39. Within fourteen days, or such further time as may have been allowed by the Land Appeal Court for the purpose, from the making of any order or the hearing of any matter, any party may lodge with the Registrar a notice requiring the Land Appeal Court to state a case for the Supreme Court. Every such notice shall, except when given by the Minister, be accompanied by a deposit of £20 as security for any costs that the person giving the notice may be ordered to pay. Within seven days thereafter such person shall serve the Registrar with a draft of the case to be thereafter settled by the Land Appeal Court, and shall also serve the other party with a copy of such draft.

40. If a person requiring the Land Appeal Court to state a case as aforesaid fails to bring the case before the Land Appeal Court to be settled without unnecessary delay, or to perform any condition or matter prescribed by the last preceding rule, the Land Appeal Court may refuse to state such case, and may order such deposit or any part thereof to be forfeited; and the other parties concerned may thereafter proceed as if the application for a statement of a case had not been made.

41. When the Land Appeal Court desires of its own motion to state a case for the Supreme Court, a copy of the case proposed to be stated shall on application be furnished by the Registrar to each of the parties concerned, and the Registrar shall give not less than seven days' notice in Form 5 of the day appointed by the Land Appeal Court for the settling thereof, and the Land Appeal Court shall thereafter proceed to hear the parties and to settle the terms of such case.

42. When any case has been returned with the decision of the Supreme Court thereon, the Land Appeal Court shall appoint a day for the making of any orders which may be proper for the carrying out thereof, and the parties shall be heard as to the nature of the orders which may be required.

43. Any notice or other documents which any party is required by these Rules to give to or serve upon any other party concerned in connection with any motion or special case shall, in the case of the Crown, be given to or served upon the Crown Solicitor.

44. Any period of time limited by these rules for the performance of any matter may, upon cause shown, be enlarged, shortened, or otherwise varied by the Land Appeal Court.

45. In any case in which it may be found that a direction as to procedure is required, and that the provisions of these rules are not applicable or sufficient, the Land Appeal Court may in each such case give directions as to the course to be adopted, and the parties shall proceed accordingly.

46. Any appellant may withdraw his appeal by giving notice to the Registrar in Form 6 not less than fourteen days before the date fixed for the commencement of the sittings of the Land Appeal Court at which such appeal would in due course come on for hearing, and on receiving such notice the Registrar shall inform the other party or parties

concerned and the Chairman of such withdrawal ; and the Land Appeal Court may make such order in respect of the appellant's deposit as the said Court may think fit.

47. Upon the final disposal of any appeal or reference to the Land Appeal Court, the Registrar shall forward to the Minister all papers connected with the case.

48. When the Land Appeal Court has ordered any matter to be returned or remitted to the Board, the Registrar shall forward to the Chairman all papers connected with the case, and a minute of the Court's order and direction in that behalf.

49. The Registrar shall allow any officer authorized by the Minister or Under Secretary in that behalf to have access to and to take copies of all papers in his possession connected with any case in respect of which an appeal is pending, or which has been referred or returned to the Land Appeal Court by a Board or the Minister, and if so required shall, without payment of any fee, furnish a copy of all such papers to the Minister.

SCHEDULE.

SCALE OF FEES PAYABLE TO THE REGISTRAR OF THE LAND APPEAL COURT.

	s.	d.
On issuing a subpoena	0	6
On issuing a copy of a certificate of an order of the Land Appeal Court ...	2	6
On filing an affidavit or statutory declaration	1	0

In the matter of [*the nature of the case, names of parties, &c., to be here set out*].

WHEREAS I [*name in full and address to be here stated*] on the day of appealed to the Land Appeal Court from the decision of the Local Land Board at in the above matter: And whereas I am desirous of withdrawing the said appeal: Now, I hereby give you notice that I withdraw the said appeal and accept the aforesaid decision of the Local Land Board.

Signed this day of 189 .

(*Signature of appellant.*)

To the Registrar of the Land Appeal Court.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CROWN LAND BILL OF 1894.

(RETURN OF LAND AT PRESENT AND PROSPECTIVELY AVAILABLE FOR SELECTION IN THE CENTRAL DIVISION.)

Ordered by the Legislative Assembly to be printed, 19 September, 1894.

SYNOPSIS, Statistical Tables, with Diagrams, &c., in connection with Crown Lands Bill of 1894.

RETURN of Land at present and prospectively available for Selection in the Central Division.

Central Division Leases.

Clause 3. In this clause the legal rights of lessees, to whatever extensions may be awarded them under section 43 of the Act of 1889, are recognised; but provision is made for the withdrawal (after three months' notice in the *Gazette*) of land from lease for the purpose of settlement. Not more than half the leasehold can be withdrawn. The withdrawal of the maximum quantity may take place at once or by a series of withdrawals of not less than one-eighth of the area. Withdrawal will be followed by compensation to the lessee in the shape of an extension of lease proportioned arithmetically to the area withdrawn, on the basis that if half the leasehold be resumed the remaining term of lease for the balance will be doubled, and the lessee will be entitled to hold the withdrawn area under preferential occupation license, and to claim as his property the improvements on the withdrawn area.

In recognition of the possibility that the land withdrawn may be of different quality to the balance left under lease, provision is made for an extra extension or an adjustment of the extension, and for a reappraisal of the rent of the land remaining under lease.

One special advantage claimed for the provisions of this clause over any scheme of general division of leaseholds is that lessees will be required to part with a portion of their holdings only when an actual public necessity has arisen, and the Crown will not be called upon to oust one tenant until, it might be said, the second one has come on the field. Apart from this, only such land need be taken from the lessees as may be suitable for settlement, and the opportunity will be given of concentrating settlers in particular localities where the conditions are favourable to their remaining permanently.

In order to avoid any possibility of misinterpretation of the clause, the arithmetical operation of arriving at the compensatory term is explained, being merely an application of "the rule of three." In the language of the Bill, "The method of ascertaining the added period shall be by multiplying together the unexpired period and the area withdrawn and dividing the product by the area left." The following examples are worked out by way of illustration:—

Case A.

From a lease of 40,000 acres half the area is withdrawn at a time when the lease has, say, five years to run:

20,000 area withdrawn	
5 years' unexpired period	

Area left 20,000)	100,000(5 years' extension
_____	100,000

That is to say, he will hold 20,000 acres for ten years in lieu of 40,000 acres for five years.

Case B.

From a lease of 40,000 acres one quarter (10,000 acres) is withdrawn at a time when the lease has five years to run :

10,000 area withdrawn
60 (months) unexpired period

Area left 30,000) 600,000 (20 months' extension
600,000

In this second example it might at first sight appear that the lessee should receive $2\frac{1}{2}$ years' extension. It has, however, not to be forgotten that three-fourths of the original area is left under lease, and what the lessee is entitled to is a five-year term for one-fourth, distributed over the remaining three-fourths; that is to say, 5 years divided by 3, viz., $1\frac{2}{3}$ or 1 year and 8 months. Putting it in another way: The lessee upon losing 10,000 acres for five years, should receive another 10,000 acres for five years, but instead he will receive three times the quantity (*i.e.*, the balance of the leasehold) for one-third of the term.

Occupation License of Leasehold Areas.

Clause 4. All holders of extended central leases will have the privilege of holding their leaseholds under preferential occupation license on the expiration of their leases.

With regard to improvements, all such as may be effected after the occupation license comes into existence will be regarded as the lessees' property. Those effected previously will be claimed by the Crown, as the lessees will have been compensated for them by any extension of lease that may have been granted. Improvements on lands withdrawn from the leasehold will, however, be regarded as the lessee's property at whatever time they may have been made.

The Governor will have the power of refusing renewal of any such preferential occupation licenses on three months notice, but the licensee will have tenant right in his improvements.

On lessees whose leases may not be extended (or who may withdraw their right to extension) the privilege of a preferential occupation license has already been conferred by section 43 of the Act of 1889, and the Declaratory Act of 1889, 57 Vic. No. 27.

Power of withdrawal from Western Division Pastoral Leases.

Clause 5. The same power of withdrawal as proposed in Clause 3 with respect to Central Division pastoral leases is proposed also with respect to pastoral leases in the Western Division, except that the least area capable of withdrawal will be $\frac{1}{16}$ of the total leasehold. Withdrawal will be followed by the same compensation in regard to extension of term and preferential occupation license as is provided in connection with the Central Leases.

The exercise of this power will admit of provision being made for extra urban settlement.

Pastoral and Homestead Leases in Western Division.

Clause 6. So far as these are concerned, the provisions of section 43, of the Act of 1889, will be superseded by lessees receiving an absolute extension of seven years, making the present term twenty-eight years in all. The rent for the last seven years will be at the same rate as that for the preceding seven years. These provisions will not apply to leases not brought under section 29 of the Act of 1889. The leases not brought under that Act include only 7 Pastoral Leases and 21 Homestead Leases.

On the expiration of any Pastoral or Homestead Lease the lessee will have tenant right in his improvements.

Attachment of Resumed Areas to Leasehold Areas.

Clause 7. In recognition of the fact that in some parts of the Western and Central Divisions the division of the pastoral holdings was unnecessary, and has led to the neglect or deterioration of resumed areas for which no demand (except under occupation license) has sprung up or is likely to spring up, provision is made to place such resumed areas again under pastoral lease, an arrangement calculated to benefit lessees, and to be of advantage to the public estate and revenue.

The resumed area may be added to the leasehold area at the same rate of rent as the leasehold area if the Minister and the lessee agree, or, failing such agreement, at the license fee rate or at an appraised rate, according as the Minister may determine.

Reappraisal of Rents in the Western Division.

Clause 8. It has to be acknowledged that in consequence of the existence of rabbits, the expense of destroying or checking them, and in consequence of the fall in prices of stock, &c., &c., the rents which pastoral and homestead lessees and occupation licensees are required to pay have become in some instances excessive. To remedy this grievance provision will be made for a reappraisal on the application of the lessee, which will take in the rent (of a lease) for about the next ten years.

The application must be accompanied by a deposit as security for half cost of the reappraisal, which will be charged against the applicant.

Lessees, who brought their holdings under the Act of 1889, started a new term of twenty-one years (divided into three seven-year periods), commencing from the end of the year of the lease current at the commencement of that Act (1 December, 1889). Most of the leases had, under the Act of 1884, commenced about July, 1885. The new term, under the Act of 1889, therefore commenced about July, 1890, so that the first period of seven years would end about July, 1897, when, under the Act of 1889 a new reappraisal of the second period would take place.

The Bill anticipates this reappraisal by providing an appraisal of the residue of the first period with the second period—about ten years in all.

New Pastoral Leases.

Clause 9. The power which the Governor will possess of granting pastoral leases (with a term not exceeding ten years) over lands not likely to be required within ten years for occupation in smaller areas under other provisions of the Bill, promises to encourage persons to rent lands which at present are deteriorating and are unproductive to the State.

The leases will be put up to auction or tender.

The right of the Crown to withdraw land from lease for settlement will be reserved, as in clause 3 of the Bill; but even if half the leasehold were withdrawn, and the withdrawal should take place while the lease has more than five years to run, the extension will not exceed five years.

The lease will be subject to such conditions of improvement as may be notified in the *Gazette*.

On the expiration of the lease the lessee will have tenant-right in improvements.

Classification and Survey of Crown Lands.

Clause 10. This is one of the most important clauses of the Bill, and promises to remedy a long-felt grievance. By this clause the Governor can set apart tracts of land for such purposes as Homestead Selections, Settlement Leases, Improvement Leases, &c., and to have the lands subdivided into blocks suitable for the class of holdings for which the land may be intended to be made available. The size of blocks will be determined by the question as to how much land is required to support one family, so that the blocks may vary in size not by any capricious method or accidental circumstances, but according to the quality of the land and the quantity deemed sufficient for one holder.

Homestead Selections.

Clause 11 to 15. This marks a new departure in legislation, the cardinal principles of which will be the acquisition of lands under easy terms, but stringent residential conditions. A selector henceforward will be in a position to obtain land in fee-simple and establish a home without the dread of being weighed down by financial difficulties at the start. The land will be surveyed, and its value, and the value of any improvements, fixed before he applies for it, and there will be no uncertainty as to his rights of possession. The area may range from 1,280 acres downwards, and the value of classified land may range from 10s. per acre upwards, but if the selector chooses to select the land before classification and survey, the value will be accepted as £1 per acre (see Clause 17). Like an ordinary conditional purchaser the selector will have to reside five years, and cannot therefore transfer until five years. After that term residence will continue as a perpetual obligation either upon each successive holder of the land or upon his deputy. During each year the former must reside at least seven, or the latter ten, months; but the obligation may be relaxed or excused whenever circumstances dictate that a concession is necessary.

For the first five years the land will be subject to a rent of 3d. in the £, payable in half-yearly instalments. Half a year's rent, with the whole, or one-third, of the survey fee (according to the selector's option), must be deposited at the time of application. The balance of survey fee will be payable by instalments within three years from date of application. The value of improvements will be payable in three annual instalments, with 5 per cent. interest. Within the first eighteen months a dwelling-house worth £50 has to be erected, and afterwards maintained. After the first five years a grant will issue without payment of any purchase money, and on issue of the grant the land will be subject to a perpetual annual payment of £3 10s. in every £100. For example, on 640 acres, if valued at £640, the following payments would be due, contrasted with those on an ordinary conditional purchase. It is assumed that the survey fee will be the same in both cases.

Homestead Selection.		Conditional Purchase.	
	£ s. d.		£ s. d.
1st year	8 0 0 rent	64 0 0 deposit	10 15 0 survey fee
	3 11 8 survey fee		
2nd year	8 0 0 rent	Nil.	
	3 11 8 survey fee		
3rd year	8 0 0 rent	Nil.	
	3 11 8 survey fee		
4th year	8 0 0 rent	32 0 0	instalment
5th year	8 0 0 rent	32 0 0	"
	£50 15 0	£138 15 0	
House	50 0 0	320 0 0	Fencing or improvements
	£100 15 0	£458 15 0	

Homestead Selections without Personal Residence.

Clause 16. Are provided for, subject to the selector residing by deputy, provided that the calling of the selector prevents his residing, and that he ultimately intends to establish his home on the land. These provisions are calculated to encourage town residents to acquire a homestead for a later period of their life. Safeguards are provided against the improper use of the privileges offered. The rent for the first five years will however be 3½ per cent.; the survey fee must be paid in one sum at the time of application, and the homestead must be of the value of £100. In addition, the selector must have one-tenth of the area within three years and one-fifth during the fourth and fifth years under cultivation. The other provisions as to homestead selections will apply.

Homestead

Homestead Selections not in Homestead Selection Areas.

Clause 17. This clause permits selection before classification and survey. Such land as may be open to conditional purchase will be available for the purpose. The maximum area will be 640 acres in the Eastern or 1,280 acres in the Central Division. The value of ordinary land (*i.e.*, land not within a special area) will be taken as £1 per acre. The rules of measurement in connection with conditional purchases will apply.

Conversion of Conditional Purchases into Homestead Selections.

Clause 18. The holders of conditional purchases, by being entitled to convert them into homestead selections, will have an opportunity (subject to the obligation of perpetual residence) of escaping from their present financial burdens. This applies particularly in cases where selectors have conditionally purchased special areas and have found the cost too great. The selector, by paying a perpetual rent equal to $3\frac{1}{2}$ per cent. on the unpaid balance of purchase money (which will be taken as the capital value of the land) may secure his grant, and obtain substantial relief. For example, say a block of 500 acres, selected as a special area at £2 per acre, *i.e.*, £1,000, and that the selector has by his deposit and instalments reduced his balance to £1 10s. per acre, *i.e.*, £750,—instead of having to pay an annual instalment of £50 he would have to pay a rent of $3\frac{1}{2}$ per cent. on £750, *i.e.*, £26 5s.

Surrender, &c., of Homestead Selections.

Clause 19. Homestead selectors who may surrender their holdings will be entitled to tenant right in improvements. The privilege can be extended (where special circumstances may warrant) to cases where forfeiture has occurred.

Subdivision of Homestead Selections.

Clause 20. The Governor may sanction the subdivision of a Homestead Selection, and in doing so, may apportion the rent, or discharge it from any portion from it, and determine the block or blocks on which residence is to be carried out or discharge them from that obligation. And generally may make such arrangements and impose such conditions as the circumstances of the particular case may suggest.

These provisions are necessary in anticipation of lands becoming valuable, perhaps becoming the site of a private town, and being subdivided into a number of blocks held by many different persons.

If the Governor's sanction be not sought and obtained, each of the portions into which the selection may have been subdivided will be liable to a condition of residence.

General Provisions as to Conditional Purchase made Applicable to Homestead Selections.

Clause 21. This clause makes the provisions of the following sections of the Crown Lands Acts applicable to Homestead Selections:—

- Section 123, Act 1884—Minors enabled to make valid agreements.
- 141, Act 1884—Contributions, &c., to boundary fences.
- „ 32, Act 1889—Reversion on forfeiture to holding in which the land may be situated.
- „ 42, „ —Power of resumption of lands for roads.
- „ 44, „ —Provisions as to ownership, purchase, &c., of improvements on land applied for.
- 55 Vic. No. 1—Waiver and reversal of forfeiture Act.

Protection of Homesteads, &c.

Clause 22. This clause is designed to enable a homestead selector or conditional purchaser to secure his home in the event of financial difficulties by protecting it (on registration at the Registrar-General's office) to the extent of £200. The idea is borrowed from the United States and Canadian law.

Unless the sum up to which the land has been protected is first paid into the Supreme Court, the land cannot be sold under a writ of execution, or taken for the benefit of creditors upon the holder's bankruptcy.

The money paid into Court will be invested (with the approval of the Court and subject to such terms and conditions as it may impose) for the permanent benefit of the holder of the land or his family.

The protection will not be obtained if at the date of registration the selector was in insolvent circumstances, and it will cease when he ceases to live on the land as his home; when he obtains protection for a second holding; or when he himself withdraws the registration.

The protection will not affect any cause of action accruing before registration, and will not affect the powers of the mortgagee in the case of a mortgage executed after issue of the grant, and registered under the Real Property Act.

Settlement Leases for Agriculture and Grazing.

Clauses 23 and 24. The Bill here provides for leases of agricultural land up to 1,280 acres, and of grazing land up to 10,240—the actual size of the block to be, however, regulated according to its capability of supporting one family. The land will be measured beforehand, and valued at not less than 10s. nor more than £1 per acre. A survey fee will be payable. The lease will be subject to an annual rent of 3d. in the £, and will have a term of 28 years. The main conditions of the lease will be:—

Residence for seven months in each twelve by the lessee during the whole term.

Fencing within the first three years.

One-quarter of the area to be cleared of scrub during each seven years.

The land to be kept clear of rabbits, noxious weeds, &c.

No transfer or subletting (except with Ministers' consent) unless by way of *bona fide* mortgage.

The owner will have tenant right in improvements on the expiration of the lease, and may under clause 26, take up 1,280 acres as a homestead selection. Improvement

Improvement Leases.

Clause 25. The clause under this head contains elastic provisions for efficaciously dealing with scrub and inferior lands unsuitable for settlement in their present condition. It has been found that the circumstances in different localities vary so largely that no hard and fast rules can be made applicable, and accordingly the Bill provides that the terms of the lease may be accommodated to requirements in each individual case.

Leases of this character will be let by auction or tender, in areas not exceeding 10,240 acres, and for a term of 28 years.

The lessee will have tenant right in improvements on expiration of the lease and right of selection of a homestead of 640 acres under clause 26.

Homestead Grants out of Leases.

Clause 26. Holders of the following leases are offered the privilege of a homestead selection within their holdings. The minimum area which may be purchased is 40, the maximum 640 acres, except in the case of a settlement lease, when the maximum is 1,280 acres.

Pastoral leases in Western Division.

Homestead leases.

Scrub leases not within pastoral or homestead leases.

Leases of inferior lands.

Improvement leases.

The land to be purchased must contain the place of residence of the lessee. Application cannot be made until the last year of the lease.

The land must also have been improved to the extent of £1 per acre, except in case of a settlement lease where due performance of the conditions of the lease will be sufficient.

The capital value of the land will be taken as £1 per acre, unless it shall have been fixed at a lower rate.

Acquisition of Lands for purposes of Closer Settlement.

Clauses 27 to 29. Should the necessity arise the Governor may acquire or resume freehold lands for the purposes of closer settlement.

The Minister will have an estimate prepared of the total cost to the Crown of land proposed to be acquired and may enter into provisional agreements with the owners as to purchase or compensation.

Particulars will be laid before both Houses of Parliament for such inquiry as may be ordered, and after report a specific resolution will be moved in each House. The Governor may then enter into a contract to purchase, or may proceed by way of resumption, in which case the Governor will have powers similar to those conferred by the Lands for Public Purposes Acquisition Act.

To provide funds for the purposes of this clause, moneys not exceeding in any year £300,000 may be borrowed.

Sums borrowed and received will be paid into a "Lands acquired for Settlement Account."

Where the owners of the acquired or resumed lands are willing, payment may be made to them in debentures bearing interest not exceeding 4 per cent., and having a currency not longer than forty years.

Suspension of Payment of Instalments on Conditional Purchases.

Clause 30. To meet the case of selectors who may be unwilling to convert their conditional purchases into homestead selections, and yet may be unable to pay their instalments, provision is made for suspension of payment subject to payment of interest on the unpaid balance of purchase money during the period of suspension. The holder of a conditional purchase of 100 acres is required to pay £5 per annum by way of instalment: but he may have cleared 10s. per acre off his balance, which would stand at £50. In such a case he would be required to pay 4 per cent. interest on £50, *i.e.*, £2 per annum instead of £5.

It will be a condition of suspension that the conditional purchaser is resident and the holder *bona fide* for his sole use and benefit. Should he cease to be resident, or should the land be transferred, suspension will cease.

Term of Residence of Conditional Purchases applied for after the Bill becomes Law.

Clause 31. The term of residence on conditional purchases *applied for after the Bill becomes law* will be increased from five to ten years, and a distinct term of residence will attach to any new additional conditional purchases. The selector will be able (as he is at present) to transfer his conditional purchase at the end of five years, but during the second five years the transferee (or selector if he has not transferred) must reside seven months in each twelve, or his deputy ten months in each twelve.

Residence on Additional Conditional Purchases, &c.

Clause 32. The residence condition has been attached to additional conditional purchases to prevent the easy acquisition of lands by virtue of conditional purchases on which residence has ceased perhaps many years ago; previous residence will reduce the new term, but not beyond five years. The residence attaching to an additional conditional purchase may of course be carried out on the original or any additional conditional purchases of the series, and may be performed concurrently in connection with any conditional purchase of the series. For example—an original conditional purchase, if made on the 1st July, 1895, must be resided upon up to the 1st July, 1905. If an additional conditional purchase should be made on the 1st July, 1896, residence to satisfy the additional conditional purchase would be necessary up to the 1st July, 1906.

Additional Conditional Purchases and Conditional Leases not barred by issue of Grant for Original.

Clause 33. The Bill validates additional conditional purchases made by virtue of original conditional purchases on which the balance of purchase money has been paid; and provides that additional conditional purchases may be made in similar circumstances in future. Payment of balance of a conditional purchase is enforced by the present law, and it is merely a question of time when any conditional purchase shall become a freehold. If a selector should pay his balance earlier than he is obliged, and thus discharge his debt to the Crown, it is not deemed reasonable that he should be robbed of privileges enjoyed by a conditional purchaser who prefers to remain in debt to the Crown.

Abolition of Declarations.

Clause 34. The existing Acts (like the repealed Acts) provide that a conditional purchaser shall make certain declarations that he has fulfilled his conditions. Under the repealed Acts these declarations were accepted as sufficient proof of themselves. Now they are ignored, as the question of fulfilment of conditions is made a matter for investigation by the Land Board. Having, in fact, lost their force and importance, it is proposed to abolish them, especially as they are too frequently found to have been made without much regard to correctness of statement or to the solemnity which should attach to them.

Apart from this the waiting for selectors to make them causes a good deal of delay.

Alternative condition of fencing or improvement.

Clause 35. This clause affords relief to selectors and simplifies, and therefore renders less expensive, certain matters of administration. At present a selector has to fence within two years from date of confirmation of his application, or he may, with the permission of the Board, substitute improvements in lieu of fencing. In the latter case improvements to the value of 6s. per acre are required within three years from the date of confirmation.

The Bill dispenses with the application to, and the permission of, the Board (which have become matters of form rather than anything else); it extends the term for fencing from two to three years and leaves it to the option of selector whether he will fence or otherwise improve.

If the conditional purchaser does not fence he will be subject to the provisions of Clause 48 as to impounding and trespass.

Subdivision of Conditional Purchases.

Clause 36. This is a further provision for the benefit of selectors. At present the holder of a conditional purchase must, if he wishes to convert any part into a freehold, pay up the balance on the *whole* area—a proceeding which in connection with a conditional purchase of large area involves a considerable outlay. If the land had been selected in 40-acre, or small blocks, the holder would not of course be under this disadvantage, as he could pay up his balance on one conditional purchase at a time as it might suit his circumstances. To remove this difficulty, the Bill provides that on any conditional purchase of, or over, 100 acres, the balance on any area of not less than 40 acres may be paid and a grant issued. The block measured off cannot, however, be transferred apart from the block out of which it has been carved until the purchase money has been paid in connection with the block cut off and the grant of it issued. The interests of the Crown are guarded, and the selector is required to pay necessary expenses of subdivision, &c.

Formal applications to Local Land Board.

Clause 37. The design of this clause is to prevent delay and inconvenience to selectors by enabling the Chairman of the Board to at once dispose of certain formal matters. Frequently a favourable disposal by the Board is a foregone conclusion, but it takes time to put the Board in motion, seeing that meetings (which are held at several places) have to be arranged for, and the parties are expected to come before the Board. This often entails a good deal of travelling backwards and forwards for the selector with attendant expense. For example, say a selector is taken ill and requires immediate suspension of the condition of fencing. If the Chairman is satisfied, he can grant the suspension without any delay.

Ballots.

Clause 38. The Bill here provides that the priority of conflicting applications shall be determined by ballot, and proposes to cure certain anomalies which have grown up under the system of balloting in connection with conflicting applications for conditional purchases and conditional leases. Frequently one and the same person makes at the one time a conditional purchase application and a conditional lease application by virtue of it. The latter is dependent on the former, and cannot succeed without it. It has been ruled, however, that each separate application must be represented by a separate marble, and the result of the ballot has, in consequence, become in many cases very anomalous. For example: A and B make two applications, one for a conditional purchase and one for a lease. These are represented by four marbles, and the ballot results perhaps thus:—

A's lease	First
B's conditional purchase	Second
A's conditional purchase	Third
B's lease	Fourth

Here A's lease, although first, is in fact overborne by B's conditional purchase, which is second. The Bill provides that associated applications shall be treated as one application and be represented by only one marble. The nominally successful applicant will be successful in fact.

Limitation

Limitation of Privilege of Selecting, &c.

Clause 39. It is provided in this clause that when a person obtains any one of the following classes of holdings his right is exhausted, that is to say, if he obtains a homestead selection he shall not obtain a second one or a settlement lease, &c. :—Homestead selections, settlement leases, original homestead leases, original conditional purchases.

In the case of a settlement lease or homestead lease the restriction will cease after the original term of the lease (whether forfeited in the meantime or not) has ceased; that is to say, if A takes a settlement lease with a term of 28 years, and forfeits after he has held three years it will be 25 years before his disqualification will cease unless he has obtained a certificate of abandonment.

A further disqualification will be found in the next clause.

Disqualifications from Selecting.

Clause 40. This clause provides that none of the following holdings shall be taken by any person who held in fee-simple, or conditional purchase and conditional lease at least 2,560 acres, at or within six months prior to the date of application, or who, having owned the area referred to, divested himself of it to defeat the clause :—Homestead selections, settlement leases, original homestead leases, original conditional purchases.

None of these holdings can be taken by a person who is not a natural-born or naturalized subject of Her Majesty.

Application to be made in Good Faith.

Clause 41. This is a very necessary clause, expressed in positive terms, laying it down absolutely that every homestead selection, conditional purchase, or settlement, conditional, or homestead lease, must be applied for *bona fide* in the interest of the applicant; and providing that the Board may, if not satisfied as to the *bona fides* of the applicant, disallow the application and forfeit the deposit. The provisions in the Acts now in force have been found in this respect less ample and more circuitous than is desirable; and, moreover, do not appear in the positive form in which they are embodied here.

Forfeiture for Want of Good Faith.

Clause 42. This clause follows up the preceding one by providing that where the application has advanced beyond confirmation, &c., the question of *bona fides* may be investigated, and if necessary the land, &c., forfeited.

The holders of certificates of conformity and transferees without notice of the previous holder's shortcomings are protected, but persons who accept transfers before issue of certificate of conformity will be deemed to have had notice of any violation of the law, as it is found that selectors, who have incurred forfeiture, endeavour to block enforcement of forfeiture by transferring to friends, who set up the plea that they took the land without notice of default. Some amount of abuse promises to be checked by the provisions of this clause.

Validation of Purchases and Leases.

Clause 43. The provisions of this clause promise to be very beneficial. It is a matter of too frequent occurrence that the titles of persons, who have acquired Crown lands in good faith, are shaken by different interpretations of the law, and when this happens there are persons always on the alert to dispossess the previous occupants. This leads to a great deal of hardship, and often involves the Crown in large expenses for compensation to the injured parties.

To meet the difficulty the Bill proposes to treat such invalid holdings not as void but as voidable, and to give the Governor power (after referring the matter to the Land Board or Land Appeal Court for investigation where necessary) to ratify the transaction.

In connection with future purchases or leases (*i.e.*, made after the Bill becomes law) notice of the Governor's intention to validate them must lie before both Houses of Parliament for at least 90 days without being objected to by specific resolution.

Exchanges and Surrenders.

Clause 44. The Governor will, it is proposed, be invested with a general power to exchange Crown lands for private lands after report by the Local Land Board. The lands must be as nearly as practicable of equal value. No money can pass *from* the Crown, but when the Crown lands are of the higher value the difference will be payable to the Crown. This is a power which could in many instances be advantageously exercised in the public interest. It would simplify the present provisions as to exchange which, so far as pastoral leases in the Eastern Division are concerned, have become inoperative through the leases having expired and the law requiring the exchange to be effected during the currency of the lease. Many cases of this character have unfortunately been blocked, although on the eve of completion.

In connection with exchanges between pastoral lessees and the Crown, under section 46 of the Act of 1889, it may be a condition that the lessees shall surrender the improvements on the land. That Act does not require them to do so.

Annual Leases.

Clause 45. An annual lease application under section 33 of the Act of 1889 must, if the land is not reserved from lease, be granted. Frequently, the public interest suffers in consequence, as applicants apply for land reserved from sale (only) for travelling stock, &c., &c., and before the lessee can be dispossessed, the grass is eaten down and a good deal of mischief caused.

The Bill invests the Minister with the power of refusing an application if the granting of the lease shall appear to be contrary to the public or general interest.

The

The remaining part of the clause contains a concession to annual leaseholders. They are by the present law required to pay a full year's rent if the lease commences at any time between the 1st January and 30th June, and a half-year's rent if it commences at any time between the 1st July and 31st December. The Bill provides that the rent shall be proportioned to the term actually enjoyed.

Tenant Right in Improvements.

Clause 46. In various clauses of the Bill provision is made that certain holders shall have tenant right in improvements, and it is explained in this clause that these holders shall be enabled to receive payment for their improvements from the incoming tenant. If, however, there should be no incoming tenant for six years the improvements will pass over to the Crown. Unsuccessful or useless wells or bores, or improvements forfeited to the Crown are excluded; and in cases where the wells or bores are successful, the first cost shall be taken as their value. The improvements must be of a permanent, fixed, and substantial character, and necessary for the profitable occupation of the land. Their value will be appraised by the Local Land Board, and payment for them made by instalments.

Tenant right is extended to holders of conditional leases on the expiration of their leases; and the Governor may extend it to conditional lessees who have surrendered or forfeited their holdings.

Reclamations.

Clause 47. The provisions of the present law in connection with reclamations are not satisfactory. The applicant cannot be limited as to the time in which the reclamation is to be completed, so that when once the Crown authorises reclamation, the parties can postpone the work as long as they please. The Bill will prevent this, and will give the Minister a power of forfeiture.

The basis of the price of reclaimed land will also be altered. At present the price is half the difference between the value of the land and the estimated cost of reclamation. Under the Bill the enhanced value of the adjoining land by reason of the reclamation will be taken into account, and the cost of reclamation deducted from the total value. The difference will represent the price payable to the Crown.

The grant of reclaimed lands may contain special conditions, such as:—

Power of resumption by notice in the *Gazette*.

No compensation payable other than the value of such improvements as may have been consented to by the Minister, and the repayment of purchase money and cost of reclamation.

Trespass and Impounding.

Clause 48. This supersedes section 130 of the Act of 1884, which in consequence of repeated amendments in the Acts does not meet all cases. Conditional purchasers instead of fencing substitute improvements, and an obligation of fencing does not attach to all holdings.

The Bill will not entitle the holder of lands to impound or bring an action for trespass (except of course the trespass was wilful), unless the lands are fenced.

References to Land Appeal Court.

Clause 49. Simplifies the manner in which the Crown may bring cases before the Land Appeal Court by reference on the part of the Minister.

Regulations.

Clause 50. Empowers the Governor to make Regulations.

Statistical Tables, Diagrams, etc.

RETURN showing Alienation and Occupation of Lands in New South Wales on 31st December, 1893.

ALIENATION.

REPORT by the Metropolitan District Surveyor upon the Crown Lands in the Metropolitan Land Board District.

CROWN LANDS REMAINING ARE OF INFERIOR CHARACTER.

(1.) Except as a premiss it is almost needless to state that this district comprises the oldest part of the country, and nearest to the metropolis and principal port; consequently all the Crown Lands attractive for settlement were alienated many years ago, and such lands as remain would merely have a value dependent on surrounding occupation, or in some cases for suburban residential purposes as distinguished from country settlement.

AGRICULTURE.

(2.) Touching agricultural settlement, I have to state that there is no land remaining which is suitable for cultivation. It should be borne in mind that the remaining vacant Crown Lands are of sandstone formation, and for the most part rugged broken country, presenting the most unattractive aspect; the conditions are altogether unfavourable for cultivation of any sort, and there have been many futile attempts lately which have been disastrous to those concerned.

THE OLD COMMONS LATELY MADE AVAILABLE FOR SETTLEMENT.

(3.) The only useful lands which have lately been made available to the public are comprised in the old commons in the County Cumberland, which have lately been revoked.

PROXIMITY TO THE METROPOLIS CAUSES AUGMENTATION OF VALUE.

It may reasonably be held that land within easy access of the metropolis should have an enhanced value from that cause, and no doubt it has led to much of the selection by conditional purchase, for persons in trade have thus been able to acquire homes outside of their trade or town business; but the physical conditions are generally unsuitable for grazing purposes, and any improvement to be of permanent benefit would be too costly, as it would not yield an adequate return on the outlay. Such patches of country as might be regarded as suitable for cultivation or grazing (exclusive of the commons above mentioned) are so insignificant in area, and so scattered in position, that it is impossible to locate them on a general map.

REPORT by the District Surveyor at Armidale upon the Crown Lands in the Armidale Land Board District, including Resumed Areas, Annual Leases, and Vacant Lands.

EASTERN DIVISION.

NEARLY all the available agricultural land within the district has already been taken up. I think I should here inform you that the whole of my district lies within the Eastern Division, and that the leasehold areas were thrown open for selection about three or four years ago, the land was rushed by selectors, with the result that little of the available land now left is suitable for agriculture. The little that is left consists generally of small remnants, scattered throughout the whole district, and in places remote from market.

I think, under existing circumstances, I may generally report that very few areas capable of being valued on an agricultural basis, and of any appreciable extent, exist in this district. There are agricultural Crown lands, but these mostly are situated within reserves retained in public interests, and are, of course, not available for alienation.

I would beg to inform you that a large proportion of the area is more or less suitable for grazing. Owing to the non-uniform nature of the district it is not easy to readily classify the grazing capabilities of the remaining Crown lands, which, I may state, embrace in parts what may be termed virgin, inaccessible country, seldom, if ever, used for stock purposes. Other portions of the district embrace Crown lands very mountainous and ridgy, of low carrying capacity; whilst other portions of the district embrace very fair sheep and cattle country. Speaking generally the bulk of the available Crown lands within this district, in my opinion, is poor grazing country, more suitable for cattle than for sheep, due principally to the broken character of the country, the extreme elevation, heavy rainfall, soil, timber, and undergrowth.

That portion of the district to the east of the Great Dividing Range within the counties of Hawes, Vernon, Sandon, Gresham, and Clarke may be generally said to consist of plateau and falls country. All the streams on this eastern slope break away into exceptionally deep, broken, mostly wide, inaccessible gorges or canons, the watercourses rapidly descending from one to two thousand feet below the general level of the New England District. This falls country is generally very heavily timbered and scrubby, and of little practicable use for stock purposes, although wherever possible it is made use of in winter as a shelter for cattle. As evidence of the unprofitable value of the country it may be stated that the bulk has not been held under occupation license for years past.

In the county of Clarke, country which may be veritably deemed virgin country exists, densely timbered, rugged and mostly barren and scrubby high ridges with intervening swamps, with little, if any, practicable access, country which I understand has never been used for any purpose whatever.

With the exception of the inaccessible country referred to in the 4th and 5th paragraphs of this Report, the available lands are more or less suitable for immediate occupation.

Whilst in France, I was amazed at the—to me—barren, inhospitable, steep, mountainous country occupied, and most successfully so, by the people, and I could not help then thinking that, in the course of time, what we in Australia consider our barren good-for-naught, inhospitable coast-range country would in time, by ordinary industry, be made available for occupation and cultivation, fruit, vines, &c., and I feel sure that the wine industry, in the end, will successfully vie with the present staple wool industry of the Colony.

REPORT by the District Surveyor at Grafton upon the Crown Lands in the Grafton Land Board District, including Resumed Areas, Annual Leases, and Vacant Lands.

EASTERN DIVISION.

THE land suitable for agriculture is limited in extent and generally confined to narrow belts and pockets on the banks of the water courses, although there are some patches of large extent such as that at Don Dorrigo, the Comboyne Brush, and the Richmond River Brush, &c.

I have included in the land suitable for grazing only such of the brush land in the Richmond and Tweed districts, that on the range dividing the Clarence and Richmond Rivers, and also lands in the counties of Fitzroy and Raleigh, &c., which, although containing rich soil, is too steep and broken for cultivation, but when cleared would be well adapted for dairying.

The best land with the exception of that which is embraced in Special Areas or Reserves has been alienated, and that which is left is generally too far from market or place of shipment to be profitably occupied for agriculture only, but I think it could be used for mixed farming by the cultivation of the portion of good land which is suitable, thus providing food for stock, pigs, &c., and by grazing a few head of cattle on the inferior land, this district is not suitable for sheep farming, and none is now carried on.

Although, generally, the land throughout the district is suitable for immediate occupation, the price of cattle is at present so low that there is little inducement to embark in that industry whilst in consequence of the low price of maize, which is the principal product of these districts, during the present season, coupled with the losses by floods for several previous years, it has been a difficult matter for those engaged in agricultural pursuits to pay their way even when their holdings are favourably situated and in close proximity to navigable water, so that the prospect of immediate occupation is not promising.

REPORT

REPORT by the District Surveyor at Maitland upon the Crown Lands in the Maitland Land Board District, including Resumed Areas, Annual Leases, and Vacant Lands.

EASTERN DIVISION.

Agricultural.—In some of the brushes in the Gosford district, and at Cooloongolok, on the range dividing the Manning and Hastings Rivers, and also on the table-land at the head of the Barrington and Manning Rivers, are areas of some extent which may be cultivated, and would produce maize and other cereals and farm produce in general. These would ere now have been taken up but for the difficulty of transit occasioned by want of made roads, and the distance from markets, and I doubt not but that in time they will be eagerly sought after. In various parts of the district there are smaller scattered areas of land of very fair quality, suitable for cereals, and I would here suggest that conditional purchases of land of this character should not exceed 160 acres.

For a distance of about 30 miles from the coast, the coastal rains extend, and the area within their range is generally heavily timbered; the grasses are chiefly of the coarser descriptions, but in the valleys and along the creeks, small but fertile spots occur, and it is here that agriculture and dairying could be well combined. Advantages also offer for poultry-rearing, and especially for bee-farming. These lands would perhaps be troublesome to get into good condition for grazing, the timber requiring first to be ring-barked and suckered, but they should, when cleared and planted, produce succulent artificial grasses, and be well adapted for dairy purposes.

A great deal of the timber is of commercial value, and even if not within marketable distance (which in many instances it would be), it would lighten the cost of fencing and the cost of erecting building improvements.

The areas west of the influence of the coastal rains are more openly timbered, and the natural grasses are of a sweeter nature and more nourishing description, and well adapted for production of the finest wool.

The district has now been open some thirty odd years to conditional purchase, and has been settled for over forty years, so that it can hardly be expected that any very extensive areas are available for settlement; nearly all the frontages and accessible land has been secured, and, as a consequence, much that is left is hemmed in at the back of large estates and difficult of access, and may be classed as remnants; nevertheless, much of this is of very fair quality, and only requires to be dealt with patiently and systematically to support a great number of families. The construction of railway lines and facilities for water carriage in this district render much of it valuable; it is diversified in its physical character, and is all suited, either for rearing of cattle and dairying or for the production of very valuable wool, and for fattening a great deal of the littoral is splendidly adapted for fruit-growing, poultry-rearing, and bee-farming.

REPORT by the District Surveyor at Orange upon the Crown Lands in the Orange Land Board District, including Resumed Areas, Annual Leases, and Vacant Lands.

EASTERN DIVISION.

THE Crown Lands in this district are classed as a whole as suitable for grazing only.

There are within these areas pockets and stretches of country which are strictly arable lands, but owing to difficulties of access and the transit of produce they are not suitable for profitable agriculture, which I apprehend is the sense in which the term is applied. The great want of the Colony is, of course, population of a suitable character, and were the numbers twenty times greater than at the present time,

lands now regarded as unsuitable would be profitably occupied; but whilst so many hundreds of thousands of acres of equally good land, and much better situated, is kept only for grazing purposes, as it will not pay to farm, it seems useless to class it as fit for agriculture under present conditions.

I think it should also be explained that very large tracts are unsuitable for profitable grazing. Such parts have been shown as grazing land as they are not suitable for anything else, but if it is desired to know the parts which could be profitably occupied, then a large portion would have to be excised.

Under existing circumstances, outside of reserve and population areas, I regard it that there is very little land in the district suitable for new settlement, but additions will be made to existing holdings, as experience proves that land of very low value indeed is so taken, as opportunity admits and necessity demands.

REPORT by the District Surveyor at Cooma upon the Crown Lands in the Cooma Land Board District, including Resumed Areas, Annual Leases, and Vacant Lands.

EASTERN DIVISION.

I HAVE shown no land as agricultural. There are, of course, scattered flats of small extent, but wholly insufficient in area to support or materially help to support a resident lessee.

Although there is a large area of Crown land in this district, a considerable part (probably 500,000 acres) is within the snow belt. Clause 36 of 1889 provides for leasing this country, which has not been largely applied for as yet, but will be in demand when droughts recur. There is also much country where the soil is too poor to admit of remunerative improvement for other than pastoral occupation in large areas. Some of this has already been disposed of under clause 37 as inferior land, and more is in course of action.

In the coast districts, viz., Eden, Bega, Moruya, and Milton, there are scattered areas where the soil is fairly good, where the climate, rainfall, and proximity to shipping ports point to occupation in time, but the timber is so dense that it produces no grass. This country is at present unoccupied; clearing is necessary before the smallest return is obtained. The cost of clearing is from £3 to £10 per acre.

This district being wholly in the Eastern Division, there are no leaseholds to fall in, and as it is one of the oldest settled parts of the Colony, the whole has been thoroughly picked over. The area remaining suitable for agriculture is quite insignificant.

REPORT by the District Surveyor at Wagga Wagga, upon the Crown Lands in the Wagga Wagga Land Board District, including Leasehold and Resumed Areas, Annual Leases, and vacant Lands.

EASTERN AND CENTRAL DIVISIONS.

I AM of opinion that nearly the whole of the unalienated land within the Eastern Division may now be described generally as suitable for grazing purposes only.

It is not intended to indicate that there is no agricultural land in the Eastern Division, but merely that all the land now available for settlement may now be classified generally as fit for grazing only.

The North-western part of this Board District, in the Central Division, embraces land suitable in many portions for cultivation, but too dry and remote from railway communication for profitable agricultural occupation under present conditions. Steam ploughing may be applied later on.

Adopting

Adopting an idea suggested by geologists, this district may be described as having passed through the cattle age, and passing from the sheep into the cultivation era, but the hindrances to progress in that direction is the accumulation of large estates along the railways. The demand for land on the railway lines is recognised by the owners, and some are already cultivating on the "half system," but that is not conducive to permanent settlement, and I think that legislation should, therefore, take some form that would tend to prevent the extension of the "half system," as that rental is too high.

The Crown lands, with the exception of the mallee country, about 250,000 acres, in the north-west of the district, is suitable for settlement after water is conserved. The mallee country would be suitable after the destruction of the mallee and the conservation of a supply of water.

The physical characteristics of the district may be described as ranging from high mountainous country on the east to level open plains on the west, including all ranges of climate, except torrid, and affording physical facilities for the cultivation of wheat, maize, barley, potatoes, tobacco, grapes, and other fruits.

A great many suggestions with regard to the profitable occupation of the inferior lands (mallee chiefly) have occurred to me from time to time; but if the facilities afforded by the proposed Bill of 1893 for the occupation of these lands are not sufficient, I do not think that anything else, even a free gift of the land, would induce settlement. I anticipate that in course of time the mallee country will be occupied and settled under some favourable regulations; and when enterprising men have practically demonstrated the possibilities of the country, and are reaping the fruits of their labours, there will not be wanting many who will be envious, and assert that the laws were too liberal.

REPORT by the District Surveyor at Tamworth upon the Crown Lands in the Tamworth Land Board District, including Leasehold and Resumed Areas, Annual Leases, and Vacant Lands.

CENTRAL AND EASTERN DIVISIONS.

THE land in the Eastern Division—Land Districts of Murrurundi and Tamworth—is, generally speaking, first-class wool-growing country, and as settlement becomes denser will probably be utilised for vine and olive growing, for which it is to a large extent suited.

The land in the Gunnedah District, south of the Namoi, ranges from fair grazing to first-class fattening country; while north of the Namoi it is good wool-growing land. The agricultural land in this district is generally of good quality.

The land in the Coonabarrabran District varies from very poor grazing land to first-class fattening the former predominating. It is also a first-class fruit-growing district for apples, pears, and kindred fruits.

The land in the Narrabri District, north of the Namoi, is some of the finest fattening country in the Colony—it is like an immense park. South of the Namoi the land is wooded and more or less scrubby, suitable when cleared for fruit-growing or mixed farming.

The foregoing descriptions of country relate to the whole of the Crown Lands whether reserved or held under pastoral lease or now available for settlement. At the present time there are in this district about 2,500,000 acres available for immediate settlement, and owing to non-application for extension of pastoral leases there will shortly be available for settlement a further area of about 500,000 acres. Of the first area—about one half is suitable for immediate settlement, and of the second about the same proportion will be suitable when the leases expire. The balances are scrub lands, and require more labour to render them productive than the average selector is prepared to expend.

REPORT

REPORT by the District Surveyor at Dubbo, upon the Crown Lands in the Dubbo Land Board District, including Leasehold and Resumed Areas, Annual Leases, and Vacant Lands.

CENTRAL DIVISION.

THESE lands are exceedingly rich, and generally include excellent agricultural soil along the streams and in patches of considerable area. These latter will be ultimately required for agricultural settlement; but would not be so used if available at present. On this account these lands should be only leased, for any form of pastoral use, until genuine demand grows for their agricultural development. This demand would be hastened, and would be steady and certain, if inducements were offered for artesian boring as irrigation centres * * *

Characteristics.

On the eastern side—Hilly country naturally suited for agricultural farming.

In the middle—Rich alluvial plains, naturally suited for agriculture along railway. Elsewhere highly suitable for same use on development of irrigation by artesian bores.

On the western side—Rich soil, undulating surface, non artesian, and no natural surface water west and south-west of Bogan River. Wheat growing and grazing land.

Pastoral land—Selection, with the present maximum of 2,560 acres, for grazing alone has failed throughout the district to promote settlement, and has been productive of land jobbing on a large scale—by which much included agricultural land has unfortunately been locked up. Under what is at present called pastoral land there is mixed in patches much excellent agricultural soil, there being no large extent, together, of land unfit for agriculture.

They are called “Pastoral” only because they are remote from the railway. With better access and increased population affording a genuine demand they would be occupied for mixed farming.

They should be only leased and not alienated, for pastoral purposes, until they are required for agriculture * * *

Nearly all agricultural settlement so far has been made by trained farmers from the more settled districts and from Victoria—there being otherwise scarcely any other farming skill in the district. Nor is there disposition to take to farming by the type of selectors previously in the district.

REPORT by the District Surveyor at Forbes upon the Crown Lands in the Forbes Land Board District, including Leasehold and Resumed Areas, Annual Leases, and Vacant Lands.

CENTRAL DIVISION.

THE Resumed Areas have not been considered except in the western part of the district, where the land is so inferior that little or none of it has been taken up. Elsewhere the Resumed Areas are practically exhausted so far as land for alienation is concerned.

The area of Crown Lands in this district at the present time is about 4,000,000 acres, and of this I think that about 1,000,000 acres might fairly be put down as suitable for occupation in holdings not exceeding 1,280 acres, for grazing and agriculture combined. Such land is situated in the County of Bourke, which is within a reasonable distance of the Hay and Temora Railways, and around the Towns of Parkes, Forbes, Grenfell, Condobolin, and Wyalong.

In parts of the Counties of Gipps and Kennedy the soil is well adapted for wheat-growing; but the rainfall is so precarious and irregular, and the distance from market so great, that agricultural pursuits could not be carried on except at a loss.

In County Dowling and the west parts of Counties of Gipps and Cunningham the country is heavily encumbered with scrub and infested with rabbits.

REPORT

REPORT by the District Surveyor at Moree upon the Crown Lands in the Moree Land Board District, including Leasehold and Resumed Areas, Annual Leases, and Vacant Lands.

CENTRAL AND WESTERN DIVISION.

ABOUT three-fourths of this Land Board District is level or nearly so; the remainder is undulating or hilly. The level country embraces nearly the whole of the counties of Courallie and Stapylton and the portion of the district lying to the west and south-west of those counties, while the hilly country embraces that part of the district lying to the east of them.

The level country is for the most part black soil, a large proportion being plain; the remainder is principally open forest, but there is a small proportion of dense scrub. Much of it is subject to inundation in high floods, but there is a strip of flooded country about 60 miles long and from 6 to 8 miles wide running across the county of Benarba in an east and west direction that is more often under water than not. The black-soil flat country, when not so frequently flooded or too heavily timbered, carries a good coat of the finest fattening grasses in its natural condition, and the water has only to be drained off the flooded ground, and the timber killed in the scrubs, for the flooded and scrubby lands to grow good grass. Little or no agriculture has been attempted on the black soil, plain country, and owing to the adhesive nature of the soil when wet or even damp, rendering it very difficult to work, it is improbable that it will be required for agriculture for many years to come, particularly as the rainfall is uncertain and there is no local market for the produce.

The hilly country is of slate sandstone, or basalt formation. Some of the hills are very low grade pastoral country, but many of the slopes are suitable for agriculture, while many of the alluvial flats are very fertile and capable of growing almost anything. Some of the western slopes of the hilly country, as it runs out into the plains, are open downs generally of basalt formation and very rich pastoral land. Some more of these slopes are rich chocolate soil, suitable for wheat-growing, but most of this is unoccupied, for it is covered with dense belar, brigalow, and other scrubs. Some of it is not held under any tenure, a little is held under scrub leases, and a good deal is embraced in leasehold and resumed areas, but generally it is fenced off and not used. The cost of killing the timber on this country is too great for it to be sought after for pastoral purposes unless on long leases, while the distance from market prevents it being sought after for agriculture.

The rainfall on the eastern side of the district is about 30 inches, and on the western side about 19 or 20 inches. I think agriculture is possible on the east, but, without irrigation, crops would be very uncertain on the west.

Owing to the long distance from market, and the competition of more favoured districts, it appears to be most improbable that any part of the Moree Land Board District will be extensively used for Agriculture for many years to come.

REPORT by the District Surveyor at Hay, upon the Crown Lands in the Hay Land Board District, including Leasehold and Resumed Areas, Annual Leases, and Vacant Lands.

CENTRAL AND WESTERN DIVISIONS.

BETWEEN the Lachlan and the Murray the land is best suited for agriculture and grazing combined, especially so, from the Lachlan South, past the Murrumbidgee to the Billabong Creek and Edwards River.

The drawback to selection in this district is scarcity of water, and the initial expense to the selector of its conservation. The average rainfall is from 9, in the Western end of the district, to 19½ inches in the Eastern end. The main rivers and the Billabong Creek afford the only natural permanent supply, but the country between the Billabong Creek and the Murray is well favored with good watercourses.

The South-eastern part of the Central Division is suitable for grazing as well as agriculture; the greater proportion of the Western Division is covered with mallee and other scrubs.

Area should be set apart in the vicinity of towns and villages for settlement in small areas.

REPORT by the District Surveyor at Bourke upon the Crown Lands in the Bourke Land Board District, including Leasehold and Resumed Areas, Annual Leases, and Vacant Lands.

WESTERN AND CENTRAL DIVISIONS.

THE six Land Districts under my supervision contain about 60 millions of acres, that is, three-tenths of the whole area of the Colony, purely pastoral country, and having an estimated population not exceeding 40,000 souls, that is about one person to every 1,500 acres, and about one-thirtieth of the whole population of the Colony. About one-half of the whole area is held under pastoral lease. Of the remaining 30 millions of acres, about 6 millions are held under homestead lease, that is to say, that in nine years of homestead leasing the average annual extent of that form of occupation has been about 660,000 acres. I do not know of a single instance in the whole area under my supervision of land being or having been applied to agricultural purposes solely, though I know of a very limited extent of agriculture for the assistance of pastoral pursuits.

The whole district is naturally and on a commercial basis suited for grazing purposes only. Practically, agriculture is commercially possible only near centres of population and with irrigation from permanent natural water. This limitation of possibilities is due to the limited and uncertain annual rainfall, from $9\frac{3}{4}$ inches, in average, to $19\frac{1}{2}$ inches in average in different parts of the district.

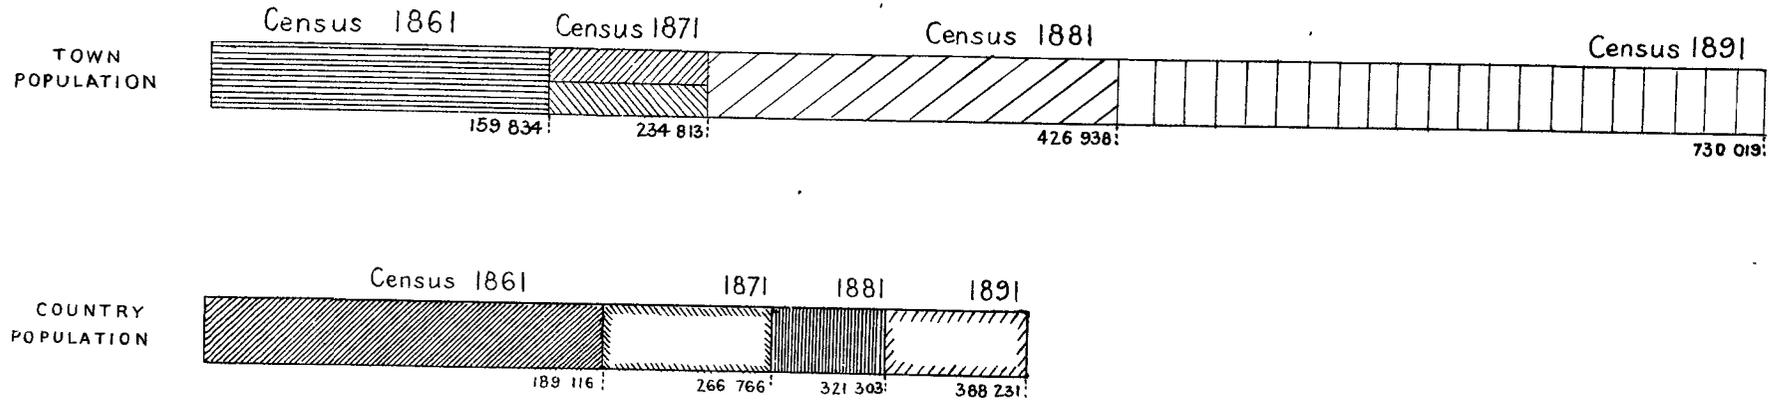

The areas within which agriculture, by the aid of irrigation, might be made to pay are those within 60 chains of either bank of river water, either naturally or artificially permanent, and those within 40 chains of each artesian bore. This extent of country is so limited that practically the districts under my supervision cannot be considered agricultural, but are purely pastoral. In them pastoral pursuits can be certainly made remunerative, much assisted by agriculture to a very limited extent, as precaution against drought and as sustenance for the most valuable stock.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LAND ALONG OCEAN FORESHORE, NEWCASTLE TO
COCKLE CREEK.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 26 February, 1895.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 6th November, 1894, That there be laid upon the Table of this House,—

- “ (1.) The names of companies or persons owning lands along the foreshore of the Pacific Ocean, from Newcastle to Lake Macquarie Heads.
“ (2.) Which, if any, of such companies or persons, owning land as aforesaid, have the right to fence down to the water's edge.
“ (3.) The same information regarding the foreshores from Lake Macquarie Heads to Cockle Creek.”

(Mr. Edden.)

No. 1.—Owners' names for lands, with frontage from Newcastle to Lake Macquarie:—

AUSTRALIAN Agricultural Company; the Trustees of the late Edward Christopher Merewether; the Scottish Australian Mining Company (Limited); Walter Bailey; F. Gardner and F. Alcock (part of portion 92, parish of Kahibah); the Redhead Coal-mining Company (Limited).

No. 2.—Which, if any, of above have the right to fence down to the water's edge:—

AUSTRALIAN Agricultural Company; the Trustees of the late Edward Christopher Merewether (in part, respecting portion 30, parish of Kahibah); the Scottish Australian Mining Company (Limited); Walter Bailey; F. Gardner and F. Alcock (in part, respecting portion 92, parish of Kahibah); the Redhead Coal-mining Company (Limited).

No. 3.—Owners names for lands with frontage (first part) from Lake Macquarie Heads to Cockle Creek:—

HENRY MARKS; Job Butler Hudson and Phillip Williams; Catherine Yates; Mary Jane M'Connell; Benjamin Samuel Yates; Michael Yates; Peter Fleming; John Anderson; Elizabeth Williamson; Ann Green Taylor; Abel Harber; Newcastle Investment and Building Society; Elizabeth Hester Hall; William Ernest Brooks; Joseph Wood; George Clift; James Edward Hannell; Elizabeth Lochhead; Samuel Branxton Clift; Lydia Frances Field; Archibald Hay; W. K. Lochhead and F. Gardner; L. J. and E. M. Whiting; Bank of New South Wales; The Cardiff Coal Company; John Nixon; James Byrnes and Executors of the late John Robertson; Thomas Croudace; the Trustees of the late E. C. Merewether; John Brown Watt; Alfred Wood; Aaron Crossman, Albert Ferdinand Warner, William Curtis Warner, Trustees in Warner estate (unsold); William Barnard Walford.

No. 3.—Which Owners have the right to (second part) fence down to the water's edge:—

HENRY MARKS; Job Butler Hudson and Phillip Williams; Catherine Yates; Mary Jane M'Connell; Benjamin Samuel Yates; Michael Yates; Peter Fleming; John Anderson; Elizabeth Williamson; Ann Green Taylor; Abel Harber; Newcastle Investment and Building Society; Elizabeth Hester Hall; William Ernest Brooks; Joseph Wood; George Clift; James Edward Hannell; Elizabeth Lochhead; Samuel Branxton Clift; Lydia Frances Field; Archibald Hay; W. K. Lochhead and F. Gardner; L. J. and E. M. Whiting; Bank of New South Wales; The Cardiff Coal Company; John Nixon; James Byrnes and Executors of late John Robertson; Thomas Croudace; The Executors of late E. C. Merewether; John Brown Watt.

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NOTICES ISSUED TO CENTRAL DIVISION LESSEES.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 5 September, 1894.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 5th September, 1894, That there be laid upon the Table of this House,—

“ A copy of ex-Attorney-General Barton’s Opinion, furnished to the late Minister for Lands in respect to the notices issued to Central Division Lessees under 78th section of ‘ Crown Lands Act of 1884.’ ”

(Mr. Ashton.)

Copy Opinion of the Attorney-General.

Subject :—*Re* Rights of Pastoral Lessees in the Central Division to extension of Lease under section 78, sub-section iv “ Crown Lands Act of 1884,” and 43, Act of 1889; and whether the notification by the Minister under the former section is a bar to any claim for extension under the latter.

WITHOUT doing some violence to the language it is difficult to reconcile the enactments in question—namely, sub-section iv of section 78 of the Act of 1884 and section 43 of the Act of 1889. The simplest way out of the difficulty would no doubt be the adoption of the view suggested by Mr. Canaway in his (a) note to sub-section iv, that the sub-section is “ practically and impliedly repealed by section 43 of the Act of 1889.” But the latter Act requires in its 1st section that “ it shall be read with and form part of the ‘ Crown Lands Act of 1884.’ ” Hence the two must, if possible, be reconciled. Assuming that the “ Acts Shortening Act of 1852 ” does not by the proviso to section 3 do away in effect with repeal by mere implication of a portion only of a section, still I think the reconciliation may be effected without distorting the language. Sub-section iv (a) gives a right of extension for five years, “ provided always that no extension shall be given if the Minister shall have notified,” &c., and the rent during the extension under that sub-section is to be determined by the Minister, “ after appraisal by the Local Land Board,” at a rate not being less than the rent paid for the last past five years of the currency of such lease. Section 43 of the Act of 1889 deals only with lessees who apply in the prescribed manner and within a certain time, paying a deposit of £20. If any such lessee obtains an extension, its length is determined by sub-section ii of section 43 (b) (and it must not be for more, though presumably it may be for less, than five years), and the rent is by sub-section iii (c) to be at the “ same rate as prior to the extension.” Both of these conditions differ from those which are imposed upon lessees who do not apply in the manner indicated, but rely upon their right under section 78 of 1884. Sub-section iv and the question whether or not the lessee, applying under the Act of 1889 (d), is to have an extension depends upon the Land Court or the Minister, acting upon the recommendation of the Land Board. Thus there appears to me to be nothing actually inconsistent with the provisions of the section in coming to the conclusion that the Minister or Court, in deciding whether there should be an extension, is bound by the proviso in sub-section iv of section 78 of the Act of 1884.

I am therefore of opinion that the notification by the Minister under (a) the Act of 1884 is an absolute bar to the claim of any lessee for an extension, whether the notification is made before or after application under the Act of 1889 (b), provided the notification is made before the extension is actually granted.

EDMUND BARTON, 11/8/92.

**CONDITIONAL PURCHASE MADE BY GEORGE VINCENT IN THE
DISTRICT OF GUNDAGAI.**

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 19th April, 1895, "to inquire into and report upon all the circumstances attending the conditional purchase made by one George Vincent, in the district of Gundagai, on the 22nd day of August, 1878, of 640 acres, parish of Mooney Mooney, county of Harden," and to whom was referred on 1st May, 1895, the *Return to Order of Session 1892-3, on the same subject*, have agreed to the following Report:—

Your Committee, having examined the witnesses named in the list,* * See list, page 5

find,—

1. That on the 22nd August, 1878, George Vincent conditionally purchased, at Gundagai, measured portion No. 93 of 640 acres, parish of Mooney Mooney, county of Harden.
2. That the conditional purchase was declared void on the 23rd October, 1878, the land having been allowed to Mr. Thomas Broughton as a pre-emptive right.
3. That the Secretary for Lands (Mr. Hoskins), in a minute dated 22nd April, 1881, stated that Mr. Farnell was not justified in declaring the conditional purchase void, and that the cancellation should be reversed and Vincent's conditional purchase held to be good.
4. That after Vincent had completed his three years residence, and made his declaration, an action was brought against him in the Supreme Court, by Thomas Broughton, for trespass, and a verdict was given against Vincent on the ground that the measured portion had been improved to the value of over £40, which the Supreme Court decided barred selection.
5. That the evidence given before your Committee shows that improvements under the value of £40 had been effected before Vincent selected, and that Mr. Broughton continued fencing and improving the land for some time afterwards, and that the improvements declared by the Court to bar selection were effected after Vincent selected.
6. That the land has been reserved pending settlement of Vincent's claim.

Your Committee consider that Vincent should be reinstated on the land, and recommend his case to the favourable consideration of the Government.

TRAVERS JONES,
Chairman.

No. 2 Committee Room,
Legislative Assembly,
Sydney, 30th May, 1895.

1894-5.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 1 MAY, 1895.

MEMBERS PRESENT :—

Mr. Anderson,		Mr. Barnes,
Mr. F. Clarke,		Mr. Travers Jones.

Mr. Travers Jones called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Committee deliberated.

Ordered,—That an intimation be sent to Mr. Thomas Broughton informing him of the date appointed for next meeting.[Adjourned till Tuesday next at *Eleven* o'clock.]

TUESDAY, 7 MAY, 1895.

MEMBERS PRESENT :—

Mr. Travers Jones in the Chair.		
Mr. Anderson,		Mr. Barnes,
		Mr. F. Clarke.

Entry from Votes and Proceedings referring the Return to Order, "Conditional Purchase of George Vincent at Gundagai" of Session 1892-3, to the Committee, *read* by the Clerk.*Ordered*,—That George Vincent and James Armstrong be summoned to give evidence next meeting.[Adjourned till To-morrow at *Eleven* o'clock.]

WEDNESDAY, 8 MAY, 1895.

MEMBERS PRESENT :—

Mr. Travers Jones in the Chair.		
Mr. Anderson,		Mr. Barnes,
Mr. F. Clarke,		Mr. Gormly.

George Vincent called in, sworn, and examined.

Witness withdrew.

James Armstrong called in, sworn, and examined.

Witness withdrew.

Thomas Broughton called in, sworn, and examined.

Witness withdrew.

[Adjourned till Tuesday next at *Eleven* o'clock.]

TUESDAY, 14 MAY, 1895.

MEMBERS PRESENT :—

Mr. Travers Jones in the Chair.		
Mr. Barnes,		Mr. Gormly,
		Mr. O'Sullivan.

William Henry Capper (*Chief Clerk, Conditional Sales Branch, Lands Department*) called in, sworn, and examined.Witness handed in report of Inspector Evans as to improvements on Vincent's conditional purchase (*Appendix A1*). Minute by Mr. Hoskins, Secretary for Lands (*Appendix A2*). Minute by Mr. Moriarty in reference to the second voidance (*Appendix A3*). Letter from George Vincent to Under Secretary for Lands, asking for refund of deposit (*Appendix A4*). Letter from Mr. McLaughlin, solicitor, asking for a refund voucher for the amount of deposit, interest, and instalments paid by George Vincent on his selection (*Appendix A5*). Particulars of conditional purchases applied for by Peter Considine, William John Slade, and Charles Stuart (*Appendix A6*). Return showing list of portions north of portion No. 193 which were acquired by Thomas Broughton as auction purchases (*Appendix A7*).

Witness withdrew.

Arthur James Stopps (*Acting Chief Draftsman, Lands Department*) called in, sworn, and examined.

Witness withdrew.

George Vincent recalled and further examined.

Witness withdrew.

Committee deliberated.

[Adjourned till to-morrow at *Twelve* o'clock noon.]

WEDNESDAY,

WEDNESDAY, 15 MAY, 1895.

MEMBERS PRESENT:—

Mr. Travers Jones in the Chair.

Mr. Barnes,		Mr. F. Clarke,
Mr. Gormly,		Mr. O'Sullivan.

George Vincent recalled and further examined.

Witness withdrew.

Patrick James O'Donnell called in, sworn, and examined.

Witness withdrew.

Arthur James Stopps recalled and further examined.

Witness handed in tracing showing surveyed road from Gundagai to Cootamundra (*Appendix B*).

Witness withdrew.

The Chairman having left the Chairman, Mr. Gormly called to the Chair *pro tem*.

Travers Jones, Esq., M.L.A. (a member of the Committee), sworn and examined.

The Chairman resumed the Chair.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY, 30 MAY, 1895.

MEMBERS PRESENT:—

Mr. Travers Jones in the Chair.

Mr. Anderson,		Mr. Barnes,
		Mr. O'Sullivan.

The Chairman submitted Draft Report.

Same read and agreed to.

Chairman to report to the House.

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

GEORGE VINCENT'S CONDITIONAL PURCHASE, GUNDAGAI.

WEDNESDAY, 8 MAY, 1895.

Present:—
MR. ANDERSON, MR. F. CLARKE,
MR. BARNES, MR. GORMLY,
MR. T. JONES.

TRAVERS JONES, ESQ., IN THE CHAIR.

Mr. George Vincent, called in, sworn, and examined:—

1. *Chairman.*] What are you? A blacksmith.
2. Did you conditionally purchase 640 acres on Muttama Run on the 22nd August, 1878, at Gundagai? Mr.
G. Vincent.
3. Have you read these papers printed in reference to your case by order of the Legislative Assembly? 8 May, 1895.
4. Is paper No. 41 D a copy of your conditional purchase application? Yes.
5. Was there any fencing or other improvements on the land when you selected it? There was part of a fence.
6. Will you describe the fence—what did it consist of? It was a post and one-rail fence; about a mile and 40 panels.
7. The selection is a mile across? It is a square mile. It was fenced with one rail and posts across from one side to the other, and turned down the corner forty panels, no wires.
8. Did that fence make a complete paddock-fence? No.
9. Was that fence erected across the main surveyed road from Cootamundra to Gundagai? Yes.
10. Did it stop the traffic? It did.
11. Was the fence cut down to let teams through? It was.
12. Was there any wire in the fence—was it wired and braced? No.
13. Were the posts bored for wiring? No.
14. Would that fence be of any use to you as the selector of the land? None whatever.
15. Why not? For the reason that it was not on the boundary of the surveyed road in the first instance.
16. It was not what you call a roadside fence? No.
17. Between the surveyed road and the eastern side of the fence, would there have been a narrow slip of ground left if you had been compelled to fence off the road on both sides? There would.
18. That would be no use to you as a paddock? No use whatever.
19. It would simply cut you off from the water-frontage? Yes.
20. Did you get any person to inspect the conditional purchase? I did. I did that the day after I selected it.
21. Was that done with the object of seeing what improvements were on it? It was.
22. Has Mr. Broughton had some men working at the fence, the day after you selected? Yes.
23. Did you give Mr. Broughton notice when you selected, and ask him to discontinue improving the land? I did.
24. Did he do so? He did not. He continued to improve the land.
25. Will you call any men who inspected the fence to give evidence before this Committee? Yes; there is one gentleman in attendance.

- Mr. G. Vincent.
8 May, 1895.
26. Mr. Broughton continued to put up that fence after you had selected the land? Yes.
27. How long after you selected did he make it a complete paddock-fence by wiring it and bracing? I think very nearly twelve months.
28. Did the lessee, Mr. Broughton, oppose your application on the plea of having applied for the land, with a pre-emptive right to purchase, on the 17th June, 1864? He did.
29. Did you resist his claim by employing land agents, &c.? Yes.
30. And was your conditional purchase declared void in October, 1878, as shown by paper No. 46? Yes.
31. Was the cancellation reversed on the 22nd April, 1881? Yes.
32. And was it decided that your conditional purchase application should stand good? Yes.
33. As shown by paper No. 75? Yes.
34. What did it cost you to get the voidance of the selection reversed? As near as I can remember now, between £60 and £70.
35. After the voidance was reversed, were you left in peaceable possession? Yes.
36. And you completed your three years' residence? Yes.
37. And you made the required declaration? Yes.
38. How long after you made the declaration was it that Mr. Broughton brought an action against you? I think nearly twelve months.
39. The papers, I think, show that it was two years? I do not know exactly the time, but I know it was a long while afterwards.
40. Did you pay three years' interest? Yes.
41. So you must have been on the land before he brought the action? Yes; I was forgetting.
42. When Mr. Broughton brought this action of trespass against you, was the selection transferred to the Bank of New South Wales? Yes.
43. Why did you transfer it to the Bank? To raise money on it to enable me to carry on.
44. Do I understand that the expense you were put to by the voidance of the selection placed you in difficulties, and that in order to improve the selection you had to transfer it to the Bank to raise money;— is that what you mean? Yes.
45. Mr. Broughton took you into the Supreme Court as a trespasser on the land? Yes.
46. Did he swear in the Court that the fence was wired at the time you selected? He did.
47. A complete fence? A complete paddock, wired and fenced.
48. Was it on that evidence, and also on evidence that the value of the improvements was £40, that he got a verdict against you? Yes.
49. Do you know why he brought this action of trespass against you? Because he understood, I think, that £40 worth of improvements would bar my selection.
50. Was it not through a previous case being tried in the Supreme Court, in which it was decided by the Judges that £40 worth of improvements on any measured portion of land barred selection? That was decided in the Supreme Court in a case before mine.
51. It was on that decision of the Judges that the verdict was given against you? Yes.
52. Did Mr. Broughton swear that the fence was wired, and that it was above the value of £40? Yes.
53. The papers show that a verdict was obtained against you on the 3rd March, 1883, for 40s. and costs? Yes.
54. You put in a letter to the Colonial Secretary claiming compensation, and furnishing an account. In that letter you say that you had effected improvements on the selection to the amount of £456? Yes.
55. And that your costs of defence in the action brought by Mr. Broughton against you amounted to £275 8s. 3d.? Yes.
56. And that the amount paid by you to witnesses was £149 19s., and that you paid plaintiff's costs as taxed, amounting to £211 13s. 11d., making a total of £637 1s. 2d. for law costs? Yes.
57. You say, "This makes a total of £1,093 1s. 2d., being the loss sustained by me in consequence of the Supreme Court deciding that the land was not open to selection in consequence of it being a measured portion containing more than £40 worth of improvements, although I received letters from the Department informing me that the Minister had decided in my favour, and informing me that I might proceed with my improvements." You mean that after the voidance was removed you got a letter from the Department saying that you might continue your improvements? Yes.
58. Is the amount of money which you claim as compensation £1,093 1s. 2d.? Yes.
59. That is the full amount including everything? Yes; I never put in my own expenses of travelling up and down several times, but simply the cash which it actually cost me for law costs, &c.
60. When this action was brought against you was the land alienated to the Bank? Yes.
61. The fact of the matter was the Bank was the trespasser? I had transferred the land to the Bank.
62. But you were still residing on the land? Yes.
63. You remained in possession of the land after it was transferred to the Bank? Yes.
64. On the verdict being obtained against you, what did you do? I had to leave the selection and go and work at my trade.
65. You started a blacksmith and carpenter's shop at Coolac? Yes.
66. Did you leave any person in charge of the cottage? Yes.
67. Whom did you leave in charge? A man named Ryan.
68. Is he in charge now? No; he gave me notice that he wanted to shift, and I placed a man named Briggs in the place, and he resides there now.
69. Briggs took charge of your residence after Ryan left it? Yes; in fact he went in before Ryan did leave.
70. Do you mean to say that this verdict was obtained against you on false evidence in the Supreme Court? Yes.
71. Through the witnesses swearing that this fence was wired before you selected? The evidence given in the Court with regard to the fence was untrue.
72. Can you prove, by reliable evidence, that the lessee's men continued fencing for months after you had selected? Yes.
73. And that the fence which was sworn in the Supreme Court as being a complete paddock-fence, wired at the time you selected, was not complete and wired for months after you selected? No, it was not.
74. You are quite clear on that point? Perfectly sure.
75. Did Mr. Broughton at any time offer to buy you out of the selection? He did.
76. When was that? About a month before he served me with the Supreme Court writ. 77.

Mr.
G. Vincent.
8 May, 1895.

77. *Mr. Anderson.*] What did he say to you then? He came to my place and asked me what I intended to do with the land, and I told him that I would sell it if I could get money enough for it. He asked me what I wanted for it, and I said £1,200. He laughed, and said, "It is not worth that. You would be very lucky if you got half that." I said to him, "What do you think it is worth?" He said, "Not much." I said, "What will you give for it?" He said, "I do not think you could do better than take your deposit money and get wages for your improvements out of it. I do not mind giving that, if you like to accept it." I said that I would not take it. He said, "If you will not take that you will have to go out of it." That is all that passed between us, except that when Mr. Broughton was leaving he threatened me with legal proceedings, but I forget the exact words which he made use of.
78. Did you ask him his reason? I did not say any more to him. He got on the coach and went away.
79. *Mr. Gormly.*] What did you value the improvements at when you selected the land? I could not value them at anything.
80. Do you know the value of fencing? Yes.
81. What length of fencing was on the land? A mile and forty panels.
82. It was split posts and one top split rail? Yes.
83. About what would it cost per mile to erect such a fence? I think that at that time it could have been erected for something like £25 per mile; that would be a big price for it as it stood.
84. Was timber plentiful in that neighbourhood? Plenty of timber, but rough.
85. Was timber easily procured in the neighbourhood where the fence was erected? Yes, for rough fencing.
86. Such a fence as that erected? Yes.
87. Were there any other improvements on the land? None.
88. Was the land ringbarked or scrubbed? No.
89. Were there any other improvements on the land but the fencing? Nothing.
90. And the fencing erected was not worth £40? No.
91. *Mr. Barnes.*] At the time you took up the land it was not a reserve? No.
92. It was a piece of ground thoroughly open to selection? Yes.
93. And you took it up with the idea that there were no improvements on it, and in good faith, believing that the land had less than £40 worth of improvements on it? I did.
94. You were aware that £40 worth of improvements would bar your selection? I was not aware of that.
95. The fence you speak about was a rough fence, and done with timber got close by? Yes; the principal part of the timber was split on the ground.
96. *Mr. F. Clarke.*] Did the Land Agent at Gundagai offer any objection when you put in your application for this land? No.
97. What became of the log fence to which Mr. Evans refers in his report when transmitting plans to the Surveyor-General? That was burnt a long time before I selected the land.
98. Was the 2 miles of fencing—wire and top-rail fencing—which was erected on the selection by Mr. Broughton, put there before or after the date of your application? After the date, with the exception of a mile and forty panels.
99. Did Mr. Broughton put in the wires of the fence after the date of your application? Yes.
100. You stated just now that you had a man in charge of the place;—do you pay that man to remain there? No; he pays me rent.
101. *Chairman.*] Did Mr. Broughton keep occupation and run his sheep on this selection all the time you were there? He never used to try to keep them out; but I used to turn them off, and all the time I was living there myself I kept them out. I ran stock on it myself, and he never interfered with it.
102. Did he put any of his stock into this paddock after he had fenced it off? It was never a fence to prevent stock. It was only fenced on three sides, and the stock used to cross the creek. It was a boundary of the land, but never cattle-proof.
103. *Mr. Anderson.*] Were you willing to pay Mr. Broughton for the fence that was on the selection at the time you selected? No; because I did not consider that it was of any value to me. I should have had to shift it if I had bought it.
104. It was not on the boundary of your selection, consequently it was of no use to you? No, it was not.
105. *Chairman.*] Is the sketch of portion 93, shown on page 14, a plan showing the old surveyed road? Yes.
106. And that pencil mark represents the new surveyed road? Yes.
107. After Mr. Broughton erected this fence across the old road and blocked it, was the road opened again, or was it closed, or what was done? The fence was cut down to allow teams to go through.
108. Was the new road surveyed? Yes.
109. On this very portion? Yes.
110. Are you claiming compensation and also asking to be put in occupation of the land again? Yes.
111. The land has not been alienated since? No.
112. It has been made a reserve? Yes.
113. Reserved from sale? Yes.
114. It is still there, as you left it? Yes.
115. There have been no other improvements effected on it since that fence was erected? No.
116. *Mr. F. Clarke.*] Did you continue to reside on the land after your selection was voided? Yes; until after the verdict of the Supreme Court.
117. *Mr. Gormly.*] Has a second voidance taken place? No.
118. You received no second notice of voidance from the Department? No.
119. Then what is the reason why you said that the land has been reserved from sale;—how do you know that that took place? I do not know how it took place.
120. Are you prepared to place before the Committee any documents—*Gazette* notice, or any document from the Department to yourself, showing that it has been reserved from sale? I do not know what the Government did with it.
121. You do not know that a second voidance took place? No.
122. Do you know that the land has been reserved from sale? No, I cannot say that it has.
123. *Chairman.*] You got no notice of a second voidance? No.
124. Did you ever apply for a refund of your deposit and interest? No.
125. Nor anyone on your behalf? No.

- Mr. G. Vincent.
8 May, 1895.
126. You never signed any voucher? No.
127. And the money has never been placed to your credit in the Bank? No.
128. For all you know the money is still in the Treasury? I have never lifted it out of it.
129. *Mr. Gormly.*] Does the Bank of New South Wales hold the selection as a security, or does it hold it as an absolute transfer? As a security.
130. It is still your land? Yes.
131. But transferred to the Bank of New South Wales by way of security? Yes.
132. *Mr. Anderson.*] Are you getting any benefit from the land now? No.
133. How long is it since you have been deprived of the benefit of the land? I have never had any benefit from it.
134. Did I understand you to say that it was rented? The house.
135. But not the land? Not the land.
136. How long have you been deprived of the benefit of the land? Over nine years, I think.
137. And you have not got the money you paid as a deposit? No.
138. Nor anything in lieu of it? No.
139. No advantage from the land? No.
140. *Mr. Gormly.*] How are you deprived of the benefit of the land;—who derives benefit from the occupation? Mr. Broughton occupies the land, I believe.
141. You are not prepared to say that your selection has either been forfeited or voided? No; I do not know anything more than that. Mr. Broughton beat me in the Supreme Court; that is all I know about it.
142. *Chairman.*] Did Mr. Broughton order Briggs out of the cottage? He ordered him out of the house.
143. Briggs came and told you so? Yes.
144. *Mr. Gormly.*] Are you aware that if the voidance was reversed it would be necessary before the land could be taken out of your possession, if you legally possessed it as a conditional purchaser, that a certain process should be gone through, and that it could only be done by a Proclamation or *Gazette* notice;—do you know if such a notice was issued? I do not know of it; I have never seen it.
145. *Mr. F. Clarke.*] Did I understand you to say that you never applied for a refund after the Supreme Court action? No, I did not.
146. Will you turn to page 33, and look at a letter purporting to be from you to the Under Secretary for Lands. If you look at paragraph 3 of that letter you will see these words:—"I have therefore to ask that you will be good enough to refund me my deposit, with interest thereon from the date of payment, and also the sums I have paid for interest since the year 1881?" It is signed "George Vincent," but I have no recollection of signing or sending it. It may have been sent by the Bank.
147. You never wrote that letter nor signed it? No.
148. *Mr. Gormly.*] Would you know your letter if it were produced by the Department? Yes.
149. *Mr. Anderson.*] Could you have signed that letter by the authority of the Bank when it was taking the land as a security? I think I did sign to the Bank for the deposit money.
150. *Mr. F. Clarke.*] Did you give the Bank authority to get a refund? Yes; but when I cleared off my liability to the Bank it wanted to hand over the affair to me, but I never got it.
151. You never got the amount of the refund from the Bank? No.
152. You never drew it from the Bank? No.
153. *Mr. Anderson.*] Did the Bank receive it from the Department on your account? Yes.
154. *Mr. Gormly.*] Then you say the Bank did receive a refund of your deposit? I do not know that they ever took it from the Treasury, but I transferred the selection to the Bank.
155. You are not aware whether the Bank got a refund of the deposit or not? If it did, I know nothing about it.
156. I thought that, in answer to Mr. Clarke, you just stated that the Bank did receive a refund? I did not say that the Bank did receive it.
157. In this return to the order made by the Legislative Assembly, on page 37, there is a letter from the manager, Bank of New South Wales, Gundagai, to the Chief Commissioner, dated 16th May, 1884, containing the following words:—"On the 8th August, 1883, I wrote asking you to kindly forward me refund vouchers for deposit, £160, and three years' interest, £96, due on a conditional purchase (as per marginal notes) of George Vincent's, transferred by him to this Bank, and afterwards declared void. As I have not to this date been favoured with any reply to the above letter, I shall feel obliged by your making inquiries why it is I am not furnished with the documents applied for";—were you aware that that letter was written by the manager of the Bank of New South Wales? Yes.
158. It was written with your knowledge, then? I had no knowledge of its being written, but I see it is printed.
159. *Chairman.*] Did you receive a refund of the deposit? I received a voucher, but I would not sign it, and I returned it.
160. *Mr. Gormly.*] You are not in a position to say whether the deposit was refunded to the Bank of New South Wales as the persons to whom you had transferred the land? No, I am not.
161. *Mr. F. Clarke.*] Did the Bank manager ever tell you that he had received a refund of the deposit? No, he did not. If they have it, I know nothing about it; and if they have got it, they must have got it by some unfair means, because I do not owe them a shilling.

Mr. James Armstrong called in, sworn, and examined:—

- Mr. J. Armstrong.
8 May, 1895.
162. *Chairman.*] What are you? Farmer and storekeeper at Muttama.
163. Do you remember George Vincent selecting 640 acres adjoining your property at Muttama? Yes, I do.
164. He afterwards asked you to inspect, with some other people, a fence on the land—the day after he selected? Yes.
165. Will you describe what improvements were on that land the day you inspected it—the day after Vincent selected? All the improvements on it, as near as I can guess, were about a mile of fencing—perhaps a little more or a little less—split top rail and split posts.
166. Were the posts bored for any wire? I do not think they were bored.
167. Was there any wire in the fence? No.

168. Did that fence, as it stood, make a complete paddock? It could not make a paddock, because it was only one side; it would want to be fenced in all round to make a paddock.
169. It was not erected so as to make a paddock? No.
170. Do you know if a portion of that fence was erected across the surveyed road? It was not on the surveyed road then—not that I know of.
171. Do you remember the fence being cut down? The road was inside the fence, and I remember its being cut down.
172. Did the fence, where it turned round, cross the road near the corner? Yes.
173. Do you remember the fence being cut down to allow teams to go through? Yes.
174. Has a new road been surveyed since, outside that fence? Yes, surveyed by the road inspector.
175. Were Mr. Broughton's men at work on that fence when you inspected it the day after Vincent selected? Yes; the men were putting up the fence.
176. Did they continue to work at that fence afterwards? They continued until they finished their work.
177. Finished the fence and made a paddock of the land? Yes.
178. Did they put the wires in the fence and complete it after Vincent had selected? Yes.
179. How long after was it completed? A couple of months elapsed before they had it completed.
180. Are you aware that Vincent completed his residence and made a declaration? I am aware that Vincent completed his own residence.
181. Do you remember anything about an action of trespass being brought against Vincent by Mr. Broughton? Yes; I know there was an action for trespass or something.
182. You did not give evidence at the Supreme Court? No.
183. Do you know that Vincent had a man named Ryan in the cottage? Yes; there was a man named Ryan living in the cottage.
184. That is, after Vincent left it to go to work at his trade? Yes.
185. Ryan left some time after? Yes; and there is another man living there now—a man named Briggs.
186. He went in when Ryan left? Yes; by authority from Vincent.
187. Do you consider that the improvements on that selection upon the date when you inspected it were worth £40? I am sure they would not be.
188. *Mr. Gormly.*] What would you value the improvements at? I do not suppose that they would be worth more than £30.
189. You went with Mr. Vincent with the object of valuing the improvements? To look at the improvements.
190. And you do not think that their value exceeded £30? No. We went to give Broughton notice to discontinue the improvements on the land Vincent had applied for.
191. At the same time you inspected the improvements? Yes.
192. What do you consider they were worth? About £30.
193. *Mr. Barnes.*] I suppose you saw no papers Mr. Vincent received on the matter, asking him to leave the land or anything of that sort? I never saw any papers.
194. In fact, you were not aware that the selection was declared void a second time? No; I do not know anything about that.
195. *Mr. Anderson.*] Do you remember the time when Mr. Vincent selected? Yes.
196. What length of time elapsed between the time when Vincent selected and the time when the fence was completed? About two months.
197. You said there were about £30 worth of improvements at the time he selected? Yes.
198. What length of fencing was there when you went there with Vincent? About a mile.
199. Was that a boundary-fence? No; there was no boundary-fence at all.
200. Had it any connection with the selection? It only cut it in two.
201. *Chairman.*] How far are you living from this land? About 15 chains, I suppose.
202. If Mr. Broughton swore in his evidence in the Supreme Court that that fence was a complete fence, wired and braced, when Vincent selected, was that evidence correct, or was Mr. Broughton mistaken? He must have been mistaken. It was completed afterwards.
203. *Mr. Anderson.*] How long afterwards? Two or three months.
204. After Vincent gave Mr. Broughton notice to discontinue the fence he went on and completed it? Yes.
205. A paddock was made? Yes.
206. *Mr. F. Clarke.*] Mr. Broughton turned it afterwards on the boundary-line down to the creek? Yes.

Mr. Thomas Broughton called in, sworn, and examined:—

207. *Chairman.*] You are lessee of Muttama Run? Yes.
208. You opposed Vincent's conditional purchase application for 640 acres on Muttama, you claiming it under a pre-emptive right applied for on the 17th June, 1864;—is that correct? I disputed Mr. George Vincent's right to the 640 acres. I moved for an injunction to restrain Mr. Vincent from selling the selection. The injunction was granted, and a trial took place before a Judge and jury about June, 1882.
209. Before that you had Vincent's selection declared void, did you not, in 1878, I think? I applied in 1864 to the Government, under pre-emptive right, for 640 acres of land, also for 160 acres of land. The particulars you will find in the printed document moved for by Mr. Barnes. So far as I know, the particulars are contained in that printed document.
210. The papers show that this pre-emptive right applied not to this 640 acres selected by Vincent but to 640 acres at Elton's old sheep-station and including Billingsley's conditional purchase? The particulars of that, I have already stated, are contained in that printed document.
211. You had some men erecting a fence on the land now in question when Vincent selected it? Before I made application at all, or about that time, I had a chock and log fence along the line of roadway. That is the one reported upon by Mr. Surveyor Evans.
212. I am not referring to the log fencing; I asked you if you had any men erecting a post and rail fence on this land when Vincent selected it—say yes or no? With all due respect to you, Mr. Chairman, "yes" or "no" does not explain the matter.
213. Had you men erecting a fence on this particular piece of land which Vincent selected when he selected it? I had 1 mile completed of the line of fence along the road when Mr. Vincent made his application.

Mr.
J. Armstrong.
8 May, 1895.

Mr.
T. Broughton.
8 May, 1895.

- Mr. T. Broughton. 214. How do you mean completed;—had you made a complete paddock-fence? Not a complete paddock-fence, but along the line of roadway for a distance of a little more than a mile, with a top rail and six 5-wire fencing.
- 8 May, 1895. 215. And that was a complete fence, wired, when Vincent selected? It was wired before Vincent made his application. The two men who constructed the fence gave evidence in the case before the Judge and jury.
216. You are quite certain about that? Will you permit me, Mr. Chairman, to suggest to the Committee that you should be furnished with the Judge's notes in that case.
217. *Mr. Anderson.*] At the time when Vincent selected this land you had part of a fence on it? I had a fence along the line of roadway—that is, a top rail and six 5-wire fence to the extent of over a mile.
218. What do you reckon was the value of that fence? If you will refer to the documents you will find that the appraiser—
219. The reason why I ask this is because the matter is entirely strange to me, and I wish to get the information for my satisfaction as a member of the Committee? There are many different varieties of fencing.
220. But the value of that particular fencing is what I want to know? Unless I explain to you that the posts were put 2 feet into the ground and 5 feet above—
221. That does not matter. I want your opinion as to the value? About £80 a mile.
222. After Vincent selected, did you make a complete paddock-fence of that fence? I did.
223. You knew at the time that you completed this fence that the Departmental sanction had been given to Vincent to occupy this land? No; quite the reverse. The Government had directed that the ground should be measured in satisfaction of Broughton's application for 640 acres of land.
224. Bearing date when? I beg to refer you to the report, or to the instructions given to James Evans, the surveyor, to measure the land.
225. Did that refer to Vincent's selection, or the land that Vincent applied for, or did it apply to other selections? The land was specially surveyed, by instruction of the Government, for Broughton.
226. Was that the land that Vincent applied for? It is the land that Vincent applied for; and my agents, Messrs. Bloomfield, protested against Vincent's selection, and Mr. Farnell cancelled the selection.
227. Have you similar selections of the same dimensions in the same neighbourhood? No, I have not.
228. How long had Mr. Vincent been in possession at the time he was notified by you? Only a very few months. From memory I cannot say much, but from this printed document you will find all the particulars.
229. Did you at any time want Mr. Vincent to sell his interest in this selection to you? No. In the year 1882 Mr. Archie Smith, an agent in Gundagai, wrote me, stating that he was instructed by Vincent to sell the land. He offered it to me at £2 per acre cash. Upon the receipt of that application I moved for an injunction to restrain Vincent from selling or disposing of the land.
230. Did you have any conversation with Vincent in connection with the land? Never.
231. Then neither directly or indirectly did you make any proposal to him by way of purchase? The sum of £3,000 was demanded from me.
232. On what grounds was that demanded? To remove any opposition to the selections held by Broughton—that selection and other selections.
233. By whom was that proposal made? By Vincent's friends.
234. From the time that Vincent applied for the land to the time when he was dispossessed of it, how long had he peaceable possession of it? He had an old man living there, but he never lived there himself. He carried on business at Coolac, 10 or 12 miles away from the selection, as a blacksmith and wheelwright.
235. Did the Department grant Vincent a right to this selection? Mr. James Hoskins, at the instance of your Chairman, Mr. Pinkstone, and a deputation that waited upon him, confirmed Vincent's selection.
236. And after he had been reinstated, how long was he in possession? As to his possession, he still carried on his business at Coolac.
237. How long was he in possession after being reinstated? Nominally he was in possession until I brought an action against him.
238. What was the result of that action? The jury found that there were improvements on the land sufficient to bar selection. I did not seek damages, but the jury returned a verdict for 40s. damages.
239. What improvements had Vincent on the ground at that time—improvements which he himself actually placed on the ground? So far as the fencing is concerned, I fenced the whole of it in. Vincent built a cottage there a short time before the three years expired.
240. Was it this actual land or any portion of it which Vincent selected that you fenced in? Yes; the whole of it.
241. I asked you if there were any 640-acre selections in connection with your station other than Vincent's? I notice that these printed papers do not include a return moved for by Mr. Barbour, giving particulars of all the land that has been conceded to me by the Crown. I now hand in a copy of that return. The first-mentioned 640 acres was forfeited by me.
242. By you? Yes. It was measured where I did not require it, and I objected to take it.
243. *Mr. Barnes.*] What is the area of Muttama Run? 131,000 acres.
244. *Mr. F. Clarke.*] Did you ever offer, either personally or by letter, to buy Vincent out? Never in my life.
245. Have you ever since applied to the Department for this land in dispute as an improvement purchase? Whatever I have done is mentioned in these papers, and the application was refused on the grounds that the land was not improved to the extent of 20s. per acre.
246. Well, it states in these papers that you have applied for it as an improvement purchase—is that correct? I have applied several times, and the answer that I have invariably got has been, "This matter is before the Legislative Assembly."
247. I am simply asking you if you have applied for this land as an improvement purchase since the Supreme Court decision? Yes; and it was refused, on the grounds of not containing improvements to the extent of 20s. per acre.
248. In the first instance, under what right did you set up a claim to this particular 640 acres? Simply because the Government had allowed it to be selected, but had themselves put it up for auction sale.

249. I understand you did not set up a claim to it on account of the application under the Orders-in-Council? I did in the first instance, and there was a dispute as to whether that particular portion of land belonged to me or to my neighbour, Mr. Dallas.
250. That point, of course, was decided afterwards;—you are referring now to the run boundary? Yes.
251. When that point was decided you renewed your application for this 640 acres to embrace a portion of 140 acres selected by one Billingsley;—is that not so? That is hardly correct. The Government wanted 160 acres as a water reserve, and I gave up that 160 acres to enable the Government to declare the spot a water reserve.
252. But, all the same, you accepted, in virtue of your application, a 640-acre block? For the 640 acres I had lost by the act of the Government—not by any negligence on my part, but simply by the oversight or negligence of the officers of the Government.
253. I do not want to go into these details too much, because I do not think they bear sufficiently on the case; but you say that you applied for this 640 acres, and then you withdrew that application in order to allow the Government to get a reserve of 160 acres? The Government suggested to me that if I would concede that 160 acres they would cancel part of Billingsley's and give me 640 acres somewhere else. It was not for me to consider, but for the administrators of the Government to say what they would give me.
254. Did you have that in writing? Nothing more than is contained in the printed documents.
255. Do you know whether there is any document printed here which conveys to you what you have just stated? Yes.
256. There is, amongst these papers? Yes, there is—sanctioned by Mr. Wilson, who was then acting as Minister for Lands.
257. In what position did you apply for that 640 acres afterwards? What is now called "Vincent's 640 acres."
258. But did you not apply somewhere else before that? No, never.
259. That included Billingsley's 140 acres? Billingsley's 140 was in lieu of the 160 I was entitled to, which the Government, at a subsequent period, desired to have as a water reserve.
260. Then this 640 acres was another claim altogether? This 640 acres was in substitution for what the Government had allowed to be free selected, and what the Government had sold by auction.
261. Did your pre-emptive right to this 640 acres expire altogether at a certain time? No. Having reference to my first application, I was then entitled under the Orders-in-Council, as stated in these printed papers.
262. In asking you the question, I had in mind a part of Mr. Hoskins's minute, which is printed on page 28; will you kindly look at this paragraph—
Secondly—Because Mr. Broughton's pre-emptive right of purchase of Crown land on the Muttama run ceased on 31st December, 1865, when the lease of Muttama run under the Orders-in-Council expired. That is given as one of the reasons why your claim should not be allowed;—in your opinion, was the statement correct that your right had ceased? That may have been his view.
263. I am asking what was your opinion of the case—of course it was Mr. Hoskins's view, or he would not have written that? That was his view. I disputed it.
264. You thought you still had a claim, notwithstanding what Mr. Hoskins wrote? I did, certainly.
265. On what grounds? Without there being any fault of mine, that particular portion of land was absorbed by an oversight of the Government.
266. And notwithstanding the fact that your right expired in 1865? I beg your pardon, my application was still standing in 1864.
267. Yes, the application was there, but still the right to deal with that application did not exist after 1864? I presume that you have read these document from the questions you ask me, and it would be disclosed there that the reason assigned was the uncertainty of Elton's old station, and then the Government offered me land near to it.
268. You are going away from my question? I do not desire to do so.
269. It is not necessary to go into these particulars, because they are already shown in the papers; all I want to know is whether you concurred in the view expressed by Minister Hoskins in that minute? Certainly not.
270. You consider that you had a claim on the Department, notwithstanding that the time for exercising that claim had expired? I do not admit that the time had expired.
271. Did you continue to improve the land after Vincent selected? I did. I finished fencing the opposite side of the road.
272. Did Vincent give you any notice to cease putting up improvements? I do not think he gave me notice, but I think that he gave notice to the men who had not completed the fencing. But I would not swear positively upon that question. He may have given me notice.
273. How long before Vincent applied for the land had you these improvements you speak of completed? Vincent's application took me entirely by surprise.
274. I am asking you how long before Vincent applied had you the improvements completed; I do not know whether you were surprised or not? They were going on when Vincent made his application.
275. What stage were they in; I think you have already stated that there was a mile finished;—how long had that been done when Vincent selected? After the men had fenced the mile of roadway, erecting sixty-four panels, running west, towards the creek.
276. When Vincent selected? Yes; the men had erected sixty-four panels on the south side of the boundary running to the creek.
277. That was in August, 1878? Yes.
278. You continued fencing? Yes.
279. For how long afterwards? Until I had completed.
280. Right down to the creek, on both the north and south boundaries? Yes; and I erected a similar fence on the eastern side of the road.
281. That would be two lines of fence? Yes. Altogether there were four lines of fencing—two road boundaries, and on the south side and part of the north, but not the whole of the north—not a cross-fence on the whole of the north, because I had other lands adjoining.
282. What value of improvements do you think you effected there altogether in the way of fencing? I should say about £280 in fencing.

