1522. You took it for granted that the Department knew of the extent to which the jetty was being used although you did not inform them officially? Yes. I do not inform the Public Works Department of what I use the wharfs for. For example, suppose I use a wharf for merchandise; I do not tell them what particular kind of merchandise it is used for. They certainly did not tell me that this particular platform would only carry a bale of wool.

1523. I presume you never had any doubts as to its stability? Never; if I had I should have reported it at once as I should report anything else which I considered dangerous, if, when going round the wharfs, I happened to notice it.

## CIRCULAR QUAY ACCIDENT INQUIRY BOARD.

## APPENDIX.

## 1.

Sir, I beg to bring under your notice, that when the works now being carried out at the south-east corner Circular Quay are completed, it will be necessary to replace the punt in its original position and to erect a stage from the Quay to same.

I would at the same time point out the necessity of erecting a small jetty, about 80 feet long by 10 feet wide, at the foot of Phillip-street, for the use of the police boat. At present, the only available place for shipping prisoners is through the Watson's Bay Ferry Jetty.

The Engineer-in-Chief for Harbours and Rivers.

Public Wharves Office, 11 May, 1892.

I have, &c.,

JOHN JACKSON.

Mr. Williams for report.—J.N.O.P., for E. in-C., 12/5/92. Mr. Grimshaw.—Please make an enlarged plan of this corner of the Quay and fix the position of floating punt and proposed jetty, consulting Captain Jackson on the matter.—A.W., 16/5/92. Plan herewith, showing the position of Police and Customs Jetty and Floating Wool-punt, as required by Captain Jackson.—J.W.G., 25/5/92. Mr. Williams. Separate report and plan herewith.—A.W., 25/5/92.

## 2.

Memo to Captain Jackson, Public Wharves' Office, re "South-east Corner of Circular Quay."

Harbours and Rivers Branch, 110, Phillip-street, 25 May, 1892.

I ENCLOSE tracing showing proposed position of Police and Customs Jetty and Floating Wool-punt for your approval. I find that a gate in fence is provided for the Jetty, and position fixed, and, on measuring the size, I find the punt is considerably larger than sketched in by us on the 18th instant.

Is 27 feet between the jetty and punt sufficient? I think you said it would be.

J. W. GRIMSHAW.

Noted and returned.—J.J., 25/5/92. A.W., 25/5/92.

## 3.

From Alfred Williams to the Engineer-in-Chief.

Department of Public Works, 25 May, 1892.

Subject:—Circular Quay: Respecting Captain Jackson's application for a Jetty to be erected for the use of the Water Police, and to replace floating stage.

The tracing herewith shows the proposed new jetty. The floating stage, with platform, can be replaced at a small cost. This proposed arrangement has been made in accordance with Captain Jackson's views. I beg also to suggest that the wharf should be extended on the line marked A B on plan.

ALFRED WILLIAMS.

Mr. Tillet.—J.N.O.P., 26/5/92. In my opinion there is not sufficient room in this angle of the Circular Quay for both jetty and floating stage, and would suggest that the floating stage only be moored at this place.—J. A. TILLET, 30/5/92. Is there any punt available for a stage.—A.D., 9/6/92. Superintendent.

The original floating jetty, 60 x 30, will be available when "Vernon" is condemned. Mr. Williams will, I think, soon be finished with the other punt about the same size, now used for conveying stone to Careening Cove and Neutral Bay.—A.B.P., 9/6/92.

As the covered-in floating stage is now in use alongside the "Vernon," carrying a steam pump and boiler, I think this matter might be allowed to stand over until the "Sobraon" is finished, when the pump alongside the "Vernon" will be no longer required.—C.D., 13/6/92. Captain Jackson.

The covered punt used at the "Vernon" is not required. Mr. Williams has the use of the original wool-punt that I propose to replace. This is absolutely necessary for shipping of wool into lighters during the wool season. There is ample room at the south-east corner of the Quay for a small jetty, as shown in plan, and it is very necessary that a special place be provided for the police boat. I would strongly recommend that it be carried out without delay.—J.J., 14/6/92. The Engineer-in-Chief for Harbours and Rivers.

When can the punt in question be again placed in the position sought?—C.D., 16/6/92. Mr. Williams. At once, if the Engineer-in-Chief considers that the depth shown on sections submitted with separate paper herewith is sufficient.—A.W., 24/6/92. The mound on sections 2, 3, and 4, seems to be the worst. Move a little more of this, then moor the punt.—C.D., 25/6/92. Mr. Williams. Mr. Grimshaw, please note, and see that the punt is fixed as soon as possible.—A.W., 27/6/92.

## 4.

Department of Public Works, Harbours and Rivers Branch, Sydney, 5 July, 1892.

Memorandum from J. W. Grimshaw to Inspector Cameron, Neutral Bay.

MR. WILLIAMS wants punt brought across to Circular Quay, and moored to Captain Jackson's satisfaction.

J.W.G.

Captain Jackson being away from the office, no one seems to know anything about how this punt is to be moored.—R.C., 5/7/92. I find this punt is at Garden Island. Have her brought to her berth at Circular Quay, and moored about in the position of the red lines on plan; then see if there is sufficient holding-ground for two fender piles to be driven. I must get approval for these piles and a stage.—A.W., 12/7/92. Mr. Grimshaw.

In accordance with the above instructions, the punt has been brought across from Garden Island and moored at Circular Quay, and everything made ready to take the boring for the proposed piles. Captain Jackson has, however, arranged with Mr. Williams to dispense with the piles: accordingly, nothing has been done in the matter, and the punt will be left moored at Circular Quay.—J. W. GRIMSHAW, 15/7/92. Mr. Williams.

Captain Jackson states the piles will not be required.—A.W., 16/7/92.

1899.  
(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

STEAMSHIPS "SYDNEY," "WESTERN," "FIONA,"  
"ILLAWARRA," AND "NARRABEEN."

(REPORTS OF MR. WILLIAM P. HINCHOLIFF, ENGINEER, R.N., UPON.)

Printed under No. 14 Report from Printing Committee, 19 December, 1899.

SURVEY OF THE S.S. "SYDNEY."

30th September, 3rd and 4th October, 1899.

THE ship was in Mort's Dock. S.s. "Sydney" is 35 years old, having been built in 1864. New engines and boilers were fitted in 1884.

*Forecastle.*

1. The hull plates are pitted considerably all over their surfaces. One plate on port side and two on starboard side, which are much worn, are being sheathed by  $\frac{1}{8}$ -in. steel plate. A hole was drilled on port side, in strake H, and a thickness of  $\frac{3}{8}$  in. was obtained, the original thickness being  $\frac{1}{2}$  in. The frame angle irons are much worn. Stringers and deck beams (which require scraping and painting) are in a safe condition.

*Fore Peak.*

2. A new collision bulkhead of  $\frac{1}{8}$ -in. steel plate is being fitted. The hull plates are fitted all over their surfaces. A hole was drilled in a plate in strake B, port side, and a thickness of  $\frac{1}{2}$  in. bare obtained,  $\frac{1}{4}$  in. being the original thickness. The frame angle irons are much worn. Stringers and deck beams (which require scraping and painting) are in a safe condition.

*Fore Hold.*

3. The hull plates are pitted considerably. In strake F, the plates of which are very thin in places, are being sheathed by  $\frac{1}{8}$ -in. steel plates for the whole length on the port side, and for 20 feet forward on the starboard side. Original thickness of F plates,  $\frac{1}{2}$  in. In one plate in strake E, on port side, a hole was drilled and a thickness of  $\frac{3}{8}$  in. was obtained, original thickness being  $\frac{1}{2}$  in. The boarding was removed for examination of the floors and reverse bars, which were coated with rust and cement. One floor was cleaned and drilled, and a thickness of  $\frac{1}{8}$  in. bare obtained, original thickness being  $\frac{3}{8}$  in. All the floor reverse bars were very thin, and also those of frames. On the starboard side an indentation was observed in strake D, caused, I was informed, by the ship going ashore at some time. The boarding was removed for an examination of the adjacent parts, which were found in safe condition. A hole was drilled in the part of the plate indented, and a thickness of  $\frac{3}{8}$  in. was obtained, which is the original thickness of the plate.

Stringers and deck beams (which require scraping and painting) are in a safe condition. Plates of fore cabin and after bulkhead are also in a good condition.

*Forward Bunker.*

4. Screen bulkhead (not essential to the vessel's strength) in very bad condition. The hull plates are pitted very badly; those in strake F are exceedingly thin in places, and are being sheathed by  $\frac{1}{8}$ -in. plates on both sides of the ship. The coal was removed for the examination of the floors and reverse bars (the latter are much worn). One floor was drilled, after the coating of thick rust was removed, and a thickness of  $\frac{1}{8}$  in. obtained, the original thickness having been  $\frac{3}{8}$  in. The reverse bars of frames were much worn. Stringers and deck-beams (which require scraping and painting) are in a safe condition. Deck beams under coal shoots are in need of immediate repair.

*Boiler-room.*

5. The hull plates are pitted badly, those in strake F are much worn, and are being sheathed by  $\frac{1}{8}$ -in. plate on both sides of the ship. The floors and reverse bars and boiler bearers are in good condition, having been renewed recently. Frame and angle irons are thin; stringers and deck beams (which require scraping and painting) are in a safe condition. A hole was drilled in a plate in strake A, underneath boilers after end, and a thickness of  $\frac{3}{8}$  in. obtained, this being the original thickness.

*Boilers (two in number).*

6. All parts were examined internally and externally as far as could be seen. Internally the shells, tubes, tops of combustion chambers, furnaces, &c., were found in good condition; there was a slight scale. Holes were drilled on top of combustion chamber and furnace in port boiler, and at water-line of shell in starboard boiler, but there was found no diminution from original thickness of plates. The furnaces are in good condition; a patch was refitted at bottom of the starboard furnace of port boiler. Externally, the shell plates, as far as could be seen, were in good condition. Funnel and up-takes are in fairly good condition, but in need of a few minor repairs.

*After Bunkers.*

7. Screen bulkheads are in bad condition. Hull plates are pitted very badly; those on port side in strake F are being sheathed by  $\frac{3}{8}$ -in. plate. On starboard side only the forward plates in that strake are being sheathed. A hole was drilled in a plate in strake F on unsheathed part, and a thickness of  $\frac{1}{4}$  in. was obtained, original thickness being  $\frac{3}{8}$  in. There was too much coal in the bunker for examination of the floors. The angle irons of frames were exceedingly thin. Deck beams (which are worn) and stringers should be scraped and painted; they will require an overhaul in six months' time.

*Engine-room.*

8. The hull plates are pitted as in the other parts of the ship. In strake F the foremost plates on port side are being sheathed by  $\frac{3}{8}$ -in. plate. The floors, which were covered with a heavy coating of rust, grease, and cement, were in good condition. A hole was drilled through one and showed little diminution from the original thickness of  $\frac{3}{8}$  in. The reverse bars of floors and frames are very thin. The plates at the bottom of the bilge could not be seen for grease and dirt. Stringers and deck beams (which require scraping and painting) are in a safe condition.

*After Hold.*

9. The hull plates are pitted as in the other parts of the ship. A hole was drilled in a plate at starboard side of the ship at strake E (which had a heavy coating of rust), and a thickness of  $\frac{3}{8}$  in. was obtained, original thickness being  $\frac{1}{2}$  in. The boarding was removed for the examination of the floors and reverse bars, which were in the same condition as those in the fore hold. One floor on being drilled showed a thickness of  $\frac{1}{16}$  in. The angle irons of frames are thin. Deck beams and stringers (which require scraping and painting) are in a safe condition. Plates of after saloon and forward bulkhead are in good condition.

*After Saloon.*

10. The hull plates and frame angle irons are in much the same condition as in the other parts of the ship, but have been scraped and painted. In strake H on both quarters, for a length of 40 feet,  $\frac{1}{8}$ -in. sheathing plates have been fitted.

*Upper Deck.*

11. Deck, stringers, superstructure, and woodwork are in fairly good condition.

*Paddle-boxes, Floats, Shafts, &c.*

12. All the above-mentioned were carefully examined and found in good condition. Two caps of bearings were removed, one inside the ship and one outside.

*Hull externally.*

13. The plates fore and aft were pitted, those at the water-line considerably so. All are in a safe condition, except those forward in fore-castle, which are not included in present repairs.

*Present Repairs, &c.*

14. The present repairs, which have all been mentioned in the inspection of the internal parts of the ship, consist of 120 feet of sheathing in strake F on port side from the engine-room amidships to the fore peak; 20 feet forward, and 40 feet amidships on starboard side in strake F; also 40 feet of sheathing in strake H on both quarters of ship, besides the sheathing mentioned in the fore-castle.

When new engines and boilers were fitted to the ship in 1884, a doubling strake was fitted amidships in strake H on both sides of the ship, from abreast mizzenmast to abreast the foremast.

*Summary.*

15. The ship after present repairs will, in my opinion, be seaworthy for a period not longer than six months, when it will be necessary for the whole of the reverse bars to frames and floors to have a thorough overhaul, as many will require renewal. The hull plates will require to be examined carefully, especially those at water-line abreast the boiler-room, bunkers, and the after hold.

It would be advisable to have as much of the internal parts of the ship as possible scraped and painted now, before proceeding to sea.

WILLIAM F. HINCHOLIFF,  
Engineer, Royal Navy.

21st October, 1899.

## SURVEY OF S.S. "WESTERN,"

10th, 11th, and 12th October, 1899.

The ship was in dock at Cockatoo Island; she has been laid up for some months, and is 40 years old. The vessel was fitted with the present boilers seven years ago.

*Fore Peak.*

1. The frames, deck beams, gusset plates, and stringers are in a bad condition. The hull plates are pitted badly. A hole drilled on starboard side in strake F gave a thickness of  $\frac{3}{8}$  in. The peak bulkhead and collision bulkhead are in good condition. The hull plates and frames at the bottom are thickly coated with cement.

*Forecastle Deck.*

2. The frames are in bad condition. The hull plates are pitted badly. Stringers and deck beams are in fair condition.

*Fore Hold.*

3. The hull plates are pitted badly. A hole was drilled on the starboard side in strake J and a thickness of  $\frac{1}{8}$  in. full was obtained. Two holes were drilled on port side in strake J, and thicknesses of  $\frac{1}{8}$  in. full forward and  $\frac{3}{8}$  in. aft were obtained. A bottom plate in strake A was drilled and gave a thickness of  $\frac{1}{2}$  in. The floors are pitted badly and covered with rust; three of them were drilled and a thickness of  $\frac{3}{8}$  in. was obtained.

The reverse bars were much worn, wood being used as a substitute for them under the forecastle deck.

*Elevation of Side of Ship.*

K. Sheer strake.
J.
I.
II.
G.
F.
E.
D.
C.
B.
A.
Keel plate.

Adjoining is an extended elevation of the side of the ship, giving the strakes of bottom and side plating. Original thicknesses are not known.

Deck beams, stringers, tie plates, in bad condition. The vertical keel plate is gone completely at bottom in most places. The angle irons of frames are in bad condition; some of them have been strengthened by angle irons 3 in. x 3 in. x  $\frac{3}{8}$  in., riveted to ship's side to defective frames.

The hatch on port side is in bad condition. The after bulkhead is in bad condition at the wing plates, other parts good.

*Boiler-room.*

*Boiler-room.*

4. Hull plates inside bunkers fitted badly; a hole drilled in strake G showed a thickness of  $\frac{1}{8}$  in. The frames were in a bad condition; the floors and bottom hull plates were covered with cement, the cement being removed from one floor and a hole drilled;  $\frac{3}{8}$  in. thickness was obtained. Reverse bars of all floors in fairly good condition. Vertical keel plate is completely gone at bottom in most places. Boiler bearers deck beams, and stringers in safe condition. Screen bulkhead to bunker on both sides of the ship in very bad condition.

*Boilers.*

5. All parts internally and externally, as far as could be seen, were in good condition. There was a slight scale on the tubes, tube plates, and shells, but there were few signs of pitting. Stays were worn, but in safe condition.

Hole drilled on top of combustion boiler; thickness of plate,  $\frac{3}{8}$  in. Another drilled at bottom of furnace gave  $\frac{1}{8}$  in., and a third at water-line of shell showed  $\frac{1}{8}$  in.

Shell, furnaces, funnel, and up-takes in good condition.

*Engine-room.*

6. The floors and reverse bars are in an exceedingly bad condition. Vertical keel plate is entirely gone at the bottom. Reverse bars to frames are very worn, and the hull plates pitted badly. A hole drilled on port side in strake J gave a thickness of  $\frac{1}{4}$  in.

The engines were not opened for inspection, but appear to have been fairly well kept.

*Shaft Tunnel (passing through after hold).*

7. All the bottom frames are covered with cement. The plates of tunnel are in good condition. Shafting pitted, but not to a serious extent.

*After Hold.*

8. Hull plates are pitted badly. A hole drilled in strake J, on starboard side, gave a thickness of  $\frac{1}{8}$  in. full; on the same side of the ship another hole was drilled in strake I, and  $\frac{1}{8}$  in. was obtained. Two holes were drilled in strake J, port side, and a thickness of  $\frac{1}{4}$  in. forward and  $\frac{1}{8}$  in. full aft was obtained. The floors are pitted badly and covered with rust, and the reverse bars of the same are in a very thin state.

Deck beams, stringers, and tie plates are in bad condition. Vertical keel plate completely gone in most places. The angle irons of frames are in very bad condition; some of them had been strengthened, as in fore hold, by angle irons 3 in. x 3 in. x  $\frac{3}{8}$  in.

The bulkhead at forward end is weak for about 8 ft. from bottom; other parts in good condition.

*After Compartments.*

9. Hull plates are pitted badly; frames are thin, but not so bad as in other parts of the ship. Stringers and deck beams in fair condition. A hole was drilled in strake C, on the starboard quarter, and a thickness of  $\frac{1}{8}$  in. was obtained. After bulkhead is in good condition.

*Decks.*

10. Forecastle and bridge decks are in very bad condition, also stringers and ties under latter.

*Hull externally.*

11. All plates are considerably pitted and worn, but, excepting several at the water-line, on both sides of the ship, are in safe condition.

Screw propeller in good condition. A representation was made to me that the keel of the ship was out of line, but, in my opinion, it is not so; the stern quarters above have been damaged, and would tend to give the parts below a bent appearance.

*Summary.*

12. Although the hull plates are in safe condition, excepting those mentioned at water-line, the general condition internally of the frames, floors, reverse bars, stringers, deck beams, tie plates, and vertical keel is so bad that, in my opinion, the ship is unseaworthy.

WILLIAM F. HINCHCLIFF,  
Engineer, Royal Navy.

21st October, 1899.

---

SURVEY OF S.S. "FIONA."

18th and 20th October, 1899.

The ship being alongside the jetty, only the parts internally could be inspected.

The "Fiona" was built fifteen years ago, is engaged in the sugar trade, and belongs to the Colonial Sugar Company; at the present time she is undergoing an extensive refit by Mort's Dock and Engineering Company.

*Water Ballast Compartments.*

1. From the fore to aft collision bulkheads the ship is fitted with double bottoms used as water-ballast compartments. There are five in number:—

Two in fore cargo hold, holding 66·8 tons.

One in engine and boiler room, holding 65 tons.

One in after cargo hold, holding 30·5 tons.

The compartments, excepting the parts underneath the boilers, are in much the same condition throughout the ship. The intercostals, floors, and angle irons of same, and the plates of inner bottom, are covered with a coating of rust, varying from  $\frac{1}{8}$  in. thick in the cargo holds to  $\frac{3}{8}$  in. thick in bunkers and engine-room. This on being removed in places found the plates not deteriorated more than  $\frac{1}{8}$  in. from

from original thickness of  $\frac{3}{8}$  in. A hole was drilled in the plate of inner bottom amidships under bunker, and a thickness of  $\frac{1}{8}$  in. was obtained, original thickness being  $\frac{3}{8}$  in. The company's engineer informed me that the whole of the water-ballast compartments were to be scraped and painted.

The compartment underneath the boilers is being wholly renewed with new intercostals, floors, angle irons, and inner bottom plates—all of iron, in lieu of steel. Some of the old intercostals and floors under the boilers, which were in place at the time of this inspection, were completely "gone" in parts, and had, in my opinion, reached their safe limit.

A plan of the intercostals, floors, and gussets, now being renewed, is attached to this report.

*Forecastle.*

2. Hull plates pitted slightly. Frames, stringers, and deck beams in good condition.

*Fore Peak.*

3. Hull plates pitted moderately. A bulge was noticed on the port side above the water-line, caused, I was informed, by the ship going ashore at some time. A hole bored in the plate gave a thickness of  $\frac{1}{8}$  in. bare, the original thickness being  $\frac{1}{4}$  in. All the frame angle irons are thin, but are being renewed. The plates of chain locker and tube are in bad condition, and are being repaired. The part of collision bulkhead forming the fore end of chain locker is completely "gone" in places, it is being sheathed by  $\frac{1}{2}$ -in. plate over the defective parts.

*Fore Cargo Hold.*

4. The inner bottom plates are covered on top with cement, and then "boarded"; the side hull plates are also "boarded" over. This boarding is being removed for the plates and frames to be scraped and painted. The plates seen showed moderate signs of pitting; holes were drilled in strake G on both sides of the ship, and thickness of  $\frac{1}{4}$  in. was obtained, the original being  $\frac{3}{8}$  in. A few of the frame angle irons were thin, but all were in a safe condition.

Deck beams, stringers, and stanchions in good condition. The after bulkhead is in good condition. The hatch is pitted considerably, but is in a safe condition.

*Bunker.*

5. The hull plates are moderately pitted. A doubling strake is fitted on both sides of ship in strake G from the bunker amidships to engine-room. A hole was drilled in strake G in an unsheathed plate, and a thickness of  $\frac{1}{4}$  in. was obtained, being the original thickness of the plate. The frame angle irons, which are thin, are being renewed, and the after bulkhead is heavily coated with rust, but all parts of the bunker are being scraped and painted.

The inner bottom plates are covered, as in forehold, with cement and boarding. Deck beams and stringers are in good condition.

*Boiler and Engine Room.*

6. The hull plates are moderately pitted. A hole was drilled in strake H abrcast engines, which gave a thickness of  $\frac{1}{4}$  in., original thickness being  $\frac{3}{8}$  in. Several of the frame angle irons and gusset plates are being renewed. Inner bottom plates, excepting those being renewed under boilers, are covered with cement and boarding. Deck beams and stringers are in good condition. Forward bulkhead in good condition.

*Boilers (two in number).*

7. All parts internally are covered with a slight scale, which is being removed, but are in good condition. Hole drilled in crown of furnace gave a thickness of  $\frac{1}{8}$  in., and in crown of combustion chamber  $\frac{1}{2}$  in. A patch is being fitted to each boiler at forward end on circumferential seam 5 ft. x 1 ft. 4 in.; also another at the after ends on circumferential seams. In the starboard boiler a small patch is being fitted in the lower ash-pit, and another in the port boiler combustion chamber. Outside of shell plates, as far as could be seen, were in good condition; a few minor repairs are being done to the up-takes; the funnel is in good condition.

*Main Engines (two in number).*

8. Both engines appear to have been well kept, and are having a complete refit. The plates of shaft tunnels, which are in good condition, are being removed for the examination of the propeller shafts and bearings.

*After Cargo Hold.*

9. The hull plates are pitted moderately. Holes drilled in strake G on both sides of the ship gave a thickness of  $\frac{1}{8}$  in., the original thickness being  $\frac{3}{8}$  in. Frame angle irons are in fairly good condition. Inner bottom plates are covered with cement and boarding. The boarding has been removed from the sides of the ship, and the plates and frames are being scraped and painted. Deck beams, stringers, and stanchions are in good condition. The hatch is badly worn and pitted, and in need of immediate repair. The after collision bulkhead is in good condition.

*After Compartment (containing two fresh-water tanks).*

10. Hull plates, frames, &c., are in good condition. In the saloon the boarding is being removed for the hull plates and frames to be scraped and painted. Deck beams are in good condition.

*Upper Deck.*

11. Bulwarks, superstructure, and deck (excepting in the alley-ways, where it is being sheathed in places) are in good condition.

*Summary.*

12. As the ship was under extensive repairs at the time of inspection, I am unable to state whether the "Fiona" is seaworthy or not until these are completed. I was informed she was to be placed in dock in four or five weeks' time.

26th October, 1899.

WILLIAM F. HINCHCLIFF,  
Engineer, Royal Navy.

Sir,

Sir,

R.N. Depôt, Sydney, 22 November, 1899.

In accordance with previous orders of Commander-in-Chief, yesterday, being accompanied by Captain Hickson and Mr. S. Smith, M.L.A., I completed the inspection of the s.s. "Fiona," now on a slip at Mort's Dock, and have the honor to report as follows:—

The hull plates externally were in good condition excepting a slight pitting at the water-line amidships on the starboard side. A plate is also being renewed in strake B (see midship section of ship already forwarded with first report on this vessel) in the bows on the port side.

The repairs inboard, which have already been reported upon, are nearly finished; their completion will render the ship, in my opinion, seaworthy.

I have, &amp;c.,

WILLIAM F. HINCHCLIFF,

Engineer.

The Captain-in-charge.

## SURVEY S.S. "ILLAWARRA."

Friday, 11th August.

1. The ship being alongside the wharf, having one boiler with steam up, the other boiler filled with water, and all machinery "closed up," only a survey of the hull inside the ship, and the part of the hull above the water-line could be carried out; a proposal was made that the ship should be placed in dock at an early date, and also that boilers, two in number, emptied for inspection.

*Fore Peak.*

2. All plates, floors, and angle irons in good condition; the hull plates appear to have been recently wholly renewed, and the angle frames partially so.

*Fore Chain Locker Compartment.*

3. All plates, as far as could be seen, were in good condition; a few of the frame angle irons were very thin in places, and should be repaired at an early date. Underneath the chain locker the bottom hull plates and floors were covered with a layer of cement, which did not appear to have been removed for some considerable time. Some rust and cement were removed from one of the floors, and thickness of iron measured, but there was not much depreciation from its original thickness ( $\frac{3}{8}$  in.).

*Fore and Aft Holds.*

4. All the hull plates, as far as could be seen, were in good condition, but the floors underneath the boarding (which I had partially removed) had a heavy thickness of rust and dirt on them. One floor was cleared of its coating, and a hole punched in it; the wear from original thickness of plate ( $\frac{3}{8}$  in.) was  $1\frac{1}{2}$  in.; one of the floor angle irons showed a wear of  $\frac{3}{8}$  in. from its original thickness ( $\frac{3}{8}$  in.).

*Floors and Angle Irons under Boilers and Engines.*

5. The bottom parts of floors could not be seen for water in the bilge, but a thorough examination was made of all the parts that were accessible. Rust and dirt were as prevalent as in the floors of the holds, but the floors and angle irons, on having a part of their surfaces cleaned, were little worn from their original thicknesses.

*Boilers.*

6. On my inspection of the parts accessible underneath the boilers, I noticed a leak from an apparently newly-made patch on the after boiler itself; this caused me to inquire when the boilers were last examined, and whether any drill or water tests had been made, but no person present could furnish me with any information on the point. If such a procedure has been disregarded, it appeals to me as a serious matter, as the boilers are apparently old.

*Plates removed, Repairs effected, &c.*

7. My attention was drawn to some old plates which were supposed to have been taken from the ship during the recent repairs; but as by Commander-in-Chief's order I have only been called upon to inspect vessels in their present state, I have not expressed an opinion on them.

The recent repairs effected by Mort's Dock and Engineering Co. included forty-five new hull plates, and several frames renewed, keel repaired, new iron work on paddle boxes, bunkers and bulkheads repaired, boilers patched, smoke-boxes repaired, some deck beams renewed, and cargo doors repaired.

*Summary.*

8. The part of the ship inspected is, in my opinion, seaworthy; but I consider it necessary that the rust and dirt should be removed from the floors and angle irons of the holds and boiler-room. As to the ship's complete seaworthiness, I do not feel justified in making a statement unless the ship is placed in dock or on the slip, and the boilers opened for examination.

WILLIAM F. HINCHCLIFF,

Engineer, Royal Navy.

## SURVEY S.S. "NARRABEEN."

Tuesday and Wednesday, 15th and 16th August.

Ship on slip at Mort's Dock.

*Coal Bunker (forward of Boiler-room).*

1. The screen bulkhead, not essential to the vessel's strength, was in bad condition. The plates of hull and angle frames, as far as could be seen (there being coal at the bottom of the bunker) were in good condition. The bottom plates and floors could not be examined. *Boiler-room.*

*Boiler-room.*

2. All the floors underneath the boilers have been entirely renewed by  $\frac{1}{8}$ -in. iron plate in lieu of  $\frac{3}{8}$ -in. steel plate removed. The old angle irons were not removed, being in good condition. Five of the hull plates, which were removed to enable three patches on the circumferential seams of each boiler to be made, have been renewed. My special attention was drawn to the old plates and floors removed; but as they were not in the vessel at the time of inspection, I have not stated their condition.

*Bulwarks.*

$\frac{3}{8}$ in. thick.	F
$\frac{3}{8}$ in. thick for 50 ft. amidships, remainder $\frac{1}{4}$ in. thick.	E
$\frac{1}{2}$ in. thick.	D
$\frac{5}{8}$ in. thick.	C
$\frac{1}{2}$ in. thick.	B
$\frac{3}{8}$ in. thick.	A

Adjoining is an extended elevation of side of ship showing bottom and side plating from garboard strake to bulwarks. The thicknesses of plates given are those when ship was new.

*Keel.*

Several of the hull plates abreast of boilers in the strakes C and D are badly pitted, and will require a further examination in six months' time. A hole was drilled in one plate abreast the boiler-room, in strake D, on both sides of the ship, and a thickness of  $\frac{1}{8}$  in. was obtained, which showed a wear of  $\frac{1}{8}$  in. from original thickness. The plate of after boiler-bearer, port side, was badly deteriorated, and requires immediate repair. The others are pitted, and will require to be thoroughly examined in six months' time.

*Engine-room.*

3. The plate of starboard support of main condenser was in bad condition, and requires renewal, as there was no appreciable thickness on plate being drilled. The other support and angle irons of both were in good condition. The boarding was removed in engine-room for the inspection of the floors, angle irons, and bottom plates, which were covered with a coating of cement. I caused some of the cement, which had an old appearance, to be removed from one of the floors, and a hole drilled, but no sign of wear was discernible.

*Fore and Aft Compartments.*

4. The bottom plates and bottom parts of floors were covered with a new cement. The angle irons and parts accessible were in good condition.

*Deck Beams, Stringers, Bulkheads.*

5. These were all in good condition fore and aft of the ship (excepting the one mentioned).

*Paddle-boxes, Floats, and Shafts.*

6. The above were closely examined and found in good condition.

*Boilers (two in number.)*

7. All parts internally were examined, and were found clean and in excellent condition, there being no signs of pitting or corrosion. The three patches have been well fitted to the circumferential seams on each boiler, but the boilers should have been subjected to a water-pressure test to prove the tightness of these patches—only the bottoms of the boilers could be examined externally, as they were lagged for three-quarters of their circumferences at the top.

*Hull—External.*

8. The plates fore and aft were in fairly good condition, excepting those in strakes C and D, especially those abreast the boilers, as mentioned in boiler-room inspection, which are badly pitted, and will require a thorough examination in six months' time. The big pits on the outside have been filled with a composition to arrest further decay. Two external patches have been fitted in the strake C in the vicinity of the "blow-off" cocks from boilers (one port and one starboard). A hole was drilled through the part of plate on which patch is fitted on the starboard side, which showed a diminution in thickness of  $\frac{3}{8}$  in. full from original thickness ( $\frac{1}{8}$  in.).

No zinc protectors were fitted to the blow-off cocks to prevent decay of plate in that region.

Another

Another external patch has been fitted aft of the one mentioned on the starboard side and in strake D. A hole was drilled through the plate on the other part to which the patch is fitted, and showed a wear of  $\frac{1}{8}$  in. full from its original thickness ( $\frac{1}{4}$  in.).

*Repairs, &c.*

9. Mort's Dock and Engineering Company in their recent repairs to the vessel renewed three plates in A (two port and one starboard); five plates in B (three starboard and two port); renewed floors under boilers; and fitted others with new reverse bars.

*Summary.*

10. The ship at present is seaworthy, in my opinion, for harbour service (her traffic being between Manly and Sydney) for a period of six months, when she should be subjected to a careful examination of the defective parts mentioned.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

GOVERNMENT DOCKING ESTABLISHMENT, BILOELA.  
(RETURN RESPECTING.)

*Printed under No. 13 Report from Printing Committee, 12 December, 1899.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 25th October, 1899, That there be laid upon the Table of this House,—

“The Report of the Sub-Committee, consisting of Messrs. Pollock, Cruickshank, and Portus, of the Public Service Board, upon the working of the Government Docking Establishment at Biloele.”

(*Mr. Law.*)

REPORT OF COMMITTEE OF INQUIRY, GOVERNMENT DOCKING ESTABLISHMENT, COCKATOO ISLAND.

To the Members of the Public Service Board, Sydney.

Gentlemen,

January, 1899.

1. We, the Committee appointed to inquire into the working of the Government Docking Establishment at Cockatoo Island, have the honor to submit the following Report :—

2. The Committee has held twenty-one meetings, and examined thirty-one witnesses, comprising all the officers holding responsible positions at the Establishment, a number of representative workmen, prominent officers of the Public Works Department who exercise control of the management of the Dock Establishment, and Government Contractors who supply the bulk of the stores and materials used there.

3. Before dealing generally with the many subjects which have arisen in the course of our inquiries, we purpose answering specifically and concisely each of the questions definitely submitted for our consideration in the list of instructions furnished to us at the commencement of the inquiry.

The questions, with our answers, are as follow :—

Q. 1. Are the officers at present employed competent or otherwise ?

A. They are competent and steady.

Q. 2. Is the staff sufficient, insufficient, or excessive, having in view proper and economical supervision ?

A. The staff of officers is insufficient.

Q.

- Q. 3. Are the rates of remuneration paid to the officers commensurate or not with the duties which they are called upon to perform ?
- A. (a) The Committee consider that the salary paid to the Manager is not at all commensurate with his duties and responsibilities.
- (b) Having in view the responsibilities of the respective positions of Foreman Engineer and Foreman Boilermaker, and the very large increase in the work of these two officers, the Committee recommend for the consideration of the Public Service Board the question of restoring their salaries to what they were before the 10 per cent. reduction in 1893.
- (c) In consideration of the large amount of responsible work devolving on the Storekeeper in addition to and apart from his duties as responsible officer in charge of stores, the Committee recommend that his salary be increased.
- (d) The rates of remuneration paid to the remainder of the officers on the permanent staff are commensurate with the duties they are called upon to perform.
- Q. 4. Are the rates of wages paid to the workmen in accordance with the current rates of their respective trades ?
- A. Yes; but in addition the men are paid for all public holidays and are entitled to accident pay. (See page 34.)
- Q. 5. Is a sufficient number of men put on to efficiently and economically perform the work required ?
- A. The number of men employed is sufficient to do the work, but not with economy, as the limited number of machines causes a large amount of overtime.
- Q. 6. What system is adopted in the taking on and discharge of men, and is the Superintendent left sufficiently untrammelled in this particular ?
- A. The Manager (Superintendent) has full power to take on and discharge men as the exigencies of the work may require. He is untrammelled in this respect and in the management of the men.
- Q. 7. Is the system adopted in keeping and checking the time of the men an efficient one ?
- A. It is very efficient.
- Q. 8. What system is adopted in regard to the engagement of apprentices, and what improvement can be suggested therein, if any ?
- A. No officially recognised system is adopted in regard to the engagement of apprentices. The Committee recommend that a slight alteration on the system now in force in the Railway Department be adopted, but that the rates of wages at present paid to apprentices at the Docks, which only slightly differ from those ruling in the Railway Department, be adopted. (See par. 102 of this Report for details.)
- Q. 9. Are the arrangements at present in force for the quick supply of needed stores and material the best that can be adopted ?
- A. Certainly not.
- Q. 10. Are the stores supplied of good quality, and the rates paid therefor reasonable ?
- A. The stores *accepted* by the officers are of good quality, and the rates paid are reasonable. A small percentage only of deliveries is returned.
- Q. 11. Is a sufficient check kept on the use of the stores so as to ensure economical consumption and the avoidance of waste ?
- A. Yes, a very good check.

- Q. 12. (a) Is the supply of tools, implements, machinery, slips, &c., sufficient for the working of the Establishment;  
 (b) If not, in what particular is the supply deficient; and  
 (c) Might not night-work be largely curtailed by better arrangements as regards such plant, and in other ways?

- A. (a) No;  
 (b) See paragraph No. 62 of this Report;  
 (c) Yes.

- Q. 13. (a) Is the whole Establishment conducted in such a manner as to ensure the best results to the State being obtained;  
 (b) If not, what measures are necessary to bring about this desirable end?

- A. The answer to this question, containing, as it does, the crux of the whole inquiry, has received due consideration. We find that the Establishment is not conducted in such a manner as to ensure the best results to the State being obtained.

- (b) See paragraph No. 40 for the Committee's opinion as to what measures are necessary in order that better results may be obtained.

4. Having replied to the particular questions we were asked to answer, we have now to deal generally with the evidence placed before us, and the conclusions we have come to after carefully considering it.

5. In the course of our investigation it has been brought home to us that there are serious defects in the system of management. Chief among them are:—

- I. Delay in the supply of stores and material.
- II. Unbusinesslike method of account-keeping.
- III. Over-control of the management of the Docking Establishment by Head Office.
- IV. Inadequate supervision of the workmen,
- V. Mechanical draftsman required; also a diver.
- VI. Insufficient provision of machine tools.
- VII. Necessity for appliances for lifting heavy weights from vessels when in dock.
- VIII. Necessity for the provision of a slip.
- IX. Defective condition of the pumping machinery.
- X. Insufficient fire-extinguishing appliances.

6. Other matters of a general nature have arisen, upon which we also report. They are:—

- XI. Workshop extension and tramway.
- XII. Docking men-of-war, &c.
- XIII. Charges for the use of tools, &c.
- XIV. Apprentices.
- XV. The workmen and their requests.
- XVI. Complaint against Mr. J. Pratt, Dockmaster.
- XVII. Statements of Mr. J. Hoey regarding the foremen.

We will now deal with these in their order:—

#### I.—DELAY IN THE SUPPLY OF STORES.

7. The system now in vogue for obtaining stores and materials from the Contractors is very unsatisfactory. When an article is required by a workman for the job he is engaged at he applies to his foreman, who sends a labourer with a docket for it to the store. If the article is not in the store a requisition is prepared, and sent to the Manager for signature. From the Manager the requisition is sent to Head Office for approval by the Engineer-in-Chief and other officers, and is referred after that to the Accountant, who eventually issues the order on the Contractor. The evidence given to us shows that this process never takes less than two days, and frequently much longer. Mr. Darley states that he has himself traced fourteen operations in the hands of different officers through which requisitions have to pass; that the system is altogether too cumbrous; and is such that if a private firm attempted to work with it they could not carry on.

8. When the official order for the goods has been signed by the Accountant it is despatched to the Contractors, who then furnish the goods if they have them; but it not infrequently happens that the particular article ordered cannot be obtained in the local market, when inquiries have to be made as to what is obtainable most nearly approaching what is required, and the requisition must be returned to the Accountant and altered by him before the Contractor can deliver the goods at Cockatoo Island. Bearing this in mind it is easy to believe that the statements made in evidence that long delays have occurred are perfectly true.

9. It would appear, however, that the above rules for obtaining supplies have been frequently departed from by individual officers on their own responsibility and at their own risk in order that the work of the Establishment might not be absolutely at a stand-still. It has been found necessary to order goods verbally from Contractors, promising that official orders would follow; and by these means goods urgently required have been landed and used at the works before the requisitions have been dealt with by Head Office. Under the circumstances the officers referred to had practically no option.

10. We think sufficient consideration has not been given in the past to the fact that a large amount of the work carried out at the Docking Establishment consists of repairs to steamers and dredge plant, and that for this work it is impossible to foresee what will be required. If the officers have a specification for a new piece of work (such as the construction of a new launch) before them, they can order beforehand exactly what they will need, but in repairing a boat or engine no one can tell until it is pulled to pieces what will be necessary in order to effect proper repairs, and when it is in pieces the materials are wanted at once in order that those repairs may be carried out.

11. In the evidence given by Mr. Hoey, the predecessor of the present Manager, he distinctly states that he was allowed freedom, almost amounting to license, in respect to obtaining the stores required for the work, and that there were no delays. The present system seems to us to be a departure to the other extreme.

12. We quote below extracts from the evidence on this subject:—

The Manager of the Establishment stated:—

The delay in getting stores is mainly due to the circumlocutory way the whole business has to go through. I send a requisition to Head Office and it goes from one to another and from one to another, and time is lost that way. Not only is time lost, but it costs more. (P. 28.)

The Foreman Engineer said:—

They are not allowed to get anything now without an order from Head Office. . . . I often ask Buddle to get it (an article requisitioned for) up next day. He does so, but is not supposed to without the order.

Sometimes we have waited as much as a week or a fortnight for a few bolts or for a special iron that we wanted. . . . Whatever we order in the way of cocks, valves, &c., we have to wait a fortnight for always. (P. 41.)

The Store Clerk (Buddle) said:—

The Contractors very seldom have what we want in stock (timber). I have to wait then until they have had sufficient time to get it from the bush.

Yesterday I was asked to get some 2½ half-round iron, and I got it yesterday. In that case the iron was here almost before the order left the office. I know it is against the rules, but the job must be done. (P. 44.)

If the orders could be issued from the Works and signed by Mr. Broad we could get the goods much quicker, and I would not have to break any rules. . . . If orders were carried out strictly the work would be stopped in many cases. . . . It usually takes three or four days for the orders to go through the Head Office. (P. 44.)

The "Thetis" was here the other day. She was coming up the Harbour and a tube burst. They rang me up from the Island to get a tube for her; the tube was put in and the boat was at work the next morning. She would have been there for days if I had waited for the order. . . . This practice on my part has never been questioned. . . . They do not know anything. . . . I have to chance something. (P. 44.)

The Inspecting Engineer (Fulton) said:—

If we could get the order direct from Mr. Broad, then, if they (the Contractors) had not got the thing, it could be made before the official order was through. There is a lot of time lost that way. It would be better still if we could get the official order straight from Mr. Broad. I have to take things on my own hands and take the risk. I use my own common sense, but I am aware that I am breaking the Regulations. (P. 45.)

The

The Foreman Boilermaker said:—

I have very often a difficulty in getting material. Sometimes it is a month from the time I order to the time when I get it. I have waited a week for a plate for a job that would only take two or three days to do. . . . Very often Mr. Buddle goes and gets me a plate without the order, but that is against the rules. It is the same if I want a set of tubes. I have to wait. I take the men away from the job and put them to something else. I do not think half enough stock is kept here. (P. 46.)

The Storekeeper, Cockatoo Island, said:—

We always have a poor stock. . . . It takes about a week to get a requisition through. . . . The people in Head Office must trust to us who send the order as to whether the goods are required. I think it would be as well if we could send the order to the Contractor direct from here, and send a duplicate to Head Office, who could charge it to the different Votes just the same. The stuff would be here, and we could be using it while they were passing it from one to the other. (Pp. 50, 51.)

I think a lot of delay could be obviated if an indent were sent Home and a stock kept of sizes of plates that we cannot ordinarily obtain here. . . . I do not know what we should do were it not for Buddle coming up here every day. When we want anything he gets it without the official order. . . . The Regulations have to be a dead letter; they are unworkable. The work would be simply at a standstill if we had to wait always for an official order. (P. 51.)

I do not think there is any chance of these delays getting better under the present system. (P. 52.)

The Accountant, Public Works Department, said:—

When you ask, "Why should not the officers here order what they want direct?" you raise a very large question. That would require a complete change in the policy of the Harbours and Rivers Department. . . . We trust entirely to the man here who sends the order as to whether it is really needed. (P. 56.)

Mr. Broad originates those orders, Mr. Portus approves, and Mr. Napier and Mr. Carleton; then it would come to me for order; the order clerk would prepare it, I would sign it, and then it would be issued. I do not think it is necessary for it to go through all these hands. I think Mr. A. B. Portus' approval would be quite sufficient. (P. 57.)

I do not think there should be any difficulty in the way of money being voted to provide a sufficiency of stock there, both of plates and timber. It is simply a question of whether the Minister would approve of an increased Vote. (P. 58.)

The Engineer-in-Chief, Public Works Department, said:—

Mr. Broad has been complaining very much to me about the delays experienced in the present system of getting stores. Formerly all orders for stores were invariably in the Contractors' hands within twenty-four hours of the time they were written at the Dock. . . . Now I do not think they ever reach the Contractors' hands under three days. A complete change was made in passing all stores through the Accountant. It was done while I was away from the Department. They have reorganised and rearranged to an extent which has made everything most laborious and burdensome, but it is quite inevitable that a change must be brought about. The present system has proved itself an utter failure in my opinion. . . . If they (the officers) have a complaint to make (about delays) they must make it through the Accountant. That must be altered, and I must know when delays are taking place. I have been rather slow to move in the past, because I wanted to give the new system every chance. (P. 72.)

I have been told that now there are further changes in contemplation on account of the new Stores Board, which, I am afraid, will lead to still further delay if the contemplated action is taken.

Of course, it would facilitate matters if the Superintendent could order straight from the Dock, but I think the Department ought to exercise some control over the orders. . . . For years I have been trying to impress upon the officer up there that the store is simply to keep a stock to supply immediate requirements, not to carry a big stock for two or three months' supply. I hold that the bulk store should be in the Contractors' yards. (P. 72.)

I was told that these documents (requisitions) pass through twenty operations from the time when Mr. Broad says, "I want such and such a thing," until it reaches the Contractor. I have traced it through fourteen operations myself. (P. 74.)

It seems to me there are too many branches under the Accountant's control, and we cannot get on with our work. There is too much referring, too much red tape. If a private firm attempted to work with our present system they could not carry on.

It would be contrary to the practice of the Department for Mr. Broad to order direct. (P. 74.)

Personally, I would not mind Mr. Broad ordering the stores direct. He manages the works uncommonly well, and is a most desirable officer; but we might get a man in whom I would not have confidence. . . . All urgent things I believe the Manager ought to order. I would give him power to order anything he urgently needed from the importers. (P. 74.)

I have nothing to say in favour of the present system of rendering the accounts or obtaining stores. Some radical change is wanted. (P. 76.)

The ex-Superintendent of the Docking Establishment stated:—

If I wanted anything I could get it. If I had not had *carte blanche* it would have been impossible to carry on. (P. 80.)

I had the power, and any departure from that is a mistake. It is wasteful. (P. 80.)

I had freedom almost amounting to license. I was allowed to exercise my judgment in almost everything. (P. 80.)

I had no reason to complain of delay. (P. 80.)

13. In order to remove all cause of delay in obtaining stores in future, the Committee recommend that the Manager of the Docking Establishment be given full power to order all stores required from Contractors, forwarding at the same time a duplicate of the order to the Head Office to note in connection with the payment of the Contractors' accounts. The Manager would then be in a position to obtain whatever he required with the minimum expenditure of time, and a great deal of clerical labour would be saved.

14. It has been recommended by a number of the officers that a larger stock should be kept in the store at the Docking Establishment; but the policy of the Department, as expressed by the Engineer-in-Chief, is that the Contractors should keep the stock for the Government, and that the stock in the Government store should be kept as low as possible. The Contractors, however, say that [they cannot be expected to lay in a large stock of goods when the contract is only for a period of six months, for by the time they could get in a fairly large quantity of goods the contract would have expired, and they would probably have the goods left on their hands.

15. If the present Departmental policy of keeping the stock in the Government store as low as possible be adhered to, the Committee consider that the contracts should not be less in duration than twelve months, and, if practicable, for a much longer period; but they are of opinion that, in view of the largely increased amount of work that is being done and is likely to be done in the future at the Docking Establishment, the stock might be increased with advantage, especially as regards special sizes of material.

16. While on this subject we desire to state that we think the old conditions of contract were very one-sided, the Contractors having no right of appeal from the decisions of the Departmental officers. We understand, however, that in the new Public Service Tender Board Regulations this defect has been remedied.

17. There have been long-continued delays in the supply of timber required for use in both new work and repairs; and although we have had evidence from a representative of the Contractors, the delays have not been satisfactorily explained.

18. We quote hereunder a few portions of the evidence on this subject:—

The Accountant, Public Works Department, said:—

The main difficulty lies with the timber and iron plates. It does not seem to matter what annual Contractor the Department has, we are always lauded in difficulties with the timber, and there seems to be no merchant that can stock the sizes of iron plates that are demanded. (P. 56.)

The Manager of the Docking Establishment said:—

What is conspicuously the worst thing about the place is the delay in the supply of timber. (P. 28.)

The Foreman Shipwright and Dockmaster said:—

The following timber was requisitioned for on 25th June, 1898. . . . I have not seen it yet. (14th November, 1898.) . . . On the 18th July, 1898, I ordered 5,000 ft. of 5 x 2½ kauri decking, and that has not arrived yet. . . . They tell me I am not to keep a stock of timber here. It must be in the Contractors' yard. Well, here is the result. . . . I want two pieces (of hardwood) for the "Powerful," and I cannot get the stern frame up without them. We are just simply playing with the job as we are going on now, putting men on and off as the timber arrives. We have a good-sized store, but there is not sufficient in it. This difficulty in not being able to get stock applies to most of my work. It appears to me to be getting worse. (P. 36.)

I think the General Superintendent ought to have power to send straight to the Contractor for the timber. There is too much paper work. The timber wants seasoning, and that is the reason we should have it here, and proper sheds to put it in. The proper thing for these keels would be to get the timber here in log and cut it. Give me a proper breaking-down saw and the machinery. I want a planing-machine, too. (P. 38.)

Mort's Dock had to get their own breaking-down saw and cut their own logs. If they wanted a piece of timber of a big size they could not get it. They have their own logs, and they can get any size of timber they want within two hours. We should have it too. (P. 39.)

The Store Clerk said:—

There have been great delays in supplying timber. (P. 44.)

Messrs.

Messrs. Goodlet and Smith's representative :—

No one can keep a stock of timber that will suit for supplying orders directly unless they are small sizes. Large sizes, such as are generally wanted at Cockatoo, we have to send to the bush for. . . . The contract is only for six months, and in consequence of that you cannot make a proper arrangement, because you do not know whether you will get it for the next six months. Sometimes we may get an order at the beginning of the contract and not get it filled by the end of the contract. (P. 69.)

19. The Committee have considered the evidence, and have come to the conclusion that the best way to obviate further inconvenience and expense from this cause is to keep a stock of logs at the establishment, obtain a breaking-down saw, a four-headed planer, and other necessary wood-working plant, with which the material could be cut and prepared as required. If this be done a stock of seasoned timber of special sizes will always be available.

## II.—UNBUSINESSLIKE METHOD OF ACCOUNT-KEEPING.

20. It appears to be the policy of the Public Works Department that the Accounts of the Docking Establishment shall be kept as far as possible at the Head Office under the direct supervision of the Public Works Accountant.

21. The system is this : The foreman notes the time each man is on each job and furnishes this to the Timekeeper, who checks it with the times of arrival and departure of each man as taken by him, and debits it in a dissection book to each job, specifying, in the case of a vessel, whether the work is done to hull, machinery, or boiler, and in other cases giving whatever details are necessary.

22. When stores are required the foreman specifies on the docket the job they are for, and also whether for hull, machinery, or boilers, as with the men's time. The store dockets are entered (for store purposes only) in a stock ledger at the Docking Establishment.

23. After each fortnightly pay the dissections of the pay-sheets are forwarded to Head Office, where accounts for each job are made out against each department for the workmen's time, *but a lump sum only is given*, and not the details of the time each class of men was engaged on the job.

24. Once in each month the store dockets are sent to Head Office, where they are again entered in a stock ledger, the values of the articles are placed on them, and debits are made against the various departments for the materials used on their work. The accounts for these stores are furnished to the debtors monthly, the lump sum only being shown until quite lately, but the detailed items are now given.

25. From the above it will be seen that, for a job lasting three months, as many as nine separate accounts are furnished, some for wages only, others for stores only, and there is no indication on the vouchers of what the total cost will be.

26. In many cases when goods are not in stock they have to be requisitioned for, and are then ordered direct for the job, not going through the store or store books at all. In these cases, when the Contractors send in their vouchers, the vouchers themselves, after being checked by officials at the Dock, are sent by the Public Works Department to the Department for which the work is being done for payment. Should the Contractor neglect to send in his voucher for a time, accounts may come in perhaps a couple of months after the jobs are complete and all other accounts paid.

27. We append a few excerpts from the evidence regarding this matter, the opinions of all the witnesses who were questioned on the subject being adverse to the present system.

The Manager of the Docking Establishment said :—

My opinion is that the accounts should be sent in when the jobs are finished, except where it is a very large work, and then they should be sent in in periods. (P. 28.)

The Accountant, Public Works Department (after detailing the present method of dealing with accounts), said :—

That did not seem to me to be a satisfactory way of doing it. I thought there ought to be one account for the one job. . . . In rendering an account we give the wages for a fixed period. We do not give the time that each particular class of men was on the job. It is generally a lump sum. For material

material there is more detail given; for, say John Keep and Sons supply material for a Marine Board launch, the voucher for that material would go to the Marine Board, and they would see the full particulars. We give full detail for material taken out of the stores. (P. 56.)

So far as I am concerned, I cannot alter the system. I have made an effort, but failed. I cannot break through the Government Regulations. . . . I made this effort because of my experience of the imperfections of the system. *I knew it was wrong and unsatisfactory.* (P. 58.)

The other Departments are so slow in paying that my accounts are crippled. I pay in hard cash and must get cash back, or else my advance account gets tied up. . . . I have an advance account from which I pay the wages right away. In those wages there are amounts for work done for other Departments, and I have to recover from them the amounts I pay for them so as to recoup my cash. I send the voucher on a week afterwards, but it may be a month afterwards before I get it back. (P. 58.)

The Engineer-in-Chief of Public Works (in reply to a statement by Mr. Cruickshank that "the accounts are made out in such a way that nobody can understand them and nobody would sign them") said:—

I know that has been a sore point for a long time. Complaints have reached me, indirectly, from you and from other Departments that we have worked for that they get their vouchers piecemeal.

As long as twenty-five years ago I complained about the same thing myself when I was in charge of works in the Newcastle District. I complained that I never could find out what any particular thing cost. From that day to this it has been a sore point.

There is a difficulty in the way of rendering these accounts monthly on account of the store issues being so much behind. If we had a bigger staff we could do it. The store issues are always two or three months behind in balancing. I have nothing to say in favour of the present system of rendering accounts or obtaining stores. *Some radical change is wanted.* It seems to me it would be a very simple thing to have a prime-cost clerk up there to make out the vouchers from the paysheets and from the store account, and make up the account the day the job leaves the works. (P. 76.)

28. Seeing this unsatisfactory state of affairs, both the Engineer-in-Chief for Public Works and the Accountant have attempted to remedy it. Their narratives of these efforts are as follow:—

The Engineer-in-Chief said:—

I made a recommendation last year that we should have a special Vote to charge all these jobs to, so as to enable us to get the money to pay them until the whole of the accounts could be brought together, and then one account could be sent. . . . We get a £5,000 Trust Account to charge everything to, instead of sending vouchers on to-day and to-morrow and the next day; and then, when everything was complete we proposed to send in one account. We commenced on that, and then the Auditor-General stepped in and closed it. (P. 76.)

The Accountant said:—

I thought there ought to be one account for the one job, and for that purpose we got £5,000 voted, and we asked the Treasury to transfer it to a Trust Fund so that we might operate upon it. That was no sooner done than the Auditor-General objected, and would not allow it, so we put the money back into the Treasury.

I intended that to be operated on in the same way as the Dock £7,000 for Stores. The Auditor-General had some technical legal objections to treating loan moneys as Trust Funds, so that we were forced back upon the old system of rendering accounts piecemeal against each Department, just as the vouchers happen to come in. (P. 56.)

If the Auditor-General had not prevented my using that Vote of £5,000 for "Services of Other Departments" I would have been able to render the accounts very much like Mort's accounts are rendered. We would have been able to give very full particulars. We cannot do it now because we have no capital to work on.

I went over and interviewed the Auditor-General, and his objection is to placing this money to the credit of a Trust Fund at all. (P. 58.)

29. Upon this evidence the Committee have come to the conclusion that the accounts are complicated to an unusual degree, and that there is no necessity for this:

30. The evidence given shows further that a large amount of time is wasted by having the accounts kept at the Head Office; and, from an inspection of copies of accounts furnished for work performed, the Committee consider them most unsatisfactory, they being such that no Superintending Engineer in a private firm would certify to them.

31. From a further careful consideration of the evidence the Committee have concluded that the present system is impracticable; and they are strongly of opinion that all accounts for work done should be kept at and issued, *in detail*, direct from the Docking Establishment.

32. Mr. Darley's suggestion appears to the Committee to be at once simple and sensible, and we recommend that a sum of money be placed to the credit of the Establishment; that the Manager (subject to periodical approval by the Board of Control, see par. No. 41) have power to draw against this sum for the payment of expenses until the work in hand is finished; that the account be then rendered in commercial fashion, and the amount, when paid, be repayed to the Advance Account. If this method be adopted, we are convinced that the result will be a very material increase in both efficiency and economy.

### III.—OVER-CONTROL OF THE MANAGEMENT OF THE DOCKS BY HEAD OFFICE.

33. In answer to Question No. 13 we have stated it as our opinion that the Establishment is not conducted in such a manner as to ensure the best results to the State being obtained.

34. It has been shown in the evidence that no work can be undertaken without an order from Head Office, and that no stores can be ordered except through Head Office. This has been the cause of great delay to the work, and, therefore, of largely increased cost; in fact, the system is practically unworkable.

35. The Manager of the Establishment has stated (p. 28):—

Sometimes the Marine Board, or another Department—the Asylums—sends up saying, "I want so and so done directly." I have no authority to do that, although I know it is urgent. I must get authority from Head Office.

The Storekeeper stated:—

Another thing that causes delay is that we get boats up here perhaps a week before we get the instructions to do the work. The orders ought to come here before the boat, just the same as if we were a private contractor. . . . There is a punt in there now—the one with a hole knocked through. We have not got any order for it. . . . According to the Regulations we could not put her in dock without an order, but we have. . . . If we strictly carried out the instructions we could not do anything at all. If we stuck to the letter of the law and never did anything without an order I think we would get into worse trouble than we do. (P. 52.)

36. At page 34 of the evidence it will be seen that the cost of public holidays for twelve months is set down at £1,350, and accident pay for the same period is valued at £72 3s. 6d. The overtime paid for at the Docks for the period from 1st November, 1897, to 31st October, 1898, was 21,888 $\frac{3}{4}$  hours, equal to 2,736 days of eight hours, and would cost, at the low rate of 1s. per hour, nearly £1,100. How this overtime is caused will be seen by the following short extracts from the evidence:—

The Manager of the Establishment stated:—

We have worked a little overtime in consequence of not having sufficient machinery, but my great desire is not to have any overtime at all if possible. (P. 26.)

The Foreman Engineer stated:—

We are so short of machines that we must keep the machines going overtime to keep the fitters employed. (P. 39.)

It frequently happens that we have to work overtime on our work to let the warships get into the docks at a certain time, and that adds to the cost of the work. (P. 40.)

The Dockmaster stated:—

The cost of the work is very much increased by the warships sometimes wanting both docks at once, and our having to work overtime on whatever jobs are in so as to get them out for the men-of-war to come in. (P. 37.)

37. In the evidence quoted in Divisions I and II of this Report it will be clearly seen that one of the main reasons why the best results to the State are not secured by the present methods of management is that too much control is exercised by officials at head-quarters.

38. We have given much thought to this subject and to the relative conditions under which mechanical work is carried out at the Fitzroy Dock and at private establishments, and it is apparent to us that the cost at the Government workshops is largely increased by expenditure from which private firms are exempt. Private firms have not to pay workmen for the numerous holidays granted every year, nor are they so liberal to their employees in case of accident. They do not bear the

cost of conveying the men by steamer to and from the workshops; and the cost of work performed is not added to by overtime payments due to insufficient plant, and to having to hurriedly complete vessels so that preferential turns may be given to Her Majesty's ships of war.

39. As it has been decided by the Government that, where possible, all departmental work shall be carried out at the Docking Establishment, this necessarily means a large increase in buildings, shop appliances, tools, &c., and in the number of men employed; hence any loss of time and money under the present system would be intensified and multiplied.

40. To ensure the maximum of efficiency with the minimum of expense the works should be self-contained, and the Manager should have power to do anything, or order anything that might be required. The Docking Establishment should, in a practical sense, be a separate department, under the control of a manager, who, as in private firms, would be responsible to a Board of Control, which Board would be directly responsible to the Minister.

41. We would suggest that the above Board should consist of three gentlemen, viz., the Engineer-in-Chief (as president), a competent experienced marine engineer, and a good commercial man, to whom the Manager would have to give an account of his stewardship in similar fashion to the practice in Mort's and other firms, where the Directors meet their managers weekly and transact all necessary business.

42. One of the most important items to be remembered is that the Government Docking Establishment is essentially a Mechanical Engineering Establishment, and also that a very large proportion of the work is of a marine character. We quite recognise the Engineer-in-Chief's reputation and ability as a Civil Engineer; but from the evidence, and from our own observations, we are convinced that what is really wanted is not civil, but high-class mechanical knowledge and marine experience to ensure reliable and economical working. Our opinion, therefore, is that if a Board of Control be appointed as suggested, it would be the most efficient method of ensuring the best results to the State being obtained.

#### IV.—INADEQUATE SUPERVISION OF THE WORKMEN.

43. In Division No. III we have drawn attention to the disadvantages under which the Docking Establishment is carried on. Subjected to these disadvantages it is imperative that the most vigilant supervision should obtain in every branch of the works. It will be seen by the return of the workmen employed at the present time (p. 30) that—

The Foreman Engineer has the oversight of—

48 Fitters	11 Apprentices
3 Machinists	5 Improvers
11 Blacksmiths	2 Plumbers
14 Blacksmiths' Strikers	2 Electricians
2 Shop-boys	1 Furnaceman
2 Moulders	1 Fireman
2 Coppersmiths	—
3 Drillers	Total 128
21 Fitters' Labourers	

44. The Foreman Boilermaker supervises—

30 Boilermakers	1 Engineer
45 Boilermakers' Labourers	1 Blacksmith
14 Shop-boys	—
5 Apprentices	Total 96

45. And the Foreman Shipwright and Dockmaster has the supervision of—

25 Shipwrights	1 Sawyer
19 Shipwrights' Labourers	2 Painters
5 Joiners	—
1 Boat-builder	Total 53

46.

46. These Foremen have to supervise not only the work done in the shops but also many outside jobs at widely separated parts of the Island. This circumstance has rendered it necessary to have additional supervision so that proper oversight of all the men might be secured. Each of the Foremen has, therefore, a man who is actually a working assistant foreman to help in the supervision of the men; but these working foremen are not recognised as such by the Department, being on the temporary staff; and, as two of them receive no higher pay than the highest of the men they supervise, and the third only 1s. per day higher, their authority is much weaker than it should be.

47. We find that the Foreman Engineer is very much overworked, he having, in addition to the oversight of the different classes of workmen, to do a lot of work which should properly be performed by a Mechanical Draftsman, making scale and full-size sketches for the engineers, blacksmiths, and others to work to.

48. Having given this matter very careful consideration, and having compared the methods of supervision at the Government Docking Establishment with those of privately-owned works, the Committee strongly recommend that the staff of Foremen be strengthened in the manner indicated herein.

49. Assisting the Foreman Engineer in the supervision of the engineers, fitters, &c., is Mr. Stewart, in receipt of 11s. per day, who, as previously stated, is not on the permanent staff. The Committee recommend that he be permanently appointed as Assistant Foreman Engineer at £187 4s. per annum (equivalent to 12s. per day of fifty-two weeks of six days).

50. In the pattern shop, nominally under the Foreman Engineer, supervision is exercised by Mr. Kidd, called Foreman Patternmaker, and paid 13s. 4d. per day, but treated as an ordinary workman, and on the temporary staff. It will be seen by the evidence that Mr. Kidd also performs work outside his ordinary duties, he having frequently to make scale and full-size drawings for use by workmen other than patternmakers, and having to give estimates of the weight of all castings which it is proposed to order from the Contractors. We recommend that Mr. Kidd, who is a most efficient officer, performing professional work, be permanently appointed Working Foreman Patternmaker, at a salary of £234 per annum (15s. per day).

51. The Moulding Shop, supervised by the Foreman Engineer, and furnishing employment for sometimes four and sometimes five men, is in charge of a Mr. Nell, styled Foreman Moulder, but paid the rate of an ordinary working moulder (11s. per day) and on the temporary staff. This department is, at present, small, but it is intended to be greatly expanded in the near future, when more hands will necessarily be employed in it. The Committee, therefore, recommend that, for the time being, Mr. Nell be recognised as Working Foreman Moulder, under the Foreman Engineer, and that he be paid £187 4s. per annum (12s. per day).

52. The Blacksmiths' Shop was formerly in the charge of a Foreman Blacksmith, at £275 a year, but on his being retired his salary was saved by placing the shop under the Foreman Engineer. In the absence of that officer in other parts of the Establishment there is no person authorised to take charge of the work. The Foreman Engineer depends on some of the older hands to see that things go right and to report to him, but these men have no authority over their fellow-workmen. The Committee consider that this is an unsatisfactory arrangement, and recommend that Mr. McCulloch, the leading hand, receiving 12s. per day, be appointed permanently as Working Foreman Blacksmith at £218 8s. per annum (14s. per day).

53. The Foreman Boilermaker is assisted by a Mr. Anderson at 12s. 6d. per day, but the position is not recognised by the Department. The Committee think that such assistance is necessary, and recommend that Mr. Anderson be permanently appointed Working Assistant Foreman Boilermaker at £202 16s. per annum (13s. per day).

54. The Foreman Shipwright's Assistant is Mr. Castle, who is in receipt of 10s. per day on new work and 12s. per day on old, and is on the temporary staff. It will be readily seen that, as the Foreman Shipwright is also Dockmaster, and has therefore to be absent from the Carpenter's Shop whenever vessels require to be either docked

docked or undocked, it is imperative that some person should be placed in authority over the workmen at such times. The Committee therefore suggest that Mr. Castle be placed on the permanent staff as Working Assistant Foreman Shipwright at £187 4s. per annum (12s. per day), whether on new work or old.

55. In addition to the workmen engaged under the three principal Foremen, in the Engineering, Boilermaking, and Carpentering Shops, there is a gang of labourers employed in performing the casual work of the Island, quarrying space for new workshops, shifting heavy weights wherever required, and generally in improving the premises. These men are in charge of a Mr. Godden, called the Foreman Labourer, who is directly responsible to the Manager. He receives 10s. per day, and is on the temporary staff. The Committee recommend that he be appointed Working Foreman Labourer at £187 4s. per annum (12s. per day) and be placed on the permanent staff.

56. Regarding the suggested Working Assistant Foremen (Mr. Kidd, Mr. McCulloch, Mr. Stewart, Mr. Godden, Mr. Anderson, Mr. Nell, and Mr. Castle), we are of opinion that they should be paid for overtime (but only for the actual time worked), and should be entitled to annual leave, this being the present practice in the Dredge Service.

57. It has been previously pointed out that many of the repairs carried out at the Docking Establishment are effected outside of and away from the workshops, on board the vessels requiring them. This renders the continuous supervision of the men engaged on the work by their respective Foremen a matter of impossibility. We therefore suggest that where such work is of any magnitude the Manager be authorised, at his discretion, to place leading hands in charge of such jobs, as in private works, paying them 1s. per day extra while so in charge.

58. Portions of the evidence bearing on this subject are quoted hereunder :—

The Manager of the Establishment stated :—

I do not think the supervision of the fitters and turners is efficient. Gibson has a good deal of running about to do. If there are ten or a dozen ships here he has to go to every one of them, and during that time the men in the shops will talk a good deal and idle. (P. 29.)

The Foreman Engineer said :—

I have an assistant named Stewart. He attends to the work outside. . . . It is impossible for me to look after these men. . . . Since Mr. Kidd was brought here he has always done duty as a Foreman, although he has never been made a Foreman. . . . He was selected as the best man in New South Wales. . . . I have always left it (the pattern shop) in his charge. . . . Stewart is not acknowledged as a Foreman. . . . He gets a shilling a day extra. I do not think it is enough. (P. 39.)

When I am busy I have three or four first-class men whom I take and point out to them what work has to be done, and tell them I expect them to look after the work and do their best. They are leading hands, but do not get anything extra for it. (P. 39.)

I have a man supervising the coppersmith work named Vale. He gets nothing extra for it. I do not think that is a sufficient inducement. (P. 40.)

I am here every morning long before six o'clock. . . . I have too much to do. I have had blacksmith's work to supervise for the last thirteen years. . . . I have no leading blacksmith. (P. 40.) The blacksmiths have done an immense amount of overtime. It would assist me if some responsible men were placed over them and the coppersmiths and others. (P. 40.)

The Inspecting Engineer stated :—

I do not think the supervision here is so good as at Mort's Dock. (P. 45.)

Mr. R. McCulloch, Blacksmith's Representative, said :—

There are thirty-two men in our shop. . . . There is no supervision over them except by Mr. Gibson. (P. 60.) . . . I have no hesitation in saying there should be a practical man in charge of that shop. (P. 61.)

Mr. Kidd, acting as Foreman Patternmaker, stated :—

I have been six and a-half years in charge of the patternmakers. . . . Mr. Gibson is supposed to be foreman, but he has never interfered. (P. 62.)

It would be to the benefit of the works if there were more supervision. . . . When a man is placed in charge of work it is an encouragement to him to do the best he can for the Department—when he feels his work is recognised. (P. 62.)

Mr. Stewart, Assistant to Foreman Engineer, said :—

We have not got a leading hand on the place. I think we should have. (P. 64.) I am practically second foreman in the shop, but I am not recognised or paid as such. (P. 64.)

The

The Engineer-in-Chief for Public Works said :—

I think the Foreman Engineer needs some assistant foremen. . . . The work has grown very rapidly of late, and, perhaps, we have not kept up with it. . . . In my opinion we want more supervision. . . . I believe it will pay for itself. (P. 73.)

The Dredge-master, Sydney, said :—

I think there needs to be more supervision over the men working there. . . . There should be a leading hand in charge of all jobs where two or three men are employed. (P. 76.)

The ex-Superintendent of the Docks said :—

If I had thirty men in a blacksmith's shop I would have a foreman over them. . . . I would give him a little more money. . . . I think the system of having perhaps two or three leading hands and not acknowledging them is very bad. (P. 82.)

#### V.—MECHANICAL DRAFTSMAN REQUIRED; ALSO A DIVER.

59. In the course of our investigation we have found that the Foreman Engineer and the Foreman Patternmaker have to execute working drawings and sketches required in connection with their work, and a fitter out of the workshops is employed copying tracings, &c., in the Manager's office.

On this point the Foreman Engineer stated :—

I do not think Martin is a mechanical draftsman. There should be one here. Any sketches that are required are done by me and Mr. Kidd. If I want a drawing or a hand sketch I have to do it myself. Martin is under me as a fitter, but he has been working up here as a draftsman for two and a-half years. Mr. Broad took him out of the shop. (P. 41.)

The Foreman Patternmaker stated :—

I have to do all the drawings in connection with the blacksmith's work. Mr. Hoey gave me to understand that I would have to do this. . . . I get no assistance from the draftsman here. I have nothing at all to do with him. I practically do the work of the drawing office in connection with my own business. I lay down working sketches on the boards full size for the blacksmiths. Sometimes we get drawings quarter scale or half scale. I take that all out in detail and make it all up for the blacksmiths.

I have been in Mort's, and from my experience of engineering workshops I think it very desirable to have an experienced mechanical draftsman here. He would help forward the work considerably. When a set of drawings came to the Island he could go through them carefully, examining them, see that the material was on the Island to carry out the work, and make any small sketches. (P. 62.)

The Engineer-in-Chief stated :—

I think a mechanical draftsman should be appointed to make the sketches for the small jobs, and to make detail sketches for the foundry. (P. 73.)

60. The Committee consider that a good mechanical draftsman, who should also act as Assistant Manager, is absolutely necessary; and they suggest that his salary should be at least £350 per annum.

61. In his list of what he considers necessary in the branch of the Establishment supervised by him, the Dockmaster has included a diver. The Committee agree with this, and recommend that one of the shipwrights should be a diver, being only paid in that capacity when so engaged. The diving dress and complete apparatus which would be required should be permanently kept at the Island.

#### VI.—INSUFFICIENT PROVISION OF MACHINE TOOLS.

62. In pointing out one of the causes of the large cost of work carried out at the Government Docking Establishment, reference was made to the inadequacy of the machine tools.

63. As further instancing this fact, the following statements are quoted :—

The Manager said :—

We are deficient in machines. If there is a breakdown job we sometimes have to work overtime. (P. 26.) We want a lot more lathes to do away with a lot of overtime. . . . The natural course of events will be that the work will get more and more. (P. 27.)

The Foreman Engineer said :—

I do not think we have a sufficiency of machinery. We have been working overtime for the last two and a half years. We are so short of machines that we must keep the machines going overtime to keep the fitters employed. . . . What we want principally are lathes. . . . We have only one screwing

screwing machine to do the whole of our work. (P. 39.) To reduce the overtime I would suggest that we get three more lathes, a screwing machine, and a slotting machine. (P. 40.) We can do our work as cheaply as outside firms providing they give us proper machinery to do it with, but not if we have to keep doing overtime. (P. 41.)

The Engineer Inspector said :—

There are not sufficient lathes here. I have seen work standing for days waiting to go into the turning machines. I should think the furnishing of these tools would have the effect of doing away with a large amount of overtime. (P. 45.)

The Foreman Boilermaker said :—

We are badly off for tools. We have about the worst shop in the Colonies so far as tools are concerned. . . . I need a plate-planer and a drilling machine and other machinery. . . . I have not sufficient boiler power to drive the new machinery. We have a riveting machine, but no gaunting over it. We have no rivet-making machine. (P. 45.)

Mr. R. McCulloch, Blacksmiths' Representative, said :—

There are not sufficient tools. We want another hammer. There is a back shop, and all the men have to come from that back shop to the hammer when they have a heat, and by the time they get there the best of the heat has gone. (P. 60.)

Mr. Kidd, Acting as Foreman Pattern-maker, said :—

We have got only one turning lathe and a band-saw. It is not sufficient to carry on the work of the shop rapidly and economically. (P. 62.)

Mr. Stewart, Assistant to Foreman Engineer, said :—

We have not sufficient machines in the shop. We are short of lathes. If we had more lathes it would do away with some of the overtime. (P. 64.)

The Engineer-in-Chief for Public Works said :—

During the past year we have increased the appliances very much. . . . But still the growth has been so rapid that our machines are behind our requirements. (P. 73.) We want a lot more tools and planing machines. (P. 76.)

64. Having heard this evidence and carefully examined the machinery at present in the workshops (a list of which will be found at pp. 54, 55, and 91) the Committee came to the conclusion that there certainly is urgent need for the immediate supply of a number of machine tools.

65. We therefore requested the Manager and the Foremen to supply lists of the tools they considered necessary, and these lists will be found in the evidence. It will be further seen that the Manager, in his report (p. 89) says :—

It must not be understood that what is asked for now (by him) is imperatively necessary to be all at once supplied, but that it may be realised in say five years by gradual and judicious development, because workshops will have to be extended in the first place to receive the tools asked for.

66. The Committee, however, are of opinion that a certain number of machines should be supplied at the very earliest opportunity, and these are specified in the list subjoined :—

Engineers' Shop.

One 18 in. gap lathe.  
One 10 in. gap lathe.  
One 8 in. turret lathe, for brass-finishing.  
One screwing and nut-tapping machine.

Boiler Shop.

One travelling crane over riveting machine.  
One set of plate bending rolls.  
One plate edge planing machine.

Carpentering Shop.

One breaking-down saw.  
One four-headed planing machine.  
One 10-ton wharf crane for lifting logs out of water and placing them on saw carriage.  
New boiler, under fired, to burn either sawdust, timber, or coal.

Smith's Shop.

One steam hammer, 10 cwt.  
One steam hammer, 7 cwt.  
One silent fan, for 30 fires.

67. We also wish to draw attention to the fact that certain machines which were asked for by the Manager of the Establishment on the 24th June, 1897, and approved by the Minister on the 6th July, have not been received up to the present, though expected within a few weeks.

68. If the machinery we have recommended above be supplied, the necessity for a large portion of the overtime now worked would vanish, and the cost of the work performed would be materially reduced.

#### VII.—NECESSITY FOR APPLIANCES FOR LIFTING HEAVY WEIGHTS FROM VESSELS WHEN IN DOCK.

69. During the Committee's inspection of the Establishment they have been struck with the absence of any appliance for lifting heavy weights from ships in dock, such as propellers, rudders, shafts, or portions of the engines. The evidence, quotations from which are given, shows that the "shore" cranes running on rails beside the Docks will only lift light weights, and that when 15 or 20 tons or more require moving special tackle must be rigged on board the vessel for the purpose.

##### 70. The Manager said :—

The only appliances for lifting heavy weights such as propellers and shafts are the cranes at the big dock. The inner one will lift 5 tons. . . . We could not lift a portion of a rudder weighing 10 tons. (P. 35).

##### The Dockmaster said :—

For lifting heavy weights they have generally got their own steam on board—their own winches. We can lift 4 tons, a straight lift. That is the maximum. (P. 38.)

##### The Foreman Engineer said :—

We have never been put to any inconvenience in the new dock for want of lifting appliances. . . . We can lift up to 30 cwt. or 2 tons with the cranes we have. There ought to be some bigger cranes. Wherever you see a big dock you see appliances for lifting big weights. (P. 41.)

##### The Engineer in Chief said :—

The "shore" cranes at the big dock will only lift 4 tons. With the present appliances we have we could not lift the rudder of the Himalaya in the dock. We have a 20 ton fixed crane on the wharf by the entrance to the old dock. (P. 75.)

71. The Committee consider that it is absolutely necessary that means should be provided whereby heavy weights may readily be moved, and, after consideration of the relative merits of fixed and floating cranes, they recommend that floating shearlegs be obtained, capable of lifting from 40 to 50 tons. As pointed out by the Engineer in Chief in his evidence (p. 75), and in his Minute which is copied on p. 78, such a crane has been a long-felt want in the port of Sydney, and has the advantage over a fixed crane that, besides doing whatever work is required of it at the Docks, it will be available for use in any part of the Harbour.

#### VIII.—NECESSITY FOR THE PROVISION OF A SLIP.

72. It has been pointed out to the Committee, and has been referred to in paragraph No. 36 of this Report, that, frequently, when one of the docks is required for a vessel of the Imperial Pacific Squadron, whatever vessels of the Dredge Service, or of other Departments, may be in Dock, must be got out as quickly as possible, and thus a large amount of overtime is rendered necessary. The same thing applies, with double intensity, when Her Majesty's ships require both docks at once, as has happened several times.

73. Under these circumstances, the Committee have concluded that it would be best to provide a slip sufficiently large to take any of the Government vessels, thus furnishing a means of working at them whether the docks are required for warships or not, and also much lessening the expense of docking the smaller vessels, while not increasing that of dealing with the larger.

74. The need for a slip has been referred to in the following testimony.

The Dockmaster said :—

It would be advisable to have a slip here for small vessels the size of the "Thetis." (P. 38.)

The Engineer-in-Chief said :—

I think it would be an advantage if there were a small slip on the Island, so as to relieve the docks of the Dredge Plant. (P. 73.)

#### IX.—DEFECTIVE CONDITION OF PUMPING MACHINERY.

75. When the Committee were questioning the Foreman Engineer, he stated : "I do not think it will be long before the pumping machinery will all collapse." This evidence was of so startling a nature that we at once decided to make a personal practical examination of the whole plant, which we did on the 24th of November last, thoroughly surveying the boilers inside and out, descending the pump shaft, and entering and examining the valve chamber and tunnel.

76. As the result of this examination, we have to report that there is nothing materially wrong with the boilers at the pumping station. All they require is resetting and retubing; and, if this be properly carried out, they will be good for ten years' work.

77. That these boilers were considered defective is proved by the boilers from the Glebe having been fitted; but such action cannot be justified by their present condition. It is also to be regretted that there is no recognised system of periodical examination.

78. The engines and pumps are of poor and faulty design. They never were and never can be made a good job, and must always be more or less troublesome and expensive. The Foreman Engineer's evidence, that he considered them unreliable and was afraid they would collapse, was fully borne out by our inspection.

79. These engines are seriously defective—so much so that we have no hesitation in stating that they should be thoroughly overhauled at once. Both of them are and always have been working considerably out of truth; and there is ample evidence, both above and below, of structural weakness, which should be materially strengthened and stiffened without delay.

80. Nearly the whole of the valve seatings of the pumps are in a lamentable condition, as are also a large percentage of the valves, of which there are 200.

81. The extra stiffening cast-iron beams, which had to be fitted to steady the engines before the Contractors' representative dared work with them at the trial, are not sufficient, and will have to be substantially supplemented before the necessary strength and rigidity can be secured.

82. The engine framing also is weak and far too shallow; and this weakness is intensified by the engine shafting, connecting rods and pump rods, &c., being out of truth. The whole of the engines need taking to pieces and relining.

83. The main injection pipe is in the wrong place, and should be shifted to take its injection from the sea, which would ensure a steady and uninterrupted flow of clean, solid water. The present arrangement is faulty, because when the pumps stop the engines have to work high-pressure for a number of strokes, thus heating the condenser, and injuring the air-pump valves, &c.

84. We are of opinion that the defects in this pumping plant should be grappled with in the following manner :—All the gear required, new valve seatings, &c., should be got ready as far as possible, also all the extra stiffening girders and beams, and three shifts, night and day, should be put on to overhaul the whole fabric. This could be done in three weeks approximately; and if the dock were required in the interval one of the powerful sand pumps of the Dredge Service might be utilised for emptying the dock, with, if necessary, a small centrifugal to assist in draining it.

85. As we have mentioned before, we are aware that the present plant will always be troublesome and expensive, and that modern centrifugal pumps would do the work as efficiently, while the wear and tear and cost of repairs would be very much less; but this would mean an enormous expense. Therefore, after due consideration, we think the present machinery can be repaired so as to serve its purpose for the next ten years.

86. In connection with the repairs, we would point out that both docks depend entirely on the one pair of engines, which are not truly in duplicate. Nothing can be done to the machinery below the surface if one pump be working, as the suction well is common to both. Further, there is but one shaft to both engines; and we think there should be a spare shaft, forged and roughly turned, ready in case of an accident.

87. In addition, we think it desirable to suggest that a centrifugal pump (not necessarily very powerful or expensive) be connected to the small dock, capable of pumping it dry in, say, eight or ten hours. This would keep this dock available in cases of emergency, or in the event of a breakdown.

88. We wish, further, to emphasise the absolute necessity for periodical personal examination of the whole plant by experienced mechanical engineers, and that a complete detailed report be submitted at least annually.

#### X.—INSUFFICIENT FIRE-EXTINGUISHING APPLIANCES.

89. In the course of our inquiry certain evidence was given that the fire-extinguishing appliances provided at the Establishment were inadequate. In view of this the Committee had a trial made, under the most favourable circumstances, but found that though the present appliances (simply hose and hydrants) are good in themselves, they would be insufficient in case of a fire.

90. We think that these appliances might be supplemented with advantage by having an oil-engine or other motor of such power that it would be capable of throwing water a greater height and with more force than the present hose connected directly with the mains. We also suggest that there should be some recognised periodical system of fire drill.

#### XI.—WORKSHOP EXTENSION, AND TRAMWAY.

91. The necessity for the extension of the workshop and for the construction of a tramway was brought before the Committee in the following evidence:—

The Manager stated:—

There is not sufficient workshop accommodation. . . . I propose to have a tramway about the place. . . . Now if we have to move things about we have to get all the labourers out to the number of thirty perhaps to do it. The proposal is to have a tramway throughout the shops and yard leading to the wharf crane. (P. 27.)

The Shipwrights' Representative said:—

Our principal grievance is what is termed our workshop. . . . There is no room to work inside. (P. 67.)

The Blacksmiths' Representative said:—

If we had more fires there would be no need for overtime. There is plenty of room on the Island for fires. We have not room in our shop for more. (P. 61.)

The Engineer-in-Chief said:—

The plan for the proposed improvement of the works is not finally decided on. . . . The growth has been so rapid lately that I have talked it over with Mr. Broad, and we have worked up a scheme, which has not received my final approval. I quite recognise the necessity of it. (P. 73). I want a system of tramways about the Island to run through the shops, a 3 ft. 6 in. gauge, to connect the cranes and the docks with the workshops. I have got it laid down on the plan and I have got money on this year's Estimates for carrying it out. (P. 73.)

92. Apart from the above evidence the Committee recognise that if the machinery they have recommended be supplied further workshop accommodation will be imperatively necessary in order that it may be properly housed, and they have therefore inspected the plan of the proposed improvements referred to above, on which are shown the extensions in detail, including a proposed new Carpenters' Shop beside the present Erecting Shop, and a proposed new Boiler Shop on the site of the present Carpenters' Shop.

93. The Committee are of opinion that this arrangement would not be the best possible, and would suggest that the Boiler Shop be left in its present position, and that the extra space required be provided by covering in the clear ground to the north of it, the cover being made sufficiently high to allow of its being used to build vessels under, if necessary, as well as for a workshop.

94. The new Carpenters' Shop, we think, should be placed on the site of the present one, so as to have a water frontage where timber in log can be landed close to the sawing machinery which we have recommended. In this position the shop would also be in close proximity to the proposed slip.

95. The remainder of the workshop extensions proposed as indicated on the plan the Committee entirely agree with, and the construction of the tramway referred to is recommended.

#### XII.—DOCKING MEN OF WAR.

96. It has been pointed out in previous portions of this Report (pars. 36 and 72) that an appreciable amount of overtime has to be worked on vessels other than warships or mailboats in order that such vessels may be speedily got out of dock to admit the warships or mailboats.

97. The Committee consider that when this is the case the extra cost of the work—*i.e.*, the difference between bare time and overtime—should, if practicable, be debited to the incoming man-o'-war or mail steamer.

98. For docking ships of war, only the actual cost of wages and stores is charged to and paid by the respective Governments, by arrangement, we presume, between the Colonial, Imperial, and other Governments.

99. The Committee suggest, however, that, whatever may be paid, dock dues, calculated at the rates of private docks, should be credited in the books of the Establishment for each ship docked, in the same way as credit is taken by the Railway Department for all free services.

100. Thus the "Royal Arthur" being in dock from the 6th to the 15th October last (nine days), and her tonnage being 7,700, the charges (according to scale on p. 32) would have been £914 7s. 6d. We think if these amounts were shown on the books it would give a better idea of the usefulness of the Establishment. The charge actually made against this ship was £64 5s. 11d.

#### XIII.—CHARGES FOR THE USE OF TOOLS, ETC.

101. The Committee are strongly of opinion that, in conformity with the practice in all private establishments, charges should be made for the use of tools, machines, etc., in the same way that the materials and the workmen's time are charged for.

#### XIV.—APPRENTICES.

102. As stated in our answer to Question No. 8, no officially recognised system is adopted in regard to the engagement of apprentices, eleven of whom are at present employed in the shops, with five improvers, and fourteen shop-boys.

103. At page 27 and 28 will be found the Regulations proposed by the Engineer-in-Chief and the Manager to be adopted in future in engaging lads in this capacity. It will be seen that an exceptionally high educational standard is set, which we consider is not necessary.

104. We recommend that a slight alteration of the system now in force in the Railway Department (see Evidence, p. 42) be adopted, but that the rates of wages at present paid to apprentices at the Docking Establishment, which only slightly differ from those ruling in the Railway Department, be retained. The following is the Rule we suggest :—

Lads will be taken into the workshops as required, to learn the trades of fitter, turner, boilermaker, &c. They must not be under the age of 15 years, and will not be out of their apprenticeship before reaching the age of 21 years. In any case the minimum term of apprenticeship will not be less than five years.

Candidates must be of good constitution, and be able to read and write with facility. They will not be bound apprentice, but will be able to resign, and will be liable to dismissal, in the same way as the men. They will also be subject to the same Rules and Regulations as the men.

The remuneration for their services will be as follows :—

First period, or up to 17 years of age,	1s.	per day.
Second period, 17 to 18	„ 1s. 8d.	„
Third period, 18 to 19	„ 2s. 6d.	„
Fourth period, 19 to 20	„ 3s. 4d.	„
Fifth period, 20 to 21	„ 4s. 2d.	„

At the end of the term of apprenticeship they will be paid wages proportionate to the value of their services.

#### XV.—THE WORKMEN AND THEIR REQUESTS.

105. The Committee having decided to see the men, an intimation was conveyed to them, through their Foremen, that if they had any matters which they wished to bring forward they might select from among themselves two representatives for each of the large staffs, and one for each of the small staffs. As a result we were waited upon by

- One representative of the blacksmiths,
- One representative of the blacksmiths' strikers,
- Two representatives of the fitters,
- One representative of the moulders,
- One representative of the boilermakers,
- One representative of the boilermakers' labourers,
- Two representatives of the shipwrights,
- One patternmaker, on his own behalf,
- One assistant engineer foreman, on his own behalf,
- One joiner, on his own behalf, and
- One foreman labourer, on his own behalf.

These men preferred the following requests :—

1. That they should not be required to furnish medical certificates when absent for a short period through illness.
2. That all should be treated alike in respect to accident pay.
3. That if a man arrives at the works within one hour of starting time he should be allowed to commence work at once, and not be compelled to stand idle until after the breakfast hour.
4. That a dining-room should be provided on the Island for them.
5. That the blacksmiths should be paid double time for the first two hours' overtime, and time-and-a-half after.
6. That when men are sent along the coast to work, they should be allowed saloon fares, not steerage, as hitherto.
7. That the allowance for board money when men are sent away from head-quarters should not cease at the expiration of three months.
8. That when men are sent to work away from the Docking Establishment, either in or near Sydney, or up country, their wages should be promptly paid.
9. That when men are sent away from head-quarters to work, they should be allowed an advance of cash if they need it.

10. That when men are sent to work on board dredges away from Cockatoo Island, at remote parts of Port Jackson, "walking time" be allowed them one way.

11. That when a public holiday occurs on a week day, they should be paid for 8 hours 40 minutes, instead of for 8 hours only, the extra 40 minutes being the time they usually work on other days to make up the full time for Saturday; and holidays occurring on Saturday being paid at  $5\frac{1}{2}$  hours only, instead of 8.

12. That annual holidays be allowed as in the Dredge Service.

13. That engineers be allowed dirt money.

14. That engineers be paid double time for the first two hours' overtime.

15. That when correspondence is addressed by the men to the Department respecting increases of pay, or on other matters, replies should be sent them.

16. That the boilermakers should be paid dirt money in connection with the work done on the "Ajax."

17. That when apprentices have completed their term, they should be paid journeymen's wages.

18. That the departmental ferry should not leave Darling Island until 5.30 each morning, instead of 5.25 as at present.

19. That labourers in the Boiler Shop should be allowed a 1d. an hour more for dirt money, as well as the boilermakers, with whom they work.

20. That shipwrights should be paid 11s. per day on new work, and 12s. on old, instead of 10s. on new and 12s. on old, as at present.

21. That further workshop accommodation be provided for the shipwrights.

22. That labourers shall receive the same allowance for board money as the mechanics.

107. Regarding request No. 1, the Committee suggest that a certificate, signed by two respectable householders, be accepted if furnished, but that otherwise a medical certificate be required.

108. We suggest that the question of accident pay (request No. 2) be left to be dealt with by the Manager, who should, at his discretion, fix the period and rate to be allowed, if any, after due inquiry.

109. In consideration of the fact that the men are not able to get off the Island to their meals, we think that request No. 4 is reasonable, and might be granted.

110. Regarding request No. 8, we are of opinion that the plan suggested by Mr. Rossbach might be carried out. (See page 77.) In any case, the wages should be paid promptly on the regular pay-day.

Mr. Rossbach's suggestion is as follows:—

The Dock should make out the pay-sheets for all the men. When a man goes away from the Dock he should be given a card with his name, position, and rate of pay stated on it, and it should also state the time he is paid up to at Cockatoo; and the officer he was going to would fill in day by day the time he was working. If a man returned in time for the Dock pay-day he could bring this with him, and if he was not coming back in time for that the officer could telegraph the time to the Dock, and by that means the Dock would have a complete record of his time, and could pay on it.

111. Respecting request No. 9, we suggest that the Docking Establishment Manager be empowered to let the men have an advance of cash when they are sent away.

112. The matter of "walking time" (request No. 10), is one which the Committee can scarcely decide, as it depends upon circumstances which, we think, should be left to the Superintendent of Dredges and the Manager of the Docking Establishment to deal with.

113. Regarding request No. 17, we have already recommended that when lads have completed their term of apprenticeship they should be paid according to their worth.

114. Request No. 21 is dealt with in the Report.

115. With respect to request No. 22, as accommodation is generally very limited in the places to which these men are sent, and they have no choice in this matter, we suggest that discretion be given to the Manager of the Establishment to grant the same allowance to labourers as to mechanics or not, according to the places to which they may be sent.

116. Of the remaining requests, we consider Nos. 3, 6, 7, 11, 15, and 18 reasonable, and recommend that they be granted at the discretion of the Manager; but we are of opinion that request No. 12 should not be granted, as the men are paid overtime rates; and that requests Nos. 5, 13, 14, 16, 19, and 20 should be declined, as the rates asked are not paid by any private employer, and the men working at the Docking Establishment already have considerable advantages over those employed by private firms.

#### XVI.—COMPLAINT AGAINST THE DOCKMASTER.

117. In response to a communication from Mr. W. H. Wilks, M.P. for Balmain North, asking that two shipwrights, ex-employees of the Docking Establishment, be granted a hearing, the Committee saw these men (Henry White and James Murphy) who laid before them certain complaints regarding the Dockmaster. The latter was then afforded an opportunity of replying:

118. Having heard the complaints and the reply, we do not think the charges are sustained. (See Evidence, pp. 70, 71.)

#### XVII.—STATEMENTS OF MR. J. HOEY REGARDING THE FOREMEN.

119. When our investigation was about drawing to a close, we received further communications from Mr. W. H. Wilks, M.P., in which he asked that Mr. Jas. Hoey, ex-Superintendent of the Docking Establishment, be examined, stating that that gentleman was willing to give evidence, and that such evidence would be of "inestimable" value.

120. We thereupon held a meeting for this purpose, and Mr. Hoey made certain statements regarding the Foremen employed at the Establishment.

121. In order to give these men an opportunity of replying, we held a further meeting, had Mr. Hoey's statements read to them, and heard their rejoinders, which will be found in evidence.

122. A few days later we received the following letter from Mr. Hoey, our reply to which we also give beneath:—

The Committee of Inquiry into the Management of the Government Docking Establishment at Cockatoo Island,—

Gentlemen,

41, Short-street, Balmain, 15 December, 1898.

The evidence which I gave to your Committee I regard as being for the purposes of the inquiry only. I trust that, for obvious reasons it, will not be made the subject of conversation outside, especially to the officials at Fitzroy Dock Works.

I am, &c.,

JAMES HOEY.

James Hoey, Esq., 41, Short-street, Balmain,—  
Sir,

20 December, 1898.

I am directed by the Committee of Inquiry into the Management of the Government Docking Establishment to acknowledge the receipt of your letter dated the 15th instant, in which you state that you "regard your evidence as being for the purposes of the inquiry only," and you "trust that, for obvious reasons, it will not be made the subject of conversation outside, especially to the officials at Fitzroy Dock Works." In reply, I am directed to state that, in consequence of your having made certain charges against the foremen employed at the Docks, the Committee thought it only fair and just to have your evidence read to those men and to give them an opportunity of defending themselves. This has been done.

I have, &c.,

J. GARLICK,

Secretary to Committee of Inquiry *re* Government Docking Establishment.

123. Having investigated these statements, the Committee consider that they are not sustained.

124. With regard to the Foremen having relatives employed at the Docks (a matter referred to by Mr. Hoey), the Committee approve of Mr. Darley's minute of the 15th November, 1893 (p. 86), which was approved by the Minister on the 27th November, 1893.

#### CONCLUSION.

125. In conclusion, it is due to the responsible officers in charge of the Docking Establishment to say that, in a mechanical sense, the work done will compare favourably with that of any private establishment.

We have the honor to be,  
Gentlemen,  
Your obedient Servants,

ROBT. POLLOCK, Chairman.

WM. D. CRUICKSHANK, }  
A. B. PORTUS, } Members.

(Subject to dissent recorded below.)

126. I entirely disagree with the recommendation to create a Board of Control, because I consider it unnecessary, and that in practice it would be unworkable. I feel thoroughly certain that Mr. Darley, the Engineer-in-Chief for Public Works, is qualified to decide upon all matters which the Manager of the Establishment may from time to time submit for his direction.

127. I disagree with that portion of paragraph 77 which refers to utilising the Glebe Abattoirs boilers. They belonged to the Government and had been lying unused at the Docking Establishment for a long time. Now that they are built in they serve the dual purpose of supplying steam for any machinery, electric or otherwise, and of being used as occasion may require, in lieu of the pumping engine boilers, which, being of the under-fired type, are not, in my opinion, thoroughly reliable under conditions of hard firing.

A. B. PORTUS,  
Member.

### Dock Establishment, Cockatoo Island.

A Committee, consisting of Mr. Robert Pollock (Chairman), Mr. A. B. Portus, and Mr. William Cruickshank, having been appointed to inquire into the working of the Dock Establishment at Cockatoo Island, with a view to reporting to the Public Service Board on the subject, the following instructions are issued for their guidance.

In carrying out the inquiry it is desirable that the Committee should direct their attention more particularly to the following points :—

1. The competency or otherwise of the Officers at present employed.
2. Whether the staff is sufficient, insufficient, or excessive, having in view proper and economical supervision.
3. Are the rates of remuneration paid to the officers commensurate or not with the duties they are called upon to perform.
4. Are the rates of wages paid to the workmen in accordance with the current rates of their respective trades.
5. Is a sufficient number of men put on to efficiently and economically perform the work required.
6. What system is adopted in the taking on and discharge of men, and whether the Superintendent is left sufficiently untrammelled in this particular, and in the management of the men.
7. Whether the system adopted in keeping and checking the time of the men employed is an efficient one.
8. What system is adopted in regard to the engagement of apprentices, and what, if any, improvement can be suggested therein.
9. Are the arrangements at present in force for the quick supply of needed stores and material the best that can be adopted.
10. Are the stores supplied of good quality, and the rates paid therefor reasonable.
11. Is a sufficient check kept on the use of the stores, so as to ensure economical consumption and the avoidance of waste.
12. Whether the supply of tools, machinery, implements, slips, &c., is sufficient for the working of the Establishment, and, if not, in what particular is the supply deficient ; and, further, if by better arrangements as regards such plant, or in other ways, night work might not be largely curtailed.
13. Generally to advise as to whether the whole Establishment is conducted in such a manner as to ensure the best results to the State being obtained, and, if not, to report what measures are necessary in order to bring about this desirable end.

In carrying out these inquiries the Committee are given the fullest latitude to pursue the investigation in any direction they may think necessary ; and all the officers and employees of the Department are enjoined and directed to give the Committee all the assistance in their power to aid them in their inquiry.

---

*MONDAY, 7 NOVEMBER, 1898.*

PRESENT :

MR. R. POLLOCK, Chairman.  
MR. A. B. PORTUS. | MR. W. D. CRUICKSHANK.

The subject of the inquiry was discussed in a preliminary way at Mr. Pollock's office, 17, Bridge-street, city, in the morning.

In the afternoon the Committee visited Cockatoo Island, interviewed Mr. Broad, and asked him to prepare a plan of the Island, showing the arrangement of the different works. Mr. Broad was also asked to prepare the following returns :—

1. Detailed list of the staff, showing salaries.
2. Rate of wages paid to workmen in the various shops.
3. Contract prices for stores.
4. Average number of men employed in the various shops per month, for the past twelve months.
5. Charges against men-o'-war using the dock in relation to their gross tonnage.

It was then decided that the Committee should sit on Mondays, Wednesdays, and Fridays at 2 o'clock p.m.

The Committee then adjourned until 2 p.m. on Friday, 11th instant, Wednesday, the 9th, being a public holiday.

11 November, 1898.

Confirmed,—  
ROBT. POLLOCK, President.

J. GARLICK, Secretary,  
7 November, 1898.

FRIDAY, 11 NOVEMBER, 1898.

The Committee met at 2 p.m. at Prince's Stairs, Circular Quay, and proceeded in the launch "Dayspring" to Cockatoo Island, where a meeting was held in the Board Room.

PRESENT :

MR. R. POLLOCK, Chairman.  
MR. A. B. PORTUS. | MR. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Secretary reported having written letters to Messrs. Foster and Minty, Grant Bros., T. and A. Halliday, Chapman and Co., and Mori's Dock and Engineering Co., as follows :—

I have the honor, by direction of the Committee appointed to inquire into the management of the Government Docking Establishment at Cockatoo Island, to ask that you will be so kind as to favour them with a statement of your Schedule rates for mechanics, &c., engaged on repairs and new work, the wages paid to the men, and in what cases dirt money is allowed.

This information is needed in order that a comparison may be made with the cost of repairs at Cockatoo Island and the wages paid there, and will be regarded as strictly confidential.

He also reported the receipt of a reply from Messrs. Foster and Minty (copy attached, page 29).

The Secretary further reported the receipt and handed in copies of the following returns furnished by Mr. Broad, the Superintendent of the Docks, as under :—

1. List of staff, showing their salaries (copied on page 30).
2. Return showing rates of wages paid to the workmen in the various shops (copied on page 30).
3. Contract prices for Stores.
4. Return of number of men employed in shops, asked for at last meeting, is embodied in Return 2 (page 30).
5. Statement of charges against war and other ships for docking and repairs (see pages 31 to 34).

Examination of Mr. E. J. H. Broad, General Superintendent, Docking Establishment.

Mr. Broad was called, and handed in further returns as under :—

6. Average number of men employed in various shops for 12 months (see page 34); and
7. Statement of principle upon which sick pay and holidays are allowed (see page 34).

Mr. Broad stated, in reply to questions :—

*Sick Pay.*—If a man meets with an accident he has to get a doctor's certificate that he is unfit for work. Then he is paid as follows :—1st month, full time; 2nd month, two-thirds time; 3rd month, one-third time. The men do not contribute a farthing to this; it is allowed by the Government to the men as a privilege.

*The Quarry.*—We have not room enough here, and we are taking away the rock behind this building, alongside the dock; it is stock work, improving the property; you see we are hemmed in by the Gaol on one side and by the Sobraon Ground on the other, so that we cannot extend without taking away the rock; we put these men on this work as we are able; sometimes we are busy in the yard, and we cannot put so many on.

*Men Employed.*—The return shows the average number of men employed as 362 per month; we have at times had 400.

*Mr. Broad.*—I have been here five years and three months; I am in sole charge of the Island; my immediate chief is Mr. Darley, the Engineer-in-Chief.

*Office and Managing Staff.*—I have no complaint whatever to make regarding my staff and foremen as far as their abilities are concerned; I am perfectly satisfied with them; they were all here before I came; if any vacancy occurred it would be filled by the Public Service Board; I do not think the staff is quite sufficient for the work we do; I have not got sufficient assistance; since I have been here the number of hands has been reduced to 100 and 150, but that was only in my first year; I make it a point to arrange matters so that we have as a rule just the same number of men; I do not like the fluctuation; at the time we got so low the funds were exhausted; now I try to make them extend to the end of the year—that is, not to spend them faster than is consistent with keeping up the staff throughout the year; I think the salaries of my assistants had better be judged by those paid by outside firms to officers holding similar positions.

*Taking on Men.*—The foreman comes to me and reports he wants men; if there are none on our books available for immediate work, I tell him as soon as any men apply to take them on, and if he has difficulty in getting workmen he tells the men in the shop and they send men here and we take them on.

*Discharging Men.*—When men are not required a list is always submitted to me to see if I approve and if so, they are discharged; I take them on and dismiss them myself.

*Overtime: Insufficient Machinery.*—We have worked a little overtime in consequence of not having sufficient machinery, but my great desire is not to have any overtime at all if possible; we are deficient in machines; if there is a breakdown job we sometimes have to work overtime, but not unless it is necessary; the men themselves do not like it; the rate paid for overtime is time and a half for the first two hours; shipwrights get double time; the rates of overtime are the same as in other places.

*Checking Time of Men.*—When a man arrives in the morning he first comes to the timekeeper's office window and the timekeeper gives him a ticket; the man deposits this ticket in a box, and then goes to work; after the men have started work the timekeeper examines the box and rearranges the tickets on a board kept for the purpose; after breakfast they do the same again, and the same at each meal; the only chance for a man to get away is to go straight away after he puts his ticket in the box instead of going to the shop, but if he is found out he is dismissed at once; the system used to be that the men took their tickets away at night and put them in in the morning, but there was not sufficient check in that.

Dissection

*Dissection of Time.*—The foreman in every shop keeps the time as well as the timekeeper in the office. The foreman sends in the time each man is on the different jobs.

*Stores.*—When a man wants stores for a job he goes to the foreman and the foreman writes out an order; the man used to take it to the stores, but we found that a lot of time was lost that way; now I have got a labourer who practically attends most of his time to the stores; he gets the dockets and takes the stores to the mechanics, thus saving a lot of time; I have known men go to the stores to see if material was there, and then go back for an order, and then go and get the stores; if a particular article is not in the stores we have to order it; the storekeeper keeps the dockets and from these the accounts against the ship are made up, and they are checked against the stock at the end of the year; they are all sent to the Head Office and examined there again; it is necessary to send the accounts through the Head Office in order that a check may be kept against outstanding accounts.

*Accounts for Work Done.*—We supply the Head Office with the details of work done on a ship, and they send in the accounts; we give the Head Office the time of the men on that work and the stores issued for it; the Head Office keeps a "Cost Book"; it was kept here formerly, but the officer keeping it was moved down there so as to be more under the immediate control of the Accountant; he is entirely dependent on the information we give him.

*Inspection of Books.*—Treasury Inspectors come here to inspect our books; we never know when they are coming; one might be here to-day; they come and examine the petty cash and check the stores; they may ask how many inch bolts we have in stock according to the books, and then they see how many we have got and they have to tally; it is a splendid check on our stock and on our books.

*Stores.*—The Department conceives it to be the duty of the Contractor to keep a stock in his yard and not for the Government to have them in store, but the Contractor will not do it for the Government; the Contractor is only paid for what he delivers; we have a store Advance Account of £7,000, and that sum is always swimming; even with our small stock now that sum is all out; if we had a larger stock we should require an extra advance; it would be very much better if we had a larger stock; we are doing so much now for outside Departments that I doubt very much whether, if the advance were increased to £10,000, it would be sufficient; some time ago we had £5,000 put on, but we cannot touch that for the Store Advance Account—it was to be entirely for the outside services; for instance, we are working for the Marine Board, and that £5,000 was to be exclusively appropriated for the use of the Marine Board, to pay for stores used for them and that sort of thing; of course it is refunded to the Vote from the various Marine Board Votes, but the arrangement has not been carried out to any great extent; I merely mention the Marine Board as an instance of the charges it was intended to make against the £5,000 vote; the same remark applies to all outside Departments for which we carry out work.

*Accountancy.*—We have a book showing how the Establishment stands; it shows the expenses and credits; it shows the actual money paid or charges for work done, and whether the work is on the hull or the machinery or the boilers.

*Machinery.*—I do not think we have got sufficient machines here; we want a lot more lathes to do away with a lot of overtime; I did not anticipate eighteen months ago that we were going to have the work we have had from the Tramway Construction Department; that has required a lot of our machines, and in consequence we have had to work a little overtime; the natural course of events will be that the work will get more and more; the Dredge Service is increasing considerably; there is considerable increase per year in the Dredge Service, and then there is a tendency in the other Departments to get their work done here.

[At Mr. Cruickshank's suggestion the Committee asked Mr. Broad to prepare a written statement of the machines now on the works, and of those he considers necessary, and anything else in the Establishment where, in his opinion, the facilities are imperfect or insufficient for the work to be done, with a provision for the future.]

*Workshop Accommodation.*—There is not sufficient workshop accommodation; I have got a sketch of the place here, but I will get you a better one—a drawing which is with the Engineer-in-Chief showing my ideas for the development of the place; I propose to have a tramway—3 ft. 6 in.—to move things about the place; now, if we have to move things about, we have to get all the labourers out to the number of thirty, perhaps, to do it; the proposal is to have a tramway throughout the shops and yard leading to the 20-ton wharf crane.

*Apprentices.*—We have a good many apprentices at present—54; there has been no arrangement whatever with them up to the present time; those who made application were taken on whenever there was an opportunity; generally they apply to a Member of Parliament, and he interests himself on their behalf, and when there are vacancies we take them on irrespective almost of age or qualifications or anything else; I get the consent of the Engineer-in-Chief; I take on shop boys without getting consent; the following are the Regulations I think advisable for the introduction of apprentices of the ordinary class—that is, those whose only desire is to become journeymen mechanics:—

*Regulations for Admission of Apprentices to the Government Dock Yard at Cockatoo Island.*

1. The number for admission will depend on circumstances, and the necessity for them. The Public Service Board will notify in the public Press the number that will be taken on in each of the following shops, viz.:—Engineers' Shop, Blacksmiths' Shop, Boilermakers' Shop, and Pattern Shop, and they shall be admitted only on successfully passing an examination in the elementary branches of knowledge as a qualification for such apprenticeship.

2. An examination will take place, when and where directed by the Public Service Board, in the following branches of knowledge:—English, Grammar, Writing from dictation, Arithmetic, Algebra, Geometry, Geography, English History.

3. Each candidate must notify the Public Service Board in his own handwriting within the limit of time prescribed in the notice for Government Dockyard apprentices.

4. The Public Service Board will notify to the applicants the time and place where the examinations will be held.

5. Each candidate, on receipt of a notice from the Public Service Board will be required to affix a 1/- duty stamp to the notice before he can be admitted for examination.

6. Each candidate must not be under 16 years, nor over 18 years of age, at the time of examination.

7. Only one member of any employee's family will be allowed to compete, as it is very undesirable to have at any time more than two members of any family employed here.

8. Any candidate successfully passing the scholastic examination, but fails to pass the medical examination—as to constitution and good health—will be rejected on that account.

9. The successful candidates will not be bound apprentices, but will be able to resign, and will be liable to dismissal in the same way as the men or for insubordination or improper conduct, and they will in every way be subject to the printed Rules and Regulations for the proper and efficient working of the Government Dockyard Establishment.

10. No apprentice shall be employed more than twelve months after the expiration of five years of apprenticeship, for which he will receive improvers' rates.

11. Any apprentices showing exceptional ability, clause 10 will not apply, but their services may be temporarily retained if thought advantageous to the Department.

There is a great demand to "apprentice" youths here for the reason, I suppose, that outside engineering establishments require a large premium; and so long as no premium is asked by the Government it is only reasonable that the most promising youths should be selected when they are required.

*Stores.*—If any bad stores are supplied we tell the Contractor to remove them, and when the voucher is sent in we will not pay it; some time ago Mr. Broomfield sent in some very defective white lead and we refused it; he took it back and sent some more, and we refused that also; if Contractors do not come and take away bad stores we write to Head Office, and the Under Secretary writes them to take the goods away at once; the Contractors, when informed of the rejection of any goods supplied are also notified that the goods have not been taken delivery of, and are lying at the Dock at their risk; notwithstanding that in the contracts special brands of white lead are specified the Contractors want to send in other brands; Champion's was specified, but Broomfield having the contract insisted on sending in Burrell's; this lead was bad; it has gone as hard as a brickbat; you could hardly break it with a hammer. The delay in getting stores is mainly due to the circumlocutory way the whole business has to go through; I send a requisition to Head Office, and it goes from one to another, and one to another, and one to another, and time is lost that way; not only is time lost but it costs more; if we want half-a-dozen boiler plates, Buddle, styled a clerk, but really the storekeeper's assistant, goes round and ascertains whether plates can be got anywhere approximate to what we want; if they cannot be got he gets as near as he can; the reason for that is that if we make out a requisition for what we want it will come back saying it is not in stock; frequently vouchers come down with "weights of material not right"; some plates were ordered,  $1\frac{3}{8}$  in. thick; the stupid contractor, instead of writing the exact size of the plates that he delivered to us, which were 10ft. long, copied the order we sent 8ft. x 4ft. x  $1\frac{1}{4}$  in. because he thought that would agree better; we had to take 10ft. sheets because they were the nearest to suit the job; I cannot order stores except through Head Office. If I cannot get a size to suit our purposes we have to stock, and we indent for them; if it is a very urgent job I must go to somebody who has got plates, perhaps Mort; I think the manner of dealing with the stores could be very much improved.

[Mr Broad was then asked to put in writing his ideas of how the method of dealing with stores could be improved upon, and also any suggestions as to how the present system of managing the works could be altered with a view to better or more economical working.]

*Urgent Work.*—Sometimes the Marine Board, or another Department—the Asylums—sends up saying "I want so-and-so done directly"; I have no authority to do that, although I know it is urgent; I must get authority from Head Office, and that hampers me; I have frequently telephoned to the Engineer-in-Chief, and where it is a very urgent job he has told me to go on with it; but supposing I get verbal approval from the Engineer-in-Chief our next trouble is that we do not know what to charge the time to; there must be authority from Head Office for putting the time down and paying the men; they will not accept me as an authority for spending money; it might answer to say "Engineer's authority per telephone," but if I did that a few times they would say I might just as well not ask leave at all; if I do the work they send up from the Head Office and ask "Where is your authority?"

*Timber.*—What is conspicuously the worst thing about the place is the delay in the supply of timber; I will get you out some cases where delay has occurred.

*Accounts for Work Done.*—The accounts for work done are sent in to Head Office from here; the accounts could be sent from here to the various Departments; my opinion is that the accounts should be sent in when the jobs are finished, except where it is a very large work, and then they should be sent in in periods; we send to Head Office the time-sheets that the men are paid from.

[Mr. Broad was then asked to furnish the Committee at their next meeting with actual copies of the accounts sent to the Head Office in connection with the last docking of the "Captain Cook" and the "Galatea"; and the Secretary was directed to obtain from the Public Works Department actual copies of the interim and final account issued by Head Office against the Marine Board and Dredge Service for the work done on these boats.]

*Injuries to Men—Who Bears Cost of Accident Pay?*—If a man is injured when working at a warship, the warship bears the accident pay while she is here; but if the man has not recovered when she leaves, the Dock bears the expense afterwards.

*Dock Vote—Surplus.*—The Vote was reduced in 1893, and there was no other course but to discharge the men; I take care now not to absorb the Vote; the money to pay the men on the Dock is voted in advance; we must always keep a certain staff on; £5,600 is voted every year, and has been for years past, for the working of the Dock Establishment; sometimes it is not all used, but the surplus is not carried on to the next year; it is paid into the Treasury; I must not exceed it, but must dismiss the men; that Vote is simply for the maintenance of the Docks and the Establishment; only the wages of the men engaged in maintaining the docks or making new works and improvements are paid out of it; the men doing the work on the jobs are paid from the work they are on; men working on a job for the Marine Board are paid with money received from the Marine Board; of course we must pay the men a month or two before the Marine Board pays us, and that is done out of the Vote, the money being refunded when we send the accounts in; a regular Paymaster brings the money here from the Head Office to pay the men; the wages of the men employed in docking men-of-war, shoring up, and so on, come out of the Vote, and the pay of the men on this quarry also; that Vote is the only fund we have; the small sums we charge to the men-of-war for wages in connection with docking are paid into the Treasury, and not refunded to the Vote—they are kept to recoup the Treasury for the advance—but the moneys charged for repairs and stores used are paid back to the Vote; in the account against the "Karrakatta" (page 31), there

there is "shipwright, six-and-a-half hours"; he was putting up the shores; the "Karrakatta" pays for that; that £22 2s. comes out of the Dock Vote to pay the men's wages; the "Karrakatta" pays it to the Treasury, but it is not paid back to the Vote; if we did £22 2s. worth of repairs to the "Karrakatta" it would come back again to the Establishment; upon that point it would be just as well to get advice from the Head Office; there seems to be a division of opinion as to where it does go.

*Charging beyond the Twenty-four Hours.*—If a merchant ship is here and is an hour or so beyond the twenty-four hours, if the dock is not engaged I use my own discretion as to whether I shall charge for that; we cannot go by a hard-and-fast rule; we have even had them two or three hours beyond the twenty-four, but they have always asked before-hand and explained the reason—something over which they had no control; if a merchant vessel is in dock over Sunday, we do not charge if no work is being done on that day.

*Officers.*—Those six officers specified in the return (p. 30) are virtually all the responsible officers about the place; those are the men who come under the operation of the Public Service Act, but in addition to them there is a foreman labourer here, a foreman patternmaker, the timekeeper, and two men in the store; Buddle, who goes round and ascertains where stores can be obtained, is wholly employed at Head Office, but comes here every morning for orders; Lawes, the Chief Clerk, keeps the books; I think the best way of judging their salaries is by comparing them with those paid outside for similar work.

*Fitters.*—I do not think the supervision of the fitters and turners is sufficient; Gibson has a good deal of running about to do; if there are ten or a dozen ships here he has to go to every one of them, and during that time the men in the shop will talk a good deal and idle, but I do not think there is very much idling going on here; Fulton, the Inspecting Engineer, is really an outside inspector; he has little or nothing to do here; Mr. Gibson has to go off the Island, but not often; Fulton is not Gibson's assistant; he is paid from here, but his salary is charged to the various works he is on; he sends in his time-sheet with so many hours at Pope, Maher's, and so many hours at other places; we pay him and charge the money to the various services; Mr. Gibson has really no assistant; I asked for a Foreman Blacksmith, but they would not grant it; we need a leading hand, not a foreman, to look after the men and work with them, not to knock about with his coat on.

*Political Influence.*—Political influence has not been felt here to any great extent; when I have discharged men they have gone to their Member, and he has gone to the Minister and Engineer-in-Chief; I cannot say that at any time I have been threatened by any of them; I think political influence has slightly decreased since the advent of the Public Service Board, although it was not very strong before; now if any Member wants a favour he generally comes personally and talks the matter over; he would not do that before; there are only a few here now who have a lot of political influence, but it is very nearly used up; Mr. James Johnstone was the only one who got me into trouble in the early days; I had a notification the other day that it was practically left to me to take on and discharge hands; it was left to me before, but I was coerced to a certain extent, but I am not now; I have full power to take on and discharge men, but I have got to show good cause for it; if I say there is no more work when there is really no more work it is all right; in 99 cases out of 100 where complaints have been made and the Department has asked me to report, they have found that the men have not had any foundation for the assertions made; for instance, a man complained that he was unfairly treated and not properly paid, and I sent down a list of his twelve months' pay, amounting to nearly £150.

*Grading of Men by Public Service Board.*—It would never do for the men to be graded by the Public Service Board; it would never do for the Public Service Board to interest themselves in the men working here; we pay some men more than others according to their work; we take a man on and give him so much a day; if he works very well we give 1d. per hour more, if he is deserving it; some men here you never see away from their work, no matter when you go to the shop, and they are worth a little extra; you do not want a man to look after them; it would not do for the Public Service Board to grade these men because the work fluctuates; supposing next week the work tapers out we would have to get rid of the men; the men know it themselves now.

[Mr. Broad then conducted the Committee on an inspection of the workshops, quarry, stores, and pattern rooms.]

*Quarry.*—At the quarry Mr. Broad informed the Committee that the rock and shale excavated was taken to Darling Island in a Dredge Service punt, but nothing is credited to the Dock for the services or material.

At 5 p.m. the Committee adjourned until 2.15 p.m. on Monday.

The Secretary, Committee of Inquiry re Government Docks,—

Dear Sir,

Peacock's Point, Balmain, Sydney, 9th November, 1898.

In reply to your inquiry dated 8th November, 1898, re rate of wages paid to mechanics, &c., engaged on repairs and new work, we have much pleasure in forwarding to you the attached Schedule with particulars as to overtime, &c., &c. Trusting it will be of some service to you.

Yours, &c.,  
FOSTER & MINTY.

Receipt acknowledged with thanks.—J.G., 10th November, 1898.

[NOTE.—As the information as to rates of wages paid by Messrs. Foster and Minty was supplied on the understanding that it would be regarded as confidential, it has been omitted.]

## Charges for Docking, &amp;c., Men-o'-War.

*Docking.*—Mr Broad states that no tonnage rate is charged for docking men-o'-war, either for the British or foreign Governments, such work being done free.

*Repairs.*—For repairs, &c., the following is the system of charging :—

1. Wages of men engaged on the work for the time actually employed.
2. Salaries.—If only one vessel is under repair, the whole of the office salaries for the time taken in those repairs is charged; but if more than one vessel be undergoing repair the office salaries for the time are divided equally, irrespective of tonnage; thus, if a 6,000-ton vessel were being repaired and another of 2,000 tons, each would be charged half of the office salaries, not three-quarters to the former and a quarter to the latter, as would be the case if the charge were according to tonnage.
3. Stores, Materials, &c.—The actual amount consumed, plus 10 per cent. for waste, &c., is charged.

Examples of these charges are attached in the shape of copies of accounts rendered against H.M.S. "Boomerang," on 3rd November, 1898, H.M.S. "Karrakatta," October, 1898, H.M.S. "Royal Arthur," 3rd November, 1898.

The above applies to warships only. Attached is a copy of the scale of charges fixed by the Minister for docking and repairs to vessels other than warships.

10th November, 1898.

### GOVERNMENT DRY DOCKS, PORT JACKSON.

#### REVISED REGULATIONS AND SCALE OF CHARGES.

##### Conditions.

- All vessels belonging to H.M. Navy, the Colonial Government, and men-of-war of other nations will be admitted to repair in the Government Docks, Sydney Harbour, free of any dock dues or rates, but they will be required to repay all actual expenditure of stores, wages, and material.
- All other vessels will be admitted at the rates shown in the scale of charges below.
- The dock dues will include and cover the cost of pumping, shoring, wedges, and blocking, and the cost of all labour connected with opening and closing the docks, and all incidental labour connected with the actual operation of docking a vessel.
- The Government will not undertake the repairs of a vessel or its machinery; and all parties availing themselves of the use of the docks will be required to make their own arrangements for this service, and provide all necessary labour and material for the same.
- The Government will not hold themselves responsible for any accident occurring to a vessel or her crew whilst docking, undocking, or in dock.
- The officers, crew, and workmen of any vessel whilst in dock will be required strictly to adhere to the Regulations of the Establishment.
- The captain, master, or pilot of a vessel, after making fast to any buoy or bollard off the mouth of the docks, for the purpose of entering, will thenceforth be required to attend to the direction of the officer of the dockyard superintending the docking or undocking of the vessel.
- Applications for the use of the docks will be registered in the order of their receipt, but the Government reserves to itself the right of determining the order of priority in special cases.
- Vessels registered and not arriving at the dock at the appointed time to enter will be liable to the forfeiture of their turn on the register, and will also be held responsible for any expenditure that may have been incurred for the purpose of docking them.
- In future vessels will be admitted into dock on the application of the owner, agent, or master, who will be held responsible for payment of all dues and charges.
- No vessel will be permitted to enter the docks with gunpowder or explosives of any kind on board.
- Any vessel entering or leaving the dock on Sunday shall pay the dock dues as for a week day.
- Vessels not entering, but occupying the dock on a Sunday, and performing any work either inside or outside the vessel which could not be done without docking, shall pay dock dues for the day whether such work is performed by the ship's crew or by contractors, but when no work of any kind is performed about the vessel Sunday will not be charged for.

##### Scale of Charges for Dock Dues.

	Per ton, first day or part of a day.	Per ton, second day and each succeeding day or part of a day.
	s. d.	s. d.
4,000 tons and under .....	0 6	0 4
4,001 ,, to 5,000 tons .....	0 5½	0 3½
5,001 ,, to 6,000 ,, .....	0 5	0 3
6,001 ,, and over .....	0 4½	0 3

Subject to a minimum charge for small vessels of £20 for the first day or part of a day, and £15 per day or part of a day after.

Docking dues start from the time the vessel is clear of the dock sill when coming into dock.

The gross tonnage given in Lloyd's Register, when the vessel's name appears there, is that by which the charges will be calculated.

The Sutherland Dock has from 29 ft. 6 in. to 32 ft. of water over the sill at high water, at neap and spring tides respectively, and is capable of taking in a vessel up to 600 ft. in length; blocks are at present laid for 556 ft.; clear width at entrance, 94 ft.

The Fitzroy Dock has from 19 ft. to 21 ft. 6 in. over the caisson sill at high water, neap and spring tides respectively, and is capable of taking in a vessel 450 ft. in length; width at entrance, 59 ft.

##### Workshops and Machinery.

On application the use of the following machines, etc., may be obtained at the scheduled rates, preference being always given to the requirements of a vessel in dock. These charges will be in addition to dock dues, and will include such labour and material only as the following list declares.

The officer-in-charge of the Establishment will have power to prevent damage to any of the Government plant by removing any incompetent or careless workman, or improper material from the works.

## Cranes.

	Minimum Charge.	Charge per hour or part of an hour.
	£ s. d.	£ s. d.
Dock Steam Travelling Crane .....	1 10 0	0 15 0
20 ton Wharf Steam Jib Crane.....	10 0 0	5 0 0
5 ton Wharf Derrick Crane.....	0 10 0	0 5 0

These Crane Rates include driver, coals, water, and oil for the steam-cranes only; slings, etc., if supplied, will be charged extra.

contracts of longer periods than even six months; I do not think the contractors themselves care to accept contracts for such long periods, owing to the market prices; of course, if they had it for three years they would keep larger stocks; six months is not sufficient time to induce the contractors to keep a large stock in hand, and that increases the delay; the shortness of the contract increases the delay; that could be got over by keeping a larger stock here.

*Periodical Overhauls.*—Mr. Portus would be able to tell better than I whether there are any recognised rules for periodical overhauls similar to those which govern the Mercantile Marine; generally speaking, the vessels are periodically sent here, but it is very seldom that they come, unless something is absolutely needed.

[Mr. Portus explained that he received weekly reports giving the condition of all the different parts of the vessels, and from this information he judged whether an overhaul was necessary.]

*Overhauls.*—A list of the repairs required is sent with the vessel, but if we find on opening up that there are defects which are not in the list we carry them out; sometimes when we open up we find that defects that are mentioned on the list are not needed to be carried out; the nature of the defects determines the amount of work to be done.

[Mr. Portus explained that the Engineer in charge of the plant examines it and fills in a form with the nature of the defects and the cost; that is submitted to the Engineer-in-Chief, and he approves and orders it to be carried out at Fitzroy Dock.]

*Stores.*—We do not supply stores to ships except such as are needed for repairs.

[*Qualifications of Officers and Engineers.*—Mr. Portus explained that the following were the qualifications required of masters and engineers of dredges:—

Position	Pay.	Qualification.
	£	
Engineers .....	252	First-class Engineer's certificate of competency.
Do. ....	228 to 180	Second-class Engineer's certificate of competency.
Do. ....	168	Third-class Engineer's certificate of competency (and to be a Fitter).
Do. ....	156	Third-class Engineer's certificate of competency.
Engine-drivers .....	180 to 168	Third-class Engineer's certificate of competency (and to be a Fitter).
Do. ....	156	Third-class Engineer's certificate of competency.
Masters and Drivers of Launches .....	156 to 144	Third-class Engineer's and Harbour and River Master's certificate of competency.
Masters .....	260	Foreign-going Master's certificate of competency.
Do. ....	252 to 180	Coast Master's certificate of competency.
Do. ....	168 to 156	Harbour and River Master's certificate of competency (and to be an A.B.)
Mates of Dredges .....	180	For hopper sand dredges—Coast Master's certificate. For other dredges—Coast Mate's certificate of competency.
Do. ....	168	Coast Mate's certificate of competency, or Harbour and River Master's certificate of competency (and to be an A.B.)
Mates of Steamers .....	144	Foreign-going Mate's certificate of competency.

When the ships are laid up it does not affect the pay of the officers employed in any way; except they are required to supervise the work; they are sent away in other vessels; the engineer remains in charge of the work to be carried out; when a vessel is laid up for three months for cutting down or something special, she is handed over to Mr. Broad; nothing extra is allowed the officers when the ship is laid up.]

Mr. Broad continued:

*Overtime.*—The Foremen do not get extra pay for overtime; they are here whenever they are wanted.

*Instructions to Officers.*—None of the responsible officers have been furnished with instructions relating to their duties; they get all their instructions from me verbally.

*Ferrying the Men.*—The men pay nothing for their carriage to and from work in the Government launch; the Atlas Works charged 1s. 6d. a week to their men.

*Fire Prevention.*—The only fire prevention appliances are the hoses laid about here; I do not consider them sufficient.

[Mr. Broad was asked to embody suggestions on this subject in the report he was preparing.]

*Lifting Appliances: Cranes.*—The only appliances for lifting heavy weights, such as propellers and shafts, are the cranes at the big dock; the inner one will lift 5 tons; we can get one on each side; we could not lift a portion of a rudder weighing 10 tons; we should have to put up special gear and tackle on board the ship; they usually have the means on the ship, but it takes a long time; those cranes travel along the old dock as well as the new, there are no other lifting appliances but those; I do not think the 30-ton floating crane could be made available; up to the present we have not had to do any big work for these vessels; it is let by contract, and the contractor does that sort of thing.

*Telephone.*—We now have the telephone connected directly with the Exchange at Balmain, as well as through the Head Office; we can also communicate with the Fire Brigade direct, day or night.

*Pumping Gear.*—I am not satisfied with the old pumps here; we will shortly have to get centrifugal pumps for the big dock; the present pumps are rusting very badly down below, and give us some trouble; they are very expensive; we have fresh boilers now; the tubes in the old boilers kept giving out very quickly; Gibson is the officer who keeps the pumps in good order; the engineer on the job looks after the boilers; he came here to erect them, and has been on the job ever since; he cleans the boilers out almost every time after pumping; the last inspection was done by the man up there; he cannot get into the boilers to do any work; they are tubular boilers; you put a candle down  
below

below and scrape the mud out; they are pocketed already in the bottom, and I have put in scores of new tubes; that is why I got new boilers; we have not kept a sketch of the boilers and marked the tubes that gave way; some of them cut right through in six weeks; we have not got a drawing of the boilers, nor of the machinery; they are the Colonial type of boilers; the fresh boilers we have are not new, but they were boilers the Government had in hand; they have 32 Galloway tubes in each; I was told to get prices for them, and the highest offer was £75 for the two; the old boilers were giving a lot of trouble, and I got permission to put these in; one of the floats in the pump is not answering very well, and we are taking it out and putting the ordinary valve in; I do not think it necessary to put a certificated engineer in charge of the boilers; if any accident happens I take the whole responsibility, and in return I demand full submission from every man here; there is a first-class mechanic on the job; I do not know whether he has got a certificate, but still he has served his time; the boilers came down in pockets just after they were here; I do not like them being pocketed down like that; they are externally fired; I do not think you can beat this man; he came here from Smail's as a fitter to assist in the erection.

*Docking Men-of-War.*—When men-of-war are in dock all work required below the waterline is done by our staff; it used to be done by the outside people; they would call for tenders for it; it is only little finicking work that we do below the waterline; anything of any magnitude is let out; we do not want to do anything here; we cast some zincs and put them in; some years ago a ship came in and occupied the dock for a considerably longer period than she should; I complained to the Engineer-in-Chief that all the work necessitating the ship's staying in dock should be done by us, so that we could get her out; we do not want to interfere with private enterprise.

[Mr. Portus explained that the Government rates were so arranged that they could not compete with private firms for any work that those firms could do, but for any work that those private people could not do the rates were lower than were charged in other colonies so as to induce shipping to come here.]

*Salaries Charged.*—If there is one vessel in dock she pays the full amount of salaries; if there are two vessels in the dock still pays the same amount of salaries, but they are divided between the two vessels; the same is done with the cost of the electric light; the bare time of the men is charged and all that is received from the ships goes back into the Treasury as revenue.

*Accounts.*—We do not send the detail of our accounts to Head Office in this form (*looking at an account from Mori's Dock*); we could give it all like that but it would necessitate extra clerical assistance; our cost book gives much more detail than the cost book at Head Office; all the returns for the "Galatea" are not in yet—the vouchers for the material; I can give you the approximate cost.

(Witness retired.)

Mr. John Pratt, Dock Superintendent, was called. In reply to questions he stated: I have been here since 1891.

*Docking Ships.*—Mr. Broad gives me a written notice that such and such a ship is coming into dock at a certain time on a certain date; the time of leaving the dock is arranged between the captain and myself; I have nothing to do with making up the charges; I send in the time the vessel comes in and the time she goes out.

*Stores.*—We have a certain amount of stock timber here, and if I am short I have to requisition for it; I send an order over to the store and I have got to wait till it comes; if the timber is in stock I make out a docket, send it in to the store and get the material; that is charged against the ship that uses it; if it is an out-of-the-way piece that they have not got in stock I make out an order on a separate piece of paper and send it to the store; the storekeeper makes out a requisition and sends it to the Head Office; I have nothing to do with it after that; I have to wait till the material comes to hand; I will give you an instance; the following timber was requisitioned for on Requisition 25th June, 1898, by Mr. Orr:—

Ironbark keel	...	...	...	...	1/57—6 x 5
Keelson	...	...	...	...	1/57—5 x 5
Rudder post	...	...	...	...	1/7—10 x 11
"	...	...	...	...	1/8—8 x 5
Stringer	...	...	...	...	2/60—9 x 1½
Boiler bed	...	...	...	...	2/37—8 x 7
Decking	...	...	...	...	1,560 lineal feet 4 x 2 decking
"	...	...	...	...	2/36—12 x 1½ kauri
"	...	...	...	...	2/30—12 x 1½ kauri
Hull plank	...	...	...	...	700 lineal feet, 8 x 1½ kauri
"	...	...	...	...	1,300 lineal feet, 10 x 1½ kauri
"	...	...	...	...	4/60—6 x 1½ Oregon

I have not seen it yet; the very first thing that should be here is the hull planking and the deck planking; it is not here yet, and that is five months ago; on the 18th July, 1895, I ordered 5,000 ft. of 5 x 2½ kauri decking, and that has not arrived yet; that was for stock; here is the "Orestes" here now for a new deck and I have not got it; there is time enough to send to England for it in five months; I have a certain amount in stock, but not enough to complete; they tell me that I am not to keep a stock of timber here; it must be in the contractors' yard; well, here is the result; Goodlet and Smith are the contractors; here is a piece of hardwood 7 ft. long 10 x 7 and I cannot get it; I want two pieces for the "Powerful," and I cannot get the stern frame up without them; we are just simply playing with the job as we are going on now, putting men on and off as the timber arrives; we have a good sized store but there is not sufficient in it to keep this place going; this difficulty in not being able to get stock applies to most of my work; it has been the case ever since I came here; it appears to me to be getting worse; I have had this job on the "Powerful" for five months now; the timber that is here is falling to pieces for want of putting in its place; I have spoken about it till I am tired; I am always speaking about it; Buddle does all he can do to get it;

he

he goes to the contractors and they tell him it is in the harbour, but we cannot get it; they will not send the punt up specially with one piece; we are in an out-of-the-way place, and unless there is sufficient to send the punt with I do not suppose they will send it; we had men working on the "Powerful" and had to take them off because there was not the material; a few crooks have been delivered for the Marine Board launch, and that is all; we have not started on that for want of timber; I can do nothing without the keel; I have had these jobs for five months waiting for the timber, and all of it, except the kauri planking, is practically procurable in New South Wales; it can be got from the Northern rivers; there was a man came here one day and said he could supply anything we liked to order; I sent him down to Mr. Portus; I do not know his name; Mr. Orr ordered all this timber; these are copies of his requisitions; so far as I am concerned I am practically helpless without this timber; I can do nothing more personally to get it; if I went to see the contractor I would be exceeding my duty; I have not got written instructions as to my duty.

*Labour Contracts and Day Labour.*—There were two punts built here by labour contracts in my time; they were sublet by the late Superintendent, except the jetties in Erskine street; the work was done satisfactorily, but I got into hot water for trying to get what was right; the contractors complained to the head of the Department that I was treating them unfairly and that sort of thing; of course I did not hear anything of it back, but it was done; I can do the work cheaper by day labour; take the last punt I built for Darling Harbour, and compare the cost of that with one done by Mr. Ford at Berry's Bay; the anchor boats are built here by piecework, which comes out as cheap as building them by day labour; if the work is given out elsewhere to be done I have either got to supervise it or send it to a man to supervise it; if it is done under my supervision here I can save all that expense; there was a delay in the timber when the pontoons were being built; I could not say who were the contractors then; there is a clause in the specification that if the timber is not supplied in a certain time it can be bought elsewhere; but there is always a loophole to get through these things; the contractor has only to go to Head Office and say that he cannot do that and he cannot do this, and he gets an extension of time.

[Mr. Portus read the penalty clause, as under:—In the event of contractor failing to deliver or despatch articles or materials ordered, as specified above, within two clear days of receipt of order, the officer, or his authorised representative, shall have power, without any further reference or notice to the contractor, to purchase such articles or materials elsewhere at the contractor's risk and expense; and should it not be possible to procure articles or materials of the kind or quality ordered, the officer shall be entitled to obtain, at the contractor's risk and expense, articles or materials of the next higher quality, kind, or make procurable, which in the officer's opinion may be suitable.]

Mr. Pratt continued:—The Head Office has the carrying out of that; I could not say whether Morrison is in the same fix for timber for the steamer he is building for the Department as we are; I want about 3 cwt. of  $2\frac{1}{2}$  x  $\frac{1}{2}$  cheese bolts and nuts now, and they cannot be got in the country; they are in contract; that is for a job that is waiting to be gone on with now; they do not keep enough in stock here of bolts and nuts; if I get any sort of a job here it takes 3 or 4 cwt. of bolts and nuts; I cannot send in an order for a large amount of stock, for I do not know what job is coming in; they tell me I have got no authority and no responsibility; I recollect Mr. Portus telling me that I could order £500 worth of timber; I did so, but they will turn round and say, "What do you want it for?" I cannot say, "The 'Orestes' is coming here," because I do not know that she is; twelve months ago I spoke to her captain, and asked him to let me know whether Mr. Hamilton was going to get this done, so that I could get the timber in stock; I was not told, and now the ship is here and I have not got half the material for it; if Mr. Broad asked me every six months to make out a list of what I considered necessary to put in stock for our work I could do it; I am in a position, from my knowledge of the work and of the ships and their condition, to do that; such a system as that would be a material improvement on the present practice, and it could be done without any trouble; I am told I am to order everything direct for the job; that means that I have to be the storekeeper; when any material is ordered direct I have to take charge of it and store it in the shed, which I consider should not be.

*Personal—Mr. Pratt.*—I cannot be on my job as much as I would like, because these two docks keep us going; I have got an assistant to help me, but he is not appointed assistant; we very seldom have the dock empty; there were 121,713 tons docked last year—15 warships, 19 steamers, 2 sailing vessels; that does not include the tugs and punts belonging to the Department; the last week in last month I was fully occupied the whole of the week, and could not leave the dock for anything; I will tell you what I did: on the 21st October I undocked the "Boomerang" and "Karrakatta," and cleared the dock of shores, &c.; on the 22nd I docked the "Glaucus"; on the 23rd (Sunday) I undocked the steamship "Glaucus" and cleared the dock; on the 24th I docked the "Willyama"; on the 25th I undocked the "Willyama" and cleared the dock, I took in the "Warrnambool," I undocked the "Warrnambool" at half-past 3 in the afternoon, I put the "Galatea" in the dock and pumped it down to nine feet; that is one day's work; on the 26th I docked the "Galatea"; on the 27th I undocked the "Mohawk" from the Fitzroy Dock, and I put the caisson in its place and pumped the dock dry and fixed the blocks, I filled the dock, put in No. 3 barge, No. 30 barge, the drill punt and the "Athena," pumped the dock down to six feet; on the 28th I finished docking the barges, the punt and the "Athena"; the whole of that time I could not leave the dock except for a very short time, yet I was supposed to be looking after other work too; that represents a total of about 7,910 tons roughly in one week; that was a busy week; in that week I did twenty-three hours' overtime, besides my day's work, Sundays included; everybody else in the Service who works overtime or on Sundays gets paid for it; that twenty-three hours is calculated as if it had been a shipwright working on the job; it is about eighteen hours actual time.

*Docking Warships.*—The cost of the work is very much increased by the warships sometimes wanting both docks at once, and our having to work overtime on whatever jobs are in, so as to get them out for the men-o'-war to come in; everything has to give way to the Imperial work; the overtime thus caused is not charged to the warships, but to the work on which it is done; shipwrights are charged for eight days one and three-quarter hours patching the copper on the "Royal Arthur" when she was docked she was here nine days; that was all the time they were at her.

*Stores—Timber—Machinery.*—An engine-bed has been put down for a saw-mill so that we can get timber and cut it ourselves ; they talk about getting a breaking-down saw ; I do not know whether they intend getting one. The biggest piece of wood I can cut with the circular saw I have is 8 in. ; I have a very good band-saw, but it is only good for certain purposes.

[Mr. Pratt was asked to submit in writing suggestions about the docking of the ships or the working of the Establishment which would conduce to better management or greater economy.]

Mr. Pratt continued :—

*Assistant.*—I have an assistant, but he is not recognised in any way by the Department ; he is simply selected by me to represent me on the job when I am away ; I do not see why he should not be recognised ; this place has grown.

[Mr. Pratt was informed that this should be included in his suggestions.]

He continued :—

*Docking Appliances—Cranes, &c.*—The appliances for docking ships are quite up to date ; I have no complaint whatever to make ; the old dock has none too much water, but still we can manage all right ; we have plenty of staging ; we are not stinted for material in any way ; we have been complimented by every ship that has come here on our docking arrangements. For lifting heavy weights they have generally got their own steam on board—their own winches ; we can lift 4 tons, a straight lift ; that is the maximum.

*Stores—Timber—Delays.*—I think the General Superintendent ought to have power to send straight to the contractor for the timber ; there is so much paper work ; it has to go through so many hands down below that it is weeks or months before you get satisfaction ; Mr. Orr can tell you more about it than anybody else ; the contractor gave this order to somebody else to supply the timber, and he has failed too ; that 5,000 ft. 5 x 2½ ordered in June last was for stock and was ordered after my conversation with Mr. Portus when he told me to order £500 worth ; the timber wants seasoning, and that is the reason we should have it here and proper sheds to put it in ; we should order it before it is wanted, and keep all the standard sizes in stock ; the proper thing for these keels would be to get timber here in log and cut it ; give me a proper breaking-down saw and the machinery ; I want a planing-machine, too.

*Slip.*—It would be advisable to have a slip here for small vessels about the size of the *Thetis* ; there is a place near the carpenters' shop naturally cut out for a slip ; there is very deep water there ; a foundation of piles would have to be put down the same as at Mort's ; there would be little or no excavating to be done.

(Witness retired.)

[The Committee then inspected the carpenters' shop, the saw-mill, the site for a slip, the frame of the "Powerful," Fitzroy and Sutherland Docks, and the pumping.]

At 5·30 they adjourned until 2 p.m. on Wednesday the 10th instant.

PARTICULARS supplied by Mort's Dock and Engineering Company, Limited, as to rates of wages paid to certain classes of employees in their establishment.

[NOTE.—As the above particulars were supplied on the understanding that they would be regarded as confidential, they have been omitted.]

#### THURSDAY, 17 NOVEMBER, 1898.

The Committee met at 2 p.m. at Prince's Stairs, Circular Quay, and proceeded in the steam launch "Leila" to Cockatoo Island, where a meeting was held in the Board Room at 2·30 p.m.

PRESENT :

MR. R. POLLOCK, Chairman.

MR. W. D. CRUICKSHANK. | MR. A. B. PORTUS.

The minutes of the previous meeting were read and confirmed.

The Secretary reported having prepared from the published list of railway employees for 1897 a statement of the wages paid to foremen and mechanics in that Department (see pages 42 and 43). He also reported having written to the Secretary for Railways asking for similar information for the present year, and reported, further, the receipt from the Public Works Department of the copies of accounts in connection with the docking of the "Captain Cook" and "Galatea," as previously asked for.

Mr. Portus said he had made inquiries at Head Office about the delay in the supply of stores, and had been referred to Mr. Steel ; that gentleman had explained the circumstances to him and had offered to come and give evidence on the subject, and also with regard to the method of rendering the accounts.

It was then decided not to take Mr. Steel's evidence until after that of all the employees on the Island connected with the questions at issue had been taken.

Mr. John Pratt, Dock Superintendent, recalled, stated in reply to questions :—

*Docking Merchant Vessels.*—The German ship "Friederich der Grosse" pays full dock dues, so much per ton, the same as at Mort's ; we do not make any charge for the stores or anything of that sort ; punts, staging, trestles, &c., are charged so much each per day ; if I want material for docking purposes—say, shores—I order so much timber for the Sutherland Dock, or for the Fitzroy Dock : in my time-book would be entered, "Docking 'Friederich der Grosse,' so many carpenters, so many labourers, such and such a time" ; I send it to the office then ; that is how I put it in my time-book ; I do not know how the charges are made up ; I know what it costs to dock a ship, but what it is when the bill is made up I do not know.

*Stores—*

*Stores—Timber.*—Yesterday afternoon they sent me some more timber, and it would be just as well if you went over and had a look at it; it is for various jobs, for the Marine Board launch the "Powerful," and stock; if I send it back I will get into trouble; it is not fit to receive; the contractors will go down to Head Office and slate me in all directions; I do not care about that, provided they go the proper way about it; I am quite ready for anybody if they go the right way about it, but not if they go behind my back; the material supplied is not fit for the purpose for which it was ordered; there are a few crooks that I condemned before and they are sent back now, and they are not fit to go into the vessel; Mr. Goodlet will go down and complain to the Head of the Department and say everything is bad, because I do not receive what he likes to send; all the timber ordered for the "Powerful" is not out of contract; all the short lengths are in contract; 26 ft. is the limit; 57 ft. is out of contract; the contractor has got to supply the crooks for the Marine Board launch; everything except the keel and keelson is in contract; Mort's Dock had to get their own breaking-down saw and cut their own logs; if they wanted a piece of timber a big size they could not get it; they have their own logs, and they can get any size of timber they want within two hours; in an establishment like this we should have it too; I went to Watkin and Watkin's and got a price for a saw for £95; we want a boiler to burn saw-dust and timber, as well as coal.

[Mr. Pratt was asked to prepare, for the information of the Committee, a list of the vessels docked during the last twelve months.]

Mr. John Gibson, Foreman Engineer, stated in reply to questions:—I have been here twenty-four years.

*Ferrying the Men.*—The men travel backwards and forwards in their own time; they have eight hours' work here.

*Stores.*—If a man wants a file or anything he comes to me; if I am away I leave a slate; I have a docket made out for that, and put on the docket what job it is for; after I sign it the docket goes to the store; I do not allow the man who wants the file to keep running backwards and forwards, but I have a man who gets the things from the store and takes them to those who want them; I understand the storekeeper charges that file to that job.

*Time-taking.*—Every man in the shop has a board issued to him, and whatever job he is working on, wherever he is, he puts that particular job on his board; in the morning all the boards are brought in and I have them all entered up into my time-book in detail; that goes into the office and is copied off into their books, so I know how many hours a man has been on each job; the same with the tools and the machines; if a man is working on a job on a lathe, he puts down so many hours on the lathe and so many hours on the drilling machine on the work that he is on.

*Stores.*—The same with the material; if it is only 2 lb. weight it is all charged to that particular job; we get the iron out of the store with a docket, cut off what we want, and take the rest back.

*Assistants—Foremen.*—I have an assistant named Stewart; he attends to the work outside and runs about, because I am not able to go out to all the jobs; of course, I have to go out sometimes to set off work and give instructions as to what is to be done, and he carries out my orders; we supervise the work in the engineers' shop and the machine and blacksmiths' shops, and the plumbers and coppersmiths' work; all these, and the moulders and patternmakers, are under my charge; of course, since Mr. Kidd was brought here he has always done duty as a foreman, although he has never been made a foreman, and I have always left it to him; it is impossible for me to look after these men; I have always left it in his charge; he was selected as the best man in New South Wales; my opinion of him is that he could not be beaten in New South Wales; he is a thoroughly practical man; you can take him aboard to any part of the machinery or vessel or tug and tell him you want so and so made, and he can do that, and make it just as you want it; the trouble is that he has never been put down in our books as a foreman, never been looked upon as a foreman, and he thinks it hard that he should be doing a foreman's work and not put down as a foreman; he is not altogether dissatisfied with the pay, 13s. 4d. a day; I might mention that if ever there is a vacancy at a firm in Sydney we will lose him; Stewart is not acknowledged as a foreman; he is only a leading hand; he gets 1s. a day extra; I do not think it is enough; I asked for 2s. a day for him; his pay is 11s.; there are five patternmakers, including Mr. Kidd and two boys; for the last two years we have had constant work, but just now things are a bit slack; however, we have just received orders to go on with some other work, and we will be able to keep him going for some time.

*Machinery.*—I do not think we have a sufficiency of machinery; we have been working overtime for the last two-and-a-half years; we have worked from 5 to 10 and from 4 to 10, and 4 to 9 for months upon months; we have to take on a number of fitters to work on the jobs outside, and we are so short of machines that we must keep the machines going overtime to keep the fitters employed; we get a whole lot of dredges here to be done at once; we take on a lot of fitters and we have not got machines to keep them going; what we principally want are lathes; we have cleared out the back shop to make room for more lathes; we have had three lathes on order for eighteen months or two years, but they will not be enough to keep up with the work we have here; I have asked Mr. Broad several times, and he does not seem to get any information; one is an 18 in. gap lathe, to take in 25 ft. outside chuck work, another is a 10 in. centre lathe, and the third is an 8 in. brass finishing lathe; we have any amount of power, 14 in. cylinders with 2 ft. 3 in. stroke; of course, we only use one boiler, but I told Mr. Broad the other day we must use two boilers; we have two in the place; we must use the two, because if we take a few blows with the steam-hammer we cannot make steam quickly enough to keep all going.

*Supervision of Men—Assistants.*—When I am busy with a couple of warships in the big dock, vessels in the old dock, and sand-pumps, such as the "Castor," fitting up, I have three or four first-class men whom I take and point out to them what has to be done, and tell them I expect them to look after the work and do their best; they are leading hands, but they do not get anything extra for it; they receive 10s. per day; there are some machinists who are paid a little more than that; none of the fitters are paid more than that except Stewart, my assistant; I have a man named Morrison, who is down supervising the job at Darling Island, and I have the two Thompsons, real first-class men, and I always put them in charge of a job if I have a dredge to fit out; I go down, or send my assistant, to see how things are going and report to me.

*Pumping*

*Pumping Engines—New Dock.*—I might go up once a day, or once in two or three days, to the engines at the new dock ; it all depends on whether there is anything wrong.

*Supervision, &c.*—If I am away from the shop for a few minutes it is when Stewart is about ; when there are a number of outside jobs to supervise, Stewart travels from one to another ; he cannot be with them all ; we have fifty fitters ; the work is not all outside ; the supervision lies between Stewart and me ; I have a man supervising the coppersmith work named Vale ; he has been here a number of years, and is a first-class workman ; he gets nothing extra for it ; I do not think that it is a sufficient inducement ; it would not do for me to make any recommendation for extra pay for him, because I do not know whether he would get it or not ; I recommended Stewart for 12s. a day and he only got 11s.

*Personal—Mr. Gibson.*—I am here every morning long before 6 o'clock ; I have no time to waste ; I have too much to do ; I have had the blacksmiths' work to supervise for the last thirteen years ; there are eleven blacksmiths and fourteen strikers, one improver, and a boy striking for him ; I have no leading blacksmith, but there are two leading men, who get 12s. a day, and if they see anything wrong in the shop they always inform me, and I know what to do.

*Boilers.*—If an accident happened to the boilers in the shop—an explosion—I suppose I would take the responsibility myself to a certain extent, but only partially, because Mr. Broad is the responsible man ; I am under his supervision ; Mr. Fletcher goes into the boilers to examine them, and he tests them ; the responsibility for the explosion which took place some time ago was fixed on Mr. Hoey ; that boiler of Mr. Pratt's was examined by Mr. Fletcher, and the boilers at the new dock are cleaned out every two months ; they are washed out ; you cannot get into them ; when they require to be pressed Mr. Fletcher has it done ; we have had steam on the new boilers, but we are making alterations in the safety valves, but those boilers were got for here ; they were to be put in here to supply the whole of the works, but as it is we have a boiler here and an upright boiler there that burns three times the coal we are burning ; it is just a vertical boiler they had at the Darling Harbour lifts for lifting coal.

*Warships in Dock.*—It frequently happens that we have to work overtime on our work to let the warships get into the docks at a certain time, and that adds to the cost of the work ; the overtime is not charged to the warships, but to the work it is done on.

*Small Tools—Machinery.*—We have a fair stock of small tools, such as rimers, dies, and drills, but at the time I put in for these lathes I put in for another screwing machine, but for some reason I found that it was crossed out ; we have only one screwing machine to do the whole of our work ; it is a modern machine ; you can cut a two-inch bolt up with one cut, but I have put in for a screwing machine and for a nut-tapping machine, and the nut-tapping machine was left on the list and the screwing machine was knocked off ; that nut-tapping machine has not arrived yet ; we are just receiving a bolt-making machine ; we have it erected, but we are making a new pulley, but we only received three pairs of dies with it, and not even a furnace for heating the iron, and two pairs of those dies are cracked in hardening, so it is useless to us ; a report has gone through to the Engineer-in-Chief, and they are going to communicate with the people at Home that supplied it, and that means it will lie there now for eighteen months.

*Dredges.*—A lot of the dredges come here at once ; we have had as many as five different dredge plants lying alongside those wharves at the same time ; in my opinion that is one of the main causes of this overtime ; we have not got the tools to do the work ; there is the "Acheron" dredge ; she is fitted up now ; we had the "Hunter" here about two years ago ; some time ago we had the "Jupiter" and the "Ceres" here together, and we had the "Castor" ; the "Castor" was a new job, a stand-by job ; we were not pressed to work overtime on her, but we did so ; we had the "Sydney" here ; if I had known you wanted these things I would have got them out ; I have mentioned it to Mr. Portus once before.

Mr. Portus : I have certainly tried to obviate it if you did.

Witness (continuing) : I could not mention the names just now, but I know it was very hard on me ; not only that, but we had other work to do, and that made it worse ; you (Mr. Portus) often do consult me when you have a steamer coming down and ask me how I am off for work ; I have not seen a slack period here for three years ; we have had a big run of work, and of course those sand pumps that we erected here gave a lot of extra work ; we had a lot of work for the country towns water supplies and points and crossings for the George and Harris streets tramways, and that handicapped us to some extent, because it used two of my planing machines and a shaping machine and sometimes two drilling machines ; we have not done much for the Water and Sewerage Board ; six or seven years ago we did not work for the Marine Board, but for the last two and a half years we have done practically all their work ; the "Captain Cook" comes here to be docked and repaired ; the war vessels have been just about the same for the last six or seven years.

*Overtime.*—To reduce the overtime I would suggest that we get three more lathes besides what we already have, a screwing machine, and a slotting machine ; I drew a list up and handed it to Mr. Broad ; the blacksmiths have done an immense amount of overtime ; it would assist me if some responsible men were placed over them and the coppersmiths and others ; you cannot stop talking in any shop in the world.

[Mr. Gibson was asked to submit in writing a list of the tools he requires in order to do away, as far as possible, with the working of overtime, and suggestions of how the works might be better managed.]

*Pumping Machines.*—I do not think it will be long before the pumping machinery will all collapse ; we have had to stay it down below in many cases, and the valve faces are worn out—the suction and the discharge valves ; I suggest that we should put down a good centrifugal pump and do away with this altogether ; my opinion is that they will give way some time and we will be left in the lurch ; I am doing all I know to keep the thing in as perfect order as I can ; I have asked Mr. Hoey times out of number to put it to the Engineer-in-Chief to get a plant up ready to take the place of this, and I have suggested it to Mr. Broad too ; although the plant is in duplicate you have not the slightest idea of the work and trouble there is to keep it in order ; the pumping machine there now is not a good one—it is not reliable ; that is my experience of it ; we have to keep constantly putting in new valve faces ; I think I have eight or ten ready now to put in at any time—you can see it for yourselves ; from what I have seen I do not think that any repair would be sufficient to make the machinery efficient—I think it should be renewed ; when no ship is in it takes 4½ hours to pump the dock out ; we try to keep to the same time in pumping out ; it is just

just as well to keep the machinery going as to let it jog slowly; I make the man up there keep a log-book of every pumping and the ship it is for; he keeps a log of the coal he burns and everything; he is a first-class mechanic named Langford; he is one of the men who came out and erected the machinery under Smail; we had great difficulty at first with the suction-valves—they all shifted; the cast-iron frames were giving way; I had to put in great big girders, and now the studs are giving way; we made four new studs last week; the plungers themselves have never been lifted from the pumps, and they are wearing very badly; the stroke of the pump is longer than the stroke of the engine; you ought to see those things vibrate and kick about when we are doing the pumping of the lower part of the dock; we have had to put the struts on to support the frame; you will see that disc when it comes to the top go like this (*indicating with a jerk of the hand*).

*Boilers—Pumping Machinery.*—The boilers are now in a bad condition, and that is the reason we got the two new ones; and the tubes are bad, and one or two of them have got a little bit of a pocket in them; several new tubes have been put in; we did one pumping with the new boilers, and they went very badly, but that is because the railway people painted them inside, which caused them to be very dirty; I did not go into the matter to see whether they were big enough, but I understand Mr. Broad did; the pressure of steam is the same in the new as the old boilers—80 lb.; the cylinder is 40 inches; we have the expansion gear, which cuts off at different parts of the dock (stroke?) as it is pumping; the number of revolutions varies from twenty-four at the first, when the dock is full, to fifteen at the last; the stroke of the pump is 6 feet, but the stroke of the engine is only about 4 feet. (For particulars of engine, &c., see page 43.)

