5282. Would it not be possible for some of these officers to perform the duties of inspector of public watering-places instead of the inspectors specially appointed? The most suitable men to make these inspections would be the inspectors of stock; but I doubt very much whether the inspectors of stock could undertake this work, or whether the Board would permit them to.

5283. You think the Boards would not permit this additional duty to be performed even if it led to the expenditure of the branch for the prevention of scab in sheep being reduced to some extent? No, I think not; because if the inspectors of stock undertook this work they would probably have to neglect important duties under the Sheep Act.

5284. What about the superintendents and road overseers;—would it be possible for these officers to make an inspection? That was in dispute between the two departments. We say that the cost of constructing works under these road superintendents is so great that it would not be a matter of economy to place these works in their charge instead of in that of the inspectors.

5285. Now that these watering-places have been made, could not the road superintendents and road overseers inspect them? We are still going on constructing the works.

5286. Is there any reason why the work should not be carried out under the inspection of these officers? When these works were constructed by the Works Department under the district engineers the cost was much greater than it is now that they are being constructed under our inspectors.

5287. Would the conditional purchase inspectors be qualified to supervise? I should doubt it very much. There might be a man among them, there might be two men or half-a-dozen men who are qualified, but the duties of a conditional purchase inspector would not qualify him to perform this work.

5288. You are aware that the former Commission recommended that the caretakers and the inspectors should, to a large extent, be dispensed with? Yes.

5289. What is your view of that recommendation? My own view is that the caretakers cannot be dispensed with, unless we can lease the watering-places, because if we have neither a tenant nor a caretaker in charge the work may be destroyed.

5290. The saving suggested by the former Commission would have been from £10,000 to £12,000 a year, but instead of there having been any economy enforced since the date of that report I see that there has been an increase in the salary of the Superintendent of the Public Watering Places from £250 to £515; he was then an inspector, now he is a superintendent;—do you consider the salary he receives, together with travelling expenses, a fair or a liberal one? I do not consider it particularly liberal. I think it a very fair salary.

5291. Has he not a very small staff under him? He does very important work and he does it very well. He works very hard. He is a very good officer. All the artesian boring is done by contract, and unless you have a very good man you could easily lose some money over these contracts.

5292. In your opinion would it be possible to make the Public Watering Places and Artesian Boring Branch self supporting? I think it is quite possible.

5293. In what way? At the present time the Minister has under consideration a scheme for cutting up land connected with the bores into farms that would be worked by irrigation, and I am in hopes that the revenue from these will very nearly if not quite equal our expenditure.

5294. Have you large quantities of stores in connection with your department? No, except in the matter of casing for the artesian bores. We have to keep a fair stock of that on hand. It has to come from home; we cannot get it from anywhere else. Sometimes our stock is very low.

5295. Where is the casing stored? Some of it in Sydney, some in Bourke, and some in Wilcannia.

5296. Do you require any large amount of stores from the Comptroller? We take a good deal altogether. We use a considerable quantity of stores.

5297. In the Service ordinarily promotion follows on long service and seniority? Yes.

5298. Do you approve of that system or can you make any suggestion as to classification or grading that would lead to greater efficiency and to appointments being due to merit rather than to long service? The classification that is contemplated in that question I take to be a classification of work and not of men. We have never had anything but a classification of men. It is possible that a saving might be effected if there was a classification based upon the work performed by the officers. Of course that is quite a different classification to that spoken of before. Such a classification as you propose would cause quite a revolution in the Service.

5299. Do you think it would be a better system, and give vitality to the Service, if work were graded and officers paid according to the value of their services and their responsibilities? Yes; I think it would be an improvement.

5300. Do you think it would lead to greater efficiency and economy? Well, it would if fairly applied. Of course the difficulty is about the application. I think it is quite possible; if the obtaining a position was the result of a competitive examination fairly carried out it would be an improvement.

5301.

- H. Wood, Esq., J.P.
18 Feb., 1895.
5301. Have you in your department ever encountered the difficulty of recommending an officer for a higher position who is not otherwise eligible than by long service? No; I do not think I have had that difficulty to contend with.
5302. Are there any high-salaried officers in your department doing merely ordinary clerical work? No. Of course a great deal depends upon what you consider ordinary clerical work. They are not doing what I consider ordinary clerical work.
5303. *Mr. Storey.*] What sort of work are the two clerks doing who receive £280 a year? One has charge of the branch that deals with the applications for leasing, both on Crown lands and private property, and also with applications for all titles under the Mining Act, Crown Lands, or Private Property. He is a very efficient officer, and well worth from £350 to £400 a year. The other is employed under him; and although they are both getting the same salary, the first one I have named is worth considerably more than the other.
5304. How come they to be getting the same salary? By seniority.
5305. *Mr. Humphery.*] Is there any duplication of work in your department that might be dispensed with? I do not think so.
5306. Is there any unnecessary detail that you think might be got rid of? I do not think there is any practice in the department that could be abolished with a view to a greater economy, but I think, as I said before, that economy would be obtained by bringing all the records and all the correspondence into one room.
5307. Have you any observations to make with regard to the practice that obtains under the Civil Service Act of granting leaves of absence to all officers in the Public Service for three weeks in the year? No; I am not prepared to say that they should not have three weeks leave. In some cases I do not think it is absolutely necessary that they should have it. In other cases, I think, in the public interest, it is a fair thing if the officer has a great deal of responsibility and is heavily worked as many of our men are. It is discretionary with the permanent heads of the departments, for no man has a right to obtain leave unless he can be spared.
5308. You very rarely refuse applications for leave? Yes; but I have had to refuse them. That is distinctly understood, that no man can claim leave as a right, only if he can be spared. But no doubt in computing the number of men required to do the work of a given branch, the necessity for granting leave of absence would be taken into account. As a matter of fact we do not put on men to perform the duties of those who get leave of absence. The work is generally done by the officers of the branch to which the officer who gets leave belongs.
5309. *Mr. Storey.*] Are the country clerks entitled to a leave? Yes.
5310. Do you not have to send clerks there? Most of our country officers are only paid a sort of nominal salary by us, and hold office in other departments. In some cases there is provision in those departments for relieving the officers. Most of our country offices are filled either by clerks of petty sessions or by constables. There are relieving clerks of petty sessions. We do not have any relieving officers.
5311. What officers are paid out of the vote for the School of Mines and Assay Branch? The temporary men in the Assay Branch are paid out of that. The metallurgist is also paid out of that vote.
5312. What are his duties and what salary does he receive? He commenced at £1,000 with an increase of £100 a year. He was engaged for three years through the Agent-General.
5313. Has a school of mines been established? Yes, in connection with the University. The metallurgist has nothing to do with that school of mines except this, that as soon as we have metallurgical works erected and in operation the students of the school of mines at the University will have the privilege of going there to witness all the operations.
5314. In what way has the time of the metallurgist been employed since he arrived? In inspecting the mines, where difficulty is found in treating the ore and advising owners of mines as to the best methods of treating such ore. Then he has been inspecting and reporting on new inventions in connection with mining and in the selection of a site for the metallurgical works.
5315. Has the metallurgist yet entered upon the special work for which his services were secured? No, because we have not for want of a site been able to erect the necessary works for him to carry on metallurgical operations.
5316. Would not the site of land be the least expensive part of it? The difficulty is that we cannot carry on these metallurgical works wherever we like. One cause of the delay in this matter was this. Until quite recently it was the intention of the Government to have a noxious trade site where all noxious trades could be carried on. We were waiting for that site to be decided on before having our works erected. In the meantime I understand Professor Anderson Stuart advised the Government that it would be unwise to have a noxious trade site because the fumes from that particular site would be so very injurious that it would be better to allow these trades to be carried on on sites distributed about. Then it was that the Government abandoned the idea of having a site for all the noxious trades and it was not until then that we were at liberty to select a site for the works. We have practically obtained a site now, but it is not at all surprising that there has been some delay. We must have a tramway, and the works must be connected with the railway either by a tramway or a siding. That involves crossing a road, and a lot of difficulties have to be surmounted. Everything now is practically ready, and there is no doubt that in a very short time the works will be commenced. The delay has been serious.
5317. Would not the proper course have been to have put the machinery up before you engaged a man to control the machinery? I think not. It was by my recommendation that the course I have named was taken. If we had erected all the building and appliances there is nothing more likely than that the metallurgist would have condemned everything that we had done, and said that was not what he wanted. In such a case we should have saved nothing by not having engaged the officer beforehand.
5318. *Mr. Robertson.*] Are you aware of any cases in the Civil Service of servants being retrenched and shortly after of their being appointed to an office in another department? Yes; some time ago I made a recommendation to my Minister that in any case where an officer is retrenched from any department he should be the first on the list for appointment in any other departments where a suitable vacancy occurred, and that was approved by the Cabinet.
5319. Have you in your own department any who have been retrenched from other departments? I think so.
5320. Will you furnish the Commission with a list of these? Yes; I do not think there are many. [Return subsequently handed in.]

TUESDAY, 19 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, F.S.I.A., F.I.A.V.,
 . | J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Harrie Wood, Esq., Under Secretary, Department of Mines, further examined:—

5321. *Mr. Robertson.*] Did you receive a communication in January, 1890, from the Auditor-General with reference to unpaid mining lease rentals? Yes.

5322. In which it was pointed out that there were overdue on mineral leases £12,582 16s., and on gold leases £1,828 9s.? Yes. H. Wood,
Esq., J.P.
19 Feb., 1895.

5323. Will you tell the Commission how it was that these arrears were allowed to accumulate? The arrears were allowed to accumulate through the neglect of the registrar to see that the rents were demanded periodically, as they should have been, and his excuse was that he had given instructions to one of his officers to perform this duty, and the officer had neglected to do it. In consequence of this the registrar's services were dispensed with, and the clerk who he said was to blame was disgraced and fined.

5324. Were these two clerks in the one branch? Yes. It was the registrar, and one of the clerks in his branch.

5325. And was it their duty to send out the notices? Yes.

5326. Did not the Royal Commission that was sitting in 1890 suggest the dismissal of Burcher, the clerk concerned? I think so; but I do not know that it was in connection with this transaction. I am not sure, but, as far as I know, that Commission was not aware of the fact that this neglect had occurred. I am inclined to think that they visited the department and completed their labours in it before this communication was received from the Auditor-General.

5327. So besides this matter there was another matter entirely different upon which that Commission recommended his dismissal? Yes; I say that with the reservation I made previously. We did not recognise that report, because it was not accompanied by evidence.

5328. In this case this is the evidence, is it not? Not the evidence upon which they worked, because their investigation closed before this occurred.

5329. But this is the evidence of the neglect? It was the evidence upon which Mr. Farr was dispensed with.

5330. And upon matters in which he was assisted by Mr. Burcher? Yes.

5331. Did not the Treasury inspectors report upon this matter? I do not think so; the Treasury inspectors really only examine our books with reference to revenue that we receive. This is revenue we do not receive; it is not payable to us but to the Treasury.

5332. But because of the omission to send out notices has there not been a considerable loss of revenue to the country? It is possible that some loss did accrue from this neglect that we are referring to now, but I do not wish it to be understood that that neglect is still going on.

5333. What was the amount of revenue overdue at the time this matter was pointed out on the 31st of January, 1890, which was lost through the neglect of the two clerks? As I stated before, I do not know that we will be able to fix that quite accurately, but I will do the best I can to give it.

5334. Was there any friction in the Lease Department at the time? That did not occur in the Lease Department, it was in the Registrar's Department. The Lease Branch is a distinct branch altogether. The Lease Branch is where they deal with the applications to lease, and go through all the forms leading up to a lease. After the lease is issued it is registered by the registrar, and he keeps the records in connection with all transactions afterwards.

5335. Were the notices prepared and not sent out? Yes, in a number of cases; but I could not say in every case named in that list.

5336. Who was the clerk who withheld the notices from being sent out? Burcher was the clerk who was charged by the registrar with this omission.

5337. This man is still in the Service? Yes.

5338. Upon what grounds did you keep him in the Service after that? We considered it was the duty of the registrar to see this work done, and that the main fault rested with him.

5339. He was to see that it was done, and it was the duty of the other man to do it? No doubt, to carry out the instructions he got from the registrar.

5340. Is there anything about this man that would lead you to keep him in the Service although he had so utterly failed in his duty? Well, the opinion, I think, of the Minister at the time was that if he were fined and disgraced he would be sufficiently punished.

5341. What was your opinion? I could not think myself that he deserved the same punishment as was inflicted upon the officer whose duty it was to see the thing done. The registrar was dispensed with, but if the other man had been dismissed that would have been equivalent to saying that he was equally guilty with his chief.

5342. I hardly follow you in that, Mr. Wood. If a man utterly fails in discharging his duty, surely he is equally guilty with a man who fails to point out that he had not fulfilled his duty? That may appear so to you, and perhaps that is the correct view of it, but in the Service we always regard the officer who is responsible for the performance of the work of a branch as more guilty than his subordinates if the work of that branch is not carried out.

5343. I will ask you one general question: If a man in a branch failed to do the work which he was employed to do and paid to do, and his neglect were condoned or overlooked by his superior officer, would you simply discharge the superior officer and fine the junior officer? Well, I should think that would depend very much upon the special circumstances of the case.

5344. We will deal with it just as this case is before us? I really could not tell you at the present moment what my recommendation was in regard to Burcher in that particular case. I believe he was suspended the same as the registrar, and was called upon to show cause why he should not be dismissed. He did show cause, and I presume he must have shown cause to the satisfaction of the Minister, so that instead of his being dismissed he was fined and disgraced.

H. Wood,
Esq., J.P.
19 Feb., 1895.

5345. Am I wrong, then, in thinking that there was friction between some of the sub-branches in your department which directly or indirectly led to this loss of revenue? I cannot conceive how friction in another branch could affect this question.

5346. Was there friction, then, between the two men in one branch? In that branch?

5347. Yes? As far as my memory serves me, there was no friction between these two men until this discovery was made, and then, of course, there was friction, because each tried to put the blame on the other.

5348. Has there been any friction in any of the branches, or is there any existing to-day? I cannot say there is any at the present time. There was a good deal of friction for some length of time in the Charting Branch.

5349. Is there any friction between the chief inspector of mines and the Government geologist? I do not think they are very friendly, but that does not affect either of their branches, I believe. The difference is something purely personal to the two men.

5350. It does not affect the working of the branches? I do not think so.

5351. Will you enumerate the various Record Branches in the Mines Department? The principal record-room is connected with the Mines proper, and in addition to that there is a record-room in connection with agriculture and forests, a room in connection with the Stock Branch, a room in connection with the watering-places, and one in connection with the prospecting vote.

5352-3. Is there a Record Branch in connection with the conservation of water? I think not; we deal with the papers in connection with the Mines.

5354. In the cases of drunkenness that may be brought under your notice, what steps do you usually take? In some cases, if it is nothing very serious, I request the head of the branch to send the officer to me, and I give him a good talking to. If that has the desired effect, and there is no more drinking, nothing more happens. If after I have given an officer a warning of that kind it is reported again that he is drinking, then I recommend the head of the branch to bring the matter under my notice officially, with a view of calling upon the officer to show cause why he should not be dismissed.

5355. Have you had many cases reported to you? Not a great many. The case of one officer was brought under my notice, and I gave him a pretty severe lecture. I am informed since then he has not indulged. To-day a case was reported to me verbally, and I instructed the head of the branch to report the matter to me officially, so that I might call upon the officer to show cause why he should not be dismissed.

5356. Have you an officer in the Public Watering-places Branch who was retrenched from the Lands Department on the 31st December, 1888, received a gratuity of £381 11s., and is now on the permanent staff in the Mines Department at a salary of £245? He is one of some two or three in the department who have previously been employed in other departments, and who were retrenched. Some time elapsed between the retrenchment and re-appointment.

5357. Is there a man in the Forestry Branch getting 15s. a day, less 10 per cent., in excess of £200 per annum, who was retired from the Trigonometrical Branch in 1890, and received a gratuity on retiring of £207 15s. 6d.? There is such a man; whether he was previously employed I do not know. When he was appointed to the Forest Branch the branch must have been either under the Lands Department or the Chief Secretary. He was in the branch when it came back to the Mines.

5358. In addition to these lease rentals, have there been any other reports made in connection with money that has been embezzled in your department? Yes.

5359. In more than one department? In more than one.

5360. What were the departments? The Public Watering-places and the Forests.

5361. Can you explain how that occurred in these two departments? In regard to one case I think you have the papers here, and without reference to them I could not give you details. It happened some time ago, and I have not seen the papers for a long time.

5362. Was the cause of these embezzlements want of oversight as in the loss of revenue in the other case? I am inclined to think it was so; there was not as much care taken, I am afraid, as there might have been; but I rather think that in the case of the watering-places there were some grounds for excusing the head of the branch.

5363. Through letters having been withheld from him? Yes.

5364. This report shows that £207 5s. 8d. was embezzled? I think it was something about that.

5365. What action was taken in that matter? The man was dismissed, and it was intended to prosecute him, but he cleared out.

5366. With regard to the case in the Forests? There is no doubt there was want of supervision there; but the officers who were responsible for the supervision were all retrenched, and it was after the retrenchment that we discovered this deficiency.

5367. What was about the amount in that case? If I recollect rightly it was not very large. In point of fact this officer himself was being retrenched, and it was while we were considering the question of leave of absence for him that we discovered the defalcations, and then instead of retrenching him we dismissed him. I am inclined to think that in that case his friends paid the money. I could get the papers if you would like to have them.

5368. You might hand them in. [*Papers subsequently handed in.*] Was Mr. Slee appointed acting mining warden during last year? He has been appointed Warden for various districts for quite a good many years back; but what we do with Mr. Slee is this: when a new field is opened requiring special attention more than the warden of the district can give it, we send Mr. Slee to take charge until things have shaken down a bit.

5369. Do you know how long he was away travelling last year? He would be travelling a very large part of the year, but he would be stationed at Wyalong for some months.

5370. Have you a museum in the Domain? Yes.

5371. Could that museum be connected with the general museum in College-street? Not with advantage. I doubt whether there would be room supposing it were desirable to put the exhibits there. There would not be room in the Australian Museum building to put the exhibits.

5372. Have you not a great many exhibits that are duplicates of the exhibits that are in the Museum already? It is very likely that they have duplicates of some of our exhibits, but they would very likely be the palæontological exhibits, which we class as scientific exhibits.

5373. Do you make a personal supervision of the branches in your department? I have a general supervision, but I do not inspect the rooms. I leave that to the chief clerk and heads of branches. 5374.

5374. Have you ever been in the Prospecting Vote Branch and the Watering-places Branch, with a view of inspecting their books? No.

H. Wood,
Esq. J.P.

5375. You really could not say what their books are? I have a general knowledge, but not an exact knowledge.

19 Feb., 1895.

William Henry John Slee, Esq., F.G.S., Chief Inspector of Mines and Superintendent of Drills,
sworn and examined:—

5376. *President.*] You have a staff of two inspectors? I have a staff of three inspectors.

5377. I see there is a clerk in addition? There are three clerks altogether under me.

5378. I suppose the other two are those mentioned under the head of Diamond Drills on page 137 of the Estimates? Yes; I have three altogether.

5379. Can you tell the reason why the Diamond Drill Branch is separately stated from the other? The Diamond Drill Branch was established in 1882 as a separate branch to the inspection of mines, and a superintendent of drills was appointed at £490 a year, I think. In 1885 I was asked to take over the diamond drills for the sake of economy, and the then superintendent of drills resigned.

5380. You are chief inspector of mines;—are these mines of a metalliferous character? Yes.

5381. But not coal or shale mines? No.

5382. Do your duties as inspector call you away from town frequently? Yes.

5383. How long have you to be away on a trip? At times I have been away for two or three months; but a general trip takes me from a week to a fortnight.

5384. That would be visiting the different mining districts? Yes.

5385. That would be an ordinary part of your duty? Yes.

5386. What would your three assistant inspectors be doing while you are away? They are mostly away; one is stationed at Broken Hill, and the others have to go round like myself inspecting the mines as to their safety.

5387. That is, to see whether the mines are carried on properly? Yes.

5388. Whether the shafting is properly made? Whether the mines are properly timbered. At Broken Hill, for instance, the inspector has to see that the open cuts are put in such a way that they shall not injure the life or limb of any person employed.

5389. I suppose there is constant employment at Broken Hill for one person? There is one man constantly there fully employed.

5390. Then the three clerks on the staff are often left alone? No; I have the controlling power over them; I direct them what to do.

5391. When you are away? Even if I am away all the papers I attend to in my office are sent after me, and I do my office work in the place where I am located.

5392. You return the papers with directions? I instruct the inspectors in which direction they have to inspect.

5393. Do they have sufficient employment always? Always.

5394. Because you are not working the diamond drills just now? No; but the fact is we have hardly sufficient inspectors to go round.

5395. I am speaking of the clerks? I think the clerks have quite sufficient to do even now because a great deal of work has been put on to me only lately; for instance, these men called fossickers come to me twice a week and I have to examine them.

5396. The fossickers? The men who receive free passes to go on to the gold-fields and fossick for gold. A former Minister adopted a plan by which they might receive free passes provided the Mines Department should approve of them. They come to me and I generally examine them, and if I think they are fit they go out.

5397. Fit as regards their physical ability? Or in any other way. I satisfy myself that they would be good workers; if they are downright bad characters I would not assist them. Last year I recommended 9,700 odd to receive free passes.

5398. Then you give them the best of advice as regards the district they should go to? As far as my knowledge goes.

5399. The diamond drill is hired out, is it not, when it is in operation;—you do not do any work for the benefit of the Government? None whatever. The diamond drills since I have had charge of them have been considered as revenue producing.

5400. Have they paid themselves? They have paid themselves all along.

5401. Did you execute the work at Cremorne? Yes. In hiring a diamond drill the mode of procedure is this: An application is sent into the Minister for Mines, asking that the use of a diamond drill may be given to such a party. On my recommendation that application is granted, the use of the drill to be paid for at so much per foot. A fee of 2 guineas, called the inspection fee, is paid, and that goes to the revenue. I inspect the site, and fix the spot where the bore should be put down. I send my men to start the work, and I visit the work as often as possible. The whole of the Cremorne bore was done under my supervision.

5402. The people who employ you find the fuel? Yes; they find water and fuel, and pay a certain amount towards the expenses. The Cremorne bore, I think, paid 14s. per foot for the first thousand feet, and after that, more.

5403. What is recorded in your books? We record the applications; all expenditure in connection with the drills; and also the earnings.

5404. They are in the nature of account books, as well as registers? Yes.

5405. Are they all mixed up together? No, they are separate.

5406. How long have the clerks been with you? Two of the clerks were in the department when I took charge of the drills in 1885; I think they must have been there ever since the drills branch was established in 1882.

5407. Have they had any increases to their salaries of late years? They had some increase to their salaries, but not within the last four years, I think.

5408. Do you think the services they render—I am not speaking of the men themselves—are well enough paid at the salaries they receive? I think they do not receive too much salary for the amount of work they perform.

5409.

W. H. J. Slee,
Esq., F.G.S.

19 Feb., 1895.

- W. H. J. Slee, Esq., F.G.S.
19 Feb., 1895.
5409. I should think they cannot have much to do just now? They are at work all day long; there is a good deal of work done in connection with the prospecting vote, the compiling of our annual reports and statistics, fossicking, and the inspection of miners' papers. Every day a large number of papers come from miners and the mining community, asking questions that have to be answered.
5410. In the contingencies voted on the Estimates I see the item, "Expenses of working and repair of diamond and other drills for the purpose of developing the mineral and other resources of the Colony, £4,500 a year";—is that all spent? No, it is not; last year, I think, we did not spend one-half of it. Since 1885 we have always had more revenue coming in than expenditure going out.
5411. Since 1885 down to the end of last year? Down to the end of 1893.
5412. Last year it was not so? Last year we received more than we spent, but some of the revenue really belongs to the year previous.
5413. If that had not been the case you would have been short? Yes; but not all the £4,000, because the Government has saved £2,500 at least.
5414. *Mr. Storey.*] Out of that £4,500? Yes.
5415. You only spent £2,000? At the very outside.
5416. *President.*] That is to say, you are not spending anything at all? So far not; but the Minister intends to pursue a different policy in connection with diamond drills.
5417. Have you any voice in the spending of this £20,000, which is said to be for the promotion of prospecting for gold and other minerals? Yes; the Under Secretary for Mines, the Government geologist, and myself compose the Prospecting Board.
5418. The Government geologist is Mr. Pittman? Yes; but the Minister may, if he chooses, appoint other members to act as well as us.
5419. Is it your opinion that money spent in this way is for the advantage of the Colony? I think so. In 1892 there were thirty-five cases in which payable gold had been obtained; in 1893 something like thirty cases, and last year we had only about twenty. Mount Drysdale field was discovered through the prospecting vote on my recommendation. A great deal of gold has been found at Hill End and Hargraves through the prospecting vote, and at Tenterfield we have several cases to show in which it has done good. If one lease obtains gold other leases are taken up alongside it, and thereby a large number of persons is employed.
5420. Was the product of gold greater or less in 1894 than in 1893? It was greater in 1894 than in 1893. Our statistics are barely complete, but so far they show we are ahead of 1893.
5421. What allowance do you receive when travelling? At one time I received 30s. a day, out of which I paid railway fare and all other expenditure, but since the new regulations have come into force it is 15s. a day.
5422. But your fares are allowed as well? Yes.
5423. Is it 15s. a day, including Sunday? Yes, when absent from head-quarters.
5424. You find that to be sufficient? Well, yes.
5425. You have nothing to do with the geological staff? Nothing whatever; but I have frequently to report on new discoveries, or even on tracts of land which I think sufficiently auriferous to make into reserves.
5426. *Mr. Robertson.*] As a geologist, do you make any reports to the Mines Department? I make a great many reports. At one time there was only one geologist, Mr. Wilkinson, and he and I made a lot of reports.
5427. *Mr. Storey.*] How long have you been in the Civil Service? I entered the Civil Service on the 7th August, 1876.
5428. Who is your superior officer? The Under Secretary for Mines. He is the only one superior to me, and the Minister for the time being.
5429. Could you not fulfil the duties of inspecting the coal-mines as well as your present duties? I would not say that.
5430. But I ask you that? I have had no experience in coal-mines; I have had forty years' experience in other mines.
5431. I think you said just now that you used to make the geological reports? No; I said that I gave reports to the Mining Department on the mineral resources of the Colony. That is what I meant to say.
5432. Up to when? I do it now at all times.
5433. What are the particular duties of the geological staff? I could not say.
5434. Do you know how long the geological staff has been in existence? About twenty years, I think.
5435. The diamond drill is not at work now I understand;—can you give us an idea of what you received at the Cremorne bore? We charge 14s. per foot for the first 1,000 feet, but the Government allowed the Cremorne bore a certain amount out of the prospecting vote, as it was considered to be of a prospecting character, if for nothing else for scientific purposes; that is, to determine whether payable coal could be found on the shores of Sydney Harbour.
5436. But was not the idea of the prospecting vote to give facilities to those who were not able to prospect without assistance? It does not say so in the regulations. It says we may, as a Board, recommend 50 per cent., but it is very seldom indeed that assistance is given to any companies or syndicates if we know they have lots of money; but sometimes syndicates are very poor. The Cremorne Bore Syndicate was one of these, I am afraid.
5437. How much was allowed out of the prospecting vote for the Cremorne bore? I could not say exactly, but I think it was £1,600.
5438. Was that the first one or the second? The first bore was not assisted, but the second one was, as the Government considered it was not advisable to leave the question undecided as to the existence or otherwise of coal at Cremorne.
5439. When you say that the drills have been self-supporting, how do you estimate the cost and the revenue; do you take your expenses into account? Yes; everything is taken into account, salaries and all.
5440. *Mr. Robertson.*] You said part of your duties was to attend to fossickers who came in large numbers twice a week to your office;—can you give us the number who visited you during last year? From the 1st of January, 1894, up to this date, 10,934 men have been assisted by the Mines Department.
5441. Did these men all visit the office? They all visited the office; they cannot get a letter without doing so.
- 5442.

5442. What is the nature of the letter they get? It is a printed form, on which I put down where the men want to go to or where I think they ought to go, after questioning them.
5443. One would think from the evidence you have just given that you yourself interviewed these fossickers throughout the year? Not throughout the year.
5444. In your evidence you said you did it twice a week? Whenever I am in Sydney.
5445. Of course that makes all the difference? My clerks attend to them at all times.
5446. How long were you absent from Sydney last year? I could not tell you exactly.
5447. Were you appointed acting mining warden? Yes; I was a warden at Mount Browne in 1881.
5448. At what places were you acting warden in 1894? In the Temora district, which includes, of course, Wyalong, and I was acting warden at Adelong in the Gundagai district.
5449. Will you furnish the Commission with a return of your duties as acting warden during 1894? Yes.*
5450. Can you tell us the date when the last bore was put down? It was put down at Bingera in September, 1894.
5451. Was that the only bore you put down last year? The only bore.
5452. How many bores were put down in 1893? A bore was put down at Bulli, one at Cremorne, and one at Cowabbie.
5453. How many in 1892? Nine.
5454. You are acquainted with the books that are kept by your department, are you not? Yes.
5455. What are the books in use at the present time? There is the record book, the ledger, the entrance book, and the diamond book, in which we keep an account of all the diamonds we use.
5456. Would the operations in that book be very extensive? No.
5457. Well, having the knowledge you have of these books, do you say there is ample employment for these three clerks drawing together £757 per annum? I think there is. Of course they have not as much to do as they formerly had, but there is plenty of work coming in, and I think there is enough for them to do, especially if the new process is to come in.
5458. We do not speak of anything that may come to pass; it is what exists to-day;—I think you said in evidence that these clerks were fully occupied? Yes.
5459. In what way would their time be occupied, because from the inspection of the books I made yesterday I must confess I am utterly at a loss to see what possibly can keep them occupied? There is a large number of letters in connection with the prospecting vote to begin with.
5460. It appears from a statement supplied to the Commission that the papers registered in connection with the prospecting vote number 4,356, and that assistance has been granted in 1,008 cases in 1894;—would the balance of the letters refer to the 1,008 cases? They would refer to the cases which have not been dealt with.
5461. You give it as your opinion, and with all your years of experience, that with the work these men do they are certainly not over-paid? I do not think they are over-paid; I do not think I am over-paid.
5462. When do you have your portion of the report ready to hand completed to the Under Secretary? As a rule, about the end of February.

Henry Bede Sullivan, Esq., Chief Mining Surveyor, sworn and examined:—

5463. *President.*] Including yourself, you have a staff of eighteen? Yes.
5464. Can you tell us generally what your duties are? I direct the work of the draftsmen, issue all their work to them, and generally supervise the work of the Charting Branch, and also of the mining surveyors in the field.
5465. Are coal-mines and all other mines included in your department? Yes.
5466. The principal members of the staff, I see, are draftsmen, of whom you have fourteen and one assistant draftsman;—what are their duties? Some draftsmen deal with the applications that come in to lease; I think at present only three are dealing with applications to lease, that is, on Crown lands; two and sometimes three deal with application to lease private lands under the recent Mining on Private Lands Act, and two deal with the applications for permits to mine under reserves. One keeps a register of all applications to lease, and notes on plans and papers the state of all leases; others are engaged in the preparation of new maps and various kinds of drafting. One draftsman is constantly employed in charting up our mining maps for the use of mining wardens, mining surveyors, wardens' clerks, and district surveyors. He has to be assisted sometimes, and even then he can scarcely keep up with the work.
5467. The draftsmen define the superficial areas of the mines;—is not that so? If there is an application made to lease a piece of Crown land, the land is either a surveyed or an unsurveyed portion; in each case the surveyor defines the area, which is afterwards checked by a draftsman.
5468. Would that be for a coal-mine? Either for coal, mineral, or gold. If the land is not already surveyed I issue instructions to a mining surveyor, who carries out the survey. He sends in his plan to me, which I issue, with the application attached to it, to one of the charting draftsmen, who examines it, checks the area, and checks the boundaries, to see that the portion will close, as we term it. He has to examine the maps also, to see that it does not encroach on any other portion already leased or alienated, or any land held under a miner's right. If he has any doubt as to the latter, I refer the matter to the warden. We get his report, and also a report from the district surveyor, as to whether the land is or is not available for mining purposes, so far as the Lands Department is concerned, and he informs us whether it encroaches on any land which has already been applied for under the Lands Act. Then, if all that is found to be right, and there are no objections, we prepare diagrams of the lease, and send the matter on to the Lease Branch, where the lease is engrossed. It then goes to the Minister, and afterwards to the Executive Council for approval. That is the procedure in a case where a new survey is required. If the portion has already been measured, almost the same course is carried out, except that we use the original plan of the survey. In some cases we find that it is a very old survey, and perhaps so badly made that we have to call upon an applicant to pay a fresh survey fee. We have a fresh survey made, and the same course is gone through as I have already described.
5469. You mentioned that they had also duties to do in connection with applications to mine on private lands; in what way does their duty differ in that case from their ordinary duties? At present we have had very little experience with the Act; but so far the routine is very much the same. When the Act first

* "I inadvertently promised more than I am in a position to fulfil, owing to the fact that I have not kept a complete diary, and my note books do not supply me with the required information." Extract from a letter by the witness to the Secretary, dated 28/2/95.

H. B.
Sullivan, Esq.
19 Feb., 1895.

first came into force a great many applications were made by owners who, under the Act, are empowered to apply for the lease of the whole area they hold. I have copies made of the original plans which are kept in the Lands Office, and we retain those in order to avoid the loss of time in referring to the Lands Department for their plans, and we note such application on our copies. That is about all we can do with these cases at present, because, until the lease forms are prepared by the Crown Solicitor we cannot investigate the title. When we are able to investigate the title there is nothing to prevent the lease from going on, or being refused. For smaller areas the process is almost identical with that for Crown lands, except that we have to have appraisements of the land by the surveyor at the time he makes the survey. The surveyor assesses the amount of damages that have to be paid by the applicant to the owner or occupier; but at present we have done very little with that Act beyond the initial stages. About the most complicated work we have to do is in connection with applications for permits, under the 28th section, to mine under roads, rivers, and reserves. It is really very difficult to tell at times whether land is available under the 28th section. For instance, it may appear as a reserve, and when we examine the plans we find it is only a reserve in contemplation. Sometimes we have tried to state, immediately after receiving an application whether the land has been available under the 28th section or not; but we found it so risky that we could not do it. Sometime ago our Minister directed me to expedite the work, as some applicants complained they were not informed quickly enough as to whether the land was available or not; but we have found in most cases that we had to refer matters to the Lands Department; and we then discovered that, although it was proposed to reserve certain lands, those reserves had not yet been made, so we had to hold the applications over until the reserves were made or deemed unnecessary; and some lands are reserved in such terms that it is difficult to say if they are embraced by the 28th section of the Mining Act.

5470. Has the last Mining Act given more work to your department? Yes. In some of the settled districts, where nearly all the Crown lands have been alienated, there are very few applications under the Crown Lands Act for mineral lands, but a great many applications have been made since the Private Lands Act came into force.

5471. You said your draftsmen had plenty to do? I think I can conscientiously say that.

5472. Do you consider that they are sufficiently paid; they get very liberal salaries; I see the first one gets £396, the next £335, there are two at £303 10s., two at £281, three at £258 10s., three at £236, one at £200, and two at £100;—beyond possessing accuracy and carefulness, I suppose the draftsman does not require to be a very superior man? No; but the position requires a considerable amount of training on the part of the draftsman; it is very different from ordinary clerical work, as there is more danger of error in drafting work, and it is quite different from the work performed by draftsmen outside the department. A draftsman has also to be a fairly good arithmetician; that is to say, he must be very careful in his computations, otherwise very serious mistakes might arise. Long experience is required to make our draftsmen thoroughly efficient, and the actual drafting or plan-drawing is one of their least important duties. I do not think some of them are sufficiently paid, considering the number of years they have been in the Service.

5473. Their duties, I suppose, are entirely in the office? Entirely in the office.

5474. In fact all your staff are occupied in the office? Yes.

5475. Have they been a long time in the department? I can hardly say from memory, but I think some of them have been fifteen or sixteen years. This is a mistake on my part, as four have been in the Mines Department for twenty-one years, two for eighteen years, and five for eleven years, and all of these had previously been in other branches of the Service for periods varying from five to ten years.

5476. You have not been so very long in that particular department yourself—about three years, haven't you? I entered that department about seventeen years ago, the same branch that I am in now, the Charting Branch, but I was only there two years; then I was sent into the field as mining surveyor.

5477. You have been acquainted with the department for seventeen years? Yes.

5478. You have a messenger;—are his duties very onerous, do they call for a great exercise of intellect? Oh, no; it only wants a smart active man to do the duties of messenger.

5479. Comparing his salary with the salary of a storeman, and of those who have a hard day's work to perform every day in the week, and who do not get so much money, it seems to me he is paid in a very extravagant manner, £130 a year? I may mention one thing that does not show on the surface at present. The messenger you refer to now is, I presume, marked as messenger in the Blue Book.

5480. *Mr. Robertson.*] No; he is marked as messenger in the expenditure for 1895? I will explain: The messenger for a great number of years for that Branch was a man named Joseph Clark. His duties as messenger did not call for great intelligence, but he understood the draftsmen's requirements, and knowing his way about the different offices, could collect plans and maps very quickly. The department had for several years a succession of lads taking care of our plans and maps, which are very valuable. I do not know how it was before I took charge, but when I went there I found the arrangement was not at all satisfactory. We had a lad who took no interest in his work, the plans were never properly recorded nor easily obtainable, and some of them were half eaten by rats. I had to recommend that he be dispensed with. In order to save his salary I tried to get the work done by one of the assistant draftsmen, the lowest on the ladder, but he was so constantly called away that the draftsmen were continually complaining that they did not know where to find the draftsman in charge of the records. So I asked the Under Secretary whether he would have any objection to my employing Clark, who had been in the habit of assisting the lad to take care of the plans, and the Under Secretary consented. For the last twelve months Clark has taken the part of custodian of plans and maps, and has done it most satisfactorily.

5481. In reality he is not a messenger? He is not a messenger now.

5482. *President.*] Do you render reports at stated periods to the Under Secretary? Every month.

5483. As to the nature of the work that has been done, and if there is anything to notice in the routine of the duties? Yes; if there is anything calling for special notice.

5484. Is there any occasion to work overtime? There is no overtime amongst the draftsmen; but I go back to the office sometimes after office-hours to deal with any work I have been unable to deal with during the day through people coming in for information.

5485. As we are here to try to find out means of economising without sacrificing the utility of the department, can you make any suggestions to that end, either by reducing the number of hands or by diminishing the salaries? I must say that I cannot see my way to do so, because our Under Secretary has

H. B.
Sullivan, Esq.
19 Feb., 1895.

has so often asked me the same question, and I really think that if we got rid of any of the officers in the Charting Branch, though we might be able to do without them, some work would be likely to fall into arrear.

5486. Of course we all know that there must be a good deal less doing in the mining part of the community. Most of them are selling coal at a loss, and there is no temptation to open up fresh country;—would not that diminish very much the necessity for all your staff? I may explain that some time ago, when mining matters were brisk and there was a rush of work, nearly all the available draftsmen in the Charting Branch were put on to the lease work. There was an enormous number of applications for leases, and the draftsmen managed by doing overtime to get through the lease applications, but it was only at the cost of miscellaneous work which most decidedly fell into arrear, and we are only catching up with the arrears of work now. Several men have been retired from that branch within the last three or four years, and, if we had another rush of work I doubt very much whether the men here could keep up with it. I am afraid we should have to drop some of the miscellaneous work as before, or else work longer hours.

5487. Do you anticipate another revival; it is not within sight of most of us outside? I cannot say I do anticipate it, but my experience in mining is that we do not know from one week to another when a mining boom may set in. I would not suggest that the men be kept on for a prospective mining boom, but so long as they have work to keep them employed, and the work they are engaged on is valuable, I do not think they ought to be dispensed with.

5488. The rooms you occupy are in the main building in Phillip-street? Yes; on the top floor.

5489. Have you any part in recommending the employment of the prospecting vote? Yes; I am a member of the Board.

5490. You join in recommending or in refusing any applications just as may seem proper? Yes; I do not have much to do with it, because as a rule I have no time. I have only attended very few meetings.

5491. Can you say whether the recommendations for assistance in prospecting are more in the direction of mineral mines than coal mines? I think the far greater number are for gold.

5492. But you cannot say very particularly; you do not attend every meeting? Not every meeting, but I do not remember one application for assistance for a coal mine.

5493. You do not know anything about the diamond drill? Nothing whatever.

5494. Mr. Slee has care of the diamonds when they are not employed in the drills? Yes.

5495. *Mr. Storey.*] You have been three years in charge of the department? Yes.

5496. In which department were you before? I was a mining surveyor out in the field.

5497. Was this a new branch made, or had anybody filled the position before you? The position I hold now was held by Mr. Pittman, who is the present Geologist, or rather part of the position I hold, because now I do the work which was done by the chief mining surveyor and by the chief draftsman.

5498. Could not any of this surveying work be done in the Lands Office by the Survey staff? Some of it could, but I know the idea of forming a salaried staff for the Mines was to get the work done quickly. Some years ago licensed surveyors under the Lands Department were busier than they are now, and they simply would not do the work unless it came in large batches. This caused such delay that the Minister for Mines sent myself and another surveyor out, and that was the start of the salaried mining surveyors. I have repeated applications now for work from the surveyors under the Lands Department, and wherever it is practicable I give them work; but of course they cannot afford to survey small isolated portions in rough outlying places, as they are unremunerative, and it is for surveys of this kind that our salaried surveyors are particularly required.

5499. You think a separate department in your branch is better? I feel satisfied in my own mind that it is better for the public, because even now when survey work is very scarce surveyors will not do it till they have a lot in hand; they hang on to it until the applications accumulate, so that the issue of leases is delayed. On one occasion in Hillgrove, even during the rush, there were three surveyors in the district who had no work, and I had far more than I could do. I was told I could transfer the Hillgrove work, which was exceedingly rough, to any surveyor for whom I could be responsible, and though I offered it to three they all refused because it was too rough. At that time I had £400 worth of work that I could have transferred. My experience of some surveyors is that they will not do the work in rough places even when it will pay well. The issue of leases is very much expedited by employing our own surveyors.

5500. Are these surveyors paid by salaries from the Lands Office or for work they do? They are simply paid by results.

5501. Considering the altered circumstances of the Colony, have you compared the salaries of your draftsmen with those of draftsmen doing work for ordinary surveyors in the city? I do not know what is paid in the city. I think our men are paid fairly well. I suppose some cognizance should be taken of length of service. I think it would be hardly fair to give a man, say £200 a year, and let him know he was not to expect any increase if he stopped there for twenty years.

5502. Here is a man getting £394 a year;—could that man make such a salary outside the Service? I am pretty sure he would not make that much in a dull time, like the present, as there are so many draftsmen outside now, and he would not obtain work similar to what he has been engaged upon here for over twenty years. Moreover, it would take years to work up a payable business outside.*

5503. Has there been any reduction in these salaries during the last three years? Only the 10 per cent. reduction which took place all round some time ago.

5504. *Mr. Robertson.*] You said you were a member of the Prospecting Vote Board? Yes.

5505. How often does it meet? I do not think there are any fixed dates for the meetings, but the secretary comes up at odd times and asks me whether I can attend, and occasionally I go down.

5506. Do you not recognise the important responsibility thrown upon you with regard to this expenditure of £20,000? I think it is a very serious one. 5507.

* NOTE (on revision) :—The duties of the draftsman referred to are of a very responsible nature, which can only be efficiently performed by a man of ability and long experience. A fair comparison cannot be made between his duties and those of an outside draftsman as the two are entirely different, those of the latter consisting of little more than plan drawing; and while my draftsman, if sent to the outside market to earn his living at a time like the present, and being without a business connection, might not earn so much as is now paid to him, I have no doubt that the same officer, if he had spent as many years outside the department as he has in it, would be earning more. To make my meaning more clear I may say that I believe that very few of the men who are earning £400 and £500 a year outside the Service could efficiently perform the duties of the draftsman under notice without long experience; nor could they be expected to do so. The same remarks apply with equal force to all my senior staff draftsmen.

- H. B. Sullivan, Esq.
19 Feb., 1895.
5507. Why do you not insist upon taking part, even at inconvenience, in the voting away of this large sum? It is not the inconvenience to myself; I do not mind that.
5508. Has any good resulted to the Colony from this prospecting vote? I am almost certain that out of the hundreds of mines that have been assisted not a half per cent. have turned out any good at all, so I think the money is only being wasted by most of those who get it. We distribute the aid impartially, and with a view to obtain the best results.
5509. And would you advise its continuance? Conscientiously I would not. I have even gone so far as to tell some Members of Parliament for the mining districts, when questioned upon the subject, that I thought the money could be well saved.
5510. And of course if the vote were not made, that would mean a further saving with reference to the staff which administers it now, would it not? Yes certainly, unless they did other work not in connection with this prospecting vote.
5511. Do you know how many bores have been put down during last year? I do not know.
5512. Your own branch has been reconstructed during the last few years, has it not? Yes.
5513. In your opinion your branch is doing good service? Yes, I think it is doing very good service now; there is no doubt about the state of disorganisation that existed some years ago, but all that was changed, and I found the branch in an excellent state when I took charge.

THURSDAY, 21 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
THOMAS LITTLEJOHN, Esq., PRESIDENT.

Alexander Bruce, Esq., Chief Inspector of Stock and Registrar of Brands, sworn and examined:—

- A. Bruce, Esq.
21 Feb., 1895.
5514. *President.*] Under the heading of "Prevention of Scab in Sheep," in the Estimates, you have under you sixty-one clerks, inspectors, and others. Is it the case that all the expenditure in this particular section is repaid to the Government by the stock-owners? There are some of the Acts under which the expenditure comes out of the Consolidated Revenue, the Imported Stock Act, for instance. All the expenditure under the heading of "Scab in Sheep" comes from the stock-owners by special contribution, at so much per 1,000 sheep.
5515. You have an inspector of imported stock, two quarantine keepers, a steam-launch master, and an engineer;—could that section of the department not be conducted by your staff? That is my staff.
5516. I mean by the other staff, without expense to the Consolidated Revenue? The whole of the expenditure is apportioned under the different Acts, according to the amount of work that is done. It has been proposed to put the whole of the expenditure on stock-owners, and a Bill has been in type since 1886, providing that the whole expense of my department should be chargeable to this contribution fund. It is a large Bill, consolidating all the Acts with which we have to deal; but the Government has never had an opportunity of bringing it in. It was referred to the different Stock Boards, and a conference was held in Sydney in which they went through it clause by clause, and approved of it. Under this Bill the whole expenditure would be levied on stock.
- 5516½. Would that principle have your approval? Certainly; and stock-owners themselves approved of it through delegates from the different Stock Boards.
5517. It would save nearly £3,000 to the Consolidated Revenue? It would save the whole of the amount, except that which is paid under scab in sheep.
5518. But until the Bill becomes law the expenditure under the heading of Imported Stock and Registration of Brands will have to continue as at present? I think it must.
5519. Does the registration of brands continue to be a very frequent thing? Yes; but it is not expensive; the time of one clerk and half the time of another are occupied in this work.
5520. But I see there are forty-nine deputy registrars? I am forgetting these deputy registrars. It is necessary they should be paid, because a good deal of their time is taken up with this work, and in connection with different clauses in the Act which have to be carried out. They do a great deal in the prevention of stock-stealing, and in tracing stolen sheep.
5521. If they had merely to register brands their services would not be worth £22 10s. a year? No; but suppose sheep are missed on a station the first person who has to trace the sheep is the inspector, because he can go on any run and demand examination of the sheep.
5522. Could not a police constable do it? A constable could do it; but he is not so well acquainted with stock matters; besides he must get a warrant before he can go on the station; while under the Sheep Act an inspector can at any time demand an examination of the sheep. He can go on a station without saying why he goes, and the owner does not know that he is looking for stolen sheep.
5523. Well, should the cost of that man's services not be paid by those who get the benefit of them? Yes, and we intend to do it under the Bill referred to. In another respect the passing of the Bill is a very necessary thing, for at present we lack the power to deal sufficiently with diseases.
5524. We have had some mention before us of the public watering places and the artesian bores;—the public watering places are constructed, I suppose, for the accommodation exclusively of travelling stock? Yes.
5525. Now this is a very expensive department, and it would be very desirable if we could find out if there were any means of obtaining a fee from the travelling stock which would meet the cost of the construction and maintenance of these tanks; in your opinion, would it be possible to impose such a thing so as to lessen, at any rate, the cost of the places? There is a fee charged now for watering, but the question has been raised whether there should not be a fee for the grass as well as the water, so as to provide sufficient funds to defray the cost of supervision of the watering places and travelling stock reserves. It has also been suggested that in order to confine their use to *bona fide* travelling stock, the drovers should take out travelling permits and pay a fee, which would be a very light one, for the use of the grass and water on the route. It was not contemplated that any revenue should be derived from these places more than was necessary to pay the expenses of them. I think it would be a very good thing if such a system could be initiated for protecting the reserves, besides making these places self sustaining. 5526.

5526. The caretakers alone cost the country £11,000? At one time I had charge of the tanks and wells, from 1880 to 1883 or 1884, but since then I do not know personally much about them.

5527. But ought not the management of these places naturally to belong to you? When I was in charge of the tanks and wells I had nothing to do with the construction of them—that was done by the Works Department, but now the construction has been transferred to the Public Watering Places Department. The supervision of the boring of the artesian wells and the construction of the tanks and wells would require more time than our men could spare from their other duties, because their districts in many cases—especially where tanks and wells are wanted—are very large. It would require a great deal of supervision to look after the contracts that are let for boring and the making of tanks and wells.

5528. But after the tanks were completed and ready for use, and the borings too, could not your inspectors exercise supervision over them,—you have about sixty of them? Sixteen inspectors out of the forty-five do assist now in the supervision of tanks and wells to a limited extent. When anything is very urgent, and the inspector under the Public Watering Places Act cannot attend to it, they see to it; besides, they always inspect these places whenever they are in the neighbourhood.

5529. You do not think they would have time as a body to give to the supervision? I think it would require special men with special qualifications to see to the construction of these tanks and wells, and to look after the boring. I do not know how many inspectors of public watering-places there are, but as they would have to be frequently where the works are going on I should fancy a reasonable number would be required.

5530. *Mr. Teede.*] You have told us that the cost of this prevention of scab in sheep is borne by the squatters, and that the expenditure under the imported stock and registration of brands is borne by the Consolidated Revenue? Yes.

5531. And you say that the squatters are anxious to take the whole charge of this upon themselves? They are quite willing to take the charge; they revised the Bill under which the whole expenditure is charged to contribution on stock.

5532. You say that advisedly? I have the Bill here.

5533. Can you tell us what is the reason for the marked difference in the salaries of the inspectors;—take Moama for example, which, being a border town, is presumably an important place; the salary of the inspector there is £160, while the inspectors at Wentworth and Wilcannia receive £344? The inspector at Moama resides there, and has no travelling to do; he is only stationed there to examine the stock which are about to cross.

5534. But the others have a special allowance for travelling? It is a small allowance—4d. a mile, and does not exceed £50 a year. The inspector at Moama has no responsibility beyond a very limited area around his crossing. He is supposed never to be away from it, but the other inspectors have other duties also.

5535. What other duties have the other inspectors to perform? They have to protect the travelling stock reserves—to see that they are not trespassed upon by adjoining owners, and that travelling stock do not loaf upon them, but go a regular distance; to prevent the introduction or spread of diseases in stock; to enforce the Sheep Brands, Public Watering Places, Pastures and Stock, and Diseased Animals' and Meat Acts; to advise owners as to the treatment of diseases in stock; to inspect pounds, and to report on matters connected with commons.

5536. By whom are the appointments of the inspectors made? They are under the Sheep Act nominated by the Boards for the district, and appointed by the Minister. They first have to obtain a certificate before they can apply to the Board for the appointment; there is a Board of Examiners which tests their qualifications for the position.

5537. And does the Board fix the salary? No; the Board is practically a Board of Advice at present. Under the present Act the administration lies with the Minister.

5538. And he fixes the salary? He fixes the salary. Some of these high salaries were fixed for border inspectors when Victoria had scab in sheep; we put the best men we had on to the work, and we had to give them more salary. At one time there were five or six millions of scabby sheep in Victoria, and we had to have not only good inspectors, but boundary riders riding along the river.

5539. Your Sydney inspector is also inspector under the Imported Stock Act? Yes; that is one of his principal duties.

5540. Is he located in your office? Yes.

5541. Is it a Government building? No; it is a portion of the building rented by the department.

5542. Then what does he want with £65 allowance a year for rent? I tried to get the best man I had on the staff for appointment in Sydney, because that Act was one of the most important ones we had to administer. He had a larger salary and allowances combined with his remuneration under the Pastures and Stock Act where he was than we could offer him to come to Sydney, and this allowance is made to him to make up his salary.

5543. Then he does not pay any office-rent? It is not for office-rent;—it is an allowance for house-rent.

5544. Then it tends to create a wrong impression? Yes—without explanation.

5545. You thought the salary was not large enough, and in order to make it large enough you got him an allowance for rent? Yes.

5546. Do you think that a proper thing to do? That induced him to come to Sydney.

5547. But do you think it was a proper thing to do? I wanted to get the man, and the Minister sanctioned it.

5548. I suppose you are responsible for these Estimates? Yes; and with the house-rent he was not getting more than he was worth.

5549. Of course that is a matter of opinion; the salaries are settled by Parliament;—in the salaries paid to this gentleman as submitted to Parliament that £65 a year does not appear? But it is within the sum over which the Minister has power.

5550. I am not talking about the Minister, I am talking about the knowledge of Parliament in this matter. As a matter of fact this sum of £65 would be passed without the knowledge of Parliament? But it appears afterwards.

5551. In contingencies—in a general sum? Yes; in the Schedule to the Estimates.

5552. But when Parliament passed a salary of £254 for this officer it was not aware that there was to be an allowance of £65 for rent? But the Parliament put a certain amount of money in the power of the Minister, under the heading of contingencies, to act upon, and out of that he decided to pay this as he did other sums, until an opportunity occurred of putting an increase of salary on the Estimates—which was done in submitting the Estimates for 1894.

A. Bruce,
Esq.
21 Feb., 1895.

5553. But what I want to point out is this: A Minister must depend upon the principal officers of his department for the chief items in the Estimates; he cannot be cognizant of everything that passes in his department, but Parliament expects him to submit an accurate statement of the salaries that he wishes to be voted. Now, when this particular case comes before Parliament, the Members are not aware that the same officer who is getting the salary put down on the Estimates is also getting an allowance for house-rent? You see, next year they voted him an increase.

5554. But I am talking about these Estimates which you supply to the Minister, and for which you hold yourself responsible;—what I want to know is: Do you think it was fair to Parliament to present the matter in this way? If I thought there was anything wrong I would not have done it.

5555. But you admit you got the extra amount by this side wind because you believed you could not get it in a direct manner? Well no, there was a vote open to the Minister to act upon, and he decided to give this allowance.

5556. I suppose because you recommended it? Because he thought it was the proper thing to do.

5557. You must recognise, Mr. Bruce, that a Minister cannot go through every item? No item is passed without his seeing it, and his approval was given to that item as to every other item; no sum is paid without his sanction.

5558. We are aware of that, but that is not the question we are trying to elucidate; I want you to tell me whether you think it is fair the Minister should submit it to Parliament in such a way that Parliament could not know what this particular gentleman was going to get? I could not answer in any way but what I have done. I might say that Parliament voted him a larger salary when he was inspector at Condobolin.

5559. What did he get at Condobolin? I think £350; he came to Sydney to a much lower salary, and it had to be made up to him. It was the year before I went away that the £65 was given to him, but while I was away they gave him an advance of £100.

5560. Was he not inspector under the Stock Act when he came to Sydney? He was inspector at Condobolin, and he was moved to Sydney, but his Sydney salary as inspector of sheep was smaller than what he had been receiving at Condobolin, and there was no salary for him under the Imported Stock Act.

5561. At Condobolin he was an inspector under the Act for the Prevention of Scab in Sheep, and he got then £344 a year? No, it was different in 1892.

5562. What was it in 1892? I think it was £250.

5563. He was removed from Condobolin? When he came to Sydney.

5564. I am speaking of Condobolin;—what did he get there? £350, and he came to a salary of £250, on condition that it was to be made up to him.

5565. How was it made up? By the £65; but next year he not only got the £65 but £100 advance besides.

5566. What did he get the £100 advance for? That was voted while I was away.

5567. As an addition to his salary? Yes.

5568. When did he get the £100 as inspector under the Imported Stock Act? That was when I was away.

5569. Was that when he came to Sydney? No; he came to take Mr. Stanley's place, and he did my work while I was away.

5570. Was he brought specially to take your place? No, he was brought to be inspector under the Imported Stock Act; that was the principal object, because there is not much work as a sheep inspector in Sydney.

5571. When he came to Sydney he got £254 as sheep inspector? Yes.

5572. And he got at the same time, as inspector under the Imported Stock Act, £100;—is that so? No, not then but afterwards.

5573. Is he doing the same work now as he did while you were away? No; he has his own work to do now.

5574. When was he appointed inspector under the Imported Stock Act? When he came to Sydney.

5575. He got £100 a year for that? No, not then but afterwards.

5576. Has that £100 additional been discontinued? I do not know that it is paid, but it is voted. I think he had a special allowance for doing my work while I was away, and did not draw the £100.

5577. When did he get the £100 a year as inspector under the Imported Stock Act? I believe it is a question when he would begin to get paid; he would get it because his salary was intended to be raised when he came to Sydney. It was proposed to put it on a proper footing, and instead of house-rent he was to get an increase to his salary. Then he had a special allowance when I was away for doing my work, but, though the amount of £100 as increase of salary was voted, I do not think it has been paid yet.

5578. When did he become inspector under the Imported Stock Act? Immediately he came to Sydney.

5579. And he got £100 for that? No, not then, but, as I have explained, afterwards.

5580. When he was at Condobolin he got £344. You say he was brought to Sydney at a lower salary, and that the office-rent was given him to increase it? I will explain how the salary was lower: It was not because the place was not worth more, but Mr. Stanley, who was acting as sheep inspector and veterinarian, was paid so much as veterinarian, and so much under the Sheep Act, making up a salary of £610 a year. When Mr. Jones came to Sydney there was only the small sheep salary, and as he had to do responsible work, the only way in which we could make matters fit was to give him this allowance for house-rent, because we could not give him anything as salary that was not voted, except from the Contingency Vote.

5581. According to this schedule he is now in receipt of £441 10s., instead of the £350 he got at Condobolin? There was the allowance to him at Condobolin as Deputy Registrar of Brands.

5582. But he had no such allowance at Condobolin? All the inspectors get this allowance for brands; and besides that, he was paid as Secretary to the Pastures and Stock Board.

5583. You say all the country inspectors get an allowance for brands? Yes; they all get £22 10s.

5584. Who is responsible for the preparation of this Schedule—the Estimates-in-Chief for 1895? If anybody is responsible, I am.

5585. You say all the deputy registrars of brands get £22 10s.; but I find no such provision made for the inspectors at Cobar, Condobolin, Narrandera, or Urana? I am making a mistake about Condobolin. The allowance was included in his salary; there are a few cases in which that has been done.

5586. Then he did not get an extra allowance? No.

5587. I come back to the original point;—he got £344? That includes the brands allowance.

5588. And he now gets at the rate of £441 10s., including the brands; how do you reconcile that with the statement that the £65 is to make up his salary to what it was when he came to Sydney? I said that was the origin of the £65. His office is the most important, next to mine, in the Colony. He frequently does duty for me when I go away visiting the country offices.

5589.

A. Bruce,
Esq.

21 Feb., 1895.

5589. Do you not see that that is not the reason you gave me; you said the reason was to make the salary up to what he got at Condobolin? That was in the first instance; I did not know you were alluding to the present Estimates; I thought you were speaking of the 1894 Estimates.

5590. 1894 and 1895 are exactly the same; what existed in 1894 exists now? It was understood the salaries would stand the same as in 1894.

5591. *Mr. Storey.*] Has the expenditure on the prevention of scab been increasing or decreasing of late years? It has been rather increasing, because there have been additional inspectors appointed.

5592. The term "prevention of scab in sheep" is hardly a proper one;—your inspectors are for the inspection of all diseases in animals? Yes.

5593. Have those who have to pay this expenditure made any complaints that the expenses are too high? Not in an official way.

5594. Have any complaints come to you? Not from any of the Boards. There are sixty Boards of sheep directors.

5595. Are these Boards paid? They get an allowance of £1 a meeting if the distance is within 20 miles.

5596. What is that paid out of? It is paid out of the funds raised under the Diseases in Sheep Act. In the Contingencies you will see an item of £300 for the travelling expenses of sheep directors.

5597. And no complaints have been made as to the salaries of these officers? No.

5598. Do you consider any of them overpaid? No. A rearrangement of salaries I think is necessary, as on account of the way in which the Act is framed there is no proper system under which we can give a deserving man promotion.

5599. But the Act does not provide for the salaries; the salaries are fixed by yourself and the Minister? They are fixed by the Minister, but we cannot change an inspector from one district to a more important one, and give him a higher salary. The Board of Directors have practically control over the appointments, as the nomination lies with them.

5600. Under the Imported Stock Act, which is paid by the Consolidated Revenue, there is an item of £2,350 for expenses connected with investigations of outbreaks of diseases amongst live stock, including expenses of temporary Stock Institute;—how much of that sum is spent during the year? There is not much spent.

5601. Why is it put on the Estimates; it is a good lump sum? There was a proposal made to have a Stock Institute for all the Colonies and the site was fixed at Sydney. A vote was put on to establish it, but the other Colonies did not agree to the proposal, and the thing never came about.

5602. Will that money be used for any other purposes? The investigation of diseases is going on now. For instance, we have had a report with respect to a disease in horses on the Darling River which makes them go blind. A veterinary surgeon has been there for nearly a month. Another veterinary surgeon at Albury has just made a report with respect to a disease in sheep, and a short time ago we sent another veterinary surgeon to the Bogan district to inspect the disease there. These men get about three guineas a day.

5603. Will that be paid out of the £2,350? Yes.

5604. Why should it not be paid out of the other item—Prevention of Scab in Sheep? There is not a vote for it.

5605. Under the Imported Stock Act there is one item, steam-launch master;—have you your own steam-launch? Yes.

5606. How often is it employed? Pretty frequently. It is employed not only by our own department but by others. It does regular carrying work for other departments.

5607. Which departments? Any department that requires it gets the use of it.

5608. Do they bear any of the expense of it? No; they have not borne any of the expense as yet. There is a good deal of expense under the Imported Stock Act, but a portion of it comes back again. We charge the owners for conveying their stock from the ship to the quarantine and back again.

5609. There is an expenditure of £264 for a steam-launch master and engineer;—how many times a week are these men employed? Sometimes it would be every day, sometimes two or three times a day, and sometimes not all. They have to carry the fodder to the stock at Bradley's Head and Shark Island; and to take inspectors to vessels in the stream.

5610. Have you always stock there? Generally.

5611. Is there any stock at present? Yes.

5612. Do you not think that is an expenditure that might be done away with? It could not be done away with as long as we have quarantine.

5613. Could you not make a contract with some steam-launch owner? We did not find that a safe thing, as we were not sure that there might not be contamination; besides we had to pay a good large sum for the work. I could work the question out and show how it stands.

5614. Just for the sake of information, could you let us have a return showing how often the launch is employed? Yes.

5615. There is a deputy registrar of brands and clerk-in-charge at £358 a year;—what are his duties? He is chief clerk in the office.

5616. He has a clerk under him at £250 a year;—where is his office? He is on the staff.

5617. Has he any occupation at all? Oh, yes; he is the chief clerk, and looks after the whole of the clerical work in my office.

5618. Why should the Government pay him; you have a staff of clerks for the prevention of scab in sheep; you have another clerk, the deputy registrar of brands, and he has a clerk; is there work enough for these people? It would take a clerk all his time, and another clerk half his time, to do the work of the brands. We have 80,000 brands registered, and there are continual transfers and fresh applications for brands.

5619. How many transfers and applications do you receive in a day? We might have on an average eight or ten a day. It is a rather tedious process getting them through under the Act, as a search has to be made to see that they do not clash with other brands, and they have to be advertised two or three times in the *Gazette* to allow objections to be brought against them.

5620. Do you tell the Commission that the clerical work of the registering of brands is worth £600 a year? Owing to the way in which the salaries are arranged I could not help putting it in that way; but at the same time you can get at what the brands cost by taking a lower salary and a clerk's salary.

5621. I am taking the deputy registrar and clerk-in-charge who gets £358, and has a clerk at £250; that is over £600 a year for clerical work in connection with the office of registrar of brands, and you say you get from eight to ten a day? But that is new brands.

5622. If you were managing the concern yourself how much would you pay for clerical work? The men are fully employed. It is no light matter to look after so many brands.

5623. Would you mind telling me the name of the officer who came from Condobolin to fill the position in Sydney? R. D. Jones.

- A. Bruce,
Esq.
21 Feb., 1895.
5624. He had a salary of £344 a year up there? Yes.
5625. How long was he in Sydney before you left for England? About six months.
5626. When he came to Sydney did he understand he was to have your position when you were leaving? Yes.
5627. Did he draw any extra salary for filling that position when you were away? I believe he did.
5628. Was it not understood he was to get it? It was not understood. When I left it was understood that the salary was to be made up for him to a higher rate than what we could give him when he came down when the first Estimates were put forward.
5629. The position in Sydney was to be better than the one he had in Condobolin? No; because he had a salary as secretary to the Pastures Board.
5630. What is he doing now? He is inspector for the Sydney district, and as such has charge of the quarantines and the inspection of vessels. He boards the vessels when they come in and examines the stock, and he has to see that the stock are properly attended to in quarantine.
5631. What salary is he getting for that? He is getting the salary on the Estimates.
5632. You are the head of the department, and I ask what salary is he drawing? I did not bring a copy of the Estimates with me, and I have not the memory to recollect the salary of each officer.
5633. You do not know what salary he is getting? Not at the present moment.
5634. Has he anything to do at all;—does he come to the office every day? He is fully employed.
5635. Prior to his coming to Sydney who did the work? Mr. Stanley.
5636. You do not know what salary he is getting, and you say his time is fully occupied? His time is fully occupied.
5637. *Mr. Robertson.*] Have you ever had any complaints from the stockowners of this tax upon them to the extent of £20,000? Not officially.
5638. Has it come under your notice in any way whatever? Now and then, but very seldom, I have seen some remarks in the papers about the expense of the department.
5639. Are you aware that the squatters are urging for more inspectors? In some cases they have. Since I went away, two additional inspectors have been appointed to districts for which appointments had been refused.
5640. Have there been recently any urgent requests on the part of squatters that you should appoint more inspectors? There have been some. A new appointment was made for Moree and one for Jerilderie, while I was away.
5641. If we were informed that the squatters are always wanting the districts subdivided, and new additional inspectors appointed, would you be able to endorse that statement? No; not a broad statement like that.
5642. You are not aware that the squatters are anxious for additional inspectors to be appointed? I cannot recollect; but there are requests made in that way through the members.
5643. Are you aware that it is at the instance of the squatters? Yes; it is at the instance of the squatters.
5644. It seems rather an unreasonable thing, does it not, that these people should be anxious for additional taxation to be put upon them? I do not think they look at it in that light. They look to get as big a share as possible of the contribution fund for their own district.
5645. Can you tell us when the last case of scab was reported? The last case of scab in imported sheep was in 1883. The last case of scab among sheep in the Colony was in 1868.
5646. During all that time the producers of sheep and cattle have gone on paying this tax, and have expressed a desire for further appointments? Yes; because there are other diseases in sheep, and the inspectors have a good many other duties with respect to brands, stock-stealing, supervision of travelling stock reserves, looking after drovers, and so on.
5647. What have your inspectors to do with stock-stealing? I think I already explained that they had a good deal to do in enforcing the Sheep Brands Act, which is a great means of preventing sheep-stealing. Brands are altered, and though an inspector may not be able to bring home a case of stock-stealing against a man, he may secure a conviction against him for altering brands.
5648. You are the head of the registration of brands? Yes; I am registrar of brands.
5649. Have you ever been struck by the enormous number of sub-branches that are in the various public departments? As far as my department is concerned, I have been doing my best to put an end to that by consolidating all our Acts into one Act.
5650. Would there be any economy effected by that amalgamation? Certainly; the expenses would come wholly on the stockowners.
5651. You said that the work of inspectors of watering places required a great deal of inspection because of contracts for boring and the construction of tanks? Yes.
5652. Can you tell us the number of bores that were put down last year? I cannot.
5653. If I told you that only one was put down last year, would that surprise you? But then there are the tanks and wells of which there are something like 100 all over the Colony.
5654. How many tanks were constructed last year? I do not know.
5655. What especial qualifications are required for the inspection of bores and watering tanks? So far as boring is concerned some engineering knowledge is required, and that would be of use in the construction of tanks, as at some of them the water is raised by steam-pumps and horse-whims.
5656. Then, in your opinion, it is necessary for these inspectors of watering places to be engineers in order to inspect these works? They should have some engineering knowledge. Some of the men, though they are really not professional engineers, have been so long out in the back country that they have acquired a considerable amount of engineering knowledge.
5657. Is the engineering knowledge of which you speak to be acquired by simply living on a station property in the back blocks? No; but situated as they were they had in many cases to master engineering matters.
5658. If we were told by a previous witness that it was not necessary these men should be engineers, do you think that would be correct or incorrect; do you know, as a matter of fact, that four out of the six are not engineers? I do not know.
5659. *Mr. Humphery.*] Was the present deputy registrar of brands formerly chief clerk in the branch for the Prevention of Scab in Sheep? Yes.
5660. When he was chief clerk, did you charge his salary to that branch? Yes, when he only held that appointment, but the two offices of Chief Clerk and Deputy Registrar were combined when the previous Deputy Registrar left, and his salary was then paid to Mr. Weller, who did the double duty.
5661. Is he still doing duty in the Prevention of Scab in Sheep Branch? Yes. 5662.

5662. Do you charge any portion of his salary against the assessment upon sheep? No.
5663. Do you charge the whole of his salary to the Government? Yes.
5664. What was the result in actual cost as against the Consolidated Revenue in the change of bringing Mr. Jones to Sydney, and Mr. Stanley going to the Board of Health? This outlay was caused by the fresh appointments made by the Board of Health of veterinary surgeons.
5665. What additional duties are cast upon the inspectors of sheep by reason of their acting as deputy registrars of brands? They have to see that the branding is properly carried out.
5666. But do they not do that as inspectors of sheep? Not as regards horse and cattle brands, as inspectors of sheep, but as deputy registrars under the Brands Act. As regards sheep brands and marks, they inspect under the Sheep Act. They have to examine the way-bills of drovers, and see that they have not more cattle or sheep in their lot than is mentioned in the way-bill.
5667. Is that a duty of the deputy registrar of brands? Yes, it is under the Brands and Sheep Acts that that is done.
5668. You expressed the opinion in conversation that some of the salaries are too low while others are excessive;—what do you consider should be the average salary paid to the inspectors of sheep, including the allowances as deputy registrar of brands? £300, and £50 for travelling allowances. I think the Commission will see that in Sydney, where the imported stock have to be dealt with and where there is a danger of introducing disease, the salary should be higher.
5669. *Mr. Robertson.*] What would be the minimum salary? I could not tell you unless you told me the place;—there are places on the border where the responsibility is greater; it is specially greater at the ports where foreign stock come in.
5670. *President.*] You told us that the sheep inspectors were of great use in assisting the police to ferret out cases of sheep-stealing, because the Act gives them the power to go on any station without stating the object of their visit; I suppose one of their duties is, where a squatter has a fresh brand to register, to see that the brand does not bear too close a resemblance to any other brand? We have a register of all the brands, and we also plot them on maps of the several sheep districts to see that we are not giving brands or marks which are at all similar to those of neighbouring owners.
5671. Do they send the application to you? Yes.
5672. What number of applications might there be in the year to one of the least employed inspectors—say Moama? He would not take applications; they would come to the inspector for the district.
5673. Well, what would be the minimum number of applications in any of the districts? I could not say; we have usually an increase of two or three thousand a year.
5674. You have a good deal of employment in the transferring of brands from sellers to purchasers? Yes.
5675. *Mr. Teece.*] In answer to Mr. Humphery you detailed some of the important duties the deputy registrars of brands have to perform; on the whole are they overworked, or have they plenty of time on their hands? It is the inspectors who are deputy registrars of brands.
5676. Taking all the work they have to do, are they overworked? They complain of overwork, and of having a great deal of writing to do besides outdoor work. They do 60 miles of travelling a week, and they send in a weekly report showing where they have been, which we check. They must do their 60 miles a week before they can get their £50 allowance at 4d. a mile.
5677. So you have the means of knowing whether they are fully occupied? Yes.
5678. If these duties as deputy registrars of brands had imposed a great deal of extra work upon them would it not follow that they were not fully employed as inspectors? The Brands Act was passed in 1886, and the Sheep Act about the same time, so that they have been deputy registrars of brands from the time they were inspectors.
5679. With regard to the deputy registrars in Sydney, you are the registrar? Yes.
5680. Have you any deputy registrars? The only real deputy registrar is the one mentioned in the Estimates, because he actually registers the brands and prepares the list for publication.
5681. He is really the one who does the work? Yes.
5682. If he does the work why does Mr. Jones get £22 10s. as deputy registrar? There is a good deal of registration of brands about Sydney and in the Sydney district, which extends from Appin to Wiseman's Ferry.
5683. You have just told me that the deputy registrar does the work? He is a different man; he is an office-man altogether. Mr. Jones is an inspector of stock, and as inspector looks after the outdoor work.
5684. In the country districts if a man wants to register a brand he sends the application to the local deputy, does he not? Yes, in the first instance, but it afterwards comes to Sydney.
5685. Do the people in Sydney send it to Mr. Jones? No; Mr. Jones' district extends from Camden to Broken Bay; he has a good many stock in that part of the country.
5686. And he travels about doing this? Yes; it is his duty to do so, but owing to my absence he has not been much out during the last eighteen months.
5687. Did he do that travelling when acting for you? No; there is another inspector in Sydney. I would like to hand in this document with respect to my own duties and my own work. [*Document handed in.*]

Hugh Giffen McKinney, Esq., M.E., M. Inst. C.E., Chief Engineer for Water Conservation, Irrigation and Drainage, sworn and examined:—

5688. *President.*] You have been over the greater part of the Colony, I suppose, and are acquainted with its different districts? Yes; well acquainted.
5689. We have been a good deal interested in a department under the Mines and Agriculture, that is, the Public Watering Places and Artesian Boring; have you taken much notice of that section of the Public Works? Yes, necessarily.
5690. These watering-places require the supervision of about eighty-five men as caretakers; the wages of these men are said to vary from 3s. to 10s. per day, and taking their number, and the amount put down as the yearly expenditure, the average wage of each man is £140 8s. Now, I dare say you are well acquainted with a great many of these watering places and tanks? I cannot say that I am. When I first joined the Department of Mines, after the expiration of the Water Conservation Commission, I was directed to get up type drawings of dams, tanks, and wells for the use of that branch, but afterwards when these were completed I was requested to transfer them to the officers of that branch, and from that time I had nothing to do with them.
5691. But, still, you know a great deal about them? Merely from passing them by. As a rule they are on the stock routes, and the work I have to deal with has principally been along the rivers, so it is only occasionally I have come across these places. I am, therefore, really not intimately acquainted with their management.

H. G.
McKinney,
Esq., M.E.,
M.I.C.E.
21 Feb., 1895.

H. G.
McKinney,
Esq., M.E.,
M.I.C.E.
21 Feb., 1895.

5692. You have not in fact examined them professionally? No.
5693. Your acquaintance with them would be that of a casual passer by? Quite so.
5694. Have you seen enough of them to say whether irrigation could be profitably employed on the land round about them? Not in regard to the tanks, but there is no doubt there are cases in which irrigation could be profitably employed at the artesian bores. In fact about three years ago I was called on specially to report on that matter, and to suggest the best crops to irrigate, and the best way to utilise the water, but I never had anything to do with carrying out any work. My work was simply made over to the Watering Places Branch, and I had no opportunity to carry out my own ideas on the matter.
5695. It has been suggested to us that if the caretakers were provided with a fair portion of the land in the immediate vicinity of the tanks and bores they might become the lessees, instead of being paid a pretty considerable wage to take care of the tanks, that is, provided they had the means to irrigate the land? Well there are certainly cases in which an industrious man should be able to make a very good living at some of the artesian bores in particular, because these bores are situated in very dry parts of the country, and it very often happens that a stock of fodder stored at a place of that kind would be very valuable to the man who had it.
5696. In the Blue Book for 1893 I see there are a number of temporary men who do not appear on the Estimate for the present year. Your present staff consists, in addition to yourself, of three assistant engineers, and two engineering draftsmen, and you have discontinued one assistant engineer, a record draftsman, and a probationer? Yes, the staff altogether is reduced to very small dimensions now.
5697. I suppose you are your own inspector to a very great extent; you see everything with your own eyes? Yes, everything that is of considerable importance. For instance, the other day, in connection with fixing a lock site on the River Darling, I went up specially to see that myself.
5698. In the course of your journeys do you come across any of the different classes of inspectors in the Government service? Occasionally I do.
5699. Could you tell us whether they are very fully employed with their duties, or the contrary? I could not say from my own knowledge.
5700. *Mr. Teece.*] Your department is in the unique position of not having any clerks? As a matter of fact there are two, both temporary men, but that is all the clerical establishment I have, except that a messenger boy is very often used at indexing work.
5701. Your work is principally of an advisory character? Well, in a large measure, it is that; since we gave up the artesian bores we have had no actual construction going on except a small work at Wyalong, and another that is being started.
5702. This artesian boring is a matter quite cognate with water conservation, is it not? Undoubtedly.
5703. And in a less degree, the question of public watering-places? Yes, certainly.
5704. That is a question of water conservation? In fact, as I have explained, I really got out a series of type drawings and specifications for work of that kind.
5705. Do you not think that more effective supervision and more economical administration could be secured by placing the public watering-places and artesian boring under the Department of Water Conservation and Irrigation? I certainly think it would be advantageous. Of course I should not care to have the management of them once they were constructed, but as far as the construction of any of these works is concerned I think it should fairly come under the branch I have charge of.
5706. Do you not think that the man who constructs is likely to take a greater interest in the preservation of his work than the man who does not? Yes; but I think these works should be got off the hands of the Government altogether if possible to do so, but if not possible it would probably be best to place them in the hands of those who have the construction of them.
5707. I do not mean to suggest that if you constructed all these places you should constantly exercise supervision of them;—that could be done by means of an inspector under you, and if anything required attention your services could be called into requisition? Yes.
5708. *Mr. Storey.*] Have the salaries of the assistant engineers in your department been reduced of late? They were reduced by 10 per cent.
5709. That is, the ordinary reduction? Yes.
5710. How long have these gentlemen been in the Service? The senior assistant in the field has been, I think, about twelve or thirteen years in the Service.
5711. How long has this separate department been in existence? It was formally organised at the beginning of 1890. I should perhaps explain that the origin of it was really in the Water Commission. The Water Commission was appointed at a time when the Colony was passing through a dry period, and irrigation was looked on as a burning question. The Commission carried on its work for about three years. I was the engineer, and had to do the work of taking levels, river discharges, or any projects that commended themselves to the Commission. When the Commission concluded its labours it was recommended that the officers who had served it all through should be retained in the service of the Government to carry on the work. I may mention that before I joined the Commission I was an officer in the Harbours and Rivers Department.
5712. When this was made a branch had you the fixing of the salaries of the subordinates under you? I was in a position to recommend in some cases, but only to a moderate extent; it would not be correct to say I fixed them.
5713. Are the salaries fair or too high? The men are certainly not overpaid. The small staff I have I consider are men who are above their class as far as abilities are concerned, and their abilities cannot be reckoned by their salaries.
5714. But, taking the present state of the Colony, do you think they could earn these salaries outside the Government? No, they could not; but there is another way of looking at it: Ten years ago Mr. Wade would have been told he was extremely foolish for staying in the Government service, now he would probably be told he was very fortunate, and possibly the first statement would have been true.
5715. You say the salaries at present are fair, but still they are more than what the men might get outside? Undoubtedly; things are greatly depressed. When I was in the Harbours and Rivers Department from 1880 to 1884 there were very few of the officers then in the Public Works Department who were really good at their work who would not have done better outside. I know friends thought I was foolish to remain with the Government then, but what I wish to state is that I do not think it is a fair thing to take a period of depression as a rule. Twelve years ago people spoke very contemptuously of the Government service, and said it was a place that no man of energy would remain in, but now they speak of the princely salaries of the Civil servants.

5716. Are all your staff fully occupied? Yes, they are.

5717. And excepting some work at Wyalong you have no construction work going on? I can tell you exactly the duties they are on: Mr. Wade has a couple of tanks in hand at Wyalong; as soon as I can spare him for three weeks I have to send him to the Lachlan to make a survey for a proposed weir, so there is plenty of work to go on with. Mr. Poolé is on the river Darling, and has completed the survey for a lock and weir a short distance above Bourke. He is taking the river discharges now, and I have recommended he should take soundings from Brewarrina down to determine the positions the weirs should occupy. Mr. Bloomfield, the third assistant engineer, has just gone to Mount Drysdale.

5718. I suppose there is no direct revenue from your department? There is a nominal revenue. For instance, the caretaker at Wyalong is, I think, getting in rates for the water something over his own pay; of course, it is only a very small affair, and the object is as much as anything else to keep the tanks under control.

5719. *Mr. Robertson.*] In the Estimates of Expenditure there is no evidence that you have a clerical staff, but you have stated you have temporary clerks doing clerical work? Yes, I have two.

5720. There is no evidence either that there are any contingent expenses in connection with your department. Are there any such contingent expenses? They are very slight.

5721-2. What provision is made for them? I do not know what would come under contingent expenses, but to cover any small expense in connection with the office there is a sum allowed for petty cash.

5723. Do you know where in the Estimates that is provided for? I really forget under what heading; but the whole of the contingent expenses of that kind would amount perhaps to about £30 a year.

5724. Does that include all your travelling expenses? Oh, no; the travelling expenses are paid out of the Water Conservation Vote.

5725. *Mr. Storey.*] What about the temporary clerks' salaries? They are paid out of the Water Conservation Vote too.

5726. *Mr. Teece.*] Is that a loan vote? Yes.

5727. *Mr. Robertson.*] Your travelling expenses are paid out of a loan vote? I believe so. My travelling expenses last year amounted to £35 5s.

5728. *Mr. Teece.*] What about the travelling expenses of these engineers in the field? As far as I am aware they are charged to the Loan Vote.

5729. What are the allowances for travelling expenses? A new scale was approved lately. These three officers rank in the third class, the rate for which is 12s. a day if they are at the same place for a period not over ten days; if they are at one place for over ten days they receive 8s. a day. My own travelling allowance is 15s. a day, in addition to the cost of conveyance.

5730. What are the duties of your branch? The greater part of our work has been preliminary. It is to do the whole of the preliminary work required for a scheme of irrigation throughout the western part of the country. We have carried out the greater part of this preliminary work, and we are quite ready, as far as the information is concerned, to go on with the works. We have the information that will be necessary, and which, under any circumstances, must form the basis of any irrigation schemes carried out in the western districts.

5731. If your work is carried out in the way you indicate what will be the additional cost of your branch, estimated of course? That is a very difficult thing to answer. If the matter had been taken up as it should have been this branch should not cost the country anything.

5732. You say the work has been preliminary;—how long has this department been in existence? It was regularly organised and gazetted at the beginning of 1890.

5733. Have you been doing preliminary work only during the past five years? Not altogether; we have got the levels taken over an area, I should say, of 66,600 square miles, 36,100 square miles in the western division, and 30,500 square miles in the central division. Of these areas 29,000 square miles in the western, and 13,600 square miles in the central division are Crown lands.*

5734. Were any levels taken in 1894? Not many, they were all advanced in 1894.

5735. What were the expenses in connection with the taking of the level in the last five years, have they been charged to the Loan Fund also? Certainly. Our surveys are undoubtedly the cheapest that have been carried out anywhere in these Colonies so far as I have been able to ascertain. The preliminary surveys of the Sydney water supply works cost one-third more than the whole of our surveys over the western district.† If the question of legislation had been taken up some years ago, and a system of permissive dams and permissive pumping establishments had been started, the people who had these would gladly have paid a certain amount for licenses and for having definite rights. It would have been part of the work of the department to see that the public interests were protected in connection with the question of water rights, and as we have the discharge observations taken in all the rivers tabulated up to date, we could tell what rights might be granted without detriment to the public interest.

5736. When were the Public Watering Places removed from your department to the Mines? They were always in the Mines.‡ That branch originally belonged to the Stock Department, and some time after Mr. Gilliat got charge of the Watering Places under Mr. Bruce they were made a separate branch.

5737.

* NOTE (on revision):—Notwithstanding the fact that there is no law in existence under which the Government can levy rates on account of works constructed for water conservation, irrigation, or drainage, some useful works have been carried out. The works for diverting a supply of water from the River Lachlan into the Willandra Billabong, consisting of (a) an earthen dam carried to 3 feet above the highest flood levels, (b) a cribwork weir (the first of its kind constructed in this colony), and (c) improvements in the channel of the Willandra Billabong to a distance of about 8 miles from its head, have been constructed with a total outlay of about £10,000. The effect of these works has been to give a permanent supply of water throughout a length of considerably over 200 miles of creek in one of the driest parts of the Colony. The weir, though founded in a quicksand, has stood the test of a series of the highest floods. The improvement of the Yanko Creek has resulted in turning the Yanko and Colombo Creeks into permanent running streams, the length of the former being about 160 miles, and the length of the latter about 80 miles. The outlay was about £5,000. Before the improvements these creeks did not run throughout their whole length for more than a few weeks annually. The flood-gate constructed at Lake Cudgellico, with an outlay of less than £1,000, maintains automatically a permanent supply of water in that lake, which has an area of over 4,000 acres. In addition to these works several small town supplies were carried out, and a number of water supply and irrigation Bills which have been before Parliament were prepared.—H. G. McK.

† NOTE (on revision):—The actual cost of the water conservation surveys has been about £33,000, while the cost of surveys in connection with the Sydney Water Supply works has been nearly £35,000.—H. G. McK.

‡ NOTE (on revision):—The charge of management of the Public Watering Places always was in the Mines; the charge of construction and repair of the works was till 1889 under the Works Department.—H. G. McK.

H. G.
McKinney,
Esq., M.E.,
M.I.C.E.
21 Feb., 1895

5737. Did you put down the bores? We completed only two—those at Coonamble and Bourbah.

5738. What year were they completed in? Last year.

5739. *Mr. Humphery.*] Can you suggest any changes in the departments that would tend to economy without impairing efficiency? I think if a distinct line were drawn between the duties of each department it would be advantageous to all. It seems to me it would be a logical way of dealing with the question to have harbours, navigation, and all matters connected with dredging and docks under one department, river conservancy and water supply to country towns and drainage under another, roads and bridges under another, and the railways under another. Then there would be a broad line between every two departments. At the present time you will find questions of water supply often dealt with by the Harbours and Rivers Branch, drainage by the Roads and Bridges, and occasionally water supply by the Roads and Bridges. In these days when people are supposed to make a study of certain subjects it seems reasonable to think that you would get more good out of a man by employing him solely in the direction in which his special training lies.

5740. In what manner would the expenditure be lessened, supposing your suggestions were practicable? I think a great deal could be done in connection with the Harbours and Rivers Department, but I understand that this department is being reorganised at the present time. I fancy it would not be difficult to show there might be a very considerable economy effected.*

5741. Can you particularise? To go into the details would necessitate my going into the duties of the different members of the Harbours and Rivers Department, and I am afraid that would scarcely be considered a proper thing to do.

5742. *President.*] Although the work you have done in your department is not at present of a revenue-producing character, still the effect of the survey of these 50,000 square miles of country will be seen eventually in the increased prices which the land will realise, and places that are now not suitable for population will become suitable for a large population on account of the advantages afforded by irrigation? Undoubtedly, and of course independent of the direct revenue that the Government may obtain there will be the indirect revenue due to increased settlement.

5743. Your experience in India is of great value to you in coming to these conclusions? Undoubtedly.

5744. I suppose the scientific skill acquired in India is of a more superior character than can be acquired here? The irrigation works are on a greater scale, and are of a much more complicated nature than any that have been contemplated here or are likely to be constructed. In India they have much finer rivers with a far larger supply of water, and the works, necessarily, must be larger. In addition to that, they are much more complicated owing to the circumstances of the case. For instance, in the Ganges Canal they have had to provide for rivers flowing over the canal, for some flowing under it, and in one case for a river flowing across on a level.

5745. *Mr. Humphery.*] Were you in the Civil Service in India? I passed the competitive examination at the India Office in 1868.

5746. How many years' service had you? About ten and three-quarter years'.

5747. What was your position? I entered as assistant engineer, and I was acting executive engineer at the time I left.

5748. Have you given any consideration to the system of appointments and promotions to the Civil Service of this colony? Certainly; I could not help comparing them with what I had seen before and knew to be in existence in England.

5749. With what result? I certainly considered the system here was very much behind the systems in either England or India.

5750. Are you familiar with the systems in England and India? Yes.

5751. In what respect, generally, do they differ from the systems of appointment and preferment here? There the general rule is that appointments are made by open competition, and there is a special examination held for each branch of the Service, the subjects being those that would be useful in the after career of a successful candidate.

5752. By whom are the appointments recommended in the Indian Service? They are made by competition, as in the English Service.

5753. By a Board? They are made by the Civil Service Commission in London.

5754. In your opinion would it be better to have Civil Service Commissioners here to regulate all appointments and promotions in the Service? I think so, decidedly.

5755. Would it, in your opinion, be better to have a Board of that kind comprised of high officials in the Service, or composed wholly of persons outside the Civil Service? Well, I have not thought out that matter carefully, but the impression I have is that it would be better to have the Board composed altogether of persons outside the Service.

5756. What are your reasons for that conclusion? I am inclined to think that a Board so composed would be in a position to judge from an entirely impartial standpoint.

5757. *Mr. Teeco.*] In the event of the Service being regulated as you suggest, would you have promotions to follow a classification, or would you have each individual case dealt with by the Board—each individual increase in salary? There certainly should be a classification for each particular branch of the Service. They work on that system in England and India. Where there is any considerable number of men in any branch they are regularly classified under different grades.

5758. And you think it would be desirable under such a system to fix the minimum and maximum age for entering into the Service? Undoubtedly.

5759. At about what age, roughly speaking? In both the Indian and English Services they vary the age according to the nature of the employment. There are some branches of the Public Service in which they insist that candidates shall have outside experience before they come into the Service, and their limit of the age is placed high. For instance, in the appointments of Irish county surveyors—I don't know whether it is the same in England—they won't take men under 26, but they will take them up to 36 or 40.

5760. Then they would be already competent men? Yes; it is insisted on they shall have practical experience on works.

* NOTE (on revision):—The form of the answer here given is due to a remark of a member of the Commission that amalgamation of the Water Conservation Branch with another branch dealing with cognate subjects might be productive of economy.—H. G. McK.

MONDAY, 25 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
 JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Joseph Barling, Esq., Under Secretary for Public Works, sworn and examined:—

5761. *President.*] We hear that you have been reorganising your department? Our reorganisation scheme is nothing like complete yet. A statement was put in the papers recently showing the lines on which we are proceeding. Mr. Young has given me instructions to reorganise the department on certain well-defined lines—first, by amalgamating the staffs as much as possible. We have different branches of the Public Works Department. First, there is the Ministerial office, which, of course, controls the whole establishment. That department is headed by the Minister. Then there is the Land Valuation Branch, the Harbours and Rivers Branch, the Roads and Bridges Branch, the Architect's Branch, and the Railway Construction Branch. These are our branches. It has been the practice until the present time for each head of a branch to manage his own accounts. He is a public accountant under the Audit Act, the money is placed to his credit, and he deals directly with the accounts. One of the propositions in connection with our reorganisation scheme is to completely amalgamate the whole of the accounts. We have now an accountant in each branch, with the exception of the Land Valuation—one in the Harbours and Rivers, one in the Architect's Branch, and an accountant in each of the other branches. The Minister directed that these branches should be amalgamated, thus doing away with the necessity of having a number of accountants, and putting all the accounts under the control of one accountant.

J. Barling,
 Esq.
 25 Feb., 1895.

5762. The staff would not be increased by the proposed scheme? On the contrary, it would be decreased.

5763. The different staffs would be welded into one? Entirely.

5764. And there would be a number of officers whose services would be discontinued? Yes; and this will apply to some of the more highly paid officers. It applies to the paymasters and to the examiners of accounts, and there are other ramifications besides which will tend to produce economy.

5765. Have you been able to find out roughly what economy is likely to be effected by this scheme of organisation? Only to a very rough extent. After the Minister gave me these instructions, the first thing I did was to examine every member of the staff myself. Some I did not know—they had not come in contact with me. I had every officer before me and his work, so that when the reports came before me I should have an accurate knowledge of the staff myself. I then appointed a sub-board, consisting of the accountant, the assistant accountant, the paymaster, the examiner of accounts, and the officer in charge of the statistical work, being the officers I proposed for these positions. I appointed them a sub-board to advise me in the matter, and I gave them very specific instructions, based on the lines laid down by the Minister. They were first to consider what office was required, and then to select from the staff the officers whom they thought best fitted for the positions. I told them not to take into account length of service or any other consideration, but fitness for the work, and least of all the salaries at present obtaining, but to allocate the salaries according to the value of the respective duties to be performed. That sub-board has met a good many times, and the report is in my hands, but it has not yet been considered. I then appointed another sub-board to deal with the clerical branch of the Service on matters outside of the accounts, and I gave similar instructions to this sub-board that I gave to the first. I selected the present chief clerk, whom I proposed to recommend for the new office of accountant, to go through the clerical branch, together with the chief clerk of the Harbours and Rivers Branch (Mr. John Portus), who is the best man for the position of chief clerk, and Mr. Selkirk. These three gentlemen I gave the same instructions to as I did to the others, and I told them to go through the office and report on the lines I have indicated. They have done so, and their report is now ready. I have not yet had time to look at it. When I have considered both the reports, I will then call the Board of Reference. This Board was appointed some years ago. It consists of the heads of branches—the Engineer-in-Chief for Harbours and Rivers, the Engineer-in-Chief for Railway Construction, the Commissioner for Roads and Bridges, the Government Architect, and myself. I am chairman of the Board.

5766. There are five altogether on it, are there not? Yes. We were to deal with these reports this afternoon, but my coming here has prevented it. After we have dealt with the reports we shall then make our recommendations to the Minister.

5767. The new salaries will be readjusted? Yes, and a very considerable reduction will, I think, be the result. I have found very great discrepancies in the salaries, of which I will give you instances. The record clerk who is in the Roads Branch was examined by me, and I found that his salary was £267 10s. When his assistant came in I asked him what his salary and his duties were, and he said, "I am the assistant of the record clerk, and act under his instructions, and my salary is £281." The head of the division was getting considerably less than his assistant. This arose out of the fact that the assistant had been a permanent officer in the department for nearly thirty years, while his chief had been only fifteen years in the department as a temporary officer. It was a sort of survival from an ancient past. Owing to the department being divided up into branches, these things did not come directly under my attention. Another case was that of a book-keeper who was getting £290 a year, while another equally good, if not better, man was getting £150. All these anomalies will be adjusted under our scheme.

5768. You disapprove of salaries being increased solely by length of service? Yes, I do. I think it is an utter mistake.

5769. And you disapprove of seniority being the chief claim for vacant positions? Entirely so, unless the conditions be equal. If there are two claimants of equal merit, the case would be different. I consider merit to be the prime thing, and I think that promotion based on seniority only would be likely to work most disastrous results.

5770. If you had occasion to reduce salaries, has it occurred to you that it would be a good thing to have salaries adjusted in classes? Yes; I have drawn up a list of draft regulations for the department. Under the Civil Service Act each department is at liberty to draw up its own regulations. The 7th section provides for regulations to be made by any department. [*Witness reads regulations.*] The same operation is going on in the professional branch. We are reorganising the professional branch as well as the clerical branch.

J. Barling,
Esq.
25 Feb., 1895.

5771. Do you consider that the duties of registering and recording clerks are exceedingly onerous? I consider that a record clerk requires more intelligence than an ordinary book-keeper. I am not referring to accountants. A man who keeps records, to be efficient, ought to have in his mind the whole subject of the papers. He should have a good memory and take an interest in his work. It is difficult sometimes to know, when you want a paper, what particular paper answers your requirement. The record clerk should be able to suggest what is wanted. I consider that it requires a man of higher powers to make a good record clerk than to make a book-keeper.

5772. *Mr. Teece.*] You do not expect a man to remember all there is on the papers, I suppose? Certainly not, but our records are kept in such a way that it is a very necessary thing for a record clerk to have a good memory. It is not possible for him to remember the contents of thousands of papers, but it is possible for him to remember where information is contained, so that he may readily find it.

5773. Do you record everything? Yes, practically everything.

5774. Do you think it is worth the trouble? It is difficult to say what we should record and what we should not. I have sometimes noticed that very important things have arisen out of very unimportant matters. It would be rather dangerous to lay down the rule that an officer should record this and not that, and so on. You will see, I think, if you visit the Works Department, that we ought to record all these papers.

5775. Could you form an estimate how many inquiries are made with regard to the papers that are recorded, either by Parliament or by any other source? I could hardly form an estimate, but the inquiries made are simply innumerable by Members of Parliament or others.

5776. How many communications on an average do you receive every day? In 1894 we despatched documents amounting to 44,350. We received 73,796. Then there were also 45,349 vouchers, making a total of 119,145 documents received, and 44,350 documents despatched. That makes a grand total of 163,495. I do not reckon the vouchers sent out of the office in this number.

5777. These require certain expressions proper to each, do they not? Yes, and the vouchers require special care in drawing up.

5778. Are these documents typewritten? We use typewriting a good deal; sometimes they are typewritten and sometimes not.

5779. Are they on an orthodox sheet of foolscap? Yes, generally. It is more convenient for registration. Little slips of paper are more apt to get displaced. Letters are generally sent away on single sheets of foolscap. Most of our letters are written on foolscap. Anything that only requires one sheet has only one.

5780. I see that the clerical division has been rearranged, so that you have been at work on reorganisation for some years? Yes. When I first became Under Secretary I rearranged the Record Branch, because I found papers were being recorded two or three times quite unnecessarily. We saved something like £1,100 a year at once.

5781. In the reconstructed column of the Estimates I see there are twenty-nine clerks mentioned after the Chief Clerk and Secretary to the Tender Board, who, I suppose, are ordinary clerks. They begin at a salary of £425, and go down to £125? These Estimates really do not give a correct idea of the number of persons in the department. There are a considerable number on the temporary staff.

5782. You might let us know what is the number you have now? At the present time we have on the permanent and temporary staff; 503 officers, drawing salaries amounting to £128,613. On the professional permanent staff we have 97 officers and on the temporary 260. On the clerical staff we have 70 permanent officers and 76 temporary officers, including messengers and cleaners, making a total of 503. In these numbers I have not included the two Boards of Water Supply on the Hunter River and the metropolis.

5783. *Mr. Teece.*] They are under separate management, are they not? Yes; but under the control of the department.

5784. They are all administered by you? By the Minister.

5785. Do they make periodical reports? Yes; which are laid on the table of the House.

5786. Once a year? Yes; as provided for by the Act.

5787. If anything goes wrong I suppose it is reported to you? Yes; the Minister has to accept all contracts, they cannot accept contracts. The contracts must be approved of by the Minister before they obtain force.

5788. *Mr. Storey.*] The numbers you have given us do not include the dredge service or the docks, do they? No; the dredge service consists of 436 persons, while the dock establishment consists of 303; but I should say that this is a very varying number. It is just about what we have now. The men are taken on and discharged as the work goes on. There are two docks—the Sutherland Dock and the Fitzroy Dock. If you turn up the Estimates and look at the dock establishment you will find a very small amount in comparison with my returns. We take on men as we require them. If a number were taken on for the dredge service their wages would be charged to the Dredge Vote. The dock is by no means a self-supporting establishment. The Sutherland Dock was built principally for ships of war, the idea being that having this large dock, which cost a very great sum of money, the safety of the whole Colony might be assured, because in case of the disablement of a man-of-war, unless it could go into dock, it might mean danger to the whole port, so that we look upon the dock as an expense which has to do very largely with the defence of the Colony.

5789. *President.*] When warships make use of the dock I suppose they pay for it? Only for the stores they use and the wages disbursed.

5790. *Mr. Storey.*] They do not pay dock hire at all, do they? No.

5791. When you say it is not self-supporting, do you mean that the expenditure, including interest, is more than the revenue? Yes; I think it is a very right thing to look at it in the way we do. I mentioned it in the Annual Report of the Public Works Department. I drew attention to that particular fact. The paragraph reads as follows:—"These docks (the Fitzroy and Sutherland Docks) cannot be looked upon in the light of revenue-producing concerns, their chief duty being in the direction of facilities afforded for the docking of ships of war, and in this view they may be regarded as part of our naval defence. They are also largely availed of for the repairs of the Government dredges, tugs and punts, which are employed on the various harbours and rivers of the Colony."

5792. *President.*] Under the head of Dredging Service, page 89, in the readjusted column, there are fifteen masters and chief engineers, whose salaries range from £380 to £268? Yes.

5793. What is the occupation of the masters? The master is supposed to remain on board the dredge and to direct the whole of the operations. J. Barling, Esq.
5794. On board the dredge itself? Yes; he is a qualified mechanical engineer. The master has nothing to do with the steering. The dredge does not move. 25 Feb., 1895.
5795. What are the duties of the captain of a dredge steamer? They are just like those of an ordinary captain.
5796. He is one of those men who are paid from £380 to £268? I think the outside salary paid to the captain of a tug is £279. The steamers have a regular captain who is a nautical man.
5797. In addition to the master of the dredge? Yes; undoubtedly.
5798. A sailing captain? Yes.
5799. Could not one man do it? You are introducing a question of management. I think I am correct in saying that in the old country the masters of the dredges are simply sailing masters; but here it was thought that this was a wrong system, that the master of a dredge ought to be a qualified engineer, so we differ from the practice which prevails in the old country in that way. It is a very moot question whether it is necessary to have an engineer, a highly qualified engineer in charge, because it is very rough machinery they have to manage.
5800. It does not seem to me to require very great engineering skill? I think it is a matter that is very open to question as to whether ordinary masters could not manage the dredges.
5801. This part of the service has not passed under your improving hand? Not this time. Some years ago, when I was in the Harbours and Rivers Branch, Mr. Hickson, Mr. Darley, and myself were appointed a Board to reorganise the Dredge Branch. We made some recommendation for a reduction of the crews, salaries, &c., for the dredges.
5802. Has this anything to do with the Marine Board? No.
5803. Would it be a reasonable thing to put the dredges under the Marine Board? That question was considered some years ago, and the engineers protested against it very strongly. They urged that the dredges performed a very important part of the improvements of the harbours, and the arguments of the engineers were to this effect: "You expect us to carry out harbour improvements, and you take away our tools; we must have the control of these machines." I am inclined to think that this is the right view to take of the case. It requires a marine engineer to indicate where the channels should be cut, and it is very desirable that he should have the control of the machine. At present these machines are directly under the Engineer-in-Chief for Harbours and Rivers. If you were to amalgamate them with the Marine Department, I hardly know where would be the saving. We have at the present time eleven ladder dredges in commission, seven suction dredges, seventeen grab dredges (something like a Priestman's crane), twenty steam tugs, varying from the size of the "Thetis" and the "Ajax" to very small tugs; and then there are others, making altogether sixty-five vessels of all capacities, in and out of commission. That is a plant deserving of a superintendent. No private company in the world would have an inferior man to look after a plant of that description.
5804. Do you consider length of service in giving promotion? Length of service is, of course, considered, but in filling a vacancy we would endeavour to get the man best fitted for it.
5805. Tell us the basis upon which these salaries are given;—are they graded on salaries paid outside? No, I think not. The officers would probably be found to be paid very well on that comparison.
5806. Looking at the general run of things in the outside world, do you not think there would be room for a little economising? I should not like to answer that just now. There will be a very great difference in the salaries when the reorganising scheme is complete. I have made myself pretty well acquainted with the salaries prevailing outside, and the conclusion I have come to is that the middle rank officers are paid considerably more than persons occupying similar positions outside, but that the higher officers are not paid in the same proportion as those outside. In grading the salaries, that has to be borne in mind. I do not wish it to be inferred that I am asking that salaries should be increased.
5807. Would you like another opportunity, when you have your scheme completed, to come again? Yes.
5808. When would you be ready? I think the Board will meet on Thursday. The clerical branches will be ready, perhaps, next week, and the professional branches will take longer. I think there will be considerable room for amalgamation there. It is proposed to amalgamate the Roads and Rivers Branch with the Harbours and Rivers Branch. Mr. Darley will go to the Water and Sewerage Board, and Mr. Hickson will take his place at the Harbours and Rivers and Roads and Bridges, which will then be combined. We shall be able to amalgamate a great deal on that account. You might ask how can Mr. Hickson manage such a large branch. We are going to hand the sewerage works over to Mr. Darley, with the approval of the Minister. He will be directly responsible to the Minister, and I think, although the saving in his salary is not worth speaking of, it will give an opportunity of reorganising right through, and enable us to save, I should hope, at any rate, £10,000 a year, and, perhaps, a good deal more.
5809. In professional salaries? Yes. In 1888, when I re-organised the Records, as far as I could at that time, by doing away with double and treble recordings, we saved about £1,100 a year. In July, 1893, the clerical staff was again reduced, and we dispensed with six officers, and saved £1,746 a year. In October, 1894, a further reduction took place, which resulted in a saving of £2,532 per annum. The services of thirteen officers were dispensed with. The clerical staff has been so pared down that it really did not give any reorganisation scheme a chance to cut it down much more, but in this further reorganisation scheme I think we shall save £3,801 a year, by dispensing with the services of ten or eleven more, some of them high-salaried officers, drawing £400 or £500 a year. Without going to the professional branch there has been a saving since 1888 of £9,367 a year. Some of the salaries have been considerably cut down. We propose to do away with the anomaly of giving one man £290 a year and another £150 for doing exactly the same work.
5810. Have you acted on the principle of having grades of employment, with a maximum salary for each grade? No, I could not carry that out very well, except on very broad lines. I would like to read you the regulations which I have drafted, which are as follows. [Witness reads regulations.] There may be a man, in a lower division, of exceptional qualifications, and when a vacancy occurs in an upper division he may be exactly the one wanted to fill a place, but it would be out of the question to ask him to pass a University examination. In ordinary cases the fact that a man has to pass the examinations mentioned in these regulations will nip political patronage in the bud, for if a man has passed these examinations it will prove, however he gets into the Service, that he has the necessary qualifications. I have statutory rights

J. Barling,
Esq.
25 Feb., 1895.

rights under the Act to make any recommendation I like to the Civil Service Board as to the appointment and promotion of officers. [*Witness reads regulations.*] This is a proviso quite in accordance with the Civil Service Act. Now and then it is necessary to take in men whose wide experience of business matters outside enables them to deal better with the class of work required than men inside the Service could do. Take the case of a land valuer. A man inside the Service would not be likely to fill such a position well. He must be in close touch with commercial transactions outside in matters relating to land. There is no one I could recommend to such a place in the office, as I once told the Minister. I should never dream, under ordinary circumstances, of employing anyone in the office to do that work.

5811. *President.*] There has been a good deal said in some of the other Colonies in favour of doing away with patronage by having an independent Board who could fill vacancies. Of course your Board of Reference and the organisation you have just sketched out would not take the place of such a Board of Commissioners? I have heard that it sometimes does not work very well. I have heard of absurd things taking place in neighbouring Colonies because the Commissioners are not in touch with the Service, and you find sometimes that they put round men in square holes and *vice versa*.

5812. Under your scheme you require a Board of Reference in every department? Yes; but it does not entail any further expense beyond the employment of the secretary.

5813. *Mr. Teece.*] But under your system there will be no uniformity, since each department would have a separate Board? I see that difficulty; but in order to carry out a general scheme an Act of Parliament would have to be passed. Now, we might have to wait till doomsday for that, whereas this could be enforced in our department at once.

5814. *Mr. Humphery.*] That would only cover one department? Yes.

5815. *Mr. Teece.*] How would you act if the Minister sent down word to you that such a person should be appointed a clerk? I see that difficulty, but it is intended to have this scheme approved by the Executive Council.

5816. *President.*] In Queensland the Chief Commissioner is an old Civil servant.

5817. *Mr. Teece.*] In the Harbours and Rivers Branch there are a number of cases where the forage allowances range from £30 to £100;—what are these for? The allowance to Mr. Darley of £100 is knocked off.

5818. Then there is one for £50? The officer who draws that has a large district to travel over, and he may have to keep a horse.

5819. Does he keep a horse? I think there is no doubt about it.

5820. Then there is another here at £100? He has to travel about too.

5821. Why should it be £50 in one case and £100 in another? Because one might have to keep two horses and the other only one.

5822. Has Mr. Keele to travel like that? I think he has. He is in charge of the works at Richmond River and has to go over a large district. The other man would not have so much travelling to do and he could take steamers.

5823. Then Mr. Vernon, the Government Architect, has £100 for forage allowance? That is part of the agreement made when he was first appointed Government Architect. He has to keep a horse, and I am sure he does, and he has to visit public buildings in Sydney.

5824. But a horse can be kept for very much less than £100 a year? He has to keep a man too.

5825. You can take your horse to a livery stable and have it attended to for £1 a week? I dare say, but our officers keep their horses at their own place and a man too. However I think it very probable that these items will be all knocked off.

5826. Do you think £100 is too much for forage for a horse? Yes.

5827. There is a constantly occurring item, "for an equipment allowance"? That would mean a horse and buggy—sometimes two or three horses.

5828. You do not want to buy a horse and buggy every year? They move about continually. I do not think it is a large allowance for the work done. These officers have very large districts to travel over and have sometimes to keep two, or three, or four horses. I will give you a return showing exactly what each officer is expected to do for this equipment. [*Return subsequently handed in.*]

5829. The amount begins with the Engineer-in-Chief who has £100? He has not to use a horse to anything like the amount that the roads' officers do.

5830. He has to use one? Occasionally. He uses one chiefly to go to the sewerage works which are spread over Sydney. But when that work is handed over to Mr. Darley there will be no necessity for such an expenditure, and it will be knocked off.

5831. On the Estimates for 1895, under the head of roads, bridges, and sewerage, I do not see that equipment allowance provided? It is paid out of the general vote for roads. If you turn up the road vote you will see it.

5832. Is that out of the £250,000 for the half year? Yes. The officers are continually travelling.

5833. Is that a loan vote? No; it is a revenue vote.

5834. Why is the equipment allowance charged to that vote when the salaries are not charged to it? You see some of the salaries but not all—some are charged to the lump vote.

5835. Is that because some of the officers are not permanently appointed? Yes.

5836. So that they may be kept out of the sight of Parliament? I do not think it is for that, but in order that they may be easily dispensed with when their services are not required.

5837. When the vote of £250,000 is passed by Parliament the impression on the minds of Members is that it does not include anything paid for salaries? It has been known for very many years that there is a temporary staff.

5838. This equipment allowance is paid whether the officers have occasion to use it or not? Certainly not. If an equipment allowance is put down for an officer who does not use it, I should say it was dishonest for an officer to take it. If I knew such a case I should draw attention to it.

5839. Have you always means of knowing whether the officers use horses? I have pretty well the means of knowing. In the case of the roads officers they could not do their work without horses.

5840. This equipment allowance covers for forage as well, does it not? Yes; I will prepare a return which will show exactly what it is.

5841. I noticed in the clerical division that there are a number of clerks—I do not speak now of the chief clerk, because a man in a responsible position presumably possesses knowledge which enables him to fill that position,—but I find that under him there are clerks ranging from £425 a year downwards? We propose to deal with that. The top salary you name will drop out altogether.

5842.

J. Barling,
Esq.

25 Feb., 1895.

5842. You think the salaries named are too much for mere clerks? I think that some of the clerks are too highly paid.
5843. There are four accountants? That will be done away with.
5844. There is a clerk at £403? I propose to make him examiner of accounts.
5845. What are you going to do with the four accountants? The first I propose to make a paymaster or assistant accountant; it is not quite settled yet. The next I propose to make paymaster. Then there is another gentleman who gets nearly £400. I propose to dispense with his services altogether. I do not know what position to place him in. There is another at £335 who, I consider, is altogether overpaid, and probably he would have to come down to £200. Then the examiner has £403 a year. I propose to make him the examiner for the whole department, and give him the same salary. I propose to make the next his assistant.
5846. What duty does the secretary of the Parliamentary Works Committee perform? I have nothing to do with him.
5847. Who is his superior officer? The Chairman of the Parliamentary Works Committee.
5848. Did he appoint him? No; he was originally appointed by the Government. We have practically nothing further to do with him.
5849. Would the Chairman of the Public Works Committee be able to dismiss him? I think the Government would have to dismiss him, but it would have to be entirely on the recommendation of the Chairman. I should take no cognizance of the matter at all. The Committee would not communicate with me, but with the Principal Under Secretary.
5850. You employ a great many skilled and unskilled manual labourers? Yes.
5851. What wages do you pay? It varies very much. From 7s. a day for unskilled labour up to 14s. and 15s. for inspectors. I will send you in an exact list for your information, showing the wages paid to skilled and unskilled labourers, carpenters, bricklayers, and so forth. [*Return subsequently handed in.*]
5852. You have told us that you consider some of the salaries paid are excessive? I think so.
5853. And that you propose yourself to make some recommendations which will have the effect of reducing them? Yes.
5854. And also of reducing the number of persons employed? Yes.
5855. Have you been responsible for these Estimates that have been submitted from year to year? Only to a very limited extent.
5856. You take the initiative, I suppose? Not beyond this, that the Treasury sends to me for the preparation of the Estimates, and then the heads of the different branches forward to me their reports, and these are sent in to the Minister.
5857. Then the Estimates are sent to you by each head of a branch? Yes.
5858. And do you subject them to revision? With the Minister.
5859. Have you proposed these reductions? Yes.
5860. Had you previously proposed them? I cannot say that I had, because the officers had not exactly passed under my review.
5861. Do not the whole of the Estimates pass under your review? Yes; but I did not so well know the work of the different men. I am only proposing the reduction of some of the salaries because we are able to amalgamate. If a man has charge of the accounts in a branch he ought to be paid more when he is wholly responsible for them than when he is brought under this scheme and the responsibility is taken away.
5862. The Ministers have from time to time requested that the Estimates should be prepared with as great a regard to economy as is consistent with public efficiency? Yes.
5863. You now tell us that the salaries are to be reduced;—have you told the Minister that? I have done that a great many times, as you see. We have reduced again and again, but I could not see my way to doing it now without a reorganisation scheme.
5864. Is it not a fact that this is not a new thing, that it has been the cause of remark for many years that the departments are overmanned and overpaid, and that the public has demanded a greater regard to economy, and that Ministers have said that regard should be had to economy in submitting these Estimates;—I ask whether you have had that in view? Continually; and, as I pointed out, we have, since 1888, been reducing year by year. Some of the officers have been sent away altogether. When I first came we had a chief accountant at £800 a year. I pointed out that that was unnecessary. He went—others went also who had considerable salaries. You cannot jump at a thing all at once. I have been trying year by year to bring about this reorganisation.
5865. Would not these reductions be due, in a great degree, to the reduction in the public works? Certainly not. A great many reductions in the professional branch, especially in the Railway Branch, have been due to that.
5866. Take the case of railway construction;—the vote does not seem to be much less? They are engaged in preparing schemes to be submitted.
5867. Can you tell the Commission how the temporary clerks came to get into the Service? They have been very often nominated by Ministers. Speaking for myself, I do not remember having recommended a single one. Unless you could give me any particular name I could not tell you.
5868. Have their services been required? I should not like to say that they have been required in every case. If the Minister wants a man put in, work has been found for him.
5869. In other words, people have been put in through political influence and kept there? Yes; but I do not think our department is an out-standing example of that.
5870. Have any number of temporary clerks been sent to you without any request on your part for them? Yes.
5871. And presumably you did not want them? We could have done without some of them.
5872. *Mr. Robertson.*] You have the Government Architect's Branch in your department? Yes.
5873. What is the general nature of the work undertaken by this branch? This (*handing in document*) is a list of the works which they have in hand now or are preparing to call tenders for. The list comprises court-houses and gaols, lock-ups, police stations, post and telegraph offices, public offices, public buildings. The full list of the new buildings completed during 1893 will be found on page 12 of the report of the Department of Public Works for that year.
5874. The staff in this department is a fairly large one, is it not? When we have reorganised it we shall be able to do away with some, but when we have done that I do not think there will be too many. The Minister has told us not to pare down to the last fraction, but to keep a competent staff. 5875.

- J. Barling,
Esq.
25 Feb., 1895.
5875. Do you not think that all the public buildings in connection with the Service should be under one branch? You are referring to the public schools—I should think so. I should think it could be very easily managed.
5876. Have you ever considered this matter with regard to making any recommendation? The public schools are outside of my department. It would not do for me to recommend that the work of another department could be taken over by ourselves, but it has been often talked over. It is more a matter of policy for the Minister to decide.
5877. Being at the head of a very large department of the Civil Service, would you recommend to the Minister any saving that commended itself to you? Yes, certainly; it has been mentioned over and over again, but I could not make an incursion into the department of another Minister.
5878. But you think that all the buildings should come under one branch? I think so.
5879. Either that the works should be absorbed in the Public Instruction Department? I should say it would not be a proper thing for the Public Instruction Department to absorb the work of the Public Works Department. What would they know about gaols, court-houses, and so on?
5880. But the Public Works Department ought to know something about all the public works in the Colony? Yes; I think so certainly.
5881. Have you any doubt that such an amalgamation would be followed by a considerable saving? I really do not know what the cost of the Educational Department is on that head—I have not gone into it; but from what I know of the amalgamation of the different branches I should think there ought to be a saving.
5882. Would you estimate that the erection of buildings carried on through your department is greater or less than the erection under the Department of Public Instruction? I should think it would be greater.
5883. In your branch I find that there are four clerks of works, and in the Department of Public Instruction there are six clerks of works? The Architect's Department has been pared down very much the last year or two, both in numbers and in salaries.
5884. Among the clerical officers of the Government Architect's Branch there is a chief clerk drawing £560? Yes.
5885. Do you propose to continue that officer? I do not see the necessity for it under our new arrangements. I might mention that Mr. Vernon has a very great regard for that officer. He thinks that he is a most efficient one.
5886. You have an accountant at £394? I propose to do away with the salary. He is a very good man.
5887. Is it an office you can dispense with? Yes, under our new arrangements.
5888. Then there is the correspondence clerk? The officer in question is something more than a corresponding clerk. He has the whole business of the branch at his finger ends. Mr. Vernon would be simply lost without him.
5889. Then there is Mr. Marks? We should have to keep the office, but we should not pay the present rate.
5890. It would be considerably reduced? Yes.
5891. You have an assistant to the record clerk at £245 a year? That would be altered very much.
5892. You think that that officer is too highly paid? Yes.
5893. Here is a clerk who makes out vouchers and keeps the accounts of contracts and cheques, &c., and receives £312 10s.? He would most likely be reduced. He is an excellent officer, whom I would be sorry to see reduced.
5894. Then you have an assistant examiner? We abolish that office altogether.
5895. On the temporary staff you have a book-keeper at £245? He would be very much reduced.
5896. How many Record Branches have you in your department? Now we have only two; when I first became Under Secretary that is the position I altered. I effected a very considerable saving there. The second Record Branch is that at the land valuer's. On the surface it would not appear necessary, but the officer in charge of that branch has to deal with very confidential matters, and his papers should not be incorporated with the general papers of the office.
5897. How long have you been Under Secretary? Nearly seven years.
5898. Does the land valuer require two draftsmen? Unless more works are carried on I think the staff can certainly be reduced.
5899. Is there much work being done in the Valuation Branch now? Yes; but it is more work of squaring up old matters. That, however, means a very great deal. It means tens of thousands of pounds to the Government.
5900. There is a first clerk at £380;—do you think that this can be reduced? Unless a change takes place I think a good deal of reduction might be effected in the staff of that branch. If we carry on works again we shall require them.
5901. How long is it since this branch was actively employed? It is so up to the present time.
5902. At present you say there is very little being done? No. There is plenty of work going on in the way of squaring up.
5903. When you entered the office as Under Secretary you found the department divided up into branches? Yes.
5904. In your opinion were there too many subdivisions? I cannot say that. It was a system that had been in vogue thirty-five years, and was considered by the Government as the best way of carrying on the department. There is a question now whether it is advisable to amalgamate them. It is a matter in which we have to proceed very cautiously. What has brought the matter up now is that an opportunity has arisen for employing Mr. Darley wholly as President of the Sewerage Board. The opinion was expressed in Parliament that there should not be dual offices, and I suggested that advantage should be taken of the change to reorganise the department. I think it will be a success.
5905. Some years evidently after you were appointed you went into the matter of reducing the department? To a certain extent.
5906. And it is to be assumed on account of the steps that you have taken that it was admitted to be a mistake that so many sub-branches should exist? No; I do not think that would be a fair conclusion to come to. When the various departments were established it was considered desirable to have these sub-branches, but I do not see any reason why some amalgamation should not take place now.
5907. You recognise that in the Record and Account Branches at least the policy has been an expensive one? I think it has been. There may still be differences of opinion. It is not desirable in a big department like ours to jump at a thing or to make hasty changes.
5908. Will you furnish the Commission with a list of the Record Branches? Yes. [*List subsequently furnished.*]
- 5909.

5909. And also with one of the Account Branches? Yes. [*List subsequently furnished.*]
5910. Speaking generally, I think you said that the salaries of the middle class are rather high? I think there is no doubt about it.
5911. *President.*] I think you said in speaking of grading that there should be three grades, ranging from salaries of £300 a year down to salaries of 10s. a day? Yes; I think it is better to have a small number of grades, and to simplify matters as much as possible.
5912. Under your chief clerk, who receives £650, you have another clerk at £515 10s.? Yes. With regard to the officer who receives £403, he was recommended for a very much higher salary than that by the late Attorney-General, Mr. Heydon, and the Crown Solicitor. A very strong recommendation was made. He is something more than a clerk. He is a professional man; he is a public conveyancer, and does a large amount of legal business. He is a sort of go-between between the Crown Solicitor and myself. I consider him principally under the Crown Solicitor.
5913. Where did he gain his experience? From the Crown Solicitor's Office. He came on the recommendation of the late Crown Solicitor, Mr. John Williams.
5914. There is a record clerk at £380? Yes, he is the principal record clerk.
5915. That salary is too high? I think it will be reduced.
5916. And the clerk who keeps the Railway Construction Records receives £245 a year? That will be altered, the work is all finished, and whatever takes place reorganisation must take place unless we have a number of new railway works.
5917. The clerk in charge of the correspondence and shorthand-writer is Mr. Holliman? Yes, he is secretary to the Board of Reference, is head of the correspondence, and is one of the ablest men we have in the office. He acts also as my confidential clerk. He was brought up in the English Civil Service. He is an expert shorthand-writer.
5918. What personal supervision do you exercise over the officers? I should only exercise supervision over them when I see the papers that come up to me for Ministerial action. I have but little to do with the accounts at present with but few exceptions; they only come under my notice when Ministerial action is required with regard to them; that is one of the things I propose to change. The professional heads of branches have had too much of their time taken up with mere clerical matters. £1,100 a year is paid to Mr. Darley, who has a lot of clerical work to do in signing vouchers which might be done by someone else, so as to leave him free to do professional work. The same might be said of Mr. Hickson, the Commissioner for Roads. These accounts will come under my notice in future through the medium of the officers I propose to appoint. I shall not sign the vouchers, but the work will come directly under my notice.
5919. How then do you personally visit the sub-branches of the department? I do not do it at all.
5920. Do you receive written reports from the heads of the sub-branches? No; I know what is going on because if anything went wrong it would inevitably come to my knowledge.
5921. Could you say, of your own knowledge, that all the men in the sub-branches have their time fully occupied? I do not know that I could absolutely say that, because they do not pass under my review. In the Harbours and Rivers Department Mr. Darley would have to say that, and probably he would have to ask his accountant.
5922. You could not say whether they were fully occupied or not? No; unless I went personally among them, which would be out of the question, for I have not the time.
5923. There is an officer on the temporary staff receiving £360 4s.? He remodelled the books when he came into the office.
5924. Could not the permanent hands in the office do this work? Not so well; they had not such good outside commercial experience.
5925. That is as much as admitting that the men in the office do their work in such a stereotyped way that you have to go outside to get people to do it properly? I do not think that is a fair way of putting it. There is no harm, now and then, to have an outsider come in and make suggestions.
5926. There is a temporary clerk attending to correspondence—Mr. Forsyth? I think he gets a good salary, but he is a very good corresponding clerk. Give him a minute in the very briefest manner, and he will write a very good letter. I find it very difficult to get good corresponding clerks.

TUESDAY, 26 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
 JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
 THOMAS LITTLEJOHN, Esq., PRESIDENT.

Joseph Barling, Esq., Under Secretary for Works, further examined:—

5927. *Mr. Humphery.*] I think you wish to make an explanation with reference to a proposed reorganisation of your department after the completion of the building you now occupy? Yes. I think it was Mr. Teece and Mr. Robertson who asked why the reorganisation that we now contemplate was not carried out before, seeing that I had occupied the position of Under Secretary for nearly seven years.
5928. *Mr. Teece.*] What I said was, I think, are you responsible for the preparation of the estimates, and if so, why have not the reductions been pointed out to the Minister? It was something of that sort, I think. With regard to the reorganisation, I wish to point out that as early as the 10th October, 1888, I prepared a paper in which I stated, after referring to the reorganisation of the records, which was a simple affair in comparison with the accounts, "I am by no means certain that we cannot still further reduce expenditure by a method of judicious amalgamation in the matter of accounts, but that requires more time and thought than I have been able to devote to it at present. With the Minister's sanction, however, I will still further pursue the subject." That was only a few months after I had become Under Secretary. The reorganisation in the matter of records was carried out, and resulted in a very considerable saving, and in the facilitation of business, but with regard to the accounts the matter was entirely different. That is a matter of very much greater magnitude, and deserves a larger consideration. I think you will hardly realise,

J. Barling,
Esq.
26 Feb., 1895.

J. Barling,
Esq.
26 Feb., 1895.

realise, until I mention it to you, the enormous magnitude of the expenditure of the Works Department. Since the inauguration of our department, some 36 years ago, we have spent from loans and revenue something like 73 millions of money. During all this time I do not think there has been the slightest slur on the department as to the management of the accounts. Looking at it in that light it seems to me that any alteration in the scheme which involves such large interests requires the utmost care. It must be remembered the ramifications of our office extend over the whole Colony, and any failure in connection with the way of checking our accounts or with promptitude in paying vouchers would be a matter of very large concern indeed. I, as practically responsible for making any change, have to look at the question in a most serious light, and pause before entering into rash and hasty changes in such a system. I found it was utterly impossible to carry out the reorganisation of the accounts while our office was constituted as it was some time ago. Our new offices were not then built, and the account branches were so scattered that I could not easily bring them together. I saw that as we had not the necessary accommodation it would be utter failure to do anything in the way of reorganisation then. On my recommendation the Minister of the day approved of the additions to the Works Department; they cost £55,000, and the land £25,000. One of the objects I had in view in recommending these additions was to amalgamate our various staffs. Practically we did not enter into possession until the beginning of 1893, so no steps towards reorganisation could be taken till then. Up to that period the Government Architect's Branch was entirely separated from us. About the middle of 1894 I saw the opportunity to put my scheme into effect. Directly I saw the chance of Mr. Darley being sent to the Water and Sewerage Board I took advantage of it. Mr. Lyne went out of office, and the day he left he sent for Mr. Hickson and told him what I proposed, adding that if he remained in office he would carry it out. When Mr. Young came into office I brought the matter before him, and he has now given his sanction to have the work carried out. I think you will see a clear principle underlying the whole of my management in the direction of amalgamating the different staffs. From that time till now there has been a steady decrease in the number of officers; some of very high standing, who got from £500 to £800 a year, were dispensed with. With regard to high salaries, I said I felt conscious that many of the salaries paid to the middle men were higher than those paid in private employ, but I think I am correct in saying that our men are not by any means more highly paid than the general body of the Government Service. It was really not the policy of the Government in the way of retrenchment to cut down salaries. We reduced the staff by dispensing with the services of officers, but the question had never come up to go through individual salaries and reduce them. The Government rather chose the method of a general percentage reduction.

5929. *Mr. Humphery.*] Exclusive of messengers, the cost of the Accounts Division Branch appears now to be £5,964? You cannot tell the whole cost from the estimates of expenditure. As I explained yesterday, there are a large number of temporary men in addition.

5930. Can you say how many temporary clerks are working in the accounts division? Twenty-one.

5931. How many are there in the clerical division? Forty-three.

5932. What are the total salaries of the temporary clerks? The total is £9,916 for accounts and clerical.

5933. I observe you have thirty-two persons in the permanent clerical division for 1895, and there were thirty-five for 1894;—have three been dispensed with? A number have been dispensed with.

5934. Have those officers left the Service altogether? Left the Service altogether.

5935. Not transferred to other branches? No.

5936. Why have you increased the number of persons employed in the dredge service, exclusive of Harbours and Rivers and Water Supply, Works Department, from 247 in 1894 to 357 in 1895? That is because during 1894 a number of dredges were laid up, and the crews were disbanded for a time.

5937. That made a difference of 110? Yes.

5938. Additional hands? Well, they were hands taken back again after they had been discharged.

5939. Discharged during 1894? Yes.

5940. There was no provision for them in 1894? No; and in some part of 1894 they were taken on again. You will find a reference to that in the Supplementary Estimates.

5941. Why were the dredges laid up in 1894? In view of retrenchment. The revenue was not sufficient to meet the expenses, and it was part of the scheme of retrenchment of the late Minister to disband the dredge crews, and save the money.

5942. *Mr. Storey.*] But the revenue never does meet the expenditure? At any rate the expenditure was far in excess of the revenue, and this was done *inter alia* with the object of trying to balance affairs.

5943. *Mr. Humphery.*] Did the Minister receive a report from the superintendent of the dredge service that the dredges referred to could be laid up without inconvenience? I do not think that was exactly the way in which it was put. We were told we must make a certain reduction in the expenditure, and that applied to the Roads Branch as well. There was an amount of £216,000 written off in the Roads Branch. This was all done in the general scheme of retrenchment, but it was never supposed it would be permanent. It was not the result of reorganisation, such as we are carrying out in the clerical and professional branches by means of amalgamation; it was merely postponing the work till the revenue improved.

5944. Were any urgent works suspended in consequence of this general instruction? At Newcastle some urgent work was suspended, and there was some little disturbance because we stopped the dredge. If I remember rightly they had double and treble crews on the dredges working day and night in three shifts. In Sydney harbour some dredges were laid up, and they have not all been re-commissioned yet.

5945. When re-commissioned, do you take the opportunity of altering the rates of pay? No, the rates of pay have not been altered, generally speaking.

5946. Yesterday you mentioned that the Board of Reference had sent a minute for the consideration of the Minister with regard to watering places and artesian bores? Yes.

5947. Can you say generally what recommendation was made by the Board of Reference? The Board of Reference pointed out that the Public Works Department could take over the construction of tanks and wells, and the carrying out of boring operations, without a penny additional expense to the Government. We could employ our roads officers to carry out the work.

5948. Would the roads officers be capable of seeing that the whole of the watering places and artesian wells were kept in order? I think so, without difficulty.

5949. Without additional expense? I think there might be some little expense in the matter of travelling allowance, but very little.

5950. Does your evidence amount to this: that by the transfer of the Watering Places and Artesian Branch to your department a saving of the whole cost of that branch might be effected? I don't think there would be a saving of the whole cost of that branch. The branch has never been in our department, and I don't know what the expenditure would be. I am referring to the construction and keeping in repair. Of course, there is a question of obtaining revenue, which I don't think it would be advisable for the Works Department to take over. We are a construction department, not a revenue department. I think, therefore, that all we could with advantage take over would be the construction of tanks and wells, and the keeping of them in order.

J. Barling,
Esq.
26 Feb., 1895.

5951. Those already constructed, as well as any new ones that may be constructed? Yes. It is right I should also tell you that the Mines Department were decidedly opposed to the proposals contained in the minute of the Board of Reference, and I think, in justice to them, you should see their replies, although they were never officially recorded in our office.

5952. Did you see the reply? I have seen it, but if I remember rightly I have not had the chance of reading it through, as Mr. Young did not think it worth while to pursue the question.

5953. *President.*] The annual cost of taking care of these watering places and bores is over £11,000? I should not be at all surprised.

5954. Are you still of opinion that the recommendation of the Board of Reference for the transfer of the work done at present in the Watering Places and Artesian Branch should be carried out? I say the work could be done without any additional expense, so far as mere construction and keeping in order are concerned, but, as the matter now belongs to another Minister, I should not like to make any recommendation.

5955. How many roads officers have you altogether? I put in this statement, showing sixty-nine officers in charge and forty-two assistants. [*Statement put in.*]

5956. I suppose they are spread over the whole Colony? Yes.

5957. How do you fix the boundaries of the different districts? They are fixed as nearly as possible to meet geographical convenience. Of course, there is no arbitrary line; I have sent in a map which shows the different districts.

5958. Have you given any consideration to this branch of the Service with a view of reducing the numbers? We have certainly given a great deal of consideration to that question. The same steps are being taken with regard to the professional division as have been taken with regard to the clerical division—that is, with a view to the amalgamation of the Roads and Bridges and Harbours and Rivers Branches. Mr. Hickson has appointed a sub-Board who are now engaged in going through the whole department, excluding the Architect's and the Railway Construction Branches, and I hope next week to have their report so as to be ready for the Board of Reference for the reorganisation of the whole department.

5959. The Board has not had time yet to give much attention to the change that will be necessary? No.

5960. Can you say in what direction it is proposed to make changes? I think you are aware that some couple of years ago the Colony was divided into districts, and the divisional engineers had their headquarters in Sydney. They were then near at hand, and it was considered they could more readily reach the parts of their district from Sydney. When Mr. Lyne came into power he was not satisfied with the arrangement, and I think the last Civil Service Commission drew attention to it. Mr. Lyne decided they should go back to their districts and reside there, as he thought they would better grasp the work under them than if in Sydney. I am sorry to say that in my opinion the whole thing has been a failure, and I think Mr. Hickson will agree with me. Instead of facilitating the work it has retarded it. In a recent case two or three months elapsed before I could get a reply from a divisional engineer, and Members of Parliament were impatiently waiting for the report. But the delay was nobody's fault, but the fault of the system. The divisional officer put the papers on one side, as he wished to see the place himself, but having an enormous district he had not time to attend to them at once. The present system of making divisional engineers reside in their district has broken down, and I have no doubt it will be completely altered.

5961. In your view, what should be substituted for the existing system? I think we must depend upon the local officers themselves and communicate with them direct, and they must answer back direct; this would save a great deal of time. I was talking to the assistant engineer this afternoon on this subject, and he quite agreed with me. His idea is to do away with the divisional engineers altogether, and make them resident engineers of a superior order, so that if anything occurred requiring a special report in a resident engineer's district we could send them to attend to it.

5962. I don't quite gather, from what you say, whether there would be any advantage by the change you propose, excepting in name; you would call the divisional engineer a local engineer? I don't know what the name would be; they would be superior engineers, but they would generally have to attend only to their own districts. But on account of their being experienced men we could occasionally employ them if anything went wrong in a resident engineer's district, and send them to make an independent report.

5963. Is this your idea: by making the divisional engineers superior resident engineers you would be able to dispense, probably, with some of the resident engineers now on the staff? Yes; any of our resident engineers who were not up to the mark would have to go.

5964. Have you many engineers of that character on the staff? I should not like to say that. It is only very seldom that I am brought into personal contact with them; but if anything against one of them is reported to me, I write a sharp minute to let the officer know that the matter has been brought before the Minister.

5965. Have you considered the advisability of your Roads and Bridges officers taking charge of the construction and maintenance of public watering places? I have considered the question, and am quite prepared to say they could undertake this additional duty.

5966. Are you aware that the evidence you have just given is in direct conflict with opinions expressed by the Mines Department? I am aware of it.

5967. Notwithstanding this, do you maintain that your view is the correct one? Of course I am acting on the evidence that comes before me in the office, and I have no doubt of it. It should be understood that I am not recommending this course, but I think it could be adopted as far as maintenance and construction are concerned. But, as I have already said, in justice to the Mines Department, I think you should see their reply. You will understand, too, that our department is big enough in all conscience to satisfy the ambition of anybody, and I am not seeking other work.

- J. Barling, Esq.
26 Feb., 1895.
5968. You mentioned yesterday that there were 260 temporary professional men? On the professional staff there are ninety-seven permanent and 260 temporary men.
5969. How is it there are so many temporary officers? I think that is a matter that is capable of satisfactory explanation. The Works Department, from its very nature, is liable to contraction and expansion, and it is, therefore, desirable that the department should not be fixed by having a large number on the staff, because that would involve a considerable burden so far as the Superannuation Fund is concerned, and we should have to be continually compensating officers for abolition of office and so on.
5970. Is the temporary staff for 1895 less than for 1894? I think so, decidedly. I have a return here which includes the temporary and permanent officers, showing appointments, retirements, and reappointments from the 23rd of October, 1891, to the 15th February, 1895. The net decrease in the number of the staff during that time is 117, and in the salaries a net decrease of £39,348.
5971. Does that include the Railway Construction Branch? Yes.
5972. *Mr. Teece.*] That must include a lot of high salaried men, as the average is over £300 a year? Yes; during that period the appointments numbered 131, with salaries amounting to £18,800; retirements 311, with salaries amounting to £68,952; reappointments sixty-three, with salaries amounting to £10,804.
5973. *Mr. Storey.*] What is the reason of this: The dredge and dock expenditure as passed in the Estimates for 1894 amount to £78,137—that is, dock expenditure £5,063, and dredge expenditure £73,074—and in the Supplementary Estimate for 1894 there is a further sum of £30,425? That is for the dredges. The dredges were laid up and almost immediately afterwards recommissioned, and in order to meet that expense we put a sum on the Supplementary Estimates.
5974. When the Estimates come before Parliament do the Members understand what they are voting? I think they do. How could the matter be dealt with in any other way? When the Estimates were prepared it was the intention to curtail the dredge service to the amount placed on the Estimates, but after the Estimates were placed on the Table of the House it was seen that it would be a great detriment to the Public Service if some of the dredges were dismantled, so the Cabinet decided the work should go on, and an additional sum was placed on the Supplementary Estimates.
5975. Your expenditure under that heading is about £100,000 a year? A little more than that—say, £105,000.
5976. How was it a saving was not effected, in accordance with the direction of the Minister that so many dredges should be laid up? It was not the department that dealt with the matter, it was the Cabinet. When the Estimates were prepared it was determined to lay up the dredges, but when the time came to recommission them, Mr. Lyne considered that the revenue looked better than he had anticipated, and he decided to keep the men on, a course which the Cabinet approved. When the new Government came in that fact was brought before them, and they decided the reductions should not take place.
5977. I understand that practically the very thing that was to have taken place did not take place? Undoubtedly, except to a limited extent.
5978. I gather that Mr. Portus is the head of this particular branch and would know more about the practical details of it? Yes. I should like to point out that notwithstanding the high wages we pay we show better results than any other country in the world. Our work is done cheaper. I quote a paragraph from the draft report for 1894:—"In explanation of the economical results arrived at, notwithstanding the eight-hour system and comparatively high wages, it may be noted that in the largest ladder dredges double and treble shifts are employed, one dredge thus doing the work of two or three under one controlling officer, who is an engineer experienced in preventing accidents and capable of having repairs quickly carried out, thus minimising stoppages, which are always chief factors in expensive work. The dredge regulations of 1880, which are rigidly adhered to, have cheapened work by preventing the Service being burdened with unsuitable employees."
5979. I do not know whether you can make comparisons between this country and other parts of the world, because conditions vary so much? But allowance has been made for that.
5980. Do you allow for interest on the outlay on your capital? I don't think that is included in any return, although it is right to do so.
5981. There is an enormous outlay on the dredges? Undoubtedly; but we are supposed to keep them in efficient repair out of the revenue. We have one dredge, at any rate, which has been in commission somewhat like fifty years. It was sent out by the English Government in the old days.
5982. As Mr. Portus is responsible for the whole of the workings of the dredges, does he in any way consult you, or does he fix the rate of pay and wages for the whole staff? That would be done by Mr. Darley; but that has been in operation for many years. Mr. Darley is the head of that branch.
5983. Had Mr. Darley anything to do with the rate of wages? Only to a limited extent. The present rates were in force long before his time.
5984. Mr. Portus is conversant with all this? Yes.
5985. He will be able to tell me why there are three masters for the one steam-tug, the "Orestes"? I think that is easily explained. Perhaps she was working double and treble shifts, or one of these men was master during one part of the year and another during another part.
5986. In docking the ships-of-war you undertake the whole of the repairs? Yes, for some time past.
5987. Do you keep any account as to whether you make a profit? We don't make a profit, certainly.
5988. Do I understand the only work you do is for the ships-of-war? As a rule, it is so. For instance, if a mail ship went into dock—I am speaking subject to correction—I believe Mort's Dock would take the contract for doing what was necessary, or their own men might do it.
5989. In looking over the return which you handed to me this evening, I find the minimum of your wages is identical with that of Mort's Dock, but your maximum goes up till it makes your average much higher than Mort's? But there are only a few who would get that.
5990. Go through the whole piece, and your maximum is higher; if their's is 10s. yours is 12s., and so on? But the maximum would not affect any large number. There would be special circumstances which would be considered to justify that maximum wage.
5991. *Mr. Teece.*] Are the day men paid whether it is wet or dry? They are only paid when actually at work. They come under the conditions of Mort's Dock.
5992. *Mr. Storey.*] In whose department is the "Thetis"? In the Works Department.

J. Barling,
Esq.
26 Feb., 1895.

5993. What do the men on the "Thetis" get? The master gets £279 4s. He has a certificate such as is held by no other captain in our service. He takes the "Thetis" sometimes long trips to sea, to Norfolk Island, and Elizabeth Reef. There is one engineer at £257 12s.; there are two firemen and oilers—one at £145 4s., and the other at £132; the mate gets £145 4s.; and there are two seamen at £114 8s.

5994. Does that include rations? No, they have to find their own. I am aware in some cases a higher rate is paid in the lower grades than is obtained outside, but that has been going on for years.

5995. Have you had an opportunity of comparing the wages paid in the Government Architect's office with outside rates? No.

5996. Is any private work done by the dredges, or is it all Government work? Occasionally we do private work, but only as a matter of grace. The object of the dredge service is not to do private work, but as only the Government have dredges we sometimes hire them out to private persons.

5997. In other departments where you have works done by tender have you a Tender Board? Undoubtedly.

5998. All tenders are opened by them? Yes. When first I became Under Secretary the method of dealing with tenders was completely altered by my advice. We made an open Board, of which the Minister is the president, and I am the vice-president.

5999. All tenders which are called for are for works absolutely required to be done? Yes.

6000. You do not call for tenders for works you do not intend to do;—has that ever been done? I cannot say that tenders have never been called for work we did not intend to do; but tenders have been called for works that we have not been able to carry out for some time. During 1893 and 1894 we called for tenders for works which we did not carry out because the financial crisis came upon us, and we had to postpone them.

6001. The tenders were not called for in order to get estimates? Oh, no; that would be most dishonest.

6002. Do I understand that when you talk of taking over the construction of tanks and wells, the only saving would be the cost of supervision, there would be the same cost of construction? Yes, undoubtedly.

6003. *Mr. Humphery.*] And maintenance? Yes; but we could not undertake the collection of revenue.

6004. *Mr. Storey.*] If the department were handed over to you, the only saving would be in the supervision which you would be able to give through your officers instead of having it done by a separate branch? Yes.

6005. So there would not be much saving actually? In case any repairs were required our officer could attend to them. Very often, I presume, the caretaker could not do them.

6006. *Mr. Teece.*] For example, the travelling expenses of the Mines officers amount to £2,000 a year; you could save that sum? I should not like to say that; I do not know how that sum is spent.

6007. I presume it is spent in seeing that the places are in good order? I presume it is for that.

6008. *President.*] When a tank is leased the caretaker looks after it in his own interest, but some of the tanks are in places where there is no inducement to lease them, and therefore the Government have to pay men to look after them—that costs the country over £11,000 a year; in some cases they have engines to pump the water, and in others a windmill, and the men are expected to keep the machinery in good working order? Yes.

6009. *Mr. Teece.*] If the Mines vote of £2,000 for travelling expenses of inspectors is for looking at the tanks and seeing that they are in good order, your department could do that? I think so.

6010. Then there are six inspectors in the Mines, and a staff of clerks? We could save some of them, certainly.

6011. What you had in view was that the inspection could be done by your country officers? Yes; they could attend to what relates to the construction of these works.

6012. *Mr. Storey.*] You have been a long time connected with the Civil Service;—do the departments work amicably together, or is there any friction between them? I do not know that I could mention any special case of friction.

6013. I am speaking generally? Generally, I do not think so.

6014. And the departments all help each other? I do not know that I could say they do not; of course there may be little jars here and there. No doubt, in years gone by, there has been a great deal of friction with the Mines. In Mr. Bennett's time there was a large amount of friction, and a Commission made an inquiry into the matter.

6015. But you say advisably now the departments do help each other? As far as I know they do; there is nothing in my mind to make me suppose the contrary.

6016. I suppose the arrangements you propose to make in your own department with regard to appointments and promotions are all subject to the present Civil Service Board? Undoubtedly.

6017. You are pretty conversant with the Civil Service Act? Yes.

6018. Could you tell us in what way you think it has been a failure, or has not met with the requirements of the Service, putting aside the superannuation? Either they have not sufficient power, or they have not exercised their power to the fullest extent. I know very well that in the appointments that are brought before them they can only recommend, and the Minister can over-ride their recommendation, but that seldom occurs. I never had occasion to look into the matter very carefully, but it has somewhat struck me that if the members of the Board took the powers of the Act into their own hand they could exercise more power, but I may be quite wrong in that supposition.

6019. Are you in favour of probationers in the Service? Yes.

6020. But as at present appointed? I am afraid the Civil Service Act in a great many of these things has been completely put aside very often. I may mention temporary appointments. The Act gives, I think, only a tenure of two years, but that has been a dead letter from beginning to end, as you are all aware. Probationers are taken in the office without any reference to the Civil Service Act, on the plea that they are on the temporary staff, and the Civil Service Board knows nothing about it beyond what it learns from the returns sent in every year according to the Act. It is in these matters that the Board should have more power, or exercise the power which, it has struck me, they may now have.

6021. I think you would favour an Act somewhat on the lines laid down in your paper? Yes.

6022. One that would deal with all entrances into the Service, and eventually put aside political patronage? There would be political patronage still, but if my scheme were acted on I should not fear any political patronage that might be brought to bear, because, if everyone had to comply with these requirements, I would not care who recommended them.

J. Barling,
Esq.
26 Feb., 1895.

6023. Do you think it is right to have a Superannuation Fund in the Service? I think it is more in the interest of the public than of the Civil Service, because I can see as plainly as possible, in the case of those who might have to be turned out in the cold, that, although theoretically it is quite right to dispense with their services if they are not required, there would be such an immense amount of sympathy for them that they would either have to be kept on when they ought to be retrenched, or else, as it was before the Civil Service Act was passed, considerable sums would have to be voted to them as compensation. Then take the case of persons who have arrived at the age of sixty or seventy years; they would just hang on as poor feeble members of the Service—for Civil Servants do not save much—drawing large salaries for doing nothing at all. My impression is that as a rule a Civil Servant, when he arrives at the age of 60, should be made to retire in the interests of the Public Service, because, although he may be capable of doing his work, he may have fallen into a stereotyped groove, and be incapable of adopting ideas of reform. I have a great faith in introducing new blood into the Service. Of course there are exceptions; but, as a rule, if provision were made by which the Government could compel a man to retire at the age of 60, it would be possible to bring about a very advantageous reorganisation in the Service. The Civil Servants now have to bear the largest portion of the burden of the advantages which are supposed to accrue through superannuation. They pay annually about £65,000, which means that the Civil Servants themselves, to a large extent, meet the cost of the retirements; and the public get the benefit, over and over again, for what they pay in addition to that. When you think, too, that a considerable percentage is paid by the Civil Servants, and how few get any benefit at all, you will realise what a large amount the Civil Servants are contributing towards the result I refer to. In Melbourne, I think, an enormous sum is paid out of the revenue towards the Pension Fund, and under the English Service the Civil Servants pay nothing at all to the Pension Fund. Although, theoretically, it is a mistake; in its practical working out it tends to the public interest.

6024. You are in favour of having a fund, and you think the Civil Servants should contribute towards it? Undoubtedly they should.

6025. You think that the fund should be aided by the Government? I think it is the interest of the Government to aid it, undoubtedly.

6026. Is that preferable to making all Civil Servants insure their lives the same as in Melbourne? Insuring their lives does not exactly meet the case; the two things are not comparable, and that is where the whole thing has been mixed up. Take the case of a young man who has insured his life, and is used up in the Service when he is still a young man. Insuring his life will not only not benefit him, but will be a burden to him, because he would not be able to keep up the payments. Nor would it meet the case of old age unless the insurance were made payable at a certain age. Then how could an insurance company take over the business as it exists at present. What Company would take my life, for example. The payments would be so great that no company would take over the assets and liabilities of the Civil Service Fund.

6027. *Mr. Trece.*] With regard to the Civil Service Board, you say that you think the Board has not exercised as fully as it might have done the power which is vested in it? Yes, but I spoke with very great caution on that point. It has sometimes struck me it has been so, but I have never gone into the whole question.

6028. The Civil Service Board has nothing to do with fixing the salaries of public officers? Certainly not.

6029. It has no knowledge, except from occasional reports, of the manner in which public officers perform their duties, unless a complaint is lodged? We have to report every year how each officer performs his duty, but I think that is done in a very perfunctory manner.

6030. You mean to say that a report of the duties performed by every officer, and the manner in which they are performed, is supplied to the Civil Service Board? As far as our department is concerned that is so.

6031. And is the Civil Service Board seized with the knowledge whether an officer is being paid too much or too little? I think that is quite outside its functions as at present constituted.

6032. So far as the question of remuneration of public officers is concerned, and the discipline in the service, the Board is quite ignorant? Unless the matter is brought under its attention.

6033. And, of course, from the very nature of the case that must be so, because the Board is composed of gentlemen actively engaged in other businesses, and they cannot go through all the offices? Of course they cannot.

6034. Do you think it would conduce to the efficiency of the Service if a Board vested with these powers were called into existence? I think it would, undoubtedly.

6035. Then you think if the present Board, or a Board vested with such powers, should exercise them to the fullest extent it would conduce to the interests of the Public Service? I think it would.

6036. On the question of superannuation, you said you considered the fund a useful one in the case of retrenchment? Yes.

6037. You mean to say that if you want to get rid of a man in the Service, it is a convenient way to shunt him? Knowing what human nature is I think I can even appeal to yourself on the humanitarian side. If you had an officer, not a bad officer, but one whom, in the interests of the Service, you considered it desirable to get rid of, would you not be guided by the consideration that if he were not allowed some little pension it would mean turning him out to starve?

6038. You mean a man who had worn out in the Service? Or was found by change in the Service to have become incapable.

6039. In other words, from incapacity as we know it? Yes.

6040. That is a different thing; that of course is the object of the Superannuation Fund? Of course it is.

6041. You are aware the fund has been used for other purposes? Yes. In the amalgamation scheme we are carrying out some of the officers will have to go, as we really shall not want them. They will be left high and dry through the abolition of their office, and it assists us very much to think that they can be put on the Superannuation Fund. The very fact of our knowing that there is a provision for such men would certainly weigh with us in bringing about this reorganisation.

6042. But do you not know that a proceeding of that kind is entirely foreign to the purposes of the Superannuation Fund? Well, I do not think it is altogether foreign to the Act.

6043. I am not talking about this Act, but about the principle of the Superannuation Fund? Undoubtedly it is.

J. Barling,
Esq.

26 Feb., 1895.

6044. You, no doubt, agree with the Commission that the purpose served by the Superannuation Fund is to relieve the Service of men who have become too old, or too ill, to perform their duties? Undoubtedly that is the main object of it.
6045. But the question of making provision for the family of a man still comes up—the question of life assurance is altogether a different one from that of superannuation? The object of life assurance is to provide a pecuniary aid for the survivors.
6046. And if a man had insured his life, and were compelled to retire on the Superannuation Fund, he would have the means of continuing to pay his premium? Yes.
6047. You are aware that the practice in the railway service of Victoria and South Australia is to compel the men to insure their lives? Yes; and in ours.
6048. There is a sum of money payable at 60, which is inalienable, and they take that instead of a superannuation allowance? I think that would be undoubtedly in the interests of the person himself, but under our system the State gains, because in case of death the sums paid remain to the credit of the fund, with certain exceptions. I should point out, however, that the provision of a sum of money as suggested at the age of 60 would not wholly meet the case, because, in the event of the recipient living much beyond that age, it would probably not be sufficient to meet his requirements, and that at a time when from his age and other causes he would be quite unfit to enter upon any remunerative business.
6049. You think that in any superannuation scheme the beneficiaries should be made to contribute to it as well as the Government? Undoubtedly.
6050. Do you think it would be a better plan for the Government to provide superannuation, and to compel the Civil Servant to apply the contribution, which he would otherwise have to make to the Superannuation Fund, to the purchase of life assurance, so that in the event of his death his family would be provided for, because a Superannuation Fund, pure and simple, would confer no benefit on a man at his death? None whatever. I think the Government should compel people to contribute to the Superannuation Fund, and also to pay something additional to provide gratuities to their relatives at their death. I do not think the two things ought to be mixed up at all. I have heard Civil Servants say that when they die all their contributions are lost to their family, but they forget that the fund has taken the risk of their knocking up in the Service, and of living after 60, and drawing a good pension for years. I think we get good returns for the 4 per cent. we pay to the fund.
6051. Those who have come in to pensions? Yes.
6052. You are aware that the present system of computing the pension is to take the average salary of the last three years of service? Yes.
6053. Do you think that is open to abuse? Yes, it is very liberal.
6054. Do you think it would be fairer to take an average over a whole period of service? Yes. Perhaps an average of ten years would be fairer.
6055. *Mr. Robertson.*] Have you in the Department of Works any persons who have been retrenched and then re-employed? Yes.
6056. What has been the expenditure in your department within recent years? The expenditure for 1892 from loans and revenue was £3,223,494; in 1893, £2,557,907; in 1894, £2,021,133.
6057. What is your opinion with regard to holidays? The Act provides three weeks in the year, which is very liberal.
6058. Do you think that by reducing the three weeks to two there could be a saving? I think it would be hardly appreciable, although I think two weeks in the year would be enough. The half holidays for cricket matches and races are an abomination.
6059. Could you make any suggestion with regard to the amalgamation of the office of inspectors in the country? You are referring, perhaps, to the Architect's department. I hardly think the roads men would be able to inspect buildings, except very minor affairs. It might be worth while considering, but I am afraid it would be a little beyond our men. An engineer is not considered to be an architect.
6060. *Mr. Teece.*] You have a great many messengers? Yes.
6061. Have you many elevators in your building? We have two.
6062. These messengers are all men, I suppose? Yes.
6063. And the lift attendants are men? Yes.
6064. They are getting salaries from £135 to £166 a year? Yes. Mr. Vernon is very insistent on that point. He thinks they ought to be capable men.
6065. Could not the work these messengers and lift attendants perform be largely done by boys at one-third the cost—I do not say entirely, for of course there must be here and there a reliable man where a boy could not be trusted? I think it could, but Mr. Vernon has an idea that there ought to be capable men in the lifts. We know accidents do occur sometimes.
6066. You mentioned that your department has spent about seventy-three millions of money;—that includes railway construction, I suppose? Yes.
6067. What principle has been followed in the matter of the expenditure of this money, leaving railways out of the question, and speaking only of post-offices, gaols, and other public buildings? An estimate has been given by the Architect. Supposing a post-office has been required, the Postmaster-General has first moved in the matter by asking us for an estimate to be prepared. We prepare it, and if it suits the Postmaster-General the sum is put on the Estimates.
6068. Who decides, when a building is required, whether it should cost £5,000 or £50,000? The Postmaster-General, to a certain extent, because when the estimate is sent back to him he can say whether it is too expensive or not.
6069. Do you know of any places where any Government buildings have been erected in country towns and not used? I think the large gaol at Glen Innes is not used.
6070. How came that to be? That was built long before I was Under Secretary, and I have no personal knowledge of the matter, but it must have been done, I think, either at the solicitation of the Members or of the Minister of the day.
6071. Do you not think that as a rule the public buildings are of too expensive a character? In very many cases they are, and in many cases they are put up under political pressure.
6072. Do you not think it ought to be impossible for a building to be erected for a public purpose and never to be used for that purpose? Certainly. It is only a rich country like Australia that could stand it.
6073. We may say in general terms that, during the last twenty years large sums have been uselessly squandered? I should say large sums have been unnecessarily spent.

WEDNESDAY,

WEDNESDAY, 27 FEBRUARY, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
 JAMES ROBERTSON, Esq., F.S.I.A., F.L.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.,
 THOMAS LITTLEJOHN, Esq., PRESIDENT.

Edward Fisher Pittman, Esq., F.G.S., A.R.S.M., Government Geologist, sworn and examined:—

- E. F. Pittman, Esq., F.G.S., A.R.S.M.,
 27 Feb., 1895.
6074. *President.*] You are under the Mines Department? Yes.
6075. Would you give us an idea of the nature of your duties? I have the superintendence of the geological survey work generally. I have three geological surveyors working under my supervision. We have to deal more especially with the mining interests in New South Wales, the reporting upon the discoveries of all metalliferous and also of mineral deposits, such as coal, shale, &c. We have to see that the reserves are sufficient to cover the expanse of known mineral deposits, and also of mineral deposits which are likely to be discovered. We have a good deal of work in connection with the alteration of the boundaries of reserves. From time to time the Lands Department give us a good deal of work inasmuch as they always wish to limit and reduce the reserves, while our main object is to see that metalliferous and mineral lands are not alienated, so that the Crown may have the advantage of rents and royalties resulting from minerals. We have a good many reserves which are not actually gold-field or mineral reserves, but which cover land which it might be objectionable to have alienated. Then, I have also the superintendence of the laboratory where all the assays are made. I have also the Geological Museum under my control, and the limestone caves of the Colony are under my supervision. I am a member of the Prospecting Board, and I have at various times assisted the Minister with reports on metallurgical processes; but at the present time there is a Government Metallurgist, so that I have been relieved to some extent from this work. Then, I am generally geological adviser to the Department of Mines. I have endeavoured to give a *resumé* of all my work in the list of officers and their duties which I have forwarded to you. [*Return handed in.*]
6076. Is your time fully occupied? Quite so. Rather more than I can do sometimes.
6077. There is a very large vote for prospecting among the contingencies? Yes.
6078. Does that mean prospecting for gold and other minerals? Yes.
6079. Do you have much initiative in prospecting in your department, or do you wait to hear of discoveries of gold and coal before taking action? Occasionally we have taken the initiative in connection with the prospecting vote.
6080. What success has attended your efforts in prospecting? In answering this question I hope you will understand that I give my opinion as a private one. I do not wish to have my remarks on this subject considered as criticising Government policy. My own private opinion is that the prospecting vote has not resulted in very much good. I have read the reports of scientific officers in Victoria on the same question and I quite agree with them. I do not consider that it has resulted in developing mining discoveries to a very great extent. It may, of course, be said that I am not cognisant of all the results that have been obtained. I do not take a very active part in the Prospecting Board sittings. Whenever there is any case on which some of my officers have reported, or on which I have reported, coming on, I might be specially asked to attend; but I do not by any means attend every sitting. I give my opinion as the result of my observations.
6081. You do not think that the expense of the prospecting vote has been of a payable character? No; I think not.
6082. Did you take any official part or interest in the Cremorne bores? Yes.
6083. Had you anything to do with the first boring? No. The selection of the site of the first bore was not referred to the Geological Branch. I chose the site of the second bore. I saw the first bore completed. It was plain that the coal was burned to the condition of coke by molten lava, because we came across the dyke-stone of lava in the core.
6084. The bore struck a natural coke instead of coal, did it not? Yes. I think it was a pity that the site was not chosen in the first instance by the Government Geologist.
6085. Do these basaltic deposits spread laterally as well as vertically? In the Bulli district they do, but it is exceptional. In this district and in the Newcastle district the destructive effect has not extended laterally more than a few inches in some instances. It cannot have been very much in the case of Cremorne.
6086. Do you yourself personally visit the different districts where mines are said to be suitable? Yes. Are you speaking in connection with the Prospecting Vote?
6087. Yes? I have done so occasionally, but I do not do that as much as Mr. Slee. He and his officers do the bulk of it. Some of the work is done by my officers.
6088. Are they constantly on the move? Yes; but not always on the prospecting vote. Where their ordinary work brings them into the vicinity of prospecting vote work we endeavour to utilise their time so as to avoid sending another officer to the same district.
6089. Do you require to take a very deep interest and supervision over the openings of coal-mines—they do not rely upon any report of yours, do they—supposing a Company has hold of a good coal district, they would not look to you for information or opinion before starting a mine, would they? I cannot remember a particular instance, but undoubtedly the opinion of the geological staff is frequently asked as to the value of coal districts. The Minister does not allow a geological report on any single property, but we visit districts, and our reports would undoubtedly be considered of use in giving information as to the thickness of the seam and the quality of the coal.
6090. Of course you take no part in inspecting coal-mines? No; that comes under the Examiner of Coal-fields. I should like to supplement my remarks about the Cremorne bore. You asked me if I had anything to do with the recommendation to grant Government aid. I am free to confess that I did recommend aid in that instance. My reason for doing that was that I regarded the proving of coal under Sydney harbour as a national question. It was from no idea of assisting anyone in particular. My idea was to find out whether coal extended under Sydney or no. I thought it was a question of national importance.
6091. You believe that there is plenty of coal there now of a suitable description? I have no doubt about it. As far as we have seen it in this district, and in the Newcastle district, the basaltic intrusions have not damaged the coal to any great extent,

6092. *Mr. Teece.*] In reference to those bores, were they both subsidised by the Government? I think only the last. E. F. Pittman,
Esq., F.G.S.,
A.R.S.M.
6093. I understood you to say that if you had been consulted about these bores you would not have put down the first bore where it was put down? No.
6094. Why? Because the dyke is in proximity to it. 27 Feb., 1895.
6095. Was not the presence of the dyke discovered by the bore? Yes; but you could trace it right along the surface. I found one dyke intersecting both water frontages. I afterwards made a survey of Cremorne, and traced the depression caused by this dyke right along the surface close to the bore.
6096. On the subject of this prospecting vote, has there not been an annual amount set apart for this purpose for some years? Yes.
6097. Is it not largely utilised for affording assistance to private people in sinking shafts? Yes.
6098. The Government has not undertaken any prospecting on its own account? I cannot absolutely quote an instance, but I think it has done so in some. I recommended it to be done on one occasion, but the aid was unfortunately not taken up. In that case I now remember the aid was granted on the application of an individual.
6099. Have you ever known a gold-field to be discovered as a result of the prospecting vote? No.
6100. You do not think the Prospecting Vote is necessary for the purpose for which it was instituted? No; I do not think it is.
6101. Do you not think it was a useless waste of the public money? Well, honestly, that is my private opinion. My own idea is that it has not only not developed resources to any extent worth considering, but it has tended to destroy the independence of the miner.
6102. Do you make assays for the public? To a large extent.
6103. Do they cost the Government anything, or are they self-supporting? It is all an expense of the State. We make between three and four thousand assays in the year.
6104. Would you assay a mineral for no charge? Yes; we make only two stipulations. You must tell us where it comes from, and it must be from a reef that has not actually been worked.
6105. These assays are made with a view of developing something new, are they not? Yes. New reefs are discovered in old fields sometimes, and assays are made of them.
6106. Are you retained entirely by the Government, or are you engaged in private work? I have no private work.
6107. *Mr. Robertson.*] Are you not engaged in the University? Yes, I have given a course of lectures in the University on mining. I am not what you might call lecturer on mining at the University. The Mining Act provides for the establishment of a School of Mines, and, as the Mines Department was not in a position to form one, they recommended that a School of Mines should be started at the University with the assistance of the Mines Department. My services were asked for to deliver a course of lectures. I do not know whether I shall be called upon to give any course this year. The lectures I delivered were in 1893 and 1894.
6108. *Mr. Storey.*] Does the work of your department keep you constantly employed? Yes; I have a very large amount of work.
6109. Does the appointment of these other Geological Surveyors rest with you? No; they are appointed by the Governor in Council.
6110. Are they recommended by you? Yes, somewhere in the department when I took my present position.
6111. Have they enough to keep them in work? Yes, rather too much. My chief assistant was retrenched last year.
6112. Was there any reduction in the salaries last year? Yes.
6113. You mean the 10 per cent. reduction? Yes; the chief assistant received £600, and this position was struck off the Estimates.
6114. Is there any revenue from your branch at all? There is a slight revenue from the caves from the sale of magnesium wire.
6115. Then there is no way by which you could suggest any saving in your department? Only in connection with the caves. I have already suggested that to the Minister.
6116. In what way? The matter has been under consideration for some time. The Jenolan Caves are a serious cause of worry and inconvenience, and their management is generally unsatisfactory for this reason that there is a large cave reserve, and the cavekeeper has a 10-acre annual lease in the centre. He has been allowed to erect a considerable number of improvements on this lease, and the Government have also spent a large amount of money alongside of this man's buildings, and at the present moment it is very hard to say to whom the improvements belong. There have been a number of complaints also as to the way in which the accommodation house is managed. I dare say many of the complaints are unreasonable. It was suggested that the whole question of the Caves should be gone into with the object of putting the accommodation house on a more satisfactory footing. The idea was to buy out the lessee, or compensate him for his improvements, to keep him as a cave guide or keeper, and to put the accommodation into the hands of a public tenderer, or allow competition. I think it would be very much more satisfactory, and the public would be better served. Mr. John Young reported in favour of this, and so did I, but nothing has yet been done. The expense under the existing arrangement is very heavy, and it is really a question whether the Government is justified in spending so much without return.
6117. *Mr. Robertson.*] You are a member of the Prospecting Board? Yes.
6118. Would the department suffer in any way through the non-existence of the prospecting vote? I really do not see how it would.
6119. As a member of the Board of Examiners you would know something about the ability and qualifications of the inspectors? I was a member of the Board of Examiners, and know something about their qualifications.
6120. Are the inspectors fully competent? Yes. They were examined by a Board before being appointed. They took the first place in the examination.
6121. Could not these men report directly to the Under Secretary; is there anything to prevent that? I really do not know of anything, but I do not wish to give an opinion which may be a criticism of any other officer's work, and I certainly think there should be a Chief Inspector.
6122. Can you, in any general way, recommend any reduction? Not other than in connection with the Caves. 6123.

