2482. It has been pointed out to us that there is a large class who have to go to the hospital now who would be benefited by treatment by doctors in connection with a free dispensary? Yes.
2483. Has it occurred to you what form that dispensary had better take? No, I have not thought the matter out.
2484. Do you know the Regent-street Dispensary? Yes.
2485. Is it of any real use? I should say so, decidedly.
2486. But there is no visiting done from it? No; it is a branch of the out-patients' department of the Sydney Hospital.
2487. And its only use is to supply medicine, and it is a little near to the homes of the patients? That is all.
2488. In your experience at the Prince Alfred Hospital you had a great deal to do with the out-patients' department? Yes.
2489. We find that these out-patients' departments are growing very much;—have you any idea how they could best be restricted? Well, I tried for several years to have a small fee charged at the Prince Alfred Hospital, as they have at the Sydney Hospital. There are dozens and dozens of old ladies who go up there to gossip on the out-patients' day, and who are not happy unless they have a bottle of medicine to take away; but I doubt whether they take the medicine. They come for years and years. It was partly to get rid of these loafers that I proposed to make a charge.
2490. We find that the fee at the Sydney Hospital seems rather to increase than to diminish the number of patients going there? I am surprised at that, because I made inquiries, and they told me that they had reduced their attendances by one-quarter in the first year that they imposed the charge.
2491. I understand that it is impossible for the medical officers to do justice to the patients, owing to their great number? Yes, partly owing to the great number of the patients, and partly owing to the very small number of the medical officers. There are only two assistant physicians at the Prince Alfred Hospital, and they have to see about 15,000 visits in a year.
2492. Do you think that any restriction of the number might be brought about by making the patients bring letters from medical practitioners, stating that they are fit subjects for outdoor hospital treatment? No; I do not think so. We had a rule at the Prince Alfred Hospital that each patient should bring a paper from a medical practitioner, or a magistrate, or clergyman within the district in which the patient was living, but the papers were not worth the cost of printing.
2493. Not even those from the medical practitioners? They may have been, but the others were not. I do not think they came from medical practitioners.
2494. Do you think any restriction can be placed on the number attending in the way in which it is done in the hospitals at home by the medical officers seeing only a certain number of cases every day, selecting the more important of them, and sending the others away? Yes, I think so.
2495. In connection with the Prince Alfred Hospital you had a great deal to do with the collection of sums paid for, or towards, the maintenance of in-patients? Yes.
2496. We should like to have your views as regards the pay-system in hospitals? The amount paid by patients in the first place was not at all adequate to the good they gained from the hospital, and yet it did not matter how little they paid, if it was only 5s. a week, they thought they were entitled therefore to all the advantages of hospital treatment.
2497. They did not consider that they were receiving any charity at all? No. Then in addition to that there is a large class of patients who are sent to the hospital who can afford to pay a small fee, and they are sent there by the hon. medical officers of the hospital to be admitted into the beds of the hospital under their care. For instance, an honorary medical officer may have thirty beds in the hospital, and he may send up thirty of his private cases to fill them.
2498. That is, he sends his private cases that are more or less in necessitous circumstances? They are in such necessitous circumstances that they cannot pay his fees outside; that is the only criterion.
2499. Do you think that the metropolitan hospitals ought to take any fees, or should they treat their patients absolutely gratuitously? The ideal would be to treat them absolutely gratuitously. There should be no question of payment in the case of hospital patients.
2500. What is the objection to taking 5s. or 10s. if a patient can pay? The patient will expect everything for that 5s., and will think he has a right to everything.
2501. Do you think the hospital ought to make any profit out of patients? I do not.
2502. Would you fix any limit to the fees they should receive? As I said before, I think that an ideal hospital would be one that took no fees at all from patients.
2503. Is it a fact that the admission of patients who are able to pay excludes patients who are not able to pay? Yes, it does; but only through that arrangement which I have just spoken of.
2504. And is it a fact also that the directors are much more ready to receive patients who are ready to pay than those who are not able to pay? No; I do not think the directors have anything to do with it. Of course they are very pleased to see that the amount received for patients totals up more each year.
2505. Do you think that everything is done by hospital directors to detect abuses, or can you point out a way of doing that? Well, we were very careful in making inquiries at the Prince Alfred Hospital; but I know that abuses used to creep in, especially with regard to patients sent to us by our own honorary medical men. They would come and tell me that they could not afford to pay anything. When I had any suspicions, I would direct the Secretary to write to the police in the country, and make inquiries, and he would do so. In 50 per cent. of the cases, however, the police refused to give us any information, and there was no one else to apply to. It amounted to a question whether the people were telling the truth or not in 50 per cent. of the cases. We found in a good many instances that they were not.
2506. Do you think that the hospital accommodation for the sick is sufficient at the present time? That depends largely on the class for whom we shall reserve hospitals. It depends to a large extent on the finances of the public. For instance, lots of cases have been treated in the Prince Alfred Hospital that could well have been treated outside.

F. J. T.  
Sawkins,  
M.B., Ch.M.

28 June, 1890.

2507. If we exclude the people who could be treated in a free dispensary and people who ought not to be admitted owing to their being able to pay fair sums outside, would hospital accommodation be then sufficient, as far as you are able to judge? I really think it would if the cases were redistributed. They are not distributed properly.

2508. *Mr. Barling.*] Do you know what are the usual charges at private hospitals? They vary from 3 guineas a week up to 10 or 15 guineas.

2509. Three guineas a week is looked upon as very low indeed? That is supposed to be a very small fee, and it means that the surgeon does not get anything for his attendance. He attends the patient, and the patient pays 3 guineas a week to the nurses running the hospital.

2510. Then those who are not taken into the public hospitals are compelled to go to these expensive private hospitals? Yes, or be attended at home.

2511. Then they could not afford to pay a surgeon? They can get a trained nurse for 2 guineas a week for everything except infectious cases, and sometimes for less. It is not every case that requires a trained nurse.

2512. Do you not think it shows that a middle-class hospital is required;—if you made the public hospitals absolutely free, does it not show a necessity for a hospital to take in the middle classes? Yes, we certainly need that; but with the number of beds that we have—the Sydney Hospital, St. Vincent's, Prince Alfred Hospital, and the Coast Hospital—one would think there must be quite enough beds, if they are worked properly.

2513. How do you arrive at that conclusion? At the Prince Alfred Hospital, I suppose, quite one-quarter of the cases are surgical cases, and many of those are cases that could be dealt with easily at the Coast Hospital at a saving to the Government and to the hospital.

2514. How do you make that out? Because they come under the category of minor surgical operations. Dozens and dozens are done up there that could be done at the cheaper hospital.

2515. Is it not a fact that the Coast Hospital is nearly always full? Yes; but in the Coast Hospital there are a number of cases that are not suitable for a general hospital, and which should go to an asylum.

2516. Then the meaning of that would be that the asylum accommodation of the Colonies would have to be enlarged, would it not? That may be.

2517. Then you would suggest that a considerable number of patients in the Coast Hospital should be removed to the asylums to make room for minor surgical cases that ought to be sent there? Yes, I am sure that great help could be derived from that.

2518. You recommend that the Prince Alfred, the Sydney, and the Coast Hospitals should be absolutely free; but where would the persons I have referred to go unless there was a hospital such as I spoke of, where they would receive small fees? I think that all those larger hospitals should be free.

See note "A"  
p. 100.

2519. What I am trying to bring out is that there is an absolute necessity for a second-class hospital where the patients would all have to pay fees? Such an institution might be an advantage, but is not a necessity.

2520. Suppose a person has £200 or £250 a year, and he has to have a major operation performed on himself or one of his family, the fee for which would be 100 guineas, that may impoverish his family for life, which shows the necessity for some kind of hospital in which they could be received on paying such a fee as they could afford? They could be accommodated at private hospitals quite well.

2521. How would they manage there? If a man is getting £200 a year he ought to be able to pay 3 guineas a week for maintenance and a small fee to the doctor.

2522. In that case the patient would have to say "I cannot afford to pay a higher fee," and make special arrangements for the payment of a low fee? Yes; he ought to do so.

2523. Do you think that the nurses at the Prince Alfred Hospital are overworked? No.

See Note "B"  
p. 100.

2524. I believe they work ten and a half hours a day? They are on duty ten and a half hours a day, but they are not doing hard work all that time.

2525. So you do not think they are overworked? No; I am certain they are not. The proof lies in the fact that the matron has at present 400 applicants waiting to join the staff. They improve in physique and appearance during the three years they are at the hospital.

2526. *Mr. Critchett Walker.*] You said that the dispensary in Regent-street was doing a lot of good in assisting the Sydney Hospital? I am sure it does.

2527. How do the patients get their medicines from there? I have not been there, but I know that doctors from the Sydney Hospital attend, see the patients, and prescribe for them. I do not know where they get their medicine.

2528. Is it not possible for anybody to go there? Yes; anybody can go there.

2529. Ought there not to be some check on the dispensation of medicine? Certainly.

2530. But there is no check whatever? There is a charge of 1s. I believe the Sydney Hospital charges 1s. for each renewal of a ticket, and I believe that the ticket lasts a month.

2531. Do they produce a ticket? Yes.

2532. There is that little check? I know that there is in the Sydney Hospital, and I presume that there will be at the dispensary.

2533. Have you ever been to the Coast Hospital? Yes.

2534. Do you think that if the Coast Hospital were connected with the Botany tram that it would improve the means of getting to it and render the hospital more useful than at present? No; I do not think so.

2535. You do not think it would facilitate the sending of patients? No; they have a very excellent ambulance service, which is better than any tram, and the result of tram communication would be to overcrowd the hospital with friends of the patients.

2536. You think it would be a disadvantage? Yes.

2537. How about the Prince Alfred Hospital—two tram services go out there, do they tend to overcrowd the hospital with friends of patients? We have a great deal of trouble with the friends of patients at the Prince Alfred Hospital.

2538. It is not an advantage to have tram communication? Not always; it is often a great disadvantage.

2539. I should have thought that having tram communication to the hospital would afford greater facilities for sending people out there, if you had a proper ambulance on the tram? I do not think so.

2540. You do not think it would improve matters at all? No; if a person is sick he comes in an ambulance or cab.

2541. You think that there would be no advantage in having tram communication? I do not think that the disadvantages would be compensated for by the advantages.

2542.

- F. J. T. Sawkins,  
M.B., Ch.M.  
28 June, 1890.
2542. It would only be a convenience for those attending the sick and persons visiting their friends? That is all.
2543. It would not afford facilities for relieving the sick or those who are injured? Not unless you had a special hospital tram.
2544. I mean that, of course, and that there should be a reception-house in the town? Do you mean that you would have a hospital tram with a surgeon in charge?
2545. Yes; the patient would go to the reception-house, and would be sent out with a nurse or attendant or surgeon, if necessary? They would not send him out direct.
2546. With the ambulance you do not move a man out directly? If you had a specially-prepared tram-carriage for the surgeon and nurses it would help the present ambulance service; but it would not do more than that.
2547. There is an idea at present that the Coast Hospital being so far out, it is not so useful as it might be if it were nearer the town? Well, if they use the Coast Hospital for a larger number of cases of minor surgery, the present conveniences for getting out there are quite adequate for that class of cases.
2548. If they restrict it to that one special object? No, if they use it principally for that. It will always be used until we have further accommodation for infectious cases, and the tram would not do for those.
- President.*] Do you know anything about the medical aid societies? Yes; there are two of them. There is the People's Prudential, a proprietary concern, which is not recognised by the medical faculty.
2549. It is boycotted, is it not? It is absolutely boycotted.
2550. I suppose you consider that it is not conducted on proper lines? No; it is carried on in contravention of the usual ethics of the medical community.
2551. Do you consider that it is a sweating concern? No, not that; but they will canvass other men's patients to get people to join the society, and they do not care whom they get in. They have no wage limit at all.
2552. So it is very prejudicial to the profession? Yes. There is another society which was started by Dr. Rennie in the city and suburbs. That is recognised by the profession, and probably it will sooner or later cut out the People's Prudential. The People's Prudential Society is doing a big business now.
2553. *Dr. Manning.*] Have you any idea of the number of private hospitals that there are in Sydney? No.
2554. What is this North Shore United Friendly Society? I think it is a society on the same lines as the M.U.O.O.F. They have four doctors there. I know there is a large society at North Sydney.
2555. *President.*] Is there anything else that you would like to say which has not been touched upon? There is one point which I fear I have not made as clear as it should be, and that is the question as to the right of the honorary medical officers of the hospital to fill up all the beds under their care from their own consulting rooms. I spoke about this when I was at the hospital. I always thought it was a great wrong—that it was not fair. I admit that a good many do not think the same as I do on the subject; but I have always thought that the practice was a very great wrong to the indigent sick.
2556. Do they not fill those beds with necessitous cases? No, they are not necessitous cases from the general point of view. They are necessitous cases from the surgeon's point of view. They are too necessitous to pay his fees; but they could pay a fee.
2557. They could pay a fee? Yes, a fee that would be quite sufficient for a junior doctor; this is the point. The public hospital is thus used as a private hospital for the honorary officer's middle class and poor patients.
2558. So that many of those patients admitted on the orders of the honorary medical officers, who could not make arrangements with those particular men, could make arrangements with some other medical man to pay a suitable fee? Yes, that is the point; and they could make arrangements with the honorary medical man if he would take a smaller fee, which he will not do as long as he can get the hospital to take them in.
2559. Are there many cases of that kind? I think so.
2560. In those cases are the doctors allowed to charge the patients anything? No. The charge is received by the hospital if the patients are in private wards, and the amounts are placed to the credit of the honorary medical officers by whom they are treated; but the medical officer always returns the money to the hospital.

*Notes by Dr. Sawkins on revision of evidence.*

A.

The opinion is widely held amongst the medical community that general hospitals should be free, and maintained for the use of the indigent sick only. Such an arrangement would be an ideal one, and would necessitate the financing of the institution by the Government.

The scheme for a middle-class hospital or hospitals for patients who could not afford to pay a doctor for a continued illness, or the fees for a large operation, but who could afford to pay something, would become practicable.

The two following questions would, I feel sure, assume a very important position, and require very careful consideration:—

- 1st. Should there be an appointed staff of medical officers, or should any duly qualified and registered practitioner have the right of sending and attending his own cases?
- 2nd. To whom should the fees revert, that are paid by the patients, to the hospital management, or to the attending medical officers?

B.

NURSES' WORK AT PRINCE ALFRED HOSPITAL.

I would respectfully urge that the nurses in training at the Prince Alfred and other large hospitals should not be looked upon as merely the paid servants of these institutions.

They are just as much students engaged in learning their future profession as are students of medicine at the University. I have never heard of any public outcry against the long hours students of medicine have to work in their curriculum, and it always appears to me ridiculous when I hear the hard work and long hours of nurses inveighed against. If a woman cannot stand the strain of the hard work and the hours necessary to gain her practical experience as a trained nurse, she is clearly unsuitable for the profession.

I felt this so strongly that before I left the hospital I suggested to my Board of Directors that nurses should no longer be paid during their course of training at the hospital, but that a few scholarships should be awarded each year to help women whose means would not allow them to go through the necessary three years' curriculum.

One practical result of such a plan would be to diminish the enormous number of applications from all sorts and conditions of women for admission to the training school, and limit them to a class more suitable because of their education and upbringing. It would also determine the annual saving of several hundreds of pounds to the hospitals, and it would clearly define the proper relation of the hospital authorities to the nursing staff.

Dr.

S. H. MacCulloch, M.B. et Ch.M., Edin., sworn and examined :—

S. H.  
MacCulloch,  
M.B. et Ch.M.,  
Ed.

2561. *Dr. Manning.*] In regard to the subject of hospital accommodation, the question as to friendly societies has come in, and we know that you can give us some information in reference to the working of friendly societies? Yes.

2562. You have been medical officer for friendly societies for a good many years? Yes; about sixteen years.

28 June, 1899.

2563. Which of the Friendly Societies have you had to do with? Chiefly the Oddfellows and the Protestant Alliance.

2564. What is the system on which they pay their medical officers? They pay their medical officers so much a year. The lodge is advertised, and the medical officer contracts with the lodge for so much a year. It has been regulated by the number of men applying, lodges having a tendency to take the lowest tender, but many of them are willing to pay a fairly good fee for a man they like.

2565. What is about the scale of fees paid to the medical officer? From about 5s. to £1 per annum per member. Where the 5s. comes in is in the amalgamated lodges. A number of societies amalgamate together and pay the doctor a salary. Three thousand members, say, pay £1,000 a year to four doctors. That is not much more than 5s. per member. Each member has a wife and family, so that you can see what in the amalgamated societies a doctor has to do. If you reckon that there are three in each family, that makes 9,000 individuals for four doctors to attend to. The average rate of pay is 16s. per member per annum. That is the lowest that most doctors will take. Very few of the societies in Sydney pay £1. None that I know of pay more than £1. The greater part pay 16s., except in the case of the amalgamated societies.

2566. What is paid to the chemist? From 1s. 6d. to 2s. per quarter. I do not know what the chemist gets from the amalgamated societies.

2567. Amalgamated societies pay their chemists salaries, do they not? Yes.

2568. For that sum can anything like good drugs be supplied? I do not think they could for 2s. per member per quarter. It would be difficult to answer that question.

2569. There is a danger when expensive drugs are ordered that something else will be substituted by the chemist? Yes.

2570. Quinine being ordered, the bottle may be filled with quassia or other bitters? Yes.

2571. What are the objections to the benefit societies from a medical point of view? That the subscriptions to friendly societies are diverted into other channels than those for which they were originally intended. All these friendly societies are intended to provide medical benefits. They are nothing but medical benefit societies, and the objection is that the contributions are used for other things—expenses in management and so on. A working man pays his society £3 a year, and out of that the medical man gets 16s., the chemist 8s., and the rest goes in other ways.

2572. But they have some other objects than sick aid? Yes.

2573. The members of these societies comprise a very large section of the community? Yes.

2574. To what class do the members belong for the most part? To all classes. The rich take advantage of the societies, but the bulk of the members are working men.

2575. There is no wage limit whatever? None whatever. A wealthy man can be a member of one of these societies if he will subscribe. I think these societies are absolutely necessary for the working classes. No man with a salary of £3 a week and a family of five persons can afford to pay medical fees, and there is nothing between the hospital and the payment of high medical fees except these Friendly Societies.

2576. It is necessary that a candidate for membership of one of these societies must be examined as to the state of his health? Yes.

2577. There must be a very large class not able to pass the examination, being already damaged in constitution? Yes; but some are allowed to get in, and that is the fault of my own profession. The reason of that is that a struggling medical man has to take so many of these societies to eke out a living; consequently, he looks upon any candidate for membership as a person bringing more income and lets him in. That is the reason why there is so much hard work in connection with these societies.

2578. The examination is not a very strict one? As a rule, it is not.

2579. But apart from that, there must be a large class who cannot join, partly because they cannot pay, and partly because they are damaged in constitution and cannot pass? Yes; in my own societies I reject many of certain trades. For instance, I never admit plumbers and painters, because after ten or twelve years they come on the society. All these trades are kept out of my societies.

2580. There are no free dispensaries in Sydney to deal with improvident classes, and those who cannot get into a society? No.

2581. Do you think such an institution is wanted? I think that under proper supervision it should be a good thing.

2582. You think it would prevent people from seeking hospital relief, either as in or out patients? I think it would. The system obtains in Edinburgh to a large extent.

2583. And in most English towns? Yes; but very much in Edinburgh.

2584. In connection with the dispensaries, patients are attended at their own homes? Yes; the dispensary is attached to the University in Edinburgh. There is a medical man for each dispensary, and there are dispensers, and a certain number of fourth and fifth year students take outdoor practice in connection with the dispensary. When a person is ill, a student is sent, and he orders medicine, which is given at the dispensary. If the student is not able to diagnose a case, he calls in the honorary medical officer.

2585. There much is done at a very little expense? Yes.

2586. And at a great saving of the hospital beds? Yes, a very great saving.

S. T. Knaggs, M.D., sworn and examined.

2587. *Dr. Manning.*] In connection with this hospital question the subject of medical attendance by and through the friendly societies has cropped up. You have had a very large experience of these friendly societies,—can you tell us the system under which they are conducted, and what is your opinion of them generally? Yes. My experience in connection with them was from 1870 to 1884, and principally amongst miners. I can only give you information on the medical aspect of the matter. The object of forming these lodges was to provide medical attendance for the members and their wives and families, and also some provision in case of sickness or accident. They used to pay for medical attendance and medicine 6s. 6d.

S. T.  
Knaggs, M.D.  
23 June, 1899.

S. T. Knaggs, a quarter or 26s. a year. The medical man was supplied with a list of all the members, and the Society only paid for those whose names were on the list. No man was allowed to join a lodge unless he and his wife underwent a medical examination to see that they were in perfectly sound health. It seemed to work very well, but the system was very often abused by people being in the lodges who had private means and who were well able to pay for medical advice. On inquiry, however, I found that those people had joined lodges in previous years when they were poor, and they were loth to leave them.

S. T. Knaggs,  
M.D.  
28 June, 1899.

2588. Was there any wage limit in any of those lodges? There was no special rule, but when I found that a candidate had means and could pay, I used to see the Chairman and expostulate with him, and they generally met my wishes.

2589. The members, then, for the most part, belong to the labouring classes? They consist principally of the labouring classes, artisans, and small shopkeepers.

2590. So far as those classes were concerned the societies were very beneficial? They were. People who would otherwise have to be put into a hospital were attended at their own homes and nurses were provided if necessary.

2591. What were the chemists paid? We had no arrangements with chemists. I had my own compounders and used to compound the medicines with their assistance. I may say that I had a very large practice, the number of members of my lodge being 1,200. I had two qualified assistants and two compounders.

2592. And a very large income? Fifteen hundred pounds a year from lodges alone.

2593. In cases where the chemists have a fixed sum for supplying medicine, do you think the medicine supplied is always what is ordered? I have no knowledge of that, and I should not like to throw any reflections on the chemists, but there is a great temptation with regard to that. When a medical man supplies his own medicines, it is to his interest to cure as quickly as possible, and he will give the best medicine for the purpose.

2594. There is a temptation to substitute other drugs for those that are prescribed? Yes, to substitute such things as an infusion of quassia for quinine, and to resort to other little dodges.

2595. There is some system now of private clubs—how is that worked? I may mention how it arose. When I left Newcastle, the gentlemen who succeeded me did not get on very well with the clubs, and the clubs advertised for two medical men. I believe they also ran what was called a medical institute on cheaper lines. They paid about £750 for the same work that I and my assistants did for £1,500 a year. To remedy this, the medical men in the town started what they called private club lists. They opened lists which previous members of any club might join by paying the usual 6s. 6d. a quarter.

2596. They distinguished between their own ordinary private patients and former club patients by putting them on a certain list and charging them smaller fees? Yes.

2597. You have a considerable knowledge of the out-patients' department of the hospital? I have.

2598. Can you tell us how it would be advisable to restrict the increasing number of out-patients? Do you mean patients who apply for out-door relief and who have means to pay?

2599. Patients of all kinds. Is there any way of restricting the increase? I think there should be certain officers appointed to make inquiries as to whether the patients are suitable subjects for charitable relief.

2600. Do you think it would be possible to restrict the number of out-patients by requiring them to bring a letter from a medical practitioner? I know that in several institutions that is done. I am a life member of St. Vincent's Hospital, and they always respect any letter that I send; but I generally write "This patient is without sufficient means to pay for medicine or advice, and I request you to afford out-door relief."

2601. You think that medical men, as a rule, would not object to give letters like that? I think not; I think they would be very pleased. I know that what occurs at present is a very great hardship. You take a great deal of trouble with a patient; you prescribe, and you find out afterwards that he has not means to pay for medicine, and all your trouble goes for nothing. It is best to have some reliable person to give a letter. You need not restrict it to medical men—clergymen very often have more knowledge of the means of patients than even medical men have.

2602. According to the evidence given to us, letters given by others than medical practitioners are not of much service; what is your experience as regards that? It greatly depends on who gives the letter. I think you can place reliance on a clergyman's letter of recommendation.

2603. As regards the poverty, possibly, but not as regards the medical need? No.

2604. Do you think there is a necessity in Sydney for a free dispensary on the lines of the dispensaries in the old country;—do you think that it would prevent a number of people from going to the hospital who at present have to be sent there? I always thought that the out-patients' department of the hospital would attend people at their homes. If you establish a free dispensary you will want to have a regular outfit there and appliances for dressing wounds.

2605. Patients are not attended at their own homes from any of the present hospitals? You mean a kind of bureau where medical men could always be called on?

2606. I mean a dispensary at which patients could attend as out-patients, and from which, in case of illness, they could be attended at their own homes? I think it would be of great service.

2607. And it would prevent people from going to the hospitals who are now obliged to go there? Yes; if people could have free medical attendance at their own homes many would much rather not go into a hospital.

2608. Are there not a large class who are not and cannot be members of clubs? There are, and they are really the people who most need medical advice, as they are excluded from the clubs owing to their having a tendency to bad health.

*Note by Dr. Knaggs on revision of evidence.*

With regard to your project of having a free dispensary for such patients as are unable to pay for advice and medicine, I cordially agree with it, and think the idea an excellent one, which will greatly contribute towards relieving the hospitals of having patients sent to them who could be treated at their own homes. As a rule, I find patients do not wish to enter an hospital, but their inability to pay for medicine constrains them to do so.

I think it would be very desirable to establish a dispensary in some central part of the city, with two qualified medical men, a dispenser, and a married couple, to look after them. Possibly two graduates of Sydney University might be engaged on the same terms annually that they receive from the local hospitals.

A superintendent (say, some senior member of the profession having experience of dispensary and club practice) might be appointed to supervise, and be ready for consultation in serious cases.

THURSDAY, 29 JUNE, 1899.

[The Commission met at the Offices of the Public Service Board, at 3 o'clock p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).	
F. N. MANNING, Esq., M.D.	J. BARLING, Esq., J.P.
J. POWELL, Esq., J.P.	CRITCHETT WALKER, Esq., C.M.G.

Hon. C. K. Mackellar, M.B., Ch.M., Glas., M.L.C., sworn and examined:—

2609. *Dr. Manning.*] You were for some years Medical Adviser to the Government? Yes, I was.  
 2610. And you are at present, and have been, one of the honorary physicians to the Sydney Hospital? I was for some years one of the honorary surgeons, and subsequently I was one of the honorary physicians.  
 2611. And you are now a director, appointed by the Government, at both the Sydney and the Prince Alfred Hospitals? I am.

Hon. C. K.  
Mackellar,  
M.B., Ch.M.,  
Glas., M.L.C.  
29 June, 1899.

2612. So that you had a very large experience of hospital administration? Considerable.  
 2613. You know the Coast Hospital very well? Yes; I had that under my control for some time.  
 2614. Have you seen it lately? Not within the last two or three years.  
 2615. Since that time I may inform you that there have been considerable additions and alterations;—a complete system of sewage and some permanent buildings for laundry and other purposes have been erected;—we have the evidence of the Government Architect to the effect that the old buildings have further life in them of some fifteen years, and the new buildings will last for thirty years or perhaps more;—under these circumstances we wish advice as regards the best use to which the Hospital could be put;—do you think it suitable for cases of infectious disease? It certainly is unsuitable for certain infectious diseases. It is, to my mind, entirely unsuitable for the treatment, for instance, of typhoid fever. Whilst I had the administration of the Hospital numerous cases of typhoid fever were treated there, and I found that the long distance that it was situated from the town was decidedly prejudicial to such cases, unless in the very early stages, or where the disease had manifested itself in a very mild form; and, in consequence, I, at that time, formulated a certificate which I required medical men to sign before sending patients to the Coast Hospital suffering from that disease. I believe that that certificate is still used, though it is twelve or fourteen years since I framed it. If my memory serves me right, it was to the effect that not alone was the patient a suitable patient, but that he was not in any way likely to be prejudiced by the journey, because I perfectly satisfied myself that patients were prejudiced by the journey; and I wrote a memorandum and submitted it to the Government, along with certain other papers, on the same subject. I have not been able to lay my hand on all the minutes that I wrote, but I have got one or two of them here which I might let you have. This document here which bears the date 9th March, 1883, was addressed by me, I presume, to Mr. Critchett Walker, and will show you what my views were on this subject at that time. Apparently, there had been a deputation waiting upon the Colonial Secretary in regard to this subject, and I say here:—

A perusal of the attached correspondence will show that the deputation which waited upon the Colonial Secretary on the 30th ultimo, and some of the general public, have taken an erroneous view of the intentions of the Government with regard to the reception and treatment of patients at the Coast Hospital. Several persons suffering from typhoid fever in the acute stage have been sent from the Prince Alfred Hospital, and one very bad case from the city by a medical practitioner, and, although no dangerous consequences have as yet arisen from this practice, yet I cannot advise the Government to allow it to be continued, for, in my opinion, some very serious result may reasonably be expected where persons, in the critical period of one of the most serious fevers to which the human race is liable, are driven over a rough road for a distance of upwards of 10 miles. My experience in the mother country showed me that too much importance cannot be attached to this question of the transit of patients, and although I fully realise the vast importance of the isolation and separate treatment of fever cases, yet I cannot advise so risky an experiment as their consignment to Little Bay, until the tramway, which was at one time in contemplation, is constructed.

I may say that at that time a tramway was contemplated from the Botany terminus to Bare Island, with a branch tramway to the Coast Hospital.

Should the Government see fit to carry out this work I think that great advantage would accrue to the health of the city and suburbs of Sydney from the establishment at the Coast Hospital of wards not only for typhoid, but also for measles and scarlet fever, and, moreover, I would observe that such a proceeding might be carried out without interfering with the efficiency of the Small-pox Hospital in any material degree. I am continually receiving letters from institutions, as well as private individuals, asking that fever patients may be accommodated at a hospital, and there can be no doubt that the request is a reasonable one.

The distance, in a straight line from the present tram terminus at Botany to the Sanatorium at Little Bay, is less than 2 miles, and over a series of low sand hills, which, I should imagine, would offer no great difficulty to the construction of the line.

Well, I contemplated this, that the institution should be used as a sort of sanatorium, using the word "sanatorium" in its broadest sense—a place for the treatment of the milder cases of typhoid fever, scarlet fever, and so on. Not that I thought that it was by any means the best place, for I do not think it is, but it was the best place available, and the Government had the buildings already erected. I recommended the Government at that time to have a general fever hospital somewhere in the vicinity of the University paddocks, somewhere between Newtown Road, Parramatta Road, and Annandale, as I considered that that was the centre of the district from which we might reasonably expect to get most cases that needed such treatment, and I hold to that opinion now, that if it be possible to secure a suitable site in that locality, there the general fever hospital should be built. I do not think any objection whatever would accrue to the neighbourhood from the cases being taken there. As to the Coast Hospital, I think that it will be quite suitable, that is to say, as a makeshift, for the treatment of the milder cases of fever and for many convalescents. It is totally unsuitable for cases of tuberculosis of the chest, and perhaps equally unsuitable for cases of rheumatic diathesis. In my experience, and I may say that while I had charge of this institution we had as many as 200 patients there under treatment at a time, cases of that kind did badly there, did very poorly, but still there were many chronic and convalescent cases that did very well there.

2616. Subject to the certificate of which you have spoken, and to the regulations which you made and which have been continued ever since, typhoid fever has been treated at the Coast Hospital with a large amount of success? Oh, a large amount of success. I think you know that the success is very largely due to the fact that I rigidly, at that time, and my successors, I believe, have equally rigidly held the medical

Hon. C. K.  
Mackellar,  
M.B., Ch.M.  
Glas., M.L.C.  
29 June, 1899.

medical men to that certificate, and the medical men have been so frightened that harm might come that they have only sent the very mildest cases there. Of course, the amount of success that has attended the treatment of typhoid cases at the Coast Hospital is quite phenomenal, extraordinary. Proportionately unfavourable results in some of the metropolitan hospitals have been commented on, but really, in point of fact, they have had all the bad cases and the Coast Hospital has had all the good ones.

2617. Then you think that with a tramway the facilities for the treatment of patients at the Coast Hospital would be very much increased? Yes, but still I might point out here that there are difficulties in regard to the tramways, because the tram cannot take a patient from his own house. It can only take him from the main line. The patient has first to be carried to the tram, which may be a distance of some miles, so that there is a difficulty there, but it would minimise the danger certainly.

2618. But given a proper depôt and a tram starting from that depôt? At a definite time.

2619. Say once or twice a day, and with properly arranged carriages, the patients could be shifted from the ambulance in which they were brought and taken out to the Coast Hospital very much more easily by the tram than if they were taken all the way by the ambulance? Undoubtedly.

2620. And there would be no objection to the transport of cases of scarlet fever and measles, so long as their condition was not a dangerous one, by the same method? No objection whatever.

2621. So that, in the absence of other buildings, there would be no objection to making the Coast Hospital into an infectious diseases hospital to that extent? None whatever.

2622. In regard to Lock cases, there is some difficulty as regards the accommodation; the male patients are treated at the Coast Hospital. Do you see any objection to treating the females patients there also if they were properly fenced in and placed under proper supervision? Yes; I think it is entirely unsuitable. On this question I also addressed some years ago a memorandum to the Principal Under Secretary, which I have been able to get from the records of the Board of Health, and it is here:—

January, 1883. The fact that venereal disease exists to an alarming extent in all classes of the community no one can doubt, nor is there any question that the hospital accommodation at present available for its treatment entirely fails to exert any marked influence in lessening the number of those affected. This failure is due to a variety of causes, but I believe that it is chiefly owing to the exceedingly scanty accommodation afforded by the hospitals of this city for the treatment of such ailments.

I have the authority of Mr. Fosbery, the Inspector-General of Police, for saying that there are about three hundred (300) women in Sydney who live wholly by prostitution—that is to say, known to the police—and I think I may safely estimate the number of those who occasionally supplement their earnings by the same mode of life at fully double the number, so that we have a total of (900) nine hundred women very likely to acquire and disseminate the disease.

One of the Secretaries of the Association for Promoting the Extension of the Contagious Diseases Act of 1866 to the Civil Population of the United Kingdom says that the proportion of diseased to healthy prostitutes in London is one in three, whilst Mr. Simon, F.R.C.S., the late Medical Advisor to the Privy Council, in a recent paper upon prostitution, deemed the proportion of diseased women to be one in six. If we adopt the latter estimate we have one hundred and fifty (150) women constantly affected, while for their treatment at the present time there are in Sydney Hospital only ten beds available, and none at either the Prince Alfred or St. Vincent's Hospitals.

The Secretary of the Sydney Hospital informs me that the Lock Ward is always full, and that females are frequently treated as out-patients, both for gonorrhœa and syphilis, whilst males with gonorrhœa are, as a rule, not admitted to the hospital, but treated as Dispensary patients. It is clear, therefore, that a very much larger accommodation for the treatment of the disease is absolutely necessary; but, in my opinion, merely increasing the number of female lock beds in the general hospital would not meet the difficulty, as those institutions afford no special facilities for the treatment of these cases; and, further, a considerable amount of publicity, which is very much objected to by such persons, is unavoidable in their treatment in a general hospital. Under these circumstances it is not surprising that both syphilis and gonorrhœa are rapidly disseminated throughout the community.

It is in vain to expect that a woman of the town will at once desist from prostitution on being infected with venereal disease. She is usually totally destitute of means wherewith to pay for her maintenance and treatment whilst ill, and, as a natural consequence, continues to practise her calling much to the detriment of her own health, and with destructive results to the general community.

I have given much careful consideration to this subject, and am forced to the conclusion that State interference in some way is absolutely necessary, either by police supervision and medical inspection, which, however, is objected to by a large portion of the community on both moral, constitutional, and even medical grounds, or the establishment of Lock Hospitals, where diseased women could readily, without charge, and with a reasonable amount of privacy, obtain the most skilful treatment—not subject to the supervision of the police. I desire to give my emphatic opinion that the latter course is in every way the more desirable.

I would recommend that a special institution, wholly under Government supervision, should be opened for the treatment of females suffering from venereal disease; that in it every facility should be offered for the ready and skilful treatment of such disorders, and, although I fully recognise the difficulty likely to be encountered in administering such an institution, I would nevertheless recommend that it should be on the voluntary principle, and that the inmates should be free from police supervision and subject only to the regulations under which all public hospitals are governed.

I might have added there that not only should they be free from police supervision, but from the supervision of meddling busy bodies who are trying to reform them, who are just as harmful as the police in meddling with such cases, and who, I have no doubt, prevent these women availing themselves of the general hospitals, and would equally prevent them availing themselves of the treatment of this hospital.

Institutions of the kind suggested have been created in some districts of the United Kingdom, notably in Glasgow, where their establishment has been attended with a large amount of good.

As regards the treatment of the male portion of the community, I think the present arrangements in the general hospitals are quite adequate, and that all that is required is that a larger number of beds should be allotted to venereal disease. I do not think that any good result would follow their treatment in a special institution.

Following on this minute the Colonial Secretary of the day caused a large sum of money, some £5,000 or £7,000, to be placed on the Estimates, and I was directed to choose a site, which I did at Miller's Point, a building which is now used as an eye hospital, and the Government resolved to take this building for the purpose I have indicated; but, some short time after that, some persons interested in the neighbourhood, together with some clergymen, waited upon the Colonial Secretary as a deputation, and they tried to show him that it was wrong to have such an institution, and that it should certainly not be in the city, that it ought to be clear away from the city, and so on, and meantime the vote lapsed.

2623. Then your objection to the treatment of the women at Little Bay is rather that they would have to go a long distance, than from any difficulty that would arise in separating them from the male patients? Well, there would be very great difficulty in separating them from the male patients there. I do not think it would be a desirable thing to put the women there under any circumstances, but I think that the distance would be a very great objection. An institution such as that should be in such a situation that those persons who are affected could readily obtain access without any trouble. It is so very much in the interest of the general public that they should be relieved of their ailments. 2624.

2624. As a Director of the Sydney Hospital, you will be able to tell us something about the Dispensary in Regent-street. Do you think that is performing any useful work, or that it should be continued? I do not think so. I was a member of a committee on this subject some years ago which drew up a report and recommended that it should be abolished, chiefly on the grounds that a dispensary was not necessary—a dispensary for the treatment of disease was not necessary under the circumstances—and I still hold to that view. The majority of the patients that attend that dispensary would be very much better off with, say, a basin of beef-tea and a bath, for instance, than anything else. That is the class of patient that goes there—they want to be cleaned and they want to be fed. I think the majority are fit patients for a benevolent asylum, but not for a hospital dispensary at all.

Hon. C. K.  
Mackellar,  
M.B., Ch.M.,  
Glas., M.L.C.  
29 June, 1899.

2625. You think that, as at present situated, the Institution is really doing no good? Not any adequate good to the payment made for it.

2626. And do not you think that if a separate free dispensary was established from which patients could be visited at their own homes, and in which students under the charge of a competent medical man could get their midwifery done, and also assist to visit these patients, it would be a very useful institution? I think that it would.

2627. You think that would meet a want that exists? I think that is a want that exists in all large towns where there are poor people.

2628. Now, as regards Moorcliff—this place has grown into a very large institution; do you think it is really necessary? Well, I think that it is very necessary that there should be an eye hospital, and I think that Moorcliff serves very well as an eye hospital, but if a wing of the general hospital were devoted to the same purpose it would serve equally well, and probably would be administered somewhat cheaper.

2629. So that you think that the eye cases could be treated quite as well in, say, a new ward in the Prince Alfred Hospital as they can where they are at present? I have no doubt of it.

2630-1. It has come to the knowledge of the Board that a very large number of these cases are cases of granular lids and chronic cases; could not they be treated in a ward in a sick asylum directly under Government management? Well, I just recollect now that about ten or twelve years ago, about the time that I wrote those memoranda that I have just read to the Commission, I wrote some memoranda on this subject, and made a recommendation to the Principal Under Secretary, that these chronic cases should be treated in the hospitals at Parramatta, the Government Asylums, and, in accordance with my recommendation, they were treated there. A special ophthalmic surgeon was appointed by the Government to visit Parramatta and the other Government Institutions at stated intervals—Dr. Cecil Morgan—and he was ophthalmic surgeon to the Sydney Hospital; and for some years Dr. Morgan carried out that work, and great relief to the Eye Hospital was obtained by those means, and, I have no doubt, that the patients were equally well treated. Subsequently, Dr. Rowling, who had in the meantime specially studied eye diseases, undertook the treatment on Dr. Morgan's retirement, and I did not know that the arrangement had fallen through. But certainly the chronic cases of eye disease might be perfectly well treated elsewhere. There is no occasion for keeping up an expensive hospital for their treatment.

2632. There is no occasion for their being paid for at the rate of 3s. a day? No; but at the same time I would say this, that chronic cases of eye disease need some better food than ordinary paupers.

2633. But they could be maintained at less than that rate? I do not doubt that.

2634. It is stated that they cost about 13s. a week in Moorcliff, but the Government pays about 21s. a week for them? Yes.

2635. Do you think the hospital accommodation of Sydney sufficient at the present time? Yes; I think it is just about sufficient. Of course as the population increases so the number of beds that will be necessary will increase. I would not advocate that it should be largely increased just now, because, if it were 50 per cent. greater, I have no doubt that the hospitals would still be filled; but I not know that it is necessary that so many persons should be accommodated as would endeavour to obtain admission.

2636. Would you give us your views as regards the pay system in the hospitals—the system under which the hospital directorate receive payment from the patients themselves? Well, I have always been very strongly opposed to it. I think that it is a most pernicious system, and I have always advocated that the only method by which patients should obtain admission should be by showing that they are in a necessitous condition, and that they are eligible from a medical point of view. I do not think that any rights should be given to admit persons to a hospital to any persons who subscribe, nor should patients be required to pay 2s., 3s., or 4s. a week, as the case may be, as they are in the general hospitals now; because that induces a large number of persons to avail themselves of the hospital who otherwise would not do it, and who might very well do without it, perhaps, as these persons go away with the idea that they are paying for their treatment, when they are not even paying for the food that they eat, independently of their treatment or of the general expenses to which the Government is put in the erection of the hospital or its administration.

2637. I see that you object to payments of all kinds, not only small sums, but you would object more to the payment of large ones? I object to that altogether. I am perfectly certain that it saps the fountain of benevolence on the part of the general public. That is one of the reasons why the general public subscribe so little. This system destroys the benevolent idea altogether.

2638. Do you think that by taking in these paying patients, the more necessitous class are excluded? Well, I think it quite possible they may be.

2639. That would be the case where there was a rather scant supply of beds? Oh, certainly it would, and the temptation to the officer who is administering the institution would be too great. He knows the necessities of the institution, and if a number of patients apply who can pay something, and others apply who are not capable of paying anything, I think that, unless he could get them in as Government patients, for whom he would get a guinea a week, he would be very apt to favour those who paid something for their admission.

2640. Especially if he was paid 2½ per cent. himself for all the collections he could get from the patients? Well, I would be surprised if I heard such a thing was possible, but I should say it would be very likely.

2641. But there must be a good many people who need hospital accommodation, and are able to pay 5s. or 10s. a week;—what would you do with that class? I would admit them without payment at all in preference to letting them pay the 5s. a week, even although willing. A person who can pay but 5s. a week is in what I would call a necessitous condition, and I would scarcely think it advisable to drag 5s. a week out of him.

- Hon. C. K. Mackellar, M.B., Ch.M., Glas., M.L.C.  
29 June, 1899.
2642. And you would exclude altogether people who can pay 15s. or 20s.? I would require them to go to a private hospital; and though at the present time there is no private hospital in Sydney which could accommodate patients who could pay such a fee as that, I have no doubt that such an institution would be established if the necessity for it arose.
2643. Do you approve of the system of payment of a shilling for the registration of out-patients? I do not.
2644. It is done at the Sydney Hospital? I know it is done, but I have never approved of it. I do not approve of any patient giving anything to the hospital if he is in a necessitous condition, and if he is able to pay no more than a shilling he is in a necessitous condition.
2645. Do you object to donations from the hospital patients, either in or out-patients? No, certainly not; I think that is very desirable. It is very desirable that they should be allowed to give if they please, but that they should be required to give so much on registration, or for each week of treatment, is undesirable. I am aware that this system of registration and re-registration is in vogue in London at the present time, and is strongly advocated by some persons who know a great deal about the hospitals, but I have never seen any arguments that have induced me to change my views on this subject.
2646. Do you know anything of the private hospitals? Very little.
2647. Do you think that they ought to be subject to any registration or inspection? I think they should, certainly. I think that is an absolute necessity with all private hospitals. I do not think that in Sydney any harm particularly has arisen from the establishment of such institutions, but we know that very great harm has arisen in other places, in London, for instance, from the establishment of institutions ostensibly for the purpose of private treatment.
2648. *Mr. Walker.*] There is no law under which they can be brought? I think not.
2649. There would have to be a special Act passed to deal with them? Yes.
2650. *Dr. Manning.*] In the Melbourne Health Act there is a special clause dealing with private hospitals, providing that they shall be registered under the Board of Health? I think that is a very desirable thing.
2651. *Mr. Barling.*] With regard to Lock Hospitals, have you, in recent years, given your attention to this subject;—are you aware of the present state of affairs in this respect? No, I am not. When I wrote that memorandum I was in the position of Medical Adviser to the Government, and then it was part of my duty. I have not kept up my information on that point.
2652. I think you would still recommend the establishment of a Lock Hospital somewhere within convenient access of Sydney? Yes.
2653. And you do not recommend a Contagious Diseases Act, but rather that it should be voluntary on the part of the unfortunate females to go to such an institution? Yes; those are my sentiments. I may say that some years ago I carried a resolution, strange to say, in the British Medical Association, against the Contagious Diseases Acts, not because theoretically they were wrong—for theoretically they are unassailable precisely as the theory of absolute freetrade is unassailable—but practically they are wrong.
2654. You would not be surprised to hear, then, that in the evidence we have received from two highly competent gentlemen on this subject, viz., Dr. Paton, the Government Medical Officer, and Dr. McClelland of the Sydney Hospital, the former says that at the present we have practically an epidemic of venereal disease, while the latter gives similar evidence and adds that one-sixth of the whole of the out-patients at the Sydney Hospital come under the class of persons suffering from venereal diseases; this would show that the views you held some years ago should be accentuated at the present time? Probably.
2655. From that evidence? Yes. I may say that in the Benevolent Asylum, where a large number of children are born and maintained in the early period of their lives, the number of those suffering from syphilitic disease of the eyes is simply horrifying. I went through that institution some couple of years ago, and I would almost say that the majority of the children then were suffering from affections of the eyes, which I judged to be inherited syphilis, and that is one of the most shocking aspects of the whole question. These children inherited this disease.
2656. All these facts show that it is a question which should be faced with seriousness at the present time? I do not doubt it.
2657. It has become a very urgent question? I would like to emphatically say that the institution which is designed to treat women should be separated from any other institution, and it should be made as easily accessible as is possible—that it should be absolutely private, and that there should be no police supervision whatever.
2658. *Mr. Wilson.*] They should be encouraged to take advantage of it, not compelled? Well, I satisfied myself at the time that they would take advantage of it. I took a great deal of trouble before writing that memorandum to satisfy myself that what these people objected to and the reason they did not go for treatment was because of their being overlooked, as it were, by servants of the institution and by the visitors to the general hospital, and I have no doubt that the desire of certain very well-meaning persons to reform them also interfered somewhat with their willingness to go to an institution of that sort.
2659. *Mr. Barling.*] Some years ago, Dr. Mackellar, the then Colonial Secretary, afterwards Sir Alexander Stuart, put certain questions to you. One of them was as to the desirability of having a general Hospital Board. In your reply, which was dated the 22nd August, 1883, you made these remarks: "The custom of granting Government aid to metropolitan hospitals, which are wholly unconnected with each other and governed by totally distinct Boards, is also in my opinion fallacious, and calculated to be followed by extravagant expenditure, because of the rivalry which is almost certain to be engendered, and which in itself would, under other circumstances, give a healthy and perhaps beneficial tone to the management. The establishment of a General Metropolitan Hospital Board would obviate this danger, and, moreover, would be conducive to economical management of the whole, as it would afford facility for entering into larger and more favourable contracts for the supply of provisions and hospital necessaries." We shall be glad to have your views on that subject now, whether they have undergone any modification or whether they have strengthened? My views have undergone no modification whatever. I have not the slightest doubt that all that I said at that time is correct. Whether it would be advisable to have a general Hospital Board is a totally different question. I may say that this tendency for hospitals—rival hospitals, if I may use the term—to go into extravagant management has been very clearly shown in Sydney some years ago. The day after my appointment by the Government to the Board of the Sydney Hospital my attention was drawn to the extraordinary

extraordinary increase of expenditure which had gone on during the previous three or four years, and I moved for a committee to inquire into it, and acted as chairman of the committee. The committee investigated the matter, and presented a report to the Board upon the subject, recommending changes which ought to be made immediately, and which would, in our opinion, not in any way detract from the efficiency of the hospital, and which would involve a saving of several thousands of pounds: to name a minimum, we said £1,200. The changes were made, and the following year £3,000 was saved, and the same number of patients treated with equal success; in point of fact, as it happened—which is, of course, only a coincidence—the success was greater. The mortality was much less the following year; but that did not bear on the question at all. Well, that extravagance goes on in all hospitals. In that hospital where I received my education, the surgeons receive a notice once a week, which is handed to them on their entering the hospital to tell them what the cost has been in their wards for stimulants, because the use of alcoholic liquors is one of the readiest means of getting rid of a large amount of money. Some hospitals manage to treat their patients at a cost of 5s. per annum per bed; other institutions in England cost £2—I think it is as much as £2 10s.—per bed.

Hon. C. K.  
Mackellar,  
M.B., Ch.M.,  
Glas., M.L.C.  
29 June, 1899.

2660. *Dr. Manning.*] For stimulants? I know one of them spends £2 1s. 6d., and I think some of them even more than that.

2661. *Mr. Barling.*] Do you think the Government should have better supervision over the charitable institutions—more especially in respect of hospitals—than they have now? Well, I am one of the representatives of the Government on the Board of both the hospitals, and, therefore, I, perhaps, may be allowed to say that the method, of which I am one of the representatives myself, is an exceedingly bad one, and very little supervision—that is to say, from the Government point of view—is exercised by myself or by the gentlemen who are in a similar position to me on the Boards. I think I may say that I have sometimes, in past years, asserted a little more authority, on the ground that I was appointed by the Government, and I have found that it was not at all well received by the other directors of the institution who were not similarly appointed.

2662. What remedy would you propose for this state of affairs? I have not thought the matter sufficiently out to suggest a remedy, but that some supervision more than is at present exercised is necessary I am quite sure.

2663. Do you think, Dr. Mackellar, that it would be a good idea for the Government to appoint a Board which shall supervise all the expenditure in connection with the Government aid to charitable institutions;—do you think that would have a good effect? Well, I do not know that the appointment of a Board specially would be necessary. If there were a Government officer whose duty it was from time to time to report upon all such institutions —

2664. *Mr. Walker.*] The Colonial Secretary is the Inspector of Charities now by law; he can depute his powers to anybody? Yes. We had many years ago a gentleman who held the title of Inspector of Public Charities, but his supervision was certainly not more efficient than that of the Government members of the Board, I think, perhaps, even less effective. Perhaps that was because the gentleman might not have been quite suitable for the office.

2665. *Dr. Manning.*] Do you think that operations should be carried out at the Coast Hospital? No, I do not. Operations necessitate a very much larger expenditure per patient than would be necessary in the treatment of ordinary diseases, and much closer supervision. On the whole I do not think it would be at all desirable. They should be left to the large general hospitals. Of course it should be recognised that, in leaving the operations to the large general hospitals, you are increasing the expenditure per bed very much of the general hospitals. The cost of modern surgical appliances is very great, enormous in fact, and therefore, it must be recognised that the general hospitals will be more expensive, but I think that the patients would be very much more likely to obtain thoroughly efficient surgical treatment in the general hospitals than they could possibly obtain there.

2666. There would be more effective supervision in those hospitals by the outside medical men, and by students, than you could have at the Coast? Undoubtedly. Things might occur, even in a very well-managed institution, if they were not under the exceedingly critical eye of the whole of the medical profession, as well as the, perhaps, still more critical eye of the medical students, which would be very unlikely to occur in a metropolitan hospital. I should say that that is one of the safeguards to the patient. A bungling surgeon cannot have a very long life in a large metropolitan hospital, because his deficiencies are so exceedingly apparent and so very freely commented on.

2667. Can you give us any way by which the number of out-patients attending at these hospitals can be restricted? Yes. I think that a ticket for treatment at the hospital should last only for a definite time, and that a special examination should be made of the individual, and he should be reported upon when his ticket expired. It is notorious that some patients go on at these out-door dispensaries for years.

2668. That is, the out-door departments of hospitals? Yes. Whether they take the medicines prescribed for them or not is a question I could not answer, but enormous quantities of medicine are given to these people and taken away from the hospital at a very great cost to the institution.

2669. Would it do to insist upon all people who are admitted as out patients bringing with them a note from a medical man? I do not understand you.

2670. Would it do to insist, as a qualification for treatment at the out-patient department, that the people should bring a letter from a medical practitioner recommending them for treatment? That would be an exceedingly good method if it were possible to carry it out; but I do not see very well that that could be carried out. It would be difficult to obtain a certificate in some cases.

2671. Do you think it would do to adopt the system which is adopted in some London Hospitals now, to limit the number of persons to, say, twenty each day, taking the more important cases, and turning the others away? Yes; that would be a very good thing. The treatment that it is possible to give to out-door patients is so inefficient that really the whole thing amounts to a positive farce in many cases. The out-door surgeon is asked to see and prescribe for forty or fifty cases in an afternoon, and sometimes, I think, considerably more than that, and if he were to go immediately after lunch to the institution, and remain till night, it would be only just sufficient to see the patients that pass in review before him. He cannot devote more than two or three minutes to each, and where there is any necessity for a subtle diagnosis it is quite impossible that he can make it.

2672. *Mr. Barling.*] Have you anything that you would like to say, Dr. Mackellar, apart from the questions submitted to you? No; I cannot think of anything.

FRIDAY, 14 JULY, 1899.

[The Commission met at the offices of the Public Service Board at 3:30 p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).  
 F. NORTON MANNING, Esq., M.D. | J. POWELL, Esq., J.P.  
 J. BARLING, Esq., J.P.

Robert Vandeleur Kelly, L.R.C.P., F.R.C.S., sworn and examined:—

R. V. Kelly,  
 L.R.C.P.,  
 F.R.C.S.  
 14 July, 1899.

2673. *Mr. Barling.*] Will you tell us what experience you have had in hospital and dispensary work both here and in the Old Country? Yes. First of all, I had experience in Edinburgh as a student in connection with the dispensaries; afterwards in Glasgow, for six months I had complete charge of the dispensary district, and for four years I held an appointment in Ireland under the Local Government Board as medical officer of a large dispensary district; as medical officer of health and as a magistrate for the county. Then I was very nearly five years outdoor surgeon to the Sydney Hospital, during which time I came in contact to a certain extent with the same material that comes before the Hospital Admission Board—the out-patients.

2674. You have, I think, on many occasions, acted for Dr. Paton, Government Medical Officer, and consequently have had opportunities of observing the method in vogue in connection with admissions to the Government asylums and the hospitals subsidised by the Government? I have.

2675. The Commissioners will be glad if you will kindly give them the benefit of the valuable experience you have gained in connection therewith? First, I may state that I think the hospital admission system is admirable. One thing I have noticed in cases that have come before me, and that is that chronic cases come again and again. You send them to the asylums, and they go there for a few months; but after they have got out they come back again. That is one difficulty which apparently you cannot remedy as things are now. I may say that the superintendents of the hospitals in every way help the Government Medical Officer. In any urgent case they will always strain a point to accommodate them; but in spite of this I consider that there are often cases which it is very hard to know what to do with. Patients come, and there is no room in the hospital, and they are not exactly suitable for admission. They are not mild enough cases to go to Rookwood, or one of the other asylums, and, of course, sometimes the hospitals are all full, or the vacancies are not very many.

2676. Who has practically the right to decide as to admission to the hospitals on Government orders? Theoretically, the Government Medical Officer certainly—that is to say, he has the right to veto, but in practice it is very much divided between him and the superintendents of the hospital. I will explain how that happens. They have printed forms; a man brings down a printed form to the superintendent of hospitals, on which it says:—"The following case is suffering from such and such a disease. If you will order his admission we will take him in"—that is to say, they will strain a point to make room for him. Under these circumstances the Government Medical Officer could scarcely refuse to give an order, so that in that way it gives the superintendents of the hospitals a certain power. It divides the power with the Government Medical Officer. I think myself that the Government Medical Officer ought, of course, to be the chief power and authority, and so he is in theory. He can veto, and he can object. As a matter of practice the admissions lie very much with the superintendents of the hospitals. I am not saying whether that is a good thing or a bad thing.

2677. How has that right been exercised, so far as your observation goes? In this way. The vacant beds are marked on a piece of paper, which is laid before the Government Medical Officer. Suppose there were three vacancies in the surgical ward, and you have already filled them, then in comes a case with an order from a superintendent. They say, "If you will give an order we will admit this person," although there is no vacancy on the hospital sheet. Then you send it as an urgent case. I should like to explain that these are generally supposed to be outdoor cases, which are selected for operation or treatment indoors. For instance, some man is attending as an outdoor patient of the Sydney or Prince Alfred Hospital, and it is found that the patient has a tumour or an abscess, or something requiring operative proceedings. They take him in, and send to the medical officer, and say, "If you will give an order we will admit this patient." That is recognising the power of the medical officer to grant the order. Of course in nearly every case it is granted. In that way it divides the power very much between him and the superintendent of the hospital.

2678. So that, as a matter of fact, some cases are admitted, not on account of their urgency, but on account of their being favourable cases for operative surgery? We have no way of knowing whether these cases are urgent or not. We, perhaps, have not seen the patient at all, but we take him in.

2679. Although, from information given you, there is no vacancy? Yet; although according to the returns there may be no vacancy, I take it that these are cases that require operations, and it is necessary that the patient should be taken in. That is the way that the matter comes before the Government Medical Officer.

2680. Would you suggest any alteration in this procedure, and if so, what? Well, I think that as long as the Government Medical Officer and the superintendents of the hospitals pull well together as they do now, the present is as good a system as you could have, but as a matter of principle, if the relations were strained at all between them it might lead to confusion, but the hospital authorities have always hitherto been so obliging and willing to strain a point for the Government Medical Officer that I do not know that I could suggest any radical change, certainly not with the present hospital system.

2681. Do you approve of any money being demanded or taken from patients who are admitted to the hospitals? I do not approve of money being demanded from patients at all. With regard to patients giving money voluntarily, I say, of course, yes; but demanding money seems to me an iniquitous thing. I know several cases in which patients have been most harshly treated, money being demanded of them before the other patients. They are made to look foolish. No money should ever be demanded of patients, though they might try to get money from their friends and relatives outside.

2682. What course then would you recommend for adoption with regard to the people who could pay something towards the cost of hospital treatment? That could be met by dividing the hospitals so as to have one absolutely free, and another available to persons on payment of a graduated scale of charges,  
 and

and there should not only be a graduated scale of charges, but also a scale of small comforts. People who go in and pay use the same coarse cups and mugs, and have the same surroundings as those who do not pay. A person who pays 5 guineas a week has exactly the same mugs and spoons as a person who pays a few shillings a week. You cannot graduate these matters under the present system—you treat all alike. Persons who are paying 5 guineas a week like to have some extra comforts. I know a case of a girl who brought in her own tumbler and a mug for use in the hospital. If you graduate the payment you ought certainly to graduate the comforts. That certainly could be met by having a hospital in which the payments were graduated on a scale to suit the means of the persons going in, and affording comforts on a corresponding scale.

R. V. Kelly,  
L.R.C.P.,  
F.R.C.S.  
14 July, 1899.

2683. Then you would advise that we should have one hospital absolutely free, and another hospital as the requirements of Sydney may demand, at which a graduated scale of fees may be charged? Certainly; one hospital to be absolutely free, and known to be so.

2684. So that it would be understood that persons who went there would be persons absolutely unable to pay anything? Quite so. With regard to the working out of the pay system that is only a question of working out details; but one hospital should be absolutely free.

2685. Are you aware that the cost of accommodation and treatment in a private hospital is far beyond the means of a large section of the community, who yet could pay something towards their expenses while under hospital treatment? Yes, the charges are very high, and people cannot afford to pay them.

2686. And therefore it shows the necessity of having a medium class hospital, such as you have suggested? Quite so. They have no choice between that and going into the hospital.

2687. And as a result, from the want of this, private charity is much abused? Yes, very much.

2688. Can you give any instance of abuse of hospital benefits—that is, of people going into hospitals who have the means to pay? No case has come under my own immediate observation, but I have heard of cases from other people.

2689. Then the remedy that you suggest of having a second-class hospital would meet the case? Yes.

2690. The statement has been made that, by reason of their high charges, the doctors themselves are partly responsible for abuses of the hospital system; do you think there is anything in that contention? Yes, I think there is. I think that young and inexperienced doctors, when starting, have a hard-and-fast idea with regard to fees. I do not think that sort of thing exists amongst doctors who have been practising for any considerable time. Experience has compelled them to graduate their fees.

2691. Has it come under your notice that the benefits afforded by friendly societies are taken advantage of by the well-to-do classes? No, I cannot say that it has. I have had some considerable experience of friendly societies, though I have nothing to do with them now, and I cannot say that I ever knew a case. I think that in all the cases that arise, in which there is a disagreement between the doctor and a member he thinks he is well off; he thinks the man is better off than he is, and possibly he wants to extort a little extra attention because he is better off. That leads to friction between the doctor and the patient.

2692. Is there anything else you would like to say that would assist the Commission in the pursuit of their inquiries;—we should like especially to have an account of your experience with regard to the dispensary system with which you were connected in Edinburgh? The dispensary system is, of course, conducted as a charity—that is to say, that the people who get these dispensary orders obtain medicines and advice free. In Edinburgh there are a lot of students, who do most of the visiting, under the supervision of a medical man. The subscribers, of course, would have the option of recommending patients, and the people go to the dispensary and get attended to by the doctors there or they are visited at their homes. That system seems to me to work very well in the Old Country. There are an enormous number of cases that you cannot take into a hospital, such as old women with chronic bronchitis. They are not bad enough to go into hospitals, and they will not take them into the other institutions because they want a certain amount of medical attention, and the dispensary meets their cases. These old women go to the dispensary and get cough-mixture and other remedies. If a sick child is brought there it is attended to. If the child is very bad it finds its way to the hospital, or is suitably treated at home. I think the Charitable Dispensary fills up a very large gap in the medical charities. In Edinburgh they have the advantage of a large medical school, and they have scores of students to visit out-cases. If any difficulty arises they send for the doctor under whose supervision the students work. The same applies to midwifery, which is a very large branch, and a branch of medical charity which is very much wanted on account of its urgency. In Ireland the dispensary system is worked under the Local Government Board. The orders there are given by members of the committee, who are all ratepayers; and although it is a charity in one sense, there are no subscribers to it as in the case of the Edinburgh and other charitable dispensaries, which are kept going by private subscriptions. A dispensary like that would take off a very large number of applicants who go to the hospital-admission depot. A great number of people come in who only want a bottle of medicine, and can live at home. These we send as outdoor patients to the hospital. I would like to say something with regard to the word "pauper." If you strike out the word pauper, you strike out one great engine of force. You must have some line of demarcation. A patient will do one of two things, either go as a pauper, or find means to pay. If you strike out the word "pauper," you leave things in a state of confusion. It is the only test that you can bring to bear on a man's delicacy of feeling. Unfortunately you have to deal with a great deal of snobbery in treating the sick public. They like to boast of having been in the hospital or of the money they have paid. Many people are not a bit ashamed to go and get tickets if the word pauper is not on them. In Ireland the fact of getting a pauper's ticket disfranchises a man. They realise that if they can afford to pay, and they go and beg a ticket, they lose their franchise. Although unfortunately Ireland is different from other countries, many of the elections being illegal through the candidates being returned by pauper votes, still they are held to some extent in check by the penalty of disfranchisement. You were asking if I had anything to say about hospitals, and I would say a word about the Carrington Convalescent Hospital. If I mention some facts which came under my notice, it will bring the whole question before you with regard to demanding money from patients. I attended a man who worked for the Gas Company, who had a wife and seven or eight children. He got pneumonia, but made a good recovery, and as soon as he was well enough to get about, I said, "You must go into the country; I will get you into the Carrington Hospital." He was much pleased at this. I went to the Sydney Hospital and asked for an order, and I said, "This man cannot pay a penny. He is drawing £1 a week from his lodge, but that only pays his rent and keeps his family from starving." He went to the Carrington Hospital. I called

at

B. V. Kelly, L.R.C.P., F.R.C.S.  
14 July, 1899.

at his house a few days afterwards, and said to his wife, "How does your husband like the hospital?" She said, "He does not like it at all; he wants to come home." I thought it was a very funny thing, so I cross-examined her on the matter, and she at last said, "Well, when he arrived there, he was shown into a room with a lot of other patients, and the matron or nurse came in and said, 'Well, now, what are you going to pay?', and demanded £1 a week." This took the man's breath away, and upset him so much that he felt quite ill at such a request being made before a room full of people. That was the welcome that he met with. I had distinctly stated at the hospital that the man could not afford to pay anything. I told his wife to write to him and say there was some mistake, and the man was kept at the hospital for a time. That was his experience of the Carrington Hospital. As regards the demanding of money in any special form, you are at the mercy of the nurses, the matron, or the manager. You cannot tell what they say or what they do not say. The more money they get the better they think they are doing their duty to their employers. Money should not be demanded from patients in any shape or form. They might apply to his relations, but the patient should not be troubled with such demands.

2693. I understand that you recommend the dispensary system for Sydney? I think that the dispensary system would relieve the other charities very much.

2694. It would have the effect, according to your view of the case, of preventing a good many patients from going to the hospitals at a very much larger expense; it would have the effect also of being agreeable to many of the people themselves, who would rather be treated at home; and, thirdly, it would be a very effective means of educating our students? I think so. There is a school of medicine growing up here, and students could do the visiting. One result would be that the diseases would be taken earlier, especially children's diseases. They would be diagnosed earlier. The parents carry the children to the depot at present when they are suffering from measles or scarlet fever. They wait till the patient is very bad, and then they think it is going to be taken into the hospital. Speaking with regard to a dispensary, I distinctly mean a charitable dispensary. I do not mean a provident dispensary; and if the patients know that they are getting relief out of a charity there should be no question of their paying at all.

2695. What has been your experience as a student as to the effect of this system on the education of students? I think you may say that it has been beneficial. I do not see how a student, if he simply goes round the clinical wards of a hospital preparing for his examination, ever can form a clear idea of what he has to meet when he goes out into the world and has to attend patients in dirty ill-lighted rooms with but few conveniences. In the clinical wards of a hospital you have everything that is required—perfect light, ample attendance, plenty of water, and every appliance; but when you go into some of the hovels in which people have to be attended you can get nothing, not even light. It is an experience which we all go through in the medical profession. When you go into those hovels it is very different from treating patients in a beautifully-illuminated theatre, with people to hand you sponges and hot water, and everything you want. I think that the dispensary system acted very well in the Old Country, particularly in cases of midwifery.

2696. It gives the students an experience such as they would be unable to obtain in any other way? I do not see how they could get the same experience in any other way, except by being apprenticed to a medical man in practice.

Alexander MacCormick, M.D., sworn and examined:—

- A.  
MacCormick,  
M.D.  
14 July, 1909.
2697. *President.*] You are now senior surgeon at the Prince Alfred Hospital? Yes.
2698. As regards payment by patients for treatment, would you say that the hospital should be only for necessitous cases, or should payment be taken where it is available? A great drawback with regard to payment is that the patients think that they are paying for everything that they get, and they do not hesitate to take advantage of it; whereas, if they did not pay anything, they would be too proud to take advantage of it. The hospital is a charitable institution, pure and simple, but when the patients pay they do not look upon it as a charitable institution.
2699. Is that the only objection to receiving payment if it is offered? Suppose it is known that a man can pay £1 or £2 a week, what is the objection in principle to receiving the money? There is no objection in principle, but the patient gets advice for practically nothing, and is under the impression that he is paying for all that he gets. Not only that, a man who could pay for private treatment would take advantage of that when otherwise he would not.
2700. Then to that extent it would be unfair to the profession? Yes, to the profession in general.
2701. Then, would you be opposed to payment being received from patients under any circumstance? Yes.
2702. Do you approve of payment for the registration of out-patients? That could be subjected to the same abuse as the other practice.
2703. The same principle would govern that? Yes.
2704. Perhaps to a greater degree, because the fee for registration is merely nominal? Yes. I have been at the hospital and seen a man come in who has had, perhaps, gonorrhœa. He puts 10s. in the out-patients' box and demands treatment just as if he paid for all that he got. Of course, a patient like that could be told to get his 10s. back and go somewhere else.
2705. Do you think that the hospital authorities make proper inquiries as to who can pay and who cannot? They try to, but it is impossible for them to know the circumstances of everybody.
2706. They make inquiries when the patient is admitted, but it is difficult to follow them up? Yes; I send a number of patients to the hospital, and I only take their own word as to whether or not they can afford to pay.
2707. Do you think the hospital accommodation of Sydney is sufficient for present requirements? I do not think so. Certainly it is not sufficient at the Prince Alfred Hospital. Very frequently patients from the country have to wait three or four weeks to get admission.
2708. What do you say, looking at the question as a whole? Sydney Hospital used to be crowded also I do not know what it is like now, as I have not been connected with that institution for three or four years.
2709. Assuming that the hospital accommodation is not sufficient for present requirements, could you make any suggestion as to the direction in which it should be increased? One or two extra pavilions could

A.  
MacCormick,  
M.D.

14 July, 1869.

- could be added to the Prince Alfred Hospital. The administrative department is there in any case, and the only cost would be that of two additional pavilions.
2710. And there is ample ground there? Yes.
2711. That would not apply to the Sydney Hospital? No; the ground there is limited.
2712. Could you tell as anything about Moorcliff? I do not know anything at all about it.
2713. Would you say whether, in your opinion, there should be a separate ophthalmic hospital in Sydney, or whether it could be attached to the Sydney or Prince Alfred Hospital? It could be attached to a general hospital.
2714. Would the conditions be as good in connection with a general hospital as in a separate hospital? I do not see why they should not, as long as there is plenty of room to put up separate buildings.
2715. Do you know anything about the private hospitals in Sydney? Yes.
2716. Could you tell us how many there are? I do not know. In conjunction with three other medical men, I help to keep one going. There are certainly six or seven of these hospitals.
2717. Would you approve of the registration of private hospitals? Yes.
2718. And of their inspection? Certainly.
2719. At present anybody can start a private hospital? Yes, anybody.
2720. And conduct it in any way they please till something goes wrong? Yes.
2721. Do you know whether registration and inspection are carried on in Melbourne? I do not.
2722. What are the rates that are generally charged in private hospitals? We charge from 3 guineas to 6 guineas a week, according to the accommodation required and the nature of the case. That includes everything except stimulants and washing.
2723. It includes nursing and medical attendance? No; it does not include medical attendance. It includes boarding, nursing, dressings, and that sort of thing.
2724. Do you know anything about the suburban hospitals? No.
2725. *Mr. Barling.*] I think we understand from your examination that you are entirely against any payments being made by hospital patients for treatment? Yes.
2726. How would you provide for that class of the community who are able to pay something, but who are not able to pay the heavy charges made in connection with private hospitals? I should take them for nothing in a general hospital.
2727. Would not the charitable public be very much victimised if persons went into the hospital who could pay something and yet were admitted free of cost? The charitable public would not be victimised nearly so much as they are already, because people take advantage of the hospitals now. They pay a small fee, and they think they are not under an obligation to anybody.
2728. Would it not be a good thing to have a second-class hospital which would charge graduated fees, so that a person who might be able to pay 15s., or £1, or £2 a week could go there instead of to private hospitals, the charges in which they could not pay in addition to the medical fees? Would that be looked upon as a charitable institution?
2729. It might be partly so? No patient could be provided for out of 15s. a week.
2730. I suppose a patient could be provided for for 30s. or £2 a week? That would pay his maintenance expense in a general hospital, nothing more.
2731. If a person paid £2 a week he would not feel that he was dependent exactly on charity? I think that most medical men who give their services to charities for nothing would prefer that the patients who go there should not pay anything.
2732. So you would leave patients to go elsewhere, and pay what they could afford, by making special arrangement with the doctor in connection with a private hospital? Yes. I am thinking of surgical cases principally, and their attendance would be expensive. They could be sent to a general hospital for nothing.
2733. A case has come under our notice, in evidence given here, of a patient who was prepared to pay 30 guineas for an operation, but the doctor demanded 50 guineas; being unable to pay 50 guineas the patient went into the hospital and got the operation done for nothing;—are not cases like that likely to occur under the present system? If a person could pay 30 guineas his residence in all probability in the hospital would not take more than three weeks, and that would mean 9 guineas for board and lodging. That would not be much.
2734. If a person can pay 30 guineas, but cannot pay 50 guineas, and has to go to the hospital, it would seem that some system should be devised which would do away with such anomalies? There is a great difference between 30 guineas and 15s. a week.
2735. It seems that some middle-class hospital should be provided to meet the cases of the numerous class who are getting from £150 to £200 a year, and who have to go into the hospitals or to make some private arrangement? We try to meet that class of cases by special arrangements.
2736. Have you paid any attention to the dispensary system which is in operation in Edinburgh and other parts of the Old Country? Yes; I attended some of the dispensaries there as a student.
2737. Do you think it would be advisable to have some such system in Sydney? I do.
2738. What would be the advantages of it? It would relieve the out-patients' department of the hospital, and it would provide a field for teaching students from the University. In Edinburgh the students pay a small fee to the dispensary, and they see all the out-patients. They get the names and addresses of patients who are very ill, and visit them. When they are in any trouble, or doubt, a fully qualified medical man is called in.
2739. Such a system as that would relieve the hospitals of a great many patients who go there now, and it would provide opportunities which are now wanting of educating our medical students? Yes.
2740. Evidence has been given to us that students in the hospitals, where they have first-class appliances of every kind, may be at a loss to know what to do when they visit patients in poor quarters, so that a dispensary system would meet a want in that direction? Yes.
2741. Would you think that such a dispensary could be established here? I think so—in fact, there was some talk about it amongst medical men some years ago.
2742. From your experience, you think it would be a desirable thing? Yes, a very desirable thing.
2743. A great deal has been said in Parliament and elsewhere about overworking nurses; would you give us your opinion on that subject. At the Prince Alfred Hospital the nurses work ten and a half hours a day;—do you think that is too long? Much depends upon the size of the staff. I daresay that sometimes they would be worked very hard.

- A. MacCormick, M.D.  
14 July, 1899.
2744. From your experience of that hospital, do you think the nurses there are overworked? I have not the opportunity of seeing them during the early morning hours or late in the evening; but they always look very well.
2745. *Dr. Manning.*] Would not a free dispensary also relieve the in-patients department of the hospital? Yes, of course, by students visiting the patients at their own homes.
2746. Therefore there would be more beds left for urgent cases? Yes.
2747. The number of ophthalmic patients at the Prince Alfred Hospital is rather small for teaching purposes, is it not? Yes; far too small for teaching purposes.
2748. Would it not be an advantage to increase the ophthalmic department of that hospital? Certainly.
2749. Have you any scheme for the support of hospital patients if payments are abolished? No; that is a part of the matter that I have never thought about.
2750. *President.*] Have you ever considered the question of a hospital rate? That is the only way that you could get at the people who really benefit by the hospital.
2751. The cost of the hospitals falls now on the liberal portion of the community? Yes. A great many people who take advantage of the hospitals would have to pay if we had a hospital rate. The class of people who take advantage of the hospitals here are a class much better off than those who do so in the Old Country.

MONDAY, 28 AUGUST, 1899.

[The Commission met at the Offices of the Public Service Board at 2:15 o'clock, p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).

F. N. MANNING, Esq., M.D.  
J. POWELL, Esq., J.P.

J. BARLING, Esq., J.P.  
CRITCHETT WALKER, Esq., C.M.G.

Robert Thompson Paton, L.R.C.P., Ed., F.R.C.S., Ed., further examined:—

- R. T. Paton, L.R.C.P., F.R.C.S.  
28 Aug., 1899.
2752. *Mr. Barling.*] When you were before us in April last you gave the following evidence: You said, "At present we have practically an epidemic of venereal diseases. I never remember having so many cases as we have had in the first three months of this year." Since then Dr. Thompson has furnished us with statistics on the matter, which, although to a certain extent bearing out your statement of the case, do not do so to the extent that your answer may convey. The percentage of male venereal cases of the total number of applications at the Hospital Admission Depôt, in 1898, was 10.61; from January to the end of June, 1899, it was 13.37, a considerable increase. For the year 1898, the corresponding percentage in the case of females was 4.71, and for the half-year of 1899, 6.38; we understand you have some further information on the matter? My reason for stating that there was an increase in the number of cases was because from 1st to 30th June, 1898, we had 440 male cases, and 92 female cases, applying at the Hospital Admission Depôt, and from 1st to 30th June, 1899, there were 523 male, and 92 female cases, showing an increase of 83 males. The accommodation for lock cases is 34 beds for men at the Coast Hospital, and 12 beds for women, who are treated at the Sydney Hospital. That the Coast Hospital accommodation is insufficient is shown by the fact that during the first six months of 1899, on 92 of the 155 working days, the Coast Hospital bed-list showed no vacancy for venereal cases. The venereal cases applying at the Hospital Admission Depôt are all of the destitute class; and, judging from the expensive advertisements of persons professing to cure such diseases, one is led to believe that the cases applying at the depôt only represent a very small proportion of the number of venereal cases in Sydney.
2753. Can you tell us what powers the police have in dealing with a case of prostitution or solicitation to that end? I cannot be absolutely certain; but I understand the police cannot arrest except on the charge of the person solicited.
2754. The police cannot take independent action? So far as I am aware, that is so.
2755. Can you suggest any measure, short of legislative in the shape of a Contagious Diseases Act, which would have a tendency to minimise the evils which are shown to be so great a burden on our charities? If we had power to retain the women in the hospital until the infectiousness of the disease had disappeared that would be a help.
2756. We should require legislation for that? Yes.
2757. Dr. Mackellar has given evidence on this point; he is very much opposed to repressive legislation, but he says every inducement should be held out to the women to remain in the hospital so long as there was a danger of spreading disease;—do you think everything is now done in that direction that can be accomplished? I think so.
2758. The women show themselves restive of retention? Some remain in for a considerable time; but others only remain until they can get about conveniently—until pain and sores have disappeared.
2759. Not until they are cured? No.
2760. Have you ever visited at the homes of people who are not able to go to the Hospital Admission Depôt? I visit the destitute sick unable to attend at the Hospital Admission Depôt, at the request of the Chief Medical Officer, and of the police.
2761. At their own homes? Yes; I am also frequently asked at my own house to visit, by clergymen and others. I sometimes receive requests by letters and telephone, and am sometimes asked by charitable societies. Visits, other than at the request of the Chief Medical Officer or police, are not recognised as part of my duties.
2762. When you see persons at their own homes, what are the circumstances which lead you to send them to the hospital? Some of them are sent to the hospital because they are suffering from diseases requiring surgical treatment, or are acute medical cases requiring constant nursing; others I have to send to the hospital—because they are destitute, because they have no means to obtain medicines or medical attendance or the necessary food.
2763. Have you always done this? Yes.

2764. I think you are conversant with what is known as the dispensary system, especially in Edinburgh;— will you let us know whether you think it desirable to institute some such system here, and whether, if that were done, it would sensibly relieve the hospitals? In my opinion it would be a good thing to institute here, and also it would, to a certain extent, relieve the hospitals. There are a number of cases which I have sent in which could have been treated at home had they been able to get medicines and regular medical attendance.

R. T. Paton,  
L.R.C.P.,  
F.R.C.S.  
28 Aug, 1899.

2765. It would also be of advantage to medical students, who could be usefully employed in carrying out this work? Yes.

2766. I understand you are entirely in favour of some such system here? I am.

2767. *President.*] If women are to be compulsorily detained, the number of beds must be largely increased? Yes, you would require more than the twelve beds that are now available.

2768. Until the beds were increased the measure would only have a limited effect? Yes; they would soon be filled up.

2769. *Mr. Powell.*] If you had power to keep these women in the hospital, the advantage would only be a limited one, as you would have no control over those who would not go to the hospital? It would be a slight amount of protection, but not a great deal. The people who apply are only those who are destitute.

2770. Disease might be very freely propagated by others? Yes; by those who could afford medical treatment elsewhere.

**Commission.**

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,  
Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved—

JOSEPH BARLING, Esquire, Chairman of the Public Service Board, and one of Our Justices of the Peace of Our Colony of New South Wales, Associate of the Institution of Civil Engineers ;

GEORGE ALEXANDER WILSON, Esquire, a Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony ; and

JAMES POWELL, Esquire, Deputy Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony,—

Greeting:—

Know Ye, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any two of you, as herein-after mentioned, to make a diligent and full inquiry into, and report upon the methods of carrying on Government Charitable Institutions, and the way in which Grants of public money to charitable objects under the control of the Government are administered, including Grants for the Aborigines; and to report also upon the methods of administration and relief in force in all charitable organizations which receive aid from the public Treasury, including the Hospitals of the Colony; with further power to suggest desirable changes in the existing state of affairs, with a view to placing the expenditure of public moneys in such directions upon a more satisfactory footing: And We do, by these presents, grant to you, or any two of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And We do give you power at your discretion to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission: And Our further will and pleasure is that you do within three months after the date of this Our Commission, certify to Us, in the office of Our Chief Secretary under your or any two of your hands and seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony, that they be assistant to you and each of you in the execution of these presents: And We appoint you the said JOSEPH BARLING, Esquire, to be President of this Our Commission; which said Commission We declare to be a Commission for all purposes of the Act 14 Victoria, No. 1, intituled "*An Act to regulate the taking of Evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commandor-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this tenth day of November, in the year of Our Lord one thousand eight hundred and ninety-seven, and in the sixty-first year of Our Reign.

Principal Under Secretary.

VICTORIA,

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,  
Defender of the Faith, and so forth,—  
To our Trusty and Well-beloved—

GEORGE ALEXANDER WILSON, Esquire, a Member of the Public Service Board, and one of Our  
Justices of the Peace of Our said Colony,—

Greeting:—

WHEREAS by an instrument under the Great Seal of Our Colony of New South Wales, bearing date the tenth day of November, one thousand eight hundred and ninety-seven, We did, *inter alia*, appoint JOSEPH BARLING, Esquire, to be a Member, and also President of the Royal Commission of Inquiry in connexion with Charitable Institutions: And whereas the said JOSEPH BARLING has now resigned the Office of President: Now, therefore, know You, that We, of Our especial grace, have thought fit to appoint, and do hereby appoint you, the said GEORGE ALEXANDER WILSON, to be President of such Commission.

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependancies, at Government House, Sydney, in New South Wales aforesaid, this eighth day of February, in the year of Our Lord one thousand eight hundred and ninety-eight, and in the sixty-first year of Our Reign.

Principal Under Secretary.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,  
Defender of the Faith, and so forth,—  
To Our Trusty and Well-beloved—

RICHARD CORNELIUS CRITCHETT WALKER, Esquire, Companion of Our Most Distinguished Order of Saint Michael and Saint George, Principal Under Secretary; and

FREDERIC NORTON MANNING, Esquire, Doctor of Medicine,—

Greeting:—

WHEREAS by an instrument under the Great Seal of Our Colony of New South Wales, bearing date the tenth day of November, one thousand eight hundred and ninety-seven, We did appoint JOSEPH BARLING, GEORGE ALEXANDER WILSON, and JAMES POWELL, Esquires, to be a Royal Commission of Inquiry in connexion with Charitable Institutions, and the said JOSEPH BARLING to be President thereof: And whereas by a further instrument, bearing date the eighth day of February, one thousand eight hundred and ninety-eight, We did appoint the said GEORGE ALEXANDER WILSON to be President of such Commission in the stead of the said JOSEPH BARLING, who had resigned such office: And Whereas it hath appeared to Us to be expedient to appoint additional Commissioners: Now, therefore, know Ye, that We, of Our especial grace, have thought fit to appoint, and do hereby appoint, you to be such additional Commissioners accordingly.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependancies, at Government House, Sydney, in New South Wales aforesaid, this sixteenth day of February, in the year of Our Lord one thousand eight hundred and ninety-nine, and in the sixty-second year of Our Reign.

(L.S.)

HAMPDEN.

By His Excellency's Command,  
JAMES N. BRUNKER.

Entered on record by me, in Register of Patents No. 20, page 272, this twentieth day of February, one thousand eight hundred and ninety-nine.

For the Colonial Secretary and Registrar of Records,  
CRITCHETT WALKER,  
Principal Under Secretary.

#### ROYAL COMMISSION OF INQUIRY ON PUBLIC CHARITIES.

WHEREAS it is necessary to extend the time within which the Commissioners are to make their report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such report for a period of six months,—to take effect from the 10th February, 1898.

Given under my hand at Government House, Sydney, this second day of March, one thousand eight hundred and ninety-eight.

ROYAL COMMISSION ON PUBLIC CHARITIES.

---

REPORT.

---

To His Excellency the Right Honorable WILLIAM, EARL BEAUCHAMP,  
K.C.M.G., Governor and Commander-in-Chief of the Colony of New  
South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,

We, your Commissioners, were appointed by Letters Patent, dated the 10th day of November, 1897, "to make a diligent and full inquiry into, and report upon the methods of carrying on Government Charitable Institutions, and the way in which grants of public money to charitable objects under the control of the Government are administered, including Grants for the Aborigines; and to report also upon the methods of administration and relief in force in all charitable organizations which receive aid from the Public Treasury, including the Hospitals of the Colony; with further power to suggest desirable changes in the existing state of affairs, with a view to placing the expenditure of public moneys in such directions upon a more satisfactory footing." Much time was occupied at the outset of the inquiry by a special investigation which we were required to make, under the authority of a separate Commission, into the management of the Institution for the Blind at Strathfield; but on the termination of that investigation we proceeded with our main inquiry, and determined to divide the work into the following sections:—

1. Institutions dealing with the Blind and with the Deaf and Dumb.
2. Subsidised Charitable bodies, such as the Benevolent Societies and kindred institutions.
3. Hospitals.
4. The Aborigines.
5. Government Institutions controlled by the Director of Charities, and also the operations of the State Children Relief Board.

With statistical information before us relative to the operations of the institutions coming within the above groups, we did not think it would be necessary to take formal evidence in respect to each institution; and we proposed, in regard to Groups 2 and 3, to report only on important typical institutions, and on such of the less important as might appear, on an analysis of their accounts, or for other reasons, to require special investigation, from which course we have found no reason to depart.

Our first Report, dated 29th June, 1898, dealt with—

- The Institution for the Deaf and Dumb and the Blind, Newtown Road;
- „ Sydney Industrial Blind Institution;
- „ Institution for the Blind, Strathfield;
- „ St. Patrick's Institution for the Blind, Lewisham; and
- „ Institution for the Deaf and Dumb at Waratah.

The two latter, not being State subsidised institutions, did not come within the scope of the Commission; but, finding that a knowledge of their operations would probably throw light on the subject we were commissioned to inquire into, we obtained the permission of their governing authorities to extend our inquiries to them.

At

At the end of the Report is given a summary of the recommendations embodied within its pages as follows:—

*Institution for the Deaf and Dumb and the Blind.*

1. That, as long as State aid is continued, a responsible officer of the Government shall have power—(1) to audit the accounts at any time; (2) to ascertain if the funds are expended for proper purposes, and with due regard to economy; (3) to see that the rules and by-laws are carried out in their integrity; (4) to report generally on the management of the institution, with a view to bringing under the notice of the Government and the Committee any defects that may, in his opinion, exist in connection therewith.
2. That receipts be given for all subscriptions, and that the auditor should include in his audit a thorough check of the receipt-book butts.
3. That the request of the Committee for a grant of £6,000 for building purposes be declined, the Committee having ample funds for the necessary buildings.
4. That a more extended energetic canvass for public subscriptions be made, particularly in the country districts of the Colony.
5. That measures be taken to collect all arrears of fees now recoverable, and that in future payment in advance should, as far as possible, be insisted on, as provided in the Committee's form of security; and that any special arrangements for reduced payments which it may be necessary to make with parents or guardians who may not be in a position to pay the prescribed fees, be strictly enforced, and any payments so arranged for be made in advance.
6. That Government payments for the maintenance of inmates of the institution be confined in future to children under the control of the State Children Relief Board; and that the fees for such children be paid from the Parliamentary Vote for the services of the State Children Relief Department.
7. That, in order to secure the additional accommodation at the Institution for the Deaf and Dumb and the Blind which the Committee state is required, the Roman Catholic children now there should be transferred to the Roman Catholic Institutions at Lewisham and Waratah, if satisfactory arrangements can be made for such transfer; and that, in future, all deaf and dumb and blind children of that Church who may be at any time under the control of the State Children Relief Board, should be maintained in the institutions established for that purpose at Lewisham and Waratah.
8. That the age at which pupils should be discharged from institutions in receipt of aid from the Government for the education of the deaf and dumb and the blind should not exceed sixteen years.
9. That there should be legislation for the purpose of controlling the admission of indigent deaf and dumb and blind persons from other colonies into New South Wales.
10. That in view of the risk attendant upon lending money on mortgage of freehold property, the Directors in future invest their accumulated funds in Government securities.

*Sydney Industrial Blind Institution.*

1. That, in view of the very considerable increase in the funds of the institution which will accrue from the Hunter-Baillie Legacy, and of the extended canvass which it has been determined to make for the purpose of obtaining increased voluntary contributions, the subsidy to be paid in future by the Government towards the maintenance and instruction of the workers shall not exceed £15 per head per annum, at which rate indigent persons can be maintained in Government Asylums for the Infirm and Destitute.

2. That, as long as State aid is continued, a responsible officer of the Government shall have power—(1) to audit the accounts at any time; (2) to ascertain if the funds are expended for proper purposes, and with due regard to economy; (3) to see that the rules and by-laws are carried out in their integrity; (4) to report generally on the management of the institution, with a view to bringing under the notice of the Government and the Committee any defects that may, in his opinion, exist in connection therewith.
3. That, in order to enable blind workers at the institution to live with reasonable comfort in their homes, their minimum weekly remuneration (inclusive of allowances) should be fixed at 17s. 6d. for men and 15s. for women, except in the case of workers who have other means of support.
4. That, in order to confine expenditure as far as possible to the instruction of blind workers who are capable of becoming fairly expert in the trades taught at the institution, it should be a condition in the case of any male worker that he should earn from the proceeds of his own labour not less than 10s. a week on the average, and in the case of any female worker that she should earn not less than 7s. 6d. a week on the average. The average for the purpose of this calculation to be the average of the immediately preceding quarter, ending 31st March, 30th June, 30th September, or 31st December, as the case may be.
5. That, as it is possible some of the workers may endeavour to take improper advantage of the provision for a standard minimum wage by not earning more than 10s. a week in the case of men, and 7s. 6d. in the case of women, the Committee provide against any such default by making mandatory instead of permissive By-law 11, which provides: "If at any time a learner or worker shall appear to be unsuited to the employment, or incapable of efficiency in it, or his conduct shall appear to be detrimental to the credit of the institution, or he shall become intoxicated, or conduct himself in a disorderly or unbecoming manner, or behave disrespectfully to the officers, the Committee may require him to leave."
6. That, should any worker be found to be incapable, after receiving two years' instruction, of attaining the standard of efficiency necessary to qualify to obtain the minimum wage, or should it be obvious at any earlier period that any worker cannot or will not reach the standard, such worker shall be required to leave the institution, in accordance with the provisions of the foregoing By-law.
7. That, as the By-laws only relate to male workers, a By-law be adopted providing for the appointment of a ladies' committee (which is already in existence without any such By-law) to deal with the women who are now admitted as workers at the institution.
8. That the periodical valuation of the stock, in the form of material and manufactured goods, be made by an expert not connected with the institution, whose certificate should be published in the Committee's Annual Report.

*Institution for the Blind at Strathfield.*

That, in view of the fact that two industrial establishments for the blind are unnecessary, and that their maintenance separately causes great waste of public money, the Committees of the Sydney Industrial Blind Institution and the Institution for the Blind at Strathfield be invited to meet and discuss with the Government proposals for the amalgamation of their institutions, in order that the women now employed in the industrial division of the home at Strathfield may be transferred to the Sydney Institution at Boomerang-street, and boarded and lodged in respectable homes, and utilising the buildings at Strathfield for other public purposes. As stated on page 13 of our Report on the Institution for the Blind at Strathfield, in view of the limited scope of the Home Teaching Department and the large expenditure incurred upon its administration, we fail to see any necessity for continuing its operations.

In the second section of our inquiries we commenced with the Benevolent Society of New South Wales, and, in view of the important position it occupies, and the urgent necessity for some alteration in its policy, we thought it desirable to make it the subject of a special report, which was presented on the 2nd December, 1898, and stands as the second Report of the series.

The recommendations which we were led to make as the result of a close and somewhat lengthy inquiry into the operations of this institution, were as under:—

1. That the operations of the Benevolent Society of New South Wales be confined, in future, to the distribution of outdoor relief and the reception and casual relief of destitute women and children.
2. That a maternity hospital on modern lines be established at Darlinghurst, as recommended in our letter of 11th October, 1898, to the Honorable the Chief Secretary, and that the property now known as the School of Industry be resumed for that purpose, and the necessary additions and alterations made to the building.
3. That the constitution of the proposed new hospital should be framed on lines somewhat similar to that of the Sydney or Prince Alfred Hospital, so as to invite and elicit from the public support for its maintenance.
4. That, in order to provide the School of Industry with other premises, negotiations be opened by the Government with the trustees of the Institution for the Blind for the acquisition of that institution's property at Strathfield.
5. That so long as the lying-in department is carried on at the Benevolent Asylum women confined there shall be required to leave the institution within thirty days after confinement, if certified by a duly qualified medical man to be fit for removal. Mothers, with their infants, not otherwise provided for, should be handed over to the Department of Charities for transfer to the Newington Asylum; the children, as soon as they reach a suitable age, should be boarded out by the State Children Relief Board.
6. Children, when received at the Benevolent Asylum, should be handed over without delay to the State Children Relief Board, upon which body the responsibility of dealing with such children has been placed by law.
7. That while the work of the Society is carried on as at present a paid medical officer be appointed, in addition to the honorary staff, to attend daily at the institution.
8. In view of the evidence which has been given to the effect that some of the recipients of outdoor relief are living in a state but little removed from starvation, we recommend for favourable consideration the giving of a larger grant for outdoor relief.
9. That the inspecting staff of the outdoor relief division be increased. Of the increased staff one should be a woman.
10. That in connection with the administration of outdoor relief the Society obtain the voluntary assistance of committees of lady inspectors in the several districts within the field of its operations, in order to secure a more efficient dispensation of charity.
11. That the accounts of the Society be audited by a competent independent auditor, instead of, as at present, by members of the Board of Directors.
12. That as long as State-aid is continued a responsible officer of the Government shall have power—(1) to audit the accounts at any time; (2) to ascertain if the funds are expended for proper purposes, and with due regard to economy; (3) to see that the rules and by-laws are carried out in their integrity; (4) to report generally on the management of the institution, with a view to bringing under the notice of the Government and the Committee any defects that may, in his opinion, exist in connection therewith.

13. If the first recommendation be given effect to, the present site and premises will not be required for the operations of the Society. We recommend that, in that case, the Society be provided with suitable premises (a store, offices, and casual refuge for destitute women and children) in exchange for those now occupied, which would then become available for any public purpose that may be determined upon.

Our Third Report, dated the 13th April, 1899, completed the investigation in regard to subsidised benevolent institutions, other than hospitals, and also dealt with the question of the administration of out-door relief by the Government. The institutions which were specially reported upon were—

The Sydney Rescue Work Society.  
 The Society for providing Homes for Neglected Children.  
 The Salvation Army's Institutions.  
 The City Night Refuge and Soup Kitchen.  
 The Sydney Night Refuge and Reformatory.  
 The Infants' Home, Ashfield.  
 The Central Mission Children's Home.  
 The St. Vincent de Paul's Home for Destitute Boys.  
 The Sydney Female Mission Home.  
 The Newcastle and Northumberland Benevolent Society.  
 The Newcastle Relief Society.  
 The Newcastle Mutual Help Society.  
 The Maitland Benevolent Society.  
 The Women's Hospital and Dispensary.

And the following are the recommendations which accompany that Report:—

1. That no further Government aid should be given to the undermentioned institutions:—
  - Sydney Rescue Work Society.
  - Society for providing Homes for Neglected Children.
  - Newcastle Relief Society.
  - Newcastle Mutual Help Society.
  - Sydney Female Mission Home.
  - Central Mission Children's Home.
  - Sydney Night Refuge and Reformatory, Francis-street, Woolloomooloo.
2. That, in view of the fact that the boarding-out and individual treatment of children has been sanctioned by Parliament, and has been shown to be the system best calculated for their future success and welfare, no institution in which children are dealt with in the aggregate should, except under special conditions, be subsidised by the State.
3. That subsidies to societies or organisations controlling more than one institution should not be granted so that they may be used for general purposes at the discretion of the management, but should be granted towards special objects to be named and defined.
4. That as the grant to the Discharged Prisoners' Aid Society, voted from 1881 to 1896, has been discontinued, and no special assistance is now given to discharged prisoners, except in the form of gratuities and railway fares, assistance should be continued to the Prison-gate Home for Men, and the Rescue Homes for Women—institutions mainly for the aid of discharged prisoners, which are carrying out useful work in a commendable and systematic manner under the direction and control of the Salvation Army, and which are now receiving aid in the form of State grants voted to that body for its "social work" generally.
5. That institutions which provide temporary relief, either in the form of quarters, food, or money, should demand the performance by all able-bodied applicants of a certain amount of work, in partial or full return for the assistance rendered; and that in the distribution of State aid preference should be given to institutions giving effect to that system.

6. That as soon as an hospital for the treatment of maternity cases and the diseases of women, such as is recommended in our report on the Benevolent Society of New South Wales, be established, no further State aid be granted to any other maternity home in the metropolis.
7. That in future it shall be a condition precedent to the granting of State aid to any institution, that it shall be visited and reported on by a responsible Government officer, and that after such aid is granted visits shall be paid to such institution once at least in every six months.
8. That as long as State aid is continued, a responsible officer of the Government shall have power—(1) to audit the accounts at any time; (2) to ascertain if the funds are expended for proper purposes, with due regard to economy; (3) to see that the by-laws are carried out in their integrity; (4) to report generally on the management of the institution, with a view to bringing under the notice of the Government and the Committee any defects that may, in his opinion, exist in connection therewith.
9. That Government allowances for out-door relief granted by the Chief Secretary's Department direct, and also through other agencies, should be dispensed on a much smaller scale than at present; and that as soon as local government is established throughout the Colony, any expenditure for out-door relief, not met from private charity, should be thrown entirely on the local rates, and not made a charge on State funds, either by subsidy or otherwise.

The Fourth Report, dated 15th September, 1899, embraces the results of our inquiries in respect to the hospitals of the Colony, and the provision made by the Government for the treatment of the sick poor. The principal recommendations contained in the Report are as under :—

- That all subsidised hospitals shall be periodically visited by an officer of the Government who shall have power—(1) to audit the accounts at any time; (2) to ascertain if the funds are expended for proper purposes, with due regard to economy; (3) to see that the by-laws are carried out in their integrity; (4) to report generally on the management of the institution, with a view to bringing under the notice of the Government and the Committee any defects that may, in his opinion, exist in connection therewith.
2. That a thorough inquiry by a Government officer, and a favourable report as to the necessity for the establishment of any new hospital, should be conditions precedent to the granting of Government assistance either to build or maintain that hospital.
  3. That model plans for country and district hospitals be prepared by the Government as guides to local committees in the construction of new hospitals.
  4. That the Government subsidy of £ for £ be continued both in regard to funds collected for the building and equipment and also for the maintenance of hospitals; but that special grants, in cases where no like amount is raised by subscription or otherwise, should not in future be given.
  5. That, as hospitals can, except under very special circumstances, be suitably built and adequately equipped at a cost of £200 per bed, the Government subsidy towards the building fund should not exceed the amount of £100 per bed.
  6. That the Government subsidy should only be granted where it is shown on the report of the inspecting officer that all regulations made by the Government are acted on, and that an efficient system of inquiry as to the pecuniary positions of both in- and out- patients is carried out.
  7. That Government aid be withdrawn from the Silvertown and Bulli Hospitals, and the special attention of the inspecting Government officer drawn to the question of the advisability of the continuance of Government aid to all hospitals in which the average annual cost per bed is exceptionally high.

8. That, in the absence of any local poor-law administration, the Government should provide and maintain, in connection with the asylums for the infirm and destitute, one or more hospitals on the model of the sick asylums under the Poor-law Board in Great Britain; and that, when these are available, the patients sent by the Government to the Sydney and Prince Alfred Hospitals should be only such cases as require special operative measures, or cases of emergency which would be prejudiced by delay in treatment.
9. That the administration of the Coast Hospital be removed from the control of the Medical Adviser to that of the Director of Government Asylums for the Infirm and Destitute; and that the institution be worked in connection with the asylums for the infirm and destitute and the hospitals or sick-asylums above recommended, and that it be utilised—(a) for cases of infectious disease until other provision for these cases is made; (b) for lock cases in men; and (c) for ordinary hospital cases which will not be prejudiced by the journey.
10. That the tram-line be extended to the Coast Hospital from the Botany terminus, and the patients taken by special ambulance conveyances at fixed times.
11. That a lock-hospital for women, with not less than thirty beds, be established in Sydney, and conducted under the Department of Government Asylums for the Infirm and Destitute.
12. That the Government should cease to pay the rent of the buildings occupied as an Ophthalmic Hospital at "Moorcliff" in connection with the Sydney Hospital, on the expiry of the present lease; and that the more chronic ophthalmic cases be treated in one of the hospitals or sick asylums under the Department of Government Asylums for the Infirm and Destitute, and those cases which are of a more acute character, or require operative treatment, in the Sydney and Prince Alfred Hospitals.
13. That the Regent-street Dispensary should be discontinued and the Government grant cease; and that Government assistance should be given in aid of a free dispensary, on the lines of such institutions in the Mother Country, from which patients in destitute circumstances could be treated, either at the institution or at their own homes, by a competent medical staff, and receive the necessary medicines, &c.
14. That all private hospitals be placed under Government supervision, provided for by Act of Parliament, in some such manner as exists in the neighbouring colony of Victoria; and that they only be allowed to continue their work under a license granted after inspection by a competent authority.

To realise the full bearing of the recommendations made in the several Reports, it will, of course, be necessary to read them in the light of the data and arguments on which they are founded.

It has been evident throughout the inquiry that the inspection by a qualified Government official of all charitable institutions subsidised by the State would be productive of many advantages, both to the Government and to the authorities of the institutions; and it will be noticed that in each of our Reports we have recommended the appointment of such an officer, and mentioned the duties he should be required to fulfil.

A matter which calls for special comment is the need for legislative provision dealing in a comprehensive manner with the administration of charity in this Colony. Up to the present time charitable relief has been dispensed, either by the Government itself or by charitable organisations, whose funds collected from the general public have been added to by liberal subsidies from the Government. It seems to us desirable that in any measure for the establishment of local Government throughout the Colony some provision should be made to give to the local authorities a legal position with regard to the dispensing of charitable aid, and power to provide by local or municipal taxation grants towards the support of hospitals and other charitable

charitable institutions now supported entirely by the Government or by subscriptions from the general public. Possibly some such provisions as exist in the "Hospitals and Charitable Institutions Act" of New Zealand, a copy of which is appended hereto, might be made applicable to this Colony.

Another question which needs legislative attention is that in relation to the exercise of some control over the inmates of Government Asylums for the Infirm and Destitute. At present, such inmates, although quite unable to earn their own livelihood, are able to leave at their discretion, and to travel the country as vagrants, and it is a general cause of complaint that they often find their way to hospitals and other charitable institutions, upon which they constitute a heavy burden. In many instances, the State has, in addition, to bear the cost of their conveyance back to the asylums.

Legislation is also required to prevent the importation of blind, deaf and dumb, sick, and other persons, quite unable to earn their own living, and who are likely to become, from the date of their arrival, or soon after, a tax on the finances of the Colony.

Our Commission further empowers us to make inquiries in respect to the administration of grants for the maintenance of Aborigines, and the methods of carrying on Government Charitable Institutions—including the State Children's Relief Department and the Government Asylums for the Infirm and Destitute. The Departments dealing with the Aborigines and State Children are each administered by a board of management appointed by the Government, the members of which act without reward for their services. Of the operations of these Boards the Government is made cognisant through the medium of annual reports, which are submitted by them for presentation to Parliament.

In respect to the Government Asylums, since the issue of our Commission, a close investigation into their administration has been made by the Public Service Board (two members of which are also members of the Commission), and the report of that investigation has been placed in the hands of the Government. In view of these facts, and of the long time over which the work of the Commission has already necessarily extended, and further, as other engagements press heavily upon members of the Commission, we have respectfully to request that we may be relieved of the conduct of any further investigation.

The Commission was appointed on the 10th day of November, 1897, and has therefore been in existence for nearly twenty-three months, during which time 117 sittings have been held.

Before closing, we wish to express our thanks to the gentlemen who, as witnesses, have given us the benefit of valuable knowledge and experience, and aided us in coming to the conclusions which have been submitted in our former Reports and are now here brought together.

We have the honor to be,

Your Excellency's most obedient Servants,

GEO. A. WILSON, President,  
J. BARLING,  
JAMES POWELL,  
CRITCHETT WALKER,  
F. NORTON MANNING, M.D.

WALTER WILSON,  
Secretary.

27/9/99.

## APPENDIX.

1885, No. 46.

AN ACT to provide for the Management of Public Hospitals and Charitable Institutions and, for the Title.  
Distribution of Charitable Aid. (22nd September, 1885.)

BE IT ENACTED by the General Assembly of New Zealand in Parliament assembled, and by the authority of the same, as follows:—

1. The Short Title of this Act is "The Hospitals and Charitable Institutions Act, 1885." Short Title.

This Act shall come into operation on the first day of October, in the year one thousand eight hundred and eighty-five, which shall be deemed the commencement thereof.

2. Nothing in this Act contained shall be deemed to apply to any asylum or institution established for the custody or treatment of lunatic or insane persons, nor to any school or other institution established or maintained under "The Industrial Schools Act, 1882." Act not to apply to lunatic asylums or Industrial schools.

Provided however that the cost of maintaining at an industrial school any child who has become an inmate thereof under subsection one of section sixteen of "The Industrial Schools Act, 1882," by reason of having no means of subsistence, or of the indigent circumstances of its parents, shall be defrayed by the District Board of the district wherein the order for sending the child to an industrial school was made out of moneys available for charitable aid in such district, but no such cost shall exceed a rate of eight shillings a week :

And in case any such maintenance-money shall not be paid by the Board aforesaid, the manager of the school of which such child is an inmate may recover the same from the said Board as a debt due to the said manager :

Provided further that every District Board which pays any money for the cost of maintenance of any inmate of a school as aforesaid shall have the same powers of proceeding against all persons who are liable to contribute for the maintenance of such inmate for the recovery of contributions from such persons for such maintenance as the manager of the school has hitherto had under sections thirty-two to thirty-five, both inclusive, of "The Industrial Schools Act, 1882," and "The Industrial Schools Act 1882 Amendment Act, 1885," which enactments respectively shall be read and construed, *mutatis mutandis*, and shall apply accordingly for this purpose.

3. The counties of Kawhia, Taupo West, and Taupo East are hereby excepted from the operation of this Act. Counties excepted from operation of Act.

The Governor may, by Proclamation in the *Gazette*, bring any of such counties, or any part thereof, under this Act, and create the same part of a district; and may from time to time, by Order in Council, make regulations for the due administration of this Act in the said counties, and for raising contributions therein for institutions and charitable aid in accordance with this Act, and otherwise may do all things necessary in or towards the proper carrying out therein the aforesaid administration.

4. In this Act, if not inconsistent with the context,—

Interpretation.

"Contributor" means a person who in any district subscribes not less than five shillings per annum or ten pounds in one donation towards the funds of a benevolent society, or towards the maintenance of an institution, or for the purposes of charitable aid within such district :

"Contributory local authority" means the Council of a county or borough, or the Board of any road or town district where "The Counties Act, 1876," is not in operation, paying a proportion of the cost or contributing an annual sum towards the maintenance of any institution in any district, or for the purposes of charitable aid in any such district :

"District" means a hospital district constituted under this Act :

"District Board" or "Board" means the Hospital and Charitable Aid Board appointed for a district constituted under this Act :

"Institution" means any hospital instituted for the reception, relief, treatment, and cure of disease, and includes any public establishment instituted for the reception or relief of orphans, aged, infirm, incurable, or destitute persons, or established for any one or more of such objects, or the administration by any body or association of persons of charitable aid :

"Separate institution" means an institution as herein defined, which is separately incorporated under this Act, and has its own separate managers :

"This Act" includes by-laws made under this Act :

"Trustees" means the trustees of a separate institution as herein defined :

When a thing is required to be "publicly notified," or when "public notice" of anything is to be given, it is meant that a notice thereof shall be published in some newspapers circulating in the district in which such thing arises or to which it relates :

Words in this Act referring to a district, institution, society, Board, committee, trustees, or authority shall be construed distributively as applying to each district, institution, society, Board, committee, trustees, and authority to whom or to which the same is applicable.

5. For the purposes of this Act every borough shall be deemed to be included within the territorial area comprised in the description of the county wherein it is situate or to which it is contiguous, although such borough does not actually form part of such county. Boroughs deemed to be included in counties.

In any case of doubt the Governor, by warrant under his hand, shall appoint the county wherein shall be deemed to be included any borough which is on the confines of more counties than one.

DISTRICTS

## DISTRICTS AND DISTRICT BOARDS.

Districts  
constituted.

6. The divisions of the colony described in the First Schedule hereto are hereby constituted hospital districts for the purposes of this Act, and shall be called by the names set over each such description.

When the boundaries of any county comprised in a hospital district shall be altered, such alteration shall operate with respect to any hospital district constituted under this Act, and shall take effect accordingly.

If a new county shall at any time be created the limits whereof extend into more hospital districts than one, the Governor, by warrant under his hand, shall appoint the hospital district wherein such new county shall be deemed to be included.

District Boards  
established.

7. For every such district there shall be a District Board of administration to consist of the following members—namely, one member for every borough and county respectively in the district having less than eight thousand inhabitants, and two members for every borough and county respectively having more than eight thousand inhabitants.

(1.) The said members shall be elected by the Councils of the boroughs and counties on the fourth Wednesday in November in each year, and shall come into office on the first Wednesday in December ensuing next after their election.

(2.) Members shall hold office for one year or until their successors come into office, but failing election by any Council of any borough or county, the Governor may appoint a member or members for such borough or county to hold office until the next yearly election.

(3.) In any county where "The Counties Act, 1876," is not in operation the Chairmen of the Road Boards in such county shall be deemed the County Council for the election of such members.

(4.) If there is not more than one county in any hospital district, then the Chairmen of Road Boards in such district shall elect at least three members of the Board for the district.

Special District  
Boards in certain  
districts.

8. Notwithstanding anything contained in the last-preceding section in the districts hereinafter mentioned the District Boards shall consist of the local authorities and persons or local authorities herein also mentioned respectively; that is to say,—

(1.) Within the District of Coromandel, the Council of the County of Coromandel.

(2.) Within the District of Patea, the Council of the County of Patea, and the Mayor of Patea, together with four members of the Borough Council of Patea, to be selected by the said Council.

(3.) Within the District of Cook, the Council of the County of Cook and the Borough Council of Gisborne jointly.

(4.) Within the District of Waipawa, the Council of the County of Waipawa and the Council of the County of Patangata jointly.

(5.) Within the Districts of Wairau and Picton, the Chairmen of the Road Boards and the Mayors of the boroughs therein respectively.

(6.) Within the District of Inangahua, the Council of the County of Inangahua.

(7.) Within the District of Buller, the Council of the County of Buller and the Mayor of Westport, together with four members of the Borough Council of Westport, to be selected by the said Council.

(8.) Within the District of Grey, the Council of the County of Grey, and the Mayor of Greymouth, together with four members of the Borough Council of Greymouth, to be selected by the said Council.

(9.) Within the District of Ashburton, the Council of the County of Ashburton, and the Borough Council of Ashburton jointly.

(10.) Within the District of Waitaki, the Council of the County of Waitaki and the Mayors of the boroughs of Oamaru and Hampden, together with four members of the Borough Council of Oamaru and two members of the Borough Council of Hampden, to be selected by such Councils respectively.

First Meeting of  
Boards.

9. The Governor shall appoint the day of the first election of every Board and the time and place of the first meeting of the Board, which shall be deemed to come into office at such meeting, and may nominate some member of the Board to preside at such meeting, and may appoint the number of members that shall be necessary to constitute a meeting for the conduct of business.

Chairman.

At such meeting the Board shall elect one of their number to be Chairman, who shall hold office until the coming into office of the Board then next to be elected.

Annual meeting  
of Boards.

10. On the first Wednesday in December, in the year one thousand eight hundred and eighty-six, and thereafter on the same day in every year the Board shall hold its annual meeting; and at such meeting the members of the Board for the previous year shall go out of office, and the members then recently elected shall come into office, and shall there and then elect one of their number to be Chairman, who shall come into office on his election, and hold office until his successor is elected.

Incorporation of  
Boards.

11. Every Board shall be a body corporate by the name of "The [*naming the district*] Hospital and Charitable Aid Board," and shall have perpetual succession and a common seal, and shall be capable in law to hold real and personal property, and do and suffer all things which bodies corporate may do and suffer.

Boards to have  
control of institu-  
tions in district.  
Boards to distri-  
bute charitable  
aid in districts,  
and may apply  
funds for this  
purpose.

12. Except as hereinafter mentioned, in relation to separate institutions, the exclusive superintendence and control of every institution within a district is hereby vested in the Board of such district.

13. The Board shall have the control of the distribution of charitable aid in the district under its direction, and may apply out of the Hospitals and Charitable Aid Fund of the district such moneys as they may from time to time think required for the purpose.

## SPECIAL FUNCTIONS OF DISTRICT BOARDS.

Moneys consti-  
tuting Hospital  
and Charitable  
Aid Fund.

14. For every district there shall be an Hospital or Charitable Aid Fund, consisting of the moneys arising from the following sources:—

(1.) Rents and profits of land and endowments vested in the Board;

(2.) Rents and profits of land and endowments set apart for the benefit of particular institutions which have not become separately incorporated under this Act;

(3.)

- (3.) Voluntary contributions, including donations and bequests;
- (4.) Grants from contributory local authorities;
- (5.) Subsidies from the Consolidated Fund; and
- (6.) All other moneys which may be received by or become the property of the Board under this or any other Act.

15. There shall be issued and paid out of the Consolidated Fund to every Board the following sums during each financial year, for five years, commencing from the first day of April, in the year one thousand eight hundred and eighty-five, that is to say:—

- (1.) Ten shillings for every pound of bequest, but in no case exceeding five hundred pounds in respect of any one bequest;
- (2.) One pound for every pound of voluntary contributions received from any person; and
- (3.) One pound for every pound of contributions received from any local authority, whether voluntary or raised by a general or a special rate.

During each financial year after the said five years, unless the Colonial Treasurer shall be satisfied that the Board has a sufficiency of funds to carry out the administration of this Act during such year, there shall be paid the like sums or such lesser sums as the Colonial Treasurer shall think sufficient.

16. All bequests and devises of property made for the benefit or endowment of any Board or of any institution or separate institution shall be strictly applied in manner directed by the testators respectively; but in the absence of any such direction the proceeds therefrom shall be applied in such manner as the Board shall direct for or towards some permanent improvement of such institution, or the extension of the objects for which the institution is founded.

Pending such application as aforesaid, all proceeds from any such bequest or devise shall be invested in securities issued by the Government of the Colony, or by any local authority under any Act of the General Assembly, or on mortgage of land in New Zealand held in fee-simple, and the interest accruing from year to year in respect of such investments may be applied towards the maintenance of the aforesaid institution.

17. All moneys paid from time to time as subsidies in respect of any bequest or devise shall be deemed to form part of such bequest or devise, and shall be appropriated and applied in the same manner, and not otherwise.

18. The Board shall take all necessary steps for providing funds for the maintenance of any institution vested in them or under their control, or for obtaining means to afford charitable aid, and may appoint persons to collect voluntary contributions or donations for all or any of such purposes, and shall receive and collect from the several contributory local authorities in the district the contributions which they may be required to furnish from time to time.

19. At every institution a book, to be called "The Contributors' Book," shall be kept, in which shall be entered the names and addresses of all persons contributing towards the funds for the support thereof, and the amounts contributed by each person.

20. All moneys arising from any of the sources aforesaid shall be paid into such Bank as the Board may from time to time determine, to an account to be called "The Hospital and Charitable Aid Fund Account," and shall only be paid thereout by cheques signed by the Treasurer, and countersigned by any two members of the Board authorised by them from time to time to sign cheques.

21. The Board shall, as early as possible after first coming into office, and thereafter in every year before the last day of March, ascertain the amount of the expenditure required for the maintenance of the institutions in the district, and for the distribution of charitable aid therein up to the last day of March in the following year; and shall allocate the proportion of such expenditure to be contributed by the local authorities within the district in the manner hereinafter set forth.

22. The Board may, from time to time, by resolution—

- (1.) Divide the district under their jurisdiction into subdivisions for the purposes of this Act, and such subdivisions may comprise one or more counties, together with or without any borough or boroughs contiguous thereto respectively, or any one such county or borough separately;
- (2.) Vary, alter, or abolish any such subdivisions, and constitute others, and also may amalgamate any subdivisions or merge any subdivision or part of a subdivision into another or other subdivisions;
- (3.) Declare what local authorities within the subdivision shall be liable to contribute to the support of the institutions therein, and afford charitable aid in such district, and may also appoint the proportion of the contribution to be made by each such local authority respectively, and the time for the payment thereof.

23. Contributions from each of such local authorities shall be proportioned to the ratable value of the ratable property, as defined in "The Rating Act, 1876," or "The Rating Act, 1882," in the district or subdivision represented by each local authority respectively, as may be provided by resolution of the Board made under the powers herein contained.

24. From the total estimated annual cost of maintaining the institutions in any district or subdivision and of affording charitable aid therein, the Board shall deduct the net annual income estimated to be available for such purposes, and the remainder shall be the total amount to be allocated for contribution by the local authorities in such district or subdivision, less such amount as may be receivable from the Consolidated Fund in respect of such remainder.

25. Any contributory local authority who shall deem the amount of any contribution required of it by the District Board to be unjust may appeal therefrom by transmitting a copy of any resolution expressing their dissent to the Colonial Secretary, who thereupon shall direct an inquiry to be made in the same manner as hereinafter provided in section forty-four in relation to inquiring into objections against incorporation. The said section shall apply *mutatis mutandis*, and the decision of the Commissioners shall be final.

26. Every contributory local authority liable or willing to pay any contribution in aid or for the support of institutions, or for charitable aid, may pay the same out of the ordinary funds at its disposal, or out of any moneys received by way of subsidy, or may, if it thinks fit, raise the required amount by a rate to be struck for that purpose.

Every rate authorised under this Act shall be struck, made, levied, and collected in all respects, and with, under, and subject to the same powers, rights, and authorities in all respects, as such local authority may levy rates for general or ordinary purposes; and one half of such rate may and can be deducted by the occupier from any rent payable by him to the owner of the land and premises occupied by him and so rated.

But nothing in this section shall authorise the levying of any rate on any land ratable under "The Crown and Native Lands Rating Act, 1882."

Provision where "The Counties Act, 1876," is not in force.

Contributions in arrear may be recovered as a debt.

Contributions in arrear may be deducted from subsidies.

Board may apply funds for erection and maintenance of institutions and in providing charitable aid.

Board may establish new institutions.

Board may borrow money for certain purposes.

Board may close any institution which they deem not required.

27. Where "The Counties Act, 1876," is suspended in any county, the Council of such county may set apart any portion of the County Fund for the purposes of this Act, and shall have all the powers in respect thereof that such Council now has to apportion and divide such fund.

28. If any contributory local authority liable to pay any contribution authorised or required to be paid under this Act shall, for a period of one month, neglect or refuse to pay the same after the time prescribed for the payment thereof, such contribution may be recovered by the Board in any Court of competent jurisdiction as a debt due by such local authority to the Board.

29. If any contributory local authority shall fail to pay the required contribution or any part thereof, the Colonial Treasurer, on the application of the Board, may deduct from the subsidies payable to such local authority under any Act or authority a sum equal to the amount prescribed as aforesaid, or such part as may be unpaid, and shall pay the same over to the fund of the district or of the institution in respect of which such failure shall have occurred.

30. The District Board may apply any of the moneys in their hands from time to time in such proportions and in such manner as they shall think fit in and towards the erection and maintenance of any building or institution, with all necessary outhouses and enclosures, for the purpose of being used as an institution under the provisions of this Act, or in and towards the repairs, additions to, or alterations of any existing or future institution or building annexed or belonging thereto, and also in the maintenance and relief, or in contributing to the maintenance or relief, of any indigent, sick, infirm, or aged people, and generally in payment of all charges and expenses incurred by the Board in carrying out this Act.

31. The Board may, from time to time, establish in any part of the district new hospitals or branch hospitals, or other charitable institutions where they may deem them required.

32. For the purpose of erecting new, or for making additions, alterations, or repairs to existing institutions, the Board may, from time to time, borrow money on the security of their income, or of any endowments vested in them, but not belonging to or held in trust for any separate institution.

33. The Board may close any institution vested in them within the district which they may think not expedient to maintain any longer, and shall provide for the distribution of the inmates or other persons receiving relief therefrom respectively among adjacent institutions within the district.

#### UNITED DISTRICTS.

Union of districts for charitable aid.

34. Notwithstanding anything hereinbefore contained, for the purposes of the contribution for and distribution of charitable aid under this Act the separate districts enumerated in the several subsections of this section shall be deemed together to form united districts respectively, and the members of the several District Boards of such separate districts shall together form the Board of such united districts respectively, that is to say,—

- (1.) The North of Auckland District with the Auckland District;
- (2.) The Coromandel District with the Thames District;
- (3.) The Patoka District with the Wanganui District;
- (4.) The Waipawa District with the Hawke's Bay District;
- (5.) The Wairarapa District with the Wellington District;
- (6.) The Inangahua District and the Buller District with the Nelson District;
- (7.) The Ashburton District with the North Canterbury District; and
- (8.) The Central Otago District and the Tuapeka District with the Otago District.

Functions of Board of united district.

35. The Board of an united district, for the purposes aforesaid, and for all purposes incidental thereto,—

- (1.) Shall have all the powers, duties, and functions which, but for this section, would devolve upon District Boards, and shall supersede the District Boards of the separate districts forming part of such united district;
- (2.) Shall be deemed to be incorporated under this Act; and
- (3.) All provisions of this Act, so far as applicable and necessary to give effect to this enactment, shall apply in respect to such Board, and shall be construed, *mutatis mutandis*, as they would apply in respect of the District Board of a separate district.

#### EXISTING INSTITUTIONS.

Institutions subject to Act.

36. The institutions severally enumerated in the Second Schedule hereto shall be subject to the provisions and operation of this Act.

Existing administration to continue temporarily.

Notwithstanding the repeal of the Acts and enactments enumerated in the Third Schedule—

The Committee or other persons or body having the actual charge and management at the time of such repeal of the affairs of any institution mentioned in the Second Schedule shall continue to have the charge and management thereof until the same becomes vested in a District Board or Trustees under this Act.

All officers, medical men, nurses, attendants, and other persons engaged or employed in any such institution, shall be deemed to have been appointed under this Act, and shall continue in office subject to the provisions of this Act.

Institutions to elect whether or not they will be incorporated.

37. The Committee or persons or body aforesaid shall respectively, on or before the fifteenth day of November ensuing next after the commencement of this Act, notify to the Board of the district wherein is situate the institution under their charge or control, whether or not they propose to petition the Governor, in manner as hereinafter next mentioned, for the incorporation of such institution as a separate institution under this Act.

38. At any time within four months after the passing of this Act the aforesaid Committee or persons or body may petition the Governor praying that the institution under their control may be incorporated as a separate institution under this Act, and shall annex to such petition a verified list of the names of not less than one hundred persons who shall have signified their intention to contribute in yearly sums of not less than five shillings an amount of not less than one hundred pounds to such institution, and who shall have paid one year's subscription in advance, or a donation in one sum of not less than ten pounds.

Incorporation to be effected within four months of passing of Act.

A copy of every such petition and its annexes shall be transmitted to the District Board fourteen days at least before the same is presented to the Governor.

39. On the receipt of such petition the Governor may take action under the provisions hereinafter mentioned as if it were a petition of the contributors to an institution, and the said provisions in relation to the incorporation of separate institutions shall apply accordingly.

Future administration to vest in Trustees elected under Act.

If the institution becomes separately incorporated the aforesaid Committee or persons or body shall vacate their offices upon the appointment of the first Trustees of the separate institution.

40. Every institution mentioned in the Second Schedule which does not become or petition to become incorporated as a separate institution within four months from the passing of this Act, and all the estate and interest in any real and personal property belonging thereto, shall be vested in the Board of the district wherein it is situate—

Failing incorporation, institutions to vest in District Board.

- (1.) On the next first day of the month of December, in respect of institutions whereof the persons or body aforesaid shall not have notified their intention to petition for such incorporation;
- (2.) On the first day of February next after the commencement of this Act, in respect of institutions respecting which notification has been given as aforesaid, but which have not become incorporated as aforesaid.

41. Notwithstanding anything contained in the last five preceding sections, any institution mentioned in the Second Schedule may become incorporated as a separate institution under this Act, at any time hereafter, on petition of the contributors thereto, in manner next hereinafter mentioned.

Hospitals may nevertheless become incorporated hereafter.

#### SEPARATE INSTITUTIONS.

42. Any institution supported in whole or in part by the voluntary contributions of not less than one hundred persons, who shall have signified their intention to contribute and have contributed thereto as mentioned in section thirty-eight, may be incorporated as hereinafter mentioned as a separate institution under this Act.

Subscribers to institutions may petition for incorporation.

43. The Governor in Council, on the receipt of a petition signed by not less than fifty of the said persons, praying that such institution may be incorporated, may cause the substance or prayer of such petition to be gazetted, and (if no counter petition, signed by an equal or greater number of such persons, shall have been delivered at the office of the Colonial Secretary within one month after the date of such publication, or if the District Board shall not have lodged with the Colonial Secretary within the same time an objection to such petition), the Governor in Council may declare the contributors for the time being to such institution to be, and they shall thereupon become and continue, a body politic and corporate by the style and title named in the Order in Council, and shall have perpetual succession and a common seal.

Incorporation effected by Order in Council, if not opposed.

A copy of every such petition as aforesaid to be presented to the Governor shall be transmitted by the petitioners to the District Board not less than fourteen days before the same is so presented.

#### Objections.

44. The District Board, on receiving notification from the Committee or persons or body having the actual charge and management of any existing institution, or on receipt of the copy of any petition to the Governor for the incorporation of any institution, may object to such incorporation on the ground that the institution is not necessary, and, if they pass a resolution to that effect, shall transmit a copy thereof to the Colonial Secretary and to the petitioners or intending petitioners, and thereupon all proceedings as to the incorporation of such institution shall be suspended pending an inquiry into such objection.

District Board may object to incorporation, if institution not required.

- (1.) The Colonial Secretary shall thereupon require the District Board and the petitioners respectively to appoint a Commissioner to inquire into the case, and shall appoint some Resident Magistrate residing or having jurisdiction in the district where the institution is situate to sit with the Commissioners aforesaid upon such inquiry. If either party fail to appoint a Commissioner within one month, the Colonial Secretary shall make the necessary appointment.
- (2.) The Commissioners aforesaid shall sit as a Court of inquiry, and shall have the powers of Commissioners under "The Commissioners' Powers Act, 1867," and any Act amending the same, and shall report their decision to the Colonial Secretary, and such decision shall be final.

Inquiry into objection.

If the decision shall be that the institution is not required, then no further proceedings shall be had in respect of incorporating such institution.

If the decision shall be otherwise, then the proceedings for incorporation shall proceed as if they had not been suspended.

45. After such Order in Council as aforesaid, all previous and preliminary steps and proceedings as hereinbefore required shall be deemed to have been duly and properly taken, and no objection whatsoever shall be taken to the incorporation of such contributors, but they shall, under all circumstances, be deemed to be duly and legally incorporated within the meaning of this Act, whether it shall have been complied with or not.

Incorporation deemed valid.

46. Every such incorporated institution as aforesaid shall be governed by not less than six nor more than nine Trustees, to be elected by the contributors for the time being to such institution; together with not more than five other Trustees, who may be elected by the local authorities for the time being contributing to the funds of the institution.

Trustees to be elected.

A local authority shall be deemed to contribute to the funds of a separate institution when it contributes any sum to the District Board for the purpose of the same being paid to the separate institution.

Contributing local authority may elect Trustees.

47. Every contributory local authority which contributes to the funds of a separate institution shall have the power hereinafter declared to elect Trustees of such separate institution.

- (1.) If there are only five local authorities contributing to such separate institution, then each shall elect one Trustee on the date and at the time members of the District Board are elected, and such Trustees shall hold office for one year or until their successors are elected :
- (2.) If there are more than five local authorities contributing, then each local authority contributing not less than one-fifth of the amount contributed by the whole of the local authorities shall elect one Trustee, and the remaining local authorities shall elect as many other Trustees as will make the whole of the Trustees elected by the local authorities number five in all :
- (3.) Each local authority, for the purpose of electing such remaining Trustees, shall have one vote, and an additional vote for every four thousand inhabitants after the first four thousand inhabitants in its jurisdiction according to the Registrar-General's last published Statistics, and the election shall be made by every County and Borough Council respectively, deputing one of its members to meet and elect Trustees, exercising the votes belonging to the local authorities :
- (4.) Such election shall be on the first Monday in December in each year :
- (5.) Any local authority ceasing for twelve months to contribute to the funds of a separate institution shall lose its right to elect or vote in the election of Trustees.

Votes exercisable by contributors.

48. The Trustees may fix the number of votes each contributor, and the representative of each contributory local authority may exercise in accordance with his contribution, or the contribution of the local authority, provided that any person subscribing five shillings shall have one vote, and no person shall be capable of exercising more than five votes.

First meeting of contributors.

49. The first meeting of contributors to any institution shall be held at such time and place as the Governor shall, by public notice, appoint, and at such meeting the contributors shall elect not less than six, nor more than nine, Trustees, and shall transact any other business relating to the institution. There shall be six Trustees elected by the contributors when the number of contributors to the institution does not exceed five hundred, and nine Trustees when the number of contributors exceeds five hundred.

Annual election of one-third of Trustees.

50. On the second Thursday in the month of January, in the year one thousand eight hundred and eighty-seven, and thereafter on the same day in every year the annual meeting of contributors to the institution shall be held; and on the day of such meeting one-third part of the number of Trustees elected by the contributors shall go out of office (but may nevertheless be re-elected), and the persons who shall go out of office shall be those who have been the longest in office without re-election, or, where two or more shall have been in office for the same length of time, then those who shall go out of office shall be determined by lot.

Procedure at elections.

51. Every meeting of contributors shall choose its own chairman, who shall have an original as well as a casting vote in the event of there being an equality of votes; and every question submitted to such meeting shall be decided by a majority of the votes of contributors then present.

Disqualification of voters.

No person shall be qualified to vote at any first or subsequent meeting of contributors for the election of any Trustee to such institution unless he shall be of the full age of eighteen years, and shall have been a contributor to such institution for the space of one week previous to such meeting; but where a contributor shall have paid his subscription for the year immediately preceding the year in which any annual or general meeting shall take place the payment of his subscription for the then current year at any time before such meeting shall entitle such contributor to vote.

Adjourned elections.

52. If at any first meeting or at any annual or general meeting of the contributors to any institution at least ten of the contributors qualified to vote shall not assemble and proceed to business within one hour from the time fixed for the meeting, no election of Trustees shall be made, nor shall any business be done at that time; but in such case there shall be another meeting of the said contributors at the same place and at the same hour of the same day in the second following week, which meeting shall be publicly notified, and at this last-mentioned meeting any number of contributors, qualified to vote as aforesaid, exceeding three shall constitute a meeting.

Extraordinary vacancies.

53. If any Trustee shall die, or resign by letter under his hand addressed to the Secretary of the institution, or become bankrupt or insolvent, or compound with his creditors, or be convicted of any treason, felony, or misdemeanour, or be absent without leave from four consecutive ordinary meetings of the Trustees, or hold any office or place of profit under or in the gift of the Trustees, or be concerned or participate (other than as a shareholder in an incorporated company, or in an association or partnership consisting of more than twenty persons) in any contract with or work to be done for the Trustees, his office shall become vacant, and the remaining Trustees shall declare his office vacant, and temporarily appoint thereto some contributor to such institution, until the next annual meeting for the election of Trustees, when the person thus temporarily appointed shall retire as one of those who are hereby required to go out of office.

Trustees may be elected for several institutions.

54. Nothing herein contained shall be construed to preclude the election of the same persons as Trustees, or to prevent any person from being elected a Trustee, for several separate institutions.

Property of institution to vest in elected Trustees.

55. All the estate and interest in any real and personal property held by the District Board or by any person in trust for any institution at the time of the incorporation thereof, shall be vested in such incorporated institution.

#### SPECIAL FUNCTIONS OF TRUSTEES OF SEPARATE INSTITUTIONS.

Powers of District Board to vest in Trustees.

56. All powers and authorities of the District Board in respect of the management of any institution shall, on the incorporation thereof as a separate institution, be transferred to and vested in the Trustees of such institution as elected under the provisions of this Act.

Moneys constituting the Institution Fund.

57. For every separate institution there shall be an Institution Fund, consisting of the moneys arising from the following sources :—

- (1) Rents and profits of land and endowments belonging to the institution;
- (2) Voluntary contributions, including donations and bequests;
- (3) Grants from the District Board;
- (4) Subsidies from the Consolidated Fund; and
- (5) All other moneys which may be received by the Trustees, or become the property of the institution under this or any other Act.

58. There shall be paid the following sums to each separate institution in the same manner in each year as are payable under section fifteen in respect of institutions under the control of District Boards, and subject as in the said section mentioned; that is to say,—

Annual subsidies.

In respect of the sums received by the Trustees during such year from the sources following:—

- (1.) Ten shillings for every pound of bequests, but in no case exceeding five hundred pounds in respect of any one bequest;
- (2.) One pound for every pound of voluntary contributions received from any person or local authority; and
- (3.) One pound for every pound of grants from the District Boards.

59. The Trustees shall on their first coming into office, and thereafter before the last day of March in each year, ascertain the estimated gross cost of the maintenance of the institutions vested in them, together with the estimated income from all sources of such institution for the twelve months next following, and shall transmit such estimates to the District Board, together with a requisition to such Board for a contribution from the Hospital and Charitable Aid Fund of the district to the amount of the difference between the estimated gross cost of maintenance and the estimated revenue; and the District Board shall make contributions out of the Hospital and Charitable Aid Fund to the separate institutions according to their requisitions.

Trustees to estimate their expenditure, and to apply to Board for grant.

60. If the District Board shall deem the amount of any requisition made to them by the Trustees of any separate institution for a grant to be excessive or otherwise unreasonable, they may appeal therefrom by transmitting a copy of any resolution expressing their dissent to the Colonial Secretary, who thereupon shall direct an inquiry to be made in the same manner as hereinbefore provided in section forty-four in relation to inquiring into objections against incorporation. The said section shall apply *mutatis mutandis*, and the decision of the Commissioners shall be final.

Board may appeal against amount required.

61. The Trustees of a separate institution, with the consent of the District Board, may borrow money on the security of their endowments and income for making repairs, additions, or alterations to the institutions under their control, or to any building annexed or belonging thereto, or may apply to any one or more local authorities for a special contribution towards such purposes; and, in case any local authority shall grant any such contribution, there may be paid out of the Consolidated Fund, in such manner as the Colonial Treasurer, if he agree to such contribution, may from time to time appoint, a special subsidy in aid of the aforesaid purposes not exceeding ten shillings for every pound of special contributions received from any such local authority; but the maximum sum to be granted out of the Consolidated Fund in any one year shall not exceed two thousand five hundred pounds to any one institution.

Trustees, with consent of Board, may borrow money.

#### GENERAL FUNCTIONS OF BOARDS AND TRUSTEES.

62. Every District Board, in respect of the institutions vested in them, and the Trustees of any separate institution respectively, may, from time to time, and subject to the provisions of this Act, make by-laws in respect to all or any of the matters next mentioned, and may from time to time revoke or vary any of such by-laws, that is to say,—

Board and Trustees may make by-laws.

- (1.) For conducting any election where necessary, and regulating all matters connected with any such elections, and for determining the validity of disputed elections:
- (2.) For prescribing what shall constitute a life-membership of any institution:
- (3.) For regulating the admission of patients into any institution, on the nomination or recommendation of contributory local authorities and contributors or otherwise, and of their discharge therefrom:
- (4.) For the maintenance of order, discipline, decency, and cleanliness among the inmates of institutions:
- (5.) For prescribing the duties of the several medical and other officers, nurses, attendants, and servants of any institution:
- (6.) For preventing trespass or intrusion upon the premises of any institution or the grounds attached or belonging thereto:
- (7.) For preventing disorderly behaviour in or upon the premises of any institution by any person:
- (8.) For prohibiting the introduction of any articles whatsoever into any institution, whether or not of food, drink, consumption, or otherwise:
- (9.) For all matters affecting the general management, care, control, and superintendence of any institution:
- (10.) For the affording relief by medicine and attendance to out-door patients, or the administration of out-door relief, and either directly or by means of any voluntary or other association formed for the purpose of providing or aiding in the administration of such relief.

63. All such by-laws shall be printed, and they shall not come into force until a day to be fixed therein, not being less than fourteen days from the date of making the same.

By-laws to be printed and copy posted in conspicuous place in institution.

One or more copies of all by-laws shall, as soon as conveniently may be after the making thereof, and before they come into operation, be affixed and maintained in some conspicuous public place in every institution to which the same relate.

A copy of every by-law when made shall be sent to the Colonial Secretary before the same shall come into operation; and the Governor may at any time disallow any such by-law, but such disallowance shall not affect the validity of anything theretofore done prior to such disallowance.

All the above provisions shall apply to any amendments or alterations of any by-law made under this Act.

64. A printed copy of by-laws, purporting to be the by-laws of any District Board or Trustees respectively, if authenticated by the seal of such Board or Trustees respectively, shall be evidence of such by-laws, and of their having been duly made.

Evidence of by-law.

65. Every by-law repugnant to this or any Act of the General Assembly shall be void.

66. Any by-law may provide a penalty for every breach thereof of an amount which shall be in the discretion of the Justices inflicting the same, and shall in no case exceed five pounds.

By-laws to be consonant with public law. Penalties for breach of by-laws.

67. All penalties under this Act may be recovered in a summary way, as provided by "The Justices of the Peace Act, 1882."

68. Recovery of penalties.

Board or Trustees may appoint officers.

68. The Board and Trustees respectively, may from time to time appoint a Secretary, Treasurer, and such medical men and other officers, nurses, attendants, and servants to assist in the execution of this Act as they shall think proper, and may from time to time remove any of them and appoint others in their stead.

Board or Trustees to regulate their own proceedings.

69. The Board and Trustees respectively may, by ordinary resolution, make, alter, and revoke rules regulating their own proceedings and the general conduct of business; for determining the number of members necessary to form a quorum; and for calling special or general meetings of the Board, Trustees, or of the contributors to any institutions.

#### MAINTENANCE.

Power to make contracts for maintenance, &c.

70. The Board and Trustees respectively may make contracts for the maintenance, care, or attendance of any persons in any institution.

Persons receiving relief liable for same.

71. Every person maintained in or who is in the receipt of relief from any institution, whether the same be supported wholly or partly by public moneys, shall be liable to contribute a reasonable sum towards the same respectively, according to his means.

The Board and the Trustees respectively, or any person authorized by them respectively in that behalf, are hereby authorized to sue for and may recover in any Court of competent jurisdiction such sum as the Court shall think reasonable as a debt due to the Board or Trustees from the person so maintained in or in receipt of relief from such institution.

Near relation liable to contribute.

72. Every person maintained in or who is in the receipt of relief from any institution as last aforesaid who has not sufficient means to pay for the same respectively shall be deemed to be a destitute person within the meaning of the "Destitute Persons Act, 1877," and the provisions of the said Act shall apply accordingly.

Public Trustees to contribute in certain cases.

73. For the purposes of this Act in relation to the maintenance of persons in any institution, or receiving relief therefrom, the Public Trustees shall be deemed to be a near relative of any such persons aforesaid respectively, in the place of their actual near relative who shall have died intestate; and he is hereby authorized and shall contribute out of the estate in his hands of any such intestate person, towards the maintenance of the aforesaid persons respectively in the same manner in all respects as the person so dying intestate would have been liable to contribute had he been alive.

As to relief afforded to persons coming from beyond contributing districts.

74. If an institution under this Act afford relief to any person coming from beyond the contributing districts in which such institution is situated, it shall be lawful for the Trustees or the Board having the control of the institution affording relief to recover from the Board of the district from which such person came the entire cost of such relief, provided that the person has resided in the last-mentioned district at least six months next before he entered the institution from which he obtained relief.

#### CONTRACTS.

Board and Trustees may enter into contracts for carrying out provisions of Act. Signing of contracts.

75. The Board and Trustees respectively may enter into any contract with any person for doing anything which the Board or Trustees may be authorized to do, or which is necessary for carrying out the purposes of this Act.

76. Any contract which, if made between private persons,—

Firstly, must be in writing under seal;

Secondly, must be in writing signed by the parties thereto;

Thirdly, may be made verbally without writing;

When made by the Board or Trustees respectively,—

In the first place shall be in writing under the seal of the Board or of the Trustees, as the case may be;

In the second case shall be signed by two members of the Board on behalf of and by direction of such Board, or by two Trustees on behalf of and by direction of the corporate body of the Trustees;

In the third case may be made verbally without writing by the Board, or any two members thereof on behalf of and by direction of such Board, or by two Trustees on behalf of and by direction of the corporate body of the Trustees.

All such contracts may be varied and discharged in the same manner respectively.

Contracts above £10 to be by public tender.

77. No contract the amount whereof exceeds ten pounds shall, except in case of urgent necessity, be made except after public tender, of which due public notice shall be given, but the Board and Trustees respectively shall not be obliged to accept the lowest or any tender.

Composition upon breach of contracts.

78. The Board and Trustees respectively may compound with any person for such sum of money or other recompense as it or they may think fit in respect of the breach of any contract, or any penalty incurred thereunder, or of any debt or money due to the Board or to the Trustees respectively, whether before or after any action or suit brought for the recovery of the same.

#### REAL AND PERSONAL PROPERTY.

Real and personal property to vest in Board or Trustees.

79. All the estate and interest in any real and personal property belonging to any institution at the time of the commencement of this Act, or held by or vested in any persons in trust for or on behalf of any such institution, and all real and personal property which may hereafter be conveyed, granted, or bequeathed to or on behalf of any such institution—

(1.) Shall be vested in the Board of the district wherein the institution is situate, if such institution is under the control of the Board; or

(2.) Shall be vested in the persons, body, and trustees for the time being administering the affairs of the institution, if such institution is not under the control of the Board.

Saving of debts, liabilities, &c.

80. All such property shall be held, by the Board or Trustees respectively, in whom the same may be vested under this Act, for and upon the same trusts and purposes (subject to this Act) as are now or may hereafter be attached to the same; and subject to any contracts, leases, mortgages, or other debts or charges for the time being affecting it, and the Board or Trustees respectively shall be liable for the payment of such mortgages, debts, or other charges.

81. All contracts, agreements, and securities before the coming into operation of this Act, and entered into or made between any Board, Trustees, or other body or persons having the control or management of any institution, and which immediately before the coming into operation of this Act as aforesaid were in force, shall take effect and may be proceeded on and enforced, as near as circumstances will admit, in favour of, by and against, and with reference to the Board constituted, or the Trustees of the institution elected under this Act.

Contracts agreements, &c., may be enforced by or against Board or Trustees.

Nothing herein shall give to any person any further or better remedy or right than he would have had if this Act had not been passed.

Status of parties not altered.

82. Except as provided in section eighty-eight lands now or hereafter reserved or set apart for the purposes of, or as endowments for any institution may be granted to the Board or Trustees of the institution for which the same has been so reserved or set apart, in the manner provided by "The Public Reserves Act, 1881."

Lands reserved may be granted to Boards or Trustees.

83. Any lands which have been reserved or set apart for any institution prior to the commencement of this Act, may be granted to the Board or Trustees under this Act which or who shall have taken the place of the Board, Trustees, or other body or persons theretofore having the control or management of such institution.

Provisions as to lands reserved previously to Act being brought into force.

84. The Board and Trustees respectively may let any lands vested in them, or any part thereof, not required for immediate use, at such rents and upon such terms and conditions as they shall determine.

Board and Trustees may lease lands.

Any such leases for agricultural or pastoral lands shall be for any term not exceeding twenty-one years, and for town lands or lands used for building purposes be for any term not exceeding forty-two years, to take effect in possession from the time of the execution thereof, and so that an annual rent be reserved, payable at such times or periods as the Board or Trustees respectively think fit:

Or the Board and Trustees respectively may lease any land for any term not exceeding twenty-one years on the condition that at the end of that term the lease may be put up to auction for another term of years, and so on from time to time, the incoming tenant paying to the outgoing tenant the full value of all improvements on the land, such value to be determined by arbitration, as the Board or Trustees may in the lease provide.

85. The leases of all such lands shall be sold by public auction or public tender, and at least two months' notice of such intended sale shall be publicly notified, and all rents and profits derived from such sale of the leases granted in respect thereof shall form part of the fund of the institution to which such lands belong.

Leases to be sold at auction. Application of proceeds.

86. When any lease is for a longer term than twenty-one years, the annual rent reserved by such lease for any period beyond the first twenty-one years shall be an advance at least of fifty per centum upon the annual rent payable under such lease during the last year of the expired twenty-one years: Provided that on no lease shall any premium, fine, or foregift be taken.

Rent to be increased for extended leases.

87. Nothing herein contained shall prejudice or affect any lease already granted or agreed to be granted under powers conferred upon any former trustees.

Saving of existing leases.

The Board and Trustees respectively shall, in respect of any such lease, have and exercise all the rights, remedies, and powers as though such lease had been duly made by the said Board or Trustees to the lessee or lessees therein named.

#### ENDOWMENTS.

88. The Governor in Council shall from time to time, as soon as may be after the coming into operation of this Act, set apart not exceeding in the whole two hundred and fifty thousand acres of Crown lands, in such areas in different parts of the Colony as he shall think fit, as endowments for the purposes of this Act.

Endowments.

(1.) Nine-tenths of the total amount of such endowments shall be allocated amongst the various institutions and separate institutions which shall be subject to the provisions of this Act at the expiration of two years from the day of the passing thereof, and the remaining one-tenth shall be reserved, to be allocated from time to time amongst the institutions which may hereafter be subject to this Act.

Allocation.

(2.) The allocation of the endowments shall be made by the Controller and Auditor-General at the expiration of the two years aforesaid in such manner as he shall think most equitable, having regard to the permanent annual income which the several institutions and separate institutions, amongst which the said endowments are to be apportioned, shall be estimated to be receiving at the time aforesaid, and with the object of aiding such institutions in proportion to their necessities.

No such allocation, however, shall take effect until it has been confirmed, either in its original shape, or as it may be amended by a joint resolution of both Houses of the General Assembly.

(3.) The Governor shall have the same powers as he has in respect of Crown lands generally in respect of the dealing with any such endowments previous to their being allocated under this Act, but so that no disposition of any such endowments shall be made whereby any part thereof shall become absolutely alienated.

(4.) The proceeds to arise from any disposition of the aforesaid endowments shall, until the allocation aforesaid takes effect, be paid into the Consolidated Fund, and shall be paid in each year by the Colonial Treasurer to the several District Boards in the Colony having control of institutions under this Act, and to the trustees of the separate institutions thereunder rateably in proportion to the total amount of subsidies paid out of the Consolidated Fund in such year to such institutions and separate institutions respectively.

Application of proceeds.

(5.) On the aforesaid allocation taking effect, the share of endowments apportioned to each institution and separate institution shall vest in the District Board or Trustees having respectively the control of such institution for the purposes of this Act, but so that no part of any such endowments shall at any time be absolutely alienated, unless it may be otherwise provided by any special or general Act of the General Assembly.

(6.) After the allocation aforesaid is made, the proceeds of the unapportioned one-tenth of the aforesaid endowments shall be paid into the Consolidated Fund, and shall continue to be applied as mentioned in subsection four, until by the establishment of new institutions, or the creation of new separate institutions, the said proceeds shall require to be allocated amongst such institutions last mentioned.

(7.) Except otherwise declared by Act, the endowments may, after allocation as aforesaid, be leased as provided in section eighty-four of this Act.

ACCOUNTS

## ACCOUNTS AND AUDIT.

Board to keep books and accounts.

89. Every Board shall cause books to be provided and kept, and true and regular accounts to be entered therein, of all sums received and paid for and on account of this Act, and of the several purposes for which such sums of money shall have been received and paid, which books shall at all reasonable times be open to the inspection of any of the members of the Board.

Separate accounts shall be kept—

- (1.) Of the rents or profits of any land specially set apart for the endowment of any institution and of the interest or other produce of money or property given or bequeathed thereto, or derived from any other property vested in the Board under this Act; and all such rents or profits, and interest or other produce of money, shall be applied in and for the benefit of such institution, as the case may be.
- (2.) Of moneys granted, voted, collected, or received for any institution or for charitable aid; and such moneys shall only be appropriated to the purposes for which the same shall have been granted, voted, collected, or received.
- (3.) Of the receipts and expenditure of each subdivision of a district, and balance-sheets thereof respectively shall be made up to the same period as the balance-sheet of the entire district.

Books to be balanced.

90. The Board shall cause their accounts to be balanced in every year to the thirty-first day of March in each year, and shall cause a true statement and account to be drawn out of all contracts entered into and of all moneys received or expended by virtue of this Act during the preceding year, and of all available assets of, and of all debts then owing by such Board in respect of the entire district, and of each subdivision thereof.

Accounts to be audited.

91. All such accounts shall be audited by the Controller and Auditor-General, who for that purpose shall have and may exercise all such powers as he has under section thirty-three of the "Public Revenues Act, 1878," in respect of public moneys.

Trustees to keep similar accounts, to be audited by Board.

92. The Trustees of every separate institution shall keep accounts and have the same balanced as hereinbefore provided with respect to Boards, and sections eighty-nine and ninety shall apply for this purpose *mutatis mutandis*, and as if the word "Trustees" had been enacted in place of the word "Board" therein respectively.

All such accounts of Trustees shall be audited by the Board in such manner as they shall direct.

## INSPECTORS.

Governor may appoint Inspectors of Institutions. Visitations by Inspectors. Penalty for obstructing Inspectors.

93. The Governor may from time to time appoint one or more persons, as he shall think fit, to be an Inspector or Inspectors of Institutions under this Act.

94. Every Inspector may, without previous notice, visit any institution at any time he shall think fit; and any person refusing or obstructing any such Inspector in his visitation shall be liable to a penalty not exceeding fifty pounds, to be recovered in a summary way.

Annual report by Inspector to be submitted to Parliament.

95. Every Inspector shall, on or before the first day of May in each year, send a report to the Governor on the condition of the several institutions visited by him within the preceding twelve months, which shall be laid before Parliament, if in session, within a fortnight after the receipt thereof by the Governor, and if not, then as early as may be, when the same is in session. Any Inspector may make special reports to the Governor from time to time, as he shall think fit.

## MISCELLANEOUS.

Penalty for obtaining money from Consolidated Fund by false pretences or misrepresentations.

96. If any District Board or any Trustees at any time by false pretences or by wilful misrepresentation obtain the payment from the Consolidated Fund, or otherwise from the Colonial Treasurer, of any sum in excess of what may be due to them respectively in accordance with the provisions of this Act, every member of the Board and every Trustee respectively, who consents thereto, shall for every such offence be liable to a penalty of two hundred pounds. All moneys so fraudulently obtained shall be deemed to be a debt jointly and severally due to the Queen from each and all of the members of the Board, or from each and all the Trustees respectively, as may be the case, who consented as aforesaid to the obtaining of such moneys.

Actions by or against Board or Trustees.

97. All actions, suits, or other proceedings to be commenced or prosecuted against any institution shall be brought or prosecuted by or against the Board or Trustees respectively who have the management thereof; and all goods, chattels, and effects belonging to any such institution shall be deemed and taken to be the property of the Board or Trustees aforesaid, as the case may be, for all or any of the purposes of any action, suit, or other proceeding.

Repeals.

98. Upon the commencement of this Act every enactment enumerated in the Third Schedule hereto, to the extent therein mentioned, and every other enactment, order, regulation, or agreement previously in force relating to the management or control of any hospital or charitable institution within the operation of this Act, or regulating the distribution of charitable aid in the area comprised within any district, shall be repealed.

If Act deficient Governor may make regulations.

99. Where there is any omission in the Act, or where no provision or no sufficient provision shall, in the opinion of the Governor, be made, the Governor may from time to time make and prescribe all such regulations and orders, either general or applicable to particular cases, only as he shall think fit, for the purpose of facilitating or more effectively carrying into execution the provisions of this Act.

AN ACT to amend "The Hospitals and Charitable Institutions Act, 1885." [17th August, 1886.] Title.

BE IT ENACTED by the General Assembly of New Zealand in Parliament assembled, and by the authority of the same, as follows:—

1. The Short Title of this Act is "The Hospitals and Charitable Institutions Act 1885 Amendment Act, 1886." Short Title.

It shall be read and construed together with "The Hospitals and Charitable Institutions Act, 1885" (herein referred to as "the said Act").

2. The said Act is hereby amended, as follows:—

Amendments of  
Act of 1885.

In section four, the definition of "District" and "District Board" shall be omitted, and the following substituted:—

"District" means a hospital district, or an united district constituted under the said Act, and includes a separate district as defined by this Act.

"District Board" or "Board" includes a Hospital and Charitable Aid Board, a Hospital Board, and a Charitable Aid Board.

"Separate district" means a hospital district which has control of hospitals but not of charitable aid being united to another district for the purpose.

3. Every order heretofore made or hereafter to be made at any place under subsection one of section sixteen of "The Industrial Schools Act, 1882," for commitment of a child as an inmate of an industrial school shall be deemed to have been made within the hospital district wherein such place is situate: And the Board of such district, or the Board of the united district wherein such hospital district is comprised, shall defray the cost of maintaining such inmate at the aforesaid school, whether such inmate was committed to such school at any time before or after the first day of October, one thousand eight hundred and eighty-five.

Maintenance of  
destitute  
children.

Every Board liable as aforesaid,—

- (1.) Which shall not have made provision for the maintenance of children who were committed before the first day of October aforesaid may, under the authority of this section, require a special contribution from the local authorities within the districts under the jurisdiction of such Board, which shall be sufficient to defray the cost of such maintenance for the whole period included between the thirtieth day of November in the last past year and the first day of April in the now next ensuing year. All the provisions of the said Act relating to the levying of annual contributions from local authorities for defraying the cost of charitable aid, and for the recovery thereof if not paid, shall apply, *mutatis mutandis*, for the purpose of levying the special contribution authorised under this section;
- (2.) Shall include the cost of maintaining such children in the annual estimate of the cost of affording charitable aid in the district under its jurisdiction required to be made by such Board on or before the thirty-first day of March in the now next ensuing year, and in every year thereafter.

4. The Board or Trustees respectively having the control of any institution wherein orphan children who have lost both their parents are maintained may appoint any fit person, to be approved by the Colonial Secretary, to be the manager of such institution for the purposes of this section, and may apply to a Resident Magistrate under the provisions of section twenty-eight of "The Destitute Persons Act, 1877," for an order appointing the said manager to have the custody of any such orphan child.

Guardians of  
orphans in  
charitable  
institutions may  
be appointed

- (1.) The Resident Magistrate is hereby authorised to grant such order, notwithstanding any previous order for the maintenance of such child may not have been previously made by him or any other Magistrate under the said Act; and thereupon the guardianship of every child in respect whereof such order is made, shall vest in the manager so appointed.
- (2.) Every manager so appointed shall, as such guardian, have all and singular the powers and authorities over the person over whom such guardianship is exercised which a guardian of the person of an infant appointed by the Supreme Court would have; and shall have and may exercise all the powers and authorities in respect of such person as the manager of any school under "The Industrial Schools Act, 1882," has and may exercise over any inmate of such school as the guardian of such inmate.

With the consent of the only surviving parent of an orphan child, to be expressed to a Resident Magistrate at a private examination to be made by him of such parent, such Magistrate may make a similar order in respect of any orphan child, having one parent surviving, if he shall think fit, and every order so made shall have the same effect as an order made as hereinbefore first mentioned. And upon the making thereof, the surviving parent of the child in respect whereof the order is made shall wholly cease to have any legal control or guardianship over such child so long as the said order remains in force.

Any Resident Magistrate may rescind or vary any order made under this section whether by himself or by any other Magistrate, and may transfer the guardianship of any orphan child from one manager to another appointed as aforesaid, whether of the same or any other institution as aforesaid; and every such order shall remain in force until the person over whom the guardianship is exercised by virtue of any such order or orders shall have attained the age of twenty-one years.

5. Subsection five of section eight of the said Act is hereby repealed.

Repeal.