*Lifting Appliances.*—We have never been put to any inconvenience in the new dock for want of lifting appliances; we have never had any big jobs there; we can lift up to 30 cwt. or 2 tons with the cranes we have, which were made for lifting the shores; there ought to be some bigger cranes; wherever you see a big dock you see appliances for lifting big weights.

*Stores, Bolts, Nuts, &c.*—When I want stores I have to make out an order, "I want so and so for such a job," and send it to the Storekeeper; he makes out a requisition and sends it to Sydney, and we have to wait till it comes; sometimes we have waited as much as three weeks or a fortnight for a few bolts or for a special iron that we wanted; there was some 7½ in. x 1 in. flat iron one time we waited five weeks for; Mr. Buddle is here every morning before breakfast; I asked him every day if he had succeeded in getting the iron; he says he always does his best; they are not allowed to get anything now without an order from Head Office; that is always the plea—"It has not passed the Head Office, and we cannot get the stuff"; they keep a pretty fair stock of bolts and nuts of a small size in the place; we do not have to wait for them; they do not stock longer than 1 inch in diameter, and about 4 inches in length; if an extra large size is wanted it must be ordered through Head Office; the orders are sent to Head Office by post, and Buddle gets them from there and then hunts the stuff up; when a thing of that kind is wanted, I often ask Buddle to see if he cannot get it up next day; he does so, but is not supposed to without the order; the worst people we have to deal with are Millen's, in Sussex-street, for engine fittings; whatever we order in the way of cocks, valves, &c., we have to wait a fortnight for always; they have got an order for one 3-in. right-angled stock valve, cast iron, dozens of which you can pick up in town, and we have had to wait a fortnight for it; Buddle has no power to go and say, "There is a valve at Briscoe and Drysdale's," or somebody else's, and suggest that they should buy it, but he does do it; I ordered an injector, and it took three weeks to get it; I have ordered another, and I do not know when I will get it; I do not know who it is that determines what amount of stock should be kept; I walk in and say, "Look here, you have only got one of so and so—you had better order some more"; if I were asked to make out a list of stock required twice a year I could do so, and that would be a great advantage, but then there is another thing to be looked at—perhaps, now we have had such a run of work, we may be slack for a long time, and may not require the stock.

*Cost of Work.*—We can do our work as cheaply as outside firms, providing they give us the proper machinery to do it with, but not if we have to keep doing overtime; I think we can build boats as cheaply as they are tendered for; we lengthened the "Castor" here, but that was under Mr. Fletcher; we are making two steam winches here, and the cost will be less than if made elsewhere; one has 4 in. double cylinders, the other 6 in.; there is one in the shop there being repaired; you might as well say it is new; there are only the two cylinders and the shafts out of the old one in it; the cost of the little winch will be £65; it has got a clutch and brake, double purchase, to it; I made eight diagonal winches right off one time, cheaper than they could be bought at Mort's.

*Stores.*—I do not think Mr. Broad has ever declined to order articles which I have suggested should be kept in stock; when I find a lot of valves and things wanted I go straight to the stores and see if they are there; if they are not there I make out an order straight away; the Storekeeper has got orders to keep the stock down low.

*Sawing Machinery.*—We have got the bed fixed for the sawing machinery for the carpenters' shop, and have fixed the engine pretty well as far as we can go; a new boiler has to be built for it; the drawing for that has been in hand for two or three weeks, but I think Mr. Martin has it complete, now; it is two months since I started putting that engine down; I can do no more at present.

*Drafting Work.*—I do not think Martin is a mechanical draftsman; there should be one here; any sketches that are required are done between me and Mr. Kidd; if I want a drawing or a hand sketch I have to do it myself; Martin is under me as a fitter, but he has been working up here as a draftsman for two and a half years; Mr. Broad took him out of the shop.

*Personal.—Mr. Gibson.*—I have had to work night and day for the last two and a half years; it was remarked to me that when I was away my men did not work when on overtime, so I have always stopped with them; I have never received a penny for it; my present pay is £300 a year; previously I had £320; the first reduction took place at the time of the 10 per cent. reduction (1893), and then when the Public Service Board came in they reduced me again, another £8; I believe Mr. Hickson and Mr. Barling were the cause of my doing blacksmith work; a man named Williams, at £275 a year, was here

over them; I have been slaving at that ever since; I asked the Engineer-in-Chief to make me an allowance for overtime, and he told me to write in and explain it all to him; that was about eighteen months ago, and I have heard nothing more of it; I would not ask for overtime if they had left my salary alone.

[The Committee then inspected, at Mr. Pratt's request, some timber just received from the contractors, a portion of which he considered unfit for use.]

At 5 p.m. the Committee adjourned until 2 p.m. the following day.

J. GARLICK,  
Secretary, Committee of Inquiry re Government Docks.

RAILWAY DEPARTMENT.

Leave.

Every servant, except salaried officers, will be entitled to a day's leave on full pay for each proclaimed public holiday. Those servants who cannot take such leave on the proclaimed holidays, in consequence of being required to work, will, on making application be allowed the same number of days at a future time, provided the Head of the Branch decides that they can be conveniently spared. Should, however, the exigencies of the Service not admit of the whole or any of the holidays being taken before the 31st July of the year following that for which they are due, an equivalent in money will be paid.

SHOP BOYS—RATES OF WAGES PAID IN RAILWAYS AND DOCKS COMPARED.

Government Docks, Cockatoo.

Revised Scale approved by Engineer-in-Chief on 23rd November, 1892.

See 92-12826, Harbours and Rivers.

14 to 15 years of age .....	1/8 per day.
15 " 16 " .....	2/0 "
16 " 17 " .....	2/3 "
17 " 18 " .....	2/6 "
18 " 19 " .....	3/- "
19 " 20 " .....	4/- "
20 " 21 " .....	5/- "

*Railway Workshops.*

Boys, other than apprentices, will be taken on to assist working in the running sheds and workshops at the following rates of pay :—

14 to 15 years of age .....	1'9 per day.
15 " 16 " .....	2/- "
16 " 17 " .....	2/3 "
17 " 18 " .....	2/6 "
18 " 19 " .....	3/- "
19 " 20 " .....	4/- "
20 " 21 " .....	5/- "

APPRENTICES.—RATES OF WAGES PAID IN RAILWAYS AND DOCKS COMPARED.  
*Government Docks.*

Rate fixed in 1887—see Public Works Department, 87-8703.

1st year .....	1/- per day.
2nd " .....	1/8 "
3rd " .....	2/6 "
4th " .....	3/4 "
5th " .....	4/2 "

*Railway Workshops.*

Lads will be taken into the shops as required, to learn the trades of fitter, turner, &c. They will not be taken in under the age of 15 years, and will not be out of their apprenticeship until the age of 21 years. They must be of good constitution, and able to read and write with facility; they will not be bound apprentice, but will be able to resign, and will be liable to dismissal in the same way as the men; they will also be subject to the same Rules and Regulations as the men. The remuneration for their services will be as follows :—

1st period—or up to 17 years of age .....	10d. per day.
2nd " of a year .....	1/3 "
3rd " " .....	2/ "
4th " " .....	3/ "
5th " " .....	5/ "

At the end of the term of apprenticeship they will be paid wages proportionate to the value of their services.

To the Chairman of Board inquiring into the working of the F.R.D. Establishment,—  
Sir,

Fitzroy Dock, 15 November, 98.

In compliance with your instructions, I hand you herewith a list of saw-mill plant which would be beneficial to the working of the establishment.

- 1st. One breaking down saw to admit a 48 in. log.
- 2nd. Robinson's self-acting circular saw and bench to take not less than a 36 in. saw.
- 3rd. Robinson's latest 4-headed planing machine to take not less than 24 in. in width and 6 in. in thickness.
- 4th. Emery saw sharpening machine.
- 5th. Band saw sharpening machine.
- 6th. Steam grinding stone sharpening machine knives.
- 7th. Overhead traveller for lifting logs into mill.
- 8th. Round hardwood logs, various sizes, to be kept in stock.
- 9th. A diver to be kept on the establishment.
- 10th. A patent slip capable of taking s.s., "Thetis"; then it will suit any of the dredge plant.
- 11th. Various sizes of deck planks to be kept in stock, and a proper shed to put it in.
- 12th. Sufficient material to be kept in general store here.
- 13th. Larger stock should be kept.

I am, &c.,  
J. PRATT.

SUTHERLAND DOCK.

*Particulars of Pumping Machinery.*  
Main Pumping Machinery.

Engines.—One connected pair of horizontal high-pressure surface condensing steam engines—diameter of each cylinder, 38 in.; stroke, 48 in.

Pumps.—Two vertical double-acting plunger pumps—diameter, 54 in.; stroke, 72 in.

Boilers.—Three horizontal multitubular steel boilers, 7-16 plate—diameter, 6 ft. 6 in.; length, 15 ft.; steam pressure, 80 lb. per square inch; boilers are set in brickwork and fired externally.

NOTE.—Two large Lancashire boilers from Glebe Island were erected in an extension to the boiler-house about eighteen months ago.

Drainage Engine.

One vertical non-condensing steam engine—cylinder, 14 in. diameter; stroke, 12 in. This engine is geared and operates three single acting vertical pumps, each 11 in. diameter and 30 in. stroke. It also supplies the power of hauling the caisson into and out of its inner berth.

18/11/98

J. E.

PARTICULARS OF TEST OF SUTHERLAND DOCK MACHINERY, OCTOBER 25TH, 1889.

Water pumped .....	41,200 tons
Time .....	3 hrs. 29 min.
Work done .....	425,186 foot tons
Mean indicated horse-power .....	317
" revolutions per minute .....	20,349
Total revolutions during trial .....	4,253
Pounds of best screened Wallsend coal used .....	4,255 lb. = 38 cwt.
" ashes produced .....	415
" actual combustible used .....	3,840
" green coal burned per square foot of grate .....	20.53
" used per I.H.P. per hour .....	3.853
" combustible .....	3.477
Tons of water raised per revolution .....	9.7
" displacement of pumps per revolution .....	10.9
Percentage of slip .....	11.0
Boiler pressure throughout trial .....	80 lb.
Steam supplied by two of the three boilers during trial.	

From high water level spring tides, the above dock (with the caisson stationed on the inner stop) contains 48,200 tons of water, and working at top speed of 20½ revolutions of the engines per minute, this can be discharged in four hours. This time can be reduced from fifteen to thirty minutes when a vessel is in dock. In practice it is found convenient to lay a ship dry in from 5½ to 6½ hours.

22/11/98.

WM. R.  
FRIDAY,

FRIDAY, 18 NOVEMBER, 1898.

The Committee met at 2 p.m. at Prince's Stairs, Circular Quay, and proceeded in the steam launch "Leila" to Cockatoo Island, where a meeting was held in the Board Room at 2:30 p.m.

PRESENT:

MR. R. POLLOCK, Chairman  
MR. W. D. CRUICKSHANK. | MR. A. B. PORTUS.

The minutes of the previous meeting were read and confirmed.

Mr. John George Buddle, Store Clerk, was called, and stated in reply to questions:—

*Personal*—*Mr. Buddle*.—I am Store Clerk, but was first appointed as Timber Inspector, etc.; I have been here seven years; before that I was employed at Mort's Dock as shipwright; I get any boats built that are required for the Public Works Department and supervise them while they are building if they are built away from Fitzroy Dock; I examine all chains that are required before they are cut off to see that they are numbered according to the certificate; I come here to the dock the first thing in the morning and see Mr. Lawes, and whatever is wanted on emergency in the store I get; the Storekeeper does not give me orders; I see the orders lying on the table, and if they are urgent he asks me can I get so and so up to-day; I take a copy of that and I see the contractor and try to get it up that day if possible; if I went to the Head Office I should not be able to get it up that day, as the requisition would have to undergo the official routine, which would be two or four days, but I have known it to take a week or ten days, but I would go and get any little thing that would not run into much money on my own responsibility; strictly speaking, I receive all my orders from Head Office; if anything important was required for Dredge Service I would go and ask Mr. Portus whether it would be safe for me to get it without waiting for the order, and if he thought the work was necessary he would say, "Get it by all means."

*Timber*.—The contractors very seldom have what we want in stock; I have to wait then until they have had sufficient time to get it from the bush, unless some other timber merchant has got it in stock, and I go round to see if they have; there have been very great delays in supplying timber, especially kauri decking, because no one in Sydney except Mort's keeps kauri decking cut; the Kauri Timber Company keep fitches, but the last ordered was 30 feet and upwards; if it had been 25 feet they might have done it; some time ago the Kauri Timber Company happened to get a deck, and the party failed, and they came to me and asked me if I could do anything; I saw Mr. Portus and he said it would be a good thing and I had better see Mr. Orr, but they were not our contractors, and it had to be ordered through our contractors; so that when it came to be ordered the timber was sold; that timber is what is wanted now for this little boat for the Marine Board; the contractor has bought the timber "to arrive"; the vessel was ready to leave New Zealand five weeks ago; yesterday I was asked to get some 2½ half-round iron and I got it yesterday; in that case the iron was here almost before the order left the office; I know it is against the rules, but the job must be done; the orders are taken to the Head Office by Peter in the launch; I am a shipwright by trade and I understand all about the work and that sort of thing.

*Stores, &c.*—I think the special orders from Cockatoo Island ought to be treated like those from the rivers; they get approval and get it away that day; if the orders could be issued from the works and signed by Mr. Broad we could get the goods much quicker, and I would not have to break any rules; sometimes the Engineer-in-Chief strikes things out of the requisition; suppose something was wanted in a hurry for one of the tugs for the Dredge Service, and I got it without seeing Mr. Portus, the Engineer-in-Chief might strike it out, and I would have to get the contractor to take it back; if the orders were carried out strictly the work would be stopped in many cases; we had the pilot boat, the "Captain Cook," here in dock; Mr. Pratt and the other officers wanted different things up here to get the job done; I got the things, but I have not got the orders for some of them yet. [Note: The "Captain Cook" left the dock on about the 12th of June, 1898.] It usually takes three or four days for the orders to go through the Head Office; it depends whether the Chief is away; I have the Roads and Bridges Department, the Railway Construction Branch, and the Sewerage Construction Branch to look after in the same way, and then there is the river work for Mr. Brooks and Mr. Keele and Mr. Houston at Trial Bay; I have to get vessels to take powder and get it away; it is only part of my work to call here in the morning; I have not the opportunity of knowing whether the same difficulty exists with other Departments in regard to stores; I see the requisitions from the dock before they go to the Head Office and get them after they have gone through, but requisitions from other Departments only reach me after they have gone through; the "Thetis" was here the other day; she was coming up the Harbour and a tube burst; they rang me up from the Island to get a tube for her; the tube was put in and the boat was at work the next morning; she would have been there for days if I had waited for the order; this practice on my part has never been questioned; they do not know anything; if there was any trouble I do not doubt that the contractors would take the articles back from me, but I would have to pay the expense of freight; I have to chance something; if I get an order for boiler plates and cannot get the proper size I have to report it to the Accountant,—"Mr. Steele, such and such plates cannot be got that size; might get them 6 in. wider or a foot longer," or something of that sort, and he forwards it on to Mr. Broad for approval, and then it comes back, and it is approved to get the larger size; I do not know who approved finally of getting the larger size, but I generally see Mr. Broad's name on it; there is a case now for Mr. Walsh at Newcastle; he asked for a plate 6 x 3 x ¼; I could not get that; I could get 8 x 3 x ¼, or I could get other thicknesses of the size asked for; I think it took three weeks before I could get the information, but that was a matter for Mr. Walsh himself; they sent the requisition to Mr. Walsh and stated that certain plates could be procured in Sydney—would any of them do? and he said "Yes, I will take 8 x 3 x ¼"; if Briscoe, Drysdale and Co. said they had not got 6 x 3 x ¼, and I knew Keep or any other firm had it I would make them buy it; they will give me an order to go and buy the plate; if it is procurable in Sydney I can guarantee to get it.

[Mr. Portus explained that the position taken up by the Accountant was that if a plate 6 x 3 x ¼ was ordered and one 8 x 3 x ¼ supplied, the Department should not be asked to pay for the extra 2 ft.]

Witness,

Witness, continuing, said :—If I cannot get anything down to the Accountant by 1 o'clock I cannot do anything that day ; Friday is the best day of the week, because the boat is half an hour later going out. The contractor has to find ways and means of getting the goods here, but there is a fruit-boat that leaves Sydney at 1 o'clock every day—the "Grower's Friend"; the contractor has to pay the freight; the launches will not bring anything up without instructions from Head Office.

(Witness then retired.)

Mr. Hugh Fulton, Inspector, was called, and stated in reply to questions :—I am an inspector, and have held my position for seventeen years ; I inspect all new constructions for the country towns water supplies, all the wharf ironwork, and the brass goods for the Harbours and Rivers Department, and all the machinery that is required—pumps and engines, and all that kind of thing ; I have nothing to do with anything that is being made here.

*Stores.*—I attend here every morning to get orders for goods that are required in town ; I order nearly all the brass goods for the docks ; if I came here and got the official orders for valves and cocks I would then go to the contractor and give him the official order which comes up here from the Head Office ; if the contractor has them in stock I examine them and see that they are what we want, according to the sample in Head Office ; sometimes the contractor has not got them, which causes a delay of several days ; I should hunt round and see if we cannot get it elsewhere, but I never got any orders to do that ; it should be cancelled after twenty-four hours, but that is not done ; if they were ready to use the cock here and the contractor had not got it I would then report that to Mr. Broad, and we have to wait for it ; he does not tell me to go elsewhere ; as a rule the work stands still until it is made ; I am under Mr. Broad, Mr. Portus, Mr. Grimshaw and Mr. Pridham ; Millen's people keep a very poor stock ; of course, if I had power to cancel the order I could go and get it elsewhere ; perhaps the contractor would lose 5s. or 10s. upon each article, and that is where the trouble comes in ; if the power of cancellation was used I could get the things much better and quicker ; I think Mr. Broad has sometimes written to the Head Office and recommended that orders should be cancelled, but I do not think any notice has been taken of it, so far as I know ; I do not think the power of cancellation has been used, except once or twice, for a number of years ; I have not known cases where the work has been kept back very much by reason of this power not being used ; the worst time is when making cast-iron valves ; Millen's have the contract along with the brass, and they keep no stock, and when you go there it is the same as with brass goods, they have not got them ; just now I have waited three or four days for one for the "Athena," a 3½ in. right-angle wheel valve ; I will not get it now before Monday ; Mr. Gibson, I suppose, ordered it a week before I got the official order ; it is six days now altogether since I gave Millen's the official order ; they have to cast them and machine them ; I might not have been able to get a 3½ right angle in town by buying elsewhere ; it is an outside size ; if we could get the order direct from Mr. Broad, then if they had not the thing it could be made before the official order was through ; there is a lot of time lost that way ; it would be better still if we could get the official order straight from Mr. Broad ; I have to take things on my own hands and take the risk ; I use my own common sense, but I am aware that I am breaking the Regulations ; the Department gave me a circular to that effect ; it said if anything was sent up here without an order I was liable to dismissal, and then it said I was not to speak to the contractor ; I showed it to Mr. Portus and he said, "You must speak to the contractor."

[Mr. Fulton was asked to let the Committee see the circular referred to at their next meeting.]

I said that they should keep a stock here of six of each different sizes, but orders have come to hand from the Head Office that they are to keep down the stock.

*Supervision.*—I am over at Mort's Dock nearly every day ; I have to go there to see all castings and explain personally ; I do not think the supervision here is so good as at Mort's Dock ; I think you want another foreman in the turning-shop ; you have no foreman there at all, and Mr. Gibson cannot be there and all round the different tugs and dredges as well ; at the old A. S. N. Co.'s, where I was, I was outside foreman for all work done on steamers, and there were foremen over all other departments, and each one was responsible for their own place ; I think you ought to have a man well up in the work over the machine-shop.

*Machines, &c.*—There are not sufficient lathes here ; I have seen work standing for days waiting to go into the turning-machines ; I should think the furnishing of these tools would have the effect of doing away with a large amount of overtime ; it would be an improvement in the place and a saving of money, unless you paid the fitters off, as they do elsewhere ; they pay them off and take them on when forgings and castings are machined, but it is still a loss of time, and that means money.

(Witness then retired.)

Mr. George Fletcher, Foreman Boilermaker, was called, and stated, in reply to questions :—I have been here twenty-two years ; I superintend the lengthening of ships and all general ironwork.

*Machines—Overtime.*—We are badly off for tools ; we have about the worst shop in the colonies, so far as tools are concerned, in proportion to the amount of work we turn out ; I need a plate-planer and a drilling-machine and other machinery which Mr. Broad has a list of ; of the two rollers in the shop, one is a very old pattern, and will only roll a plate 9 feet ; the other will roll a plate 14 feet, but nothing thicker than ¼-inch in thickness, unless plates are made hot in the furnace, which is very expensive ; when these rollers were tendered for I asked for rollers to roll a ¾-inch plate, but received these that would only roll a ¼-inch plate ; I have not sufficient boiler power to drive the new machines ; there is a separate plant for the boiler-shop—two little upright boilers, one to relieve the other ; I try to do away with overtime ; I make the men work meal hours, as I think two hours in daylight are worth four at night ; I put on spare men in meals hours if a job is urgent ; I am not fond of overtime myself ; I do not get paid for it ; my men get double time the first two hours overtime and time and a half afterwards right through the night, just the same as in outside firms ; we have a riveting-machine, but we have no gantling over it ; we have no rivet-making machine, we buy all rivets ; our riveting-machine takes two men to work it and four on the winch ; it is hydraulic ; I seldom work it, but do

do most of the work by hand; we made a tool to make the rivets for the "Sydney's" buckets—just a make-shift affair; we do all pipe work with boys; we can do 20-inch pipes for 1s. 6d. a foot for labour; I do not know the cost of the material; we could do them cheaper if we had the material landed here at our wharf alongside the shop instead of having to bring it up from that wharf to this weighbridge and then wheeling it back again; that makes the pipes cost very nearly half as much again; they land it where it suits them; sometimes our wharf is occupied.

*Apprentices.*—We have five apprentices at present; they serve five years; they have no written agreements; it is simply a verbal understanding; I think Mr. Darley appoints them; I have to speak to Mr. Broad; their wages are—6s. a week for the first year, 10s. a week for the second year, 15s. a week for the third year, 20s. a week for the fourth year, 25s. a week for the fifth year; if they want to join the society or to go to another shop they come to me for a testimonial; there is no grievance in connection with the system of apprenticeship; everybody is satisfied.

*Examination of Boilers.*—I examine the boilers of all ships that come here as far as Mr. Portus gives orders; I have got to see them under steam and examine them when blown off; I go through them myself; I determine the amount of work to be done; we get a list with a certain amount of work to be done, and sometimes I find about three times as much as is on the list; at other times I find that work specified is not needed; if I find there is more work to be done than is on the list then I report to Mr. Broad or Mr. Portus, and my report is always acted upon.

*Boilers—New Dock.*—I have not been in the boilers at the new dock for the last three years; when Mr. Hoey was here I happened to be in the room when they telephoned through to know who took charge of the dock boilers, and Mr. Hoey said Mr. Gibson would, so I had nothing more to do with them, but if anything goes wrong with them I generally go down and put it right; I cannot say whether anybody else has been in those boilers during the last three years, but I have not; the last time I put the stay tubes in I went in myself; that is about three years ago; when they came out first the stay tubes at the fire end of the boilers were not screwed into the back plate; they were just put in with a jamb-nut on each side; about three months after they were put in I found the nuts lying on the back end of the fire-pit, and sent men to cut end of tubes off; riveted and beaded them to act as stays; I did not examine the boilers when they came down in pocket; I saw the pocket; it was just something like my hat—about the same size; nothing was done to it excepting putting brickwork right round it to keep the heat away; it is there now; the cause of that was this: they used to have the zinc hanging on a hook; now zinc breaks in pieces, and I think a piece of zinc fell and landed on the bottom of the boiler on one spot; the man said he always washed and blew out the boiler when he had a chance, but of course he could not wash this zinc away; when I examined it I saw where the zinc was, and I came to the conclusion that that was the cause of the pocket; as far as I know there is no periodical inspection of boilers here; I have never been asked to do it.

*Stores.*—I have very often a difficulty in getting material; sometimes it is a month from the time when I order to the time when I get it; I have waited a week for a plate for a job that would only take two or three days to do; whenever I want any material I write out an order and give it to Mr. Lawes below; he forwards it to the store; then Mr. Buddle comes and gets a copy of it; then a requisition is sent to Head Office and it has to pass through the Accountant to come to Mr. Buddle again; very often Mr. Buddle goes and gets me a plate without the order, but that is against the rules; it is the same if I want a set of tubes, I have to wait; I take the men away from the job and put them to something else; I was at the A.S.N. Company's for twenty years; the boiler-shop there took charge of all the plates and tubes and angle iron; the ordinary store had the cocks and valves and fittings; I do not think half enough stock is kept here; I could not get any plate near the size we wanted for this boiler for the "Sol"; that should have been made with two plates, and we have had to make it with four; seven months ago Mr. Portus asked me for a list of plates for stock, and I gave him a list of £1,500 worth; we have had the plates here five months, and the frames and everything else for the steamer we are going to build now; there has been no delay over her; we will be able to go right ahead with her, but no boiler has been ordered for her.

[Mr. Portus explained that a boiler out of another steamer would be used for this boat.]

Witness, continuing, stated:—Mort's Dock can make boilers for half what they cost here, because I can only get small plates, while they have all sizes; I had to put two pieces in at the end of the "Galatea's" boiler, because I could not get a plate big enough; I can make a boiler here as cheaply as they can at Home if I get the proper size of plates; Mort's made two of those reclamation punts, Atlas Works two, and we had three; their tender was £895, and we finished ours for £750; the punts were started first by Mr. Grant, and he got £1,400 apiece for them; I only got one chance to compete against outside people with a good punt; that was a 330-ton punt, and was built for about £550 less than the lowest tender; I have built five steamers here and lengthened about a dozen.

[Mr. Portus remarked that the tenders for the 300-ton punt included winches, whereas Mr. Fletcher had not made winches for that constructed by him.]

Witness, continuing, said:—I went through Hoskins' shop, and when I saw the machinery they have got it made me ashamed of the place; they have put a shed up on the only bit of ground I had for building boats.

[The Committee then decided that the workmen in the different shops should be given an opportunity of bringing forward any matters they might wish, and that they be informed that they might select representatives from among themselves, two from each of the large staffs and one from each of the small staffs. Mr. Fletcher was asked to convey an intimation to this effect to the men under his charge.]

Mr. E. J. H. Broad was recalled, and stated in reply to questions:—I have not got my report ready yet; it will take some little time.

*Machines.*—The delay to the three lathes and the screwing machine is owing to the strikes in England, but they are on the road now.

[The Chairman said the strike should not affect these machines—they should be all ready made.]

Witness, continuing, said:—They should be all ready made—in fact all the machines we want ought to be here in three months by telegraphing for them; as a rule, when the Government orders machinery, we can scarcely ever get what we order; the machine was ordered correctly, the mistake has been made in England and a letter has been sent to the Agent-General drawing his attention to the fact, and also to the damaged state in which the machine has been delivered; take this machine down here now—Horsfall's Patent Nut-making machine; that is not what we ordered; we ordered it to make from  $\frac{5}{8}$  up to  $1\frac{1}{2}$  in., and we have only got from  $\frac{3}{8}$  to an inch, and only for making hexagonal, not square, nuts; all indents are checked and passed by the Engineer-in-Chief after being passed by Mr. Carleton; when Davis was here, he sent Home for a milling machine, and when it came it had not got a cutter; we have had to send an indent for cutters; fancy a milling machine without a cutter; my idea in ordering tools from England is to order them as complete as possible; when things are ordered I do not follow them up in Head Office and find out when they are coming; I think the lathes and screwing machines are on the sea; I was informed the other day that it will not be long before they are here; if we can get them in eighteen months we are satisfied; I think pounds, shillings and pence was the reason for the delay; the order was got out, and they suddenly discovered they wanted funds; the Engineer-in-Chief decided that the order for the tools required should not be sent on when the requisition was first received; we have the funds now, and they ordered them; in a case like that they never let me know because I never asked; in the Railway Department they have a man who does nothing else but write out indents, and they hold him responsible that everything that is required is mentioned; I asked the other day if they could show me the wording of this indent that was sent Home, and nobody could find it; I sent in asking for £14,500 to be placed on the Estimates for next year; I do not think I got a reply; that was about six months ago; this is the list:—

Estimate of Works required to be carried out during the year 1898-99.

	£	s.	d.
Boiler and engine for carpenter's shop ... ..	300	0	0
Electric light ... ..	600	0	0
Removal of rocks ... ..	2,000	0	0
Blacksmith's shop (new) ... ..	750	0	0
Slip for 500-ton slips ... ..	1,050	0	0
Pattern shop (new) ... ..	300	0	0
Tramway (shops and wharf) ... ..	500	0	0
Coal wharf ... ..	500	0	0
20-ton weigh-bridge ... ..	400	0	0
Moulding shop (new) ... ..	100	0	0
Erecting machine (new) ... ..	500	0	0
Removal of 10-ton crane from Garden Island and erecting at Fitzroy Dock ... ..	500	0	0
Dock Vote increased to ... ..	7,000	0	0
	14,500	0	0

The present amount of the Dock Vote is £5,600; I proposed to have that increased to £7,000, which is on the Estimates; the reason I did not ask for any small machinery there was because I thought that with all these small firms smashing up some suitable machining might be procured.

*Dock Vote.*—The docking of that German ship (Friederich der Grosse) goes into the Treasury; the wages of the men are paid out of the Dock Vote, which is reduced by that amount; the Head Office would be able to give a statement of the money earned by the docks; the system of book-keeping here is very different to that of a commercial house; one half is done here, and that half is done in a peculiar way.

[Mr. Broad then handed in copies of the accounts sent to Head Office in connection with the "Captain Cook" and the "Galatea." See pages 48 to 50.]

*Accounts.*—On the accounts we send to Head Office we do not show the material; we send the dockets down and they show what ship the material is for; they are compiled in Head Office, the information is sent to us, and we enter it in our cost book.

[Mr. Broad was then informed that the Committee intended conveying to the men an intimation that they might elect representatives to wait upon the Committee and bring forward any grievance they may have.]

Witness continued:—

*Pumping Engines.*—I am not apprehensive of the pumping engines breaking down because I keep a sharp look-out on them; I go down and look at them; but it is very evident that within a short time we shall have to write a report to the Engineer-in-Chief about the condition of the pumps, and suggest that means be taken at once to replace them with centrifugal pumps.

[The Committee then informed Mr. Broad that they had determined to go and see the pumps for themselves, as the evidence was that they were in such a bad state and so unreliable that they might break down at any moment.]

The Secretary was then directed to obtain from the Public Works Department the papers respecting the machinery ordered eighteen months ago by Mr. Broad, and, further, to obtain from Mr. Steel a statement of how the Dock Vote is operated on.

The Committee then inspected the boiler shop, and at 5 p.m. adjourned until 2 p.m. on Monday, 21st instant.

*Copy of Voucher.*

MONDAY, 21 NOVEMBER, 1898.

The Committee met at 2 p.m. at Prince's Stairs, Circular Quay, and proceeded in the steam launch "Leila" to Cockatoo Island, where a meeting was held in the Board Room at 2-30 p.m.

PRESENT:—

MR. R. POLLOCK, CHAIRMAN.  
MR. A. B. PORTUS, | MR. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Secretary reported having informed Mr. Pratt and Mr. Gibson of the Committee's decision to see the men; and handed in the official papers regarding the lathes, &c., said to have been under order for eighteen months. A *procès* of these papers was also handed in (see pp. 52 to 55).

The Chairman reported the receipt from Mr. Fulton of the circular referred to in his evidence (copied at p. 54), and a statement from Mr. Pratt of the number of ships docked for the twelve months ended 30th June (copied at page 54).

Mr. George Frederick Lawes, storekeeper, was called and stated, in reply to questions:—My position is that of Storekeeper, but I do other work; I look after the books and accounts; I have been here six months.

*Stores.*—When stores are required the foremen have to send in dockets; the dockets are entered up against the stores received, and at the end of the month are sent down to Head Office, and the money values of the stores are put against the different jobs at Head Office; the dockets show whether the material is required for hull, boiler, or machinery—they would show whether it was for a steam-pump or a stop valve; we always have a poor stock; if there is a big job like the "Castor," that we know a lot of material will be wanted for, we order it for the "Castor," and it is charged up against the "Castor" direct, otherwise, if it is charged to stock, it has to be marked off by these dockets; bolts, and things like that, we prefer ordering direct for the job, because we want to keep our stock down low; we have a few in the store to draw on when the foreman underestimates his requirements; when stores are required

a requisition is made out and sent to Head Office direct to Engineer-in-Chief by post—then it goes to the Accountant, and so on, until the order is made out; it takes about a week to get a requisition through; I do not know how many hands it goes through; it goes to the Engineer-in-Chief, to the Accountant, and then, I think, to Mr. Conley, to know whether the Votes are there.

[Mr. Portus said he had made inquiries *re* this, and found that Mr. Wiley opened the requisition, which was then sent to be registered, then to Mr. Napier, and to Mr. Carleton; Mr. Carleton would sign it and send it to the Accountant; the Accountant then sent the order up, and Mr. Oatley would get it after, for correction.]

Witness, continuing, said:—When the order is sent to the contractor, the Head Office advises us to that effect, and we have had advices here before the contractor has received the orders; when the order is made out there are an original, a butt, and a duplicate; the duplicate is sent to the office that orders; it is about four or five days usually after we send the requisitions in that we receive the advices that the orders have been sent on; the contractor is allowed forty-eight hours to deliver after he receives the order; the people in Head Office must trust entirely to us, who send the order, as to whether the goods are required; they cannot tell without coming here; I think it would be as well if we could send the order to the contractor direct from here, and send a duplicate to Head Office, who could charge it to the different Votes just the same; the stuff would be here, and we could be using it while they were passing the requisition from one to the other; it would be much quicker; if we did everything here for the Head Office, and sent the accounts from here, it would need a larger clerical staff up here.

*Accounts.*—That item “salaries” against the “Karrakatta” is composed of the salaries of the officers, except the watchman, Macdonald; those are the salaries per day for the time the ship is in; if there are two boats in, one-half is charged to each; if there are three, one-third is charged; those are the whole of the staff on the docks whose time is not charged to any job; the others are all temporary men, paid per day, and their time is charged to the various jobs; the coal that is charged against the pumping out is the actual material used; so much coal, so much waste, and so on are issued for the pumping, and that is charged plus 10 per cent., and split up among the various vessels; coal and waste are issued out by docket; there is a weighing machine up at the pumping station to weigh the coal; the man knows pretty well what a barrowful weighs; that account is made out by Head Office; we send them the information; we do not send any accounts to the Naval Station, nor against merchant vessels; the Head Office collects all accounts; if it were decided to render accounts from here for docking, we could do it from the dockets for material and from the labour, but we should have another clerk; I have seen a commercial account—Mort’s account; we could do it in that way.

[At this stage Mr. Gibson entered, reported that the pumping engines were working, and asked the Committee to go and inspect them; this they did.]

On resuming, Mr. Lawes was recalled, and continued, in reply to questions:—

*Stores.*—It frequently happens that when we want a plate 6 x 3 we have to get one 8 x 3 or 9 x 3, the 6 x 3 is cut off and used, but the whole of the plate is charged to the job; when we want a 6 x 3 plate and cannot get it, but can get 8 x 3, we are supposed to send in to the Accountant and tell him so and suggest that an 8 x 3 plate would do, and he has to get the butt of the order altered and tell the contractor he can send; otherwise the contractor might have his account cut down to the weight of a 6 x 3 plate; they might say, “We have only ordered 6 x 3, and that is all we pay you”; that could be obviated if we ordered direct from this Establishment; we could alter the butt and tell him to alter his order; sometimes the account is sent up for a 6 x 3 plate and the weight of an 8 x 3 is shown; we have done that to get the thing through down below to save this trouble and annoyance, because we actually received that amount of plate; I think a lot of delay could be obviated if an indent were sent Home and a stock kept of sizes of plates that we cannot ordinarily obtain here; ordinary trade sizes we could order from the contractor, but there are a lot of sizes that it would never pay a contractor to keep; I do not think we need stock as much as 60 or 80 tons;  $\frac{3}{4}$  in. is the thickest I would recommend; the plates we always have a difficulty in obtaining are 5 ft. and 6 ft. wide; there are also a lot of angle-irons we cannot get; there is a trouble over the lengths; we want them for the frames of ships or for punts; I think Fletcher could give us a very good idea of what plates he would want; during the time I was at Keep’s it was the ordinary custom for orders to come, “Please supply plate such and such a size, official order to follow”; that worked all right; I used to see that I got the official order; it was done at our own risk, but I think most of the contractors would supply on a memo. from me or Mr. Broad, but we would have to see that they did get the official order; I think the right should be given to Mr. Broad or myself to write to the contractor and say, “We have sent in a requisition and the official order will follow,” and by that means get the goods up at once; I do not know what we should do if it were not for Buddle coming up here every day; when we want anything at once he gets it without the official order; of course, he is well known; the Regulations have to be a dead letter; they are unworkable; the work would be simply at a standstill if we had to wait always for an official order.

*Overtime.*—There is a good bit of overtime worked here, mostly in the machine shop; Gibson says that is owing to the lack of machinery; the Foreman is there, and he knows what time the men start; when they leave they give their numbers to the watchman, and he takes their time when they leave.

*Stores.*—It would be a great facility if we had racks in the stores to keep the boiler plates in and stand them up on their edges, and we should have an overhead traveller to get them out; now they are stowed right along the centre of the building, and they are awkward to get at; I think the weighing machines outside the stores should have the handles and the indicators inside; I believe that when the blacksmiths, say, are returning some iron from which they have used a piece, they might weigh the piece themselves and tell Parish inside, who should do it himself; if the weighing parts were inside they could not do this; I have two men at the store, and a timekeeper and a boy in office; when I get advice from the Accountant that goods have been ordered, if the goods are not to hand I send a note, “Not yet received,” back within two days sometimes, but in other cases, where I know there is a special delay—say information comes back, “None of this in town; we have got it landing in a week or two”—I keep it longer before sending it back; I do not know how many times I have written about that timber that was ordered

ordered four or five months ago; the papers are going backwards and forwards now; we did not order that; Mr. Orr ordered that; we cannot get any satisfaction now about the kauri; the last intimation I got was that it was in the harbour; now I find it is not in the harbour; I waited a week and sent it back saying, "I understood it was in the harbour, but now I understand it is not so"; I do not think there is any chance of these delays getting better under the present system; I think the requisition goes through more hands now than it used to; I do not know how many; I think it would save a good deal of trouble if I could send those advice notes about goods being ordered instead of Mr. Broad; it takes a lot of his time; the stores we get are generally of good quality; if they are not we simply tell the Contractors they are lying here at their risk and should be removed; there is some timber over there now which is condemned.

*Books.*—I have a cost book, store ledger, and a time book, and detail book; the dockets are entered up every day in a book kept in the store; every month they are sent to Mr. Delargie at Head Office who keeps a stock ledger from them, extending them into money, and sending back the value every month to us—"Captain Cook," hull so much, machinery so much, and boiler so much," and so with all the others; we then enter that in our cost book in which we keep wages, material, and what we call direct charges—that is, vouchers for stuff ordered direct; Mr. Delargie was here for years doing that work, but when I came here he was sent down to Head Office as they thought he could do the work there and perhaps do a little more; our cost book is really to keep more details than they have at the Head Office; I can show you a copy of how the dockets come back to us with the store issue every month; I have got it entered in a small book before it goes into the cost book; if this was a private firm it could be worked differently, but being a Government concern I do not see how it can be worked on a commercial basis; if we had authority we could use the telephone, order goods, and get them at once; I cannot see any advantage in having to send these requisitions through Head Office; it would save a lot of time if we did it here.

*Accounts.*—When my predecessor was here the accounts were made out at Head Office just the same as now, but Mr. Delargie used to keep the stock ledger here; if the accounts were made out here in a commercial way, and the orders given direct from here in harmony with the commercial practice, I would want two extra clerks here—Mr. Delargie back from the Head Office and another one; we could then make out the accounts exactly as Mort's accounts are made out.

*Delay to Instructions to do Work.*—Another thing that causes delay is that we get boats up here perhaps a week before we get the instructions to do the work; the orders ought to come here before the boat, just the same as if we were a private contractor; for instance the Spit punt was lying here for a week before we got the order; the man used to come and say he wanted this, that, and the other done, and we could not take his word for it; I think it a very undesirable thing for anybody to go to the Foreman and say, "We want this done and that done"; I think the orders should go through the office; then there is a punt in now, the one with a hole knocked through; we have not got any order for it; the little man from the "Octopus" came up and said somebody had knocked a hole in her—could we put her in dock? he said he would be here early in the morning, and we kept the dock open till one o'clock; according to the Regulations we could not put her in dock without an order, but we have; we had the "Mildura" in before we got the order; of course we had a telephone message, but the actual papers did not come here until the boat was in the dock; if we strictly carried out the instructions we could not do anything at all; if we stuck to the letter of the law and never did anything without an order I think we would get into worse trouble than what we do.

*Docking Men-of-War.*—At the time we charged £2 11s. a day against the "Royal Arthur" for salaries the "Mohawk" was in Fitzroy Dock, and we just halved the salaries between them; later there were the "Boomerang," "Karrakatta" and "Mohawk" in, and we divided the salaries among the three of them; the same with the electric light; Pratt has enough men to dock a ship without taking on any extra labourers, but he takes on men to scrub and paint; they are just casual men who work perhaps two or three days a week and are paid off; the men-of-war scrub themselves; I am referring to punts, &c.; Mort's do the merchantmen; we are not allowed to compete against them for a job like that.

*Stores.*—We charge for coal and oil and all other stores at contract prices, plus 10 per cent. for men-of-war.

*Coal.*—There is a pit certificate for the whole of a cargo of coal, giving the quantity and the colliery it comes out of; Godden generally tallies it out; the question of quantity has never been raised; we have never had a complaint; the quality of the coal is generally shown by the pit certificate.

[Mr. Portus said that the fireman at the pumping station had said he had great difficulty in keeping steam.]

Witness, continuing, said :—He has never complained before; I suppose it is the storekeeper's duty to see to the quality of the coal, but if there is anything wrong the foreman should complain; if he did complain, I am not a judge of coal, but I would have got on to Brown's about it; I will find out how that item of 14/2½ for wedges (on account "Royal Arthur," page 32) is made up. Later: This item is wedges at 12/11 per 100, plus 10 per cent.

The Committee then proceeded, in company with Mr. Lawes, to inspect the time book and cost book in the office, and the store dockets and books in the store.

At 5.15 the Committee adjourned until 2 p.m. on Wednesday, the 23rd instant.

#### ALLEGED DELAY TO MACHINES ORDERED FOR FITZROY DOCK.

##### *Précis of Correspondence.*

On March 11th, 1897, Mr. H. R. Carleton, Principal Assistant Engineer, Harbours and Rivers Branch, Public Works Department, asked Mr. Broad for his proposals as to what amount should be placed on the Estimates for 1897-1898.

Mr. Broad replied on 24th June, 1897, attaching a list of tools and machines he required (see page 53), and stating "he would like as many of these as the Engineer-in-Chief approved." He also said he would like to lay down a slip sufficiently large to take any of the tug boats, and suggested a sum of £2,000 be placed on the Estimates for both machines and slip.

Mr. Carleton immediately asked for the estimated value of the tools and machines mentioned in the list, and Mr. Broad replied on 28/6/97 stating he had put the approximate price against each item.

A recommendation was submitted to the Engineer-in-Chief for Public Works by Mr. Carleton asking that £1,300 be placed on the Estimates to provide the tools and machinery asked for by Mr. Broad.

This was concurred in by Mr. Darley on 2/7/97, approved by the Minister on 5/7/97, noted by the Accountant on 8/7/97, and by Mr. Broad on 19/7/97.

On the 8th July, Mr. Carleton verbally inquired at Messrs. A. McArthur & Co.'s for prices for these tools, and they gave approximate prices for some of them, but said it would be necessary to communicate with Messrs. J. Buckton & Co., of Leeds, before giving definite quotations.

Nothing further appears on the papers until October 5th, 1897, when McArthur and Co. forwarded a copy of Messrs. Buckton & Co.'s letter to them of 26/8/97, stating that they were not in a position to quote for a Copper's patent turret lathe, a Thorne's patent multiple drilling machine, nor a 6-spindle nut tapping machine, but furnishing prices for all the others.

On 5/10/97, the same day, Mr. Broad was asked by Mr. Carleton whether any of the machinery recently purchased at Messrs. Russell's at Newcastle could take the place of any of those offered by McArthur and Co., and on 12/10/97 Mr. Broad replied that the slotting, punching and shearing machines would do, and put a note on the list of machines asking that a 40-ton and a 10-ton spring balance weighing machine be ordered as well as the 20-ton previously asked for.

There is a break in the correspondence then until 18th January, 1898, when, in reply to further inquiries by Mr. Carleton, Messrs. McArthur & Co. write quoting prices for 5 and 10 ton Denison weighing machines.

On the 9th February, 1898, Messrs. McArthur & Co., replying to inquiries of same date, quote prices for Denison's machines to weigh up to 30 and 40 tons.

On 10th February, 1898, Mr. Darley asked what tools had been indented for on the following votes:—

Fitzroy Dock .....	£1,300
Newcastle.....	250

And further asked whether the cutters for the milling machine at Fitzroy Dock had been indented for.

Mr. Carleton replied next day that "full particulars of the tools and other articles required and the Votes which they should be charged are shown on the attached list, from which an indent can be prepared for forwarding to the Agent-General. The cutters for the milling machines are included in the indent. There is only about £60 of a balance on the Vote of £250 for tools for the Newcastle workshop."

The Engineer-in-Chief then recommended on 16/2/98 that an indent be forwarded to the Agent-General for (inter alia) "Tools, &c., for Fitzroy Dock, £1,250," with a request that the goods be purchased and sent out by steamer as soon as possible. The Minister approved on 17/2/98, and the indent was prepared and sent to the Treasury on 23/2/98 for transmission to the Agent-General (copy of indent herewith, pp. 53, 54). On the 1st March, 1898, the Under-Secretary of Finance and Trade reported that the indent had been forwarded as requested.

Messrs. McArthur & Co., wrote on 9/6/98 stating that they had just received advice from Buckton & Co., that they had received orders from the Agent-General for the machinery, and stating that they would no doubt be able to send the Denison weighing machines out in from two to three months, and they would not keep them back for the lathes.

On 19/7/98 the Under Secretary for Public Works forwarded an indent for a brass finishing lathe to the Under Secretary for Finance and Trade for transmission to the Agent-General. The Under Secretary for Finance and Trade replied on 26/7/98 that the indent had been forwarded.

J.G., 20/11/98.

LIST SUBMITTED BY MR. BROAD WITH MINUTE OF 24/6/97.

April 26th, 1897.

Necessary Tools required for Engineer and Blacksmith Shops.

- 1 Cooper patent turret lathe for brass finishing, double-gearred, 9 in. centres, length of bed 10 feet—about £130.
- 1 Thorne's patent portable drilling machine, to drill from  $\frac{1}{2}$  in. to  $1\frac{1}{2}$  in. holes—about £50.
- 1 of Smith and Coventry's self-acting sliding gap, surfacing, and screw cutting lathes, height of centres 18 in., to take a 6-foot chuck in gap with pillar to receive slide rest for large diameters, and one 4 jaw chuck 6 feet in diameter, length of bed of lathe 20 feet—about £300.
- 1 of Smith and Coventry's improved 10 in. screw cutting gap lathe with self-acting cross traversing gear, length of bed 15 feet—about £200.
- 1 of Smith and Coventry's improved slotting machines, stroke 9 in., to take in 3 feet diameter—about £180.
- 1 of Smith and Coventry's improved 6-spindle nut tapping machine, according to No. 3 in Catalogue—about £30.
- 1 of Smith and Coventry's shearing and punching machines for Blacksmith shop, to shear  $\frac{7}{8}$  plate and to punch up to  $\frac{7}{8}$  plate—about £220.
- 1 spring balance, to weigh up to 20 tons, for hanging on cranes to weigh material by the crane for shipping—about—£30.
- I have mentioned Smith and Coventry machines, but any recognised maker would be acceptable.

E.J.H.B., 24/6/97.

Copy of Indent.

Department of Public Works, Harbours and Rivers Branch, Sydney, 22nd February, 1898.

INDENT of Wire Ropes and Machinery to be ordered of T. and W. Smith, Smith and Coventry, &c., for the Harbours and Rivers Branch of this Department, and for which a letter of credit amounting to £1,633, the estimated cost, is recommended to be transmitted.

Particulars.—As per attached list.

Port of Delivery.—Sydney.

To be sent by Sailing or Steamship.—Steamship.

To be Obtained from T. and W. Smith, Newcastle-on-Tyne.

Best patent plough steel-wire rope, plain, extra special flexible—2,700 feet,  $2\frac{1}{2}$  inches; 1,400 feet,  $2\frac{3}{4}$  inches; 500 feet,  $2\frac{1}{2}$  inches; 370 feet, 3 inches; 200 feet, 4 inches; two 141-foot lengths, 4 inches; two 121-foot lengths, 4 inches.

To be Obtained from Smith and Coventry, Manchester.

- 1 Cooper's patent turret lathe for brass finishing, double-gearred, 9-inch centres, length of bed 10 feet.
- 1 Thorne's patent portable drilling-machine to drill  $\frac{1}{2}$ -inch to  $1\frac{1}{2}$ -inch holes.
- 1 improved 6-spindle nut-tapping machine, No. 3 in Catalogue.
- Cutters for universal milling-machine, 3 complete sets required,  $2\frac{1}{2}$ -inch, 3-inch, and 4-inch diameter.
- Width of face— $\frac{1}{2}$  inch,  $3\text{-}16\text{th}$  inch,  $\frac{1}{4}$  inch,  $5\text{-}16\text{th}$  inch,  $\frac{3}{8}$  inch,  $7\text{-}16\text{th}$  inch,  $\frac{1}{2}$  inch,  $9\text{-}16\text{th}$  inch,  $\frac{5}{8}$  inch,  $11\text{-}16\text{th}$  inch; diameter of cutter,  $2\frac{1}{2}$  inches, 3 inches, and 4 inches.
- Width of face— $13\text{-}16\text{th}$  inch,  $\frac{1}{2}$  inch,  $15\text{-}16\text{th}$  inch, 1 inch,  $1\frac{1}{8}$  inch,  $1\frac{1}{4}$  inch,  $1\frac{1}{2}$  inch,  $1\frac{3}{4}$  inch, 2 inches,  $2\frac{1}{4}$  inches,  $2\frac{1}{2}$  inches, 3 inches; diameter of cutter,  $2\frac{1}{2}$  inches, 3 inches, and 4 inches.
- Width of face,  $3\frac{1}{2}$  inches, 4 inches, 5 inches, 6 inches; diameter of cutter,  $2\frac{1}{2}$  inches, 3 inches, and 4 inches;  $\frac{1}{2}$  inch to 2 inches to have 1-inch holes for mandrills;  $2\frac{1}{4}$  inches to 6 inches to have  $1\frac{1}{4}$ -inch holes for mandrills.
- Twin or straddle mills for nut work, 1 set each right and left handed.
- Width of face— $\frac{3}{8}$  inch,  $\frac{1}{2}$  inch,  $\frac{3}{4}$  inch, 1 inch,  $1\frac{1}{8}$  inch,  $1\frac{1}{4}$  inch,  $1\frac{3}{8}$  inch,  $1\frac{1}{2}$  inch,  $1\frac{1}{2}$  inch, 9 right handed; diameter of cutter,  $2\frac{1}{2}$  inches,  $2\frac{3}{4}$  inches, 3 inches,  $3\frac{1}{4}$  inches, 4 inches,  $4\frac{1}{2}$  inches,  $4\frac{1}{2}$  inches, 5 inch, 9 left handed.
- Small cutters to have 1-inch holes, large ones  $1\frac{1}{4}$  inch.
- Cutters to have cutting edges on both sides and face to have  $1\frac{1}{4}$ -inch holes.
- Width of face— $1\frac{1}{4}$  inch,  $1\frac{1}{2}$  inch,  $1\frac{3}{4}$  inch, 2 inches; diameter of cutter,  $2\frac{1}{2}$  inches, 3 inches,  $3\frac{1}{2}$  inches,  $4\frac{1}{2}$  inches, four pairs.
- Two of each of these to work in pairs.
- Angular cutters:
  - Width of face—1 inch,  $1\frac{1}{4}$  inch,  $1\frac{1}{2}$  inch,  $1\frac{3}{4}$  inch, 2 inches, five required; diameter of cutters,  $1\frac{1}{2}$  inch, 2 inches,  $2\frac{1}{2}$  inches, 3 inches, 4 inches;  $\frac{1}{4}$ -inch holes in cutters up to  $2\frac{1}{2}$  inches; 1-inch holes in cutters up to 3 inches and 4 inches.

*To be obtained from Joshua Buckton and Co., Limited, Leeds.*

Prices f.o.b. London, as per quotation from Sydney agents.

- 1 sliding and surfacing brack lathe, 18-inch centres, 25-foot bed, to take 6-foot chuck, with pillar to receive slide rest for large diameter and 1-4 jaw chuck, 6 feet diameter, £506.  
 1 improved 10 in. screw cutting gap lathe with self-acting cross traversing gear, length of bed 15 ft., £140.  
 1 Denison suspended weigher, to weigh 10 tons, £44 5s.  
 1 Denison suspended weigher, to weigh 40 tons, £97.  
 1 Denison suspended weigher, to weigh 30 tons, £79 10s.

*To be obtained from W. T. Avery.*

1 7 ton cart platform weighbridge.

Department of Public Works, Sydney, 1st July, 1897.

*Supply of Inferior Goods by Annual Contractors.*

[Circular.]

Frequent complaints have been made by Local Officers of the quality of materials, tools, &c., supplied in response to their requisitions; and also that other brands are supplied than those named in the requisitions.

In future "orders" upon the Contractors will be made out strictly in accordance with the requisitions; and it will be the duty of all officers receiving the goods to see they are of the brands and kinds named, of satisfactory quality, and correct as to weight or quantities.

If it is found that requisitions have not been complied with, or that the goods supplied are of inferior quality, they are not to be made use of until report has been made to this office; and vouchers are on no account to be signed until instructions have been received.

Reports of this nature can be made on the Accountant's advice that order has been issued, or by wire in urgent cases.

ROBT. HICKSON,

Under-Secretary and Commissioner for Roads.

Department of Public Works, Sydney, 15th October, 1897.

*Goods Supplied under Annual Contract.*

[Circular.]

Referring to circular of 1st July, 1897, 97-1, 486-86,—In cases where goods upon delivery to the local officers are found by him not to be in accordance with his requisition, the course to follow will be: Report to the Accountant, stating in what respect the goods do not comply with requisition, and then await instructions.

Officers are not to return goods to the Annual Contractors until this has been done, nor are they to communicate with the Contractors, except through this office.

ROBT. HICKSON,

Under-Secretary and Commissioner for Roads.

DOCKING, YEAR ENDING JUNE, 1898.

*Sutherland Dock.*

	No.	Tonnage.
War-ships .....	13	31,205
Vessels.....	32	121,148
Dredge-plant .....	36	7,927
Total Number .....	86	

*Fitzroy Dock.*

War-ships .....	9	10,200
Dredge-plant .....	61	10,505
Total Number .....	70	

Sutherland Dock, total tonnage .....	160,325
Fitzroy Dock, total tonnage .....	20,705

The above includes 16 mail steamers—some of the largest this side of the line—also two Flagships.

Total tonnage for the two Docks .....	181,030
---------------------------------------	---------

J. PRATT.

WEDNESDAY, 23 NOVEMBER, 1898.

The Committee met at 2 p.m. at Prince's Stairs, Circular Quay, and proceeded in the steam launch "Swift" to Cockatoo Island, where a meeting was held in the Board-room at 2.30 p.m.

PRESENT:

MR. R. POLLOCK, Chairman.

MR. A. B. PORTUS | MR. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Secretary reported the receipt from Mr. Gibson of lists showing:—

1. Machines now in Shops.
2. „ under order.
3. „ required

The Lists are as follow:—

*List of machines at present in use in Shop.*

Lathes:—

1 large lathe, 2 ft. 6 in. centres.	1 lathe, 8½ in. centres.
1 „ lathe, 19 in. centres.	2 lathes, 8 in. centres.
3 lathes, 12 in. centres.	1 lathe, 7½ in. centres.
1 lathe, 10 in. centres.	1 lathe, 6 in. centres.

Slotting

1 slotting machine, 20 in. stroke.	Slotting Machines :—	1 slotting machine, 15in. stroke.
1 planing machine, 17 ft. travel.	Planing Machines :—	1 planing machine, 10 ft. travel.
1 planing machine, 10 ft. 6 in. travel.		1 planing machine, 4 ft. travel.
1 shaper machine, 16 in. stroke.	Shaping Machines :—	1 shaper machine, 9 in. stroke.
1 shaper machine, 12 in. stroke.		
8 drilling machines.	Drilling Machines :—	

## Machines at present in use in Shop.

- 1 nut-tapping machine.
- 1 bolt-screwing machine.
- 1 milling-machine and emery stone.
- 1 emery wheel.
- 1 8-ton traveller
- 1 pumping and shearing machine.
- 1 15-cwt. steam hammer.
- 1 10-cwt. steam hammer.
- 1 new nut and bolt making machine.

*List of Tools ordered to carry out work for Machine Shops.*

1. One self-acting sliding gap surfacing and screw-cutting lathe ; height of centres, 18 in. ; length of bed, 25 ft. between centres, with pillar and slide rest for large diameter work, with one jaw chuck 6 ft. in diameter.
  2. One improved screw-cutting gap lathe ; height of centres, 10 in. ; length of bed, 15 ft. Extra strong lathe.
  3. One patent turret lathe for brass-finishing : height of centres, 8 in.
  4. One improved (B) six-spindle nut tapping machine ; taps and master taps complete from  $\frac{1}{2}$  in. to 1 in.
  5. One improved Thorne's patent portable drilling-machine.
- I believe these machines have been ordered.

J. GIBSON.

*List of Tools required for Machine Shop.*

1. One sliding gap screw-cutting lathe, with shifting bed ; height of centres, 12 in. ; length of bed, 15 ft., with treble gearing and pillar rest ; one jaw chuck 4 ft. 5 in. in diameter.
  2. One improved screw cutting gap lathe ; height of centres, 12 in. ; length of bed, 20 ft. ; take 15 ft. between centres when gap is open.
  3. One improved screw-cutting lathe ; height of centres, 10 in. ; length of bed, 15 ft. ; self-acting cross-cutting gear.
  4. One improved bolt-screwing and nut-tapping machine, to screw from  $\frac{1}{2}$  in. to 2 in. ; to cut thread in one operation ; taps and master taps complete ; oil pumps for discharging oil on to bolts while working.
  5. One improved small slotting machine, 9 in. stroke.
  6. One screwing machine for screwing iron pipes ; to screw from 1 in. to  $1\frac{1}{4}$  in.,  $1\frac{1}{2}$  in., 2 in.,  $2\frac{1}{2}$  in.,  $2\frac{1}{2}$  in.,  $3\frac{1}{2}$  in.,  $3\frac{1}{2}$  in. and 4 in., with 10 pairs of extra wheels complete ; hand or steam power.
- Selig, Sonnenthal & Co., engineers.

*Blacksmith's Shop.*

1. One improved silent fan, Lloyd's system, suitable for thirty fires.
2. One steam hammer, Rigby's 10 cwt., without self-acting gear.
3. One steam hammer, without self-acting gear, 7 cwt.—Ragby's.
4. Coppersmith's shop : One burring-machine or jenny.
5. One turn-up wiring-machine.

*Tools required—Coppersmith's Shop.*

1. One beading or swageing-machine for tin, with one pair of steel rollers.
2. One grooving machine 38 in. long.
3. One planing machine.
4. One bottom closing machine.
5. One hydraulic bending-machine, for bending copper pipes up to 6 in., with return stroke.
6. One loom-mill for moulding-shop.
7. One new traveller for erecting shop, to lift 20 tons.
8. One new traveller for machines-shop, to lift 10 tons.
9. One crane and furnace for Blacksmith's shop. Crane to lift 5 tons.

These machines are needed to carry out the necessary work to do away with overtime as much as possible.

J. GIBSON.

Mr. Thomas Robert Steel, Accountant, Public Works Department, was called, and stated in reply to questions :—All documents relating to the finances of this Island go through my hands.

*Vote—Store Advance.*—There is a Vote of £7,000, called the Store Advance Account, for these Docks, for the purpose of buying stores to stock the store here ; whatever is purchased and placed in the store is charged temporarily against that Vote ; when the goods are used on the different works—say dredges or ships of any sort—the charge for what portion is used is transferred to the debit of the different works or services and credited to this Vote ; this £7,000 is continually being recouped ; the position is practically this : the amount the Vote is short of £7,000 is represented by stock in the store ; it is not annually voted, but was voted a good many years ago—in 1877—once for all time, and we continually pay into and draw out of it ; that £7,000 is practically the capital upon which the stores of the Island are worked.

*Vote—Dock Contingencies.*—Then there is another Vote for Dock Contingencies which increases or decreases according to Mr. Darley's estimate of what will be required ; he may, perhaps, one year think he ought to get a lot of tools, or that he is going in for more extensive work ; in such a case he would increase it ; there are sometimes special votes for tools, &c. ; it is also regulated according to the necessities of the Colonial Treasurer, who has the power of veto ; for 1898-99 we proposed £7,000 for this Vote, which is taken for the payment of all sorts of services connected with the Dock—thus, improvements to the Dock, such as clearing away some rocks or levelling any place, would properly be charged to it ; any expenditure incurred in connection with men-o'-war would not be recouped to the Vote—it would simply be paid to the Treasury ; the actual expense of docking a man-o'-war is charged against her ; that would first of all

all be charged to this Contingency Vote ; then when we obtain the money from the man-o'-war we pay it into a trust fund ; it practically goes to the credit of the Vote in that case ; the actual expenses are charged in the first instance to the Contingency Vote and then practically recouped ; docking the men-o'-war does not impoverish the Vote at all ; we do it simply at bare cost ; others would probably add to the bare cost a sum for depreciation of the capital value of the works and implements, but we do not ; the addition of 10 per cent. to the stores issued is an arrangement of Mr. Broad's, and is to cover cost of handling ; expenditure in connection with docking warships is not recouped to the Vote, because stores used for that purpose are already debited to the Dock as maintenance, and the amounts paid by the ships become Dock revenue pure and simple ; stores issued in repairing warships are paid in to the credit of the Vote, and are therefore available for the operations of the year ; this Vote may or may not be exhausted at the end of the year ; say we order a lot of machinery, and we calculate that the money for that will just use up the £7,000 at the end of the year ; if the person we order from does not furnish his account in time to be paid before the end of the financial year, there is a balance left to the credit of the Vote, and that lapses ; no balances are carried forward under the present system ; if there is £2,000 left in the Vote at the end of the year it is absolutely lost to the Dock ; if we order £5,000 worth of machinery to arrive on July 30, and at June 30 have £2,000 to the credit of the Vote, that £2,000 does not go towards paying the £5,000 ; even if we had sent the money Home, if the Agent-General had not got the account and had not paid the money it would lapse ; the amounts which have lapsed from this Vote at the end of the financial year for the past five years I can furnish ; this Vote pays for improvements to the works and for new machinery, unless the Engineer-in-Chief, seeing that there is a great demand for new machinery, were to take a special vote for it on the Estimates ; he might decide to build a new store or a new workshop ; it is quite possible that for such a purpose he would take a special vote on the Loan Estimates ; I find the present stores have been built from both Loan and Revenue Votes.

*Vote for the Services of other Departments.*—We have another Vote which we took on this year's Loan Estimates which we called "Vote for the Services of other Departments" ; up to the present, when work has been going on for other Departments (the Marine Board, the Fisheries, the Railway Construction Branch), it has been the practice to make out vouchers from the fortnightly wages sheets for each little bit of wages against each job and send them on to the Departments concerned ; then when we get our monthly statement of stock issued from the Dock we send out accounts for the stores issued during the month to each job ; that would go on from month to month until the job was finished ; that did not seem to me to be a satisfactory way of doing it ; I thought there ought to be one account for the one job, and for that purpose we got £5,000 voted, and we asked the Treasurer to transfer it to a trust fund so that we might operate upon it ; that was no sooner done than the Auditor-General objected and would not allow it, so we put the money back into the Treasury ; I intended that to be operated on in the same way as the Dock £7,000 for stores ; the Auditor-General had some technical legal objections to treating loan moneys as trust funds, so that we were forced back upon the old system of rendering accounts piecemeal against each Department just as the vouchers happen to come in ; I may state that the Railway Commissioners adopt just the same principal in rendering accounts to the Public Works Department ; they render the accounts to us just as the wages accounts come in and we pass them ; in rendering an account we give the wages for a fixed period ; we do not give the time that each particular class of men was on the job ; it is generally a lump sum ; for material there is generally more material given, for say John Keep and Sons supply material for a Marine Board launch, the voucher for that material would go to the Marine Board, and they would see the full particulars ; we give full detail for material taken out of the stores.

*Ordering Stores.*—The main difficulty lies with the timber and iron plates ; it does not seem to matter what annual contractor the Department has, we are always landed in difficulty with the timber, and there seems to be no merchant that can stock the sizes of iron plates that are demanded ; the Dock officers can always ring up the Contractor for plates, find out if he has the size required in stock, and if not what is the nearest size that can be obtained ; they can then make out their requisition accordingly ; when you ask, "Why should not the officers here order what they want direct?" you raise a very large question ; that would require a complete change in the policy of the Harbours and Rivers Department ; the Engineer-in-Chief would lose control of approval ; we have found from experience that if officers throughout the country order they usually break away from the contracts ; we trust entirely to the man here who sends the order as to whether it is really needed ; I order on his signature after the approval of the head of the Branch has been attached ; if the officers ordered independently, many difficulties in the matter of examining and passing accounts, which do not now exist, would be created ; I submit a lot of the Dock requisitions and also this statement showing all the requisitions we have received from the 1st July to date ; that has been extracted from the books ; now, here are a number of requisitions just picked out for me ; Mr. Broad originated requisition No. 3629 on the 11th October, but it did not reach me until the 13th October ; of course, it may not have been despatched until the 12th ; after it was received it would go to Mr. A. B. Portus, because in that there happens to be something for the Dredge Service, and he would have to approve of it ; well, that is pretty prompt ; here is a case : requisition No. 3723, originated in the Dock on the 8th, which reached me on the 14th ; you will notice your minute, Mr. Portus.

[Mr. Portus read : "The stock of  $\frac{3}{8}$  in. special plates for landing silt pipes should be well kept up, otherwise short and narrow plates have to be bought locally, causing much extra cost by extra riveting and punching."]

Witness, continuing : Now, in this there comes another element ; it was necessary to go even beyond Mr. Portus in that ; the Minister's approval had to be obtained on account of the very considerable amount involved and because it was not in contract ; there is a limitation to the amount which a chief of a Branch can expend on his own authority ; there is also a further point—it is not in contract ; in this case the Minister's approval was necessary ; here is another one from the 14th to the 18th, requisition No. 3761 ; "No record" means that we have no record of the quantity last supplied ; we now come to another element that causes delay ; you notice here an approval by Mr. Rossbach, acting for Mr. Carleton, Assistant Engineer for Harbours and Rivers ; this requisition goes first to Mr. Portus and then to Mr. Rossbach ; naturally, both of these officers have other duties, and many of these cannot be attended to at once, but having to pass through the two increases the delay ; here is one originated by Mr. Broad on 17th November, 1898 (No. 4849) ; a Dredge Service matter being involved in it, Mr. A. B. Portus dealt with it on 19th  
November,

November, 1898; it then went to Mr. Napier, one of the Engineers of the Harbours and Rivers Department, who revised it, then to Mr. Carleton to approve before coming to me to order; that did not go to Mr. Conley to see if there was money in the Vote; we risk the money for small amounts; the money is all right for that.

Chairman: Of course, the money is all right in all cases?

Witness: No, I have accounts for services for other Departments of which I cannot get payment from those Departments, simply because they have not money voted; for instance, the Dredge Service Vote ran out before the end of last year; if there had been a sudden breakdown of dredges there would have been no money on hand to pay for that; we would have had to try to get the money from the Treasurer's Advance Account; we would have had to repair the dredges right off and find the money afterwards; as a rule before work is done inquiry is made whether the money is available, but in cases of emergency we have to do the work and obtain funds afterwards; there was a case where another Department wanted a launch and the matter was referred to the Works Department; tenders were called, but as they were high it was decided to build it at the Dock; the papers came before me, and I made inquiries, with the result that I found they had not sufficient funds to pay for the boat, but wanted the Works Department to build it and wait for the money, settling up the account as best we could; I directed attention to that, and have heard no more about it; in that case the boat was not started on, but in the case of the pilot steamer "Ajax," for Newcastle, the work was started on, and it was found that the Vote taken was far short of what was required; the responsibility for these things does not lie with me, but the difficulty of straightening these things does; a special vote of £4,000 was got for that but we had to wait twelve months for it, and meantime our accounts were disorganised; Mr. Broad originates these orders, Mr. Portus approves, and Mr. Napier and Mr. Carleton, then it would come to me for order, the order clerk would prepare it, I would sign it, and then it would be issued; I do not think it is necessary for it to go through all these hands; I think Mr. A. B. Portus' approval would be quite sufficient; if the Engineer-in-charge of the Dock had power he might possibly order those things where no Ministerial approval is necessary; if he had full power to get anything that is required for the Establishment, subject to the approval of the Engineer-in-Chief, once a week or once a fortnight, then the Department would be committed before the Engineer-in-Chief had an opportunity to approve; if they do that now it is at their own risk; they have a store here, where they can store all requirements; it is their place to keep up a stock and draw on that stock; no provision has been made for increasing the amount in stock; there is no proposal to increase the Store Account; when I get a requisition my next step is to prepare the order, which is made out in triplicate, at one writing, with carbon sheets; the first copy is kept to check the account by, the second is sent direct to the Contractor, and the third is sent to the Dock advising them that we have ordered, and on this advice there is a footnote to say, "Should the above not be received promptly, please report, to enable me to take action in the matter; you will also inform me if the goods or articles are not of satisfactory quality, or of the brands requisitioned for, and you should also ascertain if the correct weights and quantities are delivered; if satisfactory, please return this advice, but if not, report on this form, or by wire in urgent cases"; there is the advice to the Dock that the goods have been ordered; I have to wait until they inform me that the goods have not been delivered; the Contractors are allowed forty-eight hours to deliver, and longer in case of coal; if the Dock officers report to me that the material is not delivered, I take this line of action—this is some timber for a wooden steam launch for the Marine Board: Mr. Orr writes, "The following pieces of timber were requisitioned for on the 25th June last, none of which has yet been delivered (order No. 23299), and as they include the keel, keelson, and shelves, the construction of the vessel cannot be proceeded with"; that is addressed to Mr. Carleton; I get a copy of the order, and I say, "Scott, Sibbald and Co. might be asked to state when delivery can be expected, and be asked to expedite"; they are written to, "I have the honor to inform you that it is reported that Mr. Davis' boat was at Cockatoo Island on the 24th ultimo, but no timber was delivered, as promised in your letter of the 19th ultimo, and must, therefore, request you to supply the material at once"; that material is not here yet; the Dock officers were asked to give a list of the material which had not been delivered; they did so, and I inquired, and then minuted as follows: "As some of this material is reported to have been delivered prior to Mr. Broad's report, will he please furnish an accurate list of all timber not yet to hand"; some of the timber was on the Island and Mr. Broad reported it was not received; well, we have got the list now, and here are the sizes, 4/60's, 6 x 1½ Oregon; that was ordered from Goodlet and Smith yesterday; I made inquiries, and they said they had not a stick of wood to cut to that length, and they seemed to have a difficulty in finding out where to get it; we could not get this timber from Goodlet and Smith, and Mr. Orr said he could get it if we gave him an order; we did so, and he placed it with Scott, Sibbald, and Co., and they have not supplied it yet; there were 1/57 6 x 5 ironbark; 1/57 5 x 5 ironbark; 2/60 9 x 1¾ spotted-gum; and 2/60 10 x 1¾ spotted-gum; in these cases that I have just spoken of the length seemed to be the difficulty; now, take the kauri that we placed with Goodlet and Smith according to their contract:—400 running ft. 6 x 1½ tongued and grooved kauri; 1,550 running ft. 4 x 2 kauri decking; 1,200 running ft. 6 x ¾ tongued and grooved kauri; 2/36 and 2/30 12 x 1½ dressed kauri; Goodlet and Smith have been daily expecting the vessel in with the kauri, and it has not arrived yet; it was ordered further back than October; they are waiting for the Kauri Timber Co. to bring it; they are buying from the Kauri Timber Co., but cannot get it; that 1/57 6 x 5 ironbark and the 2/60's 9 x 1¾ were placed with Scott, Sibbald, and Co. on the 7th June; they are not contractors; on the 20th October I said, "What action does the Engineer-in-Chief suggest?" when the timber could not be got, and Mr. Darley minuted, "Messrs. Scott, Sibbald and Co. should be again written to and urged to supply this timber at once"; it was perfectly within the province of the Engineer-in-Chief to suggest that another size should be got; here is another aspect of the matter: Atkins and Co. supply steel; that order was placed on the 24th October; on the 26th Mr. Broad reports that the material has not yet been received; my man found on inquiry that the contractors considered that they should not supply that quality of steel under the contract; they wrote "Re order 7751 for 1 bar each ¾, ¾, ¾, 1, 1½, 1¾, 1¾, and 2 in. round extra special," this we regret we are unable to supply at the price under item 8, as it is of the quality which is of an expensive kind, and which has only recently been stocked by us, after repeated and severe trials by the Railway Department; we shall be pleased to reduce our price to 60/- per cwt., which is a low price for the steel"; I could not attend to that, but had to refer it to the officer who deals with bonds and contracts as to whether it was in the terms of the contract or not; Mr. Broad

puts on "The Contract reads 'Best cast steel for tools, including silver steel, any maker as selected, *vide* page 84, item 8, also the footnote;' under this line the Contractor must supply steel suitable for various purposes, such as lathes, tools, snaps, hammers, etc.; I therefore think that the steel ordered should be supplied under this Contract"; Mr. Norrie follows on, "I think the view expressed by Mr. Broad in his minute of 2/11/98 is quite correct, and that the contractor should be informed that unless the order in question is complied with our powers under the contract will be exercised"; then it went to Mr. Broad to see what we had done, and he noted on it "Seen"; I do not know whether that steel has been supplied or not; I do not think there should be any difficulty in the way of money being voted to provide a sufficiency of stock here, both of plates and timber; it is simply a question of whether the Minister would approve of an increased Vote; I do not think he would object to it, but I do not know how far the institution of the Public Service Tender Board will affect the question of stores here now; it is quite possible that the ordering will leave me and be taken over by them; that will increase the number of hands the requisitions will have to go through—not so far as ordering stock is concerned, but special lines; I presume that after the requisitions are approved by Mr. Darley they will pass out of the Public Works Department and go to the Public Service Tender Board; it is anticipated that they will take over all the ordering for all the Departments; the annual Contractor does not know exactly what quantity he will have to supply; it would be hard to forecast.

*Accounts.*—If the Auditor-General had not prevented my using that Vote of £5,000 for Services for other Departments I would have been able to render the accounts very much like Mort's accounts are rendered; we would have been able to give full particulars; we cannot do it now because we have no capital to work on; if extra clerical assistance were provided here the accounts could be made out on a commercial basis, but it would not prevent our sending them on piecemeal in the first instance; I pay about £1,400 for Dock wages out of my Advance Account; I can clear the greater portion of that because it is for the Dredge Service and for our Department, and can be charged against the votes, but there are always little bits of the account which I cannot clear—£1 for this Department or £2 for that; the other Departments are so slow in paying that my accounts are crippled; I pay in hard cash, and must get cash back or else my Advance Account gets tied up; we pay on Fridays; we get the voucher in the evening; it is checked in the evening and in the morning a cheque is drawn and the money is made up down in the Pay Office. when we make the payment we do not know how it is to be divided any more than a mercantile firm; within a week Mr. Broad sends us in a charge sheet dividing it among the different Departments; I have an Advance Account from which I pay the wages right away; in those wages there are amounts for work done for other Departments, and I have to recover from them the amounts I pay for them so as to recoup my cash; I send the voucher on a week afterwards, but it may be months afterwards before I get it back; so far as I am concerned, I cannot alter the system; I have made an effort, but failed; I cannot break through the Government Regulations; I went over and interviewed the Auditor-General, and his objection is to placing this money to the credit of a Trust Fund at all; if the Attorney-General or the Law Authorities rule that he is wrong, the Auditor-General must give way, or if the Treasurer takes the matter in his own hands and takes the responsibility, the Auditor-General would then report the matter to Parliament and they would deal with it as they saw fit; I made this effort because of my experience of the imperfections of the system; I knew it was wrong and unsatisfactory.

*Stores.*—When the Harbours and Rivers Department existed separately, there used to be an arrangement by which stores wanted urgently were ordered direct with an intimation, "Official order will follow," but that would not do now; we had an instance of that lately; Grimshaw, of the Harbours and Rivers, and King, of the Architect's, had been doing that, and Keep was constantly sending me notes, "I have supplied so and so without order and no order has come to me"; I made inquiries and found that Grimshaw and King had forgotten to make out orders; in the matter of substituted plates, the Storekeeper could ring up Briscoe, Drysdale & Co., and find out what they have got, and then make out the order; Buddle is here in the morning, and if Briscoe, Drysdale & Co. have not got the size required, he should be asked to ascertain whether they can be got elsewhere, then he can telephone to the Dock, "I can get so and so," and the Dock can requisition accordingly; we must have some system; you cannot look at these things entirely from a commercial point of view; if Mr. Broad had that power, the Treasury or the Auditor-General would, possibly, later on, question it; of course, if that were the established method, I as Accountant, could provide means of dealing with it in regard to the accounts; I think very few of Mr. Broad's orders are altered in any way; one alteration, I remember, is that for those iron plates which Mr. Portus increased; I may point out that this is exactly the same method as the Railway Commissioners adopt; the Station-masters send in monthly requisitions to the Comptroller of Stores, who, when he has received them all, makes up his orders on the contractors, gets the stores, and sends them to the different stations; we adopt the same principle so far as the requisitions are concerned, but let the officers requisition whenever they may require the material; the complaints of delay at the Dock are not very great, take them all in all; the number of these advice notes that I get back is not very great; I introduced that advice note because, before I sent it, the Dock was never advised when material was ordered; there should be no difficulty in increasing the Stores Vote if Mr. Darley and the Minister approves; Mr. Broad could make a proposal and Mr. Darley could recommend it to the Minister through the Under Secretary, but if it is to be done, it ought to be done promptly, because the Loan Estimates are asked for; if you recommend £3,000 for tools it should be separate from that £7,000, because when spent, it would be gone, but that £7,000 Store Advance will be here always; the tools ordered from England will be paid for out of the Dock Contingencies Vote of £7,000; I do not think that is likely to be reduced; the money is not voted yet, but each month we use one-twelfth of last year's amount.

At 5 p.m., the Committee adjourned until 10.30 a.m. next day.

THURSDAY,

## THURSDAY, 24 NOVEMBER, 1898.

The Committee met at 10:30 at Prince's Stairs, Circular Quay, and proceeded in the steam launch "Europa" to Cockatoo Island.

PRESENT:—

Mr. R. POLLOCK, Chairman.  
Mr. A. B. PORTUS, | Mr. W. D. CRUICKSHANK.

The Committee spent from 11 a.m. to 2:30 p.m. in making a careful and complete examination of two of the old set of boilers, one of which is pocketed; and also in examining the pumping engines stated by the Foreman Engineer to be liable to give way at any moment.

In the course of this inspection Mr. Pollock and Mr. Cruickshank entered the boilers to make an internal examination and descended the pump-shaft, passing into the tunnel connecting with the Dock.

Mr. A. B. Portus was also present and assisted in the examination.

At 2:30 p.m. the Committee adjourned until 2 p.m. next day.

*Annual Overhaul, Spit Ferry Punt, North Sydney District.*

Department of Public Works, Sydney, 23 November, 1898.

Memo.—Acting on instructions from Mr. W. A. Smith I give a statement of particulars in connection with above, for the information of Mr. A. B. Portus.

On September 1st, 1898, I wrote a minute to the Principal Assistant Engineer asking for arrangements to be made for the annual docking of the steam punt, stating that I understood (by telephone) that she could be taken in on Tuesday, the 6th inst. (App. 8283.)

I then instructed the Engineer at the Spit to have everything in readiness on the morning of the 6th, on which day she was taken in. On the 5th September I sent in a list of repairs which I had obtained from the Punt Engineer, and which he specially wanted effected; and stated that the punt was to go into dock on the following day.

On the 8th instant this paper came back for an estimated cost of repairs (papers 8414) on which I wrote the following minute:—"I have telephoned to the Fitzroy Dock for estimate, but they tell me they cannot give it till they know what is actually required; might not this attached list be sent to them. The punt is now in dock, but nothing can be done till they get particulars."

This is all the correspondence in the matter.

LINDON BROWN.

FRIDAY, 25 NOVEMBER, 1898.

The Committee met at 2 p.m. at Prince's Stairs, Circular Quay, and proceeded in the steam launch "Swift" to Cockatoo Island, where a meeting was held at 2:30 p.m.

PRESENT:—

Mr. R. POLLOCK, Chairman.  
Mr. A. B. PORTUS, | Mr. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

*Stores.*—The Secretary reported having ascertained from Mr. Steel, Accountant, Public Works Department, that during the year ended 30th June, 1898, stores were received at the Docking Establishment to the value of £14,166 4s. 1d., the issue from stock totalled £9,786 16s. 6d., leaving in hand at 30th June, 1898, material to the value of £4,379 7s. 7d.; at the 30th September last the value of the stock in the store was £5,286 0s. 9d., while at the present date the whole of the Store Advance Account of £7,000 is expended, but debits against other Departments for material actually used to the value of, say, £1,000 would reduce the value of goods now in the stores to £6,000.

A report by two officers of the Public Works Department on the last stocktaking at Cockatoo Island was handed in by the Secretary, and directed to be embodied in the Minutes of Evidence. It is as follows:—"23rd September, 1898. We beg to forward herewith a statement of the stock at Fitzroy Dock as taken by us in July last. On referring to the comparative statement attached it will be seen that the result is most satisfactory and reflects the greatest credit on all who have had to do with the management of the stock. The seeming large surplus of cement (80½ casks) is made up principally of 77 casks supplied by Messrs. Goodlet and Smith to make up the short weight on casks previously supplied. We would suggest that this surplus be taken into stock and the price per cask of stock cement reduced accordingly. The whole of the stores have been well cared for and are in good order. We examined the store books and found that they were carefully and neatly kept. (Signed) J. P. WYLIE; W. R. WYLIE."

"The result of the stocktaking is highly creditable to all concerned, and shows that the receiving and issuing of the stores has been carefully and correctly carried on throughout the year. I think the usual practice of writing off the deficiencies and taking the surplus into stock might now be adopted. (Signed) C.W.D., Engineer-in-Chief. Seen with pleasure, (Signed) J.H.Y."

A

A letter from the Secretary for Railways forwarding a printed list of employees for 1897 was received. The Secretary to the Committee reported that this return was identical with that from which he had obtained the information already furnished. (See p. 42.)

Mr. J. Gibson, Foreman Engineer, re-examined, stated in reply to questions :—

*Pumping Engines.*—If we wanted to disconnect one pump we could do so by taking the connecting rods off; we could not work at repairing one pump even though it was disconnected from the other, because we have no means of shutting off the water which fills up the well; the place is so constructed that it could not be made to shut off; although there are two pumps and two engines the only time available for repairing either of them is when the dock is empty; of course you can repair when the dock is full, but you have got to keep the sluice-valve down, and then you are working with the pressure against that big valve; but you cannot at any time work one pump and repair the other; if the pump is under repair the work must be stopped if either the Fitzroy or Sutherland Docks needs to be filled; the suction is common to both; of course we can repair anything on top by disconnecting the piston rod from the connecting rod; the crank shaft would still have to go round; even to do that you have to open up your circulating pump and block it up with blank flanges; practically, although we have two engines and two pumps, we have not got a duplicate plant; both docks are entirely dependent on the one plant; if any breakdown occurred there would be no means of pumping out either of the docks; some time ago we disconnected one pump when the cross-head pin gave way, and we had to pump the dock with one pump; it did it alright, but it took eight and a half hours; to pump out for laying the blocks when there is nothing in it takes about four and a half to four and three-quarters hours; sometimes we might do the pumping with the valves and all good, and the next time three or four of the valves might be gone; it all depends on that.

[Mr. Portus said that at the time of the test it was done in three and three-quarters hours.]

Witness: I think it took four and three-quarters hours; we always try to keep the engines up to the work as much as possible; we take as much as we possibly can out of them at the first part of the dock where it is lightest; we have put in four suction valve seats on the outside of the pump; we have never renewed any of the suction valve seats on the inside; there is one frame cracked on the inside now; to renew that we would have to take the frame and the cover off if it was at the top part, but if it was in the lower part we would have to take the plunger out, and there might be just room, and that is all, to get the plunger past the overhanging frame; they are all of cast iron; if we had a duplicate shaft it would take the best part of three weeks to get in; there would have to be some fitting on it even if you had eccentrics and everything fitted on it; we would have to lift out that fly-wheel, which weighs from 18 to 20 tons; the whole of the facilities for docking ships at Cockatoo depend on those engines, and there is nothing to fall back on; to put in one of those valve seats we have to strip the pump, and if you did the top box you would have to go through the same performance to do the bottom box, so that it would be better to renew them all together; I have about eight valve seatings by me now; we can put nothing in until we take the pump to pieces; if we could have got at the inside seatings we would have put some in, and we have not put them in simply because of the amount of work and time it would take; I think we could renew the whole of the valve seats on one pump in a month, but I would have to stand by it myself to take every bit out of the men.

[Mr. Portus said the pumping of the dock could be done by putting one of the sand pumps in and letting her pump it out, going down with the water. The dock is 620 ft. long; the "Groper" is 100 ft. long, and that would leave 500 ft. for shipping. The "Groper" indicates 300-h.p. and the dock engines also indicate 300-h.p., so that the "Groper" could pump out the dock as quickly as these engines, while the "Castor" could pump it out twice as fast.]

Witness: I think gun-metal would be too soft for these valve seats to be renewed with; there is a great hammering on them; some of them that are not eaten away are beaten right in; the metal in the framework below—the cast iron—is getting very soft; if Mr. Portus' suggestion to utilise one of the sand-pump dredges to do the pumping were carried out, we could renew the whole of the valves, and then it might be good for another eight years, having lasted for eight already.

(Witness then retired.)

Robert McCulloch, elected representative of the blacksmiths, stated :—I have been here about eleven years; we have twelve fires; there have been on an average about twelve blacksmiths here for the last three or four years; when I came here first there were four fires, and the old Maysmith hammer, and a little one that is in the boiler-shop at the present time; the Maysmith was of no use at all; it stood where the big hammer is now; I am the leading hand; there is no foreman in the shop; Mr. Gibson is our foreman; my pay is 12s. a day.

*Stores.*—If stores are wanted, anybody in the shop can go and get a docket from the man in the engineers' shop; then he has to get it signed by Mr. Gibson; nobody but Mr. Gibson has authority to sign the dockets for our shop; when he is not here we just have to wait, but when he goes away for a few hours he leaves a number of orders signed in charge of a clerk in his shop; when he is off sick there is someone in his place, and he signs; sometimes there is time lost waiting.

*Supervision.*—Each blacksmith has a striker, and some have two; there are about thirty-two men in our shop, blacksmiths and strikers; there is no supervision over them, except by Mr. Gibson; I came here when Mr. Williams left; one other smith gets the same as I do; I came from the A.S.N. Company's works; I think we made a shaft that was 18 inches finished; that was the biggest; we made another some time ago, 14 inches.

*Tools.*—There are not sufficient tools; we want another hammer; there is a back shop, and all the men have to come from that back shop to the hammer when they have a heat, and by the time they get there the best of the heat has gone; we want swedges and vice-blocks for stamping things out; our big hammer is quite big enough for any forging we can do in the fire; we have a 5-cwt. and a 15-cwt; we want one between the two; we are too far from the boilers, and by the time the steam gets to the hammers a great deal of it has been condensed to water; the boiler that drives the machinery in the engine-shop supplies our hammers, and the steam travels about 50 yards; the pipes are all covered.

*Supervision.*

*Supervision.*—I have no hesitation in saying that there should be a practical man in charge of that shop; I have worked in a few shops in this and the Old Country, and I never was in a shop where there was not a man of the trade in charge of it; I have no doubt it would be very much better for all concerned.

*Medical Certificates.—Sickness.*—The men had a meeting, and they asked me to mention two or three matters; one is the medical certificates; if a man is bad for a day, but not ill enough to go to a doctor, he has to produce a medical certificate to explain his absence; that certificate costs 5s. or more, according to what the doctor's fee is; that is considered rather a hardship; whether the men bring the certificates or not they do not get paid.

*Accident Pay.*—We do not consider it a hardship to have to get a certificate in the case of accidents when we get paid; since I have been in the shop there have been three, or, rather, more than three accidents; applications were put in for pay and some got full pay, others got half pay, and some got none at all; I do not know what was the reason for the difference; in the case of one man that did not get it it was said that it was through his own carelessness; I do not know who decides whether we are to be paid or not; at the A.S.N. Co's. it was not the custom to pay men when away sick, but they paid for accidents.

*Holidays.*—We get pay for holidays; only the Government give that; when we work on a holiday we get double pay, but, actually speaking, we only get single time; if I work on a holiday the other men are off; the others get a day's pay; I get paid for the holiday and for the day I work as one day, instead of double time.

*Overtime.*—Last year we worked a good deal of overtime, but have not done so much this year; last year we had four months out of twelve on overtime; if we had more fires there would be no need for overtime; there is plenty of room on the Island for fires; we have not room in our shop for more; when we work overtime we go home by the Ferry steamer, but we are allowed 1d. for that.

*Quality of Coal.*—Another grievance in connection with our shop is in the coal supplied to us; it is a great disadvantage not only to us, but to the Government; the stuff we get is not coal at all; you have no sooner put it on the fire than you have to throw it out again; dirty is not the name for it; we have complained to Mr. Gibson, and he says he has complained about it, too, but it comes here, and we have to make the best of it; it is all shell; it is terribly detrimental to the interests of the work; we are not allowed to touch the coal down there for the "Leila"; if you get good coal like that there is as much difference as between chalk and cheese; if you get a good coal it will cake all over the fire and make a sort of solid fire; but what we get will not run together at all; it is quite loose.

*Starting Time.—Late Arrivals.*—We come by the steamer in the morning, and she leaves certain wharfs at certain times; if a man loses that steamer and gets here perhaps half an hour after the bell he is not allowed to start until after breakfast, but has to wait about here for two hours doing nothing; some of the men living at a distance do their best to get here to time, but they may be a little late; the suggestion the men agreed on was that if a man did his best to get here and arrived before an hour had elapsed he should be allowed to start, but the time he was late should be deducted.

*Incidental Holidays.*—At one time we used to get all the holidays allowed to the clerks in the Head Office in between the ordinary holidays, such as a holiday on the landing of a new Governor, and so on; now we do not get these holidays, and the men think that whatever the Head Office get we ought to get; I do not know whether they would give up their pay for overtime to get these holidays.

*Eating Room, &c.*—The heat in our shop is terrible in summer time; the walls are thick and the shop is badly ventilated; there are louvres in the roof; we want some place where we can keep our food and have a decent meal in; we have to keep our food in a hot shop, and it is hardly fit for human consumption by dinner-time; we would like to have some sort of an eating-house on the Island; we cannot go off the Island, but have to bring all our meals with us.

[The Chairman said the Committee would inspect the shop.]

(Witness withdrew.)

James White, representing the strikers, stated:—I have been here twelve years.

*Accident Pay.*—Some men who have been hurt have received full pay for the time they have been off, others half-pay, and some have received none; if accident-pay is due to any workman who gets hurt through no fault of his own, we wish everybody to be treated alike; a big bar fell on my foot at one time; it was purely an accident; I had to get a declaration to that effect from two men who saw it, and a doctor's certificate; I sent them in with an application for pay, and they told me they would send it on, but they did not think they could recommend it; my toe is deformed now through the accident; it happened on a Thursday, and I started again on the following Monday; had I taken the doctor's advice I would not have been in for a fortnight, because I could not wear a proper boot for a fortnight afterwards; I never got paid for that time; a man named Stafford got half-pay; I do not know how long he was laid up; one man was laid up a long time and another a short time, and both got full pay; I do not know who decides whether we are entitled to accident-pay.

*Doctors' Certificates.*—If we are injured, or if we stop away from work through sickness, we have to produce a doctor's certificate to show why we were off; in some cases we have to pay 5s. or 2s. 6d. for this certificate; a man may have an illness for which it is not necessary to see a doctor, yet he has to get a medical certificate.

*Overtime.*—The men were unanimously of opinion that they should receive double time for the first two hours' overtime and time-and-a-half afterwards; they get it in the boiler-shop; the blacksmiths used to get it at one time.

(Bad quality of coal was also mentioned.)

(Witness retired.)

William Kidd, pattern-maker, who saw the Committee on his own behalf, stated :—

*Personal.*—I have been six and a half years in charge of the pattern-makers, coming here on the distinct understanding that I should take charge of the pattern-makers; of course, I did not know anything about how matters were carried on in the Government, and I simply took it for granted that it was the same as a private firm, and that "taking charge" implied that I would have the duties and status of a foreman; I receive 13s. 8d. a day; I have six journeymen and two apprentices under me; Mr. Gibson is supposed to be foreman, but he has never interfered.

*Stores.*—I sign all dockets for stores for my shop; I order and keep my own stock of timber, and issue the dockets to the store as we use it for each job.

*Tools.*—We have got only one turning lathe and a hand-saw; it is not sufficient to carry on the work of the shop rapidly and economically; a turning lathe and two small planing machines would be an acquisition to the shop—just a surfacing machine, about 20 inches surface, to take in timber about 20 inches wide; a band-saw setting machine and a ripping saw.

*Overtime.*—We work very little overtime in our shop; I try to avoid it.

*Personal.*—When I came here first I received 12s. a day; I started the shop; before I came Mort's Dock carried out all the work for the Department, and the rate charged was 1s. 10d. per hour for ordinary pattern-makers; I was asked to come over here to take charge at that rate, and a promise was given that I would be considered after the shop was started; about four months after I came I got the additional 1s. 8d. per day.

*Drawings.*—I have to do all the drawings in connection with the blacksmiths' work; Mr. Hoey gave me to understand that I would have to do this; when patterns go to the contractors, I have to put in an estimated weight for all castings; I make out the drawings for my own patterns; there is a compound condensing engine in the shop, and I made my own drawings for that; I get no assistance from the draftsman here; I have nothing at all to do with him; I practically do the work of the drawing office in connection with my own business; I have made models of the "Dictys," but I had no drawings for the amended design; I lay down working sketches on the boards, full size, for the blacksmiths; sometimes we get drawings  $\frac{1}{4}$ -scale or  $\frac{1}{2}$ -scale; I take that out all in detail, and make it all up for the blacksmiths.

*Supervision.*—Mr. Gibson has never exercised any supervision over me; I have entire charge and supervision of the pattern-making, the making of sketches for blacksmith's forgings and making up estimates of the weights of all castings that patterns are made for; they are all cast outside by the contractors; before the contractors receive the official order, the weight or estimated cost has to be given by the store, and sent to Head Office, who issue the order to the contractor; that entails a lot of extra work on me other than pattern-making.

*Mechanical Draftsman.*—I have been in Mort's, and from my experience of engineering work-shops I think it is very desirable to have an experienced mechanical draftsman here; he would help forward the work considerably; when a set of drawings came to the Island he could go through them carefully, examine them, see that the material was on the Island to carry out the work, and make any small sketches.

*Supervision.*—It would be to the benefit of the works if there were more supervision; I mean properly recognised supervision under the Superintendent; when a man is placed in charge of work it is an encouragement to him to do the best he can do for the Department, when he feels his work is recognised; I believe there is a great deal too much work put on Mr. Gibson's shoulders altogether; if he had recognised assistance it would be a great help to the place.

(Witness retired.)

[The Committee then proceeded to inspect the blacksmiths' shop with regard to the complaint made by Mr. McCulloch regarding the bad ventilation and the necessity for a place where the men could keep and eat their food.]

At 5 p.m. the Committee adjourned until 2 p.m. on Monday, the 28th instant.

#### MONDAY, 28 NOVEMBER, 1898.

The Committee met at 2 p.m. at Prince's Stairs, Circular Quay, and proceeded in the "Dayspring" to Cockatoo Island, where a meeting was held in the Board-room at 2.30 p.m.

PRESENT :—

Mr. R. POLLOCK, Chairman.  
Mr. A. B. PORTUS, | Mr. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Secretary reported having received from Mr. Gibson a list of the vessels which were in dock in March, 1896, as follows :—

"Castor."	"Omicron."
"Groper."	Trial Bay Winch.
"Neptune."	Camden Haven Winding Winch.
"Jupiter."	H.M.S. "Royalist."
"Golden Fleece."	H.M.S. "Boomerang."
"Rhea."	H.M.S. "Porpoise."

The Secretary was directed to write to Messrs. Goodlet and Smith (contractors for supply of timber), Briscoe, Drysdale, & Co. (contractors for supply of iron plates), and Milne Bros. (contractors for supply of iron plates, castings, &c.) and invite them to give evidence regarding the supply of stores, &c.

Two ex-employees of the Docks having intimated to the Committee, through Mr. Wilks, M.P., their desire to bring forward certain matters regarding their treatment, the Secretary was directed to inform them that the Committee would see on them on Wednesday next (White and Murphy).

C. Donnelly, elected representative of the fitters, stated:—I have been here about eight years; I am under Mr. Gibson.

*Steerage Fares.*—A thing that has troubled the shop for a long time is that when men are sent to jobs on the rivers, they are only allowed steerage fares on the boats; until the last couple of years it has been customary to allow saloon fares; it is not altogether a matter of pride, although that has a little to do with it, but the boats on the coast are not fit for pigs to travel in; that is the reason the men ask for saloon fares when travelling on the coast; on an average there is a man away every fortnight, sometimes more, sometimes less; the reason for asking for saloon fares is because the steerage accommodation is so bad; if we were travelling by the big boats we would not object to it; to an ordinary man, going outside the Heads is a big job; the last job I was on I travelled to the Tweed, and I never had a place to lay my head; I never had my boots off; it seems to be recognised by the Public Service Board that men receiving £144 or £147 should have a saloon passage; it seems a big distinction when men in the Dredge Service at £147 get saloon fares, and men here getting £156 only a steerage passage; ever since I have been in Sydney it has been a rule of the trade that an engineer should get first-class fares when travelling; when travelling for outside firms I never received anything but saloon fares.

*Board Money.*—If we go away working along the rivers they allow us board money, but it ceases at the end of three months; if we are up there three months we get the board money for the whole of the time, but if we are up for four months we only get board money for three; one man on Solitary Island got it, and another man sent to Solitary Island did not get it; that is one of the grievances on this Island, some men get things, and others do not; I have known men get saloon fares to go up the coast, but it is not by right, it is by some roundabout way; Charles Docksey (or Doxey) in the coppersmith's shop received a saloon fare; I do not know what job he was on; I think the board money is about 3s. 7d. a day, 25s. a week; about three years ago it was 30s. a week; it is an allowance to cover the cost of board in a boarding-house.

*Payment of Wages when sent away.*—If you are working on the Rivers at the present time you never know when you are going to get the money; there is no settled system of any kind; we might get it once a month or once a fortnight, or get it when you get back; at the present time there is a man up at Bourke; his wife is drawing his money; Archie Portus is away on another job and he has not got his money yet; that is the drawback; we do not know how we will be paid; I believe some have arranged it so that they can leave some with their wives; as a rule when a man is sent away he receives notice perhaps at 12 o'clock to-day and has to catch a boat to-night; they pay very regularly on the Island, but when we are away it is irregular; I would suggest that in the event of a man going away half his pay should be given to his wife and the other half forwarded to him on the Rivers; men have spoken to me about it at different times, but they will not complain.

*Advance of Wages when sent away.*—The men would like, in the event of being sent away to jobs like that, to be able to get a small advance to go on; the last time I went away I received notice at half-past 3; I happened to have a little money by me, and I had given notice at the Post Office to get it, but could not get it then; I had friends and was able to borrow; we have to make our own arrangements when we get there, and they pay us board money, but they do not advance it to us; a man sent away on a job will usually get an advance anywhere.

Mr. Cruickshank: You think Mr. Broad ought to be in a position to say, "Do you want a couple of pounds? Will a couple of pounds do you?" And if you say "Yes," he should be able to give you a couple of pounds whether it is due to you or not, so long as you are a reputable man whom he knows. If you have been working here for a considerable time you think he ought to do that?

Witness: Yes.

[Mr. Cruickshank promised to inquire into the stoppage of board money after three months.]

*Walking Time when on Outside Work.*—If a man is sent to work on a dredge down the harbour he is expected to be there at 6 in the morning and to leave at 4 in the afternoon, no matter where it is; the men would like some allowance for walking time; it would be a fair thing to give some walking time one way; I think that has been customary in the trade in Sydney.

[The Chairman explained that the general rule of the trade was that the men went to the job in their employer's time and returned in their own time.]

Witness: That would be a very fair thing; we always did that until about two or three months ago; the last time the "Groper" was overhauled Mr. Carruthers ruled that the men should not be allowed any time; we do not have to come to the Dock to put in our tickets; the Dredge Master takes the time; they usually carry a very fair supply of tools on the dredges; Mr. Carruthers wanted us to work the hours usual on the Island—6 to 4; we do not think that is right; when we are out we simply take the same meal time as we do when we are on the Island; we have never known it to be recognised that the cook on the dredge should cook meals for men from the Island; I have never asked him to do it; the "Groper" cannot come through the Glebe Island Bridge without being dismantled, and I think that is the reason they get the repairs done up there, rather than dismantle her; it is sometimes very awkward to get to the dredges when they are in out-of-the-way places.

*Meals.*—We are very badly off for meals on the Island; if you would go through the shop and look at the men's bread you would find it crisp and dry; all that is provided on the Island is hot water; we cannot get to a cookshop or any convenience, and it makes it rough all round; since we have had the new shop it is far more comfortable to get our meals in than the other shop, and I suppose we are better off in the fitters' shop than any others on the Island.

*Walking Time.*—If there was no difficulty in getting to a job we would not ask for walking time; I live handy to the "Groper," but I have never worked on her there yet; I worked on her once at the Island; if I lived in Sydney and had to go and get on board the "Groper" at Glebe Bridge I would not be handy to her; I have worked at North Shore and Middle Harbour on dredges, and I think a man placed like that ought to be allowed to catch ordinary workmen's ferrics to go; wherever convenient they send launches to these dredges down the harbour.

*Medical Certificates.*—If I meet with an accident on the Island, or if I go off sick, leaving word with my foreman that I have got a bilious attack, I have to produce a doctor's certificate to say I was sick; I was in a hospital five months, and I had to send a doctor's certificate every month; if a man has only a slight sickness he has to pay for a certificate.

*Accident Pay.*—Men have had accidents and some have received full pay, some half pay, and some none at all; that ought to be put on a satisfactory basis so that we shall know what we are to receive.

*Payment for Holidays.*—It is a customary thing to be told that men in the Government Service are paid for holidays; we work eight hours forty minutes per day, the extra forty minutes being to make up for Saturday afternoon; when we get a holiday we are only paid for eight hours when it is on a week day, and if on a Saturday we are only paid for half a day (five and a half hours); when the holiday comes on Saturday we ought to get a full day's pay, because we have made up for the Saturday afternoon during the week, or else when it is on a week day we should be paid for eight hours and forty minutes; if a holiday comes on a Monday, a Tuesday, a Wednesday, or a Friday we are paid for forty-seven and a quarter hours instead of forty-eight; we do not get our full pay; if they stick to that then when a holiday comes on Saturday we ought to be paid for the balance of four hours.

*Annual Holidays.*—There are some men in the shop who think that men who have been a long time in the Government Service might be given the privilege of a few days' holiday in the year; it is allowed in almost all the other branches of the Government Service; it is allowed in the Dredge Service.

[Mr. Portus pointed out that, although annual leave was allowed in the Dredge Service, the men in that service were only paid for overtime for the time actually worked, not time and a quarter like those at the Dock.]

*Dirt Money.*—Then it is pointed out that engineers do not get dirt money, but boilermakers do; I know it is not a rule of the engineers' trade to get dirt money, but still, at the same time, Government service is supposed to be fair, and if dirt money is given for one class of the trade it ought to be fair for the other; I think it is the engineer that gets the dirty part of the job; the boilermakers' job is only clean, black soot, but when it comes to getting in the bilges down below the engineers have the dirtiest work.

*Overtime.*—Then I have to ask that we should get paid double time for the first two hours' overtime; we used to receive it; our request might be met by saying that this is not given anywhere else; I am willing to admit it, except in the railway shops; it was taken off the outside shops by a conference between the men and the employers when times were bad, with a promise that it should be given back when the wages were restored to 10s. per day, but although this has been done the double time for overtime has not yet been conceded; the men ask for this in order to discourage overtime; it is a common practice in the trade, because they only pay time and a quarter, to run the shops almost every night; at the present time there is a movement in the trade to approach the employers to have double time reinstated; there has been a lot of overtime done here, due to the need of machinery.

*Stores.*—If I require a file I go to Mr. Gibson and tell him; if he is not there I wait till he is there; no one else can give it out; Mr. Gibson and Mr. Stewart look after the fitters; jobs are not placed in charge of leading hands; when Mr. Gibson was away Morrison assisted Mr. Stewart.

(Witness retired.)

William Stewart, interviewing the Committee on his own behalf, stated:—I am Assistant Engineer to Mr. Gibson; I have been here ten or eleven years.

*Machines.*—We have not sufficient machines in the shop; we are short of lathes; if we had more lathes it would do away with some of the overtime; we get a run of work in, but are not able to send it out in time; it is not very often that we have to work overtime on vessels in the dock to get them out for warships to come in.

[Mr. Portus read the list of vessels in during May:—"Castor," "Croper," "Neptune," "Jupiter," "Golden Fleece," "Rhea," "Omicron," Trial Bay Winch, Camden Haven Winding Winch, H.M.S. "Royalist," H.M.S. "Boomerang," H.M.S. "Porpoise."]

Witness said: There would be fitters at all these jobs.

*Supervision.*—I look after the men working on the different jobs outside; Mr. Gibson would be looking after those inside; he is not always inside, we are both backwards and forwards; it is not very often that the fitters and turners would be left without any person in the shop; I do not work myself; we have not got a leading hand on the place; I think we should have; none of the men are getting leading hands' pay.

*Personal.*—I get 11s. a day; that is 1s. extra; when Mr. Gibson was ill I had charge of the shop; I had an assistant; I did not receive any extra pay.

*Machines.*—I would suggest that a slotting machine be got; we have a big one and want a small one; we want a screwing machine and a nut-tapping machine; we have got a milling machine; it is working now; but we are short of cutters for it, and are making them.

*Supervision.*—Mr. Gibson has to look after everybody in the fitting, turning, moulding, and copper-smiths' shops, and the new dock engines; he has a leading hand in charge of the copper-smiths who receives the same wages as the rest; he is not recognised; Mr. Gibson is responsible.

*Personal.*—I came with regard to my wages; I reckon that I am not paid sufficient for the work that I do; I should be a little bit above the men that I have got to do with; none of the fitters get 11s; two turners get a little bit under 11s; I am practically the second foreman in the shop, but I am not recognised or paid as such.

(Witness retired.)

Harry

Harry Nell, elected representative of the moulders, stated :—I am an iron and brass founder and have been here four years ; there are four of us constantly in this shop—a moulder, a coremaker, a trimmer, and a fireman for melting iron ; we have an extra hand on when we cast iron to give us a hand in carrying the metal, and when we have to do any heavy lifting we have labourers.

*Lifting Gear.*—I may mention that we have no gear for lifting anything heavy, and it is quite dangerous.

*General.*—We have been working in brass and gun-metal for about four years, and now we have commenced on iron work ; the heaviest brass casting we did was, I think, a pipe of 8 cwt ; we have not been able to do any very heavy cast iron yet ; 8 cwt. is about the heaviest ; we have not got facilities for it ; we have two cupolas and a splendid blower ; we can get down about 7 tons ; we have only just commenced and are making our own gear and making our own boxes, and as soon as we get the pattern-makers out of the way we shall have a good shop ; we could do with a man and a boy now, and the work would be much cheaper through not having to wait for help ; the only things that are cast at Mort's are those for which we have not patterns here ; there are a few castings round the shop that were made there ; it would not pay to make patterns for the purpose ; otherwise nothing is done at Mort's ; being in an incipient state, I should like to mention that we have no particular classification here ; there seems to be a tendency to think that moulders are very much inferior to any other class of engineers ; that is not so in the Old Country—in fact they are generally paid more than fitters or turners ; I applied for an increase some time ago, and they said when the Public Service Board inquired into it I might expect an adjustment in my favour ; the other moulder commenced at 8s. 1d. a day ; he was amongst the labourers at first, and was brought in occasionally when I was busy, but now he is properly employed and has been promised an advance when we get the thing properly in swing ; last April I received 11s. ; before that it was 9s. 4d. ; I was in the Railway Service for nine and a-half years in charge of the tramway shops, and was paid 12s. 4d. a day for the same character of work ; there were three of us ; that was locomotive and tramway work—not equal to what we have here ; I left the Railways because I had a better position to go to, and the business failed, and I had to come back to the trade again ; the lowest they commence at in the Railways is 9s. 6d., which is increased to 10s. when they have been there twelve months ; I consider I am underpaid in comparison with others in private employ ; at Watson and Crane's they pay 12s., with a percentage on all work except what is used on the place ; the assistant-forman in the Railways gets 14s. a day, and has not to go to the ticket office ; they have not got many more moulders in the brass foundry than we have ; theirs is routine work, but here it is all jobbing—one thing one minute and another the next ; one man may be kept making one thing all the year in the Railways ; they have every facility—boxes made specially ; hitherto I have had to work with wooden boxes, but since we have been casting iron we have made iron boxes.

(Witness retired.)

James Russell, elected representative of the fitters, stated :—I have been here ten or eleven years ; I am under Mr. Gibson ; after mentioning the question of steerage and saloon passages he went on to speak of—

*Board Money.*—When a man is sent away he is only allowed board money for three months ; one of our fitters was sent to Solitary Island for fourteen weeks, but only received board money for thirteen ; that may be a solitary instance, but when he made his claim he was referred to the Rule ; I have never seen the Rule.

*Payment of Wages when away from Head-quarters.*—In a great many instances when men are sent away on jobs they have to wait a long time for their wages ; a man may be away three months, and it may be six weeks or two months after he gets back before he gets his money ; in my case I waited two months after coming back before getting my money ; that was when I went to the Richmond ; then when I went to Moss Vale I was six weeks waiting for my money after I came back ; I can mention other instances.

*Notice when Required to go away from Head-quarters—Advance of Cash.*—The men would like to get some notice when they are required to go away on a job ; we have had notice here between 2 and 3 to catch the train to go away at night-time, to be away from two or three weeks to perhaps two or two and a half months ; we think it is a grievance that an allowance is not made to us before we go as an advance, because when we go we may not have sufficient money to pay for board ; or it might be arranged for the man in charge of the dredge to advance the board money.

*Walking Time.*—A man living in Balmain, and sent to work on a dredge in the Harbour under the Dredge Master, should have some allowance made for the extra half or three-quarters of an hour it takes to get to the job ; the rule in outside jobs is that the men travel one way in the master's time ; Mort's Dock boat that comes here for their men always leaves here ten minutes or a quarter of an hour before our bell rings.

*Payment of Wages when away from Cockatoo, but still in or near Sydney.*—A man might be working on Thursday and Friday at Cockatoo and on Saturday be sent to a dredge in the Harbour ; when he comes back to Cockatoo he can only draw the two days' pay, whereas he may have been working a fortnight ; we have had to wait as long as three weeks for our money when working on dredges in the Harbour ; we have to wait until the Dredge-master sends advice here through the Head Office ; it is very seldom we get it inside a week ; we have never written in to Head Office complaining about it ; if a man happened to be sacked after his job on the dredge was finished he would still have to apply to the office for the money ; I have never known such a case ; the money is sent up here from Head Office and paid here ; we are then called into the office and sign the docket, and receive the pay ; it is a great hardship to a working man to be kept waiting for his money.

(Witness retired.)

James Johnstone (ex-M.P.), elected representative of the boiler-makers, stated :—I have been here two years and eight months.

*Place for Food—Eating Room.*—We would certainly like to have some place to get our food ; at low tide, and when the wind is blowing in, the excreta from the w.c. lies on the rocks below the wharf there.

*Steerage Passages.*—I have been to Mr. Broad and my foreman about the steerage passage allowed to men sent away; as a rule the steamers they send the men away in have not got a steerage, and they have to go as best they can; the boilermakers have been putting a few shillings out of their own pockets to it, to get themselves some comfort, with the hope of getting it back again; of course, there is some cleanliness and comfort in a second-class railway car, but I can assure you there is none in these steamers; I think the Public Service Board have laid down that anybody getting £144 and over is entitled to a saloon passage.

*Accident Pay.*—When men get hurt on the premises whilst at their work, some receive full pay, others half-pay, and some none at all; if it is a rule of the Establishment that men should get their pay, they should have no trouble.

*Medical Certificate.*—Witness also repeated the arguments of former delegates against having to furnish medical certificates when sick.

*Replies to Correspondence.*—Men working here making application for a rise have to go to the foreman; I suppose he worries Mr. Broad, and Mr. Broad worries Mr. Portus, and Mr. Portus worries somebody else, but we never hear anything more about it; we are never told whether they will allow it or not; we would like you to bring about some finality in this, so that we might get answers to our applications; in the Railway they get a rise for servitude, almost without asking.

[Mr. Portus explained that Mr. Broad never spoke to him about increasing the pay of any of the men, as he (Mr. Portus) had nothing to do with anything except the Dredge Service.]

*Dirt Money.*—The boilermakers have been getting dirt money on all work outside of the shop; there has never been any quibble about it in any of the shops in Sydney until the Government made a quibble about the "Ajax"; we were not paid for it on the "Ajax," although we were justly entitled to it; we would like this question settled finally; Mr. Broad told me that when the Committee sat I had better speak about it; we consider we are entitled to dirt money on old jobs; the "Ajax" was risen upon, and where the new work joined the old we claimed dirt money; we claimed it for the whole job; when I was in the chair at the dinner at the annual picnic I brought that under the notice of the Minister, and he said he would see it was rectified—"he did not want to quibble at pennies"; it is 1d. an hour extra; if it is old work there is never any trouble about it at Mort's; but when private firms find out that the Government is stinting in this matter they do the same.

*Apprentices—Improvers—Journeyman.*—The boys here do not seem to be able to get their rises; I might mention that a deputation waited on the Railway Commissioners about the same thing, and Mr. Oliver stated that he was very pleased to see them, and as a result some of the boys got their journeymen's money straight away; here, when the boys are out of their time, they do not get journeymen's wages; they keep them here for under-money.

*Ferry Boat.*—The men would like the boat to leave at half-past 5 every morning instead of twenty-five past; some of them come in by tram, and have to go to Darling Island to catch the boat, which comes round and calls at Colt-street; I pull to work; the boat gets here at ten to 6; they wait a good while at Colt-street to give the men a chance; if they left five minutes later at Darling Island and did not stop so long at Colt-street they would be here soon.

*Dirt Money.*—The boilermakers want a penny an hour for old work whether it is dirty or not; I get 1s. 2d. an hour, and if I am working at old work I get 1s. 3d.; in the Railway you get a rise for servitude, but here you write in, and that's the last you hear about it; the same thing about dirt money cropped up in the A.S.N. Co., and in the Railways when the Commissioners took office, and the Commissioners had the men up before them and said, "We will give you a penny an hour more all round and save trouble"; and Mr. Small did that; in the Railways some of them get 10s. 8d., 10s. 4d., 11s., 11s. 8d., and 12s. a day; after they are there for twelve or eighteen months they always get a rise; they get a rise to 10s.; a labourer would get a rise there, too.

(Witness retired.)

William Gray, elected representative of labourers in Boiler-shop, stated:—

*Cranes.*—We require a crane over the hydraulic machine, and another over the punching machine, and if we had a few blocks for flanging it would be better for the Department, and we should be able to turn out better work.

*Room for Meals.*—(Repetition of arguments of others.)

*Board Money.*—When labourers are sent away with mechanics there is always a difference of 3s. a week in the board money against the labourer; when a mechanic is allowed 24s. the labourer gets 21s., and when a mechanic is allowed 27s. the labourer gets 24s.; we cannot tell why it varies; the labourers have to pay as much for their board as the mechanics; I have not been away myself.

*Dirt Money.*—The labourers think if the mechanics get dirt money the labourers should get it also; we generally have the dirtiest part of the job; we have to go in and sweep it out; the boilermaker does not work by himself; he has always got a mate.

Richard Green and James O'Hehir, elected representatives of the shipwrights, were called:—

Green stated: I have been here about nineteen or twenty years.

O'Hehir stated: I have been here twenty-two years.

*Wages.*—O'Hehir stated: Our first grievance is in connection with the wages; we used to be paid 11s. on new work and 12s. on old until about four months ago, when it was reduced to 10s. on new and 12s. on old; we asked the reason and were told 10s. was the wages of the port; but we do not get the wages of the port; we only get time and a half for overtime, but at Mort's Dock, or any other private shop they get double time; we work a good deal of overtime.

*Medical Certificate.*—(Same arguments as used by others.)

Accident

*Accident Pay.*—One man got his thumb poisoned, and he was paid; another man got his finger crushed and got nothing; White was the one who had his finger crushed; Billy Miller, a joiner, had his finger cut with a chisel, and he was put off; we have never had any reason why some got paid and others did not.

*Steerage Passage.*—(Same arguments as used by others.)

*Workshop.*—Our principal grievance is what is termed our workshop; one end is turned into a joiners' shop, and boats are stored at the other end; when it comes on a shower of rain we have to knock off work as there is no room to work inside, and that is a hardship to men who are only paid 10s. for new work; we have to work in the open; there are many jobs that might be done inside if there were room; sometimes they paint men-of-war boats in there and you cannot walk through the shed—the gear, paint-pots, and boats are in the way; I do not think any complaint has been made to the Foreman about it.

Green said:—There is a boatbuilder who uses the end of the shed for his shop; at the present time there are thirteen or fourteen boats in there.

*Meals—Convenience for Getting.*—There is a complaint about the want of facilities for cooking; if you want to cook a bit of steak there are only a few sheets of iron; you can only boil an egg.

(Witnesses retired.)

George Taaf, joiner, waited on the Committee on his own behalf and stated:—I have been here twenty-three years; they cut my wages down from 12s. to 10s. about twelve months ago; I am not the leading hand; there is one above me; he gets 12s; his name is Joe Reed; Mr. Pratt is my foreman; he told me he would get me the sack altogether; he wanted to do away with the old hands; I consider he did not treat me fairly because he did not give me notice that my pay would be reduced; when he sacked me I saw Mr. Hickson and he put me back.

(Witness retired.)

Frederick Godden, foreman of labourers, waited on the Committee on his own behalf and stated:—I have been here five years; I came at 10s. per day, which rate I receive now; in January, 1896, I applied for an increase, and Mr. Broad recommended that I should get 12s. per day; that application was returned with the understanding that it was to be resubmitted when the Public Service Board took office; that was done, and when Mr. Wilson came here I brought the matter under his notice, and he, without committing himself in any way, expressed himself as favourably inclined towards it; I heard nothing further, and wrote to the Engineer-in-Chief in October, 1887, and he told me the papers had gone to the Public Service Board, and he could do nothing further until they dealt with it; I was engaged to be foreman here, but though my position is recognised here I am not on the permanent staff, and therefore have no official standing; Mr. Broad is my immediate superior.

*Steam Lighter.*—We need a small steam lighter to get things away from the Island on; if we had a punt and could be sure of getting a tug whenever wanted it would do, but very often we cannot get a steamer; if we had a lighter we could keep it constantly employed; we want better facilities to get things away; the wharves need repairing, and a tramline about the works is needed.

At 6 p.m. the Committee adjourned until 2 p.m. on Wednesday, the 30th instant.

### WEDNESDAY, 30 NOVEMBER, 1898.

The Committee met at 2 p.m. at Circular Quay and proceeded on the "Dayspring" to Cockatoo Island, where a meeting was held in the Board Room at 2-30 p.m.

PRESENT:

Mr. R. POLLOCK, Chairman.  
Mr. A. B. PORTUS. | Mr. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Secretary reported having written letters, inviting Messrs. Briscoe, Drysdale, and Company, Messrs. Goodlet and Smith, and Messrs. Milne Brothers to send representatives to give evidence, and also having written to Murphy and White, two ex-employees of the Docks, informing them that the Committee would hear them.

*Sick Pay—Accident Pay.*—The following letter was received from the Secretary for Railways:—

I have to acknowledge receipt of your letter of the 25th instant, asking what is the practice in this Department in regard to allowance of sick pay to mechanics in the Eveleigh Workshops.

In reply, I have to inform you that the standing Regulation as affecting these men is the same as that which applies generally to the Service, and is to the effect that when an employee is injured in the performance of his duties, without carelessness on his own part, he is allowed half pay during the pleasure of the Commissioners; if the injury is due to causes entirely beyond his control, he is allowed full pay during the pleasure of the Commissioners. The heads of Departments have power to grant the allowance for a period not exceeding one month, but for over that period the case is specially submitted for the approval of the Commissioners, and in every case the certificate of the Railway Medical Officer is necessary.

Special cases not coming strictly under the above conditions are dealt with on their merits, subject to the authority of the Commissioners.

The above relates to cases of accident only. Employees on the wages staff are not allowed sick pay, except under very special circumstances, which rarely occur, and which, of course, would be specially authorised by the Commissioners.

H. MCLACHLAN, Secretary.

Mr. J. GARLICK, Secretary Committee of Inquiry re Government Docks.

Copies of Dredge Service Regulations as under were handed in by the Secretary:—

Board Money (Regulation 159).

Officers receiving £168 per annum and over shall be allowed 25s. per week when not provided with accommodation, and 2s. 3d. per diem when accommodation is provided. Other employees shall receive relatively 20s. and 1s. 8d.

Steamer

## Steamer Passage.

Officers will be allowed second-class fares by rail and coach fares by road. Those in receipt of salaries of £144 per annum and over will be allowed saloon fare by steamer; those in receipt of a less salary than £144 will be allowed steerage fares by steamer.

## Holidays (Public).

156. The following days shall be observed as holidays, viz.:—New Year's Day, Anniversary Day, Good Friday, the day after Good Friday, Easter Monday, Queen's Birthday, Bank Holiday (1st August), Prince of Wales Birthday, Christmas Day, Boxing Day (26th December), and any other day proclaimed as a public holiday throughout New South Wales. No other holidays or partial holidays shall be observed without the special authority of the Minister for Public Works.

## Sick Pay.

157. In the event of an officer being incapacitated from work by reason of sickness, the permanent head may, with the approval of the Minister, if the officer has served continuously for more than three years, grant leave of absence on half pay for any period not exceeding one month in one year, provided always that such sickness has not been brought about by any misconduct or fault on the part of such officer, to determine which a certificate shall be required from a duly qualified medical practitioner stating the nature of the illness. Such certificate may, if deemed necessary, be referred to the Chief Medical Officer for report. Whenever an officer is prevented by sickness from attending duty, he shall immediately report the same to the Master of the Dredge to which he may be attached, and shall forward to the said master, within four days, a medical certificate showing the nature of his illness, which said certificate shall be transmitted to the Head of the Department, with a report of the circumstances of the case: Provided, however, that in cases of absence for a period of three days or less, the certificate of the Dredge-master, endorsed by the Superintending Engineer, may be taken as sufficient, but this shall not be held to prevent a certificate from a Medical Officer being demanded in respect of any period of absence if the Minister considers it desirable. All fees in respect of medical certificates shall be paid by the officers concerned, and, in cases of extended absence, the Minister may, if deemed desirable, require a fresh medical certificate to be furnished each week.

*Sick Pay—Stafford's Case.*—The Secretary handed in the official papers in the case of J. Stafford, blacksmith's striker, whose toe was injured on 30/12 97, through a bar of steel rolling off a weighbridge on which he had placed it; Mr. Broad reported, on 14/1/98, that the accident was due to Stafford's carelessness in turning round, after placing the iron on the machine, without seeing that it was properly secured; the Engineer-in-Chief concurred in this opinion; on the 20th March, Stafford wrote to Mr. Wilks, M.P., on the subject, and the latter interviewed the Minister, who eventually, in April, granted half-pay; two men, Parrish and Tennant, who witnessed the accident, certified that it was not caused through any fault on Stafford's part; the period he was absent was twelve days; no official papers can be traced regarding the accident alleged by White, in his evidence, to have caused his absence from duty from a Thursday to the following Monday, for which he received no pay.

*Stores, &c.*—Mr. A. B. Portus produced and read the following statement:—

During the time I occupied the position of Chief Clerk, Harbours and Rivers Branch, from 1st January, 1891, to 31st March, 1895, the method adopted for dealing with requisitions for supplies to the various works carried out at Fitzroy Dock was as follows:—

The requisition having been made out by the Storekeeper on one day, was signed by the Superintending Engineer of the Dock the following morning and sent to Head Office by the steam launch "Leila," addressed to the Engineer-in-Chief. The letters were opened by me, and the requisitions immediately taken to the Engineer-in-Chief, who approved of the supplies, and the Order Clerk (Mr. Oatley) was enabled to have the requisitions by 11 a.m.; he made out the orders in duplicate the same day, and next morning, by 9.30, they were signed by me, for the Engineer-in-Chief, and handed to Mr. Buddle, who placed them with the Contractors before 10 a.m., so that within twenty-four hours from the requisitions leaving the Dock the orders were placed with the Contractors.

The same arrangement existed with regard to requisitions for the Dredge Service.

In cases of great emergency, the Dock authorities would telephone direct to the Contractor for supplies and an order would be handed to them next day.

With reference to works which were frequently carried out for other Departments by the Docking Establishment, it often happened that the service so required had to be performed at the Dock, and the vessel or article, as the case might be, was sent to the Island before the authority to undertake the works thereon reached the Superintending Engineer. When this occurred, he would telephone to me and I would, in turn, telephone to the Department concerned, asking for what purpose the vessel or article had been sent to the Dock, and when the reply had been received, I would instruct the authorities to immediately put the work in hand, in anticipation of the approval of the Minister or the Engineer-in-Chief being obtained, as it was obvious that, through the unavoidable circumlocution, delay would be experienced before the paper asking for the works to be performed at the Dock reached its ultimate destination. As a consequence, works would occasionally be well in hand, if not completed, before formal approval had been obtained.

This practice had, to my knowledge, been observed in the Harbours and Rivers Branch for a considerable period prior to 1891.

JOHN PORTUS.

Mr. Corran Bridson, representing Messrs. Briscoe, Drysdale, and Co., stated:—

*Stores.*—I represent Messrs. Briscoe, Drysdale and Co., the present contractors for iron plates, gas pipes, angle-iron, bar-iron, engineers' stores, &c.; inquiries often come to us for plates of a size we have not in stock; we search the town and inquire of all the importers to see if they are procurable; if the particular size required is not obtainable we submit to the Department the nearest size procurable; Mr. Buddle is the man that makes the inquiries, and I always tell him the nearest size procurable, and he submits it to some official in the Head Office; we always deal with Mr. Oatley's Department in these matters; while I am inquiring Buddle has gone away, and when I know I ring up the office or write a note and tell them I am sorry that size is not procurable and give them the nearest to it; we have to wait some time before they inform us whether that size will be accepted, and sometimes in the interval we may have sold that size, and I have to give them particulars of another size; sometimes it is two or three days before I get a reply from the Department; in some instances it has been longer, but not generally speaking; we then get official instructions to alter the size that is ordered to the size that we can supply; I generally return the order to Mr. Buddle, and he takes it away and brings it back altered; I do not know who decides whether it will be accepted or not; I have an order now for 6 ft. 6 in. of angle iron  $1\frac{1}{2} \times \frac{3}{4}$ ; we do not cut angle iron; it is not trade usage; we have never been asked to do so.

[Mr. Portus said the order referred to must have come from someone in the country who did not know the trade sizes.]

Witness, continuing, said: We do not cut plates; I believe we have been asked to cut a plate, but have not done so; I might state, as one cause of delay in supplying goods, that we have had an order for plates of iron not of a manufactured size; I believe they were wanted for some reclamation works; they were 13 ft 10 in. x 5 ft. 6 in. x  $\frac{3}{8}$ ; this size of plate is not kept in stock by any maker in England; we had

had to cable to England for them, and could only find one maker that would roll them; they are under weigh now; our contract says "iron plates, any length and shape, all sizes," and we, as contractors, knowing the trade sizes that are kept, never considered or reckoned when we tendered that plates of such dimensions would be ordered from us; that clause is too open; if they ordered a plate a mile long under that clause we would have to supply it; 14 ft. is a size that is not manufactured unless under special circumstances; it is not usually kept in stock; I know some have been supplied to your Department; we had to send to England for them; it would be just as easy to send for 13 ft. 10 in. as for 14 ft.

[Mr. Portus explained that 13 ft. 10 in. was the size actually required, and as there was a difficulty in getting 14 ft. plates through the rolls to cut off the extra length, and as the plates had to be ordered specially, it was thought to be just as well to order the exact size required and so save any cutting when the plates were received.]

Witness, continuing, said: There is no proviso in the contract respecting outside sizes; the contract says: All sizes to 4 cwt., 9s. 8½d.; above 4 cwt. and up to 6 cwt., 10s. 2½d.; above 6 cwt. and up to 8 cwt., 11s. 2d.; above 8 cwt. and up to 10 cwt., 12s. 2d.; above 10 cwt. and up to 18 cwt., 13s. 1½d.; there is no provision for an outside size; that is only the weight of the plate; I consider the clause that we are to supply plates of any size very one-sided and unfair; there should be some provision for a special rate for outside sizes; 13 ft. 10 in. x 5 ft. 6 in. is an outside size; in this case the difficulty arises in the width; in a case like this, where we cannot supply and have to import, the Department are bound to give us the order; I am mentioning that as a case where delay was caused because it was an outside size; in ordering stock sizes if they will give us the order about 9 or 10 in the morning we always do our best to get the goods away that day; the boat leaves at 1, and if we do not get the order in time it must wait till next day; I have telephoned up here and told them the nearest size of plate when I have not had the exact size ordered in stock, but as a rule I do not do that, because then I do not get the official order altered; you rarely ask us for sizes that are not trade sizes, but in some cases sizes are sold out in the Sydney market; it would save a lot of time if I telephoned to the Superintendent of the Dock and told him I had not a 6 x 5, but could supply a plate 6 ft. square, and if he had the power to tell me to send it on; I do not think we have ever refused to buy plates in town of the size required by the Department, if they are procurable, to complete an order; we are the largest importers of plate and bar iron and ironmongery in all its branches in Australasia, and we can give despatch for nearly every size that is asked for; instances are very rare where we are compelled to buy plates and bars for the Department; in cases of urgency Mr. Buddle will come down and ask us to supply goods without an order; we know it is against the rule, but to oblige the Dock I send the goods up, knowing that I will get the order in due course; I cannot render an account until I get the official order; I have not had any trouble with the Department in that respect.

(Witness then retired.)

Mr. Charles William McFarlane, representing Messrs. Goodlet and Smith, stated:—

*Stores—Timber.*—Goodlet and Smith are the contractors for timber; there are three separate contracts, but we have the whole of them; no one can keep a stock of timber that will suit for supplying orders directly, unless they are small sizes; large sizes, such as are generally wanted at Cockatoo—long lengths—we have to send to the bush for; in the winter time, if it happens to be wet, when the logs are fallen, the teams cannot get them through the bush, and that sometimes causes a few weeks' delay; then the contract is only for six months, and in consequence of that you cannot make a proper arrangement, because you do not know whether you will get it for the next six months; sometimes we may get an order at the beginning of the contract and not get it filled by the end of the contract; that would be where it was a very large size; you might get a dozen logs, and when you cut them up you might find them no good; hardwood timber is faulty; it is not like pine; we have the kauri ordered from the Kauri Timber Company; they have a monopoly of all the mills in New Zealand, and their delay is the cause of our delay; we received that order at the end of June and ordered it on July 5, and it is not here yet; we stock kauri at our place, but the lengths required are over 30 ft.; we have up to 22 and 24 ft.; I never asked if 24 ft. would do, because I understood it was for deck-planking for a launch, and nobody ever will take less lengths than 25 ft.; those are the standard lengths for decking; we could not have bought it in Sydney; no such timber could be got in Sydney.

[Mr. Cruickshank said Beattie had a lot of it, and also Mort's.]

Witness: We were not aware that Beattie had any, and Mort's will not sell to us; if we had a contract for two or three years we could keep a much better stock; we cannot lay in a stock now, because by the time we got it in somebody else might have the contract; Mr. J. H. Goodlet is of opinion that the contract should not be less than twelve months; for years past the contracts were for twelve months; the price of timber has not varied very much for the past two years; variation in price would not be likely to influence us except a duty were put on; but if it were arranged that the duty would not be chargeable on Government contracts it would make no difference; keels are not ordered from us; they are not in our contracts; they are hewn—our contracts are for sawn timber; the delay, so far as we are concerned is due to the fact that we have ordered the timber but cannot get it; we have the whole stock of the Kauri Timber Company at our disposal by the terms of our agreement with them; we have had correspondence with them about this, and they have promised us time after time, and said they expected the next vessel loading would bring it; we got word on Monday this week that a vessel called the "Overland" is loading and she will bring it; we have tried the other timber merchants.

[Mr. Portus read "Timber for Marine Board Launch, ordered 25/6/98, not yet received":— 400 ft. 6 x 1½ t. and g. d.d. kauri, 30 ft. lengths; 1,560 ft. 4 x 2 kauri decking d.d., 30 ft. lengths; 1,200 ft. 6 x ¾ kauri, t. and g., 16 ft. lengths; 2 pieces 36 ft. and 2 pieces 30 ft. dressed kauri, 12 x 1½; 700 ft. 8 x 1½ d.d. kauri; 1,300 ft. 10 x 1½ d.d. kauri.]

Witness: That is all coming from New Zealand; we could not get those lengths, 36 ft., in Sydney.

[Mr. Portus continued reading:—"4 pieces 60 ft. long 6 x 1½ Oregon."]

Witness: We could not get the Oregon, but of course there was not much use in delivering that before we could get the other; they could not do anything with it. Mr.

[Mr. Portus continued reading:—"Ordered 19/7/98 for stock not yet received—1,000 ft. run 6 x 3 kauri; 5,000 ft. run 5 x 2½ kauri; 492 ft. super. 12 x 1½ kauri; 320 ft. super. 12 x 2 kauri; 482 ft. super. 6 x 2 kauri; 1,260 ft. super. 16 x 1½ kauri; 500 ft. super. 6 x 1 kauri t. and g.; 2/16 16 x 6 Oregon; also several sizes of hardwoods." Now here are the hardwoods, 4 pieces 14 ft. long, 18 x 3, and 8 pieces 26 ft. long, 12 x 3 spotted-gum.]

Witness: That could be got; that 1,460 lineal ft. 9 x 1½ spotted-gum, 26 ft. and up could be supplied; nearly all that 3,800 ft. 9 x 2½ spotted-gum, 26 ft. and up, has been supplied, and that 100 ft. of 9 x 3; I think you will find that they have not marked off the last lot they got; there is about 200 ft. of that 3,800 ft. yet to come; in this case there has been a lot of delay, but that is owing to the breakdown of our large steam punt; it broke down two or three times; but some of these lines have been supplied; in the hardwood the delay is due to the breakdown of our plant.

Mr. Portus: We saw some knees sent here twice; they were rejected and sent back again.

Witness: Oh no!

Mr. Cruickshank: There was Mr. Pratt's mark on them (condemnation mark).

Witness: I know nothing about that; I think it is better to have all the contracts in one, because then you have one delivery and can deliver two or three things at one time; the contracts were not blended this year; we got the three separate contracts.

(Witness retired.)

Mr. C. Bridson, representing Messrs. Briscoe, Drysdale and Co., was recalled, and stated:—Six plates 6 x 3 x ¾ were ordered on 14/9/98; at that time they could not be supplied; speaking from memory, I think we advised the Department that we had 7 x 3 x ¾; I have evidently overlooked the fact that the order for the 6 x 3 x ¾ was not cancelled, and that they are therefore still on order; I thought they had accepted the 7 x 3 in place of the 6 x 3; I can supply the latter now; on 1/10/98 half a ton of 1½ x ¼ angle iron was ordered; this is being rolled by a Sydney firm, and will be sent on as soon as possible; the delay has arisen through their being so busy.

Mr. G. W. F. Lawes, Storekeeper, was sent for at this stage, and on entering the room said:—When we ordered six plates 6 x 3 x ¾, and Briscoe, Drysdale, and Co. told us that they had not that size, but had 7 x 3 x ¾, we ordered the latter on a separate order, and the order for the 6 x 3 x ¾ is still outstanding; we still want them.

Mr. Bridson: We have supplied the 5 cwt. of 2½ x ½ half round iron for stock; there are only two lots of 200 ft. each of that size that we have to supply.

[Chairman read: "A quantity of Cleveland drills were ordered to be imported on 1/4/98. On making inquiries last month we were informed that Briscoe, Drysdale, and Co. had never ordered the drills. A new order has now been made on H. P. Gregory.]

Mr. Bridson: My predecessor had that order in hand, and on looking into the matter I found he had neglected to indent for them; the order has since been cancelled.

(Witness and Mr. Lawes then retired.)

James Murphy and Henry White, shipwrights, waited on the Committee on their own behalf:—

Mr. White stated: I have been employed at the Docks at different times during the past eighteen months; the last time I was employed was six or seven weeks since; after I had been working about a fortnight the last time a number of men were taken on, and after they had been at work two or three days I was knocked off and they were kept on; I went and asked Mr. Pratt why he put me off and kept on other men who came after me, and he made a direct charge against me; he said I was always talking and neglecting my work; now, Mr. Castle is the leading shipwright under Mr. Pratt, and gives us our work; I went and asked him if he ever knew me to be guilty of that sort of thing, and he said, "If I was asked the question I could not say a thing like that"; with Mr. Murphy I went and saw Mr. Darley, the Engineer-in-Chief; we stated our case, and he said he would make a further investigation; I waited a little while but received no communication from him, and then I saw Mr. Wilks, the Member, and asked him if he had seen Mr. Darley; he did so, and sent me a note to say that Mr. Darley had made an investigation, and could not recommend either Murphy or myself for further employment here; now, there must have been something very serious said when Mr. Darley would say a thing like that; if I was such a bad character the shipwrights of Sydney would not have elected me secretary of their society for the past seven years; hundreds of pounds of their money pass through my hands every year; it is all over the place now that I have been dismissed from Cockatoo for talking; there is one thing that Mr. Pratt might have said to Mr. Darley. (Witness then mentioned the details of a quarrel between himself and Lawrence, master of the "Dayspring," which occurred eight years ago, for which he was dismissed from the Atlas Works, but was afterwards reinstated. He said he thought this should not be brought up against him.) The other morning we came up here and applied for work, and Mr. Pratt said he did not want men then, and when he did he would employ the best procurable; we are as capable of doing our work as anybody else; there is one thing I want to disabuse your minds of, and that is we want no privileges; there has been a very serious imputation on my character and I want to clear myself; Mr. Pratt has made some statement to Mr. Darley to make him say he cannot recommend me for employment; the men who are employed here constantly have to be very careful what they say; shipwright's work is very precarious, and when a man gets anything like steady work at all he would put up with anything rather than lose his employment; if the men do not complain it is because they are not in a position to lose their work; really, I would rather be a little dog than be like some of the men on this Island; Mr. Pratt is overbearing and tyrannical; he degrades the men in every sense—degrades men quite as good as himself, only he has been pitchforked into that position; I have never given Mr. Pratt the slightest provocation, and he has treated me cruelly; the men who were taken on a few days before we were put off, and were kept on, were George Scott, Henry Moore, Thomas Winstanley, James Pashley,

Pashley, and John Chapman; if it had been a private firm I would have had a better opportunity of dealing with Mr. Pratt than I have under present circumstances; I could have got my fellow-workmen to support me, but we cannot dictate terms to the Government; I believe the payment for holidays here is detrimental to the men, for I believe the men are put off sometimes until the holidays are over so as not to have to pay for them.

Mr. Murphy stated: I have worked on the Island on and off for thirty years; Mr. Pratt has taken a dislike to me, and whenever an opportunity has occurred has singled me out for his hatred; I never liked Government employment; I was fifteen years in one private employ, and seven years again before the A.S.N. Co. broke up; circumstances have occurred which unfortunately make it necessary for me to work again. (Witness then corroborated White's statements regarding their being put off about six or seven weeks ago, while other men who were taken on after them were kept.) When a man gets employment he should have the privilege of being kept on before those who came after him, everything else being equal; that is my complaint in a nutshell; Mr. Pratt has not got common decency; when I go to speak to him he stands off (*imitating*), and Lord Hampden would not do it; I do not know why he is so vindictive against me; I have been a contractor for the Government on this Island; Mr. Darley gave me to understand that as soon as he landed on this Island he would cause inquiry to be made, and he said, "More than that; if there is any employment to be had, you shall have it"; now, through the Member for Balmain, I am informed that Mr. Darley says he cannot recommend me for any employment; now, it must have come through Pratt, and that is why I would like you to call Mr. Pratt; I do not think there is a man on this Island who cares for Mr. Pratt; I came here three mornings' running after I was discharged, and asked him for employment, and he said, "No, I want no men," and at that very time he had two men on, and he says, "What's more, when I want them I will get the best men procurable"; he has got men here that have made some botches of jobs on new work—I can prove that; I do not want any privileges—all I want, as a taxpayer and citizen (and a good one), is a day's work when the Government of this Colony have a day's work to give, and I am quite qualified to do it; I am no drunkard.

White then asked how he could find out the decision of the Committee regarding this matter, and was told he might see the Chairman after the Inquiry was over.

(Witness then retired.)

Mr. Pratt, Dock Superintendent, recalled, stated (after being informed by the Chairman of the complaints against him by White and Murphy, and asked if he cared to say anything): I have been about twenty-five years among these men, and have grown up with them, and I consider I know the men that will best suit the Department; I was away on a day's leave, and this man Murphy was taken on by Castles, who is my leading hand; he took the first man that came along; Murphy had worked very little here for me; I took White on, and I gave him to understand when he was coming on that it was not a job for life; he replied that he knew that; the majority of the men who come here think that they have no right to be put off at all—they want to rule me; I have got a certain position here, and in the interests of the Department I must uphold it—I must be master and not the men; I took on the men that came along; in our trade all workmen are supposed to be equal by the Society, but they are not by any means; for a caulking job they are all well enough, and they get through it if I stand over them; Murphy is one of those men that I require to be standing over the whole of the time, and I cannot do it; as for the statement that he is an old man, he is not so old as he looks; when you hear a man say that he "can reach as far with the mop as any of them," you can take it for granted he is not up to much; you do not know the meaning of that; it means, in caulking, that a man who is not working faithfully need not caulk part of the seam, but when the seam is paid with pitch his work will look as good as if the whole were properly caulked; I have heard that remark passed by men before to-day; I will admit I took men on after White and Murphy, far better men in every respect, and I have kept the best men in the interests of the Department.

Mr. Cruickshank mentioned that if it was a private firm, and men were put off before others who came after them there would be a strike.

Mr. Pratt said: Yes, there would have been a strike, but because it is a Government shop the Union rules do not hold good; the Government shops do not recognise the Society rules in any way; I was a good many years at Mort's Dock under Mr. Clay, taking men on and putting them off, and I always managed to keep the best men on; there are always any amount there to pick from.

Mr. Cruickshank mentioned that it was said that Mr. Pratt treated the men like dogs.

Witness: That is not true, but I will give you an instance of the way they treat me; the day after Murphy was put off he came up to me when I was busy preparing to undock the "Royal Arthur" and said, "Is there any rules in this place?" I said, "What do you mean?" "Well," he said, "Is there any rules in this Establishment?" I said, "If you go down to the shed you will find the rules posted up there"; he turned round to White and pulled out a piece of paper and said, "You hear that? He refuses to give me any information," as loud as that (*loudly*); I turned round to one of my labourers and said, "You hear this, Kinneally? I am referring this man to Mr. Broad"; they told me they were going to write a report out against me and put it on paper, but I believe they went to the Engineer-in-Chief personally; Mr. Broad happened to mention that they had seen the Chief, and I said, "I would like to speak to Mr. Darley when he comes up here," and I did so, and he was quite satisfied with what I told him; I explained it exactly as I have done to you; a day or two afterwards, before 6 o'clock Murphy, came here by the Leichhardt boat—not by the men's ferry—so as to get the first chance at me, so that I could not say I did not want men; he met me at the foot of the ladder as I was coming down, and he said, "I understand you want more men"; and I said, "You understand more than I do"; he said, "Do you know Mr. Darley said I was to be employed here whether there was any work or not?" I said, "I am not aware of it," and he said, "You will soon find out"; that was about a fortnight ago, and I have heard no more about it; there was a letter in from a Member of Parliament complaining about the way these two men were treated; it did not mention names, but simply said two shipwrights; afterwards the names were given; when Murphy came to me I did not want men; if I were an employer to-morrow I would not employ either of these men; I would like to explain about that man Scott; I have written a report about that; there are a certain number of men that are pretty well permanently employed here; when we get to a low ebb I have

have to turn men off; I keep on those whom I consider the oldest hands; Scott was one that was put off; I had three or four ships to dock for Mort's, one after another; I sent a man expressly to Scott's house and to three other men's houses, so as to distribute the work as much as possible; I sent a man over in Government time to tell him to come over in the afternoon (Saturday) to dock this ship; they came over and docked the ship, and it only took a certain number of hours; it did not take a day, but they wanted to be paid for a day; they were paid for the time they were actually employed, and were told they could have another day next day, as another ship was coming in; Scott went straight over to Mr. Broad and complained about the way he was treated, and Mr. Broad said he would have to see me in reference to it; Scott went home and wrote out about three or four foolscap sheets about me and about the supervision here; that came on for report; when Mr. Broad told me Scott was so dissatisfied I did not offer him the second docking which I had intended; I have reported the circumstances just the same as I have explained them to you; this man has had a chance to come here and explain himself before this Committee, but he preferred not to do so; I told the shipwrights if they had a grievance they should come here and state it before the Board; I called them to my office, and so that I would have a note of what I would say I wrote on a piece of paper what I told them; I said, "Any of you shipwrights who have a grievance will be required to state it before the Board if called upon"; there is another man Scott, who came here after Murphy, and Murphy cannot hold a candle to him; he is a man who worked for Ford building launches, and I have a launch to build; when I give orders for steam to be got up I give them to the fireman, because he lives on the Island—not out of disrespect to the engineer; very often the engineer is not on the Island when I need steam; I think Taaff was getting 12s. a day, and it was reduced to 10s.; I have better men getting less money; I think the shipwrights get double time for overtime in other shops, according to the Society's rules; they want to work the rules of the Society in this place, and as soon as they do that the Foreman's power will be limited, and the Department will suffer in consequence; I have taken the men off the "Powerful"; I am waiting for the crooks; O'Neill and Goldsmith have the order, I think; we are waiting for the keel and decking and hull planking for the Marine Board launch.

(Witness retired.)

At 5 p.m. the Committee adjourned until 2 p.m. on Friday, the 2nd proximo.

FRIDAY, 2 DECEMBER, 1898.

The Committee met at 2 p.m. in the Library of the Public Works Department.

PRESENT:

MR. R. POLLOCK, Chairman.  
MR. A. B. PORTUS, | MR. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

Mr. Cecil W. Darley, Engineer-in-Chief for Public Works, stated, in reply to questions:—I am a Civil Engineer; Cockatoo Island and the whole of the Docking Establishment are under my direction; the Superintendent reports to me; I visit the Island once a week at least, but sometimes more frequently—just as necessity arises; at other times I delegate some of my assistants to go.

*Stores.*—Mr. Broad has been complaining very much to me about the delays experienced in the present system of getting stores; formerly all orders for stores were invariably in the contractors' hands within twenty-four hours of the time they were written at the Dock—in fact, from the time the Superintendent named his requirement, anything urgent could be sent on in an hour; now I do not think they ever reach the Contractor's hands under three days; a complete change was made in passing all the stores through the Accountant; it was done while I was away from the Department (as President of the Metropolitan Board of Water Supply and Sewerage); they have reorganised and rearranged to an extent which has made everything most laborious and burdensome, but it is quite inevitable that a change must be brought about; the present system has proved itself an utter failure in my opinion, not only in connection with the Dock, but with all my officers along the coast; they are complaining of the very same trouble—they cannot get their stores, and the Accountant gets, I know, rather annoyed if they communicate and report to me that they are not getting the stores; I am in this position, that I give an order for a work to be carried out, and I believe that the work is going on, and I find out afterwards there are long delays. Several cases came under my notice lately, and I asked why, and they said "We have not got the material yet"; if they have a complaint to make they must make it through the Accountant; that must be altered, and I must know when delays are taking place; I have been rather slow to move in the past because I wanted to give the new system every chance; the same thing applies to the Dock; Mr. Broad is constantly asked how he is getting on with this or that, and he says he is waiting for timber, waiting for one thing and waiting for another; under the old system the Dockmaster sent down a requisition to me, my Chief Clerk brought them to me in the morning; I looked through them and made any alteration I thought necessary and initialled it; it then went on to an officer who made out the order and the Chief Clerk signed it, and at 10 o'clock in the morning it was given to the Inspector and sent out; I have been told that now there are further changes in contemplation, on account of the new Stores Board, which I am afraid will lead to still further delay if the contemplated action is taken; I am told that our officers who follow up the orders are to be transferred to the Stores Board, so I do not know how we are going to get the stock; of course it would facilitate matters if the Superintendent could order straight from the Dock, but I think the Department ought to exercise some control over the orders; if he ordered direct on the Contractor I would not know what he was ordering; suppose he ordered a ton of bolts when I thought a hundred-weight would be enough, it would be too late for me to check it when the Contractor had got the order; for years I have been trying to impress upon the officer up there that the store is simply to keep a stock to supply immediate requirements, not to carry a big stock for two or three months' supply; I hold that the bulk store should be in the Contractor's yard, and that is where my supervision of the requisitions is always exercised; I am constantly objecting to large orders—perhaps a thousand gallons of oil, or a great quantity of bolts, or a large quantity of iron; I cut them down.

[The Chairman remarked that as the contract was only of six months' duration the Department could not expect the Contractor to keep a large stock; it was not worth his while.]

Witness

Witness continuing: That is only a temporary arrangement, I think; I think it was to try to bring the stores in with the new financial year; I am decidedly of opinion that twelve months should be the minimum; there is a tendency to carry a big stock, and I object to that; in the old days, we had no trouble with the stores; if there was an occasional delay it came under our notice at once; I issued a cancelling order, and the goods were obtained elsewhere at the contractor's risk within a couple of days.

*Pumping Engines and Boilers.*—The pumping plant serves both docks; it is so arranged that when one pump is working the other cannot be repaired, but there are long spaces of time, when the ships are in dock and when they are not, during which the pumps can be repaired; there is ample time; the pumps were never a good job; they were not satisfactory at first; we have ample time for maintenance, because they are only working for a few hours a week; all the time the ship is in dock, repairs can be attended to; there is nothing I can see likely to go wrong very seriously all at once; the valves require attention.

[The Chairman said the pump was so made that new valve seats could not be put in under a few days; the evidence was so startling that the Committee went down and had a look at it for themselves; new seats for the valves could not be put in without taking off the top of the pump; from their examination the Committee thought the pumps were in a bad state.]

Witness continuing: Sometimes a ship is in dock two or three weeks, and there is time then; if one pump is out of order, we can disconnect and pump with one pump; we have done that recently; there is no necessity to dismantle both pumps at one time; of course I would like to see better machinery there, but it would be a very costly thing, and as long as we can keep life in these we should do so; I have given attention to that and thought what we could do if it did break down, and of course we could put one of our suction dredges in to pump the dock out.

*Slip.*—I think it would be an advantage if there were a small slip on the Island, so as to relieve the Docks of the Dredge plant; of course the original idea was to have a small dock in between the two, with gates at both ends, so that we could get out at either end; I have given up that idea because if we put a dock there now it would stop us increasing the length of the big dock, and we may have 700 ft. vessels coming here; a small slip there to take up all our lighter plant would be very convenient.

*Supervision.*—I think the Foreman Engineer needs some assistant foremen; of course I should explain that the work has grown very rapidly of late, and perhaps we have not kept up with it, although quite lately, the charge has been levelled against us that we have increased the supervision very much, and the supervision now is more costly than ever it was, and I think that is the cause this Board has been appointed; in my opinion we want more supervision; but seeing the Public Service Board were coming in I stopped taking action until they came; every suggestion I made was postponed until they could go into the matter, so I let it wait, but it is only practically the last twelve months that a great quantity of work has been rushed on us; the Treasurer has ordered that all the outside boats belonging to the Marine Board, the Health Board, the Stock Board, and the Military Department, should all be sent up there, and a great quantity of work has come to us from the Railway Department; we have been making all the points and crossings for the George Street Tramway; I think the work will still further increase, and in that case, to get proper supervision of the men, we must get more foremen; I believe it will pay for itself; Gibson is not able to keep up the supervision of the inside and outside men too; he has too much to do.

*Improvements in the Works.*—The plan for the proposed improvement of the work is not finally decided on; generally, I may say, the growth has been so rapid lately that I have talked it over with Mr. Broad, and we have worked up a scheme, which has not received my final approval; I quite recognise the necessity of it.

*Machinery.*—During the past year we have increased the appliances very much; we are constantly getting out new machines, but still the growth has been so rapid that our machines are behind our requirements; there has been some delay in connection with some machines which have been ordered; I do not know the cause.

*Votes.*—I do not think there would be much difficulty in increasing the Store Vote or the Floating Dock Vote; I cannot say that we have been refused; the Minister has not limited us in any way; I have tried to keep down the expenditure as much as possible, but I have generally been granted whatever votes I asked for.

*Mechanical Draftsman.*—I think a mechanical draftsman should be appointed to make the sketches for the small jobs and to make detail sketches for the foundry.

*Improvements.*—I have got a good many improvements planned out; I want to get rid of the coal heaps and put them near the Ferry Wharf, and I want a system of tramways about the Island to run through the shops, a 3 ft. 6 in. gauge, to connect the cranes and the docks with the workshops; I have got it laid down on the plan, and I have got money on this year's Estimates for carrying it out.

*Eating-room for the Men.*—It would be a suitable arrangement to put up a room for the men to have their meals in; it is one thing to put up the shed; and another to get the men to use it; we built a messroom at Garden Island and I never saw a man in it yet; the circumstances are not quite the same, however; I think such accommodation should be found for the men; I have never heard it suggested, nor ever had any application for it, so it has not been refused; if such a proposal were made, I would recommend it to the Minister; the question is,—how far should we go? Should we put a man in charge of it and boil water for them?

*Payment of Wages of Men Working on Dredges.*—There is no reason why men should have to wait some days for their pay when they have been working on dredges away from the Dock; delay of that kind has never been brought under my notice; the wages can be paid from the Advance Account; I would like to inquire into a case of that sort, because there is no reason for it all; the man ought to get a ticket from whoever he is working for to say that he has worked for a certain time; it should be put on the Cockatoo pay-sheets, and the man should receive his money; in the case of men up country, a telegram should be sent from the place where the work is done to Mr. Broad, and he could pay on the telegram; if it was found out afterwards that he had made broken time it could be taken off the next pay-sheet; there would be no difficulty about that at all.

*Board Money.*—It is under the Public Service Regulations that the board money stops at the end of three months ; it was originally twenty-one days, and I had a great deal of trouble with it ; the first case that occurred under that Regulation was very important ; I sent a man to do some very important work in reconstructing the crane on Solitary Island, and, of course, twenty-one days went in no time ; I pointed out to the Board that these men were under unusual expense in a place like that, and the Board, on the strength of that, extended it to three months, but I think that three months is subject to revision in any special case ; what gave rise to the Regulation was that men went away to what was almost permanent work, and they expected their expenses, but we do not pay them ; if there is a long job we say, "There is a place for you ; take that work" ; the Public Service Board have made a number of Regulations, but they cannot be too hard and fast, and, so far as I have seen, the Board have always been willing to listen to and deal with the special cases when brought under their notice.

*Doctors' Certificates.*—When men are absent we must have some check, because a man might go on the spree and come back unfit for work ; of course, if we found a man away frequently we would sack him ; we have all kinds of men up there, and we must take some precaution ; if any suggestion was made to me by which the Superintendent could satisfy himself that all was right, without necessitating men getting medical certificates, I would consider it ; some responsible man known to the Superintendent should certify ; the present rule is not a hard-and-fast one, and there is no reason why it should not be modified.

[Mr. Portus mentioned that in the Dredge Service Mr. Darley accepted the certificate of the Dredge-master endorsed by himself (Mr. Portus) for three days.]