- E. F. Pittman, 6123. *President.*] How many officers are under your wing in your department? I have a list which I will hand in. [*List handed in.*]
- Esq., F.C.S.,
A.R.S.M.
6124. Are they responsible to you as their head? Yes; there are thirty-eight altogether.
- 27 Feb., 1895. 6125. Are they all under your control? Yes.
6126. In your opinion would it not be desirable to endeavour to lease the Caves so that they would be self-supporting instead of being costly? That is my view, but they should be under Government supervision. I think we always ought to have an officer supervising the caves. We have had a great deal of trouble in preserving the beauties of the caves; very many of the visitors have an inclination to break off stalactites when not watched so that we have to fence them off with wire netting.
6127. There would then be a saving in connection with the department if a charge were made for these caves? Yes, and there should be a call made for tenders to provide the necessary accommodation.
6128. *Mr. Humphery.*] What is the annual cost of maintaining the Fish River Caves, including the cost of running the electric light? £480, without the superintendent's salary.
6129. Would that cover the total charge? I think so. The visitors average about 2,000 a year. We sometimes employ a gardener so that the total cost will come to about £500.
6130. Is it your opinion that a charge should be made to visitors to the caves? Certainly, for admission.
6131. What do you think would be a fair charge? It is not so much what would be a fair charge, but what people would pay. I do not think people from England would mind paying 5s. a visit, but people in the neighbourhood might object.
6132. Is it your opinion that a charge not exceeding 5s. should be made? Yes. The main expense of going to the caves is the coach fare, which costs £1 each way.
6133. Could any work done by your department be done by the officers of any other department? Not so far as I am aware.
6134. Have you given any consideration to the question of so combining the branches as to be able to lessen the staff? We always give that a consideration when making appointments. Of course some of our officers do work which is supposed to belong to another branch.
6135. *Mr. Robertson.*] Is it necessary to have a museum in connection with your branch in the Domain? Yes, it is a very important part of my branch; it is very largely availed of by the public and by students.
6136. Is your palæontologist fairly paid at £245? He has resigned since those estimates were framed. He is now in charge of the Australian Museum at £500 a year.
6137. I notice that he receives £245 from the Museum? He was brought out to assist the Museum and to act as Palæontologist to the Mines Department, and was paid by both.
6138. Have you appointed a new palæontologist? No; we have the services of Mr. Etheridge, as honorary Palæontologist, and of an assistant, at a small salary.
6139. Is there anything further that you would like to tell the Commission? I would like to draw your attention to the new scale of travelling expenses which was recommended by the Board of Under Secretaries, who, I believe, were unanimous about the scale, but not unanimous about the exceptions to it. There were two dissentients, I believe, two of the Under Secretaries being opposed to making any exceptions; but the scale now in force was carried by a majority. The consequence is that officers of different departments but having the same salary receive different travelling expenses, because some of them have been recommended as exceptions by their Under Secretary. Officer A, in my department, has to travel alongside officer B, who belongs to another department. They may travel in the same conveyance, they may sit at the same table, but A receives 6s. less than B, although B's salary is less than A's. I consider that an anomalous and unjust arrangement.
6140. *Mr. Humphery.*] Will you specify the departments in which no exceptions were made? The Mines Department and the Education Departments are the only ones in which no officer was recommended as an exception. The Government Geologist was regarded as a first-class officer in the Civil Service Act of 1884, now he is regarded as a second-class officer; and an officer in another department, who may be receiving considerably less salary than I, may be getting 6s. a day more for travelling expenses.

Robert Henry Ormiston, Esq., Chief Clerk, Department of Mines, sworn and examined:—

- R. H.
Ormiston,
Esq.
27 Feb., 1895.
6141. *President.*] I suppose you are one of the oldest officers in the department? I have had twenty-five years' service in the Lands and Mines.
6142. You were accountant for some considerable number of years before you became chief clerk? Yes.
6143. So you know the department thoroughly? Yes, I do.
6144. You have a considerable number of clerks under you? About thirty-five.
6145. The Registrar is mentioned after the chief clerk? Yes.
6146. What registration duty does he perform? He is the Registrar of Gold, Mineral, and other leases, and he looks after the transfers and all things connected with leasing matters, that is after the leases have been prepared.
6147. He has nothing to do with communications? He has no correspondence. He might send out printed notices.
6148. You have an accountant? Yes, Mr. Primrose.
6149. How long has Mr. Tunks been in the Service? Twenty-four years.
6150. Is he still there? Yes, as record clerk.
6151. He was not considered so suitable to fill the position as Mr. Primrose, was he? No, not to fill the position of accountant.
6152. Is he a thoroughly efficient man? He is an excellent record clerk. In fact in the Department of Lands he was brought up as a record clerk.
6153. He has been recording all his life? Yes.
6154. And the records he keeps would be of letters? Yes, records of papers received in the department. I daresay he records between 30,000 and 40,000 letters and papers, not applications. They are recorded elsewhere in the Lease Application Branch.
6155. That is a more important section than ordinary correspondence would be, I suppose? It is necessary to exercise great care in the records. It is considered a very important branch.
6156. *Mr. Robertson.*] Then Mr. Tunks is an excellent officer? He is.
6157. *President.*] But still Mr. Primrose is considered better? As an accountant.
- 6158.

R. H.
Ormiston,
Esq.

27 Feb., 1895.

6158. Is it your system, when a vacancy occurs, to promote the next by seniority? If considered the most suitable.
6159. If he is equally suitable with anybody else, his seniority would give him the preference? Yes.
6160. But in this case seniority did not come into play, as Mr. Tunks was not considered so good an accountant as Mr. Primrose? That is so.
6161. Do you consider the scale of salaries that the clerks receive is ample? I think it is very fair.
6162. You think it is not too much? Not for the class of work. Juniors who do not do so good a class of work as the others get less.
6163. You consider the clerks in your department are not overpaid, considering the class of work they do? That is so; some have very responsible work.
6164. Has a comparison with other departments of the Government service anything to do with the rate of pay? No; our Under Secretary has always been cutting things to the lowest possible price. In fact, if you compare the salaries of the officers belonging to the Mines Department with the salaries of officers in other departments you will find that we get much smaller salaries for similar positions.
6165. You have a considerable number of temporary clerks? About nine or ten.
6166. Are they paid at per day? Yes.
6167. Is the pay for six days in the week? Yes, and 10s. is the highest.
6168. I see that some have been twelve years temporary clerks? Yes.
6169. Have they been employed without intermission all that time? Yes.
6170. And still remain temporaries? Yes.
6171. Do you consider it is a good system to have temporary clerks? No; I think if a man is on permanent work he should be put on the permanent staff. We have men on the temporary staff whose places we could not fill at once.
6172. So that, as they have been employed without intermission, they ought properly to be made permanent officers? That is my opinion.
6173. Have these temporary clerks been appointed by the Minister? Yes; they do not require Executive appointment. They are appointed by the Minister.
6174. Have you had any recent introductions of temporary clerks? Not for some time.
6175. Of course they need not pass through the hands of the Civil Service Board? No.
6176. The Minister could appoint as many as he pleases? Yes.
6177. Without a word from anybody? Yes; the Minister has that power.
6178. Do you think that a Board of Commissioners with power to make appointments, of course with the concurrence of the Minister, would be the best mode of making appointments? I do not see that they would be able to do more than the Minister does.
6179. Supposing that they were to be free of political influence, a Minister might not always be so? No; but we have always found that the Minister has employed very good men. I don't think it would make much difference whether it was in the hands of a Board or not.
6180. You don't think it would be preferable to the present system? No. There are very few appointments made at the present time. The only appointments the Minister would make now would be those of probationers. If a vacancy occurs high up on the staff those below if they were fitted would go up to it, and the vacancy at the bottom would be filled by a cadet.
6181. I see you have three messengers, one of whom gets £150, another £120, and another £110? Yes.
6182. For the kind of work that a messenger performs it seems to me that these salaries are very much in excess of what they ought to be? The chief messenger who gets £150 a year has the control of the other messengers. The others average a little over £2 a week. They are very often in attendance till 11 or 12 o'clock p.m. when Parliament sits. The Minister always has one in attendance.
6183. That does not happen every day in the year—sometimes there is a very considerable recess? They are always fully occupied.
6184. *Mr. Storey.*] Could not smart young boys do it for £1 a week? A boy might be careless.
6185. *Mr. Robertson.*] You would not keep a careless boy long? No.
6186. *President.*] Are the messengers middle-aged? About 30 years is the average.
6187. You do not think that the messengers are overpaid? With the exception of the head messenger, the others only get £2 a week. You could not make much reduction in that.
6188. You say the head messenger looks after the others? He has to do his share of work as well. He has to go out if anything is required. He has to see that the other messengers do their work and come back in a reasonable time, otherwise we would not know where they were.
6189. He is responsible for their attention to their duties? Certainly.
6190. *Mr. Teace.*] How do the temporary clerks come into the Service? If we want a clerk and there is no provision on the Estimates, then the Minister appoints one.
6191. That could be remedied in the following year;—have any of these appointments been made with the view of avoiding the Civil Service Board on the belief that the Board would not allow them? No; most of the temporary officers who have been appointed have not passed examinations.
6192. So that they could not be put on the Service in any other way? That is so. We have one temporary officer who has been a branch Bank manager.
6193. Have you ever had the Minister send you one to be taken on? I have never known such a case.
6194. How long have you been in the Service? Twenty-five years.
6195. And during that time you have never known a man get an appointment through political patronage alone? It has never happened to my knowledge.
6196. What is the exact duty of the record clerks? As soon as it is opened the post is sent to the record clerks. They number the letters, stamp them, and put them in their register. After that the papers have to be connected with others referring to the same subject, and got ready for submission to the Under Secretary when wanted.
6197. This registering is mere clerical work, is it not, which requires no technical knowledge? It is routine work.
6198. Any ordinary clerk would be competent to do it? Certainly.
6199. There are seven clerks in your department from £236 a year downwards;—are these mere ordinary writing clerks, or is there any special knowledge required? Some are in charge of correspondence and other important work. That entails a lot of care besides the writing of the letter. They have to look

R. H.
Ormiston,
Esq.
27 Feb., 1895.

into the cases and see that the action taken is correct. It is not a simple paper given to an officer, but a batch of papers. They have to look back, perhaps, and examine the paper and see that the action taken is correct, and they inform the person accordingly. There is, therefore, a certain amount of responsibility attached to the position.

6200. Could not one officer in charge of all the correspondence do that? One officer might do for the Mines Department; but then we also do a lot of correspondence for the branches, and then there is the ministerial work, not writing on cases only, but on appointments and that sort of thing as well as preparing Executive minutes, &c.

6201. Do you know anything about the public watering places and bores, and water conservation? No; they are under Mr. Boulton and Mr. McKinney.

6202. Do you know anything about the Prospecting Vote? No; that is under Mr. Slee.

6203. *Mr. Storey.*] Are you the only controlling power over the clerical staff? Yes; after the Under Secretary.

6204. You have nothing to do with the survey staff? Nothing whatever.

6205. Your control is centred upon mines? Yes.

6206. Have you anything to do with the fixing of the salaries? No; that is for the Under Secretary and the Minister. The Under Secretary generally recommends to the Minister.

6207. Is your advice asked as to the efficiency of the officers under your charge? The Under Secretary may ask it, but the Under Secretary has a great knowledge himself of the officers.

6208. Do all these officers get an increase every year? No; unless a vacancy occurs.

6209. What is the object of having so many probationers? They are put on for fear anything should happen to those above them, and to enable them to get experience in the way of departmental work.

6210. Do you require eight as a reserve fund for that sort of thing? They do a lot of work.

6211. What work do they do? We have some in the Accountant Branch. They enter in certain books abstracts, and that sort of thing. They have to go every day to the Treasury. That takes an hour or so. Others assist in other branches.

6212. Can you tell the Commission of your own positive knowledge that the staff under you are fully employed from 9 a.m. till 4:30 p.m.? They are fully employed. If you go to the office between 7 and 9 o'clock p.m. you will find some of the clerks working there. Some of the clerks in the Correspondence Branch have been working back till 11 p.m.

6213. Anything special? No; but one of the clerks has been sick. You will see the accountant's clerks working every night till 7 p.m.

6214. Is overtime allowed? Only 2s. 6d. for tea.

6215. What are your own duties? General supervision of the office, of the clerks, and their work. Submission to the Minister and Under Secretary of information required, and distribution to the clerks of all papers, &c., examination and signing of all letters, opening post-letters, and interviewing the public; I am also a member of the Tender Board. There are a lot of small things it is impossible to enumerate, which occupy time.

6216. Do you keep daily supervision of all these clerks? No; but I always have them under my eye.

6217. How are the offices situated? There are separate rooms, but there is easy communication along the passage. We are all very close together.

6218. After your long career in the Government can you suggest any way to this Commission by which retrenchment can be effected? I do not know that I can. The Under Secretary has always cut things as fine as possible. He has got rid of a couple of men lately. They were not good clerks, and so he dispensed with them.

6219. *Mr. Robertson.*] I think you said you were the chief clerk, supervising the work done by the thirty-five clerks on the clerical staff? Yes; I supervise their work.

6220. Into how many rooms are these men put? About seven.

6221. How often do you make a personal supervision of the seven rooms? I go through them occasionally. There is a head to each branch.

6222. When did you last go through the seven rooms? I was through them this morning. When I get a spare moment I run through them.

6223. Then you are personally acquainted with the work done by these men? Yes.

6224. Have you ever found men not occupied? No; they are a good set of officers. They have quite enough to occupy them.

6225. Have you ever reported a case of idleness to the Under Secretary? No.

6226. Have you ever reported a case of drunkenness? Yes.

6227. Was there neglect of work in consequence? He had, perhaps, been drunk only that day. The head of the branch would tell me.

6228. He was not fully occupied then? No. The Under Secretary got rid of a man recently for that. I do not mean to say that these men were so very drunk that they would be staggering about the place.

6229. Are you aware of the work done in the Diamond Drill Branch? No; that does not come under my notice. Mr. Slee takes all his work direct to the Under Secretary.

6230. Have you any supervision over the expenditure of £46,600 per annum in contingencies? No; that comes under the accountant.

6231. Have you any control, or are you in any way referred to, with regard to the expenditure of this money? No; not at all. If anything was out of the common, the accountant would submit it to the Under Secretary.

6232. Are you, or are you not, conversant with the clerical work and the duties being performed in the sub-branches? No.

6233. Have you ever made a report upon any of the sub-branches to the Under Secretary? No.

6234. Are there any men in the department, to your knowledge, who have been retrenched from other departments, and put on the permanent staff of the Department of Mines? Not in the Mines proper.

6235. Do you know of a case in any other department? I cannot remember any case.

6236. *Mr. Humphery.*] How many years were you accountant? About seven or eight.

6237. How many assistants are there now in the Accountant's Branch? Six.

6238. What is the amount of expenditure for the department with which the accountants deal? When I was accountant I had as much as £400,000 to deal with. At that time we had the loan votes. There was that much open for expenditure in that year.

6239.

6239. I am speaking of revenue? The accountant does not deal with revenue; that comes under the registrar, Mr. Ray. The accountant only deals with the expenditure.
6240. Has any change taken place since you were accountant? In what way?
6241. In the nature of the work? No; I think the work is very similar now to what it was.
6242. Can you mention the figures for the year 1894? No; the Estimates will give the amount; it is nearly always expended.
6243. You say the registrar deals with revenue? Yes.
6244. How many assistants has he? He has six, I think.
6245. What is the amount of revenue with which his branch deals? The revenue for the department is about £50,000; but that is not his only duty; he has the leases to attend to. The revenue work is only a small item in his business.
6246. Why does the registrar, and not the accountant, deal with revenue? That is the system which prevails in our office.
6247. Is there any reason of which you are aware why that should be so? None of which I am aware.
6248. Have you considered how it would be possible to so rearrange the staff as to enable you to effect some economy by combining the work of those branches? I do not think so. Some years ago the Under Secretary went right through the department himself and rearranged the offices.
6249. But you say now it would be quite possible for the accountant to deal with the revenue as well as with the expenditure? No doubt; but he would, perhaps, have to have a clerk.
6250. That being your opinion, do you not think that the officers' positions might be so combined as to enable reductions to be made in the staff? Mr. Ray, the registrar, does all the lease work; that is his most important work. The revenue is a very small matter. It does not take up much of his time.
6251. Then the six officers who assist the registrar are not occupied in connection with the revenue? No; only Mr. Ray himself. He may have some of them to do Treasury work in connection with it.
6252. From your knowledge of the duties of the registrar, do you think that by transferring the collection of the revenue to the Accountant's Branch the services of any officers could be dispensed with? I am quite sure they could not.
6253. *Mr. Teece.*] Have you any officers now who are guilty of drunkenness? They are all pretty steady now.
6254. Have any of those at present in the office been reported for drunkenness? Not in the Mines; but there was one in the Stock Branch lately. His case is now under submission to the Minister.
6255. Are you aware of any considerable loss of revenue to the country through any friction or dereliction on the part of persons formerly employed in the Leasing Branch? Yes.
6256. When did that occur? About 1890.
6257. What was the nature of the loss, and how did it occur? There was a certain amount of rent lost. Some leases that ought to have been cancelled were not cancelled, therefore the land was not opened to the public to take up. Some of this land might have been worked. The total amount in question was about £12,000 but out of that sum we did collect a lot of the rent.
6258. If the men in your department had done their duty the leases would have been cancelled, and the land would have been thrown open to the public? Yes. The land was locked up through the leases not being cancelled.
6259. How did it occur? Owing to carelessness on the part of Mr. Farr.
6260. Did it not also occur owing to the man who was supposed to do the work not doing it? There is no doubt about that. Mr. Burcher did not do the work which he ought to have done.
6261. What was done to Mr. Farr? He was allowed to retire.
6262. Was he transferred to the Superannuation Fund? He was allowed to retire under the Civil Service Act.
6263. What became of Mr. Burcher? He was reduced from £290 to £150.
6264. *President.*] He now receives £236? Yes; that is owing to vacancies having occurred in the meantime.
6265. *Mr. Robertson.*] Was this case brought before the Civil Service Board? It must have been, because they must have known of Mr. Burcher's retrenchment and consequent loss of salary, and of Mr. Farr having been retired. Both would have come under their knowledge.
6266. Might not that have been brought under their notice without the facts of the case being submitted to them? I think the minutes were bound to state the facts.
6267. Were these delinquencies reported to the Board to be dealt with by the Board? I cannot say that. Mr. Herring was Assistant Under Secretary; I was the accountant. I had nothing to do with these matters; but the papers are there.

William Easdown Smith, Esq., wholesale printer and stationer, sworn and examined:—

6268. *President.*] We have got some specimens of stationery which we wish you to price. Here are three samples of foolscap-size wove paper which have been received from three distinct Government Departments. What price would you place upon that quality of paper per pound? Sevenpence for that marked A, and 6d. for those marked B and C.
6269. Here are two sheets of letter-paper size received from the Railway Department;—you call that cream wove bank paper, do you not? Yes.
6270. They are in single leaves;—what price is that paper per pound? Fivepence to sixpence.
6271. In addition to the lower price, what extra quantity of paper would be supplied in a pound weight of that quality and size compared with the departmental paper? The railway paper would have more than double the number of sheets.
6272. Here is a postal card from the railway;—what would that paper cost? 2½d. per pound.
6273. *Mr. Teece.*] What rate of wages rule in your establishment? We are paying in the printing department from £2 12s. to £3 3s. for compositors. Some are very much better than the others. There are only two earning £3 3s., and they are the foremen. The lower wages have been ruling since the strike.
6274. Is £2 12s. the wage for an ordinary compositor? Yes. The manager of the department gets £4 10s.
6275. Have you apprentices? Yes.

R. H.
Ormiston,
Esq.

27 Feb., 1895.

W. E. Smith,
Esq.

27 Feb., 1895.

- W. E. Smith, Esq., 27 Feb., 1895. 6276. What do they get? From 15s., with a yearly increase of 2s. per week. The last year they get about 21s.
6277. How long do they serve? Four or five years. Sometimes they come in at 16 years of age, or 17.
6278. What do you give the folders and sewers? From 10s. to 20s. per week. The forewoman gets 21s.
6279. What are ordinary wages? 12s. 6d.
6280. Would that be for an ordinary efficient girl? Yes.
6281. With regard to the wages paid to the men engaged in bookbinding? Generally the vellum binders get from £2 15s. to £3.
6282. What do the rulers get? £2 15s. to £3. The machine youths get from 7s. 6d. to 8s. 6d.
6283. Is that for eight hours? Yes.
6284. Have you ever had any work done at the Government Printing Office? Not that I remember.
6285. *Mr. Storey.*] Have you ever been able to compare the prices paid at the Government Printing Office with those paid at your establishment? No.
6286. Do you know at all whether the wages paid in the Government Printing Office are higher than what you pay? Sometimes I have heard that the wages are a little in excess of what we pay, but I do not know of my own knowledge.
6287. Have you a person in your employ who is called the foreman of the bookbinding branch? Yes.
6288. What salary would he get? £4 10s. and £5. The foreman now has only been with me two months; but he is a man of such vast experience that I gave him the sum named. The previous foreman was getting £4 a week.
6289. Do you consider it a high salary? Yes. I consider him the best man obtainable in Sydney.
6290. Do you do any piece-work? No. It would jeopardise my reputation; the work would probably be scamped.
6291. Do you fancy there is a great deal of work done in the Government Printing Office that could be done outside? Yes; we are called upon sometimes by the department to do some.
6292. *Mr. Robertson.*] What would you pay an overseer in your general printing business? I pay the manager of the department from £4 to £4 10s.
6293. Have you any sub-managers? It is an understood thing that there are always one or two men next to the manager of the department who can act for him in case he is absent. This man would get £3 3s. a week.
6294. What would you call him? Foreman.
6295. Have you an officer similar to that of storekeeper in the Government Printing Office? Yes, a warehouseman.
6296. What salary do you pay him? From £3 to £3 3s.
6297. I suppose he receives all supplies? Yes; and he gives out paper every month.
6298. Does he keep a set of books showing the quantity of what he gives out? Yes; he has to enter everything he receives from England or from the Continent, or from America, and he puts down everything he gives out.
6299. Do you take stock once a year? Yes.
6300. *Mr. Humphery.*] Will you furnish a list of the classes of employés in your establishment, with their wages? Yes. [*Return subsequently handed in.*]

F. J. Thomas, Esq., Manager of the Newcastle and Hunter River Steamship Company (Limited), sworn and examined:—

- F. J. Thomas, Esq., 27 Feb., 1895. 6301. *President.*] How long experience have you had in dealing with shipping matters? Thirty-five years, thirty of which I have been manager.
6302. Do the rates of pay for the various employés in your Company come under your supervision? Yes.
6303. *Mr. Storey.*] Have you any return showing the rates of pay in your Company? Yes.

Wages of Engineers.

STATEMENT showing amounts paid under old Agreement and rates payable under new Agreement, viz., from 1st November, 1893.

Steamer.	Nominal Horse-power.	Old Rates.			New Rates.		
		1st engineer.	2nd engineer.	3rd engineer.	1st engineer.	2nd engineer.	3rd engineer.
		£ s. d.					
"Lubra" ...	45	20 0 0	16 0 0	18 0 0	14 10 0
"Gwydir" ...	90	20 0 0	16 0 0	18 0 0	14 10 0
"Sydney" ...	220	24 0 0	18 0 0	15 0 0	21 10 0	16 0 0	13 0 0
"Maitland" ...	250	24 0 0	18 0 0	15 0 0	21 10 0	16 0 0	13 0 0
"Namoi" ...	350	25 0 0	18 0 0	15 0 0	22 10 0	16 0 0	13 10 0
"Newcastle" ...	500	25 0 0	18 0 0	15 0 0	22 10 0	16 0 0	13 10 0

6304. Are these the current rates of wages paid to the engineers on the steamers on the coast of New South Wales? Yes, and the other coastal and intercolonial steamship Companies pay about the same rates.
6305. Is the number of hours restricted? We pay 1s. an hour overtime. The men work from about 6 to 6, and before and after that they are paid 1s. an hour overtime.
6306. That is when they are working in harbour, is it not? Yes.
6307. It does not apply to when they are working at sea, does it? No. It applies only in harbour from 5 to 5 really, with two hours for meals—that is, 10 hours.
6308. Your steamers are constantly trading backwards and forwards? Yes; they are in and out every day.
6309. And have you ever had occasion to know the wages paid by the Government to the men employed on the steamers? No, I have never compared the Government wages with our own.
6310. Have you seen the "Captain Cook"? Yes.
6311. Do you know the duties performed by that vessel? I do not know how constantly the men on the "Captain Cook" are employed, but I understand that the vessel is employed in the pilot service.

6312.

6312. The master gets £460 a year ;—would you consider that a large salary? I should consider that a high salary for the service performed. F. J. Thomas, Esq.
27 Feb., 1895.
6313. The mate gets £214? I should consider that a high salary. We pay our masters at the rate of £300 per annum for passenger steamers, and at the rate of £240 per annum for cargo steamers. Our chief officers and second mates receive £15 and £12 per month respectively.
6314. And the first engineer receives £270? Our chief engineers receive from £22 10s. to £18 per month, as per annexed statement, showing rates of wages agreed to between the representatives of the Steamship Owners' Association of Australasia and the Australasian Institution of Marine Engineers on 19th October, 1893:—

Wages paid Crews.

Trimmers ...	5	0	0	7	0	0
Greasers ...	8	0	0	10	0	0
Donkeyman ...	8	0	0	9	0	0

Memo.—Third officers and third engineers are only carried when passenger steamers run through to Morpeth; third officer not carried while river pilot engaged. Greasers only carried on "Newcastle" and "Namoi." Cook.—Chief cook on passenger steamers £9 per month; second, £3. On cargo steamers cook is paid £11 per month to act as cook and steward. Donkeyman.—Usual wage, £7 per month and overtime, but in steamers supplied with electric light he is paid £1 extra for attention to light, and in the case of the "Lubra" £1 extra for attending lamps.

6315. Do you think the work and the life of the officers of the "Captain Cook" can be compared with that of the officers on steamers like yours, remembering that the "Captain Cook" lies in the harbour and goes out to sea once or twice a day? I should think there would be a great difference between the two. The masters and men on our service are worked much more laboriously than any men on the "Captain Cook." Our vessels are under steam all night, the men have to keep night watches and work cargo during the day. The master gets rest during a portion of the day. Ours is a very constant service.

MONDAY, 4 MARCH, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C.,

J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Mr. Alfred James Gaston, Entry Clerk and Storekeeper at the Government Printing Office, sworn and examined:—

6316. *President.*] I understand you have been at the Government Printing Office for a great many years? Thirty-three. Mr. A. J. Gaston.
4 Mar., 1895.
6317. You are thoroughly acquainted with the routine of the department? Yes.
6318. Have you charge of the stores which are kept in the Printing Office, and in Macquarie-street? Yes; we call the store at the Government Printing Office the basement store.
6319. You have control of all the stores placed in the basement? Yes.
6320. You draw a distinction between the basement and the other floors, do you? No; I have control of the stores both in the basement and at McMahan's Bond.
6321. There are stores on the other floors as well as in the basement, are there not? Yes; I have control of them all.
6322. Are these stores received direct from the contractors? Yes; the stores are sent, as a rule, to McMahan's Bond, and we fill up from there, as required, in the basement store.
6323. Can you tell us how many months' supply you have of stores generally, and especially of paper, in the Printing Office itself? No; we keep only a portion of our paper there, that most generally used, and we fill up, as required, from McMahan's Bond. We may have a large order which would take the whole supply away, or we might be a few weeks before having an order.
6324. You might have to replenish the store in a few days, or it might be a few weeks? Yes.
6325. And then you would replenish it from the large stock in McMahan's Bond? Yes.
6326. Do you keep a book—it might be called a stock-book or a ledger—showing the quantities of everything you receive and the quantities used? Yes.

6327.

- Mr. 6327. Then you can show what the balance ought to be at any moment? Yes.
- A. J. Gaston. 6328. I presume your stock-book is perfectly accurate—absolutely correct? Yes.
- 4 Mar., 1895. 6329. And when you balance the stock at any particular date, you look to your book to see if it agrees? Yes.
6330. And you generally find that it does agree? Yes.
6331. I believe that in the office the accountant also keeps a set of books similar to yours? Yes.
6332. Are you aware of that? It is not exactly a duplicate of ours, because it has not the money columns. Their books do not show the value of the stock.
6333. But without the money columns the books kept by the accountant are duplicates of yours? Yes.
6334. You have money columns which they have not? Yes.
6335. Do you think it is necessary for the accountant to keep a book similar to yours? It could be done without, I think.
6336. How many years have you occupied the store at McMahon's Bond? Since the 1st of March, 1891.
6337. What rent have you been paying? £624 per annum. It is held on a five years' lease.
6338. So that it expires on the 1st March, 1896? Yes.
6339. You have still one year's occupation of it to rent? Yes. I might mention that the Government Printer has taken steps to obtain a reduction of rent, if it is relet to us.
6340. Do you find it a very convenient store? Yes.
6341. How many months' supply of material do you estimate that it now contains? It holds a twelve months' supply.
6342. Are the goods that you store there ordered from England chiefly? Yes; the agents are English.
6343. Do they tender? Yes; on Schedules of Contract for twelve months' supply. They are contracted for in that way. That is our system. These are schedules of contracts for 1895. [*Witness hands in schedules of contracts.*]
6344. That is a contract for twelve months' supply? Yes; the paper is delivered in two portions, in January and July.
6345. In what month are the tenders sent in? The tenders are generally called for in the early part of the year.
6346. So that deliveries would be in July and January? The first delivery is in January. The tenders are called for in the month of May for the following year generally.
6347. And the deliveries consist of two portions? The paper is delivered in two portions. Some of the other lines are delivered differently. The photographic materials are taken all at once in January. Printing materials also we take in January. The paper generally is delivered in two portions.
6348. What is the value that you have at present in that store? We have about £21,000 worth in the Circular Quay store—McMahon's bond.
6349. Your year's supply then would be £21,000 worth? We have more than a year's supply there. Some lines are not usually kept here. We use more one year than another.
6350. If you have more than one year's supply that would make the annual consumption still less? On some lines.
6351. Have you ascertained correctly the value of the stock in McMahon's Bond just now? Yes; the value is taken at the present contract rates.
6352. And you estimate it at £21,000? About that.
6353. When I was round at the store I understood you to say that the value of the stock would amount to about £30,000? I meant the whole of the stores under my control. The value of the stores at McMahon's Bond is about £21,000; but we have about £12,000 more in the basement.
6354. Are you aware if it is insured against fire? There is no insurance.
6355. Do you think it is proper to have such a big value uninsured? It is a system which belongs to the Government. I understand that they do not insure. The Government buildings are not insured.
6356. I am not speaking of the buildings, but of the property;—is there not an insurance on the stores in the Government Printing Office? I am not aware of any insurance at all.
6357. I suppose you have not the decision on that point? No; it does not rest with me to decide whether it should be insured or not.
6358. Do you not think it would be better to make the tenderers the storekeepers, and arrange their contracts so that they should deliver once every two months? That has been tried and failed.
6359. In what way was it not successful? Before I went to the stores it was tried and failed. There was always some drawback in connection with it. When a contract is taken it is necessary that the paper should be exactly of the same quality and colour. It would not do to have different qualities or makes of paper in a volume or job.
6360. But that need not be. Although you got it in two-monthly supplies, you have been there so long you could form a very correct judgment as to what quantity of any particular description of paper would be required, and you could have the supply monthly if necessary? It would be an impossibility.
6361. Supposing you took three-monthly, or six-monthly deliveries instead of twelve-monthly deliveries, how would that affect you? We would still have to keep a stock for our requirements. If we knew the requirements of the Service, we could act accordingly. We have to be prepared for any sudden demand on the stock, and it is found cheaper to keep large stocks of lines mostly used than buy when it is required. If we knew exactly what would be required there would be no necessity to keep such a large stock; but, as I said before, we have to be prepared for any sudden demand. We do not know what may be required.
6362. Do the Government departments prepare any estimate for what quantities they require? No.
6363. Could not they do so before you made your arrangements—could you not require them to say that they would require a certain amount of paper for the following twelve months? If we could get the departments to do that there would be no difficulty.
6364. Could you not get them to do that? I do not think so.
6365. Supposing you had not enough for the year, what would you do then? We should have to buy it; we should get it from the trade if we could.
6366. Does that happen often? No; it has not happened since 1891. We have not bought any since then to speak of.
6367. We want to show the Government where economy can be affected;—it would be a great matter to save this £624 in rent;—could it not be done by receiving supplies at more frequent intervals and thereby making the tenderers and not yourselves the storekeepers? I do not think there would be any saving.

6368. Could you not get along with three months supply? We could do it, but I am afraid there would be no saving. I am sure there would not.
6369. There would be a saving in this way: You would knock off three-fourths of the value of the store, and yet have enough to keep on for three months? The present contractors have no store in Sydney.
6370. That is their affair? They would charge us with the storage in the increased price for goods.
6371. The tenderer would have to obey the specifications that you laid down, and you may depend upon it that the conditions you laid down in your specifications would have to be and would be adhered to. They would be the storekeepers and you would receive from time to time goods as you required them;—perhaps that would give more trouble? Of course there would have to be an examination and all that.
6372. *Mr. Humphery.*] What is the amount of contracts for the Printing Office for 1895? £6,650.
6373. What was the amount of contracts for 1894? About £15,000.
6374. And for 1893? About £21,000.
6375. Can you explain why the amount for 1895 is so much less than for previous years? Our requirements are less on account of having the large stock, and the prices of material have decreased. There has been a falling off in the value of paper for years.
6376. Had you a very large stock in 1893? Yes; larger than our requirements.
6377. How did that come about? By paper being contracted for in the year 1891 on account of the extra work anticipated on account of Federation.
6378. In view of the contracts for 1895 being £6,600, can you say approximately how much will cover the contract for the following year? I do not expect it to exceed £7,000.
6379. How does it happen that you will be able to do in 1895 and 1896 with less than £7,000, your previous average having been so much greater? On account of having a large stock on hand which we are working off.

Mr.
A. J. Gaston.
4 Mar., 1895.

Frederick Bridges, Esq., Chief Inspector of Schools, sworn and examined:—

6380. *President.*] Have you any special knowledge of the Department of Public Instruction, which in the Blue Book is mentioned as being under the Under Secretary? Do you mean the Ministerial Branch?
6381. Yes? I have a good knowledge of that. The clerks in that branch have to do my work. The work comes through me. Ninety-five per cent. of the work in the Public Instruction Department passes through my hands.
6382. You have a chief clerk remunerated at £605 per annum? Yes.
- 6382½. Has he any special control over the office? Yes; he is responsible for the work being done. He has to see all memos. and letters.
6383. Does much of the duty in this department consist of receiving documents, letters, and communications, and recording them? Yes, and answering them. Of course a great many, such as the reports of schools of which we receive something like 4,000 a year, are simply recorded as a general rule.
6384. And laid by? Sometimes action is required, but in a good many cases, where a school is working well for instance, no action would be required.
6385. After these reports have been registered they can be laid by as a rule and not required again? They are frequently required. They are all bound every year. To-day: for instance, I had to go back ten years looking for information with regard to a teacher.
6386. Then the system of recording is in your opinion indispensable? So far as the teachers and the establishment of schools are concerned.
6387. Is there much correspondence reaches you of a trivial character which may receive attention at the moment and may be laid aside entirely? Not much correspondence of a trivial character reaches me, because it is dealt with by the inspectors themselves, and is not sent to the head office.
6388. Is it efficiently dealt with? Yes, we hold the inspectors responsible for the good working of the schools in their districts.
6389. Do you dispose of the correspondence at once? Yes.
6390. In a manner suitable to its importance? Yes.
6391. You do not think that there is undue attention given to registering and recording in your department? I do not think so. Things that are not likely to be required again are not recorded; they are just attended to and put aside.
6392. Looking at the amount of the salaries given to the clerks, it seems to me, judging from a mercantile point of view, that they are exceedingly liberal;—what is your opinion? I cannot speak from a mercantile point of view; but I think the salaries in our department are lower than in any other Government Department. Of course I have had no mercantile experience, and cannot judge from that standpoint.
6393. Do you consider the clerks overpaid? No; not considering the character of the work they do. Most of them have been a good while in the Service.
6394. Some have been, I see, since 1858—that is a very long time; but it surely does not require an immense deal of intellect and a superior intelligence to do the work of recording? No; but that is a very small part of the work.
6395. Take the first half-dozen clerks below the statistical clerk and others? The statistical clerk no longer exists; he is retrenched; he has been taken away from the office altogether.
6396. I suppose that was because the office was considered superfluous. Are there any others that you consider superfluous, and that might be abolished? There are one or two that might be abolished, and boys might do the work. I know of one office that I think is unnecessary.
6397. Is it a highly paid office? No; the officer is not very highly paid. There is an old man in charge of the despatch-room, getting £254 a year, whose work might be done by a boy. The staff in the office now is only about two-thirds of what it was ten years ago, and there is twice as much work.
6398. You find that young hands are very efficient, do you not? Yes.
6399. It is not necessary to have an old experienced man to do ordinary clerical work, is it? No.
6400. Probably some of those old officers, whom we consider highly paid, have been forced into their present positions by a system of seniority? I do not think you will find many old ones in our department who have been pushed up in the way you mention, excepting the one I have referred to.
6401. There is one clerk in the office since 1865? He is in charge of the records. He is a kind of confidential clerk as well. If there is a matter which the Minister or Under Secretary does not wish to become public property, he is entrusted with the duty of attending to it and writing about it.

F. Bridges,
Esq.
4 Mar., 1895.

- F. Bridges, Esq.
4 Mar., 1895.
6402. Then there are three other clerks who get £380, £335, and £310? One does very important work. He is really the correspondence clerk of the department.
6403. Do you know something of the qualifications required in banks and in our principal insurance offices? Yes.
6404. Do you consider that the qualifications required for the work done in the Public Instruction Department are equal in degree to the qualifications required in banks and insurance companies? In the case of three or four of the higher class I think the work is quite equal certainly to anything in Banks. Of course, in Insurance offices there is a special technical knowledge required.
6405. The work in Insurance offices is rather exacting, is it not? Yes.
6406. And requires special qualities of mind? Yes.
6407. To a far greater degree than is required of the gentlemen occupying the positions referred to in the Public Instruction Department? Yes; but then Insurance clerks are very much better paid.
6408. You think the head men should be well paid? I think so.
6409. For their superior ability and power to carry on their work satisfactorily? Yes; and for their experience.
6410. But the mass of workers under the head officers should not through the force of seniority have any special advances made to them? No; not those whose duties are merely clerical.
6411. Do you consider that there should be a classification of the Service? Yes.
6412. What would you recommend as a proper classification;—how many sections would you have with a maximum to each rising up to the higher positions which ought to be very well paid? I have scarcely given thought to the matter, so that any opinions I might express might be very crude. Speaking roughly, I think there should be something like three grades—the heads of departments or branches who manage the business, then the chief clerks, or heads of rooms, who are responsible for carrying out the details and seeing that the work is properly executed, and thirdly the mechanical clerks who do the work of writing letters and despatching letters.
6413. And who keep account of the papers in books? Yes.
6414. And there might be a class below that? Yes, of probationers and juniors.
6415. You think that would be very advisable? I think so. Of course there might be more classes than those I have mentioned.
6416. Do you think that any improvement could be effected in the mode of appointments. At present it is supposed that the Civil Service Board have the power of recommending? Of course that is a dead letter.
6417. There are several open doors through which escape can be made, and the Minister can do what he likes. In your opinion should there be an independent Board, call it a Board of Commissioners or anything you like, to deal with these matters? I have always thought that.
6418. Is it your opinion that the recommendation of this Board should be necessary before appointments or promotions could be made? Certainly. An independent Civil Service Commission should have the power of going into every department and seeing which is over or undermanned, and should be able to shift persons according to the necessities of the Service. It should also have the power of appointments and promotions.
6419. Are you in favour of competitive examinations? No; I have been connected with examinations all my life, and I don't think much of them. Professor Huxley says that the man who succeeds best in examinations is he who has the power of swallowing all he hears or reads, and of vomiting it forth at the right time on an appointed day. The student who is well known to be the best all round often takes a low place, sometimes on account of nervousness. Then, there is a certain amount of luck which enters into examinations. A question is asked on a subject which the examinee has just been reading up, and the answer consequently comes out pat. I do not know of any better test for measuring progress, but I do not approve of it as a test for measuring efficiency. The book-worms come out top, and they are not always the best.
6420. What other method would you suggest? I would suggest that no one be allowed to enter the Service until he has passed a stiff examination, not competitive, and that after that his promotion should depend on his fitness for the work. In the Australian Mutual Provident Society there is a stiff examination for probationers, and after that is passed advancement depends upon the work. You cannot, by competitive examination, test a man's fitness to take charge of a department in a merchant's office; you must test his efficiency by actual work. But I do not think that the Service should be entered without an examination, the passing of which will show that the candidates are qualified up to a certain point.
6421. The salary paid to the messengers—£175 and £150—seems to be excessive? I think so too. I consider it is very excessive. I think, as a rule, the messengers throughout the Government Service are greatly overpaid. You will see some bigger salaries than that.
6422. So you are quite of opinion that the remuneration of messengers is altogether excessive? I think so. Take, for instance, one of the messengers in our department, who receives £175. We have hundreds of school teachers who do not get that, and they have been trained.
6423. A messenger has no responsibility, and it is only necessary that he should be able to write his name? And that of the visitors.
6424. Are four messengers required in your department? The first one is the Ministerial messenger, he has to attend to the Minister; the second one is the Under Secretary's messenger; the third one has to do the general work of the office, to take papers from one room to another, and take the books to the Parliament House for the Minister; the fourth one at £50 is mine. He has to wait in the hall and take the names of visitors when they come and send them in in order, and he has to go for papers.
6425. An intelligent boy could do that, could he not? Yes; my messenger, who only gets £50, has to be pretty sharp. He is about 18 years of age. A crowd of teachers come to see me on Saturday, and he has to see that they come in in their turn.
6426. I suppose he does his duty as well as the other messengers? Yes.
6427. What about the Account Branch? I know very little about that.
6428. What about the Architect's Branch;—could the Government Architect not do the duties of the architect in your department? If the duties were handed over to the Government Architect we would never get the schools built. We must have somebody under our orders who would carry out our instructions. The Architect's Branch has been gradually dwindling down, because a great deal of the work is being done by the inspectors of schools. The architect only looks after the big buildings.

F. Bridges,
Esq.
4 Mar., 1895.

6429. To what extent has a diminution taken place within the last few years? We have lost one clerk of works, and there may be some others who have gone, but I would not be very positive, because I do not give much attention to the Architect's Branch. One clerk at £300 has been transferred to the accountant's office to fill up a vacancy, and the clerk of works, drawing £254, has been retrenched.
6430. Are the others quite sufficient to do the duties of the sub-department? Yes.
6431. I suppose it is absolutely essential that a clerk of works should be supplied by the Government, and not taken on the spot where the work is being executed? That would be much more expensive, because the schools are scattered all over the country. In many instances we could not get a qualified man to act, unless we sent a special one from Sydney for the purpose, and that would take him away from his work. This would entail greater expense than the present system. These men are stationed at Goulburn, Bathurst, Maitland, and Tamworth, as well as in Sydney. The Goulburn man, for instance, has to visit all the schools from Goulburn south and west.
6432. He would receive travelling allowances? Yes.
6433. How much? Twenty shillings a day when absent from head-quarters at night. Out of that they have to pay everything, including their own conveyances.
6434. Do you consider that reasonable? Yes; it pays their way. I do not think they make anything out of it.
6435. Do the clerks of works visit the job occasionally? Yes.
6436. As often as they can? They are directed partly by the architect, who is the head of their Branch, and partly by the inspector. If the latter knows of a work that requires visiting and a little more professional knowledge than he has himself he asks the clerk of works to take it *en route*.
6437. The inspector is not supposed to be a practical architect? No. As a matter of fact the inspectors have picked up a lot of information which enables them to deal with small cases, but they do not attempt to deal with cases where there is an expenditure of £1,000.
6438. Is the deputy chief inspector a very essential officer? Yes; I think so.
6439. Has he a very responsible position under you? Yes; he has to take charge of the professional work when I am away. We have thirty-four inspectors stationed about the country, and it is necessary sometimes to compare standards. The best of men lose nothing by being looked after. The deputy chief inspector must be qualified to take up my work when I am away. There is a rule in the department that, before any teacher can be promoted to the first-class, his school must be tested by the chief inspector or by the deputy chief inspector. I have to certify from personal knowledge that a teacher has the special qualifications for a first-class certificate such as to warrant him to do the work. Sometimes I cannot get away, and the deputy chief inspector has to act on my behalf. He is the only professional officer in the department besides myself.
6440. Have the clerks any professional knowledge? They do the routine work. You could not trust a clerk to test a teacher's school or judge an inspector's report.
6441. You have nine clerks in the chief inspector's branch? All that has been altered; there is only one branch now. The chief inspector's branch has been abolished so far as the clerical work is concerned. That is how there has been such a reduction in the office staff. We have no separate branch. There were at one time two branches and two systems of recording; but all that has been done away with.
6442. There is another Superintendent of the Technical College now? Yes; Mr. Maiden. He was Curator of the Technological Museum. That office has now been abolished.
6443. I see there is a correspondence clerk and a messenger? Yes; the messenger is paid £50 a year, and has charge of the library, for which he receives nothing in addition. He is 18 years of age. As librarian, he has to see that the books are kept in their proper places, and are kept clean; and if there is any messenger business to be done he has to do it, and the junior clerk looks after his work. His hours are from 12 o'clock to 9 p.m. It is simply a reference library; the books are not taken away. He has also to give information where certain papers and classes are to be found.
6444. Has this branch been a great success? Yes.
6445. How many students are there? Over 6,000. Sometimes a thousand are in attendance on one day; the number varies. Monday, Wednesday and Friday are the best nights.
6446. I suppose the students are thoroughly organised into classes? Yes.
6447. I see there is a registrar? No; the clerks on the Estimates are for both Museum and College; their work is one.
6448. They are moderately paid? Yes; I think the chief clerk gets £268. The College and Museum are amalgamated.
6449. The superintendent has, I suppose, very high qualifications? Yes; he has charge of the Museum as well. All the work of the Technical Branch has to pass through my hands, so that I have to exercise supervision over it still.
6450. Does it require the constant presence of the superintendent? Yes; in fact, the superintendent has to be there three evenings in the week as well as all day.
6451. The assistants, I suppose, are employed in the Museum? Yes; handling the specimens, and analysing and cataloguing them.
6452. Is there an engineer? Yes; he has charge of the machinery, and of the turning and fitting. He is also a teacher of turning and fitting.
6453. Does he get £4 a week? Yes; he gets no salary for teaching, but he receives the fees from the students. I have tried to get him more salary, but I have not succeeded; he is worth more.
6454. What has the operator to do? A miscellaneous kind of work. He has to keep the scientific apparatus in order and to take photographs. A good deal of lecturing is done by slides. These are thrown on the screen. The architect, for instance, might give a lecture on Greek architecture. The slides are prepared by the operator. He throws them on the screen; and he can throw a hundred pictures in the same time it would take to draw one, and the slides are good for all time.
6455. Then there is a modeller? The modellers prepare the models for the drawing and also casts for the teaching of drawing in the public schools. One of the modellers has notice that his services will not be required after the 30th June.
6456. They require a good deal of technical skill, do they not? Yes.
6457. Are they thoroughly competent? Yes.
6458. I see that carpenters are paid £3 a week? Some are employed in the museums and some in the College. They have to repair all woodwork, make cases, &c.

- F. Bridges, Esq.
4 Mar., 1895.
6459. What are the attendants for? They are in the Museum.
6460. They are in grades, I suppose? Yes, of various degrees.
6461. Have they much responsibility? Yes; they have to watch the specimens, to keep the things clean and be ready to answer questions.
6462. Could there be any economy in this direction? I do not think so.
6463. What do the caretakers and cleaners do? The cleaners clean the whole building. There are two or three acres of floors which have to be cleaned twice a day. These floors are used by the day-classes and night-classes. The cleaners also clean the High School adjoining.
6464. I see £3 a week is paid? Only one man gets that, and he is responsible for the whole work, and his wife has to wash the towels used by the students. They have to be there till 10 o'clock at night.
6465. The watchmen are moderately paid? Yes; they are employed in the Museum. They are on from 5 p.m. to 8 a.m. There is another watchman in the College. They have to look after fire. I do not think we could do without a watchman. It would be running a great risk. The staff there is smaller than it was five years ago, although the work is much greater.
6466. The total number as compared with 1894 seems to be pretty much the same? —
6467. *Mr. Storey.*] The total expenditure for 1895 as passed is £703,817. Will that be sufficient for the department? Yes.
6468. Or will there be any supplementary amount? There will be no supplementary amount. We have scarcely ever had a vote for supplementary estimates, and only then for a small sum.
6469. Is there any revenue to come off this? About £60,000 for school fees.
6470. That will leave £633,817 to cost the Government? Yes.
6471. You expressed yourself in favour of dividing the clerical staff into four grades;—what would you consider a fair salary for each of these grades; you divided them into heads of departments, chief clerks, mechanical clerks, and juniors;—what would you consider a fair salary for a chief clerk? About £550.
6472. What would you consider a fair salary for the third-class? I would place the maximum at £350.
6473. And the juniors? I would make £200 the maximum.
6474. And the minimum? I would start with £50 a year, going up by increments of £25. If there were a vacancy in a position at £300 a year I would appoint a man to that position straight from £200 a year, but would give him £150 to start with, and let him work up to the maximum.
6475. Your ideas of salaries are based entirely on salaries paid in the Civil Service, are they not? No, on my own judgment.
6476. Has your experience been gained entirely in the Civil Service? Yes.
6477. What would a chief clerk's responsibilities be? He would take charge of the whole office staff and see that they did their work properly and effectively, and he would see that all communications that were sent out were correct and properly dealt with, and that the instructions of the Minister or chief inspector were carried out. He would also see that the letters were respectfully and properly expressed.
6478. What heading would these duties come under—what would be the work of the chief clerk? To manage the office.
6479. Would he deal with the promotion of teachers? No, excepting to carry out the decisions, and to notify them to the persons concerned.
6480. Does he get the applications for schools, and attend to them? No. An application for establishing a school comes to the office. If it is sent to the head office it comes to me. I send it to the inspector who has to deal with the matter. He furnishes a report on which I recommend either the establishment of the school, or the declining of the application. The Minister gives his decision. The chief clerk receives the papers from me, and sees that they are passed on to the right parties, and when the papers come back he notifies that the work has, or has not, been carried out.
6481. He has no responsibility—he has not to originate anything? No; he is simply the manager of the establishment to see that the work is done.
6482. You think the position is worth £550? I think so.
6483. The work of those under him is purely clerical work, is it not? Yes.
6484. There is nothing original in their work? No; of course they are supposed to have a lot of information that is useful when wanted.
6485. That applies to the forty-three clerks, does it not? Yes.
6486. And the junior clerks do what they are told? Yes; they copy documents and fill up memorandums.
6487. What do they begin at? £50.
6488. Do they get a rise of £25 in twelve months? Not now. If a junior clerk comes in and passes the junior examination at the University and displays merit he may get £75 after twelve months; but he may stop at that for a long time.
6489. Do you consider the salaries of the inspectors ample? No; I think the inspectors are the hardest-worked men and the worst paid in the Service.
6490. Explain why? I cannot explain why they are the worst paid; but as a matter of fact I think they are. The necessities of our department have been such that they have had to do a great deal of work somewhat outside of their own immediate field. We have set our faces against appointing too many. We have tried to keep down expenses, and that has set a lot of work on them. Each of these inspectors has a district to himself, the expenditure of which varies. The officer stationed at Hay has to go all the way southward to the Victorian border and westward to the South Australian border. He happens to be one of the juniors, and gets £380.
6491. And how much a day for travelling allowance? Twenty-five shillings. He is travelling eight months in the year, perhaps a little more, but fully that. He has to go to Broken Hill, to Milparinka, and a number of other places. He has to provide his horse and buggy. None of our officers get any equipment. They pay it all out of their own pocket.
6492. What class do you draw the inspectors from? Some outsiders were taken in 1880, and a couple more were taken a year or two later, but most of our inspectors have been successful teachers.
6493. What about the district inspectors? One has charge of the northern part of the county of Cumberland and the southern part of Northumberland. His headquarters are at Sydney. The headquarters of another are at Maitland. Another is stationed at Armidale; there is one at Grafton, one at Bathurst, one at Goulburn, one at Wagga Wagga, and one at Bowral.

6494. Are the duties of the inspector strictly confined to the examination of children or of teachers? Of children. In a few words, his duty is to see that his district is properly supplied with schools, and that the scholars are properly educated.

F. Bridges,
Esq.

4 Mar., 1895.

6495. Is there any examination of what is done by them? No.

6496. Who certifies that the fees are correctly received? The accountant. A return has to be furnished of the number of scholars, and the amount paid by each, together with the number of free pupils.

6497. Is there no inspection of the money received by the teachers;—do you trust to the teachers' own representations? Yes; the teachers have to enter it in a daily report book, and these books are examined by the inspector.

6498. Does he check them? Yes. The money is handed to the accountant; but the return is in such a form that the teacher cannot go wrong.

6499. Then the inspector does exercise a check? Yes.

6500. Has there been any reduction in the staff of inspectors? Yes; one resigned last year, and his place has not been filled up; and at the beginning of 1893 the inspectors as well as the other officers had 10 per cent. taken off all salaries over £200.

6501. How do you examine the applicants for pupil-teachers in the country? The examination of literary attainments is done by papers sent to Sydney.

6502. Could not that be done by the inspectors? No; they have to examine the school during the day, and do their correspondence, which is very heavy, at night. An inspector has about ninety schools to look after; he has to attend to the correspondence after school hours.

6503. Do you have the fixing of the salaries? No; Mr. Johnson, the late Under Secretary, had most to do with that.

6504. Have you endorsed his figures? No; I do not think they are good enough. I think the salaries are too low as compared with the other Colonies, and as compared with Great Britain. If the inspectors now receiving £380 had remained as teachers they would have been receiving the same money, with a house in addition,—so that they are actually worse paid than the teachers of our highest schools.

6505. Has there been any reduction in the architect's branch of late years? Yes; even this year there has been a slight reduction.

6506. Can you give us a return for the last five years of what the expenditure has been on building? Yes. The expenditure by this department upon public school buildings, sites, furniture, repairs, rents and rates during the last five years has been:—1890, £150,441; 1891, £191,374; 1892, £157,679; 1893, £112,856; 1894, £73,791.

6507. Some of the inspectors are doing work in this line, are they not? Yes; they are looking after all the small school buildings.

6508. Are many works going on now? We have two thousand different buildings scattered over the Colony.

6509. Are they new? Not many; there are always some additions or improvements going on. Applications for new buildings keep coming in.

6510. Have not many expensive buildings been erected where they are not required? There are very few instances of that. Take a building to accommodate 1,000 children; if there is a little ornament about it, it is hardly a matter for fault finding; you would not put up a school as you would a barn. I know of one or two cases where the mistake has been made of putting on too much ornament; but the cases are very few.

6511. You are in favour of that department being kept under the Public Instruction Department? Certainly, I think it would be a great mistake, and would cost us a great deal more, if these works were put up by an officer who was not under the control of the department.

6512. These buildings were under the control of the Government Architect, were they not? No.

6513. Were they put up by Mr. Mansfield? Some of them were. He was employed by the Council of Education, and not as a permanent officer, but the buildings are put up much better and much cheaper now.

6514. I see the teachers' salaries come to half a million sterling? Yes.

6515. Have you any rate? Yes, fixed by regulation.

6516. Made by whom? Submitted to the Minister by the officers of the department and approved by him and by Parliament. There are 4,500 teachers, so that the average salary is very little over £100 per head.

6517. What do they get besides the salaries? Married teachers are supplied with a residence. If a teacher is not married £1 is taken off his salary. If he is married and his wife does not teach needlework he is treated as a bachelor and the £1 a week is taken off just the same. The unmarried men are not provided with a residence.

6518. Do all these teachers come under the Superannuation Act? Yes.

6519. Are they all looking for their pensions after serving fifteen years? No. They cannot get pensions till they are 60 years of age.

6520. Have there been any reductions in these salaries of late? Yes, they were all reduced five per cent. two years ago.

6521. Do you think they should be reduced still further? I do not think they should. A great many of them must have hard work to live. We might make some slight reduction in the salaries of female teachers. We are trying to decrease the number of departments and so have fewer mistresses and more assistants.

6522. Are you not overwhelmed with applications by teachers? Yes.

6523. That would look as if the salaries were very tempting? They were fixed after considering the salaries paid to the Board Schools in England and in the other colonies.

6524. What about the pupil-teachers? They start at 15 years of age with a salary of £23. They get annual increases till they reach £46; after that they are examined competitively for entrance into Hurlstone. Males begin at £40 and rise to £68. There are fifteen full scholarships, and ten half scholarships for each training school. The full scholarship entitles them to all the advantages of the institution without paying; the half scholarship entitles them to all the advantages of the institution on payment of £15 15s. They are there for twelve months, they are then examined and classified, and employed as temporary assistants for certainly four years at a salary of £84.

6525. Does that include anything else? No; they have to find their own board. They are then appointed assistants in schools, generally in the country, at a salary of £108 or £114, and perhaps in four or five years they may work up to the position of mistress at a salary of £170.

6526.

- F. Bridges,
Esq.
4 Mar., 1895.
6526. Do the males get up faster than that? No; they are slower. No woman can get up to the maximum salary under less than twenty years of service.
6527. You do not recommend any reduction in teachers' salaries? No; there might be some readjustments. I do not think we could pay the teachers lower salaries. The number of sewing mistresses has been greatly diminished. Vacancies have not been filled up. In future there will only be vacancies for such positions in large schools.
6528. What about this £10,000 which is put down for cleaning? That has to pay for the cleaning of 2,000 schools. It does not pay for it all. The balance has to be paid by the teachers themselves.
6529. *Mr. Humphrey.*] Have you had any experience outside the Public Instruction Department? No.
6530. Can you make any suggestion with regard to office arrangements that you believe would enable you to reorganise your staff so as to effect economy without sacrificing efficiency? That would hardly be for me to say. I have nothing to do with the office staff, except to see that my work is done. They are wholly under the direction of the Under Secretary, through the chief clerk.
6531. I think you said that you did not favour competition? I said I was not in favour of competitive examinations as tests for entering the Service or for promotion.
6532. That being so, in what way would you suggest that vacancies should be filled so that the best men might get promotion? I think that the whole of the Service should be opened to probationers who could pass a certain examination—not a competitive examination; not such an examination as the Civil Service examination, but one that would to a certain extent test their fitness for the work they would have to do, such, for example, as the A.M.P. Society has. From that the whole Service could be recruited by promotion. Promotions should be in the hands of an independent Board, who should have power to go into every Government department to see how the work is carried on, and who should also have power to move officers from one branch to another.
6533. That is scarcely an answer to my question;—you are speaking now of entrance to the Service? And of promotions in the Service.
6534. Assuming vacancies to occur in the Service? Promotions should be made by an independent Board.
6535. Do you approve of competitive examinations to fill those vacancies? No.
6536. How, then, would you propose to deal with vacancies? It could only be done by having an independent Board to make themselves acquainted with the duties of each officer.
6537. You have no suggestion to make as to the manner in which the vacancies should be filled? No; a man's fitness to fill a vacancy is best shown by the way in which he does his work. No examination will show a man's fitness for particular work. You might have a man who knows all the languages that are spoken, and all the sciences, and yet would be no good in the department.
6538. I thought you might, perhaps, be able to suggest an alternative for a competitive examination? The evil that exists can only be cured by lapse of time. Cure must begin at the bottom. There are a number of people in the Service who, in course of time, will be cleared out.
6539. How do you propose to dispense with those you think should not be continued in the Service? In the first instance I think the heads of the departments should give information on that point, and then I think that all promotions should be vested in an independent Board—a Board quite independent of Ministers, or even of Parliament.
6540. Are you acquainted with the scale of salaries paid to teachers in high-class private establishments? No.
6541. Then you do not know how they compare with the salaries paid by your department? No.
6542. You would not consider that a proper comparison? I do not think, as a rule, that the comparison is a fair one, because for a very long time a large majority of those employed in private schools have been people who could not get into the Public Service, because they could not pass the requisite examinations.
6543. Is it your opinion that the teachers under the Public Instruction Department are more highly qualified than private teachers? I have known of hundreds of cases of people who could not pass the preliminary examination, and of hundreds of others who have failed in the Public Service, and who have gone into private service.
6544. How many new public schools are now in course of erection? About fifty.
6545. The architect of the department has the supervision of schools undergoing repairs, has he not? Only of the large ones.
6546. Is he responsible for the erection of all new ones? Only of the large schools, not of the small ones.
6547. Are all branches of the department under your immediate supervision? All connected with the schools are—such as the training schools.
6548. Have you given any consideration to the cost of the Cadet Corps Branch? No; that is not directly under me. The only thing I have had to do with it is, I have arranged for the officers in the Cadet Branch to give instruction in drill in the public schools; but I have no control over them. I have control of the primary schools, the high schools, the training schools, and the Technical Branch.
6549. The annual expenditure of the Technical Branch is apparently very large;—can you make any suggestion in connection with that branch which would lessen the annual cost? I think it is brought down pretty well to starvation point. The expenditure last year was about £20,000, and there were something over 6,000 students.
6550. What fees were received? The fees paid by students amounted to about £3,300. These fees either go directly to the teachers or are utilised in payment of the teachers' salaries. Take for instance, the teacher of the wool-class, who receives £335 a year. The fees amount to £200, which is utilised in paying his salary. The teacher gets the fees and the balance of the £335 is paid by the department. The £20,000 expenditure includes that for the Museum as well, and for the branch museums all over the country.
6551. These are in connection with the Technical Branch? Yes; I may tell you that five or six years ago the expenditure on the Technical Branch was £6 per head; now it is a little over £3. In London the expenditure at the Finsbury Technical College is £30 per head.
6552. What classes of the population take advantage of this branch? A large proportion are either apprentices to various trades or men who have served apprenticeship. The students generally vary from 15 years of age to 40. We have some few, in the agricultural class especially, who are older than that.
6553. When you say that you have reduced the cost to £3 per head, is that exclusive of interest upon the cost of the building? Yes.

6554. And I suppose of machinery? The machinery is paid out of the yearly vote, and so are the repairs too. F. Bridges,
Esq.
6555. Would £3 per head be entirely exclusive of that expenditure? It would be exclusive of the buildings, but not of the machinery. 4 Mar., 1895.
6556. With regard to the high schools at Maitland and at Bathurst;—how does the expenditure per head compare with that of the high schools in Sydney? Much greater, because they have a large number of scholars and others who pay no fees.
6557. Where? At Maitland and Bathurst; there is a larger number there in proportion.
6558. Can you give the figures? No; of course, the smaller numbers at the country schools make them much more costly than the Sydney schools, where the numbers are larger.
6559. Is the establishment of high schools to be discontinued? Not as constituted at present. High schools are established by Act of Parliament, and, of course, it is my business simply to carry out the Act; but I may say that we are not likely to establish any more high schools. We are making all the superior public schools in the country do high-school work as well as their own. That is, we take up with the advanced schools, at Grafton, for instance, where the scholars get all the instruction that can be given in a high school; some of them are being trained there to pass a matriculation examination at the University.
6560. Could the same system be pursued at Maitland and Bathurst? Yes.
6561. Are the high schools there unnecessary? Yes.
6562. What saving could be effected by their discontinuance? In Bathurst we would save, roughly, about £500 a year.
6563. Not more? No.
6564. What would be saved at Maitland? £800, if we shut up both schools. We have vested buildings at East Maitland; the high school for boys was built there.
6565. Has there been a very considerable falling off in the attendance at the high school in Sydney? Yes.
6566. How much per cent.? 40 per cent.; but there has been an increase in the fees owing to the higher rate. Formerly we charged £2 2s., now £3 3s.
6567. As there is only half the former number of pupils now, can any reduction in cost be effected? We would have to reduce the staff.
6568. Have you that in contemplation? Yes; one of the staff resigned last year, and no one was put in his place; and if we get the chance we will act in a similar way to others.
6569. *President.*] Are you in favour of the present wide basis of education? Yes; you must, however, bear in mind that 90 per cent. of the pupils leave the public schools as soon as they can pass the standard for exemption. The great majority of the lower classes do not get more than a rudimentary education.

TUESDAY, 5 MARCH, 1895.

Present:—

Hon. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Mr. Charles Moore Kellick, Clerk in charge of the Publishing Branch, Government Printing Office,
sworn and examined:—

6570. *President.*] You have been a very long time in the office? Over thirty-five years.
6571. You understand it thoroughly? Not every branch.
6572. But your particular section? Yes.
6573. You have the control of the stores in which are placed printed documents? Yes; old documents or anything that is put into stock.
6574. Do you find that the supplies are barely sufficient, or are they greatly in excess of what is necessary? In some cases they are a little in excess. When a new school of arts is opened we generally send it a copy of these documents, and so reduce our stock in that way.
6575. How many might you require for that purpose? There are about 270 schools of arts, mechanics institutes, &c., existing now.
6576. You have a supply of Parliamentary papers? Yes.
6577. Is it a very large supply? No; after I distribute certain papers I have only about seventy in stock. Suppose a department were to issue a report, they would ask us to put fifty or a hundred extra copies in stock, but our proper stock number would not exceed 100 copies at the very most.
6578. You have them placed on shelves in double rows? Yes; there are about nine or ten pigeon-holes high.
6579. The papers connected with the Legislative Council's proceedings;—would you designate the quantity there as small or large? Small, I should think; there is an accumulation of Assembly and Council papers since 1824.
6580. Of the earliest years you have only a few copies? Only a few.
6581. Of the later years how many? They vary—say, about fifty.
6582. That would be of each year? That would be of each paper of each year; we go in Sessions.
6583. Is the stock of papers connected with the Legislative Assembly small or large? It is about the same as that of the Council; there would not be much difference between the two in number of copies, but more papers would be printed.
6584. Is not the number of shelves occupied by the papers connected with the Assembly six times more than is occupied by Council papers? Well, I should think it would be. There are considerably more papers printed every year.
6585. And do you hope ever to get rid of all these? No; I do not think so. In order to make room I go through the stock periodically and cull it out, using my own discretion with regard to *Gazettes* and Parliamentary papers.
6586. What becomes of them when you make away with them? We have to make waste paper of them.
6587. How often have you a sale of that kind? Not very often—about once a year.

Mr.
C. M. Kellick.
4 Mar., 1895.

6588.

- Mr. C. M. Kellick. 6588. How many tons do you sell at a time? It would be a ton or perhaps two.
6589. Then you always have a supply of catalogues of the Free Public Library? Yes.
- 5 Mar., 1895. 6590. Is it a large supply? Yes.
6591. What do you charge a copy? A shilling; a copy if we sell it over the counter. It is sold in the Library also at a shilling, and we allow the Library a discount of 25 per cent.
6592. Would the old copies of these catalogues prove serviceable to readers in the Library? Yes; they are sought after.
6593. The dates of the *Government Gazettes* you have in stock extend, I understand, from 1832 to 1894? Yes.
6594. Have you a large stock of these? We have 2,503 bound copies.
6595. What does the binding cost? Eight shillings for each.
6596. Do you sell these or give them away? We keep them in stock for the purpose of supplying requisitions of Government officers.
6597. How many in a year might you have to distribute? There are about 125 bound up in a year, and we distribute (say) forty-five or fifty.
6598. But you are continually adding to the stock? Yes. We bind up two months' *Gazettes*.
6599. Is the actual stock an increasing quantity in consequence of the fresh numbers? We do not increase our stock; we bind up the same number every time.
6600. What do you do with the spare ones? We keep them in stock for future requirements.
6601. Have you very much spare space? No; we are pushed for space.
6602. Are the Votes and Proceedings in Parliament a very bulky parcel of books? Yes; they come to about 978 bound copies.
6603. What do they cost for binding? About the same as the *Gazettes*, 8s.
6604. And how many loose? I could tell you by referring to the books. Then there are the Council journals, or the Proceedings of the Legislative Council, of which we have 244 in stock.
6605. Are any of them bound? Yes; those are the bound ones I am alluding to. We do not bind any for stock; they are not bound unless a member of the Council requires a bound copy, and then we bind it for him.
6606. Do you still prepare copies of the Minutes of Council? Only on requisition.
6607. Did the Council request you to discontinue? We got an order from someone; but I could not say from whom.
6608. But it came officially? Yes.
6609. What is the size of the stock of Parliamentary debates? 3,117, the binding of each volume costs about 5s.
6610. Do they lie as dead stock? Yes; we do not have many requisitions for a thing like that, unless from Members of Parliament.
6611. Are any of these bound volumes you have mentioned embossed with gold figuring outside? Yes; they are all lettered in gold.
6612. I suppose they are rather handsome looking volumes? When first they come out they are very nice; but after a time they become dilapidated, and can be bought for a shilling in town.
6613. Have you not also a number of the Official Record of the International Exhibition of 1879? I have about 277 in stock.
6614. What do the binding and gilding of these cost? In those days it cost about 6s. a volume; I think it could be done for less now.
6615. I suppose very few of these are applied for now? Very few; I distribute them to new schools of arts.
6616. Then the Adelaide Exhibition of 1887-1888? There are a few catalogues on the shelf.
6617. Are they also bound? They are bound in a paper cover; but there are some in cloth, the average being about 1s. 6d. for binding.
6618. You have also copies of a report on Australian timbers? These are pamphlets, and were done for the Chicago Exhibition.
6619. Have you many of these? I think about 1,700 at present.
6620. There are occasional applications for copies, are there not? Yes, occasionally. The price is 7s. 6d., and the sale is very small.
6621. *Mr. Storey.*] What did that cost? I did not get the cost of this; there are lots of diagrams in it, which would make it expensive.
6622. *President.*] There was a pamphlet on the Fisheries? There were not near so many printed as of the Timbers pamphlet.
6623. Are there frequent applications for them? Yes.
6624. Have you a stock of books connected with the registration of conditional purchases throughout the Colony? Yes.
6625. How many volumes? The one I think you are alluding to is the one you saw at the store the other day; that is obsolete, and was never used.
6626. How many have you? Sixty-nine.
6627. There has not been a letter written in any of them? No; the binding cost £1 16s. a copy.
6628. Besides the material? The sixty-nine cost £210; that would be about £3 per copy.
6629. They are very handsome books? Yes, they are well bound.
6630. Is it possible to utilise them? Only the binder could utilise them.
6631. They have printed columns with descriptions at the top of each column, so I suppose they could only be used for the purpose they were intended for? Yes.
6632. They were printed under the auspices of a deceased Minister? Yes; they were done in 1883, and since then the Land Laws have been altered, and they became obsolete.
6633. You would be glad to get rid of the books? Oh, yes; the difficulty is in getting rid of them.
6634. Index letters of registration and patents;—have you a very large stock of these? There is a small pamphlet done in parts; there are about twenty-seven parts, and we have 500 copies of each part.
6635. Are they at all useful? Well, they remain in the store, but I do not know whether anyone is going to use them; they are simply put into stock, like other things, for future requirements.
6636. *Mr. Storey.*] What is the cost of them? About £260.

6637. *President.*] Among other things, you have census returns bound? Yes, for 1891. We have Mr. Coghlan's report, and the tabular matter. Mr.
C. M. Kellick.
6638. They are rather handsomely bound, some of them? They look pretty well; they did not cost much to bind; there are about 1,750 of each at the store. The binding cost 1s. 6d. a copy. 5 Mar., 1895.
6639. That would be about 3,500 altogether? Yes.
6640. Do you sell it? I am afraid we will not sell many; we charge about 10s.
6641. Can you tell us anything else of interest and utility to enable us to arrive at some means of economising? As regards pamphlets, they are printed to distribute and advertise the Colony. If you spoke to certain Members, they would say it was a very good thing. They think the way to advertise the Colony is through the Government Printing Office, and that it is not a waste to print these things.
6642. But the excessive quantity that may happen through miscalculations is troublesome;—what percentage of all the stock that is in your warehouse could you dispense with, and still keep a sufficient supply of each publication to provide for the probable wants of applicants? The bound copies I may say are rather useless, but we have not so many of the loose papers, seeing that *Gazettes* go back to 1832, and Parliamentary Papers to 1824.
6643. Whose directions do you act upon in weeding out needless matter? I use my own discretion to a certain extent; sometimes I speak to the Government Printer.
6644. When you sell a ton or two of them, you just take the things that are in excessive supply? Those that I think would not be required.
6645. Of course you do not sell valuable bound volumes; you keep them always? I do not think we can get rid of the bound volumes of Votes and Proceedings in any way; if we wanted room we would have to destroy them, I suppose.
6646. Unless you get rid of a lot of these papers you will be unable to put fresh matter on the shelves? In a few years time we shall be rather too full.
6647. Would you be able to store fresh matter of this year without being inconvenienced? Yes, for this year.
6648. What do you estimate the actual cost of the whole of the contents of that store? What it took to print the things and to bind?
6649. And what the paper cost? It would take thousands and thousands of pounds to print the matter that is there, as there is an accumulation of sixty odd years, but I suppose the value of it would be over £25,000. If a fire took place and the whole were consumed you could not replace it for that, and as waste paper I suppose I would get about 10s. a ton for it, and there are about 200 tons there. The paper as new paper would come to between £5,000 and £6,000.
6650. Are you a good judge of the quality of papers? No, that does not come under my notice much, the storekeeper has to do with that.
6651. Still you know something about it? I could tell if it were rotten, or if it would last perhaps.
6652. *Mr. Storey.*] How long have you been in your present position? About ten years.
6653. Are you stationed down at this store? No, at the Government Printing Office, there is what we call a storeman there.
6654. Although you are clerk in charge of the Publishing Branch, are we to understand that you are also in charge of this surplus stuff that is published? Yes.
6655. You have nothing to do with the publishing office? No, it is a misnomer to call me publisher. I think the Government Printer ought to be called publisher.
6656. You are in charge of all this stuff as it comes into stock? Yes.
6657. Can you give us any idea of the quantity of stuff you send out during the year;—do you keep any record of the value? The sales clerk does that. I simply pass it into the sales clerk and get a docket, and he charges for the document.
6658. Can you give us an idea of the value of the sales for 1894 from this store of yours? We only draw from that on requisition, supposing we want to supply a Government Office with the *Gazette* for example.
6659. Do you charge that office? Oh, no.
6660. Have you ever represented to the Government Printer or anybody the vast accumulation of stuff you have? Yes; I have always said we had too much.
6661. What reply does he give? His mouth is pretty well closed; people will put these things into stock.
6662. What people? Government officials. For instance, suppose a department publish a report, they may ask us to print fifty or 100 extra and keep them in stock.
6663. Does the Government Printer charge the departments for all the work done for them? No; that would be a book transaction, I think. Of course we keep an account of what printing is done, and what it costs.
6664. Does the Government Printing Office get credit from the other departments for this tremendous surplusage? I could not answer that; the chief clerk, or the computer, or the accountant could give a better idea.
6665. Was not the pamphlet on Timbers charged to the Chicago Exhibition? I believe that one was.
6666. What rent do you pay for the store? £300 a year.
6667. Does the Government Printer take any credit for the value of all this stock in the store? Not that I am aware of.
6668. Do I understand you to say that the value of that stock is £25,000? I estimate it at that, although opinions may differ.
6669. It cost £25,000 to produce? It cost considerably more.
6670. How much more? I really could not say. There is an accumulation of sixty years' papers, and I don't know what things cost then.
6671. And the whole value would be 10s. a ton for 200 tons? That is as waste paper.
6672. Is there a man constantly in charge of the store? Yes.
6673. How much does he get? He gets 10s. 6d. a day.
6674. What work has he to do during the day? He has to look over anything I send down into stock, count it, enter it, and put it on his shelf. He has to attend to the telephone as I am continually ringing him up about old documents.

- C. M. Kellick, Esq.
5 Mar., 1895.
6675. How much a day is this man employed, taking an average of a week? Someone must be there the store is twenty minutes' walk from our office; there must be someone there to protect the place.
6676. But there is no one in charge of the large store at McMahan's; when anything is wanted from there a man is sent down? But they are not always telephoning for documents. When we have no stock at our office, and they want stock from their office in Macquarie-street, they go down and get it out; but they could not do that, perhaps, every hour or two in the day.
6677. At whose instance are such things as these published—Votes and Proceedings of the Houses of Parliament and Parliamentary Debates? By Parliament.
6678. Who gives the order to the Government Printer? The principal shorthand-writer or the Speaker. I daresay the Speaker has the control of that.
6679. Knowing the tremendous accumulation of years, do you not think there ought to be some check put upon the publication of these? There are about eighty volumes every Session, and if there is a fresh Parliament there might be eighty new Members, and it has been the practice to give them the Debates of the previous Session.
6680. Whether they ask for it or not? It has been the practice.
6681. In spite of all that, you have this large lot? Yes; we have not always a fresh Parliament.
6682. You have been thirty-five years in the Government Service, and in the Printing Office the whole time? Yes.
6683. And ten years in charge of this branch? Yes, about that. Before that I was reading the Debates, and before that I was a compositor.
6684. Is there any suggestion you can give this Commission with a view of lessening the cost of the department? Take the Parliamentary returns. A Member will call for a return; it is laid upon the Table of the House, is ordered to be printed, and is printed. Perhaps it is very expensive. How are we to stop that unless Members will stop calling for returns. I spoke of that at the last Commission, and one of the Members of the Commission, who was a Member of Parliament, said, "We are the best judges as to whether papers should be printed or not." These returns give a lot of labour, in the first place to clerks of other departments, and then they come to us to be set into type, and a certain number is worked off and put into stock. That is where a good deal of the waste is. Some of these returns cost a lot of money to get up. They are put into stock, and there they remain.
6685. *President.*] You mentioned the storeman as getting 10s. 6d. a day;—is that for week days only? Yes.
6686. Not for Sunday? Oh, no.

Captain James Edie, Government Shipping-master, sworn and examined:—

- Capt. J. Edie.
5 Mar., 1895.
6687. *President.*] You have a Deputy Shipping-master;—is he absolutely necessary? It is absolutely necessary to have a deputy, because engagements are not binding unless made in the presence of the Shipping-master or his deputy. According to the Merchants' Shipping Act the heading of the articles runs: "Consular Office, Shipping-master or Deputy."
6688. So when you happen to be absent he takes your place? Yes.
6689. You are not very often absent? Oh, no.
6690. The next one after him is the first clerk and accountant;—are his duties very responsible and onerous? Yes; he has a good deal to do in connection with the correspondence with the Board of Trade and the different departmental returns.
6691. Does he collect such revenue as you obtain? No; there is a cashier for that. But if the cashier is at the bank, the accountant will look after the cash in his absence.
6692. So they are mutually in the same department, as it were? Yes.
6693. Is there much cash received? Not a great deal.
6694. The payments are not very numerous? No.
6695. Then what does the cashier employ himself with? He does other work, such as the writing out of the licenses. Men apply for a license to ship, and come to me; I examine them to see whether they are honest in what they state, and I give them a slip to him to grant them a license. The men come with all sorts of stories, and we have a lot of hunting up to do, so it takes up a great deal of his time.
6696. You have two clerks also—one at £200, and the other at £100;—what are their principal duties? The £200 man is entirely taken up with discharges in receiving and entering up the characters of seamen who are paid off. The captain writes the report of character for him, he fills up and signs the discharges, enters them into the books of the office for our returns to the Board of Trade. We send a monthly return of all men engaged and discharged from over-sea ships to the Board of Trade in London, stating the characters they have received when discharged; whether they have deserted, or been left in the hospital; the amount of money left for them in the shape of wages; whether ill from natural causes or injured in the service of the ship; or whether any are left in gaol. So the character of the men is recorded with the Registrar-General of Shipping in London, as well as with us. As to the £100 man, he keeps the books of under-tonnage vessels, and endorses the ships' articles. We have to write an endorsement on the articles of all over-sea ships to the effect that such and such men have been discharged or have deserted; that the proper entries have been made in the official log-book which has been produced to us; or that certain men were left in the hospital or in gaol. This clerk does the most of that, and he is kept pretty busy.
6697. And the probationer assists? He takes a duplicate copy of all engagements that take place. The deputy takes the ships' articles, and the probationer takes a duplicate copy, and afterwards enters the names up in our ledgers.
6698. What about the director of seamen? I do not know exactly how the director comes in; he is more a messenger; he is the man for handling sailors when they are obstreperous. He was in the Water Police for a number of years, and is a very efficient officer. For the present we have lent our probationer to the Treasury, as they required a relieving officer, and things are a little slack in the Shipping Office.
6699. The director of seamen seems to be very well paid at £180 a year. I suppose he is not a man that requires much literary ability? No, muscular.
6700. Is the rate of pay not rather excessive for such an officer? He was in the Water Police, and I do not know how they were paid. He also acts as messenger for us.

6701. Do you not think there is a little room for modification in his salary? I do not know what a good man could be got for. If he were away we would require a man with some training. You want somebody who understands the sailors; anybody else would not get on well. Capt. J. Edie.
5 Mar., 1895.
6702. Is the director an old seaman? Yes, he is one of them.
6703. At the same time it is a very comfortable salary for a man in that position? Oh, yes.
6704. *Mr. Storey.*] He has been there a long time? Yes, many years; he has grown up with the position. We have retrenched in our department to the extent of two men. There are eight of us, and there used to be ten three years ago. I think we have retrenched to the extent of £440.
6705. Supposing the director were to die, you would not give his successor the same salary as you give him? I do not know what the Water Police get. It is about a water-policeman's job.
6706. Could they not lend you one of the Water Police? He has to be on the premises.
6707. He has to be under your orders? Yes; he is our messenger as well.
6708. Then you have an office-keeper to clean the place out, I suppose, and see that it is kept tidy? Yes.
6709. Is there no way by which you could suggest a reduction of the cost of the department? Not just now; we retrenched one man who was a temporary clerk, and had been there a number of years; and old Mr. Brown, who has been connected for forty years with the Shipping Office, has been retired. There are times when there is very little doing in the office, but half an hour afterwards every one is as busy as he can be. I hand in this statement, showing our expenditure and income. [*Return handed in.*] In 1892 the revenue was less than the expenditure; but in 1894 we had turned the tables, and the revenue was beyond the expenditure.
6710. *Mr. Humphery.*] Is the office self-supporting? Yes; I think after everything is taken into account, and allowance made for rent, it about squares itself.
6711. *Mr. Storey.*] How long have you had charge of the whole establishment? Four years last November.
6712. That was your first entrance into the Civil Service? Yes.
6713. When you took charge did you find the Shipping Office overmanned? Well, I thought it was from the beginning.
6714. How long was it before you were able to get any retrenchment carried out? It was some time before I was sufficiently acquainted with the workings of the office; but after I became fairly acquainted with the ways of the office, and Mr. Kirkpatrick became Under Secretary, the matter was mentioned. A temporary clerk was very anxious to get an increase to his salary. I told him I thought he had better leave it alone; it appeared to me he was not required, and when Mr. Kirkpatrick wished to know whether the increase was necessary, I advised him that the man was not required.
6715. I understand that after being in the Shipping Office some time, and becoming perfectly acquainted with the work, you were impressed with the fact that it was overmanned, and that the officers were overpaid? The salaries were high owing to length of service of the officers.
6716. And since then certain reforms have been made, and you have placed the thing upon a more economical footing? Yes.
6717. You find the work of a Government officer differs in many ways from that of one in the employ of a private ship-owner? I think the Government method is entirely different.
6718. Is it not a fact that a great deal of clerical work which you have to do in your office in connection with sending these returns to England has to be done under Board of Trade Regulations—that costs the country some money? Yes.
6719. But that cannot be avoided, I understand? No; they send us circulars of every alteration that is made in the laws. I am empowered by the Board of Trade to draw bills upon them.
6720. Do you get any revenue from all this work? No; but all the other British Possessions have to do the same.
6721. There is a good deal of clerical work actually done by your staff which has to be done under the laws of Great Britain, which are the laws the Board of Trade works under? Yes; we have books of instructions to officers of British Possessions abroad.
6722. Is any unnecessary work done in your department that could be dispensed with? I do not think there is. We have a vote of about £400 for bringing home shipwrecked New South Wales seamen, although we do not often expend it, or anything like it. We have had to pay passages for men from China and the west coast of America. If the Board of Trade pay anything on our account they charge us; and if we pay anything on account of an English registered ship we charge the Board of Trade, and they refund our Government.
6723. *President.*] They authorise you to pass a draft upon them? Yes.
6724. *Mr. Storey.*] What are the office hours? From 9 till half-past 4, and from 9 till noon on Saturday.
6725. Is there any overtime? No.
6726. Has the Deputy Shipping Master been a long time in the Service? Just on thirty years.
6727. His salary is £357 10s.;—is that because of his thirty years' service, or is the position actually worth that amount? I think the salary has increased through the long service.
6728. Have you any control over the Newcastle Shipping Office? None at all.
6729. The Government have a large staff of dredges and tug boats; the Government boats have no articles? No.
6730. Could you give the Commission an idea of what you would consider a fair rate of pay for the masters and officers of dredges and tug boats employed in Sydney harbour? I really could not say what would be a fair rate. There are only two lots of tug boats here, Fenwick's and the Manly Company's, and I should think the masters would have from £17 to £20 a month and find themselves.

— Captain John Jackson, Manager of the Public Wharves and of Resumed Properties, examined after declaration:—

6731. *President.*] You have an assistant manager at a salary of £281 a year;—has he full employment? He has more than full employment; he does all the collecting round the whole of the city, and keeps the collecting books as well.

6732. That is the wharfages? Yes.

348—2 K

Capt.
J. Jackson.
5 Mar., 1895.

6733.

- Capt.
J. Jackson.
5 Mar., 1895.
6733. Inward and outward? Yes; he keeps the books in connection with the collections, makes out all the statements for the Auditor-General, sends the returns into the Treasury every day, and banks the money every day before 3 o'clock.
6734. But when you say he does all the collecting, he does not himself go round? He does. He first delivers all the accounts by the middle of the month, and when the pay-days of the different firms come round he collects the money.
6735. *Mr. Storey.*] That is inward and outward? Yes.
6736. *President.*] You don't allow accounts to have a longer currency than one month? One month. In some cases they may stand over longer periods; say, for six weeks.
6737. What do you do in such cases? We get them at the end of the six weeks, but sometimes firms go insolvent.
6738. But you have the goods all the time? Yes; we can always levy on the goods. We do it in this way: When we know the firm we let the goods go, but with a firm we don't know we keep the goods till we are certain of our payments.
6739. Then you never make bad debts? At the end of the year there may be bad debts to the amount of £10 or £15.
6740. You have a book-keeper at £245, what is the nature of the book-keeping he does? There is a good deal of book-keeping. There are a wharfinger and a clerk at the different wharfs, but seeing that at some of the out wharfs there was not full employment for the clerks, and there was too much to do at the head office, I asked permission to bring some men from the out wharfs to the head office to give assistance. As to Mr. Bayliss, he is fully employed at book-keeping.
6741. The books contain accounts of people who owe wharfage? Yes; we keep a cash-book, journal, ledger, manifest-book, and entry-book. All the entries entered in the Custom House have to be copied by us to get our accounts from.
6742. Are the wharfage rates difficult to calculate? Now they are, because in the Wharfage Act there is such a large quantity of goods coming in that are not enumerated otherwise.
6743. And you have difficulty in assessing whether it is to be a 2d., 3d., or 4d. rate? It is difficult.
6744. But there is no difficulty with bulky goods at so much a ton? There is no difficulty about that.
6745. Who is the officer responsible for fixing the rate when it is a doubtful point? I am.
6746. It ultimately comes for your decision? Yes.
6747. They abide by that? Yes. I have never known, except a few cases, of dissatisfaction.
6748. Where there is a doubt you give the importer the benefit? No, I refer to the Treasury.
6749. I see there has been one clerk dispensed with in 1895;—was that under your direction? There was an assistant at Byron Bay, and Mr. Cooper was taken from me to the Treasury, and I thought one would do at Byron Bay, so I took the clerk at Byron Bay to my office.
6750. In addition to the book-keeper, you have a clerk at £104 per annum? That is the one from Byron Bay.
6751. Is there full employment for him? Quite.
6752. What does the outdoor officer do? He is fully employed in taking account of wool that is shipped from the public wharves to private wharves, which otherwise we should have no account of.
6753. Is it taken by punt? Yes. He counts the bales, and we charge the consignees. We charge also tonnage dues for the punt, beside 4d. a bale for the wool.
6754. You think the charge for outward wharfage is a proper one? I think it is very moderate, only I think it should be charged at Newcastle as well.
6755. There is no inward wharfage at Newcastle? There is absolutely nothing, except tonnage dues.
6756. It is very unfair I suppose you think? I think it is very unfair, because at three of the northern wharves they have to pay wharfage.
6757. Then you have two day watchmen at £130? No; the watchmen get £114, £130, and £104. The day watchman acts as messenger, and that is why he gets the extra.
6758. He just patrols about, I suppose, to see that nothing goes wrong? That is so. Formerly there were no watchmen on the public wharfs.
6759. The wharfinger at Cowper Wharf gets good pay, £236;—is he a sort of deputy of yours? Yes; he keeps account of all the ships that come inward, keeps the entries, sends them up to the head office, and takes an account of all wool that goes from there by punts.
6760. So he could not be dispensed with? No.
6761. He has a clerk to help him? He has at the Circular Quay, because he does the work at the Circular Quay.
6762. You have a night watchman and a day watchman also at Cowper Wharf? Yes.
6763. The wharfinger at Darling Harbour seems to be well paid, without requiring any staff? There is a staff there; it is Mr. Eagar, but he is at the head office, doing the work of the wharf there. I may be able to show you where you can do something there.
6764. Then at Pymont Wharf you have a wharfinger and clerk, a night watchman and a day watchman? There is very little business doing there. The revenue is only a little over £2,000 a year. I think the wharfinger at Pymont Wharf could do the two duties, and the wharfinger at Darling Harbour could be dispensed with without doing any harm to the Service.
6765. And Blackwattle Bay Wharf is also very near there? It would be too much for a man to do the three.
6766. Is there much business done at Blackwattle Bay? We have about £1,100 a year from it, chiefly from metal and timber.
6767. Is there timber discharged there? A considerable quantity of intercolonial.
6768. There is something rather singular about Blackwattle Bay, for the wharfinger is paid at a smaller rate than the clerk? Because the same wharfinger is also clerk at Cowper Wharf.
6769. *Mr. Storey.*] How can he be at Cowper Wharf and Blackwattle Bay? He is at neither actually, but he keeps the books for the two wharves. All I have there is a watchman.
6770. *President.*] His duties as wharfinger at Blackwattle Bay are not so very heavy as to prevent his going to Cowper Wharf to act as clerk? That is so.
6771. Is he at Blackwattle Bay Wharf every day? He is very seldom there, because the watchman, at £104, measures all the timber and metal there, and sends the return to the head office. All the work is done at head office.

Capt.
J. Jackson.
5 Mar., 1895.

6772. Byron Bay is a solitary place, but you must have somebody there; it has a railway station there now, has it not? Well, it pays expenses; that is all it does.

6773. Is it expected to do better by-and-by? It did better while the railway was being constructed.

6774. *Mr. Storey.*] It will be worse when the railway goes past it? We did about £1,000 a year while the railway was being constructed, and the revenue is down to £400 now. The revenue was about the same before the railway was begun as after it was finished.

6775. Woolgoolga Wharf; I see there is only a caretaker there; is that a wharf for sailing craft only? And steamers. Those two wharves are white elephants. One of them brings only £45 a year, and the other about £80.

6776. You mean Coff's Harbour? Coff's Harbour and Woolgoolga.

6777. So if there were not a wharf and a jetty there you would not recommend —? I would recommend the Government should lease the wharfs. It would save the Government that salary and about £60 a year more for coal for the steam cranes, and another £100 a year for the two wharfs for other stores.

6778. Is there any resident near the wharf at either place who might be willing to lease it? There is at Woolgoolga; there is a saw-mill there.

6779. Has that man been approached indirectly or in any way to ascertain whether he would lease the wharf? He made a kind of an offer at one time to lease it at £25 a year, but £25 a year for a property that cost £13,000 is rather little.

6780. *Mr. Humphery.*] But you are not getting any returns from it? No.

6781. *President.*] The salary would be saved, so that might be added as part of the revenue? Yes; and the expenses would be saved also.

6782. He would have to maintain the wharf in order, ordinary wear and tear excepted? I question whether anyone would give more than £25 a year for it. Of course the wharf is very much exposed, and sustains damage from heavy gales.

6783. This jetty is not so important as the wharf, I presume? They are all jetties, these three.

6784. Is that in a solitary place? Very few people are in the vicinity.

6785. The wharves at Botany are leased at a favourable rate? £50 a year.

6786. A repairing lease? Yes.

6786½. That is better than having to maintain them? Yes.

6787. You have mentioned one item in which a saving could be effected—the Darling Harbour wharfinger;—are there any other savings you could mention now? There is a thing I have often thought of, but whether it could be done or not I am not sure. Three out of my office could be saved, if it could be arranged that inward wharfage should be collected in the Custom House. I know it would be impossible for them to collect the outward wharfage, because they would require to have men to watch the lighters, and it sometimes happens that wool, for which entries are passed in the Custom House for export, actually does not go in the ship at all. But if the Commission could see any way by which the wharfage could be collected in the Customs—and I think it could be just as well done—it would save three clerks with salaries aggregating £545. Of course it would add something to the work of the Custom House.

6788. But I have no doubt you have considered that matter, and with the large staff it could scarcely make much difference? Yes. Wharfage is a technical thing to deal with, and would cause a great deal of confusion in the Custom House. I leave it to your wisdom.

6789. If they had a clerk expert in the duty I do not see that it would inconvenience them? If they took, for instance, one of my men, say Mr. Eagar, who has £150 a year, he no doubt could keep it all right.

6790. The introduction of the *ad valorem* duties must have cost an immense deal of discomfort and difficulty in the Custom House to begin with until they got thoroughly accustomed to them, but if they had a clerk accustomed to the wharfages, and the wharfages were pretty well defined, they would very soon slip into the way of it? I think it could be done.

6791. At any rate you could dispense with three clerks? Yes. Then I would propose that, if my book-keeper went, my assistants could do the book-keeping in my department. And if you think it wise to let the wharfinger at Pymont take the Darling Harbour Wharf as well, that would be another saving of £288, or £833 in all.

6792. Which would be a very material saving? Yes, in a small department.

6793. Have you brought with you a memorandum of the revenue derived from your department? I have not brought it with me, but I can give it to you, I think.

6794. For 1893 and 1894, what were the revenue and the expenditure for each year? Of course these figures are approximate. In 1892 it was £74,000, in 1893 it was £70,000, and in 1894 it was £56,000, and there has been the same expenditure of about £3,500 per annum.

6795. Would you kindly explain what you consider to be the reason of the falling off? Well, previous to 1893 the imports were so much greater. During the last two years the imports have fallen off enormously in consequence, no doubt, of the general stagnation in trade. Besides that, I have had to recommend to the Treasurer to reduce the rents paid by the large steamboat companies. They could not afford to pay the former rents. We used to charge the French Company £3,000, and the Orient and P. & O., £2,500. These amounts have been reduced by £500 each.

6796. *Mr. Storey.*] That revenue included all the annual payments? All the revenue that has gone through my department.

6797. The revenue from the passenger traffic at the Circular Quay is also included? Yes; the rents of those places have been reduced too, and of the ferries in Erskine-street.

6798. Is not a great deal of the wharfage collected by the Custom House agents for you? I suppose about £1,000 or £1,500 a year. A good many of their constituents are up country or in Melbourne, and we could not get hold of them.

6799. Do you make them any allowance for collecting these wharfages? Yes—5 per cent.

6800. What are the particular duties of these watchmen? To watch the goods.

6801. But you don't take any responsibility for the goods? I thought of that when I first came on the wharf. Although the Government are not legally responsible, I think, as they get such a large revenue, they are morally so.

6802. Can you give me the figures showing what the revenue is from wharfage on merchandise? From inward

Capt.
J. Jackson.
5 Mar., 1895.

inward wharfage alone, I suppose, about £15,000. Of course if there were no watchmen there the Government property would simply be destroyed by the larrikins who infest the wharfs.

6803. You have supreme control over your department, have you not? Yes.

6804. Have all these salaries been under your revision? Yes.

6805. Are they fixed by you? Some of them have been fixed by me; I may say all of them.

6806. How long have you had charge of the wharfs? Going on eleven years.

6807. Has the expenditure under your department much decreased during your term of office? No; it has increased because, when I took charge of the wharfs, the revenue was only a little over £10,000.

6808. It has increased by your having all these wharfs tacked on to you? Yes.

6809. As to that proposal about letting the Customs collect the inward wharfage, have you ever suggested that to the Customs or the Treasurer? I was speaking to the Collector some time ago.

6810. Did he favour it at all? I do not know.

6811. Has not the competition from private wharves affected your income? It has affected the associated wharfs, but not the public wharfs. I do not care about sailing ships now, because I am almost full of steamers, and I have to keep a berth for them for the date they arrive, and I could not do that if I had sailing ships.

6812. In your opinion are not the wharfage rates far too high? Well, on some articles they are. For instance, take case brandy, which costs 8s. 4d. per ton by measurement. I have often thought it would facilitate a great deal of the work if wharfage was charged so much per ton weight or measurement. For instance, a case no bigger than that book is charged 6d., and another, that may measure 10 tons, pays the same.

6813. How many years is it since the wharfage rates were fixed? About fifteen years.

6814. Does not the fact that private wharf-owners can give 50 and 60, and as much as 70 per cent. rebate prove that the rates of wharfage are too high? It certainly points that way. The Wharf Association does not give any rebate now; there was an agreement with the Treasury to that effect. I may mention that the rate of the Town Hall organ was only 9d., while a piano would cost 2s. 6d.

6815. Those are the only retrenchments you can show us;—there is nothing under the head of contingencies? I could not touch them.

6816. Cleansing public wharfs, £625,—that is a big item? But it is a big wharf. There are only three men and a horse and cart.

6817. What have you to do with the lighting and maintenance of light on Stockton Wharf, Newcastle; you have nothing to do with that? Yes; I have. We do not charge wharfage, because we could not; but we call it craneage.

6817½. *Mr. Humphery.*] There was a difference of £14,000 between the earnings of 1893 and the earnings of 1894? Of course that is approximate.

6818. Which of the wharfs showed the largest falling off? The largest falling off in proportion was at Darling Harbour Wharf; the revenue fell from about £4,000 to £2,000, and at Cowper Wharf it fell £2,000.

6819. Circular Quay? Circular Quay fell, I suppose, about £5,000.

6820. How do you account for this very great falling off in Circular Quay? By the reduction of rents in a great measure. The reduction amounted to about 25 per cent.

6821. Do you think it would be possible to let the Byron Bay Jetty? I do not think it would be wise. I am afraid it would get into the hands of a clique. Next year I hope to do a good deal more business at Cowper Wharf.

James Hoey, Esq., sworn and examined:—

J. Hoey, Esq.
5 Mar., 1895.

6822. *President.*] What are you, Mr. Hoey? I was General Superintendent at the Fitzroy Dock.

6823. When did you leave it? At the end of July, 1893.

6824. We understand you can give us some valuable information in connection with it? I can give you a little. I do not know whether you will consider it valuable or not. I just dotted down a few items this afternoon.

6825. Will you mention the reason of your leaving? I was retrenched.

6826. Are you now a pensioner upon the Civil Service Fund? Yes.

6827. Did you retire voluntarily? Oh, no. I do not know why I was retired. I have never been able to find it out. The nearest I can get to it is that it was the act of the Minister for Works.

6828. Of course, if you have information of a general and important character that you can give us, we shall be glad to receive it. We are here to discover means of economising without sacrificing efficiency, but we do not inquire minutely or microscopically into personal affairs. You will, no doubt, avoid these, and let your remarks be of a general character, and your information such as will conduce to the welfare of the Service? What I would speak about first is the cost of the clerical branch at the Fitzroy Dock. To give you an idea of the expenditure of that place, I may tell you that in 1892 the wages amounted to £50,000, the clerical branch costing £522 10s. Now they are paying only half the amount in wages, and the expenditure on clerical work is £738.

6829. Do you mean that to be understood in a disadvantageous light? The expenditure is unnecessary.

6830. Were you accustomed to clerical work yourself, when you were General Superintendent, or were you a practical man? I superintended those men. They were responsible to me.

6831. You thoroughly understood the duties of the dock as well as the practical part of the clerical work? Yes, quite.

6832. How do you account then for the difference in the amount of pay? The number of extra men put on.

6833. You left in 1893, and you have not been employed in that department since? No.

6834. Are you intimately acquainted with all that has been going on in it since then? Fairly well.

6835. You see, we must have information from the very root of the matter, and anything like guesswork would not suit us here at all. If you had continued in that department you would have been the man to give us reliable and perfect information, but as it is you speak merely from what you may have learnt or have heard or have partially observed, and therefore your statements would not have that weight as evidence that we should desire them to have. If you had any absolute solid facts to give us we should be glad to have them? Well, these are facts which you can prove at any time.

6836. I hardly think, Mr. Hoey, that the matter is in such a position that you can give us reliable information which we could publish? Very well.

6837. Seeing that you have left the place twenty-one months ago? I thought I could have shown you how the thing could have been worked for the same expenditure as when it was under my charge, but it makes no difference to me personally. J. Hoey, Esq.
5 Mar., 1895.

6838. You can speak with absolute certainty as to what the expenditure was when you were there? You could better get that from the head office straight.

6839. But you are here as a witness, and we want you to tell us. Before July, 1893, what was the expenditure in the department of the Fitzroy Dock, of which you were General Superintendent? I would have to go into a lot of figures to find out; you will see it in the Blue Book for 1893.

6840. You cannot tell us? No, I cannot tell you.

6841. Can you tell us what the cost of carrying it on per annum was? I could if I were to work it up. What I wanted to point out to you gentlemen, if you care to hear it, is the increase in cost over and above what I carried it on for.

6842. But if you cannot tell us what the expenditure was when you were there, nor the cost of carrying on the work, you surely cannot form a conclusion as to whether it is more or less, because you do not know? But I do know. For instance, during the whole of that time there was one boiler-maker foreman; now there are two. The extra one is absolutely unnecessary—a mere excrescence.

6843. That is your opinion? Well, my opinion is as good as that of any man in the country, as I was thirty years superintending work.

6844. What have you to support your opinion by? My own experience of course. In addition to the two foremen boiler-makers, a man has also been put on as a foreman labourer, a thing I never required, and can see no earthly use for. An extra man has been put in the store, and the issues from the store cannot be half what they were in 1892. An extra clerk has been put into the general service since I left.

6845. You said the expenditure in wages alone when you left was £50,000? I said in 1892; it had fallen to about half of that when I left.

6846. Have you any means of judging what the rate of expenditure is now? It should not be any more than it was in my time.

6847. Do you know for a fact what it is? I have told you these extra people have been put on, and, of course, they are paid; and, in my opinion, they are quite unnecessary. The work could be done just as well with the staff in existence in my time, and you can ascertain for yourself what that was.

WEDNESDAY, 6 MARCH, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Alexander Brown Portus, Esq., A.M.I.C.E., Superintending Engineer of the Dredge Service, Harbours and Rivers Department, sworn and examined:—

6848. *President.*] You have been a considerable time in the Service, I believe? Thirty years.

6849. And fifteen of those years you have been at the head of the Dredge Service? Yes.

6850. You are a professional engineer, are you not? I am an Associate Member, with corporate privileges, of the Institution of Civil Engineers of London.

A. B. Portus,
Esq.,
A.M.I.C.E.

6851. In the list of those in the department you have a clerk? Yes; and an assistant clerk.

6 Mar., 1895.

6852. There are two clerks receiving, respectively, £245 and £236? Yes; but, by an arrangement, the clerk receiving £236 is at the Fitzroy Dock. I have a second clerk under me who receives less than that. He is paid by the Clerical Branch £156 per year. The other clerk is the principal clerk.

6853. Your clerk is not paid £245? Yes; one of the clerks is. They are both in one of my rooms. One of them is tabulating the returns, and the other is doing all the necessary clerical and other very responsible work.

6854. What returns do you speak of? Of the work performed by the dredges during the week. The principal clerk has all to do with the classification-sheets, preparing estimates, and noting the position of each employé. All papers go to him.

6855. Does your clerk prepare the pay-sheets of the men? The pay-sheets are prepared by the masters of the dredges. Their position is somewhat of a dual one—doing clerical work and engineering work as well. About 6,000 vouchers are sent in by them in a year duly certified. I have to deal with all of those vouchers.*

6856. Once a month? Yes. The contractors and the crews are paid once a month.

6857. In the new column for 1895 I see there is a master and chief engineer on each dredge? Yes; that is, as far as the large dredges are concerned.

6858. Are the masters thoroughly qualified marine engineers? Yes; nearly all hold first-class certificates of competency.

6859. I see there are fifteen of them drawing from £380 to £268? Yes; they are graded at different rates.

6860. In which capacity is it that they are considered most entitled to those salaries, as masters or as chief engineers? As chief engineers. I might mention that the masters of these dredges have other duties to perform. Many of them have small grab dredges working under them. Originally, these small grab dredges had masters, paid at a high rate, but a Commission which inquired into the question in 1887 decided that the masters of the large dredges should control the grab dredges.

6861. Who selects the place where the dredging is carried on? The papers are always sent to me for report. Application is made for a dredge (say, in the northern district). It goes to the Minister, who refers it to the Engineer-in-Chief, who then refers it to me. I report, and say whether the dredge should go or not. In Sydney it is difficult to determine fairly, as much of the dredging consists of sewage matter which the department removes free of cost. Sometimes the owners of wharves want them deepened.

They

* NOTE (on revision):—Elaborate weekly returns of work and labour, and monthly detail returns of all stores used and in stock, are sent in for my guidance by dredge officers, and requisitions for all stores required are made out by them.

- A. B. Portus, Esq., A.M.I.C.E.
6 Mar., 1895.
- They apply to us, and, if the deposits are not sewage, we let the dredges out. We would charge £30 a day to a wharf-owner for the use of one of our largest dredges. The dredging is done free if the plant is employed removing sewage. I have to recommend whether the dredge is to be paid for or not.
6862. How many vessels have you in all? Fourteen ladder dredges, 8 suction dredges, 19 grab dredges, 24 steamers, and 76 barges, amounting to 141 vessels in all. The estimated value of the whole is £467,600.
6863. They have not any work to do outside the heads, have they? Dredges have not to work outside the heads, except in the case of three suction dredges, which are suitable for dredging near bars. We have only had one case yet where a suction dredge was so used—on the Clyde bar. The Clarence River was dredged near the bar. The sand was pumped up into the hopper, and discharged into the sea, partly outside the heads.
6864. Are you acquainted with the rates of pay received by the chief engineers of sea-going vessels other than those belonging to the Government? Yes; I have a fairly good acquaintance with them.
6865. How do they compare with the wages that prevail on board the dredges? You are referring to the engineers, but of course the engineer and master of a dredge has a dual position. Take the Newcastle and Hunter River Company; the chief engineer receives £22 10s. per month, and is found. That means about 2s. per day, in all, say, £25 10s. per month, or about £300 per year. The engineer of the "Thetis," 600 indicated horse-power, and the engineer of the "Castor," 800 indicated horse-power, receive £19 13s. 4d. per month.
6866. Rations? No; they keep themselves. Captain Hutton's pay is exceptionally high, because he is called upon to make long voyages in the "Thetis," and because he has been a long time in the Service.
6867. Some of these engineers have been a considerable time in the Service, have they not? Yes.
6868. And did they receive increments on their salaries from year to year—I do not speak of the last two years, but previously? In 1883 there was a general increase of 10 per cent. upon all salaries. That was a temporary increase, in the first instance, to meet the increased cost of living. It went on for a couple of years, when it was made permanent. In 1886, Mr. Lyne, then Minister for Works, decided that the 10 per cent. should cease on all new appointments.* In 1887 a Commission sat and inquired into the Dredge Service. Mr. Darley, Mr. Hickson, and Mr. Barling formed the Commission. It was considered that the Service was expensive, and it was desirable that the working expenses should be cut down. The result was that the numbers of many of the crews, chiefly of the tugs, were reduced—some by two hands, others by one. Some of the dredges were put out of commission in 1893.
6869. If by any chance one of the chief engineers and masters had to retire on superannuation, or in any other way, would you not be able to fill the vacancy at a very much lower rate? Mr. Carruthers, who draws £380, receives the highest salary. If he were retired, or if he left the Service, that position would be filled by the next in turn, who would only receive £348 10s. That amount is the maximum for all future appointments. We have provided in the future for four grades, namely—£348 10s., £312 10s., £290, and £267 10s. The engineers of our largest tugs receive £236, and the first in rank would be entitled to be appointed (should a vacancy occur) to the lowest grade dredge, where he would receive £267 10s., and the highest engineer officer in the second grade, if he held a first-class certificate, would take the place of the officer in the first grade at a salary of £240 per year less 10 per cent. on £40.
6870. Are the masters of tugs also engineers? No; but they (the masters) possess coasting certificates of competency for first-class tugs. Those in the small tugs have harbours and rivers certificates.
6871. I see from page 132 of the Blue Book that the seamen, of whom there are 118, receive a salary of £114 8s.? Yes.
6872. Are these men ordinary seamen? Yes; they are specially good men selected for the purpose. They are able-bodied seamen who have passed a medical examination, and whose previous characters must have been good.
6873. Have they to keep themselves out of their salary? Yes.
6874. Are there any rations of any sort? No; but on a coast journey an allowance is made. The 1887 Estimates were passed by Parliament at a reduced rate. There was a great outcry about it. Members of Parliament interceded, and, in 1889, Mr. Bruce Smith, who was then Minister for Works, restored the rates to the former scale.
6875. Are the duties of the seamen very severe and arduous? No; they would not be considered arduous.
6876. Would their positions be considered comfortable? Fairly comfortable.
6877. They are not called upon to expose themselves to the weather as able-bodied seamen are at sea? Not generally. Many of the vessels, however, work all night, and there is some risk attached to it.
6878. I have a list before me, cut from a Newcastle paper, where it is stated that the wages of able-bodied seamen are £3 10s., and £1 10s. to £2 per month for ordinary seamen;—of course they are kept? I fancy that is not the coastal rate. The coastal rate is £5 for able-bodied seamen and £7 for firemen.
6879. Intercolonial sailing vessels pay from £3 to £4 for able-bodied seamen, and £1 to £1 10s. a month for ordinary seamen;—there is a very great difference between these wages and the Government wages? Yes; I did not know that on vessels you refer to the rates were so low.
6880. Is there a great deal of competition among seamen to get employment on dredges? Yes; numbers of persons apply for the position.
6881. It is, therefore, something to be aimed at, both by engineers and seamen, is it not? Yes.
6882. Are the engineers on tugs masters as well as engineers? No; except on small launches.
6883. Then there are two chief officers on board—each looking after his own department? Yes; on the larger tugs.
6884. That must make it very expensive? Yes; you will find the same thing in all steamers. £13 a month is paid the engineer of second-class tugs. The master gets a similar sum. If he has been six-and-a-half years in the Service he receives 10 per cent. additional.
6885. Is the Dredge Service at all remunerative? You cannot look at it in that light. The benefit received by the Colony is the impetus given to commerce by the deepening of harbours and rivers, and the creation of valuable public assets by reclaiming important land areas.
6886. Do you do much work that is paid for? Not much. The deepening of wharf frontages is the principal item.
- 6887.

* NOTE (on revision):—The 10 per cent. so reduced was restored by a subsequent Minister, who directed that seamen and firemen should receive 10 per cent. after three years' service, and other employes after six and a half years'.

6887. What revenue does it produce? Dredges are occasionally hired out. A week or two ago one of the dredges was hired for nine days, at £30 per day. That is the largest amount we have had for some time. A. B. Portus,
Esq.,
A.M.I.C.E.

6888. The outgo of your department is £184,000 a year? It is not so large. The dredge vote is at the rate of £99,000 for this year; half this sum was voted for six months. 6 Mar., 1895.

6889. Can you give us some idea where economy can be exercised in your department, such as by dispensing with any unnecessary hands or by showing how work can be done on a more economical scale than at present? As far as the number is concerned it is not very clear to me how we could make any reduction because we have already cut down the numbers to the lowest possible limit. In consequence of the recommendations of the last Commission we made numerous reductions. [*Witness reads minute.*] When an effort was made to effect reductions in the rates objection was made by Members of Parliament, and the Minister has been induced to restore the rate.

6890. Such influence of course is not compatible with business principles; the Government should be able to carry on its operations free of all political influence; the work should be carried on on a proper basis of utility without excessive remuneration; the men should be remunerated on a proper scale the same as if it were an outside institution or company carrying on business for a living;—do you think it would be advisable to have all these appointments made by a Board who would be superior to any influence by any Members of Parliament, and who would appoint the best men to be ascertained by competitive or non-competitive examination? As far as the rates are concerned.

6891. Are you in favour of the professional men being examined by competent examiners before being appointed to a position, and of ordinary men being examined as to their character and respectability and capability, the Minister of course making the appointment subject to the recommendation of such an independent Board;—would that not enable you to get rid of the undesirable influence which is exercised to keep wages and salaries up, and to fill the place with perhaps undesirable men? I do not think that these objects would be effected by the appointment of such a Board. For example, take the case of the Railway Commissioners. They pay relatively, I think, almost as high rates as we do, rates which I think are above the ordinary mercantile rates.

6892. You do not think, then, that Parliamentary influence exercised to keep wages up is an undesirable thing? I say that when the Commission to which I referred recommended a reduction of rates, which was for a time carried out, some objections were raised, and the Minister gave way and restored the rates. There has been no effort made for a reduction since 1893. As a matter of fact salaries under £200 when retrenchment was recently effected were not touched, and are not subject to the 10 per cent. reductions, and firemen and sailors come under that head, as they receive less than £200 per year.

6893. You said that the rates were reduced, and that influence was used by Members of Parliament to get them restored to the old level? Yes; by deputations to the Minister.

6894. I asked you whether it would not be well to get rid of Parliamentary influence and of deputations, and to have appointments made by an independent Board who would appoint according to merit? It was tried in Melbourne by the Melbourne Harbour Trust. Their rates are, I think, about the same as ours. As far as the masters and engineers are concerned their rates are, I think, even higher, because they have an engineer and a master in these dredges, and we have only one officer filling the dual position.

6895. *Mr. Storey.*] You have been over thirty years head of this branch? Yes; fifteen only superintending.

6896. You have seen it grow up to its present big dimensions? Yes.

6897. Have all these additions to the Dredge Service and steam tugs been made at your request, or at whose request has the Service been increasing at such a rate? Commercial requirements had to be met. I drew the attention of the authorities to the method of using sand-pumps. That necessitated a considerable expenditure which resulted in a great increase in the year's output, and in a great reduction in the cost of the work. This return will show what has been done. [*Witness hands in return.*] Much of that has been due to the system of working, and to the better class of dredges used.

6898. Has all this plant been manufactured in the Colony? Nearly the whole of it with the exception of one dredge and the machinery for grab dredges which was imported.

6899. Were the dredges constructed by your department? The dredges of late have been chiefly constructed by ourselves at the Fitzroy Dock. Previously the work was done by contract, and it is occasionally now so done.

6900. Have you any comparison as to the cost? The work at the Fitzroy Dock would, in our case, furnish a comparison. In building iron barges, Fitzroy Dock work was £100 per punt cheaper than the cost of similar work done by private firms, as nearly as I can remember.

6901. We have a statement of the wages paid to all mechanics;—would they be under your control? The superintendent of the Fitzroy Dock carries out the work there. I supervise carrying out the engineering part of it connected with the Dredge Service. The superintendent is responsible to the Engineer-in-Chief.

6902. You spoke of some Commission which resulted in the reduction of the crews in the dredges? Yes; chiefly in the tugs.

6903. Should you not have known that the vessels were overmanned? I took charge of them in 1880.*

6904. Are you responsible for the rate of wages fixed, and for the number of the crews on all these dredges and tugs? Yes.

6905. Do you make it your business to ascertain whether there are too many on board a vessel, or that the rates of pay are too high? Yes; I make it my business to see that the branch is properly conducted in that respect.

6906. Are you guided by what the captains tell you? No; because I have worked plants myself. I had charge of dredging operations before I came to Sydney. I have a return of the value of all the dredges which I will hand in. [*Witness hands in return.*]

6907. How comes it that in the list of the crews of the tugs and dredges there are two or three masters and engineers? They work in three shifts. It is more economical making one dredge do the work of three. The men only work eight hours. There is only one dredge master and chief engineer, but necessarily with three shifts there are three tug captains and three tug engineers, and, I believe, the work done by this dredge has not for cheapness been surpassed anywhere by a ladder dredge.

*NOTE (on revision):—Up to 1892 the rates paid by the steam companies were about equal to £9 5s. per month for seamen, and £11 5s. for firemen—this is allowing the keep of the men to be worth 1s. 6d. per day.

- A. B. Pörtus, Esq., A.M.I.C.E.
6 Mar., 1895.
6908. You said you were pretty well conversant with the rates of pay of steamers in the harbour? . Yes.
6909. Would you compare the duties of the master and engineer and seamen of the "Thetis" with those of the master and engineer and seamen on one of our large tug boats belonging to the Port of Sydney? As far as responsibility is concerned?
6910. I mean as far as actual work is concerned as well as responsibility? I consider that the responsibility of these on board the "Thetis" is greater, because we have the very highest type of engines, triple expansion with evaporation feed-water and forced draft, which have to be kept in good order. Those on the tug boats generally are not so good.
6911. The recent tug boats that come here are of the highest class? One, the "Hero," is exceptional, and I do not think she has the accessories mentioned.
6912. *Mr. Robertson.*] So is the "Thetis"? The "Castor" has triple expansion engines of 800 horse-power, and has steam for everything, even for lowering the funnel.
6913. *Mr. Storey.*] The master of a tug boat who is engaged in seeking work has a pretty responsible situation considering the competition there is among the tugs? Yes.
6914. The master of the "Thetis" gets £25 a month, while the master of the "Hero" only gets £14 a month? *The master of the "Thetis" has to go to the islands of the Eastern seas and up and down the coast, towing very valuable uninsured dredges. His salary is not £25. It is about £23; and he has had many years' service.
6915. Take one of the steamers plying between the different Colonies. The rate of pay for the men constantly employed in and out of port is £20 a month for the captain, against £23 a month without rations for the captain of the "Thetis"? Our general rate is £20 a month, and if Captain Hutton died the rate of pay given to him would not be given to his successor.
6916. The men on intercolonial steamers work at night and the others do not? Captain Hutton works at night when he goes along the coast.
6917. The average cost of your masters and chief engineers is £27 a month? They have to make out elaborate monthly store returns, supervise grab dredges, do clerical work, and, therefore, their positions differ wholly from those you are referring to. The value of the various vessels controlled by the chief engineer and master of the dredge, "Newcastle," is over £60,000.
6918. Do not the masters of all vessels have to do clerical work? To some extent perhaps. I might add that the master of the "Newcastle" dredge has to supervise the workmen doing repairs in the machine shop in addition to his other work, and country dredge masters are often called upon to report upon and advise as to wharves, docks, &c.
6919. You have a great number of sailors in your branch? . Yes.
6920. The average wage paid to your seamen and firemen is £12 a month, and as there are 307 of them, they get £144,144 a year? How do you take the average?
6921. I am quoting a return furnished by the Public Works Department. The rate is £9 10s. 8d. for seamen. The monthly rate paid by the Newcastle Company was £5? And found.
6922. That would be equal to 1s. a day? More than that.
6923. Your men live ashore, they have no night-work? They have night work occasionally.
6924. You cannot compare the absolute work, the manual labour, of the crew of a collier running this coast with that done by the crews of your tug-boats? No comparison can fairly be made, I consider.
6925. The seamen on such a collier would get £5 a month, the captain £20, the first officer £18, and the second £10. All your wages are 50 per cent. higher than those paid outside? But the men outside are all found. That makes 1s. 6d. a head extra per day. That would bring it to £7 5s. a month against our £9 10s.
6926. In your opinion, is it reasonable that the employes in the Government dredges and tugs should be paid a higher rate of wages than is paid the ordinary steamers running on the coast? The rates we pay are too high.
6927. Have you ever brought it under the notice of the heads of your department that the wages are too high? No, I have not; it is useless doing it.
6928. Do you prepare the estimates every year for your branch? . Yes.
6929. And you go on, year by year, without making any suggestions with reference to it? We are bound by the regulations. They have the sanction of the Civil Service Board, and certain rates are put down in the regulations.
6930. But these regulations were drawn up by your own department, were they not? Yes; in 1880.
6931. The Civil Service Board could not make any objection to your regulations, could they? I do not know.
6932. So that it is purely a matter of form if the Civil Service Board approves of them? I suppose so, but the Act should be referred to.
6933. How comes it that there is such a large increase in the last six months compared with the previous six months. The total vote for the last six months of 1894 was £47,000, whereas it is £49,851 for the first six months of 1895? A number of dredges were put out of commission. We sent in our estimate for about £104,000, and were asked to cut it down. We did so, reducing it to about £73,000 for the twelve months of 1894.
6934. By leaving off work? By doing only absolutely necessary work. The work of reclamation, for instance, was scarcely proceeded with. We laid up a number of dredges.
6935. Were these dredges employed on work that was not necessary to be carried out? Reclamation was carried on because it was considered reproductive at Leichhardt, where there was an unwholesome swamp, but in other places where it was not considered so important it was temporarily abandoned.
6936. Were other works going on that had to be abandoned? We knocked off double and treble shifts at Newcastle Harbour. The people made an outcry, and on the instruction of the Minister we put on additional shifts of men. The matter came up before the House, where it was considered that the work was of a necessary character, and the Minister promised that it should be gone on with. Additional estimates were passed for £30,426 for 1894.
6937. Do you do all the repairs yourself? Yes; Government workmen do.
6938. Do you find it much cheaper doing it in that way than by contract? Yes; and a great deal better. One advantage of having engineers in charge of the dredges is that the cost of repairs here is much cheaper

* NOTE (on revision):—The master of the "Hero" also gets a small commission on the earnings of the vessel.

cheaper than elsewhere. At Home, for instance, they have, I think, nautical men in charge of the dredges, who do not, I fancy, pay that attention to the machinery that our controlling engineers do. The difference in the cost of repairs in different countries is shown on this return. [Witness hands in return.] 6939. Is the increase in the staff of the masters and chief engineers on account of the new tugs and dredges? By recommissioning dredges.

A. B. Portus,
Esq.,
A.M.I.C.E.
6 Mar., 1895.

6940. What suggestions can you make whereby economy can be effected in your branch? I would make a reduction on the salaries throughout; not only on those over £200 a year, but on all.

6941. What would you consider a fair reduction? From 12½ to 15 per cent.

6942. And then the men would be very favourably paid, would they not? Yes.

6943. Are most of your men contributors to the Superannuation Fund? A few; certainly not the bulk. All the dredge masters are bound to be, and some in the lower grades subscribe to it.

6944. *Mr. Robertson.*] In a statement handed into the Commission by the Under Secretary for Public Works, it appears that you have thirteen permanent masters and chief engineers, drawing a sum annually of £4,239, making an average of about £325 per annum each man. You have three temporary masters and chief engineers, drawing £803, or an average of £267. By the last report of the Railway Commissioners, dated 30th June, 1894, I find that the locomotive engine-drivers on the railways receive on an average 14s. a day; that is £4 4s. a week, or about £218 per annum. How do these rates compare with those paid in your branch? They are in no sense parallel cases. One of our firemen may rise to the position of driver, getting that £4 4s. a week. It would be absolutely impossible for a driver to rise to the position of master of one of the dredges, because he must have been trained and hold high certificates. I suppose they get that high rate on the railway for pursuing a dangerous calling.

6945. But you don't compare your firemen with these engineers? I think you will find on inquiry that these men are not tradesmen. They go in as cleaners and work up till they become drivers.

6946. On the same list there are 307 permanent seamen, firemen, and others, receiving a sum annually of £44,225,—that makes an average of £144 per annum each man? There are 307 permanent captains, engineers, mates, engine-drivers, coxswains, carpenters, blacksmiths' strikers, seamen, and boys, the average being £144 per year.

6947. There are 110 temporary hands, drawing £11,933—that makes £108 each man? Yes.

6948. In reply to Mr. Storey you admit that this rate could be considerably reduced, and yet that the men would be receiving fair salaries? I think, in the altered condition of the Colony, the rates should come down a little, and that officers, seamen, and all should be reduced.

6949. You have 417 employes—307 permanent and 110 temporary—receiving, on an average, £144 and £108 per annum each, in their respective classes. In the earlier part of your evidence you said it was necessary for all to pass a medical examination. Have all these 417 men passed medical examinations? Such men as were in the Service when the regulations came into force have not passed, but all permanent men who have joined since then have passed.

6950. Since when? Since 1880. I am speaking of the permanent staff. Before a temporary man can come on the permanent staff he must pass an examination.

6951. You understood when the President was asking you about the advisability of placing the work under a Commission that he was speaking only so far as the dredges were concerned;—is not that so? Yes.

6952. What is your opinion as to placing the whole of the Service under an independent Commission? I have not given the question any thought.

6953. But you have admitted that certain suggestions made by the Commission of 1887 for the purpose of effecting economy have been nullified through the interposition of Members of Parliament? That is so.

6954. In your opinion is it desirable that the Service should be removed beyond all control of political influence? Much would depend on the constitution of the Commission.

6955. Granting that the constitution was a proper one? If the Commissioners had a free hand to carry things out, and if the Commission was judiciously selected, then I think I would be in favour of it.

6956. What is the value of the plant in your department? £467,600.

6957. How much of that plant is laid up? Out of fourteen ladder dredges three are laid up; out of eight suction dredges one is laid up; and out of twenty-four steamers three are laid up.

6958. Can you give us an estimate of the value of the laid-up plant? The value of the plant laid up varies. A laid-up suction dredge valued at £21,000 may, one week, be laid up, and the next week be at work, with a £14,000 suction dredge laid up. About £52,000 represents the value of the vessels generally out of commission.

6959. What is the arrangement that you make with regard to this plant that is laid up and not in use? We keep it, except a dredge at Shoalhaven, at Darling Island. There is a watchman on the island, and one at Shoalhaven. We turn the machinery round occasionally and see that it is kept in good order.

6960. How long have these dredges been laid up? Since July, 1893, when they made the wholesale reductions.

6961. Have you a personal knowledge of all the dredge work that is going on now? Yes.

6962. How many inspectors are there? There are no inspectors. We have high class men in charge of the dredges and inspection is not so urgent. The Marine Board require to have their steamers inspected on the rivers, and they often come to us to get the engineer and master of one of the dredges to inspect the steamers requiring certificates. These masters and engineers overlook the small grab dredges, which lessens my work very much. I get the returns every week, stating in detail the condition of the boilers and machinery, and of the plant. I may say that we have never had a boiler explosion, and that no person has ever been killed owing to defective dredge machinery. Our steamers and dredges are exempt from Marine Board inspection.

6963. *Mr. Storey.*] When a job is finished do you go and inspect it? No; I would be unable to get away from Sydney. I have sufficient confidence in the Government engineer of the dredge who undertakes the repairs to know that everything will be all right. He would report to me. As opportunities offer I visit and inspect the plant and the dredging from the Tweed in the north to Moruya in the south.

6964. *Mr. Robertson.*] Do you supervise the whole of the expenditure under the contingency vote? Yes; all the vouchers come to me. The requisitions are sent in by the dredge masters. If I find the vouchers are correct, I send them on to the accountant, who submits them to the Engineer-in-Chief, who

A. B. Portus, Esq., A.M.I.C.E. passes them. We have about 6,000 vouchers a year, about 1,400 requisitions, 2,800 (weekly) dredge and tug returns, giving detailed information, and 660 store returns, giving in detail for each month all stores used and in stock.

6 Mar., 1895. 6965. Is there any matter in the contingencies besides the wages whereby you could effect a saving? I do not think so. I think that our work is as well and cheaply done as anywhere in the world, except in the matter of wages.

6966. Do you make any revenue? Only now and then for the deepening at wharves, for which we occasionally let out the dredges. The receipts are sent in to the Treasury.

6967. *President.*] When you come to the conclusion that you do not want a man, what do you do? The men are paid off at once when their services are no longer required.

6968. When men are paid off, do you make a special effort to accommodate some of them on the tugs and dredges that are in employment? Yes, if any men are required; but the Service must get rid of a number of men occasionally.

6969. You do not take them on simply for the purposes of giving them wages and salary, do you? No.

6970. But you accommodate as many as you conveniently can? As many as the exigencies of the Service require—no more.

6971. We are pleased to note that you think there is room for a reduction of wages to the extent of 12½ or 15 per cent.;—that is so, is it not? Yes; I think it should obtain right through.

6972. Have any men been sent to you by the authorities with a request that you should give them employment without regard to their merits or to the exigencies of the service? If a man did not come up to my standard I would not take him on. I am shielded by the Dredge regulations.

6973. But there have been some cases where they have been sent and you have been able to take them in? Not for the dredge service, unless they have been qualified and required.

NOTES (on revision) :—The number of employes given in the foot-note of the Public Works section of the 1893 Blue Book far exceeds the totals of the Dredge Service of that year. A critical perusal of the pages makes it clear that the figures quoted by Mr. Robertson apply to the whole of the Harbours and Rivers Service and not to the Dredge Service alone.

With respect to the average rates cited by Mr. Robertson as being paid to firemen, it will be found that the amount is very little over £11 per month, because nearly all the men are paid at that rate; the very few paid on the higher scale keeps the average rate down. Of course, as explained by me, this is higher than the coastal rates.

The value of the laid-up plant may vary quite £20,000 from one week to another. The "Jupiter" (£21,500) and "Thetis" (£13,000), are perhaps laid up one week and in commission the next week; the "Neptune" (£14,000) laid up. Watchmen only, as I stated, are kept on the laid-up plant, and if the service requires a laid-up vessel temporarily, a scratch crew is employed.—A.B.P.

THURSDAY, 7 MARCH, 1894.

Present:—

HON. F. T. HUMPHERY, M.L.C.,

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,

J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Francis George Finley, Esq., Chairman of the local Land Board, at Armidale, sworn and examined:—

7 Mar., 1895. F. G. Finley, Esq. 6974. *President.*] Will you please state the position you occupied previous to your present one? I became a licensed surveyor under the Government of New South Wales in October, 1865, and I was appointed to the permanent staff in 1874. I was appointed district surveyor in 1880, but during the previous six years I had been an acting surveyor in the Deniliquin and Inverell districts, and Riverina.

In 1888 my predecessor, Mr. Sydney Blythe, Chairman of the Land Board at Armidale, died, and I was appointed Acting-chairman, combined with the position of district surveyor. I held the dual position until May, 1891, when I was permanently appointed Chairman of the local Land Board.

6975. *Mr. Robertson.*] How long were you in the Service as a district surveyor? I was actually a district surveyor for eight years, but I had been acting as district surveyor before that for four or five years; I was doing the work of district surveyor for thirteen years.

6976. And in the positions which you have occupied, you have had very large experience with regard to the surveys connected with the Lands? I have had, I think, a very large experience, and a very varied one, in the Lands Department. I have held almost every position.

6977. In what districts have you been acting district surveyor? In Riverina, at Inverell, Moree, and Armidale.

6978. And now what position do you hold? I hold the position of Chairman of the local Land Board at Armidale.

6979. How long have you held that position? As a permanent appointment I have held it since May, 1890, but I have been acting Chairman of the Land Board since 1888.

6980. You have associated with you two other members constituting the Land Board? I have.

6981. Is it necessary that there should be two such officers? I think quite unnecessary.

6982. Would you recommend that these offices should be abolished, in view of the necessity at the present time of effecting economy in the Service? Yes. I think it would be a means of effecting great economy if the lay members of the local Land Board were removed.

6983. By the abolition of these offices what would be the saving over all the Colony? I am afraid I could not answer that. For the whole of the Colony the members' fees are £5,255, and members' travelling expenses nearly £2,000—that appears to be £7,200 in round figures.

6984. The Chairman of the Land Board is usually accompanied by a deposition clerk? He is.

6985. Do you think that office could be abolished? I do not think that that office could be abolished altogether, but I think great economy could be made in this way: that is, the Chairman should be empowered either to take a junior clerk with him, or to employ clerical assistance in the different towns he might go to.

6986. You think it would be possible to arrange in the towns where the courts are held to have the work done by some other officer—say, for instance, the clerk of petty sessions or the land agent? Yes; I have no doubt of it; there would be a little inconvenience, I dare say, but it might be arranged. I may tell you

you that during my experience I have had no deposition clerk on some trips, and have effected great saving by employing clerical assistance in the towns I have visited. F. G. Finley, Esq.

6987. Then, in your experience, you have proved that this economy can be practised? Beyond doubt.

6988. *President.*] And the assistant need not be a Civil Servant? No; not necessarily.

7 Mar., 1895.

6989. *Mr. Robertson.*] I suppose that this would entail some extra work on the Chairman of the Land Board? Yes; it always necessitates a little extra work, but I have never minded that myself.

6990. As a Chairman, you would undertake the extra trouble? Most certainly.

6991. I think you said in answer to the President that you have been occupying the dual position from 1888 to 1890? Yes, I did.

6992. And did you find that there was any trouble or any difficulty attending the filling up of the dual position? I must say that I did not at the time; the work went on very smoothly for two years. I undertook and managed to carry out my duties as Chairman of the Land Board and district surveyor to the satisfaction of the public for the two years I filled the position.

6993. We have been told by previous witnesses that this has been tried in several cases and failed? I do not think that remark can be applied to me, because I think everything went on very smoothly when I held the dual position, and now there is a great reduction in most of the districts in the work of the local Land Boards.

6994. How did the years 1888 and 1890 compare with the years before and afterwards? I believe the work was equally great in those years. My cases averaged 3,000 a year, and I believe those were two of the heaviest years; at all events they were up to the average.

6995. Did you receive a dual salary? No, I did not; I received the salary of the district surveyor, not of the Chairman of the local Land Board.

6996. Do you think there could be an amalgamation, say of the position of land agent with that of clerk-in-charge of the local Land Board? Speaking personally, I would not like to make a very definite statement on that point. I may state that I know the amalgamation has been made in certain districts, and carried out very satisfactorily, and I have taken the trouble, knowing I would be examined here, to speak to my clerk-in-charge on the subject. He tells me he could fill the dual position of land agent and clerk-in-charge, but I would like to mention to you that the land agent at Armidale is also registrar of births, deaths, and marriages, and that is an office which, to a certain extent, I do not think it would be desirable or expedient to give to the clerk-in-charge.

6997. Still might there not be some adjustment, whereby the registration of births, marriages, and deaths could be handed over to some other officer? I believe it could, but that is rather outside my province.

6998. Do you know that the police magistrate of Murrurundi is clerk of petty sessions, land agent, and registrar of births, deaths, and marriages, and holds other offices? No; I do not.

6999. Is there any officer in the Service who could ever take the registration of births, deaths, and marriages? I suppose the clerk of petty sessions could do it, but I do not know for a fact.

7000. Has it ever struck you that, although the whole of the work connected with the survey and alienation of the public lands of the Colony is done by the district surveyor and his officers, there is in the Sydney office a staff almost equal to the combined country offices? Yes; that has struck me.

7001. What is your opinion on that matter—when did this decentralisation take place? Decentralisation took place on the passing of the Land Act of 1884, when all the officers were sent to the country districts. Of course, I do not know much of the internal working of the department in Sydney, but I believe they have a very large staff of officers down here, who duplicate the work to a very great extent.

7002. Was the object of decentralisation to have the work done and completed in the country? I should think it ought to have been; I believe that was the object.

7003. And yet the staff in Sydney is almost equal in number to the combined country staff? Yes; to quote from the fourteenth annual report of the Department of Lands, schedule 7—"The Survey Branch at the head office numbered in 1893 162 persons drawing salaries amounting to £34,554; the district survey officers numbered 197 persons drawing £51,905."

7004. Are you aware at all of any duplication of work in the department? We keep a complete set of books and records in our office of all the land that is alienated and of all applications, and we have to send similar returns to the head office. There is a record kept of all moneys for conditional purchases in our office.

7005. And copies of these records are furnished to the head office? Yes; perhaps I have not stated what might be exactly true with regard to keeping a correct record of the moneys paid in. What I was going to say is that we keep an exact copy of the applications, and they show the exact amount of the moneys received for applications, deposits, and all payments.

7006. *Mr. Humphery.*] And subsequent payments? Not subsequent payments. We deal with everything through the Treasury. All orders for extra deposits or refunds we make with vouchers which are dealt with down here by the Treasury, and we notify the Under Secretary. Perhaps I am hardly correct in saying that we keep an exact record in regard to money.

7007. *President.*] For example, a selector pays, we will say, an instalment direct to the Treasury? We know nothing of the instalments whatever; they are all paid to the land agent.

7008. *Mr. Robertson.*] Has the local land agent a record of all the revenues in connection with conditional leases and conditional purchases? I believe he has, but they generally are not under my supervision.

7009. Is he not there with the object of collecting revenue? He is.

7010. And are you aware he sends copies on to the head office in Sydney? I am not aware of it for a fact, but I believe he does. I have never examined his system.

7011. Is there a Roads Branch in the head office? There is, I believe. Mr. Stopps is at the head of it.

7012. What is the work done in that branch? It is of a varied character; I believe they have the examination and charting of all roads plans.

7013. But are not these plans prepared by the district surveyor? They are.

7014. Could not the examination of these plans be done and the whole work completed in the district surveyor's office? The examination of the plans could certainly be done in the local office. Of course there are matters of compensation. A local Land Board appraises the value of land resumed for roads, but nearly everything with regard to roads is done in the head office.

7015. Could the conditional purchase inspectors combine with their work the work connected with forest ranging? Yes; we do a good deal of it now in our office; we inspect for ring-barking applications and report

F. G. Finley, Esq., report upon them; that is a thing that used to be done by the forest ranger. I really think there would be no trouble in carrying out the work of the Forestry Department by district surveyors and local Land Boards.

7 Mar., 1895.

7016. Do you think the watering-places on the stock routes could be inspected by the sheep inspectors? Most certainly I do. I do not think it is a matter of very great importance from what I have seen. Of course I take it that the inspection means seeing that the places are kept in good order for the purpose of watering stock along the routes. I think that duty could be carried out by the inspectors of conditional purchases, or by the surveyors.

7017. Would it not be a natural conclusion that it was really part of the duty of the inspectors of stock and sheep? I think so. They know the number of stock that are travelling. I was not aware there were special inspectors for that purpose. Of course we have very few of these watering-places in New England, as the country is so well watered.

7018. Are there any recommendations you can make to the Board that would help them in the work they are called upon to do? I think the most important recommendation I could make is the one you have touched upon—the amalgamation of district surveyor and Chairman. I am very strong in that opinion, and I think it could be effected without any trouble. When I held the two positions for two years there was a Board of Inquiry sitting, of which Mr. MacDonald, district surveyor, was a member, and I was informed that they did not approve of my holding this dual position. I might say I believe I was only keeping the position for somebody else, but while I held it I managed to do the work. Of course if you gave the Chairman of a local Land Board the two positions of Chairman and district surveyor I think you would have to give him an efficient staff. The field staff would require proper supervision, and surveys would have to be examined and checked in the field; this is being done now by the first-class surveyors, not by the district surveyors. You would have to leave that staff for the Chairman of the local Land Board. It would be impossible for him to carry out the duties of his judicial position as Chairman and also to examine surveys in the field. He could regulate it and so supervise it that the same officers that are now doing it for the district surveyor could do it for the Chairman. There is not one district surveyor in the Colony that I know who examines in detail and checks surveys in the field. They scarcely ever put an instrument up now. In regard to the position of deposition clerk, I may say I think it is unnecessary to appoint a man at a salary of £200 per annum, and pay his travelling expenses and allowances, when the work could be done by the employment of local officers in the towns the Boards visit. As to the lay members of the local Land Boards, the only possible use they can be is perhaps to exercise a moral effect upon the community. They have not sufficient professional knowledge to make them of use to the Chairman in directing the surveys, and they are not of much use to him in his judicial position from a legal point of view, because they do not read the Act sufficiently. They may have some moral effect, as the public might say the decisions are not all in the hands of an official. That is about the only use they are, and they cost a very vast sum of money.

7019. To give effect to any recommendations it would be necessary to alter the present Act? It would certainly, because the Act provides for the appointment and payment of members of the local Land Boards. If the Land Act which Mr. Carruthers has brought in is passed it will do away with a great deal of the work they do now, because a lot of work that has to go through the ordinary routine of being prepared for the Land Boards could be done by the Chairman writing a minute in his office. The offices of clerk-in-charge and land agent might be amalgamated. It would make the work of the clerk-in-charge more responsible.

7020. What would be the saving effected per annum if the travelling expenses of the deposition clerks were done away with? I think you would save £150 for each clerk; at all events, you would save £100 a year; I am quite sure about that.

7021. In the Lands Department there is a branch called the Detail Survey Branch;—are the district surveyors qualified to conduct these detail surveys? I believe the district surveyors are qualified.

7022. Do you know who it was that organised the present detail surveys, and put them on their present basis;—are you aware that Mr. Poate, the district surveyor at Tamworth, did this work? No; I am not.

7023. *President.*] I think you said the second and third members of the Land Boards are not men possessing special qualifications? Certainly not—not in all cases; of course there are occasionally very good men.

7024. But there are many who have not had training to fit them for the proper discharge of these duties? Most decidedly not.

7025. Can you tell us what remuneration they receive? They receive 2 guineas per diem for sitting. Of course there are half days as well, when they receive only 1 guinea. When they are travelling they are paid the cost of their conveyance, and they are paid for loss of time, except on a Sunday. They also get 15s. a day travelling allowance.

7026. What is their loss of time estimated at? They are allowed a guinea a day for loss of time in travelling away from their business.

7027. Has it ever happened in your experience that they have differed from the Chairman in their opinion? Yes; it has been my experience that they dissented from me on one or two occasions, but on appeal they have been found to be wrong.

7028. Always in the wrong, as far as your experience goes? Yes; pretty well.

7029. It might happen that the member might be a man possessing prudence and common sense, or it might happen that he did not possess these qualities in a great degree? Yes.

7030. I should like a little more light thrown upon the plans of the selections which I understand are all in existence in the different land offices in the country;—do you think that the Department of Lands would consider that that was a sufficient discharge of its duties in respect to the lands of the Colony, and that it would dispense with having the exact details in its own keeping? Well, they have to keep these there. There is one thing to be considered—there is always the danger of fire, and it is a very wise precaution to have duplicates of them, but it has always struck me that the staff in Sydney, in view of the scheme of decentralisation that was carried out, was much larger than it should be, because we were supposed to do the work in the country. Of course that is a mere matter of opinion.

7031. But, in your opinion, there is certainly a great mass of details that might be dispensed with in the head office, all of which are in existence in the country offices? Yes, to some extent.

7032. But you do not think it would be desirable that the Lands Department in Sydney should be absolutely

absolutely without any details? No; I do not think you could very well do without them. The Lands Department is the office under the political head, as it were, and has a vast amount of correspondence to deal with. F. G. Finley,
Esq.

7033. It is all conducted on paper of foolscap size, and of excellent dog's ear quality? The quality of the paper has been reduced within the last few years, and a much inferior quality of paper has been supplied. 7 Mar., 1895.

7034. But still sufficiently good for the purpose? Oh yes, perhaps too good in some cases; but they gave us bad paper for some documents.

7035. But for permanent documents good paper is still in use? Yes.

7036. But for trivial things inferior paper is used? Yes; for the outside covers good paper is required.

7037. You suggested a considerable saving in dispensing with the attendance of the deposition clerk at each of the Land Board meetings? Yes.

7038. And, in your experience, you have found that a good clerk can always be got on the spot to do the work satisfactorily at a very much less price? I think it should be left to the discretion of the Chairman of the Land Board as to whether he should take a junior—one of the probationers—or employ local assistance. As things are now the deposition clerks have to stop at hotels, and that has a demoralising effect upon the young fellows. They are engaged in the office for only a certain number of hours, and the result is they have not enough employment to fill their time. They get away, and do not do the work satisfactorily. I am quite sure that far more than £100 a year could be saved if the Chairman were allowed to employ local clerical assistance.

7039. And that would be £100 a year in how many establishments? In every case—that is, fourteen establishments. Besides, a clerk at £200 a year should be a very valuable clerk in the office, and I say the junior clerk at £100 a year could do the work equally well—that is, if we were compelled to take a clerk from the office.

7040. *Mr. Storey.*] How long have you been in the Civil Service of the Colony? I have been on the permanent staff without any break of service since 1874, but I have been working for the Lands Department since 1859.

7041. You now hold the position of Chairman of the Land Board of Armidale? Yes.

7042. The clerical staff of the Land Office at Armidale is under your supervision? It is.

7043. Have you anything to do with the appointment of the officers? Nothing whatever.

7044. Anything to do with fixing salaries? Nothing whatever.

7045. Have you too many clerks? I do not think so. One of the junior clerks might be dispensed with, but the work is keeping up wonderfully, and the district is a large one; we have had 3,000 cases a year.

7046. You could only get rid of one clerk? We could not dispense with more than one.

7047. As to the rates of salaries of these clerks, do you not think them too high, considering the work they have to do? Of course the cost of living in the country is considerable. I would not like to say they are too high.

7048. You are in charge of this Land Board, and we ask you now whether you can show us wherein retrenchment can be made;—one of the things that have come before us is the high salaries paid to clerks? The clerk-in-charge is a man of very excellent attainments, and has not a very high salary. He had £400 a year, but the 10 per cent. reduction brought it down to £360, and he has to pay his superannuation allowance out of that. He is the principal officer, and is responsible for the whole of the work when I am away.

7049. I do not want you to single out one; the whole of the work is purely clerical;—do these men receive more than the work is worth; do not take into consideration length of service, because we find the rule in the Service is that because a man has been twenty years in it he should get more than a man who has been there ten years? I must conscientiously say I do not think our staff are over paid.

7050. You do not think you are overmanned except as to one officer, and you do not think the salaries are too high? No; and I think if amalgamation were carried out there would be a great difference.

7051. How many Government officials are there in Armidale in all the offices? There is the Chairman of the Land Board, the district surveyor, the superintendent of police, the resident engineer for roads, the police magistrate, the clerk of petty sessions, the land agent, the post and telegraph master, and the railway station master.

7052. As far as you know from your residence in the town are these men fully occupied? I do not think the police magistrate's time is fully occupied in every district.

7053. There are certain duties that must be performed by a police magistrate;—by whom could they be performed? That is a matter of detail I have never gone into. The unpaid magistracy do a great deal of the court work there now. A police magistrate travels a great deal, of course, and fills the office of mining warden.

7054. How many Land Courts do you hold during the year? I hold Board meetings at thirteen different places, and in the majority of those places I try to hold them once a month. Sometimes a sitting will occupy as many as three days. For instance, the day before I came down here I held a court at Wallanumbie, dealt with forty-one cases, and travelled into Armidale 26 miles in the one day.

7055. Do you hold these courts regularly once a month? Just as the work arises. We find the work accumulates in such a way that it is almost necessary to hold a court once a month.

7056. *President.*] You so arrange as to take in rotation the places where you hold the court? Yes; I do not go back to head-quarters till I have finished the tour.

7057. *Mr. Storey.*] What length of time are you away from head-quarters? I am frequently away three weeks on a trip. I go to Glen Innes to-morrow, and will not be back till the 24th of the month.

7058. During your absence does any work require to be dealt with? Anything that has to be done personally by me accumulates, and I take one or two days to it when I get home.

7059. What is the nature of this work? Cases of a technical character. For example, a man may write in and ask what he has to do with his fence, or with regard to further time. These cases require a definite reply.

7060. Are all these things held back for three weeks? No; the clerk-in-charge deals with many of them of a simple nature.

7061. There is the right of appeal to Sydney against any decisions you give? Yes.

- F. G. Finley, Esq., 7062. Is that availed of by many people? Since I have been Chairman of the Land Board I may say I have been peculiarly successful in avoiding appeals. The year before last I had five appeals, but only one of them was sustained. Last year there were no appeals, and I think there have been two this year.
- 7 Mar., 1895. 7063. Have you watched the results from various other Land Boards? The appeals are more numerous than they are with me.
7064. Do you think the position of the Land Court of Appeal here is required? I do; but I do not know that three Commissioners are wanted. I think one Commissioner, holding the status or qualifications that Mr. Oliver does, would be sufficient. Why I think it is necessary to have a court is that it is impossible for a layman to properly interpret the legal phraseology of the Land Acts. They are becoming very difficult and abstruse.
7065. Could not the duties of the land agent be performed by the Land Court in Armidale in your office? I say there could be an amalgamation of the duties.
7066. I thought the amalgamation you proposed was that of the offices of district surveyor and Chairman? But this is a second one—an amalgamation of the offices of clerk-in-charge and Crown lands agent. It has been done in some districts.
7067. There would be a saving? A vast saving.
7068. Has the land agent any clerical staff under him? One junior clerk.
7069. Is the land agent paid by salary? Yes; I think he gets about £400. He is the registrar of births, deaths, and marriages as well.
7070. Conditional purchases inspectors—I suppose they are necessary? I have two, as it is a very vast district. There was a third sent up, but he has received notice that his services will not be required after the 11th of next month.
7071. They have a very fair salary—£290 a year and travelling expenses. I suppose they are always travelling? Always travelling.
7072. Who keeps a check over the travelling expenses, suppose they travel thirty days and they need travel only fifteen? They have to keep a diary, and show where they go. That is checked by the clerk-in-charge, and is referred to me, and I certify to the amount.
7073. The other amalgamation which I think you suggested was that of Chairman of the Land Board and district surveyor. I have before me some evidence which says:—
- “Could not the district surveyors perform all the duties that are now being discharged by the Chairman of the Land Board? I do not think so. I have made inquiries as to what the district surveyors do with regard to the Land Board. The only thing they do is, when an application comes to them, to look in their maps and direct their surveyor, who may be in the neighbourhood concerned, to make the survey, if there is no objection. The district surveyor never appears again in the matter except to report that the survey has been made, unless it should turn out there are some valuable Crown improvements on the land, in which case the district surveyor generally appears before the Board to give evidence as to their value, so that the Board may be able to determine how much the selector has to pay for the improvements. The Chairman of the Land Board is a judicial officer.
- “What are his duties? The applicant is summoned by the Chairman to attend the meeting. He comes before the Chairman and members of the Board to prove his *bona-fides*, and then he is informed that the land is available and that he can enter into possession. Then the Chairman instructs the inspector, at the end of three months or a little later, to visit the selection, to see whether the man is residing on it, and whether he is improving it. If it comes to the knowledge of the Chairman that he is not residing on it, he sends the inspector to report on the matter. There were fourteen Chairmen in 1892, and they dealt with 33,000 cases at the different courts. A Chairman holds one court in this town, and goes off perhaps 30 miles to hold another court. He holds the courts as much as possible in the centre of the groups of selections. That takes up almost all his time.
- “If the district surveyor were granted the assistance that would be required in the event of his undertaking the duties that are now discharged by the Chairman, could not the work be done satisfactorily? That plan has been tried, but it has not been a success. We tried it in two or three places, and found it would not answer.”
- That is the evidence given by a rather high authority in the Lands Department;—having heard that, do you see any way to alter your opinion? It does not alter my opinion one iota, I still hold to what I say, and I have a most decided opinion based on my two years' experience that one man can fill the two positions if you give an efficient staff to the district surveyor. Of course it is most necessary that the district surveyor should fill the dual position, because he has the professional qualifications required in dealing with the survey portion of the work. There are many Chairmen who have not that professional qualification.
7074. The Chairman of the Land Board would have to be a surveyor? The district surveyor if the amalgamation took place.
7075. The district surveyor would go to the Land Board? I do not say he would go to the Land Board, as there are many Chairmen, like myself, who have been district surveyors, and are competent to perform the work. It would be impossible for a non-professional man to undertake the dual position.
7076. If the amalgamation were made the only saving would be the salary of one man? That is all; I reckon it would be £1,000 a year in the case of each Land Board; it would be £800 a year, at all events.
7077. Do you receive any money at all in the Land Board? We receive small amounts; for instance, if a man appeals against our decision he lodges £10 with the appeal, and we keep the money till the question is decided; we have had as much as £150.
7078. Could the interest on conditional purchases be collected by you? That is collected by the Crown lands agent.
7079. *Mr. Humphery.*] Assuming it to be in contemplation to merge two districts into one, in that case could the offices of district surveyor and Chairman of the Land Board be combined without sacrificing either office? I think so. The districts are sufficiently large if you give one man the dual position, but of course communication in New South Wales whether by coach or railway is very rapid, and that is why I think it could be done. But I do not think you could very well enlarge the district if you amalgamated the positions; a man's time would be fully occupied as the districts are at present.
7080. Say Tamworth and Armidale, in that case could one officer perform the duties of both positions? I do not think so; I think you would want a surveyor and Chairman in that case.

7081. Your suggestions would not apply if the recommendations that have been made to the Minister to merge two districts into one were carried out? Oh, no, they would have no effect in that case. F. G. Finley,
Esq.

7082. In that case you think it would be necessary to have both a Chairman and a district surveyor? Yes; in fact, I think a great deal of time is taken up in most districts with travelling. The more condensed you get the work the better. If you put two districts into one a man would have to spend more time in travelling. 7 Mar., 1895.

7083. Have some of the present Chairmen of the Land Boards more practical knowledge as to the values of country than is possessed by the district surveyors? I do not think they have as much. I do not think you can find a man of more varied experience than a district surveyor. I do not know whether judicially district surveyors are as well qualified as some of the Chairmen, but, speaking of other district surveyors, and leaving myself out of the question, it would be hard to find more competent men in their position. They are men who have had a large experience with the lands of the Colony and the Acts they are supposed to administer, and I think they are the very best men to hold the position of Chairman.

7084. Have you personal knowledge of many of the Chairmen of the Lands Boards and district surveyors? I know them all, I believe, with the exception of one or two Chairmen:

7085. And in giving your evidence you have had regard to the knowledge you possess of their qualifications? Yes.

7086. *President.*] From what you have said, it would seem to be a very great additional qualification in the Chairman of the Land Board that he has been a district surveyor? Of course, there may be exceptional men, but you cannot find any non-professional men that could undertake the duties of district surveyor. He has not the mathematical knowledge or the training.

7087. But I mean if a man who is a district surveyor is Chairman of the Land Board, his previous experience would be of great value in his new position? Certainly.

7088. You would not go so far as to say that the Chairman of the Land Board ought to have been a district surveyor? No.

7089. Because he may have other qualifications which fit him for the position? Well, no; I think he should be a professional man, if you are going to combine the positions.

7090. Certainly, if there is to be a duality he ought to be a professional man, without doubt? Yes.

7091. *Mr. Robertson.*] The Chairman who had not been a district surveyor would have to lean on the district surveyor, and be guided by him? Certainly I am guided entirely in my judicial decisions by the district surveyor, although I have had experience as a surveyor.

7092. *Mr. Storey.*] Could not the appeals be made to the law court in the districts? They could if they would give their attention to it, but the judges do not like the Land Appeal cases. I think the Land Appeal Court is a good institution myself. I do not know whether it could be reduced in numbers, but I think it prevents a great deal of trouble.

7093. *Mr. Robertson.*] Is the work of the Land Appeal Court likely to increase within the next few years? I do not think it is.

7094. Is it likely to decrease under present conditions? I could not say.

7095. *Mr. Storey.*] Do you think the alteration in the land laws, by which Land Courts are established and business is done in the country, has been a good thing, pecuniarily or otherwise? I think the Land Act of 1884 has worked most successfully—that it is a great pity to alter it.

7096. That was the Act that produced the Land Courts? Yes.

7097. It took away all the business from Sydney? Yes. It worked very satisfactorily in my district.

7098. Has there been any saving of money to the country? No; I think the cost of that administration is very great.

7099. *President.*] Could the plans prepared by the draftsmen in the country not have duplicates made? Yes, by the heliographic system, which they use very extensively.

7100. So there would not be much manipulation required? No.

7101. Then the country office could either send the original or the duplicate, as directed by the Lands Office? They do send down the duplicate now, and it is charted here afresh, I believe.

Robert McDonald, Esq., District Surveyor of the Armidale Land Board District, sworn and examined:—

7102. *President.*] You have been in the Service for thirty years, I think? I joined the Service in 1865; I have been connected with the Service since that time, but I was some time a licensed surveyor. R. McDonald,
Esq.

7103. *Mr. Robertson.*] How long have you been a district surveyor? Since January, 1885. 7 Mar., 1895.

7104. Were you a member of a Departmental Board of Inquiry? I was.

7105. When was that? In 1887.

7106. When did you complete your work? We furnished our report in August, 1889.

7107. What was the nature of the inquiry? The inquiry was into the working of the country offices, and also into the working of the Detail and the Trigonometrical Branches at head office, with a view to reorganisation.

7108. Can you tell the Commission who organised the detail survey work and put it on its present basis? I believe Mr. Poate, district surveyor at Tamworth, was charged with the early organisation of the work.

7109. Are all the district surveyors men who are competent to conduct these detail surveys? Yes; I think any good surveyor would be competent to conduct them; it is a question of accuracy, that is all.

7110. Is there a Detail Survey Branch in connection with the Lands Department? Yes; there is.

7111. By the district surveyors undertaking the work of the detail survey could any economy be effected? Perhaps I may explain that the only detail surveys that have been carried out are those at Sydney and Newcastle, and it would only be the district surveyors of Sydney and Maitland who would be affected. I presume Mr. Twynam, the chief surveyor, who is also district surveyor of the metropolitan district, is in charge of the detail survey of Sydney.

7112. Still you say the district surveyors are men who could undertake such surveys? Decidedly. The work is of a mechanical nature.

7113. Do you think there is a necessity for the present constitution of the Land Board? No, I should say not, of course assuming that the law will be altered; there is a necessity under the present law.

7114. In what way would you suggest it could be altered? I would suggest that the law should be altered so as to allow the Chairman to deal with all cases, sitting as a Commissioner alone, and that from his

R. McDonald, Esq.
7 Mar., 1895. his decisions there should be an appeal to a local Appeal Board. It should be a free appeal. At present a person wishing to appeal to the Land Appeal Court has to lodge £10, and has probably to employ counsel. I should allow applicants who are dissatisfied with a Chairman's ruling to make the free appeal to the local Appeal Board. I do not think 5 per cent. of cases would be appealed against. If Boards were done away with altogether in the country, I think there would be an outcry.

7115. As a matter of expediency you do not suggest doing away with all the local Land Boards? Well, I do, except as regards that local Board of Appeal. If a selector were dissatisfied with the ruling of the Chairman—say the Chairman fixed the rent at 4d. per acre, and the selector thought that rate too high—I would allow him to appeal to a local Board on that question of rent. If the local Board supported the Chairman, the selector should still be entitled to appeal to the Land Appeal Court in the ordinary way. That would save, of course, all the expenses of travelling. I do not think the local Appeal Court would have to sit more than two or three times a year.

7116. It would practically resolve itself into the saving of the fees and travelling expenses of the local members? It would do more than that; it would give the Chairman a free hand in arranging courts, as he would not have to consult the convenience of local members.

7117. Do you think the offices of district surveyor and Chairman could be combined in one person? Yes; I believe they could.

7118. Are there any Chairmen of the Land Boards, to your knowledge, who have not been district surveyors? There are a number.

7119. Would not these Chairmen be very largely, if not entirely, guided by the advice given by the district surveyors? Yes, I think so; the district surveyor is really the adviser to the Board, and I think the Chairman are guided by his reports.

7120. But if there were a combination of offices, the officer to take charge would necessarily be a district surveyor? Oh, necessarily; any district surveyor can be a Chairman, but it does not follow that any Chairman can be a district surveyor.

7121. Would that materially effect the expenditure? It would reduce the expenditure, I think, materially. There are two independent men now in the same office, and I think that must mean unnecessary expenditure.

7122. Does it mean that, because there are two such officers, there are two staffs, which are larger, on account of their being distinct, than would be necessary if the offices of Chairman and district surveyor were combined? Yes; I believe it would tend to a reduced staff.

7123. What would you think the saving would be? It would be approximately £1,000 a year, because a good deal of the Chairman's travelling expenses would be saved, as the district surveyor might also attend to some of his duties as a district surveyor, when travelling as Chairman of the local Land Board.

7124. Does that include the clerk also? Yes; but there would be an increased responsibility on the chief draftsman and clerk-in-charge; also on the salaried field staff.

7125. With the adjustments necessary, would the saving be (say) £1,000 per annum? I believe it would.

7126. Do you remember when the decentralisation took place? It took place when the Act of 1884 came into operation—on the 1st of January, 1885.

7127. What was the object of that decentralisation? It became necessary with the Land Act of 1884; it was the policy of the country at the time.

7128. The object was to have the whole of the work done in the country—the survey work and the administration;—would not that largely reduce the staff in the city? I should have thought so; it ought to have had that effect.

7129. In Schedule 7 of the fourteenth annual report of the Department of Lands, the Survey Branch at the head office numbers 162 drawing salaries amounting to £34,554, and at the district survey offices there are 197 employed drawing salaries amounting to £51,905;—does not this appear to you to be a strange result after all these years? It certainly does.

7130. Do you know of a branch in the head office called the Roads Branch? Yes; I know of it.

7131. Part of the duties of that branch is to examine maps that are prepared by the district surveyors of roads in the country? The plans are prepared by the surveyors, and are forwarded to the District Survey Office for a superficial examination. We are not allowed to examine the plans in detail.

7132. Could not that examination be done in the district survey office? Decidedly.

7133. Do you not think it would be a proper course? Yes, I do.

7134. And would that entail more expense in the district surveyor's office? It would hardly make an appreciable difference.

7135. But would it mean that there would be a saving in the Roads Branch in Sydney? Yes, naturally.

7136. While there would be an immaterial saving in the district surveyor's office, there might be a considerable saving in the Roads Branch in the Sydney office? Yes.

7137. What effect would that have upon you personally—the recommendation you have made to the Commission? As affecting my position in the Service?

7138. Would you suffer in any way, or would you gain? I think I would suffer, because I think I would have to move. Mr. Finley has been at Armidale longer than I have.