6. The Governor, by Order in Council, shall, before the month of November ensuing next after the commencement of this Act, and at the same period in every third year thereafter, apportion the representation of the various contributory local authorities in any district on the Board of such district in the proportion to the amount contributed by such local authorities respectively to the Hospital and Charitable Aid Fund thereof during the year ending on the thirty-first day of March previous to the date of such Order in Council, and in proportion to the population of the districts of the various contributory local authorities.

Representation  
on District  
Boards to be  
proportioned to  
amount of con-  
tribution thereto  
by the several  
contributories.

Where a new district is constituted the apportionment, so far as contributions are concerned, shall be made according to the contributions of the local authorities therein to the fund of the district whereof the new district had previously formed a part.

Every apportionment of representation as aforesaid shall be made so that no local authority shall have more than four members on the Board ; and all members so apportioned shall be elected, as provided in section seven of the said Act, in the month of November ensuing next after the date of the Order in Council whereby such apportionment is made.

It shall not be necessary to grant a representative to each contributory local authority, but the local authorities may be grouped and return a member or members for such group.

The Governor shall also have power to adjust the representation of United Boards on the principles laid down regarding the representation of District Boards.

So much of the aforesaid section seven of the said Act as is repugnant to this section is hereby repealed.

Extraordinary vacancies.

7. Extraordinary vacancies may be created in any Board in the same manner as provided by section fifty-three of the said Act in relation to the trustees of a separate institution ; and for this purpose the said section shall apply *mutatis mutandis* in respect to every Board, the word " Board " being read therein in the place of the word " trustees."

If a sufficiency of members be not elected to supply any extraordinary vacancies, the Governor may appoint such persons as he may think fit to the Board, as provided in section seven of the said Act, on failure of election.

Governor may appoint Commissioners where no Board exists.

8. In case all the members of any Board shall resign, so that the functions thereof cannot be exercised, the Governor may appoint any persons as he may think fit as Commissioners to exercise the functions of the Board, and such Commissioners shall be deemed to be the Board of the district for which they are appointed, and shall exercise all the powers and authorities of a Board under the said Act and this Act.

Districts may become united by resolution.

9. Notwithstanding anything contained in the said Act, any two or more hospital districts may, by resolution passed by the respective Boards thereof, become joined into an united district under the said Act. A copy of such resolutions shall be transmitted to the Colonial Secretary, who shall thereupon notify in the *Gazette* the fact of such union, if he approve it, but such union shall not take effect until the first day of April or October next succeeding the gazetting thereof.

Chairman or President an original and casting vote.

10. At every meeting of the Board of any district under the said Act or this Act, or of the Board of Trustees of any separate institution, the Chairman or President of such meeting shall have an original vote, and, in case of an equality of votes on any question, shall also have a second or a casting vote.

Annual subsidies to Boards

11. Section fifteen of the said Act is hereby repealed, and in lieu thereof it is hereby enacted as follows :—

There shall be issued and paid out of the Consolidated Fund to every Board the following sums during each financial year, for five years, commencing from the first day of October, in the year one thousand eight hundred and eighty-six ; that is to say,—

In respect of the sums received by the Board during such year from the sources following :—

- (1.) Ten shillings for every pound of bequests, but in no case exceeding five hundred pounds in respect of any one bequest ;
- (2.) Twenty-four shillings for every pound of voluntary contributions ; and
- (3.) One pound for every pound of contributions received from any local authority.

During each financial year after the said five years, unless the Colonial Treasurer shall be satisfied that the Board has a sufficiency of funds to carry out the administration of this Act during such year, there shall be paid the like sums or such lesser sums as the Colonial Treasurer shall think sufficient.

Every Board which shall not have made sufficient provision for the cost of maintenance of institutions within the district under the jurisdiction of such Board respectively, or the distribution of charitable aid therein, or for both of such objects during the now current year, and until the first day of April in the now next ensuing year, may require a special contribution from the local authorities in such district for the purpose of providing so much of the aforesaid cost as has not been already provided.

All the provisions of the said Act relating to the levying of contributions from local authorities for any of the objects aforesaid, and for the recovery thereof if not paid, shall apply *mutatis mutandis* for the purpose of levying the special contributions authorised under this section.

Annual subsidies to separate institutions

12. Section fifty-eight of the said Act is hereby repealed, and in lieu thereof it is hereby enacted as follows :—

There shall be paid the following sums to each separate institution in the same manner in each year as are payable under the last-preceding section of this Act in respect of institutions under the control of District Boards, and subject as in the said section mentioned ; that is to say,—

In respect of the sums received by the Trustees during such year from the sources following :—

- (1.) Ten shillings for every pound of bequests, but in no case exceeding five hundred pounds in respect of any one bequest ;
- (2.) Twenty-four shillings for every pound of voluntary contributions ; and
- (3.) One pound for every pound of contributions received from any local authority, but only in case such local authority has not received, or is not entitled to, a subsidy in respect of the amount of such contribution.

Advances may be made on account of subsidies.

13. Out of any moneys from time to time appropriated by the General Assembly for the purposes of this Act the Colonial Treasurer may in each year advance to any Board or Trustees under the said Act, in anticipation of its estimated revenue for such year, any sums not exceeding in any case a sum equivalent to the half of the amount of the estimated revenue from all sources exclusive of subsidies.

All sums so advanced to any Board or Trustees shall be deemed to have been paid on account of subsidies, and shall be deducted from the first subsidy thereafter payable under the said Act or this Act to the Board or Trustees receiving such advance.

14. Every District Board constituted under sections seven or eight of the said Act, and the Board of every united district constituted under section thirty-four thereof, out of the district funds under their respective control,—

- (1.) May pay such salaries and general expenses as shall be necessary in and towards the due administration of the said Act within such districts respectively; and
- (2.) May pay the actual cost of the fare by road, railway, or water conveyance incurred by any member of such Board in going to or returning from any meeting of the Board when duly summoned, or in making any official visit of inspection to any institution when appointed to do so by the Board.

Expenses of administration.

15. The provisions of section fourteen shall be construed retrospectively, and be deemed to have been in force from the date of the commencement of the said Act.

Section 14 of this Act retrospective.

16. Every Board mentioned in section fourteen may refund to any local authority any money for travelling expenses of the nature mentioned in subsection two of the aforesaid section, which such local authority may at any time intervening between the commencement of the said Act and this Act have paid to the representative of such local authority on any of the aforesaid Boards, subject, however, that to every application for any such refund, there shall be annexed a statutory declaration under "The Justices of the Peace Act, 1882," made and signed by the Chairman of the local authority making the application to the effect that the said local authority has not been paid, and is not entitled to be paid in respect of the same expenses by any other person, Board, or local authority under any other Act.

As to refund to local authority of expenses paid to its representative.

17. All payments of money made before the passing of this Act to any officer or servant of an institution as a bonus on his retirement from his office or service are hereby validated; but nothing in this section contained shall be construed to authorise any such payments in the future.

Payment of bonus validated.

18. Before any person shall be paid any money for travelling expenses under subsection two of section fourteen, he shall deliver to the Chairman of the Board from which he claims the same a statutory declaration made and signed by him under "The Justices of the Peace Act, 1882," that he has not been paid, and is not entitled to receive any sum in respect of the same travelling expenses from any other Board or Corporation under any other Act.

Declaration before payment of travelling expenses.

19. No person, being the holder of a free pass on a railway, shall be paid any money in respect of expenses for travelling on such railway.

Holders of free passes not to be paid railway expenses.

20. The Trustees of any separate institution may, out of the funds thereof, pay such salaries and general expenses as shall be necessary in and towards the due administration of the said Act in respect of such institution, and may pay to any Trustee the actual cost of the fare by railway, if he is not the holder of a free pass on such railway, or by coach or water conveyance, or by horse, incurred by any such Trustee in going to or returning from any meeting of the Trustees when duly summoned; but not more than five pounds in the whole shall be paid to any Trustee under this section in any one year.

Payment of expenses of separate institutions and of Trustees.

21. Every hospital district under the said Act which becomes united to another hospital district for the purpose of distribution of charitable aid, shall thereafter, in respect of the maintenance of hospitals, be known as a separate district, and the corporate name of the Board thereof shall be changed into "The [naming the district] Hospital Board."

Corporate name of united separate district.

The corporate name of the Board of an united district shall be "The [naming the district] Charitable Aid Board."

On the formation of an united district the Hospital and Charitable Aid Fund of each separate district forming part of such united district shall be called the Hospital Fund; and the fund of the united district shall be called the Charitable Aid Fund.

22. In section fourteen of the said Act all words antecedent to subsection 1 shall be omitted, and the following substituted:—

Division of Hospital and Charitable Aid Fund.

For every hospital district there shall be an Hospital and Charitable Aid Fund, and for every separate district an Hospital Fund, and for every united district a Charitable Aid Fund, consisting respectively of the moneys arising from the following sources:—

23. Any surplus funds not required for immediate expenditure, and remaining at the end of any year in the hands of any Board under the said Act or the Trustees of any separate institution, shall be carried forward to the credit of the succeeding year, in reduction of the amount of contribution to be collected for the expenses of the institution in such year.

Application of surplus funds.

All surplus funds belonging to any institution which, at the time of the passing of this Act, are invested in any manner, shall remain so, and the yearly proceeds of such investments shall be applied towards the current expenses of the institution in reduction of the contributions to be collected for such purpose.

But the Governor, if he thinks fit, may at any time permit such investments to be realised, and the proceeds to be applied in any case of emergency or for such special objects permissible under the said Act as such Board or Trustees may from time to time direct.

And of proceeds from investment.

24. All receipts given by or on behalf of any Board constituted under the said Act shall be exempt from stamp duty.

Receipts exempt from stamp duty.

25. Every Board may from time to time divide the district under its jurisdiction into subdivisions, and also may vary, alter, or abolish any such subdivisions and create new ones; but it shall not be lawful for any Board to dismember any subdivision of a district from such district, and every such severance heretofore made or purported to be made shall be deemed to be illegal.

Board may subdivide district for purpose of distributing charitable aid.

The division of a district into subdivisions shall be for the purposes only of facilitating the levying and collecting contributions from the contributory local authorities in such district, and the distribution of charitable aid therein, or for one or other of such objects.

26. Every Board, according to its respective functions, shall declare what local authorities within the district under its jurisdiction shall be liable to contribute to the support of the institution therein, or to afford charitable aid therein, or both, and shall appoint the proportion of the contribution to be made by

Board to collect contributions on an uniform scale.

by each such local authority respectively on an uniform or equivalent scale throughout the entire district, but proportioned as mentioned in section twenty-three of the said Act; and may appoint the time for the payment thereof. No differential proportion of contributions shall be made in any district.

Section twenty-two of the said Act is hereby repealed.

Board may remit contributions in case of excess.

27. In case any contributions required from local authorities shall prove to be in excess of the actual necessities of the district or united district, the Board of any such district may, by resolution, acquit such local authorities from the payment of any part of such contributions, but every such release shall be made uniformly and to the same degree to all the contributory local authorities in proportion to their respective contributions.

Property-tax Commissioner may levy contributions in districts where no rates levied.

28. If any contribution authorised or required to be paid under the said Act within any part of a district cannot be recovered by reason of the absence of any local authority therein, or by reason of no rates being levied by any local authority therein, and no subsidies being payable under the said Act or any other Act to any such local authority, the Colonial Treasurer, on the application of the Board, and on receiving from it an account of the amount of contribution required from such part of the district, shall send such account to the Property-tax Commissioner. It shall be the duty of the Property-tax Commissioner forthwith upon the receipt of such account to raise, by means of rates upon all ratable property within any such part of a district as aforesaid, the amount stated in such account, together with the amount of the estimated cost of making and collecting such rates.

For the purpose of making and collecting any such rate, the assessment-roll made by the Property-tax Commissioner shall be deemed to be the valuation-roll of the ratable property in the aforesaid part of a district; and the Property-tax Commissioner shall be deemed to be a local body within the meaning of "The Rating Act, 1882," and any Act amending the same or passed in substitution thereof, all the provisions whereof respectively, as the case may be, shall apply to the making and collecting any such rate.

All rates so raised shall be paid to the Board of the district for which they were collected, less the amount of expenses for collecting the same, which shall be paid into the Public Account, and form part of the Consolidated Fund.

Board may appoint local authorities to distribute charitable aid.

29. The Board of any district may appoint any one or more local authorities in the district, or in any subdivision thereof respectively, to distribute or to collect and distribute the charitable aid funds of the Board within the district under the jurisdiction of such local authority, and may from time to time vary or rescind any such appointment in part or in whole.

Dissolution of certain united districts.

30. Subsections one and six of section thirty-four of the said Act are hereby repealed; the North of Auckland District, the Auckland District, the Waikato District, the Nelson District, the Buller district, and the Inangahua District are hereby constituted hospital districts under the said Act, as if they had never formed part of any united district.

Allocation of assets and liabilities.

The Boards of the united districts of the North of Auckland with the Auckland Districts, and of the Inangahua and Buller with the Nelson District, are hereby dissolved; and all the assets and liabilities of the Boards of such united districts at the time of their dissolution respectively shall be apportioned among the Boards of the several districts forming part of such united districts respectively in manner as shall be allocated by such person as the Governor may appoint for the purpose.

This section shall not come into force before the first day of April next after the passing thereof.

Nothing in this section shall affect any moneys or lands specially bequeathed or granted to any institution in the City of Auckland, and such moneys or lands so bequeathed shall not be deemed assets of the Board in the meaning of this section.

Annual subscriptions.

31. In section thirty-eight of the said Act, the words, "in yearly sums of not less than five shillings an amount of not less than one hundred pounds" shall be omitted, and the words following substituted: "in sums of not less than five shillings a yearly amount of not less than one hundred pounds."

Life contributors.

32. The District Board or trustees having the control of any institution may elect any person who gives or has given a donation in one sum of not less than twenty pounds to the institution to be a life contributor thereof; and to have thereby all the privileges of an annual contributor thereto, with the same right of voting at any meeting of the contributors to such institution, and the power of exercising his vote by a proxy given in writing under his hand.

Any person who before the passing of the said Act may have been elected or appointed to be a life governor, director, or subscriber to any former institution, but which now is existing under the said Act, shall be deemed to be a life contributor to such institution under the said Act.

Except as aforesaid, no contributor shall be permitted to vote by proxy.

Limitation of votes.

33. At any election of trustees of an institution every contributor shall have and may give one vote only in respect of each trustee to be elected, anything contained in the said Act notwithstanding.

Election of Trustees of separate institutions

34. Section forty-six of the said Act is hereby repealed, and in lieu thereof it is enacted: Every such incorporated institution as aforesaid shall be governed by not less than six nor more than nine trustees, to be elected by the voluntary contributors for the time being and by the contributing local authorities for the time being to the maintenance of such institution.

If the voluntary contributors contribute in respect of the total amount required for the maintenance of the said institution during the last-preceding financial year,—

- (1.) Less than one-sixth they shall elect two Trustees; and
- (2.) If one-sixth and less than one-third they shall elect three Trustees; and
- (3.) If one-third and less than one-half they shall elect five Trustees; and
- (4.) If more than one-half and less than the total amount they shall elect six Trustees.

The local authorities contributing for the time being to the maintenance of such institution shall elect the remainder of such Trustees, so as to make the total number of Trustees nine.

Definition of contributory local authority.

35. A local authority shall be deemed to contribute to the funds of a separate institution when it contributes any sum to the District Board for the purpose of the same being paid to the separate institution.

36. Sub-sections one and two of section forty-seven are hereby repealed and the following substituted:— Mode of election by contributory local authorities.

- (1.) If there are no more local authorities contributing to such separate institution than Trustees to be elected by them, then each shall elect one Trustee at the time of the first incorporation of the institution as a separate institution, and thereafter at the date and at the time when members of the District Board are elected, and such Trustees shall hold office for one year or until their successors are elected.
- (2.) If there are more local authorities contributing than Trustees to be elected, then each local authority contributing not less than the total amount contributed by the whole of the local authorities divided by the number of Trustees to be elected shall elect one Trustee, and the remaining local authorities shall elect the remaining Trustees to be elected.

37. Section ninety-two of the said Act is hereby amended by the omission of all the words thereof after "audited," and the substitution in lieu thereof of the following: "by the Controller and Auditor-General in the same manner as provided in section ninety-one of the said Act in respect to the auditing of the accounts of Boards." Controller and Auditor-General to audit accounts of Trustees of separate institutions.

38. The cost of every appeal under sections twenty-five and sixty respectively of the said Act, and of every inquiry under section forty-four thereof, shall be defrayed by the party to such appeal or inquiry against whom the decision shall be given; and may be recovered from such party by the Colonial Secretary as a debt due to the Crown; or the amount may be stopped by the Colonial Treasurer out of any subsidy which may at any time be payable under the said Act to such party. Cost of appeals and inquiry to be paid by losing party.

39. Section eighty-two of the said Act is hereby repealed, and in lieu thereof it is enacted as follows:— Reserves and endowments may be granted to institutions.

Except as provided in section eighty-eight of the said Act, lands now or hereafter reserved or set apart for the purposes of or as endowments for any institution may be granted to the Board or trustees of the institution for which the same has been so reserved or set apart, anything contained in "The Public Reserves Act, 1881," to the contrary notwithstanding. This Act shall be deemed to be a special Act for the purpose of making any such grant as aforesaid.

1899.  
(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**HOSPITALS FOR THE INSANE.**

(PARTICULARS RESPECTING NURSES AND ATTENDANTS, &c., AT.)

*Printed under No. 6 Report from Printing Committee, 19 October, 1899.*

[Laid upon the Table in accordance with promise made in answer to Question No. 1, Votes No. 28, 17 October, 1899.]

Question.

- (1.) Hospitals for Insane controlled by Public Service Board:—Mr. E. M. Clark asked the Colonial Secretary,—
- (1.) To what extent are the nurses, attendants, gardeners, carters, and gatekeepers in the various Hospitals for the Insane controlled by the Public Service Board?
  - (2.) To what extent are they controlled by the Inspector-General of Insane?
  - (3.) What are their hours when performing day duty in summer and winter time?
  - (4.) What are the hours of those who have to perform night duty in summer and winter time?
  - (5.) Will he see that steps are taken to have them placed on a similar footing to the Police Forces, viz., eight hours a day?
  - (6.) Is it a fact that the food served to them is very inferior, and at times they receive no vegetables for months?
  - (7.) Is it a fact that they are obliged to take supper at 4 o'clock in the afternoon, and get nothing more till 7 o'clock next morning?
  - (8.) Will he see that steps are taken to allow them to board themselves?
  - (9.) Is it a fact that the single men attendants are charged £12 a year for their room, which is situated next to where the patients are located, and very often at nights are obliged to get up and attend them when actually off duty?
  - (10.) Will he see that steps are taken to have the £12 a year taken off when they have to sleep in such an unsuitable place?
  - (11.) Why is it that the attendants are charged £15 a year for their rations when they only cost £9?

Answer.

- (1.) The control exercised by the Public Service Board is as regards classification, the salaries fixed for the various grades, the amount of deduction to be made from the salaries, and the number of attendants, &c., to be employed
- (2.) The Inspector-General of the Insane has control of the staff in all other respects.
- (3.) Indoor attendants and nurses,—
  - 6.30 a.m. to 6 p.m. in winter, less 1½ hours for meals.
  - 6 a.m. to 7 p.m. in summer, less 1½ hours for meals.
 Outdoor attendants—
  - 6.30 a.m. to 5 p.m. in winter, less 1½ hours for meals.
  - 6 a.m. to 6 p.m. in summer, less 1½ hours for meals.
- (4.) Night attendants and nurses—
  - 6 p.m. to 6.30 a.m. in winter.
  - 7 p.m. to 6 a.m. in summer.
- (5.) The matter will be considered.
- (6.) It is not a fact.
- (7.) Half of the attendants and nurses have tea at 5 p.m., the remainder at 6 p.m. They cease duty at 7 p.m. In winter the hours are an hour earlier. Provision is made for supper later for anyone who desires it.
- (8.) The matter will receive consideration.
- (9.) The charge for the single attendants' rooms is £10 per annum, and this includes their share of dining-room, sitting-room, and other accommodation. They are very rarely indeed aroused at night to attend patients, but are required to do so if necessary.
- (10.) The matter will be considered.
- (11.) The actual cost of provisions varies according to the rates at which the contract happens to be taken, and the £15 charged, which also includes fuel, is a fair average. At present contract prices the actual cost of articles of diet is £14, and the cost of fuel, cooking, &c., added to this exceeds £15.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## HOSPITAL FOR INSANE, PARRAMATTA.

(PAPERS IN CONNECTION WITH THE CASE OF MRS. CHARLOTTE DOUGLASS, LATE CHARGE NURSE AT.)

Printed under No. 14 Report from Printing Committee, 19 December, 1899.

### The Public Service Board to The Attorney-General.

Case of Mrs. Charlotte Douglass, late Charge Nurse, Hospital for the Insane, Parramatta.

Public Service Board, 50, Young-street, Sydney, 16 October, 1899.

THE Public Service Board desire to bring under the notice of the Government the following case:—

Mrs. Charlotte Douglass, formerly Charge Nurse, Hospital for the Insane, Parramatta, was employed from 1st April, 1860, to 28th February, 1869, when she resigned. She was re-appointed on 15th January, 1879, and served until 31st July, 1898, when, having reached the age of 62 years, she applied to be allowed to retire. The application was approved by the Governor and Executive Council. She had elected in terms of section 57 of the Civil Service Act of 1884 to contribute to the Superannuation Fund, and had paid such contributions from 1st May, 1887. In accordance with the opinion of Mr. Attorney-General Barton, dated 8th December, 1893, her term of service was allowed only from the date of such admission as a contributor, and she was allowed under section 49 a gratuity at the rate of one month's pay for each year of service, amounting to £77 18s. 4d.

The Inspector-General of the Insane now represents that Mrs. Douglass was at the time of her retirement in good health, and capable of rendering satisfactory service for some time, and that her retirement would not have been asked for but for the assumption that she would have received a pension. He therefore recommends her case for special consideration.

As it appears that Mrs. Douglass was induced to retire on the assumption that she was entitled to a pension, the Public Service Board, in view of the representations of Dr. Sinclair, desire to submit the matter for the consideration of the Government, with a view to her re-employment in her former Department.

GEO. A. WILSON, }  
J. BARLING, } Members of the  
T. A. COGHLAN, } Public Service Board.

Submitted.—H.P., 19/10/99. The Chief Secretary.—B.R.W., 24/10/99. Papers with 99-15,007, P. S. Board, 27th Aug., '98. The Principal Under Secretary.—H.M. (for Sec.), B.C., 24 Oct., '99.

See also Attorney-General's minute, dated 1st Nov., '99:—"It is not quite clear whether Dr. Sinclair approves of the re-appointment of this lady. *Prima facie*, it seems undesirable to appoint a lady of the age of 62 or 63 to have charge of insane patients.—B.R.W., 1/11/99."

The Principal Under Secretary.—H.P., 3/11/99. Retd.—C.S.O., 4 Nov., '99. Refer to Dr. Sinclair.—C.W., B.C., 7/11/99.

The re-employment of this nurse is not desirable, the same conditions as led Dr. Manning to recommend her retirement being present. She was capable of rendering good service at the time she retired, but it would be impossible to make the conditions exactly the same as then, and satisfactory service could not now be expected. The case is one in which compensation, not employment, was recommended by me, as it is clear that she was led to expect a pension on retirement.—ERIC SINCLAIR, 13/11/99. The Principal Under Secretary.

## The Public Service Board to The Attorney-General.

Case of Mrs. Charlotte Douglass, late Charge Nurse, Hospital for Insane, Parramatta.

Public Service Board, 50, Young-street, Sydney, 24 November, 1899.

THERE appears to the Public Service Board to be some misapprehension in regard to the circumstances of this case, the papers regarding which have been again referred to them by the direction of the Honorable the Attorney-General.

The circumstances in connection with Mrs. Douglass's retirement, shortly recapitulated, are as follows:—

This lady was employed in the Lunacy Department from the 1st July, 1860, to the 28th February, 1869, when she resigned. She was re-appointed on the 15th January, 1879, and served until 31st July, 1893, when, having reached the age of 62 years, she applied to be allowed to retire, apparently on representations made to her by Dr. Manning that she was entitled to receive a pension. She had elected, in terms of section 57 of the Civil Service Act of 1884, to contribute to the Superannuation Fund, and had so contributed from the 1st May, 1887.

When her retirement had been effected by the Executive Council the papers were forwarded to the Board in accordance with the usual practice, with a view of having the superannuation allowance computed by the Actuaries. It was then pointed out that under the opinion of Mr. Attorney-General Barton of December, 1893, her service for superannuation purposes could only legally be counted from the date she commenced to contribute to the fund, viz, 1st May, 1887, and therefore, as such service did not amount to fifteen years, she could not be allowed a pension, but only one month's pay for each year of service from the date of commencing to contribute before mentioned, and a recommendation to that effect was made by the Board.

This was fully explained to Mrs. Douglass. Dr. Sinclair, who in the meantime had succeeded Dr. Manning as Inspector-General of Insane, also saw the Board on Mrs. Douglass's behalf, and the legal difficulty in the way of granting a pension was explained to him.

The case appeared to the Board to be one of considerable hardship, but inasmuch as the law on the subject seemed to be clear, the Board could not recommend the payment of a pension. They therefore determined to submit a statement of the circumstances of the case to the Government, with a suggestion that as Mrs. Douglass had left the Service under the inducement of the head of her Department that she would be allowed a pension, which, however, was not the case, the Government might consider it desirable to re-employ her in her former Department. The Board, in making this suggestion, had before them the memorandum of Dr. Manning of the 19th September, 1889, which is with the papers, in which he states:—

"I believed that she (Mrs. Douglass) was entitled to a pension, and had carried out all the requirements with regard thereto, or I should not have taken steps to obtain her retirement, as she was physically fit for several years until she attained the age of 65."

Dr. Manning also states that one of the grounds on which he recommended her retirement was that, although a most trustworthy and excellent woman, her defective education placed her in a difficult position with regard to the nurses under her—she being a Charge Nurse, having the supervision of other nurses.

The Board made no statutory recommendation for her re-employment—indeed they have no power to do so, the appointment of lunacy officers of this class being entirely vested in the Inspector-General of Insane.

From the report appearing in the *Daily Telegraph* this morning of the debate which took place in the Legislative Assembly last night on the Public Service Act Amendment Bill, it appears to the Board that the Honorable the Attorney-General cannot be fully acquainted with the facts of the case as herein set forth.

As the statement in the paper referred to gives an altogether erroneous impression of the action which they have taken, they trust that Mr. Wise will, in justice to them, see his way to make the necessary correction, and to put the matter in its proper light before the House at the earliest possible moment.

GEO. A. WILSON, } Members of the  
J. BARLING, } Public Service Board.

NEW SOUTH WALES.

## HOSPITAL FOR THE INSANE, KENMORE.

(REPORT RESPECTING THE CASE OF THOMAS ARRAGON, LATE A PATIENT IN.)

*Printed under No. 14 Report from Printing Committee, 19 December, 1899.*

The Inspector-General of the Insane to The Principal Under Secretary.

Lunacy Department, Inspector-General's Office, Gladsville,

15 November, 1899.

Sir,

I have the honor to enclose report from the Medical Superintendent of the Hospital for the Insane at Kenmore on the case of Thomas Arragon, late a patient in that hospital, as to which comment has been made in the Legislative Assembly.

It appears that Arragon was sent by a Police Magistrate to Kenmore, and not brought by his friends, and that during the ten months of his stay there none of them visited or inquired about him. Consequently, when the mental illness had passed away, and he was in a state to be discharged, the hospital authorities were not aware that his friends were in a position to support him, or were desirous of doing so, and as his advanced age, 68, and the mental dulness resulting from the severe attack of mania precluded his working for a living, they recommended his transfer to Rookwood.

According to a rule of the Department, however, the friends should have been communicated with, and given the option of removing the patient, and the omission to do so in this instance cannot be excused.

It is recognised that friends have a right to be informed of changes in the condition of patients, or of their proposed discharge or transfer, and every care should be taken to write to them at the earliest opportunity. I have taken steps to prevent the recurrence of similar neglect in the future at any of the hospitals in this Department.

I have, &amp;c.,

ERIC SINCLAIR,

Inspector-General.

[Enclosure.]

Lunacy Department, Hospital for the Insane,

Kenmore, near Goulburn, 6 November, 1899.

Sir,

In reply to your inquiry with reference to the case of Thomas Arragon, who was admitted into this institution on the 8th December, 1898, I have the honor to report that he was sent from Adelong, by order of the Bench of Magistrates, on the 5th December, 1898. He was described as a labourer, 68 years of age, unmarried, and was certified to be suffering from the delusion that he was at that time resident in Ireland, and not in New South Wales, and that his brother had dispossessed him of certain money and documents.

Under care and treatment he remained for some months in practically the same mental condition as when admitted, chafing, somewhat, at his detention, but was at no time demonstrative or troublesome, although later his morbid ideas concerning his habitat and his brother appeared to fade in intensity and eventually to subside altogether. His state of mind at this stage was one of simple mental enfeeblement, due to the antecedent attack of insanity, increasing age, and infirmity.

Under these circumstances, it was decided, after careful consideration of his case in all its bearings, that there was not sufficient reason for his further detention in a hospital for the insane, and as there was no doubt of his unfitness to earn a living by his own efforts, arrangements were made for his transfer to an institution more suited to his condition.

It is, as you are aware, an invariable rule in the Department under your control to consult the friends when any change in a patient's residence is contemplated, irrespective of whether such friends contribute towards maintenance in the hospital, and in the present instance this should have been done. By an oversight, however, the address-book was not consulted, and as no one had visited the patient or made inquiry concerning him during the period—ten months—in which he was resident here, the mistake was made of supposing that he had no relatives sufficiently interested to assume the responsibility of caring for him. Unfortunately, also, the fact escaped notice that his brother was contributing towards his maintenance at the rate of £12 per annum.

After his transfer to Rookwood, his relatives wrote making inquiry concerning his whereabouts, and in the reply sent the facts were explained, and regret expressed that any pain or distress should have been caused by the failure to notify them when the transfer of the patient was proposed.

I have, &amp;c.,

CHISHOLM ROSS,

Medical Superintendent.

The Inspector-General of the Insane.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## COAST HOSPITAL, LITTLE BAY.

(REPORT FOR 1898.)

*Printed under No. 6 Report from Printing Committee, 19 October, 1899.*

The Chief Medical Officer of the Government to The Principal Under-Secretary.

Sir,

Sydney, 9 August, 1899.

I have the honor to submit, for information of the Chief Secretary, my Annual Report on the working of the Coast Hospital at Little Bay for the year 1898, to which the usual statistical returns are appended.

2. The number of patients remaining in on December 31st, 1897, was 207; 2,487 were admitted during the year—the total number under treatment thus having been 2,694. Of the total, 2,341 were discharged, while 145 died; the mortality was, therefore, 5·8 per cent. The average daily number of occupied beds for the year was 231·6, being an increase of 7·2. The annual cost per bed was—for maintenance and treatment, £62 11s. 5½d., for the ambulance service, £6 2s. 5½d., and for repairs, £2 3s. 5½d.; total, £70 17s. 4½d. The gross expenditure for the year was £16,415 Gs. 8d.

3. The number of infectious cases in isolation was 766; and the number of kinds of disease which require isolation from each other, and from other patients, represented among that number of patients, was 10. This was an increase on the corresponding figures for previous years, and was due to rather severe epidemics of measles and of scarlet fever as well as (in a less degree) of diphtheria. The work thus done towards the prevention of such diseases is no doubt good as far as it goes; but I would point out that the distance at which the hospital stands from the inhabited area, which has ever been a ground of complaint with the poor who find it difficult to visit their relatives while they are under treatment, must militate especially against its efficiency as a means of limiting the spread of infectious diseases which attack young children chiefly. From this point of view it may perhaps be questioned whether the preventive results attained are commensurate with the cost incurred. The buildings used for isolation purposes are unsuited to them in construction and arrangement, and cases have arisen which gave ground for inquiring whether the infection had or had not been received from other patients already in isolation.

4. It will be noticed that the annual cost per occupied bed exceeded that for 1897 by more than £13. More than £5 of this amount is due to appointment to the nursing staff of 9 extra nurses, and to the serving staff of 2 extra servants, in order that this part of the staff might be given fifty-two clear days leave in each year; and in a lesser degree to appointment of 3 extra members to the ambulance and office staffs, made necessary by increase in the general business of the institution. The greater part of the remaining £8 or £9 appears under the heading "provisions," among which more than £3 a head for fresh fish stands out prominently. As to the increase under this heading in general, I point out that, for half of the year under review, the duties of Medical Superintendent were taken by a gentleman temporarily appointed to them; and, although he performed them at least as well as could be reasonably expected, that it was scarcely possible for a stranger to the institution and to hospital management to grasp its details with the clearness, and to administer a business concerning more than 300 persons, with the firmness, which are essential to strict economy. But the large sum expended on fresh fish was due, primarily, to the price at which it was supplied under the existing contracts, viz., 1s. 2d. a pound; though in a lesser degree to the number of patients (40) who daily drew a ration of fish—a number which, again, might probably have been reduced had a much stricter supervision been available.

5. The Medical Superintendent (Dr. R. U. Russell) was removed by promotion on 19th July, and his duties were discharged to my satisfaction thenceforward by Dr. J. N. E. Maclellan, temporarily appointed to the post. The posts of house-surgeon were filled as follows by the undermentioned graduates of the University:—From January 1st to end of the year, by Dr. Robert Dey; from January 1st to March 31st, by Dr. Robert Farrell; from April 1st to December 31st, by Dr. P. G. Cooley. Miss M'Master continued in the post of matron, and Mr. Willman in that of clerk and storekeeper. I have pleasure in drawing attention to the efficiency with which the officers and members of the permanent staff in general performed their duties during the year.

I have, &amp;c.,

J. ASHBURTON THOMPSON,  
Chief Medical Officer of the Government.

## APPENDIX A.

*Printed under No. 13 Report from Printing Committee, 12 December, 1899.*  
—

No. 1.

The Honorable J. A. Hogue, M.P., to The Chief Secretary.

Dear Sir,

7 March, 1899.

I desire, as Parliamentary representative of the district of the Glebe, to invite your attention to the question of the diphtheria branch of the Hospital for Sick Children, Glebe. The existence of that branch of the hospital has done great injury to property-owners in the immediate neighbourhood, and, indeed, to those in the borough generally.

Property has notoriously been depreciated in value by the knowledge that the Glebe is the receptacle for diphtheria patients from outside.

As it would not do to discontinue this branch of the hospital until some substitute for it were found in another locality, I venture to strongly impress upon you the desirability of establishing, in a position to be hereafter chosen, a general fever hospital for the metropolitan district. Should such hospital be erected, all diphtheria patients could be treated therein. I am given to understand that such a course would be in harmony with the wishes of the authorities of the Children's Hospital, who would gladly remove their diphtheria branch if a suitable site were found for it elsewhere.

Trusting that this matter will receive immediate attention.

I am, &c.,  
J. A. HOGUE.

—  
The Chief Medical Officer may perhaps advise if it is possible to erect a building adjacent to the Coast Hospital that will meet the requirements of this case.—J.N.B., 9/3/99. The Chief Medical Officer of the Government.—C.W., P.U.S., B.C., 13/3/99. Acknowledge.—13/3/99.

No. 2.

The Chief Medical Officer of the Government to The Principal Under Secretary.

Sir,

Office of the Chief Medical Officer, Sydney, 22 March, 1899.

I have the honor to acknowledge receipt of the Minister's minute dated March 9th, in which he requests me to advise whether it is possible to erect a building adjacent to the Coast Hospital, which will meet requirements contemplated by the Honorable the Minister for Public Instruction in his letter (returned herewith) dated March 7th.

2. Mr. Hogue, in the letter mentioned, advocates establishment of a general fever hospital for the Metropolitan district, at which all diphtheria patients could be treated. It is the case, in my opinion, that a general fever hospital is much required; that it should be the kind of institution commonly referred to as an isolation hospital (or, perhaps more judiciously, as a sanatorium); and that such an establishment is the necessary complement of, or the corollary to, the notification part of the Public Health Act.

3. The objects of an isolation hospital or sanatorium are two: prevention of epidemics, and the treatment of infectious disease. They help in prevention of epidemics by furnishing means of promptly and effectually isolating the earliest cases of infectious diseases which occur in any district, further spread from such cases being thereby avoided. Success depends, however, on such promptness and such thoroughness being invariably exercised; and a central position is, therefore, evidently important. As regards the treatment of disease, the distance at which a sanatorium may be placed from the centre of the inhabited area to be served depends on the kinds of disease to be treated and the requirements of persons suffering from them. In the case of some diseases the distance to which a patient is transported is of comparatively small importance when suitable means of conveyance are provided; in others the delay and fatigue of a long journey would often be fatal. Now, as any such hospital is, for reasons of economy, and for others unnecessary to be mentioned just now, designed to treat all kinds of such diseases, the distance at which it may be placed from the centre is governed by the requirements of that disease in which transport is of most importance.

4. Diphtheria (and diphtheritic croup) is the malady to the successful treatment of which a centrally placed hospital is absolutely essential. This is well known, of course, to the medical profession, as well as to many parents who have had practical experience with this disease; but I have thought it well to invite Mr. C. P. B. Clubbe to speak on this point, since his experience of the hospital treatment of diphtheria in Sydney is most lengthy and most extensive. He has been good enough to respond as follows:—

“The reasons against placing a hospital for the treatment of diphtheria in the neighbourhood of Little Bay, to the exclusion of one in or near the city, are many and weighty. Diphtheria occurs chiefly amongst children. Many of the cases are only brought to the hospital when acutely ill and often needing immediate surgical treatment—in some instances because it is only then that the disease is recognised; in others, because it is only then that the parents will consent to their removal. Such cases (*i.e.*, children choking from diphtheria) could not possibly bear the long journey; and if they were sent, a large proportion would be dead on their arrival. In the milder, but not less infectious cases, the parents would often refuse to sanction their removal to a hospital situated at such a distance.”

With these opinions I entirely concur. Mr. Clubbe goes on to point out that establishment of a sanatorium at Little Bay, with a view to its being the hospital at which all cases of diphtheria should be treated, would very soon have an effect precisely contrary to that desired, namely—(*a*) the proportion of deaths would inevitably be increased by the mere length of the journey; and (*b*) the disease would be spread, and the mortality from it would consequently be increased from the same cause operating in another way—that is, the known unwillingness of parents to send their children to a distant and hardly accessible institution would lead them to retain the patients at home where they could not be isolated, and where their disease would spread by contagion.

5. As regards the treatment of other infectious diseases, distance has great importance in some kinds, though it is not possible to show this quite so clearly and forcibly as in the case of diphtheria; but, as regards prevention, all such diseases stand on the same footing. If a sanatorium is to answer its most important purpose of preventing the spread of infectious disease it must be so placed that people will not be for any reason unwilling to send their children there, and so that when removal of patients is required it may be effected in three or four hours at most. These considerations show that the neighbourhood of the Coast hospital—that is, 3 miles from the nearest village and 6 miles distant from even the fringe of the more thickly inhabited portions of Sydney—is altogether unsuitable.

6. Whether it is necessary to further emphasise the unsuitability of the Coast Hospital site for erection of a sanatorium, I do not know; but it seems worth while to point out that the usefulness of the Coast merely as a general hospital, actually is impeded and discounted by its situation. Objections to going there are frequently and strongly urged by the poor; they are—(*a*) impossibility of reaching it except on foot during many night hours; (*b*) impossibility of reaching it during the day except at an appreciable money cost, and at the loss of three-quarters of a day's work; (*c*) the separation between relatives and friends thus entailed at a time when the need of active sympathy is most felt; (*d*) the difficulty of summoning a minister of religion when death unexpectedly threatens. It is true that this institution is always full, notwithstanding; but it is filled by the poor who have no choice but to go there where a bed is offered them; and therefore it appears to me wrong and unjust to place a general hospital at so distant a spot. To erect a sanatorium there would be, in addition a tactical blunder, fatal to its main object.

7. It may perhaps be supposed that a remote position is necessary in order to prevent the spread of infection from a sanatorium. But this is not the case. The Coast Hospital was designed as a small-pox hospital. It happens never to have been used for that purpose; but to place it far away was not unreasonable (though the distance is much greater than necessary), because the infection of smallpox can spread to a considerable distance beyond the walls of the hospital in which the disease is being treated. But it is the only disease of which this can be said. In every other the infection can spread directly from the patient only for extremely short distances and, for practical purposes, only to points within the room in which he lies. There is thus no reason for fixing upon a remote site for a sanatorium, while every reason points to choice of as central a site as can be found.

8. There are other grounds of objection to the site mentioned, which I just note below:—

1. Extra expense of building where all material has to be carried far by road.
2. Excessive cost of transport of patients, and difficulty of maintaining an ambulance service not merely efficient, but invariably and promptly available on demand.
3. The sanatorium would require a disinfecting apparatus and staff; a similar apparatus and staff are required for the metropolitan district. The latter must be central, and might be attached to the sanatorium if that were central too; otherwise two disinfecting stations will have to be provided—one central, one distant for use of the distant hospital.
4. The sanatorium must, in any case, have a separate staff. Even the Medical Superintendent of the hospital, which often has 250 occupied beds, could not manage, in addition, so different an institution as the sanatorium.

## 3.

5. Were the sanatorium placed so far away, the medical students at the University would be deprived of a most valuable opportunity for becoming acquainted with the various forms of infectious disease which are not admitted to the general hospitals where they are now educated. Such attendance at an easily-reached sanatorium could be permitted under suitable regulations for avoiding risk of carrying infection.

6. A sanatorium, placed within view of the public, and known to have been instituted for prevention of epidemics, as well as for treatment of infectious disease, could not fail to exert some educational effect, which would be lost were such cases relegated to the Coast, already known, as it is, to be a general hospital like any other.

9. I do not expect the considerations noted above to carry much weight at first sight. Reflection, and a good deal of experience are necessary to due appreciation of them; but, if requisite, I could say a good deal under several of the heads mentioned. In the meantime, I have the honor to advise that any proposal which may be made to erect a sanatorium at Little Bay, or at any but a comparatively central spot, is unpractical, and should not for a moment be entertained; and I am further of opinion that, if Little Bay were to be brought into closer tram communication with Sydney, this would not be nearly as great an improvement as it sounds, and in all practical details would leave the objections raised above very much as they stand.

I have, &c.,

J. ASHBURTON THOMPSON,  
Chief Medical Officer of the Government.

Submitted.—C.W., 5/4/99. A copy of this report may be forwarded to the Hon. J. A. Hogue, M.P. The Chief Medical Officer may also be asked if he can suggest a site adapted for a fever hospital at which diphtheria patients could be treated.—J.N.B., 5/4/99.

## No. 3.

The Principal Under Secretary to The Honorable J. A. Hogue, M.P.

Sir,

Chief Secretary's Office, Sydney, 13 April, 1899.

Adverting to my letter of the 13th ultimo, formally acknowledging the receipt of yours of the 7th idem, advocating the establishment of a general fever hospital for the metropolitan district, at which all diphtheria patients could be treated, and notifying you that the Chief Medical Officer of the Government had been instructed to advise as to the possibility of erecting a building adjacent to the Coast Hospital, which would meet the requirements contemplated by you, I am now directed by the Chief Secretary to append, for your perusal, copy of a report which has been furnished to this Department by the Chief Medical Officer on the subject.

2. I am to add that the papers in the matter have been returned to Dr. Ashburton Thompson, who has been requested to say whether he can suggest a site adapted for a fever hospital at which diphtheria patients can be treated.

I have, &c.,

CRITCHETT WALKER,  
Principal Under Secretary.

## No. 4.

The Honorable J. A. Hogue, M.P., to The Principal Under Secretary.

Sir,

Department of Public Instruction, New South Wales, 14 April, 1899.

I have the honor to acknowledge receipt of yours of 13th instant, respecting the question of establishing a general fever hospital for the metropolitan district, and beg to say that I am gratified at the attention which this important subject is receiving at the hands of the Chief Secretary.

I have read with interest the report (copy of which you have been good enough to forward me) of the Chief Medical Officer, together with the opinions quoted by that gentleman of Dr. Clubbe; and I would like to observe that with the opinions expressed by both Dr. Ashburton Thompson and Dr. Clubbe I entirely concur. The necessity for a general fever hospital, or sanatorium, for the metropolitan district is so apparent that I need add nothing to what has been urged by the Chief Medical Officer. The only question to be determined is that of site. Little Bay seems to me to be too distant from the centre of population to meet requirements. As far as I can see, there are two sites worth considering—that at Kensington, where some 40 acres of Crown land are available, and that in the University Park, near the termination of Ross-street, Forest Lodge. Of the two, the Kensington site appears the more eligible one in every way, and I would like to suggest that that site be adopted. A general fever hospital and sanatorium erected there would be easily accessible from all parts of the metropolitan area, and, as far as I can see, is open to none of the objections to other sites.

I beg to express the hope that my esteemed colleague, the Chief Secretary, will favourably consider the suggestion herein made.

I have, &c.,

J. A. HOGUE.

Submitted

Submitted.—C.W., 19/4/99.

I fail to recognise the advantage to be gained by selecting a site for the proposed institution in a locality promising at no distant date to be as densely populated as that of the present hospital. The Chief Medical Adviser may be asked if, in addition to the valuable suggestions already submitted, he can recommend a more suitable site, and one free from the prejudices that have induced the request now made for a change.—J.N.B., 22/4/99.

The Chief Medical Officer of the Government.—C.W., P.U.S., B.C., 24/4/99.

### No. 5.

#### The Chief Medical Officer of the Government to The Principal Under Secretary.

Sir,

Department of Public Health, New South Wales, Sydney, 5 June, 1899.

I have the honor to acknowledge receipt of a letter addressed to the Honorable the Chief Secretary by the Honorable the Minister for Public Instruction on appointment of a site on which a sanatorium to serve Sydney might be erected, together with a minute by the Honorable the Chief Secretary, in which I am requested to recommend a more suitable site than one lately mentioned for the purpose on the Bunnerong-road, which is referred to in Mr. Hogue's letter as being at Kensington.

2. I have already had the honor to point out that such an institution must be within easy reach of the people to be served if it is to answer fully its main purpose—that, namely, of preventing the spread of epidemic diseases. Either it must be placed, therefore, in a position where it will necessarily be in nearer or further proximity to inhabited houses; or else—the only alternative I see—several such institutions (or, in the case of Sydney, say three) must be placed at points on the circumference of the area to be served, so situated that the various parts of the area can be reached from one or other of them with sufficient facility. Three such points in situations sufficiently remote from houses at the date of selection could doubtless be found. But the expense of this plan would evidently be great.

3. The site on the Bunnerong-road is, I now believe, the only one which, being Crown land, can be said to be available at this date. It should not be referred to as at Kensington, being, in fact, about a mile beyond the nearest houses on that estate, and next to, but considerably beyond, Kensington race-course. Its nearest neighbour would be a new penitentiary (should construction of the latter be authorised). The available area being 40 acres, it would be possible to place the buildings within an unoccupied (plantation) zone of considerable breadth, which would sufficiently isolate it from boundary roads and adjacent dwellings; for, though at present sufficiently remote from any inhabited neighbourhood, the adjoining land is open to occupation, and, in course of years, is likely to become populous. I have mentioned this possible site, not because it is in the best situation, but for the reason mentioned above. If a few acres of Sydney Common could be resumed on Dowling-street, and adjoining that portion which is now withdrawn from the uses contemplated in the Act by which the City Corporation are made trustees for it, by their having devoted it to the burial and destruction of garbage, that position would be much more central, and consequently much more economical in connection with the transfer of patients from their homes to it.

4. It is admitted, I believe, by the party which desire to see the diphtheria branch of the Glebe Hospital removed, that the objection to its presence is not practical as regards actual or probable dissemination of disease from it, but at bottom sentimental, although of indirect practical importance as being said to reduce the value of house property in the neighbourhood. I would here point out that the objections which can be legitimately raised to neighbourhood of a sanatorium are always of that kind, and, consequently, most difficult to meet. There is beyond doubt no fear of the spread of infectious disease from such an institution when properly arranged and conducted (and, in the case of the Glebe, actual figures show that no such spread has occurred); and it is evident that if there were, the hospital would fail of that use, namely, the prevention of disease, which has caused every important municipality in the Old Country to erect one. In view of these considerations I would suggest that erection of a sanatorium in a neighbourhood where at the time of erection it is not, but after the lapse of years may be expected to become, surrounded by houses, has advantages over erection of one near some old-established centre of habitations; for, clearly, a sentimental objection can be got rid of only by experience of the reality and observing it to be different from what was imagined; and this, I believe, would result from contemplation of a sanatorium at a distance, and consequently the gradual occupation of neighbouring land at average values would follow. But the prejudice referred to will, it may be expected, also be overcome in part by education in the uses of such an establishment. When the intention of preventing infection is grasped, and the fact that it may be realised here as it already has been realised elsewhere, then, I believe, objections to the neighbourhood of a picturesque collection of buildings, erected within a well-planted neutral zone, and surrounded with its own wall, will be diminished. With these views in mind, the desirability and usefulness of sanatoria has been mentioned in pamphlets on the infectious diseases, isolation, disinfection, &c., &c., which have lately been published for this Department, and which, in the course of a year or two, will have become very widely distributed by local authorities under the Public Health Act throughout the country.

5. The impossibility of removing the diphtheria branch of the Glebe Hospital until some other place for the treatment of diphtheria is established in Sydney at a point within easy reach of the population, and (as regards diphtheria) within reach of practitioners specially skilled in the operative treatment of that disease is, I believe, recognised. It is also admitted, I believe, that if a new institution for that purpose is to be erected, it should also provide for isolation and treatment of cases of all other kinds of infectious disease. There is, in my opinion, as chief of the Public Health Service, no doubt at all that an institution for the latter purpose which would also accommodate the whole of the cases of diphtheria which need isolation and treatment—a number much larger than that which can be dealt with at present at the small hospital at the Glebe—is required, and is the complement to recent legislation for restraint of infectious diseases. It is also certain that wherever and whenever a site for this purpose is selected the same fear of depreciation of land values in the neighbourhood will make itself felt as an obstacle. Under these circumstances it appears to me that the Government will at some time or other see occasion for some exercise of authority—that is, as soon as erection of a sanatorium has been decided upon, however great the care may be which is taken to avoid unnecessary intrusion on already inhabited areas.

areas. Such unnecessary intrusion would, in my humble opinion, be avoided by selection of the Bunnerong site; but it could be as well avoided by choosing a site on Sydney Common in the situation indicated above, while several advantages not afforded by the Bunnerong site would in that case accrue. In both cases need for exercise of authority in the way alluded to would be least likely to arise, since less objection could be raised in respect of them than of any other sites which I have been able to think of. I trust that the possibility of acquiring a site on Sydney Common at the remote part of it mentioned may be favourably considered for inquiry and report in the first place.

I have, &c.,

J. ASHBURTON THOMPSON,  
Chief Medical Officer of the Government.

Submitted.—C.W., 8/6/99. A copy of this report to be sent to the Hon. J. A. Hogue, M.P., then to be referred to Cabinet.—J.N.B., 10/6/99.

#### No. 6.

The Principal Under Secretary to The Honorable J. A. Hogue, M.P.

Sir,

Chief Secretary's Office, Sydney, 15 June, 1899.

With reference to your letter of the 14th April last, in continuation of previous correspondence respecting the question of the establishment of a sanatorium for the metropolitan district and the selection of a suitable site for the purpose, I am now directed by the Chief Secretary to enclose, for your perusal, copy of a further report which has been furnished to this Department by the Chief Medical Officer of the Government on the subject.

I have, &c.,

CRITCHETT WALKER,  
Principal Under Secretary.

#### No. 7.

The Honorable J. A. Hogue, M.P., to The Principal Under Secretary.

Sir,

27 June, 1899.

I have the honor to acknowledge your communication of 15th June, 99/10,330, respecting the question of removing the diphtheria branch of the Sick Children's Hospital from the Glebe and establishing a sanatorium for the metropolitan district.

I desire to thank my honorable colleague, the Chief Secretary, for his action in the matter, and to express, generally, my concurrence in the views of Dr. Ashburton Thompson, as expressed in the accompanying copy of his letter.

I am, &c.,

J. A. HOGUE.

Submitted.—C.W., 3/7/99. Seen.—J.N.B., 4/7/99.

#### No. 8.

The Council Clerk, Glebe, to The Principal Under Secretary.

Dear Sir,

Town Hall, Glebe, 19 October, 1899.

I am directed by the Glebe Council to acknowledge the receipt of your letter of 15th June, No. 99-10,330, addressed to the Honorable J. A. Hogue, M.P.

The Council are pleased to learn that the Chief Medical Officer of the Government has suggested the erection of a sanatorium within easy reach of Sydney, and beg to urge that you should use your influence with the proper authorities to have such suggestion carried into effect at an early date. The Council are of opinion that if this were done Sydney and the suburbs would derive inestimable benefit by the erection of the sanatorium.

With regard to the removal of the diphtheria branch of the Glebe Hospital, the Council feel that this should be specially urged for the following reasons:—

1st. When the hospital was first started it was distinctly agreed that no case of infectious disease should be brought into the hospital, and for many years this fact was specially noted on all printed reports and on the rules, but such notification was discontinued after the Committee had determined to open a diphtheria branch of the hospital. It will thus be seen that the opening of such branch was a breach of faith.

2nd. That a diphtheria hospital should be in an isolated position, and not placed in the centre of a large population.

3rd. That the value of property in the Glebe has depreciated in consequence of the diphtheria branch being opened.

4th. That there is grave danger to the inhabitants of the Glebe by having the diphtheria branch in its present position, and especially if there be any carelessness in conducting the institution.

The Council desire to acknowledge that up to the present, so far as it comes under their notice, the Children's Hospital has been conducted in a most excellent manner, and that every credit is due to the medical, nursing, and general staff for all they have done.

The Council asks that no stone be left unturned to carry into effect the proposal contained in the Chief Medical Officer's report.

I have, &c.,

T. D. GLASSCOCK,  
Council Clerk.

Submitted.—C.W., 25/10/99. Seen.—J.S., 25/10/99.

## No. 9.

J. A. Hogue, Esq., M.P., to The Chief Secretary.

Sir,

25 October, 1899.

I desire to bring under your notice the subject of the diphtheria branch of the Children's Hospital, Glebe, and to point out that a favourable opportunity now presents itself for doing what has long been agitated for by the people of the Glebe, namely, declaring the branch closed.

The existence of this branch has long been felt to be a serious injustice by the residents of the Glebe. Its very establishment in the borough was a breach of faith; its continuance has been a matter of necessity; but at the present moment that necessity does not exist. There are now no patients in the branch. The time is therefore opportune for the closing of it. No injustice would be done thereby, but an act of simple justice would be done to the people I have the honor to represent in the Legislative Assembly.

I respectfully and earnestly press this matter upon your serious attention as one of urgency.

Awaiting your favourable decision,

I have, &c.,

J. A. HOGUE.

Refer to the Chief Medical Officer.—C.W., B.C., 30/10/99.

## No. 10.

The Chief Medical Officer of the Government to The Principal Under Secretary.

Sir,

Department of Public Health, New South Wales, Sydney, 6 November, 1899.

I have been officially informed by a member of the House Committee of the Children's Hospital that the diphtheria branch has been so long practically empty, that the general committee propose to close it. The wish expressed by Mr. Hogue, M.L.A., in his letter of 5th October, will therefore be met without need for the Minister's intervention.

2. I understand the reason for closing the branch which the Committee entertains is their hope that the late diminution in the amount of diphtheria will continue and prove permanent. I do not think there is any good ground to expect this. The facts are:—That before and during 1898 there was an epidemic of this disease which reached its acme in May, 1898, when 102 cases were notified to me as having occurred in the metropolitan district during the fortnight ending 20th May, 1898; that from that date the fortnightly number of notifications steadily fell; and that since August, 1899, not more than six cases have been notified to me in any fortnight since that which ended 12th August. This is an example of the fluctuations in the prevalence of this disease which are usual, and I have no doubt that in due season there will be an increase in the number of cases, and that need for a diphtheria hospital will again become urgently felt.

3. In this connection, I would refer you to my letters on the same subject written on a similar occasion, and addressed to the Chief Secretary under dates 22nd March and 8th June, in which the need for a sanatorium for reception of cases of infectious diseases occurring in the metropolitan area was pointed out, and in which it was shown that the Coast Hospital (where alone diphtheria cases can be sent in absence of the Children's Hospital Branch) is from its distance quite unavailable for reception of cases of diphtheria. If the branch referred to be abolished, and no central hospital where diphtheria can be promptly received and suitably treated be substituted for it, much avoidable loss of infant life will occur, and very great embarrassment will be caused to the Government when, in the ordinary course of events, diphtheria once again becomes epidemic. In the second of the abovementioned letters a definite suggestion as to site for a sanatorium was made, and I further suggested that certain preliminary steps should be taken. I now once more beg to repeat those recommendations, and to point out that for want of selection of a suitable site, Sydney is still not merely unprovided with means of isolating the earliest cases of infectious disease which occur, and so preventing epidemics of them, but also remains unprovided with a suitable disinfecting-station—which should, for economy and for other reasons—be attached to the sanatorium contemplated.

I have, &c.,

J. ASHBURTON THOMPSON,

Chief Medical Officer of the Government.

Submitted.—C.W., 11/11/99.

## No. 11.

The Hon. Secretary of the Sydney Hospital for Sick Children to The Principal Under Secretary.

Dear Sir,

Wigram Chambers, Phillip-street, 17 November, 1899.

I have the honor to inform you that the Board of Management of the above Institution has taken into consideration the facts—

- (1) That the number of patients in the diphtheria ward has been steadily decreasing. There are twelve cots in the ward, and the average occupancy during the past four months has fallen to five.
- (2) That the expenses of this branch of the hospital, owing to its necessary isolation and the specially-trained nursing staff that has to be maintained, cannot be reduced and are quite disproportionate to the present results.

The marked decrease, not only in the mortality but also in the severity of this disease, following on a proper use of antitoxin, has led to its almost universal adoption by medical men in this as in other parts of the world, so that now many patients who would formerly have been sent to the diphtheria hospital are kept at home, because after the injection of antitoxin they rarely require hospital treatment.

Having regard to the foregoing, I am desired by my Board to intimate to the Government that owing to these changed conditions, and for financial reasons, it is proposed to close the diphtheria branch of the Hospital at the end of this year.

I have, &c.,

HAROLD W. FAIRFAX,

Hon. Secretary.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## PUBLIC HEALTH ACT.

(RETURN RESPECTING CONVICTIONS UNDER.)

*Printed under No. 4 Report from Printing Committee, 24 August, 1899.**[Laid upon the Table in accordance with promise made in answer to Question No. 9, Votes No. 17, 23rd August, 1899.]*

## Question.

- (9.) Convictions under Public Health Act :—Dr. Ross asked the Colonial Secretary,—
- (1.) The number of inspectors that are at present engaged in detecting food and liquor adulterations in the interest and for the protection of public health?
  - (2.) In how many cases have such inspectors obtained convictions under the Food and Liquor Adulteration and Public Health Act?
  - (3.) What is the nature of such convictions, if any?

## Answer.

Department of Public Health, New South Wales,  
Sydney, 23 August, 1899.

The number of inspectors at present engaged in detecting food and liquor adulterations in the interest of and for the protection of the public health could be given only after special inquiry of the several authorities authorised by the Act to appoint such inspectors.

Certain persons are empowered to take samples for the purpose referred to by the Public Health Act, section 52, namely, any Officer of the Board of Health, and any Inspector of Weights and Measures, or any Superintendent, Inspector, Sub-Inspector, or Sergeant of Police; and such power may be conferred on certain other persons by written authority of Mayors, or of the Inspector-General or any Superintendent of Police, namely, any officer of a Municipal Council, and any Constable. As regards the Board of Health, one officer suffices to purchase all the samples which can be analysed in the Board's Laboratory, and he regularly makes such purchases.

In answer to a similar question asked by Dr. Ross on February 23rd, it was stated that fifteen convictions had been obtained by the Board under the adulteration part of the Public Health Act, and these were for selling adulterated oatmeal, pepper, tea, and milk. No further conviction has been obtained. At the same time it was stated that twenty-one convictions were reported as having been obtained by the various local authorities under the Public Health Act, but that the information was available only for the latter three quarters of 1898. The nature of these convictions is not reported by them, but it is believed they related almost entirely to the adulteration of milk. During the first half of the present year convictions obtained by the various local authorities were reported by them to have been as follows :—In the Metropolitan combined districts, including the City of Sydney, six; in the Hunter River combined districts, nil; in the whole of the rest of the country, six.

DEATHS FROM CONSUMPTION IN DISTRICTS OF WOLLONGONG, KIAMA, AND SHOALHAVEN.

(RETURN RESPECTING)

Printed under No. 3 Report from Printing Committee, 22 August, 1899.

[Laid upon the Table in accordance with promise made in answer to Question No. 5, Votes No. 12, 10 August, 1899.]

Question.

- (5.) Deaths from Consumption in Districts of Wollongong, Kiama, and Shoalhaven:—Mr. Alexander Campbell asked the Colonial Secretary,— (1.) How many persons have died of consumption during the five years ending 31st December, 1898, within the districts of Wollongong, Kiama, and Shoalhaven? (2.) The number of males and females? (3.) How many of each sex had attained the age of maturity? (4.) Is the death-rate from the above cause above or under the average rate in Great Britain?

Answer.

DEATHS FROM PHTHISIS.

SOUTH COAST, including Albion Park, Bega, Bemboka, Berry, Candelo, Eden, Helensburgh, Kiama, Milton, Moruya, Nowra, Wollongong, Woonona.

NOTE.—Causes of Death are published in Groups of Districts, hence the figures for the above Division of the Colony.

Table with 6 columns (Year) and 4 rows (Deaths from Phtthisis, Mean Population, Rate per 1,000 of Population). Data points for 1894-1898 are provided.

Under and over 20 years not given in this form. (See figures for New South Wales for approximate proportion.)

**CASE OF MR. SHERLOCK BARRON, NORTH BOTANY.**

(PETITION FROM THOMAS SHERLOCK BARRON, OF BOTANY, PRAYING FOR LEAVE TO APPEAR BEFORE SELECT COMMITTEE IN PERSON, OR BY ATTORNEY OR COUNSEL, AND TO EXAMINE AND CROSS-EXAMINE WITNESSES ON.)

---

*Received by the Legislative Assembly, 23 August, 1899.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of Thomas Sherlock Barron, of Botany, in the Colony of New South Wales,—

HUMBLY SHOWETH :—

1. That on the 15th day of August, in the year of our Lord one thousand eight hundred and ninety-nine, your Honorable House appointed a Select Committee to inquire into and report upon the claim of Mr. Sherlock Barron, formerly dairyman, North Botany, for loss sustained through the action of the Board of Health.

2. That your Petitioner humbly prays that he may be represented by counsel or attorney, or in person, before the Select Committee appointed to inquire into and report upon the matter, with the right to call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence before the Select Committee.

And your Petitioner, as in duty bound, will ever pray.

THOMAS SHERLOCK BARRON.

CASE OF MR. SHERLOCK BARRON—NORTH BOTANY.

---

REPORT.

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 15th August, 1899, “*to inquire into and report upon the claim of Mr. Sherlock Barron, formerly dairyman, North Botany, for loss sustained through the action of the Board of Health,*” and to whom was referred, on 26th October, 1899, a Petition from Thomas Sherlock Barron, “*praying to be represented by Counsel, or Attorney, or in person, before the Select Committee,*”—have agreed to the following Report:—

Your Committee, having examined the witnesses named in the List\* (whose \*See list, p. 5. evidence will be found appended hereto), find—

1. That Mr. T. S. Barron, who carried on the business of a dairyman, had a child pronounced by Dr. Gwynne-Hughes to have suffered from typhoid fever, and that, in accordance with the provisions of the Dairies Supervision Act, the Board of Health informed the Council Clerk of North Botany that typhoid fever had occurred on Mr. Barron's premises, and advised that the registration under the said Act should be immediately cancelled; which advice was carried out.
2. That the said child was subsequently removed to the Coast Hospital, and upon careful examination by Dr. Taylor, who had the case under his supervision for two days, pronounced to be suffering from congenital heart disease, of which the child subsequently died, as stated in the certificate of death.
3. That it therefore appears that the dairy was closed upon a mistaken diagnosis of the disease, and in consequence Mr. T. S. Barron has suffered a loss which entitles him to claim the favourable consideration of the Government.

J. R. DACEY,  
Chairman.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 31 AUGUST, 1899.

MEMBERS PRESENT :—  
None.

In the absence of a quorum the meeting called for this day lapsed.

THURSDAY, 26 OCTOBER, 1899.

MEMBERS PRESENT :—  
Mr. Bruncker, | Mr. Carroll,  
Mr. Dacey, | Mr. James Thompson.

Mr. Dacey called to the Chair.  
Entries from Votes and Proceedings appointing the Committee, and referring the petition of Thomas Sherlock Barron, read by the Clerk.  
Original petition before the Committee.  
Resolved (*on motion of Mr. Bruncker*),—That the prayer of the Petitioner be granted.  
Dr. J. D. Sly, Solicitor, appeared on behalf of Mr. Thomas Sherlock Barron.  
Ordered,—That the Secretary to the Board of Health and Mr. T. S. Barron be summoned to give evidence next meeting.

[Adjourned till Tuesday next, at 2:30 o'clock.]

TUESDAY, 31 OCTOBER, 1899.

MEMBERS PRESENT :—  
Mr. Dacey in the Chair.

Mr. Anderson, | Mr. Bruncker,  
Mr. J. C. L. Fitzpatrick, | Mr. Nielsen,  
Mr. James Thomson, | Mr. Wilks.

Entry from Votes and Proceedings, adding Mr. See, Mr. Anderson, and Mr. Nielsen to the Committee, read by the Clerk.  
Present:—Dr. J. D. Sly, Solicitor, representing Mr. Thomas Sherlock Barron.  
Thomas Sherlock Barron called in, sworn, and examined.  
Clarence Arthur Simms (*Secretary to the Board of Health*) called in, sworn, and examined.  
Witness *produced* correspondence, &c., in the case of Thomas Sherlock Barron.  
Witness withdrew.

[Adjourned till To-morrow, at 2:30 o'clock.]

WEDNESDAY, 1 NOVEMBER, 1899.

MEMBERS PRESENT :—  
Mr. Dacey in the Chair.

Mr. Anderson, | Mr. Bruncker,  
Mr. Nielsen, | Mr. James Thomson,  
Mr. Wilks.

Present:—Dr. J. D. Sly, Solicitor, representing Mr. Thomas Sherlock Barron.  
George Henry Taylor (*Medical Practitioner*) called in, sworn, and examined.  
Witness withdrew.  
William Green (*House and Land Agent*) called in, sworn, and examined.  
Witness withdrew.  
Thomas Alexander Watson (*Council Clerk and Inspector under the Dairies Supervision Act, North Botany*) called in, sworn, and examined.  
Witness withdrew.  
Alfred George Fletcher (*Van Proprietor*) called in, sworn, and examined.  
Witness withdrew.  
Alfred Cross (*Draper*) called in, sworn, and examined.  
Witness withdrew.  
Caroline Mudge called in, sworn, and examined.

## MEMBERS PRESENT:—

Mr. Dacey in the Chair.

Mr. Bruncker, | Mr. Nielsen.

Present:—Dr. J. D. Sly, Solicitor, representing Mr. Thomas Sherlock Barron.  
 Ordered, That Dr. Gwynne Hughes be summoned to give evidence next meeting.  
 [Adjourned till Wednesday, 15th November, at 2:30 o'clock.]

## WEDNESDAY, 15 NOVEMBER, 1899.

## MEMBERS PRESENT:—

Mr. Dacey in the Chair.

Mr. Bruncker, | Mr. J. C. L. Fitzpatrick,  
 Mr. Nielsen, | Mr. James Thomson.  
 Mr. Wilks.

Present:—Dr. J. D. Sly, Solicitor, representing Mr. Thomas Sherlock Barron.  
 The Clerk, by direction of the Chairman, read a letter from Dr. Gwynne-Hughes, who had been requested to give evidence, stating that Barron had brought an action against him in the District Court in reference to the matter before the Committee, thereby causing him considerable inconvenience, loss of time and money, and that, therefore, he declined to attend before the Committee.

Resolved (*on motion of Mr. Bruncker*), That the Chairman take the necessary steps to compel the attendance of Dr. Gwynne-Hughes at 2:30 o'clock to-morrow.  
 [Adjourned till To-morrow, at 2:30 o'clock.]

## WEDNESDAY, 16 NOVEMBER, 1899.

## MEMBERS PRESENT:—

Mr. Dacey in the Chair.

Mr. Bruncker, | Mr. Anderson,  
 Mr. J. C. L. Fitzpatrick, | Mr. Nielsen,  
 Mr. James Thomson.

Present:—Dr. J. D. Sly, Solicitor (*representing Mr. Thomas Sherlock Barron*).  
 Devereux Gwynne-Hughes (*Medical Practitioner*), called in, sworn, and examined.  
 Witness withdrew.

Dr. Sly addressed the Committee.

Room cleared.

The Clerk submitted claim from Dr. Gwynne-Hughes for £1 1s., witness's expenses.

Claim considered and passed.

Committee deliberated.

[Adjourned till Wednesday next, at 2:30 o'clock.]

## WEDNESDAY, 22 NOVEMBER, 1899.

## MEMBERS PRESENT:—

Mr. Dacey in the Chair.

Mr. Bruncker, | Mr. Nielsen,  
 Mr. James Thomson, | Mr. Wilks.

Committee deliberated as to the Report.

[Adjourned till To-morrow at 3:30 o'clock.]

## THURSDAY, 23 NOVEMBER, 1899.

## MEMBERS PRESENT:—

Mr. Dacey in the Chair.

Mr. Anderson, | Mr. Carroll,  
 Mr. Nielsen.

Chairman submitted Draft Report.

Same read, amended, and agreed to.

Chairman to report to the House.

## LIST OF WITNESSES.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

## CASE OF MR. SHERLOCK BARRON, NORTH BOTANY.

TUESDAY, 31 OCTOBER, 1899.

Present:—

MR. ANDERSON,

MR. BRUNKER,

MR. J. C. L. FITZPATRICK,

MR. NIELSEN,

MR. JAMES THOMSON,

MR. WILKS.

J. R. DACEY, Esq., IN THE CHAIR.

Dr. J. D. Sly, Solicitor, appeared on behalf of Mr. Thomas Sherlock Barron.

Thomas Sherlock Barron sworn and examined:—

1. *Chairman.*] Were you at one time engaged at North Botany as a dairyman? Yes.
2. *Dr. Sly.*] Will you state the facts of the case from the beginning? Yes. On the 16th February, 1896, I called in Dr. Gwynne Hughes to see my daughter, who was sick.
3. How old was she? Six years and a month. Dr. Gwynne Hughes came to the house about 12 o'clock. He looked at the child and said he thought she was suffering from an attack of typhoid fever. He added, "On account of your place being a dairy, the matter must be reported to the Board of Health, and I would recommend you to send your child to the hospital." I replied that I would not do so. He then said, "The authorities will stop your business." I said, "They can do so; I will not allow the child to go to the hospital." He then remarked, "I must report the matter to the Board of Health; you are under a penalty of £100 and I am under a penalty of £50 if the fact that the child is suffering from typhoid fever is not reported."
4. Did he say anything about you selling your milk? No.
5. *Chairman.*] Did he caution you not to serve milk to your customers? He did not. He said the matter would have to be reported to the Board of Health. He asked for a pen and ink, and said he would write a report. I asked him to let the matter stand over until the morning, when we might have an opportunity of getting the child removed to another place. He replied that the report would have to go in that night. He gave me a paper, and told me to take it to the Board of Health, and I did so.
6. *Dr. Sly.*] What happened then? I gave the paper to an official of the Board of Health, and he said, "You can sell no milk whilst the child is on your premises." I asked him what I should do, and he said, "You had better take the paper to Dr. Paton, Richmond-terrace, and he will tell you what to do."
7. *Chairman.*] What occurred then? I took the paper to Dr. Paton, and he asked me if I would promise to sell no milk whilst the child was on the premises. He asked me what I could pay for attendance on the child in the hospital, and I told him I did not want her to go to the hospital. I asked him to allow me a day or two in order to get the child removed to some other house, or to get my cows away. He asked me if I would promise not to sell milk as long as the child was in the house, and I said I would.

T. S. Barron.

31 Oct., 1899.

- T. S. Barron. 8. What occurred after you made that promise? I went home, and next morning about half-past 7 o'clock, Mr. Watson, the Council Clerk at North Botany and Inspector of Dairies, came into the place. He told me that I was liable to heavy fines if I sold milk, and that I was to do what the Board of Health told me to do in advising me to send the children to the hospital.
- 31 Oct., 1899. 9. *Dr. Sly.*] Did you temporarily close your dairy? He told me that he would most likely receive a letter by the mail that morning, and that he would then have to come up and close my place.
10. Did he do so? I did not see him.
11. What happened after that? Dr. Gwynne-Hughes came back about half-past 4 o'clock. That was on the Monday. He looked at the child, and asked me what they said at the Board of Health. I told him. I went to the cow-bails, and he followed me out and said, "If I were you I would sell milk; I would not take any notice of what they say at the Board of Health." I told him that I could not do that, and that I had been told not to sell. I went into the house and talked the matter over with my wife, and she agreed to let the child go to the hospital. I thereupon saw Dr. Gwynne-Hughes, and received an order from him which I had to take to the Board of Health.
12. What happened on the following day—Tuesday? The ambulance came out from the hospital. Prior to its arrival I saw Dr. Gwynne-Hughes in the street, and asked him to come and see the child. He came in, and stated it was a lot better. Half an hour after that the ambulance came out and took the child to Little Bay Hospital.
13. Did you see the child at Little Bay Hospital? Yes, on the following day, Wednesday.
14. Had you any conversation with the doctor at Little Bay as to what was the matter with the child? The nurse said, "That child is in a terrible state with its heart." I asked her if she thought the child would get rid of the fever, and she replied that Dr. Taylor did not think she was suffering from fever.
15. Did you see Dr. Taylor? Yes, I went over and saw him, and he said, "The child is in a terrible state with its heart." I asked him if he thought the child was suffering from fever, and he said, "I do not think so."
16. *Dr. Sly.*] Did anyone see the child at your house before it left? Yes.
17. Did anyone competent to judge of its condition see it? Yes, a nurse.
18. What was her opinion? She said she did not believe the child had fever.
19. *Mr. Wilks.*] Was she a trained nurse? I think she is a certificated nurse—Mrs. Moloney, a midwife.
20. *Chairman.*] Where did she see the child? At my house.
21. What happened after you saw the child on the Wednesday in the hospital? I went home and took its mother to see it. I was going out the next morning about 6 o'clock to see the child, when I met a man named Joe Tunbridge, who told me the child was dead.
22. *Dr. Sly.*] Do you produce a copy of the certificate of death? Yes.

No. of Application, 97/3176. 1896.

DEATHS Registered in the District of Botany, at Waterloo, in the Colony of New South Wales, by James Skinner, District Registrar.

No.	Description.			(1) Cause of Death; (2) Duration of last illness; (3) Medical Attendant by whom certified; and (4) When he last saw Deceased.	(1) Christian Name and Surname of Father; (2) If known, with rank or Profession; (3) Christian and Maiden Surname of Mother.	Signature, Description, and Residence of Informant.	(1) Signature of District Registrar; (2) Date; and (3) Where Registered.	If Burial Registered.		Where born, and how long in the Australian Colonies, stating which.
	When and where died.	Name and Surname, Rank or Profession	Sex and Age.					When and where Buried. Undertaker by whom Certified.	Name and Religion of Minister, Names of Witnesses of Burial.	
38	20 Feb., 1896, Coast Hospital, Little Bay.	Mary Sherlock Barron.	Female, 6 years.	(1) Congenital heart disease—pericarditis; (2) 6 years; (3) Dr. G. H. Taylor; (4) 19 February, 1896.	(1) Thomas Sherlock Barron; (2) dairyman; (3) Mary Smith.	Certified by G. H. Taylor, Medical Superintendent, Coast Hospital, and Thomas Sherlock Barron, father, High-st., North Botany.	(1) James Skinner; (2) 20 Febr'y, 1896; (3) Waterloo.	21 Feb., 1896, Presbyterian Cemetery, Rookwood. Joseph Medcalf.	W. J. Cuthbert, Presbyterian, Alexr. Watt, Sidney B. Medcalf.	North Botany, New South Wales.

1036. I, Alfred Parry Long, Registrar-General of New South Wales, do hereby certify that the above is a true copy of an entry in a register of deaths kept at the Registrar-General's Office, Sydney, and extracted this eleventh day of August, 1897.

A. PARRY LONG,  
Registrar-General.

23. What does the certificate say was the cause of death? Congenital heart disease—pericarditis. The certificate shows that the child died on the 20th February, 1896, at the Little Bay Hospital. The medical attendant was Dr. G. H. Taylor.

24. Would you have sent the child to the hospital had it not been for the order of the Board of Health? No.

25. *Chairman.*] Did the North Botany Council send you an order to close the dairy? No. The Inspector told me on the Monday to be sure and do as the Board of Health bade me.

26. *Dr. Sly.*] Did you call at the North Botany Council Office and see a letter, of which the following is a copy:—

Dairy Supervision Act.

Sir,

I have the honor to inform you that, in accordance with the seventh section of the above Act, it has been reported to the Board that typhoid fever has occurred on the premises of Mr. Sherlock, High-street, North Botany, and to advise that the registration under the said Act should be immediately cancelled, and remain so until patient recovers or is removed and the premises are disinfected, and all danger of infection past.

I have, &c.,  
C. A. SIMMS,  
Acting Secretary.

The Council Clerk, North Botany.

Yes.

27. In accordance with this letter I believe your premises were closed? Yes.

28. *Mr. Anderson.*] I suppose they were closed under the instructions of the Board of Health? Yes, according to the newspaper.

29. *Chairman.*] According to what newspaper? *The Suburban Times.*

30. *Mr. Neilsen.*] When did you see a copy of the letter which has just been read? About a week after the occurrence.

31. *Dr. Sly.*] Was the fact that there had been an alleged outbreak of fever commented on in the district? Yes. I could not sell milk on the Monday or Tuesday on account of the order from the Board of Health; but I sent out milk which I purchased elsewhere. I bought it for a few customers from the Fresh Food and Ice Co. T. S. Barron.  
31 Oct., 1899.
32. Was the report that there had been an outbreak of typhoid fever on your premises spread abroad in the districts of Botany and Redfern? Yes.
33. How did it affect your customers? A large number of them stopped taking milk.
34. How many customers had you when the trouble occurred? About seventy. I produce a list of them, which I put in as an Exhibit.

Goron Alley, 2 pints.	Opposite Weirick, 2 pints.	Kinkade, 2 pints.	Steadman, 4 pints.
Colston, 2 pints.	Bell, 1 pint.	75, Wellington-st., 1 pint.	Rose, 2 pints.
Dowdell, 3 pints.	James, 1 pint.	Avis, 2 pints.	Williams, 2 pints.
Shepherd, 1 pint.	Fahey, 2 pints.	Russell, 1 pint.	Peat, 1 pint.
Marshall, 1 pint.	Kinkade, 1 pint.	Long, 90, Buckland-st., 1 pint.	14, William-street.
Moloney, 1 pint.	Brown, 1 pint.	Avis, 2 pints.	McAuslin, 1 pint.
Garland, 1 pint.	Hocking, 3 quarts.	Bargery, 2 pints.	Fairweather, 1 pint.
Anderson, 1 pint.	Shop, Pitt-street, 5 quarts.	Kennedy, 1 pint.	Mudge, 2 pints.
Bird, 1 pint.	Williamson, 6 quarts.	Cross, 1 pint.	5, George-street, 1 pint.
Boyd, 1 pint.	Flynn, 1 pint.	Robertson, 16 quarts.	19, George-street, 2 pints.
Burrows, 1 pint.	Lee, 1 pint.	Duffy, 18 quarts.	Hill, 2 pints.
Lambert, 2 pints.	Clarke, 1 pint.	Blinkhorn, 8 quarts.	Morrison, 1 pint.
Murry, 2 pints.	Smith, 1 pint.	63, Wellington-st., $\frac{1}{2}$ pint.	Wright, 2 pints.
Marsh, 2 pints.	Howard, $\frac{1}{2}$ pint.	Newman, 2 pints.	4, Zemia-street, 1 pint.
McConnell, 3 pints.	Nash, 1 pint.	80, Pitt-street, 1 pint.	Smith, Morehead-street, 1 pint.
McKenna, 1 pint.	Harvey, 1 pint.	2, Pitt-street, 1 pint.	72 customers.
Bain, 1 pint	Kelly, 1 pint.	115, Pitt-street, 1 pint.	
13, John-street, 1 pint.	Pender, 1 pint.	Goodyre, 2 pints.	

35. Did most of your customers discontinue taking milk? Yes.
36. Did they give any reason why? Some did and some did not. Those who did said they would not take any more milk as there was fever about the place.
37. Did any notice appear in any of the newspapers with reference to the matter? Yes, in the *Redfern Times*.
38. Does that newspaper circulate in Botany and Redfern? Yes, and in Waterloo.
39. Will you kindly read the notice to which you refer? Yes, it is as follows:—

From Board of Health, to the effect that typhoid had been reported in the dairying premises of Mr. Sherlock, and also of Mr. Furlong, of King-street.—Received. The Council Clerk explained that on receipt of the notice he had immediately inspected Mr. Sherlock's premises and had them temporarily closed.

40. *Mr. J. C. L. Fitzpatrick.*] I presume that it is an extract from a report of the meeting of the local Council? Yes.
41. *Dr. Sly.*] When was it published? On the 7th March, 1896.
42. *Mr. J. C. L. Fitzpatrick.*] I presume that extract refers to correspondence received from the Board of Health? Yes.
43. *Dr. Sly.*] Do you produce another extract which appeared in the *Suburban Times*? Yes. The following was published on the 30th May, 1896:—

We have been requested to draw attention to the fact that Mr. T. S. Barron's dairy premises at North Botany have been wrongly included by the Board of Health in the list of premises affected by typhoid. Dr. Taylor, the Medical Superintendent of the Hospital, has certified that the child was not suffering from fever, and the Board, therefore, had no justification for that portion of the report.

I also produce another extract published on the same date, as follows:—

From T. S. Barron, with reference to a report of typhoid fever on his premises. According to the *Suburban Times* a report had been received from the Board of Health. This had damaged his business, and as the Medical Superintendent of the Hospital, Dr. Taylor, reported that the child had no fever, he desired that the true facts should be made known.

On the motion of Alderman Sparkes it was decided that full publicity be given to Mr. Barron's communication, and that a letter should be sent to the editor of the *Suburban Times* asking him to specially note it.—Seconded and carried.

44. Did that have the effect of restoring confidence and bringing your customers back? No.
45. What were your takings at the time? From £10 to £10 10s. a week.
46. *Mr. Wilks.*] Is the list of names that you have put in taken from a journal or ledger? Yes.
47. *Dr. Sly.*] What were your profits at the time? I was clearing about £4 a week.
48. *Chairman.*] Clear of all expenses? Yes; clear of all expenses attached to the dairy.
49. *Dr. Sly.*] When you found your business was practically ruined, what did you do with your cows and plant? I gave the cows to a man named Bridge, to take to Liverpool. He said he would graze them for 9d. a head. I sold one cow and a horse and cart to a neighbour.
50. *Mr. J. Thomson.*] How many cows had you? Ten.
51. *Dr. Sly.*] Were they in full milk? Yes.
52. What were they worth? About £3, for milking purposes.
53. What do reckon would have been a fair price for your business at that time? I could have got £150 for it a short time before this occurred.
54. *Mr. Wilks.*] Have you ever been offered that amount? Yes; Mr. John Green wanted to buy it for a friend.
55. *Dr. Sly.*] When the trouble arose, did you try to sell the business? Yes; I put it into an agent's hands.
56. Did anyone come to inquire about it? Yes; two people.
57. What was the result? They would not buy it. One went away and said there was typhoid fever on the place, and he would not buy.
58. *Mr. J. Thomson.*] But there was no typhoid fever about the place then;—I suppose you had complied with the conditions of the Board of Health in regard to fumigation, and so on? Yes; but people were frightened to buy the business.
59. How much milk did you sell in a day? From 100 to 110 quarts.
60. What was the price of milk at that time? I sold a good deal to shops; the price would average about 3½d. per quart.

- T. S. Barron. 61. *Dr. Sly.*] Are you clear on the point that if it had not been for the order of the Board of Health you would not have closed your dairy nor sent the child away? I would not.
- 31 Oct., 1899. 62. Do you think that hasty action in sending the child away in its then state of health caused its death? Yes; that is my opinion.
63. *Chairman.*] What do you consider was the actual loss you sustained by the action of the Board of Health in closing your dairy? I lost the dairy.
64. Did you sell the stock? Yes; I got £20 for a cart and horse and cow.
65. *Dr. Sly.*] What did you get for all your plant? £26. Some of the cattle died on the run to which they were sent. In the beginning of June Mr. Briggs sent word that some of them were dead, and that if I did not take them away they would all die, as he had no grass.
66. *Mr. Anderson.*] What was the dairy worth to you at the time the trouble arose? It was worth £200 to me. It was worth £150 to sell.
67. You say you removed your cows in consequence of what occurred? Yes; I paid 9d. a week for the feed of each cow after they were sent away.
68. *Mr. J. Thomson.*] How many customers were you left with after this occurred? About thirty. Some of the thirty customers had stock. I lowered the price of milk to them to 2d. per gallon.
69. Had you any cash customers in addition to the sundry customers to whom you have referred? Yes. I used to leave about 7 quarts of milk a day at the house, and this my wife sold for cash. On an average I supplied about 100 quarts of milk a day, and sometimes more.
70. *Mr. Brunker.*] The market value of your plant was £150, and you had to sell for £26? Yes.
71. Did you bring an action against Dr. Gwynne Hughes in the law courts? Yes.
72. For what amount? £200.
73. For what offence? On account of negligence in the treatment of my child.
74. Did you succeed in your action? No.
75. Were any costs given against you? Yes.
76. Do you know what Dr. Gwynne Hughes' defence was? No.
77. What amount did the costs come to? About £60.
78. *Dr. Sly.*] Did Dr. Taylor give evidence in that case? Yes.
79. Can you tell the Committee the nature of his evidence as to what the child was suffering from;—did he say it was suffering from typhoid fever or heart disease? He said it was suffering from heart disease.
80. Did he state that, in his opinion, the child was not suffering from typhoid? He did.
81. *Mr. Brunker.*] Were you compelled to suspend your business? The customers gave up—not the whole of them—and I was losing about £2 a week.
82. *Mr. J. Thomson.*] Was the damage done after reports were published in the newspapers? A good deal of damage was done before that. I lost all the trade from the house before the reports appeared in the newspapers. Business was practically suspended before the reports were published in the newspapers.
83. *Mr. Brunker.*] Was Dr. Gwynne Hughes your family doctor? No; the family doctor was away at the time.
84. *Mr. J. Thomson.*] I believe that Dr. Taylor and Dr. Gwynne Hughes were the only two medical gentlemen who examined the child? That is all I know of.
85. *Dr. Sly.*] Did the nurse who accompanied the child to the Little Bay Hospital make any remark about its condition? Yes; she said its temperature was very low for a child suffering from fever. She asked when the doctor saw her, and I told her he saw her about half an hour previously. She then said she supposed it would be all right.

Clarence Arthur Simms, Secretary to the Board of Health, sworn and examined:—

- C. A. Simms. 86. *Dr. Sly.*] Do you produce any document in connection with the case? Yes, the whole of them.
- 31 Oct., 1899. 87. Can you pick out any document giving instructions from the Board of Health respecting an alleged outbreak of typhoid fever on Barron's premises? I can produce the circular letter, a copy of which I have with me.
88. *Chairman.*] We want a letter bearing directly on the case, and instructing the local authorities to close the dairy? I have that. It is not endorsed, because it was a circular letter; but I have the original entry of the letter having been sent to the local authorities. The circular is as follows:—

BOARD OF HEALTH.

Offices, 127, Macquarie-street, Sydney,

189 .

DAIRIES SUPERVISION ACT.

Sir,

I have the honor to inform you that, in accordance with the seventh section of the above Act, it has been reported to this Board that \_\_\_\_\_ has occurred on the premises of \_\_\_\_\_ and to advise that the registration under the said Act should be immediately cancelled, and remain so until the patient recovers or is removed, the premises are disinfected, and all danger of infection past.

I have the honor to be,

Sir,  
Your obedient Servant,

Secretary.

89. I suppose the name filled in was that of Thomas S. Barron? Yes; and it was sent to the local authority of the district.
90. Do you think the letter produced by Mr. Barron is an exact copy of that which was sent? No; the words "the Board" are used instead of the words "this Board." The words "Mr. Sherlock" are also used, whereas the name should be "Thomas S. Barron." Substantially, however, it is a correct copy.
91. *Dr. Sly.*] Have you a copy of Dr. Taylor's report? Yes; the original is here.
92. I want the original letter sent by Dr. Taylor to the Board of Health reporting on this case? There was no such letter. Dr. Taylor was the Medical Superintendent of the Coast Hospital. The child was removed from Botany to the Coast Hospital, and that is how Dr. Taylor came to have knowledge of it. Dr. Gwynne Hughes was the medical practitioner attending the case, and he reported that it was a case of infectious disease on dairy premises.
93. What did Dr. Taylor report? He reported nothing until Mr. Barron raised the question. Mr. Barron, I think, stated that the child was suffering from heart disease, and not from typhoid fever. Dr. Taylor

Taylor confirmed that, and said there was no trace of typhoid. There are one or two medical questions which he answers, and the fact remains that there was a difference of medical opinion. I may mention that when Mr. Barron fought the case in the court Dr. Gwynne Hughes was exonerated. C. A. Simms.  
31 Oct., 1899.

94. *Mr. Bruncker.*] The fact is, then, that the Board took action on account of the representation made by Dr. Gwynne Hughes, and not by Dr. Taylor? Quite so. Dr. Gwynne Hughes reported that there was a case of infectious disease on dairy premises, and that was acted upon as a matter of course without further inquiry.

95. *Dr. Sly.*] You say that Dr. Taylor stated that there was no typhoid? Yes.

96. *Mr. Anderson.*] Is there any report showing that Dr. Taylor examined the child prior to or after death? His report was made after the child's death.

97. *Dr. Sly.*] I believe that Dr. Taylor attended the child during its illness in the hospital? Yes. She was there only two days.

98. *Mr. Bruncker.*] Was the notice to close the dairy issued on Dr. Taylor's authority? No. It was issued as a matter of form on the receipt of the formal letter from Dr. Gwynne Hughes, which stated that there was a case of typhoid fever on registered dairy premises.

99. *Mr. Wilks.*] Is it usual, when you are informed by a local medico, to take action? Yes; it is done fifty times a year.

100. You have no officer of your own to make a report? No.

101. *Mr. Anderson.*] Medical men are under a penalty if they do not report cases of fever which come under their notice? That is so.

102. *Dr. Sly.*] If an incompetent medical man reported to you, would you act on his report? On the report of a legally qualified medical practitioner.

103. You would not take the consequences to the individual concerned into consideration? I do not see how we could. If a man is qualified he is supposed to be competent.

104. You give orders, I suppose, to the local authorities to close dairy premises in cases of fever? We notify them, and we leave the matter in their hands.

105. Practically, you give authority to close the premises? Yes. The 7th section of the Act requires a report to be made to one of several persons, but it is more commonly made to me as Secretary of the Board of Health.

106. When you are appealed to in this way you give orders which practically have the effect of closing the dairy? Yes.

107. *Mr. Anderson.*] And the local authorities are bound to act upon the instructions they receive? Yes.

108. Were you Secretary to the Board at the time this trouble occurred? Yes.

109. You acted, then, simply upon the report of Dr. Gwynne Hughes? Yes.

110. Is Dr. Gwynne Hughes an officer of the Department? No; he is a private practitioner.

111. You consider, then, that you are not in any way responsible for his acts? Not at all. He is a legally qualified medical practitioner.

112. *Dr. Sly.*] Has he ever held any office in connection with the Board of Health? No; he is an officer of the City Council.

113. He is sometimes called a medical officer? Dr. Hughes is the City Health Officer, under the control of the Municipal Council.

114. *Chairman.*] Is there any further statements you would like to make in connection with the case? Only this general point: that it seems to me to depend upon a difference of medical opinion, which can never be cleared up now, as the patient is dead. Legally qualified men, like Dr. Gwynne Hughes, for instance, report from forty to fifty of these cases a year. A circular, a copy of which I have read, is sent to each local authority. The premises are closed, or the patient is removed. The premises are disinfected, and as a rule we never hear anything more of them. Mr. Barron, who called on Professor Stuart, who was then the head of the Department, said he had been damaged by newspaper reports. Those reports, I suppose, were communicated by the local council. All our business is confidential.

115. *Dr. Sly.*] Is there anything in the circular letter to which you have referred to show that it is confidential? No.

116. As a matter of fact, the letter which has been put in as evidence is a copy of a circular letter which was sent to the council and from them to Barron? Yes.

117. They did not seem to look upon it as confidential? I suppose that was due to want of discretion. I should like to emphasise the fact that from forty to fifty of these cases happen every year, and that we never hear any more of them. The steps we take are all in the course of law.

118. *Mr. J. Thomson.*] I suppose the cases to which you refer are cases where typhoid fever has occurred? Yes, typhoid fever, scarlet fever, diphtheria, measles, syphilis; half-a-dozen proclaimed diseases.

119. In this instance Barron alleges that there was no fever;—he alleges that there was heart disease? Dr. Taylor says it was congenital heart disease. Questioned by Dr. Ashburton Thompson, he said that there might have been traces of typhoid. There might have been latent or dormant typhoid, but the time was too short for him to determine. The patient was only two days under treatment. Please remember that I am speaking from memory. I have not read the papers for a twelvemonth.

120. Was a *post-mortem* examination held? No.

121. *Mr. J. Thomson.*] Would it be practically impossible to close a dairy without the fact of it being closed becoming public property? Amongst a man's customers, perhaps—I do not know otherwise.

122. *Mr. Anderson.*] If you have not been apprised by a medical man that fever was prevalent on Barron's premises, you would not have issued instructions for them to be closed? No, we must be moved by a medical man.

123. *Mr. Bruncker.*] All you did was to comply with the conditions of the 7th section of the Act? That is all.

124. *Mr. Anderson.*] There is no doubt that the premises were closed in consequence of Dr. Gwynne Hughes' report and your instructions? There is no doubt of that.

125. *Mr. J. Thomson.*] And if any mistake has been made it has been made by Dr. Gwynne Hughes? I cannot say that. It rests between the two doctors. There was a difference of medical opinion.

126. *Dr. Sly.*] Still it was on your authority that the step was taken for closing the dairy? Yes; moved by Dr. Gwynne Hughes, who reported that there was infectious disease on the premises.

WEDNESDAY, 1 NOVEMBER, 1899.

Present:—

MR. ANDERSON.		MR. NIELSEN.
MR. BRUNKER.		MR. JAMES THOMSON.
MR. WILKS.		

J. R. DACEY, ESQ., IN THE CHAIR.

Dr. J. D. Sly, Solicitor, was present on behalf of Mr. Thomas Sherlock Barron.

George Henry Taylor, medical practitioner, sworn and examined:—

- G. H. Taylor. 127. *Chairman.*] Were you the Medical Superintendent of the Coast Hospital in 1896? Yes.
128. Do you remember attending a child, 6 years of age, of the name of Barron? Yes.
- 1 Nov., 1899. 129. Did the child die? Yes.
130. What was the cause of death? In my opinion, the cause of death was congenital heart disease, with lung complication.
131. *Dr. Sly.*] Did you send in a report about the case? Yes.
132. I believe you reported that the child died from congenital heart disease and pericarditis, and that she had no symptoms of typhoid fever? That is correct.
133. What are the general symptoms of heart disease and pericarditis? In this particular case the child was born with a malformed heart. She suffered from palpitation, and was particularly liable, as all these cases are, to lung complications.
134. As far as you saw, there were no signs of typhoid fever? I could not say she had no symptom, because she was feverish; but she had no symptom indicative of typhoid fever.
135. You stated in your report, "she had no symptom of typhoid fever"? That would be incorrect, because in every case of typhoid fever there is feverishness, and this child was feverish.
136. She was simply feverish as contra-distinct from typhoid feverishness? Yes.
137. She had no fever? In my opinion no typhoid fever.
138. *Mr. Bruncker.*] Are there exceptional complications in connection with typhoid which you would have noticed in your diagnosis? Yes.
139. *Dr. Sly.*] How long was she with you? Two days.
140. Had you frequent opportunities of examining her? Yes. I saw her several times each day.
141. *Mr. Anderson.*] Were you aware how long the child was sick prior to admission? I cannot very well remember now.
142. *Chairman.*] Was a *post-mortem* examination held? No; the father removed the body almost as soon as the child was dead.
143. *Dr. Sly.*] Do you remember the father coming to see you shortly after the admission of the child? Yes.
144. Do you remember telling him that in your opinion there was no typhoid? Yes.
145. *Mr. Bruncker.*] Was Dr. Gwynne-Hughes associated with the case at the Hospital? No.
146. Was he there at any time after the child was received? No. When the child was admitted I did not know that it came from a milk-vendor. I treated it as an ordinary case, and at the end of twenty-four hours I decided that it was not a case of typhoid.
147. *Dr. Sly.*] Was it suggested to you in any way that it was suffering from typhoid? Yes; it came in as a case of typhoid.
148. And you diagnosed the disease bearing that in mind? Yes. I should like to mention that about that particular time, in the locality in which the child was living, there was an outbreak of typhoid. A great number of cases had been removed from the vicinity in which the child lived.

William Green, house and land agent, sworn, and examined:—

- W. Green. 149. *Dr. Sly.*] Have you been engaged in business for a number of years? Yes.
- 1 Nov., 1899. 150. Have you had a good deal of experience in buying and selling businesses? Yes; we do a large business in dairies, and that kind of thing.
151. How long have you known Mr. Barron? Ten or twelve years.
152. Do you remember, three years ago, having any conversation with him as to the sale of his business? In December, 1895, I went to see him and asked him if he would sell his dairy. He said he would if he could get his price—£200. He said his net profits were £4 a week. We sent a man to inspect, but he did not purchase.
153. Was that a fair value if the profits were £4 a week? Yes.
154. *Mr. Bruncker.*] How do you arrive at the value? By what other people give for dairies.
155. *Mr. Anderson.*] Do you think £200 is sufficient if the net profits were £4 a week? That is about the usual price.
156. *Dr. Sly.*] In other words, about a year's profits? Yes.
157. Did Mr. Barron apply to you again after that? In November, or January of the following year, he called and said he wished to sell his dairy. I then sent another client to inspect. He made some inquiries, and came back and told me that it was of no use him thinking about that dairy, as there was typhoid fever there and Mr. Barron had lost a lot of his customers. I think I wrote to Mr. Barron, if not he called to see me. I told him it was of no use trying to sell his dairy when there was typhoid fever there.
158. Is a business of that kind worth anything after an alleged outbreak of typhoid? No. It would spoil our connection by trying to sell one under such circumstances. I told him I would not care about going further with the matter, as he had had fever there and had lost all his customers.

Thomas

Thomas Alexander Watson, Council Clerk and Inspector under the Dairies Supervision Act, North Botany, sworn and examined:—

159. *Dr. Sly.*] Do you remember the alleged outbreak of typhoid fever on Barron's premises at North Botany? Yes. T. A. Watson.  
1 Nov., 1899.

160. Did you receive any instructions from the Board of Health at that time? Yes; I received this letter:—

Dairies Supervision Act.

Sir,

Board of Health Office, 127, Macquarie-street, Sydney, 19 February, 1896.

I have the honor to inform you that, in accordance with the seventh section of the above Act, it has been reported to this Board that typhoid fever has occurred on the premises of Mr. Sherlock, High-street, North Botany, and to advise that the registration under the said Act should be immediately cancelled, and remain so until the patient recovers or is removed, the premises are disinfected, and all danger of infection past.

I have, &c.,

C. A. SIMMS,

Acting Secretary.

The Council Clerk, North Botany.

161. *Chairman.*] In accordance with this document did you issue instructions to Mr. Barron that he was not to sell any more milk? Yes.

162. *Dr. Sly.*] And you temporarily closed his dairy? Yes. It was closed on the 21st, and was opened again on the 24th, after it had been disinfected and the child had been removed to the hospital.

163. *Mr. Brunker.*] Then the dairy was only closed three days? About that time.

164. *Chairman.*] I believe that Mr. Barron was usually known about the place as Mr. Sherlock? No; I never heard the name of Sherlock until I received the notice from the Board of Health. He was always called Thomas Barron, and he is entered in our register as Thomas Barron.

165. How do you know, then, that this notice applied to him? At the time there was only one dairyman in that street. I knew there was a case of supposed typhoid fever on the premises, because there was information received from Mr. Barron himself.

166. *Dr. Sly.*] When did you receive that information? Somewhere about the beginning of the week. I think he came to the Town Hall and notified me.

167. Before closing the dairy, had you heard the report that typhoid had broken out? Yes.

168. Was the matter currently reported in the district? I only heard it from Mr. Barron.

Alfred George Fletcher, van proprietor, sworn and examined:—

169. *Dr. Sly.*] Do you know the dairy of Mr. Barron? Yes; he is a neighbour of mine.

170. Had you been a customer of his for some time prior to February, 1896? Yes; from the time he started business. A. G.  
Fletcher.  
1 Nov., 1899.

171. What made you leave off being a customer? My daughter advised me to get condensed milk, as there was fever in Barron's place.

172. Did you ever deal with Mr. Barron again? No.

173. Was it in consequence of the reported outbreak that you ceased to deal with him? Yes.

174. Was the report of the alleged outbreak rapidly spread about? Yes, very rapidly.

Alfred Cross, draper, sworn and examined:—

175. *Chairman.*] Do you know Barron's dairy? Yes.

176. Had you been obtaining milk from there for some years? Yes; for nearly four years—up to February 1896, when I left off. A. Cross.  
1 Nov., 1899.

177. What caused you to leave off? For two or three days he did not come round. I made inquiries from other customers, and they told me that there was fever in the house.

178. Was it in consequence of the reported outbreak of fever that you ceased to become a customer? Yes.

179. Have you ever got milk from him since? No.

180. Was the alleged outbreak commonly reported in the district? I heard it from two or three people.

181. *Mr. Anderson.*] Would you have continued taking the milk from Barron but for the alleged outbreak of fever? Yes; I have never had better milk than I had from him.

Caroline Mudge sworn and examined:—

182. *Dr. Sly.*] Do you know Mr. Barron's dairy? Yes.

183. Were you a customer of his? Yes. At the time of the alleged outbreak I had two young children who were fed on the milk from his cows. C. Mudge.  
1 Nov., 1899.

184. What made you leave off getting milk from him? I had heard about the outbreak of fever.

185. How much did you get from him per day? From 3 to 4 pints, and sometimes more.

186. Was it in consequence of the alleged outbreak of fever that you left off taking the milk? Yes. I heard the report of the outbreak before I saw it mentioned in the newspapers.

187. Have you dealt with Mr. Barron since? No.

Clarence Arthur Simms, Secretary to the Board of Health, recalled, and further examined:—

188. *Dr. Sly.*] Amongst the papers exhibited by you yesterday is a report signed by Mr. Pearson, C. A. Simms, Examiner of Accounts at the Treasury? Yes. 1 Nov., 1899.

189. How came he to make the report? By direction of his Under Secretary. Mr. Barron applied to the Department of Justice for compensation, and also to my Department and the Treasury. I think that on the occasion he applied to the Treasury Mr. Kirkpatrick instructed Mr. Pearson to report.

190. *Mr. Brunker.*] Your Department is controlled by the Treasury? Yes.

191. Can that report be accepted, if correct? Yes.

192. *Chairman.*] Who is the report signed by? Mr. A. P. Pearson, Examiner of Accounts. It is addressed to the Under Secretary. In the first place, I do not understand the whole of the report; and, in

C. A. Simms. in the second place, I deny that the Board of Health prohibited Barron from doing certain things. We did not. The report is as follows:—  
1 Nov., 1899.

## REPORT ON THE CASE OF THOS. S. BARRON.

20 October, 1898.

MR. BARRON'S daughter was medically examined by Dr. Gwynne-Hughes, who, on the 16th February, 1896, reported to the Board of Health, as required by the Dairies Supervision Act, that the case was one of typhoid fever.

On the 17th February, 1896, the patient was removed to Coast Hospital, and on examination there by the Medical Superintendent, the case was pronounced to be one of heart disease, without any symptoms of typhoid fever. She died on the 20th February, 1896, three days after admission.

Owing to the report of Dr. Gwynne-Hughes, the Board of Health prohibited Barron, who carried on the occupation of dairyman, from selling milk during the time his daughter remained on the premises. After her removal, and when it became known typhoid fever had been contracted, Barron states his customers would not deal with him; consequently he lost his business, and is a ruined man.

On the 9th September, 1897, Barron sued Dr. Gwynne-Hughes in the District Court, claiming £200 compensation for alleged unskilful, improper, and negligent conduct. The newspaper report shows that a verdict was given for the defendant (Dr. Gwynne-Hughes).

Barron has made repeated applications for assistance. He thinks he has not been properly treated; has not received justice, and cannot obtain redress. He now asks that his fare, as well as that of his wife and family, be allowed to enable him to leave the Colony.

If a sum be granted, it may be thought the Government is remunerating him for the loss he alleges he has suffered, which would be almost equivalent to recognising that either the Board of Health or Dr. Gwynne-Hughes acted erroneously in carrying out the law prescribed by the Dairies Supervision Act.

At present we have only Barron's statements to go on, and should inquiry be made, the case may not be so bad as represented in these papers.

I might add, I do not think any amount should be authorised, unless with the concurrence and upon the recommendation of the Board of Health.  
A. P. PEARSON,  
The Under Secretary. Examiner.

193. *Mr. Bruncker.*] What was the date upon which Mr. Pearson made the report? The report came to us on the 21st October, and two or three days afterwards I returned it with our view as follows:—

Sir,

Office of the Board of Health, Sydney, 24 October, 1898.

In returning the attached papers, I am directed to say that the Chief Medical Officer of the Government would be glad to try and get any information which may be desired—probably through the police—if the exact points are mentioned; but the matter seems fully dealt with on Health Department 97-8,482, and Treasury 97-9,590. Dr. Gwynne-Hughes was not an officer of the Department. Barron had a milk business. The child may or may not actually have had typhoid; but a jury exonerated Dr. Hughes, at all events. Publication of the fact that Barron had typhoid on his premises was only in course of usual report of the proceedings of Waterloo Council at an ordinary meeting, and beyond control of the Board. Lastly, Barron was dealt with exactly as several other milkmen were dealt with during the year, as well as many others both before and since, from whom no similar complaint has been received.

I have, &amp;c.,

C. A. SIMMS,  
Secretary.

The Under Secretary for Finance and Trade.

Examined.—F.K., 27/10/98.

This report from the Board of Health shows that Barron was dealt with in exactly the same manner as other milkmen during the year, as well as others both before and since. Under these circumstances it would not appear to be advisable to create a precedent by allowing any monetary assistance in consequence of alleged losses owing to the operation of the Dairies Supervision Act, and Mr. Barron might be informed that the request contained in his letter of 25th October, 1898, respecting the application for payment of his fare, as well as his family's, out of New South Wales, cannot be complied with.—C.W., 4/11/98. Answer.

Submitted.—F.K., 5/11/98. Approved.—G.H.R., 5/11/98. Mr. Robbards.—F.K., 7/11/98. Done.—G.E.F.R., 8/11/99.

194. *Dr. Sly.*] Is the *precis*, made by yourself, correct? Yes.

195. You say:—

“Dr. Gwynne Hughes reports Mary Sherlock Barron to be ill on a registered dairy; in my opinion, I think she is suffering from typhoid fever.”

196. Were those the exact words of Dr. Hughes? Yes; I used his phraseology.

197. *Mr. Nielsen.*] Is the letter which has been produced by the Council Clerk the one you sent to the North Botany Council? Yes.

198. Yesterday you stated that your letter did not contain the name of Sherlock? So I did. A gross clerical mistake has been made. If I had noticed the mistake the letter would not have gone out in the name in which it did.

199. *Mr. Bruncker.*] Has Dr. Taylor at any time made any representation to the Board with regard to the case? Yes, on request. Mr. Barron, after his daughter's death, came to the Health Office and wrote out a statement of the case, in which he made a complaint of unfair treatment, owing to mistakes of the medical attendant. We referred to Dr. Taylor, and he said that the child had congenital heart disease. Dr. Thompson thereupon asked whether there might not have been an indication of typhoid fever. I forget his reply, but I think he said it might possibly be; but as no *post-mortem* had been held, and the child had been under his care too short a time to enable him to judge from external appearances, he could not say for certain.

200. I suppose that accounts for this paragraph in your letter: “The child may or may not have had typhoid, but the jury exonerated Dr. Hughes, at all events”? Yes. As I said before, it is entirely a matter of medical opinion.

THURSDAY, 16 NOVEMBER, 1899.

Present:—

MR. BRUNKER,	MR. NIELSEN,
MR. J. C. L. FITZPATRICK,	MR. JAMES THOMSON,
MR. ANDERSON.	

J. R. DACEY, Esq., IN THE CHAIR.

Dr. J. D. Sly, solicitor, appeared on behalf of Mr. Barron.

Devereux Gwynne-Hughes, medical practitioner, sworn and examined:—

201. *Dr. Sly.*] Do you remember attending Mr. Barron's female child two or three years ago? Yes, on 16th February, 1896. D. Gwynne-Hughes.  
16 Nov., 1899.
202. Do you remember what opinion you formed as to what she was suffering from on your first visit? Advanced heart-disease and typhoid fever.
203. Are not the symptoms of typhoid fever frequently very difficult to detect in the early stages of the disease? Very difficult sometimes, and especially in view of the form of heart-disease from which the child in question was suffering.
204. Then no matter what amount of skill a practitioner brings to bear on a case of typhoid fever he often has to change his opinion? Sometimes.
205. There are certain symptoms which are common to typhoid and other fevers? Yes. It is extremely difficult sometimes to diagnose typhoid fever, and it is very difficult to differentiate certain forms of heart disease from typhoid fever.
206. Being of opinion that the child was suffering from typhoid fever, you sent a report to the Board of Health? Yes.
207. In that report you state that, in your opinion, the child was suffering from typhoid? Yes.
208. That was written on the 16th February, 1896. On the following day you wrote again stating that she seemed to have typhoid and other symptoms? Yes; but I told Mr. Barron on the first day that the child had advanced heart-disease. He and Mrs. Barron admitted that to the Judge at the trial. No one could possibly mistake the fact that she had advanced heart-disease; but I thought it my duty, in the interests of the general public, and in accordance with the Act, to report the matter to the Board of Health. If I thought the child was suffering from typhoid fever as well as heart-disease it was my duty to report the matter to the Board.
209. I believe you only had one opportunity of seeing the child before you came to the conclusion that she was suffering from typhoid fever;—if you had had an opportunity of seeing her a number of times might you have arrived at a different conclusion? Yes.
210. *Chairman.*] You stated, in one of your letters, "The child died from heart-disease, accelerated by typhoid fever, which was omitted in the certificate of death"? Yes. Dr. Taylor would not certify to the typhoid fever. There was no *post-mortem*, so that Dr. Taylor could not possibly state whether she had typhoid fever or not.
211. Dr. Taylor was asked this question by Dr. Sly: "I believe you reported that the child died from congenital heart-disease and pericarditis, and that she had no symptoms of typhoid fever?" To that question Dr. Taylor answered, "That is correct." I, myself, think she had symptoms of typhoid fever.
212. What I wish to particularly draw your attention to is the omission of any allusion to typhoid in the certificate of death;—it was purposely done? Yes.
213. Judging from his evidence, Dr. Taylor does not think there was any typhoid? This is so.
214. It is a mere difference of opinion? Yes.
215. *Mr. J. C. L. Fitzpatrick.*] Would it be necessary to hold a *post-mortem* to discover whether typhoid did or did not exist? I think so, in a difficult case like that. There are other diseases which are difficult to diagnose. Take for instance cancer in the stomach. On one occasion I diagnosed cancer in the case of a female patient, and other doctors said she had not cancer. It was only proved by a *post-mortem* examination that she had cancer. Many eminent medical men at Home in cases of advanced heart-disease, such as this child was suffering from, cannot at times differentiate it from typhoid fever.
216. Dr. Sly-Aitkin, in his medical work, says: "The disorder with which typhoid fever may be confounded vary at different stages of the disease. Early in the affection it may be mistaken for a simple continued fever, relapsing fever, or anyone of the exanthemata. At a more advanced period it may be confounded with typhus and with typhoid conditions, such as arise from uræmia, pyæmia, general debility, and influenza; also with enteritis, peritonitis, meningitis, and acute pulmonary diseases"? That is so, and it is very often confounded with ulcerative endocarditis. There was no question about the heart-disease. I told Mr. Barron at the time the child was dangerously ill, and that I did not think it would live three weeks at the most.
217. *Mr. Brunker.*] I believe there is a material difference between diagnosing a case of cancer and a case of typhoid? When I referred to cancer I was only pointing out how doctors differ. In my opinion the child had typhoid fever, and Dr. Taylor could not positively swear that she had not typhoid fever without a *post-mortem* examination. I maintain that no one could say she had not typhoid unless there was a *post-mortem* examination.
218. I suppose that immediately after you saw the child you determined that the case was one of typhoid? I thought so most decidedly.
219. And you felt it your duty, in the interests of the public, to notify Dr. Thompson, the President of the Board of Health? Yes. There was a big epidemic of typhoid in the neighbourhood at the time. There were about thirty cases of typhoid from that neighbourhood. Of course I had nothing to do with the closing of the dairy. I told Mr. Barron to seek the advice of the Board. I simply performed my duty. I had no animus whatever against Mr. Barron.
220. *Mr. J. Thomson.*] Would the fact that typhoid was prevalent in the district influence you in arriving at your conclusions? I do not think so.
221. Judging from some of your remarks you do not seem to have been very strongly impressed with the idea that the case was one of typhoid, but erring on the safe side you thought it your duty to report the matter? Yes.

D. Gwynne-  
Hughes.  
16 Nov., 1899.

222. You were not very strongly convinced that it was a case of typhoid fever? No. Of course you require a case like that to be under observation—to be visited (say) every six hours. Of course in the hospital Dr. Taylor would be placed at a greater advantage than I would be. He would have the nurses' reports every six hours.

223. That brings us to this important point: that Dr. Gwynne-Hughes' examination can hardly be regarded as of equal value to that of the examination of Dr. Taylor, who had more time and opportunity of seeing the child and watching its varying symptoms:—I suppose you will admit that? He certainly would be in a better position to judge than I would be.

224. When you formed the opinion that the case was one of typhoid you considered that it was imperative on your part to report the matter to the Board of Health? Yes.

225. That is mandatory under the law? Yes.

226. Do you agree with Dr. Taylor in his evidence to the effect that the child was born with a malformed heart, that she suffered from palpitation and was liable, as all these cases are, to lung complications? Yes.

227. Dr. Taylor was asked the question whether there were any signs of typhoid fever. His answer was, "I could not say she had no symptoms because she was feverish, but she had no symptom indicative of typhoid fever"? When I saw her she had every symptom of typhoid. It would be exceedingly difficult to say she had not.

228. Would that abate between the time you saw her and getting to the hospital? Probably. Dr. Taylor stated that she was in almost a state of collapse when she arrived at the hospital.

229. Dr. Taylor was asked the following question: "You stated in your report 'she had no symptom of typhoid fever'? That would be incorrect, because in every case of typhoid fever there is feverishness, and this child was feverish"? Yes, she was feverish. She had a temperature of 103 to 104 every day I saw her, and that is unusual in heart-disease.

230. You considered that you were perfectly justified in notifying Dr. Thompson, in the public interest, that the child was suffering from typhoid, that being your belief at the time? Yes; that was my belief at the time.

231. It is not unusual, I believe, that cases diagnosed as typhoid turn out to be something else? Yes; in some cases of influenza it is extremely difficult in the early stages to define the disease from typhoid.

232. And it is sometimes necessary to give your opinion as a precaution to parents? Yes.

1899.

(THIRD SESSION.)

—  
 LEGISLATIVE ASSEMBLY.  
 NEW SOUTH WALES.

NEW ROAD AT BURRAWONG OLD STATION, DISTRICT  
 OF MOLONG.  
 (RETURN RESPECTING.)

Printed under No. 1 Report from Printing Committee, 3 August, 1899.

RETURN (*in part*) to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 20th April, 1899, That there be laid upon the Table of this House,—

“ All papers since the year 1881 in reference to the alteration and construction of the new road that is now being carried out at Burrawong Old Station, in the District of Molong.”

(*Dr. Ross.*)

SCHEDULE.

No.	PAGE.
1. Report—District Engineer, Orange, to Principal Assistant Engineer, Roads, Sydney, <i>re</i> proposed deviation at Burrawong, road Cumnock to Bolderogery. Also “Statement of Particulars.” 6th May, 1898 .....	1
2. Copy of Minute—Department of Public Works to Department of Lands, <i>re</i> establishing proposed deviation, 4th June, 1898 .....	3
3. Memorandum—District Engineer, Orange, to Principal Assistant Engineer, Roads, Sydney, inquiring what action is being taken in the matter, 31st January, 1899. Minutes by officers in head office, and Ministerial approval to go on with work before establishment of deviation, 3rd March, 1899 .....	3
4. Letter—John Young, Chairman, Burrawong Grazing Company, to District Engineer, Orange, giving permission for the construction of the deviation through the Company's property, 27th February, 1899 .....	4
5. Telegram—District Engineer, Bathurst, to Principal Assistant Engineer, Roads, Sydney, <i>re</i> deviation in course of construction, 17th April, 1899 .....	4
<i>Contract Papers.</i>	
6. Schedule of Tenders opened 17th March, 1899—Thomas Murphy, £189, lowest; accepted 27th March, 1899. Contract agreement signed by Thos. Murphy, 27th March, 1899 .....	4

No. 1.

The District Engineer, Orange, to The Principal Assistant Engineer.

(98-4,291.)

Roads Office, Orange, 6 May, 1898.

REPORTING on a proposed deviation at Burrawong, on road Cumnock to Bolderogery, No. 1,036 on the Minor Road Schedule for 1897-8, parish of Burrawong, county of Gordon, Electorate of Molong.

I HAVE the honor to report as follows:—

1. I have visited the site of the proposed deviation, and submit herewith a detailed estimate of cost, together with a sketch plan of the locality (marked “A”) and a “Statement of Particulars” and “Schedule of Portions.”

2. Burrawong Hill, which it is the object of the proposed deviation to avoid, is the chief obstruction on this road, and is the cause of much complaint. In addition to its severe ruling gradient of 1 in 7·85, there is a sharp curve at the steepest part, an element of much additional impediment to ascending and of danger to descending traffic. The cost of maintaining the metalling on this severe grade is also excessive, and a satisfactory surface impracticable.

3. The deviation would afford a ruling gradient of 1 in 16·44, be practically straight, and 10 chains shorter between the two termini, “A” and “B” on the plan.

EO--A

3.

[580 copies—Approximate Cost of Printing (labour and material), £36 18s.]

4. To cut down the hill to the same ruling grade as the deviation would, as it is of rock, cost not less than £220; there would still be the curve, and the ruling grade would be 32 chains in length, as against one of 9 chains on the deviation. The length to be abandoned is metalled, but the metalling is much worn and of little value. The formation on the deviation would cost £120, as against £220 on the road. The cost of metalling would be less, because it is 10 chains the shorter; the cost of culverts, &c., would be about the same in either case.

5. The deviation would be on portion of the Burrawong Estate, and the manager, Mr. Reynolds, whom I saw on the ground, is anxious for it on account of their traffic, and offered to consent to it, taking the existing road in exchange without asking any compensation for fence alterations, &c.

6. The cost of the works required to make the deviation trafficable, as given in detail in the statement of particulars, would be £145. The annual vote for the road is £100.

7. The recommendation is that the deviation be made, and that a special grant of £100 be obtained to supplement the vote and meet the cost.

I have, &c.,

A. W. STILWELL,

District Engineer.

Minute and tracing herewith for transmission to Lands,—Mr. W. A. Smith.—Mr. W. J. DOWNNEY, 4/6/98. Special minute sent Lands Department. See copy of 98-4,951 herewith. 7/6/98. Mr. Stilwell to see. Seen.—A.W.S., 13/6/98. Principal Assistant Engineer. File.—W.W., 15/6/98.

Roads Office, Orange, 6 May, 1898.

Deviation at Burrawong Hill Road, Cumnock to Bolderogery, No. 1,036 on Minor Road Schedule, 1898.

*Statement of Particulars.*

(General Instructions, Appendix No. 28.)

To accompany Plan, Report, and Recommendation of District Engineer A. W. Stilwell.

(1.) State the locality of proposed deviation, giving numbers of portions and names of parish and county, electorate, and any other particulars necessary for identification.

(2.) Is the road on schedule? If so, what are its number and name on this year's schedule?

(3.) Is it within a municipality?

(4.) What is the length of the deviation and area of land required?

(5.) What is the length of the road to be superseded, and its area?

(6.) Do you recommend that any part of the superseded road be closed and granted in lieu? If so, give its length and area.

NOTE.—No road can be closed without the approval of the Department of Lands, and in the case of a boundary road all the adjoining owners must give their consent before it can be closed. (See Clause 193 of General Instructions.)

(7.) State the nature of the tenure of land to be resumed or appropriated—whether freehold, conditional purchase (C.P.), conditional lease (C.L.), reserve, Crown land, &c.

(8.) State the general quality of the land in the holding and its approximate value per acre.

(9.) State the nature, trend, and extent of the traffic; and whether local or general, light or heavy.

(10.) How many persons are served by the road?

(11.) What is the approximate area of cultivated land served by the road, and what is the nature of the produce?

(12.) Is such traffic likely to increase in the near future, and on what grounds is your opinion based?

(13.) State fully the advantages of the deviation as compared with the existing reserved road.

(14.) State the nature of work required to make the deviation suitable for present traffic, and give an estimate of cost in detail.

(15.) What expenditure would be required to put the established road in a condition suitable for present traffic?

(16.) Give the gradients and their lengths on the deviation and on the established road.

(17.) What is the value per acre of the land to be resumed?

(1.) At Burrawong Hill, about 1 mile from Cumnock, portion 115, parish of Burrawong, county of Gordon, electorate of Molong.

(2.) Yes; No. 1,036, Cumnock to Bolderogery.

(3.) No.

(4.) 50 chains, 9 acres.

(5.) 60 chains, 9 acres.

(6.) Yes, the whole of it. It is not a boundary road.

(7.) Freehold.

(8.) Fair grazing land, but rocky; say, 30s. an acre.

(9.) Heavy, farming, fruit-growing, and wool traffic to rail, &c., at Molong from a large extent of country westwards.

(10.) This is a scheduled road as a result, presumably, of adequate inquiry and consideration. The present extent of the traffic is certainly sufficient to justify it, and also the alteration and expenditure now proposed.

(11.)

(12.) Will probably increase. More country is being put under cultivation.

(13.) Ruling grade of 1 in 16.44, as against one of 1 in 7.85; the avoidance of a sharp curve, and a shorter road by 10 chains.

(14.) 48 chains clearing at 5s.; 50 chains drain at 6s.; 9,241 yards, formation at 2s.; one-fourth c. culvert at £10; 2 pipe culverts at £5; one causeway at £6—total, £145 4s.

(15.) £263. This would give the same ruling grade as the deviation, but it would be 23 chains longer; there would still be the bad curve and 10 chains longer road.

(16.) Deviation—8 chains, 1 in 45.10; 13 chains, 1 in 27.48; 9 chains, 1 in 16.44; 21 chains, 1 in 24.19. Existing road, not graded, varies every few yards; ruling, 1 in 7.85.

(17.) Say, 30s.

(18.)

- (18.) What is the value of the land severed? (18.) No real severance; same owner on both sides of road. No claim made beyond that of old road for new.
- (19.) Will the property be improved in general value by the deviation? (19.) Yes, by improved access to market, &c.
- (20.) What is the length and value of fencing required? (See Clause 195 of General Instructions.) (20.) No fencing asked for by the landowner.
- (21.) Should fencing be erected by the Department or its value paid to the owner? State reasons for the recommendation. (21.) Neither; no claim made for it.
- (22.) Is the present road fenced? (22.) Yes.
- (23.) Are the portions through which the deviation passes enclosed? If so, give the nature of the fences and their state of preservation, and show their position on the sketch plan. (23.) Yes, top rail and four wires; fairly good.
- (24.) Have the owners offered to give their land, and on what terms? (See Clause 193 of General Instructions.) (24.) Yes, in exchange for the existing road; no further claim.
- (25.) Is obtaining immediate possession of the deviation an important consideration? (25.) Very desirable as early next financial year as funds for it can be provided.
- (26.) Are funds available for resumption and formation? (26.) No; a grant of £100, to supplement the vote, is recommended in covering report.
- (27.) Have you any general remarks to make on the whole question? (27.) None beyond those in the report.

A. W. STILWELL,  
District Engineer.

### No. 2.

#### Minute from The Department of Public Works to The Department of Lands.

Road Cumnock to Bolderogery, Deviation at Burrawong Hill.

4 June, '98.

THE traffic, which is large and heavy, along the scheduled road "Cumnock to Bolderogery" is reported to be considerably hampered by the severe grades on Burrawong Hill. The ruling grade at this place is about 1 in  $7\frac{3}{4}$ , and to reduce in a reasonable degree would entail an unnecessarily large outlay. By the construction of the deviation indicated by red line on tracing, a ruling grade of 1 in  $16\frac{1}{2}$  may be obtained at an expenditure fully warranted by the traffic. This deviation is 10 chains shorter than the existing road, and, owing also to the flatter grades, the cost of maintenance would be considerably reduced.

The owner is anxious for the construction of an improved road, and, it is reported, will make no further claim than to be granted the old road in lieu of that proposed to be taken. It is recommended that the Department of Lands be asked to take into early consideration the desirability of establishing the deviation indicated.

G.W.J.D.

### No. 3.

#### The District Engineer, Orange, to The Principal Assistant Engineer.

Road Cumnock to Bolderogery, Proposed Deviation at Burrawong Hill.

Roads Office, Orange, 31 January, 1899.

MEMORANDUM.—A report recommending this deviation was furnished on the 6th of May last, accompanied by detailed report as to resumption required, section, &c.; also recommending a special grant of £100 to meet the cost.

I would ask to be informed what action has been taken in the matter, and whether there is any probability of the work being done this year?

A. W. STILWELL,  
District Engineer, Orange.

98-4,951 forwarded to Lands, 7/6/98.—F.E.C., 2/1/99. Mr. Mollison.—JNo. P., 3/2/99. Mr. Downey.—J.S.M., 6/2/99. Proposed resumption gazetted, 18/1/99.—G. W. J. DOWNEY, 8/2/99. Mr. Mollison.

As resumption will now be probably completed in from six weeks to two months, Mr. Stilwell's recommendation of a special grant of £100 (Paper 98-4,291) might perhaps be approved, in order that steps may be taken to prepare the contract, but a tender should not be accepted till the road has been actually established, or the owner has given a written permit to enter.—JAS. S. MOLLISON, Assistant Engineer, 8/2/99. Under Secretary for Public Works and Commissioner for Roads.

Submitted for approval.—R.H., Under Secretary for Public Works and Commissioner for Roads, 10/2/99. Approved.—J.H.Y., 10/2/99.

Mr. Stilwell to note. If the (unconditional) permit can be obtained easily and quickly this might be done, otherwise the case might be resubmitted shortly in order that further inquiry may be made at Lands.—JAS. S. MOLLISON, 13/2/99. Mr. Stilwell.

In view of Mr. Young's attached note, and of the document he says he has signed—presumably with Lands Department,—it does not appear necessary to longer delay the work, and I am now about to obtain tenders for it.—A.W.S., 28/2/99. Principal Assistant Engineer, Roads and Bridges.

Submitted for approval to proceed with the work prior to formal establishment. See indirect approval of 10/2/99.—JAS. S. MOLLISON, Assistant Engineer, 2/3/99. Under Secretary for Public Works and Commissioner for Roads.

Submitted for approval.—W. J. HANNA (for Under Secretary and Commissioner for Roads), 3/3/99. Approved.—J.H.Y., 3/3/99. Mr. Hanna.—JNo. P., 3/3/99. Mr. Stilwell to note.—W.J.H., 4/3/99. Noted.—A.W.S., 7/3/99. File.—W.W., 8/3/99. Principal Assistant Engineer, Roads and Bridges.

No. 4.

## No. 4.

John Young, Esq., to The District Engineer, Orange.

Mr. Stilwell,—

Kentville, Johnston-street, Annandale,

Dear Sir,

27 February, 1899.

My son, F. J. T. Young, informed me that by writing to you, and giving the necessary permission, you would proceed with making the new road from Cumnock down the hill, past old Burrawong, on the Peak Hill Road.

The new road to go through a portion of ground belonging to the Burrawong Grazing Company (Limited).

We have already given permission and signed a document which was sent to the Government ———; but I again, on behalf of our Company, give permission, and request that the formation of new road be proceeded with.

I am, &amp;c.,

JOHN YOUNG,

Chairman of the Burrawong Grazing Co.

## No. 5.

Telegram from The District Engineer, Bathurst, to The Principal Assistant Engineer.

Bathurst, 17 April, 1899.

DEPARTMENT is constructing a deviation at Burrawong Hill, Road Cumnock to Bolderogery, to avoid impracticable grade and turn on existing road—the causes of much complaint. It is not at any one's request. Know nothing of William Ross having been prosecuted in '82 for forcible opening of this line, and nothing of any previous road in this location. The papers, plan, and sections in Head Office will show whole history of the case so far as I am acquainted with it.

A. W. STILWELL,  
District Engineer,  
Bathurst.

Authorised Excess ... ..	100	0	0
	300	0	0
Expenditure ... ..	123	6	0
Balance ... ..	£176	14	0

Liabilities—Nil.—F.H., 4/4.

We certify the above to be correct, and that we have initialled all the tenders, three in number.

HENRY J. LEARY, C.P.S.

W. C. ADAMS.

Date of Notification of Acceptance of Tender, 27th March, 1899.

Deposit received, 27th March, 1899; Deposit banked, 27th March, 1899; Amount of deposit, £9 9s.

I have accepted the tender of Thomas Murphy, for the sum of £189.

A. W. STILWELL, 27/3/99,

Officer-in-Charge.

Not d. for deposit, 20/3/99. Deposit paid, 27/3/99.—W.R.W. There is a special grant of £100 for this work, also a balance of the vote for the road of £76 14s., or, in all, £176 14s., leaving a deficit of £12 6s. Can this additional sum be provided, or shall I reduce the work?—A.W.S., 21/3/99. Principal Assistant Engineer, Roads and Bridges. Submitted for approval to an additional sum of £12 6s.—T.R.S., 4/4/99. Approved.—R.H., Under Secretary Public Works and Commissioner for Roads, 6/4/99. Accountant. Noted.—Mr. H. to note authority for excess and pass on.—J.C., 6/4/99. Noted.—R.H., 6/4. Funds available.—J.C., 6/4/99. Account Branch Notations.—Deposit noted, 3,733. Tenders examined, O.C., 4/4; W.R.W., 7/4/99; T.R.S. Noted.—J.S.O., 7/4/99. Funds available.—J.C. Mr. Norrie as to queries, then Mr. Stilwell to note as to funds.—T.R.S., 7/4/99. Checked and found correct.—HAROLD F. NORRIE, Clerk-in-charge of Bonds and Contracts, 10/4/99. Now to Mr. Stilwell re funds. Noted.—A.W.S., 19/4/99. The Accountant. Department

Department of Public Works, New South Wales.  
Lump Sum Tender Form. Contract No. 54/98-9.  
Road Cumnock to Balderodgery.

I, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of contract No. 54/98-9, on road Cumnock to Balderodgery, agreeably to the plan, specification, schedule to specification, special conditions, and general conditions, which have been inspected by me, for the lump sum of £199 19s, and to complete the same within the time stated in the said general conditions; and I do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the schedule of prices endorsed hereon, or if not in schedule at a price to be agreed upon at the time, and added to or deducted from the above lump sum, as the case may be; and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned.

Dated this 16th day of March, A.D. 1899.

JOHN QUINN,  
Molong.

This is the tender, marked " \_\_\_\_\_ ," referred to in \_\_\_\_\_  
Her Majesty the Queen, dated the \_\_\_\_\_ day of \_\_\_\_\_  
Witness— \_\_\_\_\_  
annexed agreement with  
A.D. 189

NOTICE TO TENDERERS.

When two or more persons send in a joint tender, the name of each must be set forth therein; and all names must be written in full. Tenderer's address to be clearly stated.

A separate tender must be sent in for each contract under separate cover, with number of contract endorsed thereon.

As soon as the tenders shall have been opened, and the bulk sums of each ascertained, the lowest eligible tenderer shall be called upon to pay a minimum deposit of £2 if the tender be £40 or under, or a sum representing 5 per cent. on the pounds in tenders over £40 and under £200, before his tender can be recommended. On all tenders of £200 and over, the security required will be that provided for in clause 29 of the general conditions, viz., £5 for every £100 or part of £100. In the event of tenderer refusing or neglecting within seven days from date of opening tenders to pay this deposit he will be liable to disqualification from further tendering. If the next tenderer is considered suitable, the work may be offered to him, and so on as long as the local officer considers the tenders to be of such a nature as he would be justified in recommending.

In the event of a tenderer refusing to take up his contract, or the contract being cancelled, his deposit will be forfeited to the Government of New South Wales, and will be paid to the credit of the Consolidated Revenue. The deposit will be returned when the final certificate has been forwarded for payment.

No tender will be considered which shall have been received after the advertised time for the receipt of tenders, unless there are valid reasons which render it equitable that it should be entertained.

This is the Schedule of Prices hereinbefore referred to:—

AGREEMENT

AGREEMENT made this twenty-seventh day of March, in the year of our Lord one thousand eight hundred and ninety-nine, between Thomas Murphy, of Orange, in the Colony of New South Wales, Contractor (hereinafter styled or referred to as "The Contractor"), of the one part, and Her Most Gracious Majesty Queen Victoria, of the other part. Whereas the Minister for Public Works in and for the said Colony (hereinafter called the said Minister) recently called for tenders for the completion of Contract No. 54/98-9, on Road Cumnock to Balderogery, in the said Colony, according to plans, specification, schedule to specification, and general conditions which are hereunto annexed and marked respectively "A, B, C, D, E, F;" and whereas the Contractor made the tender hereunto annexed marked "G," to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the said works agreeably to the said plan, specification, schedule to specification, and general conditions; and at the sum in the said tender mentioned and within the time set out in the said general conditions; and whereas the said tender was accepted by the said Minister, and such acceptance duly notified to the Contractor on the twenty-seventh day of March, one thousand eight hundred and ninety-nine (a copy whereof is hereunto annexed and marked "H"); and whereas the Contractor has deposited the sum of nine pounds nine shillings in lawful British money with the said Minister, to be held by him as such Minister or the Minister for Public Works for the time being in and for the said Colony as security for the due performance of this contract and all other matters and things herein contained and which on the part of the Contractor are to be done and performed: Now this agreement witnesseth that in consideration of the premises the Contractor hereby agrees to perform the various works required in and about the full and proper completion of the said works in accordance in all things with the said several annexures hereto, and at the sum in the said tender mentioned, and within the time set out in the said general conditions; it being also hereby declared that any additions to or deductions from the said works mentioned, or set out in the said specification, or schedule to specification, or shown in the said plan, are to be paid or allowed for, as the case may be, at and according to the rates or prices in the schedule of prices endorsed on the said tender, or if not in the schedule at a price to be agreed upon at the time, and added to or deducted from the bulk sum in the tender, as the case may be.

And it is hereby further declared and agreed between and by the said parties hereto, that the said several annexures hereto, all being marked as aforesaid, shall be read as incorporated in and forming part and parcel of these presents, in like manner as if the same had been herein written and set forth at length, and that the said several annexures and these presents shall together be taken to be the contract between the said parties in respect of the said works.

In witness whereof the said parties to these presents have hereunto set their hands the day and year first before written.

Signed by the said Thomas Murphy, )  
in the presence of,— )  
W. C. ADAMS. )

THOMAS MURPHY.

Department of Public Works.

SPECIFICATION.

Cumnock to Balderogery Road, Orange District, No. 54/98-9 Contract.

This Contract comprises the following works:—On the Deviation on Burrawong Hill:—

- 48 chains of road-clearing.
- 48 chains of drains.
- 1,061 lineal yards of road formation.
- 1 timber culvert.
- 4 stoneware pipe culverts.
- 1 stone causeway.

The clearing to be the full width between the surveyed road lines, and grubbed out 12 inches below the natural surface.

The drains to be along the higher side of the road, as directed, in alignment with and 4 feet in the clear from the side line, 1½ feet deep and 1 foot wide at bottom.

The formation to be along the pegged central line in cuttings and embankments to the levels and gradients shown on the plan "A" attached, 24 feet wide and with a convexity of 9 inches.

The timber culvert to be of the 5th Class, of 4 feet clear span and 20 feet clear roadway, and in accordance with the plans "B" attached. Timber to be of white or yellow box or ironbark.

The pipe culverts to be 20 feet in length, one of 24-inch and the remaining three of 12-inch pipes, to be supplied to the contractor at Molong railway station, the ends to be retained with neatly hand-packed dry rubble walling.

The causeway to be 30 feet x 18 feet, and in full accordance with the plans "C" attached, excepting that the whole of the timber work is to be omitted.

Clauses 6 to 15, 18 to 32, 34, 36 and 37, 39 and 40, 42 to 46, and 48 to 64 inclusive in the Schedule to Specification attached, do not apply to this Contract.

The General Conditions also attached apply to this Contract.

This is the Specification marked "D," referred to in my annexed agreement with Her Majesty the Queen, dated the twenty-seventh day of March, A.D. 1899.

THOMAS MURPHY.

Witness—W. C. ADAMS.

E.

Contract No. 54/98-9.

SCHEDULE TO SPECIFICATION.

Clause 1.—Contractor to determine Nature of Ground.

The nature of ground shown on plan or referred to in Specification is not guaranteed. The Contractor has to determine this for himself in all cuttings and excavations for drains, formations, or foundations—and in the case of draining and forming shall give one average price per lineal yard irrespective of nature of material excavated—and for foundations at per cubic yard, if not included in the bulk price for the culvert, causeway, or other work specified. Clause

### Clause 2.—Clearing.

- (a) The width of clearing specified to be taken within surveyed limits of road or an equal distance on each side of the centre line, as pegged by the Superintending Officer.
- (b) Unless otherwise specified, grubbing shall include the extraction of all trees, stumps, scrub, roots, rocks, or boulders, within whole width of clearing, and to a specified depth below the natural surface, the holes so made to be left open for inspection by the Superintending Officer, after which they shall be filled in with approved material well rammed, or, if specified, heaped 6 inches higher than the surrounding surface so as to allow for settlement.
- (c) Any trees or large boughs that overhang the clearing, or whose fall would cause obstruction in the road, are to be cut down and burnt, unless otherwise specified, as well as all the extracted trees, brushwood, stumps, or roots.
- (d) Contractor to be responsible for all damage by fire to fences, grass, cultivation, or buildings. Any fences injured during the execution of the work to be immediately repaired at the Contractor's cost.
- (e) Where clearing includes part grubbing and part tree-felling stump high, the timber so cut down and grubbed shall be consumed by fire, unless otherwise specified.
- (f) During the clearing of the road the greatest care must be taken not to disturb any bench mark, survey, or level pegs.
- (g) This class of work to be tendered for at per lineal chain.

### Clause 3.—Draining.

- (a) Drains to be cut where directed by the Superintending Officer, to the average depth, and width at bottom as specified, with side slopes of 1 to 1, unless otherwise stated, and at such gradients as will ensure the free flow of water.
- (b) The material excavated from drain to be evenly banked up on lower side, three (3) feet clear from edge of drain, or, if so specified, to be distributed and spread as may be directed within the limits of the Contract.
- (c) Drains to discharge freely to culverts or causeways.
- (d) Tenders to quote rate per lineal chain.

### Clause 4.—Formation.

- (a) Roadway to be formed to the width specified (such width being measured from water-table to water-table in ordinary formation and through cuttings, and from water-table to edge of scarp-bank in side cuttings, and between top edges of banks in embankments), on lines pegged out by the Superintending Officer, and to be cut to the inclination directed by him or shown on section, the gradients being properly boned through, and due allowance made for shrinkage of banks as the nature of the material may require, at the discretion of the Engineer.
- (b) The formation to be in the solid, or made up with approved hard material; to be uniform in cross-section, having a convexity specified, and where embanked on a siding, the scarp to be left slightly high to allow for settlement as may be determined by the Superintending Officer.
- (c) All trees, stumps, rocks, roots, or other obstructions met with are to be removed to a depth of at least 15 in. below the finished surface; and all holes, ruts, hollows, or depressions to be filled with approved material.
- (d) Wherever the formation is not altogether in the solid, it must be satisfactorily consolidated before any metal or gravel is spread, fresh material being supplied to make up convexity and formation level where required. Surplus material excavated in forming the road shall be used to widen embankments, or shall be deposited and evenly spread at such places and levels as the Superintending Officer may direct, within the limits specified.
- (e) Extra material for embankment to be obtained as may be directed within specified limits, but no borrow-pits will be allowed within the limits of the road without the written permission of the Superintending Officer. In such cases the Contractor shall either ease or slope down the banks to a grade of 1 in 4, or securely fence off (as specified in clause 52) any dangerous place as may be directed, without extra payment.
- (f) Wherever it is practicable and included in the tendered price for Formation, mitre drains 18 in. wide shall be cut to relieve water-tables, at such intervals and angles as shall be directed, a solid block being left, and the tabling recommenced 2 ft. below each mitre drain.
- (g) Any ballast or other material necessary to complete the above portion of the work, as specified, to be included in and form part of the tendered price for formation.
- (h) The banks in cuttings to have a slope of 1 to 1 in earth,  $\frac{1}{2}$  to 1 in hard shale, and may be vertical in well-bedded rock, the latter in each case being determined by the Officer-in-charge. In cuttings where the strata consist of well-bedded rock underlying earth, the face of rock shall be left vertical up to the junction of the rock and earth, the latter being then stripped back for a distance of 2 ft., and battered thence 1 to 1 to the surface. Cuttings shall be carried round all bends in even regular curves, cut clean and sharp into the tabling, that there may be no impediment to the flow of water.
- (i) The slopes of embankment nowhere shall have a less batter than  $1\frac{1}{2}$  to 1, and shall be benched at the toe where the Superintending Officer may direct. In every case where the natural cross-section of the ground is too steep to allow of this batter, a retaining wall, 18 in. thick on top, of large stones, must be built to the approval of the Superintending Officer; such wall to be built carefully to a batter on face of  $\frac{1}{2}$  to 1, the back being vertical, and shall have no stone less than  $1\frac{1}{2}$  cubic feet in size, with headers not more than 5 ft. apart; a proper footing to be cut out of the solid for foundation, which shall be at least 1 ft. deep the full width of wall, and having an inward inclination.
- (j) All stones that may lie on or within 4 in. of the surface of road after completion, to be broken to a 3-in. gauge and blined, and any irregularities in settlement made up therewith.
- (k) Any rock excavated which may be suitable for metalling or rubble backing, can be taken by Contractor for use on any part of this Contract, providing an equivalent quantity of approved material for embankments be supplied by Contractor at his own cost.
- (l) The greatest care must be taken not to disturb any survey or level pegs. None of these pegs are to be removed under any circumstances until approved by the Superintending Officer, and all such pegs as he may require are to be left standing with the turf round them until the completion of the works or he receives instructions for their removal. No bench mark to be disturbed on any account. Any disregard of this sub-clause will be treated as evidence of intention to defraud.
- (m) Formation to be tendered for at per lineal yard, irrespective of nature or quantity of material.

### Clause 5.—Soakage Drains.

Where springs occur in the formation, or the subsoil is not sufficiently firm for roadway, the springs shall be tapped by means of soakage drains led to side drains or lower ground, with such fall as may be directed, to be of the depth specified, 1 ft. wide, filled with 6-in. ballast, 12 in. deep, with a covering of 3-in. metal or clean river gravel, carried up to road surface. Surplus earth to be distributed as may be directed. Soakage drains complete to be paid for at per lineal yard.

### Clause 6.—Bed for Metal or Gravel.

The central portion of formation to be excavated to the width and depth specified for receipt of the metal or gravel. The material from excavation to be used for embankments, or removed and spread where specified, or otherwise deposited clear of road as directed. At intervals of at least a chain, on either side of roadway, small mitre drains, 1 ft. wide, shall be cut to allow soakage water to escape; side of drains to be sloped 2 to 1, and cut in direction of natural flow of water. Cost to be included in tendered price for formation.

### Clause 7.—Metal.

Metal to be of the best description of stone procurable within the specified radius of the work, or it shall be the best obtainable in the specified locality, or it shall be of the class or quality specified.

Stone to be approved by the Superintending Officer, to whom a sample is to be submitted before any quarrying is done. To be broken with clean, sharp, and cuboidal fracture, quite free from spawls, quarry face, dirt, chips, &c., and stacked on even ground by the side of the road for measurement, unless otherwise specified. If directed the metal to be turned over by a fork having tines  $1\frac{1}{2}$  in. apart. The heaps shall be opened out for inspection as directed.

### Clause 8.—Gravel.

To be of the best description of ridge, quarry, or creek gravel specified, or procurable within the specified distance of the work. To be stacked on even ground by the side of the road for measurement, unless otherwise specified. The heaps to be opened out for inspection as directed.

Clause

#### Clause 9.—Screening.

If specified, the gravel shall be screened in the following manner :—All the material shall be thrown with a shovel against the upper surface of a rectangular screen, 7 ft. long, set at a batter of  $\frac{1}{2}$  to 1, having perpendicular bars  $\frac{3}{8}$  in. diameter set  $\frac{1}{4}$  in. apart. That which passes through the screen is not to be used as gravel. Of the residue, all stones over  $2\frac{1}{2}$  in. gauge to be broken to that gauge, and the whole stacked for measurement.

#### Clause 10.—Maintenance Metal or Gravel.

In the case of maintenance metal or gravel, the heaps for measurement shall be of such size as may be directed by the Superintending Officer, and after measurement shall be distributed as specified. When so stacked or distributed the heaps shall be left clear of water-tables, and in such positions as not to interfere with the safe passage of traffic.

#### Clause 11.—Gauge of Metal or Gravel.

The metal or gravel shall be strictly of the gauge specified, so that every stone shall pass every way through a ring of that gauge.

#### Clause 12.—Spreading Metal or Gravel.

(a) When the whole or any well defined length of formation is ready to receive metal or gravel, it is, after measurement, and on receipt of instructions from the Superintending Officer, to be evenly spread to the width and depth specified ; but it shall be competent for the Superintending Officer to remeasure such metal or gravel on the road, when spread, should he consider it necessary.

(b) Until so spread and examined, no more metal or gravel shall be stacked within such distance of the measured metal or gravel as shall be directed.

(c) When the spreading of maintenance metal or gravel is specified, the surface of old metal or gravel to be covered, shall, if so specified, first be broken up or scarified with a pick. In all cases the maintenance material, or such proportion of the total quantity as may be specified, shall be carted out and spread on the road to such lengths, depths, and widths, and in such places as may be directed, first removing all dirt, mud, or earth from the holes, hollows, or ruts to be covered with metal or gravel.

(d) Cost of spreading metal or gravel to be included in the tendered price of same, unless otherwise specified.

#### Clause 13.—Boxing in Metal or Gravel.

After metal or gravel has been spread, it shall be retained or boxed up at the sides by filling with approved material to the surface of metalling or gravelling, and sloped uniformly to the water-table or edge of embankment.

Cost to be included in tendered price for metal.

#### Clause 14.—Blinding.

(a) When the material has been properly spread, and after inspection by the Superintending Officer, the metal or gravel shall receive an even coat of blinding of the width and at the rate per cubic yard to lineal yard specified. Blinding to consist of decomposed granite, clean ridge gravel, or other approved gritty material, the best procurable within the distance specified.

(b) Tenderers to quote a rate per lineal yard.

#### Clause 15.—Rolling.

(a) When the earthwork in formation has been completed, it shall, if so specified, be rolled longitudinally with a roller 3 ft. to 4 ft. 6 in. in width, and weighing  $\frac{1}{2}$  to 1 ton for every foot in width. The rolling to be commenced at the sides, and finished in the centre; the roller to be drawn over the same ground at least twice, or oftener if so specified, all irregularities in surface being attended to during the operation.

(b) Upon the completion of the spreading of metal or gravel, and blinding, the road shall be rolled again as above specified.

(c) Rolling completed, as specified, to be tendered for at per chain.

#### Clause 16.—Timber.

(a) Timber employed to be of the kind specified ; all to be of the best description, sound, straight, free from wanes, shakes, gum veins, cores, or other defects, and to be of full dimensions specified. Hewn and sawn timber to have clean, sharp arrises.

(b) Round timber, unless otherwise specified, to have bark peeled off, and the diameter given to be its smallest dimension, exclusive of bark.

(c) Hewn timber to be square, smooth, and free from axe marks.

(d) Sawn timber to be absolutely free from heart.

(e) Slabs, unless otherwise specified, to be split, lined, and adzed square on edges, and free from heart.

(f) Posts and rails for split fencing to be sound, straight, and cleanly split, free from large knots, splinters, and other defects.

(g) Unless otherwise specified, piles, sleepers, sills, capsills, girders, joists, wing-pieces, and end posts of fencing to be of round timber.

(h) Planking to be sawn timber, unless otherwise specified. Hand-rails, comprising rails, hand-rail posts, and struts on culverts and ordnance fencing, to be sawn and smoothly planed where exposed to view. Kerbs to be sawn.

(i) Sheathing to be of slabs, unless otherwise specified.

(j) Ballast pieces to be hewn.

(k) Treenails to be of oak, ironbark, or blue gum, cut from sound old timber, approved by the Superintending Officer, and of hexagonal section, 1 in. across sides, unless otherwise stated, driven into holes bored with 1 in. auger.

(l) All timber under or in contact with ground to be charred.

(m) Where the Contract is for the supply of timber only, it shall be stacked where, and in such a manner, as may be directed. All labour required for turning over timber for inspection and branding shall be supplied by the Contractor.

#### Clause 17.—Excavations for Foundations.

(a) All excavations for foundations and trenches for culverts, pipe culverts, and causeways, shall, unless otherwise specified, be included in the tendered price for such culvert or causeway.

(b) The Contractor to excavate the formation to depths shown, or to such greater or lesser depths as will ensure sound, permanent, and level foundations for footings at such levels as may be determined by the Engineer. In the case of concrete, masonry, or brick footings, benchings will be allowed or not, at the discretion of the Engineer, who will examine and pass the foundation before the footings are laid. Contractor to keep the trenches clear from water until such time as the Engineer may approve ; after trenches have been examined and approved, the foundation shall be laid, and walls carried up, the trenches to be then filled in with approved material, well punned in layers.

(c) Prices to be given per cubic yard for rock excavation and for excavation in other than rock ; the price for excavation to include all cost of removal of surplus material to embankments, and placing same in position, refilling trenches, unwatering, or any other means found necessary to secure a solid foundation. The depth of foundation shown on plan shall be taken as the contract depth, all deviations from this depth will be added to or deducted from the Contract at Schedule rates, or, in the absence of Schedule rates, at a price to be agreed upon in writing. Any rock excavated which may be suitable for ballasting or rubble backing, can be taken by Contractor for use on this contract, providing an equivalent quantity of approved material for embankments be supplied by Contractor at his own cost.

#### Clause 18.—First-class Timber Culverts.

(a) Culvert to be built square to stream unless otherwise shown or specified, and to consist of one span of the length specified, measured from centre to centre of abutments along the line of traffic.

(b) The roadway to be of the width specified or shown on plan in the clear between kerb logs measured at right angles to the centre line of culvert.

(c) Piles in all cases shall be in one length, not less than 12 in. diameter at small end, and shall square 12 in. x 12 in. at head, or be at least 18 in. diameter, and to be adzed to a flat bearing of not less than 5 in. to receive sheathing.

(d) Tenons 8 in. x 4 in. x 5 in. deep to be cut neatly on pile heads; and in the case of piles let into sills, similar tenons to be cut on feet of piles.

(e) Culvert to be built in accordance with the dimensions shown on lithographic drawing.

#### Clause 19.—Driven Piles. No. 1 Type.

(a) Piles to be driven to the depth shown in drawing, to be pointed, and to have a wrought-iron ring 2 in. x 1 in., fitted on their heads, to prevent splitting in driving. Piles to be charred from the point to 1 ft. above ground level, and to be pitched sufficiently long in order to ensure a perfectly sound head being left after the pile is driven to its full depth.

(b) If specified, piles shall be shod with wrought-iron pile shoes of approved pattern, each 16 lb. weight, secured with eight  $\frac{1}{2}$  in. spikes,  $3\frac{1}{2}$  in. long.

#### Clause 20.—Piles on Sunken Sills. No. 2 Type.

(a) Sills to be 15 in. diameter, laid on an approved foundation, excavation for which shall be included in the tendered price of the culvert, at the depth shown on drawing, firmly bedded, and mortised accurately for tenons on foot of piles.

(b) The trench to be carefully filled in after piles have been placed and treenailed, with approved material well rammed in layers, up to the natural level of the ground surface.

#### Clause 21.—Piles in Rock. No. 3 Type.

(a) The ground at site of piles specified to be let into rock, to be excavated to the depths shown on plan, which shall be included in the tendered price of culvert, or such greater or lesser depths as will ensure holes being in sound solid rock. After the hard bed of rock has been laid bare and freed from water, round holes to receive piles to be excavated in solid rock at position shown on drawing. The sides and bottom of holes to be carefully rough-tooled to exact lines, vertical and horizontal respectively, the feet of piles to be then stepped into their proper places, the whole to be driven tightly with a heavy beetle or ram, the spaces between timber and rock to be run in with grout, composed of 1 of cement and 2 of clean sharp sand.

(b) After the piles have been secured, the trenches to be filled in with approved material, well rammed in 12 in. layers.

#### Clause 22.—Piles on Sills and Sleepers. No. 4 Type.

(a) The trench for culvert, which shall be included in the tendered price for culvert, shall be excavated to the depth indicated by the Superintending Officer, with a fall towards the outlet.

(b) Sleepers to be 12 in. diameter, sunk as shown on drawing, and to be firmly bedded with approved material well rammed about them. The upper side to be adzed down to a depth of 4 in. in the centre, and decreasing towards the abutments; and the whole bottom of culvert shaped accordingly.

(c) Two sills 15 in. diameter to be scribed and notched at ends of sleepers as shown, with flat bearing, 1 in. being taken out of each, and secured to sleepers with jagged driving bolts 1 in. diameter and 24 in. long.

(d) Sills to be mortised to receive tenons on piles, the latter being secured to sills by treenails.

#### Clause 23.—Capsills.

(a) Capsills 15 in. diameter to be flattened 10 in. wide over piles, mortised accurately to receive tenons and bear truly on pile heads, and to be secured with treenails 1 in. diameter through capsill and tenon on piles.

(b) To be flattened 8 in. wide under girders to a true surface.

#### Clause 24.—Wing-pieces.

Wing-pieces, 15 in. diameter, and sloped as shown, to be notched over ends of capsills, and secured thereto with  $\frac{7}{8}$ -in. bolts, the foot of wing-pieces being sunk at least 6 ft. into solid ground, or let into rock as shown on drawing. Wing-pieces to be adzed to a flat bearing of not less than 5 in. to receive sheathing.

#### Clause 25.—Girders.

All girders to be round, of the diameter shown, and adzed off to a true level bearing, 5 in. wide, to receive floor plank; to be seated firmly on capsills, and secured thereto with  $\frac{3}{4}$ -in. bolts as shown.

#### Clause 26.—Sheathing.

The landward side of abutments to be sheathed with slabs, unless otherwise specified, not less than 4 in. thick, from at least 1 ft. below natural surface, except where the surface is bare rock, to underside of deck-planking. Girders to be notched  $1\frac{1}{2}$  in. to admit of slabs being inserted between underside of planking and top of capsill. Slabs to be lined and edged to fit perfectly close; joints to occur only over piles, and secured to piles and wing-pieces with spikes 7 in. long by  $\frac{3}{8}$ -in. diameter, one at each intersection with piles and ends. Ends of sheathing to be sawn to the corresponding slope of wing-pieces.

#### Clause 27.—Flooring.

Flooring to consist of sawn planking, unless otherwise specified, 4 in. thick, laid transversely, no plank to be more than 12 in. nor less than 6 in. wide. All planks to run the entire width of culvert in one length, unless otherwise specified; to be laid flush and close, and secured to girders by  $\frac{3}{8}$ -in. spikes, 7 in. long, two spikes at each intersection with girders when planks exceed 7 in. in width. Heads of spikes to be drifted down  $\frac{1}{4}$  in. All irregularities in surface to be adzed down.

#### Clause 28.—Kerb.

(a) Kerb logs to be sawn 6 in. x 6 in., chamfered and secured through planking and girders at regular intervals not exceeding 7 ft., with  $\frac{3}{4}$ -in. bolts.

(b) To be painted, as specified in clause 45.

#### Clause 29.—Hand-rail and End Posts.

(a) Hand-rail posts to be 6 in. x 4 in., those over abutments to be tenoned  $1\frac{1}{2}$  in. into capsill to be evenly spaced not more than 7 ft. apart, and secured to girders and kerbs by  $\frac{3}{4}$ -in. bolts as shown.