- Mr. T. Broughton. 283. Can you remember when you completed them? I commenced immediately after enclosing the western boundary of the road.
- 8 May, 1895. 284. The western boundary is a creek? Yes; but I think I was speaking of the road boundary. Not only the 640 acres would be open to travelling stock, but—
285. It would be about how long do you think after the time Vincent selected? It went on; I do not think there was any stop at all.
286. You went on with it? Yes; relying on my contract with the Crown.
287. Within six months of Vincent's application, you had both sides of the road fenced, and the whole of the southern boundary of the 640 acres? Yes; I should say there were $3\frac{1}{2}$ miles of fencing altogether.
288. You value that at what? About £280.
289. Was that completed about six months after Vincent about that time selected? All completed by then.
290. Are you aware that on the 20th April, 1879, Mr. Fraser Keele valued the improvements then—2 miles of six-wire and a top-rail fence—at £170? I am not sure whether it is five or six wire, but I think it is six.
291. He valued that at £170 in 1879? Yes.
292. Vincent applied the year before that? Somewhere about that time.
293. Vincent applied on the 22nd August, 1878? Yes.
294. You were fencing at the time Vincent applied? Yes.
295. And you completed your fence about six months after he applied? I do not say positively; but I say about that time.
296. To the value of £250? Yes.
297. That would bring you up to February, 1879, and on the 20th April, 1879, Inspector or Appraiser Keele values the improvements at only £170, and you say there were £250 worth? Of course I did not know what he valued it at, but it was immaterial to me what he valued it at.
298. He says that there were 2 miles of six-wire and top-rail fence on the 20th April, 1879, whereas you put it down at $3\frac{1}{2}$ miles a few months before that? After erecting 2 miles, there were about $3\frac{1}{2}$ miles, and I account for the $3\frac{1}{2}$ miles by saying that the southern boundary had been fenced, and a part of the north boundary, but not the whole. Then I say that part of the southern boundary was land between Mr. Armstrong and myself. His land was to the south of mine, and as regards the northern boundary, I had adjoining land there, and the probabilities are that Mr. Keele took that as belonging to the other men or as boundary fencing.
299. Although the fence was on the boundary? Yes.
300. There is a difference of a mile and a half, you know? Well, notwithstanding that, if you put a scale to the southern boundary—and that is all fenced—it would show a mile.
301. You consider he reckoned that in? I considered that he did not take that into account at all, because it was a boundary-fence.
302. You think that Mr. Keele knocked out that 1 mile between you and Mr. Armstrong? Quite so, and the other half-mile was a boundary-fence adjoining the 640 acres. The southern boundary of the 640 acres would be about a mile, and the northern boundary would be about the same. But having land adjoining, I did not fence the whole of the northern boundary.
303. I wanted to arrive at how the discrepancy arose between your statement now and the Government appraiser's statement? Yes; I account for it in that way.
304. That he did not take into account some boundary because it adjoined another part of your property? Yes.
305. *Chairman.*] Was the southern boundary-fence erected by you or by Mr. Armstrong? I cannot positively say, but Mr. Armstrong did not acquire that land until some time after. I think there is a road between Mr. Armstrong's land and mine, and his land faces the east side of the road, and does not run to the creek boundary.
306. When you erected this paddock-fence on the western portion of Vincent's selection, was the road inside the paddock—the surveyed main road between Cootamundra and Gundagai—where you talk about the log fence? The log fence was on the west side of the wire fence. The road had been altered at the instance of the road inspector.
307. It was altered after you put up the fence? No, not after I erected the wire fence. The road inspector, with my consent, made a bridge that he considered would be less expensive to erect, and more convenient to the public.
308. And then the road was altered accordingly? Then the road was altered to accommodate that bridge.
309. And put outside the first fence you had put up? The road went to the east. Previously there was no bridge across the watercourse.

TUESDAY, 14 MAY, 1895.

Present:—

MR. BARNES, MR. GORMLY,
MR. O'SULLIVAN.

TRAVERS JONES, Esq., IN THE CHAIR.

Mr. William Henry Capper called in, sworn, and examined:—

- Mr. W. H. Capper. 310. *Chairman.*] You are the officer-in-charge of the Conditional Sales Division of the Lands Department? Yes.
- 14 May, 1895. 311. Have you read these papers in Vincent's case, printed by order of the Legislative Assembly? Yes, I have.
312. Are they true copies of the papers relating to George Vincent's conditional purchase of 640 acres? Yes, with the exception of two documents that appear to have been missed.
313. What are those documents? A report by Inspector Evans, and Mr. Secretary Farnell's authority to declare Vincent's application void.
- 314.

Mr.
W. H. Capper.
14 May, 1895.

314. Does that refer to Mr. Broughton's pre-emptive right claim, or to Vincent's conditional purchase? Vincent's conditional purchase. I now put in that report. [*Appendix A1.*]
315. That is, as to improvements? Yes.
316. Do the papers show that the conditional purchase was declared void in October, 1878, through the land having been allowed to Mr. Broughton as a pre-emptive right? It was declared void on the 23rd October, 1878, the land required having been allowed to Mr. Thomas Broughton as a pre-emptive right.
317. Will you look at paper No. 75, Mr. Hoskins's minute;—does the minute of the Secretary for Lands, Mr. Hoskins, dated 22nd April, 1881, show that Mr. Farnell was not justified in declaring the conditional purchase void, and that the cancellation should be reversed, and that Vincent's conditional purchase application was held to be good;—can you produce the original minute? Yes; I have that minute here. [*Minute read by witness and put in. See Appendix A2.*]
318. Was Vincent reinstated because of that minute? Yes; the cancellation of his selection was reversed.
319. Have you any record of the Supreme Court Judges having decided before Vincent's case was tried that £40 worth of improvements on a measured portion barred selection? Yes.
320. Can you state what that case was? The case of *Moore v. Bernholt*.
321. The Department received a copy of the verdict in Broughton's action against Vincent? Yes; signed by the Prothonotary.
322. Can you produce the Judge's notes? Yes.
323. And the evidence given in the case? No; I cannot produce any evidence except the Judge's notes, which I take to be notes of the evidence given.
324. Was Vincent's conditional purchase declared void a second time? Yes.
325. When? From printed paper No. 101, I find that Mr. Stobo states that "at Vincent's request a voucher for the refund of his deposit money has been issued to him."
326. Is that in reference to a second voidance? Yes.
327. Does that give the date of the second voidance? No, it does not.
328. Can you state the date of the second voidance? Yes.
329. Look at printed paper No. 103, it shows that that voidance was not completed? That is only according to the register.
330. Paper No. 104 shows that the whole of the papers in the case were then under reference to Surveyor Park? Yes; on the 23rd June, 1884.
331. Look at paper No. 114—a minute from the present Under Secretary for Lands; in that minute he only refers to the first voidance in 1878? Yes. Of course, as a matter of fact the selection was void from the beginning.
332. But the cancellation was reversed, and Vincent was reinstated;—there is no evidence before the Committee to show that a second voidance was made by a minute of the Secretary for Lands;—have you any paper which shows that? The conditional purchase was declared void the second time on 30th June, 1883. I put in the minute. It is signed by the Chief Commissioner, 21st June, 1883, and approved by Mr. Secretary Farnell, on 26th June, 1883. The necessary documents were sent out on 30th June, 1883. [*See Appendix A3.*] I also produce a letter from Mr. George Vincent, asking for refund of his deposit, with interest thereon, from the date of payment, and also the sums that he had paid for interest since the year 1881, together with a reasonable sum as compensation for the value of his improvements and the time lost by him in performing the residence conditions, and the amount of law costs which he had incurred. [*See Appendix A4.*] I also put in a letter from Mr. McLaughlin, solicitor, asking for a refund voucher for the amount of deposit, interest, and instalments paid by Mr. Vincent on his conditional purchase. [*See Appendix A5.*]
333. *Chairman.* I now hand you a letter, dated the 13th May, 1895, issued by the Under Secretary for Finance and Trade, stating that an amount of £256 is still available for refund in connection with Vincent's conditional purchase? This letter refers to the land selected by Vincent, and shows that the money which he paid into the hands of the Government is still in the Treasury.
334. And there was no application for a refund, or it would have been made? The money is in the Treasury for Mr. Vincent or his agent to lift.
335. If a voucher had been produced the money would have been paid, no doubt? Yes; to Mr. Vincent or his agent. The money is still available.
336. You say that in a case before Vincent's there was a decision of the Supreme Court that £40 worth of improvements would bar selection on any measured portion? Yes; in the case of *Moore v. Bernholt*.
337. Anyhow, the second voidance was made after the decision of the Supreme Court that if there were £40 worth of improvements on the land they would bar selection? Yes.
338. Was any action taken by the Department to amend this defect in the law, which affected thousands of selections besides Vincent's? Improvements to the value of £40 always barred selection up to the passing of the Act of 1884.
339. Has the lessee of Muttama Run applied for this land as an improvement purchase since;—have you any papers to show that? I have not gone into the question of the claim to this land under the pre-emptive right or the improvement purchase; any evidence on that point could be given you by the officer who deals with those matters.
340. You do not know that this portion of land has been reserved from sale? Yes, I know that. It is reserved from sale pending the settlement of this dispute.
341. Do you know the names of Broughton's witnesses in the Supreme Court? Peter Constantine, Charles Stuart, and William John Slade. These names appear in the Judge's notes.
342. I think that Constantine and Slade were selectors;—what land had they selected on the Muttama Run? I put in a return [*Appendix A6*] giving particulars of conditional purchases applied for by them, and a return showing a list of portions to the north of portion No. 193, which were acquired by Mr. Broughton as auction purchases, and by other means. [*See Appendix A7.*]

Mr. Arthur James Stopps called in, sworn, and examined :—

- Mr. A. J. Stopps.
14 May, 1895.
343. *Chairman.*] You are the officer in charge of the Roads Branch? I am the acting chief draftsman at the present time, but I have been in charge of the Roads Branch, and have now general supervision of it.
344. I want you to point out where the surveyed road from Gundagai to Cootamundra was on the 22nd August, 1878, when Vincent selected;—is that a correct tracing of the road at the time Vincent selected? Yes. That has evidently been taken from the original plan.
345. Have you any plan showing where that road was altered afterwards? Yes; this shows it. The blue line shows the original line, and the red line shows the new road as proclaimed.
346. Does the blue line show the old surveyed road when Vincent selected? Yes.
347. And the red line shows the new survey made after this fence had been erected? Yes.
348. Before this new survey was made, that fence was not a roadside fence? No.
349. The road was altered in several places? Yes; there are slight deviations in one or two places.
350. In order to put the road outside the fence? It had that effect.
351. That is on the measured portions? Yes.
352. And the same applies here on the village reserve? Of course the village reserve in those days was not sold; the land was not subdivided. I might mention that it is customary for us to adopt the fences of private estates when we can do so without injury to the position of the road. There was a road before. This was only a redefinition of it, in order that if the Works Department elected to spend money upon it the surveys-marks should be a guide to the authorised road.
353. Do you know the date of that survey? Yes—August, 1880.
354. *Mr. Barnes.*] Was there a road on the southern boundary of that portion when Vincent selected? No; there was no road on the southern boundary of that portion.
355. Whose land adjoined at that time? Alexander Armstrong's.
356. *Chairman.*] There appears to have been no fence on the eastern side of the road when that survey was made? No.
357. Nor on either the southern or northern boundaries? There was a fence on the southern boundary, lying between the reserved road and Muttama Creek. At that particular part where the road intersected the boundary the new and the old roads were identical.
358. And also on the north? Yes; to Muttama Creek.
359. Was there any boundary-fence running east from the surveyed road either north or south? The plan does not indicate it; I should say not.

Mr. George Vincent recalled and further examined :—

- Mr. G. Vincent.
14 May, 1895.
360. *Mr. Gormly.*] In a document now produced to the Committee by Mr. Capper, of the Lands Department, it is stated that Mr. McLaughlin, the solicitor, called on the Department for a refund voucher on your behalf;—was Mr. McLaughlin engaged by you as your agent to conduct your case? Yes.
361. He was conducting your case? Yes.
362. Therefore, I suppose any action which he took in the case would be on your behalf? Yes.
363. Have you any knowledge of Mr. McLaughlin applying for a refund voucher? I signed a document, but I did not know that it was a refund voucher. I understood it to be for compensation.
364. But Mr. McLaughlin was acting for you? Yes.
365. And, therefore, the Committee will presume that any action which Mr. McLaughlin took would be authorised by you? Yes.
366. *Chairman.*] Have you refreshed your memory since you were here last as to sending letter No. 93? Yes.
367. You have seen the original document? Yes; I saw a letter signed by me.
368. Would you have signed that letter if you had known that it contained a request for a refund and interest? No.
369. It was not written by you, but by your solicitor? Yes, by my solicitor.
370. Why would you not have asked for a refund? Because you, Mr. Chairman, told me not to do so.
371. For what reason? Well, I understood you to say that you thought you could get the selection validated, and would be able to get a Select Committee of the Legislative Assembly to sit on the case.
372. That is, if I could not get the selection validated? Yes; and that you would try to get me justice for what I had lost.
373. That is the reason why you never raised the money out of the Treasury? That is the reason why I never drew the deposit money.
374. While residing on this selection, were you in the habit of working at your trade of a blacksmith and a carpenter for wages elsewhere? Yes.
375. And when doing so, did you reside upon the selection at night—that is, when you were working close by it? Yes.
376. Did you work for Mr. Armstrong on the adjoining land? I did.
377. What were you doing? I built a number of buildings—a store, a public-house, a stable, and out-houses, &c.
378. On the land adjoining your selection? Yes; not a quarter of a mile from it.
379. And you went to sleep on your selection at night? Yes.
380. Did you erect Cobb & Co.'s coaches at Brawlin? Yes, I did.
381. While you were working within reach of your selection you slept upon it? Yes; I always resided upon it when I was within reach of it.
382. When you were working any distance away, what did you do? I went to the selection every week and stopped there Saturday and Sunday.
383. Who erected the cottage on the selection? I did.
384. I think you said before that you gave Mr. Broughton notice to remove the fencing that was on the land? I did.
385. Was that fencing of any use to you? No use whatever.
386. Why not? For the reason that it was not a boundary-fence nor a roadside fence.
387. Is it a fact that the fence which was supposed to be on the southern boundary when you selected had to be pulled up and re-erected because it was not on the boundary? Yes. 388.

388. Was there any fence on the northern and southern boundaries of the measured portion, east of the road, when you selected? No.
389. It was fenced afterwards? Yes.
390. Were both sides of this road fenced before you selected? No.
391. Was it known to you that £40 worth of improvements belonging to the lessee existed on the land when you selected? No.
392. Did you have the fencing inspected and valued by any person the day after you selected? Yes.
393. Do you know how many men inspected it? I think eight.
394. And you can prove through them that there was no wire in the fence and no wire on the selection when you selected? Yes, I can.
395. Do you know any of the witnesses who gave evidence against you in the Supreme Court? Yes.
396. Who? Peter Constantine.
397. What is he in the employ of Mr. Broughton? He was head stockman—a managing man of the stock.
398. And William John Slade? Yes.
399. Was he in Mr. Broughton's employ? Yes; he was bullock-driver at that time.
400. A man named Charles Stuart gave evidence;—do you know him? No.
401. Did you ever see him on Muttama Station? No.
402. Constantine and Slade were selectors on Muttama Run? Yes.
403. You knew them to be holding selections? Yes.
404. Was all this trouble and expense to which you were put brought about by any fault of your own? Not by any fault of mine.
405. Was it through a defect in the Land Act which was proved by the Supreme Court? It was.
406. You have not got with you your lawyer's bill of costs for defending the action brought by Broughton against you? No; but I could get it in a few minutes.
407. Do you remember what those costs came to? Something over £400.
408. *Mr. Barnes.*] About the fence on the southern boundary—who erected it down to the creek? Mr. Broughton.
409. Was that fence up when you went there? Only forty panels of it.
410. And no wire in it? No wire; it had to be pulled up again; it was not on the boundary at all.
411. *Mr. Gormly.*] When you made application for this land, did you reside on the land within three months of the date of your application? Yes.
412. Did you continue to reside there for three years afterwards? Yes.
413. *Mr. Barnes.*] You made it your home for three years? Yes; I had no other home.

Mr.
G. Vincent.
14 May, 1895.

WEDNESDAY, 15 MAY, 1895.

Present:—

MR. F. CLARKE, MR. GORMLY,
MR. O'SULLIVAN.

TRAVERS JONES, ESQ., IN THE CHAIR.

Mr. George Vincent recalled and further examined:—

414. *Chairman.*] I understand that you made a mistake in answering question 56. You were asked, "And that the amount paid by you to witnesses was £149 19s., and that you paid plaintiff's costs as taxed, amounting to £211 13s. 11d., making a total of £637 ls. 2d. for law costs"; you replied, "Yes";—did you pay Mr. Broughton's costs as taxed, amounting to £211 13s. 11d.? No. In looking over my evidence I found that I said "Yes," but I did not understand the question put by you. Things have to be very clearly put to me before I understand. I might inform you that I am not an educated man at all.
415. You also still owe your own solicitor £241 11s.? Yes.

Mr.
G. Vincent.
May, 1895.

Mr. Patrick James O'Donnell called in, sworn, and examined:—

416. *Chairman.*] You are proprietor of Brawlin, the adjoining property to Muttama? Yes; I have a property on each side of Muttama run—Brawlin and Mingay.
417. Do you know the land that Vincent selected? Yes.
418. Were you on that land some time before he selected? I was.
419. Very long before? Six or eight days.
420. Do you know if there were any improvements on it when he selected? Men were erecting a fence on it.
421. You gave evidence in the Supreme Court as to the value of that fence? I did.
422. What was the value of the fence when Vincent selected? I think, as far as my memory serves me, that I valued the fence at some £30 odd. I think £32 or £33. To the best of my knowledge and belief, that was my reply in the Supreme Court.
423. You valued it at under £40? Yes.
424. Was there any wire in that fence at the time? No.
425. Was it what you call a complete paddock-fence? No.
426. Do you remember if that fence was across the road? I do, for the simple reason, as you, Mr. Chairman, must know, that I had occasion to use that road very frequently, passing backwards and forwards between my two stations. I had to use that road weekly; consequently I have good reason to remember the position of the road.
427. Did you find the fence across the road at any time? There was a fence erected across the road, but it was afterwards removed by somebody.
428. Vincent was employed by you in erecting a stable known as Cobb's stable at Brawlin? Not employed by me. He was employed by Cobb & Co. to erect a stable. That was at a place convenient to his selection.
429. Do you remember his working at that? Yes, very well.
430. Was that when he was doing his residence on the selection? Yes.

Mr. P. J.
O'Donnell.
15 May, 1895

- Mr. P. J. O'Donnell.
15 May, 1895.
431. Do you know who put up the cottage on Vincent's land? Yes—himself.
432. Do you know of his erecting a public-house, and a store, and other buildings for Mr. Armstrong on the adjoining land? Yes, I do.
433. When you were passing backwards and forwards in going to your stations you saw him frequently working there? Yes, I did.
434. You consider that he did residence on his selection there at the time? I honestly believe that he did, for this simple reason. I wish to disabuse your mind of there being any feeling on my part towards him. I know that he was the best part of twelve months erecting a house there. It stands there to-day, and is a good one. He was some months—I do not know exactly what time—sinking a well there. I remember being at that well after it was completed—I, himself, and his brother, Alfred Vincent, as they believed they had found gold in the bottom of it. I know that on all those occasions he was living on his selection, boarding there, and all the rest of it. I have been in his house when passing backwards and forwards.
435. Did Mr. Broughton's men continue erecting this fence after Vincent selected? Yes.
436. Was it a roadside fence? No; there was a mill-track which passed through that property, and over Blind Creek, which was generally used by the public.
437. Did Mr. Broughton put up a fence on the eastern side of the road after Vincent selected? The fence has been put there, and, I presume, by him.
438. And the boundary-fences have all been put up since? Yes. It was never made a complete paddock by Mr. Broughton, for the reason that the water-frontage had not been fenced by him. Portions of it, which were not sheep and cattle proof, were fenced off by the free selector during his time there. To the best of my knowledge and belief it would amount to about three-quarters of a mile of log fencing, which means almost the whole of the water-frontage, with the exception of a quarter of a mile.
439. Do you remember an old log fence that was on the side of the old road? I do.
440. Was that of any value when Vincent selected? Really it was never of any value. I never valued it at anything. There were a lot of long thin poles, which were put up with a long reach, and after being up a month they sank down in the centre and really meant nothing.
441. Would the fence you saw erected when Vincent selected be of any value to him as a fence;—it not being a roadside or boundary fence, would it be of any value to the selector as it stood? If the selector had the right to take it down and remove it to its proper position, of course it must be of some value to him.
442. Was a new road surveyed outside this fence afterwards? Yes.
443. The old road has been blocked by that fence? Yes. A bridge had been erected some little distance away from the selection, and after the erection of that bridge the present road we are now using was surveyed through the property, and the original road, I suppose, given in lieu of the new.
444. And that has left the fence now a roadside fence? That has left the fence, as it stands there to-day, a roadside fence. The land is fenced on both sides of the road.
445. *Mr. Gormly.*] I think that in previous evidence it has been stated that the old log fence was burnt before Vincent selected;—do you know if it was? I would not attempt to say. It is a long way to go back.
446. You are not sure as to whether that log fence was on the selection when Vincent selected;—you would not like to say positively? I would not attempt to say that. I really do not know.

Mr. Arthur James Stopps recalled and further examined:—

- Mr. A. J. Stopps.
15 May, 1895.
447. *Chairman.*] Do you hand in a tracing? Yes; in illustration of my evidence yesterday. [*Appendix B.*]
448. *Mr. Gormly.*] Does that tracing correspond with the one you handed in yesterday? Yes, it does, so far as it refers to this particular portion of land.

Travers Jones, Esq., M.L.A., sworn and examined:—

- Travers Jones, Esq., M.L.A.
15 May, 1895.
449. *Acting Chairman (Mr. Gormly).*] Will you state to the Committee what evidence you wish to give in regard to this case of Vincent's selection? I have been a resident on Muttama Run. I commenced to reside there and to work the mine in 1870. Before Vincent selected there was a Progress Committee formed, and I was the Chairman of it. At that time Mr. Broughton was interfering with the rights of selectors by fencing off reserves—in fact, he interfered with the rights of miners by selecting over our mining leases. That is the reason why the Progress Committee was formed. I know this land well. I have been in the habit of shooting Muttama Creek up and down for years before this land was selected by Vincent, and also after it was selected. The day after Vincent selected he came to my place on the reef and said that he wished me to go down and meet some other persons, in order to see what improvements were on the land, as Mr. Broughton had men erecting fencing on it. I rode down with him and Mr. James Armstrong, who has given evidence before this Committee. When we got on the ground Mr. Armstrong, I, and Vincent joined a party consisting of John Paul Sullivan, John Hanlin, John McLeod, Walter Hoar, and Israel Hartley. We rode all through the selection, and we came to this fence, and I found that there was a split post and top-rail fence erected right across the selection—not on the roadside, as then surveyed—and it turned the south corner. There were forty-three panels on the south corner. Those forty-three panels were not on the boundary, but off it some few yards. I afterwards saw that fence pulled down and re-erected on the boundary. There was not a single wire in the fence, nor a coil of wire to be seen on the selection. At [the north end there were two men unloading some fencing-stuff on the north boundary. The fence was not even bored for wire. While that fence was being erected I was in the habit of driving my wife in a buggy and pair very frequently to Cootamundra. A man of the name of Stuart and his boys were erecting the fence. I asked him if he was going to fence the road, and he said that his instructions from Mr. Broughton were to fence across the road. I came one day and found the fence across the road, and I had to turn up into the bush and go round the fence and across a dry steep gully. I very nearly upset the trap and threw my wife out of the buggy. We got over. After that I instructed the Road Superintendent to have something done, so that we could get round the fence. Mr. Broughton's men continued to fence there. I frequently passed in going to Cootamundra. The
- next

next time I came with the buggy I found that the fence had been removed off the road and I drove through, and that gap remained in it until they wired the fence. Then it was repaired and wired, and the men continued fencing until they put the wire in the fence and braced it. That was months after Vincent selected. Some time afterwards there was a new road surveyed outside the fence, and the road was formed across this steep gully, and we were able to travel round it. There was no fence on the eastern side of the road. There was no fence on the northern or southern boundary. There were the forty-three panels that I have mentioned, but they were not on the boundary. They were taken down and put on the boundary afterwards—after Vincent had selected.

450. *Mr. F. Clarke.*] On which side of the boundary were the forty-three panels? On the south.

451. Were they on the 640 acres? No, outside; on what is called now the village reserve.

452. *Acting Chairman.*] The forty-three panels were on the reserve? Yes; on the reserve outside the selection—not on the boundary.

453. Then there was only a mile of fencing on the selection? That is all. I may say that I made a note in my pocket-book at the time, and when I moved for the appointment of this Committee I refreshed my memory by looking at that note which I made on the ground; but on looking this morning for it I could not find it, it having somehow or other got misplaced. However, only a very short time ago I refreshed my memory by looking at it.

454. Did you value the fence at that time? Yes. The men who were on the ground and I had a talk over it, and the opinion was that the actual value of the stuff in the fence and putting it up was about £30.

455. Was that your estimate of the value? Yes.

456. *Mr. O'Sullivan.*] You have said in your evidence that certain improvements were made after Vincent selected—that Broughton continued the fencing after Vincent selected? Yes; he never withdrew the men.

457. How did you come to know that? I was in the habit of driving my wife backwards and forwards to Cootamundra in a buggy for years.

458. Then it came under your personal observation that these improvements were being made after Vincent selected? Yes; the improvements that were sworn in the Supreme Court as having been erected were erected and completed after Vincent selected.

Travers Jones,
Esq., M.L.A.
15 May, 1895.

APPENDIX.

[To Evidence of *W. H. Capper, Esq.*]

A. 1

(C.P. 78-257.)

REPORT by Edwin Evans, Inspector of Conditional Purchases, respecting the selection of George Vincent, made at Gundagai, on 22nd August, 1878.

Sir,

Gundagai, 21 May, 1882.

I have the honor to report that I visited and inspected the above-described conditional purchase on the 21st May, 1882, and that I found the selector then not resident upon his selection.

The land, which consists of good soil, and comprises 640 acres, is occupied and used by selector as grazing, and the selector, who follows the avocation of publican, had at the time of my visit made the improvements hereunder particularly described, the value of which I estimate at the sums respectively stated, viz. :—

Slab and iron house, all sawn timber, containing five rooms	£	200
Well, 60 feet		45
1 mile and 54 chains one-rail five-wire fence		134
Out-houses		6
About $\frac{1}{4}$ mile chock and log fence		7
		£392

The improvements claimed to have been on this conditional purchase prior to selection are 1 mile 54 chains one-rail five-wire fence, £134, also a log fence following the old line of road, which had been destroyed.

From the appearance of the land and the circumstances stated in the following remarks, I am of opinion that the selector has been continuously resident upon the selection.

I have, &c.,

EDWIN EVANS,

Inspector of Conditional Purchases.

The Chief Commissioner, Department of Land, Sydney.

A 2.

It appears that on 17th June, 1864, Mr. Thomas Broughton, lessee of the Muttama Run, applied to be allowed to purchase 640 acres of Crown land on the north side of Muttama Creek, and near Elton's old station, in virtue of his pre-emptive right. This application was held over pending the settlement of the dispute as to the "run" boundary, and on 26th April, 1866, the Land Agent at Gundagai was instructed to withhold the land applied for by Mr. Broughton from conditional purchase.

On 12th March, 1872, Mr. Broughton wrote to this Department, stating that as the dispute about the run boundary had been settled, he submitted that he was entitled to purchase so much land as had been applied for by him on 17th June, 1864, and further represented that some of the land so applied for had been sold at auction and some conditionally purchased by John Billingsley and others. Mr. Broughton further stated in the same letter that, so far as these selections were concerned, he did not wish to disturb them, except an additional conditional purchase of 140 acres by Billingsley, and further respectfully requested to be allowed to purchase 640 acres on the same side of Muttama Creek, including the 140 acres additionally conditionally purchased by Billingsley, and that Billingsley's additional conditional purchase should be cancelled.

Mr. Farnell, as Minister for Lands, decided, on 24th June, 1873, that Billingsley's additional conditional purchase should be declared void, and that Mr. Broughton was entitled to purchase the 140 acres, being Billingsley's additional conditional purchase, because the lessee, Mr. Broughton, had applied in 1864 to be allowed to purchase that, with other land, up to 640 acres, in virtue of his pre-emptive right; and Billingsley's additional conditional purchase was accordingly cancelled.

Now,

Now, Mr. Broughton, in his letter to this Department, of date 12th March, 1872, submits his claim to be allowed to purchase, in virtue of his pre-emptive right, the area specified in his application of 17th June, 1864, viz., 640 acres, and states that he wishes to have allowed him, in satisfaction of that application, Billingsley's "additional conditional purchase" of 140 acres and an additional area to make up 640 acres on the same side of Muttama Creek. Now, the 7th section of the Crown Lands Alienation Act of 1861 prescribes that lessees of runs may be permitted to exercise a pre-emptive right of purchase over *one portion and no more* of an area not exceeding 640 acres out of each block of 25 square miles of his run. Now, as Mr. Broughton fixed the position of the land he sought to purchase, in virtue of his pre-emptive right of 640 acres, by specifying that he wished to include Billingsley's additional conditional purchase in the 640 acres he sought to purchase, it follows that the land he described must be north of the Muttama Creek.

It appears that Surveyor Evans measured a portion of 640 acres in October, 1874—plan No. 193—in satisfaction of Mr. Broughton's application by pre-emptive right, by direction of the Deputy Surveyor-General, but the action taken by Surveyor Evans was wrong, seeing that the 640 acres he measured did not include the 140 acres embraced in Billingsley's additional conditional purchase, which Mr. Broughton applied for by his letter of 12th March, 1872, to be included in the 640 acres pre-emptive purchase, and *which could only be in one block*, as provided by the 7th section of the Act of 1861; therefore, in my opinion, the action taken by Surveyor Evans was erroneous, and not in conformity with Mr. Broughton's application.

I find further that George Vincent applied to conditionally purchase 640 acres of Crown land on 22nd August, 1878, county of Harden, parish of Mooney Mooney, described as follows:—"Bounded on the west by Muttama Creek, on the north by a lapsed purchase of Andrew Melzer, on the east by William Ward's conditional purchase, on the south by forfeited conditional purchase by James Thompson, the said 640 acres being supposed to be a measured portion No. 93, believed to have been surveyed by Surveyor Evans, and not yet offered for sale;" and it appears from papers Misc. 75-4,270, that portion 193, parish of Mooney Mooney, county of Harden, 640 acres, measured by Mr. Surveyor James Evans, for Mr. Broughton's pre-emptive purchase, was first numbered 93, and the surveyor was instructed to alter the number of this portion to 193. Vincent's conditional purchase was protested against by A. G. Blomfield, for Thomas Broughton, on 20th September, 1878, on account of that gentleman having held the said portion under pre-emptive right, and that the Land Agent had been instructed to withdraw it from conditional purchase, when, in point of fact, there is no evidence in the papers to show that Mr. Broughton ever did apply for this portion under his pre-emptive right, but, on the contrary, he did apply for the portion adjoining Billingsley's additional conditional purchase.

It appears that my predecessor, Mr. Farnell, decided that Vincent's conditional purchase should be declared void, as it was represented to him that a previous Minister for Lands decided that Mr. Broughton should be permitted to purchase 640 acres of land in the position portion 193 now occupies, when, in point of fact, there is no minute on any official document to show that such a decision was ever given; the only reference in previous papers showing that Mr. Secretary Wilson approved of the Land Agent at Gundagai being requested to withhold from conditional sale 640 acres in the position 193 occupies, pending inquiry into a claim said to have been verbally made by Mr. Broughton for that land, although there is no official documentary evidence to confirm the statement that Mr. Broughton applied for this land in virtue of his pre-emptive right, while there is the lessee's (Mr. Broughton's) written application to have Billingsley's additional conditional purchase included in an area of 640 acres to be sold to him in virtue of his pre-emptive right.

Since my predecessor (Mr. Farnell) decided to cancel Vincent's conditional purchase (on paper 78-37,956 C.S.), several protests have been sent to this Department against the voidance of this conditional purchase, and, although I am very reluctant to review any decision of my predecessor's, nevertheless, as the conditional purchaser and his agents have requested that I should give his claim to portion 193 my consideration, I feel bound to state that, after having carefully perused all the papers in the case, I am constrained to arrive at the conclusion that the conditional purchase of George Vincent for 640 acres has been erroneously cancelled, and that such cancellation should be reversed for the following reasons:—

First.—Because Mr. Broughton applied by letter on 12th March, 1872, that his claim for a pre-emptive right to 640 acres, made on 17th June, 1864, might be satisfied by permitting him to purchase 640 acres of Crown land, to include Billingsley's additional conditional purchase of 140 acres, and as such purchase could only be made in one block in terms of the 7th section of the Act of 1861, Mr. Farnell agreed to allow Mr. Broughton to purchase Billingsley's additional conditional purchase, and of necessity the 640 acres which Mr. Broughton desired should include Billingsley's additional conditional purchase must be in that place, as he was only entitled to exercise his pre-emptive right by purchasing one block of land.

Secondly.—Because Mr. Broughton's pre-emptive right of purchase of Crown land on the Muttama Run ceased on 31st December, 1865, when the lease of Muttama Run, under the Orders in Council, expired; therefore, any application to purchase under pre-emptive right made by Mr. Broughton in 1872 was void, save that as an act of grace he was allowed by the decision of Mr. Farnell to revive his application, made in 1864, in respect to Billingsley's additional conditional purchase of 140 acres. There is no evidence in Mr. Farnell's minute of 24th June, 1873, that he intended Mr. Broughton should be allowed to purchase by pre-emptive right more than the land embraced in Billingsley's additional conditional purchase; on the contrary, it appears from the Minister's minute that he appeared to consider that Mr. Broughton had waived his right to purchase by pre-emptive right any larger area of land than was included in Billingsley's additional conditional purchase.

I have no objection, if the land is available to be measured in a form in conformity with the regulations, to allow Mr. Broughton to purchase, in virtue of his pre-emptive right, 640 acres, including Billingsley's additional conditional purchase, as requested by Mr. Broughton on 12th March, 1872, seeing that some of the land applied for by him on 17th June, 1864, was erroneously alienated by the Crown, some of it to Mr. Broughton; but, in my opinion, he has no title to portion 193, parish of Mooney Mooney, county of Harden, and, therefore, George Vincent's conditional purchase application for that portion of land must stand good.

J.H., 22/4/81.

The necessary action should now be taken, and Mr. Broughton and Mr. Vincent be duly informed.—W.B., 22/4/81.
W. Spicer (for Geo. Vincent) to return voucher. A. G. Blomfield (for Thos. Broughton), informing fully, 3/5/81.
Voucher to be returned, now herewith, 14/6/81. Action noted on 81-21,865.

A 3.

Conditional purchase 78-257, Gundagai.

THE conditional purchase by George Vincent of portion 193, parish of Mooney Mooney, which was declared void on the 23rd October, 1878, but reinstated by desire of Mr. Secretary Hoskins in May, 1881, has formed the subject of an action in the Supreme Court, and of a verdict adverse to the conditional purchaser. Mr. M'Laughlin, of Gannon and M'Laughlin, the attorneys of the conditional purchaser, has called upon me, to request refund of the deposit money and interest which has been paid in respect of the conditional purchase, and I submit that refund be authorised.

A.O.M., 21/6/83.

Approved.—J.S.F., 26/6/83. Messrs. Gannon and M'Laughlin informed, with refund order. Agent and Treasury informed P.S. instalments, 30/6/83.

Gentlemen,

Department of Lands, Conditional Sales Division, 30 June, 1883.

Gundagai. C.P.
78-257, 640
acres. 22nd
August, 1878.
George Vincent,
now Bank of New
South Wales.
Enclosure,
Refund Voucher
£160

Referring to your letter of the 9th March last, requesting, on behalf of Mr. G. Vincent, that refund of deposit money may be made on his conditional purchase noted in the margin, which formed the subject of an action in the Supreme Court and of a verdict adverse to the conditional purchaser, I have the honor to inform you that the Minister has approved of the purchase in question being declared void, and enclose voucher for the refund of deposit money thereon. On application to the Treasury the amount of interest paid will be refunded.

I have, &c.,

WM. BLACKMAN

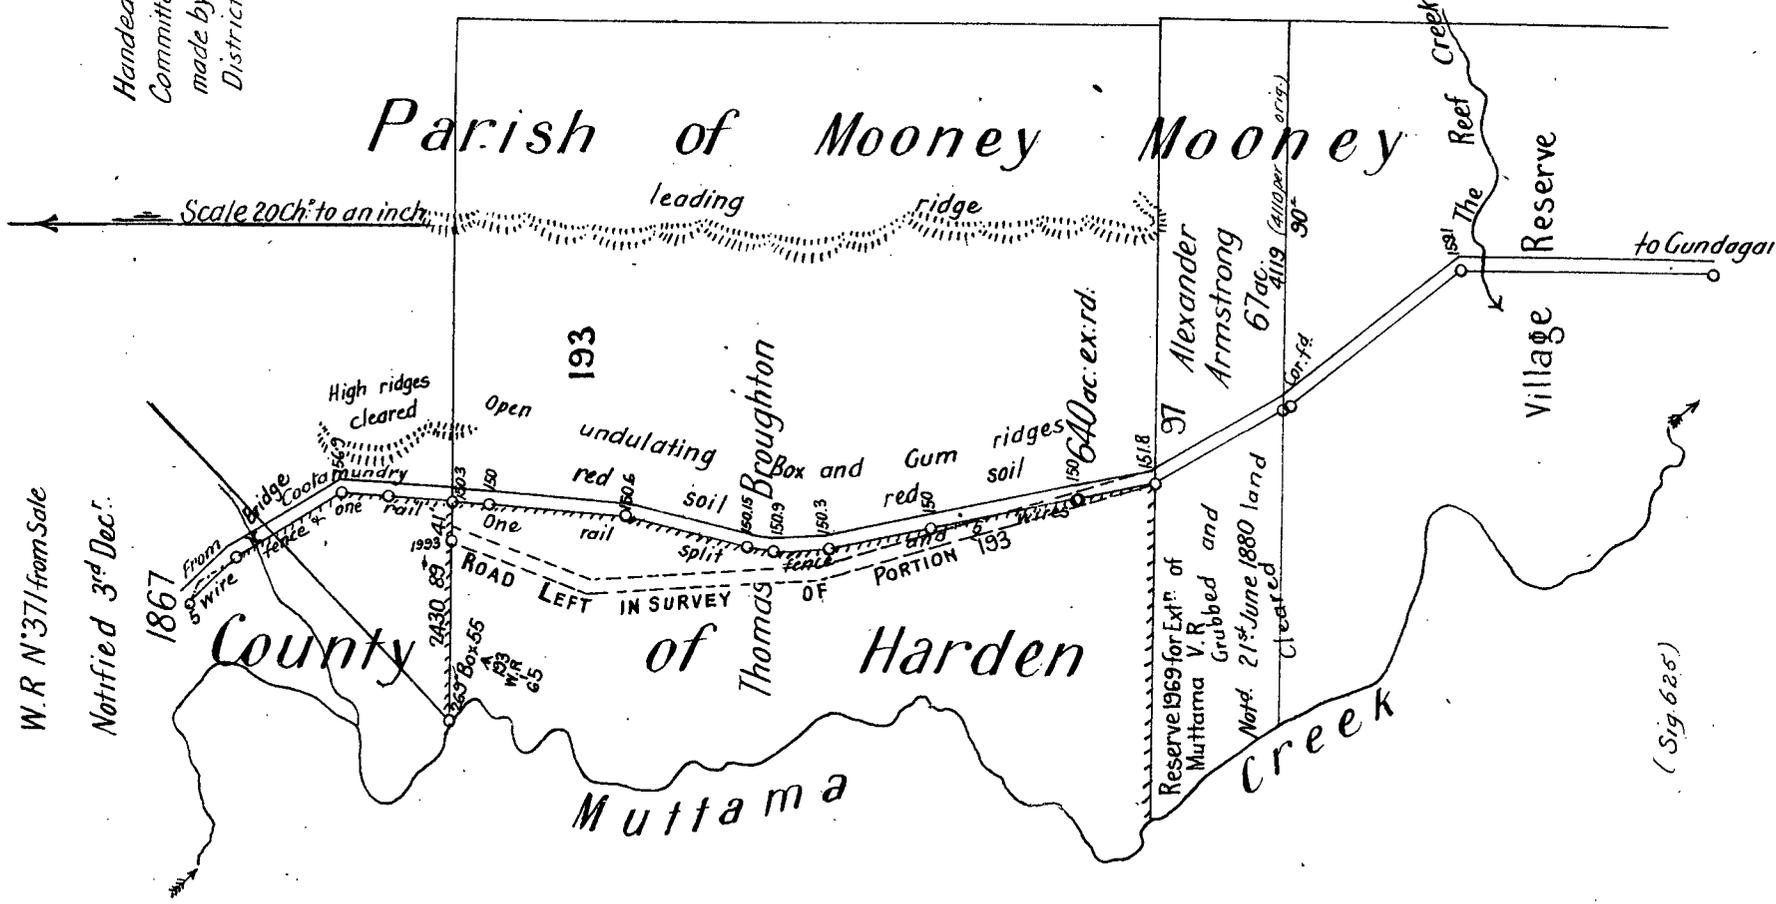

(For Chief Commissioner).

Messrs. Gannon and M'Laughlin, Sydney.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NATIONAL PARK TRUST.

(REPORT FOR THE YEAR 1893.)

Ordered by the Legislative Assembly to be printed, 6 November, 1894.

The Chairman of the National Park Trust to The Chief Secretary.

Sir,

National Park Trust Office, 3, O'Connell-street, Sydney, 1 March, 1894.

The Trustees of the National Park have the honor to present their Report for the year 1893.

It is with much regret that they have to report the death of Mr. Walter Bradley, one of the first Trustees of the Park, and an active and energetic member of the Trust. Mr. J. H. Want, Q.C., has been appointed in his stead. Death of Trustee.

The Trustees have much pleasure in stating that the number of visitors to the Park has greatly increased during the year. From the Returns kept by the Trust, the total number of visitors passing through Loftus and Waterfall stations is shown to be more than 27,000, exclusive of those visiting the lower portion of the Park at Port Hacking, which may be estimated at about 10,000. Arrangements have been made with the Railway Commissioners for an improved railway service to the Park, and special facilities have been afforded for direct and speedy communication. Visitors to the Park

In order to meet the convenience of the public, the Trustees deemed it desirable that the pavilion at Audley should be under the control of a competent caterer, and they have accordingly leased it to Mr. G. S. A. Firmin for a term of seven years, and every means are now provided for the comfort of the public. The pavilion.

Greater facilities are now offered for hiring boats on the fresh and salt water rivers, and a lease has been granted to Mr. F. Matson for the right of letting them. Boats

The rules prohibiting the destruction of the plants have been placarded in the Park, and have been strictly enforced. Destruction of plants.

In order to prevent net fishing, the Trustees have been compelled to have the river flats and sand spits staked. Net fishing.

The works carried out during the year are as follows:—A new cottage has been erected for the overseer on the road between Loftus Station and Audley. Works carried out.

A retaining wall has been built, and an excellent lawn made in front of the pavilion, and sundry improvements for the convenience of visitors have been completed.

The aviary at Robertson Grove for the preservation of Australian and other birds has been completed, and contains English pheasants, partridges, &c., which are thriving well and are a great source of attraction to visitors. The Trustees have procured various kinds of Australian and other birds, together with some doves from Lord Howe Island. The latter have been liberated, and are frequently seen amongst the shrubs at Audley.

In the Deer Park the trees have been thinned out, and a large area has been cleared of under scrub and sown with grass. The deer are thriving and increasing in number. At present there are thirty-two head. Deer Park.

A large quantity of cedar, ornamental and fruit trees have been planted in suitable places in the Park. Those previously planted at Loftus and other parts of the Park have been carefully attended to, and have made rapid growth. Tree-planting.

This part of the Park has become a favourite resort for visitors. The building has been enlarged; a substantial and convenient boat shed has been erected, and the grounds have been tastefully laid out and planted with different kinds of ornamental trees and shrubs. Warambul, near the South-West Arm.

The greater part of this road has been gravelled, and five new culverts have been erected.

*252—

This Road from Loftus Junction to Audley.

Lady Carrington Road.	This road, which follows the windings of the river, and passes through some of the most beautiful scenery of the Park, has become a favourite carriage drive, and has been kept in first-class order; part of it has been widened and gravelled, and the culverts repaired.
Waterfall Road.	Parts of this road have been ballasted and gravelled, and the whole length maintained in a good state of repair. A cottage has been built adjacent to Waterfall Station for the maintenance man on that road.
Garie Road.	This road, which is much used by fishing parties and others during the summer months, has been improved in parts and generally kept in good repair.
Wattamola Road.	About 5 miles of this road have been cleared, and portions of it formed, and the culverts repaired.
The dam at Audley.	The dam at Audley has been strengthened and maintained in a satisfactory condition, notwithstanding the severe weather and the floods.
Causeway.	The Causeway leading from the Waterfall to Lady Carrington Road has also been strengthened, and stepping stones placed so as to allow pedestrians to cross during the flooded state of the river.
Buildings.	The whole of the buildings on the Park have been painted and kept in a state of preservation.

I have, &c.,

CRITCHETT WALKER,

Chairman of the National Park Trust.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

NATIONAL PARK TRUST.

(REPORT OF TRUSTEES FOR THE YEAR 1894.)

Ordered by the Legislative Assembly to be printed, 27 March, 1895.

The Chairman of the National Park Trust to The Chief Secretary.

Sir,

National Park Office, 3 O'Connell-street, Sydney, 1 March, 1895.

The Trustees of the National Park have the honor to present you with their Report for the year ended 31st December, 1894.

It is with deep regret that the Trustees have to record the death of their Chairman, Mr. Joseph Graham, J.P., who was one of the first Trustees appointed. He occupied the position of Chairman for several years, and took an active part in the management of the Park. His Honor Alexander Oliver, M.A., has been appointed a Trustee in room of Mr. Graham. Alteration in Trust.

The Trustees have again much pleasure in bearing testimony to the great interest manifested by the public in the Park. The number of visitors *via* Loftus and Waterfall (as shown by the caretaker's books) during the year is 48,000. This is exclusive of the number of persons who have visited the Park through the lower part of Port Hacking, which may be estimated at about 22,000 more. Visitors.

Great care has been taken to prevent the destruction of the flora, &c, in the Park, while the rules prohibiting shooting and net fishing have been strictly enforced.

The principal works carried out during the year are as follows:—The public accommodation house at Audley has been painted, renovated, and otherwise improved for the convenience of visitors. Pavilion at Audley.

The water supply at Audley being insufficient, the Trustees found it necessary to purchase a 6-horse power boiler and engine which forces the water from Kangaroo Creek to an elevation of 132 feet into suitable tanks. By this means the public pavilion and the whole of the buildings at Audley are provided with a constant supply of water. The windmill which previously provided water has been removed to the aviary. Water supply

The old and unsightly stables at Audley have been removed and new ones erected on a more convenient site. A carpenter's and blacksmith's shop has also been built in close proximity to the new stables. New stables.

As stated in the last Report, this portion of the Park has become a favourite resort—so much so that the Trustees, in order to meet public requirements, have had the building enlarged and furnished. Warumbul, near South-west Arm.

Several of the workmen's cottages have been added to.

A further portion of the Park has been cleared of useless trees and scrub and sown with grass, thus providing additional feed for the deer, which are thriving. Workmen's Cottages. Deer Park.

About 60 acres of land at Farnell Downs have been cleared and sown with grass. The land previously cleared on the river flats has been kept in good order, and has been much used by picnic parties during the year. Clearing.

The dam at Audley, which was slightly damaged by the floods, has been repaired, and the roadway re-ballasted. The dam.

The causeway on the Waterfall Road, which was also damaged by the recent flood, has likewise been repaired. Causeway.

Portions of this road have been re-gravelled, several of the culverts repaired, and the whole length (9 miles) maintained in good order. Lady Carrington Road.

During the year parts of this road have been re-made, several landslips removed, and a new culvert erected. Garie Road.

The main road leading from Loftus Junction to Audley has been re-ballasted and gravelled in various places, and the whole length kept in an efficient state of repair. A deviation of this road is now being made near Audley, which will reduce the existing dangerous grade from 1 in 5 to 1 in 10. Road from Loftus Junction to Audley.

Roads and path-ways. The other roads and pathways throughout the Park have been maintained in good order.
 Dredging. The steam dredge, under the direction of the Harbours and Rivers Department, has greatly improved the river in the vicinity of Swallow Rock.
 Snagging of river. The fresh water portion of the river between Audley and the Peach Trees has been kept clear of snags and otherwise improved.
 Trees. The ornamental trees planted at Loftus Heights and at other parts of the Park have been attended to, and have made rapid growth.

I have, &c.,
CRITCHETT WALKER,
 Chairman.

ANNUAL REPORT.

To The Honorable Sydney Smith, Esq., M.P., Minister for Mines and Agriculture,
&c., &c.

Sir,

I do myself the honor to submit to you the following report upon the working of that division of the Department under your control, which deals with mining interests, and also the progress of mining and the results obtained during the year 1894.

The following statement conveys some idea of the clerical work of the Department during the year :—

STATEMENT of the Number of Papers registered and Letters despatched by the several Branches of the Department of Mines and Agriculture.

	Papers Registered.		Letters Written.	
	1893.	1894.	1893.	1894.

* Exclusive of applications to lease. † Returns and circulars not registered this year. ‡ Exclusive of caretakers' reports. § This number is exclusive of *Gazette* and seed applications. || This number includes partly printed advices and particulars of seeds and publications despatched. ¶ Exclusive of printed forms, circulars, and telegrams. ** Including recommendations to fossickers for passes, &c.

As the Water Conservation Branch was not retransferred to this Department till 20th November, 1894, I have not included in the above statement the papers registered in that branch.

The statement shows that the work of the Department, so far as its extent is indicated by the number of papers registered and the letters written, has not declined during the past year. Yet, thanks to the zeal of the officers generally, the work has been kept well in hand, notwithstanding reductions in the staff.

My thanks are due to the heads of branches for the assistance they at all times rendered me in the performance of the work of the Department.

On the 10th day of June, 1894, the Mining on Private Lands Act came into operation.

Under the provisions of that Act, the owners of private land who were *bonâ fide* mining thereon when the Act came into operation, or who had, prior to that date, obtained or applied for a permit under section 7 of the Crown Lands Act of 1884, or persons who had, prior to that date, made agreements with owners to mine upon private lands, and were *bonâ fide* mining thereon when the Act came into operation, or persons who had obtained permits to search on private land, had a prior right, for a period of two months, to obtain leases under the Act.

The leases which owners of land, as aforesaid, could, within the period of two months, apply for are termed special leases, and so are the leases for which the owners of land and the person who was mining under agreement could make joint application. The number of applications for special leases was 413, comprising an area of 68,916 acres. Of these, 94, comprising 23,405 acres, have since been abandoned.

The

The number of leases applied for by holders of permits to search was 14, comprising an area of 173 acres, none of which have been abandoned.

The number of ordinary leases applied for under the said Act was 52, comprising 3,404 acres.

In addition to the above, a considerable area of private land has been occupied under authorities to search under agreement with owners (section 33), and under Prospecting Licenses, but the extent of land so occupied is not known.

The only minerals dealt with under the said Act are gold, silver, tin, and antimony.

The areas comprised in the applications to lease for the purpose of working the several minerals are:—

Gold.			Gold and Silver.	Gold and Tin.	Tin.			Antimony.
a.	r.	p.	acres.	acres.	a.	r.	p.	acres.
63,003	1	5	5,307	310	3,629	2	8	58

One of the effects of the said Act has been to stop the issue of permits to search on private land for gold, silver, tin, and antimony, and to terminate those that had been issued prior to the Act coming into operation.

Another effect that it has had is the loss of royalties payable under permits granted under section 7 of the Crown Lands Act of 1884.

With regard to the acquisition of Crown land for mining purposes:—

The number of applications made to lease Crown land for mining purposes during the year 1894 was 757, or 112 less than the number made during 1893. Of the 757 applications so made, 620 were for auriferous land, comprising an area of 2,954 acres 1 rood 5 perches, and 137 were for mineral land, embracing an area of 9,617 acres 3 roods.

The number of applications dealt with in 1894 was 766—a decrease of 62 as compared with 1893. No effort is spared to deal speedily with these applications, while great care has to be exercised to guard against the creation of conflicting titles.

Of the 766 applications dealt with in 1894, 586 were for gold-mining leases, comprising an area of over 2,819 acres, and 180 were for mineral leases, embracing an area of 10,427 acres. The area of auriferous land applied for in 1894 was less by 633 acres 0 rood 9 perches than in 1893, and the mineral land 4,290 acres 3 roods 36½ perches less during the same period.

LAND applied for to be leased during 1894, and the minerals to be mined:—

	a.	r.	p.		a.	r.	p.
Gold	2,954	1	5	Plumbago	40	0	0
Antimony	50	0	0	Silver	320	0	0
Asbestos	80	0	0	Silver and tin	40	0	0
Bismuth	40	0	0	Silver, lead, and copper	48	0	0
Cinnabar	80	0	0	Silver and lead	225	0	0
Chrome	80	0	0	Silver and copper	46	0	0
Copper	40	0	0	Silver and wolfram	40	0	0
Coal	175	0	0	Silver, platinum, and wolfram	80	0	0
Coal and shale	5,237	2	0	Silver, lead, and limestone	260	0	0
Diamonds	320	0	0	Silver, lead, and nonstone	40	0	0
Kaolin	20	0	0	Tin	945	1	0
Limestone	300	0	0	Tin and bismuth	80	0	0
Marble	20	0	0	Tin and wolfram	461	0	0
Meerschaum	10	0	0	Wolfram	20	0	0
Opal	420	0	0				
Platinum, iridium, tin, and silver	100	0	0		12,572	0	5

As shown by the foregoing table, the aggregate area applied for is 4,924 acres 0 rood 5½ perches less than that applied for in 1893. The decrease occurs principally in gold, coal, silver, opal, silver and lead and tin, although coal and shale show a satisfactory increase during the year, and there is reason to believe that a larger area was occupied as claims for gold-mining in 1894 than in 1893.

AREA held under application to lease on 31st December, 1894:—

	a.	r.	p.		a.	r.	p.
Gold	1,616	1	7	Opal	80	0	0
Asbestos	80	0	0	Platinum, iridium, tin, and silver	100	0	0
Bismuth	60	0	0	Silver	120	0	0
Cinnabar	80	0	0	Silver and lead	118	0	0
Coal	128	0	0	Tin	280	0	0
Coal and shale	2,513	0	0	Tin and bismuth	80	0	0
Chrome	40	0	0	Tin and wolfram	339	0	0
Diamonds	40	0	0	Wolfram	20	0	0
Kaolin	20	0	0				
Manganese, copper, and silver	40	0	0		5,764	1	
Meerschaum	10	0	0				

The

The aggregate area of Crown lands held under application to lease at the 31st December, 1894, is less by 806 acres 3 roods 9¼ perches than was so held at the end of 1893. This is accounted for by the decrease in the number of applications made to lease during the year, due probably to the general depression which has restricted the investment of capital in mining ventures to the low price of some of the metals, and to some extent to the recently adopted practice of refusing to grant leases on newly opened goldfields.

TABLE showing the area of Crown lands held under lease and the minerals to be mined:—

Minerals.	Mining Act, 1874.			Mining Act Further Amendment Act, 1884.			Crown Lands Occupation Act, 1861.			Total.		
	a.	r.	p.	a.	r.	p.	a.	r.	p.	a.	r.	p.

Tin and wolfram	49	0	7	49	0	7
Tungsten	40	0	0	40	0	0
Gold	6,687	2	37½	836	0	13	7,523	3	10½
Not specified	20	0	0	37	1	33	57	1	33
Total	23,621	2	27½	38,992	2	28	2,361	1	33	64,975	3	8½

The above table shows a large decrease on the area held under lease at the end of 1893, the greatest decrease being under the heading of coal and shale. This is probably due to the number of leases cancelled during the year, either for the non-observance of the labour conditions or for non-payment of rent, a few, however, being either surrendered or abandoned altogether by the lessees. The total number so cancelled is shown as under:—

Mineral Leases.	Area.		
		a.	r. p.
For non-work	75	4,800	2 0
For non-payment of rent	268	16,039	0 10
Surrendered, &c.	18	763	0 0
	361	21,602	2 10
Gold Leases.			
For non-work	204	1,457	2 0
For non-payment of rent	123	1,375	1 0
Surrendered, &c.	4	22	0 0
	331	2,854	3 0
Total	692	24,457	1 10

The

The number of applications for permits or authorities under sections 27 and 28 of the Mining Act to mine on or under reserves during last year was 260, an increase of 41 on the number received the previous year. The number of such applications dealt with was 140, a decrease of 46 on the number dealt with in 1893. The following table shows that the area of land embraced by permits and authorities granted in 1894 was 31,495 acres 3 roods 11 perches, being an increase of 14,228 acres 1 rood 6 perches upon the area so granted in 1893. The principal increase is in coal and shale, and coal, due to some extent to the proving of a valuable seam of coal in the neighbourhood of Sydney by the bore at Cremorne:—

Table showing area of reserved land comprised in permits and authorities granted during 1894, and the minerals to be mined thereunder:—

	a.	r.	p.
Coal	9,858	0	0
Coal and shale	21,520	0	0
Tin	6	2	0
Cobalt	4	0	0
Gold	107	1	11
	<u>31,495</u>	<u>3</u>	<u>11</u>

Table showing area of reserved lands comprised in authorities (sections 27 and 28) issued prior to 1894:—

	a.	r.	p.
Coal	8,767	2	39
Coal and shale	647	3	0
Shale	19	2	32
Limestone	10	0	0
Tin	137	1	31
Copper	58	2	18
Antimony	57	1	15
Gold	50	0	4
Silver	20	0	0
Silver and lead	3	0	0
Copper and cobalt	4	0	28
	<u>9,775</u>	<u>3</u>	<u>7</u>

Table showing areas comprised in authorities (sections 27 and 28) which were in force on 31st December, 1894:—

	a.	r.	p.
Coal	19,170	3	39
Coal and shale	1,680	3	0
Shale	19	2	32
Limestone	10	0	0
Tin	138	1	3
Copper	58	2	18
Copper and cobalt	4	0	28
Silver	20	0	0
Silver and lead	3	0	0
Gold	36	1	19
	<u>21,141</u>	<u>3</u>	<u>19</u>

The number of applications for authorities under the Mining Act of 1889, to dig and search for gold and other minerals, in 1894 was 688, an increase of 266 on the number received in 1893. The number dealt with was 713, an increase of 301 over the previous year. The number of such permits in force on the 31st December, 1894, was 311, an increase of 142 on the number in force on the same date in 1893.

The number of applications for permits under section 7 of the Crown Lands Act of 1884 to win and remove minerals reserved in the Crown grants of freehold lands received during 1894 was 160, a decrease of 29 on the number received during the previous year. The number of such applications dealt with was 117, a decrease of 15 on the number so dealt with in 1893. The number in force at the 31st December, 1894, was 195, as compared with 224, the number of such permits in force at the 31st December, 1893.

The foregoing tables, &c., represent all lands occupied for mining purposes other than alienated lands which do not come under the operations of the Mining on Private Lands Act, and alienated lands and Crown lands held under miners' rights and mineral licenses. The area comprised in these exceptions represents a considerable area.

The amount received as royalty during the year from alienated land was £409 9s. 4d., as compared with £3,544 10s., the amount received from this source the previous year (this decrease is perhaps due to the Mining on Private Lands Act coming into operation. Under this Act the Crown receives no royalty upon the gold, silver, tin, and antimony won from private lands); and from Crown lands, £13,552 6s. 2d., as against £14,463, the amount received in 1893.

During the year the returns of gold and mineral leases, and of authorities under section 27 and 28 have been published punctually, but it is questionable if the miners have availed themselves of the information so supplied to such an extent as they might have done with benefit to themselves. In face of this fact, and with a view to economy, the return is now published only half-yearly, instead of quarterly.

PROSPECTING BOARD.

During the year 1894 the Prospecting Board visited, amongst others, the following places, for the purpose of inquiring into and reporting on applications for assistance from the Vote :—

Adaminiby	Cox's River	Michelago	Spicer's Creek
Adelong	Crudine	Milparinka	Stannifer
Albury	Cudgegong	Milton	Stewart's Brook
Araluen	Dalnorton	Mogo	Stroud
Armidale	Deepwater	Molong	Stuart Town
Back Creek	Drake	Mongarlowe	Sunny Corner
Barmedman	Dungog	Moonbi	Sutton
Bateman's Bay	Eden	Moruya	Tambaroora
Bear Hill	Emmaville	Mount Allen	Tamworth
Bega	Forbes	Mount Hope	Tarana
Bermagui	Germanton	Mudgee	Tarcutta
Binda	Gilgai	Murrumburrah	Taylor's Arm
Bingara	Glen Elgin	Muttama	Temora
Blayney	Glen Innes	Nambucca	Tent Hill
Bolaro	Gloucester	Nana Creek	The Gulf
Bombala	Grafton	Narooma	Tia
Boonoo Boonoo	Grenfell	Narrandera	Tichborne
Bowling Alley Point	Gulgong	Newbridge	Tilba Tilba
Bowraville	Gundagai	Niangala	Tingha
Braidwood	Gundaroo	Nimitybelle	Tooloom
Brimbramalla	Gunning	Nine-mile	Trunkey Creek
Brindabella	Hanging Rock	Nowendoc	Tuena
Bundarra	Hargraves	Nundle	Tumut
Bungendore	Hill End	Nyngan	Ulmarra
Bungonia	Hillgrove	Oberon	Uralla
Burruga	Hillston	O'Connell	Wagonga
Burrowa	Home Rule	Ophir	Walcha
Byrock	Inverell	Orange	Wandella
Canowindra	Jembaicumbene	Pambula	Wattle Flat
Captain's Flat	Jindabyne	Parkes	Welcome Reefs
Carcoar	Kempsey	Peak Hill	Wilson's Downfall
Cargo	Kiandra	Peel	Windellama
Clear Creek	Kookabookra	Pipeclay Creek	Windeyer
Cobar	Leadville	Pretty Gully	Wiseman's Creek
Cobargo	Louisville	Queanbeyan	Wyalong
Coolac	Lismore	Reidsdale	Wyndham
Cooma	Lucknow	Rockley	Young.
Corowa	Macksville	Rylstone	
Cow Flat	Mandurama	Sally's Flat	
Cowra	Marulan	Sofala	

During the year there were 1,068 applications for aid received which were disposed of as follows :—

Aid granted in	397 cases.
Aid refused in	584 „
Applications abandoned	27 „
Applications not dealt with	60 „
	1,068 „

The results of the prospecting operations aided from this Vote may, I venture to think, be regarded as satisfactory on the whole, especially if the discoveries be followed up as they appear in some cases likely to be. Of course, every one who has had much experience in prospecting knows that ordinarily the number of finds is very small compared with the number of failures, still if prospecting were abandoned there would be no discoveries except such as may be made by accident.

The following extracts are taken from reports by the Wardens and Mining Registrars on the work of parties in receipt of aid from the 1894 Prospecting Vote :—

1. The Warden's clerk, at Grenfell, reports that W. G. Campbell and party, who received aid to continue his 300 feet shaft to a total depth of 400 feet, came upon a new make of stone at the 400 feet level, which is believed to be the main Homeward Bound Reef. The lode is 2½ feet wide, and shows splendid gold throughout.
2. Wilson and Curtis, who were aided to sink on Ocean View Hill, near Bodalla, struck a rich reef, which it is estimated will yield 10 oz. per ton. The reef is 12 inches wide.
3. The Warden's clerk, at Drake, reports that Jonas Rhodes, who received aid to test some land situated at Slatery Creek, near Sandy Hill, Drake, had a parcel of 22 tons crushed, which yielded 141½ oz. of gold.
4. Grotefent and party, who were in receipt of aid for the Randwick claim, Hill End, had a small crushing of 14 tons, which gave a return of 21 oz. of smelted gold.
5. Geo. Smith and party received a small sum to further test a piece of alluvial land in the vicinity of the One-mile Lead, Mount Browne, and were successful in striking a fair run of wash, which yields about 6 dwt. of gold per load.
6. Ovington and party, Forest Reefs, have been receiving aid from several Votes to prospect for an alluvial lead in that locality. They have at last been successful in striking a run of wash 3 feet thick, 20 loads from which yielded 11 dwt. per load.
7. Clayton and party were aided to further prove the Lady Broughton Mine, at Gadara, in the Tumut district. The result has proved very satisfactory, their last washing up yielding 21 oz. of gold for 6 weeks work.
8. Fred Simmons and party, prospecting on the Nail Can Hill, Albury, by assistance from the Vote, have struck the reef, they were in search of, which looks promising, and the party are now preparing to follow it down.
9. Mitchell, M'Gowan, and Limaitre were aided, in August last, to sink a shaft on Specimen Hill, Hargraves, to a depth of 50 feet, and drive from that level 50 feet. At the 50 feet level the party struck very rich stone, gold to the value of £1,000 being dollied out in a very short time. The discovery has been the means of reviving mining in the locality, which was in a languishing state. The party have asked that the amount granted them for driving, and not expended, be withdrawn.
10. Wm. Elkin and party were aided to further test their prospecting area at Back Creek, Crudine, 12 miles from Sofala, struck a patch of payable wash, which yielded 4 oz. to ten loads. The sinking is only about 12 feet deep, but the ground is wet, and requires timbering.
11. Thos. Shawcross and party received aid to put in a tunnel to test the Eldorado lease at Big Oakey, Wattle Flat, and were successful in striking a reef which promises well. The first crushing of 8 tons gave a return of 11 dwt. per ton.

12. The Corowa Deep Lead Prospecting Company, Corowa, were aided to put down a series of bores in search of the Ruthglen deep lead supposed to cross the Murray at Corowa. No. 4 bore, at 306 feet, passed through 10 feet of gravelly wash, containing specks of scraggy gold. It has been decided to continue the boring operations in search of the deeper ground. Great satisfaction is expressed in the district at the bright prospects of the company.

13. Samuel Cassidy was aided to continue his shaft, situated about half-a-mile southerly from Hargraves, and in driving from the 110 feet level struck a nice reef averaging 3 feet thick, which is expected to yield about 10 dwt. per ton, with indication of it improving.

14. Brown and Williams, 2 miles south of Sofala, were aided to continue their shaft to 150 feet, and in driving from that level struck the lode, with gold showing in the stone. It is 18 in. thick, and appears to be opening out.

15. Robinson, Wolfe, and party are in receipt of aid to further test the Garden Hill Mine, near Dalmorton. They struck a small vein, a crushing from which went 1 oz. 11 dwt. of gold per ton. The party have prospects of it widening out.

16. C. Butler is in receipt of aid to prospect near the Junee Reefs. In his 70 feet shaft he struck a reef 3 feet wide, carrying both gold and silver. A small crushing was put through from it, which yielded 2½ oz. of gold per ton.

Some of the discoveries noted in last year's Annual Report have turned out remarkably well, notably that made by Messrs. M'Pherson and party, at Mount Drysdale, in the Cobar district. A grant was made to further prospect this mine from the 1892 Vote, and it is only fair to add that the present great excitement in mining circles in that district is due in a great measure to that grant. A township is rapidly springing up in the vicinity of the mine.

Another case is that of Henry Fitch and party, who found the Young O'Brien Reef at Grenfell by a grant from the 1892 Vote. The reef has maintained its richness and permanency, the last crushing of 500 tons yielding 525 oz. of gold.

There is no doubt that all the discoveries made under the Vote are not reported to the department, and a copy of the following circular was sent to all the Wardens in the Colony during the year:—

Prospecting Board Room, Department of Mines and Agriculture, 2 January, 1894.

CIRCULAR MEMORANDUM.

As it has come to the knowledge of this department that parties in receipt of aid from the Prospecting Vote have made valuable discoveries through the agency of the aid granted them, and have failed to report such, the Minister would be pleased if the Wardens would be good enough to instruct the officers, whose duty it is to measure up such works, to at once report to this department any discoveries so made, to allow of the fact being credited against the value of the money expended for prospecting purposes.

HARRIE WOOD,

Under Secretary for Mines and Agriculture.

The Government Metallurgist (Mr. James Taylor) has given the Board the benefit of his services whenever required.

Mr. David M'Culloch, as Secretary to the Board, has rendered excellent service, and I am much indebted to this officer for the valuable assistance he has given me in the preparation of this report.

THE "FOSSICKING" BOARD.

The following table shows the number of men who received letters from this department during 1894 to Mr. Creer, Superintendent of the Government Labour Bureau, recommending that they be supplied with a railway pass and a miner's right on credit, to enable them to proceed to some of the gold-fields of the Colony, where the men thought they would be able to earn a living by "fossicking":—

January	917	August	736
February	761	September	481
March	1,350	October	542
April	1,521	November	522
May	839	December	298
June	862		
July	743		9,572

The majority of the men proceeded to the banks of the Macquarie River and its tributaries, *via* Stuart Town; the alluvial fields in the Mudgee district; the extensive auriferous deposits on the banks of the Shoalhaven River, *via* Tarago and Nowra; the Peel River country, *via* Tamworth; and, during the summer months, to the Snowy River district, *via* Cooma, and to the Wyalong and Garangula rushes. A considerable number, however, went to the Hillgrove, Peak Hill, Lucknow, Tenterfield, Glen Innes, and Gundagai districts, or other parts of the Colony where mining operations are being carried on to any great extent.

Since the inauguration of this scheme there has been a decided increase in the quantity and value of the gold won in the Colony, as will be seen from the following figures:—

	oz.		Value.
1892	156,870	£569,178
1893	179,288	651,286
1894	324,787	1,156,717

The fact that a large number of applications have been made by relatives and mates of the men who have preceded them for assistance to join them would show that the men have improved their position by proceeding to the gold-fields and have inducements to remain there. Two of the men (R. Franklin and Michael Kerins) assisted to proceed to the Junee gold-fields, in March last, have made

made application for a reward as the discoverers of the Garangula gold-field, near Murrumburrah. Their claim, however, has not yet been dealt with by the Prospecting Board. The department has done as much as possible to assist the men with advice as to their procedure on reaching the gold-fields, and endeavour to arrange that each party going out shall include at least one man who has had some little previous experience on the fields.

To prevent the system being used by other than deserving persons it was found necessary to issue the following circular to the Mining Wardens of the Colony:—

Department of Mines and Agriculture, Sydney, 2 March, 1894.

CIRCULARS TO WARDENS.—REISSUE OF MINERS' RIGHTS TO APPLICANTS ON CREDIT.

It has been brought under the notice of the Honorable the Minister for Mines and Agriculture that miners' rights have been obtained from Mr. Creer, Superintendent of the Labour Bureau, on credit, through the recommendation of magistrates and others. To prevent such being done in future, Mr. Creer has been requested not to issue miners' rights on credit to anyone on the gold-fields, on any other recommendation than that of a Warden, whose report on each individual case has been received at this department.

Will the Warden, therefore, be good enough to carefully inquire into each application made to him, and report the facts, bearing in mind that while it may be expedient, in certain cases, to assist persons in actual need, it is highly important that the revenue be guarded from imposition; and he will, in all cases, expedite action on cases referred to him, so that there shall be no cause for complaint in regard to delay.

HARRIE WOOD,
Under Secretary for Mines and Agriculture.

It is also worthy of note that the number of miners' rights sold in 1894 shows an increase, which may be due to the fact that fossickers to whom miners' rights were in the first instance issued on credit have subsequently purchased such rights for the purpose of protecting their interests. If this surmise be correct it would indicate that such fossickers have met with some measure of success.

GEOLOGICAL SURVEY.

During the early part of January the Government Geologist (Mr. E. F. Pittman) was engaged in an inspection of the Gulgong Common, and in giving evidence before the Land Board at Mudgee, with the object of showing by what area the Common might be reduced without unduly affecting mining interests, he reported that a considerable area of land could be withdrawn from the Common and utilised for settlement without in any way interfering with mining operations. He afterwards accompanied me on a trip round by Woodstock, Warri, Malongulli, Cowra, Battery Point, &c., during which we examined several mineral deposits for developing which aid had been applied for out of the Prospecting Vote. Towards the end of January Mr. Pittman inspected and reported upon a silver-bearing lode known as Cuneo's lode, near the Peaks, Burragorang. On 15th February he inspected a diamond drill bore, which was being put down near Maitland to prospect for petroleum. On Mr. Pittman's recommendation boring operations were stopped, as there was no probability of the occurrence of petroleum. Towards the end of February he inspected and reported upon a large coal reserve at Joadja.

Early in March he (in company with Mr. Carne) examined the railway reserves near the Mudgee railway line, with the object of releasing such areas as were not likely to be required for coal or shale mining.

In April Mr. Pittman spent several weeks in a geological inspection of the Wyalong Goldfield, and he subsequently furnished a report on the geology and prospects of the field.

In May he accompanied me to Soldier's Creek, near Orange, where we inspected an auriferous lead for the development of which aid had been asked from the Prospecting Vote.

In June Mr. Pittman inspected the site of a small rush at Bidura, near Balranald, where prospecting for opal was being vigorously carried on. In his report he stated that there was no probability of precious opal being discovered there, but he announced that he had identified upper cretaceous rocks at Bidura. This discovery is of importance as pointing to the possibility of the artesian water-bearing basin extending much further southwards than had hitherto been supposed. In June, and subsequently in August, he inspected and reported upon a number of areas of land near Temora, for the sale of which application had been made to the Lands Department.

On the 25th June he proceeded to the new alluvial gold-field known as the Garangula rush, and subsequently furnished a report upon the field.

During the months of October and November Mr. Pittman made an extended tour of the country lying to the north and west of Wilcannia, and a geological examination of the cretaceous beds over a large portion of that district extending to the Queensland border. He subsequently furnished a report on the subject of this examination. The importance of this report lies in the statement that the artesian water-bearing basin (the southern boundary of which was previously supposed to be near Wilcannia) may probably extend southwards along the course of the Darling River. With the object of testing this question he recommends that a series of bores be put down to the south of Wilcannia.

Mr.

Mr. Geological Surveyor J. E. Carne, F.G.S., returned to Sydney on the 10th February from the Chicago Exhibition, where he had charge of the Mines Department exhibits. He was engaged until 9th April in finishing up the work and writing his report upon the World's Fair. He was employed for a considerable part of the year in reporting upon reserves (in different parts of the Colony) which the Lands Department desired to have cancelled and thrown open to conditional purchase, also in inspecting mineral deposits for the developing of which aid had been applied for out of the Prospecting Vote. In addition to this and other miscellaneous work he furnished reports upon—(1) the auriferous deposits in the Tumberumba, Bago, Maragle, Paddy's River, and Burra Goldfields, and the country lying between them and Toolong on the Upper Murray River, with a view to ascertaining the extent of the deposits and the possibility of conveying an efficient sluicing supply of water from the river mentioned; (2) the gold discovery at New Station, near Wyndham; (3) magnesite deposits at Eurongilly, near Junee; (4) supposed spring at Government experimental farm near Wagga; (5) tin and wolfram deposits on Pulletop Station, near Wagga.

Mr. Geological Surveyor G. A. Stonier, F.G.S., was principally engaged during the year in Prospecting Vote work, in reporting upon objections to the alienation of areas of land within gold-fields, and in inspecting reserves and reporting upon proposals to cancel or reduce them, so as to allow of the land being made available for conditional purchase.

Mr. Stonier also furnished special reports on—(1) the platiniferous beach sand deposits of the Evans River; (2) the Bingara diamond fields; (3) the geology of the country surrounding Wellingrove.

Mr. Geological Surveyor J. B. Jaquet, A.R.S.M., F.G.S., during the first four months of the year was engaged in a geological examination of the auriferous drifts of the Shoalhaven River in connection with a Government proposal to convey water for the purpose of working the drifts by hydraulic sluicing. After furnishing two reports upon this subject he proceeded to inspect and report upon—(1) the Cobborah gold-field near Gulgong; (2) the auriferous drifts of the Macquarie River; and (3) the Mount Drysdale gold-field. The remainder of his time was employed in dealing with applications for aid from the Prospecting Vote, in reporting upon areas of land proposed to be sold within gold-fields, and in reporting upon proposals to reduce, cancel, or extend reserves in various parts of the Colony.

At the end of the year Mr. Robert Etheridge resigned his position of palæontologist in this department in consequence of having received the appointment of Curator of the Australian Museum. The loss to the department would have been very serious but that Mr. Etheridge with a devotion to his work, which is beyond praise, has volunteered to act as Honorary Consulting Palæontologist to the department. Thus I am happy to say the distinguished services of this gentleman have been retained and with the assistance of Mr. Dun, who had served for some years under Mr. Etheridge, the palæontological work of the department will be carried on.

The work done in the laboratory under Mr. Mingaye during the year consists of 7,541 assays and analyses, as under:—

For Gold	3,386	For Lead	26
Silver	3,392	Iron	16
Copper	131	Bismuth.....	16
Tin	123	Antimony	15
Chrome	122	Mercury.....	13
Manganese, nickel and cobalt	69	Zinc	4
Platinum	66	Analyses, comprising coal, kerosene shale,	
Tungstic acid	28	water, clays, &c.	134

MINING SURVEYS, &c.

The number of mining surveys made during last year was 704 (exclusive of colliery surveys); of these 399 were gold leases, 53 mineral leases, 10 mining permits under the 28th section, and 242 mining tenements; 458 were made by salaried and the balance by non-salaried surveyors. The number of salaried surveyors employed was 4, and one of these, Mr. E. Thomas, was occupied almost exclusively in surface and underground surveying at various collieries, including the A. A. Company's, the Pacific, Ferndale, Stockton, Helton, Wickham and Bullock Island, and Vale Collieries. The number of applications awaiting survey on the 31st December was 147 gold leases, 14 mineral leases, 8 mining permits and 28 mining tenements, total 147 against 65 at the end of 1893. Nearly all of these applications were of very recent date, having been made during November and December last, and 73 of the gold leases were applied for under the Private Lands Act, many of which it was afterwards found did not require survey.

CHARTING.

COMPLETE List of Mining Maps in use to date.

Parish.	County.	Mining District.	Gold-field.
Abercrombie (part of)	Beresford	Tumut and Adelong	Umaralla.

INSPECTION OF MINES OTHER THAN COAL AND SHALE MINES.

Mr. Slee, F.G.S., Chief Inspector of Mines, reports 28 fatal and 27 non-fatal accidents in connection with the metallic mines during the year, which is an increase of 9 fatal and 3 non-fatal over the previous year. Of the 28 fatal accidents 12 were in quartz and 7 in alluvial gold-mining and 9 in silver-mining, principally at Broken Hill. I have to observe with regret that the percentage of fatal accidents is slightly higher during the past year, being 1·16 as compared with ·96 during 1893, and the non-fatal 1·12 as against 1·20 during the same period. The number of men employed in and about the metallic mines has largely increased during the year, the number being 24,088 as compared with 19,709 in 1893. The increase is principally in alluvial gold-mining, traceable to the large number of men despatched by this department as fossickers.

The undermentioned localities were visited and inspected during the year:—

By the Chief Inspector.

Kiandra, Wee Jasper, Adjinbilly, Tumut, Adelong, Gundagai, Cootamundra, Muttama, Coolac, Barmedman, Reefton, Temora, Sebastopol, Grong Grong, Wagga Wagga, Mudgee, Gulgong, Hargraves, and Bathurst. During the visit of the Chief Inspector to those districts he also inquired into applications for aid from the Prospecting Vote, and also acted as warden at Wyalong during a part of the year.

By Inspector Milne.

In the Western District—Blayney, Brown's Creek, Burrage, Bathurst, Bald Hills, Billagoe, Carcar, Calula, Cowra, Canowindra, Cox's River, Cobar, Flyer's Creek, Forest Reefs, Forbes, Galley Swamp, Gulgong, George's Plains, Goolma, Gilgunnia, Hartley, Hargraves, Hill End, Kerr's Creek, Leadville, Lucknow, Mount M'Donald, Mount Hope, Mount Allen, Mandurama, Murga, Macquarie River, Mullion, Nymagee, Newbridge, Oberon, Ophir, Orange, Peak Hill, Palmer's Oakey, Rockley, Sofala, Stuart Town, Trunkey, Tarana, Wellington, Wattle Flat, and Woodstock.

In the Southern District—Bungendore, Brindabella, Colington, Goulburn, Michelago, Queanbeyan, and Wyalong.

The Inspector reports that generally he found the regulations complied with, and a desire among the miners to adhere to them as closely as possible. Mr. Milne, as a member of the Prospecting Board, reported on a large number of applications for aid from this vote throughout the different districts inspected by him.

By

By Inspector Hebbard.

Besides making frequent inspections of the extensive mines at Broken Hill, Mr. Hebbard visited and inspected the mines at work at Thackaringa, Purnamoota, Euriowie, Nuntherungie, White Cliffs, Milparinka, and Tibooburra, and found the regulations generally complied with.

By Acting-Inspector Godfrey.

In the Southern District—Adelong, Adaminaby, Bungonia, Braidwood, Brimbramalla, Bimbinbi, Big Hill, Bermagui, Cullinga, Currowan, Cowra Creek, Delegate, Fiery Creek, Grong Grong, Gundagai, Krawaree, Kydre, Mogo, Mount Dromedary, Mac's Reef, Narrandera, Nerriga, Nerrigundah, Pambula, Snowball, Wandella, Young, and Yalwal.

In the Northern District—Boonoo Boonoo, Bear Hill, Bowling Alley Point, Copeland, Cobark, Drake, Deepwater, Dalmorton, Dungog, Emmaville, Elsmore, Glen Elgin, Hillgrove, Inverell, Kempsey, Lionsville, Mann River, Marengo, Moor Creek, Moonan Brook, Macleay River, Niangala, Nundle, Nambucca, Rivertree, Swamp Oak, Stewart's Brook, Timbarra, Tooloom, The Gulf, Tingha, Tia, Uralla, and Wilson's Downfall.

In the Western District—Burruga, Dark Corner, Grenfell, Lucknow, Mudgee, Mitchell's Creek, Orange, Parkes, Peak Hill, Stuart Town, and Sunny Corner.

The Inspector found that the larger mines employing labour comply, as a rule, with the regulations, and that the smaller claims were worked with due care. Mr. Godfrey also reported on a large number of applications for prospecting aid during his visits of inspection.

DIAMOND DRILLS.

The total depth bored in 1894 was 557 feet, or 1,346 ft. 7 in. less than during the year 1893.

The average cost per foot for boring in 1894 was 36s. 5½d., as compared with 16s. 0¾d. in 1893.

Diamonds used in 1894 cost 9d. per foot, as compared with 3s. 3¾d. in 1893.

The earnings of the diamond drills during the year was £510 3s. 4d., and the amount paid into the Treasury was £1,462 17s. 3d.

GOVERNMENT METALLURGIST.

This officer (Mr. James Taylor, B.Sc., A.R.S.M.) on the 14th April left for Grafton, and from thence visited the Sir Walter Scott mine at Cangi. As a result of this visit he suggested a course of procedure by which the mine could immediately be worked in a profitable manner. Further acquaintance with the products of the mine have only served to confirm the good opinion of the sterling value of the mine. Bulk crushings of 10 tons at Aldershot, Queensland, and of 3 tons in Sydney, have satisfactorily shown what may be done at the mine by acting on the suggestions given by the metallurgist. After many discouragements the proprietors have taken heart again, and it is hoped that the mine will soon be in full and profitable work.

Whilst in the Grafton district the metallurgist visited the beach workings at Evans' Head, and has since his return received a continuous stream of inquiries on the subject of beach mining.

From Grafton he proceeded to Dalmorton, and visited the Black Slate and Excelsior batteries, and several of the mines near. Thence he went to Oakey Creek, near Newton Boyd, whence several parcels of rich stone have been taken by Lister and party; but as transport to the nearest mill costs £2 per ton a small mill on the mine itself is much needed. Returned to Sydney 30th April.

On 4th May he left for the Wagonga River, calling at Yalwal. Here (Yalwal), at the Homeward Bound mine with fifty head of stamps, and the Pioneer with forty, is done the cheapest mining and milling in the Colony. Less than 2 dwt. of gold recovered per ton of ore is more than sufficient to pay all mining and battery expenses.

From Yalwal the metallurgist went by Black Flat to Mummuga Creek and the Wagonga River to examine some extensive deposits of supposed auriferous quartzite or siliceous slate, and to arrange for ten parcels of 10 tons each to be mined and sent to Sydney for treatment. After well examining the ground seven only of these bulk samples were taken and treated at Messrs. Park and Lacey's works, Pyrmont. Gold was obtained in each case, but the highest yield was only 13·3 grains of retorted gold per ton of ore. Owing to the exceedingly favourable situation and immense extent of the stone, a yield of four or five times the above amount, though relatively small, would have opened up an enormous industry. He returned to Sydney on 19th May.

On 7th June Mr. Taylor investigated alleged discovery of gold at Garie Beach, near Helensburgh. At the spot indicated by the finder was an intrusive dyke coming up through the sandstone. No gold was contained in the samples taken. He

He left for Cobar on July 20th to advise the syndicate now working the Great Cobar Mines as to the extraction of copper by the manhès and electrolytic methods. He visited the mines of the Cobar district and also Mount Billagoe and Mount Drysdale, and returned from Cobar on July 27th.

On December 12th the Metallurgist left for Peak Hill. Called at the Mitchell's Creek Gold Mine to see the chlorination plant just then beginning work. From Dubbo visited the Barbical alluvial deposits, which are scarcely being touched at present. Several attempts have been made to work these deposits, but unsuccessfully up to the present time. It is to be hoped that further efforts will be made, as there are considerable quantities of wash-dirt, and gold can always be found by panning.

At Peak Hill he discussed with Mr. Kelly, the manager of the Peak Hill Proprietary Mine, the peculiar difficulties which have made their appearance at this mine, due to the presence of easily decomposable iron pyrites. He made some suggestions, which may overcome those difficulties, and hopes to hear the result of his suggestions in the near future.

He spent a short time at Parkes, visiting the Hazelhurst battery and one or two mines, and went on to Copper Hill, near Molong, to examine such of the deposits as were accessible, and to sample the various heaps of material alleged to contain both copper and gold; and returned to Sydney on December 23rd.

METALLURGICAL WORKS.

It was hoped that the year 1894 would see these works in operation, but that hope has not been realised. Various sites were inspected, and one was recommended; but for financial reasons mainly, and partly owing to legal difficulties due to the locality of the site, the land was not secured during the year. Notwithstanding previous disappointments it is expected with some confidence that the year 1895 will find the works established, on a very small scale, it is true, owing to the very much reduced fund to be devoted to the purpose.

The more the Metallurgist sees of the Colony the more convinced he is of the necessity of such works and of the benefit that must result to the mining community when the various branches of metallurgical industry are fully established and maintained in active operation.

He trusts that these works will prove to be of substantial value not only to miners directly but also in aiding the University and the Technical College in their work of supplying the Colony with what is more needful than foreign capital. I mean well-equipped brains and hands, so that the wealth so lavishly bestowed by nature may be most efficiently and advantageously utilised.

SCHOOL OF MINES.

In 1893 a Board was appointed to consider the question of the establishment of a School of Mines. The Board consisted of Professors Liversidge and David of the University; the late Mr. E. Johnston, Under Secretary for Public Instruction; Mr. Fredk. Bridges, Superintendent of Technical Education; Mr. E. F. Pittman, Government Geologist; and myself as Chairman.

In accordance with the recommendation of the Board it was decided that the School of Mines should be established in connection with the University, and the balance of an unexpended vote (£10,000 School of Mines and Assay Works, 1892) was set apart by the Hon. the Minister for Mines and Agriculture, for the erection and equipment of a suitable building, the Senate of the University undertaking to provide the necessary teaching staff and defray the expense of maintenance. Courses of study in chemistry, physics, mining engineering, surveying, metallurgy and assaying, geology and mineralogy, were arranged to be given at the University, on such lines as not to overlap the teaching imparted at the Technical College, but to continue the instruction in the higher branches of the subject at the points where the Technical College teaching left off.

Provision was thus made for a well-graded system of scientific education for students wishing to qualify themselves for the positions of mining engineers and mining managers. Details of the course of study are published in the Calendar of the University, and any further information can be obtained from the Registrar. The building is now completed, and every effort has been made to ensure the teaching of all branches of the subject being as efficient and thorough as possible, so that it is thought that this School of Mines will compare favourably with any similar school in the world. By the arrangement thus effected students have the privilege of studying chemistry, physics, mining engineering, metallurgy and assaying, geology and mineralogy, at the splendidly equipped laboratories of the University. It is satisfactory to know that a maximum of efficiency for the teaching of mining engineering has thus been attained at a minimum cost, inasmuch as the services of the professors paid by the University have been

utilised as far as possible for the teaching within the School of Mines, and all the requisite laboratories, with their equipments (with the exception of the geological and mineralogical laboratory, which has just been completed), were already in existence.

Two students have already finished their course of training at the School of Mines, and have obtained the degree of Bachelor of Mining Engineering, and it is satisfactory to be able to state that both have been appointed to suitable positions at one of the leading mines in Australia.

As soon as the Government Metallurgical Works have been completed, arrangements will be made whereby the students of the School of Mines and those of the Technical College will be able to obtain practical instruction in the treatment of ores in bulk.

It is hoped that the establishment of the School of Mines will result in a gradual improvement in the methods of mining, as practised in this Colony, by providing a class of managers who will have had the advantage of a thorough scientific training, and who will only need a few years practical experience to qualify them as mining engineers of the highest efficiency. The ultimate result must be an increased development in the mining industries of this country.

MINERAL PRODUCTS.

The aggregate value of the mineral products of this Colony to the end of 1894 amounted to £109,336,847. The value of such products for the year 1894 was £5,056,136, a decrease of £382,395 upon the value of the minerals won in 1893. As will be seen from the following table, there is a gratifying increase in the value of the gold won during the year of over half a million sterling, and a very satisfactory increase in the value of the coke manufactured, and also in the output of copper. Chrome promises to be a valuable addition to our mineral products. As might be expected from the very low prices prevailing for silver during the year, there is a decrease of no less than £742,231 in the value of the silver and silver lead exported as compared with the previous year. The depression in silver mining at Broken Hill has been the means of reducing the value of limestone flux produced during the year by £41,751. There are grounds for believing that if the fields recently opened be properly worked our output of gold will be maintained, if not increased. Although there was a considerable increase in the quantity of coal produced, still, owing to the low price, there is a decrease of £16,148 on the value of the year's output compared with the previous year.

The total value of the minerals won during the year 1894 exceeds the decennial average by £432,361; but it is less than the value of the output of minerals for any year since 1889.

The following table shows the aggregate value of minerals, the produce of New South Wales, for the years 1893 and 1894 respectively compared:—

Minerals.	Quantity.	Value.		Quantity.	Value.		Increase in Value.		Decrease in Value.	
		£	s. d.		£	s. d.	£	s. d.	£	s. d.

GOLD.

The value of the gold won from the opening of our gold-fields to the end of 1894 is £41,010,658 18s. 5d. The quantity and value won last year—was 324,787 oz., valued at £1,156,717 7s. 7d., being the largest yield of any year since 1873, and amply bears out my anticipations of 1893. I think it might now be fairly assumed that the policy of the Government in despatching so many thousands of our unemployed to the gold-fields of the Colony, has, in some measure, contributed to this revival in gold-mining, and so also has the amount voted by Parliament for prospecting purposes. These factors, combined with facilities for working the auriferous deposits within private lands, will, it is hoped, have the effect of maintaining, if not still further increasing, our gold yield.

TABLE showing the Quantity and Value of Gold won in the Colony of New South Wales from 1851 to 1894.

Year.	Quantity in oz.	Value.	Year.	Quantity in oz.	Value.
		£ s. d.			£ s. d.

The following extracts taken from the reports sent in by the Wardens and Mining Registrars of the various Mining Districts of the Colony indicate pretty clearly the condition of mining in New South Wales during 1894:—

THE BATHURST MINING DISTRICTS.

Cowra Division.

There has been a very satisfactory improvement in the output of gold from this Division during the year, the quantity won being 802 oz., valued at £3,308, as compared with 200 oz. won during 1893. The action of Messrs. M'Innes Bros., in throwing open their property at Binni Creek to prospectors, is responsible for this increase, where some 200 men are at work, who are, with few exceptions, making wages. From one block of stone, weighing 4½ cwt., 102 oz. of gold were crushed. A little gold is being got in other parts of the Division, but nothing of any consequence. The total number of men employed in this Division is about 400.

Mount M'Donald Division.

The returns show a considerable decrease this year—being 996 oz., valued at £3,714, as compared with 1,415 oz., valued at £5,312, in 1893—owing to the fact that the principal mine in the locality, owned by the New Balmoral Gold-mining Company, of Hong Kong, being stopped during the year, the Company being reconstructed. Active operations have now been started, and good returns are looked forward to during next year. A good deal of prospecting is going on in this Division, both for quartz and alluvial, but no discovery of any moment has been made, so far. This is not a very promising locality for the fossicker, who has to depend on his weekly returns for rations, all the mining at present requiring capital, without which miners would do little or no good.

Carcoar Division.

The return from this Division has been rather less this year, being valued at £7,599, as compared with £10,353 during 1893. The best crushing during the year in this Division was by Woodward and party, who put through 9 tons of stone for 83 oz. of gold. Smith and party, on a new line of reef, crushed 23 tons for 75½ oz., and Digby and party 176 tons for 215½ oz. The "Newman's Freehold," at Galley Swamp, put through 110 tons for 140 oz. of gold. Mining operations are very brisk at Flyer's Creek, a great deal of prospecting being done, about 200 men being on the field, which, on the whole, looks well and prosperous. M'Nab and party had one crushing of 74 tons, which returned 150 oz., and Wm. Stammers and party 80 tons for 108 oz. of gold. Jarvis and party, from their sluicing operations, won 121 oz. of gold, but they put through a large quantity of stuff.

Blayney Division.

The gold won in this Division during the year was 2,233 oz. from alluvium and 100 oz. from quartz, valued at £7,202, as compared with £5,007 in 1893. In this Division mining on Crown lands has not been carried on to such an extent as in previous years, but private land has been prospected under the new Act to a large extent, with more or less success. Sherlock and party, at the head of the old workings in M'Phillamy's paddock, King's Plains, have sunk two shafts to a depth of 60 feet each, and have found a lode or dyke with quartz veins and ironstone carrying very good gold. A trial crushing of 4 tons gave a return of 6 oz. 4 dwt. 12 gr., and they are still driving across the lode and raising stuff for another trial crushing. Davis, Nicholson, and party report having struck a reef 2 feet wide, showing gold freely, on their 20-acre lease on Mr. Robert Glasson's property, about 3 miles from Blayney and close to the railway station. A trial crushing now being raised is expected to go at least 1 oz. to the ton. The Brown's Creek Gold-mining Company were idle during a part of the year effecting repairs and alterations to the machinery, but have again started work with forty men, and good returns are now anticipated. This mine has just been floated on the English market for a large sum. On the whole, mining matters in the Blayney Division are looking up, and, from the number of parties out prospecting in the locality, something new may be discovered soon.

Newbridge

Newbridge Division.

About ninety gold-miners are working in this locality, principally prospecting, and the yield for the year was 150 oz. valued at £579, which is considerably less than the quantity got in 1893.

Trunkey Division.

In the Trunkey Division of this District there are nearly 200 men at work mining for gold, fifteen of that number being Chinese, who produced 675 oz. of alluvial and 748 oz. of quartz gold, valued in all at £5,424, which is just about double the quantity won during 1893. This very satisfactory result is no doubt traceable in a great degree to the seasonable rains, which fell during the months of June, July, August, and September, allowing the sluicers and fossickers to get to work on ground which is deserted during the dry seasons. A large number of men were forwarded to this locality during the year, the *bond fide* seekers for employment earning not less than £1 per week at fossicking and many double that amount, while there is plenty of water. The Eureka Gold Mining Company, at Colo Creek, are proceeding vigorously with the development of their property, and have erected machinery to the value of about £10,000. The Kilkerin Gold Mining Company has also crushed a large quantity of stone with satisfactory results. At Mount Gray, Monie, Angus, and Company put through a crushing from their mine, but have done nothing further. Opposite the township, James Dickie and party are putting a tunnel into the hill, which has already reached a distance of 212 feet. The principal sluicing companies—such as McVicar and party, the Mountain Run, Gayner and Company, and Owen and party, in Trunkey Creek—got very good returns during the wet months, and Messrs. Gannon and Company are making extensive preparations to commence sluicing during the coming winter.

Tuena Division.

The yield of gold from this Division during the year was 1,340 oz. from alluvium and 206 oz. from quartz, valued at £5,777, as compared with £5,760 in 1893. Although there is such a small increase in the yield, there has been a very marked improvement in quartz-mining in the locality, especially about the latter part of the year, and a good many parties have started prospecting on the old reefs about Junction Point and Crooked Corner. Brennan and party have obtained some splendid stone from their Extended Claim at Scrubby Rush, near Tuena. One crushing of 20 tons they had returned 1 oz. per ton; and McGuines and party, who are working at Hillside, had also a crushing of 20 tons, which yielded 30 oz. of gold.

Rockley Division.

There are seventy-two gold-miners at work in the Rockley Division, principally on alluvial, and they won about 750 oz. of gold, as compared with 773 in 1893. Greater attention has been paid during the year to ground sluicing than formerly, the past wet winter being very favourable for such work. A large number of the unemployed in the locality have, owing to the depression, taken to gold-mining, and in many instances have earned more than ordinary wages. D. Crozier and Sons discovered a gold-bearing reef at Eagle Vale, on Warby's conditional lease, about 13 miles from Rockley, from which they obtained some very rich specimens. A crushing of 60 tons will be put through shortly, which will fully test the value of the discovery. With the exception of a few alluvial mines, there is nothing doing at Back Creek.

Burraga Division.

In the Burraga Division sixty men are at work on the alluvial deposits, but nothing very rich has been discovered. The bulk of the men are at Mount Werong, about 35 miles out from the township of Burraga, where a very good living can be made by sluicing although the gold is very fine. Messrs. Tate and Davies have erected a gold saving machine on the Mount—which is expected to put through about sixty loads per day. Should this machine prove a success, there is plenty of ground available for many more of them. Rantow, Jago, and party are in receipt of Government aid to put a tunnel into a basalt hill on the Isabella River. The last report from the claim states that the indications are very promising. The output of gold during the year was 185 oz., being slightly less than the output during 1893.

O'Connell Division.

There are only a few fossickers at work in this Division who won gold to the value of about £150.

Oberon Division.

There are seventy-one miners in the Oberon Division engaged in alluvial mining who won during the year 281 oz. of gold, valued at £1,300, which is nearly double the quantity won in 1893. It is considered that the above figures do not represent the total quantity of gold won in this Division, as a number of fossickers at work have always been able to get sufficient gold to meet their demands, but the total quantity could not be ascertained.

Bathurst Division.

This Division of the Bathurst Mining District is considered a very good locality for fossickers during wet months, and some of the men who went to work with a will did very well, making more than wages during the wet weather. The average number of men at work during the year was about 100, and the returns give the yield of gold as 1,100 oz., valued at £4,076, from alluvium, and 125 oz., valued at £464, from quartz. At Glanmire the Napoleon Reef Company have not been at work all the year round, and operations at the mine are now temporarily suspended.