*Stores.*—In the old days the stores were dealt with by the Engineer-in-Chief's branch entirely ; now they are all put under the control of the Accountant of the Public Works Department, under the Under-Secretary ; Mr. Steel is not an officer of the Engineering Department ; he is not my officer ; I have access to him ; I was told that these documents pass through twenty operations from the time when Mr. Broad says "I want such and such a thing" until it reaches the Contractor ; I have traced it through fourteen operations myself ; if Mr. Broad wants a coil of rope he gets a requisition prepared, it is sent down to my clerk, he sends it to Mr. Carleton, and he sends it to the Accountant, and the Accountant sends it to the Sub-Accountant to know if there are funds to pay for it ; well, such a performance I have not seen before, and I do not see the necessity for it ; the Sub-Accountant sends it back to a clerk to make out the order, and then it goes back to the Accountant again and to Mr. Oakley, and he marks it off ; altogether I think it passes through fourteen different operations which take about three days ; in the old days, when Mr. Broad wanted anything urgently he would send down a special messenger and we would send down and get it in a quarter of an hour, but now I do not think we could get it under two days no matter how urgently we wanted it, unless we took the bull by the horns and went and got it from the Contractor without an order ; it seems to me that there are too many branches under the Accountant's control and we cannot get on with our work ; there is too much referring—too much red tape ; if a private firm attempted to work with our present system they could not carry on ; with the old system there was no complaint, it worked uncommonly well ; it would be contrary to the practice of the Department for Mr. Broad to be allowed to order direct ; every order is issued from the Head Office and not from a sub. ; if you did that with the Manager at Cockatoo you would have to do it with the managers of other works—the District Engineers, who are in charge of works just as large ; with private works the Head Office would be at the Works and it would still go through the Head Office and pass through their books ; the Manager at Cockatoo has a very small staff—in fact they have kept drawing everybody away from there ; I have had great difficulty in getting what assistance there is there now ; I know Mr. Broad ought to have even more assistance, but they want to keep all the accounts and the store books down here ; I pointed out that could not be done ; personally I would not mind Mr. Broad ordering the stores direct ; he manages the works uncommonly well and is a most desirable officer, but we might get a man in whom I would not have confidence ; in the old days I was constantly putting my pen through big orders ; I have scores of times written out on paper, "The dock is not the place to carry stock" ; things were not wanted, but simply because a man found a nice line in town he made a requisition for it where there was no immediate requirement for it ; that frequently happened in the old days, but it has not happened lately because Mr. Broad knows my wishes and tried to carry them out ; the daily requisitions in nine cases out of ten are distinctly for stock ; what you (the Committee) propose is that he should have power to order urgent things ; the bulk of the requisitions are for replenishing stock ; you propose that Mr. Broad should have power to order the special items direct ; all urgent things I believe the Manager ought to order ; I would give him power to order anything he urgently needed from the importers ; as a matter of fact it is occasionally done now and he follows it up with a requisition, but that is irregular ; there would be a risk, if that practice became too general, of the orders not coming through ; the orders and the butts are the one check of the whole system.

[Chairman : We know sufficient about mechanical work to make the statement that it cannot be done properly unless the Manager of a place like that has the power of getting things.]

Witness, continuing : I think Mr. Broad might have the power, and we might recognise it officially ; the difficulty is that a little laxity in not sending down the requisitions will mean that the order will not go to the Contractor, and without the order he cannot get his money ; the whole system of departmental book-keeping might be upset ; that is the most important check in the system ; as long as it can be kept limited to really urgent things, and then have some system by which to make sure that it is followed up by a requisition and marked "Obtained," I would be quite willing to agree.

[Mr. Cruickshank said : From an official point of view the Manager at Cockatoo can do nothing without authority ; he has no power at all.]

Witness : That is the whole system ; I can do nothing without authority ; I am even more tied than they are ; if I send Mr. Broad up authority to do a certain thing he can do it ; if I send a recommendation up to the Minister to build a boat, and he approves of it, you would think that would be sufficient for me to order the wood to build it with ; no, I must send up a recommendation to buy the wood to build the boat, and so on with everything else ; but I am quite prepared to recommend that Mr. Broad should have a free hand so long as a proper system is instituted to make sure that the requisitions go on.

*Boilers*

*Boilers and Pumping Machinery.*—The boilers want resetting; they were not condemned; we could not set them without stopping the Dock; I have always thought we could get work out of them still, but the settings were bad.

Mr. Cruickshank: There seemed to be no periodical examination of the boilers, and nobody seemed to have the duty of examining them; they have never been pulled to pieces until we were there and did it.

Witness: Of course it could not be done until we got the other boilers; I should think the foreman boilermaker would examine them.

Mr. Cruickshank: The foreman boilermaker is all right, but there ought to be somebody to check him.

Witness: The engines can be maintained while the dock is free; I think we can carry on with them some time longer; I have been down the pumps lately.

Mr. Cruickshank: They are in a very bad state, and the internal valve faces cannot be got out without pulling the whole thing to pieces, and you cannot do that in a day or a week, and there are 200 valves; the majority of the valve faces are not there; they are gone; that being the case there is no doubt the thing wants a thorough overhaul at once; not only that, you know those girders that were put underneath? they are faulty, especially on one engine, and we found out the fault and suggested what should be done; we went all over the machinery, and it wants a thorough overhaul as soon as possible, and that could be done, as Mr. Portus suggests, by putting in a sand-pump dredge to pump out the dock; I think it would take about three weeks to do the whole of the valve faces.

Witness: While ships are in dock it could be done, one pump at a time.

Mr. Cruickshank: Both these pumps are very much out of line; I believed if it were lined off it could be made very much better.

Witness: I think it is the down thrust.

Mr. Cruickshank: The foreman said he thought it was five-sixteenths of an inch out of centre; of course it is a big job to tackle, but I think if it were tackled and if new valves were put in it would last for some years longer.

Witness: I think there would be no difficulty in doing one pump while the other was being used; my intention was to get one thoroughly overhauled and work the other; it has not been reported to me that these pumps are in such a bad state; the discharge valves can easily be got at, I have seen them in the shop several times; but the suction valves have not been reported to me at all.

Mr. Cruickshank: They ought to have been; that is why I say it ought to be examined periodically once in twelve months and a report furnished to you; if that had been done you would have known; we did not know until we went down below, and we would have gone down below only for this evidence; the suction valves are inside the chamber, and they cannot be got out without taking the top off.

*Lifting Appliances—Big Dock.*—The shore cranes at the big Dock will only lift 4 tons; with the present appliances we have we could not lift the rudder of the "Himalaya" in the dock; we have a 20-ton fixed crane on the wharf by the entrance to the old dock; I had plans prepared for floating shears which we could use for lifting heavy weights at the dock or anywhere in the harbour; I had a sum placed on the Estimates two or three times, but it was struck off in Cabinet; with this we could lift anything over the caisson and could run a tramway at the bottom of the dock in the centre on which to bring the weights to the caisson to be lifted; I want to get something like a 70 or 80-ton floating crane or shearlegs; it would be far more useful in the harbour to have a floating shearlegs than to have a fixed crane, and all the authorities at Home agree with me; they are giving up big fixed cranes now except where there is plenty of work for them; if we had a big fixed crane there it would rust out before it would work out.

*Who Decides what Work is to be done.*—If a dredge is sent to Cockatoo the Superintendent in charge of the dredges decides what is to be done; it is all set forth beforehand and sent to me; the Master Engineer on the dredge makes out a list of the repairs required on the dredge, and Mr. Portus looks over it and initials it and sends it up to me for approval, and then it is sent to the Dock.

Mr. Portus: The proof that the system works well is that it has gone on for twenty-five years and there has been no accident.

Mr. Cruickshank: It seems to me that all is left to the foremen; there is no check on them.

Witness: I think it should be left to the Chief Engineer of the steamer.

Mr. Cruickshank: If we took the certificate of the Chief Engineer there would be no necessity for the Board of Trade or the Marine Board.

Mr. Portus: I have a return in the office of every boat in the service. You accept the certificates of these engineers for all work they examine for you up there.

Mr. Cruickshank: They make an affidavit.

Mr. Portus: We can get them to make an affidavit, but certainly there has been no accident. The appliances are periodically overhauled whenever it suits the Department to have them overhauled.

Mr. Cruickshank: I am of opinion that whoever is responsible for the work should examine it personally, and so much should not be left to the foremen.

Witness: We have not got officers enough.

*Apprentices.*—I went fully into the matter of apprentices with Mr. Broad some time ago, and the Board have postponed the whole thing until they can look into it; what Mr. Broad has outlined is what I would like to see carried out; I do not approve of boys intended for tradesmen being required to pass a high examination in algebra and mathematics and so on before they can be apprenticed; that is for a better class of young fellows who are to go through the shops and come into the office and become engineers.

*Engineer, Pumping Station.*—I do not think it necessary for the pumping engines and boilers to be overlooked by a certificated engineer the same as on the dredges; the Superintendent has got a capable engineer in Mr. Gibson, and a capable boilermaker in Mr. Fletcher, and those two men's joint reports should

should be sufficient; if all these defects have been suddenly announced they have certainly never been brought under my notice, and there is certainly some blame attaching to the persons who have kept all this to themselves until now; I know they were not a good job from the first, but I thought good care and proper maintenance would keep them going for some years to come; when they were first put down, and started I thought they were going to leave the engine-room, but those beams tied it down and acted as struts at the same time; it would require a little consideration as to whether a spare shaft is necessary on account of the expense; there is nothing to show that the crank shaft is weak at all.

*Machinery.*—We want a lot more tools and planing machines; we are weak in planing machines simply on account of this work we have got for the tramways; the Department has not been charging the Tramway Branch with the time the planing machines are on their work; I have a report before me now in order to make up a charge against them.

*Accounts.*—Mr. Cruickshank: The accounts are made out in such a way that nobody can understand them and nobody would sign them.

Witness: I know that has been a sore point for a long time; complaints have reached me, indirectly, from you, and from other Departments that we have worked for, that they get their vouchers piecemeal; as long as twenty-five years ago I complained about the same thing myself when I was in charge of works in the Newcastle district; I complained that I never could find out what any particular thing cost; from that day to this it has been a sore point; I made a recommendation last year that we should have a special vote to charge all these jobs to, so as to enable us to get the money to pay them until the whole of the accounts could be brought together, and then one account could be sent; there is a difficulty in the way of rendering the accounts monthly on account of the store issues being so much behind; if we had a bigger staff we could do it; we got a £5,000 Trust Account to charge everything to instead of sending vouchers on to-day and to-morrow and the next day, and then when everything was complete we proposed to send in one account; we commenced on that, and then the Auditor-General stopped it and closed it; I do not profess to know much about accounts, but I know I have tried to get this straight; there is a difficulty in making out the accounts in detail unless we get a much larger staff up there; the store issues are always two or three months behind in balancing; we had a prime cost clerk at one time, but he was removed and all the accounts placed under Mr. Steel, the Accountant, the same as putting all the stores under the Accountant; I have nothing to say in favour of the present system of rendering the accounts or obtaining stores; some radical change is wanted; it seems to me it would be a very simple thing to have a prime cost clerk up there to make out the vouchers from the pay-sheets and from the store account, and make up the account the day the job leaves the works.

(Witness then retired.)

Mr. Alexander Milne and Mr. William Milne, of Messrs. Milne Brothers, 166, Sussex-street, contractors, were called:—

Mr. Alex. Milne stated, in reply to questions:—We are contractors for cocks and valves and fittings, No. 2 engineer's stores; we have been doing various contracts for the Government for the last fifteen years.

*Duration of Contract.*—The contract is for six months, from July to December; I do not think it is long enough; I would suggest that it should be from three to five years, the same as they have in some of the other Departments; the Water and Sewerage Board have a five years' contract, and the Public Works enter in to a five years' contract for labour and material for small valves and hydrants for country towns water supplies; those are only small stores and the Water and Sewerage contract is for small stores.

*Delivery Receipts.*—When goods are delivered at Cockatoo Island nobody will sign for them until they are inspected; we work for all the other Departments and they all sign the receipts as soon as the goods are delivered; I think it is only a fair thing to expect a receipt when we deliver fittings; if they are bad send them back; what we want is merely a receipt to say that the goods have been supplied—good, bad, or indifferent; perhaps two or three days we get the tickets back altered; we cannot tell whether our man has delivered the fittings or not; that causes a lot of loss to us; we have sent them the original packets from England, such as oil feeders, &c., six in a packet, and the tickets have come back with one knocked off, "a dummy found"; well, we never come across dummies when we open a packet.

*Goods Supplied without Orders.*—Very often we supply fittings without orders in order to avoid delay, and often at great inconvenience to ourselves.

*Stock.*—I would suggest that in future the Island should be allowed to lay in a stock; they know better than we can anticipate their own requirements; it is hardly fair to expect a contractor to know what is likely to be wanted in the Dredge Department some months ahead; you will never get rid of the delay unless you keep a stock; you know the size of every valve in the dredges, and what is the harm of keeping a stock of each of them?

[Mr. Portus: There are forty-five dredges, and there are different patterns of valves and cocks on each of them.]

The cocks and valves in our contract can be fitted into any dredge, notwithstanding the fact that they vary as you say; in the Railway Department they can give you an estimate of the probable quantity for twelve months; you cannot go wrong in making up the quantity, because it is generally under what they require, and the goods are always ready.

Mr. John Carruthers, Chief Engineer, and Master of Sydney Dredges, stated in reply to questions:—I have been twenty-five years in the Service; I have charge of all the dredging plant in Sydney District; I know the manner in which the work is carried out at Fitzroy Dock.

*Supervision.*—I think there needs to be more supervision over the men working there; there are two foremen engineers in the place; I do not know whether one of them is considered the outside foreman or not, but one of them goes round occasionally to see what the men are doing; there should be a leading hand in charge of all jobs where two or three men are employed.

Overtime.

*Overtime.*—A good deal of overtime is worked there, chiefly owing to the want of lathes ; another cause is that vessels have to be hurried out of dock to make room for others coming in ; last night and to-day they were working at the new dredge "Antleon," because the dock is wanted for the men-o'-war ; that is a very frequent occurrence.

*Slip.*—I think it would be advisable to have a slip for small vessels ; it is very requisite at Cockatoo ; the most convenient place for it would be near the carpenter's shop, to the southward of the dock ; of course I cannot tell what sort of a bottom it has got, but it looks to me to be a suitable place.

*Payment of Wages when Working on Dredges.*—As soon as a man has finished his work the Dredge-master makes out a pay-sheet for him and sends it in to the office here ; then he has finished with it ; I do not know when the man gets the money, but if he does not get it he very soon lets me know ; I am frequently up at the Dock.

*Walking Time.*—The men from the Dock working on board the dredges down the harbour start bell to bell ; I do not allow them any walking time ; the dredge is working within a reasonable distance of the city ; when they are lying out in the stream we make provision for their getting on board.

*Cook.*—If men from the Docks working on board the dredges want anything cooked, the cook always does it ; I have never had a complaint about it ; all the dredges have cooks ; the Department provides the cooks and galleys and the men find the food.

(Witness retired.)

Mr. T. F. Rossbach, Clerk, Dredge Service, stated, in reply to questions :—I am Mr. Portus' clerk.

*Payment of Wages.*—Men from Cockatoo Island when working on dredges in the Harbour are as a rule paid their wages directly the work is done ; I know one case lately where the driver of a dredge at Cook's River forgot to send the time in ; but there is no delay as far as the Dredge Service is concerned that I know of ; if a man knocked off work on a dredge in the Harbour on Thursday night he would very likely get his pay on Saturday ; I would send the money to Cockatoo ; I know what it was with the Dredge Service some time ago, and that is how I came to alter the system so far as we were concerned ; men were sent away to the country districts and their pay-sheets came through the office, and had to go right through the whole course of the Accounts Branch before any money was banked to the Dredge-master's account to pay the men ; I noticed this delay—sometimes as much as six weeks' money owing—and I started the system of drawing cheques on Mr. Portus' account ; the men got the cheques by return post ; the old system is still followed in other Branches of the Department ; I think Trial Bay was one of the last places where there was a complaint ; the difficulty is that the officers in the country do not know the time the pay-sheets should start, as the men are paid for the time they are travelling, and they do not know the time the men arrive at the Dock after their job is completed ; I think the Dock should make out the pay-sheets for all the men ; when a man goes away from the Dock he should be given a card with his name, position, and rate of pay stated on it, and it should also state the time he is paid up to at Cockatoo, and the officer he is going to would fill in day by day the time he was working ; if a man returned in time for the Dock pay day he could bring this with him, and if he was not coming back in time for that the officer could telegraph the time to the Dock, and by that means the Dock would have a complete record of his time and could pay on it ; in the Dredge Service we have got over the difficulty because Mr. Portus has an advance account at the bank ; he takes the responsibility of the correctness of the pay-sheets he draws cheques for ; I am not like a country officer ; I can ring up the Dock and find out whether the time shown on the sheet fits in with the Dock pay-sheets, and adjust at once any little loss of time in travelling ; a country officer cannot do that ; I think all the pay-sheets should be made up at the Dock, who should receive telegrams for the absent men's time.

(Witness retired.)

The Committee then decided that their next meeting should be held in Mr. Cruickshank's office after the transcription of the notes of evidence was completed.

The meeting was then adjourned.

FRIDAY, 9 DECEMBER, 1898.

The Committee met at 2 p.m. at the office of Mr. Cruickshank, Marine Board Engineer Surveyor.

PRESENT :—

Mr. R. POLLOCK, Chairman.

Mr. A. B. PORTUS,

Mr. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Secretary reported having written to Mr. Jas. Hoey, ex-Managing Superintendent of the Docking Establishment, inviting him to attend to give evidence.

Mr. Hoey not being in attendance the Committee proceeded to consider and discuss the evidence, laying down the lines of their report.

During the consideration of the evidence Mr. Cruickshank received a telegram from Mr. Hoey saying he had just received the Secretary's letter, but too late to attend the meeting, and could attend any day next week. The Secretary was directed to inform him that Committee would hear his evidence on Monday, the 12th instant, at 2 p.m.

The Committee then further considered the evidence, and as a result of their deliberations the Secretary drew up a draft report.

At 4.30 p.m. the Committee adjourned until 2 p.m. on Monday, the 12th instant.

Minute

## Minute Paper.

The Engineer-in-Chief for Harbours and Rivers to the Under-Secretary for Public Works.

Department of Public Works, Harbours and Rivers Branch, Sydney, 15th September, 1898.

THE need of appliances for lifting heavy weights, such as locomotives, boilers, machines, etc., from vessels has been a long-felt want in the Port of Sydney, and it is well known that shipowners in British ports demand a high rate of freight on all heavy goods owing to the absence of proper appliances in this harbour for discharging the goods from vessels on arrival. Formerly when the Government purchased locomotives f.o.b. London it was the usual practice to pay about £50 for landing each locomotive, this cost being incurred rigging up heavy lifting gear.

Latterly the manufacturers have had to land and complete the engines here, so the cost of landing is not directly felt, but the contractors must still pay somewhere about the same price, and proportionately increase their contract sum.

In Melbourne a fixed 50-ton crane has been provided and has been frequently called into use.

For general purposes a fixed crane is not so convenient or useful as a floating crane. The latter has the advantage, inasmuch as it can be taken alongside the vessel requiring its services, the load taken out and landed when required without the vessel having to leave the discharging berth.

Heavy screw propellers often have to be taken from vessels in the dock and sent to a workshop. The crane could go to the end of the dock, lift out the propeller, take it away, and land it at the works.

I therefore recommend that a sum be placed on the next Estimates sufficient to procure a crane capable of lifting 40 tons with a clear reach from side of pontoon of 30 ft. to centre of lift.

I estimate the cost of such a crane at £8,000 complete.

C. W. DARLEY.

Copy of Minute from Captain Jackson to Under Secretary for Finance and Trade.

SOME kind of appliance for lifting heavy weights is a want long felt by the shipping community of the port. Nothing could be better to meet the requirements than a floating crane as suggested by the Engineer-in-Chief for Harbours and Rivers. I would, however, suggest a 50-ton crane.

Circular Quay, 21st September, 1891.

J. J.

MONDAY, 12 DECEMBER, 1898.

The Committee met at Mr. Cruickshank's office at 2 p.m.

PRESENT :—

MR. R. POLLOCK, Chairman.  
MR. A. B. PORTUS, | MR. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Secretary reported the receipt of a letter from Mr. McFarlane, representing Messrs. Goodlet and Smith. (See page 88.)

Mr. James Hoey, ex-Managing Superintendent, Fitzroy Dock, stated, in reply to questions :—I was Superintendent of the Cockatoo Docks for about twenty years, but it was in two different capacities ; it is five years since I left there.

Chairman : We are anxious to obtain any information we can about the working of the Dock ; if you have anything to tell us, we will be glad to hear it.

Mr. Hoey : I will begin with the man that was there the longest, Mr. Gibson ; in the first place, I may say, that all the foremen were my own appointments ; Gibson worked into his job as foreman ; we began in a small way and worked the thing up gradually ; I found Gibson a first-class mechanic, with a natural ability that way, although he knew nothing of the technicalities of the trade ; he was a man of resource and most energetic ; he was always perfectly loyal to me and recognised my position in every way ; I have nothing whatever to say to depreciate him, and if I had to go over the work again, I would most willingly try to get him the same position, after nearly twenty years' experience of him.

Mr. Fletcher.—Fletcher was a man that I recommended for appointment, on the recommendation of Mr. George Davidson, who was at that time the Superintending Engineer of the A.S.N. Co. ; I was not aware then that he was utterly illiterate and could not sign his name ; he has no technical knowledge connected with boiler-making ; he could neither read nor write up till the time I left, except to sign his name.

Mr. Cruickshank : But both these men are good mechanics ?

Mr. Hoey : Yes ; Fletcher is a good workman ; he would put the utmost energy into work that was likely to bring him under the notice of those higher than himself, but with ordinary repair work, there was no man who gave me more trouble ; he was careless and indifferent about dredge repairs and all minor work ; there was another difficulty I had to contend with ; he is a professional boat-sailer, and when hands had to be discharged, through slackness of work, he would keep on the crews of his boats and recommend the discharge of others who had been there a much longer time ; I never left the discharge of the men entirely to the foreman ; a list of the men it was proposed to discharge had to be brought to me, and I happened to have a clerk named Morling who knew all about it ; I submitted the list to him and he told me, and I put my pencil through the crew and left the other men on ; that kind of thing has gone on to a tremendous extent since I left, and the place is filled with his own relatives and the relatives of his sons ; with such a system there can be no discipline ; that can be easily ascertained.

Mr. Cruickshank : It is a large order to say the place is filled.

Mr. Hoey : Well, largely I mean ; I do not mean to say the whole lot are relatives or members of his boat crews ; then there is another thing : at the time that I left, and some time before, the relations between Gibson and Fletcher were very strained, and you will find that after Mr. Broad came he granted Fletcher a lathe and an engineers' drilling machine, and he has got an engineer, and that engineer has often got a helper.

Chairman : What is the engineer for ?

Mr. Hoey : That is for you to find out ; I could never find out, unless it was in order that he could do any little thing he wanted without going to Gibson ; the whole of the work that Gibson had to do for Fletcher in my time would not amount to half a day in a week ; that has all been done since I left.

Chairman :

Chairman : That is only hearsay on your part ?

Mr. Cruickshank : That is not evidence ; you are not certain.

Mr. Hoey : Do you not want to know these things ? Are you not there to find out what is taking place ? The Public Service Act says that it (*en inquiry*) is not to be on simply judicial lines.

Mr. Cruickshank : We do not want to be told by you what evidence we are to take ; I object to your assuming that tone.

Chairman : Of course you cannot be certain of anything that has happened since you left the Island ?

Mr. Hoey : No ; but still you want to know if anything is going wrong on the Island, and nobody else will tell you unless I tell you ; they are afraid to tell you.

Chairman : We only want to know what you know of your own knowledge as facts ?

Mr. Hoey : I will say of my own knowledge, and as fact, that no such thing took place in my time, as that the foreman boilermaker had an engineer under his own supervision ; you can find out if there is now ; it is a matter of public notoriety, as well known as it can be, that the place is filled with Fletcher's relatives and boats' crews.

Mr. Cruickshank : This is simply what somebody else has told you ; you do not know of your own knowledge.

Mr. Hoey : I know that ; and I know that the Public Service Act provides distinctly that an inquiry is not to be on judicial lines at all ; the Public Service Board are supposed to take anything as evidence that they can afterwards work upon—any information that they can get.

Mr. Portus : Do you know any of the relatives by name ?

Mr. Hoey : He has got three sons there and a brother-in-law ; I could give the names of his sons, but it is a matter of notoriety, and there can be no difficulty in finding it out—not the slightest.

Chairman : Well, Mr. Hoey, is there anything else ?

Mr. Hoey : I suppose I can tell you about Mr. Pratt now, but, of course, if you do not want to hear it, I will not tell you about it ; I was the means of having him appointed, I am sorry to say ; I had two or three years with him ; I found him to have a little more education than the others had ; he could write a letter, but I found that he had no technical knowledge of his business—none whatever—at shipwrighting ; I also found him to be a most tyrannical man to his men, and he used most vile language to them, for which I had to correct him more than once ; I thought I was getting a man like his two brothers, that are well enough known to many of you here, gentlemanly men in every respect ; and instead of that I got the very opposite, and if I had known his character was such he would never have been here ; I like men treated properly ; I always treated them properly myself ; but they do not get that from him ; when I found this out I did not report the man ; I was not going to do that sort of thing, but I spoke to him and told him that it must cease or there would be some trouble over it ; after that he took very good care not to let me hear it, but it did not stop ; in my time he had no foreman to do the work for him ; he could not lay a ship down ; he does not know how to look at it ; he could not lay the lines of a ship down in my time ; he may have learned it since ; it is five years since I left, and he has had time to learn ; when I was there a draftsman was sent from the office to do it ; Hayes could lay a ship with anybody.

Mr. Portus : Did you ever send for Pratt and ask him to do it ?

Mr. Hoey : There is no need to send for a man to lay a ship down, when he could not understand the drawing ; it would only humiliate the man ; the "Golden Fleece" was built there in my time ; Pratt did not lay down her lines ; he built her, but he had better men than himself to take things off with ; he had some first-class shipwrights there that could do anything ; Mr. Orr did not lay down vessels in Mr. Hayes' time ; I have seen Hayes lay them down frequently ; he could have made the scale drawings if he had been asked to ; with respect to Mr. Kidd, whom I always called and considered to be a foreman, I never in my experience met a better man ; he is a man with a thorough technical knowledge of his work, is an excellent draftsman to scale or full size, and one of the most careful patternmakers that ever I met with ; the minimum amount of work to the engineers always resulted from his patternmaking ; that man in my time had the usual privilege of a foreman not to take out a ticket, and to get his money without getting into the ruck along with the rest of the men ; not long after I left he was degraded to the position of having to go among the ruck ; he is, without a doubt, the ablest man on that Island ; that is the treatment he got there ; I do not know who did it ; I daresay you know it.

*Foreman Labourer.*—In my time there was no foreman labourer, and I never needed one ; I was never able to see what any such individual was wanted for ; each Department had its own labourers ; I doubt whether they are doing half the work now as compared with when I was there in the year 1892, when I had 560 hands, and they have never had so many since ; then I had no foreman labourer ; there was a gang of labourers belonging to the Dock, and they were quite sufficient to do the moving of the vessels, especially as if they have to go any distance they get a pull from one of the tugs ; they have a foreman labourer at Mort's, but you cannot compare Fitzroy Dock and Mort's Dock ; when there were forty or fifty men scrubbing a ship it was Pratt's business to look after them ; he had always a leading labourer getting 6d. a day more than the rest ; he would very likely have 6d. a day more all the time, and he would be put on that job ; the foreman labourer has nothing to do with the scrubbing ; that is still in Pratt's hands ; that work of cutting down the rocks requires a man to be constantly on the job ; it does not want a man that can be called upon at any time to go to the engineer's shop or the boiler shop or to Mr. Pratt ; it requires a quarryman, not a sailor, as a matter of fact ; when I had those 560 men I had on board the "Sobraon" a leading boilermaker and a leading shipwright and a crowd of men ; the one was Anderson and the other was Castle ; they did not get extra pay for that ; the only difference was that they had not to work ; I daresay I had 100 men or more on the "Sobraon" ; for the other 460 there was only the ordinary staff of foremen ; I am sure they were quite sufficient to overlook these men ; there was another job on about the same time, the "Gropor," and I put a man named Green on to the hull ; the way they do it at Mort's is that they put on a leading man the same as I did, but he has nothing to do with any other job ; he devotes his whole attention

attention to that job ; I asked the Engineer-in-Chief for extra pay for these leading hands, but he would not give it ; they ought to have at least 2s. extra per day ; there was one man, Morrison, an engineer that I put on and gave him 2s. a day extra, and the new Manager took it off again ; he was the best man on the Island next to Mr. Gibson himself.

*Office Staff.*—I want to say a little about the office business—what it cost in my time ; I am not speaking of the stores, but of what was done in the office where I was myself ; that was done by one man and one boy, and at the time that the £50,000 was spent in wages in one year that was all the staff I had ; the work was done efficiently and thoroughly, and nobody was oppressed with too much to do ; Morling had £175 a year and the boy from 5s. to about £1 a week ; they also registered every paper that came to the office ; minute papers, accounts, requisitions, vouchers, and everything were entered the day they arrived and the day they left ; they made out the cost of every individual job, and sometimes in one fortnight there would be an alphabet two and a half times over to indicate the jobs ; they took all that out, and it would agree to a penny with the pay-sheets ; Fuller was there in those days, but I never recognised him as connected with the Dock at all ; he compiled some book for the office from the sheets made up by Morling, and from the store docketts ; he was of no use to me ; the same thing is being done now by Delargie at the Head Office.

*Stores.*—The requisitions for Stores was made out by Halliwell, after a consultation with me ; I arranged what everybody had to order ; I would not care to speak about Halliwell, as he is dead ; if he were not dead I would speak freely ; he brought all the vouchers to me, and if they were incorrect, or if there was any minute to go on the back of them, I would dictate it and he would write it, and I would sign it ; after Halliwell made out the requisitions, which were signed by me, they went to the Head Office ; there was no delay in getting stores, because I had *carte-blanche* to do as I liked ; if I wanted an article in a hurry before there was time for the requisitions to go through I sent for it direct, and immediately I got it I covered it with a requisition, and frequently the job was finished before I got the official order on the contractor ; I had no reason to complain of delay ; it was not against the rules for me to do this, because the Engineer-in-Chief allowed me to do it ; what he, Mr. Moriarty, said to me was, “Damn red tape ; you look after the work and never mind anybody ; it is work I want and not red tape” ; that is what Mr. Moriarty said to me ; whether there is red tape now of course I do not know, and I do not care ; in my time Mr. Fulton was outdoor Inspector, and I was responsible for all the contracts done outside in iron work ; Mr. Fulton was my assistant ; he reported to me at 9 o'clock every morning, except Saturday, the progress of these things ; if there was any difficulty I went with him to the contractor, and before I signed a voucher I went and examined everything ; many of these vouchers were progress vouchers, and I satisfied myself that the value was there from my own knowledge ; if I wanted anything I could get it ; if I had not had *carte blanche* it would have been impossible to carry on ; for instance, it was a very common thing for a shaft in those grab dredges to break ; the broken shaft would be brought to me immediately ; I would see the dimensions, and send somebody away to the contractor to pick out a shaft the right size ; the men would be put on the job all night, and it would be got away right off ; when vessels come into dock we might find faulty plates ; we might not have the plates in stock, as Mr. Darley would not allow us to carry sufficient stock, so we had to send for them ; if I had to go through all this red tape the vessel might be in dock for a week before I got the plate ; I did not do that ; Mr. Darley and Mr. Moriarty allowed me to make my own arrangements, and in many cases that obviated the crew having to stand idle for a week.

Mr. Cruickshank : We would like to have your opinion of what power the man holding the position of Managing Superintendent at Cockatoo should have, from your experience of twenty years there.

Mr. Hoey : I would distinctly say that in the matter of stores, especially for repairs, they should revert to the old system that I worked under ; it would altogether depend upon whether you had the right man in the right place ; I would not like to say anything about that ; it would be better for the man in the position to order it himself without going to the Head Office ; I had the power and any departure from that is a mistake ; it is wasteful ; I had to cover it with an order afterwards, and he would have to do the same ; the Engineer-in-Chief is a Civil Engineer I suppose ; I know he is not a Marine Engineer.

Mr. Cruickshank : Speaking to you as a mechanical engineer with a large experience of this place, from your mechanical knowledge should this establishment be under a Civil Engineer ?

Mr. Hoey : No, I am sure it is not ; I found that out many and many a time ; I do not know what freedom anybody there has now, but I had freedom almost amounting to license ; I was allowed to exercise my own judgment in almost everything in Fitzroy Dock, and I have put aside scores and scores of expensive plants, and have done things in a simple inexpensive way ; I think the man who should have control of this place should be a man with a life-long experience in marine engineering, and unless he can show that he is not fit for the job ; I have not the slightest hesitation in saying that ; he ought to be a man that would not be in a way under the control of his foreman ; he should be able to control the foremen, and the foremen should control the workmen.

Mr. Portus : I think you misunderstand the question ; Mr. Cruickshank asks who should be the supreme head ; do you think the Engineer-in-Chief should be a Marine Engineer ?

Mr. Hoey : No, I do not go that length ; if you put a marine engineer in charge of the dock it would be sufficient ; you cannot expect the man in charge of the Public Works to have universal knowledge ; what you want as General Superintendent of the Fitzroy Dock is a man who would be able to thoroughly direct his foremen ; my practice when I got orders from the Head Office was, if they were simple things that a foreman could easily understand, I would send him in a copy of the order ; but if the job was a matter of consequence I always called for the foreman that would have the principal part of the work to do, and had a consultation with him, and we decided upon a course of action ; if it was an urgent job we arranged what work might stand over ; I never lost sight of a job until it was finished ; I have no hesitation in saying that things will never go right at Fitzroy Dock unless the head of it is a thorough, not only mechanical, but marine engineer ; and with that, Mr. Cruickshank, there is no need that his superior officer, the Engineer-in-Chief, should be a marine engineer ; I think the place ought to be self-contained.

*Idling by Dredge-men when in Dock.*—I will go further than that ; the Superintendent at Cockatoo should have some control over the dredges and tugs that go to the Dock ; he should be able to utilise labour that is otherwise not utilised ; it is utterly impossible that Mr. Portus can look after the crews

crews that come there and do his other work as well ; there are many and many instances where those men are days and days idle, and they can be utilised about the place, if not on board the dredges ; they do not assist in the repairs of the dredges ; Dock men do not go on board dredges and put on buckets and pins and things of that sort ; that is finishing-up work ; I will give you an instance : an engineer in one of the largest tugs came to Gibson and wanted an engineer to do so-and-so ; Gibson thought it was a little bit beyond the mark, so he came to me and said, "So-and-so wants an engineer to do such-and-such a job" ; "I said, "Come on board with me, John," and we went on board, and the man was sitting on board aft in the cabin smoking his pipe along with the captain ; he was doing nothing whatever in the way of work ; I said, "What do you mean by this?" Why do you ask for a man from the shop when you are doing nothing yourself" ; I do not remember what he answered ; I said, "You will not get a man ; and, if the thing is not done I will report you to Mr. Portus" ; now, I say that the Superintendent, being on the Island, should have the power to prevent anything of that sort.

Mr. Portus : Was it not arranged that Mr. Gibson and I should set out work for the engineer to do, distinct from the other work ?

Mr. Hoey : It was not done in my time ; you have an instance of a captain coming to me for six men to paint his bulwarks, and he had men on board there that could have done it themselves ; I would not do it, and brought it under your notice ; I have seen a man on board one of the dredges spend days with arms folded looking down at the Fitzroy Dock men working ; but this man had a dredge master over him at the time, so that it would have been a delicate matter to have interfered ; he was an engineer—a driver ; the dredges carry from nine to fourteen or fifteen hands.

Mr. Portus : There are about ten ; they consist of engineer and master, the driver, firemen, seamen, cook, and watchman ; these men are engaged on the inside work, while the Dock men do the outside work ; the crew of a tug generally consists of four people—master, engineer, fireman, and deck hand.

Mr. Hoey : Then there are the barges, grab-dredges, the coxswain and crews of which frequently do nothing, and nobody controls them.

*Pumping Machinery.*—When I was there the pumping machinery at the big dock was under my charge.

Mr. Cruickshank : How often was it examined ?

Mr. Hoey : Frequently, but there was no regular time for doing it ; of course, we only worked it at long intervals ; it was not like an engine that was constantly working, or like the engines of a steamer ; there was no periodical examination such as prevails in steamers ; we did not overhaul them regularly ; we had plenty of time to do anything we wanted there when vessels were in dock ; I have been right through the whole thing myself ; when it was handed over to me there was a great row, and it seemed as if it would knock the place down ; I had to go right through it to the lowest suction valve, and I found the frame of that working on two or three bolts like a hinge ; we fixed up that ; and the valve that was intended to be used, when the new dock was dry, to pump the old dock was perfectly useless, for it just lifted off the face ; we made an arrangement to keep it on to its face ; that plant was no credit to the man that altered the original design—Sir John Fowler ; the Works Department sent Home to get prices for centrifugal pumps, the modern style, and he altered it to what you have seen ; I was so informed by Mr. Moriarty ; the Dock was designed by Mr. Skinner, and Mr. Maekenzie altered it and spoilt it ; he made it dangerous for the men to work in ; I started this machinery and we had a lot of trouble with it ; when I was there I had serious fears that the pumps would decay fast, as they were only cast iron—in fact, they did show signs of decay, and there should very soon be a renewal there ; I mean the rams ; many parts of the structure were of cast iron that should have been gun metal ; the arrangements of that multiplicity of valves were very defective too, and, of course, one or two of them breaking off largely spoilt the pumping ; I look upon the whole thing as a mechanical botch, not in accordance with the present practice ; there is another thing I can tell you that perhaps you do not know—if that machinery breaks down there is no possible means of pumping either of the docks ; there will be a stoppage of both the docks ; if the "Groper" went in, and stayed in, she could pump it out, but that would be a curious proceeding, and in the old dock there would not be room for anything else in along with her ; I recommended the purchase of those two boilers from the Abattoirs, and on the same paper I advised the fixing here of a centrifugal pump, to be worked with these boilers from the old engine-house, and then they would have had a duplicate plant for Fitzroy Dock ; it seemed to be approved of in a general way, but it never came to anything ; I had nothing to do with the setting up of the original boilers at the pumping station ; I examined them and repaired them ; they are about as fool of a job as ever I saw in the fixing of tubes ; there was nothing wrong with them after we went all over them and put them right ; they were expanded tubes, but not properly done, and we cut them off and beaded them over ; I did not get the new boilers for there at all ; it was for the old plant ; I was going to use one to drive everything in the machine-shop and the boiler-shop and the centrifugal pump, and the other one was to be a stand-by, or we could use the two together ; I do not know why they are built in where they are ; there was no reason for it in my time ; two boilers pumped the dock and one was a stand by ; we used the whole three for ease and economy, but if it was necessary we could always do it with two.

Mr. Cruickshank : Did you ever tackle the engines for that nasty bump they have got every time they come over the centre ; the discs make all the bed-plate vibrate ; you fitted girders underneath before they could run their trial ?

Mr. Hoey : Yes.

Mr. Cruickshank : Did you ever find out where the fault was ?

Mr. Hoey : We reckoned they were out of truth at the centre ; the only way to find out how much would be by measuring ; I tell you now they were out of truth, off the square, out of line ; nothing was done to get them in line ; I could not tell you how much they were out of truth, but it was not much ; the knocking seemed to arise from the pumps themselves.

Mr. Cruickshank : But the whole of the main bearings of the engine seem to be knocking.

Mr. Hoey : That is only weakness in the job ; they did it far worse until we screwed them down to those girders ; the whole thing was on the move ; it would be a lot of trouble to line it off ; I do not think you could do much good if you found it out ; the job is inherently weak when it is worked at a high pressure, and we never could go to what they run at the trial trip ; I would never venture on it ; the thing would not be strong enough ; nobody went specially into the thing.

Mr. Cruickshank : I suppose you know that the boilers are set so that there is at least 30 per cent. of the fire grate of no use ?

Mr. Hoey : No, I did not know that ; I know the whole thing went to pieces under them, and we had to do it up underneath the best way we could, and we could not get bearing surface without taking away some of the heating surface ; all the boiler work under the furnaces broke to pieces ; it was done by the contractor ; then all cast-iron work you saw on the front of the boilers was put on by us ; the trial was done with two boilers, and it worked far faster than it has done ever since.

Mr. Cruickshank : It was going twenty-one revolutions the other day.

Mr. Portus : The trial was twenty-one revolutions I think.

Mr. Hoey : These boilers were a constant nuisance and a constant expense, and the older they get the worse they get.

*Mr. Fletcher and Mr. Broad.*—I might say that on Saturday afternoon I was told that Mr. Broad had told Mr. Fletcher that I had offered my services to you as a witness, and that I had been under examination the previous afternoon, and Mr. Fletcher went about the place saying that that "d—— b—— Hoey" had been and offered his services to the Commission and was examined yesterday ; I do not know whether you pledge your witnesses to secrecy with regard to their evidence, but if you have it has been to very little purpose.

Mr. Cruickshank : We have not pledged them to anything ; we are not ashamed of anything that takes place here ; if they like to go and talk about it they may ; we have nothing to conceal and do not want to conceal anything ; all that we want is to get at the actual state of affairs and get any suggestions which might help us to do this job as creditably as possible, that is all.

*Fire Prevention.*—When I was at the Dock I had first-class appliances for putting out fires ; I had hydrants put at regular intervals, and a hose that was under the control of the night watchman only ; in addition to that there were two sets of hose and directors and two portable pumps ; there were ample means of putting out fires, and fires have been put out there and nothing has been heard about it ; they can drop the suction of the portable pumps into the sea ; there is also a 4 in. main from Sydney, and there must be high pressure when it is only a few feet above the sea level ; the pressure was sufficient to feed the machine shop boilers without a pump ; the hose directors have been tried and they have thrown the water right over the building.

*Timber.*—There was very little building of wooden vessels in my time, except punts ; in cases of that kind we used to take sufficient time to get the stuff together ; we did not deal with that as an urgent matter ; if a Contractor failed to supply articles according to his contract for anything we got a cancelling order, and then the buyer went about the different yards and was allowed to buy whatever he found suitable at the risk of the Contractor.

*Mr. Buddle.*—I never had to deal with a better man than Buddle ; if I had known more about him he would have been where Pratt is now.

*Stores, Issue of.*—Perhaps you would like to know how the stores were issued in my time to the workmen ; the men would go to the Foremen and tell them what they wanted ; the Foreman would tell them to go to the stores to get what they wanted, and if what they wanted was not there they would get the nearest to it rather than waste time waiting for it ; if they wanted 2½-in. bolts and there were only 2½-in. bolts in the store they would take them ; the dockets were written out in the store and brought to me next morning, and I overhauled them and signed them, and the Foreman afterwards initialled them ; the Foreman never made the dockets out ; I am informed that they do not make them out even now ; we had two sets of books, one was brought to me and the other was in operation ; the reason for that was that some of them could not have written the dockets to save their lives, and one time I had a deal of trouble in sheltering Fletcher from the Engineer-in-Chief over that business ; it is more irregular now, where Foremen keep clerks to do it for them ; Fletcher has a clerk, I am told, and Gibson has a clerk ; the man goes to this clerk and tells him what he wants ; they have to wait till Mr. Gibson shows up to this clerk and tells him to write it, and the clerk goes to the store, not the man, for the article, and if the identical article is not in the store he comes back without it ; he does not take the next nearest, nor anything of the kind, and the whole of this action has to be gone through over again ; the men have told me that.

Mr. Portus : Is not it better to have a cheap man instead of a workman to do that ?

Mr. Hoey : The workman is waiting all the time ; in every other shop the Foreman carries a docket book in his pocket, and when a man wants a thing he writes down what he is to get and signs it or initials it.

*Supervision.*—Mr. Cruickshank : What is your opinion of having about thirty men in the blacksmiths' shop all on the same level with nobody to look after them ?

Mr. Hoey : There were not thirty in my time ; the wages also varied ; if I had thirty men in a blacksmiths' shop I would have a Foreman over them—of course, a working Foreman ; I would give him a little more money, of course ; I think the system of having, perhaps, two or three leading hands in the shop is a good one, but the system of having leading hands and not acknowledging them is very bad ; I would have a leading hand in the shop where the lathes are and where the fitting and turning goes on.

[Witness then retired.]

The Committee then proceeded to discuss their draft report, after which it was decided to give the officers referred to disparagingly in Mr. Hoey's evidence an opportunity of replying to his statements ; at 5 p.m. the Committee adjourned until 2 p.m. on Thursday, the 15th instant, at Cockatoo Island.

THURSDAY,

THURSDAY, 15 DECEMBER, 1898.

The Committee met at 2 p.m. at Circular Quay and proceeded in the launch "Little Nell" to Cockatoo Island, where a meeting was held in the Board-room at 2.30. p.m.

PRESENT :

MR. R. POLLOCK, Chairman.  
MR. A. B. PORTUS, | MR. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Secretary handed in the official papers of the Public Works Department respecting the dismissal of certain workmen from the Docks because of their relationship to the Foremen; memos. were received from the Foremen respecting their relatives who are now employed in the establishment. (See pp. 86 and 87.)

A general report by Mr. Broad regarding the whole of the works was received. (See pp. 88 and 89.)

The Committee then decided that Mr. Pratt and Mr. Fletcher should be called, that Mr. Hoey's statements regarding them should be read, and that they be allowed to make a statement in reply.

Mr. John Pratt, Dock Superintendent, was recalled. Mr. Hoey's evidence (pp. 79 to 82) was read to him. He then stated:—Mr Hoey has never called me in question in reference to this; this is the first I have heard of it; Mr. Hoey never complained or alleged that I was tyrannical to the men; I thought I got on very well with them; I am rather surprised to hear of this.

Mr. Cruickshank: He never spoke to you about it?

Mr. Pratt: Never; I always thought I was in his good graces; I was never so much surprised in my life as at hearing this; he recommended me for the appointment, and took a great deal of interest in me getting it; he has written to me to ask me to put some men on, some tenants of his, since he has been away, and I suppose this is the outcome of my not doing it; he told me in the letter that they were tenants of his; unfortunately I have not got the note; if I had known it was to be now stated I would certainly have kept it; I do not know that I have destroyed the letter; I will hunt it up and find it if I can; he has never found fault with me; it has always been the other way so far as I know; Mr. Hoey never troubled himself about any job that I was doing; he never could come and tell me how to do anything in my department; he never showed me how to do anything.

Mr. Cruickshank: How do you account for this?

Mr. Pratt: It is spite; I have a man working here now who is a neighbour and particular friend of his, and that may be the man who takes him the reports he says he gets weekly.

Mr. Cruickshank: Then, as a matter of fact, what he states here is not true?

Mr. Pratt: It is absolutely untrue; it is false from beginning to end; utterly false for a man to turn round and say that I am not capable of carrying on my work; who does it if I do not?

Chairman: What he means by "laying a ship down" is taking it off the scale drawings?

Mr. Pratt: Yes; I can take it off the scale drawings if I have the time; there is no comparison between the work to be done here now and that to be done when Mr. Hayes was here; there is twice the work here now as when Hayes was here; he only had one dock to run till just before he left; he used to lay down the ships, but I have not the time to do it; I can go into the loft to do it if I have the time, but there is so much work now that it would be impossible for me to be laying ships down and be personally looking after the docking and supervising work; I cannot be in the drawing-loft and looking after two docks as well; no one man could do it.

Mr. Cruickshank: What is your opinion of the condition of Cockatoo now as compared with when Mr. Hoey was here?

Mr. Pratt: I say it has improved wonderfully; it is now respectable for men to come and look at; I consider it was a disgrace to the Department it belonged to to allow it to go the way it did; he had the money voted to spend on plant, but did not provide proper plant; I came here in 1891; the work on the "Sobraon" was done in 1892; it was the first job of any importance I took in hand; the "Dawn" was not finished when I came; at that time I had about 250 men under me—shipwrights, painters, joiners, and so forth—and the two docks to run as well.

Mr. Cruickshank: You say the place is very much improved, and it is not like the same place; to whom do you consider the improvement is due?

Mr. Pratt: To Mr. Broad.

Mr. Cruickshank: That is to say, since Mr. Broad has been here he has carried out certain improvements which are creditable to him?

Mr. Pratt: Yes, a great number; when I came here they had a pit-saw, the same appliance that Noah had to build the Ark with, and as I came from a place where they had proper machinery I felt it very much; after much complaint on my part Hoey gave me what I have there now—a small circular saw—a thing you will find in any yard where firewood is cut, and is unsuited for my requirements; I have mentioned this to Mr. Broad, who has given me several pieces of good machinery, and he has promised to give me a better saw; I say that the whole of his statements are utterly false, and it is nothing but a bit of spite; I have never done anything to Mr. Hoey that I know of, and I am thoroughly surprised to think that he would make such a statement now.

Mr. George Fletcher, Foreman Boilermaker, was recalled. Mr. Hoey's evidence (pp. 79 to 82) was read to him. He then stated:—Well, as far as the boat's crew goes, I never took on men the whole time I have been here without letting Mr. Hoey know, and I never put a man off without letting Mr. Hoey know; when I discharged men I gave a list to Mr. Hoey, and he could please himself who

who he put his pen through ; when I wanted men here I used to tell Mr. Hoey I wanted men, and he said " Put them on " ; I put on men who knew the business ; there are men who cannot use the flogging hammer, and I put on those who could ; with regard to my boys, one was to go in Mr. Portus' office, and in the meantime Mr. Skinner died and his son was sent there in place of mine, and my boy was then apprenticed to the engineering for three (3) years, and afterwards serving five (5) to the boilermaking ; they all served their apprenticeship here at 6s. a week ; the younger one came here at 17 years of age, and he has turned out a very smart fellow at the theory part of the trade ; he went to the College and passed in mechanical drawing, and then I sent him Home, and he has only just landed here on Friday after being away for ten months ; I sent him Home to see what he could pick up ; he was the young chap that carried on the work here with Anderson while I was away on my leave ; those boys are doing platers' work and only getting riveters' pay, 14d. an hour ; I was frightened to ask for platers' pay for them ; Mr. Hoey gave the eldest one an increase of 15d. because of the way he made the boiler for the " Harrier " ; he started and finished it right out ; it was not for me to put them on ; if Mr. Hoey had said they were not to come on I could not put them on, and if he had ordered them to be put off I would have to put them off ; the system now is the same ; if men are to be put on, Mr. Broad says " Put them on " ; if men are to be put off, I put them on a list and Mr. Broad puts them off.

Mr. Cruickshank : Mr. Hoey says that when men had to be discharged you selected a certain class of men to go and kept on other men who were members of your boats' crews.

Mr. Fletcher : It does not make any difference to me ; if he knew that they were my boats' crews, why did not he put the pen through them ?

Mr. Cruickshank : You put the names before him ?

Mr. Fletcher : Yes.

Mr. Cruickshank : What Mr. Hoey says is that the names of the men who were members of your boats' crews were not put before him.

Mr. Fletcher : I can honestly swear that I never kept a man back from him yet, or Mr. Broad either ; I dare not do it ; I can quite understand this about Mr. Hoey, because I know there was a bit of ill-feeling between him and me when he went away ; I was blamed for a lot of things being said, and of course I never made use of the words that were put on to me.

[The Secretary read the evidence of Mr. Hoey regarding Mr. Fletcher on p. 82 from the words " I might say " as far as the words " examined yesterday. "]

Mr. Fletcher : That is not true ; it is false ; in fact, I did not know anything about Mr. Hoey coming here, and it was Crewes told me that he met Mr. Hoey on Saturday night and went from Erskine-street to the top of King-street with him, and he wanted to know who was on the Inquiry Board, and Crewes said Mr. Cruickshank, Mr. Portus, and Mr. Pollock, and he said, " Them ! " that was the first I heard of Mr. Hoey, and I think it was on Monday morning.

Chairman : What about the other statements about reading and writing ?

Mr. Fletcher : Well, I was not a very good scholar in reading and writing when I came here ; I can manage to do what wants to be done here now ; I can lay a ship down, or I can lay a boiler down or design a boiler ; I think that was the only failing Mr. Hoey could put on me so far as my abilities go.

Mr. Portus (reading from Mr. Hoey's evidence, p. 78) : " At the time that I left, and for some time before, the relations between Gibson and Fletcher were very strained ; and you will find that after Mr. Broad came he granted Fletcher a lathe and an engineer's drilling machine, and he has got an engineer, and that engineer has often got a helper. "

Mr. Fletcher : It was Mr. Broad recommended it ; it was like this : when we wanted any screw stays put in we would take them into the engineer's shop here, but we could not get them until it suited Gibson to turn them ; he had a lot to do, and very little appliances to do it with ; my job was wanted in a hurry as well as his ; I told Mr. Broad, and he said the best thing to do would be to get a little bit of a lathe and put it in the shop, and get an engineer, as an engineer would be required to look after the machinery in the shop ; so we got Clark, and he does all the tap stays for me and all the little bits of fixing up of the engines.

Mr. Cruickshank : What does he do when there are no taps to fix up ?

Mr. Fletcher : He has to keep all the tools in repair ; we can find plenty of work for him to do ; it was in that way also that I got McGregor, the blacksmith ; I went to Mr. Hoey, and told him I could not get my punches or shears dressed, and Gibson and I got to loggerheads about it ; he could only do those things when it suited him, and my men were standing all the time ; two or three punches would double up in a day, and the whole place was at a standstill ; Mr. Hoey told me to get a blacksmith.

Mr. Cruickshank : As regards the engineer and tools, as stated by Mr. Hoey, you have no hesitation in saying that the man and the tools are always fully employed ?

Mr. Fletcher : Yes.

Mr. Cruickshank : Mr. Hoey says he could not find out what you wanted them for.

Mr. Fletcher : There is a great deal more work done now than there was when Mr. Hoey was here ; we only had that small shop at the back there with nothing in it at all when he was here—a bit of a shop about 14 feet wide ; I do not drill my own tube-plates ; the machine is not out yet ; Mr. Gibson has got my machine ; he said he wanted it to drill double holes in links, and Mr. Broad spoke to me about it, and I said, " Very well, get me another one, and let him have it " ; there is no ill-feeling between Mr. Gibson and me that I know of.

Mr. Cruickshank : But Mr. Hoey says there was.

Mr. Fletcher : Well, then, it must have been him that made it ; when he started to fit this shop up was where the annoyance first came in ; there was an old engine that was in the " Pearl " when I was a boy running from Adolphus-street to Sydney ; they had it in the blacksmith's shop for fourteen years and condemned it ; when Mr. Hoey started this shop, he was going to fit it up on the far corner, and I objected ;

I said it was of no use to me; then they got an old boiler off the "Sobraon" and put it in the shop, and I asked Mr. Hoey if that one boiler was going to be used to drive the shop; I said it was no good to me—I wanted a relieving boiler; after that Mr. Hoey was retrenched; two boilers and two engines came from Darling Harbour cranes and were lying on the grass for about years; I recommended that the two boilers and one of the engines should be put in the boiler shop, and Mr. Gibson went up with Mr. Hoey and when he came back he said they were not worth putting in the place, and the engine was not worth fixing up, and there was a lot of brass work lost.

Mr. Cruickshank: That all goes to show that there was a bit of ill-feeling between you and him at the time. Is there any ill-feeling now?

Mr. Fletcher: No; that is all I know of; when Mr. Broad came here I took him to see them and when he saw them he grasped the thing at once and put them up for me; those are what we have got working at present.

Mr. Cruickshank: What is your opinion about the present condition of the works compared with what it was in Mr. Hoey's time?

Mr. Fletcher: We are doing very nearly as much work again; I do not see much difference in the system; I can see a great improvement in the place, but the work is done the same; what I mean by improvement about the place is making the place look something like decent; you could not walk on this place alongside the wall; the general condition of the place has very much improved; I take part of the credit to myself as far as my own shop goes for this improvement; there is very great improvement in the whole Island and I give Mr. Broad the credit for it; since Mr. Hoey left and Mr. Broad came here Mr. Broad has improved the place considerably.

Mr. Portus: Have you got a clerk?

Mr. Fletcher: No; I have got a man who keeps the docket book and time book, and when he is not doing that he is working with anybody else about the place; he is a labourer and gets labourer's wages; they have him in the office sometimes when they are making up the books; he goes to the stores for any light thing that is wanted if he can carry it; he has to work about the punching machine; of course he cannot go far away from the desk; if the men want any help to lift a plate or anything he has to give them a hand; those are his orders; he gets £2 2s., but deserves more.

*Lifting Appliances.*—When we want anything heavy shifted in the Boiler-shop we have to ring up a block and tackle; sometimes we do it with our own men or sometimes we get Godden's men; he is the foreman labourer; if there is anything heavy to lift I get him to put up the tackle, as I do not care to put up tackle myself; in Mr. Hoey's time I used to take the boilers out of the shop myself with my own men; the buckets were put on board the dredges with my men; Godden does it now; he does all the lifting and dragging about the place now; I think it is necessary to have a foreman labourer here; things that come out from England Godden fetches up; when Mr. Hoey was here our men had to do that; I have known us to be three or four days in bad weather wheeling about 12 or 14 tons of iron from that wharf where the Parramatta steamers stop; Mr. Hoey and I were very good friends up to the day he left.

Mr. Cruickshank: How do you account for this?

Mr. Fletcher: He has heard something very bad about me; when he was going away they got up a subscription list to get up a testimonial for him; I had a guinea to give towards it, but I did not know anything about it until the testimonial was presented down at the picnic ground, and he out with all this; I never knew from that day to this that that man had all this against me.

Mr. Cruickshank: You cannot account for this evidence he has given?

Mr. Fletcher: No; all I can say is that when he came to me at the A.S.N. Co.'s the first time I refused to take the job as a working foreman because I was a working foreman then; I told him I would come as foreman boilermaker; then he sent for me to his house and offered me a shilling more than Kelly had, and said that as the work increased my salary would increase; I accepted that; the statements he has made are not true.

Mr. Portus: Do you give any preference now to men who sail in your boats—do you keep them on?

Mr. Fletcher: Some of them are the oldest hands I have got in the shop; I never turn an old hand off here to keep a new hand on; if you look through the books you will find that the last men on are the first to go off; these men are the senior men.

Mr. Cruickshank: Supposing the new men were very much better men would you keep them on?

Mr. Fletcher: I would not like to turn the old hands off; I reckon I could not get better men in Sydney as boilermakers than those I have got; I think I have got the pick of the country as far as labour is concerned; I have been amongst the men now long enough to know their qualifications.

[The witness then retired.]

The Chairman and Mr. Cruickshank handed in letters received from Mr. W. H. Wilks, M.P., suggesting that Mr. Hoey should be called as a witness. (See p. 86.)

The Secretary reported that Mr. Hoey, in revising his evidence, had added two statements which he had not made when before the Committee. It was decided that these portions should be omitted from the report of the evidence.

Mr. Broad's report was then read by the Secretary. (See pp. 88 and 89.)

Mr. Portus handed in a statement showing how the crews of certain vessels belonging to the Dredge Service were employed while in Dock.

It was then decided by the Committee that no further evidence should be taken.

At 5 p.m. the Committee adjourned until Monday next at Mr. Cruickshank's office at 2 p.m.

Mr. Pollock, Chairman Commission, Cockatoo Island Works,—

Dear Sir,

Parliament House, N.S.W., 7 December, 1898.

I beg to submit to you the name of Mr. J. Hoey, Short-street, Balmain, ex-Superintendent of Fitzroy Dock. He is a gentleman that I feel convinced would be able to supply evidence of an inestimable nature re administration of said Works.

I would be pleased if you will summon this gentleman as a witness.

Yours truly,  
WILLIAM H. WILKS.

Mr. W. D. Cruickshank,—

Dear Sir,

Re Inquiry, Cockatoo Island.

Parliament House, 29 November, 1898.

Have you considered the advisability of calling Mr. Hoey, late Superintendent of Cockatoo Island Works? I may state that I am of the strong opinion that you would receive valuable evidence from this gentleman.

Trusting you will decide to summon Mr. Hoey,

Yours truly,  
WILLIAM H. WILKS.

Jas. Hoey, Esq., Short-street, Balmain,—

Sir,

8 December, 1898.

I have the honour to inform you that the Committee which has been appointed to inquire into the management of the Government Docking Establishment at Cockatoo Island will hold a meeting to-morrow, Friday, the 9th instant, at 2 p.m. at the office of Mr. W. D. Cruickshank, Engineer Surveyor to the Marine Board.

I am directed to invite you to attend to give any evidence which it may be within your power to furnish with respect to the subject matter of the inquiry.

I have, &c.,  
J. GARLICK,  
Secretary, Committee of Inquiry, Government Docks.

Engineer-in-Chief, Harbours and Rivers,—

Sir,

41 Short-street, Balmain, 25 October, 1893.

I regret that you were unable to be present to make the presentation to me, as it was under you that I first entered the Public Service in 1868. I would have been pleased that you should have taken part in what is, I presume, the last act as a retiring officer. I was also anxious to have a conversation with you on certain matters, which I will now commit to writing.

With regard to the relations between the foremen, I regret to say (especially during the last two years) that between Fletcher and Gibson is much strained. This caused me much trouble and anxiety to prevent the public interests suffering thereby. Mr. Gibson never interfered or made any remarks about any of the workmen not under his supervision. He simply attended to his own duties. Mr. Fletcher, on the other hand, judging from innumerable remarks made by him to me, showed himself to be possessed of an almost insane hatred to all engineers, either workmen, dredgemasters, draughtsmen, or civil engineers, and he has shown an intense dislike to Mr. Gibson. Of this feeling Mr. Gibson was well aware. If I had taken notice of Fletcher's remarks there would have been endless trouble.

About sixteen years ago, a vacancy having occurred in the position of foreman boilermaker, I, by the permission of Mr. Moriarty, appointed Mr. Fletcher to the position. Shortly after he started I was surprised to find that he was ignorant of the rudiments of education and has not since acquired them. You may easily understand what I have had to do for him during all these years, and that he could not have held a similar position in any private workshop, and but for me he must have remained an ordinary workman. I have been the best friend he ever had, and I had a right to expect that he would have made an exception in my case in his feeling about engineers, but I have learned on indubitable authority that he has expressed himself in these words, "We have got rid of that b—— Hoey at last," thus showing an extent of ingratitude that is almost incredible.

I may also add that I considered it my duty to inform Mr. Broad about Mr. Fletcher's hostility to engineers, and that it would require the greatest care on his part to prevent trouble and injury to the Service arising from this cause

I am, &c.,  
JAMES HOEY.

Minute Paper.

Subject: Fitzroy Dock Works, Cockatoo Island—Foremen employing Relatives under them.

The Engineer-in-Chief for Harbours and Rivers to The Under-Secretary for Public Works.

Department of Public Works, Harbours and Rivers Branch, Sydney, 15 November, 1893.

It has recently come under my notice that both the leading Foremen at the Fitzroy Dock Works have several near relatives employed on the works. This I consider is likely to lead to abuse, and is, in my opinion, for many reasons a very objectionable practice to allow. I therefore bring the matter under the Minister's notice, and suggest that I be empowered to issue orders that no foreman can be permitted to have more than, say, two relatives working on the Island.

The worst case is that of the Foreman Boilermaker, Fletcher. I have only just learned that this man's real name is Holmes, not Fletcher. He has working in the establishment—

	Wages on New Work.		Wages on Old Work.	
	s.	d.	s.	d.
George Fletcher, son .....	10	0	10	8
Louis Fletcher, son .....	9	4	10	0
Percy Fletcher, son .....	3	4	3	4
Alfred Holmes, snr., brother .....	10	0	10	8
Alfred Holmes, junr., nephew .....	9	4	10	0
James Wade, brother-in-law .....	9	8	10	4

I think this family party should be at once broken up in the manner I have suggested.

The Foreman Fitter, Gibson, also has six relatives or connections working in the shop, viz. :—

	s.	d.	
John Gibson, son, a boy ..	1	0	per day.
John Gibson, nephew, a boy .....	1	0	"
August Anderson, relative, labourer .....	7	0	"
William Marshall, ,, striker .....	7	0	"
Joseph Hankinson, ,, ,, .....	7	0	"
George Henry, father-in-law, labourer .....	7	0	"

While Fletcher's family are all drawing high wages, Gibson is somewhat more moderate, his son and nephew being only boy improvers drawing 1s. per day, the remainder strikers and labourers at 7s. per day. I am not sure how nearly three of the men are related or whether only distant connections, but still I hold that it is unwise to let the shop be made use of as a domicile for any foreman's connections.

C. W. DARLEY.

Submitted.—J.B., 21/11/93. I do not object to the sons being employed at the small wages named (3s. 4d. a day and 1s. a day), but both Fletcher and Gibson, being in positions of trusts, are censurable for taking so many of their relatives on without the knowledge of their superior officers. With the exception of the boys, I think it desirable that the others should leave the Service.—W.J.L., 27/11/93. Mr. Broad to notify the persons herein named, omitting those crossed

out

out in red, that their services will not be required after this week, and arrange for good men to take their places. See if young Boyd cannot be taken on as an improver.—C.W.D., 29/11/93. I find Marshall is so distantly connected that he cannot be called a connection or relative, so his name may be omitted from the list to be notified to go.—C.W.D., 29/11/93. The services of the persons notified have been dispensed with, but Hankinson and Henry have been taken on again for further consideration.—E.J.H.B., 4/12/93. George Boyd has started as an apprentice to boilermaking, and I have allowed him to begin with the second year's rate of pay, viz., 1s. 8d. per day, because of the experience he has gained as a shop boy.—E.J.H.B., 6/12/93. Approved, but obtain statement from Gibson as to whether there is any relationship or connection between him and these two men.—C.W.D., 6/12/93. Mr. Broad. Statement attached.—E.J.H.B., 11/12/93. Mr. Gibson's statement of 8th December, 1893, shows that George Henry is his (Gibson's) wife's step-father, and that George Hankinson is in no way related to him. The services of these men may be retained, as they clearly are not related to Gibson.—C.W.D., 13/12/93.

LIST OF FOREMEN'S RELATIVES AT PRESENT EMPLOYED AT FITZROY DOCK.

J. Gibson, Foreman Engineer.	s. d.
J. Gibson, son, improver .....	6 8
J. Gibson, nephew, fitter.....	8 8
G. Fletcher, Foreman Boilermaker.	
Geo. Fletcher, boilermaker, son.....	10 0
L. Fletcher " " .....	9 4
P. Fletcher " " .....	9 4
J. Pratt, Foreman Shipwright and Dock-master.	
Herbert Pratt, son, fitter's apprentice .....	3 4

From L. Burnett to J. Hamilton, Esq., Dredge, Newcastle,—

There are only two seamen on board "Ceres." One is employed cooking and cleaning, the other chipping and painting storeroom, anchors and davits, fidley and funnel, painting boat, and sundry jobs as required. L.B.  
Forwarded.—J.H.

J. Hamilton, Esq.,—

Sir,

S.S. "Galatea," Newcastle, 15 December.

To your request, the work performed by the crew of the tug "Galatea" while under repairs at Fitzroy Dock from September 30 to October 23—Seaman and boy chipping and painting. The boy Kinkstone away sick from the 5th of October. E. Knight joined in his place on the 14th. Master of the "Galatea," one week in "Dawn." Fireman and assistant fireman removing fire bars and bridges and rebuilding same, chipping and painting boiler, cleaning engine-room bilges, also cabin bilges. Engineer looking after men and boys. Engineer one week away in "Ceres."

Your obedient servants,

THOS. J. SHAKESHAFT.  
JOHN GARDE.

Forwarded.—J.H.

Mr. A. B. Portus, Superintendent of Dredges,—

Sir,

Tug "Ceres," Newcastle, 14 December, 1893.

The following is a statement of the work performed by the crew of the tug "Ceres" while under repairs at Fitzroy Dock during parts of the months of July and August, 1893:—

Engineer.—Supervising the repairs being done to the boilers and machinery.

Fireman.—The fireman was engaged cleaning out the furnaces and backs, chipping the shell of boiler and coal bunkers and giving them a coat of red lead paint. He also painted the stokehole and the lagging on the boiler, fitted the fire bars and built the bridges with the assistance of one of the men who was assisting to clean up in the engine room and stokehole after he had finished in the boiler.

Assistant Fireman.—The assistant fireman was engaged assisting the fitters, cleaning up in the engine room and in painting the engine room and the engines, also serving out what tools and stores that were required during the overhaul.

JOHN YOUNG,  
Engineer.

Forwarded. J.H.

J. Hamilton, Esq.,—

Newcastle, 14 December, 1893.

Work done in engine room and stokehole by fireman and assisting fireman during overhaul at Fitzroy Dock. One fireman looking after the cleaning of the boiler bilges, cleaning out backs, &c., &c., chipping and cleaning paint work, also painting and occasionally assisting fitters working in engine room, cleaning disconnected parts of machinery.

Assisting fireman looking after working tools, stores, &c., and keeping bright work clean.

F. IRWIN,

Engineer, tug "Orestes."

Forwarded—J.H.

MEMO.

## MEMO.

Goodlet and Smith, Ltd., to J. Garlick, Esq., Secretary, Committee of Inquiry re Government Docks.

Sir,

493, George-street, Sydney, 2 December, 1898.

With reference to a question asked me on Wednesday by the Commissioners as to whether there was any special difficulty in supplying 4/14 18 x 3 spotted-gum ordered for use at the Fitzroy Dock, and said to be undelivered, and to which I answered that there should be no great difficulty, on looking into the matter I find that these were supplied on 2nd August last.

I have, &c.,

C. W. McFARLANE.

REPORT AS ASKED FOR BY THE BOARD OF INQUIRY NOW SITTING AT FITZROY DOCKYARD.

*Fitzroy Docks and Dockyard.*

THE work carried out at this Establishment consists principally of docking ships of war, vessels of the mercantile marine, tug boats and Dredge Service plant of N.S.W. The workshops in connection with the Docks are scarcely equivalent to the requirements of the Docks—that is to say, in a case of great emergency, necessitating the rapid use of these Docks and effecting all necessary repairs, &c., it would be found that our workshop capabilities are incompatible with the Docks' requirements. I do not anticipate there is any reason at present to suppose that such emergency cases will arise; but with the growing requirements of this Colony, it is only reasonable that its greatest workshop should expand adequately to its requirements, as these workshops are essentially shops for effecting repairs to our own plant without any pretensions to do any new work whatever, or to in any way interfere with private enterprise. Nevertheless the fact must not be lost sight of that these shops must increase, and all such suitable appliances and machinery placed therein as experience has shown to be necessary, so that the Colony can do its own work if some unforeseen circumstance should arise which necessitated it; and holding these views I ask from time to time to be allowed to extend these workshops, and to have some new and modern machinery.

*Extension of Workshops.*—I have had a plan prepared showing, tinted in red, the proposed extension of workshops in which I propose to erect a new smith's shop, and place therein some new machinery and furnaces for working up our old scrap wrought-iron, &c.; and the present smith's shop to be converted into a machine shop to receive the new machines asked for, and a new pattern-shop to enable the iron foundry to be completed, with suitable appliances erected therein for carrying out work economically. It is also proposed to bring the carpenter's shop on the other side of the Fitzroy Dock (in the distant future) as shown on the plan submitted, and to erect on the site of the present carpenter's shop a new boilermaker's shop, as it would be in convenient proximity to the Docks, and repairs would be more expeditiously carried out, and a suitable slip to be laid down by the side of it, and a 50-ton shearlegs erected on the wharf and connected with the workshops by railroads.

*Tools under order for Engineer's Shop.*

Tools under order are as follows:

- (1) Gap, self-acting, sliding, surfacing, and screw-cutting lathe, 18 in. centres, and length of bed between centres 26 ft., with pillar and slide rest for work of large diameter; and one jaw-chuck 6 ft. diameter.
- (2) One improved screw-cutting gap lathe, 10 in. centres, length of bed 15 ft., extra strong required.
- (3) One patent turret lathe for brass finishing 8 in. centres.
- (4) One improved six-spindle nut-tapping machine; taps and master taps complete from  $\frac{1}{2}$  in. to 1 in.
- (5) One improved small slotting machine, 9 in. stroke.
- (6) One improved Thorne's patent portable drilling machine.

*Tools in addition to the above are required for the Engineer's Shop.*

- (7) One gap sliding, surfacing, and screw-cutting lathe with shifting bed, 12 in. centres and 15 ft. length of bed, with treble gearing and pillar rest, and one jaw-chuck 4 ft. 5 in. diameter.
- (8) One improved screw-cutting gap lathe, 12 in. centres, bed 20 ft. long, capable of taking 15 ft. between centres when gap is open.
- (9) One improved screw-cutting lathe, 10 in. centres, bed 15 ft. long, self-acting and surfacing gear.
- (10) One improved bolt-screw and nut-tapping machine, to screw from  $\frac{1}{2}$  in. to  $2\frac{1}{2}$  in. in one cut only; taps and master taps complete; and oil pump for delivering oil on to the bolts while threads are being cut.
- (11) One screwing machine, for screwing iron pipes, to screw 1 in.,  $1\frac{1}{2}$  in.,  $1\frac{1}{2}$  in., 2 in.,  $2\frac{1}{2}$  in.,  $2\frac{1}{2}$  in., 3 in.,  $3\frac{1}{2}$  in.,  $3\frac{1}{2}$  in., also 4 in., with ten pairs of adjustable discs, and an extra pair of wheels complete, for either hand or steam power.

*Tools required for new Blacksmith's Shop.*

- (1) One improved silent fan, Lloyd's system, suitable for thirty fires.
- (2) One steam hammer, Rigby's, 10 cwt., without self-acting gear.
- (3) One steam hammer, 7 cwt., without self-acting gear.

*Tools required for Coppersmith's Shop.*

- (1) One burring machine or jenny.
- (2) One turn-up wiring machine.
- (3) One beading or swageing machine for tin, with one pair of steel rollers.
- (4) One grooving machine, 38 in. long.
- (5) One planing machine.
- (6) One bottom-closing machine.
- (7) One hydraulic bending machine, for bending copper pipes to 6 in. diameter with return stroke.

*Moulding Shop.*

One loam mill for moulding shop, and one 2-ton jib crane.

*Tools required for Boilermaker's Shop.*

- (1) One set of rolls, 16 ft. long, for  $\frac{3}{4}$  in. plate.
- (2) One beam or angle iron bending and straightening machine.
- (3) One plate-straightening machine, flatten up to  $\frac{1}{4}$  in. plates.
- (4) One portable hydraulic riveting machine, Bear type, 21 in.
- (5) Horizontal boiler shell drilling and tapping machine.
- (6) Plate edge planing machine.
- (7) New plate blocks for furnace.
- (8) Extension of boiler-shop for the above machinery.

*Tools required for Patternmaker's Shop.*

- (1) One of Fay's No. 5 20-in. swing patternmaker's lathes, iron bed, pair of centres, three rests and two sockets, wood cone and countershaft.
- (2) One of Fay's No. 2 standard ripping saws, with elevating arbor, rip, cross-cutting mitre gauges, iron table and two saws, 22 in. diameter.
- (3) One of Fay's No. 2 patent jointing and hand planing machines, 16 in. cylinders and countershaft.
- (4) One of Fay's No. 2 Centennial surfacing machines, to plane one side 20 in. x 6 in., one pair 20 in. knives and countershaft.
- (5) One of Fay's patent automatic band-saw setting machines.

*Tools*

*Tools required for the Joiner's and Shipwright's Shop.*

- One of Robinson's latest four-headed planing machines, to take 24 in. in width and not less than 6 in. in depth.  
 (2) One of Robinson's latest self-acting circular saw benches, to take a 36 in. saw.  
 (3) One of Robinson's breaking-down machines, to take not less than a 48 in. log.  
 (4) One emery saw sharpening machine.  
 (5) One band-saw sharpening machine.  
 (6) One grinding stone for planing machine knives.  
 (7) One traveller for lifting logs for breaking down sawing machine.

In addition to the above machines required in the different shops, suitable lifting appliances must also be provided in each shop that the work may be carried out with despatch and economy. I have not given a list of those machines already in use here in this report, because they are mentioned in the printed scale of Dock Dues.

*Fire Engine.*

In the event of a fire taking place here I think some quick and efficient means of extinguishing it should be provided, such as a steam fire engine, or an oil engine, because the water service we have laid throughout the place would be inadequate if a large fire were to occur; and if it should happen in the night, perhaps a water pump driven by an oil engine would be the quickest to get into action.

*Charges for the use of Machines and Appliances.*

It will be seen in the charges for the use of machines and appliances that they appear excessive. I recommended them because I wanted them to be prohibitive, for the following reasons: I found, when no charges whatever were made, applications came from all quarters for the loan of our tools, and these charges have had a beneficial effect; but in cases of great urgency, when the use of our appliances is necessary, I try to soften these charges down to that which is reasonable and fair for private enterprise; but so far as the Public Works are concerned, no charge whatever has been made for the use of our machinery by any branch of the Public Service that we have been doing work for. A short time since I computed a scale of charges for machinery, which I forwarded to the Head Office, showing it to be 7 per cent. on the total cost of work done. Such charges in my opinion should be made on all the accounts we render.

*Insufficient Wharfage Accommodation.*

Experience has shown, through want of more wharves, we are obliged to put vessels side by side, which adds to the cost of repairs through having to get at them with difficulty. If some means could be devised which could give us more accommodation in this direction it would considerably facilitate repairs which have to be effected, and also to remove the coal wharf to more convenient and commodious positions.

*New Pumping Machinery for Docks.*

It is well to bear in mind the fact that our present pumps are corroding away fast, and before long the necessity for new pumping machinery will have to be considered; and in my opinion every consideration should be given to that system which would offer the least difficulties in effecting repairs or renewals. Our present pumps present such difficulties in this direction that I would recommend the centrifugal system for consideration.

It must not be understood that what is asked for now is imperatively necessary to be all at once supplied, but that it may be realised in say five years by gradual and judicious development, because workshops will have to be extended in the first place to receive the tools asked for.

*Railway throughout the Works and Docks.*

The railway throughout this place, as contemplated by the Engineer-in-Chief, should in my opinion be proceeded with as speedily as possible, as it will considerably lessen the cost of moving about heavy pieces of machinery from one shop to another and to its final destination.

*Removal of Rock.*

We are proceeding very fairly with this work, and I may say that sufficient has been cleared, and a quantity of stone already dressed, to enable those workshop extensions asked for to be gone on with at once.

*Ordering Stores.*

If some better means could be introduced which would enable us to be supplied more readily with what we require, such work requiring it could be more rapidly expedited, as we practically keep no stock in our store, and are entirely dependent on the contractors for our materials. We must either keep a larger stock, or some quicker means of getting what is required will have to be introduced. Might I venture to suggest that I be allowed to get out orders in triplicate, and send one to the contractor, another to the Head Office, and retain the other in this office. It would certainly expedite the work, and would not in any way lessen the controlling functions of the Head Office over this place.

*Wages.*

I believe a higher rate of wages prevails here than in outside shops. Take joiners: The highest rate is 9s. per day; we give 10s. Take labourers: Our lowest rate is 7s., and the unfairness to the skilful labourer is that he only gets the same as the absolutely unskilled, and I may say comparatively useless, one. I therefore think that these should start at a lower rate—say 6s. a day.

*Accident Pay.*

In the event of an accident happening here, it is usual for the Government to allow pay to the sufferers in the following manner:—For the first month, full pay; the second month, two-third's pay; and the third month, one-third pay. I very much regret to say workmen frequently, for the most trivial accident, run away for a doctor's certificate, upon which they claim accident pay. If the same thing occurred to them in a private firm, where no such allowance is given, they would never think of knocking off for it. I would, therefore, recommend for consideration the abolition of these concessions. Should it not be deemed advisable to do so, might I ask that a departmental doctor shall, in all cases of accidents, be consulted, and pay granted only on his certificate; because I find it difficult myself to discriminate between the real and apparent accidents, so as to enable me to make satisfactory recommendations.

EDWD. J. H. BROAD,  
 General Superintendent, Fitzroy Dock.

15 December, 1898.

MONDAY, 19 DECEMBER, 1898.

The Committee met at Mr. Cruickshank's Office at 2 p.m.

PRESENT :—

MR. R. POLLOCK, Chairman.  
MR. A. B. PORTUS. | MR. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Secretary reported that Mr. Fletcher, in revising his evidence, had inserted a statement which he had not given when before the Committee. It was decided that this be omitted from the notes of evidence.

Mr. Cruickshank reported the receipt of a letter from Mr. Hoey, stating that his evidence was given for the purposes of the Committee only, and asking that it should not be made the subject of conversation, especially to the officials at Fitzroy Dock. The Secretary was directed to reply that as Mr. Hoey had made certain charges against the Foreman, the Committee had thought it only fair and just to give them an opportunity of replying.

The Committee then discussed the evidence and considered the draft of their report.

At 5 p.m. the meeting was adjourned until 2 p.m. on Wednesday next.

WEDNESDAY, 21 DECEMBER, 1898.

The Committee met at 2 p.m. at the Office of Mr. Cruickshank.

PRESENT :—

MR. R. POLLOCK, Chairman.  
MR. A. B. PORTUS. | MR. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Committee then considered their draft report.

At 5 p.m. the meeting was adjourned until 2 p.m. on Wednesday, the 28th instant.

WEDNESDAY, 28 DECEMBER, 1898.

PRESENT :—

MR. R. POLLOCK, Chairman.  
MR. A. B. PORTUS. | MR. W. D. CRUICKSHANK.

The minutes of the previous meeting were read and confirmed.

The Committee then further considered their draft report, after which they adjourned outside to inspect the Fire-extinguishing Appliances. The Watchman was asked to put a hose on the hydrant outside the Manager's office. At the end of five minutes all was ready (one length of about 50 ft.) to be screwed on to the hydrant, which was in its place; but the former would not fit, and a fresh length had to be obtained, adjusted, and fixed, when the water was turned on ten minutes from starting time. The jet was found to fall rather short of the strength necessary for the proper command of the Boiler-shop, to the roof of which it was directed.

At 5 p.m. the Committee adjourned to a date to be fixed.

WEDNESDAY, 4 JANUARY, 1899.

The Committee met at 2 p.m. at Circular Quay, and proceeded by the "Ithena" to Cockatoo Island.

PRESENT :—

MR. W. D. CRUICKSHANK.  
MR. A. B. PORTUS.

The Committee inspected the plan of the proposed extension of the Workshops in company with Mr. Broad, the Manager.

They then continued the consideration of their report.

At 5 p.m. the Committee adjourned.

## COPY OF OFFICIAL PAPERS RESPECTING THE APPOINTMENT AND SALARY OF MR. BROAD AS GENERAL SUPERINTENDENT FITZROY DOCK.

*Minute Paper.*

*Subject:*—Superintendent, Fitzroy Dock Works, Cockatoo Island.

Engineer-in-Chief, Harbours and Rivers, to The Under Secretary for Public Works.

Department of Public Works, Harbours and Rivers Branch, Sydney, 21 July, 1893.

WHEN reporting on the retrenchment in the staff under my direction last week, I referred to a proposed change in the management at Fitzroy Dock. I, however, made no recommendation then until I was in a position to recommend a good successor to Mr. Hoey, who, I proposed, should be retired on a pension. In justice to Mr. Hoey I must state that I have no fault to find with his management. He is an old and faithful servant, and has carried on all work entrusted to his care in a zealous and most efficient manner; but as it is imperative that our present staff should be reduced, the only way I can see for doing so with the least amount of hardship is to let those retire who by age and service are entitled to a pension, and promote to their places other officers from the staff who would otherwise have to be retired without any pension. This is, however, on the supposition that there are other officers fitted for the vacant position.

In this case care must be taken to secure a man of experience in general engineering practice, and one who can manage a body of men with tact.

From

From my own knowledge, as well as from inquiries made, I believe that the officer best fitted to take this position is Mr. E. J. H. Broad, now a mechanical draftsman in this branch. Mr. Broad has been a little over thirteen years in the Service. The first portion of his time he was in the Railway and Tramway Department in the position of Foreman of Workshops for some time, and the officers of the Department speak highly of his capabilities. He has had long practical experience in England as manager. Mr. Broad's age is about 53.

I therefore recommend that Mr. Hoey be retired on a pension after the usual leave of absence, and that Mr. Broad be appointed to succeed him at a salary of £400 per annum.

C. W. DARLEY.

Submitted.—J.B., 21/7/93. Approved; but Broad to be put in temporary charge only at his present salary until such time as I can further consider who should be permanently appointed.—W.J.L., 21/7/93.

*Minute Paper.*

*Subject* :—Recommending permanent appointment of Mr. E. J. H. Broad as General Superintendent of Fitzroy Dock.

The Engineer in Chief for Harbours and Rivers to The Under Secretary for Public Works.

Department of Public Works, Harbours and Rivers Branch, Sydney, 4 April, 1894.

Now that the Appropriation Act is passed, and Mr. Hoey's leave has expired, I respectfully suggest that the matter of appointing a permanent officer as General Superintendent of the Dock Establishment be also reconsidered, and I see no reason whatever to depart from the recommendation I made on the 31st July last (*vide* M.P., No. 93-6,696), wherein I nominated Mr. E. J. H. Broad for this position. Since Mr. Broad assumed temporary charge of this important establishment, he has shown himself in every way possible well qualified to discharge the onerous duties annexed to the appointment, and I therefore have pleasure in again submitting that he be permanently appointed General Superintendent, at the salary voted on the Estimates for this year, viz., £350 per annum. I hope, however, that the Minister will be able to grant Mr. Broad an increase on the above salary at an early date, as the sum voted is very little more than he was receiving as a draftsman, when he had very little responsibility; it is also less than some dredge-master's draw, yet his position is far more onerous and responsible than that of any dredge-master.

As this position has always carried an allowance in lieu of quarters, I would ask the Minister to approve of Mr. Broad receiving the usual allowance of £50 per annum, as there are no quarters for him provided on the Island.

C. W. DARLEY.

List for decision—J.B., 2/4/94. Submitted to Minister, Order No. 1,514, and marked by him as under :—“He may be appointed at £350, but the allowance to stand over.”—J.B. I presume Executive authority will now be sought for Mr. Broad's appointment.—C.W.D., 20/4/94.

The Under Secretary, Public Works. P.S.—In view of the Civil Service Board's request of the 16th instant, I beg to point out that no other officer in the Department has any claim for the vacancy as General Superintendent of the Docks. Mr. Broad has fourteen years' service, and is at present in receipt of a salary of £312 10s. per year on the temporary staff. It is greatly to be regretted the voted salary for General Superintendent is such an inadequate one, viz., £350 per annum, especially seeing that the Dockmaster receives £290 and quarters, fuel, and light, valued at quite £80 per annum, equal to £370, and the Foreman Boilermaker and Foreman Fitter respectively are paid a yearly increment of £308. I respectfully submit that the anomalous position in which the General Superintendent is placed is most apparent, more particularly when it will be observed that one of the Foremen receives higher pay than Mr. Broad, and the other two are nearly as well remunerated.—C.W.D., 27/4/94.

The Under-Secretary, B.C.—Separate paper recommending the appointment of Mr. Broad sent to Civil Service Board (94/1,491).—D.C.McL., 7/5/94.

*Minute Paper.*

*Subject* :—Recommending permanent appointment of Mr. E. J. H. Broad as General Superintendent of Fitzroy Dock.

The Engineer-in-Chief for Harbours and Rivers to The Under Secretary for Public Works.

Department of Public Works, Harbours and Rivers Branch, 94/4091, Sydney, 4 May, 1894.

Now that the Appropriation Act is passed, and Mr. Hoey's leave has expired, I respectfully suggest that the matter of appointing a permanent officer as General Superintendent of the Dock Establishment be also reconsidered, and I see no reason whatever to depart from the recommendation I made on the 21st July last (*vide* M. P. No. 93/6,696), wherein I nominated Mr. E. J. H. Broad for this position. Since Mr. Broad assumed temporary charge of this important establishment he has shown himself in every possible way well qualified to discharge the onerous duties annexed to the appointment, and I therefore have pleasure in again submitting that he be permanently appointed General Superintendent, at the salary voted on the Estimates for this year, viz., £350 per annum.

In view of the Civil Service Board's request of the 16th ultimo, I beg to point out that no other officer in the Department has any claim for the vacancy as General Superintendent of the Docks.

Mr. Broad has fourteen years' service, and is at present in receipt of a salary of £312 10s. per year on the temporary staff.

C. W. DARLEY.

Recommended.—J.B., 7/5/94. Secretary, Civil Service Board.—B.C. The Civil Service Board concur, but desire to point out that, for purposes of superannuation or retiring allowance, Mr. Broad can only be allowed to count his service from the date of his permanent appointment.—J. H. STORREY, Chairman. The Under Secretary for Public Works.—B.C., 9/5/94. From what date is it proposed to appoint him?—J.B., 14/5/94.

Mr. Darley. From the 1st January, 1894.—C.W.D., 15/5/94.

The U.S., P.W. See approval of Minister on 94/3,162. Prepare Executive Minute.—J.B., 15/4/94.

Engineer-in-Chief,—

Sir,

Fitzroy Dock, 31 May, 1894.

I most respectfully desire to draw your attention to the low salary I am receiving, viz., £325 per annum, and that my predecessor, Mr. Hoey, received £490, with house allowance, £50—in all £540 per annum.

The duties and responsibilities have in no way diminished, and I believe I have given every satisfaction in the performance of those duties.

I therefore hope you will take this into your favourable consideration, and remunerate me consistently with my abilities and experience.

Yours, &c.,

EDWD. J. H. BROAD.

I have already on more than one occasion urged that Mr. Broad be paid a salary commensurate with the duties and responsibilities of his office. I consider he should be allowed an equal rate to his predecessor.—C. W. DARLEY, 1/6/94. The Under Secretary Public Works, B.C. Not dealt with when Minister left office; what further is to be done?—13/ /94. The Minister has dealt with this, as Mr. Darley is aware.—J.B., 23/8/94. Seen.—C.W.D.—20/8/94. Put by.

*Minute Paper.*

*Subject* :—Dock Establishments, Port Jackson. Recommending payment of increased rate of salary to the General Superintendent of the Docks, as passed by Parliament.

The Engineer-in-Chief for Harbours and Rivers to The Under Secretary for Public Works.

Department of Public Works, Harbours and Rivers Branch, Sydney, 23 January, 1893.

PARLIAMENT has voted the sum of £2,469 on the Estimates-in-Chief for the year 1895—for the period from the 1st January to the 30th June—for the Dock Establishments

Included in this sum is an amount of £200, half-year's salary for the General Superintendent, and I beg to recommend that immediate steps be taken to advise the Treasury of this increased rate of salary to be paid to Mr. E. J. H. Broad as from the 1st instant.

C. W. DARLEY.

Salary voted 1894 ... .. £350.

1895 ... .. £400.

See Minister's approval on 95/951.—A.F.T., 29/1/95. Put by.

1899.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

ABORIGINES.

(REPORT OF BOARD FOR 1898.)

Presented to Parliament by Command.

Printed under No. 1 Report from Printing Committee, 3 August, 1899.

The Aborigines Protection Board to The Principal Under Secretary.

Office of Board for Protection of Aborigines,

Sydney, 18 April, 1899.

Sir,

In accordance with the established practice, we have the honor to submit, for the Chief Secretary's information, the following Report regarding the work undertaken by us during the year 1898, together with information as to the number, location, and present condition of the Aborigines throughout the Colony, and the means adopted by us for their relief, so far as the funds placed at our disposal would admit.

We regret to have to record the death, on the 23rd August last, of Mr. James Hill, who was appointed to a seat on the Board on the 20th September, 1895. Mr. Hill was a regular attendant at the Board's weekly meetings, and always evinced an interest in matters concerning the welfare of the Aborigines.

Mr. William Charles Hill accepted a seat on the Board to fill the vacancy thus occasioned, his appointment dating from the 16th September last.

The statistics of the Aboriginal population of the Colony (*see Appendix A*), compiled from information collected by the police, on the 15th October last, show a total of 3,230 full-bloods and 3,661 half-castes—6,891 in all.

These figures exhibit, as compared with the numbers for the previous year, a total decrease of 194—192 full-bloods and 2 half-castes.

The deaths amongst the full-bloods exceeded the births by 67, the numbers being 144 and 77 respectively. On the other hand, there were 108 more births than deaths amongst the half-castes, the former reaching a total of 180, and the latter 52. These figures would, however, show a net increase in the whole Aboriginal population instead of a decrease. The deficiency unaccounted for is probably due to the difficulty experienced in taking a correct census, owing to the migratory habits of the Aborigines, and by the border tribes crossing into the other colonies.

The number of full-bloods has declined from 6,540 in 1882, the year in which the first of such census returns was specially taken, to 3,230 at the present time, an average annual decrease of 206. On the other hand, the half-castes have increased from 2,379 to 3,661, an average annual increase of 80.

A total sum of £16,591 1s. 11d. was expended by the Government on behalf of the Aborigines during the year (*see Appendix C*). This includes an expenditure of £11,801 4s. 5d. by the Board, £876 14s. 7d. by the Chief Medical Officer, £936 16s. 2d. by the Minister of Public Instruction, £83 6s. 9d. by the Chief Secretary, and £2,893 from the Vote for Stores.

The expenditure by the Board is given in detail (*see Appendix D*). A sum of £9,565 14s. 8d. was expended in the purchase of food, clothing, medical comforts, boats and gear, fencing wire, farming implements, seed, material for the erection and improvement of dwellings, &c.; £222 14s. 1d. for the fares of Aborigines travelling on the railway lines; and £2,012 15s. 8d., in liquidating claims incurred specially in connection with the Cumeroogunga (Murray), Warangesda (Murrumbidgee), and Brewarrina (Barwon), Aboriginal Stations.

At the following places the Aborigines have been assisted to erect comfortable dwellings for themselves:—Burraborang, Cowra, Forster, Goonal, Gulargambone, Conargo, Singleton, Uralla, Walcha, Wellington, and Wilcannia. The practice followed has been to supply tools, nails, and roofing iron, the Aborigines themselves procuring the necessary timber and providing the labour.

Six additional reserves, as under, aggregating an area of 869 acres, have been set apart during the year for the use of Aborigines. The area of the reserve at Runnymede has also been increased from 100 to 115 acres :—

Dubbo	...	...	...	...	...	...	19 acres.
Sackville Reach	...	...	...	...	...	...	40 "
Colimo	...	...	...	...	...	...	245 "
Mungindi	...	...	...	...	...	...	100 "
Kunopia	...	...	...	...	...	...	100 "
Euroka Creek	...	...	...	...	...	...	365 "

The reserve of 34 acres on the Minnamurra River, being subject to inundation by flood, and therefore of no use for the purpose for which it was set apart, has been revoked. The area of the reserve at Narrabri has also been reduced from 5,200 to 900 acres.

On the 31st December last there were 118 reserves for Aborigines in different parts of the Colony, with a total area of 23,480 acres.

In numerous instances the land is successfully cultivated by the Aborigines, and their efforts have been encouraged by the Board as far as practicable by the supply of implements, seed, and other assistance. Several of the reserves have been enclosed with good substantial fences, the Board supplying the wire, and the Aborigines providing the posts and carrying out the work.

The total number of Aboriginal children now receiving instruction is 612—595 at public schools and schools established specially for them, and 17 privately.

The Board continue to offer every inducement to the Aborigines to send their children to school, chiefly by providing decent clothing for all those who regularly attend, and granting them a weekly ration of food. It is to be much regretted that at Gulargambone and Wollar, owing to objections raised by parents of European children, the Minister of Public Instruction has thought proper to direct that the attendance of Aboriginal children at the local public schools should be discontinued; notwithstanding the fact that the children were habitually clean, decently clad, and conducted themselves with propriety both in and out of school. The difficulty at Gulargambone has since been overcome by a number of local residents undertaking to erect a special school building on the reserve at that place, and the Department of Public Instruction agreeing to provide a teacher.

The school at Barrington, which was closed in 1897, has been reopened. The school at Wallaga Lake, closed in 1895, is also once more in operation.

Visits of inspection are periodically made by officers of the Department of Public Instruction to the schools established especially for the instruction of Aboriginal children at Brewarrina, Cumeroo-gunga, Forster, Googeedee (Brungle), Grafton, Mulyan (Cowra), Rolland's Plains, Warangesda, and Wauchopa. The following extracts from the reports furnished with regard to the Cumeroo-gunga and Warangesda schools are quoted as instances of the good work that is being done :—

Cumeroo-gunga.—“This school is very well conducted, and the results obtained thereat are far in advance of those achieved in several of the ordinary public schools.”

Warangesda.—“In their general appearance and conduct the pupils bear favourable comparison with white children attending ordinary schools.”

The police have been successful during the year in obtaining convictions against a number of persons in the Metropolitan District for supplying intoxicating liquor to Aborigines; also in the following country districts :—Brewarrina, Cobar, Lismore, Moree, Murwillumbah, and Tamut. Prosecutions were also instituted at other places, but on the grounds of insufficient evidence the cases were dismissed.

At the Home for Aborigines, in the Clarence District, satisfactory progress has been made during the year in the cultivation of the land and in effecting improvements—clearing, ringbarking, fencing, excavation of large underground tank, &c. A total sum of £86 18s. 8d. has been realised during the twelve months by the sale of farm produce. One of the satisfactory results achieved by the establishment of the Home is the fact that by a thorough training in farm work, and the observance of a regular system of working hours, the Aborigines now find very little difficulty in obtaining employment in the district at good wages. The number of Aborigines in residence at the Home on the last day of the year was 67.

A number of improvements have been made during the year at the Cumeroo-gunga Aboriginal Station, Murray River. The whole of the dwellings have been put in good repair and given a coat of lime; ornamental trees have been planted along the avenues; floors have been laid in some of the cottages; additional fencing has been erected; 200 acres suckered, and 75 acres cleared and grubbed. Two hundred and ten acres were also sown with wheat, giving a net return of 10 tons of hay and 260 bags of wheat. Seven additional farm blocks were taken up by Aborigines, raising the total to twenty. These blocks are all being cleared and cultivated, and very satisfactory progress is being made upon them.

At

At the Brewarrina Station about 1,000 acres have been suckered and other minor improvements effected. The total amount of revenue derived during the year was £195 15s. 2d., particulars of which will be found in Appendix H. As the total expenditure for all supplies and services was £211—a sum larger by £15 only than the revenue—the station may now be said to be self-supporting, a condition of affairs which the Board consider eminently satisfactory. Owing to the continuous drought it became compulsory at the end of the year to remove most of the large stock to Dubbo for feed. The conduct of the Aborigines has been good, and the Local Board express satisfaction with the attention given by the manager and matron to their duties.

Owing to representations made to the Board as to the very insanitary condition of the Aborigines' dwellings and surroundings at the Brungle Aboriginal Station, and the neglect and inaptitude of the manager for his duties, a personal visit of inspection to the Settlement by one of the Members of the Board, accompanied by the Secretary, was decided upon. The statements made to the Board were fully borne out, and as a result it was decided to at once make a change in the management, and to arrange for the early carrying out of a number of very desirable alterations with a view to improving the condition of the Settlement. The new manager took charge on the 14th November. Permits were obtained from the Lands Department to enable the Aborigines to obtain timber for new dwellings from one of the district Forest Reserves, and upon the completion of the harvesting of the Station wheat crop the work of cutting and splitting the material was commenced. It is proposed to provide all the inmates with new dwellings, and to have the same erected upon a more suitable portion of the Reserve.

It having been brought under the notice of the Board that a number of able-bodied persons, many of whom should be classed as Europeans rather than as Aborigines, were in residence at the Aboriginal Stations, it was decided to issue a Circular to all Local Boards and Managers of such Stations, impressing upon them the desirability of furthering by every means in their power the aim of the Board, that all youths and girls should, after receiving instruction, and when of an age fit to work for a livelihood, be placed in suitable service or induced to accept it. It was at the same time again pointed out that the reasons for forming such establishments were simply that they might be asylums for the aged, crippled, or infirm; that the children might be provided with schooling and instruction; and that a home might be provided for Aborigines where they could find means to labour for the support of their families; not a place where people—not Aborigines—of all ages and both sexes could idle their lives away as pensioners on the public.

Since the issue of this Circular the manager of the Warangesda Station has reported that he has sent several half-caste girls to service, and that they were giving satisfaction. The manager at Brungle also states that a number of young men and women have been induced to leave the Station and accept employment in different parts of the country.

The receipts from produce at the various Aboriginal Stations during the year reached a total of nearly £600. This money was lodged to a special account opened with the Commercial Banking Company of Sydney (Limited), on authority obtained from the Treasury, and expended in paying claims for labour, farm horses and waggons, farming implements, provisions, tools, fencing wire, sheep, seed, clothing, building material, &c. A detailed statement will be found in Appendix H.

The receipts from the Sale Stores at the Cumerogunga and Warangesda Aboriginal Stations totalled £421 16s. 10d., and the expenditure £409 15s. (*See Appendix I.*)

A sum of £318 13s. 10d. was, on the 31st December, lying to the credit of a Trust Account, opened by the Board with the Government Savings Bank, being the amount of wages received in trust from employers of a number of Aboriginal children apprenticed from the stations. The Board are now taking steps in a number of cases with a view to the money being expended for the benefit of those entitled to it.

In conclusion, the Board desire to express their appreciation of the valuable assistance cheerfully rendered them by the several District Boards of Advice and the Members of the Police Force generally in furthering their aims for ameliorating the condition of the race.

## APPENDIX K.

## REPORTS OF LOCAL BOARDS.

Sir, Aborigines' Protectorate, Local Board, Brewarrina, 5 April, 1899.

I have the honor to submit herewith the report of the Local Board for the year 1898.

Owing to the able-bodied aboriginal men having been on the Station for only short periods during the year, the manager could only get about one-third of the ringbarked country suckered, say, 1,000 acres. In addition to this, the ordinary work on the Station was satisfactorily attended to.

There were 50 people (29 full-bloods and 21 half-castes) sleeping on the Station the last night of the year. There was 1 birth, 4 deaths, and 2 marriages during the year. With the exception of an outbreak of measles, the health of the people was generally good. The measles affected 21 children and 9 adults; but, fortunately, through medicine being supplied from the Brewarrina Hospital, all the patients recovered.

The number of children on the School Roll was 11 girls and 8 boys, and when examined in May the classification of the three classes was very creditable.

The stock at the end of the year consisted of 698 mixed sheep, 7 cattle, and 6 horses. In addition to these there are 13 horses and 25 cattle at Dubbo, having been sent there for grass. There were 669 sheep shorn, yielding 5,063 lb. wool, giving a net return of £112 3s. 9d., and in addition to this, sheepskins and other oddments of wool realised £16 3s. 10d.

There were sold during the year 7 cattle for £16, 2 horses for £14, and 5 pigs for £5 10s. Three hundred and eighty-nine sheep were killed for rations during the year.

Two paddocks of about 500 acres each were leased for grazing large stock for three months for the sums of £21 and £19 respectively. The sum of £4 2s. was also received for agistment of sundry stock.

The year generally was a very dry one, especially so at the latter end, and in December it became compulsory to remove most of the large stock for grass. These were trucked at Byrock and sent on to Dubbo, where, owing to the continued severe drought, they still remain. The losses of stock owing to the drought were 7 horses, 8 cattle, and a few sheep, and unless a favourable change soon takes place more losses are sure to occur.

The conduct of the residents generally has been good.

The Manager and his wife (Mr. and Mrs. Hopkins) continue to give every attention to their duties, and the Board are very pleased with their management.

I have, &c.,

H. L. CATHIE,

Chairman, Local Board.

The Secretary, Aborigines' Protection Board, Sydney.

Dear Sir,

Grafton, 19 January, 1899.

It is our pleasing duty to again forward you our annual report for the year ending 31st December, 1898.

The number of aborigines at the Home at the end of the year was 67, and the average population during the year 50, the attendance at the school being 13 children.

At present the cattle number 43 and horses 6, the pasture being very good all the year round, and more than ample for the stock.

The present crops of maize, amounting to some 25 acres, were well killed, and early in the season showed great promise, but continuous dry weather has militated largely against the return; but the late rains will no doubt slightly increase the yield, and the crop turn out better than we anticipated.

A good deal of clearing and ringbarking has been done on the lower lands adjoining the cultivation, and half a mile of two-railed fence erected.

The large underground tank excavated by the Manager has been cemented and properly covered in and cleaned out. This is a very valuable asset to the Home, and the cost very small in comparison to its value.

The net return given by the Manager for the year is £92 4s. 4d., but we anticipate when more land is properly under cultivation that a much better result will accrue.

Upon our official visit the other day, a site was picked out for a barn, and orders given to remove certain unsightly sheds and timber which have accumulated while work was in progress on the farm.

The school attendance is not satisfactory, and the constant absence for long periods spoil the records of inspection.

The inmates seem happy and contented, although occasionally drunkenness takes place in town, which seems almost impossible to check.

The Manager and Matron deserve every credit for their untiring energy in making the Home so successful an undertaking.

Yours faithfully,

THOMAS PARKER, Chairman.

JAS. C. WILCOX, } Members.

GEO. CRISPIN, }

The Chairman, Aborigines' Protection Board, Sydney.

Sir,

Aboriginal Station, Brungle, 31 March, 1899.

I beg to submit the annual report of this Station for the year 1898.

The gentlemen comprising the Local Board have met eight times during the year, and have transacted a good amount of business on matters generally for the benefit of the Station.

The average attendance of children at the school has been 19.6—boys, 9.7; and girls, 9.9. The school has been closed on two occasions (two weeks each occasion) on account of the teacher's illness, by order of the Minister of Public Instruction. The District Inspector's report speaks very favourably of the general improvement of the school children all round.

The health of the Station has been fairly good during the year. The arrangement made with the District Government Medical Officer gives every satisfaction, and he has paid his monthly visits regularly.

*Births.*—Full-blood, 1 male; half-castes, 3 males and 2 females; total, 6.

*Deaths.*—Full-blood, 1 male; half-castes, 2 females; full-blood, 1 female; total, 4.

The

The conduct of residents has been only fair, but towards latter end of year one young man was expelled for misconduct, which seems to have had a beneficial result to Station.

One of the greatest of the vices of the Station (heading pennies) is now entirely eradicated, and the residents seem to be settling down to more healthy pastimes such as cricket, football, &c.

A good wire fence has been erected (about 12 chains), dividing the wheat paddock from the house paddock, and also about 14 chains have been erected dividing the grass paddock from the wheat paddock.

About 44½ acres of land were put under the plough for wheat crop, and the result has been fairly good. From 44½ acres 900 bushels of fairly good wheat was obtained, or an average of about 20 bushels to the acre. We also got nine bags of inferior or chick wheat.

We have two stacks of first-class clean straw, also a small stack, the whole comprising about 30 tons, which we intend to dispose of, if possible.

There are 3 tons of hay under the shed, and we will not want to purchase feed for our horses during ploughing time and the coming winter.

The gardens belonging to the Aborigines have been a failure, as the residents do not appear to care for the work of cultivation growing vegetables. The gardens originally were scattered over three paddocks. About 3 acres of ground have now been ploughed for gardens, and two men have been appointed, whose duty will be to have control of gardens, growing vegetables under the supervision of the Manager for the whole of the Station. The garden has been enclosed with a three-wire fence.

We have a good single-furrow plough, one set of harrows, also a good scarifier for corn-growing.

There are three horses on the Station, and they are in good condition now for ploughing, &c.

A good-sized wheat-shed has been erected, 22 feet long, 9 feet wide, and 9 feet high, now holding our 239 bags of wheat. This store is built 18 inches from the ground, and is perfectly mouse and rat proof. A store for rations has also been erected, 12 feet long, 8 feet wide, and 8 feet high, and fitted up inside with flour and sugar bins, shelving, &c.

A number of the young men and women have left the Station to try and better themselves. Some have gone to the Shoalhaven fossicking for gold, while others have gone to different places rabbiting; so, practically speaking, we have only the old men, women, and the children, and a few able-bodied men about the Station at the present time. The whole of the residents were camping away from the Station at Christmas time along the banks of the river, but, becoming a nuisance by preventing stock from grazing and danger from their camp fires, they were ordered to return to the Station.

J. H. HUBBARD,  
Manager.

Submitted.—J. JONES, Member of Local Board, 6th April, 1899. The Secretary, Aborigines' Protection Board, Sydney.

Dear Sir, Aboriginal Station, Cumeroogunga, Murray River, 20 January, 1899.

Herewith statistics as requested:—

Improvements have been made during the year as follows:—Formation has been made in Cooper-street, and proper fall given to gutters, so that no water lies on the street now for any time. Ornamental trees have been planted each side of Cooper and George Streets, and enclosed in high tree-guards. The trees are making good progress. The whole of the cottages (twenty-nine), with store and church buildings, have been whitewashed, which gives the village a bright and animated appearance. Four new floors have been laid in different cottages, part of dormitory removed and erected next Manager's residence. About 12 chains picket fencing erected round yards attached to cottages; 200 acres suckered; 75 acres cleared and grubbed; 130 chains five-wire fence erected round farm blocks.

Two hundred and ten acres were ploughed and sown with wheat—70 acres by station and 140 acres by the farm block men, giving a net return of 10 tons hay and 260 bags wheat.

Seven farm blocks were taken up during the year, making a total of twenty blocks now being cultivated and cleared, and on which they are making very satisfactory progress. More blocks would be taken up, but no land is available.

The school has made good progress during the year, as an extract from Mr. Inspector Nolan's annual report to the Public Instruction Department will show:—"The school at Cumeroogunga is very well conducted, and the results obtained thereat are far in advance of those achieved in several of the ordinary Public Schools." The average attendance for the year is as follows:—Boys, 29·8; girls, 26·4; total, 56·2. Number on roll, 64. A number of white children also attend the school, but they are not included in the figures given.

Births, 16; deaths, 7; marriages, 7.

Stock includes 166 sheep, 15 horses, 32 cattle, and all are in good condition.

Yours respectfully,  
GEO. H. HARRIS,  
Manager.

The Honorary Secretary, Local Board, Moama.

Forwarded to the Aborigines' Protection Board. The Local Board have visited the Station twelve times, and have held seventeen meetings during the year.—A. E. KINSEY, Chairman, C. L. BLAIR, Hon. Secretary, Local Board, Moama. The Secretary, Aborigines' Protection Board, Sydney.

Aborigines' Protectorate, Local Board,  
Darlington Point, 18 April, 1899.

Sir,

In compliance with your request I beg to report as follows:—

During the year Mrs. Smith, who had rendered faithful service as Dormitory Matron, resigned, and was succeeded by Miss Maspero, who, after only three months occupancy of the position, also resigned, and was succeeded by the present Matron, Mrs. Thorne. Mrs. Thorne has given complete satisfaction.

Mr. and Mrs. Pridham, Manager and Matron, who had for nine years been identified with the Aboriginal cause, and who had given three years of faithful and diligent service to Warangesda, also resigned their positions, and were succeeded by Mr. and Mrs. Macdonald. Mr. Macdonald has already proved himself to be an earnest worker.

In consequence of the severe drought which has devastated Riverina, about 70 acres put under wheat turned out to be a complete failure. Throughout the whole year grass was very scarce, and it was only with extreme difficulty that the stock were kept alive.

A vegetable garden, securely fenced, has been started in close proximity to the well, so that it might be irrigated. It is hoped that this enterprise will minister to the health of the residents, and materially reduce the expenditure for flour, &c.

A substantial fence has been erected between the Station and a neighbouring selector. A large quantity of dead timber has been gathered and burned, fences have been repaired, and much useful work of different kinds has been accomplished.

The conduct of the residents has been satisfactory on the whole, and their health has been good. The Station has always presented a clean and tidy appearance.

Several girls have been provided with suitable situations, and are reported to be doing well. The number of half-castes (men) has decreased during the year.

The marked improvement in the appearance of the girls, and of everything connected with the Dormitory reflects the greatest credit upon Mrs. Thorne.

The school continues to make satisfactory progress. During the year the Local Board endeavoured to secure the creation of a suitable residence for the teacher, and although their representations met with a definite promise that a residence would be erected without delay nothing has yet been done, and the teacher, with his family, has to continue to live in a house that is unfit for habitation.

G. R. F. NOBBS,

Hon. Secretary, Local Board,

Warangesda, Aboriginal Station.

The Secretary, Aborigines' Protection Board, Sydney.

(THIRD SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## INSPECTOR-GENERAL OF THE INSANE.

(REPORT FOR YEAR 1898.)

*Printed under No. 3 Report from Printing Committee, 22 August, 1899.*

The Inspector-General of the Insane to The Chief Secretary.

Sir,

Lunacy Department, Inspector-General's Office, Gladesville, 30 June, 1899.

I do myself the honor, in accordance with the 81st section of the Lunacy Act of 1898, to submit for your information a report on the state and condition of the Hospitals and other Institutions for the Insane for the year ending 31st December, 1898.

I have, &amp;c.,

ERIC SINCLAIR,

Inspector-General.

ON the 31st December, 1898, the number of insane persons under official cognizance was 4,073, and their distribution was as follows:—

Institution,	Number on Register.			Number on Leave.		
	Male.	Female.	Total.	Male.	Female.	Total.
Hospital for the Insane, Gladesville .....	523	344	867	14	27	41
Do Parramatta (Free) .....	676	382	1,058	9	9	18
Do do (Criminal) .....	45	8	53	.....	.....	.....
Do Callan Park .....	458	413	871	16	34	50
Do Newcastle .....	165	144	299	2	1	3
Do Rydalmere .....	352	149	501	.....	1	1
Do Kenmore .....	250	123	373	3	5	8
Licensed House for the Insane, Cook's River.....	15	18	33	1	.....	1
Do do Ryde .....	.....	8	8	.....	1	1
Do do Picton .....	.....	1	1	.....	.....	.....
South Australian Hospitals .....	5	4	9	.....	.....	.....
Total.....	2,479	1,594	4,073	45	78	123

The number on 31st December, 1897, was 3,957, so that the increase during the year was 116. This is only slightly over the average for twenty years, as shown in the following return:—

Year.	Increase.	Year.	Increase.	Year.	Increase.
1879.....	95	1886.....	74	1893.....	113
1880.....	88	1887.....	104	1894.....	162
1881.....	119	1888.....	76	1895.....	133
1882.....	98	1889.....	76	1896.....	125
1883.....	96	1890.....	128	1897.....	112
1884.....	121	1891.....	32	1898.....	116
1885.....	119	1892.....	178		

The total for twenty years is 2,165, or an average of 108 a year. Up to 1891 the average annual increase was 94, but the financial depression through which the Colony soon after passed induced an unusual amount of insanity, which has, till now, influenced the statistics. The increase for 1898—116—

may

may be accepted as a normal rate when the growth of the population of the Colony is considered. As the population increases, a proportionate addition to the number of the insane under care must be expected, but so long as this is not greatly out of proportion to the population no concern need be felt.

That it is not yet so can readily be shown. The insane under official cognizance number 4,073, and the population of the Colony, as estimated by the Government Statistician, 1,346,240. The proportion of insane to population is, therefore, 1 in 330½, while in England it is 1 in 308. In the latter country, which may be taken as a standard for purposes of comparison, there has been a gradual rise from 1 in 360 in 1878 to 1 in 308 in 1897. In New South Wales the ratio in 1878 was 1 in 362, about the same as in England, and it has now reached 1 in 330½, an increase only half as rapid as in England.

The ratio of admissions to population, or, as it has been called, the "occurring insanity," may also be taken as a measure of the amount of insanity in the Colony. Were insanity increasing out of proportion to the population a larger number per thousand would be sent to the hospitals, and the ratio thus increased. This, however, we do not find. During the years 1892 to 1896 inclusive, a larger proportion of admissions to population occurred; but in 1897-8 the ratio returned to about the average for the last twenty years. The figures are given in the following statement:—

Year.	Admissions.	Proportion to Population	Year.	Admissions.	Proportion to Population.
1879 .....	440	1 in 1,668	1889 .....	550	1 in 2,040
1880 .....	476	1 in 1,618	1890 .....	611	1 in 1,914
1881 .....	494	1 in 1,581	1891 .....	596	1 in 1,955
1882 .....	473	1 in 1,728	1892 .....	666	1 in 1,797
1883 .....	476	1 in 1,826	1893 .....	688	1 in 1,778
1884 .....	493	1 in 1,868	1894 .....	712	1 in 1,757
1885 .....	567	1 in 1,723	1895 .....	715	1 in 1,787
1886 .....	567	1 in 1,817	1896 .....	740	1 in 1,753
1887 .....	532	1 in 1,960	1897 .....	692	1 in 1,912
1888 .....	538	1 in 1,816	1898 .....	730	1 in 1,844

Average for 20 years, 1 in 1,808.

The patients on the register at the close of the year, 4,073, were distributed as follows:—3,901 were in the Hospitals for Insane, 40 were in licensed houses, 123 were absent on leave under the provisions of the Lunacy Act, and 9 were in Hospitals for the Insane in South Australia. The number in the Hospitals has increased by 116, in licensed houses the number has decreased by 3, and in South Australian Hospitals there was an increase of 3. The latter were sent from Broken Hill, under agreement with the South Australian Government. The arrangement works well, and is beneficial to the patients, who, otherwise, would have to be sent a journey of some 1,400 miles to a hospital in New South Wales, and to their friends who have an opportunity now of visiting them which they did not previously have.

The following tables show the admissions, discharges, and deaths; the proportion of recoveries; the rate of mortality; the causes of insanity in those admitted, those who recovered, and those who died; the causes of death; the length of residence in those who recovered and those who died; and also the ages, condition as to marriage, religious profession, nationality, and previous occupation of those admitted and of all under care, as well as the form of mental disorder in those admitted, those who recovered, and those who died during the year:—

TABLE I.

 Average percentage of deaths on average numbers resident for ten years, 1889-1898 ..... 7·18 5·49 6·54

TABLE 3.

SHOWING the Causes of Insanity,\* apparent or assigned, in the Admissions and Readmissions in the Hospitals and Licensed Houses for the Insane, during the year 1898.

Causes of Insanity.	Number of Instances in which each cause was assigned.								
	As predisposing cause †			As exciting cause †			Total ‡		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
<b>MORAL—</b>									
Domestic trouble (including loss of relatives and friends) ...		1	1	4	17	21	4	18	22
Adverse circumstances (including business anxiety and pecuniary difficulties) ...				19	8	26	18	8	26
Mental anxiety and "worry" (not included under above two heads), and overwork ...	4	1	5	13	12	25	17	13	30
Religious excitement ...	1	1	2	7	2	9	8	3	11
Love affairs (including seduction) ...				1	1	2	1	1	2
Fright and nervous shock ...					5	5		5	5
Isolation ...		2	2	1	1	2	1	3	4
Nostalgia ...				1		1	1		1
<b>PHYSICAL—</b>									
Intemperance in drink ...	1		1	65	11	76	66	11	77
Do (sexual) ...									
Venereal disease ...				1		1	1		1
Self-abuse (sexual) ...	1		1		9	9	10		10
Sunstroke ...	2		2	6	1	7	8	1	9
Accident or injury ...	4		4	7	1	8	11	1	12
Pregnancy ...									
Parturition and the puerperal state ...					16	16		16	16
Lactation ...		1	1		2	2		3	3
Uterine and Ovarian disorders ...					3	3		3	3
Puberty ...	4	2	6	5	2	7	9	4	13
Change of life ...		3	3		2	2		6	5
Fevers ...				1		1	1		1
Privation and overwork ...	1		1				1		1
Phthisis ...				2		2	2		2
Epilepsy ...	9	6	14	8	12	20	17	17	34
Disease of skull and brain ...	1	1	2	18	2	20	19	3	22
Old age ...	23	13	36		1	1	23	14	37
Other bodily diseases and disorders and chronic ill-health	11	19	30	5	8	13	16	27	43
Excess of opium ...		1	1	3	1	4	3	2	5
<b>PREVIOUS ATTACKS</b> ...	57	56	113				57	56	113
<b>HEREDITARY INFLUENCE ASCERTAINED</b> ...	27	23	50				27	23	50
<b>CONGENITAL DEFECT ASCERTAINED</b> ...	19	17	36				19	17	36
<b>OTHER ASCERTAINED CAUSES</b> ...	1	2	3				1	2	3
<b>UNKNOWN</b> ...							118	74	192

\* These "causes" are taken from the statements in the papers received with the patients on admission, and are verified or corrected as far as possible by the Medical Officers.

† No cause is enumerated more than once in the case of any patient.

‡ The aggregate of the totals exceeds the whole number of patients admitted, the excess being due to the combinations.

TABLE 4.

SHOWING the Causes of Death in the Hospitals and Licensed Houses for the Insane during the year 1898.

	Male.	Female.	Total.
<b>CEREBRAL DISEASE—</b>			
Apoplexy and paralysis ...	6	1	7
Epilepsy and convulsions ...	14	7	21
General paralysis ...	42	3	45

00

*Admissions.*

The admissions have been 730, and give a ratio of "occurring insanity," in proportion to the general population, of 1 in 1,844. Of the admissions, 110 were readmissions, having been under treatment in the same hospital at some previous time.

The number of admissions from places beyond the Colony, reported under section 140 of the Lunacy Act, was 5. In these cases the Master-in-Lunacy took steps to recover the cost of maintenance from the persons made liable by the Statute. An additional 6 were admitted to the Reception House on remand, but were discharged in a few days. A total of 11 thus comprises all recent arrivals in the Colony who were insane, or who were suspected of being so.

Among the admissions was a large number of people whose main ailment was old age and its accompanying dementia. Many of these came from the Benevolent Asylums, where their mental affection made them a source of annoyance or danger to the other inmates, and where, perhaps, facilities for their care were absent. As these patients must, in the nature of the case, be incurable, they diminish the recovery rate of the hospitals, and help to keep the wards full, to the detriment of curable and hopeful cases.

The admission papers, in a number of cases, were defective, and required amendment. In most cases these errors and omissions were the result of carelessness in filling up the forms, and want of attention to the marginal instructions printed on them. Out of the 730 received, 130 had to be returned for amendment, and the great majority of these had passed through the hands of a Clerk of Petty Sessions or a Magistrate. It is at the same time satisfactory to record that most of the defects were technical, and in only a few cases did the medical certificates contain insufficient evidence of insanity.

*Transfers.*

The following table shows the admissions by transfer from one Institution to another during the year:—

RETURN showing Transfers for year 1898.

*Discharges.*

The number of those discharged recovered was 322, and shows a percentage on the admissions and readmissions of 44.10, which is somewhat over the average for the previous ten years. In addition, 39 patients were discharged relieved. These were mostly taken care of by their friends when no further improvement was to be expected from hospital treatment.

*Leave of Absence.*

Under the provisions of the Lunacy Act a large number of patients was removed from the Hospitals on leave of absence before being finally discharged. Convalescents were in this way taken home at an earlier period than would have been expedient were it necessary to obtain fresh papers in case of a relapse, and cases of recurring insanity were enabled to spend the intervals between their attacks among their friends.

The following return gives particulars as to leave of absence during the year:—

RETURN showing particulars as to Leave of Absence during the year 1898.

*Escapes.*

The number of escapes was 47. In the majority of these the absence was of less duration than a day, but 10 remained at large when the time allowed by statute for their recapture had expired. Escapes mostly occur from among the convalescents and those quiet and harmless patients who are allowed more or less liberty in and beyond the hospital grounds.

*Accidents.*

During the year one fatal accident occurred, the suicide by drowning of a male patient at Kenmore. The patient had been for years a quiet chronic, and was employed about the grounds mostly in work by himself. There had been no reason to suspect a suicidal tendency, or to take special precautions against it, and the case affords another illustration of the fact that it is not always the most demonstrative in their threats of suicide who succeed in the attempt.

The other accidents were mostly fractures of bones in the limbs by accidental falls, or by interference by a fellow-patient in the excitement of mania; 5 were of bones of the leg, 4 of the arm, 1 of a rib, and 1 of the collar-bone. Two women suffered injuries to arm and finger respectively from laundry machinery, and one patient sustained a scalp wound and linear fracture of the skull from throwing himself from a height with suicidal intent, but recovered without untoward symptoms.

*Deaths.*

The number of deaths was 246, and, calculated on the average number resident, gives a percentage of 6.29—the rate for men being 6.58, and for women 5.81. This rate is slightly below the average for the last ten years, which is 6.54.

In Table IV the causes of death are set forth in detail. It will be seen that the chief causes were diseases of the brain, and of these general paralysis was responsible for by far the largest number.

*Need for additional accommodation.*

At the close of the year there were 4,022 patients in the various hospitals for the insane, or 151 over the numbers they could properly accommodate. During 1899 a further increase must be expected of, say, 108, that being the average annual increase for the last twenty years. For these 259, room will be found at Kenmore Hospital, where wards for 305 patients are either just completed or are in process of erection. The last of these new buildings will not, however, be ready for occupation till the close of the year 1900, by which time a further increase of 108 will have occurred, and there will again be an overcrowding to the extent of 62. It is thus evident that immediate steps should be taken to provide for the future, and I would recommend that the land reserved for the erection of a hospital for the insane at Orange be utilised. With a hospital at Orange, patients from the western districts of the Colony would incur less expense and difficulty than is at present the case when they have to travel to Parramatta. The overcrowding in the latter Institution, too, would be to a great extent relieved.

It is also very desirable to increase the accommodation for scientific work at the hospitals, particularly in the direction of establishing a pathological department, similar to those already in operation at Claybury, England, under the Asylums Committee of the London County Council; at New York, under the State Commission in Lunacy; and at the Scottish Asylums Laboratory in Edinburgh.

*Receipts and Expenditure.*

The receipts of the Department from all sources amounted to £16,436 7s. 1d., and were made up as follows:—Collected by the Master in Lunacy towards the maintenance of patients in hospitals, £15,612 3s. 2d.; paid by the Imperial Treasury for the maintenance of convict patients, £133 18s.; received from sale of fat and old stores, £600 3s. 5d.; and from rent of land, £60 2s. 6d. The details are shown in the following return:—

TABLE showing Total Receipts on account of Institutions for the Insane during the year 1898.

Name of Institution.	Collected for maintenance of Patients.	Paid from Imperial Treasury for maintenance of Patients.	Sale of Fat and old Stores	Rent of Land.	Total.

Total .....	£ 15,612 3 2	133 18 0	600 3 5	60 2 6	16,436 7 1

The total expenditure amounted to £115,418 13s. 3d., and was made up as follows:—Maintenance of patients in Hospitals for the Insane, £111,084 12s. 4d.; maintenance of patients in the Reception House at Darlinghurst, £1,426 3s. 10d.; maintenance of patients in South Australian Hospitals, £447 6s. 6d.; and general expenses—including cost of Inspector-General's Office, payments to official visitors, maintenance of steam-launch, &c.—£2,460 10s. 7d.

The average weekly cost per patient was 11s. 0½d., without deducting collections, and 9s. 5d. when these were deducted. This is somewhat higher than during the last four or five years, but below the average for ten years. As pointed out in previous reports, the cost has now been brought down to the lowest possible, commensurate with the safety of the patients and their recovery.

The following returns show—(1st) the average weekly cost of the hospitals for the last ten years, 1889 to 1898 inclusive; (2nd) the weekly cost at each hospital from 1870 to 1898 inclusive; and (3rd) the particulars of expenditure at the hospitals during the year 1898.

*The Observation Wards at H.M. Gaols, Darlinghurst and Parramatta.*

The statistics of these wards are as follows:—There were at the ward at Darlinghurst on December 31, 1897, 11 inmates, and 29 were received during the year, making 40 under care; 23 were discharged of sound mind, 3 were sent to Hospitals for the Insane, 1 died, and 13 remained at the close of the year.

In addition to these inmates, for whom the ward was specially set apart, 135 other prisoners were for short periods inmates, the majority of these being cases suffering from temporary mental symptoms due to alcohol, whilst serving sentences of a few days, or whilst under remand.

At the ward at Parramatta there were on December 31, 1897, 12 inmates, and 25 were received during the year, making 37 under observation. Of these, 20 were discharged as of sound mind, 3 were sent to Hospitals for the Insane, 2 were discharged at Police Court, 2 were transferred to the Observation Ward at Darlinghurst, and 10 remained at the close of the year. Into this ward, also, a number of similar cases to those received at Darlinghurst was admitted, the total number of these being 32.

The Lunacy Act provides that these wards should be visited by the Inspector-General of the Insane, and special visits of inspection were paid to the ward at Darlinghurst on January 28, March 10, May 12, June 10, August 4, October 7, and December 2 and 14, and to the ward at Parramatta on January 20, May 31, July 5, September 28, and December 8. The wards have also been visited at other times to see individual prisoners, or at the request of the visiting medical officers. At the visits of inspection care has been taken to see and speak to every prisoner, and to inquire into the circumstances of his case, as well as to make a careful examination into the general management of the ward.

The Comptroller-General of Prisons has courteously furnished the following returns, showing the general statistics of the two wards for the year 1898:—

RETURN showing the number of Persons received into the Observation Ward, H.M. Gaol, Darlinghurst, during the year 1898, the places whence received, and their disposal.

GRIMSHAW, MRS. ... ..	29 August, 1898	Still in office.
BARTON, MRS. EDMUND ... ..	30 January, 1899	Still in office.
STEPHEN, MRS. C. B. ... ..	23 May, 1899	Still in office.

SUMMARY OF CONTENTS.

INTRODUCTION TO REPORT.

	Fol.
The reorganisation of the Cottage Homes for Invalid Children .....	8
The better classification of the children of the State .....	3, 4, 5, 9
Advocating the more general application of the Boarding-out System as a primary test.....	4 & 5
Explaining the advantages of Probationary Farm Homes for practical training and the close observation of troublesome boys .....	5, 6, 7
Recommending that treatment in the Industrial School "Sobraon" be principally confined to children who cannot be reclaimed under the Boarding-out System or in Probationary Farm Homes, and to boys whose conduct has improved in the Carpenterian Reformatory .....	7
Recommending that the girls in the Shaftesbury Reformatory be sent to the Industrial School at Parramatta; and that the inmates of the latter Institution, when their conduct improves, be separated by admission into a Cottage Home until eligible for private service .....	7
Recommending that the Carpenterian Reformatory be recruited from the Gaols and the Industrial School for Boys .....	7
Showing the imperative necessity for conceding power to transfer State Children from one method of treatment to another .....	3, 4, 8
Advocating the concentration of the management of the State Adult Poor and the State Minor Wards .....	9
Advising the appointment of a State Board of Charity .....	9 to 13

PART I.

Nineteen years' Statistics relating to the Board's work in dealing with children apart from their parents.....	14
Two and a half years' Statistics relating to children left in the custody of their mothers .....	15
Shewing the estimated cost of continuing to provide for all children apart from their parents.....	15
Shewing the actual cost of administering both policies .....	16
Explaining the difficulties of administration and the methods adopted by the Board to safeguard the expenditure of the public funds.....	17
Pointing out the necessity for frequent inspection .....	20
A comparative statement of children provided for, and the cost of maintenance between this and other Colonies prior to the Statistics in New South Wales being influenced by a change of policy .....	20

PART II.

Statistics for the year ending 5th April, 1899.

(a) Children maintained apart from their parents.

Variation in numbers of State Children .....	21
Method of disposal of State Children .....	21
Numbers of State Children in each town.....	21
Applications received during past six years .....	23
Inspection of State Children .....	23
Number of State Children adopted .....	24
Number of State Children in each foster-home .....	24
Number of State Children apprenticed .....	24
Daily admissions to Central Depot .....	25
Variation in number of Cottage Homes Inmates .....	25
Complaints from which invalid children suffered .....	26
Invalid children, whence received.....	26
Ages of all State Children at date of admission.....	26

The President, State Children Relief Board, to The Chief  
Secretary.

Charitable Institutions of New South Wales,  
State Children Relief Board,  
Richmond-terrace, Sydney, 5 April, 1899.

Sir,

In compliance with the provisions of Section 12 of 44 Victoria No. 24, I have the honor to present to Parliament my Annual Report showing the operations of the various divisions of the State Children Relief Department during the year ended 5 April, 1899.

Upon reference to my previous reports it will be found that seventeen years ago I expressed the opinion that a thoroughly efficient system of management would not be secured until the whole of the children supported at the expense of the Government were placed under the control of a single agency.

I have, since then, consistently advocated the union of our auxiliary institutions under the control of one governing body; but they remain as separate in their administration and as hampered in their operations to-day as they were when a brief official experience first convinced me that the policy adopted in other colonies and elsewhere was, in every way, much more desirable than our own.

In this report I do not intend to make a lengthy reference to the merits of the boarding-out system as a social institution. Under well-organised supervision it is undoubtedly the most natural and best method of dealing with our dependent children; but it has never been claimed by its most enthusiastic supporters that it will prove effective in every instance. Nevertheless in this Colony no provision has yet been made to relieve the State Children Relief Board of the custody of children who require to be dealt with under the firm discipline and corrective treatment which our industrial and reformatory schools provide.

It does not follow that if a child is without a home, or if found in company with reputed thieves, or even if convicted of theft, that he is too steeped in vice to be amenable to home influences where the discipline is firmer and the surroundings are more cheerful and wholesome than he ever before experienced; nor is it to be expected that children supposed to be tractable will not occasionally be found vicious and incorrigible when tested under the boarding-out system. In dealing with rescued children whose dispositions are not thoroughly understood, experience teaches that mistakes are frequently made in first assigning the method of treatment to which they are to be subjected. No provision can be made to entirely prevent this. A test is the only solution, and an unrestricted system of exchange amongst the institutions providing varying methods of treatment is the only remedy. In America it is customary for experienced officials to attend the law courts and possess themselves of all important facts relating to each case, and consult with the magistrates as to the best disposition of the children. Under this system the number of mistakes made by injudicious commitment is materially reduced.

Unfortunately, however, for the welfare of the children of the State, no such provision is made in this Colony, consequently the number of wrongful commitments arising from time to time in the absence of this wise precaution becomes much more numerous than need be, a defect which renders the free interchange of children absolutely indispensable. But consultation before commitment is not the only safeguard established elsewhere for purposes of classification. It is  
very

very properly recognised that without an intimate knowledge of character there must remain a percentage of erroneous commitments, and to reduce this percentage to a minimum the responsible heads of the several institutions providing varying methods of treatment meet, after the child has been under observation for a time, and determine the action to be taken if the course of treatment to which the child has been subjected is found to be unreasonably lenient or unnecessarily severe. It would, obviously, be useless to hold such consultations here until our statutes were so amended that effect could be given to any recommendation that might be submitted if a transfer from one branch to another were found to be necessary.

If a child who should have been boarded-out be committed to an industrial school or a reformatory, the State Children Relief Act gives power to effect the transfer to the boarding-out system, and the Industrial Schools Act permits the elder lads to be apprenticed; but if a juvenile offender be sent to an industrial school, and reformatory treatment were found necessary, or *vice versa*, no transfer could be made, nor could an inmate of either of these institutions be legally sent to a hospital if the nature of the illness required the scientific skill of an expert. When the Carpenterian Reformatory was under the control of the Director of Charities, treatment in one of our metropolitan hospitals was prescribed for a patient likely to lose his eyesight; but the Crown Solicitor advised that it was illegal to make the transfer. In the interests of humanity the law was, I believe, broken in this instance; but it should certainly not be necessary to act unlawfully for such a purpose as this, and it must be admitted, if the act were illegal, that the law which so defines it should be promptly amended, so that our juvenile offenders may not suffer from the harsh provisions of our early legislation. Again, if, instead of a child being sent to an industrial or reformatory school, a course of treatment under the boarding-out system is first tested, then even the most vicious children cannot be removed to an industrial or reformatory school by the simple process of transfer; but each must be charged and committed, and it is very rarely that a master or mistress will come forward publicly in the law courts and assist the State Children Relief Board to secure this end.

In this Colony the Government has established two industrial schools and two reformatories: but their methods of admission are so defined by law that the free interchange of children cannot be secured no matter how desirable it may be to take advantage of the varying methods of treatment, each of which we recognise as necessary in the treatment of children who have to be dealt with as wards of the State, otherwise these institutions should cease to exist.

In South Australia and Victoria the boarding-out system and the industrial and reformatory schools are administered by one Department, and unrestricted facilities are afforded for testing children under any method of treatment that the Minister, acting on the advice of his responsible officers, deems to be most judicious.

In my opinion a similar policy should be introduced here; but I regret to have to admit, that although I have for many years consistently advocated this reform in our social institutions, my efforts have been unsuccessful. Certainly, steps were taken some years ago which led my Board to believe that the Government recognised the soundness of my contention; but the facilities were hastily and inconsiderately withdrawn, and the State Children Relief Board was left to encounter even greater difficulties than were hitherto experienced, owing to the expansion of the work having increased the number of troublesome children. I refer particularly to the removal of the Carpenterian Reformatory and the Shaftesbury Reformatory from the control of the Charities Department.

Some

Some years ago, when these institutions were placed under the Chief Secretary's Department, provision was made at the former for the treatment of troublesome lads and cripples in a home adjoining the reformatory, but under the control of the Superintendent. Subsequently, this auxiliary institution was removed to Newington Asylum for Destitute Women, many of whom are young, but suffer from neurotic diseases. This step was not a wise one, and for obvious reasons the State Children Relief Board has ceased to recognise its usefulness. At the same time the Shaftesbury Reformatory, then about to be closed, was placed under the control of the State Children Relief Board, to be used as an industrial home for troublesome girls, and for the reception of State children waiting to be boarded-out.

With the advantages these two institutions afforded, my Board's difficulties temporarily ceased, but both institutions were, some years since, transferred to the control of the Minister for Public Instruction without other provision having first been made for the treatment of State Children found unsuitable for private service; and since then the State Children Relief Board has been compelled to make the best of the limited resources at its disposal. Either the objectionable practice of admitting refractory girls into the cottage homes for invalid children has to be resorted to, or the Board is compelled to continually transfer such children from one private family to another until their periods of detention have expired, and they are left, unreclaimed, to follow whatever mode of life their inclinations suggest. I feel that it is not necessary for me to advance reasons to show that both these methods of treatment are bad, nor should I be again compelled to ask that the requisite facilities be afforded for the more suitable treatment for those unfortunate children who have been unsuccessfully dealt with under the boarding-out system. I do not, however, wish to convey the impression that the percentage of non-successful cases has reached unreasonable proportions. To draw such an inference from anything I have said or intend to say, would be to arrive at a conclusion unsupported by the official records of my Department. My Board has opened the door for the admission of troublesome children as wide as could reasonably be expected; but not so wide as could be done, with excellent results, were other avenues not closed to those who fail. The Board's inspectors and the police rescue annually a large number of neglected children, and with a daily average of 3,700 under control, from thirty to forty are exceptionally troublesome or vicious. These are the children who should be dealt with by transfer to industrial or reformatory schools.

The boarding-out system, wisely administered, should secure a form of life similar to that in which each child should have lived under more fortunate circumstances, and to which each must eventually return, when the period of detention in an industrial or reformatory school has expired. A less natural and more rigid course of training should not, therefore, be applied unless there is convincing evidence to show the necessity for it; but when that necessity does arise a course of probationary training should be promptly administered under the firm discipline and close observation of the skilled officials in charge of our industrial and reformatory schools.

My Board has had under consideration for some time an auxiliary method of treatment intended for robust but troublesome State boys for whom employment cannot be found. The scheme has recently been adopted and a Probationary Farm Home has been established at Cessnock, 20 miles from Maitland. The owner is a practical farmer, and the area of the estate is 150 acres; 10 acres are under grape-vines, and 10 are used for agricultural purposes. The owner has agreed to receive four lads, provide them with separate sleeping accommodation, and treat them in every respect as members of

of his family, on the understanding that he is paid 10s. a week each while receiving probationary training under his care. These lads will live and work under the supervision of himself and his two sons. The other conditions imposed are as follow:—

1. It is the duty of the master to find suitable employment for the lads (subject to the approval of the Board) when there is evidence of improvement in their behaviour sufficient to justify their discharge.
2. When the boys may be trusted, with safety, to accept temporary work at a daily rate, they are to be encouraged to do so, but must return to the probationary home at stated hours in the evening.
3. Wages earned in this way are to be paid by the employer to the master, and one-third of such earnings may be given by him to the boy for pocket money, but two-thirds must be remitted to the Board, to be held in trust for the lad until the period of detention expires.
4. The boys are to be encouraged to look for work locally, when eligible for discharge, as the Board is of opinion that better results can be secured in this way than by compelling lads of this class to perform duties that may not be congenial to their temperaments.
5. The reform is expected to result from moral suasion, and by inculcating a feeling of self reliance, and not from the severe application of corporal punishment.
6. Two additional lads will be admitted for each lad discharged from the probationary home, and for whom private service has been found with an approved employer, who has signed the indentures of apprenticeship. The maximum number of inmates to be limited to ten.

Theoretically the scheme has much to recommend it, and practical experience in Victoria, where a somewhat similar system has been tried, has amply justified its adoption. The chief factor essential to success is the judicious selection of the Farmer-in-Charge, and although my Board has reason to believe that a qualified man has been found, still it is premature to express an opinion without supporting evidence. Should, however, this auxiliary system justify its recognition as a necessary agency in the treatment of unmanageable State boys, it should prove equally effective when applied to juvenile offenders who have served a probationary term under more severe conditions, and to adopt it as a permanent policy is but to introduce another argument in favour of the united control of the minor wards of the State under a body vested with power to utilise whatever course of treatment it considers most advantageous in individual cases.

But the probationary farm home system has other advantages. It introduces a policy of decentralisation; it takes the boys at once into the agricultural districts; it secures wholesome surroundings, and a more natural form of life; it affords practical training, and offers to our farmers facilities for selecting their apprentices which cannot be conceded under existing conditions. No additional administrative cost is incurred, and as the boys will become wage-earners at the first opportunity, the term during which they will be maintained at the Government expense will be reduced to a minimum. The reward to the farmer in charge of the home is practically payment by results. It is to his advantage to increase his number of inmates, and this can only be done by finding masters (approved by the Board) willing to receive the lads reclaimed and sign the indentures of apprenticeship provided under the regulations of the State Children Relief Act.

If

If a number of State children can be successfully dealt with in this way, the number who should otherwise be sent to industrial and reformatory schools will be materially reduced; but it does not follow that the restrictions placed upon the admissions to, and the discharges from, our social institutions should still continue; for it must be obvious that, owing to our unsatisfactory methods of classification, there should be a number of our juvenile offenders now under commitment who could be placed in probationary farm homes, boarded out at a cost of 5s. per week only (if under 14), or sent to service as apprentices at no cost to the Government if over that age. I am led to this conclusion from my official knowledge of the fact that the State Children Relief Board has already removed upwards of 500 children, under the age of 12, from our Industrial Schools, almost the whole of whom have turned out well; and from the published reports of the Superintendent of the "Sobraon," which show that upwards of 94 per cent. of the boys apprenticed by him have been reported of good character. Most of these children have received probationary treatment in these institutions; but the question arises,—Should the whole of them have been admitted to an Industrial School before other treatment had first been tested? I will answer this question by quoting the following extract from folio 29 of the Annual Report of the State Board of Massachusetts for the year 1898:—

"When juvenile offenders are committed to the custody of the Board, they are generally placed at once in some selected family in Massachusetts or elsewhere in New England. Sometimes, when the offence is slight, and the home is exceptionally good, they are placed with their parents on probation. Some of them are temporarily cared for in a special family, under the immediate direction of the Board. *The Board is authorised, in cases where family trial proves unsuccessful, to transfer children, under the original mittimus, to the Layman School or the State Industrial School.*"

Miss Pemberton, Superintendent of the Children's Aid Society of Pennsylvania, when addressing the National Conference of Charities and Correction, expressed herself in these words:—

"The children of neglect become the children of crime, not because they always inherit criminal tendencies, but because their associations and training are criminal. They need the exclusive personal care of a father and a mother, the stimulus of a new environment, and the prompt removal from present temptation far more than they need the locked step, the daily drill, the enforced task, and the unavoidable but deadly intercourse with criminal companions in a Reform School. The Boarding-out System offers a very simple solution of this problem of the child criminal."

These authorities and others that could be quoted if necessary bear out my contention that the family life system should be the first test, unless there are sufficient reasons to show that restraint and discipline are necessary for a probationary period only.

From the published reports, it appears that there is, at the present time, more accommodation available in our Industrial and Reformatory Schools than there are refractory children under treatment in these institutions. To apply the reorganisation scheme suggested by me would lead to this result:—The Carpenterian Reformatory would be recruited from the worst cases admitted to the "Sobraon" and from the best conducted juvenile offenders confined in our gaols; and the Shaftesbury Reformatory would be closed, the inmates of the latter being transferred to the Industrial School at Parramatta. The most refractory and nomadic State children under the control of the Board would, when necessary, be transferred to the Industrial Schools  
for

for probationary treatment; and immediately any marked improvement was shown in the conduct of Industrial School children, their transfer could at once be made to the home life system which my Board provides. When it became necessary to separate girls of improved character, but not yet eligible for service, from the more corrupt inmates of the Industrial School, they could be admitted into the Cottage Home, which it is the intention of the Board to set apart for the classification and training of troublesome, but not vicious, State girls. This would secure a desirable system of classification, and would confine our two important Industrial Schools more to the work of reform, and would prevent the possibility of their ultimately developing into a system of management in which it is difficult to distinguish where reformation ceases, and a policy of orphan school treatment begins.

In my last annual report, a scheme for the centralising of the Mittagong Cottage Homes for Invalids, and for the better classification of the inmates was fully outlined. I then pointed out that the rents paid for the seven (7) cottages now occupied were excessive, but that more suitable premises could not be secured. Moreover, the distances one from the other are too great for administrative requirements; and as the cottages were not erected for the purposes for which they are now being utilised, they do not allow of a necessary system of classification. For administrative purposes, and on economical grounds, and for other sufficient reasons, it is therefore desirable to secure a property of sufficient area at Mittagong upon which a number of homes of suitable design can be erected, and vegetables, fruit, and milk produced in sufficient quantities for local consumption. Had this suggestion, which has been under the consideration of the Government for nearly two years, been adopted, the State Children Relief Board would have been in a position to set apart one of the Government Cottages at Parramatta for the accommodation of the cripple lads in other homes, and at Newington Asylum. A cottage could also be utilised for the treatment of feeble-minded children upon lines similar to those so generally adopted in the United States, and a number of troublesome girls, now most undesirably associated with innocent children, could be removed to a home set apart for their special accommodation, in which the laundry and needle work of the other Cottages could be attended to, and the girls could be trained as domestic servants.

The suggestions I have made in my previous reports relating to Cottage Homes for Invalid Children, I regard as of supreme importance to the social well-being of the children who are brought under the control of the State, and I must confess the extreme sense of discouragement I labour under in consequence of the delay that has arisen in giving effect to the recommendations to which I refer. But this provision, when available, will dispose of only a number, and not the whole of the troublesome girls who are now under the control of the State Children Relief Board.

Access to Industrial Schools is required for the Board's juvenile offenders, for wanderers, and for the probationary treatment and punishment of children whose presence in a family becomes intolerable when they tire of their surroundings, and wish to be transferred to another home.

Upon reference to the map published as an appendix to this report, it will be seen that the Board's operations extend to the most remote parts of the Colony; and the supervision of the children, apart from a few isolated instances, is entrusted to Government Inspectors and honorary lady visitors; but these officials have no authority to inspect the apprentices placed out from Industrial Schools, although they visit probably every town in which such apprentices are located. I am not aware of any sufficient reason to justify the Government in providing

providing a divided control, or a separate form of oversight, when dealing with wards of the State subjected to an identical method of treatment; but it requires no argument to show that if the Superintendent of each Industrial School inspects the apprentices sent out from each of these institutions, the public funds must be saddled with unnecessary expense, while if the duty is delegated to the police, to be consistent, the police should also inspect upwards of 1,000 of the Board's apprentices, male and female, and the Board's officials should have this responsibility removed from their shoulders. But to attempt such a re-arrangement of work would lead to the cancellation of a number of indentures by the best guardians of the Department, and to admit that this effect would ensue from such a change of administration is also to acknowledge that under police surveillance the selection of homes is restricted to those prepared to tolerate this method of supervision—a result manifestly prejudicial to the best interests of the children. I do not, however, think the system of inspection adopted under the State Children Relief Act needs justification, as the wisdom of it is self-evident, and its recognition elsewhere is almost universal.

In my opinion the whole of the minor wards of the State should be subjected to the supervision of the Inspection Staff of the State Children Relief Board; and every home selected for State children, irrespective of their place of detention, should first be approved of by these officials. Moreover, an experienced officer should be entrusted with the distribution of the whole of these children, and the officer so appointed should be afforded facilities for consultation with the officials who have had the training of the children, and also with the Inspection Staff who pass the homes into which these children are to be admitted. The distribution could then be made with greater possibilities of success, and the work could be so concentrated that the subsequent inspection could be arranged at a minimum cost to the Government. These, and other instances which I could mention, lead me to believe that the placing of the whole of the minor wards of the State under one body, upon lines somewhat similar to those adopted in Victoria and South Australia, would lead to an improvement in the condition of the children themselves; and the harmonious working of the various branches must secure administrative advantages and economical results.

As the Minister for Public Instruction has announced his intention to introduce a bill for the amendment of our social laws,\* it appears to me an opportune moment to invite attention to the most recent and progressive legislation that has reached me bearing upon the management of State Charities. I refer to the action taken in July last by the State Parliament of Massachusetts (U.S.A.), representing a population upwards of two and a half millions of people. During the past twenty years the State Board of Charity of Massachusetts has had the control of the insane and other work as well; but the State Parliament has now established a State Board of Insanity, and the State Board of Charity has been left to administer that branch of work which its title suggests. In the last report to hand, published so recently as January, 1899, it is stated that "the Board made an important change in its organisation—one which it had under consideration for many years, and had only waited a favourable time to carry into effect." It was determined that from July, 1898, all persons under the care of the Board should be divided into two classes, to be called respectively the "State Adult Poor" and the "State Minor Wards," the first to be under the charge of an official known as the Superintendent of the State Adult Poor, and the latter under an official designated the Superintendent of the State Minor Wards—both to be subject to the Board's direction.

---

\* This report was in type before a change of Government was anticipated.

The State Board of Charity—like the State Children Relief Board here—consists of nine members (male and female) who serve without compensation, but have their travelling expenses paid by the State. This Board has subdivided the State Adult Poor Branch into two divisions, viz. (1) the inmates of the several state institutions supported by the Commonwealth; and (2) the poor in the several cities and towns, whose expenses in cases of sickness, temporary need, transportation, and burial, are in like manner payable by the State. The State Minor Wards Division includes—

1. Juvenile offenders convicted of crime or misdemeanour, and committed by the courts *to the custody of the Board.*
2. Neglected children—that is, children between the ages of 3 and 17 neglected by their parents and committed by the courts *to the control of the Board.*
3. Dependent children—that is, orphans or children whose parents are too poor to support them; and
4. Pauper infants under the age of 3 years.

In this Colony the State Adult Poor Branch, the admission of dependent and neglected children to the control of the State, and the administration of the Children's Protection Act, are all under the control of the Director of Charities, who is also the chief executive officer of the State Children Relief Board, which has no official connection with the work referred to. My Board deals with children after their admission to State control only; that is, when they have been withdrawn from institutions and placed with guardians or in cottage homes for invalid children, but under the State Children Relief Act of 1896, the Board has the power of admitting children living with their mothers, and of paying the mothers for their maintenance when the circumstances render such action necessary.

It will, therefore, be observed that, apart from the fact that the Industrial and Reformatory Schools are not subject to the control either of the Board or the Board's chief officer, the whole of the work under the State Board of Charity in Massachusetts is similarly grouped in the one department in New South Wales, with this anomaly: that, whereas the State Board of Charity controls the whole (as it very properly should do), the State Children Relief Board administers but part, and its chief officer, acting independently, the other part; but neither one nor the other, nor the Executive Council itself, has power to apply to troublesome children the course of treatment the merits of the case demand.

In this Colony we have no laws for the suitable government of our adult poor. Our Industrial and Reformatory Schools Acts have not been remodelled for thirty-three years; and the Children's Protection Act—a measure for the protection of the infant life of the community—is admittedly defective in several clauses. These divisions of work have not been administered by a Board of Control, and, in my opinion, it is mainly attributable to this fact that progressive legislation has not been introduced.

The State Children Relief Acts, on the other hand, have been administered by a Board; and it is entirely due to the exertions of the State Children Relief Board that these statutes compare more than favourably with intercolonial and foreign legislation, and that we, in this Colony, are now in a position to congratulate ourselves upon the admirable and humane provisions which they contain.

If,

If, then, by comparing the results of our local administration, facts such as these become so strikingly apparent, the soundness of my reasoning must be admitted. But, if this evidence were not sufficiently convincing, and we are prepared to be guided by the experience of those interested in the work of charity in other countries, we must come to the conclusion that the most progressive legislation is invariably found in States where the wisdom of Board management has been recognised as a necessary institution in the administration of charitable work.

“So far as State action in matters of charity and correction and reform is concerned,” says an eminent authority, “it is the special function of the State Board of Charities to watch over it, to guide it. Directly or indirectly, most of the progress that has been made has originated with these Boards, or with men of like character, though working at a disadvantage, who have been engaged in the ennobling work.” [Mr. L. L. Barbour addressing the Twenty-first Annual Session of the National Conference of Charity, U. S.]

In advocating the constitution of a State Board of Charity in New South Wales, I have not approached the subject without a careful study of its probable effects, or without a firm belief in its public usefulness. Neither am I recommending the introduction of an untried principle, with nothing more to support its adoption than the force of my own opinion based upon a life-long experience of the merits, the defects, and the omissions of our constitutional laws in so far as they apply to the charitable work of this community. State Boards of Charity are recognised social institutions. They have stood the test of years and have produced the best results. My reasons for recommending a State Board of Charity in this Colony are as follow :—

1. Because the principle of Board management has, unquestionably, proved the best known method of charity organisation.
2. Because the State adult poor and the State minor wards should be controlled by one body.
3. Because one State Board of Charity can efficiently and economically control the whole of our Government charities and supervise the work of subsidised agencies.

Dealing first with the principle of Board management, we need not look further than our own statutes to find its soundness generally recognised. As it applies to wards of the State, it received Parliamentary sanction in 1881, and the passing of the State Children Relief Amendment Act of 1896 can only be regarded as a confirmation of this method of management. The Government of South Australia, acting upon the sound advice of no less an authority than the Chief Justice of that colony, who thoroughly investigated our methods of administration, introduced legislation based upon our Act of 1881, but, guided by our defects and the proved advantages secured in Victoria, wisely concentrated the control of all juvenile offenders and neglected and dependent children under the State Children Council of Adelaide, undoubtedly one of the most useful and competent social agencies in Australia. The Imperial Government has also recognised the principle of Board management, and in Germany and in the United States of America it is universally adopted, and recent legislation has widened the sphere of usefulness and increased the administrative powers. With such precedents as these to guide us, I may reasonably claim to have proved my contention that the principle of Board management has higher claims to recognition than individual administration.

Concerning the latter, I doubt whether any authoritative opinion more outspoken or more convincing can be found in standard works on charity organisation than the following quotation from  
Mr.

Mr. Barbour's address:—"Those in charge of Institutions," says Mr. Barbour, "never have reported, and never will report, their own faults and failures. They seldom report any untoward influences that magnify the evils they are called upon to amend, unless there is supervision and liability to criticism."

In support of my opinion that the State minor wards and the State adult poor (I do not refer to those eligible for old-age pensions, when pensions are voted) should be administered by one body, I wish first to refer to our own organisation. I have already pointed out that the industrial and reformatory schools are under the control of the Minister for Public Instruction, and that the neglected and dependent children are under the State Children Relief Board, while the Board's chief officer acts also as Director of Government Asylums, and chief officer under the Children's Protection Act. The whole work is, therefore, principally administered in one office; consequently the policy of concentrated management has been established by our own Government; and it only remains to transfer the control of the most necessary of all adjuncts—the juvenile offenders—to bring the whole of the work under the one Department. The advantages to be derived by doing so are so obvious, and the affiliation of the work is so natural, that I do not think a moment's serious consideration of the subject will lead to any other conclusion than that our system of divided control is detrimental to the public interests, and inimical to the well-being of the children of the State.

The Governments of Tasmania, South Australia, and Victoria believe this to be so; and as the legislation in these colonies is more recent than our own, we can only conclude that the affiliation is advantageous, or it would not be accepted with such unanimity. And when we bear in mind that our Industrial and Reformatory Schools Acts have not been recast since 1866, and that the South Australian Act was passed in 1885, and the Victorian statutes were amended in 1890, it is inconceivable that the primary provisions of our own laws would have been disregarded unless the scientific knowledge of recent years had substituted other methods wiser and better than those which we have so long applied to the children of the State in New South Wales.

And, if it be wrong in principle to amalgamate the minor wards and the adult poor branches, then the Director of Charities here should not act as chief boarding-out officer and chief officer under the Children's Protection Act; nor should the whole of the Government Charities be placed under the control of one official in Tasmania. Moreover, it would also be a wise policy for the eighteen States of America to recast their legislation and appoint thirty-six State Boards of Charity to deal with the work, which practical experience teaches can, in the best interests of each State, be entrusted to eighteen advising and controlling agencies, constitutionally appointed under statutes carefully drawn and subject to frequent revision.

If I have succeeded in showing that a State Board of Charity should be the governing body here, and that one agency should control the whole of the minor wards and the adult poor as well, it only remains for me to advance reasons sufficiently convincing to lead to the conclusion that this amalgamation of work would not be too unwieldy to be judiciously entrusted to the administration of one governing body. This can be done most effectively by making comparisons between the population of our own Colony and the population of States where similar organisations have proved capable of supervising a greater amount of work with much more satisfaction to the public than our separate methods of management have secured here. Of the eighteen State Boards of Charity in the United States of America, those of Rhode Island,  
Kansas,

Kansas, New York, and Massachusetts exercise the greatest powers; but as the latter two cover the widest field of miscellaneous work, and as their statutes embody the most recent legislation, they may be accepted as the best for purposes of comparison. The population of the State of New York is double the population of the State of Massachusetts, and the population of the State of Massachusetts is approximately one million in excess of that of New South Wales; consequently it must be possible for one State Board of Charity in this Colony to efficiently perform similar functions here, otherwise we must come to the conclusion that, after twenty years experience in Massachusetts, the State legislation there has unwisely confirmed during the past twelve months, the statutory powers of a body incapable of dealing satisfactorily with the minor wards of the State, and unequal to the responsibilities connected with the relief of the dependent poor distributed throughout a population of two and a half millions of people.