(b) Round end posts, one at each corner, 12 in. diameter, and neatly trimmed, to be sunk in the positions shown to a depth of 4 ft. in solid ground, or set on prepared footing, with approved material tightly rammed round them. Top of posts to be shaped as shown, covered with 6-lb. sheet lead secured to posts with lead-headed nails 2 in. long, having a wrought-iron ring  $2\frac{1}{2}$  in. x  $\frac{1}{2}$  in. tightly fitted and secured with four 3-in. wood-screws, heads countersunk. Holes to be mortised to receive ends of hand rails.

(c) Top rails to be 4 in. x 4 in., laid aris uppermost in notches cut on top of posts, and secured thereto by hoop straps 2 ft. x 2 in. x  $\frac{1}{8}$  in. iron, with  $2\frac{1}{2}$ -in. cup-headed bolts through each.

(d) Lower rails to be 4 in. x 3 in., secured to each post by one  $\frac{1}{2}$ -in. cup-headed bolt.

(e) Scarfs in rails to occur only at posts.

(f) Ends of rails to be inserted a depth of 6 in. into holes neatly cut in end posts, and secured thereto with  $\frac{3}{4}$ -in. treenails through posts and rails.

(g) All posts and hand-rail to be painted, as specified in clause 45.

#### Clause 30.—Second-class Timber Culverts.

(a) Sleepers, of the number and length shown, to be 12 in. diameter, sunk and firmly bedded, the ground being well rammed around them, to be shaped as shown on drawing, and the whole bottom of culvert formed accordingly.

(b) Two longitudinal sills, of the length and diameter shown, to be scribed and notched over sleepers, and secured thereto with treenails.

(c.)

(c) Key pieces, 12 in. diameter and 5 ft. long, to be notched over longitudinal sills, in the positions shown, the end of keys to be well bedded and rammed into trenches prepared to receive them.

(d) Capsills of sizes shown to be notched and treenailed over key pieces.

(e) Joists, of number and dimensions shown or specified, to be securely seated on flat bearings prepared on capsills, and secured thereto with  $\frac{3}{4}$ -in. spikes, 18 in. long. The upper side of joists to be adzed off to an even surface 5 in. wide to receive floor.

(f) Flooring to consist of sawn planking, unless otherwise specified, 4 in. thick, laid transversely, no plank to be more than 12 in. nor less than 6 in. wide. All planks to run the entire width of culvert in one length, unless otherwise specified; to be laid flush and close, and secured to girders by  $\frac{3}{4}$ -in. spikes, 7 in. long, two spikes at each intersection with girders where planks exceed 7 in. in width. Heads of spikes to be drifted down  $\frac{1}{4}$  in. All irregularities in surface to be adzed down.

(g) Two ballast pieces, of the dimensions shown, to be laid over each end of floor, and secured to outer joists with three  $\frac{3}{4}$ -in. bolts, and painted with three coats of paint, as specified in clause 45.

(h) Wing-pieces, 12 in. diameter, halved over ends of capsills and bolted thereto, to be set at a slope of  $1\frac{1}{2}$  to 1, as shown, and sunk 2 ft. 6 in. deep in solid ground.

(i) Sheathing of split, lined, and adzed slabs, 4 in. thick, to be pointed and closely driven to a depth of 2 ft. below the natural ground surface on the landward side of wing-pieces, heads afterwards being neatly sawn off. Four-inch slabs of sufficient depth shall be inserted between keys and joists in notches  $1\frac{1}{2}$  in. deep prepared for the purpose.

(j) Where it is necessary to increase height of culvert, Contractor shall, if specified, provide and fix extra sills, keys and sheathing as shown on plan.

#### Clause 31.—Third-class Timber Culverts.

(a) Sleepers, of the number shown, to be 12 in. diameter, sunk and firmly bedded, the ground being well rammed around them, to be shaped as shown on drawing, and the whole bottom of culvert formed accordingly.

(b) Two longitudinal sills, of the length and diameter shown, to be scribed and notched over sleepers, and secured thereto with treenails.

(c) Joists to be securely seated on flat bearings prepared on longitudinal sills, and secured thereto with 18-in. spikes. The upper side of joists to be adzed off to an even surface 5 in. wide to receive floor.

(d) Flooring to consist of sawn planking, unless otherwise specified, 4 in. thick, laid transversely, no plank to be more than 12 in. nor less than 6 in. wide. All planks to run the entire width of culvert in one length, unless otherwise specified; to be laid flush and close, and secured to girders by  $\frac{3}{4}$ -in. spikes, 7 in. long, two spikes at each intersection with girders when planks exceed 7 in. in width. Heads of spikes to be drifted down  $\frac{1}{4}$  in. All irregularities in surface to be adzed down.

(e) Two ballast pieces, of the dimensions shown, to be laid over each end of floor, and secured to outer joists with three  $\frac{3}{4}$ -in. bolts, and painted, as specified in clause 45.

(f) Sheathing of 4-in. slabs, and of sufficient depth, shall be inserted between joists, in notches  $1\frac{1}{2}$  in. deep prepared for the purpose.

(g) At the four corners of culvert shall be built with large rubble stones, or with turf if specified, a solid retaining wall, sloped at a batter of 1 to 1 from deck level, to a depth of 1 ft. below natural ground surface, as shown on drawing.

#### Clause 32.—Fourth-class Timber Culverts.

(a) Sleepers, of the number shown, 12 in. diameter, to be sunk and firmly bedded, the ground being well rammed round them, to be shaped as shown on drawing, and bottom of culvert formed accordingly.

(b) Two longitudinal sills, of the length and diameter shown, to be scribed and notched over sleepers, and secured thereto with treenails. The upper surface to be adzed to a true and level bearing at least 5 in. wide.

(c) Two capsills, of the length and diameter shown, to be adzed top and bottom to a flat surface, at least 5 in. wide, and laid over longitudinal sills, and secured thereto with three 1-in. bolts.

(d) Floor to consist of slabs as specified in clause 16, laid perfectly close together, and each slab secured with spikes  $\frac{3}{4}$  in. x 7 in., one at each end.

(e) Ballast pieces, 12 in. x 12 in., to be secured to capsills with 1-in. jagged driving bolts, 20 in. long, to be painted, as specified in clause 45.

(f) At the four corners of culvert shall be built with large rubble stones, or with turf if specified, a solid retaining wall, sloped at a batter of  $1\frac{1}{2}$  to 1 from level of roadway, to a depth of 1 ft. below the ground surface, as shown on drawing.

#### Clause 33.—Fifth-class Timber Culverts.

(a) Sleepers, of the number shown, 12 in. diameter, to be sunk and firmly bedded, the ground being well rammed round them, to be shaped as shown on drawing, and bottom of culvert formed accordingly.

(b) Two longitudinal sills, of the length and diameter shown, to be scribed and notched over sleepers, and secured thereto with treenails. The upper surface to be adzed to a true and level bearing at least 5 in. wide.

(c) Floor to consist of slabs as specified in clause 16, laid perfectly close together, and each slab secured with spikes  $\frac{3}{4}$  in. x 7 in., one at each end.

(d) Ballast pieces, 12 in. x 12 in., to be secured to capsills with  $\frac{3}{4}$ -in. jagged driving bolts, 20 in. long, to be painted, as specified in clause 45.

(e) At the four corners of culvert shall be built with large rubble stones, or with turf if specified, a solid retaining wall, sloped at a batter of  $1\frac{1}{2}$  to 1 from level of roadway, to a depth of 1 ft. below the ground surface, as shown on drawing.

#### Clause 34.—Timber Box-Culverts.

(a) Culvert to be built before placing in position, the bed of trench for same being previously prepared with soft clay at least 6 in. deep, and of full width of trench.

(b) Bottom of culvert to consist of 3-in. slabs, each secured to sides of culvert with two  $\frac{3}{4}$ -in. x 6-in. spikes, one at each end.

(c) Sides to be built of pieces of 9 in. x 6 in. hewn timber, placed on edge, one over the other, to break and butt joint as shown, and to be secured with  $\frac{3}{4}$ -in. bolts, spaced not more than 8 ft. apart; where joint occurs, a bolt on either side of same to be inserted through the floor, sides, and bottom, as shown.

(d) Floor to consist of slabs, as specified in clause 16, laid closely together, and each slab secured with spikes  $\frac{3}{4}$  in. x 7 in., one at each end.

(e) Ballast pieces, 12 in. x 12 in., to be secured to ends of side pieces with  $\frac{3}{4}$ -in. bolts, as shown, and painted, as specified in clause 45.

(f) At the four corners of culvert shall be built with large rubble stones, or with turf if specified, a solid retaining wall, sloped at a batter of  $1\frac{1}{2}$  to 1 from level of roadway, to a depth of 1 ft. below the ground surface, as shown on drawing.

(g) If specified, apron at outlet to be of large stones roughly squared, and roughly dressed on top surface and joints, set closely together. Pitching to be at least 9 in. deep.

#### Clause 35.—Pipe-laying.

(a) Pipes of length and diameter specified will be delivered to Contractor free of charge, at the place specified. He will have to make his own arrangements for conveying them to the work, and he will be answerable for their safety, and shall pay cost of breakage, if any, after he takes delivery of them. The trench shall be dug out, either square with roadway, or on such a skew as may be directed; it is to have such a fall towards outlet as may be directed, and is to be of such a depth as to admit of at least 18 in. covering, without any rise in the surface of road.

(b) The width of the trench is to be 1 ft. more than the diameter of the pipe, so as to allow 6 in. of good puddled clay at sides, from end to end of culvert, and, in case of a rocky bottom, pipes are to be laid in a 9-in. bed of similar clay, all to be well rammed, and the puddled clay to be 9 in. thick over pipes; all the joints to be made water-tight with well-tempered clay.

(c) Over this 3 in. broken stone of approved quality shall extend across the entire length of culvert, the full width of drain, and 1 ft. thick; the roadway is then to be brought to the proper height and neatly levelled.

(d) In the case of pipe culverts, the tendered price of culvert to include the pipe-laying as well as the two heads, Clause

### Clause 36.—Timber Heads for Pipe Culverts.

(a) At inlet and outlet ends, timber heads shall consist of two hewn vertical posts, 12 in. x 12 in., sunk 3 ft. below invert of pipe, approved material being well rammed round them, and to be of sufficient length to reach level of road surface, exclusive of tenons, which shall be 8 in. x 4 in. x 6 in. deep.

(b) Hewn ballast pieces, 12 in. x 12 in., ends projecting 9 in. over posts, to be chamfered and mortised over posts and secured thereto with treenails, and painted with three coats as specified in clause 45.

(c) Two wing-pieces, with a slope of  $1\frac{1}{2}$  to 1, of split, adzed, and lined slabs, 9 in. x 6 in., to be halved and fitted on to posts and secured thereto with 3 spikes  $\frac{1}{2}$  in. x 7 in. long. The lower ends, provided with feet as shown, to be sunk 2 ft. 6 in. into the ground, the earth being tightly rammed around them.

(d) Vertical sheathing of pointed slabs, 3 in. thick and not less than 6 in. wide, to be driven at rear of wings a depth of 2 ft. 6 in. below invert of pipe, the heads of slabs being neatly sawn to corresponding slope of wing-pieces. In face of pipe heads, similar sheathing, shaped to suit pipe, to be driven as shown. Slabs to be then carried up horizontally from top of pipe to under side of ballast pieces.

(e) If specified, the space between wings at outlet end to be excavated and trimmed to a regular concavity, and to be pitched with approved stone not less than 9 in. thick, roughly squared and dressed on top surface and joints, closely laid and well wedged with spalls.

### Clause 37.—Stone Heads for Pipe Culverts.

(a) At inlet and outlet ends, heads to be constructed of approved stone retaining walls, the excavation for which shall be carried down to a firm and approved foundation at least 18 in. below pipe.

(b) Walls to consist of squared rubble, laid in irregular courses, of large stones not less than  $\frac{1}{2}$  a cubic foot in content, with beds and joints squared and hammer-dressed. All stones to be laid on their natural beds, and bond to be carefully attended to throughout. Through stones to be hammer-dressed and extend the whole width of wall, to be used as the Superintending Officer may direct. The top course, and the stone immediately over but not resting on pipe, as also the two on either side of pipe as shown, to be through stones at least 12 in. thick. All stones to be carefully hand-packed and laid dry.

(c) The walls shall be of the length shown on drawing, full 20 in. wide on top, with face batter of 1 in 7, and vertical at back.

(d) At each end of both walls, a sloping retaining wing wall shall be built with large rubble stones, with a batter of  $1\frac{1}{2}$  to 1 from top corner of wall to a depth of 1 ft. below ground surface, as shown on drawing.

(e) If specified, the space between the wing walls at outlet end to be excavated and trimmed to a regular concavity, and to be pitched with approved stone of not less than 9 in. thick, roughly squared and roughly dressed on top surface and joints, closely laid and well wedged with spalls.

### Clause 38.—First-class Stone Causeway.

(a) The site of causeway shall be excavated on the lines and to the levels directed, or made up with rubble filling as may be required, soft and boggy spots being cleaned out and filled with spalls—to be of the dimensions shown on drawing—the two ends to be on a descending grade of 1 in 12, unless otherwise shown, to a central level length.

(b) Four round posts, 12 in. diameter, rounded on top, to be sunk in the position shown, a depth of 3 ft. 6 in. in solid ground, to which longitudinal sills, 12 in. diameter, shall be bolted with  $\frac{3}{4}$ -in. bolts, let into and scarfed over posts, which, with the exception of two central posts (which shall be cut off flush with top of sill) shall be 4 ft. above the sill. On posts, at every foot in height, shall be deeply cut figures 4 in. long, denoting the height above the lowest portion of causeway. Posts to receive three coats of white paint, and figures, black paint, as specified in clause 45.

(c) Upon the prepared foundation, spalls shall be carefully hand-packed on edge throughout the length and width of causeway a depth of 8 in., upon which other spalls shall be broken in place, filling the interstices and reducing the gauge of stones on and near the surface to  $2\frac{1}{2}$  in., making the total depth of stone at least 13 in., and bringing same up to level of top of longitudinal sill. The whole shall then be covered with blinding consisting of fine creek gravel or other approved gritty material, sufficient to thoroughly fill all interstices.

(d) An apron of approved concavity, extending the whole length of causeway, shall be built of rubble stones, carried out at the slope shown on drawing, the surface stones being roughly squared, dressed, and closely hand-packed and well wedged with spalls.

(e) Causeway complete as specified to be tendered for at a bulk sum.

### Clause 39.—Second-class Stone Causeways.

(a) The site of causeway shall be excavated on the lines and at the levels directed, or made up with rubble filling as may be required, soft and boggy spots being cleaned out and filled with spalls, to be of dimensions and have a regular concavity as shown in drawing.

(b) Three round posts, 12 in. diameter, two end ones rounded on top, to be sunk in the positions shown, a depth of 3 ft. 6 in. in solid ground, to which longitudinal sills, 12 in. diameter, shall be bolted with  $\frac{3}{4}$ -in. bolts let into and scarfed over posts, the central one being cut off flush with top of sill, while end posts to be 4 ft. above and have deeply cut figures 4 in. long, at every foot in height, denoting the height above the lowest portion of causeway. If the length of causeway will admit, and a suitably shaped sill is available, the centre post may be omitted, if so permitted by the Superintending Officer. Posts to receive three coats of white paint; figures black, as specified in clause 45.

(c) Upon the prepared foundation, spalls shall be carefully hand-packed on edge throughout the length and width of causeway a depth of 8 in., upon which other spalls shall be broken in place, filling the interstices and reducing the gauge of stones on and near the surface to  $2\frac{1}{2}$  in., making the total depth of stone at least 13 in., and bringing same up to level of top of longitudinal sill. The whole shall then be covered with blinding consisting of fine creek gravel or other approved gritty material, sufficient to thoroughly fill all interstices.

(d) An apron of approved concavity, extending the whole length of causeway, shall be built of rubble stones, carried out at the slope shown on drawing, the surface stones being roughly squared, dressed, and closely hand-packed and well wedged with spalls.

(e) Causeway complete as specified to be tendered for at a bulk sum.

### Clause 40.—Third-class Stone Causeways.

(a) Bed for causeway shall be excavated at an angle of 60 degrees with line of traffic, with such fall to scarp of bank as may be directed, to be 12 feet wide measured at right angles to flow of water, with a concavity of 9 in. On the upper side, from finished edge of causeway, the grade of roadway shall be uniformly cut a length of at least half a chain for full width of formation.

(b) Upon the prepared foundation, spalls shall be carefully hand-packed on edge throughout the length and width of causeway a depth of 8 in., upon which other spalls shall be broken in place, filling the interstices and reducing the gauge of stone on and near the surface to  $2\frac{1}{2}$  in., making the total depth of stone at least 13 in. The whole shall then be covered with blinding consisting of creek gravel or other approved gritty material, sufficient to thoroughly fill all interstices.

(c) A retaining wall of equal width to causeway, 18 in. thick on top, face slope 1 to 1, vertical at back, and carried down to a solid foundation, shall be constructed of large rubble stone along the outfall.

(d) If so specified, an apron shall be pitched of stone, closely hand-packed, at foot of retaining wall, as shown in drawing.

(e) Causeway complete as specified to be tendered for at a bulk sum.

### Clause 41.—Inlets and Outlets of Culverts and Causeways.

(a) All inlets and outlets to and from culverts, pipe drains, and causeways, shall be cut so as to properly direct the water into such culvert, pipe drain, or causeway, and carried out to such length and with such fall as the Superintending Officer may direct, to ensure the free and full discharge of water. Such drains shall be of the same width or carrying capacity as the culvert, pipe drain, or causeway, as the case may be. Cuttings to have side slopes of 1 to 1, and all surplus material so excavated to be removed 6 ft. clear of edge of drains, or distributed and spread if so specified.

(b) All work in connection with the above to be included in the tendered price of the culvert pipe drain, or causeway, as the case may be.

Clause

### Clause 42.—Rubble Backing.

(a) As soon as the abutments are completed, the rubble stone filling to be placed in position; the rubble to be 2 ft. wide on top at level of underside of deck, to be set on slopes of 1 to 1, the slopes being hand-packed; corners over capsills to be neatly faced with the largest stones procurable. Where the banks slope toward the abutments, benching 3 ft. wide to be provided in steps extending the full width of the rubble work.

(b) Unless otherwise specified, rubble backing is to be included in the tendered price of the culvert.

### Clause 43.—Approaches.

(a) As soon as the rubble backing, if specified, has been placed in position, the embanked approaches shall be undertaken at once, and be carried up in horizontal layers of 1 ft., so as to be well consolidated by the time the culvert is ready to open for traffic. Embankments, when completed and consolidated, to be of the width specified, with slopes  $1\frac{1}{2}$  to 1, and neatly trimmed. Cuttings to be of the width at bottom, as specified, with slopes neatly trimmed. Embankments and cuttings to be formed to gradients shown, and to have a uniform convexity, as specified. If the material for banks is taken from borrow pits, any such excavation must be made at a distance of at least 20 yards from site of culvert, and down stream thereof, and in such positions as will be pointed out by the Superintending Officer.

(b) The Contractor to force the traffic on embankments as much as possible, so as to thoroughly consolidate them.

(c) In case of culvert renewals, where existing approaches are retained, the side slopes of the road will have to be carefully dressed, with an incline of  $1\frac{1}{2}$  to 1 towards the inlet and outlet of culverts, as shown in drawing. The roadway is to be restored to the same condition as when the culvert was commenced, the earth well rammed to the sides of culvert, and the junction of road with the flooring properly made—all to the entire satisfaction of the Superintending Officer.

(d) In the case of a contract for formation, which also embraces a culvert, the cost of approaches shall be included in the tendered price for formation at per lineal yard,—or if the contract be for culvert and its immediate approaches only, the cost of approaches, whether in cutting or filling, to be paid for at per lineal yard.

### Clause 44.—Pitching.

(a) Pitching on slopes of embankments to be of approved stone, 12 in. thick, roughly squared and roughly dressed on beds, top, surface, and joints, and carried up in courses from a solid foundation.

### Clause 45.—Painting.

(a) The whole of the exposed timber in ordnance fencing, and all the hand-railing and other timber work above the level of deck (including kerbs and ballast pieces) to be thoroughly cleaned and receive a coat of raw linseed oil, to be then stopped with white-lead putty, and receive three coats of paint, the last being white. All tenons, mortises, joints, and butting surfaces in this portion of the work to receive, before being fixed in position, one coat of raw linseed oil and two coats of white lead and oil.

(b) All exposed ironwork in hand-railing and ordnance fencing to receive a priming coat of paint, and two coats of black varnish.

(c) First or priming coat for timberwork to consist of white lead and raw linseed oil in the following proportions:—  
18 lb. white lead.  
4 pints raw linseed oil.

(d) Second and third coats for timberwork, and for ironwork which may be inaccessible for painting when fixed, to consist of pure white lead ground in oil, raw linseed oil, and turpentine, in the following proportions:—

15 lb. white lead.  
4 pints raw linseed oil.  
1 pint turpentine.

(e) First or priming coat for ironwork and paint for rust spots, to consist of red oxide of iron (sesquioxide) ground in oil, mixed with a sufficient quantity of raw linseed oil, to bring it to a proper consistency. Boiled linseed oil or turpentine to be added if directed by the Engineer. If dry oxide of iron is used it must be ground with oil into a smooth paste before mixing, and the remaining oil added by degrees.

(f) Should the paint require thinning, raw linseed oil to be added to bring it to the required consistency.

(g) No paint to be applied during or immediately after wet weather, or while surface of timber or ironwork is wet, and an interval of forty-eight hours must elapse between each application.

### Clause 46.—Tarring.

(a) The flooring, girders, capsills, piles, wing-pieces, and sheathing of 1st class timber culverts, and any other timber that may be specified, to be tarred as follows:—

(b) The first coat to be coal tar laid on hot, and a second and third coat composed of 7 parts coal tar, 4 parts of Stockholm tar, and 1 part of pitch, thoroughly melted together, and applied hot. All joints and butting services to be well payed with the hot composition as above before fixing, and in finished work composition to be poured into the interstices and joints. Any timber, if inaccessible for tarring when fixed, to receive three coats before being placed in position. All tarring to be completed before painting is commenced, and no tar is to be applied during or immediately after wet weather, or while surface of timber is wet, and an interval of forty-eight hours must elapse between each application.

(c) The upper surface of flooring to be well sanded after being tarred.

### Clause 47.—Bolts.

(a) Unless otherwise shown on plans, all bolts through timberwork to have square heads and nuts, with two washers to each bolt—heads to be countersunk if required.

(b) Unless otherwise shown, bolts to be screwed four diameters in length. Washers for bolts  $1\frac{1}{2}$  in. diameter to be  $3\frac{1}{2}$  in. x  $3\frac{1}{2}$  in. x  $\frac{1}{4}$  in.; 1 in. diameter to be 3 in. x 3 in. x  $\frac{1}{4}$  in.;  $\frac{3}{4}$  in. diameter,  $2\frac{1}{2}$  in. x  $2\frac{1}{2}$  in. x  $\frac{1}{8}$  in., and  $\frac{3}{8}$  in. diameter,  $2\frac{1}{2}$  in. x  $2\frac{1}{2}$  in. x  $\frac{1}{8}$  in.

(c) Jagged driving bolts to be of the diameter specified, pointed, and jagged 6 inches from point.

### Clause 48.—Coppering.

Coppering to be fixed as follows:—The piles to be adzed to a smooth surface, and before being placed in position to receive one coat of Stockholm tar [and pitch applied hot, to then receive a coating of chunam  $\frac{1}{8}$  in. thick, and be sheathed with 16-oz. Muntz metal secured to piles with 1-in. Muntz metal nails,  $1\frac{1}{2}$  in. apart, or at the rate of  $\frac{3}{4}$  lb. per sheet. When piles have been driven to the satisfaction of the Engineer, coppering to extend from 1 ft. above high-water mark to the depth shown on plan. Chunam to be composed of finely ground slaked shell lime mixed with black-fish oil, and brought to the consistency of putty.

### Clause 49.—Ordnance Fencing. Type "A."

(a) When embankments are thoroughly consolidated to the satisfaction of the Engineer, the fencing to be undertaken.

(b) Sawn posts, evenly spaced as shown on drawing, to be 6 in. x 4 in., mortised into a sill 9 in. diameter x 7 ft. long, laid in a sloping position as shown, and secured by a hardwood treenail 1 in. diameter.

(c) Posts to be supported by one sawn strut, 4 in. x 4 in., to be secured to each set of posts and sills by  $\frac{3}{8}$  in. x 7 in. spikes.

(d) Sawn top rail to be 4 in. x 4 in., laid aris uppermost in notches cut on top of ordinary posts, and secured to each with hoop straps 2 ft. x 2 in. x  $\frac{1}{2}$  in. iron, and two  $\frac{1}{2}$ -in. cup-headed bolts.

(e) Sawn lower rail to be 4 in. x 3 in., secured to each ordinary post, over which it shall be halved, by one  $\frac{1}{2}$  in. cup-headed bolt.

(f) End posts, 12 in. diameter x 9 ft. long, to be let 4 ft. into ground and well rammed. Rails to be mortised into end posts and treenailed. Tops of posts to be protected by caps formed of 6 lb. sheet lead, secured to posts by lead-headed nails 2 in. long, and wrought-iron rings,  $2\frac{1}{2}$  in. x  $\frac{1}{4}$  in. secured by four 3-in. wood screws, heads countersunk.

(g) Two black fencing wires, No. 8 B.W. gauge, to be placed below lower rail, to pass through holes bored in posts, and be properly strained and plugged in position.

(h) Where embankment is less than 2 ft. high, posts to be let 3 ft. into the ground, as shown.

(i) The fence to be erected to a true line along the top, and not to follow the lesser irregularities of the ground.

(j) The whole of exposed timber in ordnance fence to be painted as specified in clause 45.

(k) Tenders to quote a rate per lineal foot of fence complete.

Clause

### Clause 50.—Ordnance Fencing. Type "B."

- (a) When embankments are thoroughly consolidated to the satisfaction of the Engineer, the fencing to be undertaken.
- (b) Sawn posts, evenly spaced as shown on drawing, to be 6 in. x 4 in., mortised into a horizontal round sill 9 in. diameter x 5 ft. long, and secured thereto by a hardwood treenail 1 in. diameter.
- (c) Posts to be supported by two sawn struts, 4 in. x 4 in., to be secured to each set of posts and sills by  $\frac{3}{8}$ -in. bolts and  $\frac{3}{8}$ -in. spikes, 7 in. long.
- (d) Sawn top rail to be 4 in. x 4 in., laid aris uppermost in notches cut on top of ordinary posts, and secured to each with hoop strap 2 ft. x 2 in. x  $\frac{1}{2}$  in. iron and two  $\frac{1}{2}$ -in. cup-headed bolts.
- (e) Sawn lower rail to be 4 in. x 3 in., secured to each ordinary post, over which it shall be halved by one  $\frac{1}{2}$  in. cup-headed bolt.
- (f) End posts, 12 in. diameter by 9 ft. long, to be let 4 ft. into ground and well rammed. Rails to be mortised into end posts and treenailed. Tops of posts to be protected by caps formed of 6-lb. sheet lead, secured to posts by lead-headed nails 2 in. long, and wrought-iron rings, 2 $\frac{1}{2}$  in. x  $\frac{1}{4}$  in., secured by four 3-in. wood screws, heads counter-sunk.
- (g) Two black fencing wires, No. 8 B.W. gauge, to be placed below lower rail, to pass through holes bored in posts, and to be properly strained and plugged in position.
- (h) Where embankment is less than 2 ft. high, posts to be let 3 ft. into the ground, as shown.
- (i) The fence to be erected to a true line along the top, and not to follow the lesser irregularities of the ground.
- (j) The whole of exposed timber in ordnance fence to be painted as specified in clause 45.
- (k) Tenders to quote a rate per lineal foot of fence complete.

### Clause 51.—Split Fencing. Type "A."

- (a) Split posts, set 8 ft. 3 in. apart, centre to centre, to be 8 in. x 3 $\frac{1}{2}$  in., mortised into a sill 9 in. diameter x 3 ft. 3 in. long, as shown on drawing.
- (b) Posts to be supported by a single strut, 4 in. x 2 $\frac{1}{2}$  in., to be secured to posts by  $\frac{3}{8}$  in. bolt, and to sills by 7 in. spikes, as shown on drawing.
- (c) Top rail to be 8 in. x 2 in., lower rail 8 in. x 2 in., each 9 ft. long. Tenons on ends of rails to be 6 in. long, adzed carefully to fit into 6 in. x 3 in. mortises, shouldered square, and finished so as to butt up to posts.
- (d) End of corner posts to be 12 in. diameter, sunk 2 ft. 6 in. into solid ground, or sunk 1 ft. 6 in. into rock, as may be required.
- (e) Where embankments are less than 2 ft. 6 in. high, or where there are no embankments, split posts to be sunk 2 ft. into solid ground, or let 1 ft. into rock if required.
- (f) Earth to be well rammed round sills, split or round posts, and in the case of posts in rock they shall be run in with special mortar.
- (g) Posts to be set uniform and upright, and erected to a true line along top, and not to follow the lesser irregularities of the ground.
- (h) Tenders to state rate per lineal rod of fence complete.

### Clause 52.—Split Fencing. Type "B."

- (a) Split posts, set 8 ft. 3 in. apart, centre to centre, to be 8 in. x 2 $\frac{1}{2}$  in., mortised into a horizontal sill 9 in. diameter by 5 ft. long, and secured thereto by a hardwood treenail 1 in. diameter.
- (b) Posts to be supported by two 4 in. x 2 $\frac{1}{2}$  in. struts, to be secured to posts and sills by  $\frac{3}{8}$  in. bolts and  $\frac{3}{8}$  in. spikes, 7 in. long.
- (c) Top rail to be 7 in. x 2 in., lower rail 8 in. x 2 in., each 9 ft. long. Tenons on ends of rails to be 6 in. long, adzed carefully to fit into 6 in. x 3 in. mortises, shouldered square, and finished so as to butt up to posts.
- (d) End or corner posts to be 12 in. diameter, sunk 2 ft. 6 in. into solid ground, or sunk 1 ft. 6 in. into rocks as may be required.
- (e) Where embankments are less than 2 ft. high, or where there are no embankments, split posts to be sunk 2 ft. into solid ground, or let 1 ft. into rock if required.
- (f) Earth to be well rammed round sills, split or round posts, and in the case of posts in rock, they shall be run in with special mortar.
- (g) One black fencing wire, No. 8 B.W. gauge, to be placed between rails, to pass through holes bored in posts, and be properly strained and plugged in position.
- (h) Posts to be set uniform and upright, and erected to a true line along top, and not to follow the lesser irregularities of the ground.
- (i) Tenders to state rate per lineal rod of fence complete.

### Clause 53.—Sand.

Sand to be sharp quartz sand of approved quality, free from all earthy, loamy, clayey matter, &c., and washed perfectly clean whenever the Engineer deems it necessary.

### Clause 54.—Cement.

- (a) The cement to be used throughout these works to be well packed in strongly made casks, to be the best Portland cement of approved brands and manufacture, delivered in thoroughly sound condition, fit for immediate use, and without requiring seasoning or air-slacking, to be free from any symptoms of staleness, caking, damage to the packing, hard or set lumps, and no barrel or portion of same to be used until it has been examined and approved by the Engineer.
- (b) Samples from various casks (not exceeding six in number), from each parcel brought on to the works, to be taken and submitted to the following tests:—The weight per struck bushel not to be less than 100 lb., and each cask shall contain not less than 387 lb weight of cement, exclusive of weight of cask and packing. The specific gravity not to be less than 3.10. The cement, when passed through a wire sieve of 2,500 meshes per square inch, to leave a residue of not more than 10 per cent.; through a sieve of 5,806 meshes, not more than 25 per cent.; and through a sieve of 14,400 meshes, not more than 40 per cent. The cement, when mixed neat with water, to give a tensile strength of not less than 250 lb. per square inch after three days' setting in water, 450 lb. after seven days, and 550 lb. after twenty-eight days. The cement is to be "slow setting," and when gauged with water to a stiff paste must set in a damp atmosphere of between 60° and 90° F. in from 1 $\frac{1}{2}$  to 6 $\frac{1}{2}$  hours. Neat cement of the consistency above mentioned, to be made in pats, kept in moist air until set, and then immersed in water to a temperature of between 60° and 80° F., and also placed in Deval's hot bath apparatus at a temperature of 180° F., as to symptoms of blowing, or any alteration or variation of form or volume. The cement, when mixed in the proportion of 1 of cement to 3 of standard sand (washed, dried, and sifted through a sieve of 400, and retained upon one of 900 meshes per square inch), and about 10.0 per cent. of the total weight of water, to give a tensile strength of not less than 150 lb. per square in. at seven days, and 230 lb. at twenty-eight days, the briquettes having been kept in a damp atmosphere, put in water twenty-four hours after they were made, and left in water at a temperature of between 60° and 80° F. The tensile strength will be ascertained by the Departmental testing machine with the load increasing at the rate of 200 lb. per minute, and the average breaking weight of six briquettes will be taken for each test. Should the sample fail in any or all of these tests, or not show a proper progressive increase in strength with age of briquette, then the Engineer may reject the whole parcel from which the sample was taken, and the Contractor shall at once remove the said parcel of cement from the site of the works at his own expense; failing which, the Engineer may have it removed at the Contractor's cost without further notice.
- (c) Empty casks to be destroyed. Contractor to provide and make approved gauge-boxes for measuring cement. Cement of a lighter weight than herein stipulated, but otherwise equal to the specified test, may be permitted to be used in the works, subject to the decision of the Engineer, and provided that the deficiency in weight is made up in quantity.

### Clause 55.—Mortar.

Mortar to be composed of one part Portland cement and two parts clean washed sharp sand, the proportions of each to be ascertained by measurement; the whole to be mixed with clean cold water, as may be directed, to be well incorporated and used fresh. All mortar to be mixed upon approved sawn timber platforms close to where mortar is required.

Clause

### Clause 56.—Concrete: in Footings, Walls, or Boxes.

(a) The concrete in footings, walls, or boxes to be mixed as follows:—Twenty-six cubic feet of approved stone of the kind specified, to be measured in a cubic gauge-box and evenly spread on a timber platform, thirteen cubic feet of approved sharp clean sand to be measured in a cubic gauge-box and placed in a level layer above the metal, four and one-third cubic feet of cement, measured in a cubic gauge-box, to be then evenly spread over the sand (equivalent to six of stone, three of sand, one of cement); after which all the materials to be carefully mixed and turned over twice, and then the whole to be mixed with clean cold water and thoroughly turned over twice, or oftener, if required, until, in the opinion of the Engineer, it shall be well incorporated and fit for the work before it leaves the platform. The concrete to be set in board frames, which are not to be removed until concrete has thoroughly set; walls, were exposed to view, to be then coated as per clause 65, and lined up in imitation of ashlar.

(b) Concrete to be used fresh and lowered in skips containing at least  $\frac{3}{4}$  cubic yard; each layer of 12 in. deep to be properly levelled and rammed, and if allowed to set to be picked up and run over with cement grout before any more concrete is laid. During progress of the work, steam-pipes, 3 in. in diameter, for holding-down bolts, to be built into walls at position shown. Weep-holes to be left in abutments as may be directed. Stone to be broken by hand or crushing machine, to pass freely with its largest dimension through a ring 2 in. diameter, to be sieved, washed with clean water, and be free from dirt or quarry refuse being deemed suitable for the work.

### Clause 57.—Masonry, Random Rubble uncoursed.

Random rubble uncoursed to consist of rubble laid in random courses in mortar, mixed as described in clause 55, the stones to be set at random, and all interstices to be filled with spalls and cement mortar, the beds and joints need not be dressed, but all projections must be knocked off. All stones to be laid on their natural beds; the bond to be carefully attended to throughout, and through-stones the whole width of wall to be used at intervals, as may be directed by the Engineer; the through-stones to be roughly squared and hammer-dressed. Quoins to be of quarry-faced ashlar, with 2-in. plumbing drafts and  $1\frac{1}{2}$ -in. drafts round arrises. During progress of the work steam-pipes, 3 in. diameter, for holding-down bolts, to be built into walls at positions shown. When masonry has been completed all the joints to be pointed with neat cement. Weep-holes to be left in abutments as may be directed.

### Clause 58.—Masonry, Random Rubble built in Courses.

Random rubble built in courses to consist of rubble as specified, laid in 12-in. courses in mortar, mixed as described in clause 55, the work in each course to consist of the flattest stones procurable, set at random, and pinned in with spalls and cement mortar, each course to be levelled up throughout before another course is laid, bed and joints need not be dressed, but all projections must be knocked off. All stones to be laid on their natural beds, the bond to be carefully attended to throughout. One-fourth part of the face of each course to consist of headers 12 in. deep x 18 in. to 24 in. wide x from 2 ft. 6 in. to 4 ft. long. Headers to be roughly squared and hammer-dressed. Quoins to be quarry-faced ashlar, with 2-in. plumbing drafts, and  $1\frac{1}{2}$ -in. drafts round arrises. During erection, holes 3 in. x 3 in. to be left in through-stones for holding-down bolts. When masonry has been completed, all the joints to be pointed with neat cement. Weep-holes to be left in walls as may be directed.

### Clause 59. Masonry, Squared Rubble uncoursed.

Squared rubble uncoursed to consist of squared rubble laid in irregular courses, set in mortar mixed as described in clause 55, the work to consist of large stones with beds and joints, squared and hammer-dressed. All stones to be laid on their natural beds, and the bond to be carefully attended to throughout; through-stones to be hammer-dressed, and extend the whole length of the wall, to be used at such intervals as the Engineer may direct. Quoins to be quarry-faced ashlar, with 2-in. plumbing drafts and  $1\frac{1}{2}$ -in. drafts round arrises. During erection, holes 3 in. x 3 in. to be left in through-stones for holding-down bolts. When masonry has been completed all the joints to be jointed with neat cement. Weep-holes to be left in walls as may be directed.

### Clause 60.—Masonry, Squared Rubble built in Courses.

Squared rubble built in courses to consist of squared rubble, laid in from 10 in. to 14 in. courses in mortar, mixed as described in clause 55, the work in each course to consist of one or more large flat-bedded, squared, and hammer-dressed stones; each course to be levelled up throughout before another course is laid. All stones to be laid on their natural beds, the bond to be carefully attended to throughout. One-fourth part of the face of each course to consist of headers the full depth of course, from 15 in. to 21 in. wide and from 2 ft. 6 in. to 4 ft. long; headers to be squared and hammer-dressed. Quoins to be of quarry-faced ashlar, with 2-in. plumbing drafts, and  $1\frac{1}{2}$  in. drafts round arrises. During erection holes 3 in. x 3 in. to be left in through-stones for holding-down bolts. When masonry has been completed all the joints to be raked  $\frac{1}{2}$  in. and pointed with neat cement. Weep-holes to be left in walls as may be directed.

### Clause 61.—Masonry, Block in Course.

Block in course to be set in mortar, mixed as described in clause 55, courses may vary in depth from 12 in. to 14 in., and the work to consist of large flat-bedded, squared, hammer-dressed stones, all stones to be laid on their natural beds, the bond to be carefully attended to throughout. One-fourth part of the face of each course to consist of headers the full depth of course, from 11 in. to 14 in. wide, and from 2 ft. to 3 ft. 9 in. long; headers to be squared and hammer-dressed. Quoins to be of quarry-faced ashlar, with 2-in. plumbing drafts and  $1\frac{1}{2}$ -in. drafts round arrises. During erection, holes 3 in. x 3 in. to be left in through-stones for holding-down bolts. When masonry has been completed all joints to be raked  $\frac{1}{2}$  in. and pointed with neat cement. Weep-holes to be left in walls as may be directed.

### Clause 62.—Masonry, Ashlar Facing with Rubble Backing.

Ashlar facing with rubble backing to consist of quarry-faced ashlar, backed with rubble and set in mortar, mixed as described in clause 55; the ashlar masonry to be in 12-in. courses, the beds and joints all full and chisel-dressed perfectly square with the face, the quoins to have 2-in. plumbing drafts and  $1\frac{1}{2}$ -in. drafts round arrises; no stone to be less on bed than height of course, to be headers and stretchers alternately, the headers to go the full width of course, the backing to be of hammer-dressed stone with level beds and square joints, no joints to be more than  $\frac{1}{2}$  in. in width, and no stone less than 2 ft. in length; at every third course the whole of the masonry to be levelled up and grouted with cement grout. During progress of the work, steam-pipes, 3 in. in diameter, for holding-down bolts, to be built into wall at positions shown. When masonry has been completed, all the joints to be raked  $\frac{1}{2}$  in. and pointed with neat cement. Weep-holes to be left in walls as may be directed.

### Clause 63.—Brickwork.

(a) Bricks to be of well-mixed material of approved quality and uniform fineness, to be new, sound, hard, well-burnt kiln bricks, free from cracks and all other defects, truly rectangular, with sharp arrises, of approved dimensions and form, to be specially radiated for arches and invert, and moulded for the cutwater plinths, string-courses, and parapets.

(b) The work to be in English bond, set in mortar, mixed as described in clause 55; the external rows of bricks to be alternately headers and stretchers, and those within the walls to be all headers. All courses to be at right angles to faces of walls. Bricks to be cleaned and soaked in clean water for at least 10 minutes before being used. All the joints to be thoroughly filled with mortar; but the joint not to exceed  $\frac{1}{4}$  in. thickness. On completion of brickwork the joints to be raked  $\frac{1}{4}$  in. and pointed with neat cement.

(c) Bricks to be tested for transverse strength and for porosity. The transverse strength of the brick to be tested in the Departmental testing-machine by laying the brick horizontally on its base of 3 in. between supports 7 in. apart, and applying a weight of 6,000 lb. at the centre.

(d) Porosity.—Bricks immersed in water for twenty-four hours must not increase in weight more than 6 per cent.

(e) Twelve sample bricks, from bricks stacked on the works, will be selected for testing, and should any of the bricks fail to withstand either of the above tests, the Engineer may reject the whole stack of bricks from which the 12 bricks were taken.

### Clause 64.—Grout.

Grout to be composed of one part of Portland cement and one part of clean, washed, sharp sand, mixed fluid in tubs close to where required, and used fresh.

Clause

Clause 65.—Coating.

Coating to be composed of one part of Portland cement and two parts of clean, sharp sand, well mixed and incorporated with water; to be laid on in two thicknesses, and when finished to be not less than  $\frac{3}{8}$  in. thick. All surfaces to be thoroughly cleaned and well watered before coating is applied.

Clause 66.—Puddle.

Puddle to consist of the approved clay, to be carefully turned over and mixed with clean water, as may be directed, until the clay, in the opinion of the Engineer, has become of one even and uniform colour and plasticity.

Clause 67.—Material from Crown Lands, &c.

Contractors must provide themselves, at their own cost, with permits or licenses to quarry, excavate, and remove stone, gravel, or soil from unused Crown Lands, or to cut timber for culverts, &c., as laid down in the regulations specially made in that behalf; and if, by non-compliance with instructions, they infringe any of the clauses of the Timber and Quarry Regulations under the Crown Lands Act of 1884, they will be personally liable to the penalties therein declared. With regard to material to be obtained from private lands, Contractors must make their own arrangements with proprietors.

Clause 68.—Traffic.

(a) During continuance of this Contract, the Contractor is to maintain in fair order the portion of road comprised therein (except where contract is for supply of metal only), and also to afford every facility for the passing of the traffic during the execution of the work, and, if necessary, to securely fence off existing road, and provide new, or keep the existing out turns in repair, as may be determined by the Engineer.

(b) In the case of culvert renewals, or where proposed culverts will occupy the existing track, Contractor shall provide, if so specified, temporary culverts, and remove same upon completion of contract. He shall also provide proper guards for the drains and water-tables.

(c) The Contractor to take all due precaution to prevent accident to the public from leaving culverts open or placing heaps of stone in dangerous positions, and will be responsible for all damage arising from neglect of these precautions. He shall also provide such lights and signals by day and by night as the Superintending Officer may direct. In the case of the Contractor neglecting to carry out such directions, the Engineer may, without further notice, take such steps as he may think fit to secure the safety of the public, and shall deduct cost of same from Contractor's final payment.

Clause 69.—Tackle.

All tackle and staging used in the execution of the work to be subject to the approval of the Superintending Officer.

Clause 70.—Sunday Work.

No night or Sunday work will be allowed without special orders from the Superintending Officer; but if required on any emergency, Sunday or night work to be carried on without extra charge.

THIS is the Schedule to Specification marked "E" referred to in my annexed Agreement with Her Majesty the Queen, dated the twenty-seventh day of March, A.D. 1899.

Witness—W. C. ADAMS.

THOMAS MURPHY.

GENERAL CONDITIONS.

Interpretation of Terms

1. WHENEVER the terms hereafter explained in the present clause occur in these or any Special Conditions, or in the Contract or Specification, or Schedule or Specification, they shall be held to mean, and shall mean, as follows:—

"Government" shall mean the Government of New South Wales promoting this undertaking.

"Minister" shall mean the Secretary for Public Works of the Colony of New South Wales for the time-being.

"Engineer" shall mean the Commissioner for Roads, or the Engineer-in-Chief having the principal charge of the works, as the case may be, or the person acting as such for the time being, respectively.

"Superintending Officer" shall mean any person or persons who may from time to time be entrusted with the superintendence of the works on behalf of the Government.

"Contractor" shall mean the person or persons who contracted to execute the works.

"Special Conditions" shall mean any "Special Conditions" hereto attached and forming part of the Contract; and such Special Conditions shall be read with the General Conditions as part and parcel of the Contract.

"Schedule of Prices" shall mean the rates by which the Contractor has offered or agreed to execute the Contract, where the same is based on a Schedule of Prices; and be the basis on which the value of any extra works or any deductions shall be calculated, and progress payments made, whether the Contract be one of a Schedule of Prices or a bulk sum.

"Plans" shall mean and include all drawings referring to the works and explanatory of, or supplementary to, the Specification and Schedule to Specification.

"Works" shall mean the works set out in the Specification, Schedule to Specification, and Plans, or, in the event of there being no Plans, in the Specification or Schedule to Specification only.

"Net Claim" shall mean the sum claimed by the Contractor after deducting therefrom the sum acknowledged by the Department to be due.

"Board" shall mean the Board of Reference for the Department of Public Works, consisting of the Under Secretary for Public Works and Commissioner for Roads, the Engineer-in-Chief for Public Works, the Engineer-in-Chief for Railway Construction, the Government Architect, and the Engineer for Sewerage Construction; provided that any member of the of the Board who may give his decision in the first instance shall not be qualified to vote upon the matter referred to it for decision.

Supply of Labour, Materials, and Plant.

2. The Contractor shall, except in so far as the Specification may expressly state to the contrary, provide at his own cost and expense all labour, materials, and plant, and everything which the Engineer may consider necessary for the proper and complete performance of this Contract. No materials or plant placed on the site of the works shall be removed therefrom, or otherwise disposed of, without the consent of the Engineer.

Plans, Specifications, &c.

3. The Plans, Specifications, and Schedules to Specifications represent generally the forms, dimensions, and description of the several works. Where any discrepancy exists between the dimensions, as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by scale. Or if there be any discrepancy between the figures or dimensions, or the form of construction, or the materials as indicated in the Plans, and the dimensions and materials given in the Specification, or the Schedule to Specification, the directions of the Specification or Schedule to Specification shall be adopted; and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the Contractor. Also anything contained in the Plans, and not in the Specification, or Schedule to Specification, or anything contained in the Specification or Schedule to Specification, and not shown in the Plans, shall be equally binding as if it were contained in both. If neither Specification, Schedule to Specification, nor Plans contain any mention of minor parts, which, in the opinion of the Engineer, are reasonably and obviously necessary for the satisfactory completion of the works, such parts are to be provided by the Contractor without any extra charge, as if they were specially mentioned, and shall be deemed to be, and hereby are, included in this Contract.

As works described in, or implied by the Specification, or Schedule to Specification, shown on any of the Plans, or set forth in any lists or tables thereon, or attached thereto, as well those expressly provided for, are to be made and executed in every detail conformably to the several plans already prepared, or which may be prepared hereafter for the purpose of this Contract, in strict accordance with the provisions of the Specification, Schedule to Specification, and Conditions, and to the entire satisfaction of the Engineer.

Clause

## Copies of Plans, &amp;c.

4. A copy of all Plans, Specifications, and Schedules to Specifications, required by the Contractor for carrying on the works will be provided by the Government, but must be returned before a final Certificate for the work can be given. Any additional copies which may be required and are supplied by the Department shall be paid for by the Contractor at a rate to be fixed by the Engineer.

## Setting out Works.

5. The works will be set out—that is to say, all necessary centre lines and levels will be given to the Contractor—except in the case of buildings, when, in the absence of setting out, a block plan will be supplied, from which he must work; but the Contractor must satisfy himself of the accuracy of the setting out, as no work incorrectly set out or improperly executed will be paid for.

## Protecting and maintaining Signals and Marks.

6. All bench marks, pegs, and signals on the surface, and all alignments, and level marks underground put in by the Engineer or Superintending Officer for the purpose of checking the Contractor's work, will be confided to the care of the Contractor. He shall, at his own expense, take all proper and reasonable precaution and care to preserve and maintain them in their true position; in the event, however, of their being disturbed or obliterated by accident or from any other cause whatever, they may, if necessary, be replaced by the Engineer or Superintending Officer at the Contractor's expense, and the cost thereof deducted from any moneys then due or thereafter becoming due to the Contractor.

## Possession of Ground.

7. In giving the Contractor possession of the site it shall not be deemed that he is to have the exclusive possession, but only a limited possession—that is to say, such possession as will enable him to perform the works comprised in this Contract. The Minister may at any time take possession of any portion of the works or ground or intended site of the works for the purpose of carrying on any other works or for any purpose whatsoever. The Contractor must procure for himself all other land which he may deem requisite for any temporary purposes or for his own convenience.

## Access to Works.

8. The Engineer, or any other person authorised by him, shall have free and uninterrupted access at all times to the works, and during working hours to any workshop or premises, not on the site of the works, where materials may be in preparation or stored for the purpose of this Contract. The Contractor shall give the Engineer all particulars as to the mode and place of manufacture of any of the materials proposed to be used in connection with this Contract, and shall facilitate in every way the inspection of the same.

## Contractor's Risk.

9. The Contractor shall take upon himself the whole risk of executing the works to the satisfaction of the Engineer, and in accordance with the Plans, Specification, and Schedule to Specification.

## Contractor to be represented.

10. The Contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer in charge to receive instructions from the Superintending Officer or Engineer, and to represent the Contractor for all purposes of this Contract.

Any notice or any written instructions to be given or delivered to the Contractor under this Contract shall be deemed to have been so given or delivered when given or delivered to the Contractor or his representative at the work, or left at the Contractor's usual or last-known place of abode or business.

## Order of Procedure.

11. The Engineer shall have full power to decide in what order in point of time the various parts of the work or works comprised under this Contract shall be carried out.

## Power of Entry.

12. The Engineer shall have the power, at his discretion, without vacating this Contract, to enter upon, by himself or his agents, and make use of any part or parts of the work comprised under this Contract, and his doing so shall in no wise be held as a waiver of the responsibility of the Contractor in respect of this Contract, except in so far as any injury may accrue to such work so entered upon, by reason of any proved carelessness, to the satisfaction of the Engineer, of any employee of the Government, in which event the Contractor shall be free from liability on account thereof, but not otherwise.

## Instructions to be obeyed.

13. Should the Contractor refuse or neglect to carry out the instructions of the Engineer or the Superintending Officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

## Power to dismiss men.

14. The Engineer may require the dismissal within twenty-four hours by the Contractor of any agent, overseer, foreman, workman, or other person employed on the works, and, in the event of the Contractor refusing or neglecting to comply with such requisitions, all further payments on account of the work may be stopped until such dismissal is effected.

## Bad Materials or improper works to be removed.

15. The Contractor shall be bound to remove within twenty-four hours, if written notice from the Engineer or Superintending Officer to that effect be given, any materials or work, whether fixed or not, which may appear to the Engineer to be of an inferior or improper description; and, in case of refusal, the Engineer shall have the power to get such materials or work removed at the Contractor's expense, and to withhold all payments until such instructions have been complied with.

## Extra Works—Omissions of Works.

16. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to order material or work of a different description to that specified, or to increase or diminish the dimensions or extent of any works to be done under this Contract, or to alter their situation or vary the form or dimensions of any of the said works, or of any part thereof, or to make any deviation or to substitute one class of work for another, he shall have full power to do so, and to order and direct any such increase, diminution, alteration, deviation, or substitution, and the works involved in any such increase, alteration, deviation, or substitution, shall be executed by the Contractor if of the class of works provided for in the Schedule of Prices, at such Schedule Prices; and no such increase, diminution, alteration, deviation, or substitution of works shall in any way annul or set aside this Contract, or extend the time for the completion thereof, unless such extension shall have been given as provided for in clause 24; but such additions or alterations shall be measured and paid for, or deducted from the Contractor's account, as the case may require, according to the Schedule of Prices. Provided that if any portion of the works so ordered to be done shall not be, in the opinion of the Engineer, of the same value or class of works provided for in the Schedule of Prices, the same shall be executed by the Contractor at such prices as may be agreed upon with the Engineer; but if the Contractor and Engineer cannot agree as to the price to be paid, the Engineer may order and direct the same to be done by such person or persons as he may think fit. Before any extra work, or work of an altered value or class, is undertaken by the Contractor, it shall be imperative for him to procure an order in writing from the Engineer for carrying out such extra or variation of work, and the Contractor shall not be entitled to any payment for such extras or variations unless he produce the written order for the same, as aforesaid, and he shall not be entitled to plead that the Engineer omitted to give such written order, as it is to be distinctly understood that the onus of obtaining such order shall be on the Contractor. The Contractor shall not be entitled to any other rate than the Schedule rate on any plea that the work was in a different position or of a different class from, or in a more difficult position than, that shown on Plan or described in Specification or Schedule to Specification, or carried out under circumstances not contemplated in the Specification, unless an agreement entitling him to payment by other than the Schedule rates shall have been previously made and signed by the Engineer and the Contractor.

## Valuation of Omissions.

17. The Engineer shall have the power to direct the omission of the carrying out of any part or parts of the said works, but not amounting to the omission of the whole; and the value of such work so omitted in such case, calculated at the Schedule rates, or in the event of there being no Schedule rates, calculated on the basis of the proportionate value which such work bears to the lump sum, as ascertained by the Engineer, whose decision on that point shall be final, shall be deducted from the Contract sum.

## Net Measurements.

18. The whole of the work shall be executed and paid for according to the Contract dimensions, and no allowance will be made for any excess of dimensions above those found on the working plans now exhibited, or which may be afterwards supplied, notwithstanding any general or local custom to the contrary, unless such excess has been expressly ordered. In the case of dressed masonry all cubic measurements will be taken at the extremes, and in the case of rock-faced masonry all measurements will be taken at the draft. With regard to timber, all framed work will be paid to extremes, but in no case will scarfs in hewn or sawn timber or round logs be paid for.

## Contractor liable for injury to adjoining Lands, Properties, &amp;c.

19. The Contractor shall not commit any act of trespass, and shall effectually protect all adjoining properties and owners thereof against any loss, damage, or injury that may occur through the carrying on of the works, whether to buildings, goods, property of any kind, or to persons; and in case any such trespass be committed, or any such loss, damage, or injury occur, the Contractor shall make full compensation, and shall make good all or any such loss, damage, or injury; and if any such compensation for trespass, or any such loss, damage, or injury be recovered against the Government in the first instance, it may be deducted from any money due or coming due to the Contractor under this Contract, or may be recoverable from the Contractor as liquidated damages in that respect incurred.

## Damages, &amp;c., to be paid for by the Contractor.

20. All damage, injury, or loss that may happen to the works from any cause whatever during their progress must be made good by the Contractor at his own expense; and the whole of the works must be delivered up, complete in every respect, according to this Contract, and the care and maintenance of all works under this Contract shall remain with the Contractor until the Engineer shall, by notice in writing under his hand, inform the Contractor that he has taken charge thereof; and until such notice shall have been given the Contractor shall be responsible for all accidents, from whatever cause arising, and shall make good all damages thereto.

## Contractor not to Sublet Works or Assign Moneys.

21. The Contractor shall not assign or underlet this Contract, or any part thereof, or assign or mortgage, charge or encumber all or any of the moneys payable or to become payable under this Contract, or any other benefit whatsoever arising, or which may arise, under this Contract, to any person without the consent in writing of the Minister being first obtained. The Contractor for each and every breach of this Condition shall be liable to pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the Contractor under this or any other Contract with the Government. And any permission to assign or underlet works to be done under this Contract shall not discharge the Contractor from any liability in respect of this Contract, and shall extend only to the permission actually given, but not so as to prevent any proceedings for any subsequent breach of this Condition; and all rights under these Conditions shall remain in full force, and shall be available as against any such subsequent breach.

## Truck System not allowed.

22. The workmen and labourers of every class employed on the works shall be paid their wages in full, in money, current coin of the Colony, at least once in every month, and no ticket or other system of payment by provisions, liquors, or goods will on any pretence be allowed; nor shall the Contractor, or any person or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the Contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen and labourers of every class shall be paid on the works if it be possible, or in some building in the vicinity; and in no case shall they be paid at a public-house or other place where liquors or refreshments are sold. The Contractor for each and every breach of this Condition shall pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the Contractor under this or any other Contract with the Government.

## Power of the Government to pay Workmen and Tradesmen.

23. Before the payment of any money to the Contractor, the Engineer may require from him a statutory declaration that the tradesmen supplying materials for or incidental to the works, and the workmen and labourers of every class employed on the works, have been paid their claims of every kind in full, in current coin of the Colony, and to the latest date at which such wages or claims are due; and the Engineer may withhold the payment of any money that may be due or become due to the Contractor until such declaration has been made and delivered to him.

If the Contractor shall fail or omit to pay the claims of any such tradesmen, workmen, or labourers, in the current coin of the Colony, it shall be lawful for the Minister, or the Engineer as often as the same shall happen upon complaint of such failure or omission made by any such tradesman, workman, or labourer, and upon proof to the satisfaction of the Minister or Engineer of such failure or omission to pay the amount of such claim to such tradesman, workman, or labourer, and to deduct the same amount from any money then due or owing, or thereafter to become due or owing, to the Contractor under this Contract.

## Delay.

24. If the Contractor shall not be able to obtain possession of any portion of the ground required for the execution of the works to be done in connection with this Contract, or if from the non-delivery, or any delay in the delivery to the Contractor, of any materials which under this Contract the Minister is to supply, or from any cause whatever arising out of the acts or defaults of the Minister, or any officers or servants in his employment, or from any accident happening to the said works during their progress not arising from the neglect or default of the Contractor or his servants or workmen, the Contractor shall be delayed or impeded in the execution of his Contract, the Contractor may from time to time within seven days of the happening or occurring of such act, default, or accident, apply in writing to the Minister for an extension of time on account of such act, default, or accident, setting forth the cause of such application, and the Minister shall, if he think the cause sufficient, but not otherwise, allow by writing under his hand such an extension of time as he shall think adequate; and the penalties, sets-off, and deductions to which under this Contract the Contractor is liable shall not attach until the expiration of such extension of time, but shall attach, and the Contractor shall become liable to the same, from the date of the expiration of such extended time or times. And unless the Contractor shall make such application within the time and in the manner aforesaid, and unless and until the Minister shall allow such extension or extensions of time as aforesaid, the Contractor shall not by reason of any delay arising from the cause or causes aforesaid, or any of them, be relieved in any way or to any extent of his liability to finish and complete the works within the time in this Contract specified; and, in default of his so doing, to pay and be subject to the liquidated damages, deductions, and sets-off as in these Conditions provided; nor shall the Minister be deprived in any way or to any extent of his right to deduct or recover any sum or sums as liquidated damages, and not as or in the nature of a penalty or to make deductions or sets-off which under this Contract he is entitled to make, deduct, set-off, or receive from the Contractor for or by reason or on account of any delay in the completion of the work or any portion of the same, nor shall the rights, powers, and authorities by these Conditions given to or vested in him be in any way affected.

## Patent Rights to be included.

25. The Contractor is to include in his Tender the amount of all patent rights and royalties which may be claimed by any patentee or patentees for the manufacture and use of any portion of this work, and must undertake to liquidate the same when required to do so.

## Free Passes, &amp;c.

26. No free passes on any of the Government Railways will be granted either to the Contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

Conditions

### Conditions not to be waived.

27. None of the Conditions of this Contract shall be varied, waived, and discharged, or released either at law or in equity, unless by the express consent of the Minister, testified in writing under his hand.

### Progress Payments without Prejudice.

28. No progress payment given to the Contractor shall prevent the Engineer from at any future time before the final settlement rejecting all unsound materials and improper workmanship discovered subsequently to the giving of any previous payment; and notwithstanding any approval given or made by the Superintending Officer that portions or the whole of the works have been satisfactorily performed, the Engineer may require the Contractor to remove or amend at any future time previously to the final payment on account of the work, any work that may be found not in accordance with this Contract; and the Contractor must remove and amend at his own cost all such work when so required; and if he refuse or neglect to do so, the Engineer shall have the power to carry out such work, and to deduct the whole cost thereof from any moneys that may be due, or that may become due, to the Contractor.

If, in the opinion of the Engineer, further inquiry is necessary or desirable before any progress payment is made, he shall have the power to withhold the certificate on which such payment would have been made for any period which he may consider necessary for the purpose of such inquiry.

### Security.

29. Within fourteen days after the notice of the acceptance of his Tender shall have been given to the Contractor, or posted to the address of his last-known place of business or residence, he shall deposit with the Minister, or at the option of the Minister in some Bank or Banks in Sydney, upon fixed deposit in the name of the Minister, a minimum deposit of £2 if his Tender be £40 or under, or a sum representing £5 per cent. on the pounds if his Tender be over £40 and under £200; but if £200 or over, then a sum calculated at the rate of £5 for every £100 or part thereof on the amount of his Tender up to the sum of £100,000, and at the rate of £1 for every £100 or part thereof in addition, for any amount over that sum, to be held by the Minister as security for the due and proper performance and completion of this Contract until the Engineer has certified that the whole of the work in the said Contract has been completed to his satisfaction, and the period specified for the maintenance of the said works has expired, or until this Contract has been cancelled by the Minister under the power given to him in that respect under clause 32 of these Conditions, in which last-mentioned event happening the money so deposited shall become forfeited to the Crown, and shall be held by the Colonial Treasurer, for and on behalf of Her Majesty the Queen, as liquidated damages. If, however, this Contract shall not have been cancelled under the said clause, and if the works comprised in this Contract are not completed within the time mentioned in clause 34 of these Conditions, the liquidated damages which, under the last-mentioned clause are made payable to the Minister, may be deducted and taken from the money so deposited.

If the Contractor fail to deposit the sum as hereinbefore provided within fourteen days from the acceptance of the Tender, or if he fail to execute the Contract for the due performance of the works mentioned in the said Tender, the Minister shall have the option of and full power and authority to declare such acceptance to be annulled, in which case the amount of the preliminary deposit will be absolutely forfeited to the Crown, as provided by the Regulations of the Tender Board.

No Tenderer will be authorised to proceed with the work tendered for until he has made the deposit as aforesaid, and has executed the required Contract for the due performance of the said works, it being hereby declared that for all or any work done or materials found and provided by the Contractor before the due execution of the said Contract, or the said moneys being deposited as aforesaid, he shall not have any right of action, claim or demand against the Minister.

The Contractor will be entitled to receive any interest that may be payable upon the fixed deposit of the money, if the money be placed in a Bank at fixed deposit, as such interest becomes payable, but it is expressly declared that the Minister is not to be held liable or answerable in any way for any loss on the money so deposited or for any loss of interest from the fixed deposit not being renewed.

### Payments.

30. Progress payments may be made once in every month, unless the same shall become not payable by reason of anything contained in these Conditions, on the certificate of the Engineer, as the work proceeds, in the proportion of 80 per cent. of the value of the work returned, until the sum retained reaches the amount of the deposit provided for in the preceding clause, when no further deductions will be made. The amount of the retention money will be held by the Minister, in addition to the cash security, unless otherwise provided for in the Specification, until the Engineer has certified that the whole of the works have been satisfactorily completed, and the period specified for the maintenance of the said works has expired, and all accounts finally adjusted, when the retention money, in addition to the cash security, will be paid to the Contractor; and it is expressly declared that until a certificate has been given by the Engineer to the Minister that the work done by the Contractor has been executed and completed to his satisfaction, the Contractor shall have no right or claim in respect of any work done or materials provided, nor to the payments from time to time to be made under this Contract, or to the final payment upon the whole of the works being finished.

### Delay or Bad Work, Bankruptcy, &c.

31. In case the Engineer shall be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, or in case the Contractor shall at any time neglect or omit to carry out the instructions of the Engineer, or to dismiss any person employed when required, or shall neglect or omit to remove any materials or work which he is required to remove under Condition 15, or in case the Contractor shall assign or underlet this Contract, or any part thereof, or assign or mortgage, charge or encumber, or attempt to assign, mortgage, charge or encumber, all or any of the moneys payable or to become payable under this Contract, or any other benefit whatsoever arising or which may arise under this Contract, without the consent in writing of the Minister being first obtained, or in case the Contractor shall make default in insuring and keeping insured, in cases where insurance is specified, and depositing the policies and receipts for premiums in accordance with these Conditions, or in case the Contractor shall become bankrupt, or shall make an assignment of his estate for the benefit of creditors, or shall make an arrangement or composition with his creditors, then and in every such case the Minister shall be at liberty, without vitiating this Contract, and without prejudice to any right that may have accrued to liquidated damages under any of these Conditions, to take the works wholly or partially out of the hands of the Contractor and to employ or contract with any other person or persons to execute the same, and for that purpose to take possession of and use all horses, materials, plant, tools, implements and things on or about the said works, without making any allowances for the same, and all damages and expenses thereby incurred shall be ascertained and certified by the Engineer, and together with any sum payable as liquidated damages under these Conditions shall be deducted from any money that may be then due or may thereafter become due to the Contractor or may have been deposited by him; and if the money then due, or thereafter becoming due to the Contractor, or deposited by him, be not sufficient for that purpose, the balance remaining unpaid shall be a debt due by the Contractor to the Minister, and may be recovered accordingly.

### Cancellation of Contract.

32. In any or either of the events mentioned in the last preceding clause of these Conditions, the Minister shall have the option and full power and authority in lieu of proceeding under such clause, and without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to cancel this Contract whether there are any works remaining to be done or not; and in such case the moneys which shall have been previously paid to the Contractor on account of the works executed, shall be taken by him as full payment for all works done under this Contract; and upon notice in writing under the hand of the Minister that he, under the authority of this Condition, cancels this Contract, being given to the Contractor, this Contract shall be cancelled, and thereupon all sums of money that may be due to the Contractor, or unpaid, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, shall be forfeited, and all sums of money held as security or named as liquidated damages for the non-fulfilment of this Contract within the time specified shall also be forfeited and become payable to the Government, and the said implements and materials shall become and be the absolute property of the Government, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of Contract.

### Insurance.

## Insurance.

33. The Contractor shall from time to time, when required to do so by the terms of the Specification, insure the works against loss or damage by fire, in an office to be approved in the name of the Minister for the amount of the full value of the work completed, as determined by the Engineer, and shall lodge with the Engineer the policies and receipts for the premiums for such insurance, and shall continue such policies until possession is given up to the Government; in default of which the Minister shall be at liberty to insure and deduct the amount of the premiums paid from any moneys payable to the Contractor, and may refuse payment of any certificate until such policies and receipts are handed in as aforesaid; but this insurance is to be no limit or bar to the liability and obligation of the Contractor to deliver up the works to the Minister completed in all respects according to the Contract. In case of loss or damage by fire the moneys payable under any such insurance shall be received and retained by the Minister until the works are finally completed, and shall then be credited to the Contractor in the final settlement of accounts in the event of the Contract not having been previously cancelled under these Conditions.

## Time of Completion, &amp;c.

34. The Contractor shall complete the whole of the works comprised in this Contract within ten weeks from the date of the acceptance of his Tender, and in the event of their non-completion at the specified times, should the Minister not have proceeded under clauses Nos. 31 and 32 of these Conditions, or either of them, the Contractor shall pay, by way of liquidated damages, and not as or in the nature of a penalty, the sum of one pound ten shillings sterling for every week, or for every part of a week that shall elapse after such specified time, until their completion, and which sum or sums may be deducted from any money payable to the Contractor under this or any other Contract. The Contractor shall have no right to a Certificate for payment after the date specified in these Conditions for the completion of this Contract until the whole of the works shall have been properly completed to the satisfaction of the Engineer, unless the time for the completion of this Contract shall have been extended as hereinbefore provided, in which case such extended time shall become the time for the completion of this Contract, and it is to be expressly understood that the fact of the time having been so extended shall not in any way be taken as a waiver of this Contract, or as annulling or setting aside this Contract in any respect, nor be taken as releasing the Contractor from any of the responsibilities or obligations of this Contract, which, in all other respects, shall remain the same as if the time had not been extended.

The like liability also shall hold good as to the obligation of the Contractor in the event of any advance being made to him from the retention money, or on material on the ground and not *in situ*.

## Maintenance.

35. The Contractor will be bound to maintain the works for a period of one week after their final completion and use by the Government; and if any part should within that period show signs of weakness, or of giving way, or if any defective workmanship or materials be detected, the Contractor, when called upon to do so, shall make good the same at his own expense, to the satisfaction of the Engineer, before any moneys held by the Government on account of this Contract will be paid. It is also to be distinctly understood that the Government shall have the full, free, and unrestricted use of the said works, without any interference whatever on the part of the Contractor during the currency of this period of maintenance; and such use of the said works on the part of the Government shall not be held as relieving the Contractor of any liabilities or obligations whatever in respect of his Contract.

## Settlement of Claims.

36. The following matters shall be decided by the Engineer, whose decision shall be absolute and final, viz. :—

- (1). All questions and disputes when the net claim shall not amount to the sum of £1,000.
- (2). All questions and disputes (irrespective of the amount involved), which shall arise respecting the true construction or meaning of the Plans, Specification or Schedule to Specification; or the quality or sufficiency of the workmanship; or the quantity, quality, or sufficiency of materials necessary for the whole or any part of the Contract; or the true value of any extra works that have not been previously agreed upon; or the value of any works omitted from the works specified to be done under the Contract.

37. Where the amount of any net claim in respect of any matter relating to the said Contract (other than and excepting those mentioned in class 2 of the last preceding clause) shall amount to the sum of £1,000 or upwards the Contractor shall within one month from the date of the expiration of the period of maintenance referred to in clause 35 furnish to the Engineer "full particulars" in writing of any such claim, giving distinct and separate items and the amount, if any, claimed under each item, and the same may be accompanied by any such explanatory matter as the Contractor may consider necessary. The Contractor shall be bound by such particulars, and no claim not included in such particulars shall be taken into consideration or become the subject of any action. All such claims amounting to £1,000 or upwards shall in the first instance be referred to and decided by the Engineer, and if the Contractor and the Engineer cannot agree upon the amount to be paid in respect of such claims the Contractor shall then be allowed to appeal to the Minister, who shall refer the matter for the consideration of and final adjudication by the Board, whose decision shall be final when so expressed by the said Board to be final, and the Contractor shall have no right of action or suit under the Contract or these conditions for or in respect of any such claims, saving for the amounts that may be so certified to be due. Provided always that if, in cases where the said Board shall not arrive at and make a final decision, the Contractor may require the Minister to state, and he shall state a special case without any pleadings for the opinion and final decision of the Supreme Court with power to the Judges upon the hearing thereof to draw conclusions of fact and to review, and vary, or refer back the claim to the Minister; but in case of any such special case being so stated the taxed costs of both parties incidental thereto shall be borne by and divided between them respectively in the inverse proportion which the amounts actually awarded and disallowed respectively shall bear to the total amount in dispute, and no action, suit, or other proceeding shall be instituted in respect of the premises, except for the purpose of enabling such special case to be stated as aforesaid.

The Minister shall not be called upon or be bound to make any payments out of the retention money or the money deposited as security for the due carrying out of the Contract, or to give up any bond that may have been given or entered into in connection with the Contract before or until all questions and disputes shall be finally settled; and should the Minister in his discretion make any payments out of the retention or deposit money to the Contractor, the making the same shall not in any way prejudice the Minister's rights under the Contract, or be taken as an admission of any claims made by the Contractor.

Department of Public Works,  
Sydney, New South Wales, 23rd March, 1898.

J. H. YOUNG,  
Secretary for Public Works.

## G.

## LUMP SUM TENDER FORM.

CONTRACT No. 54-98-9, ROAD CUMNOCK TO BOLDERGERY.

I, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of Contract No. 54-98-9, on road Cumnock to Boldroger, agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by \_\_\_\_\_, for the lump sum of one hundred and eighty-nine pounds, and to complete the same within the time stated in the said General Conditions; and \_\_\_\_\_ do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Prices endorsed hereon, or if not in Schedule at a price to be agreed upon at the time, and added to or deducted from the above lump sum, as the case may be; and \_\_\_\_\_

and hereby undertake that will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions abovementioned.

Dated this 16th day of March, A.D. 1899.

THOMAS MURPHY,  
Anson-street, Orange.

This is the Tender, marked "G," referred to in my annexed agreement with Her Majesty the Queen, dated the twenty-seventh day of March, A.D. 1899.

Witness—W. C. ADAMS.

THOMAS MURPHY.

#### NOTICE TO TENDERERS.

When two or more persons send in a joint Tender, the name of each must be set forth therein; and all names must be written in full. Tenderer's address to be clearly stated.

A separate Tender must be sent in for each Contract under separate cover, with number of Contract endorsed thereon.

As soon as the Tenders shall have been opened, and the bulk sums of each ascertained, the lowest eligible Tenderer shall be called upon to pay a minimum deposit of £2 if the Tender be £40 or under, or a sum representing 5 per cent. on the pounds in Tenders over £40 and under £200, before his Tender can be recommended. On all Tenders of £200 and over, the security required will be that provided for in clause 29 of the General Conditions, viz., £5 for every £100 or part of £100. In the event of Tenderer refusing or neglecting within seven days from date of opening Tenders to pay this deposit he will be liable to disqualification from further tendering. If the next Tender is considered suitable, the work may be offered to him, and so on as long as the local officer considers the Tenders to be of such a nature as he would be justified in recommending.

In the event of a Tenderer refusing to take up his Contract, or the Contract being cancelled, his deposit will be forfeited to the Government of New South Wales, and will be paid to the credit of the Consolidated Revenue. The deposit will be returned when the final certificate has been forwarded for payment.

No Tender will be considered which shall have been received after the advertised time for the receipt of Tenders, unless there are valid reasons which render it equitable that it should be entertained.

This is the Schedule of Prices hereinafter referred to:—

Schedule Number.	Nature of Work.	Schedule Rates for Additions or Deductions.	
1	Clearing road, 66 wide .....	per lineal chain	£ s. d.
2	Forming, including cutting and filling ..	per lineal yard	0 8 0 48 chains.
3	Side drains .....	per lineal chain	0 2 5 1,061 l. y.
4	Metal gauge .....	per cubic yard	0 6 6 48 chains.
5	Metal gauge .....	per cubic yard	.....

## NEW ROAD AT BURRAWONG OLD STATION, DISTRICT OF MOLONG.

No. 1.

William Ross, Esq., to The Surveyor-General.

Dear Sir,

Dilga, Molong, 21 December, 1882.

I again beg to bring under your notice my letter in the *Molong Express* paper of 17th June last, viz., Road Grievance, Lord *v.* Ross.

I now tax Mr. Surveyor Busby's veracity on his report regarding the various roads referred to; see to this at once—bearing in mind Surveyor Simpson's act, Lord *v.* Clyne.

Yours, &c.,  
WM. ROSS.

To see papers referred to.—P.F.A., 27. Roads 82-<sup>1</sup>/<sub>2</sub><sup>2</sup>. Sent to Surveyor Crouch, 5/10/82, No. 520. Transferred to Licensed Surveyor Busby, 6/10/82. Still unacted on, 27/12/82. Surveyor-General.—Perhaps this should be sent to Mr. Crouch with reference to previous instructions.—J.F.L., 27/12/82. It was a copy of the newspaper I wished to see; also I wished to see Mr. Busby, who is in town.—P.F.A., 30. Memo. sent to Mr. Busby to call, 30/12/82. Mr. Christie,—Please obtain copy of paper referred to.—J.F.L., 30.

Notwithstanding the protest of Mr. Wm. Ross, I do not see any ground for altering my previous recommendation in this case. Mr. Wm. Ross does not state in what respect he questions the veracity of Mr. Surveyor Busby, but even if the road advocated by Mr. Ross were a better as well as a shorter road, I do not consider that sufficient cause has been shown why the Government should establish, by proclamation under 4 William IV No. II, the deviation in question to the prejudice of the owner of the property traversed by the proposed deviation.—P. F. ADAMS, 8th January, 1883.

Submitted.—H.W., 16/1/83.

In view of the report of the Surveyor-General, I cannot reopen this question. I noticed, in a petition signed by Mr. W. Ross and others, an assertion that the road asked for by them has been "in use by the public for a number of years." If this is the case, the public can assert their right to the road in question, and force an opening if they require it. Mr. Ross may be informed.—J. P. ABBOTT, 16/1/83. A. Ross, M.D., M.P., informed 19th January, 1883.

[Enclosure.]

EXTRACT from the *Molong Express*, Monday, 17 June, 1882.Road Grievance—Lord *v.* Ross.

To the Editor.

Sir,

The following case was tried before the Molong Bench on the 6th instant, after a very prolonged hearing. I am charged with having wilfully and maliciously cut down a certain fence, which was erected by plaintiff's servants across a public road, without just cause or reason. I will not only point out in the sequel both cause and reason, but show also that I had more valid reasons for doing so than parties had in trying to insinuate "that for all the difference it would make in the distance between the two distinct points it was unneighbourly on my part to do so." But that extra mile per day (to and fro), and that six days in the week, amounts to a good round distance of unnecessary travelling in the course of a year. Persons will bear in mind that, to obtain my mail-bag, I have to travel the road to and from Dilga to Cumnock, *via* Burrawong, and, therefore, I am made to suffer should the road happen to be diverted from its present track. I may have, in an unguarded moment, answered in haste the absurd way in which plaintiff's solicitor put a question regarding pegs. It was the fence, which is near the culvert, lately put up that I thought of when pegs, fence, and roads was the question asked, and which led me to make the slight mistake I did, but which I subsequently corrected and explained, and that ought to have satisfied any man but those who might possibly wish to row in the same boat. Whether I am the aggressor it matters not, for the question involves a deeper principle than this, viz., a "public right-of-way"; and I will be able to show, in spite of plaintiff's witness, that it has been in existence and use for many a long year—aye, as far back as 1847. I may even yet find out that the very public wrong that I am now striving to prevent in this road grievance that, perhaps, others may possibly be doing the same thing, so that they may establish a precedent or helper in their own cause. It is, I admit, easy to see through a grindstone when the hole is bored. So it is with this road matter, as I will, I daresay, show before finished. One thing I am proud of, and that is that the P.M. is of the same opinion now that he was years ago in regard to what constituted a road. But as for me not bringing witnesses, that arose from the shortness of notice, seeing that I was served with the summons at sundown on the 3rd, and the case came off on the 6th, or only two days. Neither did I imagine that I would be called as a witness, judging by my solicitor's former advice and experience.

Now, as regards the various roads in that locality where the fence is being erected, and now cut down, bear in mind, Mr. Editor, that all the plaintiff's witnesses swore that they never saw, or yet heard of, any other road in that locality but the one in question, and that one went to Burrawong House. Strange to say, not one of them could, or would, tell which way it passed the house in former years, whether west or north, even though the plaintiff's manager was actually born in the house now standing—about thirty-four years ago, may be thirty-five to forty years—and yet, remarkable to say, he knows during all these number of years of no other road and never saw any in that locality but the one to Burrawong. He knows it to Burrawong door, and there he loses it. He does not even know of any other road that once led to the far-famed Burrawong Copper Mine, or yet to any of his neighbours' selections in that quarter. A late manager, Mr. George Bruce, who also was off and on engaged on Burrawong for fourteen years, and has known the locality for twenty-six years, yet how wonderful some people's memory fail them in adversity. Sam Hillan also knows the locality twenty-two years—his age in all being 30 (?) years, and odd years, like Mr. Keays. Mr. Hillan has only lived about seven years in the locality, yet he also knows of no other road to Burrawong House, only over and down a steep hill, far less even to get there or elsewhere when there. Another witness, James McCormack, says he has lived off and on in the locality twelve or fourteen years, aye, and although living on Jenkins' selection for years, and which is near the crossing on this road, has never seen and knows of no other road in that neighbourhood only the one from Cumnock to Burrawong, no, not even the road that leads to the Burrawong Copper Mine, a mine not easily to be forgotten if once seen, far less smelt. Yes, and this very mine is within 200 or 300 yards of where he (McCormack) lived on Jenkins' selection. Last, but not least, of plaintiff's witnesses is the

man

man who is erecting a fence. He also has lived in the locality for two or three years, and in this short time, compared with other witnesses, he has at least seen one road, one other road than that only remarkable road to Burrawong House, but where it leads to he could not say. So much for the plain truth to a plain question. In spite of all these witnesses I will show that there are other roads in the locality, roads, in fact, in existence ever since white man first put foot on Burrawong. For he remembered that the original station is 1 mile south of the present Burrawong, therefore there must have been roads in the locality, and which, if not travelled daily, are still plainly to be seen even to where they divert in various directions. Yes, and before the present Burrawong House ever was thought of, and I am prepared to state that each and all of these roads are less or more travelled on by the public to this day. If not so, how is it possible for settlers to get in and out from their farms without the existence of roads? Some of the first selections are to be found adjoining the old Burrawong Station. But I will furnish later proof than this, viz., when James Gallagher took up an additional conditional purchase on original Burrawong, Mr. Lord, by hook or crook, worried Gallagher, until he lost it, by getting the land measured, then put to auction, when, it is supposed, Lord bought. To enable Mr. Lord to do this, one (and the principal reason) was that one of these roads, which four witnesses on the 6th swore they never saw or knew of, was that Mr. Gallagher could and would not be allowed to take up his additional conditional purchase because "there was the very road between them." Yet, in the face of this, witnesses swear they don't know of this road, or, perhaps, of such a transaction of how Gallagher lost the land. Messrs. Keays, Bruce, Hillan, and McCormack swore that they knew of no direct road by way of the Burrawong Copper Mine from Gallagher's selection—from the original Burrawong to Cumnock, and where Gallagher had other selections on which he kept an inn for years, and travelled to and fro, between his selection at original Burrawong and his inn at Cumnock, on this very identical road, aye, without ever dreaming of going down the break-neck perpendicular hill or road in front of Burrawong House. The road Gallagher travelled is better, nearer, and more direct, besides being used by travellers and teamsters who had no particular business to transact at Burrawong. About the year 1869 what with fences and the crossing of the Burrawong Creek near Gallagher's becoming all but impossible. I may say that this public thoroughfare or right-of-way had been in daily use, to my own knowledge, since 1858, and perhaps was in use when the original Burrawong was taken up by Mr. Bonner. What with fences and the bad crossing-place, I took the trouble to write to the then Member, the late Mr. George Lord, especially on the state of this very road, and Mr. Bennett, of the Roads Department, instructed Superintendent Gordon, of Orange, to see and put the road in a proper state of repair, so that residents westerly might be able to travel it. Mr. Gordon, in consequence, visited the locality, and the present culvert was then pegged out on both sides of the creek—no thanks to the then Burrawong super. or storekeeper, however, who were so rude and insolent to Mr. Gordon that he left in disgust, after having marked out the length and width of the culvert. The Burrawong people rendered him no assistance, not even the use of a tomahawk—the pegs being made with a knife the best way we could. Then taking a comparison of the various roads in use, to see which was the best and nearest to the main road at Cumnock, and which he (Mr. Gordon) rode over to see for himself, and is the one road or very identical track which is now being fenced across, and which I complain of, and which I cut down, being a public road. I may remark that as we left the Burrawong storekeeper, in a very bombastic way he told Mr. Gordon that "he did not care where he made the road or culvert, as he would not remain much longer on the station—in fact, he was about leaving." "But," says he, "from what he knew, he (Mr. Gordon) had better keep the road or culvert up at Gallagher's farm," where it then was. After inspecting the various roads and the creeks from Burrawong to Gallagher's farm, a distance of over 1 mile, Mr. Gordon came to the very wise conclusion to retain the culvert where it is, and which has not cost a farthing for repairs since, and is, in fact, as good and sound as the day it was completed under Mr. Gordon's instructions, now going on twelve years since. The road Mr. Gordon rode over was plain enough and did not want making, as the traffic on the road made it plain enough and a good road to travel on, and requiring no repairs for perhaps years. I call such a road an outlet to all farms and settlers westerly from Burrawong, a splendid road compared with the Burrawong road, which is nearly perpendicular and almost impossible to climb it, or yet to reach the main road at Cumnock by this way. It is all very well for the P.M. and Mr. Smith to say the hill can be climbed, but one may as well attempt to climb the steeple of a church as to get up with a load anywhere, but I say no, for Gordon's road has no hills to climb, and, therefore, it shows a strange feature of the exact nature of this hill or road, or I am not to be believed.

From these remarks I am right, I think, in maintaining that the road selected by Mr. Gordon is by far the best in every sense, and considerably the shortest for the travelling public, and which is well known gradually rises from the culvert in the creek until it reaches the top of the hill and without difficulty. And thus why I cut the fence down and insist on Gordon's road being retained, being the nearest and best for man and beast, horsemen, or teamsters. A merciful man, it is said, is merciful to his beast. Not so with the P.M. or Mr. Smith, for they advocate that the Steeple Hill should be travelled; but I ask them to try it, then they will find out right from wrong, or whether I am insisting on an honest claim or a sham. It is "public rights" that must be considered, and not the private interest of Burrawong people in dealing with this road grievance. An inspection of the two roads by any impartial, unprejudiced person would unhesitatingly decide in favour of Gordon's road. If it is difficult to get up the hill, it is equally difficult to get down. The proof of the pudding is in the eating; then let anyone try the experiment, and he will have no difficulty in realising the truth of my assertion and statement, that to retain the Steeple Hill road it would be a gross and glaring wrong and injustice to the public for all time to come. I am not the only individual who is irreluctantly compelled to cut down an obstructing fence at Burrawong, for as far back as 1849, the same thing was done by Surveyor Davidson (afterwards Surveyor-General), who also cut down a fence near Burrawong, the fence being erected on the west side of the Burrawong Creek, aye, the sliprails had to be put up at the place cut down so as to enable the public to travel north and south, as they thought proper,—the creek for many miles below Burrawong being all but impassable for drays, and still remains so to this day. This road which I now allude to has much to do with that part of the road down Burrawong Steeple Hill, even before Burrawong House was moved to where it now stands, and then, in 1858, when the crossing became impassable in the creek for teams, the traffic returned up, or south, of old Burrawong Station, and the road is yet plainly to be seen where it passes through lands afterwards selected by James Gallagher, then it crosses the creek behind old Burrawong cultivation paddock, coming out round this fence to the north, about 1 mile south of the present Burrawong House, thence up a gentle rise of the range of the hill (Gordon's road), previously alluded to, until it reaches the main road to Cumnock. No travellers or teams going to Molong east, south, or south-east, even going north 1 mile simply to see Burrawong House, or yet for the pleasure of climbing up the steep hill when it can be avoided by travelling the old, better, and shorter road. Many teams soon after getting round north of the old cultivation paddock turn south on to the Brymedura road for a few yards, then south-east near Jenkins' selection, on which Mr. McCormack, one of plaintiff's witnesses, lived for years; then, as stated, it goes south-east, on to Messrs. Bolton's Doyboy Flat Station, and from this onwards to the main road to Molong by way of Bolton's ration road (the latter part of this line to main road being nearly east); others, again, keep south-east on Kinchila's Redbank Station road, until they come to Sandy Camp saw-pit; thence easterly, crossing Redbank or Nora Creek near a road going to Molong, and Orange roads to Molong. From these facts, it is evident that there are not only other and better roads to Molong than the "one solitary extraordinary road" going up and down Burrawong Steeple Hill. I could name and describe other roads in the locality. Suffice to say, I have said enough to show a discerning public the right road from the wrong—the road, in fact, most suitable for and in the interests of settlers in the neighbourhood and the travelling public. I may as well say that I keep no joeys or horn-blowers, nor do I even send my dog where I cannot go myself.

In conclusion, I earnestly trust the Government will see justice done to selectors and settlers in these all-important road matters and grievances, so that better provision may be made to enable farmers to get to and fro to their selections, in place of being often harassed and annoyed without rhyme or reason, or, perhaps, merely to suit some antagonistic individual interest. Apologising for trespassing on your valuable space—

Let each man learn to know himself,  
To gain that knowledge let him labour;  
Improve those failings in himself,  
Which he condemns so in his neighbour.

Dilga, near Molong,  
13th June, 1882.

Yours, &c.,  
WILLIAM ROSS.

## No. 2.

Messrs. H. H. Brown &amp; Co. to The Under Secretary for Mines.

Sir, 21, Exchange Buildings, Pitt-street, 4 January, 1883.

We have the honor to request, on behalf of our client, Mr. Francis Lord, that you will be pleased to cause to be proclaimed in the *Gazette* the road from Cumnock, *via* Burrawong and Dilga, to Parkes. This road only in parts is through measured portions, and as it is most important for legal rights of our client that this road should be proclaimed, we beg that the matter may have early attention.

We have, &amp;c.,

H. H. BROWN & CO.,  
Agents for Hon. F. Lord.

The Surveyor-General.—G.E.H. (for the Under Secretary), B.C., 5/1/83.

## No. 3.

The Under Secretary for Mines to Andrew Ross, Esq., M.D., M.P.

Sir, Department of Mines, Sydney, 19 January, 1883.

Referring to your letters and the petition of Mr. William Ross, Wright, Heaton, & Co., and others, respecting the opening of a road in the vicinity of Burrawong, I am directed by the Secretary for Mines to inform you that no departure can be made from the decision conveyed to you in my letter of the 14th September last, but should the assertion made by the petitioners, that the road has been in use for a number of years, be the case, the public may have a right to the road and fence an opening if they require it.

I have, &amp;c.,

HARRIE WOOD,  
Under Secretary.

## No. 4.

Andrew Ross, Esq., M.D., M.P., to The Honorable the Minister for Mines.

Sir, Parliament House, Sydney, 24 January, 1883.

I again desire to draw your attention to the road question between Cumnock and Rocky Ponds, at Burrawong, and to draw your special attention to the printed correspondence in the matter, which was moved for in Parliament. The residents (by the correspondence) we perceive, to the number of nearly fifty, protest against the present road as being too steep and hilly; in fact, almost impossible to get up and down with heavy loads. Another feature in the matter is that no objection has been lodged to the road but the report of the Surveyor, and he, being a total stranger to the locality and district, can really know nothing of the case. Whereas the petition protesting against the road going up the hill is signed by influential men and the farmers in the neighbourhood. I do hope, therefore, that you will see the necessity of reconsidering your opinion in this most important case, so that public justice may be done in the matter.

By referring to the printed correspondence you will find what I have stated to be the truth and facts of the case.

I have, &amp;c.,

A. ROSS.

I shall be pleased if the District Surveyor will make a personal inspection of the two roads, and let me have his report. Mr. Ross may be informed that I have called for this.—J. P. ABBOTT, 27/1/83. A. Ross, M.P., informed, 31/1/83. Parish Burrawong, county Gordon, papers herewith. The Surveyor-General.—G.E.H. (for the Under Secretary), B.C., 1/2/83. Mr. District Surveyor Crouch, for report as directed by the Minister for Mines.—A. J. STOPPS (for Surveyor-General), 6/2/83. Report of the 9th July, 83-94, dealing with above herewith.—H. A. CROUCH, Acting District Surveyor.

## No. 5.

The Under Secretary for Mines to Andrew Ross, Esq., M.D., M.P.

Sir, Department of Mines, Sydney, 31 January, 1883.

With reference to your letter of the 24th instant, respecting the road between Cumnock and Rocky Ponds, at Burrawong, I am directed by the Secretary for Mines to inform you that he has requested that the District Surveyor be asked to make a personal inspection of the two roads and furnish a report on them.

I have, &amp;c.,

HARRIE WOOD,  
Under Secretary.

## No. 5½.

Office Memorandum.

6 February, 1883.

WHEN Mr. District Surveyor Crouch is visiting the roads at Burrawong, Cumnock, Dilga, and Baldarudgerly, I shall be glad if he will call on Mr. William Ross, of Dilga, also Mr. Carter, of Baldarudgerly.

J. P. ABBOTT.

The Surveyor-General.—H.W., B.C., 6/2/83.

## No. 6.

Andrew Ross, Esq., M.D., M.P., to The Honorable the Minister for Mines.

Sir,

Parliament House, Sydney, 13 April, 1883.

I do myself the honor to ask if any report has been received *re* road at Burrawong, near Molong, and which is now obstructed by a fence. You will remember that several weeks back you authorised Mr. Crouch, Acting District Surveyor at Orange, to report on the matter. If the report has not reached your office, I shall be glad if you will take the necessary steps to expedite the same, so that I may be enabled to communicate the information the report contains to the public, and who are at present suffering from the destruction to the road.

I have, &c.,  
A. ROSS.

Will the Surveyor-General please say?—G.E.H. (for the Under Secretary). The Surveyor-General, B.C., 14/4/83. The District Surveyor's report has not yet been received. On return of this paper from Mines, it will be sent to him in connection with his instructions.—A. J. STOPPS (for Surveyor-General), 15th May, 1883. Inform.—G.E.H. (for the Under Secretary), 17/5/83. Dr. Ross, M.P., informed, 17th May, 1883. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 18/5/83. Mr. H. A. Crouch, Acting District Surveyor, in connection with instruction No. 98, of 8th February, 1883.—A. J. STOPPS (for Surveyor-General), 22nd May, 1883. Received in District Survey Office, 26/5/83. Reported upon by my letter of the 9th July, 83-94.—H. A. CROUCH, Acting District Surveyor.

## No. 7.

The Under Secretary for Mines to Andrew Ross, Esq., M.D., M.P.

Sir,

Department of Lands, Sydney, 17 May, 1883.

With reference to your letter of the 13th ultimo, inquiring whether any report has been received respecting a road at Burrawong, near Molong, which has been obstructed, I have the honor to inform you that the District Surveyor's report has not yet been received, and your present letter will be sent to him in connection with his instructions.

I have, &c.,  
GERARD E. HERRING,  
Under Secretary.

## No. 8.

Mr. Acting Surveyor W. F. Busby to The Surveyor-General.

ACTING SURVEYOR W. F. BUSBY to the Surveyor-General, transmitting plan of levels of reserved road and track through portion No. 115, in the parish of Burrawong, county of Gordon.

No. 83-47.

Sir,

Camp, Molong, 19 June, 1883.

In accordance with verbal instructions from Mr. District Surveyor Crouch, I have the honor to transmit herewith plan showing levels taken of reserved road through portion No. 115, parish of Burrawong, county of Gordon; and of track sought to be opened in lieu thereof by William Ross. Plan herewith.

Both the reserved road and track were reported on by me with letter No. 82-15 of 15th June, but since that time the track in question has been improved by the horse traffic that has been upon it, and with the expenditure of a small sum of money in metalling and placing a culvert at the point shown on plan would be both shorter and easier for all kinds of traffic than the present reserved road.

In both cases the centre of the road has been taken at distances of 1 chain apart. Date of survey, 18th April.

I have, &c.,  
W. F. BUSBY.

Submitted in connection with my letter of the 9th July (83-94).—H. A. CROUCH, Acting District Surveyor.

## No. 9.

Mr. Acting District Surveyor H. A. Crouch to The Surveyor-General.

PARISH ROAD.—Mr. Acting District Surveyor H. A. Crouch to the Surveyor-General, reporting on road through portion No. 115, Francis Lord's 513 acres, parish of Burrawong, county of Gordon.

No. 83-94.

Sir,

District Survey Office, Orange, 9 July, 1883.

In accordance with your instructions of the 6th February (No. 83-98) relative to roads through portion No. 115, Francis Lord's 513 acres, parish of Burrawong, county of Gordon, I have the honor to state that on the 27th ultimo I inspected the road reserved through the portion and the one petitioned for to be opened in lieu, under the Act of Council 4 Wm. IV No. 11, and having interviewed Mr. Keay (manager for the Hon. F. Lord) and Mr. Wm. Ross, would respectfully report:—

2. That the subject is one which appears to have provoked a good deal of local feeling, and as a consequence the importance of decision has been unduly exaggerated.

3. As an evidence of this feeling, it may be mentioned that the wire fencing crossing the road petitioned for has been wilfully cut away, and although still left so, a trench has been cut in a small intersecting gully, and some trees felled, with the intent of rendering the track impracticable.

4. As it appears unnecessary to refer to the various erroneous statements, I therefore turn to the main point for consideration, viz., a comparison of the roads, by which a decision may be arrived at as to the better one for adoption.

5. As it was evident from the different statements made that the gradients of the two roads would be primary elements for attention, I requested Mr. Busby, when in the locality, to take the necessary levels; and this he effected, and plan is transmitted with his letter of the 19th June, 83-47, and in this report that plan will be used for reference.

6. The road reserved by Mr. Licensed-Surveyor Brock in the measurement of portion No. 115 follows generally a track on which the principal traffic has passed for many years. It passes over sound ground throughout, and in traversing westward follows a level spur till within about 50 chains of the Burrawong Creek, when it descends 133 feet in some 27 chains, the steepest grade being about 1 in 8·7 for 6 chains. This is the hill complained of. Mr. Busby shows the steepest grade as 1 in 11·68, but he has allowed for a cutting which is not likely to be undertaken on this road under any circumstances, whilst the rocky nature of the hill would also be an obstacle to such, if otherwise entertained.

7. As will be noted the grade is somewhat severe for heavy traffic, and it would be the more noticeable if the traffic were confined to the width of the road reserved. At the present time the land being open on the northern side, the track veers beyond such width. This difference is such that I consider, if the general direction of the reserved road is approved, a slight deviation for some 5 or 6 chains would be desirable to secure the better ascent.

8. Although, as stated, the gradient is somewhat severe, it is evident from the extent and length of time the road has been used that it has never been considered as a very serious obstacle.

9. The southern side of the reserved road has been fenced with a substantial split top-rail and five-wire fence, and part of the northern side at its western extremity, as shown on plan.

10. The road petitioned for by Mr. Wm. Ross and others diverges from the spur traversed by the reserved road, and follows the siding of another with a gentle slope. The general grade is much easier and the distance 9 chains shorter than the reserved road. It is intersected by a small gully at point A on plan, but such is of slight moment and could be made conveniently passable with a trifling cutting and a set of pipes. I think about 5 chains of this track would be boggy in very wet weather, but it must be pointed out that the heavy traffic, caused by wool and farm produce, does not pass in the winter months.

11. I am of opinion that this track would be traversed by any person with a loaded vehicle in preference to the other.

12. This track has every appearance of comparatively recent formation, and no satisfactory explanation can be given as to why it was not earlier adopted when the whole country was open.

13. Beyond the inconvenience and cost of removing fencing, &c., I am unable to perceive any injury that would be inflicted on Mr. Lord by the adoption of this road.

14. This cost I estimate as follows:—Removal and re-erection of 58 chains, at 2s. per rod, £23 4s.; erection of 1·75 chains (to correspond with portion of fence now on north side, less 9 chains saved by removal), at 5s. per rod, £1 15s.; total, £24 19s.

15. The road is important, as it forms part of the principal line of communication to the head of the Bogan River, Rocky Ponds, Dilga, Bolderogery, &c., with a branch line up the Burrawong Creek, and in my opinion the traffic is sufficient and of prospective increase to justify the above expenditure.

16. In view of the superiority of grade, and the saving in distance, I would respectfully recommend the adoption of the road sought by petitioners.

I have, &c.,

H. A. CROUCH,  
A.D.S.

#### No. 10.

#### The Surveyor-General to The Under Secretary for Mines.

DEVIATION of a road through Francis Lord's land, parish of Burrawong, county Gordon, sought by Wm. Ross and others.

27 July, 1883.

FURTHER investigation into the relative merits of the two roads shows that the track advocated by Dr. Ross, M.P., on behalf of applicants, is generally easier in grade, and shorter by (say) 200 yards than the established road, but these advantages are not so conspicuously great as to leave no hesitation of the propriety of adopting the track, in lieu of the road which was in use for many years before Mr. Lord's land was surveyed by the Crown for sale, which was reserved within that land, and has been fenced substantially by the owner; having in view also the fact that Mr. Lord objects to the substitution of one road for the other, and also that, from the extent of the traffic, and the length of time the road has been in use by the public, the steeper gradient of a part of the road appears never to have been considered as a very serious obstacle.

Beyond the cost of making a gully passable for traffic, there would be the additional cost, say £25, for fencing the proposed deviation, should it be decided to adopt it in lieu of the reserved road.

A. J. STOPPS  
(for Surveyor-General).

Submitted. See 83-280 and 83-386.—H.W., 28/7/83.

Under this report from the Surveyor-General, I will not sanction the opening of this road if Mr. Lord objects to the same being opened, as already one road has been left through his land. If Mr. Lord consents, the old road might be cancelled and the new one opened.—J. P. ABBOTT, 30/7/83.

H. H. Brown & Co., and A. Ross, M.D., M.P., informed, 31/7/83.

## No. 11.

Messrs. H. H. Brown &amp; Co. to The Under Secretary for Mines.

Sir,

21, Exchange Buildings, Pitt-street, 3 August, 1883.

We have the honor to acknowledge your letter of 31st July, 1883, and to advise you that our client, the Honorable Francis Lord, objects to any further road being opened through his land, portion No. 115, of 513 acres, parish of Burrawong, county Gordon. Mr. Lord cannot see that the proposed road would confer upon the public any special benefits, and is assured that it would cause him great inconvenience; therefore he objects to any further roads being opened, and especially the one proposed in this case.

I have, &amp;c.,

H. H. BROWN & CO.,  
Agents for Hon. F. Lord.

Submitted.—G.E.H. (for the Under Secretary), 3/8/93. Seen.—J. P. ABBOTT, 4/8/83. The Surveyor-General.—G.E.H. (for the Under Secretary), B.C., 8/8/83. Put away.—A.J.S., 8/8/83.

## No. 12.

Andrew Ross, Esq., M.D., M.P., to The Honorable the Minister for Mines.

Sir,

Molong, 15 January, 1885.

Enclosed find petition signed by fifty-eight settlers (and who are compelled to travel the road) in favour of the road from Cumnock to Bolrudgey, *via* the hollow at Burrawong, in place of the steep hill. Justice and public right is undeniably on the side of the petitioners, and I trust, therefore, that you will take their application into early and favourable consideration.

I have, &amp;c.,

ANDREW ROSS, M.D. and M.L.A.

Acknowledge.—G.E.H. (for the Under Secretary), 16/1/85. A. Ross, M.D., M.P. Acknowledged, 17/1/85. The Surveyor-General.—G.E.H. (for the Under Secretary), B.C., 19/1/85.

It has been decided on Rds. 82/202-21, Surveyor-General's Office, herewith, not to open the deviation herein referred to without the consent of the owner of the land, which has not been obtained.—A. J. STORPS (for Surveyor-General), 3/2/85.

Submitted.—G.E.H. (for the Under Secretary), 5/2/85. Approved.—J. P. ABBOTT, 10/2/85. A. Ross, M.D., M.P., informed, 12/2/85. The Surveyor-General.—G.E.H. (for the Under Secretary), B.C., 12/2/85.

## [Enclosure.]

The Honorable the Minister for Mines, Sydney,—

Sir,

Cumnock, 29 December, 1884.

We, the undersigned, do most earnestly hope that you will see that the necessary steps are taken to have the road from Buldary to Cumnock, in the vicinity of Burrawong, taken and proclaimed up the hollow of the hill, in place directly up the hill, as now proposed in front of Burrawong residence. The old road (the one advocated by Wm. Ross) is the road we, the settlers in this locality, insist on being proclaimed a public road, as it is the only road that we can travel in safety or with produce to market.

To take the road in any other way will only be to inflict a shameful and perpetual wrong upon the travelling public and every settler who has to get his produce to market. The papers and maps of the road in question are already in your office, and we trust, in justice to the travelling public, that you will see the propriety of at once acceding to the request of these your humble petitioners. Your earliest and immediate attention to the matter, before the road is fenced in, will oblige.

We have, &amp;c.,

Name.	Occupation.	Residence.
James O'Brien .....	Farmer.	Merrangle.
Daniel O'Brien .....	"	Cumnock.
Michael Whittaker .....	"	"
Patrick McGuver.....	"	"

[Here follow fifty-four other signatures.]

## No. 13.

The Under Secretary for Mines to Andrew Ross, Esq., M.D., M.P.

Sir,

Department of Mines, Sydney, 12 February, 1885.

With reference to your letter of the 8th ultimo, forwarding a petition for a road from Cumnock to Bolrudgey, *via* the hollow at Burrawong, in lieu of that part over the steep hill, I have the honor to inform you that it has been decided not to open the deviation applied for without the consent of the owner of the land, which has not been obtained.

I have, &amp;c.,

HARRIE WOOD,  
Under Secretary.

## No. 14.

The District Engineer to The Under Secretary for Public Works and Commissioner for Roads.

*Minute Paper.*

Road, Cumnock to Bolderogery—Deviation at Burrawong Hill.

Department of Public Works, Engineer-in-Chief's Office, Sydney, 4 June, 1898.

THE traffic, which is large and heavy along the scheduled road "Cumnock to Bolderogery," is reported to be considerably hampered by the severe grades on Burrawong Hill. The ruling grade at this place is about 1 in  $7\frac{3}{4}$ , and to reduce in a reasonable degree would entail an unnecessary large outlay. By the construction

construction of the deviation indicated by red line on tracing a ruling grade of 1 in 16½ may be obtained at an expenditure fully warranted by the traffic. This deviation is 10 chains shorter than the existing road, and, owing also to the flatter grades, the cost of maintenance would be considerably reduced.

The owner is anxious for the construction of an improved road, and, it is reported, will make no further claim than to be granted the old road in lieu of that proposed to be taken. It is recommended that the Department of Lands be asked to take into early consideration the desirability of establishing the deviation indicated.

WILLIAM A. SMITH,  
District Engineer.

7th June, 1898.—Under Secretary for Public Works and Commissioner for Roads. The Under Secretary for Lands.—R.P.H. Under Secretary for Works and Commissioner for Roads, B.C., 7 June, 1898.

### No. 15.

#### The Chief Surveyor to The District Surveyor, Orange.

Road, Cumnock to Bolderogery—Suggested deviation at Burrawong Hill, parish of Burrawong, county of Gordon.

2 August, 1898.

THE deviation suggested by the Department of Public Works was agitated for some years back by certain of the residents, but as the then owner of portion 115 (F. Lord) opposed its adoption, it was thought inadvisable under the circumstances to establish it, although it was admittedly a better road than the one in existence. Since then it would appear that portion 115 has changed hands, and it is stated the present owner is anxious for an improved road, and will make no claim for compensation other than for grant of the area contained in the road proposed to be superseded.

These papers are now forwarded to the District Surveyor for report or, at discretion, survey of the deviation referred to.

E. TWYNAM,  
Chief Surveyor.

Received in District Survey Office, Orange, 5th August, 1898. Mr. Surveyor Chapman, for action accordingly. In view of the District Engineer's minute of 6th June, survey would appear advisable. Usual particulars to be reported.—H. A. CROUCH, District Surveyor, 5th August, 1898. Replied to by my letter dated 29th August, No. 98-79.—A. W. CHAPMAN, Surveyor.

[Enclosure.]

Department of Lands, Sydney, 5 August, 1898.  
MR. A. W. CHAPMAN, surveyor, is hereby authorised, under provisions of the "Public Roads Act of 1897," to survey proposed deviation of road at Burrawong Hill, on the Cumnock Bolderogery Road, within portion No. 115, parish of Burrawong, county of Gordon, for which purpose he may enter on alienated lands and Crown lands under lease, as provided in section 27 of the said Act. Notice of survey will be issued by the District Surveyor to proprietors upon whose lands it may be requisite to enter.

E. TWYNAM,  
Chief Surveyor.

### No. 16.

#### Mr. Surveyor A. W. Chapman to The District Surveyor at Orange.

Surveyor A. W. Chapman to the District Surveyor at Orange, transmitting plan of land to be resumed under the Public Roads Act of 1897, in connection with proposed road from Dilga to Cumnock, within John Young's portion No. 115, parish of Burrawong, county of Gordon, land district of Molong.

No. 98-79.

Sir,

Orange, 29 August, 1898.

I have the honor to transmit herewith the plan of the abovementioned road, survey of which was completed by me on the 11th instant, in accordance with your instructions dated 5th August, No. 98-76.

1. This survey includes the centre line marked by the local officer of the Public Works Department as site of proposed deviation in lieu of existing road. It has easier grades, and is about 10 chains shorter than the old road, and the proposed alteration appears to be a desirable one.

2. A width of 1½ chain was adopted, in conformity with existing road and design furnished by the Works Department. It being a stock route, the extra width is desirable in this instance.

3. The owner's consent (in writing) was obtained. The only compensation he asks for is an exchange of roads.

4. The area of road to be resumed is 6¾ acres, and its value as unimproved freehold, at 25s. per acre, is £8 8s. 9d.—6¾ acres ringbarked and suckered, £1; total, £9 8s. 9d.

5. The area of old road which will not be required after deviation is established, and will be available for exchange, is 8¼ acres, and its value as unimproved freehold, at 25s. per acre, is £10 6s. 3d., or 17s. 6d. more than values of land to be resumed. As, however, the surface of old road is beaten, and will not be fit for grazing for some time, the values of respective roads might be considered equal.

6. The country in each case is undulating, stony in parts, and may be considered fair grazing land.

The cost of removing old line of fence on existing road to deviation would be 93 chains at £20 per mile—£23 5s. Mr. Young, however, does not ask for cost of removal of fence, and as he will be materially benefited by the improvements of road and easier grades, an exchange of roads only is considered a fair compensation.

I have, &c.,

A. W. CHAPMAN.

R. 6,075-1,603. Checked and charted.—W. J. ROPER, 3rd November, 1898. Examined.—A. R. GALL, 4th November, 1898. Plan approved.—H. A. CROUCH, District Surveyor, 4th November, 1898. See covering minute.

[Enclosures.]

## [Enclosures.]

19 August, 1898.

I, JOHN YOUNG, of Burrawong, Cumnock, owner of portion No. 115, in the parish of Burrawong, in the county of Gordon, do hereby express my willingness to allow the land marked out for a road by Mr. A. W. Chapman, surveyor, within the portion specified, to be resumed under the Public Roads Act of 1897, and undertake that no claim for compensation shall be made to the Crown in respect thereof, provided the old road which it supersedes is granted me in exchange.

JOHN YOUNG.

Witness—S. P. REYNOLDS.

Forwarded to the District Surveyor at Orange with my letter dated 29th August, No. 98-79.—A. W. CHAPMAN, Surveyor.

SCHEDULE of proposed resumption and of unnecessary roads intended to be closed under the Public Roads Act of 1897. Description of the Land proposed to be resumed and of road deemed to be unnecessary which is to be closed in connection with the intended part of road from Dilga to Cumnock, within John Young's portion 115, parish of Burrawong, county of Gordon.

## Land District of Molong.

A. R. GALL

(pro District Surveyor).

The plan may be catalogued R. 6,075-1,603.—W. WINDER (for the Chief Surveyor), 29/10/98, 1-11, No. 114.

## No. 18.

The District Surveyor at Orange to The Under Secretary for Lands.

## Memorandum.

Part Road from Dilga to Cumnock, parish Burrawong, county Gordon.

4 November, 1898.

1. In pursuance of instructions of 2nd August, No. 98-79, survey has been effected.

The necessity for the deviation was strongly maintained by the District Engineer's minute of 6th June last (enclosed), and it is no doubt much superior to the old road.

2. The deviation is wholly within portion 115 freehold, owned by Mr. John Young, who has given his written consent to resumption without compensation other than that the old road be granted in lieu.

As Mr. Young will be benefited by the establishment of the new road, he does not ask for costs in connection with removal of fences.

The lands for exchange may be considered of equal value.

It is recommended that the road be established as surveyed.

H. A. CROUCH,

District Surveyor.

No. 21.

The Under Secretary for Lands to The Crown Lands Agent at Molong.

Sir,

Department of Lands, Sydney, 21 January, 1899.

I am directed by the Minister for Lands to forward the accompanying copy of a plan of survey of land which it is proposed to resume under the Public Roads Act of 1897, in connection with an intended road, and to request you to post the same outside your office.

A notice also is enclosed, specifying a time within which objections in writing may be lodged with the Minister for Lands, which notice you are requested to post in like manner.

At the expiration of one month from the date such copy of plan and notice were so posted, you will be good enough to return the same to this Department with a statement showing that you have complied with this request.

I have, &c.,

W. HOUSTON,

Under Secretary

(per F.H.W.)

The accompanying heliograph and notice have been exhibited at this office from the 25th January to 25th February, 1899.—F. S. MURRAY, Crown Land Agent, Molong, 25th February, 1899. The Under Secretary for Lands.

No. 22.

The Under Secretary for Lands to Mr. John Young.

Sir,

Department of Lands, Sydney, 21 January, 1899.

I am directed by the Minister for Lands to invite your attention to a notice in the *Government Gazette* of the 18th instant, a copy of which is enclosed, relating to the proposed resumption of land under the Public Roads Act of 1897, within property said to be owned and occupied by you, and proposed closing of an unnecessary road, particulars of which are given in the Schedule appended to the *Gazette* notice referred to.

A copy of the plan of lands to be resumed and closed can be inspected at the office of the Crown Land Agent at Molong.

Should you desire to lodge any objection to the proposed resumption, &c., it should be made in writing, and forwarded to the Minister for Lands within one month from the date of the notice in the *Government Gazette*.

I have, &c.,

W. HOUSTON,

Under Secretary

(per F.H.W.)

[Two Plans.]

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be clearly documented and supported by appropriate evidence. This includes receipts, invoices, and other relevant documents that can be used to verify the accuracy of the records.

In addition, the document highlights the need for regular audits and reviews. By conducting periodic checks, any discrepancies or errors can be identified and corrected promptly. This helps to ensure the integrity and reliability of the financial data being recorded.

Furthermore, the document stresses the importance of transparency and accountability. All transactions should be recorded in a clear and concise manner, making it easy for anyone reviewing the records to understand the details. This level of openness is essential for building trust and maintaining the credibility of the organization.

Finally, the document concludes by reiterating the significance of diligent record-keeping. It serves as a foundation for sound financial management and decision-making. By adhering to these principles, organizations can effectively track their performance and ensure the long-term success of their operations.

## NATIONAL PARK.

(REPORT OF TRUSTEES FROM 1ST JANUARY, 1898, TO 30TH JUNE, 1899.)

*Printed under No. 7 Report from Printing Committee, 26 October, 1899.*

Sir,

The Trustees of the National Park have the honor to present you with their Report from the 1st January, 1898, to the 30th June, 1899.

It is with deep regret that they have to record the death of Mr. Maurice O'Connor, L.R.C.S., &c., Death of a Trustee. one of the Trustees, who always took an active part in the conservation and improvement of the Park.

The Trustees have again much pleasure in stating that the public interest still continues to be visitors. manifested in this magnificent reserve—the number of visitors having greatly increased during the past year.

As stated in previous reports, the rules for prohibiting shooting and net-fishing have been strictly enforced, while the greatest care has been taken in the preservation of the flora, &c.

The principal works and improvements carried out since the last report was furnished are as follows:—

The public pavilion at Audley has been enlarged by an addition of 14 feet to the dining-room, and Audley Pavilion. a covered way has been erected between the kitchen and the main building. Additional bathrooms have also been erected for the convenience of visitors, and water-heaters placed therein. The grounds have also been greatly improved.

A substantial bridge has been constructed across Kangaroo Creek (in place of the one which was Bridge over Kangaroo Creek. washed away by the flood). This bridge is much used by the public, as it gives direct access to the aviary and also to excellent picnic-grounds.

A verandah has been added to the stables at Audley, which will afford shelter and protect the Stables. building from the south and west winds.

It has been found necessary to erect a new cottage near the dam at Audley for one of the New cottages, near dam and Mullin Brook. employees, and another at Mullin Brook for the maintenance-man in charge of Lady Carrington Road.

A large concrete pond has been made for aquatic birds, and a new windmill erected in order to Aviary. ensure a permanent supply of water. The aviary contains a large number of birds, and is much frequented by visitors.

A powder magazine has been erected for the storage of dynamite and other combustibles used for Powder Magazine. blasting purposes.

This portion of the Park still continues to attract a large number of visitors. The buildings have Warumbul. been renovated and kept in a thorough state of repair; an additional room has been erected, and a covered way built connecting the dining-room with the kitchen, and a water-heater fixed in the bathroom for the convenience of boarders. Stone pillars have been built under the approach to the floating jetty, and the garden and grounds greatly improved.

A new cottage has been erected (for the Fisheries Inspector) at Yenabilli, which commands a view Yenabilli. of the various bays in Port Hacking.

The road from the Junction to Loftus (now National Park Station) has been re-formed, about Road, Junction to Audley. twenty (20) chains of it having been ballasted and gravelled and several of the culverts repaired, and the road leading from the Station down to Audley has been greatly improved, ten (10) chains of a narrow part having been cut away and widened to thirty-two (32) feet, and eighteen (18) chains of it ballasted and gravelled.

The Lady Carrington and Waterfall Roads, which are greatly used by the public, have been kept Lady Carrington and Waterfall Roads. in good order; the bridges and culverts have been repaired and made secure, and dangerous places fenced, in order to prevent accident.

- Plantations. About two thousand (2,000) more trees have been planted and are doing well; those previously planted have been attended to and are making rapid growth.
- Clearing, &c. Several of the flats on the river banks have been further cleared and planted with buffalo grass, and twenty-five (25) additional seats have been placed in convenient picnic places for the use of the public.
- Deer Park. The Deer Park has been further improved and cleared of underscrub, and about a mile of substantial fencing of eight (8) wires has been put up in order to prevent the deer (which are increasing in numbers) from trespassing on the adjoining private properties.
- River improvements. The navigable waters both above and below the Dam have been kept free from snags.
- General. The whole of the buildings, roads, &c., throughout the Park have been kept in good order.

CRITCHETT WALKER,

Chairman of the National Park Trust.

The Honorable The Chief Secretary.

*Printed under No. 3 Report from Printing Committee, 22 August, 1899.*

The Director of the Botanic Gardens to The Principal Under Secretary.

Botanic Gardens, Sydney, 24 June, 1899.

Sir,

I have the honor to submit a Report on the Establishments under my control for the year 1898.

The year in question has been a period of drought and consequent anxiety, yet I hope the conditions of the various gardens and parks will be found to be satisfactory.

I have the honor to be,

Sir,

Your obedient Servant,

J. H. MAIDEN,

Director.

## Botanic Gardens.

*Introductory.*—In my last Report I enumerated the Annual Reports that had been issued from this establishment so far as I knew them. The Director of the Royal Gardens at Kew has drawn my attention to the fact that, in addition to those mentioned, reports were issued for 1856, 1857, and 1858. I have been able to procure a copy of the 1856 Report (dated 14th March, 1857); the other two Reports I have not yet seen.

*Arrangement Ground.*—Some of the Natural Order plots in the Monocotyledonous Arrangement Ground have been raised with new soil, and the plants re-arranged. Extensive alterations have taken place here which have rendered this section of enhanced educational value. Following are some further details of the improvements. A much larger area even than was rendered available last year is now devoted to Australian grasses, and about twenty-four (24) species were added to the collection during the year. Alongside these, as a matter of convenience of reference, a large bed of forage plants, or reputed forage plants, has been established. This bed contains specimens of the best forage-plants, together with those which have been from time to time advertised as such, often, it is feared, without accurate reference to their actual merits. The bed of exotic grasses has been largely denuded of duplicates as they have flowered, and a number of species added that were not hitherto in the collection. Additions have been made to the Liliaceæ, chiefly by the addition of indigenous species. Such orders as the Commelyneæ have been removed, as it was considered that the space they occupied could be more profitably employed.

These changes, with re-arrangement of the verges, have enabled me to establish beds for the Junceæ, Restiaceæ, and Cyperaceæ. These orders were practically non-existent in the Arrangement Ground, and very poorly represented in any part of the Garden; but largely through the assistance of Mr. W. Forsyth in collecting suitable plants, these three interesting and important orders are now fairly well represented, and their future improvement is only a matter of time.

Following are the Natural Order beds in the Arrangement Ground at the present time. The numbers preceding each order are those of Bentham and Hooker's *Genera Plantarum*. I may observe that additional orders are grouped together in other parts of the Garden. At the present time the Dicotyledonous Arrangement Ground is separated from that of the Monocotyledons by a considerable interval. I think that undesirable; and inasmuch as it is desired to have additional orders represented in the Arrangement Ground, I desire to take the first opportunity of connecting the two grounds by additional Natural Order beds, made in the narrow lawn which is adjacent to both.

DICOTYLEDONS.

*Other Beds and Borders.*—In the Lower Gardens additional flower-beds have been made, and several borders have been enlarged. The additional space thus obtained has been almost exclusively devoted to florists' flowers. The borders in the "Old or Middle Garden" adjoining the Garden Palace Grounds have been cleared, trenched, new soil added, and prepared for replanting. These beds run north and south and are east of the corrugated iron fence that formerly existed in this situation and which has been referred to under "Boundaries and Fences." This is one of the most prominent and most frequently patrolled areas in the Garden, and in place of the common trees and rampant growing shrubs found here, a selection of choice plants will be put out in the autumn.

*Lawns.*—The alterations to and top-dressing of lawns have been neither numerous nor important during the past year. The chief work under this head has been the top-dressing and levelling of the lawn between the lately-removed boundary between the Palace Garden and the Lower Botanic Gardens. About 200 loads of soil have been used in this work.

*Boundaries and Fences.*—For many years an iron railing separated the Palace Garden from the Lower Garden, its direction being north-east or south-west. This has been removed and re-erected between the Palace Garden and the Middle Garden, its direction being north and south. It has taken the place of an unsightly corrugated iron fence which had remained in position since the International Exhibition of 1879-83, forming an unsightly barrier between the two Gardens. There is now an unbroken vista along the Palace Garden and Lower Garden lawns—a charming view which attracts the attention of all lovers of the beautiful. I have referred to this matter in my Report on the Palace Garden (Garden Palace Grounds).

*Plant-houses.*—No changes have taken place here except some minor repairs, but tenders have been called for very extensive repairs to all our glass-houses, and for new pit and plant frames. An order has been sent to England for an iron hot-house, uniform in design with those of two already in the Garden, while tenders have been called in the Colony for a hot-house to be specially devoted to tropical Australian and Polynesian orchids. I trust, therefore, in my next Report, to have satisfactory information to communicate in regard to our plant-houses.

*New Buildings.*—Packing and potting sheds and store-rooms, together with a kitchen and dining-room for the men, have been erected during the year.

The packing-shed is a continuation of the existing stable buildings in an easterly direction, and a room, 35 feet by 18 feet, is provided, together with a loft for packing material. Great saving of labour and economy of time have resulted through the situation and the arrangement of this building. Parallel with this, and at a distance of 48 feet from it, is the building which contains a lofty potting shed, 23 feet by 13 ft. 6 in.; two store-rooms, 11 feet x 13 ft. 6 in. and 15 feet by 13 ft. 6 in. respectively; a men's kitchen, 11 feet by 13 ft. 6 in., adjoining which is a room, 19 feet by 13 ft. 6 in., which is used as a dining and recreation room. It is plainly but sufficiently furnished, and is much appreciated by the staff. The parallel lines of buildings are joined at their north-easterly and south-easterly corners by a substantial fence, thus forming a quadrangle.

The buildings are of brick, and were erected by Mr. J. Meeks at a contract price of about £600.

*National Herbarium.*—In my last Report I hoped to be able to announce that a suitable building to house the herbarium would be ready for occupation. This has not yet been realised, but the Government Architect has designed a commodious building of handsome design which will be in keeping with its beautiful surroundings. As I write, a tender for its erection has been let; so I trust that my hope of last year may be realised during the present one.

The particulars given on pages 10 and 11 give some idea of the progress made in the acquisition of herbarium specimens. They do not, however, indicate the collections of Australian plants made by my staff and myself and by willing coadjutors all over the Colony. I have been so busy in acquiring and naming specimens, that I have had no time to take a census of them, but I think the number of named species in the herbarium at the end of the year is not less than 15,000.

Messrs.

Messrs. Betche, Camfield and I have been engaged chiefly upon the phanerogams and vascular cryptogams, Mr. W. Forsyth on the mosses, and Mr. A. Grant on the fungi. The lichens and algæ have been put in order. Parliament has been pleased to vote a sum of money for the purchase of the lichen herbarium of the Rev. F. R. M. Wilson of Melbourne; this is, I believe, the finest collection of these plants in Australia. In my next Report I hope to announce that I have taken it over, and I will give some particulars of its contents.

Much attention has been given, during the past year, to the collection and investigation of plants from the Polynesian Islands.

*Botanical Museum.*—This is an adjunct to the herbarium, its contents consisting mainly of specimens which cannot be placed in the herbarium because they are too large, too clumsy, or because they are preserved in liquid. Its arrangement is precisely similar to that of the herbarium—Bentham and Hooker's *Genera Plantarum* being followed as closely as possible.

Besides the specimens to illustrate systematic botany, the Museum contains teratological specimens; garden plants affected by insect-pests (for these I am mainly indebted to the kindness of Mr. W. W. Froggatt, Government Entomologist); photographs and other pictorial illustrations of indigenous and other vegetation; photographs and other portraits of Australian botanists, and of those out of Australia who have identified themselves with Australian botany.

The specimens in the Museum by no means illustrate systematic botany merely, but also morphology and physiology. A special effort has been made to secure teratological specimens.

*Public Lectures.*—Having obtained a number of photographic views of landscapes and of interesting plants in the Botanic Gardens, I caused them, to the number of about ninety, to be made into lantern slides, and used them to illustrate a lecture I had been invited to give at the Y.M.C.A. in August. Opportunity was taken to give the large audience information which could only be given in a personally-conducted tour of the Gardens. The early history and development of the Gardens were dealt with, and information given in regard to the botany and economic uses of some of the plants. I repeated the lecture in September (St. James' Church), and in October (Randwick), and had to decline other invitations because of the demands on my time. If I could I would deliver many of these lectures during the winter months, particularly in the country districts, and thus give country people interesting information in regard to the Gardens of which they are so justly proud, but in regard to which they rarely receive guidance and instruction.

*Departments of Agriculture and Forests.*—I have received a large number of papers from those Departments for report during the year, but as I have made brief Annual Reports to both these Departments, they need not be repeated here.

*Collecting and Botanising Tours.*—Following are the principal journeys I have made:—

1. Mount Kosciusko, January.
2. Jenolan Caves, February and other months.
3. Lord Howe Island, March and April.
4. Melbourne (Herbarium), June.
5. Dubbo and Narromine districts, and Harvey Range, September.
6. Clarence Siding (highest point of Blue Mountains), September.
7. Appin (over some of Allan Cunningham's, and Sir William Macarthur's collecting grounds), September.
8. Shoalhaven gullies, October.
9. King's Table-land and edge of Burragorang Gorge, October.
10. Mount Tomah (Allan Cunningham's collecting ground in 1822), November.
11. Tenterfield district, and Dividing Range as far south as Mount Spiraby, east of Bolivia Station, December.

Some accounts of Trip No. 1 will be found in the *Agricultural Gazette* for July, 1898; of Trip No. 3, in the *Proceedings of the Linnean Society of New South Wales* for 1898.

On Trip No. 9 I was accompanied by Mr. W. Forsyth. In addition to the above, collecting trips were undertaken by Mr. E. Betche to the Walcha district, in December; by Mr. W. Forsyth to Mount Warning and the Tweed River district; by Mr. J. L. Boorman to the Dubbo district in December, and the Wyong district in October and other months; by Mr. J. H. Camfield to many collecting-grounds readily reached from Sydney.

By all members of the staff systematic collecting and recording of botanical observations were undertaken, with the double view of the enrichment of the herbarium and the acquisition of materials for a systematic botanical survey of the Colony.

*Publications.*—Following are the publications made either by me, or in co-operation with others:—

WITH HENRY DEANE, M.A., &c.

1. On the White Ash of Southern New South Wales (*Eucalyptus fraxinoides*, n.sp.)
2. Notes on the Eucalypts of New South Wales, No. 4.

The following species are dealt with:—

- E. piperita*, Sm.
- E. pilularis*, Sm.
- E. acmenoides*, Sieb.
- E. Sieberiana*, F.v.M.
- E. Sieberiana*, var. *Oxleyensis*, nov. var.
- E. Planchoniana*, F.v.M.
- E. eugenioides*, Sieb., var. *nana*, nov. var.

Both papers published in the *Proceedings of the Linnean Society of New South Wales*.

WITH W. S. CAMPBELL, F.L.S.

3. The Flowering Plants and Ferns of New South Wales. Small 4to. Part 7. With four coloured plates. (Government Printer, Sydney.)

WITH ERNST BETCHE.

4. Notes from the Botanic Gardens, Sydney, No. 2.
  - Oxylobium ellipticum*, R. Br. var. *alpinum*, var. nov.
  - Leptospermum lanigerum*, Sm. var. *macrocarpum*, var. nov.
  - Baeckea virgata*, Andr. var. *polyandra*, var. nov.
  - Podolepis longipedata*, A. Cunn., var. *robusta*, var. nov.
  - Also records of *Epacris mucronulata*, R. Br., *Pimelea axiflora*, F.v.M. var. *alpina*, and *Phyllanthus Mitchelli*, Benth., as new for the Colony.
5. Descriptions of four new species of Australian Plants (*Eugenia brachyandra*, *Verticordia darwinioides*, *Rulingia procumbens*, *Rulingia prostrata*).
6. Notes on *Sterculia (Brachychiton) lurida* and *discolor*.

## 7. Notes from the Botanic Gardens, Sydney, No. 3.

*Elaeocarpus longifolius*, C. Moore.  
*Boronia ledifolia*, J. Gay., var. *glabra*, var. nov.  
*Rupicola sprengeliioides*, gen. et sp. nov.  
*Grevillea juniperina*, R. Br.; var. *trinervata*, var. nov.  
*Ricinocarpus Bowmanni*, F.v.M., var. *albus*, var. nov.  
*Potamogeton ochreatus*, Raoul.

The above were published in the *Proceedings of the Linnean Society of New South Wales*.

8. On a new *Myoporum* from South Australia. (*M. refractum*). (*Proceedings of the Royal Society of South Australia*.)

WITH J. H. CAMFIELD.

9. Notes on some Port Jackson Plants (*Banksia*, *Boronia*, *Sprengelia*). (*Proceedings of the Linnean Society of New South Wales*.)

Following are my miscellaneous publications during the year:—

1. A Manual of the Grasses of New South Wales. Royal 8vo., pp. 199, with twenty illustrations. (Government Printer, Sydney.)
2. Some Eucalypts of the New England Table-land. (*Proceedings, Australian Association for the Advancement of Science, VII.*)
3. Notes on a trip to Mount Seaview, Upper Hastings River. (*Proceedings of the Linnean Society of New South Wales, XXIII.*)
4. Observations on the Vegetation of Lord Howe Island. (*Proceedings of the Linnean Society of New South Wales, XXIII.*)

Following is a list of the most important of the miscellaneous articles contributed by me to the *Agricultural Gazette of New South Wales*, and appearing in the 1893 issues of that publication. Some of these articles are illustrated:—

1. Useful Australian Plants, No. 49.—The Pigmy Panic Grass (*Panicum pygmaum*, R. Br.)
2. No. 50.—The Stringybarks of New South Wales.
3. Some Food-plants of the Aborigines.
4. Mount Seaview, and the way thither.
5. A contribution towards a Flora of Mount Kosciusko.
6. A study of the Prickly-pears naturalised in New South Wales.
7. Indigenous Vegetable Drugs (in two parts).
8. A chat about Wattle.
9. Some Exotic Grasses, No. 1.—Prairie Grass (*Bromus unioloides*, H.B. et K.)
10. New South Wales Weeds—Nut Grass (*Cyperus rotundus*, Linn.).

*Guide to Gardens*.—I regret that the Guide to the Gardens is not yet ready for the printer. I have spent much labour upon it during the past year, but it is very time-absorbing, and I have many other claims on my time; yet knowing how useful a guide will be to visitors, I am doing all I can to expedite its issue.

*Sewerage*.—Perhaps the most noteworthy improvement effected during the year has been the system of drainage carried out by the Sewerage Construction Branch of the Public Works Department, which has amply and permanently provided for nearly all the sanitary requirements of the Gardens. These sewers, which comprise a length of about 26 chains, consist of 6-in. diameter stoneware pipe sewers, jointed in cement compo., and laid at suitable depths to intercept the sewerage from the various buildings, stables, lodges, &c., throughout the grounds. The main line rises at the foot of the Palace Garden slopes, near the orchid houses, and follows the course of one of the main avenues in a generally south-easterly direction to near the Botanical Museum, where it receives two branch lines, one draining the upper and the other the lower portions of the Gardens. Thence it continues through the Outer Domain towards Woolloomooloo Bay, into which a temporary outlet pipe has been provided pending the completion of the Woolloomooloo low-level sewer system now in progress, when the drain from the Gardens will be connected with the pumping station in Forbes-street, and the discharge lifted into the ordinary high-level or gravitation sewers.

Every precaution was taken during the work to prevent damage to the plants or disfigurement to the Gardens, and the pipes being nearly altogether laid in tunnel through rock at a considerable depth, do not proclaim their existence in any undue or unpleasant fashion, while the attractions even of Sydney's fairest Paradise will be in no small degree enhanced by a perfect system of drainage. For purposes of inspection, flushing, and ventilation, shafts substantially built in concrete have been provided, while inlet pipes have been left to connect the various buildings with the sewers. The works, which cost some £1,400, are now complete, and have proved thoroughly efficient in action.

*Water Supply*.—Following is the registered supply of water during the year:—

Meter No. 205.—Botanic Gardens. Lower portion; also for birds, &c. ... ..	5,000,000	gallons.
Meter No. 279.—Upper Gardens, near Macquarie-street, Domain ... ..	847,000	"
Meter No. 207.—Garden facing Farm Cove and water-closets ... ..	1,111,000	"
Total ... ..	6,958,000	"

*Roads and Paths*.—Endeavour has been made to keep these in as good order as possible, but I am not satisfied with them yet. Several walks have been regravelled—(e.g.) walk along Azalea border; also that part of Mrs. Macquarie's Road in the Lower Garden which is between the north end of the aviary and the middle gate. The sides of the walk near the large hot-house—which walk was much disturbed by the sewerage operations—have been regruttered with a neat glazed drain of hemispherical section, and edged with turf.

*Labelling*.—This necessary work has been pushed on as well as our resources have permitted, but at present the whole of not even one man's time can be devoted to this important duty.

As regards florist's flowers, the commoner shrubs, and the better-known orchids, an experiment has been made of purchasing several hundreds of cast-zinc labels with raised lettering, and these labels are now on trial.

*Spraying*.—I think it is generally agreed that the Garden is freer from insect pests at the end than at the beginning of the year. This result has been arrived at, not so much by spraying as by destroying diseased plants or portions of them, and by carefully eradicating old worn-out trees and other plants wherever it was possible to spare them. In this way we have not only got rid of a number of unsightly plants, but the conditions of the neighbouring ones have been ameliorated.

We

We have an excellent spraying plant, and have done a little spraying, but not as much as I should have liked to have done, for lack of labour. I look forward to the day when we shall be in a position to continuously employ one man on the work of combating insect pests in the Garden. It would be his duty to spray and adopt other means for dealing with pests, and also, by systematic inspection of the whole of the Garden, to detect, at as early a stage as possible, any fresh insect attacks on a plant. It would also be his duty to critically examine every plant received in the Garden from outside with respect to its freedom from pests. This duty is carried out carefully at the present time, but it should, I think, be the special work of one man.

*Oka (a new vegetable).*—On the 18th January, 1893, the Director of the Royal Gardens at Kew wrote me as follows:—"I am sending you a few tubers of *Oxalis crenata*, the 'Oka' of the Peruvians, which is worth a trial as a vegetable for table. The tubers should be planted 3 feet apart in sandy soil, and treated like a potato. New tubers are formed at the end of the season, and, under favourable conditions, they are 3 inches long, and weigh 2 oz. When lifted they should be exposed to sunlight for two or three days. To cook them, boil for twenty minutes in water containing a pinch of carbonate of soda. They change to a bright amber colour, and if eaten with pepper and salt they are palatable, and of a pleasant flavour."

Five and a half oz. were planted on the 14th March, and 26 oz. were harvested on the 22nd July. This is not a conclusive test as to yield, as of course the tubers were planted out of season, but the test will be continued. As regards the flavour, I may say that I boiled one or two on the 7th October. They remind one both of potato and of a sweet potato, and are decidedly palatable.

*Correspondence.*—Letters registered from 1st January to 31st December, 1898, 4,451, being 632 more than during the corresponding period of 1897.

Letters despatched from 1st January to 31st December, 1898, 3,795, being 523 more than during the corresponding period of 1897.

As usual, the requests for information are of the most varied character, and a reply to a particular letter often involves so much research, and may be of such real public interest, that it would be published for general information did the Botanic Gardens possess a *Bulletin* of its own, as do so many institutions of a similar character. The lack of a special publication is, however, at the present very little felt, as I can address the public on botanical and economic matters in the columns of the *Agricultural Gazette*.

*Seeds received and despatched.*

BOTANIC GARDENS.

## Received.

- Berkeley, California Floral Society—  
20 packets Californian seeds.
- Cape Town. Professor MacOwan, Government Botanist—  
12 packages miscellaneous seeds.
- Columbia, British, Department of Agriculture—  
7 packets miscellaneous seeds.
- New South Wales, Department of Agriculture—  
15 packets miscellaneous seeds.
- Forest Department, New South Wales—  
Seeds of *Acacia implexa*.
- Bell, M., National Park—  
1 packet *Telopea speciosissima*.
- Technological Museum, Sydney—  
Various N. S. Wales seeds.
- Queensland. Colonial Botanist, Brisbane (F. M. Bailey)—  
Fruits of *Costus lamingtonii* and *Fragaria obovata*, var. *papuanum*, from New Guinea.

## Despatched.

- Lausanne, Switzerland—  
55 packets N. S. Wales seeds.
- Lemberg, Austria—  
46 packets N. S. Wales seeds.
- Lille, France—  
45 packets N. S. Wales seeds.
- Lyons, France—  
53 packets N. S. Wales seeds.
- Madrid—  
107 packets N. S. Wales seeds.
- Montpellier, France—  
97 packets N. S. Wales seeds.
- Melbourne—  
47 packets N. S. Wales seeds.
- Nantes, France—  
55 packets N. S. Wales seeds.
- Naples, Italy—  
49 packets N. S. Wales seeds.
- Natal (Durban)—  
164 packets seeds from Australia and other countries.
- Noumea, New Caledonia, Jardin d'Essai—  
103 packets N. S. Wales seeds.
- Odessa, Russia—  
49 packets N. S. Wales seeds.
- Oxford, England—  
63 packets N. S. Wales seeds.
- Palermo, Sicily—  
75 packets N. S. Wales seeds.
- Reunion—  
4 packets N. S. Wales seeds.
- Rome—  
129 packets N. S. Wales seeds.
- Saharanpur, India—  
3 packets N. S. Wales seeds.
- Siena, Italy—  
64 packets N. S. Wales seeds.
- Singapore—  
3 packets N. S. Wales seeds.
- St. Paulo, Brazil—  
47 packets N. S. Wales seeds.
- St. Petersburg, Russia—  
106 packets N. S. Wales seeds.
- Stockholm, Sweden—  
43 packets N. S. Wales plants.
- Tiflis, Caucasus—  
53 packets N. S. Wales seeds.
- Trieste, Austria—  
43 packets N. S. Wales seeds.
- Utrecht, Holland—  
53 packets N.S. Wales seeds.

## OTHER BOTANICAL ESTABLISHMENTS.

## Despatched.

- Berkely, California, Floral Society—  
39 packets N. S. Wales seeds.
- Cape Town Department of Agriculture—  
1 packet *Trigonella suavissima* seed.
- France, Consul-General for, Sydney—  
29 packets grass and fodder plants.
- Haarlem, Holland; Kolonial Museum—  
23 packets N. S. Wales seeds.
- N. S. Wales, Department of Agriculture—  
Seeds of *Trigonella suavissima* to the various experimental farms.
- Technological Museum, Sydney—  
Fruits of Lord Howe Island plant.
- Norway and Sweden, Sydney, Consul for—  
Seeds of six species N.S. Wales *Coniferae*.
- India, the Director of Land Records, N.W. Provinces and Oudh—  
12 packets grass seeds.
- South Australian Agricultural Bureau, Adelaide—  
Seeds of *Laurus camphora*.  
Seeds of *Paspalum dilatatum*.
- S. Australia, National Park, Belair, The Trustees—  
8 packets N. S. Wales seeds.

## Received.

## Despatched.

United States America, Department of Agriculture, Washington—  
193 packets N. S. Wales and other seeds, and 20 packets grass and fodder seeds.  
Vienna Horticultural Society—  
9 packets N. S. Wales seeds.

## FIRMS AND PRIVATE INDIVIDUALS.

## Received.

## Despatched.

- Barling, J., Darlinghurst—  
1 packet seed, *Passiflora Herbertiana*.
- Betts, C. M., Gladesville—  
1 packet seed of a *Spondias*.
- Brown, Rev. Dr. George, 318, George-street—  
2 pods of *Theobroma Cacao* from Samoa.
- Buyzman, Dr., Middleburg, Holland—  
10 packets grass seeds.  
33 packets miscellaneous seeds.
- Carter, Charles, King-street, Sydney,  
5 packets seeds.
- Craig, Rev. J. H., Norton-street, Leichhardt—  
Seeds of *Abrus precatorius*.
- Cullen, Hon. W. P., M.L.C., Mosman—  
6 packets native seeds.
- Cundall, C. H., Manila, Philippine Islands—  
1 packet seed, *Myrmecodia* sp.  
Seeds of three species of palms.
- Fardell, H. L., Kumanota, Japan—  
5 packets miscellaneous seeds
- Ferguson & Co., 19 Royal Arcade—  
Collection of pansy seeds.
- Greenlaw, Mrs., The Kiosk, Government Domain—  
1 bulb of a liliaceous plant, and seeds of five ornamental plants cultivated in New Zealand.
- Griffiths, G. H., 369, George-street—  
1 packet seed, *Arucaria Bivilli*.
- Herbe and Wulle, Messrs., Naples—  
16 packets miscellaneous seeds.
- King, Miss, Homebush  
1 packet seed.
- Lascelles, A., Neutral Bay—  
28 packets of Indian seeds.
- Little, Robert, & Co., Sussex-street—  
1 packet palm seeds from South Sea Islands.
- Menzel, O. E., South Australia—  
23 packets miscellaneous seeds.  
25 packets Australian seeds.
- Moore, F. H., 7, Gresham-street—  
Pods of *Acacia Barnesiana*.  
Seeds of *Acacia* sp.  
Flower-heads of a Composite.  
Seeds of *Trigonella suavissima*.  
A few pods of 7-year old beans, from the Gascoigne District, West Australia.  
Fruits and seeds of several West Australian plants.
- Norton, Hon. Dr., Sydney—  
3 packets seeds.
- Patterson, George, Queensland—  
1 packet seed, *Leucadendron argenteum*.
- Perez, G. V., Teneriffe—  
1 bag of *Tagosaste* (*Cytisus proliferus*) seed.
- Rabe, J., D.D.S., San Francisco—  
12 packets miscellaneous seeds.
- Robinson, Isaac, Norfolk Island—  
1 bag *Areca Baucri* seed.  
3 bags *Arucaria excelsa* seed.
- Sander, F. & Co., St. Albans, England—  
22 packets miscellaneous seeds.
- Zouch, C. G., Sydney—  
12 packets miscellaneous seeds.
- Buyzman, Dr., Middleburg, Holland—  
18 packets N. S. Wales seeds.
- Cullen, Hon. W. P., M.L.C., Mosman—  
3 packets N. S. Wales seeds.
- Cundall, C. H., Manila, Philippine Islands—  
32 packets N. S. Wales seeds.
- Dall, James, Collingwood, New Zealand—  
Seeds of *Astrebla pectinata* and *Tricholena rosea*.
- Edwards, R. S., Cornuna, Canada—  
Seeds of *Telopoa speciosissima*.
- Fardell, H. L., Kumanota, Japan—  
6 packets N. S. Wales seeds.
- Geissler, Max, Nurseryman, Görlitz, Silesia, Germany—  
50 packets N. S. Wales seeds.
- Harvey, R. Inglis, Manly—  
10 packets salt-bush seed.  
1 packet tree-lucerne seed.
- Kerkhoven, A. E., Java—  
30 packets N. S. Wales Eucalyptus seed.  
6 " " " Acacia seeds.  
18 packets miscellaneous N. S. Wales seeds.
- Lascelles, A., Neutral Bay—  
Seeds of *Doryanthes Palmeri*.
- Longe, Rev. F. E. G., Suffolk, England  
14 packets N. S. Wales seeds.
- Menzel, O. E., South Australia—  
30 packets N. S. Wales seeds.
- Perez, G. V., Teneriffe—  
11 packets N. S. Wales Acacia seeds.
- Runge, A., Samatra—  
17 packets N. S. Wales seeds.
- Sander, F. & Co., St. Albans, England—  
8 packets miscellaneous seeds.
- Steel, Thomas, care of Colonial Sugar Refining Company, Sydney—  
Box ripe fruits of *Ficus* for experimental purposes.
- Tate, W. C., Oporto, Portugal—  
22 packets N. S. Wales seeds.
- Walker, W. H., Tenterfield—  
1 packet *Trigonella suavissima* seed.  
1 " " *Ammophila arundinacea* seed.
- Wellford, Dr., Selangor, Straits Settlements—  
17 packets N. S. Wales seeds.
- Zouch, C. G., Sydney—  
1 packet *Trigonella suavissima* seed.

## Living Plants Received and Despatched.

Received.	Despatched.
Adelaide, Botanic Gardens— Collection of succulents and willows.	
Brisbane, Botanic Gardens— 3 plants <i>Dendrobium speciosum</i> , var. <i>Hilli</i> .	Bendigo, Public Gardens— Piece of Lace-plant ( <i>Onc. randra</i> ).
Colonial Sugar Refining Co., Sydney— Fiji plants for experimental purposes.	Bergin, Mr., Sydney— Roots of ramie.
Deane, Henry, M.A., Engineer-in-Chief for Railways, Sydney— Cuttings of <i>Thunbergia coccinea</i> .	
Dublin (Glasnevin) Royal Botanic Gardens— Bulbs of 18 varieties <i>Nerine</i> .	
Fiji, Botanic Station— 1 case <i>Piper methysticum</i> .	Fiji, Botanic Station— 15 miscellaneous plants.
Gelding, John, Sydney— 6 varieties of <i>Canna</i> .	
Gregson, Jesse, Newcastle— 1 case <i>Dendrobium Kingianum</i> , and collections of other native orchids.	
Hore, Captain, s.s. "John Williams"— 15 miscellaneous plants from South Sea Islands.	
	Kanematsu, F., 8, O'Connell-street, Sydney, for the Imperia Gardens, Tokyo, Japan— 25 species of orchids.
	Kerkhoven, A. E., Java— 41 miscellaneous plants.
	Kew, Royal Gardens— 22 miscellaneous plants.
Lascelles, A., Neutral Bay— 1 plant, <i>Indigofera pulchella</i> .	
McManamey, H., Mortlake— 4 plants, <i>Nepenthes Kennedyi</i> , from Possession Island, Torres Straits—	
Melbourne, Botanic Gardens— Living specimens of <i>Opuntia</i> .	
Natal (Durban) Botanic Gardens— A specially valuable collection of 214 miscellaneous plants and 22 bulbs.	
Noumea, New Caledonia, Jardin d'Essai— 3 plants <i>Jatropha manihot</i> .	Noumea, New Caledonia, Jardin d'Essai— 2 cases, 6 bundles plants.
70 " <i>Aracaria Cookii</i> .	
Queensland Colonial Botanist, Brisbane (F. M. Bailey)— Ginger Rhizomes from New Guinea Rhizomes of <i>Nymphaea Lotus</i> (white variety.)	
	Robinson, Isaac, Norfolk Island— 48 miscellaneous plants.
Rockhampton, Botanic Gardens— 30 plants <i>Nymphaea gigantea</i> .	
Sander, F. and Co., St. Albans, Herts, England— 109 miscellaneous plants and 180 bulbs.	Sander, F. and Co., St. Albans, Herts, England— 18 miscellaneous plants.
Seligman, Dr., London— 1 plant <i>Myrmecodia armata</i> , and 2 tubers from Saibac Island, collected by the donor.	
Smith, Mrs., Goderich, Bayswater Road, Sydney— Valuable collection of Orchids, &c., as per list:—	
2 <i>Brassia Lawrenceana</i> .	
28 <i>Calanthe</i> var.	
13 <i>Cattleya</i> var.	
1 <i>Calogyne cristata</i> .	
1 <i>Calogyne pauciflora</i> .	
1 <i>Cymbidium pendulum</i> .	
1 <i>Cypripedium Harrisianum</i> .	
1 " <i>grande</i> ( <i>selenipedium</i> .)	
2 " <i>Spicerianum</i> .	
1 " <i>calophyllum</i> .	
1 " <i>longifolium</i> ( <i>selenipedium</i> .)	
" " (Red " ".)	
1 " <i>Scdeni</i> ( <i>selenipedium</i> .)	
1 " <i>seltigerum</i> .	
1 " <i>Lecanum</i> , var. <i>superbum</i> .	
1 " <i>Chamberlainianum</i> .	
1 " <i>villosum</i> .	
1 " <i>insigne</i> , var. <i>maulei</i> .	
1 " <i>marmorophyllum</i> .	
1 " <i>barbatum</i> .	
1 " " var. <i>nigrum</i> .	
1 " <i>Lawrenceanum</i> .	
1 " <i>bellatulum</i> .	
2 " unnamed.	
2) <i>Dendrobium nobile</i> .	
1 " <i>imbriatum oculatum</i> .	
3 " <i>bigibbum</i> .	
1 " <i>primulinum</i> .	
5 " <i>densiflorum</i> .	
1 " <i>Farmeri</i> .	
2 " <i>untatum</i> .	
1 " <i>Devonianum</i> .	
1 " <i>moschatum</i> .	
1 " <i>Brymerianum</i> .	
1 " <i>Johannis</i> .	

Received.	Despatched.
1 <i>Dendrobium cretaceum</i> .	
2     " <i>aggregatum</i> .	
1     " <i>chrysanthum</i> .	
1     " <i>albo-sanguineum</i> .	
1     " <i>Parishii</i> .	
2     " <i>Pierardi</i> .	
1     " <i>sp.</i>	
2 <i>Eria sp.</i>	
4 <i>Lolia var.</i>	
2 <i>Maxillaria Harrisonii</i> .	
2 <i>Phaius maculata</i> .	
1     " <i>assamica</i> .	
1 <i>Peristeria elata</i> .	
4 <i>Saccolabium sp.</i>	
1 <i>Vanda gigantea</i> .	
1 <i>Phalaenopsis Schilleriana</i> .	
1 <i>Caladium Verdi</i> .	
1     " <i>Raymond Lemoinier</i>	
1     " <i>unnamed</i> .	
1 <i>Croton sp.</i>	
1 <i>Cordyline Knausii</i> .	
1     " <i>Knoxii</i> .	
1 <i>Torenia</i> .	
8 <i>Gesnera</i> seedlings.	
1 <i>Davallia sp.</i>	
2 <i>Microlepia hirta cristata</i> .	
1 <i>Aspidium sp.</i>	
4 <i>Gaillardia</i> , James Kelway.	
2 <i>Hemerocallis</i> .	
1 <i>Primula</i> .	
1 <i>Aurum</i> .	
1 <i>Richardia</i> , white.	
1 <i>Rhapis humilis</i> .	
Sydney Technological Museum, (R. T. Baker, Curator.)	Sydney Technical College. Fresh specimens for the Botany class, as required.
1 plant <i>Acianthus fornicatus</i> .	
1     " <i>Corysanthes bicarata</i> .	
2     " <i>Cheilanthes tenuifolia</i> .	
3 tubers <i>Caladenia clavigera</i> .	
4 <i>Pterostylis sp.</i>	
Tait, W. C. Oporto, Portugal.	
Bulbs of mixed wild Portuguese Narcissus.	
<i>Pseudo-narcissus</i> (var. <i>Garret</i> .)	
<i>Triandrus Johnstoni</i> .	
Natural Hybrid.	
Thompson Mr., care of Rev. Mr. Plume, Hornsby Junction—	
14 small native orchids.	
Wharton, Mrs., Yokohama, Japan—	
2 bulbs each of 17 species Japanese lilies.	
Westmacott, Mr., Macquarie-street—	
1 tuber from Vavau, Tonga.	
	Whitelaw, Thomas, Melbourne—
	Cuttings of <i>Alternanthera amara</i> .
	"   " <i>versicolor</i> .
	Whitelegge, Thomas, Sydney—
	56 miscellaneous plants.

*Living Plants despatched from 1st June to 31st December, 1898.*

Public Schools, number of consignments . . . . .	299
Roman Catholic Churches, number of consignments . . . . .	26
Roman Catholic Convents, number of consignments . . . . .	23
Church of England Churches, number of consignments . . . . .	20

Union Churches, number of consignments . . . . .	3
Parks and Recreation Reserves, number of consignments . . . . .	58
Goals, Court-houses, and Police Lock-ups, number of consignments . . . . .	36
Railway Stations, number of consignments . . . . .	35
Municipal Councils and Public Streets, number of consignments . . . . .	45
Post Offices, number of consignments . . . . .	18
Hospitals, number of consignments . . . . .	14
Cemeteries, number of consignments . . . . .	2
Miscellaneous, including Experimental Farms, Sewage Farms, Military Stations, also a few private persons by way of exchange, number of consignments . . . . .	21
Total . . . . .	624
Made up as follows :—	
Trees . . . . .	23,845
Shrubs . . . . .	19,074
Miscellaneous plants . . . . .	2,720
Total . . . . .	45,639

Plants distributed for public purposes.

*Herbarium Specimens exchanged.*

Received.	Despatched.
Australian Museum, Sydney—	
65 species of Lichens and Algae from Mount Kosciusko, Port Jackson, and New Zealand.	
37 species Phanerogams and Ferns from Blue Mountains, N. S. Wales, Lord Howe Island, and China.	
2 Cones, branches, and timber of <i>Erromanga (Dammara)</i> Pine, New Hebrides.	
Tree blazed with inscription :	

*Received.*

- Baagoe, J., Næstved, Denmark—  
30 species of European *Potamogetons*.
- Biltmore Herbarium, North Carolina, U.S.A.—  
500 species North American plants.
- Buitenzorg, Java Botanic Gardens—  
102 Carpological specimens, chiefly of tropical plants.
- Berkeley, California, University of California—  
472 specimens of North American plants.
- Cape Town, Government Botanist—  
230 species South African plants. (Professor MacOwan's contributions contain many of his numbered types, so that our Cape herbarium may be of standard record, and usable with the published flora.)
- Copineau, Mons. C., and Mouillefarine, Mons. M., France—  
839 species of European plants.
- D'Alton, St. Elroy, Nhill, Victoria—  
16 species of rare Victorian plants (mallee country).
- Menzel, O. E., S. Australia—  
81 species of exotics and South Australian plants.  
100 species of North American plants.
- Queensland Colonial Botanist, Brisbane—  
394 species of Queensland plants.
- Rodway, L., Hobart—  
120 species of Tasmanian plants.
- Technological Museum, Sydney—  
133 herbarium specimens.  
48 species fruits.
- Tisdall, H. T., Melbourne—  
25 species of Victorian algae.
- Victoria, Conservator of Forests, Melbourne—  
1 case cones and seeds.
- Victoria, National Herbarium, Melbourne—  
Miscellaneous Australian plants.
- Vienna, Naturhistorisches Hof Museum—  
100 species of Cryptogams.
- Walter, C., Melbourne—  
603 specimens of Victorian plants.  
180 specimens of West Australian plants.
- Whitelegge, Thomas, Sydney—  
60 species of N. S. Wales Hepaticæ, including types of new species described by Carrington, Pearson, and Stephani; also plates and sheets of illustrations of new Hepaticæ.