Wyagdon Division.

In the Wyagdon Division there are thirty-two men principally employed fossicking on alluvial ground, and their output for the year was 200 oz., valued at £750. The average wages earned were very small, not exceeding 20s. per week, although some of the men may have earned a little more than that. There are several parties at work in the locality, prospecting for quartz reefs, who are in receipt of aid from the Prospecting Vote.

Sunny Corner (Mitchell) Division.

The returns from this Division give the yield for the year as 2,166 oz., valued at £8,122, which is 983 oz. in excess of the quantity produced in 1893. The Paddy Lackey Mine crushed 1,079 tons for 1,066 oz., valued at £3,731. This mine was originally brought into prominence through a grant made from the Prospecting Vote, and has yielded payable returns all through, and constantly employed about twenty men during last year.

The St. George's Mine is also being further prospected, and during the year had only one small crushing of 120 tons for 48 oz. There are still a large number of men employed fossicking in the creeks and gullies in the neighbourhood, who are evidently making a living if nothing more.

Hartley Division.

On the Cox's River, in this portion of the district, several parties are prospecting for gold, and have met with fair indications. One of the parties is in receipt of aid from the Prospecting Vote.

Orange Division.

Owing to the splendid returns from the Lucknow mines, this is now one of the largest gold-producing centres in New South Wales, the output being, for the year, 36,208 oz., valued at £128,197, and giving employment to nearly 700 men. Of that number, the Wentworth Proprietary Company employ 232 men, and raised during the year 10,947 tons, yielding 19,992 oz., valued at £72,118. This company's shaft is now down 828 feet, and their plant is valued at £50,000. The Aladdin's Lamp Gold Mining Company raised 4,298 tons of stone for 14,008 oz. of gold, valued at £47,645. The shaft is down 517 feet, and the company has plant on the ground to the value of £15,000. The Amana Company also raised a quantity of stone during the year, and the D'Arcy Estate Gold Mining Company are busily sinking a main shaft, which is now down about 240 feet. Prospecting is still being carried on at Forest Reefs, but the work is very expensive owing to the hard basalt and quantity of water met with. Berryman and party struck a small patch of wash, but it unfortunately run out. Ovington and party are now on the wash which is said to be payable, and the party are arranging for the erection of machinery. Lawler and party have now reached the wash, and the erection of their machinery is nearly completed. All of these parties were in receipt of aid from the Prospecting Vote. A good deal of fossicking is still being done in the neighbourhood of Forest Reefs. Mining is still dull at Lewis Ponds, although a few parties were successful

successful in striking rich patches of gold. A number of fossickers are still making a living in this locality. In the neighbourhood of Ophir, a large amount of work has been done in alluvial during the year, but the scarcity of water has proved a great drawback. Several long tunnels have been put in under the basaltic hills in the locality, and in one case payable wash was obtained at a distance of 600 feet in. During the winter months, ground sluicing has been successfully carried on here, S. McConnell and party, particularly, having turned out some fine specimens, one containing over £140 worth of gold. At Summer Hill Creek about thirty men are at work, but it could not be ascertained with what success. They are evidently getting sufficient gold to meet their wants. At Cadia, mining is virtually at a standstill, only a few men fossicking in the locality. Considerable interest has been taken in the prospecting operations being carried forward on the Bletchington Estate during the year, which lies north of Orange, and through which it is supposed the rich Lucknow leads extend. The prospects met with have proved very encouraging, and arrangements are being made to prosecute the work on a more extensive scale.

THE MUDGEE MINING DISTRICT.

Cobbora Division.

This is a new Division of the Mudgee District, formed this year, and returned 230 oz. of alluvial gold, valued at £891, from about 630 tons of wash-dirt, or an average of 7 dwt. per ton. The seat of gold-mining in this Division is situated about 10 miles east from Cobbora, in the direction of Gulgong, and along the bottom of a range that extends from the head of the old Tallewang Diggings, and was discovered about the middle of the year. The sinking varies from 8 feet to 30 feet in depth, and the greatest width of the wash, so far as proved, being 20 feet and 1 foot thick. The bottom consists of rotten slate, and the gold is found varying from a few grains to 6 and 8 dwt. pieces, the larger pieces being impregnated with sharp quartz, showing that it had not travelled far. In several gullies near the main lead gold is being won by about forty miners, although a good number had to leave through scarcity of water, promising to return when the wet weather set in.

Demson Town Division.

There is little doing in gold-mining in this Division, the only party at work being M'Mahon and Bird, at the Pine Ridge, who are sinking through the basalt for gold and gem stones, and are in receipt of Government aid. A few men are fossicking about the Tucklan, but it is questionable if they are making more than a bare living.

Gulgong Division.

A considerable increase has taken place in the quantity of gold won in this Division during the year, the figures being 2,298 oz., valued at £8,846, as compared with 1,436 oz., valued at £5,578, in 1893, due, no doubt, to the large number of men assisted to proceed to that locality. The gold was all alluvial, and, as near as can be computed, there are 350 men busily at work in the creeks and gullies. Miller and party, in Morrissey's paddock, are said to be getting fairly good returns from their claim. Mr. Frame Fletcher, the representative of the English company formed to work the Black Lead, is now in England, for the purpose, it is said, of obtaining authority to expend more money in developing the ground. The company has already spent a large sum, with, unfortunately, no return so far. In this Division the owners of auriferous lands have fully availed themselves of the privileges given under section 33 of the Mining on Private Lands Act, 1894.

Hargraves Division.

During the year this Division produced gold to the value of £4,125, as compared with £2,850 worth in 1893. There has been a marked improvement in mining in this locality during the past twelve months. Warry and Stuart have a splendid claim on the Big Nugget line of reef, which seems to be improving daily. Mitchell and party, who received aid from the Prospecting Vote to sink a shaft on Specimen Flat, struck a nice patch of gold, from which they took 224 oz. of retorted gold. Scott and Laing, on the Lizzie Watson line of reef, have completed the erection of a 15-head stamper battery, which will prove of great service to the field. The New Hargraves Gold-mining Company have shut down, after spending a very large sum in prospecting.

Mudgee Division.

This Division produced 5,373 oz., valued at £20,448, as compared with 3,975 oz., valued at £15,303, in 1893—a very satisfactory increase, which is directly traceable to the large number of men who have been assisted to proceed to this district as "fossickers," their seat of operations being principally in the vicinity of Apple Tree Flat, Pipeclay, Limestone, and Merrendee.

Windeyer Division.

There is no improvement to report in this Division, the value of the gold won being £7,700, a slight increase over 1893. Most of the leases are all but idle, and very little is doing on the Jubilee line of reef from which so much was expected. There are 200 men mining in the locality including about forty Chinese, the majority of these fossicking in the creeks and gullies with varying success.

Peak Hill Division.

This Division shows a satisfactory increase during the year, being 12,231 oz., valued at £44,941 as against £41,945 won in 1893. The principal mines working in this Division are the Proprietary, Wythes and Mooney, the Crown of Peak Hill, and the Bobby Burns. The Proprietary Company crushes on an average 1,600 tons of ore per month, and although the returns are only something like 6 dwt. per ton, there is still a margin of profit. There appears to be a large quantity of this class of ore available. This company are also treating their pyritous ores by burning in open air kilns, and the process is said to be very successful. There is no doubt the treatment of these ores is of vital importance to the mining industry at Peak Hill. The ore in Wythes and Mooney's claim is slightly richer than in the Proprietary, but that is probably due to the ore being picked. The Crown of Peak Hill Company have let their mine on tribute, and have erected Denny and Watson's grinding pans, and also a small calcining furnace with the object of treating their pyritous ores. So convinced is this company that their pyritous ores can be profitably worked, that they are about to sink a shaft to a depth of 400 feet for the purpose of raising this class of ore, at which depth they hope to cut the Great Eastern lode, which averages about 15 dwt. of gold per ton. The Great Eastern Mine is idle and has lately changed hands. At The Myall mining has considerably revived, and a large amount of prospecting work is being carried on, principally owing to the discovery of a payable quartz lode by Moore, Reidy, and party in May last 950 tons from which yielded 497 oz. of smelted gold. At Tomingley there are two claims at work, the best returns being got by Crowhurst and party, who are working the Tomingley reefs. There is very little alluvial mining being carried on in the Division, it being reduced to a few fossickers who barely manage to make rations.

Wellington Division.

With the exception of The Mitchell's Creek Freehold Gold-mining Company little has been done in the way of mining in this Division during the year. The enterprising proprietors of this Company, under the able management of Mr. Philip Davies, have made very extensive additions to their plant during the last twelve months, which is now valued at £20,000. The quantity of stone raised by them was 6,273 tons, which yielded 4,798 oz. of gold, valued at £17,826. Their deepest shaft is now down 600 feet, and the company give constant employment to over 150 men. No fresh developments in alluvial mining have taken place, although about 60 men are prospecting and fossicking in the neighbourhood, who won, among them, 410 oz. of gold, valued at £1,558.

THE TAMBAROORA AND TURON MINING DISTRICT.

Hill End Division.

The gold won in this Division was 2,610 oz. from alluvium, and 1,278 oz. from quartz, valued at £15,067, which is in value a few hundred pounds short of the yield for 1893. Alluvial mining is principally carried on by sluicing, and there are 120 Europeans and 47 Chinese employed in the work. The work done in quartz-mining was principally prospecting, and a large quantity of poor stone having been put through, has brought the average yield below that of previous years. However, most of the dead work is now done, and mine-owners are looking forward to good returns during 1895. The mines are generally looking better, and many of them are now raising payable stone, amongst the latter being Cross and party, Thomas Trevithick, junior, the Root Hog Syndicate on the Macquarie River, Carver and party on Hawkins Hill, the Hill End United Gold-mining Company, Marshall and party at Hill End, and M'Cudden and party at Tambaroora. Several

Several other parties are at work in the locality, but are not on payable stone at present. The Hawkins Hill Company continued their main shaft a further distance of 120 feet during the year, which is now down 530 feet, and a cross-cut is being put in to cut the reefs at the lowest level. At Paxton's a tunnel is being driven from Carver's tunnel, a distance of 260 feet, to drain the water which for many years has prevented the successful working of the mine. The owners of the Robert Emmett Mine, on Prince Alfred Hill, have done a lot of prospecting during the year, and a few nice patches of gold have been struck. Burns and Graham and the Hill End Proprietary Company are both vigorously pushing forward prospecting works. During the past few years many thousands of pounds' worth of machinery have been brought on to the field, which shows that the mining population have great faith in the future prospects of Hill End. The total number of men on the field at the present time is 317.

Sofala Division.

There is a slight reduction in the quantity of gold won during the year in this division, being 3,544 oz. of alluvial, and 740 oz. of quartz gold, valued in all at £16,576, the 740 oz. from quartz being crushed from 2,020 tons of stone. Alluvial miners, especially those engaged in surface sluicing, have been much hampered in their operations by the continuous dry weather which prevailed in this Division during the year, and compelled the miners to confine their work to near the rivers and creeks, where the water is more permanent, or bear the cost of carting their wash-dirt long distances. Some men on Palmer's Oakey Creek got fairly good returns while the water lasted by sluicing, and near the Public School, Palmer's Oakey, a party of ten men are doing well in sinking from 6 to 9 feet deep. Numerous parties are all over the locality, some making more than wages. At Dead-horse Gully some very nice patches of coarse gold are being got. At Crudine, 9 miles from Sofala, Hammond and party, who are sluicing there, got a lot of coarse gold, some of the pieces weighing over half an oz. Quartz-mining at Spring Creek shows a revival. Brown and Williams, on the South Welshman's line of reef, are now down 150 feet, and the reef has widened out to 4 feet, showing gold. The party, who are in receipt of aid from the Prospecting Vote, have not had a crushing yet, but it is expected to prove payable. A steam-winch for hauling purposes, and an 8-head stamper battery has been erected on the mine. Miller and Birkett, on the same line, had a crushing of 31 tons for 22 oz. At Wattle Flat, Mini and party, on Big Oakey Creek, crushed 570 tons for 227 oz., and expect to strike some richer stone soon. Near the same place the O.K. Gold-mining Company crushed 80 tons for 83 oz. Some parties are prospecting at Blacksmith's Point, under aid from the Prospecting Vote, and have great hopes of striking something rich before long. Heagney and party, on Bullock Flat, who are also in receipt of Government aid, have struck a reef showing gold, but have not yet had a crushing. At Tobin's Oakey, Davis and party, on the Hill-top Reef, have very good prospects in their tunnel, and are now erecting a 6-head stamper battery; and Buttle and party, adjoining, are on a reef 2 feet thick, with gold showing freely. At Box Ridge, Knoblanche and party have taken up some ground adjoining the old Home-ward Bound Mine, which was worked very profitably some years ago. At Solitary Creek Brailey and Montgomery crushed 488 tons of surface rubble for 32 oz. of gold. At Reilly's Creek Keeley and party put through 38 tons for a return of 75 oz. of gold. In this Division there are 450 miners employed, including fifty Chinese.

Rylstone Division.

There is very little mining going on in this Division; a few men are fossicking for gold, and manage to obtain the price of their rations. The finding of some specimens of gold in quartz near Pursur's Creek caused a mild rush, but nothing payable has been reported so far.

Ironbarks Division.

There are 270 gold-miners working in this Division, 220 of that number being engaged in alluvial mining. The quantity of gold produced was 2,611 oz. of alluvial and 659 oz. of quartz gold, valued at £12,590, an increase of 777 oz. on the previous year. Quartz-mining is still depressed in this Division, the principal companies at work being the Golden Gully Gold-mining Company, the Burthundra Gold-mining Company, Bochme and party, on the Post Office line of reef, and Curnow and party, at Splitter's Gully. The alluvial miners are principally employed in re-working the old abandoned leads. The majority of the men were assisted to the district as fossickers, and appear to be doing fairly well.

THE LACHLAN MINING DISTRICT.

Molong Division.

With the exception of about a dozen men fossicking in this Division, there is no mining going on. Permits to mine for gold on private property have been granted to Bennett Bros., but as yet no payable results have been reported.

Cargo Division.

Mining has been exceptionally dull in this Division during the year, the quantity of gold won being only 150 oz., against 1,695 oz. in 1893. The Ironclad Mine has been shut down owing to the difficulty experienced in treating the refractory ore, and the Goldenclad Mine has been abandoned. A few men have been prospecting in this locality during the year, but with poor results.

Cudal Division.

As far as could be traced, there was no gold sold in this Division during the year. A little work was done on a lode on Kearney's conditional purchase at Paling-yard Creek, but not having machinery on the ground to treat the stone, it could not be profitably worked. At Oakey Creek, about 5 miles westerly from Paling-yard Creek, some prospecting was done on private land, and fine gold was got in wash running into the hill under the basalt, but nothing payable. A party has applied for a gold lease at Toogong, but have done no work on the ground yet.

Canowindra Division.

This Division returned 381 oz. of gold, valued £1,453, taken from 423 tons of stone, and 14 oz. of alluvial gold from 94 loads of wash, the alluvial gold being got by Kirkman and party, working in Sullivan's Gully. The Lady Burdett Coutts Gold-mining Company, at Boney's Rocks, treated 67 tons for 177 oz., and the Blue Jacket Company 200 tons for 175 oz. Although the mining industry has been very dull during the year in this locality, and the quantity of gold won small as compared with former years, still it is expected that something will be struck shortly by some of the men who are vigorously carrying on prospecting work in the Division.

Forbes Division.

Very little mining is being carried on in this Division, but several parties are out prospecting. Webb and party found a reef near Strickland's line, about 7 miles north from Forbes, near the main road to Parkes, from which a trial crushing of 10 tons yielded 2 oz. 7 dwt. per ton. A few men are obtaining a little alluvial gold in this locality, probably thrown from Strickland's reef. With the removal of the machinery at the Pinnacles, mining may be said to have ceased there. At Billy's Look Out, near Lake Cowal, a considerable number of miners are working chiefly in alluvial ground, but as the wash-dirt is poor as yet, the men are only making small wages. A small rush took place to Mr. Nair's selection, where some good looking stone had been struck near the old alluvial rush at Billy's Look Out. As yet the value of the find cannot be stated, as only surface work has been done, and no crushing made, but the stone prospects very well. It is generally believed that some payable reefs will be found yet in this locality when thoroughly tried by experienced miners.

Parkes Division.

There is a very large increase in the output of gold won in this Division during the year, the quantity being 2,024 oz. of alluvial gold, and 7,721 oz. of quartz gold, valued at £33,998, as compared with £17,584 worth won during 1893. The principal mine in the Division is Bushman's, which lay idle for a long time, but was ultimately let to a party of tributors, who have been singularly fortunate, as will be seen from the following list of crushings they had during the year:—

333 tons	for	266 oz.
120 "	"	243 "
187 "	"	568 "
441 "	"	1,349 "
477 "	"	1,546 "

There are thirty men employed in this mine, and the stone is being raised from the 400-foot level, where there appears to be a shoot of gold over 470 feet in length. Baxter and Sadler have sunk a main shaft in their ground, and have cut the Bushman's

Bushman's reef, which seems payable, but are driving west to cut the rich shoot being worked by the tributors of the Bushman's mine. When the tributors lease expires, which will be shortly, it is proposed to amalgamate these two mines, erect new hauling plant, and probably a battery of twenty stampers. The Hazlehurst mine, from which such valuable stone was raised in times past, has also been worked by tributors during the year. The tributors, when working on the east and west vein, cut a reef from which some very rich stone was taken. The vein is only 8 or 9 inches wide, but the discovery is considered of much importance, as it is thought from its bearings to be a continuation of the Bushman's line of reef, on which were several payable claims. Work will shortly be resumed in Quayle's Mine, which adjoins Hazlehurst, by an experienced party of tributors. The reef originally worked in this mine proved very payable, but could never be traced beyond the north-west boundary of the claim. The Gladstone Mine, also being worked on tribute, is putting out 2 oz. stone from the 240-foot level, but the vein is small and the country hard. The tributors, who have the mine for three years, are fixing up an engine to cope with the water. The Deep Sinking Prospecting Company, who have been at work for six years, are still carrying on, and have nine men at work. They have not yet struck anything really payable. At the Nibblers Hill a syndicate has purchased the claim of Mosford and party for a good figure, and from a 23-foot shaft took stone which yielded 50 oz. of gold. In this locality about forty men are employed in different parties. The Dayspring Mine, also being worked on tribute, is paying expenses. On Wright's reef, situated on Bartley's Creek, 4 miles south east of Parkes, three parties are at work on payable stone.

There are four or five alluvial claims at work at the head of Possum Gully, close to the old workings, for a yield of from 3 to 9 dwt. to the load, and it is hard to understand how this ground remained undiscovered so long with so many alluvial miners prospecting in the locality. The total number of mines employed in the Division is 712.

Alectown Division.

Mining matters in this Division are very dull, the output of gold during the year being only 272 oz. from alluvial and 90 oz. from quartz, valued at £1,360, as compared with £4,808 worth won in 1893. The 272 oz. of alluvial gold were obtained from 1,113 loads of wash, which gave an average yield of about 4 dwt. per load, which, with the exception of a few loads, were all taken from the old ground. The Prospectors Claim was worked out early in the year, and as near as can be ascertained 1,197 oz. of gold were taken from it. Several parties are out prospecting for further deposits of payable alluvial, and one party at work, about 5 miles south-west of the township, is said to have very good prospects. The reefs in the locality are nearly abandoned, no doubt owing to the poor yields from trial crushings, which were 600 tons for 90 oz.

Grenfell Division.

This Division shows a very satisfactory increase in the value of the gold won during the year, being £5,620 as compared with £3,693 won in 1893. The principal crushings during the year were by the Young O'Brien Gold-mining Company, who put through 887 tons for 731 oz.; the Homeward Bound Gold-mining Company, 518 tons for 255 oz.; and the Lucknow Gold-mining Company, 169 tons for 75 oz. The Young O'Brien mine is looking very well, and the lode appears to be improving as it goes down. This mine was opened up by means of aid granted from the Prospecting Vote. The Homeward Bound Company have made arrangements to proceed, during 1895, with extensive prospecting operations in connection with their mine. The Lucknow Company have obtained aid to continue their shaft in search of the main lode. A local company has been formed to sink a shaft in search of the lode being worked in the Young O'Brien mine, and the shareholders are very sanguine of success. There is not much doing in alluvial mines, work being principally confined to the old ground, and might be put down as fossicking. The men engaged in this class of work are said to have done fairly well during the year.

Murrumburrah Division.

In this Division the principal event of the year was the discovery of the Garangula Gold field, situated principally on two 640-acre conditional purchases belonging to the Macansh Estate. About the month of March the first rumours of payable gold got abroad, and before the middle of May there were 1,200 men on the ground; but by the 1st September the number had dwindled to 500 men, and has remained steady at about that number. The men employed seem generally to be fairly satisfied with the results of their labours. Puddling machines have been erected at a dam made in Jellambi Creek, and most of the wash-dirt is brought there and put through. The sinking on the principal leads on Straw Stack Gully and Mam Camp Gully is dry, and averages about 25 feet to the wash, which is from 6 in. to 18 in. thick, with an average width of 20 feet, with fairly coarse gold, the largest piece yet got being 2 dwt. From information collected at eighty-three of the alluvial claims it is estimated that the yield all round has averaged 7 dwt. per load. So far, no tin has been met with in the wash, and there are no gem stones worth mentioning.

There are seventeen claims at work on the quartz reefs, the deepest shaft being down about 100 feet. The veins vary from 5 to 22 inches in thickness, with a tendency to widen as they go down. The quartz is glossy white, in some instances iron-stained, and in some of the veins the gold is coarse, but generally fine, some showing galena with plenty of pyrites, and in some cases an appreciable quantity of zinc and manganese. A battery has been erected on the field, but so far has only put through some of the poorer stone to get it into working order. There was 1,205 oz. of alluvial gold purchased at the local store to the end of 1894, but the exact amount won was probably double that mentioned.

At Frogmore, near the old copper mines, two gold bearing reefs are being prospected, but nothing assuredly payable has yet been discovered. On the Fish River, about Branch Creek, a few men are fossicking, and some of them got sufficient gold to keep them going. About the end of the year a small rush set in to Grassy Creek, but as the ground was wet, it was soon abandoned. A little coarse gold was got during the year at the head of Phil's Creek, where it is said there is some very likely ground yet untouched by prospectors.

Temora Division.

There has been a satisfactory increase in the quantity of gold won in this Division during the year. The yield being 1,875 oz., an increase of over 1,300 oz. on the yield during 1893, which is, no doubt, due to the large number of men assisted to the district as fossickers. At the Temora Battery, 631 tons of stone were put through for 1,147 oz. At Hansler's Battery, Gundibindyal, 228 tons were crushed for 236 oz., and at Morris' puddling machine, 550 loads of wash for 55 oz. There is a very noticeable improvement in mining matters in the District, more especially since the discovery of Wyalong, and from the splendid returns now being got at Gundibindyal, a phenomenal yield for the year 1895 is predicted.

Barmedman Division.

The yield from this Division was 890 oz., valued at £3,404, from 743 tons of stone, which is more than double the quantity won in 1893. Wyalong, which used to be embraced in this Division, has, in view of the importance of the field, been formed into a new Mining Division, and made the head-quarters of the Warden, and a Mining Registrar has been appointed to the Division. Following the discovery of Wyalong, a new field has been opened about 8 miles south-easterly from Barmedman which is known as Reefton, and several crushings put through in Barmedman from the new find raised from 6 dwt. to 7 oz. per ton. The country rock is soft slate, the reefs although small are well defined, and appear to improve with depth. A 12-stamp battery has been erected by Mr. Joseph Rich, and crushing operations commenced. Still another discovery was made during the year on Stewart's selection, situated about 6 miles west from Reefton; but owing to the hardness of the country rock (micaceous sandstone), and the distance to cart the stone, the prospectors had to abandon it, but have notified their intention to re-occupy the ground now that a battery has been erected at Reefton. Another new discovery was made by Joseph Nessi and party on the western fall of the ridges about 1 mile west of Barmedman. Their shaft is down 40 feet on a reef 10 feet wide, a crushing of 40 tons from which yielded 7 dwt. per ton. Martin and party, a short distance west of Nessi and party, have found a lode in hard blue felspathic rock, traversed by small quartz veins from which they took a trial crushing of 7 tons, yielding 15 dwt. per ton. This lode is running parallel to Nessi's big lode, but in quite different country. Other parties are hard at work prospecting in this locality, although it is generally believed that the Barmedman reefs could be profitably worked, still nothing has been done towards re-opening them up.

Wyalong Division.

The Chief Inspector of Mines, Mr. Slee, who acted as Warden for this Division during a part of the year, reports as follows:—

In submitting my report as Warden of the Wyalong gold-field, I have the honor to inform you that the first prospecting claim for Wyalong was registered at the Mining Registrar's office, Barmedman, on the 26th December, 1893, under

under the names of Frederick Neeld, senior, J. G. Neeld, Fred. Neeld, junior, E. A. Neeld, G. W. Neeld, and H. E. Neeld. But as the area registered was held under conditional lease by G. W. Neeld, the registration was null and void. Such being the case a permit to dig and search for gold on said conditional lease was then applied for by the owner, G. W. Neeld, and his brother, H. E. Neeld, and a permit granted to them; hence these two persons became the legally recognised discoverers of the Wyalong Gold-field.

The selection on which the first payable gold was discovered by Fred. Neeld, senior, the father of the selector, was taken up on 2nd August, 1893, by G. W. Neeld, and not by the father, as is generally supposed. It consisted of 400 acres conditional purchase, and 511 acres of conditional lease. The apparent small area taken up was no doubt owing to the fact that there was very little Crown lands available in the neighbourhood.

Several months elapsed before the outside public took much notice of these discoveries. But in February and March last several bulk crushings were tested at the Barmedman quartz-crushing battery, under the able management of Mr. W. H. Downey, with very payable results; causing a great rush of people from all parts of Australia, and a rapid increase of population from a few hundreds to at least 10,000 persons. Claims were marked off in all directions. Mining disputes became numerous, but were mostly settled by me on the ground under the provision of the 71st section of the Mining Act of 1874.

Water being very scarce on the field, I recommended the resumption of a tank belonging to Mr. A. Blyth, of Wyalong Station, and the 16-mile, and Jarter's Tank on the eastern part of the field. A large population soon camped around the White Tank, and notwithstanding my warning and advice, an irregular narrow street was formed on the very quartz claims, whereby the main camp, or Wyalong West, became an established fact. I, as Warden, being unable to lay off a street 99 feet in width, with cross streets of same width, in a position not likely to be auriferous, in accordance with Mining Board Regulation 85, requested parties not to build their premises on the auriferous quartz claims, but to take up allotments in the already surveyed town $2\frac{1}{2}$ miles distance. This advice was unheeded, and the consequence is that there are no end of disputes at Wyalong West between the quartz-claim holders and business people. The latter not being able to obtain a title to the land on which their business premises stand, unless said claims were resumed by the Government. However, no one but the parties interested are blamable in the matter. The surveyed town of Wyalong has streets 99 feet in width. The town itself is in a healthy position; over 400 allotments, of a quarter of an acre each, have already been taken up, and at the end of the year the population of the town was about 1,200, and daily increasing. By the police returns the total population within 5 miles of the Wyalong Court-house, and including both townships, was at the end of the year 4,215, of which 3,825 were males, and 930 females, exclusive of children.

The field so far is essentially quartz-mining. The quartz-veins occur in lenticular shapes in granite, porphyry, diorite, and slates from mere threads up to 18 inches in thickness.

No less than 900 quartz claims, from 4 to 8 men's ground, have been registered, but this registration includes a large number of claims several times abandoned and registered. Only about 300 claims may be considered in actual work. Of these 300 claims, 121 were of sufficient importance for the owners to incur the expenditure of survey, and out of the total number about 25 may be considered as yielding more than payable returns.

The total number of tons of quartz crushed, and the yield of gold from the Wyalong Gold-field since its opening up to the end of the year, is 6,358 tons, yielding 9,649 oz. 1 dwt. of gold, or an average of 1 oz. 10 dwt. 9 gr. of gold per ton. Out of the 6,358 tons quartz crushed, no less than 2,616 $\frac{1}{2}$ tons were crushed at the battery at Barmedman under the able supervision of Mr. W. H. Downey, yielding 4,126 oz. 10 dwt. of gold.

There are now 6 crushing machines at Wyalong, which, in my opinion, is more than ample for reduction purposes. There is, however, a great opening for a chlorination plant to treat the concentrates on the spot, as, owing to the refractory nature of most of the ore on the field the present appliances in use can only treat the free gold, and probably fully 25 per cent. of the gold is lost in the concentrates. I have lost no opportunity to impress owners of mines with the necessity of keeping the whole of their tailings for future treatment; hence, instead of agitating for additional crushing power it would be far more beneficial to encourage the erection of chlorination works.

Several of the claims have already struck water, which is, however, not fit for human consumption. Some of the claims which are on the water-level are very treacherous to work, owing to the very jointed nature of the rock, which keeps slipping away, and requires not only close timbering, but also false sets to work the ground with anything like safety.

The greatest drawback to the development of the Wyalong gold-field is the scarcity of water; and as there are no large watercourses suitable for the erection of reservoirs, the excavation of tanks and cutting of races has to be resorted to.

Artesian water is not likely to be met with in the district of Wyalong.

Latterly the extension of new discoveries have been made southerly and easterly of Wyalong. From Bams and party's claim, at the Pine Ridge, about 1 mile southerly of Wyalong, 1 ton of quartz was crushed, yielding 41 oz. of gold; this, however, was picked quartz. No alluvial gold has, so far, been discovered, and, as stated in my report in March last, there is not much likelihood that alluvial gold will be discovered in the vicinity of present workings; but there is a likelihood that alluvial gold may be discovered toward the Humbug Creek or Lake Cowel.

YALGOGRIN.

This is also an essentially reefing district, situated about 26 miles westerly of Wyalong. Some of the quartz veins occur in hornblende granites, others in felspathic rock and quartzite. A total of 335 tons quartz crushed during the year yielded 377 oz. 12 dwt. Several quartz claims are also at work with fair prospects. At Mulyan, about 10 miles from Yalgogrin, but up to the end of the year no payable crushings had taken place.

An alluvial rush took place during the year to Narriah, about 8 miles from Yalgogrin, where a miner named John Smith had received aid out of the Prospecting Vote, but the population decreased to about 25, as, so far, nothing payable had been discovered.

Marsden Division.

There are 70 men in this Division, principally fossicking, and they won 170 oz. of alluvial gold, valued at £640. A few men are working on some quartz reefs discovered in the vicinity, but no crushings have been made from them yet to prove their value.

Young Division.

This Division returned 1,935 oz. of alluvial and 15 oz. of quartz gold, valued at £7,552, which is £1,000 in excess of the quantity won in 1893. The South Burrayong Company's mine, situated about 2 miles from Young, has not produced much gold during the year, and in November, obtained three months' suspension to allow of more powerful machinery being erected to cope with the great influx of water. In former years this mine used to add considerably to the output of gold from this Division. There are a good many sluicing claims in the vicinity of Young, from which good returns have been obtained during the year, more especially the claims occupied by Messrs. Penrose, Barnes, Tonkins, Gibbons, Perrins, Hunter, and James and Ashton's at Stony Creek. The quartz claim at Wombat has been idle for some time, and the lease has been cancelled in consequence. At Moppity, about 6 miles from Young, 30 or 40 men are at work, under a private agreement with Mr. Carlo Marina, the owner of the property, where reasonable wages are being made. The sinking is through an alluvium of decomposed granite, the wash being 25 feet wide, 2 feet thick, and averaging about 8 dwt. to half-an-ounce to the load. At Cullinga, the Tildens Proprietary Company crushed 1,460 tons from 921 oz., and Reynolds and party, 130 tons from 46 oz.

THE TUMUT AND ADELONG MINING DISTRICT.

Albury Division.

A very great improvement is observable in mining throughout the Albury Division, with a tendency to still further improve during the coming year.

The Mining on Private Lands Act must be credited with having given it a powerful stimulus, as also the action of the Government in assisting so many of the unemployed of the cities to the mining localities of this Division, who have materially aided the development of partially tested lines of reefs, or imperfectly worked alluvial. Since the passing of the Mining on Private Lands Act, 12 permits to examine surface have been granted, 28 agreements have been registered, and 46 special leases have been applied for. In specifying localities likely to develop into mining centres, that of Bulgandra, near Walbundrie, 40 miles from Albury, may be mentioned where several reefs have been partially proved with very encouraging results, on the properties of Messrs. Gibson and Company and Mr. Fagan. The present settlement of miners and

and business people is on a water reserve fronting the Billabong Creek, from which a plentiful supply of water can always be obtained. The principal reefs worked so far are the "Show Day," and the "Goodwood," one running north and south, and the other east and west, some of the stone from which has crushed up to as high as 4 oz. per ton. There are also several other very promising reefs in the locality. A twelve head battery is to be erected on the field, and there is a fair quantity of stone at grass ready for it. On the Nail Can several parties are at work with promising indications, and two of the parties are in receipt of aid from the Prospecting Vote. At Four mile Creek, about 20 miles from Germanton, several good-looking reefs are being prospected, but the water is rather troublesome. Some very good specimens were got by Messrs. Williamson and party from the reef they are sinking on, and if a battery were erected at Four-mile Creek the district immediately around it would probably receive more rapid and permanent development. Not far distant from Four-mile Creek is Yarrara, where gold mining has been carried on for many years past. The local battery is, however, now idle, having been allowed to go out of repair, which is very unfortunate for the field. This is considered a very good locality for fossickers. The quantity of gold won in this Division during the year, as near as can be ascertained, was about 1,200 oz., valued at £4,200.

Adelong Division.

The quantity of gold won in this Division during the year was 1,624 oz. from alluvial and 4,732 oz. from quartz the total value being £23,976, a very substantial increase on the output during 1893, which was £17,705, the number of miners employed being 310, as compared with 262 the previous year. The principal mines at work in the Division are the Gibraltar Hill Gold-mining Company's, which produced 706 tons for 3,090 oz., the Lady Mary, at the Gap, 710 tons for 692 oz., the Adelong Proprietary, 436 tons for 512 oz., the Perseverance Mine, and the Great Victoria United Company, who are driving below the old ground for payable stone. Shephard's alluvial mine, at Adelong, is producing good wash, and a large number of parties are scattered throughout the Division either prospecting or fossicking. The provisions of the Mining on Private Lands Act has been largely availed of, but hitherto with little success.

Gundagai Division.

The men employed in this Division are principally alluvial miners, and they number about 200. As far as could be ascertained, the quantity of gold won was 1,235 oz., valued at £4,755, which is about 200 oz. in excess of the yield for 1893. A few parties are in receipt of Government aid in the District, but have not made any new discovery of importance so far.

Cootamundra Division.

The yield of gold within this Division was 174 oz. from alluvium and 782 oz. from quartz, valued at £3,572, as compared with 245 oz. won in 1893. Although there is a large increase in the yield, mining is now nearly at a standstill in this Division, owing to the large number of local miners having left for the newly-discovered fields of Wyalong and Garangula. A few men are, however, still fossicking in the locality, just making rations.

Junee Division.

The gold won in this Division was about the same as the previous year, being 218 oz., valued at £820. At Wantiool there are 13 alluvial claims at work, the wash raised being 897 loads, yielding 138 oz., and also 3 quartz claims, from which were crushed 15 tons for about 15 oz. Crawley and party struck a reef in their 4 acre lease 8 inches thick at the 140 foot level, which is expected to go fully 2 oz. per ton, but owing to the heavy influx of water little work could be done in the way of following the reef down.

There are two quartz claims at work at Euongilly, and the quartz raised was 110 tons for 45 oz., and 4 alluvial, engaged principally in prospecting operations. Work is still being vigorously carried on at the Junee Reefs, where C. Butler, under aid from the Prospecting Vote, has sunk two shafts 73 and 102 feet respectively, and in the former shaft was successful in striking a reef 3 feet thick, a trial crushing from which yielded 2½ oz. of gold per ton. Another party at work not far from Butler's ground, struck a surface leader carrying both gold and silver, and the vein appears to widen out as it goes down. About 4 miles from Butler's Claim 4 shafts have been sunk, the deepest being 150 feet, through slate and clay formation, in search of alluvial gold, which was obtained, but not in payable quantities. There are a goodly number of fossickers throughout the Division, and they appear to obtain sufficient gold to meet their wants. From present indications a satisfactory revival in mining may be expected in this locality during 1895.

Tumut Division.

Mining in this Division has been carried on in a very desultory manner during the year, and has been confined to alluvial, the yield being only 93 oz.

Tarcutta Division.

There are only a few fossickers at work in this Division, who are barely making a living. At Lower Tarcutta the quartz reefs were tried, with poor results. A party of 4 have started work on Beaver's old line of reef, and a 5-acre gold lease has been applied for on Mr. Donnelly's property.

Bailow Division (late Ready Flat).

The quantity of gold won in this Division during the year was 670 oz. from alluvium, valued at £2,596, a very satisfactory increase over 1893. A considerable amount of prospecting has been done during the year in the neighbourhood of Cherry Hill, on the Dividing Range, between the Bago and Tumberumba Creeks, several tunnels being put in under the basalt, and gold discovered, but it was only where water was easily available for washing purposes that it proved payable. Timmins and party are still at work at the head of Adelong Creek, where they have a great body of stone thrown on one side which might pay were a battery erected on the ground. A good number of men, assisted by the Government fossickers, are working the old ground in this locality with evident success.

Tumberumba Division.

The estimated quantity of gold won in this Division during 1894, was 1,558 oz., valued at £4,676, and the number of men employed is about 150. Mining matters have not been so brisk as formerly in this quarter, but there is still a lot of prospecting work going on, and the indications on the whole are very promising.

Narranderra Division.

The only mine in this Division yielding gold at the present time is the Harry Smith, at Grong Grong, which produced 626 tons for 558 oz., valued at £2,223. There are other claims prospecting in the vicinity of the Harry Smith, but so far they have not succeeded in striking an extension of the rich stone worked in that claim.

Cooma Division.

This Division also shows an increase in the gold won during the year the figures being 635 oz. from alluvium, and 1,194 from quartz, giving a total value of £6,709, an increase in value over the previous year of £2,629, the quartz gold being obtained from about 2,300 tons of stone. At Cowra Creek a deal of prospecting work is being carried on. Messrs. Leom and party have purchased the Iron Clad leases, and have erected further gold-saving machinery on the claim, and have conserved sufficient water for requirements. The King gold lease, which has been payably worked by tributors during the year, is about to be worked by the leaseholders. Murray and party are putting in a tunnel at the junction of the Biedbo River and Cowra Creek, and have arranged to work their machinery by water power, when it is expected that 5 dwt per ton will pay expenses. Several leases on the field are under suspension, awaiting the erection of machinery, when better returns may be expected. Under the Mining on Private Lands Act, 1894, 8 applications have been lodged to mine for gold, nearly all by owners and parties to agreements, and amounting in the aggregate to 574 acres.

Kiandra Division.

Mining in this Division is confined to alluvial, the quantity won being 1,062 oz., valued at £3,982. Since the snow melted mining has been quite brisk in the Kiandra Division, and sluicing claims have given good results. The tributors working the mine on New Chum Hill have had eleven men at work during the year, and have done well. Heinz, Hooper and party are still driving into the Township Hill by means of aid from the Prospecting Vote, and are now in 804 feet on wash,

wash, which is not quite payable. Heness, Houghton, and party, also in receipt of Government assistance, at the 12-Mile, are in 360 feet, and expect to strike the wash in another 80 feet. At Toolong, a discovery was made during the year, about 30 miles from Kiandra; 100 men are working, and about forty on payable gold. On the Boogong Mountains there are about 100 men at work, some of them making good wages; and the same remarks apply to the Snowy River and Bark Huts. A large number of these men were assisted, on the recommendation of this Department, to reach these localities during the first month in summer, as it is only during the summer months that fossicking can be carried on with any degree of success there.

Nimitybelle Division.

There are about twenty men at work in this Division, who won about 70 oz. of gold, got principally in the vicinity of the old Kydra diggings. At Bumberra Creek, Turbit and party are sinking on a reef, but have not succeeded in striking anything payable so far.

Captain's Flat Division

The 1,226 oz. of gold from this Division was won in connection with the New Koh-i-noor and Lake George Gold, Silver, and Copper Mining Company's operations, which companies are now amalgamated under one management, and employ over 200 men. A few fossickers are at work in the district, and just manage to make both ends meet.

Queanbeyan Division.

The quantity of gold won in this Division was not over 100 oz. There is a considerable amount of prospecting, however, going on, principally in the parish of Bywong, where some rich veins have been discovered, and two small batteries have just been erected. Mac's Reef has again been taken up by a syndicate, who are erecting a small plant and battery.

Gundaroo Division.

With the exception of about thirty men fossicking in the vicinity of Brook's Creek, there is very little mining going on in this Division. The gold won amounts to about 140 oz.—all from alluvium.

Wagga Wagga Division.

Through a discovery of some fairly rich veins on the common near the township, a very perceptible revival in mining matters has taken place in this Division. A good deal of prospecting work is being carried on which is believed will lead to the opening up of some payable claims.

SOUTHERN MINING DISTRICT.

Braidwood Division

There were 935 oz. of alluvial gold won in this Division during the year, and none from quartz, as compared with 59 oz. in 1893, the large increase directly traceable to the number of "fossickers" assisted to this Division, who confined their attention to the banks of the Shoalhaven River, and some auriferous land near Jembaicumbene. The provisions of the Mining on Private Lands Act were taken advantage of by a few persons with no satisfactory results, and the workings were abandoned in every instance.

Araluen Division.

The quantity of gold won in this Division during the year is very little in excess of the quantity won during 1893, being 3,300 oz., valued at £12,750, being all from alluvium, with the exception of 135 oz. Work in the claims has been very much retarded owing to the large influx of water during the wet weather, which was more than the pumps employed could contend against. At Upper Araluen there is one party at work on a reef, but no crushing of the stone has yet taken place. From a claim at Bell's Creek 120 tons were treated for 135 oz.

Major's Creek Division.

There are 129 alluvial miners in this Division, twenty-two of whom are working on private lands, and the gold won was 1,520 oz., valued at £5,054, an increase of about 320 oz. over 1893. The bulk of the claims are situated on Long Flat, and the number of loads of wash-dirt put through is estimated at 6,050 loads for 243 oz. The absence of seasonable rain throughout the the Division greatly retarded the operations of ground-sluicers, but at Long Flat, where dams are erected, work was carried on all the year round. There are still a few men at work at Snowball, some of whom are successful from time to time in picking up nuggets and coarse gold. A few parties still continue the search for quartz reefs in this locality, but nothing payable has been met with yet, although gold has been crushed from rubble found scattered around.

Little River Division.

A considerable increase has taken place in the quantity of gold won in this Division during the year, the quantity being 2,260 oz., valued at £8,816, as compared with £5,241 the value of the product in 1893. There are three leases in the locality being proved to a greater depth at the present time, viz., the "Homeward Bound," the "Scotch Lassie," and the "Dog's Head," on which have been erected winding and pumping gear complete, and it is now only a question of time when the Little River reefs will be proved payable or otherwise at a depth. The want of a crushing plant on the field is a great drawback to the development of the claims, as the carting and crushing costs 30s. per ton. No new discoveries of alluvial gold have been made in the Division, although some very rich quartz veins have been found in one instance; 10 tons from one of these veins yielded 42 oz. of gold, and four crushings, aggregating 27 tons, gave a return of 124½ oz.

Nerriga Division.

The increase in the quantity of gold won in this Division during the year is very satisfactory indeed, being 1,042 oz. from alluvium, and 105 oz. from quartz, valued at £4,577, as compared with 470 oz. won during 1893. With the exception of H. T. Gordon and party at Mountany, who raised and crushed 54 tons for 85 oz., there is very little doing in quartz-mining. A large number of unemployed arrived during the year to work the banks of the Shoalhaven River for gold, but it is questionable if they succeeded in making rations by working the drifts on this part of the river.

Nelligen Division.

This is a new Division, until lately part of Moruya, returned 545 oz. of gold from 446 tons of quartz, and 20 oz. from alluvial. Brimbamalla is the chief mining centre in this Division, and it can now be safely regarded as a permanent field, but the miners work under the great disadvantage of having to pay 18s. per ton for crushing, and from 4s. to 6s. per ton cartage from the mines to the battery, consequently only fair stone is put through. This is considered a good field for prospecting, but as the claims are being worked by poor parties of miners, deep sinking cannot be attempted, and so far, little more than surface work has been done, numerous reefs in the locality remaining untested. At Currawan, the Phoenix Gold-mining Company has erected a crushing plant, and spent a considerable sum in prospecting work, but results have unfortunately not reached expectations. Channon and party, who have also done a lot of prospecting work, are still hard at work, in the hope of striking a payable reef. The rush which set in to Britton's Hill has ceased, and there are but two leases being worked at present. At Clymallow, Mr. Copeland is erecting a 14-stamp battery, and there are about fifteen miners making a living by fossicking in the neighbouring gullies.

Moruya Division.

The yield from this Division during the year was 226 oz. from alluvium, and 816 oz. from quartz, valued at £3,569. The yield is very much smaller this year, owing to the fact that Nelligen, which was formerly included in Moruya, was during the year proclaimed a separate Division, under the Mining Act. At Bimbimic, Keating and party, who erected a crushing plant at the beginning of the year, put through 222 tons for 168 oz. On the Big Hill, near Bateman's Bay, several payable reefs have been struck during the year, more especially that worked by Fullerton and party, who crushed

297 tons from 516 oz. Their shaft is now down 90 feet, and the reef varies from 2 to 6 feet wide. Fitzgerald Brothers have a lease about a mile north from Fullerton's, from which they raised 51 tons of stone which yielded 92 oz. There are several leases being worked on the Hill, but although the most of them have struck small leaders containing gold, none of them have struck Fullerton's reef. They, however, expect to strike it at a greater depth.

Galway and party raised 350 loads from their alluvial claim for 56 oz. Their shaft is 25 feet deep, and the width of the lead from 1 to 10 feet. They are troubled with water, and have to employ a steam pump. There are a large number of fossickers scattered throughout the Division, who appear to be doing fairly well.

Neerigundah Division

The quantity of gold won in this Division during the year was 889 oz., valued at £3,600, a slight increase over the previous year. A payable vein was discovered by Wilson and party on Ocean View Hill, from which they took a crushing of 20 tons, which yielded 2 oz. per ton. In Gulph Creek, close to the town, on private land, a party of sixteen men are on very payable gold, and further up the creek other twenty five men are doing fairly well. Messrs Anderson and Mitchell are still working their claim, and appear quite satisfied with the returns from their reef. Throughout the Division there are about 150 men making a good living fossicking for gold. Of that number eighty are Chinese, some of whom are making more than wages on private land.

Wagonga Division

There were 1,119 oz. won in this Division during the year, valued at £3,876, against 891 oz. won the previous year. The Mount Diomeday Company's mine is still being worked on tribute, with results fairly satisfactory to the tributors. A scarcity of water for motive power during the last half of the year has largely reduced the quantity of stone put through by their plant. Ruley and Miles are now down 300 feet, the stone still looking well, even better than in the higher levels. On the southern slope of the Mount, Lee and party have taken up some land abandoned on account of the heavy water, and are driving a 300 foot tunnel to drain the ground. They are also erecting a 5 head battery to be driven by water-power. Clow and Cowdery are still driving for the vein met with in their workings at a higher level. Williams and party have taken up the Mount ground to the north, and are putting in a tunnel and erecting a battery and turbine wheel. At Mounts Long and Lougan a syndicate erected a small Huntbington mill and put 100 tons through, but the result was not satisfactory, and some stone was tested in Sydney from Mount George with a like result. At Bermagui a syndicate erected a small gold washing machine to work the old alluvial ground, but it did not prove a success financially. A good many men are working in the creeks and gulches in the vicinity, earning a living by fossicking, and they appear to get sufficient of the precious metal to meet their more urgent necessities.

Cobargo Division

The quantity of gold won in this Division was not obtainable. A good deal of prospecting has been carried on during the year, but the results, as far as could be ascertained, have not been very satisfactory. There are still a number of fossickers earning a living in the vicinity of Montreal and Coolgolite.

Bega Division

There is little mining going on in this Division. During the year there were three applications lodged under section 25 of the "Mining on Private Lands Act of 1891."

Pambula Division.

Mining in this Division is totally confined to reefs, the quantity of gold produced being 3,882 oz., valued at £13,528, just a few pounds worth more than the value won in 1893. The quantity of stone raised and crushed by the Mount Gahan Gold Mining Company was 4,040 tons, which yielded 1,504 oz.; the Great Southern Company, 270 tons for 148 oz.; the Great Victory Company, 190 tons for 94 oz.; and the Mount Lesison Company, 33 tons for 43 oz. Work has been stopped at some of the mines for some time pending improvements being effected in the gold saving machinery. At New Station, near Wyndham, Millner and Southwell, the prospectors, are now down 40 feet with their main shaft and are driving at that level, and have a quantity of stone at grass. Maunson and party, Shap and party, and several other claim-holders have quantities of stone ready for treating when the erection of the battery is completed. Roberts and party on Robertson's Flats are sinking for alluvial gold, and have fair prospects.

Bombala Division.

There were 417 oz. of alluvial gold won in this Division during the year as compared with 320 oz. in 1893. Although a great deal of prospecting has been carried on in the Division, yet up to the present no fresh discovery has been made that would justify the prospectors in any substantial outlay. The Delegate River Hydraulic Sluicing Company, Nelbothery, were idle during the greater part of the year, having to apply for suspension to alter the system of working, the original system not being successful in saving this gold. While in full work they employed a large number of men, and it is gratifying to learn that that the Company is now ready to re-start operations under this new system. At Snodgrass, Davis and party are still at work, but have not yet struck payable stone. Clifford and party, at Brown's Camp, have put in a tunnel 250 feet, and have a fair prospect at the end of the tunnel. Both of the above named parties are in receipt of Government aid. At Delegate, Jefferys and party have gone to much trouble to turn the river in order to work a very promising looking bend. Although gold has been obtained, yet not in sufficient quantities to remunerate them for the work done. Better results are, however, expected.

Milton Division

With the exception of a little prospecting work in the neighbourhood of The Pigeon House, at the head of the Clyde River, there is really nothing to report.

Yalwal Division.

The splendid yield from the Caledonian mine, viz., of about 4,000 oz. of gold during November and December, has given a great impetus to this field. Forfeited and abandoned leases are being applied for, and tribute parties are in course of formation to work them. The principal mine on the field, the Homeward Bound, has unfortunately been idle during the greater part of the year owing to litigation; the output of gold from the mine during the early part of the year being paid into the Bank pending a settlement of the dispute. A few men are working on alluvial grounds, but have not yet struck anything very rich.

Burrowa Division.

There are about fifty miners at work in this Division, and, as far as could be ascertained, the quantity of gold won was 50 oz., valued at £188. A few parties are at work on reefs which showed gold, but the work has been carried on with little energy, and no good results can yet be mentioned.

Berrima Division.

Mining has not progressed to any extent in this Division during the year, either with regard to mining for gold or other minerals. In the case of gold, the attempts made to develop hydraulic sluicing on a large scale on the Shoalhaven River have, to date, not proved very successful, owing chiefly, it is considered, to defective appliances for saving the gold, which is very fine. Some work of a prospecting nature is going on near Wingello, on a reef of a promising character, but nothing really payable has yet been met with. A large number of men, assisted by the Government as fossickers, are in this Division, but it is questionable if they are making more than a bare living at the work.

Yass Division.

There is very little doing in mining matters within this Division, and there are no signs of an immediate revival in the industry.

THE HUNTER AND MACLEAY MINING DISTRICT.

Copeland Division.

This Division shows a very satisfactory increase in the quantity of gold won during the year, which was 564 oz. from about 486 tons of stone, and 188 oz. from alluvium—the value of the whole amounting to £2,668, as compared with £1,012 the previous year. The best crushing during the year was 66 tons from the Lady Belmore mine, which yielded 319 oz. of gold. During the past two years the stone from this claim has averaged 5 oz. per ton, and pays well, although the vein is small. The old Hidden Treasure mine is being worked on tribute, but as there is a heavy flow of water to contend with, any margin of profit is swallowed up in pumping operations. Chubb and party are driving a tunnel on the Centennial reef, and are in receipt of Government assistance for the work. This tunnel will drain the old workings and allow the reefs to be worked on the higher levels at a profit. There is very little work going on at Cobark, and most of the leases taken up there have been abandoned. Moulton and party, working the Masonic mine, have erected a 10-head battery, but their last crushing of 50 tons did not come up to expectations. The 5-head battery belonging to the Great Cobark Co. is now lying idle. At Bowman, five leases have been applied for, and it is expected that this locality will attract attention during the coming year. Giro, Allgood, and party, who have been prospecting on the Golden Spur line of reef, are so well satisfied with their indication that they are having a 5-head battery erected on the river, to be driven by water-power, and will, therefore, be able to crush cheaply. There has been more work done in alluvial in this Division during last year than for many years past, owing, doubtless, to the large number of men drafted to the country districts as fossickers, the majority of whom managed to earn a living.

Dungog Division.

There is a slight reduction in the value of the gold won in this Division during the year, which was 205 oz., as compared with 344 oz. in 1893. Although there is a reduction in the quantity of gold won, the interest in mining has increased throughout the Division, owing to the discovery by Moore and party of some very rich specimens in their claim at Monkerai, on the Karuah River, 20 miles from Dungog. A rush set in, but, as the best of the ground was church and school lands, and the men were not armed with the necessary permit to mine on the land, obtainable at the Head Office, Sydney, the majority left disappointed, rather than write and wait for the permit. The prospectors are still sinking, and have not yet had a crushing. All the other claims on the field look well, and some substantial developments are expected during 1895 on the Monkerai field when the 5-head stamper battery erected by a Dungog syndicate gets to work. At Lower Wangat, the Wonga Wonga mine is being worked by tributors, who obtained 153 oz. of gold, and Smith, Barnes, and party and Gardiner and party are driving tunnels in their respective claims, by means of aid from the Prospecting Vote. At Upper Wangat work is progressing very favourably, although there is little of importance to report, several parties being busily employed pushing in their tunnels to catch the main reef. The Brandon syndicate has leased 22 acres of ground, and is systematically preparing for good work. The syndicate has also secured a lease of the Upper Wangat battery, and intend fitting the latest gold-saving appliances thereto. A new discovery has also been made at Whispering Gully, lying above Upper Wangat, in very rough country, where some good specimens have been got, the prospectors crushing 20 tons for 23 oz. The nearly inaccessible character of the country, and the absence of a battery on the field, is a great drawback to its development. The Cherry Tree Hill Company are still driving their tunnel to strike the reef, and are now in 274 feet. Three leases have been applied for on private property belonging to Mr. H. Hooke, at Rocky Hill, 4 miles from Dungog. Good specimens were obtained, and the syndicate is sanguine that payable gold will ultimately be struck, although a trial crushing made by them did not come up to expectations.

Bulladelah Division.

The quantity of gold won in this Division may be set down under 100 oz. Messrs. Kemp, Myers, and Lewis are in receipt of aid to further test their claim near Coolongolook from the Prospecting Vote, and have struck $\frac{1}{2}$ -oz. stone, which is thought will turn out payable, as the party have erected good machinery on the claim. A party are putting in a drive at Curraiki, from which they took 26 tons of stone for 20 oz. of gold. The Queen of Bulby claim, worked by Rathbone and party, is also being aided, a small crushing from which yielded 11 dwt. per ton. A parcel of 16 tons from Hill and party's claim, known as the "Widow," and treated at Kemp and party's battery, returned 9 oz. of gold.

Kempsey Division.

There is very little gold-mining going on at the present time in this Division, and, with the exception of a few men at Deep Creek, and a few more fossicking in the alluvial ground, it is practically at a standstill.

Macksville Division.

The above remarks on Kempsey may safely be applied to this Division, so far as gold-mining is concerned.

Taree Division.

So far as could be ascertained, there was only a small quantity of gold won in this Division during the year, still a good deal of prospecting is going on in the locality. A few claims were pegged out at the Old Bar, Manning Heads, but they were all abandoned ultimately, with the exception of one, which is being worked by two men, who are evidently making wages. A few men are also fossicking along the beach north of Harrington, but it could not be ascertained how they were doing.

PEEL AND URALLA MINING DISTRICT.

Glen Innes Division.

The gold won in this Division during the year was 1,848 oz., as compared with 1,598 oz. the previous year, the gold being got from the mines at Glen Elgin. Although the returns from the Glen Elgin mines did not come up to expectations based on various assays, still there is no doubt as to the richness of the lodes, and the certainty of a profitable return on the outlay when more experience has been acquired in the economical treatment of the pyritous stone now being sent to the batteries. Ground sluicing is still being carried on at Oban with success. An increase of population to the field, resulting in a proportionate increase in the production of the precious metal. About the middle of the year a rush took place to a reported new find at Marenga, but it turned out to be a short gully in the old "Orara" field, affording room for the prospectors only. On the tail-end of a piece of the level country at Mount Mitchell East Station, 5 miles from Paddy's Gully, Oban, two parties of miners have opened out new ground, and are ground-slucing with water brought from the lower end of Paddy's Gully, a run of not less than 5 miles. The men appear to be doing well, and as there are over 3,000 acres of similar ground available, the locality is worth the attention of men accustomed to such work. A party of New Zealand miners have started operations at Martin Point, on the Mitchell River, with very good indications of success. A dearth of employment in quartz-mining has led to more attention being paid to alluvial deposits over a wide extent of this Division.

Mr. Warden Martin, P.M., commenting on the results of the Prospecting Vote in his district, says:—"There may be cases where State aid has led to valuable discoveries, but I am doubtful if a single instance of this kind has taken place in my district, and, as a rule, the spirit of self-reliance and energy which characterised the early prospector and digger, has been sapped by the system in a most undesirable way."

Kookabookra Division.

The yield of gold from this Division was slightly increased during the year, being 706 oz., as against 385 in 1893. Very little work has been done in quartz-mining during the year. The Bear Hill mine was worked on tribute for a few months, but owing to a dispute among the party work was discontinued. There is, however, a probability that work will be resumed at an early date.

Armidale Division.

The returns for this Division show that 184 oz. of alluvial and 248 oz. of quartz gold were won during the year, which is just half the quantity won in 1893. The bulk of the mining is at Puddledock and Tilbuster, where a good deal of prospecting work is going on. It was thought that the passing of the Mining on Private Lands Act would cause a revival in mining in this Division, but such has not been the case. Ten applications for gold leases and twenty-four applications for authority to search for gold were lodged under the abovenamed Act, but no discovery has been reported so far.

Hillgrove

Hillgrove Division.

The gold won in this Division during the year was 21,050 oz., valued at £74,557, as compared with 25,798 oz. won in 1893. The principal mine in this Division is that owned by the Baker's Creek Gold-mining Company, which has been worked all the year round, crushing with a 40-stamper battery. The gold won amounted to 17,656 oz., valued at £62,678, and £30,000 of that amount has been paid in dividends, making a total of £207,500 so paid since the Company started work. The work of development has been vigorously proceeded with, and the appearance of the mine is as promising as ever at the present deepest level, which is now 698 feet. The Eleanora Company won 3,394 oz., valued at £11,879, also 472 tons of smelted antimony, valued at £7,080. The Company has decided to put up 100 head of stamps, thirty of which are already up and at work. The erection of the balance is being rapidly proceeded with. The Company further propose to adopt electricity instead of steam as their motive power, which will, it is said, effect a considerable saving in working expenses. The Garibaldi mine is let on tribute, but little work has been done during the year. The owners of the Baal Gammon mine have done a little prospecting work during the year without any satisfactory results. A 10-head battery has been erected on the Golden Gate mine, to be worked by electricity. The mine is fairly well opened up, and looks promising. The Baker's Creek No. 1 Extended and the Baker's Creek Consolidated mines are still being prospected, but the Cosmopolitan and Lady Carrington are idle.

Hillgrove West Division.

The output of gold has considerably increased in this Division during the year, the quantity being 10,318 oz., from 21,376 tons of stone, as compared with 4,616 oz. won the previous year. The Sunlight Gold-mining Company has been constantly at work during the year, with forty head of stamps. The Company has added a quantity of gold-saving machinery to their plant, with satisfactory results, the stone put through being 11,696 tons, for 4,764 oz. The West Sunlight Reef Gold-mining Company have had twenty head of stampers at work throughout the year, which treated 9,383 tons of stone, for 5,181 oz. Work at the Consolidated mine is rapidly being pushed forward, and the owners have purchased the plant at the Lady Carrington mine for erection at their mine. Fuller and party are working several of the blocks purchased from the old Earl of Hopetoun Gold-mining Company on tribute, and are doing fairly well, although they have to cart their stone, at considerable expense, to the Cosmopolitan battery for treatment. The stone raised by this party was 253 tons, for 307 oz. There are still a large number of men fossicking in this Division, chiefly in the neighbourhood of the Rocky River Diggings, some of whom are making full wages, others just earning rations.

Uralla Division.

There were 2,256 oz. of alluvial gold won in this Division as compared with 2,900 oz. won during the previous year. About 200 men are fossicking throughout this Division, and it is thought the majority of them are doing well. A large area is being prospected under the Mining-on Private Lands Act, and some important developments are looked forward to on these lands during 1895. More attention is also being given to reefing, which has hitherto been neglected in this District.

Walcha Division.

The gold won in this Division totalled 921 oz. Watt and party are still at work at Tia, and have raised about 100 tons of stone from the 110-foot level, which yielded about 10 dwt. per ton. A whim has been erected on the shaft to deal with the water. A few men are at work in this locality on alluvial ground, but their earnings could not be ascertained.

Swamp Oak Division.

The only mine at work of any note in this Division is the Highland Mary, where some new machinery is being erected to deal with the large quantity of water met with in the claim. The gold won during the year was 735 oz.

Niangala Division.

Mining has been so dull in this Division during the year that the Mining Registrar's office has been closed and transferred to Swamp Oak. The "Jersey" and "Just-in-Time" mines are let on tribute, the latter being in receipt of aid to continue the shaft another 90 feet. Some very good stone was raised from the Jersey claim during the year, which is thought would improve if a lower level could be reached, which is impossible without good pumping plant. The water has also been the means of closing the Starlight mine. At Paradise, about 10 miles south of Niangala, there is only one party at work, who have obtained fair results. The water here is also very troublesome.

Tamworth Division.

There were about 230 oz. of gold won in this Division, principally by fossickers. A mild rush set in during the year to Boundary Gully, situated about 14 miles from Tamworth, where a lot of prospecting work was done. A syndicate was formed to work the ground, but the results from their trial crushings convinced them that it was not payable, and it fell through. Prospecting is going on at Goonoo Goonoo, and also at the Porcupine, about 5 miles north-east from Tamworth.

Nundle Division.

The returns from this Division show that the yield was 3,616 oz., as compared with 3,874 the previous year. The Mount Sheba Sluicing Co. have sold their water race, and there is a probability that work will be resumed under new management. Work in Isaacsohn's claim has been retarded somewhat in the lower levels by the heavy influx of water, but a tunnel is now being put in to drain the ground. The Golden Gate tunnel is now in 226 feet, and expect to cut Isaacsohn's reef in about 60 feet. Some new veins have been opened out near Hanging Rock, one of which yielded $1\frac{1}{2}$ oz. per ton. The sluicing parties and fossickers have done fairly well during the year—some nice nuggets being found, the largest being 9, 6, and 4 oz. respectively. A good number of the men are still at work, but a large number sunk a few holes and cleared out, the work not being to their liking. At Bowling Alley Point the Peel River Company extended their lower tunnel to 1,500 feet, but unfortunately the results were not up to expectation. Isaacsohn and Hefferman found a new vein, from which some nice specimens were got, and they are now sinking on it. Three parties on leases granted by the Peel River Company have done very well, having won 200 oz. among them.

Bendemeer Division.

This Division returned 230 oz. of alluvial gold, as compared with 64 oz. the previous year, got chiefly on the McDonald River, where there were about 60 men working at the end of the year apparently making a living. The scarcity of water in the Division during the year somewhat retarded mining work.

Bingara Division.

The quantity of gold won during the year was 1,393 oz., valued at £5,129, an increase of nearly 100 per cent. over 1893. A new find was made during the year at Barrack Creek, about 12 miles from Bingara, on the Tamworth Road. A large number of leases were taken up, a number of which were sold at a satisfactory figure to a Sydney syndicate. Much faith is placed in this new line of reef, and big returns are looked forward to in the near future. At Spring Creek, Mr. Harle has erected a battery, and is raising very good stone. Several other claims are doing very well in the same locality. In consequence of the difficulty of obtaining employment, a large number of the local men have been driven to the gold-fields, and combined with the fossickers assisted to the district, accounts for the large increase in the yield during the year.

Barraba Division.

There is also a satisfactory increase in the quantity of gold won in this Division, the yield for the year being 500 oz., as compared with 297 oz. the previous year. During the latter part of the year a few men did very well in the vicinity of Wood's Reef, but the quantity of gold won could not be ascertained. The reefs at Crow Mountain are turning out well and

and a small crushing-machine is in course of erection by Messrs. Watt, Davis, & Co. When completed, the battery will crush for the public, which will be of immense benefit to the field. At Tea Tree a few men are at work on the alluvial ground, and appear satisfied with the results of their labour.

Stewart's Brook Division.

The gold won in this Division during the past year was 1,571 oz., valued at £5,244, as compared with 1,686 oz., valued at £5,664, the product of 1893. Mining has been in a very languishing state during the year, and the population has been greatly reduced in consequence. The only company at work is the Royal Standard, who employ eleven men, and raised during the year 153 tons of stone for 259 oz. The Lady Mary claim is being worked by Cornelian Riley, and party, who raised 50 tons for 40 oz. The claim on Collet's Reef, by Spencer and party, who raised 92 tons of stone for 127 oz. of retorted gold; Driscoll and McLaughlin, on Fuller's Reef, raised 67 tons for 103 oz.; W. and J. Wells from the Seldom Found Claim, raised 7 tons for 43 oz.; James Urquhart, from the Omadale Brook Reef, raised 9 tons for 49 oz.; W. L. Adams, from the South Standard, raised 26 tons for 31½ oz.; and Moore and party, from the Imperial Standard mine, raised 35 tons of stone for a yield of 21 oz. of gold. From a reef in Carter's Paddock (private property) a 34 tons crushing was taken, which returned 38½ oz. It is regrettable to say that at the present time there are four large powerful batteries lying idle on the field, in the midst of a large tract of auriferous quartz country, which would no doubt pay if economically worked by experienced miners.

THE NEW ENGLAND MINING DISTRICT.

Fairfield Division.

I am glad to be able to state that the output of gold from this Division is still increasing, the total quantity of quartz and alluvial gold won being 6,062 oz., valued at £21,217, as compared with £15,666, the value of the yield during 1893. The principal mine in the neighbourhood of Drake is the Lady Jersey mine, at Long Gully, which still continues to maintain a steady and regular output of gold, and developments during the past year point to a continuance of these conditions. The stone raised from this mine during the year was 1,008 tons for 1,851 oz., taken from the 100-foot level, where the reef varies from 12 to 18 inches wide. The All Nations mine, situated on the north side of Mount Carrington, got 729 oz. from 223 tons of stone. The prospects of this mine are very encouraging, and the owners have decided to erect a crushing plant. At Gough's Gully, about 5 miles south of Drake, several parties are engaged prospecting for reefs, notably Kelly Brothers, who hold a gold lease of 8 acres, on which they have sunk two shafts on a reef varying from 2 to 4 feet thick, a trial crushing of 15 tons from which yielded 36 oz. of gold. Allison and party, to the south of Kelly's, have a shaft down 62 feet on a reef which yielded 7½ oz. from 4 tons of stone. The proprietors of the Adeline mine, situated on private land, and which is being worked for gold and copper, raised and treated 544 tons of stone for 570 oz. To the north of Drake, on the old diggings around Tooloom, Eaglehawk, Frazer's, and Mosquito Creeks, Pretty Gully, Joe's Gully, and Dry Gully, and to the south on McLeod's Creek, Gough's Gully, Armstrong's Gully, Poverty Point, and on the Tableland, a large number of men are at work making a living, some of the parties making good wages. At Nicholson's Creek, near the confluence of the Rocky River, a large party of miners have set to and are taking up a tail-race for the purpose of working a piece of ground, which in former years baffled all efforts to bottom, in consequence of the great influx of water. Should they be successful, employment will be found for a large number of men. At Lionville, which is situated in the southern portion of this Division, a large number of fossickers are scattered over a very large area of country, more especially in the neighbourhood of Sandy Creek, Cedar Creek, Old Scrub, Solferino Creek, Bulldog, Ewengar, and Storm Gully, where gold is being got in sufficient quantity to meet their wants. No heavy deposits of alluvial gold have ever been discovered in these localities, as it is more of a reefing district. Some years ago several reefs were opened and large quantities of gold obtained therefrom, and the claims afterwards abandoned, none of the shafts having been sunk to any depth.

Tenterfield Division.

The gold won in this Division during the year was 507 oz., as compared with 235 oz. in 1893. The claim on the Buck Reef has been constantly at work during the year, with the exception of a few months during which they had suspension. Very little work has been done on the other leases on the field. There are about 40 men fossicking on the field, who have averaged about 1 oz. per man per month.

Wilson's Downfall Division.

The quantity of gold won in this Division was only 96 oz., valued at £343, mining being confined chiefly to tin and silver.

CLARENCE AND RICHMOND MINING DISTRICT.

Grafton Division.

Very little gold has been won in this Division during the year, the amount being only 427 oz. Owing to the scarcity of employment in this Division, greater attention has been paid to prospecting work, and as there is a vast area of auriferous country virtually untried, some fresh discoveries are expected. Tully and Company have a dredge at work in a creek near Yulgilbar, but the results so far have not been up to expectations. The owners of the Sir Walter Scott Mine sent about 10 tons of stone to Maryborough for treatment, the result being a little over 1 oz. per ton. As there is a very large body of stone, the result is considered satisfactory.

Nana Creek Division.

There is a slight decline in the quantity of gold won in this Division during the past year, which was 290 oz., compared with 301 oz. in 1893. The Lady Bella mine is now being worked by E. Morris and party, and they have put in a tunnel 328 feet to meet the main shaft, and the reef averages 18 inches thick. The Nana's Daughter claim is being worked on tribute, and only crushed 13 tons for 13 oz. of gold. L. M'Kinnon and party, working the Homeward Bound claim, are in receipt of aid from the Prospecting Vote to continue their 60-foot shaft 75 feet deeper, where it is thought a good permanent reef will be met with. The Mount Orara Company and Pout and party of the Lady Carrington claim ceased work, the Orara Company being granted six months' suspension. At Coramba there are a few claims at work, but there is nothing of much importance to report in connection with them.

Dalmorton Division.

The value of the gold won in this Division during the year was £3,984, as compared with £5,348 during 1893. Mining has been very dull in this Division during the latter part of the year, one great cause being the removal of the public crushing battery from Springbrook to Coramba, in the Nana Creek Division, the removal of this battery being the means of closing several mines in and around Springbrook. The only mines raising gold-bearing quartz in this Division at the present time are the Golden Hill, Alice Cornwall, Garden Hill, Brett Harte, Mary's Home, Liberator, Mount Poole Marvel, Mount Rea, and Hawke Eye. The Black Slate Creek mine has been idle for some time, but will probably be started at an early date. The Garden Hill shaft, now down 140 feet, is the deepest on the field, and is being continued deeper by aid from the Prospecting Vote. At the lowest level 1½-oz. stone was struck, and the fact of payable stone being found at this depth may induce other claim-holders on the field to go deeper. The Mount Poole Marvel is again being worked by tributors, and although the stone must be carted about 16 miles to the nearest battery, they expect to make wages. The Tower Hill Company are still driving their tunnel, which is now in 1,100 feet. The object of this tunnel is to strike a rich reef which was worked in a shaft up the mountain, but unfortunately they have not been successful so far. The tunnel has, however, been driven in on a reef, which in some places goes as high as 8 dwt. per ton, and it is not unlikely that a battery will be erected to treat the large quantity of this stone available. A few fossickers, assisted by the Government, are in this Division, but they are doing very little good.

Casino Division.

Beyond a little prospecting and fossicking there is no mining being carried on in this Division, and it could not be ascertained that any gold had been won.

Ballina

Ballina Division.

The quantity of gold won may be set down at 920 oz., as the exact yield could not be ascertained, all won from the black sand on the sea-beaches, whereon a large number of men do fairly well after heavy weather, especially when the black sand is exposed. The earnings of the men employed in this vary considerably, some making more than wages, and others just a bare living. The gold is very fine, and requires an amount of skill to save it. Prospecting is still going on, on the terraces above the beaches, but no fresh development has taken place. About 350 men are employed in this class of mining.

Maclean Division.

There are about 35 men employed on the sea-beaches in this Division mining for gold, and the amount won was 177 oz., valued at £452. There were fully 200 men at this work during the early part of the year, but the want of suitable appliances to save the fine gold compelled the majority of them to seek new fields.

Murwillumbah Division.

There is very little mining going on in this Division, and what is doing is confined to the sea-beaches, where a few men are getting a little gold.

THE COBAR MINING DISTRICT.

Cobar Division.

The phenomenal returns from the Mount Drysdale claim have been responsible for the very large and gratifying increase in the yield of gold from this Division during the past year. The exact returns from each mine could not be ascertained, but the total quantity of gold won may be set down as 18,524 oz., valued at £70,250, as compared with 3,824 oz., valued at £15,271, won in 1893. Since the discovery of the Mount Drysdale mine by aid granted from the Prospecting Vote in 1893, prospecting operations have been vigorously carried on in that locality, with the result that 351 quartz-claims were registered under the Mining Board Regulations, and although some of the claims show gold, the only two payable as yet are the Mount Drysdale and the Eldorado, which adjoin each other. No doubt the want of a crushing-plant on the field is a great drawback to its development, as there is a large quantity of low-grade ore that could be profitably treated, which at present has to be carted to Cobar, a distance of 26 miles. It is understood that the Mount Drysdale Company propose erecting machinery of the latest design, and go on with the construction of dams, &c. The Huntingdon Mill Company treated for the Mount Drysdale, the Eldorado, and several small claims, 2,370 tons of stone for a yield of 7,796 oz., but the Mount Drysdale sent a large quantity of stone to Wallaroo for treatment, but the returns could not be ascertained. A parcel of 354 tons of stone from the Eldorado claim yielded 826 oz. of gold. The Chesney Cobar Company raised and crushed at their own battery 1,985 tons for 1,019 oz. The Occidental Company are still at work, but their returns were not available. Prospecting work is also being carried on with spirit on the Bald Hills, near Cobar, and when water is conserved good results may be obtained. A township is rapidly springing up in the neighbourhood of the Mount Drysdale mine; about 150 residential areas were registered, and some substantial buildings erected, including hotels, stores, and other places of business. The Government are also erecting a Public School and police-station, and tenders have been invited for the construction of a large dam. The population is now about 700 people, and it is fully anticipated that Cobar will yet become the centre of a very large and prosperous mining district.

Nymagee Division.

The only gold-mining going on in this Division is of a prospecting nature, which resulted in a quartz-reef being discovered at Restdown, about 20 miles from Nymagee. A reef carrying gold could be traced on the surface for over a mile. The value of the discovery will be ascertained at an early date, when a trial crushing is to be put through. There were 50 men on the ground at the end of the year. At Overflow, about 30 miles from Nymagee, several parties are at work prospecting, and gold was found in two of the claims. The indications are considered very good, both in the claim in question and other places in the vicinity.

Mount Hope Division.

The gold won in this Division during the year was 1,354 oz., valued at £5,416, taken from 2,873 tons of stone, the principal mine in this Division working for gold being the Mount Allen mine. The Nil Desperandum lease is being worked by Messrs. Thompson and Fullerton, who are in receipt of aid from the Prospecting Vote. The indications are very promising, and good results are expected to follow this grant. The conditions prevailing in this Division owing to the scarcity of water, &c., are only suitable for men with capital, and it would not be advisable for poor persons to proceed there to seek a living on the field at present.

Euabalong Division.

The Errebundery Gold-mining Company is the principal quartz-mine in this Division, and they raised 1,183 tons of stone for 715 oz. of gold. Work was much retarded on this field during the year, owing to floods on the Lachlan, the field being liable to inundation when the river is high. A few parties of men are prospecting throughout the Division, but no finds of any importance have been reported.

Condobolin Division.

The quantity and value of the gold won in this Division could not be ascertained, and the only mining going on is at a place 28 miles west of Condobolin township, on Kiacatoo Run. On one claim M'Donald and party discovered a reef 4 feet wide, and they have about 25 tons of stone at grass expected to go 1 oz. per ton. There are about 40 men at work at the place, which is being thoroughly tested.

Fifield Division.

The quantity of gold won in this Division was 875 oz., all from alluvium washed from about 3,000 loads of wash-dirt, which also yielded about 1,000 oz. of platinum. The depth of sinking is from 3 feet to 65 feet, and the average yield is 2 dwt. of gold and 7 dwt. of platinum per load. There are three puddling-machines on the field, but they cannot be kept constantly at work, owing to the scarcity of water. The number of men on the field is 150, and there are about 20 claims on gold, but it is questionable if any of the claims on the field yielded on the average more than wages.

THE ALBERT MINING DISTRICT.

Milparinka Division.

The gold won in this Division is estimated at 2,300 oz., which is a considerable increase over the previous year. A good deal of prospecting work was carried out during the year at One Mile Lead, where Geo. Smith and party were in receipt of aid from the Prospecting Vote, and who were successful in striking wash averaging from 5 to 7 dwt. per load. This caused a wild rush, and the ground is being thoroughly tried. A good deal of fossicking is still going on throughout the Division, and the men do fairly well when water is plentiful.

Tibooburra Division.

The quantity of gold won in this Division during the past year was 1,386 oz.—just about the quantity won in 1893. The bulk of the claims are alluvial, and some of them have done very well, and would do much better were a good supply of water available. Gaden and party, prospecting in Nolan's Gully, struck a quartz reef, which averaged 2 oz. 5 dwt. 17 gr. per ton. It is considered an excellent show, and steps are being taken to prove it at a depth.

Broken Hill Division.

The only gold-producing mine on this well-known silver-field is the Broken Hill Proprietary Silver-mining Co., who extracted from their silver-lead bullion 4,079 oz. of gold, valued at £16,300, as compared with 3,279 oz. saved the previous year. Some prospecting is being carried on for gold at Mulcula, some miles from Broken Hill, by a party in receipt of aid from the Prospecting Vote. They have sunk some distance on a likely-looking quartz reef, but up to the present have not succeeded in striking anything of a payable nature.

I am indebted to J. MacDonald Cameron, Esq., F.I.C., the Deputy Master of the Royal Mint, for the following information :—

QUANTITIES of Gold, the produce of New South Wales, received into the Royal Mint, Sydney, during 1893 and 1894, compared.

SUMMARY.

District.	1893.	1894.
	oz.	oz.
Bathurst	18,191·64	31,706·32
Tambaroora and Turon	6,814·17	7,333·71
Mudgee	2,746·42	3,218·43
Lachlan	8,360·67	12,679·57
Albert	975·41	1,386·57
Southern	5,438·76	6,631·22
Tumut and Adelong	10,225·94	11,137·37
Peel and Uralla	32,496·83	26,848·57
Hunter and Macleay	58·37	56·76
Clarence and Richmond	716·68	842·02
New England	657·55	989·38
Mixed—Western, Northern, and Southern	35,511·58	62,459·88
Localities unknown	48,903·05	57,698·37
	171,097·07	222,988·17

From the above statement it is seen that the quantity of gold sent to the Mint in 1894 exceeds that of 1893 by 51,891 oz. The principal increases are under the head of "Mixed Western, Northern, and Southern," and "Localities unknown," and from the Orange District, due to the splendid returns from the Lucknow mines. The returns from Parkes and Temora also show a satisfactory increase; the increase from Temora is no doubt due to the opening up of the Wyalong and other new fields in that District. It is difficult to account for the large decrease from the Armidale District, as the mines at Hillgrove have been yielding well during the year.

The following table is compiled from information kindly furnished by the Collector of Customs:—

EXPORT OF GOLD, 1894.

Gold.		Quartz Tailings and Pyrites.		Total.	
Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
oz.	£		£	oz.	£
89,676	327,102	18,439 packages.....	45,461	101,799	372,563

The quantity of gold sent to the Mint, plus the quantity exported, represents for the year 1894 the quantity of gold won, as none of the gold that passed into the Mint during the year was exported. Thus the gold sent to the Mint 222,988·17 oz., plus the quantity exported—101,798 oz. 17 dwt.—equals 324,787·17 oz. It might be here stated that the Broken Hill Proprietary Silver-mining Company saved 4,079 oz. of gold, valued at £16,300, from their silver smelting operations.

As will be seen from the following table of returns, supplied by the Mining Registrars, of gold won in their respective Divisions, that their figures exceed those given by the Mint by 22,716·62 oz., but is less than the total yield by 79,083·38 oz. I am satisfied that the Mining Registrars exercised great care in procuring correct returns, but often they have a difficulty in obtaining information from miners. It does not often happen that the owners of important mines refuse to supply returns, but some of the larger mine-owners in the Cobar District refused to supply details of their gold yield for last year.

RETURNS OF GOLD for 1894, from Mint and Mining Registrars compared.

District.	Mint.	Mining Registrars.	Excess.	Deficiency.
	oz.	oz.	oz.	oz.
Bathurst	31,706·32	50,023·56	18,317·24

The returns from Mining Registrars exceed returns from Mint by				22,716·62

The Mining Registrars' returns of gold from 1894 show increased yield of only 72,364 oz. over that of 1893, which will show clearly that these returns are not, in spite of the efforts of the Registrars' complete.

MINING Registrars' Returns of Gold for 1893 and 1894 compared.

The following statement shows the results obtained from the treatment of parcels of alluvium in several of the Mining Districts. The Mining Registrars have much difficulty in obtaining the information necessary to compile a complete and correct table of this nature. The miners are either adverse to supply details of their labour, or they have been careless in keeping data from which it could be supplied. There must be many thousands of tons of wash-dirt put through, the yield from which is never made public, but which should be published in the interest of the miners themselves.

The information collected in 1894 is slightly more complete than that for 1893, but the average yield per ton is considerably less.

COMPARATIVE Statement of Average Yields from Alluvial Mines for 1893-94.

The return following gives particulars of the average yield of sundry parcels of stone crushed in the various Mining Districts.

Though this return is very far from complete, I must congratulate the Mining Registrars upon the fact that it is an improvement upon previous returns. While the average for the whole of the Districts was less in 1894 than in 1893, so far as disclosed by the table, the averages for the Bathurst, Southern, Tumut and Adelong, Hunter and Macleay, Clarence and Richmond, Cobar, and New England, are highly satisfactory. It is, however, to be feared that if the results of all the crushings in these Districts had been included in the table the averages would not have been so high.

COMPARATIVE Statement of Average Yields from Quartz-mines for 1893-94.

The number of miners engaged in gold-mining, more or less constantly, during 1894 was 17,207, an increase of 5,250 as compared with 1893.

The number engaged in alluvial was 7,982 Europeans, 760 Chinese, and in quartz 8,465 Europeans. The depression in the labour market has no doubt compelled many persons to turn their attention to mining as a means of earning a living, which, by all accounts, the majority have succeeded in doing. Dividing the quantity of gold won by the number of miners employed, the result obtained is that each man won 18'87 oz. of gold, valued at £70 15s. 3d., as compared with 14'99 oz., or £54 9s. 4d. during 1893.

Of the number of men employed, it must, of course, be understood that a large number of them devote only part of their time to mining, while some were engaged in prospecting and constructing works from which no returns were received during the year. On the other hand, some portion of the gold won is paid away as dividends, or in the purchase of plant, &c., so that the earnings given above can only be taken as a very rough approximate.

During

During the year 3,386 samples were assayed for gold in the laboratory of this Department.
 1,828 yielded nil.
 957 „ under 10 dwt. per ton.
 132 were concentrates, blanketings, &c.
 469 yielded as follows:—

COAL.

THE output of coal in 1894 shows, as compared with that in 1893, an increase of 393,748 tons, but a decrease in value of £16,149 due to the very low price prevailing for this product during the year. From a table following it will be seen that the average price per ton last year, viz., 6s. 3.53d. is the lowest since the year 1849.

In 1850, the price was only 6s. 6.77d. per ton, but from that year until 1881, when the average price was 6s. 9.55d., the price exceeded 7s., and one year, viz., 1854, reached as high as £1 0s. 5.63d. per ton.

It would seem that the foreign export trade is improving somewhat from the severe shaking it received through the lamentable strike in 1890, as there is an increase under that head of 275,201 tons as compared with 1893. Indeed the quantity sent to foreign ports in 1894 is the largest since 1889.

The export, the Australian Colonies appears to be recovering, and so does the home consumption.

It is stated that the Sydney Harbour Collieries Company formed to work the valuable coal-seam underlying the waters of Port Jackson propose to commence sinking operations during 1895. It will, however, be some years before the Company is in a position to put coal on the market.

The number of collieries under inspection at the 31st December, 1894, was 95 coal and 5 shale as compared with 97 coal and 4 shale on the same date in 1893.

QUANTITY and Value of Coal raised from the opening of the Coal-seams to 1857, inclusive :—

The following comparative statement of output of coal in the several districts shows that there was an increase in the yield from the Northern District of 401,662 tons, but owing to the reduced price per ton, only an increase in the value of £2,956 10s. 4d., and also an increase in the Western District of 9,491 tons, and in value of £2,221 6s. 2d., as compared with 1893. In the Southern and South-western Districts, however, there was a decrease in the output, of 17,406 tons, and in the value, of £21,326 13s. 2d. during the same period. As may be gleaned from the above figures, there was a heavy decrease in the average price in the Northern District of 1s. 1'83d. per ton, and in Southern and South-western Districts of 4'54d. per ton, while in the Western District there was an advance of '49d. per ton in the average price.

COMPARATIVE Statement of Output of Coal in the Northern, Western, and Southern Districts.

* Only prospecting.

The number of men actually employed in and about the collieries raising coal and shale was 9,428 during 1894, as compared with 10,413 the previous year. During the year there were 7 fatal and 40 non-fatal accidents in the coal-mines, as compared with 13 fatal and 45 non-fatal the previous year. Of the fatal accidents, 6 occurred in the northern district, and one in the western district; and of the non-fatal, 27 took place in the northern and 13 in the southern and south-western districts.

From the following table, comparing the number of fatal accidents in the United Kingdom with New South Wales, it will be seen that the Colony does not suffer by comparison. It is only fair to state, however, that the danger attending the working of coal in this Colony is not so great as in the United Kingdom, because our collieries are comparatively free from explosive gas.

SUMMARY of persons employed, number of fatal accidents (deaths), and ratios of the number of persons employed, and the number of fatal accidents in and about the "United Kingdom" and "New South Wales" Coal Mines, since 1874:—

Year.	United Kingdom.				New South Wales.			
	Persons employed.	Lives lost by accident.	Persons employed per life lost.	Death-rate from accidents per 1,000 persons employed.	Persons employed.	Lives lost by accident.	Persons employed per life lost.	Death-rate from accidents per 1,000 persons employed.
1874	538,829	1,056	510	1·959	5

* Excessive number of falls of coal and Lithgow disaster caused this high death-rate.

† Bulli catastrophe and excessive falls of coal caused this high death-rate.

‡ Hamilton pit crush, excessive falls of coal, and over-winding of four men at South Burwood sinking pit caused this high death-rate.

During the year five analyses were made of coal in the laboratory of this Department, three of which are as follows:—

Official Number.	Locality.	Analysis in 100·00 parts.					Sulphur.	Specific Gravity.	Remarks.
		Hygroscopic Moisture.	Volatiles Hydrocarbons, &c.	Fixed Carbon.	Ash.				
643	Awaba, parish of, South Hetton Colliery.	4·15	27·85	59·25	8·75	·645	1·332	Coke 68 per cent., not much swollen, firm and dull. Ash—reddish tinge, granular. 1 lb. of this coal will convert 12·1 lb. of water into steam.	
15	Burraborang	2·80	26·80	62·50	7·90	·576	1·345	Coke 70·4 per cent., fairly well swollen, firm and lustrous. 1 lb. of this coal will convert 12·1 lb. of water into steam. Ash—grey and flocculent.	
526	Wallarah Coal-mine	2·75	30·45	56·35	10·45	·878	1·405	Coke 66·8 per cent., not much swollen, firm and dull. Ash—nearly white and granular. The calorific intensity of this coal, determined by experiment, is 6578—that is, the quantity of water which one part of coal, on complete combustion, would raise in temperature 1° Cent. or 1·8° Fahr.	

COKE.

The following table shows a very satisfactory increase in the manufacture of coke during the past year, which has every appearance of being maintained. The improvement is, no doubt, due to the greater care taken by the manufacturers in cleaning the coal before treatment, and the erection of ovens more suitable to the class of coal to be treated. The Broken Hill Silver-mining Company still spends large sums annually in importing good clean hard English coke, which they state is necessary for the proper treatment of their ores. The principal manufacturer in the Southern District is the Australian Coke Company, at Unandera, who made 14,613 tons during the year; and in the Northern District, the Purified Coal and Coke Company, at Wallsend, who turned out 12,779 tons of coke, and 2,357 tons of nut coal washed from slack. The price per ton realised last year was not quite so high as in 1893.

TABLE showing the quantity and value of Coke made in the Colony of New South Wales.

Year.	Quantity.				Total Value.	
	Northern District.		Southern and Western Districts.		£	s. d.

Totals	56,469	9	65,153	4	137,915	5 6

SHALE.

The following table shows a very serious falling off in the quantity and value of the output of shale during the past year, the net decrease in the value being £69,439, and in the average price per ton 6s. 4·16d. The decrease is accounted for by the fact that the known deposits of first-class or export shale are now nearly worked out, and until a demand arises for a lower-grade mineral, of which a considerable quantity has already been opened up, there can be little hope for any large increase in the output.

The following table shows the quantity and value of Kerosene Shale produced during the years 1865 to 1894:—

Year.	Quantity.	Average price per ton.	Total Value.	Year.	Quantity.	Average price per ton.	Total Value.

SILVER AND LEAD.

As will be seen by the following table, there was a considerable increase in the output of silver and in the value thereof, but in the export of silver-lead ore and metal there was a serious decrease in 1894 as compared with 1893. The value of the aggregate export for 1894 was less by £742,231 than that of 1893. This decrease is due to the low price of silver and lead, which has caused several of the smaller mines to shut down. Until a satisfactory mode of treating the low grade ores has been devised or the market price of silver improves, I fear we shall have difficulty in keeping up our export of silver and lead. The Colony is much indebted to the Broken Hill Proprietary Company for the efforts made to solve the problem how to treat our low grade ores profitably, and though they may not have been as successful as might be desired, they have spared neither trouble nor expense, and I hope their efforts will yet be crowned with success.

QUANTITY and Value of Silver, and Silver-lead, and Ore exported.

* NOTE.—In the Annual Report for 1888, 11,739 tons 7 cwt. of silver ore, valued at £164,620, was omitted from the table. The bulk of the silver is exported in the form of silver-lead.

The following information in connection with the silver-mining industry in New South Wales is taken from reports forwarded to the Department by the Wardens and Mining Registrars:—

THE ALBERT MINING DISTRICT.

Broken Hill Division.

Owing to the continued low price of silver rendering the small outside mines unprofitable, work during the year has been almost entirely confined to the principal mines at Broken Hill, viz., The Broken Hill Proprietary, The Broken Hill Junction, British Block 14, Block 10, The Central, Broken Hill South, and the Consols Mine. The Broken Hill Proprietary Company employ no less than 3,352 men, including the managerial staff, and their mining and metallurgical plant is valued at £505,718. During the past year the company raised 642,822 tons of ore, which was estimated to contain gold, silver, lead, and copper to the value of £2,167,635, the exact value of the gold saved from the silver bullion being £16,300.

The total quantity and value of the minerals exported from the field during the year were as follows:—

	Tons.	Value.
Silver lead bullion	42,509	£1,543,038
Silver lead ore	137,385	644,896
Silver ingots (pure)	511,090 oz.	61,194
Copper ore	80 tons	673
Copper matte.....	190	500
Iron ore	254	256
Tin ore.....	25	1,172
		£2,251,729

As the bulk of the silver is exported in the form of silver lead bullion, the exact quantity of pure silver cannot be ascertained until the product is realised in London, but it may be set down as close upon twelve millions of ounces.

Prospecting work was carried on by the Associated Companies during the year from the 1,330-foot level in the New Broken Hill Extended Company's shaft, but nothing of any importance was discovered. The total number of men employed on the field is 4,240, and the population of the town of Broken Hill is estimated at 20,000 souls.

THE BATHURST MINING DISTRICT.

Mitchell Division.

The Sunny Corner Silver-mining Company's mine is still being worked on tribute, and there were 20,752 tons of ore raised, producing 586 tons of argentiferous and auriferous copper matte valued at £34,065. The silver-mines at Back Creek, Rockley, are idle, and the Mount Costigan and Cordillera in the Tuena District are also practically idle.

MUDGER MINING DISTRICT

Denison Town Division.

The Mount Stewart Silver Mine, which has been shut down for the last eighteen months, was worked on tribute during the last two months of the year, when a considerable amount of ore was smelted, but the returns were not available.

NEW ENGLAND MINING DISTRICT.

Fairfield Division.

The White Rock Silver Mine resumed work during the year under the management of Mr. John Rossiter, who, in conjunction with Mr. J. W. Horton, has been engaged for some time experimenting with a view to find the cheapest and best mode of treating the low grade ores. The system of treatment likely to be adopted is the chlorodising and amalgamation process, and the furnace to be used for the purpose of roasting will be Howell's patent, as also Howell's pans for amalgamation. The value of the plant on this mine is estimated to be £25,000.

Emmaville Division.

Webb's and Mount Galena were the only two silver mines at work in this Division during the year. At the former mine operations were energetically carried on, and 2,000 tons of concentrates were sent away for treatment, returning 48,000 of silver, valued at £5,700, but it is questionable if at the present price of silver, the mine does much more than clear expenses. The tributors at Mount Galena raised 50 tons of ore, averaging 46 oz. of silver and 60 per cent. of lead, valued at £550. The lodes at Mount Galena are wide and easily worked, and it is thought they should pay well if capital and energy were expended on them.

Wilson's Downfall Division.

There has been a falling off in the silver-mining industry in this Division, the mines at Rivertree being practically idle during the past year, the quantity of ore produced being only 70 tons valued at £686. The Proprietary Company are still carrying out experiments in connection with the treatment of their ore, under the supervision of Mr. Edgar Hall, of Brisbane. On the Proprietary Company's property only one lode has been worked, and that during the last few months of the year. A new shaft has been sunk to a depth of 70 feet on a lode from 5 to 8 feet thick, and averaging 20 oz. silver per ton. The owners of the Central Mine have been developing their property during the year, and a few parcels of ore have been sent to the Queensland Company's works at Aldershot, which yielded 150 oz. to 200 oz. silver per ton. Work has been carried on by Reid and party on the amalgamated blocks with fairly good results, a parcel of 20 tons of their ore giving 225 oz., and another of 40 tons, 100 oz. silver per ton. Mr. Rodda is in receipt of Government assistance to continue prospecting operations on the ground lately held by the Wangabah Company. He has great faith in the future prospects of the mine, and good work is being done.

SOUTHERN MINING DISTRICT.

Captain's Flat Division.

The New Koh-i-noor and the Lake George Gold and Silver Mining Companies were amalgamated during the year. The quantity of silver saved by them was 40,701 oz., valued at £4,823, as also 1,226 oz. of gold and 155 tons of copper. The united companies employ 200 men in connection with their mining and metallurgical works.

The work of development is being rapidly pushed forward, and the output of ore will, it is expected, be largely increased during the coming year.

During the year 3,392 samples were assayed for silver in the laboratory of this Department.

1,720 yielded nil.

1,487 „ under 20 oz. per ton.

132 were concentrates, blanketings, &c.

53 yielded as follows.—

Official number	Locality.	Description.	Per ton.

TIN.

THE quantity of tin exported from the Colony, as shown by the following table, was slightly in excess of the previous year, yet the value was less by £42,546. About the beginning of the year a rise in price was expected, but it never came, and indications do not point to an immediate rise in the value of this metal. The bulk of the tin is still being won from the Vegetable tin-field, near Emmaville, where there are 174 Europeans and 216 Chinese at work. This is a great reduction on the number employed in 1893, when there were nearly 900 men on the field. The scarcity of the tin, and the unremunerative prices prevailing is, no doubt, accountable for this great falling off in the mining population. The Otery tin-mine, at Tent Hill, has been in full work during the year, and 22 miners are employed constantly, exclusive of the usual surface men. The quantity of ore raised is estimated at 1,108½ tons, valued at £44,386, and 21 tons of tin ingots were sent away, valued at £1,202. The tin won in the Glen Innes Division was about 120 tons, valued at £4,800, mostly obtained by small parties mining on the banks of the Mann River. The quantity won in the Wilson's Downfall Division was 157 tons, valued at about £6,000, a great falling off from previous year, owing partly to the low price and the fact that some of the best claims have now been worked out. In the Deepwater Division there are 290 tin-miners at work, and the output was 350 tons, valued at £12,250. A good deal of prospecting work is going on in this district, and attempts are being made to prove the deep lead supposed to underlie the basalt. O'Keefe and party are in receipt of prospecting aid to carry on this work, but had to cease operations owing to a breakage in the machinery, after having reached a depth of 105 feet. Staader and party are also in receipt of Government assistance in this locality, struck the wash at 68 feet, which was 2 feet thick, yielding about 3 oz. of tin to the dish. Lavery and party, on the same line of supposed lead, bottomed at 100 feet on good wash mixed with very large hard boulders. Mining at Nine-mile is very dull, all the shallow ground being worked out. In the Tingha Division the quantity of tin won was 742 tons, valued at £27,454, which is a slight decrease on the output for 1893. There has been no fresh discoveries of stream tin during the year, and the only work of any importance going on at the present time in the way of opening up new ground is the construction of a race (5 miles of which is already constructed) from Cope's Creek to a large area of tin-bearing country 9 miles distant. A large quantity of the tin won in this Division was obtained from "leaders," of which the district is full. These are worked till they pinch out, when they are abandoned, the men not having the means to follow them down. At Giant's Den, and Watson's Creek, in the Bendemeer Division, tin ore was raised to the value of £800. In the Germanton Division, in the Albury District, the Dora Dora Tin-mining Company have expended a considerable sum of money in wages and working expenses generally, but hope to recoup themselves when their arrangements to conserve a sufficient supply of water are completed. The prospectors of the Champion Tin-mining Company, at the junction of Basin and Spring Creek, are constructing extensive fluming and a tail-race, which will be ready for work in a few months, when the value of the Upper Murray tin-field will be fully proved. The Basin Creek Gold and Tin-mining Company have been much retarded through want of water; they are, however, taking steps to remedy this evil. The value of the tin exported from the Broken Hill District during the year was 25 tons, valued at £1,172, got principally in the neighbourhood of Eurioiwie.

TABLE

TABLE showing the quantity and value of Tin exported from, and the product of, the Colony of New South Wales, since the opening of the Tin-fields in 1872.

Year.	Ingots.				Ore.				Total.

		Platinum	7 19 22
		Osmiridium	1 6 0
		Other platinoid metals	0 3 6
993	Shellharbour, near Kiama	Concentrated beach sand	71·20	Nil.	Nil.
161	Wagga Wagga (Pullitop Station).	Stream tin (tungstic acid, 33·50 per cent.)	32·25
162	Wagga Wagga (Pullitop Station).	" with much wolfram, &c. (Tungstic acid, 62·20 per cent.)	4·46
540	Wagga Wagga (M.L. 7,767).	Drift, containing wolfram, and tin. (Tungstic acid, 45·90 per cent.)	20·50
541	Wagga Wagga	Stream tin, containing much wolfram. (Tungstic acid, 12·8 per cent.)	54·02
767	Wagga Wagga (Pullitop Station).	Rubble, consisting of quartz, wolfram, tin-stone, with pebbles of various rocks. (Tungstic acid, 28·82 per cent.)	27·72
1975	Wagga Wagga	Crystallised tin-stone, with wolfram in granite rock. (Tungstic acid, 3·75 per cent.)	57·30
2130	Woodburn	Concentrated beach sand. (A trace of platinum present.)	4·68	Trace.	Trace.
2593	Wyalong	" Wash," containing stream tin, gold, magnetic iron, &c.	67·00

COPPER.