In my opinion, the whole of the Government and subsidised charities of this Colony should be placed under the control of one body, and I believe no better system can be introduced than that in operation in Massachusetts, and in other parts of the United States, where sociology has been treated most scientifically, and where the well-being of the aged and the young maintains its true position as the primary object of charitable work.

In order to remove any misapprehension that may arise after perusing my report, I wish to say that my criticism, in so far as it applies to institutions not within the jurisdiction of the State Children Relief Board, refers to defective laws, and not to maladministration on the part of officials so long discouraged by defective legislation, in the performance of their public duties. Considering the disadvantages, these institutions are, I believe, excellently managed; and the whole of the officials have worked earnestly and cordially with the State Children Relief Board in the past. A comprehensive system of social reform is, however, much needed in our statutes, and my object in writing at such length is to point out existing defects, and indicate the lines upon which, in my opinion, that reform should be based.

## PART I.

### SHOWING THE OPERATIONS OF THE STATE CHILDREN'S RELIEF BOARD UNDER STATE CHILDREN RELIEF ACT, 44 VICTORIA No. 24, AND STATE CHILDREN RELIEF ACT, 60 VICTORIA No. 9.

From 1881 to September, 1896, the operations of the State Children Relief Board were confined to the provisions of the State Children Relief Act of 1881, which gave the Board power to deal only with State children maintained apart from their parents. The Amendment Act of 1896, however, in addition to remedying the defects of the Principal Act, made provision for widows and deserted wives to receive cash allowances for the support of their own children. Prior to 10th September, 1896, mothers—who were left with families of young children, and who found the relief granted by public and private charities insufficient to enable them to keep their homes together—were compelled to have their children admitted to the control of the State, to be maintained at the expense of the Government, with guardians selected by the State Children Relief Board. The statutory powers embodied in the Act of 1896 have, however, during

during the past two and a half years, rendered it unnecessary to take the children from their natural guardians, provided the mothers were in necessitous circumstances and suitable persons to have the control of children. This special provision in our social laws is, I believe, a step in advance of either intercolonial or international legislation; and as it has only recently been introduced here, I purpose dealing fully with my Board's experience of its application to the deserving cases of distress which have come under notice since the benefits conferred by this Act have been administered in New South Wales. In the first instance, I intend to deal with the statistics relating to children maintained apart from their parents and those left in the custody of their natural guardians conjointly; and subsequently to treat each branch of the Board's work separately, as heretofore. By this means, the effect of the operations of one division upon the other will be more clearly understood, and the estimated additional expenditure to the State will be explained, as far as it is possible to do so from the data at my disposal.

The following table shows the rate at which the number of children provided for, apart from their parents, has increased annually since the initiation of the boarding-out system:—

\* This total includes 8 children in Hospital, 143 in Cottage Homes, 33 in Depot, 24 under 2½ years paid for at 7s. per week, 20 paid for at 6s., 4 infants paid for at 8s. per week, and 1 lad paid for at 10s. per week, 147 paid for at rates ranging from 2s. to 4s. 6d. per week (with relatives), while the balance are paid for at 6s. per week.

† This total includes 22 children who are classed as "Boarders without subsidy," that is, placed with guardians who, as in the case of adopted children, do not receive payment for maintenance.

‡ This total includes 19 absconders, whose names still appear on the books, and 3 children classed as unofficial.

THE following Statement shows the receipts and expenditure of the State Children's Relief Board since 1881 :—

NOTE.—The cost of administering the Children's Protection Act is also included to balance the Treasury advances.

The children for whom mothers receive allowances under the Act of 1896 are the children who, if admitted under the principal Act would have been classed as “supported by the Government.” (See first table.) I will, therefore, deal specially with the statistics under this heading, as adopted children and apprentices are not supported by the Government. Upon examining the numbers maintained on the 5th April, 1893, 1894, 1895, and 1896, it will be seen that the increase is equal to 325 a year, or a total of 977, during the three years preceding 5th April, 1896. Healthy children over the age of 3 years are paid for at 5s. a week; children under 3 years from 6s. to 10s. a week; and delicate children over the age of 3 years from 6s. to 8s. a week. These allowances have been fixed at rates in excess of the actual cost of maintenance; not to allow a margin in favour of the guardian would decrease the number of applicants for State children, for obviously the higher the rate allowed the wider the selection and, consequently, the higher the standard of the homes in which such children are placed. That the rates paid here are reasonable is evidenced by the fact that the State Children Relief Board has always been in a position to reject over 40 per cent. of the applications received, and still have more suitable homes available than there have been children to distribute amongst them.

The average cost per head (not including salaries) amounts to £14 4s. 1d. per annum. Assuming that the Act of 1896 had not been passed, and that the relative annual increase had continued, the total 2,441 supported by the Government on 5th April, 1896, would have reached

reached 3,418 on 5th April, 1899. But the actual figures on the 5th April, 1899, are shown to be 2,563 only, or 855 less than would have been admitted if the relative annual increase of the three preceding years had continued. During the three years prior to 1896 the increase was at the rate of 325 a year. In 1897 the total stood at 2,651: in 1899, 2,563 only—an actual decrease of 88 children. The total cost for the year 1896 was £42,200 14s. 11d. 855 extra children at £14 4s. 1d. per head would increase this total by £12,144 11s. 3d., and thereby necessitate an outlay of £54,345 6s. 2d. in providing for the maintenance of children apart from their parents.

Passing from this branch of the Board's work to the statistics relating to children whose mothers have been paid allowances to help with their maintenance, it will be seen upon reference to folios 29 and 30, that on the 5th April, 1898, 770 mothers were assisted to support 2,422 children, while on the 5th April, 1899, 935 mothers received allowances for the maintenance of 2,884 children. The amount paid to these widows and deserted wives during the year now under review was £15,647 12s. 8d., but including both divisions the gross amount expended during the year ended 5th April, 1899, was £60,961 11s. 11d. I have already pointed out, however, that if the Amended Act had not been in force the estimated expenditure under the Principal Act would have been £54,345 6s. 2d. By deducting the estimated cost of maintaining children apart from their parents (£54,345 6s. 2d.) from the amount actually expended in providing for neglected children and those left with their mothers as well, there is an apparent increase of £6,616 5s. 9d. per annum. It may, therefore, be assumed that the administration of the Amended Act of 1896 has increased the expenditure of the State Children Relief Board by about £6,600 a year over and above the estimated expenditure had not this law been in operation. But it should not be assumed that this is altogether a new item; for a large number of the women who receive these allowances were previously assisted by societies subsidised by the Government, while substantial cash allowances were granted to others by the Chief Secretary from the Charity Vote. The expenditure the Board has since incurred cannot, therefore, be regarded wholly as additional disbursement of charity. Part of the amount represents merely another method of distribution, but in the absence of reliable data I am not in a position to say what cash value should be placed upon it. It is, however, a noticeable feature of the Board's work that a number of the most deserving families now assisted concealed their destitution from private and subsidised Societies, and deprived both themselves and their children of common necessities rather than appeal for any other form of charity. Relief given in such instances is, therefore, entirely increased expenditure. The average rate paid per child is slightly less than 2s. 6d. per week; the average number in each family is a fraction over three; and the average weekly rate paid to the 935 mothers is about 7s. Taking into consideration the continuity of the payments, these allowances are probably worth 4s. 6d. a week more in each case than those which the mothers received from the societies that previously helped them.

The law provides that each amount voted must be determined by the Board, and, in the case of deserted wives, unanimously. To those experienced in charitable work it will be readily understood that the duties devolving upon the State Children Relief Board in apportioning these allowances with a due regard to the necessities of each case are surrounded with difficulties that require the most careful consideration. Apart from the question of character and fitness to have charge of children, the Board must be in a position to know whether

whether the mothers are able to work themselves, and whether they live in localities where work is available; whether they make an effort to help themselves; whether they live rent free, or have any source of income other than their earnings; the amount of assistance allowed by their children, relatives, or friends; whether children able to work are allowed to remain in idleness at home; and if the rents paid are too high. These, and other conditions so frequently varying, make it impossible to adopt a scale of payments which would be suitable for the whole of any specified time. The equity of the allowances depends chiefly upon the frequentness of inspection, and the longer the intervals between the visits, the greater the hardship likely to ensue from under-payments; and the greater the probabilities of imposition, should the allowance have been apportioned too liberally. In the Metropolitan and in the Newcastle Districts each home should be visited not less than once every two months, then the Board would be able, as it is always prepared to do, to systematically vary the payments to meet reasonable appeals for extra consideration. Owing, however, to pressure of work, the inspectors are unable to visit more frequently than once in six and sometimes once in nine months.

The Board often receives from the mothers and their friends appeals for payment of allowances based on the rates paid to strangers who engage to nurse children maintained apart from the parent. These rates exceed the actual cost of maintenance, and it is not the Board's intention to authorise their payment to mothers for the support of their own children, nor is it the intention of the Act that such payments should be made. The official records of the Department show that the able-bodied mother who cannot provide for the support of herself and her children when in receipt of a weekly allowance of 2s. 6d. per child is, as a rule, unfitted to be their custodian, and the Board, in the interests of the children, deem it advisable in such cases to wholly provide for the children by boarding them with non-relatives rather than grant supporting allowances to those well able to manage, if industrious, with assistance only. If the children are delicate, or the mothers are of weak constitution, no reasonable appeal for increased payment is refused when the facts of the case are brought under notice.

In order to satisfactorily deal with this important branch of the Board's work special meetings have to be held, and occasionally three sittings a month become necessary. And it would obviously be wrong to meet even so seldom if the conditions of each case had to be hastily examined and the allowances voted without a previous knowledge of the surrounding circumstances. It was therefore determined, in order that the allowances might be made with due regard to the wants of each appeal, that a *précis* of each case should be prepared and forwarded to the individual members of the Board several days in advance of the meeting. This arrangement works admirably. The whole of the applications are carefully analysed before the meeting; the rates are assessed by each member and, as the allowances are voted after comparing notes, the Board is in a position to announce that the rates fixed represent a consensus of opinion based upon an intimate knowledge of the circumstances of each parent at the time the Inspector furnished the report.

Upon reference to the statistics on folio 30, it will be found that 198 applications were refused, and 71 were held over for more complete information. Three hundred and eighty-five new applications were granted; 306 were reviewed, but the rates allowed were not varied; 137 were increased; while the allowances in 223 instances were reduced principally on the ground that the children had reached an age when they were able to support themselves, and 220 cases receiving relief were discontinued. The latter total includes widows who remarried or voluntarily withdrew owing to improved circumstances, and others whom the Board considered able to make provision for their families without further State relief.

BALANCE-SHEET

## BALANCE-SHEET of the State Children Relief Board for the Year ending 5th April, 1899.

Upon comparing the balance-sheet published on page 18 with the expenditure shown in last year's report, it will be found that the following savings have been effected:—

	£	s.	d.
Clothing ... ..	313	4	1
Gas ... ..	21	4	4
Books ... ..	59	7	2
Travelling ... ..	470	3	4

One of the most striking features noticeable in an analysis of the Board's expenditure is the variation in the outlay for the maintenance of children supported apart from their parents. In the year 1893 the total cost was £25,798 2s. 5d., but during 1896 the outlay reached £38,919 19s. 8d., an increase of £13,121 17s. 3d., or an increase of £4,373 19s. 1d. a year. In 1899 the payments to mothers for the keep of their children so influenced this vote that it shrunk to £41,887 8s., or an actual decrease of £2,597 15s. 11d., compared with the expenditure of this service during the year 1898. As the annual increase for the three years preceding 1896 was £4,373 19s. 1d., and as the actual decrease between 1898-9 was £2,597 15s. 11d., the new policy may be said to have influenced the expenditure under the Principal Act to the extent of an annual saving of about £7,000 a year. The chief increase will be found under the heading "Widows and Deserted Wives." This expenditure is £3,853 5s. 2d. in excess of last year, but the total cost of the year 1898 for all services was £59,596 1s. 1d. against a total expenditure of £60,961 11s. 11d. for the year ending 5th April, 1899, or an increased expenditure of £1,365 10s. 10d. only. When it is considered that without the benefits conferred under the Amendment Act the expenditure for the three years prior to 1896 increased at the rate of £4,373 19s. 1d. a year, and that last year the increase in the total expenditure of the Board amounted to the comparatively small item of £1,365 10s. 10d., there is reason to believe that ultimately it may be found not only more humane but more economical for the Government to pay the mothers than remove the children from their custody. The great increase in expenditure from £42,200 14s. 11d. in 1896 to £59,596 1s. 1d. in 1898 is, of course, attributable to the change of policy, which brought an appeal from every mother who expected to receive benefits under the Act. When the whole of these appeals were dealt with the additional expenditure of the Department increased by £1,365 10s. 10d. only during the succeeding year's operations. This additional expenditure represents the lowest annual increase of any year since the constitution of the Board in 1881, excepting during the year 1889, when the increased expenditure for all services was £459 only in excess of the cost of 1888.

The following chart shows the increase in the number of children under the Board's control in both divisions from year to year since 1881:—

The line A B represents the increase in the number of State children boarded-out, adopted, and apprenticed apart from their parents at the close of each year since 1831. The line D E represents the increase in the number of children *partly supported* in the care of their mothers since 1896. The line A C represents the total number of children subject to inspection, but does not include 544 infants registered under the Children's Protection Act, which is administered by the Board's Chief Officer. The latter children are not supported by the Government.

After examining this chart, and the map which forms an appendix to this report, and shows the towns in which these children are placed, it will, I am sure, be conceded that six male inspectors and three ladies cannot visit the whole of the children frequently enough to reduce imposition to a minimum, and properly safeguard the interests of the children by careful examination of their methods of treatment, more especially when it is taken into consideration that these officials have also to examine claims for Government subsidy, attend to the inspection work of the Children's Protection Act, and investigate all applications in the Metropolitan District for relief from the Charity Vote. In 1895, when, as will be seen from the chart, the number of children under control was 3,174, twelve inspectors, drawing salaries amounting to £2,400 a year, were employed, and these officials were assisted by members of the clerical staff to such an extent, that the strength was equal to fourteen officials working full time. When the re-organisation by the Public Service Board took place in 1896, but prior to the passing of the 1896 Act, and, therefore, before the extra work was added, the number of inspectors was reduced to seven. Two have since been appointed; but no assistance is now rendered by the clerical staff. There are 6,606 children to be inspected, and the salaries paid amount to £1,700 a year, or £700 a year less than the cost in 1895, when the number of children under control was 3,174, or 3,432 less than have now to be visited. Pending a further re-organisation of the Department, which the Public Service Board is considering, the question of increasing the number to the strength of 1895 has been held over; but as the delay vitally affects the efficiency of my Board's administration, additional inspectors should be promptly appointed. The Public Service Board is, however, fully seized with the importance of this matter, and will, I understand, have it adjusted shortly.

During the year 1896, when the mothers were first paid for the support of their children, there were 3,456 children cared for, apart from their parents, under supervision of the State Children Relief Board, and the cost for the maintenance of those boarded-out was £14 3s. 11d. per head. A comparison with the statistics of other colonies about that time—that is, before the statistics here were influenced by a change of policy—is stated hereunder:—

Colony.	Under control.	Cost per head.		
		£	s.	d.
New South Wales ... ..	3,456	14	3	11
Victoria ... ..	3,965	14	17	4
South Australia ... ..	1,009	14	6	0
Queensland ... ..	1,615	14	10	3

The figures for New South Wales are brought up to 5th April, 1896; those for Victoria to 31st December, 1896; South Australia to April, 1898; and Queensland to 31st December, 1897. The statistics for all colonies on 31st December, 1896, are not available, but those quoted will be found sufficiently accurate to show that both in the number of children dealt with, apart from their parents, and in the disbursement of the public funds set apart for their maintenance, the administration in this Colony has proved highly satisfactory.

I have already stated that the payment of cash allowances by the Government to mothers for the support of their children is confined to this Colony only. I am, therefore, not in a position to make comparisons,

parisons, but a perusal of the comprehensive statement which I have given in this report concerning the administration of this Act will, I believe, lead to the conclusion that the State Children Relief Board has not only succeeded in placing deserving mothers of sober and industrious habits in a position to support their children, if they make a reasonable effort to help themselves, but has also distributed the amounts set apart for the purpose with a conscientious regard to their public responsibilities.

## PART II.

## ADMINISTRATION OF THE STATE CHILDREN'S RELIEF ACT OF 1881.

(Children provided for apart from their parents.)

The following statistics represent the variation in numbers during the year ended 5th April, 1899:—

	Boys.	Girls.	Total.
Under control on 5th April, 1898	2,083	1,626	3,709

The following return shows the number of applications received for the custody of State Children under the boarding-out, adoption, and apprenticeship clauses of the Act during the past six years:—

Year.	Approved.	Refused.	Not yet inquired into.	Total.
1894 ...	667	186	244	1,097
1895 ...	908	292	615	1,715
1896 ...	858	398	264	1,520
1897 ...	769	301	440	1,510
1898 ...	927	332	529	1,788
1899 ...	875	315	425	1,615

A total number of 1,615 applications was received during the year; 1,190 were enquired into, and of this number 315 were rejected upon the reports of the Board's inspectors.

Of the number received during the year ending 15th April, 1899, 1,265 were from Protestant and 350 from Roman Catholic applicants. The number of children applied for was 2,473, and the number of children admitted 569. The conditions under which the children were required are shown below:—

Religious Denomination.	Boarders.	For Adoption.	For Service.	Total asked for.
Protestant ... ..	1,402	36	480	1,918
Roman Catholic ... ..	457	15	83	555

#### *Inspection of Children.*

The number of visits paid to the children by the Government officials during the past year cannot be regarded as satisfactory. In this division 1,092 visits less were paid during the year ending 5th April, 1899, than were recorded in the previous year. Some of the children have been inspected twice, but the visitation in the country districts does not exceed one visit a year. Each child should be visited at least three times in the Metropolitan district, and in Newcastle and Goulburn, where so many are located; and it is not judicious to limit the inspection in all other districts, where the homes are more scattered, to less than twice annually. The Board wish to express their high appreciation of the services rendered by the honorary visiting staff, who have so ably assisted during the past year. The number of visits paid during 1897-8 amounted to 4,164, but this total reached 6,856 during the year now under review—a most substantial increase of 2,692 visits. But included in the number 6,856 are the visits paid to children boarded with their mothers. The following table shows the number of visits paid during each of the past six years:—

Year.	Permanent Staff.	Lady Visitors.	Total.
1894 ... ..	6,323	1,666	7,989
1895 ... ..	6,851	1,305	8,156
1896 ... ..	6,606	2,008	8,614
1897 ... ..	7,147	1,465	8,612
1898 ... ..	5,950	4,164	10,114
1899 ... ..	4,858	6,856	11,714

*Adopted Children.*

The number of children adopted by reputable citizens without payment has increased from 111 in 1898 to 116 in 1899. As the cost per head for maintenance is £14 4s. 1d. for boarded-out children, the placing of 116 children with foster parents for adoption represents a considerable saving to the Government. These children mostly assume the surname of the foster-parent, and the fact that they are not the legitimate offspring of their guardians is known to the officials of the Department only.

*Number of Children in each Home.*

The principle of maintaining, as far as possible, the feelings of family affection, by not separating brothers and sisters, has been adhered to, with the results as shown hereunder:—

1,382	homes with 1 child.				
517	"	"	2 children, including 392 with children of one family.		
232	"	"	3 " "	159	" "
93	"	"	4 " "	32	" "
7	"	"	5 " "	4	" "

2,231 homes, containing 3,519 children (exclusive of 19 absconders, 8 in hospitals, 143 in cottage homes, and 33 in depôt).

It will be seen, therefore, that there are 587 homes with children of one family.

Exclusive of homes containing children of one family, there are:—

1,382	homes with 1 child.		
125	"	"	2 children.
73	"	"	3 "
61	"	"	4 "
3	"	"	5 "

1,614 homes, containing 2,110 children, or an average of 1.28. (Last year the average was 1.24.)

*Apprenticed Children.*

On the 5th April, 1899, there were 999 children (605 boys and 394 girls) under indenture in various parts of the Colony. 112 boys and 69 girls were discharged during the year. All the girls are at domestic service while the boys are employed by bakers, bootmakers, brickmakers, butchers, bookbinders, broom makers, coach builders, chemists, carpenters, dairymen, engineers, fruiterers, grocers, gardeners, grooms, hairdressers, messengers, mineral water manufacturers, orchardist, plumbers, printers, saddlers, tailors, vigneron.

These children are all wage-earners, and the cost of supervision, transit, and replenishing (in a few instances only) of outfits when under transfer, is the only expense to the State. The total 999, is the greatest number yet recorded.

The amount of wages collected and paid to apprentices who have served their terms of indenture since 1887, is shown hereunder:—

	£	s.	d.
Total collections to 5th April, 1879 ... ..	20,682	8	3
Amount of disbursements ... ..	16,995	18	5
To the credit of Trust Account, 5th April, 1899 ...	£3,686	9	10

*The*

*The Central Home, Paddington.*

The majority of the children received by the State Children Relief Board are admitted into the Receiving Depôt at Paddington immediately before being boarded out. Here the outfits are provided and the children remain temporarily until arrangements can be made for their distribution and transmission to the homes selected for them by the official in charge of this important duty. When facilities have been afforded for the disposal of grown girls, unfitted for domestic service, it is the Board's intention to admit the children direct to the Central Home and discontinue the practise of first sending young children to the Sydney Benevolent Asylum. Pending the re-organization of the Cottage Homes, however, the Board is unable to change the custom which now obtains. I pointed out in my last report that it was the wish of the Board to admit all children to the depôt, and the Royal Commission on Public Charities has since made a similar recommendation. When the other changes outlined have been made and extra accommodation has been provided the whole of the children received from the police and from the parents will be admitted to the depôt and sent to their future homes without delay.

The average daily number of children passing through the depôt during the past year was 26. The total cost of maintenance was £230 13s., and the capitation cost amounted to £8 17s. 5d. per annum only.

*Cottage Homes for Invalid Children at Mittagong and Parramatta.*

There are two cottages at Parramatta erected by the Government for the purposes for which they are now utilised; and seven (7) homes at Mittagong. The latter are private property used temporarily pending the erection of suitable cottages. As I have already referred to the administrative defects of these homes, I purpose dealing now with the statistics of the past year only under this heading.

These homes contain in all 143 inmates—twenty-nine males and 114 females.

The following tables furnish additional particulars:—

## PART III.

## STATE CHILDREN RELIEF ACT OF 1896.

*(Children cared for by their Mothers and partly supported at the Government expense.)*

The statistics published in my last annual report show that on the 5th April, 1898, 770 mothers were in receipt of cash allowances to enable them to provide for the support of 2,422 children. Including original applications received since that date, and cases in which assistance had previously been authorised and were again brought under

under review, the State Children Relief Board during the past year dealt with 1,540 requests for cash assistance, with the following result:—

385 were granted.  
 198 were refused.  
 306 were not varied.  
 137 were increased.  
 223 were reduced, mostly owing to the children being over age, and  
 71 were postponed for various reasons.  
 220 were discontinued.

On the 5th April, 1899, 935 widows and deserted wives were in receipt of cash allowances paid by the Government.

The following is a statement of their classification:—

674 Widows.  
 179 Deserted wives.  
 39 Husbands insane.  
 18 Husbands in gaol.  
 17 Husbands in Asylums for the Infirm and Destitute.  
 8 Husbands in hospitals.

---

935 Total.

During the year 1,307 children were admitted to control and 845 discharged. The total number now on the books, inclusive of 2,422 under control on 5th April, 1898, is 2,884. The ages are as under:—

Under 1 year.	1 to 2.	2 to 3.	3 to 4.	4 to 5.	5 to 6.	6 to 7.	7 to 8.	8 to 9.	9 to 10.	10 to 11.	11 to 12.	Over 12.	Total.

## PART IV.

## BOARD MEETINGS, HONORARY VISITING STAFF, &amp;c.

*Board Meetings.*

There were twenty-eight (28) sittings of the Board during the year, viz., 12 general, 14 adjourned, and 2 special, at which the members attended as follows:—The Hon. Sir Arthur Renwick, Kt., M.D., M.L.C., President, 25; Mrs. Garran, 25; Mrs. Slattery, 17; Mrs. Grimshaw, 17; Lady Manning, 16; Lady Renwick, 14; Hon. W. J. Trickett, M.L.C., 9; Mrs. McMillan, 8; Mrs. Goodlet, 4; and the Hon. L. F. Heydon, M.L.C., 4.

In addition to the meetings specified above, the Finance Committee meets in advance each month, and examines and certifies to the claims to be submitted for payment at each general meeting of the Board; and the lady members, in rotation, inspect monthly the Cottage Homes for invalid children at Parramatta and at Mittagong.

*Appointments, resignations, and leave of absence.*

On the 20th July, Mrs. Goodlet resigned her position as a member of the Board, and on August 29th Mrs. Grimshaw was appointed to the vacant position.

On the 28th November, Lady Manning was granted six months' leave of absence; and Mrs. McMillan's leave was extended for a further term of three months.

Lady Renwick resigned her seat on the Board on the 30th January, Mrs. Ed. Barton being appointed in her stead.

*Lady Visitors.*

As is now well known, the State homes in various parts of the Colony are placed under the supervision of lady visitors, whose voluntary services on behalf of the children cannot be too highly appreciated. The usual list is appended hereto, viz.:—Armidale, Mrs. Allingham, Mrs. J. J. Bliss; Albury, Mrs. E. Edmondson, Mrs. J. Kennedy, Mrs. C. Spencer; Auburn, Mrs. C. Gannon, Miss Darmody; Annandale, Miss O'Brien; Bowral, Mrs. J. C. Bagot; Bega, Mrs. E. Bland; Braxton, Mrs. J. A. Tulloch, Mrs. Bercini, Mrs. E. Smith; Bundanoon, Mrs. Osborn; Bathurst, Mrs. Marriott, Mrs. A. Reading, Miss Newman, Miss Meagher, Miss C. White; Berrima, Mrs. G. Sheppard, Mrs. W. McCourt; Bethungra, Mrs. M. Sawyer; Baulkham Hills, Mrs. W. M. Best; Burwood, Mrs. Ireland; Berry, Mrs. E. Morris, Mrs. English; Boolong, Miss Grant; Burrowa, Mrs. C. Robinson, Mrs. J. H. Boucher; Barraba, Mrs. Kidd; Braidwood, Mrs. O'Brien, Mrs. Bayley; Bulli, Mrs. Tate; Balmain, Mrs. J. Dixon, Mrs. Pole, Mrs. W. McKenzie, Mrs. G. Boulton, Mrs. Venables; Brookfield, Mrs. S. Carlton; Bringelly, Mrs. Mayne; Bowan Park, Mrs. S. M. Thomson; Ballina, Mrs. W. E. Evans; Blacktown, Mrs. E. Pearce, Miss Middleton; Badgery's Creek, Mrs. C. J. Swann; Bondi, Mrs. F. Marsh; Botany, Mrs. Reeve; Cootamundra, Mrs. E. Barnes, Mrs. W. H. Mathews, Mrs. E. J. Webster; Camden, Miss Raymond; Cassilis, Mrs. M. Traill; Cambewarra, Mrs. Brennan; Cessnock, Miss M'Donald; Campbelltown, Mrs. J. Kidd, Mrs. J. Loney; Crookwell, Miss Olivia Smith; Cobargo, Mrs. E. Tarlinton; Cobbitty, Mrs. G. H. Allnutt; Camperdown, Mrs. E. Barnier, Mrs. B. Levey, Mrs. W. Hamblin, Mrs. Preston; Canterbury, Mrs. Wilson; Chatswood, Mrs. Middleton; Croydon, Miss M. Stack; Corrimal, Miss M. Hicks; Casino, Mrs. H. Lumsdaine; Canberra, Mrs. P. G. Smith; Cowra, Mrs. R. S. Smith,  
Mrs.

Mrs. W. J. Walker ; Carcoar, Mrs. J. Links ; Cooma, Mrs. L. Marks ; Deniliquin, Mrs. H. M'Collough, Mrs. A. H. Noyes, Mrs. Holt ; Dungog, Mrs. Waller, Mrs. F. A. Hooke ; Dalton, Mrs. H. T. Beresford ; Darlinghurst, Mrs. J. B. Christian ; Dubbo, Mrs. B. Soane ; Forbes, Mrs. Reymond ; Fairfield, Mrs. B. Dale, Mrs. A. C. West ; Flemington, Mrs. H. C. Kent ; Goulburn, Mrs. Ross, Mrs. Oliver, Mrs. A. Chisholm, Mrs. Handcock Burkitt, Mrs. W. Chisholm, Mrs. De Lauret, Mrs. M'Killop, Mrs. E. Gillespie, Mrs. Jessop, Mrs. Craig, Mrs. T. M'Killop, Mrs. George Sheaffe, Mrs. E. Kingsmill, Mrs. M. Fleming ; Gladesville, Mrs. Lumsdaine, Mrs. M. F. Makinson ; Guildford, Mrs. Gurney ; George's Plains, Mrs. M. Young ; Granville, Mrs. E. B. Docker, Mrs. T. Irons, Mrs. R. F. Ritchie ; Gunning, Mrs. Saxby ; Grcsford, Mrs. R. B. Boydell ; Gerringong, Miss M. Folcy, Miss Devery ; Gosford, Mrs. Fielder, Mrs. J. K. Brown ; Gordon, Mrs. Richardson ; Grafton, Mrs. M. A. Lee, Mrs. E. A. Ebsworth, Mrs. A. Saunders, Mrs. R. Lipman, Mrs. T. Creagh, Mrs. J. S. M'Kittrick ; Grabben Gullen, Mrs. J. Downey ; Ginninderra, Mrs. K. M. Crace ; Glenbrook, Mrs. E. Scragg ; Glen Innes, Mrs. H. Wrigley ; Gunnedah, Mrs. W. L. B. Brown ; Gerogery, Miss M. Vile ; Hunter's Hill, Mrs. R. Lenehan, Mrs. A. F. Lenehan ; Hay, Mrs. Jolmson, Mrs. Lavender ; Homebush, Mrs. H. C. Kent ; Hoxton Park, Mrs. F. W. Biden ; Hillgrove, Mrs. B. Carry ; Harden, Mrs. F. Brady ; Inverell, Mrs. A. Callaghan, Mrs. J. W. Anderson ; Junee, Mrs. Studds ; Jamberoo, Miss E. Colley ; Kempsey, Mrs. Minnuet ; Kurrajong, Mrs. M. Gray ; Katoomba, Miss K. Kelly ; Kelso, Mrs. G. S. Oakes ; Kangaloon, Mrs. W. J. Brenning ; Kangaroo Valley, Miss E. O'Sullivan, Miss M. Guihen ; Kogarah, Mrs. T. Murray, Mrs. J. Vogel ; Liverpool, Mrs. E. J. Ashcroft, Mrs. E. Simpson ; Leichhardt, Mrs. J. J. Dougherty ; Lambton, Mrs. M. Turnbull ; Long Reach, Mrs. A. J. Henderson ; Largs, Mrs. Warden ; Lismore, Mrs. N. J. Simmons ; Lochinvar, Miss Kavenagh ; Lithgow, Mrs. M. Ryan, Mrs. W. Stewart ; Maclean, Mrs. M'Innes ; Maitland, Mrs. M. Smith, Mrs. W. G. Lipscombe, Mrs. P. Rafferty, Mrs. J. B. Rooney, Miss E. Tucker, Miss M. Enright, Miss A. Healey ; Menangle, Mrs. Onslow ; Morpeth, Mrs. F. H. Thomas ; Murrumburrah, Miss M. A. Bourke ; Mudgee, Mrs. E. J. Willis, Mrs. M. Crossing ; Marulan, Mrs. M. E. Shaw ; Moruya, Mrs. Williams ; Milton, Miss Kendall ; Marrickville, Mrs. W. W. Clarke, Mrs. A. E. Perkins ; Molong, Mrs. W. E. Panton, Mrs. Alldis ; Muswellbrook, Mrs. W. S. Wilson, Miss Luke ; Mewether, Mrs. Berkeley ; Murrumbateman, Mrs. M. M'Clung ; Manly, Mrs. S. C. Douglas ; Mosman, Mrs. E. M. Sayers ; Merella, Mrs. M. Dalgleish ; Newcastle, Mrs. Cuthbertson, Mrs. M. Timbury, Mrs. M'Donnell ; North Sydney, Mrs. T. O'Sullivan, Mrs. E. M. Clark, Mrs. N. Greenwood ; Newtown, Mrs. R. Scott, Mrs. J. G. Clegg, Mrs. J. Lee, Mrs. Goldsmith, Mrs. Painter, Mrs. H. N. Howe, Mrs. Taylor, Mrs. G. Douglas, Miss C. Healey ; Narrandera, Mrs. E. Elwin ; Nowra, Mrs. H. M. Trickett ; Orange, Mrs. J. Dalton ; Plattsburg, Mrs. M. A. Froome ; Penrith, Mrs. T. Woodriff, Miss A. Leithbridge ; Picton, Mrs. Gibson, Mrs. Sheppard, Mrs. W. R. Antill ; Prospect, Mrs. M. Remington ; Pymont, Mrs. S. Fuller, Mrs. H. Holliday ; Parramatta, Mrs. W. J. Gunther, Mrs. Inglis, Mrs. Holt, Mrs. A. Quirk, Mrs. R. L. Fitzpatrick ; Parkes, Mrs. E. Ranford ; Peak Hill, Mrs. Richard Holmes ; Quirindi, Mrs. M. Allen, Mrs. E. J. Dawson ; Queanbeyan, Mrs. Willans ; Raymond Terrace, Mrs. J. Richardson ; Redfern, Mrs. Boyce ; Richmond, Mrs. Onus, Miss Onus ; Rooty Hill, Mrs. R. Lister ; Rouse Hill, Mrs. M. Pearce, Mrs. E. A. Rouse, Mrs. E. J. Wilson ; Rookwood, Mrs. A. Gormley, Miss Gulliver ; Robertson, Miss A. J. Hayter ; Riverstone, Mrs. A. E. Faviell ; Rockdale, Miss E. Burns, Miss J. Walz ; Sutton Forest, Mrs. M. J. Parnell ; Stroud, Mrs. Rushforth ; Stockton, Mrs. S. W. Smith ; St. Peter's, Mrs. E. D. Madgwick ; Smithfield, Mrs. J. E. Wilkins ; Singleton, Mrs. Moylan, Miss Snelson ; Shoalhaven, Mrs. Thompson ; Scone, Miss E. Hopper ; Tirianna, Mrs. E. H. Glover ; Tamworth, Mrs. Middleton ; Tumut, Mrs.

Mrs. A. M. Brown; Toongabbie, Mrs. E. Perry, Mrs. F. Northcott; Ultimo, Mrs. R. S. Paterson; Windsor, Mrs. J. B. Johnston, Mrs. Hall, Mrs. W. Dean, Mrs. J. C. Fitzpatrick, Mrs. Holland, Miss Hall; Wollongong, Mrs. M. Fairweather, Mrs. A. Mackay; Wallsend, Mrs. Neilson; Waverley, Mrs. Best; Wallerawang, Mrs. Abbott; Wagga Wagga, Mrs. G. Coleman; Windeyer, Mrs. Mallon; Wiseman's Ferry, Miss A. Wilson, Mrs. J. T. Marx; Woodville, Mrs. Graham; Wybong Creek, Mrs. Cox; Wentworth, Mrs. W. B. Grang, Mrs. M. E. Morgan; Windellama, Mrs. Calthorpe; Wahroonga, Mrs. J. J. Toohey; Wyalong, Mrs. E. S. Burton; Warren, Mrs. K. Parker; Wilberforce, Miss A. Simpson; Woollahra, Mrs. F. C. Irving; Yarrunga, Mrs. Throsby; Young, Mrs. Heeley, Mrs. M. Byrne; Yass, Mrs. B. Sheeby, Mrs. H. Faunce.

I regret to have to announce the death of Mr. James D. Prentice, who ably assisted the State Children Relief Board by acting during the past fifteen years as Secretary to the Local Ladies' Committee at West Maitland.

#### CONCLUDING REMARKS.

In conclusion, I have much pleasure in conveying the thanks of the members of the Board to Mr. Critchett Walker, C.M.G., the Principal Under Secretary, to Mr. Fosbery, the Inspector-General of Police, Sydney, and to Mr. George Phillips, Commissioner of Police, West Australia, for the valuable assistance rendered to the Department during the year.

I have, &c.,

ARTHUR RENWICK,  
President.

## APPENDIX A.

## OPINIONS of Lady Visitors and Public School Teachers upon the operations of the Boarding-out System.

Mrs. W. R. Antill, Picton :—

The boarding-out system is very successful in this district. The children are happy and well looked after by their guardians, and are treated as their own ; generally they are healthy, and nearly all are out on small farms.

Mrs. J. W. Anderson, Inverell :—

So far as I have observed, the boarding-out system is very satisfactory. Since I have been lady visitor there are only two children living with a guardian, and they appear very happy and well cared for, and compare most favourably with those under care of parents.

Mrs. Alldis :—

My experience of boarding out State children has been fairly favourable. The children being unfortunate in their earlier career, do not always show to advantage, and in whatever light regarded they usually present some regrettable aspects, but in "making the best of bad cases" I believe the State approaches as near to success as can be reasonably hoped for. I am satisfied that occasional visits from authorised State inspectors has a good effect, and gives more weight and influence to local committees. My confirmed experience is, if children be domiciled with tender-hearted, reputable persons, and a fair watch kept, the best that can be done for them is achieved.

Mrs. E. Barnier, Camperdown :—

I find, in going from house to house, that the State children are as well, and in some cases better cared for than children who are with their mothers.

Mrs. J. J. Bliss, Armidale :—

I think that the boarding-out system is an excellent one. The children under my supervision are all happy and healthy, and are really loved by their guardians.

Miss M. A. Bourke, Harden :—

I have visited the State children under my supervision, and find them thoroughly happy and well cared for.

Mrs. F. D. Brady, Harden :—

I have visited the State children under my supervision, and find them thoroughly happy and well cared for.

Mrs. Brennan, Cambewarra :—

The boarding-out system works very satisfactorily in my district. I have had no complaints from either the children or their guardians. The boys are all on farms, and appear very happy and contented. I have three families under my supervision, with their mothers acting as guardians to them, and the assistance given them is of very great help.

Mrs. K. Brenning, Kangaloon :—

The boarding-out system is worthy of encouragement, especially so in the country, where—by its application—the children obtain fresh air and wholesome food.

Mrs. A. M. Brown, Tumut :—

At present there are only two State children in my district, but I see a great improvement in them since they came. They are healthy, quite contented, and most comfortable in their home, and are well looked after.

Mrs. M. Byrne, Young :—

Some of the State children recently in this district were hard to manage, being self-willed and determined ; but my experience of the present year is that the children are well cared for, no complaints having been made by guardians or children. Considering how these poor children have been reared previous to being taken by the Department, wonderful reformation has been made in them.

Mrs. Calthope, Windellama :—

The State children under my supervision are well cared for, and the best relations exist between children and guardians. The children compare favourably with those under their parents' control.

Mrs. J. B. Christian, Elizabeth Bay :—

I am happy to express my entire satisfaction with the boarding-out system in this district. I think, as a rule, the children placed with guardians are better cared for than those boarded out to their mothers.

Mrs. E. M. Clark, North Sydney :—

As it applies to the children in this district, I consider the boarding-out system an excellent one. It ensures to the dependent children of the State the comforts and advantages of a home life, while in the case of deserving widows and deserted wives it enables them to keep their homes together and to have their little ones under their own immediate supervision.

Mrs. J. G. Clegg, Newtown :—

In reply to your request, I consider the introduction of the boarding-out system a national benefit, seeing that the destitute orphans are brought up with home surroundings, including all its attendant blessings. The constant supervision of such homes and orphans by the lady visitors all over the Colony must be a permanent benefit to the State, and well repays the nation for the money so expended, and, with God's blessing, those children will grow up good citizens ; and, so far as human foresight can go, I consider the system one of the best extant. I further wish to state that all the State children in my district are clean, healthy, and appear quite happy in their adopted homes, and I have very great pleasure in stating that there appears to be a genuine mutual attachment for good between the children and their adopted parents.

Mrs. B. Dale, Fairfield :—

I think the boarding-out system works very well. The guardians seem very fond of and attentive to their little charges.

Mrs. J. Dalton, Orange :—

As far as my experience goes, the children who are boarded out in Orange have much better homes and seem to be much happier than many who are living with their parents.

Miss M. Darmody, Auburn :—

The children placed out with guardians in the Auburn district compare favourably with those who are with their mothers. They appear to be quite contented, and are much attached to their guardians.

Mrs.

Mrs. E. J. Dawson, Quirindi :—

When I saw the one child in this town under my supervision it was healthy and well clothed, and the boarding-out system, in this instance, I consider to be quite satisfactory.

Miss M. Devery, Gerringong :—

The boy who comes under my supervision is thoroughly satisfied with his home. The guardians are charitable and kind, and there have been no complaints made on either side.

Mrs. G. Douglass, Newtown :—

I think the boarding-out system is an excellent one. All the children who are placed within my district are well cared for.

Mrs. J. Downey, Grabben Guillen :—

The majority of the State children in this district compare favourably with children residing with their parents. As a rule, they are nicely dressed when appearing at church or other public place, and they are well fed and rarely overworked. Some of the guardians are really fond of the children, and treat them not only kindly, but affectionately.

Mrs. E. Elwin, Narrandera :—

The children under the care of their parents in this district are, generally speaking, well cared for

Mrs. M. Fairweather, Wollongong :—

All the children under my supervision in this district are well cared for, their guardians showing sympathy and kindness towards them. They compare very favourably with children under their parents' care.

Mrs. A. E. Faviel, Riverstone :—

The boarding-out system seems to answer well in this district. The children appear well taken care of and are healthy and happy.

Mrs. C. Gannon, Auburn :—

I think the boarding-out system is very satisfactory. Deep affection exists between the guardians and the children, and the latter compare favourably with children residing with their own parents.

Mrs. Gibson, Upper Picton :—

The State children with whom I am acquainted are well cared for, and treated by their guardians as if they were their own, and the children are fond of their guardians.

Mrs. Gormley, Rookwood :—

I have every reason to be pleased with the way State children and their guardians get on together in this district; they compare very favourably with children under their own parents. I think the system is a great blessing to the majority of the children.

Mrs. M. Gray, Kurrajong :—

With regard to my opinion of the working of the new rule, viz., the boarding out of the children to their own mothers, my opinion is this: It is a great boon to both parents and children, and, so long as the visitors see that the privilege is not abused, it must result in great and lasting good.

Miss M. Guihen, Kangaroo Valley :—

As far as my experience goes, the children boarded out by the State are better cared for than many children living with their parents. Those in my district are certainly happy and very well cared for.

Miss A. J. Hayter, Robertson :—

The State children under my supervision are well cared for, and the best relations exist between children and guardians.

Miss A. Healy, East Maitland :—

The State children under my supervision appear to be happy and contented with the treatment they receive from their guardians.

Mrs. D. Heeley, Young :—

In reference to the boarding-out system, I am pleased with what I have seen of the kindness and attention paid to the children. Many of them look better cared for than those who are with their mothers.

Mrs. A. J. Henderson, Long Reach :—

I consider the boarding-out system to be a great success. The children seem happy and contented, and, in my opinion, are in many instances better cared for than some who are living with their parents.

Mrs. M. Irons, Granville :—

I am happy to say I believe the boarding-out system is in nearly every case coming under my own notice very successful, and the children as happy and well cared for as they would be in their own homes; of course, some of the foster-mothers are not so desirable as others, but in many cases the children and their guardians are quite attached to each other.

Miss K. Kelly, Katoomba :—

The boarded-out children in this district compare very favourably with other children in general appearance. I think the boarding-out system an excellent one.

Mrs. A. Mackey, Wollongong :—

The homes I have seen have been very satisfactory. The State children seemed to be as much at home as the children belonging to the house. I also saw two of the schoolmasters in the district, and had a good report of the children.

Mrs. L. Marks, Cooma :—

I think the boarding-out system is an excellent one. All the children under my supervision have comfortable homes and are well treated. The guardians faithfully perform their duty to the children in their care.

Mrs. F. Marsh, Bondi :—

I think the boarding-out system is in every way satisfactory. The relations existing between children and their guardians are both pleasing and satisfactory, and the children compare favourably with those under parental control.

Mrs. Mayne, Bringelly :—

The results of boarding out children in this district are distinctly good; in every instance the children look healthier and happier than on arrival, and seem well cared for.

Mrs. Middleton, Willoughby :—

I have been deeply impressed with the satisfactory results of the boarding-out system. The State children in the Willoughby district are, so far as I can judge, truly happy and well cared for.

Mrs.

Mrs. M. E. Morgan, Wentworth :—

The boarding-out system acts admirably. The children always appear clean and happy.

Mrs. E. Morris, Berry :—

The State children who are boarded out and apprenticed in this portion of Shoalhaven district have remarkably good homes; they are well clothed, and are apparently healthy and contented. The boarding-out system is an excellent idea.

Mrs. M. McClung, Murrumbateman :—

I think the boarding-out system very satisfactory. The children are well treated by their guardians, have the benefit of happy, healthy home life, and should become decent members of society.

Mrs. W. M'Court, Berrima :—

I am satisfied that the boarding-out system works well; the homes have been judiciously selected; the children, as a rule, are well cared for, and in some instances they are looked upon as members of the family.

Mrs. C. G. M'Jones, Maclean :—

The admirable system of boarding out children instead of housing numbers in an institution is, as far as my knowledge goes, acting beneficially for all. The children behave well and seem quite happy. They are well fed, clad, and cared for. The help afforded under the amended Act to poor widows to maintain their little ones in their own homes is a wise and humane measure, and proves a boon to the hard-working mothers. To my mind a better scheme could not be conceived.

Mrs. W. P. Northcott, Wentworthville :—

The State children under my supervision are in comfortable homes, are carefully taught right from wrong, and are as well advanced, both in day and Sunday school work, as other children, and in no way differ from those among whom they live. They seem to be on perfectly happy terms with their guardians.

Mrs. M. O'Brien, Braidwood :—

The boarding-out system in this district is a great success. The children all look well and happy, are in good health, and the guardians treat them as their own.

Mrs. S. Oliver, Goulburn :—

I am very pleased with the system of boarding out State children to guardians. The children seem happy and contented.

Mrs. Onus, Richmond :—

During the past year I have frequently seen the children boarded out in this district. They appear to be well looked after, are clean and healthy, and seem to be quite content with their treatment. I think the system of your Department leaves little room for comment.

Miss E. O'Sullivan, Kangaroo Valley :—

The State children boarding out in the district under my supervision are neatly dressed and apparently well cared for. The relations existing between the children and their guardians seem to be very satisfactory. The children appear to be as well cared for as those with their parents.

Mrs. B. S. Paterson, Ultimo :—

In my district there are very few children with guardians, but the few there are seem to me to be under better training than most of those with their mothers.

Mrs. C. Perry, Wentworthville :—

The boarding out of the children works very well, and secures a home influence superior to any more public mode of caring for the children.

Mrs. E. Ranford, Parkes :—

The State children under my supervision always appear quite happy and contented, and have the appearance of being well cared for.

Mrs. A. Reading, Bathurst :—

I think the boarding-out system is a good one. The children under the care of guardians receive the same attention, and are apparently quite as happy, as those under the control of their parents.

Mrs. R. Scott, Newtown :—

All the State children under my supervision have comfortable homes, and are well cared for. In most cases they are quite as happy and contented as children with their own parents.

Mrs. E. Scraggs, Glenbrook :—

From my observation as lady visitor in this district, I think that the State children compare favourably with those living with their parents. The relations existing between the children and their guardians seem satisfactory. I regard the system as an ideal one.

Mrs. Shaw, Marulan :—

I consider the boarding-out system an excellent one, and that the children are far better brought up in separate homes than under the old barrack system.

Mrs. G. Sheaffe, North Goulburn :—

All the boarded-out children visited by me in this district seem very happy and well cared for. I have never had a complaint from a child, and in many homes the children are spoken of with great affection. I should think, from what I have seen, that they are quite as well cared for as children of the same class living with their parents.

Mrs. E. Simpson, Liverpool :—

The State children in my district have comfortable homes, are well clothed, and appear very happy with their guardians. They compare favourably with children in the care of their parents. I think the boarding-out system an excellent one.

Miss Simpson, Wilberforce :—

The State children under my supervision are well provided for, and, as far as I can judge, little or no difference exists between their treatment and that of the foster-parents' own children.

Mrs. B. Soane, Dubbo :—

The boarding-out system is very successful in Dubbo. The children placed out are very well cared for. In cases when I have visited them quite unexpectedly, I found them, as a rule, clean and well fed.

Miss O. Smith, Crookwell :—

All the children placed under my supervision are doing well, and attend their respective schools regularly. They appear to be treated by their guardians in the same way as those who are under the care of their parents.

Mrs.

Mrs. J. Vogel, Kogarah :—

From careful observation and inquiry, I have formed the opinion that the boarding-out system is the best that could be adopted in the interest of the children. It affords them comforts of a home, which could not be obtained in an orphanage or similar institution.

Mrs. A. West, Fairfield :—

The children boarded out in my district compare favourably with those under the care of their parents, and it is evident that sympathy and affection exist between the children and their guardians.

Miss Wilson, Wiseman's Ferry :—

The State children under my supervision appear to be well cared for, and good feeling exists between guardians and children. I consider the boarding-out system an excellent one.

The Superior Public School Teacher, Annandale :—

I have formed a most favourable opinion of the system over which you preside. The State children under my supervision are well looked after, and I am sure that no stranger could pick them out from among the other children in the school, by reason of inferior appearance, clothing, or general physique.

The Public School Teacher, Arncliffe :—

My experience of the system in operation under the Board has been such as gain my warm commendation. The children under the system in this school compare very favourably with other children.

The Public School Teacher, Bondi :—

I think the system a good one. The State children compare favourably with the other children under my supervision.

The Public School Teacher, Bowral :—

1. The system, so far as I have had opportunities of judging, works well, the children being under as healthy an influence as can be expected. They are kept clean and apparently well fed.

2. Their conduct in school is such as render them undistinguishable from children having their parents' supervision, and, on the whole, gives much satisfaction.

The Public School Teacher, Bandanook :—

I have much pleasure in again testifying as to the good results of the boarding-out system. The children seem thoroughly at home, and get quite fond of their guardians. As an example, one child in my district was transferred to another person, and was present when they left the station. Both the child and guardian shed tears at parting. The other children in my district appear very happy in their homes, and are treated as belonging to the family.

The Public School Teacher, Croydon :—

The State children attending this school are well looked after. They are tidy, clean, and regular.

The Public School Teacher, Canley Vale :—

The children that have come under my notice seemed well cared for; compare favourably with other children, both as regards demeanour and progress in study; and the fact of their being "State children" does not weigh unfavourably in the eyes of other children. In my opinion the system is the best that could be devised.

The Head Teacher, Superior Public School, Dubbo :—

The State children attending this school compare very favourably with the other pupils of the school. They are always well and neatly clothed, and appear to be well cared for. Their conduct gives evidence of good home-training. I consider the boarding-out system, so far as my experience goes, to work very satisfactorily.

The Public School Teacher, Jamberoo :—

The children all seem contented and happy, well nourished, and suitably clothed. They attend school fairly regularly, and compare favourably with the other children in intelligence and all other respects. Of course, I know that a great deal depends upon the people under whose care they are placed, and could give individual instances in which the children are exceptionally well cared for. My honest conviction is that all are treated with due consideration and care.

The Public School Teacher, Newcastle South :—

The State children attending my school compare favourably with the other children of the school in regard to regularity of attendance, cleanliness, and conduct. In point of fact, it is difficult to distinguish them from the other pupils of the school, and they seem contented and happy.

The Public School Teacher, Penrith :—

The children seem to be well cared for, and, so far as my experience goes, attend regularly at school. The boarding-out method is an excellent one, and forms the best substitute for parental love and care. Too great caution cannot be exercised in the choice of guardians.

The Public School Teacher, Raymond Terrace :—

From my experience of the system, and from my observation of the work in the surrounding districts of Miller's Forest and Nelson's Plains, where a number of these children are kept, I believe the Act to be one of the best measures ever passed in the Colony. It is of vast benefit to the children, as it gives them a home where they are in most cases kindly treated, and are taught to become honest and hard-working citizens of the country; and it relieves the State of a difficult and troublesome duty—the care of so large a number of neglected children. Now that a strict supervision is exercised over the guardians of these children by the Department, through its inspectors and lady visitors, I think the system is all that can be desired.

The Public School Teacher, Rookwood :—

The State children attending this school are well clothed, clean, and tidy in appearance. They are also well behaved and attend regularly, and more than favourably compare with many of the pupils who have parents to take care of them.

The Public School Teacher, St. Peters :—

My experience concerning boarded State children is that they compare favourably with the children of working people; they are apparently well kept, and differ in no wise from the other pupils attending school.

## Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,  
Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved—

JOSEPH BARLING, Esquire, Chairman of the Public Service Board, and one of Our Justices of the Peace of Our Colony of New South Wales, Associate of the Institution of Civil Engineers;

GEORGE ALEXANDER WILSON, Esquire, a Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony; and

JAMES POWELL, Esquire, Deputy Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony,—

Greeting:—

KNOW Ye, That We, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorise and appoint you, or any two of you, as herein-after mentioned, to make a diligent and full inquiry into, and report upon the methods of carrying on Government Charitable Institutions, and the way in which Grants of public money to charitable objects under the control of the Government are administered, including Grants for the Aborigines; and to report also upon the methods of administration and relief in force in all charitable organizations which receive aid from the public Treasury, including the Hospitals of the Colony; with further power to suggest desirable changes in the existing state of affairs, with a view to placing the expenditure of public moneys in such directions upon a more satisfactory footing: And We do, by these presents, grant to you, or any two of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means: And We do give you power at your discretion to procure such clerical and other assistance as you may deem necessary for enabling you duly to execute this Our Commission: And Our further will and pleasure is that you do within three months after the date of this Our Commission, certify to Us, in the office of Our Chief Secretary under your or any two of your hands and seals, what you shall find touching the premises: And We hereby command all Government Officers and other persons whomsoever within Our said Colony, that they be assistant to you and each of you in the execution of these presents: And We appoint you the said JOSEPH BARLING, Esquire, to be President of this Our Commission; which said Commission We declare to be a Commission for all purposes of the Act 14 Victoria, No. 1, intituled "*An Act to regulate the taking of Evidence by Commissioners under the Great Seal.*"

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this tenth day of November, in the year of Our Lord one thousand eight hundred and ninety-seven, and in the sixty-first year of Our Reign.

(L.S.)

HAMPDEN.

By His Excellency's Command,

JAMES N. BRUNKER.

Entered on Record by me, in Register of Patents No. 19, page 151, this eleventh day of November, one thousand eight hundred and ninety-seven.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,  
Principal Under Secretary.

VICTORIA,

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,  
Defender of the Faith, and so forth,—

To our Trusty and Well-beloved—

GEORGE ALEXANDER WILSON, Esquire, a Member of the Public Service Board, and one of Our Justices of the Peace of Our said Colony,—

Greeting:—

WHEREAS by an instrument under the Great Seal of Our Colony of New South Wales, bearing date the tenth day of November, one thousand eight hundred and ninety-seven, We did, *inter alia*, appoint JOSEPH BARLING, Esquire, to be a Member, and also President of the Royal Commission of Inquiry in connexion with Charitable Institutions: And whereas the said JOSEPH BARLING has now resigned the Office of President: Now, therefore, know You, that We, of Our especial grace, have thought fit to appoint, and do hereby appoint you, the said GEORGE ALEXANDER WILSON, to be President of such Commission.

In testimony whereof, We have caused these Our Letters to be made Patent, and the Great Seal of Our said Colony of New South Wales to be hereunto affixed.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this eighth day of February, in the year of Our Lord one thousand eight hundred and ninety-eight, and in the sixty-first year of Our Reign.

(L.S.)

HAMPDEN.

By His Excellency's Command,

JAMES N. BRUNKER.

Entered on record by me, in Register of Patents No. 19, page 263, this eighth day of February, one thousand eight hundred and ninety-eight.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,

Principal Under Secretary.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen,  
Defender of the Faith, and so forth,—

To Our Trusty and Well-beloved—

RICHARD CORNELIUS CRITCHETT WALKER, Esquire, Companion of Our Most Distinguished Order of Saint Michael and Saint George, Principal Under Secretary; and

FREDERIC NORTON MANNING, Esquire, Doctor of Medicine,—

Greeting:—

WHEREAS by an instrument under the Great Seal of Our Colony of New South Wales, bearing date the tenth day of November, one thousand eight hundred and ninety-seven, We did appoint JOSEPH BARLING, GEORGE ALEXANDER WILSON, and JAMES POWELL, Esquires, to be a Royal Commission of Inquiry in connexion with Charitable Institutions, and the said JOSEPH BARLING to be President thereof: And whereas by a further instrument, bearing date the eighth day of February, one thousand eight hundred and ninety-eight, We did appoint the said GEORGE ALEXANDER WILSON to be President of such Commission in the stead of the said JOSEPH BARLING, who had resigned such office: And Whereas it hath appeared to Us to be expedient to appoint additional Commissioners: Now, therefore, know Ye, that We, of Our especial grace, have thought fit to appoint, and do hereby appoint, you to be such additional Commissioners accordingly.

Witness Our Right Trusty and Well-beloved Cousin, HENRY ROBERT, VISCOUNT HAMPDEN, Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, Our Governor and Commander-in-Chief of Our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this sixteenth day of February, in the year of Our Lord one thousand eight hundred and ninety-nine, and in the sixty-second year of Our Reign.

(L.S.)

HAMPDEN.

By His Excellency's Command,

JAMES N. BRUNKER.

Entered on record by me, in Register of Patents No. 20, page 272, this twentieth day of February, one thousand eight hundred and ninety-nine.

For the Colonial Secretary and Registrar of Records,

CRITCHETT WALKER,

Principal Under Secretary.

#### ROYAL COMMISSION OF INQUIRY ON PUBLIC CHARITIES.

WHEREAS it is necessary to extend the time within which the Commissioners are to make their report in the above matter: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such report for a period of six months,—to take effect from the 10th February, 1898.

Given under my hand at Government House, Sydney, this second day of March, one thousand eight hundred and ninety-eight.

HAMPDEN.

*FRIDAY, 7 JULY, 1899.*

Dr. Manning and Mr. Powell visited the Hawkesbury Hospital and Benevolent Asylum at Windsor at 11.30 o'clock a.m.

*FRIDAY, 14 JULY, 1899.*

The Commission met at the Offices of the Public Service Board, at 3.30 o'clock p.m.

Present:—Messrs. G. A. Wilson (President), J. Barling, J. Powell, and Dr. Manning.

Drs. R. V. Kelly and A. MacCormick were sworn and examined.

The minutes of the meeting on the 29th ultimo and subsequent meetings were read and confirmed.

The Commission adjourned at 5 o'clock p.m.

*FRIDAY,*

*FRIDAY, 21 JULY, 1899.*

Dr. Manning and Mr. Powell visited the Hospital at Mudgoe at 11 o'clock a.m., and returned to Sydney by the evening train.

*FRIDAY, 28 JULY, 1899.*

Present:—Messrs. G. A. Wilson (President), J. Barling, J. Powell, Dr. Manning, and Mr. Critchett Walker, C.M.G.

The Commission visited the Coast Hospital, Little Bay, in the afternoon.

*MONDAY, 28 AUGUST, 1899.*

The Commission met at the Offices of the Public Service Board, at 2:15 o'clock p.m.

Present:—Messrs. G. A. Wilson (President), J. Barling, J. Powell, Dr. Manning, and Mr. Critchett Walker, C.M.G.

Dr. R. T. Paton was further examined.

The minutes of the meeting on the 14th July and subsequent meetings were read and confirmed.

The Draft Report on the Hospitals of the Colony was considered in part.

The Commission adjourned at 4:15 o'clock p.m.

*WEDNESDAY, 30 AUGUST, 1899.*

The Commission met at the Offices of the Public Service Board, at 2:15 o'clock p.m.

Present:—Messrs. G. A. Wilson (President), J. Powell, Dr. Manning, and Mr. Critchett Walker, C.M.G.

The minutes of the previous meeting were read and confirmed.

A portion of the Draft Report on the Hospitals was read and considered.

The Commission adjourned at 4 o'clock p.m.

*THURSDAY, 31 AUGUST, 1899.*

The Commission met at the Offices of the Public Service Board, at 2:15 o'clock p.m.

Present:—Messrs. G. A. Wilson (President), J. Barling, J. Powell, Dr. Manning, and Mr. Critchett Walker, C.M.G.

The minutes of the previous meeting were read and confirmed.

The Draft Report on the Hospitals was further read and considered.

The Commission adjourned at 4:15 o'clock p.m.

*MONDAY, 4 SEPTEMBER, 1899.*

The Commission met at the Offices of the Public Service Board, at 2:15 o'clock p.m.

Present:—Messrs. G. A. Wilson (President), J. Barling, J. Powell, Dr. Manning, and Mr. Critchett Walker, C.M.G.

The minutes of the previous meeting were read and confirmed.

The Draft Report on the Hospitals was further discussed.

The Commission adjourned at 4:45 o'clock p.m.

*THURSDAY, 7 SEPTEMBER, 1899.*

The Commission met at the Offices of the Public Service Board, at 2:15 o'clock p.m.

Present:—Dr. Manning in the Chair, and Messrs. J. Barling, J. Powell, and Critchett Walker, C.M.G.

The minutes of the previous meeting were read and confirmed.

The Draft Report was further considered.

The Commission adjourned at 3:45 o'clock p.m.

*SATURDAY, 9 SEPTEMBER, 1899.*

The Commission met at the Offices of the Public Service Board, at 9:15 o'clock a.m.

Present:—Dr. Manning in the Chair, and Messrs. J. Powell and Critchett Walker, C.M.G. (Mr. G. A. Wilson, President, arrived subsequent to reading of minutes and took the Chair).

The minutes of the previous meeting were read and confirmed.

Further consideration was given to the Draft Report.

A discussion ensued as to the future action of the Commission, and it was resolved that a short report be written reviewing the past work of the Commission, and that a respectful request be made through the proper channels that the Commission be relieved of the conduct of any further inquiries. The three remaining branches of work not dealt with by the Commission were in relation to the administration of grants for the maintenance of Aborigines, the support of State Children, and the conduct of the Government Asylums for the Infirm and Destitute. The first two being already under the special control of Boards of Management appointed by the Government, it was not considered

that any inquiries conducted by the Commission would be productive of results such as would justify the expenditure of the time and labour that would necessarily be involved. In regard to the Government Asylums for the Infirm and Destitute, as the Public Service Board (two members of which are also members of the Commission) had already instituted a close investigation into their administration, no further action, it appeared to the Commission, was necessary.

It was also resolved, on the motion of the President, that there should be placed on record an acknowledgment of the invaluable services which had been rendered by Dr. Manning in the conduct of the Commission's investigation, and of the deep interest and unremitting attention he had displayed in the work.

The Commission adjourned at 4 o'clock p.m.

---

*WEDNESDAY, 13 SEPTEMBER, 1899.*

The Commission met at the Offices of the Public Service Board, at 2:15 o'clock p.m.

Present:—Dr. Manning in the Chair, and Messrs. Barling, Powell, and Critchett Walker, C.M.G.

The minutes of the previous meeting were read and confirmed.

The Draft Report of the Commission was further considered, and, on the motion of Mr. Barling, seconded by Mr. Walker, was adopted.

The Commission adjourned at 3:45 o'clock p.m.

ROYAL COMMISSION ON PUBLIC CHARITIES.

---

REPORT.

---

To His Excellency the Right Honorable William, Earl Beauchamp, K.C.M.G., Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,

Following the procedure laid down in our previous Reports, we, your Commission appointed by Letters Patent, dated 10th November, 1897, have the honor to submit to your Excellency our Report on the subsidised hospitals of the Colony, which completes the third section of our investigations.

Although confined by our Commission to inquiry in respect to institutions aided or entirely supported by the State, we have considered a knowledge of the operations of those not enjoying that support necessary to a satisfactory comprehension of our subject. We have, therefore, visited most of the latter, and been courteously received and furnished with information by the authorities thereof.

To the officials of the hospitals throughout the country, to the Department of the Chief Secretary, and to the Medical Adviser to the Government, we are indebted for much valuable information; and in the Appendices appear, in tabulated form, the particulars obtained from those sources, and from a careful examination of the annual published statements of account and reports of the hospitals.

Our Report is divided into the following sections, dealing with the hospitals in divisions, and with certain important features of hospital policy which have seemed to us to demand individual treatment:—

1. Metropolitan Hospitals.
2. Suburban Hospitals.
3. Country and District Hospitals.
4. The "Coast Hospital."
5. Convalescent Hospitals.
6. Children's Hospital.
7. Lying-in Hospitals.
8. Home for Consumptives.
9. Provision for Ophthalmic Cases ("Moorecliff").
10. Regent-street Dispensary.
11. Provision for Treatment of the Sick by Friendly Societies and Provident Dispensaries, and the necessity for a Free Dispensary.
12. Provision for Lock Cases.
13. Pay or Part-pay System in Hospitals.
14. Out-patients.
15. Training, Hours of Duty, &c., of Nurses.
16. Private Hospitals.

There

There are 108 hospitals which are subsidised by the State, one maintained entirely by the State, and, to the best of our knowledge, five not subsidised. There are, in addition, five institutions for lying-in cases, three of which receive Government aid.

*Subsidised.*

<hr/> Total ... ..	<hr/> 3,422

There is thus provision for about  $2\frac{1}{2}$  beds per thousand of population. In addition, there are 1,383 hospital beds in the Government Asylums for the Infirm and Destitute, making in all, when the hospitals are fully equipped, accommodation for 4,805 patients, and bringing up the total number of beds per thousand of population to about  $3\frac{1}{2}$ . At present a few of the country hospitals are not provided with beds to the full limit of their accommodation. Three of the hospitals—Marrickville, Camden, and New Angledool—included in the 112 mentioned above were opened during the present year.

The number of beds in hospitals in 1889 was 2,181, so that in the past ten years (excluding the lying-in institutions) there has been an increase of nearly 50 per cent., while the number of hospitals has risen from 84 to 114, an increase of 36 per cent.

The revenue and expenditure for 1897 and 1898 of the 105 subsidised hospitals which were in operation in those years (excluding the lying-in institutions), and of the Government hospital at Little Bay, were as under:—

Year.	Hospitals.	Revenue.						Expenditure.					Invested Funds at end of 1898.	
		From Government.	Subscriptions and Donations.	From Patients.	Interest on Invested Funds.	Other Receipts.	Total.	Medical Officer's Salary and Fees.	Other Salaries and Wages.	Maintenance.	Buildings and Repairs.	Other.		Total.
1897	Metrop.	£ 29,657	£ 13,603*	£ 5,650	£ 2,499	£ 642	£ 52,051	£ 18,119	£ 22,041	£ 5,327	£ 4,323	£ 49,810	...	
1897	Govt. ...	14,974	...	...	...	...	14,974	2,445	8,198	2,724	1,607	14,974	...

1898	Metrop.	27,498	16,761†	5,614‡	1,760	1,258	52,884	18,451	23,229	2,980	3,507	48,167	83,278	
1898	Govt. ...	20,910	...	...	...	...	20,910	3,884	10,324	4,993	1,704	20,910	...	
1898	Country	34,937	31,200	7,206	2,240	483	76,095	8,865	20,442	32,551	7,957	6,532	76,347	56,678
...	Total ..	83,335	47,964†	12,320‡	4,000	1,741	149,889	8,935	42,777	66,104	15,935	11,743	145,424	139,951

\* Includes bequests (£3,165) received by Sydney and Prince Alfred Hospitals and invested. † Includes bequests (£7,208) received by Sydney and Prince Alfred Hospitals and invested. ‡ A legacy of £7,850 in addition was received by the Children's Hospital and invested.

The total expenditure in 1898 was £145,424. The receipts (less the bequests which were invested by the Sydney and Prince Alfred Hospitals, and consequently were not available for expenditure) amounted to £142,686, towards which the Government contributed £83,355. Of the latter sum, £20,910 was for the maintenance of the hospital at Little Bay. The cost of the treatment of the sick poor in the Government Asylums for the Infirm and Destitute is not taken into account in these figures.

Of the total revenue of the subsidised hospitals, (less the bequests referred to) the Government contributed 51 per cent. in 1897, and 51·3 per cent. in 1898; whilst the contributions from the public in the form of subscriptions and donations in those years amounted to only 33·9 per cent. and 33·5 per cent. respectively.

For the metropolitan and country hospitals separately the calculations are as under :—

Year.	Hospitals.	Government Aid.	Percentage of Revenue.	Subscriptions and Donations (Bequests not included).	Percentage of Revenue.	Total Revenue.
1897	Metropolitan ... ..	£ 29,687	60·7	£ 10,438	21·3	£ 48,916
	Country . . . . .	31,110	44·2	29,936	42·6	70,349
	Total... ..	£ 60,797	51·0	40,424	33·9	119,265
1898	Metropolitan ... ..	27,488	60·2	9,561	20·9	45,681
	Country ... ..	34,957	45·9	31,200	41·0	76,095
	Total... ..	£ 62,445	51·3	40,761	33·5	121,776

On the basis of population the contributions by the Government and the public were as shown in the following table :—

Hospitals.	1897.			1898.		
	Mean Population.	Contributions per head of Population.		Mean Population.	Contributions per head of Population.	
		By Government.	By Public (less Bequests).		By Government.	By Public (less Bequests).
Metropolitan ... ..	414,020	s. d. 1 5·2	s. d. 0 6	422,100	s. d. 1 3·6	s. d. 0 5·4
Country ... ..	896,530	0 8·3	0 8	912,750	0 9·2	0 8 2

In 1897 the total number of in-patients treated in the subsidised hospitals was 22,158, and in 1898 23,832; and, as showing how the demands for hospital accommodation in the Colony were met by those institutions, the following table, giving a numerical classification of the hospitals in accordance with the number of patients treated in 1898, is of interest :—

No. of in-patients treated in year.							No. of Hospitals.	
From	8	to	25	...	...	...	1	Opened October, 1898. Country.
"	26	"	50	...	...	...	5	
"	51	"	75	...	...	...	16	"
"	76	"	100	...	...	...	15	"
"	101	"	150	...	...	...	26	22 " 4 Metropolitan.
"	151	"	200	...	...	...	9	"
"	201	"	250	...	...	...	5	4 " 1 "
"	251	"	300	...	...	...	5	"
"	301	"	350	...	...	...	2	"
"	351	"	400	...	...	...	2	1 " 1 "
"	401	"	450	...	...	...	4	"
"	451	"	500	...	...	...	1	"

"	801	"	900	...	...	...	1	Newcastle.
"	1,001	"	1,100	...	...	...	1	Carrington Convalescent.
"	3,500	"	4,000	...	...	...	2	Sydney and Prince Alfred.

The number of in-patients treated in 1898 by the hospitals not subsidised by the State (excluding lying-in homes) was 3,292, of which 1,665 were dealt with at St. Vincent's Hospital, Sydney. Including the number treated at the Coast Hospital there were thus 29,818 patients who received hospital care in the Colony in 1898, an increase of over 76 per cent. in the last ten years.

As a means of showing where the pressure on the hospital accommodation is most felt, we may compare the average daily number of beds occupied with the number of beds for which structural provision is made:—

No. of Hospitals.	Average Daily No. of Beds Occupied.	No. of Beds.		Total.	
		For General Cases.	For Infectious Cases.		
1	.....	...	...	...	Opened October, 1893.
3	1 or less ... ..	16	2	18	Country.
17	1 to 3 ... ..	155	21	176	"
21	3 " 5 ... ..	212	72	284	"
11	5 " 7 ... ..	132	33	165	10 " 1 Metropolitan.
15	7 " 9 ... ..	189	43	232	13 " 2 "
5	9 " 11 ... ..	76	26	102	"
10	11 " 15 ... ..	183	47	230	9 " 1 "
8	15 " 20 ... ..	195	31	226	7 " 1 "
4	20 " 25 ... ..	116	25	141	(1 a combined hospital and asylum.)
2	25 " 30 ... ..	66	14	80	3 Country, 1 Metropolitan.
3	30 " 35 ... ..	138	14	152	3 " (1 a combined hospital and asylum.)
2	45 " 50 ... ..	111	18	129	1 Country, 1 Metropolitan.
1	75 " 80 ... ..	84	16	100	Carrington Convalescent.
1	200 " 250 ... ..	230	6	236	Prince Alfred.
1	250 " 300 ... ..	312	6	318	Sydney.

This indicates that in the country districts, as a whole, and particularly in respect to the smaller hospitals, the limit of accommodation is far from reached; and a closer inquiry goes to prove that there are instances where the number of patients treated is so small as hardly to justify the continuance of the institutions—a deduction which is borne out by an examination of the average annual maintenance cost per occupied bed.

We find that, for the year 1898, the hospitals may be classified in accordance with the average annual cost per bed as under:—

In 2 hospitals, it ranged from £25 to £35. (These are combined hospitals and poor asylums.)
In 1 hospital (Carrington Convalescent) it was £35 11s.
„ 12 hospitals it ranged from ... .. over £50 to £60
„ 14 " " " " " " " 60 " 70
„ 13 " " " " " " " 70 " 80
„ 11 " " " " " " " 80 " 90
„ 6 " " " " " " " 90 " 100
„ 16 " " " " " " " 100 " 120
„ 17 " " " " " " " 120 " 140
„ 3 " " " " " " " 140 " 160
„ 1 " " " " " " " 180 " 200
„ 2 " " " " " " " 200 " 250
„ 4 " " " " " " " 250 " 300
„ 2 " " " " " " " 350 " 400

In respect to three hospitals—those at Berrima, Jerilderie, and Silverton—the figures in the table are based on the cost for 1897; the complete figures for 1898 not having been received.

The cost per bed has been arrived at on the basis of the year's expenditure, less expenses incurred in the erection of new buildings and their equipment, the cost of the treatment of out-patients, where information has been obtainable on the point, and any extraordinary expenditure. It includes the cost of minor additions, alterations and repairs, the general painting or renovation of premises, and clerical and other expenses, which go to make up the outlay incurred in the general maintenance of an hospital. There appears to have been considerable confusion in the minds of hospital authorities as to how the cost per bed should be calculated. Some have excluded the cost of minor additions and repairs, and others clerical expenses and all minor charges which, though not directly incurred in the internal economy of the hospital, are necessarily involved in the working of the institution. We have not had the opportunity of obtaining a minute analysis of the accounts of the hospitals, and have in our calculations relied chiefly on the published statements of account and the financial returns furnished to the Medical Adviser to the Government. In Appendices D and E are given tables, in which the average annual cost per bed of each hospital is shown. When a particularly heavy outlay has been incurred in preserving the hospital buildings in a proper state of repair, mention is made of the fact. In the case of the smaller hospitals it is necessary to remember that a small increase or decrease in the average daily number of beds occupied affects very largely the average annual maintenance cost per bed.

There appears to be a strong tendency to establish an hospital in each small centre of population, and in spite of the large number already in operation, efforts towards the erection of others are being actively made. The Government, whose assistance is early invoked in the life of such agitations, becomes the largest subscriber, and furnishes the funds for half and sometimes more of the cost of the erection of the buildings and that of the subsequent maintenance of the institutions. Though the Government has thus so large an interest in the proper conduct of the hospitals, and the judicious and economical expenditure of their funds, it exercises no voice whatever in their management, except in the case of the Sydney and Prince Alfred Hospitals; nor, except under special circumstances, does it institute any inquiries in regard thereto, although there appears to be sufficient provision in an existing Act of Parliament for that purpose. (See Appendix M.)

We think it expedient that there should be a periodical visit to, and systematic inquiry into the general conduct of all these institutions by an officer of the Government. We have clearly seen that inspection by a competent official would be very helpful to the hospital authorities in several respects; and if conducted with discretion and tact, it need in no way conflict with the rightful authority of those members of the community who, in an honorary capacity, devote so much time and attention to hospital management. We have in former Reports suggested the lines on which inquiries should be conducted in respect to other benevolent institutions, and we think a similar provision should be put in force in regard to hospitals.

The invested funds of the subsidised hospitals at the end of 1898 amounted to £139,951, of which £72,972 were in the hands of the Sydney and Prince Alfred Hospital authorities. These funds consist mainly of savings in years when revenue has exceeded expenditure, of special collections for building and other purposes, and of bequests which have been made on the condition that they shall be invested and the interest thereon only expended for the maintenance of the hospital. The amount is a large one, and in some respects important as bearing on administration. To the policy of benevolent institutions accumulating funds, reference has been made in our former Reports, and it is herein further commented on in relation to hospitals.

The Public Hospitals' Act now in existence (see Appendix N) contains provisions for the election and appointment of officers, the making of rules and regulations, the control of hospital properties, and the institution of legal proceedings; but it does not deal with other matters of importance. This Act is only made to apply when the authorities of the hospitals ask for an extension of its provisions to their institutions. There are several hospitals which have not as yet been brought within its provisions, and until they have been, their legal position, we understand, is in some respects insecure.

## METROPOLITAN HOSPITALS.

The hospitals in the metropolitan area of Sydney and its suburbs for the care and treatment of the sick are—

- (1.) The general hospitals.
- (2.) A convalescent hospital.
- (3.) The suburban hospitals.
- (4.) The special hospitals for maternity cases and diseases of women.

The general hospitals and the number of beds in each are as follows :—

	No. of beds.
1. The Sydney Hospital (including the Ophthalmic Branch)...	318
2. The Prince Alfred Hospital ... ..	236
3. St. Vincent's Hospital ... ..	175
4. The Glebe Hospital for Children ... ..	64
5. The Coast Hospital ... ..	286
Total ... ..	1,079
The Convalescent Hospitals (as will be hereafter explained) add to the hospital accommodation of Sydney to the extent of at least 100	
The Suburban Hospitals (including Lewisham, and St. Joseph's, Auburn) contain ... ..	152
	1,331

In addition, there are, approximately, 181 beds set apart for diseases of women and maternity cases in the Hospital for Women, the Benevolent Asylum, and the Maternity Homes hereafter to be mentioned, which number, however, can be increased to about 260, should the calls upon the accommodation of the institutions demand it. Further, there are 1,383 beds for hospital cases in the wards of the Government Asylums for the Infirm and Destitute.

The beds in the city and suburban hospitals proper (including the convalescent hospitals) are in the proportion of 3·1 per 1,000 of the population. Adding the beds in the maternity hospitals, the proportion is 3·5 per 1,000, and inclusive of those in the Government Asylums for the Infirm and Destitute, the proportion is 6·8 per 1,000 of the population included in the metropolitan area.

Various attempts have been made by writers on hospitals to lay down some rule as to the proportion of hospital beds to population necessary, but the conditions of life in large cities vary so considerably, and the special needs of the population are so diverse, that it seems impossible to deal with this matter entirely on a statistical basis. An examination into the proportion of hospital beds to population, in a number of large cities, in returns already published, shows that this varies from about ·64 at Portsmouth to 9·83 per 1,000 at Paris.

The number of cities under review was forty-seven, but the condition of no one of these large cities affords a parallel to that existing in Sydney. In Sydney the climatic conditions and the general absence of the grinding poverty so common in all large European cities would seem to point to the need of a less number of beds than usual; whilst, on the other hand, the gravitation of the sick poor of the whole Colony towards the metropolis is a disturbing element in the other direction, so that any average of the number required for the cities of Europe, or any calculation based on the returns of any one of these, is likely to give results altogether fallacious. Some of the best authorities on the subject are of opinion that there should be provided in large town districts four hospital beds for every thousand of the population, including union infirmary beds, which are calculated to be about one-quarter of the whole; but when these figures were placed before Sir Arthur Renwick he at once

once objected to be guided in his opinion by them, declining "to give an estimate on a statistical basis of that kind at all," or rely on it; whilst Professor Wilson and other witnesses did not consider that figures were of any great value, unless account were taken of the circumstances of the community.

We are of opinion that it is from experience alone, after a careful consideration of existing conditions, that any conclusion can be drawn on this subject.

The sufficiency or otherwise of the existing hospital accommodation in the metropolis for the needs of the class requiring it has been very fully before us. The majority of the witnesses have stated that there is great pressure on this accommodation, and are in substantial agreement that at least 100 additional beds are required, and some of them consider that 200 beds or upwards are necessary to meet all the calls for hospital assistance. On the other hand, some witnesses well qualified to form an opinion (Dr. Ashburton Thompson, Dr. Mackellar, and Dr. Sawkins) see no need for any immediate increase in the number of beds. We do not doubt but that if 200, or even more, beds were available they would be immediately filled; but we are not convinced of the immediate necessity of any additional accommodation in the general hospitals, and we are of opinion that any pressure which at present exists can be relieved by a redistribution of cases, by certain restrictions as to the admission of paying patients, by providing increased facilities for treating patients in their own homes, and by additions to the existing accommodation in connection with the Government Asylums for the Infirm and Destitute.

Under present arrangements beds in the general metropolitan hospitals are occupied by three classes of cases that, in our view, should not be admitted thereto:—

- 1st. By those who can afford to pay the private practitioner for attendance, or who should avail themselves of the accommodation and care already to be obtained in private hospitals, or which would, no doubt, soon be obtained at a reasonable rate if the general hospitals shut their doors against this class.
- 2nd. By those who come under the notice of the police or of charitable organisations and individuals as needing medical assistance, and who, owing to the want of a free dispensary with visiting medical officers, are taken into the hospital, when they would much rather, and might with greater economy and equal efficiency, be treated at their own homes. For this class a free dispensary, as we have elsewhere indicated, is a necessity.
- 3rd. By those who are sent by Dr. Paton, the Government Medical Officer for Sydney, for treatment in the general hospitals because no suitable provision for them exists in the hospitals managed entirely by the Government. This class is undoubtedly a very large one, and includes a very large proportion of the persons applying at the Hospital Admission Dépôt for relief. The remedy in this case is the provision in connection with the Government Asylums for the Infirm and Destitute of properly-built, properly-equipped, and properly-managed hospitals having wards set apart for special cases, and corresponding in general arrangements with the Sick Asylums now so numerous in England, which have grown out of and have replaced the sick-wards in poor-houses. These hospitals could, we are assured, be managed efficiently, and with all due liberality, at a cost per bed very considerably less than the present cost in the general hospitals.

The exclusion of these three classes under the provisions for their care above indicated would, there is no doubt, do away with all present pressure on the existing hospital accommodation, and leave the general hospitals free to do, and space to cope with, work which is more legitimately the aim and object of their existence.

In the absence of any complete system of local government, the maintenance and care of the sick poor fall directly on the State, and hitherto the Government of New South Wales has not dealt with this question on any definite principle.

It has provided certain wards in the Government Asylums for the Infirm and Destitute for the 1,383 hospital cases—1,074 males and 309 females—who are sheltered in these institutions; but this provision is stated to be neither adequate

nor satisfactory. It maintains an hospital at Little Bay, with accommodation for 286 cases, under the control of the Medical Adviser to the Government, and it sent, in 1898, over 2,900 cases for treatment to the two main general hospitals (which it has found the major part of the funds to build), and paid at the rate of 3s. a day for their care and treatment in those hospitals.

The following is the evidence of the Medical Adviser on this point:—  
 “The total number of patients in Sydney Hospital in 1898—the beds being 279—was 3,618, and out of that number 1,557 were Government patients; so that there were 2,061 who were not Government patients; and for the 1,557 Government patients the Government paid very nearly £9,000, in addition to the £4,000 subsidy which the hospital annually receives. The number of beds in Prince Alfred Hospital is 236; the total admissions to the hospital were 3,706; the Government patients numbered 1,359, those not being Government patients numbering 1,347, and the amount paid was £5,700—here again, in addition to the annual subsidy of £4,000. So that, in the case of the Prince Alfred Hospital, the patients dealt with by the hospital as a public hospital, and dealt with by the hospital as a Government institution, were about equal—1,347 and 1,359.”

The kind of partnership which has hitherto existed between the Government and the two large general hospitals—the Sydney and Prince Alfred—in this matter, has not been on the whole satisfactory to either party. The Government has granted valuable building sites, has given the sum of £268,933 to the building funds of these hospitals, this being 77·4 per cent. of the total sum expended in their erection, and now, apart from the £ for £ subsidy which is given to all hospitals, gives to these hospitals the sum of over £14,000 a year for the treatment of pauper patients, together with £700 a year for the maintenance of a dispensary, and £350 a year as rent for the buildings at Moorecliff. The sum of £268,933, spent by the Government in building these hospitals, could have provided at, say, £200 per bed, 1,345 beds in one or more well-built and well-equipped hospitals of its own, and for decidedly less than the sum annually paid for the maintenance of pauper patients, it could for years past have maintained these patients in its own hospitals. The existing arrangement is certainly not to the advantage of the Government from a financial point of view, and it appears that it is not satisfactory to the hospital directorates, who have recently approached the Government with a request that the 3s. per diem per head now paid for destitute persons, shall be increased to 4s. in the future. Moreover, the arrangement has led to a more or less general belief that the hospitals are little other than Government institutions, or, at all events, that funds are forthcoming from the Government whenever these are necessary. This belief has influenced the public in their dealings with the hospitals, and appears to have lessened the amount of subscriptions and donations on the one hand, whilst it has induced people who otherwise would not have done so to take advantage of the benefits of the hospitals on the other.

The time would seem to have arrived when the Government might with advantage reorganise its whole hospital system and place it under one Department, and at the same time the relations of the Government to the two main hospitals might be revised, and placed on a more business-like and satisfactory footing.

The Government might, with advantage, take on itself the treatment and care of the sick poor coming under its protection much more completely than it has hitherto done, and do this in hospitals after the pattern of the Sick Asylums now so numerous in England under the Department of the Poor Law Board, whilst the aid of the general hospitals might be invoked for the treatment of special cases, and especially for those requiring the major surgical operations.

These selected cases would, no doubt, involve considerable expense in their care and treatment, and this expense would, probably, not be met by the daily rate now paid by the State to the hospitals; but the Government, under the arrangement indicated, could afford to pay liberally for this class, and would, no doubt, under the circumstances, be ready to meet the cost actually incurred.

Before

Before we had arrived at any conclusion with regard to the necessity for increase in the hospital accommodation of the metropolitan area, we took evidence from the witnesses before us as to the best means of providing this accommodation should it be found to be required. It is now only necessary to put on record briefly and incidentally the conclusion we arrived at on this question.

The evidence showed conclusively that it would be unwise to add more buildings for the accommodation of patients to the Sydney Hospital, the site being already too limited, and the addition of another storey objectionable, as cutting off light and air, involving difficulty in administration, and introducing an element of danger in case of fire; and that St. Vincent's Hospital, which is in many respects a private hospital, is not regularly subsidised, and only comes under our review as forming part of the hospital system of Sydney, is already large enough, considering the area of ground on which it stands; and further, that any increase which seems advisable is rather in the direction of additions to the hospice or home for the dying which has been recently established there in connection with the hospital than to the hospital itself. There remains the Prince Alfred Hospital; and we found a general consensus of opinion that any increase of hospital accommodation in Sydney, when this may become necessary, should be in connection with this institution. The hospital was planned, and the general administration is intended, for a much larger number of beds than it now possesses, the space is ample, and the sites for additional pavilions good, whilst the administrative buildings being already in existence, ward accommodation only would be necessary.

We have made some inquiries into the cost of both the Sydney and Prince Alfred Hospitals, and find that the Sydney Hospital (exclusive of the old south wing, but including the nurses' home) has cost a sum of £169,650, or at the rate of £681 per bed for the accommodation provided, whilst the Prince Alfred Hospital (including the nurses' home) has cost a total of £177,922, or at the rate of £754 per bed. Of the total amount, no less than £145,433 in the case of the Sydney Hospital, and £123,500 in the case of the Prince Alfred Hospital, was provided directly by the Government.

The expenditure in both instances has been unnecessarily high, resulting in extremely massive and structurally elaborate buildings. The contrast between these buildings and the utilitarian structure at St. Vincent's, which was built entirely from subscribed funds, but which serves all necessary purposes, is a useful object-lesson in hospital construction.

The evidence shows that the charity of the hospitals is taken advantage of by a number of persons who have no claims upon it whatever. The witnesses examined on this point are practically unanimous as to this, and most give one or two flagrant instances coming under their own observation.

The class of people seeking hospital care is said to be altogether different to that in Great Britain, and the charity of the hospitals is abused—first, by those who obtain admission without making any payment at all, but are well able to do so; and second, by those who pay small amounts, but are really able to pay much larger ones.

The abuse of hospital charity under the first heading is due in a measure, as we have already pointed out, to the fact that the hospitals are by a large class held to be mainly Government institutions, the advantages of which may be shared by anyone who chooses to avail himself of them; whilst the abuse under the second heading is partly due to the pay system, under which the commercial instinct of the patient is aroused, and he makes the best bargain he can, regardless of the equities of the case.

Among the more flagrant cases appear to be patients from the country who come to Sydney for operations, and who escape the fees which their medical attendants in the country and those they consult in Sydney propose to charge by getting admission to the hospitals under plea of poverty. The hospital authorities make certain inquiries both before and after the patients are admitted; but there is no system under which these inquiries are followed up, a process which appears to be absolutely necessary to check imposition. We have gone into this question at some length when dealing with "out-patients," and it need not be further dealt with here.

Of

Of the three general hospitals which are subsidised by the Government, two—the Sydney and the Prince Alfred Hospitals—are governed by committees elected in accordance with special Acts of Parliament, differing in some respects in their provisions; and in the case of the Children's Hospital, the committee is elected in accordance with the rules drawn up at the establishment of the institution. In all three hospitals the committee is a somewhat numerous body, and in the case of the Sydney Hospital the Government is directly represented by ten, and at the Prince Alfred Hospital by three members. At the latter hospital the Chancellor of the University and the Dean of the Faculty of Medicine have seats *ex officio*. At these two hospitals the Government not only subsidises the hospital to the extent of £ for £ on subscriptions and donations, but pays very large sums for the maintenance of pauper patients, and thus is the largest supporter of the institutions, and should no doubt be in some way represented on the Boards of Management.

There is, we find, considerable difference of opinion as to the value of the Government representation. The evidence of Professor Wilson was—

949. Do the Government nominees attend regularly? They do.

950. The number being so small, would they exercise any real influence in the management of the hospital? I imagine that that is rather a question of their personality. As a matter of fact, I think they do, but I can imagine it being the other way. In my experience, they have exercised a very fair amount of influence on the Board.

989. Have you given any thought to the question of the control of our charitable institutions in the matter of the Government subsidy;—do you think the Government, who contribute the principal part of the subsidies, have sufficient control? I think that the Government representatives on the Board of Directors ought to be adequate to represent the public interests. I must confess that I think the life nomination of Government representatives rather tends to loosen the control. You cannot have the Government representatives always alive to their work. I think our Government representatives are very much alive. We have good representatives, and they do their work exceedingly well, but I think that the system of appointing three Government nominees for life on the Board is perhaps not altogether satisfactory from the point of view of the Government. I do not think, however, that anything would be gained by greatly increasing the representation.

whilst Dr. Mackellar said—

2661. I am one of the representatives of the Government on the Board of both the hospitals, and, therefore, I, perhaps, may be allowed to say that the method, of which I am one of the representatives myself, is an exceedingly bad one, and very little supervision—that is to say, from the Government point of view—is exercised by myself or by the gentlemen who are in a similar position to me on the Boards. I think I may say that I have sometimes, in past years, asserted a little more authority, on the ground that I was appointed by the Government, and I have found that it was not at all well received by the other directors of the institution who were not similarly appointed.

It is clear that ten Government members in a committee of twenty-six at the Sydney Hospital, and three Government members in a committee of fifteen at Prince Alfred Hospital, cannot exert any preponderant influence, and such influence as they do exert is no doubt due to individual interest in or an aptness for the position rather than to their number or position as representing the Government.

The large size of the committee at the Sydney Hospital is defended on the ground that the interest in the institution is thus spread over a large sphere, and of late years, and since it has been working under the new Act, the Sydney Hospital has been managed with but little friction. The Prince Alfred Hospital, of which the committee is comparatively small in size, has, from its commencement, worked in a manner to which little or no exception can be taken.

A suggestion has been made, and this view is favoured by one of the witnesses examined, that the three subsidised hospitals should be placed under one Board to ensure some uniformity of action and prevent undue rivalry. We think it doubtful if anything is to be gained by this course, and, although in the past there has no doubt been some rivalry between the two chief hospitals which was not altogether wholesome in its results and which has led to some extravagance in building the hospitals, there does not now appear to be any antagonism likely to be to their detriment. Some uniformity of action might undoubtedly be obtained if all the Government nominees were appointed to the committee of both hospitals instead of to one only, and the Government appear to have in some measure realised this, as two of these nominees have seats both at the Sydney and Prince Alfred Hospitals.

The

The revenue of the three subsidised hospitals for 1898 was as follows :—

	Sydney.	Prince Alfred.	Children's.
From Government subsidy and special grants ... ..	£3,721	£4,691	£1,480
Maintenance of patients...	8,056	6,134	.....
Subscriptions and donations ...	2,485	2,403	1,818
Bequests (invested) ... ..	3,702	3,501	.....
Patients' payments ... ..	2,296	2,414	408
Interest ... ..	1,053	631	27
Other receipts ... ..	309	371	.....
	21,622	20,145	3,733

A legacy of £7,850 was received and invested.

It will be seen by the above figures that under existing arrangements the Government furnished 62·9 per cent. of the entire sum forming the income of these three hospitals (excluding the invested bequests), and 65·4 per cent. of the total income of the two main institutions, and it is probably largely owing to these facts that these hospitals are regarded mainly as Government institutions that subscriptions and donations are not given as freely as might otherwise be the case, and that persons of moderate means feel less compunction in applying for and accepting relief than they would if the charity came directly and entirely from private sources. The subscriptions and donations, which include the amounts received from the Saturday Hospital Fund, form only 17·5 per cent. of the entire income of the three hospitals (excluding bequests), and 14·1 per cent. of the income of the two chief hospitals, and considering the size and wealth of the metropolitan population these amounts are decidedly small, and contrast unfavourably with the subscriptions and donations in the country districts.

The establishment of the suburban hospitals has no doubt diverted funds from the metropolitan ones, but, including the receipts of these in the calculation, the subscriptions and donations to the subsidised hospitals in operation in 1898 in the country districts amounted to 8·2d. per head of the population, whilst in the metropolitan area (including the unsubsidised St. Vincent's Hospital, and also the Marrickville Hospital opened in 1899) they amounted to only 6·5d. per head.

The amounts of invested funds of the three hospitals at the end of 1898 were as follows :—

Sydney Hospital ... ..	£37,494	(Includes £2,903 Samaritan Fund.)
Prince Alfred ... ..	35,478	
Children's ... ..	8,747	
	81,719	

We have taken some pains to inquire into the sources of these funds, and as to how far they are set apart by testamentary or other deed for special purposes, or are available for the general purposes of the hospital, but we have been unable to ascertain exactly the position of these endowments. The larger part of the funds appears to have been derived from legacies, which in some instances have been "ear-marked" so that only the interest can be used. The directors appear to have also placed to the endowment fund under the by-laws of the hospitals all sums of £100 and upwards received as donations or otherwise.

We are unable to see any special reason for building up an endowment fund at either of these institutions, and so providing for the future at the expense of the present. The people of the future should be as able to provide funds for hospital maintenance as are those of to-day. It has been an almost universal experience that when hospitals become largely endowed public interest in their management and welfare ceases, abuses creep in, and funds put aside for one purpose are diverted to another, or are lost in the vicissitudes brought about by time. The Select Committee of the House of Lords on the hospitals of London, which sat in 1890-1, reported that "in the case of the three endowed hospitals your Committee are of opinion that the system of administration does not compare favourably with that which exists at the other general hospitals," and some of the endowed special hospitals came in for decided animadversion.

This

This view has been upheld upon other inquiries, and is supported in a measure by facts which have come under our own observation. We are of opinion that all sums coming to hospitals which are not specially set apart by the legators or donors, so that only the interest is available, might advantageously be spent in adding to or improving the structure of the hospitals or applied towards their maintenance, and that instead of seeking Government assistance for future additions the metropolitan hospitals might with advantage first spend some of their accumulated funds in this manner.

The general management of the subsidised metropolitan hospitals, which have the advantage of constant and enlightened public criticism, we deem to be on the whole satisfactory. The directors and the officers immediately in charge appear to be fully aware of the necessity for additional buildings in some cases, and of shortcomings in appliances in others, and though anxious to remedy defects are restrained by consideration of expense.

#### SUBURBAN HOSPITALS.

The suburban hospitals, including that at Marrickville recently opened, provide accommodation for ninety-seven patients, distributed as follows:—

	Males.	Females and Children.	Special or Infectious.	Total.
Balmain ... ..	9	13	...	22
North Shore ... ..	11	12	2	25
Western Suburbs, Ashfield	6	9	...	15
St. George's, Kogarah ...	3	8	...	11
Manly ... ..	5	5	2	12
Marrickville ... ..	4	8	...	12
	—	—	—	—
	38	55	4	97

In addition to these subsidised hospitals, the hospital at Lewisham now contains thirty-six beds, all for women and children, a number which will be raised to 100 when additions now in progress are completed, whilst the accommodation at St. Joseph's, Auburn, is for 19 patients—men, women, and children. Both of these institutions are managed by, and are the property of sisterhoods, and are, in a manner, therefore, private institutions, and receive no Government subsidy.

The total suburban hospital accommodation is, including the hospitals at Lewisham and Auburn, for 152 patients (to be raised to 216 on the completion of the additions at Lewisham), and, with the exception of the North Shore, appears to be sufficient for the needs of the districts served. The average daily number of patients resident, as shown by the returns from the subsidised hospitals for the last two years, is evidence that there was no real pressure on the accommodation, and inquiries on this point showed that, except at special times when sickness was much more than usually prevalent, the hospitals were able to meet requirements.

The oldest of these hospitals, that at Balmain, was established in 1884, and the latest, that at Marrickville, was opened during the current year, so that in fifteen years 152 beds have been added, in the form of suburban hospitals, to the hospital accommodation of the metropolitan area.

These suburban hospitals, as a rule, fulfil a useful purpose and are doing good work, but there appears to be a tendency to increase their number unnecessarily and without a full consideration of existing conditions and needs.

The establishment of one or two of the hospitals, which were started some years ago, appears to have been somewhat premature and hardly justified by the number of patients they have received, and it is a question whether the needs of the districts in which they are situated could not have been equally well served by the Prince Alfred Hospital, which is at no great distance and easily reached by rail or ambulance.

This question becomes even more cogent in the case of the new Marrickville Hospital, which is situated at a distance of about  $2\frac{1}{4}$  miles only from the Prince Alfred Hospital, a distance traversed by good roads and trams. It is impossible under the circumstances to imagine that this hospital will supply any real need, and the money spent in building, that collected in subscriptions and donations, and also the Government subsidy, with which we are more immediately concerned, would probably have been better expended in adding to and supporting the Prince Alfred Hospital than in starting and maintaining a separate institution. It does not appear, therefore, that any additions to these hospitals, unless, perhaps, in the case of the one at Balmain, which is in the centre of a large industrial population, and the North Shore Hospital, which will be separately considered, are immediately necessary, except to provide for some shortcomings in the original plan or to meet administrative needs.

The original intention of the small suburban hospitals was to provide for accidents and urgent cases, and to diminish suffering and save life, by sparing the patients the pain and exhaustion necessarily involved in journeying to the large metropolitan hospitals situated at a distance.

Some of these suburban hospitals, and notably those at Ashfield and Manly, have already passed beyond the sphere of usefulness originally contemplated, and have undertaken the care of cases in no sense urgent, and arranged for a large extension of their work in the direction of operative surgery. The operations at the former numbered forty-six, and at the latter, fifty, in 1898, and most of these were of a severe character. The advisability of carrying out operations on a large scale in an hospital removed from the useful criticism of medical practitioners and students, which is always present at a metropolitan hospital, has been called in question by several witnesses, and we think with good reason.

Whilst examining into the condition of the suburban hospitals several points in connection with them came under consideration. The provision made for women and children is as regards the whole group, and conspicuously so in some instances, greater than that for men, and the explanation offered is that women, in many cases, will not enter, or allow their children to enter, the large metropolitan hospitals, where they would be distant from their homes and unable to see the members of their families frequently, but that they are willing to avail themselves of the care offered in the cottage hospital in their immediate neighbourhood.

These suburban hospitals have, in all cases, a certificated nurse (usually trained in the Prince Alfred Hospital) as matron, and the senior nurses have also undergone the recognised three years' training in a large hospital, and hold certificates; but a large part of the work is done by probationers, and the hospital authorities are not altogether at one as to the manner in which these probationers should be dealt with. In some cases the impossibility of adequately training nurses in such a small sphere of work is fully recognised, and the probationers are only taken for a period preliminary to their entry as probationers at one of the larger hospitals for which their names have been entered as candidates before their engagement. In others, the services of the probationers are retained for two years or more, and they leave, not with certificates, but with commendatory letters, which ensure them private nursing work. This system we consider to be unwise, since it turns out nurses with inadequate training, both theoretical and practical, and is neither good for the nurses themselves nor for the public, who are unable to distinguish as to their qualifications.

The hospitals do not all afford accommodation for cases of infectious disease, or for other cases requiring isolation which break out in the hospital itself, or are admitted thereto before the symptoms are fully developed. This is a matter which we think should be remedied.

The North Sydney Hospital, owing to the very large and scattered district it serves, the rapidly-growing population of North Sydney, which has already reached about 40,000, and the difficulty and delay attending the transport of patients across the harbour, especially from outlying districts, to the metropolitan hospitals, seems destined to grow into a somewhat large district hospital, calculated to provide all the accommodation required for North Sydney. This appears to be the view held  
by

by the committee of the hospital, who have already decided to give up the present building and commence *de novo* on a new site, and also of the Government, who have granted a site of 8 acres in a position which appears to be well suited for the purpose. In commencing a new hospital the fullest consideration should be given to the plans, so as to ensure an hospital easily worked in the present, and adapted for enlargement as necessity arises without detracting from its efficient administration and its sightliness, or without involving an increase in the cost of maintenance beyond that necessitated by an increase in the number of patients.

The cost of building the suburban hospitals, exclusive of the cost for land, has ranged from about £121 to £216 per bed, and the money, provided that the hospital was necessary at all, has in each case been judiciously spent. The annual cost of maintenance ranges from about £56 10s. a bed at Manly to £83 17s. a bed at Balmain.

The governing bodies are in most instances somewhat large, and in one instance an hospital with twelve beds has a governing committee of thirty-three persons; but this is defended on the ground that the interest in the hospital is widened in proportion to the number on the committee, each of whom feels personally responsible for the work of the institution, and for assistance in one way or another towards its support. The real management is, however, in most instances entrusted to a House or Executive Committee, and the work is, as a rule, well done.

The suburban hospitals appear to be subjects of interest, pride, and satisfaction in all the districts in which they have been established, and in no case is there any debt nor does there appear to be any great difficulty in obtaining funds for the current expenses of maintenance.

The subsidies paid by the Government towards the building of the suburban hospitals and towards the cost of maintenance have been very unequal. In one case every £1 collected for both purposes has been met by a Government subsidy of equal amount, and though the neighbourhood is a wealthy one, special subsidies in addition have been unconditionally granted, whilst in others the collections towards building have been only partly met by subsidies from the Government, and no special and unconditional subsidies have been given.

It is difficult to see why all districts should not be treated alike in this respect, or what has been the reason, except importunity, political or otherwise, which has led to this unequal treatment. We doubt if it is ever wise or necessary for the Government to give these special and unconditional grants, or to do more than grant £ for £ on the collections for both building and maintenance, and we are convinced that even these £ for £ subsidies towards the building funds should be subject to certain conditions, among which are the following:—

1st. That subsidies should only be granted towards building new hospitals or enlarging the existing ones on the report of a competent Government officer showing that the inception of a new hospital or the enlargement of an existing one is justified by circumstances.

2nd. That subsidies in aid of the building fund should only be granted on condition that the plans, specifications, and estimates are submitted to the Government for approval, are altered according to suggestions made, and carried out in accordance with these suggestions.

3rd. That, as the cost of building should not exceed £200 per bed, the amount contributed by the Government towards the building fund, on the £ for £ basis, should not be greater than at the rate of £100 per bed.

#### COUNTRY AND DISTRICT HOSPITALS.

The total number of country hospitals in operation is at this time 97, and these afford accommodation when fully equipped for 1,794 patients. Of the total number of beds, 1,459 are for general hospital cases, and 335 for cases of infectious disease.

We have not thought it necessary—neither would it have been possible—to visit all the hospitals, especially as the objects of our Commission were of a general character, and nothing was to be gained by an elaborate inquiry into the management of each hospital concerned. We have rather sought to ascertain that the hospital requirements of the community as a whole were properly, and efficiently met on an economical basis.

Twenty-three hospitals, sufficiently representative of the whole number, have been visited by members of the Commission, and the following is a list of these:—

Newcastle	Mudgee	Warialda
Maitland	Forbes	Gunnedah
Wallsend	Wyalong	Moree
Lithgow	Broken Hill	Goulburn
Bathurst	Kiama	Corowa
Orange	Wollongong	Parramatta
Dubbo	Bulli	Windsor.
Wellington	Armidale	

Reports on most of the above are given in Appendix C. In addition, the Commission has received from each hospital certain statistical and other details, which are set forth in appendices attached to the report, and also plans and other information of considerable interest.

The hospitals vary much as to the date at which they were established, some, as those at Windsor, Parramatta, Newcastle, Maitland, &c., dating back from the earlier times of the Colony, and having a continuous existence of eighty or more years, whilst others have been commenced within the last few years—those at Lithgow, opened in 1896, Mossgiel, in 1898, Camden, where a cottage has recently been rented, and New Angledool being the latest additions to the list. Efforts are also being made to establish hospitals at Tumut, Milparinka, Blayney, Wee Waa, and Quivindi, for which Government aid has been received. At the first-named town it is expected the hospital will be erected and occupied by the end of the year.

During the last ten years the number of hospitals opened has been unusually large, and the advisability of providing some accommodation for cases of accident and serious disease has attracted much attention. There appears to be a danger of establishing these institutions in places where they are not really needed, where the expense incurred would not be justified by the result, and where, in occasional cases, with proper ambulance arrangements, it would not be difficult to transport the patients without any great suffering or danger to hospitals already in operation.

It has formed part of the subject of inquiry to discover if all the hospitals on the list are really needed, and we have come to the conclusion that in one instance at least, viz., Silverton, the hospital, from the decrease of population in the neighbourhood, has outlived its period of usefulness, and should be closed; and that in others, and notably at Bulli, the hospitals should never have been established. The hospital at Silverton had an average daily number of only 1.1 beds occupied in 1897, and its annual cost per bed was £375 18s. in that year; whilst at Bulli the average daily number of beds occupied in 1897 was 0.44, and in 1898, 0.47, and the annual cost per bed at the rate of £404 in the former, and £379 7s. in the latter year. The corresponding figures for 1898 from Silverton have not been received.

The patients from Silverton could easily be taken to Broken Hill, where the hospital is well equipped, and efficiently conducted; whilst Bulli is only 6 miles by rail, and 7 by road, from Wollongong, where the hospital has abundance of vacant beds, which would accommodate all the patients from Bulli, who could easily be sent there by ambulance or otherwise, and could be maintained at a very much less cost than they are at present. The expenditure on the part of the Government in connection with Bulli Hospital is between £70 and £80 annually, besides occasional special subsidies, and is altogether more than can be justified by the nature of the cases treated, or by other considerations. We have gone further into detail on this question in the special report on the Bulli Hospital. (See Appendix C.)

The cost of building the country hospitals is in many instances difficult to ascertain, especially in the case of the older institutions, as the records have not been carefully kept; but in the newer ones it has varied as far as can be ascertained from the returns to hand from £35 per bed at Mossiel, to £293 per bed at Bathurst. This variation is greater than local conditions will altogether account for, and the cost might, in future, be made more uniform if certain stock plans and specifications were prepared of hospitals of different sizes, which would serve (possibly with some modification) for guides to local committees and their architects. This appears to be the more necessary since, on a careful examination of the plans of seventy-six of the country hospitals, we find that only twenty-six can be classed as good and satisfactory, the remainder being either defective in important particulars or altogether inconvenient and bad.

The range in the annual maintenance cost per bed at the different hospitals is somewhat startling—excluding the hospitals which are a part of, or are worked in conjunction with, benevolent asylums, in which the cost does not represent that of hospital patients—it varied in 1898 from £50 6s. at Bathurst to £379 7s. at Bulli; and, even allowing for special circumstances, and for isolated and costly neighbourhoods, the higher rates seem to need some justification. At the Prince Alfred Hospital, which is replete with every modern appliance, and where the class of cases treated is of a kind involving large expense, by reason of costly surgical dressing, and the proportionately large nursing staff required, the cost in 1898 was £68 7s. per bed, whilst in the country districts, in no less than 45 hospitals, the maintenance rate was upwards of £100, in 8 it was over £200, and in two it was over £300 per bed.

In the course of our inquiries we have found that there is no one central authority dealing with the hospitals as a whole. Certain statistics and returns in forms which have been prescribed are furnished by the hospital authorities to the Medical Adviser to the Government, and to the Chief Secretary as a condition precedent to the payment of the subsidies, but no action appears to be taken on these, even should they show obvious mismanagement or wasteful expenditure. Statements of all subscriptions and donations towards the maintenance of the hospitals are forwarded to the Chief Secretary, and these appear to be closely scrutinised, and the Government subsidy of equal amount paid on them in accordance with the Regulation in force, which provides “that the Government, through Police Magistrates or other approved officers, have the right of recommending the admission of patients.”

As Dr. Ashburton Thompson, points out, “the establishment of country hospitals is always by local initiative, and there is never any controlling inquiry as to the need for one.” The reasons for establishing an hospital are not by any means always satisfactory or free from the tincture of personal interest on the part of the promoters; the site, which is sometimes given by a resident, is not always well chosen, and the buildings are not always planned in accordance with modern scientific views on hospital construction. It is true that there is a rule under which these plans must be forwarded for approval by the Chief Secretary, and they are thence transmitted to the Medical Adviser, where they are examined as to the arrangements and also as to general suitability and sufficiency; but Dr. Thompson states: “As a rule I have supervised these plans myself, and made notes on them, saying, ‘This is wrong,’ or ‘This must be altered,’ and so forth, and sent them back to the Chief Secretary, but nobody has any hold over the country hospitals, except the Chief Secretary, and his hold depends not on any matter of law, but entirely on his control of the purse. The consequence is that the alterations indicated are not always made. I have found that out by visiting the hospitals perhaps two or three years after they have been built. There is no arrangement for insisting on these alterations being made—there is no control and no check.”

When a sum of money has been subscribed the Government is applied to for the £ for £ subsidy, and this is generally granted without any systematic inquiry as to the necessity for the hospital or its compliance with requirements. In some instances the Medical Adviser has suggested that the subsidy should be withheld until the hospital authorities have complied with certain requests made by him, or carried out certain alterations in the structure or in the management of the hospital which he has recommended, and in some cases they have been withheld until reforms have been effected, whilst in others the suggestions have not been acted on.

When

When the Chief Secretary required that all destitute sick persons coming under the notice of the Police and recommended by the Government Medical Officer of the district, should be admitted to the district hospitals so as to prevent their admission to the only other refuge—the hospitals within gaols—certain of the hospital authorities were recalcitrant and declined to comply with this request; but, as it was decided to withhold the payments of the subsidies in these cases, all the hospital committees have now agreed to meet the views of the Government in this matter.

On the other hand, some years ago the Medical Adviser moved the Chief Secretary to require that every country hospital should have accommodation for at least two cases of infectious disease, and should admit such cases to the extent of this accommodation, and although the majority of the hospitals complied with this requirement, some have successfully resisted it or put up accommodation clearly inadequate to meet the object in view.

The subsidised hospitals have, as a rule, been brought under the provisions of the Public Hospitals Act, but there has been no insistence on this, and there is no obligation on the hospitals to adopt a code of model rules for the management of hospitals which has been drafted by the Medical Adviser, and many of them have not done so.

In other really important matters there is no uniform action, and in some instances, such an officer as the matron has not received the thorough training which is essential for anyone appointed to the position. A suggestion in a circular letter, dated December, 1894, and intended to have the force of a regulation in regard to this matter, made by the Chief Secretary, is only technically complied with in some cases, and in others is altogether ignored.

The annual reports are submitted in diverse forms; they often omit tables showing the maladies treated, are incomplete in essential details, and even such important facts as the average daily number of beds occupied and the annual cost per bed are in some cases omitted. The accounts of the hospitals are in many instances not presented so as to show readily the financial condition, and in a number no balance-sheet is submitted, invested funds and endowments are not shown, and the only guide to their existence is the sum shown under the heading of interest in the annual statement of receipts and expenditure. Further, there is no regular inspection of the hospitals, either as to their general condition and management, or as to their current expenditure, and no visiting officer from whom the officers or committee can obtain advice in regard to details of administration. Such advice we found the officers ready to ask for and willing to accept in a number of instances. It is true that the Medical Adviser to the Government, or officers of his department, when visiting municipalities or country districts for other purposes, visit and inspect the hospitals in a general way, and draw attention to more obvious defects, and in cases in which charges of neglect or mismanagement are made, or quarrels between officials impair the good government of the institution, special inquiries are set on foot by the Chief Secretary, but there is no systematic inspection by a competent official and no complete gathering-up for the benefit of hospital administration of the facts and statistics which would be useful for comparison and interesting to the general public.

Our inquiries have convinced us that the hospitals, as a rule, are well conducted, and that, on the whole, very considerable interest is taken in their management in the districts in which they are situated. On the other hand, there are in some instances great defects in the hospital buildings—some of which are ill-planned and altogether unsuitable—a great need of the necessary equipment, and grave faults in the administration; whilst in others the hospitals are carried on in connection and under the same roof with, asylums for the destitute, under circumstances which render good hospital work, and especially operative surgery, almost impossible. In some—and indeed, perhaps, in the majority of—instances the committee are aware of, and are anxious to remedy, the more obvious defects and shortcomings in the way of structure and surroundings, but in others the present condition of matters is acquiesced in and thought sufficient. In a large number of cases those in authority do not appear to sufficiently appreciate the importance which attaches to a consideration of details, or the extent to which inattention to these details goes to interfere with the comfort and, indeed, the recovery of the patients.

In matters of expenditure, also, the details do not always receive the attention which they deserve, and instances of extravagance in one or other direction are not infrequent.

In some instances the hospital appears to be too much in the hands of some one medical practitioner, who has an exclusive right of attending patients, and it would doubtless be to the advantage of the patients and of the district, as tending to widen the sphere of interest in an important public institution, if greater liberality was exercised in this regard, and more than one medical officer placed on the hospital staff where this can be arranged.

We do not consider it a rule having an universal application, but it is certainly the case in special instances, that the hospitals which have endowments and are the least dependent on public subscriptions are the least commendable as to their buildings and their management, and we believe that this arises from the fact that the public, as a rule, takes but little interest and feels but little pride in what it is not called on to support. We believe that the endowments might in several instances be advantageously spent in re-building or re-modelling the hospitals, and that the future support of the institutions should be sought in subscriptions from the public, who would probably then take a much greater interest in the hospitals than they do at present.

These facts point to the necessity for some more effective control and some more systematic inspection of hospitals from their inception. It is clearly advisable that the Government should be able to say that an hospital is not needed, or that the proposed site is unsuitable, and so determine at once that on either of these grounds no Government subsidy would under any circumstances be forthcoming. This would, as a rule, nip the undertaking in the bud, or cause important alterations in the manner of procedure. It is equally advisable that the hospitals receiving subsidies should be subjected to periodical inspection, and reported on by an officer of the Government.

The committees of country hospitals complain, not without reason, of the number of sick vagrants that come under their care, and the cause of these complaints is likely to continue so long as persons quite incapable of earning their own living, and really requiring hospital care, are permitted to depart from the Government asylums for the infirm and destitute, and to travel in the country. Expense is not only thus incurred by the hospitals, but by the State, which has often to bear the charge of conveying these people back to the asylums.

In the section dealing with suburban hospitals, we have referred to the unequal manner in which State aid has been dealt out to those institutions. This inequality in treatment is even more noticeable in the case of the country hospitals, and to them applies with greater force the remarks we have made in regard to the suburban ones. The conditions we have suggested, upon which aid should be given by Government towards the erection of new suburban hospitals, should also, we think, be enforced in the country.

#### THE COAST HOSPITAL.

The Coast Hospital is entirely a Government institution, and comes within the scope of our inquiries mainly in its relation to the general hospital system of the metropolis.

It was built somewhat hastily during an epidemic of small-pox in 1881 and 1882, and being intended as a sanatorium, and not an hospital, was lightly constructed almost entirely of wood and iron, and was at first without many of the accessories necessary to fit it for hospital purposes. The hospital has been improved from time to time. It has been connected with the Sydney water supply, water-closets and lavatories have been erected, the whole establishment has been properly sewered, and certain substantial buildings, including a laundry, kitchen, &c., either have been or are in the course of being erected.

In

In 1883 lepers were sent there, and were accommodated in temporary structures till 1890, when a regular lazaret was built—a small distinct hospital at some little distance from the other buildings, which somewhat increases the difficulties of administration.

The buildings have been put to various purposes since their erection, but since 1884 they have been used for hospital purposes, for the reception, care, and treatment of some cases of acute illness, for sub-acute and chronic cases of general disease, for lock cases in men, to the extent of 800 to 1,000 cases annually, for cases of typhoid fever, and for cases of infectious disease, there being no other provision for the latter class of cases.

The hospital has, in fact, been an overflow hospital for the metropolitan district, and has received, in addition, all cases of infectious disease needing treatment within that area, except severe cases of diphtheria, which the distance at which it is situated rendered it perilous to send.

It was found soon after the hospital was opened for the reception of cases of typhoid fever that the long distance which patients had to travel was decidedly prejudicial if the disease was severe in type or the patients in the later stages of the malady, and Dr. Mackellar, the then Medical Adviser, laid down rules under which typhoid cases were to be sent. These have been adhered to up to the present. Under them a very large number of cases of typhoid have been successfully treated for many years, and during the summer months these cases form a considerable proportion of the total number of inmates.

Dr. Mackellar, at the same time, pointed out how much the administration of the hospital would be facilitated, and how much its utility would be increased, by a tram service, but no steps have of late been taken with regard to this.

The hospital is difficult to administer by reason of the manner in which the buildings are arranged, the large area they cover, and their distance from each other. It is somewhat costly to maintain by reason of its isolated position and the difficulty of obtaining supplies, and also by reason that the patients must be conveyed by an expensive ambulance service, which adds about £6 per annum to the cost of each occupied bed. It is unsuited by reason of its situation for cases of phthisis and rheumatism, and by reason of its distance for accidents and for cases of very acute and exhausting illness, except in the earlier stages of the malady; but it has done very excellent service as part of the hospital system of Sydney for many years, and it still has in it a large capacity for usefulness.

Our first duty was to ascertain what is the anticipated life of the existing buildings, and the next to try and arrive at some conclusion as to the cost of a tram service to the hospital, and how far this would serve in diminishing the expenses and increasing the usefulness of the institution.

The Government Architect states in evidence that the further life of the older buildings, if kept in ordinary repair, is fifteen years, and that of the newer structures thirty years, so that it seems advisable, especially considering the large sum which has been spent in the construction of the hospital, that it should be continued in use for certain classes of cases.

The Department of Public Works estimate that the continuation of the tram service from the terminus at Botany to the hospital, a distance of 3 miles, and thence to La Perouse, would cost £12,200, and it is certain that it would be of some public service besides conveying the patients and their visitors to the hospital. Under these circumstances, the cost of transit, which, so far as the ambulance service alone is concerned, is upwards of £1,400 a year, would be materially reduced, and, under proper arrangements, including a special ambulance tram once or twice a day, the conveyance of the sick would be much facilitated, and many cases now precluded might be safely taken.

The hospital now admits the following classes of cases, viz., medical cases of a sub-acute or chronic kind, surgical cases either not requiring active surgical interference, or requiring this only in a minor degree, lock cases, lepers, cases of typhoid fever, and cases of infectious disease. The large amount of work done at this  
hospital

hospital in connection with cases of fever and of infectious disease is shown by the following extract from the report of Dr. Ashburton Thompson on this institution for the year 1897 :—“The number of fever cases varied only with the epidemic conditions of the season, and was almost always much above 200, in one year rising to nearly 400, whilst the number of infectious cases of all sorts rose to more than 500 in one year; and, as to kinds, seldom included less than five, all of which, of course, required isolating, not merely from the general cases, but also from each other.”

The number of the typhoid and infectious cases treated may be judged by the following return, compiled from the reports of the hospital for the four years, 1895, 1896, 1897, and 1898 :—

	Chicken-pox.	Measles.	Scarlet Fever.	Influenza.	Whooping-cough.	Diphtheria.	Beri Beri.	Erysipelas.	Typhoid Fever.	Total.
1895 ...	10	1	60*	26	25	45*	11	51	96	325
1896 ..	1	2	76*	5	3	50*	...	73	247	457
1897 ...	5	...	249*	18	...	29*	...	107	141	549
1898 ...	1	321	348†	30	50	25	8	70	165	1,018

\* A number of the diphtheria and a few of the scarlet fever cases were only received in their convalescent stage.  
† In 57 of these cases the disease was combined with either diphtheria, measles, or erysipelas.

The results of treatment in the cases of infectious disease at the Coast Hospital appear to have been very successful, but it must be remembered that some of the more severe cases have been excluded, owing to the dangers involved in taking them so long a journey.

Since the notification of infectious disease has become compulsory, the need of hospital provision for such cases has become more apparent, and has more specially engaged the attention of the Health Authorities. An hospital for the reception of cases of infectious disease, which should be removed from thickly-populated districts and overcrowded households, is, indeed, a necessary corollary to the compulsory notification, which was introduced by the Health Act of 1896. Dr. Ashburton Thompson does not view favourably the Coast Hospital as a place for the treatment of infectious disease, owing to its distance and other drawbacks, and is now seeking a new site; but it cannot be denied that, up to the present, this Coast Hospital has done exceedingly good work in this connection, and would be more generally available if a tram-line were made as suggested. It should be remembered also that the Government has set apart a site for a sanatorium on the North Shore to serve the whole of the districts on the northern side of the harbour, so that, with a new general hospital, the North Shore will be a separate hospital district, and the danger of removing patients from what, so far as the Coast Hospital is concerned, was the most inaccessible district from which patients were sent, will be thus removed.

On the whole, we can see no valid reason why the Coast Hospital should not be continued as an hospital for infectious diseases, at all events until other and better arrangements can be made, and especially if some small hospital or receiving-house for acute cases of diphtheria, and other severe ailments, be established in a more central situation. Such parts of the Coast Hospital as are not required for cases of infectious disease might still be used for general cases as at present, and the whole institution might, we are of opinion, be removed for administrative purposes from the Department of the Medical Adviser to that of the Government Asylums for the Infirm and Destitute, and worked with the hospitals or sick asylums in connection with that department, which must soon be established to supplement and in time replace the wards for the sick and infirm now at those Asylums.

This arrangement meets with the approval of Dr. Ashburton Thompson, and is outlined in the following questions, viz., 76, 77, and 78 :—

76. Turning now to the metropolitan hospitals, which consist of the Sydney, the Prince Alfred, the St. Vincent, and the Children's Hospitals, can you tell us whether these are sufficient for the needs of the population, or is the hospital accommodation for the metropolis below its requirements? I can only judge so far as there is pressure on the Coast Hospital, and my belief is that the hospital accommodation is well taken up at present. If it is not actually deficient, it is fully occupied.

77. So that it is rather below than above what is required? Yes; that is my belief.

78. Such being the case, what would you consider the best mode of meeting the want? That is a very difficult question. The plan that I have always had in my own mind was that of building an infirmary like a Poor Law Infirmary in England, and that the Coast Hospital should be combined with it. It would be filled largely with the more serious cases of chronic sickness in the asylums, and by such acute cases as are now represented by the acute cases which are taken into the Coast Hospital—if such a place were established within reasonable reach of Sydney. One must never forget that a hospital in the existing isolated situation is not equivalent to a hospital in the city. Then I believe that a large proportion of the cases now admitted to the Sydney and Prince Alfred Hospitals, and paid for by the Government, would be treated there. I think there would be economy in that plan, notwithstanding the primary expenditure on buildings. It is a subject about which a great deal might be said, but that has always been my idea. The infectious hospital would work in much better with such an institution as I have just mentioned than if it stood by itself, because the number of patients in it will fluctuate immensely; therefore, its staff needs will fluctuate; so that it can be much better worked in conjunction with some general hospital.

#### CONVALESCENT HOSPITALS.

The two convalescent hospitals which serve the metropolitan district are the Carrington Hospital, which has accommodation for 100 patients (and of which a report will be found in Appendix C) and the Thomas Walker Hospital, which, including a special cottage for children, has room for 76 patients, together giving a total accommodation of 176 beds.

The average daily number of patients at the Carrington was, in 1897, 78; and in 1898, 76. In the year 1896, according to the evidence of the hon. secretary, the total number of patients received at the Carrington Hospital was 1,055, and of these 96 were sent from private houses or institutions other than hospitals, and the remainder from the metropolitan hospitals themselves. The figures for 1897 and 1898 do not differ materially from this—less than one-tenth, therefore, come from outside sources and over nine-tenths from the hospitals, so that of the average daily number of 76 to 78, it may be reckoned in round numbers, 70 are from the metropolitan hospitals, and these hospitals are relieved to that extent.

The average daily number of patients at the Thomas Walker Hospital for 1897 was 68; and for 1898, 67; and of these, a somewhat larger proportion than is the case at the Carrington come from private houses, but about two-thirds come from the hospitals, so that these are relieved by the Thomas Walker to the extent of about forty-four beds.

The patients sent to the convalescent hospitals from the general hospitals are not fit for work, and the majority are without homes to which they could at once return, or in which the necessary supervision over convalescents could be exercised, so that in the absence of convalescent hospitals they would remain and occupy beds in the general hospitals. It may be taken, therefore, that the two convalescent hospitals add at least 100 beds to the metropolitan hospital accommodation, and as the Carrington was opened in 1890, and the Thomas Walker in 1893, this accommodation has thus, within nine years, been increased to that extent.

The Thomas Walker Hospital was built and endowed by its founder, the late Mr. Thomas Walker, and his family, and seeks no aid from the public or the Government, so that it does not come within the scope of our inquiry; but the Carrington Hospital is subsidised to the extent of £ for £, and the sum of £5,000 was granted by the Government towards its erection. In addition to these subsidies, a sum of 2s. a day is paid for all cases sent to the institution by the authorised Government Medical Officers, and 10s. per patient for cost of transit. These payments made up a total of £941 10s. 2d. in 1897 and of £1,119 5s. 10d. in 1898, and are equal in amount to one-third of the total annual cost of the hospital. The average cost per bed at the hospital was £35 3s. 9d. in 1897, and £35 11s. 4d. in 1898, and for a convalescent hospital this rate is a high one; moreover, the payment, which is at the rate of £36 10s. a year, with 10s. in addition for the transit of each patient sent, is in excess of the average cost. If the Government builds and manages its own hospitals, on lines which we have elsewhere indicated, there will be very little, if any, need to send its patients to this or any other convalescent hospital, as those discharged from the metropolitan hospitals could be received during convalescence into one or other of the sick asylums under the Government control, and maintained at a less cost, so that a great part of the sum paid to the Carrington Hospital would be saved.

## THE CHILDREN'S HOSPITAL, GLEBE.

This hospital, of which a description is given in Appendix A, is working under conditions of some difficulty, owing to the buildings being unsuited for hospital purposes and too small to properly house the officers in its service. The pressure on its ward accommodation does not appear to be excessive except at times, since the average daily number of beds occupied is fifty out of a total of sixty-four. A new hospital should, we consider, be built when funds are available, and might be planned so as to allow of expansion as additional beds are shown to be required. The committee of management has this in view, and purposes placing the new building on the site now occupied by the cottage for diphtheria cases, and possibly adding to the area of land, already 4 acres, by purchase. This will involve, as a preliminary, the removal of the cottage, and the provision of some accommodation for cases of diphtheria elsewhere. There is, however, reason to believe that, with the increasing use of anti-toxin and the fuller knowledge of its remedial properties, such provision will be less necessary in the future than it has been in the past.

The evidence given by Dr. Clubbe as to the value of anti-toxin was as follows:—

1576. The anti-toxin treatment has been used there now for some years? We began to use it in 1895.

1577. Has it been a very great success? Yes. It has lowered the death-rate from 50 to 24 per cent. The death-rate last year was 17 per cent.

1578. What was it the year before? The year before that it was 18 per cent.

1579. I ask for the two years to show that this lowered death-rate was not an exceptional thing? This year there has been no death at all so far.

1580. Do you think it likely that the death-rate will be further decreased? Yes; I feel sure that it will. Formerly we did not give enough anti-toxin. In the first place it was very expensive, and we did not know much about it. We find that we can give much larger doses. If it is given earlier and in sufficient quantities I believe there will not be any deaths from diphtheria at all.

1581. Then the diphtheria hospital has been a very useful institution? Yes; 884 children have passed through it since it opened in 1893, and there are only twelve beds. We opened the hospital in July, 1893, when there were 75 cases with 43 deaths. In 1894, there were 137 cases with 68 deaths; in 1895, 184 cases with 42 deaths; in 1896, 177 cases with 34 deaths; in 1897, 160 cases with 31 deaths; in 1898, 151 cases with 26 deaths.

The cottage for cases of diphtheria has been objected to as a focus of disease, but the evidence goes to show that there is no real ground for this objection:—

1582. The hospital has been objected to as likely to be a focus of disease;—has there been any real ground for that objection? No; as a matter of fact there have been very few cases of diphtheria in the Glebe. We hardly get any cases from the Glebe; but if it was a focus of infection we should get more of them.

1583. The number of cases from the Glebe has not been greater in proportion to the population than those from other districts? No; I think the number has been less. We have a table in the report showing where the cases come from. There were nine cases from the Glebe last year.

This evidence is especially interesting in relation to the selection of a new site for the hospital for diphtheria cases, and may serve to dispel some erroneous view and dispose of some objections which may be raised with regard to the neighbourhood of such an institution.

#### INSTITUTIONS FOR THE TREATMENT OF MATERNITY CASES AND DISEASES PECULIAR TO WOMEN.

Apart from small private lying-in houses, there is accommodation provided in the metropolis for about 172 maternity cases at the following institutions:—

Benevolent Asylum	...	...	...	...	42 beds.
St. Margaret's Maternity Home	...	...	...	...	42 „
Home of Hope	...	...	...	...	30 „
Salvation Army's Maternity Home, Burwood	...	...	...	...	26 „
Women's Hospital	...	...	...	...	16 „
Queen Victoria Maternity Home	...	...	...	...	16 „
					172 „

The Women's Hospital has, in addition, nine beds for female surgical cases, and a large number of women are attended in their own homes by the medical officers and nurses on the hospital staff. Should the necessity arise, the accommodation at the Benevolent Asylum for maternity cases can be increased to 100, and at the Home of Hope to 50, making a total accommodation for 259 persons.

In our previous reports we have dealt with four of the abovenamed institutions—the Benevolent Asylum, the Women's Hospital, the Home of Hope, and the Maternity Home at Burwood. The cost of the first is entirely borne by the Government, while the others receive aid from the State by means of subsidies of £ for £ on the contributions from the public, or by means of special grants. In the case of the last two, the amount given by the Government is not specifically for the support of those institutions, but is granted as assistance towards the whole of the varied operations of the organisations which control them; that is, the Sydney Rescue Work Society in the one case and the Social Branch of the Salvation Army in the other. The St. Margaret's Home and the Queen Victoria Home are not subsidised.

The number of women accouched in each of the homes in 1897 and in 1898 was as follows:—

	1897.	1898.
Benevolent Asylum (indoor department) ... ..	302	241
Women's Hospital " " ... ..	45	168
Home of Hope " " ... ..	92	114
Burwood Home ... ..	65	39*
St. Margaret's Home ... ..	80	116
Queen Victoria Home (opened October, 1897) ...		7

We have already referred to the disadvantages which are inseparable from the existence of a number of institutions of this character in the metropolis, and urged the establishment of a central hospital, such as exists in other important cities, for the treatment of diseases peculiar to women and of maternity cases.

In such an hospital the patients could be treated, not only at less expense, but under better conditions than is possible in small homes, and it would besides serve as a useful teaching centre for both students of medicine and maternity nurses.

This hospital, we have suggested, should be controlled on lines similar to those upon which the general hospitals are maintained and managed, and on its establishment we think the State should cease to grant any aid to other maternity institutions.

There is an essential need in Sydney for a properly-equipped hospital of the kind suggested, as the accommodation now provided is, to a large extent, ill-adapted and unsuited for the performance of the work.

In four of the institutions mentioned nurses are trained in midwifery, and, if successful in passing certain examinations, certificates of proficiency are granted to them. The conditions under which nurses are trained, and the examinations to which they are subjected, vary with the institution, and, especially where the nurses have not had a prior general hospital experience, the training, we think, is in some instances insufficient in length of time, and conducted amidst surroundings which are not conducive to efficiency. The proper training of nurses in midwifery is of very considerable importance to the community. Such an hospital as is proposed would afford the best facilities for this training, and the possession of a certificate of proficiency by a nurse trained therein would be a valuable guarantee to the public of her competence.

The only institution that we are aware of outside of the metropolis which provides for lying-in cases is the asylum under the control of the Newcastle Benevolent Society at Waratah, where a small ward is set apart for the purpose under the care of a trained nurse.

The reception and befriending of women before and after confinement, which is, in conjunction with the medical treatment of maternity, undertaken by some of the institutions named, is no doubt a very benevolent and useful work, and properly-conducted homes for that special purpose are deserving of assistance.

QUEEN

\* Home moved from Newtown to Burwood in 1898, and for some time prior and subsequent to removal arrangements were made for applicants for admission to go to the Benevolent Asylum.

QUEEN VICTORIA HOME FOR CONSUMPTIVES AT THIRLMERE, NEAR PICTON.

This Home was founded by Mr. J. H. Goodlet, who for some years rented a house in the town of Picton for the reception and care of consumptive patients, and defrayed all the expenses in connection therewith. About twelve years ago Mr. Goodlet built the present Home at Thirlmere, removed the patients thereto, and for about eight years carried on this Institution from his private resources, unaided by any subscriptions or other help. About five years ago circumstances compelled Mr. Goodlet to give up his charitable work, and the building was handed over to a Board of Management, who undertook to collect funds for the continuance of the work which Mr. Goodlet had for so long carried on unaided.

In August, 1898, the management announced that it would be necessary to close the Home, owing to the want of adequate support. However, in accordance with a strongly expressed public opinion, it was handed over to the Executive of the Queen Victoria Home for Consumptives, and the retiring Board asked that the sympathy and support which had been extended to them might be continued to the new management. Several of the members of the late Board have seats on the new one. The conduct of the institution has been, in the main, on the lines already laid down, and there has been no material change in the staff. The executive of the Queen Victoria Home took over the sum standing to the credit of the former management, amounting to about £1,000, which had been raised by special efforts on the part of the public immediately prior to the transfer of management, and entered into an arrangement under which the Home, with about 4 acres of land to be used as garden, were handed over to them for two years, on condition that they would repaint and repair the buildings and keep them in a satisfactory condition during their occupancy. They also deemed it necessary to make certain alterations in the sanitary arrangements, which, with the painting and repairs, involved an expenditure of £150.

The Home is now managed by a house committee appointed by the executive above mentioned, and consisting of nine members, of whom about one-half are ladies. The hon. treasurer and the hon. secretary, who are members of the house committee, were elected by the general committee of the Queen Victoria Fund. This house committee meets once a month, and two of the members pay a monthly visit to the home. The hon. treasurer and hon. secretary also make periodical visits. A paid secretary, who has an office in Sydney, visits the home fortnightly. The other officers of the Institution are an honorary examining officer, by whom all applicants for admission are examined in Sydney, and who certifies to their fitness for care and treatment or otherwise; a visiting medical officer, who is paid a retaining fee of £40 a year; a matron, who has general charge of the Home; and a collector.

The Home stands in an elevated position at upwards of 930 feet above sea-level, and is distant from Thirlmere about 1 and from Picton about 3 miles. It is faultily planned, not too well built, and poorly fitted; but the rooms are lofty and well lighted and ventilated, and there is ample verandah space.

There is no hot water supply for the wards, and in time of drought water for baths has to be carried from a dam in an adjoining paddock.

The accommodation is for fourteen female and twenty-six male patients; who are housed in three large and three small dormitories; a large dining room; and two sitting rooms; which, with the verandahs, give ample day space. The accommodation for the staff is sufficient, and fairly comfortable, and the kitchen, store-room, &c., which are in the basement, are sufficient in size, and convenient in general arrangements.

The staff consists of a matron at £72; three nurses—one at £40, one at £30, and one at £25 a year; a wardman, a gardener, and a married couple who act as cook and kitchenman. The laundry-work is all done out of the institution.

The number of patients in the Home on 30th August, 1897, was 40, and 89 were admitted during the year; so that the benefits of the institution were made available for 129 patients, of whom 73 were discharged, 19 died, and 37 remained on 3rd September, 1898, when the present executive took charge. The average daily number resident during the year was 37·3, and the cost per occupied bed, £32 6s. 4d.

The

The demands on the Home are very considerable, and it is said that there are as a rule twenty or more patients waiting admission.

There does not appear to be any rule for the guidance of the Examining Medical Officer with regard to the stage of the disease at which the cases are to be admitted—in fact it is said that any patient suffering from consumption is admitted if able to endure the journey to the Home, and the number of deaths, which seems somewhat large, may be due to the reception of cases in an advanced stage of the malady. There is apparently also no limit as to the time during which patients may enjoy the benefits of the Home, since we heard of some who had been inmates for four, and of one who had been in for seven years. The present management will perhaps see its way to effect some alteration in both these respects, as it would certainly be for the greatest good of the greatest number if the cases selected were in the earlier stages of the disease, and so more likely to benefit by the change of air and treatment; and if there were a limit to the period of residence, to be extended perhaps in exceptional instances, the cases which proved chronic and hopeless being discharged to make way for new admissions.

The income for the year ending 31st August, 1898, was as follows:—

	£	s.	d.
Subscriptions and donations ... ..	834	14	8
Various collections from carnivals, fetes, bazaars, &c.	485	11	11
Specially collected by <i>Daily Telegraph</i> ... ..	178	19	6
Legacy ... ..	40	0	0
Special Government grant ... ..	300	0	0
	<hr/>		
	£1,839	6	1

No mention is made in the last report of this institution of any receipt of moneys from patients towards maintenance, and the report is meagre and unsatisfactory in other particulars. When visited there were only three patients paying—one at 3s., one at 5s., and one at 15s. a week; and it is stated that the sums received under this head are small. Nevertheless, they should appear in the statement of account under a separate heading.

It has been decided by the new management to apply the interest of the amount collected for the Queen Victoria Homes, which amounts to upwards of £14,000, to the current work of this institution, and this, with donations and the proceeds of entertainments, will make up the amount available for the expenses of the current year. The institution is not at present, under the Public Hospitals' Act, and is not regularly subsidised by the Government with the usual grant of £ for £.

The whole place is admirably kept; the dietary is very good and abundant; and a mid-day meal, which we saw ready for serving, was well cooked and good in all respects. The institution is no doubt doing very useful work, but its faulty planning, the existence of large dormitories instead of small rooms, and the want of selection in the cases sent, together with a want of limit as to stay, are all drawbacks to its utility.

#### PROVISION FOR OPHTHALMIC CASES.

##### “Moorecliff.”

The Ophthalmic Department of the Sydney Hospital was established in 1882. When the old hospital was demolished and a temporary structure substituted this department was crowded out, and was placed in a private house at Miller's Point. Here it has grown to a larger size than would have been possible if it had remained as part of the main hospital, and this growth has been assisted by two causes: 1st, that, by reason of the skilled surgical assistance of the honorary staff, the department has obtained a reputation which has extended over the whole of Australasia, and owing to the readiness with which admission has been granted, patients with eye diseases have been attracted from other colonies, and especially from Queensland; and, 2nd, that owing to the want of a properly equipped and officered ophthalmic ward in connection with one of the Government Asylums for the infirm and destitute patients with Government orders have, in large numbers, been sent to “Moorecliff.”

The

The present condition of the department at "Moorcliff" is sufficiently indicated in the separate report thereon, and it now only remains to set forth what seems advisable in dealing with it in the future.

It is clearly impossible to continue a condition of matters which is creditable neither to the Sydney Hospital nor to the predominant partner, the Government; and the only direct suggestion offered by the witnesses examined is the erection of a new hospital specially for ophthalmic cases either at "Moorcliff" or on a new site. The expense involved in this proposal is one which cannot, under the circumstances, be justified, and the remedy must, we think, be sought in another direction. It cannot be considered satisfactory to the Government which bears most of the expense—though we can understand the Directors of the Sydney Hospital congratulating themselves on the fact, as is done in the last annual report of the hospital,—that patients from other colonies are attracted to New South Wales to be treated in "Moorcliff" mainly at the public expense, and, in cases where the sight is lost, to remain as permanent beneficiaries on the charity of this colony. Another class, which evidence shows constitutes quite one-half, if not two-thirds, of the total number, consists of more or less chronic cases, which could be treated without difficulty, and at a considerably less expense than the present cost to the Government, in a properly equipped ward or wards—which could be visited by a specialist when necessary—in connection with one of the hospitals in the Government Asylums for the infirm and destitute; and steps should, we think, be taken to establish an ophthalmic department on the lines indicated and under direct Government control as soon as possible. Considering the present condition of "Moorcliff," the change to a well-equipped Government Hospital would certainly be one for the better so far as the comfort of the patients is concerned, whilst their medical treatment, so far as this is necessary, could be made equally efficient.

This will leave a permanent number of possibly some thirty cases requiring active treatment or operative assistance, and these could be dealt with partly in the wards of the Sydney Hospital and partly in the Prince Alfred Hospital, under a re-arrangement with regard to the general Government patients elsewhere indicated. At present the number of beds set apart for ophthalmic cases in the latter hospital owing to more pressing calls on the accommodation is stated by Professor Wilson, Dr. MacCormick, and other witnesses to be too small for effective clinical teaching in connection with the medical school.

By this arrangement the principle which, in our view, should guide the Government in dealing with this Department, as with all hospital work, will be carried out. The Government will itself provide for the more chronic cases, and will send to and pay for in the General Hospitals (liberally if need be) for all the acute cases requiring active treatment, and operative interference which can be best carried out in one of the large metropolitan hospitals with an adequate honorary medical staff.

The present financial arrangement between the Government and the Sydney Hospital authorities so far as regards "Moorcliff" cannot be held to be fair to the former. The Government pays the rent of the houses at "Moorcliff," and allows 3s. a day for every patient admitted on Government orders. These patients constitute fully two-thirds of the total number of inmates,\* and as the cost of maintenance at "Moorcliff" is estimated at 13s. a week, the Sydney Hospital funds benefit to the extent of 8s. a week, without considering the payment for rent, for each patient, or to the amount of about £1,200 a year. It is possible that if the Government did not supply funds to the Sydney Hospital in this it might be called on to do so in some other way; but the present arrangement does not commend itself as a business transaction, especially as the chronic patients could undoubtedly be maintained in wards in a Government hospital as above indicated for a sum even less than 13s. a week.

Under the arrangements proposed the Ophthalmic Hospital at "Moorcliff" would melt away, and there would be no need for renewing the lease on its expiry in 1901, or for the Government to undertake the building of a separate Ophthalmic Hospital at a very large expense for site and structure.

\* The number of Government patients on 25th May, 1899, was 60 out of a total of 71, or 84·5 per cent.

## DISPENSARY, REGENT-STREET.

The Dispensary in Regent-street is managed from the Sydney Hospital and is really a branch of the out-door department of that Institution, by means of which the patients living in its neighbourhood are saved from going to the hospital for advice and medicine. The physicians and surgeons in charge of the out-patients at the Sydney Hospital visit the Dispensary at stated times, and one of the Dispensers of the hospital is in attendance at these times to give out the medicines ordered. There is no provision for visiting patients at their own homes; and in the event of their inability to visit the Dispensary, they must call in other medical assistance or go into hospital. The Directors of the Sydney Hospital have more than once taken into consideration the advisability of discontinuing the work at the Regent-street Dispensary, and the majority has been in favour of doing so; but this work has been continued at the request of the Government, who have agreed to give a subsidy of £700 a year in consideration of the work being continued. The work as at present carried out is considered by the President of the Sydney Hospital to be unnecessary. He states :

453. I have gone to Regent-street on many occasions and examined the books and seen the patients that go there, and I doubt whether it would not be far better if those patients came to the out-door department at the Sydney Hospital. Nine-tenths of them are cases which could come without any difficulty at all, and it is questionable whether the other tenth ought to get hospital treatment—whether they should not pay for treatment, and whether they should be treated at a public dispensary at all. A dispensary, with a person attached to go and visit the poor who are unable to pay for attendance, would be a valuable thing.

Dr. Graham's evidence on the same subject is as follows :—

1695. You do not think it is necessary or useful work? I think it is an absolute discredit to us as now conducted. That is my view of the question; but I think it could possibly be made to do good work, and if my suggestions had been carried out it would have done good work. It would if it was established as a dispensary similar to those in the Old Country, where a doctor resides and attends casualties, sets broken arms, extracts teeth, makes casual visits to deliver women taken ill, and so on. We should make a pure dispensary of it, and put it under the rule of some charitable organisation. Then I think it could be made to do good work; but as it is now I do not think it is a credit to any scientific institution.

1696. You would have more than one medical officer for the whole of Sydney? I think one man could do the work, because the amount of casualty work that you get is very slight. I know from my experience of the Old Country that one resident dispenser in a huge district can do a great deal of work of that kind. I think there is a want of that type of assistance. I suggested, when I got the Board to abolish the institution, that it might be handed over to the Students' Medical Society, who might run it themselves. It might be conducted as a medical mission, where you combine religion with medical work. That type of work is carried on all the world over.

1697. A medical mission? Yes, or purely a dispensary.

1698. On English lines, visiting people in their own homes? Yes.

1699. You are of opinion that there is a want of that sort? Yes, a distinct want. The experience of every medical man in the city is that there is a difficulty of knowing what to tell poor people when they come begging you to see a sick man or woman. You send them to a hospital unless you go and attend them as a matter of charity, which you often have to do. A man comes weeping and tells you that his child has broken its arm, or that he has a wife who is dying, and he is in destitute circumstances, and you must either attend as a matter of charity or send the case to the hospital.

1700. Then they go to the police, the police surgeon is sent for, and they are sent into the hospital to occupy beds, he not having time to attend them? Yes.

1701. Do you think an institution of this kind properly administered would prevent a good many people being sent to the hospital who are now sent there? Yes, I think it would. It would relieve the hospital very much of a form of congestion which should not exist.

1702. You talk of putting them under the Students' Medical Society;—do you not think it would be well administered as part of the Benevolent Society? I do not think so. I think that anything connected with scientific work should be out of their hands, and you cannot dissociate the scientific from this class of work.

1703. You say it will be done at a very much more reasonable rate if done by an organisation already existing than by one started as a separate affair? Yes; because you would require a good deal of voluntary work which you would readily get from such an organisation as the Students' Medical Society. You would have to put in such a type of doctor as is found in the Students' Medical Society—young graduates. There are plenty in the society who would do good work, and moreover, it would be educational work for the students. Their course of study prescribes that kind of work, and they must get it either at the hospital or from a doctor, or else in some way that has not yet been established—from a dispensary. I mean the term that he has to put in for outdoor visiting or medical work. He could get that education from such an organization as the dispensary; so it would be educational work, too.

and Dr. Mackellar is in substantial agreement with the other witnesses—

2624. As a Director of the Sydney Hospital, you will be able to tell us something about the Dispensary in Regent-street;—do you think that is performing any useful work, or that it should be continued? I do not think so.

2625. You think that, as at present situated, the Institution is really doing no good? Not any adequate good to the payment made for it.

2626. And do not you think that if a separate free dispensary was established from which patients could be visited at their own homes, and in which students, under the charge of a competent medical man, could get their midwifery done, and also assist to visit these patients, it would be a very useful institution? I think that it would.

2627. You think that would meet a want that exists? I think that is a want that exists in all large towns where there are poor people.

It must be remembered that these three gentlemen have not only a wide acquaintance with the needs of the sick poor, but one is the President and the other two are Government Directors of the Sydney Hospital, under which the Regent-street Dispensary is worked. The cost of the Dispensary, as at present managed, cannot be exactly ascertained, as the Dispenser employed has also duties at the Hospital, and the drugs used are part of the ordinary hospital stock. There can, however, be no doubt but that, even after paying a high rent for very inadequate premises, a considerable part of the sum paid by the Government goes to the general current account of the Sydney Hospital, and that, so far as the Dispensary itself is concerned, neither the public nor the Government get due value for the money voted.

We are of opinion that this Dispensary, in its present form, should cease to exist, and that the money granted by the Government would be much better expended in subsidising a dispensary established on the much wider lines indicated elsewhere in our Report, and including, as an essential part, the visitation at their own homes of patients too sick to attend at the dispensary.

#### THE PROVISION MADE FOR THE TREATMENT OF SICKNESS BY FRIENDLY SOCIETIES AND PROVIDENT DISPENSARIES, AND THE NECESSITY FOR A FREE DISPENSARY.

As incidental to our inquiries and bearing on the question of hospital accommodation, and the way in which the pressure on this, as stated to exist at the present time, could best be met, we have deemed it advisable to obtain some information as to the provision which exists in the metropolis for treating the sick poor and the less well-to-do classes apart from the hospitals. In the first place it is only right to mention that the members of the medical profession attend to a very large number of sick persons from whom no payment whatever is received or expected, the transaction being one simply of private charitable aid.

The operations of the friendly societies, almost all of which supply medical aid and medicines to their members under certain regulations, cover a very extensive field, and meet the needs of a large number of the more provident class dependent on weekly wages or small salaries.

We are informed by the Registrar of Friendly Societies that the number of members of friendly societies at the end of the year 1897 was 69,124, which is less by over 2,000 than the number in 1893. The reduction he attributes to commercial depression, and consequent inability of people to pay the membership fees, which has led even to the closing of some of the lodges; but the number of members is now gradually increasing. The present number is thought to be about 70,000, and on the basis of  $4\frac{1}{2}$  persons to a family, it is estimated that 315,000 individuals, or about 23 per cent. of the population participate directly or indirectly in the benefits offered by the societies in return for the fees charged. These benefits vary with different institutions, but, generally speaking, include medical attendance and medicines during sickness, payment of stipulated sums to members during incapacity to work on account of illness, and allowances for burials.

The following particulars for the year 1897 have been furnished by the Registrar:—

Number of members sick during the year	...	...	...	11,054
Amount paid to sick members...	...	...	...	£56,561
Average paid to sick members per sick member	...	...	...	£5 2s. 4d.
Amount paid for medical attendance and medicines...	...	...	...	£63,979
Average paid for medical attendance and medicines per sick member	...	...	...	£5 15s. 9d.
Number of members who died...	...	...	...	536

Some of the lodges have each their medical attendant or attendants and chemists; others have co-operated and engaged a staff of medical practitioners and established a dispensary for the joint benefit of their members. This, it is said, enables the medical, dispensing, and other services to be obtained at a lower cost than is the case with societies not so united.

In isolated lodges the medical men are paid fees of varying amounts, from about 16s. a year per member, which seems to be the usual sum, up to 26s., which we understand is the highest sum paid by any one lodge. In the case of the Manchester Unity Order of Oddfellows, the united Sydney lodges of that order employ a staff of four medical men, each of whom receives £250 a year. All sick members are expected, if able, to attend at the dispensary; if not, they are visited at their homes by the doctors. Special fees, it appears, are paid to the doctors in all instances for maternity cases.

The membership of friendly societies is not confined to any class, and no wage limit is fixed for its members; any person, therefore, although in a financial position to pay the ordinary fees for medical attendance, may belong to a society and avail himself of its medical provisions.

When seeking membership, however, the candidate has to submit himself to a medical examination, more or less strict, and if found to be in ill health is, according to the rules, refused admission. This has the effect of excluding a large number of persons from the benefits of friendly societies, so that, including those who cannot afford to join, there is a considerable number of people for whom medical treatment must be provided in some other form.

Provident dispensaries, apart altogether from friendly societies, have been found to work satisfactorily in small and medium-sized towns in England, where they can be worked from one centre. The essential principle of these is the payment of a small weekly or monthly contribution by the members or subscribers, as an assurance of medical assistance when required, to a central committee or board of directors, who have only a philanthropic interest in the dispensary. The committee builds or rents rooms for out-patients and for the issue of medicines, engages a dispenser, and places on its list a number of medical practitioners of good standing—anyone of whose services can be selected and called in by the member in case of illness. The medical officers are either paid a fixed sum for each visit, or at the end of the year the excess of income over expenditure, after certain reserves have been made, is divided among the medical officers in proportion to the number of their attendances. These institutions have not been found to work well, or indeed to in any way prosper in London or other very large cities, where the population is migratory and the distances from one neighbourhood or district to another large. It has not been found easy to map out a large city into districts, and arrange that a person leaving one district—and, therefore, the provident medical association—could attach himself to the association of his new district. These difficulties have, however, been lately met in Sydney by a modification of the rules of some of the English provident dispensaries so as to fit them to local conditions.

In carrying out this scheme the rules of the provident dispensary at Eastbourne, which has been the subject of commendation by the leading English Medical Journals, have been the chief guide in framing the constitution of the City and Suburban Provident Medical Association in Sydney which has now been established nearly two years, but the advantages and benefits of which do not appear to be as yet fully known. This association is managed by a committee of medical practitioners, and its

its staff consists of a secretary, who is a medical practitioner, an assistant secretary, and certain collectors. By the payment of small weekly fees, which the collectors call for at the homes of the members, the members can ensure for themselves and their families medical attendance and medicines when necessary.

The association has a central office in Bathurst-street, and its objects are set forth as follows:—

“This association has been founded for the purpose of providing medical attendance and medicine for those unable to pay ordinary medical fees. Single persons whose incomes do not exceed £125 per annum, and married persons whose total income does not exceed £200 per annum, are entitled to the benefits of the association.

Admission of members—entrance fee, 2s. 6d.

Unmarried persons from 16 to 20 years of age pay at the rate of 6d. per week.

Persons with incomes up to £50 per annum pay at the rate of 7d. per week.

„ „ from £50 to £100, pay 7½d. per week.

„ „ „ £100 to £125, pay 8d. per week.

„ „ „ £125 to £150, pay 9d. per week.

„ „ „ £150 to £175, pay 10d. per week.

„ „ „ £175 to £200, pay 1s. per week.

Payments to be made fortnightly, monthly, or quarterly in advance.”

The association has on its lists nearly seventy general medical practitioners in Sydney and suburbs, and a consulting medical staff of upwards of thirty, and from the medical practitioners the members can choose their own medical attendant and can change their medical attendant if they change their residence. The consulting staff have agreed to charge half their usual fees, and the medical practitioners are paid annually a sum in accordance with the number of patients on their list. All the subscriptions by members, after the payment of the staff and the provision for contingencies, are divided among the doctors who attend and the chemists, of whom there are thirty on the list of the association, who supply the medicines. The wage limit is fixed at £200. A medical examination is necessary before members can be admitted, and they must be certified to be in good health, though special cases are admitted on special terms. The number of contributing members is now about 1,700, and is increasing. The association neither advertises nor canvasses for members, but a large number are recommended to join by the medical practitioners of the city and suburbs because they are unable to pay the usual fees, and others are sent by the medical superintendents and other officers of the hospitals. The association is in no sense a charity. It has no objects and aims except those above set forth, and there are no benefits accruing to anyone except the patients and the medical practitioners. It is thus commented on by the *Australasian Medical Gazette*: “The general statement may be made that through the society’s agency at present about £1,800 per year is collected from the poorer classes to ensure them attendance and medicine, which otherwise would have to be provided by means of public or private charity. Such a movement must help some little towards reducing the present over-crowding of our hospital wards and out-patients’ department and, moreover, has a good educative influence on the poorer and more improvident classes. It teaches them that medical treatment must be paid for except in cases of real destitution; it shows that persons with limited incomes can have a doctor’s services without imposing on our public charities or asking gratuitous service.”

Another society was started about three years ago, and is called The People’s Prudential Benefit Society (Limited), and the evidence shows that it has a large number of members and has seventeen medical practitioners on its list. Its members contribute small weekly fees, which ensure them medical attendance in case of sickness by one of the medical practitioners on the lists of the society. It has no wage limit for its members, and a certificate or declaration as to health is necessary before admission as a member. This society is, however, managed on a totally different footing, and among its benefits is a provision for funeral expenses, &c., in case of death and a compensation allowance in the case of temporary disablement from

from accident and from specified diseases. It is a registered limited liability trading company, managed by directors, who have an invested capital, and not by the medical practitioners themselves; and, though no dividends have yet been paid—all profits so far having been placed to the credit of a reserve fund—it is intended to pay dividends from the profits. It can be readily understood that this society is not regarded with any friendly feeling by the majority of medical practitioners, especially as the fees paid to those who consent to be placed on its lists are considerably below those paid by friendly and other societies and by the City and Suburban Provident Medical Association abovementioned, and as there is practically no wage limit for members. Still the society is providing medical attendance and care for those who are provident and avail themselves of its provisions, and so helping to relieve the over-crowding of hospitals and the abuse of public charities, though, perhaps, on lines which are not altogether free from objection.

It appears, then, that provision is made through the friendly societies and the provident medical associations,—the operations of which seem capable of very considerable extension—for supplying to the more provident of the wage-earning class and to persons with small incomes medical attendance and medicines on terms which are equitable, and into which the question of charity in no sense enters. There is, however, a class of the population which is not provident, and cannot, apparently, be made so, and the individual members of which are often outside the pale of friendly societies and provident medical associations, because they are already damaged in health and cannot pass the physical examination which is required for membership. For this class there is in Sydney, so far as we have been made aware, no provision except the hospitals and their out-patients' departments.