*Despatched.*

- Baagoe, J., Næstved, Denmark—  
Australian species of *Potamogeton*.
- Berlin Botanical Museum—  
429 species of Australian plants.
- Biltmore Herbarium, North Carolina, U.S.A.—  
434 species of Australian plants.
- Berkeley, California, University of California—  
34 species of *Eucalyptus*.  
71 species of *Acacia*.
- Cape Town, Government Botanist—  
416 species of Australian plants.
- Cape Colony, Conservator of Forests (Eastern Division)—  
19 species of N. S. Wales *Eucalyptus*.
- Cape Colony, Conservator of Forests (Western Division)—  
19 species of N. S. Wales *Eucalyptus*.
- Copineau, Mons. C., and Mouillefarine, Mons. M., France—  
780 species of Australian plants.
- D'Alton, St. Elroy, Nhill, Victoria—  
36 species of N. S. Wales plants.
- Darwin, Prof. Francis, Cambridge, England—  
9 botanical specimens.
- Heckel, Prof. E., Institut Coloniale, Marseille, France—  
100 species of N. S. Wales plants.
- Herb and Wulle, Messrs., Naples, Italy—  
20 species of Australian fruits and seeds.
- Kew Royal Gardens—  
Several species of Lord Howe Island and rare N. S. Wales plants.
- Menzel, O. E., S. Australia—  
181 species of N. S. Wales plants.
- Natal (Durban), Botanic Gardens—  
100 species of N. S. Wales plants.
- Queensland, Colonial Botanist, Brisbane—  
33 species of N. S. Wales *Eucalyptus*.
- Rodway, L., Hobart—  
148 species N. S. Wales plants.
- Technological Museum, Sydney—  
43 herbarium specimens.
- Tisdall, H. T., Melbourne—  
48 species of Australian and African Proteaceæ.  
39 species of Australian and exotic Rutaceæ.
- United States, Department of Agriculture, Washington, D.C., U.S.A.—  
Parcel of fungi.
- Victoria, Conservator of Forests, Melbourne—  
63 species of fruits and cones, chiefly Australian.
- Victoria, National Herbarium, Melbourne—  
Miscellaneous plants, chiefly exotics.
- Vienna, Naturhistorisches Hof Museum—  
100 species N. S. Wales plants.  
34 species N. S. Wales *Eucalyptus* and certain Cryptogams.
- Walter, C., Melbourne—  
210 specimens of N. S. Wales plants.
- Western Australia Bureau of Agriculture, Perth—  
100 specimens of weeds naturalised in Australia.  
200 species N. S. Wales plants.

*Herbarium specimens presented.*—In addition to the very large number of correspondents of the Botanic Gardens who send specimens for identification, following is a list of the principal contributors to the herbarium during the past year :—

- Alkin, Rev. T. V., Campbelltown.
- Brown, F. H., Port Moresby, New Guinea—  
125 specimens of plants from the Astralobe Range.
- Campbell, J. F., Walcha.
- Gregson, Jesse, Mount Wilson.
- Griffiths Bros., George-street—  
Samples of Kola Nut.
- Groom, Miss, Sydney—  
Specimens of Tasmanian plants.
- Hamilton, A. G., Mount Kembla.
- Hore, Captain, a.s. "John Williams"—  
Coral blocks, with mosses, from Funafuti and Raratonga.
- Palmer, E. G. W., Lawson.
- Rumsey, H. J., Barber's Creek.

*Herbarium specimens purchased.*

250 specimens of 40 species, also 447 species of South Australian plants.  
Six bound volumes of Harvey's Australian seaweeds, containing 493 species determined by him.  
1,162 species of rare South African plants (Schlechter's collections).

*Publications acquired by gift.*

Report of the Government Botanist and Curator  
of the Cape Government Herbarium for 1897.

(From the Government Botanist.)

UNITED STATES DEPARTMENT OF AGRICULTURE.

Publications of the Division of Botany as follows:—

Circular No.—

1. Hungarian broom grass.
2. Nut grass.
3. The Russian thistle. (Revised edition.)
5. Giant knotweed or sachaline.
6. Standards of the purity and vitality of agricultural seeds.
7. Tumbling mustard. (Second edition.)
8. Crimson clover hair balls.
9. Wild garlic (*Allium vineale*, L.)
10. Three new weeds of the mustard family.
11. The vitality of seed treated with carbon bisulphide.
12. The camphor tree (*Cinnamomum camphora*, Nees and Eberm.). (Revised.)
13. Observations of recent cases of mushroom poisoning in the district of Columbia.
14. Dadders infesting clover and alfalfa.
15. Horse-radish.

Bulletin No.—

16. American ginseng: its commercial history, protection, and cultivation. (By G. V. Nash.)
  20. Principal poisonous plants of the United States. (By V. K. Chesnut.)
- Contributions from the U.S. National Herbarium, Vol. iii,  
No. 7, issued 1st April, 1896. (By J. M. Coulter.)

Division of Agrostology, as follows:—

Circular No.—

1. A note on experimental grass gardens.
  2. Hairy vetch, sand vetch, or Russian vetch (*Vicia villosa*).
  3. Saltbushes.
  4. The renewing of worn-out native prairie pastures.
  5. Cowpeas. (Revised edition.)
  6. The Cultivated Vetches. (Revised edition.)
- Grass gardens. (Reprint from Year Book, U.S. Department of Agriculture, 1895. (By F. Lamson-Scribner.)

Bulletin:—

- No. 1. Notes on grasses and forage plants of the South Eastern States. (By Thomas H. Kearney.)
  5. A report upon the grasses and forage plants of the Rocky Mountain Region. (By P. A. Rydberg and C. L. Shear.)
  6. Grasses and forage plants of the Dakotas. (By Thomas A. Williams.)
  8. Studies on American Grasses:—
    - (1.) New or little known grasses. (By F. Lamson-Scribner.)
    - (2.) Leaf structure of *Journa* and *Eragrostis obtusiflora*. (By Miss E. L. Smith.)
  9. Notes on grasses and forage plants of Iowa, Nebraska, and Colorado. (By L. H. Pammel.)
- Forage conditions of the Prairie Regions. Reprint from Year-book of U. S. Department of Agriculture, 1895. (By Jacob G. Smith.)
- Timothy in the Prairie Region. Reprint from the Year-book of U. S. Department of Agriculture, 1896. (By Thomas A. Williams.)

Publications of the Division of Vegetable Phytology and Pathology, as follows:—

Hybrids and their utilization in plant breeding. Reprint from Year-book of U. S. Department of Agriculture, 1897. (By Walter T. Swingle and H. J. Webber.)

Bulletin No. :—

1. Additional evidence of the communicability of peach yellow and peach rosette. (By Edwin F. Smith, 1891.)
2. The California vine disease. A preliminary report of investigation. (By Newton B. Pierce, 1892.)
3. Report of the experiments made in the treatment of plant diseases. (By B. T. Galloway, 1893.)
4. Experiments with fertilizers for the prevention and cure of peach yellows, 1891-92. (By Erwin F. Smith.)
5. The pollination of pear flowers. (By Merton B. Waite, 1895.)
15. Some edible and poisonous fungi. (By Dr. W. G. Farlow.)

Publications of the Division of Fibre Investigations, as follows:—

Report No. 8.—A report on the culture of hemp and jute in the United States, with statements concerning the practice in foreign countries, the preparation of the fibre for market, and remarks on the machine question. (By C. R. Dodge, 1896.)

Bulletin No. 10. Report on flax culture for seed and fibre in Europe and America. (By C. R. Dodge.) 1898.

Special Report on the Beet Industry in the United States. 1898.

Publications of the Division of Forestry, as follows:—

Circular No.—

10. Suggestions to the Lumbermen of the United States in behalf of more rational forest management.
11. Facts and figures regarding our forest resources, briefly stated.
12. Southern Pine—Mechanical and physical properties.
13. Forest-fire Legislation in the United States.
14. Is protection against forest fires practicable?
15. Summary of mechanical tests on thirty-two species of American woods.
16. Age of trees and time of blazing determined by annual rings.
17. Recent Legislation on State Forestry Commissions and Forest Reserves. (Revised edition.)
18. Progress in timber physics. (Influence in size, &c.)
19. Progress in timber physics. (Bald Cypress.)
20. Increasing the durability of timbers.
21. Practical assistance to farmers, lumbermen, and others in handling forest lands.

Bulletin No. 13 (Revised edition)—The timber pines of the Southern United States. By Charles Mohr; together with a discussion of the structure of their wood. (By Filibert Roth.)

Publications of the Division of Pomology, as follows:—

Circular No.—

1. Nut culture.
  2. Prune culture in the Pacific North West. (Revised.)
  3. Notes on peach culture. (Revised.) Reprinted from Report of the Pomologist for 1894.
- Report of the Pomologist for 1895. (By S. B. Heighes.)
- Nut culture in the United States, embracing native and introduced species. 1896.
- Bulletin No. 5—Fig culture. Edible figs: their culture and curing. (By Gustav Eisen.)
- Fig culture in the Gulf States. (By Frank S. Earle.)

Publications of the Division of Publications, as follows:—

Bulletin No. 4.—Index to authors, with titles of their publications appearing in the documents of the U.S. Department of Agriculture, 1841 to 1897. (By G. F. Thompson.) 1898.

Office of Experiment Stations:—

- Miscellaneous Bulletin No. 1—Proceedings of the second Annual Convention of the Association of American Agricultural Colleges and Experiment Stations, held at Knoxville, Tenn., 1st, 2nd, and 3rd January, 1889.
- Experiment Station Bulletin No. 7—Proceedings of the Fifth Annual Convention of the Association of American Agricultural Colleges and Experiment Stations, held at Washington, D.C., 12th to 18th August, 1891.
- Experiment Station Bulletin No. 11—A Compilation of Analyses of American Feeding Stuffs. (By E. H. Jenkins and A. L. Winton.)
- Bulletin No. 16—Proceedings of the Sixth Annual Convention of the Association of American Agricultural Colleges and Experiment Stations, held at New Orleans, Louisiana, 9th to 15th November, 1892.
- Bulletin No. 33.
- Experiment Station Record—Vol. 5, Nos. i, xi, and xii; Vol. 7, Nos. xi and xii; Vol. 8, Nos. i to xii; Vol. 9, Nos. i to xi.
- Album of Agricultural Graphics.—Value per acre of crops of the United States, based on results of official statistical investigation. (By J. R. Dodge, Statistician.) 1891.

Publications of the Division of Soils as follows:—

- Some interesting soil problems. (By Milton Whitney.) Reprint from the Year-book of Department of Agriculture. 1897.
- Bulletin No. 11. Tobacco soils of the United States: A preliminary report upon the soils of the principal tobacco districts. (By Milton Whitney.)
- Farmer's Bulletin.—
- No. 6. Tobacco: Instructions for its cultivating and curing. (By J. M. Estea.)
  11. The Rape-plant: its history, culture, and uses. (By Thomas Shaw.)
  14. Fertilisers for cotton. (By J. M. M'Bryde.)
  15. Some destructive potato diseases. What they are, and how to prevent them. (By B. T. Galloway.)
  16. Leguminous plants for green manuring and for feeding. (By E. W. Allen.)
  17. Peach yellows and peach rosette. (By Erwin F. Smith.)
  18. Forage plants for the south. (By S. M. Tracy.)

19. Important insecticides : directions for their preparation and use. (Third revised edition.) (By C. L. Marlatt.)
  20. Washed soils : how to prevent and reclaim them.
  21. Barnyard manure. (By W. H. Beal.)
  22. The feeding of farm animals. (By E. W. Allen.)
  23. Foods : nutritive value and cost. (By W. O. Atwater.)
  24. Hog cholera and swine plague. (By D. F. Salmon.)
  25. Peanuts : culture and uses. (By R. B. Handy.)
  26. Sweet potatoes : culture and uses. (By J. F. Duggar.)
  27. Flax for seed and fiber in the United States. (By C. R. Dodge.)
  28. Weeds : and how to kill them. (By L. H. Dewey.)
  29. Souring of milk, and other changes in milk products. (Revision of Bulletin, No. 9.)
  30. Grape diseases on the Pacific Coast. (By Newton B. Pierce.)
  31. Alfalfa, or lucerna. (By Jared G. Smith.)
  32. Silos and silage. (By Charles S. Plumb.)
  33. Peach growing for market. (By Erwin F. Smith.)
  34. Meats : composition and cooking. (By C. D. Woods.)
  35. Potato culture. (By J. F. Duggar.)
  36. Cotton seed and its products. (Condensed from original articles by members of the office force and others.)
  37. Kaffir corn : characteristics, culture, and uses. (By G. C. Georgeson.)
  38. Spraying for fruit diseases. (By B. T. Galloway.)
  39. Onion culture. (By R. L. Watts.)
  40. Farm drainage. (By C. G. Elliott.)
  41. Fowls : care and feeding. (By G. C. Watson.)
  42. Facts about milk. (By R. A. Pearson.)
  43. Sewage disposal on the farm, and the protection of drinking water. (By Theobald Smith.)
  44. Commercial fertilizers : composition and use. (By E. R. Voorhees.)
  45. Some insects injurious to stored grain. (By F. H. Chittenden.)
  46. Irrigation in humid climates. (By F. H. King.)
  47. Insects affecting the cotton plant. (By L. O. Howard.)
  48. The manuring of cotton. (Condensed from an article by H. C. White in Bulletin No. 33 of the office of Experiment Stations.)
  49. Sheep-feeding. (By John A. Craig.)
  50. Sorghum as a forage crop. (By T. A. Williams.)
  51. Standard varieties of chickens. (By G. E. Howard.)
  52. The sugar beet : culture, seed development, manufacture, and statistics. (By H. W. Wiley.)
  53. How to grow mushrooms. (By William Falconer.)
  56. Experiment station work. i. (Prepared in the office of Experiment stations.)
  57. Butter-making on the farm. (By C. P. Goodrich.)
  58. (1) The soy bean as a forage crop. (By T. A. Williams.)  
(2) Soy beans as food for man. (By C. F. Langworthy.)
  59. Bee keeping. (By Frank Benton.)
  60. Methods of curing tobacco. (By Milton Whitney.)
  61. Asparagus culture. (By R. B. Handy.)
  62. Marketing farm produce. (By G. G. Hill.)
  63. Care of milk on the farm. (By R. A. Pearson.)
  64. Ducks and geese : standard breeds and management. (By George E. Howard.)
  65. Experiment Station work. ii.
  66. Meadows and pastures : formation and cultivation in the middle Eastern States. (By Jared G. Smith.)
  67. Forestry for farmers. (By B. E. Fernow.)
  68. The black rot of cabbage. (By Erwin F. Smith.)
  72. Cattle ranges of the south-west. A history of the exhaustion of the pasturage and suggestions for its restoration. (By H. L. Bentley.)
  75. The grain smuts : how they are caused, and how to prevent them. (By Walter T. Swingle.)
- Year-book of the Department of Agriculture for 1895.
- Bulletins of American Agricultural Experiment Stations.*
- Alabama (Canebrake).  
Bulletin, No. 18. Cotton, corn, wheat, and forage crops. Twelfth Annual Report, 1897.
- Alabama (Auburn).  
Bulletin No. 8. A preliminary list of Alabama fungi.
- Botanical Exchange List of the Alabama Biological Survey.
- Arizona (Tucson).  
Bulletin No. 3. Irrigation in Arizona.  
4. Waters and water analysis.  
6. Soils and waters.  
7. Canaigre.  
9. Insects and insecticides.  
10. Experimental work at Willcox.  
12. Preliminary report of observations on the Crown knot.  
20. Arizona weather.
23. Sugar beets.  
27. Arizona weather and climate.  
28. Salt River Valley soils.  
California (Berkeley).  
Bulletin No. 104. Investigation of Californian olives and olive oil.  
105. (1) The Canaigre, or Tanners' Dock.  
(2) Australian saltbushes for alkali soils.  
106. Distribution of seeds and plants.  
107. The Russian thistle in California.  
108. The distribution of salts in alkali soils.  
109. Distribution of seeds and plants.  
110. The study of human foods and practical dietetics.  
111. The work of the College of Agriculture and experiment stations.  
112. Distribution of seeds and plants.  
113. Suggestions for the use of disinfectants.  
114. Sowing Australian saltbushes.  
115. Directions for taking soil samples.  
116. The Californian vine hopper.  
117. The control of temperature in wine fermentation.  
118. Distribution of seeds and plants.  
119. Vine pruning.  
120. The olive knot.  
121. The conservation of soil moisture and economy in the use of irrigation water.  
Report on grasses and forage plants. (Reprint from reports for the years 1895, 1896, and 1897.)  
The beet sugar industry and its development in California. (Reprint from Pacific Rural Press.)  
Carolina North (Raleigh).  
Report on Raleigh Agricultural Experiment Station for the year 1897-8.  
Connecticut (New Haven).  
Twenty-first annual report.  
Idaho (Moscow)  
Bulletin No. 1. Organization and progress of work.  
2. Announcement and proposed work.  
3. The application of chemistry to the agricultural development of Idaho.  
4. (1) Methods of preventing smut in wheat and oats.  
(2) Carbon bisulphide as a squirrel exterminator.  
(3) A new squirrel exterminator.  
6. Annual Report for 1894.  
7. Insecticides and spraying.  
8. Water and water analyses.  
9. (1) Idaho soils.  
(2) Miscellaneous analyses.  
11. Smuts and rusts of grains in Idaho.  
12. Sugar beets in Idaho.  
13. Meteorology.  
14. Twelve of Idaho's worst weeds.  
15. Report for the years 1897-8.  
Annual Report for the years 1894-5.  
Iowa (Ames).  
Bulletin No. 1. Organization and plans.  
2. (1) Corn tassels, silks, and blades.  
(2) Proposed chemical work.  
(3) Grasses and other forage plants.  
(4) Chinch bug remedies.  
(5) Arsenic experiments.  
(6) Promising new cherries.  
3. Characteristics of hardy and tender fruit trees.  
4. (1) Notes on some introduced plants of Iowa.  
(2) A study of leaf anatomy of some species of genus *Bromus*.  
(3) A comparative study of the leaves of *Lolium* and *Bromus*.  
(4) An anatomical study of the leaves of some species of the genus *Andropogon*.  
6. Experiment station wheat and oats in 1889.  
7. Experiments with corn.  
8. Iowa station milk test.  
9. Comparative value of fodder plants.  
10. Our rusted and blighted oats and barley in 1890.  
11. Experiments in making and storing hay.  
12. Experiments with potatoes.  
13. Experiments in feeding for milk.  
14. Effect of food upon the quality of milk.  
15. Sugar beet growing.  
16. Flax seed meal and oil meal.  
17. Feeding beets and potatoes for butter.  
18. Experiments with sheep.  
20. Steer feeding.  
21. Investigation in cheese-making.  
22. A study in churning.  
23. Soiling.  
24. Steer and heifer beef.  
26. The Russian thistle.  
27. Soiling crops in 1894.  
28. Angus and short-horn feeding experiment, &c.  
29. Investigation of bovine tuberculosis.  
30. Treatment of currants and cherries to prevent spot diseases.  
32. Entomological work for 1895.  
35. Lamb feeding.  
36. Soil moisture.

37. Sugar beet investigations.
38. The Russian thistle.
39. Weeds.
- Contributions from the Botanical Department, No. 9.  
Alfalfa leaf spot disease.
- Seed testing.

Kansas (Manhattan).

- Bulletin No. 7. Experiments with wheat.
8. Preliminary reports on smuts on Oats.
10. Notes on conifers.
11. Experiments with wheat.
12. Preliminary experiments with fungicides for stinking smuts of wheat.
13. Experiments with oats.
14. Winter protection of peach trees, and notes on grapes.
15. Additional experiments and observations.
16. Experiments with sorghum and sugar beets.
17. Crossed varieties of corn, second and third years.
18. Experiments with forage plants.
19. Germination of weeviled peas.
71. Experiments with wheat.
72. Growth of young stock.
73. Fruit trees.
74. Experiments with oats.
75. Root development.
76. Fifth report on Kansas weeds. Vegetative propagation of perennial weeds.
77. Some insects injurious to the orchard.
78. Sugar beets.

Kentucky (Lexington.)

- Bulletin No. 2. Corn fodder and food for stock.
32. Strawberries and vegetables.
33. Corn experiments.
34. Commercial fertilizers.
35. Experiments with wheat and oats.
37. Experiments with potatoes.
38. Vegetables, Strawberries.
39. Mares.
40. Some common pests of the farm and garden.
41. Commercial fertilizers.
42. Experiments with wheat and oats.
43. Commercial fertilizers.
44. Bordeaux mixture for apple pests.
45. Field experiments with fertilizers.
46. Commercial fertilizers.
47. The pests of shade and ornamental trees.
49. Destructive locusts in Kentucky.
50. Fruit growing in Kentucky.
51. Commercial fertilizers.
52. Commercial fertilizers.
53. Spraying for Codlin moth.
54. Notes on vegetables.
55. Field experiments with fertilizers.
56. Analysis of commercial fertilizers.
57. Wheat experiments.
58. Cutworms in Kentucky.
59. Spraying experiments in 1895.
60. Analysis of commercial fertilizers.
61. Potatoes.
62. Strawberries.
63. Tobacco.
64. Analysis of commercial fertilizers.
69. Wheat.
70. The woolly mullein.
71. Official analysis.
72. Potatoes.
73. Strawberries.
74. (1.) The Chinch bug.  
(2.) Earthworms, a source of gapes in poultry.
75. Commercial fertilizers.
76. Commercial fertilizers.
77. Wheat.

Maine (Orono.)

Thirteenth Annual Report, 1897.

Minnesota (St. Anthony's Park.)

- Bulletin No. 36. Miscellaneous analyses of feeding stuffs.
37. The Chinch bug.
38. Garden tillage and implements.
39. Potatoes.
40. Grain and forage crops.
41. Soils.
42. The composition, digestibility, and food values of potatoes.
43. Insects injurious in 1895.
44. Fattening steers and lambs in winter.
45. Potatoes.
46. (1) Forage and grain crops.  
(2) Cross rotation experiments.  
(3) Smut in wheat.  
(4) Three annual weeds.  
(5) Tillage experiments.  
(6) Meteorological records.
47. Flax.
49. Rate of increase on the cut-over timber lands of Minnesota.

50. Progress at several experiment farms in 1896.
56. Sugar beet.
57. Fattening lambs in winter.
58. Fattening steers in winter.
52. Fattening lambs and wethers in winter.
60. Beef-cattle and swine.
- Macmillan, Conway. Minnesota botanical studies:—  
Bulletin No. 9, part 1, 1894.  
Bulletin No. 9, title page, and table of contents; also  
index for series i.  
Series ii, part i, June, 1898. (From the author.)

Missouri (Columbia.)

- Bulletin No. 38. Peach-growing.
39. The influence of width of tire on draft wagon.
40. The sugar beet.
41. The San Jose scale in Missouri.
42. A new orchard pest. The fringed-wing apple-bud moth.
43. (1) Winter forcing of asparagus in the open field.  
(2) Asparagus culture in Missouri.

Nebraska (Lincoln.)

- Bulletin No. 50. Notes on pruning.
51. Observations on the Codlin moth.
52. Cornstalk disease.
53. A preliminary report on experiments with forage crops.
54. The effects of certain methods of soil treatment upon corn crops.
- Eleventh Annual Report.

New Hampshire (Durham.)

- Bulletin No. 40. Strawberries.
46. An experiment with steam-drill and methods of road maintenance.
48. Ninth Annual Report.
49. The inspection of fertilizers.
50. Dehorning cattle.
51. Sweet corn for New Hampshire.
52. Growing musk melons in the north.
- Catalogue of the New Hampshire College for 1897-8.

Nevada (Reno.)

- Bulletin No. 1. History of organization and proposed work of the station.
2. The investigation of the independence of plant life.
3. Meteorological Report for 1898.
4. Meteorological Report for January, February, and March, 1889.
5. Meteorological Report for April, May, and June, 1889.
6. Meteorological Report for July, August, and September, 1889.
8. The codlin moth.
10. The pear and cherry slug.
11. Plant life infesting the apple.
14. Potato experiments.
15. Dodder.
16. The Creamery Industry.
17. The woolly aphis of the apple.
18. Cheese and its manufacture.
19. Sugar beets.
20. (1) Potatoes. (2.) Tobacco.
21. Nevada weeds.
22. Nevada weeds.
23. Sugar weeds.
24. Early Flora of the Tucker Valley.
25. Irrigation.
26. Feeding stuffs.
27. (1) Grain. (2) Potatoes.
28. An important elm scale.
29. The San Jose scale.
30. Wheat cutting at different dates.
31. Texas cattle fever.
32. Sugar beets.
33. Field notes on some Nevada grasses.
34. Drinking water.
35. Hops.
36. Some injurious insects of W. Nevada.
37. Sugar beets. Notes for 1897.

New York (Cornell University.)

- Bulletin No. 39. Creamery and aerating milk.
40. Removing tassels from corn.
41. On the comparative methods of steam and hot water for greenhouse heating.
49. Sundry investigations for the year 1897.
53. Oedema of the tomato.
55. Greenhouse notes for 1892-3.
58. The four-lined leaf-bug.
61. Investigations of the year 1893.
64. On certain grass-eating insects.
69. Hints on the planting of orchards.
71. Apricot growing.
72. The cultivation of orchards.
73. Leaf cure and plum pockets.

74. Impressions of the peach industry in Western New York.
75. Peach yellows.
76. Some grape troubles of Western New York.
77. The grafting of grapes.
78. The cabbage root maggot.
79. Varieties and leaf blight of the strawberry.
80. The quince in Western New York.
81. Black-knot of plums and cherries and methods of treatment.
82. Experiments of tuberculin on non-tuberculous cows.
83. A plum scale in Western New York.
84. The recent apple failures of Western New York.
85. Whey butter.
87. The dwarf Lima beans.
92. On the effect of feeding fat to cows.
93. The cigar-case bearer in Western New York.
95. Winter musk-melons.
96. Forcing house miscellanies.
97. Studies in artificial cultures of entomogeneous fungi.
98. Cherries.
100. Evaporated raspberries in Western New York.
101. Notions about the spraying of trees, with remarks on the canker worm.
102. General observations respecting care of fruit trees, with some reflections upon weeds.
103. Soil depletion in respect to the care of fruit trees.
104. Climbing cut worms.
105. Tests of cream separators.
106. Revised opinions of the Japanese plum.
107. Wire worms and the bud moth.
136. Chrysanthemums.
137. Agricultural extension work.
138. Mushrooms.
139. Japanese plums.
140. Second report on potato culture.
141. Powdered soap as a cause of death among swill-fed pigs.
142. The codlin moth.
143. Sugar-beet investigations.
144. Notes on spraying.
145. Some important pear diseases.
146. Fourth report on progress of extension work.

## Ohio (Wooster).

- Bulletin No. 67. Oats.
68. Some destructive insects.
  69. The Chinch bug.
  70. Forage crops.
  71. The maintenance of fertility.
  72. Peach yellows, black-knot, and San Jose scale.
  73. Investigations of plant diseases.
  74. Fifth Annual Report.
  75. Beet sugar production.
  76. Potatoes.
  77. The Chinch bug and other destructive insects.
  78. Corn.
  79. Some diseases of orchard and garden fruits.
  80. The maintenance of fertility.
  81. The San Jose scale in Ohio.
  82. Field experiments with wheat.
  83. A first Ohio Manual.
  84. Seventh Annual Report.
  85. Strawberries.
  86. History of the lives of a butterfly and moth.
  87. The periodical Cicada.
  88. Co-operative experiments made by the Ohio Agricultural Students' Union.
  89. Prevalent diseases of cucumbers, melons, and tomatoes.
  90. Sugar beet investigations.
  91. The lung and stomach worms of sheep.
  92. Preliminary report upon the diseases of the Peach.
  93. The home mixing of fertilisers.
  94. The maintenance of fertility.

## Pennsylvania (Centre County).

- Bulletin No. 9. Digestibility of corn fodder and silage.
16. Culture of the chestnut for fruit.
  17. The value of cotton-seed meal as compared with bean for the production of butter.
  18. Notes on new and old varieties of orchard fruits and small fruits.
  20. Tests of dairy apparatus.
  21. The Koch test for tuberculosis.
  22. Tests of dairy apparatus.
  23. Forest fires.
  24. Influence of quantity of food upon economy of milk and butter production.
  25. Small fruits in 1893.
  26. Mangels and sugar beets versus silage yield—cost and feeding value.
  27. Tests of cream separators.
  28. Cotton-seed feed for dairy cows.
  29. Tuberculosis of cattle.
  30. Tobacco experiments.
  31. Report of the Director for 1894.
  32. Small fruits in 1894.

33. Directions for using the Babcock milk test.
34. A phosphate deposit in Juniata County.
35. A soil test with fertilisers.
36. Chestnut culture for fruits.
39. Wheat, oats, and potatoes.
40. The sugar beet in Pennsylvania.
41. Tests of dairy feeds.
43. Apples in Pennsylvania.

## Texas (College Station).

- Bulletin No. 42. The Irish potato.
43. Report from Beeville Station.
  44. Paints and painting materials.
  46. Grasses and forage plants.

## Vermont (Burlington).

- Bulletin No. 49. Potato blights and fungicides.
54. Salad plants and plant salads.
  55. Apple growing in Grand Isle County.
  60. Insects of the year.
  61. Hardy apples of cold climates.
  62. Home-grown grapes in Vermont.
  63. Analyses of commercial fertilisers.
  64. do do
  65. do do

## Virginia West (Morgantown).

- Bulletin No. 1. Organisation work for 1890.
4. The creamery industry.
  5. The selection of milch cows.
  6. Milk.
  7. Experiments upon wheat.
  8. Meteorological observations.
  9. Additional reports upon wheat distribution in 1889.
  10. Meteorological reports for August.
  11. Meteorological reports for September.
  12. The Canadian thistle.
  13. The creamery industry.
  14. Farm and garden insects.
  15. Raspberry gouty-gall beetle.
  16. Yellow locust.
  17. Black spruce.
  18. Law and regulations concerning the sale of commercial fertilizers in the State of West Virginia.
  19. Weeds as fertilizers.
  20. Potato culture and fertilization.
  21. Injurious insects and plant diseases.
  22. Your weeds and your neighbours'.
  25. Flat experiments with commercial fertilizers on wheat.
  26. Law and regulations concerning the sale of commercial fertilizers in the State of West Virginia.
  27. Flat experiments with commercial fertilizers on corn.
  29. Experiments on corn and potatoes.
  30. Notes on sheep.
  31. Catalogue of West Virginia Scolytidae and their enemies.
  32. Catalogue of West Virginia forest and shade tree insects.
  33. Sub-irrigation in the greenhouse.
  34. Fertilizer analyses for the year 1893.
  35. Defects in wood caused by insects.
  36. Black holes in wood.
  37. Electro-horticulture.
  38. Potato blight and scab.
  39. Vegetables.
  40. Commercial fertilizers.
  41. Potatoes.
  42. Vegetables.
  43. Why, when, what, and how to spray.
  44. Practical entomology.
  45. Chickens.
  50. The practical cicada in West Virginia.
  51. Commercial fertilizers.
  52. Strawberries.

## CANADA.

## Ottawa Central Experimental Farm.

- Bulletin No. 27. Strawberries.
28. Weeds.
  29. Results obtained in 1897 from trial plots of grain, fodder, corn, and roots.
- Report of the Entomologist and Botanist for 1896.  
Evidence of Dr. James Fletcher before a select committee of the House of Commons on agriculture and colonization, 1897.
- Report of the Director for 1897.  
Papers on horticulture and kindred subjects, 1891 (by William Saunders, Director).

## Ontario (Guelph).

- Bulletin No. 60. Growth and uses of rape.
61. Determination of fat in milk.
  62. Bark-louse and pear-tree slug.
  63. Pitting the sugar beet.
  64. Ensilage and roots for swine.
  65. Ginseng.
  66. Variation in the fat of milk.

67. Winter wheat experiments.
  68. Feeding shorn and unshorn lambs in winter.
  69. Fattening lambs for the British market.
  70. Feeding grade steers of different breeds.
  71. Experiments with spring grains.
  72. Roots, potatoes, and fodder corn.
  73. Fungicides and insecticides.
  74. Rape culture.
  75. Butter-making on the farm in summer.
  76. Butter fat in milk and cream.
  77. Fattening lambs.
  78. Fattening lambs for the British market.
  79. Experiments with winter wheat.
  80. Effect of food on milk and butter.
  81. Bees in relation to fruit.
  82. Corn ensilage for market beef.
  83. Feeding shorn and unshorn lambs in winter.
  84. Experiments with spring grain.
  85. Weeds and moles of destroying them.
  86. Roots, potatoes, and fodder corn.
  87. Remedies for common plant and insect foes.
  88. The making of cheese.
  89. Analyses of fodder corn.
  90. Experiments with winter wheat.
  91. Weeds of Ontario.
  92. Diseases affecting the grape.
  93. Dairy Bulletin.
  94. The care of milk for cheese factories.
  95. Experiments in cheese-making.
  96. The composition of milk, cheese, and whey, in relation to one another.
  97. Experiments with winter wheat.
  98. Impurities in clover seed.
  99. Experiments with winter wheat.
  102. Experiments in cheese-making.
  104. Rations for dairy cows.
  106. The San Jose scale.
  107. Dairy Bulletin.
  108. Experiments with winter wheat.
  109. Farm-yard manure.
  - No. 2. Road Bulletin (special)—
    1. Instructions in spraying.
    2. (Special) Plans of buildings and methods of conducting cheese factories and creameries.
- (Special) The teaching of agriculture in the public school.  
 Twenty-second Annual Report.  
 Twenty-third Annual Report.

#### INDIAN GOVERNMENT PUBLICATIONS.

- Prain, Surgeon-Major, D.—The Agricultural Ledger of 1898—
- No. 1. Vegetable Product Series No. 38. The Mustards cultivated in Bengal. (Being a reprint from Bengal Bulletin No. 4.)
- The Agricultural Ledger, 1897—
10. Industrial Series No. 1. Horns, antlers, and horn work.
  11. Entomological Series No. 6. Burmah silk.
  12. Agricultural Series No. 22. Embankments. Grass sowing.
  13. Mineral and Metallic Series No. 10. Reclamation of Reh or Usar lands.
  14. Forest Series No. 3. Production of and trade in teak wood.
  15. Agricultural Series No. 23. Utilization of bone-dust manure.
  16. Rust in wheat in the Australian colonies.
  17. Vegetable Product Series No. 36. Silk-cotton (floss) of *Calotropis procera*.
  18. Entomological Series No. 7. White ants as a pest of agriculture.
  19. Medical and Chemical Series No. 11. The constituents of some Indian aconites.
  20. Vegetable Product Series No. 37. Al (*Morinda*) cultivation, dyeing, and printing in the Central Provinces.

#### The Agricultural Ledger, 1898—

2. Agricultural Series No. 24. On the composition of Indian soils.
3. Medical and Chemical Series No. 12. Contributions to our knowledge of the aconite alkaloids.
4. Vegetable Product Series No. 39. The Spanish chestnut.
5. Veterinary Series No. 26. Professor Koch's method of immunising cattle against rinderpest.
6. Vegetable Product Series No. 40. Darnel Seeds. Their reputed use in Almora as a medicine for cattle.
9. Agricultural Series No. 26. Experimental cultivation of Egyptian cotton in Redhanpur.
10. Entomological Series No. 8. Sale of raw silk for the Kashmir Durbar.
11. Vegetable Product Series No. 42. Pine-apple fibre.
12. Agricultural Series No. 27. Carrot cultivation as an emergent crop at seasons of threatened scarcity or famine.

#### The Agricultural Ledger, 1898—

13. Crop Disease and Pest Series No. 3. An account of the fungal disease attacking sugarcane in the West Indies, together with remedial measures recommended by the authorities of the Royal Gardens, Kew, concluding with Dr. Bourne's report on the occurrence of the disease in the Godávari deltas. (From Government Printer, Calcutta.)
- Imperial Institute Series (Indian section) Handbooks of commercial products, No. 10. *Adhatoda vasica*, with plate. (By David Hooper). (From Government Printer, Calcutta.)
- Records of the Botanical Survey of India, vol. 1, Nos. 8 to 11. (From the Superintendent, Royal Botanic Gardens, Calcutta, Director of the Survey.)
- Report on the Natural History results of the Pamir Boundary Commission. (From the Assistant Secretary to the Government of India, Simla.)
- Report on the Government Horticultural Gardens, Lucknow, for the year ending 31st March, 1898. (From the Director of Land Records and Agriculture, N.W. Provinces and Oudh.)
- Report on the progress and condition of the Government Botanical Gardens, Saharanpur, and Arnigadh for the year ending 31st March, 1898. (From the Director of Land Records and Agriculture, N.W. Provinces and Oudh.)
- Reports on the operations of the Department of Land Records and Agriculture, Madras Presidency for the official years 1894-5, 1895-6, 1896-7. (From the Director of Land Records and Agriculture, Madras.)

#### CRYPTOGAMS.

## Aviary.

Presented to the Trustees National Park—1 bustard or plains turkey (*Eupodotis australis*, Gray, Australia.)

## PRESENTATIONS.

- 1 morepork (*Podargus strigoides*, Lath., Australia. From Miss A. Brownlow, 8 Shepherd-street, Darlington.
- 3 stone curlews or stone plovers (*Edicnemus gallinarius*, Lath., Australia). From Mr. W. A. B. Greaves, "St. Helens," Burwood.

- 1 galah parrot (*Cacatua roseicapella*, Vieillot, Australia). From Miss Hill, 43 Bent-street, Sydney.
- 2 Pennant's parrakeets (*Platyercus elegans*, Gmelin, Queensland.
- 5 bronze-wing pigeons (*Phaps chaloptera*, Latham, Australia).
- 1 Port Lincoln parrot or banded parrakeet (*Platyercus zonarius*, Shaw, Central and South Australia).
- 2 Californian quail (*Callipepla californica*, Shaw and Nodder, California).
- 5 dotterel quail (*Turnix varia*, Lath., Australia).
- 1 rosella (*Platyercus eximus*, Shaw, New South Wales). From Miss Lily Hill, Vancluse.
- 2 sulphur-crested cockatoos (*Cacatua gymnopsis*, Sclater, North and North West Australia).
- 1 golden pheasant cock (*Chrysolophus pictus*, Linn., China).
- 1 Reeves' pheasant cock (*Phasianus Reevesi*, Gray, China). From Mr. W. Parr, 13 Broadway, Glebe.
- 5 white-backed magpies (*Gymnorhina tibicen*, New South Wales.) From Mr. A. M. N. Rose, Boloa, Buckley's Crossing.
- 1 sulphur-crested cockatoo and cage (*Cacatua gymnopsis*, Sclater, North and North-west Australia.) From Miss Spencer, Criterion Theatre, Sydney.
- 1 blackbird (*Merula merula*, Linn., Europe). From Mr. S. W. Wagstaff, 145, Alfred-street, North Sydney.

## PURCHASED.

- 2 Brown's parrakeets (*Platyercus Browni*, Temm., Port Darwin).

## BRED IN THE AVIARY.

- 6 hybrid pheasants—English x silver.

## CAUGHT BY AVIARY-KEEPER.

- 1 Pennant's parrakeet (*Platyercus elegans*, Gmelin, Queensland).

## STOLEN OUT OF CAGE.

- 1 golden pheasant cock (*Chrysolophus pictus*, Linn., China).

## DEATHS.

- 3 Java sparrows (*Munia orizivora*, Linn., Java).
- 3 common pheasant hens (*Phasianus colchicus*, Linn., China).
- 1 silver pheasant hen (*Gemvus nycthemerus*, Linn., China).
- 1 crane.
- 1 white swan, killed by dogs (*Cygnus olor*, Linn., Europe).
- 1 Egyptian quail.
- 1 dotterel quail (*Turnix varia*, Lath., Australia).
- 1 brush turkey (*Calothurus Lathamii*, Gray, Queensland).
- 1 horned parrakeet (*Nymphicus cornutus*, Gmelin, New Caledonia).
- 3 galah parrots *Cacatua roseicapella*, Vieillot, Australia).
- 1 warbling grass parrakeet (*Melopsittacus undulatus*, Shaw, Australia).
- 3 red-billed liothrix (*Liothrix lutea*, Scop., Asia).
- 2 chestnut-eared finches (*Tanopygia castanotes*, Gould, Australia).
- 4 wood ducks, killed by cats (*Chenonata jubata*, Lath., Australia).
- 1 wood pigeon.
- 7 magpies (*Gymnorhina tibicen*, N. S. Wales).
- 1 pale-headed parrakeet, killed by rats (*Platyercus pallidiceps*, Vigors, Queensland).
- 1 cut-throat finch (*Amadina fuscata*, Gmelin, South Africa).
- 1 long-billed cockatoo (*Liometes nasicus*, Lath., N. and N.E. Australia).
- 2 bronze-wing pigeons (*Phaps chaloptera*, Lath., Australia and Tasmania).
- 1 weaver (*Quelea quelea*, Linn., S. Africa).
- 1 morepork (*Podargus strigoides*, Lath., Australia).

## Government Domains.

*Introductory.*—No votes of money having been granted for new works, any special undertaking had to be provided for from savings. I trust, however, that the year will be found to have been one of real progress in the work of the Domains.

On the 12th and 13th February, after five weeks' severe drought, we were visited by a heavy down-pour of rain (4½ inches in forty-eight hours), accompanied by almost a hurricane wind of 70 miles an hour, which uprooted several trees and tore great branches from others, necessitating the employment of the staff for several days pruning, &c., and cleaning up fallen debris. On 5th and 6th of May we had a similar storm, the wind blowing 67 miles an hour, and 6 inches of rain fell in the two days. This storm will be remembered as that which caused the wreck of the "Maitland," off Broken Bay. Again, on 30th June, and 2nd October, we had severe storms; 2¾ inches of rain fell on the latter date. All these storms inflicted damage on the Domain.

*Carriage Roads.*—During the year 2,500 square yards of carriage-way, in various places, have been torn up and re-metalled with 190 tons of good hard blue stone, hand-broken to 2-inch gauge. This has been lightly covered with good binding clay, thoroughly saturated with water, and well rolled. The road was

was

was at once made available again for vehicular traffic. A portion—800 square yards—of the semi-circular terminal carriage-way, near Mrs. Macquarie's Chair, has been laid with rough asphalt. This is a resting-place for vehicular traffic, and from it may be obtained a magnificent view of the Harbour and passing vessels, besides which several men-'o-war generally repose in the vicinity.

During the long spells of dry weather which were experienced during the year, it was found necessary to keep the watering-cart frequently in use on the carriage-roads, in order to bind the loose metal; and preserve a regular and smooth surface.

I am still very anxious about the steepness of the road where that from St. Mary's Gate to Mrs. Macquarie's Chair intersects that from the Macquarie-street gate to Palmer-street gate. Minor accidents at this place are of constant occurrence, and although reduction of the grade at this particular spot will be both difficult and expensive, I trust that, out of consideration for both man and beast, the work will be taken in hand at an early date.

*Footpaths.*—A new footpath (68 feet long by 4½ feet wide) has been made joining the carriage-way at Mrs. Macquarie's Point, with another at a lower level overlooking Farm Cove at its south-eastern side. This proves a convenience to persons in wet weather, or on a dewy morning, as hitherto those pedestrians who wished to pass to the foot-path from the carriage road, or *vice versa*, had to cross the turf.

Dilapidated foot-paths and surface-water channels have been broken up, tarred, and re-asphalted, to the extent of 1,206 square yards, while 4,680 square yards of asphalt walks have been painted over with boiling tar, and immediately sanded.

Besides the maintenance and routine work connected with the paths, the three following important improvements have been commenced:—

(1.) The main central avenue for pedestrian traffic leading from St. Mary's entrance gates to the Botanic Gardens gates, over 420 yards in length, is in the most frequented portion of the Outer Domain, and was found to be much too narrow for the large numbers of people using it on Sundays and holidays. The sides were broken and undefined, and the width of the avenue varied from 17 to 20 feet. The sides have been properly aligned to a uniform width of 24 feet, and neatly kerbed with 8-inch round-topped freestone from the Pymont quarries. The extra width of the walk enclosed was ballasted with stone debris from buildings in progress at a trifling cost. The whole of this beautiful avenue now requires re-asphalting, which it is to be hoped will be carried out at an early date.

(2) Beach-walk.—From its first formation, some eighteen or twenty years ago, this favourite marine parade has been a source of trouble on account of sudden and irregular subsidences causing dangerous holes on the surface. This arose from fine silt and gravel having been used amongst large stones in the original formation; this has gradually been washed away by the tidal waters percolating through the imperfect base of the dwarf sea-wall, and undermining the whole of the walk.

An opportunity occurred towards the end of the year of giving temporary work to a number of men. The whole of the west side was turned over 2 to 3 feet deep, all the large stones broken up and rammed close together, thus filling up all cavities; the shrinkage thus created on the surface was made good by the addition of over 300 cart-loads of stone debris and clay, &c. The walk now requires a top-dressing of good gravel to make it perfect.

(3.) New Steps.—A beginning has been made of another important improvement between Mrs. Macquarie's Chair and the Corporation Baths, on the steep escarpment facing Garden Island. On account of its inaccessibility it has hitherto been mostly given up to loafers. There was no easy access from the high-level walk on east side to the promontory to the Beach-walk, some 40 feet below, without a very circuitous journey. A flight of zig-zag stone and concrete steps has been commenced to unite these walks, and it is proposed to further improve upon the already-interesting natural features of the place by utilising projecting portions as seats, landings, or platforms, or as canopies over recesses forming open caves, and cosy look-outs for picnickers and other visitors.

When in the near future the electric light will be shining here during fine evenings, and fresh water laid on to the vicinity, this place will be an excellent rendezvous for respectable citizens. These slopes afford some of the most beautiful scenery in the world, and having an easterly aspect, the afternoon sun will not inconvenience those who desire to use the place for a quiet read or simple rest. So strongly do I feel in regard to the desirability of utilising these slopes, that I look forward to the time when I shall be in a position to construct three or four rustic flights of steps to connect these high-level walks with the Beach-walk. I am very anxious, also, to connect the high-level walk overlooking Farm Cove with the Beach-walk. I do not doubt that it is mere oversight that has prevented the utilisation of these beautiful slopes so long, and it speaks volumes for the good nature of our citizens that, for so long a period, they have been content with making a tedious detour whenever they desired to pass from the high-level roads and paths in the Domain to the Beach-walk, and *vice versa*.

*Removal of old trees.*—It has been found necessary to remove the following old trees which, through disease, old age, or breakage by storms, had become unsightly and useless:—3 White or Cabbage Gum (*Eucalyptus hamastoma*, var. *micrantha*); 3 Brush Box (*Tristania conferta*); 1 Moreton Bay Fig (*Ficus macrophylla*); 1 Blue-berry Ash (*Elaeocarpus cyaneus*); 3 Forest Red-gum (*Eucalyptus tereticornis*); 2 New Zealand Karaka (*Corynocarpus laevigatus*); 1 Port Jackson Fig (*Ficus rubiginosa* or *australis*); 1 White Poplar (*Populus alba*).

The *E. hamastoma* and *E. tereticornis* were not planted by the hands of man. Some of these trees have been unsightly for years, and if I could have spared the labour I would have made a clean sweep of them before. While a healthy tree is one of the most beautiful objects in Nature, a diseased and dying one is a lamentable sight, offensive to the eye, liable to communicate disease to healthy trees, and a possible source of danger to pedestrians in its enfeebled condition.

In addition to the above, 2 Norfolk Island Pines (*Araucaria excelsa*), 6 Aleppo Pines (*Pinus halepensis*), 3 Smooth-barked Apple (*Angophora lanceolata*), 3 *Banksia integrifolia*, 2 *Pinus insignis*, and 2 *Pittosporum undulatum*, have all died from one cause or another.

*Tristania*, *Corynocarpus*, and *Pittosporum* are subject to grubs in the stems and branches, which cannot well be got at. Most of the *Pinus halepensis* in the Domain have been suffering for several years past from the effects of an insect pest very difficult of treatment. The Figs and Poplars have been blown over or broken by fierce winds, and the others have died back gradually from old age, dry-rot, or white ants.

The above list of removals shows the necessity for yearly plantations to keep up the supply, and already several sites for trees have been decided upon, and will be occupied as soon as funds and opportunity will allow.

Much

Much pruning and some thinning-out has been necessary to keep trees in shape and out of harm's way, while a quantity of dead wood has been removed from old gum-trees to preserve their green and healthy appearance as much as possible. Nevertheless, the day is approaching more rapidly than I like, when the self-planted indigenous trees in the Domain will be a thing of the past. Like our aborigines, they pass away with the development of the improvements of civilised men. I may remark that several trees, both figs and pines, which were planted some years ago near the water's edge, for ornament and shade, have succeeded so well that they now interfere considerably with the magnificent view from the carriage-road, and will probably have to be thinned-out in the near future.

*Tree-planting during the year.*—During the year ending December, 1898, no young trees were planted in the Domain, as all our available funds, after the usual necessary repairs to roads and paths, &c., were expended upon improving the central avenue, as referred to in this Report. It is to be hoped, however, that during the year 1899 we will be able to provide guards for and plant at least two dozen permanent trees in suitable places.

*Acacia or Wattle Plantation.*—This corner of the Domain, near Governor Bourke's statue, is very interesting. A plantation was begun here in 1897, and already some wattles have shown their flowers. Further ground, in the same locality, is being prepared to increase the collection, which it is hoped will be largely added to during 1899.

*Rosarium.*—This garden, near St. Mary's entrance to the Domain, has proved very attractive and interesting to visitors. There are now 196 varieties of roses to be seen here, all true to name; and although the place is very much exposed to east and south-east winds, causing the plants to suffer severely, yet numbers of blooms are maintained every month of the year. A lawn-mower is frequently used on the green turf-paths; the encircling walk has been ballasted and covered with fine sandstone chippings, which produces a very good effect. Edging tiles have been laid on one side of this walk all round, and the ground has been partially drained.

*Grass.*—Hundreds of loads of soil and loamy clay from various foundations and excavations about Sydney have been used in filling hollow places, and in levelling-up the ground. Grass has been planted on bare patches, although on certain spots where there is much traffic or dense shade from the trees there will always be absence of green sward.

*Water Supply.*—We have still only one fountain in the Domains. Further accommodation in this respect is much needed, particularly at two points, namely, near Mrs. Macquarie's Chair, and towards St. Mary's entrance gates, where visitors mostly congregate on Sundays, &c.

A cattle drinking-trough is also much required near Mrs. Macquarie's Chair, but at present the water-main does not extend to within several hundred feet of the spot.

Following is the registered water-supply during the year:—

Meter No. 284. Enclosure near Macquarie-street entrance, Domain.—May, 1898 (date of fixing), to December, 1898...	1,000 gallons.
Meter No. 285.—Cattle trough, St. Mary's entrance, Domain.—June 10, 1898 (date of fixing) to December, 1898	6,000 "
Meter No. 275.—Enclosure near St. Mary's entrance, Domain.—From January, 1898, to December, 1898	24,000 "
Meter No. 277.—Cattle trough near Cricket Ground.—January, 1898, to December, 1898	16,000 "
Total ...	47,000 gallons.

*Lighting.*—An extension of the present system, or a better system, of lighting the Outer Domain is very much required. There are forty-seven feeble gas lamps scattered over an area of 50 acres of ground, and the other 40 acres have no artificial light at all. I can only reiterate the wishes contained in my last Report. If the Domain were well lighted by the electric light, thousands of citizens would promenade it every evening, which at present they are unable to do.

*Seats.*—There are now 230 seats scattered all over the Outer Domain, making a net addition of thirty during the year, after replacing a number of broken or worn-out ones. Even this number is very inadequate at certain times and in certain places. I hope to still further augment them during the coming year. These seats are all 6 feet long, and can easily accommodate five persons; but two or three persons usually monopolise the whole seat. It is a matter for consideration whether shorter seats and more of them would not better suit the public convenience.

*Railings and Fences.*—The fences have been kept in repair and the old single batten fences to protect verges and slopes are gradually being replaced with 3 x 3 rails set diagonally and supported by posts of the same dimensions. The iron railing near the electric lighting station at Woolloomooloo Bay having been frequently broken, a gate has been fixed in the railing at this place with the view to meet the public convenience. The boundary between the Domains and Botanic Gardens along Mrs. Macquarie's Road is marked by an unsightly galvanised iron fence. This structure is not only hideous in itself, but it prevents visitors to the Gardens looking out into the Domain, and, above all, it prevents visitors to the Domain from enjoying the delightful view across the Gardens towards Farm Cove. A neat dwarf wall, surmounted by an iron railing, would cost perhaps £1,500, but the improvement to both the Gardens and Domains would be immediate and enormous. The present condition of affairs may be likened to that of a precious jewel in a setting of base metal.

*Tree Guards.*—The most effectual tree guards for the purposes of the Domain are circular iron guards, 7 feet in diameter and 4 feet 6 inches high, made of round iron pointed at the upper end. Picket-fence guards, 8 feet square and 4 feet 6 inches high, are also useful in certain places, e.g., about Mrs. Macquarie's chair, and on the flat ground near the floating baths, Farm Cove. The iron ones are used in the south-west part of the Domain, and in the central avenue and in other places. The cost of picket-fence guards as above is about £3 each. The cost of circular tree guards as above is about £3 10s. each. The latter are very durable, will probably last three generations of trees, and always look well. The picket-fence guards will probably last only one generation.

*Painting.*—All seats and fences in the Domains, except the boundary iron railing, receive, if possible, an annual coat of paint; this has been done within the past year. The question of colour is a debatable one. Some people prefer green, as being theoretically the most natural colour, harmonising with everything around. Unfortunately, during our hot summers, trees and grass, &c., are often not green.

green; but even with all vegetation "in verdure clad," it may not follow that inanimate objects in the vicinity, such as fences, railings and seats, should be similarly coloured; also, owing to its lack of durability, green paint soon becomes of a sombre unattractive hue. At present a quiet stone-colour has been selected as seemingly the most appropriate for the Domain, and I have not heard any adverse criticism from the general public, from painters, or from landscape gardeners. It has certainly the merits of durability, and has a bright, clean appearance.

*Refuse.*—The iron bins provided as depositories for fruit, paper, and other rubbish, have not been much availed of by visitors. By want of thought in this respect, visitors impose an enormous amount of unnecessary labour on the staff, which is the more regrettable seeing the desirable improvements that cannot be carried out simply because workmen are not available for the purpose.

*Public Latrines.*—These conveniences were erected in 1895, and are now extensively used by the public. The present accommodation is already rather limited, and arrangements are being made for its extension. On one Sunday in January, about 1,700 persons were counted entering these latrines, and the numbers are not decreasing. The latrines require frequent attention to keep them wholesome and clean, and improved arrangements will be adopted with the extension referred to. These latrines are confined to one portion of the Domain, in a convenient, though not in a central situation. In my opinion more latrines for men, in the vicinity of Mrs. Macquarie's Chair, are absolutely necessary. The absence of similar accommodation for females is a matter for very great regret.

*Music.*—The bandstand was erected in 1897, and was first used by the Permanent Artillery Band on 16th February, 1898, and these performances have proved an immense attraction. Many citizens now look eagerly forward to Wednesday afternoons for the recognised weekly musical performance. At the beginning of the year visitors could be counted by a few hundreds; recently, over 2,000 listeners have been frequently counted at a performance. The stand is not reserved for any particular body of performers; it is only required that applications should arrive in sufficient time to permit of proper arrangements being made. During the year, on Sunday afternoons, several bands belonging to Sydney and suburbs have played sweet music on this bandstand, and I would like to see it occupied far more frequently than is the case at present. The comfortable seating of the public at these performances seems to be out of the question when the audiences are large. The number of seats in the vicinity of the bandstand has been largely increased, but at present the people mostly accommodate themselves on the grass, while in very wet weather the band rarely performs; but if some enterprising individual were to offer to supply seating accommodation—say camp-stools, or light chairs—on these occasions, his venture would probably be remunerative. I would like to see the bandstand lighted with gas or electricity in the near future; in this case, musical evenings in the Domain will become a fashionable enjoyment.

*Cricketing and other games.*—The juvenile cricket-ground formed last year on the east side of the Lower Domain, adjoining Cowper wharf, has been very much availed of by the persons for whom it was intended, and small boys who practise cricket and other games in other parts of the Domain are not interfered with unless they take up places where their games will cause inconvenience to pedestrians and others using the Domain.

*Bathing.*—I am far from satisfied with the bathing arrangements in Woolloomooloo Bay and Farm Cove. It seems to me that the requirements of the public should be far better served than they are at present, while improved arrangements would, I feel sure, result in an enormously increased number of bathers. Thus judicious expenditure would result in increased revenue to lessees of baths. By the erection of a hideous fence some 18 feet high the lessee of one of the baths has removed the scandal that formerly existed through visitors to the Domain being able to see, from the road, nude bathers.

*Insect pests.*—Some two or three years ago a scale insect was discovered to be attacking and considerably injuring several oak-trees. It was determined by the Government Entomologist to be *Pterodaspes (Planchonina) quercicul.* A few sprayings with kerosene emulsion and resin-wash, however, has hindered its progress, and a few more will probably exterminate it. For green-fly on roses we find Gishurst compound the best remedy—2 oz. to a gallon of hot water. For mildew, sulphur is successfully used. For slugs and snails quicklime is best; and for ants on walks, bisulphide of carbon has been effectively used.

*Weeds.*—The well-known Nut-grass (*Cyperus rotundus*) is a serious pest in the Domain. It comes with soil, by the agency of birds, and in various ways. Our men have to wage a relentless war upon it. Frequently it appears to get the upper hand, and nothing but intelligently-directed perseverance can cope with it. The eradication of this pest involves us in a serious annual charge.

The other troublesome weeds here are Paddy's Lucerne (*Sida retusa*), Cobblers' Pegs (*Erigeron canadense*), and the grass *Sporobolus indicus*, all of which frequently overgrow the pasture grasses, are not much eaten by cattle, and give the sward an untidy appearance if allowed to spread. *Lantana camara* has been almost entirely exterminated, while *Phytolacca* (Poke-weed), *Datura Stramonium* (Stramonium), *Cryptostemma calendulaceum* (Cape-weed), *Xanthium spinosum* (Bathurst-burr), and *Emex australis* have been nearly exterminated.

Many weeds, and even Nut-grass on gravel paths and sides of carriage roads, have been destroyed by two or three consecutive applications of sodium arsenite. The proportions used are 5 lb. arsenic, and 10 lb. caustic soda, dissolved in a few gallons of water; this is added to 150 gallons of water. The solution is sprayed on paths, &c., through the rose of a watering can, at the rate of one gallon to ten square yards.

*Visitors.*—On Sunday, 11th December, we counted the number of persons coming into the Domain, between 2 and 5 o'clock p.m., at the two principal gates only, viz., Macquarie-street entrance and St. Mary's Road entrance, and found as follows:—11,140 pedestrians, 196 vehicles, 56 bicycles, and 7 equestrians (5 gentlemen and 2 ladies.) The day turned out dull and cloudy, and there was no band or any special attraction in the Domain.

*Government House Gardens.*—The gardens about Government House have been well attended to by three men under a gardener-in-charge (Mr. Helps). The lawn and tennis-courts, &c., have been kept well mowed and rolled; the flower beds and green houses have been kept well furnished, and a fair supply of cut flowers and pot plants has been always available.

Several garden walks have been turned over, ballasted, and gravelled, and new turf edgings have been laid where necessary.

The condition of the grounds certainly shows an improvement on that of the preceding year, in spite of the fact that the climatic conditions have not improved.

*Miscellaneous.*

*Miscellaneous.*—Besides the Inner and Outer Domains and gardens at Government House, Mr. Jones has under his supervision several small plantations, grass lawns, shrubberies, and flower borders at various public buildings about the city of Sydney. My sub-department is also called upon to supply information, plans, and supervision in regard to the laying out or improvement of grounds at various Government institutions in the country—gaols and railway stations, &c.—and suitable trees and plants for the same are frequently supplied from the Botanic Gardens.

The most important outside works undertaken during the past year are the Court-house grounds at Newcastle and the grounds adjacent to the Caves house at Jenolan.

### Garden Palace Grounds.

The year 1898 has been a particularly trying one, and will be long remembered by the staff on account of its almost continuous dryness, consequent upon the scanty rainfall during that part of the season when it was most needed. Although, by dint of careful watering, a fair succession of flowers was maintained in the more important parts of the grounds, the lawns unfortunately were very frequently brown, thus materially detracting from their appearance. However, little of any consequence was lost, and, owing to a fairly good pressure of water, few trees or shrubs of value suffered very severely.

*Water Supply.*—The matter of draining the fountains round the statue of Governor Phillip is a work of some importance. When the statue was completed, as referred to in my last Report, it was considered advisable to conduct the spent water from the fountains into an adjacent main drain, in accordance with an arrangement undertaken some time ago. It, however, appeared to me that the water might be utilised for the purposes of the Botanic Gardens.

It may not be generally known that the ponds in the Botanic Gardens possess no regular supply of fresh water, either to ensure the prevention of stagnation or even to compensate for that lost by soakage and evaporation. With the exception of the spent water discharged by the Mint in Macquarie-street, which is drained from that Institution into the Garden Creek, and thence to the ponds, and also a small, almost inappreciable quantity of waste from the drinking fountains, the rain is depended upon for keeping the ponds supplied. Consequently, when the rainfall is slight, as for instance during the last summer, the very undesirable result is the stagnation of the pond water. Not only is the water itself badly coloured by reason of the minute animal and vegetable life with which it teems at such times, but the smell arising therefrom is very disagreeable, and it may also be detrimental to the public health.

It occurred to me that the waste water from the Phillip fountains might with advantage be used for flushing the creek, and thus for replenishing the ponds. Accordingly, a service consisting of 6-inch glazed drain-pipes, was laid down, the joints being well cemented to prevent the ingress of roots, &c. The course of the drain is from the statue in the direction of the picket fence on the southern boundary of the grounds to a point about 70 yards from the main gates, and from thence parallel with the fence through the Garden Palace Grounds and the propagating reserve to the head of the creek in the Botanic Gardens, where it discharges. Although the water is not absolutely sufficient to thoroughly remedy the state of things to which I have referred, as the supply is intermittent (being only available for two or three hours twice a week), yet the result answers my expectation, and is, I am fully convinced, a step in the right direction. While referring to the matter, I feel moved to record my conviction that the existence of this stagnant water at certain times in the Botanic Gardens ponds should not be permitted to continue. The remedy, of course, is a constant supply, whenever needed, of fresh water. This will certainly entail expense, but perhaps some arrangement may be come to with the Water and Sewerage Board by which a sufficiency of pure water may be available, at all times during the year, to keep the creek and chain of ponds in a perfectly wholesome condition.

The following is the registered water supply during the year :—

Meter No. 206	...	...	...	...	...	...	...	gallons.
								980,000
(The Governor Phillip Fountain is not separately controlled by meter.)								
Meter No. 253.	Lawn near Governor Phillip's Statue	...	...	...	...	...	...	36,000
	Total	...	...	...	...	...	...	1,016,000

*Removal of Fence between Garden Palace Grounds and Botanic Gardens.*—It being evident that the iron-railing fence separating these grounds on their north-eastern boundary from the Botanic Gardens was an unnecessary obstruction to the public, and that it materially interfered with the landscape views in this direction, I caused the fence to be removed. The fence, being in thoroughly good order, was re-erected in place of the old and unsightly corrugated galvanised-iron fence which had hitherto divided these grounds on their east side from the Botanic Gardens. I have reason to conclude that these changes, although small in themselves, have largely contributed to the comfort of visitors, and have added much to the attractiveness of the scene between the Garden Palace Grounds and Farm Cove.

Eventually the removal of these fences will necessitate some alterations in the direction of new walks and borders, &c., in order to adjust some anomalies which at present exist, partly in consequence of the alterations, the two gardens having been laid out at different periods, and to some extent independently of each other.

*Painting.*—During the month of December all the boundary fences, railings, and gates of these grounds were cleaned and painted by a number of temporarily employed men, under the supervision of the Government Architect. This work has vastly improved the appearance of the place. The Phillip statue, together with all the statuary, vases, &c., of these grounds, were thoroughly cleaned and renovated by the same men.

*Top Dressing of Lawns.*—This work has been proceeded with as far as opportunities would allow. The small lawn on the eastern side of the main walk leading from the principal entrance has had a large quantity of soil carted on to it, removing to a great extent the inequalities and depressions which had resulted from the settling of the ground; also, the lawn on the western side of the same walk received a slight dressing, which I intend to supplement as soon as material is available. The small lawn between the palm-bed and the main walk near the entrance to the Botanic Gardens has also received attention, a large quantity of soil having been carted on to it, raising it to its normal level.

*Soil for New Border.*—The shrubbery in the south-east portion of the grounds referred to in my last Report has since been filled with the necessary soil, and is now only waiting the planting season for the work to be completed.

## Centennial Park.

*Tree-planting.*—This work has not been neglected during the past season, trees to the number of 190 having been planted. The names and numbers of the species are as follows:—

Port Jackson fig ( <i>Ficus rubiginosa</i> ) .....	143
Moreton Bay fig ( <i>Ficus macrophylla</i> ) .....	6
Live oak ( <i>Quercus virens</i> ) .....	17
Coral tree, several species ( <i>Erythrina</i> ).....	21
Stone pine ( <i>Pinus pinea</i> ).....	3
Total .....	190

These trees have been treated liberally in the matter of soil, upon which the sum of £122 3s. 6d. has been spent, at the rate of 4s. 6d. per cubic yard. The Park consists of nearly pure sand, and all trees have been planted in a sufficiency of good soil, without which vigorous arboreal vegetation cannot be established.

It will be observed that the trees above enumerated are all of what may be termed common species, and perhaps some persons may consider that we should aim at planting a larger number of kinds. This has already been tried, and has proved a failure. For the present, or until such time as the hardy trees afford some shelter, only very hardy trees will survive in the bad soil and bleak exposure of the Park.

All the trees planted in 1897 are growing nicely. The experiment made of planting *Acacia* (wattle) and *Casuarina* (she-oak) seedlings has been fairly successful. *Acacia Baileyana* has thriven splendidly; the plants are now about 9 feet high, and covered with flower buds. They should make a grand display of golden-yellow bloom about the month of August.

*Acacia binervata* and *decurrens* have both made good growth; but, although they are fine, healthy plants, no flower buds have yet made their appearance. *Acacia longifolia* has, however, proved a failure so far, owing principally to the attacks of insect pests, to which this species seems to be extremely susceptible. *Casuarina quadrivalis* has made excellent growth, and if clumps of this plant can be successfully grown, they will form quite a feature in the Park. As regards the Broad-leaved Tea-trees (*Melaleuca leucadendron*) planted in 1897, they are growing splendidly, being now over 6 feet high, and much is expected of them in damp situations in the Park, where they are planted mainly as break-winds.

*Tree-guards.*—During the past year iron tree-guards to the number of 120 have been purchased, and nearly the whole of them have been put in use. Additional tree-guards will be required during the coming year to protect freshly-planted trees and to replace as many as possible of the temporary wooden ones, which it is my desire to abolish altogether.

*Protection of Native Vegetation.*—Last year I drew attention to the desirability of protecting the knolls of indigenous vegetation in the centre of the Park. Up to the present it has not been possible to set apart a sum of money for the purpose of fencing these interesting spots. In a few years it will be too late, and during the past twelve months many plants have been trodden down and otherwise destroyed. It will be very pleasing to me if in my next Report I am able to state that a beginning has been made with this very necessary work.

*Native flower plantation.*—In anticipation of provision being made for iron fencing for a native-flower plantation, plants indigenous to the Colony are now being raised in pots in the propagating ground, and it is hoped that during the coming year we may see our anticipations in this matter realised. In this way the Park will have a directly educational value, as all the plants will be properly labelled, and I do not doubt that the public will appreciate the innovation.

*Collection of native grasses, Cyperaceæ, &c.*—From time to time plants of native grasses have been collected, potted, and sent to the Botanic Gardens to augment the collection of native grasses there. Many plants of the orders *Restiaceæ* and *Cyperaceæ* have been collected and sent to the Botanic Gardens to supplement the collections in the Monocotyledonous portion of the Arrangement Ground. I take this opportunity of commending the good work that Mr. William Forsyth (the overseer) has done in this direction, and he has also busied himself with the collection of native seeds and of botanical specimens.

*Effects of the continued drought.*—Once more I have to record a very dry year. The effect on the Park has been very marked; the plants all suffered more or less, the annuals being, of course, the greatest sufferers. The grass gradually acquired a brown appearance, and the ponds—a conspicuous feature in the Park—have not been so empty since the formation of the Park ten years ago. So far as the ponds were concerned, however, the evil was not an unimixed one, as the absence of the water afforded an excellent opportunity of largely eradicating a plant which has been a nuisance in the ponds for a long time, viz., *Helocharis sphacelata*, R. Br. This plant has given much trouble to destroy. Frequent mowing of the stems has been tried, but little headway has been made by this method, and pulling it out by the roots seems to be the only effective way of dealing with it.

As is usual in protracted dry weather, the macadamised portion of the Grand Drive suffered severely, and many were the complaints of cyclists and drivers of vehicles at the presence of numerous small, loose stones on the road, which every endeavour was made to minimise.

*Larring and metalling of roads and paths.*—The expenditure under this head has been very heavy during the past year. The conversion of the macadamised portion of the Grand Drive into an asphalted road has been strenuously pushed on, with the result that 37 additional chains have been completed. This distance includes what is known as Cleveland-street entrance, a length of 27 chains, which a year ago was in a very bad state, but this piece of road will, I have no hesitation in stating, now compare favourably with any road of a similar width and length anywhere. The costly nature of these improvements may be inferred when it is stated that the road is 33 feet wide, and that this road has to be covered with a layer of blue-metal, then with a layer of tarred rough blue-metal screenings, and lastly floated all over with tar. The customary repairs to other roads and paths as well as floating them with tar has not been neglected. The total quantity of tar used during the year amounted to a little over 12,000 gallons.

*Road between Queen and Ocean Streets.*—The large reservoir for the Sydney Water Supply being now completed, it is necessary to form and complete the road inside the Park between the Queen-street and Ocean-street entrances. I trust that funds will soon be forthcoming for this most desirable work, as the road is required to complete and connect those round the inside of the Park, added to which the views from the site of the proposed road are of a charming character.

*The Ride.*—The Ride, in common with the rest of the Park, suffered severely from the drought; but it is a matter for satisfaction that during the year it has not been found necessary to close it. The tracks or ruts have not been so pronounced as in former years, and if riders would endeavour to avoid each others tracks, I feel confident it would not be found necessary to close the ride at all—at all events on very rare occasions.

*Cyclists.*—In my last Report I had to complain of cyclists using the footpath, to the detriment of pedestrians, and also of scorchers endangering even the lives of people. I am pleased now to state that the evils complained of have almost disappeared.

*Erection of buildings.*—During the past year a shelter pavilion similar to that in the Garden Palace Grounds has been erected at a cost of about £400. It is situated on a prominent site at the junction of three embankments near the centre of the Park, and is already much appreciated by the public. They have now a comfortable building in which to rest, and its situation is such that it affords convenient shelter to those who are overtaken by rain. Its design is very pleasing and it is an ornament to the Park. A picturesque brick cottage with red tile roof, to be used as a residence for the Senior Ranger, has been commenced. This cottage occupies the site of an old building previously occupied by him, but which was condemned as unfit for further habitation. The site is a commanding one near the end of the straight road from the Cleveland-street entrance, its situation enabling its occupant to keep in view a large area of the Park.

*Band-stand.*—I am still anxious to see a band-stand erected. The lack of one prevents bands from coming to the Park, and on the few occasions on which a band has played, the number of people who came to listen was very large. If a proper band-stand were erected, I do not doubt that the Permanent Artillery Band, and several excellent bands in the city and suburbs, would occupy it, and afford visitors opportunities of hearing good music. It is not easy to exaggerate the advantage to the public health and happiness which is secured by attracting large crowds of people into a beautiful park, and recreating them with sweet music.

*Latrines.*—This is another matter which I again recommend for serious consideration. The absence of suitable latrines for both the employees and the public should not be allowed to continue in the premier park of the Southern Hemisphere. In saying this, I am aware of the difficulty which the levels of the Park present in regard to the substitution of a scheme of main drainage in lieu of the pan system now in operation.

*Reservoir (Sydney Water Supply).*—This important work, described in my last Report, has now been completed, and forms a conspicuous and not unattractive object in the Park. The roof has been covered with turf, and from this roof and the terrace outside the reservoir proper enchanting views of the Park and surrounding country towards Botany Bay are afforded. I pay frequent visits to this place in the course of my official duties, and never tire of the view, feeling that it is one of the most beautiful with which I am acquainted. Contemplation of such beautiful scenery must tend to elevate the minds of every citizen who chooses to enjoy it.

*Statuary.*—During the past year some evilly-disposed person or persons pushed over one of the four statues of the "Seasons," situated near the centre of the Park. The statue was badly broken, but it has been skilfully repaired, and has been replaced on its pedestal. This is the first occasion on which any of the statues have been knocked over, and it may be stated that, with such a large area open to all sections of the public, the Park has been singularly free from vandalism.

*Water Fowl.*—During the last year one of the black swans hatched, and successfully reared, a brood of cygnets. The interest taken in these cygnets by the public warrants the suggestion that it would be very desirable to have a small pond properly fenced and reserved for the swans. At present they are not confined to any particular pond and are liable to be annoyed by boys, and perhaps worried by stray dogs.

### State Nursery, Campbelltown.

*Distribution of Plants.*—The plants raised and sent to the Botanic Gardens for planting out and distribution during the year numbered 84,131 (trees, shrubs, bulbs, and tubers), and notwithstanding the severity of the season, the plants referred to were of excellent quality.

*Preparation of Plants for Season of 1899.*—The stock of plants now being prepared for distribution during the winter of 1899 is of extra fine quality, and embraces a greater variety of plants than in previous years.

*Seeds and Plants received.*—About 300 species and varieties of seeds and plants were received during the year from twenty-seven contributors. Many these will be of value for the purposes of the nursery.

*The Weather.*—The year opened in the midst of a very severe drought, very little rain having fallen during the last three or four months of the previous year. During the month of March very fair rains fell, which greatly benefited the nursery stock and left the ground in good condition for the work of transplanting stock, seedlings, cuttings, &c. After good rains during the winter and spring months, another very severe drought set in as the season advanced and continued until the end of the year. This has proved the most severe drought known to Mr. McEwen, the Superintendent, during his residence at the Nursery of fifteen years.

*Water Supply.*—Following is the registered water supply during the year:—

Meter No. 268	...	...	...	...	...	...	...	gallons.
								265,000

*Improvements.*—Additions have been made to the bush-house accommodation, but more is required. The oldest structure, built fifteen years ago, required to be renewed, as it has become rotten and unfit to repair. Additional ground has been broken up for the purpose of planting specimen trees to form a small arboretum. These the Superintendent hopes to plant during the winter of 1899. Application has been made for a small brick office (the room at present used for this purpose being unfit for the preservation of books and papers), but this has not yet been carried out.

## GOVERNMENT LABOUR BUREAU.

(ANNUAL REPORT FOR YEAR ENDING 30TH JUNE, 1899.)

*Printed under No. 8 Report from Printing Committee, 2 November, 1899.*

The Superintendent, Government Labour Bureau, Sydney, to The Minister for  
Labour and Industry.

Sir,

Government Labour Bureau, Sydney, 21 August, 1899.

I have the honor to submit the seventh Annual Report of the Government Labour Bureau for the year ended 30th June, 1899.

### Labour and Industry.

When compiling my last annual report fairly good rains had fallen over the greater portion of the Colony, and the hope was generally expressed that the drought from which we had suffered for the three previous years had broken up. Unfortunately such has not proved to be the case, and we have just passed through another year of drought, affecting a much larger part of the Colony, and more disastrous than any or the whole of previous years; operating considerably on the labour market, making employment scarce and irregular.

The great pastoral, farming, dairying, and mining industries have been in a state of stagnation for the want of rain, with the result that large numbers of men have been thrown out of employment, and had it not been for the large expenditure on public works, and the elasticity of our rich natural resources, matters would have been much more serious for all those engaged in manual labour. When we consider the terrible losses of stock and crops, and the serious interruption in the production of our mineral resources (which, under more favourable circumstances, would not only have largely increased in value, but would also have given increased employment), the wonder is that the colony, under the circumstances, is so well off as it is.

During the last few weeks, however, splendid rains have fallen all over the Colony, excepting the far west, where a greater fall is still much needed.

To all appearances the drought has now broken up. If this proves to be the case, we can look forward to better times, with increased employment in all the avenues of labour and industry.

A few good seasons will dispel the gloom and disappointment which have overtaken many engaged in our great national industries, and give hope and encouragement for the future.

The number registered for the year at the head office was 3,843, or a decrease of 324 from that of the previous year. Of this number 2,196 were single and 1,647 married men, representing 4,941 children, of whom 1,630 were self-supporting, and 3,311 were dependent on their parents.

The number assisted and sent to work was 7,228, or 589 less than the previous year. The difference is not so great when the effect of the drought is taken into consideration.

The following will show the number registered and sent out each year from the head office and country branches since the inauguration of the Department, 17th February, 1892:—

Year ending.	Head Office.		Branches.	
	Registered.	Sent Out.	Registered.	Sent Out.
1893 .....	18,600	8,154	.....	.....
1894 .....	12,145	10,349	.....	.....
1895 .....	13,575	16,380	.....	.....
1896 .....	14,062	20,576	.....	.....
Intermediate period .....	3,283	5,327	1,104	143
1896-1897 .....	6,427	13,718	1,253	534
1897-1898 .....	4,167	7,817	715	288
1898-1899 .....	3,843	7,228	683	224
Totals .....	76,102	89,549	3,758	1,189

The intermediate period referred to was between 18th February and 30th June, 1896. In making our year assimilate with the financial year, the above period of four months was occasioned. The country branches were opened in March, 1896.

The reason that the number sent out exceeds the number registered is due to the fact that a man registers only once, but there is no limit to the number of times he may be sent or assisted to work.

### The Drought and its Effects.

Those who have not seen the drought-stricken parts of the Colony can have but a faint conception of the terrible havoc and devastation it has wrought, inflicting losses of the severest kind, not only to those directly interested; but to the general community.

For hundreds of miles in the western, north-western, and southern parts of the Colony, not a blade of grass or herbage of any description could be seen. Sheep by the millions perished, and also enormous numbers of stock. Those that were saved were only at great expense to the owners by their removal to the more favoured parts of the Colony, and by the cutting of scrub to feed them on. One of the results with sheep this season will be a very light wool clip, and a low percentage of lambing. The cost of replenishing the flocks and herds will prove most severe to many pastoralists.

In several parts of the Colony farmers and dairymen have also suffered severe losses.

In addition, the mining industry in most of the best mining districts has almost been paralysed for the want of water. Many of the mines were compelled to shut down at Cobar and the surrounding districts. The Great Cobar Copper-mining Syndicate was the only exception; but the management could afford to pay £11 per day for water to keep them going.

The foregoing will give a slight idea of the great loss of wealth to the Colony generally, and which has, as a consequence, materially affected labour and industry in all its branches. Hundreds of men were thrown out of employment, and made their way to Sydney to swell the ranks of the city unemployed.

To Bourke and Cobar, where the effects were more keenly felt, the Honorable the Minister gave special grants (referred to hereafter) to provide work, in repairing roads, for the unemployed, and thus saving their families from destitution. Considerable numbers of men were employed by station owners cutting scrub for starving sheep in the western and north-western districts, thus enabling them to live until employment improved.

The immense losses, the bitter disappointment, and the discouragement to those directly engaged in pastoral, farming, and mineral pursuits, as well as to the Colony generally, in consequence of the prolonged drought, should not be lightly passed over or forgotten on the return of a good season, as I fear has been the case too often in the past.

If I may be permitted to offer an opinion as to what can be done, if not to prevent at any rate to ameliorate this sad condition of affairs in the future, I would respectfully suggest—and I am confident the Government would assist—that those interested combine with a view to considering the best means to insure an additional supply of water by the construction of more tanks urgently required for the increased mining and pastoral industries which have come into existence during the last few years in many parts of the Colony; also by increasing the capacity of existing tanks, and where practicable enlarging the area. Many tanks require cleaning out, which in many instances would almost double the carrying capacity. It is said that the only means of conserving water in the Cobar district would be by the construction of tanks, as artesian boring has not proved successful. This district is rich in mineral and pastoral holdings.

In many parts of Bourke and north-western districts, artesian boring has proved a success, and in several places good supplies of water have been obtained; yet the area benefited from a bore is limited. Additional tanks, with irrigation where practicable from the Darling, Barwon, Lachlan, and other rivers, could be constructed, conserving the water in times of flood by dams, weirs, or locks, and distributing it in times of drought. No doubt these works would prove costly; but I am satisfied that they would prove amply reproductive, while the benefit conferred on the Colony and the people generally would be simply inestimable. And, furthermore, the very construction would provide a large amount of labour for a considerable period, and thereby absorb a great portion of the unemployed.

With these works successfully carried out, the rich lands of the far west would become the permanent home of thousands, capable of supplying the wants of almost the whole of federated Australia.

### Expenditure on Public Works.

The large expenditure on public works during the year has, to a considerable extent, diminished the serious effects produced on the labour market by the drought, as will be seen by the following figures:—

	£
Total expenditure on public works for the year ending 30th June, 1899 ...	2,189,287
Being an increase of £400,000 compared with the previous year.	
The Metropolitan Water and Sewerage Board ... ..	250,000
Hunter River Water and Sewerage Board ... ..	13,000
West Bogan scrub-clearing ... ..	24,185
Amount expended by various municipalities in the Colony for 1898, as per Coghlan .. ..	380,288
Total ... ..	£2,856,760

To this amount can be added the sum expended by the Railway Commissioners on railway deviations, duplications of lines, &c., during the year.

Although I do not know what this amount is, I think there can be little doubt it would bring the grand total expenditure on public works for the year to quite three and a quarter million pounds. These items include cost of material and supervision. But the greater part of this sum has been expended in giving labour, and no one will deny the immense benefits thereby conferred on the industrial classes generally, during a period which so seriously affected their welfare.

It has also prevented the necessity for relief works, which at the best are but temporary, and never satisfactory.

In two cases only was it found necessary to provide special grants for the relief of country unemployed, and these were at Bourke and Cobar, where on inquiry it was found they had special claims for favourable consideration by reason of the severe drought affecting them so seriously. The former received £350 and the latter £250 for special relief work. In the case of Cobar, the town was favoured with

with a little rain, when relief works were at once stopped. In the case of Bourke, however, only about a quarter inch of rain has fallen. This, of course, proves quite inadequate for local requirements, and the effect of the drought is more keenly felt than ever.

### The Building Trade.

No better indication of general improvement can be given than the activity which has taken place in the building trade during the last three or four months in the city and suburbs, and also in many country towns. There is evidence on all sides of reviving prosperity in the erection of public buildings, large business premises, and private dwellings.

No business man will enlarge his premises or erect new ones unless he is thoroughly satisfied that his increased demands justify it, and will pay a return on the outlay.

The same applies to private dwellings. Men with capital to invest will only purchase land and build thereon when they are convinced they will receive a fair return in interest on their outlay. In the procuring and manufacturing of materials, and the employment of such a variety of labourers and trades, there is more work afforded in the building trade than almost in any other industry. Activity in this direction is therefore of immense advantage to the industrial classes of the Colony.

When we consider that contracts for the erection of buildings in and around Sydney during the last two or three months, and now in operation, have been accepted to the value of over a million pounds, we can form some estimate of the great benefit (directly and indirectly) conferred on the general community by this industry alone.

Week by week reveals the fact that, almost daily, large contracts for buildings are being accepted, and which there is every prospect of continuing for some time. The cause of this boom is not far to seek. It is no doubt attributable to the fact that large sums of money are available for investment as soon as opportunity offers, and if I may be permitted to say so, I think that the union of the Australian Colonies has given both the impulse and the opportunity.

### Fossicking.

Fossicking as an industry came into existence in connection with the Bureau in August, 1893, and has in many instances proved a most successful and independent occupation by which to make a living, if not a fortune.

The mode adopted at the present time, is that any person registered on our books, and suitable for the work applies to the Bureau for a pass to some fossicking district, and a miner's right. He is referred to Mr. W. H. J. Slee, of the Mines Department, whose long experience as Chief Inspector enables him to advise the men as to the most suitable districts, and sends him to us with a recommendation for the assistance sought. This is complied with, the man signing a guarantee to refund the cost of same.

The following will show the number sent out fossicking since its commencement:—

1893-94	...	...	...	...	...	...	...	4,516
1894-95	...	...	...	...	...	...	...	10,718
1895-96	...	...	...	...	...	...	...	7,093
Intermediate period...	...	...	...	...	...	...	...	1,733
1896-97	...	...	...	...	...	...	...	1,647
1897-98	...	...	...	...	...	...	...	937
1898-99	...	...	...	...	...	...	...	360
Total	...	...	...	...	...	...	...	27,004

It will be seen that the number sent out for 1898-99 is considerably less than the number assisted in previous years, which is also attributable to the drought. Water is a most important factor in fossicking; in fact, it is vital to the industry, and without it it has naturally suffered. Many of those assisted have done well. In some cases it is said they have discovered valuable reefs, &c., but having insufficient means to work them have sold out to others. Many have also taken up land, and, combining other occupations with fossicking, have been able to send for their families, and have ultimately settled down. In this way hundreds have become permanent settlers in the country, making a good living, with much better prospects of succeeding in life than if they had remained in Sydney, earning a precarious living in the midst of its keen competition.

There are, however, I regret to state, numbers who have been assisted with passes, rights, rations, &c., who have not succeeded (or, I fear, even tried to do so), and have merely used the Department for a different purpose, by going to other employment, and thus evading the guarantee order that they would have to sign, authorising their employer to make the necessary deductions. No effort, however, is spared on our part to detect and discourage such tactics. Men of this class have no idea of appreciation for any assistance the Government may render them at a time when they most needed it, and take a pride, some of them, in evading payment of what they owe. Such men will never get on; and in their own interests the less that is done for them the better.

It is, however, satisfactory to know that since the system came into existence through the Bureau the increase in the value of gold won in the Colony has steadily increased, as the following table amply testifies:—

Year.	oz.	Value.		
		£	s.	d.
1891	...	...	...	...
1892	...	...	...	...
1893	...	...	...	...
1894	...	...	...	...
1895	...	...	...	...
Intermediate period	...	...	...	...
1896-97	...	...	...	...
1897-98	...	...	...	...
1898-99	...	...	...	...

I do not say that this annual increase is entirely due to fossicking, but I think we are justly entitled to take some credit for the large addition to the wealth of the Colony. It is certainly something more than coincidence. There is still a large field for permanent employment in the winning of gold in many parts of the Colony, which, with the latest improved scientific methods of treating ore and the opening up of new gold-bearing districts and river dredging, will assuredly make it one of our greatest and most profitable industries.

#### Casual Labour Farm.

This farm is situated at Pitt Town, near Windsor, and contains about 2,000 acres, formerly known as the Pitt Town Village Settlement. It was converted into its present use over two years ago, with the object of giving casual labour to those (chiefly single men) homeless and destitute, providing food, shelter, and wages from 2s. to 5s. per week.

It is under the management of Mr. A. Hutchison, who has wonderfully improved the place (which had almost become a wilderness) since he took charge.

The work performed has chiefly been farming, gardening, orchard work, wood-cutting, clearing, road-making, &c. If the land were only of better quality it could be made to self-support a large number of men. A considerable quantity of farm produce, vegetables, fruit, and firewood has already been produced, which with good seasons could be greatly increased.

The first batch of ten men was sent in January, 1898. The number sent this year was 137. The average time worked was eleven weeks. Those sent are only allowed to remain three months, so that applicants come and go all the year round. The average weekly wage paid them this year was 3s. 8d. per week. The cost of keeping each man was 3s. 2½d. without vegetables, or 4s. 3½d. with them. The conduct of the men generally the manager reports to be good. Three months of good food, with a home and the exercise of labour, have had a beneficial effect on the physical appearance and health of the applicants. Although the wages were not high, the money has enabled many of them to purchase boots and clothing, of which they were in much need.

#### West Bogan Scrub Clearing.

Notwithstanding all the criticisms levelled against the West Bogan Scrub clearing, it is said by those competent to form an opinion that the work done is a valuable one, and will recoup the Government for the outlay in improving the land and making it fit for occupation. As a means of employment, it has proved a boon to many of the unemployed, enabling them to earn a livelihood for themselves and their families at fair wages. It is but natural to expect that many who went to this work did not succeed, and this for many reasons. Some were unaccustomed to the work; some could not agree with their mates; some would not work together; while others left without a fair trial, the work being too far from Sydney, &c. These remarks apply to a number of those sent to all Government works. Of course, with these the work is always to blame. But the best evidence in favour of this undertaking is the fact that all the genuine workers that have once been there, and completed their work, are always eager to return to a fresh block. Furthermore, when vacancies for the Bogan are announced, those applying to be sent far exceed the number required. Only recently, when five gangs were wanted, twenty-three gangs applied. And later, when two gangs were required, no less than nineteen gangs applied. This, I think, is ample proof that the work and the wages are not so bad as represented by some.

According to the report of the officer-in-charge at Nyngan, about 784 were employed during the year, made up as follows:—Men who had not finished their blocks from the previous year; men employed locally to fill vacancies; and 330 men in fresh gangs (300 of whom were sent from Sydney, and thirty from Nyngan).

A gang consists of ten men, formed by the men themselves appointing their own ganger. Previous to formation they are always advised to select only such as are well known to one another as good and agreeable workers. When this is acted on, the result is always satisfactory. If in a gang of ten there should be two or three indifferent workers, or disagreeable or lazy, disunion sets in, resulting in low wages. Smaller gangs of, say, five or six would be preferable, as the chances of disagreement are reduced. When more than the requisite number of gangs apply, a ballot is taken. The blocks allotted to each gang comprise about 5,000 acres, which is estimated to give about four to six months' work. The price per acre is fixed by experts at from 1s. to 3s. 3d. per acre, according to the density of the scrub, averaging about 2s. 6d. all round. During the year the wages averaged from 5s. to 7s. per day, and the cost of living from 7s. 6d. to 10s. per week for each man. Till the husband is able to send his wife some money, his family in Sydney is provided with provisions, the cost of which remains a charge on his earnings.

Mr. Joseph Walsh, the officer-in-charge of the West Bogan Scrub clearing, has kindly furnished me with the following review of the year's operations under his supervision:—

"In compliance with your request, I have the honor to submit some general information regarding the work done in connection with the clearing of scrub lands, the property of the Crown, situated on the western side of the Bogan River, and near the township of Nyngan.

"The works were first initiated in September, 1896; the land to be operated upon was cut into blocks averaging 5,000 acres each; valuations were made by an experienced surveyor and a local expert of each block, and a price fixed per acre to enable average axemen to earn 6s. per day. At first great difficulty was experienced in dealing with the men, most of whom were inexperienced bushmen and others unwilling to do any class of work; most of those who were inexperienced soon developed into fairly good axemen, those who caused dissention and would not work were gradually weeded out.

"This work has been the means of connecting and educating some hundreds of men, who were mere idlers, into expert bushmen, whose services are now well worth 20s. to 30s. per week on any class of station work.

"Once a month each gang's work is measured by a surveyor, and payments made accordingly, and it is most gratifying to see the amount of money returned to me for despatch to their wives and families in Sydney.

"The land cleared to 30th June last comprises an area of 605,406 acres, costing £81,870, or an average of 2s. 8d. per acre, including all cost of supervision, which was practically useless and abandoned country, and has afforded work for 3,000 men.

"After

"After the completion of about 270,000 acres, certain portions were thrown open for lease, which in most cases were readily applied for, and it is most gratifying to notice large areas now being fenced and subdivided, houses built, and tanks sunk on portions which were a short time ago a perfect wilderness.

"One noticeable feature is the dress and condition of the men after being here a few months. A number of them arrive poorly clad, and without food or blankets; but after a few months' work, the contrast is very great—they look the picture of health, and are well clothed.

"Taken as a whole, the work completed during the preceding two years has been satisfactory, both to employer and the employed. Capable men have been enabled to earn wages averaging between 5s. and 6s. per day, whilst the cost of living has varied from 7s. 6d. to 10s. per week.

"For the last twelve months an area of 168,630 acres has been cleared, at an average cost of 2s. 6d. per acre, and about 784 men employed, their earnings being from 5s. to 7s. per day. The result of experience in this class of work, both by the men and overseers, is that it is being carried out in a thoroughly satisfactory manner, and is much superior to that performed privately on the stations adjoining.

"The scheme, as a whole, having proved so beneficial in every way, it has been decided to further extend the operations, and there is little doubt but that it will prove one of the most reproductive works ventured upon for many years past."

He also kindly enclosed the following statement, contributed by the Government Inspector, which may be of interest to the Hon. the Minister:—

"The Crown has leased, under improvement conditions, 745,439 acres, and a condition of the leases is that not less than 2s. 6d. per acre be expended in the first four years of the lease in thoroughly scrubbing and clearing the land. Of this area, about 550,000 acres have been operated on, and the amount expended on scrubbing is £48,506 19s. 9d.

"In addition, other improvements necessary for the profitable occupation of the land have been effected, at an expenditure of £21,370. The lessees' work was commenced about the same time as the Government scrubbing operations, and the number of men engaged on the work has varied from 500 to 2,000.

"There are now about 620 men employed by the lessees scrubbing and clearing, and the number will be doubled during the next three months, as the recent welcome rains will enable this work to be pushed on with vigour.

"In several instances the work of scrubbing and clearing on the leases has not been so thorough as that done by this Department, though the work, as far as it goes, is just as effective; but the lessees have four years to complete a work which, as far as they are concerned, will leave very little room for criticism, judging by the earnestness and energy displayed up to the present, and it is gratifying to find the action of the Lands Department receiving, in a practical sense, the best possible endorsement.

"Operations, entailing a large annual expenditure, will be carried on on these leases for a further four or five years at least, giving employment during the off seasons to a large number of men.

"It is difficult to arrive at the average earnings of the men employed by the lessees, as a number of them are Chinese. The wage paid to day men, of whom there are a good number, is from 20s. to 25s. per week, with rations and cook found. Tents, tools, and cookery utensils, &c., are supplied by the stations free of cost.

"As far as I can ascertain, the earnings of the men on contract work varies according to the qualifications of the men, some gangs earning from 15s. a week to £2 per week, out of which all expenses have to be met."

### Wages.

The wages offering at the Bureau have been much the same as during the previous year. In some callings there may be a slight difference; but on the whole there has been very little alteration in wages during the last five years.

It is well known that the Bureau does not interfere in the rate of wages, terms, or conditions of employment. Its main object is to bring employer and employee together, leaving it to themselves to make their own arrangements. When, however, an employer offers a low rate, we often write explaining he cannot expect to get a good man at his offer. In this manner frequently an advance is obtained.

An erroneous opinion is often expressed by some that the Bureau is the cause of a reduction in wages, &c. A moment's reflection will convince any reasonable mind that such is not the case. Work and wages are governed by the law of supply and demand, like anything else. It is also well known that where large numbers of men are seeking employment, there is a danger of reduction in wages. And any means that removes this condition can surely claim to have, to at any rate a large extent, averted a reduction of wages.

The Government Labour Bureau has, during its existence of seven and a half years, assisted and sent to work no less than 89,000 men, distributed over all parts of the Colony. Of course, a large number of these have returned; but they have been sent away again and again. Some may argue that these were loafers, whose competition was not to be feared; but such is not the case. Most of these men represented as capable a body of workers as any in this or any other city, and comprised all classes and callings, professional, clerical, mechanical, and labouring—all genuine working men. The Bureau, therefore, instead of having been the means of reducing wages, has, on the contrary, done more than any other institution to remove competition, and thereby protect the rate of wages.

Wage frequently is a factor in the well-being of a country, and denotes the character and condition of the people among whom it prevails. Low wages, as a rule, denote poverty, while high wages give encouragement to energy, perseverance, and diligence. For proof of this, we have only to look to those countries where high or low wages prevail. Good wages always indicate the prosperity of a community, and are therefore well worth aiming at. A good steady workman will always command good wages. The difficulty is to equalize the rate generally, hence the trouble in finding employment for inferior or incompetent workmen or old men. And should these accept work at their own value, the Bureau should not be held responsible. Unfortunately these become a burden on the State, and the difficulty of finding employment for this class is increased by the fact that, should the Government find any light work to suit them at piece-work or wages, the able-bodied men living in and around Sydney immediately rush in to participate rather than take work in the country on account of their families.

However,

However, it is far better to employ old men, or those unfitted for hard work, at some light labour they can perform, than give them free rations, if it can possibly be avoided. For the latter undoubtedly demoralises them, destroying what little energy some of them may have for honest labour.

### The Unemployed Difficulty.

This subject has claimed the attention of many public men during the last ten years. The problem has been very fully discussed in the Press and on the platform. Royal Commissions and Boards have carefully considered and reported on the subject. But, unfortunately, up to the present, there has been no satisfactory solution. It has been a great source of trouble to Government, by which endeavours have been made to meet the difficulty by providing work for the unemployed as far as possible during the year.

This year the trouble was considerably accentuated by reason of the prolonged drought. But everyone will rejoice at the fairer prospect appearing at last in copious rains over the greater portion of the Colony, and the promise of a good season, which, if only realized for the next year or two will do more than all the theories advanced to solve the unemployed difficulty. I may here be permitted to offer a few brief remarks on this question, as they appear to me in my experience in dealing with the unemployed, dividing them into three sections:—

1. The strong and willing man.
2. The indolent and lazy, who will not work.
3. The old and incapable.

1st.—All that the strong and willing want is the opportunity. How to give it them is the difficulty. Temporary Government relief work only assists for a time, although a boon to steady men with large families depending on them. But in many cases the danger is ever present of its sapping their manhood and independence, and destroying their energy, inducing them to look solely to the Government to supply them with work or support their families, thus throwing their responsibilities on the state under which they live. This does not tend to the healthy, robust, and manly independence of a good citizen. I am confident that one or two good seasons will considerably solve this matter, and any action that will occasion similar results to that produced by good seasons on a community will assist materially in the solution of the unemployed problem. The Federation of the Australian Colonies will most undoubtedly increase the opportunities for all the industrial classes. With increased expenditure of public and private capital, more permanent employment, removal of all intercolonial barriers making us one people with one destiny, will most assuredly enhance the scope of our energies.

2nd. The idle and lazy who will not work deserve very little consideration. There is in this city a number of this class who roam about begging, cadging, and stealing, disfiguring our parks and streets; who are a nuisance and a menace to the general community, and a disgrace to all genuine working men; and who I regret to say are encouraged in their idle worthless life by a too generous and liberal public who are so charitably disposed that they never stop to consider. This class always attends the Bureau when any relief in the shape of rations is given out, and as a rule attends all the other charitable institutions for the same purpose. These men never work or apply for it. There is only one method of dealing with them, and that is to apply the rule of "Work or starve." Prosperity or depression makes no difference to them, they ever remain drones in the busy working hive. With a view to reformation, if this rule were applied whenever and wherever possible it would be much better for themselves and the general community.

3rd. Old men unfitted for heavy work.—Of these there are from 600 to 700, aged from 55 to 80, and are the most difficult to provide for. Many of them are married men, several with young children to support. No employer will select them for heavy manual labour, although most of them are willing to work; and, notwithstanding their age, are as good if not better workers than many young men.

Unless these old men have children or friends to provide for them (which obligation, I regret to say, is invariably overlooked), the only alternative left for them is to go to an asylum, and this necessitates a separation of man and wife in their old days; and any system that avoids this undesirable contingency by providing and admitting aged couples to spend the few remaining years of their life together would be far preferable. I am satisfied that most of the old men who apply to the Bureau for light work, and also a large number of them at present in our asylums, are quite capable of earning, if not the whole cost of their living, at least a great portion of it, while the very exercise in doing so would be most beneficial to them.

Having this in view, and bearing in mind the cost of the present method of dealing with them, I would respectfully suggest the following, which I will call

### The Barrack System.

Attached is a rough sketch, giving a plan of it. It represents (say) an area of 1,000 acres, more or less, reserved for the purpose, with a square as near as convenient in the centre thereof, comprised of two-roomed dwellings for each married couple, or old single men in couples. There would be an oval of green in the centre for recreation purposes, and flower-beds in each corner, with a wide pathway all round; also a verandah. In the case of children, there could be a school; also a hall or church for religious services, lectures, concerts, &c. The surrounding land could be worked in the cultivation of vegetables, flowers, fruit, &c., and furnish light employment for these old people. Among them there would doubtless be many tradesmen, who could make boots, clothes, &c., while the carpenters, tin-smiths, and others could also be employed. On this settlement, of course, it would be imperative to have ground of good quality, suitable, and not far from market. The manager would have to be a person thoroughly accustomed to old people, with sufficient knowledge of the work required to instruct them in it. If such a system were tried with, say, from 200 to 300 old people, as an experiment, I am confident the last days of their lives could be made far happier at a cost much less than is possible under our present system, as a large portion of the old men would be willing and capable of light work, and by their earnings contribute towards their own support.

Number

## Number of Unemployed.

After careful calculation I estimate the number of unemployed in an around Sydney at from 3,000 to 4,000.

At the end of the year there was a slight indication of an increase; but as we have sent over 1,000 men to railway deviations, forest-thinning, Bogan scrub-clearing, and to private employers, during the last six weeks, this number is considerably reduced. It is not possible to do more than estimate the number of unemployed at any given time, because there is always a good deal of casual or irregular labour—a day a week, or a week per month. Thus, while there may be, say, 1,000 idle to-day, there may be only half that number the next day.

Comparing the character and number of unemployed at the present time with what it was some five or six years ago, there is, I am happy to say, a very marked improvement and decrease generally. For instance, in 1895, we had from 1,000 to 1,500 working daily at the Centennial Park for rations, while, during the winters of 1892–93 and 1894, we sheltered from 1,000 to 1,200 per night at the old Exhibition and the Woolloomooloo sheds. At this time there were daily and nightly processions of unemployed through the streets of Sydney, and a continual menacing agitation going on, Parliament House having to be guarded by the police against invasion, &c.

The chief causes of depression during those years was doubtless due to the effect of the memorable maritime strike and other industrial disputes, together with the terrible losses and disasters brought about by the financial crisis of 1892 and 1893.

Comparing those times with the present, I have no hesitation in saying that the whole character, condition, and numbers of the unemployed have been significantly improved in all its bearings and surroundings, and with the recent general rainfall there is every hope of good seasons, which, together with the certainty of a United Australia (already referred to), will increase and multiply the avenues of labour, and we can, I think, hopefully look forward to every capable and willing worker in the Colony being employed.

That there should be any genuine capable worker unemployed out of our comparative small population on this vast territory, with its immense natural resources, wealth, and possibilities, may seem strange. But, unfortunately, it is true not only in this but in every other Colony.

Much has been done to lessen and mitigate this evil (with more or less success), and it is most pleasing to note that the opinion of thousands of our fellow citizens to-day is that with Federation it will entirely disappear.

## Registry Offices.

Legislation for the purpose of licensing all registry offices in the city is much required, and, as I understand the Minister has prepared a Bill, I think it will soon become law, in order that those who apply at these offices for employment may be protected from imposition. This Department has had ample experience that several registry offices after charging excessive fees have sent applicants to bogus situations. In other cases fees have been taken from several people for a situation requiring only one. Several of the keepers of such offices have been prosecuted for victimising people for the purpose of obtaining fees.

## Relief.

The only relief issued at the Bureau during the year was to married women and children in Sydney whose husbands were in the country seeking employment. Such are known as free rations. Rations were also advanced to the families down here of men employed on the Bogan clearing, the cost of same being deducted from their earnings. The extent of the foregoing was as follows:—

	£	s.	d.
Free Rations	53	10	2½
Bogan „	71	2	4¼
	£124	12	6¾

Rations have also been issued to men going fossicking, costing £30 3s. 9d., which was paid for by the Mines Department.

During the year I visited Bourke twice, and Cobar once, in connection with the relief grants for the local destitute unemployed, which I have already referred to.

## Refunds.

The amount of refunds for rail and steamer fares, miners' rights, rations, and miscellaneous items, received at the Bureau and its branches for the year came to £2,646 6s. 2d., or a decrease of £155 13s. 9d. compared with the preceding year. For rail and steamer passes alone £2,547 1s. 11d. were refunded, which is equal to almost 70 per cent. of the cost represented. This is very satisfactory. The grand total refunded to the Bureau and its branches amounts to £20,598 12s. 10d. There is still, however, a considerable amount due to the Department. A strict system, of monthly circulars is in force to those indebted to the Bureau.

In the collection of fares I am much indebted to the assistance (in extreme cases) of the police, who, through the courtesy of the Inspector-General, Mr. Fosbery, have collected items in remote districts, which would otherwise have been lost. To make the work more uniform, the head office took over from the country branches the task of collecting the cost of passes issued by them on my authority.

I may here be permitted to point out that, although the cost of rail passes is large, it is not actually a burden on the country, from the fact that the railways are owned by the Government, and the despatch of unemployed has never at any time necessitated an extra ton of coal or an extra man, and the trains would have run just the same if no unemployed were carried. The real cost, therefore, is that in connection with the management and maintenance of the Bureau. This cost, since its inception, has, by the refunds, been exceeded by £10,202 18s. 6d., which represents an annual profit of about £1,360 for each of the seven and a half years that the Bureau has been established.

### Country Branches.

Most of the country reports point out the sad effects of the drought on labour and industry in many districts of the Colony. Two or three of the districts benefited by receiving a little rain, and having feed to dispose of to drought-stricken districts.

The whole of the forty-two reports go to show the wonderful enduring capacities of the Colony generally, and the immense resources of production which is possible under more favoured seasons, unequalled, perhaps, by any country in the world.

But for the drought there would have been very few unemployed in the country districts, and under the circumstances there were not so many as I anticipated. The number registered during the year at the branches was 686, and the number assisted and sent to work was 224.

I have to thank the whole of the country agents for their kindness and attention in furnishing me with their monthly and annual reports, which have enabled me to place before the Minister information relating to the state of labour and industry in the various districts of the Colony.

According to the reports (which are hereto attached), there has not been any appreciable difference in the rate of wages for the year.

### Summary.

The average daily attendance of unemployed at the Bureau has been from 150 to 500, and, on such occasions as the selection of men for railway deviations, has been as high as 800. The men come and go all day. When they find nothing suitable on the "wanted" board, the more energetic of them go elsewhere in search of work. The conduct of the men, generally, is good, with the exception of a few agitators who never will be satisfied. Frequently, when men have been required, and a selection about to take place, these agitators have endeavoured to persuade the men to follow them to the Queen's Statue or the Park, where they roundly abused everybody, from the Government downwards.

Generally speaking, the men readily submit to the rules of the Department. Those inclined to be unruly have to be treated firmly, in their own interests and those of good order prevailing in the Bureau.

All persons that apply to be registered are required to produce an elector's right, or a letter from some responsible person to certify that they have been for at least twelve months genuine residents of the Colony. It is surprising in the extreme to find so large a number of persons as we have who have never troubled to get an elector's right, although of age, born natives, or resident in the Colony for many years. Since this rule has been enforced during the last two years, many hundreds have been added to the voters of the Colony. There are still large numbers of foreigners who have been residing in the Colony for years, but not naturalised, and for that reason are not in possession of electors' rights. Many of these, it may be presumed, take an active part in all Parliamentary elections, but have no vote to support their very energetic demonstration.

The number of applicants from the other colonies for registration was 171, or a decrease of 496 compared with the preceding year.

I am pleased to acknowledge the assiduous and willing assistance rendered by my staff in carrying out the operations of the Government Labour Bureau during the year.

As a means of providing for aged people, the old-age pension schemes have been widely discussed, but at present it may be said to be only on trial. If experience proves this system to be satisfactory and effective, I have no doubt it will be adopted by this and other colonies. At the same time I fear the proposals in this direction, hitherto advanced, will fail to meet the circumstances of a large section of the aged poor.

I have, &c,  
 JOSEPH CREER,  
 Superintendent.

CLASSIFICATION of Trades and Occupations during the year ending the 30th June, 1899; and a comparison of same with previous years.

COMPARATIVE STATEMENT showing results for the years ending 17th February, 1893, 1894, 1895, 1896, and 30th June, 1897, 1898, and 1899.

Table giving the number registered for each of the above years; number assisted and sent to work for the same periods; amounts refunded for railway passes, miners' rights, &c.; number of fossickers sent out from Sydney and Country (inclusive), together with increase or decrease under each head.

NOTE.—This return does not include those men who were employed on the different relief works for rations only, and it will be noted there is a broken period accounted for owing to altering the date of our annual reports to suit the financial year, viz., 1st July to 30th June.

The Labour Agent, Armidale, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir, Department of Labour and Industry, Armidale, 4 July, 1899.

I have the honor to report that during the year ending the 30th June, ultimo, there was only one person registered for employment in this office, and he having obtained a situation, was granted a pass by rail to Gunnedah at a cost of 19s., which he refunded. The sum of 30s. was also collected from Miss Emily Alderton on account of head office, and remitted to Treasury.

The rainfall during the year has been much below the average, and consequently work on the principal industries, viz., mining and agriculture, has fallen off to a considerable extent. Recent rains, however, have given a slight impetus to a general demand for labour in all its branches, and should they continue at intervals there is every prospect of increased employment. From what I can learn there are at the present time about 100 men who are not in constant employment in the district, and who are trying to make ends meet by fossicking when other work cannot be obtained. The current rate of wages are about as follows, viz.:—Miners, 8s.; truckers and labourers, 6s. to 7s.; engine-drivers, 9s.; smelters, 9s.; carpenters, 9s. to 10s.; tool-sharpeners, 8s., and boys from 3s. 4d. to 5s. per shift; farm labourers, from 15s. to 20s. per week and found. Although, so far, there is every prospect of a good spring, I would not advise any person at present to come to this district in search of employment.

I have, &c.,  
C. SMITH,  
Agent.

The Labour Agent, Albury, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir, Department of Labour and Industry, Albury, 1 July, 1899.

I have the honor to submit herewith my report for the year ending 30th June, 1899.

No business of any description was transacted at this branch during the period named; and as the facilities which the Department offers to those in needy circumstances and in search of employment have not been availed of, it may be reasonably presumed that there is no surplus labour in this district. The rates of wages as reported from time to time have not materially varied during the past twelve months.

In bringing under review the disastrous effects wrought by the long and protracted drought in the Central and Western Divisions of the Colony, the prosperity of the Albury District, favoured by a good season and average rainfall, forms a pleasing contrast to the distress existing within the drought-stricken area. The immediate effect locally of the dry season experienced in other parts, and the large mortality in stock which ensued, has been the opening up to stockowners of markets for the disposal of their surplus stock at prices not obtained since 1889, and in some cases the profitable letting of their pastures to stockowners of other districts. The wheat farmers also have reason to feel satisfied with the past year's operations. Whilst the labours of the farmers in the dry country were met by loss and failure of crops, the last season's yield in this district exceeded that of previous years, in some instances as much as 30 bushels to the acre being cropped. The success of this season's crop has been assured by the regularity of the rainfall during the past three months.

The boring operations commenced at Black Range for the purpose of testing the existence of a deep lead in the Murray Valley, referred to in a prior report, have been temporarily suspended: but it is understood the work will be resumed shortly, and a thorough test made.

Should the experiment be attended by success, the expenditure of a considerable amount of outside capital in the exploitation of the leads and the opening up of a wide avenue of employment will follow.

The anticipated early consummation of the federation of the Colonies has had a marked effect upon the local land market. Active inquiries are being made for land in the vicinity of Albury, and as a consequence values have become enhanced.

It may not be considered inconsistent with the objects of this report to draw attention to the growing competition of the coloured races in business pursuits throughout the country districts, for in that direction may be discovered an indirect contributing cause to the limited employment to be found in certain occupations.

These men—Hindoos, Syrians, and others—who act as pedlars for the sale of the wares of their employers in the large centres, are to be met with in all parts of the country in their house-to-house canvass, and are to be found established in business in many towns. By their cheap mode of living and immunity from the ordinary social expenses which fall upon the shoulders of the European business man, they are enabled to enter, with undue advantage, into competition with the country shopkeeper to the detriment of the latter and his employees. Competition of a legitimate kind cannot be objected to, but competition of this class is both objectionable and undesirable and requires restricting.

I have, &c.,  
M. J. McMAHON,  
Local Agent.

The Labour Agent, Bega, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir, Department of Labour and Industry, Bega, 30 June, 1899.

In submitting my annual report for the year ending 30th instant, I have the honor to state that no advantage has been taken by the public generally, nor, in particular, by those in search of employment, of this branch during the year. I have not had any applications for employment, and employers prefer, apparently, to apply direct to Sydney for such hands as they may require. The demand for skilled mechanics is not large, there being only two or three fairly extensive industries in the district. As I have pointed out in my monthly reports, the main support of the people is dairying and farming; but

but owing to the continued dry weather that prevailed for the best part of the year, an anxious time has been spent by everyone. A large number of cattle died from the effects of the drought; and in order to try and save others, a lot of expense was incurred in removing them to where it was possible a little feed could be had. It is estimated, by people who are in a position to judge, that at least 500 head have been lost. This part of the Colony would, with fair seasons, be second to none; possessing, as it does, fine agricultural and grazing land, and a mild climate. The distress amongst the farmers would be alleviated to a great extent by one good season. This boon is expected from time to time, and consequently, when a little rain falls, people are more cheerful and hopeful, and their depression for the time being disappears, only to return with the dry weather.

The rainfall for the year registered 18.19 inches.

The following rates of wages obtained in the district during the year:—

Blacksmiths	...	...	...	...	...	...	£2 to £2 15s. per week.
Carpenters	...	...	...	...	...	...	£2 10s. per week.
Coach-painters	...	...	...	...	...	...	£2 10s. per week.
Compositors	...	...	...	...	...	...	£1 10s. to £2 10s. per week.
Shop hands	...	...	...	...	...	...	£3 per week.
Junior shop hands	...	...	...	...	...	...	£2 per week.
Storemen	...	...	...	...	...	...	from 10s. to £1 10s. per week.
Labourers	...	...	...	...	...	...	6s. to 7s. per day.

There are but few unemployed about the town and district, as there are many small jobs offered, such as pulling corn, milking, &c., whereby people out of work earn a few shillings. Some considerable number of young men have lately left the district for other parts to get constant work, as no opening exists here for them.

From the facts detailed, it will be noted that Bega and its neighbourhood has not escaped the general depression which has caused such widespread loss; and it is hoped that during the next twelve months a far more cheerful and healthy change will be experienced.

I have, &c.,  
W. E. O'BRIEN,  
Agent.

The Labour Agent, Bathurst, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court-house, Bathurst, 30 June, 1899.

I have the honor to forward herewith my report for the year ended 30th June, 1899. The operations for the past year have been very limited, as employers of labour in this district do not take advantage of this branch; but the branch has been found useful, to those seeking employment in other districts, in providing passes.

There appears to be no difficulty by employers of labour in obtaining competent workmen.

The past disastrous drought, of course, has been the means of making business of all descriptions dull; but the recent rainfall, although late, will have the effect of making ploughing possible, and will probably cause a movement in stock which should provide employment for ploughmen and drovers.

From an estimate obtained from the police, it would appear that the probable number of unemployed is fifty.

The current rates of wages are as follows:—

Accountants	...	...	40s. to 60s. per week.	Farm hands	...	...	15s. to 20s. per week and keep.
Bakers	...	...	35s. to 40s. "	Fellmongers	...	...	30s. to 45s. per week.
Barmon	...	...	20s. to 30s. "	Fencere...	...	...	40s. to 45s. "
Blacksmiths	...	...	7s. to 8s. per day.	Gardeners	...	...	15s. to 25s. "
Bootmakers	...	...	35s. to 45s. per week.	Grocers...	...	...	30s. to 60s. "
Brickmakers	...	...	7s. to 8s. per day.	Grooms...	...	...	15s. to 20s. "
Bricklayers	...	...	8s. to 9s. "	Ironworkers	...	...	45s. to 60s. "
Carpenters	...	...	8s. to 9s. "	Labourers	...	...	6s. to 7s. per day.
Clerks	...	...	35s. to 50s. per week.	Miners	...	...	7s. to 8s. "
Coachmakers	...	...	45s. to 55s. "	Navvies	...	...	7s. to 8s. "
Coachmen	...	...	15s. to 20s. "	Ploughmen	...	...	20s. per week and keep.

I have, &c.,  
H. H. CHIPPINDALL,  
Labour Agent

The Labour Agent, Bourke, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Department of Labour and Industry, Bourke, 1 July, 1899.

I have the honor to submit you my report for the past year. During that period—and indeed now for three years—the western portion of the Colony has suffered from a severe drought. The pastoralists were compelled during the last year—and are now—cutting scrub to keep their sheep alive, and this fact accounts for a great deal of labour being in the hands of those who probably, under ordinary circumstances, would be out of employment.

The labour market in the district is at present quiet, though I believe it to be a fact that there is employment for any man for an ordinary day's work on the various stations scrub-cutting. The unemployed in Bourke are not noticeable, and one can hardly help at this time expressing surprise at the agitation of a number of men in Bourke some months ago, seeing the quiet state of things here now. The agitation seems to have collapsed as suddenly as it arose.

With regard to wages, I learn the usual wage of a tradesman to be 10s., and carters and others doing similar work up to £2 per week.

During the year the Bourke meat works closed down, owing to the difficulty in getting stock here, on account of the drought. This means a large decrease in the circulation of money in the town.

The work performed in my office embraces the following—

Registrations	...	...	...	...	...	...	...	54
Passes issued	...	...	...	...	...	...	...	10

Amount of refunds received on account of railway passes, £12 15s. 6d.

I have, &c.,

O. A. S. FITZPATRICK, C.P.S.,  
Agent.

### The Labour Agent, Broken Hill, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court-house, Broken Hill, 4 July, 1899.

I beg to submit the following as my annual report for the year ending 30th June, 1899:—

Very few names have been registered in my books during the year, and these were men who, I have no doubt, speedily obtained employment, as I never heard of them afterwards.

As I have before reported, good hard-ground miners need never be out of employment—the demand for them now is greater than ever. There is also a demand on the Proprietary Mine for general labourers, able and willing to do the work required of them.

A local weekly newspaper some little time ago published the startling statement that 2,000 men were out of employment in Broken Hill. I immediately instituted inquiries, which resulted in my being perfectly satisfied that there were no grounds for such a sweeping statement. Indeed, when a meeting (called by advertisement) of the unemployed was held in the Central Reserve on the 19th ultimo, only ninety-one names were registered, and of these thirty-six were elderly men and fourteen were youths. As this town has a population of about 27,000 people, I regard this result as satisfactory. In every large town there must, unfortunately, under present conditions, be always persons who cannot, through numerous causes, age and physical infirmity especially, obtain permanent employment, and I cannot help thinking that a number of men here have accustomed themselves to rely on the local municipal council for such casual labour as it may from time to time require. When the revenue is low these men are the first to suffer unless they are prepared to undertake some other kind of labour (in the mines for instance), which may call for a greater tax on their powers and to which they are not, perhaps, accustomed.

During my residence here, extending now into four years, I have never known a case where a good man in any department of industry could not quickly get permanent employment.

There is very little labour employed permanently on the stations in this district. The rainfall makes little or no difference to the labour market. Although benefiting the country to an extent hardly to be described, a good fall of rain rather lessens the amount of casual labour employed, as tank-sinkers, &c., have then to cease work.

I have issued no railway passes during the year, nor have I received any refunds from persons who have obtained Government aid to proceed to their employment here.

I attach hereto a statement showing the rate of wages obtaining here.

I have, &c.,

JAMES WATT,  
Labour Agent, Broken Hill.

The Labour Agent, Braidwood, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Braidwood, 13 July, 1899.

I have the honor to forward herewith the annual report of this branch for the year ending 30th June last. The operations at this branch during the year have been exceedingly small, only one applicant having been registered.

There are a good many of unemployed in this district, which is perhaps owing to the fact that there are no industries beyond that of mining, and that industry at present is going ahead very fast.

The rates of wages are as follows:—

Miners ... ..	£1 per week.
Labourers... ..	10s. to 15s. per week.
Mechanics ... ..	£1 to 30s. „

I have, &c.,  
W. MARSH,  
Labour Agent.

The Clerk of Petty Sessions, Coonamble, to The Superintendent, Government  
Labour Bureau, Sydney.

Sir,

Court-house, Coonamble, 6 July, 1899.

I have the honor to report that during the year ended 30 June, 1899, at this branch of your Department only two men registered their names. As a means of bringing the unemployed and employers of labour together the office is useless; in fact, for that purpose, there is no necessity for an agency here—both classes ignore it—my work in connection with the office for the year being, with the exception of the registration of the two men before mentioned, merely to furnish month after month nil returns, and report no change in the labour market. Apparently there are few if any genuine unemployed in the district. There has been no demand for any class of labour. The drought caused great losses in stock, and although during the last few weeks there have been two or three falls of rain there has not been sufficient to ensure a supply of feed for stock during the winter, and unless there is further rain shortly the present growth will quickly disappear. The rate of wages current is as shown in last annual report—carpenters and builders, 8s. to 10s. per day; coachbuilders, wheelwrights, and blacksmiths, from 1s. to 1s. 3d. per hour; saddlers from £2 to £2 10s. per week; bakers, £2 per week; and labourers and station hands, no fixed rate. There have been no refunds received from persons who were assisted with railway passes during the year. There has been no new industry opened up. The district is chiefly pastoral, although I believe in parts a good deal of agriculture was attempted; the drought however, spoilt all prospects in that direction.

I have, &c.,  
C. DILLON, C.P.S.,  
Coonamble.

The Labour Agent, Cowra, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Court-house, Cowra, 18 July, 1899.

I have the honor to inform you that for the year ending 30th June last, no business has been done at this branch either in registration by applicants for work, or inquiries by employers.

For the past three years, owing to the continued drought, the labouring classes in this district have been unable to obtain permanent employment, only work of an intermittent kind, principally clearing, fencing, and grubbing land for agricultural purposes. The subsequent failures to a great extent of the crops prevented in a great measure engagement in harvesting. Last season in particular the majority of the crops failed through want of rain at the most critical period, in September, when the ears required the moisture to fill them. Notwithstanding these drawbacks the farmers and graziers have not had so severe a drought as their more western neighbours.

The present season gives every indication of being the best experienced for some years, the crops are in a forward and healthy condition, grass and water are plentiful, and good prices are ruling for stock and wool, and as a natural sequence permanent work will be obtained in farming and grazing pursuits.

The introduction of dredging for gold in our rivers and creeks, on the New Zealand methods, promises to give employment to a large number of men on the Lachlan, where leases for that purpose have already been applied for.

The following scale of wages is generally followed in the Cowra district:—

Farm labourers ... ..	15s. to 20s. per week.
Station hands ... ..	12s. „ 25s. „
Cooks ... ..	10s. „ 20s. „
Shearers ... ..	18s. „ 20s. per 100 sheep.
Rouseabouts ... ..	15s. „ 20s. per week.
Miners ... ..	45s. „ 50s. „
Wheelwrights ... ..	50s. „ 55s. „
Blacksmiths ... ..	50s. „ £3 „
Carpenters ... ..	50s. „ £3 „
Drapers ... ..	30s. „ £4 „
Grocers ... ..	25s. „ £3 „

I have, &c.,  
JAMES MILLER,  
Agent.

The

The Acting Labour Agent, Cobar, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court-house, Cobar, 29 June, 1899.

I do myself the honor to submit the annual report of this office. The past year has been a very slack one for labour, owing to the disastrous drought the district has been suffering from—the most severe one that has ever been experienced; consequently there has not been that demand for labour that there otherwise would have been. There is now every prospect of a break-up of the drought, and if we are fortunate enough to have a good rainfall during the next two or three months it may be reasonably expected that the number of men employed during the current twelve months will double that of the past year. There has been, comparatively speaking, little mining doing during the past year, and a good rainfall will cause a considerable stir in mining operations, and, consequently, an increased number of hands will be employed.

During the past year there have been 15 men registered for employment, viz.:—Engineer, 1; clerk, 1; miners, 7; wool-classer, 1; wool-scourer, 1; plumber, 1; prospector, 1; labourer, 1; tailor, 1; and ten railway passes have been issued.

The current rate of wages remain about the same, there being little or no alteration, and may be quoted as follows:—Miners, 8s. 4d.; engine-drivers, 8s. to 10s.; carpenters, 7s. to 10s.; blacksmiths, 8s. to 10s.; smelters and general mine labourers, 7s.; firemen, 7s.; general station hands, 20s. per week and found; married couples, £65 to £75 per annum.

During the past year there have been about 1,000 men employed on the field, and with anything like a fair season I think this number will be increased to a very great extent during the ensuing twelve months.

I have, &c.,

WALTERUS BROWN, P.M.,

Acting Bureau Agent.

The Labour Agent, Cooma, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Department of Labour and Industry, Cooma, 4 July, 1899.

I have the honor to submit my report for the year ending 30th June, 1899:—

1. Registrations of unemployed, thirty-four.
2. Passes issued total twenty-eight.
3. Refunds of railway fares direct to this office, £17 10s. 9d.

4. Labour market.—No demand for labour, as the local supply is more than sufficient. Although the unemployed are not much in evidence, work is scarce generally, and there is a considerable amount of poverty. The gold-fields of Cooma and Cowra Creek give employment to about 150 men, and there are others seeking alluvial gold. The principal industry, however, is grazing, which does not require so many men. Agriculture is precarious on account of the Monaro climate. There are no factories—properly so called—in this district, but the trades usually found in country towns are all represented.

5. Current rate of wages:—

Gold and copper miners	... ..	£2 2s. a week.
Contract labourers	... ..	£1 10s. to £2 "
Ordinary labourers	... ..	£1 10s. "
Blacksmiths	... ..	£2 "
Carpenters	... ..	£2 2s. "
Bush labourers, boundary riders, &c.	... ..	From 12s. 6d. to £1 a week, with rations.

6. Remarks.—The past twelve months shows an improvement on the year 1897-98, and present appearances point to further improvement; the former extremely dry period has been followed by beneficial rains and unusually mild weather, giving promise of a good spring, and an opportunity to farmers to carry out all necessary ploughing.

The area under cultivation will greatly exceed last year's operations.

I have, &c.,

EDWARD GOMM,

Agent.

The Labour Agent, Cootamundra, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Department of Labour and Industry, Cootamundra, 4 July, 1899.

I have the honor to inform you that for the year ending 30th June, 1899, eleven persons registered at this branch. In the majority of these cases railway passes were issued to enable the parties to get to the employment that awaited them. As the branch is not used to a very great extent, and from my own observation, I have come to the conclusion that on the whole this district has during the last twelve months been comparatively free from the unemployed. This is owing in a great degree, I think, to the fact that this being almost purely an agricultural district, and the supply of labour being met by the farmers and their families, that it has become known that the supply of labour is equal to the demand. The prosperity of the Cootamundra District, I think I may safely say, depends on the success of the annual harvests; and as, prior to the year 1890, and for some years previous to that date, there was a generous rainfall, it was proved that the soil in the district was capable of producing anything. In the winter months of 1898 there was a fair rainfall, which raised the hopes of the farming community; but, unfortunately, the rain held off when most needed to crown the crops. I refer to the months of September and October, 1898. If during the latter month good rain had fallen, it would have been a record crop, as a much larger area was under crop than formerly. However, bearing in view former successes, the farmers have faced their disappointments, and are now completing the sowing of their crops. Everything just now points to a good season. Last month was a rainy one, which softened the soil and helped ploughing, and assisted to germinate the seed already sown. I sincerely trust that the hopes of the farmers may be fulfilled. There has been little other work done in the district, except that the prices for stock

stock have improved, and several buyers from Victoria have been in the district and bought largely. There are numbers of men employed on the new deviation works some 10 or 12 miles from here; but these men have chiefly come from Sydney, and, as I understand a branch of the Labour Bureau has been opened at Murrumburrah, probably some of the labour has come from that town, it being near the scene of operations. The present rates of wages are as follow:—

Clerks, drapers, and grocers	... ..	£1 10s. to £3 10s. weekly.
Compositors	... ..	10s. to £2 10s. "
Butchers	... ..	£2 "
Drovers	... ..	£1 10s. and keep "
Station hands	... ..	15s. " "
Farm labourers	... ..	15s. " "
Bricklayers and carpenters	... ..	8s. daily.
Masons	... ..	9s. "
Blacksmiths	... ..	7s. "
Labourers, painters, and carters	... ..	6s. "

I have, &c.,  
G. ADDISON,  
Labour Agent.

The Labour Agent, Dubbo, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Labour Bureau, Dubbo, 5 July, 1899.

I have the honor to report as follows on transactions of this Branch for the year ending 30th June, 1899:—

*Registration of Unemployed.*—Only four men registered their names at this office during the past twelve months, and they only did so with a view of obtaining railway passes.

*Passes Issued.*—Only two passes were issued.

*Refunds.*—13s. 3d.

*State of Labour Market.*—No demand for labour here; local supply sufficient. Police state that there are a good number of unemployed in the town and district.

*Employers of Labour.*—No advantage whatever has been taken of this branch.

*Rates of Wages.*—Farm hands (good), 15s. to £1, with rations; day labourers, 5s. to 6s. per diem.

*Town Industries.*—Flour-milling, coach-building, saw-milling, brewing, wool-washing and boiling-down establishments, wages average 8s. per diem.

*Remarks.*—Scrub-cutting, ringbarking, timber-getting are done by contract; wage earned varies a good deal.

The Municipal Council employ eight hands; wages average 8s. per diem. As far as I know, and from inquiries made, late rains have made no difference in the labour market.

I know of no person obtaining employment through the agency of this office since the establishment of this branch.

I have, &c.,  
R. T. MACNEVIN,  
Agent.

The Labour Agent, Forbes, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Court-house, Forbes, 30 June, 1899.

I have the honor to report that during the year ending to-day there has been one registration (a swagman) of an applicant for work, and no other business appears to have been transacted at this agency.

The rate of wages paid in this district is the same now as has prevailed for some years past.

The district has been suffering from drought for some considerable time, and though there has been a small fall of rain within the last month the labour market has not been affected in any way.

The supply of labour available locally seems to be quite sufficient for all requirements.

Employers never make use of the agency as a medium for obtaining employees.

I have, &c.,  
W. BUTLER LUSK,  
District Agent.

The Labour Agent, Grafton, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Labour Bureau, Grafton, 1 July, 1899.

I have the honor to submit the annual report as to the operations of the Grafton Branch of the Government Labour Bureau, and in so doing would state that during the period in question, viz., from 1st July, 1898, to 30th June, 1899, the services of this branch have not been availed of either by employers of labour or persons seeking employment, with the exception of one man registering; and it is only natural to presume that there must be a fair amount of unemployed in such a large district as Grafton. It may probably be accounted for from the fact that this district—unlike so many parts of the Colony last year—has enjoyed a most beautiful season, one of the best known for many years; consequently agricultural and dairy farms have been receiving splendid returns for their various produce, especially in the dairying industry, which appears to be making very great progress in these parts, and consequently the Fresh Food and Ice Company's branch here has been kept fully employed during the year. The other industries of the district are, of course, the Meat-preserving Works at Ramornie, and mining, and both of these are at present not in full swing, from causes which I cannot at present definitely ascertain. During the year many applications for suspension of the labour conditions on various mines in the district have been made, and in most cases granted, notably that of the Beacon G.M. Co. (Limited) at Upper Bucca Bucca, and other applications are now pending before the resident Mining Warden. Some experienced miners prognosticate a great future for the mining industry in these parts, especially from hydraulic mining, and several special-lease applications for gold-dredging in the Clarence River are now before the Mines Department.

In

In regard to wages, unskilled labour is paid for at the rate of 18s. to 25s. per week and cooked rations. Tallow-makers, meat-extract makers, and firemen employed at the meat-works at Ramornie average from 35s. to 45s. per week and a ration. Butchers make about 60s., but receive no ration. The men working in the tinsmith portion of the works average from 40s. to 45s. per week.

The saw-mills of the district are not at present as busy as would be expected. Circular sawyers get 8s. per day; mechanics, 7s.; launch drivers, 8s. per day; draymen and engine-drivers, 7s. per day; and ordinary labour is in all trades paid for at the rate of 6s. per day.

The rainfall during the year has been most general, and the recent heavy rains has tended to keep off the frosts and thereby save the sugar-cane and other crops from injury. So far the winter has not affected the maize or cane, and everything tends at present to another very prosperous season for this very large and most important district. Stock of all description are in splendid condition for the winter.

I have, &c.,

JAMES C. THORNTON,

Agent.

The Labour Agent, Glen Innes, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Department of Labour and Industry, Glen Innes, 4 July, 1899.

I have the honor to forward herewith my annual report for the year ending 30th June, 1899, attached hereto.

I have, &c.,

F. BURNE.

ANNUAL Report by the Labour Agent at Glen Innes, for the year ending 30th June, 1899.

Number of men registered during the year ending 30th June, 1899, nil.

„ obtaining passes during the year ending 30th June, 1899, nil.

„ „ employment during the year ending 30th June, 1899, nil.

„ receiving miners' rights during the year ending 30th June, 1899, nil.

„ unemployed in the district during the year ending 30th June, 1899.—There were from 20 to 25 unemployed during the early part of this year, 1899, which mostly consisted of travellers to and from the district. All those, however, who remained in the district found work, mining, which industry has revived, in consequence of the rise in tin; also, any of the permanent residents, who were temporarily out of work, got employment on the farms, as the rain enabled the farmers to resume work which the drought had somewhat impeded.

The mild weather and seasonable showers which have prevailed throughout the autumn up to within the last fortnight has given a sufficient growth of grass as to ensure a fair supply for the winter.

The average rainfall for the year has been 1.96 per month.

New industries started in the district during the year ending 30th June, 1899, nil.

INDUSTRIES IN FULL WORK.

40 dairy farms.	1 gas works.
3 saw-mills.	3 brick works.
2 tanneries.	2 flour mills.
2 wool scours.	2 saddlery establishments.
1 iron foundry.	1 chaff-cutting establishment.

RATES of Wages prevailing in the District for the year ending 30th June, 1899.

Carpenters ... ..	8s. per day.
Labourers (ordinary) ... ..	6s. „
„ (farm) ... ..	15s. per week.
Butchers ... ..	40s. „
Station-hands ... ..	12s. 6d. per week, and found.
Tinsmiths ... ..	7s. to 8s. per day.
Carters ... ..	30s. per week.
Miners ... ..	7s. 6d. per day.
Blacksmiths ... ..	8s. „
Painters ... ..	8s. „
Drapers ... ..	50s. per week.
Bricklayers ... ..	9s. per day.
Stonemasons ... ..	9s. „

There have been no inquiries by employers of labour during the year ending 30th June, 1899.

F. BURNE,

Labour Agent.

The Labour Agent, Goulburn, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Department of Labour and Industry, Goulburn Branch, 1 July, 1899.

In furnishing my annual report I have the honor to state that there has been no alteration in the rates of wages paid to labourers, mechanics, and others during the past twelve months. Owing to the long-continued drought there have been a number of unemployed in and around this city. A number of men have proceeded from here to the railway deviation works at Murrumburrah. The number of registrations at this branch during the past year is fifty-six, and the number of passes issued during the same period is nineteen. There have been no applications to me on the part of employers. The recent rain has been the means of providing work for a few gardeners, as well as allowing ploughing operations to proceed.

I have, &c.,

C. J. B. HELM,

Labour Agent.

The

The Labour Agent, Hillston, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Hillston, 4 July, 1899.

In submitting my annual report for the year ended 30th June, 1899, I have the honor to state that the assistance of this Branch was not sought in any way either by employers or would-be employees, and no transactions of any kind took place. The most important matter in the district has been the protracted drought, resulting in an almost entire absence of feed and water, necessitating sheep and other stock being sent away in large numbers to more favoured districts. On those stations where the water lasted but feed gave out, large sums of money have been spent in getting chaff to keep stock alive, and also in cutting scrub; this, although of course entailing heavy expense on the stations, has had the effect of absorbing a great amount of labour which otherwise, owing to the impossibility of being employed on their own smaller holdings, would have found no outlet. Notwithstanding, however, all efforts, the mortality amongst stock of every kind has been enormous, and there will be practically no lambing in many places.

The industries are mainly pastoral and agricultural, wages ranging from 10s. to 20s. per week, with rations, and the supply is equal to the demand, while owing to the causes above stated, it may fairly be said that the district is free of unemployed—that is, of men who would work if they could get it to do. There are a few of the usual class of persons who prefer any kind of life to work of any sort, but these are not worth taking into account.

Taking the district as a whole, I am of opinion that good men will always obtain good wages, and as the seasons improve, of which there is now every indication, small settlements in all parts will receive a great impetus, and immediately any definite decision is announced as to the railway extension here, there will be a large demand for land under any of the present forms of tenure, with the result that Hillston will in a very short time become the centre of one of the most thriving and populous districts in New South Wales.

I have, &c.,  
W. LION VOLCKMAN,  
Labour Agent.

The Acting Clerk of Petty Sessions, Hay, to The Superintendent, Government  
Labour Bureau, Sydney.

Sir,

Court-house, Hay, 6 July, 1899.

During the year ended 30th June last, no applications from persons in want of employment have been registered at this office.

The public have been made aware that the Branch exists, but both masters and men appear to prefer dealing directly with each other.

The collections of refunds for railway fares are nil.

The disastrous drought, extending almost continuously over the last four years, has greatly reduced the demands for labour in this, practically, pastoral district, and the enforced economy on the part of the employers has been felt by employees, the general labouring population around, and the business people of this town.

About 3 inches of rain have fallen during the past four weeks, and this has had the effect of brightening the general outlook.

Following are the ruling rates of wages in the principal branches of employment:—

Blacksmiths	...	...	...	...	...	...	...	8s. per day.
„ assistants	...	...	...	...	...	...	...	6s. „
Bricklayers	...	...	...	...	...	...	...	10s. „
Carpenters	...	...	...	...	...	...	...	10s. „
Cooks	...	...	...	...	...	...	20s. to 25s. per week, with rations.	
Gardeners	...	...	...	...	...	...	...	20s. „
Horse-drivers	...	...	...	...	...	...	15s. to 20s. „	
Labourers, general	...	...	...	...	...	...	15s. „ 20s. „	
Wheelwrights	...	...	...	...	...	...	8s. „ 10s. per day.	

I have, &c.,  
S. H. HEAD,  
Acting C.P.S.

The Labour Agent, Junee, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Department of Labour and Industry, Junee, 15 July, 1899.

I have the honor to submit my report for the year ending 30th June last, of the work done at this branch. Only three persons during that period have registered themselves for employment, two of whom have since obtained employment, but not through this office.

No passes have been granted, and no refunds have been received.

Since my last report for the year, the principal industries have been even slacker than before, owing to the protracted drought; all businesses having had to discharge some of their hands, there not being sufficient work for them.

There are no genuine unemployed in this district at present, and no demand for labour.

The

The rates of wages have continued about the same throughout the year, viz. :—

Bakers ... ..	average	£2 10s. per week.
Blacksmiths ... ..	"	£3 "
Bootmakers ... ..	"	£2 "
Bricklayers ... ..	"	9s. per day.
Butchers... ..	"	25s. per week.
Carpenters ... ..	"	20s. to 30s. per week.
Carters ... ..	"	25s. to 35s. "
Clerks ... ..	"	50s. "
Cooks ... ..	"	15s. to 20s. " board and lodging.
Drapers ... ..	"	60s. "
Farm hands ... ..	"	20s. to 30s. " and tucker.
Gardeners ... ..	"	15s. " board and lodging.
Generally usefuls ... ..	"	15s. " "
Grooms ... ..	"	20s. " "
Grocers ... ..	"	60s. "
General labourers ... ..	"	15s. to 20s. "
Masons (stone) ... ..	"	60s. "
Moulders ... ..	"	60s. "
Miners (gold) ... ..	"	40s. to 45s. " and 7s. per shift.
Plasterers ... ..	"	10s. per day of eight hours.
Plumbers .. ..	"	9s. per day.
Printers ... ..	"	20s. to 25s. per week.
Ploughmen ... ..	"	20s. per week and board.
" (strikers' out) ... ..	"	15s. to 25s. per week and board.
Saddlers, &c. ... ..	"	8s. 6d. per day.
Steam chaff-cutting—labourers ... ..	"	5s. per day, and rations.
Tinsmiths ... ..	"	8s. per day.
Wheelwrights ... ..	"	30s. to 60s. per week, or 8s. per day.
Wood-cutters ... ..	"	20s. per week, and board and lodging.
Hotel porters ... ..	"	15s. " "
Soapmakers ... ..	"	60s. per week.
" labourers ... ..	"	10s. to 20s. per week.

The principal industries in the district are wool and wheat growing, iron foundry, machinists (agricultural), mining, soap-works, coach-building, builders, road contractors, tank-sinkers, tinsmiths, and plumbers, &c.

I have, &c.,

W. THEO. GARLAND,  
Labour Agent.

#### The Acting Clerk of Petty Sessions, Jerilderie, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Department of Labour and Industry, Jerilderie Branch, 1 July, 1899.

I have the honor to forward you my annual report in connection with the Government Labour Bureau in this district during the year ending 30th June last. No applications for employment, or from persons requiring employees were received at this office.

The current rate of wages for the class of labour usually required in this district, namely, station and farm hands, is from 15s. to 20s. per week, with rations.

It is only at shearing and harvest time that extra labour is required, which is fully supplied locally and from Victoria.

Graziers and farmers are compelled, owing to the long drought and depressed times, to employ as little labour as possible.

I have, &c.,

JOHN CURRY,  
Acting C.P.S.

#### The Labour Agent, Kempsey, to The Superintendent, Government Labour Bureau, Sydney.

Sir, Kempsey, 30 June, 1899.

I have the honor to inform you that this branch's operations for the past year have amounted to nil, there having been no applications for labour by employers, or for work by employees—no applications for registration, nor for passes, or assistance of any kind whatsoever; indeed the general public seem to be unaware of the facilities offered by this branch of the Labour Bureau for obtaining any necessary labour, and as far as I can ascertain send to Sydney to engage what skilled labour they require. The supply of unskilled labour is locally ample to meet all requirements in the present and future.

Practically there are no unemployed in this district. An occasional swagman may be seen passing through; but, as a rule, they are of the class which do not desire work. The contractor for the Kempsey bridge informs me that he has had very few applications for work by local unemployed, and as his workmen remain with him for all his contracts, he engages very little outside labour, but has no difficulty in obtaining what he wants. The manager of the principal dairy factory, Mr. F. F. East, informs me that matters remain much as he reported last year, and that there is no difficulty in obtaining the labour his company requires. He reports, however, that there is a demand for men skilled in the dairy business who can milk and attend to stock, especially in the spring, and that this is the case he thinks on all the northern rivers, and that men of this character would find suitable employment without difficulty.

Harvesting

Harvesting operations this year have been successful, the work, however, being largely performed by the farmers themselves with the assistance of their neighbours, and perhaps a casual labourer. The year just passed has been a very good one for this district, it having been exceptionally fortunate with regard to the rainfall. The crops have been good and the staple products have maintained remunerative prices. I can, however, hear of no additional demand for labour.

The rates of wages in this district do not vary, and are approximately as follows:—

Bullock-drivers	...	...	...	...	26s. to 30s. per week, and rations.
Bricklayers	...	...	...	...	8s. to 10s. per diem.
Blacksmiths	...	...	...	...	6s. to 8s. „
Carpenters	...	...	...	...	6s. to 12s. „
Carters	...	...	...	...	9s. to 10s. „
Farm labourers	...	...	...	...	10s. to 20s. per week, and rations.
Labourers	...	...	...	...	5s. to 6s. per diem.
Mill-hands	...	...	...	...	5s. to 7s. „
Painters	...	...	...	...	7s. to 10s. „
Plasterers	...	...	...	...	10s. to 12s. „
Station-hands	...	...	...	...	10s. to 20s. per week, and rations.
Wheelwrights	...	...	...	...	6s. to 10s. per diem.

I have, &c.,  
HERBERT PHILLIPS,  
Government Labour Agent.

The Labour Agent, Lithgow, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Court-house, Lithgow, 1 July, 1899.

I have the honor to forward herewith the annual report of this branch for the year ending the 30th June last. The operations at this branch have been very small, only one applicant having been registered, who obtained employment and received a pass, and who subsequently refunded amount of same to your office.

There are five local collieries idle at present, employing, before they shut down, about 210 men, who are on strike for a uniform hewing rate of 1s. 10d. per ton. Most of the mines have erected weighing-machines under the Coal Mines Regulation Act, and since this has been done the owners offered 1s. 6d. per ton hewing rate for all coal filled with a fork, and their contention is this is equal to 1s. 8d. per ton formerly paid for screen coal. The miners say they cannot make sufficient to keep themselves on this; in fact, they could not do so on the former rate of 1s. 8d. per ton, and as both sides seem determined to fight the struggle is likely to be a prolonged one. The miners are receiving outside assistance from the labour societies, and are supported locally as well. There are rumours of two of the mines starting with non-union labour. The ironworks are constantly kept going, giving employment to about 200 men. The proprietor, who is now in England, it is said, for the purpose of getting more machinery for the extension of the galvanising plant, and for steel works. The smelting works employ about 110 men, and their work is constant. The woollen mills at Coerwell employ, on an average, from 20 to 30 men, besides about 20 women, boys, and girls. There are two breweries employing about 25 men. A syndicate have, through their representative, taken up a special lease near Cullen Bullen for the purpose of obtaining limestone, the intention being to forward the limestone to Lithgow and manufacture it into cement; this would mean the employment of a good deal of labour, as the whole of the buildings and machinery necessary would be required to be erected. The late drought has completely broken up within the past two months. The rain will not be of any use, as far as grazing is concerned, as the climate here is too severe at this time of the year for herbage to grow, but it will enable farmers to plough and grow winter feed to keep their stock alive. The holdings in this district are only small, and are worked in most instances by the owners and their families, outside labour not being availed of. I omitted to mention the colliery-owners in this district obtained the contract to supply 125,000 tons of coal for the railways this year, which is an increase of 50 per cent. on last year's contract. No refunds of railway fares have been received by me during the year. The unemployed number about 275.

The rates of wages ruling in this district are as follows:—Smelters, from 7s. 6d. to 9s. 6d. per day; labourers, from 6s. 6d. to 7s. 6d. per day; bricklayers, 9s. per day; carpenters, 8s. per day; blacksmiths, 8s. per day; engineers and engine-drivers average 9s. per day; weavers earn from 22s. 6d. to 35s. a week at piece-work.

I have, &c.,

EDWARD M. COHEN,  
Labour Agent.

The Labour Agent, Lismore, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Department of Labour and Industry, Lismore, 1 July, 1899.

I have the honor to submit my annual report for the year ended 30th June last, which must necessarily be brief, for two reasons, viz., because of the small amount of business transacted and the limited time I have for compiling matters of this kind. The Quarter Sessions and District Court are about being held, and being the close of the quarter, returns and office business keep both officers here at work from 8 a.m. to 9 and 10 p.m. regularly.

This branch of the Labour Bureau is not being used in any way by those seeking employment or those requiring labour, not one application having been received during the year, its sole use apparently being to make monthly reports as to the state of the district, so far as can be ascertained from inquiries made. As on former occasions, I communicated with several persons in the district with a view of obtaining accurate information concerning the various industries, but up to the present time they have not replied, consequently my statements will be of a general nature. The rainfall for the year ended

30th June at Lismore was 47 inches, which was somewhat below the average for this district; nevertheless, the evidences of drought have not in any way been seen all through the Richmond. There appears nothing but "peace, progress, and abundance" stamped on every farm and industry. There is still a large quantity of cane growing, and the incoming season is expected to be a good one.

The dairying industry is forging ahead with remarkable vigour, farmers coming into the district from other places endeavouring to obtain suitable farms to settle on. Property is changing hands every day, at good figures—as much as £20 per acre having been refused during the past month for land close to Lismore, £12 per acre being quite a common price for conditional purchase land in good localities. There is a large area open for homestead selection in the district, but being some distance from the population centres and creameries, besides being somewhat difficult to get at because of the bad roads in the hilly country; but before long there is no doubt but this difficulty will be overcome, and the whole of the Crown lands will be in occupation. The Government Experimental Farm at Wollongbar at the present time, in the coldest weather, is a sight worth looking at, and as the incoming home-seeker travels from Ballina to Lismore, the farm with all its parts in perfect order must certainly go a long way towards deciding any doubts as to the capacity of the soil to produce paying crops.

The timber trade is also booming, all the mills being kept at work early and late, and each of the proprietors say they have orders for weeks in advance; and in the connection evidence is given of the local consumption of timber by the many new buildings going up in and around the city.

The business places of Lismore are steadily increasing, and the principal streets fast filling up with show windows and new signs of progress.

Coming to the labour conditions of the district, it will be seen from the subjoined reports received from Messrs. H. V. Jackson, manager, Experimental Farm; J. McBryde, manager, Rous Mill; and J. Gibson, manager, N.S.W. Creamery Butter Company (Limited), that there are not many unemployed in the district, but rather a demand for those who thoroughly understand farm work and dairying, but generally the supply is equal to the demand. The Resident Engineer, Mr. Fitzneads, informs me that he keeps an average of about thirty men per month employed on road work, at 7s. per day, and that he knows of about sixty men out of employment in the district—these are men who only undertake ordinary labour, and have no special knowledge of farming.

The average earnings per man in the cane-cutting gangs is, I am informed, the same as last year's reports, viz., 7s. 2d. per day, ranging from 6s. to 11s. per day; ditto for bullock team and driver, 14s. 1d., ranging from 10s. to 22s. 6d. per day; ordinary labourers working for contractors, 5s. to 7s. per day, and found; ditto on farms, from 15s. to 22s. 6d. per week, and found; old men and youths get from 10s. to 15s. per week, and found.

The following is the schedule of prices paid for skilled labour, viz. :—

Engineers, fitters, and engine-drivers ... ..	27s. 6d. to 60s. per week, and found.
Firemen, &c. ... ..	27s. 6d. to 35s. " "
Carpenters ... ..	9s. per day.
Masons ... ..	8s. "
Bricklayers and plasterers ... ..	8s. "
Boiler-makers and fitters ... ..	9s. "
Painters ... ..	6s. 6d. "
Plumbers ... ..	7s. 6d. "
Moulders ... ..	9s. "

I also attach a return kindly supplied by the police authorities, showing the population within the Police Patrol District of Lismore which extends only a radius of miles from the town, together with the agricultural and pastoral returns for the same area, and also a list of the mills, manufactories, and works up to the present date, which will give a good idea of the business being carried on.

I have, &c.,

ANDREW T. COCHRANE,  
C.P.S. and Labour Agent.

Andrew T. Cochrane, Esq., Clerk of Petty Sessions, Lismore,—

Sir,

Your letter of the 16th June, 1899, has been sent on to me here. From applications that have been made to me for employment, or for assistance in that direction, I should not consider there was a scarcity of ordinary labouring farm hands. There is only a scarcity of ordinary labouring farm hands. There is only a scarcity or difficulty in obtaining the services of a good all-round genuine gardener and farm hand of real sound experience. I have only just executed an order for a gentleman in your district for that class of man. The rate of wages paid for ordinary unskilled dairy servants, i.e., rouseabouts and milking men, varies from 8s. to 15s. or 16s., and their keep. The wage depends on the ability of the man and the nature and amount of work, also the class of dairy-farm where he may be employed.

I have, &c.,

H. V. JACKSON,  
Manager, Experimental Farm, Wollongbar.

Andrew T. Cochrane, Esq., Clerk of Petty Sessions, Lismore,—

Dear Sir,

I am in receipt of your letter of the 16th inst., and in reply beg to state that the average number of men employed, and the rate of wages paid for last year, is about the same as given in my letter to you of the 22nd June, 1898. There have been but few men looking for work this year, but I think the supply is equal to the demand.

I am, &c.,

JNO. McBRYDE,  
Manager.

A. T. Cochrane, Esq., Court-house,—

Dear Sir,

Yours of June to hand. Amount of hands employed in this district by this Company is an average of 50 men. Average pay, £2 per man a week. Supply is equal to demand. There is not any unemployed of farming hands and milk men, but a demand for good hands. General state of the dairying industry is very encouraging, and come to stay.

Yours, &c.,

J. GIBSON,  
Lismore

## Lismore Police Patrol District, 1899.

Population for year 1899.—Europeans, 7,680; Chinese, 19; Aliens (Syrians), 33; Aliens (Hindoos), 30—total, 7,762.  
Population of Lismore, 1899.—Municipal District of Lismore, 3,982; outside Municipality, 3,780; Patrol Police District of Lismore—total, 7,762.

Agricultural and Pastoral Returns, 1898-99, Lismore Patrol District.—No. of acres of land enclosed, 91,632; No. of acres of land unenclosed, 35,090; No. of acres under crop, 8,130; No. of horses, 3,717; No. of cows, 11,586; No. of ordinary cattle, 10,042; No. of pigs, 6,254.

Police Station, Lismore, 22 January, 1899.

Number of Mills, Manufactories, and Works in the Lismore Patrol District, during the year ending 31 December, 1898:—2 butter factories, 2 creameries, 1 tannery, 1 furniture warehouse, 1 ice-making, 1 bacon-curing, 1 confectionery, 1 joinery works, 1 gas works, 2 aerated waters, 2 printing offices, 1 iron foundry, 3 saw-mills, 4 tailoring establishments, 2 saddle and harness makers, 2 coach-building, 2 tinsmiths, 2 agricultural implements, 2 boots and shoes, 3 dressmaking, 1 stone-crusher, 1 water works—total, 58.

The Labour Agent, Mudgee, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Mudgee, 3 July, 1899.

In forwarding the annual report for the year ended 30th June last, I have the honor to state that during the past year no registrations were effected, no refunds received, and no railway passes issued. As previously reported, this office is not used as a means of bringing employer and employee together; I cannot hear of any demand for labour, and there seems to be very few unemployed about this district. During the past twelve months the rainfall has been about the average, but a short spell of dry weather necessitated farming being delayed a little; on the whole, the farmers and graziers had very little to complain of; vast numbers of sheep and cattle have been depastured in this district from the drought-stricken centres. The principal industries are mining, grazing, and farming. With regard to mining, the usual number of miners are employed, and it is anticipated that with the special leases for dredging for gold being granted, an impetus will be given to mining. Already many leases have been applied for, the idea being that the rivers which flow through auriferous regions have, for centuries past, deposited gold-wash in the bed of the river. There are petitions being prepared now to endeavour to prevent the leases being issued, on the grounds that it will interfere with the small miner; that the pollution of the water by the decayed matter being continually churned up will prove a source of danger to those dependent upon the rivers for a water supply, &c.; but, on the other hand, if successful, a vast amount of wealth should be added to the Colony, though I do not anticipate that the dredging will give much employment to local men. According to local reports mining at Yamble and Two-mile Flat is very dull. A number of men are at work there, and the best results do not appear to give anything more than "tucker." At Cudgebong nothing has been done lately in mining matters. There are still a considerable number of men at work about there, but gold seems very hard to get. The battery at Cunningham's lease is still at work, but the results are said to be rather poor. There is said to be a lot of dissatisfaction on the Hargraves field, at the effort made by one company to reduce wages. It is claimed that £2 2s. should be the minimum wage, and £2 is now being paid; consequently, not a single Hargraves man is working on the mine in question. The average wage of miners is 7s. 6d. per diem for six working days per week.

As regards grazing, fat stock are bringing high prices, and Mudgee is the centre of a large grazing district. The local butchers supply meat even as far distant as Cobar while the drought continues. This district has the reputation for possessing valuable stock, and at the annual show, held in May last, some of the sheep and cattle were fit to compete in any part of the Colony. Taken on the whole, the district for grazing purposes has not suffered to any extent.

As regards the farming industry, ploughing has been delayed a little on account of rain holding off; but since my last monthly report good steady rain has fallen, and, notwithstanding the low price of wheat—at present 2s. 6d. per bushel—a much larger area is being cultivated, and already I hear of hares and marsupials damaging the growing crops; and yet the Pastures Board are only offering 1d. for the scalps of these destructive animals.

In conclusion, the outlook for the coming year is good. Many people would select land, but there is a great scarcity of agricultural land available for selection.

On the stations, boundary-riders are paid from £60 to £65, without rations; single men, £40, with rations; married couples, £52 to £60, with board; and farm labourers 17s. 6d. per week, with board and lodging.

It is anticipated that federation accomplished will open the markets of all the colonies to our farmers, who are very favourably situated as regards rainfall and climate.

I have, &c.,

D. G. M'DOUGALL,  
C.P.S., &c.

The Labour Agent, Molong, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Labour Bureau, Molong Branch, 4 July, 1899.

I have the honor to report that during the year ended 30th June, 1899, no applications, either by employers or by persons seeking employment, have been made at this office. The same report was made for the years ending 30th June, 1897, and 30th June, 1898.

The labour register does not contain a single entry. The only work performed during the year was the furnishing each month of reports to the effect that no names had been registered, no refunds of any description made, and that the state of the labour market remained unaltered. The prevailing rate of wage for the class of labour usually employed, namely, farm and station hands, being from 12s. 6d. to 15s. per week, with rations.

This report as to the state of the labour market applies to the whole year.

I have, &c.,

F. S. MURRAY,  
Labour Agent.

The

The Labour Agent, Maitland, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Labour Bureau, Maitland Branch, 30 June, 1899.

During the year ended 30th June forty-eight persons in want of employment were registered at this office, and forty-eight passes were granted.

The district is purely a farming one (mostly lucerne), and there is no demand for labour; in fact, the work going on is insufficient to supply local demands. No difficulty is experienced in obtaining men when required by employers; beyond a few Government contracts there is nothing new in the district.

The average rate of wages is as follows:—

Labourers ... ..	5s. per day.
Miners ... ..	7s. 6d. per day.
Mechanics ... ..	6s. to 8s. per day.
Carpenters... ..	7s. per day.
Bricklayers... ..	8s. per day.
Masons ... ..	8s. per day.
Farm labourers ... ..	9s. to 12s. per week.

I have, &c.,

H. J. HORNIMAN,

Labour Agent.

The Labour Agent, Moree, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court-house, Moree, 4 July, 1899.

Having only come to this district some five months ago, I am not in a position to report on the condition of things during last year. It may, however, I think, be said that, instead of the state of the country improving, it has distinctly changed for the worse since the date of the last annual report.

The long-continued drought has, of course, exercised a marked effect on the number of men employed at station work, and, until we again get something approaching the average rainfall, it is not likely that a change for the better will take place.

The building trade in the town is also nearly at a standstill, owing to the difficulty in obtaining timber. Several of the saw-mills, I am informed, have shut down for the present, as it has been found almost impossible to get the felled timber drawn to the mills.