The following table shows that there was an increase in the quantity and value of copper exported during the year, and though the export of ore and regulus was less than in 1893, there is an increase in the aggregate values of copper, copper ore, and regulus amounting to £15,055. At Cobar, the Great Cobar Mine re-started work on the 15th January, 1894, having been leased by a syndicate, who raised during the year 13,460 tons of ore, yielding 665 tons smelted copper, valued at £26,600. The syndicate at the present time employ 250 men, but expect to increase that number by another 100 men when they have completed the additions to their smelting works, which are now being erected. The North Cobar Copper-mine has also been re-started, and a new shaft is being sunk on their property. The Nymagee Copper-mining Company raised 1,688 tons of ore for 148½ tons of smelted copper, valued at £5,940. This company was re-formed during the year, and now employ 120 men. At Mount Hope, the New Mount Hope Copper-mining Company employ 36 men, and raised 892 tons of ore during the year, yielding 135 tons of smelted copper, valued at £4,054, and the South Mount Hope copper syndicate also raised ore to the value of over £4,000. The copper-mine at Girilambone is being worked on tribute, and their output for the year was 36½ tons of smelted copper, valued at £1,180. The Burruga Copper-mine, near Burruga, has been in full work during the year, and yielded 622 tons of smelted copper, valued at £24,880. This mine is still being worked by Mr. Lewis Lloyd, who employs a large number of men. In the Carcoar Division the Burley Jackey Mine yielded copper ore to the value of £4,500. At the Bolara Copper-mine, in the Wellington Division, work was suspended during the last seven months of the year. During the five months the mines were at work 200 tons of ore were raised, which when smelted yielded 9 tons of copper, valued at £336. In the Captain's Flat Division, the Koh-i-noor and Lake George Companies were, amalgamated during the year, and in connection with their smelting operations for gold and silver saved 155 tons of copper, valued at £6,221. The output from this source will probably be increased during the coming year. The Broken Hill Proprietary Silver-mining Company, at Broken Hill, also saved 714 tons of copper, contained in matte in connection with their smelting operations.

TABLE showing the quantity and value of Copper, the produce of the Colony, exported from the Colony of New South Wales, from 1858 to 1894.

IRON.

The Eskbank Ironworks at Lithgow, carried on by Mr. W. Sandford, gives employment to 120 men and 30 boys, and the scrap iron, manufactured into finished iron, castings, and galvanised iron, amounted to 2,363 tons, valued at £17,170. In the Broken Hill District 254 tons of iron ore were raised, valued at £256, chiefly for the purpose of flux. No doubt the late severe financial depression has been the principal cause in delaying the proposals to establish an iron-making industry in the Colony, although public attention has been frequently directed to the many natural advantages possessed by several localities in this Colony for such an undertaking.

During

During the year sixteen assays were made for iron in the laboratory of this Department, the following yielding the best results:—

Official Number.	Locality.	Description.	Per cent. Metallic Iron.	Per ton.	
				Gold.	Silver.
				oz. dwt. gr.	oz. dwt. gr.

ANTIMONY.

Hillgrove, in the Peel and Uralla Mining District, produces the bulk of the antimony won in New South Wales, the total quantity for the year being 632 tons, valued at £9,480. Of that amount the Eleanora Company produced 472 tons of smelted antimony valued at £7,080, and 3,394 oz. of gold; the Hillgrove Antimony-mining Company, 160 tons, valued at £2,400. The latter mine is being worked on tribute, and at least two dividends have been paid during the year from the proceeds of their work. In the Hillgrove West Division the West Sunlight Reef Gold-mining Company raised 76 tons of antimony ore valued at £380. Griffin and party have been raising antimony ore during the year from a lode running through the West Sunlight Company's land, and sent away about 100 tons; but owing to the low price prevailing for this mineral, they did not persevere with the work. From Bowraville, in the Kempsey District, about 370 tons were despatched, valued at £1,372. A good deal of prospecting work has been done for this mineral in the above locality during the year, as also at Taylor's Arms and Deep Creek, in the same district, but without resulting in any new discoveries. There has been a large falling off in the quantity of this mineral produced during the year; and until there is an increase in price there is little chance of the mines now closed being reopened

During

During the year fifteen assays were made for antimony in the laboratory of this Department, the following yielding the best results :—

Official Number.	Locality.	Description.	Per cent. Metallic Antimony.	Per ton.	
				Gold.	Silver.
407	Bingara (near).....	Siliceous antimonite	65·60	oz. dwt. gr. 0 12 22	oz. dwt. gr. 0 12 22

160	Wong Wank, near Foster	"	34·71	Trace.	Trace.

BISMUTH.

The only place in the Colony where mining for bismuth is being carried on at the present time is on the Red Range, in the Glen Innes District, where about 9 tons were raised, the estimated value of which was £480. There is not much demand for this mineral, and in consequence work has not been very energetically carried on at the bismuth mines. A few tons used to be got in former years by the Great Jingera Company, near Pambula, but that company obtained suspension of the labour conditions during the last six months of the year.

During the year, sixteen assays were made for bismuth in the laboratory of this Department, the following one giving the best result :—

Official Number.	Locality.	Description.	Per cent. Metallic Bismuth.	Per ton.	
				Gold.	Silver.
842	Bombala, 20 miles west of	Molybdenite, with felspar (?) and quartz	14·83	oz. dwt. gr. 0 11 20	oz. dwt. gr. 0 7 14

During the year, 4 assays were made for zinc, in the laboratory of this Department, the following yielding the best results :—

Official Number.	Locality.	Description.	Per cent. metallic zinc.	Per ton.	
				Gold.	Silver.
513	Drake	Siliceous zinc blende, with a little pyrites.....	31·22	oz. dwt. gr. 68 9 18	oz. dwt. gr. 14 16 3
3,016	Shoalhaven District	Zinc blende and iron pyrites in chalybite.....	32·98	Trace.	Trace.

PLATINUM.

There is still a little platinum got on the northern beaches in conjunction with the gold-mining operations being carried on, on the sea beaches north and south from Byron Bay. The quantity disposed of, as far as could be traced, was 60 oz. from metal, valued at £240; but that was doubtless far short of the quantity really saved, and stored in concentrates for future attention. One or two buyers of this metal have offered to purchase it from the miners at from 20s. to 22s. 6d. per oz., if thoroughly clean and pure, but as it entails great labour to save it from the concentrates with their present appliances, the men have determined to bag their concentrates, even if they have to do so roughly, and of a low grade, and have its value determined on assay.

The Fifield gold-field is coming to the front as a platinum producer—the yield during the year being no less than 1,000 oz., with which were saved 875 oz. alluvial gold. It is thought the miners on this field do not get a fair value for their platinum, the market being controlled by a few buyers. There is a prospect that the principal lead will be traced out of the paddock in which it is being worked at the present time. Should this prove the case, and steps are taken to conserve water on the field, the output of this metal will be largely increased from the Fifield gold-field.

During

During the year 66 assays were made for platinum in the laboratory of this Department, the following yielding the most favourable results:—

Official No.	Locality.	Description.	Per ton Platinum.			Per ton Gold.			Per cent. Tin.
			oz.	dwt.	gr.	oz.	dwt.	gr.

CHROMIUM.

Chrome-mining appears likely to become a permanent industry in the Gundagai District. Three or four very large deposits of this have already been opened up, and Quilter and party, Owen and party, and Wright and party have sent away some thousands of tons of ore during the year. The parties in question are improving the facilities for conveying the ore to the railway, on completion of which the output will be materially increased. Prospecting for this mineral is being carried on in the locality with much energy. Attention has been directed during the year to the chrome deposits existing in the Grafton District, and a parcel of 30 tons has been shipped for trial.

During the year 122 assays were made for chrome in the laboratory of this Department, the following giving the best results:—

Official number.	Locality.	Description.	Chrome per cent.

MANGANESE, NICKEL, AND COBALT.

There is little or nothing doing throughout the Colony in the way of mining for these minerals. A few tons of cobalt were sent from the Carcoar District by way of a trial shipment; but no steps have yet been taken to open up the deposit to any extent.

DURING the year sixty-nine assays were made for manganese, nickel, and cobalt in the laboratory of this Department, the following yielding the best results:—

Official number	Locality	Description.	Per cent. Binoxide of Manganese	Per cent. Metallic Manganese.
126	Bendemeer	Ferruginous oxide of manganese	73.47	46.45
429	"	Manganese oxide..	72.58	45.89

TUNGSTEN.

Nothing further has been done with the lodes of Wolfram known to exist at the Table land near Emmaville, but a little prospecting work is still going on in the Cooma District, near Berridale, where the indications are very promising.

During the year twenty-eight assays were made for tungstic acid in the laboratory of this Department, the following giving the best results:—

Official Number	Locality.	Description.	Tungstic Acid, per cent
2011	Armidale District	Crushed scheelite	66.29
795	Burrowa, 20 miles N.E. of	Crushed sample (silver, 2 oz. 12 dwt. 6 gr. per ton, gold, nil.)	65.84
796	"	Wolfram and scheelite, with granitic rock	66.96
1311	"	" in granite	55.52
2173	" near	Quartz with scheelite	60.5
3343	Deepwater, near	Wolfram	68.5
3344	"	Picked wolfram	63.75
3414	" 10 miles E. of	Quartz containing wolfram and ilmenite (traces of gold and silver present).	49.5
436	Hillgrove	Scheelite	57.70
1893	New England District	Wolfram	56.50
3346	"	"	70.75
691	Nine Mile, a few miles from Deepwater	"	56.00
2009	Tenterfield, (7 miles from Railway Station).	Wolfram, apparently picked	40.21
162	Wagga Wagga (Pullitop Station)	Stream tin, with much wolfram, &c. (tin 4.46 %)	62.20
397	"	Quartz with mica and wolfram	46.17
540	" (M.L. 7767)	Drift containing wolfram and tin (tin 20.50 %)	45.90
3386A	Wellington Vale	Wolfram	66.5

MERCURY.

During the year thirteen assays were made for mercury in the laboratory of this Department, the following giving the best results:—

Official Number.	Locality.	Description.	Metallic Mercury per cent.
3010	Bingara (near)	Rolled cinnabar	79·36
3803	Clarence River (Horse Shoe Bend)	A few pieces (.86 gr.) of coarse gold present. Cinnabar in white quartz.	7·00

DIAMONDS.

All the diamond-mining companies at Bingara have obtained suspension of the labour conditions. During the year the Monte Christo mine was under offer to an English syndicate, but so far it is still held by Captain Rogers, the owner.

Mr. Southey was in receipt of aid from the Prospecting Vote during the year to continue the search for payable diamondiferous drift in the Mittagong District, but without bringing to light any new feature or information as to the existence of such in that locality. He was, however, successful in obtaining a little gold and one diamond. Near the Pine Ridge, in the Denison Town Division, M'Mahon and Bird are sinking through the basalt in search of gold and diamonds. The party, who are in receipt of Government assistance, are much troubled with underground water.

OPALS.

The White Cliffs Opal Field, in the Wilcannia District, is still the chief centre of the opal-mining industry in the Colony. During the early part of the year there were fully 800 men on the ground, but the latter part of the year saw this number reduced to about 250 men. There are 21 claims being worked chiefly by tributors, but returns could only be obtained from 14 of their claims, which showed that opal to the value of £5,684 had been sold, and that several hundred ounces were still on hand. The Government Geologist, Mr. E. F. Pittman, F.G.S., A.R.S.M., visited the field during the year, and some valuable notes made by him on the prospects of the place will be found on page 111 of this volume.

EMERALDS.

The Emerald Proprietary Company's mines at the Glen, near Emmaville, have not been worked during the year in consequence of the unprofitable returns from stones sent to the London market.

TURQUOISE.

A discovery of turquoise was made on Mount Lorigan, in the Wogonga Division, during the year. The discoverers have taken possession of a Mineral Claim, and are busily engaged testing the value of the discovery.

MARBLE.

During the year, marble-cutting and polishing machinery of the latest design have been erected at Limekilns, in the Bathurst District, by Mr. T. Tobin, at a cost of about £400, to be driven by a turbine wheel, the water being obtained from Cheshire Creek. The quarry is situated at Fernbrook, about 3 miles from the works, where some splendid samples of marble are being obtained. Valuable deposits also exist at Briar Park, near Rockley, and considerable quantities taken from both the above-named places by the Government Architect's Department, are being worked up in Bathurst Gaol. Now that labour appears to be getting cheap, it is expected that the opening up of these deposits may yet shut out the Italian article, large quantities of which are imported annually into this and the adjoining Colonies.

LIMESTONE FLUX.

The depression existing in the silver mining industry at Broken Hill has been felt at Tarrawingie, where the Flux Company's quarries are situated. The output was only 89,990 tons valued at £69,290 as compared with 130,635 tons, valued at £111,041, the output during 1893. These quarries are 30 miles distant from Broken Hill, and are connected by a tramway.

ALUNITE.

The Australian Alum Company's works at Bulladelah are still closed, but the company is still raising and shipping stone to England for treatment. The quantity shipped during the year was 800 tons, valued at £2,400 on the mine. The stone is taken from an open cut, and the lode is about 40 feet wide.

PLUMBAGO.

A shipment of 17 tons was sent to England from a very promising lode, but its true value will not be known till the returns are received. The lessees are, in the meantime, making preparations to carry on work extensively.

MISCELLANEOUS

MISCELLANEOUS ANALYSES.

LOCALITY—BALMAIN (COBALT WORKS, LOUISA ROAD).

(3165) Yellow ferruginous clay, yielding :—	
	Per cent.
Moisture at 100° C.	5 16
Combined water	13 04
Silica	6 16
Alumina	23 65
Ferric oxide	44 67
Ferrous oxide	trace.
Manganous binoxide	4 33
Cobalt oxide	85
Nickel oxide	67
Chromium, sesquioxide	30
Lime	nil.
Magnesia	79
Sulphuric anhydride	trace.
Phosphoric anhydride	trace.
	99 62

LOCALITY—BALRANALD.

(1263) Siliceous nodule, yielding :—	
	Per cent.
Moisture at 100° C.	6 08
Combined water	1 52
Silica	90 94
Alumina and trace of iron oxide	1 20
Lime	nil.
Magnesia	nil.
	99 74

LOCALITY—BALRANALD.

(1298) Nodule consisting of quartz grains, with a calcereous cement, yielding —	
	Per cent.
Moisture	96
Carbonate of lime	44 80
Carbonate of magnesia	14 15
Oxide of iron and alumina	2 34
Insoluble matter (quartz and fine clay)	37 38
Phosphoric anhydride	trace.
Sulphuric anhydride	trace.
	96 63

Experiments were made with this stone with a view to ascertaining if it had any hydraulic properties. The stone was carefully burnt and ground into a fine powder, this being manufactured into a small briquette, that on testing showed no hydraulic properties.

LOCALITY—BALRANALD.

(1299) Impure limestone, yielding :—	
	Per cent.
Moisture at 100° C.	1 35
Combined water	1 63
Silica	14 50
Ferric oxide	23
Manganous oxide	trace.
Alumina	3 56
Lime	42 56
Magnesia	1 76
Phosphoric acid	11
Sulphuric acid	nil.
Carbonic acid	34 15
Organic matter	15
	100 00

The bulk of the silica in this sample is coarse sand, which would be detrimental for the manufacture of hydraulic cement.

LOCALITY—BARRABA, NEAR—(GULF CREEK).

(1276) Mine water, yielding :—		
	Grains per gallon	In 1,000 parts.
Metallic copper	35 52	0 507
Equivalent to sulphate of copper	89 47	1 278

The water had a strong acid reaction, due to free sulphuric acid.

LOCALITY—BERRY, N.W. OR.

(2346) Shaly coal, yielding —	
	Per cent.
Hygroscopic moisture	00 65
Volatile hydrocarbons, &c.	14 80
Fixed carbon	22 20
Ash	62 35
	100 00

Coke, 84 55 per cent.

Coke not much swollen, firm and lustrous; ash, gray and granular.

LOCALITY—BOGGABRI.

(223) Green mineral, yielding :—	
	per cent.
Moisture at 100° C.	24
Combined water	1 09
Silica	78 06
Alumina	10 52
Ferrous oxide	55
Ferric oxide	1 93
Manganous oxide	trace.
Lime	24
Magnesia	73
Potash	6 75
Soda	20
Phosphoric anhydride	minute trace.
	100 31

LOCALITY—BOWRAL.

(890) Syenite yielding :—	
	Per cent.
Moisture at 100° C.	68
Combined water	1 52
Silica	57 14
Alumina	16 13
Ferric oxide	4 69
Ferrous oxide	4 00
Manganous oxide	trace.
Lime	3 44
Magnesia	63
Potash	5 07
Soda	4 87
Phosphoric acid	25
Carbonic acid	1 42
Sulphuric acid	30
Titanic	absent.
Chloride of sodium	04
	100 18

(349) The mineral was partly decomposed in acids, 17 27 per cent. being rendered soluble. Specific gravity = 2 636.

LOCALITY—BRAIDWOOD, NEAR.

Alum, yielding :—	
	Per cent.
Water (by difference)	35 88
Matter insoluble in water (chiefly sand and a small amount of clay)	20 92
Alumina	13 12
Iron oxide	trace.
Potash	11
Soda	trace.
Sulphuric anhydride	29 97
	100 00

LOCALITY—BRIDGY CREEK, GREENWICH PARK.

(1157) Alum, yielding :—	
	Per cent.
Moisture and combined water	38 57
Alumina	14 16
Ferrous oxide	nil.
Ferric	64
Lime	nil.
Magnesia	1 11
Cobalt protoxide	23
Manganous oxide	12
Potash	nil.
Soda	nil.
Sulphuric anhydride	33 09
Insoluble matter (sand with a little clay)	12 08
	100 00

LOCALITY—BROKEN HILL (CONSOLS MINE).

(1775) Mineral, treated as follows :—
The finely powdered mineral was treated with strong liquid ammonia first for some forty-eight hours, filtered and thoroughly washed—the analysis being conducted on the insoluble portion, yielded —

	Per cent.
Silver	19 71
Gold	trace.
Antimony	35 12
Arsenic	trace.
Lead	2 79
Copper	5 52
Iron	5 18
Calcium	4 84
Magnesium	17
Insoluble matter	5 20
Chlorine	14
Water	6 01
Oxygen	19 69
	99 37

Mean of two experiments by direct weighing.

Silver soluble in strong ammonia = 27 28 per cent.

LOCALITY—BROKEN HILL (CONSOLS MINE)
(1776) Substance containing antimony, silver and chlorine
The sample has been carefully hand picked to remove a
yellow argentiferous antimonial crust (presumably oxide)
Weight of mineral (in small pieces) 8.553 grammes,
yielding —

	Per cent
Antimony	10.89
Copper	5.77
Iron	1.94
Lead	6.48
Silver	53.99
Gold	minute trace (under 2 dwts p ton)
Arsenic	" "
Sulphur	10.60
Sulphuric anhydride	nil
Lime	28
Magnesia	trace
Gangue	44
Moisture and combined water	3.36
Oxygen (by diff)	6.25
	<u>100.00</u>

No chlorine, bromine, iodine, selenium, or tellurium detected

LOCALITY—BURRA BURRA (SQUEAKER & PAPT'S CLAIM)
(506) Platinum and allied metals, yielding —

	Per cent
Platinum	75.90
Iridium	1.30
Rhodium	1.30
Palladium	traces
Osmiridium	9.30
Iron	10.15
Copper	41
Gold	nil
Lead	traces
Siliceous matter	1.12
	<u>99.48</u>

LOCALITY—BYRROCK (GOVERNMENT TANK)
(590) Water, yielding —

Total solid matter (dried at 220° F)	4.496 grs per gallon
Insoluble mineral matter	35.336 " "
Soluble saline matter	13.160 " "
Free ammonia	0.70 parts per 100,000 parts
Albuminoid ammonia	0.56 parts per 100,000 parts
Nitrogen as nitrates, trace	" " "
Nitrogen as nitrites, nil	" " "
Phosphoric acid, as phosphates, trace	per 100,000 parts
Chlorine as chlorides, 5.568	grains per gallon.
Odour when heated to 100° F,	organic
Colour in 2 feet tube, reddish brown,	due to fine clay in suspension

The residue darkened on ignition, showing the presence of organic matter. The large amount of free and albuminoid ammonia, in conjunction with the presence of so much earthy matter in suspension, renders the water totally unfit in its present state for human consumption. On no account should this water be used without well boiling and filtration.

LOCALITY—CAPERIEF
(4) Rock from which the alum is derived, yielding —

	Per cent
Moisture at 100° C	1.55
Combined water	4.19
Silica	70.60
Alumina	15.34
Ferric oxide	1.59
Manganous oxide	trace
Lime	1.73
Magnesia	trace
Potash	2.62
Soda	trace
Sulphuric anhydride	2.47
Phosphoric "	0.7
	<u>100.16</u>

Specific gravity, 2.470. There is a very small quantity of a substance present, which is probably one of the rare metals.

LOCALITY—COBHAM
(1802) Calcareous material, yielding —

	Per cent
Moisture and combined water	20.30
Silica	5.70
Ferric oxide	44
Manganous oxide	12
Alumina	1.56
Lime	28.00
Magnesia	0.7
Potash	nil
Soda	"
Sulphuric anhydride	42.84
Carbonic "	72
Organic matter and strontia	trace
	<u>99.75</u>

More than 16 per cent of water is given off at 100° C.

LOCALITY—COOK'S RIVER
(761) Very plastic dark coloured clay, yielding —

	Per cent
Moisture at 100° C	1.47
Combined water	7.29
Silica	70.98
Alumina	18.12
Ferric oxide	25
Manganous oxide	trace
Lime	absent
Magnesia	18
Alkalies	1.71
Organic matter	trace
	<u>100.00</u>

LOCALITY—COOMA
(3196) Infusorial earth, yielding —

	Per cent.
Moisture, at 100° C	8.07
Combined water	2.99
Silica	80.94
Alumina	4.61
Ferric oxide	1.23
Manganous oxide	trace
Lime	86
Magnesia	45
Chloride of sodium	1.06
	<u>100.21</u>

LOCALITY—COWRA, NEAR (PROSPECTING SHAFT, 73 FEET DEEP AT NATHA CREEK)
(519) Water yielding —

	Grs per gal
Total solid matter (dried at 220° F)	186.144
Chlorine as chlorides	38.03
Sulphuric acid as sulphates	3.58

On opening the bottle the sample emitted a strong odour of sulphuretted hydrogen. At the bottom of the bottle was a small amount of a black sediment which was found to be iron sulphide and a minute trace of copper. Water gave a slight acid reaction to litmus, due to carbonic acid, and, on concentration, a strong alkaline reaction.

The total solid matter consists mainly of soda, lime, magnesia, potash (small), silica, &c, combined with carbonic acid, sulphuric acid, and chlorine. The sample was too small for a more detailed analysis.

LOCALITY—COUNTY OF COWLEY
(555) Emery, yielding —

	Per cent
Moisture, at 100° C	23
Combined water	1.27
Ferric oxide	14.10
Ferrous oxide	25.11
Manganous oxide	nil
Alumina	50.64
Lime	65
Magnesia	25
Silica	4.90
Phosphoric anhydride	34
Sulphuric "	nil
Titanic acid	2.91
	<u>100.40</u>

LOCALITY—DEEPWATER
(3345) Ilmenite, yielding —

	Per cent
Moisture, at 100° C	20
Silica	12.20
Ferric oxide	19.53
Ferrous oxide	13.23
Manganous oxide	1.94
Alumina	8.41
Lime	nil
Magnesia	15
Titanic acid	37.71
	<u>100.37</u>

LOCALITY—EURONGILLA
(1493) Magnesite, yielding —

	Per cent
Carbonate of magnesia	99.41
Silica	15
Alumina	trace
Ferric oxide	16
Moisture	11
	<u>99.83</u>

LOCALITY—HAWKESBURY DISTRICT.

(2368).—Clay, yielding :—

Moisture, at 100° C.	8.22
Combined water	3.82
Silica	52.96
Alumina	25.45
Ferric oxide	2.42
Manganous oxide	trace.
Lime	1.18
Magnesia	1.52
Potash	2.23
Soda	2.02
Sulphuric anhydride	nil.
Phosphoric "	trace.
Titanic acid "	strong trace.
	<hr/>
	99.82

Two small bricks were made of this clay, one with the clay alone, and the other with the addition of half its weight of clean sea-sand. The first fused at a strong red heat; the latter was fused at the edges, and out of shape. The presence of so much ferric oxide, lime, magnesia, and alkalis prohibit the use of the clay for the manufacture of a fire-brick, as is shown by the practical tests applied. Some of the clay was carefully kneaded and made up into a small thin dish, this being dried and burnt in the muffle furnace. From the results obtained, I am of opinion that the clay can be used for the manufacture of pottery.

LOCALITY—LEWIS PONDS (TOMS' GOLD MINE).

(3696).—Water, yielding :—

	grs. per gal.
Total solid matter (approximate only)	527.80
Total sulphuric acid (combined)	262.81
Free "	3.74
Chlorine in combination	3.32

The total solid matter consists of sulphates of iron, magnesia, lime, alumina, copper, zinc, and chloride of sodium, &c.

The water in its present state should not be used for battery purposes, as it is an acid water, holding a large quantity of mineral matter in solution. To render it suitable for use, it will be necessary to neutralise the acid, and precipitate a large quantity of mineral salts present.

LOCALITY—MOUNT ALLEN GOLD-MINE (FROM 138 FEET DEEP).

(2529).—Mine-water, yielding :—

	grs. per gal.
Total solid matter (dried at 220° F.)	147.20
Analysis of total solids.	
Lime	5.04
Magnesia	18.66
Potash	8.41
Soda	43.51
Silica	1.02
Chlorine	48.68
Sulphuric acid	16.58
Carbonic "	3.20
	<hr/>
Total, solid matter	145.10

LOCALITY—MOUNT VICTORIA ("CAMEL'S BACK.")

(2103).—Alum, yielding :—

Water	37.23
Alumina	10.65
Ferric oxide	1.27
Ferrous "	trace.
Lime	nil.
Magnesia	2.38
Potash74
Soda	trace.
Insoluble matter (chiefly sand)	17.89
Sulphuric anhydride	30.28
	<hr/>
	100.44

The insoluble residue was tested for gold and silver, with the result that neither of these metals was detected.

LOCALITY—MURRURUNDI.

(2083).—Firm white clay, yielding :—

Moisture at 100° C.	15.04
Combined water	8.21
Silica	45.09
Alumina	15.76
Ferrous oxide48
Manganous oxide	trace.
Lime	1.65
Magnesia	13.61
Potash	trace.
Soda	"
	<hr/>
	99.79

Specific gravity, 2,209. The mineral was partly decomposed by acids.

LOCALITY—NARRABRI DISTRICT (DUNGLE RIDGE BORE).

(1447) Water, yielding :—

Total solid matter (dried at 220° F) 77.140 gr. per gallon.

Analysis of total solid matter :—

	Grains per gal	In 1000 parts.
Silica and silicates	1.652	0.0236
Oxide of iron252	.0036
Alumina	trace.	trace.
Soda	40.639	.5805
Potash	2.369	.0338
Lime214	.0030
Magnesia "	1.268	.0181
Carbonic acid	21.600	.3085
Sulphuric acid	trace.	trace.
Chlorine	9.400	.1343
	<hr/>	
	77.394	1.1054

The water had an alkaline reaction, due to alkaline carbonates present. With careful use and proper drainage, I am of opinion that the water from this bore may be used for irrigation purposes.

LOCALITY—NARRANDERA.

(1803) Natural alloy of gold, silver, and copper, yielding —

Weight of metal, including several small pieces of stone, 0.4638 grammes.	
Specific gravity of alloy, 9.6103.	
Chemical composition :—	
Metallic copper	43.333
" silver	33.198
" gold	22.837
	<hr/>
	99.368

No other metals were detected, but there may be some present in a very small quantity, as the sample received was hardly sufficient to enable a thorough analysis to be made.

LOCALITY—NEW ENGLAND.

(30) Alum, from a deposit (vein?) said to be 20 feet thick, yielding :—

Moisture (by diff)	43.51
Alumina	9.36
Ferrous oxide	trace.
Zinc oxide	3.34
Copper oxide	trace.
Magnesia	5.78
Soda60
Potash	trace.
Sulphuric anhydride	34.62
Phosphoric "28
Insoluble matter (sand and undecomposed mineral)	2.51
	<hr/>
	100.00

LOCALITY—NEW ENGLAND.

(108) Carbonaceous clay, with a more or less graphitic appearance, yielding :—

Moisture and combined water	7.33
Carbon	33.83
Ash	58.84
	<hr/>
	100.00

LOCALITY—PAMBULA (MOUNT GAHAN).

(1890) Felsite rock, yielding :—

Moisture, at 100° C.30
Combined water	1.35
Silica	81.40
Alumina	11.20
Ferric oxide	1.60
Manganous oxide	trace.
Lime80
Magnesia54
Potash	2.78
Soda34
Phosphoric acid	trace.
Sulphuric "	nil.
	<hr/>
	100.31

No gold or silver was detected.

LOCALITY—PAMBULA (MOUNT LEWISON).

(1891) Felsite rock, yielding :—

Moisture, at 100° C	40
Combined water	70
Silica	74·00
Alumina	15·92
Ferric oxide	·92
Ferric bisulphide	·82
Manganous oxide	trace.
Lime	·70
Magnesia	·83
Potash	5·32
Soda	·63
Phosphoric acid	trace.
	<hr/>
	100·24

The sample contained a very small band of iron pyrites through the mineral.

LOCALITY—PARKES.

(1667) Well water for tailings battery, yielding :—Free acids, sulphates, and chlorides.

The quantity of water received was about 500 C.C.

	Grns. per gallon.
Total solid matter (dried at 220° F)	101·08
Chlorine in combination	10·5
Sulphuric acid	·5
Nitric acid	nil.

The water gave an alkaline reaction. The total solid matter consists mainly of carbonates of magnesia and lime, chloride of sodium, with lesser amounts of alkaline carbonates, silica, &c. No free acids present.

The quantity of water received was much too small for a more detailed analysis.

LOCALITY—PARRAMATTA (NEAR).

(1175) Water, yielding :—

Total solid matter (dried at 220° F.) 68·880 grains per gallon.

	Grains per gallon.	In 1000 parts.
Silica and silicates	3·024	0·043
Chloride of sodium	33·797	·482
„ potassium	18·878	·269
„ magnesium	9·420	·134
Sulphate of potash	·026	trace.
Oxide of iron and alumina	1·708	·024
Organic matter	·672	·009
Phosphoric acid	minute trace.	minute trace.
	<hr/>	<hr/>
Total solid matter	67·525	0·961

The water contained a small amount of suspended matter (2·01 grains per gallon) which consisted mainly of ferric oxide, with trace of alumina. No iron salts were detected in solution. This water has no medicinal value, and contains no ingredients that would render it of any value as a cure for indigestion. The large amount of potash in this water is peculiar.

LOCALITY—PEAK HILL.

(3495 and 3496) Efflorescence on tailing and pyrites.

The aqueous solutions from these samples gave an acid reaction. The efflorescence is due to sulphates of alumina, magnesia, and copper, with a small quantity of lime and trace of ferrous oxide, probably combined with sulphuric acid. There is also present a small amount of chlorine and soda which is no doubt combined as chloride of sodium.

LOCALITY—PENRITH.

(692) Carbonaceous shale, yielding :—

Volatile hydrocarbons, &c.	15·25
Fixed carbon	9·40
Ash	75·35
	<hr/>
	100·00

Ash, white and granular.

LOCALITY—POKOLBIN (NEAR).

(2206) Spring water ; yielding :—

	Grains per gallon.	In 1000 parts.
Chloride of sodium	432·747	6·1821
„ magnesium	21·951	·3136
„ lithium	minute trace.	minute trace.
Sulphate of potassium	1·553	·0222
„ magnesium	98·313	1·4030
„ calcium	128·588	1·8368
Carbonate of magnesium	28·731	·4104
Bromide of sodium	strong trace.	strong trace.
Iodide	minute trace.	minute trace.
Phosphate	„	„
*Ferric oxide	·336	·0048
Alumina	trace.	trace.
Silica	1·428	·0204
Organic matter	trace.	trace.
	<hr/>	<hr/>
Total solid matter	713·647	10·1933

Free alumina = ·011 ·016 per 100,000 parts.
Albuminoid ammonia = ·077 ·010 „
No poisonous metals detected.

* The ferric oxide was in suspension in the water, no iron being detected in solution.

REMARKS :—See No. 2208.

LOCALITY—POKOLBIN (NEAR).

(2207) Spring-water, yielding :—

	Grains per gallon.	In 1000 parts.
Chloride of sodium	463·970	6·6281
„ lithium	minute trace.	minute trace.
Sulphate of sodium	103·100	1·4728

Organic matter	„	„
	<hr/>	<hr/>
Total solid matter	2372·436	33·8918

Free ammonia ·008 grs. per gall., ·012 in 100,000 parts.
Albuminoid „ ·005 „ „ ·008 „ „
No poisonous metals detected.

REMARKS.—Referring to samples Nos. 2206, 2207, and 2208, the waters were filtered at the spring and then sent for analysis. No soluble iron was detected in solution, it having been deposited before the water was filtered off. The amount of lithia present is very small, and only on the spectroscopic examination of the salt being made was it detected. The waters are largely impregnated with various salts, and may be described as strong saline waters, especially in the case of sample No. 2208, which yielded nearly as much salts as contained in sea-water. The quantity of total saline matter in sea-water is from 35 to 40 parts per 1000. These waters are not suitable for watering stock with, their action being a purgative one. If used for irrigation purposes, they will kill all useful vegetation.

LOCALITY—POKOLBIN (NEAR).

(2209) Material collected from Nos. 2206, 2207, and 2208 (salt deposited on twigs of wood from the evaporation of the water), yielding :—

Sulphate of potassium	23·85
„ sodium	19·65
„ calcium	2·68
„ magnesium	18·07
Chloride of sodium	12·70
Moisture at 100° C. and combined water	7·47
Insoluble matter	15·56
	<hr/>
	99·98

The insoluble matter (in distilled water) consisted of small twigs of wood, ferric oxide, sand, and a little clay.

LOCALITY—POKOLBIN.

(2210) Spring-water and sediment, dried at 100° C. before analysis, yielded :—	
Moisture	·25
Ferric oxide	38·47
Manganous oxide	trace.
Silica	22·88
Alumina	6·73
Carbonate of calcium.....	10·55
" magnesia	1·54
Phosphoric oxide	trace.
Organic matter	19·03
Ferrous oxide	trace.
	<hr/>
	99·45

The residue, insoluble in acids, was examined microscopically for the presence of Infusoria, and a negative result obtained.

LOCALITY—PYRMONT.

(889) Sandstone, yielding :—	
Moisture at 100° C.	·45
Combined water	1·40
Silica.....	87·60
Alumina	8·53
Ferric oxide.....	·03
Ferrous oxide	·10
Manganous oxide	nil.
Lime	·60
Magnesia	·29
Potash	·28
Soda	·45
Phosphoric acid	trace.
Sulphuric acid.....	·11
Chloride of sodium	trace.
Soluble silica	·40
	<hr/>
	100·24

White clay in a very fine state of division is distributed through the sandstone.

LOCALITY—RAYMOND TERRACE DISTRICT (NINE MILE CREEK).

(209) Granular stratified magnetite, yielding :—	
Moisture at 100° C.	1·82
Combined water.....	2·14
Silica	20·60
Ferric oxide.....	60·72
Ferrous oxide	4·73
Manganous oxide	·22

Magnesia	1·40
Phosphoric acid	1·31
Sulphuric acid.....	·05
Titanic acid.....	trace.
Organic matter	"
	<hr/>
	99·55

LOCALITY—RICHMOND RIVER.

(2594) Fireclay, yielding :—	
Moisture at 100° C.	1·78
Combined water	6·30
Silica.....	65·06
Alumina	20·90
Ferric oxide.....	1·24
Manganous oxide	trace.
Lime	·66
Magnesia	·76
Potash	3·21
Soda	·17
Phosphoric acid	trace.
Sulphuric acid.....	"
Organic matter	·10
	<hr/>
	100·18

Two bricks were made up of this clay, one with the clay only, and the other with half its weight of clean sand. After being carefully dried, they were burnt in the coke assay furnace at a high heat.

The first was bulged out at the end and rendered porous. No fusion had taken place, the sharp edges being retained. The latter stood the test fairly well; but I am of opinion that the clay contains too much alkalis for the manufacture of a first-class fire-brick,

LOCALITY—SOUTH AUSTRALIA (MURRAY BRIDGE.)

(3647) Sample of Tertiary strata, yielding :—	
Moisture at 100° C.	·43
Carbonate of lime	50·53
Carbonate of magnesia	2·12
Carbonate of strontia	trace.
Ferric oxide.....	·89
Manganous oxide	nil.
Silica.....	43·82
Alumina and trace of ferric oxide ..	1·74
Magnesia	·12
Phosphoric acid	nil.
Sulphuric anhydride	nil.
	<hr/>
	99·65

Soluble in acid.
Insoluble in acids.

LOCALITY—TALLYAWALKA.

(3626) Harsh-feeling white substance, yielding :—	
Moisture at 100° C.	2·66
Combined water.....	12·93
Silica.....	47·73
Alumina	35·07
Ferric oxide.....	·81
Manganous oxide	nil.
Lime.....	nil.
Magnesia	·44
Potash	·31
Soda	·35
Sulphuric anhydride	trace.
Phosphoric acid	nil.
	<hr/>
	100·30

LOCALITY—LARRABANDRA, PARISH OF, COUNTY OF WYNARD (WATER RESERVE 77.)

(3451) Calc schist, yielding :—	
Moisture at 100° C.	·10
Carbonate of lime	98·21
Carbonate of magnesia	·42
Alumina and ferric oxide	·30
Insoluble in acids	1·20
Strontia.....	a strong trace.
	<hr/>
	100·23

LOCALITY—TASMANIA.

(2978) Hydro-carbon mineral, yielding :—	
Hygroscopic moisture	·70
Volatile hydro-carbons, &c.....	47·25
Fixed carbon	36·80
Ash	15·25
	<hr/>
	100·00

Specific gravity, 1·191. Ash—Reddish brown powder. Half of the sample was finely powdered, after being air dried, and had the above composition, but it also yielded 12·05 per cent. of sulphur. Other pieces of the sample gave from 9·1 to 3·74 per cent. of sulphur. The sulphur is due to the presence of iron pyrites, which occurs in *irregular* patches and layers. The ash consists mainly of ferric oxide with a little clay.

LOCALITY—TUMBARUMBA (CHERRY HILL.

(361) Clay :—	
A small brick was made of this clay, which was carefully dried, and burnt at a high heat in the coke assay furnace. The brick retained its sharp edges, and no fusion had taken place.	

LOCALITY—WALCHA.

(3020) Bituminous mineral, yielding :—	
Hygroscopic moisture	8·15
Volatile hydro-carbons, &c.....	20·10
Fixed carbon	7·55
Ash	64·20
	<hr/>
	100·00

Ash—Reddish tinge, granular. No coke formed.

LOCALITY—WARATTA.

(1707) Lignite material from a well, yielding :—	
Hygroscopic moisture	4·10
Volatile hydro-carbons, &c.....	34·40
Fixed carbon	23·80
Ash	37·70
	<hr/>
	100·00

No coke formed. Ash—Reddish and granular,

LOCALITY—WILCANNIA.

(3627) Calcareous nodules, yielding :—		
Moisture at 100° C.	·95	} Soluble in acid.
Combined water	1·38	
Carbonate of lime	68·39	
" magnesia	1·44	
Ferric oxide.....	1·17	} Insoluble in acid.

CHIEF INSPECTOR OF MINES' REPORT.

Sir,

In submitting my annual report for the year 1894, I do myself the honor to inform you that the following is a list of accidents reported on by Wardens, Coroners, Inspectors of Mines, and Mining Registrars as having occurred during the year 1894 in the metalliferous mines of New South Wales.

TABLE A.

No	Date.	Name of Mine.	Locality.	Persons killed	Persons seriously injured	Minor Accidents	Occupation	Cause of death or injury
1	5 Jan	Lady Bella Mine	Nana Creek	William Rees			Miner	Explosion of dynamite

Persons killed per 1,000 persons employed.	.80		1.42	2.14	1.16
Persons injured per 1,000 persons employed.	.11		.70	4.52	.15	1.12

Table A gives the number of accidents, date, name of mine or company, locality, persons killed or seriously injured, occupation, and cause of death or injury.

Table B gives in addition to the percentage of persons killed or injured, the number of persons employed, and the value of the machinery in, on, or in connection with the metalliferous mines of New South Wales. Out of the total of 28 persons killed, 12 lost their lives in auriferous quartz mining, seven (7) in alluvial gold-mining, and nine (9) in silver-mining.

The total number of persons employed on the metalliferous mines, and on the machinery in connection with said mines in 1894 was 24,088, or 4379 more than in 1892.

A large proportion of the accidents, fatal or non-fatal, occur in the Broken Hill district, and in the majority of cases on the surface, to persons who have not had much practice in mining operations; and as will be seen by Inspector Hebbard's report, many of these accidents were preventable, and were due to the persons injured.

The reports of Inspectors Milne, Hebbard, and Godfrey are also attached herewith. Their work speaks for itself, and they have given general satisfaction to all concerned.

The following districts were visited by me during the year, in the capacities of Chief Inspector of Mines or Mining Warden on various official duties. Fully six months out of the year I had charge of the Wyalong goldfield as Warden. In addition to which, I have travelled on official duties during the year in the following districts:—Kiandra, Wee Jasper, Adginbilly, Tumut, Adelong, Gundagai, Cootamundra, Muttama, Colac, Barmedman, Reefton, Temora, Sebastopol, Grong Grong, Wagga Wagga, Mudgee, Gulgong, Hargraves and Bathurst.

The total number of letters written, and papers registered in my branch during the year 1894, are as follows:—

	Letters written in 1894.	Papers registered in 1894.
Prospecting Vote... ..	2,432	4,356
Chief Inspector of Mines	7,255	8,146
Total	9,687	12,502
Diamond-drills	280	599

The large increase in the registrations of papers in connection with the Inspection of Mines is due to the assistance given to persons willing to go fossicking on the goldfields of the Colony. No less than 9,572 persons received letters from my branch for the above said purposes. But as Mr. McCulloch's energy is already strained to its utmost to keep up with the work in connection with the Prospecting Vote and Inspection of Mines, Mr. J. S. McNeill and J. S. Leigh, of the Diamond Drill Branch, have, in addition to their ordinary duties, done the work in connection with the fossickers, which required the registration and letters to the extent of 9,572 during the year.

I have, &c.,

W. H. J. SLEE, F.G.S.,
Chief Inspector of Mines.

Report by Mr. W. H. J. Slee, F.G.S. Chief Inspector of Mines, on the Wyalong Gold-field.

Sir,

Wyalong, 19 March, 1894.

I do myself the honor to inform you, that, owing to the great pressure of my official work here, I have so far been totally unable to forward any report on the Wyalong gold discoveries, other than my telegrams. My ten days' camp was right among the gold-workings, of which convenience the population took full advantage, large numbers interviewing me on various matters at my camp, from daylight up to 8 a.m., even during meal-time, and from 7 p.m. to 11 p.m., the day-time being occupied in settling mining disputes. It will, therefore, be observed that if a gold-fields warden tries to do justice and treats all classes alike, he must for the time being ignore the eight-hour system, and work 18 hours out of 24 hours. If he does not do this he will cause hardship to many hard working men.

Wyalong is about equi-distant, between Barmedman and Yalgogrin, that is about 20 miles from each locality, and is part of the identical tract of country reported on by me in August last, some three

monthsp revious to the Wyalong gold discoveries. I at that time stated that the country between Barmedman and Yalgogrin had a decided auriferous appearance, and was likely to yield a better return to the prospector than that at Yalgogrin; hence this tract of country on which Wyalong is situated is not strange to me, and my last ten days camping among the claims at work has strengthened the opinion formed and expressed by me in August last. So far, Wyalong is essentially a quartz-reefing gold-field—that is to say, that alluvial gold has not yet been discovered. I, however, think that if systematic prospecting for alluvial gold was carried on both in a northerly and southerly direction from present discoveries, favourable results may be the consequence. Unfortunately, few of the old goldminers are able to carry on such work, and those who could prefer to carry on prospecting for quartz-veins, simply because the latter have by recent crushing at Barmedman proved more than payable, and alluvial prospecting is almost prohibited through the great scarcity of water. There is, however, not much likelihood that payable alluvial will be discovered anywhere near the present workings. The geological formation consists of porphyry-granitic, porphyry, granite, and diorite; the latter occurring on the camping-reserve on which the town of Wyalong is being surveyed. Through this country rock or formation cracks occur filled with quartz and minerals, hence the quartz-veins strike almost in all directions of the compass. They generally appear in lenticular blocks, and the gold occurs in shoots. There are now parties at work on quartz-veins, either on Crown lands or selections, for about 6 miles in length and 2 miles in width, not in continuous lines, but scattered, some in isolated localities. Although names such as Mallee Bull, Mallee Cow, Mallee Calf, Mallee Hen, have been given to supposed lines of reefs, the latter certainly occur more as a network of quartz-veins than of regular well-defined quartz-reefs. Some of the quartz-veins also contain, in addition to gold, copper, zinblend, galena, iron, and manganese, refractory minerals. There are now about 30 claims on payable gold, including permit-holding on selections; others are on gold not yet payable. The total number of claims taken up and at work cannot be less than 300. The size of the quartz-veins vary from a mere thread to about 18 inches in thickness, and the deepest being the one known as the Union mine, slightly over 100 feet in depth. The county rock is of a decomposed nature and easily worked with the pick, no blasting being required. The only hard country rock is the diorite hill, on which the town of Wyalong is being surveyed, and the only locality where pure diorite can be seen. The following crushings have taken place up to date at the Barmedman Battery:—

						oz.	dwt.	gr.
Neild and party	13 tons, yielding	26	4	0
Cassin	12½ "	9	3	0
Conway and party	22 "	103	5	0
Keith and party	28½ "	67	0	0
Neild and party (No. 2)	17 "	72	16	0
Perry and party	17 "	42	18	0
Fraser and party	10½ "	39	6	0
Gorman and party	37 "	77	12	0
Smith and party	6 "	8	14	0
M'Mahon and party	4 "	10	0	0
Lawry and party	14½ "	14	18	0

The above yields were all smelted gold.

Jamieson and party crushed 6 tons 12 cwt. and obtained 22½ oz. amalgam, which will probably yield 9 oz. of smelted gold, and Taylor and party 15 tons for 66 oz. 7 dwt. amalgam, which will probably yield 28 oz. smelted gold. As these 13 returns are from different claims they speak for themselves, and require no further comment from me. The present population is sufficient for all purposes for some time to come, and persons who have not sufficient funds to keep them prospecting for at least a month should not come here at present, as they cannot fossick out a living, there being no alluvial working and little chance to obtain wages, as all the claims are held by individual miners who generally work their own interest. Water is very scarce, and by permission of Mr. Blyth, the owner of Wyalong Station, the White Tank, near the principal miners' camp, has been reserved by me for domestic purposes. To prevent hardship to those wishing to build, I have allotted them sites and given permission to occupy recently-surveyed allotments in the town of Wyalong, subject to the approval of the Hon. the Minister for Mines and Agriculture, till the surveyed town is proclaimed and camping-reserves cancelled, after which they must obtain their title in accordance with the Mining Regulations. My action taken with regard to the camping-reserve will be fully but separately reported on by me. I will also separately report on the resumption of G. W. Neild's conditional lease and conditional purchase, on Ryan's conditional lease and conditional purchase, and several tanks belonging to Mr. Blyth and Mr. Carter, which may be urgently required for public purposes. Heavy rain commenced to fall this morning, which directly will be a blessing to those already at Wyalong, but indirectly it will be the cause of raising the price of provisions and all other necessaries of life, as the roads, especially for about 5 miles, part of which contain the "Gilgys," will become impassable. Even at present the bullock-teams carrying quartz from Wyalong and timber and stores to Wyalong are frequently bogged for hours, and there has been no rain here for weeks.

I have, &c.,

W. H. J. SLEE, F.G.S.,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

REPORT by Mr. W. H. J. Slee, F.G.S., Chief Inspector of Mines, on the Tumut District.

Sir,

Tumut, 11 August, 1894.

Having for the-time-being completed my official duties in the Tumut District, I have the honor to draw attention to the fact that hitherto the gold-producing industry in said district has not received the attention of the inhabitants of Tumut that its importance fully deserves. Owing to the general depression this hitherto flourishing district has also suffered; hence the principal inhabitants have formed themselves into a Prospecting Association, with the view of assisting and testing the various localities in the district likely to be auriferous. From my own knowledge, there is certainly a great probability that the Association's praiseworthy efforts will be crowned with success.

The whole tract of country between Adelong and Tumut has a decided auriferous appearance; the hills on the Tumut Common, near Jeffrey's and Hassett's, the Killarney Creek, and the whole of the Gilmore or even Tumut Flats deserve a thorough systematic prospecting, either by boring or sinking, but boring

boring would, in my opinion, be the better mode, owing to the great flow of underground water to contend with, and, as blanks exist in the very richest of our gold-fields, it would be advisable to test the said flat by boring in five or six different places at least 1 mile from each other. If such a system were adopted it would, probably, lead to the settlement of an industrious prosperous mining population. On my visit to Lac-ma-Lac I saw some very nice gold-bearing quartz taken from a vein by Messrs. Jones and Hayden, not far from the old Lac-ma-Lac Company's mine; and now the winter is nearly over, numbers of persons may, perhaps, be able to obtain a living in searching both for alluvial and quartz on and amongst the high ranges in a north-easterly, easterly, and south-easterly direction (towards the Australian Alps) from Tumut.

I have, &c.,

W. H. J. SLEE, F.G.S.,

The Under Secretary for Mines and Agriculture.

Chief Inspector of Mines.

REPORT by Mr. W. H. J. Slee, F.G.S., Chief Inspector of Mines on the Adelong Gold-field.

Sir,

Adelong, 13 August, 1894.

I do myself the honor to inform you that the mining industry in the Adelong district has of late greatly improved.

The mine now owned by the Gibraltar Gold M. Co., situated on the Gibraltar Hill, had been abandoned and idle for years past, until after the cancellation of the lease, when Mr. W. D. P. O'Brien, now part-owner and manager of the above mine, took up the land and obtained as co-partners some Sydney gentlemen for the purpose of prospecting and developing said mine. They spent considerable sums in prospecting, and their pluck and energy have met with success. During this year the company have crushed 322 tons of quartz, yielding 1,152 oz. free gold and about 400 oz. of gold out of the pyrites treated at the Clyde Works, yielding a total of nearly 5 oz. of gold to the ton. There are now 130 tons carting to the battery for crushing purposes, expected to yield fully as much as the former crushings. No. 1 shaft is 230 ft. from the surface, and a drive is now 180 ft. in length on payable quartz, which is still being extended, and by all appearances will be found throughout the Gibraltar Gold-mining Co.'s lease, extending in the adjoining one known as the Sir Henry Parkes lease.

The Gibraltar reef averages about 20 in. in width, the strike being about 20 degrees E of N. The reef occurs in channels formed by granite walls, intersected at intervals by diorite dykes underlay easterly, and the shoots of gold generally dipping to the south.

No. 3 shaft, which is over 300 yards south of No. 1 shaft, is now 180 ft. in depth, and at the 170-ft. level good payable gold was struck, the reef being about the same size as in No. 1 shaft. About 70 tons of quartz from this shaft are now being carted to Wilson and Ritchie's crushing machine, and is expected to yield about 4 oz. per ton.

A shaft is now being sunk by contract at the Sir Henry Parkes Mine, and there appears to be but little doubt that in a short time this mine will also yield payable returns. As there are numerous channels on the Gibraltar Hill, other mines may be tested at a greater depth, and additional miners may find profitable employment.

Mr. O'Brien has also started the Great Victoria Mine, which has been idle for years. This mine gained the Government reward for obtaining payable gold at the depth of 800 ft. and 1,000 ft. respectively, and there are good indications and every probability that this mine will ere long rank again amongst the payable quartz-mines of New South Wales. The Currajong Reef has also been taken for further development.

At Mount Adrah, Cole and party have lately obtained good prospects in their deepest shaft, and Mr. A. D. Sheppard is repairing at his alluvial mine the damage done by the late heavy flood. Lower down the creek Mr. Travers Jones, M.P., has taken up 40 acres known to contain payable alluvial gold, and Mr. Wm. Ryan is working with fair success lower down the flat.

I have, &c.,

W. H. J. SLEE, F.G.S.,

The Under Secretary for Mines and Agriculture.

Chief Inspector of Mines.

REPORT by Mr. W. H. J. Slee, F.G.S., Chief Inspector of Mines on the Wee Jasper, Macpherson, Corandigbee, Gordon, and Adginbilly Creeks Gold-fields.

Sir,

Gundagai, 18 August, 1894.

I do myself the honor to inform you that having to inspect some prospecting sites on the Wee Jasper and Adginbilly Creeks, I embraced them in one trip from Gundagai, which, although a greater round for me, saved time.

The Wee Jasper is situated about 35 miles equi-distant from Yass, Tumut, and Gundagai, but fully 45 miles from Gundagai, *via* Adginbilly, the route I took.

The whole of the abovenamed creeks flow amongst the Snowy Ranges, some of which are even now covered with snow. I conversed with several parties of miners who were sluicing on these creeks, who seemed to make a living, and hoped to strike a patch of gold as extra remuneration.

As a rule, the Snowy Range miners are as hardy and energetic a class of men as can be found in any part of Australia. My special object in making this report is to draw public attention to these districts, as there appears to me but little doubt of the existence of an extensive alluvial gold-field, the prospecting of which will, however, entail a large amount of energy, perseverance, time, and money. Whatever gold has hitherto been obtained, or which is now being won on these creeks, is associated with angular and square wash of a recent period; whereas the ancient river-beds, filled with Tertiary drifts, and capped or covered over with basalt, probably contain the richest and most extensive deposits. With the exception of one or two parties who tried to sink through the basalt and reach the bed-rock, but who failed, nothing has been done in testing the Tertiary drifts.

An old miner named Charles Tulley showed me some gem-stones, such as topaz, garnets, and rubies, perhaps not of great commercial value, but still of sufficient importance to hold out inducements for the thorough prospecting of these Tertiary drifts. It is only lately that efforts have been made by an old Snowy Range miner named Patrick Maher to drive a tunnel under the basalt, he and his party having previously sunk several shafts, but owing to the great flow of underground water they were unable to bottom, their last shaft being 62 ft. in depth. They, however, pierced through the basalt and the Tertiary drift, and obtained a few colours of gold and small gem-stones to the dish. Their tunnel at about 400 ft.

will

will be nearly 60 feet deeper than their deepest shaft, and should they be successful in discovering payable gold, miles of auriferous country would be opened, and the land that can now only be made use of for cattle or sheep walks, would support a large mining population, directly benefiting the districts of Gundagai, Tumut, Yass, and Queanbeyan.

Several parties have of late been engaged blasting away the hard granite bars, which at intervals block the free flow of the Adginbilly Creek, such as at Higgins' site, where several hundreds of pounds have already been expended. Should these parties succeed, many poor miners will be able to profitably work portions of said Creek, which is known to be payable if only the bar-blocked waters could be got rid of. Mining prospects in these districts are encouraging.

I have, &c.,
W. H. J. SLEE, F.G.S.,
Chief Inspector of Mines.

REPORT by the Chief Inspector of Mines on the Mining Industry in the Gundagai District.

Sir,

Gundagai, 20 August, 1894.

I have the honor to inform you that I have, for the time being, completed my official work in the Gundagai district.

The chrome industry is now employing a large number of persons, and it is thought that as soon as the wet season is over and the roads become passable scores of persons will find profitable employment.

From Owen's chrome mine 140 tons were despatched, of which the result of 108 tons has been received, averaging 57 per cent. There are other mines, such as Quilter's and others, in the serpentine formation, which in the aggregate could put out an almost unlimited supply.

The gold industry of the Gundagai district is also reviving, several parties now obtaining gold at Jones' Creek under agreement with the owners of land in accordance with the provisions of the "Mining on Private Lands Act." No other district is perhaps more affected by said Act than Gundagai. Jones' Creek alone is several miles in length, and there is but little doubt that a payable (though perhaps somewhat patchy) lead exists from one end of the valley to the other, which, if free access could be had, would profitably employ hundreds of persons.

Nearly all the land in the valley through which Jones' Creek flows had been selected before any gold-field was proclaimed, hence miners could not enter the land unless with permission from the owner, and then only conditionally that the owner obtained a permit from the Government. Now, however, the owners have become more reasonable, and the consequence is that in two or three different places payable gold has been discovered, and is likely to be worked beneficially for all parties concerned. A large area of land has been, and is still, under cultivation, but the owners may perhaps discover that by opening up the land on suitable terms it would be more beneficial to them than growing produce at the present low prices.

Prospecting operations are still carried on at Mount Parnassus and Brummy's Hill, and some of the old quartz mines, such as the Emu Reef, are again to be tested at a greater depth. At Coolac and Muttama (more especially at the latter place, where a local crushing machine is worked by Mr. Henry Bailiff) several quartz claims are at work apparently yielding sufficient for a living to those who work them.

I have, &c.,
W. H. J. SLEE, F.G.S.,
Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

REPORT by the Chief Inspector of Mines on the Temora, Reefton, and Barmedman Districts.

Sir,

Temora, 28 August, 1894.

I have the honor to inform you that the mining industry in the above-named districts has of late very considerably revived. At Scrub Yards, or Gundibindayal, 10 tons of quartz were crushed by A. Andrews and party, yielding nearly 25 oz. of gold, the thickness of vein being 6 inches; this party is only one of several who lately obtained payable gold at the Old Scrub Yard Diggings. At Sebastapol Noonan and party are prospecting for alluvial, and extensive machinery is now being erected near the Morning Star Reef for the purpose of operating on the tailings, which are supposed to contain a large per centage of gold. At Barmedman the Fiery Cross Mine has been retaken by a Sydney company, who have great hopes and fair prospects of placing the Fiery Cross amongst the payable quartz mines of New South Wales. But the principal, most important, and extensive gold discoveries made in this district within the last few months are those known as Reefton. These gold discoveries are situated about 14 miles from Temora, 8 miles from Barmedman, and 1 mile east from the Temora to Barmedman Road, and consist of quartz veins which occur in a soft slate formation, with a strike of 20 degrees east of south, and a thickness from a few inches to several feet. So far, those veins averaging under 12 inches have given the best returns; the extent of the veins, so far open, is over 2 miles in a southerly and northerly direction, but hitherto only the one line of veins has received particular attention. Indications are very favourable to the existence of several parallel lines of quartz veins which, if thoroughly prospected by trenching, crosscutting, or otherwise, may prove as remunerative as those already discovered. Here, like Wyalong, the quartz veins occur in the lenticular system, and although the miners at Reefton expressed to me an opinion that their quartz veins would be found less broken when they considered they had reached the settled country, I feel confident that the same occurrence will take place whatever depth may be reached. One thing appears almost certain, that, although the field may not be very extensive, nevertheless hundreds of persons may find payable returns for years to come.

Several crushings of quartz have already taken place, some at the Temora, and others at the Barmedman battery with various results, some yielding only a few dwts., others several oz. per ton. The principal crushing so far obtained is from Lander and party's claim, who just finished at the Temora battery 10 tons 3 cwt. of quartz, yielding 70 oz. 2 dwt. of smelted gold, or about 7 oz. of gold per ton, which was sold to the Bank of New South Wales, at Temora, for £275 1s. 6d., or at the rate of £3 18s. 6d. per oz., being fine quality; the quartz vein is about 6 inches wide. At the time of my inspection there were several claims having quartz at grass, in which I could see gold freely with the naked eye, such as Wm. Campbell and party, Hingerty and others. No further crushings are likely to take place for some time, as the roads between Temora and Barmedman, especially what is known as Donkin's lane, are in such

such an unprecedented almost impassable state that carriers cannot take any loading, and 6-horse light loaded coaches can only travel at the average rate of 3 miles per hour, or even less. The population at Reefton is at present about 300, exclusive of women and children, of the latter I saw about 30 of the school age. A street has been laid out by the inhabitants, but is not in a suitable position, being hemmed in by a selection on the east, and the gold workings on the west. The township-site ought to have been marked on the boundary of the Temora-Barmedman road, which would interfere less with the development of the field. At present it is useless for any persons without means to go to Reefton, as there is no labour employed, and whoever comes must be provided with means to prospect for a few months at least. I was informed that a crushing battery is to be erected at Reefton forthwith. If this is correct it will give a great impetus to the development of the Reefton quartz veins and the field generally. The claims are held under the Mining Board Regulations; only half the number of men are being employed until payable crushings have been obtained.

I have, &c.,

W. H. J. SLEE, F.G.S.,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

REPORT by the Chief Inspector of Mines on the recent Gold Discoveries on the Wagga Wagga Common.

Sir,

Wagga Wagga, 4 September, 1894.

I have the honor to inform you that I have inspected the locality of the recent gold discoveries on the Wagga Wagga Common, about 4 miles westerly from the town. A large number of claims have been pegged off and several parties are at work, but so far only two parties may be considered as having struck payable gold, namely, M'Geary and party, who are the prospectors and hold a prospecting area; and Patrick Farrell and party who hold an ordinary claim of eight men's ground. M'Geary and party have forwarded 6 tons 3 cwt. of quartz to the Clyde Works, Granville, considered to be payable, and until that problem is solved they need not mark out their prospecting claim. These quartz veins occur in slate formation (probably of the Devonian Period) in short lenticular blocks, and in some parts appear as mere fragments, the country rock being hard requiring blasting, hence the short block system and the blasting will cause extra expenditure in the working of these quartz veins. The thickness of the quartz veins in both M'Geary and Farrell and party's claims is about 12 inches; they have a strike of 20 degrees E. by N. with a westerly underlay, the greatest depth so far obtained is about 10 feet.

At the time of my inspection, parts of the quartz veins were broken down in both claims, showing gold freely to be seen with the naked eye. The gold is of good quality and coarse. Nevertheless, owing to the similar occurrence of the quartz veins and hard country rock, it will require economy and thorough systematical working to make the quartz veins yield payable returns to the shareholders. There are no doubt numerous quartz veins on the hill surrounding Wagga Wagga, some of which may prove payable, and by which means a mining population may be settled in the vicinity, but at present nothing has been discovered to cause undue excitement or which would warrant the expenditure of capital for an extensive crushing and gold-saving plant.

The discoveries on the Wagga Wagga Common rather appear to me as an extension or part and parcel of the Tarcutta gold-field.

It is very probable that no large payable quartz reef will be discovered in the locality, but that whatever payable gold is discovered will occur in narrow quartz veins. This part of the country certainly deserves a thorough systematic prospecting. These small gulches or gullies leading from M'Geary and Farrell's claims should also be prospected for alluvial gold. A shaft is now being sunk by Hely and party which is 125 feet in depth and not bottomed, but, by appearances, water is likely to be met with before the bed-rock is reached.

Nearer Wagga Wagga, Nash and party are also prospecting on Mr. Nash's freehold land; the shaft is 124 feet in depth, but by the surroundings the prospects of discovering payable alluvial gold appear to me not encouraging.

I have, &c.,

W. H. J. SLEE, F.G.S.,

Chief Inspector of Mines.

The Under Secretary for Mines and Agriculture.

REPORT by the Chief Inspector of Mines on the Recent Gold Discoveries at Hargraves.

Sir,

Hargraves, 22 September, 1894.

I do myself the honor to inform you that I have this day completed my inspection of the Hargraves gold-field. Mining in this district has been at a very low ebb ever since the New Hargraves G. M. Co. stopped their operations, and it is only within the last month that new life has been imparted to the mining industry. A party named Thos. Spratt and Jas. Milton took up a cancelled lease, recently held by Bennett and party, but formerly known as the Old English Co.'s and afterwards the Big Nugget Co.'s land. The latter received aid out of the Prospecting Vote to sink their main shaft to a greater depth, but after the erection of expensive machinery their capital became exhausted, development of the mine was stopped, and the aid granted lapsed.

Spratt and party taking part of the cancelled lease, two miners named Richard Warry and Alex. Stuart took up the northern part adjoining Spratt and party's claim. This party went down an old abandoned shaft, about 20 feet in depth, where they found exposed the saddle of the reef. They took out a few prospects which appeared payable; they then started to work in earnest, and in four days raised 15 tons quartz, which they completed crushing yesterday, obtaining the handsome yield of 25 oz. 1 dwt. of smelted gold, which, after paying all expenses, will give them a dividend of £42 per man, and the quartz in the mine looks as well as the 15 tons crushed. Here the real saddle reef, similar to those on the Bendigo gold-field, occur, and I have no doubt that if those interested in mining in the Hargraves district would study this system, which hitherto has been greatly neglected, numbers of persons would receive payable returns for labour and capital expended. Warry and Stuart obtained their crushing from the top of the saddle, about 4 feet in thickness; the strike of these saddles is about 20° E. of S., the legs underlying east and west at an angle of about 20°. About 10 feet from the saddle the legs average from 18 inches to 20 inches in thickness, and, as so far the eastern legs have been worked by former companies, it is of the utmost importance to the district that the western legs should also be tested, as there is no reason whatever why the

the western legs of these saddle reefs should not yield as large returns of gold as the eastern. A shaft sunk 20 feet south of Warry and Stuart's, which was sunk by the Old English Co. some forty years ago, and which has never been worked since, shows within 40 feet of the surface three perfect, distinct saddle reefs, which have only been sunk through and left for the present generation to develop, and as these saddle reefs can be traced for a considerable distance north and south from the Big Nugget Hill, and as at least three of these saddle reefs have already been exposed to view, though apparently unnoticed for the last forty years, more of these saddles may be discovered at a greater depth, and an unlimited quantity of payable quartz—which has been hitherto been looked upon as worthless—may be the means of profitably employing a large number of persons. Spratt and Milton, south of Warry and Stuart, struck the first saddle reef yesterday in a shaft about 30 feet in depth. Gold could be seen in the quartz with the naked eye, although not as rich as that of the adjoining claim. I think, however, that a few feet deeper the yield of gold will greatly improve.

Here is another lesson so frequently taught to the mining community, and one well worthy of note, namely, that many companies spent all their capital on expensive machinery on the surface before they even thoroughly explored or developed any part of their mine. Such a system cripples the mining industry, and is very unfair to confiding shareholders.

Several parties of miners are obtaining a living working on the small quartz veins on the land formerly held by the New Hargraves G. M. Co., and the small crushing plant, erected by Messrs. Scott, Laing, and party, is being kept constantly at work. This crushing plant has proved a great boon to the Hargraves community.

Very little alluvial gold is now obtained in the district, those at work barely making "tucker."

I have, &c.,

W. H. J. SLEE, F.G.S., &c.,

The Under Secretary for Mines and Agriculture.

Chief Inspector of Mines, &c.

REPORT by Mr. W. H. J. Slee, F.G.S., Chief Inspector of Mines, on the recent Gold discoveries at Grong Grong.

Sir,

Grong Grong, 12 October, 1894.

I do myself the honor to inform you that I have inspected the workings in connection with the recent gold discoveries in the Grong Grong district, of which the Harrie Smith reef is the principal. These discoveries are situated about 10 miles north of Grong Grong railway station, 3 miles north of J. McKeon's homestead, and 20 miles from Narrandera, on an A.C.P. belonging to the abovenamed gentleman. They consist of quartz veins in a slate formation, forming part of an extensive belt of auriferous country, in which payable quartz reefs have formerly been worked, such as the Cowabee reefs, about 10 miles easterly, and the Belmore, Gladstone, Home Rule, and others, within 4 miles northerly of the recent discoveries.

From the Harrie Smith reef 361 tons of quartz have been crushed up to date, yielding 333 oz. of high quality gold, and another crushing will be completed on the 15th inst. The deepest workings are about 65 feet, and the reef has so far proven payable for a length of over 100 feet, but the most important feature as to the permanency of the Harrie Smith reef is the sinking of a new shaft 70 feet northerly of the present working shaft, to the depth of 103 feet from surface, and the striking of the reef and payable gold at that depth. At my request, Mr. Smith (part owner and manager) had some shots put into the reef to enable me to give a fair report based on personal knowledge. This morning (Friday, 12th inst.) I again went below in the 103 feet shaft, and found the quartz shot down, and exposed to view a well-defined quartz reef about 18 inches in thickness, with gold to be seen with the naked eye, well distributed through the solid quartz, which by proper treatment ought to yield about 2 oz. gold per ton. The average thickness of the reef may be taken as from 2 feet 6 inches to 3 feet, but in parts it is thicker. This is owing to the fact that the reef occurs in lenticular blocks (pinching and bulging). These occurrences should not discourage parties even if to all appearance the reef cut out either by driving along or sinking deeper. What is required is close observation to trace these lenticular blocks of quartz. The total cost of raising, carting, and crushing the quartz is 21s. per ton, out of which the contractors receive 8s. per ton for raising. So far crushing has been done at a 12-stamp battery, with rather primitive gold-saving appliances, situated near the Gladstone reef. Leases have been taken up both north and south, under the "Mining on Private Lands Act," by former permit-holders, and prospecting is being carried on by Farrell and party, Duval and party, Mally and party, Lyons and party, and others. Through the courtesy of J. McKeon, Esq., I was able to take a good tour round the locality, which, combined with my former knowledge of the Cowabee reefs, strengthen my belief that by thorough systematic prospecting other payable reefs may be discovered, as quartz veins with strong auriferous indications are visible on the surface for miles around, the greatest drawback being want of water, and the fact that almost the whole of the land has been alienated, and can only be entered upon for prospecting purposes under the provisions of the "Mining on Private Lands Act."

I have, &c.,

W. H. J. SLEE, F.G.S., &c.,

The Under Secretary for Mines and Agriculture.

Chief Inspector of Mines, &c.

INSPECTOR MILNE'S ANNUAL REPORT.

Sir,

7 January, 1895.

I have the honor to submit this, my Annual Report, of the inspection of mines in the following districts:—

Blayney, Brown's Creek, Burruga, Bathurst, Bald Hills, Billagoe, Carcoar, Caleula, Cowra, Canowindra, Cox's River, Cobar, Flyer's Creek, Forest Reefs, Forbes, Galley Swamp, Gulgong, George's Plains, Goolma, Gilgunnia, Hartley, Hargraves, Hill End, Kerr's Creek, Leadville, Lucknow, Mount McDonald, Mount Hope, Mount Allen, Mandurama, Murga, Macquarie River, Mullion, Nymagee, Newbridge, Oberon, Ophir, Orange, Peak Hill, Palmer's Oakey, Rockley, Sofala, Stuart Town, Trunkey, Tarana, Wellington, Wattle Flat, and Woodstock in the west.

Bungendore, Brindabella, Colington, Goulburn, Michelago, Queanbeyan, and Wyalong in the south.

In

In the above districts I have inspected 225 working mines, employing 1,276 men.

During the year forty written notices were served on the owners or managers of the different mines, drawing their attention to defects in their underground or surface workings, requesting that such defects should be at once remedied, and their mines worked in compliance with the regulations.

In conjunction with the above work, as a member of the Prospecting Board, I inspected and reported on 209 applications for aid from the Prospecting Vote.

The total number of working mines inspected and for aid during the year is 434.

In the execution of which I travelled 7,642 miles.

I have, &c.,

DAVID MILNE,

Inspector of Mines.

The Chief Inspector of Mines, Sydney.

INSPECTOR HEBBARD'S ANNUAL REPORT.

Sir,

Broken Hill, 9 January, 1895.

I have the honor to present my Annual Report for the year 1894 as follows:—

During the year the work of inspection has lessened considerably in this district, owing to the further limitation of work in the outlying places, work in the localities of Purnamoota, Thackaringa, Day Dream, and Pinnacles being abandoned, except for a few fossickers and tributors in the old workings of the mines.

The tin district of Euriowie bids fair to become a producer during the year, and the crushing and concentrating plants of the Mount Euriowie Co. were repaired and put in operation. Tin ore was dressed for the public as well as for the Company, but the operations unfortunately were not sufficiently remunerative at the present price of tin-oxide, and the field is now almost entirely abandoned.

At Mount Brownie work is confined to a few fossickers in old ground, and puddlers when water is available. I reported on three applications for aid from Prospecting Vote in this district, and have reason to believe that good patches of gold will be found occasionally in the abandoned ground.

At Tibooburra a few parties are at work, sluicing, &c.

Some good specimens of reef gold have lately been found in the vicinity of Waratta, and efforts are being made to float a company to systematically search for the reef.

At White Cliffs Opal-fields, owing to the heavy fall in the price of the gem, operations are much restricted, and there has been a great falling off in the population.

In the immediate vicinity of Broken Hill, work is confined to the following mines on the main lode:—Junction, British Block 14, B. H. Proprietary, Block 10, Central, and B. H. South. The Consols mine continues work in a small but systematic way, and during the year have discovered and worked a new make of phenomenally rich ore.

The Associated Companies have driven and bored a distance of 690 feet in an easterly direction from the 1,330-foot level of the N. B. H. Extended Co.'s shaft, for the purpose of prospecting the lode at this depth, but nothing beyond a 12-foot make of ore of poor quality has been discovered. They are now engaged in boring obliquely from the cross-cut to test the lode both north and south, and if funds permit will attempt a bore to test the lode at a further depth of 150 to 200 feet.

The district now employs a total of about 4,500 men, including all mining, quarrying, and reduction operations.

The accident list for the year is a heavy one, and comprises nine fatal, twenty serious, and thirty-one minor accidents, of which the majority were preventible, as will be seen from my report on each. Numerous other casualties have been reported to me from time to time, which I have found on investigation to be too trivial for further report.

Of the fatal accidents, three were the result of blasting in the open cuts, two the effects of a "creep," one through being run over by a muck waggon in the open cuts, one on the railway at the chlorodising plant (Proprietary Co.), one in laying pipes on Proprietary mine, and one through a fall of earth after blasting; so that of the nine fatal accidents for the year only one can be described as a purely mining accident.

Of the serious and minor accidents, a good proportion are the result of blasting operations, and to a certain extent within the control of the injured men themselves.

Comparatively few accidents have occurred through falls of ground.

During the year I have made several reports on applications for aid from the Prospecting Vote, and where aid has been granted, have watched the progress of the work, but in no case has anything payable been found as the result of the operations.

I have, &c.,

JAMES HEBBARD,

Inspector of Mines.

The Chief Inspector of Mines, Department of Mines, Sydney.

ACTING INSPECTOR GODFREY'S ANNUAL REPORT.

Sir,

Sydney, 11 January, 1895.

I have the honor to submit to you my Annual Report on the mines inspected by me during the year 1894.

The mining centres visited by me comprised:—

In the Southern District: Adelong, Adaminaby, Bungonia, Braidwood, Brimbramalla, Bimbimdie, Big Hill, Bermagui, Cullinga, Currowan, Cowra Creek, Delegate, Fiery Creek, Grong Grong, Gundagai, Greenwich Park, Krawarree, Kydra, Mogo, Mount Dromedary, Mack's Reef, Narrandera, Nerriga, Nerrigundah, Pambula, Snowball, Wandella, Young, Yalwal.

In the Northern District: Boonoo Boonoo, Buccra Bandiuni, Bear Hill, Bowling Alley, Copeland, Cobark, Drake, Deepwater, Dalmorton, Dungog, Emmaville, Elsmore, Glen Elgin, Hillgrove, Inverell, Kempsey, Lionsville, Mann River, Marengo, Moor Creek, Moonan Brook, Macleay River, Niangala, Nundle, Nambucca, Rivertree, Swamp Oak, Stewart's Brook, Timbarra, Tooloom, The Gulf, Tingha, Tia, Uralla, and Wilson's Downfall.

In

In the Western District: Burruga, Dark Corner, Grenfell, Lucknow, Mudjee, Mitchell's Creek, Orange, Parkes, Peak Hill, Stuart Town, and Sunny Corner.

Speaking generally, the larger mines employing labour comply, as a rule, with the Mining Regulations; and the smaller mines, with a few notable exceptions, are worked with due care.

During the year I reported on fatal accidents at Lucknow, Red-rock (near Drake), and Gilgai (near Inverell). In each case the jury brought in a verdict of accidental death, with which verdicts I concur.

The total number of mines inspected by me is, approximately, 400, employing about 2,700 men; and in the execution of my duty I travelled 9,089 miles. I also served about forty written notices where grave defects were observable, and reported on about 150 applications for and under the Prospecting Vote.

I have, &c.,

J. R. GODFREY,

Acting Inspector of Mines.

The Chief Inspector of Mines, Sydney.

SUPERINTENDENT OF DIAMOND DRILLS REPORT.

The Superintendent of Diamond Drills to The Under Secretary for Mines and Agriculture.

Sir, Department of Mines, Diamond Drill Branch, Sydney.

In submitting my Annual Report on the working of the diamond drills for the year 1894, I do myself the honor to attach to said Report the following Appendices:—

Appendix A.—Return showing the locality, strata, depth bored, percentage of core extracted, and rate per foot, exclusive of officers' salaries, store wages, and rent; also Superintendent of Drills travelling expenses.

Appendix B.—Summary of diamond drills, showing the number of feet bored, working cost to the Department, average cost at per foot, and the amount receivable for the year 1894.

Appendix C.—Balance-sheet of diamond drills.

Appendix D.—Diagram section of bore during the year 1894.

Appendix E.—Summary showing the total cost of the Bingara bore reaming, clearing, and repairing.

The total depth bored with the diamond drills in 1894 was 557 feet, or 1,346 ft. 7 in. less than in 1893. The field cost for boring, exclusive of office salaries, store wages, rent, also reaming, was £468 2s. equal to 16s. 9½d. per foot, or 4s. 4½d. per foot more than during the year 1893.

The cost to the Department for boring, exclusive of reaming, at Bingara, equal to 36s. 5½d. per foot; but the total cost to the Department for boring, reaming, and inclusive of all other expenditure of a general character, such as office salaries, store wages, rent, &c., was £1,423 2s. 5d.

The total amount paid into the Treasury during 1894 was £1,462 17s. 3d.

The percentage of core saved during the year was 65·91. This low percentage is due to the fact that the boring was done in basaltic country, with soft clays above and below the basalt, hence no core could possibly be obtained.

The cost of wear and tear of diamonds during the year is 9d. per foot, or 2s. 6¾d. less than in 1893.

Owing principally to the financial depression, and those of the public who use the diamond drills being unable to contribute towards the working expenses as hitherto, the use, and consequent revenue, of the diamond drills has considerably fallen off.

The hand-borers, which are lent to applicants free of cost, have been more extensively used by the public for prospecting operations.

I have, &c.,

W. H. J. SLEE, F.G.S.,

Superintendent of Diamond Drills.

EXAMINER OF COAL-FIELDS' REPORT.

Report of the Examiner of Coal-fields for the Colony of New South Wales
for the year 1894.

IN compliance with the provisions contained in the 26th Section of the Coal Mines Regulation Act, 39 Vic. No. 31, I have the honor to submit the half-yearly reports of Messrs. Dixon, Bates, and Humble, Inspectors of Collieries for Coal Mines at work and opening out in the Counties of Northumberland, Durham, Gloucester, Buckland, and Pottinger, called the northern district; and of Mr. Rowan, Inspector of Collieries for Coal and Shale (Boghead Mineral) Mines at work and opening out in the Counties of Cumberland, Camden, Cook, and Roxburgh, called the southern and western districts, with this my annual report for the year ending 31st December, 1894.

The information I have the honor to submit with respect to the number of accidents above and below ground, quantity and value of coal gotten, number of persons employed on the surface and underground, coal exported and that used for home consumption, and notices received of new mines opening or in course of development, &c., &c., during the year 1894, is as follows:—

In 1894, the year under notice, there have been 7 fatal and 40 non-fatal accidents. Two of the fatal accidents happened from falls of coal; 1 by explosion of a shot; 1 by falling down incline; 1 by falling on cage on incline; and 2 from falls of stone.

Five of the non-fatal accidents occurred by skips; 28 by falls of coal; 1 by fall of stone; 1 by the bursting of pin of machinery; 3 by ignition of powder; 1 by truck on surface; and 1 on engine plane.

In 1893 the fatal accidents were 13, and the non-fatal accidents 45. Ten of the fatal accidents happened from falls of coal; 1 from fall of stone; 1 by loaded waggon on surface; and 1 by descending cage at bottom of shaft.

Four of the non-fatal accidents occurred from the explosion of gas; 22 from falls of coal; 5 by skips; 5 by falls of stone; 2 by ignition of loose powder; 1 by waggon on surface; 1 on railway line; 1 falling down shaft on to cradle; 1 by an explosion of a shot; 1 by crank shaft of engine in motion; 1 by a piece of coal falling down shaft; and 1 by falling prop.

In 1892 the fatal accidents were 8, and the non-fatal accidents 77. Four of the fatal accidents happened from falls of coal; 3 from falls of stone roof; and 1 from skips in motion.

Thirty-eight of the non-fatal accidents occurred from falls of coal; 10 from falls of stone roof; 12 from skips; 6 from explosion of blasting powder; 1 kick from a horse; 5 from ignition of fire-damp; 1 bursting of a steam pipe; 1 from pit cage in shaft; 1 from explosion of a shot; 1 from haulage-rope and 1 from a block on jetty.

RETURN showing the number of fatal and non-fatal accidents; those caused by "falls of coal," stone "roof"; and Lithgow, Ferndale, Bulli, A. A. Co.'s Hamilton Pit, and South Burwood Sinking Pit disasters, 1873 to 1894 inclusive.

* Figures not available.

From this Return it will be seen that the fatal accidents are less than they have been for many years past, and that the tons of coal raised per life lost is double what it was in 1893.

The returns of the collieries raising coal and shale (boghead mineral) which have been collected and forwarded to me by the Mining Department show the following figures for the year 1894:—

From these returns we find that in the Northern District, in the year under notice, there has been a decrease of 746 persons employed in and about the collieries, and an increase of 401,662 tons of coal raised, and £2,956 in value.

In the South and South Western Districts there has been a decrease of 93 persons employed in and about the collieries, and a decrease of 17,405 tons of coal raised, and of £21,326 in value.

In the Western District there has been a decrease of 16 persons employed under ground, an increase of 10 persons employed above ground, and an increase of 9,491 tons of coal raised, and of £2,221 in value.

THE NEWCASTLE COAL TRADE.

(From *Newcastle Herald and Advocate*, 2 January, 1895.)

THE returns published yesterday of the export of coal during 1894, from this port to foreign and intercolonial destinations are of a kind to inspire a reasonable degree of hope regarding the future of an industry upon which so many of the residents of this district depend for a livelihood. Notwithstanding the severe depression in all branches of trade in many parts of the world, a total of 1,831,674 tons was sent away oversea and outside the Colony during the last twelve months. This is an increase of 307,792 tons over the total for the preceding year, and is only a little short of the quantity exported for 1892. It is thus evident that our coal is still finding a ready market in many parts of the world, and that the shocks given to the industry during the troublous past are gradually being overcome. The opening out of coal-fields in Victoria has, as yet, not been so disastrous to our chief industry as at one time appeared likely, but it is evident that too much reliance should not be placed on a trade which may soon be reduced to very small proportions owing to the steady growth of local supply. It is a matter for thankfulness that the Victorian Government have proceeded cautiously with regard to supplies required by them, and have determined to refrain from placing their sole trust in local collieries. While the Victorian trade is thus in a state of transition it will be greatly to the interest of the trade in this quarter if our Melbourne friends are kept in a satisfied frame of mind both as regards the quality and price of the mineral they require. The pressure placed on the Government of Victoria is so great for the acceptance of local tenders in which neither quality nor price is regarded as the first consideration, but the place of production is mainly kept in view, that no excuse should be given our present customers over the Murray to think that it is more profitable to them to use the coal won within the bounds of their colony. There is reason to believe that at no distant date our Victorian friends will consider it good policy to use the best and most economical fuel without inquiring as to its place of origin; and when this is accomplished Newcastle colliery proprietors need not be afraid of results. It is welcome to observe that all the other Australian colonies have been better customers to us during last year than in that immediately preceding, the gold-mining boom in the western part of the continent being the moving cause of the greater demand for coal for bunkering and locomotive purposes.

The largest increase is that for Chili, to which 124,000 tons were sent more than the export for the previous year, while the increase is also greatly above the quantity for 1892. This fact shows that the effects of the late war are passing away, and that industry and commerce are reviving. The export to that country is now little short of the quantity sent to the United States, which took from us in the same period no less than 272,000 tons. This is an increase of 63,000 tons upon the year preceding, and also eclipses the results for 1892. San Francisco has been such a good customer in the past that every effort should be exerted to conserve a business which coincides with local shipping movements and which fits in so well with the round trade of the world. The abolition of the import duty on coal under the new tariff arrangements of the States should have a material effect on the import, and as California has not been richly endowed with coal deposits, a regular and abundant supply from Australia is as profitable for the people within the Golden Gate as for those who furnish it on this side. Other portions of America which show an improvement over last year are Peru, Panama, and Mexico; while even distant Kamschatka not unreasonably wants more warmth within its ice-bound limits. It is gratifying to note that places like the Philippines and Singapore, which might be considered within the range of supplies from Japan, have well maintained their orders during the period under notice.

Export of Coke for the years 1893-4:—

Countries.	1893.	1894.	Increase.	Decrease.
	Tons.	Tons.	Tons.	Tons.
Victoria	49	97½	48½	...
Tasmania
New Zealand	81	85	4	...
New Caledonia	747	747
South Australia	750	5	...	745
Other Countries	35	35	...
Total	1,627	222½	87½	1,492

From this return it will be seen that there has been in the year under notice a large decrease in the Coke exported.

The following notices were received during the year of new mines in course of development; mining operations resumed; name of colliery changed; also appointment and resignation of colliery managers.

New Anvil Creek Colliery, near Greta.

Mr. W. Hodges, on the 10th January, notified that a party of twelve men had undertaken to work the New Anvil Creek Colliery on tribute, also had appointed him to act as their agent or manager.

Oceanic Steam Coal Co., Fassifern.

Mr. J. M. Rooke, on the 24th January, notified on behalf of himself and the Messrs. Donaldson, that they were working the late Northumberland Coal Co.'s property under the name of "Oceanic Steam Coal Company," and that Mr. W. D. Bedlington is the manager.

Font Hill, near Farley.

Mr. James Ralston, on 20th February, notified having commenced looking for the Greta seam of coal at Font Hill, near Farley.

Louis

Louis Vale, near East Maitland.

Mr. Robert Taylor, on 29th March, notified having purchased W. Shelton's right in the colliery known as "Rathluba South," and in future the mine will be known as Louis Vale Colliery.

Northumberland Colliery, Fassifern.

Messrs. A. L. and J. Donaldson, on 11th April, notified that the name of the "Oceanic Colliery," Fassifern, will be known from date hereof as the Northumberland Colliery.

Quarry Colliery, Waratah.

Mr. Thomas Hennay, on 19th April, notified having commenced to open a tunnel to work coal near the old Government quarry. The name of the mine, "Quarry Colliery."

Coal Point, Toronto.

Mr. Roachford, on 30th June, notified that he had begun to mine coal at Coal Point.

Kensington Estate, East Maitland.

Mr. James Ralston, on 5th July, notified having commenced to take the water and dirt out of an old shaft on the Kensington Estate, situated near the Northern line and East Maitland Reserve.

Landsale Colliery, Lambton.

Mr. Ed. Charlton, on 12th July, on behalf of himself and N. Elliott, notified having started a Landsale Colliery, near the Government quarry, called "Bayley's Reward Colliery."

Coal Tunnel, Waratah.

Mr. Ed. Wright, on 30th July, notified having opened a tunnel to get coal at Joseph Ellis's quarry.

Sinking Shaft, Waratah.

Mr. James Ruttlely, on 20th August, notified that he had started to sink a shaft in search of coal near the Waratah quarry.

Cullen Bullen Colliery.

Mr. L. B. Blackwell, on 29th August, notified that the duties of manager of this mine will be performed by Mr. Robt. Hutchinson, during his absence.

Vale Colliery, Lithgow.

Mr. L. B. Blackwell, on 6th September, notified having undertaken the management of the Vale Colliery.

New South Wales Shale and Oil Company, Hartley.

Mr. W. Hall, on behalf of the above Company, on 26th September, notified having commenced to pump the water out of the tunnels with a view of resuming mining operations.

Landsale Colliery, Waratah Commonage.

Mr. John Bell, on behalf of himself and W. Wolfe, on 23rd October, notified having commenced to work coal out of the little shaft near Liddles.

Greta Colliery.

Mr. W. Rennie, on 2nd November, notified having taken charge of the Greta Colliery.

Burwood Extended.

Mr. W. Rennie, on 2nd November, notified that his son, Wilson Rennie, succeeds him in the management of the above mine.

Oak Vale Colliery, Nundah.

Mr. Richard Mason, on 3rd December, notified the restarting of the above colliery.

Hillside Colliery, Burwood.

Mr. James Ruttlely, on 29th December, notified the re-opening of the above mine.

COAL-MINES ABANDONED OR OPERATIONS SUSPENDED, ETC., DURING THE YEAR 1894.

Coal Point, Toronto.

On 12th February, Mr. Jse. Rothery notified that the colliery at Coal Point is now idle and likely to be for a few months.

North Co-operative, Plattsburgh.

On 20th February, Mr Johnson notified that the colliery (North Co-operative) which he worked up to 31st December, 1893, has been closed from that date, not to work again.

South Stockton, Fennell Bay, Lake Macquarie.

On 5th March, Mr. W. G. Faul, for E. Faul and Son, notified that he had abandoned temporarily the abovenamed colliery.

Thornton

Thornton Colliery, near Hexham.

On 14th July Mr. Henry Evans notified having ceased operations at the Thornton Colliery, and had taken out all rails and pumps.

West Burwood Colliery, Merewether.

On 10th September Mr. W. H. Humphreys notified that he was drawing rails, &c., from the above mine with the intention of closing same.

Hillside Colliery, Burwood.

On 4th November Mr. James Ruttle notified that he was closing the Hillside mine down for a time until trade improved.

Abram Colliery (Manager resigned).

On 23rd May Mr. James Ralston notified that he had severed his connection with the mine, and had no charge whatsoever with the colliery.

Abram Colliery.

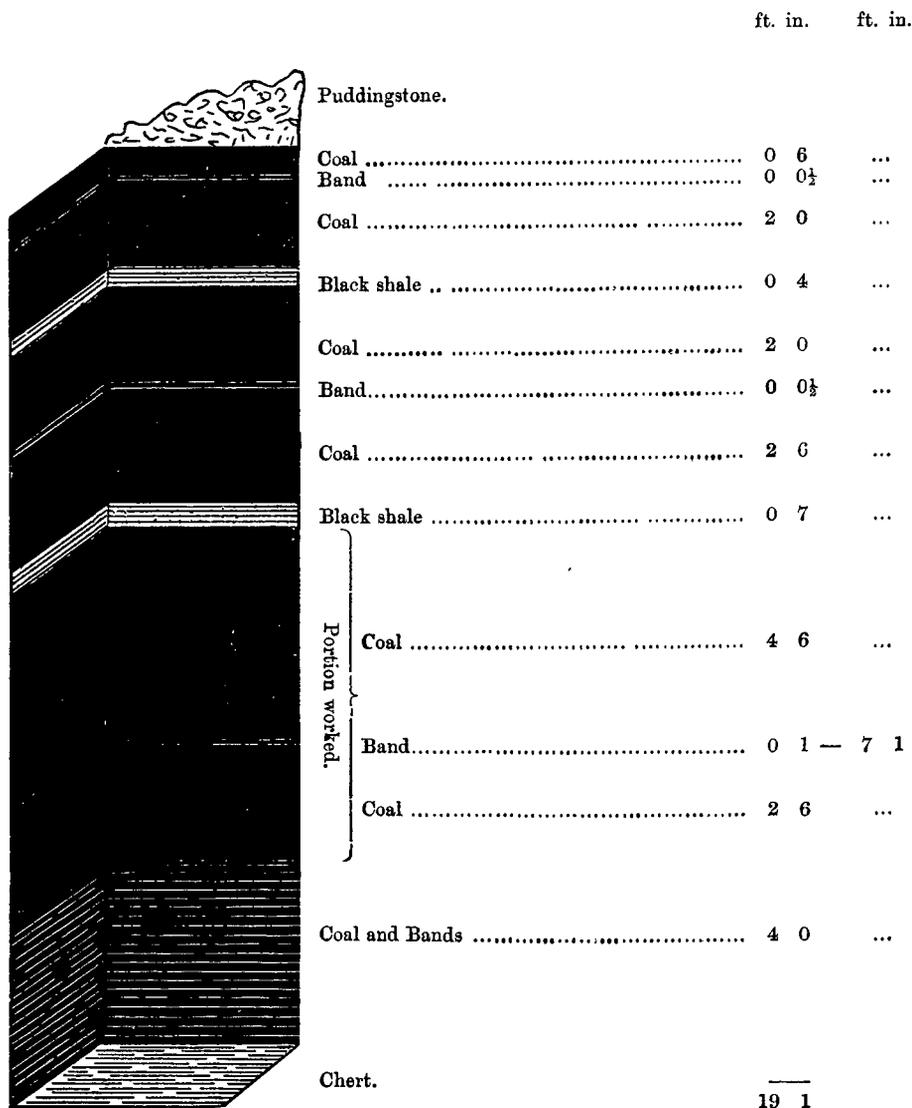

On 21st November Mr. James Ralston notified that he was removing all machinery and screens from the colliery, and the mine and tunnels are entirely abandoned.

Kensington Coal Company, East Maitland.

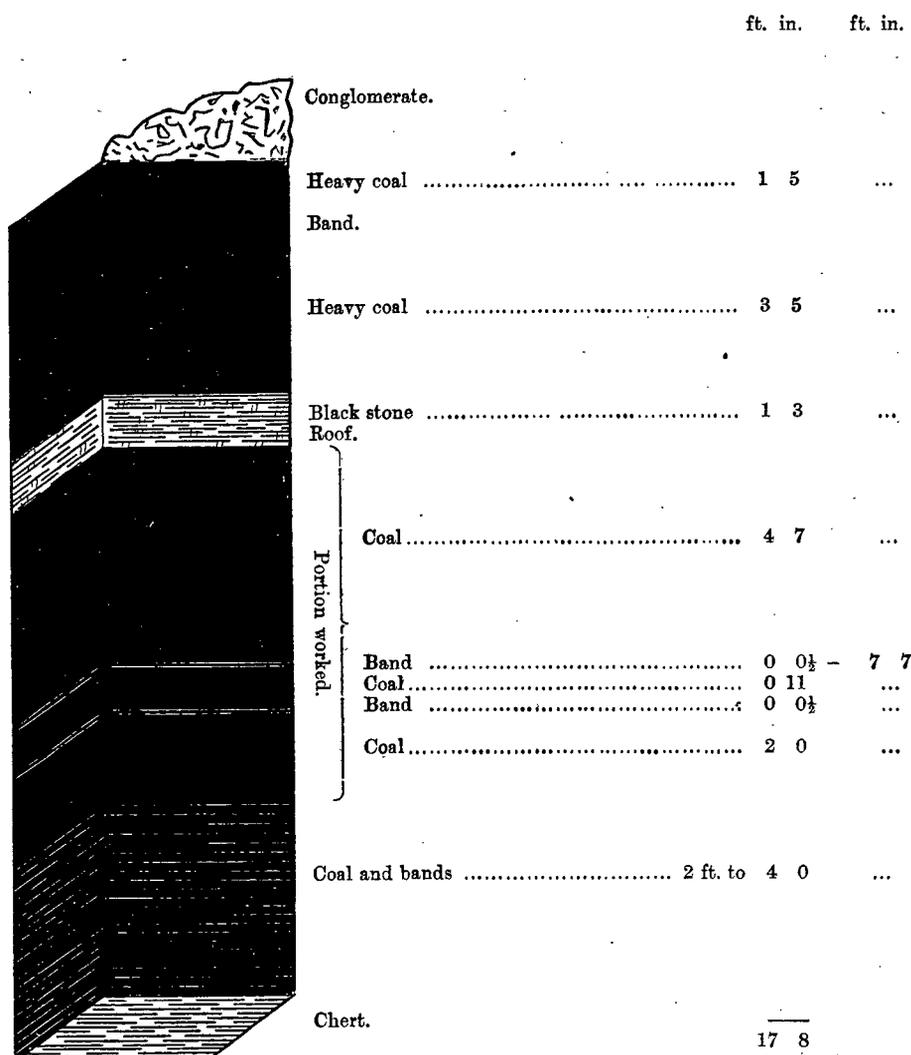

On 21st November Mr. James Ralston notified that he had ceased to act as manager for the Kensington Coal Company.

Ferndale Colliery.

On 21st December Mr. John Powell notified that, owing to the Bank taking possession of the colliery, he had ceased to be the manager, and was not therefore responsible as having charge of the work

The above is a section of the coal seam lately worked at South Stockton Colliery, Fennel Bay, Lake Macquarie. The coal is very inferior, and is the second seam below the Great Northern or Burwood coal seam.

The above is a section of a coal seam now being worked at the South Hetton Colliery, at Coal Point, Lake Macquarie. The coal is very inferior, and is the second seam below the Great Northern or Burwood coal seam.

PROSECUTIONS AND COMPLAINTS.

Proceedings where necessary have been taken to enforce the provisions of the Act, and reports furnished thereon and complaints of deficient ventilation and non-compliance with the "Coal Mines Regulation Act" have, as usual, been inquired into, and reports made thereon.

COAL UNLAWFULLY TAKEN FROM CROWN LANDS.

Reports and surveys have been made on coal unlawfully taken from Crown lands by the Vale Colliery Company, Lithgow Valley, and the Ferndale Coal Company, near Newcastle.

AUTHORITIES TO MINE AND MINERAL LEASES.

I have also visited numerous localities for the purpose of reporting upon applications to mine coal on Crown land, reserves, &c., work done thereon, and number of men employed; also checked and reported on royalties owing for coal gotten from Crown land by different colliery companies.

In conclusion, I have only to add that there were 94 coal and 6 boghead minerals (petroleum oil cannel coal) mines under inspection, and that notices have been received of 11 new mines opening out, or in course of development, re-opening, sinking, &c., and of 3 having suspended operations, and 4 of abandonment. Also that the year's return show an increase in the coal trade, for 1894, in the Newcastle district, of 401,662 tons of round and small coal raised, and £2,956 in value; in the south and south-western districts a decrease of 17,405 tons of round and small coal raised, and of £21,326 in value; and in the western districts an increase of 9,491 tons, and of £2,221 in value.

I have, &c.,

JOHN MACKENZIE, F.G.S.,

Examiner of Coal-fields.

THE Half-yearly Report on the Collieries in the Northern District of New South Wales, and Accidents investigated by the Inspector of Collieries during the six months ending June 30, 1894.

The Examiner of Coal-fields, Sydney,—
Sir,

Newcastle, 28 July, 1894.

Pursuant to the provisions of section 26 in the Coal Mines Regulation Act 1876, we have the honor to transmit to you this our six monthly report on the state of the various collieries in the Northern District for the half-year ending 30 June, 1894.

The total number of collieries under inspection in the Northern District during the half-year is 67.

Two collieries have been added, viz., Font Hill and Quarry Colliery.

Seven collieries have been abandoned, viz., Killingworth, North Stockton, Teralba, Dunkirk, Dog and Rat, Sunderland and Inganee.