For many years a special dispensary department was attached to the Sydney Hospital, under which a number of medical officers, paid comparatively small salaries, attended at the hospital and saw the out-patients, and it formed part of their duty to attend at the homes of those patients who were so ill as to be unable to visit the hospital. The city of Sydney and some of the more populous neighbourhoods adjoining were divided into districts, to each of which one of the paid medical officers was attached. These officers were medical men in general practice, and were not, as is the case in many of the dispensaries in Great Britain, solely the paid officers of the institution and engaged entirely in its work. On the reorganisation of the hospital, for reasons which have not been shown to us, the services of these medical officers were dispensed with. The system of visiting the patients at their own homes ceased, and the out-patients' department of the hospital was placed under the junior honorary medical officers attached to the hospital staff.

The Government Medical Officer for Sydney states, that since this special dispensary department of the Sydney Hospital has been abolished a great increase of work has fallen upon him owing to his being sent for by the police to attend to destitute and urgent cases; and that, as he is unable, owing to other duties, to continue in attendance on these cases, he has frequently to give orders for their admission to one or other of the metropolitan hospitals, when they might, with proper medical attendance, be treated at their own homes. In this way Dr. Paton thinks that hospital beds are occupied which need not, and should not, be if a dispensary existed.

Dr. Graham, Dr. Purser, Sir Arthur Renwick, Dr. MacCormick, Dr. Knaggs, Dr. MacCulloch and Dr. Kelly also pointed to the necessity for some free or charitable dispensary in Sydney to meet the wants of the more needy and improvident classes, who could be treated in their own homes without being sent to hospitals.

Dr. Graham's evidence on the subject has already been quoted, and the evidence of the other witnesses is as under:—

Sir A. Renwick—

495. You said that in your opinion it is advisable that some dispensary system should be established in Sydney? Yes; very advisable.

496. And you think that if people were treated at their own homes by a dispensary medical officer it would save the admission of a great many people into the hospital? I have no doubt about that. Our former experience proves that. The Sydney Hospital at one time, instead of having the present

system, had honorary physicians, honorary surgeons, and dispensary surgeons. There was a dispensary surgeon attached to each ward at the city, and those dispensary surgeons gave orders for medicines to the poor people whom they visited, and the medicines were got at the Sydney Hospital. It was a great boon. Now if a person is ill and not able to go to a doctor, he is put into a cab and taken to the hospital at once. Most of such people would remain at home, and it would save the hospital a considerable amount in regard to maintenance, if we still had the old system. Some of these cases are cases that should go to other institutions—to Little Bay or to Parramatta, or one of the other places—but they are all brought to the Sydney or the Prince Alfred Hospitals.

497. Are you aware that since the dispensary surgeons have been done away with, a great deal more work has fallen upon the police surgeon? Yes.

498. That he is not able to find time to visit the patients at their own homes, and orders their admission to the hospital; whereas, if there were a dispensary surgeon, they would be treated in their own homes? I quite agree with that.

#### Dr. S. T. Knaggs—

2604. Do you think there is a necessity in Sydney for a free dispensary on the lines of the dispensaries in the old country;—do you think that it would prevent a number of people from going to the hospital who at present have to be sent there? I always thought that the out-patients' department of the hospital would attend people at their homes. If you establish a free dispensary you will want to have a regular outfit there, and appliances for dressing wounds.

2605. Patients are not attended at their own homes from any of the present hospitals? You mean a kind of bureau, where medical men could always be called on?

2606. I mean a dispensary at which patients could attend as out-patients, and from which, in case of illness, they could be attended at their own homes? I think it would be of great service.

2607. And it would prevent people from going to the hospitals who are now obliged to go there? Yes; if people could have free medical attendance at their own homes many would much rather not go into a hospital.

2608. Are there not a large class who are not, and cannot be, members of clubs? There are, and they are really the people who most need medical advice, as they are excluded from the clubs owing to their having a tendency to bad health.

#### *Note by Dr. Knaggs, on revision of evidence.*

With regard to your project of having a free dispensary for such patients as are unable to pay for advice and medicine, I cordially agree with it, and think the idea an excellent one, which will greatly contribute towards relieving the hospitals of having patients sent to them who could be treated at their own homes. As a rule, I find patients do not wish to enter a hospital, but their inability to pay for medicine constrains them to do so.

I think it would be very desirable to establish a dispensary in some central part of the city, with two qualified medical men, a dispenser, and a married couple, to look after them. Possibly two graduates of Sydney University might be engaged on the same terms annually that they receive from the local hospitals.

A superintendent (say, some senior member of the profession having experience of dispensary and club practice) might be appointed to supervise, and be ready for consultation in serious cases.

#### Dr. A. MacCormick—

2736. Have you paid any attention to the dispensary system which is in operation in Edinburgh and other parts of the Old Country? Yes; I attended some of the dispensaries there as a student.

2737. Do you think it would be advisable to have some such system in Sydney? I do.

2738. What would be the advantages of it? It would relieve the out-patients' department of the hospital, and it would provide a field for teaching students for the University. In Edinburgh the students pay a small fee to the dispensary, and they see all the out-patients. They get the names and addresses of patients who are very ill, and visit them. When they are in any trouble, or doubt, a fully qualified medical man is called in.

2739. Such a system as that would relieve the hospitals of a great many patients who go there now, and it would provide opportunities which are now wanting of educating our medical students? Yes.

2740. Evidence has been given to us that students in the hospitals, where they have first-class appliances of every kind, may be at a loss to know what to do when they visit patients in poor quarters; so that a dispensary system would meet a want in that direction? Yes.

2741. Would you think that such a dispensary could be established here? I think so; in fact, there was some talk about it amongst medical men some years ago.

2742. From your experience, you think it would be a desirable thing? Yes, a very desirable thing.

2745. Would not a free dispensary also relieve the in-patients' department of the hospital? Yes, of course, by students visiting the patients at their own homes.

2746. Therefore there would be more beds left for urgent cases? Yes.

#### Dr. C. Purser—

2143. Has it occurred to you what would be the best way of providing for those people who are not sent to the hospital;—do you think it is necessary to establish in Sydney a dispensary on the lines of those in the Old Country? I think it would be a very good thing if it could be done apart from the general hospitals altogether. There are patients situated very far from the general hospitals, and it means a good deal in cost to them to travel in by rail and tram.

2144. But are there not many who would prefer to be treated in their own homes if there was medical provision for doing so? Yes.

2145. And who would not go into a hospital if they could be treated in their own homes? Yes; I am sure there are many who would rather be treated in their own homes if possible.

2146. You think that could be done by the establishment of a dispensary, from which medical officers could be sent out to attend patients in their own homes? In certain districts, yes.

#### Dr. S. H. MacCulloch—

2580. There are no free dispensaries in Sydney to deal with improvident classes, and those who cannot get into a society? No.

2581. Do you think such an institution is wanted? I think that under proper supervision it should be a good thing.

2582. You think it would prevent people from seeking hospital relief, either as in or out patients? I think it would. The system obtains in Edinburgh to a large extent.

2583. And in most English towns? Yes; but very much in Edinburgh.

2584. In connection with the dispensaries, patients are attended at their own homes? Yes; the dispensary is attached to the University in Edinburgh. There is a medical man for each dispensary, and there are dispensers, and a certain number of fourth and fifth year students take out-door practice in connection with the dispensary. When a person is ill a student is sent, and he orders medicine, which is given at the dispensary. If the student is not able to diagnose a case, he calls in the honorary medical officer.

2585. There much is done at a very little expense? Yes.

2586. And at a great saving of the hospital beds? Yes, a very great saving.

Dr. R. V. Kelly—

2692. I think the Charitable Dispensary fills up a very large gap in the medical charities. In Edinburgh they have the advantage of a large medical school, and they have scores of students to visit out-cases. If any difficulty arises they send for the doctor under whose supervision the students work. The same applies to midwifery, which is a very large branch, and a branch of medical charity which is very much wanted on account of its urgency. In Ireland the dispensing system is worked under the Local Government Board. The orders there are given by members of the committee, who are all ratepayers; and although it is a charity in one sense, there are no subscribers to it as in the case of the Edinburgh and other charitable dispensaries, which are kept going by private subscriptions. A dispensary like that would take off a very large number of applicants who go to the hospital-admission dépôt.

This dispensary need not necessarily be attached to one of the hospitals, and would probably do better work, and be more economically managed, apart from them.

It would seem, indeed, to be a work which might fairly be undertaken as a branch of the Benevolent Society, and might be carried out to some extent by the senior medical students at the University, under the direction of a competent paid medical head. It might, indeed, have as part of its programme the attendance on midwifery cases in the homes of the patients, and in this and other ways be a useful adjunct in a practical direction to the medical education as at present carried out at the University of Sydney. The total cost of such an institution, whether as a branch of an existing charity or as a new organisation, need not be large, and any subscriptions towards such an object might fairly be subsidised in the usual manner by the Government.

#### PROVISION FOR TREATMENT OF LOCK CASES.

The increasing prevalence of venereal disease in Sydney, and the inadequacy of the provision for its treatment, has been spoken of by several witnesses.

The Government Medical Officer for Sydney gives the following evidence:—

358. You do not send venereal cases to the other hospitals? Yes, we send female cases to the Sydney Hospital.

359. What is there to prevent you from sending the male cases to the Sydney Hospital? Because in the Sydney or Prince Alfred Hospital they would have to be nursed by women, and we do not think that that is right. They are, therefore, sent to the Coast Hospital, where they are attended by wardsmen. I do not think it right to mix them up in the same wards with other cases, on account of the danger of infection.

375. Are you aware if any complaints have been made by medical officers in the Squadron as regards the large amount of venereal disease in Sydney? I have heard that they have complained about it. I do not remember ever before meeting with so many cases as we have now.

The Medical Superintendent of the Sydney Hospital gives somewhat similar testimony—

1427. Have you found any increase in the number of patients suffering from venereal diseases? Yes; they are on the increase.

1428. Are they largely on the increase? I would hardly say largely; but certainly they are increasing.

1429. Does it often happen that female patients suffering from venereal diseases leave the hospital before they are cured; and are therefore likely to spread the disease? Yes, often.

1430. That has come under your observation? Yes.

1431. Can you suggest any remedy for this? The only thing would be to keep them in the hospital until they are cured; to have some kind of compulsory confinement.

1432. How long do they stop in the hospital? The average period is about six weeks.

1433. Is that sufficient to complete the cure, so that when they leave they will not be sources of trouble again? No; not in many of the cases.

1434. It is not a sufficient time? No.

1435. So they go out and come back again soon, worse than before, and after having done any amount of mischief? Yes.

1436. What proportion of out-patients at the main hospital and in Regent-street do you think suffer from venereal diseases? I think quite half of the surgical out-patients.

1437. Can you tell us what proportion the surgical out-cases bear to the medical out-cases? Not exactly; but I should think about one-third of the total number of out-patients would be surgical cases, excluding the special out-patients.

1438. Then half of those are persons suffering from venereal diseases? Yes; one-sixth of the whole.

The following return furnished by the Medical Adviser to the Government shows the number of Lock cases applying for treatment at the Hospital Admission Dépôt from January 1, 1895 to 30 June, 1899,

Period.	Total number of applications for medical relief at the Hospital Admission Dépôt.		Number recorded as venereal cases.		Percentage of Venereal Cases of total applications.	
	Males.	Females.	Males.	Females.	Males.	Females.
January 1 to December 31, 1895 ...	6,071	2,759	749	170	12.33	6.16
" " 1896 ..	7,500	3,645	896	208	11.94	5.70
" " 1897 ...	7,349	3,773	863	173	11.74	4.58
" " 1898 ...	7,828	3,247	831	153	10.61	4.71
" June 30, 1899 ...	3,931	1,465	523	92	13.30	6.28
Totals ... ..	32,679	14,889	3,862	796	11.81	5.34

This return does not show any large increase in the number of applications, except during the last six months, but it does indicate in a measure the great prevalence of venereal disease, and the expense to the Government involved in its treatment, and is to that extent an argument for provision in the direction of preventing, as far as possible, the spreading of this form of disease.

Dr. Mackellar, whose attention has been specially directed to this question, is most emphatic in regard both to the want of hospital accommodation for this class of cases and the remedy which should be applied.

2622. In regard to Lock cases, there is some difficulty as regards the accommodation; the male patients are treated at the Coast Hospital;—do you see any objection to treating the female patients there also if they were properly fenced in and placed under proper supervision? Yes; I think it is entirely unsuitable. On this question I also addressed some years ago a memorandum to the Principal Under Secretary, which I have been able to get from the records of the Board of Health, and it is here:—

January, 1883. The fact that venereal disease exists to an alarming extent in all classes of the community no one can doubt, nor is there any question that the hospital accommodation at present available for its treatment entirely fails to exert any marked influence in lessening the number of those affected. This failure is due to a variety of causes; but I believe that it is chiefly owing to the exceedingly scanty accommodation afforded by the hospitals of this city for the treatment of such ailments.

I have the authority of Mr. Fosbery, the Inspector-General of Police, for saying that there are about three hundred (300) women in Sydney who live wholly by prostitution—that is to say, known to the police, and I think I may safely estimate the number of those who occasionally supplement their earnings by the same mode of life at fully double the number, so that we have a total of (900) nine hundred women very likely to acquire and disseminate the disease.

One of the Secretaries of the Association for Promoting the Extension of the Contagious Diseases Act of 1866 to the Civil Population of the United Kingdom says that the proportion of diseased to healthy prostitutes in London is one in three, whilst Mr. Symon, F.R.C.S., the late Medical Adviser to the Privy Council, in a recent paper upon prostitution, deemed the proportion of diseased women to be one in six. If we adopt the latter estimate, we have one hundred and fifty (150) women constantly affected, while for their treatment at the present time there are in Sydney Hospital only ten beds available, and none at either the Prince Alfred or St. Vincent's Hospitals.

The Secretary of the Sydney Hospital informs me that the Lock Ward is always full, and that females are frequently treated as out-patients, both for gonorrhœa and syphilis, whilst males with gonorrhœa are, as a rule, not admitted to the hospital, but treated as dispensary patients. It is clear, therefore, that a very much larger accommodation for the treatment of the disease is absolutely necessary; but, in my opinion, merely increasing the number of female Lock beds in the general hospital would not meet the difficulty, as those institutions afford no special facilities for the treatment of these cases; and, further, a considerable amount of publicity, which is very much objected to by such persons, is unavoidable in their treatment in a general hospital. Under these circumstances, it is not surprising that both syphilis and gonorrhœa are rapidly disseminated throughout the community.

It is in vain to expect that a woman of the town will at once desist from prostitution on being infected with venereal disease. She is usually totally destitute of means wherewith to pay for her maintenance and treatment whilst ill, and, as a natural consequence, continues to practice her calling much to the detriment of her own health, and with destructive results to the general community.

I have given much careful consideration to this subject, and am forced to the conclusion that State interference in some way is absolutely necessary, either by police supervision and medical inspection, which, however, is objected to by a large portion of the community on both moral, constitutional, and even medical grounds, or the establishment of Lock hospitals, where diseased women could readily, without charge, and with a reasonable amount of privacy, obtain the most skilful treatment—not subject to the supervision of the police. I desire to give my emphatic opinion that the latter course is in every way the more desirable.

I would recommend that a special institution, wholly under Government supervision, should be opened for the treatment of females suffering from venereal disease; that in it every facility should be offered for the ready and skilful treatment of such disorders, and, although I fully recognise the difficulty likely to be encountered in administering such an institution, I would nevertheless recommend that it should be on the voluntary principle, and that the inmates should be free from police supervision, and subject only to the regulations under which all public hospitals are governed.

I might have added there that not only should they be free from police supervision, but from the supervision of meddling busybodies who are trying to reform them, who are just as harmful as the police

police in meddling with such cases, and who, I have no doubt, prevent these women availing themselves of the general hospitals, and would equally prevent them availing themselves of the treatment of this hospital.

Institutions of the kind suggested have been created in some districts of the United Kingdom, notably in Glasgow, where their establishment has been attended with a large amount of good.

As regards the treatment of the male portion of the community, I think the present arrangements in the general hospitals are quite adequate, and that all that is required is that a larger number of beds should be allotted to venereal disease. I do not think that any good result would follow their treatment in a special institution.

Following on this minute the Colonial Secretary of the day caused a large sum of money—some £5,000 or £7,000—to be placed on the Estimates, and I was directed to choose a site, which I did at Miller's Point, a building which is now used as an eye hospital, and the Government resolved to take this building for the purpose I have indicated; but, some short time after that, some persons interested in the neighbourhood, together with some clergymen, waited upon the Colonial Secretary as a deputation, and they tried to show him that it was wrong to have such an institution, and that it should certainly not be in the city, that it ought to be clear away from the city, and so on, and meantime the vote lapsed.

2623. Then your objection to the treatment of the women at Little Bay is rather that they would have to go a long distance than from any difficulty that would arise in separating them from the male patients? Well, there would be very great difficulty in separating them from the male patients there. I do not think it would be a desirable thing to put the women there under any circumstances, but I think that the distance would be a very great objection. An institution such as that should be in such a situation that those persons who are affected could readily obtain access without any trouble. It is so very much in the interest of the general public that they should be relieved of their ailments.

2656. All these facts show that it is a question which should be faced with seriousness at the present time? I do not doubt it.

2657. It has become a very urgent question? I would like to emphatically say that the institution which is designed to treat women should be separated from any other institution, and it should be made as easily accessible as is possible—that it should be absolutely private, and that there should be no police supervision whatever.

2658. They should be encouraged to take advantage of it, not compelled? Well, I satisfied myself at the time that they would take advantage of it. I took a great deal of trouble, before writing that memorandum, to satisfy myself that what these people objected to, and the reason they did not go for treatment, was because of their being overlooked, as it were, by servants of the institution and by the visitors to the general hospital, and I have no doubt that the desire of certain very well-meaning persons to reform them also interfered somewhat with their willingness to go to an institution of that sort.

For the treatment of venereal cases in men there is provision in the shape of a detached ward at the Coast Hospital, not now sufficient to meet requirements, but it will not be difficult to add to this at a small expense, so that the provision for men need not here be further considered. But for women the only provision made is twelve beds in a portion of a ward specially set apart for this class of cases in the Sydney Hospital, a number which is decidedly insufficient. Moreover this provision is not made in a form likely to induce women to take advantage of it. In a general hospital, and especially when this hospital is in a prominent position, women of the class needing treatment feel out of place. They are undoubtedly considered to some extent as outcasts by other patients, and they know it, and are reluctant to seek advice and treatment under such conditions.

By reason of the presence of a large floating population made up of casual visitors, and of scamen belonging to the ships of war and to the mercantile marine, the conditions in Sydney differ but little from those of a garrison town, and in the absence of any Act regulating the treatment of contagious diseases a large amount of venereal disease must be expected. The best way of minimising this, under the circumstances, would seem to be by offering facilities for care and judicious treatment to the class immediately and chiefly concerned in its propagation under conditions which they will avail themselves of.

Various objections have been raised to the treatment of this class at the Coast Hospital, and we consider that these are in the main valid, and the course which seems most advisable is for the Government to establish a Lock Hospital for women, to contain about thirty beds. Such an hospital would, in our view, be managed as a separate institution under the Department of Government Asylums for Infirm and Destitute in a more satisfactory and economical manner than if affiliated to any of the existing hospitals, and the details as to site and buildings may fairly be left for consideration when the subject is dealt with. On the establishment of such an institution the twelve beds at the Sydney Hospital might be allocated to other purposes.

## PAY OR "PART-PAY" SYSTEM IN HOSPITALS.

What is called the "pay system" in hospitals, by which is meant payment by patients for or towards the cost of maintenance, has engaged our attention, both as bearing on the subject of hospital administration, and in relation to the sufficiency of the hospital accommodation. Much evidence has been given on this subject, but we do not feel that much that is new has been, or indeed can be, said on this question, which is by no means a new one, and has been discussed in all books and in most reports dealing with hospital management.

In England the general hospitals, those which are supported by voluntary contributions and those which are endowed, and whether situated in London or the large towns, almost without exception make no charge for maintenance and care; and though they will accept donations from those who have been brought to the doors owing to serious accident, the general principle on which they are conducted is that the beds are free and intended for the treatment of the sick poor.

The two large London hospitals, Guy's and St. Thomas's, when in time of stress their funds did not permit of the opening of all their wards, devoted one or more of these to the reception of cases paying for their maintenance, but the rates fixed were somewhat high, and the arrangement was distinctly intended to benefit the general funds. This arrangement was not generally approved, and we understand has now been discontinued.

On the other hand, the cottage hospitals which are now scattered throughout England in the smaller towns and larger villages, and many of the special hospitals in London, have adopted the pay system as a part of their organisation, and take small or large sums for or towards maintenance, according as the patients can afford to pay these, some of the payments being as small as 2s. 6d. a week and others exceeding the maintenance rate of the hospital and bringing in a distinct profit thereto.

The pay system or part-pay system exists in all the hospitals in this colony except the Thomas Walker Convalescent and the Kogarah Cottage Hospital in the metropolitan district, and perhaps Goodooga and Scone in the country, in which the patients appear to have contributed nothing in 1898.

This system appears to have grown up with the hospitals. In any consideration of it, however, in this colony, a distinction must be drawn between the country, and the metropolitan and suburban hospitals, and in regard to this question the hospital at Newcastle must be considered with the latter rather than the former class.

The objections made to payment by patients in the country hospitals, whether these patients occupy private beds or beds in the general wards, or whether they pay small sums according to their means, or such sums as cover the cost of maintenance, or are remunerative to the hospital, appear to be few, especially when the medical attendance at the hospital is divided among the medical men practising in the neighbourhood, and is not confined to one medical practitioner.

The main reasons for this appear to be:—

- (1.) That in the large majority of cases there is no serious or constant pressure on the hospital accommodation, there being empty beds except during special outbreaks of disease.
- (2.) That the medical officers are for the most part paid small salaries or retaining fees—in 85 hospitals out of 95 such fees are paid, and there appears no valid reason why such an arrangement should not be made in all—and in a number they are also allowed to receive fees from patients admitted to private wards, in accordance with arrangements made between them and the individual patients.
- (3.) That owing to the scattered settlement in many districts it is difficult, if not impossible, to obtain proper nursing and care in the houses of the patients, and frequent visitation by the medical practitioner, however necessary this may be, cannot be carried out. Besides this, the fees for long distances cannot be paid by the majority of the patients on any scale that would remunerate the medical practitioner for the time spent in travelling, to say nothing of his skilled services. (4.)

- (4.) The townships and districts are for the most part so small as to preclude the establishment of private hospitals, or to keep skilled nurses unattached to hospitals in constant employment.

Under these circumstances there does not appear to be any very valid reason why payments should not be asked of and gladly made by patients who belong to the less well-to-do classes of the community, or why in exceptional instances persons who are more wealthy should not be received, provided always that the committee of management sees that payments are made in accordance with the means of the applicants, that the charity of the hospital is not abused, and that the medical officers are not dissatisfied with the arrangements made. Under any circumstances abuses of this kind are much less likely to occur in country districts than in towns, as the circumstances of most people are fairly well known to their neighbours, and the Hospital Committees are more or less easily able to obtain information.

The question, as applied to the metropolitan and suburban hospitals and to Newcastle, which may be considered metropolitan for this purpose, is a much more difficult one. The objections made to the system are mainly as follows :—

- (1.) That it is difficult, if not impossible, to arrive at the circumstances of patients, and that these frequently obtain treatment for sums much less than they can afford to pay, and thus subterfuge and deceit are encouraged.
- (2.) That the hospitals compete unfairly with medical practitioners individually, and with organisations, such as provident dispensaries, in which medical practitioners are directly interested.
- (3.) That the hospitals are using the time and skill of their own honorary medical officers, who receive no profit from the hospitals, to increase the hospital funds and to attend on cases from which they or other medical practitioners would, under other circumstances, receive fees.
- (4.) That if beds are occupied by persons able to pay, these cases exclude other and poorer patients for whom the hospitals are built and primarily maintained, and on whose account subscriptions and donations are sought.
- (5.) That when the patients are remunerative there is a tendency on the part of the hospital management to admit these in preference to the more necessitous cases.
- (6.) That when patients pay even comparatively small sums towards their maintenance, they are relieved from all sense that they are, in a measure, recipients of charity; they have an idea that they are paying for their treatment, and accept hospital treatment when they otherwise would not; and because and on account of such payments, their demands on the attention of the nurses, and their requirements generally, are excessive.

We find a general consensus of opinion, that private wards in the main general hospitals are neither necessary nor advisable in Sydney or in any city where the population is sufficient to allow of the establishment of private hospitals on a satisfactory basis, and the Directors of the Prince Alfred Hospital have already recognised this fact, and now admit to their private wards only (1) naval officers, for whom one set of these wards was specially built and dedicated by a generous donor, and (2) special cases, including students of medicine, who are received without payment, after consideration by the committee.

The richer class of patients can get thoroughly suitable accommodation, care, and treatment at varying rates, none of which seem excessive, in the private hospitals which now exist and are increasing in number; or in the St. Vincent's and Lewisham Hospitals, which have a number of beds for this class of case. But there is, admittedly, a gap in the hospital accommodation in the shape of provision for patients able only to pay from one to two guineas a week for private wards or remunerative amounts in the public wards. This gap will probably be filled by private enterprise, and hospital accommodation afforded at rates which people of very moderate means can or should be able to afford, if the general hospitals no longer admit remunerative paying patients; and we trust that attention having been drawn in our Report to this urgent requirement private enterprise will be stimulated to meet the want.

The

The reception of what are called remunerative cases in the general wards of hospitals, is objected to by all the medical witnesses, some fifteen in number, examined on this point. The objections raised are various, but the main one is, that these cases are only too willingly received by the hospital management, and crowd out the more destitute cases for which the hospitals are primarily, if not exclusively, intended. This opinion appears valid, and on other grounds we do not consider the reception of cases paying sums approaching to or in excess of the cost for maintenance desirable; but there is a considerable divergence of opinion with regard to receiving sums ranging from 5s. to 15s., or £1 a week. The medical, ethical, administrative, and personal objections urged against the pay system as a whole are in a large degree disposed of when admission to hospitals is confined to poor as opposed to remunerative paying patients. Some nine witnesses, however, all medical practitioners, connected in one way or other with hospitals, and in most cases having a wide hospital experience, object *in toto* to the hospitals receiving any sums whatever from patients; but five others, also medical practitioners, whilst objecting to remunerative cases, see no reason to object to the payment of small sums by those able to afford them. It is somewhat noteworthy that among these are Dr. Ashburton Thompson, Sir Arthur Renwick, Professor Wilson, and Dr. Graham, all of whom are public officials or directors of hospitals, who look on the matter from a somewhat different point of view from the medical practitioner who is not in an official position. The sums received from patients on account of maintenance in the subsidised metropolitan hospitals in 1898 were as follows:—

	£
Sydney Hospital ... ..	2,296
Prince Alfred Hospital ... ..	2,414
Children's Hospital ... ..	408
Women's Hospital ... ..	184
Suburban Hospitals ... ..	312
	<hr/>
Total ... ..	£5,614

and even if the remunerative class of patients were excluded, the aggregate sum of the contributions would be large and difficult to make up in other ways. The witnesses who object to any charge being made to patients offer no suggestion as to meeting the monetary difficulty which is likely to arise, except by establishing boxes for donations, which experience has not found to be attended by any large addition to the revenue of hospitals; but several advocate special wards for paying patients, or special hospitals for paying patients, on the ground that whilst the rich and the poor are each well provided for, there is no provision available for the classes that can pay something, but not the full cost, of private hospital or the best private treatment.

The opponents of the so-called part-pay system say in effect:—

1. Either let the assistance be a charity pure and simple, so that the patients know what it is before they accept it, or let people pay for what they get, but do not mix up the principles of charity and self-support so that a person believes himself to be supplying his own needs, whilst at the same time he is more than half paid for by others and is receiving charity to that extent.
2. By taking fees of 5s. or 10s. the hospitals are really acting hardly to a class who are really necessitous, and cannot in time of sickness pay these sums without privation and distress.
3. The hospitals, by taking fees, are entering into unfair competition with the general practitioner individually, and with the provident dispensaries.

The upholders of the system urge, shortly, that it is better for the poor to pay something, however small, if they can afford it, than to pay nothing at all—that such payments are good morally for the poor and good materially for the hospitals, which would be in financial difficulties without them. “I do not see,” said one witness, “what harm you do in collecting a few shillings from patients who come to you. You relieve the patient of a bitter feeling that he is at the hospital entirely on sufferance. I think it is a humane thing to say: ‘Pay what you can afford.’”

Several

Several of the witnesses seemed to feel that the question was a difficult one to meet, and with regard to which it was almost impossible to lay down hard and fast rules; and two at least drew distinctions between medical, and surgical illness requiring operations, holding that a patient who could pay for the ordinary treatment of a medical ailment might be altogether unable to afford the fee necessary for a severe surgical operation and the expenses contingent thereon, and would refuse a patient admission who was ill with bronchitis because he could pay his own doctor, and admit him when he had hernia or some other ailment requiring surgical operation, and surgical dressings, for which hospital treatment was necessary, and for which he could pay partially. Altogether we find the subject bristling with difficulties, out of which there is no royal road. It seems impossible to lay down any law for the guidance of hospital authorities, and each case must be left to the discretion of the management.

#### OUT-PATIENTS.

In the Metropolitan District the number of out-patients attending at the metropolitan hospitals in 1898 was as follows:—

Sydney Hospital	...	...	...	...	...	...	...	21,491
Prince Alfred Hospital	...	...	...	...	...	...	...	12,493
St. Vincent's Hospital	...	...	...	...	...	...	...	7,644
Children's Hospital	...	...	...	...	...	...	...	4,082
Lewisham Hospital	...	...	...	...	...	...	...	538
Suburban Cottage Hospitals (including St. Joseph's, Auburn)	...	...	...	...	...	...	...	2,187
Coast Hospital	...	...	...	...	...	...	...	2,400
Women's Hospital, Crown-street	...	...	...	...	...	...	...	1,177
								52,012

No doubt the above figures include several individuals more than once in consequence of their having attended at different hospitals, or at the same hospital, several times in the course of the year, and been each time separately recorded. Taking that into consideration, however, it is hardly to be conceived that there were so many persons in such necessitous circumstances as compelled them to seek gratuitous medical advice and medicines, and the suspicion arises that the hospitals are very largely imposed on by persons who are in a position to pay their own medical attendants, or who ought by subscriptions to provident societies to be able to obtain the services of the medical officers attached to those institutions.

This impression is very considerably strengthened by various reports brought before us, and by some of the evidence given before the Commission. Various inquiries have on special occasions been made into this matter, but the most systematic was one made at the request of Sir Arthur Renwick, the President of the Sydney Hospital, by officers of the Chief Secretary's Department in the year 1895. From this it appears—first, that 14 per cent. of the applicants for relief “deliberately furnished misleading information, and could neither be found, or heard of, at the houses in which they represented themselves to reside.” Second, that of 220 individuals whose cases were inquired into and reported on, 94 only, or 43 per cent., were destitute, whilst of the remainder 14 per cent. could not be found at their stated homes, and 43 per cent. were able to pay sums varying from 6d. to 2s. 6d. a week each for their treatment. A number of cases are specially quoted as showing flagrant imposition on the Hospitals, and the conclusion arrived at is that fully 20 per cent. of the patients examined could have made private provision for their medical advice and medicines.

It may be at once stated that the recommendations and certificates as to indigence which patients bring with them cannot in the main be relied on. The President of the Sydney Hospital, who has a large experience, and is well qualified to judge, states with regret that the certificates under this head “have been found to be not in accordance with fact.” So that little or no help is obtained in this direction. The inquiries made by the Hospital authorities on the spot, and from the patients themselves, must of necessity be hurried and incomplete, though it appears that a number of obviously unfit cases are in this way eliminated, and assistance refused. It is, however, only by systematic inquiries carried out continuously by a special officer that imposition can be fully detected, and abuses reduced to a minimum, or stopped.

This

This appears to the Hospital authorities to involve such an amount of expense that it seems better to them, from a financial point of view, to put up with a certain amount of imposition and supply advice and drugs to a number of unworthy persons than to secure the service of a special officer. This is especially the case with the Sydney Hospital at which the majority (nearly half) of the out-patients apply. This Hospital, taking as it does under the system of registration to be hereafter mentioned about £660 a year from the patients in fees, and receiving £700 a year from the Government for the maintenance of the Regent-street Dispensary, is in the position that its Out-patients' Department is at present maintained at very little cost to the institution. No conjoint action on the part of the Hospital authorities in this direction appears to have been seriously considered, and each has practically, after some special and temporary inquiry followed by a discussion in Committee, left the question where they found it, and made no real attempt to cope with the evil.

The Sydney, and St. Vincent's Hospitals, and the Hospital for Sick Children, following the course taken in some of the special hospitals in London and the Melbourne and Wellington Hospitals, have for several years past charged a registration fee of 1s. to each patient on his first applying for treatment, though a number excuse themselves from this fee by pleading poverty. The sum collected in 1898 at the Sydney Hospital was £660; and at the St. Vincent's Hospital was, we gathered, with certain "offerings" made by the patients, sufficient to meet the immediate expenses of the Out-door Department. In the case of the Sydney Hospital, the registration covers a period of two months, after which another fee of 1s. is required if the patient continues to attend.

The Newcastle Hospital has carried this system one step further, and not only requires a re-registration and the payment of an additional shilling in all cases where the attendance extends over two months, but has introduced what appears the objectionable course of paying the Secretary of the Hospital  $2\frac{1}{2}$  per cent. on all sums collected from this source and also on the payments made by in-patients.

The Honorary Treasurer of the Sydney Hospital stated that since the system of registration was adopted, and the fee of 1s. charged, it had not been found that any material imposition was practised; but it does not appear that any real inquiry in the matter has been made since the system has been in operation, and it certainly has had no effect in checking the applications for relief, since the number of attendances is yearly increasing at a very considerable rate, being, in 1898, nearly 10,000 more than in the previous year. A great increase in the number of out-patients has also taken place co-incident with the imposition of a registration fee both at the Children's Hospital and at the Newcastle and District Hospital. It is quite evident, therefore, that this system has had no effect in reducing the number, and would indeed seem to have tended to increase the number of applicants under the idea that they are paying for what they get, and are not the recipients of charity. It has been found in Great Britain, where the payment of a registration fee is enforced at a very few hospitals, that it neither cures abuse nor lessens the number of applicants, whilst it is productive of some evils. It presses unduly upon the very poor, it gives a pretence for begging money to pay the fee, it gives an idea to the patient that he is in no degree the recipient of charity, and it makes the hospital a competitor against provident sick clubs and other forms of provident medical relief. Mr. Sampson Gamgee, of Birmingham, who has taken an active interest in Hospital administration, declares "that so long as persons know that they will be received as out-patients at the hospital on paying a shilling and stating that their earnings are below a certain standard, it requires no stretch of imagination to understand that a premium is offered to improvidence and fraud," and he gives some striking instances of the unequal and cruel incidence of this charge unless made with great care and by competent officials.

This so-called registration system for out-patients is all but universally and very strongly condemned by the medical witnesses who were examined before the Commission, and we do not think that it is in this way that the evils which undoubtedly attend the out-patients' department of hospitals are to be met.

At the Prince Alfred Hospital there is a box in the out-patients waiting-room for voluntary contributions, and from this source the hospital funds formerly benefited to the extent of £300 annually. This sum, from causes not fully explained, appears

appears to have greatly fallen off during late years, and, in 1898, the sum received was only £100, though the number of out-patients has doubled since the time when £300 annually was received.

We are strongly of opinion that the evils attending the out-patients' departments of the metropolitan hospitals have not been sufficiently considered by the directors. The cost to the hospitals is, on the whole, not very large, especially under the registration system; and it is very small in the case of the Sydney Hospital, to which the majority of the out-patients resort, considering the terms on which the Regent-street dispensary is carried on; but there can be no doubt that in this matter the hospitals are competing with the outside practitioner, and with provident dispensaries and other organizations, and that they are also fostering a spirit of pauperism and dispensing aid to a number of non-necessitous people.

It is not uninteresting to note how any increase in the staff of the honorary medical officers in charge of out-patients, the creation of any special department or any increased facilities for attendance, have at once become known to the public and resulted in a decided increase in the number of patients. In the year following the addition of any new special department at the Sydney Hospital the number of out attendances has always greatly increased, and there has been a similar experience at the Prince Alfred Hospital whilst on the appointment of the honorary physicians in charge of out-patients at the Children's Hospital—the out-patients having formerly been seen by the resident staff—the number of patients rose in the year 1898 from 2,860 to 4,082.

The evidence of Dr. James Graham on this point is especially interesting:—

1710. Do you approve of any payment for the registering of out-patients? Well, that comes under the same category as taking a collection from the patients who come in. I have watched the type of patients who come in now and the type who came before the shilling was charged, and I find that it is not altered. It comes to this, however, that we get over £600 a year by the payment of a shilling each from the same class of people from whom we got nothing before.

1711. It has not acted in any way as a deterrent as regards the number who come to the hospital? No; I do not think that is the source of attraction to patients. I think the principle that gives honorary medical officers the liberty to develop out-patients' departments is the principle that causes all the trouble. The Sydney Hospital has something like 100,000 out-patients in the year. That evil has arisen because there has been no serious check upon the honorary staff, who have a large say in the management, and every man who gets appointed wants to have as big a clientele as possible. It is the road to professional success, and the Board have been lax in allowing huge out-patients' departments to spring up in a building entirely unsuited for out-patients' work. If you get a man to start a special department, he will get dozens to come. If you start fifty more out-patients' departments, you will get them all largely attended.

1712. Every enlargement of the out-patients' department, and every new specialist appointed, will bring a large number of patients? Yes.

We are inclined to think that extra provision has been made by the hospitals for the treatment of out-patients in anticipation of any real and pressing needs, and experience has shown that any provision of this kind will at once induce numerous applicants for relief who formerly did not apparently consider their ailments sufficiently serious or their necessities such as to warrant applications for gratuitous treatment.

Further, Hospital directors are not exempt from a tendency to magnify their office, and to set forth the importance of, and the increase of, the work of the institution which they are called on to govern; and if they do not take steps to enlarge the sphere of its operations, they are inclined to view with complaisance the increase of the out-patients' department, whilst the system under which Hospital Saturday and Sunday funds and other collections are distributed to those institutions which show the greatest aggregate number of in- and out-patients tends to foster the evil.

The remedies for the evils of the present system are perhaps difficult to find, but a more systematic inquiry into the circumstances of both out- and in-patients is certainly necessary, and this inquiry can only be carried out by following up the inquiries made at the hospitals by visits paid by an intelligent inquiry officer at the addresses given by the patients. At first such inquiries would no doubt entail very considerable cost, but there is good reason to believe that in time the system could be carried out by one officer acting from a central office and on behalf of all the hospitals. When it became known that these inquiries were systematic and continuous, abuses would probably in a measure cease, and the work would become lighter.

The abuses might, we consider, be further checked—

- 1st. By insisting on a note of recommendation from the local medical practitioner in all cases coming from a distance or from outside any such area as could be worked by an inquiry officer.
- 2nd. By giving priority to all cases bringing recommendations from medical practitioners in the general out-patients' department, and by insisting on such a recommendation in all cases to be treated in the special departments of the hospital.
- 3rd. By refusing to attend to any but the more serious accidents and casualties, except in the case of patients obviously unable to pay, and referring the patients to their own medical attendant, by which the idea at present entertained, that every one who meets with an accident, however trivial, has some right to hospital treatment, might be corrected.

These recommendations, which have been arrived at after an attentive consideration of the evidence brought before us, are in substantial agreement with the proposals made by the Hospital Reform Association in Great Britain in 1898, and which are printed in Appendix F to this Report.

In regard to the country hospitals, the out-patients' problem does not afford any difficulties. The numbers are comparatively few, the relief sought is generally in the event of minor accidents and other casualties, and the persons are usually known to members of the committee or of the honorary staff. In special cases it is not difficult to obtain information through the police or otherwise.

#### TRAINING, HOURS OF DUTY, &C., OF NURSES.

The training of hospital nurses and other matters in connection therewith has occupied our attention, and, in view of an opinion not infrequently expressed that it is both unnecessarily prolonged and unnecessarily arduous, we have taken the evidence of the present and two or three of the past Medical Superintendents of the Prince Alfred Hospital, of the present Medical Superintendent of the Sydney Hospital, the present and the late Matron of the Sydney Hospital, the Matron of the Prince Alfred Hospital, and other witnesses on this subject. All authorities appear to be in agreement that a training for a period of not less than three years of probationary service in a general hospital, containing not less than thirty or forty beds, is indispensable, and that the training should consist of practical work, commencing with the details of domestic service, together with lectures, demonstrations, and examinations, before certificates of competency are granted; and there is also a general consensus of opinion that the course of instruction and examination should be similar in all the hospitals, so as to have a standard of competency. The work is decidedly arduous; but the probationers are now relieved from the more menial work, and the evidence shows that what is now insisted on is considered essential, is in various ways useful in regard to the object in view, and does not involve any undue strain on the physical strength of such women as are really fitted for the position of hospital nurses. It no doubt weeds out the weakling, the incapable, the "fine lady," and the sentimentalist; but it leaves all whom it seems desirable it should leave; and the evidence is emphatic that the training in these tends towards health and strength, as well as fitness for the onerous duties involved in a nurse's calling.

As one of the witnesses who has had a large and varied experience distinctly put it, "It takes a good all-round woman to make a good nurse," and, such being the case, it is well that those who are not "good all-round women" should be eliminated as soon as possible, and that time should not be wasted in attempts to train and fit them for a career for which they are unsuited.

It may, at first sight, seem hard on the individual; but it is really for her good, and for the good of the community, that a stop is put to a useless experiment.

In addition to the formal evidence taken, we have had opportunities of speaking to the matrons of suburban and other hospitals who have "gone through the mill," and who are practically unanimous that the course of work now laid down

in

in the large hospitals, where nurses are trained, is essential for a thorough and satisfactory training, and is neither too arduous nor too prolonged. On the question of the working hours, to be next considered, they are also in accord that these, as at present arranged, are not too long.

The hours during which nurses are on duty now average about ten and a half, and the evidence of the Medical Superintendents and Matrons of the hospitals above mentioned, as well as that of other witnesses, does not go to show that this is excessive, or is objected to by the nurses as a body. It is pointed out that "on duty" does not mean actually "at work"; and further, that the general health of the nursing staff of the hospitals is at a high standard. One or two witnesses have suggested that an eight-hours' day would be considered a boon by some nurses, and would, perhaps, be the ideal standard for all; but doubts were expressed as to the advisability of adopting this on general grounds, and it is clear that few hospitals would be able to stand the expense involved in such a large addition to the staff as would be required, and would have either to close some of their wards or their doors.

In addition to the evidence taken, we have had an opportunity of consulting some of the literature on this subject, and especially a report showing the hours of duty of nurses in hospitals in America, by Adelaide Nutting, Lady Superintendent of the Johns Hopkins Hospital, and find that the hours in this Colony are not longer than the average in other places. On the whole, then, it does not appear that the training is too arduous, or the hours of duty unnecessarily or hurtfully long, and the best evidence that the calling under present conditions is not an unpopular one, or the conditions of service not objected to, is that the applicants for the positions of probationers at the metropolitan hospitals are at this time several hundreds in number, and that the lists kept by the matrons of the hospitals are full to overflowing.

It has already been mentioned that no training can be considered complete and satisfactory unless it is carried out in a general hospital, containing not less than thirty or forty beds, and the system adopted in some of the country hospitals appears to us very unsatisfactory. In some cases the probationers, after one or two or more years' service, without the advantage of any special teaching, leave, without certificates it is true, but with commendatory letters and recommendations, as practical and trained nurses. In others, these probationers are retained in the service of the hospitals, and pass up from grade to grade until they become head nurses or matrons; so that, in a few instances, persons who have had no systematic training become the heads of the nursing staff, and are in a position which involves the training of others, whilst the regulations of the Government, which require a certificated trained nurse as the matron of every subsidised hospital, are evaded. It would be well if some arrangement could be come to by the managers of the smaller hospitals to take as probationers persons who are on the approved lists of candidates for the position of probationers at the metropolitan hospitals, so that the time during which they have to wait for engagement might be spent in the smaller hospitals as a preliminary to actual training; and also, if all the more responsible positions in the nursing staff of the smaller hospitals were filled by certificated nurses from the metropolitan hospitals.

These arrangements are now adopted by some of the suburban hospitals, and are certainly conducive to the welfare of the patients.

#### PRIVATE HOSPITALS.

In the course of our inquiries, the existence of a number of private hospitals in Sydney and its suburbs was brought under our notice; but we have had considerable difficulty in ascertaining the exact number of these, since they are not registered, and there is no recognised or complete list of them in the medical or other directories. There are, however, we believe, already about twenty of these establishments, and according to the evidence given, they are increasing in number somewhat rapidly. These hospitals have been started to supply a distinct public need. The fees charged range from 2 or 3 guineas a week upwards. There is a tendency to  
lower

lower these in some of them, and to provide accommodation to meet the wants of a class unable to afford the larger payments, and yet unwilling to enter the public hospitals. Some of them are the property of, or are conducted under the immediate management of well-known medical practitioners, and others are managed by qualified and skilled nurses. The majority have established and highly-creditable reputations, being well situated, well managed, and supplied with proper sanitary arrangements, and all necessary fittings and appliances. The sanitary arrangements of others are at least doubtful, and a number of the medical witnesses were agreed that some of these establishments were used for carrying out operations not only unnecessary but illegal. Nearly every medical witness examined on this point, whether the proprietor of a private hospital or not, has given evidence as to the advisability, and, indeed, the necessity, for some system of registration and inspection of these establishments, not only with a view of a guarantee to the public with regard to their sanitary condition and their suitability and sufficiency to meet the public needs, but with a view of preventing illegal operations and other abuses, and the scandals incidental thereto.

In the neighbouring colony of Victoria this question is dealt with under the Public Health Act. A private hospital is defined as "any house, building, or place other than an institution in receipt of aid from the State, in which persons are received and lodged, or in which it is intended that they should be received and lodged for medical or surgical treatment and care," and every such private hospital must be registered by the Board of Health after inspection, and be conducted subject to Regulations made by the Governor-in-Council.

The section of the Victorian Health Act of 1890 relating to private hospitals, together with the Regulations for the registration, inspection, drainage, good management, and sanitary regulations made thereunder, will be found in Appendix G to this Report, and might with advantage be adopted in this Colony.

---

### RECOMMENDATIONS.

1. That all subsidised hospitals shall be periodically visited by an officer of the Government, who shall have power—(1) To audit the accounts at any time; (2) to ascertain if the funds are expended for proper purposes, with due regard to economy; (3) to see that the by-laws are carried out in their integrity; (4) to report generally on the management of the institution, with a view to bringing under the notice of the Government and the Committee any defects that may, in his opinion, exist in connection therewith.

2. That a thorough inquiry by a Government officer, and a favourable report as to the necessity for the establishment of any new hospital, should be conditions precedent to the granting of Government assistance either to build or maintain that hospital.

3. That model plans for country and district hospitals be prepared by the Government as guides to local committees in the construction of new hospitals.

4. That the Government subsidy of £ for £ be continued both in regard to funds collected for the building and equipment, and also for the maintenance of hospitals; but that special grants in cases where no like amount is raised by subscription or otherwise should not in future be given.

5. That, as hospitals can, except under very special circumstances, be suitably built and adequately equipped at a cost of £200 per bed, the Government subsidy towards the building fund should not exceed the amount of £100 per bed.

6. That the Government subsidy should only be granted where it is shown on the report of the inspecting officer that all regulations made by the Government are acted on, and that an efficient system of inquiry as to the pecuniary positions of both in- and out-patients is carried out.

7. That Government aid be withdrawn from the Silverton and Bulli hospitals, and the special attention of the Inspecting Government Officer drawn to the question of the advisability of the continuance of Government aid to all hospitals in which the average annual cost per bed is exceptionally high. 8.

8. That, in the absence of any local poor law administration, the Government should provide and maintain in connection with the Asylums for the Infirm and Destitute one or more hospitals on the model of the sick asylums under the Poor Law Board in Great Britain, and that when these are available the patients sent by the Government to the Sydney and Prince Alfred Hospitals should be only such cases as require special operative measures, or cases of emergency which would be prejudiced by delay in treatment.

9. That the administration of the Coast Hospital be removed from the control of the Medical Adviser to that of the Director of Government Asylums for the Infirm and Destitute, and that the institution be worked in connection with the Asylums for the Infirm and Destitute and the hospitals or sick asylums above recommended, and that it be utilised—(a) for cases of infectious disease until other provision for these cases is made; (b) for lock cases in men; and (c) for ordinary hospital cases which will not be prejudiced by the journey.

10. That the tramline be extended to the Coast Hospital from the Botany terminus, and the patients taken by special ambulance conveyances at fixed times.

11. That a Lock Hospital for Women, with not less than thirty beds, be established in Sydney, and conducted under the Department of Government Asylums for the Infirm and Destitute.

12. That the Government should cease to pay the rent of the buildings occupied as an Ophthalmic Hospital at "Moorcliff" in connection with the Sydney Hospital on the expiry of the present lease, and that the more chronic ophthalmic cases be treated in one of the hospitals or sick asylums under the Department of Government Asylums for the Infirm and Destitute; and those cases which are of a more acute character, or require operative treatment, in the Sydney and Prince Alfred Hospitals.

13. That the Regent-street Dispensary should be discontinued and the Government grant cease, and that Government assistance should be given in aid of a free dispensary, on the lines of such institutions in the mother country, from which patients in destitute circumstances could be treated either at the institution or at their own homes by a competent medical staff, and receive the necessary medicines, &c.

14. That all private hospitals be placed under Government supervision, provided for by Act of Parliament, in some such manner as exists in the neighbouring colony of Victoria; and that they only be allowed to continue their work under a license, granted after inspection by a competent authority.

In conclusion, we desire to place on record our high appreciation of the very valuable services rendered to this Commission by its Secretary, Mr. Walter Wilson, who has not only worked most ably and assiduously to further the general work of the Commission, but has dealt with a mass of details, statistics, and returns in a very complete and masterly manner.

We have the honor to be,

Your Excellency's most obedient servants,

GEO. A. WILSON, President.

J. BARLING.

JAMES POWELL.

F. NORTON MANNING, M.D.

CRITCHETT WALKER.

WALTER WILSON,  
Secretary.

## Appendix A.

## SYDNEY HOSPITAL.

The foundation-stone of the original structure of this hospital was laid in 1811. The hospital was soon afterwards opened and has been in active operation ever since. In the year 1848, up to which time it had been under Government control, it was placed under the management of the Directors of the Sydney Infirmary and Dispensary, which had been established in 1826, and for some years carried on its work in the building now occupied by the Mint. In 1876, the buildings in which the patients were housed, which were old and badly constructed, were found to be also septic, and after much consideration were, in 1879, demolished, with the exception of one detached block containing two wards, which was built in 1859, a date long subsequent to the main structure; and the Nightingale wing for nurses, which was added to the hospital in the year 1868. Temporary wooden buildings were provided so that the hospital might continue its operations until a new building could be erected. This new building was commenced in 1880, but from various causes, the chief of which were want of funds and some differences of opinion as to the size of the new hospital and the number of stories in the main pavilions fronting Macquarie-street, its completion was delayed until the year 1892, when the Government stepped in and found the necessary funds, it being decided that though the central administrative block might consist of three, the pavilions for patients should be limited to two storeys and a basement. Before the Government consented to find the means for completing the hospital great stress was laid on the necessity for satisfactory hospital accommodation for accidents and urgent cases occurring in the city, and it appears to have been understood, though not expressly stipulated, that the eye cases accommodated in rented buildings at Moorcliff, since the demolition of the old, should be removed to and provided for in the new, hospital.

In the year 1881, a special Act of Parliament setting forth the constitution and mode of government of the hospital was passed; and with new buildings and new constitution the hospital may be said to have entered on a new life in the year 1894.

The new hospital, which is on the pavilion system, contains 12 wards, which with the detached block of 2 wards, left when the main hospital was demolished, make a total of 14 wards, containing bed accommodation for 241 patients, 150 male and 91 female. These wards are allocated as follows:—1 ward for accidents, male; 2 wards for surgical cases, male; 1 ward for surgical cases, female; 1 stricture ward; 3 medical wards, male; 1 medical ward, female; 1 gynæcological ward; 2 small wards each with accommodation for 4 beds for children; 1 special room for males containing 2 beds, and 1 for females with 4 beds. There are in addition 2 beds in special rooms for cases of delirium, &c., and at the rear of the hospital 2 cottages containing 6 beds which are used for infectious diseases and other cases requiring isolation. The total number of beds thus provided at the main institution is 249. Twelve beds in the surgical ward for females are used for lock cases.

It will be seen that there are no wards set apart for eye cases, which are still accommodated at Moorcliff, with which it will be necessary to deal later on in this report. The reasons given for the continuance of this arrangement are, that the beds at the main hospital are all required for accidents and urgent cases, and other patients sent into the hospital by the Government.

The buildings appear to be on the whole well designed for hospital purposes, but to be unnecessarily massive in style, and, therefore, unnecessarily expensive. The president offers as a reason for this the fact that the ward blocks were originally designed for three stories, but this would not seem to account for the architectural peculiarities of the building, or such matters as the heavy stone verandah columns and other expensive details. Some of the wards, and especially those for children, struck us as somewhat dark and cheerless. The operating theatre is described by the president as "behind the times"; and there are defects in details, amongst others being the want of a hot-water service in the wards. The Nightingale wing, though it probably met the ideas of that time as to the housing of the nursing staff

of a hospital, is certainly not abreast of modern requirements. It was not well lighted as originally planned, and has been made darker and more gloomy by the addition of another storey rendered necessary by the increasing nursing staff of the hospital, and by other structural alterations. A large part of the sleeping accommodation for the nurses is in the objectionable form of associated dormitories; and when the additions are made, which are said by the president to be now required, it will be advisable to try to arrange for single or two-bedded rooms for the nurses, and to make the day and dining rooms larger and more cheerful. The president of the hospital and the directors are aware of the short-comings of this branch of the institution under their management, but are waiting for additional funds before taking action.

At the back of the main building is a wooden structure, not too well devised, but capable of holding six beds, which is set apart for the isolation of the occasional cases of infectious diseases which develop in the hospital.

The out-door and casualty departments are conducted in the basement, in rooms which are small for the purpose and not very well lighted.

There is a good, well kept kitchen, fitted with modern cooking appliances and all the adjuncts necessary for providing and serving meals for the patients and staff; and the store rooms, though small and somewhat dark, are in excellent order.

A special feature of the hospital is a spacious and well-arranged pathological department, containing the necessary rooms for *post-mortem* examinations and for pathological and bacteriological research. In this department the hospital is said to be in advance of any similar institution in the southern hemisphere; but it appears to be unnecessary that pathological or bacteriological inquiries, except for clinical purposes, should be undertaken at this hospital, to which no medical school is attached, and anything in the nature of bacteriological research would appear to be outside the functions of an institution of this character.

There is no proper laundry, though some of the smaller articles are washed in out-buildings in the rear of the hospital. The committee have the question of erecting a laundry under consideration, and there is evidence to show that there are advantages in having a laundry as part of a hospital, both as regards cost and in regard to the avoidance of danger by means of the introduction of infection from outside; but there are counter-balancing considerations in the fact that it adds considerably to the work of the administrative officers, and some special difficulties exist in this case owing to the small area of ground for the laundry buildings—which must necessarily be in somewhat close proximity to the nurses' quarters—and the restricted area for a drying yard.

The hospital appears to be well kept and clean, and to be not only a comfortable and cheerful home for the inmates, but to be furnished with almost all the appliances necessary for successful treatment. Even the two old wards, though not as spacious and bright as the new ones, are sufficient for their purpose.

The hospital is, by its special Act of Parliament, under the government of twenty-six directors, ten of whom are nominated by the Government, two are representatives of the honorary medical staff, and the remainder are elected by the donors and subscribers at, or in the case of a contest for the seats after, the annual general meeting. The officers chosen by the directors from amongst themselves are a president, two vice-presidents, and an honorary treasurer; and the internal management of the hospital is entrusted to a house committee which meets once a week.

The President, Sir Arthur Renwick, states that the directors appointed by the Government take a fair share in the management of the hospital, and considers that the Government is adequately and efficiently represented on the Board.

The honorary medical staff, apart from consulting officers who have retired from active duty after long service as honorary physicians and surgeons, consists of 4 physicians, 4 surgeons, 4 assistant physicians, 4 assistant surgeons, 2 ophthalmic surgeons, 2 assistant ophthalmic surgeons, 1 gynæcological surgeon, 1 assistant gynæcological surgeon, 1 aural surgeon, and 2 assistants, who undertake also the treatment of diseases of the nose and throat, 1 dermatologist, 1 dentist, 1 operating dentist, and 1 assistant operating dentist. One of the assistant physicians is also the director of the pathological department.

The

The assistant physicians and assistant surgeons, and also the honorary assistant medical officers in the special departments, have, as their main duty, the treatment of out-patients; but arrangements are made under which they can take in and treat in the hospital beds a limited number of the patients who may in the out-patients' rooms appear to be in need of in-door care.

The special departments of the hospital appear to have been increased in number during the last few years. The president considers these really necessary to meet the special demands on the hospital and to cope successfully with special cases. It is no doubt advisable, except in the largest cities, that diseases of special organs should be treated in departments in connection with the General Hospitals rather than in Special Hospitals existing as separate institutions.

The resident medical staff consists of nine officers—a medical superintendent, paid £350 a year; a senior resident medical officer, paid £100; a resident pathologist, who receives £75; and six house physicians and surgeons, who receive each £50 annually. The whole of these officers receive board and lodging. The Medical Superintendent is said to be the head of the establishment under the directors, but the secretary appears to be an independent officer responsible to the directors only. The matron is responsible to the Superintendent.

The medical staff appears to be a somewhat large one, but it is stated in explanation that, as there are no medical students, the house physicians and surgeons are called on for minor duties which would be undertaken by clinical clerks and dressers in hospitals with medical schools attached.

The nursing staff, including that for Moorecliff, consists of a matron, sub-matron, five sisters, five head nurses, thirty-two nurses, and twenty-one probationers, a total of sixty-five, giving an average of five and a half beds to each nurse. This number of nurses is smaller than it would be but for the large proportion of ophthalmic cases which do not, proportionately, require much nursing.

In addition to the nurses, there are nine wardsmen and a number of ward-maids, whose duties are merely those of cleaners, and who assist the nurses in other matters.

The number of nurses would appear from the evidence to be adequate, and although the hours of duty are somewhat long, and the work of an onerous and not altogether pleasant character, there does not appear to be any evidence to support the view which we find is sometimes held that the nurses are overworked and are compelled to carry out duties of a menial character which might preferably be entrusted to scrubbers and others. It must be remembered that the probationers and nurses in their first three years' service are receiving training for a highly honorable and useful calling; that it is certainly advisable that they should be made acquainted with the necessity for the most absolute cleanliness in every detail by means of personal service, that they will be called on in the subsequent pursuit of their calling to carry out these details personally, and that this calling will involve the necessity for physical strength, so that no one unless in robust health should continue at nursing work.

The general staff of the hospital includes the secretary, who has under his direction two clerks and a collector. The collector receives a salary of £156 a year and a commission of  $2\frac{1}{2}$  per cent. upon old subscriptions and 5 per cent. upon new ones. He gives up the whole of his time and attention to the work of the hospital, principally collecting, though he does other work as well. There is the usual staff of cooks, kitchen servants, &c. There is also an "out-patients' clerk," who is responsible to the medical superintendent.

The number of beds available for patients, including those at Moorecliff and those in the isolation cottages and special rooms, is 318 (though more than this number of patients are occasionally accommodated) and the average number of beds occupied was 291 in 1897 and 292 in 1898. It is considered necessary to keep so far as is possible a number of beds unoccupied to meet urgent cases and to allow of the necessary cleaning and disinfecting of wards.

All the officers agree, however, that the number of beds available is, under present conditions, hardly adequate to meet the calls upon the hospital. The medical officers consider that some steps are necessary to increase the accommodation, but on inquiry

inquiry as to the manner in which this could best be done, they could only suggest two methods—one of which was the addition of another storey to the pavilions, and the other the occupation of a part of the Domain adjoining the hospital—both of which are open to manifest objections. The number of in-patients under treatment in 1897, was 4,090 and in 1898, 3,904, and the average stay in hospital of the patients was 24·3 days in the former year and 25 days in the latter.

During the year 1898, the number of accident and urgent cases, the reception of which is held to be the main sphere of the hospital's usefulness, was 1,033.

The number of patients admitted on Government orders was 1,609, the number on subscribers' orders 133, and the number of patients who contributed towards their maintenance was 842.

The inability of patients to contribute to their maintenance is made the subject of certificate by the persons recommending them, but these certificates though given by "magistrates, members of Parliament, and above all by clergymen, have been found to be not exactly in accordance with fact." Special inquiries are made by the medical and other officers as to the ability of patients to pay wholly or in part for their maintenance, in ordinary cases, before admission, and in accident and urgent cases, whose admission does not admit of delay, at a subsequent time; but it is only in occasional cases that the inquiries are made, except from the patients themselves, and there is no special officer to follow up the cases to their homes and fully investigate their circumstances.

The hospital has no private wards, and as a number of private hospitals and nursing homes are now available in Sydney, and these make provision for private cases, these wards are not considered necessary, but the hospital receives and expects payments in accordance with their means from patients treated in the general wards. The sum received from this source in 1898 was £1,633, and the following brief return shows the amounts received and the number of patients contributing during the last eight months of the year:—

Paying	2s. 6d.	5s.	7s. 6d.	10s.	15s.	17s. 6d.	21s.	25s.	28s.	30s.	42s.	50s.	100s.
	10	72	18	115	21	1	101	3	5	4	13	1	1

The above are all weekly payments. The returns were not correctly kept for the earlier months of the year, so that they cannot be given for the twelve months.

Accident and urgent cases in which delay would add to the sufferings or increase the illness of the patients have always been admitted on being presented at the hospital, but for other cases an order from a subscriber, who is entitled to a given number of recommendations in accordance with the amount of subscription or donation given, has been up to the present time required. This system has, however, been found liable to abuse, and though in many cases subscribers have made no use whatever of the recommendations to which they are, under the rules, entitled, in others the full number of orders has been given, sometimes to cases by no means suitable for admission, and this has involved an expense to the institution considerably in excess of the subscription given. After full consideration the committee has decided to adopt the system which has been in force at the Prince Alfred Hospital for some years, viz., not to grant to subscribers any right to orders or recommendations except in the case of out-patients. In adopting this rule the Board will, as far as possible, admit urgent cases which present themselves at the hospital without recommendation, being guided entirely by the severity of the illness and the suitability of the case for hospital treatment. The orders issued by the Government for the admission of indigent patients are always recognised and patients at once admitted.

A large increase in number has occurred in connection with the out-door department. The attendances in 1897 were 83,396, and in 1898 92,301. It is calculated that on an average each out-patient attends between four and five times—the total number of individuals treated in 1898 being 21,491.

The average annual cost per occupied bed in the hospital was, in 1897, £61 15s. 10d.; and in 1898, £61 9s. 11d. These calculations are said to be made after deducting a certain amount for the cost of the out-patients, and also all outlay for permanent structures, from the total expenditure of the hospital. The

estimated

estimated cost of the out-patients' department in 1898 is £1,551, which is at the rate of about 1s. 6d. per individual treated. It does not appear that the cost falling on the general funds of the hospital for the treatment of out-patients is a large one. Each out-patient on registration is asked to pay the sum of 1s., and about £600 a year is raised from those who are able to contribute the amount. In addition to this income in the out-patients' department, £700 is received from the Government to cover the cost of the Regent-street Dispensary, which is managed in connection with the hospital.

This dispensary is a small inconvenient place which is not fitted for the purpose for which it is used. On the ground-floor is a waiting-room, small, and much overcrowded by patients at the time of our visit; a consulting-room, which is used by the honorary physician on two days, and by the honorary surgeon on two days, in each week; a dispensary, very small, badly fitted, and containing only a small supply of drugs; and a room occupied by the caretaker, who has also the whole of the upper floor as quarters. The whole appearance of the place is shabby and unwholesome, and has none of the signs of cleanliness and order which should characterise a branch of a large public institution. The honorary medical officers attend on two afternoons a week each, and usually spend from one to two hours in seeing and prescribing for patients. There is no resident medical officer to treat casualties, or to visit or treat urgent cases, and the place is a dispensary only in the sense that patients are seen and medicines dispensed there, and in no way carries out the functions which are connected with the name of dispensary in the mother country. The chief dispenser of the hospital attends for one or two hours four times a week, and dispenses for the patients.

There was no clerk or enquiry officer in attendance at the time of our visit. The patient is registered, and pays the 1s. fee if he has the means. The registration covers a period of two months, after which a further fee of 1s. is required.

The rent paid is £104 a year (including rates), and appears excessive considering the neighbourhood and the accommodation afforded. From the evidence it appears that the majority of the directors of the Sydney Hospital do not consider the place to be either necessary or useful, and that it is carried on by them only at the request of the Government, who, moved by the members for the district and some of the clergy, find funds which must be more than sufficient for the dispensary itself, and assist the general fund of the Sydney Hospital.

The following evidence by Sir Arthur Renwick with regard to this dispensary is interesting:—

452. There is a dispensary in Regent-street? Yes, we have that dispensary there, and we have also a piece of land bequeathed to us on the South Head Road, by the late Mr. Perry, for the purposes of another dispensary. There is a division of opinion in our Board in connection with the matter. Some members of the Board think it is undesirable that we should deal with anything outside Sydney Hospital and Moorecliff; that we should not take up dispensary work. They have, therefore, suggested to the Government that we should give up the dispensary in Regent-street, but the Government, after consideration of the matter, and especially on the representation of the gentlemen who represent in Parliament the districts concerned, have paid the rent and asked us to continue our services in connection with the Regent-street dispensary. We have not had sufficient funds to carry out the terms of Mr. Perry's bequest to build on the land. It is a matter for consideration whether we should continue or not. The continuance of the dispensary at Regent-street depends upon the will of the Government.

453. I understand that, whether it is carried on by the hospital authorities or not, some provision of the kind will have to be made? It is very questionable. I have gone to Regent-street on many occasions, and examined the books and seen the patients that go there, and I doubt whether it would not be far better if those patients came to the out-door department at the Sydney Hospital. Nine-tenths of them are cases which could come without any difficulty at all, and it is questionable whether the other tenth ought to get hospital treatment, whether they should not pay for treatment, and whether they should be treated at a public dispensary at all. A dispensary, with a person attached to go and visit the poor who are unable to pay for attendance, would be a valuable thing. Therefore, it was suggested some years ago, that the plan adopted in large cities in England would be more advantageous than this plan, viz., that the city should be divided into districts, each with a medical man attached; that the local dispensary should be paid a certain sum annually, and that the person to visit the sick should be the poor-doctor of the district. It would be a great saving to the country, and the poor would be much better attended than they are at present. As it is now, I do not know that any provision of a satisfactory nature is made for the attendance of poor sick people who are unable to go to the institution.

The Ophthalmic Department at Moorecliff, which is a part of, and is worked with, the Sydney Hospital, is housed in two old private dwellings with their out-buildings and appurtenances, and these stand, for city residences, on a somewhat large area of land, said to be between 2 and 3 acres. From a few of the rooms there

is a good view of the harbour. The site is quiet and retired, is very free from dust, and is open to the sea breeze. The admirable results which have been attained, and the success of operative treatment are due, probably, in the main, to the skill and care of the medical staff; but some credit is, perhaps, due to the site, which more than one of the medical officers considers an especially good one for the purpose. At first only one house was leased (in 1882), but both have now been occupied for about eleven years, and the leases, which were renewed in 1894, do not terminate till 1901. The rent, which is paid by the Government, appears decidedly in excess of what it should be, considering the neighbourhood, the character and extent of the accommodation, and the condition of the buildings in regard to repairs, which renders a comparatively large outlay necessary annually.

The houses have not undergone any special structural alterations to fit them for hospital purposes, and the patients are scattered in a number of small rooms, some of which are decidedly gloomy and unsuited for hospital work.

The number of beds is 69, of which 36 are apportioned to males and the remainder to females, but at our visit the number of inmates was 71, a very large proportion—26—being children, who (two or more being sometimes members of one family) were, in some instances, placed two in a bed. The institution is kept constantly full, and owing to the requests for admission there are generally more patients than there are beds for. Even with the recognised number of inmates the institution would be overcrowded, as the air space in a number of the rooms is not sufficient for hospital cases, and the ventilation, owing to structural conditions, imperfect. It should, however, be remembered that the majority of the patients only occupy the dormitories at night and are able to be up and a great deal in the open air by day. At the time of our visit only 11 were in bed, and this was said to be somewhat above the usual number.

The officers in charge appear to be doing their best to meet requirements, but the advisability of admitting more patients than there are beds for seems, at least, questionable.

The whole institution is well kept and is clean even as to details, but it is in many places in want of repair and requires kalsomine and paint throughout, and despite active efforts it is impossible to keep it free from vermin.

The day rooms for the patients, in which a great deal of their time is spent, are gloomy sheds; the kitchen and other domestic offices poor and ill found; the bedsteads of very ancient pattern; and the ward furniture and conveniences mainly remarkable for their sparseness and their insufficiency, or in some places their absence. Altogether the institution is a depressing place to the visitor and cannot be calculated to have a cheering effect on the inmates, and still it undoubtedly is doing excellent work, and has a reputation which is not confined to New South Wales, but attracts patients from other colonies and chiefly from Queensland. The directors in their report for the year 1896 stated, "The Moorcliff Hospital has during the past year been thoroughly repaired and renovated, and thus made more available for the cases of diseases of the eye admitted from all parts of Australia." But, considering that some of the patients who are attracted are indigent, others are able to pay sums which cover only a small part of the cost of their maintenance, and that the funds of the hospital are mainly furnished by the Government, the result is one which is by no means altogether a matter for gratification.

The number of patients treated in 1898 was 561, of whom 417 were admitted on Government orders and paid for at the rate of 3s. a day each. The figures for previous years do not differ materially from these. The cost per patient is not high as the nursing and general staffs are comparatively small, the dietary required by the patients is neither expensive nor very varied, and the amount of surgical dressings and other extras not nearly as great as is required for ordinary hospital cases.

As Moorcliff is worked as a part of the Sydney Hospital, and the accounts are not kept separate, it is impossible to arrive at the exact cost per bed. This, however, has been estimated at 13s. per week, and even if it is somewhat in excess of this, the payments for the Government patients should practically cover the whole expense of the institution, and besides leave a surplus towards the support of the main hospital in Macquarie-street. The hon. treasurer describes Moorcliff as "self-supporting," but it is only so inasmuch as it is no drag on the hospital funds.

The

The Medical Superintendent of the Sydney hospital is in immediate charge of Moorcliff, under the directors, and he and the matron visit the place frequently, but the officer in immediate resident charge is the sub-matron, who has a staff, as a rule, of four, and occasionally of five, nurses, besides a cook, housemaid, and wardman. The nurses are supplied from the main hospital in rotation, each completing a service of three or four months at Moorcliff as part of their training.

Many of the patients being in fair health, and only suffering from partial disability with regard to vision, are very helpful in cleaning and other work, and so a large general staff is unnecessary.

The hon. medical officers are two surgeons and two assistant surgeons, and the latter have a few beds each by arrangement with their senior colleagues.

The patients are first seen at the main hospital, and treated as out or as in patients, according as their condition may require. Their average stay in hospital is seven weeks, a long one compared with that at the main hospital, but this is owing largely to the intractable nature of some forms of ophthalmic ailment. The operations numbered 408 in 1898, and included all the usual operations recognised in modern ophthalmic surgery. The number of cases of senile cataract operated on was 37, with the result that all recovered.

At the time of our visit we were struck, first by the large number of children, and secondly, by the large proportion of cases coming from Bourke and its immediate neighbourhood. We thought it advisable to have a return of the places from which the 71 patients in the hospital were admitted; and it is as follows:—

Total ... ..	15	34	22	71

Average stay of each patient in hospital, seven weeks; No. of patients at present in hospital, 24 May, 1899, males, 42; females, 29; total, 71.

The income of the Sydney Hospital for the past three years has been as follows :—

	1896.	1897.	1898.
	£	£	£
From Government ... ..	15,469	15,262	11,777
Subscriptions and donations ... ..	3,848	3,518	2,485
Bequests ... ..	1,100	2,171	3,702
From patients ... ..	2,410	2,332	2,296
Interest on invested funds ... ..	1,017	1,254	1,053
Other receipts ... ..	185	152	309
	£24,029	24,689	21,622

The proportion of the receipts from the Government to the total income in each of those years was 64·4 per cent., 61·8 per cent., and 54·5 per cent., respectively, or an average of 60·4 per cent. over the whole period. In these calculations the bequests are taken into account as revenue, but as the bequests are invested, the proportion of the Government contribution to the income actually available is larger than the amounts named.

The subscriptions and donations show a falling off during the last few years, and on the whole they do not furnish so large a sum as might be expected from the community generally. The hon. treasurer states in his evidence that the falling-off was due to the collections by the Hospital Saturday Fund, and to the fact that the circumstances of the people during the last few years had not been so good as previously. Special efforts appear to have been made by appeals to old colonists in England, and to large pastoralists, but the results were not encouraging.

With regard to the Hospital Saturday Fund, the hon. treasurer states :—  
 “ Until last year we used to get our share of the whole fund, but when they (the trustees of the fund) made the last division, they kept back what they called the money received from the industrial people—people in shops, warehouses, houses, or factories, who contributed 6d. or 1s. a week. They kept back about £1,100, and they made it a ground of complaint against us that we did not afford them the same facilities as our ordinary subscribers. There is a by-law to the effect that subscribers of 2 or 3 guineas have a right to one or two orders. This was denied to the Hospital Saturday Fund, so they cried out about it, and said they were compelled by those who gave them the money to get some consideration for it, and they have kept that money back.” The whole amount received in the shape of subscriptions and donations, including the proportion of the Hospital Saturday Fund, is now £300 or £400 short of what used to be received a few years ago from subscribers alone.

What is known as the Benefactors' Permanent Trust Fund stood on paper, on the 25th May, 1899, at £59,101, but of this amount £24,218 had been expended on the permanent structure. The balance in hand—£34,883—was invested in the Bank of New South Wales, on fixed deposit, at 3 per cent., and is an accumulation of legacies and donations of £100 and upwards. Applying to £28,554 of this amount is the condition that it shall be invested so that the interest thereon only shall be available for expenditure by the hospital.

By the by-laws all sums of £100 and upwards received are carried to this Permanent Trust Fund. At the same time increased subsidies from the Government or increased subscriptions from the public are required to take the place of the sum so locked up. The hon. treasurer approved of this action on the ground that he would “ like to see that fund built up until we are able to do without Government assistance altogether,” which means, in other words, the imposition of an increased burden on the people of to-day, for the benefit of posterity.

## PRINCE ALFRED HOSPITAL.

This hospital was the outcome of a movement initiated in 1868 to give expression to the gratitude of the public of the Colony at the recovery of His Royal Highness the Duke of Edinburgh from the attack made upon his life in Sydney, it being decided that the establishment of such an institution was best calculated to represent the feelings of the community on that occasion. By a special Act of Parliament it is affiliated to the University of Sydney. The ground upon which it stands is about 12 acres in extent, and has been well planted and laid out in gardens. The site was a part of the University reserve first set apart for one of the colleges, but it has since been vested in the trustees of the hospital.

The hospital is planned on the pavilion system, and was originally intended to provide accommodation for 450 patients. The administrative buildings which were at once erected are sufficient for that number, but owing to want of funds it was decided to erect at first, in addition to the administrative building, only two large pavilions, and a block to contain wards for women and children, two admission or emergency wards, an operating-room, a clinical theatre, and certain rooms to be occupied by patients immediately after operations. These buildings together give accommodation for 236 patients. The building cost per bed has been calculated at £754, but it must be remembered that this includes the cost of the administrative buildings which are adequate for nearly double the present number of patients. The cost will, therefore, be proportionately considerably reduced when the hospital is completed to the size originally intended.

Of the present accommodation, 141 beds are set apart for men and 95 for women. There are wards for male surgical cases, female surgical cases, and also for male and female medical cases. One ward and part of another are set apart for gynæcological cases; one ward for male ophthalmic cases, and half a ward for female ophthalmic cases. There is one children's ward, and, in addition, two emergency wards, for cases on admission, and four small wards or rooms for operation cases. There are also six cottages each capable of holding two beds for infectious cases which arise in the hospital or for other cases which need isolation.

The hospital is stated to have been quite full, and indeed over-full repeatedly, during the last year, and had actually more patients in the wards than there were beds for, couch accommodation having been provided. This is described by the honorary secretary as a very undesirable state of affairs.

The hospital as originally planned was found to be defective in the accommodation for nurses, and to meet the requirements of this part of the staff, in accordance with modern ideas, a special building was erected in the year 1892, collections having been made for this special purpose, which were supplemented by the Government to the extent of £5,000. There was, at the end of 1898, still a debt of £1,737 on this building, which cost £13,270, or, including furniture, £15,161. This nurses' home, built on the most modern principles, contains comfortable and spacious dining and sitting rooms, and the nurses are accommodated either in separate bedrooms, or in rooms for two only.

The administrative building of the hospital includes the usual offices and quarters for the resident medical staff. There are well designed and fitted kitchens, stores, and other adjuncts; and situated near the out-patients rooms there is a large dispensary and drug store.

The number of consulting-rooms for the honorary medical staff attached to the out-patients department is now too small, owing to the recent addition of several special departments, and, besides this, the rooms themselves are not sufficiently spacious for the purpose, especially as the students attend in these rooms to receive instruction from the physicians and surgeons.

The operating-room has recently been refitted and rearranged under the personal superintendence of the late Sir Alfred Roberts, after whom it is named. It is so far up to date that it will bear favourable comparison with even the most recently-arranged rooms for similar purposes in the mother country. The number of operations has, however, so much increased during recent years that it has been found necessary to set apart a second room for this purpose, and the clinical lecture-room, at the time of our visit, was being altered as an operating theatre for special cases.

There is a well-arranged laundry in one corner of the hospital grounds, and the matron is of opinion that the laundry work is carried out more satisfactorily and at less cost to the hospital than if sent to a public laundry.

The mortuary is well arranged, but the pathological rooms in connection with it are insufficient in size, and there will clearly be a necessity for a clinical lecture-room when the present one has been taken over for an operating theatre.

The hospital, as a whole, shows evidence of most thoughtful care in every part of its construction and arrangement, and there is we understand at the present time nothing in any part of the world which is more satisfactory for the purpose for which it was designed. It is suitably furnished, admirably kept in all details, and standing as it does in a large open space, with a view of its surrounding gardens and the University grounds, it is an exceedingly cheerful home.

Under its special Act of Parliament it is governed by fifteen directors, three of whom are nominated by the Government, two are representatives of the Sydney University, and ten are elected by the subscribers and donors. Of the elected subscribers, five retire annually, but are eligible for re-election. The election usually takes place at the annual general meeting. The *ex-officio* directors are the Chancellor of the University and the Dean of the Faculty of Medicine. The number of the Government nominees is small in relation to the total number of directors, but the evidence of the honorary secretary goes to show that they have exercised a fair amount of influence on the Board, though this influence is a question rather of their personality than their number. Professor Wilson was also of opinion that the life nomination of Government representatives tended rather to lessen their control; that Government representatives did not always continue alive to their work, though he considered that the directors at present representing the Government were very much alive to their duties, and that they did their work exceedingly well.

The honorary medical officers, omitting the consulting staff, consists of three physicians, three surgeons, two gynæcological surgeons, one ophthalmic surgeon, one physician for diseases of the skin, and one surgeon for diseases of the throat, nose, and ear. There are also two assistant physicians, two assistant surgeons, an assistant ophthalmic surgeon, and a pathologist. A medical tutor is also on the staff of the hospital, with a view of assisting students in their clinical work.

The resident medical officers are—a medical superintendent, who receives a salary of £300 a year; a pathologist, and an anæsthetist and registrar, who receive £100 a year each; and six house physicians and surgeons, who each receive £50 a year. Board and lodging are included in all cases.

The resident staff is somewhat larger than that at the Sydney Hospital; and though it would appear that assistance in dressing the patients and in performing the duties of clinical clerks is given by the students, the medical superintendent considers that the resident staff is not larger than is required, and states that some part of the duties of those officers consists in overlooking and teaching the students.

The assistant physicians and assistant surgeons, and the assistant medical officers in the special departments, are charged with the duty of treating the out-patients; but, as at the Sydney Hospital, a small number of beds are apportioned to them so that they may treat patients who have been already under their care in the out-patients' department.

The special departments of the hospital have, as at the Sydney Hospital, been increased during the last two or three years, and the evidence of Professor Wilson on this head is as follows:—"It is an advantage to have a general hospital equipped with special departments, and so long as the necessity for special treatment is not very large in the community, patients can be provided for amply by special departments in a large general hospital. There is another advantage in having various departments in connection with a hospital—people come there who do not know what is the matter with them, and when they are examined they can be told off to their respective departments. It is a matter of convenience that they should be received at the centre of administration, and then drafted off to the special departments."

It has also to be taken into consideration that special departments are of advantage in connection with the training of students in any hospital to which a medical school is attached.

The nursing staff numbers sixty-seven individuals, divided into matron, sisters, nurses of various grades, and probationers, and is in the proportion of one nurse for every four beds, this somewhat high percentage, in comparison with the Sydney Hospital, being rendered necessary by the large proportion of operative work done at the hospital, and the absence of any large number of ophthalmic cases. The work demanded of probationers and nurses appears to be much the same as at the Sydney Hospital, and the hours of duty are similar, being from ten to ten and-a-half hours a day; the amount of annual leave appears, however, to be more liberal. The medical superintendent and matron were in agreement in stating that the number of applicants for training as nurses was very large; that even the selected candidates had to wait for two years or more before they could be taken; that when once the early probationary stage was passed the number breaking down or giving up the work was few; and the general health good; and, further, that the staff generally were satisfied with their treatment.

The salaries paid are as follows:—Matron, £250 per annum; 1 sister at £70, 4 at £60, 1 probationary sister at £50, 4 nurses at £44, 3 at £40, 1 at £36, 12 at £32, 17 at £24, and 23 probationers at £16 each.

The matron is subordinate to the medical superintendent and not directly responsible to the committee; and though the nurses are selected by her, and examined as to their physical fitness by the medical superintendent, the power of engagement and dismissal rests with the Board.

In addition to the nurses, there is a wardsman and a staff of cleaners and scrubbers, the latter being engaged three days during each week, thus relieving the nurses of the rougher labour of the hospital.

The general staff consists of a paid secretary, two clerks, a collector, a messenger, porters, and others.

The number of beds for patients is 236, and the average daily number of beds occupied in 1898 was 227, or in the proportion of 96 per cent. of the total accommodation, so that there were scarcely any spare beds for emergency cases and serious accidents, and the hospital was at times over-full. The best way of increasing the accommodation of the hospital had evidently been the subject of consideration both by the chairman and the honorary secretary, and it was pointed out that this could be most readily done by building the two pavilions which have been already planned, to form the façade of the hospital facing Missenden-road. The chairman, who was for many years the honorary treasurer of the hospital, and who has been an active member of the Board of Directors ever since its inception, calculated the cost of these pavilions at £40,000, this estimate being based upon the cost of those already erected, with such decrease as would arise from the present lowered building prices. The site, as pointed out, certainly seems suitable, and it would involve but little expense for basement or extraneous structures. It was shown, however, that if these pavilions were erected, some additional administrative accommodation would be necessary, but this could probably, for the most part, be provided in the pavilions themselves, and in the positions now taken up by the private wards in the existing pavilions.

The

The number of in-patients treated in 1898 was 3,706, and out-patients and casualty cases about 12,500. The number of patients treated on Government orders was 1,359. 931 patients contributed sums of varying amounts towards their support in the hospital.

The five private wards in the hospital were established on the receipt of two donations of £1,000 each, given in the years 1873 and 1876 respectively—one by Mrs. Ogilvie “for the erection of three rooms, to be called ‘The Ogilvie Wards,’ for the accommodation of naval officers and gentlemen, who, being strangers in Sydney, or otherwise unable to procure the treatment and nursing required by severe illness, might desire to obtain them by payment at the hospital;” and the other by Mr. John Fairfax, “for the erection of two wards, to accommodate ladies or gentlemen who might otherwise be unable to obtain the treatment and nursing required by serious illness, and desired to have these advantages at the hospital by moderate payment.”

The income of the hospital during the last three years, and the sources from which it has been derived, have been as follows:—

	1896.	1897.	1898.
	£	£	£
From Government ... ..	10,471	9,829	10,825
Subscriptions and donations...	2,262	2,732	2,403
Bequests ... ..	445	994	3,501
From patients ... ..	2,289	2,401	2,414
Interest on funds ... ..	1,394	1,169	631
Other receipts ... ..	224	238	371
	<hr/>	<hr/>	<hr/>
	£17,085	£17,363	£20,145

It will be seen that the amount of Government assistance was with regard to the total income 61·3 per cent. in 1896, 56·6 in 1897, and 53·7 in 1898. In making these calculations, the bequests are regarded as income, but as bequests are invested, the Government contributions in some years, for instance in 1898, bear a much higher ratio than that named to the income actually available for expenditure.

The subscriptions to the hospital have rather increased during the last two or three years, and the evidence of the chairman, Sir Edward Knox, with regard to the Saturday Hospital Fund was as follows:—

809. Then you do not think that the Hospital Saturday Fund has had any effect in decreasing the subscriptions? Not materially. It may have decreased them in certain ways by £200 or £300 in a year, and that, of course, would represent a loss of £600, because we get an equal sum from the Government; but upon the whole we have been considerable gainers by the Hospital Saturday Fund.

846. I understood you to say that you did not consider that the subscriptions to the Hospital Saturday Fund have the effect of diminishing your income? No; it has had the effect of increasing our funds. It may possibly have diminished our subscriptions from individuals to a small extent, and, of course, that is a considerable loss to us, because we should be entitled to the same amount from the Government. If we get £600 from the Hospital Saturday Fund, the Government give us only £100, and then allow us interest on the balance.

847. Then you think on the whole you do not lose by the Saturday Hospital Fund—Mr. Ewan gave very decided evidence to the effect that if the Hospital Saturday Fund had not been in existence the Sydney Hospital would have received more money from the public than it receives from that fund? I can quite understand that with regard to Sydney Hospital, because they have always had a very much larger subscribers' list than we have had, and their subscriptions were of a kind that might fall off.

848. So it would not have the same effect with regard to the Prince Alfred Hospital that it would have with regard to the Sydney Hospital? No.

From its inception the hospital has never given to its subscribers orders or letters of recommendation in return for subscriptions, but has reserved the right of admitting patients according to their fitness medically for hospital treatment, being guided chiefly by the urgency of the case from a medical or surgical point of view.

This was a departure from the system previously followed in the hospitals of the Colony, but it has been found to work well, and it has been already adopted by some of the country hospitals. The Sydney Hospital is now about to alter its rules in this direction.

The

The chairman of the Prince Alfred Hospital pointed out some of the disadvantages to the hospital of the order or recommendation system, which he considered "a wrong course altogether," and did not think that the system adopted at the Prince Alfred had any material effect in lessening the number of subscribers.

The number of patients admitted during the last three years have been as follows :—

	1896.	1897.	1898.
Accident and urgent cases admitted free ...	1,060	963	1,176
Paying for or towards maintenance... ..	926	976	931
Under bed-donors' regulations ... ..	2	9	5
Under Government orders ... ..	1,208	1,306	1,359
	3,196	3,254	3,471

The 931 patients in 1898 agreed to pay on admission sums as under :—

140	...	...	...	...	5s. per week.
50	...	...	...	...	from 5s. to 10s. a week.
290	...	...	...	...	10s. per week.
133	...	...	...	...	15s. "
125	...	...	...	...	20s. "
91	...	...	...	...	21s. "
11	...	...	...	...	25s. "
31	...	...	...	...	30s. "
1	...	...	...	...	35s. "
3	...	...	...	...	40s. "
19	...	...	...	...	42s. "
1	...	...	...	...	63s. "
1	...	...	...	...	80s. "
23	...	...	...	...	84s. "
12	...	...	...	...	other sums.

The out-patients have greatly increased in number. In 1887 the attendances were 25,830, and in 1898, 49,972, so that in ten years the increase has been 93·5 per cent. The number of attendances for 1898 probably represents 12,000 individuals, reckoning each patient to come from four to five times.

The hospital directors have not yet seen their way to impose either a registration fee on each patient at the first visit or to exact payment in any other way from those able to contribute. A donation-box is placed in the out-patients' waiting-room, and in 1887 upwards of £300 was obtained in gifts in this way; but the amount now received, although the number of out-patients has doubled, is only £100 a year.

The cost of the out-patients' department is said to be approximately £1,250 a year, calculating all the outgoings properly chargeable to this service; but the honorary secretary points out that it would be "a refinement of hospital administration to keep separate accounts for out-patients."

The number of surgical operations is a very striking and important feature of the hospital, and involves considerable expense and some embarrassment in regard to management. The cost of modern surgical dressings is very large. The operation cases require much nursing and care, and the operating theatre has proved insufficient for the increased number of cases, so that the clinical lecture-room has been taken for an additional operating theatre, and the lectures are now delivered in rooms which are required for other purposes. The increase in the number of the operations is shown by the fact that in 1885, the first year in which the statistics included the whole year from 1st January to 31st December, the operations numbered 405, and since that time every year has shown a steady increase, till in 1898 the number was 1,798. In 1885 the proportion of operations to the number of admissions was about 25 per cent.; in 1898 it was upwards of 50 per cent. The hospital has, in fact, become a centre for surgical operations, to which patients come from all parts of the Colony. More than half of the total number of patients are now admitted to undergo some operative procedure, and the medical work of the hospital appears to be to some extent thrust into the background.

Patients

Patients in the private wards were formerly charged a sum of 7 guineas a week, 5 guineas which went to the hospital for maintenance and 2 guineas to the honorary medical officer, who, however, in all cases handed over his fees to the hospital as donations; but the hospital authorities, having regard to the number of private hospitals now open to patients, have seen fit during the last year to restrict the use of the private wards to naval officers (for whom some of them were originally designed), to students at the hospital, or to other special cases considered by the directors to have claims on their consideration.

The laundry is well arranged and equipped, and eight laundresses are constantly employed; the total cost to the hospital for salaries, stores, &c., being estimated at about £600 a year. The matron considers this cheaper than putting the washing out, and in every way more satisfactory, though admitting that the laundry as an additional sub-department involves considerable care and oversight.

The hospital has now an endowment fund, shown in the report for 1898 to be £35,478, but apparently since increased, as the chairman of the Board stated it to be £38,000. This has been built up from legacies and donations, which, to the extent of £29,712 as far as can be ascertained, have been specially ear-marked by the legators or donors, so that the interest only can be expended. The balance has been set apart by the directors under the by-laws. One of these bequests, that of Mrs. Mary Roberts, amounts to £23,478. Sir Edward Knox considered it wise to have such a fund as "something to fall back on—something that brings in interest," and suggested the possibility "that it might be desirable to spend some of the money in enlarging the hospital some day."

The endowment fund is invested to the extent of £25,000 in 3 per cent. Government stock, leaving £6,000 on mortgage and £6,000 awaiting investment.

The hospital has a Samaritan fund, the result of appropriating unclaimed moneys of patients and a few subscriptions, but it has not yet reached £50, or been in any way operated on.

#### ST. VINCENT'S HOSPITAL.

This is essentially a private institution, under the care of the Sisters of Charity, but it takes rank immediately after the large public hospitals (the Sydney and Prince Alfred), owing to its large size and the number of patients for whom it makes provision.

It is under the immediate direction of the Mother Rectress of the Order, and the Government assistance has been confined to a grant of land (one-quarter of an acre) for a site, in 1855, and two special grants of £1,000 since that time. There are three hon. officers—hon. treasurer, hon. secretary, and an hon. auditor.

The hospital was first started (with eight beds) in Macleay-street, in 1857, and was subsequently moved to its present site, when new buildings were erected. From time to time additional areas of land have been purchased, and additional buildings erected, and at present the area belonging to the hospital as freehold is about 3 acres, and the accommodation is for 175 patients.

The building stands in a good situation, and consists of an H-shaped block, of which the front and one of the wings have extensive street frontages, the wards in the latter having an uninterrupted and varied view from the attached verandahs. The whole outward aspect of the place is homely, and inside it is bright, cheerful, well ventilated, and well kept. The general impression gained from its inspection is that economy has been practised in the construction wherever this was practicable, without interfering with the welfare of the patients, and is carried into details of management without intrenching on their comfort. With the exception of the operating-room, which is not up to date either in its construction or in its appliances, and the kitchen and its appurtenances, which are neither large enough nor sufficiently well arranged for the large amount of work to be carried on therein, the hospital buildings leave little to be desired.

The patients are accommodated in seven main wards—one for surgical cases (male), and one for surgical cases (female); one for medical cases (male), and one for medical cases (female); an ophthalmic ward for each sex, and a ward for men belonging

belonging to the British, French, and German navies. There are, in addition, twenty private wards, each for a single patient, four emergency rooms (three with two beds each, and one with one bed), and three small rooms for contagious cases in a detached building. In connection with the hospital, but as an addition thereto and not connected with the hospital proper, there is an hospice for the dying, which consists of an old cottage and its outbuildings, purchased recently with the ground on which it stands. This now gives accommodation to fourteen patients, all incurable or dying cases.

In 1898, 1,665 in-patients were treated, and there were 7,644 out-patients (including casualties), whose attendances numbered 22,757. The large majority of the patients are general hospital cases, but there are special departments for the eye and ear, each under its own medical officer. Infectious cases are not, as a rule, received.

The reports show that the out-patients are increasing in number, and the Mother Rectress states that more accommodation in the hospital is required, as there are more applicants for admission than room can be found for, whilst at the hospice not half of those applying can be taken in.

The sums received from patients who are admitted to the general wards range from 5s. a week to a guinea. The average fee from patients who pay is 14s. a week, and a number pay 2 guineas a week when they enter, which serves for three weeks' care and treatment. A number of patients are, however, received without any payment.

An arrangement is made with the authorities of the British, French, and German navies under which 3s. a day is paid for each patient received. The accommodation for this class is in a separate ward, and the provision is liberal and satisfactory in its arrangements.

In the private wards the charge is 3 guineas for a small room, and 4 guineas a week for a large one, with attached bathroom and other conveniences. This is exclusive of fees, usually 1 guinea a week to the hon. medical officers.

A fee of 1s. for registration is charged to each out-patient, and "offerings" are also received from such of these as like to make them.

The medical staff of the hospital consists of the following honorary medical officers:—Three physicians, three surgeons, one ophthalmic surgeon, one aural surgeon, one assistant physician, one assistant surgeon, one pathologist, one anaesthetist, and one dentist, and there are two resident medical officers, who receive salaries of £100 a year each with board and residence.

The nursing staff consists of twenty-one sisters, eighteen probationers, and three male nurses, a total, with the Mother Rectress, of forty-three, giving a proportion of four beds to each person.

The house staff is made up of hospital, nursing, and domestic lay sisters, together with some paid servants, laundress, &c.

The probationers pay a sum of 10 guineas for their first year's training, and receive £5 in the second and £12 in the third year of their probationary service; their uniforms are also found for them. This arrangement differs considerably from that at the other large hospitals, and there does not appear to be any special advantage accruing from it, except exemption from some of the cleaning work which is exacted at the other hospitals. The applicants for employment under it are, however, very numerous, and persons of all religious denominations are taken.

The hours on duty, both for probationers and sisters, average about ten daily, and the amount of leave appears to be somewhat less than at the Sydney and Prince Alfred Hospitals. The period of training is three years, and includes lectures by the staff, and tests by examination, and in practical work at fixed periods.

The sources of income are public subscriptions, donations, and patients' fees, and the latter makes up considerably more than the half of the total receipts. It is indeed from the profit made in the private wards and from other paying patients that the hospital is, in the main, able to carry out its charitable work and receive for treatment those who are in necessitous circumstances and in need of hospital care.

The

The cost per bed is calculated as £26 4s. 1d. during the year 1898, and it is to the fact mainly that the sisters take no salary, and, as the Mother Rectress states, at the same time "economise more than paid nurses do," that the very economical management is due. The above cost is obtained by dividing the expenditure by the total number of beds (and not by the average daily number occupied). Books are not kept showing the daily average, and it would involve considerable trouble to arrive at it. It is said, however, that the hospital accommodation was fully occupied during 1898.

The hospital possesses no endowment fund, and all donations and legacies appear to have been expended in the purchase of land or in adding to the buildings or appliances of the hospital. £5,532 has been expended in enlarging the area, and there is at present a debit of £3,503 on the building account.

#### CHILDREN'S HOSPITAL, GLEBE.

This institution was started about nineteen years ago as an hospital for sick children for the whole of Sydney, and not to serve the needs of the immediate neighbourhood only; but the location appears to have been originally determined, partly by the fact that some of the original promoters of the hospital lived in the district, and partly because no more suitable premises could be obtained elsewhere.

The main building now occupied by the hospital consisted at first of two or three private houses, was subsequently a school, and has only undergone some minor alterations to fit it for an hospital. Though it has for years served a very useful purpose, and good medical and surgical work has been carried out in it, the building is very far from meeting ordinary hospital requirements. The lavatories and closets are badly placed and cramped in size, some of the rooms are not too well ventilated, and the arrangements are obviously in some particulars of a make-shift character. It is described, both by the senior surgeon and by the hon. treasurer as unsuited for an hospital, and most unsatisfactory in its arrangements. Moreover, it is said to be now too small for the work which it is called on to perform, and it cannot house properly the officers and staff engaged in its service. The out-patients' department is a wooden building, recently erected in the grounds.

The whole area of land is about 1 acre, and is now the freehold property of the institution.

Diphtheria patients were at first treated in a small building at the back of the hospital; but the calls on this accommodation having much increased, and facilities for the early treatment of diphtheria, either by the Government or by other hospitals, being practically non-existent, the hospital authorities, after a consultation with the Chief Secretary, decided on making other arrangements, and about six years ago a large cottage standing in an isolated position on a block of land, in area about 4 acres, was purchased, and has since been used entirely for the treatment of cases of diphtheria, and managed as a branch of the Children's Hospital. Towards the expense incurred the Government granted a sum of £250, and has paid £250 a year towards the rent of the Diphtheria Cottage ever since.

The cost of the main hospital, together with the land, additions, and alterations, has been £7,565, of which £3,315 was raised by subscriptions, donations, &c., and £4,250 was granted by the Government. The cost per bed has been about £145. The cost of the Diphtheria Cottage, grounds, and additions, was £5,078. The number of beds in the cottage is twelve.

The hospital is governed by a large committee, consisting of a President, two vice-presidents, an hon. treasurer, an hon. secretary, five life members, twenty-four elected members, and the four senior members of the hon. medical staff, and of these the office-bearers and ten members of the committee are elected annually. Of the entire governing body, twenty-two are ladies, and this arrangement is said to work on the whole well. The house committee is composed entirely of ladies with the officers

officers as *ex-officio* members; and though the ladies take a keen interest in their work, there are complaints as to their want of business capacity and their conservative position with regard to innovations and improvements. The whole committee appears to be unwieldy and calculated to destroy the proper sense of personal responsibility. It might with advantage be reconstituted on a basis more limited as to size, and with a proportion of its members nominated by the Government.

The hon. medical staff consist of two physicians, two surgeons, one ophthalmic surgeon, and one pathologist, with two medical officers in charge of the out-patients' department. The pathologist now takes entire medical charge of the Diphtheria Cottage, and this cottage is thus completely separated from the main institution, even in regard to its medical officers; so that only on emergency are the services of the house surgeon called for.

Until lately the hospital had two resident officers, one a woman; but under a rearrangement the residents were relieved of the charge of the out-patients' department, to which two hon. medical officers were appointed, and of any except emergency work at the Diphtheria Cottage, and it was found that one resident officer was all that was necessary. This officer is paid a salary of £200 a year, with board; but he has to find lodging near the institution. This arrangement is not satisfactory, and is only allowed owing to the want of accommodation within the hospital itself.

The nursing staff for both the main hospital and the branch consists of a matron at £90, three sisters at £60 each, two staff nurses at £35 each, five nurses at £25 each, and fourteen probationers at £20 each, giving a total of twenty-five, and being at the rate of one nurse for between two and three beds. This is undoubtedly a high rate, but is explained partly by the fact that many of the children are very young and require much service, but mainly by the Diphtheria Cottage being practically a separate institution and requiring a complete and separate staff, who, owing to the trying nature of the service, and the conditions of atmosphere, &c., are not on duty for more than eight hours at a time. The staff at the Diphtheria Cottage consists of one sister and seven nurses or probationers, included in the figures above given, and is in the proportion of one nurse to every one and a half beds, which beds are, however, not always fully occupied.

The hours of duty for the nursing staff, other than that at the Diphtheria Cottage, the work they have to do, and the leave of absence granted, do not differ materially from those at the larger hospitals.

There is the usual staff of servants, including cook, laundress, porter, &c., which appears not more than sufficient for the work of the institution.

The quarters for the nurses are not all that could be desired, either as to situation, space, or privacy; but they are comfortably furnished, and are not objected to by the occupants.

The accommodation for patients in the main hospital consists of four wards, two for boys and two for girls. The medical and surgical cases are not kept distinct, and some of the younger boys are placed in the girls' wards, the arrangements being such as to make as much use of the accommodation as possible without insisting on too rigid a classification. The number of beds, including those in the isolated building, is sixty-four, and the average number daily resident for 1898 was fifty.

The total number of patients in 1898 under treatment was 601—445 general and 156 diphtheria cases. The evidence goes to show that there are, at times, more calls on the hospital than it can meet with its present accommodation, and that this is especially the case in the summer weather when cases of gastro-enteritis are very numerous.

No cases except those of infectious disease are excluded from admission, and for cases of infectious disease, or other cases requiring isolation and breaking out in the hospital, two beds in an isolated building are provided.

The Diphtheria Cottage contains twelve beds, and the average daily number of patients for 1898 was six. During the year, 156 patients were under treatment, the number being a trifle less than during the previous year. Altogether, 884 children have been admitted to the hospital since it was opened in 1893.

From the evidence of Dr. Clubbe, it appears that the rate of mortality during 1897 was 18·78 per cent.; and during 1898, 17·2 per cent. The mortality has diminished very decidedly since the introduction of the anti-toxin treatment, the mortality before its use being as high as 57·3. As the use of the anti-toxin, its dosage, and the necessary precautions in its administration are becoming more understood, it is anticipated that the mortality will be still less, and the gratifying fact is noted that there has been no death in the first four months of 1899.

The cost per occupied bed, including the Diphtheria Cottage, is about £66 15s., and this comparatively high rate is attributed to the large separate staff considered absolutely necessary to work a detached infectious disease branch with which no communication or interchange of nurses with the main hospital can be permitted. The Honorary Treasurer points out that it is not possible to keep the accounts of the cottage altogether distinct; but this is done to some extent, and, on an estimate founded on this, the cost of each bed in the cottage is nearly double that in the main building, the former being estimated at £80 and the latter at £40.

The number of out-patients in 1898 was 4,082, and the number of attendances, 10,885; and it is pointed out that this is an increase of 1,220 patients and 2,716 attendances on the figures for the previous year. This increase has been coincident with a reorganisation of the out-patients' department and the granting of increased facilities for the patients. A registration fee is charged under the new system to all able to pay this amount.

The receipts of the children's hospital for three years have been as follows:—

	1896.	1897.	1898.
	£	£	£
From Government ... ..	1,484	1,409	1,480
Subscriptions and donations . . . .	1,689	1,653	1,818
From patients ... ..	508	505	408
Other sources ... ..	28	24	27

The hospital receives payment from patients, and the sum of £408 6s. 2d. is credited to that source in the receipts for 1898. The sums received varied from a shilling or two to £1 a week.

A special feature of the hospital is the endowment of cots or beds which can be carried out for one or more years, for the lifetime of the donor, or in perpetuity, in accordance with the amount given.

The rules showing the conditions under which cots can be endowed are set forth in the annual reports of the hospital. At present there are three endowed cots, each paid for at the rate of £50 a year.

The financial position of the hospital, explained by the honorary treasurer, is as follows:—

The main hospital is freehold, the property of the Board of Directors, and free from encumbrances; but on the diphtheria branch a sum of £2,500 is owing under a mortgage.

The hospital possesses £47 11s. as an endowment account; £100 as a building account; £750 as a perpetual subscribers' fund; and a legacy of £7,850, likely soon to be increased by some £2,000, under the will of the late Mrs. Hunter-Baillie. The sums are all ear-marked for certain purposes by the direction of the donors or legators, and are not available for the current expenses and purposes of the hospital. All sums given to the hospital, and not specially set apart in the manner indicated, have been spent in the purchase of the land and buildings or for current expenses.

The work which this hospital is doing is generally of a most useful character. The community is specially indebted to it and its medical officers for the reception of cases of diphtheria, whereby the danger of infection has been removed from many households, and for the scientific treatment of this malady, which has saved many lives and added greatly to the knowledge of the medical profession with regard to the methods advisable in combatting one of the most fatal of diseases.

## Appendix B.

## BALMAIN COTTAGE HOSPITAL.

This hospital was established in 1884, and the work was first carried on in a weatherboard cottage standing at the back of the present Council Chambers.

The present site, which is 1 acre in extent, was, with a cottage standing on it, purchased in 1885, and additions were subsequently made which increased the accommodation to its present amount, which is as follows:—For men nine, for women seven, and for children six beds; a total of twenty-two beds.

The hospital is well situated in an elevated position, with a public park in front, and the back windows commanding a somewhat extensive view. It consists of a central cottage, which contains the women's and children's wards, an operating-room and consulting-room, kitchen, and offices, and most of the accommodation for the staff. On the left of this is a recently-erected, partly-detached, handsome ward for men, built of brick and stone; and on the right, occupying a site which will serve for the future extension of the hospital, is a weatherboard building, which serves as a waiting-room for out-patients, a board-room, and a secretary's office.

The matron and staff are comfortably lodged. The wards are bright, well-kept, and cheerful; and at back of the hospital are out-buildings containing laundry, closets, mortuary, and also a furnace for the destruction of dust, refuse, dressings, and other obnoxious material.

The site is freehold, and, with the buildings now on it, except the operating theatre, has cost £4,605, which has been provided as follows—Public subscriptions, £4,400; Government grant, £200. The cost per bed has been about £210, exclusive of the operating-room.

The hospital is under the provisions of the Hospitals Act, and is governed by a committee elected annually, and consisting of a president, vice-president, honorary treasurer, honorary secretary, and nine members; and, in addition, five trustees have seats on the Board. The committee meet once a month, and an executive committee, consisting of the executive officers and four members of the committee, meet also twelve or thirteen times a year, and carry out the details of management.

The medical officers until lately consisted of two honorary medical officers and one medical officer paid £100 a year, with the immediate charge of out-patients; but a change has recently been made under which the number of honorary medical officers has been increased to four, and the paid medical officer has been placed in a more responsible position with regard to accidents and urgent cases, and the first treatment of the cases admitted.

Up to within a recent period the hospital has been regarded as one mainly for accidents, but the refusal to admit urgent medical and other cases has been the subject of complaints made to this Commission, and the need for the admission of other than accidents appears to have been brought before the committee, who have decided to admit all urgent cases except those of typhoid and infectious diseases. It is understood that typhoid cases will be admitted as soon as connection is made with the main sewerage system.

The number of patients in 1893 was 116, of whom sixty-nine were accidents. The average number of beds occupied daily was 6·65, and this small number brings the cost per bed to the high figure of £83 17s. At the time of our visit the number of beds occupied was thirteen, and the average daily number resident is, under the new rules, likely to be higher, and the maintenance rate considerably less. The in-patients are not admitted under subscribers' orders, but are chiefly recommended by medical men according to the necessity and urgency of the case. The sum of £71 10s. was collected from in-patients in 1898, the contributions ranging from 5s. to 21s. a week, which is the highest amount charged. The total payments in one case reached to £13 16s.

The

The out-door department appears to be growing; the number of patients treated last year was 1,558, being eighty-five more than in 1897, and the estimated cost was £291 10s. No registration fee is charged. Subscribers of 1 guinea are allowed to recommend five out-patients, and in doing so certify that they are necessitous cases.

The cost of the out-patients' department is stated to be £291 10s., made up as follows :—

	£	s.	d.
Medical officer ... ..	100	0	0
Drugs, dressings, &c. ... ..	51	0	0
Other expenses... ..	140	10	0
	<hr/>		
	£291	10	0

The nursing staff consists of a matron at £72 a year, a sister at £40—both of whom are certificated nurses—and two probationers, who receive from £18 to £25, according to length of service. The probationers get practical work, but no teaching, and they generally stay only a short time, and enter for training at one of the larger hospitals. The remaining members of the staff are a cook, laundress, and porter.

The income of the hospital was as follows in 1898 :—

	£	s.	d.
Subscriptions and donations ... ..	501	3	10
Contributed by patients ... ..	71	10	0
Interest on fixed deposit ... ..	15	10	0
Government subsidy ... ..	565	10	6
Miscellaneous receipts ... ..	3	7	6
	<hr/>		
	£1,157	1	10

The hospital has the sum of £450 at fixed deposit, this being the result of savings—the income being in excess of the expenditure. There was also a sum of £316 2s. 6d. at credit of current account, of which £308 appears to have been savings in the year 1898. The committee intend to expend these sums in adding to the accommodation of the hospital.

The hospital is well kept, and is in a neat and orderly condition throughout. The inhabitants of the district are said to take a great interest in its management and welfare, but the subscriptions towards its maintenance by no means large, considering the population of Balmain now, which amounts to about 30,000.

The patients come, for the most part, from Balmain, but some are sent from Drummoyne, Leichhardt, and other neighbouring suburbs, and the surrounding districts served by the hospital.

#### MANLY COTTAGE HOSPITAL.

The Manly Cottage Hospital was opened in 1897. The building is of brick, picturesque in appearance, and standing on an elevated position, from which very extensive views are obtained. The area of the site is about half an acre. The original building has been enlarged by the addition of operation room, bedrooms for the nurses and staff, laundry, &c.; and the cost for land, building, and furniture has amounted to as nearly as possible £2,000; the cost per bed being £167. This sum was raised partly by subscriptions and donations from the public, and partly by a Government subsidy amounting to £1 per every £1 subscribed. There has really been no special grant by the Government, for though £250 was given under this head, it was really £1 for £1 against a sum raised by a flower-show. The building is now freehold, the property of trustees, and is without debt.

The number of wards is two, one male and one female, each containing four beds and a cot; and there is in addition one special room for operations and other cases requiring extra care, and one isolation room (formerly the operating room) for infectious and septic cases occurring in the hospital. So that the total accommodation is for twelve beds. The matron and nurses' quarters, and also those for the other members of the staff, are very good. The operating room is on the most modern principles, and is elaborately fitted and admirably kept. The kitchen and offices are sufficient, and the bathrooms and lavatories of modern and proper construction. The hospital is in fact a serviceable and satisfactory building, with all necessary fittings and appliances, and has been built at a moderate cost, but it seems inadvisable not to have secured a larger area of land in the first instance. Already one addition has been made to the area, and the acquisition of a further quantity is desirable.

No cases, except those of infectious disease, are refused, and typhoid is received. The beds are, however, very largely occupied by operation cases—the total number of operations in 1898 being 50, or 35·9 per cent. of the total number of cases treated. The total number was 139, and the daily average number 8·9; 67 per cent. of the patients were women and children. No out-patients are treated. The cost per bed in 1898 was £56 10s.

The Board of Management is a very large one, and consists of a patron, a president, four vice-presidents, five trustees, honorary secretary, honorary treasurer, and honorary solicitor, seventeen members of committee, of whom ten are ladies. The two honorary medical officers also have seats. The number is altogether thirty-three, and sometimes as many as twenty attend the meetings, which are held once a month. The number would appear to be unwieldy, but is defended on the ground that the larger the committee the larger is the sphere of interest and influence, and the larger the support given in subscriptions and donations. The details of management are entrusted to an executive committee on lines similar to those at the North Shore Hospital. There are two honorary medical officers, and the resident staff consists of matron, who is a certificated nurse, at £66, one nurse at £34, and a probationer, who receives £16 for the first year, and £24 after one year's service. No teaching, except in practical nursing work, is attempted, and the committee desire that the probationers should only stay one year, and then go for training to one of the Sydney hospitals, but this is not always practicable. The remaining staff consists of a general servant and a wardman. Some of the laundry-work is done at the hospital, and the remainder is sent out.

The income of the hospital in 1898 was derived from the following sources:—

	£	s.	d.
Subscriptions and donations ... ..	524	4	11
Payments by patients ... ..	52	4	6
Government subsidy ... ..	571	0	4
Minor receipts ... ..	1	10	0
	<hr/>		
	£1,148	19	9

And at the end of the year there was £209 13s. 1d. at the credit of the hospital's current account, and also an amount of £400 invested. The payments from patients are made up of minor donations, and of weekly sums towards maintenance, and though £1 is said to be the maximum charge, it would appear that larger sums are not refused if offered.

There are no subscribers' orders, and the patients are recommended to the medical officers and sent in to the hospital by them, if found to be fit cases from a medical point of view.

The hospital is bright, comfortable, well kept, and homely, and the officials appear to take a very keen interest in its medical, financial, and general success. The subscribers' list is a comparatively large one, though many of the sums are small, and with the donations in kind, &c., shows that the interest in this institution is widely spread in the district which it serves. This district includes Manly itself and its immediate neighbourhood, and the whole district lying to the north as far as Barrenjoey, and including Narrabeen, Newport, Bayview, &c.

## MARRICKVILLE COTTAGE HOSPITAL.

The committee of this hospital published its fourth annual report in January, 1899, but its operations appear to have, up to the present, been mainly confined to collection of subscriptions, purchasing a site, and erecting the building, which was recently opened.

The site, which is somewhat under an acre in extent, is well situated near to Dulwich Hill, and within a very short distance of the tramline. The only drawback is its somewhat limited area, which will, when the drying-yard and the gardens and shrubberies, which it is advisable should be placed along the boundaries, are laid out, leave little or no room for additional buildings, should these be found necessary.

The hospital is stated to have been projected to make provision for accidents and urgent cases in a district the population of which approximates to 20,000. The nearest hospitals are the Prince Alfred, at Newtown, and the hospital under the care of the Nursing Sisters at Lewisham.

The building, which has a very pleasing elevation, is built of brick, and has accommodation in two wards for 12 patients—8 women and children and 4 men, this proportion having been adopted after much consideration, on the ground that it is found by experience in other cottage and suburban hospitals that women are more ready to go themselves and to allow their children to go to hospitals which are near their own homes than to larger hospitals at a distance, and that the women's wards are therefore more sought after in these small, local institutions. The administrative buildings, which consist of kitchen, scullery, laundry, store-rooms, pantries, a large operating-room, and the quarters for the staff, are in the rear of the main building and connected with it by a covered corridor. The whole plan of the building has evidently received careful consideration, and the details of construction show that the committee, or at all events some of its members, have a knowledge of practical details as well as an intimate acquaintance with modern hospital requirements.

The hospital was fitted and furnished throughout, the bedsteads, beds, and bedding being largely gifts from individuals; and the matron, who has had considerable hospital experience, was engaged, at the time of our visit, in the practical details necessary before patients could be admitted.

The hospital is under the Hospitals Act, and has a Board of Management, consisting of a president, four vice-presidents, an honorary secretary, an honorary treasurer, an honorary solicitor, and eight members of committee, of whom two are ladies. The honorary medical officers, four in number, have been appointed, and also the matron and one or two subordinate members of the staff.

The cost of the hospital up to the present has been as follows:—

	£	s.	d.
Land	344	5	9
Fencing, building, and fitting and laying-out grounds	2,081	9	5
Furnishing	174	18	9
Preliminary minor expenses	335	1	9
Total	£2,935	15	8

during four years and a half, the main part of which has been met as follows:—

	£	s.	d.
Subscriptions and donations	1,341	2	11
Government subsidy	983	1	4
Special grant	500	0	0
	£2,824	4	3

The

The cost per bed, including land, building, furniture, and preliminary expenses, has been £245, or, excluding the preliminary expenses, £216.

The present intention of the directorate is not to receive payments from patients, but how far this arrangement will be adhered to time will show.

The hospital is connected with the main sewerage scheme for Sydney, and is supplied with water from the Sydney supply.

#### NORTH SHORE HOSPITAL.

This hospital was opened in 1888, and is built on a plot of land about 1 acre in area, which was given by the late Mr. Berry. The site is surrounded by streets on all four sides, and there are no possibilities of extension. The hospital buildings are close up to the boundaries on three sides, and the unoccupied ground is only large enough for a laundry and drying-green.

The original idea was for a cottage hospital, and the plans were drawn with no allowance for extension. The growing population has necessitated an increase in the number of beds and certain additions and alterations, so that the hospital has become badly arranged, and also difficult to work and to keep clean owing to the large amount of corridor and passage space.

The hospital has indeed outgrown its site, and the population of the district—now, it is said, about 40,000—demands additional hospital accommodation. It has, therefore, been decided to make a new beginning on a new site, and the Government has granted 8 acres of land for this purpose. This land is in an elevated position, and is at a short distance from the present hospital, and being in a situation convenient of access by rail, road, and tram, seems very suitable.

No steps have yet been taken for collecting funds for the new building, and the question of disposing of the old one is as yet premature. In the meantime no money is being expended on the present hospital, except so far as to keep it weather-tight, and to effect such repairs as may be absolutely necessary. The building and its appurtenances now show the result of this policy.

The short-sighted arrangement under which an hospital was originally erected on a plot of land too small even at first, and allowing no room for expansion in a rapidly-growing neighbourhood, is open to criticism; but the very rapid growth of North Sydney, which seems destined to attain ere long the dimensions and population of a large city, could, perhaps, not have been anticipated. At all events, the mistake which has been made is not likely to be repeated, and it seems essential that the new hospital should be designed on a plan capable of extension to meet ultimate requirements.

The cost of the hospital was about £3,100, and up to the time it was handed over by the provisional committee £1,758 had been raised by public subscriptions, and £1,941 received from the Government. The cost per bed was about £124.

The hospital has four ordinary wards, and a so-called isolated ward, which, however, is only so in name, as it is part of the main building. The latter ward was designed for infectious or septic cases occurring in the hospital, but appears to be mainly used for other cases than these. The number of beds, including those in the isolated ward, is twenty-five—eleven for men, twelve for women, and two for special cases; and the average daily number of patients in residence in 1898 was 16.66. There are no private wards.

The administrative buildings comprise quarters for the staff, to which no great objection can be taken, operating-room, which, though well kept, is not up to modern requirements, kitchen, laundry, and other out-buildings, which all show evidence of temporary economy in the absence of paint, minor repairs, &c.

The wards are cheerful and thoroughly clean, though two of them are not well adapted for hospital purposes; but some of the ward adjuncts, bath rooms, &c., are not as well kept as they might be.

The closets are earth, but will shortly be connected with the North Shore main drainage scheme. The water supply is from the Prospect system.

The

The committee is elected at the annual meeting, and meets once a month. It consists of president, three vice-presidents, four trustees, honorary treasurer, honorary secretary, and honorary solicitor, and nine members of committee, and the honorary consulting medical officer and the four honorary medical officers have seats on the committee, and make up a total of twenty-six members. An executive committee, consisting of the officers and one member of committee, meet weekly and direct the internal economy of the hospital.

The nursing staff consists of one matron at £72, who is a certificated nurse, one head nurse at £36, one assistant nurse and three probationers at £20 a year each, with rations and quarters. The probationers are engaged for three years, and are trained at the hospital; but the arrangements for teaching are not satisfactory, and it is doubtful if hospitals of this calibre should ever undertake the complete training of, and give certificates to, nurses who cannot be as satisfactorily educated, either in theory or in practice, as those who have spent their probationary period at a fully-equipped and large hospital. The nursing staff is in the proportion of about one to every two or three patients, and the regulations for their guidance and the hours on duty are founded as far as possible on those in use at the Prince Alfred Hospital, at which the three last matrons were trained. The other members of the staff are wardsman, cook, and housemaid. The whole of the laundry work is done by a non-resident laundress.

The number of in-patients in 1898 was 375, being twenty-four in excess of the number for 1897; and it is said the accommodation of the hospital was for some months much strained.

All forms of disease, except infectious cases, but including typhoid, are now received. According to the rules patients are admitted on orders from subscribers, but, in practice, this custom has been abolished; orders are not now issued to subscribers, and the qualification for admission is a medical certificate as to fitness, and a statement on the part of the patient as to necessitous circumstances.

The sum of £138 8s. 1d. was received from patients in 1898, in sums which ranged from 2s. 6d. to £1 per week; but the committee would take larger sums if it could obtain them, even if they were in excess of the maintenance rate, which for 1898 was £77 18s., and is, under the circumstances, somewhat high.

No out-patients are treated, and the casualties seeking treatment are very few.

The income of the hospital for 1898 was as follows:—

Subscriptions and donations	...	...	£647	7	3
From patients	...	...	138	8	1
Government subsidy	...	...	407	8	1
Rent	...	...	15	17	3
Interest on Walker bequest	...	...	10	3	3
			<hr/>		
			1,219	3	11

The rent is derived from an estate of 21 acres in Willoughby, which was left for the benefit of the hospital without restriction as to disposal, and which the committee propose to sell and apply the proceeds towards the erection of the new hospital.

The Walker bequest consists of the sum of £300, left by the late T. Walker, which has been temporarily drawn against to meet current expenses.

The hospital has no endowment or invested funds, all donations, &c., having been expended in buildings.

The hospital appears to be working smoothly and well.

#### ST. GEORGE'S COTTAGE HOSPITAL, KOGARAH.

This hospital was opened in 1894, and some additions, in the shape of an additional ward, &c., were made in 1896.

It is a slightly brick building of one storey, and stands on 3½ acres of land, which were purchased, with a strip to give access, at a cost of £860. The view from the building and its verandahs is a fine and extensive one, and includes the wide expanse of Botany Bay. The buildings, furniture, and equipment, together with

with the additions, cost £1,890, making, with the cost of the land, £2,750, or £250 per bed. Of this amount, £1,892 was obtained by subscriptions and donations, and £768 was given by the Government in the form of special grants.

The building is now freehold, invested in trustees, and without debt.

There are two wards, one for women and children, containing eight beds, and one for men, containing three, giving a total accommodation of eleven beds. The wards are clean, comfortable, and cheerful, and there are pleasant views from the windows.

The administrative buildings consist of Board-room and office, quarters for the matron and staff, kitchen, laundry, operating-room, and minor offices. The quarters for the staff are adequate, but some of the other rooms err on the side of being too small; and the operating-room, which is used also as a folding and sorting room for linen, is small, and contains few of the fittings now considered necessary.

The number of patients was 121 in 1897, and 112 in 1898, and the daily average number resident was 6·5 in the former and 7 in the latter year; so that there does not appear to have been any undue pressure on the accommodation, though the matron reports that male patients, for whom there are only three beds, have sometimes to be refused for want of room. No out-patients are treated.

Typhoid cases are received, and the only cases refused are those of infectious disease. The hospital has no room for the isolation of cases of infectious disease or others requiring separation which occur in the hospital, and this is, no doubt, a want which should be met.

The number of operations in 1898 was seventeen, and was only a little above this in 1897, so that the amount of operative surgery is not so large as at some similar institutions. Twenty-seven of the total number of cases in 1898 were accidents.

The committee, elected in accordance with the provisions of the Hospitals Act, consists of a president, six vice-presidents, honorary secretary and honorary treasurer, three trustees, and eleven members, and meets once a month. The executive committee, which attends to matters of internal management, is composed of the president, one vice-president, honorary treasurer, honorary secretary, and one member of committee, a total of five. This arrangement is said to work satisfactorily.

There are six honorary medical officers—a number which appears very large when it is considered that the average daily number of patients for two years past has not exceeded seven.

The resident staff consists of a matron, who is a certificated nurse, at £60 a year; one nurse, at £25; and three probationers, who receive £12 for the first, £16 for the second, and £20 for the third year of service. The probationers are not trained except in practical work. They carry out the whole of the domestic service—the only other members of the staff being the wardman and gardener—and they generally leave to commence as probationers in one of the larger hospitals. This arrangement the committee considers to be satisfactory. A laundress comes to the hospital on one day a week.

The income of the hospital in 1898 was as follows:—

	£	s.	d.
Subscriptions ... ..	70	0	6
Donations. ... ..	226	2	9
Government subsidy ... ..	111	0	1
„ special grant ... ..	167	19	10
Minor receipts ... ..	6	10	0
	<hr/>		
	£581	13	2

and at the end of the year there was a credit balance of £69 3s., and a Government subsidy of £284 was owing.

The list of subscribers is a small one, and a considerable part of the receipts comes from the proceeds of entertainments, &c., got up specially for the benefit of the hospital.

The

The hospital has no endowment, and is in the peculiar position of receiving no part of its income from patients.

The general management appears to be economical, the cost per bed in 1897 having been £57 8s., and in 1898, £65 14s. These calculations require some correction, as the authorities, in arriving at the average daily number of beds occupied, have reckoned three cots, or children's beds, as equal to two ordinary beds, and the real cost is somewhat less than above stated.

The district served by the hospital comprises the whole of the suburbs on the Illawarra Line extending as far as Sutherland, and considering the population it might possibly have been expected that the calls on the accommodation of the hospital would have been greater.

#### WESTERN SUBURBS COTTAGE HOSPITAL.

The committee of this institution published its Seventh Annual Report at the close of 1898, but the hospital was not opened till October, 1894.

The building first erected and the more recent additions are all of brick, and form a picturesque group, standing in a pleasant garden on high ground near the western boundary of the borough of Ashfield.

The site is in area about 2 acres, and slopes rapidly to one of the main storm-water channels in the neighbourhood, by which ordinary drainage is carried off. The closets are on the earth system, but connection with the main drainage scheme will shortly be made. The hospital is governed by a committee of eighteen members, in whom the president, three vice-presidents, three trustees, an honorary treasurer, and an honorary secretary, and an honorary solicitor are included. It meets once a month for the despatch of business, and the executive work of the hospital is carried out by committees—visiting, finance, &c.—who meet about once a fortnight. There are two honorary consulting medical officers and three honorary medical officers, and one of each of these has a seat at the Board, and is included in the eighteen above mentioned.

The hospital consists of three wards—one for women and children, containing nine beds; one for men, containing four beds; and one accident ward for men, containing two beds, giving a total accommodation for fifteen. The total number of patients in 1898 was 149, and the daily average number resident was twelve. There are no beds for infectious cases, and no private wards. The administrative buildings include very excellent accommodation for nurses in a separate building, rooms for the matron and servants, kitchen, laundry stores, and out-buildings, a well arranged and fitted mortuary, and an operating-room, which is the latest addition to the hospital, and is arranged and fitted in accordance with the most advanced ideas, a quantity of the fittings and apparatus having recently been obtained from Germany.

All cases, except those of infectious disease, are admitted, and there are almost always one or more cases of typhoid, the number of these for 1898 being twenty-four.

The medical officers report that the wards are almost constantly full, and that the demand for beds frequently exceeds the supply.

The out-patients in 1898 numbered eighty-nine, and these were for the most part minor casualties and accidents.

The nursing staff consists of a matron at £72, who is a certified nurse, two nurses at £25, and two junior nurses at £17 to £20. The nurses enter as probationers, and are trained altogether in the hospital, an arrangement which, considering the limited size of the hospital, cannot be considered as qualifying them in all departments of nursing work.

The other members of the staff are one cook, one housemaid, and one wardsmen and gardener, and the services of a laundress are engaged for one day a week.

The

## lxxxiii

The cost per bed in 1897 was £87 12s., and in 1898, £81 19s.

The income of the hospital in 1898 was as follows:—

	£	s.	d.
Government subsidy ... ..	1,007	8	7
Subscriptions, donations, proceeds of entertainments, and Hospital Saturday Fund ... ..	731	6	3
Payments by patients ... ..	49	10	6
Minor receipt ... ..	1	10	0
	<hr/>		
	£1,789	15	4

The number of annual subscribers, considering the number of inhabitants well able to contribute in the district served by the hospital, is very small; but there appears to be no difficulty in obtaining help by means of fetes, concerts, balls, &c., given to collect money for the hospital, and the honorary treasurer reports that there is not, and has never been, any difficulty as to funds. The hospital has no endowment fund, and all donations have been spent in buildings and current expenditure, but the accounts show that the hospital has a fixed deposit at the bank of £500 and a balance at current account of £502, which have accrued from excess of income over expenditure.

The payments by patients are not a large item in the hospital receipts, but all sums offered are taken—from 1s. as a donation to £1 a week. No larger amounts are received. Orders for admission of patients are not given to subscribers, and admission is determined by the medical officers, who report on the urgency of the case from a medical point of view. The patients are for the most drawn from the surrounding district, but some are received who come from distant places, and appear to have no special claim for consideration at a local hospital.

The following figures are interesting as showing the cost of the hospital:—

Land ... ..	£1,500
Building and furniture, original hospital ...	2,140
Additions and furniture ... ..	500
	<hr/>
	£4,140

which was met as follows:—

Subscriptions and donations ... ..	£1,854
Government subsidy, £ for £ ... ..	1,536
Special grant for original building ... ..	500
Special grant for additions—nurses wing, &c. ...	200
Special grant for instruments, &c., &c. ... ..	50
	<hr/>
	£4,140

The hospital, including cost of land, has cost £276, and, excluding cost of land, £176 per bed.

The cost of land, amounting to £100 per bed, appears very excessive, though the area, 2 acres, is not larger than is required for the present use and future growth of the hospital.

The hospital is a singularly bright, homely, and cheeful place, and the details of management evidently receive the most careful attention from the committee and the officers immediately in charge.

## Appendix C.

## BULLI HOSPITAL.

This hospital was opened in 1893. It stands in an elevated position on a site in area about 1 acre, which was a gift by a resident. The building is of brick, and carefully planned, and we are informed its cost, including furniture, fencing, &c., was £1,000.

The accommodation is for five beds—three for men and two for women. The main building contains the two wards, a committee-room and office, a room for the wardman and matron, and the necessary store-rooms, closets, &c. Connected by a covered way is a bath-room, kitchen, laundry, and general dining-room, all sufficient in size, and properly and neatly kept. There is no operating-room, no ward for infectious cases, and no mortuary; but the erection of the two latter is under consideration by the committee. The hospital is well and suitably equipped as to beds, bedding, and other necessaries, and is kept in a clean and orderly condition.

It is governed by a committee of twelve members, together with a president, vice-president, hon. treasurer, and hon. secretary, and this committee meets once a month and manages the whole business of the hospital. The visiting committee, which consists of three members, is elected quarterly. It has no executive function, the duties of the members being to visit the hospital, either alone or together, once a week, and report to the general committee.

There are three trustees, of whom two are members of the Committee. There are two hon. medical officers, who have not seats on the committee.

The entire staff consists of an elderly married couple, who act as wardman and matron, and who appear to be kindly people, much interested in the hospital. Their joint salary is £40 a year. Last year the secretary, who is a member of the committee, received an honorarium of £10.

The total number of patients in 1897 was 11, and the average daily number 0·44; and in 1898 the number was 9, and the average daily number 0·47. From the above figures it appears that on the average the hospital is empty for more than half the year, and for the remainder has only one patient, hence the very high maintenance rate, which, for 1898, was £19 16s. 2d. for each patient treated, and at the rate of £379 for each bed occupied. There was no patient in the hospital when it was visited.

The cases treated in 1898 were as follows:—Ophthalmia, 1; abscess of orbit, 1; œdema of arm, 1; hernia, 1; dropsy, 1; Bright's disease, 1; fractures, 2; and burn, 1; and those treated during the first six months of the current year were—gunshot wound of hand, 1; general bruising, 1; fissure of anus, 1; phimosis, 1; amputation of thumb, 1; abscess of hand, 1; rheumatism, 3; prostatic disease, 1.

Several of these cases would have been treated as out-patients in the metropolitan hospitals.

It does not appear that more than sixteen patients have been received in any one year since the hospital has been established, and an examination of the register shows that the cases have not been, as a rule, of a serious character. Of the cases above particularised, all, with the possible exception of two or three, could have readily gone to Wollongong or Sydney for treatment, and even the more serious could have been taken by rail or ambulance without any injury or inconvenience. Under these circumstances it is difficult to justify the existence of this hospital, which is within 6 miles by rail and 7 miles by road of the hospital at Wollongong, to which the patients more seriously ill could be readily transferred by a properly-equipped ambulance, which would not involve one tithe of the present cost of the hospital, and by which even serious emergencies might be met.

There are no out-patients, and all the in-patients, with an occasional exception, come from the immediate neighbourhood.

The total payments by patients amount to only a very small sum annually, not, as a rule, exceeding £5. The admission is by subscribers' orders and recommendations, subject to medical examination and certificate of fitness, but accidents, emergencies, and all cases sent by the police or Government Medical Officer are at once received.

The income of the hospital in 1898 was as follows :—

	£	s.	d.
Subscriptions and donations... ..	73	17	5
Payments by patients ... ..	6	5	0
Government subsidy ... ..	72	10	0
Interest on fixed deposit ... ..	4	18	1
Minor receipts ... ..	2	7	0
	<hr/>		
	£159	17	6

The hospital closed the year with £2 6s. 3d. to its credit, and had a fixed deposit of £150, resulting from accumulated savings, in the Government Savings Bank.

Mention is made in the annual report of a special grant from the Government of £75, but this does not appear in the annual statement of accounts as it was received subsequent to the 31st December, 1898.

The number of subscribers is twenty-seven only, and of life members, three.

The hospital appears to be regarded with interest by the inhabitants, despite its small subscription list, and it is undoubtedly well kept, but it is difficult to justify either its inception or its continued maintenance, when the patients could be treated at a cost so much lower at Wollongong or in Sydney.

#### BATHURST DISTRICT HOSPITAL.

The present hospital, which has been built about twenty years, stands in 10 acres of ground, the whole of which was granted by the Government. No additions have been made since its first erection. The contract was for £10,000, and the total cost, including furnishing, was £13,200. The hospital was formally opened by his Excellency the Governor on the 9th November, 1880, and its occupation commenced on 4th December.

The Government contributed £ for £ to the cost of the building and furniture, and everything was handed over free from debt.

This building is in three divisions, the central consisting of two storeys and a tower, and two wings of two storeys each. The central division is devoted to administrative purposes, and contains the Board-room, secretary's office, surgery matron's and nurses' rooms, two private wards with one bed each, dispensary, and operating and instrument rooms, &c. On the first floor of the tower, separated from the building proper by a balcony giving a free passage of air, is the infectious diseases ward, containing three beds. The administrative section is only large enough for the present staff of officers. The south wing contains, on the ground floor, the male surgical and accident ward, with ten beds; and on the first floor, the male medical ward, with ten beds. The north wing contains, on the ground floor, the female general ward, ten beds; and on the first floor, a ward not furnished, not at present required, and used as a sewing and work room, but having space for ten beds. The building thus furnishes space for forty-five beds at a cost of £13,200, or an average per bed of £293.

The kitchen and cook's room are situated in the basement of the tower; and the laundry and drying-room (erected since the establishment of the hospital) are located in a separate building, which cost £1,200. This money was derived from the sale of the old hospital land, which, when the old hospital was burned down, was given to the New South Wales Government by the Imperial Government, and was then granted to the Bathurst District Hospital, on condition that the proceeds of its sale should be utilised in building. There is sufficient accommodation in this laundry to do the washing of four or five times the number of patients.

The

The hospital has a reserve fund of £5,000, some of it lent out at interest on mortgage, &c. There have been a number of bequests. From the late Mr. Thomas Walker the hospital received three amounts of £500. When bequests have been received it has been usual to place them in reserve, though they have not been given on that condition. The late J. N. Gilmour, Esq., left by his will £500, vested in his own trustees, the hospital to receive the interest.

Whenever there has been a surplus it has been put aside. The reserve has been invested in Government debentures, excepting one amount on a property which had to be taken over. There is also another property, which was left to the hospital by Mr. J. Poolc.

The income of the hospital is derived from interest on the reserves, the annual subscriptions, the Government subsidy of £ for £ on the subscriptions, and sums received from paying patients. The total receipts for 1898, from all sources, were £1,408 6s. 11d.; total expenditure, £1,408 7s. 3d.

	£2,496	8	0		£2,496	8	0

During the last two or three years subscriptions have fallen off seriously; this is attributed to the bad times, and to the people not being properly canvassed throughout the whole of the district. Last year the mines at Blayney, Mount David, and Sunny Corner gave very liberally, and made no conditions whatever about nominating patients.

There are five trustees, elected for life, in whom the building is vested. The trustees are not now *ex-officio* members of the committee, which consists of a president, two vice-presidents, and twenty members, who are elected annually by subscribers of a £ or over. Meetings are held on the first Monday in each month, the average attendance being twelve or thirteen. There are also visiting and house committees.

The house committee, which is primarily for dealing with all matters relating to the staff and the food supply, consists of the president, treasurer, and three members of the general committee.

The visiting committee, which is elected each month, and visits the institution once a week, deals with all applications for admission, the general cleanliness and order of the hospital buildings, and the well-being of the patients.

The nearest hospital to Bathurst on the S.W. is that of Carcoar, distant 39 miles; on the north, Mudgee, 125 miles; on the east, Lithgow, 49 miles, and on west, Orange, 49 miles; but more than one-third of the patients come from outside that area.

Dr. W. F. Bassett is the honorary consulting surgeon and physician. There are four honorary medical officers (Dr. D. T. Edmunds, Dr. W. P. Bassett, Dr. Brooke Moore, and Dr. W. B. Cortis). The medical officers are elected annually by the committee. At one time a paid medical officer was employed, but the local medical practitioners offered to do the work gratuitously, and a paid dispenser was appointed.

There are a matron, a secretary and dispenser, seven nurses, a cook, a housemaid, a general servant, a porter, and a laundress (three days a week); and the total amount of salaries paid during 1898 was £683 3s. 4d. The matron's salary is £100 per annum, and the salary of the secretary and dispenser, who does not reside at the hospital, is £192 10s. per annum.

Nurses

Nurses, after a month's trial, enter on a three years' probationary period, the payment in the first year being 10s. per week; second year, 12s. per week; and third year, 14s. per week. It is provided in the rules that "Each probationer, upon the completion of her three years' engagement to the satisfaction of the committee, shall receive a certificate of competency as a duly-trained hospital nurse."

The nurses' hours of duty are from 7 to 7, less three half-hours for meals. The holidays allowed are—(1.) Half a day off each week; (2.) A full Sunday off each in turn—about every fourth or fifth Sunday; and (3.) Three weeks' holiday in each year. There have been no complaints of overwork. The matron is of opinion that eight-hour duty would not be found to answer.

The average daily number of patients during the last year was twenty-eight, and the average annual cost per bed was £50 6s. Patients are admitted under the old system of subscribers' orders, subject, however, to the medical officer's certificate of their fitness for hospital treatment.

Inquiries are made as to the financial circumstances of patients by the secretary and the visiting committee, and they are expected to pay whatever amount they can afford.

The visiting committee of three appointed each month have power to recommend patients for admission, but such patients have all to be examined by the doctor before they can be admitted. All urgent and accident cases are admitted at once.

The number of paying patients in 1898 was 112, or 25·7 per cent. of the whole.

The maximum charge for paying patients in the general wards, which used to be £2 2s. per week, is now 30s. Paying patients are, however, not received to the exclusion of those who cannot pay—they are only received if there is room for them.

The total number of in-patients last year was 436, of whom—

The charge made by the hospital for patients occupying the private wards was formerly £4 4s., but has been reduced to £3 3s. For many years the medical officers were prohibited from making any charge for attendance on persons in a position to pay, but some two or three years ago the honorary staff pointed out that they were often called upon to treat cases which they had hitherto been treating outside, and which were only sent to the hospital as a matter of medical emergency—yet they were unable to make any charge, because of this rule. The rules were relaxed and the doctors are now allowed to make a charge, but not till the full hospital fee has been paid. The present rule on the subject is No. 21: "Applicants for admission, who shall be in a position to pay the hospital fee, shall make arrangements with the resident dispenser, who shall report the same to the visiting committee. This shall not exempt such patients from liability to the medical attendants charging a fee to be approved by the visiting committee." As a matter of fact, the visiting committee have never been asked for their approval.

Paying patients in the general wards are also allowed to make their own arrangements with the doctors, but they are not supposed to pay them anything until the hospital has received the 30s. a week fee.

The hospital is fairly well equipped with apparatus and instruments.

The following return shows the places in the Bathurst Hospital District from which patients were received during 1898, their cost to the hospital, the amount of fees received from them, and the subscriptions from their various districts:—

#### THE CARRINGTON CONVALESCENT HOSPITAL.

This hospital is situated on high land, in the neighbourhood of Camden, on an estate of 430 acres given by the late Mr. Paling, who in addition gave the sum of £10,000 for building purposes. This sum was supplemented by subscriptions from the public and a Government grant of £5,000; and the main hospital, with some supplementary buildings, cost about £20,000. The Masonic body erected a cottage adjoining the hospital, which holds six beds, and is worked in conjunction with it at a cost of £1,500. The buildings are sightly, though no money has been spent in external ornament, and the fittings and general equipment are thoroughly good and satisfactory. The total accommodation is for 100 beds, and the cost per bed nearly £206.

The

## lxxxix

The hospital is managed by a committee of twelve members, one-third of whom are elected by the subscribers, one-third nominated by His Excellency the Governor, and one-third nominated by the representatives of the donor of the estate, and from and by this committee the honorary treasurer and the honorary secretary are elected. There are three trustees, who are *ex-officio* members of the committee. There is a house or finance committee, a local committee, and a ladies' committee, the latter being really a visiting committee, with power to report only.

The visiting medical officers are two in number, and resident in Camden. Until lately their services have been honorary, but they now receive an honorarium of £25 a year each.

The nursing staff consists of a matron at £175 a year; 2 sisters, 1 at £15 and the other at £40 a year, who are certificated nurses; and 3 probationers. The remaining staff consists of 1 cook, 1 laundress, 1 assistant laundress, 1 matron's servant, 2 housemaids, a gardener, porter, and assistant porter, and seems somewhat excessive, considering the class of patients received.

The patients are sent to the hospital on the authority of the honorary secretary, after examination and certificate as to fitness, &c., by certain examining medical officers, who are the medical superintendents of the Sydney and Prince Alfred Hospitals, the resident medical officer of St. Vincent's Hospital, Dr. Clubbe for the Children's Hospital, the Government Medical Officer for Sydney, or his deputy, acting in the case of patients sent by the Government, and Dr. Gwynne Hughes for the Masonic patients. All patients are admitted for one month, and the period is extended on the recommendation of the visiting medical officers.

The Government pays at the rate of 2s. per day for all cases sent through the Government Medical Officer for Sydney, and an amount of 10s. for the conveyance of each patient to and from the hospital. All patients who have means are expected to pay; but the amount received from this source is small, the majority of the amounts vary from 2s. 6d. to 15s. per week, the total amount in 1897 being £199 1s. 8d., and in 1898 £90 18s. 6d. only. In the latter year seventy-two patients contributed the total.

The income of the hospital in 1898 was as follows:—

	£	s.	d.
Subscriptions and donations ... ..	633	16	8
Hospital Saturday Fund ... ..	105	0	0
Contributions from patients ... ..	90	18	6
Maintenance of Government patients ...	1,119	5	10
Government subsidy ... ..	845	12	2
Rents of land ... ..	125	0	0
Interest on endowment fund ... ..	23	2	0

The endowment fund is said to be made up chiefly of "sums that have been given specifically for that object" by different people, and amounts to £744 5s.

From these figures it will be seen that two-thirds of the total income of the hospital comes from the Government, and, although one-third of the directors is nominated by His Excellency the Governor, the Government has no direct voice in the government of the hospital.

The number of patients in 1897 was 1,153, and the daily average number resident was 78; and in 1898 the number was 1,082, and the daily average number resident 76. The average cost per bed was £35 3s. 9d. in 1897, and £35 11s. 4d. in 1898, and must be considered high when the class of patients is taken into account. The distance of the hospital from Sydney, and the cost of the transit of patients, add, no doubt, considerably to the cost of maintenance, amounting, as it does, to about £400 a year; and the very little assistance in the shape of work which is rendered by the patients necessitates, in the view of the directors, paid labour which need not otherwise be employed. On this point the committee's statement, in their report for 1898, that "it is with great regret that they have to mention that there have also

been not a few cases in which non-paying patients, sufficiently convalescent, have refused to help the hospital in any way, either by a donation in money or in work, when convalescent," would seem to point to the fact that the patients admitted are either not of the class for whom such an hospital is intended, or that the provision of paid labour and the feeling that everything is done for them, has tended to idleness in those admitted.

It is almost impossible to criticise the hospital so far as its general condition is concerned, and it is, no doubt, doing good work, though at a cost which is somewhat excessive.

#### DUBBO HOSPITAL.

This hospital was established in 1867, when the main building was erected. A fever-ward was erected about fifteen years ago; and some additions, which include quarters for the matron, were made at a more recent date. The total cost, we are informed, including repairs, was about £2,667.

The buildings, which are of brick, stand about a mile and a half from the town on an elevated site. The area of land belonging to the hospital is about 16 acres in extent. It was obtained from the Government, and is very suitable for its purpose.

In the main building there are three wards, two of five beds each for men and one containing three beds for women. The fever-ward gives accommodation for twelve patients in two wards. There is no isolation ward and no ward for private cases. The main building is of primitive construction, and defective so far as appliances and fittings are concerned, the bath-rooms being badly placed in regard to the wards, and the closets, which are old cesspits, being some distance away. The existence of cesspits in connection with an hospital is very unsatisfactory, and they should, as soon as possible, be replaced by water or earth closets. The drainage of the hospital runs on to a piece of flat ground forming part of the hospital site, and is said not to be in any way a nuisance. The excreta from the infectious diseases ward is burned. Water is laid on to the hospital, being obtained from the town supply. The plans for the fever-ward, which was built about fifteen years ago, as above stated, are said to have been submitted to the Government Medical Adviser for approval, but the building is very ill-designed for its purpose, and is without bathrooms, closets, or necessary fittings. It contains no rooms for nurses, and is inconveniently situated in relation to the present kitchen. The kitchen and laundry are sufficiently large, but not well planned. The nurses are accommodated in an isolated building at the rear of the hospital. Their quarters are decidedly unsatisfactory, inasmuch as the night-nurse is accommodated in a room with only a dwarf partition dividing it from another room appropriated to the two other nurses. The whole arrangements are wanting in such comfort as should be given to those engaged in arduous work. The matron's rooms, which are quite satisfactory, are in an annex to the original structure. There is no operating-room.

The committee is elected in accordance with the Hospitals Act, and is composed of fifteen members, from whom a president, two vice-presidents, and a treasurer are elected. There are five trustees, of whom three are members of the committee. The committee meets once a month. There is a house committee consisting of four members, who change once in every three months, and the officers, who are *ex-officio* members. This committee meets once a week.

The staff consists of a medical officer, who is paid £75 a year (and who calls in other practitioners for consultation when necessary); a matron, who is a trained nurse and receives £70 a year; one nurse, who has had about eighteen months' hospital experience and is paid £26 a year; and two probationers, £13 each. There is no system of training the nurses, and it is stated the probationers do not, as a rule, stay for more than a year at the hospital. The remainder of the staff consists of a wardsmen, a cook, and a housemaid. The secretary is a paid officer, receiving £25 a year.

Cases of all kinds are admitted, but the report of the hospital does not contain any table of the number of cases of each kind of disease treated; and there are no particulars of the number of cases of infectious diseases received during the last year.

The number of patients treated in 1897 was 237, and the average daily number during the year was thirteen. The number in 1898 was 260, and the daily average fourteen. The cost per bed in 1897 was £65 3s., and in 1898, £63 19s. These figures include the cost of the treatment of out-patients.

It is stated that, occasionally, there have been as many as twenty-two patients in the hospital; and in times of pressure the infectious diseases wards are used for ordinary cases.

The number of out-patients treated in 1898 was 154. No payments were made by them, but the sum received from in-patients was £42 12s. 10d. It appears that nine paid £1 and over, six paid 10s., three paid 5s., and the remainder smaller sums. The system of admission is by orders from the subscribers, but the patients are submitted to the medical officer before admission, and he certifies that they are proper subjects for hospital treatment or not. Cases sent by the police and by the Government medical officer are admitted without question. Of the total number of patients in 1898, 118 came from Dubbo or from the district within 10 miles of it, and the remainder were either travellers or belonged to some of the towns adjoining the district.

The income of the hospital in 1898 was as follows:—

	£	s.	d.
Government subsidy of £ for £ ... ..	301	19	3
„ special grant ... ..	99	19	10
Subscriptions and donations, and proceeds of entertainments ... ..	370	10	7
Contributions from patients ... ..	42	12	10
Interest on fixed deposit ... ..	7	10	0
Unclaimed poundages ... ..	4	19	10
	<hr/>		
	£827	12	4

The hospital has no endowment fund, but has a fixed deposit of £250 in the Commercial Bank, and the report for last year shows that the institution is in a satisfactory financial condition. It is said that the subscriptions are increasing, but a large part of the income is derived from entertainments given specially in aid of the hospital. The accounts do not call for any special comment, except that the amount expended on wines and spirits is somewhat large.

The committee has recently drafted new rules and regulations, based on the code of model rules for district hospitals prepared by the Chief Medical Officer to the Government.

The hospital is clean and well kept, but the buildings are neither up to date nor adequate to properly meet the requirements of the town and district.

#### GOULBURN HOSPITAL.

The report for 1898 is the 57th annual report of this hospital, which was founded in 1842. It was for several years located in temporary premises; but in 1849 was moved to a cottage specially built in the centre of the city. This was found to be too small to meet growing requirements, and in 1889 the present hospital—the foundation-stone of which was laid in 1887—was opened for the reception of patients.

The old cottage hospital was demolished ; but the site has never been sold, the trustees not having received what they considered an adequate offer for the property. It is now valued at about £1,500, but produces no revenue.

The new hospital is a two-storied brick building, standing in an elevated position to the southward of the city, on a block of land which is completely surrounded by public roads, and contains an area of upwards of 9 acres. The site is a very good one, and the neighbouring land is set apart for public parks, agricultural society's grounds, and other public purposes.

The hospital consists of a central administrative block with two wings, all of two-storeys ; of kitchen and offices and servants' quarters in a one-storied building at the back of the administrative block, and of detached laundry and mortuary.

The administrative block contains the Board-room, matron's-room, dispensary, store-rooms, &c., on the ground-floor, and quarters for the nurses on the upper storey. Of the two wings, one, that to the north, is set apart for ordinary hospital cases, and the other, to the south, which is smaller, is devoted entirely to the reception of cases of infectious diseases.

The hospital as a whole is substantially built ; but some of the work has not been well done, and there has been a want of attention to detail and finish. The sanitary and other arrangements, sinks, &c., which could not have been up-to-date when put in position, are now very much behind the times, and require alteration. These remarks apply also to the operating-room, the alteration and refitting of which is now engaging the attention of the committee, who are also aware of the shortcomings of the hospital in other respects.

The north wing contains 1 ward for men and 1 for women, 1 accident ward for men, and 3 private wards, and will accommodate 30 patients. The south wing is cut up into small rooms, and is not well designed ; it will accommodate altogether 16 patients, and in three rooms there is only 1 bed, so that these can be used as private wards when necessary. The total accommodation is, therefore, for 46 patients.

The site on which the buildings stand was a grant from the Crown, and the hospital has altogether cost in buildings the sum of £9,500, the principal items being as under, towards which the Government contributed £2,000,—

General wards	...	...	...	...	...	£6,800
Fever ward	...	...	...	...	...	1,900
Laundry	...	...	...	...	...	360
Mortuary	...	...	...	...	...	70
						<hr/> £9,130

The new hospital when opened had on it a large debt, partly owing to the inability to sell the old site for the sum at which it was valued, and it has been struggling on under this debt ever since it started.

At the close of 1898, this debt was reduced to £400, and has since been reduced by a further sum of £200. As the accounts show a credit balance of £1,037 14s. 3d. at the close of 1898, against which there was only the debt on the building of £400, there does not appear any reason why the remaining £200 should not be paid off at once. The committee might with advantage, after the extinction of the debt, undertake the much-needed improvements to the hospital fittings, and carry out some minor repairs now necessary.

The sums expended in building included a bequest from Mr. Steers of £1,244 and a sum of £866 raised by a bazaar. On the interest of these, and also on that of a bequest from the late Mr. James Chisholm, the Government is paying the subsidy in accordance with existing arrangements. Mr. James Chisholm's bequest was for the special purpose of providing tobacco and other luxuries for male patients, and the Committee, finding some difficulty in spending the interest, has allowed the sum of £74 1s. 10d. to accumulate.

The income of the hospital for 1898 was as follows:—

	£	s.	d.
Government subsidy ... ..	653	1	0
Special grant ... ..	100	0	0
Subscriptions, donations, and proceeds of entertainments ... ..	621	14	1
Paid by patients for maintenance ... ..	193	3	7
Fees for nurses' services ... ..	46	17	6
Rent of paddock (part of hospital area) ... ..	10	7	6
Unclaimed poundages... ..	3	19	10
	<hr/>		
	£1,629	3	6

The income of the hospital is said to be increasing; but the list of annual subscribers is still very small, and a large part of the income is derived from balls and other entertainments, and from Saturday and Sunday collections in Goulburn, Crookwell, Breadalbane, and other places in the neighbourhood.

The hospital property is vested in five trustees, of whom four have seats on the committee of the hospital.

The Board of management is composed as follows:—1 president, 1 vice-president, 1 hon. treasurer, 1 hon. secretary, and 12 members of committee. The usual meetings are held once a month, and special meetings are called when necessary. There are sub-committees for finance, building, and visiting, and on the latter, which meets once a week, and consists of the office-bearers and one member of the committee, the internal management of the hospital mainly rests.

The medical officers, two in number, are each paid £50 a year, and have not seats at the Board. They receive, with the permission of the committee, fees from patients admitted to the private wards, the amounts being fixed by arrangement between the patients and themselves.

The nursing staff consists of a matron at £70; one staff nurse at £40; and five nurses at a maximum of £20. For the first year, which is considered a probationary stage, the nurses receive £12 only, getting £20 in the second and subsequent years. On entering the service, they engage to stay two years; they are trained in the hospital, and, on leaving, are furnished with commendatory letters, though not with a special certificate. There is no special teaching by lectures, &c., and no examinations. The entire staff, matron included, has been trained in this manner at the hospital, and the arrangement cannot be considered satisfactory. The matron has no experience beyond the Goulburn Hospital, at which she has had about nine years' service, having commenced as probationer; and, though the hospital has worked smoothly under her management, and she is no doubt an admirable nurse and an estimable and devoted woman, the condition of the hospital in minor details shows a want of knowledge of hospital niceties and of administrative routine. During times of epidemic, when the wards for infectious cases are full, additional assistance is sometimes procured; and, when the number of occupied beds is small, the nurses are allowed to go and nurse cases in the city, the sums received—amounting to £46 17s. 6d. in 1898—going to the hospital funds. The average hours on duty for the nurses was eleven, from which two and a quarter hours were given up for meals. The quarters for the nurses are good and comfortable.

The total number of patients in 1897 was 298, and in 1898, 339. The average daily number resident for the latter year was 22.67. For this number the staff gives one nurse for about every three occupied beds. The south wing, set apart for infectious cases, was quite empty at the time of inspection, but was said to be very rarely in this condition. In 1898, 41 cases of typhoid, 18 of scarlet fever or scarlatina, 36 of measles, 5 of influenza, 2 of erysipelas, 1 of chicken-pox, were treated. In 1896 and 1897 the number of typhoid cases treated was 80 and 72 respectively, so that there was a considerable diminution in the number in 1898. In 1897, 39, and in 1898, 47 out-patients were treated.

The Infectious Diseases Ward is a special feature of the hospital, and is, as a rule, largely used, as will be seen by the figures above given. The inhabitants of the city and district avail themselves of its advantages, and paying patients are received into either the general or private wards. The

The cost per bed in 1897 was £58 2s., and in 1898, £56 5s. The sums received from patients towards maintenance in 1897 was £207, and in 1898, £193. In the latter year the number of paying patients was 63, or 20 per cent. of the total number. The sums received from patients in the general wards range from a donation of 2s. to a weekly payment of one guinea; and the charge for private wards is three guineas a week, the fees to the medical officers being an additional charge. The sums paid by patients in 1898 were as follows:—

							£	s.	d.
1	contributed	2s.	...	...	...	...	0	2	0
2	"	11s. 6d....	...	...	...	...	0	11	6
4	"	10s. each	...	...	...	...	2	0	0
1	"	10s. 5d....	...	...	...	...	0	10	5
3	"	15s., 16s. 8d., and 19s.	...	...	...	...	2	10	8
52	"	sums from £1 to £3 3s. a week	...	...	...	...	187	9	0
							£193 3 7		

All cases sent by the Government Medical Officer or the police are at once admitted, and, if found suitable, are passed on, when able to travel, to the asylums for the infirm and destitute.

The districts from which the patients are received are shown in the annual report as follows:—

Goulburn	...	...	...	...	...	...	...	196
Crookwell	...	...	...	...	...	...	...	12
Wheeo	...	...	...	...	...	...	...	9
Sydney	...	...	...	...	...	...	...	10

Tiranna, Cooma, Boxer's Creek, Millbank, Green Flat, Kingsdale, Lake Bathurst, Parramatta, Orange, Springfield, Inveralochy, Sutton Forest, Parksbourne, Kenmore, Boro, Brisbane Grove, Woodhouselee, Wingello, Bannaby, Harden. Merrill, and Tuena	...	...	...	...	...	...	...	1 each.