7139. And you still would recommend amalgamation? Yes, I would, decidedly. It is a question of management. I daresay there would be a good deal of opposition to it, but I think it could be done.

7140. I understand that you were nearly two years investigating the work of the country offices? Yes.

7141. Were all your recommendations put into practice? I believe that every one of them was adopted, except one suggesting the abolition of the Tamworth Survey Office; the Cabinet postponed that question.

7142. Could you recommend to this Commission any economies that could be effected in the Service generally? I think the routine in dealing with road matters is generally cumbersome. We work under an old Act, William IV, No. 11. It seems to me that the system could be simplified.

7143. *Mr. Storey.* Under whose supervision does this come in your district? It is really dealt with at head office, except that we carry out the surveys. If the department is not able to come to a decision with the parties concerned as to the value of the land taken for a road, the matter is ultimately referred to the local Land Board to make a valuation. The local action need be very simple, I should think. It is merely a question of survey and ordinary examination. The Chairman should be allowed to fix the value of the land straight away from evidence. Cases are forwarded to Sydney, and really we do not know what happens to them when they leave our hands; they seem to be a long time getting through. It ought

ought not to be a difficult matter to resume a piece of land if the land is required for a public purpose. There seems to be a great deal of correspondence over roads matters, as there are usually two parties to the question. If the whole matter was simply referred to the Board to deal with, I think the business would be much simplified. The Board now, as a rule, only deals with the question of the value of the resumed land. You would be surprised at the mass of papers, petitions, and counter-petitions that accumulate in some roads' cases.

R. McDonald,
Esq.
7 Mar., 1895.

7144. You think these matters could be dealt with fully and finally in the local offices? Yes, I do.

7145. Without being sent down to Sydney? Certainly. The application could be made at the local office. I think that at present the local officers deal with quite as important cases as those relating to the resumption of roads. There is another matter in connection with the roads. We frequently find cases where the Works' officers, who are independent of the Lands' officers, may construct a road, and in doing so ignore the surveyed road without any reason, and it is often only by accident we may find out afterwards that the road which has just been constructed and formed is not the road that has really been reserved or resumed through the land. Then we have to go through the routine of exchanging one for the other, new surveys have to be made, and the whole routine of resumption gone through again.

7146. Have you anything to do with the work of the road superintendents? I have nothing to do with them.

7147. Are there road superintendents in the country districts now? They are called resident engineers.

7148. Are they civil engineers? I could not say. I know that some are not surveyors, so I imagine they would not be civil engineers.

7149. Is there any other general recommendation or suggestion you could make? I think the Forest Branch should be under the control of the Lands Department, the foresters to be under the supervision of the district surveyors, and to furnish monthly journals for review, in the same way that surveyors do.

7150. Could the office of forest ranger be combined with any other office? I think the foresters could carry out a good deal of conditional purchase inspection.

7151. Could there be an amalgamation of the offices of conditional purchases inspector and forest ranger? To some extent there could. Of course there are districts where the forest work is heavy and foresters have always to be on patrol or watch, but in other districts the work is rather light. These men must travel a good deal over the same ground as a conditional purchase inspector. If under the control of the Lands Department they would be used as conditional purchase inspectors occasionally. The foresters should also, I think, be Crown lands bailiffs. There are great areas of country now occupied by people who do not pay a penny for them, while they run thousands of heads of stock. These are forfeited or lapsed occupation licenses on which some payment has been made but not continued. The former occupiers have not applied for them again, but they use them all the same. When the Department offers the land for sale again the occupiers or land agents attend to watch the sale; if there is any other person wanting to purchase the lease of land the occupier or agent bids against him; but, if not, they simply go home again without making a bid.

7152. *Mr. Storey.*] Whose duty is it to see that this abuse is not going on? There is a Crown lands bailiff—a policeman—but, of course, he knows nothing about this kind of thing; he could not really tell where the lands are. The matter belongs to the Lands Department. I made a report to the Minister some time ago on the subject, and suggested that an officer be appointed to suppress the abuse.

7153. What did the Minister say? I think he has the papers before him at the present moment. The present system of having the Forest Branch independent of the Lands Department promotes a certain amount of jealousy between the Department of Mines and the Department of Lands. For instance, if the Lands Department wish a certain reserve revoked they refer to the Forest Branch to know whether it can be revoked. This involves delay. Besides, the two departments, to a certain extent, pull against each other; the Forest Branch want to keep as many reserves as they can, and the Lands Department, on the other hand, wish to throw open for settlement as much land as possible. If the control were vested in the Lands Department the questions would be dealt with fairly in the public interest.

7154. *Mr. Robertson.*] Do you have to transact business through the chief surveyor? We are supposed to forward road plans to him, but that is really all; practically we have no business with him.

7155. *Mr. Storey.*] You report to the Under Secretary? Yes.

7156. *Mr. Robertson.*] Do you not think you ought to report to an officer who is virtually connected directly with survey matters? There are really very few matters on which we report, excepting the road cases.

7157. Which really means you do all the work of the Survey Department in the country? Yes; we also do the survey work in connection with the roads, but we do not complete it, as we do not deal with the plans.

7158. Are you aware of a compilation branch in the Mines Department, as well as one in the Lands Office? I believe a branch exists there. I think it is unnecessary to maintain two compiling branches.

7159. There should be a considerable saving in that direction? There should be a very considerable saving.

7160. With regard to the watering-places, could not the inspection of watering-places be conducted by sheep inspectors? Yes, I think so, most decidedly. There is really nothing in the inspection of watering-places. I did not know that watering-places were not in charge of sheep inspectors.

7161. Could you suggest anything to this Commission in regard to the amalgamation of offices; for instance, could the offices of a Crown lands agent and the clerk of petty sessions be combined? I dare say more could be done in that direction, also in amalgamating the offices of clerk-in-charge and Crown land agent.

7162. What would be the effect if the branches were brought under one head? It would give the officer performing the combined duties more work, of course.

7163. You think the clerk-in-charge of the local lands office could be the Crown lands agent? I think in some offices he could, but he could hardly do it in Armidale.

7164. *Mr. Humphery.*] Do you know whether similar work to that done in the local offices is done in the head office in the way of charting? I believe a duplicate set of maps is kept at the head office.

7165. Do you consider it necessary? I do not know the necessity for it. It is held that there should be maps here to give information to the public on every piece of land that is available in the country, and I know the Minister is taking steps to have it done. Therefore they have to chart up at head office, but we could send copies of our maps, which would be easier than to do the present charting of the plans on their maps.

- R. M'Donald, Esq.
7 Mar., 1895.
7166. Would there be a lessening of expense by sending copies? I can say distinctly there would be.
7167. Would the preparation of such copies entail any additional cost in the local office? There would be no material difference.
7168. Have you considered whether in the event of a plan being adopted, which we are told is in contemplation, of merging two districts into one, it would be possible for a district surveyor, if appointed Chairman of the local Land Board, to perform the duties of both positions? I should think so. The principle would apply right through.
7169. Without regard to the extent of the district? Yes, I think so. If there was not too much work for an officer as district surveyor I do not think there would be too much work for him as Chairman and district surveyor. It would be a question of managing, but I think it could be done if it had to be done.
7170. *Mr. Storey.*] Have you charge of all the survey staff in the Armidale district? Yes; there are now nine licensed surveyors and two salaried surveyors. The licensed surveyors are paid by fees.
7171. Do you control the work these people do? Yes, entirely. We issue instructions for the work, and we examine it periodically.
7172. How does that work come under your notice? I issue instructions for the surveys, and deal with the plans when received.
7173. Are applications made to you for surveys to be done? They are made to the Chairman of the local Land Board.
7174. He tells you what survey work he wants done, and you have it done;—is that it? Virtually. The Board deals with the application, and directs the survey to be made. When the survey is made we deal with the plan and recommend the confirmation of application.
7175. The surveyors are directly under your control? Directly.
7176. Was it the Board of which you were one of the members that fixed the rate of fees for surveying? We did not fix the rate of fees; they had been previously fixed.
7177. When were the fees fixed that are paid now? I believe by a Commission or a Board of district surveyors before the Act of 1885 came into force—late in 1884 or early in 1885.
7178. Those fees are in existence still? Yes; they are subject to local increase or decrease by the district surveyor, subject to the approval of the Minister. There are some districts where the country is so difficult that a licensed surveyor would not make as much as if he were working in an easier district, so to balance matters he would receive an increase on the ordinary scale of fees. The increases range from 100 per cent. down to 10 or 15, according to the character of the country.
7179. Does it rest with you as to what percentage should be given? It rests with the Minister finally; but we make the recommendation, and it is usually acted upon.
7180. Is there any revenue from this survey;—are any fees paid by the parties having the work done? They all pay a fee under the Land Act. The fees are stated in the regulations under the Act.
7181. Does that in any way come up to the expenditure? Not nearly. I do not think it represents one-half of the expenditure.
7182. I understand the applicants for this land pay about one-half and the Government the other half? The Government pay quite half.
7183. You have only two salaried surveyors;—what salary do they get? One gets £357 10s. per year, and the other £290.
7184. Are they fully employed? Yes; very fully.
7185. All the year round? Yes; they are two excellent hard-working men.
7186. Any travelling allowance? £150 equipment allowance to each man, and also a forage allowance, which is adjusted quarterly.
7187. What does that usually amount to? With us it costs from £60 to £80 per annum each man.
7188. One of them makes in round figures £560 a year? He gets £560, including equipment allowance.
7189. Have you ever compared his earnings with those of the licensed surveyors? Frequently.
7190. How do they compare? In many cases we can get the work done cheaper by the licensed surveyors than by the salaried surveyors. It entirely depends upon the quantity of the work and the locality. Of course we give the salaried surveyors the more difficult surveys which we cannot get a licensed surveyor to carry out. There are some surveys which you could not ask a licensed surveyor to do on fees. We must have the surveys done within a certain time under this Act, because, if an application is not confirmed within six months, the applicant may withdraw his application, and we try to avoid that.
7191. In the Estimates as passed, out of thirty-two salaried surveyors you have only two? Yes; each surveyor has a field assistant, who is paid at the rate of 6s. per day.
7192. Are there any draftsmen in your office? There are eight draftsmen in the District Survey Office.
7193. Is it under your control? Yes; directly.
7194. Are the field assistants paid on Sundays? Yes; they receive £109 10s. per annum. They often have to work on Sundays, in the way of travelling, at all events.
7195. The eight draftsmen are salaried officers? Yes. The chief draftsman gets £380 per annum. He takes control of the office during my absence, and has other responsible duties. The next man gets £308 per annum, and the salaries go down to £100, which is received by the probationer.
7196. Had you the appointment of these gentlemen, or the fixing of the salaries? Not as a district surveyor, but I had, as a member of the Board of Inquiry, to suggest salaries for the officers.
7197. Are they all good men. If you were running that establishment yourself would you keep them all at that rate of pay? Some of them I would not keep at their rates of pay. I do not think they are worth it. I am reflecting on myself, as a member of the Board of Inquiry, but I think we made mistakes in the case of several of the officers; we rated them too highly.
7198. Have you represented that fact to the Minister or kept it to yourself? I have not represented that fact. There is only one man who is somewhat unsatisfactory. They would not take him away and give us a better one.
7199. *President.*] Is he unsteady? No; he is superficial, and not suited for the position he is in.
7200. You would not keep him a day if it were your own establishment? I would not keep him in that position.
7201. *Mr. Storey.*] With that exception, the others are earning their money? Yes; and some of them, I think, are paid too low.
7202. Is this gentleman you spoke of a highly-paid officer? He gets £308 per year.

7203. Is he a permanent officer? Yes; he has been nearly sixteen years in the department, although he is a comparatively young man still. I should say he is a beautiful draftsman, but he is not doing drafting work in this office. He would be more useful in the Compiling Branch of the head office than with us.
7204. Do I understand that the work which is done by your draftsmen ought to be sufficient, without having any of the same work done in Sydney. There is a good deal of the same work done in Sydney, is there not? There seems to be a good deal of the same work done in Sydney. We send copies of our plans to head office, and they chart them there on the maps.
7205. Taking the vote of £90,000, fees to licensed surveyors;—if there is no work to do there is no pay? No.
7206. You have to check all their work, and see that it is correct? Yes; we check it by their plans, and also in the field.
7207. Every man's work is subject to your supervision? Directly subject to it.
7208. You get the work done at fair rates between man and man? Yes; we try to, and I think we do. I do think, as regards the local increase, that the system is not quite satisfactory, inasmuch as one district surveyor may have a different view from another. A surveyor who is working on the boundary of my district and the Moree district makes a claim to me on the plea that the adjoining surveyor is getting a higher rate than he is. It would be better if the rates were fixed by one body.
7209. The conditions of the country are all so different, I suppose you do not get two bits of ground alike, and that was the object in allowing the scale to go up and down, but you think the rate should be fixed? I think it would be more satisfactory if dealt with by one Board. It is purely a professional matter. I think it ought to be fixed by the district surveyor and another officer of the department, who should be the chief surveyor.
7210. Do the rates fixed by one district surveyor and those fixed by another vary much? I think there is too much difference—more than there should be.
7211. You said you thought a Land Court should be composed of one person, and free appeals should be allowed to a local Board;—who should compose the local Board? The Chairman or Commissioner and two members as at present. The difference would be that, instead of travelling about, as at present, and sitting for fifty days in the year, the members would sit at one town, and for two or three days in the year.
7212. The other members, I suppose, would have a sort of retaining fee, and a fee when they sat? I do not think they would want a retaining fee, but only a fee when they sat. The suggestion involves an alteration in the Land Act.
7213. Would it be more satisfactory to the surveying staff in the country if they had a Surveyor-General at the head of the department, as it used to be, or would they leave it as it is now, when you really have to report to the Under Secretary? I do not think they are very much interested in the question. The Chief Surveyor really takes the place of the Surveyor-General; it is only an alteration in name, but I much prefer the old title of Surveyor-General, and would like to see it restored.
7214. But in his evidence he said he had no control over the surveyors in the country? I do not think it would be of any advantage to the country to have a divided control between the district surveyor and another officer. There is really no necessity for it either.
7215. *President.*] With regard to dispensing with two members who assist the Chairman of the Land Board, you would have the Chairman sit in Court by himself, without any assistance, and only in cases which were appealed against you would have for him two coadjutors to dispose of the case? That is exactly the case.
7216. Would you have these coadjutors appointed before hand, to be called upon when required, or would you select them as the cases arose? I would have them appointed beforehand.
7217. They would only receive fees when they sat? Yes.
7218. That would effect a great saving? I think it would effect a very great saving, and more than that, I think it would satisfy the people, and that has to be considered.
7219. If there were an amalgamation of the office of district surveyor with that of Chairman of the Land Board, it would necessitate in all cases that the gentleman who had the two offices should have the qualifications of a district surveyor? Yes, it would.
7220. At present there are Chairmen of Land Boards who have not the qualifications of district surveyor? Yes, there are.
7221. Do you think there would be any difficulty in filling all the appointments? Not the least.
7222. In your opinion, are salaried surveyors fully occupied? I think they are fully occupied.
7223. There are no fag ends of days or weeks that they do not know how to employ? I do not think so. My experience of these men is that they do not know a working day in the field. It is from daylight to dark with them. That is an absolute fact.
7224. Is the rate of their remuneration too much or too little? I certainly do not think that £290 a year is too much for a surveyor who has been through a long professional training.
7225. They have to find their own conveyances? They have an allowance of £150 a year to provide all equipment.
7226. Every one of them? Yes. It means a waggon, a buggy, and at least eight horses, instruments, tents, and all that sort of thing. I think it has been cut down as fine as possible.
7227. Are they allowed any attendants? They have their labourers, three or four, according to the work, and the cook.
7228. But these are not paid by Government? Oh yes; they have the ordinary party which a surveyor in practice requires. Of course, the district surveyor sees that they do not put on more men than they want; but there are a couple of men they always want, the chainman and the campkeeper.
7229. We have heard there is duplicate work performed in Sydney upon maps sent from the country;—in the country you prepare the original and a copy of maps or charts? Of plans, we prepare a certified copy.
7230. That is to say, a man takes up a selection, and his selection appears in one of these charts—well, is one copy kept in the Lands Office in the country and another sent here? Yes.
7231. Are you aware that there is a third copy prepared in Sydney? I do not think there is a third copy prepared in Sydney; there is a third copy prepared in the district office; but they are all done by a system called heliography, and that work is done in our office by the message-boy, who gets 10s. a week; it is quite a mechanical process.

R. McDonald,
Esq.
7 Mar., 1895.

- R. McDonald, Esq., 7232. The one copy that is sent to the Lands Office in Sydney is preserved? That is called the certified copy, or the standard copy.
- 7 Mar., 1895. 7233. Is the work that is done in the Lands Office in Sydney on the same scale as that which is received from the country? I think it is on a larger scale in Sydney, and there is a reason for that, because the maps we use in our office are reductions from the map in use at head office. It is a process of photolithography; the map prints better if reduced from a larger map.

MONDAY, 11 MARCH, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.,
 JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | J. H. STOREY, Esq., J.P.,

THOMAS LITTLEJOHN, Esq., PRESIDENT.

Henry Charles Lennox Anderson, Esq., M.A., Principal Librarian and Secretary of the Free Public Library, sworn and examined:—

- H. C. L. Anderson, Esq., M.A., 11 Mar., 1895. 7234. *President.*] In the Estimate of Expenditure, page 131, I see you have an assistant librarian and compiler? Yes.
7235. At a salary of £407? He is retiring on the 30th June on a pension, so that practically he will not have to be considered after this half-year. He is over 70 years of age, and has been retired under the provisions of the Civil Service Act.
7236. I suppose he has risen to that post through seniority and long service? Yes. He was librarian of the old Subscription Library, the old building which was on the site of the present library before the Government took it over, and he was transferred with that library to the Free Public Library.
7237. He has no doubt done very excellent work in his day? Yes.
7238. But I suppose old gentlemen get very unreliable? Yes.
7239. You have a catalogue clerk at £256;—has he constant work? Yes; very hard work. He is a very efficient officer. He would represent me if I happened to be away sick or on leave.
7240. Is his training sufficient for him to undertake that part? His training is, but, perhaps, his education is not. If I were leaving to-morrow I could not honestly advise the Minister to put him in my place, but, as he is most painstaking and most anxious to be useful, and recognises that it requires a highly educated man to do a librarian's principal work, he will, I am sure, gradually make himself fit for any higher duties that may come.
7241. Then this officer has no literary knowledge? Not of the highest sort. He has not had that sort of training, but he has had a good training so far as the interior economy of a library is concerned.
7242. He would be defective in the principal parts of a librarian's duty? Yes; at the same time he is a very useful man, although he would be more useful if he were better educated.
7243. There is a second assistant librarian, next to the cataloguing clerk;—are his duties such as occupy all his time? Fully.
7244. And there is an assistant;—are these officers engaged in giving out books to applicants? No; the attendants do that entirely. The assistants help me in cataloguing the books, getting them systematised and placed on the catalogue, and they assist the attendants in a difficulty. A man may come in and ask for something out of the common—for information which is not suggested by the title of any book. The assistants are supposed to be more highly educated than the attendants, and in such a case they would help the attendants, and in case of failure come to me.
7245. What is the inflow of new works into the library, say for a month? Last year the total of new books was 7,567.
7246. A little over 600 a month? Yes; it was much heavier than the previous year, when about 500 books a month were received. There is a sum of £2,500 for books in the contingencies. Some are donated. Last year there were a good many from Chicago—over 1,200—and some were given by the executors of a deceased barrister. We get all books printed in New South Wales under copyright, but they do not come to a great number.
7247. Who selects the books? I have the choosing in the first place, but my selection must be ratified by the Board of Trustees. The President of the Board rejects any that he thinks unsuitable. We present the result of our dual selecting at the monthly meeting of the Board of Trustees, who review and generally endorse what we have done.
7248. Do you order the books direct from London? No; we have just changed our agents this year. We dealt with London agents—Kegan Trench, Paul & Co. previously; but we did not get the exact books we wanted, nor as promptly as desirable. They had been necessarily allowed much latitude, and they sent us often what we did not want, and did not send us what we did want. The Board consequently changed the agents, and we now deal entirely with Messrs. Angus and Robertson, of Sydney.
7249. What concession in price do you get? Twenty-five per cent. on books that we order, and 15 per cent. on books that they submit from London on approval, which we may reject.
7250. That is on the published price? Yes; our terms are exactly what we got from the London publishers. The expense of bringing out the books was $7\frac{1}{2}$ per cent., counting insurance. Messrs. Angus and Robertson deliver the books.
7251. Do you select any books that are described as yellow-backs? We have no novels in our reference library except those by Australian authors, and no current fiction in the lending branch, except the works of standard authors, such as Dickens, George Eliot, Thackeray, Scott, &c.
7252. Have you Fielding's or Smollett's? No; Smollett is considered rather too strong. They have been asked for often enough. The Board is a large one, and very catholic in its tastes.
7253. *Mr. Teece.*] When you were Director of Agriculture did you ever have people thrust upon you against your will? Yes. I submitted a scheme to the Minister by which the Colony should be divided into four parts, and administered by a resident inspector in each division. The first division was the sub-tropical one, from the Tweed to the Clarence, to be in charge of an inspector, who should be an expert in the cultivation of sugar-cane and other tropical plants. Secondly, I proposed that there should be a farming district in New England, to be in charge of an expert in sheep-raising, turnip-growing, and English

English farming, with its head-quarters at Armidale. The third district was to be the Western Plains, where wheat and sheep are the specialties at present. The fourth division was to be the Coast District south of the Manning, which should have a dairy expert to teach the farmers. I laid this scheme before the Minister, who said it was an excellent idea, but that the country could not afford it. He was willing, however, to start with one inspector. We thereupon advertised for an inspector, and got twenty-six applications, only one of which was good enough to please the Minister, who therefore postponed the matter and made no appointment, nor did he make any provision on the Estimates then being framed. I never heard anything more about it. The Minister (Mr. Sydney Smith) went out of power in October, 1891, and Mr. Slattery came in. One day a gentleman came to me and said, "I want you to appoint my son-in-law inspector of agriculture. He is downstairs, in the Stock Department, earning 10s. a day. He has had great experience down at Fiji." I said, "You must see the Minister. I have nothing to do with it." I hinted that the inspector should be a man of good scientific and practical training. He replied, "It is all right, I will get him appointed." I said, "Don't say that. The Minister will never do it without consulting me." He laughed and said, "I will have him appointed in a few days." Previously to that time no appointment had ever been made in the department without my having been first consulted as to the necessity for the position and the qualification of the candidate. Mr. Smith never appointed even an office boy without conferring with me. A few days after this interview, five inspectors of agriculture were appointed, and another appointment was made of inspector of agricultural shows, the last being to fill a vacancy. This man had never seen an agricultural show in New South Wales.

H. C. L.
Anderson,
Esq., M.A.
11 Mar., 1895.

7254. What salary did the inspectors receive? The five new ones, £300 a year each. I had recommended to the Minister that they should have graduated salaries, from £200 to £300.

7255. They were all bracketed at £300 a year? Yes.

7256. And they were not required? No, because they were not agricultural experts; I could not find work for them.

7257. Then men were appointed in the Public Service who were not required? Certainly. If they had been good men they would have been very valuable, and would have done most necessary work. I could have done magnificent work for the Colony with highly-trained practical men, men trained in an agricultural college, with expert knowledge in their respective lines. But the five men were all appointed on the recommendation of political friends—always irresponsible and often incompetent to judge of the candidate's qualifications. I had picked out the eight candidates with the best testimonials, and expected a rigid examination of these candidates and their records before even one should be appointed on probation.

7258. *Mr. Storey.*] Are these men in the department now? One is. The Minister who prepared the Estimates only provided for one.

7259. Are they still in the Service? I do not know if all are. I can give the history of one who is; he charged travelling expenses of 12s. a day on an occasion when I saw him in town. I asked him to explain how it was that he was charging for travelling expenses when he had not left Sydney. He said he had been out of town, and gave me full details of his proceedings on the day in question. I told him to look at his diary. He afterwards confessed that he was not travelling that night on departmental business, and it transpired that he stayed behind a day, sent in a false return to show that he was at Tamworth, falsified his diary, and charged his travelling expenses. I reported him. I said he ought not to remain in our Service. He gave as an explanation that it was an oversight, and it was accepted. He repeated this serious offence within a few weeks, and was then admonished—nothing more. All this can be proved from the papers. He was reported afterwards for drunkenness in my office. Witnesses were not even asked for evidence. His explanation was deemed satisfactory.

7260. *Mr. Teece.*] Is he still in the Service? Yes. He was retrenched from the Department of Agriculture, and soon afterwards appointed to the department in charge of tanks, and I believe he has a farm there in connection with his tank.

7261. You spoke of a gentleman who asked you to appoint his son-in-law inspector? He was not a trained expert in agriculture, but he was a gentleman. I had no trouble with him at all. He did his routine work very satisfactorily, and improved very much in usefulness.

7262. Did he know his business? He was not an expert. Another of the men appointed celebrated his first day in the Civil Service by getting drunk, and came to my office in that state, his excuse being that he had been travelling all night. I told him to go and get sober, which he did. He came back afterwards fairly sober. He was a very intelligent man, and I sent him up the country to represent the department, and visit the farmers to instruct them. He was reported as drunk there. I went into the country to investigate the case, and found he had been beastly drunk for two weeks, and had done no work. I reported him, and recommended that he be dismissed. He was allowed to continue for two weeks longer, and draw his salary all the time, when he resigned. He was not censured, but I was, for suspending a drunken man from duty.

7263. I believe you have something to tell us about the Superannuation Fund;—do you represent a body of the Civil Servants who had a meeting on the 19th of November? There was a meeting of Civil Servants, at which they appointed a Committee to take the present Superannuation Fund into consideration, to suggest amendments, and to report specially on the question of compulsory life assurance. That Committee consisted of twenty-three men. After we had thrashed the matter out fully, there was a fair consensus of opinion on the necessity of combining superannuation with the principles of life insurance. The committee appointed a sub-committee of five men to consider it, who asked me to draw up a report showing the result of our deliberations. I presented this report to this general committee, and they approved of the main principles of the report.

7264. What are the salient points in that recommendation?

SCHEME for amending the Civil Service Superannuation Fund.

1. That the administration of the Fund and the sole control of all appointments and promotions in the Civil Service be vested in a Board of Commissioners who will be responsible only to both Houses of Parliament.
2. That a Civil Service Provident Fund be formed as early as possible, upon which the 4 per cent. contributions to the present Fund shall cease, except in the cases of those who may desire and be allowed to still contribute. (See section 7.)
3. That there be transferred to this Civil Service Provident Fund the total contributions of the present subscribers to the Superannuation Fund (except those coming under section 7), together with reasonable interest; the amount to the credit of each individual to be invested in a paid-up life assurance policy, payable at 60 or previous death, which will participate in all future profits.

H. C. L.
Anderson,
Esq., M. A.
11 Mar., 1895.

4. Every officer and employé now in the Civil Service, or afterwards joining it should be compelled to subscribe to this Provident Fund at a rate sufficient to secure a non-transferable and non-forfeitable policy payable at 60 or death, equal to at least twice the amount of his annual salary, increasing as it increases.

This total policy value to include any amounts already assured in terms of section 3.

Any officer now in the Service who is already insured with an approved Assurance Society may be allowed to count the amount of his existing policy or policies towards this total assurance, provided he makes them payable at 60, and deposits them with the Civil Service Commissioners, and authorises the Treasury to pay the premiums quarterly, the full value of the matured policies to be paid to the officer on reaching the age of 60 (or any subsequent age as per section 9), in a lump sum or in an equivalent annuity as desired by himself.

5. The Government to be asked to subsidise this fund to the extent of 50 per cent. of the officers' contributions, which subsidy shall form a special reserve from which all gratuities will be paid to such officers as have to retire through ill-health,—such gratuity to be decided by the Commissioners alone, within limits, to be prescribed in the new Act that will be necessary; the surplus at the credit of this reserve fund at the close of each year to be divided *pro rata* amongst all the existing policy-holders at that time in the Service of more than five years' standing. Persons surrendering their policies through leaving the Service should forfeit any bonuses allotted from this reserve.

6. All pensions or gratuities which may be given to persons removed from the Service on account of retrenchment, or for any other cause than ill-health or expiry of service at 60, to be paid by bounty of Parliament, as it is impossible for any fund to be organised to meet exigencies of this character.

7. All contributors to the present fund of 55 years of age and upwards, who have served fifteen years, to be allowed the option of continuing their subscriptions to the present fund, under the provisions of an amended Act, which should provide for the pensions being calculated on the actual *average* salary (without allowances) for the whole period of service, due provision being made for recouping the fund 4 per cent. *with interest* on all salaries received before 1885.

8. Persons leaving the Service after having contributed to the Provident Fund for not less than five years, to be allowed either to continue their policies (without special reserve profits), or to draw an actuarial surrender value; persons leaving before five years' service to forfeit all contributions to the Fund.

9. Retirement to be generally compulsory at the age of 60; but persons may be retained in the Service after that age on special report by the Commissioners, the policies of such officers to be maintained without further payments, and with participations in profits, till their retirement or death.

10. That all persons now contributing to the Superannuation Fund, and any existing pensioners who may return to the Service, be admitted to the benefits of the new Provident Fund without medical examination.

That any employé now in the Civil Service and not contributing to the present Fund, and compelled by section 4 to contribute to this Provident Fund, be medically examined, and his rate of premium be settled by such medical report.

No person to be admitted to the Civil Service in future without strict medical examination.

11. That in the case of death of any officer the Commissioners may in their discretion hold the amount due in trust for the widow or children; pay 5 per cent. interest on the capital value for a term of years, and the capital to the widow or other legal heirs on the youngest child reaching the age of 16.

(1.) The Committee were quite unanimous about that. (2.) This refers to officers over 55 years of age, whom we wish to see treated with every possible consideration. (4.) We take in everyone who wears Her Majesty's uniform, including those engaged in the railways. We aim at making men provident. Our idea is that a man should insure his life for at least twice the amount of his annual salary, so that if he is getting an annual salary of £250 he should insure his life for £500. (6.) We are unanimously of opinion that no retrenchment should ever come on the fund, and that no officers should be dispensed with and given a gratuity out of the Provident Fund.

7265. *Mr. Teece.*] Do you propose, under your scheme, that all Civil Servants under 55 should combine to form this fund? Yes.

7266. And that it should be subsidised by the return of the contributions which they have already made? Yes; into that fund.

7267. Then, with regard to those who are over 55, do you propose that they should remain entitled to a pension out of the existing fund? Yes, out of the old fund; but of course we are quite unanimous in thinking that it cannot be administered on existing lines. We are of opinion that there should be an amended Act passed, providing that the pension should be calculated on the basis of his whole service, not on the average salary of his last three years' service.

7268. You are aware that the pensions already enjoyed are sufficient to absorb more than the present amount at the credit of the Civil Service Fund? We believe that from the actuarial reports.

7269. There is no doubt about that. To that liability you propose to add the pensions of those over 55? We suggest it simply as an act of grace.

7270. And then you propose to abstract from the fund which is already insufficient for the purpose the contributions of those under 55? Yes; with reasonable interest.

7271. From what source do you propose to supply the deficiency? From the Consolidated Revenue. It should not come out of our contributions. The fund was made without our consent. The contributions to it have been deducted from our salaries. We have proved the operations of the present fund to be inequitable, and wish to form a stable and equitable scheme. The Government have incurred the responsibility of the Superannuation Fund. They have gone on paying unduly large pensions, for example, giving one man a pension with a capital value of over £6,000 in return for his payment of £250 (with interest equal to £330). We consider that we are not responsible for the insolvency of the fund, and therefore should not pay the deficiency.

7272. Apart from the particulars of this or any other fund, on the general principle of a provident fund, and voicing as far as you can the Civil Servants, do you think it would be better to have a system of compulsory insurance than a provision for pensions merging at 60 years of age? It is hard to say, because we have not been able to get the views of all the Civil Servants. The young men are generally in favour of it. I may safely say that most men junior to myself favour it, but men over (say) 50 years of age do not like it, and will naturally oppose it as lessening their expected pensions. If the pension fund could be made to furnish pensions as liberal as they are now, which should be calculated on the whole term of service (not the last three years), and would make some fair provision for the widow and children in case of an officer's death, and for retirement through sickness as well, and all this on 4 per cent., which your own report shows could not be done under 45 per cent. for some ages, the Civil Servants would be delighted. I may say that I took your report as the basis for my deductions, and realise that the large pensions of the few must suffer somewhat, if the results are to be more equitable for the many.

7273. On the question of the Civil Service generally do you think that greater economy and efficiency would be secured by having the Service entirely under the control of an independent Board, charged with no other duty than that of getting rid of the present system of Ministerial patronage? I am quite sure of it.

7274. And do you think such a system would be more agreeable to the great bulk of the Civil Servants? I feel quite sure of it.

7275. *President.*] You propose to return to the contributors of the present Superannuation Fund all that they contributed with 4 per cent. ? With reasonable interest. We expected 5 per cent. We want to have the entire amount placed into the Provident Fund. No cash would be needed, as Government securities would be taken, we propose, by the Commissioners.

7276. There has been already a very large amount paid out of the fund in pensions and gratuities, and the fund, according to expert opinion, is in an insolvent state; therefore there does not remain in it the whole of the contributions of the present contributors, much less does there remain those contributions with interest. Where is the deficiency to be met? From the Consolidated Revenue, which has benefited so much by the retrenchment which has very largely been paid for by the Civil Servants' own fund.

7277. When do you propose to hand your report in? We have a meeting to-morrow night to discuss the last three or four sections. The principles have been accepted, but the details are open to amendment. Many Civil Servants, I may state, are already insured, and the policies now existing must be reckoned. There will have to be a good deal of give and take in the matter. My idea, upon a consideration of all the circumstances, is that this should be our own fund, to be controlled solely by a Board of Commissioners.

7278. *Mr. Storey.*] What associations were represented at the meeting held to consider this question? The Draftsmen's Association, the Electric Operators' Association, and the Post Office Clerical Association.

7279. They said they represented the great bulk of the Civil Service? No.

7280. Is it not a fact that the younger portion of the Civil Servants are averse to life insurance? I think not. I have never heard any one argue against it. Probably some improvident young fellows would like their contributions back, but the great majority do not desire any such thing.

7281. *Mr. Robertson.*] Have you ever heard any one argue against superannuation? Yes; it is generally admitted that the present system is altogether wrong and doomed to early failure.

7282. *Mr. Storey.*] Do you mean to say that you have never heard any arguments against compulsory insurance by the younger members of the Service? They are fairly unanimously in favour of life insurance. There is a general belief that the present system cannot be amended without radical alterations to make it equitable for all ranks of the Service.

7283. You were director of the Agricultural Department? Yes.

7284. How long? From February, 1890, to May, 1893.

7285. What were you previous to that? Examiner in the Department of Public Instruction. I was Vice-chairman of the Board of Examiners when I was transferred to form the new department in 1890.

7286. From the time of your appointment till the time of the abolition of your office, did you give entire satisfaction? So far as I know. I never heard one word to the contrary said by anyone, nor even insinuated.

7287. The first you heard of losing your appointment was when you saw in the paper that the office had to be abolished? Yes.

7288. Was no word said about it before? No hint even had been given me.

7289. Did the Minister give any reason for this step; did he throw any blame on Parliament, or give any reason of any kind? I could not say the exact words he used. I interviewed him. He said, "We must retrench you. The department has grown too big, we must cut it down."

7290. Was that before Mr. Ednie Brown's dismissal? His position was abolished when the Estimates were first submitted to Parliament, when Dr. Cobb (pathologist), and Mr. Guthrie (chemist), had their positions struck off the Estimates.

7291. How was the department managed after you left? I do not know. I presume that the chief clerk does his best to manage it, as far as the Under Secretary permits him.

7292. Was there any reduction in his salary as compared with yours? Yes; he receives £600, my salary was £740.

7293. How long was it after that that you went to the Civil Service? I was transferred from one department to another. As Mr. Walker, the principal librarian, was retiring the Government transferred me to his place. The position was offered to me by the Minister for Public Instruction.

7294. During the time you were in the Agricultural Department were there many other cases of persons being put in your department against your will, or were the ones you mentioned the only cases that occurred? There were many other cases.

7295. *Mr. Robertson.*] What is the position of a Civil Servant under the present Superannuation Act who may contribute a number of years to the fund, and then decide to go out of the Service? He would get nothing unless he had reached the age of 60.

7296. Then he would get no benefit from his contributions? No benefit whatever if he left of his own free will; but if he were retrenched, whether for incompetency or for the sake of economy, he would get either a pension or a gratuity.

7297. After having contributed a number of years to the fund, what provision would a man have made for his widow and family? None at all, by means of this fund. Unless a widow can plead poverty or distressed circumstances she would get nothing out of the fund. In my own case I pay £72 per annum for life insurance to provide for my family, and I have been compelled to pay an average of £28 a year to this fund also.

7298. Do you know the general view of the Civil Servants on the subject of Superannuation Fund and life assurance? I think generally they favour some provident scheme which should be much more equitable than the present one. The first paragraph of the Committee's Report to be presented to the general body of Civil Servants to which I have referred are:—"The Committee are of opinion that the present system of superannuation is inequitable, since it gives some persons much more than they are justly entitled to, while to others it gives nothing at all."

7299. I see by the Estimates of 1895 that there are thirty-two foresters in the branch of Agriculture and Forestry? I do not know about them. Mr. Ednie Brown managed them entirely. I never had anything to do with them. My days and evenings were entirely taken up, even to the exclusion of my own hobbies and amusements, with the very heavy work of organising the new Department of Agriculture, and settling the hundred of details and precedents that had to be carefully attended to in the start.

7300. What are the duties of the chief clerk of the Agricultural Department? I cannot say. The chief clerk in my time had the sole control of the clerical staff, and was wholly responsible for the correspondence of the department. He was a most enthusiastic and efficient officer; his salary was £380.

7301.

H. C. L.
Anderson,
Esq., M.A.
11 Mar., 1895.

H. C. L.
Anderson,
Esq., M.A.

11 Mar., 1895.

7301. Who is supposed to be the head of the branch? The chief clerk.

7302. Have you considered the matter of classification? Yes; I think a well considered scheme of classification would promote the efficiency of the younger members very materially, and give them something to work for and hope for.

Henry Francis Barton, Esq., Master in Equity and Master in Lunacy, sworn and examined:—

H. F. Barton, Esq., 7303. *President.*] You are the Master in Lunacy as well as Master in Equity, I understand? Yes; I am Master in Lunacy by virtue of being Master in Equity.

7304. You have a small staff in your department. The first, after yourself, is deputy registrar and assisting taxing officer;—he has £560 a year? Yes.

7305. Are his duties very onerous and important? They are very important. It is his duty under me to tax all bills of costs. In each bill of costs of any importance is an item known as "instructions for brief," which item requires that he should carefully read the papers of the case all through, or some of them, with a view of determining what lump sum ought to be allowed to the solicitor for instructions to the brief. That item varies with the importance of the case and the amount at stake in each suit. It is an item in which everything is left to the discretion of the taxing officer, and he is not subject to review by the Court in respect of that item as to the amounts that he may choose to allow. I have known a case in which instructions to the brief amounted to as high as £1,000, and they vary from £5, or from a few pounds, up to that sum. Of course it requires an officer above suspicion to decide such an item, because if he allowed £500 or £1,000, there would be no review of that allowance, and, consequently, he might make a very considerable difference if he chose to be dishonest or unconscientious in the discharge of his duties.

7306. Then he must be a professional man of experience and of high honor? He certainly must be a man of experience and of high honor. I do not know that it is necessary that he should be a professional man, because, where questions of principle in taxation arise, he can always refer to me, and I can decide the question.

7307. Is he a solicitor? No; but an officer of thirty-eight years' practise, who has what I may call a considerable amount of legal mindedness in his composition. He knows exactly when a question is one of mere fact, and when it is one of principle. If it is one of principle he hands it over for me to deal with, but if it is a question of fact he will deal with it himself, and ably.

7308. You have other clerks? Yes.

7309. Are the duties of the chief clerk laborious and important? They are important in this way: He acts as my deputy in all cases in which the court sits, and it is his duty to have all the cases properly marshalled and ready for the use of the court on the hearing of all applications and motions. It requires a gentleman of tact and intelligence. He has the control of the officers under him.

7310. Is there any way by which you can suggest economy in the number of your officers? Yes. I have one at present before the Civil Service Board, whose case is now being considered. I have for a considerable time past been dissatisfied with the accountant. I may mention that an accountant in equity is not strictly required, and that his services might be dispensed with without in any way interfering with the efficiency of the office—I will go further, and say, with reference to this particular accountant, with advantage to the efficiency of the office. The accountant is, as it were, outside the clerks. He considers it his duty when he receives 6d. to record the fact as being correctly received. But he is of no use to me whatever in keeping the clerks under him at their work, or in seeing that they collect the proper fees, and it would be, in my opinion, more conducive to the well-being of the office if the present second clerk were made first clerk and accountant, and all the clerks under him took the responsibility, one after another, under him. In that way the accountant would do the duty of checking the office and keeping the clerks in order, and keeping the work going, in addition to the duties of accountant, with the assistance of the officers under him.

7311. There would be one hand dispensed with? Yes.

7312. You would pay the second clerk something more? Yes. I certainly think that that ought to be done, because he has a large amount of money to deal with, although he would be carefully controlled.

7313. What is the mode of taking evidence in your Court—is it taken orally before you? Yes.

7314. Is it taken down in longhand? I take it down myself. I would like to explain that, when I am taking evidence in order to found the basis of a decision that I have to give myself, I take my own notes in my own notebook, and I give my decision based on that evidence. Then it is open to the parties to review my decision and to bespeak a copy of my evidence. But if I were simply conducting an inquiry, as I sometimes do under the Companies Act, for the purpose of recording evidence to be used in other Courts, then I generally have it taken by a shorthand-writer; but where the matter is a simple one and will not allow of the expense of a shorthand-writer, then I have it taken down by one of my clerks on a typewriter, and it is read to the witness and signed by him. Where the evidence is taken for the purpose of eliciting information by official liquidators, in view of further proceedings in the Court, where it is not necessary for me to give any ultimate decision, I consider it desirable that the evidence should be taken *verbatim*, or as nearly so as possible; but where I have a certain reference made to me—for instance, to ascertain what damages should be paid by reason of a breach of agreement, or in lieu of an injunction—then I prefer to take my own notes, because I have to give a decision myself. By doing that it writes itself down on my memory much better than if the evidence were taken by somebody else.

7315. Then you would not recommend that the practice of writing down in longhand should be dispensed with? No. As a matter of fact, I take little evidence down in longhand, except what I use for the purposes of my own orders and certificates, and I take that down very quickly, and with abbreviations. All that is taken down for eliciting information with a view to other proceedings is taken by a shorthand writer, whom the parties pay, or by a typewriter, as I have explained.

7316. You do not doubt the accuracy of the shorthand-writer's work? No.

7317. *Mr. Humphery.*] The expenditure in the two departments controlled by you is over £6,000 per annum? Yes.

7318. With the exception of the officer to whom you have referred, is there any other officer in your department whose services could be dispensed with? Certainly not in the lunacy side, because there has been a very large increase of duties on the lunacy side owing to recent legislation, with the result that the staff is worked to the top of its bent, and any diminution in the staff there would certainly mean a loss of revenue.

7319.

H. F. Barton,
Esq.
11 Mar., 1895.

7319. Is the Lunacy Branch self-supporting? To a very large extent it is. In 1894 an Act was passed (the Lunacy Amendment Act), which gave power to make any rules of Court with the view of obtaining a percentage on the clear annual incomes of all insane patients for the purpose of paying the costs of the office. In addition to that, we take large sums of money for the maintenance of patients in the hospitals, but that goes more to the hospital expense. I have only had one year's experience of this percentage, but the following facts are significant:—In 1891 the revenue amounted to £12,235 16s. 3d. In 1892 the revenue amounted to £13,350 12s. 9d. In 1893 the revenue amounted to £13,480 10s. Then I got the benefit, in 1894, of the Lunacy Amendment Act, which enabled me to take percentages. This resulted in the jump of the revenue to £14,371 4s. Of that amount, £670 15s. 5d. was due to percentage, and applicable to the expenses of the department. It was applicable to—but I will not say it was applied to—those expenses, because it all goes to the Consolidated Revenue. The salaries in 1892 amounted to £2,510, and in 1894 to £2,554 10s. For an increase of £44 10s. in the salaries I have gained for the Government, apart from the increase of collections, the sum of £670 15s. 5d., so that that is a clear gain on the right side of the ledger.

7320. As Master in Equity can you cover the whole of the charges of your branch by the fees which you receive? Yes, on salaries, as they have been reduced by 10 per cent. The fees are more than sufficient to cover the charges of the office if you omit from those charges the salary paid to the Primary Judge in Equity; but I will point out that he is also Judge in Lunacy, and sits occasionally in Bankruptcy, and hears appeals, so that I do not know that it is fair to saddle the Equity Office with the salary of the Chief Judge in Equity.

7321. As a matter of fact, your department is self-supporting? Yes, and it would become more so if the reductions I referred to were carried out.

7322. Those reductions would entail the necessity of increasing the salary of the officer next in position? That should be made up to £320; that would be quite as much as he ought to get for the present, at any rate. He is getting £280 now. The clerks have not had a single increase for many years, and they deserve it. I think it might very well be done out of the saving I have suggested.

7323. Are your duties very onerous? Yes.

7324. Is your time fully occupied? At times I have an important case, and either in the middle of it, or in some part of it, the parties find they cannot go on. Then I, perforce, have to give up that appointment for the day; but I am very seldom idle, because I have the remodelling and revising of all the rules of Court in hand. That has given me a very great deal of work to do.

7325. *Mr. Storey.*] You occupy two positions which appear to be very onerous. You have two big establishments under you;—can you keep track of the two? Yes.

7326. Why should the two be combined? I do not see how the two could be separated, because the duties are analogous. All the court work in connection with the lunatics falls under my care. Unless you are going to appoint another professional man as Master in Lunacy—and I suppose he would want a high salary—the two offices would have to be combined. For instance, a great many of the duties of the Master in Equity consist of inquiries. The Legislature has delegated to me all the duties of the Court with reference to the administration and management of estates of persons who have been declared insane. I have the power of the Supreme Court to make any order that the Supreme Court may make as to administration and management—for instance, to sell or mortgage the property of anyone declared insane. Under the recent Act of legislation referred to, following the English legislation, I can do that on my own motion, the object being to decrease the cost.

7327. You have to trust a good deal to your subordinates? Yes; with regard to the revenue for the maintenance of persons in the hospitals I am largely dependent on my subordinate, the chief clerk in lunacy, who has to be a very careful man, but everything he does comes under review before me twice a week, and it is approved or not, as I may see fit. Without a good subordinate it would be very difficult for me to interview all the people who come, the friends of lunatics and so forth, and fix the maintenance of each, and do all the detail work. One question that has often to be considered is what amount ought to be charged for maintenance. That question very frequently comes before me on reference from the chief clerk, and I have to use a good deal of judgment in the matter. The chief clerk could only act in the first instance for me, and his decision would have to be confirmed by me.

7328. Where are the offices of the two clerks? On different floors at Chancery Square.

7329. *Mr. Humphery.*] Have you thought of any way by which the offices in any of the courts could be amalgamated? I have thought a good deal about it. The only way in which it could possibly be done would be for the whole accountancy of the courts to be brought under one department, call it the Paymaster-general's Department. If there were such an officer as a Paymaster-general who could keep the accounts of all the departments, we would get rid of the accountants in each sub-department. Whether it would be a saving to the Government I am not prepared to say, because if you create a Paymaster-general's Department the expense of that staff might be more than the expense of the present system. There would be some saving of expense if the Lunacy Branch were under the same departmental head as the Equity Office, but it would only mean the saving of a messenger, and it would be hardly worth considering.

7330. *Mr. Storey.*] The Prothonotary and the Curator and the officer-in-charge of the Probate Office, could not their offices be amalgamated? I should say it would be impossible to amalgamate them. The process is rather that of disintegration. The Curator used to be with the Prothonotary, but the duties increased until by a natural process of growth the offices separated. I doubt very much whether you would gain by amalgamating them. The two things are quite distinct. Another matter which has given me a good deal of work lately I would like to mention. An Act of Parliament thrust upon me the onus of making the people who bring lunatics to these shores pay for them—either the captains of vessels, or the agents, or the owners of ships. Of course, these men fight against it very much. I have had twenty-six cases under that Act up to date, and I have been successful in most.

7331. *Mr. Humphery.*] How much do they pay? £500 is the maximum.

7332. What is the amount of money to the credit of the Master in Equity at the present time in different suits? About a quarter of a million. The late Commission advocated the reduction of interest from 4 to 3 per cent. That has been done. It may lead to a portion of the money being invested in different securities. There has been a constant rise in the trust-funds under my control. If there were no claims against money placed to the credit of the Master in Equity in this way the Government would get it eventually.

- H. F. Barton, Esq., 11 Mar., 1895. 7333. *Mr. Robertson.*] Do you get interest on your credits? Yes; by arranging with the Government we get 3 per cent. in the Government Bank on all money paid into Court, whether on deposit or not, *de die in diem*, till the interest is paid.
7334. *Mr. Humphery.*] Are you personally responsible for this money? Yes; except that I cannot pay without an order of the Court. That is the one check upon me.
7335. *Mr. Robertson.*] What guarantee do you give? £2,000. On the lunacy side there were 1,017 cheques drawn in 1894, and 1,300 trust receipts were given in the same year.

TUESDAY, 12 MARCH, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
 JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.,
 THOMAS LITTLEJOHN, Esq., PRESIDENT.

Walter Liberty Vernon, Esq., Government Architect, sworn and examined:—

- W. L. Vernon, Esq., 12 Mar., 1895. 7336. *President.*] The officer next to you, according to the Estimates, is called the principal assistant architect. I presume you find it necessary to have such an officer? I do, for several reasons: one is that I like as far as possible to focus the country work in the hands of one officer, so that I may have only one to consult instead of several; and the second reason is, that there are many cases in connection with disputes with contractors, which arise as to the correct reading of specifications, and technicalities of that kind, and I like to have a man of experience near me in the shape of an assistant with whom I can consult sometimes. I consider Mr. Robertson is one I can consult with confidence.
7337. Are you much absent from headquarters? No, I am not; but I ought to be more than I am.
7338. So he does not require to take your place often? Not often, but on emergencies. At the same time he does not assume the full position which I hold, because I know it is the desire at headquarters that all special minutes and recommendations should come from myself, and therefore Mr. Robertson takes the routine office work, and as much as possible keeps back the more important work till I return.
7339. In addition to the principal assistant architect you have five more called assistant architects—one at £425, one at £335, two at £290, and one at £255. Have you full employment at all times for these? I have always had, and now we are extremely busy.
7340. And you could not dispense with even one of them? I do not think I possibly could; I am pressed every day to prepare plans faster than I can do them. Of course it is not always so, but I have never known a spare hour in the office for those with whom I come more immediately in contact.
7341. Working the ordinary hours, or do they work overtime? I know some of them have to write all their specifications in their own houses.
7342. They are not paid for overtime? No; they cannot do their work during office hours, they are so interrupted.
7343. The buildings of which the plans pass through your hands are of various characters, I suppose? Yes; I classify them as much as possible. I have court-houses, gaols, police barracks, lock-ups, police quarters, post-offices, a few custom-houses, police stations, and the public buildings in and around Sydney.
7344. Has there been a greater impetus lately in the erection of these buildings than there was (say) twelve or eighteen months ago? Oh, yes; the present Government, during the last Parliament, voted a large sum of money out of loans for the erection of buildings which had been in abeyance for some time, and, as a consequence, I have instructions to the extent of about eighty-six new buildings at the present moment, irrespective of those that are already in progress, and irrespective of the small works which I do in existing buildings. They are of all classes, scattered all over the Colony.
7345. The chief draftsman and building surveyor—does he superintend the draftsmen's work, and survey buildings also? He is in charge of the room of draftsmen under Mr. Robertson, and he is a capable technical officer in the way of surveying. He has been a London surveyor really. I always employ him in survey matters. For instance, if I have a dispute in the city, as regards a party-wall or boundary, or if a question arises as to the powers of the Government with regard to the City Improvement Act, Mr. Brindley is the man I always put on that particular kind of work. Besides which he has the work in connection with all theatres and licensed houses throughout the Colony.
7346. Such as regulating the number and mode of exit? Quite so.
7347. And the lighting and ventilation? All those points. We get a good many of these during the year. In addition to that, he has a small district to look after—the district round Eden—which is more easily worked from Sydney than from the country.
7348. Then the district inspectors have districts all over the Colony? All over the Colony; there are six of them.
7349. Are they much away from Sydney? They reside in their own districts. I have a statement here which I might hand in. [*Statement handed in.*]
7350. You could not do with fewer? I could not possibly.
7351. We are very anxious to meet the expectations of the Government by recommending some economy? I would only be too glad to suggest anything I could, but we have been at starvation point since 1893.
7352. Are the salaries of the district inspectors irrespective of any allowance? The inspectors get their travelling allowance in addition.
7353. But no residential allowance? None whatever.
7354. What is the scale of the travelling allowance? Very low; generally on the third class scale. In some cases it works a little hardly, as some of these men have journeys which take them sometimes fourteen, sixteen, eighteen, or twenty hours right off.
7355. No equipment allowance? No; of course they get their coach and railway fare, and 12s. 6d. a day in addition to the fares.
7356. The head one seems to be very well paid at £394? Mr. Roberts is one of the leading officers in my branch; he is stationed at Bathurst.
7357. Is the one at Goulburn on the temporary staff? Yes, and unfortunately most of the men are on the temporary staff. They were recommended for permanent positions when the change took place, but they were promoted to the work of the superior positions without the emolument. 7358.

7358. It is rather strange to be eighteen years on the temporary staff,—I suppose, without a day's inter-
mission? Oh, yes, continuous service. W. L. Vernon,
Esq.
7359. According to the Blue Book the number of clerks of works, time-keepers, draftsmen, and others on
the temporary staff is thirty-seven, at any rate? There are now only twenty-seven on the temporary staff. 12 Mar., 1895.
7360. But the re-arrangement has taken place since this book was issued? The present office staff
consists of twelve professional officers on the staff, and twenty-seven temporary men, of whom eight are
only on special engagement for three months.
7361. Do you consider that an advantageous position of affairs? No, I do not. Several of these men
should, in all justice, be put upon the staff. I think most of them are fairly well treated, but there are
three or four who, by some unfortunate circumstances, have been very badly treated. I will relate the
circumstances that led up to this. When the great reduction took place in 1893 I was instructed to
reduce my salary estimate by £3,000. To do that I had to recommend the retirement of some of the
older officers in the Service, and the dismissal of some of the temporary men; and then, in order that the
work of the office should not suffer, I recommended that the juniors of these senior men, who had been in
the office for some years, should be promoted to their positions to take up their work, and to take up also
not their salaries but a modified salary which would be more consistent with the position they were placed
in. Unfortunately the Minister accepted my recommendations as to the retirements and dismissals, and
there the matter has stopped ever since 1893. I will take the officer who built this Department of Lands;
He is receiving less salary than some of the messengers—I mean the messenger's salary with emoluments.
This officer, who is one of the most able artistic men you could possibly find in Sydney, who designed a
greater portion of this building, and who does the highest class of work, receives less money than some of
the messengers.*
7362. And he is a temporary man? Yes; he has been some fourteen years in the Service. I have
some two or three like that.
7363. Did you recommend that the deserving temporary officers should be taken from the list and placed
on the staff? I did. I would like to hand in my report of 25th January, 1893, in which I made the
recommendations in order to accomplish the saving of £3,000. (*Statement handed in.*) I not only
accomplished that saving, but the department, by postponing the adoption of my recommendations, saved
£870 in addition to the £3,000. That officer I refer to has, I suppose, about £80,000 worth of work in
his office at the present, and is receiving £290 a year.
7364. The rearrangement of the department in this section has been a matter of very recent occurrence,
has it not? Not of the professional branch, but of the clerical and account branches. They are the
subject of re-arrangement at the present moment.
7365. Has your department not shared to any great extent in the re-arrangements? Well, that re-
arrangement is just now under consideration.
7366. And you will again have the opportunity of adverting to the position of the temporary officers with
such suggestions as you may make, or are you to leave it alone? I presume my professional men are
discussed only before this Commission. The Board of Reference in the Works Department is only taking
up the clerical and account branches; it has left the professional branch to itself.
7367. Clerks of works of course are very necessary belongings in new buildings,—do you find that four
are sufficient for all you have to do? They vary in number, according to the buildings in progress. I
have ever made it a rule that a clerk of works should be constantly on any work costing £2,500 and over,
but under that sum I have done the best I could by grouping certain buildings together under one clerk
of works, or by getting periodical visits from the district clerk of works. But as to buildings above
£2,500 I have always recommended that I should have a clerk of works.
7368. The best paid one gets £334;—is he employed in one of the districts or in Sydney? He is in
Sydney.
7369. He has been there since 1861? He is my most trusted outdoor officer.
7370. You would not like to lose him? I could not possibly afford it. He looks after all the asylums
for the insane, some of the benevolent asylums, and the buildings all around Sydney. Yesterday he came
back from the South Coast—he had been as far as Milton. When a lot of papers accumulate referring
to towns down south as far as Milton, I send Mr. Telfer down, and he cleans them up as he goes along.
7371. He is well worth £6 10s. a week? Oh, yes.
7372. The others are stationed in the country, one at £290, one at £268, and one at £281? One is
Mr. Simpson, stationed in Sydney. He is an old and trusted servant; he has charge of public buildings
here, and does all the valuations for the resumption of houses and buildings for railway purposes.
7373. Do you originate the designs of new buildings; for instance, say the Government want a new court-
house or a new post office in a certain district; they probably give you an idea as to the accommodation it
should provide, and then all the details are left for you to plan out? That is so. The building is first
initiated with the department requiring it. They intimate they wish an estimate made for certain accom-
modation; that estimate is made and sent in. The next step generally is, upon approval, to obtain a vote
of that particular sum on the next estimate, or the succeeding estimate at any rate, and when that money
is obtained I have instructions to prepare plans and specifications, and from that time the matter goes
forward.
7374. The probable expenses to be confined to the maximum of the vote? Oh, yes; we have to keep
within that.
7375. Do you receive any instructions as to the ornamentation of the buildings? No, I do not; that is
generally left to me, but I may say I always send in sketches, both of the external and internal arrange-
ments, for approval. 7376.

* NOTE (on revision):—My attention has been called to the answer given to question No. 7361, and, upon closer scrutiny of my answer than unfortunately I had given when the evidence was submitted to me for approval or correction, I find that the substance relative to the professional work on the Lands Office by a certain officer differs from what I intended to convey, and is calculated to bear a wrong construction. The phrase would not be misunderstood in my drafting-room, and would not be there interpreted in the same way that would be the case by the general public. Probably the circumstances under which the evidence was given, where there was but short opportunity for exactness in mode of expression, are some explanation; and, to be properly understood, my answer should have been as follows:—* * * “I will take the officer who has charge of this building (Department of Lands). He is receiving less salary than some of the messengers—I mean the messenger's salary with emoluments. This officer is one of the most artistic men you could possibly find in Sydney, who designed a considerable portion of the details for the second half of this building, and who does the highest class of work, and receives less money than some of the messengers.”—W. L. V., 17/4/95.

W.L. Vernon, Esq. 7376. Does the ornamental part of an ordinary building—take one of the court-houses in the country—add considerably to the cost under your supervision? In the more modern style of building we have adopted there is little or no ornament; you will not see money thrown away in Corinthian façades and Grecian temples.

12 Mar., 1895.

7377. There is not much realistic carving in the country buildings? None, if I can help it. But of course in Sydney in monumental work we do our best, and I think we should; but in the country you will find the style is very simple. You were just asking me the course we go through with a new building. I have brought two or three of my office papers haphazard to show you.

7378. These are buildings now in progress? Some are in progress and some finished. I have a record of all the proceedings in connection with every building. It is a sort of diary of everything which takes place. Sometimes there is an enormous number of papers before any work is done at all. This first lot of papers relates to additions to a gaol at Moree. It has only cost £1,258, and yet there are the whole of these papers going for years before the building is commenced. The next lot refers to boatmen's quarters at Newcastle. A very small portion of these papers belongs to the actual building; the bulk of them deal with negotiations with the departments prior to the commencement of the building.

7379. Could not a lot of that work be dispensed with with economy and also with comfort? It could in a private office, but in a Government Department there is no measure to these things. You will find correspondence from progress committees urging that the building designed is not important enough for the place; the papers deal with all sorts of negotiations. Perhaps the scheme for building is stopped for a couple of years, and then it is started again. In very few cases can I carry out a building quickly and in a business-like way from beginning to end.

7380. Does that arise through the matter having to pass through many hands? To some extent it arises in the first instance through the political influence that never leaves it. When the matter is once in my hands, bar any serious dispute with the contractor, it is in smooth water, but up to that point it goes through very troubled waters.

7381. You find there is a good deal of outside influence brought to bear upon the erection of a new building in the country? Sometimes, a great deal.

7382. Is it always beneficial or the contrary? It involves additional expenditure very often, a great deal too often.

7383. Besides a great delay in carrying out the work? Yes.

7384. Then would you prefer that a single Board with full power to direct matters should be appointed, from whom you would receive your directions? It would be very desirable, if possible.

7385. *Mr. Teece.*] I want to ask you some questions with regard to this expenditure of public money. Some members of the Commission happen to know of public buildings that have been erected, especially in country towns, which have never been used. For instance, we understand there is a gaol or court-house at Glen Innes which has never been in use? I think that is the only example.

7386. The court-house at Deniliquin, we understand, was never used till the Broken Hill prisoners were taken there. There are also court houses and other offices of a very elaborate character, altogether too costly for the requirements of the place, in all the country towns, and as a rule these places have always cost more than they have been estimated to cost. We want to know what is exactly the process through which these things pass, and how it comes that there never happens to be an estimate made for a public building that is not exceeded? I cannot admit that. I have a return here which I prepared for the Minister some three or four months ago. The question was raised then, and all the branches of the Works Department were asked to search their records and get a statement comparing the actual cost with the original estimated cost. My return came out in this way:—"Towards the end of 1894 the Minister for Works asked for a return from the several branches of the Works Department, showing how much original estimates were exceeded by the actual cost, if any, in buildings costing over £2,000 from August, 1890, to August, 1894. The result was as follows:—250 buildings, estimated cost, £557,018; actual cost, £540,595; thus showing a saving of £16,423, or 2.94 per cent."

7387. Was the reduction in the cost due to the fact that the buildings as originally intended were not carried out, that is, that they were smaller? On the contrary; we have had to contend with additions made at the request of local bodies, which told against our estimates. I might say that at the present moment our estimates are, I suppose, from 15 to 20 per cent. in excess of the tenders, and have been so for perhaps the last six months. The fact is tendering is brought to such an extremely low ebb at the present time that our estimates are up in the skies. But we have thought the matter over, and have come to the conclusion that it is better to maintain a regular system of estimating, and not take too much advantage of the present wretched state of things, that is, to maintain some sort of continuity in the system of estimating, because we hope the contractors will shortly come up nearer to our estimates. We are very much handicapped sometimes. I will give you an instance: We have just built a post-office at Rozelle, West Balmain. After the building was commenced, the Member for the district came to the Minister and urged that a clock tower should be built. We were not prepared for a clock tower or anything else. We were simply prepared to put up a building for the business of the place, but, as the Postal authorities pressed us, we built a clock tower at a cost of £450, in addition to the building. I suppose the next expense will be a clock. It is extremely unfair to charge me with the cost of that tower on my original estimate, and yet the cost of the tower has gone into the cost of the building. Notwithstanding that, on the gross we are a little under the original estimate. Here is the lock-up at Kelso which is going on now; the estimated cost of this is £1,200, and the tender is £1,168; that is very close.

7388. Will you tell the Commission what is exactly the process that is gone through before a building gets into your hands—at what stage do you come in to the expenditure of public money? I come in when the Minister for Works is requested by the Minister of any other department to erect a particular building or to alter or enlarge some existing building, as the case may be.

7389. Let me take a typical case. Suppose the Postmaster-General—I take his department because there seem to be more post offices than other buildings—wants a post-office erected in some country town, do you know what process is exactly followed? Well, I could not say until the official papers subsequently reach me.

7390. He must approach, I suppose, the Department of Works? The Postmaster-General approaches it, certainly.

7391. Saying he wants a building for this purpose? Yes.

7392. And then what does the Department of Works do? Sends the paper on to me to prepare an estimate of the cost of the work according to the accommodation which is required. 7393.

7393. In making that estimate have you anything to say as to the character of the structure. The ^{W. L. Vernon,} Postmaster-General might say he wanted a post-office to accommodate a population of 5,000; would you have any recommendation to make regarding the material (as to whether the building should be of brick, or stone, or wood), and therefore as to the necessary cost of the construction? Yes, that does ^{Esq.} come under me. 12 Mar., 1895.

7394. What has been your practice in regard to that? In some cases I recommend a wooden structure, and sometimes a brick or a stone structure, according to the locality. At the present moment I am recommending a wooden post-office at Moree, because the black soil there is so fatal to brickwork. I have to recommend the discarding of brick in that district as much as possible. Then I always submit a sketch plan and elevation, showing the accommodation of the building.

7395. Then you hold yourself in some degree responsible for the cost of these structures? To some degree I do, but not in all cases; because it very often happens that the postal people send in a statement of the accommodation they want, and the money the building is to cost, and I cannot always fit these two things in. I do the best I can. If I cube up a building at 6d., 7d., or 8d., according to the district, I have done the utmost that anybody can do to bring them together.

7396. Do you find, when you get to this stage, after having recommended a building which you consider sufficient for the requirement, as far as the materials used in construction are concerned, that any influence is brought to bear to get you to erect a more costly or ornate structure? Very often; but I take good care to keep within my instructions.

7397. The pressure will come from local people or Members of Parliament? Yes, Members of Parliament and progress committees behind the Members; but I always make it a rule to refer them to the Minister and let the Minister fight it out.

7398. Does the Minister usually prove elastic or adamant? Ministers save a good deal.

7399. Will you tell the Commission whether you think there is any unnecessary expenditure in the erection of these public buildings, and whether more economy might not be observed, of course, with due regard to meeting the requirements efficiently. Take, for example, public schools; do you not think they are unnecessarily ornate and expensive? Probably in some cases they are. To tell you the truth, we have tried to economise so much these last three years that I cannot confess to being extravagant anywhere, except that I have to put up buildings which I sometimes think are unnecessary, but that is a matter which is beyond my province altogether. I can assure this Commission that I have tried to make every sovereign go as far as it possibly can in a building, and I have kept my draftsmen from putting in any ornaments that could possibly be done without. I should not like to build all buildings of one particular type and style. I do not think it would be a credit to the Colony to do so, but at the same time I study economy wherever it is possible, and we have taken advantage of the present low prices to get buildings put up at an extremely low cost.

7400. Do I understand you to say that you do not think any saving can be effected in the matter of the erection of public buildings by using cheaper material? Let me give an instance. In the country lock-ups we have adopted a fixed plan which Mr. Fosbery says is the best in existence. He also says that the English and American lock-ups cannot be compared with ours. We have taken the cells from inside the building where the constable resided. The old system of lock-ups is a disgrace to the Colony. By this system a constable's family is mixed up with the prisoners, and is liable to be annoyed by drunken prisoners. Under our new plan we give a little yard, which is grilled in at the top, where prisoners can get exercise without special care. The cells are all built on a special plan, with iron doors and concrete walls and floors. The cost of these country lock-ups is reduced to a mathematical nicety.

7401. You do not think the public schools which are being built are unnecessarily expensive? I do not know any going on. I see one casually on the railway-line, down at Ashfield, I think, but I have nothing to do with schools.

7402. Could you suggest to this Commission any system which would avoid any unnecessary expense in the erection of public buildings? If the Government could be rid of outside influences, and could put up buildings in a commercial spirit, then you would have a different state of things.

7403. How would you propose to give effect to this? That is more than I could say.

7404. I mean if the Government were willing to rid themselves of patronage, and wanted to establish a system by which the buildings could be erected and due economy exercised, what do you think would be the best plan? Well, to give an unthought-out opinion, I should think a Board, composed of one responsible officer from each department, should deal with the erection of these buildings, and say whether they are wanted or not. That would relieve the Minister of the difficulty of dealing with outside people.

7405. Do I understand you to mean this, that if a post-office were wanted, a responsible officer of the post-office, in conjunction with a responsible officer of the Works, should form a Board to determine the kind of structure? I think something might be done on that principle; I cannot go into details. As a matter of fact, if you take the English system of post-offices into consideration, the Government would not build another post-office for the next ten years. At home it is the local stationer or the chemist who is the postmaster of the district. He sets apart a portion of his shop for the postal business. There is no fault to find with the service at Home, and it is done at an extremely small cost.

7406. That is the point at which I am aiming. In these country towns of ours, the great majority of which are very small, there is no occasion for a post-office in a Government building? I think not. And I find a great difficulty with the caretaking of these buildings by the occupants. Some men are as careful as possible, and the buildings never suffer at their hands, but with others it is just the contrary. I turned a man's horse out of a parlour some time since. He had actually stabled his horse in the parlour in an expensive post-office in this country. I reported him, of course.

7407. Was any punishment inflicted on him? My report was sent on to the postal people, and such a misuse has never occurred since. On the other hand I could mention post-offices that are kept as beautifully as it is possible to keep them.

7408. *Mr. Storey.* Referring to the influence brought to bear to increase the cost of buildings, and taking those cases you have brought before us of buildings that are in progress now, can you tell us in how many of these the cost of the building has been increased,—is it the exception or the rule? The Annandale post-office was urged by the people of the district, but I cannot say the cost has exceeded the original estimate.

7409. That is Rozelle Bay that you speak of? No; but it is near by. As one place has a post-office, the adjoining place thinks it must have one also. Camperdown is another place where a post-office has been

W. L. Vernon, Esq. been built as the result of pressure. There is an addition to the Parramatta post-office, and a small post-office is being erected at Parramatta North. These are due to the representations of the Parramatta people. St. Peters is another.

12 Mar., 1895.

7410. *President.*] A new post-office at St. Peters? Yes; the foundations are being put in.

7411. Is it near the town-hall? I know it on the plan, but I have not been out there yet. We are commencing a lock-up at Broadwater, on the Clarence River. I think there has been some difference of opinion between the Broadwater people and the Woodburn* people as to whether it should be erected or not.

7412. *Mr. Teece.*] But Woodburn is on the Richmond? Yes; representations have been made that it should not be built at Broadwater, but the Minister settles that. Fernmount and Bellingen are within 3 miles of each other, and they both want the same thing. There is a constant feud between them.

7413. *Mr. Storey.*] A great many of these buildings in progress now are being erected at the instigation of interested parties? I think it relates principally to these suburban post-offices. Now here is Katoomba Court-house which we are building; it is a question whether that should have been built or not.

7414. Parramatta court-house? The court-house is not the whole of the scheme, which also includes necessarily a lock-up, police quarters, superintendent's quarters, constables' barracks, and court-keeper's cottage; the court-house comes to £5,600, out of a total of £13,300.

7415. £8,000 for a Treasury strong-room? That is really badly wanted. The present records in connection with the leaseholdings and selections throughout the country are stored in a wooden building over the tram motors, and if that caught fire I believe the damage would be incalculable. For some time past it has been determined that a strong-room should be built for these documents. They are in use every day; they are the ledgers in connection with the leasehold runs and selections throughout the country. This is more than a stronghold; it is a strong-room in which the clerks work. The ledgers are displayed during the day when the clerks are doing their work, and when the place is shut up at night it is secured against fire.

7416. When you are asked to prepare an estimate do you look at the locality? Whenever I can I do, but I cannot always do it.

7417. Does it ever strike you then that the size of the building is bigger than it ought to be? In some cases, perhaps.

7418. Do you ever report so to your Minister? I have done occasionally.

7419. What answer does he generally give? I was at Kempsey some little time ago, where a new court-house was to be built. I reported that by the expenditure of a few hundreds the present court-house would last another twenty-five years, and that I could find all the accommodation for the legal business and the Roads business as well. The amount was struck off, and authority is to be given the next half-year for a modified scheme. There will be a saving of about £5,200.

7420. *Mr. Teece.*] You spoke of a Treasury strong-room, in which clerks will work; how can you make a fire-proof room in which clerks can work? The centre of this building we are sitting in is fire-proof.

7421. Is there any ventilation? Oh, yes.

7422. How are you going to keep fire out where air can get in? If you can spare a few minutes I will show you the strong-room of this building. In addition to iron doors, it is provided with a cupola that comes down over the fanlight at night, and shuts the whole in hermetically. This building is a sort of octagonal structure, with two galleries in it. It takes all the Lands' papers, and will take, also, the Mines Department papers, I think.

7423. If this building were to take fire the central part would stand by itself? Yes, by itself intact.

7424. Have you any experience in England as to how public money is expended? The Commissioner for Works spends money on Imperial buildings only, and the Postmaster-General erects post-offices in large towns of 60,000 or 70,000 inhabitants and upwards, but in towns with less than that population he rents offices. Court-houses, gaols, and asylums are all built by the County Councils; they are not built by the Imperial Government at all. Each district builds its own. They have a subsidy from the Imperial Government, but the Government does not build any of these places.

7425. If you get the Local Government Bill through Parliament won't that have the effect of checking the expenditure of public moneys? I don't think it would in building, so long as the central government maintain the buildings themselves. If the districts under the Local Government Bill have to erect their own then you can check it at once. These public buildings will, I understand, be retained by the head government. I do not think the population is sufficient to warrant their being given up, and there would be difficulties as regards decentralisation in the benevolent asylums and hospitals for the insane. They are all centralised in Sydney, Parramatta, and Liverpool, and it would be extremely difficult for local government regulations to deal with these I think. It would never do to distribute asylums all over the Colony.

7426. The Balmain court-house cost nearly £16,000;—was not that too much for a court-house? A great deal too much.

7427. Newtown, £16,000? Yes, that is a perfect white elephant. I cannot keep it in repair.

7428. St. Leonards? I think St. Leonards includes the post-office.

7429. You say that Newtown is a perfect white elephant? No one knows what to do with it.

7430. How can we stop such buildings in future? They have been absolutely stopped for some years.

7431. Were they brought about through influence being brought to bear? I think so, and through excess of funds at one time; but you will not find any building going up now without much more consideration being given to it.

7432. Still, no matter how strong the influence of the department, outside influence upsets it? To some extent it does.

7433. *Mr. Robertson.*] Do you know what the gaol at Glen Innes cost? £4,700.

7434. When was it erected? In 1886.

7435. Do you know how many years it remained idle? Ever since. I know that Dr. Manning some time ago (I think I suggested it to him, by-the-by) considered whether lunatics should be sent there, but it would not answer at all.

7436. What did the gaol at Bathurst cost? £103,156.

7437. How much did the governor's residence in connection with that gaol cost? It was built before I came into the office.

7438. What was the cost of the entrance gateways, and the residence on either side, and the offices at the Bathurst gaol? An appropriate estimate, based upon the total cost would be as follows:—Entrance gateway,

* NOTE (on revision):—I since find I fell into an error. It should have been Wardell, not Woodburn.—W.L.V.

- gateway, front only, £4,220; residences on either side (including boundary fences), £7,478; offices on either side of gateway, £4,769.
7439. *Mr. Storey.*] Surely £100,000 is too much to spend on a gaol? Well, you see this is the second largest gaol in the Colony. We built the wing at Goulburn gaol two years ago, and we came out very well. I spent £10,000 on a wing which accommodates, I think, 127 prisoners.
7440. *Mr. Robertson.*] With the additional wing what has the Goulburn gaol cost? £93,360.
7441. What did the gaol at Forbes cost? £6,600.
7442. Do you know whether that has been largely used at all? I could not say; I have only been in Forbes once.
7443. What did the new court-house at Deniliquin cost? It cost £12,795.
7444. Is there anything in your department to prevent your undertaking the erection of public schools? There is nothing to prevent it if one could get through the work.
7445. Do you not think it would be a proper thing for all the public buildings to be concentrated in one office, and all the work of architecture to be confined to one office under the Colonial Architect? I think it would be better.
7446. And thinking as you do, would you recommend that there should be an amalgamation of these offices? Well, I hardly like answering a question of that kind. From a business point of view there is no doubt amalgamation should take place, but considering what political and other influences can be brought to bear on a question of that kind it is rather beyond me to answer. I think you must not press me beyond that point. No doubt the whole of the work could be done in one office.
7447. Were the works which are being done now under the Department of Instruction done in the one office at any period in the history of the Colony? I recollect when the Schools Act came in (I am speaking now as an outsider), and I believe a large number of the schools were then designed by outside architects; but after that, when the rush was over, the work was done inside. The other day I came across a list of the public schools, and I was amazed at the enormous number of them.
7448. Might it not be as feasible to have an Architect's Branch in the Department of Justice as to have one in the Department of Instruction? Logically, yes. I don't know much about the schools, but I understand that a large number of the half-time schools are entirely looked after by the local people—I don't mean by the department, but by local people—and in many cases are owned by local people.
7449. Have you ever had under consideration the amalgamation of these offices? Not officially. I have never been asked to make any suggestions, if that is what you mean.
7450. Would any economy be effected by an amalgamation of the offices? I think there would as regards the outdoor work, but as to the indoor I could not express an opinion, because I don't know what extent of work is going on in the office. But I am quite certain there would be some saving outside.
7451. *Mr. Humphery.*] What percentage does the cost of designing and supervising, everything included, bear to the actual expenditure upon buildings erected by your department? We have varied a little in different years, but the result this last year came to about 2·50—that is, professional charges by themselves.
7452. But everything included? That comes to about 7·46—that is, including travelling, clerical work, clerks of works, and the whole cost. But I must explain that that covers an enormous amount of work that is done on buildings that do not come to maturity, but which is still charged on the expenditure. So that is not exactly a fair comparison to make. I have a statement here that bears upon that, if I may put it in. This was a return furnished in answer to a similar question put in the House. I prepared a schedule showing the expenditure throughout the year, and the items charged, and a series of schedules showing plans prepared during the year not carried out, reports and specifications not carried out, and valuations made, but these are all charged upon the actual expenditure. [*Statement handed in.*]
7453. Have you any discretion in designing buildings after you have received specific instructions for their construction? I am generally left a free hand, provided I do not exceed my estimate, and that I give the accommodation that is asked for.
7454. Then are you not responsible, if any one is responsible, for the excessive cost where an excessive cost takes place, or an unsuitable building is erected? I should be if not interfered with.
7455. In what way interfered with? I instanced West Balmain, where a tower is put on.
7456. If you are informed by the Minister that a new building is to be erected at a cost not exceeding a certain amount, do you make it your business to ascertain whether that amount is excessive? We often write off a large annual sum as unexpended. I think if papers were asked for, it would be shown that we have written off sums every year, and effected savings on the Loan Vote; for instance, in the case of buildings for which we have not expended the whole sum. I have already explained how handicapped I have been by having additional expenditure thrown upon me on certain buildings, which very much decreases the percentage in my favour, but on many buildings I return considerable sums not spent.
7457. Does it happen that a larger expenditure than is necessary frequently occurs in order to provide handsome or monumental buildings in different places, instead of buildings that are simply necessary for the purposes to which they are to be devoted? I think that has happened, undoubtedly. I think we have that in the city.
7458. Would that be the fault of the Minister or the fault of the Government Architect? Circumstances guide cases so much. On this particular building, the Lands Office, I think there is a balance of £10,000 unexpended on the original estimate.
7459. *President.*] Will that go for the statues in the niches? They were bought by the Colonial Secretary, but I don't know the fund.
7460. They are outside the contract? Yes.
7461. *Mr. Humphery.*] There is one circumstance in connection with this office which strikes me as very startling: You say you have a temporary officer who designed the building in which we are now seated, who really supervised most of the work, and yet receives only £290 a year, while you have a clerk of works who gets £330 a year,*—how do you reconcile the duties of the two officers and the salaries paid to them respectively? If my recommendation had been adopted these officers would have been put in their correct relative positions at once. I recommended that the officer who is getting £290 should get £400. I may say his predecessor was receiving £500, but for the sake of economy, and as the present officer is a younger man, I recommended £400; that would have placed him in his correct relative position with regard to his clerk of works at once. But, although he is receiving too little, I cannot say that my clerk of works is receiving too much, because he is not. These men have to deal with contractors, honest and dishonest, and it is the easiest thing in the world to tempt a man who is struggling on a small salary; that has been my fear all the way through.

7462.

* See answer to question 7361.

- W. L. Vernon, Esq. 7462. *Mr. Teece.*] But has not the clerk of works to an architect outside to do the same thing? ———
7463. *Mr. Humphery.*] What did you pay your clerk of works outside? From £4 to £6 a week.
- 12 Mar., 1895. 7464. And he had as much responsibility? His duties would not be so varied as the duties of a clerk of works in the Government department; at the same time he is open to the same influences.
7465. Do you think any economy could be effected in country towns by utilising the services of local officers for work other than that they are actually engaged in? Undoubtedly, for the same class of work.
7466. *Mr. Teece.*] You said in answer to Mr. Humphery that a clerk of works in the Government requires to have a more varied knowledge than one working for an outside architect? I think he has, because he has such a large range of every description of building to go through.
7467. But he would be in only one building at a time. For instance, if you had a large building like the Bathurst Gaol, you would have a man there constantly, would you not? But I have Mr. Telfer in my mind.
7468. For instance, not to be invidious, take my own office, a clerk of works who would superintend such a building would be good enough for anyone? Yes, he would.
7469. *President.*] If an inspector in your department were asked to inspect (say) the building of a public school, do you anticipate there would be any friction between the departments so as to prevent the utilising of that inspector's services if he were on the spot? You mean while the two officers are in existence?
7470. Well, there might be an amalgamation; but there would have to be an arrangement by which they would be subordinate to the sub-heads instead of to one only? I could imagine there would be friction in that case.
7471. Unless it was established by law that this inspector should act for the two departments? You see we have very possibly a different mode of doing our work. The two departments must vary in some points, though they may both attain the same end. Confusion might arise where one officer is reporting for two departments in two ways. I have a system by which I know where every one of my officers is at any day. Possibly the Instruction Department has a different system for aught I know. And then there is a certain process all my papers go through. I do not think the scheme would work well except under one head. These are the instructions my men are under. [*Statement handed in.*]
7472. They say the surroundings of any individual in his early life have a good deal of effect upon his future;—now, do you pay attention to having the school buildings of such a character as will elevate the taste of the pupils, and do you build gaols and buildings of that character with no ornamentation, nothing to elevate the taste;—is there any distinction between the two classes of buildings? The first idea in designing a gaol is to secure absolute utility.
7473. But is such a line of distinction present in your mind when you are designing buildings for schools and gaols? I have always had a predilection for attempting artistic work if I could, and I ingratiate that idea in my draftsmen.
7474. *Mr. Storey.*] You were in business on your own account; do you find a great deal of difference in the expenditure of money between the Government and private concerns? Yes, there is a difference; but I have conscientiously tried to make the money of the Government go as far as I would in a private business. When I first took office I was sometimes amazed at the big cost of some of the country works; but when I travelled, and saw the difficulties of carriage of material and the stupidity of many of the country builders, I quite understood how they should cost so much.

Rev. Edward Harris, D.D., head-master of the King's School, Parramatta, sworn and examined:—

- Rev. E. Harris, D.D. 7475. *President.*] I think, if you would make us a statement describing your system, it would be a shorter way to ascertain what we want to learn as regards your mode of conducting the school, and as to the salaries of the masters, than if we were to put what might perhaps be, to some extent, incoherent questions? I presume you require the information as bearing on the public schools of this country.
- 12 Mar., 1895. 7476. Yes. We have had evidence given to us by gentlemen of the Public Instruction Department; it is of a very important and varied character, and we should like to compare what you tell us with what they have said? The task set for a school like mine is a very different one to that set in public schools, because the aim of my school is to be a large boarding school. We take a much larger portion of the life of the children into our hands than the State does in its schools, and, therefore, in using any figures I may give, you must take that fact into account, as I and my masters have a much larger task to perform than the teachers in the State schools. Of course the rate of remuneration is higher. We undertake, you see, really the place of the parents for the greater part of the year. I am *in loco parentis*. We undertake not only the intellectual training but the moral, and, I may say, under the conditions of our schools, the religious training of the children. That limits the choice in inviting a man to take a mastership at this school. As a matter of fact, our ideal is to have Oxford or Cambridge graduates at the school, or distinguished graduates from the Australian Universities, and naturally such men look for a very considerable remuneration. I hope I have made my meaning clear so far. Perhaps I might state that the highest salary which is given to an assistant master at present is nearly £400 a year, taking everything into account.
7477. Including his board and residence? Yes; there are several such masters on my staff. Their salaries range from that down to £150, with board and residence, for a young inexperienced man who would be more or less on his trial. The assistant master would be expected to take a low class in the school in Latin, French, English subjects, and mathematics. He would probably be a graduate, a man of 23 or 24.
7478. Have you ever heard of teachers having been rejected by public schools, and afterwards obtaining positions in private schools? Not in my experience.
7479. The rejection of a man applying for a position in the public school would, of course, be followed by his rejection if he applied for a position in a private school? I should think it would have great weight.
7480. *Mr. Storey.*] How many masters have you altogether? At this moment I have six masters besides myself.
7481. The highest gets £400? I can hardly state exactly what the board and lodging are worth.
7482. But without board and lodging? He gets £300 in money, and board and lodging.
7483. What does the lowest master get in money? £150. The increase is very much a matter of seniority, and proved usefulness to the school. 7484.

7484. All your masters are men who have passed through a large amount of training, I suppose? Yes.
7485. Is not the standard of education required for masters in a school like yours equal, if not superior, to that required for masters of a public school? I am inclined to say, without wishing to seem rather arrogant, that the standard of qualification with us is considerably higher, for the reason I gave just now, that I have not only to look at a man's intellectual attainments, but at his whole character and the power he has of influencing boys. In selecting a master I have not regarded only his intellectual distinctions and acquirements, but his proved power of influencing boys.
7486. Should not the same thing apply to the teachers in the public schools? In public schools there is not so much moral responsibility as in schools which undertake to control the whole life of the boys for nine months out of the twelve, day and night.
7487. The salaries paid in the high schools would perhaps be nearer to those paid in your school? Certainly.
7488. And the standard of education required in the high schools is higher than that required in the public schools? Yes. Of course there are private schools and private schools. The school which I have the honor to be connected with has for three generations stood in the front rank, and those who are responsible for it—the Council—are anxious it should remain so.
7489. Have you any knowledge of the rates of pay to masters in the various private schools in the suburbs? I cannot speak with definite knowledge; but my impression is that I am probably paying perhaps double what a school run by an individual would pay, and the stamp of man I get is, I consider, worth double the amount. It may perhaps be some guide to the members of the Commission to know that when there is a vacancy on my staff, or the rumour of a vacancy, I generally have several applications from distinguished teachers in this and other Colonies, asking that their claims may be considered. It is a favourite position.
7490. *President.*] But if you have one of the masters in your establishment who is capable of taking the vacant position, do you give him any preference? You mean give him a step in seniority?
7491. Yes? Certainly, if he were qualified for the vacant place.
7492. Because he would have the advantage of knowing all the surroundings? Yes.
7493. *Mr. Humphery.*] How do the salaries range between £300 and £150? There are three at £300, one at £250, one at £200, and one at £150.
7494. *Mr. Storey.*] How many boys? We have ninety-seven at this moment.
7495. *Mr. Humphery.*] Do your masters undertake night as well as day duties? They have to take their turn in the oversight of the boys in the evening.
7496. *President.*] They act as tutors in the evening? Yes.
7497. Which is a very great advantage to the boys? Yes.
7498. In the public schools there is no such position? No.
7499. Is a good style of penmanship a desideratum;—do you aim at a good style, clear and legible? Yes, clear and legible, but not ornamental. Calligraphy I abhor. I do not know whether I may venture to express an opinion on a rather wider subject without a question being put to me, but if the object of this Commission is to reduce State expenditure, I think a citizen may ask whether, whilst schools exist like the King's School and many others, the State is justified in incurring a very large expenditure on high schools, which, as facts prove, are endeavouring to do the same work which schools like the King's School do, and not doing it so well. I do not know whether I am insolent and impertinent in making the remark, but as a citizen I feel strongly on this matter.
7500. *President.*] If you wish it taken down we shall allow it to go with pleasure? The State in other colonies provides for the superior education of clever, but poor, boys by other means than those adopted in this Colony. Those adopted in this Colony are very costly, and I think, if I were not in the profession, I should still consider the result as not at all commensurate with the cost of the high schools.
7501. *Mr. Humphery.*] Is the method of advancing clever pupils through the State schools similar in the other Colonies to that which obtains here? No; in this Colony the State maintains a system of high schools. In Queensland and Victoria—I cannot speak of the other Colonies—the State does not maintain any high schools, but selects promising children from the ordinary public schools, and charges the existing first-rank schools, which are private schools, with the duty of carrying them on at the Government expense, satisfying itself that they send their picked pupils to good schools. The denominational difficulty is got over by the aspiring child or his parents selecting the school to which he shall go, so that his denominational preferences are respected.
7502. Can you say whether that system is less costly than ours? Much less costly; the difference is very great.
7503. Are you aware whether it has proved equally successful? I think so. I think the results in Victoria and Queensland are satisfactory to the people of those colonies.
7504. *President.*] Did it not appear about two years ago at our University examination that a very excessive number of successful pupils from other Colonies got prizes? I think that is largely due to this system: In Queensland clever children are passed on from one school to another, until at last the cream are educated in the large schools. They are hardly private schools in our sense of the word, because in Queensland the State subsidises the Grammar School as the Grammar School here is subsidised.
7505. Are there several Grammar Schools in Queensland? Several.
7506. In the large centres of population? Yes; and the highest of these is the Brisbane School, to which the most promising pupils of all are sent, and they appear in our University lists very often as taking good places.
7507. Might the same system be adopted here with regard to the Sydney Grammar School for instance? I see no reason why it should not; none whatever.
7508. You mean with advantage, of course? Certainly.

Ernest Iliff Robson, Esq., head-master of the Sydney Church of England Grammar School, sworn and examined:—

7509. *President.*] We have had some evidence from the Public Instruction Department upon the system they carry on in their schools, and we want, if possible, to learn a little from you as to your mode of conducting your school:—will you shortly tell us what your system is with regard to the masters, the rates of remuneration, and so on? Yes; I do not exactly understand what you want to get at; do you want to get at the method of teaching, or the method of working the school?

Rev. E.
Harris, D.D.
12 Mar., 1895.

E. I. Robson,
Esq.
12 Mar., 1895.

- E. I. Robson, Esq.
12 Mar., 1895.
7510. Well, perhaps part of both? With regard to the method of working, there is a Council appointed by the Synod or the diocese; the Council appoint the head master, and the head master appoints the staff, subject to the approval of the Council.
7511. He recommends? He recommends practically, but he appoints and the Council approve. The head master receives a fixed salary and also capitation fees on the number of boys in the school, besides an extra capitation fee on the number of boarders. I have no direct financial interest in the school whatsoever; I am paid simply as a servant of the Council. The assistant masters receive various salaries.
7512. Would you tell us how many you have? There are six regular assistant masters; there are, besides, two practically permanently employed in the physics and wood-work departments; and there is one clerk and drill instructor permanently employed.
7513. You might tell us the salaries of the six, from the largest to the smallest? The largest has £300.
7514. With board and lodging? Yes. In return for his board and lodging he is required to do a certain amount of supervision among the boarders. The lowest salary is £155, with board and lodging.
7515. All these masters are resident? No; there are four out of the six resident.
7516. And they do tutorial work in the evenings with the boarders? Each of the resident men takes one week in four, during which he is practically responsible for the good order of what we call the house—that is, the good order of the boarders.
7517. How many boarders have you? We have thirty-two at present.
7518. *Mr. Humphery.*] And day pupils? About ninety-eight, I think.
7519. *President.*] You do not take any absolute beginners from the A B C? We take boys from the age of 9; they certainly are not absolute beginners. We will not take them unless they can read fairly, write not exactly fairly, but they must have some knowledge of writing, and also of arithmetic and spelling.
7520. What are the branches of instruction? I think we have almost everything that you would regard a liberal education—languages, Latin and Greek, French and German; not, I mean to say, that we teach every boy all four.
7521. They can choose? Yes; a boy generally learns Latin and French, and if he is a bright boy we will let him learn Greek or German besides; of course, English. We have to give religious instruction in accordance with the principles of the Church of England; then the three branches of mathematics, arithmetic, geometry, and algebra, and a certain amount of trigonometry to the higher boys. We also give instruction in wood-work. It is not exactly carpentering work; the term wood-work, perhaps, expresses it best. That is done almost all through the school. Almost all the boys take it up. There is a small fee for it. The elder boys take up experimental physics.
7522. Wood-work is more a pleasure than a task? We make it very systematic. It is not the kind of carpenter's shop work I used to do at school. They have to make their drawings, and work from them when they go upstairs to the practical part. Then we teach the smaller boys—I do not exactly know what to call it, but say the elementary theory of music—that is, to know their notes, and so forth. We generally cultivate music in the school as much as we can.
7523. Vocal as well as instrumental? I mean vocal, chiefly; we do not teach any instrumental music as part of the school training; that is an extra.
7524. Is the examination you put your masters through when admitting them a very stiff one? We do not subject the masters to any examination whatever. You mean before taking the master on as one of the teachers?
7525. What test do they pass through? We have the test of a man's University degree if he possesses one; we have the test of his testimonials; and then, perhaps, the chief test of all, having the man in and talking to him, and seeing what he is like. That, I consider, is the most important thing in selecting a man. I can generally tell whether a man is likely to be a good man or not. Of course you must understand that in a school of our type a master has a great many other duties than merely teaching. I mean we do not take a man for the amount of knowledge he is likely to knock into a boy in a given time. We take him also for the amount of moral training he is likely to be able to give. The master's work does not cease when the afternoon school-bell rings. For instance, when I came away this afternoon there were two masters at the boat-shed looking after the boys rowing, and another on the cricket-field looking after the boys there. That is all voluntary work; you cannot make them do it. But you must understand that in a school of this kind you have to get hold of men who are willing to help you,—I do not mean to mould the boys athletically, but to mould their characters by the help of athletics, and every means of that kind.
7526. You look for a man whose influence would be beneficial to the boys' moral characters? Yes, distinctly; that, of course, I consider quite as important as getting men who can stuff a certain amount of knowledge into a boy in a given time. If you can get a man who can both teach and influence the boys out of school, all the better.
7527. Do you insist on good legible handwriting? I do, to a certain extent. It is rather hard in the upper part of the school, but in the lower part of the school I have the handwriting of all the forms sent up to me once a week, and I generally send it back to the form master with remarks on the writing. I find, as a rule, in the lower forms the writing is fairly good. It is when boys begin to prepare for examination, such as the junior examination, that the writing begins to fall off. Under the stress of the intellectual work the mechanical part seems to go.
7528. *Mr. Storey.*] Will you tell me exactly the salary of the four resident masters? The first gets £300 a year, the second £235, the next £235, but he does resident duty; he is only resident in his week; and the next gets £155.
7529. What do non-resident masters get? One receives £300, and the other £240.
7530. The whole six, I suppose, are men of superior education and attainments? Four of them are British University graduates, one is a Melbourne graduate, and the other is not a graduate at all.
7531. Have you had any intercourse with public school teachers in this Colony? Not very much.
7532. You could not give us any idea as to the relative merits of your teachers and the ordinary public school teachers? No; I have not seen enough of the ordinary school teachers.
7533. But in a school such as yours you would look to have men equal in ability to the public school teacher? Oh, distinctly; you may not necessarily have them so well trained at the routine work.
7534. But from an educational standpoint alone you would expect to have them just as good as the ordinary public school teacher? Well, they have to take higher work than the ordinary public school teacher.

7535. That is what I mean, you would compare them with teachers of the High School, would you not? E. I. Robson, Esq., Yes.

7536. Have you ever heard of candidates being rejected at the public schools and readily employed at private schools? I have never heard of that. 12 Mar., 1895.

7537. Do you think it at all probable? Of course there are private schools, and private schools.

7538. But a fairly good private school? I take the correct definition of a private school to be a school which exists for the purpose of letting the head master make money; and if he thinks that by employing inferior assistance he can do so, there is no limit to the badness of the assistants he may employ, because the public do not know much about education. Of course I have known instances of purely private schools, where certainly very poor assistants were employed.

7539. *Mr. Humphery.*] Do you consider your masters are liberally paid? No; taken all through, I do not think they are paid liberally. School-mastering is very trying work. Of course, relatively, they may be fairly well paid, but my masters are not well paid, compared with, say, the Grammar School masters here. But, I think, all through, the profession of teaching ought to be better paid.

7540. Are positions in the Church of England Grammar School, when they become vacant, considered, I was going to say prizes, to the teaching staff? There is generally a good deal of competition, but few vacancies have occurred. I suppose I have only had to make two or three new appointments since the school was opened.

WEDNESDAY, 13 MARCH, 1895.

Present:—

HON. F. T. HUMPHERY, M.L.C., | J. H. STOREY, Esq., J.P.,
JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | RICHARD TEECE, Esq., F.I.A., F.F.A., F.S.S., J.P.
THOMAS LITTLEJOHN, Esq., PRESIDENT.

Critchett Walker, Esq., C.M.G., Principal Under Secretary, re-examined:—

7541. *Mr. Teece.*] We wish you to supplement your evidence with reference to the conduct of one of the officers in your department;—has he been absent frequently? I will explain to you. When Sir George Dibbs was in power, the officer you refer to was occasionally in a state of semi-intoxication, and I spoke to Sir George Dibbs on the matter, who reprimanded him. The officer in question got in that state that I recommended him to have three months' leave. He came back two months afterwards quite right. I cannot say that he has been away since without leave. C. Walker, Esq., C.M.G., 13 Mar., 1895.

7542. Was he not suffering from *delirium tremens*? Not that I am aware of, but I was informed he went almost mad, but I never knew that he suffered from *delirium tremens*. In consideration of his long service he was given three months' leave, but he did not take the full term. That is the only occasion I know of when he was under the influence of drink. He may be drunk on Saturdays or Sundays away from the office, but that I know nothing about. I hear he has some enemies where he lives at Parramatta.

7543. Do you think he is fit to occupy his present position? Yes; when he is in a proper state. He was given leave of absence, and I could not watch his conduct while he was away.

7544. But if you gave him leave for that purpose you must know that he is hardly a proper person to fill the position he was in? I cannot altogether agree to that, because he has been right ever since he returned.

7545. A man who acts like that is not only incompetent to do work, but he sets a bad example to those under him;—you cannot expect those below him to behave properly while their superior officer conducts himself like that? Quite so; but what can I do more than report him as I did?

7546. *Mr. Robertson.*] I saw this man intoxicated at the Redfern Railway Station at 5 o'clock on December 31st last year? That was not brought under my notice. I cannot be all over the place. He has not been bad since he came back from his holiday. I must certainly say that I agree with Mr. Teece that a man who constantly conducts himself in a similar manner would not be fit to occupy a position of responsibility. I am accused of screening him, whereas I never screened him at all. I brought him before the Chief Secretary, who reprimanded him in my presence.

7547. *President.*] It was rather a severe reprimand, was it not? Yes; and not in the mildest language.

7548. *Mr. Teece.*] Could not the Immigration office be abolished? I do not see where the economy would come in. The office in question must expire shortly.

7549. Is not the Immigration Officer useless? No; but he has very little to do. Formerly the cost of the office was about £50,000, now it is only £500, and next year it will be £400.

7550. Why cannot the office be abolished at once? On account of outstanding contracts; and there is a lot of work to be done there sometimes. The other day, for instance, an important case came up, and the officer in question had to spend a whole day in looking through bundles of records to get the information required.

7551. *Mr. Robertson.*] What had that to do with the Government work in your department? That is what he is there for—to hunt up information about immigrants, and to receive deposits for outstanding contracts.

7552. *Mr. Teece.*] Why could he not be dismissed, or superannuated, or placed somewhere else with reduced salary? It would be difficult to find a position for him in any other office. When a vacancy occurs, officers in other departments look for promotion.

7553. How long has he been in the Service? Eighteen years; and you must take all these things into consideration. He gets £380 a year.

7554. *Mr. Robertson.*] All the recorded work done by this officer in 1894 was to write letters embraced within forty-five pages of the letter-book? Quite so. There must be someone there to do the work, however small.

7555. *Mr. Teece.*] Why not make him do something to earn his salary? We have been looking for something to transfer him to. The Local Government Branch could not find a place for him.

7556. He is a young man, is he not? Yes; and has done a lot of good work.

7557. *Mr. Robertson.*] Could not this officer be attached to the Record Branch? No.

7558. *Mr. Teece.*] Is there any vacant accommodation in your building? No; we have six clerks in a room not so large as this. 7559.

- C. Walker, Esq., C.M.G.
13 Mar., 1895.
7559. This room would hold more than that? But not with the large presses that occupy the room speak of.
7560. *Mr. Robertson.*] Have you reported any other case of drunkenness? Do you mean during my tenure of office?
7561. No, during the last year? No; certainly not.
7562. Have you no other cause of complaint against an officer in your department? No.
7563. Are there any other men whose time is employed only partially as in the case of the Immigration officer? That is the only case I have in my department.
7564. Will an officer in the Record Branch have sufficient time at his disposal to attend to the few matters remaining in connection with the immigration work? I do not think he would. One of the corresponding clerks might.
7565. What salary does Mr. J. G. Cohen, the clerk in charge of the Record Branch, receive? £470.
7566. What is Mr. Stoddard's salary? £299.
7567. And Mr. Armstrong's? £267 10s.
7568. Does Mr. Armstrong index the book which Mr. Stoddard keeps? No. Mr. Stoddard indexes the book which Mr. Armstrong keeps, which is a very important thing to do.
7569. Is it more important than to keep the book itself? Yes.
7570. Do you mean to say that the index book, in which the particulars are recorded, is a more important book than that in which the particulars are entered? Certainly it is.
7571. What is Mr. Budge's salary? £180.
7572. Then the cost of keeping the records in your office is £1,216 per annum? Yes; that is so.
7573. Are you of opinion that these men are fairly paid? I think they are very well paid.
7574. Do you think that the remedy for some of the evils from which the Civil Service is at present suffering would be classification with appointment and promotion by merit? Yes; I am certain it would.
7575. Are you of opinion that it would be an advantage, both to the public as well as to the officers in the Service, that there should be an outside Board, with such control over the Service that promotions would only be made after competition, and according to merit? I think so. The only question is, would it work. The Railway Commissioners are such a Board as you mean, but I understand there has been any amount of dissatisfaction amongst the officials under them.
7576. Has it worked satisfactorily? I do not know. I am inclined to think that from the economical point of view such a Board would work very well with the Civil Service.
7577. *Mr. Teece.*] Are you of opinion that the management of the railways under the Board has been a success? I do not think I ought to be asked this question, but I think it is good.
7578. Do you not think that the railway management has greatly improved the working of the railways? Yes; both as regards economy and otherwise.
7579. Are you aware that the Commissioners are saving £5,000 per annum in their Corresponding Branch? I did not know that; but I saved over £6,000 a year by one amalgamation in the Charitable Institutions.
7580. *Mr. Humphery.*] With regard to the saving you have effected in the Charitable Institutions, do you see at the present time any reason why further very considerable saving should not be effected? I am sure there could be a saving. The difficulty is, how to do it.
7581. Where does the difficulty lie? I think it is owing more to political action than to anything else.
7582. How does it come in, and how could it be removed? I was referring to the fact that in the House Members call for returns, and you cannot do the work entailed by these returns without extra clerical assistance. Then a new measure is brought in. As an instance, the new Electoral Act caused an additional expenditure of nearly £80,000.
7583. I was alluding to the Charitable Institutions? I do not know how any saving could be effected in that department, except, perhaps, by disposing of the present buildings and concentrating the inmates of the refuges in one block of buildings.
7584. What saving might be effected in that way? Nearly £2,000 a year.
7585. Of all the branches under your control is that the only one in which you can see that changes can be made that would lead to economy? That is the only one that I can see. I do not see how you could retrench the police.
7586. Run your eye over the whole Service you control? I do not think you can effect much economy in the Ministerial office, in that of the Auditor-General, or in that of the Registrar-General.
7587. Are you aware that there is a great deal of duplication of work in the departments of the Auditor-General and the Treasury? There is a good deal, but the reduction should not be in the Auditor-General's Department.
7588. You are aware that there is a duplication? Yes; if you do away with the Auditor-General you will do away with safety in checking accounts.
7589. Express your views with regard to the retrenchment that might possibly be effected by discontinuing the existing duplication of work? I have hardly gone into the system as it affects the two offices. I know that duplication exists, but I could hardly give you a decided opinion about it at present.
7590. What about the Registrar-General's Department? You might re-arrange the place and make it more convenient to the public, but I do not think you could reduce a single clerk. You might spend more money but not save any.
7591. What about the Aborigines Board? I think more money is spent in this direction than is necessary.
7592. Can you specify how economy can be effected? Some years ago a little excitement was got up, and large sums of money were voted without due consideration.
7593. The total sum allowed annually on behalf of the aborigines is £11,300, is it not? Yes. The work is done by a Board.
7594. Is that an excessive provision? I think it is, in comparison with what has been done in the past, when there were more aborigines, and less money was voted.
7595. *Mr. Storey.*] Who compose the Board? The Board is composed of Mr. Fosbery, Hon. Richard Hill, M.L.C., Hon. R. H. D. White, M.L.C., and the Hon. W. H. Suttor, M.L.C. The money is carefully enough spent, but I think the amount might be reduced.
7596. Is there any other suggestion you can make? I do not think the Medical Adviser should hold a dual office, except that of Health Officer, in addition to the appointment named. Dr. Anderson Stuart is a professor at the University, as well as Medical Adviser to the Government and Health Officer, and he can

can hardly give the same amount of attention to the work as if he were only Medical Adviser and Health Officer.

7597. Is it your opinion that he should not hold the position of professor in the University and these two positions as well? It is.

7598. What is his salary? I think he gets nearly £2,000 a year altogether with his fees.

7599. Is there any change in contemplation with regard to him? I do not think so. Dr. Manning, Inspector of the Insane, was Medical Adviser to the Government, and he had to give up the position on account of the work.

7600. If you had two men you would have to pay them the same salary? Yes; but you would have two men who would each be able to devote more time to the work than one who held both positions.

7601. *President.*] With reference to registration and recording, is it not possible for you, in the exercise of your discretion and judgment, to deal at once with a great deal of the letters that come to you, and have them sorted away and pigeon-holed, without going through the very troublesome process of having them registered and recorded? No; because nearly three-fourths of the letters concern Acts of Parliament, of which there are 140 administered by the department. Some of the letters are dealt with in the way you suggest, and are registered afterwards.

7602. What you preserve is simply of a valuable nature? Yes; letters and other important documents that have to go before the Executive Council, the Attorney-General, and others. If you were to examine the department you would say that these papers could not be dealt with in any other way. It seems to a mercantile eye very round-about, but I can assure you it is not so in reality.

7603. It certainly does. With regard to the quality of the stationery, the documents that are intended for preservation must, of course, be on good paper, yet it seems to me that there must be a good deal of correspondence that need not necessarily be written on sheets of foolscap of magnificent quality? That would be right enough if the matter were dead when I have done with it, but suppose a man makes a complaint, I send it to the Inspector-General of Police to report, and it is pigeon-holed. A Member will move, perhaps, for the papers, and these have to be produced.

7604. But could not an inferior quality of paper be used in a large number of instances? Yes; but I think that the size of the paper should be uniform. Paper of inferior quality would do; in fact we print circulars on an inferior quality of paper.

7605. Could not a great deal of the correspondence be done by having printed circulars? Yes; we have a lot done like that, but it is all on foolscap size. It used to be done on first-class paper, but the quality used now is of an inferior kind.

7606. How do you get your paper? We get it from the Government stores.

Joseph Barling, Esq., Under Secretary for Works, re-examined:—

7607. *President.*] Since you were last here I understand that you have completed your scheme of re-organisation? The last time I was here I said that my sub-board had dealt with the matter, and that their report was ready to come before the Board of Reference. Unfortunately the Board has only been able to meet once since then. It so happened that each time that we were to meet one of our members had to come before this Commission. We met the night before last, and had the report of the clerical sub-board before us, and the only thing we could do was to read it through a first time. We dealt, however, with the draft regulations, which took up most of our time, and I now hand in the regulations as amended. [*Regulations handed in.*] I told you with regard to the clerical staff that the re-organisation resulted in a saving of the salaries of about eleven officers, and that the total amount of the saving would be £3,801 per annum. I may mention that the Board of Reference has not dealt yet with the report, neither has the Minister. The Minister is aware of the outlines of the scheme, but has not yet dealt with it. Since I was here the professional Board has been dealing with the professional officers. I can indicate sufficient to show what may be the final result. In the professional staff—I am dealing now with the Harbours and Rivers, Roads, Bridges, and Sewerage Branches—there are about 330 officers, including inspectors, whose salaries, and allowances, for rent, &c., amount to £98,078 odd. Under the reconstruction scheme we propose dispensing with a number of these officers and reducing salaries in some cases, and also possibly allowances. The reconstruction will leave a total annual amount of £69,946, which will mean a saving of about £28,132; but, from this I must take the salaries of twenty-one officers who will be sent to the Water and Sewerage Board, under Mr. Darley, who is to be put in charge of the construction of the sewerage works. That means a reduction of salaries from the officers named of £7,744, giving a net reduction of about £20,388, irrespective of further reductions which will be made in the Sewerage Branch. This reduction is brought about by the amalgamation of offices in the department throughout the whole Colony. In Newcastle there is a sufficient office staff in connection with the Harbours and Rivers Branch to perform the clerical work of the combined branches. These reductions will take place wherever large works are in progress, such as on the Clarence River and elsewhere, and very largely in the head office itself, so that reductions will be carried out throughout the whole branch. I am not quite certain whether we shall not be able to dispense with the services of five or six more clerks. Mr. Hickson thinks that we shall be able to do so. There is another subject I should like to mention, and that is the amalgamation of the work of the Architects' Branches in the Public Works Department and in the Public Instruction Department. Mr. Vernon has been before you, and he has not, I understand, advocated the amalgamation very strongly, although he was under the impression that it would result in some economy. I have had a conversation with Mr. Young, the present Minister of Public Works, who was Minister of Education some years ago, and was intimately acquainted with the requirements of the Public Instruction Department. His opinion is against the amalgamation of the two Architects' Branches. He says that the schools are scattered over the whole Colony, and that a great deal of the work is of a minor character, which the inspectors are quite competent to perform, and he, therefore, thinks that if the two departments were amalgamated it would give rise to a great deal of delay and circumlocution. On the whole, he is of opinion that it would result in no real economy.

7608. In the case of the amalgamation of the Architects' offices in the two departments would not the inspectors still be in a position to look after the new buildings and small schools as they do now? I think they would, but being under two Ministers it would give rise to a great deal of circumlocution. That is Mr. Young's opinion.

7609.

C. Walker,
Esq., C.M.G.
13 Mar., 1895.

J. Barling,
Esq.
13 Mar., 1895.

J. Barling,
Esq.
13 Mar., 1895.

7609. What is your own opinion on that point? I have so little studied the question as it affects the public schools that I should not like to give an opinion right off. I dare say Mr. Vernon's opinion, that it might result in some saving, is correct, but it might also result in some disadvantages, as pointed out by Mr. Young.

7610. *Mr. Robertson.*] Would it not be equally justifiable that the Justice Department should have an architect's branch as that the Department of Public Instruction should have one? There may be some reason in that, but the buildings of the Public Instruction Department are of a very different character to those required by the Department of Justice. There are a number of small works in the former department which may be carried out by the inspectors themselves.

7611. *Mr. Teece.*] I think you said that a number of buildings were unnecessarily costly? That is my opinion.

7612. Tell us the process that is followed in the erection of these buildings;—what is the genesis of them? I will give an illustration: Suppose a deputation waits on the Postmaster-General, and strongly urges that a post-office or a telegraph office be put up in some district. The Postmaster-General often visits the place referred to by the deputation, and in many cases accedes to the request. He then writes to the Public Works Department, and asks that plans may be prepared, and he will probably state the size and character of the building that would be required. With the approval of the Minister at the head of my department the architect would prepare the plans, which would be sent to the Postmaster-General for his approval. Should he approve of them, a sum would be placed on the Estimates, or, if that had already been done, tenders would be called for the work.

7613. Would the Public Works Department exercise any check over the action of the Minister requiring this building? I think not.

7614. Suppose a Minister sent to you to say that he wanted a post-office in a township of 500 inhabitants, fit for one of 5,000 inhabitants, or suppose he said he wanted a marble building, or a stone building, where a wooden one would do, would you exercise any check? I do not think the Postmaster-General would interfere as to the particular kind of material that was to be used; that is left very much to the architect. On the plan being submitted to the Postmaster-General by the architect the former might say that the work was of too expensive a character.

7615. Then the responsibility would rest with your department? I could hardly say that. I think the Minister in charge of the department for whom the building is erected would have to incur that responsibility, because they do sometimes say, "This is too large or expensive; you can reduce it." The Minister of Justice has done so several times. The plans or sketches in the first instance are tentative only. The Minister in charge of the department concerned would express his opinion on them.

7616. The Department of Public Works does not then consider it within its duty or function to ascertain whether the buildings are wanted or not? No. That does not come within our functions.

7617. Then you would not possess any control? No. We might be able to do so if our Board of Reference were given more power. If it were understood that the Board represented the executive power of the Public Works Department under the Minister, and could have a say in the matter, it is possible we might save some of this expenditure. In that case it should be provided that the Board should report to the Minister whether a building was necessary, or whether it was not, but there would be a probability that the Minister would not like to hand over his functions to such a Board. I think that if a report from our Board had to be submitted to the Minister of the Public Works Department, as well as to the Minister over the department for which the building was required, a great deal of unnecessary work might be avoided. At present the Board of Reference is simply an advising body to the Minister, and has no power. If it were made essential that the Board should report on these matters to the Ministers, they would probably hesitate before going against the report of such a body.

7618. *President.*] How would it do to have a trio—the Minister in whose department the expenditure originated, the Minister for Public Works, and the Treasurer, to decide upon the matter. The Treasurer has to find the means, and should be consulted? Personally, I should very much rather see such a Board than the one I suggested, because it would take a great deal of the responsibility off our shoulders.

7619. *Mr. Teece.*] But would not they be subject to the pressure of political patronage? Yes.

7620. And would not the great majority of Ministers prefer to be relieved of such a pressure? I dare say they would. I should prefer to see such a Board as the President suggests, but at the same time I do not think we should shrink from any responsibility that may be put upon us.

7621. *Mr. Storey.*] Is it a fact that you anticipate saving £25,000 a year by your scheme of re-organisation? Yes.

7622. How long is it since this scheme commenced? It has been going on ever since I have been Under Secretary, so far as the Clerical Branch is concerned. We have pared down the Clerical Branch, so that there is very little to be done further in that direction; but the Professional Branch has not hitherto been touched in that way. The idea was first mooted some twelve months ago, when I suggested to Mr. Lyne that if Mr. Darley were placed wholly in charge of the Water and Sewerage Department this scheme could be carried out. I think Mr. Lyne mentioned it in the House.

7623. You have reason to hope that the matter will be carried through? Yes; but the details have not yet been determined.

7624. How are you arranging about the officers whom you are going to get rid of? That is the stumbling block.

7625. Are you going to pension them off? I could not say. They will all have either pensions or gratuities. Sixteen are on the staff and are officers in the full sense of the term.

7626. The pensions are the trouble, are they not? Yes; and that is one of the advantages of the Superannuation Fund as far as the public is concerned. The Civil Servants have to bear the brunt of it.

7627. If such a saving can be effected in your department could not a similar saving be effected in other departments? I should not like to answer that question, though generally speaking amalgamation of offices means the lessening of expenses.

A. C. Fraser,
Esq.
13 Mar., 1895.

Archibald Colquhoun Fraser, Esq., Under Secretary of Justice and Chairman of the Civil Service Board, re-examined:—

7628. *Mr. Humphery.*] What is the amount approximately of fees paid for affidavits not received by the Government? It is absolutely impossible for me to say what is the total amount of fees paid to Civil Servants

Servants for affidavits, as returns of the fees received by each officer are not furnished. I have no doubt that these fees amount to many thousands of pounds per annum. A. C. Fraser,
Esq.

7629. Can any change be effected with regard to the present system of coroners' inquests so as to reduce the cost? The only saving I can see would be in the abolition of jurors' fees, which could hardly be brought about except by the abolition of the system of coroners' juries. A Bill has been introduced in the Upper House by Mr. R. E. O'Connor, which is intended to bring that about. In my opinion it is quite unnecessary to have coroners' juries. 13 Mar., 1895.

7630. What is the cost to the country of jurors' fees? Speaking roughly, £3,000 a year.

7631. Were fees paid before Mr. O'Connor's time? No; coroners' juries were never paid till he decided that they should receive payment, except juries upon cases of murder and manslaughter and fires.

7632. What is your opinion on the subject? I see no necessity for coroners' juries at all. The importance of the coroner's decision is not as great as, at any rate it is not greater than, that of a police magistrate's. No doubt in the olden days when coroners' inquests were instituted the presence of a jury gave publicity to the proceedings, but now sufficient publicity of such proceedings is ensured by the omnipresence of the press.

7633. You referred to the changes that might be made by combining certain positions at present held by police magistrates? Yes.

7634. Do you consider that the Richmond and The Tweed could be served by one magistrate, having regard to the connection of those districts by rail? I do not think so, as the police magistrate at Lismore, on the Richmond River, has to visit the minor courts of Ballina, Byron Bay, Casino, Coraki, Wardell, and Woodburn.

7635. Does the clerk of petty sessions receive fees? Yes; but under the provisions of Act 30 Vic. No. 32, they must be paid by him to the Treasury. A police magistrate or other officer, provided he is not a clerk of petty sessions, retains them for his own use. My opinion is that all the fees received by Government officers should be paid into the Treasury. It is an unfair thing that a man in a junior position should receive a higher salary than another in a senior position by means of fees. There is another reason why it is advantageous that fees should be paid to the Treasury. I think it is desirable that in the Estimates every officer's remuneration should be shown. I have no doubt that some Civil Servants receive £200 or £300 a year in fees.

7636. *President.*] How is the evidence taken down in the Supreme Court? *Viva voce* on oath, or by affidavit, with the right of oral cross-examination of the deponent.

7637. Is it taken down in shorthand? Yes; except in certain cases. In the Equity Court the evidence is frequently taken down in shorthand; and even in the Common Law Courts, with the consent of the parties, it is taken down in shorthand.

7638. But it is not the universal practice? No.

7639. Do you think it would be desirable to have evidence taken in shorthand in every Court, the Judge for his own benefit and for his own special use taking down such notes as he considers necessary? In a certain class of cases taking evidence by shorthand would be desirable, but I do not consider myself competent to give an opinion. It is a question which could only be properly settled by the Judges.

7640. It would be within the Judge's power to take his own notes as he does at present? Yes. There is no doubt it would be an advantage to have questions and answers taken down in shorthand in cases where another hearing was likely to take place. You can imagine a long question which only requires an answer, Yes or No. The terms of the question are now set down in the answer as if they had proceeded from the mouth of the witness. In cross-examination some advantage might be taken of that. Under the shorthand system you would have both question and answer separated. It would not matter much if the Judge before whom the case was tried had to decide it, but if it had to go before another Court an unfair construction might be put on an answer of that kind. Of course if the Judge took evidence he would only take what is material, whereas the shorthand-writer would take a great deal that was not material.

7641. In cases where shorthand is employed in taking down evidence can you say what the fees are, and by whom they are paid? The shorthand-writers are paid by folio. I could not make an estimate what that would amount to. If you had shorthand-writers paid by the Crown they would not work all the time. If you had a tender called for the work you would require one head man of the staff who would have his men present at every Court, and have the work done and ready transcribed the next morning; that would involve considerable expense to the Government. It might suit the public, but it would be a very considerable expense.

7642. Then the Government would pay the costs? Yes; they would pay the staff by salary to carry out the work. If a tender were called, and a salaried staff were obtained, part of the expenses would be paid out of the costs by the parties.

7643. Are you aware whether the system of taking down the evidence in shorthand has been adopted in Canada? I have heard that it has been successful there.

7644. In the meantime would you consider it advisable to allow any shorthand-writers, with a speed certificate of 150 words a minute, to practice in the Equity or other Courts as in Melbourne? I think if a man could take down that number of words he would be good enough for the purpose.

7645. *Mr. Storey.*] Would there be any saving effected by it? Not to the State, but there might be to the public. There would be rather an increase of expenditure.

7646. Would not any arrangement of that kind be entirely under the control of the Judges? That would depend on administrative arrangements.

7647. Have you any system by which all necessary work is done by typewriters? I think a very large saving could be made by the use of typewriters. We have introduced a system of taking evidence in Police Courts by typewriters. It has been a great success. That system should, as far as practicable, be adopted throughout the country.

7648. In what way would economy be effected by using typewriters instead of having the work done in the ordinary way by deposition clerks? The time of the Crown Prosecutor, who has to read the evidence, would be saved. The evidence is now very hurriedly taken. The typist would be able to take the evidence very much quicker than a longhand writer. A great deal of clerical labour could be dispensed with if the typewriter were more freely used, more especially where copies of papers are required.

FRIDAY, 15 MARCH, 1895.

[In the Court House, Goulburn.]

Present:—

JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V., | J. H. STOREY, Esq., J.P.

THOMAS LITTLEJOHN, Esq., PRESIDENT.

William Orr, Esq., District Surveyor at Wagga Wagga, sworn and examined:—

W. Orr, Esq. 7649. *President.*] You have had rather a long service in the Government? Yes; I commenced as an
 15 Mar., 1895. articulated pupil to Edward Moriarty, Engineer-in-Chief for Harbours and Rivers. I am a civil engineer by
 profession, and I have a knowledge of land work ever since 1865, but I have only been on salary for
 about seventeen years.

7650. About what extent is the district under your care? It extends to what is called the Barrier
 Range, or the Snowy Mountains on the east, and far down to the plains below Whitton, on the railway
 line, on the west; on the north its boundary is close to Harden, on the railway-line; and on the south it
 is bounded by the Murray River and the Colony of Victoria. It comprises eleven land districts.

7651. You might describe to us generally your own duties, and during what period of the year they
 occupy you? My duties comprise the general supervision of the officers connected with the surveys. I
 have three staff surveyors and a large number of licensed surveyors under my supervision, and an office
 staff of about twelve or thirteen.

7652. Are they professional, or partly professional and partly clerical? With one exception they are all
 professional. I have one clerk who is not very efficient; but he is an obliging fellow, and strives to please.

7653. The surveyors you mentioned first are salaried surveyors? Yes.

7654. And the licensed surveyors are paid by fees? Yes.

7655. They are only paid when they are employed? Exactly.

7656. Could you suggest any economy in the number of these salaried officers, or could you say
 whether they are overpaid in any case? The question of the payment of licensed surveyors has been a
 subject for report frequently in the past. I favour contract work, as I believe it to be more economical
 than the ordinary work, because then men are paid by results; but unfortunately the work is not as good.
 The work is more satisfactory when it is carried out by a staff surveyor, because he devotes more care to
 it, but a man paid by results is apt to hasten the work. I have one licensed surveyor who made over £1,000
 last year, and in reply to a question of mine he said he had been unoccupied during that time about three
 months—that is, £1,000 represented nine months' work. Now the staff surveyors, together with their
 field assistants, tot up to about £1,000 a year, and they were fully employed. It is my duty to see they
 are fully employed from one year's end to the other. The work of the licensed surveyors is more costly
 to the Government than that of the staff surveyors. The merits of the two systems have often been
 discussed in the office. I favour at present the staff system, because we are not allowed to control the
 licensed surveyors. If I were allowed to make arrangements with a licensed surveyor and say to him,
 "Here is a piece of work which you may do if you care to do it at what I consider a fair price; I know
 what it can be done for by a staff surveyor,"—if I could make an arrangement on that basis it would be
 more satisfactory; but I am so tied down by the head office rules and regulations that I cannot act as a
 private individual would.

7657. Then you have not the same power that a clerk of works would have over the contractor for a
 building; where then does your authority come in before your work is accepted? I am bound by the
 book of regulations which is handed to me. These regulations are interpreted, not by myself, but by the
 chief surveyor in Sydney. In a case of dispute the licensed surveyor has the option of appeal to the head
 office, and properly so. The contract is not between man and man, but between a man and the Govern-
 ment, and the endeavour is to make the system which is applicable to the whole Colony apply to the
 corner in which we live.

7658. You might give an instance of one of the licensed surveyors undertaking a piece of work? It is
 rather technical, perhaps. We insert a post at each corner of a portion of land, and for each corner we
 pay (say) 5s. These corners are a large item, and give rise to confusion with the surveyors. The
 surveyor endeavours to make as many corners as he can, and I to make as few as I can.

7659. The less irregular the shape of the land the cheaper the survey? Yes; but yet we cannot possibly
 from our office—although we know the country well, and have lived in it so many years—say how many
 corners should be put in; something must be left to discretion. As far as I can, I endeavour to limit
 the number of corners to four or five; but when the surveyor gets on the ground he finds the conditions
 are such that he considers it necessary to put in more corners. [*Witness illustrated his meaning by
 means of a sketch.*] If I disallow any corners he appeals to the head office, and, owing to the practice
 throughout the whole Colony, we are obliged to abide by the decision of the head office. In cases of
 appeal I find that the decision invariably goes in favour of the land surveyor; that is to say, we have not
 that control over our men that I would like, in the interests of the Government.

7660. He always gets the benefit of any doubt? Yes; if he has courage enough, or is knowing enough
 to appeal to the head office, he invariably wins the appeal.

7661. Could you estimate roughly how much additional payment is caused in a year by this mode of
 estimating? The licensed surveyors I have had trouble with contend that the extra amounts to a
 difference of from 10 to 20 per cent. There is a lot of trouble in establishing a corner, because it must
 be very accurately defined.

7662. The boundary must be ascertained beyond dispute? Yes; the corners I hold to be the chief thing
 in the survey.

7663. They estimate the difference at 10 per cent.? From 10 to 20 per cent. some have asserted. I should
 not say it was as much as that; I should say it was approaching 10 per cent.

7664. Your head is Mr. Twynam? No, my head is the Minister only; I am practically Surveyor-General
 in my own district.

7665. Can you forecast whether the expenditure in your department will diminish or increase? I should
 say it is certainly diminishing.

7666. Because of there being less lands to survey? Yes; because the best land has been alienated, and
 because we have adopted a cheaper system of measurement. In some of the districts, such as on the
 coast,

coast, the divisions are small, consequently the survey work is more expensive; but as you get further west the divisions are larger, going up to 10,240 acres, consequently the survey is lighter and cheaper. My own district is a fair average district. The work is certainly diminishing, and the demand for land is diminishing.

W. Orr, Esq.
15 Mar., 1895.

7667. Consequently, the staff that would be required to overtake the work would also have to be fewer in number? Yes; we will have to reduce the staff.

7668. That will be a matter of the immediate future? I have been working, so far, undermanned, in order to get credit for economy.

7669. Do you anticipate being able to still further reduce the staff? Yes; my object has been always to cut down where possible.

7670. How many, within twelve months, might you be able to dispense with? I anticipate having to increase within the next twelve months, for the reason that when the new Land Bill is passed by the Legislature there will be more work for us. The work will increase then for two years; but, on the whole, it is diminishing.

7671. But at present, or lately, you have been working undermanned? Yes, at the present time. I am just harrassed over the work, but I have to get it through. They are introducing new ideas with regard to the publishing of information about lands, and I have all hands assisting the head office in the preparation of the pamphlet which Mr. Carruthers proposes to issue, showing all the lands available throughout the Colony.

7672. Have you ever considered the possibility of amalgamating any districts which are under separate district surveyors, so that two districts might be thrown into one, and thus effect a saving in that direction? I think it is not, in the interests of the public, desirable to decrease the number of districts. The public ought to be well served. If you have to study expense certainly the whole Colony might be managed by one man, but less efficiently than if divided as at present. I think the public would be better served if the district offices were more in number. I favour the division between Forbes and Wagga Wagga. I am quite confident I could manage the Forbes district in addition to my own; but I do not think it would be so satisfactory to the public, because they would have to come so far to confer with me.

7673. Have you many conferences with intending applicants? I have a draftsman who attends to the public, but if there is anything he cannot deal with he sends it in to me.

7674. Your head office, of course, is at Wagga Wagga? Yes.

7675. And are you frequently absent? No. I have to attend the Land Board and represent the Crown. Suppose the question is the appraisalment of a certain run or holding, I appear for the Crown, and the lessee is against me. The chairman acts the part of an unprejudiced person or judge, and does not take sides with either.

7676. The Land Boards are constituted by a chairman and two coadjutors? Yes.

7677. Do you think it is necessary to have distinct chairmen and coadjutors;—would it not be possible for the district surveyors to fulfil the same duties? There is a lot of work performed by the Boards which is quite unnecessary, I believe; but in Mr. Carruthers' new Bill it is proposed to reduce that very much. I certainly think the chairman is practically the Board. When an application comes in it is sent to my office for charting. It has to be charted on the maps, and examined to see whether the land is available; then it comes to me to see whether there are any objections to the form. After being carefully examined it goes to the chairman, who looks at the papers before the case comes into Court. His two coadjutors simply look over the matter. They may have a practical knowledge of the country, but a great many of them know nothing particular about the law.

7678. They have no professional skill? No.

7679. Have they local experience? Not in all cases.

7680. Do you happen to know whether any colleagues of the chairman of the Land Board travel for great distances to sit at the Court? One of them, who is a very efficient member, travels, I think, 40 miles in a day; but I do not know really if we could get a better man anywhere—one whose conduct would be so much above suspicion.

7681. His impartiality and judgment are acknowledged? He is most painfully honest and conscientious.

7682. Do you consider that it would be an advantage if the chairmen of the Land Boards were professional surveyors? I do not know; I think it is rather against the interests of the office to have a professional man in the position, because he brings his skill, or rather his knowledge, into opposition to the district surveyor. For instance, in connection with the designing of a subdivision of country he might make some alteration without due consideration, although the district surveyor, sitting in his office calmly, has made the design after careful consideration. I have worked under a chairman who was a district surveyor, and I found it was rather troublesome, because I was quite satisfied with my own designs.

7683. Then, personally, you would prefer a chairman who was not a professional surveyor? Yes; I look upon my own chairman as an admirable one. I have been under no less than three, and I look upon him as the best I have had.

7684. *Mr. Robertson.*] In your opinion, is it necessary, for the due observance of the business of the Land Board, to have two local members? No; I certainly think that the chairman is the only one necessary.

7685. Then you think that, without affecting the efficiency of the Service and the performance of the work, these two offices could be abolished? Yes; they could be dispensed with.

7686. What is the proper designation of these colleagues of the chairman—are they not called local members? Yes; that is the legal term.

7687. What would be the saving effected by the abolition of these offices? I should say fully 50 per cent.

7688. And that would, of course, include the fees and travelling expenses of the local members? Yes.

7689. Is not the man who occupies the position of chairman, not being a professional man, very largely, if, in fact, not entirely, dependent upon the district surveyor for all the information which will enable him to come to a conclusion in any matter with which he deals? Well, often when the case is heard in Court, matters arise that the district surveyors could not have cognizance of, but I should certainly say that everything is dependent on the district surveyor.

7690. As a surveyor, have you not to write out in detail the particulars of all the cases to be submitted to the Land Board? At their inception. After the matter has made some progress the papers do not

W. Orr, Esq.
15 Mar., 1895.

come to me. A man applies for a portion of land; the papers come to me for investigation as to whether the land is available; then the case goes to the Board, and they consider it, and perhaps authorise a survey; then it comes back to me, and I have a survey made; then it goes to the Board again, but after that it does not come back to me at all. The chairman then takes all the duty of the work on his shoulders. Always at the inception of a matter the thing is thoroughly investigated by myself.

7691. Practically, the man behind the chairman is the district surveyor? Yes.

7692. That being so, do you think it would be advisable that the district surveyor should be chairman of the Land Board? Yes; I certainly think the present arrangement is unnecessary. The difficulty of the existing arrangement is that I have to explain a matter to the chairman, so that he may be able to explain it to the public. Under a different system I would not have to make such a lengthy report on the matter and go so much into detail.

7693. With the necessary adjustment of office work could the district surveyor occupy the dual position? Yes; and without any increase to the staff.

7694. Then there would be a considerable reduction? Oh, yes; fully half. That is to say, the Chairman's salary and my own are something about the same. The saving in salaries, including clerks', would be at least £1,075.

7695. That would be including the abolition of the office of deposition clerk? Including that. It is quite practicable to dispense with that officer.

7696. The deposition work could be done in various towns by a clerk of petty sessions or land agent, or other officer? Yes; or a constable; it does not require great skill.

7697. How long have you been in the Service? In the Lands thirty years.

7698. You are acquainted with the "Land Act of 1884"? I am.

7699. Can you tell us what the spirit and intention of that Act were? To cause settlement in the country.

7700. To effect a system of decentralisation? Yes.

7701. As a result of that Act were there not drafted into the country in the early part of 1885 many of the most important officers in the Service? Yes; I think the choicest men they could get in the Service were selected.

7702. Was it the intention to have all the drafting and compilation done in the country, and so avoid the excessive staff at the head office? Yes.

7703. Has it ever struck you that there appears to be somewhat of an anomaly in the Service, seeing that in 1893 there were 162 officers in the Survey Branch of the head office, drawing salaries amounting to £34,554, and in all the combined country survey offices there were 197 officers, drawing a total of £51,905? Yes; it has always been my idea that there has been a duplication of offices. In fact, at the introduction of the Act of 1884 there was an adverse influence at work on the part of officers who were desirous of living in the city. That has always told against the administration of the Act; that is to say, there was a desire to centralise things.

7704. In your opinion was that a wise provision? Certainly not; though I believe in federation I believe in separate administration of the districts.

7705. Are you aware that in the Roads Office there is a Roads Branch where the maps you prepare are examined? Yes.

7706. Can you tell us anything about that? I always looked upon that as time lost. That Roads Department is under Mr. Twynam. I get surveys made in my district; he insists that I must make a preliminary inspection of plans, or what is called a cursory inspection, which is really exhaustive, and practically all that is necessary. I go through the papers, and the surveyors' work to see that the work is carried out efficiently. Then it goes down to Sydney and is duplicated. I hold that this is unnecessary, because in my experience he only looks to see what has already been done.

7707. Is not that practically work which could be completed in the district surveyor's office without additional expense? Yes; I quite agree with you there. We really do all the work. That is one point where we have no control of the surveyors. After I send the work to the head office the head office has the privilege of sending out memoranda to the surveyors requiring information on different points, whereas I could do that, or the draftsmen under me.

7708. Then, do you think that branch in the head office might be abolished? I think with advantage to the country it could be abolished. I think the Roads Department is a great trouble to the public generally. Of course the laws are very much in our way, but, no doubt, they could be altered in time.

7709. Is there a great deal of compilation done in the city—a great deal which might be done in the country offices? We could do it in the country, but at the same time we do not do it in the country. I mean to say we trust to the head office. That is where the duties of some of the city staff come in. I would have to increase my staff if I undertook compilation work.

7710. Granted that, but, if the men that would be necessary were drafted away from the head office, would it not, in your opinion, be far more advantageous to have that compilation done in the country offices? I would certainly prefer it myself.

7711. With regard to detail surveying, are the district surveyors qualified to conduct detail surveys? I should say so. You mean in connection with the city work?

7712. Yes, sewerage and drainage? Yes.

7713. If any work of that kind were being conducted in your district you could undertake it? Yes, certainly; but still, I think, I would have less difficulty than most men, because of my professional training in engineering.

7714. Still it is a work that, in your opinion, district surveyors could undertake? Oh yes, they would rise to the occasion if they had to do it.

7715. How many cases were sent to the Appeal Court in Sydney from your district? I cannot recall any referred to the Land Court by our Board in 1894.

7716. In your opinion, is it necessary to have the Land Appeal Court, as constituted at the present time? It has been suggested that the whole system might be re-organised, that the district surveyor should deal with all cases, and that all parties disappointed by his decision should have the option of appeal to a central court or an itinerant court that might travel the districts to dispense justice. I would impose some penalties on a district surveyor who gave a careless or faulty decision. I think such a system would be much cheaper.

7717. As far as the work of your district has gone, you have supplied no work to the Land Appeal Court last year? Of course our decisions have been disputed, and in that case there have been appeals, but the practice of a great many other Boards, when they are in doubt as to the law, is to refer the matter to the Land Appeal Court. The appeals against our decisions I should say must have been twenty or thirty.
7718. Would these be heard by the Appeal Court? They were heard by the Appeal Court.
7719. *Mr. Storey.*] In answer to the President, you said that your staff consists of three staff surveyors, besides nine or ten of an office staff? Yes.
7720. Has this staff been with you long? When I was appointed to Wagga the staff was quite double the number, but I have reduced it considerably by system and order. Everything was very confused when I went there.
7721. Have you had anything to do with fixing the salaries paid to the staff surveyors? They are fixed by regulation, or the practice of the office. My first lieutenant gets £1 4s. 3d. a day, and the other gets £1 1s. 5d.; that is of course exclusive of labourer's wages.
7722. But your office staff is paid an annual salary? Yes.
7723. Are any of these men paid a higher salary than their work is worth? I was thinking over that matter. Take a man who is occupying a medium position on the staff, who gets £220 a year, and suppose him to be worth his salary. I can classify men above him who are not worth it, and perhaps there are men below who are worth more than they receive.
7724. I understand that, in your opinion, there may be men getting more salary than their work justifies, and men getting less salary than they are entitled to? You have touched the point there.
7725. Would not a system of grading of that kind be of use to the whole Service? Yes; I think that is what is really needed to promote the efficiency of the Service.
7726. In that case men would not be getting a higher rate of pay than their work justified simply because they had been in the Service a great many years? No.
7727. With a proper system by which promotion might be given all over the Service, a man having reached one grade, if a vacancy occurred in the next grade in some other department, would be eligible for it? I think that is where the difficulty comes in. I could not grade a man I have never seen. I may have a first-class draftsman, and another may have another very good, but until I had the two men under my personal supervision I could not grade them.
7728. Such a method as we are now talking about could not be brought about unless some outside Board were in existence to carry out the reformation? Yes; with supreme power.
7729. Do you not find that political patronage, in a great measure, rules the Service? Yes; and it is a curse to it—if you will pardon the phrase. I am powerless against men with influence—in my own office.
7730. You said, as to the contract work, that you had not the complete supervision you should have? I have supervision, but not control—that is to say, the surveyors have the right of appeal.
7731. But it rests entirely with you or your staff to see that the work is carried out in a proper manner? I should be allowed, I think, to deal with the question as between man and man, to make the best bargain I could in the interests of my employers, and to say to a surveyor, "Here is piece of work which I know can be done at a certain price; if you take it you must do it at that price."
7732. But I understand that at the present time you are bound by head office rule? I am bound by the appeals.
7733. But no payment is made to these gentlemen until you certify to the work? No; the head office will not pay unless on my certificate.
7734. You also said your staff was fully employed the whole twelve months, whereas the surveyor is only employed nine months—I suppose we may take it for granted that being fully employed means being fully employed on necessary work? Yes. My aim is always to make the public pay—that is to say, the work of the surveyors is to a large extent paid for by the applicants.
7735. If the district surveyor filled the position of the Land Board without any co-adjutors at all, do you not think it would be necessary, in the interests of the public, that some appeal should be made against his decision, and do you not think that could be done by calling into existence an Appeal Board in the district? I would not constitute another Court of three members. I think the Police Magistrate ought to be able to adjudicate in the matter, the district surveyor and the applicant to appear before him to cite the facts of the case.
7736. I understand your notion is that the Police Magistrate should constitute the Appeal Court? Yes; we should both state our case before him, with a right of appeal to the Central Court.
7737. In Wagga Wagga you have a Crown lands agent;—could not a lot of these offices be amalgamated? I certainly think the Crown lands agent's office in Wagga Wagga could be dispensed with. The work might be carried out by the staff at the disposal of the chairman and district surveyor.
7738. Does the gentleman filling the position of land agent at Wagga Wagga fill any other position? No; he is Crown lands agent only.
7739. What is his salary? *President:* He gets £371.
7740. Would his time be fully occupied? Nothing like. I think he has an assistant.
7741. Could the clerk of petty sessions do the same work? Not in Wagga Wagga. It could be done in our office. The clerk of petty sessions works night and day there.
7742. And with very little extra work it could be done in your office? Apparently we do it all now. We could do it without much trouble.
7743. Could you say that the same thing applies in other parts of the country? I think the land agents in the other eleven districts are necessary and a convenience to the public. Their duties are amalgamated with the duties of clerk of petty sessions, for instance, at Corowa and Narrandera.
7744. In the Wagga Wagga district I suppose there is the ordinary army of road inspectors, conditional purchase inspectors, and watering-place inspectors;—could not a lot of this inspecting be done by the same people? It would add considerably to their duties. The offices of public watering-places' inspector, travelling stock inspector, and conditional purchases' inspector might be amalgamated without any trouble; but I am afraid the clerical duties would require the appointment of a clerk to assist the inspector.
7745. *Mr. Robertson.*] That would be an economy? An economy, of course, because that service could be performed for £150 a year.
7746. *Mr. Storey.*] Do these gentlemen all hail from Sydney? No; they live at Wagga Wagga. Mr. Suttor is the inspector of public watering-places, Mr. Lyne is inspector of stock, and Mr. Mulligan is inspector of conditional purchases.

W. Orr, Esq. 7747. Do you think the time of these three gentlemen is fully occupied? I think, perhaps, the technical parts of the work of the public watering-places' inspector, such as laying out the tanks and taking levels, might be done by one of my staff, but the ordinary work, such as seeing that the person in charge of the watering-place takes care of the Government property, might be done by an ordinary inspector. I, myself, just for the convenience of the public, am what they call an acting inspector of stock. The inspector of stock is frequently away, and when he is away people come to me for "sheep permits."

15 Mar., 1895.

7748. Why is he away frequently? Inspecting his district. Under the Pastures Act he has to see that it is kept clear and clean, as they call it: that is, free from scab. He has to have a technical knowledge of the diseases peculiar to stock. I do not think it requires very great skill. I think a man might soon make himself efficient in that work.

7749. Are they all paid salaries and travelling allowances? I think the stock inspector is paid largely from a tax imposed on the pastoralists in the district.

7750. But inspectors of conditional purchases and others? They are all paid salaries and travelling allowances.

7751. That has rather a tendency to keep them out travelling? Yes.

7752. In our inquiry we find that an immense number of publications are printed and circulated by the Government Printer—*Gazettes*, for instance;—do you find it essential that you should have copies of the *Gazette* sent to you? I do not think we could possibly dispense with the *Gazette* at all; so much so that, if the Government did not supply it I would pay for it out of my own pocket.

7753. Are there any publications sent to you besides that? There is the *Australian Gazette* published by the Mines Department, which is sent to me for the purpose of disseminating knowledge about insect pests and diseases in stock. It is a revenue-producing periodical. Those are the only two I receive.

7754. *Mr. Storey.*] Are there many extensive Government works going on in your district at all? At the present time I cannot recall one expensive work. Along the Murray the joint Governments of Victoria and New South Wales are building bridges—one at Tocumwal and one at Jingellic. There is no doubt they are very necessary.

7755. Do you know of any works carried out in your department beyond what is absolutely required which have been really done to satisfy the Members for the district or progress committees? No; I cannot recall any. I think Wagga Wagga particularly has been rather in the cold in that respect. We have had statesmen like Mr. Forster to represent us, men who have not been merely roads and bridges members.

Abram Orpen Moriarty, Esq., Chairman of the local Land Board of the District of Goulburn, sworn and examined:—

A. O.
Moriarty,
Esq.
15 Mar., 1895.

7756. *President.*] You have a very long record in the Civil Service? Very nearly fifty years.

7757. Have you a very extensive district under your care? I have one of the most extensive in point of business.

7758. What is the extent of it, roughly? The districts are Young, Burrowa, Yass, Gunning, Goulburn, and Moss Vale. Braidwood and Nowra were in my care, but were transferred.

7759. Were they transferred on account of the work being too great? No.

7760. You are assisted by two coadjutors, or colleagues, when you are sitting in Court? Yes.

7761. Are these gentlemen from the immediate locality, or do they reside at any distance? They are practically local men in every case. My colleagues in Goulburn are not Goulburn men, but they live within a few miles of the town; they are gentlemen of position and standing. I should have no difficulty in getting through my business without their assistance, but they are certainly a help to me, as they give one confidence. I have had thrust upon me a considerable responsibility in connection with the lands. I have had personal charge in a leading position for a number of years, and I have felt so strongly the high responsibility put upon me in connection with the administration of the Land laws that I have not hesitated at times to say what I thought. In 1887 I was asked for a report. That report was not found agreeable, and I was asked to withdraw it, and I consented to withdraw it on the distinct understanding that I should not be asked to withdraw any of the statements I had made.

7762. *Mr. Storey.*] Was this after you had a couple of years' experience of the administration of the Act? Yes.

7763. *President.*] Have you had experience as a district surveyor in your lifetime? No; I have always been employed in connection with official administration.

7764. We have gathered from some other evidence that in some cases the chairmen of the local Land Boards, although they have the advantage of their colleagues sitting with them, are practically the judges on the cases submitted to them? That is not my experience. I have said from the first that the members of the Land Board perform a useful duty. Their functions are somewhat assimilated to those of assessors or of a jury. They can strengthen one's views as to facts or as to values, and upon these points I have not attempted to dictate to my colleagues, but I expect them to take my view of the law. I do not consult them as to what is evidence, and I rely on my own responsibility on that matter. I think it is the Chairman's duty to carry on the administration of the Board. The proper function of the members is to assist him as assessors as to facts or values.

7765. Practically do they, as a rule, coincide with your decision? Almost invariably, but not always. In some cases I am over-ruled by them.

7766. There are three; so, to put you in the minority, the other two must go together? That has been done.

7767. And you have, of course, submitted? No, I have not. I have done this. I have stated in the minute on the papers that a majority consisting of so-and-so have decided, but I have taken the opportunity of adding my own views.

7768. The matter goes no further than that? Not unless it comes under review in some form.

7769. You mentioned that there were some districts removed from the scope of your control, but not at your suggestion;—could you suggest that you might undertake some other district in conjunction with your own, so as to economise; for you are aware that we are here to find out means of economy without sacrificing efficiency, and to recommend them to the Government? You will appreciate the little delicacy I have in going beyond the strict requirements of your question for this reason—the Minister himself has taken certain steps in that direction. On that subject I myself requested the Minister to hear me,

and

A. O.
Moriarty,
Esq.
15 Mar., 1895.

and I stated I was prepared to offer certain suggestions which might be useful to him and the public at the same time. What I intended to do was to tell the Minister of the evidence I had given in 1887 here before a Board which went round to inquire into these matters. Probably what I would have to say has been anticipated by myself some years ago, and it would embody what I recommended in 1884; so you see it is a little awkward. I do not want to go behind the Minister's back and say you had better do this, that and the other thing, but at the same time I have dealt with all this before.

7770. But we have authority, by request of the Governor, to inquire into a matter such as you mention, and the Minister, of course, will, no doubt, —? I only wish to indicate to you what my position is. I have already done this.

7771. But as you have not done it to us, if it should come out that we have interviewed you and have not obtained from you the exact facts that you are in a position to tell us, we shall be blamed for a dereliction of duty? Up to the end of 1884 I had entire charge of all this business. I had no Boards. The Surveyor-General who controlled the survey part of the arrangement reported to me, and I had authority to deal with my own business. I was my own Under Secretary, and I dealt directly with the Minister. On the abolition of my office I made a proposal to the Minister, Mr. Farnell, as to how the Colony should be divided between new Boards. The proposal I made was the same arrangement as I had had in operation for some years in dealing with conditional purchases—that is to say, there had been nine Commissioners. I told him that nine Boards would do the work better than a larger number.

7772. How many are there now? Fourteen.

7773. That is still your opinion? I repeated that opinion in 1887, and I am still of that opinion. There would be less risk of divergent practice in a small number of Boards. The thing was done for many years. Under that system we got through an amount of business far exceeding anything that exists to-day. There were ten districts—the Metropolitan, the North Coast, the South Coast, the Northern, the Southern, the Western, the Central North-Western, the Central South-Western, the North-Western, and the South-Western.

7774. By reverting to that number there would be a saving of the expenses connected with five districts presided over by the local Land Boards? The business would be as well done by a smaller number of Boards. I am entitled to speak with authority on the subject.

7775. Has it occurred to you to look into the saving that would be effected by such a change;—there would certainly be the saving of five salaries of £650 each—that would be £3,215 alone, besides the concomitant expenses of inferior officials? There would probably be some re-arrangement necessary; some greater consolidation of business. Some time ago I took the trouble to look into what was going on in other districts, and this information is from statistics published in 1891, which was a fairly illustrative year. The number of cases dealt with by the Goulburn Board was 3,280, and the expenses were £934 12s.; the average number of cases dealt with by the other thirteen Boards was 2,728, and the average expenses £1,225 5s. Thus, for an excess of 552 cases over the average, my Boards showed a saving of £270 13s. per annum.

7776. How do you account for that? No doubt the Goulburn District is a compact one, and I have the advantage of railway travelling. I have been accustomed to hold Courts every month at every sub-centre.

7777. How many of these have you in your district? I have been accustomed to hold Courts at Crookwell and Taralga, in the Goulburn District, but on the borders and nearer to the centre of business, and more convenient for the people who come to the Courts. I pass through Binalong in going to transact the business of the Burrowa District. As Binalong is a centre, if I brought people from Binalong to Burrowa I should impose 40 miles of extra travelling on some of them. These are the only places at which I hold Courts, except in the principal place. The places I hold Courts at are Goulburn (including Crookwell and Taralga), Gunning, Yass, Burrowa (including Binalong), Young, and Mossvale.

7778. With regard to the district surveyors, do you find their preparation of the cases, and the papers they lay before your Board, of great value in enabling you to come to a decision? Yes; but the Board does not always take their views. I have not hesitated to take a view opposed to that of the district surveyor; but we have never come into collision. I should like to complete the statement I have just been referring to. The cases per sitting in connection with the Goulburn Board were about thirty at each place per sitting day, and in connection with the thirteen other Boards, the number was nineteen. The cost per case of the Goulburn Districts was 5s. 9 $\frac{3}{4}$ d., and of the districts of the other thirteen Boards the cost has been 8s. 4 $\frac{3}{4}$ d. The Goulburn Board sat 108 times, and the average of the other Boards represented 144 days' sitting. In addition to that, my Courts were held every month at several places, which has had many advantages.

7779. It saves the time of the appellants, or the suitors, or whatever they may be called? It is also right I should state that I have made it a rule to take to the Boards only such business as the nature of the case or the requirements of the law demanded should be dealt with at a Board meeting. I transact, whenever I can, business on my own responsibility, as far as my authority extends. To show what I mean, I may say that in one year one of my neighbours, a very good officer, who took a different view of his duties from mine, dealt with four cases of a certain class in a similar district to this. I, myself, in the same year dealt with 800 cases of that same class. The number of cases he has to deal with generally are, perhaps, as large as mine; but those he did not deal with personally went into the number of cases dealt with by his Boards, and helped to swell the total number. I do not bring people before the Board unless it is absolutely necessary. Early in 1885 I arranged with Mr. Twynam (then district surveyor), that, instead of keeping a case back till I brought the people before the Board, I should pass the papers on to the district surveyor, who would undertake on his own responsibility to give instructions for survey without bringing the people before the Board at that stage. Cases only came before the Boards when the Boards were asked to decide something; the law has since been made to correspond with that practice.

7780. This system spared personal attendance on the part of the applicant in the first instance? I have known people brought from Albury to Grenfell merely to be told that their land was going to be surveyed. It was an oversight in the Act.

7781. What staff have you in connection with your Board? Five clerks in Goulburn and three inspectors.

7782. The clerks are engaged on clerical work, I suppose? Yes.

7783. Do you think that they are paid sufficiently, or are they overpaid, at the rate mentioned in the Blue Book—take the clerk-in-charge, for instance, at £380? I do not think he is sufficiently paid. He is a man of good abilities, very high character, and long standing in the Public Service. He was appointed after being several years promised £450, but that salary was struck off by a stroke of the pen for no reason

A. O.
Moriarty,
Esq.
15 Mar., 1895.

reason that I am aware of. He must have been nearly thirty years in the Public Service. He is a man who in any other vocation in the world would have gained a high position by reason of his character and business aptitude.

7784. All your staff are fully occupied? I will not say that. The employment of the staff varies with the amount of business. The staff is rather beyond what we now require, but we have had in view the probability of some changes taking place, and we are leaving the matter to come on in connection with some larger arrangements that may be necessary. The staff has sometimes been more than I would ask for, and sometimes less.

7785. But could you dispense with anyone? Yes; on the present lines we could dispense with one clerk. I have had to complain of needless expenditure in connection with my own office. I have not hesitated to say there had been jobbery. It is a strong term. This happened. In opposition to the advice of the district surveyor and myself, premises were taken for our office at a rent considerably beyond what better premises could have been had for at the same time—something double or treble. We could have been accommodated in the premises now occupied by the City and Australasian Banks, but instead of this Foxall's shop was taken. We were asked to state what fittings we would require, but we refused to recommend any fittings. In spite of us, £1,530 was spent on fitting up the place on a five years' lease, and every penny of that money was wasted. That lease ran for five years, and all the money spent in fittings was thrown away. The lease expired five years ago. All this time there has been a piece of Crown land between the lock-up and the district survey office quite ample for our requirements. We have actually sunk in rent more than enough to complete all the offices we require.

7786. *Mr. Robertson.*] Is it in contemplation to build a new survey lands office, or additions to the present lands office? Just four rooms, connecting the present survey office with the present lock-up.

7787. Do you not think that this building in which we are now sitting, and which is occupied, we are informed, for something like one month per annum, could be utilised for the purpose of the Civil Service business? Several years ago, when the building was first put up, I applied for this room and the adjoining one, but, though the Minister of the day allotted them to me, some difficulty arose, and I did not get them.

7788. Were you refused temporary use of these rooms? Yes; that is lately—within the last few months.

7789. Was that officially conveyed to you—the decision that you could not have these offices even temporarily? I do not remember at the moment, but I became aware of it. I saw the Under Secretary of Justice, and learned that we were not to have them.

7790. Are there any rented premises in Goulburn to-day? I believe there are. I think the stock inspector has some premises.

7791. You think that there could be an amalgamation of the offices of chairman of the Land Board and district surveyor? No.

7792. What are the objections? Both officers are fully employed. The district surveyor at Cooma, for example, was appointed to the position of chairman, and he was, I believe, fully occupied as chairman. He had also been fully employed as district surveyor, and so I believe is his successor. The same thing has happened in other districts.

7793. But by the adjustment of offices do you think the dual position could be occupied by one man? I think it is quite possible in some cases.

7794. In your opinion, what was the intention of the Land Act of 1884 with regard to the establishment of Survey Branches and Land Boards throughout the various parts of this Colony? I have always assumed the main object to have been, in a word, decentralisation.

7795. Has that object been accomplished? It has been very seriously interfered with by a system I have protested against over and over again—a system of interference with the local business by subordinates in the head office.

7796. Did you see the Fourteenth Annual Report of the Department of Lands? I have no doubt I have.

7797. Have you ever noticed that while £51,905 is spent on the district survey offices in the country, a sum of £34,554 is spent on the Survey Branch in the head office? I have not gone into that question of survey expenses.

7798. There were employed 162 persons in the Survey Branch of the head office, and 197 in all the combined country Survey Offices;—are you aware of any duplication of work in Sydney? I am not personally aware of it.

7799. Will you state what reasons you have for complaint with regard to the interference in Sydney? I find cases which my colleagues and I have dealt with under the law in open Court taken up by clerks in the head office whom I do not know. I cannot write a simple paper without everybody in the place writing his views about it. The official interference is overwhelming. Here is an example. [*Exhibits paper.*]

7800. This paper shows you made a very simple request, and that it was dealt with by how many persons in Sydney? It required only the Minister to deal with it, but it went through several hands. Some years ago I remember a similar paper, on which I counted the initials of nine able-bodied men.

7801. The initials of people who could not have any personal acquaintance with the business about which you wrote? I will not say that. I know the initials are of parties who have not been engaged in the duties I have been engaged in. At any rate, I felt justified in objecting, and I still object, to my work done in public and in open Court being reviewed by clerks in the head office. When the Board sitting in Goulburn found that a certain selection ought not to be forfeited, that selection was forfeited at the instance of some clerk in the head office. There is the Land Court, which I wish to speak of with respect, open for the people to appeal to, but I do not know what functions clerks in the head office have to review my business.

7802. How many cases have been sent from your districts to the Land Appeal Court during 1894? I do not know at the moment, but I think it was below the average.

7803. Do you know what the average is? I think the highest number we have had was twenty.* I may say that I have not hesitated to take what I believe to be the proper line, even although I should expose myself to the reprimand of the Land Court. I have met lately with a severe reprimand from the Land Court for exposing what the Board considered a very vicious dummy transaction.

7804. *President.*] Has your department much to do in the way of registration and recording? It employs one junior clerk, who also keeps the record of the district surveyor's office.

7805.

* NOTE (on revision) :—I find the annual average has been about 10.—A.O.M.

A. O.
Moriarty,
Esq.

15 Mar., 1895.

7805. I gather that you yourself deal promptly and finally with cases of trivial moment without putting them through the machinery of the Land Board? We deal instantly with all things we can deal with, without bringing them before the Board.

7806. Where you can dispense with formalities you do so? We always do so. As to the matter of recording and registering, I had occasion to go into that from an early period. The present system of registration in the Lands Office was copied from the system of the State Paper Office at Home. You must have some record.

7807. *Mr. Storey.*] Do I understand you to say that the cases your Land Board has dealt with, and given decisions on, are upset and altered by the Ministers in Sydney, without referring to the Land Appeal Court at all? There are certain classes of cases in which the Minister has to deal finally. There have been cases in which the Minister—I do not say this Minister—having the finding of the Board before him, has been advised to take another course and has taken it. A certain gross case occurred in the Burrowa district some twelve months ago. The Board found that it was a naked case of dummyping, but I do not know what has become of it. I daresay when I see that case again, if I ever see it, I will find that several people have given their views about it. I do not recognise that any person has the right to interpose his views between the finding of the Court and the Minister who has the deciding of the case.

7808. Is it not the law of the land that these cases should be heard by the Land Boards, and that appeals against them should be referred to the Land Appeal Court, and not to the Minister? No; there are certain cases in which the Minister has the ultimate decision.

7809. Under the law the Minister is exercising his right? Quite so.

7810. Do you think that in such cases political influence has been brought to bear to upset your decision? I do not know. I have no reason to say so.

7811. Why would a Minister go behind the back of his own Court? I do not know why.

7812. Are these cases of frequent occurrence? I complained several years ago, and I complain from year to year.

7813. Do I understand this goes on continuously from year to year? During all the years it has been a system.

7814. Are the cases exceptional? The rule, I should say, is that some officers think it necessary to advise the Minister.

7815. With reference to the amalgamation of the offices of the district surveyor and charman of the Land Court, I presume any proposal such as that would meet with the approval of the district surveyor, but it would hardly meet with the approval of the chairman of the Land Board? I do not think a district surveyor would be found to approve of it as a rule. I think you will find they have more than enough to do already.

7816. The chairman of any Land Board not being a surveyor it is needless to say he would not approve of such a suggestion? I do not know. I know some people are prepared to undertake anything. I think, as a rule, that a man of good understanding would not undertake to do anything beyond his own *métier*.

7817. The duties are entirely different from each other? I think so.

7818. Your opinion as chairman of the Land Board is that the two positions are absolutely necessary? I think so. I think the professional work is enough for the professional people.

7819. What are your three inspectors engaged at? They have to visit the selections occasionally during the period of residence to see whether the selectors are residing upon them and otherwise fulfilling conditions.

7820. What do you call them? Inspectors of conditional purchases.

7821. Are they under your control? Yes, under my personal control.

7822. Cannot this inspection be done by other inspectors that are travelling about the country;—we have all sorts of inspectors—road inspectors, public watering-places' inspectors, and conditional purchases' inspectors? There are only engaged so many inspectors of conditional purchases as have in their hands a sufficient amount of work to keep them going from year to year.

7823. You have complete control over their travelling expenses, you know that they are not out longer than they should be? I have their journals month by month, and I have to certify their travelling charges. We compare their statements with their reports, and we know generally what they are doing.

7824. Who was responsible for that expenditure of fitting up offices against the advice of yourself and others? The late Under Secretary for Lands (now a Commissioner for Railways) was primarily responsible.

7825. Did he give any reasons? The papers can be found in the head office, Sydney.

7826. You have been fifty years in the Civil Service; you are perhaps the oldest Civil Servant in the Colony;—have you any suggestions to make to the Commission as to how the Civil Service should be worked—you know all its drawbacks? The Service is a very large one. There is a great deal of business to be done under different laws, and of a different class. I think there are sometimes too many subordinate officers.

7827. I am speaking more generally of the management of the Service;—would you go on as now, with the Service under the control of Ministers and Under Secretaries, subject to political influence to rule everything, or would you take it out of their hands and put it into the control of some person or Board, who would perhaps do more justice to the Civil Servants? I have no doubt the hands of the Civil Service Board might with advantage be strengthened. I do not think the Board exercises the full functions the law contemplated it should exercise. I do not think its control over the ramifications of the Service is as effective as it should be.

7828. It is a good idea to have a Civil Service Board? I think it is a good one; it has been adopted at Home.

7829. The present Civil Service Board has no powers at all under its Act? I have seen many matters in which such a body might well be employed.

7830. You are aware of the success of the railways under a Commission;—could other departments be managed on similar lines? I think there is too much personal-responsibility thrown on the Minister by our system. I think he wants responsible persons between him and the lower officers, who would be strong enough to carry on the business in a capable and proper way.

7831. Are you in favour of the Superannuation Fund? The Service does not offer premiums to men of mark. A man cannot make a fortune in the Public Service. In all large Services it is customary to keep your men for years if they suit you. Weed them out if they are no good.

A. O.
Moriarty,
Esq.
15 Mar., 1895,

7832. As long as the Civil Servants find the money themselves there should be no objection? The present system has been abused. People have been thrown on who have no right there. A superannuation scheme of that kind only deals with retiring allowances. That does not meet the case of a man dying.

7833. A sort of compulsory insurance should be combined with this scheme? That business is very well dealt with by Insurance Companies.

7834. *Mr. Robertson.*] Do you think that there is a necessity for the continuance of the present Land Appeal Court? I am quite sure there is no sufficient employment for such a Court; but you must have something to which to appeal from the Boards. Practically, during all the years before the present laws came into force, matters of the same class were dealt with through the Inquiry Commissioners, with appeal through me to the Minister. In the suggestions I made I proposed there should be something of the same kind.

7835. Practically to abolish the Appeal Court? That is out of the question. The Court is established by law, and the members receive their salaries for life. It goes without saying that the Court has not sufficient employment. It has sat for about ten days in this year, I think. No one would pretend to say that it has been constantly employed during the five years it has been in operation. I do not yet know, and I do not know anybody else who does know, upon what lines the Land Appeal Court fixes Crown rents. I do not know what their views are on this subject, and I do not know on what data they base their computations. The Land Board fixes the rent, and the Land Appeal Court sometimes alters it.

John Gregory Blaxland, Esq., Clerk-in-Charge of the local Land Board Office, Goulburn,
sworn and examined:—

J. G.
Blaxland,
Esq.
15 Mar., 1895.

7835½. *President.*] You have had a long service in the Government? Yes, twenty-six years in July. I was senior clerk in charge when I came up here, and I had a salary of £450.

7836. It is not so much as that now? No, it is now £380.

7837. Are your duties constant? Yes.

7838. What are your hours? Nine to 4:30 p.m.

7839. With an interval of an hour for lunch? Yes, but we do not go at 4:30 p.m. if there is any work to do. Very often a selector comes in after hours and wants information. I believe we are not supposed to give it, but we always do so as it saves the man a lot of travelling.

7840. There is no overtime? No.

7841. How many clerks are there in the office under you? Four under me.

7842. And their work is directed by you? Yes.

7843. You are responsible for their discipline and attendance to duty? Yes.

7844. You find them attentive and obedient? Yes, I should report it at once if it were not so.

7845. You can tell us what their salaries are without mentioning names? There is myself at £380, one at £245, one at £200, one at £175, and one at £75 (increased to £100).