No work has been done at the following eleven collieries, viz., Awaba, Shamrock Hill, Young Wallsend, Swansea, Richmond Vale, Stanford Greta, Maitland, Leconfield, Fern Valley, Richmond Hill, and Nicholais Tunnel.

PRESENT STATE OF MINES.

A. A. Co.'s No. 2 Colliery.—About 140 men, &c., are employed in this mine during the day shift, and nearly the same number are employed on the night shift. The total amount of air circulating in the mine is about 80,000 cubic feet per minute. The workings are divided into five separate and distinct districts, none of which are overcrowded. The Act in other respects also is complied with.

A. A. Co.'s New Winning Colliery.—There are about 290 men, &c., employed in this colliery during the day, and the total quantity of air circulating in the mine is about 100,000 cubic feet per minute. The face workings are divided into six separate and distinct districts, none of which are overcrowded. The provisions of the Act in other respects also are complied with.

Newcastle Wallsend Colliery.—There are about 730 men, &c., employed in this mine during the day. The quantity of air circulating in the mine is about 160,000 cubic feet per minute. The face workings are divided into eleven separate and distinct districts, none of which are overcrowded. The Act in other respects also is complied with.

Newcastle Co.'s Colliery.—About 480 men, &c., are employed in this mine during the day, and are supplied with about 160,000 cubic feet of air per minute. There are eight separate and distinct districts, and none of them are overcrowded. The Act in other respects also is complied with.

Lambton Colliery.—There are about 360 men, &c., employed in this mine during the day. The quantity of air circulating in the mine is about 80,000 cubic feet per minute. The face workings are divided into seven separate and distinct districts, none of which are overcrowded. The provisions of the Act are complied with.

Co-operative Colliery.—About 120 men, &c., are employed in this mine during the day, and supplied with about 20,000 cubic feet of air per minute, in two separate and distinct districts. The Act is complied with.

Burwood Colliery.—There are about 126 men, &c., employed in this mine during the day, and supplied with about 28,000 cubic feet of air per minute. The face workings are divided into two separate and distinct districts, neither of which are overcrowded. The provisions of the Act in other respects also are complied with.

Stockton Colliery.—About 170 men, &c., are employed in this mine during the day. The quantity of air circulating in the mine is about 20,000 cubic feet per minute in three separate and distinct districts. The Act is complied with in regard to ventilation.

Wickham and Bullock Island Colliery.—There are about 270 men, &c., employed in this mine during the day, and supplied with about 50,000 cubic feet of air per minute. The face workings are divided into eight separate and distinct districts, none of which are overcrowded. The provisions of the Act are complied with.

Hetton Colliery.—There are about 200 men, &c., employed in this mine, and supplied with about 50,000 cubic feet of air per minute, in five separate and distinct districts. The provisions of the Act in other respects also are complied with.

Ferndale Colliery.—About 60 men, &c., are employed in this mine during the day, and supplied with about 10,000 cubic feet of air per minute. The provisions of the Act are complied with.

Brown's Colliery.—There are about 300 men, &c., employed in this mine during the day. The quantity of air circulating in the mine is about 50,000 cubic feet per minute. The face workings are divided into six separate and distinct districts, none of which are overcrowded. The provisions of the Act in other respects also are complied with.

Duckenfield Colliery.—About 290 men, &c., are employed in this mine during the day, and supplied with about 51,000 cubic feet of air per minute. There are four separate and distinct districts, none of which are overcrowded. The provisions of the Act are complied with in other respects also.

South Waratah Colliery.—This mine has been idle during the whole six months, with the exception of a staff of men who have been constantly engaged keeping the workings, &c., in repair, and getting coal for the steam boilers at the surface. Three men are at present employed below-ground. The ventilation is good, and the provisions of the Act fully complied with.

New Lambton Pit.—About 100 men, &c., are employed in this mine during the day, and supplied with about 20,000 cubic feet of air per minute. The districts are in accordance with the Act. The provisions of the Act in other respects also are complied with.

Ebbw Vale Colliery.—About 40 men, &c., are employed in this mine, and supplied with about 12,000 cubic feet of air per minute. The Act in other respects also is complied with.

West Burwood Colliery.—About 12 men, &c., are employed in this mine, and supplied with about 6,000 cubic feet of air per minute. The Act in other respects also is complied with.

Hillside Colliery, Merewether.—About 15 men, &c., are employed in this mine. The ventilation is satisfactory, and the Act complied with.

East Lambton Colliery, Adamstown.—About 32 men, &c., are employed in this mine, and supplied with about 11,000 cubic feet of air per minute. The Act is complied with in other respects also.

Rotunda

Rotunda Colliery, North Lambton.—All work at this mine is at present temporarily suspended.

Electric Colliery, North Lambton.—Only 4 men employed in this mine. The ventilation is satisfactory, and the Act complied with.

Rose Hill Colliery, North Lambton.—There are 6 men employed in this mine. The ventilation is satisfactory, and the Act complied with.

Liddle's Colliery, Waratah.—There are 3 men employed in this mine. The ventilation is satisfactory, and the Act complied with.

Quarry Colliery, Waratah.—Only 2 men employed in this mine. Ventilation good, and the Act complied with.

Ray's Colliery, Lambton.—One man occasionally employed, getting house coal. No cause for complaint.

Green's Colliery, Grovestown.—One man occasionally employed, getting house coal. No cause for complaint.

Sunlight Colliery, Grovestown.—One man occasionally employed, getting house coal. No cause for complaint.

Beaside Colliery, Grovestown.—Only 1 man occasionally employed, getting house coal. No cause for complaint.

Elernore Vale Colliery, Wallsend.—About 14 men, &c., are employed in this mine. The ventilation is satisfactory, and the provisions of the Act complied with.

Summerhill Colliery, Plattsburg.—Six men are employed in this mine, and supplied with 3,000 cubic feet of air per minute. The provisions of the Act in other respects also are complied with.

Maryland Colliery, Plattsburg.—About 20 men &c., are employed in this mine, and supplied with about 5,000 cubic feet of air per minute. The provisions of the Act are complied with.

North Co-operative Colliery (Plattsburg).—All work at this mine is at present temporarily suspended.

Dudley Colliery, Charlestown.—All work at this mine is at present temporarily suspended.

Durham Colliery.—At the present time about 20 men are employed in connection with this colliery. Everything in and about the mine appears to be in good order and condition and the provisions of the Act are fully complied with.

Burwood Extended Colliery.—Only 6 persons at present employed in connection with this colliery, keeping the workings in repair, getting coal for the steam-boilers, drawing water, &c. Everything on surface and below ground is in good order, and the Act is fully complied with.

Toronto Colliery, Lake Macquarie.—About 6 men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Morrisett Colliery, Lake Macquarie.—Four men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Wallarah Colliery, Catherine Hill Bay.—There are about 150 men, &c., employed in this mine, and supplied with about 30,000 cubic feet of air per minute in two separate and distinct districts. The provisions of the Act in other respects also are complied with.

Northumberland Colliery, Fassifern.—Four men are at present employed in this mine. The ventilation is satisfactory, and the Act complied with.

South Stockton Colliery, Teralba.—This colliery has been under inspection during the half year, but all work is at present suspended.

Pacific Colliery, Teralba.—There are about 120 men, &c., employed in this mine during the day, and supplied with about 40,000 cubic feet of air per minute. The provisions of the Act in other respects also are complied with.

Gartlee Colliery, Teralba.—About 35 men, &c., are employed in this mine, and supplied with about 8,000 cubic feet of air per minute. The provisions of the Act are complied with.

South Wallsend Colliery, Carraiff.—There are about 60 men, &c., employed in this mine. The ventilation is satisfactory, and the Act complied with.

West Wallsend Colliery.—There are about 100 men, &c., employed in this mine, supplied with about 75,400 cubic feet of air per minute. The face workings are divided into five separate and distinct districts. The Act in other respects also is complied with.

Seaham Colliery.—There are about 250 men, &c., employed in this mine, and supplied with about 45,000 cubic feet of air per minute. The workings are divided into three separate and distinct districts, none of which are overcrowded. The Act in other respects also is complied with.

Thornton Colliery, Thornton.—Work at this mine has been at a standstill for about two months, and at present there are only 2 men on the ground. The underground workings are in a good state of repair, and ready for full operations at any time. The Act is fully complied with.

Thornley Colliery, East Maitland.—Eight men are employed in this mine. The ventilation is good, and the provisions of the Act complied with.

Bloomfield Colliery, East Maitland.—About 8 men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Marshall's Colliery, East Maitland.—Two men are employed in this mine. The ventilation is good, and the Act complied with.

Louis Vale (formerly South Rathluba) Colliery, East Maitland.—Four men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

East Greta Colliery, West Maitland.—About 60 men, &c., are employed in this mine. The ventilation is satisfactory. This colliery is working a coal seam lying at an angle of about 45 degrees. A main tunnel is used for hauling the coal from the workings, and the cage is constructed to carry four skips of coal on one deck. The coal is lifted from two landings. On the surface two screens are in operation. Powerful hauling engines and two boilers have been erected. Electric signals fitted up, and everything of a most substantial character in view of a large output. The provisions of the Act in every respect are fully complied with.

Abram Colliery, Farley.—This colliery has been under inspection during the half-year, but all work is at present suspended.

Font Hill Colliery, Farley.—Two men are employed in this mine, driving an adit. The ventilation is satisfactory, and the Act complied with.

Pioneer Colliery, Farley.—Three men are employed in this mine. The ventilation is good, and the Act complied with.

Denton

Denton Park Colliery, Farley.—About 15 men, &c., are employed in the two adits at this mine. The ventilation is satisfactory, and the provisions of the Act complied with.

Greta Colliery, Greta.—There has been no work at this colliery during the past six months, except a staff of men employed in pumping water and getting coal for the steam-boilers on the surface. Two or three men are employed underground, and the ventilation is satisfactory. The Act is complied with.

New Anvil Creek Colliery, Greta.—About 25 men, &c., are employed in this mine, and supplied with about 9,000 cubic feet of air per minute. The provisions of the Act are complied with.

Ellesmere Colliery, Singleton.—This colliery has been under inspection during a portion of the half-year, but all work is at present suspended.

New Park Colliery, Singleton.—About 15 men, &c., are employed in this mine, and supplied with about 6,000 cubic feet of air per minute. The Act is complied with.

Elliott's Colliery, Singleton.—Two men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Rosedale Colliery, Singleton.—Five men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Dulwich Colliery, Singleton.—Three men are employed in this mine. The ventilation is good, and the Act complied with.

Oakvale Colliery, Singleton.—This colliery has been under inspection during a portion of the half-year, but all work is at present suspended.

Kayuga Colliery, Muswellbrook.—Only 2 men are employed at this mine, getting household coal. The ventilation is good, and the Act fully complied with.

Centenary Colliery, Curlewis.—About 15 men, &c., are employed in this mine, and supplied with about 6,500 cubic feet of air per minute. The Act in other respects also is complied with.

Gladstone Colliery, Gunnedah.—There are 9 men, &c., employed in this mine. The ventilation is satisfactory, and the Act in other respects also is complied with.

Morley Colliery, Gunnedah.—There are 3 men employed in this mine. The ventilation is good, and the other provisions of the Act fully carried out.

ACCIDENTS IN MINES.

The accidents investigated by us in the Northern District during the six months ending June 30th, 1894, are 24 in number. Of this number 15 were fully reported upon at the time, and 9 were found to be of a minor character, and full reports were not written thereon.

Of the 15 accidents in the annexed tabulated list, 2 proved fatal, 1 from explosion of shot and 1 from fall of coal. Of the non-fatal accidents, 11 were caused by falls of coal, 1 by fall of stone, and 1 by empty skips.

The first fatal accident occurred to a miner named Robert Donaldson, by the explosion of a shot, at Stockton Colliery, on March 10th. The District Coroner, G. C. Martin, Esq., held an inquest on the body of deceased, at Stockton, on the same day. The inquest was attended by Inspector Humble, who heard all the evidence, and fully agrees with the verdict of "accidental death," as returned by the jury.

The second occurred to a miner named Andrew Ritchie, by a fall of coal, at Brown's No. 2 Colliery, on June 14th. The District Coroner, G. C. Martin, Esq., held an inquest on the body of deceased at Minmi on the following day. The inquest was attended by Inspector Humble, who heard all the evidence, and fully agrees with the verdict of "accidental death," as returned by the jury.

The first of the non-fatal accidents occurred to a hooker-on named Nicholas Kearns, at Pacific Colliery, on January 8th, resulting in fracture of leg and dislocation of ankle by empty skips.

The second occurred to a shiftman named Joseph Hodgett, at Hetton Colliery, on February 2nd, by a fall of coal, resulting in injury to spine.

The third occurred to a miner named William Thacker, at Newcastle Wallsend Colliery, on February 26th, resulting in severe injury to arm, by fall of coal.

The fourth occurred to a miner named William Gerard, at West Burwood Colliery, on March 9th, by fall of coal, resulting in fracture of leg.

The fifth occurred to a miner named Ephraim Hargreaves, at Seaham Colliery, on March 27th, resulting in severe internal injuries, by fall of coal.

The sixth occurred to a miner named James McWilliams, at Seaham Colliery, on March 28th, by a fall of coal, resulting in injury to spine.

The seventh occurred to a miner named James Taylor, at Brown's Colliery, on April 3rd, resulting in injury to pelvis, by fall of coal.

The eighth occurred to a miner named George Lott, at Hetton Colliery, on April 3rd, by a fall of coal, resulting in fracture of thigh.

The ninth occurred to a miner named Ernest Grimm, at Stockton Colliery, on April 9th, resulting in fracture of leg and ribs, by fall of coal.

The tenth occurred to a miner named John Charlesworth, at Stockton Colliery, on April 9th, by a fall of coal, resulting in severe abdominal injuries.

The eleventh occurred to a miner named Edward Percy, at Brown's No. 4 Colliery, on April 25th, resulting in injury to head and hip, by fall of stone.

The twelfth occurred to a miner named William Bell, at Newcastle Wallsend Colliery, on April 30th, by a fall of coal, resulting in fracture of leg.

The thirteenth occurred to a miner named Thomas Wolfe, sen., at Lambton Colliery, on April 30th, resulting in severe injury to foot (since amputated), by fall of coal.

ACCIDENT ON SURFACE.

One non-fatal accident happened to a blacksmith named Robinson Walters, at Seaham Colliery on May 28th, resulting in fracture of leg (afterwards amputated), by bursting of piece of machinery.

The tabulated list of accidents is hereto appended.

We have, &c.,

JOHN DIXON,
THOS. L. BATES,
WILLIAM HUMBLE,

Inspectors of Collieries.

THE Half-yearly Report on the Collieries in the Northern District of New South Wales and accidents investigated by the Inspector of Collieries during the six months ending 31 December, 1894.

The Examiner of Coal-fields, Sydney,—
Sir,

Newcastle, 23 January, 1895.

Pursuant to the provisions of section 26 in the "Coal Mine Regulation Act 1876," we have the honor to transmit to you this our six monthly report on the state of the various collieries in the Northern District for the half-year ending 31 December, 1894.

The total number of collieries under inspection in the Northern District during the half-year is 68.

Four collieries have been added, viz., Rushton's, Wright's, Bayley's Reward, Kensington.

Three collieries have been abandoned, viz., Abram, Thornton, and South Stockton.

No work has been done at the following eleven collieries, viz., Awaba, Shamrock Hill, Young Wallsend, Swansea, Richmond Vale, Stanford Greta, Maitland, Leonfield, Fern Valley, Richmond Hill, and Nicholais Tunnel.

PRESENT STATE OF MINES.

A. A. Co.'s No. 2 Colliery.—About 120 men, &c., are employed in this mine during the day shift and supplied with about 70,000 cubic feet of air per minute. There are four separate and distinct districts, none of which are overcrowded. The provisions of the Act are fully complied with.

A. A. Co.'s New Winning Colliery.—About 15 men, &c., are employed in this mine. The ventilation is good, and the provisions of the Act fully complied with.

Newcastle Wallsend Colliery.—About 710 men, &c., are employed in this mine during the day, and supplied with about 160,000 cubic feet of air per minute. The face workings are divided into ten separate and distinct districts, none of which are overcrowded. The Act in other respects also is complied with.

Newcastle Co.'s Colliery.—About 550 men, &c., are employed in this mine during the day, and supplied with about 140,000 cubic feet of air per minute. The face workings are divided into ten separate and distinct districts, none of which are overcrowded. The provisions of the Act in other respects also are complied with.

Lambton Colliery.—There are about 360 men, &c., employed in this mine during the day, and supplied with about 80,000 cubic feet of air per minute. The face workings are divided into nine separate and distinct districts, none of which are overcrowded. The provisions of the Act are complied with.

Co-operative Colliery.—About 180 men, &c., are employed in this mine during the day, and supplied with about 25,000 cubic feet of air per minute. The face workings are divided into three separate and distinct districts. The Act in other respects also is complied with.

Burwood Colliery.—About 174 men, &c., are employed in this mine during the day, and supplied with about 21,000 cubic feet of air per minute. The workings are divided into four separate and distinct districts, none of which are overcrowded. The Act in other respects also is complied with.

Stockton Colliery.—About 170 men, &c., are employed in this mine during the day. The quantity of air circulating in the mine is about 25,000 cubic feet per minute. The workings are divided into three separate and distinct districts. The Act is complied with in regard to ventilation.

Wickham and Bullock Island Colliery.—There are about 220 men, &c., employed in this mine during the day, and supplied with about 40,000 cubic feet of air per minute. The face workings are divided into eight separate and distinct districts, none of which are overcrowded. The provisions of the Act in other respects also are complied with.

Hetton Colliery.—There are about 250 men, &c., employed in this mine. The quantity of air circulating in the mine is about 55,000 cubic feet per minute, in six separate and distinct districts. The provisions of the Act are complied with.

Ferndale Colliery.—This colliery has been under inspection during a portion of the half-year, but all work is at present suspended.

Brown's

Brown's Colliery.—About 320 men, &c., are employed in this mine during the day, and supplied with about 57,000 cubic feet of air per minute. The face workings are divided into six separate and distinct districts, none of which are overcrowded. The provisions of the Act in other respects also are complied with.

Duckenfield Colliery.—About 330 men, &c., are employed in this mine during the day. The quantity of air circulating through the mine is about 45,000 cubic feet per minute. The face workings are divided into five separate and distinct districts, none of which are overcrowded. The provisions of the Act are complied with.

South Waratah Colliery.—About 140 men, &c., are employed in this mine on the day shift, and supplied with about 50,000 cubic feet of air per minute. There are two distinct districts or splits, neither of which is overcrowded. The provisions of the Act are fully complied with in other respects also.

New Lambton Colliery.—About 100 men, &c., are employed in this mine during the day, and supplied with about 26,000 cubic feet of air per minute. The face workings are divided into two separate and distinct districts, neither of which is overcrowded. The provisions of the Act are fully complied with.

Ebbw Vale Colliery.—About 38 men, &c., are employed in this mine during the day, and supplied with about 12,000 cubic feet of air per minute. The Act in other respects also is complied with.

East Lambton Colliery.—Only 4 men employed in this mine. The ventilation is satisfactory, and the Act complied with.

West Burwood Colliery.—This mine has been under inspection during a portion of the half-year, but all work is at present suspended.

Hillside Colliery, Merewether.—This mine has been under inspection during the greater portion of the half-year, when 7 men were employed, and the provisions of the Act fully carried out. Work at the present time is suspended, but the mine will shortly be re-opened.

Rotunda Colliery.—All work at this mine is at present suspended.

Electric Colliery, North Lambton.—Only 3 men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Rose Hill Colliery, North Lambton.—There are 6 men, &c., employed in this mine. The ventilation is satisfactory, and the Act complied with.

Bayley's Reward Colliery, Lambton.—There are 2 men employed in this mine. The ventilation is satisfactory, and the provisions of the Act carried out.

Ray's Colliery, Lambton.—Only 1 man occasionally employed getting house coal. The Act is complied with.

Quarry Colliery, Waratah.—There are two distinct adits, and 2 men are employed in each. The provisions of the Act are complied with.

Wright's Colliery, Waratah.—Only 1 man employed in this mine. The ventilation is good, and the Act complied with.

Rushton's Colliery, Waratah.—Only 2 men employed in this mine. The ventilation is satisfactory, and the Act complied with.

Liddle's Colliery, Waratah.—There are 4 men employed in this mine. The ventilation is good, and the provisions of the Act complied with.

Beside Colliery, Grovestown.—One man occasionally employed getting house coal. The Act is complied with.

Green's Colliery, Grovestown.—One man occasionally employed getting house coal. The Act is complied with.

Sunlight Colliery, Grovestown.—One man occasionally employed getting house coal. The Act is complied with.

Elsemore Vale Colliery, Wallsend.—About 16 men, &c., are employed in this mine. The ventilation is satisfactory, and the provisions of the Act complied with.

Summerhill Colliery, Plattsburg.—All work at this mine is at present suspended.

Maryland Colliery, Plattsburg.—About 26 men, &c., are employed in this mine, and supplied with about 5,000 cubic feet of air per minute. The provisions of the Act are complied with.

North Co-operative Colliery, Plattsburg.—All work at this mine is at present suspended.

Dudley Colliery, Charlestown.—All work at this mine is at present suspended.

Durham Colliery.—Only 2 men at present employed keeping the mine free from water. Everything in good order, and the provisions of the Act fully complied with.

Burwood Extended Colliery.—There are only 4 men employed in this colliery at the present time getting coal for the steam-boilers, keeping the workings in repair and free from accumulation of water. Everything is in good order and condition, and the Act is fully complied with.

South Hetton Colliery, formerly Toronto Colliery, Lake Macquarie.—There are 5 men employed in this mine. The ventilation is satisfactory, and the Act complied with.

Morrisett Colliery, Lake Macquarie.—There are 4 men employed in this mine. The ventilation is good, and the Act complied with.

Wallarah Colliery, Catherine Hill Bay.—About 120 men, &c., are employed in this mine, and supplied with about 20,000 cubic feet of air per minute. The provisions of the Act are fully complied with.

Northumberland Colliery, Fassifern.—Four men are at present employed in this mine. The ventilation is satisfactory, and the Act complied with.

Pacific Colliery, Teralba.—There are about 130 men, &c., employed in this mine during the day, and supplied with about 40,000 cubic feet of air per minute. The workings are divided into 6 separate and distinct districts. The provisions of the Act are complied with.

Gartlee Colliery, Teralba.—About 40 men, &c., are employed in this mine during the day, and supplied with about 9,000 cubic feet of air per minute. The provisions of the Act are complied with.

South Wallsend Colliery, Cardiff.—There are about 40 men employed in this mine. The ventilation is good, and the provisions of the Act complied with.

West Wallsend Colliery.—About 130 men, &c., are employed in this mine, and supplied with about 40,000 cubic feet of air per minute. The face workings are divided into 5 separate and distinct districts. The Act in other respects also is complied with.

Seaham Colliery.—There are about 260 men, &c., employed in this mine, and supplied with about 58,000 cubic feet of air per minute. The face workings are divided into 4 separate and distinct districts. The Act is complied with.

Thornley

Thornley Colliery, East Maitland.—Eight men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Bloomfield Colliery, East Maitland.—Eight men, &c., are employed in this mine. The ventilation is good, and the provisions of the Act complied with.

Marshall's Colliery, East Maitland.—Two men are employed. The ventilation is satisfactory, and the Act complied with.

Louis Vale Colliery, East Maitland.—Two men are employed in this mine. The ventilation is good, and the provisions of the Act complied with.

Kensington Colliery, East Maitland.—Five men are engaged in sinking operations at this colliery. The provisions of the Act are complied with.

East Greta Colliery, West Maitland.—About 100 men, &c., are employed in the two shifts at this colliery. The ventilation is satisfactory, and the provisions of the Act fully complied with.

Font Hill Colliery, Farley.—Two men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Pioneer Colliery, Farley.—This mine has been under inspection during a portion of the half-year, but all work is at present suspended.

Denton Park Colliery, Farley.—There are 10 men employed in this mine. The ventilation is satisfactory, and the provisions of the Act complied with.

Greta Colliery, Greta.—There are 145 men, &c., employed in this mine during the day, and supplied with about 50,000 cubic feet of air per minute. The face workings are divided into four separate and distinct districts. The provisions of the Act are complied with.

New Anvil Creek Colliery, Greta.—About 23 men, &c., are employed in this mine, and supplied with about 9,000 cubic feet of air per minute. The Act is complied with.

Ellesmere Colliery, Singleton.—All work at this colliery is at present suspended.

New Park Colliery, Singleton.—About 21 men, &c., are employed in this mine, and supplied with about 8,000 cubic feet of air per minute. The Act is complied with.

Elliott's Colliery, Singleton.—Two men are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Rosedale Colliery, Singleton.—Six men are employed in this mine. The ventilation is good, and the Act complied with.

Dulwich Colliery, Singleton.—Three men are employed in this mine. The ventilation is satisfactory, and the provisions of the Act complied with.

Oakvale Colliery, Singleton.—All work at this colliery is at present suspended, but operations will shortly be resumed.

Kayuga Colliery, Muswellbrook.—Only 1 man employed in this mine. The ventilation is satisfactory, and the Act complied with.

Centenary Colliery, Curlewis.—There are 27 men, &c., employed in this mine during the day, and supplied with about 8,000 cubic feet of air per minute in one current. The provisions of the Act are fully complied with.

Gladstone Colliery, Gunnedah.—There are 6 men, &c., employed in this mine during the day. The ventilation is satisfactory, and the Act complied with.

Morley Colliery, Gunnedah.—Only 2 men are employed in this mine at the present time. Ventilation good, and other provisions of the Act also complied with.

ACCIDENTS IN MINES.

The accidents investigated by us in the Northern District, during the six months ending December 31st, 1894, are 27 in number. Of this number 17 were fully reported upon at the time, and 10 were found to be of a minor character, and full reports were not written thereon.

Of the 17 accidents in the annexed tabulated list, 4 proved fatal—2 from injuries on incline, 1 by fall of coal, and 1 by fall of stone. Of the non-fatal accidents, 9 were caused by fall of coal, 2 by skips, 1 on engine plane, and 1 by ignition of powder.

The first fatal accident occurred to a miner named Thomas Brennan, by a fall of coal, at Seaham Colliery, on August 6th, terminating fatally on August 13th. The District Coroner, G. C. Martin, Esq., held an inquest on the body of deceased, at Wallsend, on August 14th. The inquest was attended by Inspector Humble, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

The second occurred to a wheeler named John Gelder, by falling down an incline at East Greta Colliery, on September 1st. The District Coroner, J. N. Brooks, Esq., P.M., held an inquest on the body of deceased, at West Maitland, on September 3rd. The inquest was attended by Inspector Bates, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

The third occurred to a stoneman named David Davis, by a fall of stone, at Stockton Colliery, on October 30th, terminating fatally on November 1st. The District Coroner, G. C. Martin, Esq., held an inquest on the body of deceased, at Newcastle, on November 2nd. The inquest was attended by Inspector Humble, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

The fourth occurred to an onsetter named Joseph James Medlam, by a cage on an incline, at East Greta Colliery, on November 3rd. The District Coroner, J. N. Brooks, Esq., P.M., held an inquest on the body of deceased, on November 5th, at West Maitland. The inquest was attended by Inspector Bates, who heard all the evidence, and fully agrees with the verdict of "accidental death" as returned by the jury.

The first of the non-fatal accidents occurred to a miner named Robert Gustard, at Newcastle Co.'s A Pit, on July 3rd, resulting in loss of leg by fall of coal.

The second occurred to a miner named Alexander Somerville, at Duckenfield Colliery, on July 23rd, by a fall of coal, resulting in fracture of thigh.

The third occurred to a miner named Thomas Thomas, at Lambton Colliery, on August 13th, resulting in internal injuries by fall of coal.

The fourth occurred to a miner named Henry Fox, at South Wallsend Colliery, on August 21st, by a fall of coal, resulting in fracture of arm.

The fifth occurred to a wheeler named Sydney Edwards, at Stockton Colliery, on September 28th, resulting in fracture of leg on engine plane.

The sixth occurred to a miner named Thomas Ludwig, at Hetton Colliery, on October 1st, by a fall of coal, resulting in injury to back.

The seventh occurred to a miner named Joseph Young, at Wickham and Bullock Island Colliery, on October 19th, resulting in injury to head, back, and knee, by a fall of coal.

The eighth occurred to a miner named Chas. Gallagher, at Brown's Colliery, on October 30th, by a fall of coal, resulting in fracture of thigh.

The ninth occurred to a driver named Robert Johnson, at Newcastle Wallsend Colliery, on November 2nd, resulting in fracture of arm, by loaded skips.

The tenth occurred to a miner named George Grant, at Seaham Colliery, on November 20th, by a fall of coal, resulting in injury to shoulder and ribs.

The eleventh occurred to a miner named John Hoff, at Pacific Colliery, on November 27th, resulting in severe burns on hands, arm, side, and chest, by ignition of powder.

The twelfth occurred to a miner named Jonathan Jones, at Newcastle Wallsend Colliery, on December 6th, by a fall of coal, resulting in fracture of leg.

The thirteenth occurred to an onsetter named John Atkinson, at Newcastle Co.'s B Pit, on December 19th, resulting in fracture of arm, by loaded skip.

There were no accidents on the surface.

The tabulated list of accidents is hereto appended.

We have, &c,
JOHN DIXON,
THOS. L. BATES,
WILLIAM HUMBLE,
Inspectors of Collieries.

THE Half-yearly Report of the Inspector of Collieries on the state of the various Collieries in the Southern and Western Districts of the Colony of New South Wales, and Accidents therein for the half-year ending 30th June, 1894.

The Examiner of Coal-fields,—
Sir,

Wollongong, 8 August, 1894.

In compliance with the requirements of clause 26 in the Coal Mines Regulation Act, 1876, I have the honor to transmit to you this, my six-monthly report, on the state of the various collieries for the half-year ending 30th June, 1894.

The total number of collieries under inspection in the Southern and Western Districts during the last six months is 32.

Western District	14 coal-mines, and 5 shale-mines.
Southern	12
Berrima	2

26

PRESENT STATE OF MINES.

SOUTHERN DISTRICT.

Mount Kembla Colliery.—About 130 men and horses have been employed in this mine during the half year, and supplied with 40,000 cubic feet of air per minute, in five separate splits. The ventilation is good throughout, and the Act in all matters complied with.

Osborn Wallsend Colliery.—About 135 men and horses are employed underground, and served with 30,000 cubic feet of air per minute in three separate splits. The requirements of the Act are also carried out in other respects.

Mount

Mount Pleasant Colliery.—About 100 men and horses are employed in this mine, and supplied with 28,000 cubic feet of air per minute in three separate splits. The ventilation is good throughout, and the Act is in all other matters complied with.

Corrimal Colliery.—There are about 160 men, &c., employed in this mine, and served with 22,000 cubic feet of air per minute, in three separate splits. The roof in a number of boards is very bad but great care is taken by the miners and management to ensure safety. The Act in all matters complied with.

South Bulli Colliery.—There are about 140 men and horses employed in this mine, and served with 28,000 cubic feet of air per minute in four separate splits. The ventilation is good and the Act in all respects complied with.

Bellambi Colliery.—About 70 men, &c., are employed underground, and served with 26,000 cubic feet of air per minute. The Act in all matters complied with.

Bulli Colliery.—There are four men, &c., employed underground during the last half-year, taking out slack coal from the old workings to supply the Bulli Coke Works. The ventilation is good and the Act complied with.

North Illawarra Colliery.—About 60 men and horses are employed and served with 16,000 cubic feet of air per minute, in two separate splits. The provisions of the Act are also carried out in other respects.

South Clifton Colliery.—About 120 men, &c., are employed underground in this mine, and served with about 58,000 cubic feet of air per minute, in two separate splits. The colliery is well ventilated throughout, and the Act in every respect carried out.

Coal Cliff Colliery.—There are 26 men employed in this mine, and served with about 20,000 cubic feet of air per minute in one current. The Act in other matters is complied with.

Metropolitan Colliery.—About 290 men and horses are employed underground. The total quantity of air introduced into the mine per minute is about 304,920 cubic feet. The workings are divided into seven districts, each district being supplied with a separate and distinct current of air. The provisions of the Act are also carried out in other respects.

Bulli Pass Colliery.—About 26 men are employed underground, and served with 10,000 cubic feet of air per minute, in one current. The Act in other respects complied with.

BERRIMA DISTRICT.

Australian Kerosene Oil Company (Joadja).—About 50 men are employed underground, and supplied with 15,000 cubic feet of air per minute. The workings are the long-wall system, and the ventilation well sustained round the working faces. The Act in all matters complied with.

Box Vale Colliery.—Three men are employed underground, and served with 4,000 cubic feet of air per minute. The Act in other respects complied with.

Great Southern Colliery.—An average of 8 men employed during the last six months, and supplied with 9,000 cubic feet of air per minute. The Act in other matters complied with.

WESTERN DISTRICT.

Australian Kerosene Oil Company (Katoomba).—*Morts.*—About 90 men are employed, and supplied with 11,000 cubic feet of air per minute, in five separate splits.

Ruined Castle Tunnel.—Eight men at work, and served with 6,000 cubic feet of air per minute. The workings are conducted on the long-wall system. The ventilation good, and the Act in other respects complied with.

New South Wales, Hartley.—During the last six months little work has been done on account of no sale for the shale. Coal mine, 6 men employed and served with 8,000 cubic feet of air per minute. The Act in other matters complied with.

Oakey Park Colliery.—About 28 men and horses employed, and served with 15,000 cubic feet of air per minute. The Act in all other matters complied with.

Vale Colliery.—About 38 men and horses employed underground, and supplied with 25,000 cubic feet of air per minute. The ventilation is very good throughout, and the Act in other matters complied with.

Zig-Zag Colliery.—Twenty-six men are employed, and supplied with 16,000 cubic feet of air per minute. The Act in other matters complied with.

Vale of Clwydd Colliery.—About 26 men and horses are employed underground, and supplied with 10,000 cubic feet of air per minute. The provisions of the Act in other respects complied with.

Eskbank Pit.—About 25 men and horses employed, and served with 20,000 cubic feet of air per minute in one current. Old tunnel, 6 men employed, and supplied with 7,000 cubic feet of air per minute. The Act in all other respects complied with.

Lithgow Valley Colliery.—About 28 men and horses employed underground, and served with 22,000 cubic feet of air per minute. The ventilation good throughout, and the Act in every respect complied with.

Hermitage Colliery.—About 26 men, &c., employed, and served with 19,000 cubic feet of air per minute. The Act in all other respects complied with.

Cullen Bullen Colliery.—Twenty men employed, and supplied with 10,000 cubic feet of air per minute in one current. The Act in every respect complied with.

Irondale Colliery.—Eight men employed, and served with 7,000 cubic feet of air per minute. The Act complied with.

Ivanhoe Colliery.—About 10 men employed in this mine, and served with 10,000 cubic feet of air per minute. The Act in all other matters complied with.

Genowlan Shale Mine.—Little work has been done during the last half-year on account of no sale for the shale.

King's Shale Mine (Capertee).—Six men employed, and served with 2,000 cubic feet of air per minute. The Act in all other matters complied with.

Rawden Colliery.—Only 2 men at work in this mine. The ventilation is good, and the Act in all other matters complied with.

Cooperwall Mine.—Only one man working in this mine. The Act complied with. ACCIDENTS

ACCIDENTS IN MINES.

During the last six months ending 30th June, 1894, I have investigated eight separate accidents, which have been fully reported upon. I have also investigated several other slight accidents, which are not embraced in this report.

The first non-fatal happened a miner named Richard Smith, on 19th February, who was hurt about the back and arms by a fall of coal at Corrimal Colliery. The second happened a miner named James O'Brien, on 27th February, who was hurt about the back by a fall of coal at Osborne Wallsend Colliery. The third non-fatal happened a miner named George Clark, on 1st March, who had his leg fractured by a fall of coal at South Bulli Colliery. The fourth happened a miner named George Pratt, on 6th April, who received internal injuries by a fall of coal at Osborne Wallsend Colliery. The fifth happened a miner named George Featonly, on 16th April, who had his leg fractured by a fall of coal at Metropolitan Colliery. The sixth happened a miner named Milles Richardson, who was bruised about the chest by a set of empty skips at Bellambi Colliery. The seventh and eighth happened to two miners named William Johnstone and A. Demonchie, who were burned about the arms and chest by ignition of loose powder at Corrimal, on 22nd June, at Corrimal Colliery.

The usual tabulated list of accidents is hereto appended.

I have, &c.,
JAMES ROWAN,
Inspector of Collieries.

TABULATED LIST of Non-fatal Accidents in the Southern and Western Districts of New South Wales Collieries investigated by the Inspector of Collieries during the half-year ending 30th June, 1894:—

No.	Date.	Colliery.	Sufferer.	Occupation.	Remarks, &c., on the Nature and Extent of Injuries.	Hurt by Coal.	Hurt by Skips.	Ignition of Powder.	Fatal.	Non-fatal.

The Half-yearly Report of the Inspector of Collieries on the state of the various Collieries in the Southern and Western Districts of the Colony of New South Wales, and Accidents therein, for the half-year ending 31st December, 1894.

Sir,

Wollongong, 18 January, 1895.

In compliance with the requirements of clause 26 in the Coal Mines Regulation Act, 1876, I have the honor to transmit to you this, my six-monthly report, on the various collieries for the half-year ending 31st December, 1894.

The total number of collieries under inspection in the Southern and Western Districts during the last six months is thirty-two:—

Western District	13 coal-mines, and 4 shale-mines.
Southern District	12 "
Berrima	2 " 1 "
				<hr/> 27 " 5 " =32

PRESENT STATE OF MINES.

Metropolitan Colliery.—About 250 men are employed underground. The total quantity of air circulating in the mine is about 350,000 cubic feet per minute, in seven separate splits. Each district is well ventilated. The miners and wheelers are all working with locked safety lamps, and great care is exercised by the management in order to ensure safety.

Coal Cliff Colliery.—About 30 men are employed underground, and served with 16,000 cubic feet of air per minute. The Act in all other matters complied with.

South Clifton Colliery.—About 120 men are employed underground, and served with 45,000 cubic feet of air per minute, in two separate splits. The Act in all respects complied with.

North Illawarra Colliery.—About 50 men are employed underground, and served with 18,000 cubic feet of air per minute, in two separate currents. The Act is also complied with in all other matters.

Bulli Pass Colliery.—About 26 men are employed underground, and served with 8,000 cubic feet of air per minute. The Act in all matters complied with.

Bulli Colliery.—During the last six months only a few miners getting slack coal from the workings. About 25,000 cubic feet of air is in circulation in the mine. The miners and wheelers work with locked safety lamps. The Act in other respects also complied with.

Bellambi Colliery.—About 68 men are employed underground, and served with 20,000 cubic feet of air per minute. The Act in all other respects complied with.

Corrimal Colliery.—About 160 men are employed underground, and served with 22,000 cubic feet of air per minute, in three separate splits. The Act in all respects complied with.

South Bulli Colliery.—About 150 men and horses are employed underground, and served with about 40,000 cubic feet of air per minute, in four separate splits. The ventilation is very good, and the Act in all matters complied with.

Mount

Mount Pleasant Colliery.—About 120 men employed underground, and served with 25,000 cubic feet of air per minute, in two splits. The ventilation in fair condition throughout the mine. The Act also in other matters complied with.

Osborne Wallsend Colliery.—About 130 men and horses are employed underground, and served with about 28,000 cubic feet of air per minute, in two splits. The ventilation is good, and the Act in all respects complied with.

Mount Kembla Colliery.—About 180 men are employed underground, and served with about 56,000 cubic feet of air per minute, in five separate splits. The colliery is well conducted, and the Act in all respects complied with.

BERRIMA DISTRICT.

Australian Kerosene Oil Company's Shale Mines (Joadja).—About 80 men are employed underground, and served with 10,000 cubic feet of air per minute, in four separate splits. The colliery is wrought on the long-wall system. The ventilation is very good throughout the mine, and the Act in all respects complied with.

Great Southern Coal-mining Company (late Berrima).—About 6 men are employed, and served with 9,000 cubic feet of air per minute.

Box Vale Colliery.—Only 2 men employed, and served with 3,000 cubic feet of air per minute. The Act in all respects complied with.

WESTERN DISTRICT.

Australian Kerosene Oil Company (Katoomba).—Mort's tunnels, 50 men are employed and served with 6,000 cubic feet of air per minute. Ruined Castle, about 25 men are employed and served with 4,000 cubic feet of air per minute. The above tunnels are wrought on the long-wall system. The Act in all matters complied with.

New South Wales Shale Mines (Hartley Vale).—During the last half-year ending little work has been done at the colliery, owing to the company having a large stock of shale at the railway siding. About 90 men are employed underground when the colliery is at work.

Oakey Park Colliery.—About 28 men are employed, and served with 16,000 cubic feet of air per minute. The Act in all other matters complied with.

The Vale Colliery.—About 30 men are employed underground, and served with 25,000 cubic feet of air per minute. The Act in other matters complied with.

Zig-zag Colliery.—About 28 men are employed underground, and served with 15,000 cubic feet of air per minute. The ventilation and all other matters in connection with the Act complied with.

Vale of Clwydd Colliery.—About 28 men are employed underground, and served with 10,000 cubic feet of air per minute. The Act in all respects complied with.

Eskbank Pit and Old Tunnel.—About 33 men are employed, and served with 25,000 cubic feet of air, in two separate splits. The workings are well ventilated, and the Act in all matters complied with.

Lithgow Valley Colliery.—About 27 men employed, and served with 22,000 cubic feet of air per minute. The main road, intake and return airways, in good order, and the Act in all other respects complied with.

Hermitage Colliery.—About 28 men are employed underground, and served with 19,000 cubic feet of air per minute. The mine is well ventilated, and the Act in every respect complied with.

Coerwull Mine.—Only two men employed getting a few tons of coals weekly for the tweed factory. The Act complied with.

Ivanhoe Colliery.—About 12 men employed, and served with 10,000 cubic feet of air per minute. The Act in all other matters complied with.

Piper's Flat Colliery (Irondale).—Eight men are employed, and served with 8,000 cubic feet of air per minute. The Act in other matters complied with.

Rawdon Colliery.—During the last six months only two men at work. The Act in all respects complied with.

Cullen Bullen Colliery.—About 16 men employed underground, and served with 15,000 cubic feet of air per minute. Intake and return air-ways in good order, and the Act in all matters complied with.

Genowlan Shale Mine (near Capertee).—About 20 men are employed, and served with 2,000 cubic feet of air per minute. This mine is wrought on the long-wall system. The intake air-way I found not to be in a satisfactory condition; the manager promised to make a new intake air-way by the time of my next inspection. The Act in other matters being complied with.

Maddix's Mine.—Only 1 man at work.

King's Shale Mines (near Capertee).—During the last six months about 6 men were driving two headings to prove the thickness and quality of the shale. The Act in all respects complied with.

I have, &c.,

JAMES ROWAN,

Inspector of Collieries.

The Examiner of Coal-fields,
Mines Department, Sydney.

ACCIDENTS IN MINES.

During the last six months ending 31st December, 1894, I have investigated 6 separate accidents, included in this list. The first of the non-fatal accidents happened to a carpenter named J. S. Reid, who had his jaw fractured by a truck at the screens at Bellambi Colliery, on 31st July.

The second non-fatal accident happened to a miner named L. Palmer, by a fall of coal, in the Metropolitan Colliery, on 31st July last, and resulted in leg fracture.

The third was a fatal accident, happened to a miner named Allan Watson, by a fall of stone in the Australian Kerosene Oil Company's Shale Mines, Ruined Castle, Katoomba, on the 8th October last. The injuries in this case did not prove fatal at the time, and the sufferer lingered for ten days after receiving the accident, and expired on 18th day of same month. On the 19th of the same month, the City Coroner, J. C. Woore, J.P., held an inquest on the body of the deceased at St. Vincent's Hospital, Sydney. I attended the inquest, and fully agree with the verdict of "accidental death," as returned by the jury.

The

The fourth was non-fatal, and happened to a miner named John Bryson, by a fall of coal at Mount Kembla colliery, on 22nd October last, who had his leg injured at the knee.

The fifth non-fatal happened to a miner named G. McKinnon, who had his leg bruised by a fall of coal at Mount Kembla Colliery, on 23th October.

The sixth happened to a driver named Richard Bird, on 31st December, at Osborne Wallsend Colliery. Fracture of right leg, caused by loaded skips.

I have also investigated a few other accidents which were not of a serious nature, and are not included in this report.

The usual tabulated list of accidents is hereto appended.

John Mackenzie, Esq.,
Examiner of Coal-fields.

I have, &c.,
JAMES ROWAN,
Inspector of Collieries.

GEOLOGICAL SURVEY OF NEW SOUTH WALES.

Progress Report for 1894 by the Government Geologist.

Sir,

I have the honor to submit the following Progress Report for the year 1894:—

From the 7th to the 11th of January I was engaged in an inspection of the Gulgong Common, and in giving evidence before the Land Board at Mudgee as to the area by which the Gulgong Common might be curtailed without injury to mining interests. It was found that a considerable area of land could be withdrawn from the common and utilised for settlement without in anyway interfering with mining operations. From the 11th to the 14th of January I was engaged, in company with yourself, in visiting Woodstock, the caves in the parish of Malongulli, county of Bathurst, a copper lode at Walli, and a deposit of (Pliocene) quartz pebble drift at Battery Point on the Lachlan River. Application had been made for aid out of the Prospecting Vote to work this drift for gold by hydraulic sluicing. It was found that the drift was as much as 30 feet thick in places. Prospects were washed with the tin dish in several places and fair results were obtained. A few hundred tons had been previously sluiced, but the supply of water had been pumped up from the Lachlan River through a 5-inch pipe, and then only a head of 15 feet had been obtained. If a good head of water could be obtained by gravitation it is probable that this drift would prove payable, and would find employment for a number of men. Further away from the river the drift is covered by basalt, but at Battery Point—the scene of the proposed hydraulic sluicing operations—there is no covering over a considerable area.

On the 22nd of January I proceeded, *via* Camden and Burratorang, to the parish of Colong, county of Westmoreland, where I inspected a silver-bearing lode, known as Cuneo's Lode. My report thereon is marked Appendix B.

On the 15th of February I proceeded to Bishop's Bridge, near Maitland, and inspected a bore which was being put down with a diamond drill by Mr. Henry Harper on the supposition that petroleum oil existed in the locality. The bore was started in the Lower Marine beds of the Permo-Carboniferous series, and at the time of my visit it had just penetrated igneous rocks, so that I was able to report that there was no probability whatever of petroleum being discovered, and the drill was accordingly removed.

On the 28th of February I proceeded to Joadja Creek and inspected a large coal reserve in that neighbourhood, with a view to reporting as to the advisability of the reserve being cancelled and the land alienated. My report is Appendix C.

On the 6th of March I proceeded to Lithgow, Wallarawang, and Capertee with Mr. Geological Surveyor Carne with the object of examining the coal mining reserves of that district, and reporting as to whether any portions of them could be cancelled, so as to allow of the alienation of the land. At the end of a week I returned to Sydney, leaving Mr. Carne to finish the work.

On the 9th April I left Sydney for Wyalong and on the way thither I inspected a number of portions of land at Temora and Barmedman and reported as to any objections (as regards mining interests) to their alienation. I spent about three weeks in the Wyalong district, and on my return to Sydney, furnished a report on the Wyalong goldfield. This report is marked Appendix D.

A report, furnished subsequently, on the probability of obtaining water by sinking at Wyalong, is marked Appendix C.

On the 5th May I proceeded, in your company, to Orange, and thence to Soldier's Creek, parish of Clarendon, county of Bathurst, where we inspected a deposit of auriferous drift, for the purpose of working which Government aid had been applied for.

On the 30th May I left Sydney for Hay and Balranald and proceeded to Bidura Station (parish of Bidura, county of Caira), for the purpose of examining a supposed discovery of precious opal. I was very much interested in recognizing Upper Cretaceous rocks in this locality, an occurrence pointing to the possibility of the artesian water-bearing basin extending much further southwards than had hitherto been supposed. I had the honor of furnishing a report on this subject and it is marked Appendix F.

On my return from Balranald I visited the Grong Grong reefs near Narrandera, and furnished a report thereon, which is Appendix G.

On the 11th June I visited Temora and inspected a number of areas on which reports as to any objections to alienation, on account of mining interests, were required.

On the 25th June I proceeded to Garangula, about 17 miles from Murrumburrah, and made a geological examination of the site of the alluvial gold rush which had just broken out. On my return to Sydney I furnished a report on the field, and it is Appendix H hereto.

On the 22nd August I again proceeded to Temora and inspected a large area within the goldfield, with a view to reporting as to any objections to its alienation.

On the 12th October I left Sydney on a two months' trip, during which I made a geological examination of a large area in the north-western portion of the Colony. On my return to Sydney in December I furnished a report on the subject of this examination and the probable extension, southwards from Wilcannia, of the artesian water-bearing beds of the Cretaceous system. My report is Appendix K. A large variety of official work has been performed in Sydney, and a considerable number of papers have been dealt with during the year. While at Broken Hill in November I was presented by Mr. Howell, the general manager, and Mr. Uhren, the mining manager, of the Proprietary Mine, with a very fine collection of Broken Hill minerals for our geological museum. These minerals were subsequently exhibited in the museum and attracted a considerable amount of attention.

I have much pleasure in reporting that the officers of this branch have performed their work with care and enthusiasm.

The progress reports of the principal officers, together with the special reports furnished by them, are submitted herewith.

I desire to express my very great regret at the loss of the services of Mr. Robert Etheridge, jun., Palæontologist, who has been appointed Curator of the Australian Museum. However, it is some satisfaction to know that the step means advancement to Mr. Etheridge, and that he has consented to act as honorary consulting Palæontologist to the Geological Survey.

In

In the month of May, Mr. Geological Surveyor Jaquets' *Memoir on the Geology of the Broken Hill Lode and Barrier Ranges* was issued. This publication caused a considerable amount of interest, and letters of commendation have been received from scientific men in different parts of the world. The work reflects great credit on the author, and also on the artists who assisted in its production.

During the year there were also issued two numbers of the *Records of the Geological Survey of New South Wales*, viz., Vol. IV., pt. 1., and Vol. IV., pt. 2, containing papers by different members of the staff.

I have, &c.

EDWARD F. PITTMAN,

Government Geologist.

APPENDIX A.

Geological Survey Branch, Department of Mines, Sydney, 4 January, 1894.

Comparative values of Hawksbury Sandstone and Bowral "Trachyte" for building purposes.

THERE is no doubt that the Hawksbury sandstone, when used as a building stone, is liable to more or less rapid disintegration, especially in an atmosphere charged with salt, as that of Sydney is, and consequently the nearer a building is to the sea water the more rapid the disintegration is likely to be. A good example of the rapid weathering of this stone can be seen in the retaining wall around Farm Cove, and another instance which occurs to me was the Central Market which has recently been pulled down. The walls of this building showed the disintegrating effects of the saline atmosphere in a marked degree. There is of course a considerable difference in the quality of the sandstone, some being much harder and closer grained, and therefore less subject to atmospheric influences than other qualities are, and it would no doubt be possible, by careful selection, to obtain stone that would retain its hewn outline for many years. There can, however, be no question as to the inferiority of the best Hawksbury sandstone as compared with the stone commonly known in the building trade as "trachyte," and obtained from the Gib near Bowral. This rock is a crystalline instead of a granular rock, and would not therefore be influenced by the salt atmosphere in the way that the sandstone is. It is much harder than the sandstone, and is quarried at a much greater distance from Sydney. Its cost would therefore be very much higher; but if the extra cost were not considered prohibitive I would strongly recommend the employment of the "trachyte" for any important building in which permanence might be desired. The "trachyte" may, for all practical purposes, be regarded as indestructible.

I may add that although the rock is commonly known as "trachyte," among builders, it may be more correctly termed "syenite."

EDWARD F. PITTMAN,

Government Geologist.

APPENDIX B.

Geological Survey, New South Wales, Department of Mines,

Sydney, 14 February, 1894.

Sir,

I have inspected the silver-bearing lode known as Cuneo's lode, in the parish of Colong, county of Westmoreland, and have the honor to report as follows:—

The lode is situated in the bank of a small watercourse running into Tinkettle or Galvin's Creek, a tributary of the Wollondilly River, and is about 10 or 12 miles in a westerly direction from Upper Burragorang. Between the Wollondilly River and "The Peaks" is a considerable area of igneous rocks, a sample of which has been subjected to a microscopical examination by Mr. G. W. Card, A.R.S.M., Curator of the Museum, and has been found to be a normal quartz-felsite. This area of quartz-felsite is surrounded on all sides by precipitous mountains, the upper parts of which (including several high points known as "The Peaks,") consist of Hawkesbury sandstone, underlaid by the Upper Coal Measures, in which the outcrops of several seams of coal can be seen, while below these again, in some of the deeper valleys, fossiliferous beds of the Upper Marine series of the Permo-Carboniferous rocks occur.

Cuneo's silver lode occupies a fissure in the quartz-felsite rocks, just to the north of the northern high peak. The lode occurs partly on Crown land, and partly within H. C. Manning's conditional lease No. 91-9, upon which permits to search for silver have been applied for by Messrs. Cuneo, Sherritt, Mitchell, Payton, Milne, Hayes and Peacock. Several applications have also been made for mineral leases of the Crown lands intersected by the lode to the north of Manning's conditional lease.

Four shafts have been commenced along the course of the lode. On Cuneo's permit in the conditionally leased land the most southerly outcrop of the lode is seen. It has a width here of about 18 inches, and consists of quartz with a little arsenical pyrites and occasional bunches of galena. The strike is N. 20° E., and the dip (into the hill) is W. 20° N. at an angle of 25°. A specimen from an open cutting on the outcrop is said to have yielded by assay at the rate of 147 oz. of silver per ton. About 50 feet west of this outcrop, and higher up the spur, a vertical shaft has been sunk to a depth of 45 feet with the object of striking the lode on the dip. At a depth of 35 feet a vein 18 inches wide was struck, and about 8 inches of this width was found to consist of galena which assayed at the rate of about 70 oz. of silver per ton. The direction of this vein, however, is almost at right-angles to that of the previously mentioned lode, with which it will probably be found to junction.

About 30 or 40 feet north of the northern boundary of the conditional lease, and on Crown land, an inclined shaft has been put down following the lode for a depth of 45 feet. The lode here has the same strike as in the cutting first mentioned, viz., N. 20° E., but it dips at an angle of 35°, and its width varies from only 2 in. up to 13 in. At the bottom of this shaft the lode is very narrow, having in fact thinned out to almost nothing.

In the creek bed, 100 feet or so to the north of the inclined shaft, a small shaft about 8 or 10 feet deep has been sunk, and here the lode has a width of about 2 feet 6 in. The strike is still the same (N. 20° E.), and the dip W. 20° N. at an angle of 30°. The lode is more or less banded, and consists of quartz and impure kaolin (derived from the decomposition of the felsite) with galena and mispickel, the former in bunches, and also disseminated in places through the vein stone. An average sample of the lode from wall to wall was taken by me from this shaft and was assayed by Mr. Mingaye, F.C.S., Analyst to this Department. It was found to contain at the rate of 17 oz. 13 dwt. 20 gr. of silver per ton, and 11.62 per cent. of lead. The only other work done on the field is a little to the north of the last mentioned, and consists of a vertical shaft 16 feet in depth, put down by Oram and party in the solid felsite. The lode has not yet been struck here, nor has its outcrop been found in the vicinity, so that it is still an open question whether the lode extends as far north as this shaft.

The

The preceding remarks may be summarised by saying that Cuneo's silver lode has been traced for a distance of 200 or 300 feet only; that it tends in a direction N. 20° E., and has an average dip of about 30° in a westerly direction. A comparatively small amount of work has been done upon it (the deepest shaft being only 45 feet), and from this the lode has been found to vary in width from an inch or two up to a maximum of 2 ft. 6 in. The lode consists principally of quartz with sulphides (galena and mispickel) and in its widest part averages 17 oz. 14 dwt. of silver per ton, and about 11.62 per cent; of lead. The silver is doubtless contained in the sulphides, and the ore would require to be concentrated before it would be in a condition fit for smelting. In view of this fact and bearing in mind the extremely rough nature of the country, and the distance (between 40 and 50 miles) from the railway, I am of opinion that the lode, as exposed in the present workings, could not be profitably worked

I have, &c.,

EDWARD F. PITTMAN,
Government Geologist.

The Under Secretary for Mines and Agriculture.

APPENDIX C.

Geological Survey, N.S.W., Department of Mines, Sydney, 6 March, 1894.

I HAVE made a geological examination of the land within reserves 8,989 and 4,912, in the Parish of Joadja County Camden, to the north of the Australian Kerosene Oil and Mineral Company's Mine at Joadja Underneath the Hawkesbury sandstones, which form the summits of the mountains, are seen the upper coal-measures, there being no appearance of the Narrabeen or chocolate shales between the two. At the top of the upper coal-measures is a seam about 18 feet thick of coal and bands. About 100 feet below this 18-foot seam is the kerosene shale seam which in the Joadja Creek mine has varied very much in thickness, the maximum being 4 feet while in places it thins out to nothing. Eleven feet below the shale seam is a seam about 5-ft. 6 in. in thickness, of rather dirty coal and bands. Wherever it was possible to examine the two coal-seams on the sides of the steep valleys which intersect the mountains, the coal was seen to be inferior and the bands too numerous to allow of its being worked with profit. At the same time it must be remembered that the lower portion of the upper seam has been worked near Mittagong, and it is probable that it may be found to improve under the high land within the reserves under consideration. With regard to the kerosene-shale seam it can be traced all along the sides of the valleys in the reserves, but it is seen to have thinned out considerably and to have deteriorated very much in quality.

In conclusion I may state that within the area of the reserves prospecting has been almost confined to the valleys, and it is quite possible that under the high lands other patches of kerosene shale similar to and on the same horizon as that worked by the Australian Kerosene Oil and Mineral Company, may exist. In the same way the upper and lower coal-seams may in some parts of the reserves be found to be workable. On the other hand the land appears to be of very inferior quality for the purposes of settlement, and in view of the circumstances I do not think the reserves should be cancelled.

EDWARD F. PITTMAN,
Government Geologist.

The Under Secretary for Mines and Agriculture.

APPENDIX D.

Geological Survey Branch, Department of Mines, Sydney, 10 May, 1894.

I have made a geological examination of the Wyalong Goldfield, and have the honor to hand you the following report.

Situation.—The Wyalong Goldfield is situated on the Wollongough Road, about 40 miles in a north-westerly direction from the terminus of the railway at Temora.

Topographical and Geological Features.

The country where the gold has been discovered consists of level plains covered with dense mallee scrub and occasional belts of ironbark and box, while at long intervals are seen low ridges covered with cypress pine.

The surface of the plains consists, to a depth of 2 or 3 feet, of red and black clayey soils of Pleistocene age, with ironstone pebbles and occasional subangular fragments of quartz.

The pine ridges in the vicinity of the Government township of Wyalong are formed of hard rocks, consisting of hornblende granite, diorite, and felsite, with slates, sandstones, and quartzites—the three latter probably of Upper Silurian age. The hornblende granite, the diorite, and the felsite appear in the form of intrusive dykes, which have burst through, tilted and transmuted the slates and sandstones, while the diorites and felsites have also intruded the granites. Some of the sedimentary rocks in the surveyed township are garnetiferous, and generally speaking it may be said that the rocks over this area show great evidence of metamorphism. About 2 miles west of the main camp there is a low ridge upon which there is an outcrop of solid micaceous granite. A large lode of quartz with much tourmaline occurs here, and contiguous to it is a narrow belt of pure mica schist. There is another outcrop of solid micaceous granite about 3½ miles north of the main camp, near the north-west corner of C.P. portion 4—Gagie's selection. In the granite rocks hard white irregular-shaped nodules of magnesite (carbonate of magnesia) are occasionally found.

Immediately underneath the 2 or 3 feet of Pleistocene clay which form the surface of the plains, decomposed granitic rocks occur; and herein is one of the most interesting features of the goldfield, for whereas the rocks forming the pine ridges are all of a very hard nature, the decomposed granitic rocks underlying the plains are so soft that no explosives are necessary for mining operations, and all the work of excavation has hitherto been easily done with the pick and shovel. These decomposed rocks are of various shades of grey, yellow, brown and red, and while some of them have evidently been micaceous granites, others are probably decomposed felsites and hornblende granites, the brown or red colour being caused by the peroxide of iron resulting from the decomposition of the hornblende. It is also probable that the felsites and hornblende granites are of later age than the micaceous granite.

The decomposition of these granitic rocks over such a large area, and to a very considerable depth, is a matter of much interest. It may probably have been caused by oft-recurring inundations of the plains during Pleistocene times. The flood waters were probably never more than a foot or two in depth so that the low ridges where the hard rocks still occur were not covered or affected, and, as the surface of the granite on the plains became gradually softened by the action of the water and of the atmosphere, successive flood-waters carried down into it carbonic and other acids in solution, until the decomposition reached a considerable depth.

Mode

Mode of Occurrence and Character of the Reefs.

The reefs are found underneath the Pleistocene deposit, in the surface of the decomposed granitic rocks, where they generally appear as narrow threads, which widen out as they are followed down. Occasionally, however (as in Pettaford's claim, Stanley's Blow, and others), they are found to be of considerable width at the surface, and, as a rule, they are then found to thin out, and eventually "make" or widen again as they descend. In fact, the reefs of this district are of the variety known as lenticular reefs, such as are commonly met with in granitic rocks. The quartz has been deposited in fissures in the granitic rocks by the percolation of waters carrying silica in solution. The lense-like form which the reefs have in section is due to the fact that when crystalline rocks such as granites are fractured, the resulting fissures follow a more or less *curved* rather than a *straight* line; and, as the fracture is accompanied by a movement downwards of one of the walls, the resulting fissure will consist, not of a space between two planes, but of a series of more-or-less irregular lense-shaped spaces. The formation of these reefs can be best illustrated by laying a sheet of paper on the table and drawing the point of a sharp knife across it in an undulating line, so as to separate it into two portions with curved edges. If one of the curved edges be then moved along the other, several lenticular spaces will be formed.

One of the characteristics of the Wyalong reefs, therefore, is that they "thin out" and "make" again at intervals, and this variation in width may be expected as a recurring feature in their *horizontal course*, as well as their *downward extension*.

The general course of the reefs is about N. 20 degrees E., and, as a rule, they have an easterly dip. In and around the main camp there appear to be at least eight approximately parallel lines of reef following this course. A few others, however, have a north-easterly course, while a few others again, such as The Pioneer, The Dead Rabbit, Bolte's reef (on Bolte's selection), Saunders' reef, &c. strike about E. 20 degrees N., and have a northerly dip.

Some of the reefs, notably those in Stanley's and Pettaford's claims, are of solid white quartz, containing a considerable amount of mispickel (arsenical-iron pyrites), but as a rule they consist of more or less vesicular quartz, much stained with per-oxide of iron, and easily broken down with a hammer and gad.

Many of the principal reefs, such as those in Neeld's prospecting claim (Mallee Bull line), Gorman's shaft, and others are characterised by a considerable amount of black oxide of manganese.

Mispickel is of common occurrence in most of the reefs, and in Neeld's prospecting shaft (Mallee Bull line) small quantities of galena and iron pyrites were also seen. Gold can be seen in a considerable number of the reefs,—it is mostly of a fine character, and has the appearance of having been set free by the decomposition of pyrites. In several of the reefs such as Bolte's, Couway's &c., ironstone nodules occur; these nodules when broken in two are each seen to consist of a nucleus of mispickel (arsenical pyrites) surrounded by an envelope of limonite or brown iron ore (resulting from the decomposition of the mispickel) in which fine gold can be seen freely. (In one instance the kernel of one of these ironstones nodules was found to consist of finely crystallised gypsum.)

The greatest width observed on the field was in Neeld's prospecting shaft (Mallee Bull line) where, at a depth of 35 feet, the reef has a thickness of about 5 feet for a short distance where a change of dip occurs. In Stanley's Blow the width of the reef at the bottom of the shaft is nearly 4 feet, and a similar width was observed in Gorman's reef at a depth of 90 feet. In the latter case, however, it was found that in a horizontal distance of about 10 feet the reef had "pinched" to a few inches, while on the other side of this point it was "making" again rapidly.

Speaking generally the reefs may be said to vary in width from an inch or two to several feet.

Inclusions of country rock, known amongst miners as "horses," are of common occurrence in these reefs, and "faults" or "heaves" are also frequently met with.

There is one instance on the field of a reef occurring in a belt of slate. The reef referred to is situated rather more than a mile in a southerly direction from the surveyed township. The belt of slate is here very narrow (about 20 feet wide) and is bounded by dykes of diorite. In the prospector's claim this reef was 15 inches wide, and showed good gold. In Doyle's claim, adjoining the prospector's on the north, it had a width of only 10 inches at a depth of 6 feet from the surface, but appeared to be very rich; while in No. 2 North (Gritten and party) auriferous stone had also been struck, the reef appearing as a narrow thread, and widening out as it descended.

This belt of slate, or a parallel one, extends through the surveyed township of Wyalong, and is surrounded by intrusive rocks, which have separated it from the main body of sedimentary rocks, the western boundary of which may be seen four or five miles to the eastwards.

Outlying Discoveries.

During my visit a rush occurred at a place called the Nine-mile, in the parish of Hiawatha, county of Gipps, about nine miles in a N.E. direction from the main camp at Wyalong. Several reefs were discovered here, but very little work had been done upon them. One of these reefs (Gagie's claim) showed good gold, but was cut off by a "fault," and they are now driving with the object of recovering the lost or "heaved" portions of the reef. This reef was also characterised by the occurrence of the nodules of limonite containing kernels of mispickel, which have already been described. The reefs at the Nine-mile rush occur close to the junction of the main body of sedimentary rock just referred to, with decomposed granite rocks similar to those at Wyalong. Gagie's reef and several others are in the latter formation, but other reefs have also been found in the slate. A small patch of tertiary drift, probably Pliocene, consisting of well-rounded pebbles of metamorphosed rocks occurs on the side of a small ridge at the Nine-mile rush.

On Lange's selection, portion 11, parish of Wyalong, about 4 miles north of the main camp, a vertical reef, having a width of 4 feet has also been discovered in similar decomposed granitic rocks. I was informed by the owners, West and party, that specimens showing gold had been taken down to Sydney from this reef, but on the occasion of my visit I could not see any. Comparatively little work has been done on this reef pending the granting of a permit to mine.

About 2 miles north-east of the surveyed township of Wyalong a reef (the Little Darling) has been discovered by Barker and party. This reef was 6 inches wide just beneath the surface, and showed good prospects. Here again, and for a further distance of at least 2 miles eastwards, the country consists of the same decomposed granitic rocks, covered by Pleistocene clays. About

About 2 miles to the south of Wyalong, on George Bolte's conditional lease, portion 21, parish of Wyalong, is another reef showing good gold. This reef, which is being worked in the prospecting claim by Bolte and party, bears E. 20° N., and dips N. 20° W. at an angle of about 44°. It is nearly 3 feet wide in places, and prospects well. The formation in which it occurs is again the same decomposed granitic rock.

Extent of Auriferous Area already Prospected.

It will thus be seen that the area in which auriferous reefs have already been proved to exist in the same soft rock, extends for at least 7 miles in a north and south direction, by a similar distance east and west. Only the central portion of this area—or about 1 square mile—has been anything like systematically prospected; while the outlying discoveries, such as the Little Darling reef on the extreme east, the Nine-mile rush to the north-east, West and party's reef on Lange's selection to the north-west, and Bolte's reef on portion 21 to the south, appear to point to the probability of many other auriferous reefs existing within the area bounded by them.

Difficulties in the way of Prospecting.

The outlying reefs just described must not be regarded as the ascertained boundaries of the gold-bearing area, but merely as the extreme limits to which prospecting had been carried at the time of my visit. The extremely level nature of the country, and the occurrence of a continuous surface covering of Pleistocene clays, renders it a very difficult matter to define the limits of the auriferous area. In fact it is only by digging costeaning trenches, or sinking shafts, that the presence of reefs can be discovered, and hence it is that prospecting on this field becomes purely a matter of patient and careful work—there being little or no surface evidence to guide the miner.

Credit is undoubtedly due to the Neeld family for the manner in which they have developed the field. They came there without any experience in mining, and their success must be entirely attributed to their industry and determination.

The method followed by them was to break and examine any fragment of quartz which they saw on the surface, and whenever they saw colours of gold in the stone they sank through the 2 or 3 feet of clay or soil. In most instances they succeeded in finding the reef immediately below, and in this manner they have become the owners of some of the most promising reefs at Wyalong. Their example might be advantageously followed by many men whom I saw on the field.

Conditions of Mining.

It has already been stated that with one exception (viz., where an auriferous reef occurs in slate country) the Wyalong reefs are found in decomposed granitic rocks, and these are so soft that no explosives are required for mining purposes.

In addition to being very easily excavated, this decomposed rock appears to "hold" fairly well, or, in other words, does not require a very great amount of support in the shape of timbering.

It is evident, therefore, that at present the reefs are being worked under the most favourable conditions for economical mining.

The question as to the limit in depth to which these decomposed rocks may be expected to extend is one of considerable interest, as it will influence, in no small degree, the future of the field. In Taylor's shaft, which at the time of my visit had reached the depth of 107 feet, no perceptible difference could be observed in the character of the country rock, nor had the reef shown any alteration worthy of note, beyond the variations in width which have already been alluded to as characteristic of all the reefs on the field. Moreover, I was informed that in a shaft which had been sunk on a selection 4 or 5 miles distant from Wyalong, a depth of 192 feet had been attained without striking water, and without getting below the limits of the decomposed granitic rocks. It may fairly be assumed, therefore, that the same favourable conditions as those under which the reefs are at present worked will obtain to a depth of about 200 feet. But, on the other hand, there can be little doubt that the decomposed rock will eventually give place to hard granite, and when this is reached the cost of excavation will be a very much more expensive matter. In addition to this, when the hard rock is reached, it is probable that water will be met with to some extent, and the gold will be found (partly, at any rate) in a more or less complex ore. Much of the gold showing at present has the appearance of having been set free by the decomposition of pyrites, and therefore it is fair to assume that below the water level roasting and chlorination, or some analogous process, will be required for its extraction from the sulphurous ores.

Possibility of Alluvial Deposits being found.

Mention has already been made of the level nature of the country at Wyalong, and the covering up of its geological features, by a uniform deposit of Pleistocene clays. Owing to these conditions, the discovery of old river valleys or alluvial deposits is rendered even more difficult than the discovery of new reefs. Judging by the shafts already sunk, the bed-rock appears to come within a nearly uniform distance of the surface around the main camp, and there does not seem to be a very good prospect of alluvial drifts being discovered in the immediate vicinity. The field is, however, about 800 feet above sea level, and there is every reason, therefore, to expect that in Tertiary times the drainage from this area found its way into deep valleys, and deposited therein the gold which was derived from the denudation of the reefs. The search for these old valleys will probably require time and patience, but in the meanwhile it appears to me that one of the most likely looking outlets, viz., between the Sixteen-mile Tank and Doyle's claim (south of the surveyed township) has been scarcely prospected.

Source of the Gold.

There is, I think, little doubt that the hornblendic rocks may be regarded as the immediate source of the gold at Wyalong. The hornblendic granites, as well as the diorites, are probably of later age than the micaceous granites and sedimentary rocks which they have burst through in the form of dykes. These eruptive rocks, when in a molten condition, probably carried a small proportion of gold from great depths, and it was subsequently leached from them and deposited in the reefs by the gradual percolation of thermal waters. The occurrence of such hornblendic rocks in proximity to gold-bearing reefs is characteristic of New South Wales goldfields.

Up to the present date, 488 tons of stone from Wyalong have been crushed for a total yield of 869 ounces of smelted gold.

Summary.

Summary.

In conclusion, I may state that while the Wyalong reefs may all be expected to vary considerably in width, I can see no reason why they should not be persistent in depth. On the other hand, at a depth of 200 feet or thereabouts, the decomposed rocks in which the reefs are now being worked may be expected to give place to solid granite, and it is obvious that the cost of mining will then be materially increased, while the gold will probably be more difficult to extract. In the meanwhile, a considerable number of reefs have been proved to contain gold which should certainly be payable while the present conditions of mining obtain, and there seems to be every reason to suppose that the auriferous area will be considerably extended.

Preparations were being made for the erection of three batteries at Wyalong when I left the field.

I have, &c.,

EDWARD F. PITTMAN, A.R.S.M.,
Government Geologist.

The Under Secretary for Mines and Agriculture.

APPENDIX E.

Report on an application for aid to provide a water supply by sinking a shaft at Wyalong.

20 August, 1894.

As previously stated in my report on the Wyalong goldfield (10th May, 1894), I am of opinion that water will be met with when the decomposed rocks (in which the workings at Wyalong at present exist) give place to solid granite. While it is impossible to foretell with any certainty the exact depth at which this change in the character of the rock will take place, I have stated that, in my opinion, it may be expected at a depth of about 200 feet. There is no probability of anything in the nature of an artesian supply being met with, and it is very probable that the water will be of a more or less saline nature, owing to its having percolated through 200 feet of decomposed granite, in which the alkalis and alkaline earths of the felspars and other constituent minerals would be in a soluble state.

Assuming, therefore, that any water met with will have to be pumped to the surface, and that in all probability it will be of a character unfitted for domestic purposes, it seems unlikely that the sinking of one shaft would be of practical benefit, except perhaps to a few in its immediate vicinity. Moreover, as mining operations proceed in the ordinary course the shafts over the whole of the field may be expected to reach water. The sinking is extremely easy and inexpensive, and I do not think that Government aid would be warranted, especially as the stone being extracted more than pays for the cost of excavation in a majority of cases. The only thing to be feared, in my opinion, is that the striking of water in the shafts may prove more a source of expense than one of benefit.

E. F. PITTMAN,

Government Geologist.

APPENDIX F.

Geological Survey Branch, Sydney, 14 June, 1894.

Sir,

I have the honor to report that I have inspected the supposed opal field, in the parish of Bidura, county of Cairn, about 40 miles north of the town of Balranald.

A small rush took place to this locality about two months ago, in consequence of the discovery of some common opal during the excavation of a tank on Murphy's Homestead Lease. A considerable number of prospecting shafts have since been sunk on a low ridge in the vicinity of the tank, and from these I measured the following descending section:—

	ft. in.
Greyish white sandstone	12 0
Reddish and yellowish mottled clays	8 0
Fine white siliceous earth.....	2 12
Soft loose grey sandstone	0 9

Below these were bluish-grey, pink, and black clays, which had not been penetrated by the deepest shaft (30 feet). The white siliceous earth has been analysed by Mr. Mingaye, in the Geological Survey Laboratory, and found to contain 90·9 per cent. of silica, 1·2 per cent. of alumina, and 1·5 per cent. of combined water.

I found that in places this earth passes into common opal, and occasionally into flint, but I could see no indication of the colouring which is characteristic of precious opal, and there is no reason for regarding common opal as evidence of the presence of precious opal, although both of these minerals occur at the White Cliffs opal mines.

One fact in connection with these rocks is of very great interest, viz., that they have all the appearance of the Upper Cretaceous beds, while the underlying clays, together with the occurrence of concretionary fragments of calcareous sandstone under the sand ridges over a considerable area of this country, appear to indicate that the lower cretaceous beds are also present.

The journey from Hay to Oxley was made during the night, and therefore I was unable to examine the geological formation of the country between these two places, but from a point about 10 miles west of Oxley to Bidura and thence southwards to Balranald, the same formation appears to extend.

It would thus appear that the cretaceous rocks occur nearly (250) two hundred and fifty miles to the south of the southernmost limit hitherto assigned to them, and the importance of this occurrence, in view of the possibility of their containing artesian water can hardly be over-estimated. The south-western corner of the Colony is very subject to long continued droughts, and the advantages to be obtained from supplies of artesian water away from the river frontages would be very great indeed.

It may be that these cretaceous rocks are merely an outlying or isolated patch, in which case it is hardly likely that they would contain artesian water, as I am not aware of any high ground to the eastward, where porous beds come to the surface in such a way as to form an intake for the rain supplies; but on the other hand it is quite possible that the area under consideration may be an extension southwards of the great northern and north-western cretaceous basin, and if this be so, the possibilities in regard to its containing artesian water are very great.

I therefore venture to recommend that, with a view to testing the question, a bore be put down on a travelling stock reserve within the area indicated.

I have, &c.,

EDWARD F. PITTMAN,
Government Geologist.

The Under Secretary for Mines and Agriculture.

APPENDIX

APPENDIX G.

Geological Survey Branch, Department of Mines and Agriculture,

Sydney, 18 June, 1894.

Sir,

I have the honor to report that I have made a second inspection of the auriferous reefs on McKeown's selection near Grong Grong. This field has not been very much further developed since the date of my last visit (December 1893), and at the present time work is being proceeded with upon only seven of the areas for which permits have been applied.

The greatest amount of work has been performed upon the prospector's claim (Smith's). In this claim the main shaft is now down to a depth of 70 feet. It is vertical for about 50 feet, the balance being on the underlay. At about 50 feet from the surface a drive has been put in along the reef to the south-east for a distance of 17 feet. The reef is about 4 feet wide in this drive, and shows gold in places, while at the bottom of the shaft it has a width of nearly 5 feet. Fifty tons of stone taken from the drive and from the shaft have recently been crushed for a yield of $44\frac{1}{2}$ oz. of retorted gold. The crushing was done at Ferrier's Battery at the old Gladstone reef, and the tailings were subsequently assayed and found to contain 5 dwt. of gold per ton.

From the prospects obtained by dollying samples of the stone in this claim it was expected that the yield from the 50 tons would have been much higher than that recorded. The gold from this field is, however, extremely fine as a general rule, and hence the prospects obtained by dollying are liable to be misleading.

In Masey's claim to the south of Smith's a vertical shaft has been sunk to a depth of 50 feet, and a drive has been put in for a distance of 37 feet to the east, with the object of cutting the reef, which, however, has not been reached as yet.

In the claim to the north of Smith's, O'Farrell has also sunk 50 feet and has driven 20 feet without as yet striking the reef.

In the next claim north, viz., Duval's, a new vertical shaft has been sunk for a depth of 44 feet. At a depth of 25 feet a reef 1 foot wide, and which has so far proved barren, was met with, and has continued to the bottom of the shaft. This reef appears to be a few feet off the line of the reef struck in the old shaft, which was sunk 19 feet on the underlay, and from which a drive 16 feet long was excavated. From this old shaft and drive 40 tons of stone were recently extracted and crushed, but the yield was only at the rate of 3 dwt. per ton, and was therefore not payable.

In Myer's claim the shaft was sunk to a depth of 57 feet and drives amounting to 47 feet in the aggregate were put in. Five hundred weight of stone from this mine were recently treated in Sydney and yielded at the rate of 14 oz. 6 dwt. per ton, and 30 tons are now being crushed at Ferrier's Battery. The gold in this shaft was found to be patchy, and I understand that a new shaft is about to be sunk with the object of prospecting another part of the claim.

Peter Halbish and Adam Smith are prospecting to the north of Duval's claim, but up to the date of my visit they had not succeeded in finding a payable reef.

It will thus be seen that the work hitherto performed has not had the effect of proving that payable gold exists over any considerable area. At the same time a large body of stone is visible in Smith's shaft and drive, and should it maintain anything like its present size and yield it will certainly prove payable.

In conclusion I may remark that the field seems worthy of more systematic prospecting than it has hitherto received.

I have, &c.,

EDWARD F. PITTMAN,

Government Geologist.

APPENDIX H.

Geological Survey Branch, Department of Mines and Agriculture,

Sydney, 28 June, 1894.

Sir,

I have the honor to report that I have visited the alluvial rush at Garangula in the parish of Cunningham, county of Harden. Work is at present confined to portions 200 and 202, which are the property of Mr. Macansh of Garangula run. A number of narrow quartz reefs occur in the granite range dividing the watershed of Cooney Creek from that of Cunningham's Creek, and it is from these reefs apparently that the gold now being won has been derived. Only one of these reefs is at present being worked. It bears north-east and is nearly vertical. Its width where opened varies from 3 to 6 inches only, but as the sinking is very soft—the shaft is at present down to a depth of 60 feet in the decomposed granite—and as I saw about 1 dwt. washed from a dish of stone taken at random, it is likely to prove payable for some time at any rate.

The alluvial gold is found at an average depth of 20 feet and the lead, with its branches, follows approximately the course of the gullies which now drain the surface of the land.

It is estimated that there are at present about 1,100 men on the field, but some of them are prospecting the gullies on the eastern and northern slopes of the dividing range—that is to say, on the watershed of Jugiong and Cunningham's Creeks.

In portions 200 and 202, but principally on the latter, there are at least fifty claims in which wash has been struck, and there are probably about 250 loads of wash-dirt at grass, in lots of from five or six up to sixty loads. These paddocks of wash-dirt are variously estimated to contain from a few dwt. up to $1\frac{1}{4}$ oz. per load.

The gold is even and granular, and of good quality, a sample having been assayed at the Mint, and found, I am informed, to be worth £4 2s. per oz. Owing to its solid granular form there is a tendency, I think, to under-estimate the dish prospects. I saw several of these weighed, and in every case they proved to be much heavier than the owners estimated. The largest specimen yet found weighed 1 dwt.

The wash varies from a few inches up to 4 or 5 feet in thickness. It is somewhat clayey or "puggy" in character, and does not contain very many round pebbles, the quartz pebbles in particular being but slightly waterworn. It appears to be rather patchy in regard to its gold contents, and this is to a great extent owing to the extremely uneven or "bumpy" nature of the floor of the lead. The wash-dirt in fact has filled up the hollows between large granite rocks or boulders, which form the bed of the old channel, and hence the miners when driving are continually coming on to these "bars" or boulders

boulders of now soft or decomposed granite. I think it is possible that some of these may prove to be "floaters" or loose boulders, and if that be so, there should be rich patches of gold below and around them. As the granite is so soft it would be an easy matter to remove some of them and test the question. Owing mainly to the occurrence of these boulders or "bars" the width of the lead has not been proved, except perhaps in Campbell and party's claim, which is the lowermost of the present workings, being on the southern boundary of Mr. Macansh's property. Here the sinking is about 27 feet, and a drive has been put in across the lead for a distance of about 60 feet. From here the lead evidently runs into portion 49, which is the property of Mr. Osborne, and which has not as yet been thrown open to the miners. In all probability there will be some good claims in this paddock, and it is being watched with interest, as under the provisions of the Mining on Private Lands Act it must be open to the public within six weeks at the latest. At the present time Mr. Macansh holds permits covering portions 200 and 202, and under these he is liable to the Government for a royalty of 2s. per ounce on all gold raised. The terms on which the miners are allowed to work the ground are as follow:— Rent at the rate of 10s. per month per man is chargeable from the date when washdirt is first struck. In addition to this the men are charged the royalty (due to the Government) of 2s. per ounce on the gold raised. They also have to pay 1s. per load for the cartage (for any distance under 1 mile) of the washdirt to the washing plant, which is in course of erection. As the new Mining on Private Lands Act does not impose any royalty, it is probable that in the course of a few weeks the charge of 2s. per ounce on the gold raised will be stopped. The allotment of claims, the settling of disputes, and the mining and washing operations are entirely under the supervision of a private warden, Mr. W. K. Thirloway, who appears to be a man of considerable experience and to possess the confidence of the miners. The plant which is being erected will consist of two large puddling troughs, with sluice boxes. It is being put up at the expense of Mr. Macansh, and will be placed at the service of the miners, who will do their own washing up under the supervision of Mr. Thirloway. There is an abundance of water conserved in dams, and the water used in sluicing will pass into settling pits, and thence back into the dam.

The public are not allowed to start in business as tradesmen, as the owner of the property has a store and butcher's shop on the field. Provisions of all kinds, however, appear to be sold at reasonable prices. Timber for mining purposes is plentiful in the district.

With regard to the prospects of the field, it is difficult to speak definitely, because up to the present time only one lead of dirt has been washed. This came from Lewis and party's claim, and yielded 1 oz. 4 dwt. 14 gr. of gold. However, I saw a number of prospects washed from different heaps of washdirt, and judging by these it is, I think, probable that many of those who are at present on "wash" will make good wages. It is also probable that other gullies besides those at present being worked will be found to contain auriferous deposits, though not perhaps of extraordinary richness. At the same time it appears to me that there are plenty of men at present on the field to prospect the outside country, and until Mr. Osborne's paddocks are thrown open there will be no room for fresh claims on the lead at present being worked.

I have, &c.,

EDWARD F. PITTMAN,

Government Geologist.

The Under Secretary for Mines and Agriculture, Sydney.

APPENDIX I.

To The Under Secretary for Mines, Sydney.

Milparinka, 15 November, 1894.

I have inspected the new gold workings in the Warratta Ranges. Altogether fifteen good pieces of specimen gold have been found containing about 125 oz. of gold. The specimens show that the gold was derived from a reef about 2 inches thick and are extremely rich. The specimens were found in a nearly straight line extending across a flat of about 300 feet. The sinking is very shallow, the largest specimen having been found 5 feet below surface.

The formation is Silurian slates with intrusive dykes of eurite. The slates are intersected by numerous quartz reefs, but up to the present the particular reef from which the specimens were derived has not been discovered.

There are over 100 men on the field and they are more than sufficient to prospect the locality, which is situated between Mount Poole and Tibooburra.

The wash is about 8 inches thick and consists of large angular fragments of quartz.

E. F. PITTMAN,

Government Geologist.

APPENDIX K.*

Geological Survey Branch, Department of Mines and Agriculture,

Sir,

31 December, 1894.

I have the honor to report having just returned from a two months' trip, during which I made a geological examination of the north-western portion of the Colony with the special object of ascertaining the areas occupied by the cretaceous or artesian water-bearing rocks. The area examined by me lies to the west of the Paroo River, and is bounded on the north by the Queensland border, and on the south by a line joining Broken Hill and Wilcannia.

I left Broken Hill on the 25th October, in company with Mr. T. W. Barnes, Inspector of Public Watering Places, to whom I am indebted for much assistance, and travelled thence *via* Poolamacca, Torrawangee, Corona, Fowler's Gap, Bancanya, Packsaddle, Wonnaminta, Kooningberry, Kayrunnera, Turkey Creek, Yancannia, and Salisbury Downs to Urisino; thence westward to Milparinka and northward to Mount Poole, Olive Downs, and Warri Warri on the Queensland Border. Starting southwards I travelled *via* Tibooburra, Mount Stuart, The Peak and Warrata Ranges to Mount Poole. From here I visited Yandaminta, 20 miles to the westward, and returning to Mount Poole I journeyed to Mount Browne, Mount Arrowsmith, Cobham Lake, Morden, Kayrunnera, Tarella, White Cliffs Opal Fields, Momba and thence to Wilcannia. From Wilcannia I crossed the Darling and examined the country for a distance of 15 miles in a south-easterly direction. I also made short trips from Wilcannia to Mount Murchison, and to the Nine-mile Well in a north-westerly direction from the town. Finally I travelled from Wilcannia westward to Broken Hill, *via* Netalie, Weinterriga, Bonley Gold-field, Dolo Well, the Springs, Scrope's Range, Topar, and the Gorge. The total distance travelled in a buggy was about 1,150 miles.

Previous

* The greater part of this report was embodied in a paper communicated to the recent Brisbane meeting of the Australasian Association for the Advancement of Science.

Previous examinations of portions of this country have been made by Mr. Geological-Surveyor Brown* (now Government Geologist of South Australia) in 1881; by Mr. C. S. Wilkinson,† late Government Geologist of New South Wales, in 1884 and 1887; by Mr. Geological-Surveyor Wm. Anderson,‡ now of the Geological Survey of India, in 1891; and by Mr. Geological-Surveyor J. B. Jaquet§ in 1892.

Briefly summarised their reports are to the effect that this territory consists of several areas of Palæozoic rocks (intruded by dykes of granite, diorite &c.), which contain deposits of such metals as gold, silver, copper and tin, and which are flanked or surrounded by cretaceous or water bearing sediments, covered in places by drifts and sands of Pleistocene and recent origin.

The examination of this district recently made by me convinces me that the Palæozoic areas shown on our geological map must be considerably reduced, and, that on the other hand the area occupied by the Cretaceous or water-bearing rocks is much larger than was previously supposed.

Perhaps the most important conclusion at which I have arrived is that the artesian basin has probably a much further extension *southwards* than had been previously assigned to it. It has hitherto been considered that the southern boundary of the Cretaceous basin was formed by a bar, or buried range of Palæozoic rocks stretching westward from Cobar through Wilcannia to Scrope's range. At Wilcannia the rocks forming this supposed bar were regarded as *Devonian*, and this opinion appears to have been formed on lithological evidence only, as there is no record of any Devonian fossils having been found in situ, nor of any geological section in which the relation of these Wilcannia sandstones is described with regard to older sediments. But in my opinion the lithological character of these sandstones points to their being of Mesozoic rather than of Palæozoic age, and the small amount of geological evidence that can be obtained from a surface examination seems to strengthen that view. Deposits of hard sediments which I observed at certain localities such as at the west of the Koko range, at Kooningberry, at the western end of Mount Murchison, at the western side of Woychugga Lake, at the Springs, and at the northern end of Scrope's range, may be and probably are of *Devonian* age. They consist of hard, dense, thick bedded quartzites, similar in character to those of Mount Lambie, near Bathurst, showing slickensided joints, and as a rule, lying at a high angle with the horizon. But the rocks at Wilcannia are of a different character. They consist of soft, yellowish, greyish and whitish grits and sandstones, frequently containing bands and pockets of kaolin, and lying, as a rule, at a very low angle of inclination. In fact while one set of rocks shows abundant evidence of both metamorphism and disturbance, the other is remarkably free from signs of either

My conclusion in regard to these rocks is that they are probably of Upper Cretaceous age, and if this be correct it means that, instead of the Cretaceous basin being cut off on the south by an east and west boundary through Wilcannia, there may be a deep channel somewhere between Woychugga Lake and Mount Manara by which the artesian basin may have extended far to the southwards, possibly even under the Eocene beds of the lower Darling of the north western portion of Victoria, and part of South Australia to the neighbourhood of Mount Gambier, where fresh water has long been known to escape as springs on the sea coast, as was first pointed out by the Rev. Tennison Woods.|| It is quite possible, however, that this water may be derived from the Eocene beds themselves, and not from underlying Cretaceous beds.

In any case the probabilities of the artesian water-bearing beds, extending southwards from Wilcannia, appear to be strengthened by the occurrence of Upper Cretaceous rocks (desert sandstone) at Bidura, near Balranald, as reported by me in June last, and also by the fact that a deep channel has been proved to extend from Urisino (where two fine supplies of water have already been obtained) southwards along the west of the Paroo, in the direction of Wilcannia, for I understand that several deep private bores were put down on Momba station. The deepest of these was 2,000 feet, but I believe that boring operations were discontinued before bedrock was reached.

I propose, during the coming year, to make a geological inspection of the country along the southern course of the Darling, with the object of supplementing the information already obtained; but the only satisfactory way of settling this question is by boring, and I am of opinion that there is sufficient geological evidence to warrant the expense of a series of bores to the south of Wilcannia.

In my journey northwards from Broken Hill, the Upper Cretaceous rocks were first met with at Fowler's Gap, to the north-east of Corona Station. A good section of these beds is seen 4 miles west of Sandy Creek bore, and also 12 to 15 miles west of Bancanya bore, where they form the eastern escarpment of the Koko ranges. They consist of soft yellowish grey sandstones and grits, often showing false bedding, and often stained by peroxide of iron. They are in fact in no respect distinguishable (lithologically) from the sandstones subsequently examined at Wilcannia. On the western flanks of the Koko range these sandstone beds are seen to lie unconformably on the upturned edges of slate rocks of probably Upper Silurian age. The sandstones here dip to the east at a low angle (about 10°), but as they are followed eastwards the dip is seen to increase, until at the eastern side of the range it attains an angle of 45°. It is unusual to find Upper Cretaceous rocks as highly inclined as this, but at least one instance of as high a dip as the above has been observed in Queensland, for Mr. Rands (Assistant Geologist) has measured a dip of 45° in desert sandstone rocks on the Isis River.¶

In many other localities as at Milparinka, Mount Poole, Mount Stuart, and in the Grey Ranges, similiar soft sandstones—but dipping as a rule at a very slight angle—are met with, and these frequently alternate with, or are sometimes overlaid (conformably) by hard rocks, which, though somewhat of the nature of quartzites, are perfectly distinct from the Devonian rocks previously alluded to. The latter are highly metamorphosed *homogeneous* quartzites, while the Upper Cretaceous rocks appear to be grits which have been altered by thermal springs—they have in fact become opalised or porcelained by having all the interstices between the sand grains or pebbles completely filled by silica deposited from solution. One of the characteristics of this porcelained rock is the manner in which it breaks up on the hill tops. It is extremely hard but also extremely brittle. It "rings" like porcelain when struck, and breaks with a conchoidal fracture. The prolonged heat of the sun followed by rapid cooling of the surface, owing to thunderstorms and the frosts of winter, causes the larger pieces of stone to exfoliate and break up rapidly, and consequently it is rare to see an outcrop of solid beds—the hill tops being covered with a more or less rounded shingle like that so characteristic of Sturt's Stony Desert.

Evidences

* "Albert Gold-field Artesian Water," Legislative Assembly Paper 1881. † Ann. Rep. Dep. of Mines for 1884, pp. 146-7. Also for 1887, pp. 137-9.
 Reports on Silver-bearing Lodes of Barrier Ranges, Leg. Assen. Paper, 1884. ‡ Ann. Rep. Dep. of Mines, 1891, p. 254.
 § Ann. Rep. Dep. of Mines, 1892, pp. 137-145. ¶ Geological observations in South Australia, 1862.
 ¶ Vide "Geology and Palæontology of Queensland and New Guinea. Jack and Etheridge. p. 543.

Evidences of the agency of thermal springs are frequent in the Upper Cretaceous rocks. At the peak (Mount Stuart Range) ancient thermal springs have left mounds of curiously banded limonite, showing that many of them contained ferruginous as well as silicious solutions, indeed the Upper Cretaceous rocks are characterised by the occurrence of considerable quantities of iron oxide.

Near the top of the Upper Cretaceous rocks, in the elevated lands, there is a bed of conglomerate a few inches thick, consisting of pebbles of an infinite variety of colour, and owing to the breaking up of this conglomerate by weathering the lower ground is in many places strewn with highly polished pebbles of banded agates, chalcedony, jasper, carnelian, pink and white quartz, &c. The extremely high polish which these stones exhibit is probably due to the action of the wind and sand.

The whole of the country between the Waratta ranges and the Queensland border is more or less overlaid by these Upper Cretaceous rocks, and they appear to extend for a good many miles to the east and west. In none of the country traversed by me were the Lower Cretaceous rocks (Rolling Downs formation of Queensland) to be seen outcropping at the surface, there being always a capping of either desert sandstone or of Pleistocene sands to hide them from view. But in the spoil heaps of many of the wells which have been put down by the pastoral lessees are to be seen the characteristic blue clays and sandy shales of the Lower Cretaceous formation containing *Belemnites*, *Maccoyella reflecta*, *Maccoyella corbiensis*, &c. I also obtained a specimen (presented by Mr. A. Lang) of a very large bivalve, which Mr. Etheridge believes to be new, and Mr. Warden Maitland presented me with a specimen (from the Upper Cretaceous rocks of Mount Stuart) of a fossil tree-fern which is also new to Australia.

Very large tracts of this North-Western District are covered by recent deposits in the shape of "sandhills" and "claypans," and, as these form quite a notable feature in the character of the country, they are worthy of a brief description. They are very extensively developed along the Wanaaring to Milparinka Road, particularly between the Clifton bore and Milparinka; but patches of them are met with in various parts of the North-Western District. The sandhills, which vary from small mounds to hills of 50 feet in height, are formed of blown sand. In many cases their surfaces are being continually modified by the action of the wind, and as can be easily imagined they make the roads exceedingly heavy for travellers. The sand of which these hills are formed evidently owes its origin to the disintegration of the Upper Cretaceous sandstones. The claypans are flat-bottomed shallow depressions which occur in the neighbourhood of the sand hills. They vary in depth from a few inches to about 3 feet, and the floor consists of fine clay upon which the water lies for a considerable time after rain. They are often quite circular in form, while at other times they are seen to form long channels of regular width. It seems probable that they may have been formed by the whirlwinds (the "Burrumugga" of the blackfellows) which are of very common occurrence in this country. Some of these whirlwinds remain stationary for a considerable time—which suggests the formation of the circular depressions—while a travelling whirlwind of unusual severity might be expected to sweep up the sand in such a way as to form the long narrow channels. The depressions having been thus formed subsequent rains have carried into them in suspension fine clay washed out of the surrounding sandy soil. When the water has afterwards evaporated by the heat of the sun, or sunk into the floor of the depression, a coating of clay has been left, and frequent repetitions of this process have left a thick floor of clay forming a hard and impervious bed for the water.

One of the most interesting geological features of this district is the occurrence at Mount Browne and Tibooburra of auriferous drifts of Cretaceous age. This was, I believe, first noticed by the late Mr. C. S. Wilkinson, Government Geologist (*vide* Annual Report, Department of Mines, 2884, p. 137, and Records Geological Survey, vol. 1. pt. 1., 1889).

At the Western end of Mount Browne a rounded quartz pebble drift, which has proved to be highly auriferous, and has been extensively worked on a small rise known as Billy goat Hill, dips suddenly beneath the level of the Upper Cretaceous sandstones which surround the Mount Browne range. This quartz pebble drift takes its rise in the Mount Browne range (which is composed of upper Silurian slates with numerous quartz reefs) somewhere near the Four-mile diggings, and it trends, with a gradual fall, in a more or less South Westerly direction for about 4 miles to Billygoat Hill—on the top of which the drift is seen to be about 3 to 4 feet in thickness, lying on rather decomposed slate rocks. From here it is evident that the old Cretaceous creek or river fell over a slate cliff, for in a distance of little more than 100 yards west the drift has been followed to a depth of 240 feet in the Mount Browne Gold-mining Company's shaft—operations in which were discontinued owing chiefly to the strong body of water met with.

The gold from the higher portions of this old drift has been re-distributed during later times, and has been worked in shallow deposits in numbers of the small gullies heading from the Mount Browne range.

At Tibooburra the auriferous Cretaceous drifts dip off an area of granite rocks.

Another instance of gold being found in Cretaceous rocks was observed at a place called the Peak, between Kayrunnera and Tarella, on the Milparinka-Wilcannia road. The Peak itself is an isolated conical hill of Upper Silurian slates, capped (unconformably) by upper Cretaceous quartz and ironstone conglomerate. In the adjoining hills to the North of the Peak, the conglomerate dips to the North East under a considerable thickness of upper Cretaceous sandstone. The tenant of the Peak Government Tank (Peter Riley) has obtained a fair amount of alluvial gold by following the ironstone conglomerate to the dip, and also by working the recent gullies which intersect it, and in which the gold has been reconcentrated.

Opal mining in Upper Cretaceous rocks at the White Cliffs is still being carried on by about one hundred miners, and there is every reason to suppose that the industry will be a permanent one. The opal is being found in small horizontal and vertical pipes in a soft white rock, which is locally termed kaolin, but which appears to consist mainly of fine silica. A considerable area of ground has been broken in prospecting for opal, but very large areas still remain untouched; and I can see no reason why they should not yield good opal for many years to come. There is no surface indication of the occurrence of the gem, and consequently there is a great deal of the element of chance connected with prospecting operations. Hitherto the bulk of the opal has been obtained at a depth of about 12 feet from the surface, and the workings have mostly been confined to this level, apparently under the impression that it would be useless to look deeper for the stone. I am of opinion, however, that this is a mistake, and that opal may be expected to occur at much greater depths than it has hitherto been found.

I have, &c.,

EDWARD F. PITTMAN,

Government Geologist.

Progress

Progress Report of Mr. J. E. Carne, F.G.S., Geological Surveyor.