By far the greater number are from the Goulburn district and its neighbourhood, and it will be seen that the hospital serves a very considerable area. The nearest hospitals are at Yass, Qucanbeyan, Braidwood, and Bowral.

The patients are not admitted on subscribers' orders, but the admission rests entirely with the medical officers, who certify to the medical necessities of the case. Inquiries as to means are made; but the honorary secretary reports that cases of imposition are infrequent, and states that imposition is more easy to detect in country districts than in large cities. The out-patients are mainly casualties.

The wards of the hospital were well warmed, neat in appearance, and comfortable. The bedding was good, clean, and sufficient, and the whole place homelike; but there was a noticeable want of smartness, cleanliness, and attention to details in lavatories, sculleries, and other places—and indeed in what might be called the accessories of the place generally.

The defective sinks, lavatories, basins, and other sanitary fittings, should be replaced by other and newer forms more suited for hospital use, the hot-water system should be enlarged so as to be more generally available, and the whole of the Infectious Diseases Wing would be the better for repainting, new linoleum, and general renovation.

## KIAMA COTTAGE HOSPITAL.

This hospital was built in 1887 on plans originally drafted by Dr. Ashburton Thompson; it stands on about  $2\frac{1}{2}$  acres of ground on a hill overlooking the town of Kiama, and commanding fine views of the sea and the adjoining country.

The appearance of the building, though walls and roof are all of corrugated iron, is decidedly pleasing. The walls consist of two skins of iron with the wooden framework between them, and by an ingenious arrangement the air passes between the two skins, and the rooms are kept cool in summer. The structure is very favourably reported on by those in charge of it. It has proved water-tight in severe gales and cool in summer, and the only complaint made is that it is somewhat cold in winter. The iron stoves with which the wards were originally furnished have lately been replaced by open fireplaces built into new and substantial brick chimney breasts, with the result of making the wards much more comfortable. The building generally, though erected twelve years ago, shows no signs of wear, and the small amount of outside woodwork has been kept well painted. It cost about £1,600, which is at the rate of £160 per bed.

The accommodation consists of two wards, one holding six and the other four beds, one private ward (not used for several years), quarters for the staff, a waiting and operating room, kitchen, laundry, and offices. The infectious diseases hut and the mortuary are detached buildings. The buildings generally are sufficient, and are excellently kept, but the room for cases of infectious diseases, though of itself without objection, needs a nurses' room, closet, and other accessories, and these should be supplied without delay, especially as the cost will not be large.

The hospital is governed by a committee of seventeen members elected annually, and meeting once a month for the transaction of business. The officers are a president, a treasurer, and a secretary. There are two visiting medical officers who receive an honorarium of £40 a year each. The staff consists of a matron, who has been in charge ever since the hospital was started, and who receives £52 a year; a nurse (who is not specially trained), a wardman, and a cook, each of whom receives £26 a year, with rations and quarters. The matron considers the staff sufficient, and states that extra assistance is sometimes obtained when there are bad cases.

The daily average number of patients in the hospital in 1898 was four, and for the last three or four years there has not been much pressure on the accommodation, which has in fact been ample for the neighbourhood. There is no definite district from which the hospital patients are drawn, but patients come from Ulladulla, Nowra, Berry, Robertson, Kangaroo Valley, and as far north as the Lake Illawarra. When the railway to Kiama was in course of construction the number of patients in the hospital was much larger than at present, beds being made up on the floor, and the total sometimes numbering eighteen. The number for the year 1898 was sixty-two, forty-six males and sixteen females, and the annual cost of maintenance per occupied bed was £90 6s. This cost is high, and depends on the fact that the average number in hospital was so small. The cost per patient was £5 16s. 6d.

No form of disease is refused, and infectious cases are taken when admission is sought, though so far the number sent has been few.

Payments from patients are received up to £1 1s. a week in the general wards, and the amount received last year from this source was £26 6s. 6d. The sources of revenue in 1898 were as follows:—

	£	s.	d.
Interest on invested funds ... ..	46	14	5
Subscriptions and donations ... ..	132	7	4
Payments by patients ... ..	26	6	6
Government subsidy on basis of year 1897	120	14	9
	<hr/>		
	£326	3	0

No account of the investment fund is published, and the source from which it has been obtained is not shown in the annual report as it should be, but we have been informed

informed by the honorary secretary that £1,141 8s. 11d. is invested in Bank and Government securities. This amount is the accumulation of savings in past years, with the exception of £150 received as a bequest from the late Mr. Thos. Walker.

The hospital is supplied with rain water from the roof of the buildings, which is caught in underground tanks. Earth closets, emptied by the municipal authorities, are in use throughout the buildings, and are kept in excellent order.

The general management of the hospital appears to be satisfactory; the wards are cheerful and comfortable, the lavatories and other parts are all well kept, and the economic details are the subject of careful attention on the part of the matron.

#### LITHGOW DISTRICT HOSPITAL.

This hospital was built in 1895, and was officially opened by the Premier, the Right Hon. G. H. Reid, on the 7th May, 1896. It is constructed partly of brick and partly of wood and galvanised iron. The main building comprises matron's sitting-room and bed-room, male ward, operating-room, female ward, bath-rooms, earth-closets, &c. The matron's sitting-room is also used for Board meetings and for other administrative purposes. The male ward contains four beds and the female ward three, one of which is an emergency bed. There are no private wards or cots for children.

Opening out of the wards, which are located in separate wings on opposite sides of the building, are the bath-rooms and earth-closets. The drainage from the male patients' bath-room and latrine is taken through the hospital grounds in an earthenware pipe and discharged on a partially-formed street in front of the institution. The drainage from the bath-room in the female ward is discharged on the surface within the hospital grounds, but it is proposed to extend the pipes so as to discharge on some unoccupied land outside the fence.

Connected with the main building by a covered way are a kitchen, servant's room (opening out of the kitchen), and laundry, as an addition to which a nurse's room has been erected. These structures are of wood and galvanised iron. The mortuary, built of the same materials, with a cement floor, is completely detached from the main building.

The land on which the hospital stands cost £320. It comprises 3 acres 17½ perches on the hill side, not far from the centre of the town, and has a north-easterly outlook.

The cost of the buildings was £1,375, or an average of £137 per bed.

The operating-room is situated in the main building, next to the female ward, and is furnished with a complete set of surgical instruments, which cost £150.

The general committee consists of twelve elected members, and, in addition, the three medical officers and the three trustees are *ex-officio* members. The number would thus, under ordinary circumstances, be eighteen, but as one of the medical officers is also a trustee, the committee at present consists of seventeen members.

The general committee elect from among themselves a house committee, who see to whatever is required for the maintenance of the institution, and a visiting committee, whose duties are to see that the patients are well attended to, and to investigate complaints.

There are three medical officers, all of whom have seats on the Board. The present arrangement is that half the fees that are paid by the patients to the hospital are divided amongst the doctors equally. If £100 were received from patients, £50 would be apportioned equally to the three doctors. It is proposed, however, to alter this arrangement at an early date.

The matron is a certificated nurse, with considerable hospital experience, who receives a salary of £52 a year, and she is assisted by one nurse, whose salary is £26 a year.

There is no wardsmen, and the matron and nurse are, therefore, at times called on to perform duties which are outside the range of nurses' work, and should be done by a man.

Cases

Cases of infectious disease have up to to the present been treated in the general wards without any untoward results, but there is now in course of erection an infectious diseases ward detached from the main building. When completed, the ward will contain two rooms with a nurse's room between. In front there will be a spacious verandah. Each of the rooms will have space for two beds. The contract price is £232, but when furnished the committee estimate that the ward will have cost them £250.

When visited there were five patients in the hospital—three men and two women. The average length of time the patients remain in the hospital was, in 1898, about 20 days. During 1897 there were 53 patients, and during 1898, 68. The average daily number of patients in the hospital in 1897 was 3·5, and the same in 1898.

The hospital does not treat out-patients. The in-patients, or their friends for them, pay what they can afford. As low as 5s. a week is taken, but not often, as such patients prefer to give a donation. Inquiries as to the means of patients are made in the first instance by the matron, and are followed up if necessary by the committee, who, being business men of the town, generally know the circumstances of the patients.

There is a fair average of accident cases, but the majority of the cases treated at this hospital are fevers and cases of acute illness. The number of typhoid cases has been less during the last year or two than it formerly was.

Urgent cases are admitted to the hospital by the matron, or by one of the medical officers, or by a member of the committee. Other cases are recommended by one of the members of the committee to one of the medical officers, who certifies to the medical necessities of the case. There is a form for admission to be signed by the medical officer, a member of the committee, and the secretary.

The cost per bed for 1897 was £95, and for 1898 £91 13s.

The buildings are free from debt, and the committee has about enough money in hand to pay for the new ward.

There is an endowment fund of about £1,200, composed of two legacies for £1,000 and £100 respectively, and £98 which has been collected specially towards this fund. Mrs. Brown, who left the £1,000, vested it in her trustees, the interest to be paid to the hospital by them quarterly. The other £200 is vested in trustees appointed by the hospital, and lodged in the Savings Bank.

The hospital also has £132 in stock of the E.S. and A. Bank. There is a current account surplus of £200 banked until it is needed to pay for the infectious diseases ward.

The sources of income for 1898 were :—

	£	s.	d.
Government subsidy	208	15	8
Public subscriptions	33	12	0
Public donations	246	13	2
Patients' payments	54	15	0
Interest	65	8	0
	<u>609</u>	<u>3</u>	<u>10</u>

Collections are taken up at the mines on Hospital Saturday.

Patients have been received from Jenolan Caves, Oberon, Portland, Cullen Bullen, Capertee, Hartley, Sheather's Hill, Rydal, Mount Victoria, Blackheath, and Wentworth Falls. The two nearest hospitals are Bathurst, on the west, and Penrith, on the east. The Lithgow Hospital is said to serve the whole district between Bathurst, Mudgee, and Penrith. The greatest distance a patient has to travel to the hospital is 40 or 50 miles.

The water supply of the hospital is abundant and good, and the arrangements for the disposal of excreta satisfactory. Some change in the arrangements with regard to slop-water is, however, necessary.

## MAITLAND HOSPITAL.

The hospital was for several years located in a house in the town of Maitland, but, in 1850 or 1851, it was moved to its present site which is on rising ground near the road leading out of the town to the north. The main building was, so far as we could gather, erected for the special purpose and is a plain, substantial, old-fashioned brick structure, with verandah and balcony. There are several outbuildings most of which are of more modern construction. An extensive view is obtained from the hospital over the town of Maitland and surrounding level country to the rising land in the distance. The area of the site was stated to be between 3 and 4 acres, but its exact extent appeared to be a matter of doubt.

In the main building are three large wards—two for men and one for women, one private ward, and also one ward used for special cases requiring isolation, which, at the time of our visit, contained a case of scarlet fever. The total accommodation is for thirty-seven beds. It is probably almost impossible, owing to the length of time which has elapsed since the main building was erected, to ascertain the cost of this, or to ascertain the cost per bed. The remainder of this building is occupied as board-room, matron's and nurses' quarters, dispensary, operating-room and various store-rooms and offices.

The structure and most of the fittings are decidedly antiquated, but the sanitary arrangements, which appear to have received special attention about nine or ten years ago, are fairly good, and the drainage is disposed of on the hospital grounds without offence or danger. The wards, somewhat gloomy owing to the windows being small, badly placed, and at too great a height from the floor, are clean and well kept. The nurses' rooms, comfortable as far as they go, do not afford nearly sufficient accommodation for the staff, so that some of the nurses sleep in the rooms built for cases of infectious diseases; and the operating room and its fittings are neither suitable nor adequate. The kitchen, scullery, servants' quarters, laundry, &c., are in a range of buildings at the rear of the hospital, connected by a covered way. The mortuary is a distinct edifice too prominently placed in being exposed to view from the verandahs on which patients spend some of their time in fine weather.

The wards for infectious diseases consist of a small group of buildings at the side of the hospital which are found to be very useful, but which, from defective construction, are almost intolerably hot in the summer.

The hospital is governed by a committee consisting of a president, vice-president, hon. treasurer, and eleven members, two out of the three trustees being included in the latter number. This committee meets nominally once a fortnight, but the report for 1898 shows that meetings not infrequently lapsed for want of a quorum. The house or executive committee meets once a fortnight and is composed of the officers—president, vice-president, and hon. treasurer, and three members of the committee, who are changed every three months. There appears to have been only one medical officer during 1898, but there are now four, of whom one is a member of the committee. The sum of £100 a year is divided among the medical officers, instead of, as was explained, supplying them with a dispenser; some of the dispensing, however, is done by the matron. The secretary is a paid officer receiving £40 a year, but he does not appear to have any intimate acquaintance with the affairs of the hospital, and the office would, perhaps, be better filled, as is more usual in institutions of this size and character, by an hon. officer who is a member of the committee, and takes a personal interest in the affairs of the institution.

The nursing staff consists of a matron, at £100 a year; three trained nurses, at £50 a year each; and two probationers, at £20 a year each. These salaries are somewhat high in comparison with those paid in hospitals of like size and character, and, moreover, £45 was paid last year as a bonus to the matron and nurses—a very unusual proceeding. The sum of £70 was paid in 1898 for special nurses engaged to attend on special cases, infectious and otherwise. No training of the probationers, except in practical work, is attempted, and no certificates of proficiency are given to them. It is expected that the probationers now employed will enter for training at one of the metropolitan hospitals. The other members of the staff are a wardsman, cook, laundress, housemaid, and gardener. All laundry work is done in the hospital; the laundry is, however, small, and neither well arranged or fitted.

The

The number of patients treated in 1897 was 322, the average daily number was twenty-two, and the cost per bed (including the treatment of outpatients) £72 18s. The number in 1898 was 407, the average daily number 23, and the cost per bed £84 8s.

No class of cases except venereal diseases is refused. The report states that 85 cases of typhoid were treated, and that 39 operations—18 of importance and 21 of a minor order, were performed in 1898.

There is no table in the report giving a classification, &c., of diseases treated, and no statement as to the number of cases of infectious diseases, though the latter would be especially interesting as showing the use made of the buildings for infectious cases, and the necessity for special nurses. At the hospital we were unable to obtain any exact information on these points. There is no special provision for the treatment of out-patients, but 118 (including casualty cases) were attended to in 1898.

Subscribers of one guinea and upwards are entitled to give a certain number of orders for the admission of patients, who are received if considered by the Medical Officer fit subjects for treatment. Inquiry, however, seemed to show that some of the cases admitted, especially when there was no pressure on the hospital accommodation, were of a somewhat trivial character. There were no complaints of undue pressure on the hospital space, though the matron stated that occasionally the number of patients was somewhat in excess of the bed accommodation. The average daily number resident would not appear to indicate that this occurrence was frequent.

The financial position of the hospital is as follows:—It has an endowment fund of £8,571, invested in the Bank of New South Wales, the Commercial Banking Company of Sydney, and the Savings Bank, from which, in 1898, £298 4s. 8d. was received as interest, and that year closed with a credit balance in the current account of £222 19s. 4d.

The receipts in 1898 were as follows:—

	£	s.	d.
Ambulance fees ... ..	17	14	6
Subscriptions and donations ... ..	270	18	0
From entertainments, balls, &c. (net) ... ..	76	17	4
Payments by patients ... ..	143	17	9
Government subsidies ... ..	305	2	0
Interest on endowment ... ..	298	4	8
Minor receipts ... ..	0	15	0
Special Government grant... ..	250	0	0
Loan from trustees ... ..	200	0	0
	<hr/>		
	£1,623	9	3

The amount of £200 was a sum drawn from the invested funds.

The special Government grant does not really appear to have been for any special purpose, and was carried to the current account. It does not appear that the loan from the trustees has been repaid, so that the hospital is not in quite so good a position financially as might be inferred from the fact of there being a balance of £222 at credit of the current account.

It is somewhat remarkable that no general balance-sheet, from which the financial position of the hospital could be seen at a glance, is published in the annual report, and that there is no mention of the sum to credit of the endowment fund. This fund is in the hands of three Trustees who are elected annually. It was formed about twenty-five years ago, and the amounts which have been placed to its credit are all bequests which have been handed to the hospital with the condition that they shall be invested and the interest thereon only expended.

The expenditure for 1898 calls for no special comment, except in respect to the sum of £97 13s. 6d. for wines, spirits, &c., which appears very high, and is only partly explained by the large number of typhoid cases.

The

The subscriptions and donations are numerous, but a number obtained by collectors, chiefly ladies, are of small amounts.

The members of the hospital committee do not appear to have worked altogether harmoniously, and there have been some difficulties in regard to the medical staff, but it is hoped that with the election of the committee for 1899, and the appointment of four medical practitioners on the medical staff, these difficulties have, in the main, disappeared, and that the energies of the committee will now be directed in the necessary direction of improving the arrangements and remedying the defects of the hospital.

#### MUDGEES DISTRICT HOSPITAL.

This hospital was established about the year 1854, and was for some twenty years carried on in a cottage in the town. In 1874 the present hospital was built on plans supervised by the late Sir Alfred Roberts. The Government gave the site, which has since been enlarged by subsequent gifts from the Government until the area is now about 5 acres.

The cost of the hospital buildings, including an isolated cottage for infectious diseases, has been £3,300, and, as the accommodation is for twenty-six beds, it has cost £127 per bed.

The main building is of brick in two storeys, and the cottage for infectious diseases is a simple structure, with an outer and inner skin of iron on wooden frame work. Owing to some defect in construction, this building is very hot in summer.

The main building contains two wards, one for men and one for women, each with ten beds; two private wards, one containing two and the other a single bed; an operating-room and rooms for the matron and nurses, besides an office and dispensary store, bathrooms, closets, &c. At the back, and connected by a covered way, are the kitchen, laundry, and servants' rooms. The store-room and mortuary are detached buildings.

The hospital is not well built, and the details of the lavatory arrangements, baths, closets, &c., are old-fashioned and not satisfactory. The wards and operating-room are the best part of the building; but the equipment of the former, as regards bedsteads, bedding, and other matters, leave something to be desired and require some attention. There is no hot-water supply in the bath-rooms, operating theatre, or wards, and the drainage requires some attention. The committee is, however, aware of some of the shortcomings, and is proposing to remedy them at an early date. The infectious diseases cottage, which provides accommodation for three cases, is complete in itself, having nurses' room and all necessary accessories. The whole hospital is so planned as to allow of extension.

The committee consists of twenty-four members, from whom a president, vice-president, and honorary treasurer are elected, and the large number is as usual considered desirable as spreading the interest in the hospital over a wide field. The three trustees are members of the committee. The committee meets once a month, and there is a visiting committee which has power to act in details, and consists of two members, one of whom retires each month, so that each member really serves for two months. The visiting committee meets once a week.

There is only one medical officer, who is paid £50 a year, but medical assistance is called in when necessary to give chloroform or assist at operations, and for these services about £40 is paid annually. The arrangement does not seem a good one, and the hospital would, perhaps, be better served by two medical officers, acting in conjunction; but though the matter has repeatedly been under consideration, the committee has not seen its way to alter the present arrangement. The secretary is a paid officer receiving £25 a year.

The nursing staff consists of a matron at £70; a trained nurse at £35, who is chiefly engaged on night duty, and a wardman at £52; and the other staff is made up of a maid, and a cook and laundress. The nursing staff is small, considering the number of patients. In 1897, 164 patients were treated, and the average daily number was 12; and in 1898, 193 patients were treated, and the daily average number was 14.8. The cost per bed was £59 11s. in the former, and £51 16s. in the latter year.

By

By the rules incurable cases, parturient women, lunacy cases, small-pox, itch and confirmed consumptives are excluded; but, practically, cases of all kinds are received.

The infectious disease cases in 1898 were as follows:—Erysipelas, 1; measles, 10; and diphtheria, 2. Cases sent by the Government Medical Officer are at once received, and other cases are admitted on a subscriber's order, countersigned by the Medical Officer.

Paying patients are charged partly according to their means and partly according to the accommodation afforded, and in 1898 five paid 6s. a week, three from 5s. to 10s., twenty-seven 10s., four 20s., ten 21s., and two 42s. For the private ward, containing two beds, a charge of 21s. is made, and for that containing one bed 42s. The amount received from patients in 1897 was £121 17s. 10d., and in 1898 £106 14s. 7d.

The income of the hospital in 1898 was as follows:—

Subscriptions . . . . .	£174	9	5
Donations and entertainments . . . . .	190	0	3
Patients' fees . . . . .	106	14	7
Government subsidy, half-year . . . . .	90	4	9

The year closed with a debit balance of £25 3s., but the Government subsidy for the last half-year was owing, and a special grant of £100 which had been allotted was not received before the accounts were made up, so that the hospital is not in debt.

There is no endowment fund and no accumulations, but it is stated that there is no great difficulty in maintaining the hospital, and that the inhabitants of the district respond willingly to calls for the hospital when appealed to, and that considerable interest is taken in its success and welfare. The approximate population of the district served by the hospital is about 7,000, but a number of the patients come from other districts. The nearest hospital is at Gulgong, 20 miles away.

The Annual Report is not very well prepared, and does not show medical and other details which might advantageously be given.

The hospital is not as well kept in some respects as it might be, and there is a want of attention to some minor details; but it is doing good work, and will, no doubt, increase in efficiency.

#### NEWCASTLE HOSPITAL.

The hospital at Newcastle was originally a military hospital belonging to the Imperial Government, and it stood on part of the land occupied by the present building. In 1845 the military hospital was given up to the citizens of Newcastle on the understanding that patients belonging to the military forces were to be admitted on certain conditions; and in 1865 the old building, being unfit for the work, was demolished, and part of the present brick structure erected to take its place. Various additions have from time to time been made, and in 1887 the original plan was completed by the addition of the Hannell Wing at a cost of somewhat over £4,000. The total cost of building the present hospital from its inception to the present date is estimated at about £14,000. The site is a grant from the Crown, and is about 2 acres in area. The hospital stands close to the sea; it receives the full force and freshness of the sea-breeze, and in gales from the east and south-east the position is much exposed. The site is, however, reported on by the medical officers as very healthy, and operation cases are said to do remarkably well in the hospital, notwithstanding the defects to be presently noted and the fact that for years past the municipal authorities have had an extensive rubbish-tip very close to it.

The hospital was faulty in its design in the first instance; it has been patched and added to to meet a growing need for accommodation, and now consists of an aggregation of small and ill-arranged wards, connected by numerous passages. The whole place is difficult to work, and is not equal to the growing needs of the population of the city and surrounding district. In ten years, notwithstanding the establishment in the meantime of the Wallsend hospital with its twenty-two beds, which takes

takes patients from a large district formerly served by the Newcastle hospital, the number of patients and the number of operations have very decidedly increased, as is shown by the following figures :—In 1888 there were 502 in-patients, 33 operations, and 500 attendances of out-patients, and in 1898, 835 in-patients, 291 operations, and 3,104 attendances of out-patients.

The wards for male patients are six in number, and give space for thirty-eight beds, and those for females are four in number, with an accommodation, inclusive of cots for children, of twenty-one beds. In addition, there are isolation rooms, which will accommodate six patients, making up the total number of beds to sixty-five.

The quarters for the resident staff are good, and occupy a considerable part of the total accommodation. The operating room is very decidedly wanting in the necessary arrangements and fittings, and the fittings of the hospital generally, except in some of the newer wards, are old and not altogether satisfactory. The rooms for cases of infectious diseases are detached, and, except as to details, suited for this purpose, but the foundations of some of them appear insecure, and the walls are cracked. The whole of the buildings, owing to the salt atmosphere, the smoke, coal-dust, etc., have a somewhat shabby appearance, but experience has shown that it is almost impossible, without a very large expenditure of labour, paint, &c., to keep buildings in Newcastle in a smart condition.

The hospital is governed by a committee of twenty members with a president and vice-president. Neither the treasurer, secretary, trustees, nor medical officers are members. The Committee meets once a month, and the internal management rests with a house committee of seven members, who are elected quarterly, some of the members continuing in office for more than one quarter so as to ensure continuity of action. The house committee meets once a week. The hon. medical staff consists of eight members, and the paid officers are a medical superintendent at £200 a year (with board and residence); a secretary, who is non-resident, at £150 a year, with 2½ per cent. on all collections received for the registration and maintenance of patients; and a matron at £100 a year (with board and residence). The nursing staff, in addition to the matron, consists of one head nurse at £62, three senior nurses at £41, and ten junior nurses and probationers with salaries ranging from £35 to £17 10s. a year. The remaining members of the staff are a wardman, assistant wardman and porter, cook, two housemaids, and two laundresses. The nurses are trained at the hospital by lectures and demonstrations by the medical officers and matron, and are examined and receive certificates in due course. All the laundry work is done at the hospital.

The number of in-patients in 1897 was 801, and in 1898, 835—596 males and 239 females, and the average daily number resident was 45·4 in 1897, and 47·4 in 1898. No class of cases is refused, and 13 cases of measles, 2 of scarlet fever, 22 of diphtheria, and 58 cases of typhoid were received in 1898, whilst the number of accidents was 148. The cases are largely drawn from the colliery and shipping population, but the hospital has much more the character of a metropolitan than a country or district institution, its situation in a large sea-port, and what is practically a railway terminus, bringing to it a large number of patients who have no local claim on its charity. The cost per bed was £53 8s. in 1897, and £59 6s. in 1898.

The subscribers receive one order for the admission of patients for each £1 subscribed up to £5, but the orders are not much used, and the patients are mostly admitted on the advice of the medical officers. The payments towards maintenance range from 2s. 6d. to 28s. a week in the general wards, and 10s. a day is charged for patients in a private ward, the latter patients being for the most part captains of ships in port. It appears that the inquiries as to the means of patients are somewhat more stringent now than was the case until lately, and the secretary is encouraged in undertaking this duty by a percentage of two and a half on all collections from patients. The number of paying patients in 1898 was 324, as against 511 admitted free.

The out-patients are seen daily by the medical superintendent at a fixed hour, and in 1898 the number of attendances was 3,104, being decidedly in excess of any previous year. The number of individual out-patients was 880. A system of registration has now been in force for eighteen months under which a fee of 1s. is charged

charged, which all who are able are called on to pay, and which entitles them to attend for two months, after which an additional fee is required. Under this system the number of out-patients has been found to increase.

The total collections from in- and out-patients under the new system in 1898 was £1,180 Gs. 3d., and was the largest sum ever received from this source by some £160, and £307 higher than the receipts in 1897. A considerable part, being nearly one-half of this sum, is derived from payments from ships in port, or the agents thereof, for the maintenance of sick seamen, the charge being 4s. a day.

A number of left, stranded, and run-away seamen find their way into the hospital and are a charge on its charity, and on representation being made to the Government, a sum of £300 as a special grant was given to the hospital to meet the cost of treatment of such cases in the past. No record, however, appears to have been kept of the exact number of these cases treated. From 1st July, 1899, a new system in regard to these cases will come into operation, and on production of certificates from the Shipping-master that the patients are stranded seamen, and from the Government Medical Officer of Newcastle that they are fit cases for hospital treatment, the Government will, in future, pay the sum of 3s. daily for their maintenance in hospital.

The financial position of the hospital is as follows:—The building and land are without encumbrance and are vested in five trustees. The only endowment fund is £200 left by the late Mr. Thomas Walker. There was at the end of 1898 a balance in the Savings Bank of £122, and a balance at credit of the current account of £480.

The income in 1898 was as follows:—

	£	s.	d.
Subscriptions and donations ... ..	918	18	11
Fees of patients ... ..	1,180	6	3
Government subsidy ... ..	832	3	7
Special Government Grant ... ..	500	0	0
Interest on deposit ... ..	8	0	0
Miscellaneous receipts ... ..	5	5	0
	<hr/>		
	£3,444	13	9

The subscriptions are stated not to be increasing, and in 1898 they only amounted to about £613, the remainder of the amount shown under subscriptions and donations being made up of sums specially obtained from entertainments, &c., and from the Hospital Saturday Fund. The amount of subscriptions appears to be small considering the size and population of the district immediately served by the hospital.

The hospital is no doubt doing a very useful work under difficulties, and these the committee seems to fully recognise. It has been decided to call for competitive plans from architects, either for a new hospital for 150 beds on the present site, or for such enlargement and alteration of the existing structure as will give accommodation for a total of 150 beds.

#### ORANGE HOSPITAL.

This hospital is a brick building, part of which was erected about thirty years ago, when the institution was established, and the remainder about eighteen years since. It stands on about  $1\frac{1}{2}$  acre of land, which was given by the Government. The total cost of the building has been about £2,800. The number of beds is 29, and of these 21 are set apart for ordinary cases—13 for males and 8 for females, and 8 are used for cases of infectious diseases and other cases requiring isolation. There are no private wards. The administrative buildings, kitchen, &c., are very small, defective, and badly fitted; and the laundry, which is an iron shed, is inadequate for its purpose. The operating-room is a well-lighted and fair-sized apartment. The nurses' quarters are on the whole, satisfactory, but the room for the servants, though of sufficient size, was in an untidy and unsatisfactory state. There is a mortuary removed some little distance from the hospital.

The

The committee of management consists of fifteen members, but it appears that the president and vice-presidents are elected directly by the subscribers, and not by the members of the committee amongst themselves. This committee meets once a month. There is also a house committee which meets once a week, being comprised of two members of the general committee, who act for a month in rotation, with the president as an *ex-officio* member for the whole year. There are two trustees, one of whom is a member of the committee, and two medical officers, each paid a salary of £40 a year. The secretary is also a paid officer, and receives the same rate of salary. The nursing staff consists of a matron, who was trained at the Sydney Hospital, and who receives £75 a year, and three nurses, who receive £36 a year each. Neither of the latter is a certificated nurse, and it appears advisable in a hospital of this size that one at least of the nurses should hold a certificate, as she should be competent to take the matron's place during her absence. There is no special attempt at teaching the nurses, and we find that two of the existing staff have had no experience of nursing beyond what they have gained at the Orange hospital. There is a wardsman, who receives £35 a year, and the remaining members of the staff are a kitchen-maid, housemaid, laundress, and messenger. No cook is employed, as the cooking is done by the kitchen-maid, under the supervision and with the help of the matron, an arrangement which is clearly unsatisfactory.

All classes of cases are admitted, some directly by the medical officers, others under orders given by subscribers, and with the latter a certificate is required in each instance from the medical officer that the patient is a fit subject for hospital treatment. All cases sent by the Government Medical Officer or by the police are admitted direct. The number of patients treated in 1897 was 313, and the average daily number 16·3. The number in 1898 was 332, and the daily average number 17. The cost per bed for 1897 was £62 18s., and for 1898, £54 15s. There are no out-patients. The sum received from patients during 1898 was £75 0s. 11d., and inquiries showed that this was made up of amounts varying from under 5s. to 30s. a week, but the latter amount had only been received in a few instances.

The income of the hospital for 1898 was as follows :—

	£	s.	d.
Donations and subscriptions	305	11	9
Proceeds of entertainments and Hospital Saturday collections	198	4	10
From patients	75	0	11
Government subsidy	497	4	11
	£1,076	2	5

The hospital has no endowment fund, and the current account shows a debit balance of £217 0s. 3d. at the end of last year. The items of expenditure in 1898 call for no special comment, except that £15 6s. 11d. appears to have been paid for interest.

Water is laid on to the hospital from the town supply, and is connected with the bathrooms and other places where required, but there is no hot-water supply in either the bathrooms, wards, or sinks, where it is clearly necessary, considering the climate in winter.

The closets are on the earth system, and the night-soil is burned in an incinerator of simple construction on the grounds of the hospital without apparently any offence.

The hospital is, on the whole, clean, but there is a want of attention to minor details, and the bedding and other necessaries are not as satisfactory in several particulars as could be desired.

We have no record for 1898 of the districts from which patients came, but of the total number of cases admitted during 1897, 194, or 66 per cent., came from Orange and the immediate district; and 63, or 21 per cent., were travellers; 34, or 11 per cent., appear to have come from other districts.

The committee brought specially under our notice the necessity for wards for infectious cases, the rooms now used for this purpose not being by any means satisfactory, as they are in the main building of the hospital, and do not provide for the necessary isolation.

We

We gather that the management of the hospital is not working altogether without friction, owing to some differences of opinion on the part of members of the committee and the medical officers with regard to the qualifications and capabilities of the matron.

#### PARRAMATTA DISTRICT HOSPITAL.

This institution was first started by the Imperial Government in the early days of the Colony as a Civil and Military Hospital; and in 1849 the buildings, with 12 acres of land, were handed over to the inhabitants of the town for hospital purposes and have been so used ever since.

The site is a good one. It is in the centre of the town and yet in an open situation, with an outlook over the Park; but above half the land is liable to flood.

The main building is the original structure built many years ago. The rooms in it are gloomy, wanting in height, and not suitable for hospital wards. Constant expense is incurred for repairs, and it is very difficult to keep the building free from vermin. About sixteen years ago new kitchens, laundry, and stores were erected, and about two years since two new wards, one for men and one for women, were thrown out at the back of the main building as the first part of a plan for the complete rebuilding of the hospital. At the same time a small but well arranged detached cottage for cases of infectious disease was built. The Board-room and offices of the hospital, and also the operating-room, are detached, but connected by a covered-way, and the mortuary is a substantial isolated structure. On the hospital estate is a cottage, which is let at £24 a year, and also a small building in which the gardener of the hospital resides. The nurses and staff are lodged in the upper floor of the main building in cubicles which are neither light nor well ventilated.

There is, of course, no record of the cost of the original structure, but the two new wards and the cottage for infectious diseases are stated to have been built for £1,200; and if so, the hospital authorities have obtained good value for this outlay.

The hospital is governed by a committee of fifteen members, from whom the president, vice-presidents, and hon. treasurer are elected, and it meets once a month.

The house committee, charged with the internal administration, is composed of eight members, and appears from the annual report to meet about twice a month or oftener.

The medical staff is unpaid and consists of one consulting and three honorary medical officers, and the three latter are among the elected members of the committee.

The secretary is not a member of the committee, and receives an honorarium of £20 a year.

The nursing staff consists of a matron paid £65 a year; two nurses—one paid £40, and one £30; and four probationers who receive £15 in their first, and £25 in their second year of service. The probationary period only extends over two years, and during that time practical instruction is given by the matron and special teaching by the medical officers, and at the end the nurses are examined and receive certificates if found competent. It cannot, however, be considered that either the teaching or the experience gained are equivalent to that acquired after three years service in one of the large metropolitan hospitals, and it is impossible to regard with favour a system which turns out a class of nurses who are likely to be of a somewhat inferior grade to those trained on broader lines. The remaining staff consists of a wardman, a gardener, a cook, a housemaid and a laundress. On the whole, the staff is a somewhat full one; but it serves also the isolated cottage for infectious diseases, in which, though the patients may be few, constant supervision is necessary. The hospital has accommodation for twenty-four ordinary and four infectious cases, and the following return shows the total number and the daily average number resident for the last two years:—

					Total Number Treated.	Daily Average Number Resident.
1897	...	...	...	...	285	18.8
1898	...	...	...	...	280	19.9

The cost per bed in 1897 was, after deducting the cost of new buildings, £72 7s., and in 1898 it was £72 10s., both of which may be considered somewhat high. The isolated ward, as requiring extra nurses, &c., no doubt adds to the general cost; but it is carrying out important work, and provided for fifteen cases of diphtheria, twelve of scarlet fever, and ten of measles, in 1898. Besides these, fifteen cases of typhoid were treated, and it does not appear that any cases of serious illness are refused admission.

The published Report of the hospital is defective, as not showing the classification and number of the cases treated; and it is advisable also that the average daily number resident and the annual cost per head should be distinctly shown in this document.

The system of giving subscribers of one guinea an order for the admission of a patient in return for the subscription is in use, but urgent cases are always received without these; and all cases sent by the police or the Government Medical Officer of the district are admitted at once.

The committee complain of the number of cases they are compelled to admit who come as vagrants and travellers from other districts and have no claims on the hospital, and give the following return (which, however, is not very conclusive on this matter without some definition of what is included under the terms Southern, Northern, and Western Districts) from which all patients came who were admitted in 1898:—

Parramatta	...	...	...	...	...	...	96
Granville and Southern Districts	...	...	...	...	...	...	65
Northern Districts	...	...	...	...	...	...	70
Western Districts	...	...	...	...	...	...	25
							256

The out-patients, including casualties, numbered 283 in 1897 and 722 in 1898, and no explanation is forthcoming as to the increase. The casualties are attended to at the hospital, but the majority of the other cases are seen at the residences of the medical officers and go to the hospital for medicine.

There is no private ward, and the room which was formerly used as one is now appropriated to the general purposes of the hospital, as the committee did not consider they were fully repaid by the charges made.

The financial position is as follows:—The hospital is free from debt with the exception of an overdraft on the current account of £131 14s.

It has a fund of £1,070 set aside, of which, so far as £600 is concerned, the interest only, under the direction of the donors, can be spent. The remainder of the amount has not come to the hospital under any definite conditions. In addition to this there is a building fund which has £102 to its credit.

The income for 1898 was as follows:—

Subscriptions, donations, &c.	...	...	...	...	£528	6	6
Interest on deposit	...	...	...	...	23	13	6
Patients' payments	...	...	...	...	143	19	9
Rent of cottage	...	...	...	...	24	6	0
Minor receipts	...	...	...	...	2	18	3
Government subsidy	...	...	...	...	632	14	3
Government subsidy to building fund (on amount raised by a bazaar).					147	3	10
Unclaimed poundages	...	...	...	...	11	13	5
					£1,514	15	6

The hospital is now worked with some difficulty owing to the very unsatisfactory condition of the older part of the building, the fact that the new wards have no special sanitary arrangements, and that the whole Institution may be considered as in a transition stage; but it is clean and well kept, and is evidently the subject of great interest to the officers and committee of management.

## WALLSEND MINING DISTRICT HOSPITAL.

This hospital was built in 1892 on a well-situated plot of land, in area about three acres, the gift of the Wallsend Colliery Company. The original cost of the building was a trifle under £4,000, and recent additions have entailed a further expenditure of £600, making a total of £4,600; a cost per bed of £209. The hospital is free from debt, and is held by the trustees. Provision is made for twenty-two beds, distributed in one ward for men, one ward for women and children, and two private wards each for a single patient. There is no isolated ward for infectious diseases. In the main building are the matron's quarters and an operating-room, and in an annex, connected by a covered way, are the nurses' and servants' quarters, kitchen, laundry, store-rooms, etc. The mortuary and ambulance-shed are detached buildings. The whole premises are well-designed, and very great attention has been paid to details of construction, sanitary fittings, etc., so that it is in most respects an excellent model for hospital architects. The operating-room is well-lighted, well-arranged, and well-fitted, and, except as to its floor, all that an operating-room should be. The staff is satisfactorily lodged, and the kitchen and offices, though small, are sufficient. The drainage of the hospital has been made the subject of considerable thought and care, and is so disposed as not to cause offence.

The hospital is governed by a committee, which meets once a month, consisting of a president, vice-president, honorary treasurer, three trustees, and nine members, and two of the five medical officers act on the committee. The executive committee consists of the officers—president, vice-president, and honorary treasurer, the medical officer for the month, and four members of committee, who change every three months. This committee, by the rules, meets once a fortnight. The secretary is a paid officer, receiving £25 a year, and is not a member of the committee.

The honorary medical staff now numbers five. The nursing staff consists of a matron at £60, two certificated nurses at £35 each, and one probationer at £12 a year. No training except in practical work is attempted. The other staff consists of three—a wardsman, cook, and laundress. All the laundry work is done at the hospital. The number of patients in 1897 was 186, the daily average number resident 15·4, and the cost per bed £64 6s.; and in 1898 the number was 184, the daily average number resident 14·4, and the cost per bed £80 7s. No explanation was forthcoming as to the very serious increase in the cost during the latter year.

The hospital is mainly for accident and surgical cases. No tabulated list of diseases is published, but inquiries showed that the number of medical cases is comparatively few. The operations alone numbered 128 in 1897, and 140 in 1898. Cases of infectious diseases are not received, and such as occur in the hospital are isolated as far as possible in the private wards. The only cases absolutely excluded are those of phthisis and incurable diseases. There are no out-patients.

The rules provide for the admission of patients under subscribers' orders, but this system has practically fallen into disuse, and it is through the secretary and the medical officers that patients gain admission to the hospital. The amount received from patients in 1898 was £45 4s. 6d., and this was taken chiefly in sums ranging from 2s. 6d. to £1 1s. a week. The charge for the private wards is nominally £3 3s. a week, but £2 2s. is the sum more usually paid, the committee determining what charge shall be made in each case.

The financial statement shows that the income in 1898 was as follows:—

Subscriptions	...	...	...	...	£382	12	9
Donations	...	...	...	...	148	14	7
Patients	...	...	...	...	45	4	6
Government subsidy	...	...	...	...	388	11	3
Special grant	...	...	...	...	300	0	0
					<hr/>		
					£1,265	3	1

The special grant was given to provide additional buildings and equipment. There was a credit balance at the end of the year of £709 5s. There is no endowment or other invested funds.

The

The subscriptions come in a very large degree from miners, but have rather fallen off than increased during the last year or two. The committee individually and collectively are, and with reason, very proud of their hospital, and evidently take a keen interest in its management and welfare. On the whole, its condition is commendable, but some further attention to details on the part of the resident staff, both with regard to the comfort of individual patients and the condition of the buildings and offices, is advisable.

#### WELLINGTON HOSPITAL.

This hospital was established thirty-five years ago, and is a brick building standing on a site, which does not appear to be altogether suitable, near the Macquarie River. The area of land, which was given by the Government, is 5 acres. We were unable to ascertain the cost of the premises owing to the length of time which has elapsed since they were erected. The number of beds is seven—five for males and two for females, and there are, in addition, two rooms which can be used for purposes of isolation in cases of infectious diseases, though one of these is now used as a storeroom. There is no private ward, and no operating room. The hospital is ill-built, very antiquated as to its arrangements, and altogether unsuitable for its purpose. There are no proper fittings either in the room used as a bath-room or elsewhere. The floors are old, with wide spaces between the boards, and the walls are unplastered. Pit closets are in use, and there is a want of proper drainage. The hospital altogether is in a very unsatisfactory condition, and we found it, at the time of our visit, ill-kept and in some respects far from clean. The bedsteads and the furniture generally are of a very primitive character. The rooms occupied by the members of the staff were in a very untidy condition.

The kitchen is in a detached building connected with the hospital by a covered way, which, however, affords but little protection from the weather. Near the kitchen are the two rooms abovementioned for infectious cases, and another room, all of which were in a most untidy and unsatisfactory state.

The committee is elected in accordance with the Hospitals Act, and consists of fifteen members, from whom the president, vice-president, hon. treasurer, and hon. secretary are elected. There are three trustees. The committee meets once a month; and the house committee, which consists of three members elected for a month, together with the three executive officers as *ex officio* members, meets once a week.

The medical officer is paid £70 a year—an amount which, considering the small average number of patients, is certainly large. The nursing staff comprises a wardsman and his wife, who are paid £75 a year. Neither possesses a proper certificate of qualification for the position, though both were employed for some little time at the Coast Hospital. The hospital in this respect does not comply with the present requirement of the Government that the matron or head of an institution of this kind should be a certificated nurse. A servant is occasionally employed at 8s. a week.

The number of patients treated in 1897 was ninety, and the daily average three and a half; the number in 1898 was eighty-eight, and daily average very nearly three. The cost per bed in 1897 was £128 5s., and in 1898 £133 12s.

In the latter year a sum of £64 9s. was spent in improvements, but these do not appear to be other than the necessary repairs and minor alterations which should be included in the annual cost, so that the maintenance rate for both years is very high.

There are no out-patients treated. The sum of £25 7s. 6d. was contributed by patients in 1898, and it does not appear that any higher sum than £1 a week is ever asked for or received.

Patients are admitted on subscribers' orders, subject, however, to a certificate by the doctor that they are fit cases, but all patients sent by the police or Government Medical Officer are admitted direct.

## cix

The income of the hospital for 1898 was as follows:—

Subscriptions and donations ... ..	£154	5	0
Contributions from patients ... ..	25	7	6
Poundage fees, &c. ... ..	11	5	10
Government subsidy ... ..	156	14	4
	<hr/>		
	£317	12	8

The hospital has no endowment or reserved funds. At the close of the year there was a balance at credit of the current account of £24 6s. 10d.

The list of subscribers is a very small one, and the greater part of the receipts is obtained from entertainments given specially for the benefit of the hospital.

The condition of the hospital as regards the building, equipment, and the management, we consider to be very unsatisfactory. The arrangement under which a married couple with a rapidly-increasing family have charge of an institution of this kind, with only occasional help, appears to us to be one that should be altered at an early date, and a matron, who is a certificated nurse, appointed in accordance with Government regulations applying to subsidised hospitals. The whole surroundings of the hospital were untidy, and the wardman is allowed to keep a number of fowls, which, as we saw, were allowed to get into the store-rooms and other places from which they should have been excluded. The wardman is allowed to supply the hospital with poultry and eggs.

#### HAWKESBURY HOSPITAL, WINDSOR.

This hospital forms part of the Hawkesbury Benevolent Asylum, which is managed by the Hawkesbury Benevolent Society. This society has a curious history, which is set forth in an interesting pamphlet by the Hon. W. Walker, M.L.C., who is the president. It appears to have been instituted in 1818 for the relief of such poor persons belonging to the district "as through age, accident, or infirmity are unable to support themselves," and has been in more or less active existence ever since. Its operations were confined at first to the granting of out-door relief, and its funds were obtained partly by subscriptions and donations, some of which were in cattle, and others in wheat, maize, and other produce, and partly from a cattle-station on a Government grant at Liverpool Plains, on which there were at one time upwards of 2,000 head of cattle. In 1834 the Government granted 1 acre of land in the town of Windsor, and on this an asylum was erected, which is standing to this day, but which has not for some years been used for asylum or hospital purposes.

In 1845, the Government having some time before discontinued the hospital for prisoners at Windsor, the society conceived the idea of uniting an hospital to the asylum, and the hospital buildings in Macquarie-street, which had been erected in 1820 by the Government, were handed over to the society with an annual grant of £200, conditionally on another £200 being raised by subscriptions. The asylum was some time after removed to the hospital buildings, and the two departments have ever since been carried on jointly under one roof.

The society has had, financially, a somewhat chequered career, owing to a long continuance of law-suits and disputes as to the boundaries of its station property. It lost about two-thirds of its station, and in 1862 the stock was sold, and the remaining land let to a tenant. In 1887 the income of the society was stated to be £1,250 from all sources, but this has much decreased, and in 1898 it was only £766, as set forth in the annual report, as follows:—

Subscriptions and donations ... ..	£156	13	5
Hospital fees—fees from patients ... ..	61	2	0
Government subsidy ... ..	213	12	0
Unclaimed poundage ... ..	13	0	6
Rents ... ..	161	0	0
Interest on invested funds ... ..	155	0	0
Other receipts ... ..	5	14	6
	<hr/>		
	£766	2	5

The

The property of the institution is as follows :—

Fixed deposit, Bank of New South Wales ... ..	£3,500
Fitzgerald Bequest ... ..	1,200
Land, town of Windsor ... ..	1 acre.
„ adjoining town of Windsor ... ..	13 acres.
„ town of Wilberforce ... ..	10 „
„ Currency Creek ... ..	500 „
„ Mooki, Liverpool Plains ... ..	1,369 „

Also, hospital premises and the land on which they stand at Macquarie-street and old asylum premises near the railway station, Windsor.

The society is governed under a Special Act of Parliament, 4 Vic. No. 3, passed July 21, 1840, but has recently applied to the Government to pass a new Act amending its constitution and allowing it to sell some of its landed and other property.

The hospital cannot be considered altogether apart from the Benevolent Asylum, since both are carried on in one building under one management, and without any separate books showing the cost of each department. The total accommodation provided is for 56 inmates; 19 beds are set apart, ordinarily, for hospital and 37 for asylum cases. Of the total number of beds, 36 are allocated to men and 20 to women.

The asylum wards are on the ground-floor, and the hospital wards on the upper floor of the two-storied building, but in times of pressure on either department there appears to be some encroachment on the other. The women's wards are not nearly occupied to the extent of the capacity, but the men's wards, especially in the asylum department, are overcrowded, and the amount of cubic space is clearly insufficient.

The qualifications for admission to the benevolent department are age, infirmity, and poverty, together with a six months' previous residence in the district. When the institution is full cases are sent on to the Government Asylums for the Infirm and Destitute at Parramatta and Liverpool.

The main building is substantially built of brick in two storeys, and the committee has recently erected a new central staircase, built a verandah and balcony, and effected other improvements, including repainting, and numerous minor repairs; but the structure is, in its present condition, inherently unfit for hospital purposes, and only very extensive alterations, which would include new and larger windows, new ceilings, new floors, better ventilation, and other improvements, would make it fit. It has throughout the old peculiar poor-house smell, which anyone familiar with old buildings used for hospital or asylum purposes at once recognises; and the medical officers report that despite all precautions their operation cases do not do so well as they would in a more wholesome atmosphere.

The floors and skirtings are so old that it is almost impossible to keep them clean and free from vermin, and the wooden ceilings with wide joints are also a harbour for these pests.

The dispensary and office are in the main building, and all the other offices, including two rooms for isolation, are detached, and consist, with the exception of the matron's quarters, which are good and sufficient, of a number of ancient structures which are neither in good repair, sightly, nor creditable to the society. There is no operating-room, and no proper accommodation for the nurse and wardsmen, who sleep in the female and male wards respectively, an arrangement obviously objectionable, and calculated to deter suitable persons from accepting the appointments.

The closets are on the earth-pan system, and the night-soil is buried in an adjoining area of land used as a garden, which, however, does not appear to us of sufficient size for such use. Water is obtained from the town supply, which we are told is not altogether satisfactory. No hot-water supply is laid on to the main building, but for the baths, which are in an outhouse, hot water is obtained by pipes from the kitchen range.

The

The institution is managed by a committee, which meets monthly, and consists of a president, vice-president, honorary secretary, honorary treasurer, seven life members, and eight members elected annually. From this body a house or visiting committee of three members is appointed monthly, meeting once a week. The trustees are five in number, and are all also office-bearers or members of the committee. There are two honorary medical officers who are amongst the elected members of the committee; and the staff consists of a matron, who is also superintendent, paid a salary of £80; a nurse, who is not certificated, £39; a wardman, £24 6s.; a cook, £31 4s.; and a laundress, £31 12s. a year.

The asylum inmates render some help in gardening, and receive gratuities for so doing.

The number of patients in 1897 was 121, and the average daily number 27; and the number in 1898 was 148, and the daily average 32. The cost per bed was £25 19s. in 1897, and £26 17s. in 1898; but this cost cannot fairly be compared with that of other hospitals, as the asylum patients, who cost less than hospital patients, are a majority of the number. The daily average number of hospital cases in 1898 was 8.

The number of out-patients does not exceed 30 annually, and consists chiefly of minor casualties.

The hospital patients and the other inmates are admitted under the old system of subscribers' orders, but in the case of the former the medical officers certify as to their fitness for hospital treatment before they are received.

The payments by patients in 1898 amounted to £61 2s., and this sum was made up of payments ranging from 10s. to two guineas a week, which is the maximum charge. As, however, there are no private wards, the latter amount is only received in very exceptional cases.

The society furnished out-door relief at a cost of £68 6s. 8d. during 1898, most of the articles being given from the stores of the institution, or by means of orders upon tradespeople.

The financial position of the society has already been dealt with, and it only remains to point out that the current account shows a credit balance at the end of 1898 of £136 3s. 4d.

The number of subscribers, considering the extent of the district, is a very small one, and it is apparent that the fact of the society possessing a considerable amount of property tends, in the first place, to excite individual benevolence; and in the second, to lessen the interest of the inhabitants generally in an institution the claims of which are not pressed upon them, and which they are not called on to support.

The main part of the building, and especially the rooms used for hospital wards, are clean and well kept so far as is possible in such an old structure, but on the whole the arrangements are not satisfactory, and it does not seem expedient that asylum and hospital patients should ever be accommodated under one roof. The asylum inmates are in no degree better provided for than they would be in one of the Government asylums for the infirm and destitute, and we think it should be a matter for earnest consideration on the part of the committee whether in obtaining a new Act of Parliament provision should not be made for giving up the asylum and devoting the funds and energies of the society entirely to hospital work. In any case very considerable alterations are necessary before the hospital department can be placed on a satisfactory footing, and a part of the accumulated funds might advisedly be devoted to building a new hospital on modern lines, and with all the necessary equipment for successful work.

#### ALBERT MEMORIAL HOSPITAL, WOLLONGONG.

This hospital was founded in 1846, and was built on a site altogether unsuitable. About twelve years ago an additional piece of land was acquired by purchase, and additions to the premises were made in the shape of a cottage for infectious diseases,

diseases, costing nearly £450. In 1890 a new ward was erected, and various improvements carried out at a cost of about £1,500. The total cost of the buildings, land, and furniture up to date has been £3,250, or at the rate of £171 a bed. Before commencing the additions in 1890 a new site was sought, with an idea of removing the hospital; but the sums required for suitable locations were so large that neither the committee nor the Government, whose assistance was sought in the matter, felt justified in incurring the expense.

The area of land is about 1 acre, and the buildings, except the infectious diseases cottage (which is of weatherboard), are of brick with slate roofs. The main building contains the committee room and office, the matron's and nurses' rooms, and the ward for women, and on to these is joined, by a verandah, the new ward for men. The women's ward is somewhat gloomy, owing to the height of the windows from the ground level, and both this ward and other parts of the hospital are made unnecessarily dark by a general frosting of all windows, which completely prevents any outlook by the patients, and is clearly unnecessary as well as objectionable. There are no private wards. The kitchen, laundry, and the minor accessory buildings are good and sufficient, and there is a good and well-equipped operating-room. The number of beds in the main wards is twelve—eight for men and four for women, and the cottage for infectious diseases will accommodate seven patients in two rooms.

The matron's, nurse's, and servant's quarters will be ample and satisfactory when a room now in course of erection is completed.

The hospital is governed by a committee of twelve members, together with president, vice-president, and hon. treasurer, who meet once a month, and depute some of their functions to a visiting or house committee consisting of three members, elected every four months. There are three honorary medical officers, none of whom have seats on the committee. Of the three trustees, one is a member of the committee.

The paid staff of the hospital is as follows:—Matron, who is a trained nurse, at £53 a year; nurse, at £20 a year; and a general servant, at 12s. a week. A man is engaged for gardening and other purposes when required, and the secretary receives £25 a year.

The number of patients in 1897 was 55, and the daily average 2·8; and the number in 1898 was 53, and the daily average number 3·1. The cost per bed in the latter year was £130 5s. There are no out-patients.

The in-patients are admitted on subscribers' orders, subject to examination by one of the medical officers. All accident, emergency, and police cases are at once received.

Patients are expected to pay, if able, up to 2s. 6d. a day, but no larger amounts are received.

The income of the hospital in 1898 was as follows:—

Subscriptions	...	...	...	...	£27	3	0
Donations	...	...	...	...	100	7	0
Payments by patients	...	...	...	...	41	1	1
Interest	...	...	...	...	55	0	0
Government grant	...	...	...	...	50	0	0
„ subsidy	...	...	...	...	74	13	2
					<hr/>		
					£348	4	3

The hospital has a sum of £1,000 invested in Government debentures, which was left by Mr. John Bright, on the understanding that the interest only was to be used; and it has, at fixed deposit, also a sum of £500, which has accrued from savings. The statement of account for last year shows a credit balance of £19 13s. 2d.

The number of subscribers at £1 each is twenty-seven only, which, considering that ten of these are the heads of collieries or other large works, is a very small number for this large district. As the remaining funds, collected from the public in 1898 by way of donations, proceeds of entertainments, &c., amounted only

only to £100 7s., the hospital cannot be considered as being well supported by the inhabitants. The district extends to Albion Park on the south, where it meets the Kiama hospital district, and Corrimal on the north, where the Bulli district commences. It includes the town of Wollongong and the mining townships of Kembla and Keira. The patients, with few exceptions, come from the district itself.

On the whole, the hospital appeared well kept, but there was a want of attention to minor details. Its general equipment is satisfactory, and the general management good, but the infectious diseases cottage, which was not being used, was untidy.

#### WYALONG HOSPITAL.

This hospital was opened in April, 1895, but for six or seven months prior to that date accommodation had been provided for patients in tents. The building, which stands in a site of 17 acres granted by the Government, is constructed of wood and iron. It contains two wards, one with six beds for men, and the other two beds for women. Its cost was £565, or at the rate of about £70 per bed. There is no proper operating-room, the dispensary, which also has to serve as the matron's bedroom, being used for that purpose when necessary.

The hospital is managed by a committee of nine members, from whom a house committee of three members is appointed.

The staff consists of a medical officer, who is paid £160 a year for his services, a matron, who is a certificated nurse, paid £60 a year, and two probationers. The latter do not receive any salary for the first six months of appointment, but after that time they are paid £32 a year, which includes £6 for uniform. There are also a wardman, a cook, and a general servant. The secretary receives an allowance of £39 a year, and is paid a commission of 5 per cent. on all collections made by him in town, and 7½ per cent. on those in the country.

Patients are admitted on the system of subscribers' orders, subject to the medical officer's certificate of their fitness for hospital treatment. This system is approved on the ground that it aids in bringing subscriptions to the hospital, and for this reason it appears an attempt made by the committee to abolish it was abandoned.

The number of patients treated in 1897 was 114, and in 1898, 112, the daily average in each year being 9 and 8·6 respectively. The average annual cost per bed was £91 7s. in the former year, and £70 1s. in the latter.

There is no private ward, and the payments by patients are very few. In 1898, £11 10s. only was received from that source.

The revenue of the hospital in 1898 was as under:—

Subscriptions and donations	...	...	...	£217	2	6
Government subsidy	...	...	...	278	2	1
Proceeds of balls, &c.	...	...	...	102	11	7
Patients' payments	...	...	...	11	10	0
				<hr/>		
				£609	6	2

and the accounts closed with a small credit balance.

The hospital serves a large district, the population of which appears to be increasing, and the accommodation it provides is inadequate to meet the calls made upon it. The average daily number of patients is an indication of the strain put upon the institution. Many accident cases are received requiring surgical attention, and it is considered by the medical officer that when severe they should be isolated from the general wards, where it is said their treatment now is not always attended with success.

There is no isolation ward for the reception of infectious cases, but a case of scarlet fever and two of measles were treated at the hospital last year. The nearest other hospital is at Temora, about 40 miles away.

The hospital appears to be well and cleanly kept, but it is not well equipped.

## Appendix F.

## HOSPITAL REFORM ASSOCIATION (ENGLAND).

## PROPOSALS FOR THE REFORM OF OUT-PATIENT AND IN-PATIENT DEPARTMENTS.

Mr. T. Garrett Horder said that in drawing up any scheme for the better administration of medical relief in our hospitals, infirmaries, and dispensaries, we must bear in mind the necessity of carefully avoiding any measures that would in any way lessen the usefulness of these institutions in relieving cases of urgent illness.

The points which we should aim at are briefly the following:—

1. To lessen the large number of people who now resort to the hospitals when suffering from minor or trivial ailments.
2. To restrict treatment, both in the in-patient and in the out-patient departments, to people who are not in a position to pay private practitioners.
3. To abolish subscribers' recommendations.
4. To limit the number of new cases to be dealt with by each medical officer in the out-patient department.
5. To bring about a more intimate and cordial relationship between the hospital staff and the practitioners resident in the district surrounding each hospital.

It seems manifestly impossible to draw up any scheme which shall prove suitable to all hospitals. It will be our endeavour, therefore, to sketch out schemes which will suit

- A. The large general hospitals.
- B. The smaller general hospitals.
- C. The special hospitals.

## A.—THE LARGE GENERAL HOSPITALS.

## I.

It cannot be denied that at the present time most hospitals treat a very large number of people in their casualty department whose illnesses are of a very trivial description. Formerly that department was used for the treatment, as its name implies, of casualties; that is, cases of accidents and of sudden and acute illness. It has been argued by some prominent hospital managers that it is difficult to define exactly what are trivial and what are not trivial cases. In the great majority of instances, however, no such difficulty exists. A skilled resident medical officer should be appointed at all the large general hospitals to deal with such cases. This idea has been successfully carried out in St. George's and at St. Thomas's Hospitals for some years past, and quite recently St. Mary's Hospital has adopted a similar plan.

## II.

The Hospital Reform Association has urged the necessity of restricting all out-patients to those bringing a recommendation from a medical man, and although that particular recommendation has not met with much support from members of the medical staffs, yet it would seem on the whole that it is the best, easiest, and simplest way of limiting hospital treatment to those who are in need of it. To meet the objections which have been made to that plan it will be as well to propose some modification of it.

In dealing with this question we have to consider the eligibility of patients from two points of view: First, do the patients stand in need of hospital treatment; and, secondly, are they unable to pay for proper treatment outside the hospitals? And, again, these patients must be subdivided into two classes: (1) those suffering from such ailments as are ordinarily treated by general practitioners; and (2) those suffering from special disorders (for example, ophthalmic, aural, gynecological cases) which are not generally treated by general practitioners. To make this more clear it may be said that whereas a patient suffering from chronic bronchitis would be ineligible for hospital treatment, a patient suffering from cataract would be perfectly eligible.

Now the question arises: What should be the *modus operandi*? Should the medical fitness of a patient be decided first, or should the hospital authorities first make inquiries into the financial fitness? This is of great importance, because it is perfectly manifest that no inquiry that is conducted at the hospital will prove of any real use. To make certain that the patients are fit and proper persons for gratuitous treatment it is absolutely necessary in the majority of instances for the inquiry officer to visit the homes of the patients. As it might happen in some cases that this delay would prove hurtful, the best plan would be that the resident physician should first decide the medical fitness of patients, and after they have received first aid to refer them to the inquiry officer for particulars as to their circumstances.

The suggestions made by Dr. Turner in the December number of the *St. Thomas's Hospital Gazette* should be adopted—namely, (1) that a notice should be placed in the out-patients' room to the effect that patients bringing notes from medical men should receive first consideration; and (2) that the medical men residing in the district of the hospital should be furnished with notes by the hospital authorities.

In the case of patients coming from a distance it should be made an absolute rule that they should bring a note from a medical man. That hospitals are much abused by this particular class is well known; and it is obvious that the services of an inquiry officer could not be utilised in such cases. Many instances have come under the notice of the Hospital Reform Association in which people suffering from some trivial ailment have spent as much money in travelling to a hospital as would furnish a specialist with his ordinary consulting fee.

With respect to in-patients, except in cases of real urgency, hospital managers should make inquiries before they are admitted. Such a regulation would not apply to patients recommended by medical men.

The suggestion of the Charity Organisation Society with regard to cases obviously destitute—namely, that they should be referred to the Poor Law—is a good one, and one that would benefit the patients. At the same time the existence must be admitted of a class of people who, while they are too poor to obtain proper nourishment, are yet of a class whom it would be cruel to pauperise. For this particular class the resources of the Samaritan Society should be available.

## III.

## cxxii

## III.

We are given to understand that at many of the large general hospitals in the metropolis patients without subscribers' letters have the same facilities for treatment as those supplied with such letters. It will be found, I venture to say, that the hospital funds will not suffer to any appreciable extent if this system of recommendation by subscribers is done away with. There can be no doubt whatever that the system leads to a good deal of abuse, and that as long as it remains in operation it will be almost impossible to check that abuse. However stringent the regulations made by hospital authorities for the admission of patients, it will be found that subscribers will certainly fail to co-operate with those authorities in seeing them carried out.

## IV.

It may be said that a regulation as to the limitation of the number of new cases has answered so well at St. George's and at St. Thomas's Hospitals that it would answer equally well at other large hospitals. The resident physician would have the selection of cases, and naturally would select those which, in his opinion, stood most in need of immediate treatment. It must not be forgotten that, as a rule, the majority of out-patients suffer from chronic illnesses, and therefore do not suffer any ill-effect from having their treatment delayed for a few days.

## V.

If the plan recommended were loyally carried out by hospital managers, they (the managers) would find a disposition on the part of medical men to take a greater interest, not only in the medical work, but in the financial work in the hospitals. Nothing but good can result from the establishment of a more cordial relationship between the hospital physicians and surgeons and the outside practitioners. The subject of a wage limit for hospital patients has not been mentioned, because it is believed that such a limit is liable to act harshly. At the same time, the hospital authorities should come to some agreement amongst themselves on the subject—an agreement which would allow their inquiry officers some discretion in exceptional instances.

## B.—THE SMALLER GENERAL HOSPITALS.

It is obvious that the plan recommended could not be carried out in its entirety by small provincial hospitals, and it is therefore necessary to propose some alternative plan. I have been much impressed with the system adopted at Oldham, Sunderland, and Dorchester, and they deserve the consideration of managers of other country hospitals.

In Oldham Infirmary patients have to appear before what is called an Admission Committee, and have to prove to the satisfaction of that committee that they are not in a position to pay for treatment. The work of the committee is made easier by the fact that the benefits of the institution are restricted to inhabitants of the borough. The fact that out of a population of about 130,000, only 4,400 availed themselves of the benefits of treatment in the out-patient department in the year 1892 proves to my mind that the system adopted there is one to be commended. And belief in it is strengthened when we find that the working classes of that town subscribe something like £5,000 a year to the funds.

In the case of Sunderland Infirmary it appears that the out-patient department is limited to the treatment of in-patients who have been discharged, but who still require further attention, and to cases of accidents and sudden illness. In Sunderland, as in Oldham, the working classes subscribe large sums towards the support of the institution. In Dorchester, I am informed that the system of examination by an Admission Committee before treatment works well, and that little abuse exists.

Supposing that small provincial hospitals adopted the plan pursued at Oldham and Dorchester, I would suggest that the medical officers should have instructions to reject any cases which, in their opinion, were not in need of hospital treatment. In Sunderland, cases that appear unsuitable from a medical point of view are referred to the Provident Dispensary.

## C.—SPECIAL HOSPITALS.

It is plain that another system must be adopted for these. We have our opinions respecting the need of such a large number of hospitals for special diseases, but we are bound to recognise the fact that they exist, and that they are, as is proved by the report on them of the Hospital Reform Association, much abused. The subject teems with difficulties, and we feel that it is only by the co-operation of the medical officers attached to them that we can possibly hope to overcome these difficulties. I would venture to suggest that all patients should be requested, before being treated, to bring a note from a medical man stating that the patient required special treatment, and was not in a position to pay the specialist's fee for that treatment. The effect of such a regulation would be to diminish the number of people who now resort to such hospitals, and to bring the specialists into closer relation with the general practitioner. It must, I think, be admitted that a large number of persons resort to special hospitals who could be treated quite as efficiently by general practitioners. At the same time, the fact must be recognised that in some instances patients who require the aid of specialists are not recommended by their medical attendants to consult them.

Looking at the question from an all-round point of view, I feel that it is very desirable to bring the specialists into a closer relationship with the family doctors; I feel also that there is a large and deserving class of persons who, although well able to pay a moderate fee, are not well enough off to pay the ordinary consulting fees of specialists. We therefore think that to avoid the abuse of special hospitals on the one hand, and on the other hand to make provision for the class indicated, the medical officers attached to special hospitals in the metropolis and in the large provincial towns should take this matter into their consideration, and see whether they could not adopt some means whereby people could have the benefit of their advice and treatment on payment of a moderate fee. It should be made a *sine qua non* that people who wished to take advantage of such a scheme should bring a letter from their own medical man, stating that they were not in a position to pay the ordinary consulting fee. I submit that this would be far preferable to the present system adopted at most of the special hospitals where fees varying in amount are extracted from patients, no portion of which enriches the pockets of the medical staff.

## cxxxiii

All hospital treatment should be free, and should be restricted to those who are not able to pay for such treatment. It is altogether wrong to mix up business with charity; and if hospitals find they are not in a position to treat all the patients who resort to them, the managers should take steps to reduce the number of patients. The idea of charging small sums for medicines or appliances is altogether repugnant to the name of charity; it is, moreover, unfair to the main body of the profession, and leads many members of it to adopt plans for procuring patients which scarcely tend to enhance the dignity of their calling.

## RECOMMENDATIONS.

1. That in the casualty department of our large general hospitals only cases of urgent importance should be attended to.
2. That in the out-patient department patients bringing notes from medical men should have a prior claim to treatment. That a resident physician should be appointed whose duty it shall be to see all out-patients in the first instance, and select those that require immediate treatment, and decide which do not require hospital treatment. That after patients have received "first aid" their circumstances shall be inquired into by a competent officer. That the honorary medical officer shall not be required to treat more than twenty new cases at one sitting.
3. That all in-patients, with the exception of cases of accidents, or of great emergency, should be recommended for treatment by medical men, and that before being admitted their circumstances should be inquired into by an officer specially retained for that purpose.
4. That hospitals should have the power of receiving adequate fees for the treatment of people who have met with accidents, and whose position in life warrants such an action being taken by the hospital authorities.
5. In the case of smaller general hospitals, that the plan adopted at Oldham and Dorchester be recommended for trial.
6. That both in the large general hospitals, and in the smaller ones, patients coming from districts outside should be requested to bring notes from medical men before being treated.
7. In the case of special hospitals: (a) That payments by patients should cease; (b) that the eligibility for free-treatment should depend on the recommendation of private practitioners; (c) that some provision should be made for people who are in a position to pay a moderate fee, but are not in a position to pay the ordinary fee of specialists.

## RECOMMENDATIONS OF THE HOSPITAL REFORM ASSOCIATION.

## HOSPITAL REFORM.

1. That in the casualty department of the general hospitals only cases of urgent importance should be attended to.
2. That in the out-patient department patients bringing notes from medical men should have, *ceteris paribus*, a prior claim to treatment. That a resident physician should be appointed whose duty it shall be to see all out-patients in the first instance, and select those that require immediate treatment, and decide which do not require hospital treatment. That after patients have received "first aid" their circumstances shall be inquired into by a competent officer. That the honorary medical officer shall not be required to treat more than twenty new cases at one sitting.
3. That the circumstances of all in-patients, with the exception of cases of accidents, &c., should be carefully inquired into before admission.
4. That in the case of well-to-do people who are admitted to hospitals in consequence of accidents, &c., the hospitals should have the power at their discretion of recovering adequate fees for attendance.
5. In the case of small provincial hospitals, that the plan adopted at the Oldham and Dorchester Infirmary be recommended for trial.
6. That, both in the large general hospitals and in the smaller ones, out-patients coming from outside districts should be requested to bring notes from medical men before being treated.
7. In the case of special hospitals: (a) That payments by patients should cease; (b) that the eligibility for free treatment should largely depend on the recommendation of private practitioners; (c) that some provision should be made outside the hospitals for people who are in a position to pay a reduced fee, but are not in a position to pay the ordinary fee of specialists.

Cardiff, Feb. 19th.

T. GARRETT HORDER.

## Appendix G.

## VICTORIAN HEALTH ACT, 1890.

*Private Hospitals.*

153. The Governor in Council may from time to time make, alter, and revoke Regulations for the inspection, drainage, good management, and sanitary regulation of all private hospitals or houses, buildings, or places other than institutions in receipt of aid from the State in which persons are received and lodged for medical or surgical treatment or care.

The Governor in Council may, by such Regulations, require registration of such hospitals, houses, buildings, or places, and may also provide for the cancellation of such registration where necessary.

The Governor in Council may prescribe by such Regulations the use of a proper register for the registration of all cases admitted into or treated in any such hospital, house, building, or place, and for the inspection of such register by the medical inspector, or by any officer of the Board, or by any person expressly authorised thereto by the Board.

After the making of such Regulations, any person opening, occupying, or conducting any such hospital, house, building, or place, without having previously registered the same, or continuing to occupy or conduct any such hospital, house, building, or place, after registration thereof has been cancelled, shall be guilty of an offence against this Act.

## HEALTH ACT, 1890.

REGULATIONS FOR THE REGISTRATION, INSPECTION, DRAINAGE, GOOD MANAGEMENT, AND SANITARY  
REGULATION OF PRIVATE HOSPITALS.*At the Executive Council Chamber, Melbourne, the first day of September, 1890.*

Present:

His Excellency the Governor.

Mr. Gillies,	Dr. Pearson,
Mr. Deakin,	Mr. Bell,
Mr. Cuthbert,	Mr. Davies,
Mr. Patterson.	

WHEREAS by section 158 of the Health Act 1890, the Governor in Council may from time to time make, alter, and revoke Regulations for the inspection, drainage, good management, and sanitary regulation of all private hospitals or houses, buildings, or places other than institutions in receipt of aid from the State, in which persons are received and lodged for medical or surgical treatment or care: And whereas the Governor in Council may by such Regulations require the registration of such hospitals, houses, buildings, or places, and may also provide for the cancellation of such registration where necessary: And whereas the Governor in Council may prescribe by such Regulations the use of a proper register for the registration of all cases admitted into or treated in any such hospital, house, building, or place, and for the inspection of such register by the Medical Inspector or by any officer of the Board or by any person expressly authorised thereto by the Board: Now therefore the Governor, with the advice of the Executive Council, pursuant to the provisions of the said section 158 of the said Health Act, 1890, doth make the following Regulations, that is to say:—

1. In these Regulations, "Private Hospital" shall mean any house, building, or place other than an institution in receipt of aid from the State in which persons (hereinafter called inmates) are received and lodged, or in which it is intended that they shall be received and lodged, for medical or surgical treatment or care.

2. The provisions of the 232nd section of the Health Act, 1890, shall apply to private hospitals, save in respect of inspection, as hereinafter provided.

3. Every person who occupies or conducts any private hospital in existence on the 5th day of September, 1890, shall, on or before the 1st day of October, 1890, and in each subsequent year on or before the 1st day of January, make and forward to the Council of the city, town, borough, or shire in which such hospital is situated, or if he is a legally-qualified medical practitioner, to the Board of Public Health (hereinafter called the Board), an application for registration in the form hereunder written:—

*Application for Registration of a Private Hospital.*

To the Council of  
qualified medical practitioner) To the Board of Public Health.  
Gentlemen,

*or (if the applicant be a legally-*

I desire to have a private hospital registered in accordance with the provisions of the Health Act, 1890, and with the particulars given hereunder—

Situation of premises ... ..	
General description of premises— <i>area of ground, materials of building (brick, wood, &amp;c.), number and size of rooms, number of stories, method of drainage.</i>	
Maximum number of inmates* to be lodged at one time in each room or ward.	
Purpose or purposes for which inmates are to be admitted ( <i>e.g.</i> , for surgical or for medical treatment, or for nursing, or for treatment of particular diseases).	
Name of medical attendant ... ..	
Period of time for which registration is desired ...	Year (or less period) commencing of 189 day
Signature of occupier or conductor— Address— Date—	

\* That is, persons lodged for medical or surgical treatment or care.

4. Every person who, after the 5th day of September, 1890, proposes to open any private hospital, or to occupy or conduct one, shall, before opening, occupying, or conducting such private hospital, apply for the registration thereof, as in the next preceding section.

5. Upon the receipt by the Council of an application for registration of a private hospital, they shall direct the Health Officer to make inquiry as to the application, and report thereon to the Council; and if the application be for first registration they shall inform the Board whether or not they consider that the application should be granted.

6. If a Council recommend an application for registration, and the Board confirm such recommendation, or if the Council approve of any application for re-registration, the Council shall cause to be registered or re-registered (as the case may be), such private hospital, subject to any conditions that may be imposed

## CXXV

imposed by the Council or the Board; and these conditions, together with the particulars set forth in the Schedule appended to these Regulations, shall be entered in a book to be kept for the purpose. A copy of the particulars and conditions of registration shall be furnished to the person registered, and shall be produced by him to any person authorised to inspect the premises.

7. If the application for registration be made to the Board, as provided in the third of these Regulations, the Board shall, after inquiry, order such registration or not, as they deem fit; and if the registration be ordered, the secretary shall enter in a book to be kept for the purpose the particulars set forth in the Schedule to these Regulations. A copy of the particulars and conditions of registration shall be furnished to the person registered, and shall be produced by him to any person authorised to inspect the premises.

8. If a Council recommend that an application for registration be not granted, the applicant may appeal to the Board, who may order such registration or not, as they deem fit.

9. Every person conducting a private hospital shall enter in a book (hereinafter called the case-book) particulars concerning all inmates received into such hospital. In the case-book there shall be recorded for each inmate the full name, age, sex, and address (usual and last), whether the inmate is married or single, also a short history of the inmate while in the hospital, giving in particular the date of admission, the nature of any disease manifest at the time of admission or afterwards, any operations performed, with the name of the operator or operators, and the result of such operation or operations, and the date when the inmate left the hospital, or, in the event of death having occurred, the date of such death. There shall be recorded in the case-book also, in case of confinement, the date and a short history of such confinement, the result of such confinement, the sex and condition of the infant, both at time of delivery, and during its subsequent stay in the hospital. In all cases in which an inmate has been under the professional care of a medical practitioner, or under the charge of a nurse, there shall be recorded also the name of the medical attendant and of the nurse.

10. In the event of the occurrence of a death, a still-birth, or of a case of dangerous, contagious, or infectious disease in any private hospital, notice thereof shall be given in writing within twelve hours to the Council of the district and to the Board.

11. The Council shall cause the premises of every private hospital in its district to be inspected at least once in every three months, and shall report on the sanitary condition, and mode of sanitary regulation of such hospital to the Board. The case-books of private hospitals shall be open to inspection by the medical inspector, or any officer of the Board, or any person expressly authorised thereto by the Board.

12. Any Council, or the Board, may cancel the registration of any private hospital, if not satisfied as to its sanitary condition, or as to its mode of sanitary regulation, or as to its mode of management, of dieting, of nursing, or of treatment of any inmate or inmates, or if any of the conditions of registration is not complied with, or is violated, or if any alteration as required by the Council or by the Board (as the case may be) is not carried out within a time fixed in any notice or order: Provided that if a Council decide to cancel the registration of any private hospital, the registered occupier or conductor may appeal to the Board, who may affirm or rescind such cancellation, and whose decision shall be final.

## Schedule.

Sections 6, 7.

*Register of Private Hospitals.*

Name of occupier or conductor—	
Address of occupier or conductor—	
Situation of the private hospital—	
Total area of premises and grounds—	
Materials of which the private hospital is constructed—	
Designation of rooms allowed by the Council or by the Board to be used as sleeping apartments for inmates (consecutive letters of the alphabet being employed as the means of designation), with number of cubic feet in each *—	(A) (B) (C) (D)
Designation of rooms allowed by the Council or by the Board to be used as sleeping apartments for persons other than inmates (consecutive letters of the alphabet being employed as the means of designation), with number of cubic feet in each *—	(E) (F) (G) (H)
Maximum number of persons (inmates or others) allowed by the Council or by the Board to sleep at one time in each room—	room (A) or (B)
Other conditions of registration †—	ward (C)
Purpose or purposes for which inmates are to be lodged—(1) Surgical treatment; (2) medical treatment; (3) special purpose—for instance, for care of cases of delivery; (4) cases of dangerous infectious or contagious disease—	
Date of application for registration—	
Date of registration—	from day of 189 .
Period of registration—	till the day of 189 .

And the Honorable Alfred Deakin, Her Majesty's Minister of Health for Victoria, shall give the necessary directions herein accordingly.

G. WILSON BROWN,  
Clerk of the Executive Council.

\* These letters shall be painted on the doors of the several wards of which they are used as means of designation.

† Here enter any conditions imposed in regard to other accommodation, drainage, sanitary regulation, fire-extinguishing appliances, &c.

## Appendix H.

Medical Superintendent of the Sydney Hospital to The Secretary, Royal Commission on Public Charities.

Dear Sir,

Sydney, 24 July, 1899.

The figures contained in the enclosed are as nearly correct as I can ascertain. As to the increased accommodation and cost I can form no opinion; all this would be determined by the fact as to whether the nurses would each occupy a single room, or whether there would be several nurses in each room. There would also be need of accommodation for additional servants.

I am, &c.,

W. C. McCLELLAND,  
Medical Superintendent.

Extra No. of Nurses and increased cost by reduction of hours of duty to ...	8 hours.	9 hours.
Extra No. of Nurses.....	20	10
Increased cost of wages and maintenance .....	£1,000	£500

Medical Superintendent of the Prince Alfred Hospital to The Secretary, Royal Commission on Public Charities.

Dear Sir,

Sydney, 22 July, 1899.

In reference to your letter of 12th inst., I have the honor to inform you that the increased cost that would be incurred by reducing the nurses' daily hours of duty at this hospital to eight hours has been computed, approximately, as follows:—

Extra number of Ward Sisters .....	2
„ Nurses of all Grades .....	21
Total.....	23

Increased cost of wages—£725. (The present cost is about £1,900 per annum.)

Increased cost of maintenance (which averages at present 8s. 1d. per head per week)—£485.

Increased cost of building accommodation, &c., reckoned at £3,000, interest 5 per cent.—£150.

Total cost, therefore, would be—£725, £480, £150—£1,355 per annum.

This computation allows for the same conditions regarding holidays as obtains at present, viz., three weeks holiday per annum, with one day fortnightly, and one day and night monthly.

It is estimated that under a nine-hour system the cost would be almost as great as that given above, because of the difficulty of equalizing the shifts, and the consequent loss of time involved.

I am, &c.,

E. MAYNARD PAIN,  
Medical Superintendent.

## Appendix I.

## Appendix J.

Acting Secretary, Office of the Chief Medical Officer, to The Secretary, Royal Commission on Public Charities.

Sir,

In reply to your request of the 2nd instant, I have the honor, by direction of the Chief Medical Officer, to attach for the information of your Commission a Return showing the Nurses, Wardsmen, and Patients at the Coast Hospital during the years 1893 to 1898, inclusive.

Sydney, 8 May, 1899.  
Obediently yours,  
A. R. GULLICK,  
Acting Secretary.

## COAST HOSPITAL, LITTLE BAY.

RETURN of Nurses, Wardsmen, and Patients for the years 1893-98.

Years.	Number of Nurses at Hospital at end of year.	Number of Wardsmen at Hospital at end of year.	Average Monthly Number of Nurses.	Average Monthly Number of Wardsmen.	Total Number of Patients treated during year (including those remaining at end of previous year).
1893	26	2	21.3	2	2,466
1894	23	2	23.7	2	2,332
1895	26	2	25.4	2	2,615
1896	30	2	29.5	1.9	2,388

1898	46	1	42.5	1	2,694

## Appendix K.

STATEMENT handed in by the Hon. John Hughes, M.L.C., in reference to the St. Vincent's Hospital.

The area of the hospital and grounds is about 3 acres.

A quarter of an acre of ground was granted by the Government in 1855. This area was increased a few years later by the acquisition of an adjoining allotment, at a cost of £1,232 10s. In 1870 a further purchase of land was made for £1,500, and finally, in 1889, another strip was bought for £2,800.

The total cost of the land was £5,532 10s.

The hospital was opened for the admission of patients (with eight beds) in October, 1857.

The number of beds now available is 175.

Number of indoor patients treated in 1898, 1,665.

Number of outdoor patients during the same period, including casualty cases, 7,644.

Total number of attendances at casualty and outdoor departments during 1898, 22,757.

Number of operations, 763.

The cost of maintenance for 1898, as per audited balance-sheet, £5,045 5s. 2d.

Since the opening of the hospital a sum of over £153,000 has been spent on its maintenance.

Cost of land and building to date £53,532.

Sources of income—public subscriptions, donations, and patients' fees.

The sums above-mentioned, amounting in all to £2,000, comprise the total monetary aid received from the Government. These were granted unconditionally.

Financial position of the Institution at the present time:—

	£	s.	d.
Building account, debit balance.....	3,503	19	7
Maintenance account .....	494	11	3
Total .....	£3,998	10	10

The Institution is strictly unsectarian.

Expenditure to 31st December, 1898, £153,806 18s.

Number of patients treated during the last five years:—

Year	Indoor.	Outdoor.	Attendances at outdoor department.	Operations.
1894 .....	1,327	2,230	10,852	448
1895 .....	1,349	2,570	15,507	533
1896 .....	1,364	2,690	15,487	591
1897 .....	1,536	4,274	19,592	708
1898 .....	1,665	7,644	22,757	763
Total .....	7,241	19,408	84,195	3,043

## Appendix M.

## PUBLIC INSTITUTIONS INSPECTION ACT OF 1866.

30<sup>o</sup> VICTORIÆ No. 19.

An Act to make provision for the Inspection of Hospitals and other Institutions aided from the Public Revenue. [22nd December, 1866.]

- WHEREAS it is necessary in certain cases in which sums of money are granted by Parliament in aid of Hospitals and other Public Institutions to make provision for ensuring the proper application of such grants to the purposes intended Be it therefore enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled and by the authority of the same as follows:—
1. It shall be lawful for the Governor with the advice of the Executive Council to appoint an Inspector of Public Charities the duty of which officer under the instructions of the Colonial Secretary for the time being shall be to visit and inspect all Hospitals Infirmaries Orphan Schools and Charitable Institutions which are wholly or in part supported by grants from the Public Revenue and to conduct inquiries and examinations in respect to the management of the same and also in special cases to appoint with such Inspector any other person or persons to aid in the performance of the said duties. Provided that all such visits inspections inquiries and examinations shall have reference and be directed solely to the proper appropriation of the public grants in aid and the efficient conduct of such Institutions.
2. It shall be lawful for the Colonial Secretary to perform any of the duties and exercise any of the powers of visitation inspection and inquiry by this Act conferred upon the Inspector of Public Charities.
3. Every public Institution that receives aid from the Public Revenue shall at all times submit to the inspection and examination of the Government as provided for in this Act or by any special Board or Commission of Inquiry duly appointed And any Director Trustee Superintendent Master or Officer of such Institution or any other person resisting the inspection and inquiry so authorised by wilfully refusing admission to premises withholding books or accounts when applied for or by any other act shall be liable to a penalty not exceeding for any one offence the sum of ten pounds.
4. The Inspector of Public Charities or other persons performing the duties of inspection as prescribed by the provisions of this Act shall before the thirty-first day of January in each year lay before the Governor and Executive Council a detailed report on the condition and working of the several Public Institutions aforesaid and copies of all such reports shall be laid before both Houses of Parliament.
5. The Governor with the advice of the Executive Council may appoint any Magistrate or other person resident in any place where a Mechanics' Institution School of Arts Public Library Literary Society or other similar Institution is established with aid from the Public Revenue to visit inspect and report upon the state and working of such Institution and the person so appointed shall as to such Institution possess all the powers of inspection and inquiry conferred by the provisions of this Act on the Inspector of Public Charities.
6. All penalties imposed by this Act may be recovered in a summary way before any two or more Justices of the Peace.
7. This Act shall come into operation on the first day of January one thousand eight hundred and sixty-seven.
8. This Act shall be styled and may be cited for all purposes as the "Public Institutions Inspection Act of 1866."
- Preamble.  
Inspectors of Public Charities may be appointed.  
Powers of Inspector may be exercised by the Colonial Secretary. Public Institutions to be subject to inspection.  
Annual Report.  
Persons may be appointed to inspect Literary Institutions  
Penalties how recoverable.  
Commencement of Act.  
Short title.

## Appendix N.

Act No. 16, 1898.

An Act to consolidate the Acts relating to Public Hospitals. [Assented to, 27th July, 1898.]

BE it enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same, as follows:—

## PART I.

*Preliminary.*

1. This Act may be cited as the "Public Hospitals Act, 1898," and is divided into Parts, as follows:—

PART I.—*Preliminary*—ss. 1-3.

PART II.—*Election and appointment of officers*—ss. 4-11.

PART III.—*Hospital property and legal proceedings*—ss. 12-18.

PART IV.—*Supplemental*—ss. 19-21.

2. (1) The Acts mentioned in the First Schedule to this Act are, to the extent therein expressed, hereby repealed.
- (2) All persons appointed or elected under the Acts hereby repealed, and holding office at the time of the passing of this Act, shall be deemed to have been appointed or elected hereunder.
- (3) All rules, regulations, or by-laws made under the authority of any Act hereby repealed, and being in force at the time of the passing of this Act, shall be deemed to have been made under the authority of this Act.
3. This Act shall apply—
- (a) to the hospitals mentioned in the Second Schedule hereto; and
- (b) to any hospital to which the Governor is authorised to extend and extends the provisions of this Act as hereinafter provided.
- Short title.  
Repeal. First Schedule.  
Officers under Acts hereby repealed.  
Rules, regulations, or by-laws under Acts hereby repealed.  
Application of Act.  
11 Vic. No. 50, preamble, and s. 11.

## PART II.

*Election and appointment of Officers.*

4. The Secretary, under the authority of the committee, of every hospital shall call an annual meeting, to be held in January, of the contributors to such hospital for the election of trustees (who shall not exceed five in number), committee, auditors, and other elective officers.
5. Any contributor shall be qualified to vote at any annual or special general meeting on any question brought before such meeting, or to vote for any elective officer nominated at such meeting, if—
- (a) in the case of the first annual meeting after the extension of the provisions of this Act to such hospital, or in the case of any special general meeting he has paid to the hospital a contribution of one pound sterling at the least within twelve months before such meeting; or
- (b) in the case of any subsequent annual meeting he has paid to the hospital a contribution of one pound sterling at the least between the commencing of business at such meeting and the commencing of business at the preceding annual meeting; or
- (c) in any case he has paid to the hospital a contribution of ten pounds sterling at the least in one sum.
6. (1) Any contributor to any hospital qualified to vote as aforesaid may be nominated for and elected to any elective office of such hospital, and any person, whether a contributor or not, may be nominated for and elected to the office of auditor.
- (2) No person shall be elected to any elective office unless at a meeting for such election he is proposed and seconded by two contributors qualified to vote, and is with his own consent nominated in writing.
- (3) Every meeting for election of elective officers shall be advertised in the nearest local paper at least a week before the day on which such meeting is to be held.
- Meeting for election of officers.

Vacancies, how to be filled up.  
11 Vic. No. 59, s. 10.

Vacancies in committee—how filled.  
58 Vic. No. 6, s. 7.

Committee to appoint officers.  
*Ibid.* ss. 5, 6.

Enabling treasurers of hospitals to sue.  
11 Vic. No. 59, s. 1.

Treasurer to recover fees from patients.  
4 Vic. No. 3, s. 2.

Property may be laid in the treasurer.  
11 Vic. No. 59, s. 2.

Actions against any hospital to be prosecuted against the treasurer.  
*Ibid.* s. 3.

Treasurer to be reimbursed.  
11 Vic. No. 59, s. 3.

Memorial of the name of the treasurer of hospital to be recorded in the office of the Registrar-General.  
*Ibid.* s. 4.

Property of any hospital to be vested in trustees thereof.  
*Ibid.* s. 5.

Trustees to invest funds of hospital.  
45 Vic. No. 3, s. 1.

Committee to make rules.  
58 Vic. No. 6, s. 6.

Extension of Act.  
11 Vic. No. 59, preamble, s. 11.

Effect of extension of Act to any hospital.  
58 Vic. No. 6, s. 8.

7. If at any annual or special general meeting at least ten contributors qualified to vote do not assemble and proceed to business within one hour from the time fixed for the meeting, no election shall be made, nor shall any business be done at that time; but in such case there shall be another meeting at the same place, and at the same hour of the same day in the following week, and at the such other meeting any number of contributors more than three qualified to vote shall constitute a meeting.

8. If at any meeting the number of persons nominated for any elective office is greater than the number to be elected, the meeting shall be adjourned to a day not less than seven nor more than fourteen days after such adjournment, and the secretary shall fix such day, and shall notify the same by advertisement in the nearest local paper, and shall also forthwith transmit by post or otherwise to every contributor qualified to vote a voting paper initialled by the secretary, containing the names of all the persons duly nominated. The said contributors shall strike out of such voting paper the names of the persons for whom they do not desire to vote and shall enclose the voting paper in an envelope endorsed "voting paper," and enclosed in another envelope bearing the voter's signature inside, and shall return the voting paper enclosed as aforesaid to the secretary not later than the day before the date of the adjourned meeting. All such envelopes endorsed "voting paper," as aforesaid shall be handed by the secretary to the scrutineers appointed at such meeting, who, after counting the votes, shall present a signed return to the adjourned meeting, showing how many votes were recorded for each person nominated, and the chairman of such meeting shall declare those persons elected who have received the majority of votes.

9. If any trustee of any hospital dies, or is absent from New South Wales for more than twelve months, or resigns, or refuses, or becomes non compos mentis, or otherwise incapable to act as trustee, a special general meeting shall be called by the secretary under the authority of the committee, and the election of a successor shall be made in the same manner as at an annual meeting, and the person so elected as trustee shall, to all intents and purposes, be vested with the same rights, powers, and authorities in law as the person in whose place he has been elected.

10. When any member of the committee of any hospital dies, or resigns, or becomes non compos mentis, or refuses, or becomes otherwise unable to act as a member of such committee, the committee may declare that such person has ceased to be a member of such committee, and may appoint a qualified person in his place; and the person so appointed shall have the same rights, powers, and authorities as the person had in whose place he has been so appointed.

11. The committee of any hospital shall annually appoint a treasurer, and shall also appoint a secretary, medical officer, warden, matron, and any other officer or servant they may deem necessary for the efficient working of such hospital.

PART III.

*Hospital property and legal proceedings.*

12. (1) All proceedings at law or in equity, by or on behalf of any hospital, or wherein any hospital is interested or concerned, may be commenced and prosecuted in the name of the person who is treasurer of such hospital at the time any such proceeding is instituted as nominal plaintiff for and on behalf of such hospital, and such proceedings may be prosecuted and carried on in the name of such treasurer to their final termination, notwithstanding any change in the said office of treasurer during the progress of such proceedings.

(2) The treasurer of any hospital may institute and prosecute in his own name, for and on behalf of the committee of such hospital and by their direction, proceedings against any person who has received medical or surgical treatment in such hospital, or against the executors or administrators or the curator of the estate of any such person, for the recovery of fees and remuneration for such treatment, and such proceedings may be taken either in the District Court or Court of Petty Sessions of the district in which the hospital is situated, or of the district in which the person resides.

13. In any information or indictment against any person for embezzling, stealing, or in any manner defrauding any hospital, any property of such hospital may be stated to be the property of the treasurer thereof for the time being; and no change in the office of such treasurer during the progress of any prosecution shall abate, or in any manner effect, such prosecution.

14. All proceedings at law or in equity against any hospital may be commenced and prosecuted against the treasurer thereof for the time being as the nominal defendant for and on behalf of the said hospital; and such proceedings may be prosecuted and carried on against such treasurer to their final termination, notwithstanding any change in the said office of treasurer during the progress of such proceedings.

15. Any treasurer in whose name any such proceeding is commenced, prosecuted, carried on, or defended, shall in all cases be reimbursed and paid out of the funds of the said hospital.

16. A memorial containing the name of the treasurer for the time being of every hospital, in the form and to the effect set forth in the Third Schedule hereto, signed by such treasurer, and by a majority of the committee, and verified on oath by one or more credible witnesses, shall from time to time, as occasion may require, be recorded in the office of the Registrar-General, and no action, suit, or other proceedings shall be brought by any hospital until such memorial has been so recorded by such hospital, and the treasurer named in such memorial shall be held to be the treasurer of the hospital recording the same.

17. The trustees of any hospital and their successors shall be capable of taking and holding all lands granted, conveyed, or bequeathed to such hospital, and all such lands shall be vested in such trustees respectively; and such trustees may permit the committee of any such hospital to build on and use such lands in such manner as the committee may deem expedient for carrying out the objects of such hospital.

18. The trustees of any hospital may invest any funds thereof which the committee direct the treasurer to hand over to such trustees from the funds in his hands or otherwise, and also any moneys given or bequeathed to, or arising from any donation of real or personal property to such hospital, at the discretion of such trustees, in any Government funds or debentures of any Australian colony, or in any debentures or debenture stock of any municipal corporation in the said colonies, or of any bank or incorporated company carrying on business therein, or by way of purchase of, or on first mortgage upon, any freehold estate within New South Wales, or in bank deposit receipts for fixed periods or otherwise, with power to pay and transfer any such investment for or unto any other investment authorised by this Act:

Provided that the committee may with the consent of the said trustees in their absolute discretion at any time resort to any such investments and sell the same for the purpose of applying the moneys to arise from any such sale for the purposes of such hospital.

PART IV.

*Supplemental.*

19. The committee of every hospital shall make rules for the conduct of business at meetings of the said committee, and generally for the management and control of such hospital.

20. The Governor may, by proclamation published in the Gazette, extend the provisions of this Act to any hospital to be maintained partly by private contributions and partly by aid from the public funds and not mentioned in the Second Schedule hereto.

21. Whenever the provisions of this Act are extended to any hospital, the elective officers of such hospital holding office at the date of the proclamation shall continue in office and have the same rights, powers, and duties as if duly elected under the provisions of this Act.

A.B., Treasurer.

E. F. { Being a majority } G. H.  
I. K. { of the members of } L. M.  
the committee.

O. Q., of , gentleman, maketh oath and saith that he was present and did see the foregoing  
memorial signed by the above-named treasurer and members of the committee of the  
hospital at

Sworn this

day of

18 .

## SUMMARY OF EVIDENCE.

## PRIVATE HOSPITALS.

*Dr. Thompson* (93).—No necessity for paying wards in public hospitals if security is given that there will be private hospitals in sufficient number. (96) If a person can afford to pay his way entirely, a public hospital exceeds its proper scope and charitable design in receiving payment. Such a person should be invited to enter a private hospital; (97) and if able should pay the whole cost. (98) The charge in the hospital would not be much smaller than the charge of a private practitioner. (99) I do not think the charge would be more in a private hospital. I think it would be less. (102) I do not know what the charges are in private hospitals, or what are the charges for private wards in public hospitals. If a person can pay for a private ward in a public hospital, he can pay for a private ward in a private hospital, and he ought to do so. The public hospitals should not interfere with the business carried on by those who own private hospitals. I do not know the number of private hospitals in Sydney.

1346

*Dr. Evans* (Ophthalmic surgeon).—When I have to treat the case of a person without a home in Sydney, I send the case to a private hospital. I do not know how many such hospitals there are. The advantage of them is very limited. As a rule, the patients (private) I treat have homes in which I can do the work. The number of those who can pay is very small. There are no private ophthalmic hospitals.

1349

1656—1657

*Dr. Clulbe*.—I suppose there are quite a dozen private hospitals in the city and suburbs.

1725—1726

*Dr. Graham*.—I have a knowledge of private hospitals and nursing-homes in Sydney. I could not say how many there are. They are increasing every month.

1829

*Dr. Foreman*.—Private hospitals are increasing every day in Sydney. There must be at least a dozen.

2046—2048

*Dr. Chisholm*.—I know most of the private hospitals. I think there are about five good hospitals; certainly three which are very suitable; two or three others are admirably managed, but I do not know that the buildings are quite suitable. I believe that in most of the suburbs there are private hospitals.

2716

*Dr. MacCormick*.—There are about six or seven private hospitals in Sydney.

## REGISTRATION AND INSPECTION.

156—158

*Dr. Thompson*.—I should think it probable that it would be a good thing that private hospitals should be inspected. I think it would be a wise precaution to inspect them before licensing, and also to see that they are kept in repair.

535

*Sir Arthur Renwick*.—The Government gives nothing towards the maintenance of private hospitals. I really do not think the thing has gone far enough yet to require inspection for the protection of the people; but if it goes much further, then undoubtedly it will be necessary to have some kind of inspection. I think licensing would meet the case.

537

1480—1482

*Dr. McClelland*.—I think private hospitals should be under proper regulations and licensed. There is great liability to abuse in having private hospitals unless they are properly supervised. They should be licensed or in some way supervised.

1661—1662

*Dr. Clulbe*.—I do not think it necessary to register or license private hospitals, except the lying-in hospitals.

1728—1730

*Dr. Graham*.—I think private hospitals should be registered and licensed, for sanitary reasons and for reasons applicable to the management. I am aware that there is a licensing system in Melbourne.

1766

*Dr. Thring*.—I would advise that private hospitals should be registered and licensed. There is a danger that the proprietors may employ cheap labour. It is an abuse that exists. I would limit the number of probationers to the number of beds in each institution, and I think I would provide for inspection. Sometimes the proprietor is really not thoroughly trained herself; and, therefore, with possibly the best intentions is not competent to see that things are properly and efficiently carried out, and the supervision is entirely in that person's hands. There is no supervision at present; anyone may start a private hospital.

1774

1833

*Dr. Foreman*.—I most decidedly think that private hospitals ought to be licensed and registered; it is a very great pity that there is not some control and supervision over them. Anybody can start a private hospital; the system is very much abused. I consider inspection an absolute necessity to see that proper medical attendance and proper nursing is provided. It would be better if we had cheaper accommodation at private hospitals, but it would have to be on a large scale. A cheaper hospital is much to be desired, but it would have to be on a large scale to make it pay. I have heard on good authority that the private hospitals are being abused in certain cases.

1844

2053

*Dr. Chisholm*.—I think it would be a very good thing if private hospitals were registered and inspected. I see no objection to it. At present there is no check upon them. I suppose they are liable to great abuse without inspection. One sees homes for ladies advertised in the papers; those are simply the advertisements of abortionists. I do not think medical men send their cases there, but some are advertised as lying-in homes, and I have no doubt that they are used for that purpose.

2056

*Dr. Mackellar*.—I certainly think private hospitals should be subject to registration and inspection. I think it is an absolute necessity with all private hospitals. I do not think that in Sydney any great harm particularly has arisen from such institutions, but we know that very great harm has arisen in other places—in London, for instance, from institutions ostensibly for the purposes of private treatment. I think there is no law here under which they can be brought, a special Act would be required to deal with them.

2647

2649

*Dr. MacCormick*.—I would approve of the registration and inspection of private hospitals. At present anybody can start a private hospital and conduct it in any way they please till something goes wrong.

2717

2720

## SCALE OF CHARGES.

99

*Dr. Thompson*.—A patient from Queensland was taken into one of the hospitals as a private patient, and paid 8 guineas a week. I should think the charge would have been less in a private hospital. The 8 guineas did not, I think, represent the actual cost to the hospital.

100

534

*Sir Arthur Renwick*.—The cost in ordinary cases (in private hospitals) would not be greater than what is charged at the Prince Alfred Hospital.

927

*Professor Wilson*.—The nominal fees charged in private hospitals are rather less than those charged in the Prince Alfred Hospital. I believe that 5 guineas is the usual fee for maintenance in private hospitals; 7 guineas was the full normal charge in the Prince Alfred. When they paid 7 guineas there were 2 guineas for the medical man, and 5 guineas were considered the fee for maintenance. The doctors did not receive those sums, they were devoted to the funds.

930

1732

*Dr. Graham*.—The charges are coming down very much—the law of supply and demand is bringing them down. There are plenty of respectable, cleanly, well-conducted places that will take in a patient at from £1 a week upwards.

1749

*Dr. Thring*.—I believe that if it were recognised by patients that they enter the public hospitals on entirely charitable lines—that they pay nothing—there would be a greater effort made by many of them to have their needs seen to outside. If it were made a more purely charitable thing, they would scruple to accept it. As it is, they pay 10s. or £1 a week, and they look upon it as though they had bought the place. There are at least three private hospitals, where the nursing is the best you can get, for 3 guineas a week.

2050

*Dr. Chisholm*.—I have not heard of any abuses in connection with any of the private hospitals; the complaint against them is that the charge is too much. They will take patients at 3 guineas; but the charges run up to 8 guineas or 9 guineas a week; it all depends on the nursing. The rates are very high—5 guineas or 6 guineas a week after operation, on an average, I think.

2052

2508

*Dr. Sawkins*.—The charges at private hospitals vary from 3 to 10 or 15 guineas a week. Three guineas is supposed to be a very small fee.

2722

*Dr. MacCormick*.—We charge (private hospital) from 3 to 6 guineas a week, according to the accommodation required and the nature of the case. That includes everything, except stimulants and washing. It does not include medical attendance. It includes boarding, nursing, dressing, and that sort of thing.

2723

CONDUCT.

## CXXXV

## CONDUCT.

<i>Dr. Clubbe.</i> —The private hospitals are very well conducted, and the nursing is very satisfactory. I have not heard of any abuses in connection with them. They are good institutions and supply all that is necessary for private cases.	1658—1664
<i>Dr. Graham.</i> —On the whole they are well conducted. They are chiefly managed by nurses that one personally knows, and has helped to train.	1727
<i>Dr. Thring.</i> —Some of them are well conducted; but there are some that I certainly would not send patients to. It happens that I know of one instance in which a private hospital was used for improper purposes. It has been broken up.	1765 & 1786 1787
<i>Dr. Foreman.</i> —Some of them (private hospitals) are very well conducted.	1831
<i>Dr. Chisholm.</i> —As far as I know, they (the private hospitals) are very well conducted.	2049

## COUNTRY HOSPITALS.

<i>Dr. Thompson.</i> —The number of persons admitted on order of the Government and police is so small, and they stay such a very short time, that I think the care of them is a fair charge on the subsidy. I do not think the country hospitals ought to receive payments for patients that receive Government orders.	88 — 89
<i>Dr. Thompson.</i> —Patients are admitted on the order of a subscriber; the order is referred to the Medical Officer, who, if he thinks the case a suitable one, endorses the order for admission. If a patient can pay, he is made to pay. The Government have the right to admit any patient through the Police Magistrate.	147 — 149
<i>Dr. Pain.</i> —My experience has been that very large numbers of patients, when asked why they do not go to their own country hospitals, say that they do not like the doctor there, or give some other reason.	1041
<i>Mr. Cherry</i> (Statistician's Office).—The country hospitals receive £31,233, or 8d. per head of the country population.	183
<i>Dr. Thompson.</i> —There are at present 100 country hospitals, not including suburban hospitals. In eighty-six cases, the medical officers are paid. In the vast majority of these cases the payment is really an honorarium, and runs from £12 a year upwards.	120
I have seen most of the country hospitals. I think they are generally well conducted.	124-5
I think all these hospitals are necessary. I do not know of two such hospitals (country) so near each other that they interfere with each other's work. In one case (a mining township) the decline of the town made the hospital superfluous. In many cases patients still have to take very long journeys.	133 — 134
<i>Dr. Thompson.</i> —It would be better to dispense with hospitals in towns in proximity to one another, and have one hospital to serve the whole district.	160
I think an inspection of these hospitals is a necessity; but I could give no specific grounds. I do not think this hospital business will ever be satisfactorily managed until each hospital is supported by the inhabitants of the district which it serves, by the payment of a tax. It will not be satisfactory until it is made part of a system of local government.	135 136 154

## CHILDREN'S HOSPITAL.

<i>Mr. C. Griffiths</i> (Treasurer).—The building was erected for a school. The ground opposite, about 4 acres, was purchased, and the diphtheria ward was transferred to the cottage on the land. The building is most unsuitable and unsatisfactory, and the expenditure is very heavy. We pay £2 or £3 more for gas per month for the diphtheria cottage than we pay for the hospital. We have no private wards, and no subsidy for Government patients; our only subsidy is £ for £ on the collections. Last year there were 4,000 out-patients, with about 10,000 attendances. There is great pressure on our space, and more accommodation is absolutely necessary.	1922 1927 1954 1955 2004 2005 2010 2011
<i>Dr. Clubbe.</i> —The building is obviously unsuitable; the nursing arrangements are very satisfactory. We have a very large Board, but only two or three members take much interest in the place. There are eighteen men and twenty-two women, so that we have an unwieldy Board of forty. The house committee, practically the executive, is composed entirely of ladies; it would be much better if it consisted solely of men, or half men and half women.	1560 — 1565
<i>Dr. Thompson.</i> —They have a diphtheria ward at the Children's Hospital containing twelve beds. The Coast Hospital enables that place to deal with a larger number of patients than they otherwise would by receiving convalescents before they are fit to go home.	65
<i>Dr. Clubbe.</i> —The diphtheria ward is really a separate hospital. We began to use the anti-toxin treatment in 1895; it has lowered the death-rate from 50 to 24 per cent. Last year it was 17 per cent; this year (to 24th May) there has been no death. I feel sure the death-rate will be further decreased. There is no real ground for the objection by people at the Glebe against the diphtheria hospital. We hardly get any cases from the Glebe. There were nine cases from the Glebe last year, and I cannot say that one of them was attributable to the presence of the hospital. I think the site is as good as any we could obtain near Sydney. The diphtheria hospital is expensive—not very expensive, but comparatively so; we have to keep up our staff, because you never know when a rush of diphtheria is coming. It might be desirable to have a receiving hospital for diphtheria and urgent cases, the majority of which might be sent to the Coast Hospital.	1573 — 1586 1595 — 1597 1622

## PRINCE ALFRED HOSPITAL.

<i>Dr. Thompson.</i> —My belief is that the hospital accommodation for Sydney is rather below than above what is required.	76—77
<i>Sir E. Knox.</i> —The accommodation at the Prince Alfred Hospital is quite insufficient for the calls made upon it.	815
<i>Professor Wilson.</i> —The hospital accommodation is insufficient.	865
<i>Dr. Thompson.</i> —The number of patients admitted to the Prince Alfred Hospital on Government order in 1898 was 1,359.	105
<i>Mr. Cherry.</i> —The average residence of patients in Prince Alfred Hospital for 1897 was twenty-six days.	166
<i>Sir E. Knox.</i> —The income from paying patients is about £2,400 a year.	813
<i>Professor Wilson.</i> —931 patients contributed in 1898. In the private wards twenty-three patients paid £4 4s. per week.	922
<i>Sir E. Knox.</i> —No charge is made to the out-patients.	842
<i>Professor Wilson.</i> —We estimate the number of out-patients for 1898 at about 12,000, representing 49,000 attendances at an approximate cost of £1,250 per year.	912
The money put into the poor-box by patients was only £100 in 1898, against £380 in 1897, with half the number of patients we have now.	993
<i>Sir E. Knox.</i> —I have never known an order to be given for the admission of a patient by a director or a subscriber; we have simply been guided by the urgency of the cases.	829
<i>Professor Wilson.</i> —Lock cases are received—there is no special lock ward.	861
Ophthalmic cases can be treated quite as well in a general as they can in a special hospital.	919—920

## SYDNEY HOSPITAL.

<i>Dr. Paton.</i> —You could add to the accommodation by increasing a storey.	266
<i>Sir Arthur Renwick.</i> —When it was planned it was intended to have another storey. If we are to have further bed accommodation we must have another storey.	387—388 429
<i>Dr. McClelland.</i> —We need more female surgical accommodation. We have only twenty-two beds to accommodate all the females that come in for ordinary and accidental surgical cases.	1394

- 1400 If the female lock cases could be taken away it would afford much relief to the Sydney Hospital.  
 379-380 *Sir Arthur Renwick.*—We have some lock cases—about thirteen. At one time we had a ward devoted solely to them.  
 105 *Dr. Thompson.*—The number of patients admitted to the Sydney Hospital on Government orders in 1898 was 1,557, nearly half the total admissions.  
 166 *Mr. Cherry.*—The average residence of patients in Sydney Hospital during 1897 was twenty-four days.  
 603-604 *Mr. James Ewan.*—Up to the present time we issued orders to subscribers for the admission of a certain number of patients. We propose to do away with that practice, and admission will depend upon the medical and financial necessities of the case.  
 443 *Sir Arthur Renwick.*—If we could obtain an extra grant of land to extend the Sydney Hospital, we would instantly remove the ophthalmic patients to the main hospital, and suggest that the Government should resume Moorcliff for a lock hospital.  
 1439-1441 *Dr. McClelland.*—The beds for lock cases are always pretty well filled. This class of disease is entailing a large expense on the community. The charitable public are taxed for the purpose of treating those cases.  
 398 *Sir Arthur Renwick.*—The children's wards are sufficient for present purposes. I consider they might well be treated in a separate institution. We have always had a children's department, and the accommodation at the Children's Hospital is always pretty well occupied.  
 434 So many nurses sleeping in one room is objectionable. If we had more accommodation that would be avoided.  
 394 *Dr. McClelland.*—We have proper facilities for teaching medical students, but we have not been called upon to use them. Students are beginning to come.  
 1474-6  
 1478 I think private wards in connection with public hospitals are a mistake.

## REGENT-STREET DISPENSARY.

- 453 *Sir Arthur Renwick.*—I doubt whether it would not be better if the patient came to the out-door department at the Sydney Hospital. Nine-tenths of them could attend the hospital without any difficulty, and it is questionable whether the other tenth ought to get hospital treatment—whether they should not pay. It was suggested years ago to adopt the plan adopted in large cities in England, viz., to divide the city into districts, each with a medical man attached; that the local dispensary should be paid a certain sum annually. It would be a great saving to the country, and the poor would be much better attended to.  
 566 *Mr. James Ewan, Treasurer, Sydney Hospital.*—The full cost of the Regent-street Dispensary is paid by the Government.  
 1688 *Dr. Graham.*—It is simply a place where people get medicine. It is not a dispensary in the sense in which the word is used in Great Britain; there is no visitation of the indigent poor in their own homes. I think that it is an absolute discredit to us as now conducted.  
 2526-7 *Dr. Sawkins.*—The dispensary in Regent-street does good; I have not been there.  
 2624 *Dr. Mackellar.*—I do not think the dispensary is performing any useful work. I was a member of a committee which recommended that it should be abolished. The dispensary is doing adequate good to the payment made for it. A free dispensary from which patients could be visited at their own homes by students, under the charge of a competent medical man, would be a very useful institution, and would meet a want that exists in all large towns in which there are poor people.  
 2627

## MOORCLIFF HOSPITAL.

- 1277-1282 *Dr. Evans.*—The nursing staff is excellent and quite sufficient. I understand that our patients cost about 13s. per week.  
 413-415 *Sir Arthur Renwick.*—The site has all the advantages of clear air and good elevation. If we had a proper building the results would be very much better in every way.  
 1270 1276 *Dr. Evans.*—The site is excellent, the furniture is sparse and not satisfactory. Children do sometimes sleep two in a bed. I do not want to say anything to do us out of our accommodation until something else is provided. The place is so full of bugs that we cannot keep them under, and when an epidemic of rats come along we have to employ people to watch at night, because some of the children have been bitten by rats. A suitable building is required. I do not know of a better site than the present; a larger space would be better; you cannot take a hospital of that sort far out of the city; I think the present view and surroundings could hardly be matched anywhere; you could not get the services of the medical men far from Sydney. The place can be worked more economically in connection with the general hospital than in a separate and detached institution.  
 1285 &  
 1286 1291  
 1292 1341  
 1342 1328  
 1343 1299  
 2400 2402 *Dr. Maher.*—There is no objection to the site; we have not sufficient room, and no operating theatre; there is not sufficient land for proper exercise; we get very good results. The hospital might be on any suitable site in Sydney, and it would be better as a distinct institution. The present buildings are utterly unsuitable; there is not sufficient ground; there should be provision for 100 beds; the place is overcrowded, and patients are constantly being sent away.  
 2405 2427  
 2437 2429  
 299 *Dr. Paton.*—I think eye cases should be treated in the main Sydney hospital, room could be made for the Moorcliff cases by addition to the (Sydney) hospital.  
 1483 *Dr. McClelland.*—I think it would be cheaper, and in every way more satisfactory, if the eye patients were in the same grounds, or under the same roof, as the rest of the patients; they could be provided for in the present (Sydney) hospital by building a ward on each of the tops of the other wards. I advise that, rather than a new building.  
 1488 *Dr. Graham.*—I do not think the Moorcliff branch is necessary, many of the cases are chronic lid cases which could be treated quite as well, and better, at Little Bay. The portion of the Sydney building, now occupied by lock cases, should be emptied out, and the eye cases put there.  
 1724  
 2411 *Dr. Maher.*—Granular cases are chronic, and remain in a long time. I do not think the ordinary practitioner would be quite able to treat cases of granular lids, they are the most difficult cases to treat properly. If the hospital were out of town it would be very inconvenient for specialists to attend.  
 2417  
 2438  
 2628 *Dr. Mackellar.*—An eye hospital is necessary; Moorcliff serves very well for the purpose; but if a wing of the general hospital were devoted to the same purpose it would serve equally well, and would probably be administered somewhat cheaper. Chronic cases of eye diseases might be perfectly well treated elsewhere; there is no occasion for keeping up an expensive hospital for their treatment.  
 2630  
 1493 *Dr. McClelland.*—A very large proportion of the cases treated at Moorcliff are cases of granular conjunctivitis, a great number of which could be treated anywhere, those that come from the country seem to do well without any treatment. The change of climate seems to go a long way towards their cure. With proper surgical skill and nursing half the cases treated at Moorcliff could be treated in one of the asylums. It would be necessary to have skilled ophthalmic surgeons for operations. There are sixty-six beds at Moorcliff.  
 1497  
 1393  
 300-303 *Dr. Paton.*—Last year there were 325 order cases. The length of stay of those eye cases is very much greater than that of ordinary cases. I have known cases to remain in Moorcliff Hospital for at least a year.  
 449-450 *Sir Arthur Renwick.*—The institution attracts patients from the other Colonies; they come from Queensland and from parts of Victoria.  
 1312 *Dr. Evans.*—A good number of patients came from Queensland, some from Western Australia, and a very few, I think, from Victoria.  
 1510  
 608-609 *Dr. McClelland.*—The majority of ophthalmic cases from other colonies is from Queensland.  
 1540-2 *Mr. James Ewan (Hon. Treasurer).*—The Government pay the rent of Moorcliff (£350) and nearly all the fees; what we receive from the Government pays the full cost and a small amount of profit.  
 2421-3 *Miss Rose Creal (Matron, Moorcliff).*—The sleeping accommodation for the nurses is not good, there being three, four, five, and six in a room; the rooms are large and well ventilated. We want more accommodation. The two probationers do the scrubbing. I cannot ask for more nurses, because I have nowhere to put them.  
*Dr. Maher.*—Moorcliff is taken very little advantage of by the students of the University. The visiting hour may not suit them; they go to the Sydney Hospital.  
 Dr.

<i>Dr. Maher.</i> —If Moorcliff were abolished, I think there should be an ophthalmic hospital, with at least 100 beds for patients, on any suitable site in Sydney. I think it would be better as a distinct institution; but it could be managed satisfactorily in connection with one of the existing hospitals.	2404 — 2407 1299
<i>Dr. Evans.</i> —I think Moorcliff could be worked more economically in connection with the general hospital than in a separate and detached institution.	
<i>Dr. MacCormick.</i> —An ophthalmic hospital could be attached to a general hospital as long as there is plenty of room to put up separate buildings.	2713

## DISPENSARIES.

<i>Sir Arthur Reucick.</i> —I think it very advisable that some dispensary system should be established in Sydney. If people were treated in their own homes, it would save the admission of a great many people to the hospital. At one time there was a dispensary surgeon attached to each ward of the city. The surgeons gave orders for medicine to the poor people they visited, and the medicines were got at the hospital. It was a great boon.	495 — 500
<i>Dr. Purser.</i> —I think it would be a very good thing if dispensaries could be established in Sydney on the lines of those in the Old Country. There are many who would prefer to be treated in their own homes.	2143—2146
<i>Dr. MacCulloch.</i> —Under proper supervision a free dispensary would be a very good thing. The system obtains in Edinburgh to a large extent at very little expense and a very great saving to the hospitals.	2581—2586
<i>Dr. Knaggs.</i> —I think a dispensary at which patients could attend as out-patients, and from which in case of illness they could be attended at their own homes, would be of great service, and would prevent people from going to hospitals who are now obliged to go there.	2604—2607
<i>Dr. Kelly.</i> —In Edinburgh the people go to the dispensaries and get attended to by the doctors, or are visited at their own homes. A dispensary like that would take off a large number of applicants who go to the hospital admission depôt.	2692
<i>Dr. MacCormick.</i> —A dispensary would relieve the out-patients' department of the hospital, and it would provide a field for teaching students for the University. In Edinburgh they visit the patients; when they are in trouble or doubt a fully-qualified medical man is called in. If such a dispensary could be established here, it would be a very desirable thing; it would relieve the hospitals of in-patients, and there would be more beds for urgent cases.	2737—2742 2745 — 2746
<i>Dr. J. Graham.</i> —If it was established as a dispensary similar to those in the old country, where a doctor resides and attends casualties, sets broken arms, extracts teeth, makes casual visits to deliver women taken ill, and so on. We should make a pure dispensary of it, and put it under the rule of some charitable organisation; then I think it could be made to do good work, but as it is now I do not think it is a credit to any scientific institution.	1695
You would have more than one medical officer for the whole of Sydney? I think one man could do the work, because the amount of casualty work that you get is very slight. I know from my experience of the Old Country that one resident dispenser in a huge district can do a great deal of work of that kind. I think there is a want of that type of assistance. I suggested that it might be handed over to the Students' Medical Society, who might run it themselves. It might be conducted as a medical mission, where you combine religion with medical work. That type of work is carried on all the world over.	1696
A medical mission? Yes; or purely a dispensary.	1697
On English lines, visiting people in their own homes? Yes.	1698
You are of opinion that there is a want of that sort? Yes, a distinct want. The experience of every medical man in the city is that there is a difficulty of knowing what to tell poor people when they come begging you to see a sick man or woman. You send them to a hospital unless you go and attend them as a matter of charity, which you often have to do. A man comes weeping and tells you that his child has broken its arm, or that he has a wife who is dying, and he is in destitute circumstances, and you must either attend as a matter of charity or send the case to the hospital.	1699
Then they go to the police, the police surgeon is sent for, and they are sent into the hospital to occupy beds, he not having time to attend them? Yes.	1700
Do you think an institution of this kind properly administered would prevent a good many people being sent to the hospital who are now sent there? Yes, I think it would. It would relieve the hospital very much of a form of congestion which should not exist.	1701

## COAST HOSPITAL, LOCK AND INFECTIOUS CASES.

<i>Dr. Thompson.</i> —Buildings exclusively of wood and iron, excepting lately erected laundry, not yet in use. Scattered over a very wide area; although there is one staff, they are, in reality, two separate establishments. The distance between the buildings adds very much to the difficulty of management. There are no proper bathrooms, and there is no hot water laid on to the wards. New kitchens are required. The objections to the present buildings are their scattered distribution over the area and their primitive construction. Another objection is the distance from which patients have to be removed. Lately they had to remove a patient from a distance of 21 miles to the hospital. Whenever a patient is removed to the Coast Hospital (unless from Botany) a distance of 16 miles has to be travelled—8 miles each way. The present arrangement of the hospital is reasonable for a small-pox hospital for temporary use, but it is a very bad arrangement for a general hospital. There are ten wards on one verandah, which is the eighth of a mile long; the sanatorium, containing 100 beds, is half a mile away from the offices, half a mile away from the residence of the house surgeons, and 300 or 400 yards from the residence of the medical superintendent. I think it would be quite wrong to make it an infectious hospital. I do not think the tram would improve matters. It is the only hospital where infectious cases are regularly received.	2 — 3 9 19 13 14
<i>Dr. Paton.</i> —The Coast Hospital is suitable for infectious diseases; the distance is too great, and if a patient is too ill to be removed to the Coast I have to put him in one of the metropolitan hospitals. I think the Coast Hospital is a suitable place for treating ordinary infectious diseases, excluding typhoid.	285 286
<i>Dr. Mackellar.</i> —The Coast Hospital is certainly unsuitable for certain infectious diseases—for instance, typhoid fever. I found the long distance from town decidedly prejudicial, unless in the very early stages. At that time a tramway was contemplated from the Botany terminus to Bare Island, with a branch to the hospital. Given a proper depôt and a tram starting at a definite time, once or twice a day, and with properly-arranged carriages, patients could be shifted from the ambulance much more easily by the tram than if they were taken all the way by the ambulance.	2615
<i>Dr. Sawkins.</i> —I do not think an extension of the Botany tram to the Coast Hospital would render the hospital more useful than at present.	2534
<i>Dr. Thompson.</i> —The cost of the ambulance service is about £6 per bed per annum.	26
<i>Dr. Paton.</i> —Patients nearly always wish to go to the Sydney or Prince Alfred Hospital. The objection to the Coast Hospital—they say if they go there they would not be able to see their friends.	252—254
<i>Dr. Paton.</i> —It would be desirable to have the hospital nearer.	353
<i>Dr. Thring.</i> —I do not object to the Coast Hospital, but it is a long way for patients to travel, especially those suffering from a serious attack of diphtheria or scarlet fever.	1790
The Coast Hospital would not do for acute cases of diphtheria; the hospital should be nearer Sydney.	1795
<i>Dr. Paton.</i> —I do not think it would be wise to make the Coast Hospital into an operative hospital—cases requiring considerable skill-involving the giving of chloroform.	247
<i>Dr. Mackellar.</i> —I do not think operations should be carried out at the Coast Hospital.	2665
<i>Dr. Paton.</i> —I think the lock cases should be treated at the Coast Hospital. If the female cases were transferred to the Coast there would have to be an enclosure.	293—294
<i>Dr. Mackellar.</i> —I think the Coast Hospital is entirely unsuitable for a female lock hospital, even if they were fenced in and under proper supervision.	1622

Dr.

- 12-16 — *Dr. Thompson.*—If the present Coast Hospital were abolished it might be used as a convalescent hospital, or for some of the chronic cases in the asylums; but I think its use for an acute hospital is a mistake. It would be quite wrong to make it an infectious hospital, which should be within easy reach of the population to be served by it, and the sooner after notice that isolation is effected the better will prevention be attained. The length of the journey is decidedly harmful to people who are really ill. The Coast Hospital might be used for a general hospital or a poor-house hospital, so long as acute cases are not admitted. It is the only hospital where infectious cases are regularly received.
- 41 —
- 66 —
- 286-294 — *Dr. Paton.*—I think the Coast Hospital is a suitable place for treating infectious diseases. The female lock cases now treated at the Sydney Hospital should be provided for at the Coast Hospital; but there would have to be an enclosure. The eye cases now treated at Moorcliff should be treated in the main hospital. It is desirable that the hospital should be thrown open to the medical faculty to perform operations and attend medical cases; but it is too far away for that. The Coast Hospital would be very much more useful if it was close to Sydney. We send male venereal cases to the Coast and the women to the Sydney Hospital. The men at the Coast are attended by the wardsmen.
- 299 —
- 350-353 —
- 357-358 —
- 861 — *Professor Wilson.*—There is no special lock-ward at the Prince Alfred.
- 918 — It requires a very large population to justify the establishment of special hospitals for the minor departments. It may be different in gynecological cases; but in regard to all other cases the necessities of the community can be amply satisfied in connection with a large hospital, even ophthalmic cases, which can be treated quite as well in a general hospital as in a special hospital.
- 1588 — *Dr. Clutbe.*—A new infectious-disease hospital should be somewhere central. It should be get-at-able, so that acute cases may be safely conveyed to it. If there was a small receiving hospital near Sydney for diphtheria and urgent cases, the majority might go to the Coast Hospital.
- 1622 —
- 1723 — *Dr. Graham.*—There is a portion of the Sydney Hospital building set apart for lock cases; but the place is, I think, quite unsuited for that line of work. That part of the hospital ought to be emptied of its contents, and the eye cases should be put there, so that Moorcliff could be done away with.
- 1724 —
- 1790 — *Dr. Thring.*—I do not object to the Coast Hospital; but it is a long way for patients to travel, especially patients suffering from a serious attack of diphtheria or scarlet fever. An infectious-disease hospital should take in all infectious diseases—diphtheria, German measles, whooping-cough, lock cases, and erysipelas. It requires to be a large hospital, with pavilions for each. A large area would be required, which it would be difficult to get near Sydney. If the present hospital at the Glebe is removed it would be necessary to have some receiving hospital for bad cases of diphtheria near the centre of population. About a lock hospital, it seems to me that the want would probably be best met by having a lock ward attached to the general hospitals. I suppose we must look on the metropolitan hospitals as teaching schools; and if the lock wards were there the students could utilise them more easily. Then there is no doubt that to go into a lock hospital and to come out of it attaches a stigma to any man or woman. It would be easier to get women to go into a lock ward of a general hospital than into a lock hospital. No one knows who goes into the lock ward at the Coast Hospital.
- 1795 —
- 1802 — *Dr. Mackellar.*—I think the Coast Hospital is entirely unsuitable for female lock patients. There would be very great difficulty in separating them from the male patients there, and distance would be a great objection. An institution such as that should be in such a situation that those persons who are affected could readily obtain access without any trouble. I still would recommend the establishment of a lock hospital within convenient access of Sydney, to which unfortunate females might voluntarily go. I would like to emphatically say that the institution which is designed to treat women should be separated from any other institution, that it should be absolutely private, and that there should be no police supervision whatever. The reason why these people do not go for treatment is that they are overlooked, as it were, by servants of the institution and by the visitors to the general hospitals. I do not think that operations should be carried on at the Coast Hospital; they should be left to the large general hospital. The patient would be much more likely to obtain thoroughly efficient surgical treatment in the general hospitals than they could possibly obtain at the Coast Hospital.

## NURSES.

- 460 — *Sir Arthur Renwick.*—With the limited accommodation we have (Sydney Hospital) it is impossible for us to increase the staff, although it would be very desirable indeed. I do not think the nurses have more to do than they ought to have. They never complain, and we have many applications for positions. After a nurse has been one year in the institution, and has passed the probationer's stage, she rarely makes any complaint. It is only during the probationary stage that any difficulty happens. We keep wardsmen to do the scrubbing. There are so many applications that it takes nearly two years before a person can get on the staff. The position has been very much sought after for years.
- 471 —
- 481 — *Miss N. Gould* (Matron, Sydney Hospital).—Any applicant bringing suitable references, if she looks suitable, is put on the list, and then taken on in her turn. All the nurses have three hours every day. If they do more than ten and a half hours' duty it has to be paid back to them. They are supposed to have every day three hours off. Sisters and head nurses get one hour less. The leave of absence given is: To sisters, twenty-four hours in the month; head nurses, twenty-four hours the second and third years; all other nurses have from 10 o'clock once a month; probationers have from 11 o'clock once a month. The annual leave granted is: Fourteen days for the nursing staff, three weeks for head-nurses, and a month for sisters. I have not heard much complaint. Of course, for ten and a half hours they have to work hard; those who are strong seem to stand it very well. I have known those who were not strong to work well if they have good heads, methodical. My conclusion is that the nurses are not overworked.
- 487 —
- 641 — *Dr. Pain* (Prince Alfred Hospital).—Except so far as stress of work, involving extra duties, is concerned, the nurses are, as far as I know, quite satisfied with their hours. There has been no outcry for diminution of hours. A very great number apply; not more than one in three is found suitable by the matron. They sometimes have to wait two years for a vacancy; a number break down at an early stage. I do not think the work presses very hard upon them.
- 660 — *Dr. Wigan* (Armidale Hospital).—We have trained nurses ourselves for many years, women from our own district. We have not imported a nurse direct for eight or nine years. We get very good service, indeed. Our head-nurse has been eight years, and the matron eight or nine years, with us. I think they get a better training than the nurses get at Sydney, their training is more general, and they have more responsibility placed upon them. It would not be possible to work the hospital on the eight-hours system. Our nurses do not complain of the hours they have to work.
- 677 — *The Mother Beatrix* (St. Vincent's).—The nurses train for three years; they pay a premium of 10 guineas. The principal part of the cleaning is done by charwomen. The nurses have nothing for the first year, £10 for the second, and £12 for the third. The Sisters take no salary. The nurses go into the wards at 7-30, and go finally off duty at 8 o'clock, with one hour off every day for rest, not counting time for meals. The leave they have is one afternoon a week, and a fortnight every year.
- 1009 — *Dr. Evans* (Moorcliff).—The nursing is excellent.
- 1015 — *Miss S. B. McGahey* (Matron, Prince Alfred).—The number of nurses is sufficient for the purposes of the hospital. Sometimes there is extra work; but if there were three additional nurses I should then be able to keep the nurses on ten hours' duty daily. The long hours occur occasionally; they do not like to work longer than ten hours, some would prefer shorter hours. Our time-table is nine hours twenty minutes. The nurses and probationers get three weeks annually, the sisters have thirty days in the year. I do not consider they are overworked. The applications for employment are far in excess of our requirements.
- 1048 —
- 1178 — *Dr. McClelland* (Sydney Hospital).—We cannot accommodate more nurses than we have at present, but there are two or three more required. You cannot say that they are overworked, but now and then some of them are called upon to do a few hours extra duty. After they have done ten and a half hours, that would be overwork; but the time is subsequently repaid.
- 1185 —
- 1238 — *Miss Rose Creal* (Matron, Sydney Hospital).—We could do with a few more nurses. They do not complain of overwork. Sometimes we keep them a little over time. If the infectious wards are in use, I think we really want about three more. The sisters get thirty days, the head-nurses twenty-one days, and the juniors and probationers fourteen days leave in every year; also twenty-four hours off once a month for sisters and head-nurses, twelve hours for nurses, and probationers, nine hours. After completing their training, some of them grumble a little amongst themselves about scrubbing. They have a certain amount of scrubbing to do. I cannot ask for more nurses, because I have nowhere to put them. Nurses should do a certain amount of domestic work; I think it helps to weed out undesirable persons. During last year we had fifteen vacancies; we took on thirty, one-half of whom proved unfit for the work.
- 1246 —
- 1261-3 —
- 1277 —
- 1367 —
- 1469 —
- 1521 —
- 1555 —

<i>Dr. Clubbe</i> (Children's Hospital).—The nursing arrangements are very satisfactory. Our nurses have eight hours' duty. There are three relays.	1563, 1598
<i>Mr. Cecil Griffiths</i> (Treasurer, Children's Hospital).—The medical staff give lectures, and the nurses have to pass examinations. We have no difficulty about getting nurses.	1992-1993
<i>Dr. Sawkins</i> (Prince Alfred Hospital).—I do not think the nurses are overworked; they are on duty ten and a half hours a day, but they are not doing hard work all that time. I am certain they are not overworked. They improve in physique and appearance during the three years they are in the hospital.	2523 2525

## IN-PATIENTS—OUT-PATIENTS—PAYING PATIENTS.

<i>Dr. Thompson</i> .—A small sum is received at the Coast Hospital from relations of patients; it amounted last year to from £200 to £300. Dr. Paton is responsible for the admission of patients.	48, 73
<i>Dr. Paton</i> .—A number of people who could afford to pay very often apply at the hospital admission dépôt. After simple inquiry of the applicants, as to what property they possess, I have rejected upwards of 300 a year. I do not think it pays the hospital to take a patient for less than 25s. a week. The enormous number of out-patients at the hospital has struck me; between 45,000 and 50,000 does seem a large number for the metropolis.	267-84
<i>Sir A. Renwick</i> .—We take paying patients (Sydney Hospital). We only ask 1 guinea per week.	515-6
<i>Mr. James Ewan</i> (Treasurer).—We (Sydney Hospital) receive from 10s. to £2 2s. per week.	577
<i>Sir E. Knox</i> (Treasurer, Prince Alfred Hospital).—The income from paying patients is not increasing. We receive about £2,400 per annum. There are advantages and disadvantages connected with the receipt of payments from patients.	813
<i>Professor Wilson</i> (Hon. Sec., Prince Alfred Hospital).—We no longer receive patients in private wards, unless under certain very special cases.	845
<i>The Mother Rectress</i> (St. Vincent's).—Our charge for private rooms is from 3 to 4 guineas per week; the average payments by patients in the ordinary wards is 14s. per week. Half the revenue from patients is contributed by private rooms.	924
<i>Dr. Evans</i> (Moorcliff).—I am strongly opposed to allowing paying patients to go into hospitals. I do not know what is to be done in the case of patients who are able to pay small sums, but yet require help. I do not approve of the charge of 1s. for the registration of out-patients. I think that every means of getting money from patients is a mistake.	1220 1252
<i>Dr. Clubbe</i> (Children's Hospital).—I do not think patients ought to be charged anything at all. Perhaps one would have to draw the line in cases requiring an operation, where they could not pay for the operation, but if it was a purely medical case I would not take the patient if he could pay £1 per week. We are pauperising the people, and the hospitals are not doing their legitimate work. People who have no money are crowded out. I object altogether to the payment system. Taking in richer people, and getting payment from them, deters subscribers. I object to the registration fee of 1s. If the people are so poor that they have to come to the hospital they ought not to be asked to pay anything. The payment of tram-fares is very hard on some, and those on whom it is not hard ought not to come. The hospitals should be entirely for the use of the necessitous poor.	1352-7
<i>Dr. Graham</i> .—It seems to me that all you can do is to educate the people up to the fact that the hospital is only a place for poor people. I think there are more abuses in the hospital system in England. In Sydney it is abused, but I have not been able to find any serious amount of abuse. I do not see what harm you do in collecting a few shillings from patients who come to you. You relieve the patient of the bitter feeling that he is at the hospital entirely on sufferance. I think it is humane to say, pay what you can. I have taken 6d., 2s. 6d., and 7s. 6d. If a patient would readily pay £2 or £3 a week I would not take that patient in unless I thought his circumstances demanded it. You have to leave it to the discretion of the management. If it was a case of hernia, which required two doctors and two nurses, and the great expense of a surgical operation, I would recommend that case without hesitation. I think making a profit is an unjustifiable position for any hospital to take up. The shilling fee for registration of out-door patients comes under the same category as taking a collection from patients who come in. I have watched the type who came in before and since the shilling charge was begun, and I find it is not altered, and we get £600 a year from a class of people from whom we got nothing before.	1623 1639
<i>Dr. Thring</i> .—The payment system is a difficult question. My experience is that abuses are more likely to be found amongst in-patients than amongst out-patients, and particularly amongst the surgical cases rather than amongst the medical cases. It has always struck me that people have no right to fill up beds in public hospitals (which are primarily charitable institutions) when they could afford to go into private hospitals, or to have their nursing done at home. I have tried to help them by saying, "Most of you cannot pay my fee; I will do the operation for you if you will pay the nursing fees"—thus keeping them out of the hospital.	1666
I find that patients do get into the hospital who ought not to be there. A woman's husband was ready to pay a 50-guinea fee, but she was admitted into my ward and I operated on her. That was an abuse of charity. Such patients simply take up beds that are intended for necessitous cases, and they are practically defrauding the honorary staff.	1704
I certainly find it difficult to lay down a general rule. The hospitals should not make a profit; they should not be conducted on commercial lines. The maximum charge should be the mere cost of maintenance, it being understood that the patient is not able to pay the ordinary fee for outside attendance.	1710
<i>Dr. Foreman</i> .—I think the system of payment by patients in hospitals is absolutely wrong in principle. A public hospital is a charity intended only for people in necessitous circumstances. The friendless are those who are put in the back ground, and those who are able to pay can get attention at once. If they can pay £1 they are taken without question. If they can pay £2 they are received with open arms. It is a very hard drain upon those who can pay only 10s. a week. It is worse for them than for many others to pay a nurse outside 2 guineas a week. If a man getting £2 a week has to pay 10s. a week for his wife in hospital I do not think they should take the 10s. from him. If he has to keep a family on £2 a week he is entitled to hospital treatment. It is not only they have to pay the 10s. a week, but they have to pay somebody to take the wife's place at home. When they pay 5s. or 10s. per week the idea of charity ceases. If they pay £1 a week they think they are entitled to extra attention. If they pay £2 a week the airs they put on towards the other unfortunates in the ward you could not believe unless you saw them. I do not approve of payments by out-patients for registration. I do not think they ought to pay a penny in the out-patients' room.	1743-54
<i>Mr. Cecil Griffiths</i> (Hon. Treasurer, Children's Hospital).—We received £408 from patients last year. We have not received in any instance in excess of cost. The highest we got was 15s. or £1 per week, and they go down to 2s. and 1s. We have a registration fee of 1s. for out-patients, but it is not enforced. Last month the out-patients paid £6 10s., but that is not anything like what 1s. each would come to. We had 10,885 out-patient attendances in 1898.	1805
<i>Dr. Chisholm</i> .—On the ground that hospitals are charitable institutions, and the honorary staff give their services to the sick poor, I am not in favour of having a system of payments by patients. The honorary officers should not give their services to those who are able to pay. If a patient prefers to pay something I do not know that there would be any objection to his sending a cheque, according to his means, as a donation. I do not approve of payment for the registration of out-patients; you make him feel that he is paying for what he is getting, and that is one objection. I think the hospital is most shamefully abused by both in-patients and out-patients. It seems to me that the hospital I am connected with does not take any trouble at all to minimise the abuse. It is necessary to have an inquiry officer to visit the homes of patients. When it began to be known that endeavours were being made to prevent abuses there would be less need for his services.	2005 2023
<i>Dr. Purser</i> .—I do not think there ought to be any set payments per week from the patients. I would not take any payments at all except in the shape of some little donation—not set payments per week. I think it is a pernicious system. I formed the opinion I have expressed before I had been long Medical Superintendent at the Prince Alfred Hospital. People get into the hospital under false pretences, people who could pay a fair fee outside, and had no right to be there. I do not think the hospitals should make a profit out of patients, and I do not think that private wards are necessary in a hospital. I do not see why a person who can pay 35s. a week should occupy a bed to the exclusion of persons who cannot pay at all. The hospitals are subsidized by the Government for the poor and indigent. I think it is a fact that patients who are able to pay are more readily received at hospitals than those who are not able to pay. I am sure the Committee are more pleased the more paying patients they get each month than they are at having so many non-paying patients.	2030 2043
	2147
	2154

The

- 2186 The cases of people who could pay 5s., or 12s. 6d., 15s., or up to £1, and could pay no more, should be provided for somehow, the crux is to know how or where. In a general hospital there should be no payment at all, such hospitals should be for accident and emergency cases, and for the poor and needy.
- 2187
- 2239 *Mr. D. H. Easton* (President, Balmain Hospital).—Patients are supposed to pay, if they cannot, we take what they can give us. We got £71 last year. Some pay 10s., some 5s., and some the whole amount charged, viz., 3s. per day. They are recommended to give a coin before they leave; if they cannot pay they are allowed to go. Inquiry is made into their circumstances, and if the Committee think they can pay they are written to for the money.
- 2241
- 2430-2 *Dr. Maher*.—It is very difficult to inquire into the cases, especially from the country. I have no doubt that the hospitals are abused, I would not say very much abused, but they are abused. It is only by accident that I have found out that persons who have been in the hospital and received gratuitous treatment were fairly well to do.
- 2499 *Dr. Purser*.—There should be no question of payment in the case of hospital patients. The idea would be to treat them absolutely gratuitously. If a patient can pay 5s. he will expect everything, and will think he has a right to everything. The hospital ought not to make any profit out of patients. The admission of patients who are able to pay excludes those who are unable to pay. I do not think the Directors have anything to do with it. Of course they are very pleased to see that the amount received for patients totals up more each year.
- 2504
- 2636 *Dr. Mackellar*.—I think the pay system is most pernicious. I have always been strongly opposed to it. The only method by which patients should obtain admission should be by showing that they are in a necessitous condition, and that they are eligible from a medical point of view. The payment of 2s., 3s., or 4s. a week induces a large number of persons to avail themselves of the hospital who otherwise would not do so. Perhaps these persons go away with the idea that they are paying for their treatment when they are not even paying for the food they eat, independently of their treatment, or of the general expense to which the Government is put in the erection of the hospital or its administration. I object to all payments; they sap the fountain of public benevolence. It is one of the reasons why the public subscribe so little—the system altogether destroys the benevolent idea. If persons needing hospital accommodation are able to pay 5s. or 10s. a week I would admit them without payment, in preference to letting them pay 5s. a week, even though willing. A person who can pay but 5s. a week is in what I would call a necessitous condition. I would require those who could pay 15s. or 20s. to go to a private hospital. At present there is no private hospital which could accommodate patients who could pay such a fee, but I have no doubt that such an institution would be established if the necessity for it arose. I do not approve of the 1s. registration fee for out-patients. If a patient can pay no more than 1s. he is in necessitous circumstances. I do not object to donations; I think it is very desirable that they should be allowed to give as much as they please, but that they should give so much for registration or for each week of treatment is undesirable.
- 2681 *Dr. R. V. Kelly*.—I do not approve of money being demanded from patients. I do not object to patients giving money voluntarily. The difficulty might be met by dividing the hospitals so as to have one absolutely free, and another available to persons on payment of a graduated scale of charges, and a scale of small comforts.
- 2682
- 2698 *Dr. MacCormick*.—The hospital is a charitable institution pure and simple, but when the patients pay they do not look upon it as a charitable institution. I am opposed to payment being received from patients under any circumstances; that applies also to the charge for the registration of out-patients. I send a number of patients to the hospital, and I only take their word as to whether or not they can afford to pay. If patients are able to pay something, but cannot pay the heavy charges in connection with private hospitals, I should take them for nothing in a general hospital.
- 2706
- 2726 *Sir Arthur Renwick*.—Patients who are able to do so, pay. We ask 1 guinea per week, but there are some who could just as easily pay 5 guineas. We have no private accommodation. I do not think the hospital relief is much abused.
- 516-517 *Mr. James Ewan* (Treasurer, Sydney Hospital).—The payments by patients varied from 10s. to £2 2s. per week, and we received from out-door patients, in shillings, £660.
- 577-579 *Dr. Cluthe*.—I do not think any charge should be made. Perhaps one would have to draw the line in cases requiring an operation, where they could not pay. But if it were a purely medical case I would not take a patient who could pay £1 per week. People who have no money are crowded out, whilst those who can afford to pay proper fees come in without shame and say, "We are paying"; but they are not paying. If the hospitals did not take such cases, private hospitals would spring up at once, and, I think, at a cheaper rate. I do not think that hospitals should make a profit out of any of their cases. I think the admission of richer people rather deters subscribers. It is advisable that inquiries should be made at the peoples' homes; the very fact of it being known that inquiries will be made is very likely to act as a deterrent. The out-patients' department has increased—very strict inquiry is made into the position of every applicant to the out-patients' department, and people are refused every day, but the inquiries are only made at the hospital.
- 1623-1625 *Dr. Thompson*.—No steps are taken to ascertain the competence of patients or their relatives to pay any portion of their treatment and maintenance. I think it highly desirable to take steps. Patients suffering from infectious diseases ought to be admitted without question of ability to pay.
- 1630-1632
- 1636
- 1641-1642
- 1644-1647
- 50-51

## FRIENDLY SOCIETIES—CLUBS AND LODGES.

- 500 *Sir Arthur Renwick*.—There is no relief to the hospitals in connection with the friendly societies.
- 835 *Sir E. Knox*.—The railway and tramway employees' society is the only one with which we have an arrangement; they send their patients and pay 15s. a week for each of them, on the understanding that at the end of the year whatever surplus there may be in the funds is to be distributed between the hospitals. In that way we have received about 30s. a week for all the time the patients have been in the hospital.
- 993 *Professor Wilson*.—The medical and surgical requirements of non-indigent out-patients might constantly be satisfied by clubs. If they can afford to pay, they can afford to be members of a club.
- 1057 *Dr. Pain*.—The proprietors of the Helensburgh Colliery, by virtue of a payment of £130 a year, have a right to have any miner who is injured in the colliery admitted to the Prince Alfred Hospital at once, without question.
- 1733 *Dr. Graham*.—There are two medical aid societies—one established by a private company and the other by the British Medical Association. The private company pays the medical men they employ and divide the profits. The Medical Society is conducted on similar lines, but the money is divided between those who offer their services.
- 1870 *Dr. Foreman*.—A great many doctors send club patients to the hospitals, particularly where they want operations performed.
- 1883-1884 *Dr. A. O'Hara*.—I am hon. secretary of the City and Suburban Provident Medical Association. It was started about eighteen months ago; the income averages £36 a week, and we have enrolled about 2,500 members, 1,700 of whom are financial members. We pay all expenses, including the chemist, and the rest of the money is divided amongst the doctors, according to the number of patients they have on their list.
- 1894
- 1899
- 1911
- 2063 *Dr. Chisholm*.—The greatest abuse in connection with club patients is owing to the medical men. A patient gets ill and requires an operation. The doctor says, "Your house is not suitable for such an operation; you ought to go to the hospital." Thus people are sent to the hospital who are well able to pay. I approve of the Provident Medical Association; I am one of the consulting officers. I think it is on proper lines, and will diminish the number of out-patients at the hospitals. A man getting 35s. to £2 a week should belong to a club, and pay 25s. or 30s. a year, so as to obtain treatment for minor ailments. If he is unfortunate enough to break his leg, take him into the hospital, and let us give him all we can give him without extorting money from him.
- 2068
- 2072 *Dr. Cluthe*.—That portion of the population not belonging to the working classes who have incomes from £200 to £300 a year can be dealt with by joining the Medical Aid Society. It was started by the medical men, and every doctor in Sydney does or can belong to it, and certain of us are on the consulting staff. The fees are very small.
- 1667 *Dr. Purser*.—I approve of the Provident Medical Aid Association. I am one of the active medical officers. It is working satisfactorily; no one is admitted whose salary is over a certain amount. There is a large class of the population who cannot join either the Provident Medical Association or an ordinary club, because of the condition of their health. The Medical Aid Association is not in any sense a charity, and I am not aware that it is so regarded by the medical profession.
- 2242 *Mr. F. Sparrow*.—The People's Prudential Benefit Society, Limited, has been established about three years. The primary object is to provide medical attendance and medicines for a fixed weekly payment; for a slightly higher payment we guarantee payment of a fixed sum on the death of a member, a member's wife, or the death of children, and certain weekly payments during certain diseases. It is a proprietary concern, with a paid-up capital of about £4,000, managed by a Board. The revenue for 1898 was about £12,000, and the number of members between 5,000 and 6,000. We publish our list of medical officers, and members can select for themselves. Our membership is from 5,000 to 6,000—that would mean medical attendance to 30,000 individuals.
- 2284
- Mr.

<i>Mr. John Gelding.</i> —(Sec. Manchester Unity O.O.F.). The lodges have a medical institute, with doctors and dispensers. They have four doctors, who attend 4,000 members and their wives and children. When the doctors have patients for surgical operations they send them to the hospital. I give an order; if it is a single man I say, "You will have to pay so much off your sick pay to the hospital." If it is a married man with a family, I write and say the family want all the money. We pay £10 a year to the Sydney and Prince Alfred Hospitals; they do very well out of us, I think. I suppose there are about 19,000 in our Order in New South Wales. We pay our doctors £250 a year each, and fees for midwifery cases.	2296 — 2310 2314 — 2315 2339
<i>Mr. A. Davis</i> (Registrar of Friendly Societies).—There are about 70,000 members of friendly societies in New South Wales, representing 315,000 people, obtaining medical assistance and medicine.	2390—2392
<i>Dr. Sawkins</i> (Medical Officer of the U.O.O.F.).—The waiting-rooms at the dispensary are convenient and the drugs are of good quality.	2402 2464
<i>Dr. S. H. MacCulloch</i> (Medical Officer Oddfellows and Protestant Alliance).—I think these societies are absolutely necessary for the working classes. No man with a salary of £3 a week, and a family of five persons can afford to pay medical fees, and there is nothing between the hospital and the payment of high medical fees, except those friendly societies.	2575

## GENERAL.

<i>Dr. Thompson.</i> —When you go into figures and details, I think you will very likely find that it will be cheaper for the Government to put up a hospital for themselves than to pay other institutions for receiving their cases.	81
<i>Sir Arthur Renwick.</i> —I quite concur in the statement made by Dr. MacLaurin that great gain would result from bringing the medical charitable institutions under one controlling Board; the services would be carried out with greater economy; there would be an absence of competition between different institutions, and patients could be sent at once to the particular hospitals for which their cases were suited. I should be very glad if the hospitals were placed under one Board. It would be a great mistake in the public interest to reduce the number of members of the Board too much. My idea was, and is, that all the charitable institutions should be placed under either a small Board, or under one person. In other words, we should have three persons or one person, whichever it might be, looking after the subsidies, and the local Boards managing their own matters.	477—80
<i>Dr. Mackellar.</i> —In reply to questions put to me by the late Sir Alexander Stuart in 1883, I said, "The custom of granting Government aid to metropolitan hospitals, which are wholly unconnected with each other, and governed by distinct Boards, is fallacious, and calculated to be followed by extravagant expenditure. The establishment of a General Metropolitan Hospital Board would obviate this danger." My views have undergone no modification whatever. I do not know that the appointment of a Board to supervise all the expenditure in connection with the Government aid to charitable institutions would be necessary, if there were a Government officer whose duty it was from time to time to report upon all such institutions.	2659—63

## ROYAL COMMISSION ON PUBLIC CHARITIES.

## MINUTES OF EVIDENCE.

MONDAY, 17 APRIL, 1899.

[The Commission met at the Offices of the Public Service Board at 2 p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).

F. N. MANNING, Esq., M.D.

J. POWELL, Esq., J.P.

J. BARLING, Esq., J.P.

CRITCHETT WALKER, Esq., C.M.G.

J. Ashburton Thompson, M.D., sworn and examined:—

1. *President.*] You are the Chief Medical Officer of the Government and President of the Board of Health? Yes.

2. *Dr. Manning.*] We shall be glad of your opinion as to the general character of the Coast Hospital and its thorough fitness for hospital purposes? The buildings of the Coast Hospital are exclusively of wood and iron, with the exception of a laundry which has just been added, and is not yet taken into use. They are exceedingly simple in construction, and in consequence of their having been erected a great many years ago, for another purpose altogether, they have not the convenience, finish, or appliances which are proper to hospital buildings. They are scattered over a very wide area, and, in point of fact, although there is only one staff, there are in reality two separate establishments within the enclosure; one, called the Sanatorium, which is half a mile away from the main buildings and the offices, the consequence of which is that it has its own nurses' quarters, its own kitchen, and a staff of its own, so that it is practically a separate hospital. That, of course, and the distance between the buildings in each of these divisions, adds very much to the difficulty of management, and to the expense of management to some extent, but greatly to the difficulty. The distances to be traversed backward and forward during the day by many members of the staff really are considerable. The place has been improved from time to time,—certain additions have been made. Thus it has been connected now for some years with the Sydney water supply, and some years ago it was seweraged; but even at this date there is no proper bathing provision. There are no proper bathrooms, and there is no hot water laid on to the wards, a thing which is necessary for due treatment of patients, though not for any other reason.

3. What would you consider to be the probable life of those buildings if repairs are kept up;—we are aware that they have already existed for a good many years? They have existed for seventeen years. I think that any statement as to their probable life would be better got from the Architect, who can judge from their present state and speak authoritatively on that point. As I have already mentioned, we have lately added a laundry, which cost a considerable sum of money, and it is now absolutely necessary that new kitchens should be built, which also will cost a large sum; perhaps between £1,000 and £1,500. The question should now be discussed whether the hospital is to stay where it is, before we spend any more money. If it is going to be continued, then, in my opinion, the buildings are now approaching a state which makes it desirable that they should be replaced, possibly pavilion by pavilion, in some more solid material. If that is to be done there is no reason why a large sum should not be spent in the erection of a suitable kitchen, and in making other improvements; but if it should be decided that it shall not continue in its present position, it would evidently be unwise to spend the large sum of money which I have mentioned, and others which must be contemplated. We should rather begin shortly to erect another hospital on any other site which may be chosen. It depends upon whether the hospital is to be kept there or not,—whether we can afford to spend a large sum of money on a kitchen and other such things.

4. *Mr. Barling.*] For the purpose of making a connected statement to your answer, will you kindly say what were the circumstances which called this building into being? The institution was hastily built during the small-pox outbreak of 1881-2, and it was intended as an additional quarantine ground. It was feared that there might be a very much larger number of cases occurring in Sydney, and that more room would be wanted than could be found at the Maritime Quarantine Ground. That accounts in part for the distance at which it is placed from Sydney, and for its isolated position; also for the very elementary character of the accommodation provided. It was never used for quarantine purposes.

5. *Mr. Critchett Walker.*] Was it not built with a view of ultimately taking the Quarantine establishment away from the present Quarantine Station which it was thought was becoming dangerous to Manly? No; I never heard that mentioned. All this, however, occurred before I came here. But it would be impracticable. You could not make a quarantine station on an exposed part of the coast.

6. No, I am aware of that, but I have always been under the impression that Mr. Eagar, the then Under Secretary for Finance and Trade, was anxious to remove the Quarantine Station, and hastily got these buildings erected in order to start it? It may have been so. I never heard it.

7. *Mr. Barling.*] Will you tell us the character of the cases now dealt with there? The acute and chronic cases admitted are those of destitute poor, in addition to infectious cases which are taken from much the same class, but not exclusively. No objection is made to admitting any person suffering from infectious disease.

J. A.  
Thompson,  
M.D.  
17 April, 1899.

J. A.  
Thompson,  
M.D.  
17 April, 1899.

8. I suppose both surgical and medical cases are taken? Yes, both surgical and medical cases; but from the surgical list the major operations are excepted.

9. Will you state what you consider to be the objections to the present buildings and site? The objections to the present buildings consist, first in their scattered distribution over the area, and secondly, in their primitive construction. The buildings are made of wood and iron, which for convalescent cases might be sufficient, but for acute and infectious cases, are quite insufficient. The second objection is the distance of the place from the districts from which patients have to be removed—thus, for instance, on Saturday they had to remove a patient from a distance of 21 miles from the hospital, and removals from places as far distant as Chatswood, St. Leonards, Wahroonga, and Mosman's Bay are quite common. The route from these places is not direct, and every patient has to cross the water. Sometimes it is necessary to move a patient from the hospital to Newington. These exceedingly long journeys would not be necessary if the hospital were otherwise placed than it is. Whenever a patient is removed to the Coast Hospital, unless he happens to live at Botany, a distance of 8 miles has to be travelled, 8 miles there and 8 miles back being 16 miles. That is a sheer waste of labour. It is dead work.

10. What particular use is the Sanatorium put to? It is chiefly used for the isolation of infectious patients. The number of infectious cases under treatment varies very much indeed. When there is no large number of such patients certain wards are put to general hospital use.

11. *Mr. Critchett Walker.*] How long do you think those buildings will last at Little Bay? I would suggest that the Architect be referred to on that point.

12. Do you think that that site would be a suitable one for any other hospital purpose if the present hospital were abolished? Yes; it might be used for a convalescent hospital, or for some of the chronic cases in the asylums, but I think its use for an acute hospital is a mistake.