The construction of the Moree-Inverell railway line continues to employ a large number of men; but the works are now being carried on at a great distance from Moree, in the direction of Warialda, so that it is hard to learn the course of events in connection therewith. I understand, however, that everything is proceeding satisfactorily.

The work of the Moree branch has only been of a routine character. During the year no entries have been made in the registers, and, so far as I am aware, no applications for workmen have been received.

The schedule herewith represents the average rate of wages paid during the year; but, unfortunately, there has been little room for many men at the rates mentioned.

I have, &c.,

C. H. GALE, C.P.S., &c.,

Acting as Labour Agent.

Rates of Wages at Moree for July, 1899.

The Labour Agent, Muswellbrook, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Muswellbrook, 1 July, 1899.

I do myself the honor to report, for the year just ended, that the business of this branch has been as under:—

Business passes issued, &c.—Three registrations were made, and passes issued—(1) on 29th August, 1898, pass to Narromine; (2) on 20th October, 1898, pass to Boggabri; (3) on 24th October, pass to Boggabri.

Moneys

Moneys collected.—No payments have been made direct to this Branch, but the sum of £1 17s. 6d. was paid at your department in connection with this branch, *vide* your letter 31st January, 1899.

Drought.—It is my pleasing duty to report that this district has been much favoured as regards rainfall, and the effects of the severe drought which has proved so disastrous to other portions of the Colony has been but slightly felt in this portion of the Valley of the Hunter.

Rainfall.—Feed has been fairly plentiful, as may be judged by the quantity of rain that has fallen here during the period under notice; the rainfall from June, 1898, to June, 1899, was 22 inches 83 points.

Labour market, wages, &c.—There has not been any want of employment here, and current wages have ruled; and as far as I can judge, there has not been such a number of "tramps" on the roads in this district, which may, I presume, be taken that this is a prosperous part of the Hunter.

And, in conclusion, may state that up to the present the weather has been most mild, and a good winter in every way is expected, stock being in good condition and grass plentiful.

Trusting this report will meet with your approval,

I have, &c.,

J. KINGSMILL, C.P.S.,

Labour Agent.

The Acting Labour Agent, Murrumburrah, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Murrumburrah, 12 July, 1899.

In compliance with the request contained in your letter of the 8th instant (912/300), I do myself the honor to transmit the attached report, showing the condition of labour and industry in this district.

I have, &c.,

ARTHUR T. PATON.

Acting Labour Agent.

In this district agricultural and pastoral pursuits are principally carried on.

Owing to drought, dairy farming had to be discontinued, and pastoralists had to resort to scrub-cutting for the sustenance of starving stock.

The mining is chiefly alluvial, with one exception—The Crown Point Gold-mines, Limited, at McMahon's Reef.

There is a good deal of what may be called fossicking going on about Cullinga and Murrumburrah, but in all not more than 100 men are employed.

We have experienced a good fall of rain some weeks ago which, though coming late for the growth of the grass, was a great boon to the farmers.

The railway deviation works just started have attracted a large number of men to the district, and they will probably absorb all our local unemployed.

From the date of opening the branch here (14th June) to the present 269 men have registered themselves, nearly all of whom are unskilled labourers.

Since I have taken over the duties of this office a fact has come to my knowledge which calls for strong comment. It appears that it is the practice of the gangers, and others on the deviation works deputed to employ labour, to disregard the fact of a man holding a Labour Bureau ticket, the primary consideration, apart from physical fitness, being the possession of an elector's right on the applicant's part. Such a course of conduct, undoubtedly, renders the establishing of a labour branch here a work of super-erogation on the part of the Government.

The Labour Agent, Newcastle, to The Superintendent, Government Labour Bureau, Sydney.

Newcastle.

I MIGHT point out that, though the number of persons registered has been small, the fact that thirty-seven deserving persons, having eighty-seven others dependent upon them for support, have been assisted to employment shows that some good work has resulted from the Branch.

RETURN of the estimated number of persons employed and unemployed in the various trades and callings, with the ruling rates of wages in each case:—

Class of Employment.	Rates of Wages.	Employed	Unemployed.
Wharf labourers .....	1s. per hour .....	80	45
Carpenters .....	8s. to 9s. per day .....	300	50
Bricklayers .....	9s. to 10s. " .....	30	40
Plasterers .....	9s. " .....	20	30
Shop assistants .....	35s. per week .....	500	40
Carters .....	35s. " .....	550	40
Miners .....	2s. 11d. to 3s. 2d. hewing rate* .....	5,000	200
Joiners .....	9s. per day .....	60	12
Bricklayers' labourers .....	8s. " .....	40	30
Printers .....	8s. " .....	70	10
Stone-masons .....	9s. to 10s. per day .....	60	12
Clerks .....	35s. per week .....	600	70
Plumbers .....	9s. to 10s. per day .....	60	10
Butchers .....	25s. per week and keep .....	180	10
Bakers .....	12s. per day .....	25	5
Labourers .....	5s. to 6s. per day .....	500	80
Watermen .....	About 50s. per week .....	38	Nil.
	Total .....	8,113	684

\* Miners' average earnings, when in work, 7s. 6d. to 9s. per day.

Unless new works are started there is not likely to be any demand for outside labour during the ensuing year.

The miners who are unemployed are chiefly those at Teralba and Stockton, and it is hoped that they will be soon fully employed.

Coal-mining being the most important industry of the district, I have, with the courteous permission of the Chief Inspector of Coal-mines for the Colony, gathered the following valuable information from his published reports:—

The number of collieries in the Northern district in year 1897	...	...	...	...	62
	1898	...	...	...	62
Number of persons employed therein in 1897	...	...	5,925	...	
"	1898	...	6,247	Increase	322
Quantity of coal raised during year 1897 (in tons)	...	...	3,176,869	...	
"	1898	...	3,355,600	Increase	178,731
Value of coal raised, 1897	...	...	£938,774	...	
"	1898	...	£957,505	Increase	£18,731
Coke return, 1898, 34,422 tons, value	...	...	...	...	£34,375

From the same reliable source I have also obtained the following particulars of the shipping business, and the number of vessels cleared outwards for foreign and intercolonial ports:—

Number of vessels in year 1897	...	...	1,375	...	
"	1898	...	1,431	Increase	56
Tonnage, 1897	...	...	1,740,345	...	
"	1898	...	1,808,605	Increase	68,260
Value of imports, 1897	...	...	£510,721	...	
"	1898	...	£409,527	Decrease	£101,194

Export of coal to foreign and intercolonial ports—

Quantity in tons, 1897	...	...	2,431,489	...	
"	1898	...	2,485,394	Increase	53,905
Value, 1897	...	...	£842,347	...	
"	1898	...	£846,128	Increase	£3,781

Total value of exports, inclusive of coal, to foreign and intercolonial ports—

1897	...	...	£1,746,925	...	
1898	...	...	£1,782,634	Increase	£35,709
Export of coke, 1897, 10,448 tons, value	...	...	£13,064	...	
"	1898, 9,644	...	£11,693	Decrease	£1,371

From these figures it will be seen that there has been an increase in 1898 over 1897 in the number of persons employed in and about the mines, in the output of coal, in the number and tonnage of vessels trading to the port, and in the quantity and value of the exports, all of which tends to show that the collieries have worked well during the year, and that the trade is steadily increasing. As the result of negotiations between the coal-mine owners and the miners the price of best Newcastle coal was raised from 6s. 9d. to 8s., f.o.b., from the end of 1898, and at the same time the hewing rate for large coal was raised from 2s. 11d. to 3s. 2d. per ton. There are now, however, some difficulties existing as to this rate in connection with the compulsory weighing, under the Act 60 Vic. No. 12, of all coal gotten, but it is hoped that this will soon be arranged satisfactorily.

The following particulars show the approximate number of seamen employed, the number of ships trading to the port, their tonnage, &c., for the year ending 30th June, 1899:—

Class of Vessel.	Number of Vessels.	Tonnage.	Number of Seamen employed.
Deep-sea traders	1,370	1,799,940	31,510
Coasters between Sydney	2,721	550,000	21,768
Government steamers	10	400	128
Dredges	7	17,500	
Punts (dredge)	10		
Rock-smasher	1		
Tug boats	16	1,091	
Harbour and river steamers	36	720	96

Pontoons used in connection with the dredges:—Two measuring 60 feet by 14 feet each, seven measuring 16 feet by 16 feet each, six measuring 14 feet by 14 feet each.

Total number of vessels, 4,160; tonnage, 2,352,151.

Total number of seamen, 53,660.

Of the number of seamen above-mentioned, 3,000 were shipped or engaged at the port of Newcastle, and 348 reside in the district. Seamen, in this return, include engineers and all others employed on vessels.

The

The ruling wages are:—

Foreign-going sailing vessels—						
Chief mate ... ..	...	...	...	...	...	£7 10s. to £8 per month.
Second mate ... ..	...	...	...	...	...	£5 to £5 10s. "
Carpenter ... ..	...	...	...	...	...	£5 per month.
A.B's. ... ..	...	...	...	...	...	£3 10s. per month.
Ordinary seamen ... ..	...	...	...	...	...	£2 to £2 10s. per month.
Cook ... ..	...	...	...	...	...	£4 per month.
Steward ... ..	...	...	...	...	...	£5 "
Intercolonial sailing vessels—						
Chief mate ... ..	...	...	...	...	...	£8 per month.
Second mate ... ..	...	...	...	...	...	£6 "
Cook and steward ... ..	...	...	...	...	...	£6 10s. per month.
A.B's. ... ..	...	...	...	...	...	£4 per month.
Boys ... ..	...	...	...	...	...	£1 10s. per month.
Foreign-going steamers—						
Chief mate ... ..	...	...	...	...	...	£11 per month.
Second mate ... ..	...	...	...	...	...	£7 15s. per month.
Third mate ... ..	...	...	...	...	...	£6 per month.
Carpenter ... ..	...	...	...	...	...	£5 10s. per month.
Boatswain ... ..	...	...	...	...	...	£4 15s. "
A.B. and lamps ... ..	...	...	...	...	...	£4 per month.
A.B's. ... ..	...	...	...	...	...	£3 10s. per month.
Ordinary seamen ... ..	...	...	...	...	...	£2 10s. "
Chief engineer ... ..	...	...	...	...	...	£18 per month.
Second engineer ... ..	...	...	...	...	...	£12 "
Third engineer ... ..	...	...	...	...	...	£9 "
Fourth engineer ... ..	...	...	...	...	...	£8 "
Donkeymen ... ..	...	...	...	...	...	£4 10s. per month.
Firemen and trimmers ... ..	...	...	...	...	...	£4 per month.
Chief stewards ... ..	...	...	...	...	...	£7 "
Mess-room steward ... ..	...	...	...	...	...	£1 10s. per month.
Chief cook ... ..	...	...	...	...	...	£6 per month.
Second cook ... ..	...	...	...	...	...	£2 "

In view of the significance of the figures contained in the foregoing statements, showing as they do the great importance of the district as the largest labour centre in the Colony, I have taken some pains to show the variety of channels through which all this labour is employed, and I shall here enumerate some of the principal industries outside the coal trade, as well as some closely connected with it. 1st. The railways in the district form a most important factor in the employment of labour and the development of the coal and other trades. In addition to the Government railways, each of the several large collieries has its own railway of considerable value, and upon which much labour and capital has been expended. They are the means of conveying the millions of tons of coal from the pits' mouths to the ships at the cranes on the Dyke at Carrington and the coal-shoots, from all of which it is loaded directly into the ship's holds, and is thence carried to the various foreign and other ports. As showing the great value of those railways, cranes, and shoots, I may mention that in August last the Government railway properties in the immediate vicinity of Newcastle, including the fourteen steam cranes and two hydraulic cranes at Carrington, were the subject of an important magisterial inquiry before Mr. C. N. Payten, S.M., sitting as a Court of Appeal under the Hunter District Water Supply and Sewerage Act, at which lengthy and detailed evidence occupied the attention of the court for thirteen days. Numerous expert valuers having been examined, the properties referred to were assessed for rating purposes at £1,054,000 capital value, of which the property at Carrington before-mentioned formed the largest proportion, namely, £583,738. These railways, cranes, and shoots give employment directly and indirectly to a large number of men. The cranes are worked by the Crane Employees Association, Limited, who contract with the Railway Commissioners for the work. Seventy men are employed at them loading coal day and night (by the aid of the powerful electric light) at the rate of from 1,500 to 2,000 tons a day for each crane. The railways give employment to hundreds of men through the year, all at good average wages.

I am indebted to Mr. B. S. Holland, J.P., town clerk, for a copy of the published accounts of the city council, from which I have gathered the following particulars, viz. :—

The total expenditure for the year 1898 for labour, materials, carting, electric lighting, scavenging, the maintenance and repairing of the city streets measuring 28 miles in length, public recreation reserves, public baths, sea-bathing places, watering of the streets, removal of nightsoil and other sanitary matters, and in the general good government of the city, including salaries, amounted to £18,498.

The council has at present employed 22 labourers, 3 mechanics, 1 carpenter, 1 mason, 1 gardener, 1 quarryman, 1 paver of footpaths, and 2 drainers; in all, 32 men, receiving the following wages:—Foreman, 9s. per day; 16 labourers, 8s. per day; 6 labourers, 7s. 6d. per day; 6 labourers, 7s. per day; 3 labourers, 3s. 10d. per day.

There are also the following licensed drivers:—Cabmen, 26; busmen, 59; van and draymen, 35. Total, 120.

The following are particulars relating to works on the public roads of the district, viz. :—Number of contracts let locally, 76; monthly average of men employed, 116; miles of road constructed, 3½; miles of road cleared, 6½; miles of road formed only, 10; miles of road drained, 10; besides repairs, in which 10 maintenance men were regularly employed. Rates of wages paid by Department, 7s. per diem; rates of wages paid by contractors, 6s. per diem.

The total cost of those works has been about £9,000. There is also a large bridge being built over Cockle Creek, upon which 60 men are employed, including carpenters, masons, and labourers, at the usual Government wages, namely, masons, 12s.; carpenters, 8s.; labourers, 6s. per day.

The

The undermentioned works have been carried out under the direction of the Government Architect's Department:—

Large offices erected for the Hunter District Water Supply and Sewerage Board, costing about £5,000; average number of men employed thereon, about 12.

New post and telegraph offices, Newcastle West, costing about £1,500, and employing on an average about 8 men.

Additions to the Hospital for the Insane at Newcastle, costing about £285, and giving employment to about 8 men.

There were also general contracts costing about £400, and employing 5 men; also minor repairs costing £150, and giving employment to 3 men.

The manager of the "Sulphide Corporation" has very kindly supplied some particulars of the large operations of that Corporation at Cockle Creek. He says they are simply smelters of their own ore, from their own mine, "The Central," at Broken Hill, and buyers of such gold, lead, and silver ores as are available. The ore treated for the past twelve months comprised 31,305 tons of concentrated ore from the Central Mine, and 1,480 tons purchased ore from various other places in New South Wales, from which 18,596 tons of bullion, containing 1,787 oz. of gold and 946,855 oz. of silver, were recovered in addition to the lead. The approximate value of the bullion is about £20 per ton.

The average number of men employed has been 450 during the year, and of those 350 were regularly employed, while the remaining 100 men were not employed full time.

The corporation are adding somewhat to the plant, and there is a probability that the works will be still further extended within the ensuing twelve months, so that there may be a further demand for labour, both temporarily for construction and afterwards for regular work. The figures given are, of course, those for the Cockle Creek works alone, and do not include the labour employed at the Central Mine, which also is in New South Wales. The following are the rates of pay received:—

Smelter hands ... ..	8s.	to 6s. 6d.	per 8 hours.
Roaster hands ... ..	from 7s. 6d.	to 6s. 6d.	"
Fitters and engine-drivers ... ..	10s.	to 8s.	"
Carpenters ... ..	9s.		"
Bricklayers ... ..	10s.	to 9s.	"
Railway maintenance men ... ..	8s.		"
Skilled labourers ... ..	7s.		"
General labourers ... ..	6s. 6d.		"
Youths and boys ... ..	5s.	to 2s. 6d.	"

Amongst the other important industries of the district the following are deserving of mention:—

Ireland's Butter Factory, employing 19 hands, and turning out in the year no less than 1,464,646 lb. of butter.

The Newcastle Gas and Coke Works, employing 46 hands, and producing 70,000,000 cubic feet of gas, 78,000 gallons of tar, and 49,000 tons of coke annually.

The Castlemaine Brewery, employing 43 hands.

Biscuit factory and bakeries, employing over 400 hands.

Two large iron foundries, employing 32 and 21 men respectively.

The "Soho" Foundry of Messrs. Morris and Bearby, of Carrington, at which 80 men are employed.

The Sydney Soap and Candle Works at Waratah, employing from 58 to 89 hands.

The English and Australian Copper Company at Wallsend, employing 40 men.

The Strand Meat-preserving Works, employing 5 men.

The Purified Coal and Coke Works at Wallsend, employing 30 men.

The Co-operative Coal and Coke Company's Works at Plattsburg, employing 20 men.

The Brick Works at Wallsend, employing 10 men.

Proctor's Coach and Buggy Factory at Wickham, employing 12 men.

Coughlin's Cooperage, employing 6 hands.

N.S.W. Aerated Water and Confectionery Company, Limited, employing 36 hands.

Armstrong and Royce's Sawmill and Joinery Works, employing 16 hands.

The Wickham Ironfoundry and Engineering Works have just been newly started in the premises formerly occupied by Messrs. Hudson Brothers, and will shortly be employing from 25 to 30 men.

Bowtell's Steam Brick and Tile Works at Merewether, employing 20 men.

Hughes' Drain-pipe and Pottery Works at Merewether, employing about 10 men.

At Wallsend there are, altogether, about 2,000 men employed, and none actually unemployed. At Minmi there are over 800 hands employed, and none unemployed; there is, however, no demand for further labour at either of those places.

At Teralba there are 110 men on strike at the Pacific Colliery, and about 50 others have been thrown out of work in consequence.

At Dudley Colliery there are about 80 hands employed, and miners are still wanted there. The Burwood Colliery in the same locality is in full work with 300 men employed. The Durham, which has just recently been opened, is employing 50 hands, which number will, in the course of a short time, be considerably increased.

At West Wallsend the Seaham Colliery employs about 300 hands, the West Wallsend about the same number, Killingsworth Colliery about 50 men, and various others, including portion of Young Wallsend, about 200 men. There are about 20 men unemployed there, including miners, painters, bricklayers, stonemasons, and labourers.

The new works in contemplation in the Newcastle District are: A new post-office in Hunter-street, Newcastle; a large graving dock at Stockton, for which a special lease has already been granted, and upon which it is stated that the large sum of £100,000 is to be expended, and probably about 300 men employed; a large floating dock in the basin at Carrington, for which a special lease has also been granted; and a special lease has recently been taken up for the purposes of public baths, to be excavated out of the rocks near the sea-beach at Newcastle, which will also give employment to a number of men.

In conclusion, I desire to acknowledge the valuable assistance which has always readily been given by Mr. Inspector Lynch and his staff of police throughout the district, to whom I have, when applicants were unknown to me, invariably referred for information as to the *bona-fides* of their applications for passes and miner's rights; and who have so ably assisted me in the collection of the details of the information contained in this report.

I desire also here to acknowledge the willing assistance which has been given by Mr. C. H. Hannell, Shipping-master, the officers of the Customs Department, Harbours and Rivers Department, Roads Department, and Government Architect's Department.

I have, &c.,

W. F. ROBERTSON,

C.P.S. and Chamber Magistrate, Agent for the Government Labour Bureau.

The Labour Agent, Nowra, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Labour Bureau, Nowra Branch, 3 July, 1899.

I beg to submit my report for the year ended the 30th June, 1899.

The business transacted at this branch during the year was very light, no employers having registered their names, and only one man applied for registration for employment.

The district is chiefly an agricultural and pastoral one, and very little change takes place in regard to the state of the labour market.

The drought, which was very severe and prolonged, seriously affected all classes in the district, and old settlers here stated that it was about the worst season they could remember.

Gold-mining has been successful at Yalwal, Grassy Gully, and Nerriga, and these gold-fields are rapidly increasing. A large number of men are employed at the mines and prospecting, but operations have been hampered, owing to the scarcity of water, and consequently numbers of men found it difficult to obtain more than a living.

During the month of June last the drought had completely broken, and very heavy rain fell in all parts of the district, which will have a beneficial effect on all classes of labour.

Considering the very bad season, however, there were not many what could be termed unemployed in the district.

General labourers and farm labourers, as a rule, can find some employment, but mechanics find it very difficult. A large number of men were employed in connection with road contracts.

During the year a large number of farmers and farm labourers left this district for the Northern river districts.

The following is the current rate of wages paid throughout the district:—

Bricklayers	...	...	...	...	...	}	7s. to 8s. per diem.
Carpenters	...	...	...	...	...		
Stonemasons	...	...	...	...	...		
Painters	...	...	...	...	...		7s. per diem.
Labourers	...	...	...	...	...		5s. to 6s. per diem.
Farm labourers	...	...	...	...	...		20s. per week, or 10s. with board.
Plumbers	...	...	...	...	...		7s. 6d. per diem.
Bakers	...	...	...	...	...		30s. per week, with board.
Butchers	...	...	...	...	...		20s. to 25s. per week, with board.
Storekeepers' assistants	...	...	...	...	...		10s. to 30s. per week.

I have, &c.,

W. F. MARKS,

Agent.

The Labour Agent, Nyngan, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Labour Bureau, Nyngan Branch, 1 July, 1899.

I have the honor to submit herewith my annual report of the operations of this branch for the year ended 30th June last.

The number of men registered was 113, classified as follows:—

Labourers	...	...	...	...	...	...	...	...	...	92
Miners	...	...	...	...	...	...	...	...	...	4
Engineers	...	...	...	...	...	...	...	...	...	2
Tanners	...	...	...	...	...	...	...	...	...	2
Shearers	...	...	...	...	...	...	...	...	...	1
Sailors	...	...	...	...	...	...	...	...	...	1
Cooks	...	...	...	...	...	...	...	...	...	5
Domestic servants	...	...	...	...	...	...	...	...	...	1
Prospectors	...	...	...	...	...	...	...	...	...	1
Printers	...	...	...	...	...	...	...	...	...	1
Shop assistants	...	...	...	...	...	...	...	...	...	1
Bushmen	...	...	...	...	...	...	...	...	...	1
Blacksmiths	...	...	...	...	...	...	...	...	...	1

The labour market during the year has been in a very stagnant condition, owing principally to the very severe drought that has prevailed during the whole of that time, being the worst known in this district for many years.

A great many of the mines have been obliged to stop work, owing to the want of water, thus throwing many men out of employment; but many of these men are now able to return to work, the drought having partly broken up and sufficient rain having fallen to enable the mines to again commence operations.

The West Bogan scrub works have attracted a good number of men from other districts, the number of *bona fide* residents of this district registered not being more than about 20 per cent., the number of *bona fide* residents unemployed at the present time not being more than from 15 to 20. Many of those who apply to be registered are not genuine unemployed, and cannot be relied upon to remain at work when they obtain it.

The number of unemployed will decrease as soon as sufficient rain falls to enable agriculture to be carried on, which is now practically at a standstill.

The rate of wages prevailing during the year would average as follows:—

Labourers	...	...	...	...	...	...	...	about 6s. per day.
Cooks	...	...	...	...	...	...	...	25s. per week.
Miners	...	...	...	...	...	...	...	30s. "
Boundary riders	...	...	...	...	...	...	...	20s. "
Station hands	...	...	...	...	...	...	...	15s. to 20s. "
Carpenters	...	...	...	...	...	...	...	about 9s. per day.

The timber trade is the only industry carried on at the present time in this district, an additional sawmill having been erected during the year, and the trade has been fairly active.

The rainfall in and about Nyngan from the 1st July, 1898, to the 30th June, 1899, has only been 8½ inches, which will give some idea of the dry season experienced, and the severe check given to the agricultural industry.

Two railway passes have been issued during the year, and no refunds have been received.

I have, &c.,

G. A. HYDE,  
Labour Agent.

The Labour Agent, Narrabri, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Labour Bureau, Narrabri Branch, 13 July, 1899.

The following are the particulars of the work done at this branch during the period above mentioned:—

Passes issued	...	...	...	...	...	...	...	Nil.
Registrations	...	...	...	...	...	...	...	Nil.
Refunds received	...	...	...	...	...	...	...	2; amount, £3 10s. 6d.

During the first half of the year work in town was fairly brisk in the building line, but during the latter half no works have been going on.

With the exception of pastoral pursuits and timber-getting, there are no industries in this district of any importance.

The long-prevailing drought has had a disastrous effect on the grazing pursuits; many thousands of stock have died, and the majority of the remainder have been removed to other districts. Some little work, however, has been made in the cutting of scrub for such as were left.

The timber work has given employment to, on an average, 100 men, who, if experienced workmen, could make from 6s. to 7s. per day clear.

The following wages have been paid in the town and district:—

Boundary riders	...	...	...	...	...	...	...	20s. per week and rations.
Scrub-cutters	...	...	...	...	...	...	...	15s. " "
General labourers	...	...	...	...	...	...	...	15s. " "
Carpenters	...	...	...	...	...	...	from	7s. to 8s. per day.
Bricklayers	...	...	...	...	...	...	...	8s. per day.
Stonemasons	...	...	...	...	...	...	...	9s. "
Wheelwrights	...	...	...	...	...	...	from	8s. to 10s. per day.
Drapers	...	...	...	...	...	...	...	70s. per week.
Grocers	...	...	...	...	...	...	...	50s. "
Butchers—								
Slaughtermen	...	...	...	...	...	...	...	45s. per week.
Assistant slaughtermen	...	...	...	...	...	...	...	30s. "
Carters	...	...	...	...	...	...	...	30s. and rations.
Other employees	...	...	...	...	...	...	from	24s. to 30s. per week.

I have, &c.,

WALTER SCOTT,  
Labour Agent.

The Labour Agent, Orange, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Court-house, Orange, 5 July, 1899.

I do myself the honor to submit my report for the year ended 30th June, 1899.

Four men were registered during the year, all of whom received railway passes for the purpose of enabling them to proceed to private employment.

There has been no demand for labour. A number of men are always camped near the town, but I am inclined to think that many of them do not want to work.

		RATE of Wages.				
Farm labourers	...	...	...	...	...	15s. to 20s. per week.
Miners	...	...	...	...	...	30s. to 45s. ,,

The effect of the drought was marked by light crops, which were not nearly up to the average, but as prices obtained for produce were much higher than usual, through the complete failure in other districts, the return to the farmers was very little, if any, below the average. This district does not suffer nearly as much as many others through droughts, owing to the richness of the soil and good rainfall. I have ascertained from many of the old inhabitants that a drought, which may cause a complete failure of crops in other districts, has never been so bad here as to prevent light crops being grown, and, as I have already stated, the prices increase, which nearly make up for the deficiency in weight.

Orange is really the centre of commerce for the Western District, and on account of its elevation, rich agricultural soil, fine bracing climate, and many other advantages, is frequently mentioned as likely to be chosen as the site for the capital of the Federal Commonwealth.

A report for this district, would, I feel sure, be incomplete without some reference being made to the firm of Messrs. Dalton Brothers, general storekeepers and merchants, established in the year 1849. These premises consist of three storeys, and occupy a space of about 3 acres of land in the centre of the town. Eighty persons are employed, and the yearly expenditure in wages alone amounts to £9,000. The value of stock kept on the premises is £75,000.

The town of Orange has the finest gravitation scheme of water supply in the Colony. The reservoir, which is situated about 3 miles from the town, contains 121 millions of gallons. The cost, including reticulation, was £25,000.

*Mining.*—There are about 800 miners constantly working on the different fields in the district, and the value of gold won during the year ended 31st December, 1898, was £93,910. Several new finds have been made during the year—three of which are likely to prove permanent and give employment to a great number of miners, viz. :—Amaroo, Rosedale, and Palmer's Bulga. The latter place is situated near the Ophir, where gold was first discovered in payable quantities in New South Wales nearly fifty years ago. Some special leases have been applied for on the Macquarie River for dredging, and great returns are expected, as this part of the river is well adapted for dredging, and splendid yields of gold have been won in years past by the primitive cradle, &c. Quite a new departure was made in mining last week by some gold miners at Byng, who came across some good samples of scheelite, which I believe is valued at £35 per ton. Thorough prospecting is being carried on in the district at a much greater depth than heretofore, and I feel sure that double the number of men will be employed in the near future.

I have, &c.,

HENRY J. LEARY,  
Local Agent.

The Labour Agent, Queanbeyan, to The Superintendent, Government Labour  
Bureau, Sydney.

Sir,

Labour Bureau, Queanbeyan Branch, 29 June, 1899.

I have the honor to report that during the twelve months ending 30th June, 1899, there have been eight registrations of unemployed at the Queanbeyan branch. Of these, five have found employment; the sixth case was hardly of a *bona-fide* nature, the applicant registering in order to obtain a railway pass, which, after careful investigation, was refused. The others, as far as I know, did not obtain employment.

These applicants were all from this and adjacent districts.

During the past twelve months four railway passes were issued, the cost of which has, in three instances, been refunded.

The limited patronage this agency receives may be explained by the fact that comparatively few unemployed strangers visit the district.

There is a large number of local men, whose small farms only occupy a portion of their time, and who are always on the look-out for a job. These men know, and are well known by, the local employers of labour, and either party have little occasion to seek the assistance of the Labour Bureau.

Considerable privation and want has existed, during the past twelve months, owing to the long-continued drought. This has at length broken, and present indications give promise of a fine spring and a consequent expansion of farming operations.

There is a fair amount of work going on in the district at the present time, principally scrub-cutting and clearing, but it is fully met locally. Many men, who usually go out west shearing, have this year remained at home, being dissuaded by the drought-stricken state of the Western Districts.

A good many labourers have left for the Murrumburrah railway deviation works.

The bridge over the Queanbeyan River, local road contracts, and some little building employ a few more, and there appears to be legitimate grounds to expect a revival of mining at Captain's Flat and in its neighbourhood.

The district has been remarkably free from industrial disputes during the past year, some slight differences at Captain's Flat having been promptly settled.

The

The following is the current rates of wages obtaining in this district :—

Bakers	...	...	...	...	...	...	...	45s. per week.
Blacksmiths	...	...	...	...	...	...	...	40s. to 50s. per week.
Boundary-riders	...	...	...	...	...	...	...	15s. per week, and rations.
Bricklayers	...	...	...	...	...	...	...	8s. 6d. per day.
Butchers	...	...	...	...	...	...	...	15s. to 25s. per week, with board.
Carpenters	...	...	...	...	...	...	...	7s. to 9s. per day.
Carters	...	...	...	...	...	...	...	5s. "
Compositors	...	...	...	...	...	...	...	30s. to 40s. per week.
Cooks (female and general servants)	...	...	...	...	...	...	...	8s. to 14s. " with board.
Housemaids	...	...	...	...	...	...	...	4s. to 8s. " "
Labourers (agricultural)	...	...	...	...	...	...	...	4s. to 6s. per day. "
Laundresses	...	...	...	...	...	...	...	4s. per day.
Miners	...	...	...	...	...	...	...	20s. to 35s. per week.
Painters	...	...	...	...	...	...	...	8s. to 9s. per day.
Plasterers	...	...	...	...	...	...	...	10s. "
Saddlers	...	...	...	...	...	...	...	30s. to 35s. per week.
Station-hands	...	...	...	...	...	...	...	15s. ,, 20s. ,, and rations.
Stonemasons	...	...	...	...	...	...	...	7s. to 9s. per day.
Tinsmiths	...	...	...	...	...	...	...	9s. "
Storekeepers' assistants	...	...	...	...	...	...	...	20s. to 50s. per week.
Wheelwrights	...	...	...	...	...	...	...	40s. to 50s. "
Plumbers	...	...	...	...	...	...	...	8s. to 9s. per day.

I have, &c.;

H. J. JEFFREYS,  
Agent.

The Labour Agent, Tamworth, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Labour Bureau, Tamworth Branch, 5 July, 1899.

I have the honor to report that for the year ending the 30th June, 1899, little or no work has been done in this office in connection with labour matters. During the period under review one registration has been recorded, and one pass has been issued. The season generally has not been a severe one, and the country now looks prosperous. No new industries have been started. Mining is carried on as usual, but nothing worth special mention has been discovered; however, most men apparently earn sufficient to keep them going. As a rule, genuine steady workers of all classes can find some employment, though, in some instances, the pay offered is below the value of the work performed. Idlers get so little encouragement here that the unemployed of that class find it best to make their visits brief. Employers always seem able to obtain their own workmen, and a number are now engaged on several buildings in course of erection here. The rates of wages, as supplied by the various employers here, are as follows:—

Drapers	...	...	...	...	...	...	...	30s. to 60s. per week.
Butchers	...	...	...	...	...	...	...	30s. to 45s. "
Blacksmiths	...	...	...	...	...	...	...	30s. to 45s. "
Store-carters	...	...	...	...	...	...	...	25s. to 40s. "
Millers	...	...	...	...	...	...	...	45s. to 90s. "
Grocers	...	...	...	...	...	...	...	40s. to 70s. "
Hairdressers	...	...	...	...	...	...	...	30s. to 60s. "
Saddlers and harness-makers	...	...	...	...	...	...	...	45s. to 70s. "
Ironmongers	...	...	...	...	...	...	...	30s. to 60s. "
Bootmakers (piece-work), &c.	...	...	...	...	...	...	...	60s. "
Printers	...	...	...	...	...	...	...	40s. to 45s. "
Compositors	...	...	...	...	...	...	...	40s. to 45s. "
Carpenters	...	...	...	...	...	...	...	6s. to 10s. per day.
Coach and body builders	...	...	...	...	...	...	...	35s. to 80s. per week.
Painters and finishers	...	...	...	...	...	...	...	35s. to 80s. "
General labourers	...	...	...	...	...	...	...	5s. to 8s. per day.

Employers hesitate about giving information as to the wages paid to their own employees.

I have, &c.,

LACHLAN W. BROUGHTON,  
Labour Agent.

The Labour Agent, Tenterfield, to The Superintendent, Government Labour  
Bureau, Sydney.

Sir,

Court-house, Tenterfield, 3 July, 1899.

I have the honor to forward herewith my annual report for year ending 30th June, 1899. The work in this district, such as to give employment to any extent, has not been great—in fact, the town has, through various reasons, been at a standstill. The boot factory has been employing fewer hands than last year, but is still continuing to employ several men. There are two mills which employ labour, but not to any extent. The road work is let out, as usual, by contract, under the supervision of the

the Road Superintendent, and is usually undertaken by contractors, who employ men who are resident in the district. This season has been severe in this district, owing to want of rain, and has made business dull. The rate of wages usually given is as follows:—

Butchers, &c. ... ..	25s. to 30s. per week.
Carpenters ... ..	8s. to 10s. per day.
Blacksmiths ... ..	8s. per day.
Labourers ... ..	7s. „
Mechanics ... ..	8s. „
Compositors and bootmakers ... ..	40s. per week.

I have, &c.,  
W. C. GEIKIE,  
Labour Agent.

The Labour Agent, Wagga Wagga, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Labour Bureau, Wagga Wagga Branch, 1 July, 1899.

With reference to the labour market in this district, I have the honor to inform you that, owing to the removal of the wooden viaduct, and substitution of steel and cement work by the Government, and the vast improvements to the Sandridge Estate by Messrs. Dixon & Co., of Sydney, to utilise the land for the culture of tobacco, there has been a fair amount of employment for these classes of labour, leaving only a small number of unemployed, the rate of wages for these works being about 6s. per day.

The building trade has been moving along steadily, absorbing most of the available labour of the artisans that follow these works, the wages ruling being:—

Carpenters ... ..	7s. 6d. per day.
Bricklayers ... ..	7s. 6d. „
Hod-carriers ... ..	6s. 6d. „

The severity of the drought, necessitating the removal of most of the stock to the mountains, has been the means of employing a large number of men and youths as drovers and shepherds. The wages for this class of work range from 20s. to 27s. 6d. per week for man, horse, and dog, and rations found. In reviewing the past year it is apparent that, had Mr. Dixon not improved Sandridge, and the non-existence of the necessity for removing the stock to the mountains, there would have been a large number of unemployed here; and as both these outlets for labour are worked out, the latter end of the winter will be more severe than the autumn and the beginning of winter.

The failure of crops has materially decreased work with manufacturers of farming implements, &c.; but the recent rains will tend to increase work of an agricultural and pastoral nature.

PHILIP E. ELDERSHAW, C.P.S.,  
Labour Agent.

The Labour Agent, Walgett, to The Superintendent, Government Labour Bureau, Sydney.

Sir,

Court-house, Walgett, 8 July, 1899.

I have the honor to forward you herewith my annual report for the year ending 30 June, 1899, and beg to inform you that no transactions have taken place in connection with this branch during the past year.

The state of the labour market has been extremely dull, during the past twelve months, owing no doubt to the continuance of the drought, which has been extremely severe throughout this district, causing enormous loss of stock, whilst others which could be removed have been taken to more favoured localities. Large numbers of men have been employed in scrub-cutting throughout the district during the past six months in order to save the lives of stock. The rainfall during the past twelve months has been far below the average, 12.25 inches only having been recorded during that period, the result being that the sawmills have had to shut down, being unable to obtain carriers to draw the timber. I have no doubt that during the next few months more work will be offering owing to the approach of the shearing season, and already men are to be seen *en route* to the various stations in search of employment.

There are no industries in the district beyond a few sawmills and wool-washing establishments, it being purely a pastoral district and the class of employment offered is of a labouring character, and the rate of wage is, generally speaking, about £1 per week.

The general rate of wages are as follows:—

Married couples ... ..	£50 to £65 per annum.
Cooks ... ..	20s. to 25s. per week.
Boundary riders ... ..	15s. to 20s. „
General hands ... ..	15s. to 20s. „
Shearers ... ..	£1 per hundred.

The demand at present is quite equal to the supply.

I have, &c.,  
W. STURROCK,  
Labour Agent.

The

The Labour Agent, Wilcannia, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Court-house, Wilcannia, 30 June, 1899.

I have the honor to furnish my annual report:—

Since the opening of the branch at this place no business of any kind has been transacted.

Almost the only labour employed in the district is station-hands, and the current rate of wages is: Boundary-riders, 12s. 6d. to 20s. a week; general hands, 10s. to 20s. a week; bullock and horse drivers, 25s. a week; cooks, 25s. a week; married couples, £65 to £80 per annum; at shearing time, rouseabouts are paid from 20s. to 25s. a week; and shearers get 20s. per 100 sheep. The drought does not appear to affect either the number of men employed by the stations or the rate of wages paid.

So far as I am able to judge, it does not appear that there are many unemployed in the district, although the supply of labour exceeds the demand.

I have, &c.,

J. LAIDLAW,

Labour Agent.

The Labour Agent, Wollongong, to The Superintendent, Government Labour  
Bureau, Sydney.

Sir,

Wollongong, 5 July, 1899.

I have the honor to report that during the year ending 30th June, the names of twelve men, seeking employment at this branch of the Government Labour Bureau were registered in the books kept at this office. These applicants were all local residents, and their reason for registering was in order that in the event of the Government Labour Bureau being requested to furnish part of the labour required for the construction of the Port Kembla Harbour Works, they, as local men, should be given the preference. It is anticipated that before many months elapse these important works will be commenced, and they will be the means of giving a great impetus to all classes of trade in this locality.

Trade generally during the last twelve months has been moderately brisk. At certain periods of the year the rough weather experienced on the South Coast very much retarded coal-shipping operations. However, the inconvenience and loss to the district occasioned by the stormy weather, and the want of a properly-constructed harbour will soon be things of the past, once the Port Kembla Harbour scheme (already sanctioned by Parliament) is carried out.

With other parts of the Colony the Illawarra District participated in the serious effects of the drought, which lasted from early spring until late in the summer. However, a copious downpour of rain has since fallen, and farmers, stock-owners, dairymen, and others anticipate next season to be a fairly successful one.

During the ensuing year the coke industry in this part of the Colony promises to be exceptionally brisk. A Mount Lyell Company of Tasmania is already commencing operations on an extensive scale for the construction of coke-works at Port Kembla. Tenders are being called for the erection of the necessary plant, and the services of navvies for the required excavations are being speedily secured, although the rate of pay offered by the company for the last-mentioned kind of work is only 6s. per day. However, several men have already tendered their services at this rate of remuneration.

Generally speaking, the coming year in this district promises to be more prosperous than has been the case for many years.

H. S. BINGLE,

Labour Agent.

The Labour Agent, Young, to The Superintendent, Government Labour Bureau,  
Sydney.

Sir,

Labour Bureau, Young Branch, 1 July, 1899.

I have the honor to report that the operations of this branch during the year ending the 30th June last have been of a very limited character. Only four men applied to be registered, two of whom obtained employment.

The labour market, although at times much depressed owing to the severe drought, may, on the whole be considered fairly satisfactory under the circumstances.

The following are the rates of wages ruling throughout the year:—Miners, 50s. per week; carpenters, 8s. to 10s. per day; bricklayers, 9s. to 10s. per day; blacksmiths and tinsmiths, 40s. to 50s. per week; painters, 8s. per day; stonemasons, 11s. per day; flour-mill hands, 25s. to 30s. per week; and farm labourers, 15s. to 20s. per week.

The splendid rains, about 4 inches, which have fallen during the past month have completely changed the aspect of things, and a good season is now assured for farmers and pastoralists. The young crops, about which some anxiety was felt, are now looking very promising.

Tanks in some parts are not nearly full, but the supply obtained is sufficient to remove any anxiety for the near future. The effects of the drought, however, will be felt for some time, as the losses of stock have been very heavy, more particularly in the western part of the district. It is estimated that 300 horses, 4,000 cattle, and 100,000 sheep have perished during the past twelve months.

I have, &c.,

R. W. COLLINS,

Labour Agent.

Rough Plan of  
**Barrack System**

for aged Couples:

Not drawn to Scale.

Note.

Barracks to be built according to requirements with two rooms to each couple as shown on Plan: To be located as near as convenient in centre of ground reserved: cultivation paddocks roads etc to radiate therefrom to the boundaries.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## BOARD FOR INTERNATIONAL EXCHANGES.

(REPORT FOR YEAR 1898.)

*Printed under No. 6 Report from Printing Committee, 19 October, 1899.*

## The Chairman of the Board for International Exchanges to The Chief Secretary.

Sir,

Board for International Exchanges, Sydney, 29 May, 1899.

On behalf of the Board for International Exchanges, I have the honor to transmit a report of the work done by the Board during the year 1898.

Number of letters and circulars despatched, 603.

Number of parcels despatched, 1,181.

Number of cases despatched, 17, containing 90 parcels for transmission to addresses.

Number of cases received, 24, containing 226 parcels for transmission to addresses within the Colony.

Number of publications received by the Board and presented to various Government Departments, 1,826.

As the Public Library of New South Wales is recognised by the Board as the most suitable depository for the official publications, dealing with subjects of general interest, received from foreign countries, of the 1,826 publications received, 1,304 were handed to that Institution. The value of these publications retained by Government Departments is estimated at £370.

As the financial year is not co-terminous with the year adopted for the furnishing of the annual reports of various Government Departments, it would be difficult to give the exact expenditure of the Board during 1898, as some of the accounts for carriage, such as transhipment of cases from London to New York, Brussels, Paris, &c, are not presented until months after the shipments have been made from Sydney, but during the year cheques were drawn by the Board amounting to £37 3s. 6d. A full statement of the annual receipts and expenditure is furnished each July. The expenditure for the financial year ending on 31st June, 1898, was £51 3s. 6d.

The system of regular exchanges that has been established between this Colony and the Governments of Great Britain, United States, France, Belgium, and Germany, has been satisfactorily continued. Fifty of the official departments at Washington have either exchanged publications with the Board, or have promised to do so. Each individual State of the United States has been asked to exchange official documents with this Colony; some have gladly accepted the proposal, and others have the matter still under consideration.

On the 5th May, 1898, Mr. J. R. Martin, Assistant Statistician, and Dr. R. N. Morris, Superintendent of Technical Education, were appointed additional members of the Board.

The Parliamentary Librarian having reported to the Board that his set of the official publications of the United States was incomplete, the Board obtained, towards the completion of the set, 125 volumes from the authorities at Washington.

During the year the Hon. the Chief Secretary approved of the Board distributing the publications of the Royal, Linnean, and such other local scientific societies as the Board may approve, conditionally that such societies place six copies of their publications at the disposal of the Board. The Royal Society of New South Wales, the Linnean Society of New South Wales, and the Australasian Association for the Advancement of Science having accepted this condition, their proceedings for the past year have been forwarded through the Board.

As a question has been raised as to the Board's authority for requisitioning the Government Printer for the official publications issued by his Department, the Board wish to point out that if it is to carry out the objects of its appointment as originally set forth, 25th July, 1890, "to act on behalf of the Government in the matter of international exchanges of literary and scientific works, official publications, &c.," it must be able to offer any and all of the Government publications of this Colony, in order to get similar publications from such countries as Great Britain, the United States, France, and Germany. The Board has sent away no publication without first being assured that it would get very full value in exchange, and in the case of Great Britain and the United States we have benefited tenfold.

HENRY. C. L. ANDERSON,  
Chairman.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## FIRE BRIGADES BOARD, SYDNEY.

(REPORT FOR 1898, BEING THE FIFTEENTH ANNUAL REPORT.)

Presented to Parliament, pursuant to Act 47 Vic. No. 3, sec. 7.

*Printed under No. 8 Report from Printing Committee, 2 November, 1899.*

## The Chairman to The Chief Secretary.

Sir,

Fire Brigades Board, Castlereagh-street, 20 June, 1899.

Herewith I have the honor, by direction of the Fire Brigades Board, to forward, in compliance with the 7th section of the "Fire Brigades Act, 1884," for the information of the Chief Secretary, the attached report of the Board's administration during the twelve months ending on the 31st December, 1898.

I have, &amp;c.,

CHARLES BOWN,

Chairman.

The Principal Under Secretary.

## REPORT OF THE FIRE BRIGADES BOARD FOR THE YEAR 1898.

The issue of the departmental report for the year 1898 has been delayed in compliance with a request that the 30th June should be taken as the end of the financial year for the preparation of departmental reports. That request having been withdrawn in consequence of the probable early consummation of Australian Federation, the report is now issued for the usual calendar year.

In March, in accordance with the first section of the Fire Brigades Act, the terms of office of the Board, five elective members of the Board expired. Mr. T. M. Tinley, J.P., and Mr. Frederick Jackson, J.P., representing respectively the Fire Insurance Offices having their head-quarters in and out of the Colony, retired, and their seats were filled by the unopposed elections of Messrs. Walter Church, J.P., and S. Hague Smith. The representatives of the Municipal Council of the City of Sydney, of the other Municipalities, and of the Volunteer Fire Companies were re-elected. At the first meeting of the newly-constituted Board, Mr. Church, who had previously held the position for several years, was elected Vice-Chairman.

Forty-five Insurance Offices, or one less than in the previous year, made the returns required by the Act—the sum of their risks amounting to £60,426,170—an increase of £518,217. The contribution levied, upon the basis of the risks, amounted to 2·66 pence in £100. The nominal reduction of one in the number of offices is accounted for by the withdrawal of the Fire Underwriters Association from the collection of contributions from Insurance Institutions having risks but no representatives in the Colony, other arrangements having been made by the interested companies. Such risks escape the contribution levy made under the Act, there being no representatives of the insuring offices to make the prescribed sworn returns. In the year 1897 the insurances so held were returned by the Fire Underwriters Association at £200,200. Of the forty Insurance Companies, the head-quarters of five were in Sydney and of thirty-five out of New South Wales. The Aachen and Munich Fire Insurance Company of Munich was added to the list, while the Indemnity Fire and Marine Insurance Company of Australasia (Limited) retired.

## Municipalities.

No additional municipalities having been proclaimed under the Act, the number of municipal contributories remained forty-three. These returned the assessed value of their ratable property at £4,641,595, a decrease of £78,366 as against the previous year's decrease of £255,678. The persistent fall in values which the municipalities' returns have shown for several years had therefore not touched bottom, but was becoming less rapid. The contribution payable on the basis of the assessment was 316 pence in £, or 2s. 10½d. per £100. The ratio thus again increased in consequence of the continued fall in the assessed values, although the total sum levied by the Board was similar to that of the preceding year. Some of the boroughs have fallen into considerable arrears in payment of their contributions, and have ignored repeated claims for settlement. In justice to those municipalities and other contributories which maintain the department, it is felt that decisive action must be taken, however reluctantly, to compel payment by the defaulting councils.

## Fires.

The number of calls received by the Fire Brigade was 565, of which 64 were false alarms. The fires attended numbered 422, exclusive of 79 chimney fires. In his report, hereto appended, the Superintendent of Fire Brigades draws attention to the illustration afforded by certain fires of the necessity for legislation for regulation of building.

## Building Act required.

As previous reports have pointed out, there can be no doubt that a Building Act, upon modern enlightened lines, is most desirable from an architectural and sanitary point of view, as well as from that of public protection from fire. The conflagration which devastated a large section of the business portion of Regent-street, Redfern, originated in a large timber-yard, from which the flames, fanned by a high wind, swept across the street with such startling rapidity that the residents escaped with difficulty, having no time to save aught but their lives. At the resultant inquiry before the City Coroner, the jury were unable to determine the cause of the fire, other than that it originated in Mr. George Hudson's timber-yard; but added to their verdict this rider:—"We are of opinion that a timber-yard at No. 52, Regent-street is a source of danger to the inhabitants in the vicinity, and should not be permitted." Unfortunately, in the existing state of the law there is no power to prevent the establishment of timber-yards or large stores of inflammable goods of various descriptions in thickly-populated neighbourhoods. The existence of hotels, lodging-houses, restaurants, &c., without adequate means of escape for their inmates in case of fire, is also matter for anxiety.

Ship fires and salvage on—  
s.s. "Buteshire."

Seven fires upon vessels in the harbour were attended and extinguished by the Brigade. Of these, that on the s.s. "Buteshire" calls for especial mention. This steel steamship of 5,574 tons, belonging to the Elderslie Steamship Company (Limited), was lying at Smith's Wharf, Miller's Point, and the Brigade was summoned to its assistance shortly after midnight on the morning of the 19th October. The fire was spreading in the charcoal insulation in the fore hold, and threatened total destruction of the vessel, which was valued at about £85,000. After an exhausting struggle, during which several steam fire-engines and a large quantity of hose and other valuable fire-extinguishing appliances were employed, the fire was finally extinguished at 8 a.m. on Monday, 24th idem. Many of the firemen did not recover for several days from the effects of the heat and smoke in the confined hold, coupled with the strain of continuous trying work for many hours. The wear and tear upon the engines and hose was severe, the heat of the deck destroying much of the latter; and expenses for fuel and other necessaries were also incurred. Acting upon the intention expressed in the Report for the year 1897, the Board preferred a claim for £1,500 for salvage and expenses. The agents for the vessel, Messrs. Dalgety & Co., denied the right of the Board to charge for the services of the Brigade, and offered £100, afterwards raising the sum to £130 for the service. The Board declined the offer, and a case to decide the question at issue is now before the Vice-Admiralty Court.

Bill to extend  
Fire Brigades  
Act to harbour  
waters.

On the 29th November the Board, introduced by the Chief Secretary, waited upon the Colonial Treasurer and Premier, the Right Honorable G. H. Reid, P.C., and in response to their representations, the Minister promised to have a Bill prepared to extend the jurisdiction of the Board over the harbour, and to provide for raising of a revenue by a port due for maintaining fire-floats, &c., for protection of shipping.

## Water.

The Metropolitan Board of Water Supply and Sewerage has continued to accord most courteous consideration to any representations by this department with regard to water service for fire-extinction. The opening of the Centennial Park Reservoir of 18,500,000 gallons capacity, in September, and consequent increase of pressure throughout the area formerly served by the Paddington Reservoir, is an improvement of incalculable value for the purposes of the Fire Brigade.

Traffic in  
explosives,  
inflammable  
liquids, &c.  
Amendment of  
Fire Brigades  
Act.

The traffic in explosives and inflammable liquids, unfortunately, is still carried on without the more stringent regulations which public safety requires. Beyond the Premier's promise to introduce a Bill to extend the Fire Brigades Act to the waters of Port Jackson, there appears to be no immediate probability of the Act being improved in other respects.

Electric  
Tramway.

The Board views with some apprehension the laying of an electric tramway, of the overhead system, in the narrow main thoroughfare of the city. It is feared that the trolley-wires, charged with the electric current, may seriously hamper the firemen in working the fire-escape ladders and other appliances. Every precaution, however, will be taken to minimise the additional risk which, it is feared, will be incurred in case of fire along the route of the line in George-street.

Stations.  
Necessity for  
enlargement of  
head-quarters.  
Manly.  
Parramatta.  
Burwood.

The necessity for increased space at Head-quarters Fire Station is being felt very keenly; but, the repeated proposals submitted by the Board to the Government for extension of the premises have not yet had fruition. In Manly and Parramatta fire stations have been erected, which are now occupied by the local Volunteer Fire Companies. In Burwood a suitable fire station, to be occupied by the Burwood Volunteer Fire Brigade, is to be built as soon as a conveyance of the selected site at the corner of Burwood-road and Belmore-street can be obtained, £1,000 having been provided in the Government Estimates for purchase of the ground. The Government Architect is about to proceed with the alterations required to the old court-house and police station, at Redfern, to fit it for occupation by the Metropolitan Fire Brigade, the Government having provided £1,400 for the purpose. Plans have been prepared by the Board's Architect for the erection of a large station on the site secured in the

## Redfern.

Paddington

Paddington Reservoir Reserve, which also will be occupied by the Brigade. In Chatswood it is proposed to build immediately, and a Volunteer Fire Company has been organised for protection of the rapidly-growing district. A convenient fire station has been erected in Parramatta, at the junction of Church and FitzWilliam Streets, on ground dedicated by the Government for the purpose. It is hoped that the Volunteer Fire Companies and their equipments in Granville, Rookwood, and other places will, before long, be better housed.

At the close of the year there were 171 telephone fire-alarms, connected by 149 miles of wire, in operation in the city and suburbs. Necessity for extreme economy again limited the extension of these most useful aids to Fire Brigades; but it is anticipated that several additional alarms will this year be installed in suitable centres of spreading suburban populations. As mentioned in the last Report, it is found that the greater length of lines required for suburban installations, and the absence of poles along the routes in many localities, render these installations, and their subsequent maintenance, much more costly than those in the city. During the year alarms were placed in Leichhardt, Randwick, and Surry Hills.

The authorised strength of the Metropolitan Brigade on 31st December, 1898, was seventy-three of all ranks, and its discipline and efficiency were unexceptionable. A detachment of the Brigade occupied the fire station in Moncur-street, Woollahra, on the 1st March, the Woollahra Volunteer Fire Company having voluntarily disbanded. On 26th September, Mr. W. D. Bear resigned the position of Superintendent of Fire Brigades, and the Deputy Superintendent, Mr. Alfred Webb, was appointed, under the 8th section of the Fire Brigades Act, to the vacancy. The third officer of the Brigade, Mr. Nicholas George Sparks, was promoted to be Deputy Superintendent, pursuant to the provision of the 6th section. Thorough reorganisation of the Brigade was subsequently entered upon, and the results have proved in the highest degree satisfactory.

The partially-paid corps of auxiliary firemen numbered thirteen at the end of the year—the authorised strength being twenty. This body is peculiarly subject to change in its personnel, in consequence of the various employments of its members compelling them, more or less frequently, to leave the corps in order to take work at distances from the stations to which they are attached, and which, under the Regulations, they must constantly attend after 6 p.m.

The new steam fire-engine and the 50-ft. curricule escape-ladder, which last year's Report mentioned as having been ordered from Messrs. Shand, Mason, & Co., of London, arrived in good condition, and have proved very valuable additions to the equipment of the Brigade.

The Woollahra Volunteer Fire Brigade voluntarily disbanded on 28th February, having to its credit many years of useful service. Its station was occupied by an officer and three men of the permanent Brigade assisted by four auxiliaries. On the completion of the new fire station in Parramatta, the second Volunteer Fire Company in that town went out of existence. One company, with increased subsidy, and horses to enable them to cover a wider area, now protects the district. In Richmond a Volunteer Fire Brigade was established; and negotiations for formation of a Volunteer Brigade in Willoughby, to occupy the contemplated new fire-station at Chatswood, have since the close of the year had successful result. The sums paid to maintain the Volunteer Fire Companies amounted to £2,603, irrespective of considerable expenditure for repair of their stations, renewal and repair of fire-extinguishing appliances, provision of horses, and for payments to the wives of the engine-keepers at a number of the stations to which fire-alarm telephones are connected, for attendance to telephone calls in the daytime when volunteers are absent at their daily work.

The usual Appendices, including the Superintendent's report, furnishing detailed information, are hereto appended.

CHARLES BOWN,  
Chairman.

Adopted at a meeting of the Brigades Board, at Head-quarters Fire Station, Sydney, on Monday, 19th June, 1899.

Z. COLLIS BARRY,  
Secretary.

Z. COLLIS BARRY, Secretary.

Having examined the books and vouchers of the Fire Brigades' Board for the year ending 31st December, 1898, I certify the above-written Abstract of Receipts and Expenditure to be correct.

23 January, 1899.

JAMES ROBERTSON, F.S.I.A., Auditor.

## APPENDIX V.

## Report by the Superintendent of Fire Brigades.

Head-quarters Fire Station, Castlereagh-street, Sydney, 2 January, 1899.

The Fire Brigades Board, Sydney,—  
Gentlemen,

I have the honor to present the following report on the working of the Fire Brigade and of the Volunteer Fire Companies during the year 1898 :—

The number of calls for fires, or supposed fires, has been 510. Of these, 64 were false alarms, 24 proved to be only chimney fires, and 422 were for actual fires, of which 31 resulted in total destruction, 19 were of a serious nature, and in 372 cases the damage was slight. In addition to the above, the Brigade has attended 55 calls to chimney fires. The number of calls of all descriptions amounted to 565, a decrease on the previous year of 46.

The first part of the year was notable for its freedom from fires of a serious nature; but in the latter part the resources of the Brigade were taxed to their utmost extent on three occasions, and each of these three fires serves as an object lesson to illustrate the necessity for legislation. A fire in Regent-street, Redfern, on the 8th of October, indicated, in a most unmistakable manner, the necessity for an Act to regulate the construction of buildings outside the city. On the 19th of October, a fire occurred on board the s.s. "Bateshure." This fire showed how urgently a powerful floating fire-engine is needed, and subsequent events have also demonstrated very clearly that an amendment of the Fire Brigades Act of 1884 is required, so far as fires on ships are concerned. The third fire to which allusion is made occurred on the 9th November, in a high building, and serves to emphasise the ideas entertained by many authorities, that buildings should not be erected above a height of 90 feet.

The dry weather which was experienced during the latter part of the year was responsible for a large number of grass and bush fires which, although resulting in slight damage to property, were sufficiently serious in their proportions to require the attendance of the Fire Brigade.

In addition to attending fires, a large amount of work has been performed by the staff, a portion of which is now given for the information of the Board.

12,250 watches of 8 hours have been kept.

3,300 hydrant inspections, 12,300 telephone fire-alarm inspections, and 370 building inspections have been made. Steam fire-engines were tested 94 times, and the boilers of 3 steam fire-engines were inspected.

Alterations and repairs have been effected by the Brigade blacksmiths to 7 steam fire-engines, 10 manual engines, 5 hose-carriages, 4 ladders, and 8 other vehicles. Work of an extensive character has also been carried out at 11 fire stations.

The horses of the department have been shod, and the shoes have been made in the Brigade's workshop. Our veterinary expenses have been limited to the cost of medicine.

All the hose has been regularly tested. Ninety-two pairs of couplings have been tied in to hose; 150 buckets were made and fastened to hose; 150 straps were also made. Small general repairs to hose and harness were effected.

A large amount of work has been performed by the Brigade carpenters. All the wood gratings on the roof of head-quarters were renewed; alterations to doors and platform at No. 2 Station have been effected; three telephone switchboards and eight hickory poles were made on the premises. Repairs to nine manual engines and two hose-carriages, besides extensive repairs to the general plant, have been carried out.

A great deal of painting has been found necessary during the year. Most of the stations have had more or less attention in this respect; several engines have been repainted; and all the telephone boxes have been cleaned and repainted twice.

The annual increase in the number of telephone fire-alarms renders the task of keeping them in order more arduous every year. The work done in this connection is of special value. The Manly and Parramatta Stations have been fitted up with a complete system of electric bells; several switchboards have been fitted up; fifty old telephones have been renewed in parts; and all telephones, 317 in number, have been kept in thorough order. All batteries have been fitted, cleaned, and recharged, when necessary, by the staff.

Between 7,000 and 8,000 letters and reports have been written, and a large amount of other clerical work performed.

All this work, when taken in conjunction with attendance at fires, and everything incidental thereto, represents a large amount of labour, and has at times brought a severe strain on the whole staff, but the men have worked cheerfully and well, and I have pleasure in thus acknowledging it.

Each year shows the necessity for increased workshop accommodation. Nearly all the work is performed in unsuitable places, and the men are distinctly at a disadvantage. Were additional space at our disposal I am convinced, good as the results have been, more economy could be practised, as less time would be occupied in doing the work.

In March the Woollahra Volunteer Fire Company disbanded, and a staff of permanent men, with some auxiliaries, were placed in charge.

New stations have been opened at Manly and Parramatta, and fitted with all necessary appliances for turning out to a fire quickly. The Parramatta Volunteer Company, No. 2, ceased working on the 31st December, according to arrangement. Certain alterations were carried out at the premises in George-street, Redfern, which allowed of a hose-reel being stationed there. It is anticipated that other alterations will shortly be made, which will enable a staff of permanent men, steam fire-engine, ladders, and horses to be always in attendance.

Volunteer Fire Companies have been formed at Liverpool and Richmond, and, after undergoing a course of instruction from members of the permanent staff, were registered and subsidised by the Board. Other companies have received regular tuition during the year, and it is anticipated that at fires all will feel the benefit of the instruction imparted.

During the year twelve horses were purchased, one was sold, and six were lent to various Volunteer Fire Companies. We were especially fortunate with our horses during the year.

The new ladder ordered in 1897 for use at Newtown Station has arrived, and the men are now undergoing a course of instruction with it. An additional man and a horse will be placed at this station when the men are conversant with the use of the ladder.

Owing to the very restricted amount of money at disposal, but little extension of the telephone fire-alarm system has been made.

Certain alterations have been made in the constitution of the Brigade which, I am sure, will result in greater efficiency, and the exercise of closer supervision over the area under the jurisdiction of the Board.

We have been very severely handicapped during the last six months in the matter of sickness. Five men were down with measles at one time, and as they recovered other men met with accidents more or less serious, which incapacitated them.

It is my duty to point out that the Fire Brigades Act of 1884 requires amendments of an extensive character. The foremost of these is the manner in which the revenue is raised. The system, in my opinion, is totally wrong, and in the near future I propose to submit a report dealing with the subject, which will allow of adoption in the metropolitan area, and also will be applicable to country districts.

As the work in connection with the electric tramway along George-street approaches completion, the difficulties which its introduction will present to our work become more clear, and it is not too much to say that the duty of life-saving and fire-extinguishing will be greatly impeded and rendered more dangerous by the adoption of this system of tramway. This will be especially noticeable in that part of George-street north of Market-street, where the thoroughfare is so narrow that the distance between the trolley wires and the shop awnings will be limited to a marked degree.

It is anticipated that our telephone fire-alarm system along George-street, and the working of the Circular Quay Station, will be affected prejudicially by the tramway.

The

The officers of the Police Force and of the Water and Sewerage Board have rendered valuable service also, and thanks are due to them for coming so readily to our assistance.

I have to thank the officers and members of the permanent staff and of the Volunteer Fire Companies for the valuable aid and willing co-operation which they have accorded me during the year.

In conclusion, I wish to express my deep sense of gratitude to the Board for the support tendered to me on all occasions, and for the confidence which they have reposed in me.

I have, &c.,

ALFRED WEBB,  
Superintendent.

Detailed information is furnished in the attached Appendices :—

Members of the Brigade.	Weekly Summary of Calls.
Telephone Fire-alarms.	Monthly Summary of Calls.
Stations and Plant.	Comparison of Calls from 1885 to 1898.
Summary of Localities.	Summary of Causes of Fires.
Summary of Trades.	Summary of how Fires were reported to the Brigade.
Hourly and Daily Summary of Calls.	Details of Fires.

#### APPENDIX VI. METROPOLITAN Fire Brigade.

Name.	Rank.	Date of Joining.	Station.
Alfred Webb	Superintendent and Inspector of Kerosene.	26 June, 1888	Head-quarters.
Nicholas G. Sparks	Deputy Superintendent	1 June, 1897	do
John F. Ford	Foreman	1 Aug., 1884	No. 2 Station.
Sidney Watson	do	1 Jan., 1885	No. 3 Station.
George Lang	do	7 Jan., 1885	No. 7 Station.
Thomas Gorman	Assistant Officer	18 June, 1885	No. 4 Station.
Samuel Holman	do	11 Feb., 1886	No. 6 Station.
Thomas G. Cutts	do	19 Mar., 1888	No. 8 Station.
Frank Jackson	do	7 Feb., 1889	No. 9 Station.
John Graham	do	15 April, 1889	No. 5 Station.
George Parsons	do	6 Sept., 1889	No. 3 Station.
Harrie B. Lee	do	19 Feb., 1891	Head-quarters.
Francis Howard	do	19 April, 1888	do
George H. Dudd	do	13 Feb., 1890	No. 5 Station.
Joseph Stancheli	Barrier	1 July, 1884	Head-quarters.
Thomas P. Gordon	1st-class fireman	3 Jan., 1885	No. 7 Station.
George C. Gray	do	1 July, 1884	No. 8 Station.
Robert W. Nash	do	1 Jan., 1887	No. 7 Station.
Albert E. Pickering	do	18 Sept., 1890	No. 2 Station.
Charles May	do	3 Oct., 1890	No. 5 Station.
Edward Smith	do	7 May, 1891	Head-quarters.
John A. Becker	do	12 Mar., 1891	No. 8 Station.
William T. Corkill	do	25 May, 1891	No. 4 Station.
James W. Morris	do	1 Dec., 1891	No. 2 Station.
Harry Skelton	do	24 Mar., 1892	Head-quarters.
John A. Nicoll	do	3 Aug., 1892	No. 3 Station.
Augustus J. Gerard	do	21 Feb., 1890	do
Ephraim Stoneham	do	6 Jan., 1893	Head-quarters.
Edward J. Roberts	do	9 Jan., 1893	No. 9 Station.
Alexander Jamieson	do	18 Nov., 1892	No. 2 Station.
John Wiggins	do	17 Feb., 1893	Head-quarters.
William Whitnall	do	19 June, 1893	No. 2 Station.
George W. Barry	do	21 Aug., 1893	Head-quarters.
James Hancock	do	1 Aug., 1884	No. 6 Station.
George Alchin	2nd-class fireman	28 April, 1890	No. 9 Station.
Christopher J. Digby	do	30 Mar., 1894	No. 2 Station.
James Jones	do	1 June, 1893	Head-quarters.
Henry T. Dawes	do	1 Nov., 1893	No. 5 Station.
George C. J. Wills	do	21 May, 1894	No. 7 Station.
Arthur Houghton	do	14 Sept., 1894	Head-quarters.
William Best	do	9 Oct., 1894	No. 2 Station.
Kenneth Arthurson	do	8 April, 1895	No. 9 Station.
Thomas L. Thomas	do	9 April, 1895	No. 6 Station.
Arthur Dickinson	do	16 April, 1895	Head-quarters.
Francis A. Tuck	do	14 May, 1895	No. 5 Station.
Archibald Murray	do	5 Sept., 1895	do
James Carson	do	9 Oct., 1895	Head-quarters.
Thomas P. Nance	3rd-class fireman	6 Dec., 1895	No. 3 Station.
Francis E. Pickering	do	1 Feb., 1896	No. 4 Station.
James Sorlie	do	1 April, 1896	Head-quarters.
John Chambers	do	6 May, 1896	No. 3 Station.
Arthur W. Vigay	do	1 July, 1896	do
Sidney H. Lister	do	27 July, 1896	Head-quarters.
Charles Andrews	do	14 Sept., 1896	do
Mark Saunders	do	2 Feb., 1897	No. 4 Station.
Arthur E. Hallett	do	1 Mar., 1897	No. 2 Station.
George S. Grimmond	do	1 April, 1897	do
Percival W. Love	do	5 July, 1897	Head-quarters.
George P. Cox	do	19 July, 1897	No. 3 Station.
Samuel Wilson	do	19 July, 1897	No. 6 Station.
John Etherington	do	1 Aug., 1897	Head-quarters.
Philip Henry	do	9 Aug., 1897	do
James H. Kehoe	do	7 Feb., 1898	do
Francis McLaughlin	On probation	1 Aug., 1898	No. 7 Station.
John W. Smith	do	26 Oct., 1898	Head-quarters.
Harry Tuck	do	1 Nov., 1893	do
Peter J. Robinson	do	1 Nov., 1898	No. 3 Station.
Christopher J. Riddell	do	1 Nov., 1898	Head-quarters.
Patrick Finnegan	do	3 Nov., 1898	do
George A. Gordon	do	4 Nov., 1898	No. 8 Station.
James W. Gorrett	do	1 Dec., 1898	Head-quarters.

NOTE.—Two vacancies.

## APPENDIX VII.

## TELEPHONE Fire-alarms.

## EXPORT TRADE OF THE COLONIES.

(CORRESPONDENCE AND MINUTES IN CONNECTION WITH THE CLAIM OF THE GOVERNMENT OF VICTORIA FOR PAYMENT OF £250 11s. 5d., AS PART OF THE EXPENSES INCURRED BY THE HON. J. W. TAVERNER, M.P., IN PROSECUTING INQUIRIES IN GREAT BRITAIN IN CONNECTION WITH THE.)

*Printed under No. 15 Report from Printing Committee, 21 December, 1899.*

Mr. L. Whitehead to The Minister for Mines and Agriculture.

Dear sir,

Department of Agriculture, Melbourne, 10 February, 1899.

Mr. Taverner directs me to forward to you the accompanying copies (ten) of the Report of the recent Conference of Ministers of Agriculture.

Yours, &amp;c.,

L. WHITEHEAD.

Mr. Freedy, see that all necessary instructions are given about these matters.—D. McL., 15/2/99. All action completed as far as N.S.W. is concerned.—W.P., 17/2/99. Corres: Send a copy to Mr. Bruce and to Mr. Stephenson. Ask Mr. Bruce to note that copies of Amended Brands Bill are to be sent to the other Colonies for consideration.—W.P., 17/2/29. A.S., 20. Copies to Mr. Stephenson and Mr. Bruce. Mr. Bruce asked as to Amended Brands Bill.—22/2/99. Copy sent to Mr. Campbell.—W.P., 23/2/99.

1899.

VICTORIA.

REPORT of the Intercolonial Conference of Ministers of Agriculture, held in Melbourne, January, 1899.

## INTERCOLONIAL CONFERENCE OF MINISTERS OF AGRICULTURE.

THE Ministers of Agriculture for the Colonies of New South Wales, Victoria, South Australia, and Queensland met in Conference at the Public Offices, Melbourne, on Thursday and Friday, the 12th and 13th January, 1899, the Colonies being represented as under:—

New South Wales	...	...	...	...	Hon. J. Cook.
Victoria	...	...	...	...	Hon. J. W. Taverner.
South Australia	...	...	...	...	Hon. R. Butler.
Queensland	...	...	...	...	Hon. J. V. Chataway.

Mr. Taverner was elected to the Chair, and intimated that he proposed inviting the consideration and discussion of the following subjects, as matters in which the Colonies were mutually concerned, viz. :—

- Proposals of Mr. J. H. Geddes—Australasian Food Supply Distribution Scheme.
- Joint action for reduction of Ocean Freights.
- Direct trade with Manchester.
- Trade with South Africa.
- Tick Disease.
- Uniform Stock Quarantine Regulations.
- Other questions affecting producing interests.

*Proposals of Mr. J. H. Geddes—Australasian Food Supply Distribution.*

The attention of the Conference was first directed to a scheme which, as an outcome of a resolution adopted at the previous conference of Ministers held in February, 1898, had been submitted to the various Colonies by Mr. J. H. Geddes, of London, for the establishment of a depôt in London, in conjunction with provincial agencies throughout Great Britain, with the object of providing for the cool storage and more economic distribution and realization of perishable products imported from Australia. The proposals

put forward involved the payment of a subsidy by the Governments concerned to a company proposed to be formed for the purpose of carrying the scheme into effect, or the guaranteeing of interest on one-fifth of the company's paid-up capital.

The Conference agreed that improved methods are urgently required in connection with the landing and distribution of perishable products exported from Australia, in the direction of providing a more satisfactory means of conveying frozen produce from the ship's side to cool storage to insure its being kept in good condition, and of providing cool storage accommodation of such extent as would give facilities for the more advantageous marketing of the products dealt with, at the same time enabling a ready assurance to be afforded to purchasers and consumers as to the distinctively Australian origin of such products.

After careful consideration of these circumstances, however, and full discussion of the proposals in all their aspects, the following resolution on the subject was adopted :—

“That this Conference, having fully considered the proposals of Mr. J. H. Geddes for the establishment of a central depôt for perishable products in London, with distributing provincial centres in various parts of Great Britain, is of opinion that for the purposes aimed at such proposals are unacceptable.”

In view, however, of the great importance of the subject to Australian producers, and of the necessity of obtaining all information available as a preliminary to combined action, the following further resolution was agreed to :—

“That this Conference is further of opinion that steps should be immediately taken with the object of securing better methods of handling, storing, and distributing our products in Europe, and that with a view to achieving this result a representative of the subscribing Colonies should be despatched to Great Britain to make all necessary inquiries.”

#### *Joint Action for reduction of Ocean freights.*

In introducing this question, Mr. Taverner drew attention to the fact that the currency of the existing contracts with the mail steamship companies for the conveyance of perishable products from Victoria would expire in April next, and expressed the opinion that if a guarantee could be given by the Colonies conjointly for a certain specified annual tonnage of freight for a term of years an appreciable reduction would in all probability be obtained in the rates from all the Colonies. A guarantee of freight to an amount to be agreed upon would, he thought, be required, and, while the payments made during the recent years of drought upon produce exported through the Victorian Department of Agriculture had averaged a considerable sum, he considered that, as the advantage of any reduction which might be obtained by Victoria acting alone would almost certainly be gained also by other Colonies, the matter was one in which joint action might reasonably be taken.

Mr. Cook and Mr. Chataway pointed out, however, that their Colonies were situated differently from Victoria in regard to this question, inasmuch as in the case of New South Wales the great bulk of the frozen produce exported was shipped independently of the agency of the Government, while exports from Queensland reached their destination by entirely different routes, and in different lines of vessels.

After consideration and discussion of these and other circumstances, the Conference resolved—

“That, in view of the different systems existing in connection with the export trade in the various Colonies, it is considered inopportune at the present time to make any joint arrangements as to ocean freights.”

It was, however, considered possible that the Colonies of Victoria and South Australia might, under existing circumstances, enter into combination, and it was eventually agreed that Mr. Taverner, in conducting negotiations for the new contracts for Victoria, should have regard to the possibility of an arrangement beneficial to the other Colonies, and should submit results to them accordingly when ascertained.

#### *Direct Trade with Manchester.*

Mr. Taverner explained the steps which had already been taken in Victoria with the object of initiating this trade. A contract had been entered into by the Government with Messrs. P. McArthur, W. McMillan, and J. Munro, of Sydney, representing the Gulf line of steamers, providing that all exports consigned to Manchester, through the Department of Agriculture, should be shipped by the vessels of that line. Owing, however, in a great degree to the canal charges and other dues imposed at Manchester, it was found difficult to conduct trade profitably. The matter had been revived by communications containing proposals on the subject which had been received from Mr. A. J. Pease, of Manchester, but after consideration of these it was resolved—

“That the Conference cannot agree to the proposals submitted for the opening up of direct trade between Australia and Manchester, considering that such proposals amount to the payment by the Governments interested of the whole cost of developing the new trade.

“The Conference is, however, of opinion that the whole question may form a subject for inquiry on the part of the representative already agreed to be deputed to report upon the question of Food Supply Distribution.”

#### *Trade with South Africa.*

In view of the great increase of settlement proceeding in South Africa, and the opportunities and demands created for the expansion of trade in perishable products, it was considered advisable that action should be taken for the encouragement of business between that country and Australia. It was therefore resolved—

“That having regard to the desirability of developing trade between Australia and Africa, the Chairman of the Conference be requested to communicate with the Minister of Agriculture in Cape Colony with a view to ascertain—

- “1. The probabilities as to interchangeable products.
- “2. Particulars as to recent suggested tariff changes.
- “3. Present facilities afforded in that country in regard to cool storage.
- “4. Generally as to the prospects of trade between the countries, including Delagoa Bay, Durban, and Beira.”

*Tick*

*Tick Disease.*

Mr. Chataway intimated that practically no fresh development had occurred in connection with the tick pest since the subject had last been dealt with by Ministers in conference. The disease had extended no further south, and the quarantine and buffer lines agreed upon between the colonies were being strictly maintained and enforced by an efficient staff of inspectors.

Mr. Butler laid before the Conference a plan showing an amendment which had recently been made in regard to the prohibitory line between South Australia, on the one side, and Queensland and the Northern Territory on the other, across which cattle are not allowed to pass southwards. A copy of the regulations relating to the alteration was also submitted.

*Uniform Stock Quarantine Regulations.*

It was pointed out in connection with this question that while uniformity already prevailed between the colonies represented as to the period for which cattle imported should be required to undergo quarantine, differences existed in the cases of sheep and pigs. It was considered desirable that all-round uniformity should be attained, and the representatives of Victoria and South Australia therefore agreed to obtain a reduction of the period of quarantine for sheep introduced into those colonies from forty to thirty days, thus bringing their regulations as to sheep into line with those of New South Wales and Queensland. In regard to pigs, the importation of which into Victoria is under present regulations absolutely prohibited, while admissions are made into the other colonies represented, subject to sixty days' quarantine, it was agreed that a uniform system of admission, subject to thirty days' quarantine, should be adopted.

It was decided to print, in connection with the Report of the Conference, a statement of the Appendix I. various quarantine periods as now proposed to be amended.

*Questions Mutually Affecting Producing Interests.*

Various subjects of common interest were introduced and dealt with as follows:—

*Quotations of Cross-bred Sheep Prices on London Markets.*

Mr. Cook submitted a report from the Chief Inspector of Stock of New South Wales dealing with the subject of the absence from the weekly quotations of prices of Australian frozen mutton cabled from London of any separate quotation for cross-bred sheep, as such. The Conference concurred with the effect of the remarks made, and agreed that the representatives of the colonies in London should be asked to take action with the object of having proper quotations made as regards both sheep and lambs.

It was further directed that the report of the Chief Inspector should be printed in connection with Appendix II the Report of the Proceedings of the Conference.

*Brands Bill.*

Mr. Cook submitted copies of an amended Bill for the consolidation of the laws relating to the branding of stock in New South Wales, in which considerable alterations had been made as compared with the Bill laid before the Conference held in February, 1898. The draft was approved of by the Conference for submission to the respective Governments, with a view to adoption, so far as practicable, in other colonies. Mr. Chataway explained that an amendment of the branding laws, somewhat on the lines of the new legislation proposed by the Bill, had recently been effected in Queensland.

*Importation of Stud Stock.*

Attention was called by Mr. Cook to the excessively high rates charged for the oversea carriage of stud stock imported into the Colonies from abroad, payments required from the New South Wales Government, in some instances, on importations from Great Britain, amounting to £100 for a single beast. After consideration of the matter the Conference resolved—

“That the Chairman be requested to institute inquiries with a view to obtaining a reduction of the charges made for the carriage by sea of imported stud stock, the results of such inquiries to be communicated to the several colonies.”

*Anthrax.*

Having in view the recent outbreak of anthrax in Victoria, the Conference decided as to the imperative necessity for uniformity of action in dealing with and extirpating the disease. Similar legislation on the subject already existed in Victoria, South Australia, and Queensland.

*Gibson's Liquid Brand for Stock.*

A trial of this brand, at which Members of the Conference were to be present, had been arranged to take place on Friday, the 17th January, and, pending information as to results, it was not considered necessary to discuss the subject.

*Fruit Export Trade.*

As the Right Honorable Sir Edward Braddon, Premier of Tasmania, had convened a Conference of Ministers of Agriculture to be held in Hobart for the consideration of matters relating to the Export Trade in Fruit, it was agreed to postpone the subject accordingly.

A cordial expression of thanks was given to Mr. Taverner, Chairman of the Conference, for courtesies and attention shown towards members.

Mr. S. Whitehead was also thanked for his services as Secretary, and the proceedings terminated.

J. W. TAVERNER, Chairman.  
JOSEPH COOK.  
R. BUTLER.  
J. V. CHATAWAY.

## APPENDIX I.

PROPOSED Uniform Quarantine Periods for the Colonies of New South Wales, Victoria, South Australia, and Queensland, as regards Importations of Stock from the United Kingdom.

Cattle—40 days.  
 Sheep—30 days.  
 Pigs—30 days.

## APPENDIX II.

Department of Mines and Agriculture,  
 Stock and Brands, Sydney, 9 January, 1899.

## MINUTE PAPER.

*Subject* :—Price of Australian "Cross-breds" should be quoted in the London Market separately from "Merino."

Our latest available returns show that there are now 5,110,541 long-wools and cross-breds in the Colony, and every encouragement should be held out to the owners of moderately-sized and small holdings in suitable country, on which sheep are kept, to breed cross-breds, not only because cross-breds under such circumstances when properly managed pay better than merinos, but also because it is by keeping cross-bred sheep that a profitable rotation of crops can be established, and the long looked for combination of tillage and grazing successfully secured. It will not pay to keep merinos in a general way on cultivated food.

While this is the case the form in which the weekly quotation of the prices of Australian frozen mutton as cabled from London (see copy last Monday's quotation as it appeared in the *Daily Telegraph* of the 2nd inst.) greatly militates against the breeding of cross-bred sheep in the Australian Colonies, inasmuch as cross-breds are quoted at the same price as merinos; whereas it is notorious that prime New Zealand cross-bred mutton has, since 1884, brought 1d. per lb. more than merino.

It may, perhaps, be said that Australian cross-breds are so inferior, compared with New Zealand, that the Australian cannot be sold as cross-breds. If this be the case it is very necessary the cause of the inferiority (if our mutton really is inferior) should be known by the breeders of Australian cross-breds; and there is no doubt but it would long ere this have been so had Australian cross-breds been sold in London as such and their defects pointed out, as they would certainly have been, by the salesman there, if they had been sold for what they really were; while, if this had been done, our breeders, knowing the reason for the comparatively low prices they received for these cross-breds, would have made the necessary effort and remedied the defects. With, however, such a confusing, if not misleading, quotation as they now receive they are kept in entire ignorance as to why their cross-breds bring such a low price compared with the New Zealand; and the outcome is that, while prime cross-breds were some time back selling in the New Zealand market for shipment as high as 16s. and 17s., ours brought no more than 8s. or 9s.; and even now, when sheep have recently been selling at lower prices in New Zealand for shipment, there is a difference of the prices of equal weight and quality of, at least, 4s. to 5s. per sheep. The fact is largely through the confusing London quotation; the price obtained in the Sydney market is no higher per lb. for cross-bred than for merino mutton, while the lowest quotation for New Zealand cross-bred mutton in London is at the very least 3d., and the highest 1d. per lb., higher than Australian merino mutton.

The Under Secretary for Mines and Agriculture.

ALEX. BRUCE,  
 Chief Inspector of Stock.

## CONFERENCE OF MINISTERS OF AGRICULTURE.

Hobart, 16th January, 1899.

Present—The Hon. J. COOK, representing New South Wales.  
 The Hon. J. W. TAVERNER, representing Victoria.  
 The Hon. R. BUTLER, representing South Australia.  
 The Right Hon. Sir E. BRADDON, representing Tasmania.

The Right Honorable Sir EDWARD BRADDON was elected Chairman of the Conference.  
 Mr. GEO. STEWARD, Secretary to the Premier of Tasmania, acted as Secretary to the Conference.

## MINUTES OF THE PROCEEDINGS.

*Quarantine.—Cattle, Sheep, and Pigs from the United Kingdom.*

On the subject of the importation of cattle, sheep, and pigs from the United Kingdom, it was agreed that the period of quarantine in Tasmania should be amended as follows:—

Cattle—	Period reduced from 60 to 40 days,
Sheep—	" " 60 to 30 days, and
Pigs—	" " 60 to 30 days,

thus bringing the Tasmanian quarantine regulations into line with the regulations in operation in New South Wales, Victoria, South Australia, and Queensland.

*Establishment of Central Depot for Perishable Products in London.*

The Honorable J. W. TAVERNER laid the two following resolutions before the Conference, explaining that they had received the approval of the Ministers of Agriculture for the Colonies of New South Wales, Victoria, South Australia, and Queensland, in Conference, in Melbourne, on the 12th and 13th January, 1898:—

- (1) "That this Conference, having fully considered the proposals of Mr. J. H. Geddes for the establishment of a central depot for perishable products in London, with distributing provincial centres in various parts of Great Britain, is of opinion that, for the purposes aimed at, such proposals are unacceptable."
- (2) "That this Conference is further of opinion that steps should be immediately taken with the object of securing better methods of handling, storing, and distributing our products in Europe, and that with a view to achieving this result a representative of the subscribing colonies should be despatched to Great Britain to make all necessary inquiries."

The Right Honorable Sir EDWARD BRADDON agreed to these resolutions, Tasmania to become one of the subscribing colonies, the expense being borne by the colonies concerned on the basis of population.

*Experimental*

## The Premier of Victoria to The Premier of New South Wales.

[Confidential.]

Sir,

Premier's Office, Melbourne, 20 September, 1899.

I have the honor to forward herewith, for your confidential information, a copy of a Report respecting a Central Depot in London for Australian products, by my colleague, the Honorable J. W. Taverner, M.P., Minister of Agriculture, and Chairman of the Agricultural Conference of 1899, on which your Government was represented.

I have, &amp;c.,

GEORGE TURNER,

Premier.

Duplicate of 99/10,410, with other papers. Put away. Ack. please.—F.K., 25/9/99. Mr. Robberds. Ackwd.—C.R., 27/9/99. The Honorable The Minister for Mines.—J.S., 27/9/99. The Under Secretary for Mines.—F.K., 27/9/99.

## CENTRAL DEPOT.

REPORT on a proposed Central Depot for the reception of Australian Products to be erected in London, to the Colonies represented at the Agricultural Conferences held in Melbourne and Hobart in 1899. By the Hon. J. W. TAVERNER, the Chairman of the Conference.

I HAVE the honor to submit the results of my investigations as to the best methods of marketing the increasing Australian produce exports to the subscribers to the Report of the Intercolonial Conferences of Ministers of Agriculture, which were held in Melbourne and Hobart in 1899.

In placing before the colonies represented at the Conference the conclusions at which I have arrived, I desire to mention the course of events of which my visit was the result.

At the Intercolonial Conference of Ministers held in February, 1898, in Melbourne, at which the colonies of New South Wales, Victoria, South Australia, Queensland, and Tasmania were represented, the following resolution was carried:—

“That inquiries should be instituted by the respective Governments of the colonies represented at the conference, as to the desirability of establishing an agency in Great Britain for the distribution of Australian produce, in combination with cool storage for the accommodation of such produce when landed.”

In consequence of this, Mr. J. H. Geddes, of London, placed a scheme before the various Governments interested, which was fully considered by the Ministers of Agriculture present at the Intercolonial Conference held in Melbourne in January, 1899.

Mr. Geddes' proposals were directed towards the improved distribution of Australian produce by the establishment of a cool store on the lower Thames, where the goods could be received direct from the ship's hold. He proposed that this depot should supply sixty small distributing cold stores in the provinces, with the object of opening up a more direct trade with these centres than was possible with the present methods of distribution.

The following resolution was eventually adopted:—

“That this Conference, having fully considered the proposals of Mr. J. H. Geddes for the establishment of a central depot for perishable products in London, with distributing provincial centres in various parts of Great Britain, is of opinion that for the purposes aimed at such proposals are unacceptable.”

In view of the great importance of the matter to the Australian producer, the members of the Conference further decided—

“That this Conference is further of opinion that steps should be immediately taken with the object of securing better methods of handling, storing, and distributing our products in Europe, and that with a view to achieving this result a representative of the subscribing colonies should be despatched to Great Britain to make all necessary inquiries.”

These resolutions were subsequently ratified at the Hobart Conference of Ministers of Agriculture.

During the discussion a unanimous belief was expressed that improved methods of landing and distributing Australian perishable products were urgently required.

The want of sufficient and suitable cold storage accommodation to admit of Australian produce being marketed to the best advantage, and the conveyance of perishable produce from ship's side to cool store, were the directions in which the present methods appeared most at fault.

The desirability of consumers being able to be certain of the Australian origin of their goods in view of the efforts the Governments and producers of Australia were making to secure their exports being uniform and of the finest quality was generally agreed upon.

In my investigations I have therefore had in view the following points:—

The necessity for reducing the number of handlings of perishable and other produce to a minimum, in order that the goods may be sold in the finest possible condition and at the least cost to the producer, enabling as high a price as possible to be returned to the consignor in Australia.

The desirability of the Australian origin of the goods being kept before the British buyer, in order that the full benefit of improvement in quality may accrue to the Australian producer.

The possibility of opening up a more direct communication with markets for Australian produce in such districts as Manchester, and increasing the hold of Australian produce in London by keeping our goods well under the notice of large buyers, through the most direct and best channels.

During my visit I have made it my business to confer with some of the largest buyers and distributors of produce in Great Britain, and from one and all I have had the most encouraging opinions as to the future of Australian produce on the market. The fact that our summer-grown goods arrive during the English winter, and that the quality of our products is beyond reproach, have convinced them that the Australian colonies will obtain an increasingly strong hold. The universal opinion is that Australian produce has only to be known to be appreciated, but I was certainly astonished at the little knowledge of our goods some of the buyers displayed.

Again,

Again, the British markets are in a position to take all the produce Australia can send, provided the quality is sound and good. There is a limitless market for food products of a good quality in Great Britain.

As the result of my inquiries, I am convinced that it is desirable that a large central receiving depôt with ample cold storage accommodation be erected on the Thames, into which all Australian produce could be received direct from the ship's refrigerated hold. This would secure the marketing of the produce in the best condition and at the least possible cost.

While I have also come to the conclusion that it would be inadvisable for the Australian Governments to interfere in any way with the actual distribution, I am satisfied that the establishment of a central Australian receiving depôt would in itself be invaluable in impressing upon buyers the Australian origin of goods. It would also bring our exports under the more direct notice of the large buyers of the metropolis.

In indicating the lines on which this proposed depôt should be run, I must preface my remarks by the statement that to ensure success it is essential that it should be worked on large and commercial lines. Any half-measured attempt would be doomed to failure, and defeat the very ends it is desired to attain.

In Britain's great markets Australian produce is at present lost. I have found buyers who seemed most likely to appreciate our exports quite ignorant of the extent and variety of our trade. Our relatively small quantities find their way into side channels, where they are consumed and appreciated. They, however, do little to aid in building up that most valuable "goodwill," which every country, as every business, should strive to acquire.

Our exports at present quite fail to make the impression their bulk and quality entitle them to.

The colonies might, with the greatest possible success, and without the least risk of individual hurt, combine in order that their exports might be marketed in Great Britain (their greatest market at present and their greatest hope in the future), with the prospect of the very best results to the producers. Surely the idea of a federated Australia carries with it the necessary corollary, a federated Australian export trade conducted on lines calculated to bring the greatest credit to the Continent, and the substantial increase of our national wealth.

The wishes of the Conference appear to be best solved by a union of two ideas: The first, a Central Depôt for the reception of all Australian produce, and the second, which I will term an Australian Exchange, where samples of our produce could be seen in the very best condition and where buyer and producer's representative could be brought into direct communication.

The combination, if possible, under one roof would be desirable, and I have come across one instance in which it is largely done. I refer to the importation of Dutch butter into London. This arrives bi-weekly by boat from Holland, which boats discharge at Brewer's Quay. On every Tuesday and Friday the buyers of Dutch butter come down to the Quay and inspect the butter landed on the previous day, which is sold by agents, whose value is regulated by a price for a standard butter fixed in Holland. The agents rent space in the stores connected with Brewer's Quay, and deliveries are made to buyers' orders.

Brewer's Quay is, however, situated in the city limits, and the business in Dutch butter is small compared with anything that would be done at the proposed Australian Central Depôt. It amounts to between 5,000 and 7,000 packages per week. Some quantities, which can be more conveniently disposed of from the agents' stores in Tooley-street, are carted over there; but, practically, the whole imports are disposed of in the manner indicated.

The depôt I should propose would be erected on the lower Thames. This position is essential, as the direct delivery of goods from ship's refrigerator into cold store, is at the very root of the question. Though this is particularly necessary for perishable products, it is also most desirable for other products, as the depôt would be erected on a site in communication with the great railway lines. At the depôt products could be examined and dispatched without entering London at all. This point is of great importance, as a great portion of our commodities are eventually sent into the provinces.

Another reason for erecting the depôt out of London is the great saving in expense, as convenient land within city limits is very costly.

Ample cold storage accommodation would be provided, and the store would be identified solely with the Australian trade, both by name and reputation.

Either space could be let out to producers' representatives, or they could be charged a rate for space occupied, or both these methods might be adopted.

The establishment of the Central Depôt on the lower reaches of the Thames would *largely* realise the desires of the Conference.

The depôt alone would certainly be a vast improvement on the present system, in which it is practically impossible for many buyers to get into contact with anyone who could supply them with a variety of Australian goods in large lines and on best terms. It is most desirable, however, that buyers should keep in continual, not occasional, touch with producers' representatives.

To overcome the difficulty I would make the following suggestion. The idea is, I may state, accessory to the central depôt, which I regard as the first essential:—

The establishment of sample rooms, which I would call exchanges, one at Smithfield for frozen produce (meat, butter, rabbits, poultry, &c.), another in the city for canned goods, wine, &c., and a third, during the Australian fruit season, in Covent Garden.

At these exchanges samples of Australian produce would be displayed in the very best condition, and the producer or his representative would be brought into direct contact with the buyer, resulting in information being obtained which would be most beneficial to the Australian producer.

Buyers would regard these exchanges as the centres where information about Australian products would be available, and where any goods offering could be purchased.

The producers, representatives, and others interested in the Australian trade, would have tables for showing samples, &c., and meetings could be held from time to time to discuss points which might arise in connection with the trade.

This system is largely in vogue in Manchester, Birmingham, and other large provincial centres.

It would bring Australian goods under the direct notice of a large number of buyers who come up to London once a week from Bristol, Cardiff, and the rest of the large towns of the west and south of England, who probably would not be able to spare the time to go down to the lower Thames in addition to going to these centres for other classes of goods.

In

In addition, it would bring our products under the notice of large London buyers who frequent these markets daily.

It has, in my opinion, the twofold advantage of not interfering with the distribution in any way whatever, and utilising existing markets which, in the course of years, have acquired great reputations and large connections.

These exchanges would be in telephonic communication with the central depôt, so that goods sold on sample could be sent off direct from the store as required.

The trade from the usual sources, such as Tooley-street (the centre of the Australian butter industry), would be in no way injured, but Australian produce would be brought directly under the notice of buyers capable of buying huge quantities of produce regularly, who at present, if they do buy Australian produce, do so after it has filtered through several hands.

Sellers being so closely in touch with each other, more regular prices could be obtained, and it would be possible to fix a minimum quotation, as is done in the case of Danish butter. In this case a price is fixed every Thursday in Denmark, and wired over for a standard quality, and much disastrous cutting prevented, which so frequently militates against the interests of the producers.

My inquiries have led me to believe that large sums have been lost to the producer through this cutting by rival firms, and the opposite evil, which is quite as damaging to Australian interests, the unhealthy forcing of prices for speculative purposes.

I think that the more public sale in conjunction with the cold storage accommodation at the depôt would largely prevent the speculation in our produce. The question of a regular price is frequently not so much the regulating of supply as of co-operation to prevent interested parties forcing prices up or down.

To bring the Australian trade out of the limits of speculation into those of a fair but sure profit should be the aim of all who have the welfare of the Australian producer at heart.

The producer, it must be remembered, never gets the benefit of these great rises, while he shares in every fall, either in lower returns or lower direct offers on the plea of low prices.

It might be suggested that this would put upon some importing firms the necessity for dividing their operations over three centres. No doubt there are importing houses who sell Australian fresh fruit, canned goods, and frozen produce.

I have found, however, that the lines between these classes of produce are so sharply drawn, that to give our exports a fair chance it is necessary they should be dealt with through the particular distributing channels who deal in the classes.

Different distributors are identified with particular classes of goods, and, therefore, can dispose of them to the best advantage and in the best channels, and the more directly these distributors receive the goods the greater the gain to the producer.

In Great Britain butchers sell frozen meat, grocers sell canned goods, and fruiterers sell fresh fruit. I do not wish to suggest that there are not a great many shops in Great Britain which do not buy all these classes. In the great number of cases these are too small for the producer to hope to get into direct touch with, and they can be served with much greater effect through the large wholesale grocers. In the case of the great stores the various classes of goods are sold through different departments under the control of different buyers.

In the last class of retail shops which are put up by large public companies, the buying is done in bulk, but special buyers deal in the different classes.

If the "Exchange" idea were adopted lists of members could be circulated through the Colonies and the producer could be sure that at any rate his goods were being brought directly before the British buyer, and that sales could be traced for the information of producers. I think the point is one which the Colonies of Australia would do well to weigh carefully.

I am convinced that Australian produce has not in the past, in many instances, gone to the right quarters, which accounts for it being so little known, in spite of the fact that their good value and quality are generally recognised. Not from one or two people have I heard, "We do not see much of your products," or, "We used to buy a good deal, but lately have not had offers."

I classify the advantages of a Central Depôt under the following heads:—

- (a) The increased importance and publicity this concentration of our trade would give to Australian produce generally.
- (b) The chance it would offer of issuing reliable reports as to market prices and needs.
- (c) The satisfaction it would give producers on account of the certainty of reliable and independent reports in cases where quality is complained of, as an examination would be made at the Central Depôt before leaving.
- (d) The certain improvement of quality through fewer handlings, and no delay in discharging, and the advantages an essentially Australian wharf would have for dealing with Australian produce.
- (e) The saving in cost of marketing through lesser handlings.
- (f) The facilities it would offer for dealing with defective parcels. These, perhaps only partially bad, if not sorted would either be condemned, or, still worse, be sold at knock-down prices to a class of the trade, who would place it on the market to the detriment of our reputation. It would be easy to absolutely prohibit damaged goods leaving the depôt.
- (g) The Australian origin would be impressed on all buyers. If desired goods could be marked as having passed through the depôt.
- (h) The increase in direct contracts with the producer owing to buyers having a ready means of procuring suitable accommodation, and larger spot sales owing to buyers being under no compulsion to clear within stated periods, and the facilities it would afford the producer's representative for holding goods over a bad market.

The increased importance and publicity Australian produce would gain by a more concentrated system of marketing has impressed itself upon me in two ways. First, this publicity and recognised importance being in the nature of a real advertisement cannot but help the trade generally. Secondly, and I think that this was particularly in the minds of the subscribers to the report of the Conference, Australia does not in point of fact at present command the attention it is fairly entitled to.

I take it that it will be granted that a class of produce dealt with regularly and exclusively in one Australian centre will have a greater effect on the market as a whole than if it is sent to twenty, every now and again, not one of which is in any way identified with the Colonies. This view as to the scattering of our exports preventing their importance being recognised has been confirmed on all sides.

"You

"You should advertise." "These goods should be brought forward." "Where can they be obtained?" were remarks I had addressed to me time and again by prominent members of the trade at the Greater Britain Exhibition when inspecting the Victorian Exhibits, or provincial tradesmen would say, "We have not seen any of these varieties." "I do not think they come North."

The impression they intended to convey was not that this or that brand had not come before them, but that they did not know Australia produced such goods. Australian produce of that kind did not come under their notice when buying such classes of goods.

Or again, I have been told, "We like large lines, so frequently we are only asked to buy when agents have small lots that do not suit their usual customers," or, "I have bought lines and then was unable to follow on with the same thing."

In spite of suggestions as to the necessity for greater uniformity and more care in packing, the opinion as to the exceptional quality of Australian produce was absolutely unanimous.

Our reputation in such articles as butter, meat, wine, and fruit is much too valuable not to be used in pushing our other various products.

I can conceive no manner better likely to effect this end than by erecting a depôt which would concentrate our now large export trade in one central spot, from which it could be distributed at the least possible cost and with the least possible delay.

Already buyers recognise the advantages they gain by purchasing our butter or fruit, for instance, which is landed here in the winter season, though summer produce. It will require very little to force buyers to recognise like advantages in other exports, and no time could be better than the near future while the imperial spirit is active and there is an undoubted desire to give the Colonies the preference, "all things being equal."

The opportunity such a depôt and exchanges would afford for getting reliable information for the use of producers would be great. The needs of the markets must be carefully followed, and the distance Australia is from Great Britain renders it particularly necessary in her case that reliable information should be procurable. Some of the Colonies have recognised this already, and have had commercial representatives who have done most valuable work. The Danes have done the same thing.

The constant communication with buyer and seller, the actual handling of the produce would afford chances of correcting faults, which may be very small, but which just prevent "all things being equal."

Reliable information with prices current, timely notices as to likely competition would be invaluable. I have said that the markets for first-class goods are limitless. Now and again I have been told, "You are not quite up to the American style of packing." If goods are to satisfy buyers they must be packed and sent with their particular wants in mind, and at present the Australian producer undoubtedly has not the advantages the American has, who, owing to the shorter distance, can keep in closer touch with the markets he supplies.

Again new demands are springing up. Perhaps a country packs an article in a tin which has hitherto been sent in a bottle. The trade catches at the idea, and without timely notice the country outstrips its competitors, and obtains a start which it takes a long period of lower prices to catch up.

Or Australia may be in a position to compete in articles for which it was not aware there was a demand. A depôt in constant touch with the best buyers would certainly hear of such wants. The producer would rely upon the opinions expressed by such an independent and thoroughly reliable source.

Producers aiming at the premier position on the markets cannot know too much of what is thought of their goods or what their opponents are doing.

It is difficult to see how these advantages could be better obtained than by the combination of a central depôt which deals with our products in bulk, and the exchanges where we would come in contact with the actual buyers of our goods.

The actual saving, owing to the reduction of handling, appears to me to be one of the solid advantages which the establishment of a central depôt for the reception of our products would have. This saving, I am convinced, quite apart from improved prices owing to quality and other advantages of the kind, would amount to a large sum annually, and would, of course, be a *direct* gain to the producer. In almost all cases two handlings would be saved, and in many instances more.

I will take the case of a consignment of butter for a Tooley-street house, which is landed, and within a week of arrival sold for a provincial town such as Birmingham.

The importing agents have, it may be safely assumed, no cold stores of their own, and are therefore in no way bound. They simply want the storage to be efficient, and to cost no more than current rates. That both these essentials can be complied with I will show later. If the central depôt were erected, the process of handling would consist of discharging the butter in bulk into the depôt, samples only being sent to Tooley-street. When the goods were sold the parcel would be delivered to the railway.

That is two handlings:—

- 1st. Ship to depôt.
- 2nd. Depôt to rail.

At present the system usually works thus:—

The goods are discharged into a barge, and towed up the river 10 to 20 miles, and there stored. When sold they are carted to the railway station. The handlings then are:—

- 1st. Ship to lighter.
- 2nd. Lighter to wharf for storage.
- 3rd. Wharf to cart.
- 4th. Cart to railway.

Or it might be increased by the goods being taken into their own store by the importing agents, when the process would be:—

- 1st. Ship to lighter.
- 2nd. Lighter to wharf.
- 3rd. Cart to store for storage.
- 4th. Store to cart.
- 5th. Cart to railway.

A central depôt in the first case would effect a saving of two handlings, and in the second a saving of three handlings.

The gain in cases where the goods are eventually sold out of London (that is out of the ordinary cartage limits of the present centre of distribution) is very great, and I do not think I am going too far in suggesting that on this account alone the central depôt would largely result in increasing our trade in centres other than London. Places such as Cardiff, Bristol, Southampton, Portsmouth, and the great buying centres of the Midlands, would be the greatest gainers.

Frozen rabbits are largely consumed out of London, and the trade in this commodity would benefit greatly by the decreased cost of handling, and I believe the producer could look forward with confidence to a considerable increase in direct contracts from buyers in these districts.

The actual gain in the case of meat, which is to a great extent taken to Smithfield and delivered to customers' carts, is not so great. In no case, however, would the cost be more, if as much; and in the case of sales, which would be delivered by rail, the decrease in the cost would be equal to that in the case of any other product I have instanced.

The more these direct deliveries can be encouraged the better, and no factor can do more in this direction than the proof of cheaper delivery.

I am not speaking at random in this connection, and when in Manchester I actually saw over just such a store as I have suggested. It had direct delivery from the ship to the cold store, owing to same being erected by the wharf where the ship discharged. It had also direct delivery to rail either ex ship or ex store.

The store, which had been erected by one of the largest firms in Australasia—the Colonial Consignment and Distributing Company, Limited, will be practically used for Australasian produce.

In this case, before putting the method to the test of experience, the Company reduced their charges for handling 15 per cent. below London charges, on account of the reduced handlings alone. This was in spite of the fact that the firm in question had facilities in London second to none for dealing with frozen produce, and that their store in London had been working for years. I do not think I at all overstate the possibilities when I say that I believe the establishment of a central depôt would reduce the cost of handling by 25 per cent. in the case of the vast amount of our produce exports.

The actual cost of discharging such products as butter from the ship, opening for customs, and delivery to cart or railway truck, amounts to 4s. 6d. per ton, probably 3s. per ton would eventually be sufficient, whereas to discharge and carry to Tooley-street costs 8s. 6d. per ton. This is a saving of between 4s. and 5s. per ton, and the cost of cartage from store to railway, which is an additional gain, has to be added.

The members of the Conference were particularly impressed with the suggestion that improved quality would result from fewer handlings. This point has struck me very forcibly. I have taken the opportunity of inspecting shipments in the course of unloading, and have followed them through the various stages until they are in the store ready for sale to the consumer.

As an instance, I was at the docks when an Australian steamer was discharging a consignment of mutton. I was surprised at the old-fashioned methods that were adopted in getting goods into the barge. While the stores in London received the carcasses on an endless chain, and they were carried to the cool store by the most modern appliances, it was considered sufficient to sling 15 to 20 carcasses of mutton in a sheet and lower them into the barge.

They were then stowed as closely as possible, the workers, of course, stepping on the mutton. In its hard frozen state, and covered with the bag, no damage was noticeable; but when I later saw the mutton in Smithfield in process of thawing, distinct traces of boot-marks could be seen. The bags, which were perfectly white on being taken from the hold, were soiled; in a sentence—the goods were not in as perfect a condition as they might have been.

The same remark applies to butter-boxes and all our other exports, in which it is in any way desirable the outside packages should be in good trim, the result of careful handling.

I do not wish to exaggerate or to suggest that the present state of affairs is particularly bad. I think, however, that when it costs no more to do things properly, that goods should be placed before the buyers in the very best possible condition.

The journey of some 20 miles by barge may be a matter of a day, but a London fog or the turn of the tide may at any time further delay matters, or the goods may be discharged on a Saturday and have to wait for work to be resumed on Monday. Wharfingers do not send away a barge until it is filled, and will not load until delivery orders are to hand.

In this case, if there is any delay, the goods are placed on the quay, incurring charges and out of cold store.

While in the barge they are of course not freezing, and if the goods have had time to thaw, the warmer temperature affects the produce. Cases of our produce having had time to thaw before being placed in the insulated barge are not unknown, though of course not usual, and are generally the result of some such mistake as the delivery orders not coming to hand in time.

An Australian wharf with full knowledge, would of course be in a position to deal with such cases in the proper manner, and could cold store at once.

I have been told of cases of cheese, for instance, having softened to such an extent that it has taken days in cool store to recover its consistency. In such cases, if samples were drawn in the usual way, they would bend over like a tallow-candle on a hot summer's day.

It must be remembered that it is impossible for the producers' representatives to follow each barge load, and often to see all the goods unloaded. Usually they send down agents to inspect each shipment as it is landed, and arrange for samples to be sent on to the store before bulk can be brought up.

Difficulties of the kind I have mentioned must be faced at their source. In this instance it is at the ship's side. Everything possible must, of course, be done in the colonies.

If a central depôt were erected, the goods would be landed direct into cold store, or, if direct delivery were required in special cases, into the railway van.

While on the subject I should like to give my opinion, that in no cases should saving of cold storage be attempted. All through my investigations, I have found that our produce should be kept in cold store as long as possible, and I am convinced that to attempt to save expenses by placing perishable products in ordinary store is suicidal. The objection that the central depôt would mean placing all goods in cold store is immediately answered by the statement that that is exactly what I would advocate. No doubt there is in some cases no risk, and goods may be sold on the day they are received. The cost, however, would not be large, and the rule should be strictly observed.

The advantages an essentially Australian depôt would have for dealing with Australian goods are, of course, untested; but the specialising could have no other result than cheapening and improving the methods of dealing with our products. I think this would particularly apply to our canned goods. The experience would enable the cost of lacquering, labelling, and examining to be carried on in the most economical manner. Machinery would be erected for the sole purpose of dealing with Australian produce, and men employed would have had unique advantages of acquiring experience.

This specialising of work is carried out in the various London wharfs very thoroughly, and most of the wharfs have a reputation for one special class of produce.

This reputation, in some cases, goes to this distance, that buyers prefer goods lying at one wharf to those at another, on account of the reliability of their workmanship.

There are certain cases where perfect quality is particularly essential. For instance, compressed corned beef, in which Queensland is largely interested, is chiefly sold for cutting up by grocers, who sell to their poorer customers by the pound, at, say, 5d. to 6d. per lb. A bad tin is a loss to the grocer of between 1s. 6d. and 2s., and if he has any doubts, he will change the brand entirely and go on to another. The fact that he usually has a claim on the seller for such bad tins, will not prevent his changing, as the trouble of claiming is great. One bad tin (that is one tin that has been improperly examined at the wharf) may prevent the purchase of an entire parcel on a future occasion.

The examination of canned goods is a matter which requires considerable experience, and some wharfs in London practically command the trade, on account of the reputation they have gained. An Australian wharf would be at least qualified to deal with Australian goods to the best advantage.

The reputation of a country is founded on its reliability, and is formed, not by the standard of its best products, but of its worst. I have insisted very strongly on the absolute necessity for uniformity. I would insist just as strongly on the necessity for the colonies never sending forward goods that are not perfectly sound. Every package exported should be calculated to improve our reputation rather than damage it.

It is inevitable that in some cases—especially rabbits, canned goods, and fruit—that faulty parcels will arrive, whatever care is taken on the other side. Parcels, therefore, should not be allowed to leave the central depôt if there is the slightest suspicion that they are going off, or likely to go off, when the frost is out of them.

In all probability such goods would be sold by costermongers from barrows in the public streets, possibly labelled "Prime Australian produce." The goods, when they left the store, may possibly have not been absolutely bad, but a day in the broiling sun completes the mischief. A Government inspector comes round, and the goods are seized. When the case comes into the police courts, paragraphs result in all the newspapers. Anything more calculated to do our reputation harm cannot be imagined. The publicity of such a case as I have imagined would be immense.

During my visit I have seen reports of similar cases, on numerous occasions, in the public press. Every Australian will agree that no care is too great which prevents the possibility of such a result.

The opposite side of the question—the sorting of the good from the bad in order that, though the bad must be destroyed, the good may be repacked and sold—is important. This is particularly noticeable in the case of fruit. This is usually sold by public auction, being sent direct to Covent Garden, so that any fault is not noticed until the goods are before the seller.

If a central depôt were erected, I propose that the parcel should be inspected by a competent authority before it left the depôt. On arrival at Covent Garden, a sample case or so is turned out, and if spotted fruit is detected, the price is naturally low for the parcel. Possibly the proportion of spotted fruit in the parcel is small. A little care as the goods came through the central depôt would have meant the addition of shillings to the price of a case. Frequently parcels which have become partly unsound, if sorted and treated "at once," can be made practically sound. A day or so lost results in the bad ones contaminating the whole parcel. Action must be taken at once in such cases, and no place could be more suitable than a central depôt; in fact, I can think of no other remedy.

Its first care would be not to allow anything unsound to leave; but, being run entirely in the interests of the colonies, every precaution would be taken to see that perfectly sound goods were not thrown away.

I am firmly convinced that in the past Australia has lost a great deal from both these causes. The opinions I have gathered from the most prominent men in the trade in Great Britain all tend to confirm this belief, and my opinion that the only remedy is not to allow doubtful goods to come on the market at all. The ordinary wharf has, of course, no interest in the goods whatever, and probably would not be in a position to detect faults. Only a depôt under Government supervision would possess sufficient authority to act in such cases.

The desirability of increasing the number of contracts made direct between the producer in Australia and the large buyers in this country is deserving of attention in Australia. The method combines perfect safety with convenience, as such buyers are among the most prosperous and reputed in the British trade. Many producers prefer to know exactly what their goods will make rather than stand the risk of adverse markets, as is the case when goods are sent forward on a consignment basis. It is not possible to do such a trade as this altogether; but it is capable of considerable expansion if facilities were provided in the mother country. There are many large buyers who want their 100, 200, 300 boxes of butter per week, or their 500 or 700 crates of rabbits per boat, or who buy between 1,000 and 2,000 cases of canned goods at a time, who having no accommodation of their own have preferred to buy from hand to mouth. It would pay the producer to take a level price for such lines through a season, and it would suit the buyer here, who could rely upon a uniform article. What such a buyer would require, and what at present he has not got, is the chance of having the trouble of dealing with the lines taken off his shoulders until he actually requires the goods for sale.

Frequently, as matters stand at present, a buyer becomes interested in a particular brand, and is supplied with a hundred or two boxes or crates weekly during the season. There is no contract, and the buyer bargains each week until the market value is agreed upon. The agent recognises that the buyer has a regular outlet, and would not go past him. As the season gets on, if the quality is uniform, the buyer would be unable to get his customers on to another brand.

I have asked more than one of the large retailers—men who buy canned goods and other products which need no cold storage by the 2,000 case lines—why they do not fix up such contracts for frozen produce. Their reply has been much in the same terms as that given by a dealer who has an immense output

output throughout the country, not to the consumer direct, but to the small retailers who own single shops. He said, "We have considered the matter, as it is the sort of trade we do in tinned goods, but the difficulty of finding suitable accommodation for storing is too great." You know," he continued, "you cannot rely upon selling all your frozen produce within twenty-four hours. I think your suggestion of a central store would just suit us."

There is an immense and growing number of firms who deal direct with the consumers and have an absolutely regular trade, who, on account of the difficulty of storing, buy only as they require, instead of taking advantage of their certain output and fixing up season contracts. While on this point I desire to also mention the facilities more ample and suitable cold storage accommodation would offer to the producer's representative for holding goods over a bad market. I do not advocate any wholesale waiting for better markets. As a rule, goods should come regularly, and be sold as they arrive. There are occasions, however, such as rabbits, which arrive in May and June, where cold storage is absolutely necessary if fair prices are to be realised. There is frequently a glut of meat on the market, and if holders can tide over a bad time, they can rely upon fair prices, while their less fortunately placed competitors have to take the best offer, and sell, probably, to buyers who intend to store themselves.

Members of the Conference will notice that I have insisted strongly on the desirability of the agents not actually handling the goods in their own stores. There may be exceptional cases. I know there are; but in the average store it is not possible to deal with the produce to the same advantage as could be done in an Australian central depôt. There is not the slightest reason why goods should not be sold on sample, and in many cases it is done. If necessary the buyer can go down to the Central Depôt in the same way as he does in some cases at present. The great imports of Canadian cheese are largely dealt with in this manner. Bulks are stored at the railway depôt, to which the goods are brought from Southampton or the docks. Samples are sent to the store of the agent or buyer, and sales are made from these.

In the case of large lines a buyer goes down and inspects bulk, but in the majority of cases this is not necessary.

It must be remembered that there are solid savings in actual out-of-pockets in favour of the lesser handling of our products, and I do not believe that the storage of our goods at a central depôt will be in any way prejudicial to their popularity amongst buyers.

There is no reason why delivery should not be just as quick as at present. If it takes a little longer for the delivery order to reach the store, such delay would be more than compensated for by the possibility of dispensing with cartage and the time wasted in obtaining same.

All through my visit I have found buyers most enthusiastic about the idea of a central depôt, and it is because I believe it will tend to popularise our products, that I have formed so strong and favourable an opinion.

Having fully stated the grounds on which I have based my opinion, I will give a short idea as to the type of erection I would suggest.

The position must be on the lower Thames. The nearer the existing docks the better, and I would propose a spot between the Tilbury and Albert Docks. It is essential that the depth of water should be sufficient for the very largest boats to unload.

The size would have to be large, as I have intimated that I believe the success of the scheme depends upon the whole-hearted support of the Colonies interested, and accommodation would have to be provided for all classes of produce exported from Australia.

It would be necessary to have room for at least five vessels to unload at once in order to cope with the rush at certain seasons.

A cold storage capacity of at least 500,000 carcasses would be essential in order to provide for contingencies, and it would be necessary to have facilities for increasing such accommodation. If necessary, such erections as grain elevators and lairages could be provided.

The cost of such a store with ample ordinary storage to supplement the refrigerated chambers would, I think, reach about £250,000. Cold storage accommodation could be added to such a depôt for considerably less than the 10s. per sheep, which may be taken as a rough gauge for stores of less than 100,000 sheep capacity. Probably 3s. or 4s. would be an outside amount per sheep capacity. The London and South-western Railway Company, realising the great imports of Canadian and United States produce require facilities at the Southampton Docks, are erecting cold stores to hold 615,000 sheep and lairages for 2,000 head of cattle. The cost of this will be about £100,000. In the case of the Australian Central Depôt, large warehouses, bonded stores, and the cost of the land would have to be added, in addition to providing railway facilities.

The figure I have given, £250,000, is, I think, a reasonable one considering the convenience and advantage the Colonies would derive from it.

It would be necessary to connect the depôt with the existing railway lines, the Midland, the Great Northern, the North-western, the Great Western, and the Great Eastern, which are already in connection with the Royal Victoria, West India, and Tilbury Docks. These lines comprise practically all the great lines of the Island, and would enable goods ordered off from the depôt on one afternoon to be landed at almost any important station in Great Britain on the following morning.

I regard this connection as essential and well worth the outlay, and the opportunities I had when visiting the Manchester Docks, where this system is thoroughly carried out, have confirmed my impression.

The interest which the store should provide for over and above working expenses would amount to about £10,000, and in view of the satisfactory returns such businesses make to their proprietors in London, I anticipate that after covering this we shall be able to make considerable reductions on the lowest present rates. The desirability of forming a sinking fund could also be considered.

The first source of revenue would be landing and delivery charges, as apart from dock dues which, as far as possible, should not be levied. On such an article as butter landing and delivery charges would amount to about 4s. per ton. On 10,000 tons this would mean £2,000. Cold storage, assuming each parcel stayed a week, which would be the minimum, is usually about 10s. a ton. On 10,000 tons of butter, this amounts to £5,000. Storage on rabbits for one month, in addition to receiving and delivery, costs about 30s. per ton. There is also the examination and labelling of canned goods, the charge for which is, at present, usually 6d. per case, and the storage of same which comes to about 2½d. per week for twenty cases of the size of, say, twenty-four 2-lb. tins of preserved rabbits.

Or I will put the case in another way.

A

A usual rate for receiving and delivering meat, say sheep averaging 56 lb., is one-ninth of a penny per lb., including one month's storage. The capacity of the store would be 500,000 carcasses of this size. If the store were filled for nine months of the year at such a rate, the income would work out at £100,000 per annum. This, of course, refers to the refrigerated space only.

The last balance-sheet of a large public company, engaged in this very trade, and on similar lines intended at the central depôt, showed, after payment of interest on debentures and preference shares, a balance of 6 per cent. to ordinary shareholders. The actual earnings in this case amounted to over £30,000, which, however, included commission.

I need not repeat that my suggestions imply that all goods of a certain nature must be discharged at the depôt. There can be no doubt that if current rates were charged there would be a large margin that could be returned to the producer in the form of reduced rates.

As I mentioned earlier in my report, efficiency and low rates are the only requirements as far as the trade on the other side of the water are concerned. Efficiency, with the advantages of Government enterprise with unlimited capital and no desire to profit, can be taken for granted, and rates at the lowest limit are equally certain.

With reference to the building of such a depôt, I need scarcely do more than point out how certain it is that the future development of trade will be between Great Britain and her colonies.

I think I have now fully covered the ground which leads up to the final position.

That is, that for success a Government enterprise is necessary. No private company, however successful—and I think it might be very successful—could represent the interests of the producer. In fact, I believe the success of the company would be in the inverse ratio to the good of the producer. I think the danger of establishing a monopoly would be too great in the case of a private concern, and I believe this objection appealed forcibly to members of the Conference, when the subject was under discussion in Melbourne in January, 1899.

I do not agree with Government interference with distribution, nor do I believe such interference would help the trade. If it is desirable to open shops in provincial centres, in the manner of the Argentine Meat Trade, I believe private enterprise, as in the case of the Argentine, will do so, and probably with far more satisfactory results than would be the case if a Government attempted to do it.

I have shown that the proposed depôt would be a great benefit to our expanding trade in food products, perishable and otherwise, and a great safeguard to our reputation.

The capital required is, under the circumstances, small compared with the benefits that must necessarily accrue.

The competition Australia has to meet is great, and in spite of the freight, which handicaps us, our natural advantages are such that, with proper facilities, we must take a front place in the race for trade.

Present facilities, with the needless expense and risk of damage to our quality are, however, not proper, and this is one direction in which Governments can interfere with advantage.

It is to enable the producer to obtain the highest possible return for his produce, and at the same time to preserve and improve the reputation of the exporting colonies of Australia on the British market that I submit these recommendations. They will, I feel sure, if acted upon, result most beneficially to interests that are national and entitled to Government sympathy and action.

J. W. TAVERNER.

Board for Exports.—Mr. Taverner's report submitted:—Perusal of Mr. Taverner's report reveals practical identity with attached minute of Mr. Wildridge, dated three and a half years ago, and recommended strongly by this Board, and further, with the distribution and storage scheme of Mr. J. H. Goddes. His scheme is therefore quite in accord with the views of the Board, except that it is to be feared that, Victoria being already in the field, any mutual arrangement for marketing of produce under this scheme would give undue prominence to that Colony to the detriment of New South Wales, from which the idea of direct representation originally emanated. Mr. Wildridge's scheme will be seen to go much more deeply into the question, and to give exact estimates of cost and capacity. The only question therefore is whether it would be better to merge the interests of this Colony in a united effort to capture the British trade under the initiative of Victoria, thus taking a minor place, or endeavour, by adopting some of the suggestions made from time to time by this Board, to make an independent position for ourselves in the British market—at present there is a strong tendency to look to Melbourne as the leading port and Victoria as the only important Colony in the group.—J.S., 29/9/99. Under Secretary.

Submitted for Minister's information. There is no action that I can see can be taken in the matter at present. The whole subject is one that should engage the attention of a commercial agent in London, if the Government decide to make such an appointment. The matter may perhaps be brought forward in a month's time.—D.McL., 11/10/99. Seen.—J.L.F., 13/10/99. Resubmit after the question of Mr. Taverner's expenses is dealt with.—D.McL., 11/11/99. Resubmitted, 11/11/99.

Treasury Department, Board for Exports, 5th February, 1896.

MEAT EXPORT TRADE.—By JOHN WILDRIDGE.

A FULL report on the export of meats would entail more time than I could spare, or you afford for consideration. I will, therefore, with your permission, only deal with the matter in the way of most interest to us as an Export Board, in anticipation of recommendations from the Conference of Meat Exporters, and after which we may be able to advise the Government how the industry could be best assisted. At present we have to deal with the article frozen and preserved in tins, but hope that ere long the export of chilled meat will be prominently to the front. Since the first trial shipment of frozen mutton left Sydney, up to the end of 1895, the progress has been indifferent as compared with New Zealand.

The

The yearly totals of frozen meat exported from the Colony of New South Wales during the last seven years being as follows, taking weight per carcase of mutton at 45 lb. :—

	cwt.	Sheep.
1889 ... ..	37,868	94,249
1890 ... ..	72,304	179,956
1891 ... ..	105,013	261,365
1892 ... ..	223,074	555,206
1893 ... ..	220,584	549,009
1894 ... ..	339,404	844,738
1895* ... ..	455,674	1,134,122

\* Also, 152,144 cwt. beef.

This last year a marked improvement has taken place, and, in comparison with the years before, the results are such that, if we can only add a small margin of profit to the grower, New South Wales should at an early date head the export countries for mutton, and there is no reason why beef should not also maintain a good place.

Without dealing with the quality now exported, there are other important points which can well be discussed as bearing on the export trade :—

- 1st. Competition with other countries.
- 2nd. Freight charges and regular shipments.
- 3rd. Cold storage in London or elsewhere, and distribution.

Our greatest competitor, so far as flocks are concerned, is the Argentine Republic with 81,500,000 sheep, as against 57,000,000 in this Colony; and, as showing how the exporters from that country are awakening to the possibilities of more serious competition, we have lately had information that they will reduce their sale prices and open retail establishments all over Great Britain. This we may fully expect, and with our mutton selling, as at present, for 2½d. per lb. in London, under existing charges it would be impossible for us to compete against them successfully; and the freezing establishments now in existence here would find they have works but no mutton to freeze, as graziers would have more profit out of boiling down for tallow only. The freezing companies have already reduced their charges from ½d. to ⅓d., and lately have instituted a further reduction by including the chilling works charges in their ⅓d. With an increased business they may be able to reduce another ⅓d. or ⅓d. per lb. for receiving, freezing, bagging, and delivery—only double the London charges for receiving and storing for four weeks. When we consider that freezing costs three times as much as storing, you will readily recognise that operations here are economically carried on, requiring close supervision to leave a margin of profit. That other charges will have to be modified to meet the demand for reduced consolidated charges is apparent, the principal item being that of freight, both in railway haulage and steamer.

Railway haulage for a distance of 350 miles costs 202d. per lb., or slightly under ½d. per lb., and the average steamer freight is ⅓d. per lb. Double our present export, and, like the freezing works, the Railway Commissioners should be able to lower their charges, say, an ⅓d., and the steamers an ⅓d., as, in the latter case, owners will not require to go seeking for cargoes. The saving of time, port dues, and coal would make up the difference in present rates.

London charges are composed of—1st, storage charges average ⅓d.; 2nd, agency charges average ⅓d. full; or total, 28.

The first appears excessive as compared with our freezing rates here for the accommodation provided, as the stores are frequently blocked and the frozen meat has to be sacrificed. To meet this I would suggest that the Government of this Colony erect cold storage premises in London of a capacity equal to holding 500,000 carcasses of mutton. The cost of such a work would be about £120,000, including buildings, machinery, and land, and the working expenses, including interest on capital and depreciation, would be about £23,600 per annum. At a charge of one-half present London rates, or ⅓d. per lb., on an export of 3,000,000 sheep per annum, the Government would have a revenue of £35,000. (See calculations attached.)

We cannot very well deal with the agencies for the selling of the meat, but, with a combination on the part of exporters, these charges should, without doubt, also be considerably reduced. On the basis of an export of 3,000,000 sheep per annum charges should be :—

1st. Killing, chilling, freezing, and delivery	...	...	...	...	312
2nd. Railway haulage	...	...	...	...	125
3rd. Freight...	...	...	...	...	687
4th. Insurance	...	...	...	...	070
5th. Storage	...	...	...	...	032
6th. Agency sales	...	...	...	...	125
7th. Cost of mutton (for merinos)	...	...	...	...	750
					<hr/> 2101
For cross-breds 50 per cent. more, or	...	...	...	...	<hr/> 2476

This would place us in a position to compete against any other countries. The foregoing would be about the lowest price obtainable in London, and would ensure a small profit to all concerned. With higher prices it is possible that the several contracting parties should also receive a *pro rata* benefit. My suggestions would be, therefore, as follows :—

- 1st. Assist the export from this Colony to an output of not less than 3,000,000 sheep per annum, or the equivalent, including beef. Arrange for grading and supervision of shipments.
- 2nd. Reduction of railway haulage and freezing charges.
- 3rd. Arrange shipping to sail from this port at regular intervals, *via* Australian ports only.
- 4th. Erection of cold storage in London.

In the foregoing suggestions there are no insuperable difficulties, and indeed if we do not adopt some such ideas, we will find other colonies ahead of us, notably Queensland, as my firm is in possession of information that the latter intends proceeding somewhat on the foregoing lines.

It may not be out of place to remark that the system of refrigeration on board steamers is not all which is required, Allowing that we take every care in the manipulation of the dead meat before being put on board ship, the machines on the steamers are not all suitable for other requirements. The principle of the compressed air machines being such as to require a large amount of hydro-carbon oils being injected into the compressing cylinders to keep them working smoothly, this oil is volatilized and passed over into the holds and distributed with the cold air; frozen meat will not suffer much on this account; but for butter, cheese, or fruit the subject is one which in a contract made by the Government should receive careful consideration. With the view of inducing shipowners and those likely to cater for the carrying of our produce, regulations should be adopted which would require steamers to be fitted with refrigerating machinery capable of dealing satisfactorily with the several products to be carried.

Chilled meat in the place of frozen will shortly without doubt prove a step in advance of the frozen by enhancing values in London, and will compete directly with the American. In this direction my firm has been making a series of experiments in conjunction with one of our large shippers, at considerable expense, how long meat will actually keep in good condition, with the result that we have sent chilled meat from here to Queensland carried as ordinary goods in the guard's van during the present exceptional hot weather after fifty-five days hanging, and then eaten with relish, being both sound and sweet. This would be a sufficient assurance that it could also be delivered on the London market; but as it will take more space on board ship, more care in transit, and special arrangements for automatically regulating the temperature not to vary more than one degree during the whole voyage, the cost of a trial shipment by a single company would be considerable, but as it would be to the benefit of all probably the Government might consider such a shipment as a national one, and be at the expense of same, excluding cost of meat. I append copy of letter received from Mr. R. Ferguson, expert surveyor to Queensland Government, in reference to chilled meat.

To fully realise all the profits which should accrue in the exportation of meats; greater enterprise, and a thorough knowledge of every means which can be adopted in the preserving of meats by timing, and the treatment of by-products, &c., as is carried out in America, would prove of immense value. This comprehensive information would take months of close study, close inspection of the several processes to be undergone, and a thorough knowledge of the many mechanical applications used in reducing to healthful and profitable products, what are to us at present sanitary nuisances, and no better opportunity could offer for the Government to assist in this development than in connection with any proposed new abattoirs. Although we have already in existence the following inland chilling works:—Bourke, Nyngan, Dubbo, Forbes, Carrathool, Narrandera, Young, Narrabri, Gunnedah, Werris Creek, and Tenterfield, also Deniliquin and Aberdeen Freezing Works—a local slaughtering establishment we may deem as indispensable, and where, as already mentioned, a complete plant to deal with all by-products would not only prove a profitable investment, but, could also be the ensample necessary for the inland works, which at present cannot afford to experiment.

In conclusion, I would add the foregoing is only a brief summary of this very important business, one in which my firm has taken a very deep interest, and hope to see it second only to that of wool, while the two scientifically combined would materially enhance our land values and open resources in which our surplus labour could be profitably employed.

Yours obediently,  
JOHN WILDRIDGE.

Brisbane, 30 December, 1895.  
Messrs. J. Wildridge and Sinclair, Consulting Engineers, Sydney.

Dear Sirs,

The piece of chilled meat kindly forwarded to me by mail came to hand on the night of the 23rd instant, in splendid condition, and was of prime quality when eaten at my table on Christmas Day, the marbled undercut being generally appreciated.

I have been agreeably surprised at the sound condition of the meat upon arrival at Brisbane, temperature and weather being considered, but more so on its keeping sound after being cooked up to date, as I had some of it for breakfast this morning, enjoying it very much.

I thank you very sincerely for sending me this Christmas treat, as beyond the actual enjoyment of eating it, the test of carrying chilled meat for such a distance, exposed to atmospheric influences at this season of the year, is most interesting.

I am, yours sincerely,  
ROBT. FERGUSON.

The Premier of Victoria to The Premier of New South Wales.

Sir, Premier's Office, Melbourne, 27 October, 1899.  
 I beg to inform you that the travelling and other expenses incurred by the Honorable J. W. Taverner, Minister of Agriculture of Victoria, in prosecuting inquiries in Great Britain in connection with the Export Trade of the Colonies, as desired by the Conference of Ministers of Agriculture, which met in Melbourne and Hobart early this year, amount to the sum of £595 3s.

I enclose herewith an apportionment of this amount amongst the four Colonies represented at the Conference, calculated on the basis of population, and I shall be glad to receive, at your convenience, a remittance for the sum of £250 11s. 5d., shown by such apportionment as your Colony's share of the expense.

I have, &c.,  
 GEORGE TURNER,  
 Premier.

Mr. Robberds.—F.K., 31/10/99. Acknowledged.—C.R., 1/11/99. The Honorable the Minister for Mines and Agriculture.—W.J.L., 2/11/99.

*Expenses of Inquiries respecting Export Trade.*

APPORTIONMENT between New South Wales, Victoria, Queensland, and Tasmania, according to the population on 31st December, 1898 :—

	£	s.	d.
New South Wales...	250	11	5
Victoria ...	218	15	8
Queensland ...	92	15	9
Tasmania ...	33	0	2
	£595	3	0

The Under Secretary for Mines.—F.K., 3/11/99. Letter written to Mr. Cook.—20/11/99. In three days. Re-submitted.—23/11/99.

The Under Secretary for Mines and Agriculture to The Minister for Mines and Agriculture.

Dear Mr. Cook, Department of Mines and Agriculture, Sydney, 20 November, 1899.  
 The Government of Victoria has submitted an account to this Department asking for the payment of a sum of £250 11s. 5d., being part cost of the travelling and other expenses incurred by the Honorable J. W. Taverner in prosecuting inquiries in Great Britain in connection with the export trade of the Colonies. It is stated that the visit was made as the outcome of a Conference of Ministers of Agriculture held in Melbourne and Hobart early in the year; and as you were the Minister who represented this Colony, I am desired by Mr. Fegan to ask if you will kindly furnish him with your views upon the matter, and as to whether the account is one which this Colony should be called upon to pay.

Yours, &c.,  
 D. C. McLACHLAN.

Dear Mr. McLachlan,  
 At the time of the correspondence I did not expect the charge would be made. I do not think it should have been preferred under the circumstances. Perhaps it should be paid.

Yours, &c.,  
 J. COOK.

Minute.

## Minute.

Department of Mines and Agriculture, Sydney, 23 November, 1899.

Precis *re* claim of the Government of Victoria for payment of £250 11s. 5d. for the Hon. J. W. Taverner's Report on the Export Trade.

In January last a Conference was held in Melbourne, which was attended by the Ministers for Agriculture of Victoria, New South Wales, Queensland, and South Australia, and at which a resolution was passed:—

“That this Conference is further of opinion that steps should be immediately taken with the object of securing better methods of handling, storing, and distributing our products in Europe, and that, with a view to achieving this result, a representative of the subscribing Colonies should be despatched to Great Britain to make all necessary inquiries.”

The Conference afterwards adjourned to Hobart, when Sir Edward Braddon, on behalf of Tasmania, agreed to the resolution, the report of the meeting stating:—

“Tasmania to become one of the subscribing Colonies, the expense being borne by the Colonies concerned on the basis of population.”

The Conference was held *in camera*, and the report does not disclose if any definite arrangements were made as to whether any delegate was selected to visit Great Britain; but in February following, Mr. Taverner wired:—

“Leaving for London next month. Are you agreeable I should make inquiries *re* food supply distribution in accordance with resolution recent Conference?”

“(Signed) J. W. TAVERNER.”

To this Mr. Cook replied, “Yes.”

The Victorian Government now submit an account for £250 11s. 5d., which they state is the proportion, calculated on the basis of population, due by New South Wales of the expenses incurred, which total £595 3s.:—

“By the Honorable J. W. Taverner, Minister of Agriculture of Victoria, in prosecuting inquiries in Great Britain in connection with the export trade of the Colonies, as desired by the Conference of Ministers of Agriculture which met in Melbourne and Hobart early this year.”

With the view of ascertaining whether this Colony is liable for the sum applied for, Mr. Cook, who represented New South Wales at the Conference, was communicated with, and reports that:—

“At the time of the correspondence I did not expect the charge would be made. I do not think it should have been preferred under the circumstances. Perhaps it should be paid.”

“(Signed) J. COOK.”

It is noted that South Australia, whose Minister signed the report, and whose proportion of expenses would be about £75, has not been included in the apportionment of the expenses.

D. C. McLACHLAN.

Letter sent to Mr. Martin (Victoria) for particulars.—D. McL., 29/11/99. In a week.

The Under Secretary for Mines and Agriculture to The Secretary for Agriculture, Victoria.

Department of Mines and Agriculture,  
Sydney, 29 November, 1899.

My Dear Mr. Martin,

With reference to the account, amounting to £250 11s. 5d., which has been submitted to this Department for its portion of the expense of the inquiries instituted in Great Britain by Mr. Taverner, in connection with the Export Trade of the colonies, I am desired by the Minister to ask that you will be good enough to forward to me a copy of the Minute or letter appointing Mr. Taverner to act for this Colony.

In the apportionment of the expenses it has been noticed that South Australia has been omitted, and I am also desired to ask for information in regard to this.

Mr. Fegan intends to bring the matter before his Cabinet, but before doing so wishes to have all information on the subject—hence this request.

Yours, &c.,

D. C. McLACHLAN.

The Secretary for Agriculture, Victoria, to The Under Secretary for Mines and Agriculture.

Department of Agriculture,  
Melbourne, 6 December, 1899.

Dear Mr. McLachlan,

In answer to yours of 29th ultimo, *re* account for £250 11s. 5d. for portion of expenses of inquiries by Mr. Taverner in Great Britain in connection with the Export Trade of the colonies, I have the honor to inform you that at the meeting of Ministers of Agriculture, held in Tasmania, on the 16th January last, a resolution was passed on the motion, I understand, of Mr. Cook, that “This Conference is of opinion that steps should be immediately taken with the object of securing better methods of handling, storing, and distributing our products in Europe; and that with a view to achieving this result, a representative of the subscribing colonies should be despatched to Great Britain to make all necessary inquiries.” Sir Edward Braddon agreed to the resolution, and for Tasmania to become one of the subscribing colonies, the expenses being borne by the colonies concerned on the basis of population. On the 9th February Mr. Cook telegraphed to Mr. Taverner, as follows:—“Agreeable you should make inquiries *re* food supply distribution in accordance with resolution at recent conference.” South Australia, although represented at the conference, did not afterwards agree to contribute.

I have, &c.,

D. E. MARTIN,

Secretary for Agriculture.

1899.  
(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

METEOROLOGICAL CONDITIONS IN NEW  
SOUTH WALES.

(REPORT BY THE GOVERNMENT ASTRONOMER RESPECTING.)

*Printed under No. 4 Report from Printing Committee, 24 August, 1899.*

[Laid upon the Table in accordance with promise made in answer to Question No. 8, Votes No. 17,  
23rd August, 1899]

Question.

(8.) Meteorological Conditions in New South Wales:—Dr. Ross asked the Minister of Public Instruction,—

(1.) Will he ascertain from the Government Astronomer if he can account on any scientific grounds for the reason of the present remarkable and unprecedented wet unsettled weather and rainfall from which Sydney and coastal districts have been suffering during the last few months; and why the drought in some parts of the interior is still a source of trouble to settlers and pastoralists?

(2.) Can he furnish any reasons, meteorological or otherwise, for the existence of such precarious and phenomenal weather?

Answer.

(1.) The drought broke up in Sydney on 28th May. In June, rain fell on 19 days; in July, on 15 days; and in August, up to the 23rd, on 20 days. There is nothing unusual about this record. Its counterpart is found in ordinary good years, in some of which there are more wet days, as the following list shows:—

Rainfall days in good years.

Year.	Number of wet days			
	June.	July.	August.	September.
1889 .....	12	20	18	19
1890 .....	29	18	4	22
1891 .....	19	18	17	15
1892 .....	15	5	4	7
1893 .....	15	15	14	15
1894 .....	7	23	20	4
Average .....	16	16½	13	4
1899 .....	19	15	20	.....

A wet period, 1881.

Number of wet days.				
January.	February.	March.	April.	May
23	16	19	26	25

It thus appears that the rain of the past three months does not differ materially from that of ordinary good years, and is much below the record of a wet period.

(2.) The cause of these wet months is found in a change in the condition, as to moisture, of very large areas of atmosphere, which instead of being dry, as it has been for four years, becomes moist and in a condition favourable to rain. The cause of this changed condition has so far been beyond the grasp of meteorologists, and I am unable to explain it.

H. C. RUSSELL,  
Government Astronomer.

23rd August, 1899.

1899.  
(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

METEOROLOGICAL CONDITIONS IN NEW  
SOUTH WALES.

(RETURN RESPECTING.)

Printed under No. 6 Report from Printing Committee, 19 October, 1899.

[Laid upon the Table of the House in reply to a Question by Dr. Ross, Votes No. 29, Question No. 1,  
18th October, 1899.]

Question.

(1.) Meteorological Conditions in New South Wales :—Dr. Ross asked the Minister of Public Instruction,—

(1.) Has his attention been directed to a letter in the *Daily Telegraph* of the 25th August, from one Chas. Brown, of Rushcutter's Bay, in reference to the weather report that was laid upon the Table of the House last week in reply to a series of Questions by Dr. Ross, anent the late unusual and unprecedented unsettled weather and rainfall that has occurred in Sydney and coastal districts during the last three months?

(2.) Will he, after reading Mr. Brown's letter questioning the accuracy of the weather returns furnished by the Government Astronomer, state if he is still of the same opinion that the Colony in and around Sydney and coastal districts has not been visited by any unusual or unprecedented amount of rainfall?

(3.) Will he, for the information of the public, obtain from the Government Astronomer a return showing when and where in previous years the same unsettled weather and amount of rainfall occurred within the same limited period of three months, and the same number of wet days in the same months of June, July, and August?

Answer.

In reply to Question No. 1, asked by Dr. Ross, M.L.A., on 23rd August, I endeavoured to show that the "Present remarkable and unprecedented wet unsettled weather and rainfall, from which Sydney and coastal districts have been suffering," had its counterpart, and even more persistent rain, in past periods of three months; and I gave instances of more wet days than I have recorded during the past three months.

Mr. Chas. Brown, of Rushcutter's Bay, introduced the question of the amount of rain, which I had not dealt with, because I did not think it was asked for by Dr. Ross, M.L.A.

Mr. Brown included in his statement the rain that fell from 27th May. I take the same period—that is, to 23rd August—when Mr. Brown wrote, and I find the total was 32·83 inches, and the number of wet days 58.

For comparison, I take another wet period in which a similar storm, only heavier, took place at the end of May. The year was 1889, and the storm began on 24th May, and up to the end of August 34·44 inches of rain had fallen in 58 days—the same number of days as in the recent wet period, and 1·61 inch more rain.

Question 2.

I have made out attached Table J, in which will be found the number of days' rainfall, and the rainfall for five coastal stations, at which, during June, July, and August of 1899, the rainfall exceeded that of Sydney in the same period; and in one case, that of Newcastle, the number of days as well as quantity of rain was greater.

Question 3.

In Table II (attached) I give particulars of the rainfall during June, July, and August, 1891, at thirteen coastal stations, at which the rainfall was in excess of that during the same months in this year, but the number of days not so great. Thus proving that in the recent wet period there were more wet days in Sydney than in any other period of the same months on record.

H. C. RUSSELL,  
Government Astronomer.

## No. 1.

A. Jameson, Esq., to The Under Secretary for Lands.

Sir,

Denilquin, 16 June, 1897.

I am instructed by Mr. Franc Sadlier Falkiner, the lessee of the pastoral holding noted in the margin, to make application for permission to erect, under the provisions of the Public Gates Act of 1875, 39 Victoria No. 10, four gates in the positions hereinafter described, and more particularly shown on the sketches attached.

Tupper, No. 160  
Centra

298—

1.

530 copies—Approximate Cost of Printing (labour and material), £8 17s. 6d.

1. On 1-chain road, Deniliquin to Finley, at the east boundary of portion 39, parish of Berganbigal, county of Townsend.

2. On 1-chain road, Deniliquin to Finley, between portions 15 and 20, parish of Narrama, county of Townsend.

3. On 1-chain road, Deniliquin to Finley, between portions 143 and 122, parish of Narrama.

4. On 3-chain road, Deniliquin to Finley, between portions 59, parish of Blackwood, and 32, parish of Pungulgin, county of Townsend.

I enclose bank-draft, value £6 6s., to cover the necessary Departmental expenses which may be incurred. I am instructed to ask if you will favour me with your early consideration of this matter, and let me have a reply as soon as possible.

I have, &c.,

A. JAMESON.

Bank-draft, £6 6s., herewith.—H. W., F.B., 18/6/97. Receipt 89,593, 18/6/97.

The sketches supposed to accompany application have not, apparently, been received in the Department, and as the sites proposed for the gates cannot be definitely identified from the particulars supplied, it is recommended that writer be requested to furnish the illustrative sketches to which he refers.—A. J. STORRS, 19/7/97.

Yes.—F. H. WILSON, Chief Clerk, 20/7/97. A. Jameson informed, 21/7/97.

#### No. 2.

The Under Secretary for Lands to A. Jameson, Esq.

Sir,

Department of Lands, Sydney, 21 July, 1897.

With reference to your letter of the 16th ultimo, applying, on behalf of Mr. Franc S. Falkiner, for permission to erect four public gates, I have the honor to request you, as the sketches referred to in your communication have not apparently been received in this Department, and as the sites proposed for the gates cannot be definitely identified from the particulars supplied, to furnish the illustrative sketches in question.

I have, &c.,

WM. HOUSTON,  
Under Secretary,  
(per F.H.W.)

#### No. 3.

A. Jameson, Esq., to The Under Secretary for Lands.

Sir,

Deniliquin, 28 July, 1897.

I am in receipt of your letter of the 21st instant, 97/123-1, Roads, and, in compliance with the request contained therein, I herewith forward rough plan showing positions of the public gates applied for by Mr. Franc S. Falkiner.

I have, &c.,

A. JAMESON.

Forwarded to the District Surveyor for report.—A. J. STORRS (for the Chief Surveyor), 2/9/97, No. 40. The District Surveyor at Hay. Received in District Survey Office at Hay, 4/9/97. To Mr. Surveyor Broughton for report.—W. G. WALKER, District Surveyor, 8/9/97. To the District Surveyor with my letter No. 97-118 of 12th November.

#### No. 4.

A. Jameson, Esq., to The Under Secretary for Lands.

Sir,

Deniliquin, 1 September, 1897.

In respect of my application of the 16th June last, on behalf of Franc S. Falkiner, for four public gates within the holding noted in the margin, I am directed to ask if you will be good enough to expedite the dealing with the matter, as my client is anxious to have it completed as soon as possible.

I have, &c.,

A. JAMESON.

Forwarded to District Surveyor in connection with instruction of 2nd instant, No. 40.—W. WINDER (for Chief Surveyor), 11/9/97. The District Surveyor at Hay. Received District Survey Office at Hay, 14/9/97. To Mr. Broughton, in connection with instructions 97-106.—J.G.F. (for District Surveyor), 15/9/97. District Survey Office instructions, No. 97-108, folio 467. To the District Surveyor with my letter No. 97-118, of 12/11/97.—J. Broughton.

#### No. 5.

A. Jameson, Esq., to The Under Secretary for Lands.

Sir,

Deniliquin, 8 November, 1897.

In respect to the application of Mr. Franc S. Falkiner for four public gates within the boundaries of Tuppal holding, No. 160, Central Division (papers 97-123, Roads), will you be good enough to let me know if any objections to the granting of the applications have been lodged; and, if so, are they of such a character as to require an answer from me, as, in that case, I shall be glad to supply one.

I have, &c.,

A. JAMESON.

It is recommended that the writer be informed that the papers relating to Mr. Falkiner's application referred to above are at present with the District Surveyor for report, and that as yet no objections to the application have been lodged with this Department.—A. J. STORRS, 23/11/97. Inform.—H. CURRY, 23/11/97. A. Jameson informed, 30/11/97.

No. 6.

## No. 6.

Mr. Surveyor J. Broughton to The District Surveyor at Hay.

Sir,

Deniliquin, 12 November, 1897.

In compliance with your instructions No. 106, of 8th September last, I have the honor to submit the following report on an application by Franc S. Falkiner for permission to erect four gates, under the provisions of the Public Gates Act of 1875, on the roads between Deniliquin and Finley, and situated in the positions mentioned hereunder, viz. :—

- No. 1, at intersection of road with east boundary of portion No. 39, parish Birganbigal, county of Townsend.
- No. 2, at road between the south-east and north-east corners of portions Nos. 15 and 20 respectively, parish of Narrama.
- No. 3, at road between the south-west and north-west corners of portions Nos. 149 and 122, parish of Narrama.
- No. 4, at road between portion No. 32, parish of Pungulgin, and south-west corner of portion No. 59, parish of Blackwood (the last-mentioned gate site is described on tracing with application as being at the south-east corner of portion 59, but I find the site sought is at the south-west corner of that portion—*vide* A. Jameson's letter of 18th October, 1897, herewith).

I inspected the sites referred to on the 9th ultimo.

Gate sites Nos. 1, 2, and 3 are situated on the main route between Deniliquin and Finley, which deviates in order to serve the greatest number of settlers situated between those towns. This road has not been proclaimed under the Parish Roads Act. It is an important thoroughfare, as means of egress and ingress to settlers in the neighbourhood, and the mail contract is carried out by a bi-weekly coach (two horses) service. The fact of the neighbourhood being a farming district that is well developing, shows that future traffic will be important.

This road has been improved, and is maintained by the Works Department.

There is another route, situated about four (4) miles south, and parallel to the subject road, and by which the bulk of the produce from the Finley district to Deniliquin is conveyed; but the road in question will always be important, mainly on account of its service to settlers situated along it, and those settled north of Finley.

The applicant owns the land on both sides of each of the sites applied for.

The refusal of these public gates may compel the applicant to fence off this road, which would not be prejudicial to proprietary interests; but if such is done there would not be the scope for vehicular traffic which at present is allowed, especially in cases where the road is intersected by swamps and water-courses; therefore, the fencing of it will undoubtedly hasten the necessity for the construction of culverts and embankments, as the difficulty of traffic at these points is greatly alleviated by it being allowed to encroach on freehold land.

The fencing of the enclosures intersected by this road is of the usual 5 and 6 wire class, and worth from £18 to £26 per mile.

The public gates existing on this road are at Deniliquin common boundary, and at the boundary fence common to Tuppal and Deniliquin holding, situated  $10\frac{1}{2}$  and  $2\frac{1}{2}$  miles respectively westerly from site No. 1.

I am of the opinion that there is not any objection to the granting of the application for the above-mentioned gates, and the applicant has already erected new substantial double gates in each case, with 12-foot openings, and has corduroyed each gateway, and this provision is sufficient for all requirements.

I enclose a letter from Mr. Charles Uphill, objecting to the granting of these gates, Nos. 1, 2, and 3. Mr. Uphill is a large settler in this neighbourhood, and uses this road as means of access to market, &c., and I may point out that gates have existed at the sites applied for thirteen years to my knowledge, and this is the first complaint about them that has come under my notice.

Site No. 4 is situated on the direct road between Finley and Deniliquin. It is not a mail route, and is not dedicated under the Parish Roads Act. There is a large amount of vehicular and stock traffic on this road; a great deal of produce is carried along it, and there is no doubt—particularly in view of the early construction of the railway between Sydney and Finley—that in the future traffic will increase considerably.

This road is maintained by (and is in charge of an officer of) the Works Department.

There is not any other road that is likely to render this one unnecessary.

The applicant is the owner of the land on both sides of the site of gate applied for.

The character of the soil at the site of gate applied for is black loam and clay, and heavy for traffic in wet seasons.

In event of refusal to grant the permission sought, my remarks *re* site Nos. 1, 2, and 3, also apply to this case.

The fencing of the enclosure intersected by this road (which is fenced on the south side, east of site applied for), is of the usual 5 and 6 wire class, and worth from £18 to £26 per mile.

The existing public gates on this road are two, situated at Deniliquin common, and at Tuppal, Deniliquin run boundary, 22 and 10 miles respectively west of site applied for.

I consider that there is not any objection to the granting of the application for this gate, and the applicant has recently erected new and substantial double gates, with an opening of twelve (12) feet at the site, and has corduroyed the gateway; but I consider it desirable that, if possible, a condition should be imposed requiring that the corduroy should be maintained in a reasonable manner for twenty (20) feet on each side of gateway at the applicant's expense.

Time occupied in dealing with this report was—one day in field and travelling, half day in office; total, one and a half days.

I have, &amp;c.,

J. BROUGHTON,

[Enclosures.]

Dear Sir,

Recently you told me Mr. F. S. Falkiner, owner of Tuppal, intended to apply\* for three more licensed gates on the Mooney's Swamp road. There is the Common Gate and the Boundary Gate of Deniliquin run, and Tuppal, already licensed, and to add three more in less than 20 miles of road, is quite unnecessary, and is making servants of the public

Pine Hills, 23rd October, 1897.

\* I informed him he had applied.—J.B.

"to the individual." Will you kindly let me know when and where Falkiner's application will be heard, as I intend to object. This is also a mail route.

J. Broughton, Esq., Survey Office, Deniliquin.

Yours, &c.,  
CHAS. UPHILL.

To the District Surveyor, Hay, with my letter, No. 97-118, of 12th November, 1897.—J. BROUGHTON.

*Re* application for Public Gates, F. S. Falkiner.

Sir,

In reply to your inquiry, I beg to inform you that the site of the gate applied for on the three (3) chain road, Deniliquin to Finley, is at the south-west corner of portion 59, parish of Blackwood, and not at the south-west corner of portion 58.

Deniliquin, 18th October, 1897.

Yours, &c.,  
A. JAMESON,  
(*per* G.W.F.)

Mr. Surveyor Broughton, Deniliquin.

Forwarded to the District Surveyor, Hay, with my letter, No. 97-118, of 12th November.—J. BROUGHTON.

#### No. 7.

The District Surveyor at Hay to The Under Secretary for Lands.

Application for Public Gates, Tuppal Holding, No. 97-587.

25 November, 1897.

In view of Mr. Surveyor Broughton's report, enclosed, I am of opinion there is no objection to granting all the public gates applied for. The traffic along the road upon which gate No. 4 is situated is fairly heavy, but I do not think much public inconvenience will be caused.

The road upon which the other gates are situated is traversed by a bi-weekly mail; but this is not, in my opinion, sufficient ground for refusing the application; in fact, gates have been in the positions asked for for years. The applicant has erected substantial double gates, with twelve (12) feet openings, and these are sufficient for all requirements.

The conditions proposed by Mr. Broughton, as to the maintenance of corduroy for twenty (20) feet on each side of gate No. 4, is a good one, but there is, apparently, no provision in the Act for such.

The cost of dealing with this application is £4 9s., including £4 4s. costs incurred by Mr. Broughton.

W. G. WALKER,  
District Surveyor.

#### No. 8.

The Under Secretary for Lands to A. Jameson, Esq.

Sir,

Department of Lands, Sydney, 30 November, 1897.

In reply to your letter of the 8th instant, I have the honor to inform you that the papers relating to Mr. Franc S. Falkiner's application for permission to erect public gates within the boundaries of Tuppal pastoral holding No. 160, Central Division, are at present with District Surveyor for report, and that, as yet, no objections to the application have been lodged with this Department.

I have, &c.,  
WM. HOUSTON,  
Under Secretary,  
(*per* F.H.W.)

#### No. 9.

Office Memorandum.

Application by lessee of Tuppal pastoral holding for permission to erect public gates, county of Townsend.

8 January, 1898.

THREE of the four gates which applicant desires authorised as public gates are upon a road that is travelled by a mail coach.

It is recommended that he be informed (through his agent, Mr. A. Jameson), that it is not customary to grant permission for the erection of public gates across a mail coach route; but that if he will obtain and forward to this Department the written consent of the mail contractor to the erection of the gates as desired, the matter will receive further consideration.

Applicant might be further informed that in the event of the authorisation of the remaining gates applied for, it will be required of him that he corduroy and maintain in good repair the approaches thereto for a distance of 20 feet on each side of gateway, to which condition he should signify his assent.

A. J. STOPPS.

For approval.—F. H. WILSON, Chief Clerk, 10/1/98. Approved.—J.H.C., 11/1/98. A. Jameson informed, 12/1/98.

#### No. 10.

The Under Secretary for Lands to A. Jameson, Esq.

Sir,

Department of Lands, Sydney, 12 January, 1898.

Referring to your letter of the 18th October last respecting your application on behalf of Mr. F. S. Falkiner, for permission to erect four public gates across roads in the county of Townsend, I am directed by the Secretary for Lands to inform you that three of the four gates which Mr. Falkiner desires authorised as public gates are upon a road which is travelled by a mail coach, and that it is not customary to grant permission for the erection of public gates across a mail coach route; but that if he will obtain and forward to this Department the written consent of the mail contractor to the erection of gates as desired, the matter will receive further consideration.