Sir, Geological Survey Branch, Department of Mines and Agriculture, 14 January, 1895.

I have the honor to hand you the following report upon the work performed by me during the past year:—

Having returned from the World's Columbian Exposition at Chicago, on the 10th February, I was occupied until the 6th March in closing the work in connection with my duties as Superintendent of the New South Wales Mining Court thereat.

Between the 6th March and the 31st December, I was engaged in general geological work, and whilst thus occupied, made examinations, in accordance with your instructions, of the following reserves, with a view of reporting whether any objections existed, as regards mining interests, to cancellation or curtailment:—

Coal-mining Reserves in Counties of Cook and Roxburgh.			
Reserve 518, within the Jugiong Gold-field Reserve.			
Dromedary Gold-field Reserve, near Bermagui.			
Dua River	"	"	Araluen.
Sandy Creek	"	"	Grenfell.
Billabong	"	"	Forbes.
Junee and Sebastopol	"	"	Junee.
Fish River Creek	"	"	Oberon.
Markdale and Junction Point Gold-field Reserve near Tuena.			
Portion of Cargo	"	"	Cargo.
Mandurama	"	"	Mandurama.
Portion of Apple Tree Flat	"	"	Mudgee.
Pulletop Tin-mining Reserve, near Wagga.			
Tin-mining Reserve, Broken Dam, Merool Creek.			

A railway reserve in the parish of Benduck, on the Blacktown to Blayney Trial Survey line, was examined for the purpose of ascertaining whether it should be converted into a mining reserve. A reserve for limestone, in the parish of Tarrabandra, near Gundagai, was also examined and noted on the Geological Map of the Colony.

Inspections were made of measured portions for alienation in gold-field reserves in the following localities:—

Binalong, Burrowa, Young, Grenfell, Forbes, Parkes, Oberon, Newbridge, Blayney, Orange, Gundagai, Tumut, Tumbarumba, Bermagui, Razorback, near Ilford, and Mudgee.

In connection with applications for aid from the Prospecting Vote, I inspected sites in the following districts and furnished reports thereon:—

Oberon, O'Connell, Newbridge, Blayney, Parkes, Forbes, Grenfell, Tumut, Tuross River, Coolalite, Moruya, Mogo, and Wogonga.

For vol. IV. pt. II. of the Records of the Geological Survey I furnished a paper on "Certain Coal and Shale Lands in the Capertee Valley District," embraced within the parishes of Ben Bullen, Coco, Airley, Morundurey, Umbiella, Goongal, and Clandulla, in the county of Roxburgh, and Marangaroo, in the county of Cook.

Separate reports were furnished, and are hereto appended, on "The Auriferous Deposits of the Upper and Lower Tumbarumba, Bago, Burra, Paddy's River, and Maragle Gold-fields," and a proposed water supply for sluicing purposes in connection therewith; Gold-bearing reefs at New Station near Wyndham; Pulletop tin and wolfram deposits; Magnesite near Eurongilly; a Supposed Spring on the Government Experimental Farm, Wagga; a New Gold-saving machine, invented by Mr. W. Ring, Parramatta. In addition to the above, I beg to add the following notes on some localities visited during the year:—

Binalong.

In April I inspected certain suburban land at Binalong, the formation being quartz diorite and altered Silurian slate with a thin deposit of limestone, near the railway bridge.

Proceeding from Binalong to Jugiong Creek, and down that stream to its junction with Cunningham Creek, the formation is granite after leaving the diorite abovementioned close to the town. At the junction of the creeks is reserve 518, within the Jugiong Gold-field Reserve, which was examined with a view of cancellation if not required for mining purposes. It was found, however, to be occupied by itinerant fossickers, who, when nothing better offers, are able to eke out a living by working the surfacing. Over the reserve and surrounding country, colours of gold are obtainable in the loose granite soil, which are easily won, because of the comparative absence of clay in the wash. A few individuals have worked here intermittently for several years by means of a short race, or pump and boxhead sluice.

Pulletop.

From Binalong I proceeded to Pulletop, near Wagga, and inspected the tin-mining reserves on Pulletop and Clifton stations. Lately attention has again been directed to the mixed tinstone and wolfram deposits of the district, owing to a reported fresh discovery of lode tin ore on Clifton, about 8 miles from Pulletop. The earliest recorded discovery of tin in the neighbourhood was in 1872, when mining leases were taken up at Clifton. A good deal of prospecting was then, and subsequently at intervals, carried on both for lode and alluvial tinstone, but without profitable results. I have ascertained that the recent find is at the site of the old workings.

Towards the end of the year Messrs. Harrold Bros., 19, Bridge-street, Sydney (who have been devoting considerable attention to colonial ores, especially with a view of opening up a trade in those for which there is as yet no demand), have ascertained through their London agents, after considerable inquiry both in the United Kingdom and on the Continent, that the Pulletop ore, as represented by the average sample selected by myself from the proceeds of a small trial with a boxhead sluice, viz., tin, 27.72 per cent., tungstic acid, 28.82 per cent., has a prospective value of £15 per ton in England, less cost of treatment, which is estimated at £3 per ton.

The apparent impossibility of obtaining a sufficiently large average sample—about half a ton weight—for experimental purposes, has prevented any really definite figures of value being quoted. A mixture of tinstone and wolfram in about equal proportions necessitates special smelting treatment; because, as is well known, the equal specific gravity of the two minerals prevents separation by ordinary mechanical means; hence the application of metallurgists abroad for sufficient quantity for adequate experimental tests.

It may be noted in connection with the Pulletop ore, that a considerable difference in the proportions of the two minerals could be effected by ordinary sizing screens, because the larger fragments are almost invariably wolfram.

Dora Dora.

Whilst inspecting a measured portion in the parish of Vautier, county Goulburn, I had an opportunity of examining the Dora Dora Tin mine, near the head of Basin Creek, on the western boundary of R. Bell's conditional lease, in the same parish. This mine was originally opened by an Albury syndicate of eight members. A dam of about one million gallons capacity was constructed at the head of the creek, from which a sluicing supply was drawn, but insufficiency of fall rendered the pressure obtainable inadequate for efficient work, even when the water supply was fairly abundant. During the greater part of the year, however, water is very scarce.

The wash averages about 6 inches in thickness, the tinstone resting directly on the granite bed-rock. No lode tin has yet been discovered in the neighbourhood, nor any specimens of it in the wash. Up to the date of my visit (in April), about 10 tons of clean tin ore had been extracted from the workings, which extended about 200 yards along the bed of the creek; but as it had been won at a monetary loss, active work had ceased about three months prior to that date.

The course of Basin Creek, between the mine and the Murray River, into which it flows, lies through private land, with the exception of about one mile and a-half of rough precipitous country, through which the creek falls rapidly. An attempt was being made to drain a large swamp near the river road, on portion 12, through which Basin Creek water passes, for the purpose of testing it for tin ore, but more extensive operations than those in progress would probably be required to obtain the end in view.

Between the mine and the precipitous fall above mentioned, tinstone is reported to have been found along the course of the creek, through portions 25, 32, and 47, by boring tools, but no attempt had been made to prove whether in payable quantity or not. To enable this portion of the channel to be worked a granite bar would have to be cut through.

Jinjellie.

I did not have an opportunity of examining the site of the Jinjellie Tin mines, which were opened some years ago, about 17 miles higher up the Murray River, but soon abandoned. It is, however, locally reported that some 9 tons of ore, which were extracted during operations, are still unsold, probably because of the association of wolfram with the tinstone. The presence of wolfram in the Jinjellie ore was noted by Mr. E. F. Pittman in his report on the lodes.*

Tumbarumba.

Later on, I visited the Burra Gold-sluicing Company's claim, near Tumbarumba, in which small quantities of tinstone are obtained at each cleaning up. Specimens adhering to quartz are occasionally met with, but so far no lode tin *in situ* has yet been discovered.

In connection with the auriferous drifts of the Tumbarumba and neighbouring gold-fields, which have been chiefly worked by sluicing, the frequency of intrusive dykes in the granite bedrock, in close association with the richest deposits, is very noticeable. Sluicing operations have exposed these intrusions in a most instructive manner. Locally the dykes are termed "clay bars" by the miners, because of the soft, clayey nature of the decomposed rock lying directly under the wash. Notwithstanding the extent of the decomposition, the characteristic spheroidal markings which such rocks assume in weathering are plainly seen. Frequently cores of the unaltered rock are met with in the centre of boulders.

Without exception, all the principal claims, both of past and present workings, are characterised by one or more of these dykes, and in nearly every instance the richest paddocks have been alongside the intrusions.

In several instances, notably opposite the Show Ground, at Tumbarumba, thin quartz veins, just at the junction of the dyke and the granite country, have been found, containing exceedingly rich specimens of gold, over 70 oz. being extracted from a small quantity of quartz at the place mentioned. It appears, therefore, very probable that the richer yields obtained from the wash alongside the dykes cannot be entirely accounted for by the damming effect these obstructions may have exerted during the wearing of the channel and transport of the drifts, but must be largely, if not chiefly, due to decomposition and abrasion of the dykes themselves, and consequent liberation of the gold contained in thin quartz veins near or at the junction of the dyke and country.

The association of gold with intrusive dykes in sedimentary or other rocks is a well-established fact in all gold-producing countries, and one which is abundantly illustrated in most of the gold-fields of this Colony; the general rule being that where the country is little disturbed extensive metalliferous deposits are not frequent.

In the Tumbarumba and neighbouring fields dykes were noticed outcropping in localities not yet prospected. Attention should be given to these, particularly where alluvial gullies cross them. The dykes, as a rule, have a north and south strike.

The following rocks, associated with the gold deposits in the neighbourhood of Tumbarumba, were examined microscopically by Mr. Card, A.R.S.M., Curator of the Mining and Geological Museum:—Augite-basalt from the flow forming the cover of the Tumbarumba Tertiary lead. Ophitic-olivine-dolerite from a dyke in granite bedrock in old sluicing claim near Courabyra Public School. Quartz-diorite from a boulder in Burra Creek. Quartz-felsite from alongside Pilot reef, Maragle. Granitite from tail-race, Tumbarumba, near township.

Tumut,

* Ann. Rept. Dept. of Mines, 1881, p. 143.

Tumut, Junee, and Sebastopol.

From Tumberumba I proceeded to Tumut and inspected a small mining reserve in the parish of Coolamon, county Buccleugh; and from there to the Junee and Sebastopol reefs, in connection with the proposed cancellation of the reserve embracing the latter. Attention was being directed to these reefs when the Wyalong rush set in, and no doubt they will again receive consideration in the near future, as they have not yet been adequately tested at a depth.

Pambula.

A brief visit was paid to the Pambula gold-mines, and a number of typical rock and gold-bearing specimens selected for microscopic examination. Prepared sections of these specimens were afterwards submitted to Professor David, of the Sydney University, and Mr. G. W. Card, A.R.S.M., independently; the results of their examinations were entirely harmonious, and, so far as the petrographical investigation has proceeded, point to the probability of the auriferous rocks of this field being ultimately found to form part of a series of bedded, devitrified lava flows, portions of which possess an undoubted rhyolitic structure. The microscopic sections also prove that the composition of the auriferous matrix is identical with the so-called country. An extended examination of this interesting goldfield is very desirable.

From Pambula I visited a newly discovered reefing locality at New Station, about 6 miles from Wyndham, which at the time was creating some local stir, and furnished a report thereon.

Wagonga.

In connection with the Prospecting Vote I inspected the Phoenix reef—formerly Belle of Australia—about 3 miles north-westerly from the village of Noorooma at Wagonga Heads. This reef strikes nearly north and south in slate and quartzite country, is vertical, and has an average thickness of about 2 ft. 6 in. The eastern wall is well defined, but the western is broken and mixed with veinstone. From the bottom of the working shaft—120 feet—a 12-foot stope had been brought up to the surface, and all the material raised had been sent to the battery. The average yield being from 9 to 10 dwt. per ton. The shaft was quite dry at the above depth.

The owners, Messrs. Stanfield and Fraser, have a ten-head stamper battery near by, with amalgamating barrels, and a Burdan pan. At the time of inspection the mine was let on tribute, but the battery was being run by the proprietors.

A parallel reef on the east in the same lease has been tried by two shafts 70 and 130 feet, respectively; the stone is reported to have yielded about 10 dwt. per ton at surface, but became poorer below.

On the west at about 150 yards distant, is the Beehive line of reef. Messrs. Field and Party, and Lawrence and Party, in G.L.'s 24 and 25, were raising gold-bearing stone. In Field and Party's lease a shaft was being sunk on a 2-ft. 6-in. reef; 30 tons from surface had yielded £156 worth of gold. Six feet of the mixed country and veinstone forming the western wall is stated to have yielded at the rate of 10 dwt. per ton at surface.

Lawrence and Party were extracting stone from the outcrop of the reef in the adjoining lease, by means of very irregular openings or trenches. Eleven tons had yielded at the rate of 22 dwt. of gold per ton.

Coolagalite.

At Coolagalite I inspected a site, for which aid was asked, situated about 250 yards north-easterly from the Coolagalite Proprietary Mine (which was being profitably worked) and on the same line of reef. In the Proprietary Mine the reef averaged about 15 in. in thickness in slate country; but in the above site it varies from 3 to 7 inches.

This claim was originally prospected by Carmichael and Party, who exhausted a good deal of time and energy in sinking a number of shallow shafts close together; the labour thus expended if concentrated in one shaft would have effectually tested the claim. The gold shoot worked in the Proprietary dips south-westerly, and thus away from the site in question.

Mogo.

At Mogo I visited the site of a prospecting tunnel at Big Burrawang Hill, about one mile westerly from the village of Mogo. The hill is of low elevation and capped with basalt, which originally formed part of a flow covering an old drainage channel having a general north and south trend. Between the site and Mogo the surface is covered with pebbly detritus resulting from the weathering and removal of portions of the basalt cover and subsequent denudation and distribution of the underlying drift. Cabbage-tree and Mogo Creeks, and their tributary gullies in the vicinity, proved highly auriferous during the early mining in this locality; their richness being no doubt due to natural ground sluicing and reconcentration of a large amount of the drift, which, perhaps, in its original condition in the old Tertiary drainage channel under the basalt flow—as at Big Burrawang Hill—would not pay to work.

In the drift under the basalt where the tunnel pierces it, boulders of decomposing basalt and tuff occur, which afford evidence of an earlier flow, prior to, or contemporaneous with the deposition of the drift. The bedrock of the country consists of Silurian slates, nearly vertical, having a north and south strike.

Moruya.

About one-quarter of a mile south of the Moruya Silver and Gold Mine, and 3 miles from the town of Moruya, a site was visited which contained a quartz reef carrying arsenical pyrites similar to the ore in the above mine. The vein varies from 6 to 8 inches in thickness, and strikes N. 10° E., with a slight westerly underlay. The country is soft schist, intruded by a porphyry dyke about 80 feet east of the line of reef.

A parallel reef occurs in the adjoining C.P. 235, presenting exactly similar conditions of occurrence and composition.

The Moruya Silver and Gold Mine has been worked at intervals for a number of years, but is now shut down. The ore is of an essentially refractory character.

Tuross

Tuross River.

At Quartpot Creek, parish Cadgy, county Dampier, on the same strike, and about 2 miles north-easterly from the Wandella Gold-mine, on the Tuross River at Pintpot, two parallel reefs occur, which were extensively prospected by Messrs. Coman and party some time since. The reefs strike N. 35° E., and underlay rather steeply to the west. Each averages about 18 inches in thickness, in soft slate country. Quartpot Creek—a short, narrow channel—was worked some twenty-seven years ago. Rich specimens of reef gold were found in the wash, derived no doubt from the wearing down of the reefs which cross the creek.

At the site of one of Coman and Party's shafts some very rich surface specimens were obtained from one of the reefs, but they pinched out in a few feet, and could not be traced.

At the time of inspection, G. Thomas, of Cobargo, had taken up two leases, and was arranging for machinery to be placed on the ground. Twenty-two cwt. raised by him from a shoot on the east side of the main reef had yielded at the rate of 1 oz. 6 dwt. of gold per ton at the Clyde Works. Larger tests made by the original proprietors are reported to have yielded only a few dwts. per ton, which was not payable under the conditions of long carriage which then prevailed. With a local battery, wood and water being plentiful, it is probable that a payable return may yet be won from the fairly abundant supply of stone, even if it be of low grade.

Near Rockley.

In October, whilst inspecting a portion of land on Campbell's River near Rockley, I embraced the opportunity of visiting Crozier's Mt. Maude Reef. A good deal of attention had just been drawn to this reef owing to 8 tons of quartz from it having yielded at the rate of 6½ oz. of gold per ton at the local battery.

The Mt. Maude reef occurs in a small spur of slate and schist country, the surface of which is covered more or less with loose quartz blocks near the mine. Two shafts had been sunk on the reef, which strikes about N. 20° W., and has a very flat dip to the eastward. The shafts are about 40 feet apart; in No. 1 (south) the reef is about 4 ft. 6 in. thick at the bottom—26 feet—where it was struck on the underlay; from this level the stone was taken which yielded as above stated. In No. 2 shaft (north) the reef had been cut at about the same depth, and, so far as exposed, appeared to be about 2 feet thick. The quartz in this shaft was stated to be poorer, but no tests had been made other than by dollying.

About 150 feet south of No. 1 shaft, a small opening was being made on the reef, which at this point appeared to have thinned very much at surface, but the thickness may probably increase with depth; if it does, and the gold shoot in No. 1 shaft be found to extend thither, the value of the mine will be greatly enhanced. It is therefore desirable that a shaft should be sunk at this point. So far the cap of the gold shoot in No. 1 shaft has only been discovered, not explored. About one chain west of the main reef a parallel reef occurs, which had not yet been proved, but would shortly be in a portion of Crozier's claim on the north.

The loose quartz blocks lying on the surface or partially embedded in the soil on the west of the reefs, appear to be the remains of the flat-lying reefs above described, which originally extended over in that direction before denudation and had gradually lowered the spur to its present elevation. The quartz veinstone, resisting the denuding influences better than the softer enclosing rocks, remains in broken blocks on the surface, marking the previous extension of the quartz sheet.

Northerly the spur dips into a gully which separates it from a basalt-covered ridge overlying drift. Below the basalt cover on the slope into the gully a few specimens of gold with quartz attached were obtained by surfacing; but so far as I could learn no alluvial has yet been found in the bed of the gully, nor has the reef itself been traced into it. A trench at this point would test the ground cheaply as regards the extension of the reef northerly.

The fact that the gully, from where the strike of the reef crosses it down to the junction of another gully draining directly from the basalt area, carries no more than colours of gold, does not augur very favorably for the richness of the reef at the point cut through by the gully, if indeed it extends so far. The second gully mentioned has been worked profitably.

From Mt. Maude up to the time of my visit the following parcels of stone had been raised and treated, viz. :—

14 tons	yielding	1 oz.	12 dwt.	of gold	per ton.
8	"	"	6	"	5
7	"	"	—	14	"

Newbridge.

Shortly afterwards, in October, whilst at Newbridge, I had an opportunity of inspecting an auriferous deposit on portion 86, parish Three Brothers, county Bathurst, about 1½ miles from Newbridge, near the Trunkey Road. Some very rich prospects had at the time given rise to very exaggerated reports as to the extent and richness of the deposit.

From inquiry it appears that gold was first discovered by Messrs. Warren and Party about July, and that 3 tons of the auriferous matrix, taken from a surface cut and the upper level of a small shaft, had been treated at the Sugarloaf Battery for a yield of 16 dwt. of gold per ton.

At the time of my visit no work was being carried on as the whole property was under offer to a syndicate, under the supervision of which a test parcel of 3 tons was being selected from the rich bagged ore at grass. Through the courtesy of Messrs. Warren and Party I was enabled to examine the workings. The country is soft schist. Quartz bunches from a few inches to a couple of feet in thickness occurring irregularly, but are not persistent in depth. Gold occurs in the quartz, but the richest prospects were obtained from soft ferruginous bands in the country itself, these bands vary from a few inches to about one foot in thickness. The gold is fine and has the appearance of having been liberated from pyrites. No walls whatever are visible, the gold-bearing material (other than the quartz) evidently being part and parcel of the country, which in these particular portions has at one time probably been charged with auriferous pyrites, since oxidized into its present condition and the gold liberated in the free state.

The

The only exploratory work done up to the time of my visit, was one small shaft 30 feet deep, with two small drives about 15 and 20 feet north and south at a higher level, the bottom of the shaft being covered to enable these drives to be put in. The appearance at the drive levels were not very favourable, the country being jumbled and unsettled.

Gold was first found in an open cut about one chain south of the shaft site. In the face exposed, broken veins of manganiferous quartz are seen, and two of the soft ferruginous bands in the country before mentioned. A dish of material from the latter gave a fair prospect when washed in my presence.

The strike of the country is approximately north and south, but the irregular and inconstant occurrence of the quartz, so far as exposed, and the absence of any defined walls to the auriferous portion of the country, renders any conjecture as to the lineal or lateral extension of the gold-bearing formation extremely problematical. The open cut is only a few feet in length, and it is desirable that it should be extended, as other auriferous bands may exist in close proximity to the present find.

A small amount of prospecting in the alluvial flat bordering the mine had been done, but so far without success.

Between the first discovery of gold and the time of my visit—about four months—in addition to the 3 tons treated at the Sugarloaf battery, about 7 tons of rich material were raised from the open cut and the shaft. The 3 tons selected from the latter by the syndicate mentioned yielded at the rate of 10 oz. of gold per ton at the Sydney Mint.

On the 3rd December I was again in the locality, and learned that negotiations for purchase having fallen through exploratory work was just about to be resumed.

During the excitement caused by the discovery of the rich stone, claims and leases were pegged out on the adjoining land, which is all alienated, but very little real prospecting was done. G. Hayton, in conjunction with the owner of the land on the north (Mr. N. Wilson) being the only ones making a practical effort to trace the run of auriferous country from Warren's property.

About 100 yards north of the north boundary of the latter Hayton discovered the crop of a well-defined quartz reef (having a strike of about N. 10° E.) a little to the east of the supposed strike of Warren and party's find. The results of assay samples taken from a small opening at this point not being favourable, another opening was made about two and a half chains further north to a depth of about 9 feet. Here the veinstone is from 3 to 4 feet thick, though portions of its width are rubbly and mixed with country. The underlay is at the rate of one in three to the east. Ten tons of stone from this opening yielded only 2 dwt. of gold per ton at the Sugarloaf battery, but the prospectors intend sinking deeper and driving in search of a gold shoot.

Adjoining Wilson and Hayton's on the north, Butler and party have lately started prospecting by means of trenching to cut the above line of reef. They have also tested the alluvial flat on the west, without finding gold, which does not look hopeful for the existence of a payable reef in the vicinity.

Wagga Wagga.

In November, whilst in Wagga Wagga, I took advantage of the occasion to visit the quartz reefs on the South Common, which were discovered early in the year in a low ridge of sandstone and sandy slate with quartzite bands.

The prospectors' (McGarry and party) reef strikes about east and west, and underlays nearly one in one to the north. In thickness it varies from 1 to 15 inches.

Two shafts had been sunk, No. 1 about 42 feet on the underlay, and No. 2 22 feet 6 in. vertical and 40 feet on the underlay, connecting with the former. The gold shoot has been carried down in the shafts, but no driving has been done along the course of the reef. At the lowest level about 8 in. of veinstone was showing in the west end of the shaft, but at the east end it was very pinched and jumbled. The vein, so far as explored, was broken and irregular in occurrence. Up to the date of inspection the following parcels of stone had been treated at the Clyde Works:—

12 tons, yielding 2½ oz. of gold per ton.

20 " " 1¼ " " "

and 6 tons 14 cwt. were then being treated.

Adjoining the prospectors on the west Irving and party were down 10 feet without striking the reef.

Bolton and party were sinking on a well-defined bluish quartz reef, a little north east of McGarry's shaft. This reef strikes N. 70° E., and varies from 1 to 2 feet in thickness. The shaft was down 35 feet, the reef being vertical; so far no gold had been struck.

Cook, West, and party were down 30 feet in the adjoining claim with no better results; not even colours being obtainable.

McIntosh and party, whose claim adjoins the prospectors on the north, have performed a considerable amount of work in trenching and sinking shallow shafts in the country, the latter almost at random. If the labour thus expended had been concentrated in their present effort to catch McGarry's Reef on the underlay, it would have been sufficient for the purpose in view, and the value of their claim depends upon the persistence of McGarry's Reef in depth. McIntosh and party's No. 3 shaft is distant about 260 feet from McGarry's, the difference in surface level being about 55 feet in favour of the former. The dip of the prospector's reef is approximately one in one (estimated), which, if persistent in depth, should place it about 205 feet below the surface at McIntosh's No. 3 shaft.

Messrs. Farrell, M. Ford, G. Ford, Murphy, and party's, were prospecting a line of reef on a western spur of the same ridge; but owing to the absence of the miners—it being Saturday—I was unable to do more than examine the surface. A line of shafts was being sunk about north and south. It was reported that 5 tons of stone from Farrell and party's claim had yielded a total of 6 ounces 2 pennyweights of gold.

The general trend of the main ridge from McGarry's shaft is about S. 35° E. At the southern end of the ridge, near the Albury road, A. Lammarhert was prospecting a 6-inch quartz reef, which strikes N. 70° E., and dips southerly.

Taylor, Bolton and party had done a fair amount of surface work, and sunk a shaft 20 feet on an eastern spur; but only very thin stringers were found. A very good looking ferruginous breccia occurs here, but dolly tests are disappointing.

On the east side of the ridge, a little southerly from the latter mine, Hely and party had just bottomed a shaft in the alluvial at a depth of 208 feet. The wash was about 2 or 3 inches in thickness, but colours of gold only could be obtained. Drives were being put in north and south, but the prospects were not encouraging.

Forbes.

Forbes.

Whilst inspecting a portion of the Billabong Gold Fields Reserve in the neighbourhood of Daroualgie Homestead, I examined a reef recently discovered by Messrs. De la Hyde and party, on the west side of the railway line, about 8 miles from Forbes. Close by, on the east side of the line, is a small shallow lead which constitutes the extreme head of the old King Lead. Here fossickers occasionally find work during the rainy seasons. A small quartz reef was also at one time worked alongside the lead.

De la Hyde and party's reef was found by following up indications in the surface rubble to the site of the present shaft, which had been put down a few feet and timbered up at the time of my visit. The reef strikes north and south, in slate country, has a thickness of about 15 inches, and a very flat underlay to the east. An average sample crushed and washed in my presence gave a return equal to at least $2\frac{1}{2}$ oz. of gold per ton.

About 1 mile east is the Strickland line of reef, on the east side of which a new vein was reported as very promising. In the narrow strip of country lying between the above reefs, the outcrops of a number of other reefs, and quartz blows, were noted, on which practically no prospecting had been done beyond breaking a few specimens at the surface, or scratching a small opening alongside a quartz block. The surface is strewn with quartz rubble in some places, in others covered with a fair depth of soil. Careful costeaning combined with dolly and dish prospecting of the rubble, and patient following of colour trails in the surfacing, will very likely result in discoveries similar to Messrs. De la Hyde and party.

Parkes.

In the Parkes district which I visited in connection with applications for aid from the prospecting vote, the recent satisfactory developments at lower levels in the Dayspring and Bushman Mines, had awakened interest in the adjoining claims and neighbouring reefs. One of the principal of the latter is the old Pioneer Reef near the Dayspring. Preparations were being made by a party of miners to deepen, one of the old shafts—now down about 125 ft.—and to drive for parallel reefs which outcrop on either side. At the bottom of the above shaft only very thin leaders are visible, but in a drive a few feet west a large "blow" of quartz is exposed. Sixty tons recently crushed from here yielded 5 dwt. of gold per ton. On the surface about 100 feet southerly from the shaft, another large "blow" of quartz outcrops; and a small reef also to the north of the main line; the latter strikes N. 50° E. in slate country. Judging from the old workings the main reef is irregular and buncy in its occurrence.

In a number of reefs in the Parkes district large bodies of low grade stone exist—notably at Stricklands Reef—which will no doubt be remuneratively worked in the future as the conditions for economic treatment become more favourable.

Grenfell.

At Grenfell which was also visited, the success achieved in the lower levels of the New Young O'Brien Reef, under aid from the prospecting vote, has led to further effort in several of the old abandoned claims. The cancellation of certain leases for non-fulfilment of labour conditions was also promptly taken advantage of by parties of working miners, who are desirous of testing the claims at greater depth.

Eurongilly.

At Eurongilly whilst inspecting the site of a reported discovery of an extensive deposit of magnesite, I visited the Eurongilly Reefs which have been abandoned for a considerable time. About thirty men were engaged in the vicinity, some endeavouring to trace the old Victoria Reef southwards; others fossicking in the alluvial. The reefs occur in slate country, and strike about north and south.

On the east side of the Pioneer Reef, a small run of drift was discovered about September last, close to Mr. Keogh's private land, into which it evidently passes. Two parties were engaged raising wash-dirt, the sinking being 18 feet, and the wash 3 feet thick, the bottom foot, however, only being worked. The width of the lead is about 20 feet. The returns obtained are stated to be about equal wages.

About a quarter of a mile east of the lead, on the above private land, a small quantity of low grade chromite was noted, which had been broken from a small loose block found in the soil, which here is deep. The formation is talcose slate.

Barytes, occurring as a thin vein, was also noted in this locality in portion 56, county Clarendon.

I have &c.,

JOSEPH E. CARNE, F.G.S.,

Geological Surveyor.

The Government Geologist.

APPENDIX L.

Report on Water Reserve 2,894 a., County Phillip.

Geological Survey Branch, Dept. of Mines and Agriculture,

Sydney, 29 May, 1894.

Sir,

I have the honor to report having inspected W. R. 2,894 a, in parishes Westby, Burrandana, and Pulletop, county Mitchell, in accordance with your instructions, for the purpose of ascertaining whether any objections to its cancellation exist at the present time in view of mining interests.

The area in question was originally a water reserve solely, but on the 9th January, 1882, it was further reserved on account of tin mining, on the recommendation of Mr. Geo. Sur. Brown, pending prospecting operations which were at that time just begun or about to commence.

Though the occurrence of tin ore in this locality was known as early as 1873, as evidenced by a number of leases for tin-mining purposes having been surveyed in that year under the provisions of the Crown Lands Occupation Act of 1861, it does not appear that any adequate attempt was made to prove the ground prior to Mr. Brown's inspection in Oct., 1881. Shortly after that date, judging from the condition of the old workings, a considerable amount of prospecting was done along the flat bordering Pulletop Creek in parish Westby, and up a small gully or creek into a stony ridge of some elevation, at a point where the country rocks—granite and slate—junction.

On the east side of this gully, near its head, several quartz veins, in granite, have been opened up by means of shafts and shallow open cuttings; in these veins wolfram occurs very sparingly distributed in small patches, whilst a careful search is necessary to detect traces of tinstone. The stanniferous drift in the gully and along the flat bordering Pulletop Creek, has been derived from the weathering and disintegration of the quartz veins, and by a process of natural sluicing and concentration. In

In the upper and confined portion of the gully an attempt at actual working was made by means of a race and box-sluice.

From similarity in condition of the old workings, I should judge that prospecting was also begun about the same time about 8 miles lower down Pulletop Creek, in the parish Burrendana.

The mode of occurrence of tinstone in this parish is identically the same as in parish Westby, viz., quartz veins in granite and slate (at or near the junction of these two rocks) have fed a small gully running from a high ridge into the main creek.

The old workings consisted of a race of about $1\frac{1}{2}$ mile in length, and a number of shallow shafts and openings on the ridge and along the creek.

The stanniferous drift in the gully, derived from the wasting of the quartz veins, was partially sluiced away by the early prospectors, and a quantity of mineral won, but how disposed of I was unable to learn.

Five leases are at present in force in parish Burrendana, which embrace the site of the previous operations. The leaseholders—Messrs. G. Mackenzie and party—have been in possession for about fourteen months, and during this period have broken the outcrops of a number quartz veins, in both granite and slate, and also of granitic and felsitic intrusions in the slate close to its junction with the granite. One of the quartz veins—about 3 feet thick—is regarded by the leaseholders as the “Main” lode. It has been exposed for a few feet; small patches of wolfram could be seen, but tinstone could not be detected. Prior to the operations of the present holders, a Mr. Filewood prospected the same locality for several months.

Two days prior to my visit Mackenzie and party finished a small trial of the drift in the bed of the gully at its junction with Pulletop Creek. The quantity was roughly estimated at twenty loads, and from it about 5 or 6 cwt. of mineral was obtained with a box-head sluice. An average sample of the product selected by myself yielded in the departmental laboratory the following results:—

Metallic tin.....	27.72 per cent.
Tungstic acid.....	28.82 per cent.

This mixture of tinstone and wolfram is unsaleable in the colonies; and its value abroad can only be ascertained by practical test, for which purpose at least half a ton should be consigned to reliable agents or dealers.

Owing to equal specific gravity, tinstone cannot be separated from wolfram by mechanical means. It is probable that an admixture of not more than 10 per cent. of wolfram could be treated in the ordinary tin-smelting works; but in the proportions existing in the Pulletop drifts, fusion with carbonate of soda to remove the wolfram as tungstate of soda is imperative.

In considering the value of these deposits for mining purposes, there can, I think, be no question about at once discarding the veins as altogether unworkable. In the case of the drifts in which the economic minerals have been concentrated into smaller compass and more easily worked conditions, it is very apparent that the quantity available is very limited in extent. All the frontage to Pulletop Creek on the south side opposite the present leases has been alienated. On M. L. 2, which is situated just below the junction of the gully and the main creek, a few shafts have been sunk and bottomed at from 12 to 16 feet, the water being very heavy.

I understand that it is the intention of the leaseholders to test the Berlin and Swansea markets with a sample obtained during the recent trial; the results of which will determine their action with regard to the further development of the property; and pending which I beg to recommend that that portion of the western extension of the reserve hatched with red lines on the accompanying plan be retained as a mining reserve.

The remainder of the reserve (2894a) could, in my opinion, be alienated without prejudice to mining interests.

I have, &c.,

JOSEPH E. CARNE,

Geological Surveyor.

The Government Geologist.

APPENDIX M.

Report on Gold-saving Machine.

Geological Survey Branch, Department of Mines and Agriculture,

Sir,

5 June, 1894.

I have the honor to report that, in accordance with your instructions, I attended a public trial of a gold-saving machine invented by Mr. W. Ring, of Parramatta. At my request Mr. Card, A.R.S.M., Curator and Mineralogist, accompanied me, and joined in the following report.

The Under Secretary for Mines and Agriculture.

J. E. C.

Mr. Ring's gold-saving machine consists of an open box frame of about the following dimensions:—length, 23 inches; breadth, 17 inches; depth on feed side, 17 inches; on discharge side, 20 inches. A curved false bottom formed of zinc, with eight rows of perforations—about four to the lineal inch—limits the internal capacity to about 2 cubic feet; the working capacity would, however, be less than one half this amount. The puddling apparatus consists of a wooden shaft passing through the box frame lengthways, and armed with three rows of pointed iron spikes about 6 inches long and 2 inches apart, and one row of toothed spade-shaped spikes, the blades of which are set at a slight angle from the horizontal. Fixed to the upper edge of the feed side is a narrow inclined plate furnished with rows of short teeth, between which the points of the revolving spikes pass. The ends of the spikes reach to within about half an inch of the sides and bottom of the box frame. Below the perforated false bottom is a movable riffle tray (No. 1) of zinc, which rests upon the true bottom. From this tray the pulp passes over a wooden riffle tray (No. 2) suspended from the box frame, and set at an opposite angle to the first; from the second tray it passes on to the third and last inclined tray, which is covered with carpet; beyond the carpet the inventor claims that no gold passes. Loose laterally swung rakes at the discharge edge of the two first trays prevent the pulp from settling. An axle-box for the shaft axle is formed on the wooden framework of the machine supports, by a half circular band of iron; at this point the axle is furnished with two small cams; as the axle is revolved by means of the attached handle, each cam alternately causes a short drop, which imparts a slight jerky oscillation to the box frame and attached riffle trays. Discharge of the rubble is effected by means of a door in the lower front side, 8 inches long and $2\frac{1}{2}$ inches

inches wide. That portion of the rubble lying opposite the aperture is removed through it by the spade spikes, but the remainder of the machine has to be cleared by hand. (It must, however, be mentioned that the inventor stated his intention of increasing the length of the discharge door to nearly the full extent of the machine.) Water is supplied from a 50-gallon tank, the bottom of which rests upon a portion of the framework level with the top of the machine. A short pipe with a perforated cross-pipe conveys the water into the box frame just above the central shaft; the valve is regulated by a tap. The feed is direct into the puddler without a hopper,

Four samples were put through, but the conditions under which the trials were made were unfavourable to all concerned, owing to want of working space, failure of water supply, ignorance of yields of natural washdirts, and absence of any provision for saving and sampling tailings. The first sample treated consisted of 38 lb. of a mixture of local clay and sandy soil (free from rubble), into which twenty small specks of gold were placed. After two and a half minutes manipulation of the machine, the contents of riffle tray No. 1 were panned off with a dish and eighteen specks of gold obtained; one speck was obtained from riffle tray No. 2, and the remaining speck was probably lost, as it was not recovered from the carpet in No. 3 tray. The second test consisted of 32 lb. of loose drift from the Macquarie River; the time of operation could not be properly determined, as the water supply gave out. The yield of the wash was not known, but six small specks of gold were obtained in the first riffle tray and four in the second. The third test consisted of 49 lb. of loose earth from Sunny Corner—yield not known. The time of operation was about two and a half minutes. Seven small specks of gold were obtained in the first riffle tray, and four in the second. The fourth and last test consisted of 22 lb. of washdirt from Forbes, of a nature better suited for a grinding machine than a puddler; after five minutes manipulation one coarse and two or three minute specks of gold were obtained. The yield of the wash was not known. Samples of about 2 lb. each were taken prior to the tests, and subsequently washed at the Mining and Geological Museum to ascertain that gold was actually present in the washdirt; small specks were obtained from the Sunny Corner and Forbes samples, but none from the Macquarie sample, which was not surprising considering the loose nature of the material.

With regard to the results of the trial, we are strongly of opinion—(1st) That beyond indicating the method of working, tests of small parcels of a few pounds weight are of no practical value whatever as gauges of the capacity or efficiency of a gold-saving machine. (2nd) That the crowded condition of a public trial, in the absence of any provision for restricting encroachment upon those engaged in demonstrating the working of a machine, is not conducive to proper supervision or observation. (3rd) That little value pertains to the recovery of $\frac{1}{3}$ of the free gold introduced into 38 lb. of a prepared mixture, inasmuch as in this or any other machine having riffle tables or trays, the result of treatment of so small an amount of washdirt requiring only two and a half minutes to pass through, and in which the gold is free, cannot be regarded as the standard of efficiency of the machine in full work, when the riffle tables are continuously charged to their full capacity; in other words, the time occupied is not sufficient to prove that some of the gold particles will not pass from the riffle tables into the tailings. In the trials of the natural washdirts it will be seen that even in the extremely limited time of operation a large percentage of the particles passed to the second riffle tray. (4th) The only facts practically demonstrated at the trial, upon which we venture to offer an opinion were—1st, the unsuitability of the puddling apparatus of the machine for rubbly drift or wash; and 2nd, the want of a better system of rubble discharge.

As regards the puddler, pebbles of over $1\frac{1}{2}$ inch in diameter clog the spikes, and much smaller stones and fragments get caught between the end of the spikes and the sides and bottom, rendering it impossible to revolve the shaft continuously in one direction; from personal test we are convinced that the jarring effect of frequent jamming of the spikes would be most painful, fatiguing, and exasperating.

As regards the discharge, the amount of rubble likely to accumulate in the puddler can be estimated from the size of the perforations in the false bottom, viz., about one-sixth of an inch; and the frequency of removal of rubble necessary can be judged from the working capacity of the machine.

The accompanying sketch and elevation, prepared from sketches made at the trial, will convey an idea of the form and setting up of the machine, though the riffle trays appear set at too high an angle.

We have, &c.,

JOSEPH E. CARNE, Geological Surveyor.
GEORGE W. CARD, Curator and Mineralogist.

The Under Secretary.

APPENDIX N.

Report on the Tumbarumba District.

Sir, Geological Survey Branch, Department of Mines and Agriculture, 13 June, 1894.

I have the honor to report that, in accordance with your instructions, I have inspected those portions of the gold-fields of Maragle, Paddy's River, Burra, Bago, Cherry Hill, and Upper and Lower Tumbarumba, in the counties of Selwyn and Wynyard, which are likely to be benefited by the water scheme proposed by the Tumbarumba Progress Committee and Mining League. The proposal being for the construction of a "Channel for the purpose of conveying water from Tumut River, from a place above the bridge at O'Heher's Crossing to the top of the Dividing Range, and from there along the range to the gold-fields mentioned." The channel to be 6 feet wide and $\frac{1}{2}$ feet deep, and to carry about 100 sluice-heads of water. The estimated length of channel being 33 miles between extreme points, and 17 miles allowance for deviation—total length, 50 miles. Estimated cost, at £200 per mile, £10,000; estimated rental obtainable, 2s. 6d. per week per sluice.

Upon my arrival at Tumbarumba, on the 21st April, I was informed that Mr. L. A. B. Wade, C.E., of the Water Conservation, Irrigation, and Drainage Branch of the Department of Public Works, had already been over the route of the proposed channel, with a view of ascertaining feasibility and cost of construction.

The gold-fields mentioned lie on either side of the range forming the watershed between the Murray and Tumut Rivers, and the proposed water supply is for the purpose of sluicing the auriferous areas situated high up on the sides of the divide, and believed to be beyond the reach of any present available supply.

The crucial questions presented in such a proposition are—1st, the extent and richness of the deposits to be operated upon; 2nd, the feasibility and cost of an efficient water supply; and 3rd, the revenue to be derived therefrom.

As

As Mr. Wade's report deals with cost and revenue, I will confine myself to the first question, and use the data supplied by him in connection with the other two questions.

The Secretary of the Mining League expressed a desire that the route mapped out by Mr. Wade from the Tooma, instead of from the Tumut River, should be accepted as part of the Progress Committee and Mining League's application.

I inspected the amended course of the channel from Tooma River to Tumbarumba, *via* Bago, with the exception of a few miles of non-auriferous country north from Neurenmerrenmang, and made a series of aneroid observations of the heights of the most important points, which compare very favourably indeed with those recorded by Mr. Wade.

At an elevation of about 4,000 feet above sea-level, and about 1,900 feet above Tumbarumba,—on the Tooma River, opposite Toolong alluvial gold-workings, sufficient elevation is obtained for the intake of a gravitation supply. From this point (shown approximately on plan) the course of the proposed channel winds round the contours of the river to Mangar, or Black Jack, Mountain. The country rock being granite, and rising at frequent intervals to the surface, would from its compact unaltered condition render the cutting along the river a costly undertaking. At Black Jack the course of the channel rises along the western flank of the mountain, and from the steepness of the slope it would be necessary to overshoot all small creeks or gullies crossing the cutting, otherwise they would be likely to cut it away during heavy rain.

Along the main divide the cutting would be in fairly good country, with occasional excavations in the granite country rock. The most serious difficulty, as pointed out by Mr. Wade, is the low elevation of Pinchgut or Macartney's Gap, which is about 450 feet lower than that of the next depression on the route some miles distant, known as Neurenmerrenmang Gap. To convey the water over Pinchgut Gap at a sufficiently high elevation to allow proper fall in the channel for the remainder of its course, a syphon line would be necessary for an estimated distance of about 2 miles.

From a little north of Pinchgut Gap a distributing conduit would have to be constructed to New Maragle workings.

From the above Gap the course of the channel would be along the eastern side of the range to Neurenmerrenmang Gap, which consists of a level basaltic plateau of some extent. At this point either the main channel would have to be taken on to the west side of the range to supply Old Maragle, Paddy's River, and Burra gold-fields, or distributing channels would be necessary for this purpose, all leading from this gap. If the main channel be cut along the western side of the divide, then, to supply the western margin of the Bago and upper extensions of the adjacent Gilmore and Adelong gold-fields, a branch channel would have to be taken through a gap at the head of Brennan's Gully. From this gap, if the main channel should be used for working the old tertiary lead, its course would be along the basalt range down the west side of the Tumbarumba Valley.

With the exception of the basalt plateau at Neurenmerrenmang, and an isolated basalt knob at Pilot Hill, about 6 miles east of Bago, the formation from the Tooma River to Bago is granite, and from Bago to Tumbarumba chiefly basalt.

Mr. Wade estimates the length of the course at 85 miles, and the cost of channel and syphon at £117,000; interest, maintenance, and repairs at £6,250 per annum, and calculates that a revenue of £6 5s. per week is required for continuous use of each sluice head of water, or £3 2s. 6d. per day or night use.

The Progress Committee and Mining League's estimate of rental is 2s. 6d. per week per sluice, for, I presume, day and night water combined.

Mr. Wade further notes that eight or nine parties working in the same creek might combine and take one ground-sluice head of water, each party contributing 7s. 6d. per week.

Against this alternative it must be pointed out that the area of unworked ground at the heads of any of the creeks in the goldfields to be served is not sufficient to allow of more than, at most, two parties using the same water; and further that one ground sluice head is not adequate for really effective work. Furthermore, from inquiry I believe it extremely unlikely that any of the parties would pay at the rate of 15s. per week for a sufficient supply.

Estimating the net available supply under the scheme, for all fields, at 100 ground sluice heads, and dividing it equally amongst the various goldfields, excluding Gilmore and Adelong, twenty sluice heads would be at the service of each, equivalent to ten race supplies. Allowing two parties of four for each race, eighty men could be employed on each field, or 400 on all the fields, at a cost of £10 12s. 6d. per man per annum.

As regards the extent and richness of the unworked deposits to be operated on in the different fields embraced by the scheme, I purpose dealing briefly with the special features presented by them.

The unworked auriferous deposits of the Bago, Cherry Hill, and Upper and Lower Tumbarumba gold-fields may be considered collectively, as they all form part of the old Tertiary valley, represented at the present time by broken portions of the once continuous basalt flow, extending from Bago down the Tumbarumba Valley to the Tooma River.

It will be at once evident from the accompanying plan that such an extensive tract of country, underlaid by a more or less continuous bed of auriferous drift, of varying thickness and yield, so far as proved, constitutes the most important feature in the area under consideration; but, unfortunately, the advocacy of the proposed water scheme loses weight just in proportion to the relative importance of this area over any or all of the other gold-fields in question, from the fact that the old Tertiary basalt-covered lead will be the least benefited by the increased water supply.

From a careful examination of the locality from Bago to Tumbarumba, I am of opinion that there remains but a slight fringe of unworked sluicing ground along portions of the margin of the basalt area, and that these are chiefly confined to the elevated northern end between Bago and Cherry Hill.

From the thickness of the overburden, and probable solidity of the basalt cover over considerable areas, it will be impossible to work the drifts beneath other than by tunnels or by shafts. The proposed water supply could certainly be utilized for box sluice-heads at the mouths of the above works, but such an advantage would not be commensurate with the cost of the undertaking, especially in view of the contiguity of the permanent Tumbarumba Creek and its tributaries. The steep fall from the washlevel to the adjacent watercourses would render the conveyance of the washdirt easy and expeditious. In most instances, along the eastern margin of the basalt facing Tumbarumba Creek, or its main tributary—Brennan's Gully—the extension of the tunnel rails on trestles, for a short distance, would ensure a steep shoot into the creek.

So far the results of prospecting the drift under the basalt have, in most cases, not proved as satisfactory as could be desired; gold has always been found, but generally in small quantity only. Very probably also a moderately payable yield has, in some instances, been insufficient to encourage perseverance in those whose anticipations and hopes are centered in rich "gutters," or "leads" in the old valley bed. The richness of the beds of the present drainage channels, as proved in the early gold workings, under such conditions as prevail in the Tumarumba Valley, generally gives rise to a belief, which is not wanting in the present case, that similarly rich channels or gutters exist in the old contiguous Tertiary valley bottom, preserved under the basalt sheet, by the side of which the present watercourse trends; and such indeed is sometimes the case, but too frequently the fact is lost sight of that the existing creek bed represents an extensive ground sluice, into and through which a vast area of the original tertiary gravel was carried, and its metallic contents re-concentrated into the payable proportions proved in the early workings.

As regards the wider plateau near Laurel Hill, Bago, it is possible that "gutters" may exist, but the natural inference would seem to be that the broader the old channel or valley—as indicated by the width of the basalt with drift beneath—the more distributed the transported gravel and its gold contents.

That fairly payable patches of wash do occur in the widely-spread bed of gravel under the basalt cover, and that others may confidently be expected in the untried areas is proved by the operations of those engaged in working by tunnel at Cherry Hill, Fiery Mount, and near Appleton's lease, on the eastern margin of the basalt.

The evidence afforded by prospecting to date seems to point to the following conclusion—that the Tumarumba Tertiary lead consists of portions of a once more or less widely spread bed of gravel, lying on a comparatively level bottom or bed-rock, in which—so far as proved—no definite deep gutter occurs, though occasional "rolls" or undulations are met with in the bed-rock; the gold being lightly distributed throughout the whole of the gravel, but in payable quantity in irregular patches only.

Operations based upon such a conclusion, combined with systematic extension of prospecting in the unexplored areas, and determination to be satisfied with moderate yields, is preferable to continuous hoping and fitful seeking for "deep leads" in the original valley bed.

Surface Hill, about $3\frac{1}{2}$ miles north of Tumarumba, was pointed out as one of the sites to be benefited by the proposed water supply. Here a considerable amount of sluicing has been done on the eastern fall of Tumarumba Creek, the wash being at an elevation of about 200 feet above the present channel. Operations ceased about seven or eight years ago, after an ineffectual attempt of a company to work by tunnel. Water was conveyed to the highest point of the open workings by means of a race, at an elevation of about 315 feet above the level of Tumarumba Creek; and no doubt the water could have been brought to the summit of the ridge over the workings, but evidently the overburden became too great for further sluicing operations to be carried on with profit. The face of the open workings has fallen in, but there is sufficient evidence afforded by discarded patches of poor wash *in situ*, and by the outcrops of granite, and a characteristic band of ferruginous cemented gravel occurring in the wash, to prove that the bed-rock is rising to the west, and thus precluding the idea of a deep gutter in the unworked ground at this point. The rising of the granite bed-rock in the westernmost extension of Connors and Livingstone's trial tunnel about one-third of a mile north, which was proved to be at least 60 feet, in about 208 feet, still further points to the nearness of the western bank of the old valley in this locality.

At Cherry Hill, the next most important site north of Surface Hill, sluicing operations were originally successfully carried on by two miners by means of water brought from the head of Tumarumba Creek, the old workings showing about 35 feet of overburden. This ground is now held by the Tumut Tribute Company as G.L. 3, 4, 5, 6, 7, and 8, and is being worked by tunnel, a portion of the area having already been blocked out. Operations are at present confined to a new tunnel which has been driven in the granite bed-rock to nearly its full length, viz., 434 feet. The company have the registered right of the water-race above alluded to, which is sufficient for its requirements. The wash-dirt is treated in a box-head sluice at the tunnel mouth. The top of the ridge is about 160 feet above the level of the wash in the tunnel.

North of Cherry Hill is the Fiery Mount Claim, which was originally worked as a sluicing claim until the overburden became too great, being at the present time about 75 feet thick. It is now being profitably worked by tunnelling, the wash being treated in a boxhead sluice supplied by a race from Tumarumba Creek. The wash level is stated to be rising to the west at the present face.

G. Appleton and party have just blocked out a claim—worked by tunnel—adjoining G.L. 16 on the north, sufficient water being obtained from a small creek near by to supply a box sluice. Payable wash was proved in the above lease at the back of the workings, but the party's tunnel was lost through non-protection in blocking out.

R. Leykaufe is working a sluicing claim in Quartz Reef Gully, north of the latter party, by means of a race from Brennan's Gully, the main western branch of Tumarumba Creek. This claim was originally highly payable, but is now nearly exhausted, the remaining wash being very poor.

F. Fricke owns the registered water right from the head of Tumarumba Creek, and commands the highest reaches of Brennan's Gully, the main channel of Tumarumba Creek not being payably auriferous above the junction with the latter, which may be perhaps accounted for by the fact that the main channel heads from the granite area to the eastward, whilst Brennan's Gully drains from the basalt-covered lead.

Between Leykaufe and Fricke's claims some shallow surfacing occurs which would probably pay for sluicing on a large scale, but not for carting. This is one of the points which would be benefited by the water scheme; but it must be pointed out that Fricke's, Leykaufe's, and the Tumut Tribute Company's races command this area; indeed a branch of Fricke's race has been carried across the basalt ridge to Bago Creek, and it can be brought to all but the highest point of the range.

On the western fall of the basalt area, in portion 28, parish Bago, county Wynyard, J. Tonking is working by tunnel, a small supply of water being obtained from one of the heads of Bago Creek, on which the claim is situated. Farther west, about 150 yards from the south-west corner of portion 28, a tunnel is being driven into a basalt-covered hill on the east side of Spark's at Wombat Gully. The top of the hill is about 100 feet above the tunnel.

-  Auriferous deposits.
-  Basalt, covering auriferous deposits.

Note:—Basalt. Partly after W Anderson
Proposed line of Conduit After L.B. Wade C.E.

West of Laurel Inn, Bago, Richardson and Party are working a sluicing claim on portion 59, parish Bago, county Wynyard, for which Richardson holds a permit, the necessary water supply being drawn from the head of Gilmore Creek, about 10 miles distant. This party will be enabled to work their lead right up to its head near the basalt at Laurel Hill. Two of the same party are also engaged in driving a tunnel under the basalt a little north of the Laurel Inn, Bago.

Bago Creek has been worked out along the main channel, and up the small feeders at its head, to near the basalt from which it drains. A small area, in and around the extreme heads of the contributory gullies, would perhaps be available for sluicing purposes.

The bed of the Tumbarumba Creek, with the exception of the area held as a lease by the Tumbarumba Sluicing Company, near Surface Hill, and a smaller area just below the town, has been worked out as far as proved payable. As before stated, above the junction of its tributary or chief western branch, Brennan's Gully, the main channel, which bears away into the granite area to the eastward, has not proved payably auriferous.

Brennan's Gully has also been worked out right up to near its source, the remaining unworked ground being commanded by Fricke's race. From the western side of this gully several small gullies drain into it from the basalt formation, such as Mailtrack, Quartz Reef, Lagoon, and Peel Gullies. These have all been more or less worked along their beds. Low-grade surfacing has been proved in patches between these channels, which might profitably be worked, if an abundant supply was available.

Across the narrow Divide, north from Brennan's Gully, is one of the heads of Gilmore Creek. G. Dell owns the right of the available water, and has been engaged for thirteen years in sluicing the creek bed. At the point now reached the yield is poor, and the owner is undecided as to future operations, as, in addition to the poorness of the remaining wash, the site of his storage dam has been reached.

The basalt formation ends a little north of Laurel Inn, Bago. Here the granite bedrock makes its appearance at intervals from under a heavy cover of rich, loamy soil, chiefly derived from the weathering of the basalt; drift pebbles are occasionally to be seen where roads have cut shallow patches of soil. Over the comparatively level table-land, extending in a northerly direction from the basalt, trial shafts have been sunk, but so far not with encouraging results. This area is favourably regarded by some of the advocates of the water scheme.

On the western fall of the Main Divide, Pound, Burra, Paddy's River, and Old Maragle creeks and their tributaries take their rise. The auriferous beds of these creeks have all been more or less worked out wherever payable or accessible; but at the extreme heads of each, which generally consist of a number of small feeders, a limited area of moderately payable ground yet remains to be worked. In each of the water-courses mentioned the fall from the upper reaches is very precipitous and rocky, which causes a break in the creek workings, in some cases for a couple of miles.

On the eastern fall of the Divide is the New Maragle Creek and its tributaries—Richardson's, Pinchgut, Maddin's, Yorkey's, and Native Creeks. These have also been worked up to near their heads; though, as in the case of all the streams mentioned, small lateral areas occur along the old workings, which afford fossicking ground for occasional miners, in addition to the virgin ground at their heads, high up on the fall of the Divide.

Apart from the basalt-covered lead, the creeks described form the chief features of the goldfields, for which a water supply is desired. As before stated, the beds of these creeks, as well as numerous small side leaders along their courses, have been more or less exhausted of their gold contents, thus leaving small areas only of virgin sluicing ground at the heads of each.

In, I believe, every instance, single individuals or small parties hold the registered water rights starting from the heads of the respective water-courses which practically command the available water in each case; and thus, being masters of the situation, are enabled to work the upper reaches at their leisure. In a few instances the race water is used a second time by parties working tributary gullies or unused portions of the creek beds at lower levels.

It is noticeable that little or no effort is made to conserve water, or even to supplement the ordinary supply by means of dams, generally the undirected night water is allowed to run largely to waste. When dams are attempted they are of a most primitive character, seldom more than 3 or 4 feet high. Many of the small tributary gullies could be worked to their heads if a little more energy was displayed in the conservation of water; at all events, in most instances, the duration of the existing supplies could be considerably prolonged at slight cost of time and labour. Under present conditions, sluicing operations are chiefly confined to the winter months or brief intervals after rainfall.

At the Warden's office, Tumbarumba, between the 1st of January and the 14th of May of the present year, 260 miners' rights were issued. From personal inquiry at the several localities, the following list represents the approximate number of miners engaged at the time of inspection:—

Tumbarumba to Bago (inclusive)	67
Pound Creek	7
Spencer's Creek	5
Paddy's River	4
Burra Creek	10
Old Maragle Creek	5
New Maragle Creek and tributaries	30
Total	128

Briefly summarised, the sluicing ground available for the operation of the water scheme in the goldfields mentioned in this application is confined to a limited extent of narrow leads and shallow surfacing in several localities high up on the eastern and western falls of the main range dividing the waters of the Tooma and Tumut Rivers, between Manjar Mountain and Bago, and a narrow fringe in places, along the basalt area between Bago and Cherry Hill, in the Tumbarumba Valley.

The southern extension of the basalt lead below Tumbarumba hardly comes under consideration inasmuch as the permanent Tumbarumba Creek supply would be available for any operations in that locality.

Though the extent of virgin ground available would perhaps be sufficiently important to warrant a moderate expenditure in securing a more efficient water supply for the areas situated on the Divide, yet, unfortunately owing to the great elevation of the auriferous deposits, only a costly undertaking is possible, which would not be justified by either the extent and probable duration of possible gold workings or anticipated revenue.

During

During my examination of the above goldfields, I noted the frequent occurrence of dioritic dykes in the granite bedrock of the principal sluicing areas, and will at a later date submit some brief notes upon their characteristics and probable connection with the occurrence of gold in the district.

In concluding my report I desire to acknowledge the intelligent and painstaking guidance of Mr. W. Adams, of Tumbarumba, who was selected to accompany me.

I have, &c.,

JOSEPH E. CARNE,

Geological Surveyor.

The Government Geologist.

APPENDIX O.

Report on a Discovery of Gold at New Station, near Wyndham.

Sir,

Moruya, 16 July, 1894.

I have the honor to report that in accordance with your instructions I examined the site at New Station, near Wyndham, upon which W. Peck reported the discovery of payable gold,—*vide* papers Mines 94, 10743.

The reef in which payable gold is reported to have been struck is situated about one quarter of a mile from the north boundary of D. Irving's Conditional Lease, No. 230, parish of Yuglanah, county Auckland, about 5 miles a little west of north from the village of Wyndham, and 20 miles from the Pambula gold-mines.

The physical characters of the country are heavily timbered ridges with intervening gullies of more or less steep descent. The geological features are granite, narrow belts of slate, somewhat altered by the granite, and diorite. The surface is heavily soiled and covered with undergrowth. The track from Wyndham lies through private land, and presents several steep ascents. If required a more suitable track could be formed by sidling the ridges.

Timber of excellent quality for building and mining purposes is abundant, whilst the facilities for water conservation are excellent, the numerous creeks in the vicinity of the reefs being more or less permanent excepting in times of protracted drought.

Attention was first directed to New Station about four years ago when a Bega Company sank a shaft at New Station Creek on Wilson's C. P. of 200 acres (about $1\frac{1}{2}$ miles southerly from the reported gold discovery by W. Peck), on a supposed silver reef, the veinstone being quartz with pyrites and a little galena. Peck's partner, W. Smith, was the discoverer of this reef, and whilst engaged in sinking on it for the Bega Company discovered Peck's reef. It should, however, be stated that Mark Southwell also claims the credit of the latter discovery.

Towards the end of 1891 Peck started a shaft in the latter reef, but, after sinking 6 or 8 feet, found that he could not work on the C. L. without a permit; he therefore ceased work and applied for a permit on the 11th August, 1892, which was eventually granted on the 23rd March, 1893, and received by Peck on the 8th April, 1893.

In the meantime Messrs. Wilson Bros., the present owners of the C. L., had sunk Peck's shaft to a depth of 40 feet. Apparently this shaft was afterwards abandoned for a considerable period as no work appears to have been done by either party until a couple of months since, when Wilson Bros. began raising stone for a trial crushing, and Peck to sink a fresh shaft 1 chain N.E. from Wilson's on the same reef. On the 17th June, 1894, Peck reported gold as before mentioned, and on the same date lodged an application for a lease of 6 acres at the Warden's office, Pambula. Wilson Bros. having obtained a reported yield of 1 oz. 1 dwt. per ton from 5 tons of stone from their shaft, applied about twelve days prior to Peck's application, for a gold lease of 20 acres, which they marked and described so as to include the area held as a permit by Peck and for which he now applies as a gold lease. Wilson Bros. appear to have been working without a permit.

At the time of my visit Peck's new shaft was down about 25 feet in rotten granite; in sinking 2 or 3 tons of stone were raised from the reef, which has a thickness of about 18 inches at bottom, but is split by about 6 inches of granite. No crushing trial has been made from this shaft, the statement of payable gold being based upon results obtained by dollying. The reef strikes E. 10° N. and dips northerly.

Wilson Bros.' shaft, as before stated, was sunk to a depth of 40 feet about two and a half years ago. The 5 tons of stone raised and treated just prior to my visit was taken from the small drives to the west at about 20 and 25 feet. A second trial of 10 tons from the same levels was being treated at the time of inspection, the yield from which was 8 dwt. $16\frac{1}{2}$ gr. per ton. No stone from below 25 feet has been tested; and, owing to a landing having been placed at that depth, the bottom of the shaft could not be inspected. The vein showing in the face of the drive at 25 feet was about 1 foot thick, and the country rotten granite. A little water makes in the shafts but not of any consequence.

Upon the yield of the first crushing, viz., 1 oz. 1 dwt. per ton, being made public, a number of claims were pegged out adjoining Wilson Bros.; but these were not occupied at the time of my visit, and no work has been done upon them with the exception of a little trenching on the adjoining claim to Wilson Bros., in which one of the same family opened a reef; but the reports of prospects are conflicting: most, however, agreeing that they were not payable. The latter reef is distinct from Peck's reef.

About 1 mile north of Peck's and Wilson Bros.' claims is Southwell and Party's prospecting claim, which is situated alongside the surveyed railway line from Wolumla to Cathgart, near station peg 289.

Gold was first discovered in this locality by Mark Southwell about eighteen months ago, who prospected at intervals until about nine months since, when he, and one of his present partners, F. Millner, began active operations and have continued them up to the present time. They performed a considerable amount of work in surfacing, trenching and sinking in the country between the first discovery and the present site, which offered the most favourable indications for more extended prospecting. The country being heavily soiled, the search for permanent reefs is necessarily laborious and slow, as the outcrops rarely appear at the surface. The prospecting shaft at the time of inspection was down 26 feet in soft rotten granite which required close timbering; at this depth hard unaltered granite was met with, the reef in the hard country having a thickness of about 18 inches, and a westerly underlay of 2 feet in 26.

Apparently another reef junctions with the main reef a few feet above the present bottom, on the western wall. So far as can be judged the strike of the main reef is north and south. To the north the reef has not yet been traced from the shaft, whilst to the south, at a distance of about 1 chain, a narrow vein has been picked up which may be the main reef; if so it would confirm the north and south strike. The veinstone in the shaft consists of quartz with pyrites and a little galena and is more or less mixed with

with granite material. Four tons of the stone raised during sinking the 26 feet was picked as free from pyrites as possible, and, after heap roasting, was treated in a Huntingdon Mill at Lochiel, near Pambula, for a yield of 13 dwt. of gold per ton; which, owing to cost of carriage—30s. per ton, and treatment 20s. per ton—did not pay expenses.

It is very desirable that this reef should be proved, both vertically and horizontally, in the solid settled country. So far practically nothing has been done beyond uncovering the crop in the solid.

As the yield above quoted was from picked stone, in which the pyrites had been more or less decomposed or oxidized, and the gold liberated in the free state, it will be interesting and important to learn whether any free gold exists in the pyritous stone at a depth; if not, unless the quantity and quality of the pyrites improves, there will hardly be a margin for profitable extraction.

The result of the 4-ton trial mentioned caused a number of claims to be pegged out north and south of the prospectors, on the supposed course of the reef. Adjoining the prospectors on the north W. Sharp has marked out and applied for an 8-acre lease, and is engaged in sinking a shaft now down 25 feet in rotten granite, which he intends to continue to solid country, and then to crosscut east and west to pick up Southwall's reef, which he has been unable to do on the surface, notwithstanding a fair amount of trenching. Other claims were pegged further to the north but no work had been done. Two parties are engaged south of the prospectors, trenching and surfacing for the reef. Adjoining Southwall and party on the east, Davidge and party are sinking on a small broken leader much mixed with granite, which shows fair prospects in the dish. The underlay is 6 feet in 25 feet to the west, and the strike N. 35° E.

About 2 miles north of Southwell and party's prospecting claim, Styles and Reynolds have pegged another prospecting area on a reef striking north-east and south-west. A shaft had been commenced and was down 8 feet at the date of my visit in rotten granite. The reef was about 6 inches wide at the surface and thickening into a bunch of 18 inches at 8 feet, at the southern end of shaft, but thin and ill-defined at the northern end. The dip is north-westerly. From a portion of the veinstone on the hanging wall fair prospects are obtained by dollying and washing in a dish. Claims have been pegged out north-east and south-west of prospectors, on course of reef, but no work has been done.

Another reef, adjoining Styles and Reynolds on the south-east, has been uncovered in one small hole, about 7 feet deep, by Hughes and party. The veinstone is very jumbled and mixed with granite, making about 1 foot in thickness at 7 feet deep, a little pyrites showing in it. The strike is apparently a little east of north. Other claims were pegged out to the south, but do not appear to be held at the present time. Twenty-four men were on the field at the time of inspection.

As before stated, the country rocks consist of granite, with a little slate and diorite. The latter rock was seen outcropping in two places, one about 3 chains north of W. Peck's claim, and the other about 10 chains north of W. Sharp's 8-acre lease. No doubt it occurs in dyke masses, but it was impossible to determine the course in either case, owing to the depth of soil and thickness of undergrowth.

So far as can be judged from the difficult conditions of occurrence, and the very limited amount of work performed, the indications of payable reefs at New Station are sufficiently good to induce more systematic prospecting than has yet been attempted, and pending which the expenditure of capital in the erection of machinery would not be warranted. With this object in view I have had the honour to recommend that aid be granted from the prospecting vote, for the purpose of assisting in proving two reefs on the field, both vertically and horizontally. Considerable interest is evinced locally in the New Station reefs, and should success crown the prospector's efforts a considerable impetus will be given to mining in the district, which at the present time is languishing owing to the comparative failure of the Pambula mines to realise expectations.

As regards Peck's reef on Irving's conditional lease, No. 230, parish Yuglamah, county Auckland, to which your instructions specially refer, I am of opinion that Peck's report of payable gold is rather premature under the circumstances, and this notwithstanding that the adjoining claim (Wilson Bros.) has yielded an average of 12 dwt. 1 gr. per ton for 15 tons of stone, as no stone has been raised below 25 feet deep, and the last test of 10 tons was 12 dwt. per ton poorer than the first 5 tons raised. At the present time the prospects do not warrant the cost of resumption of the lease. It is well to note, however, that no improvements have been placed on the lease.

I have, &c.,

JOSEPH E. CARNE,
Geological Surveyor,

The Government Geologist.

APPENDIX P.

Report on the prospect of obtaining Water at the Wagga Wagga Experimental Farm.

Sir, Geological Survey Office, Department of Mines and Agriculture, 27 November, 1894.

I have the honor to report having visited the Government Experimental Farm on the Wagga Common, and inspected the small shaft mentioned in Mr. Benson's letter of the 15th October, which had been sunk with a view of obtaining a water supply for the orchard.

The site was selected because of a little surface soakage water which oozed out about 10 feet from the base of the granite outcrop forming the ridge, which here rises about 160 feet above the site. The shaft is about 8 x 4 feet and 9 feet deep. At the time of sinking the country was saturated with water, so that after bailing out the shaft it refilled in about seven hours.

At the date of Mr. Benson's letter—15th October—there were 8 feet of water standing in it, but one month later only 5 feet remained, though the supply had not been drawn upon, excepting to the extent of 600 gallons on the day prior to my visit.

The granite outcropping within about 10 feet of the shaft is solid, and slopes towards it, which is sufficient indication that at no great depth—if the sinking were continued—hard country would be met with.

Mr. Coleman, manager, informed me that on a previous occasion he sank a small hole in the soakage referred to, but that the water in it soon failed as dry weather set in. He also sank a 50 feet shaft at the bottom of the orchard site, in which—at 26 feet—a little soakage water was obtained, about sufficient for the requirements of a small cottage. The shaft during wet weather filled with water, and was subsequently bailed dry on several occasions, with the result that in dry weather it took a fortnight for 20 inches of water to accumulate.

From an examination of the surroundings I am of opinion that a permanent supply of water cannot be obtained from the sources indicated by Mr. Benson. The soakage water in the shaft—which is so rapidly diminishing at the approach of a dry summer—appears to be derived from rainfall soaking through a joint in the low granite ridge, and is therefore dependent upon frequent rains for its continuance:

From

From the experience of settlers in the district, it seems certain that catchment is the only available source of pure water supply, unless advantage be taken of the Murrumbidgee River by means of pipe line and pumping, the nearest point of the river being about 2 miles from the orchard.

In connection with a catchment supply it is worthy of note that the summit of the adjacent ridge forming the watershed is composed of more or less bare or lightly covered granite rock having a rapid slope, from which the whole of the rainfall is shed like a roof. Advantage could best be taken of this means of collecting even the lightest showers, by forming drains around the base of the ridge as close as possible to the lower edge of the rocky outcrop, for it is at once apparent that the farther the drains be cut from the bare rock the less water will be caught, owing to the extreme porosity of the intervening loose granitic soil.

Dr. Cobb, whom I met on the farm, pointed out that during a heavy shower he had witnessed, the rain ran in streams from the rock surfaces.

The best site for a tank would appear to be in the orchard itself, so that advantage would be taken of the increased water-shed afforded by the bend in the ridge on its western boundary.

It is desirable that the water-level in the small shaft be carefully noted at regular intervals during the present dry weather, for the purpose of ascertaining the correctness of the opinion expressed herein, viz., that the supply depends upon frequent rains, this opinion being based upon the limited amount of absorption afforded by the solid nature of the granite rock, which offers no extensive areas of weathered surface such as would be necessary for the retention of a more or less permanent supply of water.

I have, &c.,

JOSEPH E. CARNE,
Geological Surveyor.

The Government Geologist.

APPENDIX Q.

Report on a Magnesite Deposit at Eurongilly.

Department of Mines and Agriculture, Geological Survey Branch,

30 November, 1894.

Sir,

I have the honor to report that, in accordance with instructions, I inspected the site of a reported magnesite deposit at Eurongilly, about 14 miles from Junee Junction.

In June last a very pure sample of this mineral was submitted to the department by Mr. R. Brooks, of Newtown, from the locality mentioned, the quality of which may be judged from the following analysis:—

Carbonate of magnesia	99.41
Silica15
Alumina	trace
Ferric oxide16
Moisture11

99.83

Such a pure sample naturally attracted attention in the Geological Survey Branch, and inquiries elicited statements as to its occurrence in quantity. Quite recently Mr. Travers Jones, M.P., and Dr. Storer, F.C.S., brought it under the notice of the Under Secretary for Mines and Agriculture, and pointed out the importance of such material if procurable in quantity, in view of the possible adoption of a leaching process in connection with the treatment of the Broken Hill zinc-lead sulphides, either by the method recommended by Dr. Schnabel, or by that recently patented by Messrs. Storer and Marsh. In either case the calcined magnesite would be required for the precipitation of the zinc salt from solution.

Acting upon verbal instructions then received from the Under Secretary, I visited Eurongilly on the 10th instant, and found that the discovery was on the conditionally purchased land of Mr. Thomas Brabin, portion 104, parish of Eurongilly, county Clarendon, about 2½ miles from the old Eurongilly gold diggings.

It was disappointing, however, to find that the reported "mountain" and "seam" of magnesite had no foundation in fact; also, instead of the discovery being quite recent, it was made over two years ago during the excavation of a tank.

The magnesite at Eurongilly occurs in loose concretionary nodules in the soil, similar to its occurrence noted in numerous other localities in the Colony.

The tank has a capacity of about 1,500 cubic yards, and the magnesite nodules were found "floating" in the alluvial just above the bedrock over a portion of the bottom; and about two barrow loads of good material are stated by Mr. Brabin to have been obtained in all. The largest piece weighed about 12 lb. Inferior magnesite mixed with clay and stained with oxide of iron was found in larger lumps.

A few months ago Messrs. Brabin and Brooks spent a fortnight in testing the ground, but abandoned the attempt as fruitless. Two shafts were sunk, the tank being full of water, one on the south side about 8 feet deep in magnesian or talcose slate rock, the other on the north, 12 feet deep, in alluvial. In the latter a few small nodules were obtained as in the tank, but none in the former.

In portion 103 in the same parish, small nodules were obtained in limited quantity whilst prospecting for gold. In no case, however, has its occurrence been noted in the Colony in solid country.

The country rock, as before stated, is talcose slate near its junction with granite. From a careful examination of the locality, and particularly from the concretionary or nodular structure of the magnesite itself, I am of opinion that it does not exist in quantity.

As magnesite is likely to be in demand in the colonies in the near future if the processes alluded to are adopted, it may be well to note briefly its mode of occurrence, chief sources of supply, value, and uses.

Magnesite, when in quantity generally occurs as beds or seams, chiefly associated with serpentine or talcose rocks. The chief sources of supply at the present time, according to the *Mining and Engineering Journal*, New York, are—Veitsch in Styria (Austria), near Frankenstein, in Silesia (Prussia), at Mantoudi, in the north of the Island of Eubœa (Greece), and Child's Valley, near Rutherford (California).

The same journal quotes the price of the crude material in New York at 14 dollars per ton, about £2 16s., but this value appears excessive. The selling price of magnesite free on board at Kymassi (Greece), quoted by the agents to Dr. Storer, F.C.S., of 29 Bligh-street, Sydney, is 18s. per ton for 2,000 ton lots per month, of 96 to 97 per cent. quality, and 20s. per ton for 1,000 tons per month of similar grade.

The cost of landing magnesite in the colonies may be roughly estimated at nearly double these figures, which will afford an approximate estimate of the value of local material if a demand should arise for it.

The chief use of magnesite is as a refractory material for manufacture of fire bricks for furnace crowns, hearths, and linings, and crucibles, it having been proved to be the most refractory and durable material for such purposes. A sample magnesian fire brick, and the calcined magnesite from which it was manufactured, was obtained at the World's Columbian Exposition, and is now in the Mining and Geological Museum collection.

The

The minimum standard quality, so far as I have been able to ascertain, is not less than 95 per cent. of carbonate of magnesia.

In connection with the process recommended by Dr. Schabel for precipitation of the zinc salt for paint purposes, it is necessary that the colour be pure white, and free from iron or other stainings which would be likely to discolour the zinc white.

The above objection does not occur in connection with Messrs. Storer and Marsh's patented process, inasmuch as the precipitate is afterwards smelted for spelter.

I am not aware of any magnesite having yet been found in quantity in the Colony, though loose concretionary nodules have indicated its presence in many localities in drift and alluvium. It is, however, very probable that it may be found in commercial quantity in some of the serpentine and talcose slate belts of country which have been noted in the geological map, especially in the extensive belt represented by the Mooney Mooney Range in the Gundagai and Tumut districts, in which the recently opened chrome deposits occur. In connection with an extended examination of this scope of country it is my intention to submit a recommendation for the consideration of the Government Geologist.

I have, &c.,

JOSEPH E. CARNE,

Geological Surveyor.

The Government Geologist.

Progress Report by Mr. G. A. Stonier, F.G.S., Geological Surveyor.

Sir,

Glen Innes, 27 December, 1894.

I have the honour to furnish you with the following report of the work done by me during the year 1894.

From the commencement of the year till the end of January I was employed at the Office in dealing with various official papers, and writing an official report and article for the Records of the Geological Survey of New South Wales on the occurrence of gold at the Evans River (Appendix R.)

On February 6th I left Sydney for Bingera, and remained in the Inverell and Bingera districts till the end of April. The first portion of the time was spent in ascertaining the thickness of the basalt immediately south of the diamond mines at Bingera, as it was proposed to bottom a shaft which had been sunk to a depth of 230 feet. Arrangements were however made for the use of a diamond drill, and one bore was completed, but, as I pointed out before the drill commenced work, one bore is not sufficient to test the formation, and, although wash was not struck, the failure does not detract from the importance of proving the drift which is practically certain to underlie the basalt. The death of Mr. D. S. Lowe has temporarily stopped the work, and the Colony has lost an enterprising capitalist who would have done much for Bingera in testing a portion of the district which can only be tried by the expenditure of capital. I then proceeded to examine the various deposits near Bingera, in which diamonds have been found, in order to ascertain whether any evidence had been obtained of the existence at Bingera of a formation similar to that in which diamonds occur at Kimberley, South Africa, in the famous De Beer's Mines. My report, accompanied by two plans, forms Appendix S. to this report, and it will be seen that the diamonds at Bingera are found in a number of outliers of drift, the pebbles of which are composed largely of red and black jasper, and jasperoid rocks, the diamonds being associated with other gemstones (sapphires, &c.), "morlops," small pencil tourmalines, gold and osmiridium, all of which I believe to have been carried into their present position by the agency of moving water. Bedded and fossiliferous tuffaceous rocks and volcanic breccias are found in close proximity to the drift, but no trace of a volcanic pipe, similar to those at Kimberley, has been yet discovered. In the appended report particulars are also given of the area the drift occupies, as well as the various and varying yields of diamonds per load of wash-dirt. The Monte Christo Mine is under offer to an English syndicate, and it is hoped that capital will soon be available to work several of the mines, as enough prospecting has been done to enable an estimate to be formed of their value. During the latter part of my visit I made a hurried examination of Cope's Creek (Inverell) diamantiferous deposits, and a supposed diamond bearing wash at Mt. Lindsay, both of which are shown on the appended plan No. 2. The former, which were mapped out in 1887 by Mr. Geological-Surveyor Anderson, consist of drifts, the pebbles in which are composed largely of well water-worn quartz, with a smaller proportion of jaspers and larger fragments of tourmaline than are found in the Bingera drifts; they contain tin instead of gold, and in places are concealed by basalt. The large deposits at Malacca, Round Mount, &c., probably formed part of one old water-course, having a well-defined tributary coming from Kenzie's Claim and flowing northerly through Collas Hill into the main channel, but it appears to me that there is distinct evidence that the Staggy Creek Lead (the most westerly of the Inverell leads, and, so far as proved, consisting only of two small outliers) is of much later origin than the Malacca Lead. The latter flowed westerly, and has been traced as far as Portion 8, Parish Aconite, County Hardinge, where it is concealed by basalt, and at this point is 20 miles easterly from the Bingera drifts. Whether the old water-course continued to flow westerly, and ultimately flowed past Bingera, is very much open to question, and judging from information given by a number of the older residents, as well as from personal examination of as much of the country as time would allow, it would appear that the continuation of the Cope's Creek leads will be found to be considerably to the north-east, and possibly may not reach the longitude of Bingera.

A few miles to the east of Mt. Lindsay a lead has been discovered, having a westerly fall; the wash contains "morlops," jaspers, and is well worth a trial though up to the present time diamonds have not been detected. It does not appear to me to be at all likely that the Bingera diamonds have been derived from a formation in the vicinity of Mt. Lindsay, or, as has been suggested, from the "Cap and Bonnett," a hill 19 miles to the west of Bingera on Terry-hie-hie Run, because, independently of the geological formation of the hill, there is a strong evidence in favour of a westerly and not an easterly fall.

The conclusions to which I arrived were—

- (1). The diamonds were not formed *in situ*.
- (2). Their source remains to be discovered.
- (3). That the junction of both the tourmaline granite and the serpentine (position of which is shown on appended plan No. 2) with the sedimentary rocks should be carefully prospected for diamonds.
- (4). As the Bingera leads trend towards Cobbadah, it is possible that the deposit of drift may be found between Bingera and Cobbadah.
- (5). The drifts under the basalt are well worthy of attention.

The

The geology of the district is of special interest although little is yet known about it. There is a large development of sedimentary rocks which may be divisible into three series, apparently conformable and consisting of fresh water (*Lepidodendron*) thin bedded sandstones and mudstones sandwiched between two marine series, the upper one being tuffaceous and 1,000 feet thick, and the lower one containing several oolitic and other limestones rich in marine fauna with conglomerates lower in the series. The sediments are intruded by serpentine which can be traced for nearly the whole distance from Tamworth to Warialda; on the western side of the serpentine is a bed of limestone which varies in thickness up to 1,000 feet, and is referred by Professor David to the Gympie horizon, while the *Lepidodendron* beds are considered by the same Author* to be younger than and unconformable to the thick limestones and referable to the Star horizon of Queensland. At their junction with the serpentine the sediments have been metamorphosed into jasperoid rocks of various kinds. To the east of the serpentine is a large mass of intrusive tourmaline granite, the sediments between the granite and the serpentine having been highly altered; their age is very uncertain but they appear to me to be referable to the Star rather than the Gympie horizon. The occurrence of garnets in basalt 12 miles south from Bingera, has been referred to in a recent paper read before the Royal Society, Sydney by Mr. Donald Porter of Tamworth. The appended report gives particulars of the Secondary and Tertiary rocks developed in the Bingera district.

On the 23rd May I again left Sydney, and until the 4th August was occupied in dealing with land cases, Prospecting Vote applications, &c., at Uralla, Elsmore, Gilghi, Vegetable Creek, Wellingrove, Cameron Creek, and Woolomumbi (Armidale district), Coorangoora Flat (Upper Bingera), and Moor Creek (Tamworth). My report on Wellingrove forms Appendix T.; but most of the other places have been referred to in earlier reports. The Vegetable Creek district has been fully examined by Professor David, and there have not been any important developments since the publication of his memoir. The recent alluvial is still giving employment to a number of miners, but there has been very little work in the deep ground; should however the work now in progress at Rose Valley be successful, and payable tin struck, others will be encouraged to test the lead for its whole length towards Strathbogie. At the time of my visit the Little Plant Mine was yielding a handsome return notwithstanding the present low price of silver; and the Ottery lode was also being worked, the miners having consented to a reduction in wage in preference to the mine being closed. At Moor Creek, Tamworth, a number of thin and badly-defined veins of quartz carrying gold and telluride of bismuth (determined by Mr. J. C. H. Mingaye, the Departmental Analyst) have been discovered, but there is not sufficient stone at grass to induce the purchase of a crushing plant. At Coorangoora Flat there is a large stretch of basalt, and should it be found to cover a well-defined lead, the wash can hardly fail to carry payable gold.

From August 9th to September 3rd, leave of absence was granted to me, and on its expiration I visited Bulladelah, Cooloongolook, Stroud, Copeland, Port Macquarie and Kempsey, in order to report upon various Land Alienation and Gold Prospecting Vote cases. Half way between Bulladelah and Cooloongolook, and 7 miles from Bulladelah, on the Bungwall road, the rocks are of marine origin, the specimens collected having been forwarded to you. At Cooloongolook, several of the mines are being restarted, amongst them being the Curreekie reef, a particularly well-defined vein in which six shoots of gold occur in a length of 230 feet, and have been worked to the water level; the stone is said to have yielded from 5 to 14 oz. per ton for several bulk crushings. No attempt has been made to prove the vein below the water-level, or in a northerly or southerly direction. At Bulby (12 miles north from Cooloongolook) several parties have received aid from the Prospecting Vote to test auriferous quartz veins, but the gold has not been present in sufficient quantity to pay cartage to Cooloongolook and mining expenses. At Copeland *Lepidodendron* was collected by you in 1886, and subsequently the late C. S. Wilkinson discovered marine fossils at Cobark Station in beds which he considered to probably overlie the *Lepidodendron* Series. At Rawdon Vale I collected a number of marine fossils, and they are now awaiting examination. At Dewitt Creek Station, on the Upper Manning, there is a series of altered limestones and sandstones which have yielded a few fossils not yet examined; the series is probably older than the Copeland or Rawdon Vale rocks, and possibly unconformable, though a conclusive section was not observed. At the mines there was little work of a productive nature being done. The alluvial still yields a certain amount of gold; and at the Lady Belmore Mine a new shoot of auriferous quartz, probably an offshoot from the main vein, was being profitably worked, but most of the principal veins were idle or doing dead work. There can, however, be little doubt that they will be worked in the future, and Copeland become a thriving township, for, independently of the veins which have been discovered, there is a large area in which auriferous veins may be expected to occur, though on account of the heavy undergrowth of scrub, ferns, &c., the country is difficult to prospect. It is a noticeable fact that very little new ground is ever tried, though it is clearly unreasonable to conclude that all the auriferous veins have been discovered. From Gloucester to Taree, and on to Port Macquarie and Kempsey, most of the country is occupied by an apparently continuous series of thin-bedded mudstones and sandstones, which have not been explored for fossils, but lithologically resemble the *Lepidodendron* beds of Copeland. At Carangula, Kempsey, the antimony veins have been worked to the 200-foot level, but have been idle for several years, and, in consequence, the surrounding country, which contains a number of small bunches of antimony ore is deserted. A trace of gold is found with the antimony, and it is possible that as the veins are followed the percentage of gold may be found to increase.

I arrived in Sydney on 7th November, and left the following day for Nundle and Bowling Alley Point to report upon the proposed alienation of several portions of land. I then proceeded to Moree to report upon the occurrence of gold at Slaughter House Creek, 25 miles east from the township. About 50 oz. of alluvial gold have been won by gully-raking, and it appears to me that this gold has been derived largely from an old river channel, traces of which have been discovered outcropping from beneath basalt, though very little systematic prospecting has been done to prove whether the wash is payable or not. The bedrock consists of thin-bedded, greenish grey mudstones of Carboniferous age, with thin beds of encrinital, &c., limestone, traversed by occasional quartz and felspathic veins which have been found to be auriferous north of Yugabi, but have not been tested to more than 30 or 40 feet. Overlying the Carboniferous beds are a series of coarse conglomerates, sandstones, and shales which have yielded a few plant remains 2 miles north-west from Derra Derra homestead, and an abundance of *Orthis australis* near Rocky Creek homestead. They are probably of Carboniferous age, and slightly unconformable to the Carboniferous encrinital, &c., limestone rocks. The relation of the *Orthis* zone to the Derra plant beds

* Pres. Address Linn. Soc. N. S. W., 1894, pp. 587, 596.

beds is not clear; Professor David states that at Fraser's Creek, near Ashford, the Permo-Carboniferous beds are strongly unconformable to the Carboniferous. Above the Carboniferous sandstones, &c., to the west of Slaughter House Creek, is a series of almost horizontal, false-bedded, whitish-grey, glistening sandstones, quite indistinguishable from the Hawkesbury series developed about Sydney and the Clarence coal-field. They are strongly unconformable to the Carboniferous sandstones, &c., good sections being visible on the hills a mile to the north-west of the "Cap and Bonnett Hill," on Terry-hie-hie Run. The formation occurs as outliers, and is largely developed towards and about the township of Warialda, where good sections can be seen of the Carboniferous beds with a thin series of freshwater sandstones, sandy shales, and conglomerates resting unconformably upon them; above the freshwater sandstones are the falsely bedded Hawkesbury sandstones slightly unconformable to them, and capped by basalt to the north and south-east of Warialda. A fuller report will be subsequently forwarded to you.

From Moree I also travelled to Bogabilla, most of the distance being over Tertiary plain country without any outcrop of rock being visible, except a Tertiary basalt 6 miles east of Moree and a mile east of Coppymurrumbilla homestead, at the "Rocky Crossing" (12 miles from Bogabilla), a fairly large inlier of conglomerates, quartz, &c., and a compact clayey sandstone, &c., in all about 12 feet of section showing; they are of Cretaceous (?) age, though whether Upper or Lower there is no evidence to show.

The reports appended are—(1) Evans River; (2) Bingera; (3) Wellingrove, and in the Records of the Geological Survey of New South Wales will be found papers on "Diamonds at Bingera," and "The Occurrence of Gold at the Evans River."

I have, &c.,

GEO. A. STONIER,
Geological Surveyor.

The Government Geologist.

APPENDIX R.

It appears from Mr. Geological Surveyor Stonier's report that fine gold has been found in three different positions at the Evans River, viz., in the sands of the present sea-beach, and in two terraces or old raised beaches which have been formed by the gradual rising of the land in this locality. Mr. Stonier also reports that there is a possibility that careful prospecting may result in the discovery of a fourth deposit (below the surface), owing to slow subsidence of the land. Mr. Stonier is of opinion that there is not much opening for prospectors who are without the means of living for a few months.

E. F. P., 6-2-94.

The Under Secretary for Mines and Agriculture.

Report on Alluvial Gold Deposits near the Evans River, Lismore District.

Sir,

Geological Survey Office, Department of Mines, 2 February, 1894.

In accordance with your instructions I have examined the deposits of alluvial gold which are being worked on the coast near the Evans River, in the Lismore district, and have the honour to submit the following report:—

The Evans River, known locally as the Little River, rises in the Parish of Riley, County Richmond, half a mile to the south of the township of Woodburn, and flows to the east into the Pacific Ocean.

For many years gold has been won in patches along the coast from Port Macquarie to the Queensland border; the deposits have been described by the late Mr. C. S. Wilkinson in various reports. At Ballina the occurrence is of special interest, as the precious metal has been derived from the denudation of a sheet of basalt, which has been proved, by bulk crushings, to be auriferous (Ann. Rept. Dept. Mines for 1889, p. 203).

On the northern bank of the Evans River there is a wide, somewhat fan-shaped flat, which extends to the Richmond River, and is formed partly of fresh-water alluvium (the rich agricultural soil of the district) and partly covered by blown sand. To the south-west of the Evans River there is an extensive development of the sandstone and shales of the Clarence Coal Measures, which, with a boss of felsite, form a large headland at the mouth of the river, with the bold outcrop characteristic of the sandstone of the Measures. Coming south the rock is lost under a covering of blown sand, which occupies, at a distance of 3 miles from the river, a fairly large area, and is arranged in lines of dunes, which attain, in one instance, a height of 130 feet, and are sufficiently continuous to be termed a range, while others are in the form of ridges and eminences separated by swampy flats. They are of somewhat rounded outline, and are mostly covered with heath, which binds the surface of what would otherwise be shifting sands. These æolian deposits occupy an area somewhat lozenge-shaped and measuring about 3 miles in the greatest width, and having a length of 7 miles as far as examined; they are bounded on the west by sandstones, &c., of the Coal Measures, and at Bullock Creek, about the centre of the area, there is a small inlier of slate of Lower Carboniferous (?) age.

Gold has been obtained from three distinct deposits, which are giving employment, at the present time, to about 50 miners.

- (1.) Present sea-beach.
- (2.) Slightly raised do.
- (3.) "Back terrace" (probably a raised sea-beach).

The relative position of the three deposits is shown on the following sketch:—

(1.) Present sea-beach. After each tide a certain quantity of black sand, containing fine gold and platinum is found to have been thrown in streaks upon the beach, but as the amount of the deposit depends on favourable conditions of wind, tide, and weather, it is only at intervals that the sand is worth working. The uncertainty of the waves bringing up a fresh and workable quantity of sand for a considerable period of time makes the occupation of a comber precarious, and, as there is no great labour entailed, the beach can be kept fairly combed by the settlers in the immediate neighbourhood. The beach is narrow and inclined, and is often quite covered by the surf.

(2.) An auriferous deposit of black sand has been worked in patches for a length of about 2 miles. A fairly large amount of gold has been won—it is said that one small property yielded 1,000 ounces of gold—and although there are two or three claims with a couple of months work in sight, the bulk of gold in the deposit has been mined. The stripping consists of a loose sand, varying in thickness from 3 to 16 feet. I had no opportunity of measuring the thickness of black sand, as none of the claims were in full work.

(3.)

(3.) Some six months ago Messrs. Nobbs and McGeary were prospecting a quarter-of-a-mile inland from the coast, and discovered a deposit of auriferous black sand, which is about 6 feet above ordinary high-water mark, and has probably been formed in the same way as the two deposits already referred to. The "terrace" has been traced for some 4 miles in length, and, though doubtless continuous at one time, it has been denuded and now occurs in outlying patches of different lengths and with a maximum width of 100 feet, which are covered by drift sand varying from a few feet to 25 feet in thickness. The black sand measures from 1 to 5 feet in thickness, and has a decided dip seawards; it is thickest in the centre, and thins off at both sides. In colour it varies from whitish-grey to black, according to the amount of iron present, and it consists chiefly of minute grains of quartz and a little topaz, fine specks and pellets of ilmenite (titanic iron), gold, tin, platinum, and platinoid metals, a little magnetite and limonite, small garnets (?), and occasionally a few flat sandstone pebbles, the largest hitherto seen measuring 1 foot by 8 inches by 2 inches. The quartz grains are white and opaque, with a large sprinkling of pieces of rock crystal; a few show traces of crystalline facets, but most of them are well rounded. As a rule, the black sand rests upon, and at the sides passes imperceptibly into a white sand, consisting chiefly of fine and well rounded quartz grains; generally it also overlies, and in some places, at the sides, butts against a rock locally known as the "black rock," which latter is a consolidated sand, ferruginous and peaty, and in places quite compact. The rock is said to carry gold in places, and is considered to be bed-rock, but although it is a boundary rock for the deposits which have been discovered, it is not bed-rock in the true sense of the term. If slate, similar to that which occurs at Bullock Creek, or sandstone, identical with the Evans River sandstone, be touched it is useless to continue sinking in the hope of discovering a deposit of black sand, but the "black rock" belongs to a formation distinct from both sandstone and slate, and although in places it may rest directly upon bed-rock, it is possible that in other parts auriferous black sand may be found beneath it.

The gold, which has a value up to £4 2s. 3d. per ounce, is very fine, and the samples I examined were free from rust; most of the specks are somewhat shotty, and should be readily saved on copper plates, but there is a certain proportion which is scaly and liable to be lost. On most of the claims the ordinary box followed by copper plates and blankets is used for collecting the gold, and it seemed to me that in most cases the quantity of water flowing over the plates was excessive, and the plates themselves were not kept sufficiently bright to save the float gold; when the last copper plate is found to be thickly covered with amalgam there cannot be much doubt that gold is being lost. The miners say that if they attempt to save all the gold, a smaller quantity of pay-dirt will be put through, and that they prefer the greater output with the attendant loss, rather than a smaller quantity treated with a more perfect saving of the metal.

With the gold are associated platinum and platinoid metals. The platinum is of a steel-grey colour, and occurs chiefly as minute flat specks with a metallic lustre, and of a more or less circular longitudinal section, occasionally turned up at the edges. Very little attention has been paid on the field to the platinoid metals, and a small quantity only has been saved. Determinations have been made at various times, by Mr. Mingaye, from samples sent to the Mines Department, and the following are of recent date—my own samples have not yet been analysed:—

No.	Samples from Evans River and between Clarence and Richmond Heads.	Platinum, per ton.			Iridosmine, per ton.			Gold, per ton			Tin, per cent.
		oz.	dwt.	grs.	oz.	dwt.	grs.	oz.	dwt.	grs.	
2846	Slightly concentrated beach sand	13	7	20	5	11	0	0	18	12	7.00
1021	*Wash-dirt (?)	23	0	14	25	4	22		Nil		8.24
709	Blanketings	30	19	1	15	19	1	1	10	0	12.94
133	Concentrated beach sand	34	9	2	6	13	22	0	16	6	16.26
1022	*Blanketings.....	88	10	0	22	5	0		Nil		16.85

* Other platinoid metals present.

The market value of platinum has varied a good deal of late years, and at one time was as high as £4 per ounce; at the present time the worked article is said to be worth in London only 28s. per ounce, and scrap platinum 24s. per ounce. The market is, however, variable, and it would be advisable to send a sample to London in order to ascertain the latest quotation, &c. Each parcel must be assayed, but there should not be any difficulty in disposing of the concentrates.

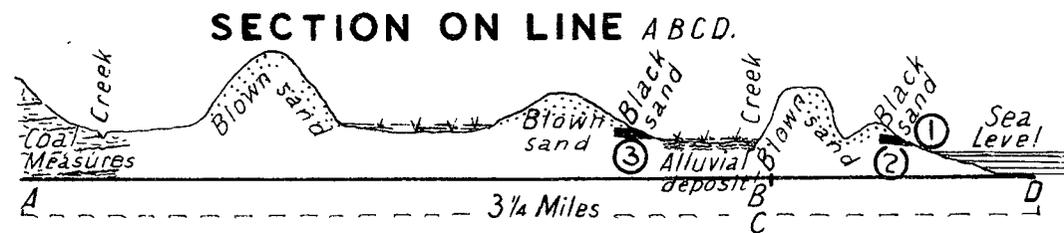

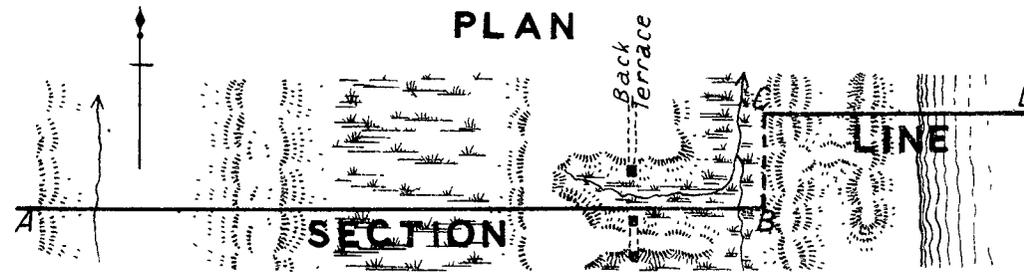

An experimental plant is being erected at Jerusalem Creek by Mr. Weekes, who hopes to be able to save and separate all the valuable minerals.

As already stated, the back terrace is not without breaks, and, although wherever portions of it have been discovered, the ground is being worked, there are several areas which have been only roughly prospected, and as some of them are in good situations, they are worthy of further attention. The claims have been worked only for gold, and those which are in a favourable position are returning more than wages, but, in contrast, there are workings which have not given "tucker" for several months' labour, the reasons being that the gold is somewhat patchy and that there are often special mining difficulties to be contended with. When a claim includes an outcrop of wash there is little expense entailed in opening a paddock and cutting a tail-race to carry off the water, but when a stripping of 20 to 25 feet has to be raised to the surface and a race is impossible, it becomes a doubtful question whether several feet of black sand will pay working expenses.