7846. You have absolutely full work for these clerks under you? At present I have hardly full work for them.

7847. Do you expect that there will be a diminution or an increase of work shortly? I expect there will be an increase.

7848. Therefore you could not recommend the removal or transfer of any of these? I should recommend a transfer if the Cooma office were not put on here. It was for that reason I was holding back for a time. We heard that there was going to be an amalgamation of some of the districts. In that case I should have had ample work for the whole of the clerks. If that is not going to be the case I think we could do with one less clerk.

7849. Would it be one of the least salaried men, or a medium man you would recommend to be dispensed with? Transferred, I should say. I should recommend the one at £200, who has lately been appointed here, and who came from Forbes.

7850. You have, no doubt, intimately acquainted yourself with the constitution of the Land Boards, especially with the one that exists at Goulburn? Yes.

7851. Is it your impression that the two colleagues of the Chairman are indispensable, or could they to a considerable extent be dispensed with? I think they could be dispensed with in a great measure, although I think it would be advisable to retain one, a local man, who would know all the requirements of the district, and its carrying power, as people would have more faith in him.

7852. In case of a difference of opinion, however, the one man would annul the opinion of the Chairman—no decision could be arrived at? No. Well, I should think the Chairman would be enough; certainly in our district our Chairman would be enough, as he has such an intimate knowledge of all the laws.

7853. But, generally, would it be desirable? I think it would; but I have never been in any other district but this.

7854. The saving that would be effected by the non-payment of fees and travelling expenses would be very material? It would.

7855. Do the colleagues of your present Chairman come from a great distance? Two of them live about 7 and 11 miles away—those are the furthest.

7856. Are they paid travelling expenses—mileage, for instance? Not mileage; they are paid for the time they are away from home. One shilling an hour up to fifteen hours; 6d. per mile for coach or private conveyance we generally allow.

7857. *Mr. Storey.*] If a man lives 7 miles out of Goulburn that is his residence, and if he accepts the position of a member of the Land Board, it is manifestly unfair that he should be paid for the time he is coming from his residence to the Land Board. Let him be paid for the time he is at the Land Board, or for any time he is away from home on business, but surely he should not be paid for the time he is coming away from his home? Exactly so; but it has always been recognised that travelling expenses are allowed.

7858-9. Yes, when you have started on your work? But it is the system. Last year they got an additional fee of 10s. 6d., if they sat for half a day, to compensate them for the loss of the afternoon, because it was considered that they neglected some of their own business in order to attend the Board, but that has been knocked off. I got a circular the other day on that subject. That would have saved about £60 in last year's expenses in my district.

7860.

7860. *Mr. Robertson.*] Do you know the reason why it was knocked off? No.

7861. Do you think the practice was abused? I do not think so in this district, because I used to economise most carefully.

7862. *Mr. Storey.*] How long is it since you had that circular? I got it on the 13th instant—two days ago. I drew the attention of the chairman to the fact that, although the circular reached me on the 13th instant, it took effect from the 1st instant. I thought it was rather hard on some of the members of the Board who had attended Courts, and, I believe, sent in vouchers for this loss of time.

7863. *President.*] Would the half-guinea be in addition to their ordinary fee? Yes; the fee would be £2 2s. for the whole day, and £1 1s. for a half day over three hours; and when they are away from home, in addition to the half day, for which they get £1 1s., they were allowed to charge 10s. Gd. for loss of time.

7864. So they really receive a guinea and a half as a minimum? Yes.

7865. But £2 2s. if engaged the whole day? Yes.

7866. You think it would be quite practicable to coalesce the two districts of Goulburn and Cooma? I should think so.

7867. It would be no detriment to the public business, and there would be a considerable saving in the diminution of the staffs? I think so. I do not know what the work of the Cooma office has been, but I do not think it has been as heavy as ours.

7868. Have you any professional skill or knowledge as a surveyor? No.

7869. So you cannot tell us, can you, whether a very efficient district surveyor might be also appointed as chairman of the local Land Board with advantage to the Service? Certainly if he had time for the two billets I think he could. The chairman at Cooma was first a district surveyor and a chairman afterwards, and he has fulfilled the duties of a chairman for some years to the great satisfaction of the people there. In this district we hold a Court every month round the different places, and that takes the chairman out of the district a great deal.

7870. He is particularly active in the discharge of his duties? Yes; and being away so much in pursuance of this duty throws much more of the administrative work of the office on me.

7871. You have not brought with you any statistics of the occasions on which he has held Courts throughout the district, and of the cost? No; I know he has held one a month.

7872. *Mr. Robertson.*] Is it necessary to hold one in every month in the whole of the places; are there so many cases that it is necessary to hold a monthly Court; could it not be once in two months? No; it was done to meet the requirements of the selectors more particularly.

7873. If they met once in every two months it would be half the travelling expenses? Yes; but, again, the sittings would be twice as long. The inspectors would be there two days instead of one, and while the Court is sitting the inspector gets £1 a day if away from headquarters.

7874. Do you know whether this is the only district where monthly meetings are held? I believe it is; but in looking at the matter once or twice we have come to the conclusion that there would be hardly any saving by meeting less frequently. Suppose the Land Board met only every two months, and a man took up land which he found he could not get, he would be kept out of his money for two months and would have to go to the banks. I have known an instance where a poor man had to pay a solicitor ten guineas for a temporary loan.

7875. It quite accords with your own views, then, that the holding of the Courts as often as they are held by your chairman is advantageous? Yes, certainly, at all important places.

7876. *President.*] You think the number of cases is likely to increase or diminish in the immediate future? I think they will increase, because of some alteration in the land law. People are waiting in this district now, as they hope to get benefits from the land law.

7877. What number of surveyors have you attached to your district? I could not say; I think you will have to ask the district surveyor.

7878. *Mr. Robertson.*] Have you ever been struck by any needless or extravagant work in the conduct of the surveys? Yes; I think a great deal of the work that could be done in the country is done in the head office—it is duplicated very much.

7879. Necessarily? I should think not.

7880. What is the class of work to which you refer? We have often come across it in gazetting schedules, forwarding schedules to head office. Leases are sent down there to await the fifteen years' fulfilment; but we want them because a conditional purchase is taken up under the 25th clause, and we have to send for the papers.

7881. Who should be the custodian of these papers? I do not know. I should think all these papers should be kept in the country offices; but I would not recommend it here, because I am afraid of fire. Our office adjoins a saw-mill and timber yard.

7882. *Mr. Storey.*] Have you no safes? No safes at all—the merest lot of cupboards.

7883. *Mr. Robertson.*] You say you think there is a good deal of unnecessary duplication of work in the Sydney office? Yes; I do not see what a great number of the clerks are wanted for in Sydney. For instance, I write for the chairman a submission to the Minister that a case be referred to the Board, under the 20th section; that is registered, goes through two or three hands, and is returned to us. Instead of being put before the Minister it is sent back. We have to register that, which triplicates the work. As to the leases, I believe we fill in all the particulars for the *Gazette*, and send them down to the Secretary for the Under Secretary for Lands. I think they are put almost directly in the *Gazette*.

7884. With regard to the record of conditional purchases, can you recommend to the Commission any system by which economy could be effected in time and cost? No, except by not registering unimportant documents. You mean documents in connection with the case?

7885. No; I refer now to the records of the transactions in connection with conditional purchases? They run to great bulk in some cases.

7886. Are they also recorded in the head office in great bulk? Yes.

7887. Do you know whether they are recorded in the Treasury in the same way? Very often, yes. Then we have to take a record of all these numbers in our registration book. The Lands Office will not recognise our number when we write for a paper.

7888. They go by their own numbers? Yes.

7889. So there is no common reference to papers? No.

J. G.
Blaxland,
Esq.
15 Mar., 1895.

7890. They each take their own reference? Yes, except that the whole are connected with the one conditional purchase number.
7891. I suppose you were in the head office a long time? Yes.
7892. Are you aware of any work, besides that you have already mentioned as being done in Sydney now, that might be better done in the country? [*No answer.*]
7893. *Mr. Storey.*] You have been twenty-six years in the Civil Service, I understand? Yes.
7894. Did you enter the Lands Office when you first joined the Service? Yes. I was in Parbury and Lamb's office when I was offered employment in the Lands Office, and I took it.
7895. In your experience have the methods of promotion and increase of salaries in the Service been satisfactory? They have been unsatisfactory.
7896. In what way? Under the Civil Service Act we got increases regularly.
7897. Of course that was stopped? Yes. I was working for a good many years in the Head Lease and Auction Branch in Sydney, and was promised time after time an increase of £450, but I did not get it for some reason or other.
7898. What was the highest salary you had in the Sydney office? £450.
7899. How many years had you been working up to that? Fourteen years.
7900. I suppose you started at the ordinary amount, £52? Yes.*
7901. Did you get all your promotions and increases of salary through your own merits, or through influence in any shape or form? I never used influence that I know of in any form. I was in charge of the Lease Branch, and was Metropolitan Crown lands agent and agent for Church and School lands. As these billets (the two agencies above) fell out, I was placed in charge of the Auction Branch; then I was asked to take charge of the Miscellaneous Branch, and was promised an increase if I did the work satisfactorily. I did it satisfactorily, I believe, but I did not get the increase until I came up to Goulburn, and then there happened to be money available.
7902. Did you leave Sydney when the alterations were made, in 1884, when the Land Boards were established? Yes; I was recommended very strongly by Mr. Oliver, the Under Secretary, to go into the country, as the object of the Act was decentralisation, and everything would be done in the country.
7903. As far as you can say, has the object of the Land Act of 1884 been accomplished,—has the Act given increased facilities to the public? Very much so.
7904. Do you think there has been much pecuniary saving to the country? I could not say that. I have heard that the Lands Office is as full as ever, but I have not been there for ten years, except on a casual visit.
7905. Do you think, if the Civil Service were taken out of the control of Ministers or Under Secretaries, and freed from political patronage, that better results could be obtained than at present? I should think so, judging from my experience in a private office, and from what has been done in the railways.
7906. And as an old Civil Servant, you are decidedly of opinion that some alteration should be made in the present system? Yes.
7907. Supposing you had entire charge of a department like the Lands Department, and tried to work it on a commercial basis, do you not think a system of grading and classifying officers could be adopted—that is, that a certain standard of work should be paid a certain standard price, and that a man having reached that stage should be eligible for going into another stage by merit or seniority—do you not think this would effect a large saving to the country, and that people themselves would get on better? Yes; and there would be encouragement to the officers. I think that is what they are trying to do now in an inadequate way in the Lands Department. In one or two instances they have written to me for the character of a certain clerk, and I have found afterwards that he was put on in the second, or third, fourth, or fifth grade; so they talk of grades. I do not know whether it comes under your Commission, but I think, with reference to the 4 per cent. we are bound to pay the Superannuation Fund—
7908. It forms part of our inquiry? I always held strong feelings against that.
7909. What are they? When it was first mooted I wrote my objections to it. If I died my widow would get nothing out of the Superannuation Fund unless she threw herself on the mercy of the Government as a pauper. Therefore I said, let every man take out an insurance policy, and let the Government keep up the policy out of his salary. As they mulet you out of the 4 per cent., let them pay the 4 per cent. as premium for the policy, and when the man dies let the Government hand it to the widow.
7910. That would not provide for superannuation, that would provide for death? You might do it in another way; you might take out a policy for a certain number of years.
7911. That would not provide for a break-down in health. The present Superannuation Act, although some Civil Servants abuse it a good deal, provides for your retirement at 60, if you elect to do so. It also provides for your retirement if you are invalided or meet with an accident, and cannot perform your duties, but where the hardship comes in is where a man dies and his widow gets nothing except as a pauper. But I will put this question: Are you in favour of a Superannuation Fund in the Civil Service? Yes.
7912. But you would combine with it a sort of life assurance? Yes.
7913. *President.*] With regard to the records of the conditional purchases, do you keep a complete record of every conditional purchase, and can you tell what the man ought to pay every year, and also whether he has paid it? No; that is all the land agent's work, he is the only man who can show that.
7914. A complete record is kept by the Crown Lands agent of all the conditional purchases, and he knows when a man has paid, and whether there are any arrears due? Yes.
7915. In another place you say there is a complete record of that kept in the Lands Office in Sydney? I believe they have a complete record.
7916. Only they do not interfere with the payments? They check them only.
7917. Oh, they do check them? I believe they check them.
7918. But if a conditional purchaser is in arrear notice is sent to him by the Crown Lands Agent at Goulburn, is it not? I am not quite sure about that. He may do so, but I do not know whether he is supposed to do so. If he were going through his books and saw a man was in arrear he might do so to save trouble.
7919. That is two places where a complete record is kept. Do you know whether the Auditor-General also keeps a record? I cannot say.
7920. At any rate you know of two places, and probably a third? Yes.

* NOTE (on revision):—I hardly understood this question. I mean about the then lowest grade.—J.G.B.

Jim McKensy, Esq., clerk of petty sessions at Goulburn, sworn and examined:—

7921. *President.*] Do you hold any other positions? I am registrar of the district court, deputy J. McKensy, Esq., clerk of the peace, registrar of births, deaths, and marriages, curator's agent, district registrar in bankruptcy, electoral registrar, and registrar of the small debts court. I am paid as clerk of the peace, and registrar of the district court, £380, less 4 per cent., and I receive fees as registrar of births, deaths and marriages, which amount to about £60 a year. I am paid £25 a year as electoral registrar, but out of that I pay my assistant half. 15 Mar., 1895.

7922. *Mr. Robertson.*] How long have you been in this Service? Twenty years.

7923. Have you ever held the combined offices of clerk of petty sessions and land agent? Yes, at Grenfell.

7924. Do you think you could fill the dual office in an important town like Goulburn? I should think so, seeing that it is done at Bathurst.

7925. You have an assistant, have you not? Yes.

7926. At a salary of—? £100 a year, less the 4 per cent.

7927. You think you could combine the offices; you know the work of land agent? I know it very well indeed; I had two and a half years' experience of it.

7928. If you were asked to do the work, would you hesitate to do it? I would not hesitate a moment. I might mention that when I went to Grenfell I was told that I would never be able to manage the work, having had no previous experience, and I was strongly advised not to go, but I managed it all right and got a good report for it.

7929. As deputy clerk of the peace, you are supposed to render any services required at the quarter sessions? Yes; I have to assist the Crown Prosecutor in drawing indictments, and anything like that. I have to pay the witnesses, and render all the returns.

7930. Are your services brought into requisition at every quarter sessions? At every quarter sessions.

7931. Are there any ways by which economy could be effected in the conduct of the business in the circuit court? The clerks of petty sessions throughout the country could equally well perform the duty that the Crown Solicitor's clerk is sent here to perform, and we could do it with very little extra trouble to ourselves. At present we have to pay witnesses, and all that the Crown Solicitor's clerk does is to prepare an indictment, if necessary, and to make out the slips for us to pay the witnesses. This is done away with at the quarter sessions, as the witnesses produce the notices they get to appear at the Court, and the police officer in charge of the Court certifies to the distance travelled.

7932. Are the clerks of petty sessions throughout the Colony appointed deputy clerks of the peace? Yes.

7933. That would be a recognition of their ability to render all necessary services in connection with circuit court business? Yes.

7934. Then, the necessary work in connection with the circuit court, which is now done by a clerk from the Crown Solicitor's office, could be done by the clerks of petty sessions, and this would effect considerable economy? A great deal of economy; all the travelling expenses, for instance. A circular was issued to that effect when Mr. Wise was in office, and was carried out. Then they gave us five guineas for doing the work. The circular reads:—"The Attorney-General having, at the instance of the Crown Solicitor, suggested that as the number of cases heard at several circuit courts held in the months of April and October is not heavy, the clerks of petty sessions could, when it is found to be expedient to require them so to do, attend to these cases on behalf of the Crown Solicitor, and so render unnecessary the attendance of clerks from that officer's department, I am directed by the Minister of Justice to inform you that he approves of this suggestion, and when it is deemed expedient by the Honorable the Attorney-General that an officer from the Crown Solicitor's office shall be sent to any circuit court you will be required to act for the Crown Solicitor. It has also been decided to allow you in respect of such service a fee of five guineas on each occasion." This is dated the 5th of September, 1884, and is addressed to the various clerks of petty sessions. I have been asked whether it would not be a better arrangement if the present Crown prosecutors would act as Crown prosecutors at the circuit courts instead of as at present employing a barrister for each different circuit court. Mr. Wise carried that arrangement into effect. It was tried for a little while, and seemed to me to work well.

7935. When were these court-houses built in which we are now sitting? They were opened in 1890, I believe.

7936. What was the cost? £40,000 nearly.

7937. *Mr. Storey.*] The building and the land? Only the building.

7938. *Mr. Robertson.*] How often is the circuit held? Twice a year, and the district court and quarter sessions four times a year. There are two courts of quarter sessions, two circuit courts, and two extra district courts; that is, the buildings are occupied six times a year.

7939. How many days do these Courts sit as a rule? I think you could fairly average them at about four days each sitting.

7940. Then for nearly eleven months in the year to what use are these rooms put? No use at all.

7941. Are you aware that the temporary use of some of these rooms was asked for by the local Land Board? Yes, I am.

7942. To conduct the business of the Land Board pending the construction of some addition to the Lands Office? Yes.

7943. Was the permission granted? Eventually it was not, but at first it was arranged that they were to come in, but something took place which prevented that. I do not know what it was. They wanted to come into this room first, but that was objected to by Mr. Cowper. Mr. Cowper came here, and wanted to put them in the other rooms, but I pointed out that as my records were kept in the large room it would be necessary to give me some accommodation in the second room in my office for my records. The magistrate's court is used on an average about three hours a day, including Saturday, and it is also used as a bankruptcy court.

7944. *Mr. Storey.*] Do the Lands Department favour the amalgamation of the offices of clerk of petty sessions and land agent? They have never objected, as far as I know.

7945. But has there been any friction in Sydney between the Justice and the Lands Departments? I have never heard of it. Sometimes there is, I believe, a little friction as to who should make the appointment.

7946. But having fulfilled the duties of the two offices you say it could be done? I am certain it could be done, with this proviso that you would want a fairly good assistant. If I had a man like the one I have at present I should not be afraid to do it.

- J. M'Kensey, Esq.,
15 Mar., 1895.
7947. If you had an assistant? I have an assistant already, and he is one of the best junior clerks I have seen. He does not mind how long he works.
- 7947½. I suppose in such a case you would render to the Lands Department all returns connected with the Lands Department, and to the Justice Department all returns connected with it? Yes.
7948. If the work could be done in Bathurst it could be done anywhere? Yes.
7949. Have you estimated what the saving would be if that were carried out? Not right through.
7950. What is the average salary of a land agent? I think from £250 to about £400.
7951. What is the average salary of a clerk of petty sessions? They vary so much; about £250 or £300, I should think. They go down as low as £150.
7952. If this amalgamation took place, would the clerk of petty sessions get any extra allowance? In certain places I think he would be entitled to a little extra.
7953. Could a land agent do the work of a clerk of petty sessions? It would take him a little time to learn it. A land agent has to learn one Act only. We must have a thorough knowledge of several.
7954. Is it not a fact that in many country towns the duties of clerk of petty sessions are done by a constable? Yes; where they are very light.
7955. Such an amalgamation would save a great deal of money? Yes. Take a little town like Burrowa. They have a clerk of petty sessions and a land agent there. These offices could be amalgamated.
7956. Could not the Crown Prosecutors fulfil the duties of circuit courts the same as they do at quarter sessions? Yes; Mr. Wise did it.
7957. It should not involve much extra work or expense? There would be a considerable saving.
7958. And the Crown Prosecutors are able to do private practice in civil cases? Yes.
7959. *President.*] Do you receive the *Government Gazette* regularly? Yes.
- 7959½. Is it of great value, or could it be done without? It could be very much curtailed, at any rate.
7960. What part of it would be sufficient for you? I think if everything were tabulated there would be a saving. The licensing courts are tabulated, but a separate advertisement appears for each meeting of the local Land Boards. I suppose there must be an official organ.
7961. You would not like to be without it? I would. As far as I am personally concerned, I do not want it.
7962. But it is necessary you should have it for these particulars? It seems to me a perfect waste of money to advertise these matters in the *Gazette*, as no one ever sees it but ourselves. No person will look in the *Gazette* for the notice of a Licensing Court when it is published in the local paper.
7963. Then you could really do without it? I could; I do not want it.
7964. Would it be the same with other officers? I think it would be almost necessary for land agents to have it, unless the present Act were altered; but clerks of petty sessions certainly do not want it.
7965. *Mr. Robertson.*] Could you suggest to the Commission any saving in connection with the Courts of petty sessions? The police magistrate for Goulburn could take Moss Vale and also Yass. The police magistrate at Wagga Wagga takes Cootamundra, but he could visit Murrumburrah and, I should think, Young. At Albury it is almost necessary to have a police magistrate, as it is an important border town. In order to save travelling expenses of police magistrates in visiting small places—which must be very great—I would suggest that the clerk of petty sessions should be appointed a magistrate (I do not say a police magistrate) and given full powers as chairman of the bench of magistrates. With the assistance of the unpaid magistrates the whole of the work off the railway line could well be done. And where there is no clerk of petty sessions, but an acting clerk of petty sessions—that is, a constable—I should say the local magistrate should be called upon to do the work. Any important case could be sent down for trial to the larger towns without necessitating the trouble of a police magistrate visiting the small localities.
7966. Could not small debts cases be dealt with by the local justice? Just as well as not.
7967. Or by the clerk of petty sessions? Yes.
7968. *Mr. Storey.*] You would not recommend that the unpaid magistrates should have the power themselves? No; except in certain cases where there is a constable acting as clerk of petty sessions; then the local magistrate could do it.
7969. *President.*] When you speak of a clerk of petty sessions being made a chairman or appointed a magistrate, what formality would be observed in such an appointment? At present I do not think there would be anything necessary but to appoint him as a justice, and empower him to sit on all cases.
7970. *Mr. Robertson.*] Do you not act in the absence of the police magistrate? I am not a justice of the peace.
7971. If you were a justice of the peace you could act? No; we are only allowed to act in certain cases.
7972. You could act in cases of drunkenness? Yes.
7973. But not in cases of theft? No.
7974. But if you were appointed a justice of the peace you could? Yes; if the department would allow us.

Oby Andrew Willans, Esq., Crown lands agent, Mining Registrar, and Warden's Clerk, of Goulburn, sworn and examined:—

- O. A. Willans, Esq.,
15 Mar., 1895.
7975. *President.*] As Crown lands agent would you roughly sketch the nature of your duties from the initiation of an application till you are done with it—say, a conditional purchase application? The application is lodged with me, a receipt is issued to the applicant for the money paid, the application is entered in a register, and returns are made to the Land Board Office, the Treasury, the Lands Department, and the Auditor-General's Office.
7976. At what stage has the applicant to make a personal appearance? When he tenders the application, if it is an original one; if it is an additional one he can do it by agent.
7977. He need not attend before the Land Board at that stage? Not at that stage, because the application is sent by me to the Land Board.
7978. If it is granted, what is the next process? I believe he generally has to appear before the Land Board, when the application is called on for granting. It is surveyed first of all, and then, in the ordinary course, he is summoned before the Land Board.
7979. It is either granted then or refused? Yes.
7980. You keep a record of it, as to whether it is granted? The Land Board informs me by a return when it is granted or disallowed.
- 7981.

7981. Have you any part in following up the matter—for instance, do you see that the conditions are fulfilled? No.
7982. Or do you ascertain that they are fulfilled? No; but at the end of three years the man makes a declaration before me or a justice of the peace as to whether he has fulfilled the conditions.
7983. Then he has to appear before the Land Board on a certain day? He generally appears before them as to confirmation.
7984. If it is confirmed he gets his certificate? It is confirmed first, when he lodges his application. At the end of three years he makes a declaration, and at the end of five years another declaration, and then, if everything is complete, he gets his certificate.
7985. Which is as good as a fee simple? Yes, quite as good. He then has to pay the annual instalment.
7986. Suppose he does not pay the annual instalment? The selection is liable to be forfeited.
7987. Who sends him a notice? Of late years the notice has been sent by me; the Lands Department also notify him.
7988. But you are responsible for sending the notice? I am responsible to the Treasury, not to the Lands Department.
7989. He has to make all payments to you? To me or to the Treasury. The majority of payments are made locally.
7990. Have you very constant and onerous employment in receiving and attending to these matters? Plenty.
7991. You have continuous work? I can give you a statement for last year. I did 290 hours 45 minutes overtime last year, for which I received nothing. I cannot exactly say I received nothing, because I have been allowed £5 for copying out the old registers and renewing them, and part of the time occupied in that work is included in that total.
7992. Do you do all the work yourself? Yes. I have been allowed an assistant in March and April, when the work is at its heaviest; but this year I am not to be allowed one.
7993. Supposing all records in other sections of the Government offices were destroyed or lost, could you, so far as your district is concerned, supply complete information as to conditional purchases still current, with money owing on them? Yes, I think so; because the conditional purchases are entered into my book completely. As payments are made, or notifications come from the Board, they are all entered.
7994. And that statement you could furnish would be absolutely reliable? Oh, yes.
7995. Are you aware whether the particulars you possess are duplicated, triplicated, or quadruplicated anywhere else? I believe the Land Board has also a register, but what they keep in it I do not know; perhaps the particulars are not so full as in mine.
7996. Yours is perfect? Yes.
7997. Have you reason to believe that there is any other Government office in which particulars are taken? Not as fully as in my office. Of course you could get good particulars of the application from the Land Board Office, because they hold the original application; but they have not anything to do with payments. They do not know when the payments are made; they only hear about the first instalment.
7998. Do they not know when the last instalment is paid so that the grant may be issued? No; I do not inform them anything about that. The Treasury know all about the payments; they are the only ones I inform. The Lands Department know from the Treasury when the last instalment is paid, and the deed is issued from the Lands Department to the Registrar-General's Department.
7999. Do you know whether the Treasury have a complete account of all the conditional purchases, and the amounts that have to be paid upon them? They have a complete account of the amounts, but what kind of register they keep I do not know. They can always check me if I send down a wrong amount.
8000. You do not know anything of the Auditor-General's Department? No.
8001. You have reason to believe that in your own department, the Land Board, the Department of Lands and the Treasury at any rate, there are records kept more or less accurate of each conditional selection? Yes; but what the actual records are outside my own I cannot say. The Treasury is very accurate in reference to money matters.
8002. There is nothing you could suggest by which we could diminish the outgoing of the Government in the matter of expenditure? I do not think there is in my office.
8003. *Mr. Robertson.*] How long have you been in the Service? Since September 1875.
8004. What positions have you occupied? Always the same—land agent.
8005. Do you think it would be possible to combine with the office of land agent any other offices? Here in town?
8006. Yes, take Goulburn? Well, not in my office I think, because, as I have shown, I am pretty full at the present time. I cannot possibly do my work during office hours at present.
8007. Have you any knowledge of the business throughout the Colony? I dare say in other places it might be possible.
8008. What offices do you think could be amalgamated? The offices of clerk of petty sessions and land agent at some places could be amalgamated; but it is not advisable to amalgamate them, because they are under two heads—the Justice and the Lands. But I have worked in an office where there were two together.
8009. You think they are offices which cannot be amalgamated because they are in different departments? In certain districts they could be amalgamated, but it is not advisable as a rule.
8010. I quote from the Blue Book for 1893;—are you aware that there are sixty-four towns throughout the Colony where the offices are amalgamated? I know there are a lot amalgamated, but I do not know how many.
8011. So, although you think it can be done, you do not think it advisable? I do not think it is advisable unless the work is light.
8012. What is the reason of your thinking it is not desirable? Because one office interferes with another. Say on Thursday, selecting day, the land agent might be wanted in Court. Which duty is he to attend to first. If you keep a selector waiting five minutes, perhaps it means a ballot and he loses his land.
8013. Do you not think that difficulty could be obviated? Yes, if you had an assistant competent to go into the Court and take depositions; then the land agent need not leave his office on such a day. I was acting for thirteen months in Mudgee.
8014. And you found no difficulty in discharging the duty of both offices? Not with the assistant I had. I used to send him into the Court to take depositions.

O. A.
Willans, Esq.
15 Mar., 1895.

O. A.
Willans, Esq.
15 Mar., 1895.

8015. Do you know why the offices at Mudgee were divided after you were transferred? I believe they were divided because the Ministers could not agree upon whom to appoint. Each wanted to appoint his own officer.
8016. *Mr. Storey.*] What are your duties as mining registrar? Everything under the Mining Board Regulations.
8017. What does that mean? All applications taken up under miners' rights.
8018. Are there many of these in Goulburn? In one week there will be several, and in the next fortnight nothing.
8019. As warden's clerk what are your duties? You could hardly separate them from those of the mining registrar. I generally sign as mining registrar. The warden's clerk can issue summonses, but the mining registrar cannot.
8020. There is no warden himself here? No; the nearest is at Berrima.
8021. Is much of your time taken up in these two departments? Not much.
8022. On an average, how much a day? I could hardly say.
8023. Do you receive any fees for this? Yes; I receive fees and a percentage on the collections.
8024. In the case of amalgamating the offices of clerk of petty sessions and land agent, could the clerk of petty sessions perform the two duties—is it done anywhere? Yes; in Mudgee, the whole lot were together. It is generally the clerk of petty sessions who is registrar.
8025. You have been the whole twenty years in the Land Agency branch? In Queanbeyan when I started, my father was filling the combined offices, and I was appointed his assistant.
8026. What salary is attached to that office now,—the Goulburn office? £290; then there is the 4 per cent. taken off that.
8027. Is the overtime you spoke of caused by the extra work of the office? Just carrying out the ordinary work.
8028. You had not anything special to do that year? Part of last year there was some special work; that is about the amount of overtime for the year. The special work I had to do last year was to re-copy conditional purchase registers. This work started in June.
8029. How many of them are there? I copied over three thousand selections;—that was four registers of about 250 pages each.*
8030. *President.*] You transcribed from an old book to a new? Yes; not the full particulars, but the old book is still kept in case I want any of the descriptions.
8031. If an amalgamation of the offices of clerk of petty sessions and land agent were to take place, could a land agent such as yourself fill the office of clerk of petty sessions? It is a thing a land agent would soon get into. I have never had much to do with the clerk of petty sessions, and I know actually very little about the work of such an officer.
8032. I suppose a person possessing acumen and a copy of Judge Wilkinson's book could soon qualify himself for the position of clerk of petty sessions, or even as a police magistrate? I think so, if he took the trouble to go into it. Wherever you go you will always get help from somebody. As to the keeping of accounts, I do not find any difficulty in that.
8033. *Mr. Storey.*] Will not the work of the land agent necessarily decrease in consequence of the land being taken up;—is much more land available for selection in this district? Not very much, but still the work goes on. The inquiries at my office average eighteen and a quarter per day, and the year before it was sixteen and a half.
8034. Are they personal inquiries, or by letters? There were about fifteen personal inquiries and about three by letter.

Walter Dickinson Armstrong, Esq., Draftsman-in-charge of local Survey Office, Goulburn, sworn and examined:—

W. D.
Armstrong,
Esq.
15 Mar., 1895.

8035. *President.*] Your duties as draftsman-in-charge are connected, of course, with the selection of lands? The administration of the land law.
8036. Will you tell us exactly what is the routine of your duties? I have supervision of the whole drafting staff, and all matters affecting the land administration come under my notice.
8037. How many draftsmen have you under your care? Six, and a clerk.
8038. And they are staff officers? All staff officers now; two have been made staff officers recently who were temporary draftsmen.
8039. Are they among the highly paid draftsmen? At present my own salary is £402 10s. That is, of course, without deducting the superannuation. The next in seniority in the office has a salary of £308; the next, £267 10s.; the next, £245; and the next are the two who have lately been placed on the permanent staff at £150 each; the next is a probationer, at £100, who is going up for examination shortly to take a higher position; and the next is a clerk.
8040. And have you absolutely full employment for all these officers? Well, we could do with more work.
8041. Under such circumstances there ought to be room found somewhere else for those you can spare. You, of course, have to recommend to your superior officer anything of the kind, or to inform him of the position of affairs, so that he may exercise his discretion? Exactly.
8042. And have you done so? Yes.
8043. How many did you mention? The reason why we have not represented it to head-quarters is this: The prospect of a new Land Bill always causes a lull in the work, and we thought that when the new Land Act came into force it would cause more work. If, as proposed, the land will be classified, and the inferior land put at a lower rate, I have not the slightest doubt we shall have any quantity of work.
8044. Quite sufficient to fill your hands? Yes.
8045. But if the present state of affairs continues? I shall certainly recommend that one draftsman and a clerk be got rid of. We would utilise one draftsman for the clerical work.
8046. Who is your immediate superior officer? Mr. Deering, district surveyor.
8047. Are your staff thoroughly trained draftsmen? They are thoroughly trained draftsmen. 8048.

* NOTE (on revision):—My reply—"four"—was only to the number I copied, not to the number at use in this office. The number of conditional purchase registers in use at this office is eight.—O. A. W.

W. D.
Armstrong,
Esq.
15 Mar., 1895.

8048. Do you consider they are well paid or moderately paid? I do not think they are overpaid, and I think if we had a rush of work they should get more remuneration. They have all been reduced as all the Civil Servants have. When I came up here I received £550 a year. Two annual increments that were put on by the Civil Service Act were taken off by Act of Parliament, and when the Board of Inquiry which was instituted in the Lands Department came here they assessed a draftsman-in-charge, or the chief draftsman as he was then called, at £425. Then the 10 per cent. was taken off, which reduced him to the present salary. When we came out of Sydney there was an inspired paragraph in the paper to the effect that all the picked officers of the Lands Department were sent out as pioneers for the new Act.

8049. Do you happen to know whether the work done by your staff is duplicated in the Lands Office? We supply them with all information, and they have a duplicate set of maps in Sydney, and every week we send down a list with a tracing of the form of the application, and that is placed on the maps in Sydney. We do not receive that application from the land agent until about Monday. It is made on Thursday, and we send it down at the end of the week.

8050. That is a delineation of the land applied for? Yes.

8051. And, of course, it is for the Land Board to deal with? That has nothing at all to do with dealing with the case. That is only to inform the head office that such an application has been made, and to give them the form in which it has been made.

8052. Have you made drafts or sketches of land which is open to application in connection with this information bureau that is about to be established? We are making now a very extensive return of all the vacant land in the district, giving the number of the portions, where they are measured, and particulars as to the character of the land, the water supply, the temperature, and the means of communication.

8053. You can tell us, I suppose, how many applications for selections come in per month on an average? We get about twenty, I suppose, per month. I am only speaking from memory. One month we may get thirty, another perhaps only twelve.

8054. Are some of them very difficult to delineate? It is not the delineation so much. Every man is trying to get the best of the Government. That is a known fact, and it is our duty to stick strictly to the letter of the law. What we do is to write out a report for the chairman, pointing out the difficulties in the case, and any questions that have been solved in the Appeal Court. Of course, as you know, the law is a very difficult one to manage.

8055. Would your department be able to protect the Government, or, we might say, the people, in a case such as this: A man wished to select (say) 80 acres, in the form of a parallelogram, alongside a road, the longest side being to the road? We never allow it.

8056. You would insist on his taking the land with a certain frontage to the road, and (say) double the depth back from the road? Yes.

8057. You would easily discover it if he took the land as I have suggested? Of course; in some cases it is a simple matter, but in others, where there are adjoining measurements, we have to depart from the regular form.

8058-9. But would you send one of your surveyors? Not in that case, because we have the creeks and frontages laid down on our maps, and when an application is made it is described as being a certain distance from a previously fixed point, and we know how to delineate that on the chart.

8060. Then, if the man applied for his 80 acres with the road frontage the longer distance, you would not comply with it? We would recommend it should be modified according to the Act. If he refused to take it, his application would probably be disallowed altogether.

8061. *Mr. Robertson.*] Do you think it would be expedient and advisable to make the district surveyor the chairman of the Land Board? I think it could be very easily done.

8062. It would require some adjustment of offices, I suppose? A slight adjustment, I suppose. The district surveyor might take the duties of chairman, if they were not too heavy, and he had not much travelling.

8063. And would he require the assistance of the local members? Of course I am not speaking with any experience of the matter, as I have been very seldom at the Boards, but from what little knowledge I have I should think the two extra members are of little or no use on the Board.

8064. So far as you are able to judge, there would be no loss of efficiency if these offices were abolished? I do not think so.

8065. If an amalgamation of the offices took place, could you undertake the control of the work in addition to the work which is under your control at present? Yes. I have now authority from the Minister to approve of plans, and to act in the office in the absence of the district surveyor.

8066. And you could undertake the supervision of the work in the combined offices of district surveyor and chairman of the Land Board? I could undertake the duties connected with the office, the clerical work and the drafting work.

8067. Do you think there would be a further economy effected by such an amalgamation? I should think so. I could not tell how many extra assistants it would take, but I think with one extra assistant I could do the work of both offices.

8068. From your position in the Service, and from the nature of the work you perform, you are acquainted largely with the kind of business that would be done in the chairman's office? Certainly; yes.

8069. You do not think you would require the whole of the chairman's staff to accomplish the work? I do not think so. Of course there would have to be a deposition clerk.

8070. Even at the present time, do you think that a deposition clerk is necessary to accompany the chairman in all his migrations? The chairman could take his own depositions, of course.

8071. It might be very inconvenient at times to take his own depositions, but could there not be some arrangement by which a Government officer in the town where the Court is being held might take the depositions? I should think so.

8072. Or the clerk of petty sessions? Decidedly.

8073. Or the land agent? Decidedly.

8074. Or some other officer in the Service? Yes.

8075. Then if that was so, do you think there would be any necessity for the travelling expenses of the deposition clerk? No; the substitute for the present deposition clerk would have to perform the duties.

8076. The clerk who might be appointed in the town where the Courts were being held would be able to take the evidence down? I think so.

- W. D. Armstrong, Esq.
1 Mar., 1895.
8077. You said that the Act of 1884 brought you and a great many others from the head office into the country? Yes.
8078. What do you think was the purpose of that Act? Decentralisation.
8079. And was it intended that the work of surveying should be carried out to its completion in the country offices? We understood so.
8080. Well, could that be done? I think so.
8081. Do you know of any insuperable difficulties in the way? I never thought there was any difficulty, the officers are all capable, and have had a training in the head office.
8082. Do you know of any duplication of work now taking place in the head office, or of any work being done in the Sydney office that might be better done, or at least as well, in the country offices? I think that the road work could be done. When we started in the country the reserve work was not in our office, but when it came to us we found no difficulty about it. We understood that when we came to the country we were to get the road work also, but the officer who has been in charge of the Roads Branch has been there for many years.
8083. Where is the compilation done? In the head office, and they have a large staff.
8084. Could that work be done in the country offices? I think we would want an extra draftsman.
- 8084½. Would you say the proper place for the compilation work would be in the offices of the district surveyors? I think so; new compilations could be made on condition that the original plans were in the district office. We have not only the plans of measured portions, but we have what we call feature surveys, those are the surveys of rivers, creeks, &c, and they are all kept in Sydney. There are miles and miles of these feature surveys, and they cost a great deal. The officers in Sydney have access to all these documents; but if we had them here we could compile the same as in Sydney. New editions of parish maps could very easily be made in the district offices.
8085. But at any rate in these offices, established through the Act of 1884, the work could be completed through the district surveyors? Undoubtedly.
8086. Have you compared the number employed in the Survey Branch at the head office with the number employed in the combined survey offices in the country? No.
8087. Have you seen the last Annual Report of the Lands Department? Yes.
8088. Have you noticed by the Fourteenth Annual Report of the Lands Office that there are 162 officers in the Survey Branch, Sydney, with salaries amounting to £34,554, and in the combined district survey country offices there are 197 officers, with salaries amounting to £51,905? I did not notice it particularly.
8089. Are you aware of any duplication of the work done by the officers in the district surveyor's office? Not in the matter of administration.
8090. But of actual work, not administration, compiling, drafting, and charting? After the plan is examined and approved, a tracing is taken of it, a heliograph is taken of that and forwarded to the head office, and that approved plan is charted on the parish maps in Sydney.
8091. Could these parish maps be completed in the district surveyor's offices? They could be completed every three months, the same as is done for the land agents. We supply the land agents with parish maps, charted up to date, every three months.
8092. Would it require additional assistance in the country offices? I hardly think so, because it would be done at the same time as the land agents' maps.
8093. Well, if it were done in the country offices, would that mean that there would be a considerable saving at head-quarters? If they did not keep duplicate maps in the head office it would certainly be a saving.
8094. *Mr. Storey.*] You have had a long career in the Civil Service—since 1863, I suppose you have gone through the vicissitudes of all Civil Servants? Yes.
8095. You know how the Service is managed at present, that there is no controlling Board of any kind, that it is virtually managed by the Minister? And the Under Secretaries.
8096. Now it must have occurred to you during these many years that some better way of managing the Service could be devised; could you give the Commission any ideas on the subject? There must be some controlling Board, whether it is an Under Secretary or anybody else at head-quarters. So long as we have a Minister who comes in without any knowledge of the Land Act, he must have some adviser.
8097. I am speaking more with regard to appointments and promotions? We are supposed to fall back on the Civil Service Board.
8098. Are you in favour of a Board having the control of the Civil Service? I should favour an independent Board; it would really be governing by Commission. We have examples of that with the Railway Commissioners. They are fairly successful.
8099. Then, with a Board of that kind, do you think the Civil Servants themselves would have better justice meted out to them? That is a very hard question to answer, it depends entirely on how it is constituted.
8100. As a Civil Servant, what would be your ideas as to the constitution of such a Board? It should be composed of men with large ideas who would take the whole Service and manage it thoroughly.
8101. Upon what lines would you say they should manage it;—supposing you were one of a Board, what would you do? It is a very wide question.
8102. Do you think a proper starting point would be the classification of the Civil Servants themselves into grades. Take your own department of draftsmen;—could you grade any of them? Yes.
8103. And fix a salary for a certain grade, so that one man should not be getting more money for the work he is doing than the work is worth? Yes.
8104. Is not that a general fault of the Service? Yes, I suppose it is a fault in the Civil Service. Many men who are not deserving of promotion have been promoted.
8105. And is it not a fact that many men are blocking the way of really very competent officers? I have heard so, but do not know of any case.
8106. Have you ever had men sent to your department whom you were told to take on? No.
8107. You have heard that such is the case? Yes. I think the Survey Office has been as fair as it possibly could be in that respect. All the men that have come into the office have undergone an examination and have been promoted—I am speaking of the juniors—as they became efficient. I had a great deal to do with that in the head office. I was one of the examiners of the draftsmen, and I always contended that any draftsman to get promotion to a high class should serve his time in what we call the charting branch; it has to deal with the surveyors' plans and the administration of the Land Act.

8108. Was there any absolute system in the office, or was it only a theory? It was carried out from the recommendation of the head of the branch, and that was sent on to the chief draftsman, who looked into the case, and approved of it, sending it on to the Deputy Surveyor-General. At that time the Deputy Surveyor-General was a man of large experience and had a thorough knowledge of all the men. I think in that way they have been fairly treated.

W. D.
Armstrong,
Esq.
15 Mar., 1895.

8109. That would be the professional side? Yes; I know nothing about the other.

8110. Are you in favour of the Superannuation Fund? Certainly.

8111. You think it is a proper thing? Certainly.

8112. Taking it from a junior's point of view, do you think it would be a good thing? It certainly would be a great loss to me if the Superannuation Fund were done away with, leaving me stranded in my old age.

8113. But still in a large Service like the Government Service of New South Wales, do you not think it is a proper thing to have? Decidedly.

8114. With considerable improvements upon the present one? Yes.

Charles Coane, Esq., Resident Engineer, Roads and Bridges Department, Goulburn, sworn and examined:—

8115. *President.*] You might tell us what the routine of the duty is in this department as it comes before you? The money to be spent on roads and bridges is first voted by Parliament, and we are informed through the Account Branch that certain moneys are placed to the credit of certain roads on the schedule. Then we have to devise a scheme of expenditure on those roads, that is, to find out the worst places on the roads, measure them up, get out specifications, and let contracts for the necessary work. We have to submit this scheme of expenditure to the divisional engineers for approval. If they approve of the scheme, we call for tenders for the work. We have also to supervise the work of what we call the maintenance men—those who are regularly employed on the roads—to direct them what to do, and to see that they are doing a fair amount of work.

C. Coane,
Esq.
15 Mar., 1895.

8116. Is not an inspection of particular roads made before the voting of the money takes place? Before the vote of the money takes place the amount to be voted is recommended by us after examination. We make a rough estimate of what money may be required for the next year.

8117. So it is not done haphazard? Oh, no; just now, in fact we have orders to get ready to inspect and ascertain what money will be required for the latter part of 1895, and the first half of 1896.

8118. Then, in order to be able to do that properly, you must have a good many inspectors? Well, we have not.

8119. How do you ascertain the condition of the roads? I go over them myself; I average about 400 miles a month travelling on the roads.

8120. In all kinds of vehicles? Yes; of course we keep our own horses and vehicles.

8121. How many horses and buggies do you keep? I keep only one sulky, and two horses.

8122. And you have a man? We have to find our own men.

8123. But you are allowed for that? That is included in our allowance. We have to find our own men to look after our horses. When we do survey work we use the maintenance men.

8124. *Mr. Robertson.*] What is the amount of your equipment allowance? £150 a year; out of which we buy new horses, and keep our horses and trap.

8125. *President.*] You find it is very much in excess of actual disbursements? When you come to knock up horses and get new ones it comes near the amount.

8126. Horses are very cheap now? Yes; but you will not get a decent horse under a fair figure.

8127. How many years' service will it take to knock up a good horse? You might knock him up in three months' service. If you are in a metalled road district such as this one you knock them up more quickly. I have knocked one up here in three months. If you are in a soft country, and work your horses turn about, and not run them too long, then they may last for years.

8128. Do you find your recommendations as to the amount estimated to be spent on the roads adopted as a rule? They are generally adopted.

8129. And when the work is finished, how do they compare with the actual cost? Our estimates are generally slightly in excess of the actual cost. In very few cases we under-estimate. As a rule, we allow fair prices for the work.

8130. You discriminate considerably in laying out the money as to whether the roads are of great public utility, or whether they are a sort of by-roads not much used? Exactly. We generally endeavour to work out from the centre. For instance, from Goulburn we do the worst places as you go out from the town, not as you come in from a distant part.

8131. And in the matter of bridges, I suppose it is a very difficult thing to decide as to the levels? We always take sections for a bridge, and find the flood-levels.

8132. Many people apply for a high-level bridge, and you give them a low-level one? Yes.

8133. Of course, it is a very benevolent and useful occupation that of making roads and improving the highways, and there is an immense deal to be done in the colony in that way still? Undoubtedly.

8134. But could you suggest any means of economising;—do you think the recommendations are made in too liberal a spirit in view of the state of the Treasury? I think the money is sometimes spent where it might not be.

8135. Is local or political influence ever brought to bear upon the officers of the Government? I think there is, if they like to give in to it.

8136. To improve places which you would not improve if left to your own will? I think a good deal of local influence is sometimes brought to bear.

8137. Successfully? Oh, yes.

8138. Which, of course, you deprecate? Oh, yes.

8139. It interferes with your plans no doubt, after you have made your specifications and plans, to be told that such and such work must be done? Sometimes that happens; in fact I know that work has been ordered entirely outside of our recommendations.

8140. You spend in this department a very large sum of money every year—it is neary £200,000? We spend more than that every year.

8141. I mean in this division? Yes; I daresay we do.

C. Coane,
Esq.
15 Mar., 1895.

8142. Would it seem reasonable and appropriate to you if a Board of Commissioners were appointed by the Government, consisting of intelligent and very high-class honorable men, three in number we will say, to have full control over appointments to the Service, and to be free altogether from political influence, and to have also an advising or even an approving power over disbursements; one of these Commissioners at least to have a very intimate acquaintance with the Civil Service and the other two to be men of high attainments and integrity? I think it would be a very good thing if there were such a Board.

8143. You think it would be for the advantage of the Service all round? I do, indeed. More than that, I think there should be some competitive means of getting into the Service, in the first instance.

8144. That appointments should be competitive, and guided by merit more than by influence? Yes; I know from my own experience that as a stranger you would have very little show without influence.

8145. I do not know whether you are aware that there is such a Board in Queensland, consisting of three Commissioners, one of whom has been a Civil Servant all his life, and the others are high class men; no appointment is made without their concurrence or recommendation? Yes; you are alluding to the whole Service?

8146. Every section of it? I think, in the first instance, it should be on the English model of competition.

8147. Did you say you have not been long in the Colony? I have been a long time in the Colonies—over twenty-four years, but only six years in the Public Service.

8148. Your present appointment took place in September, 1893? It was November, 1892.

8149. Have you given any or much consideration to the Superannuation Fund question? No; very little. I never paid any money to it.

8150. But do you approve of such a thing as the Superannuation Fund, to be contributed to by the Civil Servants? I think it would be a very good thing if the Civil Service were a permanent one; but there are so many temporary hands that I think it is rather hard lines to have to pay with the chance of being thrown out in a few years.

8151. But the temporary men are not officers, you know? No; they are not.

8152. But there should be a fund for the staff officers, pure and simple? Yes.

8153. Do you think such a thing is desirable in the Service? I fancy it would be rather a good thing, combined with a system of insurance.

8154. But, besides the contribution by the officers to the Fund, entitling an officer when the time came to a pension, there ought to be an insurance on his life as well? I think it ought to form part of an Insurance Fund. They would form part of one scheme, you may say.

8155. *Mr. Robertson.*] What work have you been engaged in during the last six years? I have been engaged in surveying and engineering works since 1880. I qualified myself as licensed surveyor in 1884, but previous to that I had been engaged in engineering work. I was for three months in the Mines Department as assistant surveyor and draftsman in the Public Parks Branch, under Mr. Cooper. When the department was broken up I went on licensed surveyor's and private work, and I was in the Harbours and Rivers Department for three years.

8156. You have been engaged in the practical work of engineering for twelve or fourteen years? Yes, say twelve.

8157. What position did you hold when the road superintendents were created resident engineers? I was not in this department at all then; I was in the Harbours and Rivers Department.

8158. Are you aware that the road superintendents holding office at the time were called resident engineers? I am aware of it.

8159. Have you come across many of these resident engineers? A good many of them.

8160. Are they all Civil Engineers? A good many of them are not.

8161. In the course of your work, could you undertake to inspect the watering places on the stock routes? Yes, I could.

8162. Are there any other works of inspection that might possibly be combined? I think there are a great many.

8163. Could you tell the Commission what they are? I think there are a lot of little works which are done by, say, one department of the Public Works or another—the Harbours and Rivers or Sewerage, for example—who send an officer up perhaps 150 miles to attend to them where an officer on the ground would be quite able to do the work, that is, if he had any knowledge of engineering worth speaking about.

8164. There appears to be in the various departments a delicacy on the part of each as to combining work with another department? Yes, there does.

8165. There seems to be forgotten the fact that the Service is one great Service, and that where it is possible for one department to help another it is the duty of the other department to give the required help;—have you found this to be so in travelling through the country? The jealousy you speak of?

8166. Yes, and delicacy, whatever you like to call it? In one or two instances I have taken notice of things which I thought were wrong, and have written privately to an officer of the department, calling his attention to it, but not officially, because I might be blamed.

8167. You have done that in your private capacity? Well, semi-officially, you may call it.

8168. Have you noticed that inspectors of public school buildings, and inspectors of all public buildings other than public schools, have been travelling in the same district, and perhaps in the same town? Yes; I have.

8169. Do you not think that is work that could be undertaken by one class of inspectors? Yes; I think so.

8170. You would not think it was necessary to have two inspectors in one town, one to examine the post office and the other to examine the public school buildings? Perhaps in a large building like the post-office they would want a man of greater capacity than the man who could inspect a small school.

8171. I am speaking of the big public schools? I should think one man is capable of performing the two duties, but I am not an architect.

8172. We have been told by previous witnesses that the small unimportant schools are not inspected by practical builders or clerks of works, but by the educational school inspectors? Yes.

8173. They report upon the wooden structures? I believe they do.

8174. *Mr. Storey.*] What is the extent of country you have under your supervision? About 3,000 square miles, I think.

8175.

8175. Who is your responsible chief? The head is Mr. Hickson, Commissioner for Roads.
8176. Are you directly responsible to him? No; to the divisional engineer at Wagga Wagga, Mr. Hanna. He gives us our instructions, and we report to him.
8177. You take your instructions from him as to starting works? We submit all our specifications to him, and everything is passed through his hands; but we send vouchers direct to the accountant in duplicate, and the accountant forwards the duplicate to the divisional engineer, so that he may be acquainted with the work that is being done and the money that is being spent in the district.
8178. What is the nature of the works you carry out? We open up new roads, improve them, keep old roads in repair, keep bridges in repair, and build new bridges. The actual building of large bridges is really carried out by the Supervising Engineer for Bridges. We supply the information from which they get out plans for large structures.
8179. I think you said, in answer to the President, there are many cases where works are carried out which, in your opinion, are unnecessary? Some such cases have come under my observation.
8180. To what do you ascribe the fact that these works are done? I ascribe it to political influence in obtaining the money to carry them out.
8181. In that way the money of the country is expended wrongfully? I do not say such cases occur every day, but I think such cases have occurred.
8182. I suppose the only way in which that could be stopped would be to appoint some such power as the President suggests? Probably that would be one way of removing political influence. I may mention that there are 446 miles of road in this district on the schedule for which there are annual grants, about 200 miles of unclassified roads, and seventy-two bridges, besides numerous culverts.
8183. You have to look after the whole of these? Yes; and I am doing it at present single-handed, and have been doing it for some time.
8184. Where is your office? In a rented building, over the Bank of Australasia.
8185. *Mr. Storey.*] How far in a direct line do you go? To the Wombeyan Caves—about 47 miles.
8186. You go within a radius of 50 miles? I am inside a radius of 50 miles. Roughly, I should say the radius is not more than 35 miles.
8187. *President.*] I see some of the resident engineers whose names are given in the list have been a considerable time in the Service—some since 1876, 1874, 1873, and 1867—and they are receiving very considerable salaries; now these are not, I suppose, what might be described as certificated engineers? I do not know. I do not know enough of them.
8188. You do not know whether they are practical men who have just been forced up? I think some of them are well qualified men.
8189. And some of them might not be? Of course I could not say. There has been a great improvement in the last few years there.
8190. Men who have probably acquired a great deal of practical knowledge? They must have acquired a good deal of practical knowledge.
8191. They could form roads with the proper convexity? Probably better than a master of engineering.
8192. As far as you are aware, they are efficient men in their department? Well, I presume they must be, or they would not be kept there. Of course I have had very little experience in the Roads Department yet.
8193. But do they fulfil the same duties as you do;—have they also districts under their supervision? Yes; more or less, larger or smaller.
8194. Then each in his own district superintends the working of the labourers on the roads? Yes; and lets contracts, supervises contracts or prepares plans, as the case may be, for the various works.

Cecil Arnold Middleton, Esq., Telegraph Master, Goulburn, sworn and examined:—

8195. *President.*] You have nothing to do with the Post Office? No; but of course we are all one department, as it were, under the Postmaster-General.
8196. There is a postmaster distinct from you? Yes.
8197. How many operators have you in your office? Seven.
8198. And what are the hours of the office? From half-past 8 until 10 at night.
8199. Always? Yes; we open to the public at 9, but we have to be in the office at half-past 8.
8200. Till 10 at night? Not the whole of us; there is a double staff. Three come on at half-past 8 in the morning. I make the fourth, because I am an operator. They go off duty at 3, and then four come on from 3 till 10. Four come on in the evening, because the returns have to be made up and posted that night. I leave, as a rule, about 5 o'clock; but return in the evening to see that everything is allright. If the line is working badly I might have to stay. Although I leave the operating-room, very often I just go into the next room, and am always within call.
8201. At certain periods of the day there is not so much stress of work? It is not the amount of work; it is the instruments that require attention. We have ten sets of Morse instruments in the office, and the quadruplex system, which requires three men occasionally to itself, but if in full swing four would have to attend to it. That, however, seldom happens. Of the other instruments, five are quadruplex lines running into our office which go on to Melbourne and Adelaide, and are disconnected, excepting for tests; but we are liable to be called at any moment to the other six. That is where the difficulty sometimes occurs, because four men cannot attend to six lines. An operator might be engaged answering Yass, and the others receiving business—one from Sydney and another from Crookwell. If I were disengaged I would attend to the public counter. When anyone comes to the counter one of us, if all are engaged, would have to open the key, stop the business, and attend to the public, as we cannot keep the public waiting.
8202. Your impression, then, is that your staff is barely sufficient? I would not say that. Of course the public would be better served if we had another one.
8203. You would be able to have one always at the counter? Yes; but even as it is now, we do not allow the public to suffer any inconvenience; you can deal with a person at the counter in a moment.
8204. Your operators are sometimes attending at the counter, or sometimes operating, just as circumstances require? Yes; perhaps they are in the middle of a telegram, when they have to open the circuit for a moment or two and go to the counter. When their business is finished there, they go back to the instrument and proceed with what they were doing. In a very urgent matter they would go on with the instrument, and call somebody else to attend the counter.

C. Coane,
Esq.

15 Mar., 1895.

C. A.
Middleton,
Esq.

15 Mar., 1895.

8205.

C. A.
Middleton,
Esq.
15 Mar., 1895.

8205. Do you consider your operators are sufficiently well paid? They are fairly well paid. Of course I would like to see some of the older hands, who are faithful good officers, get increases.
8206. Two of them have been sixteen years in the Service? Yes; my head man started with me as a messenger sixteen years ago.
8207. Then he has worked his way up? Yes.
8208. That you do not object to, where there is merit? Not at all; I like to support merit.
8209. Has the repairing of the line to come under your control? Yes.
8210. What salaries do your operators receive? I have one operator at £190, two at £170, one at £140, one at £120, two juniors at £91, three messengers at £52, one at £26, and the line-repairer at £150, the total salaries being £1,564.
8211. To what distance do the attentions of the line-repairer extend? The line-repairer has to go to Mittagong on the one side and to Yass on the other. To Bungendore is another section, to Braidwood another, to Taralga another, and to Tuena another; he has to make a monthly inspection.
8212. He is indispensable? Oh dear, yes. He has also to attend to the batteries, to clean them about once every three or four months, which is a job which requires great attention.
8213. He only gets £150 a year? That is all. He gets 10s. a day when travelling, and is allowed forage for a horse, 15s. a week.
8214. Suppose he goes by rail on any occasion, and does not use his horse? He does not get his allowance unless he is away for twenty-four hours.
8215. But the cost of travelling is allowed to him? He gets a pass from the railway. He attends also to the railway-lines if they become interrupted.
8216. The telegram forms have all to be stamped now? Yes.
8217. The public do not stamp them? I impress on my officers to almost insist on the public doing it, because it is according to the instructions. The stamp is at once obliterated in the presence of the sender, if he likes to wait, but in any case the stamp is obliterated before transmission commences. I insist on that. There are forms now with the stamp embossed on them, and we hand these to persons wishing to send messages.
8218. When you know the message is under the ten words? Of course; we add the additional stamps when it is over.
8219. You remit to the Treasury the money received for the sale of stamps? No; we have a reserve of £50, and when I get a certain amount of cash in hand I remit it to the cashier of the post and telegraph service, with a request for further supplies, which come by the next post.
8220. How often are you visited by an inspector to look over your books and premises? I think the Treasury inspector comes about once a year, and he examines the books.
8221. Thoroughly? Oh, yes.
8222. How often does the inspector from a post and telegraph office come? About twice a year I believe.
8223. He looks generally to the conduct of the department, I suppose? Yes. Of course the main thing they look to is to see you have your reserves in hand, and that the business is being conducted properly.
8224. *Mr. Storey.*] Is that reserve in stamp or cash? They send it in stamps in the first instance.
8225. *President.*] I suppose on all occasions everything has been found in order? Oh, yes.
8226. You send the telegrams themselves to Sydney? Every night. A ledger is kept of the business transmitted, and every night a summary is made of the stations and the amount, and also a summary of the totals; these two statements must agree with the ledger. In sending these down to Sydney they give us one day's grace if we like to take it, but I have always made it a rule to get the work cleared up and away every night.
8227. The premises you occupy are Government property? Yes.
8228. What rental do you estimate the portion occupied by you to be worth, supposing the building had to be leased? The whole buildings, post and telegraph, cost I think £13,000. It would be much nicer if the private quarters had been better arranged with less passages, &c. There are only seven rooms of ordinary size. The public offices and operating room are what they should be.
8229. But in time it will be about the right size? Yes. It is full of instruments; there is not much more room for extra instruments.
8230. Do you think it would be practicable to combine the two positions of telegraph master and postmaster in one person? Under certain conditions I think it would, but it would be a great responsibility.
8231. Which would be? If I were placed in charge of the two offices I should think it absolutely necessary to be relieved to a certain extent from operator's duties, except for testing the lines in case of interruptions. A man placed in such a position should be superintendent, but if a man had to operate when necessary, that is when the staff were engaged, something might go wrong, and he would be held responsible for it.
8232. *Mr. Robertson.*] Your chief operator is receiving £190 per annum? Yes.
8233. Is he a sound reader? Yes; he would not be of any use to me here otherwise.
8234. What sort of an operator is he? First-class; in fact, when I have been away on leave I have left him in charge. He is not a senior hand; he is a long way down the list in the third class, but he is a first-class hand.
8235. You say this man is a first-class operator in the third class? Yes.
8236. The third class of operators? I think he is in the third class.
8237. Will you kindly tell us what the classification is among the operators? I really do not quite know how it is based. I am a long way down the list—No. 20—and an officer who was line-repairer under me is above me and others in the classification.
8238. A man who was your line-repairer has risen into a higher classification than yourself? Yes; and there are other cases. At one time the postmasters were receiving commissions on money orders and the sale of stamps, which brought their income up to a considerable sum, but when the Government took these away from them, I think they gave them an equivalent in salary, which led to higher classification. The classifications are based on salary, I think.
8239. Do I understand that the man who was originally a line-repairer under you has been promoted through the postal branch of the Service into a higher position and higher salary than you at present occupy? Yes. I may explain that he was appointed post and telegraph master at Bourke, and would have

have all these emoluments, but when they were taken away from him the Government would give him an equivalent; that would make his salary higher than mine. Classification being based, as I presume, on salary, and not on length of service, of course he would become my senior.

C. A.
Middleton,
Esq.
15 Mar., 1895.

8240. What view do you hold with regard to these emoluments, in addition to the salary? In the old days I think they were very just, because the salaries were not enough.

8241. But the incidence is not just, because, as you stated, a man who was considerably your junior and inferior is practically drawing a larger salary than yours? That is a fact; but I have no wish to detract from the merits of this officer.

8242. In your opinion, what is a fair salary to pay an efficient operator;—give us the minimum and the maximum. Of course, directly a man is appointed an operator, you are not going to give him the maximum salary, but will let him reach that by certain increments; his opportunity for promotion will depend upon a vacancy in a higher office, that will be the prize to which he will look forward? I would make the maximum £250 in the country.

8243. Would that be more or less than in the town? In the head office they ought to be paid more, because an operator in the country has a little rest from his work occasionally; but in Sydney they take their seat at 9 o'clock, and they have not one moment's peace till they are relieved. Their minds are at concert pitch the whole time. It is very hard work; I have had experience of it.

8244. *Mr. Storey.*] You have a telephone exchange here? Yes.

8245. Does that increase your work a good deal? It increases my responsibility, because if anything goes wrong I am called off to see to it.

8246. Does it increase your staff? I have a switchboard attendant.

8247. What does your staff number altogether? Seven operators, four messengers, one line repairer, and a switchboard attendant.

8248. Do you know the number of telephones connected? We have seventeen, I think.

8249. I suppose in your office the revenue exceeds the expenditure? Oh, no; not of late years.

8250. Has there been a falling off lately? Yes; it has fallen off. Last year the revenue was between £1,100 and £1,200.

8251. Against an expenditure of £1,564? Yes. In 1888 and 1889 the revenue was nearly £2,000; that was when the Broken Hill fever was on.

8252. Has there been much falling off in the revenue, comparing 1893 and 1894? 1893 and 1894 are just about the same, £1,100 to £1,200. Things are very depressed here.

8253. In spite of that, is there no way in which you could effect retrenchment? No, I could not, without interfering with the efficiency of the public business.

8254. The method of stamping the telegraph forms seems to give more trouble than the simple way of putting down your money;—what is the object of having these stamps? I should have thought it was to save the public trouble. If you post a letter you stamp it, and put it in a box, and so it is with the telegrams; they are stamped and handed in.

8255. The post-office building is an unnecessarily costly one? Yes; I think so.

8256. *President.*] Has prolonged service as an operator any effect upon the nervous system of the operator? I have never experienced it myself, and I have never noticed it upon any clerks in my office; but I have heard of many cases. In fact I have talked to men who were at one time magnificent operators, and who have become, as it were, decrepid. They become very nervous, and stick at a word, which in their younger days they would not do. Sometimes they get scrivener's paralysis, which affects one hand. Mr. Wilson broke down almost completely as a young man, and he had to write with his left hand for a long time.

8257. Is it the case that the telephone switch attendants, after a few years' work, break down? I have not had any experience in that direction.

SATURDAY, 16 MARCH, 1895.

[In the Court-house, Goulburn.]

Present:—

HON. F. T. HUMPHERY, M.L.C., | JAMES ROBERTSON, Esq., F.S.I.A., F.I.A.V.,
J. H. STOREY, Esq., J.P.,

THOMAS LITTLEJOHN, Esq., PRESIDENT.

William Stewart Caswell, Esq., Police Magistrate and District Registrar in Bankruptcy, Goulburn, sworn and examined:—

8257½. *President.*] You have had a very long experience, and always in the same groove? Always in the police court for forty-eight years.

8258. In the Estimates of expenditure as passed I see the police magistrate at Goulburn is said to visit Collector, Crookwell, Marulan, and Taralga? Yes.

W. S. Caswell,
Esq.
16 Mar., 1895.

8259. I suppose in many districts the police magistrate has occasionally little to do? Very little to do.

8260. Do you think it is possible that you could increase the districts that are to be visited from your centre in addition to the four? If I had regular work at those places you mentioned I should say no; but the magistrates there do not like me to attend. They have never liked the attendance of a police magistrate, and the consequence is I scarcely ever go. I act under the Dairies Supervision Act, and on one occasion the police asked me to act in a case, so I went; but I believe the local magistrates said it was an insult to the Bench.

8261. They are honorary? Yes; they prefer to sit alone. Under the present circumstances I could make time by concentrating the work in Goulburn and spare two days in the week away.

8262. Could you suggest such places as might be conveniently added to the list of places you visit? I could not very well suggest anything. As regards visiting, I could go anywhere on the railway-line within reasonable distance; but there is a question that you have to consider, if I may respectfully state it. For instance, if you do away with the man at Cooma, it might be possible for me to visit Cooma, but not to attend to the places around Cooma which are now visited by the police magistrate.

8263. It must be done by a general re-arrangement? Just so.

8264.

W. S. Caswell, Esq., 8264. So that any additional places for you to visit would have to fall in with the plan of the general reconstruction of the centres and their dependent districts? Just so.

16 Mar., 1895. 8265. The occupation you have for your time at present is not sufficient, and you would have time to visit further places? Just so; the work here is very light. Of course sometimes there is a rash of heavy work; but I would warn you of one thing. You will not be alive to it if you do not get warning. At present Mr. Wilshire is warden of this district, and he goes through here. I could not possibly do the wardenship. I could not go away from such a town as this, and hold mining Courts. Now Braidwood is a purely mining centre, and whoever is there must be a warden and must do a good deal of work; perhaps go even as far as Goulburn. I could not undertake mining duty here. At Dubbo I did it all, and was coroner too.

8266. What is the number of your staff? Two; a clerk of petty sessions and an assistant.

8267. These officers have not continuous employment? Oh, yes; they are very busy. More work is thrown on them every day. The Electoral Act has given an enormous deal of trouble; unnecessarily so, I think.

8268. How frequently does the Court of Petty Sessions sit? I attend every morning, but the three Court days are Monday, Wednesday, and Friday.

8269. But you attend on the other days of the week if possible? Yes; every day at half-past 10 o'clock.

8270. Considering the great number of the magistrates and the probability that there are other districts than that which you preside over that do not afford sufficient employment for the police magistrate, you think there is room for the re-adjustment of the districts all round? It has struck me so; but, of course, I have not inquired into it.

8271. If there were a re-adjustment and fewer magistrates it would give better employment to the magistrates and be a saving of money? I think so.

8272. I suppose you have not thought it over sufficiently to say to what extent? I have not. It has only been that I have been alive to the fact that numerous Government appointments have been made without the slightest necessity. Only for my determination in the Dubbo District, I am very certain there would have been two police magistrates besides me before I left; but I always reported it was quite unnecessary, and I incurred a good deal of odium in consequence. If I was an hour late they used to report me in the hope of getting someone appointed.

8273. *Mr. Humphery.*] In addition? Yes.

8274. *President.*] Had you any reason to suspect the cause of this attempt? At Warren they wanted a police magistrate, and I was to be relieved of Warren, which I visited once a week. They said they could not depend upon me. Mr. Cass, the member, did all he could to get an appointment made for Nyngan.

8275. You think it was political influence? Decidedly; it was political influence on the one hand and town jealousy on the other, the object of which was to enhance the importance of the town.

8276. Do you think that a better mode of appointing Civil Servants all round could be instituted to get rid of political influence;—would it be better to have a Board of Commissioners, high-class men and thoroughly independent? Decidedly; I think the Service ought to be relieved of all political interference. I have not thought it out, but I have heard that suggested, and I think it is a very good idea. It might be well if the judges took in hand the appointment of magistrates and clerks of petty sessions.

8277. Men of the calibre of the judges would be very suitable as Commissioners, but I am afraid they would not have time to attend to the work. I meant men of a similar capacity and high character who could do the work just as well, and be independent of all influence whatever? I think so. If they do not do it I think the Civil Service will become so discredited that no person of any value will stop in it.

8278. You do not know much about the erection of this fine building? I do not. I have only been permanently appointed here seventeen months.

8279. Do you consider it is efficient for the purposes for which it was erected? Oh, yes; it is not well arranged, but take it altogether it is very suitable.

8280. You think the fittings and furniture are very superior? Except as to the excessive ventilation in the court rooms. In winter it is almost impossible to sit there with any comfort. I have had one of the rooms boarded over around the ceiling, and a stove put in, and we can sit there now with some comfort. I believe it is contemplated altering the Judge's Court in the same way.

8281. I suppose these buildings, as they are now arranged, will suffice to meet the objects for which they were erected for how many years, fifty or 100? 100 or 200.

8282. I suppose you cannot say what the cost of them was? No; I have heard it was £25,000.

8283. *Mr. Robertson.*] Was there any necessity to build a Circuit Court, which is used, practically, four or five weeks in a year, and lying unused the balance of the year? Perhaps they could have done without it, but when the Circuit Court is sitting, there are my Courts, and sometimes the Warden's Court also sitting, and there is the Land Court sitting. Take it altogether, I think they are pretty well occupied.

8284. But is not this large building, all this section, lying unused for nearly eleven months in the year? The Lands Office uses it; the Chairman of the Land Board uses it.

8285. Once a month? Yes, once a month; and when the mines' warden comes he uses it if my Court is sitting.

8286. That is to say, there is an effort made to use it? I think so large a building could have been done without.

8287. As a matter of fact, did you not use another portion of the building besides the Magistrate's Court, while the Circuit Court was going on, as your Court? I refused to sit in my own Court nearly all the winter, until it was put in order.

8288. When it was necessary that the Circuit Court should sit while your Court was sitting, could not that temporary arrangement have been maintained? To sum it all up, they could have done without the extensive buildings that are here. But at Dubbo—to show you the bad arrangements there—when the Circuit Court was sitting, I had not a place to sit down in. I used to hold my Court over the counter of the clerk's room, although they have a splendid Court-house which cost £10,000 or £12,000.

8289. Are you aware that the Lands Office contemplate building an addition to their present structure? I believe so.

8290. Was application made by the Land Board for the use of some of these rooms temporarily, and was such application ultimately refused? The sheriff claims sole control of this building, and would be most indignant; he would not entertain the idea.

8291. *President.*] Your impression is that there is a good deal of space here that might be utilised? *W. S. Caswell, Esq.*

8292. *Mr. Robertson.*] Could you undertake further magisterial work? Yes.

8293. What do you think you could embrace in the two days you could spare in the week? Two places at any rate; I could give two places on the railway line a day in each week.

8294. *Mr. Humphery.*] Speaking from your experience as a police magistrate, and having regard to increased railway facilities, do you think fewer circuits might be held? Decidedly; it is monstrous to say there is a Circuit Court at Yass, Goulburn, and Wagga Wagga. One at Wagga Wagga and one here would be ample. Then there are Quarter Sessions which try the same cases. I think there ought to be a Circuit Court at Dubbo and one at Bourke, and with one at Bathurst that would be ample for the Western Line. Quarter Sessions are held at Bourke, Cobar, Dubbo, Wellington, Orange, and Bathurst. I think there are too many.

8295. How many would suffice in your opinion? I think Bourke, Dubbo, and Bathurst ought to do; we might say Orange could be a place. Wellington is only 30 miles from Dubbo. Then the District Courts are held at very small places. They are held at Warren, Nyngan (I think), Cobar, Bourke, Dubbo, Wellington, Orange. I do not know about Blayney; but there is no doubt they are too numerous.

8296. *Mr. Storey.*] What is your opinion as to the amalgamation of the offices of police magistrate and clerk of petty sessions? I was the first appointed under that Act. Sir Watson Parker, on the recommendation of Sir J. Hay, gave me my appointment.

8297. Would such a thing be possible now? I think it had its advantages, and I think it has its disadvantages; but now the police magistrates travel so much there is always a certain amount of inconvenience at the principal place.

8298. Do I understand that you think it would not be a feasible thing to do now? I will not say that. The chief disadvantage is that the magistrates travel now more than they used to do. I think all the clerks of petty sessions in the circuit towns, and they are all competent, ought to be magistrates, even apart from the fact of the police magistrate's absence. I have always thought it would be much better that the whole of the proceedings should be initiated and come fresh to the magistrate on the bench. People are too fond of coming to a magistrate and asking his advice. In the District Court there is a registrar to issue summonses, in the Supreme Court there is the prothonotary to commence proceedings, but in the Petty Sessions Court there is no one to initiate proceedings unless the person who tries the case.

8299. The objection of a police magistrate having to travel, could not that be got over? It is not the absence of the police magistrate that is the objection, it is the absence of the clerk of petty sessions. If a place is large enough to justify the appointment of a police magistrate, and if this officer also had to act as clerk of petty sessions, there would be no officer left behind when he was away.

8300. Do the unpaid magistrates sit frequently with you on this bench? Some of them.

8301. From your long experience, I suppose you think the offices of clerk of petty sessions and land agent could be amalgamated in many cases? Decidedly; they are in many cases. I should imagine they could not be amalgamated here.

8302. Why? Our clerk of petty sessions has really enough to do, and I fancy the land agent is pretty busy.

8303. In big centres do you not think it could be done? I do not think it is desirable.

8304. In cases where the sheriff cannot attend, could not the police magistrate act as deputy sheriff? Decidedly; the police magistrate could act as his deputy without doubt.

8305. Would not that be a saving of travelling expenses, at all events? You mean for the police magistrate to accompany the Judge?

8306. Could the police magistrate in all cases act as the deputy sheriff? In all cases; but if the police magistrates act as deputy sheriffs they ought not to be asked to do what they do now. They make the police magistrate pay the witnesses. The consequence is, I have to be in attendance at the Court at all hours to be on the watch when the cases are over in order to pay the witnesses, although the clerks of petty sessions always do that at the quarter sessions. I protested against it, but they would not alter it. It is quite unnecessary. If I were deputy on the bench I could not leave the Court to pay a witness. I would have more responsible duties to attend to.

8307. Is it necessary for a Crown Solicitor's clerk to come from Sydney? All he does, so far as I am concerned, is to delay me in the work I have to do in the Court—the work of paying the witnesses. I have had to wait for the paper from a Crown Solicitor's clerk, who will not even make the calculations to relieve me. I asked one why he did not calculate the witnesses' expenses, but he said it was not part of his duty.

8308. I understand it is unnecessary for the Crown Solicitor's clerk to come at all? I say, so far as I am concerned; but I know what is said. They say the Crown Solicitor's clerk comes as a solicitor would—to instruct counsel. I think they put it that way.

8309. Could the Crown Prosecutors do the whole of the work of the Circuit Court as well as on the Quarter Sessions? Probably, if there were less Assize Courts and less Quarter Sessions, one officer could do it.

8310. Do you not think it would be possible to dispense with juries at coroner's inquiries? They might be used less frequently. I did not use them very much, but I got snubbed for it. I always used them in important cases. In any case where there might be feeling amongst the neighbours or anything of a suspicious nature I always had a coroner's jury.

8311. Is it not a fact that a coroner can commit? He commits for murder or manslaughter or arson, after verdict given by jury.

8312. But if you were a coroner you could commit? Not apart from the jury. The coroner without a jury simply acts as a magistrate. I held a magisterial inquiry here the other day in a case of murder and suicide. The coroner questioned the legality of the proceedings, although he was a lawyer; but they were perfectly legal. I could simply give my opinion, but that was all; I could not commit.

8313. Do jurors get fees here? Jurors are paid by the day just the same as other jurors. It must be a tremendous expense. It is only of late years it has been allowed.

8314. *President.*] Practically, did you find them of any service in a coroner's inquiry? I found them of service. I think in certain cases of murder some of the neighbours may know something which they would not tell unless the question was put from the jury, and this might lead to the discovery of the guilty persons.

Mr.

John Williams Deering, Esq., district surveyor, Goulburn, sworn and examined :—

- J. W.
Deering, Esq.
16 Mar., 1895.
8315. *President.*] How long have you been district surveyor? Ten years. I was metropolitan district surveyor in Sydney for five years.
8316. You have been in the Service over thirty-two years? Yes; I have been in Goulburn about four and a half years. I have been in Government Service for forty years. I was in South Australia for six years.
8317. Is your district sufficiently large to occupy your time? The work has fallen off within the last twelve months; selections have fallen off.
8318. What do you think that is owing to? Owing chiefly to the promise of a new Land Bill by the Government—that paralyzes selection for the time being, people wait for the new Act;—and owing also to the low price of wool, stock, and cereals.
8319. The decline in the price of wool has affected the fortunes of your district? Beyond a doubt.
8320. Seriously? I would not go so far as that; I would say partly. The low price of wheat and stock has also had an effect; but the Land Bill chiefly for the time being. The sooner the Bill is passed the better.
8321. Your district, round about Goulburn, is agricultural as well as pastoral, and extends — My district extends from near Picton to the Bland, and is both pastoral and agricultural.
8322. In consequence of the decline in the number of selectors, have you too little to do? I would not go so far as that, because I get a large amount of other work besides selections. They only form part.
8323. In connection with current conditional purchases? Oh, no, nothing to do with them; there are applications for auction grants; applications for use of land, leases, &c., and all the great variety of applications incident upon a large population.
8324. You cannot say your time hangs heavily upon your hands? No; in fact we have had a great deal of work lately in connection with reporting on the parks—that is as to expenditure, money required for the ensuing year, whether the money has been wisely spent, and whether the people have contributed to it. I have twenty-two parks in my district to report upon.
8325. Have you a special number of surveyors under your control? Yes.
8326. How many? Two staff-surveyors; and five or six licensed surveyors, who work on fees. Since I took charge of the district five years ago, I am doing the work with one staff-surveyor less, and three draftsmen less, which means a saving of about £1,600 a year. As a vacancy occurred, I would not recommend it to be filled up.
8327. You find that that has not at all affected the efficiency of your section? No.
8328. You are acquainted, I presume, with the duties of Chairman of the Land Board? Yes, intimately.
8329. Do you believe, or is it your opinion, that there could be a combination of the offices of district surveyor and Chairman of the local Land Board? Yes.
8330. In cases where the district surveyor would take up the other duty it would be practicable? Yes; but in a settled district it is not altogether an unmixed good; mind I am using the word, settled district.
8331. *Mr. Storey.*] Like Goulburn? Goulburn is a settled district, there is a large population here, and population makes the work.
8332. *President.*] The reason being? I get a large amount of work that has nothing to do with conditional purchases, work arising from population, in connection with every class of reserves, cemeteries, racecourses, and other matters.
8333. If such an amalgamation of the two offices took place, it would always have to be from the side of the district surveyor? Beyond a doubt.
8334. It would not, for instance, do to originate it from the side of the Chairman of the Land Board acquiring the other office, unless he were himself a practical surveyor? Quite so; he would not know anything about my office.
8335. But a district surveyor might well understand the duties of a Chairman of the Land Board? We write the case for the Chairman, we prepare the brief and advise him on the points of law.
8336. In your opinion, there would be a number of cases where such accommodation might take effect with advantage? Quite so, applied to the Colony; but with less advantage in settled districts, because the legitimate duties of a district surveyor would sometimes have to be delegated to another person while the Chairman was away. There is one thing, if I might mention it; it would be a great advantage to the Chairman in getting through his duties if he were not hampered by two other members on the Board.
8337. Does your experience include a knowledge of the duties of the Land Board? Yes; I frequently attend Land Courts.
8338. As a rule the two colleagues of the Chairman are not necessary? I am sure of it; they are not only not necessary, but they are in the way.
8339. Instead of being an assistance, they are an incumbrance? Yes; because they have to have the law explained to them, and they are apt to take views of their own, which are wholly incorrect, as to the law.
8340. You think it would be advisable to dispense with the two colleagues altogether? I am sure of it.
8341. Would there be any cases where it might be desirable to have them? I do not know of any cases where it is desirable to have two other members. I was thinking of road cases where the value of land taken for a road has to be appraised. The two members on the Board are bound to be interested in land, and almost to a certainty the feeling must be to keep up the price of land. I, therefore, think it is extremely likely they would be biassed, even against their desire.
8342. Unconsciously? Unconsciously.
8343. Then the saving effected would be a very considerable amount? I think about £8,000 a year, and the saving in the time of a Chairman would be immense. The Chairman could rattle through his cases in no time.
8344. Sometimes if it is a long case, instead of lasting two or three days, it might be over in half a day if the Chairman were alone? It might be so. How can these two lay members of the Board follow the precedent cases that come from the Appeal Court and the Supreme Court, when our officers, whose minds are bent on that duty alone, have to note their Land Act up with those cases, and study the decisions that are given by the Supreme Court and the Appeal Court! It becomes a most intricate law to follow. And if the two members on the Bench are not an assistance to the Chairman, they are an incumbrance to him. They have to have the decisions of the Courts explained to them, and it takes some time to understand.

understand these. Sometimes we have a storekeeper who is a member of the Board, and the person that comes before him is a selector who gets stores at his place of business. Is that right?

8345. Then it is not a balance of opinion; it is simply so, in your opinion? I have not the slightest doubt about it, and I have seen enough of them. I am trying to put the matter in as forcible a way as I can.

8346. Are you acquainted with the mode of preserving documents, plans, maps, and all sorts of papers and applications in the department? Perfectly.

8347. There is a complete record of selections kept in the local office? Quite so; necessarily.

8348. In the Land Board, too, they also have a copy of the plans and specifications of the selections? Not the plans, merely the applications with the tracings.

8349. Then in the head office in Sydney, they have a complete copy of everything there? Yes.

8350. And which of these do you think superfluous? The head office one; decentralisation has never been thoroughly carried out.

8351. I suppose you are in the country, because of decentralisation? Exactly; a large part of my official life I have been at head-quarters, for twenty-two years.

8352. If they were to rest satisfied with the records and plans that are kept in the country, they could dispense with a very large staff in Sydney; have you ever estimated how many they could dispense with? I do not see what they want the department in Sydney for. I maintain it ought to be a Ministerial Bureau of reference only.

8353. For reference and information? Yes; I have seen a great deal of the work at head-quarters all my life. I made most of the important surveys in Sydney, and I know exactly the course of the work. I was the senior surveyor in Sydney for twenty-two years.

8354. If a feeling of self-esteem did not override the feeling of patriotism, you think that the Department of Lands could dispense with all these particulars preserved in Sydney at the cost of a very large staff of officers? I think so.

8355. But of course Sydney is the head-quarters, and they do not like to feel they are to be dispensed with? The head office is never likely to drop the reins of power, because if they drop them we pick them up.

8356. *Mr. Robertson.*] What was the object of the Land Act of 1884? Decentralisation was the spirit of it.

8357. I will quote now from a return to an order made by the Assembly dated 11th May, 1886—"That there be laid upon the Table of this House a copy of the minute by Mr. Secretary Farnell, and approved by the Cabinet defining the position of the district surveyors under the Crown Lands Act of 1884, and also the subsequent minute by Mr. Secretary Abbott upon the same subject." In the minute of Mr. Farnell it says, "One of the great objects of the Act is decentralisation," that minute is dated 13/2/85, and bears the Cabinet approval, signed W.B.D., 13/2/85. The minute of Mr. Abbott says, "I have no hesitation in stating that the great principle of the Land Act of 1884, decentralisation, must be carried out to its fullest extent, and district surveyors must act upon their own judgment, and not too readily or needlessly refer matters to the head office; nor should the Surveyor-General too readily interfere with them in the discharge of their respective onerous and important duties. If these gentlemen are fit to be district surveyors, they are entitled to the fullest confidence and freedom in the discharge of the duties of their offices. The object of the Land Act of 1884, in one of its main principles, was to have the work connected with the alienation and leasing of the Crown lands disposed of in the district where the land so alienated or leased is situated, and I see no reason why this principle should not be carried out to the fullest extent, nor why the work which has to be disposed of under the Repealed Acts should not be also disposed of in the same way as the new work; on the contrary I see many strong reasons why it should be." He goes on to say, "What is done in New Zealand can and must be done in this colony, in reference to decentralisation, and it is the bounden duty of all officers of the Government Service to render their free and full efforts to carry out the policy of the Legislature." That is signed "J. P. Abbott, 2nd December, 1885," and is minuted by Mr. Secretary Copeland in these words, "I have read this correspondence, and desire to say that I concur in Mr. Abbott's minute.—H.C., 17/6/86." Has the principle of decentralisation been fully recognised since the Act came into force? Partly; but after we do the work they do it again in Sydney; that is the point.

8358. Will you tell us in what way the work is repeated in the head office; take for instance the Roads Branch, can you say anything about that? I do not see what the Roads Branch has to do with Sydney. A person applies for a road and his letter goes to Sydney. Then it is sent back to the district surveyor for report and information. I think we know better whether a man wants a road than they do in Sydney. Evidence could also be taken in open Court.

8359. Do you think that is a proper duty to appertain to the office of district surveyor? I am sure of it.

8360. What economy could be effected by the reconstruction or the abolition of that branch in the department? I think the whole roads work could be done in the district offices without any increase. When you get a lot of officers together you can distribute further duties among some of them who are not very busy, and you can squeeze a little more work in without increasing the staff.

8361. Where is the compilation done? In Sydney.

8362. Should it be done in Sydney? Certainly not. The proper man to compile a map is the man who has checked the original plans and examined them, who has been on the parish map, knows where the weak points of the surveys are. He could do it in a quarter of the time of a man in Sydney. In my office, and I suppose it is the same with all the others, one draftsman takes a certain county or land district. He takes all the parishes therein, and deals with all the surveys in a parish, he joins a new survey on to a former survey, and he deals with old surveys that will not close or come in, as we term it. You can easily see that he becomes intimately acquainted with every parish—he knows the good surveys and the bad surveys in the parish. Of course that man could compile that parish with an ease and knowledge that no stranger in Sydney could possess.

8363. The men on the spot are the men who ought to do the compilation? They ought to do everything. If the men on the spot are not competent to do the work, then decentralisation is a failure.

8364. In your opinion, are they competent? I am sure they are. I should like to read what was said in an authoritative newspaper paragraph soon after the introduction of the measure:—"The Minister for Lands, the Hon. J. N. Brunker, is vigorously adopting the policy of decentralisation with respect to the administrative arrangements of his department, and though it may be an inconvenience to his officers, the

J. W.
Deering, Esq.
16 Mar., 1895.

new order of things will be a great disadvantage to the inland community generally. Practically, Mr. Brunker is sending to the country districts all the ablest officers that have been doing duty for years in the metropolis, and he is in hopes that this arrangement will vastly facilitate the administration of the Land Act. The Minister says that it is the country, and not the metropolis, that wants able and active officers, and his new arrangement of offices and officers will largely transfer to the interior the real work of the administration of the law. Mr. Brunker regrets the inconvenience which the change causes to several officers, but he holds that the public interests are to be first considered, and he thinks that, entrusting such important administrative duties to those officers, he is marking his confidence in their ability and integrity."

8365. Are the district surveyors qualified to conduct detail surveys? Yes; there are one or two surveyors who have not had absolute experience in it.

8366. But by their training and experience are they qualified? Beyond a doubt.

8367. Would you hesitate for a moment to conduct a detail survey of this city of Goulburn? Not at all; but on the score of expense I would not do it, because it would be a waste of money.

8368. Do you think the detail surveys bring an amount of good commensurate with the expense? I am sure they do not. I think there has been a frightful waste of money over the detail surveys.

8369. What was the object of this detail survey? For drainage. It has been done only in Sydney and Newcastle, but they are going to other towns.

8370. Are you aware of any extravagant expenditure in connection with this survey? I think these surveys were made in a very extravagant manner. They are not useless, but they have been carried out with vastly more detail than was required. For the purposes of drainage there is no necessity to survey in microscopical detail every feature around and through a section of land that has been built over. I say that the outline of a section might be drawn on paper, and the details sufficient for drainage purposes and for engineering works might be rapidly sketched in, simply to show where the houses are. This might be done at a fraction of the cost that has been incurred.

8371. With regard to the levels? The levels must be taken carefully. What is wanted to be known really is the fall of the ground for the pressure of storm-waters. The houses could be sketched in correctly, and they would not be a foot out, if they were only done with a tape, instead of being surveyed to decimals of a foot.

8372. The expenditure in that department amounts to £9,050 per annum;—do you think a saving could be effected in that? I am confident of it. If you take a section of a city the houses could be sketched in within 6 or 9 inches of their exact position, without all this detail of running theodolite lines all through the section. It could be laid off with a tape, and an immense saving effected. They have done the work in a minute manner far beyond any public requirements. The levels must be taken very very carefully as stated.

8373. If the colleagues of the chairman of the Land Boards were dispensed with there would be a saving of how much? £7,193, on the basis of 1893. That expenditure is worse than unnecessary, because these men are a hindrance to the chairman.

8374. Although the spirit of the Land Act of 1884 was decentralisation, have you ever compared the numbers of those engaged in the Survey Branch at the head office with the number engaged in the Survey Branches all over the Colony? Yes. I think we have a staff of draftsmen that the world never saw anywhere. No Government in the history of the world ever had such a staff of draftsmen as we have got now in one department.

8375. That is your opinion? I am pretty well sure of it.

8376. *Mr. Humphery.*] Will you look at page 82 of the Estimates of Expenditure? From the particulars contained in the Estimates, can you say whether any large number of officers engaged at the head office can be dispensed with as being unnecessary, and so discontinue the duplication to which you refer? Decentralisation is carried out in one way, but not in others. If it were fully carried out, undoubtedly many of the draftsmen would not be required in Sydney.

8377. Would it be possible to effect a very large saving? I think so.

8378. What accommodation have you here for the District Survey Office? I have the old Court-house almost entirely.

8379. Has any additional accommodation been asked for? By the Land Board.

8380. Not by you? Oh, no.

8381. Is it necessary, as far as you are aware? A building is necessary, either where they are, or this addition.

8382. Is it desirable that the Land Board Office should be under the same roof as a District Survey Office? It is desirable.

8383. Would it be possible, by making use of any existing large public building, to bring about a change which would enable you to have sufficient accommodation in the one building? The additions they propose putting up do adjoin the Survey Office.

8384. What would be the expenditure? I suppose about £800 or £1,000.

8385. Could the resident engineers deal with the question of country roads as satisfactorily as the district surveyors? They do not administer the Act. The Roads Act is administered by the Lands Department. You open up a question there that I cannot say I have thought of—that is, as to whether the Works Department should administer the Act. We have a great many consultations with the roads officers, but I scarcely think that the Works Department could deal with all questions affecting roads, because sometimes selectors complain that the roads left for them are not traversable, so that brings the matter, as it were, under the administration of the Lands Department.

8386. But assuming the administration admitted of it, would it be possible or desirable? I think the minor roads had better be left with the Lands Department, and the making of roads with the Works Department, as at present. We make the surveys. Old boundary lines have to be run and "picked up" to show the lands that are gone through. Old corners have to be replaced, and old lines run down to get the corner.

8387. Are resident engineers usually surveyors? Not in the sense in which I am speaking; not in the sense of being able to run out old boundaries.

8388. It would be safer to continue the present system? I think so. The District Survey Office could do all the work, and all that would be required in Sydney would be a small office to send the work to for transmission to the Executive Council for approval and *Gazette* notification.

8389.

8389. Would that entail upon the district officers any additional expense? More work.

8390. But would it cost the country more? It would cost far less. Where you get a body of men together you can give them a little more work without having to engage an extra man.

8391. You referred to the fees paid to members of the Land Board whose services were practically unnecessary. It also appears there are large travelling expenses paid to clerks who accompany the chairmen of the Land Board;—in your experience, would it be possible to effect any economy in that direction? I think there ought to be a deposition clerk. I have thought this over.

8392. Why should there be a travelling deposition clerk? Because there would be a difficulty in getting a suitable clerk in many towns where the land court is held. A clerk of petty sessions, for instance, might be engaged in the police court on the same day the Land Board is sitting. As for bringing in a stranger, a clerk from some of the stores, I think that would be very inadvisable, for a stranger might miss the very point of the inquiry; and besides that, he would be irresponsible. If I were chairman I would take the depositions myself rather than have a stranger under me.

8393. Is there any reason why the chairman should not take the evidence himself? No; I have thought that out. The judges of the Supreme Court do so. The handwriting of some of the deposition clerks is almost unreadable.

8394. *Mr. Storey.*] What does your staff consist of in Goulburn? Two staff surveyors, six draughtsmen, and one clerk.

8395. Are they thoroughly efficient men? Thoroughly.

8396. Have you any cause to complain against any of them? No; they are very good men.

8397. Who is the head draftsman? Mr. Armstrong.

8398. Is he a thoroughly practical, good, man? Thoroughly.

8399. He is a man you have the utmost reliance in? The utmost reliance.

8400. And the others the same? Yes.

8401. Take Mr. Armstrong as a type? As the head of the drawing office he is a good man.

8402. What has been the expenditure on public parks? It has been going on for years.

8403. Is it still going on? Yes—they get £25 or £30 sometimes.

8404. We have heard about district surveyors doing the work of the chairmen of the Land Board, and after I have read you the evidence of a high authority in your department I would like to know if you would wish to amend your statement in any way. He said:—

“Could not the district surveyors perform all the duties that are now being discharged by the chairmen of the Land Boards? I do not think so. I have made inquiries as to what the district surveyors do in regard to the Land Board. The only thing they do when an application comes to them is to look in their maps and direct their surveyor, who may be in the neighbourhood, to make the surveys, if there is no objection. The district surveyor never appears again in the matter, except to report that the survey has been made, unless it should turn out that there are some valuable Crown improvements on the land, in which case the district surveyor generally appears before the Board to give evidence as to their value, so that the Board may be able to determine how much the selector has to pay for the improvements. The chairman of the Land Board is a judicial officer.

“What are his duties? The applicant is summoned by the chairman to attend the meeting. He comes before the chairman and members of the Board to prove his *bona-fides*, and then he is informed that the land is available, and that he can enter into possession. Then the chairman instructs the inspector at the end of three months, or a little later, to visit the selection, to see whether the man is residing on it, and whether he is improving it. If it comes to the knowledge of the chairman that he is not residing on it he sends the inspector to report on the matter. There were fourteen chairmen in 1893, and they dealt with 33,600 cases at the different Courts. A chairman holds one Court in this town, and goes off, perhaps 30 miles, to hold another Court. He holds the Court as much as possible in the centre of the groups of selections. That takes up almost all his time.

“If the district surveyor were granted the assistance that would be required in the event of his undertaking the duties that are now discharged by the chairman, could not the work be done satisfactorily? That plan has been tried, but it has not been a success. We tried it in two or three places, and found it would not answer.”

That does not alter your opinion at all? No; it was a success in Moree and Cooma.

8405. In another remark you made you said you would do away with the Sydney office almost altogether. This same witness said:—

“Can you see ahead of the present time so far as to fix about the time when a considerable portion of the work that is done in the Lands Department would, as a matter of course, be disposed of and less clerical and other work required in the department? When the Act of 1884 came in we were under the impression that the work would fall off, and we looked forward to be able to reduce the amount of work in the department in ten years, but it has absolutely increased. We have more work to do than ever we had in the head office, and we have had a large number of men removed, dismissed, and sent to the country.

“Does that arise from the increase of the number of selections? Not only from an increase in the number of selections, but all the papers have eventually to come to this office. The local Land Board may recommend the forfeiture of conditional purchases, and yet under an Act lately passed the Minister can, if he thinks fit, waive that forfeiture on certain conditions. Many of the advantages of the Land Board are thus done away with. We certainly get the Boards to take evidence, but it rests with the Minister whether he will carry out their recommendations or not. So there is absolutely more work now than ten years ago.”

What do you say to that? That is true to some extent, but the department ought not to be so taxed. When that witness says we only do the survey, he is wrong. We prepare the case; we quote authorities and legal decisions; and we collect everything that bears upon it, such as decisions in the Supreme Court or Appeal Court; and we wind up with a recommendation.

8406. But are there not a good many other duties the chairman of the Land Board has to perform besides hearing cases in connection with surveys in which he has to rely upon you? He also adjudicates on many other applications in open Court.

8407. Are the whole of his duties confined to dealing with land only? That is all. He takes my reports and he says the district surveyor reports so and so, and recommends so and so, and reads them out in Court.

8408.

J. W.
Deering, Esq.
16 Mar., 1895.

J. W. Deering, Esq.
16 Mar., 1895.

8408. *President.*] It is on your surveyor's report that the chairman of the Land Board grants the certificate of conformity? Not of conformity. The conditional purchase inspector steps in there, and reports whether the selector has lived on the land and improved it; but as to whether a new man shall get the land when he applies for it, the chairman consults my report.

8409. Has not the chairman of the Land Board to fix the values and the rent? I appraise them, and recommend to him; he recommends to the Minister, who decides.

8410. He looks to you for that? Of course he does. I look to my surveyor to tell me how many sheep to the acre the land will carry.

8411. I was under the impression that all survey business in Sydney ought to be done away with, and I asked Mr. Twynam a lot of questions on the subject. I asked him:—

"Is the work of the surveyors sent down to the head office in Sydney for checking purposes? No; it is the district surveyor of the Land Board district who is responsible for all the surveys conducted in that district, and all that work is examined and passed by him in his office. He approves of the plans.

"Where are these plans made? In the district office.

"What are all these draftsmen employed at in Sydney? The compiling draftsmen are employed in compiling maps for publication, territorial maps, parish maps, county maps, Land Board district maps, the Colony map, and so forth.

"Is there an everlasting preparation of maps going on? Certainly; and it will go on as long as the Survey Department continues, and as long as the settlement of the country requires it to go on. We have had a branch exclusively employed for many years past in the matter of opening roads alone, and it is still so employed. It is a very intricate branch of the business, and a very costly one.

"Well, under the heading 'engaged at head office'—do I understand from you that the chief draftsman and all the other draftsmen are absolutely necessary, or have we to get the evidence from the chief draftsman? I think you might with advantage call upon the chief draftsman to give you some evidence in the matter. I can give you general information on the subject, but he can enter into particulars more fully than I can."

What have you to say to that? It is all nonsense. They make parish maps we do not want; but the parish maps we do want they do not make. A small staff may be always necessary in Sydney.

8412. Are the inspectors of conditional purchases under your wing? No; they get their instructions from the Chairman's office. I make my report as to whether the applicant should get the land or not, then the matter comes to me for survey, I send it back with a tracing, and then the conditional purchase inspector reports on it.

8413. Are not the various Government inspectors tumbling over each other occasionally—stock inspectors, watering-place inspectors, and school inspectors? No; they each have a large district. The conditional purchase inspector has a very large district. There is one matter in which the department might effect economy. They might do the parish maps at a considerably less cost than they are doing now by using zinc plates instead of stones. These stones are very heavy, and are difficult to cart about. They require heavy floors to support them. They cost about £10, £12, or £14 each, but the zinc plates cost only about 15s. The drawing of the parish maps could be left on the zinc plate, and additions made as required. Every now and then they have to clean the drawings off the stones, and when the map is wanted again they make a new compilation. Of course the compilation will go on for ever on the present lines, but not if they use the zinc plates.

8414. *Mr. Robertson.*] A good deal has been said about the necessity of keeping a number of records in the Lands Office for safety;—do you know where the strong rooms are in the building? On the top of the building. If it catches fire it will come down with a crash. The flames will rush through those lifts, and those rooms will get red hot. The contents will be charred and probably reduced to a cinder. The records are safer if distributed over the country offices. To sum up my evidence my general feeling is this: The law provides that decentralisation shall be carried out; and my opinion is, it has never been carried out with sufficient regard to economy.

Frederick Griffiths Davies, Esq., Postmaster, Goulburn, sworn and examined:—

F. G. Davies, Esq.
16 Mar., 1895.

8415. *President.*] You have been in the Service for twenty-seven years? Yes.

8416. You came to Goulburn in 1888? Yes.

8417. You have been postmaster ever since? Yes.

8418. So you are well acquainted with the duties and necessities of the position? Yes.

8419. In your experience, has the place made much progress during the time you have been here? Considerable.

8420. And during the last two or three years has it stood still, progressed, or receded? I think it has progressed.

8421. But not to a great extent? The business of my department has increased considerably. It has increased 50 per cent. during the time I have been here.

8422. Have you a Savings Bank Department in the establishment? We have.

8423. I suppose that is a very good indication of the revenue and of the comfort of the common people? Quite so.

8424. Do you find it satisfactory? Very.

8425. The increase in the deposits will be the criterion? Yes.

8426. No decline at all? Not the slightest. There has been a decline of one-third in the money orders issued, but the postal-note system almost balances that.

8427. The postal-notes are used very much? Yes.

8428. No doubt that effects a great saving in work to you? Oh, no; I do not think there is any saving.

8429. Are they not all ready printed? So is the money order. We sell about 1,000 a month. We have the largest revenue in the Colony from postal notes—on an average about £300 a month.

8430. And how much from money orders? We issue now about 450; previously we issued 700.

8431. What is the minimum commission on postal-notes? A penny on notes up to 4s., 2d. on notes from 5s. to 7s. 6d., 3d. up to 15s., and 4d. up to £1.

8432. Do you find that their use leaves less opening for loss or for paying to the wrong person than the money-order system? There is no difference.

8433.

8433. You have heard no representations about loss or misdirection? No.
8434. You have some assistants;—are they clerical assistants? Yes, entirely.
8435. What are the hours of your office? Twenty-two hours in the twenty-four.
8436. You work by relays? Double staffs.
8437. Three at a time? Five on the night staff and four on the day.
8438. Then you have more assistants than the Blue Book of 1893 tells? I do not think so.
8439. There are only six mentioned? I have two probationers who do not appear in the Blue Book.
8440. Your staff are not overpaid? Considerably underpaid.
8441. I see some of them have been a considerable time with you? One clerk has been thirteen years, and gets £140; another has been eight years, and gets £100.
8442. In paying salaries what is the mode you adopt? We get a certificate from the Money Order Office to pay from the money order cash. I pay the salaries and take credit for the amount as a remittance to the chief office, and I send on the receipts.
8443. That saves a great deal of trouble? Yes.
8444. Are you visited often by the inspector from the head office? Yes.
8445. How often does he call? Two or three times a year. The Treasury inspectors and the Postal inspectors both call.
8446. The Treasury inspector not so often? Perhaps once a year.
8447. You never know when your inspector is coming? I have not the slightest idea.
8448. What is the income of the department per annum? About £8,000 a year.
8449. And what is the expense of conducting the department? About £2,400 for salaries. Of course, I do not take in the conveyance of mails or the interest on the building. I also sell the beer stamps, and I collect duties on all articles here.
8450. There is no public bond in Goulburn? No; there is an inspector of breweries. There is a revenue of £1,500 a year from the beer stamps.
8451. And from the commissions and postage-stamps? Postage-stamps return £450 a month on an average, and commissions about £15 or £16 a month.
8452. That is close upon £7,000 of gross revenue? Yes; and then there are the private boxes, which return £50 a year, besides the duty-stamps.
8453. You sell the duty-stamps for bills? And also for promissory notes. Some four or five years ago the revenue from these used to be £100 a month; now it would not exceed £100 a year.
8454. How do you account for the falling-off? Because people will not give credit. The falling-off is in the impressed stamps and promissory notes.
8455. You ascribe that to the disinclination of the large houses to give credit to the smaller people round about? Yes.
8456. You do not sell any adhesive stamps of large value? Very few.
8457. Are you satisfied with the position of the revenue of the department, considering the times? Thoroughly satisfied.
8458. Is there anything you could suggest in your department in the way of economy? I think not.
8459. You work on the lowest possible basis? I am two hands short, and have been so for two months. They are away sick with typhoid fever.
8460. But you have not filled their places? No. During the time of the influenza epidemic I was five hands short, and worked the office without any assistance. The clerks worked double hours.
8461. Any holidays? They are granted the annual leave, provided the Service will allow it.
8462. How long—a fortnight? Three weeks.
8463. *Mr. Robertson.*] You said there were no economies you could suggest? Yes.
8464. How many issues of the *Government Gazette* are there? Two a week.
8465. To whom are these *Gazettes* distributed? To thirty-four persons and institutions.
8466. Is the issue of these *Gazettes* to so many various people and offices necessary? Not in my opinion.
8467. Have you ever known cases where there have been accumulations of these *Gazettes* in offices that have never been referred to? No; I cannot say I have.
8468. But in your own office? We open our own *Gazettes* and file them.
8469. What reference is made to the *Gazette* in your own office? We are supposed to look at the *Gazette* for any instructions. The *Gazette* comes out after the *Postal Guide* is issued, and if there is any alteration in routes, we are supposed to note the *Gazette* till the *Guide* comes out each quarter.
8470. But when there is anything affecting you and your work are you not immediately advised from the post-office? Yes, we are.
8471. So as far as these *Gazettes* are concerned, they are of no practical use to you? Not the smallest, except as I said when the *Gazette* comes out there may be something in it that affects our office, of which we may not be notified.
8472. Under what circumstances would you not be notified by the head office of any changes affecting your office? In a trivial matter such as the altering of a route we may not be advised. In anything of consequence we should receive information from the head office direct.
8473. Would you recommend that these *Gazettes* be discontinued? Am I in a position to make the recommendation?
8474. Well, if you know that they are practically useless you can? That is simply an opinion; I would not think of making a recommendation.
8475. In your case is it necessary you should receive them? I do not think so.
8476. *Mr. Humphery.*] During the last five years has the expenditure of your office increased or diminished? It has diminished; expenses have been considerably reduced. There were three letter carriers getting an average allowance of £36 a year; that has been done away with.
8477. Can you make any suggestions with regard to the present system of inspection that would lessen its cost? I was assistant cashier in the post-office for years before I came to Goulburn. There were three or four inspectors, now I believe there are nine or ten. That is caused in consequence of the amalgamation of the two offices.
8478. Would the cost of inspection be lessened if the postmaster at Goulburn undertook the charge of the whole district? That was my only reason in coming to Goulburn. I was under the impression that Goulburn was to be a district office. I lost considerably by the change.

- F. G. Davies, Esq.,
16 Mar., 1895.
8479. Did you understand you were to occupy the position of inspector for the whole district? Yes.
8480. If you were made inspector as you suggest, do you think it would be unnecessary for the inspector from the General Post Office to do more than inspect the central office at Goulburn? Yes.
8481. And the other fifty or sixty offices would be under the control of the district postmaster at Goulburn? Yes.
8482. Would a change of that character lessen the efficiency of the Service? No.
8483. Would it improve it? I think so.
8484. In what way would it improve it? The man would be on the spot, and could take immediate action, whereas if there is anything wrong now you have to telegraph to Sydney.
8485. *Mr. Storey.*] What inspection does the Treasury inspector do in your Department? He goes through the whole of the work.
8486. Is not that done by the post office inspector? Yes.
8487. Is the second inspection of that kind needful? They do not both come at the same time.
8488. All your returns go to the post office? Yes.
8489. Therefore, if the postal inspector certifies that your cash and returns are correct, they absolutely are correct? For that day, but next week they may not be so.
8490. How often does the postal inspector come to you? About two or three times a year. We have had the inspector at intervals of three or six weeks.
8491. The Post Office Department sends its inspectors to the various post offices in the country, and they inspect the whole of the work;—you are responsible to your head office? Yes.
8492. You do not communicate with the Treasury? No.
8493. If the post office inspection is correct, is it not a waste of energy on the part of the Treasury inspectors to come and look after you—they have nothing to do with you? If a Treasury inspector came I would show him the books; but, though everything may appear correct according to the books, he wants to see the cash.
8494. Does not the postal inspector want to see the cash? Yes.
8495. Do not the postal inspector and the Treasury inspector do exactly the same work when they come to your offices? Precisely.
8496. Is it necessary to have the two inspectors;—does it not seem a surplus of work? It only bears out my statement that there are too many inspectors.
8497. What staff have you? Seventeen, all told.
8498. Are they all good men? Capital.
8499. Nothing to complain about any of them? No.
8500. Are the salaries fair? Not compared with other offices.
8501. Which offices do you compare yours with? Take Wagga Wagga; the first assistant gets £240, and mine gets £200.
8502. You say that your staff are not as well paid as those in some of the other offices of about equal importance to yours? Wagga Wagga is a less important office.
8503. How do you account for that? By classifying the officers. In the Government Service you do not get on by merit, but more by influence.
8504. Since the amalgamation of the Post and Telegraph Offices in Sydney, have not all the offices been classified? They have; but the Telegraph men have got the best end of the stick.
8505. In your department they are all classified, and that is how the salaries go? That accounts for the lowness of the salary.
8506. And the responsibility of that classification rests with the head of the office? Yes.
8507. Have you ever had cause to complain of any of your staff? No. I may mention that my office hours are sixteen hours a day, from a quarter to 7 to 11 o'clock at night.
8508. You live on the premises, do you not? Yes.
8509. Can you furnish us with a return showing the Money Order and Savings Bank business transacted at your office for the five years ending 1894, and also the number of letters, &c., posted for the same period? I will furnish it. (*Return subsequently handed in.*)

James Wilson Dowell, Esq., District Inspector for the Government Architect's Branch, Goulburn,
sworn and examined:—

- J. W. Dowell, Esq.,
16 Mar., 1895.
8510. *President.*] The head of the sub-branch under whom you act is the Government Architect, Mr. Vernon? Yes.
8511. Is the district under your care a large one? I have been told by Mr. Vernon, that he reckons it the most important country district in the Colony. It runs from Mittagong to Cootamundra on the main line, and out on the Cooma line to the Victorian border. It takes in Temora, Wyalong, Barmedman, and out that way, and on the cross line to Cowra.
8512. Are you very much on the move in your district? Yes.
8513. During how many months of the year? At no regular time. I do all my work as a general thing by instructions from the head office by wire. Wherever I have contracts going on, my instructions are to see the foundations in and the work up to the damp course, and then to visit it weekly or fortnightly, as in my judgment may be necessary.
8514. I presume you have a clerk of works present at important buildings? The Kenmore Asylum is the most important building we have.
8515. There is a clerk of works constantly there? There is an assistant there.
8516. Can you tell us the process from the inception of a new building down to the time when it is handed over complete? The first thing is, I get a notice of acceptance of contract, and I communicate with the contractor. I see that the contractor starts his work within the fortnight stipulated in the conditions.
8517. Who provides the specifications? They are provided from the head office.
8518. By the Government Architect? Yes; that is for all large jobs. For jobs under £200, I prepare the specifications and plans.
8519. Have you any hand in the preparation of specifications for important erections? Nothing over £200, but I am supposed to do all under £200, and submit them to Mr. Vernon. When the building is started,

started, I assist the contractor in setting out the buildings, and see the trenches are put in the proper depth; and if there is concrete work, I must be present to see it all in above the ground line. After that we can easily see what is going on. J. W. Dowell, Esq.

8520. Then your visits need not be so many? Not so often; if it is an important work, I may go twice a week, but sometimes not for a fortnight. 16 Mar., 1895.

8521. Then if the clerk of works who is always present sees anything material going wrong, does he inform you at once? Yes. In a contract like that for the Kenmore Asylum my instructions are to visit once a week without fail. I have to sign all reports, estimates, and vouchers. I am responsible for everything. The assistant has no responsibility.

8522. Do you sign the money certificates? Yes; everything.

8523. What is the best material for a damp course? We consider the best material blue slate. We have been using a patent damp course, but I believe that it is almost abandoned now.

8524. Nothing can be better than slate? Nothing in my opinion can be better.

8525. I suppose you have no voice in the amount of money that is to be expended on any proposed building? No; nothing of that kind.

8526. You accept that without question? All I have to do is to see that the work is properly carried out.

8527. With regard to buildings under £200, you yourself prepare the whole of the plans? Yes.

8528. What would be the nature of the plans? Principally for repairs.

8529. Any original buildings? No.

8530. In some cases might there not be? In a few cases; for instance, with such buildings as we are putting up at Wyalong.

8531. *Mr. Humphery.*] What are you putting up there? A Court-house and a mining warden's office, wooden buildings with galvanised roof.

8532. *President.*] No ornamental architecture? No; we are putting them up as cheaply as we can possibly make them.

8533. You have been a good many years in the Government Service? Going on eighteen years. I have been here four years.

8534. You know something of the building in which we are seated? It was built before my time.

8535. Is it, in your opinion, a suitable building for the purposes for which it was intended? It is, in my opinion, an extremely extravagant building, with very poor arrangements for accommodation.

8536. Architecturally it is extravagant, but defective in its internal arrangements? Yes. This building cost £36,000.

8537. The whole scope of the building? Yes; £30,000 was the contract price, and there was £6,000 for extras.

8538. *Mr. Robertson.*] The acoustic properties are very defective in this building? Yes; that is on account of the ceilings, which are very open. Last winter I had them closed in the Police Court on account of the draught.

8539. Who was the architect? Mr. Barnet.

8540. This building was built purely for outside effect? Yes.

8541. *President.*] And buildings with sufficient architectural beauty for the purpose they had in view might have cost probably about half what this cost? We should build the same building now for less. At Kenmore Asylum we will get the same accommodation as they have at Callan Park, but while the first contract at Callan Park was £329,000, we will build the Kenmore Asylum for £70,000.

8542. You are well acquainted with the great cheapness of almost every material that goes into buildings now as compared with the time when this was built, but making allowance even for that—? Well, the contractors do not expect so much profit. I am informed the contractors cleared about £9,000 on this building, and the one who built the Goulburn Gaol is supposed to have cleared £25,000 in four years.

8543. In your experience has it ever happened that, after plans and specifications have been prepared and adopted, alterations have been made in them through influence brought to bear upon the authorities? Formerly that was very much so. Plans after plans were prepared, but I do not think there is so much of that done now as there used to be. Thirteen or fourteen years I was a draftsman in the head office, and it was a common thing to prepare three or four sets of drawings before we could get one they would accept the tender on.

8544. Were the alterations in excess of the expenditure, or in reduction? Very often they were made to increase the expenditure.

8545. And were you aware at the time at whose instance the alterations were made? Not when I was in the head office. I was a draftsman, and had no communication with the outside public.

8546. You could not tell who influenced the changes? No.

8547. Now that does not prevail to such an extent? I do not think it is carried on to such an extent.

8548. But it does occur? It may occur, but it has not occurred to my knowledge for some time.

8549. You being resident here, and acquainted with all the different materials, does it fall within your duty or province, if you see a mistake has been made in the specifications, to suggest to your head that something else might be used which might be of a cheaper character? Yes. In the case of the Kenmore Asylum they sent the plans and specifications for us to go through, and we overhauled them, and made some alterations about the material. For instance, the door-sills and the verandah kerbs were all specified to be freestone. Well, freestone, especially in an asylum or gaol, where the patients and prisoners wear heavy nailed boots, would soon cut away, so we altered it to slate or trachyte. In the first contract for the gaol they used freestone, but they had to cut it out and put in trachyte.

8550. That is got near by? Yes; at Bowral. Slate is equally as lasting as trachyte, but it wears smooth, and is therefore dangerous in a lunatic asylum.

8551. *Mr. Humphery.*] Which is the more costly? Trachyte will cost more than slate, but it is everlasting. The objection to slate is that it wears very smooth.

8552. *President.*] You are gratified to find your recommendations in that respect at Kenmore were adopted? In the first contract I did not see the plans till they called for tenders. Freestone was specified there, and we altered it to slate to bring the work within the estimates. It is my principle to keep the contracts down, and allow no extras.

8553. Is there anything in your professional department you can tell us about whereby savings might be effected? If you will allow me I will tell you a few things I have done since I have been here. This district,

- J. W. Dowell, Esq.
16 Mar., 1895.
- district, I understand, used to cost the Government from £1,500 to £2,000 to manage, in travelling expenses and salary, and there has been on an average, for the twelve or fourteen years before I came here, £3,000 or £4,000 extra on buildings. Since I have been here I have managed the district on my own salary and about £100 travelling allowance a year. I have seldom had any extras; in fact I have had reductions on large contracts. The extra assistance I have is Mr. Roberts, who is employed by the day. He is a very trustworthy and very efficient officer in every way. Sometime ago the Albury district, which was in charge of an officer located there, was handed over to me to manage for three months. I understood I was to take it over permanently, but it was given back to the same officer. I think I could easily manage that district in addition to this without extra cost, except a little extra in the way of travelling expenses. When I took over the papers, and went through the district, I found they were only finishing a contract at Corowa, and then there was nothing left in the district for them to do except some work at about £100. Since that time I do not think there has been more than £1,000 or £1,500 spent in the district. I do not see why it could not be managed in this office. If this were done there would be a saving of £500 a year.
8554. How long ago is it since the Albury district was put into your hands? 3rd January, 1894. I have a letter from the Government Architect on the way I conducted the business.
8555. There would be no sacrifice of efficiency whatsoever? I do not think so. The district is a large one, but there are very few towns in it.
8556. But even if there were to be a very considerable increase of business generally, and an improvement in the colony's affairs all round, you still feel you could overtake any work that might be required there in addition to what you have here? I think so.
8557. Are there any other districts which, in your opinion, would be capable of being put in one control? Mr. Roberts, at Bathurst, is already looking after two districts. We have had several men dismissed from the department, and of course that threw the districts together. There was a man in the Hay district till not long ago, but he is out. There was a man at Broken Hill; he is gone, and a man at Bourke has gone. Those places have not been filled.
8558. Owing to the circumstances of the times a number of places have been vacated, but have not been filled up? Yes.
8559. My question was more as to whether there was work going on where it was possible that two districts might be thrown into one? I think we have only four officers in the country now—district inspectors. There are two young men in the Northern district, one at Armidale and one at Grafton.
8560. *Mr. Robertson.*] Are you a representative of the Government Architect? Yes.
8561. Could you undertake the inspection of the public school buildings? If I were to undertake the inspection of them, I could not take over the Albury district.
8562. With your present work could you undertake the inspection of public schools in this district? I could.
8563. You are aware that the small unimportant wooden buildings are inspected by the educational inspectors? Yes, by the school inspectors.
8564. So, in saying you could undertake the work, you would undertake it as at present conducted by the inspectors from the Branch of Architecture in the Department of Instruction? Yes; it is just the same as my work.

Joseph Longmore Henderson, Esq., Inspector of Stock, Goulburn, sworn and examined:—

- J. L. Henderson, Esq.
16 Mar., 1895.
8565. *Mr. Robertson.*] Your branch is called the Stock Branch? Yes.
8566. The primary object of your inspection is to prevent scab in sheep? I believe that was what the Act was passed for, mainly for the prevention and cure of diseases in sheep.
8567. Do you know when the last case of scab in colonial sheep occurred? I never saw the disease myself.
8568. How long have you been in the Service? Six years in October last.
8569. Do you know when the last case of scab in imported sheep occurred? I could not tell you the date.
8570. But you have been six years in the district, and have never known a case of scab? I have never seen it.
8571. Is there absolute necessity for the work being continued throughout the colony? I should think it would be necessary.
8572. Do you think that the effect of your always watching prevents the introduction of scab? I have no doubt about it.
8573. What causes scab in sheep? It is caused by the acarus, which produces an itch the same as in a human being. It is very contagious.
8574. What is the primary cause of the itch? The acarus.
8575. Has there been a case of acarus since 1868? Not that I know of; but there have been several scares. When I was sheep-farming out at Roslyn some years ago we were quarantined for six months on account of sheep that were supposed to be affected with scab having passed that way.
8576. If the inspection were done away with, do you think the disease would break out? It could not break out unless it were introduced.
8577. Would it not answer and be more economical to guard the ports of the Colony and the borders? I should not think we could prevent it from coming to the Colony by guarding the ports only.
8578. If it is kept out of the Colony, is there a probability of its breaking out in the Colony itself? Sheep may be introduced into Sydney which had the insect on them. It may be in the wool and not develop itself for perhaps two or three months, and if these sheep were sent from Sydney into the country there would be an outbreak of disease.
8579. What are your salaries and allowances? The salary was primarily £260 a year at Goulburn, with an allowance for the last three or four years, granted annually by Parliament, of £50 for travelling expenses.
8580. Is yours a large district? A good size; about 5,000 square miles.
8581. Is it larger or smaller than the average? It is smaller in area than the average, but the number of stock-owners in it is greater than in most districts.
8582. In your inspection do you pass the watering-places on the stock routes? Yes.
8583. Do you inspect these? Yes.
8584. You recognise that as part of your duty? Yes.
- 8585.

8585. Do you think every stock inspector in the country ought to do the same? I think they have instructions.

8586. From whom? From Mr. Bruce.

8587. But whether you have instructions or not, you take it as part of your duty to inspect the public watering-places? Yes; I always do.

8588. And taking that view, do you say it is the duty of every stock inspector to inspect the public watering-places? I should say so.

8589. To protect the interests of the stock-owners? Yes.

8590. If a public watering-place were not in order he would fail in his duty in not reporting it? Exactly.

8591. Do you travel about much? Between 3,000 and 4,000 miles in the year. Last year 3,973 miles.

8592. How many days in the month do you travel or are you away from home? I suppose I would be away from home about three days a week. It is just to suit the convenience of the office. If there is not much doing in the office I would be away for a week or a fortnight. There is a lot of dodging about the country and through paddocks on horseback.

8593. Are you asked to prepare an annual report? Yes.

8594. Does it take up much of your time? It takes up a great deal of it.

8595. How much in the early part of the year for the previous year's work? We have to start in November and send out the return forms to stock-owners, and that takes a month. Then we have to receive them back, and that takes December and part of January.

8596. When are you in a position to return this annual report to the Chief Inspector of Stock? We can never complete it till the end of February.

8597. You send it in during March? On the 1st of March it must be in Sydney.

8598. What was the object of this report? For statistical purposes, to show the number of stock in the Colony partly.

8599. Is it, in your opinion, necessary to supply all the particulars contained in this report? There are some particulars you cannot supply.

8600. In order to prepare this report do you send out notices to the sheep-owners round your district? Yes.

8601. You ask them to supply the number of lambs shorn, the number of sheep shorn, and to show the number and weight of the fleeces in grease, creek-washed and scoured? Yes; as near as we can get to it.

8602. Then there are a number of questions you ask as to the reason for increase or decrease in weight of clip for a district, and as to quantity of yolk, percentage of clip sound, percentage of clip tender, percentage of clip unsound, freedom from dust, and freedom from burrs. To how many people do you send out that statement? To all owners of over 500 sheep.

8603. How many return them? Not half of them.

8604. Then you have to estimate the balance? Exactly, by making personal inquiries of the different sheep-owners, and making notes as I travel about.

8605. What time does this take you—how many weeks or months? I have to keep on making inquiries as soon as the clip is taken off for wool, and nearly all the year round for lambs.

8606. You have to write to people and worry them to get these returns in, and you do not get half of them back? Yes.

8607. Does it take three months to prepare the returns? It does.

8608. Do you think it is necessary that you should have all this clerical work to do when the main duty for which you are engaged is to watch the interest of stock-owners? I do not think it is necessary.

8609. Now here is a sample of the questions:—"Any diseases or ailments affecting the horses; if so, state them, giving particulars as under in each case—

1. The diseases or ailments.
2. Cause of each disease or ailment.
3. Extent of each disease or ailment.
4. Remedies used for each disease or ailment.
5. Results of remedies used in each case.
6. If any losses; state number from each disease or ailment?" —

8610. How many owners of horses are there in this district? About 1,500.

8611. Would you have to state these particulars in each case? Yes; where disease has broken out.

8612. Do you send and ask the owners of sheep to supply the information you want to put in this report? We get a good deal of information on the stock returns, the returns under the Pastures and Stock Act.

8613. Here is another question:—"The number of animals destroyed under the Act—Kangaroos, kangaroo rats, wallabies, wallaroo, native dogs, wombats, hares, paddamelon, bandicoots, wild pigs, bilbees, eaglehawks, crows, emus, opossums." Then, on page 16, you are asked to supply the "estimated number of noxious animals in your district, kangaroos, wallabies, native dogs, hares, wild pigs," and whether they are increasing or decreasing. Then, again, you are asked "whether the land is infested with Bathurst burrs, trefoil burr, variegated thistle, black thistle, or other noxious weeds." And then, after having giving all sorts of information, the inspector is asked for "any other information with regard to stock, their pastures, conveyance to market, &c., &c., which may be useful or interesting to notice." Now, seeing that the squatters and the others whom you ask to supply this information decline to recognise your request in any way, and, in fact, in most cases resent it, what is the value of this report—what is gained by it? Not very much. I know it takes three months of my time.

8614. If you were relieved of this three months' official work in connection with the annual report you could give so much more time to the work for which you were primarily appointed? Yes; in looking after diseases. We are appointed under the Diseased Animals Meat Act as well.

8615. *Mr. Humphery.*] Do you know whether the information contained in the answers to questions for the annual report is necessary under the Prevention of Scab in Sheep Act or any Act? I do not think so.

8616. Has it ever been explained to you why you are called upon to furnish such a mass of information? No.

8617. Could you furnish a report which would, in your opinion, sufficiently comply with the requirements of the Act, without spending three or four months in endeavouring to obtain the imperfect returns to which you refer? I think I could make a report, giving anything that was worthy of notice.

J. L.
Henderson,
Esq.
16 Mar., 1895.

8618. Is much of your time occupied as Registrar of Brands? Yes; I have a great deal to do in receiving applications as Deputy Registrar of Brands, and in sending them on to Sydney and making modifications. I record about 100 brands in the year. This is apart from the sheep brands.

8619. I suppose you are aware that there is a considerable difference in the salaries paid to inspectors? Yes.

8620. How long have you been an inspector? Over six years.

8621. Are the duties of some inspectors so much more onerous than those of others that the higher salaries are reasonable? I think the higher salaries are given in back-country places, where it is thought the expenses may be higher, but that is a mistake. The cost of living may be higher, but not that of travelling. It costs just as much, or more, to travel about a settled district like this as (say) at Wilcannia.

8622. Is it your opinion that the difference in salaries should not exist? I think the salaries should be all the same.

8623. Assuming equal competency? Just so. Of course we have to pass a stock examination.

8624. As far as you know, has one inspector greater responsibilities than another? In what way?

8625. In any respect? Yes; especially those in settled districts.

8626. How is that? In the matter of receiving moneys and in the registration of sheep brands. They have also saddled us with the seed-wheat business, and I have to collect a lot of money for that. I have also to collect arrears of sheep contribution.

8627. *Mr. Storey.*] Are you aware that the sum of £20,000 per annum is spent in this department in connection with the prevention of scab in sheep? I could not tell what the amount is.

8628. According to the Blue Book that amount is spent, but it is returned to the Treasury by the squatters under an assessment;—have you heard of any complaints from squatters about the heavy charge for this assessment? I have never heard of any. They complain more about the local taxation under the Pastures and Stock Act.

8629. But none about their contributions to this particular fund? No.

8630. You think they are satisfied with the work? I think so, as far as I have heard.

8631. Have you heard any squatters say there are not sufficient inspectors? No.

8632. *President.*] Is it your opinion that if the inspection of sheep were not continued there would be a great danger to the herds of the colony by the, perhaps, unexpected and unknown inroads of scab somewhere? There would be danger if the sheep were not watched.

8633. Is it your opinion that the costs which the squatters voluntarily incur are a very small matter compared with the terrible risks and loss that would arise in consequence of the introduction of scab? Yes.

8634. Is it a fact that scab could be introduced on the clothing of human beings? It is a fact.

8635. And is it also a fact that if a scabby sheep comes under a fence, and leaves a portion of the infection upon the timber of the fence, and another sheep many months afterwards were to pass underneath it, the second sheep might be infected? Yes; the sheep might become infected.

8636. So it is a most insidious and dangerous disease? Yes.

8637. *Mr. Robertson.*] Did you ever see a case of scab? No.

8638. With these facts before you, would you consider it a safe thing to dispense with the system of inspection of sheep as it at present exists? I do not think it would be. I think sheep should be watched.

8639. And that even the sound flocks are the better for being watched by inspectors going round occasionally and seeing them? Yes.

8640. It might be the loss of millions of pounds sterling to this Colony if scab were introduced? It might, and there would be the trouble to exterminate it, which might cost millions.

8641. *President.*] With regard to the watering tanks, which are of course placed on inhospitable routes for stock, do you not think that those who are benefited by them should pay the cost of them? The stock-owners?

8642. Yes? I think so.

8643. The Government are very paternal just now, and have a most expensive department for the management of these watering tanks;—would it be a great hardship on the stock-owners who travel sheep if they were made to contribute towards the expenses of these tanks? I do not think it would. If they had proper provision made on the reserves and good accommodation I think they would be very pleased to pay as a general rule.

8644. In the Blue Book of 1893 the wages paid to caretakers of tanks amounted to £11,934 7s. 9d., and that is only for the proportion of the tanks which are not leased to lessees, but which are retained perforce under Government care, because lessees cannot be found for them? [*No answer.*]

8645. We know that statistics cannot be perfect, and there must be a great deal of what you would call "taking the average" involved;—for instance, you might estimate pretty accurately the number of lambs for a season, but as to the number of noxious animals there must be a great deal of guess work; is it your opinion that the statistics with regard to the number of sheep in the Colony are pretty accurate? I think so.

8646. Do the squatters give full return of their flocks? Yes; they make two returns, one to the clerk of petty sessions, and one to the inspector.

8647. Are they compulsory returns? Yes.

8648. These are always obtained? Every year; and they are compared and checked, and the numbers are taken from them.

8649. Do you rely upon that as being in the main accurate? Yes.

SUMMARY OF RETURNS, ETC.,

WHICH WERE HANDED IN BY THE VARIOUS WITNESSES, OR FORWARDED FOR THE INFORMATION OF, THE CIVIL SERVICE INQUIRY COMMISSION.

[Prepared by the Secretary under instructions from the Commission, as per Resolution contained on page 23 of the Minutes.]

The Returns are arranged and numbered for ready reference, not as they were promiscuously handed in by the witnesses, but according to the order of the departments from which they emanate, as will be seen by a glance at the following schedule:—

SUMMARY OF RETURNS.

FILE No. 1.

CHIEF SECRETARY'S DEPARTMENT.

MINISTERIAL OFFICE.

(1.) Printed statement showing increase of work in the Chief Secretary's Office between 1883 and 1893 inclusive, and also to 31st October, 1894. The statement shows an increase for 1893 over 1883 of 7 officers, 6 messengers, and 2 office-keepers and cleaners employed, of 8 sub-departments, and of £4,082 in the cost, &c., &c.

(2.) Return showing the number of officers and others under the Chief Secretary. The totals are as follows:—Executive and Legislative, comprising the Staffs of the Governor, the Legislature, including the Reporting Staff, &c., 92; the Staffs of the Chief Secretary and sub-departments, including the Police, 1,879; Permanent Military and Naval Forces, 640; Lunacy, 481; and Asylums for Infirm and Destitute, 131=3,752, which, with the Partially-paid Military and Naval Forces, 5782, makes a grand total of 9,534.

(3.) List of Acts which are administered by the Chief Secretary, dated November, 1894. There are 140 altogether, comprising the Companies' Acts, the Constitution Acts, Electoral Acts, Fisheries Acts, Hospitals' Acts, Lunacy Acts, Municipalities' Acts, Police Acts, Real Property Acts, Registration Acts, and Sydney Corporation Acts.

REGISTRAR-GENERAL.

(4.) Memorandum by the Registrar-General showing that the slight increase in the number of his staff has been caused wholly and necessarily by improved methods of dealing with the public business in the several branches. Previous to 1890 there had been no recognised method of check over the accounts, and each succeeding year prior to that time had proved disastrous to the financial credit of the department. Attached to the memorandum are a number of printed reports by Treasury Inspectors, with their appended schedules, giving the result of the reforms which had been introduced. The printed returns, which were prepared for submission to the Royal Commission of Inquiry into the Registrar-General's Department in 1893, includes a memorandum from Mr. Deputy Registrar Gillam on the Deeds Branch, showing the reforms that had been instituted in carrying on the work of that office. Among the returns is a statement of receipts and expenditure for five years—1889-1893. The receipts vary from £43,787 for 1893 to £46,902 for 1891, and the expenditure (voted) from £26,122 10s. in 1889 to £28,513 in 1892. The difference in favour of the receipts ranges from £16,165 in 1893 to £19,683 in 1891. The totals for the five years are £223,415 receipts, £137,176 10s. expenditure (voted), and the total difference in favour of receipts for that period amounts to £91,238 10s.

(5.) Printed returns under the Real Property Act for 1884 to 1891, presented to Parliament in each respective year, showing (1) the number of applications, with amount of fees for each month, &c.; (2) number of Crown grants for each month, and (3) memorials registered for each month. The tables for each respective year are here arranged comparatively:—

RETURN of the Number of Applications, with amount of Fees, &c., under the Real Property Act, for the years 1884-94, inclusive.—Summary.

* Actual and estimated for.

From 1892 onwards the returns of the Registrar-General's Department comprise a lot of other information over and above that summarised above under the "Deeds Registration Act," such as the number of discharges and transfers of mortgages, conveyances, assignments and leases, mortgages of land, preferable liens on wool and mortgages on live stock, discharges of mortgages on live stock, liens on growing crops, returns of births, marriages, and deaths, &c., &c. The total number of mortgages on town and country land registered under the "Deeds Registration Act" was 10,450 in 1892, 9,351 in 1893, and 9,303, actual and estimated, in 1894. The amounts mortgaged in the same years were £9,328,563 3s. 2d. in 1892, £7,434,029 6s. in 1893, and about the same, actual and estimated, in 1894. The total area and value of land under the Real Property Act in 1892 was 17,191,686 acres 1 rood, and £35,410,395 10s. 2d.; in 1893 it was 17,490,626 acres 1 rood 26 perches, and £36,679,650 18s. 11d. The total collection of fees in 1893 was £41,138 10s. 7d. by revenue, sale of forms, stamp duty on Crown grants, and by Trust funds.

(6.) Returns showing in quinquennial periods the number of deeds and documents registered, and also of fees paid in the Deeds Branch. The total revenue of the Branch in 1894 was £13,614 8s. 7d., while salaries and other expenses amounted only to £3,299. The total staff of the Branch in 1882 was 9, in 1895, 13, including the record attendants. The number of liens on crops registered had steadily increased from 582 for the quinquennial period 1863 to 1868 to 5,884 for the period 1888 to 1893, and the number registered from 1893 to 1895 was at the rate of 10,202 for the quinquennial period. The registered documents in connection with the Public Companies' Act had increased by steady leaps from 219 for the quinquennial period 1874-9 to 5,592 for the period 1889-94. The number registered under the No-Liability Companies' Act had increased from 145 for the quinquennial period 1881-6 to 219 for the period 1886-91, since which period the rate had slightly decreased. The number registered under the Trade Marks Act had steadily increased from 20 for the quinquennial period 1865-70 to 1,595 for 1885-90, and the number registered during the quinquennial period now running was at the rate of 2,204. The number of wills deposited had varied, ranging from 63 for the quinquennial period 1875-80 to 167 for the similar period 1860-5. The rate of the period now current, 142, was higher than for any other excepting the one last-named. The number of actual mortgages registered showed a steady increase from the quinquennial period 1850-55, when it was 969, to 1890-95, when it was 16,359, or just double the number of the previous quinquennial period. The number registered for the period 1845-50, namely, 1,372, was higher than the number for the succeeding quinquennial period. The number of liens on wool had varied considerably, ranging from 461 for the quinquennial period 1860-65 to 10,180 for the period 1890-95. The number of deeds registered showed a similar variation, ranging from 10,000 for the quinquennial period 1845-50 to 127,000 for the similar period 1885-90. The number registered for the current period was 121,000. The number of deed searches showed a steady increase, having been 21,865 for the quinquennial period 1885-9 inclusive, to 30,487 for the succeeding quinquennial period. The number of actual searches made had increased very considerably from 6,093 for the quinquennial period 1885-9 inclusive, to 19,567 for the succeeding quinquennial period. The number of crop searches made was similarly progressive, from 1,339 for the quinquennial period 1885-9 to 2,616 for the succeeding period. The number of wool searches made showed a large increase from 5,172 for the quinquennial period 1885-9 inclusive, to 16,774 for the succeeding period. The number of will searches made had increased from nil to 6,748 for the quinquennial period 1890-5. The number of searches made per annum ranged from 16,000 to 17,000 for the last four years. The number of trade-mark searches made had increased from 125 for the quinquennial period 1885-9 inclusive, to 1,386 for the succeeding period. The number of company searches made had increased from nil to 4,075 for the quinquennial period 1890-5. Prior to that period these fees were received by the officer administering the Act.

* (7.) Monthly Reports by Heads of Branches for 1894—(1) and (5) by the Deputy Registrar-General on the Land Titles and Deeds Branches; (2) by the Principal Draftsman on the Draftsman's Branch; (3) by the Clerk to the Examiners of Titles on the Examiners' Branch; (4) by the Searcher on the Search Branch; (6) by the Accountant on the Account Branch; (7) by the Chief Clerk of Births, Deaths, and Marriages' Branch, and (8) by the Chief Clerk of the Correspondence and Record Branch on the work of their respective branches. These reports are typewritten on printed forms, and are of a most exhaustive character. The arrivals after 9.15 a.m. and the departures after 4.45 p.m. are noted, with the names of absentees; and the heads of the various branches make whatever comments they consider necessary as to (1) the attendance, (2) the efficiency, (3) the attention to duties, (4) leaves of absence, and (5) the arrears of work, if any, of the officers under their charge. These elaborate reports, together with the attendance-book, are submitted to the Registrar-General every month.

AUDIT DEPARTMENT.

(8.) Statement showing salaries of officers transferred from the Audit Department, date of their leaving, and their present salaries, as also the salaries paid to their seniors when they left the Audit Department, and the salaries their seniors are getting now. Twenty-one cases are given. A few instances briefly summarised will convey the lesson of the return:—J. W. Meikle was receiving £50 per annum when he left the Audit Department in 1872, and is now receiving £350 per annum at the Treasury. His immediate senior in the Audit Department was receiving the same salary, namely, £50, when his junior left, and he is now receiving £303 10s. per annum. C. M. Kern was receiving £50 per annum when he left the Audit Department in 1877, and is now receiving £380 per annum from the Treasury. His immediate senior in the Audit Department was receiving £75 when his junior left, and is now receiving £258 10s. per annum. C. S. Gregory was receiving £275 per annum when he left the Audit Department in 1879, and is now receiving £560 from the Post and Telegraph Department, while his immediate senior in the Audit Department was receiving £325 when his junior left, and is now only receiving £380. E. H. Wilshire was receiving £75 when he left the Audit Department in 1879, and is now receiving £496 from the Crown Solicitor's Department, while his immediate senior in the Audit Department, who was receiving only £100 when his junior left, is now only receiving £272. A Green was receiving £150 when he left the Audit Department in 1879, and is now receiving £470 from the Justice Department, while his immediate senior in the Audit Department, who was receiving £175 when his junior left, is now only receiving £281.

(9.) Extract from instructions issued by the Lords Commissioners of Her Majesty's Treasury to Governors of Colonies, framed pursuant to Report and Resolutions of Select Committee of the House of Commons appointed to examine into the Accounts of Colonial Receipt and Expenditure, dated 27th January, 1846.

CHARITABLE

* These Reports are much too bulky to be filed, but have been placed in the custody of the Chief Secretary with the other return.

CHARITABLE INSTITUTIONS.

(10.) Letter from Mr. Sydney Maxted, Director of Asylums, dated 25th February, 1895, forwarding a statement with reference to work done by the inspectors, &c., for which see paragraph 14 headed "The Work of the Inspectors." An enclosed statement shows 3,141 State children, 417 children registered under the Children's Protection Act, 93 lying-in homes, 14 unemployed cases, and 39 pauper relief cases, to be visited four times annually by the inspectors, the total number of visits to be paid annually amounting to 16,939. Another paper states the duties of the inspectors. Table A shows the total number of applications for State children visited and reported upon in 1894 to have been 1,095, not including 184 applications withdrawn after the inspectors had made the usual inquiries. Tables B and C show that 550 children were admitted during the same period upon the reports of the inspectors, and that the number of applications from relatives for the restoration of boarded-out children reported upon was 182. Tables D and E show the distribution of State children, and of children under the Children's Protection Act, with their approximate distances from the nearest accessible railway station. Table F gives 35 and 93 as the number of registered nursing homes in Sydney, Albury, and Narrandera, and Table G, 93 as the number of lying-in homes to be visited.

(11.) Memoranda by Mr. Sydney Maxted, Director of Charitable Institutions, stating (1) that a recommendation was with the Minister for the abolition of the office of sub-matron at the Shaftesbury Reformatory, by which a saving of £130 a year would be effected; (2) that 12s. a day instead of 15s. should be sufficient for the ordinary second-class officers' travelling expenses, which would effect a further saving of £300 a year; (3) that the Charities Department was re-organized in 1888, when the three principal salaries, totalling £1,780, were merged into that of the Director of Government Asylums at £700, and (4) that a total saving of £1,872 a year could be made in his department, including the two above-mentioned, of which the details are supplied.

(12.) Return showing the number of patients and number of officers, attendants, nurses, and servants, with proportion of patients, on 31st July, 1894, in Gladesville, Parramatta, Callan Park, Newcastle, and Rydalmere. The totals are 3,330 patients—1,260 female and 2,120 male; 30 officers; 175 attendants; 103 nurses; 77 servants—49 male and 28 female; and 23 artizan attendants, engineers, and needle-women.

MERCANTILE EXPLOSIVES DEPARTMENT.

(13.) Return of merchants' explosives in the public magazines at Goat Island, Middle Harbour, Broken Bay, and Newcastle, showing the stock on 1st December, 1894, and receipts and issues from 1st to 31st December, 1894, and stock on 1st January, 1895. Summary: In store at all public magazines on 1st January, 1895—637 packages cartridges and detonators; 248 tons blasting, sporting, and other explosives. N.B.—These figures do not include military explosives in the custody of the department, the stocks of which are considerable.

THE WORK OF THE INSPECTORS.

(14.) In accordance with the instructions of the Commission, the Secretary forwarded a circular to each of the heads of departments* asking them to mark on a map of the Colony showing the postal stations and mail roads, the routes traversed by the inspectors, each department to use a differently coloured ink. The Principal Under Secretary forwarded the circular to each of the heads of the departments under the control of the Chief Secretary, and the following is a summary of the replies received:—

Director of Asylums.—Mr. Sydney Maxted, Director of Asylums, forwarded on 25th February, 1895, a map indicating the districts over which inquiries have extended. The Director points out that it is not possible to mark on the map the routes traversed by each inspector separately, because in order that the work of these officers can be checked they are sent from district to district as may be deemed necessary at the head office, so that no particular officer shall have the same district under his sole supervision for a lengthy period. The localities over which the State children are distributed are marked in red and blue on the map, the red indicating the districts in which children are placed out under the control of the State Children's Relief Board, and the blue the districts in which the children are also, in addition, placed out under the Children's Protection Act.

Auditor-General.—The Auditor-General forwards a map showing the roads traversed by the inspectors on the railway lines. The Lismore and Tweed line is approached from Queensland, *via* Brisbane and Southport, from Wallangarra.

The Fisheries Commission.—The Secretary of the Fisheries Commission says it is impossible to particularise any direct route taken by the inspectors of that department, as the fisheries inspectors have only inspected certain waters as occasion required.

Medical Adviser to the Government.—No travelling is done by the officers under the Medical Adviser to the Government except on very rare and exceptional matters. Local Government medical officers are stationed in each town of importance.

DEPARTMENT OF FINANCE AND TRADE.

MINISTERIAL OFFICE.

(15.) Comparative statement showing a total of 86 persons engaged in the Treasury Department, receiving aggregate annual salaries of £28,110 12s. in 1891, and a total of 90 receiving £23,290 18s. in 1894, or a decrease of £1,819 14s. in the expenditure, and an increase of four in the number employed.

(16.) Statement showing (a) additional work undertaken by the Treasury, and (b) duties transferred from the Treasury to other departments from 1885 to 1894.—*Summary:* (a) (1) Establishment and management of the Treasury Guarantee Fund for the fidelity of public officers, (2) issue and withdrawal of Treasury notes under the Current Account Depositors' Act of 1893, and (3) issue of local inscribed stock under the Funded Stock Act of 1892; (b) (1) publication of sworn returns of banks' liabilities and assets, (2) as also of liabilities and assets of banking, land, building, and investment companies transferred to the Government Statistician. An attached memo. shows (1) the books in use in connection with the Funded Stock Act (16), and (2) the forms in use (23). One hundred and sixteen transfers were issued in 1894 between 1st January and 5th December, 66 powers of attorney were registered since the commencement of stock, 315 ledger accounts opened, 712 certificates issued, 360 dividend disposal orders registered, and a considerable portion of time every day was occupied in answering inquiries about the *modus operandi* of stock. The whole of the work of drafting the Bill (now the Funded Stock Act), framing the regulations, and preparing the various forms, was done in the Treasury.

(17.) Return showing the number of persons employed in the Treasury Department in each year from 1885 to 1894 inclusive, together with the amount paid as salaries, wages, and allowances.

		<i>Summary.</i>				
		No.	£			
1885	74	21,558	1890	85	24,353
1886	79	22,966	1891	86	26,067
1887	77	22,768	1892	90	25,833
1888	76	22,064	1893	90	23,904
1889	86	23,228	1894	90	23,148

THE

* For the replies from other departments see paragraphs 20, 144.

(18.) List of officers who are, or act as, accountants in the public departments, with their rates of pay and years of service, and showing the number of clerks in these departments, besides the heads of departments and their accountants. There are thirty-eight accountants in all, with salaries ranging from £180 to £1,000, the average being £423 7s. 1d., and the total £16,087 10s.

(19.) Minute embodying an improved system of conducting the business of the Treasury, submitted by the Hon. the Treasurer (Mr. Geoffrey Eagar) on 16th June, 1864, and approved by the Governor, with the advice of the Council, on the following day, and carried into effect on the 1st of the following month.

(20.) Memorandum from the Under Secretary for Finance and Trade in reply to circular referred to in paragraph 14, stating that the country towns are classified in tours for the purposes of inspection by Treasury officers as per enclosed list, which generally take from seven to ten weeks to accomplish, and are undertaken when due for inspection by any inspector available. While the metropolitan offices have been inspected annually, the country offices (excepting Newcastle, Parramatta, and Ryde) have not been inspected at a less interval than eighteen months. A sub-schedule enclosed shows the various offices inspected. The inspector examines all accounts for the period from the latest previous inspection to the date of his visit. For expenses of travelling the inspectors receive 15s. per day, with cost of conveyance, but an extra sum of £10 is allowed in connection with some of the tours to cover the higher cost of travelling. There are ninety-five metropolitan inspectors and 770 country inspectors, of whom 291 inspect the Postmasters' Money Order accounts, and 102 the Acting Clerks of Petty Sessions, a total of 865. There are seven inspecting officers on the staff of the department, including the Chief Inspector and the Senior Inspector of Public Revenue Collectors' accounts, and the Accountant to the Treasury, whose united salaries for 1894 amounted to £3,640.

CUSTOMS.

(21.) Return showing the aggregate amount of fees for overtime services paid to officers in the Customs Department during the year 1894, namely, £1,946.

(22.) Particulars of cases before the Board of Commissioners of Customs during the years 1892, 1893, and 1894. Summary:—Total number of cases, 64; meetings, 193; cases, decision in favour of plaintiff, 21; cases, decision in favour of Collector of Customs, 38. It is pointed out that most of the appeals were instituted with a view of obtaining a decision as to the schedules in the "Customs Duties Act of 1891" in which goods should be classed.

(23.) Return showing the number of persons appointed to the Customs Department from 23rd October, 1891, to 4th August, 1894.—*Summary*: Total number appointed, 130. During the same period there were 7 retirements, 7 deaths, 10 dismissals, 11 officers dispensed with, 7 transferred, and 8 resignations, making a total of 50. The salaries, in a large number of cases, are also given.

(24.) Letter from the Collector of Customs, enclosing copy of a letter from the Treasury, dated 26th February, 1899, giving the names of officers in the Customs Department who had been notified that they would be required to retire from the Service with a concurrent payment of six months' salary as the equivalent of six months' leave of absence in view of the recommendations of the Public Service Inquiry Commission of that date.

(25.) Printed summary of twenty-three appeals dealt with in 1892 by the Board of Commissioners of Customs under the tariff of 1891. The Collector of Customs points out that the number of cases submitted is far larger than the usual number in previous or subsequent years, and was caused by the adoption of the extended tariff embracing *ad valorem* duties, a fertile source of dispute.

(26.) Statement showing amount collected, cost of collection (as voted), rate per cent., and "remarks" concerning the Customs, Excise, Pilotage Dues, Harbour Rates, &c., for 1880-93.—The amount collected increased gradually from £1,203,916 in 1880, when the duties on wines and spirits were increased, to £1,943,541 in 1885, the year after the duties on tobacco, cigars, and opium were increased, excise on tobacco was imposed, and stearine was taxed. In 1887, the year after the specific duties were increased and *ad valorem* duties were imposed, the amount collected was £2,289,961. In 1888, the year after the *ad valorem* duties and the duties on malt and hops were repealed, the specific duties, as also the malt spirit duties and tobacco excise were increased and the beer excise was imposed, the amount collected fell to £2,212,461. In 1892, the year after the specific duties were increased and *ad valorem* duties again imposed, the amount of Customs, &c., collected rose to £3,037,281, falling in the following year to £2,448,856. The cost of collection, as voted, had pretty steadily increased from £50,571 in 1880, to £74,216 in 1893. The rate per cent. was highest in 1880, when it was 4.20, and lowest in 1892, when it was 2.41. In 1893 it was 3.03.

(27.) Statement showing the amount of revenue collected at each port and station in 1892 and 1893. Sydney was, of course, first with £2,544,753 in 1892, and £2,051,464 in 1893. Newcastle came next with £191,395 and £151,287 in 1892 and 1893 respectively. The third on the list is Wilyama (where the railway to Adelaide, S.A., has its terminus in the Broken Hill district), the amounts collected there having been £115,358 and £96,533 in 1892 and 1893 respectively. The fourth on the list is Bourke, where only £27,384 and £20,049 was collected in 1892 and 1893 respectively. The lowest was Kiama, which brought in £7 and £4 respectively in the two years named.

STORES DEPARTMENT.

(28.) Copy of letter to the Hon. the Treasurer, dated 19th December, 1892, by the Superintendent and Inspector of Stores, in which he expresses his approval of the present system of purchasing goods in fixed quantities, but in the absence of sufficient storage space it is still necessary in several contracts to accept open or indefinite quantities and daily delivery of small parcels. In a report to the Treasurer, dated 11th May, 1892, he had pointed out that many thousands of pounds had been saved to the Government by the initiation of the former system, under which goods held in stock were ready for issue at a moment's notice, and contractors tendered at nominal advances upon manufacturers' prices, whereas under the old regulations for supplying open or indefinite quantities they necessarily provided for probable loss. As a typical illustration of the difference in cost between the two systems, the Superintendent cited the case of drapery and clothing, the cost of which in 1881 under the old system was actually £8,496 6s 10d. in excess of the expenditure for similar goods for 1891, notwithstanding that prisoners, lunatics, and destitute had increased by 2,000. Next in importance to the advantageous purchase of goods was their distribution, and the Superintendent regretted to say that a "very large proportion of the requisitions which reach this department are loosely prepared and perfunctorily approved." As instances he states that one department had sent consecutive half-yearly requisitions for "almost precisely similar lines, among others six toilet sets, &c.," which, the Superintendent points out, "could not possibly be utilised." In another case an officer reported the Superintendent to the Under Secretary for curtailing his supply of stores, stating that, "having a large family, he considered he was unfairly dealt with, inasmuch as the Superintendent had not sent him such items as 14 lb. of toilet soap." The Superintendent further states that "the very best and most expensive hand-made foolscap paper, worth retail 50s. per ream," was "now asked for in issues of forty reams at a time, the present actual supply being 900 reams per annum, which is probably one-third of what has been demanded. Similar remarks," adds the Superintendent, "would apply to envelopes and note-paper, the most expensive and richly embossed article being freely issued upon occasions when the very cheapest would answer requirements." The Superintendent instances one case in which 5,000 envelopes and sheets of paper were obtained at a cost of £46 7s. 7d., equal to about 2½d. for each sheet of paper and envelope. The Superintendent concluded by recommending—(1) increased storage accommodation, with a view of bringing all contracts under "fixed quantities"; (2) greater care in the preparation of requisitions; (3) the alteration of his official designation to "Controller-General of Stores," in order that the "onerous duty cast upon me of checking and reducing requisitions might be better understood and more generally accepted"; (4) the consideration of the propriety of establishing a Tender Board to deal with all Government supplies other than railway material and public works.

(29.) Statement showing amounts actually voted on account of the Stores and Stationery Department, together with expenditure from 1884 to 1893, inclusive. The amounts voted ranged between £114,960 in 1890 (£114,744 was the amount voted, and £216 Supplementary) and £166,221 in 1885 (£110,621 was the amount voted, and £55,600 Supplementary); and the expenditure ranged between £106,759 2s. 1d. in 1888, and £163,896 11s. in 1886.

(30.) Printed form supplied quarterly to Comptroller-General of Stores, on which he gives particulars of the paper, parchment, and miscellaneous stores received and issued during the period named. The form covers fifteen pages of fifty-two lines each, nearly every line bearing the name of a different article.

GOVERNMENT PRINTER.

(31.) Return showing the revenue, estimated value of work executed, and expenditure in the Government Printer's Department during the years 1889 and 1893 respectively.

Summary.

	£	s.	d.
Revenue collections	35,182	18	10
Value of work executed	*541,272	5	6
Cost of paper and parchment	104,101	7	9
	£680,556	12	1
Less cost of paper and parchment	104,101	7	9
	£576,455	4	4
Deduct "Expenditure".....	467,109	1	7
Excess in favour of Department	£109,346	2	9

(32.) Printed Return, showing the cost and description of work done in the Government Printing Office for 1893, being the Annual Return laid on the Table of the House every year since 1884, in accordance with an order by the Legislative Assembly, showing—

- (1.) The total cost, wages, and material of the printing, look-binding, photography, and lithography done for each Department of the Public Service at the Government Printing Office during the year ending 31st December. The estimated value of Parliamentary printing, including Parliamentary Debates and *Government Gazette*, was £32,454 17s. 10d.; and the total value, including bookbinding, photography, paper, and parchment, was £40,085 8s. 8d. Of this sum £1,882 16s. 2d. was incurred on the motion of Members of Parliament, £1,642 8s. 11d. by Members of the Lower House, and the balance by Members of the Council. The total value of the job-printing done for the several departments, including the cost of printing, binding, photography, paper, and parchment, was £81,763 15s. 6d. The total value of the work done (Parliamentary printing and job-printing, including stereotyping, electrotyping, engraving, repairs to machinery, type-founding, &c., and clerical work) was £134,350 3s. 2d., in which account is included 50 per cent. for incidental expenses, such as superintendence, reading, publishing, correcting author's proofs, wear and tear, and interest on capital invested.
- (2.) The total number of copies, and total cost, of each book and pamphlet published at the Government Printing Office in 1893. The list of books and pamphlets covers eight and a half printed pages, and embraces time-tables and passenger fares, weekly and monthly notices, minutes and Acts of Parliament, pamphlets on poultry and bees, how to make cheese, and how to store fruit; books on astronomy and music, statistics and history, departmental reports and speeches on finance. The list includes thirty one books, the number of copies published ranging from twenty of the Annual Report of the New South Wales Rifle Association for 1892 (including 900 pamphlets of the same) at £53 13s. 7d., to 2,500 for that of the Minister for Public Instruction, for the same period, at a cost of £127 10s. 2d.; 477 pamphlets were published, the number of copies ranging from four for the Syllabus and Subjects for Examination of Officers of the Partially-paid Forces, and Instructions for Commanding Officers, at a cost of £29 1s., to 21,900 in the case of time-tables and fares for June, 1893 (with maps), at a cost of £277 19s. 2d. The cost ranged from 6s. 3d. for fifty copies of the record of two cases of treatment of ankylosis of the lower jaw, to £969 10s. 10d. for 2,100 copies of the catalogue of books on Australasia in the Free Public Library.
- (3.) The title or description of each collection of photographs or lithographs published at the Government Printing Office in 1893, with the number of copies and total cost of each set. There were twenty-six in all, the number of copies issued ranging from two photographs of views for the Surveyor-General, at a cost of £4 2s. 6d., to 2,326 photographs and miscellaneous views, at a cost of £194 2s. 6d.

(33.) Memorandum showing cost of superintendence, clerical and manual labour, in connection with the Store Branch, Government Printing Office. Summary: Total, 9; aggregate salaries, £1,065.

(34.) Estimated value of work done by the Department during the year 1893	}	Printing, &c.	113,900	8	1
		Paper and parchment	20,449	15	1
		Total	£134,350	3	2
Revenue of the Department to 30 November, 1894			£5,837	10	4
Expenditure of the Department, 1893			£98,252	5	7
Number of "Permanent" hands at present employed, at rates varying from £740 per annum to 1s. per diem			437	} 625	
Number of "Temporary" hands at present employed, at rates varying from 12s. to 2s. per diem, also at 1s. 1d. per 1,000 ens and 1s. 4d. per hour			188		
Greatest number of "Temporary" compositors employed (on the introduction of the New Electoral System)			356		
Number of "Temporary" compositors at present employed			162		
Approximate annual saving if reduction be made to 1s. per 1,000 ens and 1s. 3d. per hour in respect to "Temporary" compositors			£2,000		
Probable saving by the introduction of Type-setting Machines			£4,139		

(35.) Return showing in detail number of persons employed in Government Printing Office on November 30, 1894:— Permanent, 437; temporary, 188 = 625.

(36.) Memorandum from Government Printer, stating that since his appointment to the charge of the department on November 1, 1886, the necessity for keeping down expenditure, so far as was consistent with economy, had received his closest and most unremitting attention. He instanced nineteen methods by which he had endeavoured to achieve this end, such as stopping the free printing for institutions in receipt of endowments from the Government, also of unclaimed letter lists, substituting steam and labour-saving machines for hand-power where possible, and using logotypes—*i e*, short lines of words or figures cast solid instead of using single type—particularly in the Railway Time Tables, besides binding books cheaper than formerly. Only two ways now remained for reducing expenditure—(a) by reducing the rates paid to temporary compositors, and (b) by the introduction of linotype composing machines, which latter he estimates would mean 5d. as against 1s. for cost of composition.

(37.) Return showing expenditure of Government Printer's Department for 1893 and 1894. Summary: Complete year, 1893; total, £98,252 5s. 7d. To December 12, 1894; total, £88,750 18s. 8d.

(38.)

* In this amount is included 50 per cent on the value of the composition for incidental expenses, *viz*—

Superintendence (including accounts)	10	per cent
Reading	10	"
Publishing	10	"
Correcting author's proofs	15	"
Wear and tear, and interest on capital invested	5	"
Total	50	per cent

(38.) Printed list of "Papers by Command" to be printed and published as early as possible in each year, whether Parliament be in session or not, such as departmental and other reports, of which there are 250 issued for the Council, 430 to 470 for the Assembly, 265 to 330 for stock. The return also gives the number of copies of by-laws, Acts, and miscellaneous papers printed for the Council, the Assembly, and stock.

(39.) Printed paper published as a supplement to the *Government Gazette*, 1st October, 1890, on which date they came into force, containing the rules and regulations and conditions of employment in the Government Printer's Department. These regulations are summarised in Appendix D, Civil Service classification, Government Printer's Department.

(40.) Printed minute by the Government Printer to the Under Secretary for Finance and Trade, in reply to a question in the Assembly as to whether the Colonial Treasurer was favourable to the letting by public tender of printing work now executed at the Government Printing Office, except that required for purposes of Parliament. In all the chief countries of the world, said the Government Printer, with the exception of England, in Canada, and in all the Australian Colonies, the same system is adopted as here, and the whole of the work, both Parliamentary and general, is done in the Government Printing Office. The system of printing by contracts was tried in America, and abandoned. In England large houses had the monopoly of the printing, with the result, according to the evidence of the Comptroller of the London Stationery Office, given before a Committee of the House of Commons, that *Hansard* could be printed for 45 per cent. less than was being paid for it.

BOARD OF HEALTH.

(41.) Statement showing how the vote for Quarantine officers and boatmen for the current half year (£798) had been apportioned. It was apportioned among three officers at Watson's Bay, one at Newcastle, Sydney, and Woolloomooloo respectively, and among eight quarantine officers.

(42.) Printed Annual Report for 1893 of the Coast Hospital, Little Bay, from the Medical Adviser to the Government.—*Summary.* The following statement shows the number of patients during the year, with results:—Remaining in hospital on 31st December, 1892, 192; admitted during the year, 2,274; total, 2,466. Discharged well or convalescent, 1,563; discharged relieved, 588; discharged unrelieved, 30; died, 111; total, 2,292. Remaining in hospital on 31st December, 1893, 174. Average number resident daily throughout the year, 193.5. Mean residence of each patient in days, 32.8. Rate of mortality over all cases, 4.88. The number of patients admitted during 1893 shows the large increase of 630 over the previous year, which was chiefly caused by the admission of a very large number of cases of measles and scarlatina during the prevalence of the epidemics of these diseases which visited Sydney last year. The average daily number resident throughout the year was 193.5, as against 200.3 for the year 1892, the reduction being caused by the residence in hospital of each patient being shortened from 44.6 days in 1892 to 32.8 in 1893. Notwithstanding the large additional number of cases of infectious fevers, &c., under treatment, the average rate of mortality over all cases remained about the same, viz., 4.5 per cent. The Report is accompanied by a number of Returns. Return No. 1 shows the channels through which patients reached the hospital; Returns 2 and 3 give particulars of sex and age on admission, and age at death, of patients suffering from typhoid fever, and the number removed to the Coast Hospital for treatment for each district in 1893. The number of cases had increased by 22 over the preceding year, though the mortality, namely, 10 or 12 per cent., remained the same. Botany and Sydney contributed 18 and 17 cases respectively, Leichhardt being the next highest with 9. Return 4 shows that 535 cases of infectious diseases, other than typhoid fever, were admitted during the year as against 116 in the previous year, the chief increase being in scarlet fever, from 39 to 195, and measles, from 2 to 281. The number of other cases of infectious diseases admitted were: erysipelas, 36; diphtheria, 9; chicken pox, 7; and whooping-cough, 7. Immediate provision of special and more suitable buildings was absolutely necessary. Return No. 5 shows the age, sex, and other particulars of the general hospital cases admitted during the year. The total number of these was 1,656, the average stay in hospital was 34 days, and the mortality 4.6 per cent. A large number of these cases were, after treatment for a considerable period, transferred to the Asylums for the Infirm and Destitute, their cases being such as would not be benefited by further active hospital treatment. Returns Nos. 6 and 7 show the expenditure of the hospital in detail. The working expenses have increased from £10,115 13s. 1d. to £10,451 6s. 1d., and the cost of maintenance and treatment, exclusive of ambulance service and cost of repairs, has been £43 17s. 2½d. per head per annum as against £41 6s. 9½d. for 1892, and £46 4s. 1d. for 1891. Appendices A and B give the usual classification particulars of the diseases treated, and of the patients who died in the hospital.