13. Do you think it would be sufficiently convenient for the metropolis if it were made a hospital for infectious diseases? I think it would be quite wrong to make it an infectious hospital, because the essence of an infectious hospital, which is a place quite as much for the prevention as for the treatment of disease, is that it should be within easy reach of the population to be served by it. The reasons are, first, that people are not willing to send their children when attacked by those diseases so far away that they cannot, at all events, call at the gates and ask about them with little trouble; and, secondly, when a case of infectious disease is reported and requires removal it is necessary that that removal should be effected within two or three hours of the receipt of the notice, the idea being the sooner after notice isolation is effected the better will prevention be attained.

14. But would this objection be raised if there were quicker means of communication—say, by tram—if the tram were extended *via* the hospital to La Perouse? If there was a tram to La Perouse, I presume that it would be on the Bunnerong Road to where it turns off to the hospital. I do not think the tram would improve matters very much.

15. It would not facilitate matters? No; you could not use it for the removal of patients. You would have to get the patient from his house to the tram, and having got him into a carriage it would be a pity to move him, even supposing that a tram were built for the purpose.

16. Yet they bring infectious and other cases on the railways some hundreds of miles? They may do that when they are obliged to. What the tram would do would be to get over a serious objection of quite another kind. It would enable the poor to get there and back to see their friends within a reasonable time. At present it is a matter of serious complaint with the poor that they cannot get to the Coast Hospital and back under the loss of a day or three-quarters of a day at least, and in addition to that they are a considerable sum out of pocket. Such patients are told that there is a bed for them at the Coast Hospital, so that they are obliged to go, and being there they are separated from their friends. Then, of course, there is the length of the journey, which is decidedly harmful to people who are really ill. If we take typhoid fever, of which we treat a considerable number of cases—163 last year—the death-rate at the Coast Hospital is considerably lower than that at the other hospitals; but then the reason is this—that experienced nurses are always sent to fetch typhoid patients, because of the danger of the long journey. When the nurse gets to the house she looks at the patient, and very often she feels obliged either to refuse to remove the patient or telephones for advice. That is the reason why our death-rate is lower than that of the other hospitals. It is not because the treatment is better, but because the cases are selected. The same thing applies to other acute cases.

17. Then you do not think that that would be a suitable place for an infectious hospital? No; I do not think it would be suitable, for the reasons I have given. I am quite sure that since an infectious hospital is for the prevention of disease it would be a tactical mistake to put one at that distance. You would discount the possibility of its doing what it is intended to do.

18. Do you think that if the wards of this hospital were more concentrated and built of more permanent material the hospital would be better adapted for its present purpose? I do not think, as far as I understand the general question, that the Coast Hospital—that is, a hospital of 280 beds—which has been kept going so long, could be got rid of; but whether it should be continued there or not is the point.

19. Then you see no objection to the present hospital except that it is built of temporary material? Well, you have to ask the question how long it is going to last. Wood and iron, especially in that situation, exposed to the salt air, do not last indefinitely; but there is objection to be found to the place on the score of the way in which the buildings are arranged. It is a reasonable arrangement for a small-pox hospital for temporary use. But it is a very bad arrangement for a general hospital. There are ten wards on one verandah, which is actually half a quarter of a mile long; and the Sanatorium, containing another 100 beds, is actually half a mile away from the offices, half a mile away from the residence of the house surgeons, and 300 or 400 yards away from the residence of the medical superintendent.

20. Then you think that if the buildings were reconstructed they ought to be more compact? Yes, undoubtedly. If it is not to be reconstructed, and if that bad arrangement is to be cancelled by using it as a poor-house, then as long as the buildings last I do not know but what they would do very well. The wards are rather nice, but each is pitched by itself like a tent. It is detached, and has not the necessary adjuncts. It is incomplete.

21. *Mr. Powell.*] Do you object to the site on the score of distance? Yes; I used to think that the distance was 9 miles, but lately mile-stones have been put down on the Bunnerong Road, and I find that the distance is either 10 miles, or very near 10 miles, from where we are now sitting.

22. How long have lepers been placed there? The first lepers went there in 1883, three Chinese. Then the few who were brought to the hospital were kept there in little huts which were built for them until in 1890, when Dr. Manning was Medical Adviser, a regular Lazaret was built.

23. *President.*] You referred to the difficulty of working the hospital economically for certain reasons, I understand those reasons are first, the nature of the building; secondly, the dispersion of the buildings over a wide area; third, the distance from town, entailing expense in the transit of patients. Yes.

24. Are the patients carried at the expense of the hospital? Yes. When you come to look at some of them you cannot say that they are fit to travel 15 or even 20 miles, but they must do so. Again, if the Ambulance Depot were 8 miles nearer Sydney it could do twice as much work as it does now.

25. *Dr. Manning.*] Will you give us the cost per head for the last year or two? Yes. I hand in a table which I put in my last report, which shows the cost per head with and without ambulance service, and the cost of wines and spirits for each of the years during which the hospital has been in regular use as a general hospital. The cost per head, everything included, for 1895 was £59; for 1896, £51; for 1897, it was practically the same figure; for 1898 it was nearly £71; that is £20 more than for 1896, and about £11 more than for 1895, or than it had ever been before.

26. I see that the cost for ambulance service is about £6 per bed annually? Yes; that would be a fair average figure.

27. What was the reason for the great rise in cost last year? Some of it was due to increased salaries. We had to put on an office boy, a wardsman, and a stableman; and we had no medical superintendent for seven months of the year, and the excess of temporary pay over what a permanent medical superintendent would get was £118. Then in order to give the nurses fifty-two days leave per annum regularly, it was necessary to add nine nurses and two servants. All that together accounts for £2 9s. 6d. per head of the increase. The remainder of the increase appears partly under the heading of drugs. We had an out-patient department in 1897, and in that year there were about 1,200 out-patients. Last year there were 2,400, and they consume a good many drugs. The difference in that respect amounted to nearly another £; but after all, the main part of the increase is shown under the head of provisions. That, I think, is due to three causes: In the first place, an institution like that cannot be run as it should be unless it has a permanent medical superintendent. The temporary superintendent whom we had did exceedingly well, but after all, his interest in the place was but temporary; secondly, the house surgeons are all practically students, and unless the medical superintendent keeps a very close watch over them a great deal of money will go upon extra milk, eggs, poultry, wines, and spirits; then, thirdly, last year there was a great deal of talk—not about the patients, but—about the nurses, who, I must say, are treated far better than those at any other hospital. Part of the extra cost has arisen from extra allowances. There is one very important item which does not fall under either of those three heads. During 1898 they managed to consume £600 worth of fresh fish. The reason of that is that there was a demand, more or less well founded, for more fish, and it was entered on the contract list at 1s. 4d. per lb.; so that if more fish were to be allowed, it was impossible but that the cost should be far in excess of what you would expect. Why it should be 1s. 4d. per lb. I do not know, but there it was. All this, now that we have a permanent medical superintendent, will require his strict attention, and will receive it. I think we shall have to revise the dietary scale altogether. There is a leakage which must inevitably occur as long as we have inexperienced house-surgeons there. Though it may be partly controlled, still it will always occur as long as young men have power to prescribe medical comforts and luxuries for the patients. I think it is a bad plan to employ them exclusively where there cannot be a large senior staff. I do not think it is quite fair to the patients, and I am quite sure that it interferes with the due control and economical management of the place.

28. The cost of the Coast Hospital during last year was £70 17s. 4½d. per bed? Yes.

29. Which is more than the cost at the Sydney Hospital, and nearly that at the Prince Alfred Hospital? Yes; and that has always been looked upon as very high.

30. I see from the report that during the year 1897 there were 461 cases of ordinary infectious disease, including chicken-pox, scarlet fever, diphtheria; 397 cases of venereal disease; 109 cases of erysipelas and septicaemia; eleven cases of diarrhoea; and thirty-one cases of berri-berri and malaria, and others, making a total of nearly 2,300 cases; does this represent the ordinary work of the hospital; does it show the average work of the hospital for the last two or three years? Yes; I think so.

31. So that the infectious disease cases, including the venereal cases, make up nearly one-half of the total number of cases in the hospital? Yes.

32. In addition, there were lepers;—will you give us the number? There are thirteen at the present date. The number last year was eighteen, falling to fifteen.

33. The venereal cases were all cases of males? Yes.

34. There has never been any provision for like cases of females? Never.

35. What are the objections to taking them at the Coast Hospital? The impossibility of controlling them—the impossibility of confining them to their wards.

36. Because the place is so much more open than an ordinary hospital? Yes.

37. Could not the ordinary cases that have been treated, other than the infectious cases I have mentioned, be treated as well under the Asylums Department and in the poor-house hospitals as at the Coast Hospital? About 30 per cent. of them in summer and autumn, and about 50 per cent. in winter might be treated in the poor-house hospital, but I am not quite sure whether they would all consent to go into a hospital attached to an asylum. They are working people, a large proportion of whom are destitute whilst they are ill, but when they get well again they will keep themselves. I doubt whether they would go into the Benevolent Asylum.

38. But a great number of people in the asylum are only inmates whilst they are ill, and they go out and work for their living again? Yes; I do not know any more about that than anyone else, but it occurs to me as a point for consideration.

39. So that a very large proportion of these cases could be treated in a poor-house hospital, which means a very considerable diminution of expense? I do not know that more than one-third of the people could on the whole. It depends upon the amount of illness. At any rate the poor-house hospital would have to be under the care of a medical man, and under the charge of trained nurses.

40. Yes, I am supposing that the poor-house hospital is properly managed? If they really require hospital treatment they surely need more and other food than is provided in an asylum.

J. A.  
Thompson,  
M.D.

17 April, 1899.

J. A.  
Thompson,  
M.D.  
17 April, 1899.

41. I gather from what you have already said that your view is that this would not make a good infectious diseases hospital, but that it might be used for a general hospital or a poor-house hospital, and might be useful for that purpose for some time to come if the buildings will stand? Yes; I do not see any reason why it should not be put to that use so long as acute cases are not admitted.
42. Will you give us briefly your views as to the site, the size, and the management of an infectious diseases hospital, where it ought to be, and how many patients you would admit, and under what department it could be managed? Since the infectious diseases hospital must be near the people to be served, you would require one for North Shore, and one for the rest of Sydney. As to this part of Sydney, if the hospital is to be on Crown land, I do not think there is very much choice as to the site. Leaving the Coast Hospital out of account, there are only two possible pieces of land—of which one is and one may become—available; the latter near the old rifle butts at Park Road, and the former a little way beyond Kensington Racecourse. Although that is not quite as central as one would like to see it, I think it is a suitable place. I think it is convenient enough to be accepted, considering that it is the only piece of Crown land actually available. As to its size, I do not think the hospital should begin by being very large. It is a means for the prevention of disease, and you cannot oblige people to take advantage of it. They will have to be educated into its uses; therefore, I suppose that about seventy beds would do to begin with. Perhaps it would never reach more than 200. As to its management, such a hospital ought to be under municipal control; but I think that is out of the question as we are constituted at present. Municipalities should control infectious disease hospitals. Municipal authorities get the first information, they know something about the people, and they can bring that pressure to bear without which the hospital would not be fully used. That cannot be at present, however; therefore, I do not see anything for it but for the hospital to be under the control of the Public Health Department. This detail of management requires a careful discussion. The point is that it ought to be a municipal institution. It cannot be, however, because municipalities have no power to combine to manage it.
43. If it is necessary to receive into the infectious diseases hospital people in fair circumstances—people other than paupers—would it be necessary to have more classification in that hospital than you would have if it was intended for paupers only? Yes; perhaps to some extent. Yet people who live in houses of reasonable size can manage to isolate their patients.
44. There are many respectable people whose houses are small and full of children, and it might be desirable for them to send one member of the family to an infectious diseases hospital, and they would not like to place that person amongst paupers or amongst people taken from the lower classes? I do not think that the word "pauper" should ever be mentioned in connection with such a hospital. I think it is an institution of which everybody who has not the proper means of isolation should take advantage; but you know the difficulties there are in refined classification. As soon as you go beyond a certain elementary division you double the size of your hospital.
45. It is desirable to take patients from all the different strata of society, and that means having a large hospital where a small one would otherwise do? It is a matter of opinion to what extent it would increase the size of the hospital; but if it increase it much it becomes an impracticable scheme, not only here but everywhere else.
46. *Mr. Barling.* Can you tell us what is the average number of patients per nurse and wardman at the Coast Hospital? I have the figures in my office.
47. Can you let us know how it compares with the Sydney and Prince Alfred Hospitals? Yes.
48. Are any contributions received at the Coast Hospital from relations of the patients? Yes; something is received, but it is a very small sum—so small that the Chief Secretary long ago gave authority to put it aside to form a fund from which destitute persons might get some gratuity on leaving the hospital if they were deserving.
49. Have you any idea what amount was received last year? £200 or £300.
50. Can you tell us whether any steps are taken to ascertain the competence of patients or their relatives to pay any portion of the cost of their treatment and maintenance? No steps are taken at all.
51. Do you think it would be desirable to have steps taken? Yes, highly desirable.
52. Do you think that diphtheria cases ought to be taken in? Yes; I think that patients suffering from infectious diseases ought to be admitted without question of ability to pay for the sake of isolation.
53. For the safety of the community? Yes.
54. With regard to other cases, you say that no steps have been taken to find out whether they can pay, and that, in your opinion, some steps should be taken with the view of compelling payment where they can pay? Yes. When I say that no steps are taken I mean that inquiries are made *visa voce* by Dr. Paton and by the clerk, but the answers given have to be accepted for what they are worth.
55. You think that sufficient care is not taken at present to ascertain that fact? Certainly. If the Coast Hospital is for paupers, then there should be a staff of visitors to find out who the applicants are.
56. You were speaking of an item that considerably swelled the cost of maintenance, viz., the large quantity of fish consumed;—do you consider that more fish is consumed at the hospital than should be? No; I think the excessive cost is due to the contract price.
57. Do they put down their own price? Yes.
58. One and fourpence a lb. is an excessive price for fish? Evidently.
59. Then the fault would lie with the system of tendering? Yes.
60. There ought to have been a line for preserved fish and another for fresh fish? Yes; but the contractor would tender at the price he thought fit.
61. What I mean is that the fault lies in the conditions of the contract? Probably.
62. You pointed out that fish was 1s. 4d. a lb. without pointing out whether it was fresh or preserved? It was fresh fish.
63. Then it comes to this, that a better arrangement with regard to contracts would do away with that difficulty? I think so.
64. What provisions are generally made in the city and suburbs for the treatment of infectious cases? There is no provision except that which is made at the Coast Hospital; but all the hospitals occasionally admit cases of infectious disease inadvertently.
65. They take in diphtheria patients at the Children's Hospital? Yes. They have a diphtheria ward containing twelve beds, and the Coast Hospital enables that place to deal with a larger number of patients than they otherwise could by receiving convalescents before they are fit to go home.

J. A.  
Thompson,  
M.D.

17 April, 1899.

66. As a matter of fact, the Coast Hospital is only a hospital for the treatment of cases of infectious diseases from the city and suburbs? It is the only hospital where infectious cases are regularly received.
67. Do you think at present there is a sufficient number of nurses employed for the work of the hospital? Yes.
68. You do not know enough about the Prince Alfred Hospital and the Sydney Hospital to say whether such is the case there? I do not know anything about those hospitals, except that I have inquired.
69. With regard to the Coast Hospital, there are sufficient nurses and wardmen to compass the work? Yes.
70. *Mr. Walker.*] You said that you issued orders yourself, sometimes Dr. Paton, and sometimes Dr. Taylor, or the clerk? Yes; the clerk questions the patients before they go to the doctor.
71. Who is responsible for admitting people to the hospital? I am officially responsible.
72. Then I understand that you depute your authority to those three persons? They do the work. I never interfere with them. It is impossible that I should.
73. I want to know who is responsible for the admission of patients? Dr. Paton is.
74. He admits the patients in reality? Yes.
75. And the others are under his instructions? Yes. He is chief of that branch, and will tell you more than I can tell you about the practical details.
76. *Dr. Manning.*] Turning now to the metropolitan hospitals, which consist of the Sydney, the Prince Alfred, the St. Vincent, and the Children's Hospitals, can you tell us whether these are sufficient for the needs of the population, or is the hospital accommodation for the metropolis below its requirements? I can only judge so far as there is pressure on the Coast Hospital, and my belief is that the hospital accommodation is well taken up at present. If it is not actually deficient, it is fully occupied.
77. So that it is rather below than above what is required? Yes; that is my belief.
78. Such being the case, what would you consider the best mode of meeting the want? That is a very difficult question. The plan that I have always had in my own mind was that of building an infirmary like a Poor Law Infirmary in England, and that the Coast Hospital should be combined with it. It would be filled largely with the more serious cases of chronic sickness in the asylums, and by such acute cases as are now represented by the acute cases which are taken into the Coast Hospital—if such a place were established within reasonable reach of Sydney. One must never forget that a hospital in the existing isolated situation is not equivalent to a hospital in the city. Then I believe that a large proportion of the cases now admitted to the Sydney and Prince Alfred Hospitals, and paid for by the Government, would be treated there. I think there would be economy in that plan, notwithstanding the primary expenditure on buildings. It is a subject about which a great deal might be said, but that has always been my idea. The infectious hospital would work in much better with such an institution as I have just mentioned than if it stood by itself, because the number of patients in it will fluctuate immensely; therefore its staff needs will fluctuate; so that it can be much better worked in conjunction with some general hospital.
79. You said in connection with the Coast Hospital, but you did not mean by that on the site of the Coast Hospital? Not at all.
80. Then you do not think any enlargement of the Sydney or of the Prince Alfred Hospital is at present required? I do not know that there is any present need for enlarging those hospitals. I only judge that they are about full. They are not overcrowded, but you could either enlarge them or diminish the number of patients in them by transfer to the Infirmary. The total number of patients in Sydney Hospital in 1898, the beds being 279, was 3,618, and out of that number 1,557 were Government patients; so that there were 2,061 who were not Government patients; and for the 1,557 Government patients, the Government paid very nearly £9,000 in addition to the £4,000 subsidy which the hospital annually has. The number of beds in Prince Alfred Hospital is 236; the total admissions to the hospital were 3,706; the Government patients numbered 1,359, those not being Government patients numbering 1,347, and the amount paid was £5,700—here again, in addition to the annual subsidy of £4,000. So in the case of Prince Alfred Hospital, the patients dealt with by the hospital as a public hospital, and dealt with by the hospital as a Government institution, were about equal—1,347 and 1,359.
81. Do you think it will be cheaper for the Government to put up a hospital for themselves, and run it themselves, than to pay these other institutions for receiving their cases? I think, when you come to go into details and the figures, you will very likely find that to be the case.
82. Speaking of these metropolitan hospitals, do you think there is much abuse of them by the reception of persons who are not fit subjects for a hospital? I have very often heard that that is so, but I really know nothing about it.
83. You know nothing of any system adopted to detect this abuse? No.
84. Have you formed any idea of what should be the sums fixed for payment; should these sums go beyond a certain amount, or should the hospital receive from patients anything beyond a medium sum—say 10s. or 12s. a week;—should they take sums which would really recoup the hospitals for all their expenses? No; except with regard to certain cases. I suppose there are some surgical cases which, if treated privately, would require a considerable sum of money for the operation itself, which would be beyond the means of many persons who could pay a moderate sum a week for medical attendance in hospital.
85. So that, generally, you think that a medium sum should be fixed, and that they should not take in patients who are able to pay full rates of maintenance? Yes.
86. Has the large number of out-patients engaged your attention; I see that in the metropolitan hospitals during last year there were upwards of 55,000 people in addition to the number that were treated at the Coast Hospital and at Balmain and one or two other places; so you see there were nearly 60,000 people who went and received treatment from the hospitals as out-patients;—do you not think that a very large proportion out of the Sydney population? It is a very large proportion—one-seventh.
87. Do you think it is a larger proportion than it should be? I think it must be. I do not know that I have anything definite to go upon, but I think it is an immense proportion. I should think it might be kept down by a system of inquiry officers.
88. You know the present mode of subsidising the hospitals at £ per £, and that the Government pays for patients in the metropolitan hospitals but does not pay for patients, admitted under Government orders, in country hospitals;—have you any alteration to suggest? No; I have thought about that.

The

J. A.  
Thompson,  
M.D.

17 April, 1899.

The number of persons admitted to country hospitals on order of the Police or of Government Medical Officers is so small, and they stay such a very short time, that I think the care of them is a fair charge on the subsidy.

89. Then you do not think that the country hospitals ought to receive payment for cases that receive Government orders? No; I do not.

90. The mere number is not here in question;—why should the Sydney hospitals get both subsidies and payment for their patients? I do not know, except that the Government have not a sufficient number of hospital beds at command to put destitute people in.

91. Neither have they in the country? No; but you have to consider that in Sydney it is possible to oversee the patients. It is not fully done, but it is done to a very large extent. It is part of Dr. Paton's duty to examine every patient whose stay has extended over twenty-eight days. He has to see whether they are properly retained for any longer time. We are under the impression that those hospitals are not anxious to get rid of Government patients. I think that the 3s. a day pays in some form—not directly but possibly in keeping a necessarily large staff going.

92. Then, if they are thoroughly paid they ought not to receive a subsidy of £ per £ as well? That is true. I think it would be very much better if the Government had a sufficient number of beds to take in all who were entitled to gratuitous treatment. In the country no supervision would be possible, and I think the Government would find practically they were paying the £ per £ subsidy and all the expenses. No supervision could be kept over them. I do not think that the patients in respect of whom the special payment would be claimed would always perhaps be quite fair subjects of it. Some check can be kept over such patients in the Sydney hospitals, although they are not supervised and checked as systematically as should be.

93. Now that private hospitals have been established in Sydney, do you think there is any necessity for paying wards in connection with public hospitals? No; if there is security that there always will be private hospitals in sufficient number.

94. *Mr. Barling.*] Has it ever come under your notice that there has been any abuse of the conditions under which subsidies are given to these hospitals? Are you speaking of metropolitan or country hospitals?

95. We will take the metropolitan hospitals? The Government do not pay £ per £ to the Sydney and Prince Alfred Hospitals; they get a fixed subsidy of £4,000.

96. Speaking now of the subject which Dr. Manning examined you upon with regard to paying patients, would it not be a serious inconvenience to a great many patients and persons of the middle class if the paying wards were abolished in the hospitals? I think that if a person can afford to pay his way entirely in a public hospital as a paying patient in a private ward, then the public hospital is exceeding its proper scope and its charitable design; such a person should be rather invited to enter a private hospital.

97. That is, if they are able to pay the whole of the cost? Yes.

98. But would not the whole of the cost in the hospital be very much smaller than the charge of a private medical practitioner? No. Some time ago a jeweller came down from Queensland and was taken into one of these two hospitals as a private patient, and he paid eight guineas a week.

99. Would the charge be less or more in a private hospital? I do not know whether it would be less; certainly it would not be any more. I should rather think that it would be less.

100. Did that eight guineas a week represent the actual cost to the hospital? I do not think so.

101. Would not patients, even if they paid the actual cost to the hospital, pay considerably less than they would have to pay at a private hospital? I cannot tell.

102. If it is so, it would be a great boon to the clerical and other classes, and those who are earning £2 to £6 a week? I do not know what the charges are in private hospitals, or what the charges are for private wards in public hospitals. All I say is, that if a person can afford to pay for a private ward in a public hospital, there is no doubt that he can pay for a private ward in a private hospital, and he ought to do so. The public hospitals should not interfere with the business carried on by those who own private hospitals.

103. *Mr. Walker.*] Are patients ever refused admission on Government orders to the Sydney Hospital simply for the want of means? No, never; but they are very often admitted, and an order is required after their admission, which is quite irregular.

104. If a person is admitted to the hospital, and afterwards it is found that he has means, is he compelled to pay before he leaves? I think that patients are pressed to pay if it is found out, but I do not know that any legal proceedings have ever been taken to recover.

105. How many patients are admitted to the Sydney Hospital on Government orders? In 1898 the number admitted to the Sydney Hospital was 1,557; to the Prince Alfred Hospital, 1,359. In the case of the Sydney Hospital, that number was nearly half of the total admissions, and it was just half in the case of the Prince Alfred Hospital.

106. Are not orders for admission issued by Dr. Paton and Mr. Simms? Dr. Paton gives orders to all those persons who can come to the hospital admission depôt, or who send their friends to apply to him. Mr. Simms issues orders to those people who apply to him direct. These applications emanate from medical men attending destitute persons in their neighbourhoods.

107. And you are aware, of course, that orders are given by me on behalf of the Colonial Secretary? Yes.

108. You say that there is £4,000 voted annually to the hospitals? Each of these hospitals gets £4,000, and in addition payment for the patients we have just mentioned. The Sydney Hospital got altogether £12,916; Prince Alfred Hospital got £9,790. Those are the totals for 1898.

109. *Dr. Manning.*] Do you know the capacity of the Carrington and Walker hospitals? The Carrington Hospital, 100 beds; the Thomas Walker Hospital, 76 beds. The Thomas Walker Hospital takes no Government patients. The Carrington Hospital had 1,082 in 1898, of whom one-third were Government patients, for whom they received as payment £1,006.

110. Then, with 176 beds, to what extent do these hospitals relieve the Metropolitan Hospitals? I have no means of answering that question.

111. You are aware that they take a majority of their patients from the Metropolitan Hospitals, and that they also take in a certain number of convalescents who have been treated in private homes; but you are not aware of the proportion of those? I have no information on the subject.

112. But considering that they have 176 beds between them, one may take it, I suppose, that they relieve the metropolitan hospitals to the extent of nearly 100 beds? I can only tell you that the Government gave 315 beds to people during 1898, and they were all at the Carrington Hospital.

J. A.  
Thompson,  
M.D.  
17 April, 1899.

113. Presuming that they have 100 beds at these hospitals at the disposal of patients from the Metropolitan Hospitals, that would really increase the hospital accommodation of Sydney by 100 beds? It would increase it by 100 beds for the time that those patients would have stayed in the hospital if there had not been a convalescent hospital to transfer them to.

114. Do you think that the suburban hospitals are doing all that they might do to relieve the pressure on the Metropolitan Hospitals? They are very small places. If they were kept full they would not appreciably relieve a hospital of 250 beds.

115. Have you had complaints that they do not take in cases that they might take? Not for some years. There was a time when the North Shore Hospital declined every now and then to take in cases of typhoid fever, on the plea that they had not a sufficiently large staff. I daresay that that was true; and if one says that they ought to have a sufficient staff, the reply would be, "Then you ought to find the money." They did what they could.

116. There have been no complaints of this kind of late years? I think not.

117. What do you think of the advisability of having so many small local hospitals, as regards the cost, and from other points of view? Their cost, I think, must be excessive unless they are kept full. It is a very difficult question. If a man breaks his leg at Burwood it is a long way to carry him to the Prince Alfred or to the Sydney Hospital. It is reasonable that there should be some small place to which he could be taken.

118. You think that the advantages of early treatment, and possibly more rapid recovery, compensate for the increased rates of maintenance to some extent? I think it may be so. I must put myself right with the Commission by saying that my Department has never had control of the hospitals. I do not know that it is desirable that it should have. These points do not come under my notice, and I have not the facts, on which many of those questions could be answered.

119. Has the matter of maternity hospitals engaged your attention at all? Yes; in relation to the inadequacy and impropriety of the Benevolent Asylum as it stands at present; nothing further than that.

120. Under whose control are the country hospitals? They are under the control of the Chief Secretary. Perhaps it would best put the Committee in possession of the facts if I gave what I have noted on that subject. In the first place, as to the establishment of country hospitals, that is always by local initiative; there is never any controlling inquiry as to the need for one. The inhabitants usually collect some money; a site is very often given by a resident, or granted by the Government. Having got together a reasonable sum, they apply to the Government and get the usual £ for £ subsidy. That is very rarely enough to enable them to do more than begin building, and they then apply to the Chief Secretary for a special grant, which is usually given. Then the committee engage an architect and choose a plan. The plans are forwarded for approval to the Chief Secretary, by whom they are usually transmitted to the Health Department, where they are examined as to the arrangements and general suitability and sufficiency. As a rule, I have supervised these plans myself, and made notes on them, saying, "This is wrong," and "This must be altered," and so forth, and sent them back to the Chief Secretary; but nobody has any hold over the country hospitals except the Chief Secretary, and his hold depends, not on any matter of law, but entirely on his control of the purse. The consequence is that the alterations indicated are not always made. I have found that out by visiting the hospitals perhaps two or three years after they have been built. There is no arrangement for insisting on these alterations being made; there is no control and no check. When they have got their buildings up they get gifts of furniture and instruments, and if they are lucky that takes the form of a special grant by the Chief Secretary. Sometimes wealthy residents give them instruments. These subsidies and special grants are not regulated by law, but are given at discretion of the Chief Secretary and they constitute the sole hold which any body has over the building of the hospital or its subsequent management. Then as to the constitution—and this is regulated by law: The subscribers hold a general meeting, they elect a committee, and the committee appoints its officers. The only hold over the officers consists in a regulation which was made by the Chief Secretary, as the result of an inquiry into the management of a country hospital, which was that there should be on the resident staff at least one person who is a trained nurse. That regulation has been attended to ever since it was made, which I think was four years ago. Otherwise they are perfectly free to appoint their own staff. At the end of 1895 I drafted a series of model rules for adoption by the hospital committees in regard to their organisation, but that again was quite a voluntary thing. It was done merely because it appeared to be desirable. Then the committees are required to keep certain records, namely, a cash-book, a register of admissions, discharges, and deaths, of provisions, and of subscribers. Down to 1895 forms for these purposes used to be furnished by the Government, but at that date I understand the printed stock ran out, and the committees were required to furnish themselves with suitable books. There is no regular examination of those books or accounts, but they contain particulars which have to be furnished when they are applying for their annual £ for £ subsidy. Then, as to the subsidy, that is paid by the Chief Secretary as a matter of course on application, but subject to the furnishing of the statistics of the hospital for the past year. I gather those statistics. By an arrangement, made I think in Dr. Manning's time, the subsidy is refused by the Chief Secretary if those statistics have not been furnished, but no controlling use is made of the statistics after they have been got. Dr. Manning moved the Chief Secretary to require that every country hospital should have accommodation for at least two cases of infectious disease, and should also require them to admit cases of infectious disease to the extent of their accommodation, a thing which they had always refused to do under their own rules. It was, at the same time I think, required that they must admit destitute cases presented by the police. That admission of destitute cases is intended only to avoid the necessity for sending really destitute people to gaol for shelter and protection; and if the secretary to the hospital looks after the business, they need, I think, very rarely indeed keep such a person a week. They can always transfer such persons to an asylum, which is their ultimate destination. Then as to examination of accounts, statistics, and so forth, there was an Inspector of Charities, whose duty it was to go round and inspect their accounts, and see what they were doing with their money, and I have no doubt that he was a very useful officer. However, he ceased in 1887, and he has never been replaced. I may mention that there are at present 100 country hospitals—that number does not include the suburban hospitals—and out of these, in eighty-six cases the medical officer is paid. In the vast majority of those cases the payment is really an honorarium, and runs from £12 a year upwards. I do not think it exceeds £50 in any case, except in the cases of Broken Hill and Albury. I think that the resident medical officer at the former place gets £100 a year.

In

J. A.  
Thompson,  
M.D.

17 April, 1899.

In some very remote places the medical officer is subsidised by the inhabitants as medical officer to the hospital, and that really is intended to induce him to settle there; in those few cases his salary is much above £50 of course, but takes the form of a guarantee by the wealthier residents.

121. *Mr. Barling.*] At Broken Hill I think the miners subscribe a certain sum and the same with regard to the mine-owners? Yes.

122. *Mr. Walker.*] Are you not aware that the duties of the Inspector of Charities applied to the whole of the institutions receiving aid from the Government? No.

123. You have not mentioned the Sydney hospitals, but the inspection applied to them as well as to all the Schools of Arts and other institutions receiving aid from the Government? I say that the inspection of hospital accounts ceased in 1887.

124. *Dr. Manning.*] You have visited a great many of these hospitals during the last fifteen years or so? Yes; I must have seen most of them at some time or other.

125. Are they generally well-conducted? I think so.

126. Can you point out any that you consider are not well-conducted, or that were not when you saw them last? The only one that I have had anything to say about is Cooma Hospital.

127. A good deal of interest is taken in them by the inhabitants of the place, and they are generally well-conducted? Yes.

128. As to the character of the buildings, do you consider that they are too expensive? No.

129. But they are much more expensive than the Kiama Hospital, of which you drew the plans—are they? I do not think anybody would build in iron if he could afford brick.

130. So you think that the cost of the buildings as a whole has not been too heavy in country hospitals? As far as I know, I do not think they have been; but I do not think I ought to answer the question in that way. What I mean is that the buildings in structure and size are not extravagantly designed; but what their actual cost is, and how that compares with the market rate at the time they were built, I do not know.

131. Have the by-laws that you drew up been generally adopted? No; they have been adopted by some seven or eight Committees; but in two or three of these cases, they have altered them or taken what they thought they would like, and left the rest. They have no authority; it was merely a suggestion.

132. But you think it is advisable that they should be adopted? I think so; but they have not been discussed.

133. Do you think all these hospitals are necessary? Yes; I do not know how we could get on without them. I do not know of two such hospitals so near to each other that they interfere with each other's work. That is a solitary case which you mentioned the other day—Silverton; but Silverton Hospital was necessary for a long time. It is only the decline of that town which has made it superfluous.

134. You know of no other cases in which the hospital is no longer necessary? No; and in many cases patients still have to take very long journeys.

135. Do you think that there is a necessity for the inspection of these hospitals? I think that must be so; but I could not give specific grounds.

136. You think it is necessary in the first place to see that their funds are properly disposed of, and that their management is satisfactory according to modern methods? Yes; I do not think that this hospital business will ever be satisfactorily managed until each hospital is supported by the inhabitants of the district which it serves, by the payment of a tax. It will not be satisfactory until it is made part of a system of local Government.

137. *Mr. Barling.*] Has any abuse of the conditions under which subsidies are given come under your notice? Well, I have not anything to do with it.

138. No, but has it ever come under your notice in your inquiries in connection with hospitals? I do not quite know what you mean.

139. They get £ per £ from the Government;—have they, in making up their balance-sheets, included items on which they have got £ per £, which they should not have included? Yes; but that is not first-hand knowledge. I have heard of a case, for instance, but I do not know anything about it myself, where they said they would give their doctor £100 a year, but it was understood that the doctor was to subscribe £50 a year to the hospital. Then they got £ per £ on that £50. I think something like that has happened very often.

140. That would indicate that a more careful scrutiny of the accounts of these various institutions is necessary? It would.

141. What remedy would you propose to prevent imposition of that kind? I think the functions performed by the Inspector of Charities were likely to check that sort of thing.

142. You think an officer ought to have power to inspect the accounts? He had power to examine all the books, and to take evidence, I think.

143. You say there is sufficient power if it were exercised? He had the necessary power, and I think that if he performed his functions regularly it would make it difficult for that sort of cheating to go on. I think there has been similar cheating in somewhat different ways.

144. *Mr. Walker.*] Do you not think that certain of these hospital establishments are too large for the requirements of the town? Well, there is the Broken Hill Hospital; they had to shut up one wing because they could not keep it going. I do not know of any other case. They are usually such small places that they are like private houses.

145. Would it not be advisable to have a stereotyped plan for hospitals—a plan that they might follow in accordance with their requirements? If there were means of making them adopt it it might be useful.

146. Do you not think they would adopt it if such a plan were prepared? I do not think they would unless the Government would also build. When they go to their architect he will not adopt somebody else's plan; besides everybody likes to have something different from his neighbour's. It is only a portion of the money that the Government give; the rest is subscribed by the people in the neighbourhood, and I suppose they would expect to have some voice in the spending of it.

147. Do you know how patients are admitted into the country hospitals? They are almost always admitted on the order of a subscriber. They have first to go to the subscriber, who gives an order, then they have to take that order to the Medical Officer, and if the Medical Officer thinks the case a suitable one for admission, he endorses it.

148. And the same system applies as in Sydney; if a patient can pay he is made to pay? Yes.

149. And have not the Government the right to admit any patient through the Police Magistrate? Yes; persons who come under cognisance of the police.

150. Could not some of the hospitals be dispensed with in towns in close proximity to one another; would it not be better to have one hospital to serve the whole district, instead of several? It would be better.

151. Do you not think it would be better to establish hospitals in big centres, where a good hospital might be established, and do away with the aid given to some of the others? Yes; where it could be done that would be a very good plan.

152. More especially along the railway-lines, where you could easily convey the patients? Yes; perhaps you would be able to do it only on the railway-lines.

153. For instance, at big centres like Bathurst, Goulburn, and Tamworth, you would concentrate the hospital accommodation for those districts without giving subsidies to ten or twelve different hospitals, and the patients would get better treatment? Yes; but you can go from Tamworth to Warialda, and from Warialda to Inverell, without coming across a hospital. Those are long distances, and there is no railway.

154. *Mr. Powell.*] You recommend generally local control and local rating? Yes.

155. *Dr. Manning.*] Have you any knowledge as to what is the number of private hospitals in Sydney? No.

156. Do you think it is necessary that these private hospitals, of which I may say there are a great many, should be inspected? It is done by some boards of health, but not in Australia. In many American towns private hospitals have to be licensed. I should think that probably it would be a good thing, but they are all conducted by respectable recognised medical practitioners, who are quite aware of their interests in having the place properly constructed. I suppose you did not think of any continuous inspection.

157. I was not thinking of inspection before licensing, I was thinking of periodical inspection? With what object?

158. I can conceive that a hospital might be established by people ignorant of what a hospital should be, and also with a view of gain, and I can conceive it necessary that these places should be inspected in the interests of the public;—is it your view that it would be well, at all events, to inspect them before they are licensed? I think that that might be a wise precaution, and also there might be an inspection to see that they are kept in repair. When I asked whether you contemplated continuous inspection I meant as to details of management and inspection of the method of conducting the business.

159. I gather that you think that a number of these hospitals in the country were established so that the inhabitants generally might get the services of a doctor fairly cheaply? Yes; I do not think there are a great many of these cases. Hillston is one, I believe.

160. The argument is something like this: "Where a doctor can be found to settle you had better have a cottage hospital so that we may get his services cheap, and where one cannot make a living, also found a hospital, and pay him out of the subsidy, and then we shall get his services cheap?" Yes, that may be so, but perhaps you would not get a doctor at all in those places unless such expedients were resorted to.

161. They would have to send a greater distance to a doctor and pay him more? Yes; if they could afford it.

162. *President.*] In many cases, I presume, that would be a very proper arrangement which *Dr. Manning* mentioned? Yes; I have thought that although irregular it may be as good a way as any other in the present state of the country for the Government to provide for poor people in that respect.

163. In some cases it is almost the only way in which it could be done practically? Yes; I think it is.

FRIDAY, 21 APRIL, 1899.

[The Commission met at the Offices of the Public Service Board at 2 p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).	
F. N. MANNING, Esq., M.D.	J. BARLING, Esq., J.P.
J. POWELL, Esq., J.P.	CRITCHETT WALKER, Esq., C.M.G.

William H. P. Cherry sworn and examined:—

164. *President.*] *What is your position?*

I am Chief Compiler in the Government Statistician's Office.

165. *Mr. Barling.*] *I asked the Government Statistician to be good enough to arrange certain statistics in connection with the hospitals, and I think he has deputed you to come and give the information?*

Yes.

166. *What was the average residence of persons discharged from the hospital during 1897?*

In the subsidised hospitals it ranged from sixteen to twenty six days. Thus the average for Prince Alfred Hospital is twenty-six days; for Sydney Hospital twenty-four days; and for smaller hospitals from sixteen to twenty-one days. In the Government Hospital at Little Bay the patients remain longer, the average being thirty-two days. The same remark applies to the Walker Hospital, St. Vincent's, and the Lewisham Hospital, where the averages are thirty-one, thirty, and thirty-one respectively.

167. *You have distinguished between the hospitals that are not subsidised and those that are;—the Walker Hospital, St. Vincent's, and the Lewisham Hospital are not subsidised, I think?*

No; they are unsubsidised.

168.

- W. H. P. Cherry.  
21 April, 1899.
168. *Mr. Walker.] St. Vincent's is subsidised?*  
St. Vincent's was unsubsidised in the year 1897, for which I have given statistics, and has been so returned for the last five years.
169. *Mr. Barling.] Has there been any increase in the rate of admission?*  
Yes; taking the whole Colony, ten years prior to 1897, the rate of admission per thousand of the population was 14·65. For the year 1897 it was 21·09 per thousand. The increase of population during this period was 26 per cent., and the increase in the number of admissions to the hospitals was 82 per cent.
170. *What was the rate of admission per thousand of the population to the metropolitan hospitals?*  
In 1888 the rate was 25·9 per thousand, and in 1897 it was 34·9 per thousand. The increase of population in the metropolitan area during this period was 41 per cent., and the increased admissions to hospitals 67 per cent.
171. *Does not the increase of admissions, compared with the increase of population, seem very high?*  
Yes; but I would suggest that it can be largely explained by the fact of the increased facilities and accommodation. There is no doubt that formerly many persons were compelled to remain at home who, under present circumstances, would be received into hospitals. Ten years ago the number of hospitals in the Colony was only eighty-two—seventy-six in the country and six in the metropolis;—now there are 108 hospitals—ninety-five in the country and thirteen in the metropolis, besides which many have been enlarged.
172. *What was the number of beds in 1888, and what was the number in 1897?*  
1,920 and 3,018 respectively. In the year 1894 the nursing staff numbered a little over 400, but now the number is 600.
173. *What was the number of beds per 1,000 of population?*  
For the year 1897 the total number of beds, as before stated, was 3,018 for the whole Colony, or an average of 2·3 per 1,000 of the population (1,310,550). The number of beds in the hospitals of the metropolitan and suburban area was 1,232, or an average of 3 per 1,000 of the population (414,020).
174. *What is the present population of Sydney and suburbs?*  
On the 31st December, 1898, the estimated population of the city of Sydney was 98,250; of the suburbs, 328,700; total, 426,950.
175. *What was the total expenditure and the expenditure per head of the population for all the Government hospitals and the private hospitals for 1897?*  
That is, for Government hospitals, those subsidised by the Government, and the unsubsidised hospitals?
176. *Dr. Manning.] That does not include private hospitals, of which you can have no knowledge?*  
No.
177. *Mr. Barling.] What was the total expenditure and the expenditure per head of the population for all the Government hospitals and others, not private?*  
The total expenditure on all the hospitals, Government, subsidised, and unsubsidised, was £138,719, which is at the rate of 2s. per head of the population.
178. *What was the expenditure for the metropolitan area only?*  
For the metropolitan area only the total expenditure was £65,131, or 3s. 2d. per head of the population.
179. *And for the country only?*  
For the country only the expenditure was £73,588, or 1s. 8d. per head of the population.
180. *Dr. Manning.] Does the metropolitan area include the suburban hospitals?*  
Yes; it includes the Little Bay Hospital, the Balmain Cottage Hospital, Prince Alfred Hospital, Croydon Hospital, the Glebe Hospital for Sick Children, the St. George Cottage Hospital at Kogarah, the North Sydney Hospital, Sydney Hospital, and the Lewisham Hospital. The Walker Hospital is not included.
181. *Mr. Barling.] What was the revenue from all sources?*  
For the metropolitan hospitals it was £67,100, or 3s. 3d. per head; for the country hospitals, £71,427, or 1s. 7d. per head; making a total of £138,527, or 2s. 1d. per head of the population.
182. *What amount did the State contribute?*  
To the metropolitan hospitals the State's contribution was £41,985, or 2s. per head of the metropolitan population.
183. *How much to the country hospitals?*  
To the country hospitals, £31,233, or 8d. per head of the country population; and the total for the whole Colony is £73,218, or 1s. 1d. per head.
184. *Out of the total of £138,527 of revenue, what was contributed by the patients?*  
In the metropolitan hospitals, £8,623; in the country hospitals, £6,057; or a total of £14,680, being a little over 10 per cent.
185. *According to the hospital accounts, what is the average annual Government expenditure on the metropolitan hospitals?*  
The average for the past five years was £37,569 per annum.
186. *And in the country?*  
In the country the average for the last five years was £33,838 per annum.
187. *And for the whole Colony?*  
For the whole Colony the average for the last five years was £71,407.
188. *What was the number of indoor patients for 1897, and the total cost of their maintenance and treatment?*  
In the metropolitan hospitals the number of patients was 14,447, and in the country 13,196, or a total of 27,643. The cost per patient in the metropolitan hospitals was £3 18s.; and in the country, £4 19s.; or £4 8s. for the hospitals of the whole Colony.

W. H. P.  
Cherry.  
21 April, 1899.

189. *What was the number of outdoor patients?*

That is rather difficult to answer. We cannot get the exact number. At the Sydney Hospital they give the attendances. The number of attendances at that institution is given as 85,350, but what number of individuals that represents we cannot say. I have arrived at an estimate in this way: Eliminating the Sydney Hospital, in all the other metropolitan hospitals the number is 22,510. The number which we get for the country is 7,732. I have added on to that an estimate of 20,000 for the Sydney Hospital. I find that in the Prince Alfred Hospital the number is 12,000, and I think it is considerably more in the Sydney Hospital, so I have made the estimate 20,000, which brings up the total number of outdoor patients to 50,242.

190. *What is the number of indoor patients in the Little Bay Hospital, the cost of maintenance and treatment of the patients, and the total expenditure?*

During 1897 the patients admitted numbered 2,506; the total cost of their maintenance and treatment was £10,869, or £4 7s. per patient; the total expenditure of the institution was £12,816.

191. *Excluding the Little Bay Hospital, what is the amount contributed by the Government to hospitals during the last five years, and the annual average?*

During 1893, £54,904; during 1894, £59,116; during 1895, £59,930; during 1896, £63,685; and during 1897, £60,402; annual average, £59,607.

192. *Are there any hospitals where no contributions are made by patients?*

Yes; the Little Bay Hospital and the Thomas Walker Hospital in the metropolitan area; also the Kogarah Hospital in the metropolitan district. In the following country hospitals patients contributed nothing during 1897:—Albury, Goodooga, Murrurundi, Scone, Tibooburra, and St. Joseph's, Auburn. That is absolutely correct as regards the Little Bay and Thomas Walker Hospitals, but whether it is quite correct as regards the Kogarah and the six country hospitals mentioned, I am not prepared to say. According to the returns furnished to us, the patients have contributed nothing.

193. *What is the total number of beds in the Sydney Hospital?*

The return for 1897 gave the total number as 322.

194. *And the number of indoor patients?*

4,090.

195. *What was the revenue of the Sydney Hospital, and from what sources?*

During the year 1897, Government contributions, £15,262; subscriptions and donations, £3,518; contributions by patients, £2,332; interest on invested funds, £1,254; other sources, £152; total revenue, £22,518.

196. *And the expenditure during 1897?*

Salaries, £7,141; maintenance, £9,845; buildings and repairs, £1,575; miscellaneous, £2,843; total expenditure, £21,404.

197. *Can you give the total cost of maintenance and treatment of indoor patients for this hospital?*

Yes; for 1897 it was £17,826, or £4 7s. per patient.

198. *Has there been any increase in the number of applicants for orders for Government hospitals and asylums during the five years ended 1897?*

Yes. In 1893 the number of applicants for Government orders was 8,813; in 1894, the number was 9,134; in 1895, the number was 9,747; in 1896, the number was 12,251; in 1897, the number was 11,503. There was, therefore, a decrease in the last year (1897), but an increase in all the other years.

199. *What were the increases?*

In the year 1894 the increase was 321; in 1895 the increase was 613; in the year 1896 the increase was 2,504; then in 1897 there was a decrease of 748.

200. *Now give us the total increases?*

In the year 1894 the total increase was 321; in 1895 the total increase for the two years was 934; in 1896 the total increase—that is, for the three years—was 3,438; and in 1897 it had dropped down to 2,690. That represents the total increase in the quinquennial period. The number of orders for the Asylums for Infirm and Destitute increased from 2,116 in 1893 to 3,091 in 1897, or about 50 per cent. There is a decrease in the case of one institution, Little Bay Hospital, from 2,197 in 1893 to 1,872 in 1897, or over 16 per cent. The orders for outdoor hospital treatment have risen from 1,930 to 3,300 in five years, or 71 per cent.

201. *How were the orders distributed in 1893 and 1897, and what was the increase per cent.?*

The orders distributed in 1893 were as follows:—Outdoor, 1,931; indoor, 6,412. Orders for appliances—that is, trusses, spectacles, &c.—96; the number of orders refused, 374. That makes the total of 8,813 for the year 1893. In the year 1897 the distribution of orders was:—Outdoor, 3,302; indoor, 7,615; appliances, 224; orders refused, 362; or a total of 11,503. The increase in outdoor orders between 1893 and 1897 was 70 per cent.; in indoor orders, 20 per cent. The increased number of applications for appliances was 143 per cent.; in the number of orders refused no increase at all. It is practically the same.

202. *What is the total increase per cent.?*

It is 80 per cent.

203. *You have given the increases per cent. in the applications for Government orders to hospitals and asylums; what is the increase per cent. of population during the same period?*

The increase in population is only 8½ per cent.

204. *So, whilst the population increased only 8½ per cent., we had increases of 70 per cent., 20 per cent., and 143 per cent., on account of outdoor and indoor treatment and for appliances respectively?*

Yes; and of total applications, 30 per cent.

- W. H. P. Cherry.  
21 April, 1899.
205. *Of the 11,503 applicants during 1897, how are they proportioned according to birthplaces, and also as compared with five years ago?*  
In the year 1893 the proportion of New South Wales natives in the total orders was 29·62; of other Australian natives, 7·08—that includes New Zealand; natives of the United Kingdom, 53·22; and for all other places the proportion was 10·08 per cent. In 1897 the New South Wales natives numbered 35·2 per cent.; the natives of other Australian Colonies, 7·4 per cent.; the natives of the United Kingdom, 48·7 per cent.; and the natives of other places, 8·7 per cent. As regards applicants born in New South Wales, there is an increase of 5·6 per cent. from the year 1893 to 1897.
206. *President.] You would expect an increase?*  
Yes; that is about the natural increase.
207. *Mr. Barling.] The other Australian Colonies remain in about the same proportion—it was 7·08 in 1893, and it is still 7·4 in 1897; but there is a decrease in the cases of natives of the United Kingdom?*  
Yes; of 4·5, which also you would naturally look for, and there is a slight decrease in regard to natives of “all other” places.
208. *Taking the period of residence in New South Wales, what is the number of applicants resident in the Colony from 1 to 12 months, from 1 year to 10 years, and over 10 years?*  
Resident from 1 to 12 months, 501; from 1 year to 10 years, 1,574; over 10 years, 5,375; or a total of 7,450 not born in New South Wales. Applicants born in New South Wales numbered 4,053.
209. *What is the proportion of—(1) natives of New South Wales, (2) natives of the other Australasian Colonies, (3) natives of the United Kingdom, and (4) natives of other places, to the entire population of New South Wales?*  
According to the census taken eight years ago, the proportion of New South Wales born was 64·51; of other Australian-born population, 7·47; of those born in the United Kingdom, 23·67; and of all others, 4·35. I may say that the proportion of New South Wales born has certainly increased since then, and the proportion of those born in the United Kingdom will be less.  
Contrasting these proportions with the percentages of applicants according to birthplaces just given for 1897, it goes to show that the New South Wales orders would be double if they were in proportion to the population. The orders of other Australian-born are in exact proportion to their numbers in the population. The orders of applicants born in the United Kingdom are double in proportion to their numbers in our population, and so are the orders of applicants born in “all other” places.  
Or, putting it another way, in proportion to their respective numbers in our population, the “other Australasian” applicants are double those of New South Wales applicants, and the applicants born in the United Kingdom are four times those of New South Wales applicants. But it is only fair to point out that the disproportionate number of applicants who are from the United Kingdom or foreign countries is in a great measure due to the important fact that the portion of our population drawn from these countries consists mainly of adults, while in the native-born population there is, of course, a great preponderance of children.
210. *Taking the actual increase in the number of applicants during the period 1893–97, what is the rate of increase for natives of each of the Australian Colonies?*  
During the five years, 1893 to 1897, the increase in the actual number of applicants has been as follows:—Natives of New South Wales, 55·3 per cent.; natives of Victoria, 51·3 per cent.; natives of South Australia, 51·3 per cent.; natives of Queensland, 8·9 per cent.; natives of Tasmania, 24·2 per cent.; and natives of New Zealand, 35·2 per cent. Natives of Western Australia show an increase of 800 per cent.—that is, from 1 to 9 applicants. With regard to the United Kingdom, the applicants who are natives of England have, from the year 1893 to 1897, increased 19·9 per cent.; natives of Scotland, 39·5 per cent.; and of Ireland, 12·5 per cent.  
An examination of the figures for the three years from 1895 to 1897, however, shows different results.  
Taking this shorter period, the orders have increased from 3,082 to 4,053 in regard to natives of New South Wales—that is, 31·5 per cent. The orders given to Victorian natives have increased from 239 to 354, or 48·1 per cent.; the orders for Queensland natives have increased from 132 to 147, or 11·3 per cent.; the orders of South Australian natives have increased from 44 to 56—that is, 27·2 per cent.; the orders of West Australian natives have increased from 1 to 9—that is, 800 per cent.; the orders of Tasmanian natives have increased from 108 to 118, or 9·2 per cent.; the orders of New Zealand natives have increased from 141 to 165, or 17 per cent.
211. *Now, as regards the natives of the United Kingdom?*  
The orders of the natives of England and Wales have increased from 2,681 in 1895 to 2,909 in 1897, or 8·5 per cent.; the orders of the natives of Scotland have increased from 627 to 752, or 19·9 per cent.; the orders of natives of Ireland have increased from 1,766 to 1,940, or 9·8 per cent.
212. *Now, with regard to occupation, how are the applicants classified?*  
Labourers, shepherds, and shearers, about 26 per cent. of the whole; servants, including barmaids, 13 per cent.; children and persons of no occupation represent 11½ per cent.; married women and housekeepers, 10 per cent.; seamen and fishermen, over 5 per cent.; miners, nearly 3 per cent.; carters, 3 per cent.; the others are all small. The number of seamen and fishermen seems rather high.
213. *Compared with five years ago, is there much variation in regard to the occupations of applicants?*  
There is not much fluctuation in regard to applications; there is an increase of 1 per cent. in miners, and of nearly 3 per cent. of married women applicants. Servants and barmaids are less in number by nearly 2 per cent., and cooks, bakers, and stewards by 1 per cent.

214. *How do the proportions stand in regard to the ages of the applicants?*

Nineteen per cent. are over 60 years old; another 19 per cent. are between 30 and 40 years of age; 16 per cent. are from 40 to 50 years of age; 13 per cent. from 50 to 60 years of age, and 10 per cent. between 25 and 30; 8 per cent. between 20 and 25 years of age; 5 per cent. between 15 and 20 years of age; 4 per cent. between 10 and 15 years of age; 3 per cent. between 5 and 10 years of age; and those under 5 years are very close on 3 per cent. This is for the year 1897.

W. H. P.  
Cherry.  
21 April, 1899.

215. *Mr. Powell.] Have you particulars as to the amount contributed by the public in subscriptions, donations, and bequests?*

Yes; I stated before that the total revenue of the hospitals is £138,527; of that amount the subscriptions and donations amount to £41,845. Of that total revenue of £138,527, the metropolitan share was £67,100, of which subscriptions and donations formed £12,759. For the country, the total revenue is £71,427, of which the contributions, subscriptions, and donations are £29,086. Perhaps it would be better to go more fully into the item of revenue, and to give this information under each heading. I will give the revenue from all sources. For the metropolitan area the Government contributions amount to £41,985; subscriptions and donations, £12,759; contributed by patients, £8,623; interest on invested funds, £2,479; other sources, £1,254, making a total of £67,100. The Government contributions to the country hospitals amount to £31,233. Subscriptions and donations, £29,086; contributions by patients, £6,057; interest on invested funds, £1,928; other sources, £3,123, making a total of £71,427. The totals for the whole Colony are:—Government contributions, £73,218; subscriptions and donations, £41,845; contributions by patients, £14,680; interest on invested funds, £4,407; other sources, £4,377, or a total of £138,527.

216. *Dr. Manning.] Can you give us any idea of what is included under the heading "other sources"?*

No, I cannot. This information is obtained from the returns furnished to us by the Board of Health Department. Probably they could supply it more in detail.

217. *President.] You stated that the orders in regard to New South Wales natives had in three years increased 31 per cent., Victorians 48 per cent., Tasmanians 9 per cent., New Zealand 17 per cent.;—can you account for the disproportionate increase in regard to the natives of the two first colonies?*

I cannot say why the Victorian increase is so much larger than that with regard to the natives of New South Wales.

218. *It points to the fact that we are getting poor people from there?*

It has that appearance. The number of orders granted to Victorians was 437 in 1896, and 354 in 1897, whereas in 1895 it was only 239. With regard to Tasmania and New Zealand, the three years' comparison shows an improvement on the five years.

219. *You mentioned something about the large number of seamen who apply for orders;—can you account for that in any way?*

No; we have no means of accounting for it. But probably it is not the seamen of our own population who swell the ranks of applicants. More likely it is seamen from other countries; and I am inclined to think that those applicants resident in the Colony less than twelve months are composed largely of this class.

(Additional and later statistics in regard to Government orders will be found in Appendix I.)

Walter Liberty Vernon sworn and examined:—

220. *President.] You are the Government Architect? Yes.*

221. *Have you inspected the buildings of the Coast Hospital? Not within the last month or two, nor in view of this inquiry.*

222. *You know their condition? I know their condition generally.*

223. *Dr. Manning.] You have been there frequently within the last year or two? I have been there occasionally, not frequently.*

224. *Can you indicate to us in what condition of repair the buildings generally are? The building erected in 1882, and that is the main wards, the kitchen, the nurses' quarters, the junior medical officers' quarters, the men's mess-room, the lazarette, police buildings, recreation hall, and scientific hall are the oldest buildings in the institution. They were erected in 1882, and they are more or less in a state of dilapidation. The proximity to the sea has a very strong effect upon the iron roof, the consequence being that the life of those buildings, and not only of the ironwork but also of the woodwork, is rather short. The buildings were put up, I understand, in 1882 to meet some scare. They are in such a state that I estimate they will last from about thirteen to fifteen years with annual repairs, but not longer. I have a list in the office now of general repairs amounting to £1,500, but it is not exclusively confined to that set of buildings. There were a class of buildings put up in 1892, including a clock-tower, and leper quarters for Chinese and Europeans, and they are in a better state of repair.*

225. *President.] What are they built of? The bulk of them of wood and iron, in some cases lined with iron as well as cased in iron.*

226. *Dr. Manning.] What is the life of those buildings? I consider that the life of those buildings will be from twenty-five to thirty years, of course, with repairs.*

227. *Recently some more permanent buildings have been erected? Yes. In 1897 and 1898 we put up a diphtheria ward, additions to nurses' quarters, and a number of other buildings. These are all of increased stability, and are an improvement upon the original building, and although they are erected of wood with iron casings and linings I consider that they will stand for another thirty-five or forty years. That is, with constant repairing in all cases, I am of opinion that repairs will keep on in an increased ratio per year in all those buildings.*

228. *Have any buildings of stone or brick been put up of late? We have just completed a new laundry and a fumigating-room in brick. That is practically the first building put up of a more permanent character.*

W. L. Vernon.  
21 April, 1899.

W. L. Vernon. 229. Why were they put up in stone and brick rather than on the old plan of using galvanised iron? One thing was to get stability in connection with the machinery for laundry purposes; another one was to avoid the increasing repairs in connection with these timber buildings. There was great doubt at the time as to what should be done, and at a subsequent period in connection with the new kitchen, I raised the question with Dr. Thompson as to what the future of the institution was to be, because that really would be a guide as to the class of buildings to be erected, whether they should be of a stable character of brick or stone, or of a temporary character. The laundry was built of brick, because at the time, I suppose, it was imagined that the chances were that the institution would remain permanent.

21 April, 1899.

230. What has been the cost of the buildings erected during the last two years in stone and brick? In 1897 and 1898 the infectious diseases ward cost £2,390 8s. 4d, and the furniture, £314 3s. 1d. There was a small sum of £68 for additions to the nurses' quarters. In 1898, including the laundry and several permanent additions, the cost was £3,338 2s. 2d; for furniture, £231 2s. 4d. Up to 1892 the expenditure upon the whole institution was £47,441. Since then, there has been a total expenditure of £11,337 12s. 7d. This latter amount is divided between loans and revenue. There has been an average expenditure since 1892 of £1,067 from Loans and £989 from Revenue.

231. What buildings are now contemplated at the hospital? The erection of a new kitchen and new kitchen plant, and the remaining proposals are very small at present. There are additions to the junior medical officers' quarters, and some rather large additions to the superintendent's quarters. Beyond that I cannot carry in my mind any further schemes.

232. Can you tell us what is the amount of money which it is proposed to expend over these contemplated additions? The additions to the junior medical officers' quarters, I think, come to about £350, and those to the superintendent's quarters to about £600. The question as to the kitchen has hardly got far enough to meet the estimated cost; the papers are passing through now in reference to whether it should be a permanent or temporary building.

233. *Mr. Barling.*] Can you tell us about what proportion the additional cost of brick would be over wood and iron? I should think about 30 per cent., because the hospital is in such an exposed position that if you are building in brick you must take special precautions against the south-easterly gales, otherwise you would not be so dry as you would be in a wooden building.

234. Would there be any appreciable difference in the building of a hospital on a site such as that of the Coast Hospital and at a place nearer Sydney? Yes; there is excessive cost in taking the material out there. I may mention, for instance, bricks. When I was out there the last time I found that the carters can only bring one load of bricks per day—that being a journey of 26 miles. The contractors are put to a great disadvantage as to cost, in not being able to send out two loads per day.

235. *Mr. Walker.*] That would add 5 per cent. to the cost? I think it would.

236. *President.*] Where are the nearest brick-works? At St. Peters. At present Little Bay is very inaccessible; it takes nearly a day to go there and back.

237. *Mr. Walker.*] Is there any protection from fire in the Coast Hospital? The protection of isolation more than anything else. There is a system of hydrants through the building, and we have the water supply from the city, but in a gale I do not suppose that the hydrants would stop any one ward from being burnt; but they are so well isolated that I do not think there is much to fear.

Robert Thompson Paton, L.R.C.P., Ed., F.R.C.S., Ed., sworn and examined:—

R. T. Paton,  
L.R.C.P.,  
F.R.C.S., Ed.

21 April, 1899.

238. *President.*] You are Government Medical Officer and Vaccinator? Yes.

239. *Dr. Manning.*] The majority of the cases sent to the Sydney Hospital to be treated at the Government expense, pass through your hands? They do.

240. Under whose instruction do you act? Those of the Chief Medical Officer, Dr. Thompson.

241. What, briefly, are those instructions? Either Dr. Taylor or myself is present at the Hospital Admission Depot between 10.30 and 12 every day, except Sundays, Christmas Day, and Good Friday. The persons presenting themselves at the Hospital Admission Depot are first interviewed by a clerk, who takes their particulars and inquiries as to their ability to pay anything for their maintenance, and whether they have received former hospital treatment. I have one of the forms here which shows the inquiries that we make. They are then sent into my room and examined by me, and if I find that they are suffering from some disease, and it requires active hospital treatment, and if they are not suitable cases to stand a journey to the Coast Hospital—

242. If they are so acutely ill? Yes, as not to be able to stand the journey to the Coast Hospital, I issue Government orders for their admission to the Sydney or Prince Alfred Hospital. If they require hospital treatment and are able to bear the journey to the Coast Hospital, I issue an order on the Coast Hospital, and they are sent there by an ambulance that leaves the depot every day at 12 o'clock. If they have a home and can be treated as out-patients, I issue an out-patient's order on the Sydney or the Prince Alfred Hospital. If they are destitute and suffering from chronic disease, I issue an order for one of the Government asylums.

243. What staff have you besides the clerk? One messenger, who shows the people in.

244. Have the instructions been modified at all lately? No.

245. And how does it happen that a rather different class of cases have been sent to the Coast Hospital within the last twelve or eighteen months? Probably cases that would formerly have gone to one of the metropolitan hospitals have been sent to the Coast Hospital. It simply depends upon the number of beds that we have vacant. If there are a number of beds vacant at the Coast Hospital, and we have none at the Sydney or Prince Alfred Hospital, patients are sent to the Coast Hospital.

246. Yes; but I gather that there had been a much larger proportion of cases needing operative interference, and acute cases, sent to the Coast Hospital within the last twelve or eighteen months? Then it was because there was not accommodation in the metropolitan hospitals.

247. You have had very large experience of hospitals;—do you think it is wise to make the Coast Hospital, which is a considerable distance away, into an operative hospital? No, I do not think it is.

248. Operations involve the giving of chloroform? Yes.

249. And very considerable skill? Yes.

250. And it is not advisable, is it, that these things should be done without the checks which are imposed by the presence of visitors and students in an ordinary hospital? No. I think that operation cases would be done in a public hospital, and should be under the criticism of the medical profession. R. T. Paton/  
L.R.C.P.,  
F.R.C.S., Ed.
251. So that it is not advisable that operation cases should be treated at the Coast Hospital? No; it is not advisable, if it can be avoided. 21 April, 1899:
252. You told us how you send some of these cases;—is any preference expressed for any one or other hospital by the patients? The patients nearly always wish to go to the Sydney or Prince Alfred Hospital. They ask to be sent there.
253. What are their objections to the Coast Hospital? I think its remoteness. They cannot be visited there by their friends.
254. Not because of the treatment or of the way in which they are fed? No; they say that if they go there they would not be able to see their friends.
255. Do they object to go to the Asylum for the Infirm and Destitute? Yes, a good number of them do.
256. Why? They do not seem to be satisfied with the treatment there. A great number leave the asylums and re-apply and attempt to get either to the Coast Hospital or to one of the metropolitan hospitals.
257. Do you think that is because of the dietary or because the accommodation is not so good at the asylums for the infirm and destitute? I do not know exactly the reason. They seem to be dissatisfied with the asylum, but I never could be certain as to the particular reason for their dissatisfaction.
258. Could the majority of cases sent to the Coast Hospital be treated in a proper poorhouse hospital—I do not mean a hospital in connection with the asylums for the infirm and destitute as they now exist, but hospitals in connection with the infirm and destitute institutions as they should be? If you did not send any operation cases and infectious fever cases then a large percentage of them could be treated there.
259. Do you think that the majority of ordinary cases treated at the Coast Hospital could be treated in a properly-constructed and properly-managed hospital for the infirm and destitute? A great number of them could be treated in such a hospital as you describe.
260. I may say that Dr. Thompson thinks that no more than 30 per cent. could be so treated;—what is your view on that subject? Well, the Coast Hospital takes a lot of typhoid cases.
261. I am excluding those and all infectious diseases, and taking the ordinary hospital cases? I could not be sure as to the exact number, but I should say that a large number could be treated there.
262. You think over 30 per cent.? Yes, over 30 per cent.
263. You know, of course, what the present hospital accommodation of Sydney is? Yes.
264. Do you think it is sufficient for the needs of the population? No; I think they require more beds than they have—that is, presuming that they were to take all those cases which we are now sending to the Coast Hospital.
265. And if additions are to be made, what do you think will be the best form of making them;—what form do you think the additional accommodation in the metropolitan hospitals should take? Do you mean as regards an increased number of beds?
266. Would you add to the Sydney or the Prince Alfred Hospital; and in what way would you add to it? You could add to the Sydney Hospital by increasing it a storey. I am not quite sure as to how you could increase the accommodation at the Prince Alfred Hospital.
267. Is hospital relief sought for by undeserving cases to any large extent? Not to any large extent. A number of people who could afford to pay very often apply at the hospital admission depot. If this is discovered they are refused; but I daresay that a number get into the hospital on Government orders who could afford to pay.
268. I find that you reject upwards of 300 a year? Yes.
269. That is after an inquiry which is not very searching in its character? No; it is simply an inquiry of the applicants as to what property they possess.
270. You have no corroborative evidence? No.
271. And you have no means of following up that inquiry at the people's own homes? No; we have no means of inquiring at their homes.
272. In fact, in no case do you check what they tell you by any further inquiries? No.
273. The hospitals have grown very much in special departments? Yes.
274. Do you think this specialisation of hospital work is necessary? Yes; as regards the eye department of the Sydney Hospital.
275. I am going into that afterwards; I mean the specialisation more recently established with regard to diseases of the throat, ear, and nose? The majority of the throat and ear cases are outdoor cases. I admit very few to the hospital to be treated for throat and ear complaints.
276. Are you aware that there have been special departments made at the Sydney and Prince Alfred Hospitals within the last year or two? Yes.
277. Do you not think that this has been more for the benefit of enterprising medical men than for the good of the patients? No; I think it is necessary that a man should have skill in those particular departments. I mean that the ordinary surgeon is not usually skilled in the treatment of ear diseases, and I think it is necessary and right that such departments should be specialised.
278. You have some idea of the rates of payment made to the hospitals? Yes.
279. Have you formed any idea of what should be the system under which hospitals should receive payments from their patients? Patients who can afford to pay 10s. a week have to be admitted; but we refuse to recognise them as pauper patients. We give such a patient a recommendation, saying that he can afford to pay 10s. a week, and they take him in on that; but they lose by it. I do not think it pays the hospital to take a patient for less than 25s. a week.
280. Do you think it is right that they should take paying patients up to those rates? Under certain circumstances, I think, it is right. There are a number of people who can afford to pay 25s. a week who would go into a hospital for an operation or to be nursed, but who could not afford to pay for nursing and for an operation in their own homes. A man suffering from acute pneumonia would require a night and day nurse, and his house might be unsuited for the treatment of this disease. A man who could pay 25s. a week, and go to the hospital, would have a better chance of recovering from his disease than he would have if he remained outside.

- R. T. Paton,  
L.R.C.P.,  
F.R.C.S., Ed.  
21 April, 1899.
281. But where the hospital accommodation is over-strained, as you say it is in Sydney, the taking in of paying patients must restrict the number of more necessitous cases that might be taken? Yes; it does.
282. Therefore, it means a necessity for increased hospital accommodation, practically for a class who could largely afford to go into private hospitals? I do not think that a man could be treated in a private hospital for 25s. a week.
283. Has the enormous number of out-patients struck you? Yes.
284. We find that it is between 45,000 and 50,000 individuals at the hospitals;—does not that seem a very large number for the metropolis? It does.
285. Could you tell us how far you think the Coast Hospital is suitable as a hospital for infectious diseases? It is suited for infectious diseases, but very often I get cases that are too ill to go there,—for instance, a typhoid case in the second or third week. Such a case is too ill to be removed to the Coast Hospital—the distance is too great; consequently, I have to put the patient in one of the metropolitan hospitals.
286. Let us exclude typhoid and deal with the ordinary infectious diseases;—what do you say about them? I think the Coast Hospital is a suitable place for treating such cases.
287. Can you give us any objections to it in dealing with those cases? There are several objections to the Coast Hospital. I have not any recent knowledge of that hospital. One objection was that they had no accommodation for mixed scarlet fever and diphtheria cases. I do not know whether they have any now or not. Then the conveying of them in ambulances that had to be disinfected. But with proper accommodation I should think the Coast Hospital would be a suitable place for the treatment of infectious diseases.
288. The first objection you mentioned—that there was no suitable accommodation—could easily be met by a re-arrangement of the wards? Yes.
289. And the second could be met by providing greater facilities for transit? Yes.
290. In the Sydney Hospital there are female lock cases? Yes.
291. What is the number? I have not got them separate. I have all the venereal cases together. We have not many beds for female lock cases. The only beds we have are in the Sydney Hospital. I do not think they exceed twenty.
292. Do you think these cases could be provided for elsewhere under proper conditions? Yes.
293. Where do you suggest that they should be provided for? At the Coast Hospital.
294. Then you have a very bad class of women and a bad class of men, the women possibly being worse than the men as a class, and they would be in very open wards at the Coast Hospital? If the female lock cases were transferred to the Coast Hospital they would have to be in an enclosure.
295. You think that the difficulty of treating female lock cases at the Coast Hospital could be met by treating them in enclosures? I think so.
296. It is part of your duty to visit the hospitals, and to check the stay of the Government cases? Yes.
297. How often do you pay such visits? Once a month.
298. Do you find any tendency on the part of the officials to keep those cases unnecessarily? No.
299. Turning now to Moorcliff—would it not be advisable that those eye cases should be treated in the main Sydney Hospital? Yes; I think they ought to be treated in the main hospital.
300. What is the number of cases treated at Moorcliff? Last year there were 325 order cases.
301. Do you know the number of beds at Moorcliff? I have not got the correct number.
302. What is the length of the stay of those eye cases; is it not greater than that of the ordinary hospital cases? Yes; very much greater.
303. Can you give us any idea of the average number of days that they are in the hospital? No; I have known cases to remain in Moorcliff Hospital for at least a year.
304. Are there many cases admitted that are not fit cases to be there? No; the beds are so very much in request that if a case goes to Moorcliff Hospital that is not a fit case they very soon get rid of it.
305. Are there any extra colonial cases? Yes; there are a number of them. During last year a number of people from other colonies and from beyond sea applied for admission. Of persons under one month in the Colony 164 applied, and from one month to six months, 267, giving a total of 431.
306. I am speaking more particularly of Moorcliff eye cases? A number of those cases that I am speaking of came from other colonies, principally from Queensland and were eye cases.
307. I see that Sydney Hospital, in its report for 1896, rather prides itself upon the magnitude of its dealings with eye cases, and says that the eye department is not only known throughout New South Wales, but attracts patients from the neighbouring colonies? That is so. A number of people come from Queensland. Queensland is the colony that sends the most eye cases.
308. Is that because this place is on a large scale? No; I am inclined to think that it is because the eye surgeons here have a very great reputation.
309. The department for eye diseases is on a larger scale than at almost any other place compared with the size of the town and the size of the hospital to which it is attached? Yes.
310. Do you know any other place in the world of the size of the Sydney Hospital that has four ophthalmic surgeons attached to it? Not out of London.
311. You have a good deal to do with Sydney Hospital? Yes, as regards admitting patients.
312. I suppose you look upon it as the main function of that hospital to admit accidents and urgent cases? Yes.
313. From what you have seen, do you think that room could be made in that hospital for the Moorcliff cases? Yes, room could be made for them by addition to the hospital.
314. Are you aware that those wards at the back of the administrative buildings were formerly intended for ophthalmic cases? I have heard that they were.
315. But they have been appropriated for other cases? Yes.
316. Have you anything to do with suburban hospitals? No.
317. Have you anything to do with convalescent hospitals? We occasionally send cases to the Carrington Hospital.
318. You send them direct from the dépôt? Yes; and they are paid for by the Government at the rate of 2s. a day. We do not send many cases. As a matter of fact, we get very few beds.
319. You have, besides issuing hospital orders, to give orders for appliances which have been described as trusses, spectacles, artificial limbs, &c.? Yes; we occasionally give artificial limbs, bandages, glasses, trusses, &c.

320. Is the expenditure on these articles large? The expenditure on glasses is the greatest. Every year we are getting more people applying for glasses. It is only a few years since we started supplying them. We had a number of cases applying for admission that required glasses, and we started to give them when they left the hospital.
321. And now you are supplying glasses to a very large number? Yes; the demand is increasing every year.
322. The Prince Alfred and Sydney Hospitals also supply trusses and other appliances? If they are Government patients who want them, the articles are supplied at the expense of the Government.
323. In addition to that, some new society has started for supplying them? Yes; I believe so. One of the things which lately we have had to supply is abdominal belts for women.
324. Do you know anything about the private hospitals in Sydney? No.
325. Do you know how many there are? I do not.
326. Have you formed any opinion as to the necessity for the inspection of these private hospitals? That is a thing which I have not thought about.
327. *President.*] You said you had no means of following up the inquiries made;—does that refer to the inquiries made by you or by the clerk? The inquiries are made by the clerk, and I always check them.
328. Has not the Charities Department machinery for following up these inquiries? Not for our cases.
329. Have they no inspectors? Not for this purpose. Some years ago there was a Sub-Inspector of Police, Mr. Long, who was clerk at the Hospital Admission Depot, and if we had a very doubtful case he used to make inquiries when disengaged. Even if you suspect that a man has means, you cannot refuse to admit him to the hospital if he is very sick.
330. *Mr. Barling.*] Evidence has been given to us from the Statistician's Department that out of the whole number of hospital patients treated, some 500 had been resident less than one year in the Colony;—have you some information to give us on that point? Last Tuesday I admitted four people—R—S—, 27 years of age, who was three weeks from Western Australia, and was suffering from consumption, and whom we sent to an asylum; he had no home; he had been existing on a few shillings that he possessed, sleeping at a lodging house; he had never been in New South Wales before, and was a native of Canada. Another case was that of H—S—, 22 years of age, native of Denmark, who had been six months in the Colony, and had been discharged from a steamship of the Aberdeen line, on account of ill-health, six months before; he was suffering from phthisis, and was sent to a Government asylum. Another case was that of A—R—, aged 30 years, who had been six months in the Colony, and was suffering from tuberculous glands of the neck; he had been discharged from a steamship; he was sent to the Sydney Hospital to have the glands removed. The other case was that of A—O—, aged 24 years, who had been three weeks in the Colony, and had come from Victoria; she was suffering from advanced phthisis, and was sent to the Sydney Hospital as an indoor patient. This A—O— was ill in Victoria, and her sister, who resides here, thinking that the climate of New South Wales would agree with her better than the climate of the other Colony, got her over here, kept her three weeks, then sent her to the hospital extremely ill. These are four cases selected from one morning's work.
331. These are instances of the way in which the Government liberality is used here for the benefit of people from outside the Colony who come here to be treated at the Government expense? Some are attracted by the climate, and some by the reputation of the surgeons. The eye cases come mostly from Queensland. I think they are attracted by the results of operations which they have heard of. A number of cases of phthisis at the beginning of winter begin to come in from the southern colonies.
332. Have you any information to give us to seamen discharged from ships here for the purpose of being sent to the hospital? Yes; I had to send five seamen from the Orient line to the hospital at the Government expense—two from the "Ophir," two from the "Oruba," and one from the "Orient." The way they disposed of them was as follows:—I found that they were on the articles of the ships, and I refused to treat them, and sent them back to the ship. The captain, or somebody acting for him, took the men to the Shipping-master and had them discharged. Then they came to me again destitute, or with only a few shillings. These men were all suffering from venereal disease, and they were so ill that they had to be sent to the hospital. They were sent to the Coast Hospital.
333. Do they pay anything? No, they pay nothing. Some will be a charge on the Colony for a long time. Two were suffering from gonorrhoeal rheumatism, and will not be able to earn their living for at least a year.
334. Are you aware whether the companies have any responsibility as to paying the expenses of the seamen from their boats? I believe that as soon as ever they can get them discharged by the Shipping-master their responsibility ceases.
335. Is the Shipping-master compelled to discharge them on their applying to be discharged? I am inclined to think he is. I informed Dr. Thompson, and he saw some of the Crown Law Officers, and I infer that they have power to do it, because it has not been stopped.
336. You think there is some defect in the law? Yes.
337. And that it would be desirable to strengthen the law in that particular, so as to prevent the Government from being imposed upon in that way? Yes. The North German Lloyd Company sometimes send cases, but they pay for them and take them away as soon as they are well enough.
338. Is that the only company that show any regard to their obligations? I never had any cases from the P. & O. Company.
339. The North German Lloyd Company pay? Yes, and take the men back to Germany.
340. Do they pay sufficient to recoup the Government? The man pays 10s. a week, but the company makes themselves responsible for the paying whilst he is in the hospital.
341. Have you anything to suggest by which this charge upon the Government should be put a stop to? Yes; some years ago they used to land lunatics in New South Wales in the same way as the now land sick men. I think a similar law to the amended Lunacy Act would be effective.
342. Of course such a large number as 501 persons being treated in our hospitals means a very heavy charge? I think there are more than 501 in a year, because I have got 431 applications from persons who were only six months in the Colony.
343. Your idea is that that is a mistake? I think there must be a great deal more than 500.

R. T. Paton,  
L.R.C.P.,  
F.R.C.S., Ed.  
21 April, 1899.

- R. T. Paton,  
L.R.C.P.,  
F.R.C.S., Ed.  
21 April, 1899.
344. Evidence has been given to us that whilst the increased population in the last quinquennial period has been  $8\frac{1}{2}$  per cent., the increase in the hospital orders has been for outdoor patients, 70 per cent.; for indoor patients, 20 per cent.; and for appliances, 43 per cent.;—have you any idea how it comes about that our hospital expenditure so far outruns what you would think would be its proportion to the increased population of the Colony? Of late years the number of people who could formerly pay for medical attendance have found themselves unable to pay. A great number of the bread-winners of families have emigrated—have gone to Western Australia, South Africa, and other places, and left their families here.
345. It is another instance showing the low wage-earning power of the population? Yes; but a great number of cases have come under my observation, in which the head of the family was in Africa or West Australia, and had not been heard of for months, and the family were destitute. They have been assisted with medicine and with recommendations to the charities.
346. You said in your reply to Dr. Mauning that a great many patients display a preference for the Sydney and Prince Alfred Hospital rather than the Coast Hospital? Yes.
347. Might not a part of the reason be that in those two hospitals they get the highest medical attendance, and the best surgeons to be found in Sydney, whereas, although there are first-class officers in the Coast Hospital, they are confined to Government officers—they have not the run of the talent of Sydney? It may be that; but the reason they always gave me was that they would not be able to see their friends at the Coast Hospital.
348. Is it not a fact that, to a very large extent, the Coast Hospital is run on the same lines as the Sydney and Prince Alfred Hospitals? Yes; except as regards the major operation cases.
349. In the Sydney Hospital and the Prince Alfred Hospital they have all the medical men of Sydney attending? Yes; at the Coast Hospital they have only the resident medical officer.
350. Do you think it would be desirable that that hospital should be thrown open to the medical faculty to perform operations and attend medical cases? The Coast Hospital is, in my opinion, too far away for that.
351. Yes, but apart from that, do you think it would be advantageous to the poor of Sydney if the Coast Hospital were near enough to have it thrown open to honorary officers? Yes.
352. You think that the poor would profit by that? Yes.
353. Does not that lead to the conclusion that the Coast Hospital on that account is too far away and ought to be nearer Sydney? Yes; it would be desirable to have it nearer.
354. Are not the poor of Sydney suffering a distinct loss by reason of their not having the attention of the medical faculty at that hospital? Yes; the Coast Hospital would be very much more useful if it was close to Sydney.
355. The poor would get better treatment if the hospital were nearer Sydney and if it were thrown open to the whole medical faculty? Yes.
356. Your idea is, that it would be a distinct gain to the poor of Sydney if the Coast Hospital were nearer, and the medical profession had access to it as they have to other hospitals? I think so.
357. Looking at the whole question of hospital accommodation and hospital management—have you anything to suggest that would help the Commission in coming to a determination in the matter? There is one thing about venereal cases. During last year 984 cases passed through the Hospital Admission Depot. During the first three months of this year we have had 338 cases, and we have not got sufficient accommodation for them at the Coast Hospital. We only send them there.
358. You do not send venereal cases to the other hospitals? Yes, we send female cases to the Sydney Hospital.
359. What is there to prevent you from sending the male cases to the Sydney Hospital? Because in the Sydney or Prince Alfred Hospital they would have to be nursed by women, and we do not think that that is right. They are, therefore, sent to the Coast Hospital, where they are attended by wardsmen. I do not think it right to mix them up in the same wards with other cases, on account of the danger of infection.
360. What increased accommodation would meet the want? At present we have practically an epidemic of venereal disease. I never remember having so many cases as we have had in the first three months of this year. I think that another ten or eleven beds at the Coast Hospital are actually needed. As a matter of fact, the way to get rid of venereal disease will be to secure the women. I send a woman into the hospital, she being ill and not able to go about, but as soon as she can walk about with any degree of comfort she will come out and disseminate disease all over the town.
361. Have they not some Act in Queensland dealing with it? They have a Contagious Diseases Act in Queensland.
362. Does it diminish the disease? It does in other countries; I do not know about Queensland.
363. Are you aware that a number of these female venereal cases, by reason of the restrictions in Queensland, are thrown into this Colony? I am not aware of it, but I think it is probable.
364. Therefore, the abnormal number that we have of that class of disease cases may be due to the restrictions in Queensland? I should think that a woman there who finds that she is affected would come with the first boat to New South Wales.
365. *Mr. Walker.* You say that you admit all the people to the hospitals? Yes.
366. Do you admit them to the asylums for the infirm and destitute too? Yes.
367. Does anybody else give orders besides you for admission to the hospitals or asylums? Dr. Taylor does.
368. Does not Mr. Simms give orders? I do not think Mr. Simms does. Mr. Gullick, one of the clerks of the Board of Health, gives orders for the Sydney Hospital.
369. Do not patients sometimes go in without orders, the orders being sent in afterwards? Some cases are admitted in this fashion: they are outdoor patients, and if one is found to be ill, and it is thought it would be injurious for the patient to go to the Hospital Admission Depot, they send me a note telling me the man's ailment, and I make inquiries of his friends as to their ability to pay, and so on; then I issue a Government order.
370. A person applies who says he is without means, but it is afterwards found he has money,—do they not compel him to pay? They would if he had money.
371. So there is no chance of their cheating the Government on an order unless they can hide their money? No; if we find that they have money we compel them to pay. At one time the patients all had to apply at the depot, but this enhanced the risks which they ran. At present a medical man sometimes communicates with me by telephone, and I issue the order without the patient appearing at the depot.

372. *Mr. Powell.*] You spoke about the discharge of seamen—if they are discharged for medical treatment, should not the Shipping-master impound whatever wages are due to them? I do not know whether he can.
373. Of course, they break their contract by mutual consent, and they do it for a reason; and if that reason be that the men require medical treatment which will be chargeable to the Government, should not their wages be impounded to pay the expense? Yes; but can the Shipping-master do that?
374. If a man is discharged from a ship for the purpose of medical treatment, and if that is to become chargeable to a Government institution, could not the Shipping-master or the Government Officer refuse to give a discharge unless someone became responsible for the expense? As a matter of fact, the men usually have very little money.
375. *Dr. Manning.*] Are you aware if any complaints have been made by medical officers in the Squadron as regards the large amount of venereal disease in Sydney? I have heard that they have complained about it. I do not remember ever before meeting with so many cases as we have now.

R. T. Paton,  
L.R.O.P.  
F.R.C.S., Ed.

21 April, 1899.

THURSDAY, 27 APRIL, 1899.

[*The Commission met at the Offices of the Public Service Board, at 10.30 o'clock a.m.*]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).

F. N. MANNING, Esq., M.D.

J. POWELL, Esq., J.P.

J. BARLING, Esq., J.P.

CRITCHETT WALKER, Esq., C.M.G.

The Hon. Sir Arthur Renwick, M.D., sworn and examined:—

376. *President.*] You are President of the Sydney Hospital? I am President of the Sydney Hospital, and the only surviving trustee of the land granted by the Crown for the use of the hospital.
377. How many beds are there in the Sydney Hospital? There are 189 beds for males, and 129 for females.
378. How are the beds allotted to the various wards? They are divided in this way. We have accident wards, wards for surgical cases, medical wards, and wards devoted to special diseases, such as women's diseases; and, besides these, eye cases are treated in a branch of the Sydney Hospital.
379. Are any lock cases received? We have some lock cases. At one time we had a ward devoted solely to them.
380. How many cases are there in the lock ward? About thirteen.
381. Is the accommodation sufficient, taking the hospital as a whole, to meet the demands upon it? Certainly not. It is not sufficient to meet the demands of the city.
382. No doubt you have thought the matter out;—have you any suggestion to make? With regard to the bed accommodation, I am afraid that the Sydney Hospital could not be arranged so as to make a larger provision than there is at present. The building is not yet completed. I may explain that we have an operating theatre which is rather behind the times. When originally constructed it was well adapted for its purpose, but now we have such a large number of operations daily that we have actually to use a room adjoining for operation purposes, and sometimes we have as many as two operations going on at one time in the operating theatre. Then, in regard to the Nightingale wing, we had not good accommodation there for the nurses. We should like to have additions made to the Nightingale wing which could be done without infringing on the air space or other arrangements connected with the hospital. We want accommodation for fifteen or twenty more nurses. We have no provision for laundry purposes, and we have to give out our washing. It might be arranged for a one-storey building to be built at the bottom of the ground on the left-hand side for laundry purposes. It would have to be a one-storey building; it could not be larger on account of the air. Then we have made provision for a school of dentistry in connection with the hospital. A building would be required, and that would be placed over the building where the steam-engine is at present. Professor Anderson Stuart and myself have gone into the matter, and we find that we can accommodate a dentistry school at the Sydney Hospital at an expense of about £1,000. It will not interfere with the arrangements of the hospital, and it will be a great boon to young people in Sydney who wish to be educated in dentistry. I may state that we have to arrange a curriculum, and the University is prepared to assist us. The only thing we are waiting for is the passing through Parliament of a Bill, which is now before the Legislative Assembly. These are the principal things which are required to make the hospital complete. I consider that it would be difficult to add to the bed accommodation in the present buildings; but for a properly-administered hospital the adjuncts I have mentioned are necessary to make it complete.
383. Why would it be inadvisable to add to the number of beds? Because we have not room, unless you put another storey on the top of the building. It is always a source of danger, however, to make a building too high, and especially in a hospital where there are people who are unable to move about freely.
384. Have you the average number of beds occupied? The average number of beds occupied is about 293.
385. Does that include Moorcliff? Yes.
386. Could not the eye cases at Moorcliff be received into the hospital under some arrangement? I have been pointing out that we have insufficient accommodation at present in the institution for the claims that are made. In every well-regulated hospital there ought to be a number of spare beds at all times in case of any great accident in the city, or any outbreak of disease. But that we cannot possibly make provision for under present circumstances. What I would rather suggest in connection with ophthalmic patients is that the Government, as I have already recommended, should resume the site at Moorcliff, which is a splendid site for the purpose, and is recommended by all the medical gentlemen connected with it—for ophthalmic purposes—and build on it a more modern structure. The building at present used is old; it is infested with vermin at times, and it is a continual source of expense to the institution in regard to repairs and alterations. But still the operations there are most successful, and it has really become the ophthalmic institution of Australia.
387. Was not the main hospital planned and arranged to meet these requirements? Yes; but when that plan was made it was intended to have another storey on the top of the present building. If that had been

Sir A.  
Renwick,  
M.D.

27 April, 1899.

Sir A.  
Renwick,  
M.D.

27 April, 1899.

been carried out, in all probability we could have accommodated those cases in one of the blocks prepared, called the ophthalmic block, but not having got that storey we are compelled to use Moorcliff, and we could not do without it.

388. Am I right then in assuming that the idea of having another storey is why the building was made so very heavy and massive? That is one of the reasons.

389. Are not the closets and lavatories very large in proportion to the establishment? Yes, to some extent they are; but I have always been of opinion, and I had that opinion carried out to some extent in this matter, that it is a great mistake not to have sufficient space in lavatories. One institution which you have visited, and a large one, has about half the lavatory space that the Sydney Hospital has, and it is almost impossible to keep down the smell, notwithstanding the use of disinfectants.

390. I thought that would be a matter of ventilation? It is; but everyone knows that in connection with hospitals and institutions for those specially afflicted there are people who are incapable of attending properly to themselves. There is always a difficulty about it. Whilst there is too much space allowed at the Sydney Hospital, there is too little allowed at the other institution to which I have referred.

391. The administrative offices and the officers' quarters are very large at the Sydney Hospital? They are not sufficiently large for their purposes. We have had to divide the rooms off in order to provide additional accommodation for an additional number of medical officers. I have no doubt that if the Moorcliff institution were carried out in the way I am suggesting, and also considering that we are now going largely into the matter of bacteriological investigation of disease, it would require an additional resident medical officer by-and-bye, and if we have a school of dentistry we shall require still further additional accommodation. If the original plan had been carried out it was intended that some of the rooms should be used for private patients and patients requiring separate treatment.

392. We were rather struck with the nurses' quarters;—they seem to be very dark, and some half-dozen nurses sleep in one room? That is owing to want of accommodation. If we were to carry the Nightingale wing about 20 feet further to the east, and give a little more light and further ventilation, I think the building would be much more complete and satisfactory. If we carried it 20 feet further, that would complete the work. We have had the architect there to look at it.

393. The rooms are very dark? Yes.

394. Then what about so many nurses sleeping in the same room? That is objectionable. If we had this additional accommodation that would be avoided entirely.

395. What remarks have you to make about the out-patients department? The only remark I have to make about that is this, that I think it is rather overdone.

396. I am speaking now as to the matter of accommodation? The accommodation is not so complete as we might desire, but it answers all present purposes. We have had under consideration the desirableness of making a change—putting additional rooms below, and carrying out into one of the quadrangles some additional rooms for medical officers connected with that department. That has been considered, but we would rather have a small thing perfect than have a large thing imperfect, which might afterwards be unpleasant. That is why we have not blocked up the space in the lower part of the building.

397. Then the pathological and the bacteriological department is large? I am quite sure that it is not too large. That will be a most valuable adjunct to the institution. It is the most perfect thing in the Southern Hemisphere connected with hospitals. As the work progresses, and as we understand more of the subject, I am quite sure it will make a complete change in the modes of treating disease. At any rate, researches are being made there of a very valuable character. It is becoming more important every day. I am sure that we shall have to have additions to the staff that we have there at present. We have one of the resident medical officers who has had a little experience in connection with the thing, and he desires to know more. We shall have to add one or two more to that department to run it properly.

398. Are you satisfied with the children's ward? They are sufficient for present purposes. Of course I consider that they might well be treated in a separate institution. If we had accommodation for adults, and children were accommodated in a separate institution, that would be better.

399. The room is not very bright? No; but the children are always very cheerful there. They are very contented and pleased; they sit principally on the verandah. They are very happy there, but still I am satisfied that children, like ophthalmic patients, would be far better in an institution devoted entirely to their particular diseases.

400. It is reported that there was no hot water laid on to the wards? No; that is a defect which we are going to remedy as soon as possible. Of course we could make the thing complete if we had the money at our disposal, but we are always hampered by considerations of expense. It is a pity the Government took the view which they did, because it is only by Government assistance that we could manage to carry on. The private assistance which we are getting is about as large as we could anticipate. At present I do not see how we can get more. The Government assists us from time to time, but these improvements require considerable funds. We have to do the best we can. It has been arranged that hot water shall be laid on.

401. What is the number of your in-patients? The total number of beds is 155 for males and 95 for females in main building.

402. *Mr. Barling.*] I suppose you are aware of the report which was made to the Colonial Secretary in 1883. It was a report asked for in connection with the hospital requirements of the city, reports being asked for from the President of the Board of Health, from Dr. McLaurin, and others? I remember it.

402½. Dr. Mackellar, in his report, says:—

According to Oppert, who is one of the best English authorities, there should be provided in the large town districts four hospital beds for every thousand of the inhabitants, including Union Infirmary beds, which are calculated to be one-fourth of the whole. Were we to accept the first estimate, we would be already in possession of numbers far in excess of our requirements; and were we to accept the latter, we would find ourselves very far short of the requisite number. I think that a safe and fair estimate, considering the circumstances of our labouring population, which is vastly better off than the same class in the mother country, would be three hospital beds per thousand, and that one-fourth of these should be in the hospitals of the Government Asylums for the Infirm and Destitute.

I got the Statistician to get out for me the present population of Sydney, which is 426,950. The number of beds per thousand of the population, according to the published returns for the year 1898, "Information not yet available"; 1897, total number of beds, 3,018 for the whole of the Colony, or an average of 2.3 per thousand of the population. Taking the metropolitan and suburban area only, the number of beds is 3 per 1,000 of the population, the total being 1,232 beds. According to that it will be seen that there are now three beds per thousand of the population, which would seem to carry out the recommendation

of

Sir A.  
Renwick,  
M.D.  
27 April, 1899.

of Dr. Mackellar;—we should like to know what your idea is on the whole subject in view of that statement of Dr. Mackellar's and the statistics on the subject? With regard to the statistics and the principle laid down in connection with them, you will find, as in most cases of human experience, that you have to look to practical details as well as to statistics. As a matter of fact, we know that no hospital question like this can be considered as a simple question of statistics. I have already explained that in our institution we receive medical cases, surgical cases, cases of women's diseases, and ophthalmic cases. Those statistics, of course, refer to general hospital experience; therefore, in regard to our accommodation, if you deduct the special matters you will find that they are below the mark. We make provision for thirteen or fourteen gynaecological. We have lock cases also, and those beds must be deducted from our accommodation. Independent of that argument, I should like to point out that sickness and accidents occur in waves. You cannot have any regular statistical basis on which to go in a matter of this kind. In addition to that, in every well-regulated hospital, whether surgical or medical, there ought to be a certain proportion of spare beds kept for various purposes—first of all, in case of a wave of accidents or a wave of diseases; next in order, that the wards may from time to time be evacuated of their patients, and means taken to put them in a proper hygienic condition. It is a great mistake to overcrowd any hospital, or to depend purely on statistics. In my opinion, the hospital accommodation in Sydney, when you take it as a whole—the Sydney, the Prince Alfred, and the St. Vincent Hospital—is not sufficient at the present time. I only state it in a rough way, without reference to statistics, and as the result of my own practical observation.

403. The full number of beds, the estimate by English authorities being 4 per 1,000, would show the necessity for 427 additional beds;—do you think that would be sufficient? I would not rely entirely upon statistics. First of all, the climatic conditions here are quite different from those of Germany, where, I suppose, that calculation was made, and they are different from those of England.

404. Then you do not give an estimate? I could not give an estimate on a statistical basis of that kind at all, nor would I rely upon it.

405. Without referring to statistics, what additional accommodation in the way of beds do you think will be required to fairly meet the population? Some years ago, when the matter was very much before the public, I stated what the accommodation should be at the Sydney Hospital, Prince Alfred Hospital, and St. Vincent's Hospital, and my impression was that a fourth hospital, in a different direction, would be necessary in the course of time, and that its situation would depend entirely upon the spread of population. That was calculated only on the natural increase of the population.

406. Then your idea is, shortly, that another hospital of considerable size would be required to meet the necessities of Sydney and its suburbs? Yes.

407. Would you call a hospital a large one which had accommodation for 427 patients? Yes.

408. That would be about 4 per 1,000? I was going to say that my views had been considerably modified by the fact that little suburban hospitals have been created in most of the large centres of population in the metropolis, but, independently of that, I consider that another large hospital will be necessary in the course of time, because in those small hospitals, however excellent they may be for the treatment of accidents and diseases for special cases, you must have the cream of the profession, and the cream of the profession will always be attached to the large hospitals. I say that without any derogation of the well-intentioned efforts exerted in connection with the small hospitals.

409. I think I gathered from your answer to one of Mr. Wilson's questions that you do not think that the accommodation at the Sydney Hospital is at all extravagant? I am sure it is not.

410. When the building was erected, I presume you were consulted, and approved of the plans? Yes.

411. *President.*] Taking the number of beds as 3 per 1,000 for Sydney, is it not a fact that many patients come from the country? A great number come from the country. From all parts of the Colony persons come to those large hospitals for special treatment, and that modifies any estimate that might be formed from statistics. It is a little different in regard to England and Germany; in Great Britain you have large centres of population, and large hospitals in those centres, so that there is not so much travelling to great hospitals (say) in London. Here the great hospitals are in Sydney and Melbourne. In England they are not only in London, but also in Birmingham, Manchester, Glasgow, and Edinburgh. You have in those towns large hospitals, and you have the special skill that must be necessary.

412. And those centres are only a few miles away? They are within easy reach. The whole country is small compared with these colonies. You can see, therefore, that statistics are not always reliable.

413. *Mr. Walker.*] Do you think that the Moorcliff Hospital is too large for its purpose? No, by no means; the space is just sufficient for the purposes I have indicated. At one time, when Sir Alexander Stuart was Premier, it was proposed that Moorcliff should be turned into a Lock hospital. It might be used for that purpose, but it will be infinitely more advantageous to the city to have it used for an eye hospital. It has all the advantages of clear air and good elevation. It is not too much exposed to the sea breezes, and in that institution cures are effected with remarkable rapidity.

414. Do you think there are too many officers in connection with it? There is one matron; and the number of nurses is regulated by the matron.

415. Do you think the buildings are adequate for the purposes for which they are intended? They are at present; but they are not of a kind exactly suitable for the purpose. The most is made of them; but if we had a proper building the results would be very much better in every way.

416. Do you think that if the institution were put in the Sydney Hospital you would have sufficient room there for the accommodation of the patients? Yes; if you give us another storey. Of course there are objections to putting up another storey which I have already mentioned. There are dangers in connection with a building that is too lofty in regard to the removal of patients in any great emergency.

417. You said that a great many people came from the country for special treatment at Sydney Hospital;—do you think that if in large centres, or in such places as Wagga Wagga, Bathurst, and Goulburn, large hospitals were established it would not prevent those people from coming to Sydney? I do not think that such hospitals would be suitable for the purpose; first of all, you would not get the medical attendance, the population in those places not being sufficient to maintain special men. I meant a fourth hospital within the metropolitan area. Bathurst, with a population of a few thousand, could not maintain an ophthalmic or gynaecological surgeon, and the Sydney hospitals get the services of those men gratuitously.

418. If a large hospital were established at Newcastle or Maitland, would not the population there be sufficient? Then you would require to pay those men, but you get their services here gratuitously.

419.

Sir A.  
Renwick,  
M.D.  
27 April, 1899.

419. Yes; but I gathered from a reply of yours that the Sydney hospitals were overcrowded by these people coming from the country;—could we not relieve them by having hospitals in the country? I do not say that we are overcrowded in that particular way. What I mean is that we have a larger number of applicants for admission than we have room for, and sometimes patients are delayed in being admitted from seven to fourteen or twenty-one days in consequence of the want of room in the special departments. The gynecological and other departments are run upon to a large extent to obtain the services of special men. I do not know that there are any such men to be found outside of Sydney—in fact, they could not live in the country. In Great Britain, men who start this sort of work are maintained by it, and write books on it, and there they can carry out the views you are suggesting, but the towns outside of Sydney are too small to keep a man of that character.

420. Unless he was entirely paid by the Government? Well, it would be a large sum he would have to be paid. The incomes of these men are very considerable, and I do not think the Government would be willing to give more than a Minister's salary to a medical man.

421. With regard to the outdoor patients, they are all treated now in the buildings under the archway coming from the street? Yes.

422. Did they not treat them at one time in a building in the Domain? Yes.

423. Do you think it would be a better arrangement to have a building out there? I should be most happy to adopt that suggestion.

424. Instead of having all these people gathered in Macquarie-street? It was suggested some time ago that a portion of the Domain, at the rear of the hospital, under certain circumstances and certain conditions, should be given to the hospital; that was in connection with the exhibition.

425. Do you mean where the shed was? Yes; right back to the road, and a new road was to be made at the other side. We would gladly accept that, because it would relieve us of a great difficulty in connection with the hospital work. If we had three-quarters of an acre given to us in that way we could have the outdoor department entirely separate from the indoor department. We could also make arrangements in connection with the Dentistry School and the laundry, and we could make the hospital as complete of its kind as any in the world.

426. There was an objection to giving up the people's rights? No. I thought you would know all about this subject.

427. I know there was nothing definite; it was only a proposal? It was only a proposal. We would gladly accept it. It would relieve us of all the difficulties in connection with the management of the institution.

428. What I mean is, could you not have a building facing the Domain in your own ground? No; we could not interfere with the air-space there. When I mentioned the laundry, I suggested that it should be only a one-storey building, no higher than the present wall at the back of building, so that the air-space and the breezes from the Domain could not be interfered with. It would be impossible to raise a further structure there.

429. You could not, if you put another storey on the building, add anything more to the ground? No; but if we are to have further bed accommodation we must have another storey.

430. There is not a sufficient area in the grounds to put up more buildings? No medical man would sanction such a thing for a moment, except in the way suggested.

431. The ground that you want is the land on which the museum is built? Exactly; the road was to be put on the other side, and the proposal was that we were to get about 1 acre.

432. *Dr. Manning.*] I see that you have 318 beds in the hospital, and the average number filled last year was 292, leaving 26 beds on the average vacant? Yes.

433. So that the pressure on the hospital space has not been so very extreme? That is the general average for the year; but the daily and weekly averages are quite different. On some occasions when I have gone through the institution there have not been ten spare beds; but we consider it a matter of duty to the public to keep a few spare beds.

434. You said that the children would be better in a separate institution;—why are they taken in, then, considering that there is a separate institution? Because I suppose people prefer, first of all, certain medical attendance—the attendance of certain men of reputation. In the next place, we take them in if there are spare beds in that particular department. We have always had a children's department; and there is also the fact that the accommodation at the Children's Hospital is always pretty well occupied.

435. The main object of the Sydney Hospital is the treatment of accidents and urgent cases? Certainly that object has been kept in view during the whole of its history. It cannot be anything else.

436. Something has been said about Moorcliff;—do you not think it is a very out-of-the-way place for students? The students generally take that branch of their subject when the lectures are not on.

437. Can you tell us the cost of the erection of a particular bed at the Sydney Hospital? I could not without I had the figures before me. I will see that it is prepared for you.

438. *President.*] In reference to the convenience of students, you said it was preferable to have a new hospital in Sydney to having it in a country district;—if a large hospital were built in the country would not that advantage be lost? It would be, especially where there was ophthalmic training and training in midwifery. I do not think students would go 200 miles from Sydney to obtain the information. I do not think that a hospital so distant from Sydney would be of any use to students at all.

439. In reply to Mr. Walker you said that Moorcliff is not too large? No, I am sure it is not too large.

440. There are sixty-eight beds at Moorcliff, I believe? Yes.

441. There are four honorary officers? Yes, four ophthalmic officers.

442. Is that a large staff? Well, the question may be looked at from different standpoints. The Board have looked upon it from different standpoints. In the gynecological department we have only two medical officers, and we have endeavoured to persuade the medical staff of the institution to allow us to appoint two others to that department in order that the work may be more efficiently carried out; but they have not seen their way to agree with us. I am sure that there are not too many ophthalmic officers. If the other departments were put on the same footing it might be advantageous to the public. In regard to work of that sort, it is a great mistake both for the medical men and the population that the work should not receive proper attention. It does harm to the medical man, and it does no good to the patient. I am sure that our ophthalmic department is not over-officered, and those gentlemen give their services gratuitously. It is altogether a great advantage to the public.

Sir A.  
Renwick,  
M.D.

27 April, 1899.

443. Suppose that you got an extension to the hospital by the granting of that extra land, would you consider it desirable to transfer the ophthalmic patients to the main hospital? We would do it instantly, and then suggest that the Government should resume Moorcliff for a lock hospital. It is best adapted, in my opinion, for an Ophthalmic Hospital; but the ophthalmic patients being provided for at the Sydney Hospital, we should advise the Government to resume the site as it is so admirably adapted for medical purposes. Its isolation is an advantage.

444. You said the site was a good one? A very good one.

445. The only drawback is the want of accommodation? The want of accommodation and the dilapidated and antique character of the whole structure.

446. *Mr. Walker.*] Is there room for the extension of the buildings at Moorcliff? Yes, we have two houses there.

447. What is the extent of the ground? I think, there must be nearly half an acre altogether.

448. There is an out-patients department also? Yes.

449. Does the institution attract many patients from the other colonies? Yes; they come from Queensland, from remote parts of the interior, and even from parts of Victoria. I could not tell you all the places that they come from, but we receive letters of thanks for services rendered from persons after recovery, and those letters come from very remote parts.

450. Why do you suppose they come? On account of the superior skill of the gentlemen attached to the Institution. I suppose they are the best men in the Southern Hemisphere.

451. They are rented buildings? Yes, the Government pays the rent.

452. *President.*] There is a dispensary in Regent-street? Yes, we have that dispensary there, and we have also a piece of land bequeathed to us on the South Head Road by the late Mr. Perry for the purposes of another dispensary. There is a division of opinion in our Board in connection with the matter. Some members of the Board think it is undesirable that we should deal with anything outside Sydney Hospital and Moorcliff; that we should not take up dispensary work. They have, therefore, suggested to the Government that we should give up the dispensary in Regent-street, but the Government after consideration of the matter, and especially on the representation of the gentlemen who represent in Parliament the districts concerned, have paid the rent and asked us to continue our services in connection with the Regent-street dispensary. We have not had sufficient funds to carry out the terms of Mr. Perry's bequest to build on the land. It is a matter for consideration whether we should continue or not. The continuance of the dispensary at Regent-street depends upon the will of the Government.

453. I understand that, whether it is carried on by the hospital authorities or not, some provision of the kind will have to be made? It is very questionable. I have gone to Regent-street on many occasions and examined the books and seen the patients that go there, and I doubt whether it would not be far better if those patients came to the out-door department at the Sydney Hospital. Nine-tenths of them are cases which could come without any difficulty at all, and it is questionable whether the other tenth ought to get hospital treatment—whether they should not pay for treatment, and whether they should be treated at a public dispensary at all. A dispensary, with a person attached to go and visit the poor who are unable to pay for attendance, would be a valuable thing. Therefore, it was suggested some years ago that the plan adopted in large cities in England would be more advantageous than this plan, viz., that the city should be divided into districts, each with a medical man attached; that the local dispensary should be paid a certain sum annually, and that the person to visit the sick should be the poor-doctor of the district. It would be a great saving to the country, and the poor would be much better attended than they are at present. As it is now, I do not know that any provision of a satisfactory nature is made for the attendance of poor sick people who are unable to go to the institution.

454. The number of out-patients appears to be increasing;—there are 92,000 attendances, or an increase of 9,000 in 1898 over 1897? Of course it is to be remembered that these are attendances merely—not cases—(Report, p. 11). I attribute the increase not so much to the increase in population, although that will affect the question to some extent, as to the fact that the medical gentlemen who attend there are gentlemen of repute, consequently, when any person feels that he is not getting satisfactory treatment other ways, he rushes to the dispensary to get advice.

455. There is an increase in the number of special departments—the gynæcological, and the eye, ear, nose, throat, and skin? Yes.

456. You have already said that you attach great importance to the gynæcological department, and that it should be better officered? I do not say better officered, but more largely. The gentlemen who have the management of it say that they can deal with the whole of the cases that come before them. They are quite satisfied; they do not want the additional help which the Board have suggested from time to time. The Board look at it from a different stand-point. It is a very important department indeed.

457. We have already dealt with the eye, ear, nose, throat, and skin department;—are all those special departments necessary? Oh, very necessary. To show how important they are, I suggested to our Board that we should represent to the Prince Alfred Hospital that the ear, nose, throat, and skin cases were becoming so numerous, that we should either have to increase the staff, or do something else, and we suggested that, as they had no department of that kind in their institution, it would be well to establish one to relieve us, and they have done so within the last few months.

458. That would ease you off? It has relieved us considerably; people come from all the southern districts to be treated by the special men connected with the department.

459. Are there not a large number of special cases treated at the hospital which might be treated privately? It is a very difficult question to answer. In those special departments the medical gentlemen are supposed to depend entirely on their special work, and they charge a special fee, which some people are not able to pay. The specialist may require 10, 15, 50, or 60 guineas in a case, but patients who cannot afford to pay those fees will endeavour to get the services of the same gentleman in another way. There are difficulties in connection with the department. We have had cases brought under our consideration, in regard to which we really do not know how to act. I cannot give an exact reply to that question.

460. I should fancy that it must be liable to prejudice the interests of the specialists? The only course for these cases is if they do not wish to come into the hospital to go under some gentleman of less repute who charges a smaller fee, but what they endeavour to do is, by means of the hospital, to get under the gentleman

Sir A.  
Renwick,  
M.D.  
27 April, 1899.

gentleman who charges high fees outside; hence a number of these gentlemen have established small hospitals of their own so as to adapt themselves a little more to the circumstances of the case.

461. Is the charge of 1s. to out-patients continued? Yes; it is in force at the present moment.

462. What inquiries are made as regards the means of patients who are admitted? Well, at the present time we are considering the by-laws of the institution. Some of the by-laws provide that a subscriber shall recommend patients. When a subscriber's order comes we generally take the patient in without further investigation until inquiry is made into all the circumstances of the case. The by-laws about to be suggested for adoption by the Board will require that every case shall be taken in and dealt with at once, subject to medical examination, and that the medical examination shall determine whether the patient shall be admitted or not. That is a complete reversal of the practice that has been adopted at the Sydney Hospital ever since its institution. The Prince Alfred Hospital adopts a similar rule. If it is adopted the practice will be as follows: When a patient is brought to the institution he will be examined immediately by a medical man, and if the medical man considers that it is a suitable case for admission he will be admitted forthwith. As soon as he is in his bed and arrangements have been made, all the particulars in connection with him will be then investigated and a return prepared. Then he will be asked to pay according to the rules of the institution, or not to pay, as the case may be. That is the new practice that will be followed.

463. That should tend to make the inquiry much more effective, if done at leisure? It will be done at leisure, and it avoids the horrible practice of asking a poor man who has met with a serious accident and may be in great pain questions that are perfectly superfluous until he has received medical treatment.

464. That is the course adopted with regard to in-patients? We have given instructions for it to be adopted with regard to in-patients. With regard to outdoor-patients, there is a person specifically appointed to examine and deal with them to the best of his ability; but first of all the numbers are great, and next the appreciation of a person's position is so difficult under the circumstances. A person may consider himself very poor, and may say that he is, and yet he may not be so. The statements made, I believe, are often delusive; however, the best is done that can be done under the circumstances. Subscribers in their orders have said that a person was in impoverished circumstances, and not able to pay for medical attendance; but I am sorry to say that when these have been sent even by Magistrates, Members of Parliament, and above all by Clergymen, they have been found to be not exactly in accordance with fact.

465. The number of operations as stated have been in 1896, 1,703; in 1897, 1,954; in 1898, 1,941; can you account for the increase? No; it is just an ordinary fluctuation.

466. How long does the training of the nurses take? The course takes three years.

467. And the lectures? The lectures are given every year by the honorary physician, the honorary surgeons, the resident medical officer, by the matron, and by her assistants.

468. Is the nursing staff sufficient? We should be glad to have a few more nurses if we had accommodation for them. We have a great number of applications for admission, and we endeavour, as far as we can, to get their claims satisfied, but with the limited accommodation in the Nightingale Wing it is impossible for us to increase the staff, although it would be very desirable indeed.

469. We may infer from that that the nurses have more to do than they ought to have? I do not think they have, but it would be more satisfactory to have an ample supply.

470. Do the nurses complain about their work? No; never.

471. You say you have many applications for positions? Yes.

472. What is the number of the nurses? Thirty-two. There is 1 matron, 1 sub-matron, 5 sisters, 32 nurses, and 21 probationers, making a total of 65.

473. How many resident medical officers? Nine.

474. Is that a large number in comparison with the other hospitals? A comparison can hardly be instituted with hospitals elsewhere. Most of those hospitals in Great Britain have a medical school attached, and the medical students attend in their last years. Sometimes they have clinical clerks. They have a rotation of medical officers in connection with indoor work. They have resident medical officers, and they do a great deal of work.

475. How many members of the Board are there? When I was a Member of the Legislative Assembly I got the present Act passed governing the Sydney Hospital, and in it provision was made for a President, two or more Vice-Presidents, Honorary Treasurer, ten gentlemen to represent the Government on the Board, ten to represent the subscribers, and two gentlemen to represent the honorary medical officers, that is twenty-two members of the Board and four honorary officers.

476. Do the representatives of the Government take a very active part in the management? Yes; no complaint is to be made in regard to the attendance of any of the medical gentlemen. One complaint was made in regard to one gentleman representing the Government some time ago, but I think that has been remedied. With regard to subscribers' representatives, the difficulty is to find out who are to retire according to the rules at the end of the year. Sometimes a ballot has to be taken, the attendances have been so regular.

477. *Mr. Barling.*] About the general management,—you gave us some very valuable evidence when you were before us in connection with some other branch of this inquiry. Since then, referring to some documents which I have already quoted from, I see that Dr. MacLaurin made these remarks, which agree with what you said:—

As to administration, it is clear to me that great gain would result to the public from bringing the medical charitable institutions of the city and suburbs under one controlling Board. The services could be carried out with greater economy, there would be an absence of competition between different institutions, and patients could be sent at once to the particular hospitals for which their cases were suited.

I think it will be very useful to us if you can give us anything further on that subject especially dealing with the hospitals? I quite concur in that statement, and to a large extent I have been instrumental in carrying the principle involved into effect. During the last three or four weeks the Prince Alfred Hospital Board and the Sydney Hospital Board have met in order to determine certain questions connected with both institutions, in other words they are working harmoniously together in regard more especially to the best plan of raising funds for the support of the institution. For this purpose they are going to have a conjoint ball for both institutions; the money to be divided equally between them. So they are really carrying out this principle to some extent. Of course the question as to the size of the controlling Board,

Sir A.  
Renwick,  
M.D.  
27 April, 1899.

Board, and the question of the Board having distinctive control over both institutions is another matter altogether. I think it would be a great mistake in any way to stifle the philanthropic inclinations of gentlemen on those different Boards who give their assistance freely. It would be a great mistake in the public interest to reduce the number of the members of the Board too much, and so long as the Board is manageable, it is as well to have a large one, so that as great an interest as possible may be taken in the work by the public, whom those gentlemen represent. From what I am stating, you will infer, therefore, that I do not think it would be a good thing if both those institutions were placed under one management, unless both Boards could be amalgamated, and the number of members not greatly diminished. I should be very glad if the hospitals were placed under one Board.

478. I should gather that Dr. MacLaurin does not contemplate reducing the number of members of the Board? No; but that would follow. You have at the Prince Alfred Hospital a Board consisting of twenty gentlemen, and the Sydney Hospital has a Board of twenty; that would be forty—a small House of Parliament in fact. It would lead to all sorts of discussions; the number of members would have to be limited very considerably.

479. I do not think that Dr. MacLaurin means even that; I think he must mean that over the subsidised institution there should be a controlling Board composed of, say, three gentlemen to whom these subsidies could be paid, and they would make inquiries to see that there was no overlapping and no defect in the management before the subsidies were handed over to the institution. That was your idea when you gave evidence before? I am sure Dr. MacLaurin had no such view when he made the statement contained in this paper. He says:—

As to administration, it is clear to me that great gain would result to the public from bringing the medical charitable institutions of the city and suburbs under one controlling Board. The service would be carried out with greater economy; there would be an absence of competition between different institutions, and patients could be sent at once to the particular hospital for which their cases were suited. In order that the responsibility of the Directors should be real and not merely nominal, I should suggest that their number should be not less than five nor more than nine.

we should have forty members for the two hospitals.

480. Am I right in supposing that your idea was that there should be a Board such as I mention, and which Dr. MacLaurin does not refer to there? Yes; my idea was this—and I hold it still—that all the charitable institutions, hospitals, benevolent asylums, &c., should be placed under either a small Board or under one person. This one person or small Board of two, three, or five, should then have the control of all the subsidies, but when it comes to directing the institution itself, these three persons should be superior altogether to the Board of the institution. In other words, we would have these three persons, or one person, whichever it might be, looking after the subsidies and the local Boards managing their own local matters. I do not think that Dr. MacLaurin had quite that idea.

481. Referring to the question as to the nurses again,—are you quite satisfied that the nurses do not complain that they are overworked; I have an idea that there are some complaints, although I cannot specify any? Of course this occurs. A person applies to become a probationer, and when she has been there a fortnight or three weeks a report is brought before the house committee that Miss So-and-so is a person of excellent character, but she is hardly suited to the work of a nurse. An inquiry is made by the house committee, and it turns out that she is not strong enough to do the work, and, therefore, she is allowed to leave. But after a nurse has been one year in the institution and has passed the probationer's stage, and got acquainted with the work that she has to do she rarely makes any complaint. I have never heard a whisper or a murmur in connection with their work or anything else. It is only in the probationary stage, and particularly during the first month, that any difficulty happens.

482. Do you think it is desirable that nurses on probation should go through the hard manual labour which they are called upon to do during the first year? I have always held the opinion that if a young woman is to be a nurse she ought to be thoroughly trained and that she ought to begin from the very lowest stage. I do not think it is desirable to make them scrubbers, and, as a matter of fact, we keep wardsmen to do that work; but that they should do everything connected with the nursing department, however low and degrading it may be, is absolutely essential in connection with their training. This is why any trouble of the kind you refer to that does occur occurs in the first stage of their probation.

483. You say that the nurses are exempt from the scrubbing? I understand so. We give instructions to the matron that these probationers should be relieved of that sort of work—of manual work of a degrading character.

484. Such as scrubbing floors? I think it is very desirable that they should even do that. If they go into a poor man's house they ought to know how to clean a floor or to clean a pan. I think that is essential; but I leave these matters entirely to the discretion of the matron. If she is fit for her position she knows how far this work shall be carried out by the nurses. The Board never interferes with the matron in matters of that kind; and we have never had any complaints about the degrading character of the work. We have had probationers, as I have said before, who said the work was too hard, or made other excuses; though, no doubt, that was at the bottom of it, and they have left within the first month. That sort of thing must necessarily occur. We have a great many applications. I dare say that there are more than 100 applications on the list now to get places in the Sydney Hospital. We do not encourage favouritism, nor do we make any special selection. We take these nurses in the order of their applications, and it follows, of course, that some are quite unsuitable for a position of the kind; therefore such cases as you have referred to occur. I am sure, however, that there are not half a dozen in a year.

485. In fact, it has the effect of a good sifting process? Certainly it sifts out those who are unfit. A well-educated young woman going in there, who likes her calling, would never object to the scrubbing or to the cleaning of dishes. There are nine wardsmen to do the rough, coarse work, including the scrubbing.

486. *Dr. Manning.*] You have so many applicants for the position of nurse that it takes nearly two years after an application is made before a person can get on the staff? Yes; that is about the average.

487. It is a position that is very much sought after? It has for years past been very much sought after.

488. It is advisable to put the nurses to hard work to weed out the incapables who would give trouble in a private house afterwards? Yes; and not only that but also to test their character.

489. Unless some of them were weeded out they would be a trouble in a private house instead of a help? Certainly.

490. You have said that the ophthalmic hospital attracts patients from the other colonies, do you not think that that is rather inadvisable considering that many of them will be paupers and will remain in the Colony?

Sir A.  
Renwick,  
M.D.  
27 April, 1899.

Colony? A man comes who requires an operation for cataract and he is a pauper;—how can he be refused wherever he comes from?

491. Is it a good thing to advertise it? I am not really advertising it. If you look at the statistics you will see how it occurs. They come, and the hospital is there to relieve them wherever they come from.

492. Can you give the cost of the out-patients? I could not.

493. Do you think the charge of 1s. each for out-patients advisable? I do.

494. On what grounds? It may be said that it encourages people to come who could pay a great deal more than 1s. It may be said that if they pay 1s. they think they are entitled to more than a shilling's worth. But that sort of thing was done before the shilling was charged at all. It is a kind of check, but we never ask for a shilling from a person who is not able to pay. These shillings cover the cost of the bottles, and they amount to nearly £600 a year, and that is a great consideration.

495. You said that in your opinion it is advisable that some dispensary system should be established in Sydney? Yes; very advisable.

496. And you think that if people were treated at their own homes by a dispensary medical officer it would save the admission of a great many people into the hospital? I have no doubt about that. Our former experience proves that. The Sydney Hospital at one time, instead of having the present system, had honorary physicians, honorary surgeons, and dispensary surgeons. There was a dispensary surgeon attached to each ward at the city, and those dispensary surgeons gave orders for medicines to the poor people whom they visited and the medicines were got at the Sydney Hospital. It was a great boon. Now if a person is ill and not able to go to a doctor he is put into a cab and taken to the hospital at once. Most of such people would remain at home and it would save the hospital a considerable amount in regard to maintenance, if we still had the old system. Some of these cases are cases that should go to other institutions, to Little Bay or to Parramatta or one of the other places, but they are all brought to the Sydney or the Prince Alfred Hospitals.

497. Are you aware that since the dispensary surgeons have been done away with, a great deal more work has fallen upon the police surgeon? Yes.

498. That he is not able to find time to visit the patients at their own homes, and orders their admission to the hospital, whereas, if there were a dispensary surgeon they would be treated in their own homes? I quite agree with that.

499. Has the question of provident dispensaries engaged your attention? Yes; there are a number of them in Sydney, and in some of the more important cases they are attended by a number of medical gentlemen. Those medical men engage to attend persons for a certain sum and the medicines are prepared at the central institution. There are at least three or four of these places.

500. These are almost all in connection with the different Friendly Societies are they not? No. What I am speaking of are outside the Friendly Societies altogether. I do not know that any special advantage, as far as hospital, work is concerned, arises from them. At any rate they have made no difference to the hospital, as you will see by the statistics. They have given no relief to the hospital. The only way in which they have given relief has been to persons who wish to select a doctor out of a certain number and to get him at a reduced payment for both attendances and medicine. That is the only result that I can see. In other words, it is an extension of the Friendly Societies' business. With regard to clubs and lodges, I think they are in much the same state as they have always been. There is no relief to the hospitals in connection with them.

501. I gather from the former part of your evidence that you are of opinion that the inquiry as to the means possessed by patients is at present inadequate? Yes, there is great difficulty in obtaining accurate accounts.

502. Do you think that a more accurate system might be inaugurated? It is very difficult to suggest anything. Care has been taken to make a strict examination into these matters; but it has been sometimes found after a patient has come in as a pauper, on a Government order, and has died, that he had a small banking account. Well, no one could discover that unless he chose to tell.

503. Is there any system of checking the inquiries made at the hospital, by visiting the homes of the patients? I do not think so. We should require a special officer for that.

504. A special officer would be necessary? Yes; and we have overdrawn considerably already at the Bank.

505. *President.*] What is the cost per bed in the hospital? £61 10s. I should like to explain that it is very difficult to arrive at the exact cost, per bed, of any patient in a hospital, because you make your calculations on various bases. For example, at the Sydney Hospital we have been put to considerable expense in connection with the building, the Government supplying most of the money; and the question is whether the interest on that money should be included in the calculation.

506. *Dr. Manning.*] That never is? Putting that aside, the next question that arises is, what is the expenditure of the hospital for the year *pro rata* in connection with the indoor patients. If it is taken purely on that basis, I understand that the cost is about £61 10s. per annum.

507. *President.*] Is that the outgo in reference to each patient? No, in reference to each bed.

508. *Mr. Walker.*] That does not take in money advanced by the Government? No, it is only the cost to the institution for the maintenance of that bed during the year.

509. Nothing but the actual cost of maintenance? The actual cost of maintenance.

510. *President.*] What are the sources of income to the hospital? First of all, the subscriptions of the public; next we have the Hospital Sunday Fund; next the subsidy from the Government for the maintenance of patients at the usual rate of £ per £. Then the Government pays for the maintenance of patients in the institution, and gives us also further assistance in the shape of rent for the Moorcliff Hospital and the branch dispensary. We have fees from paying patients, fees from out-patients, fees from pupils, and fees for the ambulance travelling; then there is interest on investments. Of course we have occasionally also legacies, the interest on which is available for the institution.

511. You say that the Government pay 3s. a head for patients sent by them? Yes.

512. Is that sufficient? No; it does not cover the expenses. At that meeting of the Directors of the Prince Alfred and the Sydney Hospitals, it was decided that we should wait upon the Government together, and ask them to increase the amount slightly, and so relieve us of some of the difficulty in connection with the finances.

513. What is proposed? We are going to ask the Government to give us an additional shilling—to make it 4s. instead of 3s.

Sir A.  
Renwick,  
M.D.

27 April, 1899

514. The average cost per diem is 3s. 8d., is it not? Yes; we are going to ask them to give us 4d. more than that.
515. You take paying patients? Yes; patients who are able to pay.
516. The patients pay £1 or 24s. a week;—what are your views on that? I think we make a mistake, and we are going to remedy it. We only ask 1 guinea a week, but there are some patients who could just as easily pay 5 guineas. At the Prince Alfred Hospital they have separate wards where patients are accommodated in a private way, and with considerable advantage in regard to domestic management, and they pay larger sums for the use of those particular rooms. We have no such accommodation; that is why we always charge 1 guinea a week. I do not know whether it is desirable in a public institution like Sydney Hospital that there should be any distinction drawn; but if there were any distinction we ought to give better accommodation for those who can pay larger sums of money. At the Prince Alfred Hospital the doctors get a share, which they donate to the hospital, and thus become subscribers.
517. *President.*] Is the hospital relief much abused? I do not think so. Of course it is abused as everything good is abused, but I do not think it is abused to the extent that people imagine. We have made inquiries into the matter. The Government at one time lent us a detective to go round and inquire into all the cases, and we had a report on the subject. It was said that people came to the hospital in carriages to get outdoor relief, that persons came dressed in a manner in which persons requiring assistance would not be dressed, and that others came loaded with jewellery. We had a thorough investigation, but the thing was not found to be so glaring as was anticipated. There were cases of abuse, no doubt, but it is so difficult unless the institution employs detectives to discover them.
518. For operations, I believe, certain small fees are charged? No; I do not think that any fees are charged.
519. *Dr. Manning.*] You get some money handed over to you by clubs, Benefit Societies, workshops, and firms? Yes.
520. Do you give them any special privileges or advantages? The only persons to whom we give any special advantage are the railway people. Application has been made by the Engineers' Association and by other bodies to come under the same rule as those connected with the Railway Department, but we have in every case refused. In all probability, as a result of that meeting the other day of the Directors of both institutions, the railway people will be deprived of this privilege too.
521. What privileges do they derive? They are admitted at once without any investigation. No charge is made in connection with the case, but 15s. a week is paid. Then at the end of the year, in proportion to the number of patients treated, the balance of the fund collected by the railway employees is divided between the Sydney and the Prince Alfred Hospitals.
522. *Mr. Barling.*] Referring again to the control of the Government institutions by Government officers, I suppose your idea is that it would have to be very carefully brought about, as it might have the effect of drying up private charity? Yes; that is the reason why I say that if you were to diminish the number of members of the Board it would cause a considerable diminution in the contributions. Take the Sydney Hospital. I know members on the Board of that hospital who have contributed as much as £50, and £200, and various other sums, and they use their influence with persons who are in a position to bequeath money to the hospital to induce them to do so. Let me state my own case; you will find two or three bequests on the list that amount to about £15,000. I have suggested to people that they should divide their money between the Sydney Hospital and the Deaf and Dumb Institution. There is the case of Mrs. Fox, who left £4,000 or £5,000. Another lady left £1,750, and I could pick out two or three others who left their money in this way for the benefit of the community.
523. Then the greatest care will have to be exercised in making the control so that it will not have the effect of curtailing private charity? Certainly; everything that can be done should be done to interest the public in the institution. What it is necessary to show is that it is for their own benefit that the institutions should be maintained, and that the persons who are regulating them are persons in whom the people have confidence.
524. While it is desirable to have this control, it should be so carefully guarded that it will not have the effect of preventing people from taking an interest in those institutions? Yes.
525. We were speaking about paupers coming from other colonies and being treated here at the expense of this Colony; of course, we must agree that you cannot reject an individual who comes to you suffering from disease? We are so full of the idea of Federation that of course we could not.
526. But would it not be desirable to have a law passed by which the influx of paupers from other countries could be regulated? That is done in some of the other colonies.
527. What would your idea be? I really do not know.
528. *Mr. Walker.*] There is no law on the subject in Victoria, except as regards criminals? Of course I do not regard these people in the same light as coloured brethren.
529. *Mr. Barling.*] Do you think there ought to be reciprocity—that if we receive some paupers from other colonies they will receive some of ours? Yes, certainly. I was under the impression that there was an Act in force in Victoria dealing with the matter, because not long ago the Benevolent Asylum sent some people over to Victoria, and they were returned.
530. It is stated that owing to the more favourable climatic conditions, a large number of phthisis cases come from Victoria, and a large number of ophthalmic cases come from Queensland? Quite so.
531. Do you not think we should make some arrangement by which the other colonies would contribute something towards the cost of those cases? With regard to receiving ophthalmic cases from Queensland, I may state that we send many phthisical cases to Queensland. I have sent dozens there. With Federation once accomplished there would be no necessity for any enactment in regard to the matter at all.
532. The question has been raised as to the unfairness of taking patients in that can afford to pay, because, to a certain extent, it is unjust to private practitioners; but there are a large number of cases amongst the clerical class who get from £150 to £300 a year who really cannot afford to go to a private hospital, but who can afford to pay sufficient to defray the actual cost of their treatment in hospitals;—therefore, is it not desirable, for the benefit of that class, to allow such a practice to continue? So long as it is within proper limitation it is very desirable. There are certain cases for which provision of that kind ought to be made. There are cases in which the people are able to pay something, but they are not able to pay the full amount, and they have no friends to look after them. But a great deal of difficulty has been done away with by the practice in Sydney and elsewhere of having private hospitals; private hospitals under

Sir A.  
Renwick,  
M.D.  
27 April, 1899.

under the management of medical gentlemen, where medical men attend, and where they have well-trained nurses. There are a large number of them in Sydney, and they, to a great extent, provide for such cases as you refer to. Ten years ago the argument would have been very forcible in favour of having private wards for that class of patients in the public hospitals, but in Sydney now there is ample provision in the cottage homes and private hospitals conducted by medical men and trained nurses.

533. But would not the charges be prohibitive? No. I have made inquiries as to the charges. In some of those places the charges are most reasonable for maintenance and attendance. The only difficulty is in regard to the charge for medical attendance. The charge made in the Prince Alfred Hospital for private patients is, I think, about equal.

534. A case came under my own observation some time ago—there was a case requiring medical treatment, and a doctor was seen on the subject, and he said, "Before I can do anything I must have £200." Fortunately, the money could be paid; but how many clerks are there with £200 a year who could pay that? Some of these private hospitals are well-regulated institutions, under leading practitioners, but the cost would not be anything like what you have mentioned, except in very rare cases indeed. The cost in ordinary cases would not be greater than what is charged at the Prince Alfred Hospital. There has been a complete change within the last five or six years in Sydney. That has all occurred since the new system of trained nurses has been instituted. So excellently are some of these places conducted under those medical gentlemen that from one of them the late Matron of the Sydney Hospital was taken. She was matron of one of those private institutions before she went to the Sydney Hospital. That will show you how well they are managed, and how perfect the system has become.

535. Do you think that these private hospitals should be under control? The Government gives nothing towards their maintenance. They are private undertakings.

536. I mean for the protection of the people? I really do not think the thing has gone so far as to require anything of the kind at present, but if it goes much further, then, undoubtedly, it will be necessary to have some kind of inspection.

537. Should they be licensed? Yes; licensing would meet the case, I think.

538. *Mr. Walker.*] You said there were some cases of imposition with regard to out-patients;—could you give us any information as to the extent of it? No; I could not give any information on that point. I believe that the best information is in the Colonial Secretary's Office. There are some excellent reports there from the detective I have mentioned. You have all the particulars—the names of the persons and everything connected with it. The Government only sent to us a general statement.

539. I understood you to say that you had made inquiries? Well, our inquiry was to a large extent superseded when the Colonial Secretary's Department appointed the Director of Charities to investigate the matter through a detective. We gave up the investigation then, and we received the result from the Colonial Secretary's Office.

540. That is many years ago? It must be within five years.

541. I am aware of that inquiry; but I understood you to say that you had, on your own responsibility, made inquiries? We did. We made an investigation, and we found that the information obtained was sufficiently serious for us to ask the Government to take action. We found that there were some people who were imposing upon the institution. Then, moved by that, we made a representation to the Government. The Government appointed Mr. Maxted, who engaged a detective, who reported on the subject. I have read the reports, and they are now in the Colonial Secretary's Department.

542. I thought you said you had made inquiries and found that there was not any imposition? We found that it was not so serious as people imagined.

543. I understood that the committee had made inquiries of their own? They commenced it. Representations had been made by some medical officers to the effect that people, occasionally came to the hospital in buggies; that people came dressed remarkably well; that one person had pulled out a number of notes, and things like that. On these representations being made we wrote to the Colonial Secretary's Office for the necessary assistance.

544. *Dr. Manning.*] You approve of taking in paying patients to a certain extent at a guinea a week or even more? Yes.

545. Does not that mean the keeping out of more necessitous cases or the restriction of the accommodation for them? I think not. No preferences are given.

546. But if the wards are occupied by paying patients, beds will not be available for necessitous cases? No case is ever admitted into the institution unless the medical men say that that case ought to come in. It is not a question of money at all. You may say that a case could be treated in a person's own home; but if the doctor says, "No, you must come into the hospital," the patient is brought in at once.

547. *President.*] You mentioned the starting of suburban hospitals? Yes.

548. Those hospitals must have relieved you to a considerable extent? They have, because they have treated on the spur of the moment accident cases which have occurred in their neighbourhood; but they are more useful in cases of fevers, &c. They are very useful in that respect, because those fevers can be as well treated in a home as in a big building.

549. Have you any particular knowledge of how they are conducted? Yes.

550. And they are very useful? Yes; they are useful for ordinary cases.

551. Are they well managed? I should not like to express an opinion on that. Most of them are satisfactory, as far as I know.

552. Do the Convalescent Hospitals relieve you to any considerable extent? The Carrington, the Walker, and the Thirlmere Hospitals are a great boon. I have been connected with all those institutions. They have been of very great service indeed to our general hospitals. At the City Hospitals there is not a great deal of spare room, and when people are recovering it is well that they should go away from the hospital surroundings to where there is purer air.

553. The Sydney medical men give their services gratuitously? Yes.

554. In various country places the medical officers are paid? Yes.

555. Is there anything in the circumstances of the country hospitals that would account for the difference? Yes. I think that in the country they must have very great difficulty in making ends meet, and their time is very valuable. Sometimes medical men have to travel great distances in order to obtain a fee. I think it is desirable to keep up the payments as regards country practitioners who attend hospitals. They ought to be paid for their services, or to have a kind of retaining fee.

556. *Mr. Barling.*] Dr. Thompson gave us some evidence as to the large cost during the last year or two of the Coast Hospital, and one of the reasons for it which he gave us was the employment of students from the University—that they, by reason of their inexperience, often prescribed extras that were almost unnecessary, and unnecessarily increased the cost of management;—has anything of that sort come under your observation in regard to the Sydney Hospital? At this Hospital, I believe, they are beginning to treat a number of not exactly acute cases, but cases that require a great deal of medical attendance and an increased amount of nursing. The other matter, about the hospital students prescribing drugs of a costly nature is a thing of which we have no great experience. I imagine that these gentlemen are not students at all, but men who have passed their examinations, and are fully qualified.

Sir A.  
Renwick,  
M.D.  
27 April, 1899.

557. Yes, fully qualified; but they resort to medical comforts and are extravagant? With regard to the Sydney and Prince Alfred Hospitals, we have an honorary staff, and they control the whole matter. There may be something in what you say, because those young gentlemen cannot have had any large experience. They will take the lines laid down in books, and they do not know the distinction between the cost of medicines, which may have the same result whether they are dear or cheap; but I do not think it would make much difference. These young men go direct from the University. The plan adopted is that they are classified when they have passed. We get information that so-and-so has passed; the Prince Alfred Hospital selects so many, and we select so many, and they come to the institution to get their final training. It is a great advantage to the public. It is better than the old system. Every week we have a list of all the drugs supplied, and we see that extravagance is curtailed in this particular respect.

558. Is there any other information that you can give the Commission? I know what you want. You want from me a statement of what I think ought to be the future hospital management in this country, looking not only to its present condition, but also to the future requirements of the Colony. Well, it is a very large question. It is one that I should naturally be brought into connection with, and to which I should like to give a great deal of thought before I say more than I have said to-day. What I said a great many years ago has been carried out. We have the Sydney Hospital and the Little Bay Hospital as a relieving place. It would be a great mistake to put another hospital anywhere except in the middle of a dense population. It would be a great mistake to enlarge the present hospital buildings to any great extent. I think that 300 beds are quite sufficient for any hospital. Of course if you look to economy merely you may have a hospital with 1,000 beds. That has been done, but it is a great mistake. Anyone who knows anything about St. Thomas's and other large hospitals in London will know what an error that has been. This question requires a lot of consideration.

559. *Mr. Powell.*] I understand you to say that you object to an additional storey being added to the present building? I say I would prefer having additional accommodation in the Domain; but if increased accommodation is to be on the present site, then it must be in the shape of putting on an additional storey, according to the original arrangement in connection with the plans that were instituted by the Board. It is not so satisfactory to have a lofty building for a hospital as to have one of two or three storeys. With the same conditions I would prefer to have the increased accommodation on a lower floor. But if it is a matter of necessity to do so, we must take it in the shape of an additional storey to the present building.

MONDAY, 1 MAY, 1899.

[The Commission met at the Offices of the Public Service Board, at 2:30 p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).

F. NORTON MANNING, Esq., M.D. |

J. BARLING, Esq., J.P.

J. POWELL, Esq., J.P.

CRITCHETT WALKER, Esq., C.M.G.

James Ewan sworn and examined:—

560. *President.*] You are Honorary Treasurer to the Sydney Hospital? Yes; I have been since 1891.

J. Ewan.

561. *Dr. Manning.*] Will you tell us from what sources the hospital derives its income, and the amount from each source for 1898? The income for 1898 was: Subscriptions by collectors, £1,752; subscriptions direct, £242; Hospital Saturday Fund, £490; these sums making a total of £2,484. We received in medical officers' fees £75; then we received in Government subsidy, £ per £, £2,370; for pauper patients from the Government, £8,056; from the Government for the maintenance of Regent-street Dispensary, £700; rent for Moorecliff, £350; fees from paying patients, £1,633; from pupils, £29 18s.; out-patients, £662; ambulance fees, £102; interest on investment, £1,053.

1 May, 1899.

562. What was your total income for that year? £17,921.

563. Of which £11,777 was contributed by the Government? I think that is correct.

564. The Government aid in the year 1898 was less than usual, because you had only three-fourths of the subsidy? Yes; there is one quarter owing.

565. The Government aid for 1896 was £15,469, and for 1897 £15,262? I dare say that is correct.

566. Does the Government pay the entire cost of the Regent-street Dispensary? Yes; the full cost.

567. Not only the rent, but also the cost of the medicines? The cost altogether, including drugs and attendance, £700, the Government paid all.

568. Is that the total cost? It was what we asked for as the estimated cost.

569. There is no gain or loss to the hospital? I would not be quite certain that the £700 covers the cost.

570. The £350 for Moorecliff is for rent only? Yes. It is the actual amount.

571. During 1898, there was a grant of £300 for the pathological building? Yes, to complete it. There is still a small amount owing.

572. Then the amount obtained by subscriptions is very small in comparison with the total income? It is.

573. Will you tell us what is the method of obtaining subscriptions? We have one man attending solely to that work. He receives £156 a year salary and a commission of 2½ per cent. upon the old subscriptions, and 5 per cent. upon the new ones. He gives the whole of his time and attention to the work of the

- J. Ewan.  
1 May, 1899.
- the hospital, principally collecting, though he does other work as well. Then, by way of supplementing subscriptions, we have what we call sports meetings. The last was held the year before last—the Chinese carnival. We got £220 by that.
574. Have the subscriptions increased or diminished during the last few years? They have diminished, chiefly owing to the Hospital Saturday Fund. We have taken a great many subscriptions from the working classes—what they call the industrial classes—but a great many people make it an excuse that they give to the Hospital Saturday Fund, so that they cannot give to us direct. The circumstances of the people for the last few years have not been so good as previously, and these two things are, to a certain extent, accountable for the diminution in the subscriptions.
575. You do not attribute it to any falling-off in the exertions of the collectors? None whatever. Very often we make special efforts. We write home to London to old colonists; we did that a couple of years ago, and we got three responses from about thirty-five people to whom we wrote. We wrote to the large graziers; we sent away sixty letters, and we got two answers. We do all we can to get money from the public.
576. It may be assumed that the large graziers subscribe to their local hospitals? Yes, no doubt; but a great many cases come from the country to the city that cannot be dealt with in the country.
577. You have given us the amount of money received from patients;—can you give us a return showing in what sums this money was received? They vary from 10s. up to £2 2s. a week.
578. Do you not take anything less than 10s.? There were ten patients who paid 2s. 6d. each, seventy-two who paid 5s. each, eighteen who paid 7s. 6d. each, 115 who paid 10s. each, twenty-one who paid 15s. each, one who paid 17s. 6d., 101 who paid £1 1s. each, three who paid 25s. each, four who paid £1 10s. each, thirteen who paid £2 2s. each; five who paid 28s. each; one who paid £2 10s.; and one who paid £5. These were all payments made per week during the last eight months.
579. Then you do not appear to receive smaller sums than 2s. 6d. a week from your out-patients? The figures I have quoted refer to in-door patients. With regard to out-door patients we have a system of registration. Each patient is registered and is supposed to pay 1s., if he can pay at all. We have received during the year a total of £660 in shillings.
580. Who attends to this business? We have a separate clerk who registers people, and he also assists with the Regent-street Dispensary.
581. Do you take any smaller sums than 1s.? They have a donation box into which they can drop 6d. or 3d.
582. What inquiries do you make as to the ability of the out-patients and of the in-patients to pay? Some time ago, within the last two years, we adopted the practice of requiring out-door patients to pay. We felt that a great many people came who ought not to come, and through our own officers partly we made inquiries, and we came to the conclusion to charge 1s. for registering, and if the officer-in-charge thought they ought to pay more he made inquiries, but since the system of registration was adopted, and the paying of 1s. we have not found that any material imposition was practised. As far as the in-door patients are concerned, they are questioned rather severely by the Medical Superintendent who gets to know their circumstances, and he tells them that he will require so much from them, and they generally fall in with his request. We have had some trouble with the Saturday Hospital Fund. Until last year we used to get our share of the whole fund, but when they made the last division, they kept back what they called the money received from the industrial people—people in shops, warehouses, houses, or factories, who contributed 6d. or 1s. a week. They kept back about £1,100, and they made it a ground of complaint against us that we did not afford them the same facilities as our ordinary subscribers. There is a by-law to the effect that subscribers of two or three guineas have a right to one or two orders. This was denied to the Hospital Saturday Fund, so they cried out about it and said they were compelled by those who gave them the money to get some consideration for it, and they have kept that money back. All we had to do was to say that we would not admit them except under our rules. Then there was an arrangement that they should pay the cost of the people to whom they gave orders at the rate of 4s. a day. We had a conference a little while ago with the Prince Alfred Hospital, and we thought we should come to an arrangement with the Saturday Fund people that they should give us the whole of our share of the industrial fund, and that we should acknowledge their orders, but reserve the right to question patients as to whether they were financially fit for the hospital. They have not carried out what they agreed to do, and we are in an unsatisfactory position with them.
583. They sent to you people that you did not consider were entitled to hospital relief? We thought so. We have people who cannot pay their way, but a great many we thought were not only able to contribute to the fund, but could also pay for hospital treatment.
584. Do you follow up the inquiries made by the Medical Superintendent by sending any officer to visit the homes of the patients and inquire into their circumstances? To a limited extent only.
585. Can you tell us to what extent? We do not do it very often. If we have reason to suspect that they are imposing upon us and should not come to the hospital, the collector goes and visits them.
586. It is not systematically done? Hardly, I think.
587. Do you find that the amount received from the Saturday Hospital Fund and from subscribers now equals the amount that was received from subscribers alone a few years ago? No; I think not. I think the amount is £300 or £400 short of what we used to receive from subscribers alone.
588. Will you tell us how your accumulated funds were invested? On the 31st December, 1898, we had to the credit of our Benefactors Permanent Trust Fund a total of £57,662; of this amount £24,218 was expended on the permanent structure, and we have a balance of £33,444 invested with the Bank of New South Wales on fixed deposit for one year at 3 per cent. per annum.
589. How has that £33,000 been made up? By bequests, legacies, and donations of from £100 upwards.
590. Has any condition been attached to those bequests or legacies that they should be invested, or has the money been invested under your by-laws? The condition generally attached has been that we should only expend the interest.
591. Has that condition been attached to the whole of this money? To most of it. We have a by-law to the effect that every sum bequeathed to the hospital of £100 and upwards shall be invested in that way, and that the interest only shall be expended from year to year.
592. Do you think it is advisable that you should have a by-law to that effect? I do. I think it is a safe one.

593. It is safe; but is it advisable to accumulate funds really for the benefit of posterity? It is just what we would do for our children—making provision for those who come after us. J. Ewan.
594. But should not the hospital be left for those who come after us, to support it in their day? I hardly think so. I should like to see that fund built up until we are able to do without Government assistance altogether. May, 1899.
595. I think it is a fact—have you any knowledge of it—that hospitals with permanent endowments are not, as a rule, as well conducted as hospitals which have to depend for their support on subscriptions from the public? My experience is only limited to Sydney Hospital. As far as money is concerned, we could not be more careful or economical than we are.
596. But you depend largely on subscriptions and upon Government aid? At the Sydney Hospital we take as much care of the money that we get as we should if it were our own. There is no waste there.
597. I do not doubt that; but I am speaking of such a hospital as you have referred to—one that exists entirely upon invested funds;—for every hundred pounds that you invest, practically you have to ask the Government for £100 to supply its place? Yes, that is the condition under which we work.
598. By not taking the money into your current account and expending it, you have to ask the Government for £100 for current expenses? No; for every £100 that we receive in that way in the shape of subscriptions, legacies, or bequests, the Government give us another £100.
599. That is hardly the position I want to put to you;—by taking this £100 out of your expenditure, and putting it to an endowment fund, and getting only £5 a year for it, you are virtually obliged to ask the Government for another £100 to supply its place? That is the inducement we give people to subscribe. We say if you give us £100, we shall get another £100 out of the Government. That is one of the arguments that we use.
600. Then I take it that a very large proportion of this £33,000 is made up of sums that have not been set apart as an endowment fund by the donors or the people who bequeathed the money, but moneys that have been placed to the credit of that fund under by-laws of the hospital? We have a by-law to the effect that every £100 is to be put to the credit of the Permanent Benefactors' Fund.
601. A large proportion of this £33,000 arises from donations of £100 set apart under the by-laws? Not a very large proportion.
602. What is the advantage of the Samaritan Fund? We had in December, 1898, £2,903 to the credit of that fund. When the matron or medical superintendent find cases that warrant assistance to enable poor patients to travel to their homes or to supply them with surgical instruments, boots, shoes, or clothing, the person being thoroughly destitute, they recommend that that person shall get from £1 up to £5. We have always saved considerably on the interest. Our disbursements have fallen short of the full amount of the interest every year except one. From year to year the sum has gradually grown. The amount was much smaller than it is now when the fund was first instituted.
603. Up to the present you have held out as an inducement to subscribers that they could have so many orders for in-patients and so many orders for out-patients? Yes.
604. You propose to do away with that practice now, and admission will depend upon the medical and financial necessities of the case? Yes.
605. The medical superintendent being the judge of the medical condition and the fitness of the patient to be admitted? Yes.
606. You are following the Prince Alfred Hospital in that respect? Yes.
607. Can you tell us the cost of Moorcliff as a home? No.
608. It has never been calculated out separately? No; but I think I may say from what I have heard, as far as Moorcliff Hospital is concerned, that from what we get in the way of rent from the Government; and as the Government pay nearly all the fees, it is a self-supporting institution; perhaps a little more than that. The Government pay £350 a year rent, the place is pretty well occupied by Government patients, and what we receive from the Government pays the full cost.
609. And gives you something for the profit of the hospital? A small amount.
610. The Government patients during last year were 417 out of a total of 561? Yes.
611. So that the 3s. a day for those patients more than pays for their maintenance? I would not say that it more than pays for their maintenance.
612. They are a very cheap class of patients to maintain? Yes, cheaper than those in the principal hospital considerably.
613. They require but little nursing; they cost little for medicine and for surgical dressing, the main cost being in instruments, I think? Yes; but whilst on the subject of cost I may say that last year we spent £1,932 more than our income, and for the previous year £1,330 more than our income; and we found by careful calculation that 3s. per day for patients in the chief hospital is not sufficient remuneration. The Prince Alfred Hospital found it to be the same, and we have it in view to apply to the Government for 4s. per day; and having that 4s. a day, we should just about meet the excessive expenditure.
614. What is it supposed that you do for the Government subsidy—you get about £4,000 a year; hitherto has that been taken into consideration? In view of the fact that the Government give a subsidy of £ for £ we have taken patients at less than the cost; but we find that by that arrangement we are getting into debt. We have it in view to set the position before the Chief Secretary.
615. You have no private wards? No.
616. Do you charge any fees for operations? No.
617. Will you tell us the number of your paid medical officers? Nine altogether.
618. How are they paid? The medical superintendent receives this year, £350 a year; last year the amount was £300; that in future is to be the maximum. The senior resident medical officer receives £100; then there is the Assistant Pathologist, he receives £75; and there are six others at £50 each, all with quarters and food.
619. Will you give us the rate of pay of your matron, sisters, nurses, and probationers? When Miss Gould was with us she received a salary of £300 a year; the present matron receives £200 a year; one sub-matron, at Moorcliff, receives £90 a year; there are five sisters—one senior sister at £72 a year, one sister at £60 a year, three at £54 a year each; head-nurses, one at £72 a year, two at £60 a year, and two at £52 a year. The other thirty-two nurses receive for the third year £36, for the second year £32, for the first year £26. The twenty-one probationers receive £20 per annum each with board and lodging. Wardsmen receive £52 a year with board—one with board and lodging.

- J. Ewan.  
1 May, 1899.
620. *Mr. Barling.*] Is it not possible to give us some idea of what proportion of money has been put to the endowment fund by the will of the donors, and what proportion by resolution of the committee under that regulation? Not correctly.
621. Could you give it roughly? I will try.
622. Would it be half of it? No; not more than £5,000 or £6,000.
623. Only about £6,000 has been put to the endowment fund by the committee? I hardly think it would come to that much.
624. Suppose a person gives £100 to be placed to the endowment fund, do you get £100 from the Government as against that; and when you get that £100 do you place that also to the endowment fund or do you use it as revenue? It is used as revenue. The late Mr. J. T. Neale gave £3,000, and when we sent in our statement showing the amounts received we received £100 that year in respect of that, thus leaving £2,900. We receive from the Government interest on £2,900, and we receive interest at that rate until the whole sum is paid back to us £ per £.
625. So you get £ per £ in the way of interest on these sums? Yes. They will not give us in respect of any one case more than £100, but as the years go by they give the interest until we have received a sum equal to the principal.
626. You say that the hospital had suffered by reason of the Hospital Saturday collection? Yes; that is the conclusion we have come to.
627. Do you think your loss is equal to the gain;—do you think that you have lost a sum equal to the proportion given to you from the Hospital Saturday Fund? In 1898 we received £190. I feel sure that if the Hospital Saturday movement had not been in existence we should have received from the public a larger sum than that.
628. So that these hospital days not only do not assist the hospital, but they actually impoverish it? They take away what we should otherwise get.
629. So that all that exertion goes for nothing? That is the way we look at it, especially now that they have kept back from us our share of the industrial fund.
630. *Mr. Powell.*] Do you not think that the public generally regard the Sydney Hospital as a Government institution? I hardly think so, because we never send people to Government officers until we feel sure they are destitute.
631. They appear to treat it as a Government institution by not subscribing very liberally? There are a great many other institutions to subscribe to, and when it is all put together it makes a large sum. It is not everyone that gives.
632. How long has that by-law to which you have referred been in force? It was passed years ago. The amount which should be applied to the endowment fund used to be as low as £50, but it has been raised to £100.
633. *President.*] What provision is made for auditing the accounts of the hospital? We have Mr. Taylor, a paid accountant, who receives a salary of £25 a year. He examines the accounts every month, and we get quarterly statements laid on the table. We have a by-law which makes it incumbent upon three directors to audit the year's accounts. Last year the auditors were Mr. Fell, professional accountant, Mr. Sheridan, Manager of the Bank of New South Wales, Bathurst-street Branch; and Mr. S. E. Leas, M.P.
634. So you have an outside audit and an internal audit as well? We have a professional paid auditor, and one of our own people, and Mr. Sheridan, the Manager of the Bank.
635. Do you know anything about the way that supplies are provided in the hospital? We call for yearly contracts for such goods as we can get that way. There are some few things, not many, and every year they are becoming less that we buy direct as they are required. As far as the expenditure is concerned there is nothing wasted that I know of.
636. Have any steps ever been taken by the directors to bring under the notice of rich colonists the claims which the hospital has upon them to be remembered in their wills? I wrote to fifty or sixty people.
637. For donations? To remind them of the claims which Sydney Hospital has upon them. The directors personally endeavour to influence people. We received money from Mrs. Russell. Sir Arthur Kenwick guided her largely in the making of her will. We do it wherever opportunity offers.
638. From what sources has the Good Samaritan fund been built up? Some thirty or forty years ago there was a sum of £1,300 or £1,400 put out at interest, and it was hardly ever used. That was the way it began. There was also money left, I believe, by patients, and never claimed.

Nellie Gould sworn and examined:—

- Nellie Gould.  
1 May, 1899.
639. *President.*] You were Matron of the Sydney Hospital? Yes.
640. Now you are Matron of the Rydalmere Asylum? Yes.
641. We wish you to give some information about the position of the nurses in the Sydney Hospital;—First I would ask what is the method of their appointment? Any applicant bringing suitable references, if she looks suitable, is put on the list, and then taken on in her turn.
642. They are not selected? Their names are not put down unless they bring an introduction from someone. If they bring no introduction their application is not considered at all.
643. If they are likely to be suitable their names are put on the list, and then they are taken on in their turn? Yes.
644. Between what ages are they selected? They must not be under 20 or over 30, unless by special permission of the Committee.
645. At what pay do they start? £20 for the first year.
646. What is the next stage? £26 for the second year.
647. What is the next stage? £32 at the end of the second year, and £36 a year after that.
648. What is the next stage? There is no further increase of salary unless they are put on the staff.
649. What is the position for the first year, and afterwards? The first year they are probationers; the second year assistant nurses; the third year nurses—that is, if they pass the examination at the end of each year. If they fail they remain the same as they were before.
650. At the end of the third year do they move up? No; they are known as senior-seconds after the third year. Then they can take a short holiday charge.
651. What pay do they get then? £36 a year.