I am to add that in the event of the authorisation of the remaining gate applied for, it will be necessary for Mr. Falkiner to corduroy and maintain in good repair the approaches thereto for a distance of 20 feet on each side of the gateway, to which condition Mr. Falkiner should signify his consent.

I have, &c.,  
WM. HOUSTON,  
Under Secretary,  
(*per* F.H.W.)

No. 11.

No. 11.

A. Jameson, Esq., to The Under Secretary for Lands.

Sir, Deniliquin, 17 January, 1898.  
 I beg to acknowledge receipt of your letter of the 12th instant, 97/123-8, Roads, in respect to four applications by Mr. F. S. Falkiner, for four public gates on Tuppal pastoral holding.  
 I enclose the written consent of the mail contractor, Mr. James Robinson, for the gates (3) across the mail route, and also Mr. Falkiner's undertaking to make and keep in repair the approaches to the remaining gate, applied for as indicated by you.  
 I have, &c.,  
 A. JAMESON.

[Enclosures.]

Sir, Deniliquin, 14 January, 1898.  
 In respect to the application of Mr. F. S. Falkiner, for three (3) gates on the mail road from Deniliquin to Finley, to be authorised as public gates, I, James Robinson, mail contractor, Deniliquin to Finley, hereby beg to inform you that I have no objection to the said gates being proclaimed public gates.  
 Witness—A. JAMESON. I have, &c.,  
 JAMES ROBINSON.  
 The Under Secretary for Lands, Sydney.

Sir, Boonoke, 15 January, 1898.  
 In respect to the latter part of your letter of the 12th instant, 97/123-S, Roads, addressed to Mr. A. Jameson, I beg to inform you that in the event of the gate in the parish of Blackwood being authorised as a public gate, I will corduroy and maintain in good repair the approaches thereto for a distance of twenty (20) feet on each side of the gateway.  
 I have, &c.,  
 F. S. FALKINER.  
 The Under Secretary for Lands, Sydney.

Mr. Bawden for report.—Jno. P., 24/2/98. Reported on attached paper.—C.B., 12/3/98.

## No. 14.

Mr. Charles Uphill to The Under Secretary for Lands.

Sir,

Pine Hills, Deniliquin, 26 February, 1898.

I notice by *Government Gazette* of the 16th instant, that Mr. F. Falkiner, of Tuppal, is applying for four (4) public gates on the Tuppal Run; three (3) of these gates are on the Mooney Swamp Road, between here and Deniliquin; and as there are two (2) public gates on this road already, the three (3) gates applied for would make four (4) public gates within 8 miles, or a public gate every 2 miles. This is making servants of the public. I beg of you to be heard in objection, as I very strongly object to any more public gates on this road, as it is my direct road to Deniliquin.

Yours, &amp;c.,

CHARLES UPHILL.

It is recommended that the writer be informed that the gates sought by Mr. Falkiner to be authorised as public gates, have been in position for some time past; that the contractor for the carriage of mails along the road crossed by the gates has sent in his written consent to the proposed authorisation; and that, in view of a special report obtained in the matter, and the fact that the law allows of the cancellation at short notice of public gates where such action is shown to be desirable, it has been decided to grant the permission sought.—A. J. STOPPS, 30/3/98.

## No. 15.

Mr. Road-Superintendent C. Bawden to The Principal Assistant Engineer.

Department of Public Works, 12 March, 1898.

*Subject* :—Deniliquin District, Electorate of Deniliquin.—Road from Deniliquin, *via* Moonee Swamp to Finley, and Deniliquin to Finley.—No. 423 on Schedule, 1897-8 Vote, £160; No. 2 not in Schedule; *re* application for public gates.

REFERRING to papers 98-1,475, I beg to report that I have inquired into the question of granting these gates, and find that, as all the sites here have been gates in existence here for many years, these have lately become dilapidated, but otherwise do not appear to have been any drawback to traffic, which on both roads concerned is so far light. The replacing of these old gates with authorised ones will be beneficial, as the owner will be compelled to keep them and the roadways in thorough order. Licenses might therefore be issued, so far as this Department is concerned, for all these gates.

C. BAWDEN,

Road Superintendent.

No objection from this Branch.—E. M. ALTMAN, 16/3/98. Assistant Engineer.—W. J. HANNA (for Under Secretary and Commissioner for Roads), 18/3/98. The Under Secretary for Lands, B.C.

## No. 18.

## The Acting Under Secretary for Lands to Mr. Chas. Uphill.

Sir,

Department of Lands, Sydney, 12 April, 1898.

With reference to your letter of the 26th February last, objecting to permission being granted to Mr. F. S. Falkiner to erect four public gates on the road from Deniliquin to Finley, &c., I am directed by the Secretary for Lands to inform you that the gates in question have been in position for some time past; that the contractor for the carriage of mails along the road crossed by the gates has forwarded his written consent to the authorisation; and that in view of a special report obtained in the matter, and the fact that the law allows of the cancellation, at short notice, of public gates, where such action is shown to be desirable, permission to erect the gates has been granted, *vide Government Gazette* of 6th April, 1898, folio 2854, a copy of which is forwarded herewith.

I have, &amp;c.,

H. CURRY,

Acting Under Secretary

(per

).

## No. 19.

## The Acting Under Secretary for Lands to F. S. Falkiner, Esq.

Sir,

Department of Lands, Sydney, 12 April, 1898.

I have the honor to inform you that the Secretary for Lands has granted you permission to erect the gates of the dimensions and in the positions described in the accompanying Schedule, and to direct your attention to the notice dated 6th April, 1898, which appeared in the *Government Gazette* of that date, folio 2854; and I have also to request that, in addition to the words "Public Gate," you will cause the numbers 1842, 1843, 1844, and 1845 to be painted and maintained thereon in legible characters, not less than 3 inches in length, as required by the Act 39 Victoria No. 10.

I have, &amp;c.,

H. CURRY,

Acting Under Secretary

(per F.H.W.)

## No. 20.

## Mr. Charles Uphill to The Under Secretary for Lands.

Sir,

Pine Hills, 24 May, 1898.

With reference to your letter of the 12th April ultimo, informing me that Mr. F. S. Falkiner had been granted permission to erect four public gates on the road from Deniliquin to Finley,—at the time your letter reached here I was away from home on account of illness in my family, and I have not had time to reply on that account and extra work the drought entails.

I must say I was very much surprised at your Department granting an application of this nature, and my reasons for saying so are—1st. At the boundary of Tuppal and Deniliquin runs there is a public gate which has been there for some time, being a wire netted boundary of runs. I do not object to this gate. Between this boundary gate and my boundary, which is 8 miles, are three out of the four gates your Department has gazetted as public gates to applicant F. S. Falkiner, Nos. 1,842, 1,843, 1,844, which is a public gate every 2 miles. This, if the travelling public are compelled by law to shut them, is a great hardship, and is very often attended with great danger both to driver, horses, and vehicles; and, as far as I ever understood the Act on the matter, it was only contemplated that public gates would be erected at reasonable places and distances. I further understood that myself and others who might wish would be given the opportunity of appearing at the Local Land Board Office, Lands Office, or Land Court in support of any objections to granting of same.

I wish to point out that these gates are on lines of fences forming sheep paddocks for the proprietor, and are generally kept shut by the public; but when it is sought by the proprietor to make it an act of servility to shut them at such unreasonable distances, I strongly object, and I have no doubt others will.

You say the contractor for the carrying of mails along the road crossed by the gates has forwarded his written consent to the authorisation. It seems strange that this should carry, or help carry, sufficient weight to declare public gates, when the same contractor does not own any land on this route, and has no further interest than sometimes he has horses on the run grazing.

You further say a special report has been obtained in the matter; therefore, I would ask, if I am entitled to it, to send me a copy of such special report; also a copy of Mr. Falkiner's application to have these gates made public gates, together with his reason for same. Can you kindly supply me a copy of the Act 39 Victoria No. 10 and Public Roads Act of 1897.

I have, &amp;c.,

CHARLES UPHILL.

Acknowledged, 1/6/98. The writer might be informed that the objections pointed out by him were fully considered when the question of granting permission for the erection of the gates referred to was being dealt with, but that for the reasons conveyed to him in letter from this Department, dated 12th April last, it was decided to concede to Mr. Falkiner the permission sought. Mr. Uphill might be further informed that departmental reports for the guidance of the Minister are treated as confidential, and copies of them cannot therefore be supplied to the public; but that copies of Act 39 Victoria No. 10 and the Public Roads Act of 1897 can be purchased at the Government Printing Office, Sydney.—A. J. STORRS, 14th June, 1898. For approval.—F. H. WILSON, Chief Clerk, 15/6/98. Approved.—J.H.C., 17/6/98. Charles Uphill informed, 20/6/98.

No. 21.

## No. 21.

The Under Secretary for Lands to Mr. Charles Uphill.

Sir,

Department of Lands, Sydney, 20 June, 1898.

Referring to your letter of the 24th ultimo, pointing out objections to public gates recently erected by Mr. F. S. Falkiner, I am directed by the Secretary for Lands to inform you that such objections were fully considered when the question of granting permission for the erection of the gates was being dealt with, but that, for the reasons conveyed to you in my letter of the 12th April last, it was decided to concede to Mr. Falkiner the permission sought.

I am to add that departmental reports for the guidance of the Minister are treated as confidential, and copies of them cannot, therefore, be supplied to the public; but that copies of the Act 39 Victoria No. 10, and the Public Roads Act of 1897, can be purchased at the Government Printing Office, Sydney.

I have, &amp;c.,

WM. HOUSTON,

Under Secretary,

(per F.H.W.)

## No. 22.

J. M. Chanter, Esq., M.P., to The Under Secretary for Lands.

Sir,

Parliament House, Sydney, 22 August, 1898.

*Re* the enclosed correspondence from Mr. Chas. Uphill, I shall be glad if you will peruse it, and inform me if there is any remedy for the evil complained of. It does appear to me that Mr. Uphill should have been given an opportunity to place his objections before the Land Board.

Please return the whole of the correspondence to me when noted, and oblige

Yours &amp;c.,

J. M. CHANTER, M.P.

Mr. Chanter might be informed that matters relating to the granting of permission for the erection of public gates are not referred to the Local Land Board, but are dealt with at Head Office, upon the report of the surveyor instructed to inspect the locality and make known to the Department the circumstances surrounding the case. Before erection of a public gate is authorised, members of the public are invited by *Gazette* notification, and, where practicable, advertisement in the local Press, to communicate to the Department, within thirty days from date of notice, any objection they may have to such authorisation, and, at the expiration of the prescribed time, the matter is finally dealt with. In the case under notice, the customary procedure was followed, and the objections submitted by Mr. Uphill were fully considered; but the reports of officers of this and the Works Departments being favourable to the granting of Mr. Falkiner's application, it was decided to authorise the gates, which has been done.—A. J. STORRS, 31/8/98.

For approval.—F. H. WILSON, Chief Clerk, 1/9/98. Approved.—J.H.C., 2/9/98. J. M. Chanter informed, 6/9/98. Correspondence returned.

## No. 23.

The Under Secretary for Lands to J. M. Chanter, Esq., M.P.

Sir,

Department of Lands, Sydney, 6 September, 1898.

Referring to your letter of the 22nd ultimo, respecting Mr. Charles Uphill's objections to Mr. F. S. Falkiner's public gates Nos. 1,842, 1,843, 1,844, and 1,845, I am directed by the Secretary for Lands to inform you that matters relating to the granting of permission for the erection of public gates are not referred to the Local Land Board, but are dealt with at Head Office, upon the report of the surveyor instructed to inspect the locality and make known to the Department the circumstances surrounding the case. Before erection of a public gate is authorised, members of the public are invited by *Gazette* notification, and, where practicable, advertisements in the local Press, to communicate with the Department, within thirty days from date of notice, any objection they may have to each authorisation, and at the expiration of the prescribed time the matter is finally dealt with. In the case under notice the customary procedure was followed, and the objections submitted by Mr. Uphill were fully considered; but the reports of officers of this and the Department of Public Works being favorable to the granting of Mr. Falkiner's application, it was decided to authorise the gates, which has been done.

In compliance with your request, the correspondence which accompanied your communication is returned herewith.

I have, &amp;c.,

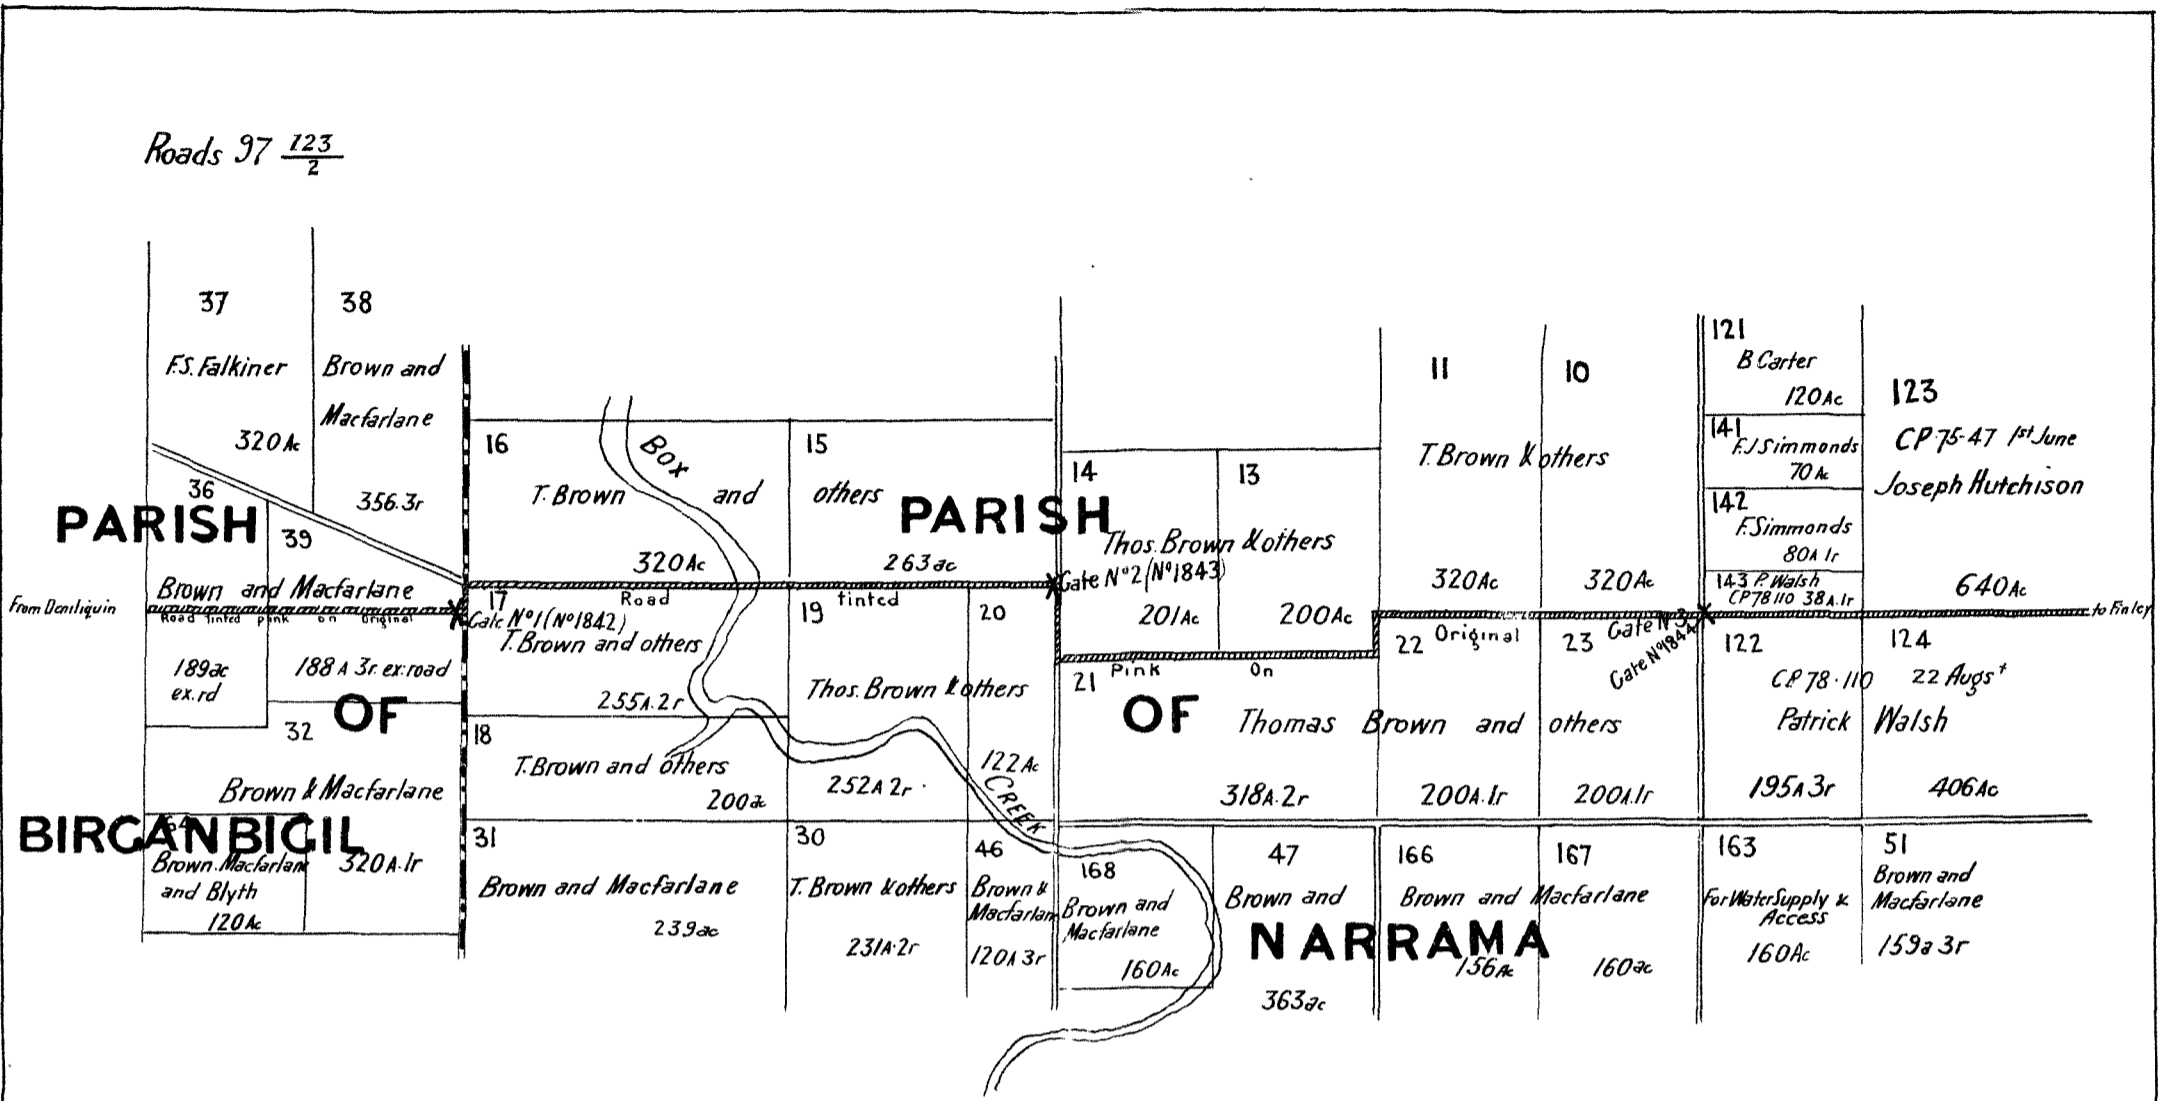

WM. HOUSTON,

Under Secretary,

(per F.H.W.)

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.

VOTES No. 37. TUESDAY, 7 NOVEMBER, 1899.

14. CASE OF WILLIAM CRESWELL:—Mr. J. C. L. Fitzpatrick moved, pursuant to Notice,—  
(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the case of William Creswell, at present an inmate of the Parramatta Lunatic Asylum.  
(2.) That such Committee consist of Mr. Dacey, Mr. Meagher, Mr. Anderson, Mr. Wilks, Mr. Waddell, Mr. B. M. Clark, Mr. O'Connor, and the Mover.  
Debate ensued.  
Question put.  
The House divided.

Ayes, 48.

Mr. Lync,  
Mr. Fegan,  
Mr. Goodwin,  
Mr. See,  
Mr. Wilks,  
Mr. O'Sullivan,  
Mr. Piddington,  
Mr. Meagher,  
Mr. Gillies,  
Mr. Hawthorne,  
Mr. Jessep,  
Mr. Pyers,  
Mr. Perry,  
Mr. Rose,

## CASE OF WILLIAM CRESWELL.

---

PROGRESS REPORT.

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 7th November, 1899, "*to inquire into and report upon the case of William Creswell, at present an inmate of the Parramatta Lunatic Asylum,*" and to whom was granted on 12th December, 1899, "*leave to visit the Hospital for the Insane, Parramatta, for the purpose of taking evidence in connection with the inquiry,*" have agreed to the following Progress Report :

Your Committee having examined the witnesses named in the List,\* \* See list, p. (whose evidence will be found appended hereto), have resolved, owing to the advanced period of the Session, to report the evidence to your Honorable House.

JOHN CHARLES LUCAS FITZPATRICK,  
Chairman.

*No. 1 Committee Room,  
Legislative Assembly,  
Sydney, 21st December, 1899.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 16 NOVEMBER, 1899.

MEMBERS PRESENT:—

Mr. Anderson,		Mr. E. M. Clark,
Mr. Dacey,		Mr. J. C. L. Fitzpatrick.

Mr. J. C. L. Fitzpatrick called to the Chair.

Entry from Votes and Proceedings appointing the Committee read by the Clerk.  
Committee deliberated.

Resolved (*on motion of Mr. Dacey*),—That the Chairman obtain the services of two medical practitioners to examine the man, William Creswell, with a view to their reporting to, and giving evidence before, the Committee.

[Adjourned till Thursday next, at 11 o'clock.]

THURSDAY, 23 NOVEMBER, 1899.

MEMBERS PRESENT:—

Mr. J. C. L. Fitzpatrick in the Chair.		
Mr. E. M. Clark,		Mr. Dacey,
		Mr. O'Connor.

Edward Priestman (*Accountant, City Mutual Life Association*) called in, sworn, and examined.  
Witness withdrew.

[Adjourned till Tuesday next, at 11 o'clock.]

TUESDAY, 28 NOVEMBER, 1899.

MEMBERS PRESENT:—

Mr. J. C. L. Fitzpatrick in the Chair.		
Mr. E. M. Clark,		Mr. Dacey,
Mr. Meagher,		Mr. Wilks.

Alfred Edwin Hellyer (*Record Clerk, Master-in-Lunacy's Office*) called in, sworn, and examined.  
Witness produced report of Drs. Fiaschi and MacCormack; also papers connected with the Creswell applications to the Supreme Court.

Witness withdrew.

Thomas James Pickburn (*Medical Practitioner*) called in, sworn, and examined.

Witness withdrew.

Henry William Devlin (*Medical Practitioner*) called in, sworn, and examined.

Room cleared; Committee deliberated.

[Adjourned till To-morrow, at 11 o'clock.]

WEDNESDAY, 29 NOVEMBER, 1899.

MEMBERS PRESENT:—

Mr. E. M. Clark,		Mr. Meagher,
		Mr. Wilks.

The Clerk read a telegram from the Chairman, intimating that he was unable to be present.

Mr. Wilks called to the Chair *pro tem*.

Edwin Godson, M.R.C.S. (*Medical Superintendent, Hospital for the Insane, Parramatta*), called in, sworn, and examined.

Witness withdrew.

Edward Priestman recalled and further examined.

Witness withdrew.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY,

THURSDAY, 7 DECEMBER, 1899.

MEMBERS PRESENT :—

Mr. J. C. L. Fitzpatrick in the Chair.  
Mr. E. M. Clark, | Mr. Dacey.

Edwin Godson recalled and further examined.  
Witness withdrew.  
Adjourned till Tuesday next, at 11 o'clock.

TUESDAY, 12 DECEMBER, 1899.

MEMBERS PRESENT :—

Mr. J. C. L. Fitzpatrick in the Chair.  
Mr. E. M. Clark, | Mr. Mcagher,  
Mr. Wilks.

John Richard Moore (*Acting Superintendent, Darlinghurst Receiving House*) called in, sworn, and examined.

Witness produced Registers 1871, 1872, Darlinghurst Receiving House.

Witness withdrew.

Harold Mapletoft Davis (*Licensed Surveyor*) called in, sworn, and examined.

Witness withdrew.

Luke Cullen called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Resolved (*on motion of Mr. E. M. Clark*),—That the Chairman obtain leave of the House for the Committee to visit Parramatta Hospital for the Insane, for the purpose of taking evidence in connection with the Inquiry, and that the Committee proceed by 9.25 a.m. train to Parramatta to-morrow.

[Adjourned till To-morrow at 9 o'clock.]

WEDNESDAY, 13 DECEMBER, 1899.

MEMBERS PRESENT :—

Mr. J. C. L. Fitzpatrick (Chairman).  
Mr. E. M. Clark, | Mr. Mcagher,  
Mr. Wilks.

Committee proceeded by train to Parramatta, thence to the Hospital for the Insane, and met in a room at that Institution.

MEMBERS PRESENT :—

Mr. J. C. L. Fitzpatrick in the Chair.  
Mr. E. M. Clark, | Mr. Meagher,  
Mr. Wilks.

The man known as Wm. Creswell having been brought into the room,—

Harold Mapletoft Davis further examined.

Luke Cullen further examined.

Wm. Algie (*Warder*) sworn and examined.

Witness withdrew.

The Committee having returned,—

Re-assembling to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 19 DECEMBER, 1899.

MEMBERS PRESENT :—

Mr. J. C. L. Fitzpatrick in the Chair.  
Mr. Anderson, | Mr. E. M. Clark.

William Ernest Forbes called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow, at 3 o'clock.]

WEDNESDAY, 20 DECEMBER, 1899.

MEMBERS PRESENT :—

Mr. J. C. L. Fitzpatrick in the Chair.  
Mr. E. M. Clark, | Mr. Meagher,  
Mr. O'Connor, | Mr. Wilks.

Alexander MacCormick (*Medical Practitioner*) called in, sworn, and examined.

Witness withdrew.

Committee deliberated.

Resolved (*on motion of Mr. Wilks*),—That the Chairman prepare a Draft Progress Report.

[Adjourned till To-morrow, at 2.30 o'clock.]

THURSDAY,

THURSDAY, 21 DECEMBER, 1899.

MEMBERS PRESENT:—

Mr. Anderson,		Mr. E. M. Clark,
Mr. Meagher,		Mr. O'Conor.

In the absence of the Chairman, Mr. Meagher called to the chair *pro. tem.*  
 Mr. E. M. Clark moved,—That Drs. Pickburn and Devlin be awarded the sum of £7 7s. each, under Standing Order No. 374, for examining the man William Creswell, and giving evidence, in accordance with the Committee's Resolution of 16th November, 1899.  
 Mr. Meagher submitted the Chairman's Draft Progress Report.  
 Same read and agreed to.  
 Chairman to report to the House.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

## CASE OF WILLIAM CRESWELL.

THURSDAY, 23 NOVEMBER, 1899.

Present:—

MR. E. M. CLARK, | MR. DACEY,  
MR. O'CONNOR.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

Edward Priestman, accountant, City Mutual Life Office, Hunter-street, Sydney, sworn and examined:—

1. *Chairman.*] I believe you visited the Parramatta Lunatic Asylum yesterday in company with Dr. E. Priestman, Pickburn and Dr. Devlin? Yes.
2. Did you there see the man who is referred to by this Committee as William Creswell? Yes; I have <sup>seen him twice before.</sup> 23 Nov., 1899.
3. I believe he is the man in connection with whose case this Committee was appointed? Yes.
4. And the man whom the doctors went to see? Yes.
5. *Mr. Dacey.*] Is the man whom the doctors examined reputed to be Sir Roger Tichborne? Yes.
6. *Mr. Clark.*] Do you allege that he is Sir Roger Tichborne? Yes.
7. And that is the man whom the doctors examined? Yes.
8. *Mr. O'Connor.*] Were you present during the whole of the examination by the doctors? Yes; for two and a half or three hours.
9. *Chairman.*] I believe you have taken an interest in this case for a number of years? Yes; for over five years. The very first day I saw him I was convinced he was Tichborne, on account of the family likeness.
10. *Mr. Clark.*] Did you know the family in England? Yes; I knew Tichborne's brother.
11. *Mr. Dacey.*] Were you personally acquainted with the family? Yes.
12. *Mr. Clark.*] I believe that in the course of five years you have gathered a great deal of information about the case? Yes; I will be able to give it to the Committee when they require it.
13. *Mr. Dacey.*] Have you any letters of the documents bearing on the case from England or elsewhere? Not from England. There have been so many resurrections in connection with the case during the last thirty years that the people at Home have got sick of it and cannot believe that there is anyone of the Tichborne family in the asylum. They tell me that if it is really proved that this man is Tichborne, England will be fairly staggered.
14. Were not the Tichborne estates settled by Act of Parliament so that this man can have no right to them? The Tichborne estates are settled on Sir Henry Tichborne to protect them against imposters, but the Doughty estates went into Chancery. I may mention, that if the man in the Asylum is proved to be Tichborne, he is Sir Roger Charles Doughty Tichborne. The present Sir Henry Tichborne is Sir Henry pure and simple. The man in the Asylum is the only one who can assume the title of Doughty. He amalgamates the Doughty estates in his own person. Failing proof that he is Tichborne, or the discovery of the real Tichborne, the estates go to another branch of the family.

- E. Priestman. 15. He would virtually be entitled to the Doughty estates under any circumstances? Undoubtedly; he is the only man who can amalgamate the two estates.
- 23 Nov., 1899. 16. Have you discovered, in the course of your inquiries, that if this man is really William Creswell, he is entitled to property at Home? We have information that Thos. Creswell swore in the witness box here in 1884, that he came here to find the brother who is entitled to an estate in England—a large farm worth £2,000 or £3,000.
17. *Chairman.*] As the result of your examination yesterday, have you seen any reason to change your opinion with regard to the identity of the man? Not in the slightest degree. I am more convinced than ever.
18. *Mr. Clarke.*] I suppose that you did not take part in the examination? No. I held up the man's sleeve that they might examine his arms.
19. *Chairman.*] I believe that during the greater part of the examination, Dr. Godson the Medical Superintendent of the Asylum was present? Yes; also a Mr. Wharf and another person whose name I do not know. There was also a warder present.

TUESDAY, 28 NOVEMBER, 1899.

Present:—

MR. E. M. CLARK,		MR. MEAGHER,
MR. DACEY,		MR. WILKS.
J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.		

Alfred Edwin Hellyer, Record Clerk, Master-in-Lunacy's Office, sworn and examined:—

- A. E. Hellyer. 20. *Chairman.*] I believe the Department with which you are connected has been called upon to produce some papers in connection with the case of William Creswell? Yes. I produce the report of Drs. Fiaschi and MacCormick. Creswell was admitted to the Parramatta Asylum on the 18th April, 1872. I may mention that Drs. Fiaschi and MacCormick made an examination of Creswell about eighteen months ago. I also produce the papers connected with the Creswell applications to the Supreme Court. The first application was made on 30th December, 1879. An order was made directing that Creswell might go to England upon Mr. Eckford giving a bond. Two men, I think, came here from England to remove him, but they were discredited; subsequently an application was made for his release as Orton. A further application was made about 1885, by Charles Orton, claiming Creswell as his brother.
- 21.—\*

Thomas James Pickburn, medical practitioner, sworn and examined:—

- T. J. Pickburn. 22. *Chairman.*] I believe you received instructions last week to visit the Parramatta Asylum for the purpose of examining a man named William Creswell? Yes.
23. Did you do so? Yes.
- 28 Nov., 1899. 24. Will you make a statement with reference to the matter? I was asked to reply to a list of questions which was submitted to me with reference to marks alleged to be on the body of this man, and to give my answers after making a careful examination on Wednesday, 21st November.
25. What length of time did you occupy in making the examination? About two or three hours. I was accompanied by Dr. Devlin, and made a careful examination so as to ascertain whether Creswell has certain marks and characteristics alleged to be identical with those on Roger Tichborne. I might state that in carrying out this somewhat tedious examination, no difficulties were experienced, so far as Creswell himself was concerned, for his behaviour was particularly quiet and docile; and when he once or twice exhibited a little impatience, a word from Mr. Edward Priestman had the effect of making him quite submissive, and ready to submit to any examination desired. The following are the questions submitted to me, along with my answers to the same:—
1. Is there a lancet cut for bleeding on the temporal artery? There are two faint linear scars directly over the temporal artery, just above the left auditory canal.
26. Where is the temporal artery? Close to the auditory canal.
2. Is there a slight blotch, about the size of a fourpenny piece, on the front of the left wrist, or any mark indicating the obliteration of such? No blotch on the front of the left wrist, but a linear scar over the radial artery, half an inch long.
  3. Do Creswell's ears correspond with the description of Roger Tichborne's, as follows:—"Ears not matches, the left being lobelless, the right having a normal lobe"? The right ear has a large pendant lobe, and the left none. The ears are not matches, the right ear being much larger altogether, and measures  $3\frac{1}{2}$  inches vertically, while the left is only  $2\frac{1}{2}$  inches, and is smaller transversely.
  4. Has he large grey-blue eyes, with a pensive expression? Yes, as to large grey-blue eyes; expression more vacant than pensive; sometimes watchful and suspicious.
  5. Has he an ample but flat forehead, with bushy eyebrows? The forehead is ample, but not particularly flat; the eyebrows are decidedly bushy.
  6. Does Creswell limp at all when walking? Yes, a little, at times, when walking; the limp being apparently due to some marked bowing of the right leg, causing a slight shortening of that limb.
  7. Has he the habit of twitching or raising the eyebrows? Yes.
  8. Has he any mark on the eyelids which could have been caused by the insertion of a fish-hook? Was satisfied that there is a small roundish scar on the right upper eyelid, and might have been so caused.
  9. Are there the remains of an issue-mark on Creswell's left upper arm? There is a small white scar, slightly depressed, on the left upper arm, near the vaccination marks, and could have been due to an issue.
- 10.

\* Question and answer expunged by order of the Committee.

T. J.  
Pickburn.  
28 Nov., 1899.

10. Are there lancet cuts for bleeding on both arms; and, if so, how many on each? Yes; at the bend of the *left* arm there is the faint scar of a puncture directly over the vein; at the *right* bend there are two scars, one directly over and in a line with the vein, and another linear scar in a line with the vein, but a little ( $\frac{1}{4}$ -inch) to one side of it.
11. Are there lancet cuts for bleeding on the ankles? Unable to find any, but it is possible that, after the lapse of so many (fifty) years, and the friction and exposure to which the feet are subjected, the smaller punctures made in bleeding would become too faint and indistinct to discern.
12. Are there any tattoo-marks on Creswell's left arm, or marks indicating the obliteration of such by cauterization? There are *no* tattoo-marks whatever on the arms. There is a large puckered elliptical scar on the back of the left hand and wrist, which is nearly 3 inches in length, and about 1 inch wide at its broadest central part.
13. Could such scar have been caused by cauterization? Any powerful caustic or acid, causing great destruction of skin, might result in a similar scar.
14. Is there a "lump" on his right instep? There is no abnormal "lump," but the tarsal end of the metatarsal bone of the right great toe is more pronounced and thickened than the left. This is a fairly common appearance on both insteps, especially the right, and in Creswell's case, the lumps are, no doubt, due to traumatism; the right foot, being naturally more exposed to injuries, would have the larger lump.
15. Are the feet of equal length, and what is the length of each foot? The difference in length between the two feet is very slight; the left foot (raised) is 10 inches; pressed on the ground half an inch longer ( $10\frac{1}{2}$ ); the right foot (raised) measures  $10\frac{1}{4}$  inches; pressed on the ground, the same as the left ( $10\frac{1}{2}$  inches); but time and mode of life must have a marked effect on the measurements of the feet.
16. What is Creswell's height? His height, measured in his socks, is 5 ft.  $6\frac{1}{2}$  in. Creswell no longer holds himself erect, and the progressive stooping of the head and shoulders would readily account for much decrease in height, even of an inch, or two inches, during the last ten or fifteen years.
17. Has Creswell a dent in the back of his head, just behind the left ear? Yes; but it is a natural depression, and can be found behind both ears; it is most marked on the left side.
18. Is there a strong resemblance between Creswell and the likeness of Sir James Tichborne, Roger's father? Could not see the slightest resemblance.
19. Has Creswell a dent in the centre of the eyebrow? Could not find any dent in the centre of the eyebrows, only the natural notches (supra-orbital) on the inner side of both brows.
20. Has Creswell a small wound, healed over, on the top of the third finger of the right hand? Could see nothing definite.

I may remark that Creswell's answers were given perfectly quietly, and without any resistance. Once or twice he seemed to be a bit tired of it, but that was all. I may state that when he sat on a chair, he sat in the way which has often been described—"he sat on the side of a chair, with his right arm thrown over the back of it."

27. I believe that is a peculiarity which has been attributed to Tichborne himself? I have read so.
28. Did you arrive at any conclusion as to Creswell's mental condition? I should say there is no doubt that he is hopelessly insane. He is in a state of chronic dementia, and always will be. Whether he is or is not harmless, I cannot say. He was, however, perfectly quiet whilst we were there. The only persons who could give evidence as to whether he is or is not harmless would be those who have had opportunities of continually watching him.
29. *Mr. Wilks.*] Did he express any desire to know the object of your inspection? No; I do not think he took the slightest interest in it. He seemed tired of it. It seemed to bore him, and he was anxious to get away.
30. You have stated that his height is a  $\frac{1}{4}$  of an inch less than it was on a former occasion when he was examined? Yes. He has shrunk a  $\frac{1}{4}$  of an inch since he was examined by Drs. Fiaschi and McCormack about two years ago.
31. I suppose that is a thing which is quite possible to occur? Yes; I should imagine that in another year he will be a  $\frac{1}{2}$  of an inch shorter still.
32. What is the difference between the measurement of Tichborne and of this man? I think that when Tichborne was a young man his height was 5 ft.  $8\frac{1}{2}$  in.
33. I suppose it is a general feature of all men that they shrink in stature as they grow older? Yes. Of course we are all taller in the morning than we are in the evening. The cartilages between the spine extend whilst we are lying down, and throughout the day they collapse a little.
34. *Mr. Meagher.*] I suppose you had the result of Drs. Fiaschi and McCormack before you when you made your examination? Yes.
35. With regard to the marks on the temporal artery;—as a result of their investigation they say "there are no lancet cuts for bleeding over the situation of the temporal artery"? Yes.
36. Is it possible that they might have laboured under the misapprehension under which many people labour in regard to the situation of the temporal artery? I should say that they would not. I may mention that the marks were distinct, and they were verified when we enlarged them by means of a magnifying glass. The arteries are very easy to see, because they are in a state of disease. They are hard and large, like whipcord.
37. Drs. Fiaschi and McCormack stated that they found no more marks on the eye-lid suggestive of injury by means of a fishhook? That is so. We looked at the eyelids very carefully. We cannot say what the mark was originally. There might have been a pustule there which has left the little scar.
38. Is it possible that that mark might have been due to an injury caused by a fishhook? It is quite possible. Of an injury, sustained thirty or forty years ago, there would be very little left.
39. I believe that the injury occurred fifty years ago? That is so. You can see a scar there, and you can also notice that the skin is a little thinner, because it is scar tissue.
40. Did you notice any appearance of Creswell being in-kneed? No; on the contrary, he is bow-legged. His right leg is bowed out. That makes one leg a little shorter than the other. I understand that during his time he has been a good deal on horseback.

T. J. Pickburn. 41. In view of the man's age and condition, there is no doubt that a shrinkage of his stature would be possible? Yes; the fact exists that he has shrunk a quarter of an inch since the last measurement. He was 5 ft. 7 in. when Drs. MacCormick and Fiaschi examined him two years ago, and since that time he has shrunk a quarter of an inch.

28 Nov., 1899. 42. *Mr. Wilks*] In what part of the day did you make the examination? In the middle of the day.

43. Do you know during what part of the day the other doctors examined him? No. If they examined him immediately after he had been in bed for eight hours it would make a difference.

44. *Chairman*.] In addition to yourself and Dr. Devlin, I believe that Dr. Godson, the Medical Superintendent, was present at the time of the examination? Yes, and he rendered us every assistance.

Henry William Devlin, medical practitioner, North Sydney, sworn and examined:—

H. W. Devlin. 45. *Chairman*.] Have you any evidence to offer? Yes; in conjunction with Dr. Pickburn I made an examination of William Creswell, at the Parramatta Lunatic Asylum, on Wednesday last.

28 Nov., 1899. 46. I believe your examination occupied a considerable length of time? About two and a half hours. I was asked to answer the following questions, to which my answers are attached:—

1. Is there a lancet-cut for bleeding on the temporal artery? Yes, two linear cicatrices (scars) directly over temporal artery, close to left auditory canal.

2. Is there a slight blotch, about size of fourpenny-piece, on the front of left wrist, or any mark indicating the obliteration of such? No blotch, but a linear mark half inch long, over radial artery.

3. Do Creswell's ears correspond with the description of Roger Tichborne's, as follows:—Ears, not matches; the left ear lobeless, the right ear having a normal lobe? Yes, perfectly. Right ear, 3½ inches length; left, 2¾ inches.

4. Has he large blue eyes with a pensive expression? Striking large grey-blue eyes, occasionally pensive.

5. Has he an ample, but flat, forehead, with bushy eyebrows? Ample forehead, not specially flat. Eyebrows very bushy.

6. Does Creswell limp at all when walking? Yes, slightly; the limp being apparently due to bowing, causing shortening of leg.

7. Has he the habit of twitching or raising eyebrows? Yes, in a marked degree.

8. Has he any marks on the eyelid which could have been caused by the insertion of a fish-hook? Yes; mark on right upper eyelid could have been so caused.

9. Is there the remains of an issue-mark on Creswell's left upper arm? Yes; small amorphous white scar near vaccination marks, probably resulting from issue.

10. Are there any cuts for bleeding on both arms, and, if so, how many on each? Yes; one on left arm, two on right. One of two on right directly over cephalic veins; the other just beside it. At the bend of left arm there is a faint scar of a puncture over the vein.

11. Are there any lancet-cuts for bleeding on ankles? Not visible.

12. Are there any tattoo-marks on Creswell's left arm, or any marks indicating the obliteration of such by cautery? No tattoo-marks; large puckered scar over the back of wrist, 3 inches long and over 1 in breadth in centre.

13. Could such scar have been caused by cautery? Yes.

14. Is there a lump on his right instep? Yes; lump on both insteps, more marked on right.

15. Are the feet of equal length, and what is length of each foot? Equal length horizontally, both being 10½ inches. Perpendicularly, or as taken by a shoemaker—right, 10½; left, 10 inches.

16. What is Creswell's height? Five feet 6¾ inches in socks.

17. Has Creswell a dent in the back of his head, just behind the ear? Yes; behind both ears, especially left.

18. Is there a strong resemblance between Creswell and the likeness of Sir James Tichborne—Roger's father? Cannot see any.

19. Has Creswell a dent in centre of eyebrow? Yes; in both, more marked in right.

20. Has Creswell a small wound, healed over, in the top of the third finger of right hand? Nothing definite.

21. How did Creswell behave in room? He seemed inclined to resent the examination; but on Mr. Priestman informing him it was for his good, he was very quiet and submissive throughout.

22. Could cuts on ankles have become obliterated? Yes; the length of time (fifty years), the exposure the feet are subject to, the friction from boots, would all tend to obliterate lancet-cuts.

23. Did Creswell volunteer any information re scars on front of arm? Understood Creswell to say that the one who removed blotch near the radial artery removed the other.

I could not say whether he meant the other scar on the wrist or the one on the back of his hand. Dr. Pickburn thought he referred to the one on the wrist.

47. *Mr. Meagher*.] Did you know at that time that Creswell had made a statement to a medical gentleman some years before, stating the cause of those removals? No; but Mr. Priestman, who was present, drew my attention to what he said.

48. *Mr. Wilks*.] He did not give any details with regard to the removal? No; he said that the person who removed the one removed the other. There were several cuts and scars on the wrist, one of which did not resemble an ordinary scar; it was something like a blotch, and he said that the man who removed that removed the other.

49. In what manner could he have removed it? By cutting a piece of skin out elliptically. I may mention that in the case of birth-marks we now, instead of burning them out, make an elliptical incision, and draw the parts together!

50. How do you suppose a mark would have been removed at the time in question? Most likely by acid.

51. Would that leave a blotch? It would leave a scar.

52. In your opinion surgical aid would be required to remove it? I think so. Of course a man with very little medical knowledge could do it. I have seen acid put on a birth-mark, and it has become white, and has shrivelled up.

53. What would be the object of removing a scar like that? If there had been a tattoo-mark, it might have been removed with the object of concealing identity. If it had been a birth-mark, it might have been removed with the object of getting rid of disfigurement.

54. *Chairman.*] Still it would be competent for a man with an object to serve to remove a tattoo-mark ;— is there any reason to believe that the mark that you found on his arm was not produced by that means? The front mark, I should think, was produced by that means, and the back ones possibly so.

55. The tattoo-mark, as a matter of fact, was on the back of the arm;—it is scarcely likely that it would be on the fore-arm? No, because the chief arteries are there, and in tattooing you would have to take great care that you did not injure them, and cause the dye to affect them.

56. *Mr. Wilks.*] Have you any knowledge as to how tattooing was carried out about that period? No.

57. Is there any scientific method of tattooing elsewhere than that which is adopted in Russia? Yes; a man whom I examined the other day in connection with a life office had a tattoo-mark upon him. It almost looked like an impression from his clothes. I asked him what it was, and he said, "I am hardly at liberty to explain, but it is the mark of a secret society in America where we are all tattooed." It was scientifically and neatly done.

58. *Mr. Meagher.*] Have you seen what are termed the "bracelets"—a tattoo-mark which goes right round the wrist? Yes; it is quite possible to do that sort of thing. It would require no scientific knowledge to do that, because a man, as a rule, would not know the danger he was incurring. On the other hand, he would probably take precautions in regard to the dye. Things which are dangerous are often done without bad results following.

24. Will the doctors state, in replying to the question as to Creswell's height, if it is probable that Creswell has shrunk; in fact, has every appearance of having shrunk fully from  $1\frac{1}{2}$  inch to 2 inches during the last ten or fifteen years, having become considerably bent, &c.? It is probable that Creswell has decreased in height to the extent in question owing to age and stooping.

25. Will the doctors state how Creswell, during most of the time he was seated, sat sideways on the chair, with one arm thrown over the back of the chair, a marked characteristic of Roger Tichborne? This characteristic was distinctly noticed.

26. Can the doctors say that he mumbled a good deal to himself (another marked characteristic of R.C.T.)? Yes.

27. Is it not usually the case that a small lump is common on the instep of the left foot with many people;—in the case of Creswell it is on the right foot (this is where it was on R.C.T.)? Not aware of lump showing preference as a rule for either foot. In Creswell's case much more marked on right.

I have seen two or three shoemakers, and they say that the lump has no preference for either foot. It sometimes occurs on the right and sometimes on the left foot, and it occurs about once in thirty people.

28. Can the doctors state that though Creswell is eccentric he is harmless to all appearances? To all appearances he is harmless, but could not definitely state, having but limited opportunities of observing him.

My answers are practically the same as those of Dr. Pickburn.

59. *Mr. Wilks.*] With regard to the mark on the right eye, do you think it could be occasioned by a pustule? I do not think so, because there was a mark and a counter-mark. It appeared as though something had gone through the eyelid whilst it was in a folded state. When it was unfolded you could see two marks.

60. Could that have been caused by a fish-hook? It might have been. Of course it is a long time since it occurred, but it is fairly distinct under the glass.

61. You have stated that Creswell had a pensive look about him;—do you think it is possible for an insane man to look pensive for any length of time? Yes. I may state the attendants said he was brighter than usual on account of the excitement. Mr. Priestman brought him some tobacco and other things.

62. You state that he mumbled to himself;—is that a characteristic amongst insane people? Yes; it is a common characteristic.

63. Is it looked upon at times as a sign of insanity? To some extent it is.

64. Is the mere fact of a man being for twenty-nine years in a lunatic asylum calculated to deprive him of what little reason he possessed when he went in? Yes; I do not think many would have stood the ordeal.

65. What impression did you form of Creswell as a man? He is a most remarkable looking man. You could never forget him if you saw him. He has aristocratic looking features—altogether out of the common, and his manner is quiet and gentlemanly. As a rule, men who are educated up to a certain standard lose all that sort of thing when they become partially insane, but he seems to have preserved it to a great extent.

66. *Mr. Wilks.*] Did he evince any interest in your examination? Very slight. When Mr. Priestman said that we were his friends, he raised his eyebrows in an extraordinary fashion. Mr. Priestman asked him to shake hands with us, but he would not do so. Mr. Priestman also asked him to be quiet, and to do what he was told, and he was quiet.

67. Do you consider him to be hopelessly insane? I should say he is a lunatic; but I did not see very much of him. I remember a patient of mine being in an asylum for six or seven years, and a year before he died he became quite sane.

68. *Mr. E. M. Clark.*] Do you look upon him as a dangerous lunatic? He seemed very harmless when we saw him.

69. *Chairman.*] Dr. Godson, I believe, made a remark to the effect that Creswell was particularly quiet and docile that morning? Yes. He also said that whether he was or was not Tichborne, he was no ordinary man. He stated that he was noted for his cleanly habits. He also stated, "This man is passionately fond of tobacco. The other inmates who are fond of tobacco will beg, borrow, or steal it, but Creswell will never get it in an underhand way. If he cannot get it in a proper fashion he will go without it."

70. *Mr. Wilks.*] Did you form an impression that he is a man who has had the advantage of a good early training? Yes; and even more than that because some men who have had a good training lose all the effect of it when they become demented.

71. Did you form the impression that he was a man with a refined mind? Yes.

72. *Mr. Meagher.*] Can you understand how a medical man, looking at the temporal artery for scars, could possibly miss seeing them if they were there? I think I could explain that matter very satisfactorily. The temporal artery runs a great distance. It branches across the temple on the side of the head.

H. W.  
Devlin.  
28 Nov., 1899.

H. W.  
Devlin.  
28 Nov., 1899.

head. When we examined the man Dr. Pickburn looked at the artery over the temple, and I looked at it below. I remember an instance in which two doctors asserted, at first, that the temporal artery ran across the forehead, but, on thinking over the matter, they said it also ran up the side.

73. Is the portion of the temporal artery where the scars were found in any way obscured by hair? I think there is a little hair. I can easily understand that the anterior branch of the temporal artery, which crosses the temple, was what was examined on a former occasion.

74. *Mr. Wilks.*] Probably the doctors did not follow out its ramifications? I have no doubt they did, but the main artery may have been neglected. They examined the portion crossing the temple. I may mention that our examination lasted for two and a half hours, and Dr. Godson told me that the former examination lasted for only one hour.

75. *Mr. Meagher.*] I suppose that, in making a full investigation, you would naturally examine the whole of the surface which was traversed by the temporal artery? —

76. *Chairman.*] As a matter of fact, being unable to discover a mark immediately over the temple, you would follow the artery down until it reached the main trunk from which it sprung? Yes; we looked about a good deal on both sides, and then saw the mark. I may state that upon one occasion I saw a man bled at that particular spot, and I had that in my mind when making the examination.

77. *Mr. Meagher.*] Were these scars or marks visible without the magnifying glass? Yes; it is necessary to look minutely, but still they are visible to the naked eye.

78. With regard to the scar on the wrist: under the microscope would there be any distinction between a wound that has been healed and a birthmark, or any other mark, which has been obliterated by the aid of acid? I do not think there would be in this case, because there was great destruction of tissue underneath. I should say that when it was done a large area was scooped out by means of operation or cautery. That would granulate upwards from the bottom, and, under the microscope, would not show any difference.

79. In notice that Drs. Fiaschi and MacCormick, who examined the scar about which you have been speaking, said, in their report, dated 26th November, 1897:—

There is a broad scar on the back of left hand and wrist. This, Creswell told us, was cut by a butcher's crop, and was treated in St. Mary's Hospital. There is another linear scar on the inside of left wrist, done by a knife, the result of a kick by a sheep whilst slaughtering it. This occurred at Tumut. These scars can be accounted in the manner described by Creswell to Sir William Manning.

Do you prefer to accept Creswell's explanation of this matter rather than the theory that the injury was the result of burning out by means of acid? I would rather accept the theory that it was burnt out by means of acid. It would be impossible for an uncomplicated crop injury to do it.

80. *Mr. Wilks.*] Did Creswell attempt to be communicative with regard to his scars? No.

WEDNESDAY, 29 NOVEMBER, 1899.

Present:—

MR. MEAGHER.

MR. E. M. CLARK.

W. H. WILKS, ESQ., IN THE CHAIR.

Edwin Godson, M.R.C.S., sworn and examined:—

E. Godson,  
M.R.C.S.  
29 Nov., 1899.

81. *Chairman.*] What are you? Medical Superintendent of the Hospital for Insane, Parramatta.

82. Would you care to make a statement, or would you prefer to answer a series of questions? I shall be glad to answer any questions that may be asked. Of course, I look upon Creswell as one of my ordinary patients.

83. *Mr. Clark.*] How long have you been Medical Superintendent there? I have been Medical Superintendent sixteen years, but I have been in the institution eighteen years.

84. *Chairman.*] Were you present at the last medical examination of Creswell? Yes.

85. And you witnessed the general behaviour of Creswell? Yes.

86. Did he exhibit then, or at any previous time, anything that would show that he was any other person than Creswell? Well, I have always looked upon him as Creswell. I do not know of anything in his general bearing that would lead me to believe otherwise. I have no opinion at all as to the identity of the man. He is there the same as any one else, and I identify him as Creswell.

87. Were you present at the previous inquiry conducted by Dr. Fiaschi and Dr. MacCormick? Yes.

88. Will you inform the Committee what was your impression in regard to the examinations—which was the more searching? The latter one—the one made by Dr. Pickburn and Dr. Devlin—was longer, but I do not say more searching.

89. *Mr. Clark.*] How long did the last examination take? From about half-past 10 until 1 o'clock.

90. And how long did the previous one take? I suppose an hour and a half.

91. We have evidence to the effect that it took about a quarter of an hour? That is altogether wrong. They were certainly there for fully an hour.

92. We also have it in evidence that Creswell was in the habit of muttering;—is not that common with general patients? No; but certain classes of patients often mutter to themselves.

93. There seems to be a diversity of opinion in regard to the scar on the temporal artery; Dr. Fiaschi and Dr. MacCormick failed to detect it, and the reason given is that they did not follow the ramifications of the temporal artery;—have you observed that scar? Well, I have not seen it recently. I examined the patient some years ago, and everything that was found was entered in the case-book? Whether that is entered, amongst other things, I could not tell.

94. They say that the scar on the temporal artery is very plain to the naked eye? I do not think it could be very plain when Dr. Fiaschi and Dr. MacCormick did not see it. I have here an extract from the case-book. It does not say anything about the scar over the temporal artery. According to this entry, there certainly is a very slight linear scar  $1\frac{1}{2}$  inches long below the outer canthus of the right eye. That will be a branch of the temporal artery.

95. *Mr. Meagher.*] When was that report made that you are reading from the case-book? The 22nd January, 1896.

96. I suppose there have been descriptions before that of the patient and his peculiarities? Yes; the records go back to 1879.

97. Is that scar remarked in all the reports? No; it is not in any of the previous records.
98. It does not appear to have been noticed until 1896? No. That mark may have been got at the hospital.
99. Did you notice any tattoo marks on him? No.
100. If there had been any, could they have been removed by any process? They probably could have been removed.
101. Would that leave a blotch? It would leave a cicatrix.
102. *Mr. Clark.*] Do you know whether there is a scar, blotch, or a mark on the wrist? There is a cicatrix on both sides of the wrist.
103. *Chairman.*] Which could have resulted from the removal of tattoo marks? It is possible to give a clear account of that. He said he got it by cutting something with a butcher's instruments. Whilst he was going through some butchering operations the instrument slipped, and he got a wound on the back of the arm. He was attended to by a well-known surgeon at St. Thomas' Hospital in London. There was a good deal of suppuration, and they made a counter opening on the front of the wrist. That explanation is quite feasible.
104. He is very coherent then in regard to his explanation? Yes; he never varies.
105. Does he display any annoyance during these inspections? Sometimes he gets a little impatient.
106. Does he show any inquisitiveness—does he ask the reason for these inquiries? No; he never asks about anything as long as he gets a bit of tobacco.
107. Something has been said about his having a peculiar pensive expression in his eyes? He has eyes of a peculiar blue—eyes which would draw anybody's attention.
108. His general bearing would lead you to believe that he has had a good early training? There is no doubt that there is something peculiar about his general bearing. He is different from the majority of them. He keeps to himself a great deal.
109. He is very reserved? Yes.
110. What are the peculiar characteristics that you have noticed? He keeps to himself, never associates with the others, is always clean and tidy and smart looking.
111. He is scrupulously clean? Yes.
112. Is he at all communicative? Not at all; he is very reserved.
113. Is he reserved with the officials? I do not think he speaks to them at all. He has been thirty years in the place. Years ago he was more communicative than he is now. I often speak to him, but he never answers me.
114. We have discovered that there is a difference of a quarter of an inch between his height at the time of the examination two years ago and his height at the recent examination;—is a decrease in height a common thing? Yes; it often happens. People become doubled up with age and the shrinking of cartilage.
115. Do you think it would be possible to decrease by 2 inches in stature in a life-time? I should hardly think so.
116. What would be the difference in an interval of fifty years; there is a difference between the supposed measurement of Tichborne and that of this man of something like  $1\frac{1}{2}$  inch;—is it possible for that to occur? It is rather difficult to say. It may be possible, but I cannot think it probable.
117. *Mr. E. M. Clark.*] Have you Creswell's height when he was originally admitted to the asylum? I think so. He was admitted to Gladesville before he went to Parramatta.
118. *Chairman.*] You would give a general description of him when he entered the hospital? The description given is very vague. There is an entry dated 28th December, 1882. It says:—

This patient was interviewed to-day, by order of the Colonial Secretary, by Messrs. Eckford, M.L.A., and two gentlemen introduced as Messrs. Daniel P. Spaul and Charles Webb. Mr. Wharf was also present during the early part of the interview. Mr. Spaul (the smaller man) put many questions to Creswell, appearing to bear upon life at Wopping; but Creswell gave no reply or rational answers that could be interpreted to mean anything; indeed Mr. Spaul spoke so low and appeared so deaf that very little could be expected from such a conversation. Creswell was frequently pressed by myself and others to state whether he knew Mr. Spaul, and to mention his name if he did know him; but he gave no reply. Creswell's talk was rambling, incoherent, and low in tone, and only when asked to accept anything, as rum and tobacco, did he make anything like a rational or outspoken statement. He sat staring at Mr. Spaul, and muttering to himself, and asked Mr. Spaul when he would come again to see him, as he had been promised something nice if they came again.

There is also the following entry, dated July, 1884:—

By direction of the Inspector-General of the Insane, a most careful examination was made towards the latter end of this month of William Creswell's person, paying particular attention to all marks that might be found on his body. This examination was conducted by both the Medical Superintendent and Assistant Medical Officer, which the signatures will testify. The left hand was first examined. On the ring finger was found a small arrow shaped cicatrix, between the second and third fingers was found a cicatrix on the web, and a scar was visible on the web between the thumb and forefinger, and also at the base of the forefinger. The ends of the fingers were normal. A large scar was found on the back of the hand, and measured  $2\frac{1}{2}$  inches long, while one of an inch in length was present over the inferior surface on the ulnar side of the wrist, and like an arrow in shape. A slight scar was also found on the middle third anterior surface of ulnar side of arm (left). On the right arm there are two vaccination marks, one of which is indistinct. On the right wrist there is an indistinct scar; on the ulnar anterior aspect of the wrist was a very slight mark on the internal aspect of the thumb. Ditto on forefinger, very slight, and a mark over the knuckle of the right ring-finger. On the right hand the finger ends are quite normal. The right cheek is pitted with skin vascular. The ears are of large size, while the lobes are not pierced. The left cheek is also pitted, and no tattoo marks of any description can be found on his arms. There is a slight warty growth at the back of the shoulder blades; no marks on back, sides, or armpits. The right leg shows slight exotosis over the instep of the big toe; but no marks on the right leg or thigh. There is no mark between the scrotum and anus. The testicles are both normal; no marks are found on the left thigh or left leg. No marks of any kind are found on the head, and no tattoo marks of any kind on any part of the body.

E. GODSON,  
Medical Superintendent.

119. The nature of his insanity is chronic dementia? Yes.
120. I suppose he is perfectly harmless? Yes.
121. Has he ever spoken in the French language at all? He has never showed the slightest knowledge of French.
122. Are his ears at all peculiar? One is different from the other. One is a perfect lobe, and the other is lobular.
123. Is one larger than the other? Yes.
124. Is that a common occurrence? Yes; you find hands and feet one larger than the other, and it is the same with the ears.
125. We have received information that there is  $\frac{1}{2}$  an inch difference between the ears;—if that is so, would it not be very apparent? Yes.

- E. Godson,  
M.R.C.S.  
29 Nov., 1899.
126. The right ear is  $3\frac{1}{2}$  inches, and the left  $2\frac{1}{2}$  inches;—that would be a very marked difference? Yes, very marked.
127. *Mr. Meagher.*] The mark on the temporal artery would be close to the auditory canal;—that is used for bleeding purposes, is it not? I suppose that any portion of the temporal artery could be.
128. It has been stated that Sir Roger Tichborne had been bled, and that there is a cut on the temporal artery caused by a surgeon bleeding him at Canterbury; you would naturally look in that direction to see if there were any signs of his having been bled;—do you say that no discovery was made before 1854? There was no record of it.
129. Does the mark there give you any indication that there has been a puncture made at a remote period? I forgot the mark. I have not examined the head for some time. It evidently is not a very conspicuous mark.
130. This examination would be conducted with the aid of a lens, but Drs. Pickburn and Devlin say that they do not require the aid of a lens to see this mark, and they refer to it as an old scar;—can you understand how, after careful examination only five years before, Drs. Fiaschi and MacCormick failed to find it? It was scarcely five years.
131. Can you give any rational explanation of these doctors stating that they found lancet cuts for bleeding on the situation of the temporal artery in 1899, and two other highly reputable medical gentlemen, who examined the patient two years before, saying that they could not discover those marks? They must be there. If present now it must have been there when Drs. Fiaschi and MacCormick examined the man. I cannot understand how they could have missed them.
132. The marks were there, apparently, some twelve years before they came to examine the man;—they were there, according to the records of the asylum, in 1884? Yes.
133. Of course, you know that Dr. Fiaschi and MacCormick were appointed by the Court to make the examination in consequence of an application to take this man to England? Yes.
134. Did they, to your knowledge, have access to the books of the asylum in regard to the description of the marks? No; I do not think they saw the book.
135. You have been there for eighteen years? Yes.
136. Do you know, as a matter of fact, that extracts from those books were furnished to the Court, giving the marks on the patient? Yes.
137. That, as a matter of fact, this report of 1884, containing the description of the mark, was before the Court? Yes; I know there was an extract taken.
138. It had been stated that the original Roger Tichborne had received an injury in the eye from a fish-hook;—have you noticed that on this man Creswell? There is no mention of it. When I examined him I had no list of things to find. Had I been supplied with the list I should have looked for the things referred to. I simply examined him as I would any ordinary patient.
139. He is without doubt the most noted patient that you have there? He has been notorious.
140. I do not suppose that any other patient has had the same amount of newspaper space devoted to him, and I suppose you take some interest in him? I take an interest in him as a patient; but not any more than I did in any of the other inmates.
141. Was it not known all the world over that there were certain scars on the body of Roger Tichborne? Yes.
142. Was not one of the scars, apart from the tattoo marks, a mark on the eyelid, caused by a fish-hook? Yes; I know that now, but I did not know it before. Had I known it when you sent for me I should have examined him in reference to these specific marks.
143. You say the reason why you have not seen that mark is that you had no specific question to answer? I do not say that the mark is not there; but I do not recollect it.
144. If you had had a specific question asked of you, you would have been in a better position to answer; in 1897 Dr. Fiaschi and Dr. MacCormick had that specific question put to them as to whether there was a mark on the eyelid suggestive of injury by a fish-hook, and the answer was, "We find no mark"? Yes.
145. Can you account in 1899 for these other two medical gentlemen having the same question put to them as to any mark on the eyelid which could have been caused by the insertion of a fish-hook, and answering, "Yes; there is a small rounded scar on the right upper eyelid, which might have been so caused"? He could not have had a fish-hook in his eye since; but some injury might have been done to his eyelid in the meantime.
146. Do you think those two gentlemen looking for this old scar would be on their guard against any recent one? You would suppose so.
147. Can you account for the discovery of the scar two years afterwards by those two doctors? No; I have no explanation to offer.
148. Dr. Devlin explains that the injury might have been done by a fish-hook, there being two marks as if the eyelid had been folded? Yes.
149. Did you ever examine the mouth of this man? Not internally.
150. Have you noted stunted nails on the right hand of this patient? I believe that one of his thumb-nails is peculiar.
151. About the tattoo-mark alleged to have been removed: Dr. Devlin and Dr. Pickburn say it is quite possible that the mark on the inside of the wrist may have been caused by some acid used to remove such a mark; the patient has also given an explanation to you;—in your opinion, which explanation is the more probable one? The explanation which Creswell gave. I have never doubted it for a minute.
152. In the first place, it would be rather a delicate place for tattooing, and still more delicate for removing the tattoo with acid? Yes, very dangerous indeed.
153. *Chairman.*] According to the evidence, you found that Creswell was particularly docile at the last examination? Yes.
154. And you passed an opinion to that effect to the visiting doctors? Yes; I remember making the remark.
155. You say he is of a reserved nature? Yes.
156. Very fond of smoking? Yes.
157. But he will not attempt to obtain tobacco by surreptitious means; he would go without rather than take it out of another man's pocket? I think he would.
158. *Mr. Clark.*] Did you notice the peculiar manner in which he sat on a chair whilst going through the examination—a manner that is said to have been a peculiarity of Tichborne? Yes; but that is a very common attitude.

159. *Chairman.*] In regard to his walk, does he limp? I never noticed him limp. I have seen nothing very peculiar in his walk.

160. Are his legs bowed at all? I do not think so. I will examine him. I should not like to commit myself to definite answers without doing so.

E. Godson,  
M.R.C.S.  
29 Nov., 1893.

Edward Priestman recalled and further examined:—

161. *Chairman.*] Have you a further statement that you wish to make to the Committee? Yes; a written statement, which I will read. It is as follows:—During the five years in which I have fought for justice for Creswell, or rather Roger Tichborne (whom I am absolutely convinced Creswell really is), I have, I feel sure, carried the good wishes of all right-thinking men as regards the efforts I have made in furtherance of the end I wish to attain. When I visited the Parramatta Asylum five years ago I went there purely to satisfy myself by close observation that there was really some truth, or foundation of truth, in the theory that Creswell was in reality Roger Tichborne. In less than ten minutes I was satisfied on the point of identity. The family likeness is striking—the large light-blue eyes, the marvellous twitching of the eyebrows, the slight limp noticeable in the walk, all tended to assure me at this early stage; but when I looked closer and saw the mark of the fish-hook through the eyelid, the odd ears, the cut on the temporal artery, the lump on the instep, and last and not least, the air of mystery innate in the man, I was confirmed in my belief absolutely. The marks and peculiarities enumerated above, I have sworn to; and it may be better imagined than described what my sensations were when most of these marks and peculiarities were refuted by eminent medical men such as Drs. Fiaschi and MacCormick, and the publication of whose evidence rendered me an object of derision, if not worse. To remove this impression has since been the object of my life. I felt certain that, could I obtain a Select Committee of Parliament, the wrong which I considered I had received would be righted. That this is in a fair way of being accomplished, I feel certain, and I wish to tender my most heartfelt thanks to Mr. Fitzpatrick and several other Honorable Members for what they have done. During my long fight, I have discovered much that may be of interest. In the first place, Dr. Manning and several others assert that Creswell is Creswell pure and simple, and that he was proved so in Court before the late Sir William Manning in 1884. If the gentlemen present will turn to the book I lately wrote on the Tichborne case and read part vi, they will find that this latter assertion is not true, and that Creswell really went back to the Asylum from the Court without a name. This will be more fully realised if the Committee will cause the papers in the Equity Court connected with the 1884 movement to be laid before them. I understand that the Medical Superintendent at the Parramatta Asylum has been in communication with the alleged Creswells, brother and sister, up to the time of both their deaths—the brother having died some ten or twelve years ago, the sister more recently. Inquiries have been rigidly instituted by a friend of mine in London, on whom I can thoroughly rely, and he informs me that the remaining survivors of the Creswell family have very hazy ideas about any relationship with the Parramatta patient. When the late Mr. Justice Manning expressed himself in Court in 1897 as being absolutely satisfied that the Parramatta patient was in reality Wm. Creswell, of Strathfieldsaye, I at once wrote to a gentleman friend of mine in London, and asked him to procure for me, from the sole surviving son of the Thomas Creswell who was out here in 1884, a power of attorney to procure the release into my hands of his alleged uncle. The answer my friend received was, "Give me £300, and I will give Mr. Priestman the power of attorney." Arrangements were attempted to be made, so that this money might be raised, but when at the point of success, my friend was told (so he informed me) that this Thomas Creswell's uncle (the Parramatta patient) owned property at Strathfieldsaye, in Hampshire, which would revert to Thos. Creswell in the event of the patient's death in the asylum, and Thos. Creswell was afraid that if the patient was released, he might will the property to someone else. This, added to the fact that the deceased Thos. Creswell swore before Sir William Manning, in 1884, "that he desired to find his brother William, because he was entitled to some of the Strathfieldsaye property," is sufficient to show that if the Parramatta patient should be really Wm. Creswell the taxpayers of this Colony should be no longer saddled with his maintenance. Regarding the marks, &c., on the alleged Wm. Creswell, it rests with the Committee as to whether it is necessary to bring to Sydney any of the witnesses whose evidence was read at my application before the late Justice Manning, in 1897. Personally, I would recommend that the following very material witnesses come to Sydney to identify Creswell in the asylum as the man whom they knew, viz.:—Mr. John Thomas Walker, saddler, Goulburn; Mr. Francis Devlin, wholesale butcher, Temora; Mr. Luke Cullen, attendant at George-street Asylum, Parramatta; Mr. William E. Forbes, Riverstone Meat-works, Riverstone; Mr. William Marshall, house and land agent, Australia-street, Newtown; Those in my mind would be ample, as the evidence they can give is very strong. Anent the tattoo mark which several of my witnesses swear to as being on the back of Creswell's left wrist, I think if the Committee look through the evidence adduced at the 1884 trial, it will find that Thomas Creswell deposed to the fact of his brother William's arm being ripped up by the meat-hook from the left armpit to the elbow, and in a different locality altogether to where the scar is on the alleged Wm. Creswell's wrist. I would also like to suggest to the gentlemen of the Committee that they order the Receiving House books of 1870 and 1871 to be produced, as also the alleged Creswell's belongings when he first entered the Asylum at Gladsville. Of course, at the time of writing this I am more or less in the dark as to the late examination of Creswell by Drs. Pickburn and Devlin. If the marks and peculiarities are deposed to by them as being identical with those known to exist on and in the lost Roger Tichborne, then the gentlemen composing the Committee must be convinced that Creswell is really Roger Tichborne; and I would respectfully suggest to the Committee that Drs. Pickburn and Devlin's evidence is given on oath, whilst Drs. Fiaschi's and MacCormick's was a simple statement, and I was not permitted the privilege of having them put in the witness-box at the proceedings in the Equity Court, in 1897, before the late Judge Manning, and having them cross-examined. In any case, I would like to impress upon the Committee the fact that I am willing to take charge of Wm. Creswell, whether proved Roger Tichborne or not, and take him to England; and I can find sureties to enter into the necessary bond for his safe custody, transport, and future maintenance. I hold power of attorney from the Rev. E. Williams, of London, to act for him in procuring the delivery into his hands of William Creswell under that name simply. I have my own opinions as to Creswell's sanity, and make free to say that I am absolutely convinced that his presumed insanity stops short at eccentricity.

E. Priestman.  
29 Nov., 1893.

THURSDAY, 7 DECEMBER, 1899.

Present:—

MR. E. M. CLARK, | MR. DACEY.

J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

Edwin Godson, M.R.C.S., Medical Superintendent of the Hospital for Insane, Parramatta, recalled and further examined:—

- E. Godson,  
M.R.C.S.  
7 Dec., 1899.
162. *Chairman.*] I think some reference was made on a former occasion to you making an examination of certain marks on Creswell? Yes.
163. Have you examined William Creswell for any marks or peculiarities since you last were before the Committee? Yes, I made a thorough examination yesterday afternoon.
164. Will you state the different marks and peculiarities which you noticed? On a former occasion I could not swear whether there was or not a mark on two particular places—the temporal artery or over the right eyelid. I examined him yesterday and I could see neither of the marks. I was not satisfied with my own examination, but sent for Dr. Reid, who also examined him. There was nothing which we could swear to as being a puncture or wound either on the eyelid or right temple. We not only examined him with the naked eye, but also with a powerful lens.
165. How long have you been connected with the Asylum? About eighteen years.
166. During the whole of that time have you found Creswell to be perfectly harmless and amenable to discipline? Yes, he has caused us no trouble.
167. Is there any other feature of the examination to which you would like to make reference? On a former occasion I said I thought there was something peculiar about his right thumb, but I find that the fingers, thumbs, and nails are perfect, excepting that the right thumb is not so long or so deeply bedded at the matrix as the left thumb. That is accounted for from the fact that Creswell always breaks his tobacco with the right thumb. We do not allow the patients knives to cut tobacco. That, however, is nothing abnormal. His thumb-nails and finger-nails are perfectly normal.
168. Is there anything further you wish to say? I think those are the principal things about which I was in doubt. The in-knees and the size of the feet and ear are absolutely proved. The right ear is very much longer than the other, half an inch. The feet are the same length. I measured him again, and he was exactly 5 feet 7 inches high.
169. *Mr. E. M. Clark.*] Did he go the full height? You might say so. Perhaps he was one-sixteenth or one thirty-second part of an inch less.
170. *Chairman.*] When the case was heard at the instigation of Mr. Priestman, some time ago, reference was made by Dr. Manning to the fact that two letters were found on Creswell at the time he entered the asylum, one alleged to be from his brother, Thomas Creswell, and the other from Mrs. West; are you aware of their existence? No, I am not personally aware of them, but I do not say they are not in existence. Any letters or property found on a patient are detained until he is either dead or discharged.
171. *Mr. Dacey.*] In whose possession will they be? In the possession of the Assistant Superintendent who keeps all the records and patients' property.
172. Was this officer there at the time of Creswell's admission? No; there have been several there since then.
173. Have you been there longer than the Superintendent? Yes.
174. How long was Creswell in the Institution before you joined it? About ten years.
175. *Mr. E. M. Clark.*] Are the records sent to the Master in Lunacy? They are always kept, and the Assistant Superintendent could produce them.
176. *Mr. Dacey.*] What was the date of Creswell's admission? I am not quite sure; but I know it was about twenty-eight years ago.
177. Have you noticed any alteration in him during the time you have been there? No, he is about the same mentally. He has altered a little in appearance, and has got greyer.
178. *Mr. E. M. Clark.*] I suppose that when you made your examination you were acquainted with the whole of the distinguishing marks which were supposed to be on Tichborne? Yes, I read Mr. Priestman's book a little time before.
179. Then, if Drs. Devlin and Pickburn claim that Creswell has certain marks over the eyelid and on the temple, you think they must be wrong? That is my opinion. I could not see anything there to which I could swear. Mr. Wilkes, on a former occasion, remarked that Dr. Devlin stated that a particular mark was so palpable that it could be seen without the aid of a lens, but, even with the aid of a lens, I could not swear that it was there. There are various puckerings of the skin. He is very weather-worn, and the blood-vessels are corrugated and enlarged, and I might easily mistake one of them for a scar. I do not say that the scar is not there, but it is not sufficiently clear for me to swear that it is there. Certainly I could not find it.
180. I suppose your examination lasted some time? For nearly an hour—fully three-quarters of an hour, and most of the time was spent about the eyelid and the region of the temple. He was a little difficult to examine at first. It was a terribly hot day, and it took me some time to examine his eyelid particularly.
181. *Chairman.*] I do not know whether you were asked, on a former occasion, a question as to the period of time which was occupied in the examination by Drs. Fiaschi and MacCormick? Yes; I was then not sure of the length of time occupied, but I am sure now that it was one and a half hours at least.
182. *Mr. E. M. Clark.*] The question was put to Dr. Pickburn, "Has Creswell any marks on the eyelid which could have been caused by the insertion of a fish-hook?" and his reply was, "I am satisfied that there is a small roundish scar on the right upper eyelid, which might have been so caused?" I could not find the mark. There was something like an injected capillary over the top of the eyelid, but I do not say the scar is not there, but I do not think it is there. I could not see it with the lens or without it. Is there any question of Creswell or Sir Roger Tichborne ever having a pustula eruption, such as small-pox, because this man is covered with some pustula eruption, which has come from small-pox or something of that kind? I asked him if he had had small-pox, and he said his mother would tell me.
183. *Mr. Dacey.*] Do you know how old he is? Yes; he always gives the same answer when you ask him. If you ask him, he will tell you that his name is William Creswell, that he was born at Mortimer, near Reading, in Berkshire, on 8th May, 1828. If you ask him when he came out here and by what boat, his reply is, "The Maid of Judah." He never varies in his answers.

184. Have you seen or heard anything to make you alter your opinion that this man is no other than the man you believe him to be? None whatever.

E. Godson,  
M.R.C.S.

185. *Chairman.*] Do you think that it is probable that certain statements have been made to him during the last twenty-five or thirty years—that have been so dinned into his ears—that he has learnt them parrot-like? To a certain extent his answers are parrot-like, because his mind is gone, and he could not learn anything. I, myself, do not doubt his story for one moment; I accept it as absolute gospel.

7 Dec., 1899.

186. Would you doubt his story if you were aware of the circumstance that in the year in which he alleges he came out in the ship called "The Maid of Judah," there was no such ship in existence? He would not tell me the year he came out. I asked him, and he did not say.

187. *Mr. Dacey.*] Is it known when he was in the Colony before being admitted to the Institution? I do not think so. He was admitted from Gladesville about thirty years ago. He was there for twelve months, and was then discharged as recovered. It was at that time that he told Dr. Manning all about his left hand, and how the supposed scar was caused.

188. You have not heard him say how long he was in the country before he entered Gladesville? No.

189. *Chairman.*] With the exception of the statements he has made to you in the fashion he usually adopts, has he ever spoken rationally in regard to any other subject? Not to me. I may say that on Sunday I tried to examine his eye and the side of his face, but he would not let me touch him.

190. *Mr. Dacey.*] Is there any person now connected with the Institution, officially, who was there at the time of his admission? No.

191. Is he a man addicted to drink? He will not touch it, but it is on account of a delusion on his part, because he thinks it is poison. On one occasion I offered him some rum in my office, but he would not touch it.

TUESDAY, 12 DECEMBER, 1899.

Present:—

MR. E. M. CLARK, | MR. MEAGHER,  
MR. WILKS.

J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

John Richard Moore, Acting Superintendent, Reception-house, Darlinghurst, sworn and examined:—

192. *Chairman.*] I believe that intimation was given to the authorities to the effect that we desired to see the records for 1870 and 1871? Yes.

J. R. Moore.

193. Will you kindly read them? The first entry in regard to Wm. Creswell is dated 12th January, 1871:—

12 Dec., 1899.

From Braidwood Gaol, in transit to Gladesville; certificate signed by R. H. Gentle and Rees Llewellyn. Patients age, 42. Religion—Roman Catholic. Native place—England. Late residence—Goulburn. Previous occupation—Butcher. Married, but separated from his wife. Form of mental disease—Monomania. Supposed cause—Not known. Has he any disposition to refuse food?—No. Is he disposed to injure himself or others?—No. Have any medical means been employed?—No. Is patients' bodily health good?—Yes. Describe particulars of disease—Continually writing to the Earl of Belmore. What property has he with him?—One gold ring, one knife, tobacco-pouch, opossum rug, quart-pot, and leather vest. Address of patients' friends?—Has no friends.

The entry for 12th January, in the symptoms book is:—

William Creswell, aged 42. From Braidwood, in transit to Gladesville Asylum. Swarming with vermin. Some of his clothes have been buried as the only means of getting rid of the lice. Transferred to Gladesville, 13th January, 1871. Diet, ordinary.

That is one of the entries. Then there is another:—

William Creswell. Admitted 8th August, 1871, from Central Police Office. Medical certificate signed by Drs. Marshall and Egan. Age, 43 years. Religion—Roman Catholic. Native place—England. Residence—Camden. Previous occupation—Gold-digger. Married; no children. Form of mental disorder—Mania. Has any personal restraint been employed?—Yes. Has the patient been insane before?—Yes. Have there been any lucid intervals?—Yes. Have you observed any change or peculiarity in his habits lately?—No. Has he shown any disposition to refuse food?—No. Is he disposed to injure himself or others; state which, or if both?—It is feared so. Has he ever been in any asylum for lunatics? Yes; Gladesville, January last. Is the patient's bodily health good?—Yes. Describe the particulars of the disease?—Has various delusions about being entitled to money which is withheld from him, incoherent, and flighty. What property has he with him?—None.

Another entry is:—

William Creswell; aged 47. From C. P. Office. Very lousy, body and clothes. Clothes in such a filthy condition, alive with vermin, that they must be destroyed. Discharged to Gladesville Hospital, 14th August, 1871.

194. *Mr. E. M. Clark.*] There seems to be a discrepancy in regard to ages;—how are the ages obtained? From the patients themselves.

195. *Chairman.*] Is there any means of securing the presentation before the Committee of the articles enumerated in the first description? They would be forwarded with the patient to the Gladesville Hospital when he was transferred from the reception house to Gladesville.

196. A ring and a leather vest are mentioned;—both play a prominent part in the Tichborne case? I do not know whether they will be at Gladesville or not. He was apparently discharged from there before 12th August. When a patient goes away, his property is generally returned to him.

197. *Mr. Wilks.*] You have stated that one form of his mania consists in writing letters to the Earl of Belmore;—is there any chance of getting any of those letters, or of ascertaining their nature? I could not say. They are not at the reception-house. The only paper we keep at the reception-house is the order from the justice of the peace for admission. I could not tell you the subject-matter of any of his letters.

Harold Mapletoft Davis, licensed surveyor, sworn and examined:—

198. *Chairman.*] Some years ago you were, I believe, located in the Queanbeyan district? Yes, for a long time.

H. M. Davis.

199. In what part of it? Gininderra and Queanbeyan.

12 Dec., 1899.

200. During your residence there were you brought in contact at any time with a man who went by the name of Creswell? Yes; I knew him intimately.

201. Have you seen him of late years? Not for the last thirty-four or thirty-five years.

- H. M. Davis. 202. Will you state how you came in contact with him? When I first came in contact with him he was groom for Mr. George Campbell. I used to meet him at Gininderra, in cricket-matches. He was a great cricketer. He was a man about my own height; perhaps a little taller.
- 12 Dec., 1899. 203. Was there anything striking about him? There was a peculiarity about his eyes; he used to wink when he spoke to you. He remained with George Campbell for some time. He was very fond of drinking, and he caused several accidents through capsizing buggies. Campbell then got rid of him. My brother, who owned Gininderra, being an ardent cricketer, thought it would be a good thing to get hold of him. At that time, and until he was married, he went by the name of George Smith. My brother hired him on the understanding that he would give up drinking. I was living at Gininderra at the time, and saw a great deal of him. We had several conversations; but nothing was said about his family. There was something peculiar about him; I could not make him out at all.
204. Did he ever tell you anything with reference to his antecedents? No; excepting that he came from Strathfieldsaye. He appeared to know that place better than any other, and it was the only one about which he spoke to me.
205. I believe that some time after you got to know him he got married? Yes. At that time I was surveying on the property of Mrs. Clarke, the woman he married. She was a widow, and kept an hotel at Jerrabeggarie. It was not until after he met Mrs. Clarke that I got to know that his name was Creswell. Mrs. Clarke was at Gundaroo, and Creswell was at Gininderra. I was camping near to Mrs. Clarke's place. She had seen Creswell at a cricket-match at Gundaroo, and she took a fancy to him. He also took a fancy to her. He used to give me notes for her, and she gave me messages for him when I went home on Saturday. I did not think there was anything serious in the matter. On one occasion, however, he gave me a letter, and told me that he intended to "pop the question to the old widow" as he called her.
206. *Mr. Clarke.*] I suppose that in those days he was not regarded as being mad? No. He was, however, always eccentric in his ways. She accepted him. Some time after that I drove him down to see her, and they named the day. On a subsequent occasion he got me to drive him down to see Mr. Smith, the clergyman. He wanted to get the license. It was on that occasion that he told me that his name was Creswell. We were about 7 miles from Mrs. Clarke's place when he suddenly stopped talking. After travelling some distance, he said: "Must I get married in my own name?" I replied: "I should think so. If you do not you will only perjure yourself." He remarked: "That is not pleasant," or, "That is awkward." I said: "If I were you I would give my right name." He then added that Smith was not his name, and after some consideration he added: "If I must have a name, I will have a good one. I will be Sir William Creswell Creswell, Bart.; I ought to be one if I am not." I did not take any particular notice of that at the time, but afterwards I thought more of it. He got the license, and gave his name as Wm. Creswell, and he always went by that name afterwards. I was at his wedding in Gundaroo. I saw very little of him afterwards. I went from Gininderra to Queanbeyan, and he always came to see me when he came to town.
207. And you have not seen much of him since? Not since he parted from his wife.
208. Did they live together long? I think not—twelve or eighteen months. There was one peculiarity about his marriage. As soon as he came back from the church, after the wedding, the first thing he did was to call his wife "Madam." I asked him why he did not call her by her Christian name. He answered: "I do not know what her Christian name is." He always called her Madam.
209. I think I saw a letter written by yourself to the *Daily Telegraph* or *Sunday Times* the other day? Yes; that was a letter I wrote to Mr. Priestman.
210. What are the circumstances associated with the writing of that letter? I was passing Dymock's, in George-street, last week, when I saw a book outside the shop, entitled "The Tichborne Mystery." One of the illustrations in the book was a likeness, and it attracted my attention, because I considered it to be a splendid likeness of Creswell, as he was when I knew him. I bought the book and took it home, and, to my astonishment, when I looked at it, the photo was not a photo of Creswell, but of Sir James Tichborne. The resemblance struck me so forcibly that in the afternoon I wrote to Mr. Priestman and told him about it.
211. There was a very great likeness? A very great likeness to what Creswell was when I first knew him. Creswell was rather broad-shouldered—a stout, strongly-made man.
212. *Mr. Wilks.*] You state that he had peculiar eyes,—was there a pensive look in them? I do not know that I have noticed that. He had a very round, light-blue eye.
213. Was it more of a merry eye than a pensive eye? I do not know about that. He had a habit of winking when he was speaking; it was something like a nervous twitching.
214. You have stated that there was something peculiar about him,—what do you mean by that? I mean that he was eccentric.
215. Were you ever led to believe that he was "ratty," or not at all right mentally? Not at all.
216. After he told you that if he were to have a name it would be Sir Wm. Creswell, Bart., did he again refer to the question of the baronetcy? No; I do not think that he referred to it again.
217. Did you pass any remark about the matter at the time? No.
218. *Mr. E. M. Clark.*] I suppose that when he told you he was Sir William Creswell he was in a jolly humour, seeing that he was about to be married? I suppose so.
219. Was he, generally speaking, a man of cleanly appearance and habits? Yes, very. He was "natty" and tidy.
220. How old would he be when you first knew him, thirty-five years ago? I used to take him to be about my own age, and I am 68 now. I should say that he was 30 or 33 when I last saw him.
221. Had you read anything about this case prior to seeing the book at Dymock's? No.
222. Were you aware of the Committee's existence? No.
223. You say you wrote to Mr. Priestman? Yes.
224. Do you know him? No; I have never had the pleasure of seeing him, but I have had letters from him.
225. Dealing with the Tichborne case? Yes; two years ago, when I was living at Gundaroo.
226. Did the letters from him ask for information? Yes; I was told by Mr. Jenkins, in the first instance, if I had any papers or letters, to forward them to Mr. Priestman, but I had none.
227. Did you notice any reserve about Creswell? He was very much reserved. He would not tell you anything about his private affairs at all,

228. Did you form the impression that he was a man who had had an excellent training in his youth? I thought he was considerably above his station. H. M. Davis.
229. Did he give you that impression on account of his conversation and general bearing? Yes. I used to think sometimes that he was rather overbearing in his manner. For instance, he regarded himself as being quite my equal. I was a new chum at the time, and did not like it. 12 Dec., 1899.
230. Your station in life was superior to his? I considered so. The more I saw of him the better I liked him.
231. Did you ever have any conversation with his wife after they were married? Yes; I saw her after she left him.
232. Did she ever say that he told her that he was anything but Creswell? No.
233. Was she a woman who was inclined to be chatty? Sometimes she was.
234. Do you think that if she knew that he was entitled to a title she would have been glad to ventilate the fact? I could not say. I do not think she was ambitious enough for that.
235. Do you think she would have made you acquainted with the fact if he had told her that he was entitled to a baronetcy? If he told her that I think she would have told me.
236. Did you see them together during their married life? No.
237. Do you know whether they were on terms of attachment or not? I do not. I do not think they lived happily together, because shortly after Creswell married her—in fact, on the very day he got married—he took to drinking again.
238. Was she older than he? I think so.
239. You say that he was about your height, or a little taller;—what was your height? About 5 ft. 8 in. Standing by the side of him he appeared to me to be about my own height.
240. You have stated that he was a good cricketer;—was he a good all-round cricketer? Yes; a good all-round cricketer. He had a very peculiar way of standing on his left toe when he was going to hit a ball.
241. *Mr. Wilks.*] Did you notice any tattoo-marks on his arm when he was playing cricket? I could not say that I did. He always wore a very broad strap round his left arm.
242. Might that have covered any mark? It might; it was from 3 to 4 inches wide.
243. *Mr. E. M. Clark.*] Did he always wear the strap? Yes; round his left wrist.
244. *Mr. Wilks.*] Did you look upon it as a wrist-supporter? I suppose so.
245. *Mr. E. M. Clark.*] Was it an uncommon thing for people to wear wrist-straps of that kind in those days? Yes.
246. Did you ever notice any limp about him? There was a peculiarity in his walk, but he was not what I would call lame.
247. Did he hobble? Yes, at times; at other times you would not notice it.
248. Were his legs perfectly straight? I think so. He was very military in his habits. I feel sure that he had had a military training from the way in which he used to keep his saddle-room and his horses. He used to roll his saddle-straps through the buckle, instead of leaving them slack.
249. I suppose he always adhered to the statement that he was born at Strathfieldsaye, even when he was going by the name of George Smith? I do not think I ever heard him mention Strathfieldsaye until I knew him as Creswell.
250. Did he appear to know a good deal about that part? Yes.
251. Did he ever speak of any other part of England? Not to me. He used to tell me about the Duke of Wellington's charger, and how often he had seen it.
252. Did he ever speak about coming to New South Wales, or of the ship which brought him? No; he was very reticent.
253. Did he ever mention the date of his birth? No.
254. *Chairman.*] Did he ever say that he had been on the Continent—France, for instance? No; I have heard him make use of French expressions. He told me he had seen a good deal of the world.
255. Have you seen his handwriting? Yes.
256. Did he write a good hand? Yes; very fair.
257. There is a copy of one of his letters in the book published by Mr. Priestman;—does that correspond with his handwriting, as you remember it? Yes; there was a peculiarity about his "t's," which I remember.
258. Were you in Queanbeyan when he was imprisoned for committing an assault? I remember that he once committed an assault; I think I must have been in Queanbeyan at the time. In the letter published in Mr. Priestman's book Creswell refers to me to give him a character. The person to whom he addressed the letter was Mr. Freestone, a solicitor.
259. *Mr. Wilks.*] What were the French expressions which you heard him make use of? They were short exclamations.
260. Were they French curse words? Some of them were.
261. They were not cultured expressions? No.
262. *Mr. Meagher.*] Do you speak French yourself? No.
263. What was the date of the marriage with Mrs. Clarke? Between 1862 and 1865.
264. Did Creswell ever tell you he had been in Victoria? I have heard him speaking of the Victorian diggings.
265. Did it strike you that he had had some experience of the Victorian diggings? He said he had been on the diggings in Victoria.
266. Did he ever in the course of conversation, when relating his experiences in Victoria, mention the name of Arthur Orton? Not that I am aware of.
267. Did he ever mention the year in which he had been on the diggings in Victoria? No; he said casually that he had been on the diggings.
268. Were there many people present when the marriage with Mrs. Clarke took place? No.
269. How many? We had breakfast after we came back, and I think there were four of us—Creswell and his wife, somebody else who came from the church, and myself.
270. Did you ever meet a man called Stafford Lett, from Victoria; and was not Mr. Lett one of those who was present when Creswell married Mrs. Clarke? I do not remember him. I do not say he was not there; but I do not remember him.
271. Was there any man there whose name you did not know? No, there might have been some one in the other part of the hotel.

- H. M. Davis. 272. Did he ever speak to you of a Victorian friend whose name I have mentioned? —  
 12 Dec., 1899. 273. When speaking of the Victorian gold-fields did he mention the name of John Stafford Lett? Not that I know of.
274. If Mr. Lett has sworn upon oath that he was present at the marriage ceremony, you would not care to say that he swore what was incorrect? No; at the same time I do not remember him.
275. If he says that at the marriage ceremony he remembers Creswell, whom he had known as Smith in Victoria, stating that he was William Creswell, you would not deny it? No.
276. Can you remember anyone being present who was surprised at hearing him declare his name at the marriage ceremony as William Creswell? No.
277. You have stated that he called Mrs. Creswell "Madam"? Yes.
278. Are you prepared to say whether he pronounced the word with the proper French accent? No; I think it was Anglicised.
279. Are you a sufficiently competent French scholar to say whether he pronounced the other French words he uttered with the accent of a man who has had a training in French? He struck me that he pronounced them as a Frenchman would pronounce them.
280. Mr. Wilks has asked you whether you considered the expressions he made use of were coarse expressions;—is your knowledge of French limited? Yes.
281. You are not in a position to say whether the words he used were of a high or low character? I do not think they could be of a low character, because I have heard ladies in the Old Country use the same expressions. They are French ejaculations which you often hear.
282. Did Creswell seem to trust more in you than in anyone else? Yes.
283. You have stated that when playing cricket he used to stand in a peculiar attitude;—I suppose you know that when boys at English colleges learn cricket they usually develop the peculiar attitude of their coaches? I have seen some of the old English cricketers at Canterbury adopting the same attitude as that which Creswell adopted.
284. Have you seen Creswell since he has been in the asylum? No. I applied to Mr. Critchett Walker on one occasion for an order to see him, and he said that if Dr. Maurice O'Connor would give me a pass to see him I could see him. He subsequently asked me not to bother about the matter, because the man had been so worried that he had gone off his head altogether. He asked me why I wished to see him, and I said that I wished to see if he recognised me, or whether he was the man whom I remembered. However, I withdrew my application.
285. *Mr. E. M. Clark.*] Did you recognise the writing in the letter which is published in Mr. Priestman's book as Creswell's handwriting? Yes.
286. What was he doing when he wrote that letter? He was living with his wife at that time. I may mention that he had a little black pocket-book about which he was very particular. I do not know what become of it. He used to keep his papers in it, and was very careful not to let anyone see what was inside.

Luke Cullen sworn and examined:—

- L. Cullen. 287. *Chairman.*] You are at present employed at the Newington Asylum, Parramatta? Yes.  
 12 Dec., 1899. 288. I believe that some years ago you were in the police force? Yes.
289. Where were you stationed? At Tumut and Wagga.
290. Did you ever meet a man named William Creswell? Yes; I arrested him.
291. How many years ago? I think it was in 1863 or 1864, but I have had a sunstroke since, and it has affected my memory.
292. Where did you arrest him? At Tumut.
293. On what charge? Being of unsound mind.
294. Had you ever come in contact with him before that time? Yes; I had spoken to him on several occasions at Tumut, and I saw him some years before that in Wagga Wagga when he was working with Arthur Orton.
295. Did you know Arthur Orton? I saw him once. I was on a visit to Wagga, and I happened to meet the two of them in the "Commercial Hotel."
296. Was there a considerable amount of difference between the personal appearance of Arthur Orton and Creswell? Yes, one appeared to be a fat, bloated, ordinary-looking man.
297. Who was that? Orton; the other was a military, gentlemanly-looking man.
298. Had you any conversation with Creswell at that time? No; but I had with Orton. I was a stranger in Wagga at the time. I was on bush duty. I went into the tap-room or parlour of the hotel, and called for a drink. Orton and Creswell came in whilst I was sitting there. Creswell went right through, as if he were going to the back-yard, and Orton sat down. He said to me, "Do you know that man who has gone through?" I replied, "No; I am a stranger here, and I do not know you or him." He said, "He is a strange card that." I asked in what way. He replied, "That man ought not to be knocking about the country. He ought to be at Home. That man would become one of the wealthiest men in England if he would only stay at Home and look after his own property." I put it down to a bit of "gas." Some time afterwards I happened to see Creswell in Tumut. I had been transferred to Gundagai and Tumut, and I saw him there butchering. What Orton had said to me struck me, and a short time afterwards in looking over the *Police Gazette*, I noticed that a reward of £1,000 was offered to anybody finding the whereabouts of Sir Roger Tichborne. On account of what I heard from Orton, in Wagga, I wrote to the Inspector-General of Police, stating that I believed Creswell was the man, and that he answered the description. The Inspector-General wrote back to this effect: "From inquiries I have made, I have no doubt whatever that you have pointed out the right man as the long lost heir, Sir Roger Tichborne, for which you will be entitled to £1,000 reward." After that, I never heard another word from the Inspector-General of Police. He seemed to hush the thing up. I wrote to him again, however, from the George-street Asylum. I was in the hospital there, and when I got well I wrote to Mr. Fosbery, asking him if he had made any further inquiry about the man. He replied asking me to have nothing further to do with the matter.
299. In what year was that? In 1869.
300. I do not think Mr. Fosbery was Inspector-General then;—was it not Captain McLerie to whom you wrote? I do not think so.
301. What did you do with the answer you received? I could not tell you; but I remember it well, and the Inspector-General of Police does not deny it. He told Mr. Priestman that if I applied personally for the letter or letters I wrote I should get them. 301.

302. *Mr. Wilks.*] Did Creswell tell you on several occasions that he belonged to the best blood in England? Yes. The first time I heard him say that was after I brought him before the police magistrate and returned him to the cell. He said, "That fellow has ordered me here. He does not know me; I belong to the best blood in England." I have heard him say the same thing on several occasions. L. Cullen.  
12 Dec., 1899.
303. *Chairman.*] You arrested him at Tumut on a charge of being of unsound mind? Yes.
304. What was the result? An order was made to have him forwarded to the Lunatic Asylum.
305. Was he violent at the time? When I arrested him he appeared to be very violent. He had an American axe in his hand and a bowie-knife, and was threatening to chop down anyone who came near him.
306. *Mr. E. M. Clark.*] Did you ever notice any marks on either of his wrists? He had marks upon him, but I forget what they were. There was one peculiarity about him which I could not forget. He had a habit of twitching his eye or eyes when speaking to me.
307. Was it a nervous twitching? It appeared to be so.
308. *Chairman.*] When did you last see him? About thirty years ago. I think I would know him again if I saw him. He gave me an impression that he had served in the army. When he was in the cells he tore a red, blue, and white blanket into strips, and put the strips around him as though it were a belt. He also made epaulettes for his arms. He marched up and down the cell and shouted out orders as though he were putting men under his command through their facings.
309. *Mr. Meagher.*] You say that it was in 1869 when you saw an advertisement offering £1,000 reward for the discovery of Sir Roger Tichborne? Yes.
310. Was there not a good deal of talk in the locality in which you were stationed about this advertisement? No. I never heard it mentioned by anybody but the police themselves. The police do not usually speak of these things publicly.
311. Was not the advertisement in the local newspapers? I do not think I ever saw it in the local newspapers. I saw it in the *Gazette*.
312. You received a reply from the Inspector-General to the effect that apparently you were on the right track? Yes.
313. Did you show his note to any of your friends? No. In connection with these matters letters are generally written to the office in charge, who reads them, or gives them to the constable to read. He retains them, and does not hand them over.
314. Who was your superior officer? Sergeant Thomas Tant. He is now a night-watchman in Sydney.
315. *Mr. E. M. Clark.*] Do you know if there was any companionship between Orton and Creswell;—did you ever hear of their being in company after you saw them at Wagga Wagga? No. I heard that they were partners in a butchering business at Wagga Wagga.
316. *Mr. Meagher.*] It was in 1869 that you saw the *Gazette* containing the notification respecting Tichborne? —
317. Do you remember that in the early seventies the whole of the Press was ablaze with the account of the great Tichborne trial? Yes.
318. Did you read in the Press at the time that those who were interested in keeping the estate were making out that the claimant was Orton, and not Tichborne? Yes.
319. Seeing those statements in the Press, did you communicate with the head of the police, or with anyone in England, stating that you remembered Orton as a butcher, and that you also remembered a man with a military bearing, and an air of superior training, being in his company;—did it strike you that you could have given information to show that Orton had the means of knowing the whole of the history of Tichborne? That was the first occasion on which I thought Creswell was Tichborne, and I communicated with the Inspector-General, and no doubt he has my letter yet. Having had a sunstroke I have been thrown out of my reckoning in regard to dates.
320. Seeing the reports in the newspapers to the effect that an attempt had been made to show that the claimant was Orton, a butcher, you communicated with the Inspector-General of Police? Yes.
321. Did you ever hear Creswell make use of any French expressions? I once heard him speaking to a French watchmaker in Tumut. The watchmaker kept a shop, and Creswell kept a butcher shop next door. The shops were opposite the court-house, Tumut, and belonged to Mrs. O'Mara. After Creswell went away I said to the watchmaker, "That man seems to be able to speak French as well as you." He replied, "Yes, and better than I; that man is an educated gentleman."
322. He seemed to have no difficulty in speaking fluently with the Frenchman? None.
323. And you were quite clear that the Frenchman afterwards told you that he was a highly-educated man, and could talk French better than himself? Yes. His expression was, "He is one school gentleman; he speak the French better than I do."
324. *Mr. E. M. Clark.*] Did you notice Creswell wearing anything around his wrist? No; he had no strap on him when I arrested him. If he had had any I should have had to take it off.
325. Had he any tattoo-marks on him? Yes, but I could not swear what they were. Of course, if he had been a criminal, I should have searched for every little mark or scar upon him.
326. *Mr. Meagher.*] But you are clear you saw some tattoo-mark, but where you could not say? That is so.
327. *Mr. E. M. Clark.*] Did you notice any peculiarity about his walk? He had a peculiar walk. He walked very erectly. He walked in such a way as to give you the idea that one leg was a little shorter than the other, or that there was something wrong with the knee.

WEDNESDAY, 13 DECEMBER, 1899.

Present:—

MR. E. M. CLARK.

MR. MEAGHER.

MR. WILKS.

J. C. L. FITZPATRICK, Esq., IN THE CHAIR.

Harold Mapletoft Davis, licensed surveyor, recalled and further examined:—

328. *Chairman.*] Have you seen William Creswell at the Parramatta Lunatic Asylum this morning? Yes H. M. Davis.  
13 Dec., 1899.
329. Have you formed any opinion as to his identity? I have not the slightest doubt that he is the man whom I knew in Queanbeyan, and to whom I referred in my evidence yesterday. There are so many peculiarities

- H. M. Davis.  
13 Dec., 1899.
- peculiarities about him that there can be no mistake. The colour and shape of his eyes, the twitching of his eyebrows, the peculiar way in which he occasionally taps his foot upon the ground, his height, facial expression, and general appearance, convince me that he is the man whom I knew.
330. Have you any doubt about it? Not the slightest. In the course of conversation he mentioned an incident concerning the upsetting of some meat at Roberts' Hotel, Goulburn, many years ago. I may explain that a number of us were staying at the hotel, and we were badly waited upon. There were so many of us that there was a difficulty in attending to our wants at meal-times. On one occasion when a man named Hyde, who lived about 3 miles from Ginnindera, was present, my brother Syd. jumped up and said, "Come on, Hyde; I'll bet you a sovereign I get my meat downstairs before you." He took hold of the remains of a leg of mutton, and Hyde seized another dish. They started for the door, and Hyde having the advantage, my brother upset his dish, and threw its contents down the stairs over Hyde's head, remarking, "I got mine down first." Creswell mentioned this incident to me to-day.
331. *Mr. Wilks.*] Did you notice any peculiarity about Creswell's ears when you knew him at Tumut? No doubt I observed it, but it did not fix itself in my memory.
332. *Mr. E. M. Clark.*] Was his beard, when you first knew him, as it is now? It was shorter.
333. *Chairman.*] That would account for your recognising the photograph in the book so clearly? Yes.
334. *Mr. E. M. Clark.*] Creswell has spoken a good deal about criminals and blood;—have you any reason for thinking he has been identified with anything appertaining to crime? No.
335. When was it that he arrived in Queanbeyan? I was there in 1856, and it must have been 1859 before I saw him.
336. Then, if there had been any rumour there that he had been mixed up in anything questionable, you would have heard it? Yes.

Luke Cullen, employed at the Newington Asylum, recalled and further examined:—

- L. Cullen.  
13 Dec., 1899.
337. *Chairman.*] Have you seen Creswell at the Parramatta Lunatic Asylum this morning? Yes.
338. Do you consider that he is the man to whom you referred in your evidence yesterday? I believe he is the same man. I have no doubt about it, although he is very much altered. He is very much thinner.
339. Have you any doubt in regard to his identification? Not the slightest.
340. Is he the man whom you stated you heard speaking French to a French watchmaker in Tumut? Yes.
341. And the man whom you arrested as being of unsound mind? Yes.
342. *Mr. E. M. Clark.*] When you were connected with the police was there any suspicion surrounding him in regard to the commission of a crime? No.
343. *Mr. Meagher.*] Have you any doubt as to him being the man to whom you referred yesterday? No; there is something in the eyes, face, and general appearance which is so striking as to leave no doubt.
344. *Mr. Wilks.*] Did you notice this morning that he disliked being questioned about Orton? Yes.
345. You stated in your evidence yesterday that he and Orton were associated? So they were.
346. Did there seem to be any strong friendship between them? None that I know of. They did not seem to be friendly, and I do not think they ever were.
347. *Mr. E. M. Clark.*] Where did Creswell remain after Orton went Home? In Tumut. As soon as he went Home the conversation I had with Orton, to which I referred, came to my mind.
348. It was about the time that Orton went Home that you arrested Creswell on account of his being of unsound mind? Yes; I would not be positive that he had gone Home or that he went Home immediately afterwards.
349. Did he show any eccentricities before Orton went away? Not until the time I arrested him.

William Algie, warder in charge of the weatherboard division, Parramatta Lunatic Asylum, sworn and examined:—

- W. Algie.  
13 Dec., 1899.
350. *Mr. Wilks.*] I suppose you have been present on many occasions when Creswell has been examined? Yes. I was present when Dr. Manning, and Dr. MacCormick, and Dr. Fiaschi examined him.
351. Were you present when Drs. Devlin and Pickburn examined him? Yes.
352. Have you been present when Mr. Priestman has visited him on different occasions? Yes.
353. Have you noticed that he was rather communicative this morning? Very much more than I ever knew him before.
354. Do you consider that he was rather more lucid this morning than usual? Yes. He seemed to give vent more freely than usual.
355. Did you observe his readiness in recognising Mr. Davis, and hear the conversation he kept up with him? Yes; he seemed to recognise him, and then he seemed to desire to shut off the conversation.
356. Did you notice, when inquiries were made of him regarding Orton, that he shut off the conversation as if there were something strange about the career of Orton about which he did not wish to be reminded? Yes. There is something in that. When you touch him on that point he does not seem to care to answer questions.
357. Have you ever heard him remark, on former occasions, anything about criminal guilt and blood? That is his insanity. He has always done that. He seems to have a delusion concerning cutting off people's heads or drinking their blood. Sometimes, if you put your hand on him, he will turn round suddenly and say, "You are a dead man, I will have your blood." Of course, that is his insanity.
358. Have you established any theory in regard to the remarks he makes of that character? No.
359. Is it your experience of insane patients that, when speaking, they usually dwell on some particular portion of their career? They vary a good deal. They seldom stick to one thing.
360. But Creswell does stick to one thing? Yes. Sometimes he appears to regard anything said to him as an offence; for instance, sometimes, if you say to him, "Good-day, Creswell," he will turn round and say, "That is not my name; it is William Creswell." He will follow you about, stamp his foot, and tell you he will have your blood.
361. *Chairman.*] What is his general demeanour? Very quiet. He has been more talkative this morning than I have ever known him to be.
362. Is he by any means what may be termed a violent patient? No. I have never known him lift his hand to any of the inmates.

363. Does his demeanour alter at all after a visit or an examination? Formerly it did, but not lately. Two or three years ago, after Mr. Priestman had visited him, he used to be very excited for two or three days, but lately he has seemed to calm down. W. Algie.  
13 Dec., 1899.
364. *Mr. Wilks.*] He kept on referring to crime to-day? Yes; and he always considers that what he says is correct—that whatever he says is law.
365. I suppose there is nothing in his remarks which would lead one to believe that he had ever been engaged in any crime? No; it is his imagination.
366. *Mr. Meagher.*] You say you were present on the occasions when the medical experts examined Creswell? Yes.
367. How long did Drs. McCormick and Fiaschi take over their examination? I did not take particular notice, but I should say it must have been nearly two hours.
368. How long did Drs. Pickburn and Devlin take over their examination? About the same time, I think.
369. *Mr. Wilks.*] Which would you consider the most exhaustive examination? Both of them were pretty exact. I do not think there was much difference. All the doctors paid great attention to him. He was stripped, and they appeared to examine every part of his body.
370. Judging by his actions and demeanour, do you regard him as a man of superior training? Yes; I think he is a little superior to the general run of patients we have.
371. Have you ever heard him make use of any French phrases? No. I may mention that Dr. MacCormick had a French cook who came to see if he could speak French, or understand it. The cook put some questions to him. The cook stated afterwards that he asked him what he did not understand—that he asked him if he wanted a bit of tobacco, and that he seemed not to understand what he was saying. Subsequently, he asked him in English if he would have a piece of tobacco, and he replied, "Yes; have you got any?"
372. *Mr. Meagher.*] Is it a fact that some of the patients would beg, borrow, or steal tobacco from one another? Yes, if they had the chance.
373. Is it a fact that although Creswell is fond of tobacco he would scorn to borrow or steal it? Yes; I have never known him borrow tobacco. If he wants any he will ask me for it, but he will not ask any patient for it, nor will he steal it.
374. *Mr. E. M. Clark.*] Does he mix much with the other inmates? No, he keeps to himself, and he amuses himself by sewing handbags.

TUESDAY, 19. DECEMBER, 1899.

PRESENT:—

MR. ANDERSON, | MR. E. M. CLARK,  
J. C. L. FITZPATRICK, ESQ., IN THE CHAIR.

William Ernest Forbes sworn and examined:—

375. *Chairman.*] What is your occupation? At present I am connected with the Riverstone Meat Preserving Company. Formerly I was station manager for the Commercial Banking Company of Sydney, and also for the Bank of Australasia, Melbourne. W. E. Forbes.  
19 Dec., 1899.
376. During your career as station manager, were you located in several places on the Southern Line? Yes; in the vicinity of Queanbeyan, Tumut, Albury, and Wagga Wagga.
377. How long is that ago? Thirty-four or thirty-five years. Prior to that I was with my father, who was one of the largest agriculturists and graziers in Australia, at Gundaroo.
378. Did you come in contact with the man who is known by several names, but particularly by the name of Smith, and afterwards by the name of William Creswell? Yes.
379. Were you fairly intimate with him? Yes.
380. Have you seen him recently? Yes.
381. When? On Wednesday last I saw him in the billiard-room at the Asylum, Parramatta. Prior to that I had not seen him for thirty-four years.
382. Did you experience any difficulty in recognising him? Not the slightest.
383. I suppose he has altered very considerably? Yes; he stoops very much, and of course he is much grayer, but when I first knew him he did not wear a beard. The twitching of his eye cannot be mistaken.
384. Were there any other characteristics about him which you could recognise him? Yes, the scar on the hand. It was on the 26th January, 1860, that I first met him in Araluen.
385. What type of man was he then? He was very active, very erect, and rather eccentric. He was then in the employ of Mr. Edward Smith, butcher, of Araluen.
386. Under what name did you know him then? As George Frederick Smith.
387. Were you brought into frequent contact with him? Yes, in 1861, 1862, and 1863 I played cricket with him for three seasons. He belonged to the Gininderra Cricket Club. Mr. Harold Davis, who was also at the Lunatic Asylum on Wednesday last, was one of his most intimate friends and also a club mate.
388. Did you have frequent conversations with him? Yes, but he was very eccentric. When his own team were batting he would be somewhere alone. He would seldom associate with anyone. The chances are that he would be lying on his back in the field, and throwing up a cricket ball and catching it. He was a very fair cricketer and a medium paced underhand bowler. Whilst playing cricket with him I frequently saw a tattoo on his arm.
389. On which arm? On the back of the wrist of the left arm. It consisted of a heart, anchor, and a cross, with the initials R.C.T. beneath it.
390. What space did the mark occupy? A space of about 2 inches—probably more.
391. Did you ever have any conversation with him with reference to it? I often asked him what it represented, and he used to put me off by saying it was a freak which had caused him to have it put on. The heart was in red ink; the rest was in blue ink.
392. I understand that at the time you were very much struck with the appearance of it? Yes. It was the first tattoo mark I had ever seen, and I thought it was very peculiar to see a picture on a man's arm. I was only a youth at the time—between 14 and 15 years of age.

- W. E. Forbes. 393. Did you ever attempt to copy it? Yes; I gave a copy of it to Mr. Joseph Eckford when he was endeavouring to prove him to be Arthur Orton. This was in 1873 or 1874.
- 19 Dec., 1899. 394. Have you a copy of it now? Yes. (*Produced.*)
395. Is this the original copy? No; I gave the original copy to Mr. Eckford, but this is a copy from the original.
396. When did you first know this man by the name of Creswell? He took it on the 6th of April, 1863—the day on which he married Widow Clark.
397. Were you acquainted with Mrs. Clark? Yes, years before her husband died. They were personal friends of my parents.
398. What transpired after that? Sometime after they were married they gave up the hotel; at the time of her marriage to Creswell she kept the hotel known as the "Farmers' Home," on Jerrabeggarie, Gundaroo, and went to Queanbeyan, where they kept an hotel. I did not see him from the time they left Gundaroo in 1863 until I met him again in Cowra in 1865. At that time he was staying at an hotel in Cowra, the name of which I cannot remember.
399. Did you have any conversation with him there? I may mention that Robert Livingstone and myself were in charge of some cattle. We had a cook, whom we sent on to camp at a certain creek on the south side of Cowra, and to get the fire ready for us. It was raining at the time, and when he got there the horses were tied to the waggonette, and the cook was lying underneath drunk. Some of the men sobered him by putting him in the creek. Livingstone discharged him the next morning, and we went back to Cowra to see if we could get another cook. We made inquiries of the landlord of the hotel, and Creswell at the time was walking up and down the verandah. When we came along the verandah he asked if we were looking for a cook, and said that if we would engage him he would do his best, although he was not a good cook. He added that he wanted to go to Wagga. We engaged him. He was then going by the name of Roger Leslie, and had separated from his wife. He went to Wagga Wagga with us. Whilst we were travelling from Cowra to Wagga Wagga he kept a diary, and on the fly-leaf of it was R. C. Tichborne. In this diary he used to write French and to translate it into English. He said he wanted to go to Wagga Wagga to see an old chum named Thomas Castro. After we delivered the cattle we stayed in Wagga Wagga for a few days, and frequently saw him and Castro knocking about together.
400. Did Castro go by any other name? Yes, by the name of Arthur Orton. Orton was then shopman to Mr. J. Higgins, butcher.
401. What happened after that? In 1865, whilst we were knocking about there, Orton said that Leslie was of England's best blood—in fact he said he was a baronet, and that his real name was Tichborne. Of course I never knew him as Tichborne; I only knew him as George Frederick Smith, William Creswell, and Roger Leslie. He had the tattoo marks on his arm, and I challenge anyone in the world to refute what I say.
402. Did you see anything of him after that? I wanted him to go back with us for more cattle. He said he did not care to go, and that he intended to stop with his old chum. He also said that he did not want money as he could get it at any time. I went away, and I did not come back to Wagga Wagga until thirteen months afterwards. Castro had then left to claim the Tichborne estates. I made inquiries as to what had become of Leslie. Some said that he had gone to Queensland, but I could not find out for certain that he had done so. In the meantime a headless corpse had been found in a quarry in Wagga. It was unearthed by a retriever dog, and from the description of the clothes I came to the conclusion that it was Creswell, or as he was then known, Roger Leslie. I was under that impression until I saw the photograph of Creswell while he was in the Lunatic Asylum at Parramatta.
403. I undersand that you never saw him from the time you left him at Wagga Wagga, in September, 1865, until you met him the other day? That is so.
404. *Mr. Anderson.*] When you met him the other day, did you observe the marks you have described? I could not find the tattoo marks, but I found the other marks.
405. *Chairman.*] Did you ever look at his arm? Yes, and I saw a scar upon it.
406. Did that scar occupy the place once occupied by the tattoo marks? Yes.
407. *Mr. Anderson.*] Is it your impression that the tattoo marks have been removed? Yes.
408. *Chairman.*] At the time you knew him had he any jewellery? Yes. He wore a gold ring with the initials "A.O." upon it. I may mention that he also had a blue tattoo mark on the back of the middle finger of the left hand in the shape of a diamond.
409. Have you any doubt as to the identity of the man whom you saw the other day with the man whom you knew as Creswell, Leslie, and Smith? Not the slightest.
410. Did he ever tell you anything as to his antecedents or of his past career? No, he was very reticent. He made very few personal friends. When I asked him the other day whether he remembered me, he said "No." He did not remember me, but he remembered the name of Forbes. Of course, I was a young man then and wore a beard. He remembered the old cricketers, including Joe Styles, who was the captain of my club for fifteen years. He also remembered Mr. Davis and the Hon. Geo. Campbell.
411. *Mr. E. M. Clark.*] Knowing that Castro, or Orton, had gone to claim the Tichborne estates, did you follow the case up at all? I was going to upset the whole thing—at least, I wished to have a say in it. I had, however, only just got married at the time, and my wife wished me to say nothing about it as I would have had to go to England as a witness, and she did not care to cross the sea.
412. Then you really gave no publicity to what was then your knowledge? No, not until I met Joseph Eckford in 1873 or 1874. I was conversing with someone in the old Victoria Theatre, when someone remarked to me, "You are the very man whom Eckford would like to see about this lunatic; you seem to know all about him." I replied, "That if he was the man who married Widow Clark, I knew him."
413. *Mr. E. M. Clark.*] What did Mr. Eckford seek to do in connection with the case? He was endeavouring to prove that Creswell was Arthur Orton. I had mentioned the matter of the gold ring with "A.O." upon it.
414. *Mr. Anderson.*] Did you notice the tattoo mark on Creswell's finger when you went to see him the other day? No.
415. Did you notice any indications of the marks having been erased? I was not close enough to him, and I did not examine him. Of course marks of this kind can be erased. There are two men in the Riverstone Meat Co.'s works who have had tattoo marks removed. They were Indian ink marks, and they were taken off by means of new milk, and you cannot distinguish where they were. They say the removal of the marks was more severe than the putting of them on.

416. *Mr. E. M. Clark.*] This morning I saw the copy of an original statement made by an intimate friend of Tichborne at the trial in England, and he described the tattoo mark as an anchor inside a cross, and the heart in the centre of it? That is not similar to what was on Creswell. W. E. Forbes.  
19 Dec., 1899.
417. Were the letters underneath the tattoo mark on Creswell printed letters? Yes, in blue ink; the heart was in red ink.
418. *Chairman.*] Had you a conversation with Mr. Eckford on the occasion to which you refer? Yes.
419. Did he give you any information as to his object in seeking to obtain possession of Creswell? No; he said he wanted to take Creswell Home in order to show that the other man was not Arthur Orton.
420. Did he convey to you the impression that he believed Creswell was Arthur Orton? Yes; he seemed to be overjoyed when I mentioned the gold ring with the initials "A.O." upon it.
421. Was there any great difference in the appearance of the two men, Orton and Creswell? Yes.
422. Was the difference so great that it would be impossible to mistake one for the other? You could not make any mistake. One was a fat burly man—as rough as any butcher you could find. The other was exactly the reverse; he was very reserved and very natty, and there was a military cut about him. His appearance led one to believe that he was a thoroughly trained soldier.

WEDNESDAY, 20 DECEMBER, 1899.

Present:—

Mr. MEAGHER,		Mr. E. M. CLARK,
Mr. WILKS,		Mr. O'CONNOR,
J. C. L. FITZPATRICK ESQ., IN THE CHAIR.		

Alexander MacCormick, Medical Practitioner, sworn and examined.

423. *Chairman.*] I understand that some time ago you made an examination of William Creswell at the Parramatta Lunatic Asylum? Yes; in conjunction with Dr. Fiaschi, on 26th November, 1897. A.  
MacCormick.  
20 Dec., 1899.
424. I believe the examination was made at the instigation of the Court? At the instigation of Mr. Salisbury, connected with the Lunacy Department.
425. Can you say what time was taken up in carrying out the examination? I do not remember exactly.
426. *Mr. E. M. Clark.*] Did you make a careful examination? Yes. Of course it is two years since I made the examination, and I have never seen the man since. I cannot carry his image and every part of his body in my mind, but anything which was written down at the time I will swear to.
427. *Mr. Wilks.*] Drs. Pickburn and Devlin assert that there is a mark on Creswell's temporal artery, near the auditory canal, which you were not able to observe? There was no mark there.
428. They gave us a sort of diagram of it, and said they found it near the auditory canal, which is a branch of the temporal artery? The question which was asked Dr. Fiaschi and myself was "Is there a cut indicating that arteriotomy has been performed." If that had been performed you would expect to see a scar on the anterior branch of the temporal artery.
429. *Chairman.*] The question put to Dr. Pickburn was, "Is there a lancet cut for bleeding on the temporal artery," and his answer was, "There are two faint little scars directly over the temporal artery, just above the left auditory canal"? That is a little above the ear. There are no marks there indicating that the operation of arteriotomy had been performed. That I will swear to.
430. Are you also confident that there are no marks there which might arrest attention? I cannot remember now what other little marks were there; but there were no marks which I could see indicating that an operation had been performed for bleeding.
431. *Mr. Wilks.*] There is a difference between Creswell's height and that of Tichborne of 2 inches. Is it possible for such a "shortage" as that to have taken place in Creswell. When Dr. Pickburn measured him he found he had lost  $\frac{1}{4}$  inch in two years? When you measure a man roughly, against a wall, you can easily incline him one way or the other, so as to make a difference of  $\frac{1}{4}$  inch.
432. *Chairman.*] He was measured with a proper measure. Did you measure him by means of a measuring machine? I forget what instrument I used.
433. *Mr. Wilks.*] It is asserted that the mark on Tichborne's eyelid was caused by a fish-hook. We have it in evidence that you failed to find any trace of it on Creswell? There was no mark on the eyelids.
434. The other doctors say that the mark is visible to the naked eye? It was not visible to the eyes of Dr. Fiaschi and myself.
435. Do you think there was any pus mark there? There were no marks suggestive of an injury by a fish-hook that we could find.
436. The other doctors state that there is a mark there; did you fail to discern it? Yes.
437. Did you notice the difference between Creswell's ears—one of them being without a lobe? I do not know what is meant by the lobe of the ear. We do not talk about the lobe of the ear, but I know the part you mean. It is spoken of as the lobule of the ear. On one side the lobule was well marked—that is to say, it was distinct. On the other side it was attached to the face more.
438. Did you notice that there was a  $\frac{1}{2}$  in. difference in the measurement of the two eyes from top to bottom? We did not measure; we were only asked about the lobule.
439. The other doctors speak about the right ear having a normal lobe? We never use the word "lobe" in the description of the ear.
440. With regard to the mark on the wrist—Supposing there had been some tattoo-mark there, could it have been obliterated by medical means? Not that I know of, except the destroying of the skin or cutting it away. You would require to destroy the dermis, and that would leave a scar.
441. And you observed nothing of that character? We observed no scars which would lead us to suppose that a tattoo-mark had been obliterated.
442. *Chairman.*] Did you observe no scar there at all? I will not say that. To the best of my ability, there were little punctated white scars, as if there had been small pustules there; but there are no scars there to indicate that tattoo-marks have been obliterated.
443. Can you remember whether there is a scar occupying a space of a 5s. piece? There is a broad scar on the back of the left wrist. That was caused by the cut of a butcher's crop—at least, that is the assertion. It did not look like a tattoo-mark that had been obliterated.

A.  
MacCormick,  
20 Dec., 1899.

444. *Mr. Wilks.*] It is said that the tattoo-marks could have been removed by an elliptical incision? Then there would have been a linear scar left which could easily have been detected from an ordinary blotch. There is no linear scar on the inside of the left wrist.
445. *Mr. E. M. Clark.*] We were told yesterday that tattoo-marks can be removed by the use of new milk? I have heard of that, but it is a popular fallacy.
446. *Chairman.*] Do you regard it as a fallacy? Yes; you cannot destroy tattoo-marks unless you destroy the skin in which the pigment is placed.
447. If you had two persons brought before you who could absolutely prove that they had had tattoo-marks removed by that means, what would you say? I should say that the tattoo-marks were only superficial, and that they were not in the true skin at all. They would not be tattoo-marks similar to those which you see on sailors. You would require to skin a man before you got rid of such marks.
448. *Mr. Wilks.*] Did you not notice any peculiarities in the man's bearing which would lead you to believe that he had had an excellent early training? No.
449. Was there anything in his habit which struck you that he had followed an occupation different from that which he is supposed to have followed? No.
450. *Mr. E. M. Clark.*] Did you come to the conclusion that he was a genuine lunatic? Yes. I may mention that he was not very communicative, and I did not examine him for the purpose of discovering his mental condition.
451. *Chairman.*] How did you arrive at the conclusion that he was a lunatic? Because he was confined in a lunatic asylum. Of course we had certain questions to answer, and we answered them as correctly as we possibly could. We had no object in answering them other than correctly.
452. *Mr. Meagher.*] I take it that when you were asked by the judge to look for lancet cuts for bleeding you naturally looked towards the anterior branch of the temporal artery? Yes; that is where you would expect to find them.
453. You would not pay the same attention where the hair is near the ear? Nobody would dream of bleeding where the hair is.
454. If any other medical gentleman has stated that lancet cuts have sometimes been made there would you feel inclined to doubt him? I should like to know for what purpose they were intended to be made.
455. I suppose for the purpose for which lancing the temporal artery is usually carried out? I would not expect to find that in the region you have stated because there is an important nerve there which might be injured, and which might paralyse that side of the face.
456. At any rate you would confine your attention there? I would confine my attention to the place where the operation of arteriotomy is performed.
457. Would you like to swear that the marks which the other doctors have indicated are not there? There are no marks there which indicate that the operation of arteriotomy has been performed.
458. On any portion of the temple? Not on the temple.
459. Are you prepared to swear that there are no marks where the other doctors say they have located them. The doctors say "there are two faint linear scars directly over the temporal artery, just above the left auditory canal"? I will swear that there are no marks on the temple indicating that the operation of arteriotomy has been performed. How can I remember all the marks and scars on his body after two years?
460. You were asked certain questions, and you looked upon certain portions of Creswell's anatomy for certain marks, and you swear they are not there? That is so. Could not you bring the man here to simplify matters?
461. *Chairman.*] You were appointed for the purpose of making this investigation with the object of satisfying the court as to what was practically the identity of the man? And I had certain questions to answer, and I answered them correctly as far as my ability went.
462. *Mr. Meagher.*] I have no doubt you were asked to look for lancet cuts in the usual place in which the medical profession would expect to find them. Although it may be quite correct that there is no indication of lancet cuts of bleeding in the usual place on the temporal artery, are you prepared to say that Dr. Pickburn is wrong in stating that there are two faint linear scars? Above the ear?
463. Yes? No, certainly not.
464. *Mr. O'Connor.*] You would not expect two scars to be above the ear unless arteriotomy had been performed? No.
465. *Mr. Meagher.*] Did you see the asylum book when you examined Creswell? No.
466. Do you know whether there is any discrepancy between the examination of Dr. Fiaschi and yourself and that of the medical superintendent as to scars? No.
467. You and Dr. Fiaschi stated, "We find no marks of an issue on the shoulder or upper arm." If the asylum case books says, "Slight irregular scar one third of an inch in diameter on the left side of neck, also one vaccination mark near another ordinary small scar," what would you say? You talk of a scar due to an issue. An issue is generally not less than the size of a sixpence.
468. Is it correct to say that there is an ordinary small scar visible to the naked eye near the vaccination mark? There is no scar due to an issue on his shoulder or upper arm.
469. *Chairman.*] In making an answer of that kind you are adhering to the tenor of the question which you were asked? Certainly.
470. *Mr. Meagher.*] Do you think that after forty years an ordinary small scar near the vaccination mark can be positively stated to be the result of an issue? I should say that it was not the result of an issue. If there had been an issue there I could swear to the scar after forty years, or any length of time.
471. You reported that there was no scar of lancet cuts for bleeding on the arm? Yes.
472. If the case book at the asylum says there is one small scar on the inner side of the left fore-arm, what then? We say that there is one small scar on the inner side of the left fore-arm, but it is not in the line of any vein, so that it has not been bled.
473. Is it possible that it may have been caused by an unskilful attempt at bleeding? I could not give any information on that point.
474. I suppose there are cases of that kind? I never heard of a case of bleeding on the inside of the arm.
475. *Mr. O'Connor.*] Would you be prepared to say that no medical man would do it? Certainly he would not.

476. *Mr. Meagher.*] With regard to the marks on the arm, which are supposed to be the erasion of tattoo-marks—if the case book at the asylum described the marks as a large puckered elliptical scar such as might well be caused by burning, would it fall in with your view? There is a broad scar on the back of the left hand and wrist. A.  
MacCormick.  
20 Dec., 1899.

477. Do you think it is possible that that was caused by cautery? It might have been caused by anything. It was not a wound which healed up well. What caused it no one could say.

478. Is it possible that it might have been a tattoo-mark erased by cautery? It is possible. I do not know what was there before. It might have been caused by cautery.

479. *Chairman.*] Were you not informed that it was caused by a hook? No. Creswell told us that it was caused by a butcher's crop, and that he was treated at St. Mary's hospital for it.

480. *Mr. Meagher.*] Mr. Wilks has asked you a question with regard to the injury to the eyelid by means of fish-hook, and he has told you that Drs. Pickburn and Devlin discerned a scar which might have been the result of an injury caused by a fish-hook? You say that you found no mark at all on the eyelid. No; we found no mark on the eyelid suggestive of an injury by a fish-hook.

481. Did you find any mark on the eyelid suggestive of an injury by anything? How do you expect me to remember all about his eyelids after two years. We examined him for an injury by a fish-hook, and we could not find any marks suggestive of it.

482. *Chairman.*] You cannot say that there were no marks there at all? It is not fair to bother me with minute details of that kind after two years.

483. You have no recollection of any mark being there? No.

484. *Mr. Wilks.*] Did you notice any raising or twitching of Creswell's eyebrows? Yes; he had a peculiar way of raising his eyebrows.

485. Is that a common thing? You meet it in some people, but it is not a common thing.

486. One of the doctors has stated that he formed the impression that Creswell was a man of good early training, and of the better class in life. Do you think that? No.

487. Is the peculiarity about the ears unusual? Unless you were examining him, you would not notice it.

488. Is it not a most unusual feature in anybody? Yes.

1899.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## ESTATE OF THE LATE S. M. SWIFT, OF PETERSHAM.

(PETITION FROM JOHN McDONALD, OF MUNGIE BUNDIE, NEAR MOREE, PRAYING FOR LEAVE TO APPEAR BEFORE SELECT COMMITTEE, IN PERSON, OR BY ATTORNEY OR COUNSEL, AND TO EXAMINE AND CROSS-EXAMINE WITNESSES.)

*Received by the Legislative Assembly, 5 September, 1899.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The Petition of John McDonald, of Mungie Bundie, near Moree, in the Colony of New South  
Wales,—

HUMBLY SHOWETH :—

1. That on the 1st day of August, in the year of our Lord one thousand eight hundred and ninety-nine, your Honorable House appointed a Select Committee to inquire into and report upon the alleged evasion of probate duty by the executors in the estate of the late S. M. Swift, Esquire, squatter, Petersham.

2. That your Petitioner humbly prays that he may be represented by counsel or attorney, or in person, before the Select Committee appointed to inquire into and report upon the matter, with the right to call witnesses and adduce evidence, and to examine and cross-examine such witnesses as may give evidence before the Select Committee.

And your Petitioner, as in duty bound, will ever pray.

JOHN McDONALD.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE  
LEGISLATIVE ASSEMBLY.

---

VOTES No. 7. TUESDAY, 1 AUGUST, 1899.

- G. ESTATE OF THE LATE S. M. SWIFT, OF PETERSHAM:—Mr. Hughes moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed to inquire into and report upon the alleged evasion of probate duty by the executors in the Estate of the late S. M. Swift, Esq, squatter, Petersham.
- (2.) That such Committee consist of Mr. Carruthers, Mr. Dick, Mr. Hurley, Mr. McLean, Mr. Thomas, Mr. McFarlane, Mr. O'Sullivan, and the Mover.
- (3.) That the Progress Report from the Select Committee of Second Session of 1898 be referred to such Committee.
- Question put and passed.
- 

VOTES No. 22. TUESDAY, 5 SEPTEMBER, 1899.

1. \* \* \* \* \*
- ESTATE OF THE LATE S. M. SWIFT, OF PETERSHAM:—Mr. Garland presented a Petition from John McDonald, of Mungie Bundie, near Moree, praying that he may be represented by counsel, or attorney, or in person, before the Select Committee appointed to inquire into and report upon the alleged invasion of probate duty by the executors in the Estate of the late S. M. Swift, of Petersham.
- Petition received.
- Ordered to be referred to the Select Committee.
- 

VOTES No. 24. THURSDAY, 7 SEPTEMBER, 1899.

1. \* \* \* \* \*
- ESTATE OF THE LATE S. M. SWIFT, OF PETERSHAM:—Mr. Hughes (*by consent*) moved, without Notice, That the Select Committee on "Estate of the late S. M. Swift, of Petersham," have leave to sit during the adjournment of the House To-morrow.
- Question put and passed.
- 

VOTES No 56. WEDNESDAY, 20 DECEMBER, 1899.

31. ESTATE OF THE LATE S. M. SWIFT, OF PETERSHAM:—Mr. Hughes, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before the Select Committee for whose consideration and report this subject was referred on 1st August, 1899.
- Referred by Sessional Order to the Printing Committee.

1899.  
(THIRD SESSION.)

ESTATE OF THE LATE S. M. SWIFT, OF PETERSHAM.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 1st August, 1899,—“to inquire into and report upon the alleged evasion of probate duty by the executors in the Estate of the late S. M. Swift, Esq., squatter, Petersham,” and to whom was referred on the same date “the Progress Report from the Select Committee of Second Session of 1898,” and to whom was also referred, on 5th September, 1899, a Petition from John McDonald, “praying to be represented by counsel, or attorney, or in person, before the Select Committee,”—have agreed to the following Report:—

Your Committee, having examined the witnesses named in the list\* See list, p. 7. (whose evidence will be found appended hereto), find as follows:—

1. That the inquiry has been of an extremely complicated and lengthy character, embracing, as it does, the transactions of several large station properties, a statement of the accounts of which, prepared by Mr. George Sandell, chartered accountant, appears in the evidence.
2. That Mrs. Elizabeth Swift, widow of the late Samuel Moffit Swift, in evidence before your Committee (or through Mr. Sandell, who acted on her behalf) alleged:—
  - (a) That the estate was undervalued in the statement filed for probate.
  - (b) That there were, in addition, concealed assets.
  - (c) That the alleged partnerships between Swift and McDonald and Swift and Hann did not exist, and that, consequently, probate was paid only on a portion instead of the whole estate.
  - (d) That the value of selections on the estate in process of alienation by conditional purchase were omitted from the schedule filed for probate, although such selections were taken up in the interest of, and belonged to the estate.
3. That with regard to the alleged undervaluation of the estate, Mr. Hann, in a letter to Mr. Webb, manager of Browley, and also to Mrs. Swift, stated that he had disposed of Browley for £15,000. It is admitted by Mr. Hann in evidence that the station was sold three days before the application for probate, and that although commission was paid on £14,506 16s. 9d., the valuation for probate was stated at £13,317 10s. 3d. It is admitted by the same witness that Snubba, although valued for probate at £2,500, was actually sold by Pitt, Son, and Badgery for £5,000, and that no amended statement was filed.

4. That with regard to the concealed assets it is alleged by Mr. Sandell (and not denied by Mr. Hann), that the following should have been included in the accounts lodged on application for probate:—

- (a) Bill for £1,200 for sheep sold to Sutton & Co. (This is admitted by Mr. John McDonald.)
- (b) Sheep sold to Cook prior to Swift's death.
- (c) Wool in transit at time of Swift's death, £1,517 8s. 7d.

Mr. Hann admits Question 1299: That he did not inspect the books prior to application for probate, as there was not time.

5. With regard to the alleged partnerships your Committee find:

- (a) That no deed of partnership ever existed, either between Swift and McDonald or Swift and Hann.
- (b) That the evidence as to the alleged partnerships is unsatisfactory.
- (c) That it appears both in the case of Swift and Hann, and Swift and McDonald, that certain stock and other transactions were completed by operations on a joint account.

6. That with reference to the selections on the estate in process of alienation by conditional purchase, it is evident to your Committee that, almost without exception, the land was taken up in the interests of the various stations. The ledger accounts produced, and the evidence of Mr. W. J. Gore, point conclusively in that direction. Attention is drawn to the following remarkable evidence given by Mr. Hann:—

1309. Do you recognise this as station letter-book No. 31? Yes.

1310. Is this a letter addressed by you to Mr. Swift in 1883? Yes.

1311. It is dated 4th May, 1883; you say, "We shall have to see what position we stand in to these men (the selectors) by-and-by, and by-and-by block them by dummyming around them";—how do you explain that? I have no explanation to give.

1317. Then, on the 6th June, 1883, you wrote:—"We must hold ourselves in readiness to secure any places, and I wish you would give me accurate descriptions of each spot to work upon. Send Frayne in next Wednesday, and I will take up 320 acres";—who was Frayne? I do not remember. I suppose he was an employee.

1318. Have you any explanation to offer for that? None whatever.

Your Committee consider that the estate has been undervalued; that assets have been concealed, and that the evidence discloses that there have been serious offences committed against the Crown Lands Acts; and in view of the above, recommend that action be taken by the Crown Law Officers.

W. M. HUGHES,

Chairman.

*No. 2 Committee Room,*

*Legislative Assembly,*

*20th December, 1899.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 10 AUGUST, 1899.

MEMBERS PRESENT.—

Mr. McLean, | Mr. O'Sullivan,  
Mr. Thomas.

Mr. O'Sullivan called to the Chair *pro. tem.*

Entry from Votes and Proceedings appointing the Committee, and referring the Progress Report of Second Session of 1898, read by the Clerk.

*Resolved (on motion by Mr. McLean),—*That Mr. Hughes be Chairman of this Committee.

[Adjourned till Tuesday next at 2:15 o'clock.]

TUESDAY, 15 AUGUST, 1899.

MEMBER PRESENT:—

Mr. Hughes.

In the absence of a Quorum, the meeting called for this day lapsed.

WEDNESDAY, 16 AUGUST, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.  
Mr. McFarlane, | Mr. McLean,  
Mr. Thomas.

George Sandell (*Accountant*) called in, sworn, and examined.

Witness withdrew.

*Ordered (on motion of Mr. McLean),—*That John McDonald, Mungie Bundie, Moree, and Charles Donaldson, Highland Plain, Moree, be summoned to give evidence next meeting.

[Adjourned till Tuesday next at 11 o'clock.]

TUESDAY, 22 AUGUST, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.  
Mr. McFarlane, | Mr. Thomas.

*Ordered (on motion of Mr. McFarlane),—*That Wm. John Gore, Wapweelah, *via* Eangonia, be summoned to give evidence on Tuesday next at 11 o'clock.

George Sandell recalled and further examined.

Witness withdrew.

[Adjourned till To-morrow at 2 o'clock.]

WEDNESDAY, 23 AUGUST, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.  
Mr. McFarlane, | Mr. Thomas.

The Chairman informed the Committee that he had consulted Mr. Speaker with reference to the non-attendance of Mr. John McDonald and Mr. Charles Donaldson, and that Mr. Speaker had stated that no further action could be taken until the witnesses expenses had been tendered.

*Resolved (on motion of Mr. McFarlane),—*That the Clerk of the Assembly be requested to telegraph to Messrs McDonald and Donaldson, pointing out that steps can be taken to enforce obedience to a summons; requesting their attendance on Tuesday next at 12 noon, and intimating that expenses will be allowed in accordance with law.

[Adjourned till Tuesday next, at 11 o'clock.]

TUESDAY, 29 AUGUST, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.  
Mr. McFarlane, | Mr. McLean,  
Mr. Thomas.

The Clerk informed the Committee that in accordance with the resolution adopted at the last meeting of the Committee the Clerk of the Legislative Assembly had telegraphed to Messrs. McDonald and Donaldson, who had replied that they would attend on payment of their expenses, and that arrangements had been made to tender same.

The Chairman read a telegram from Wm. John Gore, who had been summoned to attend to-day, intimating that he was without means to pay his fare, and asking that arrangements be made.

*Ordered (on motion of Mr. McFarlane),—*That John McDonald, Charles Donaldson, and Wm. John Gore be summoned to give evidence next meeting.

[Adjourned till Tuesday next, at 11 o'clock.]

TUESDAY,

TUESDAY, 5 SEPTEMBER, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.  
Mr. McFarlane, | Mr. McLean,  
Mr. Thomas.

William John Gore called in, sworn, and examined.  
Witness withdrew.

[Adjourned till To-morrow, at 11:30 o'clock.]

WEDNESDAY, 6 SEPTEMBER, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.  
Mr. McFarlane, | Mr. McLean,  
Mr. Thomas.

Entry from Votes and Proceedings, referring the Petition of John McDonald to the Committee, read by the Clerk.

E. P. Simpson, Esq. (*Messrs. Minter, Simpson, & Co., Solicitors*), appeared for Mr. John McDonald.  
William John Gore recalled, and further examined.

Witness withdrew.

John McDonald (*Grazier*), called in, sworn, and examined.

Witness withdrew.

Charles Donaldson called in, sworn, and examined.

The witnesses John McDonald and Charles Donaldson having refused to answer certain questions.  
Room cleared.

*Resolved (on motion of Mr. McFarlane)*,—That the Chairman consult Mr. Speaker as to the advisability of asking the House for power to enforce the provisions of the 7th section of the Parliamentary Evidence Act.

Chairman submitted claim from W. J. Gore for £14 9s. 3d. witnesses expenses.

Claim considered and passed.

[Adjourned till To-morrow, at 11:15 o'clock.]

THURSDAY, 7 SEPTEMBER, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.  
Mr. Dick, | Mr. McFarlane,  
Mr. O'Sullivan.

E. P. Simpson, Esq. (*Messrs. Minter, Simpson, & Co., Solicitors*), appeared for Mr. John McDonald.  
Charles Donaldson recalled and further examined.

Witness withdrew.

John McDonald recalled and further examined.

Room cleared.

*Resolved (on motion of Mr. McFarlane)*,—That the Chairman obtain leave of the House for the Committee to sit during the sitting of the House to-morrow.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

FRIDAY, 8 SEPTEMBER, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.  
Mr. Dick, | Mr. McFarlane,  
Mr. Thomas.

Entry from Votes and Proceedings granting leave to the Committee to sit during the adjournment of the House *this Day*, read by the Clerk.

E. P. Simpson, Esq. (*Messrs. Minter, Simpson, & Co., Solicitors*), appeared for Mr. John McDonald.

Witness withdrew.

Charles Donaldson recalled and further examined.

Witness withdrew.

John McDonald recalled and further examined.

Witness withdrew.

The Chairman submitted the following claims.

Charles Donaldson, £8 13s.; John McDonald, £11 10s.; also claim from Inspector-General of Police for refund of £15 13s. 9d., in connection with expenses to certain witnesses on service of summons.

Claims considered and passed.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 31 OCTOBER, 1899.

MEMBER PRESENT:—

Mr. Hughes.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY,

THURSDAY, 8 NOVEMBER, 1899.

MEMBERS PRESENT:—

None.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 14 NOVEMBER, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.

Mr. Hurley, | Mr. McFarlane,  
Mr. Thomas

Elizabeth Swift, called in, sworn, and examined.

Witness withdrew.

George Sandell, called in, sworn, and examined.

Witness withdrew.

Ordered,—That Phineas Hann be summoned to give evidence next meeting.

[Adjourned till Tuesday next, at 2 o'clock.]

TUESDAY, 21 NOVEMBER, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.

Mr. Hurley, | Mr. McLean,  
Mr. McFarlane.

Phineas Hann (*one of the Executors of the late S. M. Swift*) called in, sworn, and examined.

Witness withdrew.

[Adjourned till To-morrow, at 2 o'clock.]

WEDNESDAY, 22 NOVEMBER, 1899.

MEMBERS PRESENT:—

Mr. Hughes, | Mr. McFarlane.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY, 23 NOVEMBER, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.

Mr. McLean, | Mr. McFarlane,  
Mr. Thomas.

Phineas Hann, recalled, and further examined.

Clerk submitted claims for witnesses expenses: G. Sandell, £10 10s; P. Hann, £13 2s. 9d.

Claims considered and passed.

Reassembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 20 DECEMBER, 1899.

MEMBERS PRESENT:—

Mr. Hughes in the Chair.

Mr. McFarlane, | Mr. McLean.

Chairman submitted Draft Report.

Same read, amended, and agreed to.

Chairman to report to the House.

LIST OF WITNESSES.

1899.

(THIRD SESSION).

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

ESTATE OF THE LATE S. M. SWIFT, OF  
PETERSHAM.

WEDNESDAY, 16 AUGUST, 1899.

Present:—  
MR. McFARLANE, | MR. McLEAN,  
MR. THOMAS. |  
W. M. HUGHES, Esq., IN THE CHAIR.

George Sandell sworn and examined:—

1. *Chairman.*] Have you any additional evidence to give to the Committee? Yes. I now wish to tender the particulars of the exhibits as shown in the balance-sheet which I formerly presented to the Committee. They are as follows:—

G. Sandell.  
16 Aug., 1899.

PARTICULARS OF ASSETS AND LIABILITIES THAT EXISTED AT THE DATE OF TESTATOR'S DEATH; COMPILED FROM THE ESTATE DOCUMENTS BY G. SANDELL.

	<u>£1,772</u>	<u>1</u>	<u>2</u>

Bank of New South Wales—for Cox, Dowling, & Co.'s four promissory notes deposited by testators, not under discount—handed by Bank of New South Wales to Mr. P. Hann—see Hann's letter of 21st April, 1884, viz. :—

P.N. due 22nd May, 1884	for	£	s.	d.
" " 6th June, " "	"	3,061	0	0
" " 29th " " "	"	2,560	5	0
" " 24th July, " "	"	2,592	10	0
		1,594	7	6
		<u>£9,808</u>	<u>2</u>	<u>6</u>

(For further particulars see Division F 1. These four promissory notes were duly honoured at maturity, and concealed from the accounts filed on application for probate by Mr. P. Hann, and also concealed from the account filed by the executors in the Equity suit No. 5,060.)

Contingent profit on Avington cattle contract—see Account Document No.	£1,482	6	4
Liability to Messrs. Oliver, Smith, & Co., for amount due to this firm, as per Pitt, Son, and Badgery's invoice—see Document 451. (A promissory note was given by testator, for this amount, due 3rd May, 1884)	£9,441	0	0

Under an agreement dated 9th July, 1883, testator purchased the Avington herd from Pitt, Son, and Badgery—*vide* documents 485, 486, 487, 488, and 489—vendor's agents, the whole of the Avington herd, consisting of about 10,900 head, at 45s. per head, and paid £250 as deposit. The said vendor's agents and testator subsequently arranged to share the agreement, the vendor's agents participating to the extent of one-third share in the said agreement; this agreement was endorsed to and accepted by vendor's agents, testator having to provide funds for working expenses, and that during the months of October, November, and December, 1883, testator drew cheques upon his banking account to the extent of £1,504. Under the said agreement of 9th July, 1883, testator lifted a portion of the said herd, and gave to vendor's agents, Pitt, Son, and Badgery, a promissory note, due 3rd May, 1884, for £9,441. The cattle so lifted testator sold, and delivered a portion to Messrs. Cox, Dowling, & Co., and for such sales received four promissory notes (for full particulars see Division F, No. 1), the following being the approximate account of the Avington cattle purchase :—

<i>Debit.</i>		<i>Credit.</i>	
Testator's cheques for expenses	£ 1,504 0 0	Cox & Co.'s P.N.'s. for cattle	£ 9,808 2 6
Testator's P.N. for cattle	9,441 0 0	Sale of plant	546 0 0
Profit	1,396 15 6	631 head of cattle sold after testator's death	1,987 13 0
	<u>12,341 15 6</u>		<u>12,341 15 6</u>

Mr. Hann and Mr. Croaker, the executors, concealed the whole of these transactions from the estate accounts, *vide* my affidavit of 25th October, 1898—Division F, No. 1. *Exhibit*

„ 9 „ 1884; „ 12 „ 1884, „ 100 „ £7 10s.	750	0	0
	2,119 0 0		

*Vide* documents (cheques) 282 to 286, inclusive, and press letter copy-book marked B, page 666. Extract from testator's letter to Mr. James Robinson, Kimo, 24th January, 1884:—"Dear Sir,—Without prejudice. When must I remove the 100 (one hundred) bullocks bought from you? Markets are very full, and until I can make a market I might lose. Write definitely to a day, and I will keep time."

*Vide* same book, pages 667 and 668. Extract from testator's letter to Mr. M. Bradley, 25th January, 1884:—"I consider it the best chance you ever had to buy. Cattle must very dear. It is a question of keeping back delivery, as markets are rushed by men that cannot hold through water falling. Now do best you can. Secure everything, and as long delivery as possible."

Same book, page 669. Extract from testator's letter to Traffic Manager, Railway Office, Redfern, 28th January, 1884:—"I want twelve trucks at Cootamundra to load cattle on Tuesday, 12th prox., for Thursday, 14th. Sale at Homebush. Please supply, and oblige."

Extract from same book, page 669, from testator's letter to Mr. James Robinson, Kimo, 28th January, 1884:—"Dear sir,—Yours of the 26th instant to hand, fixing date for delivery for your bullocks; thanks for the concession. Bradley will be there."

These bullocks were sold on the 14th February, 1884—four days before testator's death—and no proceeds of such sale have ever been accounted for or received by testator's estate; the entire transaction has been concealed by the executors, Mr. Hann and Mr. Croaker.

## Exhibit A, No. 11.

Wool venture and wool in transit, *vide* letter press copy-book, marked B, page 500.—Extracts from testator's letter to Messrs. Peele, Borradaile, & Co.:—"3 November, 1883—146 bales per Lastingham A-JH, and 133 bales per Lastingham DAJ.

Coolabah

Boamba

Also <i>vide</i> extract from Mr. R. M. Pitt's letter to Mr. P. Hann, 19th September, 1884:—"Peel was telling me that Old Swift's share in some wool specs was about... and he was sending you a cheque." Document 287.	£300	0	0
In book marked S1, page 34, I find a statement by Hann and Croaker, of 5th July, 1884:—"36 bales of wool from the wethers now on their way to Sydney from Rockhampton" This wool I have taken at £15 per bale	550	0	0
	£900 0 0		

## Exhibit A, No. 12.

Mont de Piete, 1,000 £1 fully paid-up shares, Nos. 40,771 to 41,770, inclusive £1,050 0 0  
This amount was paid to the executors on 31st October, 1884, viz., £900 and £150 (the latter being a portion of £500 paid on 31st December, 1884—Documents 401 to 414).

These shares were transferred by the executors, Mr. P. Hann and Mr. C. H. Croaker, to Mrs. Swift, on the 24th April, 1884, for £1,050.

Kimberley Pastoral Association, 2 <sup>1</sup> / <sub>4</sub> th	£146	5	5
Testator paid on 30th May, 1882	£100	0	0
Testator paid on 14th February, 1883	46	5	5

Kiandra G.M. Co., 250 shares ( <i>vide</i> documents 415 and 418). Messrs. Thompson and Son's offer of 22nd May, 1884, 4s. 6d. each	56	5	0
	£1,252 10 5		

The whole of these shares were concealed from the account filed by Mr. Hann and Mr. Croaker on their application for probate.

## Exhibit A, No. 13.

Testator's private banking account with Bank of New South Wales at the time of his death was in credit to the extent of £399 4s. 5d. The executors, Mr. Hann and Mr. Croaker, in their account filed an application for probate, place it as a liability for £399 4s. 5d., thereby defrauding the Government of stamp duty on £798 8s. 5d. (See Exhibit A, No. 6, and documents 388 and 391.)

Bank of New South Wales, Bourke Branch, account in the name of J. Thorburn, a drover. At testator's death this account was in credit to the extent of £9 10s. 9d., and not £49 9s. 9d. debit, as entered in the accounts filed by Hann and Croaker in their application for probate. (See Exhibit A, No. 6, avoiding stamp duty on £59 0s. 6d.)

Bank of New South Wales, Walgett Branch, the debit balance at testator's death was £137 6 10  
See P. Skinner's letter, document. Executors entered £280 19s. 8d. as a liability in their accounts on application for probate, avoiding stamp duty on £143 12s. 10d.

## Exhibit A, No. 14.

Liabilities to Drovers.—All the drover's accounts had been settled by testator shortly before his death, and on reference to the executor's account, filed on application for probate, it will be seen that the whole of the figures are—"round figures," estimated for the purpose of reducing stamp duty on probate—had they have been *bona-fide* creditors, the executors would have stated the actual amounts. As a specimen of Mr. Hann's *bona-fides*, I quote the following extract from Mr. Hann's letter to Mr. John McDonald, of 21st April, 1884 (see press letter copy book No. 18, page 241:—"We gave Redford an estate cheque on 21st April, 1884, for £187 4s. 3d., and charged the whole of it to Swift's. When the account was before the Registrar, it showed the account as follows:—McDonald, £17 16s. 6d.; Swift and Hann, £57 4s. 6d.; Swift, £99 5s. 2d.; and interest, £9 2s. 5d."

Fencing, 121 miles ; .....	5,295	0	0
Fencing, 67 miles ; .....	5,445	0	0
	2,345	0	0
	£68,123	9	0

On 2nd May, 1883, Mr. P. Hann valued this property with 33,000 sheep thereon at £63,000—*vide* press letter copy book 31, page 157. In the accounts filed on application for probate, Mr. Hann placed its value at £50,715. (For further particulars, see my affidavit of 25th October, 1898, under Division A, No. 2.)

*Exhibit B, No. 2.*

Mimosa West Station—Leasehold run of about 43,500 acres, fenced and subdivided ; thirteen large and small paddocks, 21 tanks, woolshed, huts, house, outbuildings, hay-shed, &c., with 28,000 sheep—rent £50 per annum .....	£28,000	0	0
960 acres of freehold, and 320 acres of conditional purchases .....	1,123	0	0
See Lavender's valuation .....	£29,123	0	0
Add horses, cattle, and plant ; see equity suit 5,060, page 38.....	1,000	0	0
	£30,123	0	0

For number of sheep on station, see Book S No. 1, page 21—28,365 head. This valuation does not disclose the whole of the Mimosa West lands. (For further particulars, see *Exhibit B, No. 9*.)

*Exhibit B, No. 3.*

Browley Station and property :—

Messrs. C. L. Griffiths & Co. sold this property on 2nd April, 1884 (see Document 194), and the following is a true copy of that firm's receipted commission account, viz. :—

April 4th, 1884. To commission on sale to Messrs. J. and A. Macks, Browley Estate, 1½ per cent. on £14,564 16s. 9d. ....	£218	9s.	5d.
--	------	-----	-----

The following are the particulars of the said sale to Messrs. J. and A. Macks, *vide* Book 12, page 362, viz. :—

	£	s.	d.
6,824 acres of C.P., and 40 acres of freehold, at 35s. ....	12,012	8	9
Interest on purchase, as agreed .....	634	11	4
5 horses, 14 cattle, and furniture .....	197	17	2
8,508 station sheep (see Book 12, page 363) .....	2,552	8	0
	15,397	5	3
Less sale of property for Messrs. Griffiths' commission .....	218	9	5
	15,178	15	10
Add for value of 5,132 sheep not sold with station, at 6s. ....	1,539	12	0
	£16,718	7	10

For particulars and number of sheep, 16,231, see Book S, No. 1, page 21.

The executors, Mr. P. Hann and Mr. C. H. Croaker, entered the value of this property, in the account filed on application for probate on the 5th April, 1884, as £13,317 10s., notwithstanding the property had been sold three days prior to filing the said account for upwards of £15,000. (For further particulars see Division A, 4.)