(43.) Printed Report for 1892 on the Administration of the Leprosy Act and certain information respecting the prevalence of the disease in the Australian Colonies.—*Summary.* On the 1st January, 1892, there remained at the leper lazaret twenty-one persons (particulars of whom are given in Appendix A). During the year, twenty-one persons were notified to the Board as suspected to be suffering from this disease. On investigation, nine were found to be ill of some other disease, and twelve were placed in the lazaret. Of these, two were natives of New South Wales of European descent; one a native of England, who had been in the colonies since 1862; one a native of Fiji of European parentage, and eight Chinese. The number remaining on the 31st December, 1892, was thirty—two natives of New South Wales, of British descent, and two Chinese having died during the year. The total number of patients admitted since 1883 is forty-three, three of whom were females and natives of New South Wales. Their nationality was as follows:—Natives of New South Wales, eleven, of whom three have died; twenty-seven Chinese, of whom nine have died; one half-caste from the West Indies, who was discharged in 1885; one Javanese; one native of England; one native of Fiji, and one of Tanna (Solomon Islands). Of the total admissions during the past ten years, twenty-two (or more than half) have been admitted during the years 1891 and 1892, or since the reporting of cases of leprosy was made compulsory. In Appendix C are given particulars of all cases of leprosy in the other Australian Colonies, which information was furnished by the various health authorities in June last, in response to a request from this Board, from which it will be seen that, including New South Wales, seventy-three cases have been officially recorded in Australia during the past ten years, and that of this number, fifty-four (or nearly three-fourths) have been Chinese. The Board accordingly directed that a special examination of all Chinese camps and quarters within the Colony should be made, but so far no further cases of disease resembling leprosy have been found. The detailed history of all the cases, so far as the same could be ascertained, is given in Appendix D. Appendix E shows that four out of six cases of leprosy in New South Wales, treated by Dr. Cox prior to 1875, were of European descent. Appendix F gives a short account of the curative, or rather, remedial measures which have been resorted to—all without avail. The cost of the maintenance of the lazaret since its occupation until the 31st December, 1892, was £2,338 7s. 3d., or an average cost per inmate, per annum, of £66 16s. 2d., and that the cost of construction and equipment of the buildings, &c., has been £8,108 5s. 9d. For this sum, accommodation has been provided for forty-eight patients—forty males and eight females. As thirty-two patients are now under attention (two cases having been admitted since the 1st of January), there is now available accommodation for seventeen further cases. The Board has reason to hope that New South Wales may yet be saved from having leprosy as a disease permanently abiding in the Colony, and trusts that, by the health authorities of other Colonies rigidly enforcing similar sanitary regulations, Australia may ultimately be freed from the disease. There is a considerable amount of leprosy amongst the coloured and native races of New Zealand and Fiji, and as no measures are taken in these Colonies for the detection and segregation of lepers, they may become a serious menace to the well-being of Australia. Appendix B gives particulars of lepers detained at Little Bay, New South Wales, since 1883.

(44.) Tables showing respectively the successive appropriations and expenditure of the Health and Medical Department for years 1889 and 1894, inclusive.

	Summary.			Amount expended.		
	Amount appropriated.			Amount expended.		
	£	s.	d.	£	s.	d.
1894	65,727	0	0	*57,723	10	2
1893	47,567	3	7	46,098	2	0
1892	47,466	1	4	46,112	3	3
1891	50,300	17	11	48,566	19	9
1890	41,795	7	2	40,861	1	7
1889	40,039	5	4	39,149	17	11

(45.)

* The balance of £8,003 9s. 10d. will probably be exhausted by claims arriving after 31st December, 1894.

(45.) Letter from the Secretary Board of Health stating that a sub-committee of the Board of Health was appointed to investigate the management of the abattoirs, held several meetings, and made specific recommendations, the fulfilment of which had effected considerable saving in the cost of the management of the establishment—£1,073 per annum, by the reduction of seven members of the abattoirs staff, by the withdrawal of the allowances for fuel and light previously enjoyed by the officers of the establishment, and by a special contract for the supply of coal. New regulations for the control of the abattoirs had been issued, tending to more satisfactory and economical management.

(46.) The following statement was put in by the Shipping Master (Captain Jas. Edie) :—

	Revenue.			Expenditure.		
	£	s.	d.	£	s.	d.
1892	1,961	9	1	2,397	10	0
1893	2,259	6	6	2,133	0	0
1894	2,152	5	6	1,953	0	0

The expenditure of 1894 is £444 10s. less than that of 1892, and £180 less than that of 1893. The revenue of 1894 is £190 16s. 5d. more than that of 1892, but £107 1s. less than that of 1893. The expenditure includes salaries and contingencies.

FILE NO. II.

LANDS DEPARTMENT.

(47.) Statement of the expenditure of the Lands Department for the years 1886-94 inclusive.—*Summary.* Total for the nine years, £4,094,290 10s. 5d., ranging from £684,312 1s. 7d. in 1887 to £335,241 15s. 5d. in 1894, but the years subsequent to 1886 included expenditure which was not incurred by the Department in 1886, namely, in connection with the administration of the Forest Branch (now under the Department of Mines and Agriculture), the Rabbit Branch, Minor Roads, Public Parks and Recreation Reserves, Labour Settlements, and Land Appeal Court. Deducting these items the total for the nine years amounts to £3,587,616 2s. 7d., ranging from £555,873 5s. 10d. in 1886 to £302,468 13s. 0d. in 1894.

(48.) Statement of land revenue from 1886 to 1894 inclusive. The totals—which included sales, interest on land conditionally purchased, pastoral occupation, mining occupation, and miscellaneous—ranged between £1,644,017 for 1886 and £2,378,994 for the following year, the next lowest being £2,124,037 in 1894. The highest percentage of nett expenditure to revenue was in 1886, when it touched 33 per cent., and the lowest was in 1893 and 1894, when it was only 14 per cent.

(49.) Statement of travelling expenses and fees in connection with Local Land Board meetings during the years 1891, 1892, and 1893. The districts visited are Armidale, Bourke, Cooma, Dubbo, Forbes, Goulburn, Grafton, Hay, Maitland, Moree, Orange, Sydney, Tamworth, and Wagga Wagga.

	<i>Summary.</i>		
	1891.	1892.	1893.
Chairmen's and clerks' travelling expenses	£6,135 12 10	£6,436 11 5	£5,860 16 0
Members' travelling expenses	1,915 16 5	2,085 14 4	1,938 8 3
Members' fees	6,466 19 0	5,943 0 0	5,255 0 0
Fees and travelling expenses of surveyors, witnesses, and others	2,364 7 8	765 7 6	540 18 3
	<u>£16,882 15 11</u>	<u>£15,230 13 3</u>	<u>£13,595 2 6</u>

(50.) Printed "Lists of Questions for Annual Report," filled up by the Inspectors for the Sheep Districts of Canonbar and Dubbo, 1894 and 1893 respectively. The questions cover twenty-one printed foolscap pages, and embrace almost every imaginable particular on the subject of stock, giving the number of inspections made during the year of stock, dogs, pigs, reserves, commons, pounds, under the Pastures Act and under the Public Watering Places Act; the number of stock inspected on runs or roads (the Dubbo and Canonbar Inspectors inspected five and a half million sheep between them in one year), the number of miles travelled on duty (the Dubbo Inspector travelled 8,305), the number of prosecutions and convictions under seven Acts, and an enormous amount of other information about horses, cattle, sheep, travelling stock, registration of brands, pounds, the Pastures and Stock Protection Act, commons, vaccination for anthrax, annual stock traffic, &c., &c. Other returns which the inspectors have to fill up are a quarterly return, giving a number of particulars about lambing, especially the percentage, and an annual one giving the average weight of fleece per lamb and sheep, with the "reasons" for its increase or decrease, and "remarks" as to the condition of the clip, such as the quantity of yolk, the percentage of clip, sound, tender, and unsound, and its freedom from dust and burs, &c.

(51.) Letter from the Chief Surveyor forwarding, in compliance with the request of the Commission, certain printed documents summarised below, as also a copy of the minute conveying approval of his appointment as Chief Surveyor, and prescribing the duties of the position.

(52.) Report of the Board of Inquiry into the Lands Department, 1887.—*Summary.* The substance of this report is contained in the Board's final report, 1889. At the commencement of their investigation the Board decided to select a group of offices—Wagga Wagga, Hay, and Goulburn—which would be fairly typical of the different varieties of business under the Act of 1884, or the repealed Acts, and enable them to form an opinion of the soundness of the existing administrative arrangements and organisation. In their first Progress Report the Board said they found that great disparity frequently existed between the rates of pay of officers, both on the permanent and temporary staffs, and the quality and responsibility of the services rendered, and they accordingly adjusted the salaries to correspond with specific duties of equivalent value, having first ascertained what duties were necessary and the strength of the staffs required to fulfil them. The Board recommended that adequate provision should be made for the periodical inspection of local offices by responsible officers, upon whose reports the head of the department should take such action as might be necessary. The Board were of opinion that inspectors of Conditional Purchases were overpaid, and that from £200 to £250 per annum would be a fair and reasonable rate, with a travelling allowance of 20s. per diem. This work, they were informed, was done in Victoria by the police, and might, perhaps, be so done here. The Board were also of opinion that more field inspections and reports were obtained than were necessary, and that capable and highly-paid surveyors should not be employed in making reports of a minor character.

(53.) Final report of the Departmental Board of Inquiry on Local Land Board and District Surveyors' Offices, Lands Department, 1889.—*Summary.* After quoting from the first Progress Report issued by the Board attention is drawn to the Progress Report, No. 11, on the metropolitan office, in which they express the opinion that "increased efficiency can be obtained, and a considerable reduction of expenditure effected, by modification of the Sydney and neighbouring Land Board Districts." The Board "were not prepared to recommend the entire abolition of the Sydney Land Board District offices, but their investigations have shown conclusively that the existence of separate staffs at Sydney results in extravagant expenditure and waste of power, more especially as regards the maintenance of two separate survey offices, with two distinct staffs of surveyors operating within the same area." The Board laid down a scheme of reconstruction to be applied to the staffs of the Local Land Board and District Survey offices, which would result, if carried out, in the reduction of expenditure from £142,914 to £110,015, or a nett saving, after allowing for certain contingencies, of £28,899 per annum. The Board drew special attention to the large proportion of time occupied in the preparation of Parliamentary or Departmental and statistical returns, which seriously impeded the ordinary work of the office, and they recommended that eight annual returns should be substituted for the thirty quarterly returns, and that the whole of the returns supplied from the district surveyors' offices should be dispensed with. The Board made sundry other recommendations, notably that an inspector should be appointed to visit and report upon Local Land Board offices, and another to perform similar duties in respect

respect to Crown Lands offices. The final recommendation was that suitable buildings to accommodate the entire staffs, including the Crown land agent, should be erected in country towns, so as to avoid the necessity of the Department having to pay rent. The report is signed by William J. Conder, W. Houston, and Robert McDonald.*

(54.) Report of the Departmental Board of Inquiry on the General Survey and Trigonometrical Branches, Lands Department, 1889. This investigation was conducted on similar lines to those followed in the inquiry into the organisation and personnel of the staffs of the country offices.

Summary.

(a) THE GENERAL SURVEY BRANCH.

The report points out that the general survey is a system for defining on a uniform and practically unchangeable basis the relative positions of all existing land or survey marks, permanent buildings, and other features, with the object of producing accurate and comprehensive maps; also of compiling a permanent record from which the position of the marks, &c., referred to can be indisputably re-established. By the use of vertical sections the surveys might be utilised for the laying out of public roads, railways, tramways and sewerage, irrigation or defence works, &c., &c. The relative positions of the permanent points or stations are determined in relation to a common origin by means of triangulation or trigonometrical survey, which is universally admitted to be not only the most reliable but, where the conditions are favourable, the most economical method. Formerly the General Survey Branch included the whole of the staffs, both field and office, engaged on the triangulation survey and the subsidiary surveys based thereon; but the branch has since been divided into the Trigonometrical and the General Survey, the latter including the compilation of maps. The operations of the General Survey, excepting the detail survey required in connection with the city and environs sewerage scheme, has been confined principally to the county of Cumberland, although some important surveys have been conducted in the counties of Argyle and Murray, and other localities to which the triangulation has extended. The Board of Inquiry were impelled to the conclusion that the work had been unreasonably expensive, and that the most refined accuracy had been strained after, without necessity and regardless of cost. In one typical case £412 had been paid for a survey of about 20 miles in length of a not important creek, the extreme cost being due in the main to the unnecessary precision introduced into the work, as also to the system of daily rates under which the surveyor was employed. The physical conditions of a large area of the Colony (a portion of the Central, and nearly the whole of the Western administrative divisions) were unfavourable for triangulation, and the Board did not consider that the costly alternative of a geodetic survey would be justified, so they recommended that the extensive surveys which are frequently required of roads, tracks, stock reserves, or natural features be carried out with a view to their utilisation as standard surveys. The Board reported that the General Survey Branch was subject to the general supervision of the Surveyor General, that the management and direct control of the office staff was vested in the officer in charge, while the field staff was under the immediate supervision of the inspecting surveyor. The Board were favourably impressed with the supervision, discipline, and personnel of the staff generally, and details are given of their duties, &c. The Board then deals with the organisation and work of the field staff, with the question of detail surveys, with alignment surveys, with the examination of surveys in connection with the Real Property Act, and with the making of detail surveys. After giving details on each of these points the Board recommended the abolition of the present branch known as the "General Survey," and the establishment of a branch to be designated the "Detail Survey Branch," to deal exclusively with surveys and plans required by the Sewerage Department, the general supervision to be nominally vested in the head of the professional branch of the Department; but the active supervision, control, and management, to be entrusted to the surveyor-in-charge, to be assisted by an officer holding a somewhat similar position to the draftsman in charge of the district survey offices. This, the Board believed, would result in an annual saving of about £6,600. The whole of the projected surveys would be completed (at the then rate of progress) in two or three years, and they suggested that about the end of 1891 the Surveyor-General should furnish a report dealing with the whole question.

(b) THE TRIGONOMETRICAL BRANCH.

Since the Land Act of 1884 came into operation the principal work which hitherto devolved on the Branch; namely, the triangulation of the Colony, had almost ceased, and the principal duty now being carried on is the determination of latitude by independent astronomical observations, and of longitude by comparison with the Sydney Observatory, in order to afford the data required for the compilation of an accurate map of the Colony. This work had been in progress seven years, and was expected to last about eighteen months longer. The Board recommended the revival and extension of the triangulation survey, the field operations to be conducted by a surveyor in charge, with two assistant observers and two compiling overseers, and the computations and other office duties by a chief computer, with an assistant computer and a general assistant. The proposed annual expenditure was estimated at £6,000, an excess of £3,000 on the then expenditure, which represented about half the saving which would be effected if the proposed re-organisation of the general survey branch were carried out. The proposed survey would probably take about seven or eight years. The Board offered several suggestions in regard to the custody of instruments and disposal of the surplus and unnecessary stock, and dealt with equipment allowances, the depôt at Richmond, the publication of the values of trigonometrical co-ordinates (which they recommended), a monthly progress journal (a new form of which was recommended by the Board), the annual expenditure of the department, which had not been clearly placed before Parliament hitherto, but which would be if the Board's plan of re-organisation were carried out, and also with books, maps, and plans.

(55.) Copy of a minute dated 13/2/85 by Mr. Secretary Farnell, and approved by the Cabinet, in which he pointed out that one of the great objects of the Land Act of 1884 was decentralisation, and that the district surveyors should be wholly responsible to the Government, and consequently to the Minister for Lands, and not as heretofore to the Surveyor-General, a system which had proved most unsatisfactory, and had stopped the progress of the whole department, and, if continued, would frustrate the object of decentralisation. Mr. Secretary Abbott, in a minute dated December 2, 1885, while endorsing the views of the Cabinet in Mr. Farnell's minute, was of opinion that the Surveyor-General should be recognised as the head of the professional branch of the Lands Department through whom all submissions from the district surveyors on professional—as distinct from administrative—matters should be made to the Under Secretary for the Minister. Nevertheless, "the great principle of the Land Act of 1884, decentralisation, must be carried out to the fullest extent, and district surveyors must act upon their own judgment, and not too readily or needlessly refer matters to the head office; nor should the Surveyor-General too readily interfere with them in the discharge of their respective onerous and important duties." Mr. Secretary Abbott pointed out that one of the main principles of the Land Act of 1884 was to have "the work connected with the alienation and leasing of the Crown lands disposed of in the district where the lands so alienated or leased are situated," and he saw no reason why this principle should not be carried out to the fullest extent. "In New Zealand," continued the Minister, "the Colony is divided into eleven land districts, each being under the local direction of a Commissioner and Land Board. The Commissioner's office is known as the principal land office, and in each district there is a principal land office, and it is with these land offices the selector has to transact all business, from the first consultation of the maps, the subsequent selection and purchase of the land, to the final receipt of the Crown grant. What is done in New Zealand can, and must, be done in this Colony." Mr. Secretary Copeland, in a minute dated 17th June, 1886, expressed his concurrence in Mr. Abbott's minute.

(56.) Copy of minute, dated 3rd June, 1890, signed W. H. (William Houston), and approved by the cabinet on the same day, recommending that the office of Surveyor-General should be abolished, as the duties attached to that office had been materially lessened by the independent action cast upon district surveyors under the Land Act of 1884, and in lieu thereof that the office of "Chief Surveyor and Superintendent of the Trigonometrical Survey" be substituted, and that Mr. E. Twynam be offered the position, together with other recommendations rendered necessary by the proposed change.

(57.) Copy of minute signed E. T. (Edward Twynam), dated 24th November, 1890. After dealing with the importance of the trigonometrical survey, &c., Mr. Twynam says:—"It is proposed to extend the triangulation gradually and first over the Eastern Division, at present with the staff comprising three surveyors with the requisite assistance in the field, and an adequate computing branch; and it is expected with the moderate annual expenditure so to be incurred (about £6,500) sufficient progress may be made to fulfil the immediate requirements of the Department. In conclusion of this brief statement it may be mentioned that in Victoria the triangulation of the country has been completed; in South Australia and New Zealand it has been carried out economically, being concurrent with survey for settlement; and in the United States a very large staff is maintained solely for this branch of the Public Service, which is there recognised as of the highest value for national purposes; and lastly, that in all civilised countries accurate geographical maps are regarded as of the highest value for the purposes of government, and these can only be produced by the aid of trigonometrical survey."

DEPARTMENT

* Most of the Board's recommendations appear to have been carried out, and thus a large annual saving effected.—P.R.M.

DEPARTMENT OF MINES AND AGRICULTURE.
MINISTERIAL OFFICE.

58.) *Summary.*

Expenditure, 1894—Department of Mines —				Revenue, 1894—Department of Mines —

		13	6		14	5				
Grand total	£150,622			7						

(59) Statistics *re* Mining —

Gold and other Minerals

The value of gold and minerals won from 1851 to 1894, about £100,000,000
The estimated area of gold and mineral producing country, about 70,000 square miles
The cost of machinery used in gold and mineral mining, over £1,250,000
The number of miners employed, between 30,000 and 40,000

Coal and Shale Mines

The coal and shale raised up to 1894, about 4,000,000 tons
The number of miners employed, about 10,000 men

(60) List of officers retrenched from other Departments and re appointed to the Mines and Agriculture Department since 1888.—*Summary* J. J. Quinn, O. Dimelow, G. G. Benson, and R. P. Younger. Memorandum gives particulars of position vacated, annual salary, when re appointed, present position and present salary in each case.

(61) Letter from the Auditor General, dated 21/1/90, drawing the attention of the Treasury to the large number of overdue mining lease rentals, namely, £12,582 16s, mineral leases, and £1,828 7s gold leases, which should be payable in advance, non payment entailing forfeiture; with minute by the Treasury that the Mines Department had already been communicated with on the subject, and a minute by the Under Secretary for Mines, dated 24/1/90, to "demand rent at once."

(62) Memorandum by the Under Secretary for Mines, dated 3/5/95, to the Secretary of the Civil Service Commission, on "the loss of revenue in consequence of Registrar neglecting to issue notices demanding rent of leases," pointing out that the list of overdue rents mentioned in the previous memorandum included some twenty five mineral leases which had been converted into mineral conditional purchases, the rent of which could not be claimed except under certain conditions, as also of leases which were voided in 1883, then non withdrawal from the list being probably due to the Registrar's neglect. The Under Secretary only admitted that a sum of £5,128 5s 3d was to be accounted for, and he stated that the leases representing that amount were evidently cancelled. A number of gold and mineral leases were cancelled for non payment of rent every year, and so far as he knew, the number of gold leases cancelled in 1890 for that reason was not greater than usual. A large proportion of the mineral leases referred to by the Auditor General, and which were subsequently cancelled for non payment of rent, were silver leases, and as the silver boom had ceased before they were cancelled, it was more probable that the loss of rent due on them was occasioned by that fact than by reason of the Registrar's neglect.

(63) List of officers retrenched in the Department of Mines and Agriculture since 1889, giving their position, name, annual salary, date of retrenchment, and results.

Summary.

Mines	7
Mining on Private Lands Act	5
Agriculture	17
Vine Diseases Board	3
Hawkesbury College	3
Stock	2
Forestry	18
Total	55

Total Salaries saved by retrenchment £13,469 10s.

Two officers, receiving salaries of £2 and £5 a week respectively, had been re appointed, another receiving originally a salary of £300 per annum had been appointed caretaker at 7s a day, and in three cases the position was stated to have been filled.

STOCK BRANCH

(64) Letter to the Secretary of the Civil Service Commission from the Chief Inspector of Stock (Mr A. Bruce), enclosing a statement of work done by the steam launch "Golden Fleece" during the year 1894, which he had been asked to prepare.

Number of days and hours worked by the "Golden Fleece"—*Summary*

Month	Number of Days employed	Total number of Hours	Average number per Day	Month	Number of Days employed	Total number of Hours	Average number per Day
January (1)	25	140	5 60	July (7)	15	75½	5 03
February (2)	19	107½	5 65	August (8)	17	70	4 11

(1) Not counting one public holiday
(2) Not counting four days waiting at Circular Quay for orders and one day spent in cleaning engine
(3) Not counting six days waiting at Circular Quay, two public holidays, and two days when the boat was laid up on account of the sickness of the engineer and the driver rebuilding bridge
(4) Not counting four days waiting at Circular Quay and one day when the captain was sick
(5) Not counting two days waiting at Circular Quay, two days engaged in repairs and one public holiday
(6) Not counting seven days waiting at Circular Quay, and four days spent in mending machinery and cleaning boiler and boat
(7) Not counting four days waiting at Circular Quay, five days at Fitzroy Dock for repairs one day at moorings and one spent in cleaning boat
(8) Not counting five days waiting at Circular Quay, three days at Fitzroy Dock for repairs, one public holiday, and one day spent in cleaning engine and boat
(9) Not counting three days waiting at Circular Quay and one spent in cleaning boat
(10) Not counting three days waiting at Circular Quay, two days spent in cleaning boat and one public holiday
(11) Not counting three days waiting at Circular Quay one day repairing, and one public holiday
(12) Not counting three public holidays, three days spent in cleaning boat or packing grounds, and one waiting at Circular Quay

PUBLIC WATERING PLACES AND ARTESIAN BORING.

- (65.) Returns showing—
- Wages paid to caretakers of public watering places from 1890-5, namely, total £49,505 10s. 9d., the number employed increasing gradually from 77 in 1890, to 109 in 1894; and the wages paid from £8,357 1s. 11d. in 1890, to £11,351 12s. 2d. in 1894.
 - Amount paid for salaries during same period, namely, total £18,263 8s. 6d., the number employed for 1892, 1893, and 1894 respectively, being 21, and the amounts paid for the year 1894 being £4,129 4s. 5d.
 - Amount paid to Inspectors of Public Watering Places for travelling expenses during same period, namely, total £8,905 1s. 2d., increasing from £1,102 19s. 10d. in 1890, to £2,424 3s. 10d. in 1894.
 - Statement of revenue collected from public watering places during same period:—Total amount of collections from 157 tanks, wells, and dams.—*Summary*: 1890, £1,649 16s. 10d.; 1891, £1,719 7s. 3d.; 1892, £2,374 0s. 5d.; 1893, £1,808 18s. 1d.; 1894, £1,120 1s. 10d.; total, £8,672 11s. 5d.
 - Rentals received from 105 leased public watering places, tanks, wells, and dams, during same period:—*Summary*: 1890, £2,892 19s. 3d.; 1891, £2,781 8s. 7d.; 1892, £2,778 9s. 4d.; 1893, £2,952 9s. 4d.; 1894, £2,885 10s. 2d.; total, £14,291 16s. 8d.
 - Annual cost of repairs to 180 public watering places, tanks, dams, and wells, during same period:—*Summary*: 1890, £512 12s.; 1891, £411 16s. 10d.; 1892, £526 14s. 11d.; 1893, £827 0s. 6d.; 1894, £469 3s. 10d.; total, £2,749 8s. 1d.
 - Rent received from lease of 8 artesian bores during same period:—Total, £435 16s. 8d., of which £330 5s. was received in 1894.
 - Revenue collected from 25 artesian bores during same period:—*Summary*: 1890, £7 13s. 6d.; 1891, £57 6s.; 1892, £473 18s. 9d.; 1893, £301 3s.; 1894, £246 16s. 9d.; total, £1,086 18s.
- (66.) Revenue from public watering places and artesian boring for 1893 and 1894:—

1893.—Caretakers' collections	£	2,273
Rental, tanks leased		3,166
		<u>£5,439</u>
1894.—Caretakers' collections		1,431
Rental, tanks leased		3,282
		<u>£4,713</u>

(67.) Memorandum, with map, showing roads travelled by the Inspectors of Public Watering Places and their respective districts. There are 50 public watering places and artesian bores under supervision in the Bourke district, 42 in the Wilcannia district, 29 in the Hay district, 25 in the Narrabri district, 38 in the Condobolin district, and 42 in the Narrandera district, with a separate inspector for each of the districts named. The average distance travelled by each is about 5,000 miles per annum. Each officer travels as his presence is required, either for supervision of the contracts, measurement of bores, checking, receiving, and forwarding casing or material, or for urgent matters which may arise in connection with new works proposals or existing public watering places.

(68.) Printed weekly return issued by the Superintendent of Public Watering Places, dated 5th February, 1895, showing the depth of water and state of pasture in the immediate neighbourhood, and estimated rainfall at 218 public watering places on the various roads in the Colony.

(69.) Treasury receipts, vouchers, and memoranda by Mr. Jas. W. Boulton, Superintendent of Public Watering Places, and Mr. H. N. Ellis, Acting Treasury Inspector, dated January and February, 1893, on the subject of the defalcations of the late chief clerk, formerly attached to the Public Watering Places Branch of the Mines Department.

WATER CONSERVATION BRANCH.

(70.) List of officers in Water Conservation Branch whose services have been dispensed with from 1st January, 1890, to 16th February, 1894.—*Summary*: Total, 28—1 clerk, 2 junior clerks, 2 assistant engineers, 1 draftsman, 1 first survey officer, 10 survey officers, 1 probationer, 1 litho. draftsman, 1 custodian of plans, 5 inspectors of bores, 1 caretaker, 1 field assistant, and 1 housekeeper; 1 was dismissed in 1892; 1 resigned in September, 1894; and the rest were retrenched on 1st November, 1894. United salaries, £5,478 2s.

DIAMOND DRILL BRANCH.

(71a.) Letter to the President of the Civil Service Commission from Mr. W. H. J. Slee, F.G.S., Superintendent of Diamond Drills, dated 28th February, 1895, stating that the company which had the diamond drill put down by the Mines Department at No. 1 Bore, at Cremorne, had to defray the cost of all fuel, water, carriage of plant and connection, and to pay from 14s. to 45s. per foot, according to the depth. A concession on the price named was eventually made by the Minister.

(71b.) Further letter of same date from the same to the same, stating that the diamond drill was granted to the Sydney and Port Hacking Co., to put down the second bore at Cremorne, on defraying cost of carriage, fuel and water, and for tubing, &c., damaged or left in bore, and at rates ranging from 13s. to 40s., according to depth. 50 per cent. on the rate per foot was allowed out of the prospecting vote. The total cost of the bore was £3,108 0s. 9d., of which the company paid £1,786 4s. 8d.

(72.) Further letter of same date, from the same to the same, stating that he was unable to supply a detailed account of his warden's duties during last year, as he had not kept a complete diary. He only did warden's work in connection with the organisation of new goldfields, or when complicated cases occurred on any of the goldfields of the Colony.

(73.) Memorandum, dated 20th February, 1895, from the same to the same, forwarding the printed "regulations relating to the vote in aid of prospecting," as also the printed "terms and conditions under which the use of diamond drills may be obtained," and stating that in 1894 grants of aid under the Prospecting Vote were made by the Board in 397 cases out of 1,003 applications, 584 of which were refused. 3,348 other papers were also dealt with that year in connection with the administration of the vote, and 8,146 more were registered by the branch in connection with the dispatch of 9,572 fossickers.

(74.) Letter dated 26th February, 1895, from the same to the same, in reply to one from the President, stating that the inspector visited the Wyalong district during the months of March, April, May, June, part of October, November, and December. On each occasion he combined his duties as Chief Inspector of Mines, with that of a member of the Prospecting Board and Acting Warden. During his visits to the Wyalong district he had also dealt with over 200 applications for permits to dig and search for gold on conditional purchases and conditional leases under the Mining Act of 1889. Each of these areas applied for had to be personally measured and marked out by him, keeping him going on horseback or conveyances for long distances each day. The inspector enclosed:—

- Copies of his vouchers during 1894 for travelling expenses, which were charged to the Contingent Vote of the Department, and not to the Prospecting Vote, as during his country trips he combined different duties;
- A copy of the Supplement to the *Government Gazette* of 16th July, 1889, containing the regulations for the inspection and regulation of mines, other than coal and shale mines; and
- Details of all diamond drill bores put down under his supervision in 1892, 1893, and 1894.

Summary.

- Cost of first Cremorne bore, £3,618 8s. 6d.; charges to Company, £4,170 1s. 9d. Details as to second bore previously given. (See *ante*.)
- Printed annual report by the Superintendent of Drills for 1892, showing a total depth bored of 4,139 feet, or 3,658 ft. 8 in. less than in 1891. The average cost per foot for boring, exclusive of office salaries, store wages, rent, and the Superintendent's travelling expenses, was 12s. 10 $\frac{3}{4}$ d. per foot, or 3 $\frac{5}{10}$ d. more than in 1891. The total working and field cost, exclusive of office salaries, store wages, rent, and the Superintendent's travelling expenses, amounted to £2,668 17s. 3d., but the total cost, including everything, amounted to £3,318 18s. 5d., or at the rate of 16s. 0 $\frac{3}{4}$ d. per foot, or 1s. 1 $\frac{3}{4}$ d. per foot more than in 1891; whereas the total earnings during the year amounted to £3,486 7s. 11d., or 1s. 9 $\frac{3}{8}$ d. per foot less than in 1891. New stock and material had been bought

bought during the year, amounting in all to £1,598 11s. 10d. (£1,252 8s. for stock and £346 3s. 10d. for material), of which £690 had been for diamonds, and £562 8s. for boring rods, &c. The cost of wear and tear of diamonds during the year was 2s. 2d. per foot, or 4 $\frac{1}{2}$ d. per foot more than in 1891. The main cause of this extra cost was the great increase in the price of suitable diamonds and the large diameter (5 $\frac{1}{2}$ inches) of the bore at Cremorne Point—the largest diameter at that time attempted with diamond drill boring in New South Wales. The decrease in the number of feet bored was partly attributed by the Superintendent to the wave of financial depression passing over the Colony. The percentage of core saved was 89·71, or 1·13 less than in 1891.

- (c) Printed annual report by the Superintendent of the Diamond Drills for 1893, showing that the total depth bored with the diamond drills was 1,903 ft. 7 in., or 2,235 ft. 6 in. less than in 1892. The total cost, including everything, was £2,930 4s. 2d., equal to 30s. 9 $\frac{1}{10}$ d. per foot for the total depth bored. The rate was higher than usual, owing to the depth reached by the Cremorne bore. A total percentage of 98·81 of core was saved, which was very satisfactory. The cost of wear and tear of diamonds was 3s. 3 $\frac{1}{2}$ d., or 1s. 1 $\frac{1}{2}$ d., per foot more than in 1892, owing to the strata at Yacaaba, and the large diameter of the Cremorne bore. The decrease in the number of feet bored was solely owing to the depression. No. 7 drill completed a bore at Bulli to the depth of 1,010 ft. 7 in., of which 261 ft. 7 in. were bored during the year. No. 11 drill completed the important bore at Cremorne, at a depth of 2,929 feet, of which 1,054 feet were bored during the year. No. 13 completed a bore at Yacaaba to the depth of 675 feet, of which 588 feet were bored during the year. The Cremorne bore had solved the problem as to the existence of good coal under the harbour and City of Sydney. Professor David, B.A., F.G.S., reported that the seam was struck at a depth of 2,917 ft. from the surface, the total thickness of the seam being 10 ft. 3 in., with the exception of a thickness of about 1 ft. 1 in., the whole of the coal in the seam appearing to be of good quality, and a useful splint and bituminous coal. The rock temperature was tested, and found to be about 97 $\frac{1}{2}$ ° Fahr. at a depth of 2,750 ft. The mean surface temperature at Sydney being about 63° Fahr., the temperature was therefore increased by about 34 $\frac{1}{2}$ ° Fahr. at a depth of 2,730 feet—i.e., an increase at the rate of 1° Fahr. for about every 78 ft. 10 in.

- (d) Statement showing votes, expenditure, earnings, and amounts paid into Treasury for 1892, 1893, and 1894 :—

Year.	Votes.	Expenditure.	Earnings.	Paid into Treasury.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1892	6,500 0 0	3,958 13 2	3,914 0 6	4,359 12 5
1893	5,000 0 0	2,930 4 2	2,587 13 11	1,900 9 11
1894	4,500 0 0	1,423 2 5	530 4 6	1,462 17 3
	16,000 0 0	8,311 19 9	7,031 18 11	7,722 19 7

- (e) Printed forms re cost per foot of boring, number of feet bored, &c., filled in for Bingara.

- (f) Balance-sheet of Diamond Drill Branch for 1894. On the Dr. side the amount is £15,994 3s. 2d., of which sum £12,216 4s. 4d. represents the value of field machinery and plant other than diamonds, £1,622 17s. 5d. the value of the diamonds, and £1,015 5s. 10d. working expenses, including salaries, wages, and rent.

PUBLIC WORKS DEPARTMENT.

MINISTERIAL OFFICE.

(75.) Copy of regulations respecting admissions to and promotions in the clerical branch of the Public Works Department. Summarised in Appendix D attached to the Report, section dealing with New South Wales.

(76.) Return showing appointments, retirements, &c., and re-appointments from 23rd October, 1891, to 15th February, 1895 :—

Appointments.		Retirements, &c.		Re-appointments.

(79.) Memorandum showing rates of wages paid by the Railway Construction Branch to the different classes of workmen—Inspectors, 15s. per day; sub-inspectors, 10s. to 12s. per day; foreman chainmen, 7s. per day; chainmen, 6s. per day; camp cooks, 6s. per day.

(80.) Rates of wages paid to workmen employed by the Department on Sewerage Works.

Inspectors—1st class	From 12s. 6d. to 15s. per diem.	Chainmen	*7s. 6d. per diem.
2nd class	From 10s. to 12s. 6d. per diem.	Labourers	*7s. 6d. per diem.
3rd class	From 7s. 6d. to 10s. per diem.	„ employed boring	8s. per diem.

* The rate is 7s. a day, the 6d. being to cover all cost of trams and other conveyances required within a radius of 5 miles from head-quarters.

ROADS AND BRIDGES.

(81.) Memorandum showing forage allowance to roads officers. This varies from £100 to £200 per annum as follows:—40 officers at £100; 48 officers at £150; 7 officers at £175; 7 officers at £200. Officers find their own equipment, which varies from a buggy and pair to an express waggon and four, which they have to keep in repair, and provide their own man. When travelling, they are allowed, some 10s., and some in remote districts 12s. per night, out of which they have to pay hotel expenses and feed the horse. Some officers, as at Bourke, keep eight horses.

(82.) Rates of pay of men employed in Roads and Bridges Branch.

Class.	Rates per diem.	Class.	Rates per diem.
Bridge foremen	8s., 10s., 11s., 12s.	Deckhands	6s.
Road do	8s., 8s. 6d., 9s., 10s., 12s., 12s. 6d., 14s.	Toll collectors	8s. 8d.
Slip do	12s.	Bridge caretakers	6s., 7s., 7s. 6d., 8s., 10s.
Inspectors	10s., 12s.	Chainmen	7s., 7s. 6d., 8s.
Shipwrights	10s., 10s. 6d.	Bridge labourers	8s.
Carpenters	8s., 9s. 6d., 10s., 10s. 6d.	Maintenance men	7s., 7s. 6d.
Engineers	8s., 9s., 10s.	Do with horse and cart	8s. 6d., 9s., 9s. 6d., 10s., 10s. 6d., 11s.
Firemen	8s.	Labourers, temporary	7s.
Puntsmen	8s.	Divers	2s. 6d. per hour.
Blacksmiths	7s. 6d., 8s.		

The rates of pay vary according to the district and the nature of the work upon which the men are engaged.

(83.) Particulars of roads districts, showing their total area, roads mileage, number of bridges, &c., number of officers in charge, with their aggregate annual salaries and allowances.—*Summary.*

No. of Road Districts.	Officers and Assistants.	Aggregate Annual Salaries.	Aggregate Annual Allowances.	Area of Districts in square miles.	Roads Mileage.	No. of Bridges.	No. of Causeways.	No. of Culverts.	No. of Punts, &c.
63	131	£ 27,227	£ 13,485	(a) 343,927	35,149	3,703	11,052	27,010	300

(a) Only approximate and in excess of actual area.

GOVERNMENT ARCHITECT.

(84.) Printed Return respecting the Government Architect's Department, stating—

- (1.) That the total amount of contracts let for the year ending 31st August, 1894, was 586, and the total amount £82,167 8s. 5d.; that the expenditure on buildings during that period amounted to £113,117 17s., the number of progress valuations and vouchers prepared amounted to 4,185, and the sum of £2,289 1s. 3d. expended in 476 day-work accounts, averaging £4 14s. each; during the same period plans and specifications were prepared, and in some cases tenders were called for 27 works, at an estimated cost of £45,647; sketches and part plans were prepared for 29 works, estimated cost of portion only being £51,920; reports and valuations of projected improvements or repairs on 224 buildings, on 36 buildings for theatrical purposes, valuation of city buildings for rate assessment, &c., and also 260 corrected copies of plans of existing buildings were prepared, towards forming a complete record portfolio, professional and clerical services in connection with the building of Grafton Gaol and Sydney Hospital, valuations of buildings for Government Valuator for resumption purposes, and clerical work involving keeping accounts, correspondence and preparing returns, &c., &c., all of which work is given in detail in schedules attached to the return.
- (2.) That the total amount expended from Furniture Vote, principally with annual contractors, was £4,049.
- (3.) That the salaries and other expenses amounted to £14,860.
- (4.) That the percentage of cost on the total amount expended for the same period was—professional, 2½ per cent.; superintendence, 2½ per cent.; clerical, 1½ per cent.; and contingencies, 1 per cent.

(85.) List of works in hand (February, 1895), or being prepared for tenders.—*Summary.* 21 works in hand, scattered all over the Colony. Annual Service Votes, covering about 300 separate contracts, for the six months ending 30th June, 1895:—

- (a) 15 courthouses, gaols, lock-ups, police stations, &c., £23,760.
 (b) 26 buildings in Sydney and suburbs, £80,730.
 (c) 61 miscellaneous buildings all over the Colony, £114,834.

NOTE.—The amounts voted against the various buildings represent the sums voted by Parliament for the carrying out of the works.

(86.) Statement of work performed during 1894.—Number of plans prepared, 1,086; number of contracts prepared, 720; papers registered, 13,503; departmental covers registered, 6,522; letters and B.C.'s outwards, 5,326; telegrams, 808; vouchers prepared, 4,124; advertisements in duplicate, 381.

(87.) Contracts being proceeded with at the present time.—Number, 181; value, £84,530. Number of men employed, &c. (approximate):—Directly, 69; wages disbursed, £6,336. Indirectly, 300; wages disbursed, £26,100.

(88.) Expenditure on Buildings for years 1892, 1893, and 1894:—

Year.	Revenue.		Loans.		Total.	
	£	s. d.	£	s. d.	£	s. d.
1892	165,887	1 10	157,324	10 7	323,211	12 5
1893	137,850	1 9	109,076	13 1	246,926	14 10
1894	105,145	11 2	50,985	5 1	156,130	16 3
Total	£ 408,882	14 9	317,386	8 9	726,269	3 6

Total number of buildings in 1891, 886, value £4,285,000; total number of buildings in 1894, 953, value £4,470,000.

(89.) Actual cost of buildings over £2,000 from August, 1890, to August, 1894, as compared with the original estimates, 250 buildings—Estimated cost, £557,018; actual cost, £540,595; saving, £16,423, or 2·94 per cent.

(90.) Memorandum showing extra services rendered by the Government Architect's Branch in addition to general building operations, namely, reporting on the applications for theatrical licenses received from all parts of the Colony; furnishing valuations in detail of all buildings resumed in connection with construction of railways and tramways; preparation of plans and specifications, and supervision of work in connection with additions to country hospitals, &c.; supply of furniture and fittings to Government offices, and materials for the employment of prisoners in gaols in carrying out additions, &c., for which the plans and specifications are prepared by the Branch; erection of cooking, washing plants, and electric lighting in various asylums, gaols, and sewerage farms; construction of passenger and goods lifts for public offices; report and sometimes adjudicate upon competitive designs; supervision of turret and other clocks; displays in connection with public ceremonies; definition of boundaries by erection of ladders, railings, statues, fountains, &c.; erection of gallows, and taking inventory of the furniture on the arrival and departure of Governors and Administrators. An officer of the Branch was commissioned by the Minister to report on schemes submitted to the Hay Trust in connection with their irrigation scheme.

(91.) Statement by Government Architect, dated 25th February, 1895.—*Summary.*

	1890.		1891.		1892.		1893.		1894.	
	No.	Salaries.

Total number of buildings in 1891 = 886—value, £4,285,000.
 „ „ 1894 = 953— „ £4,470,000.

(92.) Minute by Government Architect, dated 25th January, 1893, only partially acted upon, recommending, in accordance with the instructions of the Minister, such alterations in the staff of the Branch as to meet the reduction of £3,000 from the provision for temporary officers as set forth in the Estimates for 1893.

Summary.

Summary.

Temporary staff—14 retirements.....	£3,231
Less promotions.....	229
Temporary staff reduction	£3,002
Permanent staff—6 retirements	£2,505
Less promotions	£300
,, 6 appointments of temporary officers to permanent staff	£2,200
	£2,500
Permanent staff reduction	£5

Showing the 1892 vote of £8,000 reduced in 1893 to £5,000.

P.S.—Recommendation that all officers leaving as above be given at least two months' notice in addition to allowances, &c.

*(93.) Difficulty of obtaining properly qualified draftsmen.—It has often been remarked that it is easy to obtain any amount of assistance at lower rates than is now the case, but my experience proves that this is incorrect. At the beginning of this year, upon instructions to prepare plans for a large number of buildings, I found it necessary to obtain temporary assistance from six additional draftsmen. Sixty-five applicants answered my advertisement, and with the exception of a few who declined, they all placed themselves under a very moderate test as regards their capabilities, with the result that I hardly found the proper number qualified to fill the positions open.

(94.) Undated and unsigned memo. by the Government Architect, stating that the lowering of the scale of travelling expenses by the Cabinet was telling hardly upon some of his officers whose duties necessitated rapid travelling, some of which they frequently had to pay for out of their own pockets. He suggested that some alteration should be made in the classification of his officers, which would enable them to receive a larger travelling allowance.

DREDGE SERVICE.

(95a.) Specimen weekly return of labour and work performed by the steam dredge "Charon," stationed at Brooklyn, Hawkesbury River, for the week ending Sunday, 10th March, 1895 (channel from main river to railway embankment), giving total of silt excavated from channel, depth, width, and length of channel dredged, length still to be dredged; quantity of silt lifted for each day, how disposed of, and hours under steam; names of officers employed, and observations, with report on state of machinery, &c.

(95b.) Specimen similar weekly return of labour and work performed by the steam tug "Orestes," attending dredge "Newcastle," at Newcastle, for the week ending 30th March, 1895.

(96a.) Specimen statement of all amounts chargeable to the tug "Athena," for February, 1895, including salaries, wages, &c., together with the list of stores received in stock and issued for the month.

(96b.) Similar statement for the dredge "Fitzroy," for February, 1895.

(97.) Printed list of dredging plant, with estimated value, from the Annual Report of the Public Works Department for 1894.—Summary: 14 ladder dredges, 18 tugs, 36 punts, 8 sand-pump dredges, 19 grab dredges, 6 steam launches, 20 small iron hopper punts, 20 close bottom punts; machinery, total estimated value, £467,600.

(98.) Memorandum of numbers of men employed on dredges and tugs in 1886 and 1895. Total on 26 vessels—1886, 177; 1895, 189.

(99.) Coloured diagram showing material raised by dredges, and cost per ton, from 1875 to 1894. The annual amount raised ranged between 1,333,280 tons and 1,341,495 in 1875 and 1880 respectively to 6,686,251 tons in 1892. The cost per ton ranged from 3·5, 3·7, and 3·9 in 1894, and 1892 respectively to 9·6 and 9·4 in 1878 and 1880 respectively. The total amount of material raised during the whole period was 59,921,647 tons, and the average of the cost per ton 5·69d.

(100.) Comparison of relative cost of repairs to dredging plant in various countries:—

New South Wales.—"Only from 15 to 30 per cent. of our expenditure is for repairs, while at the Tyne and Aberdeen repairs amount to 59 and 54 per cent. respectively." (Extract from report of Engineer-in-Chief for Harbours and Rivers, ordered by the Legislative Assembly to be printed, 19th March, 1895.)

Calais and Boulogne.—Repairs and maintenance, 35·93 per cent.

Liverpool.—Repairs and maintenance, 37·0 per cent.

Swansea.—Maintenance and stores, 28·14 per cent.

Tyne.—Repairs, 59 per cent.

Aberdeen.—Repairs, 54·34 per cent.

Dunkirk (Dredging and Transport).—Repairs dredging, 5·33 per cent., repairs transport, 15·50 per cent.

(101.) Printed Annual Report of the Engineer-in-Chief for Harbours and Rivers for 1894 and 1895, showing that the plant under the control of the Department consists of 4 double-ladder dredges, 10 sand-ladder dredges, 1 Von Schmidt type of revolving cutter sand-pump dredge on a pontoon, 3 Dutch type of suction dredges with self-contained hoppers and screw propellers, 4 Dutch type of suction dredges on pontoons for stationary work, 19 grab dredges, 27 tug boats of all kinds. Five of the dredges and 3 of the tugs have been laid up during the year. Since the introduction of the sand-pump dredges the total yearly output has largely increased, with a very marked corresponding decrease in the average cost per ton. During the five years they had been in operation the total amount of silt raised by all the dredges amounted to 28,750,000 tons, or more than was raised in thirteen previous years. The average cost per ton during that period was 4·085d., whereas the previous average cost amounted to 8·219d. per ton, which alone showed the advantage gained by the introduction of this class of plant. The cheapness of the cost of dredging carried out in this Colony as compared with other countries (for which see previous return), in spite of higher wages paid here, could be accounted for but in two ways—first, some of the cheapest work was done by dredges working two or more shifts, secondly, we employ experienced practical engineers to take charge of our dredges instead of putting them in charge of common sailors, by which plan we save a very large expenditure in annual repairs. The most important work then in hand was at Newcastle, where the harbour was seriously injured by the vast accumulation of silt left during the heavy floods in 1893. Enclosed was the report of the superintending engineer of dredges, giving a detailed statement of work performed by the dredge plant of the Department during the year. The superintending engineer drew attention to the comparative cheapness of dredge work performed in New South Wales, compared with other countries, from data contained in a work on Tidal Rivers, by Mr. Wheeler, M.I.C.E., published in 1893. The lowest record of work quoted by Mr. Wheeler, in England, Scotland, the United States, France, and Germany, was that for ladder and bucket dredging on the Tees, the average for lifting and transporting being 2·773d. per ton, although in previous years (1890, 1891, 1892,) the cost had been much higher, namely, 3·386d., 3·11d., and 7d. The next lowest quotation came from Newcastle-on-Tyne, where a year's dredging cost 3·29d. per ton, divided thus:—dredging 1·85d., conveying 1·45d. In this Colony the dredge "Newcastle" lifted in one year 1,193,045 tons of silt at a cost of 2·378d. per ton, divided thus: dredging 1·609d., conveying 0·769d., being 15 per cent. less than the best cited work on the Tees, and 33 per cent. less than the cheapest dredging on the Tyne. In suction dredging the merit of cheapest work belongs to New South Wales. The lowest cited, by Mr. Wheeler, was the "Dunkirk" at 1·5d. per ton, the "Dundee" next, at 1·875d., but the New South Wales suction dredge "Juno's" work for 1892 was 1·484d. per ton, and for 1891, 1·406d. He attributed the greater economy here, in spite of the 8-hours system and comparatively high wages, to the fact that in the largest ladder dredges double and treble shifts were employed, one dredge thus doing the work of two or three under one controlling officer, who was an engineer experienced in preventing accidents and capable of having repairs quickly carried out, thus minimising stoppages, which were always the chief factors in expensive work.

Summary

* This should have appeared as a footnote to Mr. Vernon's evidence, but the evidence having gone to press it is printed here.—P.R.M., 1/6/95.

Particulars of Ladder, Sand-pump and Grab Dredge, and Tug Expenditure and Work for 1894.—*Summary.*

Number.	Tons dredged, lifted or towed.	Hours dredging, pumping, or towing.	Expenditure.	Average cost per ton.	Average cost per hour.
Ladder Dredge Expenditure and Work.					
Totals—11	3,501,800	17,922	£ 40,210 13 2	d. 2·755	£ 2 4 10
Sand-Pump Dredge Expenditure and Work.					
7	2,273,975	10,691	21,648 15 8	2·84	2 0 6
Grab Dredge Expenditure and Work.					
17	589,186	22,406	14,035 2 6	5·737	0 12 7
Tug Expenditure and Work.					
22	3,507,570	38,509	16,285 18 8	1·114	0 8 0

The Superintendent's Report also includes statements of comparative quantity and cost of work done by ladder dredges (including towing), sand-pump dredges, and grab dredges (including towing) for 1892-4; the average cost of dredging and conveying in 1894; and a table showing the comparative cost of dredging in Europe and New South Wales.

* In this calculation 141 monitors are included, 25 boys and 116 girls, whose maximum pay is—for males, £10 a year, and for females, £8.

(c) CLASSES of schools, salaries of head teachers, assistant teachers, pupil-teachers, work-mistresses, and others.

*Summary.**New South Wales.*

Public and half-time schools.—In New South Wales there are ten classes of public and half-time schools, the attendance for Class 1 being 600, and for Class 9, 20. The salary of the head teacher ranges from £380 for Class 1 to £103 for Class 10. In Classes 1 to 4, the salary of the mistress of the girls' department ranges from £182 to £235, and of the infants' department, from £160 to £194. In addition to these salaries, residences, vested or rented, are provided for classified married male teachers in charge of classified public schools.

Assistant teachers.—There are five grades of assistant teachers, their salaries ranging from £142 to £237 for males, and from £108 to £160 for females.

Pupil-teachers.—There are four grades of pupil-teachers, their salaries ranging from £40 to £68 for males, and from £23 to £46 for females.

Work-mistresses may be appointed to schools of the first and second classes, and their salaries range from £86 to £114 per annum.

Provisional Schools.—There are 3 classes, the salaries being £68, £80, and £91.

House-to-House Schools.—The teacher is paid £4 15s. per annum for each child up to a maximum salary of £95.

Victoria.

Victoria.

There are 8 Classes of schools. The attendance for the first-class is over 800, and for the lowest class under 20. The maximum payment to the head teacher ranges from £105 to £432. No residences or allowances are provided.

Assistants.—Salaries range from £84 to £207 for females, and from £84 to £246 for males.

Pupil Teachers.—Four grades; salaries ranging from £20 to £50 for males, and from £16 to £40 for females.

Monitors.—Salaries of males £12 per annum, and of females, £10.

Sewing Mistresses.—Salary, £25 per annum for schools with average attendance of not fewer than 30, nor more than 75 pupils.

South Australia.

There are 12 classes of schools, the attendance for class 1 being 600 and over, and for class 12, 20 and over. The maximum salary for male teachers ranges from £140 to £450, and in classes 1, 9, 10, and 11, the maximum salary for female teachers is, respectively, £250, £156, £140, and £124.

Assistants.—The maximum salary ranges from £100 to £200 for males, and from £84 to £148 for females.

No residences or allowances for rent are provided in the case of any teacher.

Pupil Teachers.—Four grades; salaries ranging from £20 to £50 for males, and from £18 to £36 for females.

Monitors.—Males, £10 per annum; females, £8.

Sewing Mistresses.—12s. per annum for each girl, calculated on the monthly average attendance.

Provisional Schools.—Three classes; salaries, £72, £84, and £96 per annum.

Queensland.

There are 8 classes of schools, the attendance being over 800 for class 1 and over 30 for class 8. The maximum salary for male teachers ranges from £133 to £480, and for females from £96 to £364. In infant schools the maximum salary to female teachers ranges from £90 to £318.

Assistants.—Five grades, the maximum salary ranging from £180 to £276 for males, and from £142 to £228 for females. In infant schools the maximum salary to female teachers ranges from £138 to £216.

Married men are provided with residences, or allowances in lieu of residences.

Pupil-teachers.—Four grades; salaries ranging from £30 to £65 for males, and from £20 to £50 for females.

Provisional Schools.—Two classes, maximum salaries being £110 to £120 for males, and £80 to £90 for females.

New Zealand.

The Inspector-General of Schools states that each of the 13 Education Boards has its own scale of salaries.

(103.) Return of the Technical College for the year 1894, showing (1) the expenditure and the interest on the buildings, (2) the results, (3) the number of day and night students, and (4) the ages.

Summary.

(1.) Expenditure, &c.—	£	s.	d.
Teaching, maintenance, &c., Sydney and branch schools.....	16,325	0	0
Technological Museums	4,889	0	0
Interest, at 3½ per cent., on Sydney, Maitland, and Newcastle technical schools, £67,578 7s. 5d....	2,365	0	0
Interest, at 3½ per cent., on Sydney and Newcastle Technological Museums, £21,267 15s.	744	0	0
	£24,323	0	0

(2.) Results, &c.—

Gross enrolment, including entries of pupils for two or more classes.....	6,543
Enrolment of separate individuals	4,928

During the last term of 1894 there were enrolled 4,442 pupils in the 39 different classes, ranging from 6 in the metallurgy class to 1,333 in the art classes. At the annual examination 2,457 students presented themselves, of whom 1,644 passed; 404 of these gained first honours, and 983 second honours.

(3.) The number of day students entered during the year was 1,300, and of evening students, 5,243.

(4.) There are about 600 pupils whose ages range from 14 to 16 years, in addition to 372 boys from public schools who attend the manual training classes. The ages of the remaining pupils ranged from 16 to 50 years.

(104.) Return submitted by the Under Secretary for Public Instruction, dated 22nd February, 1895, of the classes of schools, the number in each class of school, the number of teachers in them, with the salaries and the regulations under which they are paid :—

Summary :—

Class of School.	No. of Schools.	No. of Teachers.	
		Males.	Females.
1	38	243	529
2	36	144	322
3	23	67	127
4	63	134	238
5	113	187	205
6	211	277	129
7	207	199	9
8	282	248	35
9	436	268	168
10	95	44	51
	1,504	1,811	1,813
Public Schools, at Provisional rates.....	144	54	91
Public Schools, at House rates	2	1	1
Unclassified	4	4
	1,654	1,870	1,905
Provisional Schools	281	112	169
Half-time Schools—			
8th	32	15	1
9th	282	131	10
10th	40	19	1
Unclassified	48	22	2
House-to-House Schools—			
63 Sets of Stations.....	...	49	14
Students-in-Training	53	50

Grand Total—2,400 Schools, 2,271 Male Teachers, 2,152 Female Teachers (exclusive of High School Teachers), Salaries paid to Teachers, £500,978 15s.

DEPARTMENT

DEPARTMENT OF JUSTICE.

MINISTERIAL OFFICE.

(105.) Letter from the Under Secretary of Justice, dated 7 January, 1895, stating there is only one Inspector of Petty Sessions Offices, who is also Chief Emergency Officer, and enclosing a list of the Petty Sessions Offices which have been inspected since 17 May, 1892, with the name of the Inspecting Officer in each case. The Under Secretary adds that all the Petty Sessions Offices in the Colony have not yet been inspected.

(106.) *Particulars relating to ten police magistrates, about 70 years of age, with suggestions in some cases that the office be abolished. The estimated saving in salaries was £1,999.

(107.) †Information respecting police magistrates, showing headquarters, salary, minor courts with distance and means of access thereto, average number of cases last three years, other information, suggestions, &c.

(108.) ‡Information respecting country clerks of petty sessions, showing age, service, salary, average number of petty sessions cases for last three years, minor offices and courts, suggestions, &c.

(109.) List of court-houses erected from 1884 to 1893 inclusive, and cost of same with additions in cases where more than £500 has been expended. *Summary*: In Sydney and suburbs the expenditure has been £122,801 for new buildings and £12,543 for additions, ranging from £410 for additions to the Paddington Court-house in 1893, to £40,572, the cost of building the Central Police Court in the same year. In country towns the expenditure has been £257,208 for new buildings and £55,267 for additions, ranging from £336 for additions to the Bathurst Court-house in 1893 to £31,403, the cost of building the Goulburn Court-house in 1888. The average expenditure per annum for the last ten years in Sydney, suburbs, and country, has been £38,001 for new buildings and £6,781 for additions, but these figures do not include the cost of repairs and furnishing. There are two court-houses at Young, Deniliquin, and Dubbo, and the gaol at Glen Innes, which was finished in 1886 at a cost of £12,344, has not yet been opened.

SHERIFF'S OFFICE.

(110.) Memoranda by the Sheriff on his position and salary, pointing out that if he had retained his office of police magistrate he would now be in receipt of a higher salary than he receives, and stating that he was promised £1,000 a year when he accepted the appointment. The work had greatly increased since then, as shown by the increase of papers from 1,700 to 13,000 and by the fact that the Sydney Civil Courts had been increased while the Criminal Courts sit continuously instead of quarterly, but the Sheriff, Under Sheriff and two clerks managed the office work generally without an increased staff, except assistance from officers in training. The courts were managed more economically here than in Melbourne, although, there all the courts were under one roof, whereas here they were in three different buildings.

(111a.) Memorandum signed "Al. Stuart," dated "Thursday, May," in which the writer advises his correspondent to accept an appointment and adds that "there being room for increase, influence could be brought to bear to make it something more."

(111b.) Opinion by Sir John Robertson, that "you are, and as Water Police Magistrate must remain, in the Department of Police, and every officer of that class has a house, &c., so that even in the meantime you would not have a better pecuniary position."

(112.) Letter from the Sheriff to Sir Wigram Allen, dated 24 April, 1879, with reference to the purchase of a horse for the use of the department, to enable the Sheriff to perform the out-door duties devolving on the Sheriff.

(113.) Statement showing the salaries paid as per estimates to the Stipendiary Magistrate and the Sheriff respectively from 1881 to 1894 inclusive, the salaries paid to the former for the period named totalling up to £11,300 10s., and those to the latter amounting to £10,670, from which had to be deducted 4 per cent. on account of the Superannuation Act from 1885, and two 10 per cent. reductions for 1893 and 1894 respectively.

(114a.) Letter dated May, 1876, from the then Chief Justice (Sir James Martin) to the Minister of Justice requesting that steps might be taken to place the various Court-houses at which Circuit Courts were held and the surrounding plantations under the direction of the Sheriff. "There ought," wrote the Chief Justice, "to be Court keepers at all these Courts with a couple of rooms apart from the Court, and no office ought to be allowed in the Court buildings except that of the Land Agent when he is the Clerk of Petty Sessions."

(114b.) Circular to Police Magistrates, dated 6 December, 1876, from the Department of Justice and Public Instruction, stating that the business in connection with the care and management of Court-houses would in future be conducted by the Sheriff under the Minister.

(115.) Plan of a Court-house capable of enlargement to any extent.

(116a.) Comparative statement of the Sheriff's staff in 1874 and 1894, showing that it had not been increased, notwithstanding the extraordinary increase of work, except by the employment of a temporary clerk, who attended to the counter and used the typewriter. In the Jury Branch there were now three clerks where formerly there was one, but the jurors were now summoned by post, instead of being served at a cost of 2s. 6d. per head, and as the clerks were required in other work as well the change had resulted in a great saving. In 1875 the Sheriff had three Courts to attend to; now he had eight or nine.

(116b.) Comparative statement showing number of Sheriff's Officers stationed in Sydney in 1874 and 1894, the difference being that in 1894 there was a permanent officer whereas in 1874 there had been only a relieving officer.

(116c.) Comparative statement showing rooms, &c., cleaned in Darlinghurst Court-house in 1874 and in 1894, the number for the former year being twenty-five and for the latter fifty-seven. If the two Courts were sitting an assistant was employed by the day, but there had been no increase in the Permanent Staff since 1874.

(117.) Comparative statement showing work performed in the Sheriff's Office in 1875 and 1891 :—

	1875.	1891.
Number of Circuit Courts.....	24	30
Number of Quarter Sessions Courts	35	53

For the greater part of the year there is an average of about seven or eight Courts sitting each day in Sydney, whereas formerly there were not more than three or four, or at the outside, five.

	1875.	1891.
Judges of Supreme Court.....	4	7
Chairman of Quarter Sessions	6	7
Jurors summoned (first record in 1878).....	8,869	13,930
Letters written	441	8,700
Papers registered	3,400	12,760
Supreme Court fines and estreats }	93	317
Quarter Sessions' fines, &c. }		
Writs, &c., lodged for service and execution	938	3,054
Vouchers paid.....	480	1,700
Insolvent notices lodged	503	1,540

In 1875 the staff of the office consisted of Sheriff, Under Sheriff, and 3 clerks and 17 Sheriff's bailiffs; and in 1891 it consisted of the Sheriff, Under Sheriff, 6 clerks (3 of these appointed to work not formerly done by the office), 35 Sheriff's officers, and 35 Court keepers, cleaners, assistants, &c.

(118.)

* This return is specially referred to as A in the evidence.

† This return is specially referred to as B in the evidence.

‡ This return is specially referred to as C in the evidence.

(118.) Letter from the Under Sheriff to the Sheriff, dated 9 May, 1892, pointing out that the work had increased some 300 per cent. since he entered upon his present position ten years ago; that there had been no alteration in the members of the staff; that the clerks were continually working after hours, and that more clerical assistance was urgently required.

(119.) Approximate statement showing that the cost of keeping the records in the Sheriff's Department was less than that of the Justice Department by £328 per annum in 1892, by about the same in 1893, and by £226 in 1894.

(120.) Memo. showing that 13,486 summonses had been posted to jurors in 1894, and as jurors' full names, occupations, and addresses had to be written five times, the total number of names, &c., written out amounted to 67,430.

(121a.) Statement showing expenditure in 1894 on account of Sheriff's contingencies, namely, £10,178 16s. 10d., inclusive of jurors' allowances (£5,586), special assistants for city and country courts (£782 6s. 10d.), jurors' meals (£762 4s. 7d.), forage allowance to Sheriff's officers (£711 6s. 0d.), &c., &c. The expenses of Circuit Courts for 1894 amounted to £3,706 17s. 5d., of which £3,393 10s. 0d. was for jurors' fees. List of books kept by the chief clerk in connection with the above accounts—money for liquidation of these accounts is advanced by the Treasury to the Sheriff's Public Account for salaries and jurors' allowances; in all other cases Ministerial approval is obtained through the Justice Department.

(121b.) Statement showing special assistants employed in 1894 in the city courts, and the amount of salaries paid, totalling up to £982 6s. 10d. Jury fees paid by suitors and number of cases:—Number of cases set down for trial in Jury and Circuit Courts, 472; number of cases tried, 244; number of cases settled or struck out and not tried, 170; number of cases carried forward to the year 1895, 58; amount jury fees paid (about) £944. Jury fees paid by the Crown, 1894:—Civil cases, £1,754 17s. 7d.; criminal cases, £3,831 10s. 4d.

(122.) Statement showing estimates for the Sheriff's Department for the years 1892, 1893, and 1894, the totals being, respectively, £25,703 14s. 6d., £21,838 0s. 0d., and £21,859 7s. 6d. Statement showing items of extra expenditure amounting to £3,540 of contingent account for 1893 when compared with 1892, due in a large degree to the extra court expenditure at Deniliquin Circuit Court. Statement showing expenditure on account of contingencies,—for 1891, £10,358 2s. 11d., and 1892, £13,003 16s. 10d. Statement showing that salaries in the Sheriff's Department in 1894 amounted to £10,178 16s. 10d., and contingencies to £11,600 15s. 10d., or a total of £21,779 12s. 2d. The revenue for the same period was £1,882 13s. 10d. The sum of £4,960 was voted for contingencies for the half year. The Under Sheriff and Chief Clerk had only had one permanent increase apiece, of £15 and £17 respectively, to their salaries during the last twenty years, except the two increments under the Civil Service Act.

(123.) Revenue Papers from 1890 to 1894 inclusive, showing the monthly revenue of the Sheriff's Department by fees and fines for the years named. Totals 1890, £2,682 3s. 9d.; 1891, £3,252 19s. 11d.; 1892, £2,848 17s. 11d.; 1893, £2,728 16s. 8d.; 1894, £1,882 13s. 10d.; average per annum, £2,679 2s. 3d. The decrease in revenue of 1894 as compared with 1893-92-91, and 1890 was £846 2s. 10d., £966 4s. 1d., £1,370 6s. 1d., and £799 9s. 11d. respectively. The monthly revenue for 1890-4 for poundage is also given; totals, 1890, £1,158 11s. 10d.; 1891, £1,461 4s. 3d.; 1892, £1,285 16s. 9d.; 1893, £1,036 8s. 7d.; 1894, £764 18s. 9d., the decrease of revenue of 1894 as compared with 1890-1-2-3 having been £393 13s. 2d., £696 5s. 7d., £520 18s. 1d., and £271 9s. 11d. respectively. The decision re poundage was given in February, 1890. The poundage for the previous year was £1,517 17s. 2d. The fees for 1890-91-92-93, and 1894 had amounted to £1,956 10s. 9d., £2,357 19s. 4d., £2,256 5s., £1,974 7s. 1d., and £1,553 6s. 2d. respectively, showing a decrease for 1894 as compared with 1890-91-92, and 1893 of £403 4s. 7d., £804 13s. 2d., £702 18s. 10d., £421 0s. 11d. respectively. The fines for the same period amounted to £725 13s., £895 0s. 7d., £592 12s. 11d., £754 9s. 7d., and £329 7s. 8d. respectively, showing a decrease for 1894 as compared with 1890-91-92, and 1893, of £396 5s. 4d., £565 12s. 11d., £263 5s. 3d., and £425 1s. 11d. respectively. The monthly revenue statement of writs of summons showed totals of £351 9s., £384 3s. 4d., £406 11s. 4d., £369 13s. 7d., and £263 16s. 6d., for 1890-91-92-93, and 1894 respectively, the decrease in 1894 having been £87 12s. 6d., £120 6s. 10d., £142 14s. 10d., and £105 17s. 1d. respectively, as compared with 1890-91-92, and 1893. The monthly returns of writs of *fi. fa.* showed a total revenue for 1890-1-2-3, and 1894 of £130 13s., £148 4s. 6d., £145 16s. 6d., £135 14s. 6d., and £108 3s. 6d., or a decrease in 1894 as compared with the previous years named of £22 9s. 6d., £40 1s. 10d., £37 13s. 10d., and £27 11s. The monthly statement of revenue from postage showing total receipts amounting to £29 8s. 6d., £37 12s., £33 2s., and £23 8s. 6d., for 1890-91-92-93 and 1894 respectively, and a loss for 1894 as compared with previously named years of £6 £14 3s. 6d., £11 6s. 9d., and £9 13s. 6d. respectively. Statement of monthly revenue from drawing advertisements, totalling £57 5s. 2d., £67 4s. 3d., £79 11s. 11d., £65 8s. 1d., and £62 7s. 2d., for 1890-91-92-93, and 1894 respectively, showing a decrease in 1894 of £4 17s. 1d., £17 4s. 9d., and £3 0s. 11d., as compared with 1891-2-3, and an increase of £5 2s. as compared with 1890. The revenue from bail bonds was £8 15s. 4d., £7 18s. 6d., £7 8s. 6d., £6 17s. 1d., and £4 13s. 10d., for 1890-91-92-93, and 1894 respectively, showing a decrease for 1894 of £4 1s. 6d., £3 4s. 8d., £2 12s. 8d., and £2 3s. 3d., for 1890-91-92, and 1893, respectively. The revenue from the assignment of bonds was £5 in 1890 and 1893, £10 in 1891, and nil in 1892 and 1894. The revenue from replevy was £5 in 1890, 1893, and 1894, £10 in 1891, and £15 in 1892. The revenue from *capias* was £19 8s., £20 13s. 6d., £13 17s., £12 18s., and £20, in 1890, 1891-92-93, and 1894, respectively, while that from attachments was £4 4s. in 1890, £5 5s. in 1891-92, and 1893, and £9 9s. in 1894, showing increases for 1894 as compared with previous years. The revenue from searches for 1894 was £189 11s., showing an increase over 1890 of £73 2s., over 1891 of £60 3s., and over 1892 of £6 11s., the year 1893 showing a decrease of £19 as compared with the year named. The revenue from bankruptcies amounted to £86 13s. in 1894, which was an increase over 1890 of £6 16s., and over 1891 of £11 5s. Compared with 1892 and 1893 it showed a decrease of £5 12s. and £13 19s. respectively.

(124.) Statement showing expenditure in salaries and contingencies for the Sheriff's Department from 1890-4 inclusive:—

	1890.			1891.			1892.			1893.			1894.		
	£	s.	d.												
Contingencies	10,533	7	6	10,482	7	7	13,020	0	10	9,283	8	4	10,178	16	10
Salaries	12,515	0	9	12,723	14	2	12,704	12	5	12,532	14	10	11,600	15	4
Total expenditure ...	£23,048	8	3	£23,206	1	9	£25,724	13	3	£21,816	3	2	£21,779	12	2

The difference between the expenditure in 1892 and 1893 is £3,908, the principal item being £1,039 for jurors' fees, and the next one £817, for special assistants.

(125.) Memorandum on the subject of transfer fees, of which the Under Sheriff receives an average of about £125 per annum, forming part of the remuneration of his office.

(126.) Return of salary fees, &c., of Sheriff's officers, including fees from other offices held by them. Thirty-five officers distributed all over the colony received (apparently in 1894) a total of £6,201 in salaries and £1,933 13s. 3d. in fees, in all £8,134 13s. 3d.

(127.) Letter from the Sheriff, dated 23rd February, 1894, to the Under Secretary of Justice, drawing attention to the hardship suffered by Sheriff's officers in cases where a levy is made under writ of *fi. fa.*, and the defendant becomes bankrupt before sale, the officer having to incur expenses for which he is sometimes not recouped for months.

(128.) Letter from the Crown Solicitor to the Under Secretary of Justice, dated 13th April, 1894, expressing the opinion that the only method of relieving the Sheriff's officers from the hardship referred to (see *ante*) would be by obtaining a rule of Court requiring Attorneys immediately upon the bankruptcy of execution debtors to pay the charges without the Sheriff having to wait for payment out of the bankrupt's estate.

(129.) List of official assignees' and solicitors' accounts, the former amounting to £39 3s. 9d. and the latter to £45 18s. 6d., or a total of £85 2s. 3d. Statement showing that in the case of *Basilewski v. Terrett*, 1892, the Sheriff's officer incurred expenses under the Bankruptcy Act amounting to £16 after date of bankruptcy, £3 of which is still owing; the amount realised by the sale of the estate having been handed over to the Sheriff's officer, and there being no further assets left.

(130.) Letter from Mr. John T. Steele, Sheriff's officer, Dubbo, dated January 31, 1895, apparently intended for the Sheriff, reporting that in the case of *Connell and Ors. v. Dean*, the special bailiff, S. E. Collou, of Cobar, had realised about £110 more than sufficient to satisfy the warrant which was for about £275, and absorbed the surplus in expenses. The writer gave instances of overcharges, and added that Dean alleged that the Special Bailiff sold £900 worth of property for between £300 and £400 by charging extortionate fees, but the jury of four, before whom the case was tried at Dubbo, returned a verdict for the defendants on all counts.

(131.) List of thirty-one places where, in 1888, there was a saving effected of £5 each.

(132.)

(132.) Letter from Mr. J. A. O'Flaherty, Sheriff's Office, Bourke, to the Sheriff, dated May 9, 1894, asking if it was still necessary to practise the recently established economy with regard to jurors' meals. The only two tenderers in Bourke asked 5s. a meal, because "the food must be procured and prepared, although, perhaps, not required." Subsequent letter from the same to the same, dated May 12, stating that the proprietor of the Royal Hotel was willing to supply jurors with meals, consisting of cold corned beef, bread, butter, cheese, potatoes, and tea, at 2s. 6d. per head. Letter from W. Paine, Gundagai, to the Sheriff on the same subject. Correspondence between the Sheriff and the Deputy Sheriff, at Wilcannia, on the subject of rugs hired for jurors when locked up, the latter explaining that the high price charged for the hire of the rugs was owing to their bad usage. Memoranda between the same parties with reference to the charge made for jurors' meals. Letter from the Sheriff's officer at Deniliquin, 22nd October, 1892, to the Sheriff with reference to the jurors' meals.

DEPARTMENT OF PRISONS.

(133.) Circular memo. from the Comptroller-General of Prisons (Mr. George Miller), drawing the attention of the officers in charge of gaols to the necessity for exercising the strictest economy in the management.

(134.) Return showing the cost per head per annum of prisoners confined in the established gaols of the Colony for the years 1889, 1890, 1891, 1892, and 1893.

Summary.

No. of prisons	1889.		1890.		1891.		1892.		1893.	
	21		21		21		22		23	
Daily average No. of prisoners confined	2,145.8		2,217		2,342.7		2,429.7		2,479.8	
	£	s. d.								
Total cost	103,501	2 11	106,554	16 11	111,782	6 3	114,654	8 3	115,788	14 2
Cost per head per annum	48	4 8	48	1 4	47	14 3	47	3 9	46	1 3
Cost per head per diem	0	2 7	0	2 7	0	2 6	0	2 6	0	2 6

(135.) Statement showing salaries for 1894 in 26 gaols, &c. :—Totals—Amount voted, £79,297; amount expended, £78,349 5s. 6d.; saving in salaries, £947 14s. 6d.

(136.) Statement showing the expenditure of the Comptroller-General's Department for 1894 :—Amount voted, £42,300; contingencies—amount expended, £38,836 0s. 3d.; saving in expenditure, £3,463 19s. 9d., making a total saving on salaries and contingencies of £4,411 14s. 3d. The amount saved in contingencies was wholly on the item of provisions, for which £40,000 was voted and £36,386 0s. 3d. was spent.

(137.) Statement showing a credit balance of £992 for salaries, £79,297 having been voted and £78,305 spent, and of £4,742 for contingencies, £42,300 having been voted and £37,558 spent.

(138.) Form showing state of the Goulburn gaol on March 16, 1895, where there were confined 307 prisoners, 6 of whom were females. The form is filled in giving a number of details respecting the prisoners confined.

(139.) Return showing number of officers employed in Goulburn gaol on March 16, 1895, viz., 52 male and 2 female, total, 54, with united salaries amounting to over £6,000.

POSTMASTER-GENERAL'S DEPARTMENT.

(140.) Approximate return showing number of letters, &c., posted at the Goulburn Post Office from 1890 to 1894. The number of inland letters increased gradually from 678,792 in 1890, to 865,336 in 1894. The number of intercolonial and foreign letters was highest in 1890, when it was 37,236, and lowest in 1894, when it was 30,372. The number of inland packets ranged between 24,470 in 1890 and 31,020 in 1892. The number of intercolonial and foreign packets ranged between 2,496 in 1890 and 3,981, in 1893. The number of inland newspapers kept an even balance, the numbers oscillating between 999,531 and 905,262. The number of intercolonial and foreign newspapers posted ranged between 16,440 in 1894, and 27,321 in the preceding year. The number of letters, &c., registered increased gradually from 7,044 in 1890 to 8,816 in 1894. 3,630 parcels were posted and entered in 1894, and 19,136 mails were despatched. The amount of private-box fees for 1894 was £49 12s. 0d., while that of private-bag fees was £8 8s. 0d.

(141.) Return of Money Order and Savings Bank business transacted at the Goulburn Post Office from 1890–4, inclusive. The number of orders issued increased gradually from 6,317 in 1890 to 7,494 in 1893, at the latter part of which year the postal note came into operation, when the number of money orders fell to 6,093. The amount of orders issued ranged between £15,130 6s. 4d. in 1894 and £24,067 18s. 3d. in 1892, the commission chargeable on money orders ranging between £168 3s. 0d. in 1894 and £240 9s. 6d. in 1893. The amount of Savings Bank deposits increased gradually from £16,875 0s. 9d. in 1890 to £19,692 11s. 10d. in 1892. In 1893 it rose suddenly to £38,576 14s. 2d., and in 1894 amounted to £24,715 3s. 6d. The remittances from chief office ranged between £3,851 4s. 11d. in 1892 and £8,458 13s. 4d. in 1894, while remittances to chief office ranged between £5,650 in 1890 and £25,325 19s. 5d. in 1893. 5,635 postal notes, amounting to £2,461 6s. 4d., were issued in 1894, and 5,984, amounting to £1,966 17s. 7d., were paid.

(142.) The number of money orders paid ranged between 5,984 in 1894, when the postal notes were in favour, and 7,943 in 1890, and their value ranged between £17,722 6s. 3d. in 1894, and £21,144 10s. 4d. in 1891. The number of Savings Bank withdrawals increased gradually from 1,150 in 1890 to 1,889 in 1894, and their amount ranged between £14,679 7s. 5d. in 1890 to £22,431 10s. 6d. in 1893. The expenditure for salaries was about £2,400 per annum, which had decreased by at least £100 per annum since 1892.

(143.) List of officers supplied with the *Government Gazette* by Mr. P. G. Davies, Postmaster at Goulburn.

(144.) Letter from the Deputy Postmaster-General in reply to circular referred to in paragraph 14, stating that Postal Inspectors had no specified route for travelling in their districts, the route being generally determined by the number of cases requiring investigation, and when they were in any part of their district surrounding post offices were inspected. Before proceeding on his tour the inspector outlined, as far as possible, this route; but it frequently happened that, owing to unforeseen circumstances, he had to vary it; and it also happened that he had to visit the same part of his district two or three times to deal with important matters that arose from time to time. It was, therefore, hardly possible to show the routes on the maps in the way desired. So many matters are dealt with in the metropolitan district, outside ordinary inspection of offices, that it was impossible for one inspector to attend to them, and consequently the metropolitan inspector was assisted by any of the other inspectors who might happen to be in town. Although each inspector was allotted his district, his duties were not strictly confined to that district. Then follows a list of the routes taken, the particulars of the inspectors' duties, and the offices inspected in each district shown in enclosures marked Nos. 1 to 8.

(145.) Statement showing revenue and expenditure for Postal and Electric Telegraph Department for 1892–4, which for the former ranged between £626,864 for 1894, and £652,269 for 1892, and for the latter ranged between £740,118 in 1892, and £762,594 in 1893. The total number of employes, exclusive of mail contractors, was 4,812, of postal inspectors 9, of letter carriers 460, of post offices 1,445, of receiving offices 450, of mail contractors 768, and of payments for Inland Mail services £101,000, as also to the Railway Department for the conveyance of mails £68,400. The total amount of subsidies for ocean mail services—Federal, Frisco, and Vancouver—was £40,303, and the net cost £22,810. The cable subsidies (Port Darwin, Tasmanian, New Caledonia, and the cable guarantee, including South Australia and New Zealand), amounted to £24,683. Stabling 62 horses cost £2,729; 214 rented buildings cost £11,500 per annum; the number of Government buildings was 200. The amount of retrenchment effected in 1893 was £5,293 per annum, and the number of persons retrenched whose places had not been filled since the amalgamation of departments, was 32. There were 50 Telegraph messengers over 21 years of age in receipt of £1 per week. The average number of papers recorded and of letters written daily was 240 and 360 respectively.

(146.)

(146.) Memorandum from the Cashier's Branch.—Monthly salaries and allowances for each month, £36,000. 621 sub-vouchers are prepared for the signatures of the Staff at all offices outside the Head Office. Quarterly salaries for each quarter, £4,575, for which sub-vouchers are also prepared. 1,253 separate payments. Mail contractors, paid quarterly for each quarter, £23,600, for which sub-vouchers and bank deposit duplicates are prepared. Postmaster-General's Department.—Revenue, 1893, £621,418; 1894, £611,366. Expenditure, 1893, £750,579; 1894, £751,533. Total value of stamps issued during 1894, £560,000; total value of postal notes issued during 1894, £160,000.

(147.) Memorandum from the Acting Postmaster-General, stating that the number of persons employed in the Mail Division of the Parcel Post Branch was nil in 1894, and 22 in 1895 (the Branch having been constituted on 1st October, 1893, after the estimates for 1894 had been framed); the number of clerks in the Electric Telegraph Division—33 in 1894, and 42 in 1895 (including senior clerk), and the number of letter-carriers was 282 in 1894, and 261 in 1895. The last named apparent reduction was owing to the fact that provision had been made for an extra staff, which was afterwards found not to be needed, and the spare salaries were utilised for the payment of some of the letter-carriers.

(148.) Quarterly abstract of principal ledger accounts for quarter ended 30 September, 1894, Money Order and Government Savings Bank.

(149.) Statement showing the Money Order and Government Savings Bank Account at the Chief Office from the 2nd to the 24th January, 1895, inclusive.

MISCELLANEOUS.

(150.) Rules and Regulations of the Colonial Sugar Refining Company, Limited, Employés' Provident Fund, as amended on December 31, 1891.—Subscription to the Fund is compulsory, subject to certain restrictions, for all employés under 33 joining the salaried staff after September, 1890, when the Fund was first formed, who should pass a satisfactory medical examination. Employés in receipt of weekly wages are allowed to subscribe to the Fund till they have been two years in the constant employ of the Company, except apprentices, who may subscribe after six months' service. No employé over 50 is allowed to subscribe, unless at the date of the formation of the Fund he was in the service of the Company for a continuous period of ten years, except on payment of an increased contribution. Subscribers over 33, unless they become such within three months from the formation of the Fund, pay an increased contribution; but no employé who commences to subscribe after 45 shall be entitled to a pension, nor shall any be entitled to a pension unless under 35 at the date of becoming a subscriber. Subscribers on the salaried staff contribute 2½ per cent. per annum, subject to alteration by the trustees of their salaries and allowances, but for the first ten years after the formation of the Fund the maximum monthly subscription shall be £1 11s. 6d. from employés under 33 on joining the Fund, and £1 0s. 10d. from employés over that age on joining. Subscribers in receipt of weekly wages contribute from 6l. up to 2s. a week, according as their wages are, from under £1 to £4, 2½ per cent. being the subscription for wages over the last-named amount. The Company places to the credit of the Fund monthly a sum equal to the subscribers' contributions, the maximum being £300 a year. Every subscriber prior to 31st December, 1891, who, at the time of becoming a subscriber, was under 45 is entitled to retire on a pension at 60, or on becoming disabled or incapacitated from further service after subscribing for ten years; but subscribers after the date named are only entitled to retire on a pension provided they were under 35 on joining the Fund. No pension is paid till five years after joining, and a pension, or any part thereof, may be withheld from any subscriber who is disabled or incapacitated through his own habitual misconduct or neglect. In the event of any pensioner dying before he has received double the amount of his own contributions to the Fund, the difference shall be paid to his legal representatives. On the death of a subscriber not a pensioner a sum is paid to his legal representatives equal to the average yearly salary and allowances or wages on which the subscription had been paid. Subscribers of under five years shall receive back one-half of their subscriptions without interest on voluntarily and honestly leaving the Company; and subscribers of over five years, voluntarily and honestly leaving the Company, and any subscriber forced to resign for any cause other than fraud or dishonesty, receive back the whole of their contributions to the Fund without interest; but any subscriber dismissed for fraud, or retiring in order to escape dismissal for fraud, forfeits all claims on the Fund, and all losses sustained by the Company through such fraud shall be made good out of the Fund up to three times the amount of the defaulter's contributions. In case of sickness the subscription may remain in abeyance, but such period shall be deducted from the subscriber's term of membership unless he subsequently pay the subscription for such period with 6 per cent. interest.

(151.) Exhaustive memorandum by the Victorian Commissioners of Audit, written at the instance of the New South Wales Civil Service Commission, giving in detail the method of auditing accounts in Victoria:—

Summary.

(a) Revenue:—All computations are checked and rates verified wherever practicable by authorised scales, and it is seen that the moneys have been shown under proper headings, also that the statements are signed by the proper officers, and dates, &c., correctly filled in. The totals in the statements forwarded by a Receiver of Revenue are checked, and the bank receipt and summaries are examined as to amount, date, signature, and stamp. In the cases of the Post Office, Railway, and Water Supply Departments, and the Registrar-General's Office, no check is applied in the Audit Office to the revenue paid in by the collectors, the amount being shown in a lump sum without particulars. In each of these departments, however, there are collections of a miscellaneous character of which details are given, which are checked as far as possible. In the case of Customs collections the statements give details as to the various sub-heads and items under which the moneys credited were received, and these are carefully checked. Quantities and values are of necessity taken as correct. In connection with collections on account of territorial revenue, full particulars of each item are required to be given, and are checked by the various Acts and Regulations applicable in each case. Clerks of Courts have to furnish particulars of all fines collected, and the manner in which they have been appropriated is shown, the correctness of which is checked. In cases of refunds from revenue the expenditure vouchers for the refunds are checked and referred to the Revenue Branch. The revenue statements are compared with the cash sheet and carefully checked. The Treasury ledgers are examined quarterly, and the whole of the postings compared and checked with the items on the revenue vouchers, additions being checked and results noted. Registers are kept of all rents from the various Land Acts and the Mining Acts, of payments under the Land Tax Act, and for bonded warehouses and tobacco factories. All these registers are opened from particulars published in the *Government Gazette*, and mistakes of any kind are noted. Registers are also kept of Government premises rented, and of amounts received for maintenance of patients in lunatic asylums, as also of all loans granted, and of the conditions under which they are to be repaid, attention being given to the question whether the conditions are in accordance with authority. The Commissioners of Audit are also informed how the Crown lands are sold, and they see that the survey charges and upset prices are properly made, and check all calculations. In the case of revenue credited as received on issue of license forms, &c., it is seen that the amount credited is the authorised fee, the check being very carefully devised. A similar course is adopted in checking the beer duty stamps issued to collectors. A ledger account is kept under each separate head for Trust Funds and special accounts, the amounts being posted and the charges being checked. Declared returns are furnished by collectors to the Commissioners every month, and a register is kept giving full particulars with reference to each, and a careful check is maintained.

(b) Expenditure:—The following rules are observed by the examiners in dealing with the accounts. They see (1) that the vouchers are prepared on the proper forms; (2) that they are certified by the proper officers; (3) that the computations are correct; (4) that the account is properly charged; (5) that the expenditure is properly authorised; and (6) that proper acquittances are given. It is then shown in detail how these rules are carried out. In dealing with the railway, the Commissioners of Audit say that the revenue collections of the Railway Department are not and cannot be checked in detail. That duty devolves entirely upon the Traffic Auditor, who has a large, well-organised, and efficient staff; but the expenditure is carefully checked in the Audit Office. An arrangement was being made by which the auditors of the Railway Department should, when examining the accounts of the station-masters, also inspect and examine their accounts as postmasters if acting in the twofold capacity. The Audit Commissioners were also endeavouring to arrange with the Education Department for the inspection of the books and accounts of the post offices attached to the State schools by their inspectors. Under the Audit Act, as amended in 1890, the Commissioners of Audit personally inspected the accounts of the several departments in Melbourne, visiting each one for that purpose during the year; but the inspection of officers outside of Melbourne was now done by inspecting officers, whose reports, with a further report thereon, were transmitted to the Treasury by the Commissioners. So far this new arrangement had worked satisfactorily.

(152.) Memorandum (in the shape of addenda to his evidence) by Mr. J. L. Henderson, Inspector of Stock, Goulburn pointing out that the working of the Diseases in Sheep Act, of 1866, might be facilitated if it were altered so that returns should be made to the Inspector of Stock and all contributions collected by him. One inspector cannot be expected to properly carry out all the duties appertaining to the Diseases in Sheep Act, the Registration of Brands Act, the Pastures and Stock Protection Act, the Impounding Act, the Diseased Animals and Meat Act, the Public Watering Places Act, and the Imported Stock Acts, without clerical assistance, which he (Mr. Henderson) had sometimes to employ at his own expense. The annual grant of £50 for travelling expenses was inadequate, the equipment costing double that, so that "a salary of £260 is actually worth only £160."

(153.) Letter from Mr. W. E. Smith to the President of the Civil Service Commission, dated 8 March, 1895, furnishing the rate of wages paid in his establishment, as follows :—

Printing Department.

Compositors, from £2 10s. to £3 3s.
Apprentices, from 6s. to (last year) £1 5s.
Readers, £2 16s.
Foreman, £4.
Machinists, from £1 1s. to £3.
Youths, from 12s. to £1 4s.
Engineers, £1 16s.

Lithographic Department.

Lithographic printers, from £2 5s. to £2 17s. 6d.
Fly boys, 9s.
Feed boys, from 15s. to 17s. 6d.
Stone grinders, £1 12s. 6d.
Copper-plate printers, £2 5s.
Foreman, £3 10s.
Lithographic artists, £3 10s.
Copper-plate engravers, £3 10s.

Paper Department.

Warehousemen, £3 10s.
Assistants (boys), from 10s.

Binding Department.

Vellum binders, from £2 15s to £3.
Apprentices, from 13s. 6d. to (last year) £1 10s.
Youths, from 10s. to £1 2s.
Finishers, £3 10s.
Sewers (females), from 8s. to £1 10s.
Varnishers, £2 10s.
Relief stampers (females), from 15s. to £1 10s.
Pagers (females), 15s.
Foreman, £5.

Machine Ruling Department.

Rulers, from £2 15s. to £3.
Machine youths, 7s. 6d. to 8s. 6d.
Foreman, £3 10s.

(154.) Wages sheet for week ending 4 January, 1895, furnished to the Civil Service Commission by Mr. Robert Sands, stationer, giving the name of every employé and the amount of wages paid him.

(155.) Memoranda by Mr. E. W. Knox, manager of the Colonial Sugar Refining Co., with reference to the salaries and wages paid in the different Government Departments.

(156.) Unsigned letter from Newcastle to the President of the Civil Service Commission, received 12th December, 1894, enclosing a printed letter on the subject of travelling allowances to Civil Servants.

(157.) Printed letter taken from *Sunday Times* of 23rd December, 1894, for the consideration of the Commissioners, on the "Police Superannuation Fund," signed "Subscriber."

(158.) Article in *Sydney Morning Herald*, dated 4th January, 1895, on "Travelling expenses of Civil Servants," giving particulars of new general scale of charges for Civil Servants issued by the Chief Secretary.

CLASSIFICATION RETURNS.

In addition to the returns on the three files, a number of exhaustive returns were handed in by the heads of the various departments and sub-departments, generally at the request of the Commissioners, giving the names of the officers employed, with particulars as to the amount of their salaries, the nature of their duties, and sometimes the date of their appointment, their age, and the length of time they had been in the Service.

The returns thus handed in came from the following departments, viz. :—

Chief Secretary's Department.

- (1.) Ministerial Office—printed return giving position, name, length of service, age, and duties of every officer in the Ministerial Office in November, 1894.
- (2.) Registrar-General—stating the position, name, salary, length of service, age, and duties of every officer.
- (3.) Auditor-General—giving position, name, salary, length of service, age, and duties of every officer.
- (4.) Charitable Institutions and Government Asylums—giving name, position, salary, duties, and length of service of every officer.
- (5.) The Police—return showing rank, name, station, and amount to be paid to Licensing Inspectors, and sub-inspectors in the Metropolitan District for 1894.

Department of Finance and Trade.

- (6.) Ministerial Office—printed schedule showing in separate sub-schedules the division of the Department into its various branches, with the name, position, age, length of service, nature of duties performed, and salary, in 1894, of every officer.
- (7.) Customs—(a) printed list stating the name, position, and salary of every officer employed; (b) exhaustive manuscript return, filled in by each officer throughout the Customs Department, stating the nature of the duties performed by him.
- (8.) Stores—(a) Letter from Comptroller General giving particulars of duties of officers; (b) statement giving name of officer, duties, and remarks.
- (9.) Government Printer—printed statement giving name, position, age, length of service, nature of duties, and salary in 1894, of every one employed.
- (10.) Board of Health—statement of the duties of the administrative staff, giving position, name, salary, length of service, and duties of every officer; together with copy of letter from the Secretary to the President of the Board, showing why rent allowance should not be included in his salary.
- (11.) Shipping Master—giving name, position, age, length of service, and salaries of Shipping Master and staff.
- (12.) Collector and Manager of Wharves—giving name, salary, and position of the officers on the different wharves, and showing at which wharves they are engaged.

Department of Lands.

- (13.) Ministerial Office—return, dated 28th February, 1895, of all officers, &c., giving name, position, age on 31st December, 1894, salary, allowance, length of service, and duties of each.

Department of Mines and Agriculture.

- (14.) Ministerial Office and Branches—Returns showing (a) position, name, salary, and duties of all officers on the clerical and temporary staffs, and in the Registrar's and Record Branches; (b) names and salaries of mining wardens; (c) names, salaries, and duties of mining surveyors; (d) names, salaries, and duties of officers in the Geological Survey and Metallurgical Branches, and Cave keepers; (e) names, salaries, and duties of officers in the Geological Branch; (f) names, salaries, and duties of Stock and Brands Branch; (g) names, salaries, and duties of Inspectors of Stock; (h) names, salaries, and duties of officers in the Coal Fields Branch; (i) names, salaries, and duties of Inspectors of Mines and of officers in the Diamond Drill Branch; (j) names, salaries, and duties of officers in the Water Conservation Branch, dated February 6, 1895; (k) names, salaries, and duties of officers of the Hawkesbury Agricultural College; (l) names, salaries, and duties of the Survey Staff; (m) names, salaries, and duties of officers of Agriculture and Forestry Branches; and (n) return giving position, name, date of appointment to present position, and by whom appointed, of the officers of the Department of Public Watering Places and Artesian Bores, their duties being given on a separate sheet.

Department of Public Works.

- (15.) Ministerial Office and Dredge Service—(a) giving name, duties, whether permanent or temporary, and salary of every officer in the Accounts and Records Divisions; and (b) details of Dredge Service, with name, position, whether permanent or temporary, and salary or wages of all employed, with a few other details.
- (16.) Government Architect—(a) Schedule of permanent and temporary, professional and clerical, officers employed in March, 1895, with the number of buildings in charge, assistant architects of the contracts in hand, and plans in preparation for buildings; (b) memorandum showing the organisation of the branch, with the names and duties of the officers; (c) memorandum on the "Inspection of Country Works," explaining the arrangements for and the amount of supervision given to works in the country districts.

Department of Public Instruction.

- (17.) Ministerial Office, &c.—list of officers, dated 31st August, 1894, giving position, name, age, length of service, salary, and duties of all employed by the department, including the teachers in the Fort-street and Hurlstone Training Colleges, the School of Cookery, and the Sydney Technical College and Technological Museum; but excluding the teachers in the Public schools.

Department of Justice.

- (18.) Sheriff—giving the name, position, date of appointment, age, length of service, salary, and duties of every officer.
- (19.) Comptroller General of Prisons—giving particulars of the work of the department, and the position, name, age, salary, length of service, and duties of every officer, with list of books, and returns, and registers kept, together with a statement of the books kept in the Account Branch, and of the duties of the staff.

Postmaster-General's Department.

- (20.) Postal and Electric Telegraph Department—(a) stating the position, name, salary, and duties of every officer employed; (b) also printed list of the staff arranged in divisions, classes, and grades.

LIST OF MAPS HANDED IN BY VARIOUS WITNESSES.

- A.—Map showing the routes traversed by the inspecting staff of the Treasury.
- B.—Map showing the districts of the supervising engineers, Roads and Bridges Branch, Department of Public Works.
- C.—Map showing towns at which officers are stationed in connection with the construction of water supply works, Department of Public Works.
- D.—Series of maps and tracings showing the routes traversed by the inspectors of the following Land Boards, Department of Lands:—Bourke, Cooma, Dubbo, Forbes, Goulburn, Grafton, Hay, Maitland, Moree, Orange, Sydney, Tamworth, Wagga Wagga.
 - .—Map showing boundaries of forest reserves and the position of the timber reserves.
- F.—Series of maps showing the outcrop, thickness, and dip of coal-seams in various mines.
- G.—Map showing sheep districts, stock branch, Department of Mines.
- H.—Map showing districts of inspectors of public watering places, Department of Mines.
- I.—Map showing routes traversed by school inspectors, Department of Public Instruction.
- J.—Map of New South Wales, 16 miles to the inch, showing postal stations, mail roads, telegraph lines, and inspectorial divisions of the Post Office Department, with diagrams showing post-offices, mail roads, etc., within (a) the metropolitan and surrounding districts, and (b) Newcastle and surrounding districts.
- K.—Map showing routes traversed by inspectors connected with the Audit Department.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC SERVICE INQUIRY COMMISSION, 1888.

(PARTICULARS RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 12 December, 1894.**[Laid on the Table of this House in accordance with promise made in answer to Question No. 2, of 6th December, 1894.]*

Question.

CIVIL SERVICE INQUIRY COMMISSION APPOINTED IN 1888:—MR. PRICE *asked* THE COLONIAL SECRETARY,—

- (1.) What were the names of the members of the Civil Service Royal Commission appointed in 1888?
- (2.) What were the names of the members who resigned, and the reasons given for such resignations?
- (3.) What were the names of those appointed to fill the vacancies?
- (4.) How long was the Commission in existence, and how many meetings were held?
- (5.) What was the total amount of fees paid, also the amount paid to individual members of the Commission?
- (6.) What was the total cost of the Commission, including shorthand-writing, type-writing, printing, rent of premises, fees, and other incidental expenses?
- (7.) Has the whole of the evidence and the report been placed before Parliament; if not, will he place the information before Parliament prior to the Estimates being dealt with?
- (8.) Is it a fact that a portion of the report or any portion of the evidence has been lost or stolen?
- (9.) Is it certain that the whole of the evidence taken by the late Commission has been placed before the present Commission; if not, will he see what has been done with the missing documents?
- (10.) Have the recommendations of the Commission been carried out; and, if not, what were the reasons for neglecting the suggestions?

Answer.

(7.) The only report placed before Parliament was that on the Postmaster-General's Department. The evidence was destroyed by order of the Commission, in accordance with their promise to witnesses before examination.

(8.) No.

(9.) The reports have been placed before the present Commission.

(10.) The recommendations of the Commission have been carried out, as far as opportunity offered, in the departments of the Post Office, Treasury, Mines, and Justice.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CIVIL SERVICE BOARD.

(REPORT ON AN ACTUARIAL EXAMINATION OF THE STATE AND SUFFICIENCY OF THE
CIVIL SERVICE SUPERANNUATION ACCOUNT.)

Ordered by the Legislative Assembly to be printed, 21 March, 1895.

The Civil Service Board to The Chief Secretary.

Sir,

Civil Service Board, 1st March, 1895.

1. We have the honor to submit a Report on a Triennial actuarial examination of the state and sufficiency of the Civil Service Superannuation Account made by Mr. T. A. Coghlan, Government Statistician, in accordance with section 54 of the Civil Service Act of 1884.

2. The first triennial investigation was made by Mr. R. Teece, whose report seriously impugned the solvency of the Civil Service Fund at the end of 1887.

3. Mr. Teece (balance-sheet as at 31st December, 1887) estimated the deficiency then existing to be £1,325,706, being the sum then required to assure to all subscribers to the Fund at that time the benefits promised by the Act. In dealing with the causes of the deficiency quoted, Mr. Teece called attention to the inadequacy of the contribution of 4 per cent. per annum to provide the promised benefits; the absence of sufficient provision for the accrued liabilities assumed by the Fund at the inception of the scheme; the unexpected liability in respect of pensions to officers who were neither incapacitated nor had attained the age of 60 years; the method of computing pensions; and the payment of gratuities to widows and relatives of deceased officers, a provision Mr. Teece regarded as repugnant to the principles of a superannuation scheme, and which he considered should not have found a place in the Act. Mr. Teece concluded his report in the following words:—"The deficiency which has been shown to exist may be said to be somewhat alarming. I am free to admit that there are some elements of uncertainty in the calculations, and that funds of this character are very elastic; but when due allowance is made for all variations which might favourably affect the results, there must still be such a marked disparity between the assets and liabilities as to put the question of insolvency beyond any possibility of doubt."

4. The Board in a letter addressed to the Colonial Secretary, dated 30th December, 1889, called attention to the unsatisfactory condition of the Fund as disclosed by Mr. Teece, and suggested the desirability of the Government continuing to subsidise the Fund, so as to enable it to bear the strain to which it had been subjected by the forced retirement of officers by the Government who were not eligible for retirement under the Act, either by reason of age or mental or physical infirmity, many of them being in the prime of life and even under 31 years of age. They also stated that at that time the pensions created by forced retirements had reached a charge of nearly £22,000 per annum, with an expectation that the next following year would add to the forced retirements and increase such annual payments to £30,000.

5. The second triennial investigation was conducted by Mr. J. B. Trivett, the actuary appointed by the Government, who furnished his report on the 1st February, 1892. Mr. Trivett estimated the deficiency as on the 31st December, 1890, at £1,592,568.

6. In stating the causes which, in his opinion, had led to the condition of the Fund at that time, Mr. Trivett pointed out that an extraordinary influx of entered-on-pensioners had taken place during the previous four years, that many of the pensioners were then in the prime of life, and that eighty-nine of them, or 21 per cent. of the whole pension-list, were under the statutory age of 60 years, and had various terms, ranging to twenty-seven years, to run before they could be legitimately due for retirement.

7. The Board, in their Supplementary Report for the year 1891, dealt fully with Mr. Trivett's report. It was shown that the Government, when the Bill was introduced in 1884, proposed to deduct 3 per cent. only from the salaries of the Civil Service in support of the fund, and to give a permanent endowment of £10,000 per annum from the Consolidated Revenue of the Colony. The whole amount really contributed by the Government amounted to £100,000.

8. The Board in the same Supplementary Report very forcibly brought all these matters again under the notice of the Government, and urged a reconstruction of the Act on the following lines, viz. :—

1. That there be a limitation as to the age of persons allowed to enter as contributors to the Fund, except in special cases.
2. That no retirements or pensions be allowed under 60 years of age, except under very rigid regulations.
3. That a sufficient annual subsidy be granted to assist the Fund.
4. That reorganisations and retrenchment retiring allowances should not be a charge on the Fund.
5. That section 57 of the Act be so altered that the persons therein referred to must become contributors to the Fund within a limited period, or lose their right of option.
6. That in the case of future entrants, service for pension purposes should count only from the date of contribution to the Fund.

9. In the early part of this year the Board seriously considered the necessity for a very strict and exact examination of the Fund at the third triennial investigation. The two previous investigations afforded strong and conclusive evidence

evidence that the principles upon which the Fund is based are totally unsound, and the condemnation of those principles by Mr. Teece, confirmed subsequently by Mr. Trivett, together with the accumulated and increasing deficiency disclosed by the valuations made, showed that each succeeding triennial investigation must increase the difficulties of the Board in dealing with the future of the Fund. The statement of account for the year 1893 shows that the 4 per cent. deduction from salaries for that year amounted to £67,308, and the pensions and gratuities paid under the Civil Service Act amounted to £75,262. These figures prove that the Fund was not in a healthy condition, and the Board thought it desirable to obtain the opinion of a third competent actuary to conduct the third triennial investigation, in order to compare the opinions of gentlemen whose mathematical training enables them to arrive at conclusions which the practical experience of the principles of life assurance has proved to be generally correct and unassailable.

10. The Board recommended the appointment of Mr. T. A. Coghlan to conduct the third investigation, and the Government accepted the recommendation.

11. Mr. Coghlan's report estimates the deficiency to amount to £2,905,199, as on the 31st December, 1893, that sum being required to meet the engagements entered upon with the Civil Servants. The causes which have led to the deficiency stated are fully dealt with in his report.

12. Mr. Coghlan estimates that the Fund was saddled with an initial liability of little short of one million, and offers reasons for this conclusion and demonstrates that the prescribed payments by the Civil Servants are not adequate to meet the promised benefits.

13. Referring to the wholesale additions to the pension list which have been made in furtherance of a retrenchment policy, Mr. Coghlan states that 272 persons have been placed prematurely among the ranks of pensioners, representing an annual expense to the Fund of £41,000, and that each case so placed on the Fund is a loss in three separate ways. It anticipates the date of payment of pension, it deprives the Fund of expected contributions, and, in most instances, it gives a larger pension than justice to other contributors would sanction, inasmuch as the scheme of superannuation contemplates the payment of a pension for a term of 13·5 years, which is the expectation of life at the age of 60, and not for any longer period, whereas the operation of the retrenchment policy has been to cast on the fund as pensioners persons as young as 31 years, with an expectation of life equal to an average of 36 years.

14. The enormous dormant liability so clearly and forcibly illustrated in the report furnished by Mr. Teece is made even more apparent by the extended experience at the command of Mr. Coghlan. The complete inadequacy of the original scheme is shown most clearly, and the wonder is that the words of warning have been so long neglected.

15. The Board desire to draw attention to the statement by Mr. Coghlan, on page 2 of his report, that he has dismissed from consideration as incapable of assessment the liability caused by certain persons being allowed to join the Fund at any time under section 57—the claims of officers through the abolition of their offices and the liability for claims by widows and others left in necessitous circumstances. He also points out that he has not taken into consideration the advantages accruing to the Fund—firstly, from the large number of high-salaried officials who remain in the
service.

service for years after they have attained 60 years of age; and, secondly, the gain arising from the resignation or dismissal of persons who are contributors but can obtain no gratuity or compensation from the Fund.

16. Mr. Coghlan, however, sets these gains and losses against each other, but it seems evident that it is impossible to form an accurate opinion as to whether they approximately counterbalance. It may, in fact, be anticipated that the liability for the abolition of office under administrative reform which has hitherto been such a tax upon the Fund, will not in future form a charge against it, and if such view be correct, the set-off of the liabilities referred to, as against the assets, would be very considerably reduced.

17. The Board have thought it their duty to call attention to these points, but may state that they are prepared to accept Mr. Coghlan's general conclusions as to the condition of the Fund.

18. In the Appendix hereto a statement is given detailing the particulars of a number of pensions and gratuities granted under the Act. It will be seen that in seventeen cases of pensions the Fund is losing £3,449 per annum, and in nine cases in which gratuities were granted the Fund sustained a loss of £2,500. The pension granted in the case of "J" may be taken as a striking illustration. The total amount provided was £635; the amount really required to purchase an annuity of £546 per annum was £6,770; this transaction left a loss of £6,134 to the Fund. "J" obtained a pension of £546 per annum, but his contribution under any ordinary scheme of annuities would have entitled him to a pension of £51 per annum only. The Fund in this instance suffers a loss of £495 per annum, and as "J" retired at the age of fifty the loss will probably continue for many years.

19. The deficiency is, according to Mr. Coghlan, little short of three millions sterling, and tends to increase at the rate of £120,000 a year. To remedy this condition of affairs within the lines of the present Act, there is but one course open, that is the reduction of allowances. To bring about a condition of solvency by such means, he explains that existing pensions and all prospective pensions would need to be reduced by fully 65 per cent., a reduction which would be perilously near repudiation.

20. It appears to the Board that the first practical matter which should receive attention is the payment to the Superannuation Account of all amounts which are equitably due to it by the Government. As shown in Mr. Coghlan's report, it must be assumed that it was the intention of the State when establishing the Fund to start it on a thoroughly solvent basis, and it was in pursuance of this policy intended that sufficient provision should be made at the outset for the accrued liabilities in existence on the 31st December, 1884, which were practically claims upon the Fund at the inception of the scheme. These liabilities consisted of pensions then accruing to officers by reason of their length of service to that date. The annual grant of £20,000 for five years was expected to be sufficient to meet this liability, but as shown above, it has fallen very far short of the purpose for which it was granted. It then appears to be a matter of simple justice that the difference between the accrued liability referred to and the deficient payments made to meet it, should be paid to the credit of the Fund out of the Consolidated Revenue Account, and a further amount that should be at once paid to the Fund is the value of pensions paid to officials retired under the system of general retrenchment.

21. Whatever causes have led to the disastrous condition of affairs disclosed by the actuaries, the Board are of opinion that the pensions already granted should not in any way be interfered with. Those who have retired have done so, believing that the Government would at all times be responsible for the payment of their pensions, and in the belief that their monthly drafts upon the Treasury will continue to be paid.

22. The Board cannot lose sight of the very important fact that the Civil Service Fund is subscribed to and is now maintained by the Civil Servants. The control of the Fund is, however, entirely in the hands of the Government, and if the Fund is a failure, it has failed under the control of the Government. The Government created and to a certain extent sustained it. Subscription to the Fund has been compulsory, and claims have been allowed, which, although perhaps legally admissible, have been clearly such as no fund of a like character could sustain.

23. The Board turn now to the recommendations submitted by Mr. Coghlan, with a view to carrying on the business of the Fund, and, in doing so, they think that the Civil Servants must be prepared to make some sacrifice, and that the Government should give every fair and reasonable assistance to the Fund.

24. There are two questions to be carefully considered. Is it desirable to continue the Fund, and if so, on what basis? It has been too generally regarded that the Fund is provided solely by the Government for the relief and benefit of Civil Servants. It seems to be overlooked that the Fund relieves the public purse, by making provision for the retirement of aged Civil Servants on pensions provided by deductions from their salaries.

25. The Board are of opinion that the Fund has been very unfairly treated throughout. The Government have been relieved from the payment of salaries to a number of persons it has been thought desirable to remove from the Service, and the Fund has afforded a convenient means by which their removal has been effected. It is not too much to assume that in the absence of the Fund most of the public servants removed would have remained longer in the Service, drawing annual salaries from the Treasury.

26. Taking into consideration the large interests created by the establishment of the Fund, the number of persons drawing pensions therefrom, and the almost entire reliance of a very large number of officers upon the expectation of pensions for which they have long contributed, it would be a cruel and inexpedient proceeding to sweep away a fund having invested assets amounting to nearly half a million, and an income of more than £90,000 per annum.

27. Opinions will doubtless vary very considerably as to the proposals made by Mr. Coghlan. They are suggested as a means of rendering the Fund solvent within a reasonable time. Taking the recommendations in the order in which they appear in his Report, the first and perhaps the most important suggestion is that the pension age be postponed from 60 to 65 years, and that payments from the Fund be restricted to persons who have attained the pension age, or who, through infirmity, are forced to an earlier retirement. The effect would be an increase to the Fund, arising from deductions at the highest rate of salary attained during the extended period, and the reduced number of claimants. Without entering into the question raised by Mr. Coghlan as to whether it is desirable to pay pensions to persons (being under pension age) on account of infirmity, it would appear from his statement that,
under

under stringent conditions, and the adoption of the precautions suggested by him in the second recommendation, viz., that the age attained should be a factor in determining the pension to be awarded, it is not likely that the Fund would be improperly encroached upon.

28. The second recommendation is that all payments to persons whose retirement is due to retrenchment, or public policy, be a charge on the Consolidated Revenue until the age of 65, when the liability of the Government would be transferred to the Fund. The Board, in their Report for 1893, represented the effect on the Superannuation Fund of the system of retrenchment carried out in many of the public departments, and stated their opinion to the Colonial Secretary that the officers dispensed with appeared to them to be technically entitled to compensation, but that such compensation should not be charged against the Fund, which was never intended to have this burden cast upon it through departmental changes involved in a general scheme of retrenchment throughout the Service. The reply to this representation was that it had been decided "that these claims must be paid from the Civil Service Superannuation Fund as heretofore, pending consideration of the whole question." *Gratuities* paid in respect of these claims have been voted on the Estimates of the various departments and repaid to the Fund, but no provision has been made for recouping the Fund for *Pensions* so paid. The Government, however, on 27th November, 1893, arrived at the following decision:—"The Cabinet have also decided that when the proper time for the adjustment of the matter arises the Civil Service Fund shall be recouped for any additional burden which may be imposed upon it by reason of this decision."

29. The third recommendation is—"that no person be hereafter admitted as a contributor who is above 35 years of age, unless contributions be first secured as from that age, with compound interest at 4 per cent., to be first secured to the Fund." Contributors under such circumstances might pay either in one sum, or by instalments, an amount to be determined by an actuary as the value of the expected pension, in excess of the expected contributions.

30. The fourth recommendation that pensions be in future computed on the average salary for the seven years of service previous to retirement is a fair and reasonable suggestion. There may be some difference of opinion as to the period of time suggested, but it appears certain that the more scientific method of taking an average salary for the whole period of service, as a pension basis, would under certain circumstances fail in its object.

31. The proposal to substitute a plan of insurance in place of the present objectionable system of gratuities, is worthy of careful consideration. Policies at pure premium rates would cost very little, the amount assured need not in any case be great, and it could be made to vary with increases of salary. It would also be possible to conduct this new feature of business in connection with the Fund, by accepting the policies of members assured in public companies in lieu of extra payments to the Fund, with a condition that any such policies should not be impoverished by obtaining loans or advances of any kind or be subject to assignment.

32. The Board would submit for consideration that it is also advisable that all persons in the permanent employment of the Government, mentioned in sections 7 and 8 of the Civil Service Act, should become contributors to the Fund, and be liable to the same rate of deduction from their pay as is provided in respect of the officers, and shall be entitled to participate in like manner in all the benefits conferred by the Act.

33. There is abundant evidence that the Fund was established on an unscientific basis. The original Bill was conceived in a liberal spirit, and Parliament was prepared to act generously in dealing with the measure, but the accrued liabilities to officers in the service at the time it was passed were not sufficiently provided for, and the benefits conferred by the Act were quite out of proportion to the payments made to the Fund by the officers concerned. It was at first proposed that the Fund should have a perpetual endowment of £10,000 per annum, and an unlimited claim upon the Consolidated Revenue of the Colony, should the amount of the endowment prove insufficient. The calculations of the Advising Actuary were made on this basis, and the present condition of the Fund in no way reflects on the advisers of the Government at the time. The Bill was afterwards shorn of its equitable provisions in reference to its endowment by the Government, but no commensurate reduction was made in the scale of pensions and gratuities, so that the Fund was started in an overweighted condition, viz., accrued liabilities inadequately provided for, and retiring allowances authorised on a scale beyond the power of the contributions to provide. Added to this the Government, immediately after the passing of this Act, commenced a system of reorganisation and retrenchment, by which they made large apparent savings of the salaries of officers dispensed with, but charged upon the Fund the pensions of such dispensed-with officers, and thereby have undermined the whole fabric.

34. The state of affairs now existing calls for a drastic and complete change. The Board are informed by Mr. Coghlan that the adoption of the course of action recommended by him will at once extinguish a very large amount of the deficiency shown in the valuation balance-sheet at page 3 of his Report; this end will be attained by decreasing the liabilities, and largely increasing the value of future contributions.

35. The suggestions for a reconstruction of the Fund seem to be based upon the principle that it is to be carried on in future upon commercial principles, but the Board desires to express the opinion that the Fund has suffered very seriously by the action of the Government in the past, and that the Civil Servants have a strong claim for the most liberal assistance from the Government.

36. The Board, in view of the great interests involved, the desirability of keeping faith with those who are receiving pensions, and the welfare of the present subscribers to the Fund, recommend Mr. Coghlan's report for most favourable consideration.

Report, Civil Service Superannuation Fund.

To the Chairman of the Civil Service Board,—

Sir,

In accordance with the 54th section of the Civil Service Act an actuarial investigation is required to be made as to the state and sufficiency of the Superannuation Account at the expiration of every three years from the commencement of the Act. The first of such investigations was made by Mr. Richard Teece, the Actuary to the Australian Mutual Provident Society, and brought out an estimated deficiency of £1,325,706 10s. 4d. on the 1st January, 1888, while the second by Mr. John B. Trivett, Actuary to the Board, showed that the estimated deficiency had increased in three years to £1,592,568 10s. 11d. This unsound condition of affairs was attributed partly to defects inherent in the scheme itself, and partly to the unforeseen action of the Executive, which, in pursuance of its policy of retrenchment, forced a multitude of persons on the Fund who would otherwise not have become pensioners. The same section of the Act which requires an actuarial examination, declares that if on such examination the contributions from officers at the rate of 4 per cent., together with the amount contributed from the Consolidated Revenue, prove insufficient for the maintenance of the scale of superannuation provided, then the Governor may make a *pro-rata* reduction on all superannuation allowances, both those already granted and those which may be granted in future.

The reports of the actuaries received far less attention at the hands of those interested than they deserved, as apart from any question of State policy, it must have been apparent to contributors that it would be a serious thing if they were compelled to continue paying into a fund which had on the best authority been declared to be fast lapsing into insolvency, and from which the younger of their number could not reasonably hope for benefit, while pensioners could hardly have looked with composure on the more serious and immediate loss which would befall them in the event of the Fund collapsing or their pensions being largely reduced. The apparent apathy in regard to the condition of the Fund was due to a lurking belief in the minds of many otherwise well-informed persons, that actuarial methods, though very well in theory, do not usually stand the test of every-day experience. It would be idle on my part to argue in support of actuarial methods, which are nothing if not the embodiment and application of every-day experience, and I mention the matter of the distrust exhibited in some quarters as to the correctness, from a business point of view, of the actuarial conclusions, only in order to point out that not only is there no cause for such distrust, but that if the actuaries erred at all, it was by presenting the condition of the Fund in a too favourable light.

The letter of the Board requesting me to undertake the triennial investigation, referred only to a valuation; but having taken up the work, I determined not to confine myself to the mere computation of values, but to endeavour to discover, if such were possible, a scheme which would give persons who have made the Service their profession a satisfactory retiring allowance, without increasing their present contribution to the Superannuation Fund, or casting an undue burthen upon the State.

Objects of the Fund.

Although it is unnecessary for me to give any lengthy account of the origin and history of the Fund, or to recapitulate the provisions of the Act, it may conduce to the better understanding of what follows if the leading features of the present scheme are shortly recapitulated.

The object of the Civil Service Act of 1884 was to secure pensions to officers on their retirement, under certain conditions, and for this purpose to establish a fund which would eventually become self-supporting. This was sought to be achieved by the payment from the Consolidated Revenue of a specified grant for a limited number of years, and the contribution by the Civil Servants of a fixed percentage of their salaries.

This was a perfectly feasible plan, provided the following conditions were adhered to:—That the Fund be established on a solvent basis, with a clear knowledge of the original liabilities incurred; that the promised benefits be on a scale proportionate to the price paid for them; and that, unless for adequate consideration, no charge be made upon the Fund otherwise than in accordance with the original plan.

Whether all or any of these conditions have been observed in connection with the Superannuation Fund will appear as this report progresses.

The benefits contemplated by the Act, shortly stated, are as follow:—

- (1.) Pensions, on reaching the age of 60 years, or on enforced retirement by reason of infirmity or abolition of office before that age, to persons with a service of fifteen years or upwards.
- (2.) Gratuities, not exceeding one month's pay for each year of service, to officers not entitled to a pension, and retiring on account of infirmity or abolition of office.
- (3.) Gratuities, of not more than six months' pay, to widows or other relatives of deceased officers who have not received either a pension or a gratuity, and who have left relatives in necessitous circumstances.

These pensions are calculated on the average yearly salary for the last three years of service, the annual rate of pension being fixed at one-sixtieth of such yearly salary for every year of service, with a maximum limit of forty-sixtieths, or two-thirds. There is also a maximum of salary (£1,000 in the general division, and £1,200 in the professional division), beyond which the regulations as to contributions and allowances cease to apply. The deduction from officers' salaries, levied by way of contribution to the fund, was fixed at 4 per cent.; and a similar percentage of all sums received as salary for the period of service prior to 1st January, 1885, was held as a debt against each contributor; this amount, without any charge for compound interest, to remain uncollected, but to be deducted, in one form or another, from his pension at the date it is entered upon. The sums obtained from the Government have been an annual allowance of £3,500 a year in respect of pensioners under Section B of the Constitution Act, and an endowment of £20,000 a year paid for five years. The former is a perpetuity, but the latter has been received in full.

The Valuation.

The present valuation is of necessity in many respects the most effectual test as yet applied to the Fund. The longer period of experience now laid open to observation is of great importance in the case of so young an institution. In addition to this advantage, I have taken the trouble to extract from the books of the Civil Service Board, and from papers in the custody of the Colonial Secretary, much information that has not hitherto been available.

The

The ages, years of service, and present salaries of all contributors were collated from the Civil Service Registers and tabulated. In the case of existing pensions, the minute-papers, with accompanying certificate by the Actuary to the Board and a schedule from the Auditor-General giving salary received in each year of service, were similarly dealt with. This labour, which was one of no inconsiderable magnitude, was undertaken with a view to defining the average salary at each age and the normal rate of increment. To prove the soundness of the policy which prompted this arduous preliminary undertaking, one has only to compare previous valuation balance-sheets with that embodied in this report in respect of the items "prospective pensions" and "future contributions," and to note that the striking differences in the values are due almost entirely to the absence from previous valuations of any allowance for increase of salary. The gentlemen who performed these valuations were aware of this defect, but the information was not at their disposal. They accordingly contented themselves with pointing out the fact, and abstained from conjecture as to the probable extent to which a consideration of increases in salary would affect the stability of the Fund. It is unnecessary to say that a percentage of annual salary will, at the end of a stated period, bear a larger proportion to the salary of the last year, in the case of a uniform salary, than in that of an increasing one, and, as the amount of a pension is regulated by the salary during the concluding years of service, it follows that the liability must be greatly under-estimated if an uniform salary form the basis of valuation. The graduation I have been able to introduce increases the liability by something like 200 per cent. at the youngest ages, and gradually loses its effect as the age of 60 is approached.

Various contingencies covered by the Act are not amenable to mathematical treatment, and have accordingly been disregarded. The abolition of an office may be dictated by administrative reforms or political exigencies, matters in which the experience of the past forms no sufficient guide to future possibilities. To expose the General Fund to exceptional calls which would arise whenever a policy of retrenchment might find favour with the politicians of the day is a manifest anomaly. Nor is it easy to devise an expedient in connection with a Superannuation Fund to mitigate the injustice without inflicting hardship on the persons prematurely deprived of office in such a manner. This will be attended to further on, when considering what remedies are to be applied. It is sufficient here to say that in the absence of any compensating precautions it is an unwise provision, and in this valuation no reserve has been calculated for future claims to pensions under such conditions.

The option allowed to certain persons to join the Fund at any time if so inclined, also lays upon the Fund a liability which is incapable of assessment. The same may be said of the gratuities payable to widows and others left in necessitous circumstances. These two classes of beneficiaries have accordingly been dismissed from consideration.

The omission of these three undefinable charges tends to under-estimate the liability, but on the other hand must be reckoned the gain from those officers who continue in the Service although entitled to a pension if they had elected to retire. The valuation assumes retirement at age 60 in every case, although, as a matter of fact, large numbers of high-salaried officials remain for years after attainment of that age. Many such are in the Service to-day, and their probable continuance cannot be gauged by actuarial methods, so that their pensions must be regarded as a present charge upon the Fund, as they would at once become if compulsory retirement at 60 were adopted.

Another advantage to the Fund arises from the resignation or dismissal of persons who are contributors. The gain from this source is not inconsiderable, but in this, as in previous valuations, it has not been allowed for, as it was necessary that there should be something to set against the loss to the Fund by reason of persons becoming pensioners before attaining the age of 60 years.

The cases of female Civil Servants were subjected to modified treatment. It was remarked, especially in the Department of Public Instruction, that the rate of retirement was largely in excess of that observed in the male branch of the Service. This high rate of secession, however, ceased to be noticeable at age 28 and over, so all under that age were excluded from valuation, the occurrence of negative values being thereby obviated.

The calculations are based upon the English Life Table, with 4 per cent. interest, and show the following result:—

SUPERANNUATION ACCOUNT—VALUATION BALANCE-SHEET, 31st December, 1893.

Dr.	£ s. d.	Cr.	
To value of existing pensions under Schedule B.	25,472 13 6	By balance per Civil Service Report for 1893.....	488,653 2 11
Do do Civil Service Act,		value of £3,500 per annum from Consolidated	
1884—		Revenue	87,500 0 0
Males	£659,361 13 0	value of back contributions, to be made good	
Females	28,297 13 11	before pensions are entered on—	
	687,659 6 11	Males	£203,412 5 11
value of existing pensions vested but not yet		Females	5,444 15 11
entered on, being due to contributors of 60		value of future contributions—	
years and over on their retirements—		Males	£888,602 0 0
Males	£368,652 1 6	Females	66,602 8 3
Females	7,380 17 7		
	376,032 19 1		208,857 1 10
value of prospective pensions not yet vested—			
Males	£3,325,005 1 10		
Females	208,756 4 5		
	3,533,761 6 3		955,204 8 3
value of retirement allowances of one month's			
salary for each year of service, which will			
become payable at age 60 to contributors who			
entered the Service at 46 and over—			
Males	£8,797 5 7		
Females	569 8 2		
	9,366 13 9		
amount of retirement allowances, as above,			
now payable if claimed (lives over 60)—			
Males	£12,679 11 6		
Females	441 16 8		
	13,121 8 2	deficiency.....	2,905,199 14 8
	£ 4,645,414 7 8		£ 4,645,414 7 8

At this stage we are brought face to face with the deficiency of £2,905,199 14s. 8d., the existence of which proves that the canons of safety laid down in an earlier part of this Report have not been adhered to. One must look aside from the balance-sheet to discover the causes which have contributed to this deplorable result.

First, was the Fund started on a solvent basis, with a thorough understanding of the liabilities assumed? A number of persons were promised specified benefits which were to accrue by virtue of annual payments for a certain term of years. In a large number of cases the stipulated period had already expired, while in every case it was more or less shortened. If, then, the beneficiaries were to be put on an equal footing it was obviously necessary either to raise the rate of contribution for those nearest to the period of benefit, or to demand a sum to start with sufficient to produce the same result in the end. This latter course was ostensibly adopted, but by a plan which was in direct defiance of the principles on which the whole fabric rested. The operation of compound interest is the vital principle sustaining all schemes of this description, and, in this particular case, the life contingency is an equally important element. Yet these two factors were entirely disregarded, and the bare amount of back contributions was charged, and that not as an immediate debt, but as a deduction from the pension when it should become due. It is needless to enlarge on the futility of such a course. It is as though one should offer to sell a deferred annuity for an annual premium to be deducted from the annuity itself. I estimate that on this score alone the Fund was saddled with an initial liability of little short of £1,000,000.

Secondly, are the prescribed payments adequate to produce the promised benefits? This question overlaps the previous one, but for convenience may be dealt with separately. The most favourable case for the Fund is, as has already been pointed out, that where the salary is uniform throughout the whole period of service. With the factor representing increase of salary eliminated, it is yet found that 4 per cent., even at the earliest age, is not sufficient for the objects aimed at. The following table will show the annual percentage deduction required at various entrance ages, both on the uniform salary basis and on the lines of ordinary rate of increase:—

Age.	Percentage Deduction required.	
	Uniform Salary.	Increasing Salary.
20	4.4	6.6
25	5.0	6.8
30	6.1	7.4
35	7.2	8.2
40	8.4	9.3
45	9.9	10.6

Another way of presenting the same comparison is to set forth the amount of pension which a 4 per cent. deduction would justify, side by side with the average pension payable in terms of the Act to persons retiring at 60 years of age who joined at the various ages specified:—

Age of joining Service.	Length of Service at retiring.	Pension earned by contribution.	Pension payable under Civil Service Act.
Years.	Years.	£	£
20	40	118.6	196.7
25	35	100.6	172.1
30	30	79.6	147.5
35	25	59.8	122.9
40	20	42.2	98.3
45	15	27.8	73.8

These figures demonstrate that benefits and contributions are not properly related to one another, and that either the former are much too large or the latter too small. This disposes of the second count under which the proximate cause of the deficiency has been sought.

Thirdly, has the Fund been faithfully administered in the interests of the general body and guarded from claims which should not properly have fallen upon it? The answer to this question also is unfortunately in the negative. The authors of the scheme could never have anticipated that the Fund would become the sport of political necessities when they framed the clause entitling to the benefit of the Fund any persons whose offices were abolished by the Government. Wholesale additions to the pension list have at times been made in furtherance of a retrenchment policy, and since the commencement no less than 272 have for this reason been placed prematurely among the ranks of pensioners, representing an annual expense to the Fund of £36,212. Each case so placed upon the Fund is a loss in three separate aspects. It anticipates the date of payment of pension; it deprives the Fund of so many years' contributions; and, in most instances, it gives a larger pension than justice to other contributors would sanction, inasmuch as the scheme of superannuation—such as it is—contemplates the payment of a pension for a term of some 13.5 years, which is the expectation of life at age 60, and not for any longer period, whereas the operation of the retrenchment policy has been to cast on the Fund as pensioners persons as young as 31 years, with an expectation of life equal to an average of 33 years.

It thus appears that in the main points that make for safety the Fund is essentially unsound. It came into being overshadowed by an accrued, albeit unperceived, debt, and carried the seeds of further insolvency in its constitution, while the treatment to which it has, during its short life, been exposed, and which would severely try the strongest growth, has only hastened the early demise to which it was predestined.

To illustrate the hopeless position and downward tendency of the Superannuation Account in a manner intelligible to the least-skilled observer, let us for a moment suppose that all who in future years will come to rank as pensioners will in one way or another be provided for, and that the only payments chargeable

chargeable to the existing Fund are for pensions already entered upon, and compare the value of these with the resources at command. The figures at the three periods of valuation stand thus:—

	Fund (including value of Government Contributions).			Value of Existing Pensions.		
	£	s.	d.	£	s.	d.
1887	362,177	7	8	238,491	10	0
1890	494,085	19	1	530,513	3	0
1893	576,153	2	11	713,132	0	5

If to the value of pensions entered upon be added those due to officers over 60 still in the Service who might at any moment claim them, the total value of vested pensions and gratuities for 1893 is raised to £1,102,286 7s. 8d., against which the Fund holds a credit balance of £488,653 2s. 11d. and a Government guarantee of £3,500 per annum. This represents a present deficit of over half-a-million sterling, which can only be made up by a lien on future payments of contributing officers. The injustice of this is apparent. Strong terms would be employed if such a state of affairs were permitted to continue in the case of a Life Assurance or Benefit Society; and preventive action could be taken effectually in a court of law.

Besides the undue burthen laid upon the Fund by its being utilised to break the fall for nominees of a retrenchment policy, other contributory hostile influences have been at work. The Act provides that pensions should be computed in proportion to salary received during the last three years of service. This is an empirical and unscientific method of allotting the benefits, which should rather be made to bear a fixed proportion to the total amount contributed to the Fund. It is also open to grave abuse, as many cases could be cited of salaries receiving notable additions for the concluding years of service in friendly anticipation of the increased pension appertaining thereto. Allowances and emoluments, with some limitations, are reckoned as salary in computing pensions, but no provision is made in the Act for deducting 4 per cent. from such payments. This is an oversight which gives an unfair advantage to officers in receipt of house-rent or other similar allowances.

It will have been gathered from the foregoing remarks that the condition of the Superannuation Fund is so bad that no assistance the State could reasonably be expected to afford would be of material service. The deficiency at present accumulated is little short of three millions sterling, and tends to increase at the rate of £120,000 a year. To remedy this condition of affairs within the lines of the present Act, there is but one course open, that is a reduction in the scale of allowances, and no more striking evidence of the hopeless condition of the Fund can be adduced than the extent to which such a reduction would require to be made. To bring about a condition of solvency, existing pensions and all prospective pensions and allowances would need to be reduced by fully 65 per cent., or if the burthen of the pensions granted to persons retrenched before attaining the age of 60 years were taken over by the State, the reduction required to ensure solvency would still be about 55 per cent. Such reduction would be perilously near repudiation, and if it be desired, without a complete stoppage of the Superannuation Account as at present existing, to place it on a workable basis, I am of opinion that the adoption of the following recommendations would have the desired effect:—

1. That the pension age be postponed from 60 to 65 years, and that payments from the Fund be restricted to persons who have attained the pension age, or who, through infirmity, are forced to an earlier retirement.
2. That all payments to persons whose retirement is due to retrenchment or public policy be a charge on the Consolidated Revenue until the attainment of 65 years of age, when the Fund might take over the liability. [Presuming the State takes upon itself the liability on account of officers forcibly retired under the age of 65 years, it would no doubt see the necessity of making the age attained a factor in determining the pension to be awarded, for it is obvious that a man of (say) 30 years should not receive as large a pension as granted to a man of 65, even if the actual term of service was in each case the same.]
3. That no person be hereafter admitted as a contributor who is above the age of 35 years, unless back contributions as from that age, with compound interest at 4 per cent., be first secured to the Fund.
4. That pensions be computed on the average salary for the seven years of service previous to retirement. [It would doubtless be more scientific to make the average salary for the whole period of service the basis of the pension. If this were done, the proportion of salary payable as pension would require to be increased beyond present rates; but there is an objection to adopting this plan, as in practice it might be found that persons in receipt of uniform salaries or wages over a lengthened period would become entitled to pensions in excess of those at present granted, and in some instances in excess of their income at date of retirement.]
5. That no gratuities be paid to the relatives of deceased officers, but that the Fund grant insurance for limited amounts at pure premium rates; premiums to cease at the pension age, and the reserve thereon to be returned should the insurer retire from the Service before being pensioned. It would be necessary to restrict this insurance to persons in good health.

On the foregoing lines I estimate that the deduction of 4 per cent. will provide a margin beyond requirements at all ages under 30 years, with a possible reduction for male contributors at the lowest ages, and for females of all ages.

The adoption of these reforms would establish the Fund on a sound foundation. It is true the accumulated deficit would not be entirely removed, but it would be reduced to such moderate dimensions that Parliament might see fit to assist in its gradual extinction by means of an annual allowance.

In conclusion, I would strongly press upon the Board the necessity of closing the Fund to new entrants, unless under 35 years of age, until steps are taken to reform the Superannuation System in the direction I have indicated, or in some other efficient manner.

T. A. COGHLAN.

Sydney, 28th November, 1894.

To value of existing pensions under Schedule B... Do do Civil Service Act, 1884—	25,472 13 6	By balance, as per Civil Service Report for 1893	488,653 2 11
Males	£659,361 13 0	" value of £3,500 per annum from Consolidated Revenue	87,500 0 0
Females	28,297 13 11	" value of back contributions to be made good before pensions are entered on—	
	687,659 6 11	Males	£203,412 5 11
" value of pensions vested but not yet entered on, being due to contributors of 60 years and over on their retirement—		Females	5,444 15 11
Males	£368,652 1 6	" value of future contributions—	
Females	7,380 17 7	Males	£888,602 0 0
	376,032 19 1	Females	66,602 8 3
" value of prospective pensions not yet vested—			208,857 1 10
Males	£3,325,005 1 10		
Females	208,756 4 5		
	3,533,761 6 3		
" value of retirement allowances of one month's salary for each year of service which will become payable at age 60 to contributors who entered the Service at 46 or over—			
Males	£8,797 5 7		
Females	569 8 2		
	9,366 13 9		
" amount of retirement allowances, as above, now payable, if claimed (lives over 60)—			
Males	£12,679 11 6		
Females	441 16 8		
	13,121 8 2	" deficiency	2,905,199 14 8
	<u>£ 4,645,414 7 8</u>		<u>£ 4,645,414 7 8</u>

Assets.

(1) A reference to the balance-sheet will show that the first item after the credit balance at 31st December, 1893, is the perpetual subsidy of £3,500 originally provided under the Constitution Act, and transferred to the Superannuation Account under the Civil Service Act. This has been set down at 25 years' purchase.

(2) The contributions in respect of salaries received prior to 1st January, 1885, are charged against each contributor as a debt to be recovered when a pension is granted. For all under 60 years of age this amount is a contingent reversion, and has to be discounted as such. The cases of officers of 60 years and over are treated throughout the valuation as being on the point of retirement. The figures in detail are as follows:—

	Amount.	Value.
	£	£ s. d.
All under 60—Males	273,527	129,868 5 11
" Females	16,302	5,430 15 11
All 60 and over—Males	73,544	73,544 0 0
" Females	14	14 0 0
	<u>£363,387</u>	<u>£208,857 1 10</u>

(3) Future contributions have been valued on the assumption that salaries in the future will increase at the same rate as has prevailed in the past.

Liabilities.

(1) The pensions payable under Schedule B of the Constitution Act amounted to £3,276 11s. 4d., to provide which a present sum of £25,472 13s. 6d. would be required.

(2) The existing pensions under the Civil Service Act, and their values, are as follows :—

				Annual Amount.		Present Value.	
				£	s. d.	£	s. d.
Males	69,832	19 11	659,361	13 0
Females	2,460	4 3	28,297	13 11
Total	£72,293	4 2	£687,659	6 11

(3) All contributors of 60 years and over are considered to have earned their pensions. The annual amount that could be thus immediately entered upon, and its capital value, are as under :—

				Annual Amount.		Present Value.	
				£	s. d.	£	s. d.
Males	41,449	12 4	369,652	1 6
Females	786	19 0	7,380	17 7
Total	£42,236	11 4	£376,032	19 1

(4) Prospective pensions have been computed on the assumption that increments of salary will in future follow the same course of progression as they have been observed to do in the past. This factor was absent from previous valuations, a circumstance which will account for the large apparent increase in the liability under this heading.

(5) The two items relating to retirement allowances explain themselves.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CIVIL SERVICE SUPERANNUATION FUND.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 20 November, 1894.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 16th October, 1894, That there be laid upon the Table of this House,—

“A Return showing the amounts paid during the year 1894 as Abatements
“or Gratuities which were not voted on the Estimates for 1894, also the
“total amount paid.”

NEW SOUTH WALES.

CIVIL SERVICE.

(RETURN SHOWING EXPENDITURE ON ACCOUNT OF THE TREASURY DEPARTMENT FOR THE YEARS 1891, 1893, AND 1894.)

*Ordered by the Legislative Assembly to be printed, 7 March, 1895.**[Laid upon the Table of this House in answer to Question No. 16, of 26th February, 1895.]*

Question.

16. TREASURY EXPENDITURE FROM 1891 TO 1894:—MR. HOGAN, FOR MR. SEE, *asked* THE COLONIAL TREASURER,—

(1.) What was the expenditure on account of the Treasury for the years 1891, 1893, and the estimated expenditure for 1894?

(2.) By the re-arrangement of the duties of the officers in the Treasury by Mr. See, what savings were effected as compared with amounts previously paid?

Answer.

EXPENDITURE, Treasury Department, for the years 1891, 1893, and 1894.

	1891.		1893.		1894.	
	£	s. d.	£	s. d.	£	s. d.
Salaries—						
Permanent	24,225	4 11	23,060	5 10	22,980	10 4

Contingencies	2,012	16 2	1,446	17 4	1,889	3 2
Totals	£ 28,009	1 1	25,771	3 2	25,284	11 5

On 23rd October, 1891, the aggregate annual salaries of officers of the Treasury Department amounted to... .. £25,175

On 2nd August, 1894, the aggregate annual salaries of officers of the Treasury Department amounted to... .. 23,190

Showing a saving on the annual salaries, paid on 2nd August, 1894, as compared with rates paid on 23rd October, 1891, of... .. £1,985

NOTE.—£1,985 includes the sum of £1,047, being the saving effected by the reduction of 10 per cent. on amount in excess of £200 per annum deducted from salaries of all Civil Servants during the year 1893.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

POLICE MAGISTRATES, CLERKS OF PETTY SESSIONS, &c.

(RETURN RESPECTING OFFICERS STATIONED AT CERTAIN TOWNS.)

Ordered by the Legislative Assembly to be printed, 27 September, 1894.

[Laid upon the Table in answer to Question No. 2, of Thursday, 20 September, 1894.]

Question.

- (2.) AMALGAMATION OF OFFICES OF POLICE MAGISTRATE AND CLERK OF PETTY SESSIONS:—MR. STEVENSON, for MR. CLARKE, asked THE MINISTER OF JUSTICE,—
- (1.) In what towns of the Colony are the four offices comprising Police Magistrate, Clerk of Petty Sessions, assistants, and probationers, filled by separate officers?
- (2.) In view of the pressing need for retrenchment and the apparent multiplicity of officers in such cases, will he consider the advisableness for merging the office of Police Magistrate and Clerk of Petty Sessions into one wherever practicable?

Answer.

RETURN showing the towns in the Colony where four Petty Sessions Officers are employed.

Place.	Officers.
Broken Hill	Police Magistrate, Clerk of Petty Sessions, Assistant C.P.S., and Temporary Clerk.
Maitland	Police Magistrate, Clerk of Petty Sessions, and two Clerks.*
Newcastle... ..	Police Magistrate, Clerk of Petty Sessions, Assistant C.P.S., and Clerk.†

* The C.P.S. and two Clerks also perform Petty Sessions duties at West Maitland and Morpeth.

† It has been decided to transfer the Temporary Junior Clerk, lately employed in this office, to another position.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MEMBERS OF THE LATE PARLIAMENT IN THE
PUBLIC SERVICE.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 16 October, 1894.

[Laid upon the Table of the House in answer to Question No. 1 of 19th September, 1894.]

Question.

- (1.) MEMBERS OF THE LATE PARLIAMENT IN THE PUBLIC SERVICE:—*Mr. Stevenson* (FOR MR. HAYNES)
asked THE COLONIAL SECRETARY,—
- (1.) What Members of the late Parliament are in positions, in any capacity, in the Public Service?
 - (2.) Have these persons been given preference to, and on what grounds, over the very many, long out of employment, who were refused positions?

Answer.

- (1.) Mr. W. H. Sharp has been appointed as a temporary compositor in the Government Printing Office, and Messrs. Thomas Walker and J. W. Bowes are temporarily engaged in preparing a register under the Mining on Private Lands Act.
 - (2.) I am not aware, but some persons whose services had been dispensed with are employed with them.
-

1894-5.

NEW SOUTH WALES.

REGISTRAR-GENERAL'S DEPARTMENT.

(RETURNS UNDER THE SEVERAL ACTS OF PARLIAMENT ADMINISTERED BY THE REGISTRAR-GENERAL FOR THE YEAR 1894.)

Presented to Parliament by Command.

I.—DEEDS BRANCH.

No. 1.—CONVEYANCES, Assignments, Leases and Miscellaneous Deeds; Registered under "Deeds Registration Act" (7 Vic. No. 16) during the year 1894.

Conveyances (absolute).		Assignment (absolute)—Leasehold Estates.		Lease—Period exceeding three years.		*Miscellaneous Deeds.
Number.	Amount.	Number.	Amount.	Number.	Annual Rental.	Number.
5,476	£ s. d. 1,945,526 13 0	258	£ s. d. 160,704 13 7	183	£ s. d. 25,494 12 0	1,790

* Miscellaneous Deeds embrace all documents where valuable consideration is not stated, such as Deeds of Gift, Assignments for benefit of Creditors, Settlements, Powers of Attorney, Notifications of Resumptions, Conditional Purchases with nominal consideration, Writs of Execution, &c., &c.

No. 2.—MORTGAGES on Land Registered under "Deeds Registration Act" (7 Vic. No. 16).

Lent on Town Lands.		Lent on Suburban Lands.		Lent on Town and Country and Town and Suburban Lands.		Lent on Country Lands.		Total.	
No. of Mortgages.	Amount.	No. of Mortgages.	Amount.	No. of Mortgages.	Amount.	No. of Mortgages.	Amount.	No. of Mortgages.	Amount.
1,113	£ s. d. 975,021 12 0	1,113	£ s. d. 604,647 12 1	342	£ s. d. 178,879 3 3	6,333	£ s. d. 4,066,248 16 9	8,901	£ s. d. 5,824,797 4 1

NOTE.—In many instances the amounts lent upon mortgage by the Banks are not stated, but simply the words "valuable consideration" or "cash credit" inserted in the deed. As this occurs frequently when the properties mortgaged are evidently of great value, the absence of the amounts must materially affect the returns.

No. 3.—DISCHARGES, Conveyances under Mortgage, and Transfers of Mortgages on Land under "Deeds Registration Act" (7 Vic. No. 16).

Discharges of Mortgages on Land.		Conveyances under Mortgage.		Transfers of Mortgages on Land.	
Number.	Amount.	Number.	Amount.	Number.	Amount.
3,630	£ s. d. 2,060,696 0 11	374	£ s. d. 381,737 10 11	508	£ s. d. 485,489 6 3

NOTE.—In many instances the amounts under the above headings are not stated, consequently the returns are, so far, necessarily incomplete.

DEEDS BRANCH—*continued.*

No. 4.— PREFERABLE Liens on Wool and Mortgages on Live Stock, registered under 11 Vic. No. 4.

Preferable Liens on Wool.			Mortgages on Live Stock.				
No. of Liens.	No. of Sheep.	Amount of Liens.	No. of Mortgages.	No. of Sheep.	No. of Horned Cattle.	No. of Horses, &c.	Amount Lent.
2,627	16,084,929	£ s. d. 1,952,450 14 5	2,167	6,586,711	698,448	18,016 horses, 22 camels, 5 elephants, 2 tigers, 2 lions, 2 leopards, 2 panthers.	£ s. d. 2,059,381 1 10

In addition to above there were 39 discharges of wool liens registered, representing £45,623 12s. 9d., also 4 transfers of liens.
N.B.—When any sum has been secured, both by a lien on the wool and by a mortgage of the sheep, the amount is included under the head of mortgages only. Thus in 1894 the gross amount lent on liens was £2,014,812 15s. 10d.; but from this has to be deducted the sum of £62,362 1s. 5d., secured both by lien on the wool and mortgage on the sheep, and included in the figure in the last column, so that the net amount lent on lien was £1,952,450 14s. 5d.

No. 5.— DISCHARGES of Mortgages on Live Stock, registered under 11 Vic. No. 4.

Number.	Transfer of Mortgages.	Agreements.	Deeds of Confirmation.	Further Assurances.	Amount of Discharges of Mortgage.

V.—SUMMARY.

I.—*Deeds Branch.*

THE returns of the Deeds Registration Office for the year 1894 present the following results:—There were registered a total of 21,120 Deeds affecting land, representing 5,476 Conveyances, with a value of £1,945,526; 258 Assignments of leases, of the value of £160,704; 183 Leases, of the value of £25,464; together with 8,104 Transfer of Conditional purchases; and 1,790 miscellaneous Deeds, where no consideration was stated. There were 8,901 Mortgages over town, suburban, and country lands, representing a value of £5,824,797, registered during 1894, whilst 3,630 Discharges of mortgages were registered releasing £2,060,696; 374 Conveyances under mortgage, representing £381,737, and 508 Transfers of Mortgage in consideration of £485,489. There were 2,627 preferable Liens on wool registered over 16,084,929 sheep, in consideration of £1,952,450, in addition to 43 Transfers and Discharges of liens. Of Mortgages on Cattle registered there were 2,167 over 6,586,711 sheep, 698,448 cattle, 18,016 horses, and 35 camels, &c., representing £2,059,381; whilst there were 334 Discharges deposited, releasing £496,040, and 107 other dealings therewith. The Liens on growing crops lodged for registration numbered 2,291 for £181,431, together with 2 Transfers thereof. Search fees paid numbered 6,627, at 2s. 6d. (Real Estate), 11,061 at 1s. (live stock, crops, &c.) 850 certified copies of Deeds and grants were issued with 4,707 extra folios. Wills deposited numbered 35. Total fees, Deeds, &c., £11,145 1s. 7d.

Under the Limited Liability Companies Act 90 new companies were registered, and 879 returns, &c., were furnished during 1894 by those already in existence. The Limited Companies registered as having been wound up or declared to be defunct during the year numbered 114. The No-Liability Mining Act had 25 new companies added to the list of those already registered. Searches Public Companies numbered 712. Certified copies, 55. Total fees (Public Companies), £1,039 1s.

There were 546 Trade Marks applied for, 386 were registered, 56 refused, and 10 withdrawn; in addition to which there were 94 trade marks transferred. Searches, 472. Certified copies issued, 23. Total fees (Trade Marks), £1,430 6s.

In addition to the above, numerous miscellaneous documents were registered in connection with the Titles to Land Act of 1858, Bank Act, the Old Public Companies Act, and several other Acts of Parliament wholly or partially administered in this Office.

The fees of office received by the Registration of Deeds Branch in 1894 totalled £10,625 14s., in addition to the sum of £2,988 14s. 7d. credited by the Treasury to this office for the Registration of Conditional Purchases. Grand total of fees, Deeds Branch, £13,614 8s. 7d.

II.—*Land Titles Branch.*

The returns under the Real Property Act, 26 Vic. No. 9 (Torrens' Act), furnish the following information:—During the year 283 Applications to bring 484 properties under the Real Property Act were lodged. They represented 712 acres 0 roods 11 $\frac{1}{4}$ perches of town and suburban lands and 45,044 acres 0 roods 2 $\frac{3}{4}$ perches of country lands, of the total value of £808,234, the fees of office paid thereon amounting to £2,941 17s. 9d. There were 3,365 Grants recorded during 1894, comprising 1,904 acres 2 roods and 17 $\frac{3}{8}$ perches town and suburban and 265,825 acres 3 roods 30 perches country lands. The purchase moneys totalling £485,005 11s. 1d. with payments on account of Assurance Fund, amounting to £1,011 9s. 4d. The aggregate area of land under these provisions of this Act on 31st December last was 17,801,113 acres 0 rood 8 $\frac{1}{2}$ perches of the total declared value (at the date of application and grant respectively) of £37,972,890 10s. Of the 16,956 Memorials registered there were 7,574 transfers for a total consideration of £2,048,977; 4,277 Mortgages securing the sum of £5,624,968; and 2,329 Discharges of mortgages releasing £2,083,092. There were in addition to these, 5,114 New Certificates issued and 21,191 extra endorsements (after the first) entered, whilst the total fees of office collected under this head (memorials, &c.) amounted to £17,138 14s.

4,625 Searches against titles were made by the public in this Branch during 1894, viz.:—4,022 single and 603 general searches.

There were also 87 certified copies issued, with 747 extra folios thereon. Deposited plans of sub-divisions numbered 106.

Grand total fees for Land Titles Branch, £26,141 15s.

III.—*Births, Deaths, and Marriages Branch.*

The registrations in this Branch during the year 1894 were:—Births, 38,935—20,037 males and 18,898 females; deaths, 15,227—8,754 males and 6,473 females; marriages, 7,652. These were distributed as to locality as follows:—Births—City of Sydney, 3,203; suburbs, 10,133; country districts, 25,599. Deaths—City of Sydney, 1,784; suburbs, 4,179; country districts, 9,264. Marriages—City of Sydney, 1,868; suburbs, 1,549; country districts, 4,235.

2,961 certified copies were issued and 805 searches made. Total fees for this Branch, £486 14s.

CHARLES PINHEY,

Registrar-General's Office,
Sydney, 15 January, 1895.

Registrar-General.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GENERAL SUPERINTENDENT OF THE FITZROY DOCK.

(RETURN RESPECTING RETIREMENT OF.)

Ordered by the Legislative Assembly to be printed, 16 October, 1894.

[Laid upon the Table of the House in answer to Question No. 8, of 11th October, 1894.]

Question.

- (8.) RETIREMENT OF LATE SUPERINTENDENT OF FITZROY DOCK:—MR. WHIDDON *asked* THE SECRETARY FOR PUBLIC WORKS,—Will he lay upon the Table of the House the complete text of paper No. 1, *in re* retirement of the late Superintendent of Fitzroy Dock, an excised copy of which was furnished on 17th October, 1893, at the request of Mr. G. D. Clark?

Answer.

The Engineer-in-Chief to The Under Secretary for Public Works.

RETRENCHMENT OF OFFICERS.

Harbours and Rivers Branch, Sydney, 7 July, 1893.

IN accordance with the Minister's instructions, I have revised the staff of this Branch, with the view of reducing expenditure by dispensing with the services of all officers who can well be spared at present, owing to the cessation of new works and stoppage of dredges.

I now submit a list of fourteen* officers whose services may be dispensed with, seven of whom are *Should be fifteen. staff officers and eight temporary.

A few more changes and reductions, I think, can still be made, but I am not at present able to submit their names, as it will first be necessary to make provision for supplying their places or to allow works in hand to be completed.

If the Minister approves of this recommendation, I presume steps will be taken to place the names of the officers to be promoted on the permanent staff.

The following are the changes I propose:—

PROFESSIONAL.
Permanent.

Name.	Position.	Age between—	Length of Service.
		years.	y. m.
†1. C. A. Tillet	Principal Office Assistant	54—5	22—8
†2. A. Williams	Principal Field Assistant	58—9	18—11
†3. J. P. Josephson	Supervising Engineer	38—9	25—2
4. John Laing	Dredge Master	72—3	24—11
5. James Rorison	do	64—5	23—3
6. Henry Orr	do	54—5	25—1
7. D. S. Kirkwood	do	63—4	28—8
<i>Temporary Staff.</i>			
8. W. E. Kemp	Resident Engineer (1st class)	34—5	18—1
9. A. W. H. Anderson	Surveyor	32—3	15—6
10. J. C. Rolliston	do	34—5	13—0
†	Daily rate.		
11. Selwood Smythe	Draftsman	32—3	3—11
12. C. J. Purves	do	29—30	2—11
13. T. H. Clark	do	27—8	1—3
14. J. S. Gilmore	Clerk	?	6—10
15. H. V. Proctor	do	36—7	8—11

† I would suggest that these five officers be granted twelve months' leave without pay.

The Under Secretary, Public Works.

C.W.D., 17/7/93.

7/7/93.

C. W. DARLEY.

For formal approval.—J.B., 17/7/93. Approved, excepting in the cases marked †, which will stand over for further consideration.—W.J.L., 20/7/93. Mr. Darley.—J.B., B.C., 20/7/93.

As it is possible another officer will be removed from the Department for reasons the Minister has been made aware of, I respectfully ask that Mr. Kemp's name may be omitted from the list of officers to be temporarily retrenched. Mr. Kemp is at present usefully employed in the Hunter district under Mr. Walsh, in connection with flood embankment works.—C.W.D., 25/7/93.

Approved.—W.J.L., 25/7/93.

After further considering the question of retrenching Mr. Tillet and Mr. Williams, I have decided that they should retire, to take effect from the 1st of July. The former will have eight months leave, and the latter seven, on full pay; these sums to be paid out of the savings of this year. Mr. Josephson will remain.—W.J.L., 25/7/93.

Mr. Darley.—J.B., B.C., 25/7/93.

Noted. Prepare notices.—C.W.D., 25/7/93.

Sir,

Sir,

Sydney, 26 July, 1893.

I have the honor to inform you that it has been decided you were retired from the Service on the 1st instant, in accordance with the provisions of the Civil Service Act, but, owing to your long service in the Department, eight months' leave of absence on full pay will be allowed you from the date named.

In conveying this intimation to you, I need hardly say how deeply I regret that the Department will lose such an efficient officer, and that I will be without the services of so valuable an assistant.

I have, &c.,

C. W. DARLEY,

G. A. Tillett, Esq., Sydney.

Engineer-in-Chief for Harbours and Rivers.

Sir,

Sydney, 26 July, 1893.

I have the honor to inform you that it has been decided you were retired from the Service on the 1st instant, in accordance with the provisions of the Civil Service Act, but, owing to your long service in the Department, seven months' leave of absence on full pay will be allowed you from the date named.

In conveying this decision to you I need hardly say how deeply I regret that the Department will lose such an efficient officer, and that I will be without the services of so valuable an assistant.

I have, &c.,

C. W. DARLEY,

Alfred Williams, Esq., Sydney.

Engineer-in-Chief for Harbours and Rivers.

Notices to the following effect were also sent to Messrs. John Laing, James Rorison, Henry Orr, and D. S. Kirkwood (dredge-masters):—

Sir,

Sydney, 17 July, 1893.

I have to inform you that it has been decided that you shall retire from the Service on the 31st instant, in accordance with the provisions of the "Civil Service Act of 1884."

I have, &c.,

C. W. DARLEY,

Engineer-in-Chief for Harbours and Rivers.

The following communication was sent to Messrs. A. W. H. Anderson, J. C. Rolleston, Selwood Smythe, and C. J. Purves:—

Sir,

Sydney, 24 July, 1893.

As it has been decided to exercise the most rigid economy in this Department, I regret to inform you that twelve months leave of absence without pay will be granted you from the 1st proximo.

This step is taken owing entirely to the pressing need of reducing the staff of this office for the present, but it is hoped that your services will be availed of again at the expiration of the period named.

I have, &c.,

C. W. DARLEY,

Engineer-in-Chief for Harbours and Rivers.

Notices were also sent to Messrs. T. H. Clark, J. S. Gilmore, and H. V. Proctor, as follows:—

Sir,

Sydney, 24 July, 1893.

As it has been decided to exercise the most rigid economy in this Department, I regret to inform you that your services are most reluctantly dispensed with from the 1st proximo.

This step is taken owing entirely to the pressing need of reducing the staff of this office, but at the same time I wish to state that I have had every reason to be satisfied with the services you have rendered whilst in this Branch.

Certain concessions in respect to leave of absence for your length of service will be granted you.

I have, &c.,

C. W. DARLEY,

Engineer-in-Chief for Harbour and Rivers.

A notice was sent to Mr. J. P. Josephson to the following effect:—

Sir,

Sydney, 17 July, 1893.

I have to inform you that your services will not be required after the 31st instant in consequence of the abolition of your office. You will therefore be retired under the 46th clause of the Civil Service Act of 1884.

I have, &c.,

C. W. DARLEY,

Engineer-in-Chief for Harbours and Rivers.

The foregoing letter was afterwards cancelled as follows:—

Sir,

Sydney, 8 September, 1893.

I beg to inform you that the Minister for Works has decided that you are to remain in the office. The notice, therefore, sent to you on the 17th July last can be considered as cancelled.

I have, &c.,

C. W. DARLEY,

Engineer-in-Chief for Harbours and Rivers.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LEPROSY IN NEW SOUTH WALES.

(REPORT FOR 1894 ON ADMINISTRATION OF THE LEPROSY ACT.)

Ordered by the Legislative Assembly to be printed, 11 June, 1895.

The Secretary to the Board of Health to The Under Secretary for Finance and Trade.

Sir,

Board of Health Office, 127, Macquarie-street, Sydney, 28 May, 1895.

I have the honor, by direction of the Board of Health, to forward you herewith a report on Leprosy in New South Wales, and to suggest that it should be laid before the Houses of Parliament.

I have, &c.,

EDMUND SAGER,

Secretary.

[*Enclosure.*]

LEPROSY IN NEW SOUTH WALES.

ON the 1st January, 1894, there remained under detention at the leper lazaret thirty-six persons (*vide* Appendix A); during the year twelve persons were reported to the Board, in accordance with the provisions of the 3rd section of the Leprosy Act, as suspected to be suffering from this disease. On investigation seven were found to be ill of some other disease, and five, who proved to have leprosy, were placed in the lazaret; of these one was a native of New South Wales, of European descent; one a native of Queensland, of European descent; one a native of Saxony; one of New Caledonia; and one of India.

The number remaining on the 31st December, 1894, was forty, one native of New South Wales having died during the year.

From the summary it will be seen that the total number of patients admitted since 1883 is fifty-five, six of whom were females and natives of New South Wales. Their nationality was as follows:—Natives of New South Wales, fifteen, of whom four have died; Queensland, one; China, twenty-nine, of whom ten have died; India, two; West Indies, one, who was discharged in 1885; Java, one; England, one; Fiji, one; Solomon Islands, one; New Zealand, one; New Caledonia, one; and Germany, one.

During the year a Chinese seaman from a ship in the harbour was discovered to be a leper, but as he was returned to China in the same vessel, he is not included in the list of persons detained at the lazaret.

In Appendix B will be found similar information to that given last year; the sex, occupation, and a reference number corresponding to those used in the clinical notes on the various cases being stated.

The clinical notes on the five cases admitted during the year 1894 do not form part of this general report, but are printed as an Appendix, and will be issued to medical men, scientific societies, and others interested in the study of leprosy.

The number of persons segregated during the year is considerably less than during any year since the Act making it compulsory to report all cases of leprosy came into operation, and the opinion of the Board as expressed in a prior report dealing with the comparatively large increase in the admissions during the years 1891 and 1892 is thereby strengthened. In this report it was stated that the Board does not regard this large increase as any indication of the spread of the disease, since many of the cases recently admitted must have been suffering from the disease for some years past; but it was only when the reporting of these cases was made compulsory by law that their friends and medical attendants notified the Board.

No application has been made to the Board for the special segregation of any patient outside the lazaret, and at the present time all known cases of leprosy are confined in the male and female branches of the lazaret.

Every opportunity is given to members of the medical profession to visit the lazaret for the purpose of seeing such patients as may have been under their treatment or for the study of the disease.

The following statements show the total expenditure for the year 1894 and the sources from which the moneys have been paid :—

STATEMENT of the total Expenditure of the Leper Lazaret (male and female) at Little Bay during the year 1894, showing from what sources the amounts have been paid :—

EXPENDITURE.			HOW PAID.		
	£	s. d.		£	s. d.
To working expenses as per attached statement	2,794	5 2	From vote for the maintenance of Lepers by the Board of Health	2,079	13 8
„ cost of erecting bedroom and wash-house, and other additions	260	4 2	From vote for stores by the Controller-General of Stores	461	13 4
„ fees for medical examination of lepers, proved and suspected	29	6 3	From votes under control of the Government Architect	260	4 2
			From vote of the Coast Hospital by services and stores transferred	282	4 5
Total	£3,083	15 7	Total	£3,083	15 7

STATEMENT showing the Working Expenses of the Leper Lazaret (male and female) at Little Bay for the year 1894:—

	£	s. d.
Salaries	683	7 4
Provisions	1,079	14 1
Fuel	187	0 1
Drugs, disinfectants, &c.	148	2 2
Tobacco, cigars, and opium	168	14 8
Drapery, bedding, uniforms, &c.	164	0 1
Furniture, ironmongery, brushware, glassware, and crockeryware	122	5 10
Books, papers, &c.	20	2 0
Material for repairs	33	12 2
Wines, beer, and spirits	138	0 0
Sundries	49	6 9
Total	£2,794	5 2

† Being equal to an average cost of £74 10s. 3d. per inmate per annum.

It has been the earnest endeavour of the Board of Health to do everything possible to mitigate the sufferings of these unfortunate patients, and their wants have been carefully attended to by an experienced wardman in charge, and by attendants and nurses, under the direct supervision of the Medical Superintendent and Matron of the Coast Hospital.

By order of the Board of Health,

EDMUND SAGER,
Secretary.

Sydney, 28 May, 1895.

* These are all natives of New South Wales, of European descent.

† Date of report. These patients were afterwards removed to Little Bay.

‡ Of European descent. § This patient was transferred to a Hospital for the Insane on 2nd April, 1885, where also his death occurred. ¶ This patient was discharged on the 29th December, 1885 (see note * to Appendix A).

NOTES.—(a) The only additional cases of leprosy in New South Wales which have been reported to the Board of Health are P.S., *æt.* 38, died in the Richmond River District in March, 1887, and G.R., *æt.* 28, whose death, certified by his medical attendants, was reported by the City Coroner on the 18th July, 1889. Both of these persons were of European parentage. (b) On comparison with the reports for previous years differences in ages or dates of admission of some coloured patients will be observed. Those now given are the correct ages and dates.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DAIRIES SUPERVISION ACT.

(REPORT ON ADMINISTRATION OF, FOR THE YEAR 1894.)

Ordered by the Legislative Assembly to be printed, 4 July, 1895.

The Secretary to the Board of Health to The Principal Under Secretary.

Sir,

Board of Health Office, 127, Macquarie-street, Sydney, 2 July, 1895.

I have the honor, by direction of the Board of Health, to forward herewith, for the information of the Chief Secretary, a report on the administration of the Dairies Supervision Act for the year 1894.

I have, &c.,

EDMUND SAGER,

Secretary.