The three deposits, to which reference has been made, are the only ones yet discovered, but there is much speculation as to the existence of other beaches. To the west of the "Back terrace" a line of sand-hills is running in a north-westerly direction, and at Jerusalem Creek is only a quarter of a mile from the coast, while further north the distance increases to about 3 miles. There is no evidence, at present, to show that a beach existed at the foot of this range, for the surface is covered by drift sand, but it is a matter of surprise that so little effort has been made to test the spot. From the range to the prospectors' (Nobbs and McGeary) claim is about a mile and a half, partly a peaty swamp and partly a sand-ridge, which is quite unprospected, as also is some of the country from the coast to the prospectors' claim; altogether there is a large area which has not been tried, and as there are evidences all along the New South Wales coast of elevations at various times, it is but fair to conclude that there may be further traces of old beaches; the evidence of subsidence is not so clear, but the sands cannot be looked upon as proved,

SKETCH
for report by G. A. Stonier on Alluvial Gold Deposits
on Coast near Evans River

2/2/94

(Sig 333-)

proved, until several shafts have been sunk below the "black rock" to true bed-rock. The area is, I think, well worth a trial in the manner indicated, but it would be useless for men to start work unless they are prepared for at least six months of dead work as the sand is 40 feet deep in places, and sometimes there will be so much water to contend with that it will be a difficult matter to bottom a shaft—it would perhaps be more expeditious to follow the example set by one claim-holder and test the formation with a sludger.

As the cane season is over it is likely that many of the men employed at the mills will turn their attention to mining in this particular portion of the district.

It is interesting to note the difference in value of the beach and back terrace gold, the former bringing £3 16s. per ounce and the latter up to £4 2s. 3d.; the explanation may perhaps lie in the fact that the smaller-value gold has been derived from quartz veins, while the other has had an origin similar to the Ballina gold. A large vein was discovered and partly tested at Bullock Creek, but the results were not encouraging; the slates in which it was found are favourable for the occurrence of auriferous veins.

In conclusion I desire to acknowledge the assistance rendered me by Messrs. Nobbs and McGeary during my inspection of the field.

I have, &c.,
GEO. A. STONIER,
Geological Surveyor.

The Government Geologist.

APPENDIX S.

Geological Survey, New South Wales, Department of Mines and Agriculture,
Sydney, 24 July, 1894.

MR. GEOLOGICAL-SURVEYOR STONIER was instructed to make an inspection and report upon the Bingara diamond-field in consequence of statements which have recently been made, to the effect that a volcanic pipe had been discovered at Bingara, analogous to that in which the diamonds occur in the celebrated Kimberley mines in South Africa.

Mr. Stonier has spent several months in examining the field, and it will be seen by his report that he has not found any evidence to warrant the statements made. It is true that he notes the occurrence of a brecciated rock, but this, it appears, is in the nature of a submarine tuff, and is interbedded with the sedimentary rocks.

If therefore volcanic pipes do exist at Bingara there is nothing in Mr. Stonier's report to warrant the belief that they have yet been found. Practically speaking little or nothing more is known to-day as to the origin or mode of occurrence of the diamond at Bingara than was known fifteen years ago, and this may be summed up in the statement that diamonds of small size occur more or less plentifully in quartz pebble drifts, capping small spurs which trend from the base of a high range covered by basalt. The question as to the origin of the diamonds still remains in abeyance. Whether they owe their origin to a volcanic pipe not hitherto discovered, or to the intrusion of dykes of tourmaline granite into the Carboniferous rocks, or, as was formerly thought, to chemical agencies in the drifts underneath the basalt, has not yet been proved or disproved.

Two other questions also still remain to be solved, viz.: (1) whether diamonds of the size and quality hitherto found at Bingara can be profitably mined; and (2) whether diamonds of larger size will be found on the field. It may be that both these questions will eventually be answered in the affirmative. The former can only be decided by commercial men and the latter by the prospector, but in the meantime I venture to think that there has been nothing in the shape of new discovery on this field that would warrant a boom in diamond mines.

EDWARD F. PITTMAN,
Government Geologist.

Report on Bingara Diamond Fields.

Sir,

Armida, 27 June, 1894.

In accordance with your instructions, I have visited Bingara, in order to ascertain whether recent work on the Melbourne and Bingara Diamond Mining Company's property has furnished any proof that the deposits at Bingara are similar to those which are being worked for diamonds at Kimberley, South Africa.

1. *Kimberley.*

The conditions under which diamonds occur at Kimberley, omitting of course reference to the alluvial deposits of the Vaal River, are exceptional, and in the past have given rise to much controversy. A number of valuable papers have been written, but it is only since the workings have been deepened and the opportunities for observation extended, that it has been possible to speak definitely on some of the main geological features.

The following description has been gleaned chiefly from a valuable article published in the *Mining Journal* for 1886, by Messrs. Etheridge and Davies, F.G.S., and the various articles by E. J. Dunn, in the *Quarterly Journal* of the Geological Society of London. The latest information will be found in a recent publication entitled "Diamonds and Gold in South Africa," by T. Reunert, M. Inst. M.E., &c.

The country in the immediate vicinity of the mines is covered by a capping of red sandy soil, from a few inches to 5 feet in depth, and under the soil there is a layer of calcareous tufa from a few inches to 20 feet thick, covering alike the so-called "pipes" and the country rock. The diamonds, from less than a carat each up to 969½ (Jaggasfontein) carats in weight, are found in these pipes, which are numerous near Kimberley, but not all diamond bearing. Their outcrops are more or less circular in shape and vary considerably in size. At the De Beer's Mine, the pipe measured at the surface 320 yards (east and west) by 210 yards, being of an irregular oblong shape and covering 15 acres. At the Kimberley Mine the claim ground originally covered 11 acres, but the area opened out has been increased by slips, &c., to nearly 30 acres. The Du Toit's Pan outcrop was half hooped in shape, and measured 200 by 750 (east and west) yards. The Bultfontein was almost circular and measured 300 yards in diameter.

At the surface, the rock of which the pipe is composed is yellow in colour, of a soft, friable nature, easily dug out with a spade and crumbling as soon as exposed to the air. At about the 60-foot level, the yellow rock is compact and passes insensibly into a blue rock, which ultimately becomes tough, and is distinctly agglomeratic. The "blue" is clearly identical with the yellow rock, the difference in colour being due to alteration by superficial agencies. The

The exact classification of the blue rock, although generally admitted to be ultra-basic, was doubtful for a long time, owing to the difficulty in grinding slices sufficiently thin for microscopic examination; but now that the deep levels have been reached and the rock is less decomposed, sections have been cut and examined by Dr. Stelzner, Professor of Geology at the Frierberg School of Mines, who considers the rock to be "entirely analogous" to a rock in the De Beer's Mine known as the Snake Rock, which latter he has named Pikrite-Porphry.*

It is clearly of deep-seated origin, and consists of a "much-decomposed mass, through which are scattered numerous olivines and mica splints." (Altered peridotites occur in New South Wales, but this special type of rock has not been described from Australia.) The pikrite-porphry encloses "particles, fragments and huge masses of shale, nodules of dolerite, occasional fragments of chlorite schist, micaceous schist and gneiss.†" The proportion of these foreign rocks varies considerably, and in places the rock becomes a breccia having pikrite as a kind of base.

In the two principal mines the pipe, when followed downwards, has been found to diminish materially in size, and although there are indications of some of the deposits widening at the deep levels, it is at present impossible to assert that the surface dimensions will be again attained within a workable depth. It should, however, be borne in mind that the surrounding country has probably been much denuded since the formation of the pipes, and that the portion of the pipes removed by denudation, may possibly have been of smaller dimensions than the present outcrop.

The rocks which surround the "pipes" possess a greater diversity of character than the pipe material has. The two accompanying sections (Figs. 1 and 2), taken from the Report of the De Beer's Consolidated Mines for 1891, and kindly placed at my disposal by Mr. S. J. Speak, Assoc. R.S.M., &c., show the change to the 1,200-foot level.

Below the red sand and tufa already referred to is a thin bed of basalt resting upon the highly bituminous (weathering yellow,) and pyritous clay shales, known as the Kimberley Shales, Karoo beds, and believed to be of Triassic age, below which is a lava (?) classed by Mouille as Melaphyre and by Dr. Stelzner as Olivine diabase. This sheet rests upon quartzite, and at the 1,261-foot level shale is met with. The beds are nearly horizontal but subject to a number of faults. Dunn and others maintain that the strata are somewhat tilted and altered at the edge of the "pipes."

2. New South Wales. Bingara.

The Bingara deposits have been already examined and reported upon officially by (1) E. F. Pittman, Ann. Rept. Dept. Mines for 1881 (1882), p. 141. (2) C. S. Wilkinson, Ann. Rept. Dept. Mines for 1886 (1887), p. 89. (3) W. Anderson, Ann. Rept. Dept. Mines for 1887 (1888), p. 156. These reports as well as two on New South Wales diamonds,‡ and Professor Liversidge's paper,§ have been freely used in the preparation of the following notes:—

A. GEOLOGY.

The diamantiferous deposits are also auriferous, and are developed chiefly in the Parishes of Bingara and Derra Derra, County Murchison, about 5 miles west south-west from the township of Bingara, and 280 miles from Sydney, in a direction a few degrees west of north. They consist of gravels and sands of Tertiary age (with unimportant Pleistocene and Recent re-distributions), for the most part loose and easily mined, but in places compact with thin beds of hard ferruginous quartz conglomerate; they are now found chiefly as disconnected patches not covered by any other formation and although some of them have probably been formed in old river channels at a higher altitude than the present water-courses, it is not clear that other portions of the drift are not littoral deposits. The pebbles contained in the gravels are waterworn, subangular and angular, the majority being well rounded: they vary in size from $\frac{1}{8}$ to 6 inches, averaging about 2 inches, with occasional boulders up to 2 feet in diameter, and are composed chiefly of red jasperoid claystone, jasper and black silicious mudstone, with quartz of various kinds, felspathic quartzite, pale greenish-grey silicious shale, altered claystone and other altered sedimentary rocks, occasionally felspar porphyry, a variety of small gem stones and minerals, and stiff, whitish-grey clay boulders, the proportion of the the different rocks varying in each separate deposit. Most of the prospecting work has been done to the north of a basalt range, and the area the wash occupies, which includes nearly all the proved ground, is estimated at 200 acres. The drift varies in thickness up to 65 feet; the average thickness of the wash cannot be determined until the deposits are more opened out. The gravels have been traced to the edge of the basalt, but very little wash has yet been proved under the basalt.

The diamantiferous wash rests upon a series of sands, clays, and ironstones; the formation is fossiliferous and has yielded a small *Unio* allied to *Unio Wilkinsoni* (Eth. fil.), the seeds *Plesiocapparis leptocelyphis* and *Phymatocaryon Mackayi*, F. v. M.,|| and various leaves not yet examined. The clays, &c., occupy a large area and have a maximum thickness probably of 400 feet, but as they were subjected to considerable denudation prior to the deposition of the diamantiferous wash, and the bed-rock also shows evidence of deep erosion, the thickness is very variable. To the south and the west of the proved diamantiferous area the clays are overlaid by basalt, of which there are two distinct sheets separated by 100 to 120 feet of fine gem sand with thin beds of clay and gravel, which have not been thoroughly prospected, but are said to have yielded several diamonds. The lower basalt has a maximum thickness of 300 feet, and varies in width from a few hundred yards to nearly 2 miles, extending in a north-westerly direction for 9 miles; the upper sheet has a maximum thickness of 350 feet, and has been denuded into large outliers. Wash has been proved to exist between the clays and the bed-rock, and there is every reason to assert that it extends under the basalt range; very little work has been done to test the lead.

The bed-rock contains *Lepidodendron australe*, McCoy, and various marine shells not yet examined; it consists of thin-bedded mudstones, sandstones, and occasionally conglomerates, argillaceous and oolitic limestones and quartzites, hard, thick-bedded, in some places massive, gritty, tuffaceous and calcareous mudstones and sandstones passing into volcanic tuffs and breccias, with interbedded porphyry (?). They are traversed by a number of veins of quartz and calcite (in places auriferous) and a few felspathic, somewhat brecciated, lodes, and are intersected by dykes of diorite and basalt (?) and masses of felspar porphyry, and to the east and south of Bingara by serpentine and a coarse, ternary tourmaline granite. These rocks will be more fully described in a paper to be published in the Records of the Geological Survey of New South Wales on the completion of the microscopic slides.

B.—MINING.

1. *Jasperoids, &c., Gravels.*

Mineral Lease, Portions 8 and 139.—In all some fourteen shafts, varying in depth from 6 to 16 feet, a number of a lesser depth, and five shafts from 20 to 50 feet deep have been sunk to test an outlier of drift, and the recent alluvial in Shotty Gold Creek and Cameron's Gully, which head from and are partly included in these leases, has been worked for diamonds and gold. Mr. Palmer informs me that 30 carats of diamonds (including 5 carats from a washing of 9 loads) and a fair amount of gold have been won, the drift varying in thickness up to 15 feet, and that as money is now available the blocks will be thoroughly tested. The property is of interest, as it shows that the drift has been laid down at two periods, the older of which brought the gems.

Mineral Lease, Portions 9 and 134.—These blocks form part of the Melbourne and Bingara Diamond Mining Company's property. A large amount of work well distributed over the blocks has been done, and in all a dozen shafts have been sunk, mostly through drift, with depths varying from 14 to 64 feet, a number of shafts of a lesser depth, and several cuttings. On Portion 134 the wash runs up to 8 feet in thickness, and averages 5 feet, and on Mineral Lease 9 the average is from 3 to 4 feet. Mr. Mercer, the Manager, estimates that both blocks will yield an average of $\frac{1}{2}$ carat to the load. Records have been kept of various washings, and they account for 221 carats of diamonds and 15 oz. of gold from 220 loads on Portion 134, and 130 carats from 202 loads on Portion 9. Enough work has been done to enable a good estimate to be formed of the amount of wash in sight, the yield of which could be readily ascertained by washing samples at the Rotary Machine, which is in working order and close to the eastern boundary of Mineral Lease 134. For future work, it would be advisable, I think, to continue to sink through the yellow clay, which has not been pierced and is not bedrock, in order to ascertain if there is a lower run of gems. The sites will, however, need to be carefully chosen, in order to strike the deepest part of the channel and not bottom on the sidling.

Mineral Lease, Portion 10.—A deposit of drift occurs in this lease, and it has been tried by some eight shafts, which vary in depth from 6 to 20 feet, and an open cutting 70 feet long from the end of which a tunnel has been driven a further 20 feet. Mr. Havelock Smith informs me that two loads taken from a picked spot (possibly from the tunnel) yielded 59 diamonds and 4 oz. of gold. Nine loads from one chain east of the open cut gave 2 dwt. of gold and 17 diamonds of the following weights:—

1 Diamond	$\frac{3}{4}$ carat.
1 do	$\frac{7}{16}$ "
3 Diamonds	1 "
4 do	$\frac{7}{8}$ "
8 do	$\frac{15}{16}$ "
<hr/>												
17 Diamonds.												4 carats.

Mineral Lease, Portion 16 is known as the Monte Christo. Before the present owner secured possession of the ground, a large sum of money was expended by Mr. D. Falk on behalf of a Company, in testing and working portion of the drift, and in all some 146 loads are said to have been washed, yielding 320 carats of diamonds, the first lot going $4\frac{1}{2}$ carats to the load, and the last washing yielding $\frac{1}{2}$ carat per load. The lease was allowed to lapse, and was then taken up by Captain Rogers, who worked single handed and sunk shafts to the east of the worked ground. One of these is 43 feet deep, through wash and drift, and at the bottom level there are drives in all 174 feet in length (Fig. 3), one of which connects with an air shaft 36 feet in depth (from logging). The wash disclosed in these bottom drives varies from 4 to 8 feet in thickness, showing several layers of the black pebbles, which are generally an indication of the presence of diamonds. Nine (?) feet above the lower level, an upper ("top") level, in all 150(?) feet in length, has been opened out from the air shaft (Fig. 4) showing 4 feet of wash with several layers of the black pebbles, as in the bottom level. The Jeweller's Shop is at A (Fig. 4), and has proved to be specially rich, it is said to have yielded 2,025 diamonds. To the east of the air shaft a tunnel has been driven (Fig 5) with an ultimate view of striking the No. 2 shaft, and is now 66 feet in length (exclusive of a cutting), with a cross-cut in a southerly direction for 54 feet where wash was struck.

Most of the dimensions and bearings of the drives have been kindly furnished by Dr. Storer, who inspected the property on the 11th December, 1893. At my last visit the underground workings were not open to inspection, so that it was impossible to survey the mine.

It is a matter for regret that a properly detailed account of the number of gems obtained has not been kept since work was commenced on the Lease, for some of the washings have given particularly good returns. Mr. Warden Lawson states that he saw 65 lb. of dirt washed for a yield of 65 diamonds, and it is said that 50 lb. gave a return of 80 diamonds, one barrow load 146 diamonds, and fifteen loads 2,189 diamonds; two barrow loads were washed during my visit to the mine, but they gave a very poor return. The load as washed is not, however, the load as mined, because the wash is sifted before being hauled to the mouth of the shaft and the siftings only are carted to the creek for washing; in this way haulage is wisely reduced, but the yield may appear to be greater than it actually is. The average yield of the wash could be readily ascertained by washing samples at the Pulsator, which is in working order on Doctor's Creek, half a mile from the mine, and connected by a road with an easy down grade.

Bedrock is visible around three sides of the deposit and the fourth is occupied by pipeclay, which latter is capped by basalt a few chains south of the southern boundary of the lease; several shafts sunk immediately south of the southern boundary of this lease struck a layer of wash not considered payable.

The rock, which is called the "matrix" on this mine, is a hard Tertiary ferruginous quartz conglomerate.

Two parcels of diamonds, one containing 500 and the other 600 carats, have been lately sent to England.

Mineral Lease 47, Portion 47.—Three shafts respectively 58, 68, and 97 feet deep have been sunk, and the wash is said to run from 6 to 18 inches in thickness. From the 58 feet shaft, three diamonds were obtained, nine loads were washed from the 68 feet shaft, yielding $1\frac{1}{2}$ carats of diamonds and 2 dwt. of gold per load, and from the 97 feet shaft three loads gave 5 carats of diamonds and 3 dwt. of gold. The *Unio* referred to in the first portion of this report came from the 97 feet shaft. Four shafts have also been sunk on the southern end of the block, and they range in depth from 30 to 130 feet, but have not proved any thickness of wash.

Mineral

Mineral Lease, Portion 125.—Two tunnels each about 50 feet in length were driven on an outcrop of wash, and two shafts, 45 and 70 feet in depth, were sunk, the latter going through 6 to 7 feet of wash.

Mineral Lease, Portion 126.—The land was originally taken up by G. Craddock, and is known locally as Craddock's Claim. Various tunnels, measuring in all some 600 to 700 feet, have been driven upon the outcrop of the wash in the form shown on the sketch (Fig. 6). To the east of the tunnels there are also a number of shafts of shallow depth, and on the western boundary of the block a shaft has been sunk to a depth of 195 feet, with 8 inches of wash at the 122-foot level.

The wash varies from 7 to 9 feet, where stoped, and 4 to 6 feet in the tunnels, and rests upon a steeply inclined surface of yellow clay, bearing a resemblance to the sidling of a channel. No attempt has been made to sink through the clay, but it should be borne in mind that the clay is not bedrock, and it may conceal a payable run of gems. A portion of the dirt won has been washed, and in all 280 carats of diamonds can be accounted for. Four and a half loads yielded 87 diamonds, seventy-five loads 72 carats, and seven loads 10 carats of diamonds. A fair body of wash is at grass, independent of the quantity ready for stoping, so that a bulk test can easily be made, and the average yield ascertained. Mr. Mercer estimates that, taking 9 feet of wash, the yield will be a carat to the load. There are no appliances for treating the wash on the lease, and although the grade to the machine on Mineral Lease 10 is easy and the distance only a mile, cartage is an expense which should be minimised. For future working there are two schemes. One is to construct a tramway from the mine to the Gwydir River, a distance of 4 miles, and treat the washdirt at the river; and the other proposal is to pump water from the Gwydir to Mineral Lease 10, and treat the wash with an increased plant at the present machine site. The claim is of special interest on account of the large number of pipeclay boulders in the wash.

Mineral Lease, Portion 127.—One shaft, 160 feet deep, was sunk through clay with several thin layers of drift, but no diamonds were obtained.

Mineral Lease, Portion 132 ("Eaglehawk" Claim).—Diamonds were first obtained by surfacing on this lease in 1873, and since that time nearly 4,000 diamonds have been won from a body of drift on the block which is prospected by a couple of shafts and a tunnel with cross-drives, altogether 200 feet in length. The claim is remarkable for the number of "finger stones" present in the wash.

Mineral Lease, Portion 144.—One shaft 50 feet deep in basalt.

Mineral Lease, Portion 156.—A shaft was sunk to a depth of 80 feet, but did not strike bedrock nor was wash met with.

Mineral Lease, Portion 200.—This lease comprises portion of lease No. 148, and has been taken up since the publication of Mr. Anderson's plan. Close to the northern boundary of the block a shaft was sunk to a depth of 40 feet, and struck wash 6 feet thick, which was driven on for 6 feet. Two diamonds were obtained. Thirty feet to the south-east a shaft was sunk 70 feet without striking wash, but another shaft close to the last named met 6 feet of wash at 25 feet, and 10 feet of wash at 55 feet. One diamond was obtained by washing a few dishes of dirt. To the west of the shafts already alluded to a shaft 85 feet deep passed through 70 feet of basalt and 15 feet of sand. No diamonds were obtained.

2. Basaltic Range.

The leases which have been already referred to comprise the principal work done on the diamantiferous gravels north of the basaltic range. Various other places have been tried and diamonds have been obtained as far east as Mineral Lease 22 (the deposit heading towards Cobbadah), and in a northerly direction as far as Ladies Gully. Gold and diamonds have also been won at Surface Hill, Gympie Flat (a Pleistocene redistribution of the gravels) &c., but they have not proved to be of much importance. Of much more interest is the attempt, inadequate though it has been, to prove the basalt country and test the drift below the clays on which most of the diamantiferous gravels rest.

Mineral Lease, Portion 202.—An Adelaide Company has sunk two shafts, one being 150 feet deep, driven 30 feet at 128-foot level, and at bottom level 10 feet south and 3 feet west. The other shaft is 160 feet deep, 10 feet into bed-rock, driven at the bottom level S. 10° W. 50 feet, and W. 10° S. 190 feet on a little wash. It is unfortunate that funds did not permit of a continuation of the work.

Five-mile Creek.—On the southern side of the Basalt Range a shaft was sunk to a depth exceeding 100 feet, and met 18 feet of wash, consisting of light greenish-grey pebbles, and bearing, so far as could be judged from the mullock, &c., at the shaft's mouth, none of the characteristics of the diamantiferous wash.

Midway between the Five-mile Creek shaft and the Adelaide Company's shaft, and on the top of the Basalt Range, Mr. Lowe has sunk a shaft to a depth of 230 feet, passing through the upper sheet of basalt and the underlying sands, &c., into the lower sheet of basalt, when water proved too strong, and the shaft was abandoned. Mr. Lowe has now obtained the use of a diamond drill from the Hon. the Minister for Mines and Agriculture, and has commenced a bore immediately to the south of Conditional Purchase 71, Parish of Bingara, in the hope of striking a channel. There can be little doubt that a channel exists, but as the basalt is wide it may be necessary to put down more than one bore before the ground can be considered to have been fairly tried.

The importance of testing the basalt range cannot be overestimated, for should a payable wash be found there is a large stretch of country likely to be opened out, and it is a surprise that a determined effort has not been previously made to carry out the work.

SUMMARY.

On all the claims examined the wash is practically of the same character, and although the relative proportion and size of the pebbles is not constant, the drift invariably contains a large number of intensely worn pieces of jasperoid and other altered rocks. Their present form and position can only be due to the agency of water, and bearing in mind the large area of jasperoid rocks which follows the serpentine belt from Attunga, near Tamworth, to within a few miles of Warialda, there is no difficulty in understanding why the older river channels contain so many jasper pebbles. The pebbles, however, differ materially from the fragments of rock found in the Kimberley pipes, and now that it has been ascertained that the "blue" rock of Kimberley is a pikrite-porphry, there can be no room to doubt, if indeed there ever was any, that the two deposits are dissimilar. The question then arises,—have the diamonds been formed in the drifts or have they been derived from a formation which bears some resemblance to the Kimberley pipes?

- Drift.
- Carboniferous(?) Concealed in places close to the basalt range, by pipeclay &c. Comprises the whole area under examination north of the basalt range, except where otherwise marked.
- Carboniferous(?) Porphyrite (?)
- Basalt. Position taken chiefly from Mr. W. Anderson's map. Ann. Report Dep. of Mines, N. S. Wales, for 1887.
- Outcrops of some of the tuffaceous beds and volcanic breccia.
- ① *Lepidodendron australe* and plant remains in abundance.
- ② Marine shells. Specimen obtained too imperfect for determination.
- ③ Marine shells. Undeterminable. Micro. section of volcanic breccia.
- ④ *Encrinital stems*.
- ⑤ *Spirifera* (sp?).
- ⑥ Micro section of volcanic breccia.

Special attention was directed to the formations developed in the immediate vicinity of Mr. Mercer's office and the spot marked ⑤ on this plan.

Horizontal Scale 0 10 20 30 40 Chains ----- Vertical Scale 0 200 400 600 800 Feet.

The former view is held by several able writers on the subject, and the late Mr. Norman Taylor* considers that at Cudgegong, N.S. Wales, where there are drifts of two ages, the diamonds were formed in the older and distributed into the more recent drifts. The late Mr. C. S. Wilkinson held the same view at one time, but after an extended examination of the various diamantiferous deposits in the Northern District, he suggested that if the Tertiary drifts be not the original matrix of the diamond possibly its source may be in the metamorphosed Carboniferous or Devonian beds, where they have been intruded by granite and porphyry†. Professor David, whom I accompanied on a visit to the Cope's Creek Diamond Mines in 1891, came to the conclusion that the Cope's Creek (*i.e.* Malacca, Round Mount, &c.) diamonds were, probably derived from the tourmaline granite.

At Bingara there are drifts of two ages, and the older drift has certainly been but little prospected but where tried it does not appear to be diamantiferous, and diamonds are found in such a position in the newer drifts that they could not possibly have been derived from any of the known older drifts. Then, too, the bulk of the available evidence appears to me to be strongly opposed to the possibility of growth *in situ* in the newer drifts, and as gems are found in a pipe mass of pikrite-porphry at Kimberley and altered peridotites occur in New South Wales, why should not a pipe have been formed in this country also? The occurrence of a pipe-mass on the diamond field at Mittagong, N.S.W., has been already noted by the late Mr. C. S. Wilkinson‡, and it would appear likely that prospecting operations will prove that this pipe-dyke mass contains diamonds.

In any case it appears to me to be not at all probable that the diamonds at Bingara have been formed in the drifts, and therefore that it is a matter of much importance to the industry that a careful outlook should be kept for the pipe or other formations in which the gems were originally formed. So far as my observations have been extended, the volcanic breccias of the district already observed belong to a series of contemporaneous submarine tuffs interbedded with the sediments of probably Carboniferous age. Hitherto, so far as I am aware, no definite trace of volcanic breccias of later age has been observed in the district, although it is of course highly probable that rocks of that description may occur in the neighbourhood of the original sources from which the basalts covering part of the diamantiferous gravels flowed.§ It is obviously impossible, however, that the diamonds in the drifts could have been derived from any volcanic pipe of later age than the diamond-bearing gravel, and as the basalt is younger than the gravels (the evidence of this is much more striking at Cope's Creek than at Bingara), the diamonds most probably have been formed from plutonic action in some eruptive rock older than the basalts overlying the diamond drifts.|| Of these there are two varieties:—

1. Serpentine.
2. Tourmaline granite.

That the serpentine (an altered peridotite) was formed earlier than the diamond drift, and, therefore, may have been the source of the diamonds, is rendered probable by the presence of numerous pebbles of red jasper in the diamantiferous gravels, the jasper as stated above, having been chiefly formed by the intrusion of the serpentine into the Carboniferous rocks. That the tourmaline granite is older than the diamantiferous gravels is obvious from the amount of detrital material derived from it and found in the diamantiferous gravels at Cope's Creek near Inverell. There are also possible sources in the Carboniferous tuffs—there can be no doubt that they are older than the gravels—and in basalts somewhat older than the diamantiferous gravels, but of the existence of such basalts no evidence has yet been obtained. The question is by no means proved; and although I cannot understand why one of the sources of the diamonds should not be found near Bingara, recent work on the Melbourne and Bingara Diamond Mining Company's Property has not furnished any proof of the existence of a pipe.

Prospecting for the "mother rock" in the vicinity of the mines will be a lengthy and difficult task, for much of the country is occupied by basalt, and it is only as the leads are opened out that there will be an opportunity of examining a large area of the bed-rock. It seems probable, however, provided the diamond market remains steady, that the deep leads will be tested in the future, for although some are in a purely prospecting position, more than one of the claims, on the north of the basalt range, are sufficiently opened out for bulk samples to be taken and the value of the property ascertained. The drifts, proved to be diamantiferous, are of fair extent, but as the diamonds are irregular in their occurrence, though at times astonishingly plentiful, and are not confined to any particular horizon, it is necessary that on each block the drift should be thoroughly opened out and bulk tests made. It may be found possible in some cases to mine the whole deposit, while in the adjoining claims a certain thickness, perhaps only a couple of feet, will way for working. It is impossible at the present stage of prospecting work to average the wash, but the different thicknesses of wash already proved, and the yields from various parcels tried, are stated in the detail reference to the leases. Two large bodies of wash are expected to go half a carat and a carat to the load, taking 5 or 10 feet respectively of wash, and the Monte Christo has given some astonishing returns from small washings, and is estimated to go 30 carats to the load, but it is not stated whether this load is as mined or after sifting. Provision will have to be made for the supply of water either by pumping from the Gwydir River, a permanent stream 4 miles from the deposits, or by the construction of dams close to the mines. The drifts under the basalt, and there is every reason for believing that the basalt conceals more than one old river channel, are practically untried, but should Mr. Lowe, who is testing a site with the diamond drill, strike a payable wash, a large extent of country will be opened out.

From the foregoing remarks it will be seen that the quantity of gems which can be won becomes in some cases purely a matter of calculation. Their value is however a more complex question. The diamonds are certainly small, averaging on the field about five to the carat, and running up to twenty to the carat, with not more than 1 per cent. carat stones in a general parcel. The largest yet found was considered to be $3\frac{1}{2}$ carats, but actually weighed $2\frac{5}{8}$ carats. Whether large stones will not be found in the drifts, independent of a "matrix," is a question which can only be solved by prospecting. It is, however, but reasonable to assume that, as a gem of $2\frac{5}{8}$ carats in weight has been found, others exist. As a rule more than 50 per cent. are straw-coloured, and of the diamonds exhibited at the Indian and Colonial

* Geological Magazine, 1879, VI, p. 457.

‡ Annual Report Department of Mines for 1890 [1891], p. 210.

§ Mr. Stonier's report does not, so far as I can see, disclose any traces at all of such volcanic breccias.—E.F.P.

|| It does not appear to me to have been made quite clear that the formation of diamonds in a drift may not have been influenced by dykes of later age than the drift.—E.F.P.

Colonial Exhibition, and labelled Inverell, 33 per cent. were colourless, with 1 per cent. of rejections. They are harder than the Cape gems, and hence take longer to polish, but the difficulty in cutting appears to have arisen, not from an impossibility of manipulation, but from the fact that owing to the uncertainty of the supply, it was not worth while to incur the expense of preparing the necessary discs for grinding and polishing. In brilliancy and refractive power the N. S. Wales gems surpass the African, and one cut in London during the Indian and Colonial Exhibition in 1886 is stated to have been as fine a brilliant as it was possible to obtain from any part of the world. The price hitherto obtained for the rough stones has varied. The small ones used for cutting purposes have brought from 5s. to 7s. 6d. per carat and the large colourless ones from 20s. upwards, while general parcels have brought from 8s. to 15s. per carat. The local market is limited, but it is thought that there would be a steady demand in London for gems similar to the one already referred to as having been cut in London (eleven-sixteenths of a carat in weight when cut), and that they would have been worth (when cut) £8 to £9 per carat in 1886. The present market value for diamonds is said to be 15 per cent. less than in 1886.

The drifts contain a variable amount of gold in addition to diamonds, and several gullies which head from the drifts have yielded payable returns for working the Recent Alluvial.

In view of the small amount of wash-dirt which has been treated, it is surprising to learn the quantity of diamonds and gold which have been actually won, and if the deposits are worked in a systematic manner and the yields come up to expectation, it appears to me to be likely that several of them will repay the investment of a reasonable amount of capital.

In conclusion I have to acknowledge the universal courtesy and help rendered to me by the residents of the district, and in particular to thank Mr. Connolly for the ever-ready assistance given by him in many ways.

The Government Geologist.

GEO. A. STONIER,
Geological Surveyor.

[Three Plans accompany Report.]

APPENDIX T.

Report on Wellingrove District.

Sir,

Newcastle, 8 September, 1894.

In accordance with your telegraphic instructions, I have the honour to furnish the following report upon the geology of the country immediately surrounding Wellingrove.

Wellingrove is a small township in the Parish of Wellingrove, County Gough (New England District), 12 miles from Glen Innes in a west-north-westerly direction and 13 miles south from the well-known Vegetable Creek Tin Mining Field. It is within the watershed of the Severn River, which latter flows in a westerly direction, and receives as tributaries Cameron's Creek, Wellingrove Creek (which the Back Plain Creek joins 3 miles to the north of the Wellingrove township), and Reedy Creek, each running in a northerly or north-westerly direction until it junctions with the river. The township is situated on Wellingrove Creek, 9 miles south from its junction with the Severn, the first 3 miles of which form portion of a belt of rough, rocky, and occasionally precipitous country trending in an easterly direction. For the remainder of the distance the creek is flanked with alluvial deposits which are wide at the northern extremity but thin in a southerly direction and continue below the township for several miles. To the east and south of Back Plain Creek there is a large development of basalt, giving to the landscape the table-top appearance characteristic of the lava sheets of New England. To the north-west of Wellingrove the country is gently undulating, with broken ranges to the south-west.

The formations developed are:—

1. Recent and other Tertiary alluvials (in part stanniferous) with quartzite (grey billy), &c.
2. Tertiary basalt.
3. Quartz porphyry, chiefly intrusive.
4. Granite, partly hornblendic and intrusive.
5. Carboniferous (?) mudstones, &c., more or less altered.
6. Porphyrite.

Both Wellingrove and Back Plain Creek are flanked with deposits of rich agricultural soil, and at the junction of the two watercourses they form a wide plain. At W.R. 1,500 (Parish Hadbury) the alluvial cuts out and the creek passes into a rock-bound watercourse. Gems and black sand are found in Wellingrove Creek, but tin has not been found south of W.R. 1,500 already referred to, and the results obtained by sinking a few shallow trial holes were not sufficient to induce prospectors to test the deeper ground. Two miles south-east from the junction of Wellingrove Creek and the Severn River two narrow and shallow leads of stream tin have been worked and they have yielded a certain amount of mineral. There can be no doubt that the bulk of the tin has been derived from thin veins which occur in quartz porphyry in the immediate vicinity of the workings. Most of the payable ground has been worked, but there are several gullies which have escaped attention, possibly on account of the scarcity and uncertainty of the water supply, and these gullies can be easily and cheaply tested.

To the north-east of Wellingrove, and a few chains north of Portion 122, Parish Fladbury, the recent shallow alluvial in Ti-tree Creek (head of Reedy Swamp) has been also worked for tin, and gave good wages in return for the labour expended, until the wash dipped into wet and deep (90 feet) ground at the head of the Creek, when the funds of the prospectors became exhausted and the work was stopped. It appears to me to be a matter of importance that this formation should be tested, for if a lead is discovered there is a probability that it will continue for a considerable distance and a likelihood that it will contain rich deposits of stream tin. On account of the large area occupied by basalt between the claims and Back Plain Creek the lead will not be readily traced.

In addition to this area there is a strip of basalt running from the junction of Wellingrove and Back Plain Creeks in a north-westerly direction for about 7 miles, as far W. R. 1,499, Parish Gordon, and in several places, where it has been cut through by denudation, wash outcrops. The pebbles are well rounded, up to 8 inches in diameter, and consist of quartz, Lydian stone, quartz porphyry, and altered mudstone. Near the western extremity of the basalt the wash has been partly tested and in all some dozen

dozen shafts have been sunk, with depths varying from 8 to 90 feet, and two tunnels driven, one of which is 36 feet in length. Wash, varying in thickness from a couple of inches to 5 feet, has been struck in nearly every shaft bottomed, and although generally a little fine waterworn tin and occasionally a colour of gold have been obtained, the minerals have not been present in sufficient quantity to pay working expenses. The work done has not thoroughly tested the ground, although it has demonstrated the existence of a channel, and should the series of shafts now being sunk fail to discover payable mineral, it would be advisable to prospect some of the outcrops of wash nearer to Wellingrove Creek.

Immediately to the north of the Wellingrove homestead there is a good section of the altered mudstones (dip N. E. at 80 degrees), which extend across the creek towards a hill known as the Light-house. At Webb's (Little Plant) Mine, 15 miles to the north, this formation has been found to contain a valuable silver lode, which is paying expenses notwithstanding the present low value of silver, but no veins of importance have been discovered near Wellingrove, although the formation cannot be considered to have been prospected.

Near the alluvial referred to as having been worked for tin at the Severn River, the quartz porphyry is intersected by a number of thin veins, from a knife edge to 5 inches in thickness, consisting largely of quartz carrying black oxide of tin. No attempt has been made to test these veins, but J. Randall, a prospector who is in possession of the land, is acting on my suggestion and is taking samples from the various veins with a view of having them assayed for tin. It appears to me to be unlikely that the veins could be worked on a large scale as proposed, and it is purely a matter of assaying and calculation to decide whether portions of them can be profitably mined. Two miles to the east of this spot several thin veins of quartz carrying tinstone have been discovered, but the mineral was not present in sufficient quantity to induce the testing of the veins to a greater depth than 20 feet.

Granite occupies a large area, and is at least of two ages. In the Parish of Gordon lodes have been found which carry silver-lead ore, and have been partly worked at Webb's Consols Mine, and in the Parish of Fladbury thin veins of quartz with oxides of tin occur; in the Parish of Wellingrove a number of quartz veins have been observed, and they are worth prospecting, although nothing of value has yet been detected. A mile and a half to the east of the Wellingrove township the granite contains a number of gems, such as sapphires and zircons, which are found in the soil, resulting from the disintegration of the granite.

From the foregoing report it will be seen,—

1. That the Wellingrove District borders on a tin-field from which a large amount of tin has been won.
2. A little alluvial has been worked in the northern portion of the area.
3. The formations are favourable in places for the occurrence of tin and silver bearing veins.
4. There is large development of basalt, which probably conceals stanniferous deep leads and is well worthy of attention (on account of the particular mode of occurrence, and the unprospected state of the formation, it would probably be advisable to test the leads by sinking and driving at carefully selected spots rather than by boring).

In conclusion, I beg to acknowledge the kind courtesy extended to me by L. Seeton, Esq., and the assistance rendered by Messrs. Cramsey.

I have, &c.,

GEO. A. STONIER,
Geological Surveyor.

The Government Geologist.

Progress Report by Mr. J. B. Jaquet, Geological Surveyor.

Sir, Department of Mines and Agriculture, Geological Survey Branch, January.

I have the honour to hand you the following progress report of the work performed by me during the year 1894:—

During the first four months I was engaged upon the Shoalhaven River, mapping out and prospecting the auriferous drifts in connection with the proposed Government race. I was afterwards engaged in the office preparing my reports and maps, which form Appendices U. and V.

I visited, during June, the Araluen, Snowball, and Little River Gold-fields, in connection with applications for aid from the Prospecting Vote. I also examined the auriferous drifts accompanying the Shoalhaven River, between Warri and Oallen, and reported as to the extension of the existing Gold-field Reserves from Conditional Purchase. I returned to Sydney on 7th July, and was engaged for ten days preparing reports and maps.

I left Sydney on 18th of July, for Newbridge, and made an inspection of the gold reefs being worked at Hobby's Yards, near this town. My report upon the field forms Appendix W.

On the 31st July I journeyed to Cobborah, and made an inspection of the recently discovered alluvial gold-fields. My report upon the field forms Appendix X.

After leaving Cobborah I visited Cudgegong, Hargreaves, Windeyer, Wellington, Mandurama, and Store Creek, and reported on land alienation cases in the vicinity of each of these towns.

When at Hargreaves I took the opportunity of making a short examination of the gold reefs upon this field. I found some of them to closely simulate the so-called saddle reefs which occur at Bendigo, Victoria, and I wrote you to this effect. The large reef running behind the town, which yielded, when worked many years ago by an English Company, large quantities of gold, and from which the famous "Blackfellow's nugget" was obtained, would seem to belong to this class of deposit. I am of opinion that shafts should be sunk through the quartz cap of this reef, for the purpose of proving whether other reefs occur beneath it.

From 25th August until 11th October I was engaged making a detailed examination of the auriferous drifts upon the Macquarie River, in the vicinity of Muckerawa Creek, with a view of determining whether it would be possible for a large number of men to get employment by exploiting the same. My report in connection with this work forms Appendix Y.

I left Sydney on the 29th October, for Mount Drysdale, and was afterwards engaged for three weeks making an inspection of this gold-field. My report thereon forms Appendix Z.

On 5th December I left Sydney for Hillgrove, and was engaged for a week in examining and reporting upon a proposed extension of the existing Gold-field Reserve from Conditional Purchase.

From the 13th until the 21st December, I was engaged in the office writing various reports.

From the latter date until the end of the year I was absent on leave.

During the year I have contributed two papers to the "Records of the Geological Survey of New South Wales." One, written in conjunction with Mr. G. W. Card, Curator, on columnar structure in quartz-felsite near Mount Hope, and the other on the geology of the auriferous drifts occurring in the upper portion of the Shoalhaven Valley. I also revised the proofs of my memoir on the Geology of the Broken Hill lode.

I have, &c.,

JOHN B. JAQUET,

Geological Surveyor.

The Government Geologist.

APPENDIX U.

Minute Paper.

SUBJECT:—The Geological Survey of the Shoalhaven Valley.

Geological Survey Branch, Department of Mines, Sydney, 3 November, 1893.

EXTENSIVE auriferous drifts of several ages are believed to exist in the valley of the Shoalhaven, and some time since it was decided that a geological survey should be made with the object of defining the boundaries of these deposits, and ascertaining the probable amount of washdirt that should be available for hydraulic sluicing in the event of a suitable water supply being provided by the Government or otherwise. It was deemed advisable to commence the geological survey in the neighbourhood of Major's Creek,* and extend it down to the Shoalhaven Valley in such a way as to include the lower portions of such tributaries as might appear to be worth the detailed examination.

Instructions were given to Mr. Geological Surveyor Anderson to perform this work, and in the annual report of the Department of Mines for last year, a progress report by him was published, as well as a map and sections showing the amount of work done. Portions of several other parishes were subsequently surveyed by Mr. Anderson, but at the end of June last the work was temporarily stopped, owing to the retirement of Mr. Anderson from the service, his position having been abolished in connection with the recent scheme of retrenchment.

Owing to the amount of current work requiring attention, I was unable to continue the Shoalhaven survey, with my reduced staff, until the week before last, when Mr. Geological Surveyor Jaquet proceeded to Braidwood with instructions to carry on the work commenced by Mr. Anderson.

EDWARD F. PITTMAN,

Government Geologist.

The Under Secretary for Mines and Agriculture.

Minute.

It appears from the careful examination and report made by Mr. Geological Surveyor Jaquet that, while the auriferous drifts of the Shoalhaven Valley are probably not so rich as was at first supposed by the Officers of the Works Department, they are likely to pay fairly well for the cost of treatment by hydraulic sluicing over a considerable area.

Mr. Jaquet recommends that the conduit be constructed for only about two-thirds of the proposed distance in the first instance, or, in other words, that "Section A" be constructed for the purpose of sluicing the gravels between Bombay Crossing and the southern boundary of Mr. Anderson's 686 acres.

He estimated that there are in this area 57,000,000 cubic yards of gravels available, and that they probably contain an average of 2½d. worth of gold per cubic yard—although from the patchy nature of the gold it is very difficult to estimate the average yield.

The gravels are of a loose nature, and, therefore, extremely well suited for hydraulic sluicing. The estimated average depth of the gravels over the area referred to as "Section A" is 30 feet.

It is not considered probable that the profits arising from the sale of water for sluicing the gravels in "Section A" would pay the total cost of the conduit, but the latter would be available, by further extension, for sluicing much larger areas of auriferous gravels which are known to exist lower down the Shoalhaven River.

Mr. Jaquet is having a number of shafts sunk with a view of testing a further area of these gravels, and in the course of two or three weeks he will probably be able to give an estimate of their gold contents.

E.F.P., 29/5/94.

The Under Secretary for Mines and Agriculture.

Sir,

Department of Mines and Agriculture, Geological Survey Branch, May, 1894.

In accordance with your instructions I have examined a portion of the auriferous drifts situated in the Parishes of Jinglemoney and Warri, County Murray, on the western bank of the Shoalhaven River, and have to report as follows:—

The Proposed Race.

A survey carried out by Mr. Wade, Assistant Engineer, under the direction of Mr. H. G. McKinney, Chief Engineer for Water Conservation, has shown that a conduit capable of delivering 100 cubic feet of water per second can be carried from the Shoalhaven River, at a point distant 2 miles below the confluence of this river with Jembaicumbene Creek, to Reedy Creek, in the Parish of Warri, at an estimated cost of £100,000.

The race would follow approximately, as the accompanying tracing indicates, the western boundary of the auriferous drifts, and the water which it carried would be available for sluicing purposes at an average pressure of 120 feet head.

Extent of the Drifts.

The drifts, with two short breaks, front the river for 10 miles, while they vary in width from a narrow strip to 4 miles. They cover altogether an area of 8,438 acres. About one-half, or more correctly speaking, 4,158 acres, of this land is already alienated, and the remaining 4,280 acres is Crown land open to the miner.

In regard to their general thickness, the information available is somewhat meagre, for over wide areas neither workings nor shafts are to be found.

The

* In view of Mr. McKinney's report (*vide* Annual Report of the Department of Works for 1892) as to the practicability of bringing a water supply under pressure to the auriferous alluvial deposits, I have now instructed Mr. Geological Surveyor Jaquet to postpone the detail survey of the Upper Shoalhaven, and press on with the work of defining those auriferous deposits which can be reached by the supply of water reported upon by Mr. McKinney.

The system of mining—ground sluicing—hitherto employed is not well adapted for the exploitation of deep ground. Again, it generally happens that, other things being equal, the yield of gold per unit of ground removed is inversely proportional to the thickness of the drift; so there has been a tendency in the past for the miner to attack the shallower deposits while the deeper ones have been left intact; and hence the average thickness deduced from the sections accompanying this report, obtained for the most part in old workings, is far too small.

In the northern portion of the area examined, where they attain their greatest width, the drifts are undoubtedly much deeper than those occurring further south. I have been informed by old residents in the districts that the shaft "C" reached a depth of over 100 feet without meeting with bedrock. Having regard to all the circumstances, I am of opinion that the drifts lying south of section "a" possess an average thickness of 30 feet and those north of this point vary in thickness from 10 to 150 feet.

General description of the Drifts.

They consist of alternating beds of gravel, sand and clay. The various components are for the most part loosely cemented together, so that while they readily separate when brought into contact with running water, yet, on the other hand, they are firm enough to allow of shafts being sunk without the aid of timber. In a few places beds of "running" sand occur, and occasionally thin bands of gravel with the pebbles tightly cemented together are met with. On the whole, however, as regards their physical constitution the drifts leave nothing to be desired from a sluicing point of view.

In some places a considerable amount of false bedding can be observed, and where such is the case the gold is more than usually patchy in its mode of occurrence.

Two classes of auriferous drift occur in the Shoalhaven Valley, which represent material brought down by the river at different periods. Not only as regards the period of their formation do these drifts differ from one another, but also as regards their general constitution and the gold which they contain.

The pebbles composing the older gravels are for the most part of small dimensions, and large boulders are frequently absent altogether, or are only to be found scattered through a narrow band immediately above the bedrock or a "false bottom." Again these boulders when composed of quartz-felspar porphyry (and they are generally composed of this rock) are much decomposed, so that they disintegrate rapidly on being brought into contact with water.

The newer drifts are generally shallower than the older ones, and entirely composed of large boulders but little weathered. They, on the whole, yield more gold per unit of ground, while the "colours" are heavier.

The question will be suggested, as to what areas are covered by the younger and older drifts respectively. The former are found as a narrow fringe bordering the river and the space which they occupy is insignificant as compared with that occupied by the latter. It often happens that no hard and fast line can be distinguished between the two classes of drift and the one passes by insensible gradations into the other.

Mode of occurrence and distribution of gold in Drift.

The gold occurs as extremely small flaky particles which have an average weight in different portions of the area examined of from '002 to '004 grains. In no place was any coarse gold met with. The largest fragment obtained in the numerous dishes of dirt washed by my Assistant and myself scaled about '028 grains; however, nuggets weighing up to 2 dwt. are reported as having been found by those working the ground. I have but little doubt that some of the gold is so fine that it cannot be obtained either in the dish or tail-race, and having regard to this circumstance I would suggest that by the use of mercury an increased yield might often be obtained.

The gold is extremely patchy in its mode of occurrence. It sometimes happens that you will find a section of drift capable of yielding gold to the value of 6d. to 8d. per unit of drift, while but a yard away, though there is no alteration apparent in the nature of the gravel and the bedrock is level, a similar section will yield less than 1d. per unit.

In the newer and richer drifts the gold is frequently more or less evenly distributed from the top of a bed of gravel to the bottom—see group of sections "J;" but in the older ones such is seldom, if ever, the case, and the greater portion of it is congregated along the bottom of a bed, while the yield from the upper portions is insignificant. There are, however, exceptions to this rule. It not infrequently happens that, scattered through a bed of gravel, nests or broken bands of large porphyry boulders will be found; when such is the case, the ground in the immediate neighbourhood of such nests invariably yields a quantity of gold much in excess of that yielded by other portions of the bed similarly placed in regard to the bedrock. I will refer to Section 8, Group "K." There we found no gold on the bottom and yet obtained a good prospect from a point 2 feet above it. In this case the bottom of the bed was composed of fine gravel, while large boulders occurred where the second prospect was taken.

It often happens that a higher yield of gold will be obtained on a false bottom than on the true bottom below; more particularly is this the case when the bed of gravel lying on the bedrock is much thinner than the one above, and next in order on the same sections,—see Section 6, Group "K." This circumstance is an important one when the sluicing of the ground is considered, for in some places, owing to a sufficient fall not being available, it would be impossible to win the lowest beds of drift, yet a profit might be obtained on sluicing the upper ones.

Quantity of Gold present in the Drifts.

By washing dishes of the gravel at those places where sections were available and by weighing the prospects so obtained, I have been able to estimate with tolerable accuracy the yield of gold per cubic yard in many places. A series of sections with the amount of gold which the ground yielded placed against them will be found accompanying this report, and it will be seen that the ground tested has a value which varies between nothing and 1s. 8d. per cubic yard, while the general average of the several groups of sections is 2.5d. Now these sections for the most part are taken from old workings, and it is only to be expected that they should frequently yield less gold than the ground which has been removed alongside of them, for the miner has frequently ceased sluicing and left a block of ground untouched because it contained less gold than that which he had previously been working. On the other hand it should be pointed out that the drifts which have hitherto been worked have a thickness which is much below the general average for the whole of the drifts, and the average yield of gold per unit of ground from the surface to the bedrock will undoubtedly be less for deeper sections.

These

There is some evidence that the gravels more remote from the river contain less gold than those which are nearer to it. However, until the ground has been further prospected I should not like to speak definitely on this point.

Another method of obtaining information as to the auriferous contents of the drifts consists in mapping out areas of ground which have already been worked, and then dividing the value of the gold obtained by the number of cubic yards of material sluiced in obtaining it, the quotient being the gold value per cubic yard. I have done this in a number of instances and the result of my work forms an Appendix to this report.

I have but little doubt that the yields there recorded are on the whole greater than those which have been obtained from the great mass of the ground already worked. The miner is generally optimistic in disposition and more prone to yield information concerning ground that has paid him well than that over which he has made a loss. Again, water in the past has only been carried to those places where ground rich in gold was known to occur. Notwithstanding these objections, I am of opinion that the table yields some very valuable information.

Included in it will be found several results obtained from ground worked on the eastern bank of the River, near Bombay Crossing, which is not covered by the proposed race, but is identical in character with that occurring on the western bank.

The drifts considered in connection with the proposed race.

It is proposed in the report of Mr. H. G. McKinney that the first section of the race should terminate at Reedy Creek, in the Parish of Warri, and the estimated cost for bringing the race to this point was £100,000. Now I would suggest that in the first instance the conduit be not carried so far, at any rate not beyond Section "A" on the accompanying map. The reasons which I put forward in support of this view are as follows:—

(a.) The race could be carried for the shorter distance at a smaller cost, while, having regard to the area covered by the drifts in the southern portion of the area examined, employment could be found for the whole of the water carried by the race. (b.) On the results obtained on sluicing the ground covered by the shorter race could be determined whether it would be expedient to sink a further sum of money and construct the longer one. (c.) The greater portion of the drifts situated between Section "a" and Reedy Creek are on land already alienated. The question as to how far the race should be brought might be determined by the head of water available at various points along the surveyed line of conduit.

The whole of the area of drift situated north of Section "a," and between this point and Reedy Creek—equal in amount to three-fourths of the total area of drift which would be covered by the race in the event of its being carried to Reedy Creek—is at present unproved ground. It is true that a few shafts whose position is charted on the map were sunk many years ago, but the testimony of old residents in the district as to the gold met with in these shafts is conflicting. At the present time shafts are being put down under my supervision for the purpose of proving the ground in this portion of the gold-field, and until these shafts are bottomed I am unable to give any information concerning its gold contents. In my subsequent remarks it will be understood that I am only referring to the area of drift covered by race south of Section "a."

This will embrace an area of 1,760 acres of drift which I estimate has an average thickness of 30 feet; on this basis of calculation there are 85,000,000 cubic yards of drift. I estimate that 57,000,000 cubic yards, or two-thirds of this amount, will be available for sluicing, and that this ground will yield gold to the cubic yard of a value varying from a small fraction of 1d. up to 1s. So patchy is the gold in its mode of occurrence that it is very difficult to estimate the average yield per cubic yard which is likely to be obtained throughout the whole area; but, having regard to the numerous tests I have made, I should place it at about 2·5d. On this basis of calculation the ground contains gold to the value of £600,000.

Now the auriferous gravels under consideration certainly contain less gold than the majority of the placer mines in the United States of America, but there are on record instances of handsome profits accruing on even poorer ground being worked. I may state here that the loose character of the Shoalhaven gravels, and the fact of their being interstratified with beds of loosely cemented sand, renders the drift, as a whole, particularly well adapted for exploitation by sluicing on a large scale.

The Johnson Mine, in California, sluiced 196,000 cubic yards of gravel for a total yield of £1,829, and at a cost of £1,493.* The average depth of the gravel was 30 feet. The yield of gold, per yard, was 2d., while the total cost of mining was ½d. per yard. The water was delivered at a pressure equal to a head of 80 feet, and every cubic foot of water delivered per second removed ground at the rate of 160 cubic yards in twenty-four hours, which, at 0·3d. per cubic yard (the cost of the water at the Johnson Mine), would give a daily rate of 4s. per twenty-four hours.

If the Shoalhaven conduit carried a full complement of 100 cubic feet of water per second, and the water were available for forty weeks in the year, the above data would give the following results:—

3,840,000 cubic yards removed.
£4,800 water rate.

After deducting £2,700, the interest at 4½ per cent. on the estimated cost of £60,000,† you would have £2,100 per annum available for the purpose of keeping the race in repair and for the repayment of the capital invested, while it would take fourteen years to remove the 57,000,000 yards available to be sluiced from the said portion of the conduit.

In connection with the question as to the number of years during which a sale might be obtained for the water carried in the race, it should be mentioned that extensive and probably valuable gold-bearing drifts are to be found lower down the river which might be sluiced on the race being extended.

Again, fronting the eastern bank, in some places deposits of drift occur which are certainly as rich if not richer than those explored on the western bank. It has been pointed out by the engineers that for a small extra expenditure water could be conveyed to these deposits by means of syphons, when the useful life of the first portion of the race would be lengthened by several years.

Before concluding I should like to refer to the valuable aid rendered to me, when making the numerous tests, &c., by Mr. E. C. Whittell, Field Assistant. I have, &c.,

JOHN B. JAQUET,
Geological Surveyor.

The Government Geologist.

The above data are obtained from the most reliable sources available on the field; but only in a few instances was I able to verify them.—J.B.J.

APPENDIX V.

Second Report on the Auriferous Drifts on the Shoalhaven River.

Minute.

In Mr. Jaquet's first report it was suggested that it might not be expedient to construct the whole length of the proposed race at first, since a considerable area of ground could be worked by the construction of about two-thirds of the proposed length of race, and the results obtained might throw light upon the question as to whether it would then be expedient to construct the balance.

Mr. Jaquet's second report seems to confirm the soundness of the recommendation already made. It appears that the drifts below the southern end of W. Anderson's grant of 640 acres are very deep—the bottom beds (which also contain by far the greater part of the gold) being below the level of the Shoalhaven River, and, therefore, extremely difficult to work by hydraulic sluicing. The prospecting operations undertaken by Mr. Jaquet have been greatly interfered by the large bodies of water encountered, but judging from the results obtained it appears to be doubtful whether this area of drift could be profitably sluiced.

E.F.P., 7/8/94.

The Under Secretary for Mines and Agriculture.

Sir,

Department of Mines and Agriculture, Geological Branch, July, 1894.

I have the honour to make a further report in regard to the auriferous drifts occurring on the western bank of the Shoalhaven River, in the Parish of Warri, County Murray.

My last report had reference more particularly to those gravels, &c., situated above the southern end of W. Anderson's grant of 640 acres (Section "a"). I stated then that the ground below this point and above Reedy Creek, which would be covered by the proposed race, had never been proved, and hence I was unable to report as to its auriferous contents. Four shafts have since been sunk under my supervision, and the various seams of gravel encountered by them tested.

The drifts were found to be very deep, and only two of the shafts reached the bedrock; the sinking of the remaining two was stopped after depths of 64 and 150 feet respectively had been reached, on account of the large quantity of water encountered.

The sections accompanying this report show the character, thickness, and gold contents of the beds exposed in the shafts.

The sinking of such a large number of shafts as would be required to adequately prove these extensive and thick deposits of drift, would entail an outlay of, perhaps, several thousand pounds, and it cannot be said that the work already done has achieved this result; yet some valuable information has been obtained, which may be summarised as follows:—

- The drifts for the most part attain a great thickness, and the surface of the bedrock is frequently below the level of the Shoalhaven River, consequently the sluicing of the richer basement beds would be a very difficult, if not impracticable operation. (See section starting from near Warri bridge.)
- The upper beds contain but little gold, being largely composed of drift sand, and nearly the whole of the precious metal would seem to be concentrated in the immediate vicinity of "the bottom."
- It would seem, as is the case in the adjoining and shallower deposits occurring higher up the river, that the gold is patchy as regards its mode of occurrence.

I see no reason why the basement beds of the deeper series of gravels, which I am now reporting upon, should contain more gold than those occupying the same position in the shallower and more or less proved adjoining series which formed the subject of my previous report. If such be the case, then the deeper ground might, perhaps, contain gold to the value of one half-penny per cubic yard; however, the average yield of the material raised from the shafts is considerably below this amount.

Having regard to all the circumstances there is, I think, but little chance of these drifts being profitably sluiced, even though water at a pressure should be available for this purpose. At any rate, there are few, if any, places where sluicing could be successfully commenced, and before operations on a large scale could be started expensive and costly prospecting works would have to be undertaken.

I have, &c.,

JOHN B. JAQUET,
Geological Surveyor.

The Government Geologist.

APPENDIX

APPENDIX W.

Report on Auriferous Reefs, Parish Three Brothers, County, Bathurst.

Department of Mines and Agriculture, Geological Survey Branch,

Sydney, 3 August, 1894.

Sir,

I have the honour to report that I have inspected the auriferous reefs occurring in the Parish of Three Brothers, County Bathurst, about 10 miles south of Newbridge, and beg to report concerning the same as follows:—

Geological Features.

The formations consist of Silurian (?) slates, which have for the most part an almost vertical dip and strike approximately north and south; they are occasionally contorted and crumpled. Schists, which may represent metamorphosed slates, occur in places.

Auriferous Reefs.

These are composed of milk-white quartz. They vary in width from a fraction of an inch up to 3 feet, and when followed, either in a vertical or horizontal direction, are found to "make and pinch" in the most erratic manner. On the whole, the reefs underlay with the country; yet, in places, veins of quartz, for the most part of insignificant dimensions, are found running from the main reefs across the bedding planes of the slates.

The gold, with one exception, which I shall refer to afterwards, would seem to be in the free state, and can frequently be observed with the naked eye.

Mines upon the Field.

On the Prospectors' Claim, Gold Lease No. 1, owned by Mackellar and Party, a quartz reef which has an average width of about 1 foot has been proved by the shafts, 60 feet apart, to depths of 40 and 50 feet respectively. From a trench on the outcrop of the reef 44 tons of stone have been raised, and this yielded at the battery as follows:—

5 tons	3 oz. 3 dwt.
33 tons	1 oz.
6 tons	1 oz. 6 dwt.

Free gold can be seen in some of the stone exposed in the shafts, but only a small quantity of ore has been won below, and, I believe, no bulk tests have been made.

Other shafts have been sunk upon the line of reef in the Prospectors' Claim, but these are now closed down.

On Gold Lease No. 7, owned by Mackenzie and Party, a shaft has been sunk to a depth of 100 feet. This shaft is in a line with the two shafts sunk upon the Prospectors' Claim, and distant from them about 3 chains in a northerly direction. It is sunk upon a quartz vein, which varies in width from a fraction of an inch to 6 inches, and has an average width of about 1 inch. At a depth of 50 feet a level has been driven 10 feet south, and from the end of this level a crosscut has been driven 10 feet east. In the crosscut another quartz reef, much impregnated with manganese oxide, has been encountered.

About 6 chains south of the shafts sunk on the Prospectors' Claim, Messrs. Johnson and Crees have sunk a shaft 60 feet, and driven crosscuts, each 50 feet long, east and west respectively. In these workings several small and, for the most part, lens-shaped patches of quartz occur.

The Black Bag Mine comprises Gold Lease No. 3, and is situated about 40 chains south of the Prospectors' Claim. Here an outcrop of quartz impregnated with iron pyrites occurs, which has yielded on assay gold at the rate of 5 dwt. per ton. This outcrop is about 5 feet wide, but a close examination of the same shows it to be composed of layers of veinstone with intervening bands of country; in fact, it would seem to me to represent an aggregation of small veins rather than one large one. A hole 12 feet deep has been sunk on the reef. At the time of my visit it was full of water, but I was informed that the vein had not sensibly diminished in size at the bottom of it. At a point distant 24 feet in an easterly direction from the outcrop a shaft 40 feet deep has been sunk, and from the bottom of this shaft a western crosscut has been driven 30 feet, with a view of cutting the reef on its underlay. This crosscut has only met with some small veins or patches of ore, and no formation resembling the outcrop above has been encountered. Neither in the shaft nor in the crosscut is a cross-course such as one might expect to accompany "a heave" to be seen; nor can any outcrop corresponding to the one west of the shaft be found on the eastern side of it. Having regard to all these circumstances, I am of opinion that the reef has not been "thrown," but has "pinched out" between the surface and a depth of 40 feet.

General Remarks.

The lode does not occur along a plane of faulting; and the fact that the reefs conform with the country rock are so often lenticular, and in places pinch out altogether, would seem to me to indicate that their contents have been deposited in openings between the bedding planes which originated while the tilting and crumpling of the slates were in progress.

The reefs closely resemble, as regard their mode of occurrence, some of those found in the neighbouring gold-field of Back Creek, which the Writer inspected and reported upon last year.

The country rock met with in all the workings is so soft that it can be removed by the aid of a pick or gad, and in no instance has blasting had to be resorted to. Owing to this circumstance, the exploitation of the mines could be carried out with a low rate of expenditure.

By far the most promising reef hitherto found on the field is that one occurring in the shafts upon the Prospectors' Claim. If, on being tested in bulk, the ore exposed in the shafts is found to contain as much gold as that already raised from the outcrop, this reef would certainly yield large profits on being exploited. It is possible that the reef will continue "making and pinching" to a considerable depth, as is the case where it has been observed between the surface and a depth of 50 feet; at the same time it is probable that parallel reefs, with varying dimensions, will be from time to time encountered in the shaft as the sinking of the same is proceeded with.

I have, &c.,

JOHN B. JAQUET,
Geological Surveyor.

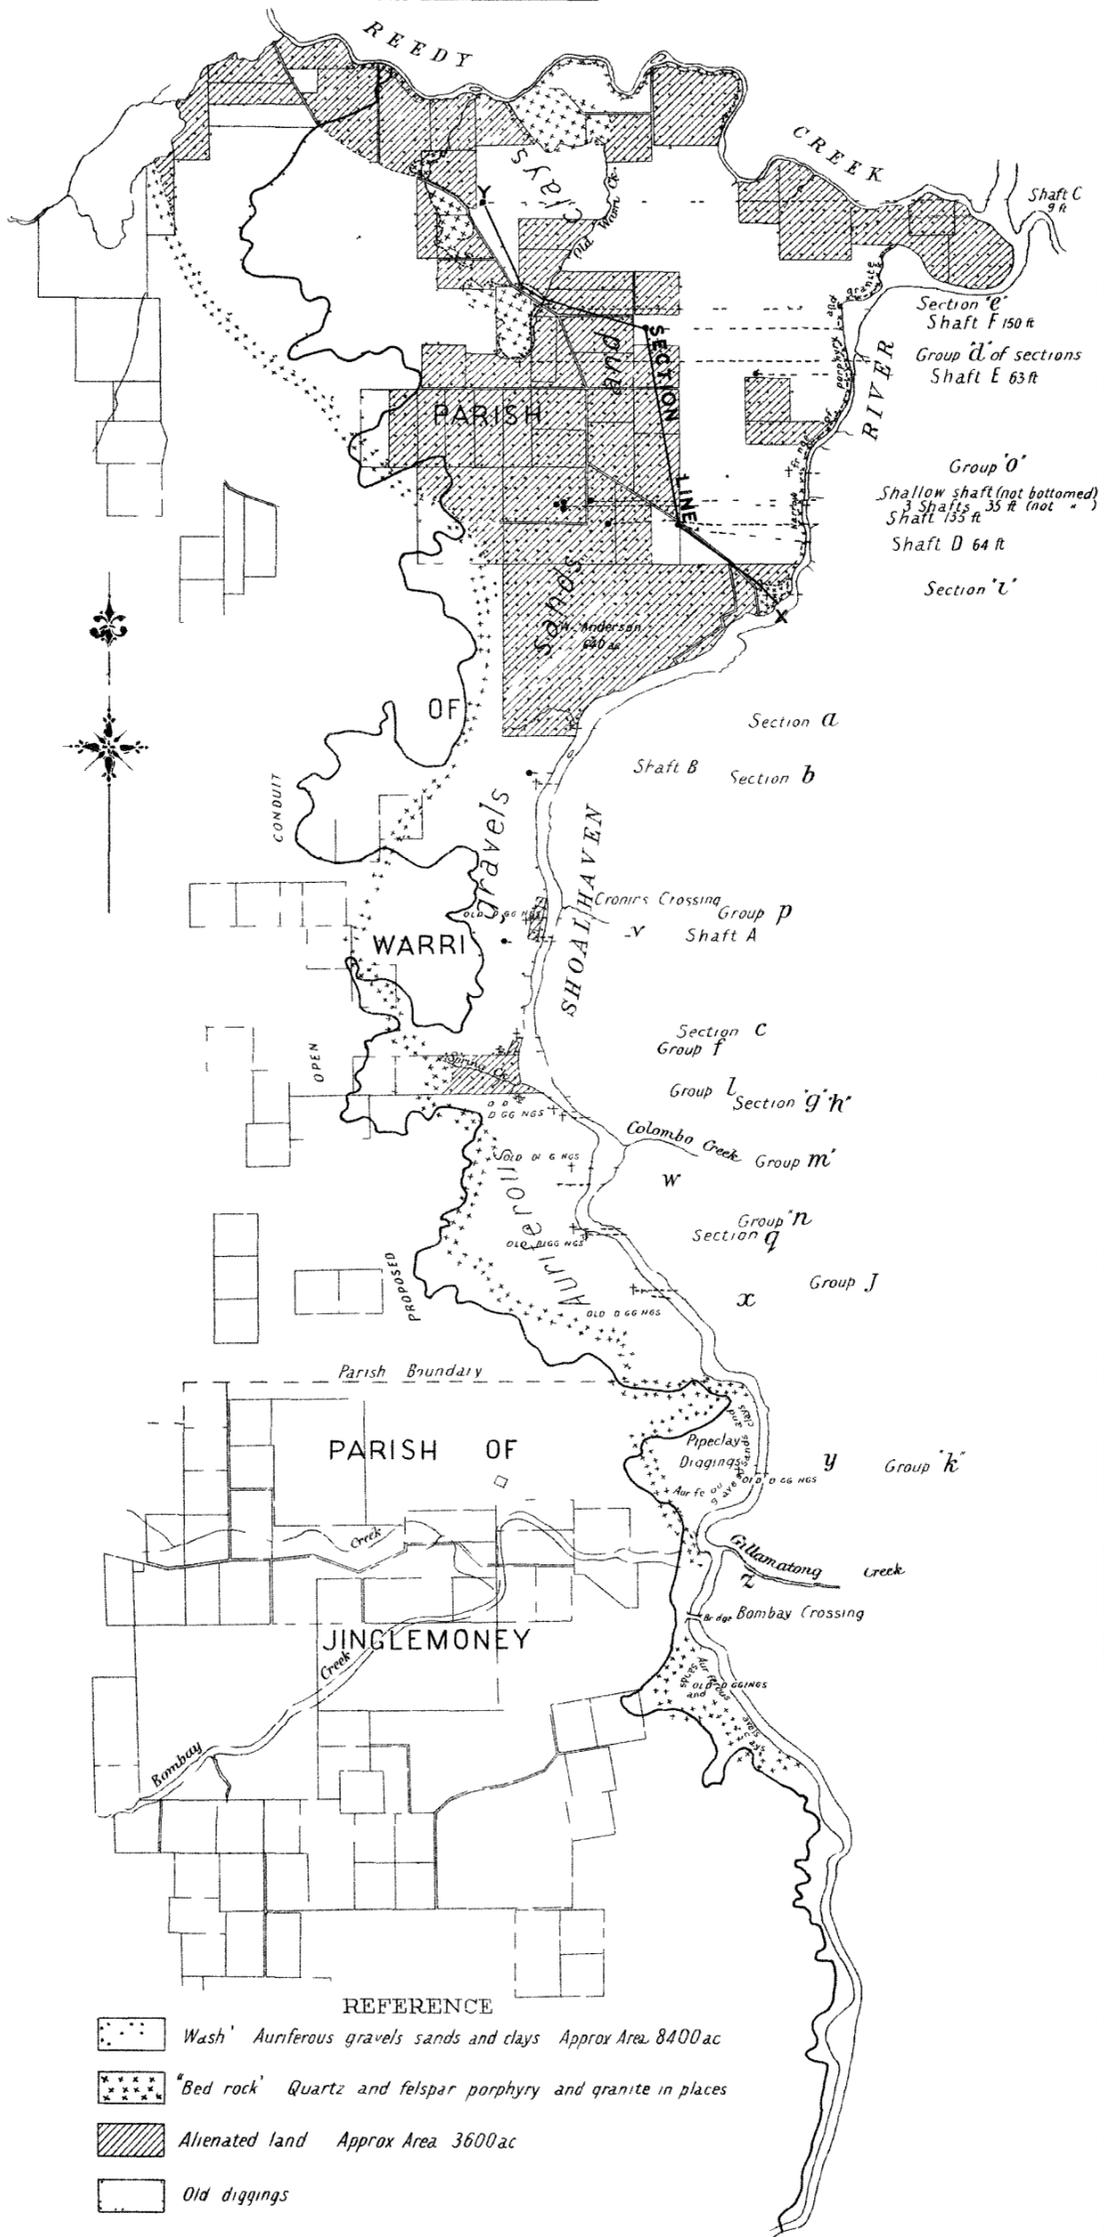

The Government Geologist.

APPENDIX X.

Report on a newly discovered Gold-field near Cobborah.

Department of Mines and Agriculture, Geological Survey Branch,

Sir,

15 August, 1894.

I have the honor to report that, in accordance with your instructions, I have inspected the recently discovered alluvial gold-field which occurs about 9 miles south-east of Cobborah, Parish of Tuckland, County Lincoln.

The site of the discovery is close to the point where the Silurian slates crop out from under the Coal Measures. The gold-bearing drifts are superimposed upon the former rocks.

The drifts have a thickness of from 10 to 40 feet. They consist of clay with sub-angular slates and quartz pebbles, while much water-worn quartz boulders occur in places. One shaft, at the time of my inspection, had encountered a sheet of basalt at a depth of 10 feet below the surface, and the clay which forms the greater portion of the drifts would seem to me to have been formed on the decomposition of this rock.

Practically the whole of the gold occurs in the immediate vicinity of the "bottom." It is very patchy as regards its mode of occurrence, and no defined lead has been encountered. Most of the gold which has been won is coarse and water-worn. I was shown one nugget (the largest yet won upon the field) which scaled 15 dwt.

Only one or two men have, in the past, made wages upon the field, but a considerable number have obtained enough gold to keep themselves in food.

In the neighbourhood of the present workings large areas of drifts occur which are likely to contain gold, and which have never yet been prospected.

I have, &c.,

JOHN B. JAQUET,
Geological Surveyor.

APPENDIX Y.

Report upon Auriferous Drifts on the Macquarie River.

Department of Mines and Agriculture, Geological Survey Branch,

Sir,

Sydney, 25 October, 1894.

I have the honour to report that, in accordance with your instruction, I have made an examination of the auriferous drifts occurring upon the banks of the Macquarie River, in the Parishes of Burrandong, Wear, Walters, and in portions of the Parishes of Muckearwa, Trianbil, and Yarral, County Wellington.

General Geology.

The dominant country rock consists of much contorted and highly cleaved slates of Silurian age, and interstratified beds of conglomerate and breccia. In the northern portion of the area examined, small outliers of sandstone, which rest horizontally upon the slates, are of occasional occurrence.

The hill-tops are, in places, capped with sheets of basalt, which, without doubt, represent consolidated lava flows, probably of Tertiary age. It would seem as if the lava originated in the south and flowed down a river channel, which had approximately the same course as that of the present Macquarie.

Quartz reefs, which are generally auriferous, are of frequent occurrence in the slates.

Recent Auriferous Drifts.

These occur, both in the bed of the present river channel, and upon the flats which accompany it. Their extent and distribution are shown upon the plan accompanying this report. The upper beds are seldom, if ever, found at a greater altitude than 60 feet above the river level, while the basement gravel beds, which contain the greatest quantity of gold, occur with a few exceptions below it. It frequently happens that the whole of that portion of a flat which is situated above the river consists of loam.

Exploitation of the Drifts.

The flats are for the most part riddled with shafts, and but very little wash dirt which is free from water, and which contains enough gold to pay for mining and carting to the river or other watercourse, remains unworked; nor is much unexplored ground to be seen. However, in a few places, men are still engaged in mining the drifts.

Sluicing.

Several attempts have been made in the past to apply this system. In some places water has been obtained by means of races heading from the various tributaries of the Macquarie, and in others it has been pumped up direct from the river. In only one instance, viz., the claim now being worked by Calder and Party, near the mouth of the Muckerawa Creek, can it be said to have been successful. Here a race has been cut which delivers a few heads of water during several months of the year, and the miners co-operating have recently been getting weekly from £1 to £2 per man.

The circumstances which militate against sluicing are as follows:

- (a) Difficulty of obtaining a sufficient supply of water for sluicing purposes.
- (b) The richest gravel deposits, and, in many cases, the whole of the gold bearing drifts, are situated below, or but slightly above, the Macquarie River, and consequently the requisite fall could not be given to the tail races.
- (c) The component pebbles of the gravel beds are often tightly cemented together, so that flowing water does not readily cause them to disintegrate.

Seven steam pumps have been at different times erected upon the river, and two are in course of erection at the present time. I have charted upon the map the position of each pump, and give below, in a tabulated form, such particulars concerning the same as I have been able to obtain from old miners and residents in the district.

No.	Position.	When in Operation.	Object.	Remarks.
A	Cookey's Flat ...	About 15 or 20 years ago	Pumping water from shafts	In operation only about 6 months.
B	Junction Flat ...	About 7 years ago	Pumping water for sluicing purposes	In operation nearly 12 months intermittently. Drove tunnel for tail race over 300 ft. Sluiced out large cutting.
C	Lower Muckerawa ...	About 2 years ago	Pumping water from shafts	In operation about 6 months.
D	do do ...	About 4 years ago	do do ...	In operation about 2 years.
E	do do ...	Present time ...	do do ...	Pumping water for working, under present river bed.
F	do do ...	About 4 years ago	Pumping water for sluicing purposes	In operation about 2 years. An 11-ton locomotive engine working two pumps discharging into reservoir. Ten men were employed at wages ranging from £2 5s. to £2 10s. per week. The gold won barely paid wages, and work was stopped on the available ground becoming poor.
G	do do ...	18 months ago ...	Pumping water from shafts	In operation nearly 12 months intermittently. Employed pumping water from shafts, which, however, were never bottomed, as pump was not capable of dealing with water.
H	Opposite Cornish Point	Present time ...	do do ...	
J	Cornish Point ...	2 years ago ...	Pumping water for sluicing purposes	In operation about 6 months.
K	do ...	9 years ago ...	do do ...	In operation about 6 months; stopped working on the richer ground being exhausted. 12 or 13 men employed.
L	Butcher's Flat ...	4 years ago ...	do do ...	In operation about 12 months.

A successful result only followed upon the introduction of one of these pumps. This was employed for about three years in pumping water for sluicing purposes. The ground sluiced immediately adjoined that now being worked by Calder and Party near the junction of the Muckerawa and the Macquarie. Ten men were employed upon the claim and the gold won was just enough to pay their wages which ranged from £2 5s. to £2 10s. per week. The company who owned the machinery received no return for their outlay, and operations were suspended on the richer and available gravel becoming worked out.

Tertiary Drifts.

They consist of beds of sand and quartz pebbles which are always overlaid with basalt, and occur at an altitude of about 500 feet above the present river.

These auriferous gravels cover an enormous area of country, and I am of opinion that they have not hitherto received the attention which they deserve. On a small spur running out from the main mass of the basalt, near Upper Mukerawa (see map herewith) about twenty miners working in tunnels driven in from the hillside are making from £1 to £2 per week, and about an equal number of men are working at "The Yahoo," near the junction of Section Creek with the Macquarie.

The great difficulty which besets the miner engaged in these operations is the want of a convenient supply of water for gold-washing purposes. The altitude at which the drifts occur, and the fact that the hills leading up to them are for the most part steep, make carting the wash-dirt to the river a difficult and costly operation. In many places dams might be constructed upon the table-lands, when a considerable amount of storm-water might be caught and conveyed to the mouths of the tunnels as required. Again, in other places the dirt might be conveyed to the base of the hills by means of inclined tramways so arranged that the empty trucks could be raised by the falling loaded ones.

Some of the gravels have been changed by an infiltration of iron oxide into cement, and the gold can only be obtained from the same on their being treated in a battery. At the Muckerawa claims, even in the loosest gravels, it generally happens that a small quantity of gold is unobtainable in the sluice-box. Probably this is accounted for by the fact that a small quantity of cement occurs throughout the drifts.

General Conclusions.

I am of opinion that, owing to the slight fall possessed by the Macquarie River and the general conformation of its banks, the construction of a large race capable of supplying the drifts with water for sluicing purposes, as advocated by Mr. Ives, would be an extremely costly, if not impracticable operation; and, further, that the quantity of drift which could be conveniently sluiced is, comparatively speaking, very small, so that should any such race be constructed it would have but a short useful life. I may remark here incidentally that a recent survey carried out by the engineers of the Works Department showed that the cost of a race covering 15 miles of the Shoalhaven River and capable of delivering 100 cubic feet of water per second (200 sluice heads) would be £100,000.

In regard to the question of obtaining water for sluicing purposes by means of steam pumps I would call particular attention to the little success which has attended efforts made in this direction in the past. It is possible that at a few places upon the river patches of drift may be found which are rich enough in gold and otherwise adapted for this method of working; but I am unable to coincide with the opinion put forward by Mr. Jennings to the effect that hundreds of men could, with the aid of steam-pumps, find profitable employment.

Notwithstanding the fact that the recent drifts are riddled with shafts, and have been worked during the last thirty years, yet there are a number of "fossickers" at the present time obtaining sufficient gold to keep themselves in food; more particularly is this the case upon the flats accompanying the Muckerawa Creek.

APPENDIX Z.

Report on the Mount Drysdale Gold-field.

Department of Mines and Agriculture, Geological Survey Branch,

Sydney, 5 December, 1894.

Sir,

I have the honour to report that, in accordance with your instructions I have made an examination of the Drysdale gold-field, situated 25 miles in a northerly direction from Cobar.

The Mount Drysdale and Eldorado Mines, from which the phenomenally rich gold-bearing stone is now being won, occur in a gap near the northern end of a low range of hills, which trend a little east of north and rise abruptly from the Pleistocene plains at their base. Near the southern end of the range gold, associated with chloride of silver, was discovered in 1866, and afterwards worked by the Mount Billagoe Gold-mining Company.

Payable alluvial gold was found on the plains to the west of the hills in 1892. A rush of diggers then took place to the field, and altogether about 300 oz. of precious metal, worth £2 15s. per oz. were obtained. The nuggets were but little water-worn. This circumstance caused the miners to look for the source of the metal close at hand, and after a little searching their labours were rewarded by the finding of the Drysdale deposit. So unlike anything of the kind obtained before is the auriferous stone, and so closely does it resemble the barren country rock, that had not the prospectors found an indicator in the shape of the strip of alluvial ground the deposit might never have attracted notice.

General Geology.

The hills are composed of more or less altered slates, conglomerates, breccias and sandstones, which strike N. 20° E., and dip at a high angle in a westerly direction. These rocks are probably of Silurian age.

In the lowest level of the Eldorado Mine, I found associated with altered slates a banded rock which resembles a fine-grained felsite, and may have had a volcanic origin. I have not yet completed my investigation of the specimens which I obtained.

Faults, running in various directions, and heaving the country from an inch to 3 feet, have been met with in places.

Quartz reefs, which contain little or no gold, and which for the most part extend but a short distance either in a vertical or horizontal direction, are of common occurrence.

The plains are covered by a red sandy loam, having numerous ironstone pebbles associated with it.

Ore Deposits.

These consist of slates, sandstones, and conglomerates, of a white or greyish-white colour, impregnated with gold. The eye cannot distinguish the barren rocks from the richest ores, except in the case of those specimens containing visible gold; in fact, the latter would seem to differ from the former only in so far as they have gold associated with them. Nor would there seem to be, as a rule, any sharp line of demarkation between the two varieties of stone. It is true that the auriferous slates, &c., are often much impregnated with silica; but this feature is more or less characteristic of all the rocks forming the ranges and not confined to those portions of them which contain gold.

The precious metal for the most part occurs as extremely minute and invisible grains, scattered throughout the stone. However, visible gold, which is found as thin scales and irregular particles along the bedding and joint planes and in the rock cavities, is not unfrequently met with. A little ferric oxide is to be seen both in the auriferous and barren rocks, but on the whole the amount of iron contained in the ore is insignificant. Chloride of silver is associated with the gold in varying quantities.

For the purpose of description, and in the absence of any more appropriate term, I shall call the rich masses of auriferous rock "shoots." At the same time, I would point out that there is no exact analogy between the Drysdale ore-bodies and the so-called shoots or chutes of a lode. If the longitudinal section through the Drysdale, Eldorado, and Multum in Parvo Mines, which accompanies this Report, be referred to, it will be seen that rich ore has been discovered between No. 2 Drysdale shaft on the north and a point about 30 feet south of the Eldorado shaft. Having regard to the little exploratory work at present carried out, and the irregular and novel nature of the deposits, I do not think one would be justified at present in expressing a definite opinion as to the dimensions of the ore-bodies. However, a consideration of all the circumstances has made me of opinion that large bodies of rich ore probably will be found in the Drysdale and Eldorado Mines outside the present workings, together with still larger quantities of lower grade stone, which could be profitably treated when reduction works have been erected upon the field.

In the Drysdale Mine the rich ore occurs as a pipe-like shoot, which is about 40 feet long and varies in width from 6 inches near the surface to about 5 feet at the 125-foot level. The shoot pursues an almost vertical course down to the 80-foot level, but below this point it dips slightly to the north. About 2,300 tons of ore have been raised from it, which contained from 3 to 30 oz. of gold per ton. The main ore shoot would seem, where hitherto explored, to have been made up of a number of overlapping secondary ones. This arrangement is explained in the accompanying ideal section through the Drysdale ore deposit. Small veins of quartz, which for the most part occur along approximately horizontal joint planes, are found in places. They pass through the auriferous shoot without influencing it in any way, and strangely enough are devoid of gold themselves.

In the Eldorado Mine gold-bearing rock occurs at the surface a little south of the shaft, and it has been traced in a winze from the 55-foot to the 100-foot level.

Below the latter level an underhand stope, 25 feet long, has been excavated for a depth of 25 feet, and at the time of my inspection some very rich ore, which showed free gold, was being bagged from the bottom of the stope. The most noticeable feature of this ore-body is the fact that the quantity of gold which it carries has increased as a greater depth from the surface has been reached. The stone obtained in the winze was estimated to yield gold at the rate of 10 dwt. per ton, while that won from the underhand stope has yielded 6 oz. per ton.

The gold deposit in no way resembles a lode, and I am of opinion that the system of prospecting now in vogue upon the field, viz., sinking shafts along a hypothetical line of reef, or at random, where no surface indications of an ore-body below exist, should be discountenanced. I feel certain that better results would be likely to accrue if the energy now being devoted to shaft sinking were applied to crushing and washing pieces of stone taken at regular intervals from the surface, and to the excavation of shallow trenches where the surface of the country rock has been shifted or is covered with a layer of loam. In the light of the evidence afforded by the ore-bodies now being worked upon the field, we may be justified in assuming that gold is likely to occur through any of the Silurian rocks, whether they be slates, sandstones or conglomerates. Hence the prospector should test by crushing and washing every description of stone; he should not wait until a reef is found before doing this.

Again it was the finding of alluvial gold upon the plains and the tracing of the same to its source in the hills, which led to the discovery of the rich ore upon the field in the first instance. In a like manner if other deposits should be found the precious metal which they have shed will probably be found close by them. So I would recommend that shafts be sunk on the plains where they border the ranges.

For a long distance on either side of the two mines, which are now putting out rich ore, claims have been taken up, and a large number of shafts are being sunk upon them. With perhaps a few exceptions where very minute traces have occurred in the stone, in none of these claims has any gold been found.

Ore deposits which consist of slates impregnated with gold, while sometimes occurring in other portions of the Colony, seem particularly characteristic of that gold-bearing belt of Silurian rocks running along, and on either side of the 146th meridian of longitude. Gold-bearing slates have been found and are being profitably mined at Mount Allen, near Mount Hope, and at the Occidental and Albion Mines, near Cobar.

Treatment of the Ore.

In the past the greater portion of the Drysdale ore has been bagged and sent to the Smelting Works at Wallaroo, South Australia. The freight and cost of treatment has totalled £8 per ton. A small quantity of the stone has been treated in a battery at Cobar. At the present time the directors are considering the advisability of erecting a battery on the field.

During the year ending 17th November, 1894, the Mount Drysdale Company paid to its shareholders £22,781 in dividends, as the result of treating about 2,300 tons of ore. This circumstance and the curious character of the deposit should cause it to be regarded as one of the most remarkable mines yet discovered in the Australian colonies.

I have, &c.,

JOHN B. JAQUET,

Geological Surveyor.

The Government Geologist.

Progress Report of the Curator.

Sir,

Geological Museum, 2 January, 1895.

I have the honor to submit the following report of work done during 1894.

The number of specimens of mineral substances submitted for examination has been very large. Of these nearly 4,000 were submitted to assay or analysis, this being 27 per cent. more than in the previous year. Quite two-thirds of this number were received during the last six months of the year, the pressure frequently being such as to necessitate the constant attention of myself and two assistants to the entire suspension of other work. Numerous samples of auriferous and platiniferous sands have been examined, as heretofore, from the northern beaches without any particularly promising results being obtained. The occurrence of platinum in the alluvial drifts at a place in the Parkes district now known as Fifield, which has long been known, has assumed a new aspect. A considerable quantity of coarse platinum is now being raised, including a number of nuggets. Two of these, each weighing about 30 grains, are now in the Museum; but much larger ones are said to occur. An analysis of the crude material showed it to contain more than 75 per cent. of metallic platinum. It is to be regretted that a mistaken idea of the value of crude platinum should be so prevalent. Owing to the difficulty of treating it, and the necessity of sending it abroad for that purpose, the price of the crude ore can never approach that of the refined, beaten metal as placed on the market.

It is satisfactory that there now seems a reasonable probability of the deposits of tripolite in the Colony being turned to a practical account for local consumption if not for export. Analyses indicate a considerable degree of purity. Present indications point to an improvement in quality with increase of depth. The uses to which tripolite can be put are continually increasing, and, should the persons engaged in the work prove to be practically acquainted with the methods of treatment, the results may be of considerable importance.

Information received recently points to the possibility of the best quality of the sapphires found in the Colony finding a market.

The past year has marked a crisis in the history of the Mining and Geological Museum. The incoming of the year saw the whole of our collections hastily stored away in the dilapidated iron building formerly used as a Technological Museum. The building had been most thoroughly dismantled, besides being in a terrible condition of dirt, and liable to be flooded by every storm. It was, moreover completely at the mercy of the smallest outbreak of fire. As the removal there was a part of the plan for general retrenchment, the most rigid economy had to be exercised. The building was cleaned, but not painted; and the roof overhauled, so that at the present time there are only a few serious leaks. After partitioning off a portion of the building for store and work rooms, a space about twice as great as that formerly at our disposal at Macquarie-street, was available for a Museum. Early in March the material exhibited at the Chicago Exhibition was returned, and much of it was utilised in the preparations for reopening. By incessant labour, necessitating very many hours of overtime, the cases were fitted sufficiently to justify the opening of the building to the public. This was done by the Minister for Mines on Monday, the 14th of May. It is with much satisfaction that I am able to report that the interest taken in the Museum, as evidenced by the attendance and otherwise, is such as to prove that the institution meets an undoubted want. It is, however, not pleasant to hear the scathing comments made by visitors from other colonies upon the manner in which New South Wales houses her magnificent collection of ores. Since that

that date as much has been done as the pressure of assay and other work would permit, but there is still very much labelling and arranging to be done before the Museum can be considered as in any way complete. Under the superintendence of the Palæontologist and Mr. W. S. Dun, our fossil collection has been properly mounted and labelled up to the Permo-Carboniferous Formation. The re-opening of the Museum under these new conditions has increased the difficulty of carrying on the office work, as it is necessary that a competent assistant should be always there. Complaints are not infrequent that the building is closed on Saturday afternoons and other holidays; and, perhaps, I may be allowed to give expression to my hope that this new year may see arrangements made whereby the Museum may be opened as long and as often as similar institutions are. Many important additions have been made to the collections. Mr. Carne obtained an invaluable series by exchange at the Chicago Exhibition. This has yielded 350 registered specimens. Several important collections of Broken Hill minerals have been received, including those collected by yourself during your recent visit. From the Californian State Museum we have received as an exchange a well-chosen series of American economic minerals. A list of the persons who have kindly assisted us with donations is attached as an Appendix. Another Appendix gives the persons or institutions to whom collections have been sent. An exhibit from the Museum is now at the Hobart Exhibition under the care of Mr. E. C. Whittell.

My examination by means of the microscope of a number of rocks collected by Mr. J. E. Carne, Geological Surveyor, from Pambula, tends to show that there must be in that district a considerable thickness of contemporaneous acid volcanic rocks. A similar examination of a series of rocks collected by yourself at Wyalong was not productive of anything of special interest, on account of their extremely altered condition.

I have contributed several papers to the Geological Survey Records.

It is again my pleasing duty to acknowledge the willing and conscientious assistance I have received from the officers who have shared with me the varied duties attached to the curatorship. Mr. Harper spent several weeks as field assistant. Mr. Allen having resigned to engage in practical mining work, Mr. J. E. Dobson was appointed temporary assistant, and has displayed the greatest diligence and care.

GEORGE W. CARD,
Curator and Mineralogist,

Annual Report of the Palæontologist for the Year 1894.

Sir,

2 January, 1895.

I have the honour to hand you herewith a Progress Report of the Palæontological work done during the Year 1894.

For one and a half months, viz., 31st March to 17th May inclusive, I acted, with the special permission of the Honorable The Secretary for Mines and Agriculture, as Acting Secretary to the Board of Trustees of the Australian Museum, during the temporary absence of Mr. Sutherland Sinclair, the Board's Secretary. Again, with the Minister's permission, I occupied the position of Acting Curator of the Australian Museum from 1st July to the end of the year, in addition to performing my ordinary duties in this department.

Records.—Parts 1 and 2 of Vol. IV of the *Records of the Geological Survey of New South Wales* have been issued, and Part 3 is in the press. These contain the following Official Papers by myself:—

- (a) Description of a proposed New Genus of Rugose Coral (*Mucophyllum*). Part 3, pp. 11-18, t. 3 and 4.
- (b) On the Occurrence of a *Pteronites* (*P. Pittmani*) in the Spirifer Sandstone of Warrawang, or Mount Lambie, near Rydal. Part 1, pp. 28, 29, t. 6.
- (c) Palæontologia Novæ Cambriæ Meridionalis. Occasional Descriptions of New South Wales Fossils, No. 1. Part 1, pp. 32-37, t. 7.
- (d) On the Occurrence of an *Oleandridium* in the Hawkesbury Sandstone Series. Part 2, pp. 49-51, t. 8.
- (e) The Idiographic Carvings at Cockle Creek, Cowan. Part 2, pp. 57-65, t. 9.
- (f) On the Occurrence of a Stromatoporoid, allied to *Labechia* and *Roscnella* in the Silurc-Devonian Rocks of New South Wales. Part 3, t. 14-16 (*in litt*).

The following in conjunction with Mr. W. S. Dun:—

- (a) The Australian Geological Record for the Year 1883, with Addenda for 1891 and 1892. Part 2, pp. 65-99.

The following Paper has been prepared for Vol. IV, Part 4:—

- (a) On the Occurrence of a Plant in the Newcastle, or Upper Coal Measures, possessing characters both of the genera *Phyllothea*, Brong., and *Cingularia*, Weiss. 3 plates.

Miscellaneous

Miscellaneous Determinations.—The following are the more important Miscellaneous Determinations made during 1894:—

1. Plant Remains of Lower Mesozoic Age from the Cremorne Bore, No. 2.
2. Siluro-Devonian, or Upper Silurian Corals from Cudal, presented by Dr. Broom, contained in water-worn pebbles.
3. Lower Cretaceous Fossils collected by the Government Geologist from a Well on Brindigabba Run, at a depth of 340 feet.
4. Plant Remains from the Coal-measures at Kanangra Walls, near the Jenolan Caves, collected by Mr. J. C. Wiburd.
5. Siluro-Devonian Corals in a Crystalline Limestone from Molong, collected by Mr. G. A. Stonier.
6. *Lepidodendron australe*, from the Manilla River, collected by Mr. G. A. Stonier.
7. Upper Cretaceous Fossils, from the White Cliffs Opal Field, collected by Mr. F. de V. Gipps, and more or less converted into precious opal.
8. Upper Silurian Fossils, collected at Lobb's Hole, near Yarrangobilly, by Mr. J. B. Jaquet.
9. Upper Silurian (?) Fossils, from Wilbertree, near Mudgee, collected by Mr. G. A. Stonier.
10. Upper Silurian Fossils, from Yarrangobilly, collected by Mr. J. Murray, Cave-keeper.
11. Carboniferous Fossils, from the Scone District, forwarded by Mr. H. T. Leary, Mining Registrar.
12. South Australian Tertiary Fossils received from the Kapunda School of Mines, S.A.
13. Permo-Carboniferous Fossils from Wingen, collected by Mr. G. A. Stonier.
14. Plant remains from the Mesozoic beds at Mount Piddington, Blue Mountains, presented by Mr. Rienits.
15. Devonian and Permo-Carboniferous Fossils, collected by Mr. J. E. Carne, in Parish Goollooinboin, Co. Roxburgh.
16. Permo-Carboniferous Fossils from New Norfolk, Tasmania, presented by Mr. Rienits.
17. Upper Silurian Fossils collected at Yarrangobilly and Lobb's Hole, by Mr. W. S. Leigh.
18. Collection of Permo-Carboniferous Fossils, chiefly from the Western coalfields, named for Mr. Rienits.
19. Carboniferous and Tertiary Fossils, collected at Bingara by Mr. G. A. Stonier.
20. Siluro-Devonian Fossils from Limekilns, near Bathurst, presented by Mr. Clunies Ross.
21. Devonian and Cretaceous Specimens submitted by Mr. Boulton, from Western New South Wales.
22. Miscellaneous Fossils submitted by the Curator of the Technological Museum.
23. Carboniferous Fossils from Boorook, Carroll, and Somerton, submitted by Mr. D. A. Porter.
24. Carboniferous Fossils, collected from localities in Co. Gloucester, by Mr. G. A. Stonier.
25. Devonian, Lower and Upper Cretaceous, and Post-Tertiary Fossils from the White Cliffs Opal Fields, obtained by the Government Geologist.
26. Siluro-Devonian Fossils and Post-Tertiary bones from the Wellington Caves, obtained by Mr. W. S. Leigh.
27. Siluro-Devonian Fossils from the top of Mount St. George, near the Jenolan Caves, collected by Guide Wiburd.
28. Mesozoic Plant remains from the Wianamatta shales, near Mowbray Park House, Burratorang presented by Mr. W. A. Cuneo.
29. Permo-Carboniferous Fossils from near Drake, forwarded by J. P. Curran, Warden's Clerk, Fairfield.
30. Carboniferous Fossils from Batandoon, Co. Buckland, collected by Mr. G. A. Stonier.
31. Upper Silurian Fossils from Lobb's Hole, near Yarrangobilly, collected by Mr. J. Murray, Cave-keeper.

Collections prepared.—Collections for teaching purposes, have been prepared for the following:—

- 1.—J. Waterhouse, M.A., Inspector of Schools, Dungog—Gosford Mesozoic-fish.
- 2.—Uren, Broken Hill—General collection of N. S. Wales Palæozoic fossils.
- 3.—Working Men's College, Melbourne—the same.
- 4.—Queen's College, Summerhill, Sydney—the same.

Mining and Geological Museum.—A very large amount of work has been accomplished in connection with the Museum. The entire Palæozoic collection of fossils has been revised, numerous additional specimens interpolated, and the whole retabulated and arranged. A special small collection has also been prepared, exhibiting the most characteristic fossils of New South Wales.

Illustrations.—A number of plates for reproduction by the Helio-type Process, have been prepared under my supervision, by Mr. P. T. Hammond, with his accustomed skill, in anticipation of future *Memoirs and Records*.

Special Work.—Under this heading may be mentioned, the study of the family Phacopidæ, amongst the Trilobites, in conjunction with Mr. John Mitchell, of Narellan. The result of this work will appear in the *Proc. Linn. Soc. N. S. Wales*, with the plates officially drawn by Mr. Hammond.

Mr. George Sweet, of Brunswick, Melbourne, forwarded for determination a large collection of Victorian Lower Palæozoic Fossils. These have been generally examined, in part determined, and numerous notes accumulated for publication. I regret to say, however, through severing my active connection with the Department, to take up other duties, I shall be unable to complete this otherwise congenial duty.