*Exhibit B, No. 4.*

Snubba Run and property :—

Messrs. Pitt, Son, and Badgery sold this property on 9th October, 1884 (see documents 195 and 197), and the following is a true extract thereof, viz. :—

	£	s.	d.
Snubba Run.....	5,000	0	0
Interest thereon, as agreed .....	262	10	0
	5,262	10	0
Less agent's commission and charges.....	131	15	0
	5,130	15	0
Add thereto the following property, sold since testator's death, that existed on the run at time of testator's death, and not included in sale by Pitt, Son, and Badgery, viz. :—			
5,512 sheep, sold to Pope, <i>vide</i> Equity suit 5,060, page 69 .....	1,792	6	0
8,614 " " Winter, <i>vide</i> Bates' letter-book .....	4,522	7	0
1,000 " " Halloran, <i>vide</i> Equity suit 5,060, page 69.....	425	0	0
163 " " " .....	31	0	0
90 rams, unsold and unaccounted for, taken at 42s.....	188	0	0
2,081 sheep, " " " 7s. 6d. ....	780	7	6
	£12,869	15	6

(For further particulars, see Division A, 5.)

The executors, Mr. P. Hann and Mr. C. H. Croaker, entered the value of this property, in the accounts filed in application for probate, as £7,210.

Particulars of the Assets and Liabilities on the Mungie Bundie, Boolooroo, and Gravesend Stations that existed at the date of Testator's death, compiled from the Estate documents by George Sandell :—

Exhibit C, No. 1.

Mungie Bundie, Boolooroo, and Gravesend Stations, 35,000 acres of freehold land with improvements thereon, taken at the low valuation of 45s. per acre .....

£78,750 0 0

Twenty-five shillings per acre is the actual amount paid to the Government for the freehold land; the improvements on the same are estimated at 20s. per acre. Mr. J. Henderson, who personally inspected these stations in February, 1887, valued the 35,254½ acres of freehold land at £75,622 18s. 9d., and valued 67,116 acres of leasehold and improvements thereon at £10,193 6s., making together £85,818 4s. 9d. (see document). These valuations of Mr. Henderson were adopted and used by Mr. P. Hann in the accounts filed in the Equity suit, No. 5,060, which were duly signed by Mr. John McDonald and Messrs. Peele, Borradaile, & Co., accountants, who prepared the said accounts as a correct valuation, clearly proving that the valuations of Messrs. Pitt and Badgery, as per my affidavit of 25th October, 1898—see Division A, No. 7—was an improper valuation to deceive the Stamp Commissioner; that since preparing my statement of assets and liabilities—as per page 31 of Minutes of Evidence—I have discovered that there were additional selections on these runs—as per supplementary particulars, Division D, viz., No. 15, 16, 17, 18, 19, 20, 21, and 22 of the cost value of £3,151 12s. 2d.—also concealed from the accounts filed on application for probate by Mr. Phineas Hann and Mr. C. H. Croaker, the executors, and Mr. John McDonald.

Exhibit C, No. 2.

Leasehold runs, consisting of 190,000 acres and improvements and plant thereon, as per the valuation of Mr. R. M. Pitt and Mr. H. S. Badgery—*vide* document 509 .....

£17,000 0 0

Exhibit C, No. 3.

Sheep on the three runs, viz. :—85,241 at 10s. per head .....

£42,620 0 0

For numbers, see Mr. John McDonald's signed report of 4th May, 1887, document 561, page 1; also stations stock assessments, documents 516, 517, 518, and 520, as 79,000 head.

For values, the average station selling price for the year 1884 was 10s. 1d. per head. Mr. R. M. Pitt and Mr. H. S. Badgery valued these sheep, without inspection, at 9s. per head, *vide* Division A, 7.

Exhibit C, No. 4.

Horses on the runs, viz. :—200, at 150s. per head .....

£1,500 0 0

For numbers, see Mr. John McDonald's letter of 20th March, 1884, document No. 508.

For value, see Mr. R. M. Pitt and H. S. Badgery's valuation, 150s. per head, Division A, 7, the average selling price on the station for the year 1884 being 150s. per head.

Exhibit C, No. 5.

Cattle on the three stations, viz. :—4,797 at lowest selling price of station. 90s. per head .....

£21,586 0 0

For numbers, see original stock assessments for the year 1884, documents 516, 519, and 560, viz. :—

On Mungie Bundie run .....	450 head.
On Gravesend run .....	3,217 „
On Boolooroo run .....	1,330 „
<b>Total</b> .....	<b>4,997 „</b>
Less number of horses, per Exhibit C, 4 .....	200 „
<b>The actual number on the three stations at date of testator's death</b> .....	<b>4,797 „</b>

For value, the average station selling price for the year 1884 was £5 17s. 6d.; for year 1885, £4 16s. 3d.; and for the year 1886, £4 10s. per head.

The foregoing assets, as disclosed in Exhibits C, Nos. 1, 2, 3, 4, and 5, were valued in the accounts filed on application for probate by Phineas Hann, C. H. Croaker, and John McDonald, at £106,500. I allege that these assets should have been valued at £161,456, and in support thereof I extract the following from an original letter written by the testator to Mr. Maiden, 26th August, 1882, *vide* documents 495 :—“Referring to our conversation last night *re* our station on Gwydir, I can only give you a rough outline as to what we have there; but if anything could be done or prospects of a sale, I would write to McDonald for full particulars and terms for Mungie Bundie, Boolooroo, and Gravesend, with stock and purchased land, &c.; we want £150,000 sterling. Terms could be arranged. The following is about the number of stock, acres of country, purchased land, conditional purchase and improved lands :—Mungie Bundie, 55,000 acres; Boolooroo, 61,000; and Gravesend, 80,000, including about 40,000 freeholds, 75,000 sheep, and 4,000 cattle.”

The following assets, as disclosed in Exhibits Nos. 6, 7, 8, 9, 10, 11, and 12, were concealed from the accounts filed on application for probate by Mr. P. Hann, Mr. C. H. Croaker, and Mr. J. McDonald, viz. :—

Exhibit C, No. 6.

Wool in transit at date of testator's death, £1,817 18s. 7d., *vide* Union Bank of Australia—John McDonald & Co.'s account, per pass-book, on 23rd September, 1884, account credited with proceeds of 114 bales, ex “Killarney”; also see press-letter copybook B, page 609. Testator's letter to Mr. Sharp, 27th December, 1883. “Enclosed memo. refers to balance of Mungie Bungie clip of 1883; please send me bills for it as soon as shipped.” The station shearing for the year 1884 commenced in October, and it would have been an impossibility for this wool to be the proceeds of 1884 clip.

Exhibit C, No. 7.

Sundry debtors, &c., at testator's death : -	£ s. d.
L. Seaton & Co., for 3,000 ewes, sold 10th January, 1884 .....	1,200 12 0
These sheep were delivered on 7th January, 1884, by Drover Halloran. Mr. J. McDonald received a six months' P.N. from L. Seaton & Co., which was discounted and credited by the Union Bank of Australia on the 12th April, 1884, two months after testator's death. See station ledger, folio 577, and banker's pass-book.	
G. Cook, for 2,100 ewes, sold 8th February, 1884 .....	413 10 0
These sheep were delivered by Drover Sinclair before testator's death, and Mr. John McDonald received and banked £209 10s., on 21st February, 1884, three days after testator's death; and on 18th April, 1884, discounted Cook's P.N. for £204. See Union Bank of Australia pass-book and station ledger, folio 571.	
P. McCormack, debtor at testator's death .....	129 0 0
This amount was received by Mr. J. McDonald, and entered in the signed accounts prepared by Peele, Borradaile, & Co., by Mr. John McDonald, as owing to the station. See accounts, page 1.	
R. Child, debtor at testator's death .....	88 0 0
See station ledger, folio 681, and also signed accounts, page 1.	
J. Jurd, debtor at testator's death .....	12 10 6
Received by J. McDonald. See bank pass-book, 21st February, 1884.	
Cash in hand at date of testator's death. See signed account, page 1 .....	15 4 2
<b>Total</b> .....	<b>£1,859 2 8</b>

Exhibit

## Exhibit C, No. 8.

Gwydir River Pumping Co ..... £192 12 0  
 See signed accounts. Mr. John McDonald therein states it was an asset at the date of testator's death. See page 1. 16 Aug., 1899.

G. Sandell.

## Exhibit C, No. 9.

Refunds from Treasury—refunds for 1883.—Wyndham's and Emmett's selections received by John McDonald. See Union Bank of Australia pass-book, 8th March, 1884, £23; and 5th July, 1884, £448.

## Exhibit C, No. 10.

Rent adjustment for year 1884 ..... £241 8 3  
 The rents for Gravesend and Mungie Bundie were paid on 17th December, 1883, for the year ending 31st December, 1884, in advance, viz., £97. The rent for Boolooroo was paid on 11th January, 1884, also in advance, for the year ending 31st December, 1884, viz., £191. The proportion to the 18th February, 1884, only, should be charged against the estate account to the date of testator's death. The balance should have been carried forward as an asset.

## Exhibit C, No. 11.

S. M. Swift's sheep on Mungie Bundie Station at date of testator's death, viz. :—  
 £ s. d.  
 8,184 Mercaool ewes, at 8s. 6d. per head (purchased and paid for by testator from Messrs. McLauchlin Bros., 5th October, 1883; vide station ledger folio 576, and document 525) ..... 3,478 4 0  
 5,641 ewes, at 10s. per head (vide station ledger folio 595, and document No. 504—shearing expenses charged against testator)..... 2,820 10 0  
 6,298 14 0

## Exhibit C, No. 12.

John McDonald's overdrawn salary account (vide station ledger folios 19 and 166) ..... £310 7 8  
 Mr. John McDonald's salary was £200 per annum, and after testator's death, without any authority, seems to have been increased to £500 per annum.

2. Have you any other documentary evidence? I wish also to submit the evidence I have prepared with regard to the concealed assets of the estate—the under-valuation of the estate, which I referred to in my affidavit of 25th October, 1893. This is giving further details as to the wool, the land on the stations, and all the particulars as to the purchase of it, and with regard to the land which I have put down under the head "dummings." It deals with the partnership claims and dummings, and the concealed estate assets. The evidence I refer to is as follows:—

## Baden Park Station, purchase and mortgage of.

In 1876, Mr. C. F. Fraunfelder was possessed of Block "S," and requiring financial assistance, entered into arrangements with the testator to endorse Fraunfelder's bills, which at their maturity, Mr. Fraunfelder was unable to meet, and testator had to provide funds; in 1876, Mr. Fraunfelder purchased from Messrs. Day, Hayes, and McKinnon Block "T," arranging to sell testator a share, if testator would further finance, stock, and improve the runs. Testator provided further funds, and opened a banking account on 14th January, 1878, under the name or style of "S. M. Swift & Co." with the Bank of New South Wales, Tammut Branch, paying to the credit of the account £334, and on the 18th January, 1878, £600, and from time to time other large amounts.

Mr. Fraunfelder drew on this account for the working expenses of the station; at this period testator was possessed of three-fourths share in the property which he carried on in his own name and that of Mr. John McDonald; the remaining share (one-fourth) belonged to Mr. Fraunfelder.

During the year 1878, Mr. John McDonald, who was engaged on the station directing some improvements, having by some error of judgment constructed a well on an adjoining run, costing £810, some unpleasantness arose, and Mr. J. McDonald ultimately retired from the partnership on the 14th May, 1879, testator taking over his share, and giving to Mr. J. McDonald a letter of release. I submit the following particulars for the Select Committee's consideration.

Extract from testator's letter to Mr. J. McDonald, 5th April, 1879, document:—"I am quite ready and willing to release you from your share, and will give you a clear acquittal any time you wish; I do not wish it, and you should consider it, at all events keep it to yourself, as if you persist in giving it up, I shall not share it with Hann; will keep it to myself." On page 209, "If you wish when you return from Baden Park, I will give you a written attested release from all interest and liabilities in any way at Baden Park."

Extract from Mr. P. Hann's letter to Mr. Wilkinson (Mr. Hann's late partner), 13th May, 1879 (vide Book 2, page 372).—"I was surprised to hear that McDonald had withdrawn from Baden Park, and that Swift now holds a half share in it." (Testator, after taking over McDonald's share, became possessed of three-fourths).

Extract from testator's letter to Mr. J. McDonald, 14th May, 1879 (see document 590), written by Mr. P. Hann, and signed by testator.—"In accordance with your wishes expressed in your letter of the 13th, received this morning, I hereby agree to take over all your liabilities and interest in the Baden Park property, managed at present by Mr. C. F. Fraunfelder, and to release you from all claims thereon. Yours truly (signed), S. M. SWIFT—Witness, P. Hann." It seems hardly creditable that Mr. Hann would have signed as a witness, had he been a partner, nor would Mr. McDonald have accepted.

Extract from Testator's letter to Mr. Fraunfelder, 26th May, 1879, document 592:—"McDonald is not going up; after looking into everything, in disgust he gave up his share to me, as I had given him that option when going into it."

Extract from Testator's letter to Mr. Murchison, 1st August, 1879, document 605:—"The shareholders are, myself, two; Mr. McDonald and a man named Fraunfelder, one each. I have most money in it. I had to put £1,700 in for Fraunfelder along with my own two shares; it will be the best property I own in a few years."

Testator's signed letter, written on Bank New South Wales paper, document 257:—"To the Manager of the Bank of New South Wales, Sydney, 13th September, 1879.—In consideration of the Bank of New South Wales granting my firm of Swift & Co. a further advance of £500 (five hundred pounds) I agree to transfer to the Bank Baden Park run, Block 'S,' in the Albert District, and will also transfer Block 'T' as soon as I am in a position to do so. I also agree to mortgage at once to the Bank 13,000 sheep and other stock now running on the said Stations 'S' and 'T,' and will procure my partner's signature to the said mortgage and transfers, which Mortgage and transfers will be held by the Bank as further security for all my present and further liabilities to the Bank of New South Wales, in connection with my other accounts. I further agree to obtain sanction of Messrs. Swift and Fraunfelder to this agreement. Yours faithfully, S. M. Swift."

Testator's signed letter to the Manager of the Bank of New South Wales, Tammut, 30th October, 1879, document 258:—"Herewith we beg to hand you a mortgage over Moama Blocks "S," of the Baden Park run and 13,000 (thirteen thousand) sheep depasturing thereon, and transfer of the said block as collateral security for an advance of four thousand three hundred and fifty pounds (£4,350) to our firm of S. M. Swift & Co., under our bond of this date, and made in the penal sum of eight thousand seven hundred and fifty pounds (£8,750). We agree to hand you a transfer of Moama Block "T" as soon as it is transferred to us, and which is also to form part of the security for the above advance of £4,350 (five lines following ruled out in original). Yours faithfully (signed), S. M. Swift and C. F. Fraunfelder."

Notwithstanding Mr. Hann's various affidavits, stating he was admitted a partner in 1878, it appears up to this period he was not included in any document as a partner of the Baden Park Blocks "S" and "T" with Swift and Fraunfelder. From my further investigations, I find that on 8th December, 1879, testator borrowed from Mr. W. A. Brodrigg £8,000 at 8 per cent, and gave a stock mortgage and transfer of the said runs "S" and "T," together with promissory notes for principal and interest. These notes were signed by S. M. Swift, C. F. Fraunfelder, and P. Hann. I conjecture that Mr. Hann signed by way of indorsement, and not as a partner, as on writing to Mr. Webb, on 20th February, 1880, vide Book 3, page 454, Mr. Hann says, "The writer does not draw or operate at all on Swift & Co.'s account."

G. Sandell.  
19 Aug., 1899.

On 9th January, 1880, Mr. Brodribb's solicitors, Messrs. McCarthy, Robertson, and Fisher, delivered their bill of costs to S. M. Swift & Co., amounting to £34 5s., which was paid on same date by cheque drawn on the S. M. Swift & Co. banking account, "for drawing, obtaining, executing, and registering stock and station mortgage, discharge of stock and station mortgage from Bank of New South Wales," documents 624, 625, and 626.

On the 19th January, 1880, *vide* documents 627 and 628, letter and account in Mr. Hann's handwriting, to the Bank of New South Wales, Tumut: "Dear sir,—Enclosed we beg to hand you Swift & Co.'s promissory note, value £430 13s. 5d. sterling, being balance of amount owing to us for sheep sent to Baden Park from Mimosa. This bill is sure to be provided for at maturity, and we should like you to discount it to our credit.—Yours truly (signed), Swift and Hann."

Copy of account (document 628):

Wagga Wagga, 13th January, 1880.

Messrs. S. M. Swift & Co., Baden Park.

Dr. to Swift and Hann.

Balance of sheep sent to Baden Park .....	£426 10 6
Thirty-nine days' discount on same for overtime, bill dating from 1st January, 1880, instead of 23rd November, 1879.....	4 2 11
	£430 13 5

If Mr. P. Hann had been a partner in S. M. Swift & Co. at Baden Park at this period, he was asking the Bank of New South Wales to discount his own promissory note without disclosing the fact.

That I find, on 8th December, 1882, testator, by a letter of request to the Manager of the New Zealand Loan and Mercantile Agency Co., Ltd., to repay Mr. Brodribb £8,000. On the 3rd January, 1883, testator wrote to Mr. Brodribb (see document 641) "to sign and return transfers of the runs 'S' and 'T.'" These transfers Mr. Brodribb returned, duly signed, on 4th January, 1883 (see document 642), and that up to testator's death the transfers were in his possession, and the runs remained in Mr. Brodribb's name. Testator died on 18th February, 1884. That on 23rd February, 1884, Mr. Hann had an interview with Mr. Shepherd Smith, general manager of the Bank of New South Wales, and on 25th February, 1884, Mr. Hann wrote the following letter, *vide* Book B, pages 699 and 700, which I affirm was the commencement of the conspiracy to defraud the beneficiaries under the will:—

"The General Manager, Bank of New South Wales. Dear Sir,—Respecting our interview of Saturday concerning the position of affairs brought about by the death of my partner, Mr. S. M. Swift, I, as the surviving partner, after careful consideration and consultation with the executors" (the executors were P. Hann and C. H. Croaker) "in the estate consider that it will be most desirable and in the best interest of all concerned to continue the working of the partnership properties, viz., Mimosa, Baden Park, and Browley until such time as the executors may deem it desirable to reduce as directed under the will of the late S. M. Swift, and which they have determined to do as soon as a satisfactory result can be brought about. To do this I have to apply to the bank to permit and assist me in carrying on the account of Swift and Hann, upon which account there is a present debt to the bank under overdraft and overdue bill of (say) £51,500, which amount I may require to increase for working expenses and permanent improvements up to shearing (say) to £54,000 sterling. The liabilities to mature amount to (say) £6,245; to meet these I propose selling surplus stock, and have, in fact, already sold under a binding agreement for delivery on the 1st April stock realising the sum of £4,687 10s., leaving me with 9,700 good young ewes yet to sell, representing a value (say) at 8s. 6d. each, of £4,100. In conclusion, I presume, the bank will continue as usual to discount the bills representing stock sales. I may add, for your information, that, in the event of the season not being favourable to move the stock sales indicated herein, I am in a position to carry them safely on the runs. I enclose herewith a rough statement, showing present debts and engagements maturing exclusive of working expenses and interest.—Yours truly, P. HANN."

Extract from Mr. P. Hann's letter to Mr. H. Webb, manager and valuator of Baden Park station, 10th March, 1884, *vide* book II, page 235:—"Unless I can sell Browley, now under offer, it is very certain that the Bank of New South Wales will not carry me on, and will insist on the stations being sold before shearing. They are not afraid of the security, but say the will gives us no power to trade—no partnership deed; and the Court would say we held it beyond a reasonable time for realising. The bank are very decided about my not having power to buy sheep for the properties. I want to keep Baden Park."

See Roope's original letter.

"11th March, 1884. Charles Roope, solicitor, Hay, to Swift and Hann, document—

"'Re Tyson. I have heard of Mr. Swift's death, but cannot say definitely who are the right parties to sue until I know more of your partnership deed and Mr. Swift's will.'"

EXTRACT from Mr. Hann's letter to Mr. C. H. Roope, 22nd March, 1884, *vide* Book II, page 351, "There was not any partnership deed existing between the late Mr. Swift and the writer. Extract from Mr. P. Hann's letter to R. J. McKenzie, accountant, engaged making up the Swift and Hann supposed partnership accounts, 18th October, 1884. *Vide* book 15, page 95, "No deed of partnership."

Mr. P. Hann had purchased on his own account from one agent alone, Mr. Bates, of Melbourne, from 27th September, 1883, to 22nd December, 1883, 30,556 sheep, of the aggregate value of £8,623 8s. (see document 111), and the promissory notes given were maturing early in 1884. After testator's death, Mr. Hann made further purchases from the same agent, and I say his desire was to obtain an overdraft from the Bank of New South Wales to carry Mr. Hann on. That there was no *bona-fide* necessity to mortgage any portion of testator's estate, and that I have prepared the following account, exhibiting the "unencumbered" Swift and Hann assets—on the 18th February, 1884—on the assumption that proof of such partnership will have to be established by Mr. P. Hann, and an account of the "realised unencumbered assets," viz. :—

	£	s.	d.
Baden Park—Blocks S and T, and 38,241 sheep depasturing thereon, as per valuation (see <i>Exhibit B</i> , No. 1) .....	68,123	9	0
Deduct therefrom the value of Moira Plains—block A, cost £11,150—and 14,000 sheep at 7s. 6d., £5,250, depasturing thereon. This property, included in Baden Park valuation, was under a stock and station mortgage to Bank of New South Wales prior to testator's death .....	16,400	0	0
Leaving Baden Park—blocks S and T—with 24,241 sheep, to be of the value of .....	51,723	9	0
Smubba Run—Land, £5,000, and following sheep sold after testator's death, viz., 1,102, sold to Halloran for £484 10s. 11d.; 7,383, sold to James and Martin for £4,565 16s. 8d.; 5,774, sold to Mr. Winter for £2,403 12s. 10d.; and 5,512, sold to Mr. Pope for £1,755 2s. 8d. (see <i>Exhibit B</i> , No. 4, for valuation) ..	14,209	4	1
128 bales of wool on Baden Park station at time of testator's death; sold 15th August, 1884 (as per <i>Exhibit B</i> , No. 7), for .....	1,418	5	9
Messrs. Morse and Baker's promissory notes, received by executors after testator's death, and discounted by Bank of New South Wales on 5th May, 1884 (see <i>Exhibit B</i> , No. 5) .....	1,773	13	0
Horses and cattle on Baden Park (see <i>Exhibit B</i> , No. 12) .....	1,340	0	0
Total .....	£70,464	11	10

That there was no necessity to mortgage Baden Park blocks S and T to the Bank of New South Wales, as the total liabilities of Swift and Hann on the 18th February, 1884, only amounted to £5,634 15s., and that these liabilities were paid from the "realised unencumbered assets," as the following account will show:—

Realised

## ON ESTATE OF THE LATE S. M. SWIFT, OF PETERSHAM.

## Realised unencumbered Swift and Hann assets.

G. Sandell.

An account of the proceeds of sheep and wool sales, being the net realisation of the unencumbered Swift and Hann assets, paid to the Bank of New South Wales after testator's death; from which fund the Bank of New South Wales liquidated the Swift and Hann liabilities that existed on the 18th February, 1884. This account is constructed from the Bank of New South Wales pass-book. 16 Aug., 1889.

	£70,913	6 10		£70,913	6 10

The Bank of New South Wales had allowed Mr. Hann an overdraft which had, on 31st March, 1885, amounting to a debit balance of £12,602 8s. 9d., to continue the supposed partnership, and this was the reason why the Bank of New South Wales required the mortgage of Baden Park Station over Blocks "S" and "T," together with the 18,000 sheep depasturing thereon.

By a statement in Mr. Hann's writing—see document 169, from 11th November, 1886, to 27th April, 1887—Mr. Hann had purchased on his own account 25,627 sheep, costing £9,974 6s. 7d., using the Mimosa Station. Mr. Hann sold a portion for £10,906 10s. 6d., leaving sheep on hand to the value of £1,355 8s., making a profit of £2,287 11s. 11d. Not one penny of this profit came to the credit of the testator's estate. The manager of the Bank of New South Wales had full knowledge that Mr. Hann was so using the station for his private speculations.

May 27, 1887. Book 16, page 324. P. Hann to S. Payne, the then manager of Mimosa West Run (intending purchaser) :—"He will also want to see the stock, and to make them a bit better you can show the Tumbleton studs and the two rams, instead of the 500 station wethers and the 160 weaners. Explain all, extra stock being mine, and not belonging to the station."

See document 171. Mr. Green's letter to Mrs. Swift, April 26th, 1888 :—"Our general manager has been taking into consideration the state of the account of Swift and Hann, and in view of the fact that you and Mr. Hann are not working amicably together, and, further, as to certain rumours that have reached us that Mr. Hann has been using the stations as a depot for sheep, in very large numbers purchased by himself and another party, thus jeopardising the interest of all by consuming the feed on the run, every blade of which should be preserved for the stock on the station, we have decided to go into possession."

Mr. P. Hann's letter to the Bank of New South Wales, 21st April, 1884, *vide* suit *Swift v. Bank of New South Wales*, No. 3,717, page 26 :—"In consideration of your handing over to us two bills made by Cox, Dowling, & Co., for £3,061 and £2,560 5s., maturing 22nd May and 6th June respectively, we hereby undertake to, when requested, give to the Bank security over Baden Park Station, and 20,000 sheep thereon, provided the debt owing thereon to the Bank of New Zealand be paid by you, now about £5,500. (Signed) P. HANN and C. H. CROAKER, executors of the estate of the late S. M. Swift."

The promissory notes therein named were handed to Mr. Hann by the Bank of New South Wales, and Mr. P. Hann and Mr. C. H. Croaker concealed them from the accounts they filed on their application for probate. The promissory notes were duly honored at maturity.

Have never been accounted for in any of the accounts filed by the executors.—The amount due to the New Zealand Bank at testator's death was £8,979 18s. 6d. A quantity of wool being in transit reduced the account to £4,288 2s. 3d. on the 7th March, 1885. This was the amount paid by the Bank of New South Wales, from the "realised unencumbered assets" to the New Zealand Bank when the Bank of New South Wales obtained the transfer of the station, which, together with stock, was valued at upwards of £51,723.

Extract

G. Sandell.  
16 Aug., 1899.

Extract from Mr. P. Hann's letter to the New Zealand Loan and Mortgage Agency Company, Limited, 27th June, 1884, Book , page 260 :—"Having arranged with the Bank of New South Wales to pay off the balance of our account in your books, we will be glad if you will acquaint them upon inquiry as to the balance, and upon payment of same hand over to them the whole of the securities held by you, for which this shall be your authority."

Extract from Mr. P. Hann's letter, same date, same book, page 262 :—"Having a lot of stock bills coming due next week, and finding the Bank of New South Wales would not meet them for Swift and Hann without further security, I could only arrange by giving authority for them to pay off the amount owing by them to you and taking over the Baden Park security. Will you kindly give them all the assistance you can in the matter when they call upon you, and, if required, transfer the run direct, so that there may not be any retransfer from me—Yours faithfully, P. HANN."

Mr. Hann's lack of knowledge is remarkably strange, as the Bank of New Zealand did not possess the power of transferring, the run being still registered under the name of W. A. Brodrick.

Telegram from Mr. T. S. Gardiner, manager, Bank New South Wales, Wagga Branch. To Mr. P. Hann, 8th July, 1884. "Re transfer of Baden Park. Solicitors advise cannot be done." See document 664.

Mr. Hann's letter to Messrs. Allen and Allen, solicitors to the Bank of New South Wales, 12th July, 1884, *vide* Book 12, page 88 :—"As promised, I now enclose you the letter received and copy of my reply to the manager of the New Zealand Loan and Mortgage Agency Company, Limited, which I hardly think should be used against him if it can be done without. I never expected any difficulty or opposition from him, and must say he gave us the greatest consideration possible in business; it is, however, necessary for the Bank of New South Wales to have a transfer of the run and mortgage, that they may fulfil the engagements made by the firm of Swift and Hann."

The firm of Swift and Hann ceased to exist, as far as regards the testator's estate, at his death. If, after that event, the Bank of New South Wales allowed Mr. Hann to continue trading, giving Hann a further overdraft, it became the private liability of Mr. P. Hann, and not the liability of the testator's estate. Death dissolves all partnerships, unless provided for by special articles of partnership deed, and as there was never any deed of partnership existing between the late Mr. Swift and Mr. P. Hann there can be no legal claim for survivorship or legal claim by the Bank of New South Wales for any such overdraft to be charged against testator's estate.

Extract from Mr. Hann's letter to Mrs. Swift, 2nd October, 1884, Book 15, page 42 :—"Croaker and I have to-day executed and signed a deed to the Bank of New South Wales, taking over the Baden Park security from the New Zealand Loan and Mortgage Company, Limited, on paying the amount due to them by Swift and Hann."

Extract from Messrs. Abbott and Allen's letter to Mrs. Swift, 8th October, 1884, document No. 673 :—"We have perused the mortgage prepared by the solicitors of the Bank of New South Wales over Baden Park Station, and comprising Moama Block 'S' and 'T,' together with 18,000 sheep. Without for one moment entering into the question of the advisability of giving such a mortgage, we have no hesitation in stating that, as a trustee of the will, you have no legal right to do so. The trustees only possess ordinary power of management, and would not be justified in incurring an extraordinary expenditure or in so dealing with any part of the estate as to prejudice the interest of that or the whole of it."

I have satisfied myself that the Mr. Abbott, of Messrs. Abbott and Allen, solicitors, who advised Mrs. Swift not to sign the mortgage over Baden Park to the Bank of New South Wales, as it was illegal, is a solicitor of very high standing, being your present Speaker—Sir Joseph Abbott.

I have also ascertained that the Bank's solicitor, who compiled and prepared the mortgage signed by Messrs. Hann and Croaker, and witnessed by Mr. Colquhoun, is now also occupying a high position, being the Crown Solicitor. Mr. Colquhoun, who at that time was interested in the firm of Messrs. Allen and Allen, and attended to the Bank of New South Wales' business for that firm. This illegal mortgage was not drawn up in ignorance of Mr. Swift's will, for a copy of the will was made and sent to the Bank of New South Wales by Sir Joseph Abbott, and is included in Messrs. Abbott and Allen's bill of costs, which was paid by Mrs. Swift.

The Bank of New South Wales seem to have been foiled in their attempt to coerce the executrix to sign the stock and station mortgage, but received the co-operation of her co-trustees, Messrs. Hann and Croaker; and on reference to the Registrar-General's Office I find a stock mortgage was registered on , 1884, book No. , no recites.

Mr. Green's (Inspector of the Bank of New South Wales) letter of 15th October, 1884, to Mrs. Swift (document 676) :—"Our Wagga manager informs us that you, by the advice of your solicitors, decline to sign a mortgage of Baden Park to the Bank. I don't know that it is necessary you should do so, as all we required was a transfer to us of that mortgage held now by the Bank of New Zealand, and it is only in accordance with Mr. Swift's promise before his death." [A bull—how could he promise after his death?] I question the veracity of Mr. Green's statement. Anxiety to obtain the security obscures the truth, as the property had been continually under mortgage from 8th December, 1879, to 8th December, 1882, to Mr. Brodrick, and from that date under a promise of mortgage to the New Zealand Loan and Mortgage Agency Company (Limited) to pay off Mr. Brodrick. Hence my disbelief in Mr. Green's statement.

In press-letter copybook 12, at page 231, I find the following letter in Mr. Green's handwriting, 29th October, 1884 :—"To the Manager of the New Zealand Loan and Mortgage Agency Company (Limited). Dear Sir,—Please transfer to the Bank of New South Wales the lease of Baden Park Run, known as Moama Blocks S and T, with mortgage on sheep, &c., and the securities attached thereto in favour of W. A. Brodrick, upon payment of your outstanding balance."

Yours faithfully,  
(Signed) P. HANN, } As Executor and Executrix in the estate  
E. SWIFT, } of the late S. M. Swift.

Now the New Zealand Company could not comply with the request in Mr. Green's letter, because the leases were not in their possession to transfer to the Bank of New South Wales, for at that date the "Leases of the Baden Park Run, known as Moama blocks 'S' and 'T,' stood in the name of W. A. Brodrick as registered lessee in the Lands Office books. Neither could the New Zealand Company transfer the 'mortgage on sheep, &c., in favour of W. A. Brodrick' to the Bank of New South Wales, as the testator had paid off Mr. Brodrick on 8th December, 1882, when the "mortgage on sheep, &c." in favour of W. A. Brodrick was discharged—Registrar-General's Office-book , page . On the same date Mr. Brodrick signed and handed to testator transfers of the leases of "Baden Park run," known as Moama Blocks "S" and "T," in blank; but the testator had omitted to have his name registered as lessee, instead of Mr. Brodrick's, in the Lands Office books, consequently the New Zealand Loan and Mortgage Agency Company, Limited, had no control or power over these discharged documents, as they were in the possession of the testator, and the transfers given by Mr. Brodrick to the testator should have been dated and filled in and registered in the names of his trustees—Elizabeth Swift, Phineas Hann, and Charles Hawthorne Croaker, as lessees of Baden Park; but instead of doing this, Messrs. Hann and Croaker handed the blank transfers of the leases over to the manager of the Bank of New South Wales, who dated and wrote in the name of the Bank of New South Wales as lessees, instead of the names of the testator's trustees, and registered them in the Lands Office; but as the Land Act of 1884 had just come into operation, the applications should have been made on new forms under the new Act; those given to the testator were under the old Act, therefore, the bank obtained new transfers, filled them up by the same persons, and Mr. Hann then got Mr. Brodrick to sign them under the pretence that, because the transfers by Mr. Brodrick to the testator had never been registered, and Mr. Brodrick no doubt was under the impression that he was then only completing the transfer to the trustees, as he signed them in blank, and the name of the bank was written in afterwards. See Mr. Hann's letter to Mr. Brodrick of 6th November, 1884. There was nothing owing to Mr. Brodrick by testator; he had no interest in Baden Park; by giving the leases to the bank Messrs. Hann, Croaker, and Brodrick have committed a fraud on the legatees, and the bank concurred in the fraud and forgery by having the titles transferred to the bank. No doubt Mr. Hann's object in doing this was that the true ownership of the station might not appear, and that for this transfer the bank would carry him on.

Mr. Hann swore before Mr. Justice Innes in No. 2 Jury Court that this letter was signed on 29th October, 1884. "I met her at Pitt, Son, and Badgery's, and went with her from there to the bank; Green wrote it; my impression is that it was written in her presence; it was filled up before she signed; I took the document to Wagga with me." (19-11.)

This must be untrue, as Mr. Hann's letter of 1st November proves. As an expert in caligraphy, I have most carefully examined the supposed signature of Mrs. Swift with undoubted signatures of the same period, and have no hesitation in saying that this signature is a forgery. I am prepared to state on oath my reasons, after minute analysis, for arriving at such a conclusion. The signatures are unattested. Mrs. Swift informs me that she is prepared to make a declaration to the same effect, and to swear that she never signed the letter or went with Mr. Hann to the Bank of New South Wales on 29th October, 1884. She had gone to Wagga on the 25th to interview her co-trustees, Mr. Hann and Mr. Croaker, to ascertain why they had signed a mortgage to the bank which they had asked her to sign, and other matters of great importance to the testator's estate. For a few days Mr. Hann would not see her, and he then went to Sydney to attend the funeral,

and

and there acted as a trustee for his late partner, Mr. Harvey Welman. She remained in Wagga until Mr. Hann's return on 31st October, when she returned to Sydney. Had Mrs. Swift signed this letter of 29th October, 1884, would there have been any necessity for Mr. Hann writing the following letter? Extract from Mr. Hann's letter to Mrs. Swift, 1st November, 1884 (*vide* Book 15, page 103), "I find it will also be necessary for you to sign the letter to the Bank of New South Wales, as we are likely to want a considerable overdraft, &c." Extract from Mr. P. Hann's letter to the Manager of the New Zealand Loan and Mortgage Agency Company (Limited), 25th October, 1884 (*vide* Book 12, pages 226 and 227), "I have your favour of the 20th, and feel hurt at the tenor of it, as I thought that when arrangements had to be made with the Bank of New South Wales for taking up your account that you willingly concurred. The delay has been with them, and not with me. When you were first seen about the S. and H. account, I should have been glad if you had offered to take over the whole account from the Bank of New South Wales; but now they have assisted us in all wanted at the time; also I pointed out that you were shipping from Adelaide wool belonging to the Bank of New South Wales, and until now, I did not know that you charged a commission on wools, as I had not noticed such charges in the pass-book."

The delay was caused by the Bank of New South Wales' solicitors advising the transaction to be illegal.

Extract from Mr. P. Hann's letter to Mr. Brodribb, 6th November, 1884 (*vide* Book 12, pages 235 and 236), "The transfers that you signed for our Baden Park Run, 'Moama Blocks S and T,' to the New Zealand Loan and Mortgage Agency Company (Limited) have never been registered, consequently they still stand in your name. (Signed) SWIFT AND HANN—by P. Hann. Letter from New Zealand Loan and Mortgage Agency Company (Limited) to Mrs. Swift, 13th November, 1884, document—"Would you kindly call on Mr. Holt at the Bank of New Zealand at your early convenience. He wishes to see you in reference to the Bank of New South Wales paying off."

Mrs. Swift informs me that she duly attended Mr. Holt on the following day and took notes at the time of the conversation with that gentleman. She asked Mr. Holt what security he held from Mr. Swift for the debt which the Bank of New South Wales were so anxious to pay off. Mr. Holt said he held no security for the present overdraft, only Mr. Swift's verbal promise to give the wool from Baden Park Station to be shipped by Mr. Holt to London for sale and the proceeds applied to pay off Swift's overdrawn account. He said he had shipped a portion of the wool and reduced the account about £3,000, but that the Bank of New South Wales, with Mr. Hann's assistance, had, in defiance of Mr. Holt, taken possession of the remainder of the wool promised by Mr. Swift to him, and in that way had left the account still unpaid of about £4,200. Mr. Holt told Mrs. Swift that Mr. Swift had given him a memo. in December, 1882, saying, if called on he would give Mr. Holt a mortgage on Baden Park stock and wool, if Mr. Holt would allow Mr. Swift an overdraft of £8,000 to pay off Mr. Brodribb; but as Mr. Swift had paid off the £8,000 and had again created a new overdraft, the payment for which the wool had been promised, as the memo. of 1882 would be no security for the new account. She requested the New Zealand Loan and Mortgage Agency Co. (Ltd.) to refuse the transfers, as Messrs. Abbott and Allen, her Solicitors, had informed her that the Trustees could not legally do so. These letters refute the probability of Mrs. Swift having signed the letter written by Mr. Green on the 29th October, 1884.

From my further examination of the Estate papers, I find that on the 7th March, 1855, Messrs. Stephen, Laurence, and Jaques, Solicitors acting for the Bank of New South Wales, paid to the New Zealand Loan and Mortgage Agency Co. (Ltd.) £4,288 2s. 3d., the balance of account of the Testator's overdraft at this date. The Bank of New South Wales debited the Estate account with £4,303 17s. 3d., on the same date that Mr. W. A. Brodribb gave fresh transfers of the lease of the Baden Park Run, known as Moama Blocks "S" and "T," on the 26th September, 1885, to the Bank of New South Wales, and the consideration is therein stated as £4,304 in each transfer, but no such consideration was paid or due to Mr. Brodribb, his claim having been satisfied on 3rd December, 1882.

Extract from Mr. Hann's letter to Mr. R. J. McKenzie, 11th December, 1884 (*vide* Book 15, page 173):—"I never knew that Mr. Swift ever invested any actual capital when we joined together. If you want any information from Tumut you must apply there for it. I cannot give my own time for writing about what I do not understand."

Letter from Bank of New South Wales to Mr. P. Hann, 3rd November, 1885, document 419:—"Re Swift and Hann account. I am instructed to notify to you that after consultation with our solicitors it has been decided that this account must henceforth be worked strictly in liquidation, &c. I have just received these instructions by this morning's mail and hasten to acquaint you with them. (Signed) T. S. Gardiner, Manager."

Extract from Mr. P. Hann's letter to Mr. Fraunfelder, 18th November, 1885 (*vide* book 16, page 53):—"The bank have ample margin in their securities, and do not refuse on that score; but on the ground of my legal position as surviving partner and trustee in the estate, saying the law did not allow me to buy, and that the law will not recognise their right to pay them, and that all my stock sales must go in liquidation of the estate."

Extract from Mr. P. Hann's letter to Mr. P. P. Gell, 22nd November, 1885 (*vide* book 16, page 56):—"Mr. Fraunfelder saw me last evening, and I explained all the circumstances to him, showing clearly that our position and securities were good—my purchases amounted to almost £13,400 sterling, and the bank have paid fully £11,000 before they refused doing anything more, thus leaving me with only £2,400 in these bills to provide for. It arises through their solicitors saying they cannot charge these things against the old securities; that I acted illegally in purchasing, as my late partner's will did not provide for it; and that the account now is only in liquidation. I wish they had discovered this in time, and then I would not have bought a single sheep for the runs; or that they had warned me in time, and allowed me to resell. The bank have now submitted a proposal, which I shall lay before my solicitor to-morrow, and if I can legally comply with it will do so, &c. If I have committed one wrong act I cannot commit a second, as the two wrongs will not make one right."

Extract from Mr. Hann's letter to Mr. Webb, 25th November, 1885 (*vide* book 16, page 62):—"I have been called upon by the bank, so as to justify their acts in carrying us on, to give them an account of all our expenditure since Mr. Swift's death."

These letters point to the fact that the bank of N.S. Wales had been acting illegally in allowing Mr. Hann to continue trading as Swift and Hann, and charging his increasing overdraft against the testator's estate; nevertheless, the overdraft was allowed to Mr. P. Hann until the 18th August, 1888, when the bank went into possession of the testator's properties.

I will now refer the Select Committee to the evidence published by Messrs. Allen and Allen—the solicitors to the Bank of New South Wales—of Mr. Hann's evidence given for the defendant bank in the suit No. 3,717, *Mrs. Swift v. Bank of New South Wales*, viz., examination of P. Hann as to Baden Park:—"Fraunfelder, Swift, and I were in partnership in 1878" (*vide* page 18).

"The defendant bank took over the mortgage and the account from the New Zealand L. and A. Co. at my request after Swift's death" (*vide* page 19):—"Mortgage from Hann, both as an individual and executor, with Croaker the other executor—but not the plaintiff—to the defendant bank, of Baden Park and stock. 2nd October, 1884," page 20. Cross-examined: "Mrs. Swift refused to execute the mortgage, only executed by Croaker and me; she told me so, and the bank knew she would not execute it," page 23. "Brodribb had really no beneficial interest in the matter," page 24. "After the bank paid off the New Zealand Co., I cannot say what money the Bank of New South Wales received as gross proceeds from Baden Park; but it was considerably more than £4,300, before they seized in August, 1888," page 25. "At the shearing of 1885 over 40,000 sheep were shorn at Baden Park; all the gross proceeds of the clip, which, of course, were over £3,000, went into the hands of the Bank of New South Wales. For 1885, that also was paid into the bank; for 1887, also, the same applies. In 1886, there were a lot of sheep; 22,000 sold through Bates realised £8,250, also paid into the bank. In August, 1885, 9,000 sheep were sold to James White & Co.; they realised £4,414 10s., which was paid into the defendant bank," pages 25 and 26. "The value of Baden Park Run and stock in October, 1884, was £50,000, as well as I could judge, including Moira Plains, which was fully one-third of the whole value."

In conversation the bank had explained that, as executors, we could not mortgage. I see I state that in my letter of 13th October, 1884, page 26.

Re-examined: This document you now show me is signed by me in my two capacities—Swift and Hann—and as executor of Swift, 21st April, 1884; and by Mr. C. H. Croaker, as executor. I had forgotten the existence of those bills of Cox, Dowling, & Co., maturing 22nd May and 6th June. The bank did hand over the bills, page 26.

From my examination of the estate documents, I find there were four promissory-notes given by Messrs. Cox, Dowling, & Co., for Avington cattle purchased from the testator, amounting to £9,808 2s. 6d. (see *Exhibit "A,"* No. 8); that these promissory-notes were simply deposited, and were not under discount with the Bank of New South Wales; at maturity they were duly honored; the executors, Hann and Croaker, concealed them from the account filed on application for probate, and no proceeds have ever been brought into the executor's account. Mr. Hann, in his statement to the Stamp Commissioner of 27th September, 1893, denied that the testator had any interest in them. On examination of the accounts filed by Mr. Hann in the Equity suit, No. 5,060, at pages 42 and 43, the net proceeds for sheep and wool of Baden Park,

G. Sandell.  
16 Aug., 1899.

G. Sandell. Park, for the years 1884-5, 1885-6, and 1886-7, paid to the Bank of New South Wales, amounted to £33,624 10s. 3d., viz. :-		£	s.	d.	£	s.	d.

Being the amount realised for three years from the Baden Park Station, and paid into the Swift and Hann continuation account of Mr. Hann, operated on solely by Mr. P. Hann. Section 14, subsection 2, of this Colony's "Partnership Act, No. 12, of 1892, provides that where, after a partner's death, the partnership business is continued in the old firm's name, the continued use of that name or the deceased partner's name as part thereof, shall not of itself make his executors or administrator's estate or effects liable for any partnership debt contracted after his death"; and section 33: "Death dissolves all partnerships unless provided for by partnership deed"; and had the mortgage of Baden Park been a *bond fide* transaction to assist in the realisation of testator's estate, sanction of the Equity Court should have been first obtained; and then the Bank of New South Wales should have kept a separate account of transactions, and not placed them in hotch-potch. The account should have been drawn against by the executors and executrix, and not solely by Mr. Hann.

By way of illustration of the Bank of New South Wales' machinations, I submit two grave charges of evasion of the provisions of the Crown Lands Acts, committed by the manager of the Wagga Wagga Branch of the Bank of New South Wales and Mr. Hann: Firstly—Henry Austin, "a dummy selector" and a station employee in the service of the testator, took up, at the special request of Mr. P. Hann, a selection of 400 acres of conditional purchase unimproved land on the Mimosa West Station on 24th January, 1884. The deposit of 5s. per acre was paid by cheque drawn by P. Hann from the station banking account, kept at the Bank of New South Wales, Wagga Branch; and that the following extracts are from original documents in my possession. For full details, see Division "D," supplementary evidence:—

Extracts from Mr. P. Hann's letter to the station manager, Mr. M. Cody, 23rd January, 1884, *vide* book 11, page 183:—"Going to take up 400 acres for H. Austin to-morrow, and after then he will go out to you."

Cheque No. 072044, drawn to bearer by Mr. P. Hann on the Wagga Branch of the Bank of New South Wales, 24th January, 1884:—"H. Austin's C.P. for £100."

Extracts from original letters written by Mr. T. S. Gardiner, Wagga Branch of the Bank of New South Wales to Mr. W. J. Gore, the manager of Mimosa West Station, after the Bank of New South Wales had taken possession of the said station.

Extract from letter dated 2nd February, 1889:—"When will Austin be coming to make his declaration? His time was up on the 24th January."

Extract from letter dated 20th February, 1889:—"I have yours of the 17th; and, in regard to Austin, I do not think there is any occasion to retain him any longer. *He need have no fear as to his getting his bonus*; that will be paid to him as soon as the certificate is issued, which I do not think will be long, as the papers have all gone on to the Under Secretary for Lands for approval."

Extract from letter dated 2nd April, 1889:—"With regard to Austin, you may tell him that he will get is £50, as soon as the certificate for the conditional purchase is obtained, and I am pushing for its issue."

Extract from letter dated 11th April, 1889:—"I have yours of the 9th inst., enclosing Austin's receipt, for which I thank you."

On searching the Registrar-General's Office I find in registered book, 415, No. 951, a transfer of 400 acres of conditionally purchased land from H. Austin to the Bank of New South Wales, 14th February, 1889; consideration money, £462 10s.

A. R. Orr, "a dummy selector," a station employee in the services of testator, took up, at the special request of Mr. P. Hann, a selection of 320 acres of land on the Mimosa West Station, 2nd May, 1884, and that Mr. P. Hann drew a cheque for £80 on the Bank of New South Wales, Wagga Branch, to pay for the deposit of 5s. per acre; that the clause under which the selection was taken up would terminate in May, 1889.

Extracts from original letters written by Mr. T. S. Gardiner, manager, Wagga Branch, Bank of New South Wales, to W. J. Gore, the Bank's manager of the station.

Extract from letter dated 9th May, 1889:—"I have yours of the 7th inst., per A. R. Orr, who has made his declaration and transferred conditional purchase. He tells that there are some items owing to him in connection with improvements on the conditional purchase amounting to £5 11s., and I told him that if they were necessary, and had your sanction, of course, he would be paid the amount. It will be for you to say if he is entitled to it. No doubt for various reasons we should not cavil about it. I have told him that as soon as the certificate is issued the balance coming to him, on the conditional purchase, £50, will be paid."

Extract from letter dated 15th May, 1889:—"Should a buyer go out you will, of course, show him round, and in doing so, do not show him the drover's selections as part of the property, as they are not yet wholly transferred to the run, and we do not wish to accept any responsibility in regard to them. You can pay Orr the £5 11s."

Extract from letter dated 3rd July, 1889:—"I have now the pleasure to advise that the certificate of A. R. Orr's conditional purchase has come to hand to-day, and that therefore you can now pay him the £50 coming to him on his signing the accompanying receipt, which be good enough to forward here."

The Minister for Lands would be able to furnish the dates of the issue of these certificates, and so confirm or refute these damning allegations of evading the provisions of Crown Lands Acts by this Institution there are other dummying transactions that require investigation. For fuller particulars I refer to any statement, Division D, Supplementary Evidence.

In reviewing the documents herein quoted clearly denotes that Mr. Hann's statement, that Fraunfelder admitted Swift and himself into partnership in 1878, to be untrue.

Testator's letters of 5th April, 1879, and 14th May, 1879, offering and giving release to Mr. J. McDonald, and the release being written by Mr. P. Hann, and also witnessed by Hann, together with Hann's letter to Mr. Wilkinson of the 13th May, 1879, are strong testimony against Mr. Hann's claim.

Testator's letters to Mr. Murchison, of 1st August, 1879, saying, "The partners were himself (two shares), Fraunfelder, and McDonald (one each)." Testator's letters of 13th September, 1879, and 30th October, 1879, to the Bank of New South Wales, confirm this opinion; and Mr. Hann's letters to Mr. Webb, of the 20th February, 1880:—"The writer does not draw or operate at all on Swift & Co.'s account." Mr. Hann's letter to the Bank of New South Wales, of 19th January, 1880:—"Requesting the Bank to discount Swift & Co.'s promissory note." Mr. Hann's letter to R. J. McKenzie, of 11th December, 1884:—"I never knew that Mr. Swift ever invested any actual capital when we joined together."

Taken in conjunction with Mr. Hann's other letters, is conclusive proof to my mind that Mr. Hann's claim to one half interest in the property, as disclosed in the "B" statement filed on application for probate, is spurious; and in summarising the Bank of New South Wales' dealing with this property with Mr. Hann, having regard to testator's letters of 13th September, 1879, and 30th October, 1879, and Mr. Hann's letter to the Bank, of 19th January, 1880, the Bank of New South Wales should have known that Mr. Hann was not in partnership with testator up to this date. I now come to Mr. Hann's interview of 23rd February, 1884, and his letter of the 25th February, 1884, to the Bank of New South Wales, to permit and assist him to continue trading by granting an overdraft. The advice of the Bank's solicitors, and also Messrs. Abbott and Allen's, that the mortgage was illegal, that there was no necessity for such mortgage to assist in the realisation of the Estate, as on referring to the realised unencumbered assets there remained a large balance after paying the

whole

whole of the liabilities that existed at the date of testator's death. There was no *bona fide* advance to the testator's estate. The Bank of New South Wales were in possession of ample securities to meet their advance to the Swift and Hann account for the overdraft that existed at testator's death. Then the only necessity for such further mortgage was to secure the Bank of New South Wales against the overdraft allowed to Mr. Hann after testator's death. The Bank's evasion of the provisions of the Crown Lands Acts, and their general conspiracy with Mr. Hann, it is unnecessary for me to pass any further remarks upon these transactions, as their criminal nature stands out in bold, glaring relief.

G. Sandell.  
16 Aug., 1899

SUPPLEMENTARY PARTICULARS to Division "D" Land Acts.

*Evasion and Dummying.*

The following extracts from Mr. P. Hann's letters upon dummying prove that he knew he was evading the provisions of the Crown Lands Acts:—

4th May, 1883, *vide* Book 31, page 162.—“We shall have to see what position we stand in with these men (selectors), and by-and-bye block them by dummying around them.”

19th May, 1883, *vide* Book 10, page 43.—“The land can only be secured by selection, and we have not people enough to do it with; but as soon as I find their land surveyed, and I can get proper description, I mean then to use Frayne and some others and adjoin their boundaries, to cut them off from getting pre-lease land.”

23rd May, 1883, *vide* Book 10, page 61.—“I wish we could have got the tank-sinkers so we could have secured Gore's and your grass rights. I fancy the piece of land in Ringhole paddock, north of the woolshed, might take the fancy of some one—what think you?”

26th May, 1883, *vide* Book 10, page 68.—“If those selectors are about over the run, and you think some of it going, send in T. Frayne, so that I can take a strip in his name.”

6th June, 1883, *vide* Book 10, page 100.—“We must hold ourselves in readiness to secure any places, and I wish you would give me accurate description of each spot to work upon. Send Frayne in next Wednesday, and I will take up 320 acres.”

7th June, 1883, *vide* Book 31, page 214.—“I must take up 320 acres next week to make sure of spoiling the selectors' chance on one end of the paddock, and connect our I. P. through the C. P. with the boundary.”

13th June, 1883, *vide* Book 31, page 221.—“I shall take up 320 acres to-morrow in one of our men's names, so as to spoil and cut off the selectors.”

4th July, 1883, *vide* Book 31, page 236.—“I note about the dummy matters, and will, the first time I see it wanted, secure a 640 (acres), but not until present C. P.'s are measured.”

17th July, 1883, *vide* Book 31, page 251.—“I had a hint given yesterday evening about being likely to lose a part of Gore's pre-lease, and to-day I have put in three I. P. applications of 320, 200, and 200 acres; but I know the improvements are not there for one and barely commenced for the other 200 acres; but we must chance something, and shall never be able to complete the conditions on Gore's 640.”

18th July, 1883, *vide* Book 31, page 253.—“I know my applications now put in will not be called for payment for fully twelve months, and then they can be put back by a little finessing.”

25th July, 1883, *vide* Book 31, page 262.—“I think the no-survey and refund the best and most saving dodge.”

2nd August, 1883, *vide* Book 10, page 298.—“If there was much chance of his being able to get west, then we should have to take 320 (acres) more for Frayne. I was leaving this an open question just to see whether we wanted Frayne to go east or west of his 320. A good job we had Gore's I. P.'s put in to-day, as a man named G. J. Adams, from Cootamundra, has taken the piece between Gore's, the I. P. of 320.”

8th August, 1883, *vide* Book 13, page 320.—“I mean taking 200 acres between the reserve and paddock, and all between the reserve and No. 6, in some names or others to-morrow.”

8th August, 1883, *vide* Book 10, page 320; to H. H. Brown & Co.—“Will you please enter a protest for W. J. Gore, through us. We have also to-day, on behalf of Gore, put in an improvement application, including this land and about 120 acres more, &c.—in all 240 acres—which we must try and hold.”

5th September, 1883, *vide* Book 31, page 320.—“Mimosa land matters take a lot of time and thought; have particulars from Cody of other land that ought to be taken up. I can manage one 640 (acre) in my man Martin's name.”

14th September, 1883, *vide* Book 10, page 424.—“Next week shall have to secure the two 640's (acres). Gore will explain and show you the 96 acres taken up yesterday just to block a 640, and I may take another like it where marked off in pencil, if you think it advisable.”

19th September, 1883, *vide* Book 31, page 369.—“I intend taking up three or four pieces of land to-morrow; Cody advises it.”

19th September, 1883, *vide* Book 10, page 441.—“I am going to take up some selections to-morrow, and will send you particulars.”

20th September, 1883, *vide* Book 31, page 375.—“Selections are easy enough talked about; I have had four taken up to-day, the two that Cody saw a danger of, 640 (acres) each, and two small mineral C. P.'s 120 and 80 acres.”

22nd September, 1883, *vide* Book 10, page 446.—“The Wagga paper will show you the four pieces of land taken up on Thursday—Mitchell, Hanson, Halloran, and Behan; mark them off on your map. It looks as if another 640 (acres) is wanted in north scrubby, west of Behan's, but I hardly know how to do it.”

22nd September, 1883, *vide* Book 10, page 443. Hann to H. H. Brown & Co.—“I enclose particulars of five pieces of land taken in our interest on Mimosa, three of them being mineral C. P.'s and two C. P.'s, 13 section. We do not expect to be able to fulfil the conditions of either and prefer their running over the twelve months before survey if it can be managed. We might have to take another 640 yet, near and west of Behan's. I send these particulars, as I thought you would like to mark them off, and to know they were in our interest. I intend, on Monday, taking pre-lease for Halloran, Behan, and Mitchell, so that please get them pushed through as soon as possible. Are you urging forward Yourall's and Frayne's pre-leases? Please do so.”

27th September, 1883, *vide* Book 10, page 464; to H. H. Brown & Co.—“In our land office yesterday we found that notice had been sent Mr. M. Cody, 25th September, No. 83/136, that his selection was void on account of vagueness of description, and we thought that it may have been done through you on our account. The selection is ours, improved over £40, and the surveyor, now in the neighbourhood, expected to commence on some of our land next week. If it is not your doing, and it is necessary to assert Cody's right to the land, will you please attend to it; his pre-lease has been granted and a 320 (acres) I. P. applied for on it.”

5th December, 1883, *vide* Book 11, pages 90 and 91.—“I had a great talk with Fisher; he is a cunning, scheming, determined man, &c.; we must preserve to uphold Frayne's C. P.; and, again, I should like to make this up to 640 (acres) next Thursday, &c., so we must fight for it tooth and nail. Be in readiness to get Sunday's letter and to send Frayne in if I want him.”

12th December, 1883, *vide* Book 11, page 104.—“Heard of Frayne being in town one day, but did not see him, and thought he was here for you to return again. His absence makes it a little more difficult to block Fisher, as I meant taking another 320 (acres) for the purpose. I will have to find another person.”

19th December, 1883, *vide* Book 11, page 110.—“You are right; it wants better huts on the selections to show *bona fides*.”

29th December, 1883, *vide* Book 11, page 134; to H. H. Brown & Co.—“The enclosed has been sent to Mr. Cody, and from this it appears that the pre-lease wants putting right as well as the C. P. did. If so, will you please attend to it? This pre-lease is improved, and 320 (acres) applied for on it.”

5th February, 1884, *vide* Book 11, page 203.—“If you can find out anything definite let me know, and on Saturday I may write whether it is necessary for Gore and Austin to come in or not.”

6th February, 1884, *vide* Book 11, pages 205 and 206.—“From your tracing of the position of the land Austin would come just about where I have dotted the line, and then this takes in the land we had Frayne's humpy put on. Austin's must come all along Keenan's south line, if his land is given in the way you have marked it; our object is to fix Keenan so that he cannot get out for a pre-lease. You will understand from this all that I want, &c., and now we must block his intentions for a pre-lease. I have a good old man here, well up in sheep, that I can rely on for a selection if we think it advisable to take one in the N.W. corner of north scrubby; he would be satisfied to live out there and boundary-ride.”

1st March, 1884, *vide* Book 11, page 240.—“When you have a handy man for the huts let me know and I will decide if one has to go on each—Behan's and D. Halloran's selections.”

8th May, 1885, *vide* Book 15, page 293.—“Fisher on Mimosa has been writing about barefaced dummying and injustice to selectors.”

G. Sandell.  
16 Aug, 1899.

17th July, 1885, *vide* Book 15, page 340.—“Fisher is also very strong in asserting that our selectors are dummies, and he can prove it.”  
Dummy selections on Mimosa West Station paid for from the station funds, prior to testator's death, and not disclosed in accounts filed by executors. P. Hann and C. H. Croaker on their application for probate, arranged by P. Hann in conjunction with employees, in receipt of weekly wages from 15s. 4d. to 20s. per week, and the Bank of New South Wales, to evade the provisions of the Crown Lands Act:—

<i>Summary.</i>			
No. 1, W. J. Gore	640 acres	C. P. land, transferred to Bank of New South Wales, 1888.	
2, H. Austin	400 "	"	1889.
3, A. R. Orr	320 "	"	1889.
4, W. Purser	640 "	and 1,962 A.C.P. land	1888.
5, M. Cody	640 "	refunded in	1885.
6, M. Behan	640 "	"	1885.
7, T. Youali	640 "	forfeited in	1886.
8, T. Frayne	320 "	refunded in	1885.
9, D. Halloran	640 "	"	1885.
10, J. Elliott	320 "	forfeited in	1886.
11, M. H. Davies	400 "	refunded	1886.
12, J. Hanson	120 "	M.C.P.	1886.
13, W. O. Mitchell	80 "	"	1886.
14, W. Drover	1,220 "	C.P. transferred to Bank of New South Wales	1889.

All these selections were concealed from the account filed on application for probate.  
Dummy Selections on Mungiebundie, Boolooroo, and Gravesend Stations, paid for from the station funds, prior to testator's death, and not disclosed in accounts filed on application for probate; arranged by John McDonald in conjunction with employees in receipt of wages, £20 to £50 per annum, to evade the provisions of the Crown Land Acts:—

No.	Name	Acres	Details	£	s.	d.
No. 15, C. Donaldson	640 acres of C. P. land	192	0	0		
16, J. Potts	C. P., 75/194 and 391 acres A.C.P.	319	18	9		
17, C. Wyndham	C.P.	164	10	0		
18, J. Jurd	C.P., No. 75/72	304	8	1		
19, H. Watts	C.P., 75/159	318	15	2		
20, H. Adams	C.P., 75/82	250	10	8		
21, W. Emmett	C.P., 82/112	160	0	0		
22, T. Warren	No. 76/103 and 77/12	1,432	9	6		
				£3,151	12	2

This amount had been paid from Mungie Bundie out of testator's estate at period of testator's death—and concealed from account filed on application for probate.

No. 1 Dummy Selection.

W. J. GORE, Station Book-keeper, a dummy selector of 640 acres of C.P. land. W. J. Gore's salary account, see station ledgers, "N," folios 238, 1, 91, 103, 223, 243, 277, and "P" 73, 99, and 149, viz:—  
14th November, 1881, to 31st May, 1882—28 weeks and 2 days, at 15s. 4d. per week. £21 14s. 4d.  
1st June, 1882, to 16th December, 1882—28 weeks and 3 days, 20s. per week, £28 10s.  
16th December, 1882, to 16th December, 1883—52 weeks, at 20s. per week, £52.  
16th December, 1883, to 1st April, 1884—15 weeks and 1 day, at 20s. per week, £15 3s. 4d.  
1st April, 1884, to 18th October, 1884—28 weeks and 5 days, at 20s. per week, £28 16s. 5d.  
18th October, 1884, to 31st October, 1884—2 weeks, at 20s. per week, £2.  
1st November, 1884, to 1st April, 1885—5 months, at £70 per annum, £29 3s. 4d.  
1st April, 1885, to December, 1885—36 weeks and 5 days, at £70 per annum, £49 8s. 2d.  
14th December, 1885, to 14th December, 1886—1 year, at £70 per annum, £70.  
14th December, 1886, to 2nd May, 1887—20 weeks, at £70 per annum, £26 18s. 4d.  
2nd May, 1887, to 31st October, 1887—26 weeks, at £70 per annum, £34 19s. 10d.  
31st October, 1887, to 4th January, 1888—£20 1s. 1d.  
1st March, 1888, to 31st May, 1888—3 months, at £90 per annum, £22 10s.  
1st June, 1888, to 31st August, 1888—3 months, at £90 per annum, £22 10s.  
(A man in receipt of commencing 15s. 4d. weekly salary taking up a 640-acre selection.)

The following extract, particulars compiled from original documents, will show how Mr. Hann arranged this dummy selection, and evaded the provisions of the Crown Land Act:—

3rd May, 1882, book 7, page 184—P. Hann to testator:—"I have decided in taking up 640 acres in the name of Gore."  
3rd May, 1882—Cheque drawn by P. Hann on Wagga Wagga Branch of Bank of New South Wales, for "W. Gore's C.P." (See cheque No. 075,836, document 679, being the deposit of 5s. per acre upon 640 acres C.P. land—£160.  
26th May, 1882—Cheque drawn by P. Hann on same bank, cheque butt No. 075,888—"to take up prelease in virtue of C.P."—£6.  
16th July, 1883, book 31, page 250—P. Hann to Swift:—"Two tanks on Gore's prelease, scrubbing and ring-barking, would secure 300 acres each."  
25 July, 1883, book 31, page 259, P. Hann to Swift:—"The selections taken up are—W. Gore, 640, surveyed; Cody, 320; Younall's, 640; Frayne, 320 (not surveyed), can be put back. All of them contain over £40 worth of improvements. Applied for on Gore's prelease, 720 acres."  
21st July, 1883—Agreement to lease for 99 years, from 21st July, 1883, from W. J. Gore to S. M. Swift and P. Hann. Lessees shall pay to the Colonial Treasurer all interests and instalments of purchase, &c.; that the lessees shall erect all such improvements as may be necessary in order to comply with the provisions of the Acts regulating, &c., the Crown lands; that the lessor will fulfil all conditions, &c., in the said Act, regulating the alienation or occupation of Crown lands; lastly, that the lease hereby agreed to be granted, shall be granted when and so soon as the lessor's title to grant such lease under the provisions of the Real Property Act, or any amendment thereof, shall be completed by obtaining the Crown grant, and that in the meantime, and until the granting of the said lease, the said lands shall be held by the said lessees, &c. "All that piece or parcel of land containing by admeasurement 640 acres, &c., conditionally purchased by the said William J. Gore at the Wagga Wagga Crown Lands Office, on 4th May, 1882.—Signed, William J. Gore, in the presence of M. Cody, Mimosa, manager. Entered in Registrar-General's book 274, No. 540, 11th August, 1883, at 12 minutes to 12 o'clock in the forenoon."  
July, 1883—1,003 yards (excavating) Gore's C.P. P.L. (see station ledger "N," folio 234)—£40 19s. 9d.  
July, 1883—904 yards (excavating) Gore's C.P. (see station ledger "N," folio 234)—£48 19s. 4d.  
August, 1883—"Building hut on Gore's C.P." (see station ledger "N," folio 215)—£8.  
August, 1883—Flooring hut on Gore's C.P. (see station ledger "N," folio 317)—£1.  
2nd August, 1883, book 10, page 248—P. Hann to Cody:—"A good job we had Gore's I.P.'s put in, as to-day a man named G. J. Adams, &c."  
8th August, 1883, book 10, page 314—P. Hann to Cody:—"We have also, to-day, on behalf of Gore, put in an improvement application, &c., for 240 acres."  
29th April, 1884—Scrubbing 252½ acres, 4s. 3d., on Gore's prelease (see ledger "N," folio 173, and Q, folio 44—£53 11s.  
3rd September, 1884, book 12, page 145—P. Hann to Cody:—"Frayne and Gore's selections are measured just as I want."  
13th September, 1884—Cheque drawn by P. Hann on same bank for £6 acres of mineral conditional purchase land; cheque butt, No. 071824. £48—being the deposit of 10s. per acre, 30th

- 30th September, 1884—Cheque drawn by P. Hann on same bank for prelease, £6; cheque butt, No. 072191.
- 10th November, 1884, book 12, page 240—P. Hann to Gore:—"I, however, want to satisfy your mind about your rise in salary, and will, from the 1st of November, make it at the rate of £70 per year, and I think this will fully meet your views." G. Sandell.  
16 Aug., 1899.
- 16th February, 1885—Cheque drawn by P. Hann on same Bank, "for expenses on Mimosa land." See cheque-butt, No. 072258—£3.
- 24th July, 1885—Book 12, page 456—P. Hann to H. H. Brown & Co.:—"A short time ago W. J. Gore received the enclosed refund vouchers for his M.C.P. of 96 acres; and as the Department are in error as to its being incorrectly placed, he delayed a little before deciding whether he would accept it or not. The portion is surveyed, and is where he required it, although an error of description may have occurred at the time through want of survey about there. As Keenan is likely to get a conditional lease, Gore thinks it better to uphold his M.C.P., so that he may adjoin the reserves. A glance at the run tracing will at once show you its position, and if you see better advice to give, please do so."
- 1885—Credit Gore's expenses to Wagga land, station ledger "N." folio 277—£1 10s.
- October, 1885—"Clearing and deepening tanks on Gore's selection." Station ledger "N." folio 317—£20.
- 16th November, 1885—Cheque drawn by P. Hann on Wagga Wagga Branch Bank of New South Wales, for annual instalment of 1s. per acre on 640 acres; cheque-butt, No. 075741—£32.
- 24th March, 1886—Cheque drawn by P. Hann on same Bank; see cheque-butt, No. 075773—£32.
- 4th May, 1887—Cheque drawn by P. Hann on same Bank; see cheque-butt, No. 075842—£32.
- 25th February, 1888—Cheque drawn by P. Hann on same Bank, 100 acres of I.P., at 25s. per acre; see cheque-butt, No. 112114—£126.
- 30th March, 1888—Document 726—P. Hann to Gore:—"I found your last instalment receipt yesterday with Mr. Fitzhardinge, and gave it to the Bank; but I cannot find Austin's or Orr's."
- 20th July, 1888—Cheque drawn by P. Hann on same Bank, 90 acres of I.P., No. 112139—£123 15s.
- 4th August, 1888—Cheque drawn by P. Hann on same Bank, 1s. instalment on 640 acres; cheque-butt, No. 112148—£32.
- 23rd August, 1888—Cheque drawn by P. Hann on same bank; purchase of right on 640 acres; cheque-butt, No. 112156—£50.
- 23th August, 1888—Document 756—P. Hann to Gore:—"As you have transferred your 640 and all rights pertaining to it, I now enclose you a cheque for £50, as agreed upon."
- 5th December, 1888—Cheque drawn by P. Hann on same Bank, "Gift to Gore"; cheque-butt, No. 112175—£20.
- Transferred to Bank of New South Wales, Registrar-General's book 385, No. 243.

## No. 2 Dummy Selection.

HARRY AUSTIN, a station employee, dummy selector of 400 acres of C.P. lands.

The following extract particulars, compiled from original documents, will show how this selection was taken up and arranged by Mr. Hann; how the station provided and paid the deposit, annual instalments, and improvements; how the station secured these payments by lease and transfer from the selector—conclusively proving the evasion of the Crown Land Acts:—

- H. Austin's salary account, *vide* station ledgers "N." folios 238 and 165; "P." 4 and 41.
- 26th January, 1884, to 18th October, 1884—33 weeks and 1 day, at 20s. per week, £38 3s. 4d.
- 18th October, 1884, to 27th November, 1884—5 weeks and 5 days, at 20s. per week, £5 16s. 8d.
- 27th November, 1884, to 3rd December, 1885—53 weeks, at 20s. per week, £53.
- 3rd December, 1885, to 16th December, 1886—54 weeks, at 20s. per week, £54.
- 16th December, 1886, to 20th December, 1887—52 weeks and 4 days, at 20s. per week, £53 13s. 4d.
- 3rd January, 1884, book 11, page 139.—P. Hann to Cody:—"Harry Austin is coming up from Browley. Do you think it advisable to take up 320 or 400 acres by him, east of Frayne's; build a hut out there, and let him live there for a time? I almost think so, to check Fisher."
- 19th January, 1884, book 11, page 177—Extract from P. Hann to Cody:—"If you find out at all where selectors are likely to get, let me know by return, as Austin will be up from Browley in a few days, and then I can place him somewhere. If he will go, I am also going to try and arrange for him to go and live out there for six or more months."
- 23rd January, 1884, book 11, page 183.—P. Hann to Cody:—"Going to take up 400 acres for H. Austin to-morrow, and after then he will go on out to you."
- 24th January, 1884—Cheque drawn by P. Hann on Wagga Wagga Branch of New South Wales, No. 072044. For H. Austin's C.P. (cash) on 25th, £100, deposit of 5s. per acre on 400 acres.
- 10th March, 1884—Agreement to lease from H. Austin to P. Hann for 99 years, from 1st February, 1884:—"All that piece or parcel of land containing by admeasurement 400 acres, parish of Bungambil, county of Bourke, being the land conditionally purchased by the said Henry Austin at the Wagga Wagga Crown Land's Office on the 24th day of January, 1884."
- Entered in Registrar General's Book 285, No. 908, 31st March, 1884, at 2:30 o'clock in the afternoon. See original document.
- 24th May, 1884—Making hut for Austin in scrubbing paddock, station books N 183, Q 45, £7 10s.
- August, 1884—Fencing in Austin's horse paddock, 55 chains, station book, N 217, £13 15s.
- 5th August, 1885—Cheque on same bank for 1,750 acres of additional conditional purchase land in virtue of C.P.—cheque No. 075706, deposit of 2s. per acre, £175.
- 26th March, 1887—Cheque on same bank, cheque butt No. 075848, annual instalment on 400 acres, £20.
- 26th April, 1888—Cheque on same Bank, cheque butt No. 112123, annual instalment on 400 acres, £20.
- 19th March, 1888—See original document 720, P. Hann to Gore:—"I see there is an inquiry into Austin's land on the 28th."
- 29th March, 1888—See original document 725, P. Hann to Gore:—"Austin and Orr seem to have been wanting work to do for some time past; they ought to have been together fencing; set them properly to work, &c."
- 10th April, 1888—See original document 729, P. Hann to Gore:—"When Purser's piece is secured it should make a good paddock, and then ought to be under the charge of Austin. As it is, Austin ought to look after the house or anything else there. Austin's and Orr's land together will be such a small paddock."
- 17th April, 1888—Original document 730, P. Hann to Gore:—"If old Harry (Austin) was a free agent and could come in, fight his own battle—we could floor Keenan, I think, as the gentleman now in place of Mr. Bolton views matters differently. No use my bothering, as I must not appear in it, and Harry could not work it up alone."
- 19th April, 1888—Original document 732, P. Hann to Gore:—"The Bank also want to get securities over Orr's and Austin's land, &c., so that next week the Bank will have them prepared and sent out for execution. They will each have to sign and execute the deeds, and it will not place them in any worse position."
- 23rd August, 1888—Original document 756, P. Hann to Gore:—"I hope Austin and Orr will act straight and right, as it will be in our interest for them to do so. I have represented them as decent, straightforward, honest men, that will still carry through their obligations as if nothing had happened, while they are treated in the same way as they have been."
- EXTRACTS from original letters written on Bank of New South Wales (Wagga Wagga) paper, in the handwriting of Mr. T. S. Gardiner, manager, to Mr. W. J. Gore; Documents Nos. 695, 676, 697, 698, and 699, viz:—
- 2nd February, 1889:—"When will Austin be coming in to make his declaration? His time was up on the 24th."
- 20th February, 1889:—"I have yours of the 17th instant; and, in regard to Austin, I do not think there is any occasion to retain him any longer. He need have no fear as to his getting his bonus. That will be paid him as soon as the certificate is issued, which I do not think will be long, as the papers have all gone on to the Under Secretary for Lands for approval."
- 2nd April, 1889:—"With regard to Austin, you may tell him that he will get his £50 as soon as the certificate for the C.P. is obtained, and I am pressing for its issue."
- 4th April, 1889:—"I have to-day received certificate for Austin's C.P., so you can pay him the £50, taking a receipt from him, which I enclose."
- 11th April, 1889:—"I have yours of the 9th instant, enclosing Austin's receipt, for which I thank you."
- I have searched the Registrar-General's books, and find in book 415, No. 951, that Henry Austin transferred this land on the 14th February, 1889, to the Bank of New South Wales for a supposed consideration of £402 10s.

G. Sandell.

16 Aug., 1899.

## No. 3 Dummy Selection.

ALEXANDER ROBERT ORR, a station employee, dummy selector of 320 acres of C.P. land.

A. R. Orr's Salary Account; see station ledgers "N," folios 238, 163, and 227; "P," folios 39, 93, and 145, viz.:—  
 23rd January, 1884, to 26th May, 1884—13 weeks and 4 days, at 20s. per week, £13 13s. 4d.  
 26th May, 1884, to 18th October, 1884—21 weeks, at 20s. per week, £21.  
 18th October, 1884, to 20th December, 1884—9 weeks, at 20s. per week, £9.  
 20th December, 1884, to 20th December, 1885—52 weeks, at 20s. per week, £52.  
 20th December, 1895, to 14th June, 1886—25 weeks, at 20s. per week, £25.  
 14th June, 1885, to 1st July, 1887—52 weeks and 2 days, at 20s. per week, £52 6s. 8d.  
 1st July, 1887, to 1st January, 1888—26 weeks and 2 days, at 20s. per week, £26 6s. 8d.  
 1st January, 1888, to 1st May, 1888—21 weeks and 5 days, at 20s. per week, £21 16s. 8d.  
 31st May, 1888, to 13th September, 1888—13 weeks and 1 day, at 20s. per week, £13 3s. 4d.  
 The following extract particulars from original documents will show how Mr. Hann arranged this dummy selection, and evaded the Crown Lands Acts:—  
 4th April, 1884—Book 11, page 424, P. Hann to Cody:—"If required, how will Orr do for taking up a piece of land?"  
 1st May, 1884.—Cheque drawn on Bank of New South Wales, Wagga Wagga Branch; see cheque-butl No. ;  
 "deposit of 5s. per acre on 320 acres, £80."  
 2nd May, 1884—Book 12, page 10, P. Hann to Cody:—"I have detained Orr for the purpose of taking up 320 acres, and for helping George to move stable things, &c. The paper will show you the description of Orr's land."  
 2nd May, 1884; see original document:—"In consideration of £80, advanced by P. Hann to A. R. Orr, and also in consideration of the said P. Hann making the payments and erecting improvements, I do hereby charge the lands comprised, &c. I agree that if called upon, &c., will execute a mortgage, &c., to P. Hann."  
 2nd May, 1884.—Agreement to lease for 99 years, A. R. Orr to P. Hann:—"All that piece or parcel of land containing by admeasurement 320 acres, parish of Bungambil, county of Bourke; being land conditionally purchased by the said Alexander Robert Orr, at Wagga Wagga Crown Lands Office on the 1st day of May, 1884, &c."  
 Entered in the Registrar-General's Book 288, No. 999, 23rd May, 1884, 2 o'clock in the afternoon.  
 14th May, 1884.—Book 12, page 32. P. Hann to Cody:—"I suppose you will have to put up a place on Orr's selection to carry improvements, and give a show of residence and *bona fides*.  
 August, 1884.—Building hut on Orr's C. P. in station ledger "N," folio 215, £9 5s.  
 1884.—"Stabling two horses and meals for himself." See station ledger "N," folio 163. £1 11s.  
 5th August, 1885.—Cheque drawn by P. Hann on same Bank, as deposit of 2s. per acre, on 1,880 acres additional conditional purchase land, £188.  
 See cheque-butl No. 075708.  
 30th September, 1885.—Book 16, page 28. P. Hann to H. H. Brown & Co.:—"Your yesterday's letter to hand. I feel much vexed over the way that Mr. Farnell has treated us. The Cabinet excuse is just something to say to us, but some other motive and influence has been at work. I want you now to consider the thing well from this point of view,—is it advisable for A. Orr, who has selected the land, to go down and try to upset the decision, and claim the land as being entitled to it, and that Fisher has no right to it; that he wanted land, and now no chance of enlarging his area, &c.; that he is *bona fide*, &c.? If advisable, too, he might be guided by you in all he did and was to do, and then try and work matters through the same channel that Fisher is supposed to have done."  
 5th October, 1885.—Book 16, page 29. P. Hann to S. Payne, manager of Mimosa Station:—"We cannot do anything through Orr yet, as his A. C. P. must be dealt with by the Board. He can take action."  
 17th April, 1886.—Book 16, page 102. P. Hann to S. Payne:—"Elliott's C. P. is forfeited. Orr must be on the lookout for when it can be retaken, and try and get it tacked on to his land. He must have a trial for it against Fisher."  
 30th June, 1887.—Cheque by P. Hann on same Bank. For annual instalment on 320 acres C.P. land, £16.  
 1884.—Expenses to Land Board. See station ledger "P," folio 93, £3.  
 10th April, 1888.—See document 731. P. Hann to Gore:—"Orr's refund voucher has been lost in the Lands Office, and ought to have been paid twelve months ago. Fitzhardinge has only just found it. Get Orr to sign it where marked in pencil; but he need not fill in the bank, or to whom payable, as the Bank will do that themselves."  
 18th April, 1888.—Document 732. P. Hann to Gore:—"The Bank also want to get security over Orr's and Austin's land, so as to have everything compact, &c.; so that next week the Bank will have them prepared and sent out for execution. They will each have to sign and execute the deeds."  
 3rd May, 1888.—See document 735. P. Hann to Gore:—"Orr's voucher all right."  
 10th May, 1888.—Document 738, P. Hann to Gore:—"An error has been made by the Treasury in paying in Orr's refund money to his own credit in Sydney instead of to the credit of the Bank here, and although it is all right, and really makes no difference, still the manager here would like Orr to sign a cheque."  
 2nd June, 1888.—See document 742, P. Hann to Gore:—"Orr's cheque all right to hand."  
 27th July, 1888.—Cheque drawn by P. Hann on Bank New South Wales, Wagga Wagga Branch, for annual instalment on 320 acres C.P.; see cheque-butl, No. 112142, £16.  
 23rd August, 1888.—Document 756, P. Hann to Gore:—"I hope Austin and Orr will act straight and right, as it will be in our interest for them to do so. I have represented them as decent, straightforward, honest men that will still carry through their obligations as if nothing had happened, while they are treated in the same way as they always have been."  
 The following extracts from original letters of Mr. T. S. Gardiner, manager of Wagga Branch of Bank of New South Wales; see documents 700, 704, 707, and 708A, addressed to Mr. W. J. Gore:—  
 9th May, 1889:—"I have yours of the 7th instant, per A. R. Orr, who has made his declaration on and transferred C.P.; he tells me that there are some items owing to him in connection with improvements on the C.P., amounting to £5 11s., and I have told him that if they were necessary, and had your sanction, of course he would be paid the amount. It will be for you to say if he is entitled to it. No doubt, for various reasons, we should not cavil about it; I have told him that as soon as the certificate is issued the balance coming to him on the C.P., £50, will be paid."  
 15th May, 1889.—"You can pay Orr the £5 11s. improvements laid out by him on the selection, taking his receipt."  
 3rd July, 1889.—"I have now the pleasure to advise that the certificate of A. R. Orr's C.P. has come to hand to-day, and that therefore you can now pay him the £50 coming to him on his signing the accompanying receipt, which be good enough to forward here."  
 16th July, 1889.—"I have yours of the 13th instant enclosing Orr's receipt, for which I thank you."  
 That I have searched the records in the Registrar-General's Office, and find that on , 1889, A. R. Orr transferred 320 acres of C.P. land to the Bank of New South Wales. For the supposed consideration of £ , see Registration Book 423, No. 659.

## No. 4 Dummy Selection.

WILLIAM PURSER, a station employee, dummy selector of 640 acres of C.P. land.

The following extract particulars compiled from original documents show how the selection was taken up and arranged by P. Hann:—

W. Purser's Salary Account (see station ledgers "N," folios 238, 225, and 313; "P," 43 and 55, viz.:—

	£	s.	d.
2nd March, 1884 to 18th October, 1884—33 weeks and 1 day, at 20s. per week .....	33	3	4
18th October, 1884, to 16th March, 1885—21 weeks and 1 day .....	21	3	4
16th March, 1885, to 1st December, 1885—37 weeks and 1 day .....	37	3	4
1st December, 1885, to 12th September, 1886—41 weeks .....	41	0	0

6th February, 1884—Book 11, page 206. P. Hann to Cody:—"I have a good old man here, well up in sheep, that I can rely on for a selection if we think it advisable to take one, in the N.W. corner of North Scrubby; he would be satisfied to live out there and boundary ride."  
 13th February, 1884.—Book 11, page 220. P. Hann to Cody:—"I must try and fix up old Purser for the Ariah Bungambil corner; but I cannot fix a true starting-point, &c. I may not take up for Purser to-morrow, so you can send me a description for it."  
 16th February, 1884.—Book 11, page 222. P. Hann to Cody:—"I did not take up any land for Purser; awaiting a description from you for next Thursday."  
 19th

19th February, 1884—Book 11, page 230, P. Hann to Cody :—" Purser, the bearer, is the man I intended taking up the 640 selection within the N.W. corner, and now I shall be away before your description comes for me. If you think there is danger of losing the ground there this week, you fill in the description on the form, and Purser will get the money from Mr. Gardiner, of the Bank of New South Wales, and take up the land." G. Sandell. 16 Aug., 1899.

1st March, 1884—Book 11, page 240. P. Hann to Cody :—" I could not get in time on Thursday to take up the selection for Purser."

6th March, 1884—Book 11, pages 263 and 264, P. Hann to Cody :—" To-day I took up 640 for Purser in the corner, &c. You will find him a good old man, &c. Give him a fairly-good comfortable cottage when he does go to live there, as he will reside and carry through conditions for us. Purser has signed his lease."

25th March, 1884 :—" In consideration of £160 advanced, and in consideration of P. Hann making the payments, and erecting the improvements, &c. I hereby charge the land comprised in the agreement, &c., and if called upon to execute a mortgage, &c.—(Signed) William Purser ; witness—R. B. Wood ; (see document)."

25th March, 1884—Agreement to lease for 99 years :—" All that piece of land, 640 acres, conditionally purchased on 6th March, 1884." Entered in the Registrar-General's Book 285, No. 909 (see Original deed).

6th March, 1884—Cheque drawn on Bank N.S. Wales for £160 (see cheque-butt No. 072076) :—" For deposit on 640 acres at 2s. per acre."

6th March, 1884—Cheque drawn on same bank :—" For expenses to apply for land" (see cheque-butt No. 072079), £4. Last will of William Purser, 6th March, 1884 :—No. 15,622.

I appoint Phineas Hann executor and trustee ; I give and devise 640 acres of land, situate in the parishes of Arianh and Bungambil, county of Bourke, conditionally purchased by me at Wagga Wagga Crown Land Office on the 6th March, 1884, together with improvements, and the land adjoining, &c., unto the said Phineas Hann for his own absolute use and benefit for ever. I give all the residue of my property unto the said Phineas Hann in trust to convert into money, &c.—Signed, WILLIAM PURSER. In the presence of R. B. Wood and W. T. Thorogood (both employees of P. Hann's) on 19th November, 1887. By act of Court, probate of the last will and testament of W. Purser was granted to Phineas Hann.

30th May, 1884—Timber purchased from John Gray, Wagga, to build hut, £7 10s. 6d.

June, 1884—Building weatherboard hut (see station ledger "N," folio 189), £9.

August, 1884—Fencing in Purser's horse-paddock (see ledger, station, "N," folio 217), £20.

11th November, 1884—Cheque drawn on same bank for Purser's pre-lease (see cheque-butt No. 072,213), £6.

15th November, 1884—Book 12, page 246, P. Hann to H. H. Brown & Co. :—" On the 12th I applied for a pre-lease of 1,920 acres for W. Purser, in virtue of his C.P. of 640 acres, No. 6-3-84, taken up on 6th March, and now measured. Will you try and get this pushed through for us, as it seems to me necessary that it should be granted before the end of the year."

5th August, 1885—Cheque on same bank, as deposit of 2s. per acre upon 1,920 acres of additional conditional purchased land (see cheque-butt No. 075,707), £192.

9th May, 1886—Cheque on same bank, annual instalment of the 640 acres of C.P. land (see cheque-butt, No. 075,815), £32.

4th May, 1887—Cheque on same bank, annual instalment of the 640 acres C.P. land (see cheque-butt No. 075,857), £32.

19th March, 1888—Document 720, P. Hann to Gore. :—" In thinking over Purser's land you are quite right to get the scrubbing squared off for measurement. I see there is an inquiry into Purser's and Austin's land comes on at the Land Office here on the 28th."

30th March, 1888—Document 726, P. Hann to Gore. :—" How does Purser's account stand in the station books ; overdrawn or in credit ? If in credit, this account of Austin's, if correct, could be paid from it ; if overdrawn I may be personally liable for it as administrator."

28th June, 1888—Document 746, P. Hann to Gore. :—" Send me in the (your) estimate of cost and improvements on Purser's original 640 acres. I thought with Purser's cultivation, cottage, scrubbing, &c., that the 10s. per acre was on it."

20th July, 1888—Document 750, P. Hann to Gore. :—" Purser's land, 640. What would be the best improvement to put on for the 4s. per acre required—clearing, or what ? Do you want yards there. The five years will be up next year."

17th July, 1888—Cheque on same bank. :—" Sixty-six acres adjoining deposit and balance," (see cheque-butt No. 112,134), £155 17s. 6d.

27th July, 1888—Cheque on same bank. "Annual instalment of the 640 acres C.P. land," (see cheque-butt No. 112,143), £32.

26th July, 1888—Document 751, P. Hann to Gore. :—" Purser's land must be improved before next March."

On searching the Registrar-General's Office I find in Book 394, No. 262, a letter of mortgage dated 25th July, 1888, Phineas Hann to Bank of New South Wales. :—" In consideration having granted to the firm of Swift and Hann a cash credit for £30,000 upon security of a bond, 22nd December, 1881, on 2,332 acres 2 roods C.P. 640 acres, W. Purser ; 6th March, 1884, section 13 A.C.P. 1,692 acres 2 roods, W. Purser ; 6th August, 1885, section 20.

NOTE.—There were 1,920 acres paid for at 2s. per acre, viz., £192, with 640. would be :—

2,560 acres
2,332 "
228 "

not accounted for, and probably is the C.P. sold by Hann to Leitch, of Berry Jerry.

No. 5 Dummy Selection.

Mathew Cody, Mimosa Station, Manager, a dummy selector of 640 acres of C. P. land.

The following extract particulars, compiled from original documents, show how the selection was taken up and arranged by Mr. Hann, viz. :—

M. Cody's salary account—see Station Ledger "N," folios 238, 31, 153, and 231, viz. :—

	£	s.	d.
21 June, 1881, to 15 November, 1881—21 weeks at 20s. per week .....	21	0	0
15 November, 1881, to 15 November, 1882—at £200 per annum .....	200	0	0
15 November, 1882, to 15 November, 1883 .....	200	0	0
15 November, 1883, to 1 October, 1884 .....	175	0	0
1 October, 1884, to 31 October, 1884 .....	16	13	4

5th March, 1883, see Book 9, page 239. Letter from P. Hann to M. Cody. :—" I fail to see your scruples or the principle involved in your taking a piece in your name for us. There is no law-breaking, no declaration, no oath, no conditions to fulfil—as we ask none, you do not promise any, and the Land Act does not ask any. It is simply a matter of wasting money for protecting what we consider our rights. After the selections are taken up they will become a forfeiture, as Gore's will be, and after spending a certain amount of money on them, as improvements, they cannot be selected, when forfeited, but must go to auction, and this may be five or six years hence. If I asked you to take up land with a view to fulfilling the conditions to make the required declaration, to give us a title then, I could readily see your reasons. The same applies to any other name that a piece may be taken in the name of. The land can only be allotted on personal application, and my object was to get those on the station to apply for us, as then they would be on the station until surveyed, and prepared to answer (if asked) any questions the surveyor may put at the time of survey. If the surveyor makes no adverse reports, then the land goes on its five years before forfeiture—at least that is my view of it. If he reports badly on it at the time of survey, I wanted you and some others on the station that we could trust, so that they could not turn round on us and jump our rights by sticking to the land after we had paid the money for it. Such things have been done to run-holders after they have put a lot of improvements on the ground, through their taking men they did not know enough of. We are going in with our eyes open, knowing what we are doing, i.e., wasting money ; but we do not want to be played fake with. There is no breaking of the law in taking up land, only when you try to retain possession and get a title by false statements, and there is no dummyming in what I have asked of you. Dummyming is when men are placed on the ground to hold and get a title ; the run-holders doing everything and paying these men for their time. If you could see the thing as I have shown it. I shall have to go in and take up 640 myself ; but this will be inclined to stir up outsiders, and bring others around us. In any case, I think it better for you to come in, bringing Halloran or whichever person you prefer, so that we can decide on what shall be done, and I shall then be prepared with Mr. Swift's views on

G. Sandell. on the matter. Be in as early as you can on Wednesday, so that the papers can be prepared and ready for prompt 10 on Thursday morning. I have just had a talk with Gore, and from what he says of Halloran and Frayne's views about land being in their names, they are not to be trusted. They would look upon themselves as the legitimate owners—want to live on it—fulfil its conditions, and then want paying off; but it is not nice to feel that you have to battle with men who are trying to rogue you."

16 Aug., 1899.

7th March, 1883, Book 31, page 130. P. Hann to Swift.—"I have Cody and Tom (Yourall) in, and will take up two pieces of land to-morrow, 320 in Cody's name in the middle paddock, and 640 in Thos. Yourall's name—studied the thing over—have no more names to use, and cannot see any way for properly securing the land without taking up these quantities. Cody seems to see the thing in its proper light now."

7th March, 1883.—Cheque drawn by P. Hann on Wagga Wagga Branch, Bank New South Wales, for C.P.'s on Mimosa, £240, deposit of 5s. per acre on 320 acres (see cheque No. 151285, being £80).

25th July, 1883, Book 31, page 259. P. Hann to Swift.—"We have sent in seven I.P.'s, in all 2,340 acres. The selections taken up are W. J. Gore 640, surveyed; Cody, 320; Yourall, 640; and Frayne, 320, not surveyed, can be put back if you think it advisable, and get deposit back."

4th August, 1883, Book 10, page 309. P. Hann to Cody.—"I am putting in your application for 320 on your prelease."

August, 1883. Clearing and burning off 207 acres (see Book "Q," page 44), £43 19s. 9d. Description of measurement of Cody's 320 acres (see Book "Q," page 112).

18th February, 1884, Book 31, page 227. P. Hann to Cody.—"Your selection has been set right, and we are asked to return the refund voucher."

8th March, 1884, Book 31, page 270. P. Hann to Swift.—"M. Cody, 320 acres. This could be increased to 640, or 320; can be applied for as an I.P. as soon as the prelease is granted; 940 acres prelease applied for."

7th April, 1884, Book 11, page 438. P. Hann to Cody.—"I have just had a letter refusing your I.P. application on account of voidance of the selection, but as the C.P. has now been put right this will also follow in due course."

7th April, 1884, Book 11, page 439. P. Hann to H. H. Brown & Co.—"Cody's C.P. having been made good will allow of the I.P. being also made so in due course. If it requires attention will you please do it and oblige!"

21st May, 1884, Book 12, page 53. P. Hann to Cody.—"I wanted you to do some grubbing at your I.P., so that you could ensure getting a larger area than you were talking about, as I wanted as large a block as we could get saved there."

25th July, 1884, Book 12, page 107. P. Hann to H. H. Brown & Co.—"Pleased to see that Cody's prelease is all right. Cheque £2 13s., in payment of your account."

2nd August, 1884, Book 12, page 116. P. Hann to Cody.—"I am putting in fresh applications for the I.P.'s now that your prelease has been restored."

5th August, 1884, Book 12, pages 120 and 122. P. Hann to Cody.—"I enclose particulars of two I.P.'s that I lodged in the Lands Office yesterday."

Copy of I.P. application for M. Cody on 4th August, 1884.—"160 acres, commencing at a tree marked J.B. 67 B., at the corner of the Yarrenjerry and Lower Mitchell Creek Run, with its intersection of the Mimosa Run; thence south 15 chains; thence east about 53 chains; thence north 30 chains; thence west about 53 chains; thence south 15 chains to the commencement point. Kangaroo Yards, £100; fencing, £30; ringing, scrubbing, &c., £30—total, £160."

14th August, 1884.—"Cheque drawn by P. Hann on Wagga Branch of Bank of New South Wales, deposit of 5s. per acre on 320 acres." Cheque butt No. 073, 170, £80.

August, 1884.—"Building hut on Cody's C.P. (see station ledger 'N,' folio 215), £8."

30th September, 1884 (part of).—"Cheque drawn on same bank for Cody's prelease (see cheque butt No. 72191), £3."

1st November, 1884.—"In consideration of £160 advanced by P. Hann to M. Cody, and in consideration of the said P. Hann making payments and erecting improvements, I agree that if called upon, &c., to execute a mortgage over said lands to secure the said P. Hann, &c. Witness, W. J. Gore, Mimosa West, book-keeper."

November 1st, 1884.—"Agreement to lease for ninety-nine years, from M. Cody to P. Hann, "all that piece or parcel of land, 320 acres, parish of Tara, county of Bourke, being land conditionally purchased by the said M. Cody at the Wagga Wagga Crown Lands Office, on the 14th day of August, 1884, &c." Entered in the Registrar-General's Book 298, No. 632, on 12th November, 1884, at 2 o'clock in the afternoon."

16th July, 1885, Book 12, page 444. P. Hann to H. H. Brown & Co.—"Your yesterday's favour to hand, and refund voucher for £80, which I shall forward to Cody for signature."

27th October, 1885, Book 16, page 48. P. H. to T. S. Gardner.—"I beg to hand you M. Cody's refund voucher on 320 acres, £80." Credited in bank pass-book, 19th November, 1885.

29th March, 1888, Document 725. P. Hann to Gore.—"As Yourall's and Cody's selections are forfeited, we have no claim over the improvements; if selections are forfeited we have no claim over the improvements if any one takes up the land. You had better remove them and then do up the men's huts that you speak of."

8th June, 1888, Document 743. P. Hann to Gore.—"Huts, Cody's, Yourall's, and Davis's selections, can be reselected, but pending the new Act I think these, with a great number of others on leaseholds, were temporarily withdrawn or reserved, and cannot be selected again until gazetted. You can take the huts from wherever you like best; the one on your selection cannot be of any use to the station, and as the certificate of condition has been given and transfer accepted, there cannot be any danger or loss there. The huts on Yourall's and Cody's may make selectors think the land has gone."

#### No. 6 Dummy Selection.

MARTIN BEHAN, a dummy selector of 640 acres of C.P. land.

The following extract particulars, compiled from original documents, will show how Mr. Hann arranged this dummy selections and evaded the provisions of the Crown Land Acts, viz:—

20th September, 1883.—Cheque drawn by P. Hann on Wagga Wagga Branch Bank of New South Wales, No. 071,852, for M. Behan's C.P., £160, being the deposit of 5s. per acre on 640 acres of C.P. land.

21st September, 1883, Book 31, page 375. P. Hann to Swift.—"I have taken up to-day the two that Cody saw a danger of—640 each—and two small mineral C.P.'s, 120 and 80 acres."

22nd September, 1883, Book 10, page 446. P. Hann to Cody.—"The Wagga paper will show you the four pieces of land taken up on Thursday—Mitchell, Hanson, Halloran, and Behan; mark them off on your map; it looks to me as if another 640 is wanted in north scrubby, west of Behan's, but I hardly see how to do it yet."

22nd September, 1883, Book 10, page 448. P. Hann to H. H. Brown & Co.—"I enclose particulars of five pieces of land taken in our interest on Mimosa, three of them being mineral C.P.'s and two C.P.'s 13th September. We do not expect to be able to fulfil the conditions of either, and prefer their running over the twelve months before survey, if it can be managed. We might have to take another 640 yet, near and west of Behan's. I send these particulars, as I thought you would like to mark them off, and to know they were in our interest. I intend, on Monday, taking preleases for Halloran, Behan, and Mitchell. &c."

24th September, 1883.—Cheque drawn by P. Hann on same Bank, "For prelease." No. of cheque 071860, £3.

21st December, 1883, Book 11, page 116. To Under Secretary for Lands:—"In reply to your letter of 17th November (L.A. 83-174), I now beg to enclose a rough sketch showing the position of my conditional purchase, and trusting the particulars given are sufficient for allotting my prelease.—Your obedient servant, MARTIN BEHAN, per his agent, P. Hann." 1884—Building hut on Behan's C.P. (see station ledger "N," folio 215, £9 5s.)

15th September, 1884, Book 12, page 171. P. Hann to H. H. Brown & Co.—"The surveyor is at Mimosa, and I have been thinking over the advisability of trying to get a refund of Behan's and Halloran's deposit."

7th October, 1884, Book 12, page 195. P. Hann to H. H. Brown & Co.—"Behan is here; can you make application, as their agent, for the refund, or must they personally sign the applications? If they have to apply, will you send forward one for Behan, and I will get it signed?"

8th October, 1884, Book 12, page 193. P. Hann to Cody.—"Has Garland surveyed Behan's and Halloran's selections? I am trying to get a refund of the deposit money granted before his report goes in."

18th December, 1884, cheque drawn by P. Hann on same Bank; No. cheque-butt, 072225:—For deposit of 10s. per acre upon 50 acres of M.C.P., £25.

22nd December, 1884, Book 12, page 285. P. Hann to H. H. Brown & Co.—"Enclosed please find one of the refund vouchers, signed by M. Behan, for £160,

24th December, 1884—Cheque drawn by Hann on same Bank; cheque-butt No. 072227; present to Behan, £5.  
 10th February, 1885, book 12, page 324. P. Hann to H. H. Brown & Co. :—"Your favour, with cheque £390 sterling, refunds D. Halloran, M. Behan, and F. Frayne." Behan's amount thereof, £156. Amount credited in pass-book on 9th February, 1885, in item £390. G. Sandell.  
16 Aug., 1899.  
 23rd June, 1885, book 12, page 421. P. Hann to S. Payne :—"Refund for Behan's prelease, £3."  
 16th July, 1885, book 12, page 444. P. Hann to H. H. Brown & Co. :—"Behan's refund voucher, £3, I have."  
 29th October, 1885, book 16, page 48. Hann to Gardiner, manager, Wagga branch Bank of New South Wales :—"I beg to hand you refund voucher."  
 31 August, 1886. Cheque drawn by P. Hann on same Bank; see cheque-butt, No. 075789.—"Present on account of refund, £2."

## No. 7 Dummy Selection.

THOMAS YOURALL, a station employee, dummy selector of 640 acres of C.P. land.

Tom Yourall's salary account, see station ledger "N," folios 238, 40, 129, and 197, viz. :—

5th March, 1883, to 22nd May, 1883—11 weeks 1 day, at 20s. per week, £11 3s. 4d.  
 22nd May, 1883, to 17th May, 1884—25 " 5 days, " £25 16s. 8d.  
 17th November, 1883, to 22nd May, 1884—26 weeks 4 days, at 20s. per week, £26 13s. 4d.  
 22nd May, 1884, to 18th October, 1884—21 weeks 3 days, at 20s. per week, £21 10s.  
 18th October, 1884, to 15th November, 1884—4 weeks at 20s. per week, £4.

The following extract particulars, compiled from original documents, will show how Mr. Hann arranged this dummy selection, and evaded the provisions of the Crown Lands Act, viz. :—

7th March, 1883, book 31, page 130. P. Hann to Swift :—"I have Cody and Tom (Yourall) in, and will take up the two pieces of land to-morrow—320 in Cody's name in the middle paddock, and 640 in Thos. Yourall's name. Studied the thing over. Have no more names to use, and cannot see my way for properly securing the land without taking up these quantities."

8th March, 1883 (part of)—Cheque drawn by Mr. Hann on the Wagga Wagga branch of the Bank of New South Wales, for deposit of 5s. per acre on 640 acres, £160.

8th March, 1883, book 31, page 132. P. Hann to Swift :—"We got the land matter through to-day, and although the men did not offer any opposition, still it may be as well taking it up. Tom will sign the lease, and I will apply for prelease."

Cheque, No. 151288, drawn by Hann on same Bank, for prelease, £6. Lease for ninety-nine years from T. Yourall to Swift and Hann (see original document.)

15th March, 1883, book 31, page 136. P. Hann to Swift :—"Yourall's lease enclosed; sign it, and return. They hardly left enough room for you, and put your seal below mine."

25th July, 1883—Book 31, page 259, P. Hann to Swift :—"The selections taken are, to Gore, 640, surveyed; Cody, 320; Yourall's, 640; Frayne's, 320, not surveyed. Can be put back if you think it advisable, and get deposit back."

27th July, 1883—Book 31, page 270, P. Hann to Swift, preleases applied for :—

9th March, Thos. Yourall.....	1,920 acres
9th " " M. Cody.....	960 "
15th June, Thos. Frayne.....	960 "

22nd September, 1883—Book 10, page 448, P. Hann to H. H. Brown & Co. :—"I enclose particulars of five pieces of land taken in our interest on Mimosa, three of them being mineral C.P.'s and two C.P.'s, 13 sec. We do not expect to be able to fulfil the conditions of either, and prefer their running over the 12th instant before survey, if it can be managed. We might have to take another 640; got near and west of Behans. I send these particulars, as I thought you would like to mark them off, and to know they were in our interest, &c. Are you urging forward Yourall's and Frayne's preleases? Please do so."

Measurement of Yourall's 640 acres of C.P. land, see station book Q, page 112. August, 1884—"Building hut on T. Yourall's C.P. See station ledger N, folio 207, £7 10s.

21st May, 1886—Book 16, page 114, P. Hann to S. Payne, Mimosa Station manager :—"I have a letter from Yourall which I enclose, and a copy of my reply to it. You will understand all by this. Of course, it would be a good thing to have the ground, but I don't want to make two other payments on it and then lose it. Yourall has no place of residence; but whether that would stand good or not for his declaration I do not know."

21st May, 1886—Book 16, page 116, P. Hann to Yourall :—"The only thing that can be done with your land is making the declaration of residence, &c., and trying to get it pushed through at the end of five years (two years more); but then you may not care for doing it. Of course, it would be a good thing for us to get the land at the end of the time—after the three years' declaration is made; then we should have to go on paying the 1s. per year on it, and I should not like to lose it after paying for the two years', or, perhaps, three payments."

29th March, 1888—Document 725, P. Hann to Gore :—"As Yourall's and Cody's selections are forfeited, we have no claim over the improvements if anyone takes the lands. You had better remove them, and then do up the men's huts you speak about."

## No. 8 Dummy Selection.

THOMAS FRAYNE, a station employee, dummy selector of 320 acres C.P. land.

Thomas Frayne's salary account; see station ledger N, folio 119, viz. :—

23rd February, 1883, to 17th November, 1883—35 weeks at 20s. per week, £35.  
 17th November, 1883, to 29th November, 1883—2 weeks at 20s. per week, £2.

The following extract, particulars compiled from original documents, will show how Mr. Hann arranged this dummy selection, and so evaded the provision of the Crown Lands Act :—

10th March, 1883—Book 9, page 358. Extract from P. Hann's letter to M. Cody :—"I have just heard of a d—d scoundrel that is taking up the block No. 12, in the wether paddock. I wish you would look it over, and see if there is any other improvement on it than the ringing; if there is we can save it; if not, we shall have to protect it. Let me know by return. Perhaps it would be as well to send in the young fellow, Tom Frayne, as I think I could trust him, and could take a lease, the same as we did from Yourall."

10th May, 1883—Book 10, pages 43 and 44, P. Hann to Cody, the then manager of Mimosa West Station :—"The land can only be secured by selection, and we have not people enough to do it with; but as soon as I find their lands surveyed, and I can get proper descriptions, I mean them to use Frayne and some others, and adjoin their boundaries to cut them off from getting their prelease land."

26th May, 1883—Book 10, page 68, P. Hann to Cody :—"If these selectors are about over the run, and you think some of it going, send in T. Frayne, so that I can take a strip in his name."

6th June, 1883—Book 10, page 100, P. Hann to Cody :—"Send Frayne in next Saturday, and I will take up 320 acres."

13th June, 1883—Book 31, page 221, P. Hann to Swift :—"I shall take up 320 acres to-morrow in one of our men's name, so as to spoil and cut off the selectors."

14th June, 1883—Cheque No. 150130 (see document 683), drawn by P. Hann on Wagga Wagga Branch, Bank of New South Wales. Thos. Frayne's C.P. deposit of 5s. per acre on 320 acres of C.P. land, £80.

14th June, 1883—Cheque No. 150132 (see document 683a), drawn by P. Hann on same bank for T. Frayne's pre-lease, cashed on 18th June, 1884, £3.

15th June, 1883—Book 10, page 130, P. Hann to Cody :—"This morning I took up 320 acres in Frayne's name, and send a tracing showing where all the land is started."

15th June, 1883—Thos. Frayne to Swift and Hann :—"I hereby agree that any moneys advanced to me by Swift and Hann are to be deducted and retained by them out of the rent payable by them to me for the land I conditionally purchased on the 14th June, 1883, and the land I prelease by virtue of such conditional purchase, and which lands I have leased to them."

16 June, 1883—See original agreement to lease for ninety-nine years, from T. Frayne to Swift and Hann :—"All that piece or parcel of land containing by admeasurement 320 acres, &c., being the land conditionally purchased by the said Thos. Frayne at Wagga Wagga Lands Office, on 14th day of June, 1883."

Entered in the Registrar-General's Office, 9th day of July, 1883, ten minutes past 11 o'clock in the forenoon (*vide* Registrar-General's book 272, No. 177). 2nd

G. Sandell.  
16 Aug., 1889.

2nd August, 1883—Book 10, page 298, P. Hann to Cody :—"If there was much chance of his (Fisher) being able to get west, then we would have to take 320 more for Frayne. I was leaving this an open matter, just to see whether we wanted Frayne to go east or west of his 320."

28th November, 1883—Book 11, page 82, P. Hann to Cody :—"From what you say, perhaps it would be as well to take up Frayne's extra 320 acres, and if you think it advisable to send Frayne in, do so."

1st July, 1884—Book 12, page 79b, P. Hann to Frayne :—"I find the surveyors are coming in a few days to commence measuring the block on Mimosa. If you are not doing anything just now, you might come up and be working, and living on the selection that I took up in your name; and then, after the survey is over, you can lease it again and return home if you want to. Your residing on the ground while the surveyor is there will pass the land, so that it will be nearly three years after that before the land is forfeited. I will pay your expenses up and back, and pay your wages while at the station."

18th July, 1884—Book 12, page 97, P. Hann to Cody :—"Frayne's land." Try and get it surveyed the way we want it, but you must not say to Garland that it is our man and our selection."

August, 1884—Building hut on Frayne's C.P. (see station ledger "N," folio 215)—£10.

3rd September, 1884—Book 12, page 145, P. Hann to Cody :—"Frayne's and Gore's selections are measured just as I want."

13th December, 1884—Book 12, page 275, P. Hann to H. H. Brown & Co. :—"If you will supply me with the form of authority necessary for each—Behan, Halloran, and Frayne—to sign for refunds, I will send these to them, so that they may be returned, and you can collect for us."

13th December, 1884—Book 12, page 276, P. Hann to Frayne :—"I find that I shall be able to get the money back for your selection, as it was not surveyed in time; and, if I can do so, I shall want you to sign the necessary forms authorising us to get the money. Will you do so for me? Let me have your reply, and then I shall know what to do. It is better for me to get the money than have the selection forfeited, and then not able to get the money afterwards."

15th January, 1885—Book 12, page 303, P. Hann to Frayne :—"I always intended giving you a cheque for £5 for doing this, but I cannot send it to you now, nor until I have the order in the agent's hands in Sydney, so that he may be satisfied the money will be paid on it."

23rd January, 1885—Book 12, page 311, P. Hann to H. H. Brown & Co. :—"I have at last got Thos. Frayne's signature to the refund voucher. Found him at Majorca, Victoria. I have promised the fellow £5, and he expects it by return."

23rd January, 1885—Book 12, page 312, P. Hann to Frayne :—"You have not signed the voucher in your usual style of writing."

9th February, 1885—Cheque—butt No. 072,249, drawn by P. Hann "on same Bank, for signing refund voucher," £5.

9th February, 1885—Book 12, page 323, P. Hann to Frayne :—"I have now got the refund from Sydney, and enclose you a cheque, £5."

10th February, 1885—Book 12, page 324, P. Hann to H. H. Brown & Co. :—"Refund £78 (being part of cheque £390, credited in Bank of New South Wales; pass-book on 9th February, 1885). Your favour of the 7th duly reached me with cheque £390 sterling, covering the refund on D. Halloran's, M. Behan's, and T. Frayne's C.P.'s, for which accept my thanks."

23rd June, 1885—Book 12, page 421, P. Hann to S. Payne :—"Refund of prelease, £3 received. (Note, this amount is credited the Bank pass-book under date of 4th November, 1885.)"

22nd July, 1885—Book 12, page 449, P. Hann to H. H. Brown & Co. :—"As Frayne's C.P. was withdrawn at his own request, it has removed the obstacle to his prelease, and that being improved does not bar it being given to him, &c. It makes me regret withdrawing Frayne's C.P."

#### No. 9 Dummy Selection.

D. HALLORAN, a drover, in the employ of the Station, a dummy selector of 640 acres of C.P. land.

The following extract particulars, compiled from original documents, will show how Mr. Hann arranged this dummy selection, and evaded the provisions of the Crown Lands Acts, viz. :—

18th September, 1883—Book 31, page 365, Hann to Swift :—"D. Halloran.—I squared up accounts with him yesterday, and enclose the one for the Oakwoods', showing £400 0s. 3d. charged to you. He sent his plant on. Promised to take up 640 for us on Thursday."

20th September, 1883—Cheque drawn by P. Hann on Wagga Wagga Branch of Bank of New South Wales. Cheque No. 071,851 for D. Halloran's C.P., £160, being the deposit of 5s. per acre upon 640 acres of C.P. land."

22nd September, 1883—Book 10, page 446, P. Hann to Cody :—"The Wagga paper will show you the four pieces of land taken up on Thursday—Mitchell's, Hanson's, Halloran's, and Behan's. Mark them off on your map. It looks to me as if another 640 is wanted in north scrubby, west of Behan's hut. I hardly see how to do it yet."

22nd September, 1883—Book 10, page 448, P. Hann to H. H. Brown & Co. :—"I enclose particulars of five pieces of land taken in our interest on Mimosa, three of them being mineral C.P.'s and two C.P.'s, 13th sec. We do not expect to be able to fulfil the conditions of either, and prefer their running over twelve months before survey if it can be managed. We might have to take another 640 yet, near and west of Behan's. I send these particulars, as I thought you would like to mark them off, and to know they were in our interest. I intend on Monday taking preleases for Halloran's, Behan's, and Mitchell's."

24th September—Cheque, No. 071859—Drawn by P. Hann on same bank—"For D. Halloran, prelease, £3."

21st December, 1883—Book 11, page 115, P. Hann to the Under Secretary for Lands :—"In reply to your letter of the 17th, No. L.A. 83-175, I now beg to enclose a rough sketch from the office map, here showing the position of my conditional purchase, as started from marked tree, &c. Trusting the particulars given are sufficient for allotting my prelease.—Your obedient servant, D. Halloran (per his agent), P. Hann."

July—August, 1884—Building hut on Halloran's C.P. (see station ledger "N," folio 219)—£8 10s.

15th September, 1884—Book 12, page 171, P. Hann to H. H. Brown & Co. :—"The surveyor is at Mimosa, and I have been thinking over the advisability of trying to get a refund of Behan's and Halloran's deposits."

7th October, 1884—Book 12, page 195, P. Hann to H. H. Brown & Co. :—"Halloran is still in South Australia, and may not be back now for one or two months, as the Department refused the prelease for Behan's and Halloran's until the C.P.'s were measured."

8th October, 1884—Book 12, page 198, P. Hann to Cody :—"Has Garland surveyed Behan's and D. Halloran's selections? I am trying to get a refund of the deposit money granted before his report goes in. Of course, he must report non-residence, or perhaps report nothing at all."

13th December, 1884—Book 12, page 275, P. Hann to H. H. Brown & Co. :—"If you will supply me with the form of authority necessary for each—Behan, Halloran, and Frayne—to sign for the refunds, I will send these to them so that they may be returned, and you collect for us. Halloran is on the road with sheep."

5th January, 1885—Book 12, page 238, P. Hann to H. H. Brown & Co. :—"Enclosed I now hand you D. Halloran's refund voucher for £160, signed at Forbes, which please collect and remit with M. Behan's. I fear it will be some time before I can get at Frayne's, as I cannot find out his whereabouts yet."

10th February, 1885—Book 12, page 324, P. Hann to H. H. Brown & Co. :—"Your favour of the 7th duly reached me with cheque £390, covering the refunds on D. Halloran's, Behan's and Frayne's C.P.'s. Halloran's amount thereof, £156. Credit in Bank pass-book on 9th February, 1885."

23rd June, 1885—Book 12, page 421, P. Hann to S. Payne :—"Refund voucher, I have one for D. Halloran."

29th October, 1885—Book 16, page 48, P. Hann to T. S. Gardiner, manager, Wagga Wagga Branch Bank New South Wales :—"Enclosed, I beg to hand you three refund vouchers, which please collect and credit the account D. Halloran, £3." Credited in the Bank pass-book, 4th November, 1885.

#### No. 10 Dummy Selection.

JOE ELLIOTT, a station employee, a drover, dummy selector; took up 320 acres of C. P. land on Mimosa West.

The following extracts of original documents will show how Mr. Hann evaded the provisions of the Crown Lands Acts :—

18th July, 1884—Book 12, page 97—P. Hann to Cody :—"Elliott will leave here on Monday; is a good working-man, and will help in putting up the house on his own place. I shall give him a horse to ride out on, and you will have to regulate his time for staying three or four weeks, according to what there is to do, and Mr. Garland surveys."

23rd July, 1884, Book 12, page 105. P. Hann to Cody, Station Manager.—“As Elliott it idle just now he would rather go out at once. I therefore send him out. Get him at work on his ground, so that we get the value of his wages. I saw Mr. Bolton about Mr. Garland not having instructions, and he says that the land being taken there that he can, in anticipation of getting instructions, survey for the selectors—it depends entirely on himself. I have explained it to Elliott and send you certified copies of the application, so that Mr. Garland can be sure he has true particulars. Elliott and Orr will each have to ask him to survey for them, and you press him to do it. We want to see if Mr. Fisher has a pre-lease. Elliott has arranged to get £10 for a month and will do what you want of him—lamb mark or anything else.”

26th July, 1884 (see original document).—“In consideration of £80 advanced to me, Job Elliott, by Phineas Hann, etc.; also in consideration of the said Phineas Hann making payments and erecting the improvements provided for, &c., I hereby charge the lands, &c., and if called upon to do, I will execute a mortgage with the usual provisions to the said P. Hann.”

26th July, 1884.—Agreement to lease for 99 years. From Job Elliott to Phineas Hann.—“All that piece or parcel of land containing by admeasurement 420 acres, parish of Birigambil, county of Bourke, being the land conditionally purchased by the said Job Elliott at the Wagga Wagga Crown Lands Office, on 5th day of June, 1884. Entered in the Registrar-General's book 292, No. 948, twenty-five minutes past 2 o'clock, 1st August, 1884.”

August, 1884.—Building hut on Job Elliott's C.P. See Station Ledgers “N,” folio 207, and “Q,” folio 45. £8 10s.

26th August, 1884, Book 12, page 137. P. Hann to Cody.—“I have arranged with Elliott to take up a 40-acre M.C.P. on Thursday, and will send you a certified copy of it.”

28th August, 1884. Cheque drawn by P. Hann on Wagga Branch Bank of New South Wales; cheque butt No. 072174; deposit on 40 acres M.C.P., £20.

4th February, 1885. Cheque drawn by P. Hann on same bank “for time on selection.” See cheque butt No. 072248. £4 18s.

17th June, 1885.—Cheque drawn by P. Hann on same bank, “for Mimosa account.” See cheque butt No. 072279, £5.  
17th April, 1886, Book 16, page 102. P. Hann to S. Payne.—“Elliott's C.P. is forfeited.”

#### No. 11 Dummy Selection.

M. H. DAVIES, dummy selector of 400 acres of C.P. land.

8th August, 1883—Cheque drawn by P. Hann on Wagga Wagga branch of Bank of New South Wales as deposit of 5s. per acre on 400 acres, £100.

7th March, 1884, Book 11, page 272. P. Hann to B. C. Garland.—“Mr. M. H. Davies has forwarded to me his consent to the increased area of his ground, and I now beg to enclose same to you.”

August, 1884—Building hut on Mr. Davies's C.P. (see Station ledger “N,” folio 219), £8 10s.

18th September, 1886, Book 16, page 167. P. Hann to H. H. Brown & Co.—“I enclose a C.P. notice 83-464, and if anything can be done with it, I can find Mr. M. H. Davies, and get the necessary document signed.”

#### No. 12 Dummy Selection.

J. HANSON, a drover, dummy selector of 120 acres of M.C.P. land.

The following particulars, compiled from original documents, will show how Mr. Hann evaded the provisions of the Crown Land Acts, viz. :—

19th September, 1883, Book 10, page 441. P. Hann to Cody, manager of Mimosa Station.—“I am going to take up some selections to-morrow, and will send you particulars.”

20th September, 1883, (See document 687). Cheque No. 071833, drawn by P. Hann on Wagga Wagga branch Bank of New South Wales, “for Jos. Hanson, M.C.P., £60, deposit of 10s. per acre.”

20th September, 1883, (See document 688). Cheque No. 071855, drawn by P. Hann on same bank. Balance-(of droving) £19 16s. 10d.

22nd September, 1883, Book 10, page 446. P. Hann to Cody.—“The Wagga paper will show you the four pieces of land taken up on Thursday—Mitchell, Hanson, and Behan. Mark them off on your map. It looks to me as if another 640 is wanted in North Scrubby, west of Behan's; but I hardly see how to do it yet.”

6th March, 1884, Book 11, page 265. P. Hann to Cody.—“Will just take in about half of the Mineral C.P. of 120 acres that I took for Hanson.”

#### No. 13 Dummy Selection.

W. O. MITCHELL, a dummy selector of 80 acres of Mineral C.P. land.

The following particulars, compiled from original documents, will show how this was arranged by P. Hann :—

19th September, 1883, Book 10, page 441. P. Hann to Cody, (See Hanson, No. 12 Dummy Selection. Extract same date).

20th September, 1883. (See document 694, cheque-butt No. 071854). Cheque drawn by P. Hann on Wagga Wagga branch Bank of New South Wales for C.P., Mimosa, being deposit of 10s. per acre on 80 acres of M.C.P., £40.

22nd September, 1883, Book 10, page 446. P. Hann to Cody, (See Hanson, No. 12 Dummy Selection. Extract same date).

#### No. 14. W. Drover's selection.

The following payments made by cheques drawn by P. Hann, on Wagga Wagga Branch, Bank New South Wales, viz. :—

16th March, 1886—Cheque-butt No. 675772 :—For purchase of lease of selection—£100.

24th September, 1886—Cheque-butt No. 075794 :—For first payment on account of selection—£50.

22nd November, 1886—Cheque-butt No. 075807 :—For Fitzhardinge and Coleman—Drover's agreement—£5 5s.

19th March, 1887—Cheque-butt No. 075847 :—For second payment on account selection—£50.

19th April, 1887—Cheque-butt No. 075851 :—For 900 acres (448½ and 451½)—£45.

2nd May, 1887—Cheque-butt No. 075855 :—On account ring-barking, declaration on his 320 acres—£16.

28th September, 1887—Cheque-butt No. 075880 :—For third payment on account selection—£50.

20th March, 1888—Cheque-butt No. 112115 :—For half-year's payment—£50.

23rd March, 1888—Cheque-butt No. 112116 :—Instalment on 1,220 acres C.P.—£61.

19th September, 1888—Cheque-butt No. 112164 :—For half-year's payments—£50.

16th February, 1889—Cheque-butt No. 112176 :—On account of purchase—£20.

20th March, 1889—Cheque-butt No. 112177 :—On account of purchase—£8.

25th March, 1889—Cheque-butt No. 112178 :—On account of purchase—£20.

25th March, 1889—Cheque-butt No. 112179 :—On account of purchase—£30.

4th July, 1889—Cheque-butt No. 112180 :—On account of purchase—£10.

23rd March, 1888—Document 721, P. Hann to Gore :—“I have seen Drover this morning, but as Mimosa matters are in an unsettled state and likely to be for some time, I could not do anything about the land, and we must only go on using it as if we intended keeping it.”

29th March, 1888.—Document 725, P. Hann to Gore :—“If there is work for Drover, and you can profitably employ him you can do so, but we cannot find special work for him.”

10th April, 1888.—Document 728, P. Hann to Gore :—“Drover thinks he has enough improvements on to pass, and that Milligan said as much. If this is right, then we shall have to do anything else required, but if the fencing we do has to make up the necessary value of his improvements for passing the land, then he has to allow us for doing it. He has to get the land passed for us.”

23rd August, 1888.—Document 755, P. Hann to Gore :—“Your suggestion may be a good one. I don't want to forfeit or lose what has been paid, and would like to carry the transaction through with them. You had better employ him in that way for beneficial and good improvements to his land.”

## ON ESTATE OF THE LATE S. M. SWIFT, OF PETERSHAM.

## No. 20.

G. Sandell.

Henry Adams, selection 75-S2—See Station Ledger, folio 276, selection under 1861 Act:—		£	s.	d.
5th August, 1875.—By deposit of 25 per cent. on 320 acres, at 20s. . . . .		80	0	0
27th " 1878.—Payment on — interest to 31st August . . . . .		4	11	5
19th September, 1878.—Deposit 25 per cent. on 331 acres A.C.P. . . . .		82	15	0
27th March, 1879.—Payment of interest on original 320 acres . . . . .		12	0	0
30th " 1880.— " " for 1880 on 320 acres . . . . .		15	0	0
14th October, 1880.—Deposit of 25 per cent. on 120 acres . . . . .		30	0	0
28th March, 1881.—Payment of interest for 1881 on 309 acres. . . . .		11	11	9
28th " 1882.— " " 1882 . . . . .		11	11	9
27th " 1883.— " " 1883 . . . . .		11	11	9
		£259 10 8		

16 Aug., 1899.

This selection was transferred (see Registrar-General's Book 490, No. 143, 28th April, 1892) by John McDonald to the A.M.L. and F. Co., Ltd.

Not included in probate valuation.

## No. 21.

W. Emmett—See Station Ledger, folio 684, boundary rider:—

30th November, 1884.—By wages, 6 weeks to date, £10.

31st May, 1885.—By 6 months wages to date, £10.

1st September, 1885.—By 3 months wages to date, £5.

1st December, 1885.—By 3 " " £5.

1st March, 1886.—By 3 " " £5.

1st June, 1886.—By 3 " " £5.

1st September, 1886.—By 3 " " £5.

1st December, 1886.—By 3 " " £5.

W. Emmett's 640 acres of C.P. selection, No. 83-112—An employee in receipt of wages of £20 per annum, taking up a selection of 640 acres.

This selection was transferred (see Registrar-General's Book 490, No. 143, 28th April, 1892) by John McDonald to the A.M.L. and F. Co., Ltd.

Not included in probate valuation.

## No. 22.

T. Warren—Selection 76-103 and 77-12, Station Ledger, folio 543, 7th March, 1883:—"To stamp duty cost of transferring C.P. cheque to Jones and Sons, S. C. Brown's costs, J. Warren's account (568 acres of C.P. land), £1,432 9s. 6d."

This selection was transferred (see Registrar-General's Book 490, No. 143) by John McDonald to the A.M.L. and F. Co., Ltd., 28th April, 1892.

Not included in probate valuation.

3. *Mr. McFarlane.*] Have you got these particulars since you were examined before the Committee on a previous occasion? Yes; the further accounts about the concealed assets and the under-valuation of the estate.

4. What are the concealed assets made up of? Under-valuation of the wool, which was omitted from the statement which Mr. Hann prepared for probate. The lands which were concealed in the application for probate, and a large quantity of cattle, sheep, and general property, which was not disclosed in the application for probate.

5. Do the accounts show that these were really the property of the late Mr. Swift? There is not the slightest doubt, in my mind, that the whole of the property that I referred to there as concealed assets were the assets of the estate.

6. Can you give any explanation how these were omitted;—would the executors have a knowledge of their existence? Mr. Hann must have had a full and complete knowledge of everyone of these items. Mr. Hann in his own letters said, "I am not going to put this wool into the probate at all." Prior to the testator's death he must have had a perfect knowledge of the land, because he makes a schedule of them, and he omits them in his probate account.

7. Have you the documents showing that? I have Mr. Hann's original letters, and also his press-copy letters. I have something like 5,000 odd letters from Mr. Hann which refer to the subject.

8. Does your statement show the amount of concealed assets? They total £190,000.

9. Is that including wool, land, and under-valuation? Yes; book debts, bills receivable, credit balances, which the executors put in their filed accounts as debit balances.

10. *Chairman.*] There is some evidence at pages 22 and 23 with reference to John McDonald;—I believe you have put in some evidence with reference to him? Yes.

11. When Mr. McDonald was before the Committee, we questioned him about his relations with Mr. Swift, and whether he was ever in Mr. Swift's employ, and whether Mr. Swift or himself, or a third person, put the money into the business. Mr. McDonald told us that he put the money into the business, and that he was a partner in this firm;—is there anything in the evidence, or have you any other evidence to offer with reference to the transactions of Mr. McDonald and Mr. Swift? I have, but at the present moment I have not fully prepared that portion. I am now preparing it. I have sufficient evidence to say to your Committee at the present moment that on the formation of a partnership, when Mungibundi Station was purchased, Mr. McDonald was never in a position to pay a single penny towards the partnership. I have sufficient evidence, after an examination of Mr. McDonald's banking accounts from the year 1870, to say that Mr. McDonald's banking account was always in debit, and that Mr. Swift, the testator, passed his cheque to his credit, and even the debit interest on Mr. McDonald's account was provided by Mr. Swift.

12. I suppose you have read Mr. McDonald's reply to all these allegations, namely, that it was a joint account, and that it was drawn on by them conjointly, and that the estate had a large overdraft at the Bank? Yes; I read the whole of his evidence. At the very time McDonald was supposed to enter into this partnership he borrowed from one of the intending partners £105. He gave to that intending partner, Mr. Spiller, a bill for £105. That was on the 13th February, 1874. At its maturity on the 18th May, his banking account was unable to meet it, and the testator provided the funds and took up that promissory-note of Mr. John McDonald's. Mr. Spiller, who held that promissory-note, endorsed it "without recourse," and handed that to Mr. Swift. I have the promissory-note now.

13. Was Mungie Bundic part of the estate? Yes.

14. Do you remember whether the Bank held a lien on it at the time of Swift's death? Yes; the Union Bank of Australia had.

15. To what amount? £55,000.

16.

- G. Sandell. 16. Was the estate ever released as far as the testator was concerned? There is a supposed partnership, I have seen a certified copy of the partnership in which Spiller, McDonald, and Swift were joint partners, but it does not state how much each partner placed there. There is an article in the partnership which states that in the event of the death of either of the partners the estate should be placed at auction. That was never done. The station was continued for some years. The Union Bank of Australia sold, but under what conditions I am unable to trace.
- 15 Aug., 1899. 17. Have you any idea as to how McDonald came to be the owner of Mungie Bundie? The transactions after the testator's death are very curious. It is transferred from one individual to another, and then re-transferred. At the present time Mr. McDonald is the reputed owner.
18. Do you think any good purpose would be served by calling Mr. McDonald? I think he should be called.
19. *Mr. McLean.*] You say that the station at present stands in the name of McDonald? Yes.
20. Can you give us information as to the party or parties from whom it was last transferred to McDonald? Yes; I have searched the whole of the Registrar-General's books, and I have all the particulars of the transfers from the time of Swift's death up to the present, but I have not got them with me.

TUESDAY, 22 AUGUST, 1899.

Present:—

MR. THOMAS, | MR. McFARLANE.  
W. M. HUGHES, ESQ., IN THE CHAIR.

George Sandell re-examined:—

- G. Sandell. 21. *Mr. McFarlane.*] In your former examination you mentioned various conditional purchases in the name of C. Donaldson, Potts, Wyndham, Jurd, Watts, Adams, Emmett, and Warren? Yes.
- 22 Aug., 1899. 22. In your report you say that these should be assets of the estate? Yes.
23. What evidence have you to show that they should be assets? I have the station ledger of Mungie-bundie regarding every one of these payments mentioned at page 16, amounting to £3,151 12s. 2d.
24. Does that prove that they were taken on behalf of the station? Mr. McDonald puts in his ledger account under the lands account these items as cash which had been paid away from the station funds to acquire these original selections.
25. How were these selections taken up in the first instance? Nos. 15 to 22 were taken up in the interests of the station, especially Donaldson's, at the instigation of Mr. McDonald.
26. Take the first one—Donaldson's;—have you anything to substantiate the statement that he was authorised to take that up on behalf of the station? If you refer to page 24 of the evidence, you will see that I there set out the whole of the particulars taken from the station ledger at that particular time.
27. What is there to show, on page 24, that the station advanced him the money? I have the original receipt of the 10th February, given by the Crown Lands Agent for the deposit of 5s. per acre, amounting to £160. That item is on page 25.
28. Is that debited to the lands account in the station ledger? Yes.
29. Have you anything to show what Donaldson was before he took up the selection? In the station ledger there is an account at folio 13, of Charles Donaldson, boundary rider. He was engaged on the station previous to taking up the selection. That account opens on 1st January, 1879.
30. Have you anything to show that he was authorised by McDonald, or by any other person in connection with the station, to take up this land? It was debited to the lands account, and not to Donaldson.
31. You have stated that Donaldson had a folio in the station ledger? Yes.
32. Does this payment of £160 appear in his folio in the station ledger? No.
33. Have you anything to show what happened after this selection was taken by Donaldson to bear out the construction that it was taken on behalf of the station? On the 13th August, 1885, Mr. Donaldson took up an additional conditional purchase of 1,905 acres 2 roods, and 2s. per acre deposit was paid, amounting to £190 11s. That also is debited to the lands account in the station ledger, and not to Donaldson. Furthermore, that additional conditional purchase was contested before the Land Board in October, 1885. It came before the Land Board for inquiry, and a man named Carrigan was the contestant.
34. On what ground was it contested? On the ground that the land was not taken up in the interests of Donaldson.
35. In other words, that he was a dummy? Yes.
36. Did Donaldson put in a defence? Yes; Donaldson's case was defended by Mr. T. G. Vynor, of Moree. He appeared in the case on behalf of Donaldson.
37. What was the result of that inquiry? The conditional purchase and additional conditional purchase were both upheld.
38. Did any of the owners of the station give evidence? Yes; Mr. John McDonald gave evidence. I have a certified copy of his statutory declaration, on 11th November, 1885.
39. Was he a witness on behalf of Donaldson? Yes.
40. What was the nature of his evidence? That Donaldson had never been engaged permanently on the station, that McDonald never had any interest in the conditional purchase or the additional conditional purchase for which Donaldson was then applying, and that it was not taken up in the interests of the station.
41. Notwithstanding that, you find that the exact amount necessary for taking up both portions was advanced by the station, charged to station account, and not debited to Donaldson? Yes; it was debited to the lands account, and all the annual instalments on the original conditional purchase were provided by station funds, and debited to lands account.
42. Have you anything else to show that the station had an interest in the land? Yes; I have the original bill of costs from Mr. Vynor. That bill of costs was made out against McDonald & Co., and was paid by Mr. McDonald. I have proof of all the cheques paid from the station to Mr. Vynor.
43. After this inquiry took place, and after the costs were settled, have you anything to show that Donaldson conveyed the selection after having carried out the conditions? He carried out the conditions, and transferred the additional conditional purchase and the conditional purchase to Mr. McDonald.

44. On the transfer to McDonald, what was the amount of consideration given for the transfer? There is nothing in the station's ledger further than a £50 bonus paid to Donaldson, and that is in the handwriting of Mr. McDonald.
45. Was that after the residence and conditions were complied with, immediately before the transfer? Yes. That was in August, 1885—that would be the five years.
46. After this transfer had taken place from Donaldson to McDonald, did McDonald continue to hold the selection? I have no proof of that.
47. Was the land transferred after Mr. Swift's death or before? After.
48. Then your contention is that, seeing that the station advanced all the money in connection with this selection held by Donaldson, Donaldson was merely a dummy, and that the land properly belonged to the station, and should have been included in the accounts filed in probate? Yes; but it was not.
49. With regard to the other selections mentioned in your report, and following the name of Donaldson, are they in the same position? Yes; they are all similar.
50. You mean to say that the whole of the selections, with the areas opposite the names in the report, were practically all dummy selections, taken on behalf of the station, and that the money for carrying out the improvements, and paying the deposit money, were advanced by the station, and not debited to the accounts of those persons engaged on the station? Yes.
51. Were all of these persons engaged on the station? Not all of them.
52. How many of them were? Donaldson was engaged on the station. I cannot trace whether Potts was engaged on the station. C. Wyndham was engaged on the station as a boundary rider. H. Watts was engaged as a general work on the station. D. Emmett was also engaged on the station as a boundary-rider. The others might have been engaged on the station.
53. Have you any documentary evidence of that? No.
54. Have you possession of the letter-books and documents in connection with Swift's estate? Yes; I have a great number of books and letters.
55. Have you any letters or copies of letters showing, in the first place, that it was desirable that this land should be taken up on behalf of the station? Yes; I have nearly 5,000 letters showing that the land was taken up as dummy selections.
56. Have you any at hand which you can read to the Committee relating to any of these selections? On the 22nd September, 1883, Book 10, page 448, Mr. Hann writes to Messrs. H. H. Brown & Co.:—
- I enclose particulars of five pieces of land taken in our interests on Mimosa, three of these being mineral conditional purchases and two conditional purchases under section 13. We do not expect to be able to fulfil these conditions all through, and prefer their running over the twelve months before survey, if it can be managed. We might have to take another 640 yet near, and west of, Behan's. I send these particular, as I thought you would like to mark them off, and to know they were in our interests.
57. Does that refer to any of the selections in the list you have read? Yes; Gore's No. 1 dummy selection.
58. After that letter did Gore take up the 640 acres? Yes; I think under the particulars given of No. 1 dummy you will get all the details, and how it was carried out.
59. Was it carried out similarly to Donaldson's case? Yes. When the testator died not one of these selections which had been taken up by Mr. Hann, and paid for from the station funds, was included in the probate.
60. Your contention is that, seeing and believing that these selections were taken up in the interest of the station, they really belonged to the station, and should have been included after Swift's death as assets in the estate? Yes.

G. Sandell.  
22 Aug., 1899.

TUESDAY, 5 SEPTEMBER, 1899.

Present:—

Mr. McLEAN,

Mr. THOMAS.

Mr. McFARLANE,

W. M. HUGHES, Esq., IN THE CHAIR.

William John Gore sworn and examined:—

61. *Chairman.*] What is your present address and occupation? I am employed on Wapwoolah Station.
62. Were you ever employed on the Mimosa West Station? Yes.
63. In what capacity? I went there as a Colonial-experience beginner, and eventually I was manager.
64. Were you bookkeeper at one time? Yes; storekeeper and bookkeeper.
65. How long altogether were you on the station? I think it was the beginning of 1881 that I went there, and, as nearly as I can remember, I left there in February, 1890.
66. Were you in the employ of the station in 1888? Yes.
67. Did you ever apply for a conditional purchase of 640 acres? Yes.
68. Where was that situated? On Mimosa West Holding.
69. What was the date of your application? I am not certain about the date; but I think it was some time in 1882. It might have been later.
70. Did you apply for it and obtain it? Yes.
71. Did you fulfil the conditions? Yes.
72. Eventually it became yours? Yes.
73. What was the amount of money which you paid for it? The deposit money was £160.
74. How was that paid? I cannot say for certain; but I think it was paid by cheque.
75. Did you tender it yourself? Yes.
76. Then, have you no recollection as to what form in which it was paid? As nearly as I can remember, it was a cheque.
77. By whom was the cheque signed? By Mr. Hann.
78. What bank was it on? The Bank of New South Wales.
79. Were all the transactions of the station carried on through that bank? Yes, as far as I know.
80. Were you not bookkeeper there? Yes.
81. Through what branch was the business done? The Wagga Wagga branch.
82. Did you have access to the whole of the books on the station? Yes—on Mimosa Station.

W. J. Gore.  
5 Sept., 1899.

- W. J. Gore.  
5 Sept., 1899.
83. Were you aware of Mr. Hann's plans and intentions;—did he make a confidant of you, so far as business transactions were concerned? Of course, during my time as overseer I knew a good deal, and saw some of the correspondence; but not all of it. But most things I used to see.
84. How did Mr. Hann come to sign this cheque for the deposit of 5s. per acre on 640 acres? You must let me give it in my own way: The cheque was given to an old man. He had the cheque, and he made application for this land in my name. I went down with this old man and applied for the land at the Lands Office. I do not know whether the cheque was signed P. Hann or Swift and Hann.
85. Did you actually tender the cheque? I know I was there, and no doubt I must have tendered it.
86. Do you recognise this cheque, No. 075836, on the Bank of New South Wales, Wagga Wagga, dated 3rd May, 1882? Yes; I know the writing and everything.
87. Is this signed Swift and Hann? Yes; that is the name of the firm.
88. Is it made out for W. Gore's C.P.? Yes.
89. *Mr. Thomas.*] Do I understand that the witness says that this is the actual cheque which was paid in on that occasion? To the best of my belief this is the cheque which was tendered on that occasion.
90. *Chairman.*] Did you make the improvements? I did not make any improvements.
91. Certain improvements have to be made under the Act; a hut of some sort has to be put up, fences, and some suitable provision for water;—were all those improvements made? Yes.
92. Were they made by you? No.
93. Did you pay for their being made? No.
94. Who made the improvements? Various improvements and a tank were made by a man named W. Sanderson.
95. The improvements are made, but not by you or by your agency? Yes.
96. Who paid the contractor? As far as I know the station did—I did not.
97. Were there any other selections, near you, taken up about the same time; for instance, by a man named Cody? Yes.
98. Who was he? The manager of the station.
99. Were you under him? Yes.
100. Did he take up a selection of 320 acres? Yes.
101. Did he take that up after you? Yes.
102. Did the same contractor make the improvements on Cody's selection? No; the only improvement I remember having been put up on his selection was a hut; there was no fencing.
103. Was it the same hut as was on yours? No.
104. Then do you remember two men named Yourell and Frayne? Yes. Yourell was a general hand on the station.
105. What was his wages? At first 15s. per week, afterwards £1. He was a rouscabout.
106. Was his selection contiguous to yours? No.
107. Was your selection a good piece of land, with a permanent water? No, not until a tank was put there.
108. Where was the permanent water on the run? There was only conserved water in tanks.
109. Who made the improvements on Yourell's, Frayne's, and Cody's selections? The only improvement I remember on Yourell's selection, and on Frayne's, was a hut on each.
110. Did Cody live in a hut? No, he lived on the homestead.
111. Who fulfilled the residence condition on Cody's selection? Nobody.
112. Was a man named Austin on the station? Yes.
113. Did he take up 400 acres? Yes.
114. Did he do so after you took up yours or before? A long time after.
115. Did he fulfil the conditions? Yes, as regards residence.
116. What were the improvements on Austin's selection? As far as I can remember a hut, a little fencing, a horse paddock, a stable, and that sort of thing, and a little well at the house.
117. What was Austin employed on at that time? Boundary-rider on the station.
118. Was he employed by the station to make the hut and fences on his selection? No.
119. Who made the improvements? I think a man named Thomas King put up his hut.
120. Did a station employee do it or a contractor? A contractor; but I am in doubt as to his name.
121. Who paid the contractor? As far as I know, the station did.
122. Have you any knowledge of the entries in the book? Yes; the entry would be in the book. But I do not remember putting it down in the book.
123. On what date did you transfer your selection to Hann? I cannot remember; but I think it was about 1888 or 1889.
124. Is this an agreement which was made by you on the 21st July, 1883? Yes.
125. What was the consideration for that transfer? They were to get a ninety-nine years' lease of the selection, as far as I can remember. There was a certain piece supposed to be reserved for my own use, consisting of 40 or 50 acres.
126. What consideration induced you to make that agreement? I was to receive a rent of £10 per year if I gave them a lease.
127. How long did that arrangement hold? I should say a little over five years.
128. What happened then? I was sent for to transfer it to the Bank.
129. What inducement was offered then? None. Mr. Hann told me that the Bank wanted it, and I said, "All right, I would sign it."
130. Did the Bank give you anything for it? No.
131. Did Hann pay you anything? Afterwards Hann gave me £50.
132. But, of course, the selection was worth very much more than that? Yes.
133. When he induced you to part with it for so small a sum, were you indebted to the station? No; I never looked upon the selection as mine; I went into it when I was a boy, and I did not know anything better, and I was glad to get rid of it.
134. What was your age then? A little over 16. I was never on a station before, and when I went there I did it not knowing hardly what I was doing.
135. Can you charge your memory with the receipt of a note from Hann, on the 23rd August, 1883, to this effect. "As you have transferred your 640 acres, with all your rights, I now enclose you a cheque for £50, as agreed upon?" I do not remember the wording of the letter, but I know I got the money.

136. It was an agreement between Mr. Hann and yourself that, upon fulfilling the conditions, and the selection being transferred to you by the Crown, you should transfer it to the station, and you were to get £50? When I signed the lease he told me that I would get £10 a year, at the end of five years, if I fulfilled the conditions. W. J. Gore.  
5 Sept., 1899.
137. It was really not a rent, but a payment of £50 at the rate of £10 per year? Yes.
138. Was it a verbal or written agreement alluded to here when he says, "You have transferred your 640 acres and all right to it, and I now enclose you a cheque for £50";—did he write out an agreement or did he say, "Well, if you take up this selection for us we will give you £50"? There was nothing like that said at first. They asked me to take up this land, and put in an application. They asked me how old I was, and I told them.
139. Do you know this letter-book which I show you, containing station letters from Hann to Cody? I recognise Mr. Hann's writing at page 184.
140. This is a letter from Mr. Hann to Mr. Cody, Mimosa West, in which he says that there is a danger of selectors going on the station, and that matters must be pushed as well as possible; that the manager should extend and clear the cultivation paddock of 50 acres, but to do it all on the outside in the middle paddock; that he had decided to take up 640 acres in the name of Gore in a certain paddock? Yes; I recognise that in Mr. Hann's writing.
141. That is dated 3rd May, 1882? Yes.
142. Then, I see you took up the selection on that very day? I do not remember the date.
143. Were the whole of these proceedings done by you or through your agency, or were the preliminary things done without your knowledge;—for instance, did you make the application yourself? No; I had nothing whatever to do with it beyond the fact that I went to the Lands Office, and I suppose that was the cheque that I deposited, together with the application form. I was in the company of an old clerk of the firm.
144. So that, as a matter of fact, the preliminary procedure was not done by you, or with your knowledge? I suppose I knew what I was doing when I went down to the Lands Office to put in the application.
145. Did you take up only one selection? Yes.
146. Did you also take up a mineral conditional purchase of 96 acres? Yes.
147. Was the conditional purchase taken up by you at the request of Mr. Hann? Yes.
148. Do you recognise this as Mr. Hann's writing, and is the reference there to you particularly with regard the 640 acres taken up in your name? Yes.
149. The fencing and other improvements were not made by you? They were not made by me, but I repaired the fence at one time when it was burnt down.
150. Did you reside there? Yes.
151. Did you make the improvements? No; I did not pay for them; I believe the station did.
152. Were the contractors employed for this particular work, or for other work? They were engaged to do general contract work. They did the work on my selection amongst others.
153. In 1883 an agreement for lease for ninety-nine years to Hann was made out, and you signed it? Yes.
154. The consideration was a yearly rent of £10? Yes.
155. You never received this yearly rent of £10? No.
156. But at the end of the time, when you transferred the selection to the Bank, you got £50? Yes; but not on the day that I transferred the selection; it was some time afterwards.
157. You did not get £10 per year as rent when it fell due? No.
158. Did you get anything further in the way of money consideration from anybody? No.
159. Was there no cheque drawn, signed "P. Hann," for £20? Yes; I got a cheque for £20.
160. What was that ostensibly for? As near as I can remember I was applying for a rise in my salary, and at the time they gave me a rise they gave me that £20.
161. Was that a few months after you transferred the selection? Yes; I find that is so; but I thought it was before.
162. You did not get the cheque for £50 until the selection was transferred? No.
163. And you got the £20 cheque afterwards? Yes.
164. As a matter of fact, you did not receive the consideration named in the lease of £10 per year? Not a year.
165. What you received was £50 for having transferred to the Bank, or some other person? Yes.
166. You sold out your right, title, and interest for £50? You might put it that way. I understood I was to get £50 at the expiration of five years. That is £10 per year.
167. But you understood, at the same time, that the selection was never really yours? I thoroughly understood that.
168. You were really only obliging the station by taking it up? Yes.
169. What was the particular reason why all those selections were taken up? To prevent others from coming in on the run.
170. Was the station involved at all? I do not know.
171. Read the evidence given by Mr. Sandell, with reference to dummy selection No. 1, at pages 16 and 17, and see if there is anything wrong about that? I do not notice anything wrong there.
172. What was your salary during the years from 1881 to 1884? I first started with £40 per year.
173. What would it be in 1884? I think I got £70 per year then.
174. Is this your handwriting in this book? Yes.
175. What is it? It is an account of the wages paid to the different men for work done.
176. What was H. Austin? A boundary-rider.
177. Were Yourall, Orr, Purser, Halloran, boundary-riders? Yes.
178. Did some correspondence pass between you and Mr. Gardiner, the manager of the Bank of New South Wales at Wagga Wagga, with reference to Austin? Yes.
179. Do you admit that Austin's application was not *bona-fide*? I should not call it a *bona-fide* application.
180. What had Mr. Gardiner to do with it at that time? He was the manager of the local branch of the Bank of New South Wales.
181. Were you, then, really acting agent for the Bank? I was manager for the Bank then.
182. At the time you were manager for the Bank, were the conditions of Austin's selections completed? No; but during my term of office they were completed.

- W. J. Gore. 183. Do you recognise the writing in this letter which I show you? Yes; that is Mr. Gardiner's writing.  
 5 Sept., 1899. 184. In his letter of 2nd February, 1889, he said, "When will Austin be coming in to make his declaration, as the time is up on the 24th"; then again on the 20th he says, "I have yours of the 17th; in regard to Austin, I do not think you have any occasion to retain him any longer";—did you discharge him then? Yes; he left the station then.  
 185. That is to say, between the 2nd February and the 20th February, he went in to make his declaration? I do not know the date, but I know he left the station to do so.  
 186. What bonus was he to get? I understood he was to get £50.  
 187. You knew at this particular time, of course, that a certificate was to be issued to a man who had no *bona-fide* intention of taking up the land? He had the land then.  
 188. It appears from the correspondence that he was in the employ of the Bank at the time that his declaration was made, and when the certificate was about to be issued? Yes.  
 189. Is this also an extract from the correspondence: "With regard to Austin, you may tell him he will get his £50 as soon as the certificate is obtained." In another letter he says, "He must have no fear as to his getting his bonus"? Yes.  
 190. Have you any idea as to how the issue of the certificate was accelerated; Gardiner says, "I am pressing for the issue of the certificates";—do you know how he did that? No.  
 191. On the 4th April Gardiner said, "I have to-day received the certificate for Austin's C.P., so you can pay him the £50, and take the receipt, which I enclose." Then, later on, he says, "I have yours of the 9th, enclosing Austin's receipt, for which I thank you"? Yes, that is correct.  
 192. The land was transferred on the 14th February, 1889, to the Bank of New South Wales for a consideration;—what was the consideration for the transfer of Austin's land to the Bank? I suppose there was no consideration at all.  
 193. Are you aware that there is a supposed consideration of £642 10s.? No.  
 194. That consideration, of course, does not exist? No.  
 195. That is not a *bona-fide* transaction? No.  
 196. You say he was a boundary rider, and did not take up the land *bona-fides*, and that he never intended to do so; that he was an employee of the Bank when the conditions were fulfilled, and up to that date when you paid him the £50? Yes.  
 197. And no consideration was paid by the Bank to Austin for the transfer of the land? No actual consideration.  
 198. But, on the other hand, there was a consideration paid of £50, which is mentioned in the letter of 20th February, 1889, as a bonus? Yes.  
 199. Do you know anything of A. R. Orr? Yes, he was a boundary rider.  
 200. Did he take up 320 acres? Yes; but I am not quite sure about the acreage.  
 201. Was that of the same character as the rest of them? Yes, exactly the same.  
 202. Were any improvements made? A hut and fencing.  
 203. Are you quite sure that it was not the same hut that was put on all these selections? Yes; it was a different hut.  
 204. Did Orr complete the transaction during your term on the station? I think so.  
 205. Who built the hut on Orr's C.P.? A contractor—a carpenter.  
 206. Do you remember these entries in the books: "Building huts on Orr's, Cody's, Frayne's, and Behan's selections—£8, £9 5s., and £10"? Yes.  
 207. Is this Mr. Hann's writing in this letter-book? Yes.  
 208. Here is a letter from Hann to Cody, dated 8th April, 1884: "If required, how will Orr do for taking up a piece of land?"—I suppose the reply to that was favourable. Further on he says: "I have detained Orr for the purpose of taking up 320 acres, and for helping George remove stable things, &c."—who would George be? He would be a groom in Wagga Wagga.  
 209. On 2nd April, 1884, this was written by Orr: "In consideration of £80 advanced by P. Hann to A. R. Orr, and also in consideration of your making the payments, and erecting the improvements, I do hereby charge the land comprised in so-and-so, and will execute a mortgage to P. Hann if required";—is that Orr's signature? Yes.  
 210. Whose writing is that on the document? Mr. R. B. Wood, of Wagga, and there is also Orr's signature.  
 211. Have you any reason to suppose that this selection was taken up under circumstances different to yours? No.  
 212. Was it done to keep *bona-fide* selectors off the run? Yes.  
 213. Do you recognise these letters from Mr. Gardiner to you? Yes.  
 214. Did you send a letter to Gardiner by Orr? I daresay I did.  
 215. Gardiner's letter is as follows:—"9th May, 1889.—I have yours of the 7th instant, *per* A. R. Orr, who has made his declaration on, and transferred conditional purchase. He tells me that there are some items owing to him in connection with improvements on the conditional purchase, amounting to £5 11s.; and I have told him that if they were necessary, and had your sanction, of course he would be paid the amount. It will be for you to say if he is entitled to it. No doubt, for various reasons, we should not cavil about it. I have told him that as soon as the certificate is issued the balance coming to him on the conditional purchase, £50, will be paid";—you replied to that, telling him, I suppose, that the £5 11s. mentioned should be paid? I cannot remember.  
 216. On the 15th May, 1889, you received a letter from Gardiner to the effect that you should pay Orr £5 11s.—improvements laid out by him on the selection—taking his receipt;—did you pay him? I daresay I did; but I do not remember it.  
 217. On the 3rd July, 1889, Gardiner wrote: "I have now the pleasure to advise that the certificate of A. R. Orr's conditional purchase has come to hand to-day; and that, therefore, you can now pay him the £50 coming to him on his signing the accompanying receipt, which be good enough to forward here"? I do not actually remember the transaction; but there is no doubt I did do it.  
 218. On the 16th July you say: "I have yours of the 13th instant, enclosing Orr's receipt, for which I thank you";—was there any consideration paid by the Bank to Orr for that transaction? I was their employee when I gave him that £50; there was no other consideration that I am aware of. The £50 was a bonus in accordance with the agreement.  
 219. The agreement was well understood by the men on the station—if they were suitable, and the Bank required them to take up selections, they would take them up? Yes.