[*Enclosure.*]

DURING the year 1894 the provisions of the Dairies Supervision Act, 50 Victoria No. 17, were extended to the following districts :—

- (a) The police district of Rylstone and those portions of the police district of Mudgee in which the Act is not already in force ;
- (b) The municipal district of Moree and an area of 5 miles outside such municipality ;
- (c) Hillgrove and the surrounding area under the Towns Police Act ;
- (d) The police district of Scone ;
- (e) The municipal district of Parkes and an area within a radius of 10 miles outside such municipality ;
- (f) The counties of King and Georgiana ;
- (g) The borough of Wagga Wagga and an area within a radius of 5 miles outside such borough ;
- (h) The borough of Lithgow and an area within a radius of 10 miles from the Lithgow Court-house ;
- (i) The parish of Metz, county of Sandon (in the Armidale district) ;
- (j) An area within a radius of 12 miles from the Broken Hill Post Office (extension outside the municipality) ;
- (k) The Municipal District of Casino, and an area within a radius of 8 miles outside such municipality ;
- (l) The Municipal District of Blayney, and an area within a radius of 12 miles outside such municipality.

With very few exceptions, all the districts in which the Act has been proclaimed have been visited by the officers of the Board as in former years. Owing, however, to the largely increased area brought under the provisions of the Act, and the additional duties devolving on the inspectors, it will not be practicable in the future to visit the whole of the districts as frequently as previously, but special assistance will be given the local authorities of those places to which the Act has only recently been extended.

The districts now under the operation of the Act have increased from 153, at the end of 1893, to 173 at the end of 1894, and in some of the dairying centres, the new registrations are very numerous.

In Appendix A will be found a synopsis of the reports of the Board's Inspectors, together with a record of the action taken consequent thereon. The extension of the Act was in most districts at the direct request of the local Municipal Council, the advantages to be derived by bringing milk sellers under the provision of such a measure being now widely recognised.

In Appendix B will be found the usual abstract of the annual reports furnished by the various Local Authorities. It is a well-established fact that a steady improvement has taken place in the administration of the Act by the various Local Authorities, but some do not pay the attention they ought to do in order to give effect to its provisions. A large number of prosecutions have been instituted by the Sydney City Council against dairymen selling adulterated milk; the police also in a few districts have taken proceedings against persons who were not registered. There are, however, numerous cases where premises are in an insanitary condition, or where other breaches of the Act are committed, and offenders are not punished as they should be, by having their registrations cancelled, or by other proceedings being instituted.

Much dissatisfaction exists in some districts, owing to (say) a farmer selling milk as such, being subjected to the provisions of the Act, whereas his neighbour, who makes butter, does not come under any supervision; also, some of the Councils express an opinion that it is in contravention of the Municipalities Act to use any of their revenue derived from rates in payment of a dairy inspector.

It will be noted from the appendices that many cattle have been destroyed as diseased, and the Board are taking steps to impress upon the Local Authorities the urgent need for the immediate destruction of any cows or bulls that may be affected with tuberculosis, and for the cancellation of the registration of dairymen who object to carry out their directions in this matter; and, while it is certain that the proportion of dairy stock suffering from this disease is much smaller here than in European countries, there are yet the strongest reasons for stamping out the cases that are discovered, not only to arrest the spread of the disease amongst the cattle, but also because of the serious risk of the tubercular matter contained in the milk causing consumption of the lungs in the human beings who use it.

By order of the Board of Health,
EDMUND SAGER,
Secretary.

2 July, 1895.

APPENDIX A.

DAIRIES SUPERVISION ACT, 1894.

ABSTRACT of Reports on the Registered Premises in the Municipal and Police Districts hereunder referred to, for the year ending 31st December, 1894, showing the steps taken by the Board of Health to enforce the provisions of the Act.

No.	Name of District.	No. of Registered Premises.		Date of Inspection	Condition of Premises.	Action taken by the Board to enforce provisions of Act.	
		Dairies.	Milk Stores.			Date.	Nature of communication forwarded to Local Authority.
1	Adamstown	8	6	17/3/94	Satisfactory	6/4/94	Copy of report forwarded.
2	Albury	22	..	14/8/94 and 15/8/94 6/7/94	Very satisfactory	24/8/94	Copy of report forwarded with letter expressing satisfaction at the administration of the Act, and advising attention to the few minor improvements recommended.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

QUARANTINE AMENDMENT BILL.

(MESSAGE No. 9.)

Ordered by the Legislative Assembly to be printed, 4 September, 1894.

R. W. DUFF,
Governor.

Message No. 9.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision for the requisite expenses in connection with a Bill to amend the Law relating to Quarantine.

*Government House,
Sydney, 30th August, 1894.*

Precisely the same sort of results emerge from a study of the epidemic in Leicester, 1892-3, and this town is notorious as the centre of the anti-vaccination movement. In this epidemic we have an example too of the immunity enjoyed by efficiently-protected nurses and attendants upon the sick, for, "of 40 officials connected with the hospital, 34 were 'efficiently' protected either by revaccination or by a previous attack of small-pox, as shown by extensive 'pitting,' and not one contracted small-pox. The remaining 6 were 'inefficiently' protected, having been vaccinated only in infancy, and having refused revaccination. Five of these contracted small-pox, and 1 died. The only 1 of these 6 'inefficiently' protected to escape was the matron, who, of course, was not much exposed to the contagion, taking no part in the actual nursing of small-pox cases, and only entering the ward occasionally."

Further, this epidemic strikingly shows the modified and mild character of the disease even when it does attack the vaccinated—for this it of course does. It is an error not unfrequently made, to expect that vaccination shall absolutely protect against small-pox. The disease itself will not do so. One attack of small-pox may be followed by another, and why, therefore, expect that vaccination shall be more efficient than the disease itself? In Jenner's own words, vaccination "duly and efficiently performed will protect the constitution from subsequent attacks of small-pox as much as that disease itself will. I never expected it would do more, and it will not, I believe, do less." In Sheffield, among the unvaccinated, 35 cases (22 of them in children under 10 years) were malignant or semi-malignant, and of these 16 died and 19 recovered, "to be left, unfortunately, disfigured for life," while no vaccinated case was of a malignant or semi-malignant type.

The length of time in hospital of the different cases supports these conclusions, for in children under 10 years, the stay of the vaccinated was only 14 days, while the unvaccinated remained 47 days; and amongst persons over 10 years, the vaccinated remained under 28 days only, while the unvaccinated stayed 44 days.

Such illustrations as these might be multiplied almost indefinitely, and all show that while our efficient medical inspections of incoming vessels and our stringent quarantine regulations against this particular disease may succeed for long in keeping the enemy from our midst, yet at any time the joint in our armour of defence may be found, and with our population for the most part unprotected, who shall stay the advance of the invader,—how many lives must be sacrificed, how much misery endured before recourse to the only known remedy does in the end what should and could be done now.

I have, &c.,

A. STUART, M.D.,

Medical Adviser to the Government.

RETURN (No. 1) showing the number of Births during the past thirty-four years, and the number of Vaccinations performed by Government Vaccinators during the same period.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the various methods used to collect and analyze the data. This includes both primary and secondary data collection techniques. The primary data was gathered through direct observation and interviews, while secondary data was obtained from existing reports and databases.

The third section details the statistical analysis performed on the collected data. This involves the use of descriptive statistics to summarize the data and inferential statistics to test hypotheses. The results of these analyses are presented in the following tables and charts.

The fourth section provides a detailed interpretation of the findings. It discusses the implications of the results and how they relate to the research objectives. The author notes that the data indicates a significant trend in the market, which has important implications for stakeholders.

Finally, the document concludes with a summary of the key findings and recommendations for future research. It suggests that further studies should be conducted to explore the underlying causes of the observed trends and to develop more effective strategies based on the insights gained.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LEPERS IN LITTLE BAY HOSPITAL.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 13 November, 1894.

[Laid upon the Table of the House in answer to Question No. 8, of 13th November, 1894.]

Question.

8. LEPERS IN LITTLE BAY HOSPITAL:—MR. HUGHES *asked* THE COLONIAL SECRETARY:—Will he lay upon the Table of this House a return containing information under the following heads, respecting the lepers in the Little Bay Hospital:—
- (1.) Total number of patients in Lazaret since 1890, sex, and age?
 - (2.) How many at present in Hospital, sex, and age?
 - (3.) What nationality?
 - (4.) Are all the cases (in the opinion of the highest medical experts) true leprosy?

Answer.

The particulars asked for are comprised in a Return which is made annually and presented to Parliament, a copy of which, completed to date, is attached hereto. There are now thirty-nine patients detained in the Lazaret, all of whom are suffering from leprosy.

RETURN of Particulars of Lepers detained at Little Bay, New South Wales, since the year 1883.

* These are all natives of New South Wales of European descent

† Date of report These patients were afterwards removed to Little Bay.

‡ Of European descent

§ This patient was transferred to a Hospital for the Insane on 2nd April, 1885, where also his death occurred

¶ This patient was

discharged on the 29th December, 1885 (see note " to Appendix A)

NOTES. (a) The only additional cases of leprosy in New South Wales which have been reported to the Board of Health are P S, at 38, died in the Richmond River District in March, 1887, and G R, at 23 whose death, certified by his medical attendants, was reported by the City Coroner on the 18th July, 1889. Both of these persons were of European parentage (b) On comparison with the reports for previous years differences in ages or dates of admission of some coloured patients will be observed. Those now given are the correct ages and dates.

1894.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LUNACY CONVENTION BILL.

(MESSAGE No. 8.)

Ordered by the Legislative Assembly to be printed, 4 September, 1894.

R. W. DUFF,
Governor.

Message No. 8.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to further amend the Law relating to the Insane; to authorise the making of Conventions with adjacent Colonies in connection therewith; and for the better administration and management of the property of persons incapable of managing their affairs.

*Government House,
Sydney, 3rd September, 1894.*

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TYPHOID FEVER IN SYDNEY AND SUBURBS.

(FROM 1876 TO 1894, INCLUSIVE.)

AND CERTAIN PARTICULARS RESPECTING OTHER INFECTIOUS DISEASES, VIZ.: MEASLES, SCARLET FEVER, AND DIPHThERIA.

Ordered by the Legislative Assembly to be printed, 4 July, 1895.

The Secretary to the Board of Health to The Principal Under Secretary.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 2 July, 1895.

I have the honor, by direction of the Board of Health, to forward to you for the information of the Chief Secretary the enclosed paper on the occurrence of Typhoid Fever and the mortality therefrom in the City of Sydney and Suburbs during the last nineteen years, and certain particulars respecting other infectious diseases, prepared from the records in this office.

I have, &c.,

EDMUND SAGER,

Secretary.

[*Enclosure.*]

Typhoid Fever in the City of Sydney and its Suburbs from 1876 to 1894, and certain particulars respecting other Infectious Diseases.

THE accompanying returns, made up to 31st December last, contain some interesting facts about the prevalence of and mortality from typhoid fever in the city and suburbs of Sydney during the last nineteen years, and of the number of deaths from scarlet fever, measles, and diphtheria, and the admissions to the hospitals of patients suffering from these diseases in the past twelve months.

Return I gives the number of deaths from typhoid in each month of the ten years ending 31st December, 1885, together with the ratio calculated per 100,000 of the population, as estimated on the 30th June in each year. From this it will be seen that during the decennial period—1876 to 1885—there was a very large increase in the mortality from this disease, viz., from 46·07 per 100,000 in 1876 to 102·17 in 1885.

Return II furnishes similar information for 1886 to 1894. From this it will be seen that the mortality from typhoid fever has of late undergone considerable diminution, having gradually decreased from 90·90 per 100,000 in 1886 to 18·01 for 1893, which is by far the lowest for any of the nineteen years now under review; but that during the year 1894 a slight increase took place, the rate increasing to 29·12 per 100,000.

Return III shows the number of cases of typhoid fever admitted to the metropolitan hospitals of Sydney, and of the number of deaths from this disease in such institutions during the nine years from 1886 to 1894. From these figures it will be seen that during 1893, 236 cases were admitted, and that thirty of these cases terminated fatally, making a death-rate of 12·71 per cent. on the admissions, this being lower than the death-rate in the three preceding years; whilst during the year 1894 no less than 481 cases were admitted, of which sixty cases terminated fatally, making a death-rate of 12·47.

Return IV supplies particulars as to the localities from which the patients treated in the metropolitan hospitals in 1894 were removed, and as to the ratio of cases for each 10,000 of the inhabitants of the districts in question. From this return it will be seen that the total cases admitted from the metropolis was 464, or 10·96 per 10,000 of the population, as against 232 cases, or 5·57 per 10,000, for the year 1893.

Return V shows the deaths which took place in the hospitals among the cases mentioned in the previous table; in this it has not been deemed necessary to calculate the ratio per 10,000.

Return VI gives certain particulars respecting measles, scarlet fever, and diphtheria. Owing to the prevalence in 1893 of the epidemics of measles and scarlet fever, the mortality in the metropolis from these diseases was very high, viz., 401 from measles, and 140 from scarlet fever, but during 1894 it will be seen that it decreased considerably, six persons only dying from measles, and eighteen from scarlet fever. During the year 142 cases of diphtheria were admitted to hospital, of which seventy-one died, as against ninety-one admissions and forty-seven deaths during 1893, the rate of mortality being practically the same, viz., 50 per cent.

By order,

EDMUND SAGER,

Secretary to the Board of Health.

2 July, 1895.

APPENDIX.

RETURN I.

Typhoid Fever—1876 to 1885.

RETURN showing the number of Deaths from Typhoid Fever in the City of Sydney and its Suburbs for each month of the years 1876 to 1885—giving the death-rate per 100,000 for each month.

1894.

(SECOND SESSION.)

NEW SOUTH WALES.

**NOXIOUS TRADES AND CATTLE-SLAUGHTERING ACT
OF 1894.
(REGULATIONS UNDER.)**

Presented to Parliament, pursuant to Act 57 Vic. No. 21, sec. 22.

The Treasury, New South Wales,
2nd August, 1894.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the undermentioned Regulations in connection with the proper administration of the "Noxious Trades and Cattle-slaughtering Act of 1894," and the same are published for general information.

JOHN SEE.

**NOXIOUS TRADES AND CATTLE-SLAUGHTERING
ACT, 57 VICTORIA NO. 21.**

PART I.—NOXIOUS TRADES.

I.—Registration.

1. In these Regulations the expression "the Act" means the "Noxious Trades and Cattle-slaughtering Act, 1894."

2. Every person applying for registration or for renewal of registration under Part I of the Act shall apply in the form given in Appendix A, and shall forward with the application a fee of ten pounds, provided—

(a) That such fee shall be returned to the applicant if the Local Authority refuses to register or renew the registration of the applicant, or if the Board refuses to approve the issue of a license to such applicant.

(b) That if the license be issued between 1st January and 30th June in any year the sum of five pounds shall be returned to the applicant.

3. Every person applying for registration or for renewal of registration as aforesaid, in respect of two or more separate premises, shall make a separate application and pay a separate fee in respect of each of such premises; and premises shall be deemed to be separate for the purposes of this Regulation when they have no common boundary.

4. The Register to be kept by the Local Authority under subsection 1 of section 4 of the Act shall be kept at the office of the Local Authority, in the form given in Appendix B.

5. All premises registered under this Act shall be so enclosed as to define their boundaries; and licenses shall issue in respect of such enclosed and defined areas only.

II.—Licenses.

1. Upon the receipt of an application for registration or for renewal of registration as aforesaid, the Local Authority shall inspect the premises in respect of which the application is made, and shall, within fourteen days of the receipt of such application, either

(a) Inform the applicant, in writing, that the said Local Authority refuses to register or renew the registration of the applicant, stating the grounds for such refusal; or

(b) Register or renew the registration of the applicant, and, within the time above mentioned, submit in writing to the Board of Health, the particulars prescribed in Appendix C.

2. The application having been approved by the Board, a license in the form of Appendix D shall be forthwith issued by the Local Authority, and shall continue in force, unless revoked, until the thirtieth day of June next after the date of issue.

III.—Inspection of premises.

1. The Local Authority shall cause all licensed premises to be inspected at least once in every month.

*IV.—Regulations to be observed in carrying on
Noxious Trades.*

A

1. The following Regulations shall apply to persons carrying on the undermentioned trades, that is to say, the business of a—

Fat-melter.
Fat-extractor.
Bone-boiler.
Bone-grinder.
Blood-boiler.
Blood-drier.
Glue-maker.

2. All materials which are not undergoing treatment shall be so stored as to prevent the emission of noxious or offensive vapours, gases, or effluvia.

3. All refuse from digesters or boiling-pans, and all refuse, residue, or other matters from which noxious or offensive vapours, gases, or effluvia are evolved or are liable to be evolved, shall be placed in properly-closed receptacles, or otherwise dealt with in such a manner as to prevent any noxious or offensive vapours, gases, or effluvia from escaping.

4. All floors on which any process of the aforementioned trades is carried on shall be properly covered with a layer of concrete, or other approved materials, laid upon a suitable bottom. Every such floor shall have a proper slope towards a channel or gully, and shall be effectually drained by adequate

drains so discharging as not to be a cause of nuisance. Every drain shall be properly trapped, and shall be protected with a grid of which the bars shall not be more than three-eighths of an inch apart. Every drain and every apparatus connected therewith shall be maintained at all times in good order and efficient action.

5. No liquid or waste matters shall be allowed to leave the premises until they have been so purified as not to be a cause of nuisance.

6. The internal surface of the walls and every floor or pavement on the premises where any of the aforementioned trades are carried on, shall be kept at all times in good order and repair, so as to prevent the absorption of any liquid, filth, or refuse, or any noxious or offensive matter.

7. The internal surface of every wall shall be at all times kept clean, and, after being thoroughly cleansed by scraping or other effectual means, shall be thoroughly washed with hot lime-wash four times at least in every year, that is to say, at least once during the periods between the first and the fourteenth days of the months January, April, July, and October in each year.

8. The interior and the exterior of every digester or boiling pan, and of every tank, vat, trough, or other receptacle, shall be thoroughly cleansed as often as may be necessary to prevent any accumulation of filth in or upon such digester, pan, tank, vat, trough, or receptacle.

9. At the close of every working day, or when work is carried on continuously then once at least in each twenty-four hours, all fat, tallow, grease, glue, refuse, filth, or other matters which has or have been spilled, splashed, have fallen, or have been deposited upon any surface, shall be removed. All such parts of the premises, apparatus, and appliances as are specially exposed to such splashing or spilling shall be effectually cleansed, and when not injurious to the apparatus or appliances shall be washed with hot lime-wash at frequent intervals.

10. All premises shall be provided with apparatus or appliances capable of effectually destroying noxious or offensive vapours, gases, or effluvia arising in any process, or from any material, residue, or other substance which may be kept or stored upon them; and every process in which any such vapours, gases, or effluvia are generated shall be carried on in such a manner that they shall be effectually destroyed.

11. Every vehicle used in the collection of butcher's or slaughterman's garbage, wastes, or other offensive material shall be so constructed that it is air-tight when closed; and while any such cart is in use, the trap or other door of access to the interior shall not be permitted to remain open longer than is actually necessary to receive or discharge such material. Every such cart shall be thoroughly cleansed, and the interior thereof shall thereafter be thoroughly washed out with an approved disinfectant, daily.

B

1. The following Regulations shall apply to persons carrying on the undermentioned trades, that is to say, the business of a—

- Fellmonger.
- Tanner.
- Leather-dresser.
- Wool-scourer.

2. All receptacles used to hold water for soaking or cleansing skins, hides, pelts, butts, or other such materials, or to hold puer or bate, lime, or tan-liquor, shall be constructed of bricks set in cement or other approved materials, and shall at all times be maintained water-tight and in good repair.

3. No receptacle which is used for soaking or cleansing skins, hides, pelts, butts, or other such materials, or to hold puer or bate, lime, or tan-liquor, shall be in direct communication with any river, creek, water-course, pool, ditch, or with tidal waters. No liquid or waste matters shall be allowed to leave the premises until they shall have been so purified as not to be a cause of nuisance.

4. All surfaces immediately adjacent to pits, all ground and every floor on which wet or moist skins, hides, pelts, butts, or other materials awaiting, or in process of, manufacture, or wet or moist fleshings, roundings, or other refuse matters are, or are liable to be, placed or dropped, and the floor of every building used for sweating, pulling, unhairing, fleshing, rounding, or the like processes, shall be properly covered with a layer of concrete, or other approved materials, laid upon a suitable bottom. Every such floor shall have a proper slope towards a channel or gully, and shall be effectually drained by adequate drains so discharging as not to be a cause of nuisance. Every drain shall be properly trapped and protected with a grid of which the bars shall not be more than three-eighths of an inch apart; and every drain and every apparatus connected therewith shall be maintained at all times in good order and efficient action.

5. The water in every receptacle used for the soaking or cleansing of any skin, hide, pelt, butt, or other such materials, or to hold puer or bate, shall be changed as often as may be necessary to prevent the emission of noxious or offensive vapours, gases, or effluvia. Every receptacle used to hold puer or bate shall be thoroughly cleansed once at the least in every week.

6. All surfaces shall be kept in good order and repair, so as to prevent the absorption of any liquid filth or refuse, or of any noxious or offensive matter which may fall or be deposited thereon.

7. The internal surface of every wall shall be kept clean, and after being thoroughly cleansed by scraping or other effectual means, shall be thoroughly washed with hot lime-wash, made with fresh lime, four times at the least in every year; that is to say, at least once during the periods between the first and fourteenth day of each of the months January, April, July, and October.

8. At the close of every working day, or when work is carried on continuously then once at least in each twenty-four hours, every surface shall be thoroughly cleansed, and all filth or refuse which has been deposited or has fallen on any surface shall be collected in suitable receptacles having close-fitting covers, and shall be so kept therein, or shall be so dealt with otherwise, that no noxious or offensive vapours, gases, or effluvia escape. All such filth, refuse, spent lime, hair, fleshings, roundings, or other such material shall be removed from the premises once in every week at the least, after being so treated, if necessary, as to prevent its being a cause of nuisance.

9. Every beam or board, and every table, bench, and implement shall be cleansed as often as may be necessary to prevent any accumulation of filth thereon.

V.—General and Penalties.

1. A copy of these Regulations shall be exhibited in a conspicuous place on every licensed premises.

2. Any person or persons offending against or failing to comply with any of these Regulations shall for each and every offence forfeit on conviction a penalty of not more than five pounds, and for a continuing offence not less than one pound for every day during which the offence shall be continued after conviction for the first offence; provided that no such penalty shall exceed £20.

Appendix A.

NOXIOUS TRADES AND CATTLE-SLAUGHTERING ACT.

APPLICATION FOR REGISTRATION UNDER SUB-SECTION 1 OF SECTION 4 OF THE ABOVE ACT.

To the Local Authority for

I apply to be registered, in accordance with the particulars in the Schedule hereunder:—

SCHEDULE.

Name in full.....	
Style or Firm under which Trade is to be conducted.....	
Address.....	
Trade or Trades proposed to be carried on	
Description of Land, Premises, Buildings, and Enclosures occupied, used, or intended to be used by Applicant	
Special Appliances and Apparatus used for prevention of Nuisance in connection with above trade.....	

I transmit herewith the sum of ten pounds, License Fee to 30th June next.

Date—

189 ,

(Signature of Applicant)

Appendix B.

PARTICULARS OF REGISTRATION OF NOXIOUS TRADES UNDER 57 VIC. No. 21.

REGISTERED by the Local Authority under section 4 of the Act for the District of _____, for the year ending 30th June, 189 .

In accordance with the provisions of Sub-section 1 of Section 4 of Part 1 of the Act, 57 Victoria No. 21, this License is hereby issued to _____, to carry on the noxious trade of _____, at _____ premises situated at _____ such License to continue in force until the thirtieth day of June next.

(Signature of the Officer of the Local Authority empowered to sign on its behalf.)

Date— _____, 18 .

The Treasury, New South Wales,
30th August, 1894.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the undermentioned Regulations in connection with the proper administration of the "Noxious Trades and Cattle-slaughtering Act of 1894," and the same are published for general information.

G. H. REID.

NOXIOUS TRADES AND CATTLE-SLAUGHTERING
ACT, 57 VICTORIA NO. 21.

PART II.—CATTLE-SLAUGHTERING.

I.—Registration.

1. In these Regulations the expression "the Act" means the "Noxious Trades and Cattle-slaughtering Act, 1894."

2. Every person applying for registration or for renewal of registration under Part II of the Act shall apply in the form given in Appendix A, and shall forward with the application a fee of £5, if the premises proposed to be registered are within the counties of Cumberland and Northumberland or within a Municipality, and in all other cases the fee shall be £2, provided that such fee shall be returned to the applicant if the Local Authority refuse to register the applicant or to renew his registration as the case may be.

3. Every person applying for registration or for renewal of registration as aforesaid, in respect of two or more separate premises, shall make a separate application and pay a separate fee in respect of each of such premises; and premises shall be deemed to be separate for the purposes of this Regulation when they have no common boundary.

4. The Register to be kept by the Local Authority under subsection 1 of section 12 of the Act shall be kept at the office of the Local Authority, in the form given in Appendix B.

5. All premises registered under this Act shall be so enclosed as to define their boundaries; and licenses shall issue in respect of such enclosed and defined areas only.

II.—Licenses.

1. The registration having been approved by the Local Authority, a license, in the form of Appendix C shall be issued and shall continue in force, unless cancelled in accordance with the Act, until and inclusive of the 31st day of August next after the day of issue.

III.—Inspection of Premises.

1. It shall be the duty of the Local Authority, by itself or by its officers, to inspect licensed slaughter-houses at least once in every month, and the date of every such inspection, with a report of the state of the premises, shall be entered in the Register.

IV.—Construction and arrangement of premises.

1. All premises registered as slaughter-houses, and all utensils and appliances used, and all other things contained therein, shall be kept in good repair and in a clean and sanitary condition to the satisfaction of the Local Authority.

2. The following special regulations shall apply to all premises licensed as slaughter-houses within Municipalities, that is to say, the occupier of a slaughter-house shall observe the following regulations:—

(a) On all registered premises there shall be a killing-house and one or more stockyards or pens; the killing-house shall be well lighted and ventilated, at least two of its sides being open to direct communication with the outer air, and all parts of the premises shall be kept in good order and efficiency, and no killing-house shall be erected within 100 feet of any dwelling-house.

- (b) If the killing-house is built of stone or brick, the inner side of the doors to a height of 6 feet shall be covered with galvanized iron, and the walls from the floor to the height of 6 feet shall be covered with smooth cement or some similarly impervious material capable of being washed clean with water, and if constructed of other material the whole of the interior to the same height shall be covered with galvanized iron; and all wood-work in the killing-house not covered with galvanized iron shall be covered with a layer of paint, tar, or lime-wash.
- (c) The floor of the killing-house shall be of concrete or other approved impervious material capable of ready and thorough cleansing with water, laid upon a suitable bottom, and with a sufficient slope to allow of effectual drainage.
- (d) If the slaughter-house is drained by connection with a public sewer, such drain shall be properly trapped and protected with a grating of which the bars shall not be more than $\frac{3}{4}$ of an inch apart.
- (e) Where connection between the slaughter-house and a public sewer is not made, all drainage shall be disposed of so as not to be a cause of nuisance.
- (f) The stockyards and pens shall be so paved as to present a smooth surface, and shall be so drained as to permit of effectual cleansing.
- (g) A killing-house shall not have any rooms or lofts thereover, nor contain any water-closet, privy, urinal, or stable; and no water-closet, privy, urinal, cesspool, or stable, nor any room used for living or sleeping in, shall be connected with or ventilate into any killing-house.
- (h) No place used for boiling offal, blood, or refuse, or as a piggery, or for poultry feeding, or as a store for hides, skins, tallow, bones, blood, garbage, or other animal refuse, shall be within 100 feet from a killing-house, and poultry and pigs shall not be allowed to come within that distance from the killing-house.
- (i) Any carcase, or portion of a carcase, and any offal, blood, or refuse to be used for the purpose of pig or poultry feeding shall be boiled for a period of not less than one hour, and no animal matter shall be given to pigs or poultry unless thus boiled.
- (j) Every slaughter-house shall be provided with an adequate supply of water for cleansing and other purposes. The water used for dressing the carcases shall be free from impurities. Proper arrangements shall be made for a supply of hot water for cleansing utensils, instruments, and appliances. There shall be a water tank within every slaughter-house premises; it shall be placed where the Local Authority shall direct; the bottom of the tank shall not be less than 6 feet above the floor, and the tank shall be properly covered.
- (k) Animals known to be diseased shall not be killed on licensed slaughtering premises.
- (l) The killing-house shall not be used for any other purpose than the slaughtering and dressing of animals, the flesh of which is fit for and is intended to be used or supplied as the food of man.
- (m) No person other than the licensee and his servants shall slaughter or dress carcases upon his premises, unless authorised by the Local Authority in writing to do so.
- (n) All blood, manure, garbage, filth, or refuse from the animals slaughtered, and all horns, hides, skin, fat, and offal, shall be removed from the killing-house at least once in every twenty-four hours, and if the same be carried through any public street or place, it shall be conveyed in airtight vehicles constructed of iron or other non-absorbent material.
- (o) Every part of the floor of the killing-house, the walls to a height of 6 feet from the floor and all of the fittings thereof upon which any blood, or refuse, or filth has been spilled, splashed, or deposited, shall be thoroughly washed and cleansed immediately after the completion of the slaughtering.
- (p) All utensils, receptacles, and appliances shall be kept, when not in actual use, in a thoroughly clean condition.
- (q) All internal walls and fittings of the killing-house above 6 feet from the floor shall be thoroughly painted, tarred, or scraped, and lime-washed with fresh hot lime-wash at least four times in every year, that is to say, between the 1st and the 10th days of the months of March, June, September, and December respectively.
- (r) All dung or offensive litter shall be removed from every stockyard or pen at least once in every twenty-four hours, and be deposited at such distance from the killing-house, and in such manner as to prevent any nuisance arising therefrom.
- (s) The garments of the men engaged in slaughtering animals, or in handling the carcases in transit, and the cloths used for covering the carcases in transit shall be kept clean.
- (t) The carts and vehicles used in carrying carcases shall be kept thoroughly clean.

V.—Penalties.

1. Any person or persons offending against or failing to comply with any of these Regulations shall for each and every offence forfeit on conviction a penalty of not more than five pounds, and for a continuing offence not more than one pound for every day during which the offence shall be continued after the conviction for the first offence: Provided that the penalties imposed for a continuing offence shall not exceed in the aggregate twenty pounds.

1894.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

NOXIOUS TRADES AND CATTLE SLAUGHTERING ACT, 1894.
(MEMORANDUM BY THE BOARD OF HEALTH RESPECTING THE ADMINISTRATION OF PART 2.)

Ordered by the Legislative Assembly to be printed, 31 October, 1894.

Memorandum.

Board of Health Offices, 127, Macquarie-street, Sydney, 24 October, 1894.

As a good deal of misunderstanding has arisen with regard to the action of the Board of Health in connection with Part II of the Noxious Trades and Cattle Slaughtering Act, the Board beg leave to submit the following memorandum of the information of the Hon. the Colonial Treasurer:—

I. As to the application of the Act,—

This Act was intended for the regulation of slaughtering premises and the licensing of persons engaged in the business of cattle slaughtering, and the evidence in possession of the Board, a great part of which has been laid before Parliament, is quite sufficient to show that some such measure was urgently needed, both in the interests of the public health and for the proper conduct of the trade in question, both as regards the Colonial and the export markets. The Act does not apply to graziers, farmers, or settlers, in the ordinary conduct of their business. The rule laid down by the Board for the guidance of local authorities has been practically as follows:—The Act is not to apply to graziers, farmers, or settlers who may from time to time require to slaughter and sell a few animals as a matter of convenience, but if any person, under colour of being a grazier, farmer, or settler, should in reality carry on a regular slaughtering trade, then, in the opinion of the Board, it would be the duty of the local authority to require such person to be licensed, and to take care that his premises should be from time to time inspected in accordance with the Act. In short, licensing and inspection are to be confined to persons who manifestly conduct the business of cattle-slaughtering. A farmer who occasionally slaughters cannot reasonably be said to conduct the business of cattle-slaughtering.

II. As regards the regulations for cattle-slaughtering,—

So far as applies to the conduct of slaughtering businesses in country places (*i.e.*, outside municipalities) the regulation of the Board cannot justly be said to be severe, for it only requires that the premises used shall be kept in good repair, and in a clean and sanitary condition, to the satisfaction of the local authority.

Considering the condition of affairs revealed in the report which was laid before Parliament, the Board believe that they would fail in their duty to the public if they did not insist on these very elementary requirements. Some misunderstanding seems to have arisen from the belief that the more elaborate series of regulations prepared for the conduct of business in municipalities was intended to apply to country places. This, however, is a mistake. The Board quite recognise that regulations necessary in populous places would be unnecessary in sparsely settled country districts.

The regulations for the conduct of the slaughtering trade in municipalities are, it is true, somewhat more elaborate. They have been carefully prepared by the Board of Health on the basis of the most trustworthy information collected by the Board, and they are in the main in accordance with the recommendations of the Local Government Board in England, which have been found, in the mother country, to be beneficial to all concerned without being in the slightest degree oppressive. The Board, however, recognise fully that in introducing a new system of regulations for the conduct of any trade it is necessary to proceed with great caution. They have, therefore, regarded these regulations as being more or less tentative, and they accordingly procured their publication a considerable time before the Act comes into full operation in order that there might be ample opportunity for everyone concerned to set forth any points in the regulations as to which the conditions of trade might reasonably require modification or amendment, and the Board have always been willing to listen respectfully to any suggestions which have been made to them in this respect. So far as the Board have yet been able to learn, the regulations have, upon the whole, met with the approval of the various local authorities who have to administer them, as well as of the cattle-slaughtering trade in general.

III. As to the fees charged,—

The Board recognise that the due administration of this Act will entail expense upon the local authorities who have to administer it. They therefore thought that it was not unreasonable that this expense should be recouped to these authorities by the charging of a license fee which, in the opinion of many persons engaged in the trade who were consulted by the Board, is not excessive, and which is authorised by the Act. The fees charged in municipalities go to the various Municipal Councils, while those charged in country districts are paid into the Consolidated Revenue Fund, and therefore in both cases contribute to meeting the expenses entailed by the administration of the Act. The Board are of opinion that this arrangement is fair and reasonable, but if it be shown that the amount of the fees charged is such as to be productive of hardship, the Board can have no objection to its reduction, for obviously the question of a fee cannot be considered by the Board as one of essential principle.

A. STUART, M.D.,
President.

1894.

(SECOND SESSION.)

NEW SOUTH WALES.

NOXIOUS TRADES AND CATTLE-SLAUGHTERING ACT 1894.

(ORDERS AND REGULATIONS FOR THE CONTROL OF THE PUBLIC ABATTOIR, GLEBE ISLAND, TO SUPERSEDE THOSE NOW IN FORCE, FROM 1ST JANUARY, 1895.)

Presented to Parliament, pursuant to Act 14 Vic. No. 36.

Offices of the Board of Health,
Sydney, 5th December, 1894.

PUBLIC ABATTOIR, GLEBE ISLAND.

THE following "Orders and Regulations," under the Act 14 Vic. No. 36, for the control of the Public Abattoir, Glebe Island, having been made by the Board of Health, under the authority contained in the sixteenth section of the "Noxious Trades and Cattle-slaughtering Act, 1894," it is hereby notified, for public information, that such "Orders and Regulations" shall take effect as on and from 1st January, 1895, and shall thereupon supersede the "Orders and Regulations" now in force:—

ORDERS AND REGULATIONS.

1. The Abattoir shall, during the period from 1st October to 31st March inclusive, be open daily for business (Sundays excepted) from the hours of 5 a.m. to 6 p.m. (except on Mondays, on which day the Abattoir will be open from 12 midnight to 6 p.m., and on Saturdays from 2 a.m. to 2 p.m.), and during the period from the 1st of April to the 30th September, from 6 a.m. to 6 p.m. (excepting on Fridays, when the hours will be from 5 a.m. to 6 p.m., and on Saturdays from 5 a.m. to 2 p.m.); and no slaughtering of cattle will be permitted during other than the hours and days above mentioned, nor shall any person, without the authority of an Abattoir officer, be allowed to be within the boundaries of the Abattoir except at such times as it is open for business. Pigs, lambs, and calves may, however, be slaughtered and dressed at the Abattoir at any time during the night of Friday in each week, between the 1st of October and the 31st of March. The Board reserves the right of altering these hours from time to time as may be deemed necessary.
2. The hours during which cattle may be driven in and yarded shall be from 5 o'clock a.m. to 8 o'clock a.m. between 1st November and 28th February, and from 6 a.m. to 8 a.m. between 1st March and the 31st October (Sundays excepted), and cattle shall in all cases be inspected before being slaughtered. Milch cows may be driven in during any business hours.
3. An Abattoir Officer is empowered to control and direct the traffic, wheeled or otherwise, within the boundaries of the Abattoir.
4. The hours fixed for driving animals into the pens of the reserved mutton slaughter-houses shall be from 6 o'clock a.m. to 6 o'clock p.m., Sundays excepted, between the 1st of October and the 31st of March, and between the 1st of April and the 30th of September the hours shall be from 7 o'clock a.m. to 4 o'clock p.m., Sundays excepted.
5. Cattle, as they are brought in, shall be kept separate from those already in the yards, until the brands shall have been inspected.

6. Sheep and cattle will not be permitted to remain in the Abattoir pens or yards more than forty-eight hours from the time of being brought in, and calves, pigs, and lambs shall only remain on the Abattoir for such time as an Abattoir Officer may from time to time direct.

7. The slaughter-houses shall, with the exception of numbers 1, 2, 3, 4, 5, and 6 cattle houses, and numbers 1a, 2a, 3a, 4a, and 5a sheep houses, be retained in the hands of the Board for the use of the public.

8. Six beef and five mutton slaughter-houses may be let or leased by public auction, at an upset price to be announced at the time of sale.

9. A fee of threepence for inspecting brands shall be charged upon every head of horned cattle slaughtered in the leased houses.

10. Persons desirous of using the slaughter-houses reserved by the Board shall be permitted to do so on payment of the following fees:—

For every ox, cow, bull, heifer, or steer (including the inspection fee of 3d.)	s. d. 1 0
For every calf not exceeding six months old (including the inspection fee)	0 6
For every sheep or lamb	0 1½
For every head of swine	0 6

11. All fees shall be paid at the Abattoir Office to the officer appointed by the Board to receive the same, on demand, and printed receipts shall be given to all parties paying fees.

12. All animals on which fees are chargeable shall be reported to an Abattoir Officer without delay, and the fees shall be paid forthwith; failing such payment such officer may close and lock the doors leading from the pens to the pithing or slaughtering floors until the said fees are paid.

13. The lessees of sheep slaughtering houses shall severally furnish to an Abattoir Officer, on or before the fourth day of each month, a monthly return of all such animals as shall have been slaughtered at such houses.

14. No lessee of any cattle slaughter house or houses shall slaughter or permit to be slaughtered therein, any sheep, lambs, or pigs.

15. No person or persons shall yard or slaughter or cause to be yarded or slaughtered, any animal without the sanction of an Abattoir Officer, to whom due notice must be given. And in all cases when carcasses are brought to the Abattoir dressed or to be dressed, notice shall be given to an Abattoir Officer on the arrival of the same; but no animal slaughtered outside the Abattoir and brought there with the head detached from the body may be dressed there. In no case shall the carcass be brought into the slaughter-house until seen by an Abattoir Officer.

16. Should any animal die within the Abattoir, the owner or person in charge of such animal shall be held liable for its immediate removal in its entire state from the Glebe Island.

17. No hide, internal organ, nor carcase of any animal shall be removed from any slaughter-house until after the same has been inspected by an Abattoir Officer. And it shall be the duty of the lessee, occupier, dresser, and slaughter-man to point out to an Abattoir Officer any suspected disease in any part of any animal. Should any carcase, on examination, prove to have been tampered with, so as to disguise the condition of the animal, the owner, person in charge, and each slaughter-man taking part in the dressing of the same shall be held to have committed an offence under these Regulations.

18. An Abattoir Officer shall have power to condemn the carcase of any animal which he may consider diseased, or deem unfit for human food. No lessee or occupier shall expose for sale any meat which has been so condemned; and any such lessee or occupier shall, when ordered to do so by such officer, immediately remove such meat from the Abattoir. An Abattoir Officer is hereby empowered, in the event of non-compliance with his orders for the removal of the said meat, to dispose of the same at the expense of the lessee or occupier.

19. Any meat found blown may be condemned by an Abattoir Officer, and the owner or person blowing the same will be held to have committed an offence under these Regulations.

20. Any animal brought to the Abattoir which appears to an Abattoir Officer to be diseased, or in such condition as to be unfit for food, shall be slaughtered at such time and shall be disposed of in such manner as such officer may order. If the owner of the animal, the lessee, or occupier shall object to the decision of the Abattoir Officer as to the condition of the animal, the owner, lessee, or occupier may require the animal to be inspected by an officer of the Board, whose decision shall be final, and the appellant shall pay the cost of such appeal, not to exceed one guinea, if the officer of the Board decides that the animal is unfit for human food, or diseased.

21. The lessee or occupier of any slaughter-house shall thoroughly cleanse and wash the slaughter-house and all places used in connection therewith, also the roadways in front and rear, to the satisfaction of an Abattoir Officer, immediately after slaughtering has been completed, and shall thoroughly lime wash throughout the premises at least once a week; and with respect to the blood and offal he may select and immediately remove such portions, not being the whole of such blood and offal, as the said lessee or occupier may require for disposal for human food; and any offal or blood not so removed shall become the property of the Board. In order to prevent the undue dilution of the blood which is sent to the manure works, the lessee or occupier shall closely follow the instructions of an Abattoir Officer as to the washing-down of the houses, and shall prevent any hair, dirt, or offal from being mixed with the blood. For the purposes of this Regulation, offal shall include any part of the animal or any animal matter that may be left in the slaughter-house after the time appointed for removal, and in the opinion of an Abattoir Officer not intended for human food.

22. No hides or other matter by which a nuisance may be created shall be allowed to remain overnight in any slaughter-house or premises.

23. Each slaughter-house, together with the implements, vessels, cloths, and water used in dressing carcasses therein, as well as the clothes worn by all persons engaged in such work, shall be kept clean by the lessee or occupier to the satisfaction of an Abattoir Officer.

24. All hides, skins, heads, feet, and offal shall be removed from the Abattoir only in such manner and at such time as may be directed by an Abattoir Officer.

25. The contents of the paunches and intestines of all animals slaughtered shall be discharged at such place as an Abattoir Officer may appoint.

26. No person shall bring to or deposit at the Abattoir offal or other offensive matter.

27. Any Abattoir Officer shall have the power of preventing the removal of meat from the Abattoir in any cart or other vehicle which is not in a clean and proper condition, and all meat conveyed from the Abattoir in open carts must be covered with clean cloths to the satisfaction of an Abattoir Officer.

28. All persons engaged in loading meat shall wear clean clothing of suitable material to the satisfaction of an Abattoir Officer, and a clean cap covering the head. The driver of each vehicle shall also wear clean clothing of suitable material to the satisfaction of an Abattoir Officer.

29. No candles or other lights shall be placed upon or against or affixed to any portion of the walls or woodwork of the slaughter-house, or of any other building or buildings in connection therewith.

30. If water be negligently allowed to run to waste, the lessee or occupier will be liable for the penalty.

31. No person shall wilfully or negligently cause damage to any property in the Abattoir under the control of the Board.

32. Lessees or occupiers are prohibited from using, or permitting to be used, any instrument for handling or driving cattle other than such as may be approved by an Abattoir Officer.

33. No person or persons shall deposit in any place within the Abattoir boundaries, except such place as an Abattoir Officer may direct, any hay, straw, reeds, rushes, bushes, or refuse

34. Gaming is prohibited with coin, dice, cards, or otherwise.

35. The use of blasphemous, obscene, or offensive language, obscene behaviour, fighting, the throwing of missiles or filth of any kind, riotous conduct, disorderly noise, or the committing of any nuisance, is strictly prohibited within the boundaries of the Abattoir.

36. No boy under the age of fourteen years shall be employed at the Abattoir in any capacity whatever. Women and children are strictly prohibited from entering the Abattoir, and an Abattoir Officer is authorised and enjoined to exclude them.

37. No dogs will be allowed within the Abattoir precincts except such as are actually used in driving, and are distinguished by the wearing of a collar bearing the owner's name and address. All other dogs will be disposed of as an Abattoir Officer may direct.

38. An Abattoir Officer or any other employee connected with the Abattoir may at any time enter any of the slaughter-houses; and no person or persons shall obstruct, molest, or assail with abusive, obscene, or offensive language any such officer or employee.

39. If any person or persons be convicted of any breach of any of these Regulations, in addition to the penalty imposed therefor it shall be competent for the Board at any time to refuse to allow such person or persons the use of any slaughter-houses reserved by the Board.

40. Any person or persons offending against or failing to comply with any of the orders and regulations contained in paragraphs 1, 2, 3, 4, 5, 6, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 38, shall for each and every offence forfeit and pay a sum not exceeding five pounds, recoverable as provided for by the Statute 14 Vic. No. 36.

41. All previous orders and regulations made under the Act 14 Vic. No. 36 are hereby repealed.

42. In these "Orders and Regulations"—

"Board" shall mean the Board of Health.

"Abattoir Officer" shall include the Superintendent, Inspector, Assistant Inspector, and any other person duly authorised by the Board.

"Lessee" shall mean person holding a lease duly issued by the Board.

"Occupier" shall mean person or firm authorised to use an unleased slaughter-house.

In witness whereof, the Common Seal of the Corporation of the Board of Health was affixed hereto by the President in the presence of the Secretary, in pursuance of a resolution passed at a duly constituted meeting of the Board, this fifth day of December, 1894.

(L.S.) EDMUND SAGER,
Secretary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RANDWICK CEMETERY BILL.

(PETITION FROM CERTAIN OWNERS, OR REPRESENTATIVES OF OWNERS, OF VAULTS AND GRAVES, SITUATED IN THE BURIAL-GROUND KNOWN AS ST. JUDE'S CEMETERY, RANDWICK, AGAINST.)

Received by the Legislative Assembly, 17 April, 1895.

To the Honorable the Speaker and the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned,—

SHOWETH AS FOLLOWS :—

1. That your Petitioners are the owners, or representatives of owners, of vaults and graves respectively, situated in the burial-ground known as St. Jude's Cemetery, Randwick, with an exclusive right of interment in such vaults and graves.

2. That a Bill has been laid before your Honorable House having the effect of prohibiting burials in the said cemetery, except in certain cases, in such Bill mentioned.

3. That in the majority of cases the vaults and graves of your Petitioners are family vaults and graves, in which relatives have been buried, and in which space more or less limited is still available for further burials. Your Petitioners, or the persons they represent, have incurred great expense in building such vaults and graves respectively, and they consider that it will not be just to them to close the cemetery against future burials therein, as in the said Bill is provided.

4. That your Petitioners submit that the provisions of the first section of the said Bill, which is no doubt inserted in order to protect the interests of those who have existing rights of burial in the cemetery, in cases where the Minister should think it right and just to exercise a discretion in their favour, will, in its present form, be inoperative, owing to the difficulty of obtaining the required consent in the short interval available after death, and as the section does not provide for any substituted authority in the absence or illness of the Minister.

5. That since the passing of the Camperdown and Randwick Cemetery Act of 1867 it has not been lawful to open any new graves in the said cemetery, and in consequence thereof there are now comparatively few burials in such cemetery, and burials in such cemetery must continue to decrease in number. When the said Act was introduced the Bill provided that all bodies buried in the said cemetery should be encased in leaden coffins, but such provision was eliminated from the Bill before the same became law.

6. Your Petitioners consider that any objection which may be raised against the said cemetery is unfounded, as the cemetery has been in existence for a great many years past without objection, and the situation of the cemetery and sandy soil therein render it impossible for any nuisance to arise from it; besides which a considerable space of vacant ground exists on every side of the cemetery between the vaults and graves therein and the boundary fences of the cemetery or roads adjacent thereto, and the larger portion of the ground within the cemetery is vacant ground in which grass and shrubs are growing; and your Petitioners submit that no objection can properly be made against the cemetery.

7. Your Petitioners consider that any objections which may have been raised against the cemetery emanate from persons who have erected houses in the immediate vicinity of the cemetery, and are unduly prejudiced and influenced against the cemetery, in the hope of better letting or selling such houses by closing the cemetery, and from other persons who have no interest in the cemetery. Your Petitioners suggest that any smell arising from municipal tips at the Centennial Park or from the sewerage pipe-vents lately constructed throughout the Borough of Randwick may be attributed by residents of Randwick to the cemetery.

8. In the majority of cases bodies interred in the cemetery are encased in leaden coffins, and your Petitioners submit that in such cases it is impossible that any ill effects can arise from such burials.

9. Your Petitioners submit that there can be no necessity to absolutely close the cemetery against burials, and that, at the most, it will be sufficient to make provision that all bodies interred in the cemetery shall, in future, be encased in leaden coffins, and that power be reserved to the Minister for Justice to license burials in the cemetery without leaden coffins in any cases in which he may think proper to do so.

Your Petitioners, therefore, humbly pray,—

That the said cemetery be not closed, but that if any alteration in the present mode of burying bodies therein be thought desirable, your Honorable House will, in any Bill which may be introduced in the matter, provide that all bodies hereafter to be buried in the cemetery shall be encased in leaden coffins, with power reserved to the Minister for Justice to license burials in the cemetery without leaden coffins in any cases in which he may think fit to do so, or that your Honorable House will impose such other conditions as may be thought necessary.

That your Honorable House will cause a full inquiry to be made into any complaints against the cemetery before passing any Act to close such cemetery.

And your Petitioners will ever pray, &c.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

—
RANDWICK CEMETERY BILL.

PETITION FROM JOHN ALFRED IRONSIDE PERRY AND OTHERS, OF RANDWICK, PRAYING THAT
 THE HOUSE WILL NOT ALLOW ANY FURTHER INTERMENTS IN THE BURIAL-GROUND KNOWN
 AS THE RANDWICK CEMETERY.)

—
Received by the Legislative Assembly, 25 April, 1895.
 —

Petition to the Legislative Assembly of New South Wales.

The humble Petition of John Alfred Ironside Perry and others, of Randwick, in the Colony of New South Wales, praying that no further interments shall take place in the burial-ground known as the Randwick Cemetery,—

RESPECTFULLY SHOWETH:—

That we the undersigned residents of Randwick, in the said Colony, desire that the burial-ground known as the Randwick Cemetery shall be closed for the following, amongst other reasons:—

1. That we believe the further use of the said cemetery to be injurious to health.
2. That the Board of Health and all the medical practitioners resident at Randwick aforesaid believe that the use of the said cemetery for burials is prejudicial to health.
3. That at the time the said cemetery was opened there was only a very small population at Randwick, whereas now the estimated population is about 6,800; and that in consequence of such increase of population the said cemetery at the present time practically stands in the middle of Randwick. There are streets running round two sides of it—in point of fact only being distant about two or three yards. In addition there are houses within a few yards. Moreover, the drainage mingles with the ordinary watercourses, and so possibly causes different diseases.
4. Generally we consider that the increasing population and further development of Randwick, the general good health of the community, the fact that there is already another cemetery at Long Bay, all warrant us in asking that this cemetery should be closed.

Your Petitioners therefore humbly pray that the Legislative Assembly will not allow any further interments in the burial-ground known as the Randwick Cemetery.

[Here follow 103 signatures.]

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ADULTERATED LIQUORS NOW OR RECENTLY IN BOND.

(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be printed, 31 October, 1894.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 23rd May, 1894, That there be laid upon the Table of this House,—

“Copies of all papers relating to adulterated liquors now or recently in bond.”

(Mr. Neild.)

The Consul-General for Germany to The Chief Secretary.

[Translation.]

Monsieur le Chef du Cabinet,

Sydney, 8 June, 1894.

Adverting to my letter of 20th July last, and of the reply received on 24th August last, concerning a shipment of explosives, I have the honor to draw your attention to the fact that there appear again erroneous statements in the recently published Parliamentary paper—“Return respecting adulterated liquors now or recently in bond.” These utterances are still of greater importance on account of parts of them being made in open Parliament in the name of the Government of this Colony.

It has been said on that occasion that some shipments of imitation brandy ex steamers “Erlangen” and “Chemnitz” were sent out from Germany. However, the local agent of the said steamers has reported that the said goods were sent by Messrs. Alex. Smyers & Co., of Antwerp, Belgium, and were shipped from that port.

This fact was known to the District Inspector of the Metropolitan District, he having reported to Mr. Superintendent Read, in his report of 5th May, 1893, published in the aforesaid Parliamentary paper, that the said goods had been *re-shipped* to Antwerp.

Similar unfounded attacks directed against the German trade having appeared occasionally in the official documents of this Colony and of one of the neighbouring Colonies, it has become my duty to try to effect that such publications should be publicly rectified at the same place and in the same manner they have been made public.

Therefore, I should feel deeply gratified if all necessary orders in that direction should be given, and if I might be advised accordingly.

Enclosing herewith translation of this letter, I avail myself of this opportunity to offer again to you, Monsieur le Chef du Cabinet, the assurance of my high consideration.

A. L. PELLDRAM,

His Imperial German Majesty's Consul-General.

The Medical Adviser to the Government, with reference to statements of Mr. Hamlet, which are objected to by the German Consul.—C.W., B.C., 22/6/94. Government Analyst for report.—A.S., 25/6/94. Report herewith.—W.M.H., 25/6/94.

The Government Analyst to The Medical Adviser to the Government.

Sir,

Government Laboratory, Sydney, 25 June, 1894.

In reply to the minute of the Principal Under Secretary, I have the honor to report that the particulars of the samples referred to in the accompanying papers were copied by me direct from the labels found on the bottles. I send herewith the two bottles which contained the two samples in question.

The details thus obtained are always entered in an analyst's certificate for purposes of reference and identification.

On looking at the labels again, I fail to see any adequate ground for the objection of the German Consul against me, especially when it is known that I know absolutely nothing of the samples or their labels, until they come into my hands.

I have, &c.,

WILLIAM M. HAMLET,

Government Analyst.

A perusal of the labels—copies of which I attach—seems to show that the errors complained of cannot fairly be attributed to any fault on the part of this Department.—A.S., 27/6/94. The Principal Under Secretary.

As the return referred to was prepared by the Justice Department, perhaps the Under Secretary of Justice will be good enough to cause an inquiry to be made into the alleged erroneous statements, and to have them corrected if necessary.—C.W. (Principal Under Secretary), B.C., 3/7/94.

Minute by The Under Secretary of Justice.

Department of Justice, Sydney, 18 July, 1894.

THE German Consul-General has brought under the notice of the Chief Secretary certain statements, contained in a printed return of papers laid on the Table of the Legislative Assembly, which he alleges to be erroneous, and which relate to a quantity of brandy that was found to be injurious to public health and was condemned.

It is desired by the German Consul-General that these statements should be publicly rectified at the same place and in the same manner as they have been made public.

The papers have been forwarded to this Department by the Principal Under Secretary, with a request that the alleged erroneous statements may be inquired into, and, if necessary, corrected.

The statements complained of are those which represent that the brandy referred to came from Germany, and it will be seen from the printed return herewith (page 4) that they are contained in answers given by Mr. See, Colonial Treasurer, and by Mr. Barton, for the Minister of Justice, to questions asked in the Legislative Assembly. There appears to be nothing in the papers to show that the brandy came from Germany, but the answer given by Mr. Barton was in terms of that supplied by Inspector Lenthall, and forwarded to this Department by the Inspector-General of Police.

It is therefore suggested in the first instance that the papers be referred to the Inspector-General of Police, who might be asked to obtain a report from Mr. Lenthall on the matter.

A.C.F.

Approved.—T.M.S., 21/7/94. The Inspector-General of Police.—T.E.M'N. (for U.S.), B.C., 24/7/94. For Inspector Lenthall's report.—E.F. Superintendent Read. Referred to Mr. Lenthall for report.—G. READ, Superintendent, 25/7/94.

Inspector Lenthall to Superintendent Read.

Sir,

Central Police Office, Sydney, 26 July, 1894.

In reply to the minute from the Department of Justice, I beg to point out that in none of my reports is the liquor described as having been imported from Germany, but from Antwerp.

The only mistake I made was, that in writing the answer to questions 1 and 3 asked by Mr. Dickens I inadvertently answered in the affirmative that the liquors had been imported from, and reshipped to "Germany," having at the time in my mind that the vessels that carried them are known here as "German steamers," and I believe fly the German flag.

If occasion arises in future, I will be careful in describing the country from which the article may come, and regret the oversight on this occasion.

I have, &c.,

W. E. LENTHALL,
District Inspector, Metropolitan District.

Forwarded to the Inspector-General of Police.—G. READ, 26/7/94. Forwarded for the information of the Minister of Justice.—ED. FOSBERY (I.-G.P.), B.C., 26/7/94. The Under Secretary of Justice.

Minute by The Under Secretary of Justice.

Department of Justice, Sydney, 30 July, 1894.

THE wishes of the German Consul-General will, apparently, be met by laying upon the Table of the Legislative Assembly a copy of his letter of the 8th ultimo, and of the papers which show the action taken thereon; and such course might be followed after the papers have been brought under the notice of the Colonial Treasurer, by whom the liquor in question was described (in answer to a question in the Assembly by Mr. Farnell, on the 9th May last), as having been imported from Germany (*vide* page 4 of the return).

A.C.F.

Approved.—

Approved.—T.M.S., 31/7/94. The Under Secretary for Finance and Trade.—T.E.M'N. (for U.S.), B.C., 3/8/94. The Collector of Customs.—F.K., 6/8/94.

The answer to question No. 7 by the Treasurer was, I think, perfectly correct. The vessels reported from Hamburg; there is nothing in the masters' reports to show that the spirit was the produce of Belgium, nor that the packages containing the spirit were transhipped.—J.P., 7/8/94. The Under Secretary for Finance and Trade.

These papers might now be returned to the Department of Justice.—F.K., 8/8/94. Approved.—G.H.R., 9/8/94. The Under Secretary of Justice.—F.K., 9/8/94.

Minute by The Under Secretary of Justice.

Subject:—Complaint of the German Consul-General respecting statements made that certain adulterated spirit was imported from Germany.

17 August, 1894.

SUBMITTED in reference to my minutes of 18th and 30th ultimo, the attention of the Minister is invited to the report of the Collector of Customs, dated 7th instant, in which it is contended that the answer given by Mr. See was perfectly correct.

Mr. See's reply was in these terms:—"A quantity of spirit recently imported from Germany was found to be injurious to health, and a portion of the spirit has been destroyed. The balance has been re-exported to the place of shipment." It is pointed out, however, that in a report of the 5th May, 1893, the following statement was made by Inspector Lenthall: "There were twelve quarter casks per 'Erlanger,' and twenty-five per 'Chemnitz,' which, I am informed at the Custom House, have been re-shipped to Antwerp."

The Collector of Customs states in his report, that "the vessels reported from Hamburg, and there is nothing in the masters' reports to show that the spirit was the produce of Belgium, nor that the packages containing the spirit were transhipped," but it is thought, especially in view of the representations made by the German Consul-General, that there may be some records or entries in the Custom House which would show whether the consignment was made from Antwerp, and whether it was re-consigned to that place. The question as to whether the spirit was, or was not, a German importation, is evidently regarded by the Consul-General of Germany as a matter of considerable importance, and it appears desirable to ascertain definitely, if possible, whether the spirit was an export from Antwerp.

It is suggested, therefore, that a further report from the Collector of Customs be obtained.

A.C.F.

Approved.—A.J.G., 18/8/94. The Under Secretary for Finance and Trade.—T.E.M'N. (for U.S.), B.C., 21/8/94. The Collector of Customs.—F.K., 22/8/94.

Report from The Collector of Customs.

Custom House, Sydney, 25 August, 1894.

I do not know that I have anything to add to my remarks of 7th August.

There is nothing in the official reports or papers of the importing ships to prove the origin of the spirit. It may have been a French, German, or Belgian spirit. The place of shipment does not determine the quality or character of the article shipped.

Imports from Great Britain consist of mixed cargoes; part may be from Germany, France, Belgium, &c. In fact, large quantities of goods imported to this Colony from London are marked "made in Germany," and such goods appear in our statistics as British goods.

The practice is to enter goods from the port of clearance, without reference to the place of production, thus the importation of brandy and geneva for 1893 is returned as—193,667 gallons from Great Britain; 96,218 gallons from Germany; 2,979 gallons from France; 16,742 gallons from Belgium.

It is well known that brandy and geneva are not produced in England, and that spirits are generally carried to England from the continent for transshipment, but when they are entered in this Colony—good or bad—Great Britain is, from an official point of view, the place of exportation. This, I assume, was the meaning intended to be conveyed by the reply of the Treasurer on the 9th May to Mr. Farnell.

We have evidence that the spirit in question was shipped at Antwerp for Hamburg, and was then shipped, or perhaps transhipped, to a vessel cleared for Sydney. We have also evidence that part of the spirit was re-shipped from Sydney to Antwerp by a ship cleared for Hamburg, *via* Singapore.

JAMES POWELL,

Collector of Customs.

Note.—

The "Chemnitz," reported 10th March, 1893, from Hamburg, *via* Melbourne, with side-notes on the manifest, showing cargo from Hamburg and Antwerp.

The "Erlangen," reported 25th November, 1893, from Hamburg, *via* Melbourne, with side-notes on manifest, showing cargo from Hamburg and Antwerp.

The "Erlangen" cleared outward at Sydney for Hamburg, *via* Singapore, with cargo for Hamburg, Genoa, Antwerp, Bremen, and Singapore.

Entries were passed by J. L. Simon for twenty-five casks brandy on 10th March, 1893, ex "Chemnitz" from Hamburg.

Entries were passed by J. L. Simon for twelve casks brandy on 25th November, 1892, ex "Erlangen" (no port named). Outward entries were passed by J. L. Simon on 3rd May, 1893, for shipment for Antwerp.

O		
1096	10 qr. casks	}
D		
1234	19 qr. casks	Brandy.

The explanation of the Collector of Customs might be referred for the information of the Minister of Justice.—F.K., 27/8/94. Approved.—G. H. REID, 27/8/94. The Under Secretary of Justice.—F.K., 27/8/94. Submitted.

Submitted. From the within report of the Collector of Customs, dated 25th instant, it would appear that his contention that the spirit was imported from Germany is technically correct, as the vessels in which it was brought cleared from Hamburg and touched at Melbourne only, and, according to the usual official custom, all goods so received are regarded as importations from Germany, irrespective of the fact that they may have been consigned to this Colony from some other country. The German Consul-General, presumably unaware of the official interpretation placed upon the words "imported from Germany," naturally, and it is thought justly, asks that the imputation conveyed according to the usual interpretation placed upon the use of such words, might be removed, and that the facts as known should be fully represented. There appears to be no doubt from the facts disclosed in these papers that the spirit was consigned to this Colony from Antwerp, *via* Hamburg, and was re-shipped back to Antwerp. Except in official circles, under the practice prevailing at the Custom House, it would therefore be regarded as an importation from Belgium, although it does not necessarily follow that the spirit had been made in that country. The facts that have now been ascertained are sufficient to enable a suitable explanation to be forwarded to the German Consul-General, and the action suggested in my minute of 30th ultimo, approved of by the late Minister, might be taken. As the matter is, however, one affecting the interests of a foreign nation, the Minister may perhaps desire that the papers should be returned to the Chief Secretary for such action as he may deem advisable in regard to carrying out the Consul-General's wishes.—A.C.F., 31/8/94.

Approved. Inform Consul-General of action.—A.J.G., 14/9/94. The Principal Under Secretary.—A.C.F., B.C., 18/9/94.

The Consul-General for Germany to The Chief Secretary.

[*Translation.*]

Monsieur le Ministre,

Sydney, 11 September, 1894.

In my letter, dated 8th June last, I directed myself to the Hon. Sir George Dibbs, to obtain redress for an unjustified attack upon the German trade.

I shall be grateful if you will give me some information with regard to this matter.

I have, &c.,

A. L. PELLD RAM,

Consul-General for Germany.

The former communication herein referred to was sent to the Department of Justice on the 4th July, and has not since been returned to this Department.—C.W., 18/9/94. Approved.—J.N.B., 18/9/94. The Under Secretary of Justice.—C.W. (Principal Under Secretary), B.C., 19/9/94. The papers referred to were returned to the Chief Secretary's Department on the 19th instant.—A.C.F., B.C., 21/9/94. The Principal Under Secretary.

The Under Secretary of Justice to The Consul-General for Germany.

Sir,

Department of Justice, Sydney, 18 September, 1894.

Referring to your letter of the 8th June last, addressed to the late Premier, Sir George Dibbs, in which you draw attention to certain statements published in a Parliamentary paper relating to adulterated liquors, I have the honor, by direction of the Minister of Justice, to inform you that necessary inquiries have been made into the matter by this Department, and the papers have now been returned to the Chief Secretary, from whom you will, no doubt, receive a further communication in due course.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

The Principal Under Secretary to The Consul-General for Germany.

Sir,

Chief Secretary's Office, Sydney, 30 October, 1894.

In reference to your communications of the 8th June and 11th ultimo, seeking reparation in regard to erroneous statements appearing in a printed document recently laid before Parliament, to the effect that certain spirits which had been pronounced by the Government Analyst to be unfit for human consumption had been imported from Germany, I am directed by the Chief Secretary to inform you that, from inquiries made, it has been ascertained that the liquor in question was consigned to Sydney from Antwerp, *via* Hamburg. It may, perhaps, be explained that it is the practice of the Custom authorities to enter goods from the port of clearance, without reference to the place of production; and in the present instance there was no evidence in the ship's papers that the spirit was the produce of Belgium.

2. I am, at the same time, desired to convey to you an expression of regret for the unfortunate circumstance, and to assure you that the necessary steps will be taken to place the true facts of the case before Parliament.

I have, &c.,

CRITCHETT WALKER,

Principal Under Secretary.

1894.

No. 1.

Minute by The Collector of Customs.

Custom House, Sydney, 5 June, 1894.

It is very much to be regretted that the subject referred to in the letter of the Under Secretary, Department of Justice, and the papers therewith, was not at an earlier stage referred to the Honorable the Treasurer.

I approach the task now imposed upon me with very much deference for the opinions already given by officers of the Government; and in putting my own view of the matter before you, I wish it to be understood that I do so, desiring only to express my honest convictions on the subject.

The present purpose is, I understand, to amend the Customs Regulation Act, with a view to prevent the importation of adulterated liquor into this Colony, and the Treasurer is requested by the Parliamentary Draftsman to give further instructions for an amending Bill to provide that no liquor shall be taken out of bond unless certified as fit for human consumption.

I

I wish to show that any such amending Bill as that proposed is undesirable for a number of reasons, and that existing legislation affords sufficient protection to the public. I also wish to show that sufficient reason is not given for the harsh interference with trade such an amending Bill would inflict.

In the first place I call your attention to the report of "The Intoxicating Drink Inquiry Commission" of 1887, and the evidence taken at that time.

Mr. Watt, Government Analyst, stated, that in no case had he ever been able to recommend a prosecution for adulteration; that fusel oil is a natural part of spirits, and therefore cannot be considered an adulterant.

Mr. Fosbery, Inspector-General of Police, said that immense numbers of samples had been taken under all sorts of circumstances, having been purchased by the Inspector where it was supposed the lowest class of liquors would be sold; that the Government Analyst had carefully examined them, but (Mr. Fosbery thought) not in one instance had he found any deleterious ingredients such as would warrant a prosecution under the law.

I also quote from the evidence I gave before the Commission in answer to a question by the Chairman: "I would suggest, however, that any steps which might be taken at the outset, that is, at the landing of the spirits, would be altogether ineffective, because they might be dealt with by admixture. For instance, after the duty has been paid any effort to ascertain the maturity or wholesomeness of the spirits would be set aside unless the test were applied to the counter trade."

I quote also from evidence given by the late Sir John Robertson, K.C.M.G., in reply to a question by the Chairman: "I would allow no liquor to be sold retail unless it was wholesome. I would not care whether because it was new, or from any other reason. I think no liquor that is unwholesome ought to go into retail shops. Because—though, whether a man who can afford to buy, or whether he can afford it or not, does buy his brandy by the dozen, he is pretty sure to have it good, the man who takes it over the counter can have no guide at all, and the only control is the control of the licensed seller of the liquor."

If, as Mr. Fosbery stated, in his evidence, the samples purchased at the counter were found to be free from deleterious ingredients; and if, as Mr. Watt stated—"That in no case had he been able to recommend a prosecution for the adulterating of spirits,"—it seems to follow that no imported impure spirit had found its way into consumption.

With such evidence as this before me, I think it very undesirable to inflict upon the importers of spirit a Customs examination of every cask of spirit imported, an examination involving a distillation in every instance—if the presence of fusel oil in a greater or lesser degree is to be taken as a test of wholesomeness or fitness for consumption.

Pure wholesome spirit is imported as a rule, and the high-class reputation enjoyed by many well-known labels is a guarantee that the liquor bearing them is sound and fit for consumption. The importation of low class spirit is the exception; and even the low class spirit imported cannot be said to be unfit for human consumption in the ordinary sense in which the words are used. The low class spirits do not meet with a ready sale, and if such spirit is removed from bond for bottling, and the bottles are sent out with false corks and labels, the means of detection must be sought at the retailer's counter, and not at the Custom House.

Again, there is the difficulty of fixing a standard of purity or wholesomeness, and the question follows, if spirit is to be specially examined for wholesomeness, why should not the rule be applied to every class of goods, and especially foods.

It appears to me that the law is sufficient to meet the retailer, and it may be taken for granted that nothing manifestly injurious to health will be allowed to pass the Customs.

I have searched the Customs Acts of the Colonies, the British Customs Act, and various Customs publications, without finding any such legislation as that now recommended to be added to the Customs Regulation Act of New South Wales. It is true that the importation of tea lower than a certain standard is prohibited in Great Britain, Victoria, and Queensland. But, as I have more than once pointed out, no teas have been imported into New South Wales, which could be fairly pronounced to be unfit for human consumption.

Referring again to the papers herewith—the recommendation that the Customs Regulation Act be amended in order to prevent the importation of adulterated liquor, is supported only by the case of the "De Valmeale & Co." brandy.

The law as it is, enabled the Inspector-General of Police to enter a bonded store and to destroy twenty-five quarter casks of the "De Valmeale & Co." brandy, the Government Analyst having reported the liquor unfit for human consumption.

The action I have described was taken without referring to the Treasurer, and I fear the rather undue haste by which that action was marked, will lead to reprisals, and possibly a heavy claim upon the Government for loss and damages sustained.

JAMES POWELL,
Collector of Customs.

The Under Secretary for Finance and Trade.

For the reasons given by the Collector of Customs, I cannot agree with the recommendation from the Department of Justice.—J.S., 6/6/94. The Under Secretary of Justice.—F.K., 6/6/94.

No. 2.

Minute by The Under Secretary of Justice.

Department of Justice, Sydney, 27 June, 1894.

A COPY of the previous papers in connection with this matter is given in the printed Parliamentary return of 31st ultimo, which is enclosed.

The Collector of Customs, it will be seen, has reported strongly against the proposal that the Customs Regulation Act should be so amended as to provide that no liquor shall be taken out of bond unless certified as fit for human consumption. I desire to point out at once that the suggestion that the amendment of the law should take this form was made by the late Crown Solicitor (letter of 29/3/94), and by the Parliamentary Draftsman (letter of 7/5/94), but that my suggestion, as contained in minute of 10/4/94, was only that provision should be made by the Legislature to allow of liquors being examined in bond, and, if found injurious, there condemned.

In

In support of his objections, the Collector of Customs refers to the evidence given before the Intoxicating Drink Inquiry Commission of 1887 by himself, Mr. Watt (then Government Analyst), and Mr. Fosbery, Inspector-General of Police. His own evidence was to the effect that whatever steps might be taken at the landing of the spirits they would be altogether ineffective, because the spirits might be dealt with by admixture. For instance, "after the duty has been paid, any effort to ascertain the maturity or wholesomeness of the spirits would be set aside unless the test was applied to the counter trade." The effect of Mr. Watt's and Mr. Fosbery's evidence was, that although large numbers of samples of liquors had been taken under all sorts of circumstances, no such deleterious ingredients had been found in them as would warrant a prosecution.

The Collector also draws attention to the views expressed to the Commission by the late Sir John Robertson, who stated that he would allow no liquor to be sold retail unless it was wholesome, but that the only control is the control of the licensed seller of the liquor. In reply to the evidence in question, I would point out that although at the time (1887) the Commission conducted its inquiries there had been only two convictions (at Emmaville, in 1882) for the sale of adulterated liquors, since the "Licensing Act of 1882" came into force there have, during the years 1888-1893, been no less than twelve convictions for that offence. In a great number of cases the samples of liquors taken by the Licensing Inspectors, when examined by the Government Analyst for the various poisonous and deleterious substances mentioned in section 89 of the principal Licensing Act, and for methylated spirit, gave only negative results, though containing the usual traces of fusel oil and metals, but were, nevertheless, of inferior quality; and it will be noticed that Dr. MacLaurin, then Medical Adviser to the Government, stated to the Commission that he was told "some of the brandies and whiskies imported are merely white spirits, doctored up so as to represent brandy and whisky, that a great deal of adulteration takes place in them before they arrive here, and that nothing could be worse than such spirits."

The circumstances in connection with the recent prosecution of August Levy, trading as J. L. Simon, at 36, Pitt-street, Sydney (alluded to in the Parliamentary Return), seem to bear out Dr. MacLaurin's statement, and have brought prominently under notice the necessity for some further legislation to enable adulterated or deleterious liquors to be dealt with in bond. In that case the Licensing Inspector (having received certain information from an outside source) had first to purchase a quantity of the suspected liquor to show that it was kept for sale, and although the convicting Magistrate ordered 24 quarter-casks of liquor in Mr. Levy's possession in bond to be forfeited, and the Inspector accordingly seized the liquor and poured it into the gutter, there appears to be some doubt as to whether such seizure was legal. It is to remove any such doubt, and to make the system of detection much more simple and effective that fresh legislation is required. Referring to the matter in his report the Collector says "I fear the rather undue haste by which that action was marked will lead to reprisals, and possibly a heavy claim upon the Government for loss and damages sustained."

The existing law is, as stated by the Collector (par. 14), sufficient to reach the retailer, but I do not know the grounds upon which is based his statement that "it may be taken for granted that nothing manifestly injurious to health will be allowed to pass the Customs."

The Collector considers it very undesirable to inflict upon the importers of spirit a Customs examination of every cask of spirit imported—an examination involving a distillation in each instance, if the presence of fusel oil in a greater or lesser degree is to be taken as a test of wholesomeness or fitness for consumption.

He also thinks such interference with trade would be a harsh one.

I think the objections of the Collector—which the Minister will observe have been endorsed by the Colonial Treasurer—would to a great extent, if not entirely, be removed, if the amending legislation were limited to the object specified in my minute of 10th April, 1894, above referred to, viz., to enable liquors to be examined in bond, and if found injurious there condemned. This would not involve the examination of all liquors before leaving bond; and a discretion being allowed the inspecting officers, "the high-class reputation enjoyed by many well-known 'labels'" as alluded to in paragraph 12 of the Collector's report, would receive proper consideration. A.C.F.

Ascertain views of Chamber of Commerce.—A.J.G., 21/9/94.

No. 3.

The General Secretary, United Licensed Victuallers' Association of New South Wales, to The Under Secretary of Justice.

Sir,

City Bank Chambers, 164, Pitt-street, 16 August, 1894.

In view of the recent prosecutions for the adulteration of liquor, upon the validity of which the decision of the Supreme Court is to be obtained, I am instructed by the Committee of this Association to place before you the views of that body upon the general questions arising from the sale and importation of inferior liquors.

The facts connected with the case of the prosecution of Mr. August Levy, trading as Mr. J. L. Simon, at 36, Pitt-street, Sydney, are too well known to you to require any recapitulation at my hands. At the same time it is right to point out, that on different occasions whiskies and brandies have been imported into this Colony, invoiced at amounts varying, I understand, from 9d. to 2s. 6d. a gallon, and yet of such a character, that no information could be laid against the vendor under section 89 of the Licensing Act, 45 Vic. No. 14. These liquors have on analysis, proved to be compounded of white, silent, or neutral spirit, of a very low grade, and containing large quantities of the higher alcohols, known in commerce as fusel oil. In all the cases recently before the Courts the defendants have stated, privately, and not in evidence, since no evidence was taken, that they sold the liquor in exactly the same condition as that in which they purchased it, either from the brewers or from the bonded stores, excepting only the addition of a certain quantity of water. As these cases are more or less *sub judice*, and especially as there is no evidence to guide me, I will refrain from commenting in any way upon their respective merits. But the fact remains that low class liquors have been, and are constantly imported, a fact largely responsible for much of the drunkenness now existing.

It

It is with great satisfaction that this Association notes your opinion contained in minute No. 8 of the Parliamentary paper published in June of this year. Your statement that "the present system of testing and analysing liquors sold in public houses, does not go far enough. If possible, such liquor should be prevented from issuing from bond," is one meriting the support, not only of those apart from the trade who desire to prevent the increase of drunkenness, but of every brewer, wine and spirit merchant and licensed victualler interested in carrying on a legitimate, respectable trade. To prevent the importation of low grade liquors, is at once to nip the evil in the bud. No longer would it be possible for persons vending liquor to the prejudice of the purchaser to be able to assert that it was sold in a condition identically the same as when imported, excepting always the addition of water; and if effective steps could be taken in the direction indicated, it would be to the advantage of the trade no less than to the public consumer. It is impossible for me to argue upon the merits of the decision given by Mr. Addison, who dismissed all the informations laid under the Adulteration of Food Act of 1879, 42 Vic. No. 14, or of the expressed determination of Mr. Giles to convict a defendant summoned under the same Act. Consequently, this Association would be, in a sense, ill-advised, if it expressed an opinion as to future proceedings of a similar character, except in so far that the Association is clearly interested in advocating the sale of pure and genuine spirits.

It has been stated on authority which seems to be reliable—that is, a report of evidence taken before a Committee of the English Parliament,—that it is the practice in England to import inferior Belgium and German spirits, to mix them in bond with British spirits of a higher grade, and then to export the mixture to the Colonies and foreign countries. If such is the case it is apprehended by this Association that it becomes the duty of the Government here to take such steps as will prevent liquors of this character passing into consumption.

I would, therefore, point out that, wholly irrespective of whether the licensed victuallers who were summoned under the Adulteration of Food Act, mixed the spirits with the adulterations complained of, or whether they were purchased so mixed in bond, these facts remain:—

1. That liquor held to be injurious under section 89 of the Licensing Act has been imported, and, despite the efforts of the District Inspector, may still be imported without detection.
2. That raw, crude spirits, of a very inferior grade, and highly injurious to health, only not of such a character as to come under section 89, have been imported and analysed by Mr. Hamlet.

I beg, therefore, on behalf of the Association, to earnestly support your recommendation contained in No. 8 of the paper before mentioned, that such liquors should be prevented from issuing from bond.

To accomplish this in a complete and satisfactory manner two steps require to be taken:—

1. That the District Inspector of Police should have the power to take samples of all classes of liquor in bond; to have them analysed by the Government Analyst, Mr. Hamlet, and if found to be not genuine, that they should be reshipped to the port of exportation at the expense of the importer, or, if present legislation suffices, that they should be destroyed. Should the Supreme Court hold that the Adulteration of Food Act applies, the importers can be dealt with under that law.
2. It is a fact, admitted by most persons connected with the trade, that the general character of the liquor cannot be wholly and fully determined by an analysis. The analyst must resolve the liquid into its component chemical parts, but he cannot decide as to the general adaptability of the liquor for public consumption. This is the work of an expert, and I would certainly recommend that, not only should your suggestion be promptly put in force, but that an expert should be appointed with power to take samples and to taste liquors, in order that, should adulteration be found, the chain of evidence may be complete in the case of a prosecution, and the admission of adulterated and low grade liquors into this market may be prevented.

This course will have an ulterior beneficial effect in the case of the prosecution of a licensed victualler for selling adulterated liquor. By the evidence of the expert, the analyst, and the District Inspector, it could be proved, beyond the shadow of a doubt, that the liquor was adulterated between the period of importation and the sale to the consumer. It would not be difficult then to place the offence upon the right shoulders.

I trust that this matter will have the early attention of your Department, and I can assure you of the hearty co-operation of the Association in carrying out the suggestions you made.

I have, &c.,

F. BEVILL,

General Secretary, U.L.V.A.

Submitted in reference to my minute of 27th June last.—A.C.F., 17/8/94. May be acknowledged and put by pending decision of Supreme Court in case referred to.—A.J.G., 21/8/94.

No. 4.

The General Secretary, United Licensed Victuallers' Association of New South Wales, to The Under Secretary of Justice.

Sir,

City Bank Chambers, 164, Pitt-street, Sydney, 18 August, 1894.

Having completed my letter to you, dated 16th instant, it suggested itself to me that I might be able to find some valuable information connected with the question of the examination of liquors in bond, in the report of the Intoxicating Drink Inquiry of 1887. Having looked through the evidence on the subject of the quality of liquors imported, I beg to submit the following:—

In perusing the evidence given by Mr. J. Powell, Collector of Customs, I am led to the conclusion that he is decidedly antagonistic to any such examination in bond as is contemplated by you, and in proof of this he states in answer to question 3951:—"I would suggest, however, that any steps which might be taken at the outset—that is, at the landing of the spirits—would be altogether ineffective;" and in answer to question 3954, he considers that the examination of liquors in bond would be "a sort of theoretical tampering with the mercantile community." Also, in answer to question 3941, he says, "I do not think that any means at the command of the Customs could be put in motion to keep inferior spirits out of the market."

Evidently Mr. Powell was then, in 1887, under the impression that the spirits imported contained no adulterant worse than water (*see* question 3937). Yet he had previously admitted that most of the spirits imported into the Colony were "coloured white spirit." And in question 3939 he acknowledges that "a quantity of the spirit is very raw," and in question 3940, that it contains fusel oil.

Despite

Despite this qualified belief in the purity of imported liquors, in question 13046 he states that a quantity of white spirit, highly obscured, had been imported for the purposes of adulteration, and admits the truth of a statement made in my previous letter as to the mixing of German and British spirits in bond in England, by saying that "the Customs practice in England allows any alteration, comparatively speaking, to be made in spirits for exportation only"; and he subsequently states in question 13055 that "they allow white spirits to be imported into London to be got up, and to be exported here as brandy."

Notwithstanding these admissions as to the impurity of the liquor imported from England, and his acknowledgment in question 13067 that there would be an increase in the importation of such spirits, he is not prepared to recommend the testing of liquor in bond, and merely suggests an increase of duty.

For support of his theories, Mr. Powell may possibly fall back upon a suggestion made by Sir John Robertson, in question 8334, that "the only control is the control of the licensed seller of the liquor"; and also statements made by Mr. Watt—that noxious substances were not added to the samples of liquor he analysed (*see* question 4340); and in question 4351, that there had been "no cases" of adulteration which he could "recommend for prosecution."

In answer to the statements made by Mr. Powell, I may quote Sir John Robertson in question 8334, who said, "I should allow no liquor to be sold retail unless it was wholesome—I would not care whether it was because it was new, or from any other reason." I may also refer to the epitome of the evidence of Mr. Hamlet, page 87, where it is stated that the presence of fusel oil, even in small quantities, is deleterious. Dr. MacLaurin states, on page 88; "that he is told that some of the brandies and whiskies imported are merely white spirits doctored up so as to represent brandy and whisky; that a great deal of adulteration takes place in them before they arrive here, and that nothing could be worse than such spirits." These opinions are confirmed by J. M. Toohey, in the epitome of his evidence, where we read "he is certain that there is a great deal of adulteration carried on; that liquors are sold by some persons for less than they can be imported for; thinks these consist of white or silent spirit flavoured here; having been so informed by the travellers of the firms who carry on that trade; is of opinion that brewers and publicans do not use the essences for the manipulation of white spirit; that it is done by some of the wine and spirit merchants, or some other class of middleman" (*see* page 89). I might continue at greater length to give instances where witnesses affirmed their belief that raw, immature, and artificial liquors have been regularly imported, and sometimes adulterated, to the prejudice of the consumer. But it seems to me, knowing something of the extent to which adulteration is now carried, that the very remedy which Mr. Powell sought to apply, *viz.*, the raising of the duty, has been the very cause of the adulteration now so commonly practised. I must admit the evidence of Mr. Watt goes to show that, in the samples he had analysed, he found no deleterious ingredient, except fusel oil, but I am convinced that if Mr. Hamlet be now called upon for a report as to the adulteration of liquor he will show the existence of a very different state of things.

The raising of the duty from 10s. to 12s., in 1879, gave the first impetus to the manufacture of illicit spirit and the importation of the low-grade spirits frequently complained of in the evidence before the Commission of 1887; but when the duty was raised to 14s., in March, 1887, then the field was laid open to the manufacturers of illicit spirit and the exporters of those low-class German spirits now flooding the market. The very first evidence of this is the discovery by Mr. Powell of the obscured white spirit, of which special mention was made in his supplementary evidence.

To satisfy yourself of the truth of my statements, I would ask you to obtain from the proper authorities a return of the illicit spirit stills detected between the years 1887 and the present time, and also of the charges which have been laid for deleterious or adulterated liquor. These will show that Mr. Powell's panacea of raising the duty has led to wholesale infringement of the Act, and the duty collected on imported spirits had decreased in a very marked manner. It has been said in evidence that a good class of whisky can be bought for 5s. 6d. a gallon. If to that we add the duty, 14s., we get the cost price at 19s. 6d.; but if we take count of the number of nobblers that may be obtained from this quantity, even after the usual proportion of water has been added, the vendor in a threepenny bar does very little more than secure the return of his money. Hence, is it to be wondered at that unscrupulous firms in Belgium and Germany manufacture a raw, immature, and highly intoxicating liquor which can be sold here from 1s. to 2s. 6d. a gallon? Is it a matter of surprise that some licensed victuallers are induced to purchase and manipulate illicit spirit, out of which they can make a handsome profit?

It is the same in the liquor trade as in other lines. During these years of depression the public demand an article not of a given quality but costing a given reduced price to meet the times. So too, the licensed victualler is compelled by the high duty to demand, not a spirit of unimpeachable quality, but one which can be sold for 3d.

With the exception of those cases in which licensed victuallers purchase illicit spirit and manipulate it themselves, the demand for a three-penny spirit, to which I have alluded, is met by the importation of an abominable compound, passing under the name of whisky or brandy, but calculated to inflict a serious injury upon the regular consumer. I may be permitted to say that it is the duty of the Government to arrest the distribution of this inferior spirit at the starting point. Mr. Powell has admitted that the English Customs permit the manipulation of spirits in bond. That cannot be stopped by the Colonial Government. But when such spirits arrive and are within the jurisdiction of the Customs of this Colony, they should be allowed to go no further.

Hence, I maintain, as in my previous letter, that liquors should be tested in bond. I do not recommend that every package and every cask should be tested, but if a reasonable discretion be observed there will be no hardship to the importer of legitimate liquors, and the consumption of these noisome compounds will be arrested.

To prevent the existence of illicit stills the police should be entrusted with power to make necessary investigations and seizures—a right now possessed only by the Customs officers.

The evidence shows clearly the necessity of an expert, for it was stated in evidence that liquor containing an excess of fusel oil would, by keeping to maturity, become a wholesome, palatable, article. Only an expert could properly deal with such liquors.

Finally, although Mr. Powell appears to strongly object to testing liquors in bond, yet the very discovery which led to his being further examined by the Commission was made by applying such a test. In his evidence—question 13053—he said, "my attention was somewhat drawn to the subject by my previous examination before this Commission, and I felt that when these samples were brought under my notice it would be the duty of the Government to endeavour to stop any injurious effects arising from the

the importation of liquor of that description at the very threshold, rather than allow the spirit to go into consumption and attempt to deal with it afterwards. I think that the Government would lose considerably in revenue in the first place, and I also feel that a serious injury would be inflicted upon the consumer." In this action Mr. Powell clearly proves and admits the necessity of testing liquors in bond.

I trust you will pardon this somewhat long letter, but the importance of the subject must be my excuse. I hope the Government, in its wisdom, will see fit—

1. To permit of discretionary analyses of liquors in bond.
2. To appoint an expert.
3. To reduce the duty on spirits, and thus make both the manufacture of illicit spirit and the importation of inferior grades of liquor unprofitable speculations.

I have, &c.,

F. BEVILL,
Gen. Sec., U.L.V.A.

Submitted. In reference to the Minister's minute of 21st instant. The case alluded to therein has been decided by the Supreme Court. Copy report of same herewith.—A.C.F., 22/8/94.

[Enclosure]

(From the *Sydney Morning Herald*, Wednesday, August 22, 1894.)

LENTHALL V. SMITH.

Mr. E. BARTON, Q.C., and Mr. Healy, instructed by the Crown Solicitor, appeared for Inspector Lenthall, and moved to make absolute a *rule nisi* to set aside a decision of Mr. Addison, S.M., at the Central Police Court, in a matter in which Inspector Lenthall was informant and George Smith defendant. There was no appearance on behalf of the respondent. It appears that Smith, who is a publican carrying on business at the "Star Hotel," Elizabeth-street South, was charged upon an information laid under the 5th section of the Adulteration of Food and Drink Act, 42 Victoria No. 14, "for that on the 10th May last he did to the prejudice of the purchaser sell an article of drink which was not of the nature, substance, or quality of the article demanded by such purchaser, to wit, whisky." It was admitted at the hearing that defendant was a licensed publican, and it was contended on his behalf that, having regard to the Licensing Act of 1882, 45 Vic. No. 14, its preamble, and also sections 89, 90, and 19, the Act under which the information had been laid was repealed either expressly or by implication, and that for any such cause of complaint against a licensed publican express provision had been made under the said Licensing Act. It was further contended that the inconvenience or incongruity of keeping two Acts in force in respect of the same kind of offence as applied to licensed publicans justified the conclusion that one impliedly repealed the other. Another objection advanced was that the information was bad, inasmuch as it did not disclose the name of the purchaser, and that if Inspector Lenthall was the person who purchased the article of drink he was not a purchaser within the meaning of section 5 of the Act 42 Vic. No. 14, and that whisky is not a drink within the meaning of that Act. In reply, it was contended by counsel for the informant that the Licensing Act of 1882 in no way affected the case against the defendant, that he could have been proceeded against either under that Act or the Act 42 Vic. No. 14, but inasmuch as a difficulty might beset the prosecution in proving that the liquor in question had been "knowingly sold" under the Licensing Act, the case should proceed against the defendant under the Act 42 Vic. No. 14, section 5, and that a licensed publican could be prosecuted under the last-mentioned Act, the Licensing Act in no way affecting or repealing the Act 42 Vic. No. 14. 2. That whisky is an article of drink within the meaning of the last-mentioned Act. 3. That it was not necessary to nominate the purchaser, that being a matter for evidence. 4. That Inspector Lenthall was a purchaser within the meaning of section 5 of the Act 42 Victoria No. 14. Mr. Addison did not go into evidence in the matter, and, after hearing counsel, he dismissed the case on the ground that he considered the information should properly have been laid under the Licensing Act of 1882, 45 Victoria No. 14, and also that in any case the information was bad, as it failed to disclose the name of the purchaser. The question for the consideration of the Court was whether this determination was erroneous in point of law.

Mr. Healy said that the 5th section of the Adulteration of Food and Drink Act, 42 Vic. No. 14, provided that every person who shall, to the prejudice of the purchaser, sell any drug or other article of food or drink which is not in the nature, substance, or quality of the drug or article demanded by the purchaser, shall be liable to a penalty not exceeding £20. Under the 6th section of that Act the onus was thrown upon the defendant to show that he knew nothing about the adulteration; but under the 89th section of the Licensing Act 45 Vic. No. 14 the onus of showing that the defendant knowingly sells the adulterated article was thrown upon the informant. That section was as follows: "Every person who knowingly sells or keeps or exposes for sale any liquor mixed with any deleterious ingredient—that is to say, cocculus indicus, coppers, opium, Indian hemp, strychnine, tobacco, darnel seed, extract of logwood, salts of zinc or lead, alum, or any extract or compound of any of such ingredients, or any other ingredients injurious to health, shall be liable for a first offence to a penalty of not less than £10 nor more than £50," &c. He referred the Bench to the English case of *Webb v. Knight*, 2 L.R. Q.B.D., page 530. The appellant in that case was a publican who was convicted under the "Sale of Food and Drugs Act of 1875" for "selling to the prejudice of the purchaser a pint of gin which was not of the nature, substance and quality of the article demanded by such purchaser." The appellant said that he had gin at 2s. and 1s. 4d. per pint. The purchaser bought a pint at the latter price. On analysis the gin was found to contain 43.15 per cent. of water, or 43.15 below proof, but the mixture was not injurious to health. The magistrate held that there was no recognised standard of alcoholic strength for gin, but that it varied from proof to 20 under proof. The appeal Court held that whether the mixture in question was what a purchaser buying gin without any further description would reasonably expect to receive, was a question of fact for the magistrate, and that there was sufficient evidence to justify the conviction. Judgment was therefore given for the respondent. The 71st section of the Licensing Act provided, "All the provisions of the Act 14 Victoria No. 4, intitled 'An Act to prevent the Adulteration of Malt Liquors,' and so much of the Act 42 Victoria No. 14, intitled 'An Act to prevent the Adulteration of Articles of Food and Drink and the Sale of Certain Liquors Injurious to Health,' as relate or are applicable to liquor [as defined by this Act shall apply to brewers and spirit merchants licensed under this Act." That section, therefore, left publicans out, and if an informant was obliged to proceed under section 89 of the Licensing Act, and prove that the defendant knowingly committed the offence, great difficulty would be thrown in the way of prosecutions of this kind. He submitted that the two Acts might well be read together, and that the magistrate's decision was erroneous.

The Chief Justice, in delivering the judgment of the Court, said he was of opinion that the magistrate ought to have heard the case. It appeared to him that the offences provided for by the 5th section of the Act 42 Vic. No. 14 (Adulteration of Food and Drink Act), and those provided for by the 89th section of the Act 45 Vic. No. 14 (the Licensing Act of 1882), were entirely different. The 5th section of the first-named Act did not provide at all, or contemplate, that the articles to be sold should be deleterious to health, though there were other sections of the Act which did. For instance, in the 1st and 8th sections, as in the case of the Licensing Act, it was the person knowingly doing the thing which was injurious to health who was liable to punishment; but under the 5th section if a person sold to a purchaser an article which was not the article which the purchaser wished to buy, it then became a question for the magistrate whether or not it was the article demanded by the purchaser. The magistrate must hear the case and decide whether if a man asked for whisky and got half whisky and half water it was not a breach of the 5th section. Then the 6th section of the same Act provided that the person proceeded against might show that he did not know, and could not by the exercise of reasonable diligence have discovered that the article sold was not of the nature, substance, or quality of the article demanded; and if the magistrate, after hearing the evidence, was of the same opinion, he might dismiss the information. The 89th section of the Licensing Act was of a different nature altogether, and provided that a person who knowingly sold or kept or exposed for sale any liquor mixed with deleterious ingredients injurious to health, should be liable to punishment, while the 5th section of the Adulteration of Food and Drink Act merely provides for something which was to the prejudice of the purchaser, though not necessarily injurious to health. The two Acts might well stand together. The magistrate also thought that the information was faulty inasmuch as it did not contain the name of the informant; but the Court did not think that ground justified the magistrate in refusing to hear the case. The information, in his opinion, complied entirely with the Act, and although it might have been better to show the name of the purchaser, he saw nothing in the Act that necessitated

7

necessitated it. As to the 71st section of the Licensing Act, he did not think that affected the case. It might have been thought that brewers and spirit merchants did not come within the Adulteration of Food and Drink Act, 42 Vic. No. 14, and that the 71st section was passed for the purpose of making it clear that they were intended to be brought within the operation of that Act. The special case must be sent back with the opinion of the Court that the determination of the magistrate was erroneous in point of law, and that he must hear and determine the case; respondent Smith to pay the costs.

Order accordingly.

No. 5.

The Under Secretary of Justice to The General Secretary, United Licensed Victuallers' Association of New South Wales.

Sir,

Department of Justice, Sydney, 22 August, 1894.

I have the honor, by direction of the Minister of Justice, to acknowledge receipt of your letter of the 16th instant, in which you convey the views of the United Licensed Victuallers' Association with regard to general questions arising in connection with the importation and sale of inferior liquors.

I have also to acknowledge the receipt this day of your letter of the 18th instant, further respecting the same subject.

I have, &c.,

ARCH. C. FRASER,
Under Secretary.

No. 6.

The General Secretary, United Licensed Victuallers' Association of New South Wales to The Under Secretary of Justice.

Sir,

City Bank Chambers, 164 Pitt-street, Sydney, 22 August, 1894.

I learn by the press reports that the case of *Lenthall v. Smith*, in which District Inspector Lenthall appealed against the decision of Mr. Addison, S.M., to the effect that information could not be laid under the "Adulteration of Food Act" against licensed victuallers, has been decided against the decision of the S.M. Under these circumstances the cases will be heard, and from what I know of the evidence to be adduced it is almost certain that the defendants will be fined. They all proclaim that they sold the liquor in the same condition as that in which they bought it—some from bond direct. Whether this statement be true or not, there is every probability that some licensed victuallers may purchase artificial German spirit in bond, and, while selling it actually in the condition in which they purchased it, may have to furnish samples, on which they will suffer conviction. No one attempts to deny that this artificial low grade spirit is imported, and yet it is to be allowed to leave the Customs without inspection, and a perfectly honest licensed victualler, believing that he has a genuine liquor, may be fined. Or a wine and spirit merchant may purchase such artificial spirit and sell the same untouched to his retail customers who will be fined. Is it not an evident injustice to the honest licensed victualler that he should run the risk of being fined for selling artificial spirit when the fault really lies at the door of the Customs? The facts herein set forth seem to me to point most conclusively to the necessity for appointing an expert and the testing of doubtful liquors before they are taken from bond.

I would also call your attention to the discovery of another illicit still at Port Hacking—no doubt one of the sources whence much of the injurious liquor is obtained.

I am, &c.,

F. BEVILL,

Gen. Sec., U.L.V.A.

Submitted,—In reference to enclosed letter from Mr. Bevill, of 18th instant.—A.C.F., 28/8/94.

The Under Secretary of Justice to The Secretary to the Chamber of Commerce, Sydney.

Sir,

Department of Justice, Sydney, 25 September, 1894.

I have the honor, by direction of the Minister of Justice, to forward, for the information of the Chamber of Commerce, the enclosed copy of the Parliamentary Returns respecting (a)* "Adulterated Liquors now or recently in Bond," and (b)† "The Val Demeale & Co. Brandy," which, however, do not include all the correspondence which has taken place relating to the question of the adulteration of liquor.

It has been proposed that the law should be amended so as to allow of liquor being examined in bond when thought advisable, and, if found to be injurious, there condemned.

The Minister will be glad to be favoured with the views of the Chamber of Commerce upon the proposal referred to, and, in fact, with regard to the form that an amendment of the laws respecting the sale of adulterated liquors generally should take.

I have, &c.,

ARCH. C. FRASER,

Under Secretary.

* (a) Ordered by the Legislative Assembly to be printed, 31st May, 1894. † (b) Ordered by the Legislative Assembly to be printed, 19th April, 1894.

No. 9.

No. 9.

Minute by The Under Secretary of Justice.

Department of Justice, Sydney, 5 October, 1894.

THE enclosed copy of the "Foreign and Colonial Importer," of 2nd April, 1894, has been left with me by Mr. Inspector Lenthall, and in submitting it to the Minister, I beg to draw his attention to the prices quoted therein for various low-grade spirits.

On page 4, plain spirit, 68 o.p. (f.o.b., Hamburg), is quoted at from 1s. ½d. to 1s. 6¼d. per liquid gallon. The prices of the flavouring essences are given on page 7; for instance, Scotch whisky, 3s. per lb.; French brandy, 3s. per lb.; finest Jamaica rum, 1s. 8d. per lb.

On page 4, various prices are quoted for German spirits, e.g., brandy, in hogsheads, from 11d. (1 to 2 o.p.) to 1s. 2½d. (45 o.p.) per gallon; original French hogsheads, 1½d. per gallon extra; quarter casks, 2d.; whisky (10 o.p.) in imitated original casks of about 55 Imperial gallons, 1s. 1½d. per gallon; imitation Jamaica rum (35 to 40 o.p.) in barrels of about 20 Imperial gallons, 1s. 4d. per gallon.

The fact that liquor of the above nature may be imported into this Colony goes to show the necessity for the suggested legislation to empower the examination of liquor in bond, and its condemnation if found deleterious.

A.C.F.

Seen. Place with papers, pending reply from Chamber of Commerce.—A.J.G., 13/10/94.

[Enclosure.]

EXTRACT from the Supplement to the "Foreign and Colonial Importer," 2nd April, 1894, London.

Plain Spirit, f.o.b., Hamburg.

		s.	d.
No. 1—Extra fine	68 o.p. per liquid gallon	1	6¼
No. 2—Extra fine czonised	68 o.p. "	1	5
No. 3—Purest rectified	68 o.p. "	1	3½

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ADULTERATED LIQUORS NOW OR RECENTLY IN BOND.
(FURTHER RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 27 March, 1895.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 21st March, 1895, That there be laid upon the Table of this House,—

“Copies of all Papers in the Department of Justice relating to adulterated liquors now or recently in bond, subsequent to those ordered to be printed by the Legislative Assembly on 1st November, 1894.”

(*Mr. James Morgan.*)

SCHEDULE.

NO.		PAGE.
1.	Minutes of the Under Secretary of Justice, with minute thereon. 23 January and 4 February, 1895	1
2.	The Secretary to the Chamber of Commerce to the Minister of Justice. 1 February, 1895	2
3.	The Under Secretary of Justice to the Secretary to the Chamber of Commerce. 12 March, 1895	2
4.	Extract from Votes and Proceedings of the Legislative Assembly, with minutes thereon. 6 March, 1895	3
5.	The Under Secretary of Justice to the Crown Solicitor. 12 March, 1895	3

No. 1.

Minutes of The Under Secretary of Justice.

Submitted.

Department of Justice, Sydney, 23 January, 1895.

I OBSERVE from reports in last week's papers that a deputation waited on the Colonial Treasurer on the 10th instant to draw his attention to the recent importations of imitation liquors, and to induce him to ask Parliament to so alter the Customs Regulation Act as to permit of the examination and testing of doubtful liquors in bond.

As the matter of the prohibition of the importation of deleterious liquor into the Colony has for some time past been engaging the attention of the Minister of Justice (as the Minister charged with the administration of the Licensing Acts), and various points in connection therewith fully discussed, it would probably be well to bring the papers on the subject under the notice of the Treasurer.

A copy of the papers to 13th October, 1894, is given in the parliamentary returns of 31st May, 1894, and 1st November, 1894, enclosed.

On the 25th September last the Minister invited the Chamber of Commerce to favour him with their views upon the proposal that the law should be amended so as to allow of liquor being examined in bond, when thought advisable, and, if found to be injurious, there condemned. They were also asked for their views as to the form that an amendment of the laws respecting the sale of adulterated liquors generally should take.

No reply has yet been received from the Chamber.

A.C.F.

517—

[770 copies—Approximate Cost of Printing (labour and material), £2 8s. 6d.]

4

4 February, 1895.

SINCE writing the above a reply has been received from the Chamber of Commerce, and is enclosed. It contains a number of valuable suggestions as to the direction in which the law with regard to the importation, sale, and distillation of liquor might be amended, and the Chamber might be thanked for them.

The main point, however, on which the views of the Chamber were invited was "whether the law should be amended so as to allow of liquor being examined in bond, when thought advisable, and, if found to be injurious, there condemned"; and as this question has not been dealt with in their reply, the Chamber might, perhaps, be again asked for their views upon it.

As this matter has been dealt with by this department up to the present, the reference to the Chamber of Commerce might also be made by this department before the papers are referred to the Treasury, as suggested in the earlier part of this minute.

It may be pointed out that with most of the matters referred to in the letter from the Chamber of Commerce this department cannot deal—the only question with which it is concerned (and the one on which this correspondence commenced) being whether legislative authority should be asked for the examination of liquor in bond, with a view to its being there condemned if found injurious—such authority being considered necessary to enable the provisions of the "Licensing Acts, 1882-3" (with the administration of which this department is charged), in regard to the prevention of sale of injurious liquors, to be effectively enforced.

The department has not made any suggestions as to an amendment of the law with regard to the importation and sale of liquor which is of very inferior quality, but not absolutely unfit for human consumption. Under certain circumstances prosecutions for the sale of such liquors are instituted under the "Adulteration of Food and Drink Act," 42 Vic. No. 14.

A.C.F.

Minute of 4 Feb. appd.—A.J.G., 9/3/95.

No. 2.

The Secretary, Chamber of Commerce, to The Minister of Justice.

Sir, Sydney Chamber of Commerce, Sydney, 1 February, 1895.

Referring to your letter of 25th September last, relative to the proposed amendment of the law so as to allow of liquor being examined in bond when thought advisable, and, if found to be injurious, there condemned, and asking generally the views of the Chamber on the subject of the sale of adulterated liquors, I have now the honor, by direction of the Committee of this Chamber, to inform you that, as the result of correspondence and discussion with the leading wholesale wine and spirit merchants, they have arrived at the following conclusions:—

- 1st. That relatively speaking the quantity of really injurious spirit *imported* is extremely small.
- 2nd. That with each advance in duty from 10s. to 12s. and then to 14s. per proof gallon, the quality of spirit imported necessarily declined, until at the present time much of that imported is inferior, while the revenue has not increased in proportion to the growth of the population.
- 3rd. That the high duty is a distinct incentive to illicit distillation.

The Committee beg, therefore, respectfully, but forcibly, to recommend,—

- (a) That the duty be reduced to 10s. per proof gallon.
- (b) That illicit distillation should be punishable by *fine and imprisonment*.
- (c) That a substantial portion of the fine should be given to the servants of the Government who discover the stills and secure the conviction of the offenders.
- (d) That all persons who import wines and spirits for sale and sell them (even in bond only) should hold a £30 license.
- (e) That it should be compulsory for bonded warehouse-keepers to place on their certificates the actual strength of spirits, as well as—in the case of under-proof spirits—the mere minimum strength on which duty may be paid.
- (f) That increased supervision over vineyard production should be exercised—some so-called wines being so fortified as to be nearer spirits than wine.
- (g) That power should be given for duly authorised officers to sample liquors, and when liquor is found to be other than that covered by label, a conviction should follow without it being necessary to prove that the vendor had himself substituted or permitted others to substitute one spirit for another.

I have, &c.,

HENRY CHAS. MITCHELL,
Secretary.

No. 3.

The Under Secretary of Justice to The Secretary, Chamber of Commerce.

Sir, Department of Justice, Sydney, 12 March, 1895.

I have the honor, by direction of the Minister of Justice, to acknowledge receipt of your letter of the 1st ultimo, and to express his thanks to the Chamber of Commerce for the valuable suggestions made by them as to the direction in which the law with regard to the importation, sale, and distillation of liquor might be amended.

As, however, the main point on which the views of the Chamber were invited in my letter of the 25th September last, was "whether the law should be amended so as to allow of liquor being examined in bond, when thought advisable, and, if found to be injurious, there condemned," and as this point has not been dealt with in your reply, the Minister desires me to say that he will be glad if the Chamber will favour him with an expression of their opinion as to the advisableness of making such amendment.

I have, &c.,

ARCH. C. FRASER,
Under Secretary.

No. 4.

No. 4.

Extract from Votes and Proceedings of the Legislative Assembly.

Question No. 11, Wednesday, 6 March, 1895.

(11.) DELETERIOUS LIQUORS PASSING THROUGH THE CUSTOM HOUSE:—DR. ROSS *asked* THE COLONIAL TREASURER,—Will he see that steps are taken to have all alleged deleterious liquors passing through the Custom House duly tested and reported on before allowing such liquors to go into general consumption?

Mr. Reid answered,—All imported spirit is tested at the Custom House. Samples of liquor found to be deleterious are sent to the Government Analyst for report. Liquor declared to be unfit for human consumption is not delivered from bond for home use.

May be placed with papers.—A.C.F., 7/3/95.

Ask Crown Solicitor when he will be able to furnish advising *re* power of Collector of Customs to prevent entry of inferior (but not deleterious) liquor for home consumption, which advising was asked for in my B.C. of 29th November last.—A.C.F., 12/3/95.

No. 5.

The Under Secretary of Justice to The Crown Solicitor.

Sir,

Department of Justice, Sydney, 12 March, 1895.

I am directed by the Minister of Justice to invite your attention to my blank cover communication of the 29th November last, asking for your advising as to the power of the Collector of Customs to prevent the entry of inferior (but not deleterious) liquor for home consumption, and to ask you to be good enough to say when you will be able to supply the desired information.

I have, &c.,

ARCH. C. FRASER,
Under Secretary.

GLENTWORTH ADDISON,
Registrar, District Court.

1894.

(SECOND SESSION.)

NEW SOUTH WALES.

RULES OF THE SUPREME COURT.

(IN BANKRUPTCY JURISDICTION.)

 Presented to Parliament pursuant to the Act 51 Vic. No. 19, sec. 119.

In the Supreme Court of New South Wales, }
 in Bankruptcy. }

GENERAL RULE MADE PURSUANT TO SECTION 119 OF THE "BANKRUPTCY ACT," 1887.

Friday, the 8 day of June, 1894.

Bankrupt's Books.

EVERY Bankrupt in the Country Districts, if unable to personally deliver his books to the Official Assignee, shall, immediately after a sequestration order has been against him made, hand over to the nearest District Registrar in Bankruptcy all his books of accounts, vouchers, and other documents and writings relating to his Estate and dealings; and the said District Registrar shall receive the same on behalf of the Official Assignee, and shall give a receipt for all such books and papers lodged with him by the Bankrupt, specifying the same: such receipt shall be in duplicate, and such duplicate shall be signed by the Bankrupt as correct, and shall be forwarded by the District Registrar to the Official Assignee of the Estate.

The District Registrar shall make an entry in a book to be kept for that purpose showing the date of receipt of such books, the number and description of the said books, and the date when the same were forwarded to the Official Assignee.

FREDK. M. DARLEY, C.J.
 W. C. WINDEYER, J.
 J. GEO. LONG INNES, J.
 WILLIAM OWEN, J.

No. 1.

Memo. for The Inspector-General of Police.

I DESIRE to draw the attention of the Inspector-General of Police to the very peculiar developments in the case of the Queen v. Dean, in connection with the cross-examination by Mr. Meagher (of the firm of Crick and Meagher, who was defending the prisoner) of one of the principal witnesses for the Crown, named Gail.

Shortly, the facts elicited from Gail by Mr. Meagher on cross-examination are those shown in Mr. Wade's report attached. The prisoner himself, on cross-examination by me, showed that he was visited by Mr. Meagher at 4 o'clock on the afternoon of the 28th March. Two hours afterwards, it has been ascertained beyond all doubt that Mrs. Gail was present in Mr. Meagher's office,* and that the two of them together endeavoured to persuade two members of the Police Force to arrest Gail on what was merely a trumped-up charge, evidently with the intention of destroying his evidence.

With a view to sifting this matter to the bottom, and other peculiar circumstances which transpired during the hearing of the case against Dean in connection with Sergeant Sawtell's report, I asked for a report from the Inspector-General of Police, which I duly received. If this report of Sawtell and his subsequent recantation stood alone it would, in my mind, necessitate a most complete and searching investigation. But it does not stand alone.

A letter, of which the following is a copy

To Judge Windeyer,

Sir,

Just a line begging you to forgive me for belying my husband, George Dean. My mother made me stick to one thing. I done it, and I pray God to forgive me and let him off. I don't suppose that he will ever live with me again, but I will deserve all I get for trying to ruin him, for he was only cross when my mother was about. I neglected his house, but do let him free. You have judged him wrong. My conscience will not let me live like this.

I remain,

A wretched woman,

Mrs. GEORGE DEAN.

Tuesday, April 9th, '95.

has been forwarded to me as having been received by Mr. Justice Windeyer.

The following is a copy of the envelope:—

“George-street West, N.S.W. 4, Ap. 9, 95. (Penny stamp.) JUDGE WINDEYER, Court-house, Darlinghurst.”

On back,—

“Sydney, Apl. 9, 6.30 p.m., 95, 402.”

* Memo. for Inspector of Police.—The interview took place in the “Barleymow” public-house or a public-house.—J.H.W.

If this is genuine, it exculpates Dean; if it is a forgery, it is a still more conclusive proof of the underground and improper actions of someone who is endeavouring to improperly affect the administration of justice and the functions of the Executive in the prisoner's favour. I therefore desire that the Inspector-General of Police will use his utmost endeavours, both in the interests of the condemned and the administration of justice, to thoroughly sift this matter, and to obtain for me the fullest possible information connected with the case, and the antecedents, history, and character of both Mrs. Seymour and Mrs. Dean.

I have since been informed that the police have discovered the letter referred to to be a forgery and conspiracy; this, therefore, accentuates the necessity for a complete inquiry.

J. H. WANT, A.-G., 16/4/95.

No. 2.

Copy of Original Letter addressed to Judge Windeyer.

To Judge Windeyer,—
Sir,

Tuesday, April 9, /95.

Just a line, begging you to forgive me for belying my husband, George Dean. My mother made me stick to one thing. I done it, and I pray to God to forgive me and let him off. I don't suppose he will ever live with me again, but I will deserve all I get for trying to ruin him; for he was only cross when my mother was about. I neglected his home. But do let him free. You have judged him wrong. My conscience will not let me live like this.

I remain, a wretched woman,
MRS. GEORGE DEAN.

No. 3.

Copy of a Letter written by Mrs. Dean from dictation, taken with a view of testing her handwriting with the Letter sent.

To Judge Windeyer,—
Sir,

Tuesday, April 9, 1895.

Just a line, begging you to forgive me for belying my husband, George Dean. My mother made me stick to one thing. I done it, and I pray to God to forgive me and let him off. I don't suppose he will ever live with me again, but I will deserve all I get for trying to ruin him; for he was only cross when my mother was about. I neglected his home. But do let him free. You have judged him wrong. My conscious will not let me live like this.

I remain, a wretched woman,
MRS. GEORGE DEAN.

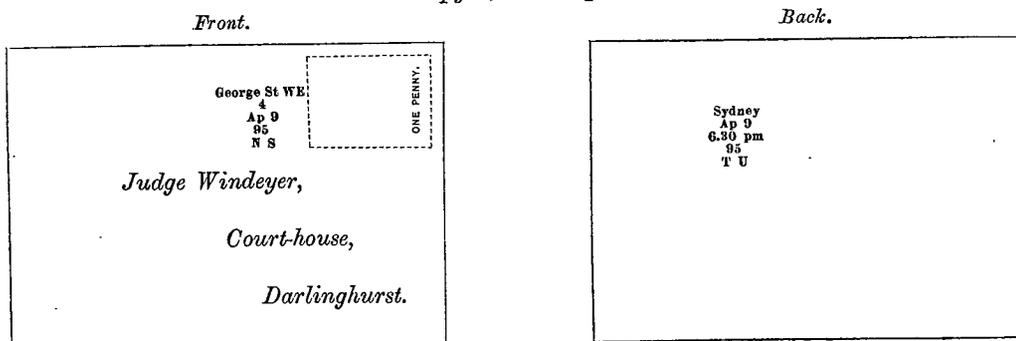

I, Mary Dean, beg to state that I have written no letter to His Honor Judge Windeyer about the conviction of George Dean. I did not write the letter now shown me by Inspector Cotter, nor authorise any other person to do so.

Sydney, 10/95.

MARY DEAN.

Witness—S. J. COTTER, Inspector of Police.

Copy of Envelope.

No. 4.

Regina v. Dean and Detective Sawtell's Report.

MEMO. TO THE ATTORNEY-GENERAL.

THE Attorney-General will remember that Sergeant Sawtell furnished two reports as to the character of Mrs. Dean and Mrs. Seymour. The reports were of such a nature that the Attorney-General, in opening the case to the Jury, practically admitted they were both women of bad reputation. From something I heard, I made an endeavour to see Sawtell about this report, but only succeeded in doing so this morning. The explanation he gave me then (to put it as mildly as possible) reflects such little credit on his skill as a policeman that I feel bound to put before you the results of my interview.

Although the report reads as if it was the result of full inquiry in the locality, it appears from Sawtell's own admissions to me that his information came from three persons only, viz., ex-Detective Williams, who left the Force under a cloud, and was reduced in grade owing to drink; two men, named Bancroft and Palmer, friends of each other, and who, as Sawtell knew on March 30th, had been in communication with Mr. Meagher, the solicitor, on this matter, and who refused to put their information in writing or sign their names to it. Sawtell made no reference to these tainted sources of evidence in his report of March 28th, but led us to infer that the police are his informants. As a fact, although

Mrs.

Mrs. Seymour has been thirteen years in Surry Hills, and would be known to the police if of criminal habits, Sawtell never asked the police a single question on these points till he was asked for a second report, and then he admits the police in that district cannot say anything against either of these women. Sergeant Perry, who lives in Paddington, and has known Surry Hills for thirty years, has not to this day been asked for information by Sawtell. He further admits that up to April 1st he had made no inquiries from any neighbours, but Bancroft and Palmer. These two men seemed to have laid a trap into which Sawtell has fallen, with an innocence that is inconsistent with his experience as a detective officer, and it is not hard to see why Mr. Crick asked in the Assembly last night for this Police report to be produced. Such carelessness is reprehensible in the youngest of policemen; but there are more serious matters for Sawtell to explain. He states, on March 28th, that Mrs. Seymour "is a well known pickpocket, and companion of Sarah Clifford." When explained it comes to this: Ex-constable Williams told him that *twelve years ago* Clifford received ten years for some offence, and Clifford remarked to Williams that Mrs. Seymour was smarter than she was. Clifford has been in gaol almost continuously during the last twelve years. Mrs. Seymour has not, at any time, been charged with any offence since 1867, as Sawtell himself finds by the records; and none of the police in her locality give her that reputation. Nobody has ever seen these two women in company. How he came to make the misrepresentation that she is a well-known pickpocket I cannot imagine.

As to the further statement that the house is "a rendezvous of Victorian criminals" he is unable to say more than this: That nine years ago two Victorian criminals came to this Colony, and the Victorian police said they might be at Mrs. Seymour's. Sawtell watched the house for these men during three nights, and never saw a sign of them.

He ends up this report by stating that Mrs. Dean is "well known in *most* of the bawdy-houses in Surry Hills." When pressed, he admits his informants are only Bancroft and Palmer, and that Palmer said he saw Mrs. Dean at McGregor's house once, but cannot say whether day or night. She has been seen to go to Madame Rose's, but not under compromising circumstances, and he was not told a word about *any other house*. And it is a remarkable commentary on this report that Mr. Meagher upon the trial never made reference to any house but Mrs. Rose's. Sergeant Sawtell has done three things which call for a full explanation:—

- (1.) He has omitted to inquire from the neighbours who would know of these things.
- (2.) He has concealed from those entitled to know the suspicious sources from which his information came.
- (3.) He has in several instances on material matters misrepresented such information as he did obtain.

Sawtell urges as an excuse that he was not called upon in the usual official manner to make a report; but he must have known full well, after what took place in the Police Court, why this information was sought, and I cannot see how a conscientious man can draw any distinction in the obligation he is under to make an honest report whether ordered officially or not.

C. G. WADE.

Chambers, 10/4/95.

No. 5.

Regina v. Dean, and Report of Constables concerning the arrest of Gail for bigamy.

THERE were certain circumstances attending the arrest of Gail that seemed to me to suggest that the steps were taken simply to damage Gail as a witness. Part of Dean's defence was to show that Gail was a man who would be likely to have put the poison in the lemon-syrup bottle on March 2nd. Dean admitted on cross-examination that he heard from his solicitor on March 28th that Gail was likely to be arrested. That same evening these police are asked to meet an unknown man, who turns out to be Dean's attorney. They then hear that the first wife (who obtained the divorce in 1892) wishes Gail to be arrested upon a highly technical breach of the law. In the face of these facts and of this extraordinary story about the poisoning in Gail's family the police never asked her a question. On April 1st I told Mr. Crick that the trial of Dean was fixed for April 4th, and on the night of April 2nd the police receive the warrant for Gail's arrest. He thus is under arrest at the time when he gives evidence without having had a chance of explaining his position. In spite of these facts, all savouring of pure malice, these two constables never informed the police of North Sydney of their intended action, although at the time of the arrest they passed the station close by; and I was unable to obtain this explanation which they have given until I had said to them that unless they told me the whole truth I should report them to the Inspector-General forthwith. There was such an apparent inclination to conceal the true state of affairs both from myself and the North Sydney Police (for which they offered no explanation) that, coupled with the other circumstances of this case, I came to the conclusion they knew more than they cared to tell.

Chambers, 10/4/95.

C. G. WADE.

I might add that this matter of Gail's arrest came out on cross-examination by Mr. Meagher. He admitted being in custody on the charge of bigamy, and explained, on re-examination, that his first wife had sued for a divorce—the rule *nisi* was granted; and he, supposing that it would be made absolute in six months, married nearly twelve months after, and has lived in the same place at North Sydney for two years or more.

No. 6.

Sergeant Sawtell's Report.

No. 3 Police Station, Sydney, 28 March, 1895.

Re the attached inquiry referring to the character and history of Mrs. Caroline Seymour, her daughter, Mrs. May Dean, and the man Thomas Jones mentioned in the case of attempted poisoning of Mrs. Dean at North Sydney, Sergeant J. E. Sawtell begs to report, that from inquiries he has been informed that Mrs. Seymour is a well-known pickpocket, and a companion of Sarah Clifford *alias* Fox, who is now serving a term for stealing from the person. Mrs. Seymour has lived in Riley-street and in Little Norton-street, Surry Hills, for the last thirteen years, and her house was the rendezvous of many of the Victorian criminals when visiting Sydney. No one seems to have ever seen the man Seymour, said to be her husband. The man Jones was a constant

constant lodger with Mrs. Seymour, and has been convicted in Sydney; also an ex-convict from West Australia; he is at present an inmate of the Liverpool Asylum for the destitute (No. 13 ward). He is well known to Superintendent Camphin, Detective John O'Sullivan, Detective Keating, also ex-Detective Phillip Williams. Mrs. Dean, *ne* Mary or May Seymour, is well known in most of the bawdy-houses in Surry Hills, being a frequent visitor at Madame Rose's brothel in Riley-street, opposite her mother's late residence, also at the house of Margaret M'Greggor, in Crown and High Holborn Streets—a fact apparently well known to the people in the neighbourhood. Mrs. Seymour and Mrs. Dean called on Mr. G. H. Townley, 423, Crown-street, chemist, on Sunday last and made a small purchase, which Mr. Townley cannot remember was the nature of at the present.

J. SAWTELL,
Sergeant.

No. 7.

Sergeant Sawtell's Report.

No. 3, Police Station, Sydney, 1 April, 1895.

Re the attached inquiry, Sergeant J. E. Sawtell begs to report that Mrs. Seymour's conviction for stealing is so obscured at the present that nothing definite can be said regarding it. Some of the neighbours say she has been convicted in Sydney, but cannot fix the date, or give any definite particulars of her case.

Mrs. Dean bears the reputation of being a frequent visitor at Madame Rose's brothel in Riley and Collins Streets; but those who could substantiate the facts declined to supply the required information. She is not known to any of the police in this division.

The sergeant has not been able to see Detective O'Sullivan yet, who may be able to throw some light on the matter, but will endeavour to see him to-day.

The sergeant has been informed that Mr. Meagher, the solicitor for the defence, has evidence of Mrs. Dean having received men at Mrs. M'Greggor's brothel in Crown-street, also as to the character of the house her mother, Mrs. Seymour, kept in Riley-street.

J. E. SAWTELL,
Sergeant.

James Brennan, Esq., Inspector.

Sergeant Sawtell's Report.

No. 3, Police Station, Sydney, 13 April, 1895.

Re the Attorney-General's minute on attached reports referring to the history of Mrs. Seymour and her daughter, Mrs. Dean,—

Sergeant J. E. Sawtell begs to further report that he is not conscious of having conveyed any discrepancy of impression when speaking to the Attorney-General on the matter, with the exception of the addition of M'Intyre's name being mentioned in the report, which the sergeant afterwards recalled to mind on referring to his notes.

When the sergeant saw Bancroft on the first occasion it appeared clear from what he said that he had known both Mrs. Seymour and her daughter for some years, and his statements being supported in a great measure by the man Palmer, "both apparently disconnected with the case," the sergeant relied upon their statements without further inquiry, and reported accordingly; but by the subsequent inquiry made the allegations made against Mrs. Seymour appeared to have been exaggerated, and those against Mrs. Dean to be simply rumour only.

Mrs. Mills, the wife of a grocer, living at the corner of Riley and Sophia Streets, states that she has known Mrs. Seymour for some fifteen years, and has watched her conduct in the training of her daughter, which was most careful and precise. She always looked upon Mrs. Seymour as a respectable woman.

Mrs. Graves states she has been in charge of Madame Rose's house for about eighteen months. Mrs. Seymour, at one time, took an active part in its management, but her daughter was never connected with the place from any immoral point of view whatever; she appeared to have been well brought up.

Nothing appears to be known against Mrs. Seymour by her most intimate acquaintances beyond that already admitted by her in her evidence.

None of the police at this station appear to know anything against Mrs. Seymour or her daughter, Mrs. Dean.

J. E. SAWTELL,
Sergeant.

Mr. Superintendent Read.

Forwarded to the Inspector-General of Police.—G. READ, Superintendent, 16/4/95.

Copy of a Letter from Mrs. Dean's Letter.

2, Little Collins-street, Surry Hills, 15 April, 1895.

ABOUT 1 p.m. three men came to the door. Mr. Johnston answered the door. They asked for Mrs. Dean. He asked them what was their business. They replied they came from the Crown Prosecutor. I then came to the door, and asked them did they want to see me. They said, "Are you Mrs. Dean?" I said, "Yes; what is your business?" They said, "We only wanted to see you."

MARY DEAN.
ROBERT JOHNSTON.

CENTRAL CRIMINAL COURT.

Cor. WINDEYER, J.
4th April, 1894.

REGINA *v.* GEORGE DEAN.

The ATTORNEY-GENERAL and Mr. WADE, for Crown.
Mr. MEAGHER, for Defence.

1st Count.—Administering poison to Mary Dean with intent to murder her.

2nd Count.—Causing poison to be taken by her with intent to murder her, on 4th March, 1895.

MARY DEAN:—I am the wife of the prisoner. Was married on 9th March, 1894. Before that I was living with my mother at Surry Hills. I knew prisoner eight months before marriage. He was in the habit of visiting me two or three times a week, both by day and night. He is master of one of the North Shore Ferry-boats. We began to live on unfriendly terms a month after marriage. It got worse. I was confined on 26th December, 1894. He never spoke to me for a week before it. The night before I was confined I told him I was going to be confined, and he went out of the house without speaking to me. About three weeks before my confinement I asked him would he change and be kind to me. He said, "No; he was tired of me, and would wait and see me over my trouble, and he would then leave me." Before this there had been no definite cause of quarrel, but it arose from his sulky disposition. Three days after my confinement he came to my bedside and said he was not the father of the child, and that I also had another to keep out of his money. There was no truth in either charge. My mother attended to me in my confinement, and afterwards. My mother made some beef-tea about a fortnight after it (about 12th January). She brought it to my bedside, and asked me to drink it. I tasted, and it had a most bitter taste. She tasted, and took it to the kitchen. I did not take it. About a week before the making of this tea I had some groats brought to me by my mother. I had about half-a-cup full out of the basin. Mother finished what was in the basin. I took it after 9 a.m., and we were both vomiting and purging all the day after taking it. We were both quite well before eating it. The prisoner was having his breakfast that morning in the house. He did not come regularly to see me after my confinement. He would come one day, and then not for a couple of days, and when he came he said most cruel things. A week after I was confined he came and said he was going to leave me, and packed his portmanteau to go. After taking the groats I had a burning pain in the pit of my stomach. Suffered from my eyes. Severe pain in my head and cramps in the feet. I had not noticed these symptoms before taking the groats. Prisoner went for Dr. Newmarch on the Monday after my taking the groats on the Sunday. He was going to pay the bill, and then he told him we were ill. A month before I was confined asked him to get the doctor, and he said I could walk. I was far advanced in pregnancy at the time. He had taken no interest in sending for the doctor before. The doctor sent a prescription. I took the medicine, and got better. When baby was a month old mother left me, about the 26th January, and I lived with the prisoner till 25th February. He was constantly telling me to leave the house, and was very cruel to me. On 25th February I bought a bottle of lemon syrup from Mrs. Adye. It was a new unopened bottle, with a capsule. I took it home. Miss Adye came there with me. We opened the bottle, and both had a drink out of it. It only tasted of lemon syrup, and I continued drinking it till the night of March 1st. There was no bitter taste in it, and I suffered no ill effects from it. I kept it on the sideboard down stairs. The night of March 1st was a Friday night. He had been out in the afternoon, and when he came home we had a few words about minding the baby. I then went upstairs. My husband came up afterwards, and said that I neglected the house and also the baby. I said to him, "Miss Cassin is the girl you ought to have married" (I knew he knew her before his marriage). He said, "That is the girl I ought to have married, and that is the girl I will marry as soon as I can get free." He then went to bed, and went to his work at 11. Next morning I found the lemon syrup on the kitchen mantelpiece. I had put it there on the night before. I was in bed when he left the night before. He had access to the kitchen, and no one was in the house but us two. No one had been in the house from the last time I had a drink of the syrup till the next morning when I had another drink. I took the last drink on Friday night, and had left the bottle on the kitchen mantel-piece. There was then no bitter in it, and I suffered no ill effects from it. I next drank from it between 7 and 7:30 a.m. on the Saturday morning. Prisoner had not returned then. I made a drink of it with water that I got from the tap in the same way I had done before in a tumbler. It was a clean tumbler. I took two or three mouthfuls, and noticed a most bitter taste, and recognised the same taste as was in the beef-tea that I did not drink. I did not drink the rest, and threw it down the sink. I felt no ill effects at the time. I then lit the fire and prepared breakfast. Prisoner then came home and had breakfast. After breakfast I took ill, vomiting and purging. At lunch-time I prepared a little more syrup in a clean tumbler and the water from the same tap. I just put it to my lips to taste it, and it still had the bitter taste, and I did not take any of it. At 2:30 I went to Mrs. Adye's and took the bottle of syrup with me. She keeps a small store. I showed her the bottle, and she tasted it. She only put her tongue to the cork. Mrs. Walke also tasted it, putting the bottle to her lips. I left the bottle there and went for my baby, and returned and got the bottle again, and took it to Mr. Smith, the chemist, and then to Mrs. Gail, a neighbour. Smith tasted it. I went to Dr. Newmarch with the bottle. He was not in, and I left the bottle with Mrs. Gail. It was just as I took it off the mantelpiece. I went home and went to bed about 7:30, feeling ill with terrible pain in my head. The vomiting had stopped. Prisoner came in and came upstairs and asked me what had made me ill. I said I had drunk some syrup out of the bottle. He asked me where it was. I said at Dr. Newmarch's. He asked me why I did not let him take the bottle. I said you were asleep when I took it, and he was. I had left it at Mrs. Gail's to be sent to Dr. Newmarch's. This was on Saturday night. He did not suggest going for a doctor. I felt better on Sunday. Prisoner asked me how I was on Sunday morning about 9 o'clock. (We were occupying different rooms at that time. We had done so since marriage. We started that way. It was my arrangement, he being at night-work.) I said I was a little better. He asked me if I would like some porter. I said, "Yes, if he thought it would do me good." He then took a tumbler into the bath-room, and returned to the room holding the bottom of the tumbler in the palm of his hand (shows),
bottom

bottom of the tumbler in the palm of his hand. I raised myself up in the bed and noticed something white in the bottom of the tumbler. It looked like a powder. The tumbler had nothing in it but the powder. He then turned his back to me and poured some porter into the tumbler. The bottle of porter was on the floor when he went out of the room with the tumbler, and the tumbler was one also in the room. He took the tumbler from the room to the bathroom. I heard the tap turned, and thought he was washing the tumbler. He then brought it back again. I had not put any powder into the tumbler. He then put the tumbler of porter to his nose, and he said it was sour. (Prisoner had brought the bottle of porter into the room on Saturday night. It was then opened for me, and I had some of it, and it did me no harm.) He then threw it over the balcony. I cannot say whether the tumbler was dirty when he washed it in the bath-room. I don't know where he took the tumbler from. Prisoner drank some of the porter out of the same bottle about 11 o'clock. About an hour and a half after he said it was sour; he drank a glassfull of it. Prisoner offered me some tea and toast about 10 a.m. It was Sunday, the 3rd of March. He poured some into a saucer and asked me to drink it. I then noticed something clinging to the side of the saucer, floating round the edge of the tea. It looked like little white lumps. I said, "What is that round the saucer?" He said it was the cream off the milk. It did not look like cream. He asked me to drink it. I tasted it, but did not drink it. I said I would drink it when it was cooler, and asked him to go for Mrs. Adye. She was my nearest woman friend. He asked me to drink the tea before he went. I said, "No; I would wait till it was cooler." He went away. I got out of bed and took a tumbler off the washstand, and poured the tea out of the cup into it. He had brought the tea in a cup and had poured it into the saucer. I only noticed the white stuff in the saucer. When I had refused to take the tea, he had before going away poured it back into the cup again. I put the tumbler under the chest of drawers. I did not drink any of it. Mrs. Adye came, and I had a conversation with her, prisoner not being present. I pointed out the tea in the tumbler under the chest of drawers, and the cup. This was after 10 a.m. After leaving, in about ten minutes prisoner came to me. He asked me had I drunk the tea? I said, "Yes." He said it would do me good. He had not waited on me this way during my confinement illness. During the rest of the day I only took lime-water and milk. On Monday morning at breakfast the prisoner brought me some cocoa, bread and butter, and a chop, which I took. About twenty minutes or half an hour after eating it I started vomiting and purging very seriously. I felt severe pains in my head, and a very heavy pain in the stomach—a burning pain—and a burning in the throat. I had no such symptoms before he gave me this food. I was feeling much better up till the time he gave it to me. No one else was in the house but us two. I lay down on the bed, feeling very ill. He was lying on the bed with me. I was dressed. The symptoms went on all through the day. In the afternoon he suggested my having the doctor, at about 5.30. (He had done so on the Sunday, but I would not, as I was feeling pretty right.) I consented, and about 6 he went for him. Dr. Newmarch came about 9 or 10 and saw me. I was still feeling the same symptoms. He prescribed for me, and prisoner went for the medicine and brought it. He offered me some at about 11 p.m. I was still ill, but not vomiting. I had ceased vomiting. He brought the medicine in a tumbler to the bedside. He had a spoon in the tumbler, pressing the back of the spoon against the glass as though he was trying to mix something. He asked me to drink it. I noticed it had a milky appearance. I asked him what made it look like that. He said it was the powder that the doctor had ordered. I then drank it. The mixture in the tumbler was very thick, and looked like curdled milk on the top. I drank it. He then went to work and left the house. About half an hour after taking it I began vomiting and purging again, with the same burning symptoms that I had before in the throat and stomach, and I could hardly see out of my eyes. It went on all through the night, vomiting and purging nearly every ten minutes. Prisoner came to me about 7 a.m. on Tuesday. He asked me how I was. I said I had been very ill all night. The doctor came about 10, I think. I was very thirsty all night, continually drinking. I was sleeping in a night-dress that night. I had put on a clean night-dress on Sunday morning, and I wore it till Monday morning about 11 o'clock, when I took it off. I had been purging whilst I wore it, and I took it off because it was soiled by the purging which followed my taking the cocoa. I put it in the clothes-basket. I saw my mother take it out of the basket, and look at it, and put it back in the basket. (This was on Wednesday, the 6th.) There was no bitter taste in the cocoa, but I think there was in the medicine on Monday night. The doctor took the night-gown away on the following Sunday, the 10th. It is in the same state now as when I took it off on the Monday. I was still ill in bed when Dr. Newmarch came. I described my symptoms to the doctor. I described them truthfully, and he examined me. On the Monday night my mother came to me and took charge of me. On Tuesday morning she left for a time, but returned on Tuesday afternoon and gave me my food. From that time I got better, and had no return of the symptoms from the time they ceased on the Wednesday, and I quite recovered. On the Tuesday prisoner was present when Dr. Newmarch was there. Nothing took place then. On Wednesday or Thursday the doctor brought prisoner to me in bed. I had told the doctor something before this. On that he went to prisoner and brought him to me and asked him did he put a powder into the medicine. He said, "No." I said, "George, you told me the doctor had ordered a powder to be put into the medicine." He said, "I did not." I said, "You know you are telling a falsehood." He said, "You would hang a man," and went out of the room. On the Tuesday morning previous prisoner said Mr. Weynton had told him something about a bottle; something about poison being in a bottle (the syrup-bottle). He asked me what I knew about poison being in the bottle. I said I knew nothing about poison, but the bottle was then at Dr. Newmarch's. The police came and searched the house. Prisoner was arrested on the 8th. Sergeant Brennan took the tea that I had put under the chest of drawers. The syrup-bottle (A) produced is the one. The tumbler produced is the same (B). I had not moved the tumbler or put anything into it. My mother saw it and Mr. Gail on the Wednesday. The bottle of medicine (C) was what I had during my confinement. I found it standing on prisoner's table with some still in it, after my first illness—after the groats, and before the lemon syrup. I asked him what it was doing there. He said he had been taking it to give him an appetite. He had been asking me to take it after I had ceased taking it a month. I did not do so, but I took the bottle (D) back into my room. Dr. Newmarch took it from my room. I did not see the bottle out of which he got the milky-looking stuff he gave me, but what he gave me was not like what is in the bottle (E) produced. This medicine is a brown colour. It was white what he gave me. My mother afterwards gave me the medicine left by the doctor, and it was like that in "E," not milky. I was not suckling the baby, and I got

got the milk from the breast with a pump. I gave some of it to the doctor on the 12th, which I drew the same day. I also gave him some of my water on the 8th. I have never bought or ever saw any arsenic or other poison in my house, or knew of it being there. The tumbler is the tumbler I drank the syrup in (*F*).

Cross-examined:—On Monday the prisoner gave me the chop and cocoa. I was first suspicious, on the Sunday, of poison, after his offering me the tea. I noticed the same taste in the groats and syrup. I did not think of poison when I took the syrup to the chemist. I became suspicious of poison in the tea, and then thought the syrup making me ill. I did not think of poison when I took the bottle to Dr. Newmarch. My suspicion was also aroused by the porter, when I saw the powder in the glass. I said to my husband when he said the porter was sour, "Oh, put some sugar into it and liven it up a bit." I intended if he then offered it to me to accuse him of putting something into it, and to refuse it. I saw seven or eight lumps round the edge of the saucer. They were much smaller than a pea [*makes a mark about the size of a pin's head*] (*g*). Some were a little larger. Prisoner did not say, when I made a demur to having the doctor on the Sunday, "I will stand this no longer, you will and must have a doctor." He said that on the Monday, between 5 and 6. I was not demurring then to having a doctor. I was vomiting very much at the time. I did not tell the doctor on Monday night of my suspicion as to poison. I did not call his attention to the tea. On the Tuesday he asked me what I had been eating. I did not tell him then that I suspected poison. Mother arrived about midnight on Wednesday, after prisoner had gone to his work, and she left between 5 and 6 before he came home. She asked me what made me so ill. I did not tell her I thought prisoner was poisoning me. I did not call her attention to the tea on Monday night. I did not tell her about the tea, because I was very ill and forgot about it. On Tuesday night I had improved. I did not call her attention to the tea then, and I did not mention it till Wednesday morning. On Tuesday morning prisoner said, "What is this I hear about the bottle?" I said, "What bottle?" He said, "The bottle which you have been drinking out of that I hear made you bad." I was up on Christmas Day. I dined with him. I had to go upstairs and beg him to come down, because it was Christmas Day. My mother was at dinner. We were not friendly, and he hardly spoke to me or to my mother. There was no drinking of a toast in a pleasant family way. There was porter on the table. My mother asked him to have some, he said he did not care. I did not say I was glad I was not confined that day. Prisoner has told me he saw her (Miss Cassin) in Oxford-street before our marriage. He mentioned it casually that he had seen her when riding his bicycle. I have never seen them in each others' company. I showed the baby to her at Mrs. Hughes', and she kissed it. There is no jealousy between us. Prisoner has never struck me or used violence to me. I have only seen him under the influence of drink on two or three occasions. He gets £3 a week. I was supposed to get £2 a week from him for the house, but I did not get it regularly. This is my signature to my depositions. It was read over to me. When I used the word "drink," I meant that he was under the influence of liquor. I said I got £2 a week, and was properly fed. He proposed to get a house of our own the first month we were married. I remember him saying in February "Well, old girl, I think I can get the money from Mr. Egan, and build the house." He told me he wrote to Mr. Egan. This was in February. I opened the note and read it [*put in No. 1*]. He did not object to my opening it, and we had a quiet chat over it. He had a piece of land before we married, and bought a piece after marriage. He fenced the land himself. My life was not insured. When I married I had an insurance policy, and he asked me to discontinue it. He asked me this before marriage. Mr. Jones was living at my mother's. Prisoner knew him. He was a tailor. Prisoner did not see me going to a house opposite. I don't know that he saw my mother, Mrs. Seymour, going there. There was nothing during the eight months he came there to give him an impression that I was not respectable. Jones has been in the house ever since I was a little child. He last worked as a tailor at Clement Lewis', about two years ago from now, for twelve months. Some gentlemen from Melbourne came to see him. He said they were bookmakers. My mother's is a fruit shop. I do not know Jones was a receiver of stolen goods. Sam, a one-eyed man, used to come and see him. I know Madame Rose's opposite, an assignation house. I never went there. I don't remember any of the women coming and getting accommodation when a raid was made on Rose's. Mother took vegetables there, and stayed 10 minutes or half-an-hour there. My mother took charge of the establishment when Madame Rose went away. She asked my mother to go as a trustworthy person to take charge of her silver and jewellery. I did not go to business in the day time. My mother, when cabs came, used to take notes away. I never went there, I have never taken notes. I never played the piano to the girls. I never told Dean about it. Prisoner used to nurse the child after a good deal of trouble in asking him.

Re-examined:—Prisoner never said anything to me about my mother. He never asked me for an explanation. Prisoner was sitting beside Mr. Meagher when he asked me these questions in the Police Court. I was very ill when my mother came on the Monday night. I forgot all about the tea when the doctor came. I felt light-headed till the Wednesday. I was purging and vomiting incessantly every time I drank, and I craved for drink, which made me vomit. There was no truth in the charge that I had another child. There is no truth in the insinuation that I did not lead a pure life before I married him. There was nothing about our house to lead him to suspect anything wrong about me, and if he has heard anything since about my mother's relationship to the house opposite, it may have come upon him as a surprise.

BESSIE ADYE:—Married woman, living at Miller-street, North Shore. I live five minutes' walk from prisoner's. I keep a shop. I sold Mrs. Dean a bottle of syrup [*produced*] on 25th February. I bought it from a Mr. Roberts with another. I had not opened it. I used the other bottle. It was all right. I had no sickness after it, nor did I notice any bitter taste in it. She brought it back to me on Saturday, the 2nd March. I tasted it. It was bitter. I just put it to my mouth, just wetting my lips. I saw prisoner next day at 10.30. He asked me to come and see his wife, as she was very ill. I went to her. She was in bed. She had a cup of tea by the bed, about half a cup. Her face was flushed. We had a talk. I took the baby away home.

Cross-examined:—Prisoner seemed anxious about his wife, and asked me to go at once.

ERNEST JAMES NEWMARCH:—I am a duly qualified medical practitioner at North Shore. I attended Mrs. Dean in her confinement. I am of opinion she had not had a child before. I am positive about it. I attended her to January 10th. I heard her describe in Court to-day her symptoms after eating the groats. The symptoms described by her indicated irritant poison. Arsenic is one. The symptoms

symptoms of arsenical poisoning are acute vomiting, purging, with probably slimy and bloody stool, straining, acute burning pains in the stomach, cramps in the limbs, and burning pains in the throat, and irritation of the eyes—they water and are filmy. These are the main symptoms, or you may get none of these symptoms, but only absolute collapse. She was vomiting and purging about the 4th or 5th of January, also the mother, but not so bad. I had been giving morphia in Mrs. Dean's case, and I thought it might possibly be owing to that, and I stopped it; but I did not think it could be as her mother had it. The symptoms which she has described as appearing after the groats are consistent with arsenical poisoning. On Monday, the 4th March, I got from a Mr. Gail a bottle of syrup partially consumed. I handed it to Inspector Cotter on the 5th. I got the bottle at 9 or 10 p.m. When I saw her at 8.10, she was very pale, skin moist and clammy, tongue clean. Symptoms gone of vomiting and purging directly after taking anything. The body was tender over the stomach region. Pulse regular. Respiration normal. The symptoms are consistent with arsenical poisoning. Any irritant poison produces extreme thirst. I prescribed for her, having no suspicion of poisoning. I went and saw her early the next morning, being called by her husband. The prescription ("H") produced is the one I gave. It is composed of opium, bismuth, and hydrocyanic acid. It would not be milky in appearance, but like that produced. It could not produce vomiting and purging, but would have the opposite effect. When the husband came on Tuesday morning, he said his wife was worse. I saw her at 8.40. She was no worse generally, but the eyes were red and the stomach very tender. She had been vomiting incessantly on the Wednesday. They said they had given her tea, which was contrary to my instructions, and the vomiting was so bad, I had to feed her by the bowel. She was very weak indeed on Tuesday and Wednesday. On the Wednesday morning I was told something by the wife. I went down and woke prisoner up, and asked him to come upstairs. I said, "What is this about the powder that they state you put in the medicine?" He turned to his wife and said, "You know I did not put the powder in." She said, "You know you did." The man was half asleep, and did not seem to know what he was saying. I thought he was intoxicated. He spoke in such a funny way. I did not order any powder to be put into the medicine. Arsenic is white. It would first float on the top of the medicine when put in in round globules like little pills. It would give a milky appearance if there was enough of it stirred up. The same if put into tea. Hot tea would dissolve it sooner. I took a night-gown from the place on Thursday. Having heard the result of the analysis of the lemon syrup I, on the 10th, got a night-gown which I picked out from a lot of dirty clothes. I took it to the police and gave it to Constable Chivers. I also got some of her urine and gave it to Chivers. Arsenic will continue in the system for some time, that is why I got her urine. It will disappear in three or four days after an ordinary medical dose. Finding it at the end of six days would indicate a large dose. The symptoms described would arise from large doses, not small constant doses. I also prescribed the tonic (D) on the last day I attended her. It is quinine and iron, and a very small quantity of strychnine [*Prescription put in (J)*], not enough to do any harm. There are less than two drops of liquor strychnia in each dose, half dram in 8 ounces. It is the ordinary medical prescription. It contains no arsenic. If there is 3 grains of arsenic in what is left in the bottle it would be a fatal dose. Half a grain of strychnine is poisonous, but there is only the fiftieth of a grain in each dose of this medicine. Supposing a person took a dose of arsenic and then took strychnine it would be an antidote to it. Arsenic deadens the pulse, but strychnine would quicken it. On the Monday night her pulse was fairly strong. Strychnine would have a bitter taste, and supposing she had taken some it would account for her having a strong pulse supposing she had been suffering from arsenical poisoning. I have experimented on myself for the purpose of this case by taking arsenic, and seeing how long it would remain in the urine. I took a $\frac{1}{10}$ th, $\frac{1}{8}$ th, and $\frac{1}{4}$ th of a grain in divided doses, $\frac{1}{2}$ to 2 grains are poisonous doses. I then handed samples to the Government Analyst. I took it on Friday, 29th, 30th, and 31st March. I gave them on 31st, 1st, and 2nd April. I made a rough analysis myself, and found it after the ordinary medical doses before I sent it. I gave the tonic which I took away to Constable Chivers as I got it. I got some milk from Mrs. Dean on the 12th. I did not examine it, but I think traces of it would be gone by then. It would last longer in the urine. I ordered her to use ice to allay her thirst. She complained of spasms and cramps in the calves of her legs which are symptoms of arsenical poisoning. I am of opinion that she was suffering from acute arsenical poisoning on the 4th and 5th when I saw her.

Cross-examined:—A person in ordinary health could not take twice the dose I could. A man may lose his life with half of what I took. I think a good many might take $\frac{1}{2}$ grain with safety. I did not think her ever in a critical condition. If the medicine be put in a glass having lime water and milk it would discolour the medicine. I did not hear her say "You told me the doctor ordered the powder." I do not remember it. Prisoner denied all knowledge of poison. He asked me to find out whether there was any poison in the bottle of syrup, and who put it in. He said they had accused him of poisoning his wife, and he could not stand that sort of thing. Prisoner was very excitable, asking me to come at once. He said, on the Tuesday morning, she was not adhering to his instructions about the dieting in the presence of his wife. I gave the instructions about the diet to Mrs. Weynton and another woman, not to the husband on the Monday night. I saw Mrs. Seymour on the Tuesday.

Re-examined:—A person may take a fatal dose of arsenic and vomit enough to save his life, and you would still find traces of it in his system. It passes from the system rapidly. If she swears that she said "You told me the doctor ordered it," I won't contradict her. There was an altercation at the time. Not suspecting poison I did not pay particular attention to what they said to each other. I got the urine from Mrs. Seymour. There is no taste in arsenic. It would be tasteless in tea. A very small quantity of strychnine in the lemon syrup would make it bitter. The taking strychnine would the better enable her to go about.

ETHEL ADYE:—I live with my parents. I know prisoner and his wife. Remember her buying the bottle of lemon syrup. It was on the 25th February. She took it home. I saw her again in the evening at her home. I saw the bottle there. I saw her uncork it, and I had a drink of it with water. It tasted sweet like ordinary lemon syrup. We had some at home the next day out of another bottle. It tasted the same. I saw her again on the Saturday at our house. The syrup had no ill effect on me.

Cross-examined:—I was often at the house. Have seen him nursing the baby several times. He seemed a very kind father, and seemed affectionate with his wife.

BESSIE WALKER:—I know Mrs. Dean and the Adyes. Saw Mrs. Dean on the 2nd March at Mrs. Adye's. She had a bottle of syrup with her. I tasted it. It was like gall. I was sick after it. I vomited. She went away and returned with the baby. She left the bottle whilst she was away, and when she returned she got the bottle and took it away. The bottle was exactly like that produced.

RICHARD

RICHARD JOHN SMITH, chemist in North Shore :—I remember Mrs. Dean coming to me on Saturday, 2nd March. She gave me a white glass bottle containing lemon syrup. I took the cork out and tasted it; it was a bitter sweet taste. I returned it to her as I received it.

FREDERICK WILLIAM GAIL :—I am a furniture-broker at North Sydney. I know prisoner and his wife. I am on good terms with them. I know Mrs. Seymour. On the Saturday afternoon I got a bottle of lemon syrup from her. I took it to Doctor Newmarch on the Monday night. It was before prisoner's arrest. I had a conversation with her. I tasted the contents, just a taste. It was very bitter. The bottle was under my care, and was in the same condition when I gave it to Dr. Newmarch.

Cross-examined :—Mrs. Seymour frequently visited my house, averaging once a week. I am in custody now on a charge of bigamy. I saw Dean on Saturday night after I tasted the bottle. Mrs. Dean requested that it should be taken to the doctor. I did not tell prisoner of her leaving the bottle. I did not attach any importance to her leaving the bottle. I went to Guise the chemist with it on Sunday night. There was something about poisoning at West Maitland; I was then 13.

Re-examined :—The arrest for bigamy was the evening before last. I have been living on the Shore five years. My first wife's name was Amelia Hart. She took proceedings for divorce when I was at sea at the time. There was a *Decree Nisi* at six months, and when I married again I was under the impression that I was free to marry, and am now. It is two years since I married my present wife. I was asked at the police court about my marriage, and I was arrested since then. There is no truth in the insinuation that I, at the age of 12, was in any way connected with a poisoning case. Fullerton and Murdoch arrested me. The divorce case was three years ago. I did not marry till twelve months after.

BENJAMIN CUTHBERT, groom to Dr. Newmarch :—I got a bottle from the doctor. I did not interfere with the contents, and gave it to Chivers.

WILLIAM MICHAEL DOGHERTY, laboratory assistant to Mr. Hamlet :—I received on the 8th March from Sergeant Brennan a tumbler containing tea, a bottle of medicine (the tonic), "D." On the 11th March I got from him a bottle of urine and a night-dress; on the 14th March from Cotter a bottle of milk; on the 15th from Brennan eight bottles, a lime-bottle, and a box of pills. All, with the exception of the tea, I handed to Hamlet as I received them. I examined the tea for arsenic, and found traces of arsenic in it, and $\frac{1}{10}$ grain of arsenic as a white powder in the bottom of the tumbler. The remainder of the tea not used in my analysis was handed back to Brennan.

WILLIAM HAMLET :—I am the Government Analyst, twenty-three years' experience, Fellow of the Institute of Chemistry of Great Britain, and have other Fellowships. On 6th March got from Cotter a bottle sealed and labelled containing lemon syrup (*produced*). Made a preliminary analysis. It contained $2\frac{1}{2}$ ounces of a clear liquid, with a white powder on the bottom of the bottle. It had a persistent bitter taste. A chemical analysis was made, and $1\frac{1}{2}$ grains of white arsenic was found in the contents of the bottle, and 1.5 grains ($1\frac{1}{2}$) of strychnine in the liquid. There was about twice as much liquid as there is now. I produce the strychnine I obtained. The strychnine was in solution. Anyone looking for arsenic only would not find the strychnine. Two and a half grains is a fatal dose of arsenic. One-half grain of strychnine is a poisonous dose. The mixture of strychnine and arsenic would cause one to counteract the other. I examined the tonic (D.) I found three grains of arsenic in it, and traces of strychnine. It was a quarter full. I also examined some urine (*produced*). I found distinct traces of arsenic in it. On the 16th March, on my return from Grafton, I broke the seal, finding indications after a week which would indicate an injurious dose—not a medical dose. I cut out a portion of the night-dress (*produced*). The stain was at the back, and was of fecal matter. I analysed it, and found traces of arsenic. I believe it had passed through the human system, because it was so intimately incorporated with the fecal matter, and because I went over it with the microscope, and could trace no crystals. There was no trace of any arsenic being put on the fecal matter. I searched but could find nothing to indicate a wash of arsenic being put on. What I found would indicate a large dose of arsenic—not a medical dose, I think. I examined some tea in a tumbler. I got it from Dogherty. I found $\frac{1}{15}$ grain of strychnine in it, and I also confirmed Dogherty's finding of arsenic. He had not searched for strychnine. When first put into a liquid arsenic will float and cover the air-bubbles, and present the appearance of lumps floating. At the bottom of the tumbler I found solid arsenic. Also examined a bottle of milk containing no arsenic. I should expect to find it in urine and feces. After several days I should expect to find it in the urine—not in the milk.

Cross-examined :—It would remain in suspension two days, but if you stir it up it rapidly sinks. I have seen prisoner daily crossing over. I formed a favourable opinion of his honesty and sobriety. I was present when he got a presentation for saving life.

Re-examined :—I examined urine brought me by Cotter as from Dr. Newmarch. First was Mrs. Dean's, March 31st; no arsenic found in it. 2nd. D No. 8: Urine No. 1, March 31st, contained distinct traces of arsenic. On 3rd April: Urine produced April 1st showed distinct traces of arsenic; not so strong as that found on 31st. D No. 10: Urine produced, April 2nd, at 7:10 p.m., Dr. Newmarch, contained a still fainter trace.

APRIL 5th.

GEORGE EDWARD RENNIE, M.D. of London, and duly-qualified medical practitioner, Government Pathologist :—I heard the evidence. I agree with Dr. Newmarch. The symptoms described are those of acute arsenical poisoning. Strychnine, taken with arsenic, will account for the steady pulse described. Arsenic deadens the heart's action; strychnine stimulates it. Arsenic is rapidly begun to be excreted, but it continues for a long time. Finding it six days after would indicate that a large dose had been taken, and it would be more likely to be found in the urine than in the milk. Her being able to move about in the afternoon would be accounted for by her taking strychnine with the arsenic.

Cross-examined :—And that she did not take a sufficient dose of arsenic to make her go to bed.

CAROLINE SEYMOUR, a widow, mother of Mrs. Dean, was with her at time of her confinement (26th December), and I remained there one month. I remember making some groats for my daughter. It was on the 13th January. I made it in the kitchen between 9 and 10 a.m. She was in bed, and I and the prisoner were the only persons in the house that day. I left the groats on the dining-room table to cool. Prisoner was at home having his breakfast. I put the groats on the table whilst he was at breakfast at it. I left it there to cool. I left him in the room with it, and went upstairs

to my daughter. I was upstairs and in the kitchen and doing work while it was cooling. It was cool when I got back to it. I took it up to my daughter. She took about half a cup full of it, and I sat down and ate the rest. About twenty minutes afterwards we were both taken with vomiting. Mr. Dean waited on us and emptied our vomit for us. It purged us also. I was very ill for three or four days after. The vomiting lasted till 12 the same day. After that I had such pain in my head that I could hardly hold my head up and get about the house. I felt sick. Dr. Newmarch sent us some medicine. Prisoner went and told him we were ill. About five days after that I prepared some beef-tea for Mrs. Dean. I put it on the stove early in the morning, 8.30, and I seasoned it and left it on the hob to cook till about 12. I seasoned it and tasted it, and it was what beef-tea ought to be. A little time after I strained it in a cullender and put it in a basin, and, when it was cool, I took it up to my daughter. When it was cooling it was on the kitchen table. The prisoner was in the house that morning, about the house. I was ironing in a different room, in the dining-room. I took it up to her. She tasted it, and could not drink it. Prisoner was sitting on the foot of the bed. She said she could not drink it, it was very bitter, and told me to taste it, and I did, and it was very bitter. I said it was not like that when I tasted it in the kitchen. My daughter asked prisoner to taste it. He took the spoon and put it to his lips, but I could not say whether he tasted it or not. He said it was all right. I said there must have been a gall in the meat to make it so bitter. I told her she could not drink it, and threw it away. I left three days after baby was a month old. Prisoner told me to go. I have been in service since at North Sydney, with Mrs. Lee, of Brunswick Cottage, two miles from prisoner's. I know Gail. I saw a bottle there on a Monday night. He asked me to taste it. I did with the cork. It tasted very bitter. I went to my daughter's on Monday, 4th March, at 12.10 a.m. I heard she was very ill from Gail. I found my daughter very ill, vomiting and purging. No one was there but the baby. As I was going there I saw prisoner on his bicycle, going to the North Shore Ferry-boat. I stayed with her till 5.40 a.m. I gave her lime-water and soda-water through the night, and I gave her medicine at 4 a.m. I did not put anything into the medicine. [*Mr. Wade proposes to ask what instructions she got from her daughter as to the medicine she had to take. Mr. Meagher objects to such evidence being given. I exclude the evidence, though I have some doubt whether it would not be admissible, as showing Mrs. Dean's belief at the time as to the medicine which she ought to take.*] I looked for a powder to put into it, but could not find it. That was in consequence of something I had been told. No one else was present but my daughter. When I left prisoner had not come home. I returned to Mrs. Lee's, where I was in service. I did my work and returned to her on Tuesday between 5 and 6. I saw prisoner in the bedroom. She was very ill, vomiting. I said to prisoner, "Whatever can be the matter?" He said, "I don't know." I stayed there from that time. On Wednesday morning I saw the doctor. She was improving Wednesday evening. She told me something on Wednesday when she began to improve. I looked under the chest of drawers and I saw a tumbler with something in it. Very thick on top and something white at the bottom and dark on the top. I put it back where I got it. It was like this tumbler. On Thursday I had a conversation with Dr. Newmarch. I saw prisoner after, and told him that Dr. Newmarch told me that there was something found in the bottle; that Dr. Newmarch said there was poison found in the bottle. He said he knew nothing about it. On the previous day prisoner was present when Dr. Newmarch was there. She asked Dr. Newmarch did he order Mr. Dean to put a powder in the medicine. Dr. Newmarch said he did not. She then said to her husband that he put a powder in the medicine on Monday night. He said he did not, and he walked out of the room. The police came to the house between 8 and 9 p.m. I don't remember telling him the police had come. From the time I nursed her on the Tuesday night she took nothing but soda and milk, and everything was injected for five or six days. I gave her nothing on the Monday night but the one dose of medicine—not tea. She had been a healthy girl. I never knew her to have attacks of vomiting before.

Cross-examined:—I called at Gail's three or four times during the four weeks after I left my daughter to have a chat. Dean told me to leave his house. He said there was a dirty milk-jug on the table, and he commenced to growl. I said there was not, and he said it was most time his wife was downstairs to take charge of her duties. I said Dr. Newmarch said she was not to leave her bed for another week, as she was so very weak. He said the quicker I cleared out the better. I said I would go when she could come down and take charge of her own house, and I stayed three days after and I left. I did refuse to go, part of the furniture being mine. He took up a chair to strike me with. She caught him round the neck, and as he pushed her from him I caught her in my arms and laid her on the sofa. I did not say, "You will remember this, you scoundrel." I asked Gail whether they had seen her. I was at Gail's on Saturday night, at 9 or 10. On the Thursday night previous she was at the circus with me. I took her. She complained of a pain in her back. Gail did not tell me about the bottle on Saturday night. I heard on Monday night she was ill, after prisoner told Gail. I waited till Gail went with the bottle to Dr. Newmarch and returned, and I left Gail's at 10.15. I then went home, and from there to my daughter. My attention was not directed to the tumbler under the chest of drawers. On Tuesday night my attention was not called to anything under the chest of drawers. I did not hear him say, "You'd try to hang me." I did not tell Mrs. Weynton that I thought there was poison in the bottle of syrup. I was convicted, and served a sentence in Melbourne thirty years ago. I never kept an improper house. I once took charge of the house, and there was nobody there. I have taken notes, but did not know whom they were to. I took them to the lady of the house.

Re-examined:—I never had words with prisoner before this. I lived with prisoner and his wife a month after their marriage. He told my daughter and me that I would have to go, and I left. I had no words with him. I gave them the best of the furniture. I had to help them. My daughter and I were very affectionate to one another. [*Witness bursts into tears.*] I had only her, no one else; my other daughter is dead. I did not suggest to my daughter in any way to make a false charge against her husband, or to take poison to spite him. The charge in Melbourne was receiving. A gentleman gave me a mantle, and I would not tell where I got it from, and took the charge myself.

WILLIAM HAMLET:—In the urine of Mrs. Dean the arsenic was perfectly dissolved, and it showed that it had probably passed through the kidneys, and their not finding strychnine is consistent with her having taken it a week before, because strychnine is very rapidly eliminated.

WILLIAM JAMES GUISE:—A chemist at North Shore. I know prisoner. He came to me on Monday 4th with a prescription [*produced*] (H). I made it up as prescribed. I put no arsenic or strychnine in it. I gave him no powder with it. I saw him next morning. He got another prescription made up. It contained no arsenic or strychnine.

Cross-examined:—

Cross-examined:—He seemed very anxious about his wife. He three times requested me to make haste whilst I was making up the prescription. I had to ask him not to bother me, as it ran a risk of making me make a mistake. I told him to be sure and shake the bottle well. I was about five minutes making up the prescription. Some other customer was there.

THOMAS EDWARD MACDONALD:—A chemist at North Shore. I know the prisoner. Early in January I made up a prescription. It was a tonic, about $\frac{1}{4}$ th of a grain of strychnine in the sixteen doses. No arsenic was put in it. Saw my assistant Webster make it up.

CHARLES PARKER WEBSTER, assistant to last witness:—Made up prescription in January last. I correctly made it up, put in no more strychnine and no arsenic.

LYDIA RUTH GAIL:—Wife of William Gail. I know Mrs. Dean and prisoner. I went to see Mrs. Dean on the Sunday, about 4 p.m., when she was ill. She was in bed. She showed me her toast. She did not show me some tea.

CATHERINE WEYNTON:—I live next door to prisoner. I went there on the 4th March, in the evening, between 5.30 and 5.45. Mrs. Adye was there. Mrs. Dean was in bed. Prisoner had gone for a doctor, and came in whilst I was there. I stayed with Mrs. Dean while prisoner was away with the prescription. He came in and said he was going to give her her medicine as I went away.

Cross-examined:—Miss Adye asked me to go and see Mrs. Dean, not the prisoner. I know nothing of them. I have not seen him nursing the baby. I do not know whether they live happily or not. I asked her why she had not told the doctor about the bottle. How can he prescribe for you when he does not know what you have done? She said the bottle was with the doctor—with the chemist—and they would know more about it to-morrow (Tuesday).