As in former years, I have been ably assisted by Mr. W. S. Dun, who has prepared the following papers for the *Records*:—

- (a) On a Vertebra from the Wellington Caves—Part I, p.p. 22-25, t. 5.
- (b) A Tabular List of the Bores and the Water Augurs put down by the Department of Mines and Agriculture, New South Wales, and mentioned in the Reports of the Department. Part 2, p.p. 100-106.
- (c) Notes on the Occurrence of Monotreme Remains in the Pliocene of New South Wales. Part 3, t. 11 and 12 (*In litt*).
- (d) Bibliography of the Geology, &c., of the Barrier Ranges District. *Mem. Geol. Survey, New South Wales, Geol. No. 5, App. II., pp. 142-149.*
In

In handing you this, my final report, I have to tender my sincere thanks to the Under Secretary for Mines and Agriculture, yourself, and your predecessor (the late Mr. C. S. Wilkinson), for the uniform kindness, consideration and help, I have always received in my endeavours to assist in elucidating the palæontology of New South Wales, and to my Colleagues in general throughout the Geological Branch, for their active co-operation and attention.

I have, &c.,
R. ETHERIDGE.

Annual Report of the Librarian for the Year 1894.

Geological Survey Branch, Department of Mines and Agriculture,
Sydney, 2 January, 1895.

Sir,

I have the honour to herewith report on the work performed in the Departmental Library since 1st January, 1894.

During the year 1,389 publications have been registered and placed in the Library; these consist of Societies' Transactions, &c., Reports of Departments, Serial Publications, and separate works and pamphlets. This number is made up of 1,159 volumes and parts of volumes that have been presented or sent in exchange for the departmental publications, and 230 volumes and parts of volumes that have been purchased.

The Library is now in correspondence with 170 institutions and State departments, from which exchanges are regularly received, and there are also numerous other donations from individuals who are in receipt of our publications.

The names of several societies have been added to the exchange list, and the names of some undesirable ones have been removed.

All presentations have been suitably acknowledged immediately on receipt of the present.

The general register, register of periodicals, letter-book, and invoice ledger, have been regularly kept up to date.

The General Library slip catalogue is complete to date.

During the year the following departmental publications were distributed through the medium of the Library:—

- (1.) Records of the Geological Survey of New South Wales, Vol. IV, pt. 1.
- (2.) Do do do do Vol. IV, pt. 2.
- (3.) Geological Memoir, No. 5.
- (4.) Annual Report of the Department of Mines and Agriculture for 1893. (To societies and institutions.)
- (5.) Miscellaneous lots to various societies and individuals.

I would respectfully beg to call attention to the overcrowded state of the shelves. Certain sets of publications have increased so rapidly that portions have to be placed in two or more places, and it has been found impossible of late to carry out the plan of arrangement originally sanctioned. It would add greatly to the utility of the Library, and rapidity of reference, if a room could be set apart for the books, pure and simple. I feel confident that it must come to this sooner or later.

I have much pleasure in again calling your attention to the very efficient assistance rendered to me by the Assistant, Mr. W. S. Dun.

I have, &c.,

R. ETHERIDGE.

Progress Report by Mr. J. C. H. Mingaye, F.C.S., M.A.I.M.E., Analyst and Assayer.

Department of Mines, Geological Survey Branch, Laboratory,

Sydney, 7 January, 1894.

Sir,

I have the honor to furnish you with the following progress report on the work performed in the Chemical Laboratory under my supervision during the year 1894:—

Three thousand eight hundred and sixteen numbered samples were received for analysis and assay; 113 ultimate and proximate analyses were furnished, and 19 partial and qualitative analyses made. These include 11 gas analyses made of the occluded gases in coal. Eighty-four crushed average samples, 56 samples of concentrates, and 102 samples of tailings were received for assay. A large proportion of these were required by the Government Metallurgist in connection with experiments conducted on bulk samples with a view to their treatment.

The total number of assays furnished, exclusive of those made for gold and silver, was 697.

The following figures show the number of samples received in the Laboratory from 1883 to 1894 for analysis and assay:—

Year 1883.....	242 samples.	Year 1889.....	3,287 samples.
" 1884.....	664 "	" 1890.....	3,323 "
" 1885.....	1,428 "	" 1891.....	4,032 "
" 1886.....	1,807 "	" 1892.....	3,570 "
" 1887.....	2,222 "	" 1893.....	3,015 "
" *1888.....	5,245 "	" 1894.....	3,816 "

The analyses, although less than last year, are of a much more complicated nature, and have taken up a large amount of time, and required careful work. Analyses were made of a number of complicated minerals from Broken Hill, platinum, gases occluded from coal, artesian waters, &c. The following analyses were made of artesian waters and others:—

- (1.) Water from Government Tank at Byerock.
- (2.) " Railway " "
- (3.) " spring, at Ashman's, near Pokolbin.
- (4.) " artesian Dingle Ridge bore, near Narrabri.
- (5.) " spring, in the Cooma District, No. 1.
- (6.) " " " " No. 2.
- (7.) " " Prospecting Shaft, at Neila Creek, near Cooma.
- (8.) " mineral spring, near Parramatta.
- (9.) " well used for mining purposes.
- (10.) " spring, at Ashman's, 14 miles from Branxton.
- (11.) " " " " "
- (12.) " " " " "
- (13.) " mine water, Mount Allen Gold-mine.
- (14.) " " from shaft, Pine Ridge, Wyalong.
- (15.) " " Town's Gold-mine, near Lewis Ponds.

On the 20th January and the 14th February, acting on instructions received from the Department, I visited the Metropolitan Colliery, at Helensburg, and obtained a number of average samples of the coal, which were secured in specially constructed air-tight apparatus. Analyses were made of the occluded gases in the coal, also proximate analyses of average samples, and a report furnished as to the nature of these gases.

Analyses

* The large increase this year due to the mining boom.

Analyses were made of several complicated minerals obtained from the Broken Hill District, and, from the results obtained, they possibly have not hitherto been described.

Several samples of fire-clays were tested in the Laboratory with a view of ascertaining if they were suitable for the manufacture of fire-bricks, analyses of the samples being furnished in each case.

Analyses were also made of some clays and limestone proposed to be utilised for the manufacture of hydraulic cements.

A large number of beach sands have been examined and assayed for platinum, platinoid metals, gold, and tin, and an analysis made of a sample of platinum from Fifield, near Burra Burra.

Owing to the discovery of large quantities of chrome iron in the Colony, a large number of prospecting samples were received, some 122 samples being assayed in the Laboratory.

The rare element tellurium was detected in a small piece of mineral tested for Mr. Geological-Surveyor Stonier, F.G.S., the tellurium being combined with bismuth, as tetradymite (No. 2390).

A small quantity of metallic substance, said to be a natural alloy was examined. The specific gravity of the alloy was 9.6103. On analysis it yielded as follows:—

Metallic Copper	43.333
,, Silver	33.198
,, Gold	22.837
	99.368

The occurrence of this alloy *in situ* is one of great interest.

As a great difficulty is experienced in obtaining pure chemicals, including acids, apparatus, &c., in the Colony, I applied that a sum of money be placed annually at my disposal for the purchase of these articles from England. The necessary authority having been given, the chemicals, &c., required for 1895, were ordered in the latter part of November, through the Agent-General.

In concluding my report, I have to thank the Assistant Analyst, Mr. H. P. White, also Messrs. Hildebrandt and Neilson for the satisfactory and efficient manner in which they have carried out the work entrusted to them. Messrs. H. Fletcher, Dolan, and Burns, have contributed also largely to their share of the work, which has been very heavy this year.

I have, &c.,

JOHN C. H. MINGAYE, F.C.S., M.A.I.M.E.,

Analyst and Assayer.

The Government Geologist.

Minute.

Mr. Mingaye has made a number of careful experiments, and, judging from his report there appears to be very little doubt that the coal from the Metropolitan Colliery is not of such a character as would be liable to spontaneous combustion, while the proportion of marsh gas present in the coal is quite sufficient to account for the explosions which have occurred after this coal was placed in the ship's hold, and there is every reason to suppose, as Mr. Mingaye suggests, that the explosions were due to a mixture of this gas with atmospheric air.

Mr. Mingaye has also shown that by exposure of the coal to the air, for a period of about a week, the greater part of the occluded marsh gas is evolved, and he recommends that before shipment the Metropolitan coal should be exposed to the atmosphere for at least a week also that the holds of the vessels should be thoroughly ventilated by pipes extending up the masts, and that no naked lights should be allowed in the bunkers where the coal is stowed.

It appears probable that mechanical arrangements could be devised, whereby the thorough exposure of the coal to the air and the consequent liberation of the dangerous marsh gas before shipment could be much facilitated.—E.F.P., 15/3/94. The Under Secretary for Mines and Agriculture.

APPENDIX A 2.

Department of Mines, Geological Survey Branch,

Sir,

Laboratory, Sydney, 8 March, 1894.

Acting on instructions received on 17th January last, that in conjunction with the Examiner of Coalfields, experiments should be conducted with the Metropolitan Colliery's coal, with a view to ascertaining the nature of the gases enclosed in the coal, and as to how the danger of explosion in the holds of vessels may be obviated, I have the honor to furnish you with the following analyses, experiments, and report:—

On the 20th January I visited the Metropolitan Colliery at Helensburgh, and accompanied by Mr. Inspector Rowan, the Mine Manager (Mr. Robertson), and Underground Manager, took a number of average samples of coal.

The samples were taken right through the seam, and placed in air-tight apparatus. The total occluded gases given off *in vacuo* at a temperature of 100° C. (212° F.) being determined, and analyses made with a view of ascertaining their composition and explosive nature.

Samples were taken from the Main Dip, about a mile from the Main Shaft pit bottom, due north of shaft. These will be referred to in the Report as "Main Dip."

Samples were also obtained from No. 7 heading, about 10 chains from where the other samples were taken from, the coal, in both cases, being at the time mined for shipment. These samples will be referred to as "No. 7 heading."

On the 14th February I again visited the colliery, and, accompanied by Mr. Inspector Rowan, who was on a visit of inspection, the Underground Manager, and Mine Surveyor, obtained fresh, average samples from the same places. The mine at this time was in a state of rest, through the miners being out on strike.

On the first visit to the Colliery, in a heading 50 yards away from where the samples were taken in the Main Dip, the place being in a state of rest, fire damp was readily detected in the roof, and the gas ignited in the safety lamp by the Manager. In the Main Dip gas could be heard exuding through the pores of the coal, and fire damp was detected in the roof. In No. 7 heading fire damp was also detected by the safety lamp in the roof, the coal being in a state of unrest and cracking, portions of it falling, owing to the occluded gases forcing their way out. Temperature of heading 25° C. Average samples submitted to proximate analyses yielded as follows:—

	“Main Dip.”	“No. 7. Heading.”
Hygroscopic Moisture.....	1.00	.70
Volatile Hydrocarbons, &c.	17.40	17.45
Fixed Carbon	69.70	72.90
Ash	11.90	8.95
	<hr/>	<hr/>
	100.00	100.00
	<hr/>	<hr/>
Coke	81.60%	81.85%
Sulphur in Coal	0.535%	0.699%
Ash	Grey, flocculent.	Grey, flocculent.

Coke:—In both cases did not form a good coke, it being brittle, and dull in colour.

Lbs. of water converted into steam by 1 lb. of coal:—

Calorific value.....	12.9	12.7
----------------------	------	------

The explosion or ignition of coal stored in ship's bunkers may be due to two causes:—1st, Spontaneous combustion of the coal, which is hastened by the oxidation of iron pyrites; thus giving rise to heat and ignition of the coal, or gases given off. It is stated “That the absorption of oxygen by fine coal, dust or gum, without the presence of pyrites, may generate sufficient heat to cause self-ignition of the coal, or the gases given off; that as soon as the temperature rises, oxidation proceeds more rapidly; and that the oxidation of pyrites, especially in the presence of moisture, greatly adds to the danger.”

In an excellent paper by Professor Vivian B. Lewis, F.I.C., F.C.S., appearing in “The Colliery Guardian” for March 18th and 23rd, 1893, entitled “The Spontaneous Ignition of Coal and its Prevention,” it is stated:—“All coals to a certain extent absorb oxygen, which combines with the carbon and hydrogen of the bituminous portions, converting them into carbon dioxide, and water vapour. This chemical activity increases rapidly with rise of temperature, so that the heat generated by the absorption of the oxygen causes it to rapidly enter into chemical combination. At ordinary temperature this oxidation is slow, and consequently it may be days before the rise in temperature becomes sensible; but when this point is reached, the oxidation proceeds with remarkable rapidity, and in a few hours the point of ignition is reached, and the mass bursts into flame.” The kinds of coals which are liable to spontaneous heating, and ignition, are open to a great difference of opinion, and Professor Vivian B. Lewis adds in his report:—“The idea that the percentage of pyrites present is an indication of the liability to spontaneous combustion must be entirely discarded, as experiments show that many coals poor in pyrites frequently ignite, while others rich in them are perfectly safe. The higher the amount of moisture held by the coal, after exposure for some time to dry air, the greater will be its power for the absorption of oxygen, and the greater therefore its liability to spontaneous heating and ignition.”

Coal is apt to more readily ignite when allowed to accumulate in the state of dust or fine slack. Of late years the researches of Cooper, Baker, Durand and others have shown the important part which moisture plays in chemical combination. A case is given where a ship took in a cargo of coal at a South Wales port, the weather being fine and dry while she was loading at the main hatch, and wet after taking in the coal at the after hatch, with the result that the temperature was after a few days about 10 degrees higher in the coal loaded wet than in the dry portion of the cargo, spontaneous ignition being the ultimate result. Professor Lewis's experience leads him to think that if air-dried coal does not contain more than 3 per cent. of moisture, and when powdered and heated to a temperature of 250° F. in an oven for three hours, does not increase more than about 2 per cent. in weight, it may be looked upon as a safe coal to store in bulk.

An average sample of each of the coals was dried at 212° F., the moisture being noted, and the samples then further heated to a temperature of 250° F. in an oven for 3½ hours, with the following result:—

	Increase in Weight.
“Main Dip”.....	0.26%
“No. 7 heading”.....	0.25%

Oxygen was passed over a weighed quantity of the fine coal for two hours, with the result that the coal increased 0.36 per cent. in weight.

According to the above experiments, and the opinion given by various experts, the coals are very unlikely ones for spontaneous combustion, the percentages of moisture and sulphur being low.

2. Explosion in the holds of ships, due to the accidental ignition of a mixture of atmospheric air and carburetted hydrogen evolved from the coal.

It is well known that a large number of accidents are on record, and disastrous explosions have taken place on board ship, caused through the gases evolved from the coal coming in contact with a naked flame, and to this cause the explosion on the ship “Francis Argo” was, in my opinion, due. The analyses of the gases occluded in the Metropolitan coal proved to be of an explosive nature, consisting largely of marsh gas.

A large series of experiments were made as to the percentage of occluded gases in the coal, their composition and explosive nature, and a number of experiments were conducted with a view of ascertaining, by exposing the coal for given periods, what percentage of gases were removed. It is well known that household coals obtained from near the surface contain, as a rule, little or no marsh gas (fire damp), the percentage of carbon dioxide and nitrogen being high. Steam coal occludes a large volume of gas, and contains a higher percentage of marsh gas.

The

The samples under examination were taken in air-tight apparatus, which was connected with a Geissler Mercury Pump, and the gases extracted at a temperature of 212° F., the apparatus containing the samples being heated in a water bath until no more gas was given off. The following are the results obtained:—

Gases evolved by 100 Grammes of Coal at 212° F. (*in vacuo*).

Locality.	Total Gases Evolved.	Composition of Gases.						
		Carbon Dioxide (C O ₂).	Ethylene (C ₂ H ₄).	Oxygen (O.).	Carbonic Oxide (C O.).	Hydrogen (H.).	Paraffins* (C _n H _{2n} + 2).	Nitrogen (N.).
1. Main Dip	c.c. 139	2·0	1·0	0·5	nil	nil	95·8	0·7
2. Do.	142	2·4	1·2	0·6	"	"	95·4	0·4
3. No. 7 Heading	318·4	7·2	nil	2·8	"	"	40·7	49·3
4. Do. (2nd sample)	218·5	5·12	"	3·0	"	"	49·6	42·28
5. Do. do.	213·2	3·20	"	5·6	"	"	48·5	43·70

* Paraffins.—These consist mainly of marsh gas; but it is very probable that a small percentage of other gases of the paraffin series is present.

The gas from No. 1 and 2 "Main Dip" readily exploded, 1 volume being mixed with 10 volumes of air, the explosion being of a very violent nature. The gas readily ignited, burning with a blue flame, the "cap" or "aureole" which is formed in the flame when a certain proportion of fire damp is present being readily noticeable.

The gas from Nos. 3, 4, and 5 (No. 7 heading), exploded only when mixed with detonating gas. The gas ignited, but not so readily as the former samples, burning with a bluish-coloured flame.

The following analyses are given showing the percentage of occluded gases, and their compositions, in British coals for comparison:—

COMPOSITION of Gases.

No of sample.	No. of c.c. of gas yielded by 100 grms. of coal at 212° F.	Carbon Dioxide (C O ₂).	Oxygen (O.).	Marsh Gas (C H ₄).	Nitrogen (N.).
1.	55·9	36·42	·80	...	62·78
2.	39·5	9·43	2·25	31·98	56·34
3.	194·8	5·04	·33	87·30	7·33
4.	149·3	11·35	·56	73·47	14·62
5.	215·4	5·64	·54	82·70	11·12
6.	555·5	2·62	...	93·13	4·25
7.	600·6	14·72	...	84·18	1·10

A series of experiments was undertaken with a view of ascertaining if by exposing the coal to the atmosphere for given periods, what per centage of gas was removed, the amount left being estimated, and its composition and explosive nature determined:—

Gases evolved by 100 grammes of coal at a temperature of 212° F. at given periods, after exposure to the atmosphere:—

Mark.	Period.	Total Gases.	Composition of Gases.						
			Carbon Dioxide (C O ₂).	Ethylene (C ₂ H ₄).	Oxygen (O.).	Carbonic Oxide (C O.).	Hydrogen (H.).	Paraffins (C _n H _{2n} + 2).	Nitrogen (N.).
1. Main Dip	Days. 2	c.c. 38·2	1·5	absent	17·5	absent	absent	45·5	35·5
2. Do.	4	32·5	·8	"	21·2	"	"	20·0	58·0
3. Do.	10	41·2	1·5	"	22·0	"	"	18·3	58·2
4. No. 7 Heading	3	46·5	4·8	"	25·2	"	"	20·1	49·9
5. Do.	7	31·5	1·2	"	30·2	"	"	10·2	58·4
6. Do.	21	25·9	·8	"	40·5	"	"	5·3	53·4

As shown by the above experiments it is possible on exposure of the coal to eliminate a certain proportion of the dangerous and explosive gases, and after giving the matter careful consideration, I beg to submit the following suggestions, which if acted on, I feel sure will to a great extent minimise the chance of explosion in a coal of this character, *i.e.*, of a gaseous nature and containing much marsh gas, &c.:—

- 1st. That notice should be given in the ship's certificate from the shipper that the coal is of a dangerous character, this being I believe enforced in Great Britain when the coals are known to be highly gaseous.
- 2nd. That no naked lights be allowed in the bunkers, and the use of safety lamps be enforced.
- 3rd. That before shipment the coal should be exposed to the atmosphere for a period of at the least one week, in order that a portion of the dangerous gases may be liberated.
- 4th. A thorough system of ventilation from the upper deck by pipes or flumes, running up the mast or funnels, so that the gases may be liberated at a safe distance from any chance of ignition, All galley fires to be placed at a safe distance from the holds in which the coals are stored.

I have, &c.,

The Government Geologist.

JOHN C. H. MINGAYE, F.C.S., M.A.I.M.E.

PROGRESS Report by Mr. W. S. Leigh, Superintendent of Caves, for the Year 1894.

Department of Mines and Agriculture, Geological Survey Branch,

Sir,

Sydney, 11 January, 1895.

I have the honor to submit the following progress report on the Caves for the year 1894:—

During the year I have inspected the following caves in connection with their general supervision, improvement, works, and new discoveries, &c., *viz.*, Jenolan, Wombeyan, Yarrangobilly, Wellington, Bungonia, Abercrombie, and Rosebrook.

New

New discoveries have been made at Jenolan, Abercrombie, and Wombeyan.

At Jenolan, on the 16th February, a fresh passage was found extending due east from the "Alabaster Hall" in the Slattery Cave, which leads to some large and exceptionally pretty cavities. [See Appendix C2.]

At Abercrombie, in a lime-stone spur, 200 yards north of the Grand Arch, some very large, but sombre-looking, cavities were discovered. They were first entered through an opening 150 feet above the level of the creek. The new entrance, however, which has been enlarged for the convenience of visitors, is much better situated, being only a few feet above the creek level. [See Appendix C2.]

At Wombeyan, two very interesting discoveries were made in the Wollondilly Cave. [See Appendix E2.]

At the suggestion of G. T. C. Miller, Esq., M.P., an examination of the southern portion of the Rosebrook limestone was made, but on account of the outlay it would involve, it was not deemed advisable for the present to proceed with a systematic exploration of same. [See Appendix D2.]

The total amount collected for the use of the magnesium light was £173 1s. 8d., and the expenditure in connection therewith as follows:—Purchase of magnesium wire, £105; repairs to lamps, &c., £6 7s. 6d.; total, £111 7s. 6d.; leaving a profit for the year of £61 14s. 2d.

The total number of visitors who signed the books at the different caves, inclusive of those to the Kanangra walls, near Jenolan, was 4,413, showing a substantial increase on the returns for last year.

Following are particulars showing number of visitors, improvements, &c., at each of the caves for the year 1894:—

Jenolan Caves.

Number of visitors, 1,038. The work of improving and opening up the new cave, which was suspended in July, 1893, on account of the retrenchment scheme, was not resumed until June, 1894, when Guide F. J. Wilson, whose services as guide were not required during the winter, was temporarily engaged to proceed with the work. With the assistance of one of the other guides, when he could be spared for this duty, very fair progress was made, inasmuch that at the commencement of the busy season, when the work was stopped, about 300 feet of passages had been opened up, and the formations protected by the erection of wire-netting.

The installation of the electric light, in the Lucas Cave, has been satisfactorily accomplished. The preliminary work, viz., the erection of dynamo and counter-shafting, &c., was completed in 1893. The remainder, embracing the whole of the work in the cave, was carried out during June and July last, by Mr. Fitzmaurice and assistants, of the Electric Light Department. The lights comprise six arc lamps, suspended in the large chambers, and about seventy incandescent lamps distributed throughout the passages. The arc lamps are well suited for this cave, the large chambers they illuminate being now seen to much better advantage.

The plantation and tracks at Jenolan, which got into a bad condition through dispensing with the services of the gardener, are now in a much improved state, the man having been temporarily re-engaged in September to put same in proper order.

Wombeyan Caves.

Number of visitors, 303. Two men were engaged for a few weeks to carry out some necessary improvement works. The effecting of other improvements equally necessary had to be held over on account of the shortness of funds.

A number of trees, supplied by the Forest Department, have been planted in front of the Accommodation House.

Numerous inquiries have been made by intending visitors as to the likelihood of the road from Bowral to the Caves being completed soon. So far the Works Department have done nothing beyond surveying the proposed extension.

Yarrangobilly Caves.

Number of visitors, 575. A man was employed for one month, during the winter, on urgent improvement works. The keeper has been allowed an assistant for three months, during the summer, the guide-work at this season being found too much for one man to perform satisfactorily.

Wellington Caves.

Number of visitors, 1,071. In addition to his usual guide-work, the keeper has collected several cases of fossil bones, &c., which were received by the Department.

Bungonia Caves.

Number of visitors, 120. Nothing was done here last year beyond the erection of an iron fence for the protection of visitors, round the mouth of the Drum Cave.

Bendithera Caves.

Number of visitors, 107. No work of importance has been done here during the year.

Abercrombie Caves and Waterfall.

Number of visitors, 1,099. During July and August, two men were employed on some very necessary improvement works for the protection of visitors, mainly the erection of guard-rails on tracks running along the edges of precipitous rocks in the Grand Arch. The entrance to the new cave was also made more accessible, and other improvement works effected inside.

I have, &c.,

W. S. LEIGH,

Superintendent of Caves.

The Government Geologist.

APPENDIX B2.

Sir,

Department of Mines, Geological Survey Branch, 6 March, 1894.

I have the honor to report, as requested, on the new discoveries at Jenolan and Abercrombie Caves.

Jenolan.

The new chambers at Jenolan, which were discovered by Mr. J. Wilson on the 16th February form an extension to the "Slattery" Cave, now one of the most interesting caves of the group. Within 2 chains of the "Alabaster Hall," the end of the left branch of this cave, a talus heap, striking due east is

is scaled to a height of 15 feet, which forms the floor of the first-chamber. This cavity is conical in shape, the height of apex being about 45 feet, by 20 feet in diameter at base. The walls are richly decorated with snow-white stalactites of globular incrustations of carbonate of lime.

The second chamber, which makes a pretty little grotto, is reached by following a narrow passage, running generally north, a distance of 10 feet. This cavity, which is dome-shaped, averages only 8 feet in diameter by 10 feet in height. The entire surface of the walls is coated with white calcareous growths, from which in places project small shelving terraces, fringed with miniature stalactites. A peculiarly shaped stalactite, which unfortunately had to be broken off in order to gain access, was found at the entrance of this chamber. The specimen was about 18 inches in length and flat sided, each of its four sides being quite smooth, as if planed. A section of same, cut at any point, would present a perfectly square face.

By traversing a very narrow and intricate passage, running E.S.E. from the grotto, a distance of 15 feet, the third chamber is entered. This cavity is very similar in form and size to No. 1 chamber, being conical in shape and about 50 feet in height. Its western wall is profusely decorated with stalactitic growths of various designs and colours, one group in particular attracting special notice. These depend from a circular canopy projecting from the wall at about 20 feet above the floor, and are about 12 feet in length. Unlike the rest, they are not perfectly round, but semi-circular or gouge-shaped in section. They are surmounted by a number of miniature ones of the same peculiar shape.

The eastern wall is much fractured and dangerous looking, and, not having the usual covering of carbonate of lime, is coated with the red clay which forms the lower floor of the cave. By reason of the strong drip of lime in solution, most of this flooring, which is at an angle of about 45 degrees, being the top of a talus heap, possesses a smooth stalagmitic coating, from which rise at intervals some rather tall and a good number of stunted stalagmites.

At present the passages between these chambers are very small, but when opened up, the new discovery will be the cause of much additional interest being taken in the comparatively new cave off which they branch.

Abercrombie.

The new cave at the Abercrombie Caves, discovered by Mr. S. Grosvenor, keeper, is entered through an irregular shaped opening, about 8 feet in length by 3 feet in width, situated on top of a limestone spur running W.N.W. about 200 yards north of the Grand Arch and 150 feet above the level of Grove Creek. A descent is made through a tortuous, funnel-shaped channel a distance of about 50 feet, at which point the cave branches right and left. The lower or main portion of the left branch is reached by descending a vertical shaft, about 12 feet in diameter, a further depth of 30 feet, when a large cavity is entered, the sloping floor of which can be traversed a considerable distance in different directions. The main body of this chamber (there being several small passages branching therefrom) averages about 50 feet square and 30 feet in height. It contains no stalactitic growths, its bare walls being much broken and sombre looking. From fissures in the roof, 20 and 30 feet overhead, depend a cluster of tree roots, which intertwine and, in most cases, trail for a considerable distance on the floor of the cave.

Returning to the junction, the first chamber of the right branch is reached by crawling between masses of fallen rocks, wedged together in every conceivable shape. This cavity averages about 60 feet in length by 30 feet width, and at certain places 40 feet in height.

By descending the opening running beneath the north-west wall of this cave, an entrance is gained into another large chamber, 100 feet in length by 30 feet in width, which, like the other portions of the cave as yet explored, is not rich in calcareous depositions, as only a few small stalactites and one solitary stalagmite were noticed. As in the left branch, numbers of tree roots fringe the walls, and in some cases are suspended from the roof in the air. In a few instances the root of the currajong, 6 inches in diameter, breaks through the solid matter, and leaving from 5 to 10 feet of its twisted, snake-like form exposed to view, disappears again in the earthy floor.

The floors throughout the new cave are thickly coated with guano and dusty, red earth, into which wombats have burrowed, these animals having been seen when exploration operations were in progress.

Altogether, this cave, by reason of its sombre and weird appearance, will prove of great interest to visitors, it being in striking contrast to the Grand Natural Arch, or day-light cave, in the immediate vicinity, the principal attraction of the Abercrombie Caves.

As further explorations are carried on, other branches are sure to be met with, and if such occur on a higher level they will most likely be found to contain good specimens of dripstone formation.

At a small outlay another entrance, which will make the cave much easier of access than the present one, can be made at a point a few feet above the level of the creek.

I have, &c.,

W. S. LEIGH,
Superintendent of Caves.

Since writing this report, the following telegram, dated 8th instant, has been received from the keeper of the Jenolan Caves:—

“Made another splendid discovery in the Slattery Cave yesterday; exploring on to-day; particulars by letter.”—W.S.L.

APPENDIX C2.

Rosebrook Limestone and Caves.

Sir,

Department of Mines, Geological Survey, 5 September, 1894.

I have the honor to report having inspected the limestone at Rosebrook, near Cooma, brought under notice by Mr. Miller, M.P., it having been represented that most probably caves would be discovered in same.

It is situated near the south-eastern corner of portion 165 of 614 acres, parish of Bunyan, county of Beresford, about 3 miles from the Bunyan platform and 5 miles from Cooma.

This limestone forms the southern boundary of a belt 4 or 5 miles in length by about 1 mile in width, which, cropping out at intervals, runs in a northerly direction to Reserve No. 1,034 and M. Harnett's portion 125, parish of Woolumla, county of Beresford.

The northern portion was examined and several openings thoroughly explored in April, 1892; and although some fairly large cavities were met with, they were not considered of sufficient importance to preserve and open to the public.

The southern portion, *i.e.*, the area under notice, which is about 50 acres in extent, is more broken and bluff-like, and is certainly more promising as regards the existence of caves than the rest of the limestone, which, as a rule, rises very little above the surface of the undulating plain over which it is scattered.

The weathering of the limestone has formed numerous joints and peaks, the upper portions of which are coated with lichen, giving them a white appearance which adds greatly to the generally picturesque surroundings. On fracture the limestone is usually reddish-mottled in colour, and, so far as I could discern, not fossiliferous. The extreme southern point of this outcrop forms a rounded bluff, rising 40 or 50 feet above the plain, in the crevices of which some promising-looking cave openings were found not sufficiently large, however, to allow of an entrance being effected.

These openings, which appear to strike laterally into the face of the hill, are much more likely to lead to cavities rich in stalactitic growths than those already referred to as occurring at the northern end of the limestone which are vertical, and act as receptacles for debris and surface drainage.

Having now seen most of the Rosebrook limestone, and explored the cavities previously discovered there, I am of opinion that there is more likelihood of fairly good caves being met with in the bluff patch of limestone under notice than in any other portion of the belt. One cannot, however, in view of the general flatness of the country, expect to find much here to compare in extent and beauty with either Jenolan, Yarrangobilly, or Wombeyan.

When the discovery of openings in the northern portion, partly on Crown lands and partly on private property, was brought under notice, labour was employed by the Department to explore same with a view to the discovery of caves. This was on the understanding that if good caves were discovered on private property, the owner of same would make an exchange with the Government for other land.

If similar arrangements could be made in this instance (same owner, Mr. Harnett) it might, perhaps, be deemed advisable at some future time—say, next year, if funds can be spared—to spend about £30 in enlarging the openings and exploring the cavities beyond.

I may add that on account of its proximity the people of Cooma and district take great interest in the place.

I have, &c.,

W. S. LEIGH,

Superintendent of Caves.

The Government Geologist.

The question suggested by this report is whether any expense should be incurred in exploring for caves in the belt of limestone herein referred to, in view of the fact that it is situated on private land. There is a precedent for such expenditure, as some openings in the limestone were explored (without much result) last year on land belonging to the same owner (Mr. Harnett), there being an understanding that if caves of any importance were discovered the Government should have the option of acquiring them by exchange.—E.F.P., 7/9/94.

APPENDIX D2.

New Discoveries at the Wombeyan Caves.

Sir,

Department of Mines, Geological Survey, 26 November, 1894.

I have the honor to report the discovery, at Wombeyan, of two more good caves. They form additions to the Wollondilly Cave, the first of which branches off on the right of the opening leading into the "Cathedral." This branch comprises three fair-sized chambers, the main one being about 25 feet in diameter, and 40 feet in height, which are connected by passages totalling about 30 yards in length.

In addition to other rare forms of stalactitic growth found throughout the cave, some very good specimens of "mysteries," or contorted stalactites are met with. Also a fine representation of a frozen cascade, the lower portion of which assumes the form of a circular canopy, 6 feet in diameter, fringed all round with miniature stalactites.

The second cave extends north-easterly from the "Pine Forest," which is reached through a small aperture leading from, and on a level with the floor of the "Cathedral." This cave can be traversed almost in a straight line, a distance of about 300 feet, its average width being 15 feet. The height throughout averages little over 4 feet, as in some places one is compelled to crawl along, and even this style of progress is, on the whole, only changed to one of stooping. At intervals a few comparatively lofty openings are met with where one can stand erect, and thus afforded relief in the somewhat arduous task of journeying through the cave. The roof is thickly studded with stalactites of various sizes and shades of colour. The corresponding stalagmites are, on the whole, small, but very numerous, which, coupled with the fact that large beds of calcite crystals are met with, also the water-worn appearance of the bare rock, where exposed, are evidences of this cavity having been under water for a much longer and later period than other portions of the Wollondilly Caves.

The walls are buttressed with thick layers of carbonate of lime, which, by reason of the varied and graceful forms assumed, add much to the general attractiveness of the cave.

I may add that the new finds are, in point of beauty, equal to most parts of the older caves at Wombeyan, and would, at a favourable time, be well worth making accessible to the public, by opening up and making necessary improvements in same.

I have, &c.

W. S. LEIGH,

Superintendent of Caves.

The Government Geologist.

[Plans,]

1894.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

COAL-MINES REGULATION BILL.

(MESSAGE No. 6.)

Ordered by the Legislative Assembly to be printed, 28 August, 1894.

R. W. DUFF,

Governor.

Message No. 6.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to make better provision for the Regulation of Coal-mines and Collieries, and for other purposes connected therewith.

Government House,

Sydney, 28th August, 1894.

1894.

(SECOND SESSION.)

NEW SOUTH WALES.

MINING ACT, 1874.

(REGULATIONS RELATING TO LEAD POISONING.)

Presented to Parliament, pursuant to Act 37 Vic. No. 13, sec. 114.

REGULATIONS RELATING TO LEAD-POISONING.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable Sir ROBERT WILLIAM
(L.S.) } DUFF, a Member of Her Majesty's Most
R. W. DUFF, } Honourable Privy Council, a Knight
Governor. } Grand Cross of the Most Distinguished
Order of Saint Michael and Saint George,
Governor and Commander-in-Chief of
the Colony of New South Wales and its
Dependencies.

WHEREAS by the Act 57 Vic. No. 18, the Governor is empowered to make Regulations for the prevention of lead-poisoning or poisoning by lead or any other fumes in conducting mining operations: Now, therefore, His Excellency the Governor doth, in exercise of the powers conferred by the said Act, make the following Regulations, to be in force in all the Mining Districts of the Colony, that is to say:—

Employment of females.

1. It shall be illegal to employ females in any capacity at works where lead, lead-ores, or lead-compounds are mined, dressed, smelted, or manufactured.

Employment of boys.

2. It shall be illegal to employ any boy below the age of 16 years in mining or sorting ores underground at any mine where lead containing minerals are got, or to employ any such boy on the surface in any place where lead-ores, lead, or lead-compounds are handled, or to employ any boy below the age of 14 years.

Record of cases of leading.

3. The Manager of every mine shall record the name, age, branch of occupation, and length of time employed of every workmen laid off on a medical certificate by leading, and also of every workmen laid off on account of alleged leading, that is to say, where no medical certificate is produced, and shall transmit a copy of each month's record (distinguishing certified from uncertified cases) to the Minister not later than the seventh day of the next following month.

Supply of drinking-water.

4. The owner shall provide an ample supply of sweet and wholesome drinking water which shall be freely and easily available to all hands at all times at the mine; (b) It shall be stored with special care to prevent contamination with dust; (c) Whenever canvas bags are provided they shall be made according to a pattern approved by the said Minister and shall be so constructed as to be closed at the top by a solid (not a canvas) cover and the water should be drawn from them through a metal or wooden tap (not a canvas pipe) suitably fixed to the bottom, or a suitable wooden barrel shall be used for sending drinking water to the men and shall be stored in a cool place, and such barrel should be supplied with a metal tap for drawing off the water; (d) The dipper for drinking out of should hang in an enclosed place so as to be thoroughly protected from dust, or pure drinking water should be supplied by pipes to every plat

in the following way,—the source being either the public water-mains or well, protected reservoirs of condensed water at the surface, the supply pipe should descend to the lowest plat and should there enter a closed metal reservoir of about 100 gallons capacity or larger, the delivery pipe should return from the reservoir to the surface, and should be fitted with a tap at every plat for supply of water thus cooled to underground workmen, or miners may take into the mine, tea or water in cans covered by tight fitting lids, which should not be removed in the mine except for the purpose of drinking therefrom.

Sprinkling water and water for washing.

5. On feed-floors and tapping floors and at every other place where dust is raised, stand-pipes and hose or other suitable contrivances shall be so provided that dust may be conveniently laid by sprinkling the ore, &c.; sprinkling water shall also be furnished in the main drive on all the different levels, so that it can be led to every working and so that it may be easily distributed to allay dust. Proper provisions shall be made in all the levels to enable men to wash their hands before crib.

Bath-water, bathing, and changing-rooms.

6. At every mine bath-houses and changing-rooms shall be provided as follows:—(a) The baths shall include both showers and plunge-tanks; (b) The changing-rooms shall be attached to and in communication with, although separate from the bath-house, and shall have boarded floors; (c) Both bath-houses and changing-rooms shall be available to the workmen free of cost at all reasonable hours, and so that they can be used by every shift; (d) Both shall be reasonably comfortable, sufficiently lighted after dark, and sufficiently warmed in cold weather; (e) Both plunge and shower baths shall be supplied with water warm to such a degree as may be found desirable in cold weather, say, 75 degrees or 80 degrees F.; (f) A caretaker shall always be in charge of bath and changing-rooms, and it should be part of his duty to keep a day-book and to record therein the names of all persons who use the baths.

Change of clothes.

7. Every underground workman shall change his ordinary clothes for working-clothes, in the changing-rooms to be provided for this purpose, before descending to his work, and change his working-clothes for his home-clothes again on finishing his work, and before leaving the mine. Surface workmen shall have liberty to make the same change of clothes, and should be encouraged to do it.

Flue-dust.

8. Emission of flue-dust from smelter stacks should be prevented as much as possible. If the Inspector considers any alterations or any additional appliances are necessary for that purpose, he may by written notice require the owner to make or supply the same, and in such notice a time shall be named within which the necessary alterations are to be made, and such time should not exceed twelve months. If any owner object, he may within the time named in the notice, show cause in writing to the Minister, who may confirm, vary, or veto the notice of the Inspector.

Flue-dust—how dealt with.

9. (a) The ports by which flue-dust is removed from champion flues must not open into tapping-floors but on the other side of the flues and into a space otherwise unoccupied; (b) The floors to which the dust falls when first hoed out, when tipped on the feed-floor, &c., must be smooth and impermeable and provided with a curb raised above the surrounding surface, so that the deposited dust or mud may not be stepped on and carried about, and must be perfectly clean, except when in actual use; (c) Workmen employed to cleanse flues and to gather and transport flue-dust shall be under the same obligation to change before going on shift as underground hands; (d) It shall be illegal for an owner to allow any man to be thus employed on the mine unless carrying a suitable respirator to cover nose and mouth, or to engage in his work and to stand about where it is being carried on by others, unless he put on his respirator; (e) The flue-dust shall be carefully wetted as soon as drawn from the flue, no accumulation of wet flue-dust shall be permitted on any mine unless within a securely closed receptacle, nor shall any accumulation of dry flue-dust be permitted outside the flues but shall forthwith be charged back regularly.

Ventilation of tapping-floors.

10. Tapping-floors shall be ventilated at the angle between the top of the champion flue and the feed-floor, to reduce draught on the tapping-floor and to afford fumes a way of escape; flues of large diameter may be carried up through the feed-floor without interfering with operations there, and they may expand below into oblong funnel-shaped openings.

Use respirator.

11. It shall be illegal for any workman to engage in repairing a furnace in blast (as in replacing a faulty water-jacket panel) unless he wear a respirator as mentioned above in connection with removal of flue-dust.

Fumes from molten metal and slag.

12. Furnaces should be surrounded with a hood which expands below as so to catch fumes from molten metal and slag, and which should terminate on one side in a chimney leading to the air on the open side of the tapping-floor.

Qualification of Inspectors.

13. Inspectors should be proficient in some simple process of estimating the proportion of carbon dioxide present in atmospheric air.

Ventilation of mines.

14. It shall be the duty of an Inspector to see that the state of the air in the various workings is at all times satisfactory, to see that sufficient pure air circulates through the galleries, and to see that the air in all workings off through ventilated passages is sufficiently pure.

Purity of air.

15. The criterion of "purity" should be the presence in the air of less than one part of carbon dioxide in every one thousand parts of air, as ascertained by an apparatus approved by the Minister.

Copy of Regulations to be supplied to workmen.

16. A printed copy of these Regulations shall be presented by the Manager to each workman on engaging him, and it shall be the duty of the Inspector to ascertain from time to time that this is duly done.

Enforcement of regulation penalties.

17. Any Inspector shall have power to enforce the foregoing Regulations, and if any person shall after written notice served upon him by an Inspector refuse or neglect to comply with any such Regulation he shall be liable to a penalty not exceeding £20 and to a further penalty not exceeding £5 for every day (during which the offence is continued after receipt of the notice aforesaid (and any Inspector or other person may recover such penalties in any Court of summary jurisdiction).

Interpretation of terms.

18. The following terms shall be the meanings hereunder assigned to them:—

"Minister."—The Minister for Mines.

"Inspector."—The Chief Inspector or an Inspector of Metaliferous Mine.

"Leading."—Lead-poisoning.

Given under my Hand and Seal, at Government House, Sydney, this twenty-fifth day of September, in the year of our Lord one thousand eight hundred and ninety-four, and in the fifty-eighth year of Her Majesty's Reign.

By His Excellency's Command,

SYDNEY SMITH.

GOD SAVE THE QUEEN!

1894-5.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINING ACT OF 1874.

(REGULATIONS RELATING TO LEASES OF WATER-RACES, DRAINS, DAMS, OR RESERVOIRS FOR MINING PURPOSES.)

Ordered by the Legislative Assembly to be printed, 11 June, 1895.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Honorable Sir FREDERICK MATTHEW
(L.S.) DARLEY, Knight, Lieutenant-Governor
of the Colony of New South Wales and
FREDK. M. DARLEY, its Dependencies.
Lieutenant-Governor.

WHEREAS by the "Mining Act, 1874," it is enacted that it shall be lawful for the Governor in the name and on behalf of Her Majesty to grant to any holder of a miner's right applying for the same a lease of any Crown Lands for the purpose of cutting and constructing thereon water-races, drains, dams, reservoirs, and tramways, to be used in connection with gold-mining: And whereas by the said recited Act it is further enacted that it shall be lawful for the Governor to cause documents to be called mineral licenses to be issued to any person or persons applying for the same, and upon payment of the sum of twenty shillings for each such license; and that every such license shall be in force for a period of twelve months from the date thereof, and shall during the said period confer on the holder thereof the same rights and privileges in respect or in connection with mining for minerals other than gold as are declared by this Act to be conferred on holders of miners' rights in respect of mining for gold: And whereas by the said recited Act it is further enacted that it shall be lawful for the said Governor, subject to the provisions of the said Act, to make regulations from time to time to be in force in all the mining districts of the Colony, or in any such district or division thereof, or in any gold-field within the Colony as the said Governor shall direct:—For prescribing the extent and form of the land to be demised by any lease under the said Act; the manner in which applicants for leases shall mark out the land they apply for; the requirements to be complied with by such persons; the manner of dealing with cases where two or more applications are made for a lease of the same land, race, reservoir, or dam, or to divert or collect or use water for mining for gold or other minerals or metals; the modes, times, and places, for payment of rent therefor; the forms of leases to be granted under the said Act; the covenants, conditions, reservations, and provisions to be inserted in such leases, and the mode of registering the same; the fees to be paid on issue of such leases and upon registration thereof; and generally for carrying out the provisions of this Act in respect to all such leases: Now, therefore, I, Sir FREDERICK MATTHEW DARLEY, the Lieutenant-Governor, with the advice of the Executive Council, in exercise of the powers conferred by the said Act, do hereby

make the following Regulations, and do hereby direct that such Regulations shall be in force in all the mining districts of the Colony.

Given under my Hand and Seal, at Government House, Sydney, this ninth day of May, in the year of our Lord one thousand eight hundred and ninety-five, and in the fifty-eighth year of Her Majesty's Reign.

By His Excellency's Command,
SYDNEY SMITH.

GOD SAVE THE QUEEN!

REGULATIONS RELATING TO LEASES OF WATER-RACES, DRAINS, DAMS, OR RESERVOIRS FOR MINING PURPOSES.

Possession of land or water or both may be taken.

1. Any person being the holder of a miner's right, or any number of persons conjointly, each being the holder of a miner's right, may, for the purpose of mining for gold, or any person being the holder of a mineral license, or any number of persons conjointly, each being the holder of a mineral license, may, for the purpose of mining for any mineral or metal or other than gold in the manner hereinafter prescribed, subject to the conditions and limitations hereinafter contained, take possession of any Crown Land (not exempted under subsections 1 and 2 of section 34 of the Act 37 Vic. No. 13) or of any water which may be collected upon, or which may be standing upon or flowing through or past such land, and may, in the manner hereinafter described, make application for a lease of such land or water or both.

Area of land and quantity of water.

2. The area of land and the quantity of water of which possession may be taken, and for which application to lease may be made, shall be as follows, and subject to existing adverse rights the land or water or both so taken possession of and applied for shall be deemed to be held under promise of lease until the application shall have been refused wholly or in part; but upon notification in the Gazette of the refusal of the Governor to grant a lease of the whole or any portion of the land or water applied for, the title thereto shall cease:—

(a) For the purposes of a water-race or drain so much land as shall be absolutely necessary for cutting or constructing such race or drain, and not less than 10 feet on either side thereof for the purpose of access to and protection of such race or drain.

- (b) The area of land which may be taken possession of and applied for, for the purpose of constructing a dam or reservoir, shall be so much as shall be necessary to include the embankment and the water impounded when the dam or reservoir is full and a sufficient margin around to protect the works and the water. Provided that if the dam or reservoir be constructed in the bed of a stream the Minister may limit the distance up stream to which the applicant's title to the land shall extend.
- (c) The quantity of water which may under one lease be diverted or taken from any spring, lake, lagoon, swamp, or stream shall depend upon the use to which the water is to be applied, and the cost of constructing the necessary works, or upon the number of men to be employed as the case may be, and upon the quantity of water which can be so diverted or taken without interfering with the rights of others.
- (d) When the water to be diverted or taken from any spring, lake, lagoon, swamp, or stream is to be sold to persons carrying on mining operations and is not to be used by the lessees in mining ground owned or occupied by themselves and is not to be applied to purposes other than mining, the quantity of water which may be taken possession of and applied for shall be limited only by the quantity available without interfering with the rights of other persons, and by the amount of money to be expended in the construction of the necessary works in the proportion of one cubic foot per second in respect of every £1,000 expended as aforesaid. If for the purpose of diverting or taking water from a stream it is necessary to place a dam across the bed of such stream, the applicant may be required to construct a byewash of such dimensions and in such position that the quantity of water impounded shall not prejudice the rights of other persons to take water from the same stream, but in dealing with such applications the Minister shall recommend the reduction of the quantity in every case in which it shall appear to him that the quantity applied for is, taking into consideration the estimated cost of the works, excessive, and upon notification in the Gazette of such reduction the title of the applicant to water in excess of such reduced quantity shall cease.
- (e) Persons desiring to divert or take water from any spring, lake, lagoon, swamp, or stream, and to use the same in mining operations (but not for sale), shall be entitled to take possession of and apply for one box sluice head in respect of every man to be employed in mining operations in connection with the water so diverted or taken.
- (f) Persons constructing a dam or reservoir shall, in virtue of the lease of the site thereof, but subject to prior rights, be entitled to all water impounded therein, provided that the water so impounded be not diverted or taken from any spring, lake, lagoon, swamp, or stream; and no person shall be entitled to take possession of or apply for a race, dam, or reservoir within the watershed of the first-mentioned dam or reservoir so as to cut off the water necessary to supply it.

Mode of taking possession.

3. For the purpose of taking possession as aforesaid—

- (a) For the purposes of a water-race or drain a post 3 inches in diameter and projecting 3 feet above the surface shall be erected at the point where the water is proposed to be diverted from any spring, lake, lagoon, swamp, or stream, and upon such post (which shall be deemed the datum-post) shall be placed a written or painted notice stating what quantity of water is to be taken and by whom, and such notice shall be dated on and shall bear the date of the day of possession, and similar posts shall be erected along the supposed course of the race or drain at distances not exceeding 1 mile apart.
- (b) A post 3 inches in diameter and projecting 3 feet above the surface shall be erected at each angle of the site of any dam or reservoir, and upon one of such posts (which shall be deemed the datum-post) shall be placed a written or painted notice stating the purpose for which possession is taken and by whom, and such notice shall be dated on and shall bear the date of the day of possession.
- (c) Forthwith after erecting the posts as aforesaid, a notice in the form of Schedule I shall be posted on the post office nearest to the datum-post, and on the office of the Warden or Mining Registrar of the division or district in which the datum-post is erected, or, if there be no Warden or Mining Registrar, on the Court of Petty Sessions nearest to the datum-post.

Notice of possession and lodging application.

4. Forthwith after possession shall have been taken and notices posted as aforesaid, application in the form Schedule II shall be lodged with the Warden or Warden's Clerk of the division in which the datum-post is erected, or if there be no Warden or Warden's Clerk, with the nearest Clerk of Petty Sessions, and shall deposit with such application the sum of five pounds, and shall fill up and sign all such forms as shall be required by the officer who receives the application.

Receipt of application and notice inviting objections.

5. The officer receiving any application as aforesaid shall endorse thereon the date and hour of receipt, and shall number the same in the order of receipt, and shall thereupon post outside his office a notice in the form of Schedule III, and shall publish the same three times in a newspaper published or circulating in the vicinity of such office and in the settlement nearest to datum-post, and the cost of publishing such notice shall be defrayed by such officer out of the sum deposited as aforesaid, and shall cause a similar notice to be sent to any person whose interests may, in his opinion, be affected by such application.

Objections, how lodged, &c.

6. Within twenty-one days after the date of the notice last aforesaid, any person desiring to object to the application referred to in such notice may give notice to the officer who received the application of his objection, setting out the grounds thereof, and shall deposit therewith the sum of five pounds. At the expiration of the twenty-one days aforesaid, the officer (if he be not a Warden) who received the application shall forward to the Warden of the division, or to such Warden as the Minister may direct, such application, together with any objection that may have been lodged as aforesaid.

Applications and objections, how dealt with by the Warden.

7. Applications shall be dealt with by the Warden as follows:—

- (a) If the application shall have been lodged with the Warden, and no objection thereto shall have been lodged, the Warden shall forthwith, after the expiration of twenty-one days from the date of posting notice (Schedule III), transmit such application, with his report thereon, to the Minister.
- (b) If the application shall have been lodged with an officer other than the Warden, and no objection thereto shall have been lodged, the Warden shall forthwith, after receipt by him of such application, transmit such application, with his report thereon, to the Minister.
- (c) If an objection or objections shall have been lodged against an application, and the deposit as aforesaid duly made, the Warden shall appoint a date and place for inquiring into such application and into any objection thereto. The place shall be fixed, having regard to the convenience of the parties or a majority of them; and the date shall be so fixed as to admit of ample notice being given to each applicant and objector, or to so many of the applicants and objectors as in the opinion of the Warden represent the whole. The Warden may adjourn such inquiry at any time, or from time to time.
- (d) At such inquiry the Warden shall take evidence in relation to the application and objections, and shall forthwith, after the close of such inquiry, transmit to the Minister the application and objections thereto and the evidence taken by him, together with his report thereon, and his opinion upon the application, the objections, and the evidence.
- (e) An applicant or an objector may, on payment of the prescribed fees, obtain a copy of any evidence taken at an inquiry into his application or objection, and a copy of any report made by a Warden thereon.

Application, how dealt with by the Minister.

8. Upon receipt of an application and report, or of an application, objection, evidence, and report, as the case may be, the Minister may

- (a) Direct that a survey be made of the water race, drain, dam, or reservoir applied for, and that the applicant deposit with the officer who received the application such a sum of money as will cover the cost of such survey, and if the applicant fail to deposit a sum of money within the time named, may recommend that the application be refused.
- (b) Direct that an inquiry or a further inquiry be held by the Warden, and a report or a further report be made.

After consideration of the application and report, or of the application, objection, evidence and report, the Minister may recommend to the Governor that a lease be granted as applied for or in a modified form, or that it be refused; and if he recommend that a lease be granted he may recommend—

- (c) What rent should be reserved under such lease.
- (d) For what term such lease should be granted.
- (e) What conditions should be imposed on the lessee.

Lease may be granted.

9. The Governor may grant a lease of so much land or water, or both (not exceeding the quantity referred to in Regulation 2), for such term, at such yearly rental, and subject to such conditions as the Minister shall recommend, or may refuse any application for such lease.

Granting or refusal notified.

10. Upon publication in the Gazette that a lease has been granted of less land or water than was applied, the title of the applicant to any land or water in excess of the quantity granted shall thereupon cease. Upon publication in the Gazette that application to lease has been refused, the title of the applicant to the land or water applied for shall cease.

Form of Lease.

11. The lease shall be in such form as shall be necessary to define the quantity and form of the land, and the quantity of water to be demised, and to prescribe the term for which and the conditions subject to which the land or water (or both) are to be demised, the rent to be reserved, and if the water is to be sold, the maximum rate or price to be charged therefor. And every such lease shall be under the hand of the Governor and the great Seal of the Colony, and shall bear date of the day on which such lease was granted by the Governor, with the advice of the Executive Council.

Execution by Lessee and Issue of Lease.

12. Forthwith, after the lease shall have been prepared as aforesaid, the lessee or each lessee shall be called upon to execute such lease; and if he fail for a period of thirty days after being called upon as aforesaid to execute such lease by himself or by his duly constituted attorney, or if he fail to pay the prescribed fee for such lease or any rent or stamp or other duty thereon, the Governor may declare such lease void, and upon publication in the Gazette of notice thereof the lease shall be absolutely void; and thereupon the title of the lessee to the land or water (or both) referred to in such lease, and to all moneys paid in respect thereof, shall absolutely cease and determine.

Cancellation of Lease.

13. If any lessee shall neglect or fail to pay the rent reserved under any lease when due, or to observe or perform any conditions or covenants in a lease, or shall violate any stipulation or re-ervation in a lease, the Governor may cancel such lease, and upon notification in the Gazette of such cancellation of such, the title of the lessee to the land or water or both demised by such lease, and to any works constructed under such lease, shall cease and determine absolutely.

Renewal of Lease.

14. At any time during the term created by a lease the lessee may, with the consent of the Governor, surrender his lease, and the Governor may grant to such lessee a new lease for a like term of the same or any less extent of land or quantity of water, and such new lease shall be subject to the same terms, conditions, stipulations, and reservations as the surrendered lease, unless the Governor otherwise direct.

Agreements may be filed.

15. Any agreement made between any lessee of water and any other person may, if sanctioned by the Minister, and upon payment of the prescribed fee, be filed in the Department of Mines, in the City of Sydney.

Lease shall be registered.

16. Every lease granted as aforesaid, and every transfer, assignment, mortgage, or encumbrance thereof, or of any interest therein, which shall have been sanctioned by the Minister, shall be registered by the Registrar in the Department of Mines, in the City of Sydney, who shall be entitled to demand therefor the fees prescribed in Schedule IV, and such fees shall be applied or disposed of as the Minister shall direct. And, in terms of the lease, no transfer, assignment, mortgage, or encumbrance, except such as shall be sanctioned and registered as aforesaid, shall be valid or be recognised by the Crown.

Suspension of work.

17. The lessee or a majority of the lessees, or his or their agent appointed in writing, may apply to the Warden for permission to suspend or partially suspend work under a lease, and the Warden, upon being satisfied on evidence that the reasons for such suspension actually exist, may in terms of Act aforesaid grant permission to suspend or partially suspend work under such lease.

Computation of time.

18. In all cases when any particular number of days, not expressed to be clear days, is prescribed by these regulations the computation shall be exclusive of the first day and inclusive of the last day, unless the last day shall fall on a Sunday or a public holiday, in which case exclusive of that also.

Interpretation.

19. In the construction of these regulations words imputing the singular shall, unless inconsistent with the context, include the plural, and vice versa.

SCHEDULE I.

Notice of intention to apply for a lease of a water-race, drain, dam, or reservoir.

Notice is hereby given that the undermentioned intends to apply for a lease of _____ for the purpose of _____ . Possession was taken on the _____ day of _____ at the hour of _____ and the datum post is distant _____ in a _____ direction from _____

Application will be lodged with the _____ at _____

Dated this _____ day of _____ 189 .

[Names and addresses of Applicants.]

SCHEDULE II.

Form of Application.

To the Honorable the Minister for Mines,
Sir,

I (or we) hereby make application for a lease of a _____ for the purpose of _____

Possession was taken on the _____ day of _____ at the hour of _____ . The datum post is distant _____ in a _____ direction from _____ . And

I (or we) hereby deposit the sum of five pounds to cover preliminary costs in connection with this application, and undertake to deposit such further sums to cover the cost of survey or to meet claims for rent or for other purposes as may be demanded, and I (or we) agree that upon failure to comply with any such demand this application may be deemed abandoned and may be refused accordingly.

Notice of this application has been given in terms of the Regulations, and I forward herewith a list of the persons whose rights or alleged rights may be affected by this application, together with such amounts as have been obtained.

The estimated cost of the works is £ [See note] or the number of men to be employed is _____

I (or we) have the honor to be
Sir,

Your obedient Servant,

[Signature of applicant or each applicant.]

[Name and address in full of each applicant.]

NOTE.—If the application is for a water-race to carry water for sale, insert the estimated cost of works. If water is to be used by applicants for mining purposes, insert the number of men to be employed. See (d) and (e) of Regulation 2.

SCHEDULE III.

Notice inviting objections to Application.

I hereby give notice that application by the undermentioned person has been lodged with me for a lease of _____

and any persons who desire to object to the granting of such application must, on or before the _____ day of _____, 189 , lodge with me and forward to _____, at _____, a notice in writing under their hand and containing their address, setting forth clearly the grounds of objection. And I further give notice that if any objection, together with a deposit of £5, be lodged as aforesaid, an inquiry into such application and objection will be held by _____, at a place and on a day to be appointed in terms of Regulation 7, sub-clause (c).

Dated at _____, this _____ day of _____, 189 .

[Name and address of applicant (signed).]

SCHEDULE IV.

Scale of fees for Registration, &c.

	£	s.	d.
For registration of each lease.....	0	5	0
For registration of each transfer or assignment	0	10	0
For registration of each mortgage or other encumbrance	1	0	0
For registration of agreement.....	0	10	0
For copy of extract from any entry, record, report, instrument, or document not exceeding per folio	0	1	6
For copy of any plan of a lease, not exceeding	1	0	0
For inspection of any record	0	1	0

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINING ACT AMENDMENT ACT, 1894.

(AMENDMENT OF CLAUSE (A) OF REGULATION No. 9 OF THE REGULATIONS RELATING TO
LEAD-POISONING.)

Ordered by the Legislative Assembly to be printed, 27. March, 1895.

Department of Mines and Agriculture, Sydney, 22 March, 1895.

AMENDMENT OF CLAUSE (A) OF REGULATION No. 9 OF THE REGULATIONS
RELATING TO LEAD-POISONING.

HIS Excellency the Lieutenant-Governor, with the advice of the Executive Council, has approved of clause (A) of Regulation No. 9 of the Regulations relating to Lead Poisoning, made under the provisions of the Act 57 Victoria No. 18 ("An Act to amend the Mining Act of 1874"); and published in the *Government Gazette* of the 28th September last, being amended by the substitution of the word "should" for the word "must," and of such part of Regulation No. 9 now reading as follows:—

Flue-dust—how dealt with.

9 (a). The ports by which flue-dust is removed from champion flues should not open into tapping-floors but on the other side of the flues and into a space otherwise unoccupied.

SYDNEY SMITH.

1894.

(SECOND SESSION.)

NEW SOUTH WALES.

MINING ON PRIVATE LANDS ACT OF 1894.

(REGULATIONS RELATING TO MINING LEASES UNDER.)

Presented to Parliament, pursuant to Act 57 Vic. No. 52, sec. 43.

REGULATIONS RELATING TO MINING LEASES UNDER THE MINING ON PRIVATE LANDS ACT OF 1894.

WHEREAS under section 43 of the Act 57 Vic. No. 32, the Governor, with the advice of the Executive Council, is empowered to make Regulations in accordance with the said Act, which may provide for their enforcement by penalties not exceeding in any case fifty pounds, for carrying out the provisions of the said Act: Now, therefore, His Excellency the Governor, with the advice of the Executive Council, in exercise of the powers conferred by the said Act, doth hereby make the following Regulations, that is to say:—

Lands to which Regulations apply.

1. These Regulations shall apply to all lands alienated, or in process of alienation, or which may hereafter become alienated, in regard to mining thereon or therein for gold, and to such lands as aforesaid, the grants of which reserve or shall reserve to the Crown in express or general terms any or all of the following minerals, namely,—Silver, lead, tin, antimony; and shall also apply to such lands as the Governor shall, by proclamation, bring under the operation of the said Act, but shall not (without the consent of the owner) apply to any lands which are enclosed and under cultivation.

Application for authority to search (Schedules 1 and 2).

2. Any holder of a miner's right may apply, in form of Schedule 1, to the Warden for an authority to search for gold on any land as aforesaid; and any holder of a mineral license may apply, in form of Schedule 2, to the Warden for an authority to search for any of the minerals aforesaid other than gold on any land as aforesaid.

Warden may grant authority (Schedule 3).—Powers conferred by authority to search.

3. At the expiration of two months from the eleventh day of June, 1894, the Warden may, in form of Schedule 3, grant in duplicate to any applicant as aforesaid an authority to search in any land as hereinbefore provided, or some part thereof, for gold, or for any or all of the minerals before mentioned named in the application. The holder of any such authority may, within the period named in such authority, remove from any vein or lode, outcropping at the surface of such land, samples of ore not exceeding in the aggregate (28 lb.) twenty-eight pounds in weight, but he shall not, by virtue of such authority, be entitled to break the surface of such land for the purpose of searching for a vein or lode, nor shall he be entitled to mine upon or under such land.

Warden may in certain cases refuse to grant.

4. The Warden may refuse to grant authority to search—
- If the Warden has good reason to believe that the land referred to in the application contains neither gold, silver, lead, tin, nor antimony; unless the Minister on appeal being made to him shall reverse the Warden's decision.
 - If some person other than the applicant holds a permit granted by the Secretary for Lands or the Secretary for Mines, and still in force to search for gold or other minerals in or on the land referred to in the application;
 - If mining operations are being bona fide carried on upon the land under agreement with the owner in terms of section 23 or 33 of the said Act.

Notice to owner of land.

5. Before any person, to whom an authority as aforesaid shall be granted, shall enter upon the land referred to therein, he shall serve upon the owner or occupier of such land a duplicate of such authority.

Service of notice.

6. The duplicate of the authority, and all other notices required by the Act or these Regulations, to be served upon an owner, occupier, or other person, shall either be served personally on such persons or left at their usual place of abode (if the same can, after diligent inquiry, be found). If the owner be absent from the Colony, or he or his agent cannot, after diligent inquiry, be found, the duplicate notice may be left with the occupier of the land, or, if there be no such occupier, shall be affixed to a tree or post upon some conspicuous part of the land; and, in the latter case, such duplicate or notice shall be advertised in two issues of a newspaper circulating in the district in which the land is situated.

Area to be defined in certain cases.

7. If more than one authority be granted to search on the same parcel of land, the person holding a prior authority shall, if required by the holder of a later authority define, within twenty-four hours, as accurately as possible by pegs set in L trenches the boundaries of the area to which his authority applies, which area shall not exceed the extent of land that may be demised under the said Act otherwise than by a special lease.

Priority of application to lease.

8. Subject to rights conferred or acquired under section 23, 24, or 33 of the said Act, the holder of an authority as aforesaid shall, for a period of one month from the date thereof, have a prior right to apply for a lease of the land referred to in such authority

And the holder of a permit to search, granted by the Secretary for Lands or the Secretary for Mines, shall within two months after the Act aforesaid comes into force, have a prior right to apply for a lease of the land referred to in such permit.

Voidance of authority or permit.

9. Any authority or permit as aforesaid, the holder of which fails to apply for a lease within the respective periods named in clause 8 hereof, shall thereupon become and be void.

Mode of taking possession for purpose of applying to lease.

10. For the purpose of applying to lease the area of land referred to in an authority or a permit aforesaid in force, the holder of such authority or permit, or for the purpose of applying to lease land not the subject of an authority or a permit aforesaid, the holder of a miner's right or of a mineral license shall, by himself or his agent, erect at each angle of the land to be applied for a post not less than 3 inches in diameter, projecting above the surface of the land not less than 3 feet, set in the angle of an L trench, the arms of which shall each be 3 feet long and not less than 9 inches deep, and cut in the general direction of the boundary lines. Upon one of such posts shall be placed a board or metal plate, on which shall be painted or written the words "Applied to Lease," and the name and address of the applicant or each applicant, and the post to which such board is affixed shall be the datum post. If the character of the ground will not admit of trenches being cut as aforesaid, the direction of the boundary lines may be indicated by mounds of stones.

Survey of land and road thereto

11. Any person having taken possession as aforesaid of a parcel of land for the purpose of applying to lease the same, may require a mining surveyor authorised thereto by the Minister or the Warden to define the boundaries of such parcel of land and of a road thereto.

Application to lease—when and how to be made.—Schedule 4.

12. Applications to lease land under the provisions of the said Act may be made in the form of Schedule 4.

- (a) At any time within two months from the eleventh day of June, 1894, by the parties to an agreement, under which mining operations are being carried on bona fide on private land or by the representatives of such parties to the extent of the land referred to in such agreement. (Special lease.)
- (b) At any time within two months from the eleventh day of June, 1894, by the owner or owners of private land, who at the time of the passing of said Act were carrying on mining operations upon such land on their own account to the extent of the land upon which such operations were being carried on. (Special lease.)
- (c) At any time within two months from the eleventh day of June, 1894, by the owner of private land who has, prior to the passing of the said Act, obtained from the Governor or made application for a permit to mine for, win, and remove gold, or any mineral other than gold, from such private land, even though active mining operations have not been commenced, to the extent of the land referred to in such permit or application. (Special lease.)
- (d) At any time within two months from the eleventh day of June, 1894, by the owner or owners of private land other than those referred to in sub-clauses (a), (b), and (c), not exceeding the areas prescribed in sub-clause (g). (Special lease.)
- (e) At any time within two months from the eleventh day of June, 1894, by any person or persons who, prior to the passing of the said Act, obtained from the Secretary of Lands or the Secretary for Mines a permit to search on private land for gold, silver, lead, tin, or antimony, to the extent of the land referred to in such permit, but not exceeding the areas prescribed in sub-clause (g), according to the nature of the permit, provided such permit be still in force at the date of such application, and that every person applying for a gold lease be the holder of a miner's right, and every person applying for a mineral lease be the holder of a mineral license.
- (f) Within one month from the date of an authority to search, granted under the provisions of the Act aforesaid, by the person or persons named in such authority, but the area applied for shall not exceed, for gold-mining, twenty acres, or for mining for other minerals, eighty acres.
- (g) After the expiration of two months from the eleventh day of June, 1894, by any holder of a miner's right to mine for gold, in which case the area applied for shall not exceed twenty acres of ordinary auriferous land or forty acres of alluvial auriferous land where the mining operations will be conducted through basaltic rock formations, or where the quantity of water necessitates the employment of steam machinery, or where in the opinion of the Minister a large outlay of money is necessary to make such land available for gold-mining, or by any holder of a mineral license to mine for silver, lead, tin, or antimony, in which case the area applied for shall not exceed eighty acres.

(h) Within thirty days after the discovery of an auriferous quartz vein in a prospecting area by any person to whom a warden has granted a prospecting license in terms of section 40 of the Act aforesaid, in which case the area applied for shall not exceed twenty acres.

(i) At any time after the eleventh day of June, 1894, by any holder of a miner's right or mineral license, for the purpose of cutting races on private land, and conveying water or detritus through or over such land to any mine, whether such mine be held under the Act aforesaid, or under the provisions of the Mining Act of 1874 or any Act amending the same, or for the purpose of a tramway, or a machine site, or smelting works, or water conservation, or any other purpose in connection with mining.

Every such application may be lodged with the Warden of the district or with the Warden's Clerk whose office is nearest by road to the land applied for, and shall state whether the lease applied for is to be effectual both on and under the surface, and, if so, whether to include the whole or only part of the surface, specifying what part, or only under the surface, and shall also state approximately the length of the road through private land to the land applied for to lease. Applications under sub-clauses A, B, and D may at any time be made, but except for the period of two months from the eleventh day of June, 1894, such applications shall not have priority over other applications for the same land.

Deposit of rent and fees.

13. With every application to lease the applicant shall deposit—

- (a) By way of rent for the first half-year the sum of ten shillings for every acre or part of an acre comprised in the area applied for.
- (b) The prescribed fees for survey of the leasehold and road thereto.
- (c) The prescribed fee for appraising damage.

Provided that, in regard to applications referred to in sub-clauses (a), (b), and (c) of clause 12, no such deposits need be made, and in regard to applications referred to in sub-clause (d) of clause 12 no deposit of rent or fee for appraising will be necessary, and in regard to applications referred to in sub-clause (e) no deposit of rent can be made until after appraisal. Forthwith after the issue of a lease the Warden shall pay the half-year's rent deposited with such application to the owner or mortgagee of the land as may be agreed upon between them, but all subsequent rent shall be payable to and recoverable by such owner or mortgagee.

Order of priority of application.

14. Applications to lease shall be numbered in the order of receipt, and shall be dealt with in the order of priority as provided in clause 12 hereof, and except that—

- (a) An application to lease by an authorised prospector (i.e., the holder of a prospecting license granted under section 40 of the said Act) if an auriferous quartz vein be found in his prospecting area, and if made within thirty days after such discovery, shall have priority over any other application to lease the same land.

Provided that if two or more applications be made at the same time for the same piece of land, it shall be determined by lot which application shall take precedence.

Notice to owner and occupier.—Schedule 5.

15. Forthwith after receipt of an application to lease (unless made by the owner of the land), notice in the form of Schedule 5, signed by the Under Secretary for Mines, shall be served as prescribed in clause 6 hereof, upon the owner or occupier of the land applied for, and such notice shall state whether the whole or only part and what part of the surface is included in such application, and shall require the owner and occupier respectively to furnish, within twenty-one days from the date of such notice, such particulars of their estate and interest therein as the Minister shall deem necessary.

Appraisement of compensation for land and improvements.

16. Any person appointed by the Governor a Mining Appraiser may, when directed by the Minister, enter upon any private land a lease of which has been applied for, and may assess the amount of compensation to be made to the owner, or mortgagee, and to the occupier of such land respectively for the loss which he or they may sustain by way of damage to the surface of such land or to any crop growing thereon, or to any buildings, structures, or other improvements erected or constructed thereupon, by reason of any mining operations either in, on, or under such land. Provided that compensation for the surface of any land included in any lease shall not exceed the market value of such land for other than mining purposes. And such appraiser shall without loss of time forward his assessment to the Minister.

Agreement as to compensation.

17. The owner, or mortgagee, and occupier of any land included in an application to lease may jointly or severally agree with the applicant to lease upon the amount of compensation to be paid by such applicant to them, or to each of them, and also as to the mode of payment of such compensation; and upon the Minister being certified that such agreement has been entered into, he shall refrain from directing an appraisalment to be made.

Notice of assessment.—Schedule 6. Schedule 7.

18. Forthwith after receipt of the assessment made by an appraiser, the Minister shall cause notice thereof, in form of Schedule 6, signed by the Under Secretary for Mines, to be served upon the applicant, and requiring him to pay the amount within a given time to be named in such notice; and shall also cause notice, in the form of Schedule 7, to be served upon the owner, mortgagee, and occupier of such land.

Appeal to Minister if dissatisfied with assessment.

19. If the applicant, owner, mortgagee, or occupier be dissatisfied with the amount of damages assessed, he may, within twenty-one days from the date of the notices referred to in clause 18 hereof, apply to the Minister to have such assessment reviewed, and thereupon the Minister shall refer the matter to the Warden for inquiry.

Failure on the part of owner or occupier not to bar an award.

20. The refusal or neglect of an owner or occupier to supply particulars of his estate or interest in land, the subject of an application to lease, shall in no way act as a bar to the making of an assessment or an award by an appraiser or a final decision thereon by the Warden.

Inquiry and final decision by Warden.—Schedule 8.

21. Upon reference by the Minister to the Warden of any matter of assessment under the said Act, the Warden shall appoint a time and place for holding an inquiry, not being more than thirty days from the receipt of such reference, and shall give due notice thereof, in form of Schedule 8, to all the parties interested therein, and at the time and place so appointed shall hear, receive, and examine such evidence as shall be produced by any of the parties, and shall thereupon determine the amount of compensation to be paid to such owner, or mortgagee, and occupier in respect of his or their respective claims, and may specify the time within which, and to whom, the same shall be paid, and may make an order for the payment of such costs as shall appear to him just; and a minute of the Warden's decision and of any order in the matter shall be forthwith entered by the Warden in the Register of Complaints required by the Act 37 Vic. No. 13 to be kept by every Warden.

Inquiry may be adjourned.

22. The Warden may, upon cause shown, adjourn the inquiry to any other time or place, and upon such terms as to costs, as may appear to him just, but such adjournment shall not be for a longer period than fourteen days.

Application to lease may become void.

23. In the event of the applicant for a lease failing to pay the compensation assessed or awarded within the time specified in the notice issued by direction of the Minister or in the decision of the Warden as the case may be, and failing to make an agreement in terms of clause 7, the application for a lease lodged by such applicant shall thereupon become void, and all moneys deposited with such application shall thereupon become forfeited to the Crown.

Compensation paid into Court, how disposed of.

24. Upon payment into Court of the sum awarded in the Warden's decision, the Warden shall, in due course, pay to the owner, or mortgagee, and occupier the amounts to which under the decision aforesaid they are respectively entitled. In the event of any owner, mortgagee, or occupier refusing or failing for a period of three months to accept or claim the amount of compensation assessed or awarded to him, such amount shall be passed to the Treasury Suspense Account, to be held in trust for the person entitled to it, but without interest accruing thereon, and if not claimed within six years from the time of the receipt thereof by the Treasury, such amount shall be paid into the Consolidated Revenue.

Application to lease may be amended.

25. The Minister may alter, amend, and modify any application for a lease (other than applications referred to in sub-clauses *a*, *b*, and *c* of clause 12), and may reduce or increase the area of land applied for either on or below or on and below the surface.

Minister may direct inquiry.

26. The Minister may direct the Warden to hold an inquiry in open court with reference to any matter touching an application for a lease under the said Act, and at all such inquiries the evidence shall be taken on oath.

Not obligatory to grant a lease.

27. It is not obligatory upon the Governor to grant a lease to any person applying for the same, notwithstanding such person may have complied with the provisions of the said Act and of these Regulations; but in case any such application be refused, the applicant shall be informed of the reasons for such refusal.

Survey of lease.

28. Except when the lease applied for, or the surface area thereof, will cover the whole of a measured portion, all such areas shall be surveyed before a lease is granted.

Governor may grant lease.

29. Subject to the provisions of the Act aforesaid, the Governor may, notwithstanding that the person applying for the same may not have in every respect complied with the regulations, grant in the name and on behalf of Her Majesty—

- (a) To the owner or owners of private land a lease (special lease) of such land for mining purposes without regard to area, and if such land had been acquired for or is owned and worked as one mine, whether such land comprises two or more portions, and whether such portions be conjoined or detached, and without any reservation of rent, but subject to the condition of efficient mining, and to all other conditions contained in the lease. Provided that at the time of the passing of the said Act such owner or owners was or were carrying on mining operations upon such land on his or their own account.
- (b) To the owner or owners of private land (who has or have prior to the passing of the Act aforesaid obtained from the Governor or made application for a permit to mine for, win, and remove gold, or any mineral other than gold) a lease (special lease) for mining purposes of the land to which such permit or application refers, and without any reservation of rent, but subject to the conditions of efficient mining, and to all other conditions contained in the lease.
- (c) To the parties to an agreement under which mining operations were being bona fide carried on upon private land at the time of the passing of the said Act, a lease (special lease) for mining purposes of such land to the extent thereof referred to in such agreement, and without any reservation of rent, but subject to all other conditions contained in the lease.
- (d) To any holder of a miner's right who, prior to the passing of the said Act, shall have obtained from the Secretary for Lands or the Secretary for Mines a permit to search in private land for gold (if such permit be still in force and the holder thereof apply within two months after the passing of the said Act to convert such permit into a lease), a lease for gold-mining of the area referred to in such permit not exceeding twenty acres of ordinary auriferous land, or forty acres of alluvial auriferous land, the working of which, in the opinion of the Minister, requires a large outlay of money. Every such lease shall be subject to payment to the owner of the land half-yearly rent at the rate of twenty shillings per acre per annum, to the employment in or in connection with mining of not less than one man in respect of each five acres or lesser area demised under such lease, and to all conditions contained in such lease.
- (e) To any holder of a mineral license who, prior to the passing of the said Act, shall have obtained from the Secretary for Lands or the Secretary for Mines a permit to search in private land for silver, lead, tin, or antimony (if such permit be still in force and the holder thereof apply within two months after the passing of the said Act to convert such permit into a lease), a lease to mine for any of the aforesaid minerals included in such permit within the area referred to in such permit not exceeding eighty acres. Every such lease shall be subject to payment to the owner of the land half-yearly rent at the rate of twenty shillings per acre per annum, to the employment in or in connection with mining of not less than one man in respect of every twenty acres or lesser area of land demised by such lease, and to all conditions contained in such lease.
- (f) To any owner of private land, being the holder of a miner's right a lease (special lease) for gold-mining of any part of his land not exceeding twenty acres of ordinary auriferous land, or forty acres of alluvial auriferous land where the mining operations will be conducted through basaltic rock formations, or where the quantity of water necessitates the employment of steam machinery, or where in the opinion of the Minister a large outlay of money is necessary to make such land available for gold-mining, without any reservation of rent, but subject to the employment in or in connection with mining of not less than one man in respect of each five acres or lesser area demised under such lease, and to all other conditions contained in such lease.

- (g) To any owner of private land, being the holder of a mineral license, a lease to mine for silver, lead, tin, or antimony, on any part of his land not exceeding eighty acres, without any reservation of rent, but subject to the employment in or in connection with mining of not less than one man in respect of every twenty acres or lesser area of land demised by such lease, and to all conditions contained in such lease.
- (h) To any holder of a miner's right to whom a prospecting license has been granted in terms of section 40 of the said Act (if he apply for it within thirty days after the discovery in his prospecting area of an auriferous quartz vein), a gold-mining lease of such prospecting area, but not exceeding twenty acres, subject to payment to the owner of the land half-yearly rent at the rate of twenty shillings per acre per annum, to the employment in or in connection with mining of not less than one man in respect of each five acres or lesser area demised under such lease, and to all conditions contained in such lease.
- (i) To any holder of a miner's right, a lease of any private land for gold-mining not exceeding in extent twenty acres of ordinary auriferous land, or forty acres of alluvial auriferous land where the mining operations will be conducted through basaltic rock formations, or where the quantity of water necessitates the employment of steam machinery, or where in the opinion of the Minister a large outlay of money is necessary to make such land available for gold-mining, subject to payment to the owner of the land half-yearly rent at the rate of twenty shillings per acre per annum, to the employment in or in connection with mining of not less than one man in respect of each five acres or lesser area demised under such lease, and to all conditions contained in such lease.
- (j) To any holder of a mineral license, a lease of private land to mine therein for silver, lead, tin, or antimony, not exceeding in extent eighty acres, subject to payment to the owner of the land half-yearly rent at the rate of twenty shillings per acre per annum, to the employment in or in connection with mining of not less than one man in respect of every twenty acres or lesser area of land demised by such lease, and to all conditions contained in such lease.
- (k) To any holder of a miner's right or mineral license a lease of any private land for the purpose of cutting mining races thereon, and conveying water or detritus through or over such land to or from any mine, whether such mine be held under the provisions of the Act aforesaid, or under the provisions of the Mining Act of 1874 or any Act amending the same, or for the purpose of a tramway, or a machine site, or smelting works, or water conservation, or for any other purpose in connection with mining, subject to payment to the owner of the land of compensation and rent to be assessed, awarded, or determined as hereinbefore provided.

Every such lease so far as it is effectual on the surface shall confer the right of cutting and constructing on the lands thereby demised, races, drains, dams, reservoirs, or tramways, and erecting thereon buildings and machinery in connection with mining, and generally doing all such acts and things as shall be requisite for efficiently mining the said land, with full right of ingress, egress, and regress for said purposes by a right-of-way or road from the leasehold to the nearest practicable point of a public road. But no such lease referred to in sub-clauses *d*, *e*, *h*, *i*, *j*, or *k* shall be granted until the compensation assessed, awarded, or determined as aforesaid, shall have been paid, or a contract or agreement in respect thereof has been entered into by the applicant with the owner, or mortgagee, and occupier. Nor shall any mining lease be granted until after the expiration of fourteen days from the date of notification in the Gazette, and in some newspaper the place of publication of which is near to the land sought to be leased, of intention to grant such lease.

Registration of leases and transfers.

30. Within one month after the execution of a lease it shall be registered by the Mining Registrar in Sydney, who shall forward a copy thereof to the Mining Registrar of the division in which such land is situated. All transfers of leases or portions thereof or interests therein shall be registered by the Mining Registrar in Sydney within one month after the date of such transfer.

Applicant and holder of lease to hold miner's right or mineral license.

31. The applicant for or holder of a gold-mining lease shall be the holder of a miner's right, and the applicant for or holder of a lease to mine for silver, lead, tin, or antimony shall be the holder of a mineral license; and the applicant for or holder of a lease referred to in sub-clause (*k*) of clause 29 shall be the holder of a miner's right or mineral license.

Forfeiture of lease.

32. In the event of an applicant for a lease refusing or neglecting to execute such lease for the space of one month after notice shall be given him of such lease being ready for execution, such lease shall be liable to forfeiture with all moneys paid thereon. In the event of the lessee failing to fulfil the conditions and covenants of the lease, or to use the land *bonâ fide* for the purpose for which it has been demised, such lease shall be liable to forfeiture, and may be forfeited on the authority of the Governor. In the event of operations having wholly ceased in connection with any mine for a period of twelve months, the lease shall thereupon become absolutely void and determined.

Suspension of work.

33. If at any time a mine shall become unworkable from any cause which in the opinion of the Warden would necessitate a suspension of mining operations, he may grant suspension of the condition to employ labour for a period not exceeding six months; and in computing the period of twelve months referred to in clause 32, the period during which work has been suspended with the sanction of the Warden as herein provided shall not be included.

Amalgamation of leases.—Schedule 9.

34. Adjoining lands or lands disconnected by roads only, and held under separate leases, may be worked conjointly as one mine, provided such contiguous lands shall not in the aggregate exceed the area allowed respectively for leases under the said Act, and that notice in the form of Schedule 9 of intention to work such leases conjointly, signed by the lessees or a majority of them, be deposited with the Mining Registrar in Sydney.

Lease may be surrendered.

35. A lessee shall be entitled at any time with the consent of the Governor to surrender his lease.

Lessee may remove plant, &c.

36. Within six months after any lease shall have been forfeited, or shall have expired by effluxion of time, or been otherwise determined, or in the event of the owner of such land having by the authority of the Governor re-entered and taken possession of it, the former lessee, his executors, administrators, or assigns shall, if he have paid all rents due and all compensation for damage done, be at liberty to remove all machinery and buildings erected over the same, and all appliances, tools, and material (other than the poppet-legs or brace erected over any shaft, or any material already used for the purpose of keeping open the shafts, adits, or mine) belonging to such former lessee, or to his executors, administrators, or assigns.

Registration of certain agreements.

37. Every agreement entered into between an owner of private land and a holder of a miner's right or a mineral license under section 33 of the Act 57 Vic. No. 32 shall, within fourteen days after the date of such agreement, be registered with the Mining Registrar of the division of the Mining District in which the land, the subject of such agreement, is situated.

Prospecting license—Schedules 11 and 12.

38. The Warden may grant to any holder of a miner's right who shall apply for the same in the form of Schedule 11 a prospecting license in the form of Schedule 12, and such license shall entitle the holder thereof to enter upon private land, except as hereunder mentioned, and to mark off a prospecting protection area of the dimensions and in the manner provided for in any Mining Act or Regulations in force for the time being and appertaining to mining for gold on Crown Lands; and the holder of such prospecting license shall have the right within such prospecting protection area to dig and search for gold subject to the provision of the said Act. And whenever alluvial deposits containing gold of a payable character are discovered, such discovery shall forthwith be reported to the Warden, who shall report the same to the Minister. Provided that such prospecting license as aforesaid shall not entitle the holder thereof to enter upon any private land occupied under the provisions of the Act 57 Vic. No. 32 or held under agreement for mining purposes as provided in section 33 of the last-mentioned Act.

Deposit to cover surface damage.

39. Before granting a prospecting license to any person to enter upon such private land for prospecting purposes, the Warden shall hold an inquiry on the land, of which due notice shall be given to the owner and occupier (if any) or to their respective local agents, provided such agents are registered as such with the Mining Registrar of the division in which the prospecting protection area is situated as well as to the applicant for such prospecting license, and shall thereupon assess the amount of money to be deposited by the applicant aforesaid towards covering the damage to the surface of such likely to be caused by mining operations being conducted thereon; and the Warden may make such stipulations and conditions with respect to such mining operations as shall appear to him necessary and expedient, and shall have power to enforce the same in all cases.

Prospector to have preferent right to claim.

40. Whenever a notification of resumption of land under the said Act shall appear in the Gazette, the holder of a prospecting license who is the discoverer of such payable deposits as aforesaid within his prospecting protection area, and who has duly reported the same to the Warden, shall be deemed to be the first applicant for a prospecting claim under his miner's right; and the date of publication of such notification in the Gazette shall be reckoned as the date of application of such prospecting claim; but in all other respects, as to area, labour conditions, and other matters, the application shall be dealt with subject to the Regulations in force for the time being authorising the occupation of Crown Lands for mining purposes; and in the event of an auriferous quartz vein being discovered in such prospecting protection area, the holder or holders thereof shall report the same to the Warden, and within thirty days thereafter shall be entitled to apply, in terms of clause 12, sub-clause (k) hereof, for a lease of such land; and he or they shall in such case be deemed to be the first applicant or applicants as the case may be.

Penalties.

41. If any owner or occupier, or other person, obstruct any authorised person in the performance of any act sanctioned by the Act 57 Vic. No. 32, or by these Regulations, or who shall interfere with, remove, destroy, or deface any boundary mark, or any necessary notice posted in connection therewith, or any post erected, or notice posted in compliance with the requirements of the said Act or these Regulations, or who shall otherwise violate the provisions of the said Act or these Regulations shall on conviction thereof be liable for the first offence to a penalty not exceeding ten pounds, or on conviction of a second or any subsequent offence to a penalty not exceeding fifty pounds.

Repeal of Regulations.

42. The Regulations made by the Governor, with the advice of the Executive Council, on the 11th day of June instant, and published in the Gazette on the 12th day of June instant, are hereby repealed.

SCHEDULE 1.

Application for authority to search for gold.

[No. and date of miner's right.]

I, _____, being the holder of a miner's right, hereby apply for an authority to search for gold in the private land hereunder mentioned, viz. :—

Name of owner _____
 Name of occupier _____
 Portion No. _____ Parish of _____, county of _____
 (Signature) _____

To Mr. Warden
 at _____

SCHEDULE 2.

Application for authority to search for minerals.

[No. and date of mineral license.]

I, _____, being the holder of a Mineral License hereby apply for an authority to search for [name minerals] in the private land hereunder mentioned, viz. :—

Name of owner _____
 Name of occupier _____
 Portion No. _____ Parish of _____, county of _____
 (Signature) _____

To Mr. Warden
 at _____

SCHEDULE 3.

Authority to search on Private Land. [Duplicate.]

I, _____, being a Warden of the _____ Mining District, in the exercise of the powers conferred upon me by the Act 57 Vic. No. 32 and the Regulations made thereunder, do hereby authorise the undermentioned holder of _____ to enter into and upon portion No. _____ in the parish of _____ and county of _____, by himself, alone, or accompanied by one other holder of a _____, and during fourteen days from the date hereof, to search therein for any vein or lode outcropping at the surface thereof, and to take and remove therefrom samples of ore not exceeding in the aggregate twenty eight pounds (28 lb.) in weight for the purpose of testing the value thereof, but not to mine upon the said land.

Given under my hand at _____, this _____ day of _____, 18 _____.

(Signature) _____
 Warden.

SCHEDULE 4.

Application to Lease.

To the Honourable the Minister for Mines,
 Sydney.

Date _____

Sir,

I or we, being _____, hereby apply for a lease, or special lease, of that parcel of private land, being _____, comprising _____, more or less, for the purpose of _____ thereon and thereunder. For which purpose _____ require _____ the surface of the said land, as shown in the sketch at foot hereof. The period for which _____ require the said lease is _____ years. Possession of the said land was taken for the purpose of this application, on the _____ day of _____ 18 _____, at the hour of _____, by the erection of posts and _____ in accordance with the Regulations. The datum post is at the angle of the said parcel of land. The length of road through private land to the parcel of land herein applied for is _____.

Name and address of applicants, No., date

(Signature) _____

Received this _____ day of _____ 18 _____, at the hour of _____, and numbered _____, together with the deposits hereunder.

Rent£
 Survey fee£
 Appraisalment fee.....£

Warden or Warden's Clerk.

SCHEDULE 5.

Notice to Owner and Occupier.

Notice is hereby given that application has been made to the Minister for Mines for a lease to be effectual

of that parcel of private land, being _____, comprising _____, of which you are reputed to be the _____, for the purpose of _____, the area of surface required is _____. And you are hereby required to furnish within twenty-one days from the date hereof to the Minister for Mines full particulars of your estate and interest in the parcel of land aforesaid.

Dated at Sydney this _____ day of _____, 18 _____.

To _____
 at _____

Under Secretary for Mines.

SCHEDULE 6.

Notice of Assessment to Applicant.

Notice is hereby given that Mr. _____, a Mining Appraiser, duly appointed in that behalf, and by the direction of the Minister for Mines, has assessed the amount of compensation which you should pay to the owner, Mr. _____, at £ _____, and to the occupier, Mr. _____, at £ _____, and to the mortgagee, Mr. _____, at £ _____, for the loss which they respectively will sustain by way of damage to that parcel of private land being _____ for a lease of which you applied on the _____ day of _____ 18 _____, by reason of your occupying and using _____ acres of the surface of the said land, and also by reason of the mining works to be _____ by you _____ the said land.

And you are hereby required to pay the sums aforesaid to the owner, occupier, and mortgagee respectively within _____ day from the date hereof.

Dated at Sydney this _____ day of _____, 18 _____.

To _____
 at _____

Under Secretary for Mines.

NOTE.—If you are dissatisfied with the assessment you may, within twenty-one days from the date hereof, apply to the Minister to have such assessment reviewed.

SCHEDULE 7.

Notice of Assessment. To Owner, Occupier, and Mortgagee.

Notice is hereby given that Mr. _____, a Mining Appraiser, duly appointed in that behalf and by direction of the Minister for Mines, has assessed the amounts of compensation, as set out at foot hereof, which should be paid by Mr. _____ for the loss which will be sustained by the persons undermentioned respectively, by reason of the said Mr. _____, under the lease applied for by him on the _____ day of _____ 18____, occupying _____ acres of the surface of that parcel of private land, being _____, and by reason of the _____ to be _____ by him. And Mr. _____ has been required to pay such compensation within _____ days from the date hereof.

To the owner, Mr. _____, £ _____
 To the occupier, Mr. _____, £ _____
 To the mortgagee, Mr. _____, £ _____

Total..... £ _____

Dated at Sydney, this _____, day of _____ 18____.

Under Secretary for Mines.

To _____
 at _____

NOTE.—If you are dissatisfied with the assessment you may, within twenty-one days from the date hereof, apply to the Minister for Mines to have such assessment reviewed.

SCHEDULE 8.

Notice of Inquiry.

In the matter of _____

To _____
 at _____

Notice is hereby given that I shall, at the Warden's Court at _____, on the _____ day of _____, 18____, at the hour of _____, hold an inquiry into the matter of _____ of _____.

And you are hereby required to attend such inquiry at the time and place abovenamed, and to give such evidence in the matter, and produce thereat such books, papers, writings, deeds, and documents relating to the matter as may be in your power, custody, or possession.

You may have a summons to compel the attendance of any witness, or for the production of any books, deeds, or documents, on applying at this office.

Given under my hand at _____, this _____ day of _____, 18____.

Warden.

SCHEDULE 9.

Notice of intention to work conjointly.

We hereby give notice that it is our intention to work the following leases conjointly as one mine, namely:—

The aggregate area of such leases does not exceed _____ acres. The lands demised by the said leases adjoin or are disconnected by roads only.

Dated at _____, this _____ day of _____, 18____.

(SECOND SESSION.)

NEW SOUTH WALES.

MINING ON PRIVATE LANDS ACT OF 1894.

(REPEAL OF CLAUSE 11, AND THE SUBSTITUTION OF REGULATION IN LIEU THEREOF.)

Presented to Parliament, pursuant to Act 57 Vic. No. 32, sec. 43.Department of Mines and Agriculture,
Sydney, 21 August, 1894.**REPEALING OF CLAUSE 11 OF THE REGULATIONS UNDER THE "MINING ON PRIVATE LANDS ACT, 1894," AND THE SUBSTITUTION OF REGULATION IN LIEU THEREOF.**

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of Clause 11 of the Regulations under the "Mining on Private Lands Act, 1894," which were published in the *Government Gazette* of the 20th June, 1894, being repealed, and of the following Regulation being substituted therefor.

SYDNEY SMITH.

REGULATION.

Any person having taken possession as aforesaid of a parcel of land for the purpose of applying to lease, the same may require a Mining Surveyor authorised thereto by the Minister or the Warden to define the boundaries of such parcel of land, but it shall not be necessary to employ a surveyor to define the position of the road or right-of-way from such parcel of land to the nearest practicable point of a public road. Any such road or right-of-way may be defined by the applicant by blazing a tree at intervals of not more than two chains apart on either side of the road or right-of-way. If there are no trees or no trees in suitable positions, posts projecting above the surface not less than three feet may be used instead of blazed trees.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINING ON PRIVATE LANDS ACT AMENDMENT BILL.
(MESSAGE No. 29.)

Ordered by the Legislative Assembly to be printed, 22 November, 1894.

R. W. DUFF,
Governor.

Message No. 29.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends to the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to amend and extend the "Mining on Private Lands Act, 1894," and for other purposes in connection therewith.

*Government House,
Sydney, 22nd November, 1894.*

1894-5.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINING ON PRIVATE LANDS ACT AMENDMENT AND
MINING ACT AMENDMENT BILL.

(MESSAGE No. 54.)

Ordered by the Legislative Assembly to be printed, 3 April, 1895.

FREDK. M. DARLEY,
Lieutenant-Governor.

Message No. 54.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Lieutenant-Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to amend and extend the Mining on Private Lands Act of 1894, and to alter and amend sections 14, 63, 65, and 66 of the Mining Act, 1874, and for other purposes in connection therewith.

Government House,
Sydney, 3rd April, 1895.

1894.
(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CLAIM OF PATRICK HANNAM.

(PETITION FROM PATRICK HANNAM, A MINER, PRAYING THE HOUSE TO GRANT HIM FURTHER COMPENSATION.)

Received by the Legislative Assembly, 20 November, 1894.

To the Honorable the House of Representatives of New South Wales in Parliament assembled.

The humble Petition of Patrick Hannam, a miner,—

HUMBLY SHOWETH:—

That your Petitioner was employed in the Rivers and Harbours Department as a quarryman, about the year 1877, and while so engaged boring in rock, preparatory to blasting it, a piece of steel flew into his right eye, which organ very soon after had to be removed. The operation having been performed by Dr. James Cox.

That in consequence of the loss of his right eye, your Petitioner was appointed caretaker of Government property at "Black Wattle Swamp," and continued in that position during about nine months; his services being then no longer required.

That your Petitioner was never compensated for the loss of his eye.

That your Petitioner made several applications for employment under the Rivers and Harbours Department, but without success. He, therefore, went prospecting, and discovered a payable reef at Temora.

That a portion of your Petitioner's interest in the said reef was illegally transferred by the Mining Registrar; and in consequence of such illegal transfer your Petitioner suffered serious loss, and, therefore, petitioned your Honorable House for redress.

That on the 20th December, 1883, a Select Committee was appointed on the motion of Mr. Gerald Spring, to take into consideration the alleged illegal transfer.

That the Committee took evidence, and reported that they found:—

That Patrick Hannam was the holder of a twelfth share of six men's claim at Temora.

That the Mining Registrar registered in the name of William Oliver a transfer of half the said share without your Petitioner's consent or authority.

That by such illegal transfer, your Petitioner was deprived of his interest in the said claim which was of considerable value, as shown by the evidence of Mr. Warden de Boos, whose estimate of its value was from £1,000 to £1,200.

That on the 21st May, 1886, another Committee of your Honorable House was appointed to inquire into your Petitioner's claim, on the motion of Mr. O'Sullivan, and after deliberation, this second Committee adopted the first Committee's report. And your Petitioner was compensated to the extent of £300 only; but the great loss of time, expense, and annoyance to which your Petitioner had been subjected during the time—three years—over which the inquiry extended, would appear to have been greatly, if not entirely, lost sight of by the Committee.

That during the year 1893, your Petitioner had the honor of more than one interview with Sir Henry Parkes relative to the loss sustained in consequence of the illegal transfer referred to.

That while in Sydney, engaged as stated in the preceding paragraph, your Petitioner was knocked down at the corner of Newtown Road, after leaving the Balmain tram, and severely injured on the left side—having either four or five ribs more or less injured. Your Petitioner had to be treated for nine days in the Prince Alfred Hospital.

That since the injury so received to his ribs, your Petitioner has been an inmate of various charitable institutions of the Colony, having been completely incapacitated for any labour whatever by the loss of his eye, as described; by the injury to his general health, resulting from the injured ribs; and to the fact that his left eye-sight is almost gone, leaving him almost helpless without an attendant.

That your Petitioner has good reason to believe that the almost complete loss of sight, in the case of his left eye, has resulted from the injury to his ribs, on the same side, that eye never having been affected in any way prior to such injury.

That having regard to all the facts herein set forth by your Petitioner—the complete loss of his right eye; the loss sustained by the action of the Mining Registrar at Temora; the injury to his body, as described; the almost complete loss of his left eye; and very serious injury to his general health, consequent upon the injury to his ribs—your Petitioner prays your Honorable House to consider the whole of his case, and to afford him such further measure of relief as, to your Honorable House, may seem meet.

And your Petitioner will ever pray.

his
PATRICK x HANNAM.
mark.

Witness to the signature of the said Patrick Hannam,—
F. J. FEE.