220. Did the Bank or the station ever break their word, and not pay the bonus agreed upon? In some cases the conditions were not fulfilled.
221. But, whenever the conditions were fulfilled, did they pay? Yes; as far as I remember. Anything during my time was paid.
222. Read through the evidence, at page 18, by Mr. Sandell, with reference to dummy selections Nos. 2 and 3, and see if there is anything wrong there? I do not see anything wrong in that. There are lots of things there with regard to dates which I am not sure about.
223. But, as far as you remember, you see nothing inaccurate? No.
224. You see something there about Purser;—what was he? A boundary rider.
225. Look through the evidence given by Mr. Sandell, at page 18, about that case, and see if there is anything inaccurate? I do not see anything wrong with that.
226. What sort of land was this that was taken up? It was yellow box, forest, and pine country.
227. There were fourteen selections taken up on the Mimosa West Station—some were forfeited, some refunded, and so on;—would they comprise the pick of the land? Yes; the pick of the place, or in positions where they would stop other selectors from coming in. They were taken to block selection.
228. Were all these transactions carried on without the knowledge of the neighbouring squatters? They were all doing the same, I think.
229. *Mr. McFarlane.*] With regard to this selection of yours, do you state that at the time you took it up, you knew it was for the station, and not for yourself? At the time I was taking it up I did not actually know what I was doing.
230. Did you understand that it was not for yourself? I was asked if I would take up this land; I said yes, and I was accompanied by this old clerk.
231. Who was the first to ask you about taking up the land? Mr. Hann, as far as I can remember.
232. Previous to his asking you, had you any idea of taking up the land on your own account? No; not the slightest.
233. Did Mr. Hann provide the money for the deposit of 5s. per acre? Yes.
234. Who provided the money for the annual payments? Presumably Mr. Hann.
235. Did Mr. Hann pay all the money necessary for the deposit, the annual payments, and the necessary improvements? Yes.
236. When handing you this cheque for £160, and asking you to take up this land, did he say anything to the effect that it was to be taken up for the station, or was any mention made of a transfer when the conditions were fulfilled? No; as near as I can remember, he asked me to go with this old man and put in an application for the land.
237. Was nothing at all said about a transfer after the conditions were fulfilled, or that the land was to be given back to them at some future period? Not that I remember.
238. Did you look upon this £160 as a loan to you? No.
239. Were you engaged on the station at this particular period when the selection was taken up and receiving a salary? Yes.
240. Had you also access to the books? Yes.
241. Would you have a folio in the station book? Yes.
242. Were the moneys that were paid for deposit and annual instalments, and carrying out improvements, charged to your account in the ledger? No.
243. After the conditions were fulfilled, was a transfer made by you in the first instance to the Bank of New South Wales, the consideration money being £50, paid in the shape of a bonus? Yes.
244. And from that date, you had nothing to do with this selection? Yes.
245. Were you satisfied with the bonus and the salary which you received while on the station? Yes.
246. Did you make any demur about the payment being too small? No.
247. Did you look upon the selection all through as not belonging to you, but as having been taken up in the interests of the station in the same way as a number of other selections which have been mentioned were taken up? Yes.
248. *Mr. Thomas.*] Can you say if all the selections were included in the valuation filed when application was made for probate in Mr. Swift's will. If you will look at Mr. Sandell's evidence, at page 33, you will see the selections which were mentioned in the valuation of Mimosa;—is your selection included in that valuation? No; I do not see my selection in it. I do not see any selections in it.
249. To the best of your belief, this selection, taken up in your name, was part and parcel of the estate? Yes.
250. During all the years that this selection was nominally in your name were you in the employ of Hann and Swift? Yes.
251. *Chairman.*] Do you recognise this letter as being in Mr. Hann's writing? Yes.
252. Did you know Purser? Yes.
253. Was he employed on the station prior to his taking up this selection? No, not that I remember.
254. Was he employed to take it up? I believe he had been on the roads for the firm before that, but I never knew him until he came here.
255. As a matter of fact, he was employed to take up a selection in the north-west corner? Yes.
256. Were you in the employ of the station or the Bank when Purser died? When he died I was overseer.
257. Did Purser die on the run? No; I took him from there to the hospital, where he died.
258. Was he then in the employ of the station? Yes.
259. In addition to taking up 640 acres C.P., he took up an A.C.P.; he made a will, and probate was granted to P. Hann, to whom all the property was given; the will says: "I give and devise 640 acres of land conditionally purchased by me at Wagga Wagga Crown Lands Office, together with improvements, and the land adjoining, &c., unto the said Phineas Hann, for his own absolute use and benefit for ever. I give all the residue of my property unto the said Phineas Hann in trust to convert into money"; that was signed in the presence of R. B. Wood and W. P. Thorogood;—who were they? Wood, I think, called himself an accountant, and Thorogood at one time was employed as a clerk in Mr. Hann's office.
260. You had correspondence with Hann in reference to Purser's land;—do you remember an inquiry held in the Land Court into the *bona fides* of Purser's and Austin's C.P.s, which came off on the 28th March, 1888? I cannot remember.

- W. J. Gore. 261. Hann wrote you a letter on 19th March, 1888, as follows: "In thinking over Purser's land, you are quite right to get the scrubbing squared off for measurement. I see that there is an inquiry into Purser's and Austin's land comes on at the Lands Office here on the 28th";—do you recollect that letter? No.
- 5 Sept., 1899. 262. Another document you received from Hann was: "Send me in your estimate of cost of improvements on Purser's original 640 acres. I thought with Purser's cultivation, cottage, scrubbing, &c., that the 10s. per acre was on it";—do you remember that? No.
263. Here is a letter from Mr. Hann to you: "I see there is an inquiry into Purser's and Austin's land. Comes off here on 28th. Send me all Purser's letters and papers";—do you remember that? I do not, but I know that is a letter which I received.
264. Do you remember who took up this selection of Purser's;—did Hann make the application, or Purser? I think there was some correspondence between Mr. Cody and Mr. Hann in reference to that matter.
265. He said, for instance, in book 11, page 230:—"If there is any danger of losing the ground there this week you fill in the description on a form, and Purser will get the money from Mr. Gardiner, of the Bank of New South Wales, and take up the land." That is to say, I suppose, you understood if there was any danger of any *bona-fide* men coming in? Yes.
266. At page 240 of the letter-book he says:—"I could not get in time, on Thursday, to take up the selection for Purser; but must do it next Thursday"? Yes.
267. Then he goes on to say:—"To-day I took up 640 for Purser in the corner: but not exactly described as you give it." According to that he must have been actually taking it up for Purser? Yes, making the application.
268. He did it on 6th March, and on 25th March an agreement was signed by Purser, as follows:—"In consideration of £160 advanced, and in consideration of P. Hann making the payments, and erecting the improvements, &c., I hereby charge the land comprised in the agreement, &c., and if called upon will execute a mortgage, &c. Signed, William Purser; witness, R. B. Wood." Then here is a cheque drawn on the Bank of New South Wales for a deposit on 640 acres at 5s. an acre;—what improvements were made on Purser's selection? A weatherboard cottage, fencing, and a tank.
269. Hann writes to you on 20th July, 1888:—"Purser's land, 640—what would be the best improvement to put on for the 4s. per acre required—clearing or what; do you want yards there? The five years will be up next year"? I suggested putting down a tank, as far as I remember.
270. Who made those improvements? A contractor.
271. At page 16 of the evidence you will see a summary there of the different selections taken up on Mimosa West Station;—do you know all those selections? Yes; but I did not know anything in connection with the selection taken up by D. Drover.
272. You recognise them all with the exception of the last one—that is Drover's? Yes; and I knew that man and the selection, but I did not know anything in connection with it. As far as I knew, he was a *bona-fide* selector.
273. Were you on the station when probate was applied for under the will of Mr. Swift? I think so.
274. Were you there from 1881 to 1884? Yes.
275. What were you doing? I went there as a Colonial-experience hand. After three years I used to keep the station books.
276. Were you fairly conversant with the transactions of the estate? Yes, as far as Mimosa West was concerned.
277. Do you know whether those selections were set down as assets in the estate? That I cannot say.
278. Was anything said by Mr. Hann or by Mr. Cody, or any other person, which would lead you to believe that they were included or were not? I never heard anything at all said about them.
279. How old were you then? At Mr. Swift's death, about 19.
280. Do you remember anyone valuing the station or inspecting it for valuation? No.
281. How many sheep were on it on an average during say three or four years before and after 1884? I cannot say.
282. How many sheep did they shear each year? I cannot say without referring to a book. They were using it as a dealing station—sometimes they might shear 30,000, and at other times not more than 10,000 or 12,000. I believe 30,000 were shorn there at one time.
283. Do you remember anyone going to the station to inspect it in order to value it for probate? No.
284. Would you recollect if anybody had? I do not remember anyone coming after Mr. Swift's death.
285. How far is Mimosa West from the town? About 50 miles from Wagga—it is off the main road.
286. Would a visit by a stranger be a rare thing? I would know if anybody came there.
287. He could not do it in a day—he would have to be there for week? Yes.
288. Were you there all the time? I might have been away on a short trip on the roads, but just after Mr. Swift's death I do not think I was away.
289. Were you away on any trip? Only for a short time.
290. When you came back, would you have heard if anyone had been there? Yes.
291. To the best of your knowledge and belief, did anyone inspect it? No; not as far as I remember.

WEDNESDAY, 6 SEPTEMBER, 1899.

Present:—

MR. McLEAN,

MR. THOMAS.

MR. McFARLANE,

W. M. HUGHES, ESQ., IN THE CHAIR.

Mr. Simpson, of Minter, Simpson, & Co., appeared for Mr. John McDonald.

William John Gore recalled and further examined:—

W. J. Gore. 292. *Chairman.*] Do you wish to add anything to your evidence of yesterday? No.

6 Sept., 1899. 293. Is there anything that you desire to supplement or correct in reference to your evidence? Not that I know of.

294. Have you any letters to submit in reference to any of the transactions upon which you were examined yesterday, or in reference to any transactions which bear upon those transactions? I have letters. W. J. Gore.  
6 Sept., 1899.
295. Have you them with you? No.
296. What is the nature of those letters? Simply business correspondence between the inspector of the Bank and myself as manager.
297. Are they in reference to those C.P. transactions? Some of them might have a bearing on that.
298. Would you have any objection to forward them to the Committee? They are in the possession of my parents in Melbourne.
299. Could they be forwarded here, and will you do so? Yes; I will give them to the Committee.
300. Will you forward them to the Committee? Yes; I will have them forwarded; but I cannot say when, because I have to write to my people in Melbourne, and get them forwarded.
301. Will you use all reasonable despatch to get them here? Yes.

John McDonald sworn and examined:—

302. *Mr. McFarlane.*] What is your occupation? Grazier, living on Mungie Bundie Station, near Moree. J. McDonald.  
6 Sept., 1899.
303. Did you give evidence in December, 1897, upon this inquiry? Yes.
304. I understand you have a good knowledge of the working and the particulars in connection with the estate of the late Mr. Swift? Yes, as far as my interest in him was concerned.
305. Have you a good general knowledge? I have a general knowledge of his transactions outside.
306. I mean, generally speaking? Yes, a good knowledge.
307. Were you interested in that estate? Yes.
308. The Committee desire particulars respecting certain details as to what took place in the estate since you gave evidence before. I understand you had access to the books and accounts of this estate? As far as my own accounts with the interest he held in the business in which he and I were together. Those were the only books I had any access to.
309. Used you to make entries in some of those books? Yes.
310. I understand you had control of the books concerning the portion of the estate in which you were interested? Yes; certainly; they were my own books.
311. Were they under your charge? Yes.
312. There is a book called the station-ledger—do you know it by that name? Yes.
313. Is that the book now produced? Yes.
314. I believe that is a book called the station-ledger? I do not know the index; it is in handwriting that I am not acquainted with.
315. Is that the book? That is one of the books relative to the property.
316. Will you turn to folio 739 in that book? Yes.
317. Is that in your handwriting? It is.
318. Now turn to folio 13? Yes.
319. Whose account is that? Charles Donaldson.
320. Do you know Charles Donaldson? Yes.
321. What was he? A horse-driver.
322. Was he employed in connection with the stations? Yes.
323. When was Charles Donaldson first employed on the station? I cannot say.
324. About what time? This book shows in 1879.
325. Was he then engaged on the station up to about that period? This shows that he was engaged on 1st January, 1879. But it has been transferred from a previous ledger to this account.
326. Was he, from your own knowledge, apart from the books? I cannot tell you, the man was about there before ever I was there.
327. But from the time when you first knew him? Certainly, some years before that. This particular account I am now reading as to dates is not in my handwriting, the other was.
328. Is that account correct;—is it correct to say that Donaldson was engaged on the station in 1879? To the best of my belief he was engaged in 1879 at a wage.
329. When were his services discontinued as an employee on the station? I cannot tell you.
- Mr. Simpson:* I object.
330. *Mr. McFarlane.*] I understand that free selections were taken on this station of Mungie Bundie in 1881—one, I see, was taken by Charles Donaldson; I understand he took up a free selection of 640 acres;—are you aware of that fact? I am aware he took up a selection.
331. Of 640 acres? What it is I cannot say.
332. Can you say anything about the date? I cannot.
333. Does not the ledger say? The ledger says nothing except about his employment.
334. That account of Donaldson's would be under your supervision at the time he was engaged on this station; any money that would be advanced to him would be charged to his account in his ledger folio, would it not? Not as a hired servant.
335. Would not any moneys that would be advanced to him be charged to his account; he has a ledger folio in the station-ledger? Yes; I have just looked at it.
336. In the debits and credits there, in the event of money being paid to him, would not that be charged to his account by the station? Yes; I see here he has credit and debit.
337. My question is that in the event of money being paid to him, would not that be charged to his account? Evidently it must be, to keep an account.
338. Turn to ledger folio 347;—is not that account called the Lands Account in connection with the station? Yes.
339. In 1881 Charles Donaldson took up a free selection of 640 acres on the station;—are you aware of that fact? I am aware that he took up a selection; but on what date I cannot tell you.
340. Are you aware that there was an amount of £160 paid by the station to Charles Donaldson at that particular period? I see no entry of that nature here. I see an entry here mutilated; I do not know by whom.
341. Are you aware of any cheque being made out for £160 about that period, and paid to Mr. Donaldson? Yes; there is an entry here for such. 342.

J. McDonald. 342. From your own knowledge, apart from that account, or refreshing your memory by looking at that folio, do you remember £160 being paid to Charles Donaldson? I see it has been loaned to Charles Donaldson.

6 Sept., 1899.

343. In the event of a loan being made to Donaldson, would not that be charged to him in his folio? It should be.

344. Can you understand why it has not been? —

*Mr. Simpson:* I object.

Charles Donaldson called in, sworn, and examined:—

C. Donaldson. 345. *Mr. McFarlane.*] What is your occupation? Boundary-rider at present.

6 Sept., 1899.

346. Where do you reside? At Mungie Bundie Station.

347. Were you engaged some years ago at Mungie Bundie Station;—when were you first engaged on that station? What do you call engaged? I worked piecework on it many years ago.

348. When did you first commence to work on wages? A very short time; but I cannot say exactly.

349. What was the nature of your engagement first? Without answering these questions, and no disrespect to the Committee, I have been advised by my solicitor to decline answering questions without counsel's advice.

*Mr. Simpson:* You can answer that, Donaldson.

*Chairman:* The Committee will not allow any advice by Mr. Simpson, and whatever evidence you give you will do so because you are asked, and not merely because Mr. Simpson tells you.

350. *Mr. McFarlane.*] I asked the witness what was the nature of his employment on Mungie Bundie Station—under contract or by the week—which? I am asking the nature of it—not whether it was weekly or otherwise;—what was the nature of the employment? It would be contract work.

351. What kind of contract work? I was pressing wool.

352. Were you ever a boundary-rider? I was, but not at that time.

353. Or a drover? No.

354. Were you a boundary-rider in 1881? No.

355. Were you in 1879? No; I was at contract work at that time.

356. If Mr. McDonald said you were a boundary rider in 1879;—would that be untrue? I cannot recollect in 1879. I was working there doing piece-work, contract work. I went there then a little while after I had been contracting. I had been contracting back and forward, not continually. I worked at other places. I came back, and was boundary riding for a while.

357. How long were you boundary riding? As near as I can tell now, it would be some six months or so at that time. I cannot say exactly.

358. Were you not getting a fixed rate of wages per year? At that time, yes.

359. How long were you getting an annual rate of wage? For the time I served.

360. Were you a free selector on this particular station at one time? Afterwards.

361. What do you mean by afterwards? After I had been contracting on that station, and after I had been boundary riding a while.

362. You ceased contracting after you took your free selection? I did not cease contracting. I contracted sometimes; but I had none for some time after.

363. Is it not a fact that you were engaged at £1 per week on Mungie Bundie Station from January, 1879, and, I think, previous to that, until some time in 1885? That was the wages I got as boundary rider.

364. I am asking you about that period—from January, 1879, until 1885,—were you not getting wages at the rate of £1 per week? I do not think I was all the time.

365. Surely you know—you do not mean to say that you forget what was paid to you for six years? But during those six years I was working my team at times.

366. I am not asking you that;—were you not getting a regular rate of wage from January, 1879, until 1885? Not continually.

367. Concerning this free selection of 640 acres, do you remember on what date you took up that selection—the year will do? I cannot tell the date; but I think somewhere about 1881.

368. What was the area? 640 acres.

369. Was it situate on Mungie Bundie Station? Yes.

370. Was the deposit paid—£160? Yes; something like that.

371. Had you any conversation with anybody previous to taking up this land? No.

372. You made the application in your own name? Yes.

373. Did you do it of your own free will? Yes.

374. Did you make a statement that the free selection would be your property? Yes.

375. £160 was the deposit paid? Yes.

376. Was that your own money? My own money.

*Mr. Simpson:* I object.

377. *Mr. McFarlane.*] Was this £160 the deposit on the free selection of 640 acres taken up with your own money? —

*Mr. Simpson.*] Do not answer that Donaldson? I object to that question.

378–9. *Chairman.*] You must answer on your own responsibility, Mr. Donaldson. If you refuse it is entirely your own responsibility. Mr. Simpson is not appearing before this Committee with the leave of the House on your behalf. He has no official position, and if you take the responsibility of refusing to answer the question, because Mr. Simpson advises you to do so, then I am here to say that it may be a serious thing. If you refuse to answer any more questions we shall refer the matter to the Speaker. I allow the question.

380. *Mr. McFarlane.*] I repeat the question whether the money paid as a deposit for this free selection of 640 acres was your own money? It was my own money.

381. Do you remember getting an advance from the Mungie Bundie Station of £160 in the shape of a loan in 1881 on the very day that this free selection was taken up? I cannot say that I recollect getting that amount about that time.

382. Do you remember getting a loan of £160 about that period? I cannot recollect about that period.

383. Are you prepared to swear that you did not get a sum of £160 from the Mungie Bundie Station as a loan? At that time?

C. Donaldson,  
6 Sept., 1899.

384. Yes? I do not know; I cannot say at that time.
385. Do you remember at any time getting the sum of £160? Well, I cannot recollect the amounts that I have had at different times. I cannot recollect what they amount to.
386. Were you accustomed to getting loans? I have got loans.
387. At about what time did you get those loans? It was after that time.
388. Was it in 1881 or 1885—surely you can tell about the year? I think about 1885 I got some.
389. You do not remember 1881? No.
390. So that if a statement was made that you got a loan in 1881, and if the station books show that loan, it would not be correct? I do not recollect at that time.
391. Are there not annual instalments to be paid on a selection of 640 acres of £32 per year, after three years, and did you pay those annual instalments? Yes.
392. Can you remember when they were paid, or where they were paid? I think it was some time about the beginning of the year, about February, that they used to be paid. I cannot say exactly—February or March.
393. Were those payments made by cheque? No.
394. Had you a banking account? I had.
395. In what bank was your account? Formerly I had it in the Joint Stock Bank, and then I went into the Bank of New South Wales. I think the Bank of Australasia was the first bank.
396. Surely you would remember the name of the bank? I think the Bank of Australasia was the first that came to the town.
397. When was that? Somewhere about 1878 or 1879.
398. That is about the period when you were first engaged on Mungie Bundie Station? Somewhere about that time?
399. How long did you continue in that bank? Until it closed. It shifted to Narrabri, and I changed into the Bank of New South Wales.
400. What is about the date? I cannot say. These things have gone out of my head, and my recollection is not so bright. No man at my age is in a position to recollect these little circumstances.
401. Who fulfilled the conditions on this free selection? I did.
402. I suppose improvements were necessary to fulfil the conditions of the Act? Yes.
403. Do you say that you did all this work yourself? Of course not; I could not do it myself; I had it done.
404. Did you pay for getting it done? Yes; I could not do it myself.
405. Had you men engaged on that free selection to assist in carrying out the improvements? At different times I had; sometimes none.
406. With regard to fencing—was that let by contract? By contract.
407. Who were the contractors? I had two or three. I let it. There were four or five out on it. Some did 2 miles, some did 3 miles, and so on.
408. Are you aware of the fact that those contractors who did this fencing were paid by the station-owners? No, I am not aware of that.
409. You say that you paid for those yourself? Yes.
410. It would be untrue to say that the station paid for them—I mean the contractors who carried out the fencing? Yes; I mean to say I paid my own cheques for them.
411. What banking account would that be in? The Bank of New South Wales, Moree.
412. Are you prepared to prove that you paid these contractors by your own cheque? By cheque.
413. Not by your own cheque? My own cheque.
414. And the annual instalments in the same way? They do not take cheques. You have to take money to the Lands Office when paying annual instalments.
415. Are you aware that those annual instalments are charged to the station account in their lodger? I am not aware of it, because the first one that I had I transferred it to another man to get money.
416. I suppose you were not on the best of terms with the station-owners? I do not know that I was on bad terms. You do not run a man out of the door when he comes near you. If you give him no trouble he does not give you any.
417. As a rule, when a man takes up a free selection on a run there is not a friendly feeling between him and the owners? Very often a slight affair will cause ill-feeling.
418. Was that your case? I do not know that it was. I was friendly pretty well with everyone about.
419. I mean the station-owners;—were they friendly with you, although you took a free selection on one of the best parts of the run? Not particularly. I do not think it was one of the best parts.
420. Was it one of the worst? No, I suppose it was not.
421. Were you contracting before you took up the free selection? Yes.
422. Were you contracting afterwards? Yes; I did several things with my team. I had a team.
423. So that there was no ill-feeling at all between the station-owners and yourself about taking up the free selection? I do not understand you.
424. Was there a friendly feeling between Mr. McDonald and yourself, notwithstanding the fact that you took a free selection on their run? Yes.
425. Did you take up another free selection, an additional conditional purchase of 1,905 acres? Yes.
426. Did you apply for that yourself? I did.
427. Did you pay for it in the way that you say you paid for the others? Yes.
428. Who filled up the application form for this additional conditional purchase? I cannot say for certain now; but when I was thinking of taking it up, and before I did so, I spoke to one or two persons. I had to get money. I had not quite money enough to do all these things.
429. You say you paid for them yourself? Yes; you do not understand me. I had to get money on the farm.
430. By mortgage? Yes.
431. That is the 640 acres? Yes.
432. Who did you mortgage it to? To a man named King.
433. Who was Mr. King? He was a man in charge of —
434. Mungie Bundie Station? No.
435. Was he not the sub-manager of Mungie Bundie Station? Never that I knew of; never in my time. He was living at Gravesend.

- C. Donaldson, 436. Do you say that Mr. King was not sub-manager of Mungie Bundie Station? He was not living at Mungie Bundie at all; never in my time that I knew off.
- 6 Sept., 1899. 437. Do you still hold this free selection of 610 acres? Not at the present day.
438. Did you sell it? Yes.
439. To whom? To Mr. McDonald.
440. Is that Mr. McDonald of Mungie Bundie? Yes.
441. What consideration did you get for the sale of this free selection? I cannot say now, for I drew it at different times. But it was something like pretty well £1,200. It might be a trifle more. I did not get it at that time, but at different times—loans.
442. I asked you a few minutes ago if you remembered getting loans? Yes.
443. I think you said you did not get loans? Yes.
444. Was one of these loans £160? Not that I recollect.
445. Were a number of them £32 each? Some were.
446. A number of the entries in the ledger are for £32? I cannot say. I got some.
447. There is one loan of £160;—do you say you do not recollect that? I cannot recollect it exactly.
448. All these loans, put together, you took as loans against the free selection? Yes.
449. Mr. McFarlane.] Can you tell me how often these loans were negotiated—how often did you get them—one every year? Oh, no; just when I required some.
450. At what part of the year would you require them most? It is impossible for me to say. When I was getting something done—and it may be I had not the funds.
451. Do you say that some of these loans were for £32? I cannot say exactly now what they were—it is very long ago.
452. Do you remember your free selection being submitted for inquiry before the Local Land Board? Yes.
453. Did you give evidence on that occasion on the 26th October, 1885? I remember giving evidence, but I cannot give the date.
454. Did you state that this conditional purchase was your own *bona fide* property, and that no one else had any interest in it, or words to that effect? Yes.
455. Had you Mr. Vyner, a solicitor, appearing on your behalf at that time? Yes.
456. Did you instruct Mr. Vyner? Yes.
457. Did he send a bill of costs?
- Mr. Simpson: I object.
458. Chairman.] Do you object to answer that? Yes.
459. On what grounds? I do not think I am compelled to answer.
460. Do you hold that it will incriminate yourself? No; I do not know whether it would or would not. I do not understand law.
461. You understand facts—you will not be asked a question of law; it is a question of fact—why do you object to answering it?
- Mr. Simpson: I object to it on behalf of Mr. McDonald, on the ground that it is not pertinent to the inquiry.
462. Chairman.] On what grounds do you object to answer the question? I am not a college-bred man; I cannot understand like you gentlemen can; I cannot answer it in the manner in which you would.
463. There is no necessity for regretting lack of education. It is a plain question of fact. There is no attempt to get you into a corner; I ask you why do you object to answer this question? I simply object to it.
464. Are you afraid it will incriminate you? Yes.
465. Mr. McFarlane.] Did you make any arrangement with Mr. Vyner when instructing him?
- Mr. Simpson: I object.
- Chairman: I rule that the question is proper; if the witness refuses to answer, I will submit it to the Speaker, and to-morrow the question will be put again, and if the witness then refuses he will take the responsibility.
- Mr. Simpson: I object.
466. Chairman.] What answer do you give to the question? I object to that.
467. Do you object to answer it? Yes.
468. Mr. McFarlane.] You have stated in evidence that you had accounts in two banks—the Bank of Australasia and the Bank of New South Wales? Yes.
469. Do you produce your bank-books? I cannot do so here. I did not think they would be required.
470. Can you send for them? There is no one in my place except a strange man, who is living in the kitchen. My place is locked up, and I cannot allow a strange man to look over my place. No one could do it but myself.

THURSDAY, 7 SEPTEMBER, 1899.

Present:—

MR. DICK, MR. MCFARLANE,		MR. O'SULLIVAN, MR. THOMAS.
W. M. HUGHES, ESQ., IN THE CHAIR.		

Mr. Simpson, of Messrs. Minter, Simpson, & Co., appeared on behalf of Mr. John McDonald.

Charles Donaldson recalled and further examined:—

- C. Donaldson, 471. Chairman.] You were asked a question yesterday in reference to a transaction you were alleged to have had with Mr. Vyner; you were asked, first of all, "Had you Mr. Vyner, as solicitor, appearing on your behalf?" and you said, "Yes"; you were asked, "Did you instruct Mr. Vyner?" and you said, "Yes"; you

you were asked, "Did he send in a bill of costs?" and Mr. Simpson, the solicitor, offered an objection. I C. Donaldson, then asked you if you objected to answer, and you said, "Yes." After some further questions as to your reason, you said you were afraid they would incriminate you. Will you take it upon yourself to say that <sup>7 Sept., 1899.</sup> Mr. Vyner did not send in to you a bill of costs?

*Mr. Simpson* : I object.

*Witness* : I object.

472. *Chairman*.] You object to what? To answer.

473. I am asking you the question now—will you take it upon yourself to deny that Mr. Vyner sent in a bill of costs?

*Mr. Simpson* : I object.

*Witness* : I object to answer.

474. *Chairman*.] It appears to this Committee that something like a conspiracy to defeat the purpose for which this Committee was appointed has taken place, and I shall not tolerate for a moment any idiotic objections. You will have to give a reason for your objection. No reason for objection will be tolerated unless you say that you do not know or you do not remember, or that you are afraid that it will incriminate you. Further, I shall not allow Mr. Simpson to advise you in any way in the Committee. The 6th section of the Parliamentary Evidence Act, under which you are now being examined, says:—

6. No action shall be maintainable against any witness who has given evidence, whether on oath or otherwise under the authority of this Act, or in respect of any defamatory words spoken by him while giving such evidence; but if any such witness shall wilfully make a false statement, knowing the same to be false, he shall, whether such statement amounts to perjury or not, be liable to penal servitude for a term not exceeding five years.

7. If any witness so summoned or attending to give evidence shall refuse to answer any lawful question during his examination, he shall be deemed guilty of a contempt of Parliament, and may be forthwith committed for such offence into the custody of the Usher of the Black Rod or Sergeant-at-Arms, and, if the House so order, to gaol for any period not exceeding one calendar month.

We do not want to be troubled, we want to go through with the proceedings in a quiet way—as Committees always have done, but it appears to me that you are objecting to answer this because you desire to shield Mr. McDonald. But you are here to act on your own responsibility. You are not representing Mr. McDonald. You are here to answer certain legitimate questions which arise in the course of this inquiry. Now, you will not take it upon yourself to deny that Mr. Vyner did send in a bill of costs?

*Mr. Simpson* : I object to that question.

475. *Chairman*.] Mr. Simpson has lodged an objection on behalf of Mr. McDonald. I want an answer from you to the question—Are you prepared to deny that a bill of costs was sent in by Mr. Vyner in respect of this transaction?

*Mr. Simpson* : I object.

*Witness* : I object.

476. *Chairman*.] Do you object to answer the question? Yes.

477. You said, yesterday, you would not answer because it would incriminate you;—what do you mean?

*Mr. Simpson* : I object to that.

*Witness* : You simply put the words in my mouth. I would not have made the remark. It was you who put the words in my mouth.

478. *Chairman* : You must not say that. You must not pose here as a rustic and innocent witness from the country. You are receiving the instructions of Mr. Simpson, and you do not answer a solitary thing unless you get a tip from him, and then you have the impertinence to say that we put words into your mouth. We cannot get any words out of your mouth. I said to you, "Do you hold that it will incriminate yourself?" and you replied, "Yes." I asked you, "Are you afraid it might incriminate you?" You could have said, "No"; but you said, "Yes." I say now, what did you mean by it? How will it incriminate you?

*Mr. Simpson* : I object to that.

479. Did you ever engage in any speculations? I do not know exactly what you mean.

480. Did you engage in any speculations—for instance, in 1881, 1882, 1883, and 1884? Speculations of what description do you mean?

481. I am asking you a straight question—say "Yes" or "No"? I would if I understood the meaning of it.

482. If you knew where the question was going to land you, you mean you would then answer it? I do not really know what you mean by the question.

483. Did you engage in any speculations? If you give me to understand the meaning of this speculating, then I will be able to answer.

484. What wages were you getting all this time?

*Mr. Simpson* : I object to that question.

485. *Chairman*.] I now ask you what wages were you getting in 1879, and on to 1881?

*Mr. Simpson* : I object.

*Witness* : I object to answer.

486. *Chairman*.] You said yesterday that you took up 640 acres on the 10th February, 1881, and that you paid a deposit of 5s. per acre, amounting to £160? Yes.

487. Was that deposit paid? It was all paid.

488. Did you pay it? I did.

489. In what form did you pay it? In notes.

490. Had you an account in the bank at that time? I think I had.

491. Did you draw £160 from the bank to pay this deposit? I did not.

492. Where did you get the money from if you did not withdraw it from the bank?

*Mr. Simpson* : I object.

*Witness* : I object.

493. *Chairman*.] Will you deny that the money was paid by the station? Certainly.

494. Are you aware that Mr. McDonald has admitted it? I am not aware what Mr. McDonald said.

495. Will you swear that the £160 paid for the selection was not paid by cheque? I am not going to undertake to swear after such a long time, because I could not positively swear.

496. You do not forget that you are on your oath, and you said before that you paid in notes? I still believe that it was paid by notes.

- C. Donaldson. 497. Look at this entry in the station-ledger I see there is a cheque there, number 18379, £160, loaned to Charles Donaldson;—do you remember that loan being made to you? I cannot swear positively to having that particular loan.  
7 Sept., 1899.
498. You will not swear that it was not made? I could not swear that it was made at that time. I have had loans.
499. Was ever a loan of £160 made to you by the station? I cannot say exactly the amount.
500. About that amount? I have had different amounts.
501. Was this one of them? It seems from that that it is.
502. Are you aware that this loan which seems to have been made to you was made on the very day that £160 was paid as a deposit for a C.P.? I am not sure of that.
503. Do you recognise this receipt for £160? Yes.
504. That document is dated 10th February, 1881, on the very day that you paid the deposit on 640 acres. You have seen that this loan was entered against you in the station books;—will you swear that that loan was not made to you? I will not swear.
505. Will you swear that it was not made to you for the express purpose of paying this deposit? I will not swear that I had that loan on that certain date, because I cannot recollect it.
506. But you will swear that you did not draw £160 from the Bank to pay it? I will.
507. Who paid the annual instalments on this selection as they became due? I think I paid them myself personally, until I got clear of it for a while.
508. Will you swear to the date? I believe I did.
509. What are we to understand by that;—will you swear that the station did not pay it? —  
*Mr. Simpson*: I object.
510. *Chairman*.] Will you swear that the station did not pay it? —  
*Witness*: I object to it also.
511. *Mr. McFarlane*.] Did the station pay you the sum of £32, when the annual instalment was due on the selection? They might have; I do not say.
512. Look at this entry in the station ledger—“£32 for interest of Donaldson's C.P.” I see that.
513. *Chairman*.] Do you recognise that as payment of your C.P. by the station? Of course it is so there.
514. You do recognise it? Yes.
515. *Mr. Simpson*.] In connection with that debit which you see there, would it be a loan from the station to you? Of course it would.
516. *Chairman*.] Did the station loan you an amount equal to every instalment as it became due? I do not think they did.
517. Will you deny that they did? When I was short, and had not the money ready of my own, I was in the habit of trying to have it ready.
518. The original payment appears to have been lent to you by the station? It might be.
519. £160 was lent to you by the station? It seems so there.
520. Was it? I cannot remember. I cannot keep in my memory every little sum that I got.
521. This is not a little sum, it is £160; unless you are a millionaire I would call it a decent sum; if somebody gave me £160 to-day, in twenty years' time I would remember it? Perhaps in twenty years' time it might move out of your memory in spite of you.
522. Will you deny that the £160 deposit was a loan from the station? If it was a loan it was booked against me.
523. When did you repay that loan? I repaid it when I disposed of my land altogether.
524. For what consideration did you dispose of your land? —  
*Mr. Simpson*: I object to that.
525. *Chairman*.] How much did you get for your land when you sold it? —  
*Mr. Simpson*: I object to that question.  
*Witness*: I object also.
526. *Mr. McFarlane*.] Did not the station buy this selection? —  
*Mr. Simpson*: I object.
527. *Mr. McFarlane*.] I understand this selection was sold for a bonus of £50? —  
*Mr. Simpson*: I object.  
*Witness*: I object.
528. *Chairman*.] Will you read this entry: “Holding old C.P., £50 bonus”;—do you recognise that in the station-ledger? I see it.
529. How was this bonus paid? I cannot say.
530. Did you receive it? It seems that I did.
531. Are you going to deny, in the face of that entry, that you did receive it? You asked me when; how can I keep all these things in my head. You will drive me mad if you keep me here much longer.
532. Do you know Mr. McDonald's handwriting? I cannot say that I know it well.
533. Do you recognise the document produced in his handwriting? It is something like it, but I cannot say.
534. On 9th January, 1886, there is an entry: “Boundary rider”;—what was the bonus paid for? I do not understand you.
535. What did the station give you this sum of £50 for? I got the £50 when I turned over my land. I had not a great deal more coming to me, because I was indebted. I had to give it up.
536. Do you mean to say that this was another loan of £50, or was it wages? No; it was my own. It was not loaned to me when I was getting clear of my land.
537. So that, when you had parted with your C.P., you got that? As far as I recollect.
538. Will you swear that it was not the only consideration you received for parting with this C.P.? It was not the only consideration. I told you I had borrowed money.
539. Will you swear that the £50 was not all the money you received from the station for the transfer of the C.P. to the station? I object to answer it.
540. *Mr. Simpson*.] Do you say that there were loans to you besides? Yes.
541. *Chairman*.] I see from the book that wages were paid to you at the rate of £1 per week? Yes, certainly, when I did work by the week.
542. On May 24, 1885, there is an item of six months' wages in McDonald's handwriting, £26;—I suppose that would be your wages? Yes.

543. It appears that from 1879 to 1885 you received £1 per week? Yes, I was working about there at C. Donaldson. that time.
544. Did you get that money? Yes. 7 Sept., 1899.
545. On this date, when the £50 was paid to you, that is January 9th, 1886, you were still getting £1 per week;—were you getting more? I cannot say what I would have been getting at that time, I cannot remember.
546. Did you receive this £50 which is shown in the book? I cannot say, except what I have explained. Of course I received £50.
547. What did you receive it for? When I turned over my land.
548. It was not for wages? No, that part was not.
549. Was the £50 for wages? No, I do not think it was.
550. Was it wages? I told you before that I got £50.
551. I am asking did you get it as ordinary wages? No.
552. Was it money that you received when you sold the land? Yes.
553. Was it the price of your land? Would that be anything like a price?
554. I have not the slightest idea;—what did you get for your land? I cannot exactly say, but it was something like £1,200.
555. Who bought it from you? Mr. McDonald.
556. Did you receive the money in one lump? I had very little to receive.
557. How is that? I had so much borrowed, and I had to pay it.
558. Borrowed from whom? Loans from the station, as you see in the book.
559. How much did you ultimately receive;—how much was left over after you repaid the loans? I had something like £50 to £100.
560. There seems to be no record of anything more than £50;—will you swear you got more than £50? I will not swear.
561. So that, as a matter of fact, when you sold your land you had borrowed so much, and you were so encumbered with debt, that after repaying your debts you only had £50 or £100 to receive? I had not too much.
562. You had about £50? Yes.
563. Will you swear that you did not get more than £100? I am almost certain that I did not get more than £100. I do not think I got that much.
564. Will you swear you got more than £50? No; I will not swear anything. I cannot swear to £1 or £2.
565. Will you swear that you got any more than that £100 or £50? It might have been more at the time. I tell you I had not a great deal.
566. *Mr. Simpson.*] Did you ever keep any books? No.
567. When you were giving these answers were you speaking purely from recollection of things which took place sixteen and seventeen years ago? Yes; some of them more than that.
568. *Chairman.*] This took place in 1886, so that it cannot be made more than thirteen years ago, even by an expert in figures; I suppose you prefer to call this money for the sale of your selection rather than a bonus due? I do not understand you.
569. Do you prefer to call this sum of £50 which you received when you sold your selection a bonus, or would you say it is money received for a sale? —
- Mr. Simpson:* I object.
- Witness:* I object to answer.
570. *Chairman.*] You admit that this land which you sold for about £1,200, only left you in pocket for an amount which you will not swear was over £50? No; I told you I would not.
571. So you must have borrowed the whole of the deposits and the whole of the money to improve, and to fulfil the conditions, and you borrowed it from the station? I cannot tell you now the amount I borrowed. I borrowed a good deal.
572. You borrowed all you wanted? Of course.
573. Did you transfer your land to Mr. King? I cannot remember the date.
574. When did you transfer your selection by way of mortgage to W. J. King? —
- Mr. Simpson:* I object.
- Witness:* I object to answer, because I do not recollect the date.
575. *Chairman.*] Was it retransferred to you? Yes, certainly.
576. You recollect that? Yes.
577. Who fixed up these transfers;—did you do them yourself? —
- Mr. Simpson:* I object.
578. *Chairman.*] Did any lawyer do it for you? —
- Mr. Simpson:* I object.
- Witness:* I object.
579. *Chairman.*] Will you swear that Mr. Vyner was not the man who did this? —
- Witness:* I object to answer.
580. *Chairman.*] Look at this document, Donaldson to King;—it is a bill of costs amounting to £6 6s from Vyner to the station in reference to the transfer of 640 acres conditional purchase to King;—do you recollect the transaction? —
- Mr. Simpson:* I object.
- Witness:* I object.
581. Will you deny that you recollect? —
- Mr. Simpson:* I object.
582. *Chairman.*] Do you mean to say that it did not take place? —
- Mr. Simpson:* I object.
583. *Chairman.*] Did you transfer it to King? —
- Mr. Simpson:* I object.
- Witness:* I think that question was asked yesterday.
584. *Chairman.*] Never mind that;—what I am asking you is was it transferred to King, and did King transfer it back to you?
- Mr. Simpson:* I object.

C. Donaldson.

7 Sept., 1899.

*Witness* : I think I answered that question yesterday.585. *Chairman*.] I want you to answer it to-day? —*Mr. Simpson* : I object.*Witness* : I object.586. *Chairman*.] Do you mean to say that your answer yesterday was untrue? No. I object to answering one thing half a dozen times over.

587. Do you object because the solicitor advises you to do so? I take his advice to a certain extent.

588. Who was King?

*Mr. Simpson* : I object.589. *Chairman*.] Look at this station ledger—"W. J. King," of Gravesend, overseer, station account, in Mr. McDonald's handwriting; do you see an item of twelve months' salary, £120";—does it not seem as if he were an overseer? —*Mr. Simpson* : I object.590. *Chairman*.] If you do not answer such a question it seems to me you are wilfully endeavouring to hide the truth, and to wriggle out of a position which you occupy;—I ask you was King an overseer on the station? —*Mr. Simpson* : I object.*Witness* : You have got it all there; I am almost sure I answered it yesterday.591. *Chairman*.] Mr. McFarlane asked you yesterday if King was the man in charge of Mungie Bundie, and you said, "No." Then you were asked if he was sub-manager of Mungie Bundie, and you said, "Never in my time, he was living at Gravesend";—do you say that the answers you gave yesterday were untrue? You do not want me to answer half a dozen times to one thing; you have got it all there.

592. What I want to know is was he overseer on Gravesend during your time at Mungie Bundie? Part of it—no more.

593. What was he doing the other part of the time;—was he employed about any other part of the various stations, or what was he? I cannot say.

594. Who owned Gravesend? I believe Mr. McDonald did.

595. As a matter of fact, was not King overseer for McDonald? He must have been.

596. Did you transfer your selection to King? Certainly.

597. Did he transfer it back to you? Yes.

598. Then you sold it ultimately to McDonald? Certainly.

599. What consideration did you receive for the transfer to King? —

*Mr. Simpson* : I object.*Witness* : I object.600. *Chairman*.] You will not swear that you received anything? —*Mr. Simpson* : I object.*Witness* : I object to these questions.601. *Chairman*.] What was the deposit on the additional conditional purchase? —*Mr. Simpson* : I object.602. *Chairman*.] Did you receive from the station a sum of £190 11s. to pay the deposit on your A.C.P. as a loan, or in any other way? If I got it, I got it as a loan.

603. Did you receive as a loan from the station £190 11s. to pay the deposit on the A.C.P.? If I received that sum it was as a loan.

604. Was it a loan? If I did, it was as a loan.

605. Did you receive it? If it is there against me. I have no account of what I got; but if it is there against me, I suppose, it is quite correct.

606. Anyhow it was paid? Yes.

607. Did you pay it yourself? Yes.

608. Did you get the money out of your own account, or did you borrow it from the station? I borrowed money several times from the station.

609. Did you borrow from the station £190 11s., on the 13th August, 1885, to pay the deposit on the A.C.P.? I cannot swear that I borrowed that sum exactly.

610. But you will swear that the money was paid? Yes.

611. And it was paid by you? Paid by me.

612. Did you withdraw money from your own banking account to pay it? No.

613. Did you have the money in cash, or in any other way in the house? I had some money in cash, sometimes I had a good bit in the house, and sometimes I had not.

614. Do you tell the Committee that you had sums of £190 in the house? —

*Mr. Simpson* : I object.615. *Chairman*.] Was the money paid to the Crown Lands Agent? Yes.

616. The station ledger shows that on that date, the 13th August, a cheque, number 56315, £190 11s., was drawn out, being the exact amount paid to the Crown Lands Agent on that date on account of the additional conditional purchase, so that when you say you think or believe you borrowed the money you might fairly admit that you did borrow it? It is there against me. I have no account of these things now, and my memory could not retain every little item which was there.

617. To the best of your knowledge and belief you did borrow it? Yes.

618. If this is a loan against you, how do you account for the fact that your account is not debited with it? —

*Mr. Simpson* : I object.*Witness* : I object to answer.619. *Chairman*.] How do you account for the fact that none of these loans from the station are debited against you? —*Mr. Simpson* : I object to that.*Witness* : I object to answer.620. *Chairman*.] Were you a particular friend of Mr. McDonald? Not that I know of.

621. Did you pay him back all this money? I paid him back what I had to pay him.

622. Is it not rather an extraordinary thing that Mr. McDonald, who was a very careful bookkeeper, should have omitted all mention of the loans against you, which in the aggregate, must have amounted to some hundreds of pounds? —

*Mr.*

- Mr. Simpson* : I object.  
*Witness* : I object to answer.
623. *Chairman*.] What made you transfer the selection from Mr. McDonald?  
*Mr. Simpson* : I object.  
*Witness* : I object to answer.
624. *Chairman*.] Who made the improvement on the selection?—  
*Mr. Simpson* : I object.
625. *Chairman*.] Did you make them?—  
*Mr. Simpson* : I object.  
*Witness* : I object to answer.
626. *Chairman*.] Do you, a *bonâ fide* selector, object to answer a question as to whether you did what the Act requires, namely, to make your own improvements? Why do you object, when asked who made the improvements? You know you are supposed to make certain improvements, and unless you do, the Crown will not transfer the land to you;—who made them? Surely you will give some other answer beside objecting;—were they made by the station?—  
*Mr. Simpson* : I object.  
*Witness* : I object to answer.
627. *Chairman*.] Were all the payments made that had to be made in connection with your selection made through loans from the station? Not all, I think. I told you I borrowed money at different times, and that sometimes I had money of my own.
628. Everything you were deficient in you borrowed from the station? If I was short I had to get it somewhere.
629. How much were you short in the original deposit of £160;—were you not short of the whole amount, according to your own statement?—  
*Mr. Simpson* : I object.
630. *Chairman*.] You say that whatever you were short you made it up by a loan from the station;—were you short of the whole amount of £160?—  
*Mr. Simpson* : I object.
631. *Chairman*.] Have you not already said that you borrowed the £160? If I have already said so, why do you keep asking me about it?
632. How much were you short in the other payment of £32?—  
*Mr. Simpson* : I object.
633. *Chairman*.] Had you to pay £32 annually? Yes; I believe so.
634. For how many years had you to go to the station to borrow that? I cannot tell.
635. A good many years, I suppose? I cannot tell.
636. Was your selection good land? Not the best in this country.
637. Was it pretty decent land? Not out of the way. Only just fair.
638. You have said that the consideration was £1,200 when you sold the land;—was it good land? It was a bit of a pine ridge.
639. If it was a fair selection, and if you did not borrow all the money from the station to pay the annual instalments and the original deposit, how came you to part with it for the sum of £50?—  
*Mr. Simpson* : I object.  
*Witness* : I object to answer.

[The Committee adjourned at 1 p.m., and resumed at 2.15 p.m.]

John McDonald recalled and further examined:—

640. *Chairman*.] Is this item in the station ledger in your handwriting? Yes.
641. On August 13th, 1885, there appears an entry of a cheque, number 56315, £190 11s., can you give any explanation as to what that cheque was drawn for? Not from that entry. I must have further details.  
J. McDonald.  
7 Sept., 1899.
642. Here is a copy of an application for an A.C.P. of 1,905 acres, on Mungie Bundie run; and on that date an amount of £190 11s., being a deposit of 2s. an acre on 1,905 acres of Crown lands, was paid at the Lands Office at Moree on behalf of Charles Donaldson;—do you recognise that cheque as being utilised for that purpose? I do not. I recognise the two amounts.
643. Do you remember the cheque being drawn out for that purpose? I just see the entry there—I do not remember what the particular cheque was for.
644. You see that on that particular day there was an amount paid of £190 11s.; it is entered in your handwriting and drawn, I suppose, by yourself, and it was drawn in favour of Donaldson? Very likely.
645. On that particular date Donaldson paid £190 11s. into the Crown Lands Office at Moree, being a deposit of 2s. per acre on 1,905 acres? Yes.
646. What I want to get from you is: Do you admit that was what the cheque was drawn for? I do not admit anything of the kind. I admit that is my handwriting, and the cheque for the amount is in my handwriting.
647. Did you lend Mr. Donaldson that amount of money? I lent him various amounts at different times. The books and balance sheets will show that.
648. Is that one of the amounts? I cannot say without seeing the balance sheet and book; that is only one entry in this particular book. There were balance sheets made out for each year. All those loans were shown in the balance sheets.
649. Is there a contra account for Donaldson, in which he is debited for £190 11s.? Without seeing the whole account I cannot say; no doubt he would be.
650. Here is a balance sheet for 1884-1885;—is that amount of £190 11s. a loan to Donaldson, or was it paid by the station. The balance sheet is shown to you to refresh your memory; you admit that a cheque was drawn, can you charge your memory with this transaction? Was the cheque paid for this application?
651. I am asking you that? Any money I gave to Donaldson I lent.
652. Was it paid to the best of your knowledge for that application? I cannot say.
653. If it was a loan, would it not be debited against Donaldson? It should be.

- J. McDonald. 654. How does it appear in the balance-sheet;—is the item there and the item in the station ledger the same? They are the same in figures, no doubt.
- 7 Sept., 1899. 655. It is the same date, the same year, and it is an A.C.P. in both accounts;—was there an application made by the station for an A.C.P.? No.
656. What A.C.P. can it refer to, if not to this one in the ledger? I cannot say; it would appear to be the same amount.
657. Were you in the habit of lending money to Donaldson? Yes; and to others.
658. Did you do this right through Donaldson's occupation of this A.C.P.? No; he applied to me to get assistance, and I gave him assistance as a loan.
659. Have you any idea whether that is debited against him;—you were carrying on business in conjunction with Swift, and would not this transaction be recorded? Certainly.
660. There is no mention of it here in the ledger? It seems to be mentioned in the balance-sheet.
661. But not against Donaldson, certainly? The following year's balance-sheet might show it.
662. *Mr. Simpson.*] Were there subsequent balance-sheets? Every year.
663. Was there a final sheet made up, showing exactly the position of Swift's estate with regard to the partnership? Yes; in 1895.
664. Would that balance-sheet probably refresh your memory? Certainly, if I could only see it.
665. *Chairman.*] Do you mean to say that that balance-sheet would explain this item of £190 11s.? It might; it would explain all the assets that were remaining. A balance-sheet was made out every year.
666. Do you say that that sum of £190 11s. was, as far as you know, a loan to Donaldson? Yes; as far as I know.
667. And the station did not hand that to Donaldson for him to apply *malu fides*? —
- Mr. Simpson:* I object.
- Witness:* I object to the question.
668. *Chairman.*] When did Donaldson repay this loan? The final repayment would be shown in the 1895 balance-sheet. An accountant then made up the balance-sheets from the books at the request of Mrs. Swift and the other trustees. You would have to go through the sheets to know how the amounts stood at the final.
669. Was Donaldson in a position to pay that money until he sold the selection? —
- Mr. Simpson:* I object.
- Witness:* I object to answer such a question. How could I know what Donaldson's position was?
670. *Chairman.*] With reference to another loan of £160 made by you or the station to Donaldson, can you charge your memory with any particulars about that? If it is in the books it was a loan to Donaldson.
671. Were you in the habit of making loans to other station employees? I used to assist selectors and other people in the district.
672. I mean station employees;—he was an employee of the station? He was subsequently to taking this land.
673. Subsequently? Before and after, I think. At various times he worked for us. Sometimes he would be contracting, at other times doing all sorts of work.
674. Was he not an employee of the station practically from 1879 down to 1885? I think he was, more or less.
675. Was this C.P. applied for in 1881? Yes.
676. At the time you advanced him £160, was he a station employee? Possibly he was. I cannot remember; the books will show.
677. Do you see an entry in the station ledger showing that in 1880 and 1881 Charles Donaldson was paid wages for six months—£26? Yes.
678. He took up the selection on the 10th February, 1881, and was he not at that particular time a station employee? Yes; it appears so.
679. He was a station employee at the time he took up this C.P., and at the time that the loan was advanced to him from the station? Apparently.
680. Were you in the habit of lending any money to other station employees for the purpose of taking up selections? —
- Mr. Simpson:* I object.
681. *Chairman.*] Were there any others besides Donaldson? I do not know; besides I object to answer the question. As a matter of fact, I do not remember.
682. The station made a loan to Donaldson of £32 in respect of the annual instalment on 640 acres C.P.; there is an item showing that;—was that a loan to Donaldson? Yes.
683. Did you lend all the money to Donaldson as the occasion for payment arose? I cannot say; whatever I lent him is there in the book.
684. It is not entered there as a loan, is it? It is charged to the lands accounts of the station? That may be; Donaldson's account might show it in the balance sheet.
685. *Mr. Simpson.*] Does your answer to the other item of £190 apply to this item of £32 2s.—that is to say the balance-sheet made up to 1895 should show exactly the position of these various items, and the debit against Donaldson? Yes.
686. If you had the balance-sheet up to 1895, could you give the Committee a definite answer? I could.
687. *Chairman.*] Do you remember when Donaldson sold the selection to the station? I do not remember. If the Committee could get the balance-sheet of 1895—the final one, it would show all the transactions.
688. Where is it? It was filed in the Court.
689. When I asked you about the transference of Donaldson's selection, did you say you did not know it had been or when it had been? I did not know when it had been.
690. Of course it was transferred? I bought it.
691. Did it appear in the assets of the estate in the application for probate? All these lands did. The land of Donaldson and others appears in the balance-sheet.
692. Were there other selections on the run in the same position as Donaldson's? There were a number of selections on the run.
693. Did they all appear in the applications for probate? I cannot say. All those which had clean titles did.
- 694.

694. *Mr. Simpson.*] Did you make up the balance-sheet for probate. No.
695. *Chairman.*] How did Pitt, Son, & Badgery value this property—did they personally inspect it, or send somebody to inspect it? I do not remember how they did it. Someone came there, but on whose account I do not know.
696. Would it be possible to arrive at an actual valuation of a property without seeing it? Yes, pretty nearly by people in that line of business.
697. Do you see this letter which I produce? Yes; it is a letter written in Sydney, giving, approximately, information about the property.
698. In that letter you say it is near enough—“Herewith I send you an approximate statement of our places which you can make out to your own liking. They are quite near enough. I would urge you to push the probate through quickly.”—This is the approximate statement accompanying it? The area given there is the original.
699. What does that mean? That was before any land was taken up. That area comprised the original Government run.
700. *Mr. Simpson.*] Do you notice that the date of that letter is March, 1884? Yes.
701. At that time the C.P. belonged to the firm? No.
702. In 1884 this C.P. had not been paid for, and it stood in the books of the partnership, or rather Donaldson's name stood in the books as a debtor? Yes.
703. Therefore, it would be improper to include the C.P. as part of the station property when the partnership had no interest in it, and when it was a debt by Donaldson to the firm? Yes, exactly; and that debt was accounted for later on. If you get the balance-sheet of 1895, you will find the whole explanation. The Court had it, and it should be there now.
704. *Chairman.*] Of course you refuse to answer the question which it seems to me would clear up the whole thing—that is, you refuse to tell us how much you gave for this selection when it was sold.
- Mr. Simpson:* I object.
705. *Chairman.*] Here is an item which I wish you to look at:—“By sundries, as per statement, £37 16s. 3d., Charles Donaldson, boundary rider”? Yes.
706. Here is the statement alluded to above:—“Holding old C.P. £50 bonus? I gave him £50 for his equity of redemption, to recover the money for the firm for the loans.
707. So he did not sell direct to you? No; he got this as his equity of redemption as far as my memory serves me. I believe it was a bonus. It is marked as such.
708. Upon payment of that he transferred the thing to you? No, I do not think he did. The final balance-sheet will show that and all other items relative to Donaldson.
709. *Mr. Simpson.*] You admit that either there should be a C.P. to represent the asset in the estate or there ought to be a loan? Certainly, one or the other. It is a long time ago.
710. *Chairman.*] For instance, if the loans advanced by the station amounted precisely to the sum required for the deposit, and to keep up the annual charges, and then at the end of the period a £50 bonus was paid, you will hardly deny that the transaction does not appear to be *bond fide*? It might be *bond fide* enough.
711. I am not saying that it is not, I am only saying that it does not appear to be so. You admit that you lent him £160 for the deposit? I admit I lent all the entries in the book.
712. You admit you lent him £32, the annual instalment, and that at the end of the period you gave him £50 bonus. You say that is the equity of redemption—that is, for his interest? I believe that was so.
713. It has been sworn here that the value of the selection was £1,200? It was not worth £1,200.
714. Here is an item of £6 6s. to F. G. Vyner, for preparing a mortgage, &c., Donaldson to King. It has been sworn that King was a servant of yours? Yes, he was in my employ at one time.
715. Was he in your employ in November, 1885?
- Mr. Simpson:* I object.
716. *Chairman.*] Here is an item in the ledger, September, 1885, twelve months' salary, £120? Yes; that seems to be paid to King, who was an overseer on a station.
717. What I ask you now is, was King in your employ at that time—that is, November, 1885? Yes.
718. If he was, will you explain that item of £6 6s. That is, how the transference of something from Donaldson, an employee of yours, to King, another employee of yours, in November, 1885, would justify a charge of £6 6s. for lawyer's fees for that transfer, appearing in the station accounts?
- Mr. Simpson:* I object.
719. Here is an item in the book referring to Vyner's bill of costs. An item of £22 is corrected by yourself, and it is made £22 10s.; the whole of it is paid by you. Here is an item, “Costs of appeal, &c., Donaldson's case, 610 C.P.—£22 10s.” Perhaps you will explain that item? I cannot explain it. You get me the balance-sheet for 1895, and I will go into the whole question with you.
720. *Mr. Simpson.*] Is it possible that it is a loan to Donaldson? That is very likely.
721. *Chairman.*] I think it is clear that the station paid the costs of the appeal? It is not at all clear. It may be a loan to Donaldson, like any other item.
722. *Mr. Simpson.*] It might be money paid on Donaldson's account? It might be. There were balance-sheets for every year—why not produce those.
723. *Chairman.*] I think we have produced enough? No, you have not. You want the final one to show these assets.
724. *Mr. Simpson.*] Do you admit that if this money were paid away for these particular matters they would be for and on behalf of Donaldson? Yes.
725. And that they would be loans standing exactly in the same position as other payments made to him on which you have been examined? Yes; and when the partnership accounts were finally adjusted they were paid, or if they were not paid, it is a clerical mistake. The accountants of Mrs. Swift had full control.
726. *Chairman.*] But if the books presented to the accountant did not contain any mention of these matters, how could the accountant make up any statement showing them? But the books did.
727. If the books did not contain them, they would not appear in the balance-sheet? I was being constantly called to explain them. The sum of £160 was the first transaction with Donaldson. It was started as a loan, and the others could be dealt with in the same way.
728. I have here a statutory declaration by John McDonald, grazier, Mungie Bundic, dated 11th November, 1895, in which he says: “I know Charles Donaldson, an applicant for an additional conditional purchase
- on

J. McDonald.  
7 Sept., 1893.

J. McDonald, on the resumed area of my run. I have known him for about ten years, and he has during that time done various work for the station, sometimes contracting and sometimes wages work. I know he is the holder of a C.P. on my run. I have not now, nor have I ever had, any interest in the said C.P. or the additional C.P. now applied for. The said Charles Donaldson has never been a regular employee on the station, and does not hold any land in the station interests";—do you remember making that declaration? I do not.

7 Sept., 1890.

729. Do you recollect it at all? I do not.

730. The allegations contained in it are rebutted by the evidence of yourself and Donaldson? No; the allegations there correspond with what I have said.

731. *Mr. Simpson.*] When wages are put down there it does not mean that he is employed at so much per week? It is only week by week.

732. *Chairman.*] You see all these items—such as £160 for C.P., £190 for A.C.P., and £32, and all these items coincide with payments made to the Crown Lands Agent;—do you say that all these were loans from yourself and the station to Donaldson? All the moneys were loaned.

733. And they were never repaid? Pardon me, they were. I say that in the 1895 account the payment is shown.

734. Were they actually paid in money? Yes, I think so.

735. *Mr. Simpson.*] Could not they be paid by crediting Mrs. Swift's account with a certain portion of them? That is the way in which they would be paid.

736. *Chairman.*] By crediting Donaldson's account? No; the 1895 balance-sheet will show it. The accountant who prepared it is in the city, and he could explain it.

737. Were these loans all repaid? Yes, they were all adjusted and repaid.

738. And at the time of Swift's death the estate was in credit so far as Donaldson was concerned to the extent of these loans? Up to that point.

739. But they were not disclosed in the application for probate? I know nothing about the application for probate. I did not make the application.

740. I do not say you did—do you know if they were disclosed? I do not know anything about it.

741. You will admit that if they were not disclosed, they should have been, if the estate was in credit to that amount? Yes.

742. Supposing the estate had lent Donaldson £600, at the time when you and Swift were carrying on business, and Swift died, the estate ought to be credited with the claim on Donaldson for £600? No, for £300.

743. Say £300, and if it was not credited with that amount it was an evasion of probate duty? Yes; that is a matter for the trustees.

744. Do you remember how much was lent to Donaldson after Swift's death? No.

745. How much was lent to him before Swift's death? It would appear from these books to be £160.

746. Then there were the annual charges—do you remember what improvements were made? —

*Mr. Simpson:* I object.

*Witness:* I object to answer.

747. *Chairman.*] Of course, some improvements would have to be made, otherwise the selection would be forfeited?

*Mr. Simpson:* I object.

*Witness:* I object to go into the question of forfeiture at all. What have I to do with forfeiture?

That is a matter for the Lands Department.

748. *Chairman.*] You were engaged in a matter of forfeiture? No.

749. £192 was lent by the station to Donaldson before Swift's death on account of the 640 acres C.P.? Yes.

750. According to that, the asset would be that amount, plus the improvements, whatever they were worth, divided by two?

*Mr. Simpson:* I object.

*Witness:* No; I object to go into that assets question. There is a loan in the books, and I say it was loaned.

751. *Chairman.*] We do not say the asset was suppressed by you; but it was suppressed by somebody. I say that you lent, on behalf of the station, £192 to this man. At the time that Swift died there was £192 plus the improvements on the land to the credit of the firm? Yes.

752. So that according to you, half of that belonged to Swift? Yes.

753. That was not mentioned in the statement for probate, and the selection ultimately was transferred to you? The fact of its not being in the statement was owing very likely to the fact that it was a very small amount in such large transactions; but the trustees had any amount of information for probate, because I think they sent someone to look over it and give a report.

754. All that we have before us is that this was suppressed, and that the asset has now become transferred to you? The land has been purchased by me.

755. If half of that amount belonged to Swift's estate, and it was not mentioned in the assets, how did you become seized of the whole of the land; and, as a matter of fact, half of that belonged to the estate, but the estate was not credited with it. It was credited with it.

756. How could it be when it was not mentioned in the probate? I had nothing to do with the probate.

757. *Mr. Thomas.*] Did you give the trustees information about it? I gave them any information they asked.

758. You admit that half of this money which was paid would be an asset of the estate? Yes.

759. When the trustees wanted to get all the information about the estate for probate, I presume they corresponded with you? They sent a man up, so far as my memory serves me.

760. You were partner, and would you not be consulted, and would you not know what went into the probate? I did not know, not being a trustee.

761. Would you not see, for your own sake, that the probate was put in properly? No, I did not.

762. Would you not see that the probate was not more than it ought to be? That was immaterial to me, as I was not a trustee. It did not affect me in the least, as I had not to pay the probate duty.

763. *Mr. McFarlane.*] With reference to these loans, I understand that Donaldson had a folio in the ledger? I think he would. It might have been a folio for whatever work he was on.

764. You have stated that these various sums of £160, £32, and so on, were loans to Donaldson? Yes. J. McDonald.  
 765. Seeing that he had that folio, would not those loans be charged to his account? ———  
*Mr. Simpson*: I object.  
*Witness*: I object.  
 766. *Mr. McFarlane*.] In granting these loans, was any arrangement made as to the length of time the loan was to exist? No time.  
 767. It was simply a loan without any stipulation as to repayment? Quite so.  
 768. Was there any rate of interest charged? Yes; I think the current rate of interest was charged in the balance-sheets.  
 769. Do I understand that these various sums at various periods were given in the shape of loans at the current rates of interest, without any stipulation as to when they were to be repaid? That is my impression of all the transactions I had as disclosed by the books.

7 Sept., 1899.

FRIDAY, 8 SEPTEMBER, 1899.

Present:—

MR. DICK,

MR. MCFARLANE.

MR. THOMAS.

W. M. HUGHES, ESQ., IN THE CHAIR.

Mr. Simpson, of Messrs. Minter, Simpson, &amp; Co., appeared on behalf of Mr. McDonald.

John McDonald recalled and further examined:—

770. *Chairman*.] This is the balance-sheet of John McDonald & Co., showing McDonald and Swift's J. McDonald: liabilities and assets, as filed for probate, annexed to an affidavit by Hann and Croaker. This is for new runs—Mungie Bundie, Boollooroo, and Gravesend? Yes; I see it covers the lot.

8 Sept., 1899.

It is made up as follows:—

	Total original leasehold, 190,000 acres.	£
Fenced and improved freehold land, about freeholds, 35,000 acres, at 30s. per acre .....		52,500
Leaseholds and improvements thereon .....		15,000
Plant, &c. ....		2,500
60,000 sheep (more or less), at 9s. ....		27,000
4,000 cattle (more or less), at 40s. ....		8,000
200 horses (more or less), at 150s. each ..		1,500

(Signed)

R. M. PITT.

H. S. BADGERY.

That is a copy of the schedule filed in probate, and a statement of the assets and liabilities of McDonald and Swift.

771. I produce the balance-sheets prepared by Peel, Borrowdale, & Co., signed by John McDonald. There 12,296 acres of freehold are put down at £2 5s. an acre, making £27,661 10s.? The land was not sold; it was only an estimated value.  
 772. The whole thing was only an estimate? Yes.  
 773. We do not say that the amount filed for probate was correct or not; but since the whole thing was a question of valuation and a matter of opinion, backed up by no actual transaction, we want to know how it is that in one place the land is estimated to be worth £2 5s. per acre, whereas, when the statement is filed for probate, it is estimated at only 35s per acre? It is purely a matter of opinion, as you say; but you will notice that the valuations for probate and those obtained on realisation were very close together.  
 774. When was the estate realised? Portion of it only was realised.  
 775. *Mr. Simpson*.] Was it realised by public auction? Yes.  
 776. Did that take place a few years afterwards? Yes.  
 777. *Chairman*.] We have nothing to do with what it was ultimately sold for; if the property was valued in 1880, and sold during the Bank crisis in 1893, you would hardly say that that would be a fair estimate of its value. If Swift died in 1881, and if the property was not sold until 1888 or 1889, obviously that is very little guide? This was the valuation in 1881—£106,500.  
 778. Here the land is estimated at £2 5s. an acre all round? It is purely a matter of opinion.  
 779. *Mr. Simpson*.] Did you make any valuation for probate purposes? Not at all.  
 780. *Chairman*.] Somebody did make a valuation, and we want to get your opinion, which ought to be a good one? I can only say that this is a valuation made for probate duty. The amount obtained on realisation at auction very nearly corresponds with this value.  
 781. *Mr. McFarlane*.] What was the original cost of the freehold when purchased from the Crown? It ranged from £1 to 25s. and 30s.  
 782. What would be about the average price? About 25s. for the actual freehold. Of course, that would be as it stood, whereas the valuation included improvements, fencing, water, and all sorts of things.  
 783. *Chairman*.] With the improvements you speak of, surely the land was worth more than an addition of 5s. per acre? There is no valuation put in for the leasehold lands at all, as far as I can see.  
 784. We are only talking about the value of the land—35,000 acres? Yes; there is so much taken in for the value of the run.  
 785. We have an item here of freehold land, about 35,000 acres, at 30s. per acre, £52,500; in another valuation we have the same land put down at a value of only £2 5s. per acre? It is over-valued, that is all. I would like to have sold it at that price then, or at this day.  
 786. Is it over-valued in one instance;—might it not have been undervalued for probate? No; because the realisation confirmed the valuation for probate. It was not rushed into the market; it was largely advertised and sold to the best advantage. The probate valuation and the realisation being nearly together, that shows that it is as correct as it could be. Henderson over-valued the land. There was a gentleman sent up, I do not know by whom, and I now remember that his name was Henderson. He came up on behalf of the trustees or someone to value the properties, and evidently this is his valuation.  
 787. You accepted it as correct? Yes; I have signed it. I suppose I did not look into it very closely. I cannot say whether I did or not.  
 788. *Mr. McFarlane*.] What was the object of that valuation? I do not know what they sent up Henderson for; they did not tell me. I think the trustees sent him.

789.

- J. McDonald. 789. *Chairman.*] You remember this man coming up there, and valuing, but you do not know for what purpose he did so? I did not know at the time; I know it had something to do with the trustees.
- 8 Sept., 1899. 790. If he was sent up by the trustees to value for probate, how was it that when they filed the probate they valued the land at 30s. per acre, although he had estimated it at £2 5s per acre? I really could not say whether he was sent up on behalf of the trustees or on behalf of anyone of them. I understood he came up on account of Somerville. He was a friend of Somerville. When he valued the property and showed me his figures I laughed. I said I wished to goodness it were worth that.
791. But yet you signed the valuation? Yes, it appears so. I did not know what this valuation was.
792. Did the property deteriorate from 1884 to 1887—had you a bad drought? Yes; in 1884–1885 we had a fearful drought.
793. But you had good weather in 1886? That is likely enough.
794. I was out there in 1886–1887, and it was then very good weather? It generally is after a very bad time.
795. When that valuation was made it was either in good weather or in a season after good weather? It was good weather. I remember distinctly now when he was there—it rained 6 inches.
796. *Mr. Mc Barlane.*] When the valuations were made by Pitt, Son, & Badgery for probate purposes, did they inspect the property? Not so far as I know. In fact they could not have done so without my knowing it.
797. In arriving at a correct valuation, would not those who personally inspected the property be more likely to arrive at a correct valuation than even very competent valuers who did not personally inspect? Not always, because people like Pitt, Son, & Badgery, who are in constant communication with property owners, who are acquainted with all the sales, and who know the different values of all these properties (like Hardie and Gorman, in connection with city values), might know a great deal more than others who inspected the property. A man might be sent out who would be thoroughly conscientious, as far as his knowledge was concerned, as no doubt Mr. Henderson was, but he altogether over-valued this property. I remember his showing me his figures, and I simply laughed at him. I did not remember, yesterday, who he was, but I now remember him distinctly. It rained all the time he was there. He must have had a large idea of the country to get these valuations; because, although I appear to have adopted them there, I knew perfectly well that they were over-valued and he showed me his figures.
798. Did you mention the fact that you considered his figures were over-valuations? Yes, to himself.
799. You signed his valuation? Not then; that was afterwards.
800. Had Pitt, Son, and Badgery an intimate knowledge of the property? Yes; they sold it to me in the first instance.
801. Was the person who made this valuation frequently on the stations? No. Pitt, Son, and Badgery were not there at all.
802. How could they arrive at a valuation if they had no knowledge of the property? Just as I have explained, they are experts in station matters. They are selling agents.
803. I can quite understand that holding good with regard to the value of sheep, cattle, and horses, but there is such a fluctuation in the price of land that it would be necessary to have personal knowledge? Districts are so well known in the grazing line of business that they get at a value almost within 1s. an acre.
804. What about improvements? True, I can quite understand that it would be necessary to see improvements, in order to get some idea of the value; but the place was pretty well known all round about, and is now, as far as improvements are concerned. I used to frequently see Pitt, Son, and Badgery. They sold stock for me. I was intimate with them, and they used to question me. That was not for probate duty at all, it was years before. They knew what we were doing, and the turn-over.
805. I understand you had a communication with them, giving an abstract of the properties with which you were connected, the number of acres of land, the number of cattle, sheep, and horses, and the improvements? Yes; I sent it to one of the trustees, and he sent it to Pitt, Son, and Badgery, to make out their valuations for probate duty.
806. Did they accept your figures as their valuation, or did they alter them? They never saw me on the matter.
807. I understand this document was written by you? That was sent to Mr. Hann.
808. That would go to the valuers? I suppose Mr. Hann sent it to the valuers.
809. Does their valuation correspond with the values which you sent to Mr. Hann? I did not send him any values. I sent him the approximate acreage, the numbers of stock, without any values attached to any of them.
810. *Chairman.*] Here is a letter dated 24th March, 1884, from Mr. Hann, in which he says:—"My Dear Badgery,—You and Pitt kindly offered to give me the Mungie Bundie valuation, and if you are still prepared to do this I should be glad. Enclosed I send all the particulars that McDonald sent me to work upon, and I trust they will be sufficient for you." It appears from that letter that there seems to have been an attempt, not to value the thing properly, but simply to make it just high enough, as not to excite suspicion? I cannot answer that question; I can only give you my opinion. Those gentlemen appeared to wish to value the thing up to its full value.
811. This is a letter from R. M. Pitt, dated 28th March, 1884:—"My Dear Hann,—Valuation of the station is as follows:—

								£	s	d.
Land	...	...	...	...	...	...	...	45,000	0	0
Sheep	...	...	...	...	...	...	...	24,000	0	0
Cattle	...	...	...	...	...	...	...	8,000	0	0
Horses	...	...	...	...	...	...	...	1,000	0	0
Runs	...	...	...	...	...	...	...	10,000	0	0
Plant	...	...	...	...	...	...	...	2,000	0	0
								£90,000	0	0

"Do you consider this too low? If so, wire in the morning. I don't think it would realise any more just now, even if as much, but with rain, of course, it would be worth considerably more."

\* \* \* \* \*

Then

Then, in reply to that, Mr. Hann wrote this letter, saying that Mr. Pitt's valuation was altogether too low, and he said we had better put a reasonable value on, so as not to have any question about it. After these arrangements had been made, the following seems to have been agreed upon:—On the 31st March, 1884, the following document was signed:—"We, the undersigned, certify that we have personal knowledge of the runs hereunder mentioned, in which the late Samuel Moffatt Swift was interested at the date of his death, and that the fair and reasonable values of the same and the stock thereon are as hereafter set forth:—Mungie Bundie, Gravesend, and Boolooroo Stations, county of Couralie, Gwydir District, New South Wales. Total original leaseholds, about 190,000 acres, all fenced and improved. Freeholds land, about 35,000 acres, at 30s., £52,500; leaseholds and improvements thereon, £15,000; plant and belongings, £2,500; 60,000 sheep, more or less, at 9s., £27,000; 4,000 cattle, more or less, £8,000; 200 horses, more or less, £1,500. Total, £106,500;"—is it not the case, according to the evidence, that no inspection was made by anyone except Mr. Henderson? I do not know of any other inspectors.

812. Then these people never saw the station? They have a very intimate knowledge of it otherwise, without going to look at it.

813. It is evident that a man who would go on a station would know more about it than a man who did not go; if it is a bad season he sees the effect of it on the station; in your district the rain may fall in patches? Yes; and when Henderson was there, 6 inches of rain fell.

814. But at the time that this valuation was made on 31st March, 1884, upon which application was made for probate no inspection of the run had taken place? No, I do not think so. I do not know of any.

815. It is pretty clear they did not inspect the stations, and that the estimate submitted by one of the valutors was rejected, because it was too low—that is, it would excite suspicion, and do the partners no good? I can help the Committee in this matter. When I was here before, and gave evidence on these valuations, if I remember aright, I stated that I thought the trustees overvalued the properties for financial purposes. This correspondence led up to it. It shows that the trustees were not satisfied with Pitt, Son, and Badgery's first valuation, and to get a higher valuation they wrote to see if Pitt, Son, and Badgery would not reconsider it. They did reconsider it apparently, and that confirms the view I had at the time.

816. If that be the explanation, how do you account for the fact that three years after a man who was on the station valued the land at £2 5s. per acre. You say that the value of 30s. per acre was too high—the reason being that the trustees so valued it simply for pastoral purposes? Yes; for financial purposes.

817. If that be so, how do you account for the fact that when this man went to see it in 1887, he valued it at £2 5s. per acre, which is very much higher still? I can only account for it by his overvaluing the land, as I told him at the time.

818. Then he did not understand his business? I do not think he did.

819. Is this your report made in 1887? Yes.

820. Was that forwarded to the trustees? Yes.

821. At their request? I think not. As far as I remember it was accompanied with balance-sheets.

822. Which balance-sheets? For the year 1887.

823. In that statement the number of sheep were put down at 85,200? Yes.

824. That is in 1884? That was the heavy drought of 1884-5.

825. What is the date of the report? 1887.

826. What is stated there about the number of sheep? It says, "I will commence my report by referring to the return of sheep, cattle, and horses, with which I furnish you copies. *Re* sheep—In the year 1883 I shored 60,204 sheep, and my returns show that 24,657 lambs were marked during that year. After adding 7,480 ewes purchased, and deducting 7,100 sold, there were 85,241 sheep on the properties at the date of the death of the late S. M. Swift."

827. But I see in the statement there were only 60,000? Yes; but you have to go through the whole of this to see this balance between what was there and what was left.

828. How do you reconcile the difference between the numbers you give and the 60,000 in the statement? We lost 24,000 odd in the drought of 1884-5.

829. If these figures were correct as to the number of sheep at the date of Mr. Swift's death, should not that have been the number put in the statement for probate? This is merely a report giving, to the best of my ability, information which I thought they should have. In the middle of the drought we could not possibly say that there were so many sheep there on the date of the man's death, especially as we lost 24,000 that year. It says here, "The losses, which were very heavy from the same cause, numbered 24,393 sheep."

830. What period would that be? During this drought.

831. How long was the drought? It lasted for eighteen months or two years.

832. What I want is that you should reconcile these two statements;—they both purport to be made for the one period; they both refer to the time of Mr. Swift's death;—they should both agree? You see the report further goes on to say —

833. I just want to fix that amount and to get some explanation as to the difference of 25,000;—they both refer to the same date? They could not be on the same date.

834. The date of Mr. Swift's death? It is from shearing to shearing that we calculate as to what we lose.

835. Would not that hold in one case as well as in the other? That is the only way you can number your losses.

836. Would not the same system be adopted for arriving at the number for both purposes? Yes.

837. Between the numbers there is a discrepancy of 25,000, and in this statement the accountant is at a loss to discover it? Here is an absolute loss of 24,393 sheep during the 1884 drought. After the 1884 shearing I started with 53,646 sheep. I want to explain this to the Committee if I can, but to explain it I would have to read it right through.

838. But you have read from the report that there were 85,000 sheep on the run at a stated time? We have to start at a point at the death of a partner.

839. I quite agree with that; but, as you see, the same system must be adopted to ascertain the number for which these figures are made up—that is 60,000? That was on the following shearing.

840. No; it is for the same period? It cannot be fixed in February, 1884.

- J. McDonald. 841. They both refer to the number of sheep on the run at the date of Swift's death? There must be a clerical error somewhere. We shear in August and September. February is in the middle of summer, and we usually take the number of sheep shorn from one year to the other. At the time I was very clear about the whole thing, but I am not good at accounts at any time.  
 8 Sept., 1899. 842. There is a discrepancy of 25,000 sheep? The report says 25,000 died.  
 843. *Mr. Simpson.*] At the time of Mr. Swift's death, as far as your knowledge goes, there were 85,000 sheep on the station, as in your report? That I believe to be correct.

Charles Donaldson recalled and further examined:—

- C. Donaldson. 844. *Mr. McFarlane.*] I understand that you got a number of loans from Mr. McDonald? Yes.  
 845. Were those loans given for any certain period? No.  
 8 Sept., 1899. 846. What rate of interest was paid? I cannot say unless it was a fairish interest—I suppose about 9 or 10 per cent.  
 847. Was there not an arrangement made in getting them? There was, but it has slipped my memory.  
 848. When obtaining a loan, would you make an agreement as to the rate of interest to be charged? Yes.  
 849. Did you do so with each of these loans? I do not know that I made an arrangement with each one. It was somewhere about 9 per cent. as nearly as I can recollect.  
 850. Was any security given? None.  
 851. Are you sure of that? Yes.  
 852. Were those loans repaid? Yes; when I had finished settling up with the selections.  
 853. In selling the selections I understand the loans were ended? They went in as the price.  
 854. They were taken off the purchase money? Yes; I suppose that is what you mean. They were taken as my receiving the money.  
 855. *Mr. Simpson.*] It was part of the purchase money? Yes.  
 856. *Mr. McFarlane.*] Who was it sold to? —  
*Mr. Simpson:* I object to that.  
 857. *Mr. McFarlane.*] Who were the 640 acres sold to? To Mr. McDonald.  
 858. From you to Mr. McDonald? Yes.  
 859. And this was looked upon as security for the money that was borrowed from Mr. McDonald? —  
*Mr. Simpson:* I object.  
 860. *Mr. McFarlane.*] Was not a transfer made to Mr. King? —  
*Mr. Simpson:* I object.  
*Witness:* I object.  
 861. *Mr. McFarlane.*] I refer to a time previous to the sale of the land to Mr. McDonald? —  
*Mr. Simpson:* I object.  
*Witness:* I object.  
 862. *Mr. McFarlane.*] There is an item of £22 10s., said to be a loan which you got for Mr. McDonald;— is that a fact? I cannot say now in what sums; I have no recollection.  
 863. There is some trouble in connection with the Appeal Court about your free selection;—was there not a bill of costs for £22 10s.? I cannot say.  
 864. Do you remember any costs being paid? No.  
 865. No costs to Mr. Vyner;—you said before that you instructed him? Mr. Vyner may have. I cannot say; it has slipped my memory.  
 866. Did he charge you £22 10s. for appearing in that case? Perhaps he did; I cannot say.  
 867. Do you remember borrowing a sum of money at that particular time of the same amount? I cannot tell you what the sums borrowed were exactly.  
 868. Do you remember anything at all about this bill of costs for £22 10s.? No.  
 869. You do not know whether you paid that amount or not? I cannot say.  
 870. You do not remember receiving it? I do not.  
 871. *Mr. Simpson.*] Do I understand that you might have received it, but at this length of time you cannot remember? I cannot remember.  
 872. Was this fourteen or fifteen years ago? Yes; I do not remember.  
 873. *Mr. Thomas.*] Have you had many transactions in that way;—have you paid many sums for bills of costs? —  
*Mr. Simpson:* I object.  
*Witness:* I object.

John McDonald recalled, and further examined:—

- J. McDonald. 874. *Chairman.*] Do you recognise this book? I do not recognise it; but I see it is a written-up book.  
 8 Sept., 1899. 875. It is a copy of what? It purports to be a copy of an account with the Union Bank of Australia, John McDonald & Co., Mungie Bundie.  
 876. Have you any reason to doubt any entry there? I have no reason to doubt.  
 877. You see there is an entry there credited by the bank for £1,814? I see there is.  
 878. There is a memorandum evidently placed there, ex Killarney? Yes.  
 879. Would that be for a shipment of wool? Probably.  
 880. When did the clip of 1883 or 1884 take place? About September.  
 881. Then, of course, that would be the proceeds of the clip of 1884, otherwise you could hardly get that in and obtain the proceeds, because the proceeds of all the wool that went through the Union Bank of Australia was from London? Not necessarily; it might be an advance taken.  
 882. You state that if it was an advance it would not be in round figures instead of an actual amount;— are not advances always in round figures? No.  
 883. Are not advances made by the bank on wool in round figures? No.  
 884. Do you mean to tell me that they advance so many pounds, shillings, and pence, as exhibited in that account? It might be so. You see it is a bill discounted.  
 885. Take your ledger, folio 598, that is the wool account, 1883;—can you tell me from that account how many bales of wool were on the station in that year? Not by this account. 886.

J. McDonald.

8 Sept., 1893.

886. You will find an entry at page 609 of £16 14s. 6d. paid to forwarding agents? Yes.
887. That was for how many bales of wool? 669.
888. There is another entry a little further down of £2 7s. 6d.? Yes.
889. How many bales of wool were there? Ninety bales.
890. How many bales is that altogether? 759 bales.
891. Does that give you an indication of the wool-clip for 1883? Yes.
892. Will you look at the credit side of the account, and tell me how many bales of wool have been credited to that account? On 5th December, there was a credit for 26 bales of wool, 5 bales are skins. Then there is a credit in February, 1894, 262 bales, then there is an entry for 38 bales, and 27 bales and 279 bales.
893. Making altogether 627 bales? Yes.
894. If you deduct 627 bales from 759, would there not be a certain number of bales on hand? Yes; presumably from these figures.
895. But I want it from you—if that is the wool-clip for 1883, and you have told me that you have debited the wool-clip with everything, and the wool-clip was 759 bales? Yes.
896. And you have left to the credit of that wool account 627 bales? Yes.
897. That would leave 132 bales still in hand? Yes.
898. Should not that have appeared as an asset at the time of the testator's death? Yes; I suppose it would.
899. Does this entry, £1,814 18s. 7d., bring it to your memory that that was any portion of that wool? No; I cannot see any connection.
900. Do you not find this entry of £814 to the credit of that wool account? No; I cannot see it.
901. Still you say there was wool on hand at the time of the testator's death? It would appear so.
902. *Mr. Simpson.*] Is that 1884? It is 1883, and February and May, 1884.
903. *Chairman.*] You are sure that there should have been wool on hand at the time of the testator's death? It would appear so. It is a matter for the accountant who prepared the books.
904. Can you tell me roughly what would be the value of the wool at that period from this account? No; the books will give it.
905. From the figures it would roughly be about £14 per bale? Probably; I cannot remember. I will admit that they were worth the average of the rest of the wool.
906. There is an account of a sale in the station-ledger, folio 577, to Seaton? Yes.
907. You sold some sheep there? Yes; a sale of 3,000 ewes at 8s., 10th January, 1884.
908. When were they paid for? They were sold on a bill, which would be due on 10th July, 1884.
909. Then at the time of testator's death that should have been an asset in the estate? It should be, if it was not discounted.
910. Was not the bill discounted on 18th April? Yes. There is an item there, Seaton & Co., £1,200 12s.; that corresponds with this entry.
911. Then it was a debt due to the estate at the time of the testator's death? It was an asset of the partnership.
912. At page 571, do you find that some sheep were sold to G. Cooke? Yes.
913. On what date were they sold? February, 1884.
914. On what date? It seems to be mutilated in the ledger. The credit shows 12th February.
915. Was that prior to the testator's death? Yes.
916. At the time of his death were they a debt due to the estate? They were an asset due to the partnership.
917. They had not been paid for by the 18th? No; they could not be, because it was a promissory-note due in three months.
918. Was it not part promissory-note? Yes; still it might not have been paid for even then, although the sale was made.
919. Will you take the balance-sheet and tell me how much was due by the Gwydir River Pumping Company? I see an item of £912 10s.
920. Was that a debt due to the partnership at the date of the testator's death? I do not think it was.
921. It was signed by you, and this is the balance-sheet for 18th February, 1884? It says:—"Statement of old account." The accountant will probably know whether it is an asset or a debt. That was the value of it to that firm on that date.
922. *Mr. Simpson.*] What was it? A pumping-plant erected by us on an adjoining station. They had an interest in it, and we had.
923. It was part of the improvements to the station? Yes.
924. *Chairman.*] Is it not specially set forth as an asset? It was a fixture, like a woolshed or a fence; you could not sell it.
925. It was not included in the valuation of Pitt, Son, and Badgery? It would go, of course, with the property.
926. It is not included in the property? It is only the interest that should go.
927. It was not included in Mr. Pitt's valuation? No, except generally.
928. There is an amount, P. McCormack, £129, due;—was that due at the time of the testator's death? Yes.
929. Are your run rents paid at the commencement of the year? I really could not tell you.
930. Do you not know, as a matter of fact, that they are? I do not, because I do not pay them; I always get the bank to pay it.
931. When? When they are due. I cannot tell you. I see that I am not overcharged when I look over my books.
932. There is an account of the rents paid for these three stations at that period? Yes.
933. Does that assist you at all? Not a bit.
934. Are not the rents paid usually in advance for the year? Yes.
935. At the time of the testator's death, was there not a large amount of money paid in advance for the current year ending 31st December? Yes, there should be.
936. When the executors filed the accounts, should they not have made a proportionate charge up to the 18th February, 1884? Apparently they should have charged for those six weeks.

- J. McDonald. 937. Should not the portion from 18th February to 31st December have been considered as an asset? I do not know what the executors should or should not do.
938. Did you receive some refunds from the Treasury on 8th March, 1884, amounting to £23? Yes. An amount of £36 7s. 4d. appears here.
939. For what year is that a refund? 1884 or 1885.
940. You could not get a refund in 1885 for 1885? It is a pre-lease refund. Pre-leases might finish any day, and you would only get your proportionate refund from the Treasury.
941. There is an amount to the credit of the banking account? This amount does not agree.
942. But there were refunds? There appear to be refunds granted.
943. Then they should be considered part and parcel of the estate at the time of the testator's death? Yes, apparently, if they were due.
944. At the time of the testator's death had you some sheep on the station belonging to the testator? Yes; if you refer to the report I had this morning you will see the number there.
945. Will you tell me what this document is? It is an account of Swift with John McDonald & Co. It is a debit against Swift.
946. For what? For shearing 5,641 sheep, 19th October, 1883.
947. Whose sheep? S. M. Swift's.
948. Where were they? They were shorn at Mungie Bundie. This was a charge incurred by him for the shearing of them.
949. Can you tell me whether those sheep left the station? I do not know when they left the station in 1883.
950. At the time of the testator's death were not those sheep on the station? I know nothing about them.
951. At that date were those sheep on the station? I cannot answer, they were shorn there.
952. Then were they not on the station? They might have gone off after shearing.
953. Is this your salary account at the time you were managing Mungie Bundie? Yes.
954. What was the rate per annum there? £200 per year.
955. When was that altered? I cannot tell you. At that rate it was £200 per year, according to this account.
956. Will you follow on the account and see? I do not see any alteration up to this point.
957. When was the account altered, and the amount increased? It appears to be some time in 1882, by the look of this ledger.
958. By whose authority was it increased? By my partner's and my own.
959. Was that mentioned in the deed of partnership? No; there was no rate mentioned to be given to any particular man in the deed of partnership.
960. *Mr. Simpson.*] Was it a matter for mutual arrangement? Yes; between the partners. The thing was getting too large, and I would not carry it on.
961. *Chairman.*] Was it altered after the testator's death? No; it is here—1882.
962. But that account was not closed until after the testator's death? Which account.
963. Whose writing is it? That is Mr. Peel's writing.
964. When was Mr. Peel engaged on these books;—was it after the testator's death or before?—  
*Mr. Simpson:* I object.  
*Witness:* I object.

TUESDAY, 14 NOVEMBER, 1899.

Present:—

MR. HURLEY,

MR. MCFARLANE,

MR. THOMAS.

W. M. HUGHES, Esq., IN THE CHAIR.

Elizabeth Swift called in, sworn, and examined:—

- E. Swift. 965. *Chairman.*] Do you wish to give some evidence with regard to the valuation of Mungie Bundie, Boolooroo, and Gravesend Stations? Yes.
- 14 Nov., 1899. 966. Did Mr. Pitt and Mr. Badgery go to Mungie Bundie, Boolooroo, and Gravesend Stations to value them for probate? No; they did not go on the stations, nor had they ever seen or been on them previous to Mr. Swift's death. Mr. R. R. Pitt told me so; and also that they gave the valuations as Mr. Hann directed them to do. Messrs. Pitt, Son, and Badgery acted as commission agents for both Mr. Swift and Mr. Hann privately.
967. Would their acting as agents for Mr. Swift give them a sufficient knowledge of these station properties to enable them to make the valuations? No; they could not make true valuations unless they went on the stations and took inventories of the stock, stores, lands, working-plant, &c. As agents, the business they did for Mr. Swift was selling stock that was purchased privately by him, and was not connected with these stations.
968. Did Mr. Swift put a value on these stations to your knowledge? Yes; I was with him when the late Mr. Goldsbrough, of Goldsbrough, Mort, & Co., offered him £130,000 for these properties. Mr. Swift refused, saying Mr. Goldsbrough could have them for £150,000. This occurred a few months before Mr. Swift's death, and I believe some letters passed about the price, &c., that Mr. Swift would take.
969. Do you know how Mr. Swift arrived at the value he put on? Yes; the 35,000 acres of freehold land he valued at cost price, £2 5s. per acre, about £79,000; 4,000 cattle at £4 per head, £16,000; 95,000 sheep at 10s. per head, £47,000; leaving Crown lands and improvements, horses, working plant, stores, &c., about £8,000; total, £150,000.
970. Would this have been a fair value at the time for probate? Yes; except that sheep and cattle had increased in value, sheep bringing as high as 26s. per head and cattle up to £16. The seasons on these stations up to Mr. Swift's death were exceptionally good, a lot of fat stock having been sold off during the season and all the stock were in prime condition.

971. If these properties had been sold do you think they would have realised the value Mr. Swift put on them? Yes; I firmly believe had these properties been put up to auction they would have realised up to £200,000. At this time there was a great demand for station properties; wool and stock were very dear; there were about 10,000 more acres secured and partly paid for that was not included in the probate; the stud sheep and cattle were usually sold separately; the pumping plant and improvements for running the water about 30 miles over the station was not mentioned in probate; the increase of lambs, about 30,000, would with the land have increased the price considerably over £150,000. I was offered £4 per acre for the purchased land. A syndicate had purchased Furricabad station and sold the purchased land as high as £11 per acre.

E. Swift.  
14 Nov., 1899.

972. Did Mr. Hann or Mr. Croaker inspect these properties for probate? No; they had never been on the stations; they knew nothing of them except what Mr. MacDonald, who was managing, told them. They did not inspect any books, &c., in connection with the working, or value, or expenditure.

973. Do you know if Mr. Lavender, who valued Baden Park for probate, went to the station and took inventories, &c.? No; Mr. Lavender did not go to the station, he had never seen it. Mr. Hann in letters and telegrams told him what values to put on. They put a lump sum of £50,715 on stock and station; they omitted the stores, which were considerable. There was a very expensive working plant, Tangye pumps, &c.; the 1883 season's wool, a large number of well-bred expensive horses, three teams of bullocks with waggons and tackle, furniture, &c., all of which did not appear in probate. They did not go through the station books, and could not possibly arrive at a true value without taking proper inventories.

974. Did Mr. Welman and Mr. Hodnett go to Mimosa and Snubba for the purpose of valuing them for probate? No; they told me they did not. Mr. Welman had never seen Snubba; he was Mr. Hann's partner at this date, and may have passed through Mimosa station. Mr. Hodnett had been on Snubba, working for Mr. Swift, in the years 1876-7, and was on Mimosa, managing, up to November, 1881. They did not take inventories, or go on the stations at all. Mr. Hodnett told me Mr. Hann made out the valuations and he and Mr. Welman signed them. They received £5 each for signing, and Mr. Lavender £10.

975. Mr. Hann and Mr. Croaker made a declaration for the purpose of probate, in which they declare Mr. Hann was half owner in Baden Park, Mimosa, Browley, and Snubba Stations. Can you, as one of the trustees, swear he is not? Yes. I can swear to the best of my knowledge, gained from my husband and from various books and papers in his estate, that P. Hann was not an owner of any part of these stations at the date of this declaration. Mr. Hann never paid any money or supplied any capital to make or constitute him an owner. These station properties absolutely belonged to my late husband, S. M. Swift.

976. Were accounts taken of the supposed ownership claimed by Mr. Hann at the time of getting probate? No; Mr. Hann always refused to show me the amount of capital he invested, or any moneys paid by him. He says there was no partnership deed between him and the late S. M. Swift.

977. Was Mr. Hann called on by the Court for accounts? Yes, by the infants, and a decree was obtained. The ninth paragraph orders that "an account of all dealings and transactions between Samuel Moffatt Swift, the testator, and the defendant, Phineas Hann, as co-partners, should be taken. This order was never complied with. Mr. Hann did not furnish an account of his supposed partnership dealings with the testator as directed by the Judge's decree.

978. Was Mr. Hann asked to prove his ownership of these stations? Yes. The Master in Equity, before whom the accounts were ordered to be set forth, just asked Mr. Hann if he was a partner with the late S. M. Swift, and Mr. Hann swore he was (see Master's notes), and produced only a copy, in his own handwriting, of a supposed memorandum of agreement, as follows:—

MEMORANDUM OF AGREEMENT.

9 February, 1877.

We the undersigned have rented the run called Snubba, on the Gilmore Creek, for the term of six months for the sum of £200, paid equally in cash, and have agreed to purchase stock and depasture them for the joint and mutual benefit of each party. All purchases and expenses to be borne equally, the management and superintendence to be under the control of Mr. Swift. All purchases and sales to be made only with the concurrence of both parties. Where stock are bought on bills which are to be given solely by Mr. Swift, Mr. Hann will provide for and pay his share of the same on due maturity  
S. M. SWIFT.  
P. HANN.

I never saw the original memorandum, and I believe I have papers in Mr. Swift's writing, and Mr. Hann's figures, showing a settlement of the transaction that this memorandum relates to. Mr. Hann paid half the expenses, namely, £208 16s. 1d., leaving due to Mr. Swift £47 16s. 7d. I can find the £208 paid into Mr. Swift's banking account by Mr. Hann's cheque. This is the only document produced as a partnership deed by Mr. Hann. It does not relate to the ownership of any stations.

979. Did Mr. Swift have business transactions with other men besides Mr. Hann? Yes; in stock—before and during the date of this memorandum. He had large transactions with Mr. Downey, the owner of Snubba, and several others. I can produce the settlements, &c., between them. The money for such transactions was found by Mr. Swift, the droving and work was done by the man who would share the profits. When the stock was sold they would settle up, and Mr. Swift would give Mr. Downey a cheque for his share of the profits.

980. Did Mr. Hann do any of the droving or work with the stock for which he received a share of the profits? No; Mr. Hann was a commission agent in partnership with Messrs. Wilkinson, Hann, Minchin, and Lavender in Sydney, Wagga, and Hay. Mr. Hann managed in Wagga, and knew about cheap stock when placed in their hands for sale. Mr. Swift was always a large buyer and seller of stock. His credit at the bank was undoubted, and a bill given by him during all his business career was never dishonoured. He gained certain information from Mr. Hann about stock on which he would make big profits. Occasionally, for this information, he would share the profits privately with Mr. Hann, employing drovers or perhaps give a third of the profit to a man for droving and taking all the responsibility.

981. Did Mr. Swift make much money in buying and selling stock as you describe? Yes; I know of big profits made by him in buying cheap stock. On one occasion, in 1878, he bought about 10,000 sheep for 4s. per head on a twelve months' bill, and while Thomas Hodnett was taking delivery they were sold for 10s. cash, making a big profit, and giving the use of the money for twelve months. Mr. Hann's firm probably received the commission on both sales. Mr. Hann did not share in the transaction. Hodnett bought, sold, and drove them; Swift making a profit of about £3,500 on the deal. This profit formed part of the purchase money for Mimosa station, the rest being made up by £1,500, and £2,500 sent to Hann

E. Swift. Hann as Swift's agent; also a bill of Swift's discounted by Hann's firm for £500. The bill was paid from Swift's account on maturity, other bills were discounted by the same means to enable Swift to pay cash for stock. He would pay the discount and interest. The purchase money for Mimosa came to about £8,100. Hodnett took delivery from Mr. Windeyer's agent, "for and on behalf of S. M. Swift." The delivery note is in Swift's and Hodnett's writing. Hodnett is in the Colony, and could swear to the transactions. He also managed Mimosa for about four years, paying for the improvements, the working expenses, &c., by cheques signed "J. Hodnett, pro S. M. Swift." Mr. Swift found the money to meet these cheques. Hann did not find or pay any part of the expenses.

14 Nov., 1899.

982. Have you the documents showing the purchase and workings of the various station properties owned by your husband? Yes; these documents, books, accounts, &c., will be handed in to the Committee by Mr. Sandell, given to him for that purpose by me, and also to prove to the Committee that Mr. Swift, at the time of his death, was the absolute owner of the station properties mentioned for probate, he having paid all the purchase-money and for working, expenses, &c.

983. There was an account opened at the Bank of New South Wales; did Mr. Hann pay any capital into that account? No; I may refer to Mr. W. T. Ball's evidence on that point.

984. Did Mr. Hann and Mr. Croaker, as trustees, without consulting you, as co-trustee, set forth in the application for probate that Hann was the half-owner in Mimosa, Baden Park, Browley, and Snubba Stations (about £50,000 value); also that J. McDonald was half-owner in Mungie Bundie, Boolooroo, and Gravesend Stations, value about £50,000 without accounts being taken, or substantial proofs, deeds of partnership, &c., being produced to prove their ownership? I was not consulted, and no accounts were taken at the date of their declaration for probate. No proofs of any kind were ever produced to show or support J. McDonald's and P. Hann's claims to these properties, only Mr. Hann's and Mr. Croaker's oath in their declaration to obtain probate. I resented those claims, knowing they were not legitimate; and I offered to Mr. Hann to employ and pay the late Mr. Durham, accountant, to go through all Mr. Hann's accounts, &c., and all Mr. Swift's accounts; and that, if Mr. Durham found that Mr. Hann and Mr. McDonald were entitled to even more than the half they claimed, I would willingly join in signing over to them all property found to be theirs. I also, as trustee, wanted to be sure that their claims were just. Mr. Hann and Mr. McDonald refused this offer, and relied on the statement for probate to support their ownership.

George Sandell recalled and further examined:—

G. Sandell.  
14 Nov., 1899.

985. *Chairman.*] Mrs. Swift, in her evidence, states that Hann was never a partner of her husband, that Pitt, Badgery, & Co. never went on to the stations to value them, that Hann never paid any money into Swift and Hann's banking account, and that that portion of the estate is under-valued for probate. She also states that Mr. Swift had an offer from Mr. Goldsbrough of £130,000 for Mungie Bundie, Boolooroo, and Gravesend, which properties were afterwards valued for probate at £106,500. In your former evidence you quoted from various letters, and stated your opinion that they showed that Mr. Hann was not a partner with Mr. Swift in those properties;—what is your opinion now? I am still firmly of that opinion.

TUESDAY, 21 NOVEMBER, 1899.

Present:—

MR. HURLEY, | MR. McLEAN.

W. M. HUGHES, ESQ., IN THE CHAIR.

Phineas Hann sworn and examined:—

P. Hann.  
14 Nov., 1899.

986. *Chairman.*] Were you one of the executors of the estate of the late S. M. Swift? Yes.

987. Did you and your co-executor, the late Mr. Croaker, file an affidavit for probate on 5th April, 1884? We did so, but I cannot tell the date.

988. In your application did you give an account of the properties in which the testator was interested? Yes.

989. In the minutes of evidence submitted to Parliament in the second session of 1898, do you recognise printed copies of the statements submitted by you? It is six years since I looked at the documents, but I believe these are the same.

990. Do you recognise balance-sheet "B"? I recognise it. As far as my memory serves me I believe the figures to be correct.

991. Who valued Baden Park station property? Mr. James Smith Lavender, recently dead, and the manager, Mr. Webb, together.

992. Was Mr. James Smith Lavender a late partner of yours? Yes, previous to my joining Mr. Swift.

993. Was Mr. Webb an employee on the station? Yes, he was the manager.

994. Both of these valuers were personally known to you? Yes.

995. Do you recognise this letter-book, No. 11? Yes; I should take this to be the partnership letter-book. The letter at page 10 is in my writing. The whole of the letters were written by me.

996. Did you write the letter dated 26th March, 1884, page 377, to Mr. Lavender? Yes.

997. Will you read the letter? Yes, it is as follows:—

My Dear Lavender,

Wagga Wagga, 26 March, 1884.

I have your message re Baden Park valuation, and have replied, offering to send all particulars by wire if you can arrange with Webb to act as valuator with you, and I will send all particulars and my views by wire. We may differ a little over values, but the Commissioner does not dispute over valuation for stamp duty. It is only to see that we do not under-estimate and defraud the revenue. My figures may appear large, but I consider the place worth it, and, although Webb may not think there are so many stock on it, still they ought to be there and have been lost since shearing. I do not like to think there are less than those I give the numbers of. I enclose my statement of run and stock, and have made the others from Mimosa, Browley, and Snubba exactly the same. H. Wellman and T. Hodnett have approved the valuations, and Fitzhardinge drew up the necessary valuation forms and appended to the statements. Kindly hurry the thing through for me, as I am so much more backward than I expected. I thought everything was ready for being done the moment I went to Sydney, and, when I begin to move in the matter, find that really nothing has been done, and that it will be fully a week before they are ready for us in Sydney.

998. Will you look at this press copy book containing telegrams sent to station? Yes. These are the telegrams I used to send to the station.

999. Will you turn to page 175 and tell us if the impression of the telegram there is a copy of one written by you? Yes; it is a telegram sent to Henry Webb:—

Inspect wethers, and if good and real bargain, close for them, provided offer right without words, approved bill, but binding sellers; accept executors or my own bill. This purchase must be made only subject to your own position for lambing and carrying extra sheep. Do not want risks, only certainties. See Lavender about particulars of run for valuation. He will explain.

1000. Was the telegram at page 177 written by you? Yes. It was as follows:—

Baden Park, known as Moana Blocks S and T, Moira Plains, A. Worked together as one station, comprising an area 208,000 acres; rental, £76 per annum. Fenced and improved; divided into eleven sheep paddocks and three small paddocks; one well, twenty-four large and small tanks, house, wool-shed, tents and outbuildings; working plant, including horses worth £1,800; stock, 31,000, as follows:—3,141 aged ewes, 7,032 4-tooth ewes, 9,124 2 and 4-tooth ewes, 4,038 2-tooth wethers, 6,948 weaners, 200 ration sheep, value £50,000, with everything given in; 100 bales wool, £1,000.

1001. Whom did you send that to? Mr. Lavender.

1002. In that telegram you said to Mr. Lavender, who was a valuator, the details, in your opinion, of the value of the station property? Yes.

1003. Do you think that was a fair and disinterested way of obtaining a proper valuation? Yes.

1004. Will you look at this document? Yes; it is evidently a copy of Lavender and Webb's valuation.

1005. Were there no more detailed statements provided as to the number of sheep and the extent of country? I do not suppose so. This telegram follows my letter to Mr. Lavender, and apparently they based their valuations upon my figures.

1006. Does this form the basis of the statement submitted for probate, being a telegram sent by you to Mr. Lavender, who was not on the station? Yes; and there was also the manager of the station, Mr. Webb, who had a more accurate knowledge.

1007. Do you admit that the data upon which the valuator formed his opinion was supplied by yourself, and that he did not go to look at the station himself? No; but he had sufficient knowledge of the property without going to look at it.

1008. How long would a valuator take, to properly inspect the property, to go over it and value it? That is a thing which is never done, as far as my knowledge is concerned. It would entail too much expense.

1009. If you were going to lend money on the mortgage of a station, what would you do? Then I would send a man out. It would depend upon the amount he required, and what I knew myself of the property.

1010. Would you take the borrowers or an interested party's statement of the assets? It would depend upon what was required.

1011. You do not deny that you were an interested party? Yes. I was a partner and an executor.

1012. Could the valuator have inspected the whole property of over 200,000 acres, with 188 miles of fencing, and a large number of sheep, in ten days? Yes; but as he had to go from Hay it would take him rather longer.

1013. Could it be done in a week? No; not if he went into all the details which you mentioned.

1014. Supposing you had to value a property of the same kind, how long would it take you? It would depend upon how far I had to go. If you are on the place, and you could be driven around very quickly, you could do it in three or four days; but if you are going from Hay it would take three or four days' driving to get there.

1015. *Mr. McLean.*] What means would he have in a case of that kind of discovering the number of sheep and cattle? They would have to be yarded, or he would accept the manager's books. In a case of that kind the manager's books would be taken, because he keeps an accurate account of the number of sheep in each paddock.

1016. *Chairman.*] Is this Mr. Roope's account for preparing the valuation? Yes.

1017. Your telegram to Mr. Lavender on which he founded his valuation was dated 26th March, 1884, and on the following day it appears that Mr. Roope attended on Mr. Lavender to take instructions to prepare the valuation of the station, &c.? Yes.

1018. Apparently no interval at all elapsed—Mr. Lavender only awaited your instructions? Yes.

1019. Having done that he just prepared his valuation as you stated it? Yes; but he had Mr. Webb there to verify the statements and assist him.

1020. Do you say that you could not make the valuation yourself in less than four days? That is only if I went on the spot and counted the sheep. Mr. Webb was there also, and he gave me the statement that the sheep were in the paddock. It was not necessary to count them.

1021. This valuation does not supply any details, it accepts your system as correct; that is verified by the fact that all the details coincide, except that he valued the property at £50,709, while you valued it £50,000? Yes; Mr. Webb was there with him at the time. He would be able to supply the particulars, and verify my statement. Then Mr. Lavender would act upon it.

1022. *Mr. McFurlane.*] How did you arrive at the figures which you gave? I got them previously from Mr. Webb, who was manager of the station.

1023. Then Mr. Lavender took Mr. Webb's figures? Yes.

1024. Mr. Webb, being one of the valutors, he would be practically accepting his own figures, and not yours? Mr. Webb would verify them as the figures which he supplied to me previously.

1025. Then, after all, they were Mr. Webb's figures? Yes.

1026. What was the object in supplying these particulars to Mr. Lavender? Simply to get the valuation completed.

1027. *Chairman.*] Were you not aware that Mr. Webb was also one of the valutors? Yes; I stated in my telegram that he would act and value with Mr. Lavender. I had not appointed him.

1028. Was that before or after you furnished Mr. Lavender with the particulars? It was evidently on the same day.

1029. Did you know when you furnished the particulars that Mr. Webb was a valuer? I cannot tell you whether or not Mr. Lavender had replied to me, saying whether Mr. Webb would act or not. Every document I had was filed in the Equity Court.

- P. Haun. 1030. As an executor, were you aware that the valutors were appointed to value the property before you furnished those particulars? Mr. Lavender was, because he was appointed at my instigation.
- 21 Nov., 1899. 1031. Were you not aware that there would be two valutors? It is usual.
1032. In furnishing those particulars to Mr. Lavender were you aware that the second valuer was appointed? I do not think so, but Mr. Webb, being on the spot, we took advantage of that fact, if he would accept the position. Mr. Webb accepted the position without payment.
1033. If he accepted the position of valuer there would be no necessity for you to furnish particulars, as Mr. Webb would know the value? I thought there was a necessity for it, and I think so still. Mr. Lavender was the one whom I had asked to act.
1034. *Mr. McLean.*] As a matter of fact, the valutors were appointed by the executors? Yes.
1035. And you were responsible for the valuation submitted to the court? The valutors are responsible for that.
1036. But you were responsible to the court? Yes, necessarily so; but the valutors were independent persons, acting independently to us.
1037. *Chairman.*] Your manager would hardly be likely to say anything to Mr. Lavender which would be contrary to your interests? Mr. Webb was a very conscientious man, and you could not turn him away from his opinion.
1038. But would he not lean a little your way? Perhaps so; but I would not like to say so.
1039. For instance, if his memory failed him; and he omitted to mention any asset, that would not appear in the valuation, because Mr. Lavender relied upon yourself and upon Mr. Webb's statement; therefore, if either of you forgot anything it would not appear in the statement for probate? It would not.
1040. Is this the original horse return of Baden Park from January, 1884, to 1885? I suppose so; it is in Mr. Webb's handwriting.
1041. You see that he states there that on the 1st January, 1884, there were ninety-four horses? Yes.
1042. Apparently, on the 18th February, 1884, there were no horses there at all? They come in as working plant.
1043. Were there any horses sold between the 1st January, 1894, and the date of the testator's death? I do not know.
1044. Is this a return for the year ending 1885? It says, "sold to date fourteen."
1045. Ought there to have been any horses on the station at the testator's death? Of course, there were.
1046. How many? I do not know whether there were ninety-four or eighty.
1047. But there might have been? Yes.
1048. In the statement that you gave to the valutors, are there any horses disclosed there? They would come under the head of "working plant."
1049. Do you sell your working plant in this manner;—this account which I show you proves that these horses were sold shortly afterwards by an agent at £7 10s. each? You puzzle me. I do not know anything about that. I do not believe one of the horses mentioned in this account were on the station. This account mentions the Hunter, which was a good many hundreds of miles away from Baden Park.
1050. Were the cattle included in the working plant? They would come in under the valuation of £1,500.
1051. Are there any particulars given of that? No, because we lump them.
1052. Which £1,500 do you mean? Working plant, wool, sheep, &c.
1053. Do you mean to say that cattle and horses are included there? I take it that they were included in those valuations.
1054. Do you say that it was unnecessary to value them separately? I think so.
1055. If I show you your valuations which you filed on the application for probate, where the number of sheep and horses was given, do you say that was unnecessary? Yes.
1056. For accuracy, would it not have been desirable to have given the details correctly? It never was done. When selling stations we sold the station for so much, and the horses and cattle and everything were given in.
1057. In valuing a partnership estate, is it not necessary for future reference that everything should be given? That might appear to be the case afterwards, but I did not think so at the time.
1058. You admit that eighty head of cattle were not included in the valuation? No; I say they were included in the total valuation.
1059. What was the homestead worth? I cannot tell from memory, but I dare say it would be worth from £300 to £400.
1060. Do you call cattle working plant? Yes; teams of bullocks and milking cows.
1061. What do you call working plant besides horses and bullocks? Drays and implements, and everything about the place.
1062. Did you have a very large stock of drays? Only just what was necessary for working the station. We sometimes had to get relief drays there for drovers.
1063. Do you say that the reason why the cattle and horses were not specified was because the whole thing was put in as one lot? Yes; it is a sufficient valuation.
1064. *Mr. McLean.*] Was this station primarily a sheep station? Yes.
1065. Did you breed cattle for sale on the station? No.
1066. Whatever cattle were on the station were there for the purpose of working it? Yes.
1067. Were they working bullocks and milking cows? Yes.
1068. Did you breed cattle for the market? No.
1069. Did you breed horses for the market? No.
1070. Were the horses and cattle on the station included in the valuation as working plant? Yes.
1071. *Chairman.*] When you found that property had been omitted from your statement filed for probate, did you take steps to supply an amended account? I do not remember anything of the kind. I do not remember any omissions.
1072. Do you not recollect the fact that you filed, or caused to be filed, a second statement? I do not for the moment.
1073. Mr. Lavender's valuation is £50,709; yours is £50,000;—how do you account for that difference? Simply because I thought £50,000 was a sufficient sum.
1074. Was it owing to any action on the part of your co-executors or co-trustees that any amendment, if any, was made? I do not know anything about it.

1075. Was the valuation, as agreed upon by yourself and Mr. Lavender, acceptable to the other executors? Yes.

1076. Will you look at the letter on page 398 of the letter-book and see if it was written by you? Yes.

1077. Is this an extract from the letter:—

I find you did not estimate the value of about 100 bales of wool that Webb thought was on the place, and, as your views exceeded mine by about £700, I am going to leave the wool out of the schedule altogether.

? Yes; that is right.

1078. How do you account for the omission altogether of the 100 bales of wool? Simply because I thought the valuation for the whole property was too high.

1079. Is that the only reason you give? Yes.

1080. You would hardly say it is the custom for an executor in a partnership estate to amend the valuator's statement because he thinks it excessive? I do not know; it was my first experience, and I thought I was acting within proper limits.

1081. Was the Court made aware of this difference of opinion between yourself and Mr. Lavender in respect of this item of 100 bales of wool? I should say not.

1082. How much was wool worth per bale then? About £10.

1083. Did you leave those 100 bales of wool out of the statement filed for probate? I think so.

1084. Was any wool disclosed at all in the application for probate? I cannot say.

1085. Is there any wool included in any of the probate statements? There is no wool included in this printed statement; all wools were at that time sent off.

1086. Is there not a letter dated 25th April, 1884, sent to Mr. Webb regarding the wool? Yes.

1087. You knew there was some wool on the station? Apparently about 100 bales. The letter mentions "about 100 bales, or 10 or more tons, of scoured wool, which you tell me is in Sydney."

1088. If you look at the statement of assets and liabilities of 19th February, 1884, you will find that there were 128 bales of wool on the station, and there was wool in transit—264 bales of wool consigned to the New Zealand Company;—how do you account for that? The wool consigned to the New Zealand Company was wool on which certain advances have been got.

1089. Was it a partnership transaction? Yes.

1090. Was Swift's estate credited with its quota of that? Yes.

1091. There are 128 bales—that is, the exact number on the date of the testator's death—which were not filed? That is the 100 bales which you have been talking about, and they are not included.

1092. Is that the exact number? I do not know.

1093. Will you swear that there were not 128 bales? No.

1094. Is this document produced a letter written by Mr. Pitt to Mr. Hann, about this station, on the 9th April, 1884, offering £50,000? Yes; that is right. He says in the letter:—"I mention £50,000 as the probable price."

1095. Did you send him in a telegram in reply? I do not know.

1096. Why did you not sell for £50,000? It was shortly after Mr. Swift's death, and we thought the property was worth more at the time.

1097. Did you not put it down at that value for probate? Yes; but you always expect to get more for a property.

1098. Did you send the telegram produced to Mr. Pitt? Yes; I state in that telegram that I want £60,000 for Baden Park.

1099. Is that dated the day after his death? Yes.

1100. And you placed it in the probate statement at £50,000? Yes.

1101. Is this one of the station letter-books? It is marked, "Private letters."

1102. At page 157 do you not state that Baden Park was worth £42,000, and the Moira Station was worth £21,000; that would be a total of £63,000? That was twelve months earlier.

1103. I am speaking of the valuation made at the time of the testator's death in February, 1884—nine months previously you valued it at £63,000, and you valued it for probate at £50,000? Yes; I do not see anything particularly wrong in that.

1104. Would not that point to the fact that the valuation you filed for probate was not an over-valuation? It was an over-valuation as matters afterwards turned out.

1105. At the time of testator's death was that property over-valued at £50,000? It was, with the number of sheep then on it.

1106. Although you omitted to include the wool? Yes.

1107. Although you valued it to Mr. Pitt a week or two afterwards at £60,000? Yes; in order to get as much as I possibly could.

1108. Did you ask £75,000 for it? Not within my knowledge.

1109. You made a valuation at Baden Park stating the number of sheep shorn at 36,000 with cattle, and the number of horses not wanted for working the station, which Webb thinks ought not to be given in—price, £65,000;—that was made shortly after the testator's death? I cannot tell you for what purpose I might have written it down. I cannot say what my actual valuation was.

1110. Did you ever write to Mrs. Swift and say, "You are quite right about Baden Park being a valuable property, or rather it will be, and it is worth £10,000 more than I put on it"? I do not remember it.

1111. That letter was written on the 13th October, 1884? Of course I wrote it, if it is in my handwriting. Naturally enough I would, to all outsiders, keep the property up to the highest value, and try to get the most for it.

1112. Do you consider that Lavender and Webb's valuation was a *bona-fide* one? Yes.

1113. It was not made to deceive? I do not see where the deception is.

1114. You omitted the wool? Yes; because I believe the properties were fully valued.

1115. But that was concealed? It was not shown.

1116. We will now take Mimosa West Station;—is this a valuation of the station? It is my handwriting. I do not know whether it is my valuation, but I assume it is.

1117. How many acres of land are given? 960 acres freehold.

1118. Does that contain the whole of the land in which the station was interested? I assume so.

1119. Are you sure? No.

1120. But that is in your handwriting? Yes.

- P. Hann.  
21 Nov., 1899.
1121. Who valued it? Mr. Welman and Mr. Thomas Hodnett.
1122. Was Mr. Welman a former partner of yours? He had been a partner in many transactions with me. We had a station together.
1123. Was a Mr. Hodnett a station employee? No; he was manager of Mimosa West when we first bought it.
1124. Did you write out the valuation? This is my handwriting.
1125. Did you write out the valuation, and did they sign it? I cannot tell you how it was done. I cannot tell whether it was based on my figures or theirs. They each knew the property.
1126. Did they inspect it? I cannot say that they went specially to inspect it.
1127. Was it done in the same manner as the Baden Park valuation? Yes.
1128. Did you pay the valuers anything for valuing? Yes.
1129. Is it included in the accounts? I think so.
1130. How much was paid to them? I fancy somewhere about 5 guineas each.
1131. Was a man named Henry Austin employed on the station? At one time he was a drover and then a station employee.
1132. Did he take up a selection on that run? Yes.
1133. How many acres? I think 300 or 400 acres.
1134. Was that taken up in the interests of the station? In his own interests, I think.
1135. Are you sure? Yes.
1136. Did you have any agreement with him? No; only to lease his land.
1137. Is this agreement produced the one you had with Austin? Yes; an agreement to lease.
1138. Was £100 drawn by you from the bank at Wagga on 24th January, 1884, to pay the deposit of 5s. an acre on that selection? That would be lent to Austin.
1139. Under that agreement? No.
1140. Was it to take up that selection? Yes, for himself.
1141. In the interests of the station? The station would have the grass.
1142. Was it taken up in the interests of the station? I do not see what you are driving at. I lent the man money to take up the land. I lent it from the station money so as to have the use of the grass.
1143. When you valued Mimosa run, did you include the amount which Austin owed? I do not know whether he owed it.
1144. Did you lend him the money with the idea of getting the selection for yourself? No.
1145. Did you do so in any of those cases? Certainly not.
1146. You made an agreement with Austin on the 10th March, and you had advanced the money to take up that selection on 26th January, 1884—on the very day that Austin paid the Land Agent? If I did so it was with the knowledge of my late partner, Swift.
1147. Was it taken up in the interests of the station and with the object of belonging to the station? You may put it that way if you like. There was no liability on the man's part. If he wished to keep the land it was his.
1148. Was he an employee? He might or might not be. I cannot tell from memory.
1149. Was Gore a station employee? Yes.
1150. Did he take up a selection of 640 acres on your holding? He took up some; I think it was 640 acres.
1151. Did the station advance 5s. an acre to take up the selection? I think so.
1152. Was that included in the probate statement? Not that I know of.
1153. Then it was omitted? I do not see how it was omitted. One could not include a thing which one had no claim on.
1154. You paid the money for it? You might lend a man money; but if you look upon it as a doubtful debt you may never get it.
1155. Was it transferred to the Bank? Yes, afterwards.
1156. Is this the agreement with Gore? Yes; it was signed by Swift and myself.
1157. Did Alexander Robert Orr take up land on the station? He took up land for himself.
1158. Did the station advance £80 to Orr on 2nd May, 1884? Very likely.
1159. Was that included in the probate valuation? It was not necessary on that date.
1160. Did Pursor take up a selection in the station's interests? He took up a selection for himself.
1161. Did the station provide the cash for the deposit? I think so.
1162. Was that included in the probate valuation? Not that I know of.
1163. Was it omitted? It had no right to be there.
1164. Did the station provide the funds? Yes; it was one of the things for which there was virtually no asset. The grass was the asset at that time.
1165. Did Pursor leave his selection to you by will? Yes; and I transferred it to the station.
1166. Did the station get it afterwards? Yes.
1167. Did Cody take up a selection? Yes.
1168. What was he? Station manager.
1169. Did he take it up in his own interests? Yes.
1170. Did he provide the money for the selection? I think it was lent to him like the others.
1171. Who carried out the improvements on any of those selections? I do not know. Cody's selection fell through. Pursor's became mine on his death, and then the improvements were carried out.
1172. Prior to his death, who carried out the improvements? I suppose he did.
1173. Will you swear that was so? No. You are taxing my memory about things which I did not do myself.
1174. Who carried out the improvements on Orr's selection? Orr and Cody together would do it.
1175. Who provided the funds to pay for the improvements? I cannot tell.
1176. How is it you are unable to tell? It is so long ago, and I have not been able to look up these particulars in any way.
1177. Did a man named Behan take up a selection on the station? Yes, 640 acres.
1178. Who provided the funds to pay for the deposit? It was a loan to Behan from the station, which was to have the benefit of the grass.
1179. Was he an employee? No, he was a labouring man.
1180. Was he engaged by the firm? No.

1181. Did a man named Yourall take up a selection in the interests of the station? I forget him.
1182. Was he not a station employee? He might have been.
1183. Is this a station ledger which I produce? Yes.
1184. Do you see the wages account? Yes, I see he was engaged as a boundary-rider on the station. He was paid £1 per week in 1882.
1185. Did he take up a selection on the 8th March, 1883? I do not know on what date he took it up.
1186. His land, if it was taken up in the interests of the station, was not included in the statement in the application for probate? I do not see how it could be.
1187. Was it not taken up in the interests of the station? The station might have lent the man the money.
1188. Then it was a debt due to the station? I do not call it a debt due when you get the grass for it. It was one way of obtaining rental beforehand, if you took the risk attached to it.
1189. Was there not a refund in that matter? I do not know; there might have been.
1190. You got the value back for the estate ultimately; but did not pay probate duty? Perhaps not.
1191. Was it concealed in the statement for probate? There was nothing to show.
1192. Did you say that Mr. Gore's selection was not taken up in the interests of the station? I do not see what you mean beyond what I have already explained.
1193. Was Gore's selection taken up *bona fide*? I think so.
1194. Will you swear it was? He had the option to keep it if he wished.
1195. Was it *bona fide* on the part of Gore? You had better get him to answer that.
1196. Do you say that all those selections were taken up, and the money advanced to those selectors for the grass rights? Yes.
1197. Were they all employees? Some of them were, and some of them were not.
1198. Who were those who were not employees? Behan, Hanson, and some others.
1199. Was Mitchell an employee? No.
1200. Was he a servant of yours? No.
1201. Was he a relative of yours? He might have been.
1202. What was Hanson? He has been a drover of mine since then, and he might have been before.
1203. What was he at the time he took up this selection? I do not know.
1204. If Gore has stated that he took up his selection *malafides*, would you contradict him? I would contradict him to a certain extent.
1205. If he stated that he did not take it up in his own interest, but in the interest of the station, and that he had no knowledge of taking it up in his own interest? I do not know what he may have said.
1206. Do you say it was not taken up in the interest of the station? I say it was taken up by Mr. Gore, and he had the power of keeping it if he wished.
1207. Here is an agreement to lease for ninety-nine years, at a rental of £10 per acre, the station to do all the improvements and pay all the annual instalments;—do you say now that the selection was not taken up in the interests of the station? It was taken up for its grazing properties.
1208. Did it ultimately come into the station? Yes.
1209. Did you give him any extra consideration beyond the amount expressed in this lease? I do not know.
1210. *Mr. McLean*] Were the affairs of this estate of S. M. Swift's ever finally adjusted? Yes.
1211. What was the net amount realised in connection with the whole of the properties? When I say finally adjusted I mean that the whole thing has been gone through in Equity by the Master, and an award given on it. The properties, Mimosa West and Baden Park, were taken over by the Bank of New South Wales in consequence of certain actions of Mrs. Swift. Those properties are still in their possession, and how they stand at present with regard to liabilities I cannot tell you.
1212. Have they passed away from the control of the executors? Yes, at that time.
1213. Have all the other station properties passed away? Yes; Snubba and Browley were sold by me, and the proceeds and all matters accounted for in the accounts passed by the Equity Court. Mungie Bundie was sold by order of the Union Bank for nonfulfilment of conditions by J. McDonald & Co. J. McDonald was partner with Mr. Swift in that property.
1214. Are you prepared to say what was the net amount the estate realised to the executors? Not without going into the figures. We are very much deficient. The estate is insolvent.
1215. You swear that the estate was an insolvent estate? Yes; and there were no assets. I am positive on that point. It would not have been so if Mrs. Swift had acted in a different manner. She would have had some assets for herself, but she ruined my assets, and the estate is insolvent.

THURSDAY, 23 NOVEMBER, 1899.

Present:—

MR. MCFARLANE, | MR. McLEAN,  
MR. THOMAS.

W. M. HUGHES, ESQ., IN THE CHAIR.

Phineas Hann recalled and further examined:—

1216. *Chairman.*] Will you look at station press-letter copy-book marked "S" No. 1, at page 4, and say if those are the particulars of Browley valuation? Yes.
1217. Was that run inspected by the valuers? No; it was just the same as the others.
1218. Who valued that property? I do not know; but I think it was Mr. Welman and Mr. Hodnett. I am not certain. Mr. Welman was a grazier; Mr. Hodnett had been a station-manager of ours. He was then a large sheep dealer.
1219. Is that the valuation you filed on your application for probate, which you swore to on 5th April, 1884? Yes.
1220. Was the land valued therein at 30s. per acre? Yes.
1221. Ten thousand five hundred sheep, at 5s. 6d. per head; two horses, £16; six head of cattle, £18; and the furniture and sundries at £100, making a total of £13,317 10s.? Yes.

P. Hann.  
23 Nov., 1899.

1222.

- P. Hann. 1222. Will you now look at the station press-copy letter-book, No. 11, page 418;—on 3rd April, 1884, you wrote to Mr. S. Payne, and therein stated that Messrs. Macks have bought Browley? Yes.
- 23 Nov., 1899. 1223. At page 419, is that your letter to Messrs. Mack on the same date, in which you say, "In accordance with your wish in yesterday's second telegram, I have to-day had prepared by Messrs. Fitzhardinge and Coleman, the agreement for the purchase and sale of Browley property and stock to you"? Yes.
1224. Then Browley was sold by you on the 2nd April 1884—that was on the day before you sent this letter? Yes.
1225. That was three days prior to your application for probate;—how do you account for that? The only way I can account for it is that that was an assumed proper valuation of the property, and the other was the result of an actual sale. The sale was made after the valuation was made. I naturally got as high a price as I could for any property.
1226. Three days before you filed your application for probate the property was actually sold? Yes.
1227. Was that amount really what ought to have been tendered in the application for probate? I do not know. Of course we have different views on the matter.
1228. Will you look at document 194; it is the sale note of C. J. Griffiths & Co., £2189s. 5d., commission for the sale of Browley Estate? Yes.
1229. So that on the 4th April the transaction by the agents was completed? Yes.
1230. £14,506 16s. 9d. was the price that Browley was sold for, on which commission to the agents was paid, and the valuation for probate was £13,317 10s. 3d.? Yes.
1231. This is a letter of yours, 2nd April, 1884, to Mr. Webb, the manager, in which you say "I am glad to say that this morning I have closed for the sale of Browley, and this will ease me another £15,000"? Yes. For the moment I cannot think of all the particulars of the sale of Browley. I have an idea that there was another piece of land included, although the documents only show the same acreage. The land was sold at 5s. per acre more than it was put down in the valuation for probate.
1232. How do you account for that? I got a better price for it.
1233. How do you account for filing a value of 30s. per acre when you sold the land for 35s. per acre two or three days beforehand? This valuation was already made, and was in the hands of Abbott and Allen. They knew of the sale, and they did not say anything about it. I did not think any more of the matter.
1234. Mr. Thomas.] Would the valuation have been in days before the 5th April? Yes.
1235. I presume you would have assisted the valuers? I would give them all the particulars.
1236. Did they examine the property previously? No; but they knew it.
1237. Was that previous to the 2nd April? Yes. We gave 30s. per acre for the property, and I suppose they considered that was its full value.
1238. Had the valuation been sent in for probate a week before you sold the property? Yes, and perhaps more. My instructions from the Bank of New South Wales were to get everything hurried through and prepared as fast as I possibly could, because it was necessary to ask for a large advance to carry on Swift's estate, as well as the estate of Swift and Hann. It was a very large transaction, and it was necessary to hurry. I was doing it as fast as possible to get probate granted, so as to be in a legal position to act.
1239. Mr. McLean.] I notice that these balance-sheets and this affidavit applying for probate were sworn before Mr. Fitzhardinge, of Wagga, on the 5th and 6th April, and balance-sheet "B" is sworn on the 5th day of 1884, which, I suppose, would be April;—were the balance-sheets and valuations prepared some days prior to the dates upon which the affidavits were sworn? They were necessarily prepared prior to that. These were, I suppose, the dates on which I swore to them.
1240. Who prepared the balance-sheets, sworn to on those dates? I suppose I must have done it myself, with the assistance of a clerk.
1241. Are you quite sure on that point? I am not; but if the documents are in my handwriting I admit it at once.
1242. Do you remember going to Fitzhardinge's office to swear these? He was our solicitor, but I do not recollect the exact circumstances. I would necessarily go to him. I remember having a dispute with Abbott & Allen, who told me I had no right to employ Fitzhardinge, as they had been appointed solicitors to the estate. I replied that he had always acted for us, and that when it was necessary to do anything for Swift and Hann I would employ him.
1243. You cannot say for certain that you prepared these statements yourself? Not of my own knowledge, now, but I daresay the books show it.
1244. Have you any information in the letter-book before you that will show the actual date upon which you did prepare this statement and valuations in reference to the Browley property? Only the date 26th March, 1884. That is the date on which it was copied into this letter-book.
1245. Chairman.] The idea that the property was worth 35s. an acre did not occur to you for the first time on 15th March? No. Naturally, if I saw a chance, and thought the buyer would give 40s. an acre, I would have asked for 40s. an acre.
1246. You do not mean to say that if you had known that you were going to sell the place for 35s. an acre you would swear the valuation at 30s. an acre? I do not suppose I should, because there are other matters where I had made actual sales, and where I gave the actual results of the sales.
1247. It is clear that you put in a statement valuing the land at 30s. an acre, it turned out that you were undervaluing the estate, and it was sold for 35s. an acre;—on the 6th April you swore the valuation at 30s. per acre, and you never said a word that you were in error? It never once occurred to me.
1248. Were all the sheep which were included in the valuation sold to the Macks? From the statement, apparently not. There are 10,500 sheep in the valuation for probate, and 8,503 were sold to the Macks.
1249. How do you account for that? I do not know whether they died or not; I do not know what became of them. I know they were very poor sheep.
1250. You filed an application for probate in which you valued the run at £13,317 10s., and you sold the run for £14,762 13s. 11d., and in this increased price there was not included 2,000 sheep, which were put down in making up the valuation of £13,317? I do not know what became of them.
1251. You do not deduct the commission that was payable to the agent?
1252. Here is a letter by you to Mrs. Swift on the same matter;—you say: "I have disposed of Browley to the Messrs. Macks; fortunately this will give the estate £15,000 more"? Yes. The unfortunate people who went into the station lost by it.

P. Hann.  
23 Nov., 1893.

1253. Now, with regard to Snubba Station, is that your valuation? Yes.
1254. Was that written by yourself? Yes; on the same date, 20th March.
1255. Who valued this property? The same valuers, I think.
1256. You prepared it yourself practically? I wrote out this statement.
1257. Did they prepare the valuation, or did you? I suppose I assisted them.
1258. Did they inspect the property? No; but Mr. Hodnett knew it well; he had been living on it.
1259. The value of the land is placed at £2,500? Yes.
1260. Did not Pitt, Son, and Badgery sell it on the 6th October, 1884, for £5,000? Yes.
1261. Was that for the run alone? Yes.
1262. How do you account for that? Because I got more than it was worth considerably.
1263. To whom was this sold? To Mr. Falkner.
1264. Did you file an amended statement in probate with respect to this? No; there was too much deficiency in other matters.
1265. You admit, with respect to Snubba, that you received an amount greater than set down in the application for probate? Yes; the sale was actually made by Mrs. Swift conjointly with Pitt. I scarcely had anything but a consenting part in it.
1266. The sale was actually completed? Yes.
1267. Do you say that Baden Park, Browley, and Snubba were not inspected for valuation? I have said before that they were not properly inspected; they were known to the valuers.
1268. Were inventories taken? Not that I know of.
1269. Look at station book No. 7;—that is a letter to McDonald from you? Yes.
1270. Look at documents 507 and 508;—that is from Mr. McDonald to you? Yes; it is dated 20th March, 1884.
1271. You see there this statement:—"Herewith I send an approximate statement of our places, which you can make out to your own liking;—these are quite near enough"? Yes; and it goes on to say, "I would urge you to push probate through quickly."
1272. Did you take any action, seeing that it was only an approximate statement that McDonald sent you to test it as an executor? No.
1273. You accepted it as correct? Yes; anything which he has given us.
1274. In this statement Mungie Bundie, Boollaroo, and Gravesend are put down as carrying 60,000 sheep? Yes.
1275. Do you know of your own knowledge whether that is approximately correct? Not of my own knowledge.
1276. You were an executor, but McDonald was not? Yes.
1277. It was not McDonald's place to consider the interests of any of the legatees? No.
1278. But it was yours? Yes; but McDonald was a partner, and it was to his interest to put it in as correctly as possible.
1279. If on those stations where he said there were 60,000 sheep there were actually 80,000, would the estate have suffered? I do not think so.
1280. If McDonald has admitted that on that very date there were 85,241 sheep on those stations, would the estate have suffered? The estate would not have suffered.
1281. Would the probate duty? I do not know, because there were deficiencies on other items in the probate. The total value for probate would not have been increased.
1282. Why? Because the station was not worth it. The station is worth a certain amount with a certain quantity of stock upon it. We overvalued Mungi Bundie and other stations considerably.
1283. If a person had been going to buy the estate, and you furnished them with an estimate of 60,000 sheep and so on, and during the interval you had put 25,000 sheep on it, would you not expect him to pay more for it? Yes; I would perhaps have fixed a value for the property.
1284. Would not 25,000 sheep be an important part of the total of 60,000? Yes; but you overlook the fact that the run was overvalued, and when it was sold it realised very much less than the valuation.
1285. You did not amend the probate? I did not.
1286. Did Pitt, Son, and Badgery make a rough valuation of those three stations, putting it down at £90,000? I think they did.
1287. Look at document 515,—do you recognise that letter to you? Yes; I recognise it as one of Mr. R. M. Pitt's letters to me.
1288. Who was Mr. Henderson? He was a gentleman formerly on Quantambone Station.
1289. Did he value the property at 45s. an acre? That was a long time afterwards; it was three years I think. He went at Mrs. Swift's request, and I do not think he was ever paid for it. He did not go at my request.
1290. Did Pitt, Son, and Badgery's valuation include any such items as land taken up in the interests of the station? I do not know.
1291. How many selections were taken up on this station? I do not know. I was asked by Mrs. Swift distinctly to leave Mr. McDonald alone, because he was such a good man, and she was so afraid that he would insist upon selling the stations before the necessary time, that she asked me, as a great favour, to leave him alone, and tried also through Abbott and Allen to make Mr. Croaker and me consent to an actual partnership on his part in it, and we refused.
1292. How many selections were there in process of alienation from the Crown on those runs at the time that Swift died? I do not know. I do not know whether the 35,000 acres mentioned there is freehold land or selections.
1293. On your own run at Wagga were there many selections being taken up? Some were afterwards. I gave you all the particulars before.
1294. There was a sum due by Sutton & Co. for 2,000 ewes;—they were sold on the 10th January for £1,200, and the sheep were delivered by drover Halloran, and Mr. McDonald received a promissory-note after the testator's death, which note never came into the probate statement which was filed? I have no answer to give.
1295. Was that amount included? I know nothing about it.
1296. McDonald has admitted it? If he did, I have nothing to say about it.
1297. Did you take any action to ascertain the facts? No.

- P. Hann.  
23 Nov., 1899.
1298. You did not take any means to prove whether it was correct or incorrect? What further means could I take?
1299. When you made application for probate, did you inspect the books? Certainly not; they could not be got in time.
1300. There is another item for sheep sold to Cook; they were sold prior to the testator's death;—were they included in the probate valuation? I do not know anything about it.
1301. Can you point it out? I cannot.
1302. That was £413 10s. Then there is another item. Wool was in transit at the time of testator's death, at Mungi Bundie, of the value of £1,817 8s. 7d.; that was never included in the valuation for probate;—can you point that out? I am not prepared to dispute anything you are talking about.
1303. Do you admit it? I do not admit anything. I am listening to all you have to say.
1304. I would like to have your answer? I have no answer to give.
1305. That being an asset of the testator, should it not have been included? You are the best judge.
1306. If the asset existed at the time of the testator's death, should it not have been included? The assumption is that it should have been.
1307. Was it? I do not know. I do not know how Mr. McDonald stood at the time.
1308. Did you never take any means to ascertain? No. As I told you before, that was at the instance of the executrix. She asked me particularly not to do anything to Mr. McDonald, to let him alone, and not even to ask to look at his books or make up accounts.
1309. Do you recognise this as station letter-book No. 31? Yes.
1310. Is this a letter addressed by you to Mr. Swift in 1883? Yes.
1311. It is dated 4th May, 1883;—you say, "We shall have to see what position we stand in to these men (the selectors) by-and-by, and by-and-by block them by dummieing around them";—how do you explain that? I have no explanation to give.
1312. In book 10, page 43, you will see a letter from you to Cody, dated 19th May, 1883, you say, "The land can only be secured by selection, and we have not people enough to do it with, but as soon as I find their land is surveyed, and get a proper description, I mean then to see Frayne and some others, and adjoin their boundaries, to cut them off from getting prelease land"? Yes, I see that.
1313. Can you explain that? No; beyond that we wanted to secure as much grazing land as we could.
1314. Then, on 23rd May, you wrote, "I wish we could have got the tank-sinkers, so we could have secured bores and your grass rights. I fancy the piece of land in Ring-hole Paddock, north of the woolshed, might take the fancy of some one. What think you?" Yes.
1315. Then, on the 26th May, you wrote: "If these selectors are about over the run, and you think some of it going, send in T. Frayne, so that I can take a strip in his name"? Yes.
1316. Can that refer to anything except your intention to take up land in the name of T. Frayne? I suppose not. It is evidently intended to secure the land.
1317. Then, on the 6th June, 1883, you wrote: "We must hold ourselves in readiness to secure any places, and I wish you would give me accurate descriptions of each spot to work upon. Send Frayne in next Wednesday, and I will take up 320 acres";—who was Frayne? I do not remember. I suppose he was an employee.
1318. Have you any explanation to offer for that? None whatever.
1319. Then, on the 7th June, 1883, you wrote: "I must take up 320 acres next week to make sure of spoiling the selector's chance on one end of the paddock, and connect our I.P. through the .C.P. with the boundary"? Yes; that is my letter.
1320. Then there is this letter to Swift: "I shall take up 320 acres to-morrow in one of our men's names so as to spoil and cut off the selectors? Yes.
1321. Have you any explanation as to that? None whatever; beyond that I was doing what all others have done—trying to secure grass. I do not see that that affects stamp duty.
1322. What is this cheque? It explains itself. Thomas Frayne's conditional purchase, £50.
1323. Then this cheque is for Gore's £160? Yes, it is for a conditional purchase, but for Gore. I have no explanation to offer, and I do not see that any explanation is necessary.
1324. How came you to give Frayne £80? So that he could take up the land.
1325. In your interest? Once the money was passed to him he could hold the land or give it up afterwards. They were never under any obligation to return us the land. We preferred to have friendly rather than hostile men on the land.
1326. Does not this letter saying, "So as to spoil and cut off the selectors," mean that you intended to secure the land for the station against *bona fide* men? All I say is that Frayne was entrusted with the money to take up the land, and then we had the use of it.
1327. *Mr. McLean.*] Do you wish to make any further statement? I wish to say something with regard to valuations, and as to having undervalued those properties for probate. Mimosa West and Baden Park have been taken over by the Bank of New South Wales with a liability of some £51,000. Before they were taken over, Mrs. Swift got Mr. R. M. Pitt to make an offer to me that she wanted to take over Baden Park for herself at £33,000. You will see the valuation was for £57,000. She wanted me to take over Mimosa West for about £13,000. It was then valued at £29,000 for probate. These are actual facts, which occurred with Mrs. Swift.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

**ART UNIONS ACT AMENDMENT BILL.**  
(PETITION FROM CERTAIN MEMBERS OF THE EVANGELICAL COUNCIL AGAINST.)

---

*Received by the Legislative Assembly, 13 December, 1899.*

---

To the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the Evangelical Council and others,—

HUMBLY SHOWETH:—

That your Petitioners, representing many Christian Ministers, Office-bearers, and thousands of Members and Adherents of the Evangelical Churches of New South Wales, view with extreme regret and alarm the proposal to pass a Bill known as the "Art Union Amendment Bill." They believe that the effect of such a Bill will inevitably be to strengthen the gambling spirit which is already far too strong in the community, and needs rather to be repressed than encouraged.

Your Petitioners would therefore earnestly pray your Honorable House to reject the said Bill.

And, as in duty bound, your Petitioners will ever pray.

*[Here follow 4 signatures.]*

---

A similar Petition was received—

On 13th December, 1899, from the President and Honorary Secretary of the New South Wales Union of Christian Endeavour Societies.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

ACCIDENTS WITH LIFTS.  
(LEGISLATION IN VARIOUS COLONIES DEALING WITH.)

*Printed under No. 6 Report from Printing Committee, 19 October, 1899.*

[Laid upon the Table of the House in connection with Question No. 10 of the 3rd August, 1899]

(10.) Accidents with Lifts:—Dr. Ross asked the Colonial Secretary,—In view of the number of serious accidents frequently occurring in connection with lifts attached to large offices and buildings in the city, has any action been taken by the Government to prevent the occurrence of such accidents by regulation or otherwise?

Mr. Brunker answered,—It will be necessary to introduce a measure to deal with this subject, and the matter shall have early attention.

LEGISLATION in various Colonies dealing with Prevention of Accidents with Lifts.

Victoria—No legislation.

Queensland        „

Tasmania           „

West Australia    „

South Australia—No legislation specially dealing with subject, but under Factories Act the Inspector has power to give directions for safeguarding lifts in factories:—*Vide* para. 2 of section 8, as follows:—“To inspect and examine machinery in any factory, and to give such directions as he may consider necessary or proper for the safeguarding of dangerous machinery, and for protecting the life and health of persons engaged in the working thereof.”

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

EARLY CLOSING BILL (No. 2).

(PETITION FROM DEMETRIO A. COMINO, OF OXFORD-STREET, SYDNEY, RESTAURANT-KEEPER,  
PRAYING FOR LEAVE TO APPEAR BY COUNSEL BEFORE THE BAR OF THE HOUSE.)

*Received by the Legislative Assembly, 1 November, 1899.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in  
Parliament assembled.

The Humble Petition of Demetrio A. Comino, of Oxford-street, Sydney, Restaurant-keeper,—

SHOWETH AS FOLLOWS :—

1. That a Bill has been introduced into your Honorable House, and has passed the first reading, therein intituled, "A Bill for the Early Closing of Shops and to Regulate the Hours of Employment in Shops."

2. That the second reading of such Bill is an Order of the Day on the Business Paper of your Honorable House for Wednesday, the first day of November instant.

3. That the interests of your Petitioner, and of other persons keeping restaurants, fish shops, and oyster shops in the City of Sydney, as distinct from the general interests of the country, are directly affected by the said Bill.

4. That at a meeting of such persons it was unanimously resolved : (a) That their special interests, as distinct from the general interests of the country, are decidedly affected by the said Bill, and that a Petition should be presented to your Honorable House for leave to appear by Counsel before the Bar of your Honorable House and so to be heard thereon ; (b) That your Petitioner should as well on his own behalf as on behalf of the said persons so petition your Honorable House.

5. Your Petitioner therefore humbly prays that leave may be granted to your Petitioner to appear by Counsel before the Bar of your Honorable House, at such time as to your Honorable House may appear expedient, and so to be heard upon the said Bill, and upon the said special interests of your Petitioner and other persons carrying on similar business affected thereby.

And your Petitioner, as in duty bound, will ever pray.

D. A. COMINO.

**EARLY CLOSING BILL (No. 2).**  
(PETITION FROM CERTAIN STOREKEEPERS OF PENRITH IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 7 November, 1899.*

---

To the Honorable the Members of the Legislative Assembly of New South Wales.

The Petition of the undersigned Storekeepers, &c., of Penrith, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

That whereas there is at the present time before the Honorable the Legislative Assembly a Bill bringing certain parts of the Colony under the provisions of an Early Closing Act, your Petitioners pray that the town of Penrith may be brought at once under the provisions of the said Act, by its inclusion among the other parts of the Colony already mentioned in the Act.

And your Petitioners, as in duty bound, will ever pray.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## EARLY CLOSING BILL (NO. 2).

(PETITION FROM CERTAIN SHOPKEEPERS OF SYDNEY AND ADJACENT MUNICIPALITIES IN FAVOUR OF AMENDING THE BILL.)

*Received by the Legislative Assembly, 8 November, 1899.*

To the Honorable the Speaker and the Members of the Legislative Assembly in Parliament assembled.

The humble Petition of the undersigned, representing small shopkeepers and tradespeople residing in the City of Sydney and the adjacent Municipalities,—

HUMBLY SHOWETH:—

That your Petitioners fully recognise the pressing necessity which exists for immediate legislation in the direction of limiting the hours of labour of shop assistants, and believe that such legislation, if passed, will tend to the material and moral elevation of the community.

And whereas your Petitioners believe that this desirable purpose can be achieved under certain provisions of the Early Closing Bill which has been introduced to your Honorable House by the Honorable Member for the Hume, they humbly pray that your Honorable House, in its collective wisdom, will devise and insert such amendments and modifications in the Early Closing Bill as shall afford to shop assistants the desired relief without sacrificing the interests and threatening the livelihood of hundreds of struggling shopkeepers.

Your Petitioners therefore pray that your Honorable House will carefully consider the arbitrary and crushing compulsory closing clauses contained in the Early Closing Bill, which, it is feared, will have a disastrous and ruinous effect upon their business, and will result in a large number of struggling shopkeepers whose livelihood mainly depends upon the business they are able to do after 6 o'clock in the evening being compelled to close up their small establishments, and thereby driven into the ranks of the unemployed.

Your Petitioners therefore pray that your Honorable House will amend the Early Closing Bill in such a manner that shop assistants may be relieved without resorting to the drastic and arbitrary proposals of compulsory closing.

And your Petitioners will ever pray.

[Here follow 823 signatures.]

**SUNDAY-TRADING BILL.**

(PETITION FROM W. M. PORTER AS CHAIRMAN OF A MEETING OF CERTAIN MEMBERS OF THE SNOWDROP LODGE OF INDEPENDENT ORDER OF GOOD TEMPLARS, HELD IN EAST MAITLAND, AGAINST.)

---

*Received by the Legislative Assembly, 15 August, 1899.*

---

To the Honorable the Speaker and Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

Your Petitioners, members of the Snowdrop Lodge of Independent Order of Good Templars, meeting in East Maitland, humbly pray that your Honorable House will not sanction the opening of public-houses on Sundays; but that you will, at an early date, adopt such provisions as are necessary to make the Sunday-closing clauses of the existing Licensing Act more effective.

Humbly praying that your Honorable House will give the subjects of this Petition your favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

Signed on behalf of the Meeting,

W. M. PORTER.

**SUNDAY OBSERVANCE BILL.**

(PETITION FROM CERTAIN RESIDENTS IN THE DISTRICT OF PICTON, AND THE ELECTORATE OF  
CAMDEN, IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 22 August, 1899.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Residents in the District of Picton, and the Electorate of Camden, humbly sheweth:—

That whereas a Bill, entitled "A Bill for the better observance of Sunday," has been introduced to your Honorable House by the Honorable Member for Yass.

And whereas your Petitioners believe that the passing of such a Bill will tend to the moral and material elevation of the country.

Your Petitioners therefore pray that your Honorable House may pass the Bill into law during the present Session.

And your Petitioners will ever pray.

**SUNDAY OBSERVANCE BILL.**  
(PETITION FROM CERTAIN RESIDENTS OF MOSMAN IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 25 October, 1899.*

---

To the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The petition of the undersigned residents of Mosman and the Electorate of Warringah,—

HUMBLY SHEWETH :—

That whereas a Bill entitled a Bill for the better observance of Sunday has been introduced to your Honorable House by the Honorable Member for Yass.

And whereas your Petitioners believe that the passing of such a Bill will tend to the moral and material elevation of the country.

Your Petitioners, therefore, pray that your Honorable House may pass the Bill into law during the present Session.

And your Petitioners will ever pray.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

**TOTALISATOR BILL.**(PETITION FROM MEMBERS AND ADHERENTS OF THE CONGREGATIONAL CHURCH, WATSON'S BAY,  
AGAINST.)*Received by the Legislative Assembly, 28 November, 1899.*

To the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Members and Adherents of the Watson's Bay Congregational Church,—

HUMBLY SHOWETH :—

That your Petitioners have viewed with alarm the introduction into your Honorable House of a Bill to legalise the use of an instrument known as "The Totalisator." They are convinced that said Bill, if made law, will work mischievously. It has done so elsewhere, and will in this Colony.

Gambling and betting are now treated as evil things. This measure will directly and seriously aggravate the evil. Your Petitioners are convinced that multitudes will be led into the hurtful practice by the facility afforded, and by the idea that the thing is "respectable," and thus great and terrible harm will be done to society. Your Petitioners, therefore, pray your Honorable House to reject the said proposal.

And, as in duty bound, your Petitioners will ever pray.

[*Here follow 20 signatures.*]

Similar Petitions were received—

- On 28th November, 1899, from certain members of Christian Endeavour Societies, Petersham ; 2 signatures.
- On 29th November, 1899, from Chas. White, M.A., Minister, and Robert Lamont, Secretary, of a meeting of members of Brown-street Congregational Church, Newcastle.
- On 30th November, 1899, from certain members of the Primitive Methodist Church, at Waratah ; 3 signatures.
- On 1st December, 1899, from members of Watson's Bay Young People's Society of Christian Endeavour ; 20 signatures.
- On 1st December, 1899, from certain members and adherents of the Baptist Church, Petersham ; 34 signatures.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## TOTALISATOR' BILL.

(PETITION FROM CERTAIN MEMBERS OF THE WESLEYAN CHURCH, MARRICKVILLE, AGAINST.)

*Received by the Legislative Assembly, 6 December, 1899.*

To the Legislative Assembly of New South Wales.

The humble Petition of the Congregation of the Wesleyan Church, Marrickville,—

SHOWETH :—

That your Petitioners view with alarm the proposal to legalise gambling by means of the Totalisator, believing as they do that gambling is immoral, and that the introduction of the Totalisator to this Colony would result in the increase of betting, and be demoralising to youth and the good order of society.

They therefore humbly petition that the Totalisator Bill may not become law.

And your Petitioners, as in duty bound, will pray.

[Here follow 40 signatures.]

Similar Petitions were received—

On 6 December, 1899, from certain members of the Wesleyan Congregation, Glebe Road, Glebe; 59 signatures.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**TOTALISATOR BILL.**  
(PETITION FROM CERTAIN RESIDENTS OF GRAFTON AGAINST.)

*Received by the Legislative Assembly, 19 December, 1899.*

To the Legislative Assembly of New South Wales.

The humble Petition of the undersigned Residents of the city of Grafton,—

SHOWETH:—

That your Petitioners view with alarm the proposal to legalise gambling by means of the Totalisator, believing, as they do, that gambling is immoral, and that the introduction of the Totalisator to this Colony would result in the increase of betting, and be demoralising to youth and the good order of society.

They therefore humbly petition that the Totalisator Bill now before your Honorable House may not become law.

And your Petitioners will, as in duty bound, ever pray.

*[Here follow 29 signatures.]*

Similar Petitions were received—

- On 19th December, from certain Residents of the district of Camden; 319 signatures.
- On 20th December, from certain Wesleyan Residents of the Clarence Electorate; 25 signatures.
- On 20th December, from certain Residents of Young; 42 signatures.
- On 20th December, from certain Residents of Lockhart; 13 signatures.
- On 21st December, from certain Residents of Spring Hill, Millthorpe, and surrounding district; 209 signatures.
- On 22nd December, from certain Members of the Congregational Church, Summer Hill; 56 signatures.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## TOTALISATOR BILL.

(PETITION FROM CERTAIN MEMBERS OF THE CONGREGATIONAL CHURCH, NORTH SYDNEY, AGAINST.)

*Received by the Legislative Assembly, 12 December, 1899.*

To the Legislative Assembly of New South Wales in Parliament assembled.

The Petition of the Congregational Church, North Sydney,—

HUMBLY SHOWETH:—

That your Petitioners have viewed with alarm the introduction into your Honorable House of a Bill to legalise the use of an instrument known as the "Totalisator." They are convinced that said Bill, if made law, will work mischievously. It has done so elsewhere, and will in this Colony.

Betting and gambling are now treated as evil things; this measure will directly and seriously aggravate the evil.

Your Petitioners are convinced that multitudes will be led into this hurtful practice by the idea that the thing is "respectable," and thus great and terrible harm will be done to society.

Your Petitioners, therefore, implore your Honorable House to reject the said proposal, and, as in duty bound, your Petitioners, will ever pray.

*[Here follow 62 signatures.]*

Similar Petitions were received—

On 12 December, 1899, from certain members of the Wesleyan Church at Wagga Wagga; 50 signatures.  
 " 12 " 1899, from certain members of the Wesleyan Church, Willoughby; 48 signatures.  
 " 12 " 1899, from certain members of the Holtermans-street Wesleyan Church; 64 signatures.  
 " 12 " 1899, from certain members of the Congregational Church, Mortlake; 17 signatures.  
 " 12 " 1899, from Henry Pain, Chairman of a public meeting held in the Baptist Church, Burwood, on 27th November, 1899.  
 " 12 " 1899, from certain members of the Wesleyan Church, Enfield; 28 signatures.  
 " 12 " 1899, from certain members of the Wesleyan Church, Burwood; 58 signatures.  
 " 12 " 1899, from certain members of the Wesleyan Church, Hill End; 30 signatures.  
 " 12 " 1899, from certain members of the Primitive Methodist Church, Balmain; 17 signatures.  
 " 12 " 1899, from certain members of the Wesleyan Church, Goulburn; 74 signatures.  
 " 13 " 1899, from certain members of the Wesleyan Methodist Church, Lithgow; 49 signatures.  
 " 13 " 1899, from certain residents of Orange; 332 signatures.  
 " 13 " 1899, from certain residents of Albury and neighbourhood; 33 signatures.  
 " 13 " 1899, from certain members of the Wesleyan Church, Canterbury; 45 signatures.  
 " 13 " 1899, from certain members of the Wesleyan Church, Homebush; 28 signatures.  
 " 13 " 1899, from certain members of the Congregational Church, Canterbury; 21 signatures.  
 " 13 " 1899, from certain members of the Wesleyan Church, of the Wellington Circuit; 45 signatures.  
 " 13 " 1899, from certain members of the Wesleyan Methodist Church, Crookwell District; 58 signatures.  
 " 13 " 1899, from certain members of the Woman's Christian Temperance Union of New South Wales; 3 signatures.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

## INDECENT ADVERTISEMENTS BILL.

(PETITION FROM HIS GRACE THE ARCHBISHOP OF SYDNEY ON BEHALF OF THE COUNCIL OF CHURCHES, IN FAVOUR OF.)

---

*Received by the Legislative Assembly, 30 November, 1899.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Council of Churches, a body comprising the Official Heads and Representatives of six of the largest Protestant Denominations in New South Wales,—

RESPECTFULLY SHOWETH :—

That your Petitioners are glad to see that a Bill has been introduced into your Honorable Assembly to “suppress indecent advertisements.”

That, in the judgment of your Petitioners, these advertisements have done, and are doing, an immense amount of harm to public morality.

That your Petitioners believe these advertisements to be, in many cases, only thinly-veiled solicitations to the commission of actual crime, as well as the suggestion of practices that are vicious.

That your Petitioners are aware that this kind of legislation is in force in other Colonies, and with manifestly beneficial results.

That your Petitioners therefore earnestly pray your Honorable Assembly to pass this Bill.

And your Petitioners, as in duty bound, will ever pray.

WM. SZ. SYDNEY,  
On behalf of the Council of Churches.

Sydney, 27th November, 1899.