Re-examined:—I said I would go in if they required help in the night. Mr. Weynton, on Tuesday, after the doctor had gone, asked, "What is this about a bottle and poison?" Prisoner said, "Poison! what do you mean?" and he asked me what about the bottle and poison. I said, "I don't know anything about it; you had better ask Mrs. Dean." The only women in the house were Mrs. Dean and I when the doctor came.

JOSEPH CHIVERS:—Constable at North Sydney. The lemon syrup bottle was handed to me by Dr. Newmarch's coachman. I put it on Inspector Cotter's table in his office as I got it. It was sealed. I got "D" from Dr. Newmarch on the 17th. It was sealed. I gave it to Cotter as I received it. I got "I" from Dr. Newmarch on the 10th. It was sealed. I gave it to Cotter as I received it. I got a soft parcel (the nightgown) from Dr. Newmarch. I gave it to Cotter.

RICHARD BRENNAN:—Sergeant of Police at North Shore. I received a bottle of tonic from Cotter on the 8th. Took it to Mr. Dogherty the same day as I got it, sealed. I have the urine bottle. Got it from Cotter. Gave it to Dogherty sealed, as I got it. The night-dress was in a paper parcel, sealed. I got it from Cotter, and gave it to Dogherty, and the tumbler with liquid in it. I got it from Mrs. Seymour. I went to prisoner's house on the 8th. I had been there on the 7th, about 9 p.m. On going there I saw Mrs. Dean in bed, and Mrs. Seymour and Mr. and Mrs. Gail. Mrs. Seymour gave me the tumbler which she took from under the chest of drawers. Prisoner came in five minutes after I got there. Mrs. Dean asked him where the child was. He said, "At Woollahra; you did not tell me to bring it home." He then left the room. Mrs. Seymour then handed me the tumbler about half-full of liquid. It was uncovered. I then went to prisoner's room, and said "Where do you get your water from?" He said "From the Sydney water supply; from the tap." I said "My reason for asking the question is in consequence of your wife's illness." I thought if he got water from a tank, poison might get into it accidentally. Prisoner said "There is no poison in the house; the first I heard of my wife's illness was on Saturday night last, and I gave her tea and toast on Sunday morning and also on Sunday evening; the case seems mysterious to me." I then left the house. I took the tea with me to Cotter, who placed it in his safe and locked it. Next morning Cotter and I took it up and gave it to Dogherty. About 6 p.m. on the 8th I went with Constable Way to Dean's house. He was in bed, apparently asleep. I said "Wake up, George," he sat up in bed. I said, "I have two warrants for your arrest." He said "Yes." I said "I will read them to you." I read the warrants charging him with causing poison to be taken by his wife with intent to murder, and the other, attempting to administer poison directly. He said as to the first, "Very strong that; I suppose I will have to go and prove my innocence." As to the other warrant, he said, "Pretty hard that, I can assure you; I had no knowledge that poison was in the house." I cautioned him, and said "You told me, last night, that you gave your wife tea and toast on Sunday evening last, and also on Sunday morning." He said "Yes." I said "Were the vessels clean that you gave your wife tea and toast out of?" He said "Yes, thoroughly clean; I scalded the teapot before I made the tea, and I got a clean cup and saucer off the dresser." I said that "In the tea which your wife says that you gave to her on Sunday morning last, arsenic has been found." He said "Well, that's mysterious; I had no knowledge of poison being in the house. I did not wash the cup and saucer which I gave her the tea out of; the wife must have washed them up." He then asked me "Did you see the powder which Dr. Newmarch showed me yesterday?" I said "I saw a powder sealed up but I did not see the powder." He said, "Did you see the writing on the powders?" I said, "No." He said, "I would like you to trace that writing." I said, "I will, and I have done so, to the North Sydney Friendly Dispensary." [*It is here admitted, both by the Crown and Mr. Meagher, that these powders had nothing whatever to do with the case, and inquiry about them is not necessary.*] He said, "I gave my wife lime-water and milk and a few drops of brandy on Monday night last, and I gave her the medicine in the same glass shortly afterwards, and that is why the medicine had a milky appearance." (I had not referred to that matter.) He said, "The first I heard about poison being in the house was on Tuesday morning last." He said, "Mr. Weynton, who lives next door, asked me what about the poison that is found in the bottle; and Mrs. Seymour told me yesterday that the police were coming up." I searched his room and clothing, and I took him from room to room as I searched. When I took him to his wife's room she was in bed. He went to the bedside and said, "Do you want me to go?" She said, "If you are innocent you had better go and prove you are innocent." Prisoner said, "I am innocent." I took him to the Police Station. I got all the bottles back from Hamlet in my safe custody.

Cross-examined:—Before he spoke of the powder being in the medicine I had not heard of it. I have not been able to trace the sale of arsenic or strychnine in North Shore.

STEPHEN JAMES COTTER, Inspector of Police:—I received the syrup bottle. It was sealed on my table; put in my safe. Next day took it to Dr. Newmarch, and then to Hamlet as I received it. I also received the tonic from Chivers; gave it to Brennan as I received it; also bottle urine from
Chivers,

Chivers, sealed, put it in safe and gave it to Brennan as I received it; also a parcel marked "Nightdress," sealed, gave it to Brennan. The tumbler I got from Brennan, and gave it to Brennan in same condition as received. He returned it to me, and it was in my safe. Nothing was done to the tea, and I gave it to Hamlet, and nightdress, and got them back last week. On Sunday last, 31st March, got two bottles from Chivers. I gave them to Hamlet.

Dr. NEWMARCH (recalled):—The bottle of urine that Hamlet got last was mine. I gave a bottle of urine to Chivers, which I got from Mrs. Seymour. Took the first bottle on March 10th. The second I drew myself from her, which I gave to Chivers.

Mrs. SEYMOUR: I gave Dr. Newmarch a bottle of urine at prisoner's house. It was my daughter's. The doctor sent me a note to get it, and I got it—it was a Sunday.

It is agreed, with consent of prisoner, his attorney advising him, that Mrs. Murphy may be called at a later stage.

[Case for Crown concluded.]

DEFENCE.

GEORGE DEAN (prisoner):—Master mariner, holding a certificate. I am employed by the North Shore Steam Ferry Co. for eleven years. Am 27. Have saved life off the steamer several times. I received a watch in token of it once. It is true as to what she swore as to over eight months acquaintance and my visiting her. There was nothing in the conduct of her mother or herself during the eight months I was visiting to lead me to believe they were not respectable. I never insulted her during our married life with reference to herself or family. There is not a word of truth in what she swore as to my charging her with having another child. Quite the reverse. She said to me on several occasions, "What do you do with the £2 you have every fortnight?" I said, "It went in paying land and timber." She then said, "I suppose you want some of it to keep your illegitimate children." I said, "Whoever told you I had illegitimate children? You know I have none." She then said a woman told her, and she would not name. This conversation started six months ago, and came up now and again. Remember Mrs. Seymour staying at the house. She and I could not agree. She used to be going at me. At latter end of April, 1894, she was staying with us six weeks or two months. We lived more happily when she was away. We were on happy terms; only when the mother was living in the house, when the wife used to get disagreeable and the mother as well. I did cause the mother to leave. Mr. Gail moved her things. I know Miss Cassin. I have not communicated with her in any way. I did not say what she swore I did as to marrying her when I get free from you. Remember Friday, 1st March. I left home about 11.15. Nothing was wrong between us. She appeared all right when I left. I returned at 7.30 a.m. next day. She was up and front door open. I stayed at home all day Saturday. I went to bed at 9 a.m. She made no complaint. She did not call me at 1, but did at 6. I got up. She appeared well and jolly when she came to my bedside to wake me. She did not tell me she had drunk anything that disagreed with her. She did not tell me about taking anything to her friends to see. She said after tea, "I don't feel well." I said, "What is the matter?" She said she felt weak. I said would she have a drink of brandy or porter. She said, "Yes." I went and bought a bottle of porter and 1s. worth of brandy. Came home and she was in bed with the child. It was about 9 p.m. I opened the bottle in the bedroom, having asked her would she have brandy or porter. She said, "Porter." I got a glass and went to fill it with porter, half froth, which I gave her. She said, "Are you not going to have some?" I said, "Yes," and I did. I laid on the opposite side of the bed till 11 p.m. Before leaving I gave her a glass of milk and a few drops of brandy. I kissed her and said "Good night," and went to my work. I am very fond of the child. I often nurse it. I got home about 9 a.m. on Sunday. Went in the back way to my wife. She was asleep. I did not wake her, but went down stairs and lit the fire. I put the kettle on and then had a bath. I then heard the child cry. I went up to the bedroom and asked her how she felt. She said she slept well all night. I then said, "What would you like this morning?" She said, "I'll have a drink of porter; it done me good last night." I took a glass off a little table close to her bedside. Went into the bath-room and washed it out. Came back to the bedroom, picked up the bottle of porter, poured some into the glass. Seeing there was no head on it, I said, "It is flat and sour." I tasted it. She said, "Put a teaspoonful of sugar in it, George, and liven it up." I did not. I drank the porter myself. I said I would not give it to her as it was flat and sour and might make her sick. I did not carry it as she swore. [*Shows how, in the ordinary way, by finger and thumb.*] I was shaking it as I came in. There is no truth whatever in her statement that there was a white powder in it. I did not turn my back on her as I poured out the porter. I did not put the cork in the bottle on Saturday night. After the porter I said, "I'll give you a nice cup of hot tea." I went down stairs and prepared the teapot. I scalded it out, made the tea, made some toast, got a cup out of the dresser, emptied some milk out of a billy. It was scalded on board the steamer, as usual. I took the tea and toast up to her. She was just the same. She appeared to be the same as I left her before. She had complained before of having a headache. She said her head was aching when I brought the tea up. I poured some tea into the saucer, and put some pillows behind her to enable her to sit up. She then said, "Will you go and tell Mrs. Adye I want her?" I went and got her. Mrs. Adye went upstairs. I went into the dining-room and had my breakfast. Mrs. Adye came downstairs while I was at it. We had a conversation. On the Sunday I asked her to have a doctor. I did so because she could not keep anything on her stomach. It was at dinner time. She said, "No; I do not want a doctor, I will be all right in the morning." Through the day I gave her a drink of milk. About 12 p.m. she asked me to go and lie down and have a sleep. I was nursing the child all the morning. She said she would call me when she wanted me. She called "George" at 6 o'clock, and I got up and went to her. She was just about the same as in the morning—complaining of her head. She asked me to get her a cup of tea. I did so. I asked her if she would have an egg. She said "No," and asked for bread and butter, which I gave her. I left home at 9.45. Worked all night. On Monday morning, came home about 7.30 a.m. I went to her. She was in bed. I asked her was she any better. She said she felt better. I said, "Well, if you feel better, don't get up and worry yourself, I'll get you some breakfast," which I did as soon as I could. It consisted of a grilled loin chop, which I brought home specially for her, as she was very fond of it, bread and butter, and cup of tea, which she ate heartily. I then said, "I'll bring you up some water in a dish, and you can sit down in bed and wash baby," which I did. She got up and

sat in a chair with her boots off, and proceeded to wash the baby. I then said, "Why don't you put your boots and stockings on, instead of keeping your feet on the cold oilcloth?" She then dragged an old garment, and put her feet on it. I then went and had my own breakfast. After breakfast I came upstairs and was amusing the child, lying on the bed. She also on the bed, with her wrapper on. After a while I fell off to sleep. I got up between 12 and 1 o'clock. She woke me up, and said to give her a drink. I went downstairs, and gave her a drink of milk. She was lying down, but not complaining, except of her head, and I then went and purchased a new tin of cocoa next door. It was never opened till I opened it. This was on Monday, between 12 and 1 o'clock. I made her a cup of cocoa. She would not have anything to eat. I brought it to her. She drank half of it, and said she would not drink any more. Said she did not want any more. I drank the other half myself in her presence. I was lying on the bed, and was awake about an hour. She was, as usual, complaining of her head, but not out of bed. I woke at 3 o'clock, she asking me to rub her head with menthol. I said, "Why don't you have the doctor?" I was rubbing her head. She said, "No; the pain will go away by-and-bye." I did not see her retching on Monday up to 3 o'clock. She never said anything about vomiting on Monday up to 3 o'clock. I then lay on the bed, playing with the child. The milkman came at 5. I went and got the milk in a jug, brought it fresh to her, and gave her a drink of it. She drank near a glassful, and lay down on the bed. So did I. Half an hour after she started to throw the milk off her stomach, at 5:30, about. I got up off the bed, and said, "I'll stand this no longer; you'll have to have a doctor, and I'll go and get him." I went for him. I hurried to him, and I returned home at 6:30. I saw the doctor a little after 8 at the house. He saw her. He gave me a prescription. Between 6 and 8 she vomited a couple of times. I got it at Guise's. I kept saying to him, "Be as quick as you can." On getting home I got a tablespoon out of the dresser, took it and the medicine to the bed-room. She said, "George, give me a drink." I said, "I have got some medicine for you, old girl." She said, "Give me a drink first;" so I gave her a drink of lime-water and milk, as the doctor ordered. There was half a glassful altogether. She did not drink all of it. She was drinking fast. I said, "Don't drink it too quick." With that she left about a tablespoonful in the glass. I then went to the mantel, got the medicine and tablespoon. I gave the bottle a shake, and poured out a tablespoonful. I then went to her bedside and said, "Come on, old girl, take your medicine." She said, "Oh, wait a while, George; don't give it to me just yet." With that I poured the medicine from the spoon into the glass that she had the lime-water and milk out of. The reason was that I could not hold it steady, and as the doctor had ordered her lime-water and milk I thought it would not hurt her. I then picked up a teaspoon from the sugar basin, and carelessly stirred the spoon round in the medicine in the glass. The reason was that Guise told me to shake the bottle. I tasted the medicine. The smell was worse than the taste. [On it being observed that he tasted everything, he says I am in the habit of tasting all medicines.] There is no truth in the statement that I put a powder in the medicine. It is not true that I told her Dr. Newmarch told me to put a powder in the medicine. No mention was made of a powder that night. Mrs. Adye came to see her on Sunday morning. She said Mr. and Mrs. Gail were there on Sunday. I left home on Monday night at 11:20. I saw her before I left. I kissed her affectionately, and she me before leaving. I left a glass of milk and lime-water by her, and a stick for to knock with, and the baby's food. On Tuesday morning I got home at 7:30. I saw Mr. Weynton leaning over the fence. What Mrs. Weynton said is true. This was the first time I had heard poison mentioned. I went to my wife and said, "What is this I hear about a bottle you have been drinking out of with a white powder in the bottom?" (Weynton said, "What has your wife been drinking out of a bottle with a white powder in it?" He then said, "This poison." I said, "There is no bottle with a white powder that I know she has been drinking out of.") She said, "Oh, the doctor has the bottle; never mind about the bottle, give me a drink." I said, "Why did you not tell the doctor about that when he was here." She said, "Oh, never mind about that, the doctor knows all about the bottle." I had not seen Mrs. Seymour at this time. My wife seemed to me, from her conduct to me, just the same as any other ordinary day. On hearing about the bottle I summoned the doctor. I wanted to go, but she said "Don't leave me," and I sent Robertson. The doctor came. I was lying on the bed beside the wife crying when the doctor came. He asked her something that I did not hear, as I got up when he visited her. I was crying on account of hearing that she had been drinking poison. After he finished talking to her I then said, "Now tell the doctor all about this bottle you have been drinking out of with the white powder in it." The doctor said, "I'll look out for that; I'll look out for the bottle." I then told the doctor what was told to me that morning. He asked for a sheet of paper, which I got, and he wrote a prescription. I went downstairs, took off my heavy coat, and put a light one on. I was standing at the foot of the stairs waiting for him. I was crying to think of what had happened. The doctor said, "Oh, don't give way, Dean, there is no danger; but get that prescription made up." I went and got it made up. I went to sleep in a chair, and got the prescription and gave it to Mrs. Lee. I went to sleep. I got up at 4 o'clock. Wife called me. I left home at 11 o'clock. Returned home on Wednesday morning at 8 a.m. I left Mrs. Seymour in the house on Tuesday night. I went to see my wife. She was still ill. She was vomiting. On Wednesday I asked Mrs. Seymour what she had been having. Saw soda-water bottles. On the Thursday forenoon was asleep in the dining room. Doctor came and woke me up and asked me, "Dean, did you give your wife a powder in the medicine on Monday night?" I said, "No, doctor." He then showed me a packet of powders he had, and said, "Did you ever see these powders before?" [These are the powders referred to as immaterial.] I said, "No." He went upstairs. He called me up. He asked me in the presence of my wife, "Did you put a powder in the medicine on Monday night?" I said, "No." She said, "You did, George." I said, "How can you say that?" and with that I left the room. I forget whether I told the doctor how I gave it. I did not say, "You would hang a man." She did not say, "Why, George, you told me the doctor ordered the powder." On Thursday morning she said, "What made the medicine white?" I thought after the doctor had gone I would go and ask her why she said it. I said, "What makes you say I put a powder in the medicine." She said, "Because it was white." I then said, "Did she not see me put it into the glass which she drank the lime-water and milk out of?" She said, "No." I said, "You know you asked me for a drink as soon as I came home," to which she replied, "Yes." I said, "Did I not then want to give you the medicine, and did you not say, 'don't give it to me just yet?'" She said, "Yes." I said, "Did you not see me pour it into the glass which you had the lime-water and milk out of?" She said, "No; she did not notice that." Next day, Friday, the Sergeant arrested me. It is perfectly true what the Sergeant

Sergeant said as to reading the warrants. I have never purchased or used arsenic or strychnine. I don't know what is the quantity to give. I have never deposited a powder in any of her food. I know the tonic. I took some of it the first week in February. I took three doses. It brought back my appetite. I took it from her room to mine. One day at this time I was in the habit of bringing home $1\frac{1}{2}$ lb. of beef to make beef-tea. I asked her to have it. There was a basin of beef-tea this day. They said it was bitter. I was called up to my dinner by Mrs. Seymour. I went to see how my wife was. I saw a basin of beef-tea by the bed. I never had interfered with it. Her mother said to the wife, "Come and have a taste of the beef-tea." She started to give it to her. The wife took a spoonful and said she did not like it; it was bitter. Mrs. Seymour then tasted it and said it was all right; "There is nothing wrong with that." Previous to taking it the wife was eating chocolates. Mrs. Seymour said, "It must be the taste of the chocolates that makes the beef-tea taste nasty." I took a couple of spoonfuls of it at Mrs. Seymour's request and I found it was all right, but a little salty. I said "Why don't you drink some, Pet, it would do you good." She said, "No." I said, "Don't throw it away, I'll drink it for my supper before I go to work." Mrs. Seymour said, "Go and get your dinner, it will be cold." Mrs. Seymour said she threw it away and I did not drink it. As to the groats. It was a Sunday morning. I came home. Mrs. Seymour said wife had just had her breakfast. Saw her. She said she felt a little better. I had a bath, breakfast, a smoke, read *Sunday Times*. I went up about 10.30. The wife ill; she was not so well, and vomited a few times. I held the basin to her. She sat in my lap at her request. During this time Mrs. Seymour vomited. I then asked, "What is the cause of your being sick." She said she did not know. She had some groats for breakfast and Mrs. Seymour had some. They had their breakfast before I came home. I said, "Shall I get the doctor." They said, "No, we will be all right by-and-bye." I went to the doctor next day and paid him for her accouchement, and told him of their both being sick on Sunday. I got a prescription from him which I took home. I told him what was the matter, and said, "Can you give me anything for it." I put it down to chaff, her talking about the illegitimate children. We were on good terms. I have done what I could to beautify the home. We have many times chatted over the making of a new home. I have done all I could to render her happy.

Cross-examined:—I was in gaol on the 28th March, and saw my solicitor on that day in the hospital. I did not know that day that a charge of bigamy was to be made. I don't know that Mrs. Gail was in Meagher's office that night with two policemen. The clerk, sitting at the table, told me that Gail was going to be arrested. I said, "I know nothing about the divorce." He said we might get Gail—that Gail might be arrested. I thought Gail was divorced long ago. She was pretty well always on. I can't give any reason for her trying to poison herself, nor did I see anything in her conduct to lead me to think she would get a charge against me. I never heard about their characters till Meagher asked the question in the Court. He never told me of it. I was sitting by him in the Police Court. I know they were vomiting; not frequently—three or four times before dinner. I did not notice them purging. It is true what they say, except I was not there at dinner. I don't doubt the beef-tea was thrown away. I would have drunk it if it had been there. It was on Friday afternoon we had the quarrel. I was going out on the bicycle. She asked me to hold the baby. She said, "You never will hold the baby when I want you." The chaff about the illegitimate children was two or three times. The story about the tea is true as to my saying "Drink it whilst it is warm," and that she sent me for Mrs. Adye. I drank the porter that was flat and sour. Barring the position in which I held the glass and the powder, her account of it is true. I did not see her vomiting on Sunday. I heard her swear that immediately, or twenty minutes, after taking her breakfast, in which was a chop, she was vomiting incessantly. It is not true. She was all right till 12 or 1 o'clock, when I went and got the cocoa. I saw her drink it. Nobody could tamper with it. She could not put anything into it. After drinking the cocoa, she did not frequently vomit and purge. She seemed all right. To my belief she was all right. She did not vomit to my knowledge after the cocoa. I heard the doctor say she was suffering from acute arsenical poisoning that evening. She did not mention a pain in her stomach to me. I know nothing about her taking her nightgown off. She was on the closet that day. I can't say how often. I was in the house all day. Hansbach was downstairs on the sofa from breakfast to dinner time. It was Tuesday morning I told her she would have to tell the doctor about the water and the bottle. It was Thursday morning that the doctor spoke to me about the powder, and told me she said I had put one in the medicine. She said, "You know, George, you did." I can't say she said, "You know it is a falsehood." I did not say anything about my putting the medicine into the used glass by way of explanation. I never gave the explanation to Doctor Newmarch. I did not say, "Why did not you let me take it to the doctor." I did not think anything of her charging me with putting a powder into the medicine. I did for the moment. I know of no medicine glass. Mrs. Seymour told me on the Thursday after the doctor left that arsenic was found in the bottle, and that the police were coming. They came that night. I was the only person who cooked the food or handled it, or gave her the medicine. I thought it was doing her good. She did not vomit before I left. She told me on the Tuesday when I returned that she had been vomiting and purging. I sent for the doctor to see her, and ask him about the bottle. I know it was the police laid the information against me, not my wife. When the doctor said this is a very serious charge, I did not have any idea that it referred to me.

MARGARET CASSIN:—Single woman. I know prisoner and his wife. Since his marriage he has avoided me. I have seen him twice since his marriage. Once with his wife. Once in Oxford-street on his bicycle. His wife invited me to see her.

THOMAS SUMMERBELL:—Manager of the North Shore Ferry Company. Prisoner is master of one of the boats. Ten or eleven years in the employ. I think everything that is good of him.

In reply, DR. NEWMARCH: On Tuesday I went at 8.15 to prisoner. He was not lying on the bed beside his wife, crying. He was not there at all. The statement that he said "Now tell the doctor all about the bottle that you have been drinking out of with a white powder in it," is not true. It is absolutely untrue. He never said that in his wife's presence. He never told me about the bottle on Tuesday. On Wednesday night I said, "What about this bottle and this charge of poisoning against you." I said it is a most serious charge, and asked him what foundation there was for it. He said "I know nothing about it, take any steps you can to discover the poison and who put it there." This was on the Wednesday night. I let him know distinctly that he was charged with putting poison into the bottle. He never gave me any explanation of the medicine looking milky. I never heard of it before to-day. On the Wednesday night he was crying when I visited her late, and he was on the bed, but there was no such conversation before me about the bottle.

By

By a Juror : Gail said, "I want you to test, I think there is poison in it." Mrs. Gail or Mrs. Seymour did not accuse prisoner. Gail said he thought Dean had put the poison in the bottle. Mrs. Dean told me on Tuesday that she thought prisoner had put poison in. I had got the bottle on Monday night, and I asked Mrs. Dean was there any foundation for it, as I could not take the statement of any one who left the bottle with me. It was after taking the medicine in which she said the powder was that she said she suspected him of putting poison in the bottle. Gail was reticent when he came and asked me to test the bottle. I said he must tell me all about it. He then told me it was a patient of mine I was attending. I said, "Who do you mean." He said "Mrs. Dean." He then said he thought that it was the husband poisoning the wife. I asked his reason for saying that. He said they did not live happily together. Lime-water is colourless, and has no white powder in it. Gail said Mrs. Dean left the bottle at my house. I knew Mrs. Dean had been to my house on Saturday night, and that she had been to the chemist's.

WILLIAM MICHAEL DOHERTY : I analysed the lime-water. It had no poison of any kind in it. I examined everything that came out of the place which we received from the Police, and found no poison. I got another bottle of syrup from Mrs. Adye. There was no poison in it.

LOUISA MURPHY : I am sister to Gail. We lived together at West Maitland till up to ten years ago. He was then about . . . There is no foundation for any suggestion that he was mixed up in a poisoning case. He then went to live with my sister. I never heard of his being mixed up in a poisoning case.

MRS. DEAN : I never accused prisoner of having to support illegitimate children. On the Tuesday he was not in the room, when the doctor came, crying. Such a conversation as prisoner swore to as to his saying "Now tell the doctor all about the bottle that you have been drinking out of with a white powder in it," never took place. No such conversation took place, as he said did, with me after the doctor left in which he suggested that the white look in the medicine was caused by his putting the medicine into the tumbler that I had drunk lime-water and milk out of (see page 13). [*Conversation as stated by prisoner read to her.*] I had a drink of lime-water and milk that night before I took the medicine, but I left none in the glass. It is quite untrue that he drank the glass of porter off which I refused there and then. I thought I was being poisoned when I took the bottle to Gail. I only had a cup of tea on the Sunday. I thought it was suspicious about the bottle, but I had no real conviction that I was being poisoned. It was just mentioned—as perhaps. I did not accuse my husband then. It was just said, "Perhaps it is poison." I did not suspect my husband then. My suspicion was aroused against my husband on Sunday morning after the incident of the porter and then the tea. I did not alter my manner to my husband, as I did not know positively that there was poison till the doctor told me on Thursday afternoon. He said he would drink the beef-tea before he went to bed. I did not get out of bed from the Saturday night, except on Monday morning, from the purging. He was kind to the child.

Mr. Meagher addresses Jury 7:45.

Mrs. DEAN, at the request of Juror, then shows how much syrup she put in the glass.

Hamlet says the quantity is a little over 2 ounces. That would not be a fatal dose, but a dangerous dose. There would be half a grain of arsenic in a tablespoonful of tonic. The strychnine would modify the arsenic, to which it is antagonistic, and would counteract it. A series of doses, though not one is fatal, may kill.

Mr. Want to Jury 10:35 ; finishes at 11:50, and Court adjourns.

6TH APRIL.

Mrs. DEAN (by Juror) : I did not see him offer the medicine to me in a spoon. He did not offer it to me in the spoon. I did not see him pouring it into the tumbler. When he came back from the chemist's he placed the medicine on the mantel. I did not know that he was measuring the medicine till he brought it to the bedside and asked me to take it. I then noticed that he had a spoon in the tumbler, pressing the back of it against the glass, as though he were trying to mix something by stirring it and pressing the back of the spoon against the side of the glass. He then asked me to drink it. It was then I noticed the milky appearance of the medicine, and asked prisoner the cause of it. He replied that it was a powder that the doctor had ordered to go with the medicine, and I drank it. This was the very first time the medicine was offered to me. Between five or ten minutes elapsed from the time of his putting the medicine on the mantelpiece and his giving it to me. No one was in the room whilst the medicine was on the mantelpiece. I did not get out of bed. He did give me a drink of lime-water and milk, but whether before he went or after he returned with the medicine I cannot say. I drank it. I did not refuse the medicine at first, but took it at once on his offering it to me. His account is not correct.

PRISONER (by Jury) : Directly I arrived home with the medicine I proceeded to the kitchen and got a tablespoon from the drawer in the dresser. I then went upstairs to her bedroom, and when I got up she asked me for a drink. I said "I have some medicine for you, old girl." She said "Give me a drink first of lime-water," which I did. After giving it to her she started to drink it quickly. I said "Don't drink it too quick." She drank nearly all, leaving a table-spoonful in the glass. I put it on the little table by the bedside. I then went to the mantelpiece and got the spoon and medicine from the mantelpiece, where I had laid it when I came up. I took the bottle and gave it a shake and got the spoon, poured out a spoonful of the medicine, went over to the bedside and said, "Come old girl, take your medicine." I offered it to her in the spoon. She said, "Wait a few minutes." I then took the glass off the table out of which I had previously given the lime-water and milk in and poured the medicine into the glass. There was a small quantity of lime-water and milk in it. I then picked up a teaspoon on the table, and I just carelessly stirred the medicine round, after stirring it awhile she turned over and rose to take the medicine. I was in the room from the time I brought the medicine home till I gave it to her in the glass. It was about five minutes from the time I brought it to the room till I gave it to her. She appeared to suffer when I was offering the medicine to her in the spoon. I can't say whether she saw me offer it to her in the spoon. She was facing out towards me in the bed. There was nothing to prevent her seeing it. I waited till she drank it. I had my hand behind her whilst she drank it. I never kept away from the place during her confinement. I used not to stop talking, as her mother said she was to be kept quiet.

I sum up.

Questions for Jury :

- I. Did she take poison somehow? Mr. Meagher admits that she did.
- II. Was it by accident or design? Repeated illnesses after the groats, the syrup, the cocoa, and the medicine. No poison used in the house for any innocent domestic purpose.
- III. If the poison was taken by design, who administered it? There were only three people in the house—the prisoner, the mother, and the daughter. The defence set up by Mr. Meagher is that the poisoning is the work of “a trinity of conspirators”—Mrs. Dean, her mother, and Mr. Gail.
 - (a) Is there evidence of such conspiracy?
 - (b) Is the defence that the wife poisoned herself to get up a false charge against her husband a reasonable explanation of the circumstances of the case?

Jury retire 12:25, and return at 9:55 with a verdict of guilty on the first count, with a strong recommendation to mercy on account of the prisoner's previous character.

Sentence—Death.

North Sydney, }
to wit. }

THE examination of Stephen James Cotter, of North Sydney, in the Colony of New South Wales, Inspector; Richard Brennan, of North Sydney, Sergeant of Police; Mary Dean, of North Sydney, wife of George Dean; Bernard James Newmarch, of North Sydney, medical practitioner; William Mogford Hamlet, of Sydney, Government analyst; William Michael Doherty, of Sydney, assistant analyst; William James Guise, of North Sydney, chemist; Arthur Gale Street, of North Sydney, chemist; Thomas Edmund Macdonald, of North Sydney, chemist; Richard John Smith, of North Sydney, chemist; Frederick William Gail, of North Sydney, furniture broker; Harry William Jenkins, of North Sydney, painter; Bessie Walke, of North Sydney, wife of Philip Walke; Ethel Adey, daughter of Tom Procter Adey, of North Sydney; Joseph Chivers, of North Sydney, constable; Caroline Seymour, of North Sydney, widow, in the said Colony, taken on oath this 23rd day of March, in the year of our Lord, 1895, at North Sydney, in the Colony aforesaid, before the undersigned, one of Her Majesty's Justices of the Peace for the said Colony, in the presence and hearing of George Dean, who is charged this day before me for that he, the said George Dean, on the 2nd day of March, 1895, at North Sydney, in the said Colony, feloniously did cause poison to be taken by Mary Dean, his wife, with intent to murder the said Mary Dean.

No. 11. Information.

New South Wales, }
to wit. }

BE it remembered, that on this 8th day of March, in the year of our Lord, 1895, at North Sydney, in the Colony of New South Wales, and within the Metropolitan Police District, Stephen James Cotter, an Inspector of the Police Force of the Colony aforesaid, of North Sydney, appears before me, the undersigned, one of Her Majesty's Justices duly assigned to keep the Peace of our Lady the Queen in and for the Colony of New South Wales, and on oath informs me, from information he has received and from circumstances within his knowledge, has just cause to suspect, and does so suspect, and verily believes that, on the 2nd day of March, in the year of our Lord, 1895, one George Dean, of North Sydney, did, at North Sydney, in said district and Colony, feloniously cause to be taken poison by one Mary Dean, the wife of the said George Dean, with intent to murder the said Mary Dean contrary to the Act in such case made and provided; whereupon the said Stephen James Cotter prays that I, the said Justice, will proceed in the premises according to law, and will issue my warrant for the apprehension of the said George Dean.

Sworn at North Sydney, in the said Colony, on the }
day first above written, before me, — . }

S. J. COTTER.

W. BARNETT SMITH, J.P.

No. 12. Warrant.

To the Superintendent and a Constable in the Police Force for the Colony of New South Wales, and to all other Constables in said Force.

WHEREAS information hath this day been laid before the undersigned, one of Her Majesty's Justices of the Peace in and for the Colony of New South Wales, for that one George Dean did, at North Sydney, in the Colony aforesaid, on the 2nd day of March, in the year of our Lord, 1895, feloniously cause poison to be taken by one Mary Dean, the wife of the said George Dean, with intent to murder the said Mary Dean, and oath being now made before me, substantiating the matter of the said information: These are, therefore, to command you, in Her Majesty's name, forthwith to apprehend the said George Dean, and to bring him before some one or more of Her Majesty's Justices of the Peace in and for the Colony aforesaid, to answer to the said information, and to be further dealt with according to law.

Given under my Hand and Seal, this 8th day of March, in the year }
of our Lord, 1895, at North Sydney, in the Colony aforesaid. }

W. BARNETT SMITH, J.P.

Court of Petty Sessions, 9 March, 1895.

GEORGE DEAN.

B.W.—That he did on the 2nd March, 1895, at North Sydney, feloniously cause poison to be taken by Mary Dean, the wife of the said George Dean, with intent to murder the said Mary Dean.

Adjudication:—Remanded until the 14th instant, at the application of Police. Bail refused.

F. W. EDWARDS, S.M.

Court

Court of Petty Sessions, 14 March, 1895.

GEORGE DEAN.

B.W.—That he did cause poison to be taken by Mary Dean with intent to murder the said Mary Dean.

Adjudication:—Remanded upon the application of Sub-Inspector Cotter, as the witnesses for prosecution cannot attend. Bail refused. Remanded to Tuesday next.

G. W. F. ADDISON.

Court of Petty Sessions, North Sydney, 19 March, 1895.

GEORGE DEAN.

CHARGED by warrant that he did, on the 2nd day of March, 1895, feloniously cause poison to be taken by one Mary Dean, the wife of the said George Dean, with intent to murder the said Mary Dean.

No. 13.

Depositions.

Stephen James Cotter, being duly sworn, on oath, states:—I am an inspector of police, stationed at North Sydney; I laid the information in the case before the Court; it refers to the prisoner; on Tuesday, the 5th instant, I found the bottle produced, marked "Dean, No. 1," with a letter from Dr. Newmarch, in my room at the police station; it was sealed and tied on the following morning, Wednesday, the 6th instant; I showed the bottle, in the state I received it, to Dr. Newmarch, at his surgery; I then took it over to the Government Laboratory, and delivered it to Mr. Doherty, assistant to the Government Analyst; on Thursday afternoon, the 7th instant, Dr. Newmarch showed me, at his surgery, several powders with a paper round them, with the words "As before"; the doctor enclosed them, in my presence, in the wrapper marked "Dean, No. 2," and gave them to me; on the same Thursday afternoon, the 7th instant, I sent Constable Chivers to Dr. Newmarch's surgery; Chivers shortly afterwards, at the police station, gave me the medicine bottle produced, marked "Dean, No. 3," containing a liquid; on Thursday evening, the 7th, Sergeant Brennan gave to me the tumbler produced, which contained a liquid; I locked the tumbler and its contents in my safe for the night, and next morning tied and sealed it in the state in which I received it, and gave it at the police-station to Sergeant Brennan; I also gave Sergeant Brennan the bottle, "Dean, No. 3," and the powders, "Dean No. 2," for the purpose of delivery to the Analyst; on Friday, the 8th instant, after the arrest of the prisoner, Sergeant Brennan handed to me two prescriptions marked "Exhibits A and B"; on Sunday, the 10th instant, Constable Chivers, in my room at the police-station, took from a locked drawer in my room of which he had the key the bottle produced, marked "Dean, No. 4," with its contents, and also a parcel marked "Dean, No. 5," produced; on Monday, the 11th instant, I gave the bottle marked "Dean, No. 4" and the parcel "No. 5" to Sergeant Brennan, for the purpose of delivery to the Government Analyst; on Tuesday, the 12th instant, I received from Constable Chivers in my room, taken from a locked drawer, a small bottle containing a white liquid, which was delivered by me to the Government Analyst; on Sunday, the 10th instant, I was at the prisoner's residence; several articles, bottles, &c., were taken possession of by Sergeant Brennan; they have since been handed to the Government Analyst.

S. J. COTTER.

No questions asked by accused.

Taken and sworn at North Sydney, this 19th day of }
March, 1895, before me,— }

JAMES GILES, S.M.

Richard Brennan, being duly sworn, on oath, states:—I am a sergeant of police, stationed at North Sydney; about 6 p.m. on the 8th instant I went to the prisoner's house in Miller-street, North Sydney, with Constable Wearn; I saw the prisoner in bed in an upstairs back room; I said, "Wake up George"; prisoner sat up in bed; I said I have two warrants for your arrest; prisoner said "Yes"; I said I will read them to you; I read the warrant produced for the charge on the 2nd March; prisoner replied, "Pretty strong that; I suppose I will have to go and prove my innocence"; I then cautioned the accused in the usual way, and said, "You told me last night that you gave tea and toast to your wife on Sunday evening and morning"; prisoner said "Yes"; I said, "Were the vessels you gave the tea and toast out of clean"? prisoner said, "Yes, thoroughly clean; I scalded the teapot before making the tea, and I got a clean cup and saucer off the dresser"; I said, "The tea which your wife says you gave her on Sunday morning, arsenic has been found in it"; prisoner said, "Well, that's mysterious; I had no knowledge of poison being in the house; I did not wash the cup and saucer out, the wife must have washed them up; the first I heard of poison being in the house was on Tuesday morning last; Mr. Weynton, who lives next door, asked me what about the poison that was found in the bottle, and Mrs. Seymour told me yesterday that the police were coming up"; prisoner then said, "Did you see the powders that Dr. Newmarch showed me yesterday?" I said I saw a packet sealed up, but I did not see the powders; prisoner said, "Did you see the writing on the powders?" I said, "No"; prisoner said, "I would like you to trace that writing"; I then searched prisoner's room and clothing; after searching prisoner's room I took him from room to room searching; I took prisoner to his wife's room; prisoner's wife was there in bed; prisoner said to his wife, "Do you want me to go?" prisoner's wife said, "If you are innocent, you had better go and prove your innocence"; prisoner said, "But I am innocent"; I found nothing in the prisoner's residence which appeared to me to be like arsenic; I took two small boxes, one containing pills, and one a bottle containing a brown liquid; these are now in the hands of the Government Analyst; before I took the prisoner to his wife's room prisoner said, "I gave my wife some lime-water and milk and a few drops of brandy on the Monday night, and I gave her the medicine in the same glass shortly afterwards, and that is how the medicine had a milky appearance"; I took the prisoner to the police station and locked him up; on the night of the 7th, before prisoner's arrest, I went to his house and saw Mrs. Dean and her mother, Mrs. Seymour; Mrs. Dean was in bed; about five minutes after I got there Dean came in and spoke to his wife, and then went out to a back room; the glass containing liquid [produced] was given to me by Mrs. Seymour in Mrs. Dean's presence; it was taken from under

the chest-of-drawers; I handed the glass and its contents over to Mr. Doherty, at the laboratory, Sydney, in the state that I received it; after I took the glass from Mrs. Seymour I went into the prisoner's room, and I said, "How do you get your water?" Prisoner said, "From the Sydney Water Supply, from a tap;" I said, "The reason I ask that question is in consequence of your wife's illness; I thought if you get water from a tank that poison might get into it accidentally;" prisoner said, "There is no poison in the house; the first I heard of my wife's illness was on Saturday night last, and I gave her tea and toast on Sunday morning, also on Sunday evening; the case seems mysterious to me;" I produce an empty tumbler which I took possession of the night of the arrest; it is not the tumbler that contained the tea; Mrs. Seymour gave me this tumbler and told me something; it was given to me in the kitchen; the tumbler is clean; the bottle marked "Dean No. 3" I received from Mr. Cotter; also the powders "Dean No. 2;" I handed them to the Assistant Government Analyst; this was on Friday, the 8th instant; on the 11th instant, the bottle marked "Dean No. 4," and the night-dress produced, I handed over to Mr. Doherty, the Assistant Government Analyst; on Sunday, the 10th instant, I took possession of five bottles at the accused's residence, in the presence of Mr. Cotter, and with three other bottles and some pills I handed over the lot to the Government Analyst on the 15th instant; one bottle contained lemon syrup, which I received from Bessie Adey.

To Mr. Meagher: I remember the prisoner asking me to clear up the writing on the powders; I found the writing to be the writing of Arthur Gale Street, the Friendly Society's Dispensary, North Sydney; I could not get the date; I have not brought Street to the prisoner; only a member of the society can get medicine there; I visited the prisoner's house once before the arrest; Mrs. Seymour and Mrs. Gale were there; I have known prisoner as master on the night ferry; I have never heard anything against his character; prisoner has been in the ferry service about eleven years; the prisoner bears a high character.

R. BRENNAN.

Taken and sworn at North Sydney, this 19th day of }
March, 1895, before me,—

JAMES GILES, S.M.

Mary Dean, being duly sworn, on oath, states:—I am the wife of the prisoner, and I live in Miller-street, North Sydney; I have been married to the prisoner twelve months; I was married in March, 1894; the night-dress produced is my property; I put it on clean on Sunday morning, the 3rd March instant; I ceased to wear it on Monday morning, the 4th; it was stained by me during my illness; it was taken off on the morning of the 4th and put in the clothes basket; my mother found it in the basket and brought it to me, and asked if it was my night-dress; it was then in the same state as when it was taken off; Dr. Newmarch took the night-dress from my room in my presence on the 6th May; my mother got it from the basket; Dr. Newmarch took it on the 7th instant; I know the bottle marked "Dean No. 3," a tonic; Dr. Newmarch took this bottle from my house on Wednesday or Thursday the 6th or 7th instant; on the 7th instant, Sergeant Brennan took from my house the tumbler containing tea; on the 8th, Dr. Newmarch took the bottle marked "Dean No. 4" from my room; it contains urine of mine; on the 8th, Sergeant Brennan got the empty tumbler produced from my house on Friday; it is the tumbler out of which I drank some lemon syrup; I know it because it is the only one in the house of that kind; the doctor also got a bottle of breast milk from me; I have been living with my husband for the last six months; my mother was there during my confinement; was attended by Dr. Newmarch and my mother; my mother left when the child was a month old; my mother did not return to the house after this until the 4th March; there was no adult inmate living in the house from January to the 4th March but the prisoner and myself; I have never had any quarrels with my neighbours; I have not had much to do with them; I was at Surry Hills before I was married; I lived first after marriage at Mosman's Bay; on the 25th February I bought the bottle marked "Dean No. 1" from Mrs. Adey, a grocer in Miller-street; it then contained lemon syrup; I brought it home, and Miss Adey came home with me; we opened the bottle; it was sealed and capped, and Miss Adey had the first drink; then I had a drink; I suffered no ill effects from that drink, nor did Miss Adey; I continued drinking the syrup up to Friday, the 1st March, and inclusive of that day; I did not suffer in any way from the drinking; on the Friday, the 1st March, I had some words with my husband; it was over the baby; I asked prisoner to mind the baby, but he refused, and said, "I have no time—I am going out"; my husband is at home in the day time; my husband complained about the house and the child not being clean; before this my husband had said something about Miss Cassin; I said, "Maggie Cassin is the girl you should have married; prisoner said, "that is the girl I ought to have married, and that is the girl I will marry as soon as I get free from you"; before and after the birth of my child the prisoner asked me to leave the house; prisoner said, "I am not the father of the child"; prisoner did not beat me, but he treated me unkindly; prisoner kept me without money, but he supplied the house with what was necessary; prisoner said he had met Miss Cassin; he just mentioned it in course of conversation; we were on unfriendly terms before my confinement; the child was born on the 26th December, 1894; I know of no reason why the prisoner should have said the child was not his; prisoner sulked a week for many a time; I never had poison in the house; my husband did not sleep with me, he occupied a separate bedroom; my husband was away at nights; I never knew of prisoner or my mother having poison in the house; on Friday, the 1st March, I went to bed in my usual state of health; the syrup was kept on the sideboard up to Friday morning the 1st March, it was then removed to the kitchen by myself; on Saturday morning, the 2nd March, I came down stairs to the kitchen; I then prepared a glass of lemon-syrup from the bottle in the kitchen, and the water from the tap; I noticed that the tumbler was clean before I put the syrup in; I then made a drink and swallowed three or four mouthfuls; I then noticed a most bitter taste. I then recognised the same taste as what I had tasted in some beef tea that I had some five weeks before; I then lit the fire and prepared the breakfast; prisoner came in while I was getting breakfast; we had breakfast together; after breakfast I started vomiting; I continued to vomit and my head was very bad; the prisoner did not give me anything; at lunch time on the same day I made some more syrup from the same bottle; I tasted it, it had a bitter taste so I threw it down the sink; I then took the bottle to Mrs. Adey; she tasted the syrup and said something to a Mrs. Walker who was there; Mrs. Walker then tasted the syrup; I left the bottle at Mrs. Adey's for 10 minutes and went home to get my baby;

baby ; I then got the bottle again, it had a small quantity of syrup in it ; I took the bottle to Mr. Smith, a chemist in West-street ; he told me something and returned the syrup ; I then took the syrup to Mrs. Gail's ; we had a conversation ; I then took the bottle of syrup to Dr. Newmarch ; Dr. Newmarch was not there ; I took it back to Mrs. Gail's and left it there ; I did not see it again until to-day ; on Saturday, the 2nd, I went to bed after tea ; between 9 and 10 on Saturday my husband gave me some porter ; he then returned to work ; I suffered in no way from this ; on the 3rd instant my husband gave me some porter in the morning ; prisoner came home a little after 9 o'clock on the Sunday morning ; prisoner came into the bedroom and said, "How do you feel this morning?" I said, "I have suffered severely from pains in my head" ; prisoner said, "What would you like to drink—either some brandy or some porter?" I said, "Give me what you think will do me the most good" ; prisoner said, "You had better have some porter" ; prisoner took a tumbler into the bath-room, and washed it ; he returned to my room ; I noticed he had the tumbler in the palm of his hand, with his fingers round it ; I raised myself in bed, and noticed something white in the bottom of the tumbler ; it looked like a powder ; prisoner turned his back to me, and put some of the porter into the glass ; there was no porter in it when I noticed the powder ; prisoner then smelt it ; I said, "What is the matter with it?" ; prisoner said, "It has turned sour," I said, "Put a spoonful of sugar into it—it will freshen it up" ; prisoner said, "No, it may make you sick" ; prisoner then threw it over the balcony, and took the glass downstairs ; at about 10 o'clock in the morning of the 3rd instant I was in bed ; prisoner came into the room, and brought a cup and saucer in with him ; the cup contained tea ; he poured some of it into the saucer, and said "Drink this" ; I noticed something white clinging to the saucer round the edge of the tea ; I asked what it was ; prisoner said, "It is the cream off the milk" ; I put it to my lips ; prisoner said, "Drink it while it is hot" ; I asked prisoner to go for Mrs. Adey ; prisoner said, "Drink the tea before I go" ; I said "No" ; prisoner then went for Mrs. Adey ; as soon as I heard the gate click I got out of bed ; I took a tumbler off the washstand ; I wiped it with a towel, to make it clean ; I then put the tea into the tumbler, and placed it under the chest of drawers ; Mrs. Adey returned with my husband ; I put two-thirds of the tea in the tumbler in the glass, but left what was in the bottom of the cup ; after Mrs. Adey came, I said something to her ; my husband came upstairs, and said, "Did you drink the tea?" ; I said "Yes" ; prisoner said, "It will do you good" ; prisoner then took the cup and saucer out of the room ; on the 4th instant Dr. Newmarch saw me, and prescribed for me ; on the Monday night, the 4th instant, about 10 o'clock, prisoner brought some medicine to the bedside, and said, "This is your medicine ; drink it" ; it was in a tumbler, and looked milky ; prisoner brought it into the room, in the tumbler ; the top looked like curdled milk ; I said, "What is that?" ; prisoner, "It is a powder that was ordered to be put into the medicine" ; prisoner had a spoon in the tumbler, pressing the back of it against the glass trying to press the stuff on the top ; I drank the medicine ; prisoner then gave me a spoonful of sugar and went off to his work ; after taking the medicine I became worse, and I vomited and purged every ten minutes through the night ; prisoner did not speak to me for a week before my confinement.

MARY DEAN.

Taken and sworn at North Sydney, this 19th day of }
 March, 1895, before me,—

JAMES GILES, S.M.

Prisoner remanded to Thursday next, the 21st instant, at the request of attorney for the prisoner.

JAMES GILES, S.M.

Court-house, North Sydney, 19th March, 1894.

Mary Dean, recalled, and duly sworn, on oath, states:—On Tuesday, the 5th instant, I had a conversation with prisoner and Dr. Newmarch ; I had told the doctor something before this ; Dr. Newmarch said, "Did you put a powder in your wife's medicine?" prisoner replied, "No" ; I said, "You gave me a powder in the medicine" ; prisoner said, "No, I did not" ; I said, "Did you not say the doctor had ordered a powder in the medicine?" prisoner replied, "No, I did not" ; I was taking medicine during my confinement to which a powder had to be added, prescribed by Dr. Newmarch ; on Saturday, the 2nd instant, the doors of the house were closed when I got up ; I had coffee and tea stored in the kitchen ; they are still used in the house ; no one has suffered from using them ; the powders [*produced*], marked "as before," were found on the outside doorstep by me ; about three weeks before my illness, on the 2nd instant, a man named Jenkins was there with a party of friends of Mrs. Gail ; my mother was not there ; the powders were on the doorstep when I came back from Miss Adey's ; I took them in and examined them ; I did not notice the powders on the step when I passed out ; it was a moonlight night ; my mother attended me up to Tuesday night, the 5th instant ; I was taking medicine prescribed by Dr. Newmarch ; my mother arrived at 12 o'clock on the Monday night, and left on the Tuesday morning at 5 o'clock ; the prisoner gave me my medicine while my mother was away ; my mother returned on the evening of the 5th instant ; I have improved in health since Tuesday night ; my medicine is kept in my bedroom ; I mean since my confinement ; one bottle was kept on my husband's table in another room—the bottle marked "Dean No. 3" ; he said he was taking the medicine ; I asked prisoner what the medicine was doing there ; prisoner replied, "I am taking the medicine, as I have no appetite ;" I have not been subject to attacks of illness, except about three weeks after my confinement ; I then had my mother attending me ; she was attacked the same as me after taking some groats ; she was sick after the groats ; the prisoner was in the house at this time ; there was no other occasion on which the doctor attended me for such an illness ; the same bitter taste I recognised in the syrup I tasted in the beef-tea ; my mother brought me the beef-tea upstairs ; prisoner was there ; this was about 11 o'clock in the forenoon ; my mother said, "Drink this, it is beautiful" ; I put a spoon into the tea and tasted it ; I said, "I cannot drink it on account of a bitter taste" ; my mother said, "I tasted it down stairs, and it was all right" ; my mother then tasted it, and said, "It is most bitter ; it must have been a gall in the meat ; it did not taste like this when I tasted it downstairs" ; my mother asked the prisoner to taste it ; prisoner tasted it, and said, "It's all right" ; prisoner then said, "It is all right, drink it" ; I did not drink it ; my mother told prisoner she was going to throw it away ; on the 5th instant, in the morning, prisoner was in my bedroom, and said, "Mrs. Weynton has spoken to me about poison being in the syrup-bottle" ; I said I did not know of any poison being in the bottle ; I said, "The bottle is at Dr. Newmarch's" ; prisoner said "Why did you not let me take

take the bottle to Dr. Newmarch?" I said it was a pity to wake him; I did not have the powders when I left the house; they were not in my possession before I left the house; I found them when I returned with Miss Adey.

By Mr. Meagher: I first knew Dr. Newmarch took the bottle on the 4th instant; my mother told me at half-past 12 o'clock on the 4th instant; I gave the empty glass up on the Friday; I told my mother it was there on the Wednesday; my mother took the glass out and examined it; Mr. Gail examined it the same time as my mother; the glass was under the chest of drawers for three days; my mother lives at Brunswick Cottage, M'Mahon's Point; Gails live about a mile away; the prisoner leaves for work about a quarter to 11 o'clock at night generally; my mother arrived unexpectedly; I heard she was at Gail's place at 9 o'clock on Monday night; three hours after this she came to the house; while living at Mosman's prisoner said that my mother must leave the house; after this my husband made her leave the house; my mother attended me during my confinement, and after for a month; prisoner came home after 7 o'clock on the Monday morning; I first heard of poison from Dr. Newmarch, on the 7th instant; on the Monday I told my mother about the powder in the porter, tea, and medicine; I told her about the porter; I did not tell my mother that I had preserved the tea; when I told my mother of the powder in the tea, porter, and medicine my mother did not ask whether I had preserved any of those liquids; it excited my attention when I saw prisoner with his fingers round the glass; I wanted to get prisoner away in order that I might preserve the tea; I thought it was of some importance; although I preserved the tea I did not tell my mother where it was; Dr. Newmarch saw me on Monday night and asked me questions about vomiting, and asked about the nightdress; he did not ask what I had eaten; the doctor asked for an explanation of my vomiting on the Tuesday; I did not then refer him to the tea under the chest of drawers; the doctor saw me on the Wednesday twice; I did not then draw his attention to the tea; I saw my lemon syrup before the prisoner came home; from the time I got up to the arrival of the prisoner I had not been outside the house; I know Mrs. Thompson; I know I was not at Mrs. Thompson's house on the 2nd March; I know I was not outside; I now remember I was in Mrs. Thompson's on the Saturday, the 2nd instant, therefore I must have been outside before prisoner came home; on the 2nd March the prisoner suggested getting the doctor; on the following day the prisoner also suggested getting the doctor; my husband was going to his duty all the time; I remember prisoner making me a cup of cocoa; prisoner helped to boil the kettle; prisoner said on the Monday, "You must and will have the doctor"; I had been refusing to see the doctor; prisoner then left the house and got the doctor; the doctor saw me first on the 4th instant; from the time my mother came until the prisoner was arrested I never told prisoner of the bottles or powder; prisoner was kind to me during my illness; I returned to the house with Miss Adey before the prisoner left; I asked all in the room who dropped the powders; I put them in the sideboard and then after into my pocket; I am sure the powders were the same; I placed the powders in my pocket as I did not wish to leave them on the sideboard; I wished to take them upstairs; the powders were found in my pocket by my mother; the dress was not worn after the party; I never remember prisoner holding a glass with his fingers round before; prisoner was holding the glass up; it was not held down for me to take; prisoner turned his back to put the porter in; the bottle had been previously opened; I have no doubt I saw powder in the glass; I told prisoner to put sugar into it to freshen it up; I do not know that I had any reason for asking for the sugar to be put in; I saw prisoner bring the medicine in the glass; I was in a weak condition; the bottle of medicine was brown; when poured into the glass it had a white colour; my husband came in breathless from the chemist and put the medicine in my room; I did not see the bottle until next day; a little table was near the bed; bottles and tumblers were on the table; I had been drinking lime-water; prisoner did not say that the white was from a few drops of lime-water being in the tumbler; when the medicine was poured out it had a white substance on the top like curdled milk; I had never seen this before in medicine; I had no idea that my husband was attempting to poison me; it never struck me that the white substance was poison; I did not ask my husband about it because I wanted to see if prisoner would ask me to take it; I intended to ask about the powder afterwards; prisoner said it was sour; I did not say I could see white stuff in it; the tea had a lot of little white lumps floating on the top of the tea round the edge of the saucer; I knew there was no business to be powder in the glass; I thought in my own mind that I was being poisoned, but I did not tell anyone; I did not think seriously of what Mr. Meagher said when I said that I did not think anyone was trying to poison me; when I saw the white round the saucer my suspicion was stronger; I was in bed; I forgot about the tea under the drawers, and therefore did not mention it to anyone; I knew Dr. Newmarch had a bottle on the Tuesday to analyse for poison; I did not mention the cup of tea, as I forgot it; the doctor did not ask on Monday what I had been eating; I did not regard the medicine as suspicious, although I suspected my husband was trying to poison me; I had never seen medicine like it before; I believed what prisoner said when he said the powder had to be put in; the powder had a most bitter taste; the taste remained about two days; it remained in my mouth Saturday and Sunday; the medicine was so bitter that I could feel it in my mouth all day Tuesday; a neighbour named Mrs. Weynton was not there when I spoke to the doctor; I remember on Tuesday morning prisoner coming to my room and saying, "What is this I hear about a bottle?" prisoner did not put the question to me, why did you not tell me about the bottle? I did not say to prisoner there was poison in the bottle; I said the doctor had it; I think Mrs. Thompson and the doctor were in the room when I spoke to prisoner; on Tuesday the doctor was not present when prisoner asked about the bottle; upon Saturday, the 2nd March, was the first time I formed an opinion that prisoner was trying to poison me; it was never suggested to me before the 2nd March that prisoner was doing anything wrong to me; my mother never suggested it; before the 2nd March my mother never gave me advice to go to a doctor or chemist; my mother never told me if I ate or drank anything that made me ill to take some of it to a chemist to be analysed; I have been married twelve months; the date of prisoner's arrest was the anniversary date of the marriage; I have never seen prisoner in company with Miss Cassin; prisoner told me that the only time he met Miss Cassin was when he was riding his bicycle once in Oxford-street; prisoner said it was in December last that he met Miss Cassin; I had met Miss Cassin before my marriage, we were on friendly terms; I have spoken to Miss Cassin since my marriage, we are still on friendly terms; I have not tried to avoid Miss Cassin in any way; I have never asked Miss Cassin over to see a sideboard made by the prisoner; I know Mrs. Hughes; I went there to show Miss Cassin the child; she saw the child and kissed it; this would be about the beginning of February; I told Miss Cassin about the sideboard, but I did not invite her

her over; on a Sunday I went to see Miss Cassin; I knew Miss Cassin was there; I asked prisoner to come over with me, but he refused, saying he was tired and preferred to sleep; the prisoner, during the twelve months of our married life, has never raised his hand to me; some of the furniture had been given to me by my mother; my mother was excited when prisoner asked her to leave the house; she did not say she was being put out of her own home; I don't think my mother saw the prisoner when she left the house; I remember fainting in my mother's arms when she had a quarrel with the prisoner; I knew my mother was distressed by her language; I have never seen prisoner the worse for drink; prisoner paid the grocer's and baker's bills; I got the money from prisoner often to pay these bills; prisoner has always taken an interest in his home; for four months I received £2 a week; I had plenty to eat then; prisoner has tried to get an advance on land to build a house; prisoner paid for fencing some land; I did not know he had bought this land; I thought he was paying it off; my husband has asked me to be saving in order that we might build a house; I remember prisoner saying, "Well, old girl, I wonder if I could get an advance of timber from Mr. Eaton, the timber-merchant"; prisoner fenced the land himself after his night-work; he paid £6 15s. for the material; prisoner said he paid £3 10s. for the material to make the sideboard; I know prisoner wrote to Mr. Lloyd about getting timber for the house; I opened the correspondence with Mr. Eaton and gave it to prisoner; there was no trouble about my opening these notes. [*Mr. Eaton's letters now put in by Mr. Meagher, Exhibits C & D.*] I had an insurance on my life; I made no will in the prisoner's favour; prisoner never asked me to do so; prisoner would not be a penny better off if I died to-day; I was insured before marriage; before marriage I sent my insurance papers to the prisoner; prisoner suggested not to pay the premiums; since then prisoner has never suggested to me to insure my life; I have never seen prisoner in company with Miss Cassin.

To Bench: On Sunday, the 3rd, prisoner gave me the tea; I had no reason for wiping the glass except that I thought it might be dusty.

To Police: My mother left at half-past 5 to go home and get breakfast, not to avoid the prisoner; I was at Mrs. Thompson's place a very short time; my husband has frequently suggested that we should part; my husband has been kind to the child; the house was locked at night; I was always up to let my husband in; my back door was sometimes unlocked at night; I had no knowledge that my mother was coming that night.

To Mr. Meagher: I had a conversation with a reporter and gave a long statement; I noticed a mistake when I read the report; I did not send and say it was incorrect.

To Bench: Prisoner put the bottle of porter behind the door; it had been opened the night before.

MARY DEAN.

Taken and sworn at North Sydney, this 21st day of }
March, 1895, before me— }

JAMES GILES, S.M.

Bernard James Newmarch, being duly sworn, on oath states:—I am a legally qualified medical practitioner, living at North Sydney; I know the prisoner's wife; she has been under my care since the 26th December last, up to the present time; I first saw the bottle marked "Dean No. 1" on the 4th March; I received it from Mr. Gail; I sealed it and handed it to the police; the powders marked "Dean No. 2" I received from Mrs. Dean on the 7th March; I sealed and handed them to Inspector Cotter on the same day I received them; they were wrapped in a paper with the words on it "as before"; the bottle "Dean No. 3" I also received from Mrs. Dean, and handed to Constable Chivers on the 7th March; the bottle "Dean No. 4" was given to me by Mrs. Dean as a bottle containing urin; I gave it to Chivers on the 7th instant; I received the night-dress produced from Mrs. Dean; I took it out of a back room; it contains stains; I gave it to Constable Chivers; I saw Mrs. Dean wearing a night-dress like the one produced; on Monday, the 4th March, at about 6:30, I was called by the prisoner to see his wife; I visited her about 8:10 p.m.; I called as soon as I could; Mrs. Dean was pale, her skin was moist, and her tongue was clean; she stated she had vomited everything she had taken, and purged; the stomach region was tender, pulse regular, good volume; I prescribed, and gave strict instruction as to diet; the prescription produced marked Exhibit A is the prescription I gave; in January I gave the prescription produced, marked Exhibit B; I saw Mrs. Dean on March the 5th at the request of the prisoner; prisoner seemed very anxious I should go there as soon as possible; vomiting had been incessant, but her general condition was not worse; I found my instructions had not been carried out; I tried to obtain some vomit, but I could not; the general symptoms; her tongue was clean, but her eyes were red; on Wednesday I went to the prisoner's wife in the morning, and in the evening prisoner left a message for me to come when I got home; this was on the 6th instant; Mrs. Dean was better when I saw her in the evening; on the 6th instant I had a conversation with the prisoner; I spoke about the bottle and a charge of poison; prisoner asked me to take any steps about the poison, and try and find out how it was administered; a man named Gail brought the bottle "Dean No. 1" to me on the 7th instant; on the Wednesday Mrs. Dean got better and continued to do so; Mrs. Dean and her mother on the 7th instant, at Mrs. Dean's house, had a conversation with me about a powder; I went downstairs and woke up the prisoner and brought him up to the room; I said to prisoner, "Did you put a powder in the medicine on Monday when you gave it to your wife?" your wife accused you of doing so; prisoner replied, "You know I did not"; no powder was to be taken with the medicine; on Sunday after Mrs. Dean's confinement, December the 30th, I attended both Mrs. Dean and Mrs. Seymour for an attack of vomiting and purging; on January the 14th prisoner came to my house and asked me for a prescription for his wife because she was attacked as before; I prescribed, but did not see them; the symptoms are compatible with arsenical poisoning; the taste of strychnine is bitter; arsenious acid is easily obtained, and is made more soluble in hot liquid; from half a grain to three grains of arsenic would be a fatal dose in ordinary cases; if put in tea arsenic would run in white little round lumps.

To Mr. Meagher: When prisoner came for me he presented the appearance of a man anxious and distressed at the illness of his wife; I don't remember anyone saying, "Dr. Newmarch ordered a powder to be put in the medicine," but Mrs. Dean did state to me that she thought a powder was to go with the medicine

medicine the same as the first ; I don't remember the conversation about Mrs. Dean saying to prisoner that the doctor had ordered a powder to be put in the medicine ; arsenic is tasteless ; I do not consider the bitter taste in the syrup would be caused by arsenic ; if strychnine was in the liquid it would be bitter.

Taken and sworn at North Sydney, this 21st day of }
March, 1895, before me,—

B. J. NEWMARCH.

JAMES GILES, S.M.

William Mogfort Hamlet, being duly sworn, on oath, states:—I am the Government Analyst ; on the 6th March instant I received from Inspector Cotter a bottle properly sealed, and labelled "Eastern, Roberts and Agnew, Camperdown, lemon syrup" ; the second label is "Dean No. 1, March 5th, 1895," ; the capacity of the bottle is 24 fluid ounces ; it contained a clear liquid, lemonade amounting to 2 $\frac{3}{4}$ fluid ounces ; there was a dense white substance at the bottom of the bottle ; the analysis of the contents was made, and one and three-quarter grains of arsenic was found, together with 1.54 grains of strychnine, which imparted to the mixture an intensely bitter taste ; on the 16th March I received from Mr. Doherty, my assistant, a tumbler, properly secured and labelled, containing tea and milk, together with a white sediment ; Mr. Doherty made the analysis ; I received a paper package containing five powders, like the powders produced, "Dean No. 2" ; these were submitted to analysis, with the result that no poison was found ; I next received an 8-ounce medicine-bottle, marked "Dean No. 3, March 7th, 1895" ; this bottle contained 2 $\frac{1}{2}$ fluid ounces of medicine, which, upon analysis, contained 3 grains of white arsenic, together with distinct traces of strychnine ; I next received a bottle labelled "Dean No. 4, March the 10th, urine passed March 9th and 10th" ; this, upon analysis, was found to contain arsenic ; I next received a woman's night-dress, 3 feet 7 $\frac{1}{2}$ inches in length, and 27 inches at its widest part ; on the lower part, behind, I found large irregular stains of faecal matter, extending over an area of 17 by 15 inches, close down to the bottom edge of the garment ; the faecal matter was subjected to analysis, and found to contain distinct traces of arsenic ; I next received a small phial, properly sealed, and labelled "Milk drawn from breast Mrs. Dean, handed to inspector by Dr. Newmarch" ; it was found to contain no poison ; other bottles and articles were examined, but they did not contain poison.

To Mr. Meagher : From three-quarters of a grain up to 3 grains would form a fatal dose ; I have seen the prisoner before on the ferry ; prisoner has always appeared to be a man of good character.

Taken and sworn at North Sydney, this 21st day of }
March, 1895, before me,—

WILLIAM M. HAMLET.

JAMES GILES, S.M.

Remanded till Friday, the 22nd March, 1895, at the North Sydney Police Court, to be taken at 2.45 p.m.

North Sydney, 21st March, 1895.

JAMES GILES, S.M.

William Michael Doherty, being duly sworn, on oath, states:—I am laboratory assistant to the Government Analyst ; on the 8th March, a Friday, Sergeant Brennan handed me the exhibits—one a tumbler containing tea ; the second, powders marked "Dean No. 2" ; the third, a medicine-bottle containing a liquid marked "Dean No. 3" ; and on Monday, the 11th March, Sergeant Brennan handed me two exhibits—one marked "Dean No. 4," and the other a night-dress, numbered "Dean No. 5" ; on Thursday, the 14th instant, Inspector Cotter handed me a bottle containing milk ; on Friday, the 15th March, Sergeant Brennan brought me several bottles, a tin, and two pill-boxes—one containing pills ; I handed all these, with the exception of the tumbler and tea, to Mr. Hamlet, in the same condition as they were handed to me, properly sealed and secured ; the tea I submitted to analysis on the 8th instant ; the tumbler contained 6 ounces of liquid—tea and milk ; the liquid contained traces of arsenic, and white arsenic, weighing one-tenth of a grain, was found as a sediment in the bottom of the tumbler ; I did not test the tea for strychnine.

To Mr. Meagher : I could not say if arsenic would be present in the human milk, if it had been discovered in the urine ; two and a half grains would be a fatal dose ; if one-tenth of a grain of arsenic was put into liquid it would be reduced ; I am of opinion that one-tenth of a grain, if put into a cup of tea, would not produce lumps round the top ; arsenic is not very soluble in cold water, but it is made more soluble in warm water ; the quantity of arsenic would not be considerably reduced in this cup of tea, if allowed to stand some days ; if a quantity of arsenic was placed in a tea-cup, I should expect the greater part to remain as a sediment in the bottom of the cup ; I have read in medical works that the result of taking arsenic is to make the pulse small, frequent, and irregular.

Taken and sworn at North Sydney, this 22nd day of }
March, 1895, before me,—

W. M. DOHERTY.

JAMES GILES, S.M.

William James Guise, being duly sworn, on oath, states:—I am a chemist, carrying on business in Miller-street, North Sydney ; I am duly registered ; on the 2nd March I dispensed the prescription marked "Exhibit A," for Mrs. Dean ; I afterwards made up other prescriptions ; no arsenic was put in any of the prescriptions ; white arsenic is not in common use ; it is used to kill dogs or white ants, but it is always coloured ; white arsenic is always coloured before being sold.

Mr. Meagher : When prisoner came for the prescription he was in a very excited state ; he forgot the prescription, and had to go back for it ; prisoner seemed much put out, and wanted the prescription made up in a hurry ; prisoner went off in a hurry with the medicine ; I have never sold poison to the prisoner ; he has never asked for any ; my last instructions to the prisoner were to shake the bottle.

Taken and sworn at North Sydney, this 22nd day of }
March, 1895, before me,—

WILL. JAS. GUISE.

JAMES GILES, S.M.

Arthur

Arthur Gale Street, being duly sworn, states:—I dispense for the United Friendly Societies only; I remember dispensing powders, similar to those produced, for a Mr. Jenkins; I gave them to Jenkins on the 14th February last; arsenic if put in water would float in little round globules round the edge of the cup.

To Mr. Meagher: I never sold any arsenic or strychnine to the prisoner; the powders contained no poison; I think I gave the powders to Mrs. Jenkins.

ARTHUR G. STREET.

Taken and sworn at North Sydney, this 22nd day of }

March, 1895, before me,—

JAMES GILES, S.M.

Thomas Edmund MacDonald, being duly sworn, on oath, states:—I am a chemist, carrying on business in Walker-street, North Sydney; I know the prisoner; I have dispensed for prisoner's wife; I dispensed the prescription marked "Exhibit B" for Mrs. Dean on the 4th January last; it is not a tonic; there was no arsenic in it; strychnine was in the bottle produced; about $\frac{2}{3}$ of a grain in the bottle marked "Dean, No. 3"; I don't sell much white arsenic, except for white ants, and it is always coloured.

To Mr. Meagher: Prisoner has never come to me to purchase poison.

THOS. E. MACDONALD.

Taken and sworn at North Sydney, this 22nd day of }

March, 1895, before me,—

JAMES GILES, S.M.

Richard John Smith, being duly sworn, on oath, states: I am a chemist, carrying on business in West-street, North Sydney; I know Mrs. Dean; on the 2nd March instant, Mrs. Dean came to my place with a bottle like the one produced; I tasted the liquid it contained; it was a bitter sweet taste; I gave it back to Mrs. Dean at once.

RICHARD JOHN SMITH.

Taken and sworn at North Sydney, this 22nd day of }

March, 1895, before me,—

JAMES GILES, S.M.

Frederick William Gail, being duly sworn, on oath, states:—I am a furniture broker, and live at Miller-street, North Sydney; I know the prisoner well, and his wife and mother-in-law; I have known them about twelve months; there is no quarrel between us in any way; I live a mile and a-half from the prisoner, and Mr. Lee's, where Mrs. Seymour was living, is about a mile in another direction; on Monday night this month I took a bottle to Dr. Newmarch like the bottle produced; it had a label like the one produced "*Lemon syrup*"; I got the bottle at my house from Mrs. Dean, the wife of accused; she gave it to me, asking me to have a drink of lemon syrup; I took a cup and put a small quantity in, and then filled the cup with water; I took a small quantity in my mouth and found it was bitter, so I spit it out; I corked the bottle up and put it into my pantry; I did not put anything into it; I did not know of anything being put into it; the bottle was given to me on a Saturday, about 4 o'clock in the afternoon, by Mrs. Dean; on the Monday after I took it to Dr. Newmarch; I can swear I gave it to the doctor in the same state that I got it; I spoke to prisoner the night I got the bottle, but I did not mention anything about the bottle to the prisoner; Mrs. Dean has been at my place since her illness, and Mrs. Seymour was at my place some hours after I got the bottle on the Saturday night, between 8 and 9 o'clock that night; Mrs. Seymour remained about three-quarters of an hour; I did not show her the bottle; Mrs. Seymour saw the bottle on the Monday night and tasted some on the cork; she did not appear to relish it; Mrs. Seymour did not put anything in the bottle; I was not at Dean's the night I gave the bottle to Dr. Newmarch; I was there the next Wednesday, about 10 o'clock in the morning; Mrs. Dean was there and her mother; Mrs. Seymour showed me some vomit in the bedroom which was in a chamber.

To Mr. Meagher: Mrs. Seymour has been a frequent visitor to my house of late—about once a week for the last six weeks, perhaps eight weeks; Mrs. Seymour has asked my advice about purchasing goods; I remember Mrs. Seymour coming on the Saturday night; I knew of the illness of Mrs. Dean's baby before Mrs. Seymour called; I may have told prisoner I was sorry to hear his child was ill; Mrs. Seymour was at my house about three-quarters of an hour on the Saturday night; I saw Mrs. Seymour to the door on the Monday night; she went in the other direction from Dean's house; she left my house about half-past 9; Mrs. Dean said she went to get the contents of the bottle analysed; she did not tell me that if ever she got ill her mother told her to get everything analysed; I never remember a friend coming with a bottle before to be analysed; I did not mention the bottle to prisoner, as I let it pass out of my mind; I remember removing Mrs. Seymour's goods from Dean's residence; I remember prisoner saying something about that the absence of the mother-in-law meant happiness for him.

WILLIAM GAIL.

Taken and sworn at North Sydney, this 22nd day of }

March, 1895, before me,—

JAMES GILES, S.M.

Harry William Jenkins duly sworn, on oath, states:—I am a house-painter, and I live in Alfred-street, North Sydney; I remember getting some powders from Mr. Street on the night of the 14th February last; after getting them I went to a party at Dean's that night, and I lost the powders there, as I never recollect seeing them afterwards.

HARRY WM. JENKINS.

Taken and sworn at North Sydney, this 22nd day of }

March, 1895, before me,—

JAMES GILES, S.M.

Bessie Walke, duly sworn, states:—I am a married woman, living with my husband, Philip Walke, at North Sydney; I know Mrs. Dean; I saw her on the 2nd March at Mrs. Adey's; Mrs. Dean had a bottle of lemon syrup; I tried the syrup; I just put a little to my lips; I was sick after it; I was there while Mrs. Dean went for the baby; no one put anything in the bottle while Mrs. Dean was away; I saw Mrs. Dean take the bottle away.

Taken and sworn at North Sydney, this 22nd }
day of March, 1895, before me,— }

JAMES GILES, S.M.

BESSIE WATKE.

Ethel Adey, duly sworn, on oath states:—I live with my father, at Miller-street, North Sydney; I am not married; I know Mrs. Dean; on the 25th February, Mrs. Dean bought a bottle of lemon syrup from our shop; I went home with Mrs. Dean; I had a drink from the bottle; it tasted sweet, and like other syrup; it did me no harm; I had no more after it; Mrs. Dean brought the bottle back to the store; I was there when the bottle was brought back.

Taken and sworn at North Sydney, this 22nd }
day of March, 1895, before me,— }

JAMES GILES, S.M.

E. ADEY.

Remanded till the 23rd instant, to be taken at 9:30 a.m.
Police Court, North Sydney, 22nd March, 1895.

JAMES GILES, S.M.

Joseph Chivers, duly sworn, on oath states:—I am a constable, stationed at North Sydney; on the 5th instant I received the bottle produced, marked "Dean No. 1," from a man in the employ of Dr. Newmarch, named Cuthbert; on the 7th I received from Dr. Newmarch, at his surgery, the bottle marked "Dean No. 3"; on the 10th instant I received the bottle marked "Dean No. 4, urine," and a paper parcel from Dr. Newmarch, marked "Dean No. 5"; the parcel contained a night-dress; on the 11th instant I received a small bottle from Dr. Newmarch, in the police station, marked "Dean No. 6"; all the bottles were tied and sealed; I handed them to Mr. Cotter on the dates I received them, with the exception of bottle "Dean No. 1," which I left on Mr. Cotter's table, in his office.

JOSEPH CHIVERS, Constable.

Accused has no questions to ask.

Taken and sworn at North Sydney, this 23rd }
day of March, 1895, before me,— }

JAMES GILES, S.M.

Frederick William Gail recalled and re-sworn, on his oath states:—*To Mr. Meagher*: I got the bottle of lemon syrup on the 2nd March; I took it to Dr. Newmarch on the Monday; Mrs. Dean's instructions were to take the bottle to Dr. Newmarch if she did not call for it; I did not attach much importance to Mrs. Dean not coming on the Sunday; after prisoner told me his wife was ill I thought of the bottle; I went to Mr. Guise about the bottle; I did not mention Mr. Guise yesterday; Mr. Guise said he had not time to analyse the syrup; I have been married about two years; I was married at 32 years of age to Lydia Ruth Hudson, by the District Registrar, Newtown.

Taken and sworn at North Sydney, this 23rd }
day of March, 1895, before me,— }

JAMES GILES, S.M.

F. W. GAIL.

Mary Dean recalled and re-sworn states:—*To Mr. Meagher*: Dr. Newmarch prescribed for me on a former illness; I took his medicine; on that occasion I did not complain to Dr. Newmarch or anyone about being poisoned; when I was ill this time I cannot remember my mother speaking to me about a certain policeman; my mother did not mention the name of a certain policeman; before marriage I was at home with my mother; my father is dead; I have resided in Norton-street and Riley-street; there were other inmates of the houses at those places; Thomas Jones was in one place, living in the second up-stairs room; my mother had the up-stairs front room; I never heard my mother mentioned as Mrs. Jones; Jones was in David Jones' as a tailor; about twelve years ago he also worked at Clement Lewis's. I never heard that Mr. Jones was a well-known criminal; I remember a one-eyed man being at the house in Riley-street; I don't know his name; he was there about a dozen times; he was introduced to my mother; I never heard he was a house-breaker; I don't know that he is in gaol; I never heard a man in plain clothes tell Mr. Jones that he had his eyes on him and the Melbourne guns; two or three other men used to come and see Jones; they were from Melbourne; I would not see them for months at a time; I don't remember the men turning up about race-times; I never saw much jewellery with Mr. Jones; I know some persons named Rose in Riley-street; I believe boarders were taken there; Roses were living about the length of the Court from our house for four or five years; there seemed to be people staying there; I have spoken to Mrs. Rose; my mother knows her; she has been in our shop; I have seen my mother go over to Rose's; she took fruit and other things; I have never seen her go without something in her hand; I never saw my mother in the house after Roses left; I never saw my mother go a message for Mrs. Rose; my mother remained a quarter or half an hour at Mrs. Rose's; sometimes there were females at Mrs. Rose's place; I have heard her called "Madame Rose"; I heard her place was a notorious brothel; I remember some of the girls coming to our shop from there.

Taken and sworn at North Sydney, this 23rd }
day of March, 1895, before me,— }

JAMES GILES, S.M.

MARY DEAN.

Caroline Seymour, being duly sworn, on oath states:—I am a widow, and I live with my daughter, Mary Dean, in Miller-street, North Sydney; the witness, Mrs. Dean, is the only child I have living; I have been living with Mrs. Lees at M'Mahon's Point; I was a servant there; Mrs. Lees is about three-quarters of a mile from Gail's; Gail's is about a mile to Dean's; my daughter was confined on the 26th December last; I nursed her; Mr. Dean sent for me; I produce the telegram marked "E"; I was there

there for a month before, and for a month after the confinement, up to the latter part of January last ; I went somewhere else then ; I went to Mrs. Johnson's, at Surry Hills ; I boarded there ; I went from there to my late situation ; I was at the situation about one month ; I know Mr. and Mrs. Gail a little through Mrs. Dean ; I was not at Dean's when I left after the confinement until the 4th March ; I called at Gail's on Monday night, the 4th instant ; I was shown a bottle with a liquid in it ; I don't know what it was ; Mr. Gail asked me to taste the cork ; I was at Gail's on the Saturday before, but was not shown any bottle then ; I tasted the cork ; it had a bitter taste ; I heard something there, and I went home, which is in the opposite direction to Dean's house ; I went for a cloak ; I then went to the prisoner's house ; I got there at about ten minutes past 12 o'clock at night ; I passed Dean at the park, near his house ; I had no conversation with the prisoner then ; neither of us stopped ; I went to the house through the back door, which was closed but not locked ; my daughter was in bed ; she was very ill ; she was vomiting and purging the whole night ; I left at twenty minutes to 6 in the morning ; I had to go home and light the fire ; I went back to my daughter's between 5 and 6 o'clock the next night, Tuesday, the 5th instant ; when I went in the prisoner was there ; I asked prisoner what was the matter ; prisoner replied, "I do not know" ; on the following Wednesday I saw some tea in a tumbler under the drawers in my daughter's room ; I looked for it in consequence of something my daughter told me ; after Dr. Newmarch told me something about poison I spoke to prisoner about poison on the Thursday after ; prisoner replied, "I know nothing about it" ; on Wednesday I had a conversation with Dr. Newmarch, my daughter, and the prisoner ; something was said about a powder in the medicine ; Dr. Newmarch said he never ordered a powder ; my daughter said to prisoner that he put a powder in the medicine ; prisoner replied, "I did not" ; my daughter has never been unhealthy ; I have known her to have an attack of illness on the 13th January last ; I was ill also—suffering from vomiting and purging ; I took some groats that were left unfinished by my daughter ; prisoner was there and waited on us ; I prepared the groats in the kitchen, and left them on the dining-room table while I prepared the prisoner's breakfast ; I made some beef-tea for my daughter five or six days after the groats ; I made it in the kitchen ; the prisoner was in the house when I made it ; I left it on the stone ; I was ironing ; prisoner could get at it ; no one else was in the house except my daughter, who was in bed ; I took it to my daughter ; she said it was bitter ; I tasted it before I took it up ; it was all right ; I gave it to my daughter, into her hand ; prisoner tasted it, and said, "It is all right" ; I said there must have been a gall in the meat ; I took it down stairs and threw it away ; I saw Mrs. Dean on the Thursday before I went to the circus with her ; I am not bad friends with prisoner ; I gave my daughter the greater part of her furniture ; prisoner asked me what the groats were ; I said I was making them for his wife.

To Mr. Meagher : I gave groats because she was not to have solid food ; I cooked the groats before 9 o'clock ; my daughter ate them about half-past 9 ; they were not eaten before the prisoner came home ; I have never been so ill before ; I did not say to my daughter that there must be poison in the groats ; I did not in January communicate an opinion about poison to a member of the police force ; the groats was not bitter ; the beef-tea was ; I put salt and pepper in the beef-tea when I made it, before I tasted it ; I have not been to prisoner's house since the confinement ; I have seen Mrs. Dean several times ; I saw my daughter away from the house on the Thursday before the Saturday ; I just know the Gails ; I called in there on a Saturday night ; before the Saturday night I may have called in two or three times ; I asked if they had seen my daughter ; I saw prisoner on the street at the Gails' house ; I don't know if Gail is incorrect if he said I have visited the house eight times in eight weeks ; I have asked the Gails about the baby ; on the Saturday night I did not ask whether my daughter had called there ; I saw my daughter on the Thursday ; I sent her home, as she had a pain in her back ; I did not tell my daughter then that she would have an illness, coming out so soon after her confinement ; I said I saw syrup in the bottle of white appearance ; it had about the same quantity as it has in now ; I thought of the beef-tea after I tasted the syrup ; Gail said he was going to take the bottle to be analysed ; I did not think anything was wrong then ; Gail took the bottle to Dr. Newmarch to see what was wrong ; the first I heard of poison was on the Thursday, from Dr. Newmarch ; Mrs. Weynton told me the door was open ; I did not tell Mrs. Weynton till Thursday that poison was in the bottle ; I did not say anything on Tuesday ; Mrs. Dean said to me something about the prisoner saying he had heard about a bottle from Mrs. Weynton ; I don't think I spoke to Mrs. Weynton on the Wednesday ; I did not tell Mrs. Weynton about poison being in the bottle ; I am on good terms with the Weyntons ; prisoner's wife did not tell me that prisoner had made her send for the doctor ; prisoner was distant with his wife ; I should not think he was the class of man to insist on my daughter having a doctor ; I did not know the prisoner was kind to his wife ; on Monday I asked what my daughter had taken ; she said she had seen something white in some porter ; she told me on Monday night ; I did not have any suspicion then about poison ; I heard the prisoner had his fingers round the tumbler, but I did not think anything of this ; my daughter said no more after she told me of the porter ; she said something about medicine ; she did not say it had something on the top ; I saw the medicine before ; it was brown ; I hunted round for a powder to go with it, but I could not find any ; I left Gail's about a quarter past 10 ; I met prisoner at half-past 11 near the park ; he was going very fast ; on Thursday afternoon I heard of the poison ; up to Thursday I had no suspicion before Thursday that prisoner was poisoning his wife ; I put the tea back where I got it ; I had no suspicion about it ; Dr. Newmarch said, in the presence of prisoner on a Wednesday, that he did not put powders in the medicine ; if the doctor says he said nothing of powders I still state that what I say is correct ; I did not feel pleased with the prisoner's treatment of his wife ; prisoner never spoke to me on the subject of going,—he told my daughter to tell me ; when the prisoner asked me to leave the house was up here, and not at Mosman's Bay ; prisoner never asked me to leave the house at Mosman's Bay ; I packed the furniture at Mosman's ; I remember my daughter fainting in Miller-street in my arms ; a month after my daughter's confinement prisoner told me to go ; I was not cool ; I was excited ; I did not say I would make it warm for the prisoner ; prisoner pushed his wife away, and she fell in my arms ; I did not call prisoner any names ; I have been in the Colony some years, and have resided in Norton-street, Surry Hills ; one of the boarders was named Thomas Jones ; a Mr. Wright was also there ; I was never addressed as Mrs. Jones ; Jones worked at David Jones's about eight years ago ; I have known Jones to earn £7 a week ; Jones has left my place about eighteen months ; Jones was never seen by me to act as a fence for stolen property ; I remember Melbourne men coming to the house ; I don't remember whether I was introduced to them ; they started coming about three years ago ; I believe they were bookmakers ; I never remember a person in plain clothes

clothes making inquiry for Melbourne guns; a man named Simon came to the house; he only had one eye; I never resided with Jones as man and wife; I have not seen Simon for some time; I do not know that he is serving a sentence for burglary; I know some person named Rose; some of the girls came for fruit; I was on friendly terms with Mrs. Rose; I never was there half-an-hour; I knew it was a house of bad fame; I remember Madame Rose going to England or away somewhere; I was over at the house; I went and slept there three or four nights at the request of Madame Rose while she was away; I never took ladies to the house; I don't remember going for a certain young lady for Mrs. Rose; I have taken several notes from Madame Rose to gay girls; I cannot say if it was less than a dozen times; I was paid for going these messages; Madame sent the notes to me; I went to mind the bedroom of Madame Rose; I cannot say what went on while I was at the house; I only had charge of the bedroom.

Statement of the Accused.

New South Wales, }
to wit. }

Statement of the Accused.

GEORGE DEAN stands charged before the undersigned, one of Her Majesty's Justices of the Peace in and for the Colony aforesaid, this twenty-third day of March, in the year of Our Lord One thousand eight hundred and ninety-five, for that he, the said George Dean, on the 2nd day of March, 1895, at North Sydney, in the said Colony, feloniously did cause poison to be taken by one Mary Dean, the wife of him, the said George Dean, with intent to murder the said Mary Dean, and the examinations of all the witnesses on the part of the prosecution having been completed, and the depositions taken against the accused having been caused to be read to him by me, the said Justice, before whom such examination has been so completed; and I, the said Justice, having also stated to the accused and given him clearly to understand that he has nothing to hope from any promise of favour, and nothing to fear from any threat which may have been holden out to him to induce him to make any admission or confession of his guilt, but that whatever he shall say may be given in evidence against him upon his trial, notwithstanding such promise or threat; and the said charge being read to the said George Dean, and the witnesses for the prosecution Stephen James Cotter, Richard Brennan, Mary Dean, Bernard James Newmarch, William Mogforth Hamlet, William Michael Doherty, William James Guise, Arthur Gale Street, Thomas Edmund MacDonald, Richard John Smith, Frederick William Gail, Harry William Jenkins, Bessie Walke, Ethel Adey, Joseph Chivers, Caroline Seymour being severally examined in his presence, the said George Dean is now addressed by me as follows:—"Having heard the evidence, do you wish to say anything in answer to the charge? You are not obliged to say anything unless you desire to do so; but whatever you say will be taken down in writing, and may be given in evidence against you upon your trial;" whereupon the said George Dean saith as follows:—"I reserve my defence."

Taken before me, at North Sydney, in the said Colony, the day and year first above mentioned,—
JAMES GILES, S.M.

No. 15.

Committal.

Regina versus George Dean.

Offence,—Feloniously causing poison to be taken by one Mary Dean, with intent to murder.

THE accused stands committed to take his trial at the next Court of Gaol Delivery, to be holden at Darlinghurst, on the first day of April, 1895. Bail refused.

Dated at North Sydney Police Office, North Sydney, this 23rd day of March, A.D. 1895.

Recognizances to give Evidence.

New South Wales, }
North Sydney, to wit. }

Recognizance to give Evidence.

BE it remembered, That on the twenty-third day of March, in the year of our Lord one thousand eight hundred and ninety five, Stephen James Cotter, an Inspector of the Police Force, North Sydney, Richard Brennan, of North Sydney, in the Colony of New South Wales, Police Sergeant, Mary Dean, of North Sydney, in the said Colony, wife of George Dean, and William James Guise, of North Sydney, in the said Colony, chemist, personally came before the undersigned, one of Her Majesty's Justices of the Peace for the Colony of New South Wales, and acknowledged themselves to owe to Our Sovereign Lady the Queen
the

the sum of £40 each of good and lawful money of Great Britain, to be made and levied on their goods, and chattels, lands and tenements, to the use of Our said Lady the Queen, her Heirs and Successors, if they the said before-mentioned persons shall fail in the condition indorsed.

S. J. COTTER.
R. BRENNAN.
MARY DEAN.
WILLM. JAS. GUISE.

Taken and acknowledged, the day and year first above mentioned, }
at North Sydney, in the said Colony, before me, — }

ARTHUR BLIX, J.P.

THE condition of the within-written recognizance is such, that whereas George Dean was this day charged before James Giles, Esquire, one of Her Majesty's Justices of the Peace for the said Colony, with feloniously causing poison to be taken by Mary Dean with intent to murder the said Mary Dean. If therefore, they, the before-mentioned persons, shall appear at the next Court of Gaol Delivery, to be holden at Sydney, in and for the Colony of New South Wales, on the first day of April next, at nine of the clock in the forenoon, and then and there give such evidence as they know, upon an information to be then and there preferred against the said George Dean for the offence aforesaid, to the jurors who shall pass upon the trial of the said George Dean, then the said recognizance to be void, or else to stand in full force and virtue.

ARTHUR BLIX, J.P.

New South Wales, }
North Sydney, to wit. }

Recognizance to give Evidence.

BE it remembered, that on the 23rd day of March, in the year of our Lord, 1895, Arthur Gale Street, of North Sydney, in the Colony of New South Wales, chemist, Thomas Edmund Macdonald, of North Sydney, in the said Colony, chemist, Richard John Smith, of North Sydney, in the said Colony, chemist, and Frederick William Gail, of North Sydney, in the said Colony, furniture broker, personally came before the undersigned, one of Her Majesty's Justices of the Peace for the Colony of New South Wales, and acknowledged themselves to owe our Sovereign Lady the Queen the sum of £40 each, of good and lawful money of Great Britain, to be made and levied on their goods and chattels, lands and tenements, to the use of our said Lady the Queen, her heirs and successors, if they, the said before-mentioned persons, shall fail in the condition indorsed.

ARTHUR G. STREET.
THOS. E. MACDONALD.
RICHARD JOHN SMITH.

1894-5.

NEW SOUTH WALES.

ROYAL COMMISSION APPOINTED TO INQUIRE INTO CASE OF GEORGE DEAN.

(REPORT OF.)

Presented to Parliament by Command.

To His Excellency, our trusty and well-beloved Councillor, the Honorable
SIR FREDERICK MATTHEW DARLEY, Knight, our Lieutenant-Governor
of our Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We, Her Majesty's Commissioners appointed under Letters Patent, under the Great Seal of the Colony, dated the 7th day of May, 1895, "to make certain investigations in the case of George Dean, on whom sentence of death was lately passed, which was subsequently commuted to penal servitude for life, for the crime of administering poison with intent to kill Mary Dean, his wife; to examine all witnesses, and call for any documents which may tend in any way to throw new light upon the case, or which may vary, explain, or bear upon any of the evidence given by the witnesses at the trial of the said George Dean; and after receiving such additional evidence, to report whether, in our opinion, as the result of such further inquiries made by us, the prisoner should serve his sentence or be released from further imprisonment," have the honor to submit to your Excellency the following Report:—

In pursuance of the Commission entrusted to us we have held thirty-nine (39) sittings, and have had brought before us one hundred and thirteen (113) witnesses, several of whom were recalled.

In the examination of these witnesses we have had the assistance of eminent counsel acting on behalf of both the Crown and the prisoner, and at the conclusion of the evidence somewhat lengthy addresses were delivered by counsel, which are presented with the evidence attached to our Report. We had before us as a basis for our inquiries copies of the depositions taken at the Police Court in the case *Regina v. George Dean*, and of the Judge's Notes taken during the trial at Darlinghurst, and of various papers bearing on the case which had been already printed and laid before Parliament.

The peculiar dangers attending the collection of supplementary evidence in any case in which the original evidence has been fully published, and widely read, have been present to our minds throughout the inquiry, and it has also been apparent that these dangers are much increased, and that evidence is liable to be manufactured or given with a special bias when the case in question is one which has invoked much popular feeling.

Some of the evidence adduced has appeared to us altogether untrustworthy, and some but little relevant to the case under inquiry or calculated to throw light upon its difficulties, but there remains a body of fresh evidence, partly as to character and partly as to facts and details, to which, after careful sifting, we feel bound to attach credence. This evidence in some matters goes only to alter the aspect of evidence already given at the trial, and some of it is chiefly valuable as bearing on medical details, which necessarily have a greater significance to the medical members of this Commission than they could have to an ordinary Court. As

As the question of the antagonism of arsenic and strychnine had been introduced at the trial, and some theories and arguments had been founded on this supposed antagonistic action, we considered it our duty to take some cognisance of this matter. It appeared in evidence taken before us that Mr. Hamlet, the Government Analyst, who was asked for an explanation of his evidence on this point, intended only to suggest that arsenic, by acting as an emetic, would get rid of any strychnine taken with it, and so render its action nugatory; whilst Dr. Rennie, the Government Pathologist, was inclined to hold that the special physiological action of each of these drugs on the nervous and circulatory systems might lead to a counteraction or antagonism in results. This was apparently the view also held by Dr. Newmarch, who, though he was not specially questioned by us on this subject, handed in a memorandum, in which his views, mainly founded on extracts from the writings of Dr. Lander Brunton, as to the special action of arsenic and strychnine individually, were set forth. Dr. Rennie was only able to point out to us one somewhat doubtful reference on this subject; and we were unable to find anything definite in the medical literature accessible to us. Under these circumstances we thought it advisable to request Dr. Charles Martin, of the University of Sydney—whose familiarity with the methods of experimental research gives a special value to the conclusions arrived at—to undertake a series of experiments with a view of determining, as far as possible, the points at issue. Dr. Martin's report (*see Appendix*) shows:—

- (1.) That arsenic is quite unable to mask the poisonous action of strychnia, either when they are both administered together by the mouth or when the strychnia is introduced directly into the circulation of an animal already suffering from the effects of arsenic.
- (2.) That when strychnia is introduced, before any decided depression has been produced by the arsenic, it occasions a small increase in the original blood pressure, but that once the depression due to the arsenic is at all pronounced, strychnia is quite unable to counteract this depression.

These conclusions have an important bearing on some of the evidence given both at the trial and before this Commission. We had already, however, before receiving this report arrived at the conclusion that there had been no symptoms of poisoning by strychnine during Mrs. Dean's illness, and no trustworthy evidence that strychnine had been taken. Dr. Martin's report confirms this view.

The testimony of a number of witnesses as to the character of Mrs. Seymour obliges us to regard her evidence with the gravest suspicion; and whilst we have heard nothing to induce us to impugn the personal chastity of Mrs. Dean, her daughter, it is evident that she was born and bred in such an unwholesome moral atmosphere as rendered it advisable for us to receive her statements with extreme caution, except when they are supported by witnesses of apparent or undoubted veracity. Some of Mrs. Dean's evidence given before us, especially when taken in conjunction with that of other witnesses, who we believe to be truthful, bears out this view.

If we put aside the evidence of Mrs. Seymour and Mrs. Dean there is but little of significance remaining with regard to the two attacks of illness early in January, and Dr. Newmarch's evidence tends to discount the value of what remains, especially with regard to the symptoms on January 4th, and their causation, so that on the whole we believe that no trustworthy inference can be drawn from the events stated to have taken place in the beginning of January as bearing on the illness in the beginning of March.

With regard to the latter illness, we have to point out that if Mrs. Dean took any of the lemon-syrup at all, and we have only her unsupported evidence on this point, it is quite clear, in view of the ready and complete solubility of strychnine in lemon-syrup of a like density, and identical with that purchased by Mrs. Dean, as demonstrated to us by Mr. Hamlet, and in view also of the amount of arsenic found in the lemon-syrup which was taken by Mrs. Dean to Mr. Gail and other neighbours, and ultimately submitted to Mr. Hamlet for analysis, and also of the evidence furnished in Dr. Martin's report as to the supposed antagonism of arsenic and strychnine that the quantity taken must have been very much smaller than she stated. That there was an entire absence of symptoms of poisoning by strychnine is shown by the evidence

evidence of Mrs. Dean herself, and the symptoms of poisoning by arsenic on Saturday, March 2nd, rest only on her assertion, and seem incompatible with her appearance and condition on that day as vouched for by several witnesses, and her action in walking a considerable distance and interviewing several neighbours.

In connection with the strychnine it is necessary to take into consideration that Mrs. Adye, who was on Sunday, March 3rd, shown by Mrs. Dean the tea remaining in the tea-cup after a part of it had been emptied into a tumbler, stated to us that she had tasted this tea and found nothing wrong with it. Neither this evidence, nor Mrs. Dean's subsequent admission that Mrs. Adye had tasted—or "sipped," (to use the exact word)—this tea was given at the trial. Mrs. Dean herself stated to us that Mrs. Adye said this tea tasted all right, but if it then contained strychnine in the proportion subsequently found by analysis in that part preserved in the tumbler, its bitter taste must have been—as we subsequently found by experiment—quite perceptible, even though a large quantity of sugar and milk had been used. Mrs. Dean's story then as regards both the lemon-syrup and the tea when viewed in the light of Dr. Knaggs' calculations as to the quantity supposed to be taken and Mrs. Adye's evidence, presents, especially with regard to the strychnine, serious difficulties.

An ingenious attempt was made to show that the symptoms attending Mrs. Dean's illness were due to or could be explained by the occurrence of an attack of influenza of a gastro-intestinal type, but this attempt completely failed. The general symptoms of the illness, the subsequent neuritis, with certain accompanying conditions, the arsenic found in the urine, and in feculant stains on linen in minute quantities, and intimate admixture, all taken together point conclusively to the fact that arsenic was taken into the stomach and passed through and affected the system generally.

It is not so easy to say when and how often this arsenic was administered. The symptoms, however, including the peripheral neuritis, are not incompatible with the ingestion of one dose only. Peripheral neuritis has been seen in severe form both in this Colony and in Victoria in cases in which only one dose of arsenic was taken.

The occurrences on Monday, March 4th, when a dose, and perhaps the only dose, of arsenic which produced severe symptoms was taken, are in dispute. Four witnesses deposed to having seen Mrs. Dean out of her house during Monday morning—a fact not previously in evidence—and when questioned, Mrs. Dean admitted that she had visited a neighbour between 10 and 11 o'clock. This admission tends to throw very considerable doubt on her other statements as to the events of this day. It is decidedly improbable that anyone who had taken at 9 o'clock such a poisonous dose of arsenic as to induce vomiting and purging of so severe a type as to involve the involuntary staining to a large extent of personal garments, would have either the ability or the inclination to leave the house about 11 o'clock. The consideration of all the evidence in detail with regard to this day induces a doubt as to whether the arsenic was taken in the morning at all, and inclines us to believe Dean's statement with regard to the events of this day and that of other witnesses, rather than those of his wife.

We do not think it necessary to go at length into other details which have, in a measure, tended to influence our opinions, such as the absence of corroborative testimony with regard to the vomiting and purging to the extent stated by Mrs. Dean, but we have carefully reviewed the whole circumstances, and in this review of the case Mrs. Dean's very peculiar conduct—

- (a) In repeatedly taking food and other articles from the hands of her husband, though in a condition, as she admitted, to help herself whilst believing, as she stated, that he was poisoning her,
- (b) In refraining from imparting her suspicions to her neighbours and friends, with whom she had free and unimpeded communication,
- (c) In refusing to have medical aid on Sunday, 3rd March, and on Monday, 4th March, until her husband insisted and took action without her consent, and in concealing all information as to the cause of her illness from her medical attendant, in whom she appears to have had confidence,

has, in a considerable degree, engaged our attention.

We

We hold that the facts, as shown, are quite as compatible with the hypothesis that Mrs. Dean, for reasons which we can only surmise, and by methods of which she alone has cognizance, administered the arsenic to herself—possibly at the prompting of her mother, and without any intention of taking a fatal dose—as that the poison was administered to her by her husband, with intent to kill.

After bestowing on the case much anxious thought, and viewing it in every conceivable aspect—not forgetting the bearing of the evidence given by Mr. Westgarth—we have grave doubts if George Dean committed the offence with which he was charged, and of which he was found guilty, and we therefore recommend that he be released from further imprisonment.

P. SYDNEY JONES.

F. NORTON MANNING.

I REGRET I cannot come to the same conclusion as my colleagues. There appears to be no doubt that Mrs. Dean was poisoned by arsenic, and there is apparently no escape from the position that this poison was either administered by Dean or by Mrs. Dean herself. There are no doubt numberless contradictions and difficulties in the case, but my opinion is based on the short ground that it seems to me unreasonable to suppose that a girl on the threshold of life (whatever may have been her early surroundings) would risk her existence by taking a deadly irritant poison, whether in one or more doses, for the purpose of bringing a false charge against her husband, and for this reason I cannot concur in the recommendation of my colleagues.

F. E. ROGERS.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SHOOTING OF THE MAN CONSIDINE AT BROKEN HILL.

(CORRESPONDENCE RESPECTING.)

Ordered by the Legislative Assembly to be printed, 1 November, 1894.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 5th September, 1894, praying that His Excellency the Governor will be pleased to cause to be laid upon the Table of this House,—

“Copies of all papers in the case of the shooting of the man Considine at
“Broken Hill.”

(Mr. Haynes.)

Telegram from Sub-Inspector Johnston to The Inspector-General of Police.

Broken Hill, 18 March, 1894.

MAN named John Considine shot by Constables White and Shiell 12:30 this morning, and died in cab on way to hospital. Considine, who was a great ruffian, was under influence of drink, and was advised by constables to go home, instead of which he went away, returning with a crowbar, and attacked the constables, knocking Constable White down, and cutting his head. He then attacked Constable Shiell, breaking one of his ribs. The constables then went to the police station for their revolvers, and returned to arrest deceased. He resisted, and was shot through the body. Coroner informed.

Telegram from Sub-Inspector Johnston to Superintendent Larkins.

Broken Hill, 18 March, 1894.

MAN named John Considine shot by Constables White and Shiell at South Broken Hill at 12:30 this morning, and died in cab on way to hospital. Considine, who was a great ruffian, was under influence of drink, and was advised by constables to go home, instead of which went away, returning with a crowbar, and attacked the constables. Constable White was knocked down, and his head cut, and Shiell has one rib broken. The constables then went to the station for their revolver, and returned to arrest deceased. He resisted, and was shot through the body. The Inspector-General informed.

Telegram from Superintendent Larkins to The Inspector-General of Police.

Deniliquin, 19 March, 1894.

Re Broken Hill shooting case. Suspended Constables White and Shiell, pending Coroner's inquest.

The constables must only be relieved from duty, pending the result of the inquest. By suspension they might be affected prejudicially.—E.F., 19/3/94.

Telegram from The Inspector-General of Police to The Superintendent of Police, Deniliquin.

Sydney, 19 March, 1894.

No necessity for you to go to Broken Hill. Mr. Johnston quite competent to watch inquest. Constables White and Shiell should be relieved from duty pending inquest, not suspended.

Telegram from Sub-Inspector Johnston to Superintendent Larkins.

Broken Hill, 19 March, 1894.

Re shooting of Considine. Inquest will be opened to-day. Meeting of miners held on reserve yesterday, South Broken Hill, condemning action of police. Deputation of miners waited on me last night, requesting me to withdraw Constables White and Shiell from South Broken Hill, but I will not do so without instructions.

Telegram from Sub-Inspector Johnston to Superintendent Larkins.

Broken Hill, 19 March, 1894.

Re shooting of Considine. Police Magistrate is of opinion Constables White and Shiell should be arrested, even presuming their act was justifiable, and brought before the Police Court and remanded to the Coroner's Court. Please wire me instructions. Very urgent.

Telegram from The Inspector-General of Police to The Superintendent of Police, Deniliquin.

Sydney, 19 March, 1894.

CONSTABLES White and Shiell will appear before Coroner's Court, as usual in such cases, and remain there to abide the result of inquest. They will be relieved from duty, and remain in barracks, Broken Hill.

Telegram from Superintendent Larkins to The Inspector-General of Police.

Deniliquin, 20 March, 1894.

MR. JOHNSTON'S telegram, which I received at 10 yesterday morning, asking advice *re* arrest of constables, was marked very urgent, and a second telegram received at same time saying inquest would open. Hence my reason for not referring to Inspector-General in that instance.

I am unable to see the urgency, debarring a reference by wire to me. I disapproved of suspension, giving my reasons, which applied with far greater force to arrest for homicide. The action was, in my opinion, most unjust to the constables, who are provided with arms, to be used when necessary and justified legally. The presumption is that they acted in the discharge of their duty (although I do not say they were). On reflection, Mr. Larkins must see the prejudicial effect that the arrest and charge at the Police Court must have upon the Coroner's jury. When the inquest is concluded, Mr. Larkins, in forwarding his report, must add his explanation of the action he took, referred to above, as I have to report to the Colonial Secretary.—E.F., 21/3/94. Supt. Larkins.

Telegram from The Inspector-General of Police to The Superintendent of Police, Deniliquin.

Sydney, 20 March, 1894.

CANNOT approve of your advice to Johnston to arrest and charge Constables Shiell and White, for reasons I already gave you, disapproving of suspension. Too late now however to recall. Having referred to me previously, you should have referred again before taking such action. It will unjustly affect their position prejudicially.

Superintendent Larkins to The Inspector-General of Police.

Police Department, Superintendent's Office, South-western District, Deniliquin, 23 March, 1894.

I HEREWITH forward Sub-Inspector Johnston's report, with reports from Constables White and Shiell, *re* shooting case at Broken Hill, also cuttings from *Broken Hill Barrier Miner*, of 19th instant, on same subject.

A. LARKINS,
Superintendent.

[Enclosure.]

Sir,

Police Station, Broken Hill, 19 March, 1894.

I beg to forward herewith for your information reports from Constables White and Shiell, *re* the shooting of John J. Considine at South Broken Hill on the morning of the 18th instant.

I first heard of the occurrence at about 3 a.m. yesterday, when I was called out of bed by Senior-constable Smith. I at once went down town and found Considine, who was then dead at the hospital morgue. I went to South Broken Hill later in the morning, and saw the constables who were badly knocked about. The Constable's reports give all the particulars I could find out from the police, and I shall not attempt here to give particulars of all the rumours that were going about; but when the inquest is over, I will send a copy of the depositions to the Superintendent. I saw both the revolvers used by the constables, and there were three empty cartridge cases in each, showing that three shots had been recently fired from each revolver. I also found that one of the bullets went through the window of the house of a resident of South Broken Hill. The bullet was found in the house flattened out, and it is now in my possession. I would state here that the foot police at this station or at any station in the Sub-district do not carry firearms, and that the recent order given in Sydney for the City police to be armed has nothing to do with this case. The two revolvers used have been kept at South Broken Hill since the station was formed, for the use of the police, should they be required. The police were not carrying revolvers when they were first assaulted, but they ran to the station for them. Both the constables are excellent men, sober, and very attentive to duty. I considered Constable White one of the best and most reliable men in the Sub-district, and he has always been very cautious in all his actions in connection with his duties. But in this case the constables acted in a most reckless manner, and they both showed great want of discretion. There is no doubt but the constables had a desperate character to deal with. He was known on the mine to be almost as strong as four ordinary men, and when under the influence of drink he was a perfect savage, and most men of South Broken Hill were afraid of him. Nearly the whole of the Considine family are bad men. The deceased's brother, James Considine, who resides here, got two years in 1891 for assaulting Constable Grieve at South Broken Hill; and another brother, Fred, is now in gaol here, having been bound over to keep the peace towards his wife, whom he assaulted and put out of the house a week after her confinement.

I have, &c.,

A. JOHNSTON,
Sub-Inspector.

[Sub-Enclosures.]

[Sub-Enclosures.]

Police Station, South Broken Hill, 18 March, 1894.

CONSTABLE JAMES L. WHITE, reports for the information of Sub-Inspector Johnston, that about 12.15 a.m. on Sunday morning, the 18th of March instant, whilst on duty in company with Constable Shiell in South-street, we heard a noise in the back of Heggarty's hotel. We stood at the gate, going into the yard of the hotel off South-street. Three men came out of the back of the hotel, viz., John J. Considine, and two men named M'Lennon. They came down to where we were standing at the gate. They were all the worse for liquor. I said, "Good night" to Considine. I then said, "Do you not think it is about time that you went home?" One of the M'Lennon's replied "Yes, come on Jack (meaning Considine), home with us." Considine replied, "I won't, I will go home when I like." He then said, "Look here, White, I will warn you that when you come to arrest me, or either Shiell or Shiner, come fully prepared. For if you don't, you will go down. Now, I have warned you. So you can take what meaning you like out of it." I replied, "Nobody is talking about arresting you." One of the M'Lennon's then took Considine by the arm and said, "Come on home, Jack." He said, "I won't, get away, Hughie," and gave him such a violent push that he knocked M'Lennon down on the footpath in the gateway. Considine then came out on to the footpath, and went towards Constable Shiell in a threatening manner having his hands in a fighting position, saying "Shiell, you are a bloody sneak and a bloody crawler," repeating the words several times still, and going towards Constable Shiell, and backing the constable against the fence. He made an attempt to strike the constable, who drew his baton and struck at Considine. I then rushed at him with my baton, and struck somewhere about the head or neck. He staggered, but did not fall. He then ran away along South-street, turned up the lane, and into the back yard of Heggarty's hotel, and ran into the passage of the hotel where we lost trace of him. We called the landlord, Mr. Heggarty, got a candle, and searched the passages of the hotel, but could find no trace of him. Whilst entering the hotel to search for him, I heard a noise like a door being opened and shut. We found that the side-door of the hotel had been unlocked. We came to the conclusion that he had escaped by the side-door into South-street. About three or four minutes afterwards we saw the accused coming running along South-street from the direction of the "Alma Hotel," coming towards us, saying "Now I will smash in their bloody brains." When he came to within a few yards of me, I saw that he had something in his hand, which I took to be a gun or rifle. He rushed at Constable Shiell with it and tried to strike him with what he had in his hand. It was then that I saw that, what he had in his hand, was what I believe to be a bar of iron or a steel-drill about 4 ft. 6 in. long. He missed the blow that he aimed at Constable Shiell. He then rushed at me and swung the bar with both his hands at my head with terrific force. I tried to close with him to save myself from getting the full force of the blow. I was only partly successful. He struck me on the side of the head, just above the left ear, cutting my cap through and making a large wound in my head. I fell on my back, and was partly dazed for a few seconds. Raising myself on my elbow, I saw deceased running after Constable Shiell alongside of the police station fence in Patton-street. I got up and went across the street to the police station fence. I got through it and went into the station where I found Constable Shiell. We then armed ourselves with revolvers, and went out again to try and arrest the deceased. He was standing in South-street near Krantz Brothers' store about 40 or 50 yards from the police station in company with some other persons. When we got to within about 20 yards of deceased, I called on him to stand, or I would shoot him. He started to run in the direction of his house. I called again on him to stand, or I would shoot him. He ran away, saying "Shoot away." I fired a shot into the ground several yards behind the deceased. Deceased still kept running away. I fired two other shots at the deceased, aiming at his knees. After running about 40 or 50 yards, deceased turned round and faced the constable, and came towards him. The constable ran against deceased, and knocked him down. Deceased said, "I will give in." With the assistance of Constable Shiell, deceased was handcuffed. He then got up and walked about 20 or 30 yards. He then fell down in the lane, and said, "I am done for." As deceased appeared to be sinking very fast, the constable went for a cab, and had deceased conveyed to Dr. John Thompson's in Argent-street, as speedily as possible. When seen by Dr. Thompson about 12.45 a.m., he pronounced life to be extinct. Deceased was alive when put into the cab at South Broken Hill. The body was removed to the morgue at the Broken Hill Hospital. The constable's reason for firing on the deceased was because he was in terror of his life after the violent manner in which he attacked the constable with the bar of iron, and, if he escaped, that he would return with firearms, and try and shoot the constable. The constable has known the deceased for some months, and always looked upon deceased as a very dangerous man, having a most violent and uncontrollable temper, especially when under the influence of liquor. Deceased's wife has complained to the constable about ill-treatment; but she stated that she was afraid to proceed against him, as he had threatened to take her life.

JAS. L. WHITE,
1st Class Constable, No. 5601.

Police Station, South Broken Hill, 18 March, 1894.

CONSTABLE SHIELL, No. 6120, reports for the information of Sub-Inspector Johnston, that at 12.15 a.m. on Sunday morning, I was on duty in South-street, in company with Constable White, when we heard a noise in the back yard of the "South Broken Hill Hotel." We stood at the gate leading to the back yard, when three men came out of the back of the hotel, viz., J. J. Considine and two brothers M'Lennon. Constable White said "Good night" to Considine, and also said, "Don't you think it is time you was going home?" M'Lennon said, "Yes, come home, Jack," to Considine. The latter replied, "No; I will go home when I like." He also said, "Look here, White, when you and Shiell and Shiner come to arrest me, be well prepared or you will go down, and keep that in mind, and take what meaning you like out of it." He then put his hand up to Constable Shiell in a fighting position, and said, "You bloody crawler, I will drop you." Constable Shiell then struck him with his baton. He then rushed Constable Shiell, when Constable White struck him with his baton. He then ran up the lane at the rear of the hotel back yard, and through the hotel, and escaped by the side-door, and in a few minutes came from the direction of the "Alma Hotel" with a crowbar in his hands, and said, "I will smash your bloody brains out." He then rushed at Constable Shiell, striking at him, with full force, but the constable evaded the blow. He then rushed at Constable White, struck him on the head and knocked him down, and again attacked Constable Shiell with the crowbar, and struck him with full force, and broke the Constable's ribs. The constables then went to the police station for revolvers, as they were unable to effect an arrest otherwise. Constable White then covered him with his revolver, and told him to stand or he would shoot. He then ran and said, "Shoot away; I will do for you." Constable White then fired. Constable Shiell also fired over his head. He still continued to run. The constables fired two more shots, each "low." He then turned round and rushed at them, when Constable White knocked him down. We then put the handcuffs on him. He then walked about 30 yards and dropped on his knees and said, "I am done." The constables then put him in a cab and took him to the hospital.

The constable's reason for firing at him was that he was in terror of his life.

The constable also states, that he has known the deceased for over twelve months, and knows him to be a very dangerous man when under the influence of liquor.

GEO. SHIELL,
Ordinary Constable, No. 6120.

CUTTINGS from *Broken Hill Barrier Miner*, 19th March, 1894:—

THE SOUTH TRAGEDY.

It would be highly improper to offer even the slightest criticism of the painful tragedy which occurred at South Broken Hill on Saturday night, for, whether they have been arrested or not, the constables who were concerned in it have a very serious charge to answer, and we may be sure that, even without the intervention of popular clamour, the authorities will see that they answer it to the satisfaction of the regulations, or suffer the consequences. In the meantime, pending the judicial investigation, nothing more may be said of that phase of the subject.

But when the constables have made their defence—call it what we may—the authorities themselves will have to answer this charge: that without sufficient justification they have put firearms into the hands of the police, thus extending the old practice, still in force here, which enables officers in special cases to shoot. In that connection, which is really the most important of the two, point is given by the very distressing incident to what was written in the *Miner* recently, upon the promulgation of an order for the arming of the force:—"But the most serious danger to the public is not from the armed criminal, but from the armed constable. If one may judge by the evidence given in Police Courts, the force contains quite the average percentage of downright dull-witted, blundering fools. No officer of experience honestly denies it so far as we know. Yet, put a revolver into the hand of one of these men, and we make of him at once constable, Jury, Judge, Executive, and executioner. That, in fact, is the seat of the trouble." Surely the present incident gives emphasis to all that.

"The immediate remedy, so far as a remedy is possible at all is," we said at that time, "to largely increase the force. In Sydney there is a policeman to every 664 people; in London, one to every 388; Liverpool, one to every 439; Belfast, one to 287; Edinburgh, one to 429; New York, one to 472. Yet, notwithstanding this disparity, the protection of life and property does not, Mr. Coghlan, the Statistician, whose figures these are, says, form the whole of the duty performed by the police in this Colony; a very large portion of their time is taken up with administrative work." What do we find here? South Broken Hill, with a population of about 4,000 people, scattered over a wide area, is guarded by three policemen! It is simply monstrous. In this case the two constables would probably have strengthened their position by getting more constables, instead of revolvers, from the police station, had the former been available. As it was, they took what there were—revolvers—when strong hands and hard batons would have been a million times better. If indignation meetings must be held, here is a subject ready made.

TRAGEDY AT THE SOUTH—A CIVILIAN SHOT AT BY CONSTABLES—ONE BULLET TAKES EFFECT.

At an early hour on Sunday morning a tragedy of a most sensational nature occurred at South Town, when a resident named John J. Considine was shot at by two policemen and received a bullet wound, from the effects of which he expired shortly after the affray.

WHAT LED TO THE AFFRAY.

Miner representatives, on making investigations, experienced difficulty in getting a coherent and reliable account of the tragedy. The townspeople were in a state of great excitement, and under the circumstances the versions given of the startling occurrence were many and varied. The constables concerned declined to make any statement, the matter having, they stated, been reported fully by them to Sub-Inspector Johnston; and this increased the difficulty in obtaining information.

Considine had, it appeared, been knocking about town a good deal on Saturday, being St. Patrick's Day. In the afternoon he was at the "All Nations Hotel," but Mr. O'Mara says he left there perfectly sober. At about 8 o'clock in the evening he visited Heggarty's hotel, and remained there for a couple of hours at least. At midnight he was again on the premises, and at 12.15 he made his exit through the side gate on to the South-street footpath. Here he was met and accosted by Constables White and Shiels, and a disputation occurred. Considine resented the interference of the police, and attacked Constable Shiels, who defended himself by drawing his baton and striking his assailant over the front of his skull. An attempt was then made to arrest Considine, but he slipped away and ran into the hotel through the back door. Mr. Heggarty, who was just retiring, heard someone running along the passage. Emerging from his room, he was asked by Constable White for a light. A search was made by the police, and they found that their man had escaped through the side door. Mr. Heggarty accompanied the constables into South-street, and was conversing there with them when he saw someone wearing a white shirt, without any coat, coming along the road. He remarked something to the effect that "Considine was coming again," and then left his companions on the footpath, closing and locking the door behind him. Mr. Heggarty apprehended no violence; but it is alleged that after he departed Considine rushed at White and struck at him with an iron bar about 4 feet long. In a conversation with Dr. John Thomson some time afterwards White stated that he rushed towards his assailant, in order that he might escape the full force of the blow, and that the bar caught him on the back of the head, bringing him down to the ground. Constable Shiels was similarly attacked, and received a blow on his left side, fracturing two ribs. The assault was most violent, and, especially in view of Considine's reputation, seems to have made the police very excited.

THE FATAL SHOT.

While in this state they repaired to the police station, which is immediately opposite Heggarty's, and, arming themselves with a revolver each, they went in pursuit of Considine, whom they determined to arrest. What intention the constables had in arming themselves is not known, but they may have done so in order to protect themselves in the event of any further assault being attempted.

Considine was overtaken in South-street, close to the intersection of that thoroughfare with a lane which runs at the back of his house. He was in the charge of two friends named William O'Leary and James Carney, who were escorting him home. He refused to surrender when called on, and made for the lane at a run, followed by the two policemen, who fired three shots rapidly at him without effect. After the lapse of a few seconds three more shots were fired. Considine was hit in the stomach, with the last bullet which was fired. He must have turned towards his pursuers just as he entered his own yard, as the ball entered his body a little to the left of the navel. When hit he fell, or was knocked over through Constable White running into him, and he was handcuffed on the ground. It is stated that he got up and walked a few yards into and along the lane away from his house with the police, and then dropped, moaning, "I am done for." Constable White then ran to the house of Scone, a cabdriver, Hebbard-street, and procured a vehicle, in which Considine was conveyed to the hospital, but he died *en route*.

ANDREW OHLSSON'S STATEMENT.

A Swede named Andrew Ohlsson, residing in Hebbard-street, on the opposite side of the road to Considine's place, has given the following statement:—"I am working at the roasting works on the Proprietary. At midnight on Saturday I came off shift, and proceeded homewards. On the road I caught up to some underground men, with whom I engaged in conversation. We came along South-street, and, instead of turning to my right up Hebbard-street, as is my usual custom, I crossed over the street and stood talking on the vacant corner next to Considine's. This was about 12.15, as near as I can judge. We had not been on the corner many seconds when, as I looked towards Heggarty's hotel, I saw a man walking towards me, followed by a man in dark clothes. It was a bright moonlight night, and I saw the first man turn to his left into a lane, whereupon the man in dark fired three revolver shots in quick succession as he was running, and then cried out 'Stop!' Almost immediately three more shots were fired. My companions and I went down to see what was up. When we had gone a few steps a policeman came running towards us with an ammunition belt and baton in one hand and a revolver in the other. He excitedly asked, 'Where is the nearest cab; Murphy's, isn't it?' I replied, 'No, Scone's,' and then asked what was the matter. He replied, 'I just shot Considine down—the brute.' I inquired whether he had killed him, and the constable replied, 'I don't know; I believe so.' I told him to hold on, and I would go and help him get the cab; and I then accompanied him to Scone's, which is only a few doors from my place, and assisted to harness the horses. The constable who spoke to me was the man who fired the revolver shots. He was stout, and wore a short beard. When he fired he could not have been more than ten paces behind the man he was pursuing. I saw only one constable. After I had helped to harness the cabdriver's horses, I went home to bed. I did not go and have a look at the man who was shot, because I reckoned there would be enough people there without me."

STATEMENT BY ALDERMAN POUND.—THE CONSTABLE'S EXPRESSION AFTER THE AFFRAY.

One of the first people to arrive on the scene after the shooting ended was Alderman C. J. Pound, whose boot shop is on the north-west side of Hebbard-street, not more than 60 yards from Considine's house. He states:—"At about 12.30 o'clock on Sunday morning I was disturbed in bed by hearing five or six revolver shots fired. Three were fired in quick succession; then there was a pause, and two or three more were fired. Hastily dressing, I ran in the direction of Heggarty's hotel, from which the sounds appeared to have come. When I reached the vacant piece of land at the corner of Hebbard and South Streets I met Constable White running into Hebbard-street in a very excited state, and holding a revolver in his right hand. He informed me that he had just shot Considine, and I asked, 'Good, God! What did you do that for?' He answered, 'You would shoot him if he did to you what he did to me.' White then ran in the direction of Scone's for a cab, and Mr. Ohlsson appeared on the scene. I then went to where Considine was; he was lying in the lane, breathing heavily. We found on examination that he had what appeared to be a bullet wound over his left eye, but which afterwards was proved to be the result of a blow. As things appeared serious, I asked Mr. Tom Reid, whom I saw in the crowd, to assist me in watching events. Mr. Reid and I helped the police to get Considine into a cab; I got in also, and took his head on my lap. As soon as the vehicle started he gave a slight sigh, and died without a moan. Constable Shiels was with me in the cab, while Constable White was on the front seat with the driver. On the road to town Shiels stated that Considine had rushed at White and himself with a bar or piece of iron about 4 feet long, which he was using with both hands; he struck both of them with the weapon, and that was the reason they fired. I asked Shiels had they preserved the piece of iron, and he replied that they had not done so, but they must find it. When the cab reached Dr. John Thomson's surgery, opposite the *Miner* office, in Argent-street, White got Dr. Thomson to examine Considine. The doctor immediately pronounced him to be dead. White was also examined, and was found to be suffering from a wound on the left side of the head, behind the ear. The flesh was cut to the bone. After White had his head bandaged up we proceeded to the hospital, and Considine's dead body was placed in the morgue."

STRAY

STRAY BULLETS.

It is an old saying that "every bullet has its billet," and one of those which were fired by the constable nearly caused a second tragedy. It sped across Hebbard-street, and entered the bedroom window of Mr. Richard Rolfe's residence, cutting through a window blind and passing over the head of Mrs. Rolfe, who was in a delicate state of health. The ball was flattened out against a bedpost. It has been handed to the police.

From the position of the buildings in the vicinity in relation to the scene of the affray it is evident that the bullet which went into Rolfe's place must have been fired about 10 yards down the lane, and have passed between Considine's house and that of a Mr. Picken adjoining. The residence of Mrs. Holden, in South-street, would obstruct the view of anyone standing at the corner of Hebbard-street; and unless Ohlsson, whose statement is given above, moved into the centre of the road towards the "Alma Hotel" he could not see the shots fired. His assertion that all the shots were delivered by one and the same policeman seems, therefore, to be based on the fact that he only saw one policeman present.

THE DECEASED'S HISTORY.

John Considine, the deceased, was 29 years of age, powerfully built, of very erect carriage, and stood 5 ft. 11 in. in his stockings. He was married, and had two children, a boy and a girl, aged 7 years and 5 years respectively. He was employed as boss of the ropers' gang on the Proprietary Mine, and was well liked by the mine officers and his fellow employees, who say that when sober he was one of the best fellows going, but in drink a demon. He was one of a large family of boys, two of whom, James and Frederick, reside on the Hill. "Jack," as he was familiarly termed, had never previously got into serious trouble with the police, although he had been convicted once for a minor offence. One of his brothers, however, were sentenced to two years' imprisonment for assaulting Constable Grieves, and the other, Frederick, was recently bound over to keep the peace towards his wife. Jack's strength was phenomenal, and a member of the force has stated that no two policemen could take him without using their batons if he resisted. Many of the deceased's friends speak of him in terms of great affection, although they admit that in liquor he was of a most violent temperament.

LOCAL EXCITEMENT—ASKING FOR THE CONSTABLES' ARREST—DEPUTATION TO THE INSPECTOR.

The news of the tragedy quickly travelled through the township and caused great excitement. As the day wore on, and the policemen who were alleged to be responsible for Considine's death were still at liberty, the deceased's friends grew very indignant. At length Mr. Terence Murphy and others conceived the idea of holding a public meeting for the purpose of forming a deputation to wait on the officer in charge of the local police and demand the arrest of the constables. Many wild statements were made, and some persons proposed that the citizens should go in a body and convey "the accused" by force to the lockup. At 6 o'clock several hundred people gathered round a trolley on the reserve adjoining the police station, and Mr. Terence Murphy, the convener, mounted the platform to explain the object of the meeting, and asked that a chairman be appointed. He was himself elected to the position, and in the course of an impassioned speech referred to the manner in which Considine had been shot down as "cowardly and contemptible." If, he said, any civilian committed a crime he would be immediately placed under arrest, but Constables White and Shiell were still at large. Ex-Alderman Nolan, the next speaker, deprecated any hasty conclusions being formed. He suggested that one of the most intelligent solicitors be employed on behalf of the family of the deceased, and that every citizen who knew anything about the affray should volunteer information. It was not proper to comment too much on the case before it came to trial. (Hear, hear.) He moved that a collection be made to defray the lawyer's expenses. The motion was carried, and subsequently the collection was made, realising £4 5s. Mr. W. Carroll, who was called upon to speak, said they all knew he had been a personal friend of the deceased, and he would do his best to see justice done. At the same time he was intimately acquainted with Constable White, and knew him to be a man of the most inoffensive nature. The following gentlemen were then appointed a deputation to wait on Sub-Inspector Johnston:—Messrs. T. Murphy, Fletcher, Conroy, Clements, Nolan, W. Carroll, Travers, Coveney (2), and Timmins.

Before waiting on the Sub-Inspector, the deputation called on the Mayor and asked him to accompany them. Alderman M'Mahon, replying, said he considered the matter should first have the attention of the Coroner. Mr. Terence Murphy headed the deputation to Sub-Inspector Johnston, and handed in a written request that the constables, White and Shiell, be arrested. The Sub-Inspector is reported to have stated that such a course was unnecessary; the policemen would be present at the inquest.

CONSIDINE'S INJURIES.

A *post-mortem* examination was made at the hospital yesterday afternoon by the Government Medical Officer, Dr. Groves, in the presence of Dr. Seabrook. It revealed the fact that a bullet had entered the left side of the deceased's stomach, between the navel and the groin, and after passing through his intestines had become imbedded in the spinal column. Internal hemorrhage had been considerable, but death had resulted primarily from the wound in the spine. The deceased had also a wound about an inch long over his left eye, which had been caused by some blunt instrument.

THE INQUEST.

The inquest on the deceased's body was opened at the Court-house this morning by the Coroner (Mr. A. N. Barnett). Mr. J. R. Edwards watched the case on behalf of Constables White and George Shiell.

The following Jury was empanelled:—John Souter (foreman), J. J. Correll, Lawrence Field, Alexander Marshall, Paul D. Davis, William Curgenven, Alfred Barratt, Charles Barratt, William F. Loutit, James A. Maunders, Charles Maley, and H. Plant.

The Jury visited the Hospital for the purpose of viewing the body. The Coroner asked them, in view of the serious nature of the case, to take a very careful view of the body, and examine it with a view to satisfying themselves as to the manner in which the deceased met his death.

After viewing the body, the Jury were driven to the scene at South Broken Hill; and upon their return further proceedings will, it is understood, be adjourned.

Telegram from The Inspector-General of Police to The Superintendent of Police, Deniliquin.

Sydney, 27 March, 1894.

CONSTABLES White and Shiell will now be suspended from duty from date of committal.

Sub-Inspector Johnston to Superintendent Larkins.

Police Station, Broken Hill, 28 March, 1894.

I BEG to report that I failed to get a copy of the depositions in the South Broken Hill shooting case, as the Coroner left for his home at Silverton immediately the verdict was returned, and he sent the depositions on from that place. I, however, got a copy of the evidence, as published in the local newspapers, which I send herewith. The newspaper report of the inquest is a very correct one. If it is really necessary for the Superintendent to have a copy of the depositions, I can get them later on, as Constables White and Shiell have applied for a copy, and I can get a copy of theirs when it arrives. I would also state here that my inquest return has been delayed since Saturday last, as I could not get a copy of the verdict on account of the Coroner leaving for his holidays (Easter) and only returning to-day. I am very sorry for the delay, but really I could not help it.

I have nothing further to add to my previous report with reference to the shooting of Considine by Constables White and Shiell.

Both constables were suspended, as directed by the Superintendent.

A. JOHNSTON,
Sub-Inspector.

[Enclosure.]

[Enclosure.]

THE SOUTH TRAGEDY—THE INQUEST—CONSTABLE WHITE'S EVIDENCE.

THE inquest on the body of John Jeremiah Considine, who was killed at South Broken Hill on Sunday morning, was resumed at the Town Hall this afternoon before Mr. A. N. Barnett, District Coroner. Constables J. L. White and George Shiell were present in custody. Alderman John Souther was foreman of the jury.

Mr. A. J. Hall appeared for the relatives of the deceased.

The first witness was *Constable James Lees White*, who appeared with his head bandaged. The Coroner said, before administering the oath, that the witness was not obliged to answer any questions which might bear on any future proceedings. The witness said: I was stationed in charge at South Broken Hill; I am relieved from duty; I have been in charge at South Broken Hill from the middle of October last; I was on duty at South Broken Hill on the night of 17th March; Constable George Shiell was also on duty; I saw the deceased Considine on the morning of the 18th at about a quarter past 12 o'clock; he was in the back yard of Hegarty's hotel; he came from the back of the hotel with two men named M'Lennan into South-street; he came to the gate of the yard of the hotel; the three men appeared to be the worse for liquor, the two M'Lennans more so than Considine; as they came to the gate I said, "Good night, Considine; don't you think it is about time you were getting home?" one of the M'Lennans said, "Oh, yes; come on Jack" (meaning Considine), "we'll go"; Considine replied, "No, I won't—I'll go home when I think fit"; he then put his hand up to his (witness's) face, and, spreading it out, said, "Now, White, you appear to be watching me"; he still kept putting his hand up, and said, "Now, White, I warn you if Shiell or Shiner comes to arrest me you had better come well prepared or you'll go down"; I replied, "There's nobody talking about arresting you"; he replied, "Never mind, I've warned you; take what meaning you like out of it"; one of the M'Lennans got him by the arm then, and said, "Come on, Jack, never mind"; he replied, "You go away, Hughie, and mind your own business," and pushing M'Lennan in the chest, knocked him down; Constable Shiell then stepped over to the kerb side of the footpath, and beckoned with his finger, saying, "Look here, Jack, I want to speak to you"; Considine passed me and went over to Constable Shiell, putting his hands up in a threatening attitude, saying, "You, Shiell, you're only a ——— thing, a ——— sneak, and a ——— crawler"; Shiell replied, backing away from him towards the fence of the hotel, and Considine said, with his hands up in a fighting attitude, "I'll drop you"; he backed Shiell against the fence up to within about 2 feet or a yard from Hegarty's hotel; Shiell drew his baton and struck at him, and I also drew my baton, believing there would be a row; I believe he struck Shiell; he rushed at Shiell, and I struck him with my baton over the forehead; he sidled backwards and then started to run along South-street and into Patton-lane; he entered Hegarty's hotel by a small gate off Patton-lane, and ran through the yard into the passage of the hotel, followed by myself and Constable Shiell; finding there was no light in the passage of the hotel, we didn't enter; called the landlord, Mr. Hegarty, who came out and gave me a candle; at this time I heard a noise as if a door was being opened and shut; lit the candle and proceeded along the passages of the hotel and searched them, but failed to find anybody; found that the door of the hotel leading into South-street was closed, but unlocked; remarked to Hegarty, "He's got away, we must let him go, and take proceedings on Monday"; after speaking to Hegarty for about three minutes at the side door of the hotel, Hegarty either remarked, "Here he's coming" or "Here's somebody coming," could not say which; Hegarty took the candle, and going inside closed the door; it was Considine coming, and he appeared to increase his pace as he came towards us, saying, "Now, I'll smash your ——— brains out"; the M'Lennans were at this time standing near the entrance gate of the hotel, 20 yards off; when Considine came within ten paces of me I saw he had something in his hand which he was carrying low down, as if it were a rifle; he struck at Constable Shiell and then swung round at me; I then saw that what he had was not a rifle, but a bar of iron or an octagon drill, about 4 feet or 4 ft. 6 in. long; he swung it round in both hands with terrific force at me; I closed with him to try and avoid the full force of the blow, but the iron struck me over the left ear, and I fell on my back out on to the footpath; I produce the cap I was wearing at the time, showing it cut through just where I got the blow over the ear; I was partly dazed for a few seconds; I raised myself on my left elbow, and looking round saw Considine chasing Shiell down along the police station fence in Patton-street; I got up, staggered across the street, and went into the police station; I had previously tried to arrest Considine for riotous behaviour; I saw Shiell at the police station; we got our revolvers and went out into Patton-street with a view to effecting his arrest; we saw him standing in South-street, against Krantz's store, about 30 or 40 yards from us; we went towards him, and he started to move away towards the direction of his house or towards Hebbard-lane; I called out, "Considine stand, or I'll shoot"; he then started to run; the period between this time and when I got up off the path was about three minutes; he ran, and I called out again, "Considine stand, or I'll shoot"; he was 20 yards off; he increased his pace and replied, "Shoot away, I can do you," or "I can do for you," I'm not sure which; I then fired a shot from about ten paces behind him into the ground before him to frighten him; he still kept running, and as he turned into Hebbard-lane I fired another shot at his feet; it didn't appear to take effect, as he still kept running, and as he turned into his own block, he partly looked back over his shoulder at the time to see if I was pursuing him; after getting into his own block he turned round and faced me, and came towards me with his hands up in front of him about level with his face; I ran into him, striking him with my left shoulder, knocking him down; he then said, "I give in," and with the assistance of Constable Shiell I put the handcuffs on; we picked him up between us and conveyed him some yards, when his knees gave way, and he suddenly fell down, saying "I'm done"; I fired three shots, the third one being fired as he turned out of Hebbard-lane into his own block; I fired the third shot at his knees as he was running and looking back at me; after I fired the first shot Shiell also fired, but without apparent effect; after I fired the second shot Shiell responded, and this also didn't appear to take any effect; as I fired the third shot Shiell immediately fired also, Shiell being about a yard behind me; Considine appeared to be in the act of turning round and coming towards me; cannot say in what direction Shiell fired; when deceased fell down I ran for a cab over in Hebbard-street, as he appeared to be badly wounded; left Considine with Shiell; told the cabman to come to Hebbard-lane, and when he came we put the deceased into the cab; he was then alive, but breathing heavily.

Constable White, continuing his evidence in the inquest on Considine this afternoon, said:—Before removing Considine to the cab Mr. Pound, and a man named Reid, came and assisted us to put the deceased in the cab; the cab went down to the police station; Constable Shiell came out and went in the inside with the deceased; I got on the box with the driver, and told him to drive as fast as he could into town; we reached Dr. Thomson's surgery in Argent-street at about 12:45; I called Dr. Thomson; he came out and examined Considine, and said he thought life extinct; he bandaged my head, and we then drove to the hospital and put the body of the deceased in the morgue; the revolver produced is in the same condition as it was when I used it; it is loaded in three chambers; three cartridges were exploded.

By the Coroner: When I fired the last shot the deceased had not turned towards me, but was running sideways from me, exposing his right side, and with his face towards me.

By Mr. Hall: I had known Considine for four or five months; I had heard that the police did not care about interfering with him, especially if he was under the influence of liquor; I cannot say he was a peaceable citizen, because I saw him picking a quarrel at a banquet two nights before; I used to be on fairly friendly terms with Considine, and never spoke to him officially before; I did not see the deceased before on that evening; I was exceedingly civil to him when I advised him to go home; I spoke to him in friendship, because I knew that in liquor he was apt to get into trouble; I saw neither Carney nor O'Leary present at the time; I am certain it was M'Lennan who caught hold of Considine by the arm, and ordered him to go home; it is untrue that Considine said to me, "You are a white man," and, turning to Shiell, said "You are a crawler," and that thereupon Shiell struck him on the head with a baton; he kept calling Shiell "a crawler" and walking towards him, and it was when Shiell had backed to within a yard of the fence that he struck Considine with his baton; I believe he struck him on the neck or the jaw; I also struck him; the small wound caused by me over the eye was afterwards mistaken for a bullet wound; it did not bleed profusely; when Considine came the second time I recognised him at a distance of 20 yards; he increased his pace when he got close; notwithstanding that the peak and the button on my cap are uninjured, I consider that the clean cut on the side of the cap was caused by the blow with the bar; I was leaning away from him when he struck at me, and I got so close in that he could not give full force to the blow; I cannot say what conversation Shiell and I had when we went into the station; Shiell was very much excited, like myself; my revolver was unloaded, and I had to load it; Constable Shiell took Constable Shiner's revolver; I don't know whether he had to load it; I decline to answer the question as to who first suggested the use of revolvers on the ground that it may incriminate me; I have had no instructions whatever about the regulation revolvers; my experience is that a revolver does not carry high with a fine sight; it was between 30 or 40 yards from where I fired the first shot to where he fell; while we were coming up from the police-station towards Considine I said to Shiell, "If he attacks us again whatever you do don't shoot him in the body, fire low"; when I first called on Considine to stop I believe he had the bar still in his possession; when the last shot was fired

he

he was between 15 and 20 yards away; I did not see him drop or fling away any weapon; it was in consequence of his second attack that we went to arrest him immediately instead of waiting until Monday; before I left the ground I gave instructions that the weapon should be searched for; Constable Shiner afterwards told me that he could not find it; I know Considine was a married man; his wife told me on the Friday evening that she was not living with him; while I was on the way to the cab-driver's I met a man named Ohlsson; I don't remember what I said to him; I refuse to say whether I told him what I had done; when we came out with revolvers there were some people standing with Considine; I don't know who they were; I don't think the blow I gave the deceased with the baton would be sufficient to cause the blood-stains on the collar of the shirt produced.

The examination of Constable White concluded at 5:15.

The Coroner at this stage said he was justified in telling the jury that once they were convinced that the deceased met his death by being shot down by one constable or some constables, the only questions they had to consider were:—(1) Was he or were they, in the execution of their duty, or, even when trying to arrest, were they in the execution of their duty; and (2) were they justified in shooting him in order to bring him within the reach of justice. Any questions that went beyond that were, in his opinion, irrelevant.

Dr. Seabrook, of the hospital, said that White had a true contused wound above the left ear; such a wound could have been caused by a heavy blunt instrument, and would be likely to affect the brain for the time being, together with depression of the nervous and physical systems; also examined Constable Shiell, who had the ninth rib on the left side fractured.

Constable Shiell said he was on duty at South Broken Hill on Sunday morning, and saw Considine at the rear of the "South Broken Hill Hotel." [The evidence was mainly corroborative of that given by Constable White.] Shiell added that White called to Considine, "Stand, or I will shoot"; the latter replied, "Shoot away, I will do for you"; Considine commenced to run, and White fired; witness immediately fired over the man's head, thinking he would surrender; White and witness again fired; after the second lot of shots, before any more were fired, Considine was on his own block; he turned round to the left and looked at them sidewise, when White delivered his last shot; when he turned his full front towards them Considine raised both hands as if he was going to rush or throw something at them; witness then fired at his legs about the knees, with the intention of crippling him, in order to effect the arrest; this was immediately after White's last shot.

The inquest was, at 6:30, adjourned until 10 a.m. to-morrow.

The inquest on the body of John Jeremiah Considine, the victim of the South tragedy, was continued at the Town Hall this morning before the Coroner (Mr. A. N. Barnett).

Constable Shiell, re-examined, produced the regulation revolver which he used during the affray; it was now in the same state as when he last used it; three of the cartridges were exploded, and the other three were unexploded; he produced the coat which he wore on the occasion, showing a mark corresponding with the locality of the injury to his ribs.

By Mr. Hall: I had not seen Considine on that evening before I met him at Hegarty's side gate; I was not watching for him; my reason for speaking to him was that I knew he was quarrelsome under the influence of drink; Considine did not strike me before I hit him; he had his hands up to me in a fighting position; he was under the influence of liquor; although he may have been able to go home without assistance, he was not in a state to be able to properly conduct himself; when Considine came towards us with the bar Hegarty was standing near the door, and the two M'Lennans were some distance away; these were the only persons present; when he made the first blow at me he slightly stumbled, and the blow just missed my head; I struck round at him with my baton, and from an indentation on it I consider that I must have struck the bar; he knocked Constable White into the gutter, and I then cried out for Hegarty; Considine thereupon rushed me; when Constable White and myself returned to the station I slightly preceded him into the building; I proceeded straight to Constable Shiner's room and took his revolver, which was already loaded; I then went to the office and witnessed Constable White loading his; when Considine turned round before I fired my last shot he did not say, "I give in"; after the last shot he rushed Constable White, and the latter pushed him down.

By Mr. Edwards: I had never previously had any private trouble or grievance with the deceased; on former occasions when I saw him under the influence of liquor I warned him to go home; Considine when sober was a good citizen; on the first occasion I fired it was with the object of frightening him, and on the other occasion it was with the object of effecting his arrest.

Dr. John Thomson deposed that on Sunday morning at about 1 o'clock Constable White called at his surgery; he examined a man who was brought in a cab, and found that he was dead; there was a wound on the deceased's forehead on the left side; Constable Shiell and two others were in the cab; he examined Constable White's head; there was a severe wound on it.

John Hegarty deposed: I am the licensee of the "South Broken Hill Hotel"; on the 17th instant Considine visited my place during the day; I saw him again at 11:30 or 11:45 in the evening; Donald and Hugh M'Lennan, James Carney, and James O'Leary were with him; about twelve o'clock, as I was retiring, Constables White and Shiell sang out from the passage door, "Considine has gone through here; give us a light"; I gave Constable White a light, and he led the way through the passage; just previous to this I had heard a noise as of someone running through the passage; I saw the constables search both parlours, and then go to the side door, which was shut, but not locked; one of them said, "He must have gone out here"; Constable Shiell said, "Here is your candle," and put it on the floor; I followed them through the side door, and stood talking to them on the South-street footpath; one of the constables said, "He is gone; we will have to summons him"; this would be as a few minutes after midnight; we were talking together about four or five minutes, when I saw someone coming along South-street about 100 yards away; I said, "There is someone coming now down the street"; Constable White remarked, "Yes; there is someone coming"; I then said, "Good night," and, closing the door behind me, I retired to my bedroom; I heard some talking; about eight or ten minutes afterwards I heard revolver shots, and went to the door and heard more; I saw some people turning into the lane at the back of the deceased's place, and heard two more shots, making six in all; I went out into the middle of the road and stood there for a few minutes until Constable Shiner came along; when Shiner came back he said that White had told him Considine was dead, and had asked him to see if he could see anything of an iron bar; Shiner and I searched for the bar without success; when I saw Considine in the hotel he had had some drink, but was far from drunk.

By the Coroner: Deceased, when sober, was a good-tempered, well-behaved man, but when in liquor he was obstreperous; I had known him five years.

By Mr. Hall: Next morning I found drops of blood along the passage.

Dr. Groves deposed that he made a *post-mortem* examination of the body of the deceased on Sunday, at noon; he first noticed a small wound over the left temple; there was a mark as if blood had run from the wound on to the collar of the shirt, and as if it had afterwards been cut and spurted; about 2½ inches to the left of the middle line, and about 1½ inches below the umbilicus, there was a bullet wound; there was a corresponding hole in the trousers; there was no trace of burning on the clothes, and the shot seemed to have been fired from a distance; the wound on the temple had just gone through the skin, but had not reached the bone; it was apparently a slight one; he traced the wound on the body, and found that the bullet had passed through the intestines in four places, divided a large artery, and lodged in the spine; he found a 450-calibre bullet embedded in the last lumbar vertebra, in the spine; he produced the bullet, the original weight of which was probably 225 grains; its present weight was 220 grains; the actual cause of death was hemorrhage, produced by the bullet wound; the abdominal cavity was full of blood.

By the Jury: The indentation on the bullet could have been caused by contact with the spine; from the nature of the wound and the course of the bullet, I am of opinion that the deceased must have received it while facing the person who fired the shot; the bullet took a downward course; it has not the appearance of a bullet which rebounded, as nearly all the lead is there; I have seen ricochet bullets, but this bullet has not, in my opinion, the slightest appearance of being one.

Donald M'Lennan, labourer, deposed:—On the evening of Saturday last my brother and I were at Hegarty's hotel; we met Considine there, and left at about midnight with him and some others through the side gate; just as we were going out of the gate, I saw the two constables; one of them said, "It is time you were away home, Considine"; deceased said he would go home when he liked; my brother put his hand on him, and advised him to go home; Considine shoved him away, and told him to leave him alone; the constables and Considine were arguing; at first they did not seem to be cross, but after a while they got more excited; one of the constables said, "You two chaps had better get away"; my brother and I went into the yard and stood there talking; Considine had had several drinks; my brother and I had each had more than we should have had.

Mark

Mark Wake, on Saturday evening, whilst in bed at midnight at Hegarty's, heard signs of a scuffling in South-street; he pulled the window-blind aside, and saw someone lying down; the man got up and went towards the police station; pulling up the window, he saw two or three people standing at the corner of the hotel; to the best of his belief they were O'Leary, Carney, and the deceased; ten minutes later he heard the report of firearms; he looked out of the window again, and heard someone say that Considine was shot.

By Mr. Hall: I don't think deceased was a man who would pick a quarrel; if crossed at all he was apt to become violent.

The Court rose at 1 o'clock for luncheon.

The inquest on John Considine was continued at the Town Hall this afternoon.

James Carney, labourer, deposed: On Saturday evening I was at Hegarty's hotel, and there saw the deceased; Considine, Jim O'Leary, the two M'Lennans, and myself left the hotel yard together at ten minutes to 12; at the gate we saw Constables White and Shiell; White said to the deceased, "Why don't you go home?" Shiell also spoke to Considine, who turned to White and said, "You are a white man, White"; Shiell then hit Considine with his baton; before this deceased had not hit or said anything to the police; deceased staggered, and the police followed him up; he then ran through the hotel yard; I did not see White touch Considine; I next saw the two policemen and Hegarty standing outside the hotel door in South-street; saw a man coming towards the hotel from a northerly direction, and heard Shiell say, "Here he comes; we will have him this time"; the police walked two or three paces towards the man, who proved to be Considine; I saw White on the ground, having been hit by the deceased; next saw Shiell running towards the police station, while the deceased remained standing where he had knocked White down; I cannot say how the deceased knocked the constable down, whether by a blow from a fist or an instrument; White remained two or three seconds on the ground; I watched Shiell enter the police station, and also saw White going in that direction; O'Leary went up to Considine, and said, "Come on, Jack; you are bleeding frightfully"; we accompanied him as far as Krantz's back yard; we stood about a minute on the footpath, and were just going to part, when we saw the constables coming towards us; one of them said, "Stand, Considine, or we will shoot"; deceased made no reply, but walked across the street; the police again called to him to stop, but he continued to walk on; I heard a shot as Considine was entering the lane behind his house; I heard more shooting; at the sixth shot I saw Considine drop, saying, "I'm done, I'm done"; he fell about 15 yards inside his own block; the constables were also on the block, about five paces behind; Considine walked four or five paces with the constables when, saying, "I'm done, I'm done," he fell down; I saw nothing in Considine's hand when he knocked White down, and I did not see him drop anything.

James O'Leary deposed that when White told Considine he "ought to be home," the latter replied, "I will please myself"; deceased subsequently warned Shiell to be prepared when he came to arrest him; Considine was speaking to White when Shiell struck him; he turned round two or three times and fell against the fence; the constables then rushed him, but he broke away; witness swore that when Considine came up subsequently and attacked White he struck the constable with his fist; deceased did not strike Shiell; afterwards, when the constables warned him the second time that they would fire if he did not stand, Considine said "Fire away."

Andrew Ohlsson, fireman, deposed that between 12:15 and 12:30 on the morning of the 18th instant he was talking to a friend at the corner of Hebbard and South Streets, when he saw a man coming towards him from the direction of Hegarty's; the person in question was pursued by another man in dark clothes, and he turned into Hebbard-lane at a walk; witness heard three revolver shots, and then a loud cry of "Stop"; almost immediately three more shots were fired; he went half-way down the block, when he met Constable White, who had a belt and baton in one hand and a revolver in the other; attached to the belt was a revolver cover; White asked, "Where is the closest cab; Murphy's, isn't it?" witness replied, "No; Scown's"; he asked White what was up, and the latter replied "I just shot Considine—the brute."

Thomas Reid, miner, deposed that pistol shots attracted him to Hebbard-lane, where he found Considine lying on his face in the centre of the thoroughfare; the man was breathing heavily; he asked Shiell, who was standing close by, why he did not turn him over on his back and give him a chance to breathe; Shiell replied, "Leave him alone"; White arrived with a cab, and Considine was placed in it; he died soon after the vehicle started; at the police-station, at which the cab called, White handed some articles to someone and said, "Take those revolvers, and let them remain as they are."

C. J. Pound, bootmaker, was awakened early on Sunday morning by pistol shots; he was proceeding to where the sounds came from when he met Constable White at the corner of Hebbard and South Streets; White was very excited, and had in his right hand a revolver; in reply to a question as to what was the matter, he replied, "I have just shot Considine"; witness said, "Good God! what have you shot him for?" and White replied, "You would have shot him had he done to you what he did to me."

By Mr. Edwards: On the day the day the inquest opened he spoke to Mr. Maley in the street; he did not know that Mr. Maley was a juror; he did not speak to him in reference to the inquest.

Richard Rolfe, residing in Hebbard-street, on the opposite side of the road to Considine's, deposed that at about 12:30 on the morning of the 18th instant he was returning home, when he heard cries in his house; he went in, and found his wife in a fainting condition in the sitting-room; subsequently found the bullet produced on the bed in the bedroom; he went across the street and was told by a constable that a man had been shot by a constable; witness remarked that another person had very nearly been shot; he found a hole caused by a bullet in the bedroom window, 4 ft. 1½ in. from the ground.

Constable White, recalled, deposed that when he fired his last shot he was in the lane; Considine was looking over his right shoulder, running sideways, with his right side exposed; he had not turned his full front towards witness when the latter fired; when Constable Shiell fired, immediately afterwards, Considine had, to the best of witness' belief, turned and faced them.

Constable Shiell, recalled, deposed that he was fairly certain that when Constable White fired his third shot Considine had turned his left side towards them; when witness fired his last shot Considine had faced them.

Sub-Inspector Johnston gave evidence concerning the constables' characters; he could not wish for a better officer than Constable White had proved, and he had never met a man in the police for whom he had a greater respect; he was a cautious man, and carried out his instructions faithfully; Constable Shiell had not come so directly under his notice; his officers always gave him a good character for attention to duty; outsiders, however, had accused him of being a little officious; witness offered Shiell the position of lockup-keeper at Broken Hill recently.

This closed the evidence.

The Court then adjourned until 7:30 p.m., when the Coroner will sum up, and the jury will retire to consider their verdict.

At 7:30 p.m. the Coroner (Mr. A. N. Barnett) commenced to address the jury. A large number of people had congregated in the passages leading to the room at the Town Hall where the Court sat.

THE CORONER'S SUMMING-UP.

The Coroner said: Gentlemen of the Jury, you have heard all the evidence, and it is now for you to say how the deceased, John Jeremiah Considine, met his death; and, if any person or persons took his life, whether those person or persons were justified in so doing. The case is a very infrequent one, either before a Coroner's Court or a Court of ordinary jurisdiction. Therefore, I shall take a little time in laying the facts and the law before you. With regard to the first part of this case there are two stories, one of which you must believe. The first is that a little after midnight on Sunday morning the deceased came out at the back of the hotel, and, proceeding to the door in the fence, met Constables Shiell and White. White said, "Don't you think it is time you went home?" addressing Considine. At that time there were three other persons with the deceased, all more or less under the influence of liquor. Considine was also urged by one of his friends to go home. He replied, "I will go home when I please." Before this he said to White, "You are watching me," or words to that effect. White responded that he was not; and Considine, going up to White, with his index finger pointing at him, said, "If you, Shiell, or Shimer want to arrest me at any time you had better come prepared, because if you don't you will go down." White remarked that he had no desire to arrest Considine, and the latter said, "I don't care whether you have or not, but you are warned, and you can take what you like out of it." Shiell then beckoned Considine on one side and advised him to go home. This apparently raised the deceased's ire; and, if you believe the evidence of the police and some of the other witnesses, he backed Shiell up against the wall and said, "You

"You are a — crawler, and a — sneak, and a — thing, and I will drop you." Shiehl, who was afraid that some harm would be done him, raised his baton and struck him on the head. Considine again rushed Shiehl, whereupon White struck him over the head. He staggered and went away round the back of the yard and through the hotel. Shortly afterwards, while the constables were talking to Heggarty, the deceased was seen coming along the road with a bar of iron in his hand. Immediately proceeding up to Shiehl, he said, "Now, I will knock your — brains out." He missed Shiehl, and inflicted on White a severe blow on the side of the head in the way that has been explained. He then assaulted Shiehl with the bar, and broke one of his ribs, and subsequently pursued him to the police station. White, who was on the ground, was able to see this. At this stage I can tell you the other story, which is given by two witnesses called Carney and O'Leary. These ask you to believe that there was some conversation between the deceased and the constables after the former came out of the hotel, and they admit that the first expression was from White, who said, "You had better go home." They thus corroborated the statement of White, and showed that his remark was admonitory and not offensive. But, while he called White a "white" man, he did not, they swear, speak to Shiehl; and the latter, without any provocation, on this remark being made, struck him over the head with his baton. What is more, they allege that both constables rushed at and pursued him. He escaped, but afterwards returned without anything in his hand; and they saw him strike White and knock him down; but they did not see him strike Shiehl in any way. They want you, in fact, to believe that the injuries which White received were inflicted by Considine with his hand. It is for you to say which you will believe as far as the statement is concerned up to the point that the iron bar is concerned: whether you are going to believe that Shiehl, without provocation, simply hit him on his head, and that they both pursued him afterwards, or whether you will believe the statements of the constables and one or two witnesses, who to some extent corroborate. I am going to assume you will not believe that part of the evidence which says that White was struck by Considine with his hand; I am going to assume that you will believe that he was struck with an iron bar, or something like it, and that Considine did inflict Shiehl's wound with the same weapon afterwards. Well, the two constables assaulted by Considine arrived at the station, seized their revolvers, and went outside. They saw two people standing at some distance away. They called on Considine, and when they did he moved away. After being called upon twice to stand, or he would be shot, deceased replied, "Shoot away; I will do for you." White fired into the ground, and Shiehl almost immediately fired in the air. Afterwards the second shots were fired with the intention, the constables say, of crippling the man. A man is responsible for the consequences of his own acts; and if he fires for a man's legs with the intention to wound, but kills, he is just as guilty as if he meant to kill. The question is: How far were the constables justified in shooting at him? Under certain circumstances a constable is justified in shooting a man who is flying from arrest. These circumstances are:—(1) That he must be in the lawful execution of his duty at the time; (2) that he must know that the person flying from him has committed or is in the act of committing a felony; and (3) it must be necessary that the shooting was what is called a necessary act—that is to say, that it was obvious that there were no other means of bringing him within reach of the law. If a constable is assaulted in his endeavour to arrest a man charged with a felony or a misdemeanour, and he cannot get him in custody without extreme measures, he is justified in shooting him there and then. If you believe that deceased did attack the constables with the bar, they would have been justified in shooting him dead on the spot, and no jury could bring in any other verdict than justifiable homicide. The circumstances would be different where there was no assault, but merely a fleeing from arrest. Were these constables acting in the execution of their duty? A constable in this Colony can arrest a man without a warrant. One of the constables had been spoken of in the most insulting manner by the deceased, who had also put up his hands in a manner which might be construed into an assault. However, we may take the second part of the case as being one for which the constables were bound to arrest. The attack with an iron bar, if you believe it took place, is a felony, punishable by penal servitude. Therefore, the constables would have been chasing a felon; and if they were trying to arrest a felon they were justified in shooting him under certain circumstances. They were in the execution of their duty, and they were arresting a felon, if you believe their story. Supposing you do not believe that, it will alter the question to some extent. You will believe, at any rate, that one man was knocked down by the deceased; but that is not a felony. If you are with me, I will explain under what circumstances a constable can shoot a man fleeing from arrest. The question is, were the constables, at the time they shot the man, taking that extreme and drastic course because it was obvious that if they did not take that course they could not bring the deceased within the reach of the law; or do you consider that there was not that apparent necessity which must exist before a constable can proceed to the extreme by taking a man's life? If a person is seen in the bush committing a murder, or doing something in the distance which amounts to a felony, and if he flees, and the pursuer sees that the criminal is gaining on him, and does not know who he is, he is justified in drawing a revolver and shooting him. But only under such circumstances as those will the law allow him to shoot him. If you find this, it will be necessary for you to say they were justified. In view of all the circumstances—that the deceased was living within a few yards of the police station, and that he was known to the police by name and disposition as a man of peaceable habits, and engaged on the Proprietary Mine—was there, then, that apparent necessity to use extreme means? You may find difficulty, as I have done, in finding out who shot the man. Possibly White's bullet did it when Considine turned partly round; on the other hand, it may be more probable that the shot fired by Shiehl a second afterwards, when the man was facing his pursuers, was the one which inflicted the fatal wound. As a matter of fact it does not matter who fired it. Any persons engaged in the pursuance of a common and unlawful design are equally liable—they are all principals. For the purposes of your verdict it does not matter very much who caused the wound. You will be stirred by no emotion of commiseration for the unfortunate victim, or repugnance against those who caused his death. I ask you to return a verdict on the facts clearly before you.

THE JURY RETIRES.

At 7:50 o'clock the jury retired to consider their verdict. They were locked up in a room upstairs, adjoining the late office of the municipal engineer. Constables were stationed on the staircase to keep the jury room secluded. At 10 o'clock the Coroner (Mr. Barnett) returned to court, and immediately afterwards the jury were ushered in.

The Foreman (Mr. John Souter): The jury is undecided, your Worship. We wish to ask what constitutes justification in shooting a man either breaking or escaping from arrest.

The Coroner: I must first ask you how you find with reference to the second alleged assault on the officers. Do you find that they were assaulted with an iron crowbar or some such weapon?

The Foreman: Yes; we all agree on that point.

The Coroner: Then, what is your simple question now?

The Foreman repeated his question.

The Coroner: The object in giving powers to a constable or any officer of the peace to arrest a person who has committed or is immediately committing a felony is simply with a view to his being brought to justice and punished in a constitutional manner. For that reason the law will only allow an officer of the police to resort to the extreme and final method of taking a man's life under circumstances where, if his life is not taken, it is reasonable to suppose that he will escape absolutely. This is law as well as common sense. Felony is an offence punishable by penal servitude, *i.e.*, working on the roads, &c. Any class of offence which comes under the heading of penal servitude is called a felony. If you find that the deceased inflicted the injuries to the constables, he was a felon escaping from justice; and the officers, being in the execution of their lawful duty, were quite justified in attempting to arrest him. But if they go so far as to take his life, they must be able to show, in defence, that the circumstances attending the effort to arrest were such as to necessitate the extreme method involved in taking life. It was never intended that an officer of the police, or any person in a similar capacity, should take on himself to be judge, jury, and executioner. If they can take him by lawful means they must do so up to the last moment. There is no statute law on this subject; but we are always guided by the law of precedent, centuries of experience, and public policy. The only justification is that if the man once gets away he will escape the punishment he deserves. The deceased was a man of peaceable temperament and bore a good character, except at certain times. Were they, then, right in taking on themselves to say, "We shall never be able to catch this man, and he will escape the punishment he deserves if we don't take the only method we can, and that is to kill him"? The only extenuating circumstance is whether, as that is the settled law as to a felonious assault on the people, the law can be altered where the felony is committed on the man attempting the arrest. If you return a verdict that the constables were justified, nothing happens. If you find otherwise, they will be indicted and sent on to a higher court.

The Foreman: Would the constables be justified in shooting a man turning on them, in the last instance, if in bodily fear of their lives?

The Coroner: That is in reference to the constable's statement that the deceased turned on him in an attitude of resistance. It is more for you to decide than me. The evidence shows that he was not within proper distance to do them any harm unless he had a weapon, which they say he had not.

A juror : If the constables thought the deceased had a weapon in his hand, such as a stone ?

The Coroner : You must be bound by the evidence. I can't answer conundrums. The evidence of one constable is that Considine might have had a stone ; but the other says he had nothing, and only lifted his hands level with his face. This struck me as merely the nervous result consequent upon being shot. I don't think they had any reason to suppose he had a weapon in his hand.

The Foreman : When the constable said " Stand, or I will shoot," was that an arrest ?

The Coroner : An arrest must be at a closer distance. Putting a hand on a man's arm is an arrest. Arrest means " to stop."

The Jury at 10 p.m. again retired.

THE VERDICT.

At 11 o'clock the Jury returned to Court.

The Coroner : Gentlemen, have you agreed upon your verdict ?

The Foreman : Yes, Sir. We find : " That the deceased, John J. Considine, met his death on the morning of 18th March, at the hands of Constables White and Shiell by shooting ; and that, at the time of the shooting, such extreme action was not justified." We add as a rider, that we deeply sympathise with the constables in the unfortunate position in which they are placed, as we consider they were acting under great provocation, and we believe they were under the impression that they were doing their duty.

The Coroner : Do you bring in, in the light in which I put it to you, that there was not in their minds at the time of shooting a reasonable belief that he would escape ultimately from justice if his life were not taken ? That is the very crux of the whole question. If there was no necessity for them to do what they did, it was manslaughter at least. Am I to take it as justifiable homicide or manslaughter ?

The Foreman : We don't understand the question.

The Coroner : There is a difficulty in explaining it more clearly. A man falls but 30 yards from his own door. His character and circumstances were known to the police, and he had been employed in the Proprietary Mine for four years. The question is this : Do you think that Shiell and White believed that if they did not shoot him he would escape from justice ? If they did not believe it, where does the necessity come in for shooting him ? You may be wavering with a desire to think they were acting under great impulse or a feeling of anger at the wounds received, but the law won't allow that to influence you. The law says a policeman must not be the avenger of a felony. It is a painful case. One of the witnesses (Ohlsson), who appeared truthful, said Constable White's first statement was, " I have just killed Considine ; the brute." That says something. Of course, you draw your own inference from that.

The Foreman then consulted with his colleagues.

A Juror : Is it a question whether we believe the man had a chance of escape ?

The Coroner : No ; it is whether you believe that the constables believed that the man had a chance of escape. Can you not suggest a means of arresting him, then or in the future, other than taking his life ?

The Foreman, after further consultation with the other jurors, said the Jury had agreed on a verdict of manslaughter.

COMMITTED FOR TRIAL.

The Coroner : I will frame the formal verdict, that the constables " did feloniously and unlawfully kill and slay." It becomes my duty now to commit the accused to take their trial at the next Circuit Court, to be held on 23rd April, on a charge of wilfully and feloniously taking the life of one John Jeremiah Considine. I reserve the question of bail.

The Jury, having been thanked for " the very careful and intelligent manner in which they had dealt with the case," were discharged.

The Coroner subsequently stated that, as the accused were officers of the police, he would fix the bail at £50 each, with one surety of £50 in each case. The sureties were immediately forthcoming—Mr. Horace Plant for White, and Mr. W. F. Loutit for Shiell.

Copy of Depositions.—Regina v. White and Shiell—Manslaughter.

Sub-Inspector of Police.] *James Lees White*, sworn, saith (after being duly cautioned) :—I am a constable of police lately stationed at South Broken Hill, now relieved from duty ; I have been in charge of South Broken Hill Station since last October ; on the night of 17th March I was on duty there ; Constable Geo. Shiell was on duty also ; on the morning of the 18th, at about 12.15, I saw deceased, Considine, in the back yard of the " South Broken Hill Hotel," in South-street ; Shiell was with me ; deceased, in company with two men named M'Lennan, came to the yard entrance in South-street ; all three were under the influence of drink ; the two M'Lennan's were worse than the deceased. I said " Good night, Considine ; don't you think it time you were getting home." One of the M'Lennan's said, " Oh, yes, come on, Jack, and we'll go ; Considine said, " No, I won't ; I'll go home when I think fit" ; he then said, " Now then, White, you appear to be watching me" ; I replied, " No, I'm not watching you" ; he was gesticulating all the while ; he then said, " Now then, White, I warn you, that if you or Shiell or Shiner come to arrest me, you had better come well prepared or you will go down" ; I replied, " There was no one talking about arresting you" ; he replied, " Never mind, I have warned you, and take what meaning you like out of it" ; one of the M'Lennan's then took deceased by the arm and said, " Come on, Jack, never mind" ; he replied, " Go away, Hughie, mind your own business," giving him a push which knocked him down ; Shiell then stepped over the edge of the footpath, and beckoning to deceased, said, " Come here, Jack, I want to speak to you" ; he passed me and went over to Shiell, putting up his hands in a threatening attitude, saying, " You, Shiell, you are only a b—— sneak, a b—— thing, a b—— crawler" ; Shiell kept backing from him towards the fence ; deceased, who had his hands up in a threatening attitude, said, " I'll drop you" ; as he backed the constable up within a yard or so of the hotel fence Shiell drew his baton and struck at him and I believe hit him ; I had also drawn my baton ; he rushed at Shiell again ; I also rushed up and struck him (deceased) on the forehead ; he staggered back and commenced to run eastwards along South-street, turning northwards along Patton-lane ; he entered the gate of Heggarty's hotel by a small gate, off Patton-lane ; he passed through the yard into the passage of the hotel, followed by Shiell and me ; we did not enter the hotel ; we called the landlord, and he came out with a candle ; I heard the noise as of a door being opened and shut before I had lit the candle ; after lighting the candle I proceeded along the passage of the hotel, but could find no one ; the door opening into South-street was unlocked ; I passed some remark to Heggarty to the effect that he had got away, and we could take proceedings on Monday ; about three minutes later Heggarty remarked, " There's somebody coming," or something to that effect ; I then saw deceased coming from the direction of the " Alma Hotel," as a trot ; his own dwelling being in that direction ; Heggarty took the candle from me, went in, and shut the door ; deceased seemed to increase his pace, saying, " Now I'll smash your b—— brains in" ; the M'Lennans were about 20 yards from me in almost the same place as the first scuffle took place ; deceased had something in his hands which I took to be a rifle ; he rushed at Shiell and struck at him ; he then turned to me, and I saw he was holding in both hands an octagon drill or iron bar, about 4 feet long ; he struck with it at my head with terrific force ; I tried to close with him, but it struck me over the left ear, and I fell on the footpath on my back partly dazed ; I was wearing the cap produced, which shows where the blow cut through the cap ; I raised myself on my left elbow, and saw deceased chasing Shiell down the police station fence in Patton-street ; I got up and went into the police station through the fence ; I there found Constable Shiell ; we took our revolvers and went out into Patton-street with a view of arresting him ; he was standing in South-street, near Krautz's store, about 30 yards away ; we both went towards him ; he started to move away towards his home, going up Hibbard-lane ; when about 20 yards from him I called out, " Considine, stand, or I'll shoot" ; about two or three minutes had elapsed since I got up off the path ; he started to run towards home ; I called out again, still about 20 yards from him, " Stand, or I'll shoot" ; he increased his pace, and replied, " Shoot away ; I can do you," or " do for you" ; I fired a shot into the ground, 10 yards in front of me, to frighten him ; he continued to run ; as he turned into Hibbard-lane I fired at his feet ; he continued to run, as if the shot had not taken effect ; as he turned into his own block, which is the second from South-street, and was looking over his shoulder at me, I fired a third shot at his knees ; he then turned round and came towards me, with his hands up in front, about the level of his face ; I ran into him, striking him with my left shoulder, knocking him down ; he then said, " I'll give in" ; with the assistance of Shiell I put the handcuffs on him ; we walked him a few yards, holding him one by each arm ; his knees gave way, and he fell, saying, " I'm done" ; immediately after I had fired a shot Shiell also fired a shot, apparently without effect ; after I fired the second, he also fired, apparently without effect ; immediately after I fired the third shot, as deceased was turning to come towards me, Shiell fired again, close to my side, as he was running

running about a yard behind me ; when deceased said, "I'm done," as I could see he was wounded, leaving Shiell with him, I went into Hibbard-street for a cab ; I told a cabman to come into Hibbard-lane ; with the assistance of Messrs. Pound and Reid, we lifted deceased into the cab ; deceased was then alive, but was breathing heavily ; I sent Shiell to the police station with the revolvers, and I walked with the cab to the police station ; Pound and Reid got into the cab with deceased ; at the police station Shiell got into the cab, and I got on to the box with the driver ; I told the driver to drive as quickly as possible to the town ; we reached Dr. Thompson's surgery in Argent-street about 12'45 ; I called the doctor ; he looked at deceased in the cab, and said he thought life was extinct ; he bandaged my head ; we then placed deceased's body in the morgue at the hospital ; I produce the revolver I used, which is in the same state as it was immediately after I fired the third shot ; after the deceased's body was put in the morgue Shiell and I were attended by the house surgeon.

To the Coroner : I fired the last shot as deceased was running from me, exposing his right side, and looking over his right shoulder.

To Mr. Hall (who appeared to watch the case on behalf of deceased's relatives) : I have known Considine for three or four months ; I never heard that the police were afraid of Considine ; I have heard that they do not care to have anything to do with him, especially when under the influence of liquor ; I have never had occasion to arrest him before, or interfere with him or speak to him officially before ; I had not seen him previously that evening ; the reason I advised Considine to go home was that I knew him personally, and only advised him as a friend to go home ; when M'Lennan fell, on being pushed by Considine, I have no doubt intoxication had something to do with his falling ; I know nothing of two men called Carney and O'Leary being there ; they were not in the hotel yard ; I am quite certain that it was M'Lennan who took deceased by the arm and advised him to go home ; when gesticulating, Considine was holding up his index finger, and not holding up his fist ; I went on duty that evening between 6 and 7 o'clock ; at the time I met deceased at the gate he had nothing in his hands ; at the time Shiell backed towards the fence, Considine had come out from the gate ; when Considine rushed at Shiell in a fighting attitude Shiell had given him no provocation ; upon being called a crawler several times, Shiell struck deceased with his baton ; I believe on the neck or jaw ; I struck him on the head with my baton ; I believe the result of my blow was afterwards taken to be a bullet wound, as it was so small ; I can't say whether this wound left a track of blood through the passage of the hotel when deceased went through ; when I was at the hotel door I first recognised Considine when he was about 20 yards away : I don't recollect saying anything to Shiell as deceased was coming up ; when Considine struck at Shiell I can't say what Shiell did ; the cut on the cap is the result of a blow from a metal bar from a powerful man, the bar being most probably an octagon drill ; I was in so close to deceased that he could not give full force to the blow ; the blow was a swinging, round-arm blow ; when I came to myself Shiell was about 25 or 30 yards away, being chased by Considine ; Considine was 2 or 3 yards behind him ; I can't say if Considine chased him into the station ; I can't say what conversation I had with Shiell when I reached the station ; both Shiell and I were very much excited ; I loaded my revolver ; I don't know whether Shiell loaded the revolver he had, which was Constable Shiner's ; as far as I know Shiell took Shiner's revolver of his own accord. [The witness here declines to answer the question put to him by Mr. Hall, as follows :—"Which of you first suggested the use of revolver?"] I have given as fully as possible the conversation which took place between myself, Shiell, and Considine, at the gate in South-street ; the revolvers are repeating revolvers ; I have not had practice with New South Wales revolvers ; I have had no instructions whatever about these revolvers ; as far as I have known, revolvers do not carry high with a fine sight ; Considine, at the time I fired the first shot, was between 30 and 40 yards from where he fell ; revolver bullets will ricochet from hard ground ; I said to Shiell, immediately on coming out of the station, "If he attacks us again, whatever you do, don't shoot him in the body, but fire low" ; Considine, when I first called on him to stand, was about 20 yards away ; I then believed he still had the weapon ; when the last shot was fired deceased was about 15 yards away ; I did not see deceased drop or fling away a weapon while we were chasing him ; he had nothing in his hands when we came up to him ; when Considine held up his hands and came towards us, I did not take his attitude to be one of surrender ; I don't know if the last shot hit him in the front of the body ; after I had fired the first shot deceased did not make any attempt to attack either Shiell or me ; we went to arrest deceased in consequence of the second attack he made on us, instead of waiting until Monday ; I left instructions for the weapon to be searched for ; I believe Constable Shiner has searched for it, but has been unable to find it ; I knew Considine was a married man, but his wife told me on Friday that she was not living with him ; I knew he lived at Hibbard-street ; Considine did not run very fast ; I spoke to some man as I was going for a cab. [Witness here refused to answer the following question by Mr. Hall :—"What did you say to that man?"] When we came out of the station with the revolvers there were some persons standing with deceased ; I called on no one to assist until I asked Messrs. Pound and Reid to help us into the cab with deceased ; Considine fell within 5 or 7 yards of the land, on his own allotment ; I don't think that the blood on the collar of the shirt produced was the result of the blow of my baton, as I don't think the blow was sufficiently severe.

Taken and sworn before me, at Broken Hill, }
this 21st March, 1894.

A. N. BARNETT, Coroner.

JAS. L. WHITE.

Sub-Inspector.] Thomas Edward Fraser Seabrook, sworn, saith :—I am house surgeon at the Broken Hill hospital ; on the morning of the 18th, at about 2 a.m., the body of J. J. Considine was brought to the morgue at the hospital ; I examined Constables White and Shiell ; when body was brought there life was extinct ; on White I found a contused true wound on the left temple, above the ear, about 1½ inch in length, reaching to the bone ; the cut in the cap shown me would correspond with the position of the wound ; such a cut and wound might have been made by a blunt instrument, such as a drill or a piece of very hard and heavy wood ; I re-adjusted the bandage ; such a blow would probably cause depression of the whole nervous and physical system of a temporary nature in his case ; it would most probably result immediately in dazing him and knocking him down ; on Shiell I found a fracture of the ninth rib on the left side, and an external mark corresponding ; such a fracture would certainly interfere with his respiration and motion ; I plastered and bandaged him.

To Mr. Hall.] The deceased was evidently a very powerful man ; the cut on the cap and the wound on the head could not have been made by a man's fist, but most probably by a gad ; the blow on Shiell, by the external appearances, could not have been done by a fist ; a wound of this sort might have been done by a bar of iron ; I did not notice any blood to speak of on Considine's shirt-collar or neck.

this 21st March, 1894.

A. N. BARNETT, Coroner.

T. E. FRASER SEABROOK, M.D.

Sub-Inspector.] George Shiell, sworn, saith (having been duly cautioned) :—I am a constable of police, at present relieved from duty ; I was recently stationed at South Broken Hill, I have been stationed there over twelve months ; on 17th March, in the evening, I was on duty at South Broken Hill with Constable White ; I saw deceased, Considine, on the morning of the 18th at 12'15 at the gate of the yard of Heggarty's hotel ; this hotel is distant 30 or 40 yards from the Police Station fence ; Considine was coming from the back-door of the hotel in company with two brothers named M'Lennan ; when they reached the gate, Constable White said, "Good night, Jack ; don't you think it time you were going home" ; one of the M'Lennans said, "Yes, let us go home, Jack" ; Considine raised his hand up at Constable White ; I can't say if his fist was closed ; he said, "Look here, White, I believe you are watching me, and when you, Shiell and Shiner come to arrest me, be well prepared or you go down" ; Constable White replied "I don't want to arrest you," or something to that effect ; one of the M'Lennans was trying to get him home, when he gave him a violent push, I think in the stomach, and knocked him down ; I called him to one side saying, "Jack, go home and don't be a fool" ; he then came to me and backed me up against the wall of the yard ; he said, "Shiell, you are a b—— crawler, and a b—— thing, you b—— sneak, I will drop you" ; he then had his fist raised in a fighting attitude ; I took my baton and struck him on the cheek or jaw ; he again rushed at me, when White struck him, I believe on the left temple with his baton ; he slightly staggered, and ran along South-street, and turned up the lane at the back of the hotel ; we followed him ; he ran through the yard of the hotel by a gate from Patton-lane, and entered the hotel by the back door ; the hotel was in darkness ; Constable White got a candle from Heggarty ; we then went through the passage looking for Considine ; we could not find him, but found a side-door unlocked with the key inside ; we stood on the footpath outside the hotel ; Heggarty was talking to us ; in a second or two I saw Considine coming from the direction of his residence towards us ; he was holding something in both hands across his body ; I thought it was a gun or rifle ; he came up and said, "I'll knock your b—— brains out" ; he then struck

struck at me with what I could then see to be a bar of iron about 4 ft. 6 in. long ; he slipped, the iron passed my face quite close with great force ; he did not hit me ; I struck at him with my staff, but I think I hit the bar about his hand ; he then turned round and struck a swinging blow at Constable White's head, he being behind me ; White rushed in at him, but was struck on the head by the bar and knocked down ; I thought at first he was killed ; I called to Heggarty for assistance ; I got no reply and no assistance ; Considine again rushed at me with the bar ; he struck me across the left side ; I made another attempt to strike him with my staff, but found I was disabled ; White was then lying in the gutter ; I ran towards the police station with Considine in pursuit with the bar ; he chased me within a few yards of the gate in the fence of the station ; I looked towards White and saw him getting through the police station fence ; he was holding his head with his hand ; I went into the station in front of him ; I went to Constable Shiner's room, and took his revolver from his pouch ; I came back to the office ; White was there ; he had a revolver in his hands ; we then went out in search of Considine ; he was then opposite Krautz's store with either one or two others ; he came across the street to about 15 paces from us ; White covered him with his revolver, and called out to him twice "Stand, or I'll shoot" ; he then replied, "Shoot away, I'll do for you" ; he then commenced to run ; Constable White then fired, either on the ground, or at him ; I fired over his head, thinking he would surrender ; Constable White fired again at him ; I fired also ; after the second shots Considine was on his own block ; he then turned his left side to us, and Constable White fired again ; he then faced us, and put up his hands about the level of his face, as though he was going to rush or throw something at us ; I fired then at his knees to cripple him ; this was immediately after White's third shot ; he rushed at White, who received him on his shoulder, and Considine fell ; we then rushed to handcuff him ; he said, "I'll give in" ; we cuffed him ; after going a few yards down the lane he fell on his knees, and said "I'm done" ; White then went for a cab leaving me in charge of Considine ; I went to the police station with the revolvers, leaving White, who had returned with Considine ; the cab came to the police station ; I went to get in and saw inside Considine, Pound, and Reid ; I got in with them ; we drove to Dr. Thomson's in Argent-street ; Dr. Thomson discovered life to be extinct ; we drove to the hospital, and placed the body in the morgue ; Dr. Seabrook attended to our injuries ; search has been made for the drill, but it has not been found.

Taken and sworn before me at Broken Hill, }
this 21st March, 1894.—

GEO. SHIELL.

A. N. BARNETT, Coroner.

The inquest at this stage was adjourned until 22nd instant.

A. N. BARNETT,

Coroner.

Exhibit.

*Sub-Inspector.] George Shiell, recalled and sworn, saith (after due caution):—*I produce the revolver used by me on the morning of the 18th ; it is in the same state as it was after firing the third shot ; it is a Government regulation revolver ; I produce the coat worn by me on that night, showing the mark left by the bar, which corresponds with the injury on my side.

Exhibit.

To Mr. Hall : The coat has been hanging in my residence since the 18th ; we had not seen Considine previously on the night of the 17th ; we were not watching for anyone at the gate that night ; no one was present but Considine, the two M'Lennans, and ourselves ; Considine and M'Lennans were under the influence of drink ; I spoke to Considine, as I know he was quarrelsome when he was under the influence of drink ; I can't say if he was a friend of mine ; Considine did not strike me before I struck him with my baton ; I did not say one word about arresting him before I struck him ; he had his fists closed ; when I struck him he slightly staggered, but no blood flowed ; Considine might have been able to go home without assistance ; when we were standing at the hotel door, and Considine was coming towards us, Heggarty was standing with us, and I believe the M'Lennans were some little distance away ; White was lying two or three seconds on the ground ; at the time I called for Heggarty, White was lying in the gutter ; Considine rushed at me when I called ; as far as I remember, when I went to the police station in front of White, I went straight for Shiner's revolver, which was loaded ; Constable White had a revolver in his hands when I returned to the office ; when we came out of the station Considine was, to the best of my knowledge, about 30 yards from his own land ; when we then first saw Considine he was in the direction of his home ; before we fired he started to run towards his home ; I knew where he lived ; when White fired his last shot Considine had his left side turned towards us, and was looking over his left shoulder, to the best of my knowledge and belief ; I fired my last shot immediately deceased turned round facing us, barely a second after White's ; Considine then had his hands up, as if he were going to throw something at us, or rush us ; when I saw him in that attitude I fired at his legs ; I was a little excited ; at the time I fired the last shot Considine was not holding up his hands in an attitude of surrender ; he did not then say, "I'll give in" ; after I fired the last shot Considine rushed at White, who received him on his shoulder ; Considine was not then in his last gasp ; he was 2 or 3 yards from the fence, across the middle of his allotment, when I fired ; when Considine fell I asked someone, I don't know whom, for assistance.

To Mr. Edwards (who appears to watch the case on behalf of Constables White and Shiell) : I was only acting as a constable on duty ; I never had any trouble or grievance with him before ; he was looked upon as a good worker, and, as far as I know, a good citizen, when sober ; we, neither of us, had any intention of taking his life ; on the second and third occasion of firing, I did so with the view of arresting.

Taken and sworn before me, at Broken Hill, }
this 22nd March, 1894.—

GEO. SHIELL.

A. N. BARNETT, Coroner.

*Sub-Inspector.] John Thomson, sworn, saith:—*I am a duly qualified medical practitioner residing at Broken Hill ; on the morning of the 18th instant a dead man was brought to me by Constables White and Shiell, who asked me to look at him ; I examined him, but found him dead ; I told the constables so ; a man in the cab struck a match, but I could tell by the feeling that he was dead ; I saw a wound on the left side of his forehead ; I did not notice any other blood than what was on his head ; Constable White called me out, and afterwards came in and had his head dressed ; Constable Shiell, Alderman Pound, and another man were in the cab with the body.

To Mr. Hall : The wound on White's head was a severe one.

Taken and sworn before me, at Broken Hill, }
this 22nd March, 1894.—

JOHN THOMSON, M.D.

A. N. BARNETT, Coroner.

*Sub-Inspector.] John Heggarty, sworn, saith:—*I am licensee of the "South Broken Hill Hotel" ; on the evening of the 17th instant deceased was at my house at about 11'30 or 11'45 ; Donald and Hugh M'Lennan, James Carney, and James O'Leary were with him ; at about 12 o'clock Constables White and Shiell called to me for a light ; they said, "Considine has gone here," meaning my passage ; they were standing outside the back door ; I gave them a light ; they walked through the passage ; I had previously heard a noise as of some one passing quickly through the passage ; the back door was unlocked ; that leading into South-street was locked, and the key was inside ; the constables looked in the parlours, and then opened the side door facing South-street, which was unlocked ; they said, "He must have gone out here" ; Shiell said, "Here's your candle" ; the constables and I stood at the door talking ; one of them said, "He's gone, we'll have to summon him" ; this would be a few minutes after 12 ; we were there for four or five minutes ; I then saw some one coming down South-street from the direction of Considine's residence ; he was then about 100 yards away, and appeared to be walking ; I said, "Here's someone coming down the street" ; one (I think White) replied, "Yes, here's someone coming" ; I then went in and shut the door ; I heard some talking outside, but did not go out ; about eight or ten minutes later I heard a shot fired ; I went out at the door in South-street ; two other shots were fired before I reached the door ; another shot was fired from towards Considine's place as I reached the door ; someone was then turning into Hibbard-lane ; I saw the flashes, and heard two or three more shots after that ; I remained on the footpath outside my door for a few minutes, and saw Constable Shiner coming ; I remarked, "I think this is a serious affair, I think it is Jack Considine" ; Shiner went in the direction of the shots quickly ; I remained about five minutes longer, and Shiner returned ; he told me White had told him Considine was dead, and had asked him to see if he could find an iron bar ; I told him I had seen nothing of one ; he searched, but I did not see him find one ; we went together to Considine's place, but did not find the bar ; deceased's hat was lying on the ground, about 20 yards inside his allotment ; deceased had been removed ; deceased had had some drinks that night, but was not drunk ; I have known deceased for about five years ; when sober he is a good-tempered hard-working man, but when under the influence of liquor he is obstreperous at times.

To

To Mr. Hall : On the night of the 17th he was perfectly good-tempered ; when at the door, the constables said Considine had abused them at the back ; I have never known Considine to pick a quarrel with anyone, but he has got into some rows through taking other people's parts.

To Mr. Edwards : When Considine left my place he was perfectly orderly ; while we were in looking for the bar a crowd of about twenty people had congregated ; on the following morning I found drops of blood on the floor of my passage.

Taken and sworn before me, at Broken Hill, }
this 22nd March, 1894,— }

J. HEGARTY.

A. N. BARNETT, Coroner.

Sub-Inspector.] *Henry Joseph Firth Groves*, sworn, saith :—I am a duly qualified medical practitioner, and Government Medical Officer at Broken Hill ; I made a *post-mortem* examination of the body of J. J. Considine, at 12 noon on Sunday last : when I first saw the body it was lying in the morgue dressed ; I first noticed a small wound on the left temple, and traces of blood on the shirt, as if an artery had been cut and the blood had spurted out ; someone had undone the shirt, and I saw a wound about 2½ inches from the middle line on the left side, and about ½ inch below the navel ; there was a corresponding hole in the trousers ; there was no trace of burning, but the shot must have been fired from a distance ; I stripped the body, but found no other marks ; I found that the wound on the forehead had gone through the skin, but had not reached the bone, and was apparently a slight one ; I found the bullet had passed through the intestines in four places, and had divided a large artery ; I found the bullet buried in the body of the last lumbar vertebra ; I removed the bullet, which I produce ; the bullet weighs 220 grains ; the actual cause of death was hemorrhage, caused by the bullet cutting the artery ; the abdominal cavity was full of blood ; the mark on the bullet is evidently caused by the bone.

HENRY J. F. GROVES.

To the Coroner : From the nature of the wound, and the course of the bullet, I am of opinion that it must have been received by the deceased when facing the person who fired, and not a ricochet bullet ; the injury to the head was evidently caused by a baton.

Taken and sworn before me at Broken Hill, }
this 22nd March, 1894,— }

HENRY J. F. GROVES.

A. N. BARNETT, Coroner.

Sub-Inspector.] *Donald M'Lennan*, sworn, saith :—I am a labourer, and reside at South Broken Hill ; on the night of the 17th instant I was at Heggarty's hotel ; I met deceased, Considine there, with my brother ; with Considine, my brother, and another man, I left the hotel about 12 o'clock ; we went out the back way, and through the gate ; as we were going out of the gate we saw Constables White and Shiell ; one of the constables said "Good night," and "It's time you were away home, Considine" ; Considine said, "I'll go home when I like" ; my brother Hugh said "Yes, you had better come away" ; Considine pushed my brother away a yard or two (he may have pushed him down, but I did not notice it), and said, "Leave me alone" ; the constables and Considine were arguing ; they were not cross at the start, but afterwards got more excited. One of the constables said, "You two chaps had better get away" ; my brother and I turned into the yard again, and the constables and Considine went away ; we remained in the yard ; we could not see the constables and Considine from where we were standing ; I saw nothing more, but heard a noise on the footpath ; I neither saw nor heard anything more ; deceased had been drinking, but was not drunk ; both my brother and I had had more than was good for us.

To Mr. Edwards : The police at first spoke to deceased civilly.

Taken and sworn before me at Broken Hill, }
this 22nd March, 1894,— }

DONALD M'LENNAN.

A. N. BARNETT, Coroner.

Sub-Inspector.] *Mark Rawse Wake*, sworn, saith :—I am out of business at present ; I reside at Heggarty's hotel, South Broken Hill ; on the 17th I saw deceased at the hotel between 11 and 12 o'clock ; I did not see him leave ; at about 11:30 I heard some one say, "Heggarty, give me a light" ; Heggarty took the light out of my room ; my room faces South-street ; about a quarter of an hour later I heard a scuffle going on in South-street, near the hotel ; I pulled the blind on one side, and looked out ; I saw someone on the ground ; one or two more people were about ; I could not say whether they were constables or civilians ; I saw the person get off the ground and go towards the police station ; I don't know who he was, or where he went to ; some time after I lifted the window, and then saw several people standing at the corner of the hotel ; to the best of my knowledge they were Carney, O'Leary, and Considine ; I lay down again ; about ten minutes later I heard the report of firearms ; I got up and looked out of the window ; I saw several people outside, and I heard someone say, "Considine is shot" ; I heard a few minutes later the sound of a cab driving towards Considine's house ; when I last saw deceased in the house he seemed perfectly sober, and able to look after himself ; I don't know in what state he was when on the footpath ; I did not hear anyone call to Heggarty for assistance ; when the man was lying on the ground, the other two went up South-street in the direction of Broken Hill ; they might have gone to the police station ; I did not see any weapon.

To Mr. Hall : I did not see any blows struck ; it was not a bright moonlight night ; deceased was a very nice fellow when sober, but when drunk was nice enough if left alone, but was violent if annoyed ; he was recognised as a very powerful man.

Taken and sworn before me at Broken Hill, }
this 22nd March, 1894,— }

M. R. WAKE.

A. N. BARNETT, Coroner.

Sub-Inspector.] *James Carney*, sworn, saith :—I am a labourer, and reside at South Broken Hill ; on the evening of 17th March I was at Heggarty's hotel ; I saw deceased Considine there ; I left the hotel yard at about 11:50 with Considine, O'Leary, and the two M'Lennans ; we went out of the back gate all together ; at the gate I saw Constables White and Shiell ; White said, "Considine, it's time you were home" ; I did not hear any reply ; Shiell said something ; deceased said, "You are all right, Shiell" ; Considine said, "You are a white man, White" ; Shiell then hit him with his baton ; Considine said nothing to Shiell, and did not raise his fist ; he pointed to White with his index finger ; M'Lennans were both standing there ; Considine staggered back, and the police followed him up ; he ran down the lane ; I next saw him going into the hotel yard ; I did not see White touch him ; the M'Lennans then went away, as I did not see them afterwards ; I next saw the two constables with Heggarty at the side door of the hotel ; I was about 7 yards away ; I then saw a man coming down to the corner of the hotel from the north—the direction of Considine's place ; he was walking at a usual pace ; I heard Shiell say, "Here he comes ; we'll have him this time" ; they walked two or three paces towards him ; I next saw White on the ground ; I can't say what caused him to fall ; I saw Shiell then running across the road, and the man, whom I saw to be Considine, stood still on the footpath ; I saw Considine strike White before he fell ; I don't think Shiell could have been struck without my seeing him, but he might ; White lay for about two or three seconds on the ground ; I heard nothing said while this was going on ; I saw Shiell go towards the police station ; White also went towards the police station ; Considine stood still in the same place ; he might have gone back two or three paces from where he knocked White down. O'Leary asked him to go home, and said, "You are bleeding fearfully, Jack" ; O'Leary, Considine, and I then walked then up to Krantz's back yard ; we were on the footpath for about a minute ; we were just separating to go home ; one of the constables said, "Stand, Considine, or we'll shoot" ; Considine made no reply, but walked across the street ; they called out again, "Considine, stand, or we'll shoot" ; he continued to walk on ; I had seen nothing in Considine's hands ; I next heard a shot, as he was crossing the gutter to go into the lane ; I was following behind the shooting ; after the sixth shot I saw Considine drop and heard him say, "I'm done, I'm done" ; he kept walking all the time ; I did not see him turn round ; when he fell I was about 25 or 26 yards from him ; he fell from 14 to 16 yards inside his own allotment ; the constables were also on his allotment ; he got up between the two constables and walked four or five paces handcuffed ; he said, "I'm done, I'll give in," and fell again ; the constables pulled him out of the lane ; I left them there, to go and tell his friends ; I saw some men coming towards them.

To

To Mr. Hall. When White fell I was 4 or 5 yards away; if Considine had had a bar I must have seen it; I saw nothing in his hands; the night was clear; I refer to the time when White was on the ground; when walking with Considine from the hotel to Krantz's yard I saw nothing in his hands, nor did he drop anything; after the police called out the second time, "Considine, stand, or we'll shoot," deceased replied, "Shoot away"; when the police called on Considine to stand, only O'Leary, myself, and Considine were together; when called on to stand Considine walked on at a fair pace; he was not running; the police were not running; after they called a second to stand Considine walked on; the police were only in pursuit of Considine; Considine has been a friend of mine for five years; I have never had a row with him; when the worse for liquor he was obstreperous if anyone picked on him; he would be angry with anyone who crossed him; I never saw Considine in a row; he was generally supposed to be above the average strength; I had been drinking that night, but neither Considine nor I were drunk; I cannot say how deceased knocked White down; so far as I could see, Constable Shiell struck deceased on the head without any provocation.

Taken and sworn before me, at Broken Hill, }
 this 22nd March, 1894,— }
 A. N. BARNETT, Coroner.

JAMES CARNEY.

Sub-Inspector.] James O'Leary, sworn, saith—I am a smelter hand, and reside at South Broken Hill; on 17th instant, in the evening, I was at Hegarty's hotel; Considine was there; I left at about 11'45, in company with James Carney, the two M'Lennans, and Considine; we went out of the back gate; at the gate I saw Constables White and Shiell; White said, "You ought to be at home, Considine"; Considine said he would please himself; nothing further was said by either of them; Considine said to Shiell that if he came to take him he would have to come prepared; Considine then called White a "white man," and Shiell struck him on the left temple; Considine said nothing to Shiell, and did not put his hands up; the M'Lennans had gone back a little, as one of the constables had ordered them home; Carney was standing beside me; when Considine was struck he turned round two or three times and fell against the fence; the constables then rushed him; he got away and ran round the corner; I did not see White strike him; I don't think he struck him then; I did not notice any blood come from the wound; I did not see him until about five or six minutes later, coming from the direction of his own place; he was walking pretty quick; I did not see him carrying anything; the constables were standing at the side door of the hotel talking to Heggarty; Heggarty went in and shut the door; Considine was then about 20 yards away; the constables walked to meet him about 5 or 6 yards; White came up to Considine first, and Considine struck him with his hand; I swear he hit him with his hand; Shiell did not go up to deceased, or deceased up to Shiell; Shiell then went to the police station, leaving White on the ground; I did not see deceased strike Shiell then; I must have seen him, had he done so; deceased, after knocking White down, stood on the foot-path; White lay there a few seconds; I went up to Considine after White had gone to the police station; I said, "Come home, John, you are losing a lot of blood—you are bleeding fast"; he came as far as Krantz's store, and about 10 yards past the store; Carney was with me; we stayed there a minute or two; we were just going home, when White and Shiell came out; I heard one of them call out, "Stand, Considine, or I'll shoot"; they were about 50 yards from Considine at this time; he got over to the corner, close to his own lane; when called on to stand, he replied, "Fire away"; deceased got round the corner into the lane and walked quickly; two shots were fired before he turned into the lane, and two just after; when opposite his own allotment, one more shot was fired, and one when he was on his allotment; both Carney and I were following; Considine was about 16 yards in his allotment, when the last shot was fired, and he fell; when the last shot was fired, he said, "Oh, my God, I'm done," and fell; the constables were about 8 yards from him when the last shot was fired; when he fell, the constables put the handcuffs on him; they lifted him, and he walked three or four paces, and the two constables pulled him into the lane; several people came up; I was about 8 yards away when they pulled him into the lane; I did not hear him speak; I then left.

To Mr. Hall: I never saw anything in Considine's hands at any time; when called upon to stand, Considine was walking towards his home, not towards the police; I had been drinking, but was not drunk.

To Mr. Edwards. When White was knocked down, I was about 8 yards away; I have been six years in South Broken Hill; the reason I did not assist White, was, that there was another constable there; if the constable had asked me, I might have assisted; it is not a fact that White was hit on the head with a bar, and that we ran away; I saw the whole of the row, and saw only one blow given by Considine's hand, no other blow being struck.

Taken and sworn before me, at Broken Hill, }
 this 22nd March, 1894,— }
 A. N. BARNETT, Coroner.

J. O'LEARY.

Sub-Inspector.] Andrew Ohlson, sworn, saith—I am a fireman on the mine; on the morning of 18th instant, at about 12'15, I was returning from work; I stopped at the corner of Hebbard and South Streets talking to a friend; I saw a man approaching me, followed by a second; he turned into the lane, going towards Considine's residence; he was walking; the ones following were going a little faster; I heard nothing said; I noticed three revolver shots in succession; I was about 55 yards away; I saw no one else about; after the third shot, I heard a loud cry, "Stop!" and immediately after three more shots; I went towards the place where the shooting was; when half-way down the block, I met White with a belt and baton in one hand, and a revolver in the other; the revolver had no cover on; the cover was on the belt; he said, "Where is the closest cab, Murphy's, isn't it"; I replied, "No, sir, Scowen's is"; I said, "What's the matter"; he replied, "I just shot Considine—the brute"; I then turned with the constables to get the cab; we got a cab, and I went home.

To Mr. Hall. There was no further conversation between White and me; White had his uniform and cap on; he was wearing a blue jumper; I recognized that he was a constable as soon as he got close to me; the constable ran up to me; from the time when the first shot was fired until White met me was about two minutes; I cannot say who it was I was speaking to at the corner of Hebbard and South Streets.

Taken and sworn before me, at Broken Hill, }
 this 22nd March, 1894,— }
 A. N. BARNETT.

ANDREW OHLSON.

Sub-Inspector.] Thomas Reid, sworn, saith—I am a miner, and reside at South Broken Hill; on the morning of the 18th instant I was standing in the back yard of the "Gladstone Hotel"; at about 12'15 I heard six shots; after the first two I went in the direction of the firing; the "Gladstone" is about 400 yards from Considine's place; I had gone about 50 yards, and heard in all six shots; one O'Neil was with me; after we had gone 60 or 70 yards the firing ceased; I went down the lane at the back of Considine's place; I saw Considine lying in the middle of the lane on his face; Shiell was standing beside him; I asked why he did not turn him on his back, to give him a chance to breathe; Shiell replied, "Leave him alone"; someone turned him over, I don't know who; White arrived shortly after with a cab; I assisted in taking deceased to the hospital in a cab; he was alive when we put him in the cab; he died just as we started; we took him to the morgue; on the way to, or at the police station, I heard White say, "Take these revolvers, and let them remain just as they are."

Taken and sworn before me at Broken Hill, }
 this 22nd March, 1894,— }
 A. N. BARNETT, Coroner.

THOMAS REID.

Sub-Inspector.] Charles John Poul, sworn, saith—I am a boot and shoe maker, and reside at South Broken Hill; I am also a magistrate for the Colony; on the morning of the 18th instant I was aroused from sleep by hearing two or three shots fired, followed shortly by three or four more; I dressed and went in the direction of Heggarty's hotel, whence the sound seemed to proceed; in Hebbard street I met Constable White; he was very excited, and was holding in his right hand a revolver; I did not notice anything in his other hand; I asked him what was the matter; he said, "I have just shot Considine"; I said, "Good God, what have you shot Considine for"; he replied, "You would have shot him had he done to you what he did to me"; I returned home; White also asked me for the direction of Scowen's place, and went in that direction; I told my wife what had happened, and returned to the lane at the back of Considine's place; I saw Considine lying on the ground in charge of Constable Shiell; he was breathing heavily; I asked Reid to assist me; I white arrived

arrived shortly after ; the police examined his face with light ; a wound, apparently of a bullet, was on his temple ; the body was then placed in the cab ; I entered the cab with Reid and Shiell ; deceased's head and shoulders were resting on my lap ; he only sighed first as the cab started, and died ; we drove to Dr. Thomson's in Argent-street ; the doctor examined him and pronounced life extinct ; the doctor also examined Shiell's rib, and White went in and had his head bandaged ; we drove to the hospital and placed the body in the morgue.

To Mr. Hall : I lived very near Considine's place ; I have always found him an excellent neighbour ; I don't think he would strike anyone except in self-defence, even when intoxicated.

To Mr. Edwards : I am an alderman, and a candidate for Parliament ; I had nothing whatever to do with an indignation meeting with reference to this case ; I was not one of a deputation to the Police ; I have had no conversation with one of the jury since being sworn in with reference to this case.

Taken and sworn before me, at Broken Hill, }
this 22nd March, 1894,— }
A. N. BARNETT, Coroner.

C. J. POUND.

Sub-Inspector.] Richard Alexander Rolfe, sworn, saith :—I am a married man, and reside in Hebbard-street, South Broken Hill, about 50 or 60 yards from the lane at the back of Considine's place ; on the 18th I reached home about 12:30 in the morning ; when within a few yards from my place, I heard cries in my place ; I went in ; my wife was in a fainting condition in the middle room with my mother ; I subsequently found a bullet on the bed my wife had been lying on ; I went out later to ascertain the cause of the bullet being fired into my place ; I was informed by a constable that a man had been shot dead ; I told him that whoever fired had very near shot a second ; seeing people looking about, I asked what they were looking for ; they said an iron bar ; I went home ; the same night my brother and I found that the bullet had come in through the window ; from the position of the hole in the window, and the height of the bed, and the position of the bullet, I think it must have struck the bedstead ; the hole in the window is 4 ft. 1½ in. above the footpath ; my house is built of wood and iron.

this 22nd March, 1894,— }
A. N. BARNETT, Coroner.

RICHARD ROLFE.

Coroner.] James Lees White, recalled, saith (re-sworn) :—When I fired my last shot I was in the lane ; when I fired the last shot he was running from me sideways, with his right side exposed, and his face turned towards me over his shoulder, but I am not sure which way he turned when he turned round and faced me ; when Shiell fired immediately after me, to the best of my belief, he was facing us.

Taken and sworn before me, at Broken Hill, }
this 22nd March, 1894,— }
A. N. BARNETT, Coroner.

JAS. L. WHITE.

Coroner.] George Shiell, recalled, saith :—When White fired the last shot, to the best of my knowledge, deceased's left side was exposed to him ; when I fired my last shot deceased was facing us.

Taken and sworn before me, at Broken Hill, }
this 22nd March, 1894,— }
A. N. BARNETT, Coroner.

GEO. SHIELL.

Alexander Johnston, sworn, saith :—I am Sub-Inspector of Police, at Broken Hill ; I have been stationed at Broken Hill for ten months ; when I took charge of this station I received a good character of both Constables White and Shiell from Sub-Inspector Saunders ; Constable White was, in my opinion, a splendid man, in fact, I could not wish for a better ; I have never met a man in the service I esteemed more ; he was very cautious, and would carry out instructions to the very letter ; Constable Shiell I have not seen very much of ; I have heard that he lacked discretion, but his officers gave him a good character as a good and steady duty man ; in fact, I have only recently offered him the charge of the Broken Hill lock-up.

Taken and sworn before me, at Broken Hill, }

A. N. BARNETT, Coroner.

ALEX. JOHNSTON,
Sub-Inspector.

Telegram from Superintendent Larkins to The Inspector-General of Police.

Deniliquin, 29 March, 1894.

WIRED to Mr. Johnston yesterday for report of committal, who informed me papers will reach here Saturday morning. If so, will post them Saturday evening, with other reports called for. They will reach Sydney Tuesday morning.

Telegram from Superintendent Larkins to The Inspector-General of Police.

Deniliquin, 6 April, 1894.

CONSTABLES White and Shiell have not applied for change venue. Intend case tried Broken Hill. Engaged Mr. Moriarty for defence.

Under the circumstances mentioned within, I have no further suggestion to make.—EDM. FOSBERY, I.G.P., B.C., 6/4/94. The Secretary, A.-G.'s Department. Now forwarded to the Crown Solicitor, to be placed with the depositions in the case of Regina v. Shiell and another.—W.W.S., B.C., 7/4/94.

Telegram from Superintendent Larkins to Sub-Inspector Johnston.

Deniliquin, 27 April, 1894.

SEND me full report trial White, Shiell, and report any observations you may wish to make yourself perhaps. Full report trial would appear in one of the daily papers. Urgent.

Report from Superintendent Larkins to The Inspector-General of Police.

Police Department, Superintendent's Office, South-western District,

Deniliquin, 3 May, 1894.

I HEREWITH forward a newspaper report of the trial of Constables White and Shiell for the manslaughter of John J. Considine, and I also forward a report from Sub-Inspector Johnston on the same subject.

It would appear from the report that Mr. Moriarty made a very able defence on behalf of the accused constables. He assailed the weak points in the evidence for the prosecution, drew attention to the Police Regulations and the law relating to the case, to show that his clients were justified in taking life under the circumstances.

The

The Crown Prosecutor, in reply, supported the Crown case in most of its bearings, and concluded by saying the Crown case was, "that it was an instance of an act lawful in itself, but performed in an unlawful way."

His Honor, Mr. Justice Foster, in summing up the evidence and laying down the law, dwelt at some length on the rules for the guidance of the Police, more especially on rules 89, 90, and 95, and in the end narrowed the charge down as to whether it was an excess of duty on the part of the constables or an act of retaliation; the jury, after a very short deliberation, said, in effect, that it was neither.

In the face of the verdict of the jury it is a delicate matter to make any observation or offer any opinion on the merits or demerits of the case, still I cannot help recapitulating a sentence I used in a report I sent to the Inspector-General on 29th March last on same subject. In that report I said it appeared to me the constables acted recklessly and indiscreetly and without due regard to human life.

Now that I have considered the whole of the evidence adduced at the trial, addresses of Counsel, and the charge of His Honor the Judge, I do not see any reason to alter the conclusions I previously arrived at.

In dealing with some of the worst classes of criminals, I have had, I think, as much experience as any man in the Service, and I must say that I never saw a greater lack of judgment used than there was in this particular instance.

As Constable White was the senior officer, one would expect before he started with loaded firearms some definite action would be laid down with regard to the arrest, and that his junior would not fire without orders; but it would appear from their own evidence that they both fired away in a sort of random fashion, without the slightest system and regardless of what course the bullets took.

Allowing the question of law to disappear from the scene altogether, and looking at the matter from a common sense point of view, it would not appear to me that there was an actual necessity to fire at the time and in the manner they did.

The offender did not on that occasion show any resistance—his back was turned to them—and they must have been a very short distance from him when the fatal shot was fired. Considine was evidently under the influence of drink, and even if he escaped their grasp for the moment he could only get into his own house.

Although I have very strong opinions about the matter, I have had from the first the greatest sympathy for the two constables, as they must have been at the time in a highly excited, nervous condition on account of the injuries they received at the hands of deceased.

Sub-Inspector Johnston, in his attached report, states the constables acted recklessly and showed great want of discretion, and that innocent persons might have been shot, and then he concludes by recommending that the two constables should be removed from Broken Hill, and in that recommendation I fully concur.

N. LARKINS,
Superintendent.

[Enclosure.]

Report from Sub-Inspector Johnston to Superintendent Larkins.

Sir,

Police Station, Broken Hill, 27 April, 1894.

I beg to forward herewith a report of the charge of manslaughter preferred against Constables White and Shiell. The report was taken from the *Broken Hill Age*, and it is, in my opinion, a very fair one.

The verdict of the Jury was a very popular one with almost every right-thinking person in Broken Hill.

Certain persons at South Broken Hill collected money and engaged a solicitor and a barrister from Adelaide to assist in prosecuting the two constables, and every effort was made to gain a conviction. Several of the witnesses who were brought to give evidence against the constables were friends of Considine's, and I have no hesitation in saying they committed wilful perjury, and I am only sorry that a case could not be made out against them.

It was proved beyond a doubt that Considine did attack and assault the constables in a most brutal manner with an iron bar. The bar, of course, could not be produced, as there is not the slightest doubt but it was spirited away by some of Considine's friends who were with him on that night, and who swore so hard against the constables.

There can be no doubt but the constables acted in a reckless manner, as innocent persons might have been shot, and they did show great want of discretion; but it must be taken into consideration that they were a good deal knocked about, and no doubt but White was dazed from the terrible blow he got in the head. And it must also be borne in mind that the constables had not an ordinary man to deal with, but a ruffian, with the strength of at least four ordinary men.

Constable White took charge of South Broken Hill Station on the 18th October last on my recommendation. I gave him a good character then, and I have not altered my opinion of him. I consider he is a good constable, and a highly respectable man. If Mr. Sub-Inspector Saunders is asked, I am sure he will bear me out in this. Constable Shiell I have always found to be a sober, good duty man, but a little too zealous.

If the constables are allowed to remain in the force, I would strongly recommend that they be removed from Broken Hill at once, as I fear some of the Considines or their friends might do them some injury.

I received an anonymous letter from Freemantle, West Australia, threatening the constables' lives, which I herewith attach.

I have, &c.,

ALEX. JOHNSTON,

Sub-Inspector.

[Sub-Enclosure.]

Sir,

Freemantle, Western Australia, 2 April, 1893.

Having seen the report in the papers of the shooting by the police, or may I say murder, of the man Considine. If they don't get put into a place of safety for a long time to come, I will shoot them, as sure as my name in what it is.

Remember, if it takes a life-time to do it. He was a good friend of mine and true, and to be shot like a dog is more than any man can suffer.

Remember this, for while I have a drop of blood in my body I will have revenge.

Yours,
SINCERELY.

THE CIRCUIT COURT.—SECOND DAY'S SITTING.

THE Circuit Court continued its sitting before His Honor Mr. Justice Foster in the Court-house yesterday morning. Mr. Edgar prosecuted on behalf of the Crown, being instructed by Mr. Lee, from the Crown Solicitor's Office.

James Lee White and George Shiell were charged that they did, at South Broken Hill, on 18th March, 1894, feloniously slay John Jeremiah Considine. The accused, who were defended by Mr. Moriarty, instructed by Mr. Edwards, both pleaded not guilty. Mr. P. McM. Glynn, barrister, of Adelaide, instructed by Mr. A. J. Hall, watched the case on behalf of the relatives of the deceased Considine.

During the empannelling of the jury the accused White challenged eight persons, the accused Shiell one, and one was asked by the Crown to stand aside. White challenged one Thomas William Torrington "for a cause," and two of the jurors already sworn—William Farmer and Joseph Peter Megaw—were appointed to decide the question. In answer to Mr. Moriarty, Torrington said that he resided on a homestead lease between Broken Hill and the Pinnacles. He was absolutely indifferent in the case. He had expressed no opinion about the death of Considine at any time, nor had he subscribed to a fund to assist in the prosecution of the two accused. Mr. Moriarty then withdrew the challenge "for a cause," and Torrington was challenged by White. The

The following jury was finally empanelled :—William Farmer, Joseph Peter Megaw, Elijah Bradley, Joseph Henry Rhodes, John M'Lellan Sutherland, Samuel Hall, Charles Hyde, Alexander Graves White, Thomas Manuel, William John Cooper, William Clync, and Walter James Spragg, junr. J. M'L. Sutherland was chosen foreman.

The jurors challenged were :—By the accused White—William Hepburn, Thomas Kneebone, Thomas William Torrington, Isaac Polkinghorne, William George Phillips, Thomas Coombe, Robert Davie, and George Carrington. By the accused Shiell—Francis William Mitchell—Robert F. Holdsworth was asked by the Crown to stand aside.

Mr. Edgar then stated the case to the jury. He said that on the night of 17th March, at about 12 o'clock, a man named John Jeremiah Considine met his death at South Broken Hill through injuries caused by a revolver bullet. The evidence, he thought, would clearly show that the revolver was fired by one of the accused. Doubtless most of the jurors knew the locality called South Broken Hill. South-street was a street running down from the mine into the south township. Near the scene of the shooting South-street crossed Hebbard street, and then Hebbard-lane, which led to the rear of Considine's allotment. Continuing along South street, Patton street was reached. At the corner of South-street and Patton-street, on the right hand side, was James' butcher shop, and on the left-hand side Krantz's store. The police station was opposite James', and Hegarty's hotel was opposite Krantz's. The bar of Hegarty's hotel was on the corner; further down South street was the side door of the hotel, a big gate opening into the yard, and a lane running along the back of the yard. Some distance up this lane was a little gate leading into the yard. The evidence would show that at about 12 o'clock on the night in question the deceased, Considine, and some others came out of Hegarty's hotel through the large side gate. The two accused were then standing in South-street, near the gate. Considine was accompanied by two brothers named M'Lennan, a man named O'Leary, and a man named Carney. One of the accused said to Considine, "Good night; don't you think you had better go home?" and one of the M'Lennans, who was the worse for liquor, put his hand on Considine's shoulder, and said, "Yes, Jack, come along with me." A quarrel ensued, and some blows were struck, which resulted in Considine running away and going up the lane at the back of the hotel. He was followed by the two accused, but appeared to have eluded capture by running through the hotel, unlocking the side door, and escaping into the street. After searching the hotel the police came out into South street again, and whilst standing there talking saw Considine coming from the direction of James' butcher shop. It would be for the jury to consider on the evidence whether Considine was carrying any weapon in his hands or not. Another row took place. White was knocked down, and Shiell walked over to the police station. Considine was joined by Carney and O'Leary, and went on past Krantz's store. About this time a cab, driven by a man named Conlon, drove to the intersection of Patton and South Streets, and a man named Donohue got out. Considine shortly afterwards left the others and proceeded towards his house. He was crossing the street when the two accused called to him to stop, threatening to shoot if he did not do so. He did not stop, and they fired in all six shots. The last two were fired when Considine was on the vacant allotment at the rear of his house, and from the doctor's description of the wound they would probably find that one of these two was the cause of death. The law, in the case of police officers, set out that they were entitled to kill a person in self-defence, or, if he were a felon, when they were unable to arrest him without killing him. It would be for the jury to say whether or not Considine was a felon. If he had only committed a misdemeanour the accused—if they shot him—were guilty of manslaughter. If they found that Considine was a felon, they must ask themselves could the accused have arrested him without killing him. If so, they were guilty of manslaughter; if not, it would be the duty of the jury to acquit them.

The following evidence was then taken.—

Donald M'Lennan, miner, said he remembered the night of St. Patrick's Day, 17th March last; a little before 12 p.m. he was at Hegarty's hotel with the deceased (Considine), witness' brother, and the two men named Carney and O'Leary; they had all of them had a few drinks; went out at the back of the hotel and through the big gate at the side of the yard into South street; witness, his brother, and Considine were walking in front; on reaching the gate saw two of the police standing on the footpath; the policemen were White and Shiell; one of them said, "Good night," and they answered; one of the police said, "Don't you think it is time to go home, Considine?" Considine replied that he would go home when he pleased; witness' brother put his hand on Considine's shoulder and said, "You had better come home, Jack"; Considine pushed him back, saying, "Leave me alone, will you?" was not sure whether his brother fell or not; the police and Considine were arguing, and the latter said, "When you come to arrest me you had better come prepared"; would not swear to his exact words; they replied that they did not wish to arrest him; the policemen appeared to be in good temper when they first spoke, but later on they all got somewhat excited; Considine might have called the police names, but witness did not remember it; the police advised witness and his brother to go away and let Considine get home; they then walked off, and did not see Considine alive again.

To Mr. Moriarty: Witness' brother was in Broken Hill, but was not a witness in the case; it was after 11 o'clock on the evening of the 17th that witness met Considine; they met him at Hegarty's hotel; Considine when sober was a very quiet man; had never seen him quarrelling or fighting; had heard that he had had fights and quarrels; was not afraid of him when he was drunk, but would probably have avoided him when he was in that condition; when they met Considine he had been drinking; could not say whether he was drinking brandy or beer; there might have been other people in the bar that evening whom he had not named; they had two or three drinks with Considine whilst in Hegarty's, and left before 12 o'clock; in the Coroner's Court, mentioned the names of Carney and O'Leary as having been present in the hotel; the police in the first instance spoke to Considine in the most civil manner; and he replied, "I'll go home when I like"; did not recollect Considine calling one of the policemen "a b—— crawler"; he might have done so; witness and his brother went away through the hotel yard; whilst in the yard heard a scuffle, but did not see Considine pass through the yard; he might have entered the yard through another gate; Considine was a very powerful man, reputed to be tremendously strong; Carney and O'Leary both had several drinks.

Mark Lavis Wake marked out the streets on the plan prepared for the information of the jury; remembered the night of 17th March; was living at Hegarty's hotel, and went to bed at about 9 15; woke up between 11 and 12, and heard a voice coming from the back yard, saying, "Hegarty, give me a light"; Hegarty entered witness' room, and took the candle off the dressing table and went out; ten minutes later heard a scuffle going on in South-street; pulled up the blind, and looked out through the window; the scuffle was going on about 6 or 7 yards away from his window; saw a man on the ground about 9 feet from the wall of the hotel; could not say who it was, or whether he wore uniform or not; he lay there for a few seconds, and then got up and walked over to the police station; witness then raised the window, and soon after saw two persons going from the direction of the police station, past James' butcher's shop, up South-street; Carney and O'Leary were standing at the corner of the hotel, and Considine and some others were standing near; heard O'Leary say "Jack, come home along with me"; they walked up South street and witness returned to bed; a few minutes later, probably eight or ten minutes, heard firearms discharged; got up again and looked out of the window, but could see nothing; saw Considine about 8 o'clock that evening, and he was then fairly sober.

To Mr. Moriarty Had known Considine for some time; when sober he was very quiet and well-conducted; had seen him when he was the worse of liquor, and was mostly quiet; he was a very powerful man.

To the Crown Prosecutor Never saw Considine pick on anyone if left alone.

John Hegarty, licensee of the "South Broken Hill Hotel," remembered the night of 17th March last; at about 11:30 that evening, John Considine, the two M'Lennans, James Carney, and James O'Leary were in the hotel; they had been drinking; Hugh M'Lennan was the most intoxicated; Carney and O'Leary seemed quite sober, and Considine was not drunk; he was not quarrelsome; he never seen him quarrelsome even when in drink; he was frequently in witness' hotel; about 11:30 they all went out of the hotel, and through the back yard; a few minutes later, heard a noise as of someone running through the passage, and one of the constables called for a light; got a candle out of Wake's bedroom, and gave it to White; White said, "Considine has come in here"; they walked through the house and looked in the rooms; then found that the side door had been unlocked; Constable White said, "He must have gone out through here"; they then went out and stood talking with witness on the footpath; saw a cab driver along Patton street and stop at the corner Patton and South Streets; one of the constables, referring to Considine, said "He has gone now, we will have to summons him"; looked up South street and saw someone coming from the direction of Considine's house; he was walking on the footpath in front of James' shop; said to the constable, "There is someone coming down the street now"; wished the constables "Good night," went inside and closed the door; after reaching his bedroom heard some talking going on outside, but did not go out; heard no scuffling; about eight or ten minutes later heard a report of firearms; ran into the passage and then heard two more; went into South-street and then heard two or three more shots, and saw the flashes in Hebbard-lane; Constable Shiner passed witness and went in the direction of the firing; he returned and commenced searching, he told witness, for an iron bar; witness helped him in the search; they found nothing; then went to the back of Considine's house and found the deceased's hat laying on the allotment at the back; had known Considine between four and five years; when drunk he was a bit awkward if anyone interfered with him; he never tried to pick a quarrel; he was a very strong man; the next day saw some drops of blood in the back yard and along the passage to the door leading into South-street. To

To Mr. Moriarty: The constables complained to witness that Considine had used threatening language towards them; when witness and Shiner were looking for the iron bar there were about twenty people about; in South-street, above Krantz's store, there was a blacksmith's forge and yard; a person going from witness' hotel to Considine's house would pass that forge.

James Carney, labourer, employed at the Proprietary, said he lived at South Broken Hill; on 17th March he was at Hegarty's hotel at about 11 o'clock; saw Considine there; they had two or three drinks; Considine was neither drunk nor sober; had known him about five years, and had never known him quarrelsome; the two M'Lennans were drunk, but O'Leary and witness were sober; on leaving the hotel, Considine and the two M'Lennans walked first; in South-street they saw Constables White and Shiell; they were standing on the footpath near the gate; White said, "It is time you were home, Considine"; Considine replied, "I will please myself"; witness then went away, and saw nothing more at the time; on returning, saw Considine and the two constables outside the gate; the M'Lennans had gone; Considine said to White, "You are a white man, White, I believe"; Shiell then hit Considine on the forehead with his baton; before that Considine had not attempted to strike either of them; Considine reeled and staggered back, and then ran away down South-street and into the lane; subsequently, witness saw him passing through the yard into the hotel; the policemen followed him; he next saw the two constables standing outside the hotel, talking to Hegarty; then he saw a man running along South-street towards the hotel, and Shiell remarked, "Here he comes; we'll have him this time"; witness recognised the man as Considine; he had no weapon in his hand; he saw him hit Constable White, but not Shiell; he struck White with his fist, and not with any weapon; White fell down, and on getting up went over to the police station; Shiell followed; witness, O'Leary, and Considine then crossed Patton-street in the direction of Considine's house; a man named Donohue followed and joined them; the latter remarked, "Here comes the two constables; I can see their revolvers shining"; witness advised Considine to go home; blood was running down his face; Considine was walking towards the lane, when one of the constables called out, "Stand, Considine, or I'll shoot"; the constables were then about 30 yards off Considine, who was walking from them; Considine increased his pace, and the constables again called upon him to stop; he replied, "Shoot away"; he had then just got into the lane; the police were twelve or fifteen paces behind him; two shots were then fired in quick succession; he believed that the police and Considine were then running; four more shots were then fired, the last two when the police were on the allotment; Constable White ran into Considine and knocked him down; they then handcuffed him, and he walked a few yards between them, then exclaimed, "I'm done," and fell; witness had known Considine to get into trouble with other people, but always through their fault.

To Mr. Moriarty: Witness was an intimate friend of Considine; he had only been to the house twice; he did not know that two evenings before the shooting Considine had driven his wife out of the house, nor that on the Friday previous he had turned her out at 4 o'clock in the morning; did not know that the children had been turned out on the night previous to the shooting; did not see any weapons in the house on Sunday when he went there; did not look for them; did not hear the word "crawler" used, nor anything to the effect that the constables had better come prepared, during the altercation with the police; in his evidence before the Coroner he had not mentioned Donohue being present; he did not offer to assist White when he was knocked down; Shiell did not offer to assist him either, but merely walked over to the police station; he could not say who broke Shiell's ribs; Donohue took no part in the affair; he would not have to pass the blacksmith's shop or Considine's allotment to get home; when witness saw Considine coming towards the police he was coming from the direction of his house, and was opposite James' butcher's shop; witness was standing a few yards behind the police; he would swear that the next thing he saw was White knocked down; he did not then attack Shiell; the latter was not assaulted, but immediately went to the police station; he did not have to pass Considine; when Considine was challenged, he did not hear him after saying, "Shoot away," add "I can do for you"; deceased did not say anything at all; would not swear that when Considine reached his own allotment he did not turn round and face the police.

James O'Leary, smelter, residing at South Broken Hill, was at Hegarty's hotel on the evening of 17th March, in company with the two M'Lennans, Considine, and Carney; the M'Lennans were under the influence of liquor; they left the hotel together by the back entrance, Considine being slightly ahead of the rest; the two accused were standing outside the gate; White, addressing Considine, advised him to go home; Considine replied, "You have been watching me for a long time; if you come to take me you had better come prepared, or you will go down"; turning to Shiell, he said, "You are a crawler," and again to White, "You are a white man"; witness did not see Considine do anything to the two constables; after Considine had spoken to the two constables Shiell hit him over the head with his baton; the constables tried to catch him, but he got away, and ran round to the lane; the police went after him; subsequently he saw the two constables talking to Hegarty at the side door of the hotel; Considine came running in their direction along South-street; he knocked White down; witness did not see him strike Shiell; the latter went to the police station, and White got up and followed him; Considine did not at any time have an iron bar or similar weapon in his possession. The witness then described the events in connection with the shooting of Considine, which corroborated the account given by the previous witness. He was subjected to a searching cross-examination by Mr. Moriarty.

Christopher Conlon, cabdriver, was plying between Broken Hill and South Broken Hill on the night of 17th March; he drove the man Donohue, who was brought into Court and identified from Broken Hill; at about 12.15 his cab was drawn up in South-street, near Hegarty's hotel; he saw Considine pass a few yards in front of the horse in the direction of the side door of the hotel; he was swinging his arms, and had nothing of the nature of an iron bar in his hands; the two constables were standing at the door; Shiell backed away from him, and Considine hit White, who fell to the ground; Shiell then went towards the police station; Considine remarked, "Don't run away, you have a stick, and I have nothing"; Considine walked to where two men were standing and said, "I call on you two men"; witness did not know what he meant; witness then left.

To Mr. Moriarty: Witness became a cabdriver when he got his license, about two months ago; he could not remember the exact date; questioned as to what was the present month, the witness was unable to answer; as to the day, he first replied that it was Monday, but afterwards corrected himself and replied Tuesday; he failed to recognise the witness Carney as one of the men whom Considine had called upon after the assault.

Michael Donohue, smelter, residing at South Broken Hill, also gave evidence; he was severely cross-examined by the barrister for the defence.

Andrew Ohlssen, labourer, living at South Broken Hill, described the shooting of Considine; three revolver shots were fired by two men, who were pursuing another man; then someone cried "Stop!" and three more shots were fired; witness went in the direction of Hebbard-lane, and met Constable White with a belt and baton in one hand and a revolver in the other; witness asked what was the matter, and White answered, "I've just shot Considine—the brute"; witness said, "You've not shot him seriously?" he answered, "I believe so"; he then inquired for the nearest cab; witness directed him to Scown's; witness then went home.

Thomas Reid, storekeeper, who assisted to convey Considine to the hospital, gave evidence.

Charles John Pound, J.P., bootmaker, of South Broken Hill, knew Considine, who lived near him in the same street; on the morning of 18th March, some time after he had retired, he was awakened by revolver shots; he dressed and went out and met Constable White at the corner of South and Hebbard Streets; he was carrying a revolver, and appeared excited; on inquiring what was the matter, White replied that he had just shot Considine; in reply to witness' query as to why he had done that, White replied, "You would have shot him if he had done to you what he did to me"; White then went for a cab; witness saw Considine lying in the lane; he was shortly afterwards put into the cab, and almost immediately after the vehicle was started he sighed and apparently died; as a J.P., witness made it a point to collect evidence in the case; he took no part in the meeting and agitation which was got up on the evening of the shooting.

To Mr. Moriarty: Witness was a friend of Considine; he was secretary of witness' political meetings, but resigned about a week before his death; he was not "chucker-out," but merely a strong supporter; he always behaved in a gentlemanly manner; witness did not read a speech on the subject of the shooting; he merely prepared a report of the events in connection with the shooting, which he showed to a few people.

C. A. Rolfe, resident of the house of which a window was perforated by a revolver bullet on the night of the shooting, gave evidence.

Constable Shiner, after the shooting, attempted to find an iron bar, which Constable White told him to search for, but was unsuccessful.

To Mr. Moriarty: He considered that it would take half a dozen constables like himself to arrest Considine if he were to resist; on Saturday morning Considine's wife had complained to witness that Considine had turned her out of the house at 4 o'clock in the morning.

At this stage the Court adjourned until this morning.

THIRD DAY'S SITTING—THE SOUTH SHOOTING CASE—CASE FOR THE DEFENCE.

The Circuit Court continued its sitting in the Court-house yesterday morning, before His Honor Mr. Justice Foster when the charge of manslaughter preferred against Constables White and Shiell was proceeded with.

Constable Shiner, called for the purpose of cross examination by Mr. Moriarty, said that there was a banquet held at South Broken Hill on the evening of Thursday, 15th March; it was held at Hegarty's Hall, and the deceased Considine attended it; it closed about 12 p.m., on the Saturday forenoon following, at about 10 o'clock, Mrs Considine came to witness and complained of his treatment of her; she then went to a place about a quarter of a mile from Considine's house; witness was at the banquet before referred to; about 12 o'clock Considine questioned the Chairman's conduct, and the banquet ended suddenly; there were about sixty or seventy people present, the lights were put out for the purpose of putting an end to the whole affair; Considine had had a lot of drink, and was excited in consequence; he was working on the Friday, but was about the town at different public houses on the Saturday.

To the Crown Prosecutor Considine did not strike anyone at the banquet

Alex Johnston, Sub-Inspector of Police, produced the revolvers used by the police on the night in question. They contained three loaded and three exploded cartridges each, the revolvers would carry 300 or 400 yards; in about 40 or 50 yards they rose 1 to 2 feet; attributed that to the quantity of powder in the cartridges; to kill a man at 20 or 30 yards you would need to fire low; produced a bullet given him by Dr Groves; it was very much knocked out of shape, but, otherwise, corresponded with those in the cartridges; also produced a bullet which went through the window of a house in Hebbard-street; every police station is provided with revolvers in case of emergency; foot police were never required to practise rifle shooting; produced the coat worn by Constable Shiell on the night of the shooting; it was produced at the inquest on 22nd March; also produced the cap worn by Constable White.

To Mr. Moriarty The cap was cut through on the left side; did not think it possible for the cut to have been caused by a ring on a man's finger, it could certainly not have been caused by an open hand; there was a mark on Shiell's coat under the left arm, running up towards the right shoulder, a blow from an iron bar would have caused such a mark; produced a copy of the police regulations

Mr Moriarty sought to put in a copy of the regulations, but His Honor remarked that these regulations were not the law. Finally the copy was marked for identification

Witness, continuing, said he succeeded Sub Inspector Saunders, now at Newcastle, in May last; Constable White was then stationed at Broken Hill and Constable Shiell at South Broken Hill; received characters of them from Sub-Inspector Saunders, Constable White was a splendid man; he could not wish for a better; had never met a man in any grade of the force that he esteemed more; he was diligent and cautious, and was promoted to take charge of the South station on witness' recommendation; Constable Shiell was under White's instruction

Mr Lidyan was about to ask questions concerning Shiell's character, but His Honor disallowed them.

Dr John Thomson said that at about 1 o'clock on the morning of the 18th March he was aroused at his residence in Argent street by Constable White, who wished him to examine a man whom he had shot; saw the man in a cab outside, and found that he was dead; saw a wound on the forehead, but made no further examination; saw a true wound on White's head, about 1½ inch long, above the left ear; about an inch behind the wound there was a smear as of soot or lampblack about 3 inches long; the top of the smear was level with the top of the wound, but extended lower; it was half an inch or three quarters of an inch wide; should say that the instrument which caused the wound had some soot or lamp-black on it, and caused the smear at the same time; the wound ran vertically, as also did the smear; no attempt had been made to dress the wound before; of course by a bar the blow must have been struck with a downward sweep.

To Mr. Moriarty There was a little blood on White's head at the time; the cut on the cap produced corresponded with the wound on White's head; saw a mark on the jacket produced; whatever had caused the mark had been smeared with black; the wound on White's head would not be likely to be caused by a blow from a ring on a man's finger; it might have been caused by any solid body; an ordinary walking stick would not have done it; a blow from an iron drill like the one produced might have caused the wound.

To the Crown Prosecutor If any one had received a blow from such an instrument, struck by a man of immense strength, it would have broken his skull had he received the full force of it, but not if he was struck by that portion of the drill near the striker's hand; the black on Shiell's coat was similar to that on White's head; if a man had a rib broken, and was in a highly excited state, he would probably not notice it for some minutes.

To the Jury There was no blood on White's cap

Dr. Seabrook, house surgeon at the Broken Hill Hospital, said that at about 2 o'clock on the morning of March 18 Constables White and Shiell brought the body of the deceased Considine to the hospital; examined the body and found life extinct; death resulted from a shot wound; the wound was on the left side of the body, about 1½ in. below the navel; there was also a slight wound on the left temple; examined Constable White; found a true wound on the left side above the ear; it was a vertical cut, and corresponded with the cut in the cap produced; noticed no mark of lampblack or soot on White's head; the wound must have been caused by a severe blow from an instrument, a man's fist could not have caused such a wound, nor could a ring on a man's finger; such a blow would probably knock a man down and render him more or less insensible; such an instrument as the bar produced might have caused the wound; the severity of a wound from such an instrument would depend entirely upon the range; examined Constable Shiell and found the ninth rib broken; a rib could be broken by a man's fist, but a fist could not cause the mark on Shiell's body.

To Mr Moriarty. A blow from an iron bar would have caused a mark like that on the body of Shiell.

Dr. Groves, Government Medical Officer, made a *post-mortem* examination of the body of John Considine; the cause of death was internal hemorrhage, resulting from a bullet wound; found the bullet produced in the body, on the left side; there was also a wound over the left eyebrow; deceased must have been half facing the person who fired the shot when he received the bullet wound in the body; the direction of the wound was downwards; the bullet, therefore, could not have struck the ground before hitting deceased; the cut on the forehead might have been caused by a policeman's baton; found grains of lead in the deceased's body; the bullet should weigh 225 grains; had weighed the one produced and it weighed 220 grains; was of opinion that the bullet did not hit a fence or anything.

To Mr Moriarty. The direction of the wound would indicate that the revolver had been pointed downwards.

This closed the case for the Crown

His Honor remarked that the jury had called his attention to marks of black on the cap worn by White.

For the defence.

The accused, *James Lees White*, was sworn, and said —At the inquest on the body of Considine he voluntarily gave evidence; he had been a constable in the New South Wales police force for five years and ten months; previously to that had been five years in the Victorian police force; since October last had been in charge of the South Broken Hill police-station; there were under him First class Constable Shiner and Constable Shiell; on the night of 17th March was on duty near the barracks with Constable Shiell; a little before 12 o'clock that night they were in South-street, opposite Hegarty's hotel; it was a moonlight night; walked down the footpath adjoining Hegarty's hotel; they were both in uniform; on reaching the gateway entering the yard of Hegarty's hotel, at 12 15, heard some noise at the back of the hotel; stopped for a second or two, and saw a man strike a match; some men walked from the back of the hotel to the gate; when they reached the gate recognised them as John Jeremiah Considine and the two brothers M'Lennan; the two latter were very much under the influence of liquor, but Considine was not so bad; said, "Good-night, Considine, don't you think it is time you were going home?" One of the M'Lennans said, "Yes, I think it's about time; come on, let us go, Jack"; Considine said, "No, I will please myself, and go home when I think fit"; he turned to witness and said, "White, you appear to be watching me"; replied, "No, I'm not watching you"; up to that time he seemed pretty quiet; he then put up his finger and said, "Now, White, I warn you that if you or Shiell or Shiner come to arrest me, come well prepared, or you will go down"; replied, "There is nobody talking about arresting you"; he said, "Never mind, I warn you, and you can take what meaning you like out of it"; by that time he was getting excited, and waving his hands about; one of the M'Lennans got him by the arm, and said, "Never mind, Jack, come away home"; Considine gave him a push, saying, "Go away Hughie, let me alone," and the man fell down"; Shiell at that stage stepped further away from the fence towards the gutter, and addressing Considine, said, "Come here Jack, I want to speak to you"; Considine walked over to Shiell, and put his hands up in a threatening attitude; he said, "You, Shiell, you are only a ——— crawler and a ——— sneak"; as he said that Shiell backed away from him, and Considine followed with his hands up in a fighting attitude; when Shiell had backed almost to the fence, Considine said, "You ——— thing, I'll drop you"; Shiell then drew his baton, and witness did the same; Considine still had his hands up, and Shiell, who is left-handed, struck him a blow with the baton, held in his left hand; believed that the blow struck Considine about the neck; Considine made another rush at Shiell, and

witness.

witness struck at him with his baton; struck him on the forehead above the left eye; he staggered back and ran eastward along South-street, turning northward along Patton-lane; witness and Shiell followed; Considine ran through a small gate opening off the lane into the yard of "Hegarty's hotel"; he went into the hotel, and they followed; there was no light in the hotel, so they procured one from Hegarty; after making a search, found the side door of the hotel leading into South street unlocked; witness said to Hegarty, "Was this door locked?" and Hegarty replied in the affirmative; witness then said, "He must have escaped here; let him go; we can take proceedings on Monday"; witness and Shiell then stood on the footpath, and Hegarty stood in the doorway; there were two other men about 20 yards further down South street, near where the first scuffle took place; had not noticed them before Hegarty said, "There's someone coming"; turned round and saw someone coming from the direction of Considine, passing by the side of James' butcher's shop; he wore a white shirt, but no coat; Hegarty said, "Good-night," closed the door, and went inside; the man, who proved to be Considine, came straight across to them; recognised him when he was within about 20 yards; he was coming at a slow trot, and increased his pace as he approached; when within 7 or 8 yards, he said, "Now, I'll smash your ——— brains in"; he had his hat on, and had something in his hands, which he carried right in front of him, held downwards; Shiell was nearer to Considine than to witness; Considine swung round the instrument at Shiell; at first thought the instrument to be a rifle, but when he swung it round saw that it was an iron bar about 4 feet long; the blow missed Shiell, and Considine, holding the instrument with both hands, struck at witness' head; witness tried to close with him, but received a blow over the right ear, and he fell into the gutter partly on his left side and partly on his hands, cutting the palm of his hand on the stone; was not touching Considine at the time he received the blow; was wearing the cap produced at the time; it was unimpaired before he received the blow; the injury to the cap and to his head were caused by the blow he received from Considine at that time; was dazed for a few seconds; raised himself on his elbow and saw Considine chasing Shiell towards the police station; went across the street and got through the fence to the police station; Shiell was then inside; got a light, and saw the wounds on his hand; got his revolver and loaded it; Shiell came in from one of the other rooms with a revolver in his hand; went out and Shiell followed him; did not remember saying anything to Shiell; on the footpath said to Shiell, "If he attacks us again whatever you do don't shoot him in the body, but fire low"; he made no reply; on reaching the corner of South and Patton Streets saw some persons standing upon the footway in front of Krantz's store; went towards them, and when within about 20 yards, noticed Considine amongst them; he walked into South-street, and made in the direction of Hebbard-lane; called out to him, "Considine, stand, or I'll shoot"; he then started to run towards Hebbard lane; witness again challenged him, when he replied, "Shoot away, I can do for you; in the meantime I started running after him; when he was about half way across South-street, going towards Hebbard-lane, witness fired a shot into the ground; he continued to run, and as he crossed the gutter, witness fired another shot behind him; he ran along Hebbard lane, and just after he turned on to his own allotment, the second from the corner, and was looking back over his shoulder; witness fired a third shot; believed he was looking over his right shoulder; witness' shot was fired at Considine's knees; he was nearer than Shiell; the latter fired alternatively with witness; after witness fired his last shot, Considine appeared to turn round facing them; by this time witness had reached the allotment; Considine had his hands level with his face, and came two paces towards witness, who then ran into him with his left shoulder, caught his left arm, and pulled him down; he said, "I'll give in"; Shiell then came up, and they handcuffed Considine, lifted him up, and walked one on each side of him into the lane; just then his knees gave way under him, and he exclaimed, "I'm done," and sank down; until then witness did not know that he was wounded; witness then procured a cab, leaving Constable Shiell in charge of Considine, and Considine was driven into Broken Hill, where Dr Thomson, after examining him, found that he was dead; Dr Thomson also bound up the cut on witness' hand, which was afterwards dressed at the hospital; while witness was looking for a cab he met Pound, who asked him what was the matter; witness replied that he feared they had shot Considine, and on Pound asking why they had done that, witness replied that he might have done the same if he had been in the same position as witness

To the Crown Prosecutor. When witness went to the police station after the first assault by Considine he immediately got his revolver and commenced to load it; Shiell came into the room with his revolver; neither of them made any suggestion to the other as to procuring revolvers.

In re-examination by Mr. Moriarty, witness said that when pursuing Considine he knew that he had arms in the house; he had seen him carrying a rifle during the strike.

Constable George Shiell said he had been in the New South Wales Police Force about three years, previous to which he had been in the English Force at Liverpool for four and a half years; he had been stationed at South Broken Hill for twelve months; his evidence was principally corroborative of that given by Constable White; when Considine approached them he struck at witness with an iron bar which he had in his hands, remarking, "Now, I will knock your b—— brains in"; the bar passed close to witness' face; he then struck at Considine with his baton, and he believed hit the bar near Considine's hand; he then knocked White down, striking him on the head with the bar; witness thought White was killed, and made another attempt to arrest him, but before he could do so he received a blow with the bar on the left side; he then got up and went to the police station, and was followed by White; they procured revolvers, when White said, "If he attacks us again don't fire at his body, fire at his legs"; the witness' description of the subsequent events in connection with the shooting coincided with the evidence of Constable White; he produced the coat which he had been wearing at the time of the assault, showing the mark on the left side made by the iron bar

In cross examination by the Crown Prosecutor, witness said he had heard from Considine's wife that he had a revolver in the house; he knew that he had carried a rifle during the strike; witness denied that he had remarked to a man named Omar Arthur at about 5 o'clock on the evening of the day previous to the shooting, "There goes Considine, I'll have him within a month if I have to shoot him"

Terence Murphy said he did not know that Considine was Secretary of Pound's Parliamentary Committee; he had asked the witness Condon to give evidence in the case

Mary Ann Towney, married woman, living at South Broken Hill, said that Mrs Considine came to her place at 10 15 on Friday morning, 16th March, and stayed until 10 o'clock on Saturday.

His Honor would not permit a question to be put to the witness by the barrister for the defence as to Mrs Considine's reason for coming to the house

Arthur Nelson Barnett, P M, had been stationed at Broken Hill since November, 1892; he had known Constable White both at Silverton and Broken Hill for about four years; he considered him one of the best police officers he had known; he was very discreet; he had known Constable Shiell for a shorter period; he was zealous in the discharge of his duties; if he were asked to express an opinion he should say that he was slightly over zealous

Senior constable Smith said that Considine, when drunk, was a dangerous man; he had on one occasion, a Sunday evening, knocked witness down when he had advised him to go home.

Constable Gieve said that on 15th July, 1890, he had summoned Considine, and he had been bound over to keep the peace.

This concluded the case for the defence.

Mr. Moriarty said that section 6 of the Police Act provided that certain rules for the guidance of the police were to be made, and, if not inconsistent with the provisions of that or any other act, should have the force of law and should be submitted to Parliament and gazetted. The question was whether these regulations would have the force of law.

His Honor I think they might.

Mr. Moriarty They have been gazetted.

The Crown Prosecutor Prove it

After further argument the regulations were put in, His Honor stating that they would be rejected in any particular which they were inconsistent with the law.

Euphemia Considine, wife of the deceased, called by the Crown, said that she had never told Constable Shiner that her husband had a revolver in the house

To Mr. Moriarty Went away from her house on the Thursday night.

To Mr. Edgar Left her house because she had a summons from a butcher, and Shiner had told her husband about it; intended returning on Sunday because the bill was paid on the Saturday afternoon.

Shortly after 4 o'clock Mr. Moriarty commenced his address to the jury. The case had, he said, already occupied the attention of the Court for two days, and it was his duty to place before the jury all the facts that had been adduced in evidence. He need not tell them that perhaps never in New South Wales or in any other country had a trial of more importance come before a jury. The importance of the trial could not be measured by the circumstances of the case. It was a matter of the most momentous importance that the position of a constable should be clearly defined from the Bench. It was only necessary to read the papers to see that there was in the colonies a class of people who had their hands raised against justice, against law, and against order. There was another class who struggled honestly for a livelihood, who wished

wished to live under the law, and who wished the protection of the police to enable them to enjoy whatever wealth and comfort they had honestly and properly gained. The jury would see how important it was that a constable's duty should be defined when he was set upon by larrikins and ruffians who had no regard for law and order, or life and property. The jury should have the honesty and straightforwardness and independence to act upon the law. Before going into the evidence he would submit—subject to His Honor—the principles of law on which that case must be decided. Section 22 of the Criminal Law Amendment Act declared that if a person maliciously wounded or inflicted grievous bodily harm on any person with intent to do grievous bodily harm, or with intent to prevent the lawful apprehension or detainment of himself or any other person, should be liable to penal servitude. Thus if a man maliciously wounded a policeman who was endeavouring to arrest him he was guilty of a felony. The whole of the evidence produced by the Crown clearly showed that grievous bodily harm was inflicted on the constables that night before any shooting took place. Therefore, on that night, after the assault at Heggarty's corner, for all purposes of that case, Considine was a felon. The next thing they had to consider was the law applicable to felons. The law said that if a man intentionally inflicted death or bodily harm it was not any crime when done by a person in order to arrest a felon, or to retake or keep in lawful custody a felon who had escaped, or was about to escape, provided that the object for which death or harm was inflicted could not be otherwise accomplished. Therefore, the moment that Considine became a felon, even if the constables intentionally shot him dead, they would be guilty of no offence whatever if they were engaged at that time in arresting a felon, providing their object could not be otherwise accomplished. He would invite the attention of the jury to the police regulations, under which the accused were acting. The police were the chosen servants of the people, sworn to do their duty as sacredly as the jurymen were sworn to do theirs. As policemen they were given certain powers, and when they exercised those powers properly it was necessary to stand by them. It would have been a far more comfortable thing for the police to have gone to bed, and arrested Considine on the following morning. Instead of doing that, they went out—wounded as they were—against fearful odds, to do their duty. He had never known two policemen more persecuted than those two men had been in that case. One of them, White, was a highly esteemed man, and a thoroughly efficient officer. The other was said to have a hasty temper, but on the night in question he was acting under the direction of White. He stood or fell with White. He had thought that private interference on the part of people in cases where the Crown was prosecuting had been put a stop to years ago, and certainly hoped that it would not occur in the future. Was it because the Crown mixed itself with persons like Condon and Donohue that the jury were to convict? Had they ever seen more disgraceful perjury than those witnesses had committed on the previous day? Shocking, horrible perjury. When men such as those were picked up at the instigation of Terence Murphy, and men like him, was it to be wondered at that they took the public money to swear the most shameful and naked perjury? An attempt was made to impress the jury with the reliability of Condon's memory. When Condon was in the box Donohue was brought into Court, and the witness recognised him as the man he had driven over to the South on the night of 17th March. The facts showed that the two men had been together at South Broken Hill since the Sessions started, and that they were talking outside the Court just before Condon was brought in. Could the jury for one second place reliance on the evidence of such men as Carney, O'Leary, Condon, and Donohue? Could any man's liberty be taken away on the oaths of such fellows as those? The look of them was enough, without considering their absolute disregard of the truth. He had always admitted that Considine when sober was as decent a fellow as could possibly be. Unfortunately he was a man of gigantic strength, and peaceable, quiet, and orderly as he was when sober, he became a perfect demon when he got drink into him. It was worthy of notice the small number of police there had always been in Broken Hill. Five or six years ago, when the place was at the height of its prosperity, there were only six constables in the Hill and three at the South. They were able to maintain order amongst so large a population, because they displayed a good deal of free and easy kindness, and when they saw a man the worse for liquor would advise him to go home rather than arrest him. If Considine had on the night in question taken their friendly advice, the unfortunate shooting would never have occurred. It appeared that he had been drinking for some days, and it was in evidence that on the Thursday evening a banquet had come to a sudden termination because the people preferred putting out the lights to having a row with Considine. Nothing could be kinder or more civil than the way in which White spoke to the deceased, but Considine very soon showed that he desired to pick a quarrel. Subsequently, when Considine backed Shiell up against the fence, the latter was clearly justified, considering his assailant's immense strength, in drawing his baton. But it would have been as much use to throw a pea at an elephant as to strike Jack Considine with a policeman's baton. Both the police hit him, but hardly left a mark. It was an extraordinary thing that Considine should then turn and run away. He was strong enough to have taken one of the policemen in each hand and walked home. He (the speaker) knew Considine, and knew that he was a man who would not run away from a policeman or anyone else. He had gone away not to avoid them, but to get a weapon with which to give them something to remember. He did not wish to rake up anything against him now that the poor fellow was dead. It was clear that his domestic life was not altogether a happy one. He would say nothing more on that point. Was it not an unfortunate thing that when Considine went away after the first encounter with the police, some of his false friends had not followed him and tried to dissuade him from again coming out to attack the police? The police had only done their duty. In advising Considine to go home in the first instance they had shown devotion to their duty. Clearly they wished for no quarrel with the man, or after the first encounter they would have followed him to his house to effect his arrest. When Considine returned he rushed straight upon the police without warning. Could the jury doubt that if either of the police had received the full force of one of Considine's blows it would have killed him? Considine appeared to have been a brave fellow, and not the sort of man to hit anyone who was down. To that circumstance White doubtless owed his opportunity of escaping into the police station. An attempt had been made to show that a lengthened time elapsed between the time of the police entering the station to their emerging again with their revolvers. The idea was to show that the shooting and the previous struggle were not parts of the one occurrence. The jury must remember that the police had a sworn duty to perform, and in the performance of that duty they had to go out after their almost murderer, and endeavour to arrest him. Was a jury in New South Wales going to convict them because, on an occasion when they were tried, they proved themselves honest, and proved themselves brave? Had Considine gone that night and murdered his children, or anyone else, they would have been held to have neglected their duty. It being, then, their duty to arrest him, were they to go forth with swords of timber, or without weapons altogether? He did not wish to hear any weak miserable talk to the effect that they could go to bed and arrest Considine on the Monday. They would have been feather-bed policemen if they had. They went forth armed, and did nothing but their duty. If fifty Considines, or fifty of the noblest fellows in the world had lost their lives in that way the jury was still bound to stand by anyone who served the community faithfully and well. When White called on Considine to stop or he would shoot, Considine replied "Fire away, I'll do for you." He was then making straight for his house. What did he mean by saying "I'll do for you," if he did not meditate getting some weapon? Shots were fired on all sides of him, but he continued walking towards his house. Had he reached it they might have had two corpses instead of one, for he might easily have murdered the two policemen had he obtained firearms. The whole of the evidence showed that they had no intention of killing him. As soon as he stopped they ceased firing, and White, though a delicate man, threw himself upon him. Had the police acted differently, and allowed Considine to get away they would have been attacked by political agitators of mushroom growth, who, now that the election was near, desired to gain some cheap popularity, and fool their poor ignorant followers. They were asked to believe the evidence of the lowest class of cowards, skunks, and blackguards as against the story of two respectable men. One witness said that White had referred to Considine as "a brute." Was it likely that he would do so at a time when he was rushing for a cab, and trying to do all in his power for Considine. In this connection another person was called. Assuming, for the sake of argument, that he was in his proper senses, that he knew who he was, what he was, and the position he held, the attempt that he had made to try and prejudice the case before the inquest or the trial was most unworthy. Owing to political influence all sorts of people were placed in the position of Justices of the Peace. When he met with a Justice of the Peace he looked to see if he was a man of any education, and next to see if he was a man of any character. If he found that he had neither education nor character he regarded him with less respect than the sweep in the street. On the previous day the witness referred to gave certain evidence in a very excited manner. They had his statement, and they had White's. There was no comparison between the two men, either in their education or otherwise. Was the jury going to believe a little, cobbler Justice of the Peace against a man like White? The little fellow was trying to get into Parliament—the idea of such fellows making the laws of the country! He hoped that after hearing the addresses of the Crown Prosecutor and the learned Judge, the jury would come to the conclusion that they could release from custody those two honest men who had already been too long under the charge.

The Crown Prosecutor said that an attempt had been made to work upon the sympathies of the jury. An iron bar had been produced. It was not identified, and had clearly been intended as a stage effect. Counsel for the defence had from the first stated his intention of calling Mrs. Considine, but he had not done so. He would ask the jury to put aside all

all feeling of friendship that they might have either to Considine or to the accused ; to put aside all that they had heard before the trial, and to give a verdict solely on what had then been brought before them. Counsel for the defence had made an attack on Mr. Pound, and asked the jury which was most worthy of belief, Pound, or a cool witness, like White. He would ask them which, under the circumstances prevailing on the night of the 17th, was the most likely to be cool and collected—White, who had received injuries to the head and been engaged in an excited struggle, or Alderman Pound ? The evidence did not show that Considine, even in liquor, was the violent man that he had been represented to be. If his learned friend had wished to establish violence on the part of Considine, he could have asked Mrs. Considine as to his character when in liquor, but he had not done so. On one occasion Considine had been arrested for using threatening language, but that appeared to be the only occasion on which he had come in conflict with the authorities. The defence had placed much reliance on the fact that Considine was drunk. The evidence was that he had been in a hotel and had had a few drinks, but he was not drunk. In speaking of the law he would follow the lines of counsel for the defence. The accused were charged with manslaughter. Manslaughter was unlawful homicide—that meant that the killing was accompanied by an intention to do bodily harm or to kill, such intention being unlawful. It did not matter whether the police intended to kill Considine or only to wound him. As far as justification applied to the case a policeman was justified in shooting a felon if he could not otherwise accomplish his arrest. They could, therefore, only be justified if the jury were satisfied that there was no other way of accomplishing the arrest. They would have to decide first as to whether Considine had committed a felony. If they found—as they probably would—that he had, they must consider the question of justification, and the main point that he would bring before them was : Had they any other means of apprehending the deceased ? The case did not stand or fall on the evidence of such witnesses as Carney and O'Leary. They had been called at the inquest, and he had felt bound to put them in the box in consequence. No doubt their story was not an absolutely true one. They did not agree with one another in every particular, but that fact tended to show that there had been no conspiracy between them. Shiell and White had both given their evidence splendidly, but the latter, at all events, appeared to have learned his off by heart, and when asked what conversation took place between himself and White at the barracks he could not remember. Shiell also stated that after the encounter with Considine he reached the station only a few paces in advance of White. Was that not a contradiction of White's evidence, and did it not tend to show that Considine never chased Shiell at all ? There was a slight contradiction in the evidence of the doctor and that of the accused as to the direction in which the blows were struck, that the jury would have to consider. Lord Hale laid down that a constable in making an arrest must not in every case proceed with severity. Had the constables shot Considine at the time he was committing a violent assault upon them justification might have been easily proved. When the police took their revolvers from the station it was evident, from what White said to Shiell, that they expected Considine would attack them again. Considine did not do so, and therefore all the jury had to consider was whether or not they could have taken him without killing him. A lot had been made of the fact that Considine was running towards his home, but the evidence tended to show that he had no firearms of any description there. He would put it to the jury that the police began firing with the intention of doing grievous bodily harm. He relied on the evidence in reference to the bullet which had gone through the window in Hebbard-street. That was 100 yards or 120 yards from the scene of the shooting. The hole in the window was 4 ft. 1½ in. from the ground, and according to the evidence of Sub-Inspector Johnson a revolver at that range would carry absolutely true. There could be no doubt that it was one of the first two bullets that went through the window. Shiell said that he saw Constable White's first bullet strike the ground, and therefore it must have been the first shot fired by Shiell. That shot must have been aimed at the centre of Considine's body. He would ask why the police had neglected to call upon those standing near for assistance before resorting to the extreme measure of shooting. Even if Considine had got to his home that could surely not be looked upon as a full escape, and he might have been recaptured before leaving it. The Crown's case was that it was an instance of an act, lawful in itself, but performed in an unlawful way. The Crown said the police were guilty of culpable negligence in shooting Considine before they had exhausted every other means of arresting him. They had first to decide whether or not Considine was a felon. If he was, did the constables shoot him in the endeavour to arrest him, and if so, had they exhausted every other means of arresting him. He felt that he had no need to remind the jury of the magnitude of their duty. Their verdict would be looked for with interest from all parts of the Colony, and whatever it was he hoped that it would be such that they might rest contented that they had done their duty.

His Honor said that as his address would take some time to deliver, and he was not prepared to enter upon it at that late hour, he purposed adjourning the court until the morning.

The foreman asked if the jury would be allowed to visit the scene of the tragedy before the case was proceeded with.

After some discussion His Honor stated that the Deputy-Sheriff would drive the jury past the scene first thing in the morning, but they must, of course, speak to no one.

Officers were then sworn in to take charge of the jury for the night, and the court rose until 10 o'clock next morning.

FOURTH DAY'S SITTING.

The Circuit Court continued its sitting in the Court-house on Thursday morning before His Honor Mr. Justice Foster.

Immediately on the opening of the court, the jury in the case of Constables White and Shiell charged with the manslaughter of John Jeremiah Considine, who had been locked up for the night, were brought into court. During the morning they had been driven by the Deputy-Sheriff past the vicinity of the shooting in Hebbard-lane, South Broken Hill. His Honor commenced his summing up shortly after 10 o'clock.

His Honor said : The charge preferred against James White and George Shiell is one of manslaughter. The Crown does not put the prisoners on their trial for murder, but for manslaughter, and it is for you to say whether the prisoners, or either of them, are guilty of manslaughter—that is, of unlawfully slaying. The case is one of enormous importance, both to the prisoners and to the community. It is of great importance also to the police force throughout the Colony. I am glad to find from the evidence of Sub-Inspector Johnstone that it has not been found necessary to arm the police in Broken Hill. It is unfortunate when such a necessity arises. It is only necessary in communities where there are people so villainously murderous as to attack the police because they are police, and who are able by their overwhelming numbers to place the officers of the law in danger of their lives. The police are bound to protect our liberties at the risk of their lives, but they are also allowed to protect their own lives the same as private individuals are. Every policeman and every private individual has a perfect right to take the life of a fellow creature if necessary for self-protection. The necessity must not only be such as would appear to an excited man, but such as would be clearly apparent to anyone coolly considering the circumstances. A man is not excused because he gets into a row and thinks his life is in danger when it really is not. In the strict terms of the law there is a distinction between "excuse" and "justification." The law excuses a man who takes the life of another in defence of himself, but it justifies a man who takes the life of another in the execution of his duty. Therefore the law says that if a man, in the execution of his duty, being a constable or officer of the police, takes the life of a felon who is flying from him, when it is necessary to do so to effect his arrest, he is justified ; whilst if he takes a life in self-defence, he is excused—in either case not being guilty of an offence at law. In every such case the jury has the difficult task of inquiring whether the circumstances were such as to make the person who kills reasonably come to either of the conclusions that could have justified him in taking life. An officer is not justified in taking the life of a man he is about to apprehend, unless the necessity for so doing is not only apparent to the officer, but reasonably apparent, and it is for the jury to say whether it is reasonable or not. Bearing this in mind, you will have to deal with the case as with all others of similar character. The question of self-defence has not really been raised by either of the prisoners. Their case is that they did what they did in endeavouring to effect the arrest of a felon who was trying to escape. You will have to consider the evidence of the witness Pound, and at the outset I must state to you that if you believe his evidence, it is evidence against the accused White, but not against the accused Shiell. What one prisoner says in the absence of another cannot be taken as evidence against the one who is absent. As to that evidence taken against White, you must say whether it indicates that he acted in an endeavour to apprehend a felon fleeing from justice, or whether his object was to retaliate for injuries received. If it was done in retaliation, the law makes no excuse for it whatever. It makes this allowance, that if a man is injured, and in hot blood seizes a weapon and takes life, he is not guilty of murder, but he is guilty of a very serious form of manslaughter indeed. It is of most serious importance for you to consider whether you are satisfied that Pound has given a correct statement of what took place when he met the prisoner White. Pound's evidence is that White said, with regard to the shooting of Considine, "If he had done to you what he did to me you would have done as I did." If that is true, do you believe that White shot Considine in retaliation for what Considine had done to him ? If so, White is guilty of manslaughter of an aggravated kind. If he had taken firearms when his blood was cool, and shot Considine, it would have been murder, but if—as in this case—he did it in the heat of passion, it would be manslaughter,

as I said before, of a very aggravated kind indeed. The law admits self-defence, but it does not allow retaliation of any kind. To punish for an offence is the province of courts of justice, and no one else. A good deal will, therefore, depend on what you think about the evidence of Pound as to what White said. White's evidence is that he said, "If you had been placed in my position, you would have done the same thing." If he said that it did not tend to implicate him. You have to take into account the dependence that may be placed upon the recollection of witnesses, who may be trying to give the most honest evidence. But you must be satisfied that the words alleged by Pound were actually used before taking them, as showing an intention to retaliate on the part of White. In approaching the consideration of this case, I have no doubt you will do so with a judicial mind. You will not show favour to the prisoners because they are constables, nor will you for any reason display feeling against them. The well-being of the community and the liberty of the community demands that police officers should be supported in the execution of their duty, but in the same way the well-being of the community and the liberty of the community demands that they should be restricted from excess of that duty. Every killing is presumed in law, in the first instance, to be a murder, unless the circumstances are such as to prove it to be either manslaughter or justifiable homicide. In this case, as in every other, you have to be satisfied beyond a reasonable doubt that the Crown is right before you can convict, but the doubt must be such as would influence you in the most important of your private affairs. If you feel that amount of certainty that would regulate you in the most important of your private affairs you should convict, but not otherwise. Bearing in mind what I have said about retaliation being utterly unjustifiable in law, that killing in self-defence is excusable, and that shooting a man in the execution of duty is absolutely justifiable, we will approach the case. The rules for the guidance of the police that have been put in, if they contradicted the law, would not excuse the constables at all, but they appear to be a fair condensation of the laws with regard to the police. They are not like an Act of Parliament, but when you take the whole of them together, and consider them as advice given to constables as to the law, they may be taken as fairly correct. They must, however, be read one part with another. I think very great caution ought to be exercised by the police in acting under these regulations. They must have regard to the whole of them, and not to any single portion. Especially cautious should they be as to the regulations touching the use of firearms. If one part seems to empower them to use firearms, and another restricts them, they must take the latter. The 90th clause of the regulation says:—"If a constable endeavours to apprehend a person who has committed a felony, or a person whom he is by a proper warrant authorised to apprehend for a felony, and such person flies, knowing the intention to arrest for such felony, and with a view to prevent such arrest, he may be lawfully killed, provided he cannot otherwise be apprehended." That is, provided that there is an absolute necessity for him to do so. It is the duty of a constable to apprehend a felon, but not necessarily to arrest him instantly he sees him, nor is it his duty to shoot a felon simply because he is running away, unless such felon could fully and wholly escape if he did not do so. The rule continues:—"At what particular period of a struggle or pursuit the impossibility of overtaking the person flying becomes manifest must depend upon the circumstances of each case." This should be carefully considered by you. It is the most important part of the case that is before you, and the regulation is perfectly correct according to law. "If the constable is better mounted than the person he is endeavouring to arrest or the place where the parties are is such that assistance is likely to be obtained before the escape can be fully accomplished, or if in any other way there is reasonable ground for supposing that the arrest can be accomplished in that particular pursuit, the officer ought not in any of these cases to take life." As I said before, when an officer shoots a man under such circumstances, the jury must be satisfied that his conclusion was a right and reasonable one that the prisoner would have escaped altogether from justice, or that there would have been no means of arresting him in that pursuit unless he shot him, before they could find him justified. It would never do for a constable to have the right to shoot a man just because he ran away from him. Immediately following come these words, which may be misunderstood by the police:—"He is not, however, bound to let a felon or person whom he is authorised by warrant to arrest for felony escape from him because he may have reason to think that he can find him easily at some other time. It is his duty to arrest the person whom he is so authorised or commanded to arrest as soon as he sees him, and if he cannot overtake him he may kill him." That does not mean that an officer should shoot a man rather than let him get out of his sight, but that he is not justified in letting him get at liberty altogether. If there is any reasonable grounds for supposing that the arrest can be accomplished in that particular pursuit in any other way, an officer ought not to take life. The latter part of the clause, saying that a constable is bound to apprehend a felon as soon as he sees him, is right, taken with the rest of the regulation, but it is not true by itself. The law provides that if a felon will not give himself up to justice and allow the charge against him to be investigated, he may be shot. The question of whether a felony or a misdemeanour had been committed does not really arise in the present case, but the rules laid down here ought to be understood by the police as not justifying them in shooting a felon as soon as they see him because he does not stop. Of course, in some cases, such as the pursuit of a bushranger in the bush, where a pursuing constable has not means of overtaking the person, he would be justified in firing at him, and shooting him, and killing him. This is right and reasonable. A man must not set the law at defiance. The regulation goes on to say:—"Constables ought in all cases to be extremely cautious in resorting to extreme steps, but when necessity occurs they must perform their duty, and the law will protect them. The preceding observations apply only to the case of an officer killing to prevent the escape of a felon. Should the officer be resisted and his own life placed in jeopardy he may then kill, not for the purpose of preventing an escape, but in self-defence." In the 89th section it is set out that there must be an apparent necessity to which an officer is reduced before he is justified in taking life. The section reads:—"It is only in the apprehension and detention of felons that a constable would be justified in proceeding to extremities; that is, when a constable is armed with a warrant for a felony or when not having a warrant a felony is committed in his own view, or when he is in immediate or fresh pursuit of a person he knows to have committed a felony, and in such cases, in order to make the resort to firearms justifiable, there must be an apparent necessity to which he must be reduced in arresting or detaining the felon." Taken by itself, that section might be misunderstood. It might be taken to mean a "seeming necessity." Section 95, however, says that the necessity must be such as is clearly apparent. The law requires a policeman as a matter of duty to take a felon, and, if absolutely necessary, to take human life. Under such circumstances, where this necessity arises, the law says that the killing is not excusable, but absolutely justifiable. I think I have sufficiently explained what the law is, and I will proceed to the matters that have been placed before you. The questions you have to determine are—Was Considine killed? How was he killed? By whom was he killed? Was he killed by the two prisoners or by one of them, jointly acting at the time he was killed? The evidence for the Crown, and that called for the defence, tends to show that the accused did kill him in trying to prevent his escape. The question you have to consider is, in the first place: Was the killing done for the purpose of arresting a felon? It is admitted by the Crown that Considine was a felon. It is then, for you to say were they endeavouring to apprehend him in order to bring him to justice, or did they shoot him because he had injured them, and they were smarting under the injury at the time? The only evidence you have in favour of the latter supposition is evidence affecting White alone. As far as that is concerned, you must, as I said before, consider the evidence, and be satisfied beyond a reasonable doubt that Pound's recollection is correct as to the very words before condemning White on that particular point. Should you find that you are not satisfied that the words used by Pound were the exact words of the prisoner White, the evidence would not be sufficient to make you say that the killing was done for the purpose of revenge. As prisoners, the accused are quite entitled to give evidence. The law takes into account that a prisoner has more at stake than any other witness, but that does not make his testimony unworthy of belief. You must bear in mind the whole circumstances of the case when deciding how much reliance you can place on the testimony of the accused. There are two stories set up in this case. It is said that there was a scuffle in the first instance. It is not material in this case, but it may throw light on the subsequent scuffle which took place, and which is important, as it was then that the alleged felony was committed. In the first scuffle no felony was committed. The police were merely arresting Considine for being drunk. When he came back the second time—according to the case for the defence—he inflicted actual bodily harm, and thereby became guilty of a felony. That being the case, the constables were justified in apprehending him, and even in taking his life, if it appears to you that it was absolutely and reasonably necessary for them to do so. The first scuffle, as I said before, seems to be of importance rather as throwing light on the probabilities of the second. With regard to the second scuffle the Crown has put forward a number of witnesses who swear that Considine had nothing in his hands at the time he came up and struck the constables. That is a matter of some importance. You have to say which version of this is most probable in connection with the rest of the evidence. If he had nothing in his hands how came the marks that were on the coat of Shiell? How came Shiell with his rib broken? And how came the injuries which the doctor found on the head of White? If you believe the evidence of the doctors, and find that the evidence of these Crown witnesses is inconsistent with it, you may consider that the evidence of the accused is not contradicted by the doctors. The evidence, as to the bar, is of importance, but it does not touch the main points of the case. If it was a charge of murder, the question of the bar might be brought in to show that they were suffering from recent injuries, but that question

question does not arise here, as they are only indicted for manslaughter. If you accept the statements made by the prisoners, supposing every word stated by them to be true, had they reasonable ground for believing that it was impossible to prevent the escape of the prisoner without shooting him? You must come to the conclusion that the Crown has not shown that they had no reasonable ground for so believing before you can acquit. It is a very difficult matter to fully understand the bearing of the case. The offence is a very serious one. It is a serious thing for an officer to be guilty of an excess of duty, and in that excess to take the life of one of Her Majesty's subjects. As far as the prisoners and the public are concerned the matter requires careful consideration. Again, I tell you that the main point for you to consider is whether the prisoners when they took this life had reasonable grounds for supposing that it was absolutely necessary in order to prevent the escape of a felon from justice. It is not sufficient to make it unjustifiable that there was a possibility of finding him at some future date. They were not bound to let him absolutely escape even for the time. But you may come to the conclusion that on that night they could have got other police and apprehended him in his own house. If you think that, it does not appear that it was necessary for them to shoot him. You will see that your verdict will act in every other case as a precedent, and if it wrongly errs in favour of the police any member of the community may be shot down by officers of the police because those officers think that they will be justified. You must not discourage officers of the police from doing their duty, but on the other hand you must not endanger the lives of the public by saying that an officer is justified in taking life merely because he thinks he could not so easily arrest a man otherwise. It is a matter for you to say whether or not the accused were acting with a fair view of the circumstances. His Honor then reviewed the evidence at length, reading the greater portion of it over to the jury. Having done so, he continued. Taking the evidence of the accused as true, you come to the question. Had they reasonable grounds to suppose that if they did not kill Considine he would escape altogether? You have to consider in the prisoners' favour the fact that a man having been pursued by revolvers might in consequence be more inclined to try to escape altogether, but at the same time it would never do to establish that without reasonable grounds a policeman could shoot so as to more easily arrest a man when he might have arrested him otherwise. It is for you to say what is a reasonable necessity. If you think that had he not been killed he would have escaped altogether and justice would have been defeated thereby, then the killing would be justifiable. The only ground on which a constable can be justified is that he acted in the discharge of his duty. Is this a case in which you can honestly say that the constables were simply doing their duty in shooting at Considine? In every criminal prosecution the Crown is bound to prove its case beyond a reasonable doubt. It is not for the prisoners to satisfy you by the evidence they give that they are not guilty, but it is for you to say on the whole of the evidence that the Crown and the prisoners have brought before you whether they are guilty or not. If you find that they are guilty you should tell me whether you think they shot him in excess of duty to effect his arrest, or in retaliation. There are degrees of manslaughter, and though it is at all times a serious offence one class of manslaughter may be more serious than another. I have drawn your attention to the facts adduced in evidence, and have pointed out the law to you. You are entirely responsible for the decision you arrive at. Gentlemen, consider your verdict.

The jury retired at 12 o'clock noon.

Immediately the jury retired,

Mr. Moriarty asked His Honor to tell the jury that if they were of opinion that the acts of the accused were necessary and reasonable to effect the arrest of Considine in the pursuit entered upon after the commission of the felony, and that such acts were done to effect that object, the jury ought to acquit the accused.

His Honor: I have told them that already.

Mr. Moriarty. Will you put it to the jury that it was the duty of the constables, after the commission of the felony, to arrest the accused immediately, and that any postponement until next day or some future time would be contrary to their duty under the police regulations.

His Honor. I have put that clearly to them, and told them that the regulations were correct according to law. I decline to put it to them any further.

Another case was then proceeded with.

On resuming after lunch the jury were immediately brought into Court, and returned a verdict of not guilty in the case of both the accused. The verdict was received in silence both inside and outside the Court. Constables White and Shiel were then discharged.

EXTRACT FROM THE "BROKEN HILL AGE," FRIDAY, 27 APRIL, 1894.

THE SOUTH SHOOTING CASE.

THE proceedings in the Circuit Court which terminated yesterday in the acquittal of Constables White and Shiel on the charge of the manslaughter of John Considine at South Broken Hill last month will be studied with peculiar interest at the present time. The affair—the killing of a man under circumstances which it had to be decided did or did not justify that killing—was the first that had occurred since the recent important step of arming the police had been made. And although the fact that it had been thought advisable to place revolvers in the hands of the police who had previously been armed only with a weapon of such limited range of effect as a baton has had no influence in the present case, and could have no direct bearing on the circumstances of the tragedy, still the present proceedings and their result will undoubtedly influence subsequent events which may arise because the police under certain conditions now carry firearms. Had the two constables been adjudged guilty of manslaughter it would have been in no sense an argument against the regular arming of the police, except on the presumption that all other constables—or at least a definite proportion of them—were also incapable of discriminating under what circumstances their revolvers should be used. A conviction would merely have proved the indiscretion of the two constables; they would have been punished, and their punishment would have showed other peace officers the lines of conduct which they must not transgress in the use of their weapons, and have assured the public that those limits cannot be overstepped with impunity. In this case, however, the jury have signified by their verdict that the constables were justified in resorting to the extreme measure they adopted.

As we have said, the proceedings will be studied with peculiar interest at the present juncture. Mr. Justice Foster's direction to the jury respecting the law on the subject of the circumstances under which a policeman may take life make it apparent that those conditions are such as are not clearly and entirely comprehended by the majority of the members of the force. Even the regulations which, according to the Police Act, having been gazetted and submitted to Parliament, and not being inconsistent with the provisions of that or any other Act, are to have the force of law, are in reality in several particulars inconsistent, and therefore the policeman who shapes his actions by those regulations may find afterwards that he has acted contrary to law, and is liable to the ordinary penalties for so doing. The ordinary constable possesses no special legal knowledge; yet before deciding that he shall act in accordance with the regulations framed for his guidance, and under which he swears to act when joining the force, he is expected, if he have regard for the law, to make a learned comparison between those regulations and the law, and satisfy himself that the force of the former is not nullified because of inconsistencies with the latter. It is clearly a task which should not be expected, and which nobody thought previously was necessary. The Police Regulations were compiled by the best available legal talent—the opinions of the late Sir James Martin, amongst others, on certain phases are embodied—and that the inconsistencies which Mr. Justice Foster says do exist have not been previously observed is due, no doubt, to the happy rarity of cases like the present, when they are put to the test. Clearly a policeman, who may not excuse himself from doing a thing which appears necessary in the execution of his duty because he fears that his incomplete knowledge of the intricacies of the law may result in his doing that thing in a way which may afterwards prove to be illegal, should be provided with a code of rules the correctness of which should be unquestionable, and which should minimise the possibility of mistake. A constable who sees the commission of a felony will neglect his duty if he fails to make an effort to apprehend the felon. He may know that a conflict with danger to himself may ensue, and that if he kills the felon he may have to face the troubles of a trial; but if, on this account, he hesitates, he has neglected his duty, and is liable to opprobrium and to dismissal from his employment.

Here arises another aspect in which it appears to us that the members of the force have to submit to hardship. The policeman, as we have explained, in certain cases has to accomplish or attempt arrest. A civilian under similar circumstances may excuse himself. He is not a servant of the public; and if he permit a felon whom he might have detained to escape, no penalty attaches to his so doing. But if either civilian or police take life they are put to the same inconveniences and expense in demonstrating that the killing was such as is justified by law. A policeman who kills is arraigned

arraigned on a charge of manslaughter, or murder, as it may be, and the resources of the Crown are pitted against him to prove him guilty. He may fear that the facts of his case may not be properly put before the judge and jury which tries him, that inconsequent circumstances may be made much of to unjustly prejudice them, or that important facts bearing on his innocence may, through incomplete explanation, be divested of their importance—a fear to which every innocent man who is put in the dock is with reason liable. If indicted for murder, the Crown fees a defending counsel—generally a junior; if for manslaughter, he must risk the incomplete elucidation of his case, or else fee counsel himself. And if, after all, it is proved that he has acted as the law requires him to do in the execution of his duty, no recompense is made for the heavy expense to which he has been put, and which has arisen in consequence of his faithful pursuance of his duty. The police must do certain things, say the police regulations, and the law will protect them. It does nothing of the sort. It harrasses them; its prosecutes them without making provision also for their defence, and finally, when it is demonstrated that they have not exceeded their duty, it makes no recompense for the pecuniary loss and mental anxiety which they have had to suffer.

The Inspector-General of Police to The Principal Under Secretary.

Case of Constables White and Shiell, manslaughter, Broken Hill.

Sir,

Police Department, Inspector-General's Office, Sydney, 5 May, 1894.

I have the honor to submit for the Chief Secretary's consideration reports on the above case from Superintendent Larkins and Sub-Inspector Johnston, together with the published account of the trial.

The case, from its extreme gravity, has attracted general public attention, and has also been referred to in Parliament; but apart from this, its serious importance to the public demands that I should give very careful consideration to it before coming to any decision, and the Chief Secretary may think it advisable, as I do, that Mr. Justice Foster might be requested, under the exceptional circumstances of the case, to state if he can express any opinion additional to that in his summing up that would be of guidance in further dealing with the two constables.

Superintendent Larkin's observations are in my judgment fair and reasonable, though I thought it my duty to disapprove of his action in causing the constables to be charged with manslaughter before the inquest on the deceased was initiated.

That the two constables cannot be reinstated in their duty at Broken Hill there can be no doubt, but a grave question arises how far their "reckless conduct," for such it undoubtedly was, will affect their usefulness as police officers in any other district and sphere of duty. They may see fit for this reason to tender their resignations, which I have no hesitation in saying I should be glad to receive; but, on the other hand, as they both bear excellent characters, and have several years' good service, if they desire to continue in the force in another district, I should not in the face of the significant fact that they have been acquitted after a careful trial in the locality where the unfortunate occurrence took place, and where, therefore, there is not likely to have been any undue sympathy for them, I should not feel justified in directing their dismissal.

I have, &c.,

EDMUND FOSBERY,
Inspector-General of Police.

Mr. Justice Foster might be asked for an opinion in addition to that given in his summing up as herein suggested by Mr. Fosbery.—C.W., 8/5/94. Approved.—G.R.D., 4/6/94. The Under Secretary of Justice.—C.W. (P.U.S.), B.C., 5/6/94. His Honor Mr. Justice Foster, for favour of opinion as requested herein.—T. M. SLATTERY, 20/6/94. E. P. Foster, Esq., Clerk Associate to the Honorable Mr. Justice Foster.—T.E.McN. (for U.S.), B.C., 20/6/94.

I have perused the reports of the Inspector-General, Superintendent Larkins, and Sub-Inspector Johnston, and, after consideration of all the facts appearing before me at the trial, and from subsequent inquiries, I quite agree with the Inspector-General that, in view of the acquittal, which I cannot say was wrong, the dismissal of the two police officers would not seem to me to be justifiable. Their action was indiscreet, but under very trying circumstances. Their characters as men and as constables were excellent, especially White's. Such men are valuable police officers, and the sad experience they have had will be their best safeguard against any similar indiscretion in the future, however trying the circumstances in which they are placed may be.—W. J. FOSTER, J., 27/6/94.

Seen. Papers may now be sent to the Chief Secretary.—T.M.S., 29/6/94. The Principal Under Secretary.—T.E.McN. (for U.S.), B.C., 30/6/94. On the opinion expressed by His Honor Judge Foster, I have no hesitation in approving of Mr. Fosbery's recommendation.—G.R.D., 4/7/94. The Inspector-General of Police.—C.W. (P.U.S.), B.C., 4/7/94. Noted, acted upon, and returned.—EDMUND FOSBERY, (I.-G.P.), B.C., 24/7/94. The Principal Under Secretary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SOLICITORS EMPLOYED FOR PROSECUTIONS UNDER
CERTAIN ACTS.
(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 26 February, 1895.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 18th December, 1894, That there be laid upon the Table of this House a Return showing,—

- “ (1.) The number of prosecutions instituted in Sydney and suburbs under the Fisheries Act in the years 1892, 1893, 1894.
- “ (2.) Whether any solicitor was engaged for the prosecution.
- “ (3.) The name or names and the amounts paid to each solicitor, and the amounts allowed in each case as professional costs by the Court.
- “ (4.) The like information as to prosecutions under the Licensing Act.
- “ (5.) The like information as to prosecutions in connection with betting and wagering.
- “ (6.) The like information as to prosecutions under the Distilleries and Customs Acts.”

(*Mr. Chapman.*)

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TRADE DISPUTES CONCILIATION AND ARBITRATION ACT.

(NAMES OF ALL THE RECOMMENDING AUTHORITIES WHO SENT IN NOMINATIONS TO 15 AUGUST, 1894; ALSO NAMES OF THOSE WHO RECOMMENDED MESSRS. P. J. BRENNAN AND E. BANNER AS ARBITRATORS.)

Ordered by the Legislative Assembly to be printed, 5 September, 1894.

[Laid upon the Table of the House in answer to Question No. 21 of 5 September, 1894.]

Question.

(21.) ARBITRATORS UNDER THE TRADE DISPUTES CONCILIATION AND ARBITRATION ACT:—MR. MCGOWEN
asked THE ATTORNEY-GENERAL,—

- (1.) The names of all the recommending authorities (under the Conciliation and Arbitration Act of 1892) who sent in nominations up till and inclusive of 15th August for the year 1894?
- (2.) The names of those who recommended P. J. Brennan, Esq., as arbitrator?
- (3.) The names of those who recommended E. Banner, Esq., as arbitrator?

Answer.

- (1.) Names of all the recommending authorities (under the Conciliation and Arbitration Act of 1892) who sent in nominations up till and inclusive of the 15th August for the year 1894.

Name of Organisation.

1. Federated Seamen's Union of Australasia.
2. Eight Hours' Demonstration Committee.
3. Builders and Contractors' Association.
4. Amalgamated Coachmakers, Railway Car and Waggon Makers, and Wheelwrights' Society of New South Wales.
5. Sydney Wharf Labourers' Union.
6. Friendly Trade Society of Ironmoulders of New South Wales.
7. New South Wales Colliery Engine Drivers' Protective Association.
8. Peak Hill Branch, Barrier, Colonial District No. 3, Amalgamated Miners' Association of Australasia, etc.
9. Council of the Federated Societies engaged in the Building Trades of New South Wales.
10. New South Wales Locomotive Engine Drivers' and Firemen's Association.
11. Iron Workers' Assistants' Association of New South Wales.
12. Brewers' Employees' Association.
13. Amalgamated Society of Engineers, New South Wales District.
14. Newcastle Typographical Association.
15. Friendly Society of Operative Stonemasons.
16. United Labourers' Protective Society of Sydney.
17. New South Wales Journeymen Farriers' Association.
18. New South Wales Typographical Association.
19. United Furniture Trade Society of New South Wales.
20. Amalgamated Society of Plumbers, Galvanised Iron Workers, and Gas Fitters of New South Wales.
21. Sydney Coal Lumpers' Union.
22. Amalgamated Bookbinders and Paper Rulers' Society of New South Wales.
23. Amalgamated Miners' Association of Australasia, Colonial District No. 2, New South Wales.
24. Protection of Trade Marks and Exchange Association (Limited).
25. Colliery Surface Men's Mutual Protection Association.
26. Amalgamated Journeymen Tailors' Association of New South Wales.
27. Amalgamated Slaughtermen and Journeymen Butchers' Union of New South Wales.
28. Master Carriers' Association of New South Wales.
29. Journeymen Butchers' Protective Association of New South Wales.
30. Sydney Progressive Society of Carpenters and Joiners.
31. Masters and Engineers of Harbour and River Steamers' Association.
32. New South Wales Journeymen Confectioners' Association.
33. Thackeringa Branch Amalgamated Miners' Association and Consolidated Accident Fund.
34. Australasian Society of Engineers.
35. Amalgamated Tobacco Workers' Society.

36. Wool and Leather Workers' Association of New South Wales.
37. United Society of Boiler Makers and Iron Shipbuilders of New South Wales.
38. Amalgamated Society of Carpenters and Joiners.
39. Newtown Branch, United Labourers' Protective Society of New South Wales.
40. Barrier Typographical Society.
41. Sydney and Suburban Cabmen's Protective Union.
42. Coal Miners' Mutual Protective Association.
43. Quarrymen's Eight-hour Protective Society of New South Wales.
44. New South Wales Letterpress Machinists and Stereotypers' Union.
45. Gas Stokers' Protective Association of New South Wales.
46. Amalgamated Miners' Association of Australasia, Illawarra District, Colonial District No. 2.
47. Northern District Eight Hours' Committee.
48. New South Wales Amalgamated Railway and Tramway Service Association.
49. New South Wales Operative Bakers' Association.
50. Sydney Lithographic Society.
51. Journeymen Coopers' Society of New South Wales.
52. Operative Bricklayers' Society of New South Wales.
53. United Licensed Victuallers' Association.
54. New South Wales Amalgamated Boot Trade Union.
55. Pressers' Eight-hour Society of New South Wales.
56. Amalgamated Hotel and Caterers' Employees' Mutual Benefit Association.
57. Waiters and Barmen's Union of New South Wales.
58. Saddle and Harness Makers' Trade Society.
59. New South Wales Sewerage Miners' Association.
60. Cutters and Trimmers' Union of New South Wales.
61. Newcastle Crane Employees' Association.

Total, 61.

(2.) The Names of those who recommended P. J. Brennan, Esq., as Arbitrator.

Name of Organisation.

1. New South Wales Sewerage Miners' Association.
2. Colliery Surfacemen's Mutual Protection Association.
3. Newcastle Crane Employees' Association.
4. New South Wales Colliery Engine Drivers' Protective Association.
5. Sydney and Suburban Cabmen's Protective Union.
6. Operative Bricklayers' Society of New South Wales.
7. Amalgamated Slaughtermen and Journeymen Butchers' Union of New South Wales.
8. Journeymen Butchers' Protective Association of New South Wales.
9. Amalgamated Hotel and Caterers' Employees' Mutual Benefit Association of New South Wales.
10. New South Wales Journeymen Confectioners' Society.
11. New South Wales Operative Bakers' Association.
12. Waiters and Barmen's Union of New South Wales.
13. Cutters and Trimmers' Union of New South Wales.
14. Pressers' Eight-hour Society of New South Wales.
15. Saddle and Harness Makers' Trade Society.
16. Amalgamated Bookbinders and Paper Rulers' Society of New South Wales.
17. New South Wales Letterpress Machinists and Stereotypers' Union.
18. New South Wales Typographical Association.
19. Newcastle Typographical Association.
20. Barrier Typographical Association.

Total, 20.

(3.) The Names of those who recommended E. Banner, Esq., as Arbitrator.

Name of Organisation.

1. Sydney Wharf Labourers' Union.
2. Newtown Branch United Labourers' Protective Society of New South Wales.
3. United Labourers' Protective Society of Sydney.
4. New South Wales Locomotive Engine Drivers and Firemen's Association.
5. New South Wales Amalgamated Railway and Tramway Service Association.
6. Amalgamated Society of Carpenters and Joiners.
7. Friendly Society of Operative Stonemasons.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TRADE DISPUTES CONCILIATION AND ARBITRATION
ACT, 1892, AMENDMENT BILL.

(MESSAGE No. 50.)

Ordered by the Legislative Assembly to be printed, 21 March, 1895.

FREDK. M. DARLEY,
Lieutenant-Governor.

Message No. 50.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to amend and extend the "Trade Disputes Conciliation and Arbitration Act, 1892."

*Government House,
Sydney, 21st March, 1895.*

1894-5.

LEGISLATIVE ASSEMBLY,
NEW SOUTH WALES.

LORD HOWE ISLAND.

(INFORMATION RESPECTING.)

Ordered by the Legislative Assembly to be printed, 7 March, 1895.

[Laid upon the Table of this House in answer to Question No. 23, of 27th February, 1895.]

The Visiting Magistrate to Lord Howe Island to The Principal Under Secretary.

Sir,

Herewith I have the honor to enclose memoranda which I trust will be sufficient to enable the Chief Secretary to reply to eight Questions having reference to Lord Howe Island, which were put to him in Parliament by Mr. Shipway upon the 18th December last.

Sydney, 21 January, 1895.

I have, &c.,

T. R. ICELY,
Visiting Magistrate, Lord Howe Island.

23. MR. ICELY, VISITING MAGISTRATE TO LORD HOWE ISLAND :—MR. SHIPWAY *asked* THE COLONIAL TREASURER,—

(1.) Is it a fact that when Mr. Icely, the Visiting Magistrate, officially visits Lord Howe Island he lives at the house of one of the residents of the island?

1. The house in which I live when upon the island is a small two-roomed cottage. It was empty when I was given possession of it, having been previously occupied by a Mrs. Andrews who had recently died. I furnished it at my own expense, and I invariably have my meals there by myself. My provisions, other than such things as the island produces, I take upon each visit from Sydney with me.

(2.) Is it a fact that the residents of the island pay no rent or taxes of any kind?

2. Only postage and Custom-house duties, which are collected in Sydney, as they would do for Parramatta or any other town of the Colony.

(3.) What is the salary and allowances of the Visiting Magistrate, and what are his duties?

3. £100 a visit and 15s. a day allowances. His duties are of a general character, having, under the direction of the Chief Secretary, to deal with every governmental department other than education, which brings the island in connection with the Government.

(4.) Is it a fact that special application has been made by a Mrs. King (a resident on the island) for the Visiting Magistrate to obtain for her protection from her husband (who also lives upon the island), and that such application has not been granted?

4. Family disturbances have brought Mrs. King and her husband frequently before me, but never with any story sufficient to justify action against the husband. They were separated for some months, but upon my last visit to the island I intervened, and they have since lived together and appear perfectly reconciled.

(5.) Is it a fact that nineteen children live upon the island, that a school was established thereon about three years ago, under the Education Department, that the said school was to be closed on the 31st December, 1894, and that no provision has been made for the future education of the said children?

5. There are not more than twelve children of school age upon the island, but this question, for special reply, had better be referred to the Department of Education, which, notwithstanding correspondence suggesting otherwise, retained, apart from the Visiting Magistrate, absolute control over the school and school buildings.

(6.) Is it a fact that an alleged case of leprosy (one Henry Wilson) upon the island has been brought under the notice of the said Magistrate, but no steps have been taken to inquire into the matter?

6. Much trouble was taken by me in the case referred to. Authority was obtained and arrangements were made for the removal of Harry Wilson to Sydney, but when the vessel arrived that was to bring him away, he refused to come. Having seen cases of leprosy elsewhere, I always freely expressed my opinion that Wilson's was not a case of it; but, as others seemed to fancy it might be, at the suggestion of the Secretary of the Board of Health, and in company with a medical man I visited the Lazaret at Little Bay, spending an hour or two in viewing the several cases of leprosy there. This visit confirmed my above-stated opinion, and it now only remains to add that Harry Wilson, who remained upon the island, is now perfectly recovered, his suffering having probably been the result of excessive use of mercury in his youth.

(7.) Is it a fact that there are several women between the ages of 20 and 25 years who are detained upon the island against their will?

7. There is not an unmarried woman of 25 upon the island, the few there who are over the age of 20 live with their parents, and are certainly quite as happy and contented as girls of their age and station usually are.

(8.) Is it a fact that there are several people between the ages of 75 and 90 years (notably Mr. Mosely, aged 90, Mrs. Mosely, aged 80, and Mr. Field, aged 75) on the island, who are living upon the charity of the other islanders, and are in a very impoverished state?

8. Though nobody knows exactly, it is probable that the ages as here given of Mr. and Mrs. Mosely and Mrs. Field are something near the mark. Mrs. Mosely, however, claims to be at least 30 years younger than 80, and is the only one of the three who does any work; but the other two are no burden to anyone, both having holdings which others desire, and who, with a view to the possible future, supply the old people with any present wants. Into the bargain, Mosely is the owner of several of the very finest cattle upon the island, while Mrs. Field has a most comfortable cottage in which she takes in visitors to the island as lodgers (upon my last visit she had a Mr. and Mrs. Barren and child, who had been there a week or two occupying two of her rooms).

(9.) Will he take immediate steps to have an inquiry made respecting these matters?

9. Yes.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ADMINISTRATION OF JUSTICE.

(SPIRITS, WINE, AND BEER—CONVICTIONS UNDER THE DRUNKARDS AND LICENSING ACTS.)

Ordered by the Legislative Assembly to be printed, 23 April, 1895.

RETURN (*in part*) to an *Order* of the Legislative Assembly of New South Wales, dated 17th March, 1892, That, in place of the Returns ordered by this House on the 15th February, 1884, and the 12th June, 1888, there be annually laid upon the Table of this House, Returns giving the following particulars for each Police Court of the Colony, classed in Electorates:—

- “ (a) The number of convictions for drunkenness only.
 - “ (b) Other convictions in which drunkenness formed part of the charge (drunkenness with disorderly conduct).
 - “ (c) Women convicted of foregoing offences.
 - “ (d) Foregoing offences committed between 8 a.m. on Saturday and 8 a.m. on Sunday.
 - “ (e) Foregoing offences committed between 8 a.m. on Sunday and 8 a.m. on Monday.
 - “ (f) Convictions for selling on Sunday.
 - “ (g) Convictions for selling during prohibited hours other than on Sundays.
 - “ (h) Convictions for selling liquor without a license.
 - “ (i) Convictions for selling adulterated liquor.
 - “ (j) Publicans', Colonial Wine, Brewers', Spirit and Distillers' licenses, respectively in each Electorate.
- “ The total numbers to be also shown in each case for the whole Colony, such Returns in future to be laid upon the Table of this House and printed, as soon after the close of the year as possible.”

(*Mr. Garrard.*)

RETURN of CONVICTIONS under the Drunkards and Licensing Acts at each Court of Petty Sessions within the Colony, for the year 1894.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DEPOSITIONS, POLICE *v.* PARKES (OF "WHITE HORSE HOTEL," PARRAMATTA)—SUNDAY SELLING.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 20 November, 1894.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 1st November, 1894, That there be laid upon the Table of this House,—

"A copy of the depositions taken before the Parramatta Police Court on "26th September, in the case of Police *v.* Parkes (of the 'White Horse Hotel') for alleged Sunday selling."

(Mr. Fegan.)

(45 Vic. No. 14, s. 63.)

INFORMATION.

New South Wales, to wit.—Parramatta Licensing District.

POLICE *v.* PARKES.

BE it remembered that on this 17th day of September, in the year of our Lord 1894, at Parramatta, in the Colony of New South Wales, Robert Megarvy, of Parramatta, a sub-inspector under the Licensing Act of 1882, informs me, the undersigned, one of Her Majesty's Justices duly assigned to keep the peace of our Lady the Queen in and for the Colony of New South Wales, that on Sunday, the 16th day of September, in the year of our Lord 1894, one Sydney George Parkes, being the holder of a publican's license for the premises known as the "White Horse Hotel," situate at Parramatta, in the district of Parramatta, in the said Colony, and within the Parramatta Licensing District, did, at 15 minutes past 2 of the clock in the forenoon of the date last aforesaid, keep his said premises open for the sale of liquors to persons therein who were not travellers nor *bonâ fide* lodgers, nor inmates drinking such liquors at a part other than the public bar of such licensed premises contrary to the Act in such case made and provided; whereupon the said Robert Megarvy prays that I, the said Justice, will proceed in the premises according to law.

Exhibited at Parramatta, in the said Colony, on the }
day first above written, before me,— }

ROBERT MEGARVY.

STEPHEN MURPHY, Justice of the Peace.

(45 Vic. No. 14, s. 63.)

INFORMATION.

New South Wales, to wit.—Parramatta Licensing District.

POLICE *v.* STONE.

BE it remembered that on this 17th day of September, in the year of our Lord 1894, at Parramatta, in the Colony of New South Wales, Robert Megarvy, of Parramatta, a sub-inspector under the Licensing Act of 1882, informs me, the undersigned, one of Her Majesty's Justices duly assigned to keep the peace of

of our Lady the Queen in and for the Colony of New South Wales, that on Sunday, the 16th day of September, in the year of our Lord 1894, at 15 minutes after 2 of the clock in the forenoon, one Johnston Henry Stone did drink liquor in the licensed premises known as the "White Horse Hotel," situate at Parramatta, in the district of Parramatta, in the said Colony, and within the Parramatta Licensing District, he the said Johnston Henry Stone not then being a *bonâ fide* lodger in or inmate of the said licensed premises and not being then a traveller, contrary to the Act in such case made and provided; whereupon the said Robert Megarvy prays that I, the said Justice, will proceed in the premises according to law.

Exhibited at Parramatta, in the said Colony, on the } ROBERT MEGARVY.
day first above written, before me,— }

STEPHEN MURPHY, Justice of the Peace.

(45 Vic. No. 14, s. 63.)

INFORMATION.

New South Wales, to wit.—Parramatta Licensing District.

POLICE v. DELANEY.

BE it remembered, that on this 17th day of September, in the year of our Lord 1894, at Parramatta, in the Colony of New South Wales, Robert Megarvy, of Parramatta, a sub-inspector under the Licensing Act of 1882, informs me, the undersigned, one of Her Majesty's Justices duly assigned to keep the peace of our Lady the Queen in and for the Colony of New South Wales, that on Sunday, the 16th day of September, in the year of our Lord 1894, at 15 minutes after 2 of the clock in the forenoon, one Arthur Delaney did drink liquor in the licensed premises known as the "White Horse Hotel," situate at Parramatta, in the district of Parramatta, in the said Colony, and within the Parramatta Licensing District, he, the said Arthur Delaney, not then being a *bonâ fide* lodger in or inmate of the said licensed premises and not being then a traveller, contrary to the Act in such case made and provided; whereupon the said Robert Megarvy prays that I, the said Justice, will proceed in the premises according to law.

Exhibited at Parramatta, in the said Colony, on the } ROBERT MEGARVY.
day first above written, before me,— }

STEPHEN MURPHY, Justice of the Peace.

(45 Vic. No. 14, s. 63.)

INFORMATION.

New South Wales, to wit.—Parramatta Licensing District.

POLICE v. MITCHELL.

BE it remembered, That on this 17th day of September, in the year of our Lord 1894, at Parramatta, in the Colony of New South Wales, Robert Megarvy, of Parramatta, a sub-inspector under the Licensing Act of 1882, informs me, the undersigned, one of Her Majesty's Justices duly assigned to keep the peace of our Lady the Queen in and for the Colony of New South Wales, that on Sunday, the 16th day of September, in the year of our Lord 1894, at 15 minutes after 2 of the clock in the forenoon, one Charles McCrone, *alias* George Mitchell or Thomas Nolan, did drink liquor in the licensed premises known as the "White Horse Hotel," situate at Parramatta, in the district of Parramatta in the said Colony, and within the Parramatta Licensing District, he, the said George Mitchell, not then being a *bonâ fide* lodger in or inmate of the said licensed premises, and not being then a traveller, contrary to the Act in such case made and provided; whereupon the said Robert Megarvy prays that I, the said Justice, will proceed in the premises according to law.

Exhibited at Parramatta, in the said Colony, on the } ROBERT MEGARVY.
day first above written, before me,— }

STEPHEN MURPHY, Justice of the Peace.

THIS deponent, *Robert Megarvy*, on his oath, saith as follows:—I am a senior sergeant of Police, and reside at Parramatta, and sub-inspector under Licensing Act; the informations read are mine, and they respectively refer to three defendants now before the Court; defendant Sydney George Parkes is licensee of the "White Horse Hotel;" on morning of 16th September, from information received, I went to the hotel in company with Constable M'Dowell, shortly after 1 o'clock—about ten minutes past; we went to George-street side of hotel, then Constable M'Dowell left me; whilst there I saw the two parlours lit up, and I heard several voices, and heard some noise, which I believed to be card-playing; Constable M'Dowell returned to me; we then went to back of premises, Church-street side; we went through the gate into the yard and into the billiard-room, the door being open between that room and the yard; I did not see anything then, but heard a shake in the hat, as if dice were thrown several times; after that I heard someone say—I believe the barman—"What is yours? what is yours? what is yours?" then I heard footsteps going into the bar; Constable M'Dowell left me and went towards where the noise was; I saw Parkes while we were in the billiard-room lock the back door; we were behind the billiard-room; from the time he was away I believe he locked the back gate; after that M'Dowell and I went into the parlour where the men were sitting; there was the publican and four others; that would be about ten minutes or $\frac{1}{4}$ past 1 when we were in the billiard-room; we were in the billiard-room about a quarter of an hour; about twenty minutes elapsed between the time I went to George-street side to the time we went into the parlour: the two defendants before the Court and a man who gave the name of Johnstone, and another man who gave the name of Charles Mitchell, were in the parlour; I said to Parkes, "This is a nice game you are carrying on;" he replied, "They are all lodgers;" there were five glasses on the table at the time; two of them had had beer in them, and froth on the glass; one of them had beer in it; two of them had had spirit—I believe whisky and lemonade—and the other one had had, I believe, brandy and soda; one glass, which seemed to be beer, was before Stone, two in front of Parkes, others in front of defendants; I proceeded then to ask their names; I spoke to Stone first; I asked him his name; he said, "John Henry Stone; I work for Mr. Purchase; I have not stayed at the hotel the night before;" I spoke next to Mitchell; he said he lived at Kellyville; I believe the distance from Parramatta

Parramatta to be five or six miles; I spoke next to a man who gave his name as George Johnstone, who also stated he had stayed at the house the night before, and lived at South Creek; South Creek is about 14 miles from Parramatta; I next asked Delaney his name; he said, "Sidney Jones"; he had his hat down, and I took hold of it and said, "Don't you think I know you"? he then gave his name, and stated he lived in Church-street, and that he had not stopped at the house the night before; the bar was open, and the barman in there; the light from the parlour shone into the bar; I went to George-street side, and asked Parkes to open the door; he said, "Get out the way you got in"; only a few minutes elapsed before the door was opened; the man who acted as barman that night opened the door; he was very drunk, and M'Dowell and myself came out; the parlours were still lit up; the room we were in was right next to the bar; Parkes was in the room when the defendants gave their name, one which I know to be fictitious.

Cross-examined by Mr. Bull: I was not very excited; I will swear the publican did not let me out; I left the house about quarter past 1; I was not there at 2 or quarter past 2; I gave the time 2 or quarter past 2 to the officer who took the information; I have made a mistake in the information; at about quarter past 2 I would be going home; I do not know the time any one of the defendants went into the house; I have told all I remember having said and seen; none of them said they had paid for their beds; they did say they had arranged to stay there; Johnstone said he was there the night before; I saw five glasses; I will swear the only glasses were five, three on the table; Mr. Parkes did not say they had paid him a shilling for their beds; I believe the defendants and the man who acted as barman were the only persons in the house; there was no light in the bar; I did not see the barman go into the bar; he brought nothing from there while I was there; I heard a noise like a shake in the hat; it was as if dice were shaken in the hat; Parkes has been keeping the place for about five or six months; I have never seen dice in the house; Parkes only left the room once while we were behind the door; until I appeared at the parlour door, nothing that I did could have shown I was there; I believe Parkes said, "Give your right names; there is nothing in it"; I had known Delaney for years; I don't know whether defendant stopped at the house that night or not.

Cross-examined by Mr. Richardson: Delaney had his hat over his face when I asked him his name; South Creek is in the County of Cumberland.

R. MEGARVY.

Taken and sworn at the Police Court, Parramatta, }
this 26th day of September, 1894, before us,— }

F. W. EDWARDS, P.M.
R. W. HARPER, J.P.

THIS deponent, *Alexander M'Dowell*, on his oath, saith as follows:—I am a constable of police and reside at Parramatta; I remember accompanying Senior-sergeant Megarvy, on the morning of 16th instant, to the "White Horse Hotel;" we went about 10 or 15 minutes past 1; I looked at the clock in the lock-up before I went out; we went to George-street side; I saw a light in the parlour window between the private bar and the public bar; I heard a noise inside; I went round to the side door facing Church-street; I knocked at the side door; I got no answer; I then went to the gate further down the street; I opened the gate without difficulty; I opened it from the outside; I went back to the senior sergeant; we then both went round to Church-street and into the back yard; we went thence into the billiard-room; the door was not locked, and into the passage between the billiard-room and the room where the defendants were, I heard defendants disputing as to whom should pay for drinks; I heard someone say, "You don't mean to say I want to have you for a drink; I'll pay for the b—— drinks;" another voice said, "Well, we will have another shake"; I heard someone coming, and the sergeant and I went back into the billiard-room; someone passed out to the back yard and returned through the billiard-room; the sergeant and I were then in the billiard-room; whoever passed through that room closed the back door and locked it, and then closed, but did not lock, the door the sergeant and I were behind; I opened the door again and went into the passage leading to the room where they were; I went down to the door of the room where they were; one of the four defendants held up a hat; they shook the hat, in which something was rattling, and then turned it over on the table; someone got up and I went back into the billiard-room; I then saw the light under the door of the public bar, and heard a noise as of glasses rattling; when the light disappeared from the bar, I went back to the passage, and, after waiting a few minutes, I saw one of the men, who gave his name as George Johnstone, drink something from a glass; I then signalled to the sergeant, who was in the billiard-room, and we both went into the room where they were; there were five persons in the room, the four defendants and another man, Johnstone; the sergeant said to Parkes, "What sort of business is this?"; Parkes replied, "Oh, it is all right, they are all lodgers"; the sergeant asked the men their names, and I noted them down; when I went into the room with Senior-sergeant Megarvy, I saw five glasses on the table; one was almost half full of beer on about the middle of the table; another one had very little beer in it; but had the froth and smell of beer; another glass had the smell of spirits, and two others had had some brandy and mineral waters mixed; one glass was half full of beer; I did not see any glasses on the mantelpiece; I do remember Parkes saying, "Give your proper names, we don't want any humbugging"; when I first went into the room I closed the door leading in the bar, and when I noted down the names I opened the door; an employé or lodger of Parkes' was sitting behind the bar counter—he was very drunk; the sergeant and I then proceeded to leave; the sergeant asked Parkes to open the door—that was the door leading into George-street, Parkes said, "No, you will have to go out the way you came in;" sergeant said, "I won't; you open the door"; the man who had been sitting behind the bar then opened the door and let us out; about an hour elapsed from the time we both went over to the time we went into the parlour; after we left the hotel we returned to the lock-up; it was then between 20 and 25 minutes past 2; when I went to look in the room and saw the hat held up, the sergeant was behind me in the passage; I was at a distance more than once while we were in the house.

Cross-examined by Mr. Bull: I am lockup-keeper; I have no authority to enter a hotel; I went in first; I opened the gate first; I do not profess to use the very words the sergeant said when he spoke to Parkes. In answer to Mr. Richardson, I said the sergeant said, "What sort of a business is this"; the sergeant may have said, "This is a nice game you are carrying on"; the billiard room is at the back of the second passage; I was standing at the billiard-room door when I saw a light in the bar, I should say a candle or lamp light; I saw no candle or lamp in the place; I have forgotten a lot of the conversation.

By

By Bench: I know Delaney, he has been a resident at Parramatta for four years; I have seen Stone about Parramatta.

By Mr. Bull: All defendants said they were going to stay there all night; I do not recollect one of them saying they had paid for beds; we were almost an hour in the house, and about five or ten minutes outside the house, previous to entering the house; when I saw Johnstone drinking from a glass it was about a quarter past 2; the sergeant made a mistake in saying that the time was past 1; it is also a mistake him saying that he made a mistake in the information.

By Bench: I did not see any of the defendants leaving the house that night.

Taken and sworn at the Police Court, Parramatta, } A. M'DOWELL.
this 26th day of September, 1894, before me,— }
F. W. EDWARDS, P.M.

Three defendants discharged.

F. W. EDWARDS, P.M.

THIS deponent, *Sydney George Parkes*, on his oath, saith as follows:—I am a licensee of and I reside at the "White Horse Hotel," and was on 16th instant; I have been keeping the place for five or six months; when Megarvy and the constable came in Delaney, M'Lellan, McCrokan, and Stone, and Johnstone were in the house; they entered the hotel 3 or 4 minutes to 11; the man supposed to be Johnstone had engaged a bed; he had paid me, and when I was giving change the others asked for beds; they engaged the beds and paid for them (1s. each); they had a drink just about closing time; they all sat round the table in the parlour; I was not aware of the police until they showed themselves at the parlour door; everything was locked and barred at 11 o'clock; I never had dice in the house, and have not now; the men were not shaking for drinks; I have no barman; the bar was in total darkness; after the place was shut up there was a reflection from the parlour in the bar; no light was lit in the bar, and no drink was brought out after the first drink; when the police came in there were some glasses (three or four) on the mantelpiece; none of the men had been drinking liquor for an hour before the police came in; I did not hear any dispute about the payment of drinks; the men were all sober except the man in the yard; I had no knowledge that the man was behind the bar; the defendant stayed there that night, and Delaney paid for his bed, and stayed there on the Sunday night; I heard M'Dowell say that from where he was standing he could see a light under the bar; I did not hear anyone knocking; I let the police out; I said, "Hullo, sergeant, how did you get in"; he muttered something; I told the men to give their proper names; the sergeant handed one of the glasses to M'Dowell, who said he thought it was whisky; the sergeant demanded to be let out; I said, "Don't you think you had better get out the way you came in"; he demanded to be let out, and I took the key out of my pocket, and opened the door.

Cross-examined by Mr. Richardson: There were some glasses on the mantelpiece; those four persons had been sitting at the table since closing up time; I have been convicted for this sort of thing once before; I heard Delaney give his name to the sergeant; he might have given the name of Sidney Jones; the man who was in the bar was behind the bar; I did not say anything to him for being there; I heard the sergeant and constable M'Dowell swear that the man let them out; it is not true; with exception of Johnstone, they had all been in the house before; they never slept in the house before; previous to the men staying there, I had lodgers three or four days before; I have persons staying there oftener on a Saturday night.

Cross-examined by Mr. Bull: The key was in my pocket; I spoke to the man about being drunk.

Cross-examined by Mr. Richardson: The key was not in the lock.

By Bench: I had to take the key out of my pocket.

Taken and sworn at the Police Court, Parramatta, } S. G. PARKES.
this 26th day of September, 1894, before me,— }
F. W. EDWARDS, P.M.

THIS deponent, *Johnston Henry Stone*, on his oath, saith as follows:—I am a groom and coachman and reside at Mr. Purchase's, George-street, Parramatta; I remember night preceding morning of 16th instant, I went there a few minutes to 11; I spoke about a bed; Delaney and the other young fellow who was here were with me; we paid 1s. each for beds; we had one drink when we went in; there was not drink supplied to me before I went to bed after the first drink; there were no dice or anything else shaken in a hat; I did not hear anyone say, "I don't want to have you for a drink, I'll pay for the b—— drinks"; I heard no dispute about drinks; I do not think the yard man let Megarvy out, I think Parkes did; I left the house about 10 past 6 next morning; we used candles to go to bed, Fred, the yardman, brought them from the bar.

Cross-examined by Mr. Richardson: I have a place at Mr. Purchase's that I can sleep at; I have slept away about five or six times; I never slept at Parkes' place before; I felt tired so stopped at Parkes'; I know Constable M'Dowell, I saw him come into the room; no glasses were on the table when the police came in; I remember Parkes whispering to me while I was sitting in the Court; I don't remember what he said; I knew Delaney before he introduced M'Crohan to me in the town; I did not know Johnstone; Delaney has been a friend of mine for about six times; he lives somewhere in Church-street; I think we went to bed 1 o'clock or quarter past 1; during the time we were sitting at the table I don't remember anyone going out.

Taken and sworn at the Police Court, Parramatta, } JOHNSTON HENRY STONE.
this 26th day of September, 1894, before me,— }
F. W. EDWARDS, P.M.

Dismissed.

1894-5.

NEW SOUTH WALES.

POLICE DEPARTMENT.

(REPORT FOR 1894.)

Presented to Parliament by Command.

The Inspector-General of Police to The Principal Under Secretary.

Sir, Police Department, Inspector-General's Office, Sydney, 11 January, 1895.

In compliance with the instructions of the Chief Secretary, and as required by the Police Regulations, I have the honor to submit, for the Colonial Secretary's information and for presentation to Parliament, my Annual Report for the year 1894, accompanied by the usual statement of the strength and distribution of the constabulary.

New stations have been formed in the undermentioned places:—

Ulladulla	Eastern District.
Milthorpe	Western District.
Wyalong	Southern District.
Chatsworth	Northern District.
Lucknow	Western District.
Nine-mile	Northern District.
Burrawang	Eastern District.
Dundas	Eastern District.
Castle Hill	Eastern District.
Garangula	Southern District.
Mulgoa	Eastern District.
Yal-Wal	Eastern District.
Mount Drysdale	Bourke District.

Applications have been received for additional police for the following stations:—White Cliffs, Leichhardt, Peakhurst, Liverpool, Campbelltown, Parkes, Gulgong, Arncliffe, Mount Hope, Walbundrie, Alexandria, Strathfield and Homebush, Wanaaring, Yantabulla, Goodooga, Canowindra, and Wellington.

The stations at Bumberry, Goorangoola, and Purnamoota were discontinued.

To increase the strength of the Force at certain stations, and to fill vacancies occasioned as under, 138 appointments were made during the year:—

Resignations	43
Discharges	38
Dismissals	2
Superannuations	18
Deaths	12

Four Police pensioners died in 1894, who had been in receipt of pensions amounting in the aggregate to £377 6s. 3d.

Eighteen members of the Force of various ranks were superannuated during the year, ten receiving pensions at rates varying between £91 5s. and £191 12s. 6d., amounting in all to £1,425 0s. 5d. per annum, and eight were granted gratuities upon their discharge, which entailed a further charge upon the Fund of £876.

Seven widows of members of the Force were awarded gratuities from the Police Reward Fund amounting in all to £1,691 1s. 8d., and one a pension of £50 per annum.

The Treasury Accounts show that the condition of the Police Reward and Superannuation Funds still continues to become each year more unsatisfactory, as after debiting the pensions to 31st December against the Funds there remains a balance of only £17,609 3s. 11d., inclusive of investments, £17,000. Since the year 1890, when the investments to the credit of the funds amounted to £40,000, £23,000 worth of these debentures have had to be disposed of to meet the excess of expenditure over revenue.

The

The Station watch-house records in the Metropolitan District show a decrease for the year of 403 apprehensions.

Total number of arrests for 1894	22,941
Do do 1893	23,344

There were 678 more apprehensions for drunkenness, simple or accompanied by disorderly conduct, than during the previous year, and a slight decrease for habitual drunkenness.

Serious crime during the year is below the average, with the exception of arson, 110 cases having occurred, as against 90 in 1893. There is a decrease of 16 in the number of murders reported, also 200 less cases for burglaries and robberies from dwellings than in the preceding year. The numbers are as under :—

Offence.	1893.	1894.	Increase.	Decrease.
Arson	90	110	20
Murder	31	15	16
Burglary and robberies from dwellings.....	2,119	1,919	200

The statement following gives an idea of the licensing business transacted in the Metropolitan District during the year :—

Applications.	Granted.	Refused.	Withdrawn.	No Parties.	Total.
For new publicans' licenses.....	5	5
For conditional licenses	6	6	7	19
By landlords, under section 16	12	8	6	26
For colonial wine licenses	49	18	12	5	84
For publicans' transfers	395	24	54	17	490
For colonial wine license transfers ...	24	1	1	1	27

The number of public-house licenses in actual existence is 797, as against 808 in 1893.

There were 242 colonial wine licenses in existence in 1893, as against 231 in 1894; decrease, 11. Spirit merchants' licenses, 115 in 1893, as against 106 in 1894; decrease, 9. Brewers licenses, 8 in 1893, as against 10 in 1894; increase, 2. Packet licenses, 20 in 1893, as against 19 in 1894. Billiard licenses, 168 in 1893, as against 161 in 1894; decrease, 7.

Notwithstanding that the population in the city and suburbs has increased since the Principal Licensing Act came into force in January, 1882, from 248,231 to 426,600, an increase in thirteen years of 69 per cent, there are now 51 public-houses less, the numbers being 797 in 1894, as against 848 in 1882, or 1 public-house to every 528 of the inhabitants in 1894, as compared to one to 293 in 1882.

The Metropolitan Licensing Inspector reports that "this satisfactory result has not to any large extent been influenced by the operation of the local option vote, but to the administration of the Act by the Licensing Bench, upon representations made by the police."

A number of old premises that from age and dilapidation no longer provided any public convenience have been closed during the year, and licenses have been very sparingly granted to a new and improved class of building containing residential accommodation.

The Superintendent in charge of the Metropolitan District reports that "nothing out of the ordinary course occurred during the year. The small decrease in the number of persons arrested is no doubt mainly attributable to the withdrawal from the metropolis of a large number of police for service in the country for several months, rather than to any improvement in the moral condition of the people. The large decrease in proportion to population in the number of houses licensed for the sale of liquors since 1882 is, I think, on philanthropic grounds, eminently satisfactory.

"The Sunday closing clause is, I regret to say, no better observed by licensees than in previous years, and it is found impracticable, without neglecting other important duties, to employ a sufficient number of men to enforce this law.

"The Metropolitan Police Barracks established two years ago have been of the most essential service in enabling me to have in constant readiness a considerable number of men for despatch to the country at the shortest possible notice. They have been also of equal advantage in emergencies arising in the metropolis, their utility for the purpose of discipline having been found of the highest value.

"As a consequence of the large number of unemployed persons about the city, the annoyance to the public of persons standing on the footways has been considerably aggravated during the year. The existing Municipal by-laws are found inadequate to meet the evil, and such an amendment of our Police Act as would enable the Police to suppress this pernicious practice is urgently called for."

During the year, 1,110 inquests were held on the bodies of deceased persons, and in 89 cases death was found to be the result of intemperance.

One hundred and sixty-seven inquests on fires were held, in which 68 were returned as "wilful," 52 as "accidental," and 47 not specified.

There have been 586 inquiries for missing friends during the year, out of which 271 persons sought for have been discovered by the Police. These figures include 152 cases reported from Great Britain and elsewhere beyond Australasia. The figures show an increase as compared with 1893 of 107 reported missing and 48 found.

I think it desirable to draw the Chief Secretary's special attention to the constantly-increasing duties imposed upon the Police relating to matters entirely foreign to their legitimate functions. I enumerate below some of the duties referred to, together with figures, which will give an idea of the large amount of work entailed.

Proceedings have been taken by the police on behalf of the Public Instruction Department under the compulsory education clauses for neglect to send children to school and recovery of school fees, &c., in 1,807 cases. Inquiries have also been conducted for the Master-in-Lunacy in 664 cases; 385 cases for the State Children's Relief Department and the Government asylums; 98 cases on behalf of the Superintendent of the N. S. S. "Sobraon"; 659 inquiries were made by the police for fossickers to recover moneys advanced to them by the Superintendent of the Labour Bureau, and 650 notices were served on behalf of the Land Board.

The police also perform the duties of—

Acting Clerks of Petty Sessions.
 Crown lands bailiffs.
 Acting gaolers.
 Acting forest rangers.
 Inspectors of weights and measures.
 Inspectors of slaughter-houses.
 Inspectors of distilleries.
 Inspectors under Fisheries Act.
 Inspectors under Gunpowder and Explosives Act.
 Inspectors under Licensing Act.
 Local authorities under Noxious Trades and Cattle-Slaughtering Act.
 Local authorities, Dairies Supervision Act.
 Agents for Curator of Intestate Estates.
 Collectors of Electoral Roll.
 Collectors of pastoral, agricultural, mills, manufactories, private schools, and slaughtering establishments.
 Mining registrars, Wardens' clerks, and bailiff's.
 Issuers of miners' rights, business and mineral licenses.
 Registrars of Small Debts Courts.
 Bailiff's of Small Debts Courts.
 Customs Officers.
 Agents for Aborigines Protection Board.
 Agents for inquiries under Poisons Act.
 Deputy Electoral Registrars.
 Local authorities under Diseased Animals and Meat Act.

I am not prepared to suggest any alteration in the system, which is in all probability the most effective method for securing a due performance of the work required, as it certainly is the most economical; but it has disadvantages, and constant complaints are made by the public of the protracted absence of constables from their stations, and the necessary neglect of patrols and other active measures for the detection of criminals and the prevention of crime.

During the past year, from the month of July to the close of the year, shearing troubles existed throughout one-half the area of the Colony, which necessitated the withdrawal of three officers and 282 non-commissioned officers and constables from Sydney and other districts for duty in the localities where disturbances occurred, such force being in addition to that available in those districts.

The cost entailed in moving bodies of mounted and foot police to such remote places, in the escort of prisoners, and also in maintaining the police, was very considerable, and the difficulty in making provision for the discharge of the necessary duties during their absence from their stations taxed the officers and men remaining to their utmost, but fortunately no increase of crime resulted, nor failure to satisfactorily deal with any serious offences committed.

The following is a statement of the apprehensions made by the police in connection with the strike disturbances:—

For riot and riotous behaviour	85
„ arson... ..	18
„ malicious injury to property	19
„ assault and obstructing persons from following lawful occupations	47
„ threatening language	1
„ insulting language	1
„ using offensive words	1
„ unlawfully and falsely imprisoning	1
„ obscene language	1
„ illegally using a horse	1
Total... ..	175

During the strike I caused an estimate to be made of the number of persons throughout the Colony in camps and unemployed, and the returns gave the total number as about 16,000.

During the past year a consignment of 200 Webley service revolvers have been received towards the completion of the arming of the foot police.

The conduct of the police generally has been exceptionally good, only two men having been dismissed from the service during the year.

I have, &c.,

EDMUND FOSBERY,
 Inspector-General of Police.

RETURN

RETURN of the Strength and Distribution of the Police Force on the 31st December, 1894.

Police Department,
Inspector General's Office,
8th January, 1895.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

REMOVAL OF CONSTABLE EASTERBROOK FROM THE
POLICE FORCE.

(CORRESPONDENCE, &c., RESPECTING.)

Ordered by the Legislative Assembly to be printed, 26 February, 1895.

RETURN to an Order made by the Honorable the Legislative Assembly of New South Wales, dated 18th December, 1894, That there be laid upon the Table of this House,—

“Copies, of all minutes, Reports, Statements, Correspondence, and other documents having reference to the removal of ex-Constable Easterbrook from the Police Force.

(*Mr. Fegan.*)

Petersham, 1 January, 1892.

SENIOR-CONSTABLE Skinner respectfully reports 2nd-class Constable Henry Stanton, No. 6,040, and 2nd-class Constable Nathaniel Easterbrook, No. 6,034, to their officer for behaving in an indecent manner with two prostitutes on a vacant piece of land off Crystal-street, Petersham, at 1.45 a.m., 1st instant.

The senior constable who was doing duty in company with Constable Aiken watched the constables' conduct for some time, and on getting up to Constable Stanton, the senior constable found him (Stanton) in the very act of prostitution with a woman named Mary Gale, who is well known to the police. Constable Easterbrook, who was lying a few yards away with another prostitute, named Burns, and on being observed, got up, leaving the woman lying on the ground.

These two constables were on duty, being told off to work together.

W. SKINNER,

Senior Constable.

N. Larkins, Esq., Inspector.

Forwarded to the Superintendent.—N. LARKIN, Insp. 2/1/92. G. Read, Esq., Supt. Memo.—Burns is the girl who some years ago complained of ex-S.-C. Wright.—G.R.

Petersham, 1 January, 1892.

CONSTABLE H. STANTON respectfully explains, in reference to S.-C. Skinner's report, that he so far forgot himself as to go with this girl, Mary Gale. The constable feels his position very keenly, such a thing never having occurred before. The constable hopes his superintendent will take the position of the constable into his kind consideration, and his previous good character.

HENRY STANTON,

Constable.

N. Larkins, Esq., Inspector.

Petersham, 1 January, 1892.

CONSTABLE EASTERBROOK respectfully begs to explain in reference to S.-C. Skinner's report of this date. The senior constable did not see the constable lying alongside any woman on the date mentioned, as such was not the case. The constable did speak to two girls on the morning in question and requested them to go home, as it was getting rather late. The constable then went up the street some 50 yards away, and left the two girls in company with Constable Stanton. One girl came after the constable, and the constable was again requesting her to go home when the senior constable came up and asked who the woman was over there. The constable replied he did not know. The senior constable then said "Come and see." The constable went with the senior constable, who asked the girl her name. She replied "Burns," and that was all that passed.

NATHANIEL EASTERBROOK,

Constable.

N. Larkins, Esq., Inspector.

Petersham, 2 January, 1892.

CONSTABLE EASTERBROOK respectfully begs to make a further explanation regarding S.-C. Skinner's report against the constable. As the constable did not have time last night when S.-C. Ford read S.-C. Skinner's report to him.

The constable was on duty the night in question with Constable Stanton. About 2 a.m. we were in Crystal-street, and met two girls at the corner of Crystal and Westbourne Streets. The constable said to the girls, "It is getting late, and it is time you went home." The constable then walked on up Crystal-street to the corner of Douglas-street, and on looking around, missed Constable Stanton and saw one of the girls coming up the street towards him. She said, "My mate has gone home." The constable told her she had better go home too, and she then went away across a vacant allotment, and when she went about 50 yards I turned to look for Constable Stanton, and saw S.-C. Skinner and Constable Aiken coming. S.-C. Skinner said, "Who is that woman going over there?" I said, "I don't know her." He said, "Come and we will see," and we followed her, and S.-C. Skinner said to her, "What are you doing here?"

442—

here?" She said she was going home. He said, "What is your name?" She said, "Burns." He said, "Where do you live?" She said, "Westbourne-street." Constable Stanton came up then, and S.-C. Skinner said, "I am ashamed of you, Stanton," but said nothing to me, but told us both to go down to Parramatta Road. About an hour afterwards we met S.-C. Skinner again, and Constable Stanton said, "Are you going to let that affair go any further?" He said, "I can't do anything else; I will let you down as light as I can." I then said, "There is nothing against me, Senior?" He replied, "There is nothing against you, Easterbrook."

S.-C. Skinner states the constable was lying down with a woman.

The constable was not lying down with a woman. The constable did not leave Crystal-street from the time he passed the two women at the corner of Crystal and Westbourne Streets until he saw S.-C. Skinner come up to him in Crystal-street.

The constable begs to state that he has been married over seven years, and has two children, and has been in the Police at Petersham sixteen months, and received full pay after ten months' service, and this is the first charge of any kind that has ever been brought against him. The constable has had more felon cases since he has been in Petersham than all the other constables put together, and he has never done a mean or dishonourable action in his life, and if he was guilty of this charge would plead guilty the same as Constable Stanton has done. S.-C. Skinner did not accuse the constable of any misconduct of any kind on that night, and the constable was surprised when he found himself reported.

When the constable joined the Police he was recommended by Mr. Gould, the late Minister for Justice, and Mr. Dudding, C.P.S, at Singleton; also Mr. Hugh Munro, Mayor of Singleton. He has a brother in the Police at Walgett (acting gaoler), and five other brothers in business for themselves in various parts of the Colony; and as this charge might be the means of seriously damaging the constable's future, he would respectfully request his superintendent, before he would finally decide this case, to have S.-C. Skinner and the constable brought before him, so that the constable would have an opportunity of asking S.-C. Skinner some questions, and verifying this statement.

NATHANIEL EASTERBROOK,

N. Larkins, Esq., Inspector.

Constable.

Petersham, 3 January, 1892.