652. What is the next step? When a vacancy occurs for a charge they are appointed probationary head nurses for three months in charge of a ward of not more than twenty-two patients. Nellie Gould.
653. What do they get when they are appointed charge nurses? Not anything till they are really appointed at the end of the three months. If appointed head nurses they get £42 a year. 1 May, 1899.
654. What is the next increase after that? £45.
655. What position have they then? That of head nurse, second year.
656. What do they get after that? £48 a year.
657. What happens then? They go on as head nurses unless they are appointed as sisters. A sister can have charge of the hospital at night, or can have more than one ward under her supervision.
658. What do sisters get? They receive £48 the first year; £54 the second; and £60 the third; they may be appointed sisters after being eighteen months head nurses, if there are vacancies. The highest salary that they get is £60, except for the one who acts for the matron; she is called the senior sister, and she gets £72 a year.
659. That is the highest office under the matron? Yes; except as regards the branch at Moorcliff. They have a different arrangement there.
660. What leave of absence do the nurses get? All the nurses have three hours every day. If they do more than ten and a half hours' duty it has to be paid back to them. They are supposed to have every day three hours off duty.
661. Are their normal working hours ten and a half? Yes; all through.
662. If they have to do anything in excess of that it is always made up? Yes; sisters and head nurses get one hour less.
663. About the leave of absence? Sisters have twenty-four hours in the month, and head nurses twenty-four hours, the second and third years; and all other nurses have from 10 o'clock once a month. The probationers have from 11 o'clock once a month.
664. Before they get their three hours off they must work ten and a half hours. The time off duty may be from 6:30 till 10:20 a.m., or 10:45 a.m. to 1:15 p.m.; or 2:30 to 5 p.m., or 6 to 9 p.m.? No, not always.
665. Is there any annual leave? Yes; fourteen days for the nursing staff, three weeks for head nurses, and a month for sisters.
666. On full pay? Yes.
667. Are you in a position to say whether during your time there were sufficient or more than sufficient nurses? At any time if I had to keep them on duty longer than ten and a half hours I had to report to the committee, and then another probationer was appointed.
668. The hospital was just sufficiently supplied as far as nursing was concerned? Yes.
669. Will you tell us the training that they have to go through as probationers;—have they much cleaning? No; in each female ward there is a wardmaid who does the washing up, the scrubbing of the floors, and the rough cleaning. In the male wards wardsmen do the scrubbing, washing up, rough cleaning, and help to lift heavy patients.
670. So that probationers have no very rough work to do? They have the washing up of all the dressing utensils, and they have to dust the wards.
671. Has every probationer to take a share in that? Yes; and even in the second year if necessary. The washing of the things used at meals is done by wardmaids.
672. Then all the probationers have to go through the same training? Exactly the same.
673. Do the nurses make any complaints of their position to you? Sometimes they find it very trying, more with regard to the spittoons, &c. They get tired enough, but I have not heard much complaint.
674. Are you satisfied with the nurses' quarters? It is a very old house. When the new hospital was opened they built an extra floor on it. Where five inmates occupied a room the number was reduced to four, and where there were four the number was reduced to three. Rooms were used for bedrooms that were meant for sitting-rooms.
675. *Mr. Barling.*] You said you had not heard nurses complain of having been overworked, which shows that there is a sufficient number of nurses to do the work? Of course for ten and a half hours they have to work hard.
676. Do you think that is too long? Those who are strong seem to stand it very well.
677. It is a good test as to physical capacity? Yes; and I have known those who were not strong to do it well, if they had good heads. If they are not methodical, it makes a great difference. A methodical woman can get through her work better than one who is not methodical. Their heads save their heels.
678. During this ten and a half hours I suppose they have a certain time off for meals? It is ten and a half hours of actual ward work.
679. They are kept at work? They have to attend to the patients for ten and a half hours. The time that they are away for meals is not counted.
680. You think that is not too much for the girls? They seem to manage it very well.
681. Have you ever made out any statistics showing the number of patients to each nurse? There are five and a half beds to each nurse.
682. How does the Coast Hospital compare with the Sydney Hospital in regard to the number of nurses, the patients, and the hours worked? I really could not tell. They have so much ambulance work. I do not know what effect the ambulance may have as regards their work. They have three or four nurses always out with the ambulances. We might have one out every day, or two, but they would not have to make such long journeys.
683. Have you ever been to the Coast Hospital? Yes; several times.
684. Did it strike you that they had a smaller number of nurses than they ought to have? If the nurses could have been left in the wards they had enough, but they were often taken away to go with the ambulances, and one nurse would be left where there ought to be two.
685. Is there any marked difference between the class of cases dealt with at the Coast Hospital and the class dealt with at the Sydney Hospital? There is a very great difference. During the typhoid fever season their typhoid wards are fuller than ours. Our patients are mixed.
686. Typhoid cases require a larger number of nurses than surgical cases? Yes.
687. They would require a larger number of nurses for 100 cases of typhoid than for the same number of other cases? Yes.

- Nellie Gould. 688. Then you think that on the whole the Coast Hospital is rather under-officered? I always thought it was, because of the nurses being taken away by the ambulances.
- 1 May, 1899. 689. Have you ever compared the rates of pay at the Sydney Hospital with the rates at the Coast Hospital? I think they are paid rather higher at the Coast Hospital; but then they are so far out, and it is not a training-school for general cases.
690. It would not be such a good training-school; but you think they pay a little more? Yes; they have uniforms granted, and our nurses have not.
691. Have you any idea of what the difference would be per annum as regards the pay at the Coast Hospital and the Sydney Hospital? I do not know what they get at the Coast Hospital; I know the pay is higher, and they get their uniform. The uniform makes a difference of about £4.
692. *President.*] I suppose that the buildings at the Coast Hospital being very scattered, that tends to make a larger number of nurses necessary? Yes, that, and having so many infectious cases. In the Sydney Hospital you can send a nurse from one ward to another, but in the Coast Hospital you cannot exchange them.
693. *Mr. Barling.*] Have they any difficulty in filling up the positions of nurses in the Sydney Hospital? None whatever.
694. They have a large number of applicants? They always had to wait for about two years for their turn to come.
695. That shows that a large number wish to get it? Yes; but only about one-third are suitable even when they come.
696. About two-thirds give up after a month's trial? A few give up after the first twenty-four hours; a number stay for a month, and then say they do not like it, or are not strong enough. The hospital also decides that some are not suitable.
697. Then your conclusion is that the nurses are not overworked? It is. I know that when the Melbourne Hospital question was raised, the nurses spoke very openly about it in the hospital, and they said they would not care to have the eight hours. They preferred the existing arrangement. That was the general opinion amongst those who had been there more than a year.
698. *Mr. Walker.*] I think you said that the nurses at the Sydney Hospital do not scrub the floors? They do not scrub the wards—they scrub the lockers and the tables.
699. Was that always the case? They have always done the lockers; they do not scrub the floors.
700. Did they never do the floors;—in the Prince Alfred Hospital it is a new rule is, it not? I really cannot tell you what they do in the Prince Alfred Hospital now.
701. Has it always been the same in Sydney Hospital? Yes; they have had wardsmen and wardsmails, but the work has been rearranged a little. They used to have only one wardmaid for two wards, now they have one in each ward. The wardsmails scrub the floors and do the washing up as well.
702. You say that the nurses get a fortnight every year;—is that merely a stereotyped rule, or do they actually go? They actually go away for fourteen days.
703. Does the nurse really go away? She need not go; the beds are there.
704. Does every nurse go away for a fortnight every year? Yes.
705. You are certain of that? Up to the 31st December they had to take their holidays.
706. Might not one out of good nature stop behind? She has to take her holiday before the 31st December. It was my business to see that she went. It was always insisted upon. They could sleep at the hospital and go out during the day, but they were off duty, and they were not allowed to go near their work.
707. How many nurses do you say there are at the Coast Hospital? I could not tell. They have had an increase lately.
708. Did they complain some time ago of being overworked? We saw it in the papers that they did.
709. You never had any complaints from any of those nurses in the Sydney Hospital? Well, women always complain more or less.
710. I mean as regards their treatment? No, we never had, except in the matter of promotion; there were grave complaints about that some who were not promoted when they thought they were suitable for promotion considered that they were hardly used.
711. *Dr. Manning.*] The first three years is looked upon as entirely training? Only training.
712. And it is on account of that that the salaries are small? Yes.
713. In fact, they are being trained to a very highly respected and to some extent a remunerative profession? Yes.
714. And the next two or three years they are waiting there either to join the hospital staff or to find some good position privately? A great many of them stay on to get some experience in administration which they could not get away from a hospital, and to learn the housekeeping part. We always had one nurse in training for housekeeping duties.
715. It is very few of the total number who really join the hospital staff? Very few. After getting sufficient experience, if an opening occurs in a country hospital or elsewhere they go.
716. And to private nursing? Yes.
717. So that mainly the hospital nursing arrangements are for the teaching of a large staff for the outside public? Yes.
718. And when they are nursing outside I suppose they work more than ten and a half hours a day? Yes; some of them have been on five days and five nights. Some have told me that they have not closed their eyes for five days and nights in operation cases. They cannot stand it long; a great many of them have to give it up.
719. What about the number of applicants each year for these positions? I was very rarely without two applicants a day, except on Sundays.
720. So you would have about 600 in a year? Yes; I counted the applicants for one year, and they were 600 odd. Out of those only a few would be put on the books. Many came just to see if they could get a place.
721. I suppose that you put sixty a year on the books? We generally took on about thirty for seventeen or eighteen vacancies. They would have to wait two and a half years to get appointed.

Captain James Edie sworn and examined:—

722. *President.*] You are Shipping Master at the Port of Sydney? Yes.

723. We are told that seamen are frequently discharged from ships in Sydney harbour in a diseased condition, and that they become inmates occasionally of the Government Hospitals;—do you know of cases of that kind? There are such cases, but they do not often occur. There is one class of cases that are sent to Little Bay—venereal cases. Those cases the Sydney Hospital refuse to take; there are not many of them.

Captain  
J. Edie.

1 May, 1899.

724. When it happens do they require a certificate that the man is unfit to proceed on the voyage? Yes; I have brought one with me.

725. That is a certificate from the Sydney hospital? Yes; to the effect that a man is unable to follow his usual occupation. There is also his discharge from the Hospital. We only pay the man his money when he brings us his discharge.

726. When this discharge is presented the man gets his wages;—are any deductions made from his wages? The Sydney Hospital charges the ship 3s. a day for a man whilst the ship is here. When the ship is ready for sea, the master of the ship pays two guineas to the hospital, and becomes a subscriber, which entitles him to a bed for one man.

727. That is, if the ship is ready to sail, and the man is not discharged from the hospital? Yes; I then get his money from the captain, and also his effects, if it is not a case of contagious disease. If it is a case of contagious disease, his effects have to be sent to the Board of Health to be disinfected. I keep the man's money, and if he comes out I pay him. If he dies it goes to the Board of Trade, in the case of an English ship. If it is one of our own cases we settle the estate here.

728. You pay the money to the Sydney Hospital? No; the captain of the ship pays the 3s. a day, and the two guineas to the hospital. They give him a certificate to the effect that the man is unfit to go to sea in the ship; and I endorse upon the ship's articles the statement that this man is left behind in the hospital, and that his wages, amounting to so much, together with his effects, have been left in our charge, so that wherever the ship goes there is an account of the man. The captain has then done with him as far as he is concerned, unless the man has been injured in the service of the ship. In that case I specially mention that fact in the endorsement. If it is a vessel belonging to another British possession, any expense that we may incur here on that man's behalf we shall recover from the Board of Trade, and the Board of Trade will recover from the ship if the man was injured in the service of the ship. But if it is a case of sickness through natural causes, his wages are supposed to go as far as they will towards the payment of hospital charges, and then the State or Colony to which his ship belongs has to make good the amount.

729. Suppose it is no case of injury in the discharge of the man's duties, and suppose it is an illness brought about by his own conduct, what is done then? His wages must go as far as they will, and if there is anything more to pay it is for the Board of Trade to defray the charge. It is not the ship that is liable. I think you will find that according to the 160th section of the Merchant Shipping Act a man is not entitled to his wages if his illness arises through his own wilful act or default.

730. Does the ship pay the two guineas and the 3s. a day? Yes.

731. Up till what time? Ships have been two months here, and they have paid 3s. a day for a man in the hospital during the whole time. Before going away, if a man is still in the hospital, the ship pays two guineas, and the hospital takes its chance. The man may die, but if he stays twelve months that is all they get.

732. And if he remains there all his life it is the same? Just the same.

733. Then seamen suffering from venereal disease are sent to the Coast Hospital? Yes; but those seamen have to contribute as far as their wages will go towards their cost there.

734. In most cases do their wages go very far? Their wages are very little.

735. What would be the average sum due in wages? In the steam boats coming here firemen's wages are £4 10s. per month, and seamen's wages £4. They get one month's advance, and they arrive out here in about fifty or sixty days, and they get supplies on board, so they have very little money coming to them. There is a case of a man off one of the Orient ships, who is in the hospital suffering from gonorrhoeal rheumatism, and he may be there for a long time. In 1896 there were only two from the Orient Company.

736. What practice do the Orient Company follow in regard to those men? When they send any of their men into the hospital I think they pay their expenses all the time the men are there. It is not the same in ships that come consigned to an agent. The agent says, "I will not accept any responsibility; I know nothing about you. Your ship was merely consigned to me, and when our accounts are made up and the ship cleared our relations cease."

737. But you must remember that the Sydney Hospital does not keep people there long; they have to make room for others;—suppose that a man leaves there and goes to a Government asylum, and has to be kept there all his life, what do they do then? He need not be kept there all his life. If he comes from England, and is an incurable, and fit to be sent back, I send him back.

738. And the Home authorities settle for the expenditure? Yes; they pay the captain of the ship 3s. a day for carrying him.

739. How many do you send under these circumstances? I could not say exactly. It does not often happen.

740. I suppose it would apply to other Governments—German or French—as well as the British Government? Yes. If one of our ships leaves a man in a foreign port the British Consul looks after him, and any expense incurred is charged to the New South Wales Government, through the Board of Trade.

741. There are not many such cases? No.

742. Have you any idea of the number? I could find out.

743. Have you five in a year? I do not think that we have every year. Some years we might have more than five. That includes shipwrecked sailors, who are treated in the same way. If any injury is sustained by a man in the execution of his duty the shipowner is answerable.

744. Can you tell us anything about the practice in New Zealand,—have they any such cases there? They had none when I was at sea; they have had since. I have a copy of the Act.

745. Section 5 deals with it? Yes; that is a very vexatious sort of thing. It requires that, before a seaman is discharged incapacitated by illness or accident, a deposit must be made for his maintenance. It is not a good thing.

Captain  
J. Edie.  
1 May, 1899.

746. *Mr. Powell.*] About these men to whom you give discharges here,—suppose a man ships in London on London articles to do the round voyage, he falls ill on the voyage, and shortly after leaving port he is discovered to be disabled from disease, he is knocked off, and does no work, and has no wages to get when he arrives here, and he is worse; then the agent of the company visits you, gets a certificate, and you give a discharge? The ship should have a doctor attending the men when it gets here. The shore doctor would recommend the man's removal to the hospital for treatment. The captain comes to us, and I advise him to go and see the Government Medical Officer.

747. You get the certificate stating that the man is unable to discharge his duties? Yes.

748. Upon that certificate the man goes (say) to the Coast Hospital; but there is no claim then against the master or the owners, nor any claim under the original contract, because the man has contracted the disease by his own wilful act? No.

749. Therefore there is no claim against the Orient Company or any other company? Not up to the 1st of the last month. The English law was amended so that it brings under it all cases except those of desertion or disappearance, so I presume that these are included.

750. What I want to do is to prevent the possibility of its appearing that this Commission is reflecting in any way upon the Orient Company, who seem to be acting quite within the law? Yes; there was some correspondence on the same subject between the Government Medical Officer and the Orient Company.

751. There is no reason why there should be any claim against this Government for any inability caused by disease on the part of a seaman in reference to the payment of whatever is due to him or to the Government for attention to him; it would be paid, I take it, by the owners or the Board of Trade? If the man is injured in the service of the ship the money is recoverable from the owners. We endorse that on the articles, and the Board of Trade will recover. I am empowered to incur expenses on behalf of the Board of Trade in cases of that sort, and to draw a bill on them at three days' sight. If any expense was incurred on behalf of these men, and the bill was sent to the Board of Trade it would be paid in the case of an English registered ship. If it is the case of a Canadian or New Zealand ship provision is made for that.

752. Considering the small number of men who are sent to the Coast Hospital, do you think it at all necessary or desirable that there should be in this Colony legislation such as they have in New Zealand with regard to this matter? I do not think it is required, because the thing is already provided for. The Board of Trade would have paid; and I see from the amending Act that has come out it will largely increase the liability of the shipowners.

753. There is one other point, and that is about the foreign ships;—your answer to the President was unintentionally misleading;—as a matter of fact, you have no control over foreign ships, as Shipping Master? None whatever.

754. That is a business entirely between the consul, the master, and the seamen? Yes.

755. And whatever payments are made by foreign ships it is the voluntary act of all those concerned;—we have nothing to do with it? No. When I was in a foreign country, being master of a ship, if I sent men to the hospital I had to pay the hospital, but I could not send them except through the consul.

756. What I want to know is whether the consul is responsible for all matters connected with the business of ships under the various flags;—that it is not your business to deal with any except British ships? That is all. We have nothing to do with foreign ships.

Charles Howard Helsham, B.A., sworn and examined:—

C. H.  
Helsham.  
1 May, 1899.

757. *President.*] You are secretary to the Sydney Hospital? Yes.

758. When were you appointed? On the 1st September, 1898.

759. What is the number of the directors? There are ten Government directors—ten elected by the subscribers; two elected by members of the medical staff attached to the hospital; and there are four office-bearers, who are, *ex officio*, directors, making altogether twenty-six. The office-bearers are the President, the Vice-President, and the Honorary Treasurer.

760. How are the subscribers' directors appointed? At the annual meeting.

761. By votes of the subscribers? Yes, by vote if necessary.

762. Is it often necessary to go to a vote? No.

763. How are members of the medical staff appointed? The Board appoints them.

764. How many resident medical officers are there? There are nine.

765. And how many visiting medical officers? Twenty-six honorary visiting medical officers and six honorary consulting medical officers.

766. The resident medical officers are paid, I presume? Yes.

767. Have you a list of the salaries? I have not.

768. Have you got the total cost per annum of the medical staff? Yes, £825.

769. How many nurses are there, including the matron? Sixty-five.

770. And how many sisters? Five is the number of the usual staff.

771. And how many nurses are there? There are five head nurses and thirty-two nurses.

772. How many probationers are there? Twenty-one.

773. And how many wardsmen? Nine.

774. What is the number of the clerical staff? I have an accountant and a collector, and Mr. Russell, the ex-secretary, comes and does an hour or two's work in the day-time in my office. There is also an office-boy. Then there is what we call the "out-patients' clerk," Mr. Moore, who attends solely to the out-patients.

775. Is he under your control? No; he is under the Medical Superintendent.

776. What other officers besides those mentioned are employed? I think the only other two whom you would call officers would be the house steward and the dispenser.

777. What is the number of beds at Moorcliff? There are sixty-eight.

778. *Mr. Barling.*] What have you to do in connection with the Medical Superintendent? I have absolutely nothing to do with the medical department of the hospital.

779. Has the Medical Superintendent any control over you? No; I am responsible solely to the Directors.

780. Have you anything to do with the matron? No.
781. Is the matron under the Medical Superintendent? I do not think so. As a matter of fact the matter never presented itself to me in that light before. I always thought she was under the Directors.
782. *Mr. Walker.*] Do you know how many patients you get from the country on Government orders? No.
783. Could you give any idea how many patients you get from country or other hospitals? I do not think we get any eye patients from other hospitals, because they do not go there.
784. There is not sufficient skill to cure them in the country hospitals, and they apply to us for orders to come to Sydney? I do not think there are many of those cases, because it is so well known in the country that Sydney Hospital is the only place where they can get eye treatment, that they apply straight away.
785. It is not always eye cases, but also complicated cases? I could not give you any accurate idea as to the number; they are continually coming in.
786. Do you know whether in these cases if the men have the means to pay they are compelled to pay? They pay what they can, they are asked what they can pay, and if they cannot pay they are admitted just the same.
787. You could not give us any idea of the number of those who come from the country hospitals? I could not.
788. Do you get many eye cases sent in there to go to Moorcliff or do you send them direct to Moorcliff? They must go direct to Moorcliff. We do not have anything to do with eye cases in the main building.
789. If any such case comes to the hospital and they find it is an eye case do they send the patient on to the Moorcliff Hospital? Yes; he is first examined by the Medical Superintendent.
790. They do not detain him at the Sydney Hospital for any length of time; he is sent on at once? He is not sent on at once, because there is very seldom accommodation to enable him to be taken in at once. People have to await their turn at the Eye Hospital just as women have to wait at the Women's Hospital.
791. I want to know whether the patient does not go into the Sydney Hospital? Yes, we take the patient in.
792. You could not tell us the daily cost of patients at the Sydney Hospital? I think it is about 3s. 8d. a day.
793. That is without any special attendance? That covers everything, food, medicine, and medical attendance.

C. H.  
Helsham.  
1 May, 1899.

FRIDAY, 5 MAY, 1899.

[The Commission met at the Offices of the Public Service Board at 2:30 o'clock p.m.]

Present:—

F. N. MANNING, Esq., M.D. (CHAIRMAN).

J. POWELL, Esq., J.P.

J. BARLING, Esq., J.P.

CRITCHETT WALKER, Esq., C.M.G.

Sir Edward Knox sworn and examined:—

794. *Dr. Manning.*] You are Chairman of Directors of the Prince Alfred Hospital? I am.
795. And you have been connected with the hospital as a director from the first establishment of the institution? Yes.
796. Could you give us the cost per bed of the institution? No; it would take some little time to make an estimate.
797. Do you know the amount of the Endowment Fund? Yes; it is about £33,000 at present.
798. How has this fund been formed? From legacies principally.
799. Can you give us the amount that has accrued from legacies, and the amount that has come by small donations of £100? No; but I can get it for you.
800. What rule have you with regard to donations of £100 and upwards? They go entirely into the Endowment Fund.
801. Whether that is the wish of the donors or not? Yes; under the rules of the hospital.
802. No sum under £100 is placed in the Endowment Fund? No.
803. Can you furnish us with a return showing the amount that was specially ordered by the donors to go into the Endowment Fund and the amount that has been placed there under the rules of the institution? Yes.
804. With what idea is this Endowment Fund built up? With the view of getting an income from it to assist us.
805. Do you think that is a better plan than to spend the whole of the sums that are not specially set apart for that fund by the donors? I think it is better to have something to fall back upon—something that brings in interest. We have £39,000 in the fund, which brings in about £1,200 a year.
806. But if you do not spend these amounts, you are obliged to get funds in some other direction, and you are really building up an Endowment Fund for the benefit of posterity? Yes; but I think it is quite possible that it might be desirable to spend some of the money in enlarging the hospital some day. It would be very useful for that purpose.
807. How is the money that is now in this Endowment Fund invested? There are £25,000 invested in inscribed stock at 3 per cent, £6,000 upon mortgage, and there is about £6,000 awaiting investment.
808. Have the subscriptions increased or decreased within the last two or three years? They have increased.
809. Then you do not think that the Hospital Saturday Fund has had any effect in decreasing the subscriptions? Not materially. It may have decreased them in certain ways by £200 or £300 in a year, and that, of course, would represent a loss of £600, because we get an equal sum from the Government; but upon the whole we have been considerable gainers by the Hospital Saturday Fund.
810. What is your method of obtaining subscriptions? We have a collector who solicit subscriptions, and he gets a certain commission upon the renewal of contributions and a certain commission upon any new subscriptions.

Sir Edward  
Knox.  
5 May, 1899.

Sir Edward  
Knox.

5 May, 1899.

811. Does he get a salary as well? He does. The present collector has only just been engaged. He receives £2 2s. a week for the present.

812. Does he get a commission on old subscriptions as well as new ones? Yes; he could not live otherwise. The whole amount does not exceed £2,000;—that is, without the money from the Saturday Hospital Fund.

813. Is the income which you derive from paying patients increasing? No; it is stationary as nearly as possible. It is £200 a month, or £2,400 a year.

814. I suppose the secretary will be able to give a return showing the amount, and the number of patients who pay? We have that in our books, and I think it is given in our Annual Report.

815. You are able to judge to a very great extent whether the accommodation in the hospital is sufficient for the calls made upon it? It is quite insufficient for the calls made upon it. For a length of time our average number of patients has been considerably in excess of the number of beds. We have had as many as 240 odd patients, and the number of our beds is 236. That was for a length of time. For the first three months of last year our average was certainly 233 or 234 beds full every day. We had no chance whatever to take in any very bad cases. If a railway accident or anything of that kind had happened we could not have taken the patients in.

816. Then more accommodation is required? Yes, more accommodation is required, and there is everything there that would be wanted—all the administrative buildings that would be wanted for about 200 more beds.

817. The administrative buildings already existing would be sufficient? Yes; if two more pavilions were added, that would enable us to add to our number at least 130 more patients.

818. So that all that is required is more ward accommodation? Yes.

819. Not more administrative accommodation? Well, there would be some nursing accommodation wanted; our Nurses' Home is quite full, but that, of course, could be provided for on the top storey of the new pavilions.

820. Did not the original plan provide for the erection of additional pavilions? It did.

821. It provided for the erection of four pavilions in addition to what you have got? Yes.

822. But the site for one of these has been taken up by the Nurses' Home? It has to a certain extent. The two projected pavilions coming out from the administrative block would be quite sufficient for the present.

823. Have you any estimate of the cost of those two pavilions? Yes. I should say that £20,000 each would be the amount. That would be about £8,000 less than we paid for the pavilions built before.

824. The pavilions already built and the proposed new pavilions being of the same size? Yes; of the same size.

825. And each of these pavilions would contain how many patients? Each should contain about sixty-four patients. Of course, we could enlarge the hospital to some extent to increase the number.

826. But as planned they were for sixty-four patients each? Yes; that would be 128 patients altogether.

827. So that it would cost £40,000 to increase the accommodation by 128 beds? Yes; of course we have had no tenders out, and I cannot bind myself exactly to the amount, but I think that would be the cost.

828. That is having in view the cost of the pavilions already erected and the difference in the building rates at the present time? Yes.

829. From the commencement the system of admission to the hospital has not been by tickets from subscribers? No; we have simply been guided by the urgency of the cases. I have never known an order to be given for the admission of a patient by a director or a subscriber.

830. When this system was first mooted it was new was it not? Yes.

831. The system in the Colony generally had been to admit by subscribers' orders? Yes.

832. And was it not apparent in many cases that the cost to the hospital, considering the length of time the patients stayed there, was far in excess of the amount of the subscriptions? Yes; a subscription of one guinea would entitle the subscriber to give an order. The average length of time that a patient remains in the hospital is four weeks, and the average cost per week is 28s., that makes £5 12s. That is what the cost would be to the hospital, whilst the amount received from the subscriber would be only one guinea.

833. Do you think you have got as many subscribers under the system that is in vogue now at the hospital as you would have had under the system of subscribers orders? I cannot say that we have quite as many, but I should think that we have nearly as many. No doubt it is a convenience to private people to have orders by them for the admission of patients, but I think it is a wrong course altogether.

834. From your experience you think the system now adopted at the Prince Alfred Hospital is the better one? Certainly.

835. What benefits have you allowed to benefit societies;—what was your arrangement with those societies and with workmen's clubs? The Railway and Tramway Employe's Society is the only one that would come under that category, and the arrangement with them is that they send their patients and pay 15s. a week each for them. This is on the understanding that at the end of the year whatever surplus there may be in the funds is to be distributed between the hospitals. In that way we have received about 30s. a week for all the time that the patients have been in the hospital. We receive 15s. at the time they enter and the rest at the end of the year. The amount of our last cheque from them, I think, was £195 10s. out of the balance of the fund.

836. The Hospital Saturday Fund, I believe, wanted to make some similar arrangement? They did, but there was great difficulty about it. The stumbling block was that we were to make no inquiries into the position of the parties who were coming into the hospital as to whether they could afford to pay or not. That has been got over by arranging that we shall not ask them on the day they come in, that when they come on an order they shall be admitted to a bed, but that we shall be at liberty afterwards to inquire into their circumstances.

837. And have the arrangements with the Hospital Saturday Fund resulted in their handing over to you the Industrial Fund? It is understood that they will do so. The arrangement was only made a few weeks ago. At the same time we do not know whether they can continue. It will depend upon what use is made of the power of recommending patients. If the number of patients becomes very great it may be necessary to make some alteration in regard to it.

838. So at present the arrangement is only tentative with the Hospital Fund? It is only tentative.

839. What inquiries do you make with regard to the means of patients applying for admission? We make inquiries from the patients themselves.

840. Do you think the system you have could be improved upon? No, I do not think it could.
841. You have no paid officer who goes out and makes inquiries at the homes of the patients? No; but we have for some weeks together had detectives employed who inquired about the patients, but we got nothing that we could take hold of.
842. Is any charge made to the out-patients? No; there is a box into which they can put contributions. I believe that at the Sydney Hospital they charge each patient 1s., and that brings in about £600 a year.
843. Is there any reason why it is not done at the Prince Alfred Hospital? No; we have discussed it on several occasions, but we did not like to do it unless it was absolutely necessary. To many of those who come to the out-department 1s. is a consideration.
844. And I suppose there is the danger of a person who pays his 1s. thinking that he has a right to the attendance? Yes.
845. So that there are disadvantages as well as advantages connected with it? Yes.
846. *Mr. Barling.*] I understood you to say that you did not consider that the subscriptions to the Hospital Saturday Fund have the effect of diminishing your income? No; it has had the effect of increasing our funds. It may possibly have diminished our subscriptions from individuals to a small extent, and, of course, that is a considerable loss to us, because we should be entitled to the same amount from the Government. If we get £600 from the Hospital Saturday Fund, the Government give us only £100 and then allow us interest on the balance.
847. Then you think, on the whole, you do not lose by the Saturday Hospital Fund; Mr. Ewan gave very decided evidence [see Q. No. 626, *et seq.*] to the effect that if the Hospital Saturday Fund had not been in existence the Sydney Hospital would have received more money from the public than it receives from that fund? I can quite understand that with regard to Sydney Hospital, because they have always had a very much larger subscribers' list than we have had, and their subscriptions were of a kind that might fall off.
848. So it would not have the same effect with regard to the Prince Alfred Hospital, that it would have with regard to the Sydney Hospital? No.
849. *Mr. Walker.*] Did I understand you to say that persons were admitted on application to the Prince Alfred Hospital? Certainly.
850. The only orders that you get are from the Government? Those are all.
851. There is a very different system in operation at the Sydney Hospital, is there not? There is.
852. Then any poor person going to the Prince Alfred Hospital, who is sick, is admitted? Yes. What ought to and I believe does govern it is simply the urgency of the case.

Sir Edward  
Knox.  
5 May, 1899.

Professor James Thomas Wilson sworn and examined:—

853. *Dr. Manning.*] You are honorary secretary to the Prince Alfred Hospital? Yes.
854. You are also one of the Professors at the University, Sydney, and have an interest in the hospital because of the Medical School, as well as from your position as honorary secretary? Yes.
855. Have you any figures showing the cost per bed of the hospital, excluding the cost of maintenance? Yes. I have here some figures that were got out some years ago by the late Sir Alfred Roberts, in the course of inquiries he made into the cost of hospitals in Australia. In some remarks upon the New South Wales Hospitals he says, speaking of the variation in the cost of construction:—

Professor  
J. T. Wilson.  
5 May, 1899.

Prince Alfred Hospital, with an average of 2,000 cubic feet per patient, costs £746 per bed.

He also makes the remark however:

That the ward pavilions for only 220 beds have been built, whilst administrative buildings for a hospital of 450 beds have been erected.

That accounts in part for the relatively high cost.

856. What is your present number of beds? 236.
857. How many are allotted for males, and how many for females? 141 for males, and 95 for females.
858. How are the wards allotted—to what kinds of cases? There are wards for male surgical cases; there are female surgical wards; male medical wards, and female medical wards. There is one small gynaecological ward, with half another small one. One children's ward, one male ophthalmic ward, and half of a small ward for female ophthalmic cases; two emergency wards, male and female, and four special wards for operation cases.
859. The latter have only one bed each? Only one bed each. In addition to those there are four private wards holding one bed each, and in addition six cottages with accommodation for two beds each.
860. The wards that you call emergency wards are mainly for accidents? For accident cases, and also for the first reception of cases that come in, which are unfit to go into the general ward straightaway.
861. Are any lock cases received there, male or female? Yes, in one of the small male wards. There is no special lock ward.
862. Can you give us any daily average of the number of beds occupied in 1898? The average number resident daily during 1898 was 227, which was a proportion of, I think, 96.6 per cent. upon the total accommodation.
863. So that at no time have you had very many spare beds for emergency cases, and serious accidents? No.
864. Sometimes the hospital has been quite full? Well, we have been over-full. It is possible, by utilising couch accommodation, to have actually more patients in the hospital than we have beds, and we have done that frequently—too frequently. It is a very undesirable state of affairs.
865. You consider that the hospital accommodation is insufficient for the calls made upon it? I do.
866. What do you think would be the best way to add to this hospital accommodation? It is, perhaps, that there should be built two pavilions which were originally planned to lie right and left of the present administrative block. I have here a plan showing the original scheme.
867. Can you tell me why it was decided to erect the two large pavilions that are now there, and to omit these two that you now propose to erect? I do not know why exactly, because it was pointed out at the time in a report which I have here, that the cost of the pavilions that were erected was considerably greater than would be the cost of the two pavilions to which you refer. The ground slopes, so that the foundations of the present pavilions were very costly. The foundations of the proposed pavilions would cost very much less.

868.

Professor J. T. Wilson. 868. Looking at the plans it would appear that it was owing to the greater facilities for administration afforded by the old pavilion than by those which you propose to erect? Yes; there is a plan which shows that at one time it was contemplated to erect the front pavilions first.

5 May, 1899. 869. You consider that the ground on which it is proposed to place these pavilions is quite suitable? Yes, I think it is admirably suited in all respects. I made the remark in regard to the present pavilions, however, that though they are nominally of the same value as the two proposed pavilions they really provide extra accommodation, because the basements of the existing pavilions have been utilised as small wards in each case. In those pavilions there are actually three wards, whilst in the new pavilions there would be only two, if the same plans are carried out.

870. Do you consider the administrative accommodation is sufficient to enable you to work these two extra pavilions? Very nearly. I apprehend that the necessity might arise for some small additions, but they would be very small indeed. I should suggest for example, that in the new pavilions we should not have private wards. That would add to the administrative accommodation attached to each pavilion, because each pavilion has its own administrative rooms attached. If they are built exactly like those at present erected we shall utilise the present private ward-space in addition to the present administrative rooms. The administrative department would, therefore, not require any increase at all. Sir Edward Knox remarked that the nursing staff would naturally be located in the upper administrative part of the pavilion. Practically one might disregard, I think, the administrative additions that would be requisite.

871. Would there be any diminution in the cost per bed in the working of the hospital after you have put up those two pavilions? Yes, I think a very considerable diminution.

872. I see that in the report of the hospital for last year it is stated that the total expenditure would be reduced, and that the cost per bed would be lower without any diminution of the efficiency of the institution if the two pavilions were erected; I do not quite understand how that could arise? An increase in the bed accommodation would not require an increase in the resident medical staff to any extent. A very slight addition to the staff would accomplish the work in the larger hospital just as they accomplish it now in the smaller one. That principle that I illustrated by reference to the medical staff would apply partly in regard to the nursing staff. We should have the same matron, and her services would be equally available for the new part of the hospital. With regard to the kitchen staff and the porters' staff we might require some slight addition, but that would be on a small scale per bed. I think that throughout the whole working almost every official would have an enlarged sphere which, however, would give very little extra work, and the cost would be proportionately reduced. Of course, not absolutely.

873. What was the date of the erection of the Nurses' Home? 1892.

874. What was the cost? £13,269 14s.

875. Are there any other points with regard to the building on which you would like to say anything? I think that whilst the two pavilions would necessarily be planned out in the way that the present pavilions are planned out, in the shape of large wards, it would be advisable to have, as part of the structure, certain additional accommodation for the out-patients' department. That is not a large matter, it would be highly desirable to have two or three extra rooms in connection with the basement of the central administration block.

876. That, as far as you are aware, is all that is needed in the way of buildings—all that is absolutely necessary? With regard to the question of cottages, under present circumstances we need more accommodation.

877. Cottages for infectious diseases? For cases that require isolation. Of course I could imagine a state of affairs in hospital accommodation that would relieve us of the necessity; but under present circumstances we certainly require some additions in that direction. I have known of eighteen cases during an epidemic of measles and whooping cough being accommodated in those cottages.

878. If provision were made for infectious diseases elsewhere, that would not be necessary? Of course, there are cases that come in—septic cases—that we cannot very well refuse to admit, which require isolated treatment, but which are not cases of infectious fever in the ordinary sense.

879. *Mr. Barling.*] You have told us that the cost per bed of the Prince Alfred Hospital is £746 per year, and that 2,000 cubic feet were allotted to each patient? I did not give the total cost; I said £746 per bed, cost of construction.

880. I think you said you had some figures which the late Sir Alfred Roberts prepared, giving a comparison with other similar hospitals;—could you give us the benefit of them? I am very pleased to submit the report just as I found it; I only came across it by accident amongst the papers, and I have hardly had time to digest it myself. Sir Alfred Roberts says:

The cost of construction per bed has varied greatly in different hospitals—from £17 6s. with an average of 820 cubic feet of space per bed (Gulgong) to £746 with an average of 2,000 cubic feet (Prince Alfred Hospital). In the latter, however, ward pavilions for only 220 beds have been built, whilst administration buildings for a hospital of 450 beds have been erected.

I do not see the details here. There is a statement of the total cost of construction in all the colonies, the Government contributions, the average cost per bed of maintenance, and so on.

881. I dare say you have carefully studied the needs of the population as regards hospital accommodation? I am afraid I could not say that I have studied it very carefully, but I have given some little attention to it.

882. Could you tell us whether, in your opinion, the hospital accommodation for Sydney generally is sufficient? I do not think it is; but I have not got the figures complete. The difficulty is to get at the actual number of beds.

883. I think it is about 1,232;—can you tell me how many beds per thousand are considered a correct proportion as regards hospital accommodation? I am afraid I cannot answer definitely. Necessities vary so much in different communities, but I believe that something like four per thousand is supposed to be a fair estimate. I really think, however, that such figures are not of very great value unless account be taken of the circumstances of the community in which they were deduced.

884. I think we have about three beds per thousand in Sydney;—what you say bears out some other evidence as to the four per thousand;—do you consider the hospital and nursing accommodation is up to date in every particular at Prince Alfred Hospital—I am referring to the character of the accommodation?

Professor  
J. T. Wilson.  
5 May, 1899.

- I think it is, taking it all round, quite up to date. I have not had an opportunity of instituting much of a comparison of late years, but from what I learn I think it is decidedly up to date.
885. As compared with the modern hospitals in the mother country and elsewhere? Of course I say on the whole, because there are several directions that I can indicate in which there could be improvement.
886. In what direction do you think there might be improvement? I think we suffer here from the fact that our resident medical officers are not sufficiently numerous to allow us to attach them to the honorary officers. In most of the home hospitals each honorary physician has his own resident medical officer.
887. I did not refer to the question of management; I referred simply to the building? I think the matters that I have in my mind are matters which would require setting forth in detail. I could not give any general answer.
888. I imagine the defects are not very serious? No, I do not think they are. I think that, for its size, the Prince Alfred Hospital is a fairly-equipped hospital. Of course I might say definitely that our operating department is not provided for sufficiently. I can still say so, although we are making an attempt to amplify it. We are making a second operating theatre, but in doing so we are taking away the only lecture theatre that we have in the place, and we shall urgently require a place for the delivery of lectures to the students and nurses.
889. So that the place you have taken now for a second operating theatre must be replaced by another? It ought to be. We are making shift in other ways. The nurses are lectured to in the Board-room, but that is not a suitable place. The students are lectured to beside the mortuary in the coroner's room.
890. Then the principal thing you require will be a lecture-room? That is one thing that occurs to me—I would not say that it is the principal thing.
891. Would you accommodate them in the new pavilions, or would you put up several buildings for that purpose? It would be rather difficult, I think, to provide separate buildings as part of the pavilion.
892. It should be a separate erection? It should be, I think.
893. Have you thought what it would cost to put up such a building? I have not; but it would not be very much.
894. I suppose about £1,500? Yes.
895. Do you think that any unnecessary expense has been incurred in connection with the hospital building? No, nothing of the sort has occurred to me.
896. Can you tell me who prepared the plans and how they were approved? Mr. Mansfield was the architect. I have his report here.
897. By whom were the plans approved before the buildings were erected? They were submitted by a deputation to the Colonial Secretary and received his approval.
898. The committee first approved of the plans, then submitted them to the Colonial Secretary? Yes.
899. *Mr. Walker.*] I think you said that the average number of beds occupied was 227 in 1898? Yes.
900. Is that an increase or decrease as compared with 1897? It is an increase. The actual number in 1897 was 225, with the same number of beds, so it is a slight increase as compared with 1897. Two more patients were present every day in the same number of beds.
901. Do you think there is any necessity for increased accommodation there? Yes; because you will observe that that leaves only an average of nine beds per day unoccupied. If the hospital were a homogeneous place and you always had nine beds available for anything, it would be less embarrassing; but in the male surgical wards there is often not a bed available for many days. In the gynaecological ward there is seldom one available either. There may be in the female medical ward, which is at times not over-crowded; but the nine beds have to be distributed over the various categories of cases. There may be pressure in three parts of the hospital, whilst in other parts there may be no such pressure. There should always be beds available for accident cases. In such cases one does not hesitate to take a bed and allocate it for that particular purpose, but one cannot do that all round. We cannot put a male patient in a female ward and so on.
902. I think you were present when Sir Edward Knox was speaking of the proposed two pavilions in the front of the building? Yes.
903. Do you think that if these were erected they would provide for the accommodation of any large increase of patients? I think they would.
904. How long do you think they would meet the requirements of the hospital;—could you give me any idea? I could only give an idea from reference to the past period during which the number of patients has increased. I do not quite know what you require.
905. You say that those pavilions would cost £20,000 each;—how long would it be before they were crowded out? They would go on for many years to come. They would meet the requirements of the Prince Alfred Hospital, and enable the Hospital to meet the requirements of the community. The actual number of beds occupied in a given year really depends upon the number we have to offer. When we have more beds to offer we may have a great many more cases coming in than we have even under present circumstances. Apart from the future increase of the population, if we could say that we had 300 beds, instead of 236, we should, in all probability, have a great many more patients.
906. *Dr. Manning.*] I see that your number of in-patients for 1898 was 3,706? Yes. That is including those who were left in the hospital from the previous year. The number admitted in 1898 was 3,471.
907. In 1883 the number of operations was 147; in 1898 it was 1,798;—how do you account for that enormous increase? I must remark first of all, with regard to 1883, that that was a partial year.
908. Take 1884? 1884 included a year and a bit. 1885 was the first full year from the first January to 31st December, for which the figures are given.
909. In 1885 there were 405 operations; in 1898 you had 1,798 operations;—how do you account for this enormous increase? I think there are several causes. If we look at the admissions of surgical and medical cases we see that the increase of surgical cases has been out of proportion to the increase of medical cases. The surgical cases admitted in 1885 were 812, whilst in 1898 they were 1,959. The medical cases on the other hand grew from 819 in 1885 to only 1,542. I account for that partly by the growing reputation of Prince Alfred Hospital as a surgical hospital. There was no reason why the increase in the medical cases should not have been as great as that of the surgical cases.
910. I see from the operation form that the operation cases are 50 per cent. of the total number of admissions to the hospital? Yes; in 1885 they were one-fourth, and they are now one-half practically of the number of cases admitted. I have given one reason, which, I think, is the growing reputation of the

Professor  
J. T. Wilson.  
5 May, 1899.

the hospital for surgical treatment. There has been an increase in the number of surgical cases admitted, and therefore a greater number of operations performed. Another factor, I think, is the increased development of surgery itself, that very many more cases now are susceptible to improvement by surgical treatment, and surgical procedures are very much more common now in any civilised community than they used to be. People used to die, now they are not allowed to die, they are operated on and cured, not only in cases of serious disease, but in regard to many minor affections. People went on suffering before where now they are relieved by operative procedure. Take the case of operations upon the nose; it is a comparatively small operation, but still the growths on the back of the throat and nose are removed, and children who used to go about as delicate children recover, and are strong and healthy. If I turn to the table of operations given in the Annual Report, I find that there are several lines which run into hundreds—the first line is “gynæcological operations 299.” It is suggested that the gynæcological operations have grown in number disproportionately, and that in many cases they have been unnecessarily performed, but I have calculated out a table showing not only the total number of operations, but the relative number of gynæcological cases compared with others, and after all there has been very little change. In 1885 there were fifty-four gynæcological cases out of a total of 405, practically one-eighth; in 1886 they were one-seventh; in 1887, one-fifth; in 1888, three-fourteenths; in 1889, one-sixth; in 1890, one-fifth; in 1891, one-seventh. From 1890 till 1898 they were one-sixth, so that after all very much the same fraction obtains all through. The gynæcological cases have not increased in any disproportion to the number of operations generally.

911. The number of out-patients and casualties I see is also increasing? Yes, it doubled during the last ten years.

912. You might give me the number of out-patients for the last year? We have an accurate record of the number of out-patients' attendances; but we have no actual means of determining the number of out-patients. That would involve a considerable amount of additional clerical labour; and that is one of the items of expenditure in regard to which we have to economise. We have at present to content ourselves with approximate estimates. The number of attendances for 1887, was 22,770; for 1898, 49,972. If we take 1888, the number for the year was 25,830, and the number for the past year was 49,972.

913. It may be reckoned that for 49,000 attendances there were actually about 12,000 patients? Yes, that is our estimate.

914. Can you tell us the cost of the out-patients' department? It is, approximately, £1,250 a year. That is again an approximation. I have here the items which we reckon into the cost of the out-patients' department, but in most cases they must necessarily be approximations. One of the heaviest items is chemicals and dressings. It would mean a refinement of administration which we cannot yet contemplate to keep separate accounts and separate stocks, to be able to allocate so much for in-patients, and so much for out-patients. We have to rely on the estimate given by the dispenser. We estimate the expenditure at £800 for the out-patients' department, and the proportion of salaries and wages at about £360.

915. These are for dispensers, porters, &c.? Yes, and for nurses; that is an additional item. We have one or two nurses in the out-patients' department now. Then there is a good deal of printing and stationery for that department.

916. What number of special departments have you in that hospital? We have the gynæcological, which however might not be considered a special department; the ophthalmic, and departments for the treatment of diseases of the ear, throat, nose, and skin.

917. I suppose that having these special departments in connection with the general hospital, prevents the establishment of any special hospitals for those complaints? I suppose it does.

918. Do you think this is an advantage, or do you believe in having a special hospital? I think it is an advantage to have a general hospital equipped with such a department, and so long as the necessities for that kind of treatment are not very large in the community, they can be provided for amply by a special department in a large hospital. It requires a very large population to justify the establishment of special hospitals for the minor departments. It may be different in regard to gynæcological cases, but in regard to all other cases the necessities of the community can be amply satisfied in connection with a large hospital.

919. Even as regards ophthalmic cases? Yes, even those cases.

920. They can be treated in connection with a general hospital quite as well as in a special hospital? Quite as well.

921. And I suppose it is advantageous to students to have special departments in connection with the Prince Alfred Hospital? Yes. There is also another advantage in having various departments. People come there who do not know what is the matter with them, and when they have been examined they can be told off to their respective departments. It is a matter of convenience that they should be received at the centre of administration, and then drafted off to the special department.

922. I see that the number of patients who contributed towards their maintenance in 1898 was 908;—can you give a return showing what amount they contributed? There were 931 who contributed in 1898.

140 of these were to pay 5s. per week.	81 were to pay 30s. per week.
50 were to pay from 5s. to 10s. per week.	1 „ 35s. „
290 „ 10s. per week.	3 „ 40s. „
133 „ 15s. „	19 „ 42s. „
125 „ 20s. „	1 „ 63s. „
91 „ 21s. „	1 „ 80s. „
11 „ 25s. „	

In the private wards there were 23 patients who paid £4 4s. a week, and in addition to those, 4 patients paid two guineas on admission.

923. Making them free to the hospital? Yes. Eight or nine paid unspecified amounts—unsubstantial amounts.

924. I understand that patients are no longer received into the private wards? No; not unless under certain very special circumstances. We have an arrangement by which naval officers are admitted to the private ward. I believe that the Imperial Government—the Naval Administration—pays for them.

925. Some of these private wards were established specially for naval officers? Yes; special provision was made for that purpose.

926. What has been the reason for the closing of these private wards to ordinary cases? I think the reason has been the diminution of the necessities which dictated their establishment. The reason for these private wards no longer exists with anything like the same force as formerly. At the time when they were established private hospitals of any consequence were practically unknown, but now there are several private hospitals where patients are received on payment of fees. There is rarely any special reason why a person should not go to a private hospital and pay the ordinary fees. Professor  
J. T. Wilson.  
5 May, 1899.
927. The fees charged in private hospitals are not greater, are they, than the fees that were charged in the Prince Alfred Hospital? I think the nominal fee is rather less. I believe that 5 guineas is the usual fee for maintenance in private hospitals. Seven guineas was the full normal charge in the Prince Alfred Hospital. In the Prince Alfred Hospital the medical attendant gets nothing, but in a private hospital the medical attendant gets his fee. If we take these cases we interfere with the legitimate practice of the medical men in the city.
928. When you took private patients, did you not take certain sums as fees? No.
929. I thought there was some system under which an amount was set apart for the fees of the medical officers, and that the medical officers handed this back in the form of subscriptions to the hospital? When they paid 7 guineas, there were 2 guineas for the medical man and 5 guineas were considered the fee for maintenance.
930. Then the medical practitioners gave those sums back? They never received them; they were devoted to the funds.
931. They became donations? Yes.
932. Then £ per £ was asked on those fees from the Government? Yes.
933. What is the number of the nurses in the hospital? Sixty-seven.
934. Does that include the matron? I think it does.
935. What number is that per patient? I think it is practically one nurse for every four patients.
936. The reason why the Prince Alfred Hospital has a larger proportion of nurses than the Sydney Hospital is that they have a larger proportion of ophthalmic cases at Moorcliff? That is one cause. There are several causes. I think that the amount of operative work done at the Prince Alfred Hospital involves a considerable addition to the work thrown upon the nursing staff.
937. The amount of operation work at Prince Alfred Hospital is much greater than at the Sydney Hospital? Yes.
938. What is the number of resident medical officers? Nine, including the medical superintendent, the resident registrar and anaesthetist, and the resident pathologist.
939. Will you give us their rates of salary? The medical superintendent receives £300 per annum, and the other two that I have named receive £100 each. Then there are six resident medical officers, each of whom receives £50 per annum, board and lodging being included in each case.
940. Is this not a large number for the size of the hospital? I do not think it is. The resident pathologist has only recently been appointed, and he was appointed in lieu of a paid pathologist who did not live in the hospital. Therefore, his appointment did not involve any additional expenditure, except the amount for his board and lodging. We had been paying the pathologist, who resided outside the hospital, £100 a year. In many hospitals they have a paid pathologist. That leaves really eight whom you would recognise as ordinary members of the staff.
941. This seems a larger number than they have in the metropolitan hospitals in England? I doubt that. When I was resident medical officer in the Royal Infirmary, Edinburgh, we had 700 beds. There was a resident medical superintendent, who did not act as a member of the medical staff; he was the general superintendent. Then we had eleven resident medical officers, who were equivalent to our six officers here. In addition to those eleven, who were resident, we had, I think, four who lived outside, and who performed the same functions as the resident medical officers, and since that time several of those have been admitted as resident, so that the number of resident medical officers has increased considerably.
942. It has been stated, in regard to the Sydney Hospital, that their number of resident medical officers was large because they have not many students to help in the work;—I suppose that students do a large amount of dressing and other work in the Prince Alfred Hospital? They do; but that implies a certain amount of superintendence on the part of the medical officers.
943. What is the position of matron;—is she under the medical superintendent, or is she an independent officer responsible only to the directors? I think she is under the medical superintendent.
944. Can you state that positively? No. I think there is some difficulty in answering the question definitely. She is appointed by the Board, and cannot be suspended by the medical superintendent, but I know that she reports to the medical superintendent as well as to the house committee.
945. Does she engage and dismiss the nurses. The nurses are engaged on her recommendation and report, but they are really admitted by the house committee; and all the promotions are simply recommended by her to the house committee, and a minute of the promotion is made by the house committee.
946. Are the dismissals by the house committee too? Yes. Sometimes the matron may dismiss summarily and report to the house committee.
947. There being a right of appeal to the house committee? Yes.
948. What number of directors are there in connection with the Prince Alfred Hospital? There are two *ex officio* directors, who are the Chancellor of the University and the Dean of the Faculty of Medicine of the University. There are three Government nominees, and there are ten who are elected by subscribers.
949. Do the Government nominees attend regularly? They do.
950. The number being so small, would they exercise any real influence in the management of the hospital? I imagine that that is rather a question of their personality. As a matter of fact, I think they do, but I can imagine it being the other way. In my experience, they have exercised a very fair amount of influence on the Board.
951. *Mr. Barling.*] In the case of casualties, what determines the question as to which hospital the patient shall be taken? I think it is determined in a chance way. If the police are concerned I think they take the case to the nearest hospital. It depends much upon whom the onus of forwarding the case falls. It may be personal proclivity or convenience of locality, or the fact that the person is a subscriber to one hospital and not to another.
952. So there is no definite rule? No.
953. Are they treated as they are brought in without question? Yes, they are in accident or emergency cases.

- Professor J. T. Wilson. 954. No question is asked? No.
- 5 May, 1899. 955. Is any inquiry made as to the ability of the patient to pay? Inquiry is made into the circumstances of the patient.
956. I am referring to casual cases? The patient is given an opportunity of contributing.
957. But if payment is refused, are there any means of enforcing it? No.
958. Is it necessary that a bacteriological department should be attached to the hospital? I think it is necessary to have a bacteriological department. It is necessary to have sufficient bacteriological equipment to enable certain clinical tests to be carried on—bacteriological tests for clinical patients—but I do not think it is necessary that a department should be equipped in connection with each hospital to carry out public scientific researches in bacteriology. You can distinguish between those which have no immediate object in view, and certain procedures that are well recognised as having a particular object, as, for example, that of determining whether a particular bacillus is in a patient's throat. Such means ought to be found in every hospital that has to deal with diphtheria. A case might come in that is not known to be a case of diphtheria, and it is necessary to be able to distinguish such cases. That is different to having a bacteriological department equipped sufficiently to carry on independent researches such as ought to be carried on in connection with the pathological department of a University.
959. Is it not a fact that the Government are establishing a pathological or bacteriological department in connection with the Board of Health? Yes.
960. Then could not everything necessary in connection with bacteriological investigation beyond that which you have described as necessary to each hospital be done at such an establishment? No, I do not think it is workable.
961. Do not you think that one establishment would be sufficient to meet all the requirements of Sydney? It is necessary to have a scientific bacteriological department in the Medical School, but for public requirements apart from immediate hospital requirements, I apprehend that the Government bacteriologist will perform the functions indicated.
962. Does not the present hospital seek to go beyond that limitation? We have not done so at the Prince Alfred Hospital. During the last couple of years we have provided bacteriological equipment on a small scale just sufficient to do the work I have indicated as necessary.
963. You are aware that in the Sydney Hospital they have a very extensive establishment? Yes.
964. I think it is understood that the appliances are more complete in the Sydney Hospital in regard to bacteriological research than in the Prince Alfred Hospital? I think it is probably so. It is not merely a bacteriological department: it is a general pathological department as well.
965. What you have in the Prince Alfred Hospital is sufficient to meet all the requirements of the case? It may be said to do so.
966. What is the basis of the arrangement between the Medical School and the hospital? There is an Act of Parliament which concerns the government of the Prince Alfred Hospital, which provides that in addition to the University representatives on the Board of the Hospital, all appointments are to be made to the establishment by a conjoint Board, which consists of the Senate of the University and Directors of the Prince Alfred Hospital, and the Act makes a number of provisions which give the Senate certain power in determining the teaching arrangements in the hospital.
967. So that organically the two institutions are connected? They are connected organically under Acts of Parliament.
968. Referring again to the private wards, do you consider it an advantage to have private wards in the Prince Alfred Hospital? I think there are occasionally cases arising from special circumstances which cannot be always defined in general terms. There are several reasons for treating persons as private patients in a hospital. There are very few such cases, but they do occur occasionally.
969. I gather from what you have said that the use of these private wards has been abused to a certain extent? It has been abused in the past, but not so much as might be supposed. When we go back to the older conditions we find that there was so little private hospital accommodation that it required something like the provision of private wards in a public hospital to meet the case. I really think there is no abuse now. Every care is taken to prevent it.
970. Sir Edward Knox told us that the cost of maintenance of the patients is 28s. a week? Yes.
971. I suppose it would be higher in the case of those who occupy private wards? Yes; it would be higher.
972. How much? I do not know. In some cases it might mean an extra nurse, or the whole time of a nurse might be devoted to a particular case; but then the whole time of a nurse may be at any time devoted to a public patient, so there is nothing more required than in an ordinary case.
973. Do you think an average of 40s. a week would be the highest cost? I think the extra cost of treating a patient in a private ward would not be much more if one excludes special attendance. There would be more nursing required.
974. Suppose we say 50s.? Then I should say that would cover it.
975. You told us that the cost of a patient in a private hospital would come to something like 5 guineas a week? Not the cost, I said the charge.
976. Taking these facts into consideration that the total cost, excluding interest on capital, in a public hospital will be 50s. a week, and the cost in a private hospital £5 a week, plus the medical fees;—do you not think that, by having private wards, you to a certain extent supply a much felt want in connection with the small-salaried classes of the community? I have thought for some time that there is a gap in the hospital provision, and that it is the existence of that gap which leads to a good deal of abuse of the public hospitals. People go into hospitals who can afford to pay; people who ought really to be paying their medical man, who cannot afford to have the necessary treatment in private hospitals, but who are yet rather above the ordinary class of cases. The result is that they have to take advantage of the hospital, and they usually go into a public ward. No institution other than a public hospital could provide for private ward treatment at that price—50s. It is not that the private hospitals score. They are necessarily more expensive institutions, having to administer a smaller number of beds.
977. Do you not think that a real want will be met by having these private wards for that class of the community that I have indicated, and could not the difficulty be got over by making provision that certain fees should go to the medical officers who attend the patients in those private wards? Well, I think that the gap which I spoke of between persons who are well off and can afford to go to private hospitals and persons

persons who are proper subjects for hospital treatment should be filled up, but I cannot see that it is right that the public hospital system should fill it up. I believe it would pay as a commercial concern to run a paying hospital on those lines. I do not think that allowing medical men to receive fees in the hospital will solve the difficulty, because if you do that you give to certain medical men a monopoly of a certain class of patients because they happen to be medical officers of the hospital.

Professor  
J. T. Wilson,  
5 May, 1899.

978. You see the difficulty? I quite see the difficulty.

979. Cases have come under my observation of persons with salaries of £150 to £300 a year, some members of whose family get sick and have to undergo extremely expensive operations, the charge for which is simply ruin to them, and it seems to me that that class of the community have a right to be considered? Well the answer to that at the present time is this,—that in default of commercial enterprise providing for hospital treatment, they are, under present circumstances, fit patients for treatment in a public hospital, and they should be asked to contribute. In other words, the existence of this class is the only justification we have for charging hospital patients at all. It is because there is this class of people for whom no provision outside of the public hospitals can be made under present circumstances that we are justified in asking them to contribute something. We cannot help their being debtors to the medical profession. They must be under the circumstances. One great evil is, that when they pay their 30s. or £2 2s. a week they do not realise that they are debtors still to the charitable work of the medical officers of the institution; but under present circumstances I do not see how we can get over that.

980. The absence of this middle class hospital is ample justification for having private wards? Yes; but I do not think we should extend the private-ward system. If these patients come they must consent to come in the position of recipients of charity. It is part of their hard circumstances in life. Even though they are above the lowest classes, they must consent to take their places in the wards, because they are recipients of charity to a certain extent. They are not beggars, but they are debtors to the community indirectly, and they are debtors directly to the medical men.

981. The community would, I think, feel they were doing good work in assisting them? Yes. They are just as deserving of assistance as others.

982. Do you notice any defect in the management of the hospital generally; and, if so, what, in your opinion, is the remedy? That seems a very wide question—one which I should not like to answer.

983. You may have some general ideas on the matter which might be useful to us? I should like to say one thing, and it is that I think the system of management by directors, who are really trustees for the community, is a good one, and that to attempt to substitute some other system for that system of quasi-independence—an independence which is controlled by public representation—would be a bad move.

984. It would tend to dry up the sources of private charity? I think it would, and I think there is, perhaps, an advantage in having this kind of control and management, because directors are personally continually in contact with the administration in a way that a more centralised administration would not permit of.

985. Your idea is that the present system is working very well? I think that in principle it is very good indeed. No system is perfect, but there appears to me at present no great defect in regard to this.

986. Do you think the arrangement for the treatment of ophthalmic cases is sufficient, or creditable to the Colony? I think that the capacity of the hospital for dealing with ophthalmic cases is too limited.

987. Speaking particularly and generally? I think that in the Prince Alfred Hospital we have not quite sufficient accommodation. We cannot afford to give enough beds. We are in the position of having more departments than a hospital of 236 beds warrants. Every special department requires a certain number of beds, and if we have half a dozen departments we cannot afford to give a fair number of beds without trenching very much upon the great general departments of medicine and surgery. As regards the general question, I am not sufficiently versed in it.

988. Have you been to the Moorcliff Hospital? No.

989. Have you given any thought to the question of the control of our charitable institutions in the matter of the Government subsidy;—do you think the Government, who contribute the principal part of the subsidies, have sufficient control? I think that the Government representatives on the Board of Directors ought to be adequate to represent the public interests. I must confess that I think that the life nomination of Government representatives rather tends to loosen the control. You cannot have the Government representatives always alive to their work. I think our Government representatives are very much alive. We have good representatives, and they do their work exceedingly well, but I think that the system of appointing three Government nominees for life on the Board is perhaps not altogether satisfactory from the point of view of the Government. I do not think, however, that anything would be gained by greatly increasing the representation. We have three out of some fourteen representatives, and I think that if the representatives are really doing their work that is quite ample representation. I should not object to more, but I think it is sufficient. I do not think the Government have anything to fear.

990. Then your idea is that the practice of life nominations tends to weaken the actual representation of the Government on the Board? I think it has that tendency, and I say so the more readily that I am quite sure that it is not the case with our representatives.

991. *Dr. Manning.*] The admission of paying patients to the hospital restricts the number of beds for necessitous cases? I think it restricts the number of beds for non-paying cases; but my contention would be that amongst the people who can afford to pay something we may meet with quite as necessitous cases in the strict sense of the word—necessitous from the point of view of hospital treatment, necessitous in the sense of poverty. I quite admit that if a paying patient occupies a bed, that bed is not available for a person who has nothing in his pocket. But that is not the point—the point is what is necessary for hospital treatment.

992. *Mr. Barling.*] Do the fees of the students go to the Hospital Fund? No, they do not.

993. *Dr. Manning.*] Is there anything else that you would wish to say? I should like to point out that the donations from the out-patients' department have decreased very considerably. In 1887 we got £300 from the out-patients' department. That was money put into the poor box. I think they were asked for it. I would point out that that £300 should be £600 at present because our numbers have doubled, but now we actually only get £100. We got only £100 last year, as against £380 in 1887, with half the number of patients that we have now. I speak of 1887 because in that year a careful inquiry was made extending over three months as to the number of out-patients who were able to pay. I should like to express my opinion that the out-patients' department of the hospital is on a totally different basis from the in-patients'

Professor  
J. T. Wilson.  
5 May, 1899.

in-patients' department. The medical and surgical requirements of non-indigent out-patients might constantly be satisfied by clubs and the payment of small fees; so we hold that the out-patients department is wholly for destitute people. It is not merely a question of that necessity which I was speaking of a few minutes ago. If they can afford to pay they can afford to be members of a club. An inquiry was made, and it was found that about one in forty-two were able to pay something. It was reckoned that one in forty-two of the patients who come into the out-patients department had no right to be there. It was after all a very small proportion as compared with what was expected. It had been thought that the abuse of the out-patients' department was much greater than it turned out to be. I mention that because at that time we were receiving more money. Now we receive very little. The circumstances of the community have altered considerably, but I imagine the abuse would be found not greater now than it was then. The money fell off from 1892. In 1892 we were getting about £17 a month, and this last year the receipts have varied from £4 to £8 a month. With regard to the beds, I would point out that the cost per bed from 1893 up to the present time has varied from £73 to £67 10s. Prior to that period we were not in the habit of deducting the cost of the out-patients' department, so there appears then to have been a sudden drop. It was due, however, to a different method of calculation. The average for the seven years before 1891 was £86 odd without the deduction referred to.

THURSDAY, 11 MAY, 1899.

[The Commission met at the Offices of the Public Service Board at 2.30 p.m. o'clock.]

Present:—

G. A. WILSON, Esq. (PRESIDENT).

F. N. MANNING, Esq., M.D.  
J. POWELL, Esq., J.P.

J. BARLING, Esq., J.P.  
CRITCHETT WALKER, C.M.G.

Ernest Maynard Pain, M.B., Ch.M., Syd., J.P., sworn and examined:—

E. M. Pain,  
M.B., Ch.M.  
11 May, 1899.

994. *President.*] You are medical superintendent of the Prince Alfred Hospital? Yes.
995. *Dr. Manning.*] Will you tell us the number of nurses at the Prince Alfred Hospital? Excluding the matron, there are sixty-six at present.
996. How are they appointed? They are appointed by the house committee, on the recommendation of the matron and the medical superintendent.
997. The medical superintendent is consulted? Yes; before the recommendation goes to the house committee.
998. And how are they dismissed? They are dismissed by the matron, with the sanction of the medical superintendent, who reports the matter to the house committee—that is, in cases of summary dismissal; but when notice is given, the inefficiency or other reason for dismissal is reported by the matron after conference with the medical superintendent, to the house committee, and the cases are dealt with by the house committee.
999. Will you give us the salaries of the matron, the probationers, and the nurses? The matron gets £250 per annum; there was an increase of £50 made two years ago.
1000. Is there a sub-matron? No. The full sisters get £60 per annum; probation sisters, £50, on probation for six months; charge nurses, £46 per annum; ward nurses, £40; third-year nurses, £32; junior nurses, £24; probationers, £16.
1001. Then they are probationers for one year, junior nurses for one year, and full nurses for one year? Yes.
1002. What are the hours of duty for the nurses? Generally speaking, the hours of duty with the majority of the nurses are from 6 a.m. to 2 p.m., with half an hour for the two meals included; then off duty from 2 till 5.30, then on again from 5.30 to 8.30.
1003. How many hours a day does that make? Roughly speaking, ten hours. The next day the hours will be arranged somewhat differently with the same nurses. They are on in the afternoon and in the morning, but they are off in the evening after half-past 5. Then there are special nurses, whose hours of duty are from 6 a.m. till 6 p.m. They are in charge of cases for whom a more frequent changing of nurses would be far from beneficial.
1004. I suppose that these nurses get special leave, so that their average hours do not exceed ten? They have opportunities of resting while on duty oftener than the others.
1005. What other holidays do they get besides the three hours a day? The holidays are arranged according to the rank of the nurse. A sister gets a month on full pay. The other nurses get three weeks on full pay; but if they are going to another Colony for a holiday, they are allowed, by special leave of the house committee, to have an extra week, for which, however, they do not get paid.
1006. And what monthly leave is there? They get one whole day and night and one day from 10 a.m. every month.
1007. What amount of scrubbing and cleaning have the nurses to do? The scrubbing and cleaning that the nurses have to do is confined entirely to the day-rooms, lavatories, and bathrooms, the handles of doors, taps, ward tables, mosquito-curtain supports, and the beds. After a case is discharged the beds are washed with carbolic acid. The floors are done by the scrubbers.
1008. Then you have a staff of scrubbers or wardmaids? Yes; we have a staff of scrubbers. They, with the exception of one, do not work more than five days a week, and they are paid by the day.
1009. Do you consider that the nurses are overworked; and are they satisfied with their position? Except so far as stress of work, involving extra duties, is concerned, the nurses are, as far as I know, quite satisfied with their hours. I mean by stress of work, the necessity that exists for having nurses in the out-patients' department to assist the physicians and surgeons—nurses who would otherwise be off duty. For instance, a nurse who is on duty in the morning, and should be off in the afternoon, is sometimes sent to the out-patients' department instead of being let off. That is the only trouble that the nurses have.
1010. Has there been any outcry for a diminution of the hours? No. At the time there was an outcry in the Press in regard to the over-working of the nurses, some reporters came to the hospital, and they were surprised to find that the nurses, as a general rule, were not ready with complaints as to overwork, but were, on the whole, quite satisfied, except with regard to the exceptional circumstances which I have mentioned. If all the hours of duty could be kept absolutely as they are arranged they would have no cause for complaint, but it seems impossible under present circumstances.

1011.

1011. It would be impossible, under any circumstances, in a calling like that of the nurses, to do away with occasional overtime? I think so, certainly. E. M. Pain,
1012. Are there many applications for the positions? A very great number apply. Some 280 odd applied during 1893. 11 May, 1899.
1013. And how many of these are found fit for work? I could not give the exact number, but not more than one in three is found suitable by the matron. Those that are found suitable have their names put down on the register after being brought to me for examination, and they are sent for as their turn comes.
1014. How long have they to wait as a rule before they can get employment? In some instances they wait as long as two years.
1015. I suppose a good many of those who are found suitable to outward appearance break down at an early stage? Yes; a certain number do.
1016. What is exactly the position of the matron with regard to the superintendent? Everything that the matron does in the hospital of any importance she must report to the medical superintendent. She is responsible to him for the discipline and management of her department.
1017. Then she does not go to the committee direct, but she addresses the committee through the medical superintendent? Yes; except that from time to time she furnishes reports of her own to the house committee, which, however, are only furnished after conference with the medical superintendent.
1018. You have wardsmen in addition to nurses? We have one wardman.
1019. Only one? Yes.
1020. What is his pay? £110 per annum. It was raised recently on account of an increase of his duties.
1021. With regard to ophthalmic cases, I suppose they are a class of cases that are treated without very much cost? I think that the whole department of ophthalmic work is the least expensive.
1022. Why? For one reason, because they do not usually require a great deal of dressing, and they do not require so many nurses, being nearly always out of bed after the first few days after an operation. The nursing is less, and the dressing required is less, and the patients being up and about they are frequently able to do small services about the wards which otherwise would have to be done by the porters.
1023. Is your pathological department at the Prince Alfred Hospital fit for your needs? As far as accommodation is concerned, I think it is quite sufficient; but there is need of an expenditure of £15 or £20 to fit it up with more modern appliances which we are without at present.
1024. You do not attempt anything in the way of original research;—you merely work to verify diagnoses for clinical purposes? Entirely clinical diagnoses.
1025. Do you think it is advisable that you should have a laboratory to carry on original research? I think, from the point of view of the hospital, it is not necessary, and especially not in the case of a hospital where within easy distance there is a thoroughly equipped laboratory at the medical school.
1026. We have been told that your infectious diseases wards are unsuited to your needs;—will you tell us how they are occupied, and what more accommodation (if any) is required? Of course, owing to the occurrence of epidemics, the circumstances in connection with the infectious wards differ very much. As a general rule, our infectious wards are insufficient, because we frequently have to admit cases of septic miscarriage and other cases which require isolation, and frequently they cannot, being of different sexes, be put in the same cottage. We often have to deal with twelve or fifteen cases in six cottages, and in no part of the hospital do I find greater difficulty of management than in that department entirely on account of lack of room.
1027. The majority of cases sent to these wards are cases that occur within the hospital—not cases that are sent in from the outside? With the exception of miscarriage cases, which are septic; puerperal cases, which are refused at almost every other hospital; and diphtheria cases, which are taken in one cottage when the diphtheria hospital is too full, and also when they are at an age beyond that at which they could be admitted into the Children's Hospital. I have had also adult cases of diphtheria sent to me by the Government Medical Officer at times when it was impossible to send them to the Coast Hospital.
1028. If there was a well-arranged Infectious Diseases Hospital outside, and cases that should be admitted to your wards came only from within the hospital, would the accommodation then be sufficient? I think it would be.
1029. We are informed that there are nine resident medical officers? Yes.
1030. Are they fully occupied? I think we could not administer the hospital under present circumstances with a smaller staff; but we could administer a larger hospital, a hospital with more beds in it, with the same staff. I mean that, although a resident medical officer is occupied all the day practically, he could spend more time in the hospital if it were required; but if you take one man away, the work could not be done satisfactorily.
1031. Do you get much help from the students? We get help from them in regard to the dressing of patients; but seeing that this frequently requires the superintendence of a resident medical officer, the actual assistance to the hospital does not amount to very much. This is especially the case when it is remembered that there are certain periods of the year when the students do not do any dressing—during certain vacations.
1032. The majority of the students at the Medical School in Sydney attend the Prince Alfred Hospital? I think that before qualification they must have attended at the Prince Alfred Hospital, or at some other hospital. I know of no case of a man having graduated without having attended the Prince Alfred Hospital for some time.
1033. So that during some part of their time the resident officers are occupied in teaching? Yes; it is a duty provided for in the by-laws.
1034. Do you consider that the accommodation at the hospital is at present sufficient for the requirements of the public? No. Under present conditions I think the accommodation is not sufficient, and I say so because cases absolutely deserving of hospital treatment are kept waiting, often to a detrimental degree, on account of there being a lack of room in that part of the hospital to which they should be admitted.
1035. The wards to which they are suited are full, and they cannot be admitted into their wards owing to their sex or classification? Yes; and I would say that what we suffer from more than anything is the absence of room to meet unavoidable fluctuations.
1036. Are there any other matters in connection with the hospital that you desire to place before the Commission? There are several matters. There are difficulties of management in connection with the Board of Health, and in connection with certain other hospitals, and there are present requirements which cannot be supplied for lack of funds. With regard to the admission of cases on Government orders, matters

E. M. Pain,  
M.B., Ch.M.

11 May, 1899.

matters are in a somewhat anomalous position. At any time during the day, except during the hours of 10 and 12, I am unable to get an order for the admission of a patient who is, however, in quite a fit state to go down to the Board of Health and personally apply for an order on my recommendation. In certain cases it might be to some extent detrimental to his condition to allow a patient to wait until 10 o'clock the next day; he must, therefore, be admitted for nothing, because under the present state of affairs, unless a patient is sent by the Government Medical Officer, or is sent to him and then sent back by him to the hospital with an order, no order is granted. I have a case in point which shows the anomaly of the position. If, on the other hand, a medical practitioner outside wishes to get a patient into the hospital, and takes the right course, of which most practitioners are ignorant—that is, to send friends of the patient with a letter to the Board of Health—an order for admission is granted at once on that letter, even though the Secretary for the Board of Health has not seen the patient; a letter from me, however, under the same conditions will not be considered at all. Even a letter being brought to the hospital from a doctor outside, which certifies that a patient is fit for hospital treatment, will not be considered unless it is taken to the Board of Health before the patient is admitted. I am referring, of course, to cases which are not brought to the hospital, urgent cases, whose friends come to ask for admission. What I should like to have would be the same privilege that is granted to every other medical practitioner—the right to send a letter to the Secretary of the Board of Health with the patient or his friends, stating that he is suffering from a certain disease, knowledge of which I should glean from himself or his friends, and to be able to get an order for his admission. At present I have to admit such cases without.

1037. The difference between the two cases seems to be that in one case the doctor has seen the patient; in the other you have not seen it—you only take the opinion of friends? Perhaps, I have not put it exactly as the case stands. It might be a case that I have seen before—a case in which I know what the disease is; perhaps, it is an out-patient who has been suffering from a certain disease—one who is too ill to come to the out-patients' department. I may know from reference to the books what his disease is, but unless he gets a letter from outside he has to be admitted as if it were an urgent case.

1038. *Dr. Manning.*] It is suggested that the hospital admits a certain number of cases for the £ per £ subsidy obtained from the Government? Yes; and as a general rule there are a very great number of patients admitted for whom no payment is asked under any conditions; but at present, if a patient whose friends only have applied seems to be an urgent case he is admitted without question.

1039. What is your next subject? I think if it were possible in this connection to inform medical practitioners generally of the fact that, instead of sending direct to the hospital, they should send the friends of the patient direct to the Board of Health at any time during the day, it would overcome the difficulty to a very large extent. At present only a few know that they can do so, and that they ought to do so. With regard to the admission of patients from places where there are already cottage hospitals, I have met with much difficulty, more especially in connection with the hospital at Balmain. They have a method of management—I am not aware of its exact nature—by which are excluded a good many cases which ought to be treated in a local general hospital; for instance, certain cases living almost next door to the Balmain Cottage Hospital have been sent to the Prince Alfred Hospital. I have made inquiries as to why they could not be admitted into the Balmain Cottage Hospital, and in one instance I was told that they did not admit heart cases, the patient had, therefore, to be brought to the Prince Alfred Hospital; in another instance I was told that they admitted no cases of typhoid, and they would not admit certain cases, although they happened to live close to their own hospital.

1040. Then you do not think that these local hospitals are doing all the work that they might do to relieve the metropolitan hospitals? I do not think so. More especially is this the case with regard to the Balmain Hospital, where they frequently have a large number of empty beds. I never ask them to take a case unless we are so full as to make it difficult to admit it. In another case, in connection with the North Shore Hospital, a doctor made application for the admission of a patient, and his application was received by the matron, who prepared a bed; but when the patient was brought in from near Mosman's Bay to the North Shore Hospital, the honorary physician refused to admit it on the ground that it was not a suitable case. The case was then brought to the Prince Alfred Hospital, and some days afterwards died. She was said to be suffering from typhoid; but it was found that she had been suffering from severe ulceration of the intestines, and there was no reason why she should not have been admitted to the nearest hospital, except that it was not a very nice case to have. I should like to say, in regard to the overcrowding of the hospital, that it seems to me that it is chiefly due to the constant applications of patients from the country, who are sent frequently by Members of Parliament with the Colonial Secretary's orders. They frequently have no friends in Sydney, and nowhere to go; they then have to be taken in at once, even though their cases are not urgent, since having no friends, they cannot remain outside.

1041. Then it would point to the fact that the country hospitals are not doing all the work that might be expected of them? Although I have no figures to justify me in saying so, my experience has been that a very large number of patients, when asked why they do not go to their own country hospitals, say that they do not care about the doctor there, or give some other reason. It is not that the country hospitals are over full. I have made a tabulated statement as to some of the needs the hospital, thinking that, possibly, the Commission would like to know of them. There are things which cannot be obtained otherwise than through increased subscriptions, owing to the fact that we have not sufficient money. There is a fuel-economiser, the cost of which I put down at £125, to do away with smoke, and to save expense in coal; a type-writer, for doing a good deal of official work and saving printing expenses; two extra telephones; furniture for sitting-room, and new lift (the present lift was not new when put in, and frequently goes wrong); appliances for the pathological department, £20; two wards require painting; and the fitting up of one cottage as a strong-room is necessary; we require a drying apparatus; a junior assistant dispenser is becoming almost an absolute necessity. Then, with regard to the increased accommodation, I would mention the waiting-room, which was suggested years ago by Sir Alfred Roberts, for visitors—friends of the patients, who have to wait frequently some considerable time—as well as the two pavilions previously spoken of, a clinical lecture theatre, and an honorary medical officers' room. I might mention, with regard to the accommodation for the extra nursing staff that would be required if there should be any increase in the size of the hospital, I think it could be very well arranged to have it at the ends of the pavilions, where there are now private wards. I have made a comparative table of the cost per bed of the 236 beds that we have at present, and the staff increase which would be required if the hospital were enlarged, and the cost of these 114 more beds in the same connection.

1024.

E. M. Pain,  
M.B., Ch.M.

11 May, 1899.

1042. What do you estimate that it would cost per patient in the hospital with 128 more beds? I have not been able to make it out with regard to maintenance. As regards increase in the staff, it would only require a dispenser, and an increase in the nursing and housekeeping departments. At present, for the resident medical officers, dispensary, secretary and clerks, tradesmen, porters, nursing, and housekeeping departments, the average cost is £31 15s. 10d. per bed. If there were 114 more beds—I say 114 because it would, perhaps, be necessary to take some of the ward space for out-patients work, and that would lower the number—the 114 beds would cost £10 18s. 3d. There would be no increase in resident medical officers, and no increase in the secretary's department.

1043. To put it shortly, your opinion is that with an increased number of beds, the cost per head for maintenance in the hospital would be considerably reduced? Yes; from the fact that certain departments could work the larger hospital without any increase in the staff.

1044. What does the laundry cost? I can estimate the whole of the cost, with the exception of the carrying of the clothes to and fro by porters, also the employment of a fireman to look after the engine, which I put down at about £100 a year. The total cost is about £650 per year.

1045. *Mr. Barling.*] With regard to the nurses, could you tell us what percentage of the probationers leave during the first month and during the first year respectively? It is very difficult to give the percentage without actually knowing the figures. I should say that more leave within the first month than leave within the first year.

1046. What percentage would it be for the first month, would it be half? No, not nearly half; I should think not more than 10 per cent. for the first month.

1047. Then I suppose for the first year not more than 1 per cent.? I should think 5 per cent.

1048. I understood you to inform Dr. Manning that you did not think the nurses work pressed very hardly upon them? I do not think it does.

1049. The students pay a certain fee for being permitted to practice in the hospital;—do those fees go to the Hospital Fund? No; they have always been divided between the honorary medical officers.

1050. Have any abuses come under your notice in regard to the private wards in your hospital? I should say from my experience in the management of the private wards, which does not extend over more than a year, that there has been no abuse of them. I have here a return of all the patients who have been admitted, and the conditions under which they were admitted to the private wards for the last twelve months. At present any patient who wishes for a private ward has the onus of proving to me that his case is suitable from every point of view, that is, the kind of treatment required, the financial condition of the patient and his social condition. If I am perfectly satisfied that the case is suitable for a private ward, and is urgent, I admit it, then report the matter for confirmation to the house committee. If, however, it is a case which can wait I would put it off till the house committee can deal with it, and the house committee decides what the patient shall pay after looking into all the circumstances of the case.

1051. Then what are the fees? The average fee is about 4 guineas. I say the average, because the majority of the cases are those of naval officers, and in their case this fee is arranged for by the naval administration. I have a short statement showing exactly the number admitted during the twelve months from the 1st April, 1898, to the 1st April, 1899. Seven made no payments; 1 paid 1 guinea a week; 2, 2 guineas a week; 2, 3 guineas a week; 20, 4 guineas a week; and 1, 8 guineas a week. The case which paid 8 guineas a week was one of acute alcoholism, he was in for a few days at the urgent request of Dr. McCormack.

1052. Do you think there is a want of wards of that character to meet the cases of those in a middle station of life who have small salaries and could not afford to pay the high fees charged in private hospitals? I do, and until some commercial enterprise of that kind to establish a paying hospital is instituted it will be impossible to do away with the paying system in our general hospitals, because there are numbers of cases that would go into a hospital where they could pay *pro rata* for the time they were there who must otherwise come into the general wards of general hospitals.

1053. Has it come under your notice that people able to pay for maintenance and medicine have been admitted? Yes; and after all possible inquiries have been made I have found cases of patients who have obtained admission, but who were quite able to pay outside fees. Such cases, however, are not very frequent. It is only when incorrect information has been given to me that they have been able to get in.

1054. Of course, you are aware that well-dressed people often come for treatment, which shows that they ought really to contribute something towards their support whilst in the hospital, or for their medicines if they are outdoor patients? Yes; the outdoor patient department is exceedingly difficult to manage, for this reason. If a man in receipt of fair weekly wages has any member of his family ill, and they do not belong to a club, their only means of getting treatment is in the out-patients' department. The remedy seems to me to lie in their joining clubs, however, since no club will take a patient who is ill we are bound to treat them while they are ill. The practice I have adopted wherever I find a case which ought to belong to a club is to recommend them to join a club. I tell the patient that he will be treated as an out-patient until he is well, but that in future he will be expected to belong to a club.

1055. What relationship with regard to hospital admission do Friendly Societies hold in connection with the hospital? There are no Friendly Societies which have a right to send patients with orders to the Prince Alfred Hospital. Their cases are treated exactly in the same way as any other cases. If a case is sent deserving, financially, hospital treatment, and needing, medically, indoor treatment, the case is admitted, no matter where it comes from.

1056. Do not the Friendly Societies pay a certain sum into the hospital fund for the right of sending members in? They have no right to recommend any patient. They are subscribers to the hospital, but it does not give them that right. The Oddfellows Hospital Fund, organised some years ago, claimed the right to recommend patients to any general hospital, and undertook to pay 15s. a week whilst they were there for maintenance, but the Prince Alfred Hospital would not accede to the arrangement. The only exception is the case of the Railway and Tramways Employees Fund, which may be looked upon as a Friendly Society. They have made arrangements with the Prince Alfred Hospital, whereby if a case is suitable, and this has to be certified by a doctor outside, it is admitted, the fund will pay 15s. a week, and a proportion of the excess of the savings at the end of the year.

1057. Is it a large sum? This last year it was about £300 altogether. The only exception other than that is the case of the Helensburgh colliery. They have a right, by virtue of a payment of £130 a year, to have any miner who is injured in the colliery admitted at once without question.

E. M. Pain,  
M.B., Ch.M.  
11 May, 1899.

1058. So that they may always maintain a patient in the hospital? Yes. The Railway Commissioners, by virtue of a payment of £60 a year, have a right to send in a patient as long as their bed is unoccupied.

1059. You are aware that in Sydney Hospital they make their outdoor patients pay a fee of 1s., but you have not adopted that rule in the Prince Alfred Hospital? It has been frequently suggested, but the proposal has always met with such contention that the system has not been adopted.

1060. You are aware that in connection with the Sydney Hospital these payments produce something like £600 a year? Yes.

1061. Do you know any objection to the practice being adopted at the Prince Alfred Hospital? I think the objection is that it gives the patients the idea that they are paying for what they are getting, and we hold that the out-patients' department should be for people who are destitute. People who are not destitute can obtain outdoor treatment at the hands of club doctors.

1062. Dr. Manning asked something about ophthalmic cases;—are you aware what provision is made in Sydney for the treatment of ophthalmic cases besides that at the Prince Alfred Hospital? I am aware of no other, beyond that I understand that there are about seventy beds for ophthalmic cases at the Mooreliff Hospital.

1063. *Mr. Walker.*] I think you said that some inconvenience was occasioned through patients being brought down from the country on the recommendation of Members of Parliament and on orders issued from the Chief-Secretary's Office—can you tell me in what way inconvenience arises? From the fact that we are overcrowded with surgical cases, and nearly all those cases are surgical.

1064. Do you not get paid for Government patients? Yes; I am only speaking of the difficulty arising from our having no beds vacant.

1065. Suppose that a patient came down without an order from anybody, and applied at the hospital, would that patient be admitted? Yes; if it were an accident, without question. If it were an urgent case, not an accident, the patient would be expected to promise to pay what he could, and then be admitted; but if he could not pay anything he would be admitted at once.

1066. How many patients do you think you get in a year on Government orders? A little over 110 per month. In 1897, the number admitted under Government orders was 1,306; in 1898, 1,359.

1067. And the majority of these orders from the Health Board? Yes, from the hospital admission Depot.

1068. Can you give any idea how many who come there are sent by Members of Parliament? I have no actual figures to guide me, but, generally speaking, I should think not more than a quarter of them.

1069. There is a general impression that Members of Parliament run a tremendous lot of people into this hospital, which I do not think is the case? I do not think the cases they send are other than deserving cases. My contention is that, the difficulty is an administrative one. They are nearly all surgical cases, and we cannot take them in at once.

1070. You have no other reason than that which you stated for saying the patients go into the Prince Alfred Hospital because they could not be properly attended at a country hospital? I do not think it is generally because they could not be properly attended.

1071. You said they could not be properly attended in the country? The cases vary a good deal. Sometimes patients come to the Prince Alfred Hospital after they have been a considerable time in a hospital in the country, when the doctor wishes for a further opinion, or for more skilful treatment. Most of them come without the knowledge of the doctor, because they prefer to have the more skilful treatment which they can obtain at the Prince Alfred Hospital, instead of treatment by local men.

1072. Then you do not think it is altogether because they cannot get treatment in the country? No; they are nearly all surgical cases, and they come for the better treatment that is to be got at the Prince Alfred Hospital.

1073. You do not see any way of stopping this sort of thing? No, I do not see any way, because the patient, being sick, must, as a general rule, be admitted.

1074. *President.*] As regards the requirements you mention, have they been approved of by the Board? Yes.

1075. It is a question of want of money? Yes.

1076. What is the amount involved for the supply of those immediate requirements which you have specified? A little over £400.

1077. That is for the drying apparatus, the new lift, and the typewriter, and so on? I am doubtful about the new lift. I have put it down at £150, but I think that is a very low estimate.

1078. The amount will be £400 or £500? Yes.

1079. You cannot get these things for want of funds? No.

1080. Do you wish to say anything more? Yes, in reference to the out-patients. The Hospital Saturday Fund Association apparently gives the subscribers who are employed in certain industrial establishments the idea that they can have indoor or outdoor treatment as they please. I meet with this difficulty: some patients come with Hospital Saturday orders for outdoor treatment, and I am told by the Board to treat them as ordinary out-patients; that would be all right, were it not that it really makes the Hospital Saturday Fund a huge club, the doctors of which are the doctors of the hospital, which is to provide medicine and treatment. Whilst the Hospital Saturday Association is allowed to give this out as the advantage to be gained by subscribing, there will always be a certain number of cases that ought not to be in the out-patients' department, who, however, because they do not belong to any club, must be admitted for treatment. With regard to the admission of out-patients, after they have been to the secretary's office, where all information as regards their financial position has been obtained, they are drafted to their respective departments by one of the resident medical staff, who makes further inquiries as to their financial condition; and if he is not satisfied that they are suitable persons for admission, I make further inquiries, and frequently am able to weed out unsuitable patients.

1081. What you say in reference to Hospital Saturday is in reference to the large establishments? I mean that in the large establishments employees are given to understand that by subscribing a small sum they can obtain these advantages, whereas otherwise they would probably subscribe to a club.

1082. That works to the prejudice of the hospital? Not so much that, as to its abuse as a charitable institution.

Thomas Jesse sworn and examined:—

1083. *President.*] You are Secretary of the Prince Alfred Hospital? Yes.
1084. *Dr. Manning.*] When are the Directors elected? They are elected annually. Five of them retire annually by Act of Parliament.
1085. They are elected at the annual meeting? Yes.
1086. And what is done when there are more candidates than there are vacancies? I do not think that has ever occurred.
1087. Will you give a list of the paid officers of the hospital? Yes; I have brought a list of the paid officers, giving their salaries. [*List produced.*]
1088. How has the Samaritan Fund been accumulated? By subscriptions. We started with a nucleus consisting of moneys belonging to deceased patients. Mr. Walker gives a subscription every year. The fund has not been operated upon since we started.
1089. So the fund exists, but no money has been expended from it? No.
1090. What is the total amount of the fund now? £31 4s. 8d.
1091. We understand that you can give us some information with regard to the Endowment Fund? All that I can give you is the amount.
1092. The Chairman promised that you should furnish us with the amount of the funds, the amount that had been set apart by the donors as an endowment fund, and the amount that had been placed to the fund under the by-laws;—have you that information? There is a list of subscribers to the Endowment Fund in the report.
1093. We wanted the amount that has been placed to the fund under [the by-laws of the hospital, and the amount placed to the fund under the will of the donors, and the conditions attached to their gift? I should have to prepare a return showing it.
1094. What special efforts are made to raise funds for the hospital? We have collectors.
1095. Do you make any other special efforts? No. We have had two balls since the hospital was opened.
1096. Are any special letters written to people who you think will subscribe? Yes. We send out a circular reminding people that subscriptions are required, and embodying the privileges given under the by-laws.
1097. How are the accounts audited? They are audited every quarter by a paid officer and by the honorary treasurer.
1098. Have you any accounts of the amounts spent on the hospital buildings? Yes; the amounts spent on the hospital up to 1886 was £164,650.
1099. How much of that amount was contributed by the Government? £118,499 19s. 4d.
1100. Does that include the Nurses' Home? No.
1101. What has been spent on the Nurses' Home? The sum spent has been £15,161 7s. 1d., including the cost of furniture.
1102. How much of that was furnished by the Government? £5,000.
1103. How much of the debt on the Nurses' Home remains unpaid? £1,737 5s. 6d.
1104. That has to be added to the £15,000 you have just mentioned? Yes.
1105. What is the area of the land on which the hospital stands? Twelve acres.
1106. Can you account for the falling off in the payments made by the out-patients? During the past few years, there has been a very great depression in Sydney, and the people are not so well off as they were a few years ago when their subscriptions were larger.
1107. You have a collection box in the out-patients' waiting-room? Yes.
1108. Have you any means of calling the attention of the patients to it? I would not say that their attention is called directly to it, but all the patients are asked to contribute something to the poor box.
1109. When are they asked? At the time when they are being registered.
1110. You ask them at that time for voluntary contributions? Yes.
1111. How much was the amount received last year? It was under £100.
1112. What is the highest amount that it has reached? We used to get a couple of hundred pounds from the out-patients years ago.
1113. Has it ever been as high as £300? I think it was one year.
1114. Does the inquiry as to the means of the applicants rest with you or with your department? The first portion rests with the secretary of the department and the remainder with the medical superintendent. Perhaps I might as well explain how they are admitted. The patient is given a form when applying for relief in the out-patients' department, and that has to be signed by a subscriber, an honorary medical officer, or the clergyman of the parish in which the patient resides. The patient then brings the form to the hospital and presents it at my office, and is then subjected to a very fair examination as to his or her means, &c.
1115. *Mr. Barling.*] With regard to raising funds, do you think that every legitimate source of revenue has been tried? I do not know; that is a question for the directors.
1116. I am asking for your own opinion;—do you know of any way by which the revenue of the hospital could be increased? I do not.
1117. I understand that the Sydney Hospital's list of subscribers is larger than yours;—how do you account for that? When the Prince Alfred Hospital was opened the Sydney Hospital had a revenue of between £4,000 and £5,000; then when the Prince Alfred Hospital opened we had to try and establish a subscribers' list of our own. Naturally, we could not come near the amount of the Sydney Hospital lists; we never could exceed £2,000 a year from outdoor subscriptions.
1118. The reason of the difference is that the Sydney Hospital is a much older institution than the Prince Alfred Hospital? Yes; they had the start of us.
1119. Is it not possible that the efforts put forth by the different hospitals overlap one another;—is there not a waste of energy in the method of collecting? I do not know that I could say that; because the subscribers have been pretty generous to the Prince Alfred Hospital, notwithstanding that many of them had been subscribing to the Sydney Hospital.
1120. Do you employ a collector? Yes.
1121. I suppose the Sydney Hospital also employs a collector? Yes.

T. Jesse.  
11 May, 1890.

- T. Jesse. 1122. Is there not an overlapping of energy in that respect? It would appear so; but if you mean that one collector could do the work for the two hospitals, I do not think that practicable.
- 11 May, 1899. 1123. That could not be;—but does it not point to the necessity or advisability of having the direction of the two hospitals put under one control? That might be done with advantage, I think.
1124. Have you anything to suggest by which you think greater funds could be obtained for your hospital? No.
1125. Every effort is put forward, you think, that can be, to get funds? I do not think I could suggest anything in that way.
1126. *Mr. Walker.*] The area of this land on which the buildings stand, you say, is about 12 acres? Yes.
1127. Does it belong to the hospital? It does now; it belonged to the University at first. It was granted by Act of Parliament.
1128. *Mr. Powell.*] When you say it belonged to the University, do you mean that it was Government property? Yes.
1129. You spoke of the amount given by the Government to the hospital; does that value form part of that money? I could not say.
1130. Is that value in addition to the money that is received? No; that is not taken into account at all.
1131. The Government, or someone, gave the hospital 12 acres of land;—is the amount which you say the Government have given in money, partly represented by the value of that land? To the best of my knowledge and belief it is not.

George Wigan, M.R.C.S., Eng., sworn and examined:—

- G. Wigan  
M.R.C.S.  
11 May, 1899. 1132. *President.*] Are you the medical officer at Armidale? Yes; I am serving my twenty-fourth year at the hospital.
1133. *Dr. Manning.*] You have taken great interest in the hospital at Armidale? I have.
1134. How long is it since it was first founded? I cannot tell you that.
1135. It was carried on for some time on one site, but lately a new hospital has been erected? Yes.
1136. How long ago? I think it was in 1882.
1137. You planned that hospital? I did.
1138. And you have had a good deal to do with the management of it since? Yes.
1139. Have you any idea what the cost was? Between £3,000 and £4,000; that was the original cost. Of course, there have been additions made since, which I should say cost £500 or £600 more.
1140. Then, the total cost has been about £4,000? Yes.
1141. How many beds are there in that hospital? In the general wards there are twenty-four, and in what we call the strong-room there is room for two. Then there are four private wards. We have also what we call the infectious hospital, where there are four separate rooms for infectious cases. That is about a mile away from the general hospital.
1142. How many beds are set apart for male and how many for female cases? There are eight beds for females and sixteen for males, with two set apart in the strong-room.
1143. Is the accommodation in the hospital sufficient to meet the calls made upon it for the district? We sometimes have the hospital overflowing, but not continuously.
1144. Is that in times of epidemic? No; we do not take in epidemic cases. It is simply that occasionally there are more calls than usual.
1145. What district does your hospital serve? It serves the district from Guy Fawkes to Bundarra and from Carlisle's Gully to Guyra.
1146. Do you take in cases from Hillgrove? No; we do not, except in this way: If a patient is not satisfied with the treatment that he is getting in the Hillgrove Hospital, and he comes to us, that hospital has to pay £1 a week for the patient.
1147. Can you tell us about the number of in-patients that you treat annually? I should say somewhere about 200.
1148. And do you treat out-patients? Yes, we treat out-patients besides.
1149. Patients who come with orders? No; that is not the arrangement that we have there. They come to our private residence; then we give them an order on the hospital for medicine.
1150. The out-patients come to the private residence of the medical officer? Yes; and they get orders for medicine. They have to have an order before they can get the medicine. They have another order, to be countersigned by two members of the general committee, saying that they are paupers, and are fit subjects to be supplied.
1151. You do not take any payment from out-patients, either for the hospital or for the medical practitioners? No.
1152. You have four private wards;—what are your charges in those wards? The charge has just been altered. It was 2 guineas a week, and the out-patients pay their medical attendant. Now it is 3 guineas a week; but I think that since I was there a resolution has been passed altering it to £2 10s.
1153. That is the fee for maintenance, what are the fees for medical attendance? Just the ordinary fees.
1154. The fees go to the medical attendants? Yes.
1155. What is the annual cost per bed in your hospital? Somewhere about 23s., I think. Last year it was a little more. I think it was about 25s. last year.
1156. That is the cost of a patient in the ordinary wards? Yes.
1157. What are your sources of income? Our sources of income are subscriptions and proceeds of entertainments, and there is, I think, £1,200 on deposit in the hands of trustees—an endowment fund. I am one of the trustees.
1158. Do you get interest on that? Yes.
1159. Then you get a Government subsidy? Yes.
1160. *Mr. Walker.*] That is on your subscriptions? I suppose so.
1161. They get about £300 a year, do they not? I think it is sometimes a little more than that.
1162. *Dr. Manning.*] How has this £1,200 been accumulated? There was one donation of £1,000, and a bequest after death of £200.
1163. Was there a special condition attached to these donations that they should be used as an endowment fund? There was.

1164. Then you do not put by any savings or sums given you to the endowment fund? No; we have never been in that happy position. G. Wigan,  
M.R.C.S.
1165. How many nurses have you? We have a matron, and three nurses, a wardsman, and a secretary, and dispenser. 11 May, 1899.
1166. One officer is both secretary and dispenser? Yes; we have also a cook and a laundress.
1167. How many honorary medical men have you? We have at present four; formerly we had three.
1168. Are their services entirely honorary? Yes; except for the fees that they get from patients in the private wards.
1169. You have never had to close any part of your hospital for want of funds? No.
1170. When you have been short of funds what steps have been taken to make up the amount? I do not think we have ever been in that unhappy position, we have always been able to pay our way.
1171. Do you find that the people in the neighbourhood are fairly liberal in supporting the hospital? Certainly.
1172. And they take considerable interest in the hospital? Yes.
1173. That applies, I suppose, to the people in the town—to the pastoralists and the settlers? Yes.
1174. I suppose there is very little abuse of the hospital by people who ought not to participate in its benefits? Well, we had a very energetic treasurer, and, to my mind, he ran the place rather too much on commercial lines. Patients, if they had a penny at all, had to pay.
1175. He made them pay? He did.
1176. Up to what amount did they pay for their maintenance? From 5s. up to the full amount of the average cost per head per annum.
1177. I suppose there were very few cases that were able to pay the full amount for maintenance? That is a question I cannot answer.
1178. You have no difficulty, I suppose, in getting nurses? We have trained nurses ourselves for many years, women from our own district. I do not think that during the last eight or nine years we have imported a nurse into the district.
1179. And you get good services from the nurses? Very good indeed.
1180. Do they remain with you long? Our head nurse has been eight years with us, the matron has been eight or nine years, and the probationers come and go, staying perhaps on an average two or three years with us.
1181. And you think it is possible to get a good training in a hospital of that kind? I think they get a better training there than the nurses get at Sydney. What I mean to say is that their training is more general, and they have more responsibility placed upon them. There are three nurses now in Sydney who were trained at that hospital. They have all passed examinations in Sydney and Melbourne, and are nursing for themselves at homes in Sydney.
1182. About what hours are your nurses on duty? There is only one night nurse, and she comes on duty about tea-time, and remains till about 8 o'clock in the morning, when the wards are cleaned up. The other nurses get up about 6 o'clock and assist her. They remain on duty until tea-time. They are on duty about twelve hours a day.
1183. You do not think it would be possible to work the hospital on the eight hours system? I do not.
1184. It would increase the cost very much? It would.
1185. Have your nurses complained of the hours that they have to work? Not at all.
1186. *Mr. Barling.*] You are aware that our inquiry takes in matters connected with hospitals generally throughout the Colony;—I imagine that you must have given some considerable study to the question of hospital accommodation in the Colony? I do not know that I have.
1187. Have you any idea whether the hospital accommodation of the Colony is equal to present requirements? As far as the north is concerned, I should say that it is. I do not think that anything more is required from Tamworth northwards.
1188. Supposing that an accident were to take place at the most extreme distance from your hospital, how far away would it be from the hospital? At Guy Fawkes I should say it would be 65 or 70 miles away.
1189. Would a patient have to be brought over rough country roads or by railway? It would be simply buggy work. But now I think of it, the patient would go to Hillgrove.
1190. Then a case from the most extreme limit of the district would have to be sent (say) 50 miles to reach the hospital? Yes.
1191. But still, for all that, you think that the requirements of the district are fairly met? Yes; the population is so scattered.
1192. Have you seen a statement in the paper to the effect that people who can well afford to pay for medical treatment are taken into the hospitals;—have any cases of that sort come under your notice? Never.
1193. I suppose it is a fact, however, that in the country districts the hospitals are the only places that can afford proper medical assistance, even to persons who are well off? Yes. That is the reason why we built our private wards.
1194. Is the charge made for private wards such as to recoup all the expenses to the hospital? Yes.
1195. So the hospital loses nothing? At the present day they lose nothing; they are gaining. I can answer that, because I have had to go into the subject very fully myself.
1196. Has it ever come under your notice that patients are sent on to Sydney who ought to be treated in the local hospital? I can say no to that. Of course country practitioners are not so well able to perform operations of a severe character, not having continuous practice, as a man like Dr. McCormack, and we do not feel that it is right to the patients to operate in those cases; so we send them to Sydney, but only cases of that kind.
1197. I gather from what you have said that the hospital at Arncliffe is fairly effective for the purposes required in regard to appliances and everything? Yes; but there is something else they want, and that is some money from the Government.
1198. *Mr. Walker.*] How are your patients admitted into the hospital? First of all they come to one of the medical staff, and he signs a document saying that they are fit subjects for treatment in the hospital. From him they go to two members of the general committee, who inquire into his means, and get him to sign a document to the effect that he will pay so much. When that has been signed by two members of the general committee he is admitted to the hospital. 1199.

- G. Wigan,  
M.R.C.S.  
11 May, 1899.
1199. Do subscribers send patients? No; we have no subscribers' orders.  
1200. You admit patients on the order of the police magistrate? Yes; without any inquiry at all. If it is a case of emergency we take the patient, and do the best we can to get payment afterwards.  
1201. Do you get many on Government orders there? I should say that there may be twenty or twenty-five in a year.  
1202. Can you give us the rate that they are charged for, and the amount they have to pay per diem? The Government patients have nothing at all to pay. We do not charge them.  
1203. That is the agreement? I take it that it is the subsidy that pays for them.  
1204. *Dr. Manning.*] I have seen the hospital, and I think you will say that it is well up to date? I should say so.  
1205. And on modern lines? Yes.  
1206. It is furnished with a heating apparatus and all necessaries of that kind? Yes.  
1207. And with an operating room? No; we have one, but it is only a substitute. We are going to ask the Government to give us the money to provide one.  
1208. But apart from that it is a well-found, well-fitted hospital? Yes.  
1209. I see that it cost about £166 per bed? That I could not say.  
1210. I suppose there is much more need for private wards in the country than there is in Sydney? I should say so, because you have nursing establishments and private hospitals in Sydney. There are no such things in the country.  
1211. So that the class of cases that would go into a nursing establishment of necessity have to go into the private wards at the hospital? Yes; either there or to hotels.

FRIDAY, 12 MAY, 1899.

[*The Commission met at St. Vincent's Hospital at 2:30 o'clock, p.m.*]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT.)

F. N. MANNING, Esq., M.D.

J. BARLING, Esq., J.P.

J. POWELL, Esq., J.P.

CRITCHETT WALKER, Esq., C.M.G.

Mary Xavier Cunningham, Mother Rectress of St. Vincent's Hospital, examined:—

- M. X.  
Cunningham.  
12 May, 1899.
1212. *Dr. Manning.*] What number of beds have you in the hospital? One hundred and seventy-five.  
1213. How many for males and how many for females? There are seventy-one for male patients and seventy for female patients, independently of private rooms. We now accommodate six male and seven female patients in the private rooms. The number of beds in the male and female wards is constant, and there is an equal division. The private rooms vary according to the applicants.  
1214. How are your wards divided? Into medical wards for males and medical wards for females; surgical wards for males and surgical wards for females. It is the same in the private wards. We have also the same arrangements with regard to the ophthalmic cases. We have one naval ward. There are twenty small rooms. We have four emergency wards, three with two beds each. We have three for contagious cases in an isolated cottage in the paddock, and there are fourteen in the Hospice.  
1215. The total accommodation would be for about 200? Yes; the hospital was built to accommodate 200. We have 200 in the house all told. I do not count the beds of those who are employed in the house.  
1216. Does the hospital supply all the calls that are made upon it? No.  
1217. You think that more hospital accommodation is necessary? We require more accommodation. We get more applicants than we can find room for. In the Hospice we cannot take in more than half of the number that apply, nor can we in the general wards admit all applicants.  
1218. You have furnished a return showing the number of in- and out-patients, and the number of beds available, and the average cost per bed for last year? Yes, the average cost per bed was £26 4s. 1d. The return is as follows:—
- |   |             |
|---|-------------|
| 1898—   |             |
| Number of in-door patients treated during the year.....                                 | 1,665       |
| „ casually cases treated „ „ .....  | 2,243       |
| „ patients treated at out-door department during the year.....                          | 7,644       |
| „ attendances at out-door department, including casualties .....                        | 22,757      |
| „ beds available for patients .....   | 175         |
| Average cost per bed during the year .....  | £26 4s. 1d. |
| „ „ patient during the year .....   | 2 17s. 4d.  |
| Nursing staff:—Sisters, 21; Nurses, 18; Male nurses, 2; Mortuary attendant 1; Total, 42 |             |
1219. That £26 4s. 1d. includes the cost for out-patients as well as for in-patients? Yes. We find that one-half of our income in patients' fees comes from the private rooms.  
1220. Your charge for the private rooms is 3 guineas and 4 guineas, according to the size of the room and the convenience afforded? Yes. It is understood that they make arrangements with their own doctors.  
1221. The general arrangement with the doctor is that he gets a guinea a week, and special fees for operations? Yes. If a large room is taken, and the doctor makes no arrangement for his fees, we charge 5 guineas, 4 guineas for the room and 1 guinea for the doctor.  
1222. What sums do you take from the patients in the ordinary wards? A guinea a week from some. They average 14s. a week. They pay 2 guineas when they enter; that pays for three weeks. If they are poor and do not stay the full three weeks, a portion of the entrance fee is returned.  
1223. Do you take many patients without payment? We take a great number without payment.  
1224. Do you take less than 14s. a week? Yes; we take 10s. a week very frequently; and for little children, 5s. a week. I think it is better that they should pay something than that they should be pauperised.  
1225. Do you take any payment from out-patients? A registration fee; that is all, unless they choose to make an offering; and that is thrown into a fund to buy bottles and little things that they require to carry their medicines home in, or to pay their fares in the trams. Very often, indeed, the sister in that department is allowed to use the little income there is for what she thinks necessary.  
1226. What she gets she uses in connection with that department? Yes. She may have something over, which she may be allowed to dispose of in some other way for the poor people. Very often it is food that they want instead of medicine.

1227. The payment made by the Navy is 3s. a day? Yes; a guinea a week. There are three Navies—English, French, and German, and they all pay the same.
1228. Then your staff consists of twenty-one sisters? Yes; and eighteen female nurses and two male nurses.
1229. What other staff have you? We have a third male nurse; but we do not call him a nurse because he has charge of the mortuary, and on occasions he has to help the wardsmen in their manual work. We have two resident medical officers, a dispenser, and an assistant dispenser, hall porter, gardener, and laundry man.
1230. What salary do you pay your resident medical officers? Formerly, £200 a year for one. Now the salary is £100 each.
1231. I understand that you have also special departments for special disease—ophthalmic cases and so on? Yes, we have.
1232. And you have a department for out-patients? Yes, we have two days for medical cases, and two for surgical, one for the ear and throat, and two for eye cases. We have two specialists, and an outdoor physician, and an outdoor surgeon.
1233. You have your own laundry? Yes.
1234. Do you find that cheaper and more convenient than putting the washing out? Much more so. We have three laundresses for the whole house. We have two paid cooks, one pantry-maid, and a housemaid for the nurses' apartments.
1235. What advantages do you think arise from having your own laundry, in addition to its being cheaper? We can separate the clothes in a particular way.
1236. And owing to that they are washed better? Yes, and they are in a much more sanitary state.
1237. You have no danger of the introduction of infectious disease? No. I prefer to have the clothes washed at home, and to have them specially sorted.
1238. How long does the training of the nurses last? Three years.
1239. And during the first year they get no pay? No.
1240. And they give you a premium of 10 guineas? Yes.
1241. In consideration of that 10 guineas they do no cleaning, I believe? The principal part of the cleaning is done by charwomen.
1242. They are not put to scrubbing and other manual work, and that is in consideration of the premium of 10 guineas? Yes.
1243. What do they receive after the second year? The salary is £10 for the second year, and £12 for the third year. I also provide the uniforms.
1244. At the end of the third year they leave you and take nursing positions elsewhere? Yes; unless they stay on to learn medicine, not for dispensing, but to guard them from danger.
1245. They have a thorough training? Yes.
1246. And they are examined by the medical staff at the end of the first, second, and third years? Yes. There is a meeting of the medical staff, and they select two examiners, whose term of office lasts two years. I may state that the sisters take no salary.
1247. It is on that account, I suppose, to some extent, that your very economical management arises? Yes; we have two sisters in almost every Department, and they economise more than paid nurses do. We have two sisters in the kitchen. We have two classes of sisters—domestic and hospital sisters.
1248. The whole of the ground upon which the hospital stands is now freehold, is it not? Yes.
1249. *Mr. Barling.*] Do you find that the private rooms are availed of fully? Yes.
1250. I think you said that the charge was 4 guineas a week per patient? It is 3 guineas a week for small rooms, 4 guineas for the large rooms if the doctor is arranged for. Just lately we have been obliged to raise the charge for the two large rooms to 5 guineas, because they required constant hot baths.
1251. You say they are always occupied? Yes.
1252. Is there any profit to the hospital out of this charge for their maintenance? The revenue from that source is one-half the income derived from patients' fees.
1253. You are charging patients 4 guineas a week—is there any profit on that which goes to the hospital? Half the revenue in patients' fees comes from the private rooms.
1254. There is something coming to the hospital? Yes, a considerable sum, or we should not be able to keep the wards. The private rooms were opened to support the wards, and they do so to a very great extent.
1255. What are the conditions upon which patients are admitted to the private rooms? They must pay 3 guineas a week.
1256. Would you admit anyone who is willing to pay? He must be examined by the doctor.
1257. You would not ask any questions as to his means? We presume that he would not come and ask for a private room unless he could pay for it.
1258. You do not ask whether he has means which would permit him to go to a private hospital outside? If he was willing to pay £1 a week he would go to a ward; if he could pay 3 guineas a week he would go to a room.
1259. *Mr. Walker.*] As regards the admission of these nurses to be trained, the system is purely non-sectarian, is it not? Yes. We have just qualified three fine girls belonging to the Church of England. Candidates who are eligible of whatever denomination are all equally welcome.
1260. What class of people come into the private wards? The people who take private rooms in the hospital come from all parts of the Colony. They are mainly country people.
1261. What are the hours in which the nurses are employed? In winter they rise at half-past 6 o'clock, and go on duty at 7 o'clock. They do not exactly go on duty at 7, but they go to breakfast, and they get into the wards at half-past 7 o'clock.
1262. How many hours a day are they employed? They go finally off duty at 8 o'clock; but they have an hour off every day to rest, not counting the time for meals. They have dinner at twenty-five minutes past 12 o'clock, and supper at 6. They come on at five minutes to 7 in the evening.
1263. *President.*] What leave do they get? One afternoon a week and a fortnight every year, and they have one hour a day for recreation apart from their meals.

M. X.  
Cunningham.

12 May, 1899.

FRIDAY, 19 MAY, 1899.

[The Commission met at the Office of the Public Service Board at 2.30 p.m.]

Present:—

G. A. WILSON, Esq., J.P. (President).

F. N. MANNING, Esq., M.D. | J. BARLING, Esq., J.P.

J. POWELL, Esq., J.P.

T. Evans, M.R.C.S., Eng., sworn and examined:—

- T. Evans, M.R.C.S., E. 1264. *Dr. Manning.*] You are the senior Ophthalmic Surgeon for the Sydney Hospital? Yes.
1265. How many years have you been a surgeon? Nearly seventeen years.
1266. How many colleagues have you now? Three. Dr. Maher, Dr. Rowland Pope, and Dr. McLeod.
- 19 May, 1899. 1267. How long has Moorcliff been used as an Ophthalmic Hospital? I think seventeen or eighteen years.
1268. So you have been connected with it from the beginning? From its inception, practically.
1269. Will you tell us the history of the place, and its growth? Yes. It will be within your knowledge that the Sydney Hospital had temporary buildings which were quite insufficient—which did not afford sufficient room for ophthalmic patients. A house was therefore taken, that of Captain Towns, known as Moorcliff, and all the eye-patients were removed from the Sydney Hospital to that new place,—the men, women, and children being treated in one house. Later on, I cannot tell you how many years, Dr. Maher, who was then my colleague, and myself, found the accommodation altogether insufficient, and we applied to the directors of the Sydney Hospital for more accommodation. It happened that the Victoria Lodge, next to Moorcliff, was untenanted, and that was taken over, and into it we put the women and children, keeping Moorcliff House for the male patients.
1270. Do you consider the site a good one? It is excellent.
1271. Why? On account of the fact that it is very quiet; it is removed entirely from the noise of traffic; and it has an admirable supply of fresh air; and is surrounded on three sides by water. I think it is an excellent site, from the fact that the results which we get there are very good. If we get children there who are broken-down in health, they get on wonderfully well, although the dietary is plain.
1272. Then the results obtained have been very good? Very good. I judge more from what I hear than from what I know, because I am not able to make comparisons much, not having been Home recently; but I know that when our nurses or sisters go Home, and have anything to do with ophthalmic work at Home, they tell us that we are freer from the complications which follow various operations than any hospital that they see at Home.
1273. The success of operative work may depend very largely upon the skill of the operator? Not very largely, but to a certain extent; not so largely as people imagine; but hygienic conditions, care, and nursing are important factors.
1274. And other results with regard to general health would, to some extent, depend upon the site? No doubt.
1275. Do you consider the building a satisfactory one? No, nor the furniture, nor anything connected with the place, except its situation.
1276. The furniture is very sparse, and not satisfactory? Yes; it has been the dumping ground for the refuse of the Sydney Hospital.
1277. Is the nursing satisfactory? Excellent.
1278. And is the staff sufficient? Quite sufficient; because, for instance, as yesterday and to-day, when we are doing six cataracts, we have an extra nurse sent down for night work. We have to arrange matters like that.
1279. Then afterwards her services would be dispensed with? Yes, as soon as the urgent cases have been dealt with. The matron, Miss Marks, is a very excellent woman; she has been there a long time, and she takes a very lively interest in the results.
1280. Have you made any calculation as to the cost of the place per bed? No; my information is only hearsay on that subject.
1281. Can you tell us what is the stated cost? I have been told that our beds cost on an average 13s. a week.
1282. That arises, I suppose, from the comparatively few nurses required, and the plain diet? Yes, and the absence of any residents there. I do not know whether the man who took the figures out took into consideration the cost of the resident staff, and charged it with its proper share; but I have always understood that our patients cost about 13s. a week.
1283. The paid medical staff do not often visit there? Yes; the Medical Superintendent does.
1284. But not the others? No; not unless they come to give chloroform, or there is any case needing anything outside special work.
1285. If Moorcliff is abolished, what would you advise? If it were abolished, then another building must be found to accommodate the eye cases, because the accommodation at the Sydney Hospital is not sufficient to allow them to be taken in. We could do with a great many more beds than we have. We frequently have to keep patients waiting to come in, and sometimes we have even made up a bed on the operating table. Sometimes we have to double-bank the children.
1286. At the time we visited the hospital there were several children sleeping two in a bed, and the number of children there was considerably in excess of that authorised? Yes; and I may mention, though I do not want anything I say to do us out of our accommodation, until something else is provided, the place is so full of bugs that we cannot keep them under, and when an epidemic of rats comes along, we have to employ people to watch at night, because some of the children, within my knowledge, have been bitten by rats.
1287. If some of the patients were removed from one of the blocks of the Sydney Hospital, could not the ophthalmic cases be taken in there? They could be of course; but I do not think with the same satisfactory result.
1288. Why not? Although we keep good order and discipline at Moorcliff, I think it is a more homely sort of place than the hospital. The eye patients are very helpful to one another; they have room to move

- move about at Moorcliff, and there is less feeling of restraint there than there would be in the building in Macquarie-street. The children play about and make a noise.
1289. You think the majority of the patients being out of bed require more space than they would have in an ordinary hospital? Yes.
1290. Or at all events in a hospital like the Sydney Hospital, which has limited ground and limited verandahs? Quite so.
1291. Then what would you advise for the future accommodation of ophthalmic cases? A suitable building.
1292. Where? I do not know of a better place than this; no doubt there are places which would be equally good.
1293. I want to know whether you have thought the matter out? I have not thought of moving away from there. Do you mean with regard to the management of the hospital?
1294. I am merely speaking now of a site for a new hospital? That at Moorcliff is out of the city; it is a little removed from the smoke and the closer air of the city, yet it is sufficiently near the centre for patients to be sent to it and for the surgeons to visit it. I do not know where you could find a better place.
1295. Would there not be economic and other advantages in having the eye cases in the main building of the institution or near it; but not in a separate institution, supposing there was accommodation for them? No; I do not see where the saving would come in.
1296. There would be no gain in having a separate and detached branch? No.
1297. Would there be any objection to making the ophthalmic hospital into a separate hospital altogether? From an economical point of view there certainly would be.
1298. What would that be? You would have a separate administrative body of resident medical men there, certainly a resident surgeon. There would have to be a medical man in charge, and I think you would need a larger staff altogether.
1299. You think it could be worked more economically in connection with the general hospital than in a separate and detached institution? Certainly; I am distinctly of that opinion. There are many advantages in having the place connected with another institution, because if any person gets sick we do not keep him (I am speaking not of eye disease, but other ailments). We send those patients away to the other building for treatment, and they only come back to us when they are fit for us to deal with.
1300. Do you think the majority of these cases could be treated in a hospital entirely under Government management? Yes; I am rather in favour of all hospitals being under Government management, for the simple reason that I cannot shut my eyes to the fact that things are kept going by the Government. I am not quite sure of the absolute accuracy of the figures; but I am sure of their comparative accuracy when I say that about 80 per cent. of the cost of the hospitals is paid by the Government.
1301. But there would still be the disadvantage in connection with a distinctly Government institution that it would have no parent institution to go to and share the expenses with; it would still be a somewhat expensive establishment? Yes; I thought you were speaking of hospitals generally, not of Moorcliff in particular. Of course, the one objection to making it a Government institution entirely is, I suppose, that the whole staff would then be paid. You would do away with the honorary service. I do not think that any of us would like to give up our work.
1302. Would there be any reason why honorary officers should not be attached to a Government institution? No; I do not think so.
1303. But it is not the custom? It is not.
1304. Is the hospital used at present by students for clinical instruction? Very little.
1305. Why not? I presume that they have sufficient material at their own hospital, which is close to their own teaching building.
1306. We gather that the number of beds for eye cases at Prince Alfred Hospital is very small? Very small indeed.
1307. Has not distance something to do with it? Distance, I have no doubt, has everything to do with it.
1308. Then, there is the fact, also, that ophthalmic surgery is sometimes taken after the students' ordinary course? I have not found that they come much.
1309. Where are the out-patients seen? At the Sydney Hospital, in the basement.
1310. Can you give any idea as to the number of patients? No; I can only tell you that there is not enough accommodation for them.
1311. They are seen by the two junior honorary officers? Yes; I very rarely go there now.
1312. Can you tell us where the greater part of the patients come from? From New South Wales. A good number from Queensland, some from Western Australia, and a very few, I think, from Victoria.
1313. We were struck rather with the number that come from Bourke? I think everybody in the Bourke district has bad eyes, more or less. I doubt whether you would find perfectly healthy eyes in that district. I refer to those parts of the eyes which are affected by hot and dry outside surroundings.
1314. What would apply to Bourke would apply also to the whole of the far western districts of the Colony? Yes; but I suppose there are more people in Bourke than in other parts of that district. It may be a larger centre. But all along there, at Nyngan, Cobar, and west of Dubbo, there is a liability to these diseases of the eye.
1315. A great many patients come from there? Yes; and they come back from Bourke. We send them away well, and in that condition they would remain if they did not go back to such a place. It is like a man who has been poisoned, you get rid of the poison, then he goes where he gets the poison again, and you have again the same symptoms.
1316. Do you think many patients come who could afford to pay special practitioners? I have reason to believe that a great many do. It depends upon who you think ought to pay. I think that men earning £3 or £4 a week ought not to make use of a charity such as that, but they do. I am not speaking of accidents and urgent cases, but such things as we call "luxuries," squints, and that sort of thing—cases that have gone on for years, and are not urgent, and for which provision might have been made.
1317. Do you think that the inquiry which is made into the circumstances of patients at the Sydney Hospital is sufficient? The patients do not tell the truth when they come. They put on their old clothes, they

- T. Evans,  
M.R.C.S.E.  
19 May, 1899.
- they leave their jewellery at home, and if they drive up in cabs we do not see them. It is very difficult to institute satisfactory inquiries into such matters.
1318. You would have to follow the people to their homes, and you would require a special inquiry officer to do that? Yes.
1319. *Mr. Barling.*] Is the climate of Sydney particularly favourable to the treatment of ophthalmic cases? I think so.
1320. As compared with Melbourne, Adelaide, and Brisbane? I do not know; I have never practised in those places.
1321. You have told us that many cases come from Queensland? Yes.
1322. Is that due to the fact that we have a better climate? They come to see the staff.
1323. There is a better staff here? They think so.
1324. I think the rent for the Moorcliff Hospital is £350 a year? Yes.
1325. Do you not think that a much better place could be obtained for carrying on ophthalmic operations for that money? Well, you have to find accommodation for between sixty and seventy people.
1326. Do you not think that a place could be got about Sydney very much more suitable for that rent? I do not know any building that would accommodate the cases. I think that £350 a year is a great deal too much for that place, because it is within my knowledge that Victoria Lodge was occupied at a rent of £100 a year before we got it. It was inhabited by a gentleman who was manager of one of the banks.
1327. You think that for that money a much better place should be obtained? Ought to be obtained; but I do not think you could better the site.
1328. Could there be obtained about Sydney a site equally good? I do not think so. I think its proximity to the water, and the view and the surroundings generally could hardly be matched anywhere.
1329. You were saying that a person earning £3 or £4 a week should not go to a public hospital? Yes, except in cases of urgency.
1330. Are there private hospitals here, the charges of which are sufficiently moderate to enable persons of small means to pay for treatment without some help? No; the private hospitals generally charge a minimum of, I think, 3 guineas a week for maintenance.
1331. Plus, I suppose, medical expenses? Yes.
1332. A person with £3 or £4 a week coming in would find it hard to pay that sum? Yes; but I specially mentioned the class of cases which I call "luxuries."
1333. Yes, curing squints and so on, but I mean actually urgent cases? There are not very many except very urgent cases in which the people having comfortable homes cannot be attended to at home.
1334. As far as diseases of the eye are concerned? Yes.
1335. The operator does not require such extensive apparatus as are required for the major operations? I am not sure of that. At any rate our instruments are much more delicate, and require greater attention.
1336. So you think that the requirements of that class could well be met outside the hospital? The general requirements, not the special requirements. We cannot get our instruments set here. I have a case constantly coming and going. I am going to give up London now and try New York.
1337. *President.*] Would that observation of yours apply to patients who come from Queensland and have no home here? Of course they would have to come into the general hospital; they must.
1338. *Mr. Powell.*] The space seems to be very insufficient for exercise at Moorcliff? The space has proved by results to be sufficient.
1339. It is very limited? It is.
1340. Do you approve of that place as a site? Yes.
1341. Would it be possible to get other properties, so that the space could be increased for the exercise of the patients? A larger space would be better with similar surroundings.
1342. Could that be obtained there? That I do not know. You cannot take a hospital of that sort very far out of the city. At least, if you did it would be attended with a great deal of inconvenience in the way of transferring patients and visiting them.
1343. *Dr. Manning.*] It would be inconvenient to take the hospital far from the city, because you would not be able to get the services of medical men? You know we are always on the spot. A great advantage in having that house in connection with the Sydney Hospital is that cases of accident when they come in can be put into beds in the accident ward.
1344. Accidents to the eyes? Yes; we keep beds at the Sydney Hospital. Sometimes there are three or four accident cases; they generally come in batches.
1345. Then, when they have to be removed, you remove them? Yes; then they go to Miller's Point.
1346. Have you any knowledge of the private hospitals of Sydney? When I have a case to treat in private, that of a person without a home in Sydney, I send the case into a private hospital.
1347. You only know one or two of these private hospitals? That is all.
1348. You do not know how many there are? No. The advantage of them is very limited. The class of persons whom I treat, as a rule, have homes in which I can do the work—except the country cases. The number of those who can pay is very small.
1349. There are no private ophthalmic hospitals? None whatever.
1350. Have you formed any opinion as to whether private hospitals should be licensed or not? No, I have not thought of it.
1351. Has the question of paying patients in public hospitals engaged your attention at all? Yes.
1352. What are your views on that subject? I am strongly opposed to allowing paying patients to go into hospitals.
1353. You would keep the hospital entirely for the necessitous poor? Precisely so, as a benevolent institution. You see it is a very difficult question to answer. There are so many considerations to be taken into account. It is not right to expect honorary medical men to give their services to patients who pay. It is not right that the hospital should use their reputation and skill, and make money out of them. I am strongly opposed to it. The idea of paying patients has only come to me since I have been in the Colony, because when I left London such a thing did not obtain. In Guy's Hospital, the hospital in which I was educated, there was not a paying patient. Such a thing was not heard of. I think I can say that that was the case at all the other hospitals.

1354. They neither had paying patients in the general wards nor in the private wards? No.
1355. What do you think should be done in the case of patients who are able to pay small sums, but yet require help? Well, I do not know. That is one of the most difficult questions we have to consider. A patient comes and says I do not want to go into a hospital, your fee for cataract is 50 guineas. I cannot pay 50 guineas, but I have £30. What am I to do. I am obliged to send the case into the hospital. Fifty guineas does not pay for a case of cataract. It is all right if it goes on well, but if it goes wrong I have to pay fifty or sixty visits, and get any amount of abuse. I admit that in that respect I have sinned frequently.
1356. Do you approve of the charge of 1s. for the registration of out patients? Most distinctly not.
1357. Do you think that is open to abuses? I do. I think that every means of getting money from patients is a mistake.

T. Evans,  
M.R.C.S.E.  
19 May, 1899.

Susan Bell McGahey sworn and examined:—

1358. *President.*] You are matron of the Prince Alfred Hospital? Yes.
1359. What are your relations to the Medical Superintendent, or your responsibility to him? In matters of importance I always consult with him before taking any active steps.
1360. Do you report to him? Yes.
1361. Do you report independently to the committee? I write a report about every fortnight, and if I have any recommendation to make I mention it to the Medical Superintendent before sending it to the Committee.
1362. You confer with him? Yes.
1363. I suppose you have full control over the nursing staff? Yes.
1364. Is the staff under the Medical Superintendent? Yes; if a nurse has to be discharged I would confer with him in the matter.
1365. Has that to be confirmed by the committee? Yes; it always has to be confirmed by the committee.
1366. Do you engage nurses? I select the nurses, they are examined by the Medical Superintendent, and the committee appoint them on the recommendation of the Medical Superintendent and myself, after they have completed one month or two months' probation in the hospital.
1367. Is the number of nurses sufficient for the purposes of the hospital? Yes. Sometimes there is extra work, and the nurses have to do longer hours; but if there were three additional nurses I should then be able to keep the nurses on ten hours' duty daily.
1368. Is it a serious matter for them that they have to do these long hours, or is it only an occasional thing? It is not the usual thing; it occurs occasionally.
1369. Do they complain? As a rule they do not like to work longer than ten hours daily; some would prefer even shorter hours.
1370. This overwork you consider is working over ten hours a day? Yes; our time-table is nine hours and twenty minutes; but the nurses cannot always get to their meals at the regular hours; sometimes they are from five to fifteen minutes late.
1371. What arrangements do you make for the hard work—scrubbing and cleaning? The probationers do a certain amount of scrubbing. They keep the day-rooms clean, the woodwork therein, and the floors; they scrub and wash-up the crockery. The ward floors are scrubbed by women whom we employ for the purpose. The probationers and nurses scrub the lockers and ward tables, and polish the brasses, sweep the floors, dust the ward furniture, and carbolize the bedsteads.
1372. Do they obtain leave of absence monthly? The nurses have a day off from 10 in the morning till 9 in the evening, Sunday off from 5.30 on Saturday to 9 or 9.30 on Sunday evening.
1373. That is once a month? Yes. The probationers and the nurses get three weeks annually. They are not able to get the three weeks just at the end of the twelve months. The sisters have thirty days in the year.
1374. Do you, personally, get to know anything of the circumstances of the patients and their ability to pay? No; the Medical Superintendent inquires into that.
1375. *Mr. Barling.*] Do you think that the complaints which have been made of the overwork of the nurses are unfounded? There are some who enter the hospital and expect to find the work easier than it is, although it is pointed out to them before coming in what they are expected to do; such people are disappointed, and occasionally grumble because they have to work. There are others who are domesticated, who do not think work menial. Such women succeed as a rule, and do not consider the work very hard.
1376. Can you tell us what proportion of nurses break down or leave after the first month? I have made a calculation for three years. In 1896 we had sixteen vacancies, and there were sixteen probationers taken on. Six per cent. of the probationers left during the first month, and during the first twelve months 37 per cent. left. In 1897 there were thirty-three vacancies and eighteen probationers left. The percentage of those who left in the first month was 15, and during the first year 54. In 1898 there were thirty-two probationers taken on to fill vacancies, and sixteen of these, or 9 per cent., left within the first month, and 50 per cent. during the first year. I might mention that 1897-98 were exceptional years. As a rule, we do not have so many vacancies, but a number of nurses were appointed in 1897 to superior positions in other hospitals, and this occasioned some exceptional vacancies on the staff; when the nurses were promoted to fill these vacancies we could not take them in their order of seniority, the result was those who were passed over left. In 1898 an old rule was brought into force which did not meet with the approval of some of the nurses, and they left when they had completed their three years' training.
1377. Can you tell us from your observation when the nurses leave whether the majority leave because they are absolutely broken down in health or because they are tired of the work? During the year 1896 two probationers resigned, two were not strong enough for the work, and two were unsuitable. In 1897, two did not care for the work, five were unsuitable, and three said they were required at home; eight considered the work too hard for them. In 1898, ten were unsuitable, three were delicate, and three did not care for the work.
1378. Can you tell us the state of health of the probationers you have now? All those I have at present seem to be in very good health.

S. B.  
McGahey.  
19 May, 1899.

- S. B. McGahey.  
19 May, 1899.
1379. They keep in good health? Yes, as a rule. If they are not strong enough to continue the work I advise them to give it up.
1380. If they are fairly strong the work is not unhealthy? No.
1381. Is there any other information you can give us that might be of interest? I was going to mention that nurses' lectures are given, and classes held in their off-duty time. Nurses have three hours off duty daily; lectures and classes are held about twice weekly for nine months in the year. Then with regard to the different grades of nurses—the probationers remain twelve months in that grade; if eligible for promotion to the junior nurses' grade, and a vacancy occurs, they are moved up. If a probationer is not able to pass her examination, or for some reason she has to wait a couple of months or more over the twelve months before entering for examination, she is still kept in the probationer's grade till she passes. Sometimes it happens she has passed her examination, but there is no vacancy in the junior nurses' grade, and she cannot be promoted. In the other grades the same sometimes occurs.
1382. Then taking it altogether, you are of opinion that there are a sufficient number of nurses to meet the wants of the hospital, and that they are not overworked? I do not consider they are overworked. They know when they come into the hospital what is required of them, and if they consider the work too heavy, they are at liberty to leave.
1383. I understand that the applications for employment are largely in excess of your requirements? Yes. I shall give you the figures for three years. In 1896 there were 270 applicants; in 1897, 225; in 1898, 280. For the first three months of 1898 there were fifty-eight, and for the first three months of 1899 there were ninety-seven.
1384. How many were taken on during those periods? During 1897 and 1898 there were sixty-five.
1385. Is there anything else that you have to say that would be of interest to us? I might mention that some time ago the nurses were very much in favour of having the eight-hour system, but during the past eighteen months little has been said on the subject.
1386. *Dr. Manning.*] It would be very difficult to work the hospital with an eight-hour day, would it not? Yes; much more so than at present.
1387. A great number of the applicants are quite unsuited for the work? Yes. Many are uneducated, others may have education but do not possess the necessary qualifications.
1388. A nurse requires a peculiar combination of qualities? Yes. I consider that it takes an all round good woman to make an efficient nurse.
1389. A nurse entering into training has to take into consideration that she has to earn a living by her profession, and it is no use her continuing unless her health is good? No, not in hospitals; she is incapable of doing her work satisfactorily.
1390. Then, she would be quite incapable of nursing at a private house if she were incapable of nursing in a hospital? Not always. In a private house a nurse has only one patient, and she is not obliged to stand so much as in a hospital; she can also take more time over her work, but as a rule she has longer hours, as she may be called up at night.
1391. *Mr. Barling.*] Can you tell us the average number of patients per nurse? About three and a half patients per nurse.

Walter Cecil McClelland, B.Sc., M.B., Ch.M., Syd., sworn and examined:—

- W. C. McClelland,  
B.Sc., M.B.,  
Ch.M.  
19 May, 1899.
1392. You are medical superintendent at the Sydney Hospital? Yes.
1393. *Mr. Barling.*] Will you state the number of wards, the number of beds, and the particular use to which each of the wards is put? We have fourteen wards. There are two female surgical wards and one female medical ward. I will give the lettering of the wards. They run A, B, C, D, E, F, G, H, J, K, M, S, T, W, [SMC], [INF], [OM], and OW. The A, B, C, are the female surgical wards. The lock ward comprises twelve of those beds, and the remaining twenty-two are the female surgical beds. D, E, F, make up the female medical wards. Then G ward is an accident male ward. H and M are male surgical wards. J, K, and T, are male medical wards. S, is a special male ward for stricture and urinary troubles. W is a female ward specially for diseases of women—the gynecological ward. We have eight children's cots; then we have six beds in what we know as our isolation cottages—two in a special room for men, and four in special rooms for women. That makes altogether 249 beds that we have in Macquarie-street, and there are sixty-six at Moorcliff.
1394. What more accommodation is required to meet the demands made upon the hospital? We need more female surgical accommodation. We have only twenty-two beds to accommodate all the females that come in for ordinary and accidental surgical cases.
1395. Is there any class of patients of whom you might be relieved, and that might be as well treated elsewhere? The lock patients occupy twelve beds, and I think they might be treated elsewhere. We have no male lock patients at all.
1396. How much increased accommodation would that give you? Twelve beds.
1397. Would that be sufficient to meet your requirements, as regards female surgical cases? I think it would, pretty well.
1398. If the female lock cases could be removed it would give you the additional accommodation that you require for female surgical cases? Yes.
1399. Do you think that the lock cases could be dealt with at the Coast Hospital? I do not know how they would manage. They take male lock patients there.
1400. If they could take the female lock patients there it would be the means of giving very much needed relief to the Sydney Hospital? Yes.
1401. It would be worth while to direct attention to the question as to the relieving of your hospital of the female lock cases? Yes.
1402. Would it remove any sources of infection if they were to be taken away? No; they are strictly isolated.
1403. You would recommend their removal simply to give you much-needed additional room? Yes.
1404. Do you admit cases of consumption? Yes, a certain number.
1405. In what stage are they admitted;—is it in the last stage? They vary. I cannot say that there is any particular stage; they are in all stages. We only admit them when the symptoms are very severe—loss of blood, excessive coughing, and vomiting.
1406. What is the average number that you have at any time? We have, on the average, at least two in each medical ward.
- 1407.

W. C.  
McClelland,  
B.Sc., M.B.,  
Ch.M.

19 May, 1899.

1407. Do you think that is a source of danger to the patients in the ward? I do.
1408. I suppose that consumption is looked upon as a highly-contagious disease? Yes.
1409. And that medical science daily proves that more and more conclusively? Yes.
1410. Therefore, it is dangerous to have consumptive patients mixed up with others? Yes.
1411. What would you recommend as regards the requirements of Sydney in that respect? I think there ought to be some small receiving depôt to take in such bad cases as I have mentioned, with a view of transferring them to a sanatorium, or something of the kind in the country, when they are relieved of their more immediate symptoms.
1412. That should be an isolated hospital, to prevent the danger of infection? Yes, unless you could have a block of one hospital devoted to that entirely.
1413. Could that requirement be met at the Sydney Hospital by erecting another building? No; there is no room in the hospital grounds for such a building.
1414. You would recommend that there should be a small receiving hospital for taking in urgent cases until the patient dies, or could be removed to a country sanatorium? Yes.
1415. At Thirlmere we have such a sanatorium? Yes.
1416. Is that suitable to meet the existing requirements? Not at all.
1417. You have thought the matter over; what do you think is required to meet cases of that kind? I do not know how many beds they have at Thirlmere; but I know that we have amongst our out-patients quite thirty cases that ought to go to go up the country somewhere.
1418. Those thirty cases, I suppose, are in poor homes where they cannot be isolated, and perhaps the disinfection process cannot be adopted; so they become a danger to the whole community? Yes.
1419. Your experience would show that at least thirty cases require to be provided for, and the same experience would be met with with regard to other hospitals,—so we may reckon that a hospital to accommodate at least 100, or a country sanatorium for 100, would be required, in addition to the provision that we have? Yes.
1420. I think you require increased accommodation for ophthalmic cases? Yes. The number of beds that we have at Moorcliff is not sufficient for the number of patients who apply for admission.
1421. What is the deficiency in accommodation? I think we should want at least half as much again, that would bring us up to about 100. We could easily fill 100 beds.
1422. Cases are now sent away that urgently require to be attended to? Perhaps not urgently; but certainly they require indoor treatment. The very urgent cases we do take in at all costs, even though we have to make up a bed for them. Sometimes we have to accommodate them in the Sydney Hospital.
1423. Have you given your attention to the question, as to whether it is practicable to get a better building than you have at Moorcliff? I think it would be easy to get a better building.
1424. Do you think you could get it at a reasonable rate? Yes, I think so.
1425. Supposing you were asked to report on the matter, you think you would not have very much trouble in suggesting a site and building which would be as cheap as the present one, and would give better accommodation? I do not know about being as cheap, but one which would give better results.
1426. What are the principal class of cases dealt with at the Moorcliff Hospital? Mostly granular ophthalmic cases and cataract and accident cases.
1427. Have you found any increase in the number of patients suffering from venereal diseases? Yes; they are on the increase.
1428. Are they largely on the increase? I would hardly say largely; but certainly they are increasing.
1429. Does it often happen that female patients suffering from venereal disease leave the hospital before they are cured; and are therefore likely to spread the disease? Yes, often.
1430. That has come under your observation? Yes.
1431. Can you suggest any remedy for this? The only thing would be to keep them in the hospital until they are cured; to have some kind of compulsory confinement.
1432. How long do they stop in the hospital? The average period is about six weeks.
1433. Is that sufficient to complete the cure, so that when they leave they will not be sources of trouble again? No; not in many of the cases.
1434. It is not a sufficient time? No.
1435. So they go out and come back again soon, worse than before, and after having done any amount of mischief? Yes.
1436. What proportion of out-patients at the main hospital and in Regent-street do you think suffer from venereal diseases? I think quite half of the surgical out-patients.
1437. Can you tell us what proportion the surgical out-cases bear to the medical out-cases? Not exactly; but I should think about one-third of the total number of out-patients would be surgical cases, excluding the special out-patients.
1438. Then half of those are persons suffering from venereal diseases? Yes; one-sixth of the whole.
1439. Do you always keep the beds for lock cases full? Yes; pretty well.
1439. So that this class of disease is entailing a large expense on the community? Yes.
1440. In other words, the charitable public are taxed for the purpose of treating these cases? Yes.
1441. Have you anything further to suggest in connection with the matter? I do not think so.
1442. You have given attention to the hospital requirements of the city and suburbs, will you give us your idea as to whether the requirements generally in this particular are met, or in what way they are deficient? Judging from the number of cases which come to me for admission, which I have to defer for some time, and some to refuse altogether, I think, as far as we are concerned, we could do with almost 100 more beds.
1443. Well, now, generally speaking? I think that altogether you want 200 or 300 more beds for the city and suburbs.
1444. You think that 200 or 300 more beds would meet the case? Yes.
1445. At present we have about three beds per 1,000 of the population, what you suggest would bring it up to nearly four beds per thousand, the average given in some of the best works on hospital requirements in Europe—you think that four beds per thousand is really needed? Yes.
1446. I understand that you do not find the practice of sending out your washing satisfactory? No.
1447. In what respect is it not satisfactory? Well, the clothes very often are damaged, and they have not been within my knowledge of a decent colour; they are not white. Some members of the Board when passing through the wards the other day remarked the brown appearance of the quilts, which should have been white.

W. C.  
McClelland,  
B.Sc., M.B.,  
Ch.M.

19 May, 1899.

1449. What is the cost of the washing? About £1,000 a year.
1450. Could you erect a laundry in the hospital grounds? There is a little plot at the back of the hospital, but I do not know whether that would be large enough to erect a laundry on. We have the matter under consideration.
1451. You think the interest on such an outlay, if it could be undertaken there, together with working expenses, would result in a saving as compared with the present outlay? Yes; it would certainly result in a saving in the end.
1452. Do you consider the operating theatre up to date? Not by any means.
1453. In what respect is it defective? Well, in every respect. An operating theatre should be of the simplest kind; but ours seems to have been built with a view to beauty rather than to usefulness. It contains stained windows with large recesses and various cornices. Everything being made to catch the dust rather than do away with it.
1454. What sort of floor has it? It is a wooden floor with oilcloth on it.
1455. Could those defects be remedied? Yes.
1456. Could you put down a cement floor? No; we have tiles outside the operating theatre and they are loosening. We often have to get them repaired.
1457. Do you require an additional operating theatre? Yes; the latest idea is that there should be two operating theatres, and we are making shift with another room to act as a second operating theatre.
1458. Why is a second operating theatre required? Because it is not considered fair to certain patients who have to be operated upon to take them into the theatre where there have been cases, not aseptic—accidents brought in from the streets.
1459. You have a theatre for the treatment of these cases? Yes.
1460. Is there any place where such a theatre could be put? I think we could erect a small theatre either on the ground-floor or supported on piles a short distance away from the other.
1461. I suppose you would want a very much smaller one? Yes; if we had another one we would use the newly built theatre for the aseptic cases, and the present one for the septic cases.
1462. I suppose that would be without incurring any great cost or unduly curtailing the ground space? I do not know about the cost, but I do not think it would curtail the ground space much.
1463. It would not interfere with your general arrangements? No.
1464. You would recommend that it be done? Yes.
1465. I believe that the accommodation for the present number of nurses is insufficient? Yes.
1466. Could it be increased by additions to the present building? I think it could.
1467. In what way would you do that? Build it to the present front at the east end.
1468. How many more nurses are required to properly carry on the work of the hospital? We should need at least two or three under existing conditions.
1469. And you cannot accommodate them with the room you have at present? No.
1470. But still two or three are required? Yes.
1471. To that extent I suppose the present nurses are overworked? Well, you cannot say they are overworked, but every now and then some of them are called upon to do a few hours extra duty.
1472. After they have worked ten and a half hours? Yes.
1473. To that extent it would be overwork? Yes, but the time is subsequently repaid.
1474. Do any medical students from the University attend the hospital? Very few; but they are beginning to come.
1475. Have you proper facilities for teaching medical students? Yes; but we have not been called upon to use them.
1476. If Prince Alfred Hospital becomes overcrowded, it will be easy to supply these wants in the Sydney Hospital? Yes.
1477. You have no private wards? No.
1478. Have you thought whether there is a necessity for private wards to meet the requirements of persons who have small salaries? I think that private wards in connection with public hospitals are a mistake.
1479. Do you think there is an opening for an intermediate hospital to meet the cases of those who can pay something towards the expenses of treatment, but who cannot afford to go to a private hospital? Yes; either that, or to have private hospitals at lower rates.
1480. Do you think that private hospitals ought to be under proper regulations—that they should be licensed? I do.
1481. There is great liability to abuse in having private hospitals, is there not, unless they are properly supervised? Yes.
1482. You would strongly suggest that they should be licensed or in some way supervised? Yes.
1483. Is there anything else on which you could give us any information which would be of use to us? There is the matter about the Eye Hospital being apart from the main building. I think it would be cheaper for the hospital, and in every way more satisfactory if the eye patients were in the same grounds or under the same roof as the rest of the patients.
1484. Would that lead to more economical results? I think it would on the whole.
1485. Could they be provided for in the present building? Yes; by additions to the present building they might be.
1486. Would you suggest that that should be done? I would.
1487. Where would you put the new building? There is no floor space. They would have to build a ward on the top of each of the other wards.
1488. Is that what you would advise should be done, rather than have a new building altogether? I would.
1489. Is there anything else you wish to mention? There is one thing that we have been in need of, and that is a proper fumigating apparatus, for disinfecting clothing, bedding, &c. We have asked for that.
1490. Would it be an expensive matter? I do not think it would be. It could be put near the engine-house, and the same means that supplies the boilers could supply the heat necessary for the apparatus.
1491. *Dr. Manning.*] How often do you go to Moorcliff? On an average, once a week.
1492. Can you give me a register of the cases showing the number of cases of each disease of the eye treated there during the year 1898? It is in the report.

W. C.  
McClelland,  
B.Sc., M.B.,  
Ch.M.

19 May, 1899.

1493. I see that a very large proportion of them are cases of granular conjunctivitis? Yes.
1494. And these cases could be treated anywhere? A great number of them, but those that come from the country seem to do well without any treatment. The mere change of climate from the country to the town seems to go a long way towards their cure.
1495. A very large proportion could be treated in one of the asylums for the infirm and destitute? Yes.
1496. In fact, nearly half of the cases treated at Moorcliff could be treated in one of those asylums? Yes; with proper surgical skill and nursing.
1497. It would be necessary, of course, to have skilled ophthalmic surgeons for operations? Yes.
1498. But it would not be difficult for an ordinary practitioner, with a fair knowledge of ophthalmic science, to treat a very large proportion of the cases now at Moorcliff? Yes; he would be able to treat them.
1499. What are the disadvantages of Moorcliff as regards administration as it now stands? Just the fact that it is so far away. A resident surgeon has to go down there every day, and, of course, it takes up his time going backward and forward. Sometimes he has to go twice a day. Sometimes he has to go in the morning, then again in the afternoon to give anaesthetics for operations. The matron goes there frequently. I have to go, and nurses have to go. It is beneficial to the nurses, because they get out there more than they do at the Sydney Hospital.
1500. But if you had the whole of these seventy cases in connection with the main hospital they would take up a good deal of the time of the medical officers? Yes; but their time would not be spent in travelling.
1501. You have spoken of providing for these cases at the Sydney Hospital, but considering that a very large proportion of them are out of bed, many of them being children, would it be at all advisable to have them near the other wards? Of course, we should have to consider where we could put them so that they would not be too near the medical wards where the cases are bad. I think they could be trained not to make much noise.
1502. Do you not think it possible that the more acute cases—those requiring operations—could be provided for in the Sydney Hospital in one of the present wards, and that the mass of the more chronic cases, especially those with granular lids, could be provided for in the asylums for the infirm and destitute? We have not room now.
1503. Suppose you cleared out one of your wards, took away some of your medical and surgical cases, and sent them elsewhere;—suppose the Government did not send you so many cases, could not a ward in Sydney Hospital be devoted to acute ophthalmic cases? Yes; but we have so many cases. If cases were not sent to us by the Government we should have more room.
1504. Suppose that the Government did not send you near the proportion of cases that they do at present, but sent them elsewhere, could you provide room for ophthalmic cases? Yes.
1505. You have spoken of phthisis cases? Yes.
1506. I suppose that many of them are quite hopeless? Yes.
1507. And they could be provided for in the asylums for the infirm and destitute, or some institution in a country place? Yes.
1508. That would, in fact, be their fit home? Yes.
1509. Suppose the Government provided an isolated pavilion? In many cases the patients that come to us are so bad that they cannot travel.
1510. Do you have many cases of ophthalmic disease from other colonies? Yes, a fair number, mainly from Queensland. The majority from outside the Colony come from Queensland.
1511. The cases from Queensland seem to be a very great burden on this Colony? Yes.
1512. Are the majority of them necessitous cases? Many of them are shearers and people of that kind, who have a few pounds with which they are able to come to Sydney, but who have very little to give towards their support in the hospital.
1513. Therefore, a considerable portion of them are maintained at the Government expense? Yes.
1514. Do you think the suburban hospitals do all that they might to relieve the city hospitals? No.
1515. Which are the defaulters in that respect? Up to lately the main one is the Balmain Hospital. Until very lately they would not take in ordinary cases at that hospital. By their by-laws, I believe, they are not allowed to take in typhoid cases; but they have sent over to me cases of rheumatism and heart disease—cases that were distinctly prejudiced by the journey to the hospital.
1516. And which might as well have been treated at their hospital? Yes.
1517. And you knew that they had beds? Yes; it has been given out at Balmain that the beds in the Balmain Hospital are simply for accident cases.
1518. Are there any other hospital defaulters in this respect? Balmain is the only one that I know of.
1519. Have there been any complaints about the North Shore Hospital? No.
1520. Or any of the other suburban hospitals? I have not had occasion to complain of them at all.

Rose Creal sworn and examined:—

Rose Creal.

19 May, 1899.

1521. *President.*] You are Matron of the Sydney Hospital? Yes.
1522. Will you tell us what are your responsibilities to the committee and to the Medical Superintendent? I am responsible to the Medical Superintendent, and, through him, to the House Committee, for the efficiency of the nursing staff, and management of the wards.
1523. Do you report direct to the Medical Superintendent? Yes. I hand in my journal weekly to be read by him to the House Committee.
1524. And you are responsible for the nursing staff? Yes.
1525. And for the household management as well? Yes.
1526. Is the number of nurses sufficient for the hospital in your opinion? No; I think we could do with a few more.
1527. Do they complain of overwork? No.
1528. What do you want more for? Sometimes we have to keep them on a little overtime. If the infectious wards are in use I think we really want about three more.
1529. What are the hours of duty? About ten and a half, sometimes eleven hours.
1530. What leave of absence do they get? The sisters get thirty days every year; the head nurses twenty-one days; the junior nurses and probationers fourteen days.

1531.

- Rose Creal.  
19 May, 1899.
1531. Is that besides any weekly or monthly leave? Yes. The sisters and head nurses have twenty-four hours off once a month; nurses twelve hours, and the probationers nine hours.
1532. Are you also in charge of Moorcliff? Yes.
1533. Do you frequently visit that place? Yes, at least once a week, sometimes twice, sometimes every day.
1534. The matron there is responsible to you? Yes.
1535. How long do the nurses remain at Moorcliff? Three months, whilst they are junior nurses; then if they stay on after their third or fourth year they are sent down there sometimes for six months.
1536. For special training? Yes: if they wish to stay on to gain more experience.
1537. *Mr. Barling.*] You were telling me yesterday that some of the nurses after being there two or three years complain of the character of the work they have to perform? Yes, after completing their training.
1538. What are their complaints? They have never complained officially, but they have grumbled a little amongst themselves. Nurses who have been in the hospital three or four years complain that they have almost as much scrubbing to do as probationers or junior nurses. I have not heard the probationers or junior nurses complain.
1539. Is there any occasion for their grumbling? They have a certain amount of scrubbing to do. We have some wards with thirty-three beds, and in those we have four nurses, a head nurse in charge, a second nurse, and two probationers. The two probationers do the scrubbing in that case, and the second nurse has nothing of that kind to do. Where there are twenty-two beds in a ward we have only a head nurse, an assistant nurse, and a probationer.
1540. I think the sleeping accommodation for the nurses is not very good, there being three, four, five, and six in a room? There are five in two rooms—the sisters have a room to themselves. There are two head nurses in each room, and there are three, four, and five nurses in other rooms. Of course, the rooms are very large and well ventilated. They were not built for bed-rooms. One was a board-room and another was a very large sitting-room.
1541. Have you anything else to tell us that you think might be useful in connection with this inquiry? I think we want more accommodation, and if we had it we could get more nurses.
1542. Until you get it you cannot have more nurses? I feel that I cannot ask for them because I have nowhere to put them.
1543. *Dr. Manning.*] The Medical Superintendent is head of the hospital? Yes.
1544. And you feel that you are responsible to him? Yes; and through him to the House Committee.
1545. Are you aware of the arrangements with regard to probationers of St. Vincent's Hospital? No.
1546. Well, the probationers on application for admission pay a fee of 10 guineas to the hospital for the first year, and receive a salary of £5 for the second year, £12 for the third year and all their clothing—the condition of things with you is very different from that? Yes.
1547. Do you think that a sufficient number of applicants could be got under the conditions imposed at St. Vincent's Hospital? I do not know.
1548. Do you think the probationers at present are overpaid considering that they are learning a profession? I do not.
1549. But if they can be got at St. Vincent's Hospital for very much less, and actually pay to be taken in, do you think it would be difficult to get them at your hospital? I do not know.
1550. The number of your applicants for admission under present conditions is very large, I believe? Yes. I have over 100 applicants on the list now.
1551. It never occurred to you that they might be got at a lower rate? No.
1552. On the payment of 10 guineas for admission to the St. Vincent's Hospital they are relieved of a certain amount of scrubbing? Yes; I do not think that is a good plan.
1553. You think they should do the scrubbing? Yes, a certain amount of domestic work.
1554. Will you tell us why? I think it helps to weed out undesirable persons.
1555. You think that having to do a certain amount of hard work weeds out persons who would not make good nurses? Yes. During the last year we had fifteen vacancies; we took on thirty applicants, one-half of whom proved unfit for the work. Some were not strong enough, others did not like it, and others were unsuitable.

FRIDAY, 26 MAY, 1899.

[The Commission met at the Offices of the Public Service Board at 2:30 o'clock p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).

F. NORTON MANNING, Esq., M.D.

J. BARLING, Esq., J.P.

J. POWELL, Esq., J.P.

CRITCHETT WALKER, Esq., C.M.G.

Charles P. B. Clubbe, M.R.C.S.E., L.R.C.P., London, sworn and examined:—

- G. P. B.  
Clubbe,  
M.R.C.S.E.,  
L.R.C.P.  
26 May, 1899.
1556. *Dr. Manning.*] You are senior surgeon at the Children's Hospital? Yes.
1557. How long have you been connected with the hospital? Fifteen years.
1558. Is that ever since its inception? No; it had been founded four years when I went there.
1559. You have taken a very active part in its administration? Yes.
1560. Are you satisfied with its general arrangement and management? Not at all. It is obviously unsuited for a hospital.
1561. The building is? Yes. It is three houses knocked into one. It was never intended to remain a permanent hospital. We have been making endeavours for the past ten years to get a new hospital.
1562. The management is satisfactory? In what way?
1563. I mean as regards the Board and the nursing arrangements? I think the nursing arrangements are very satisfactory, but I do not think that the Board take sufficient interest in the hospital. We have a very large Board, and I think that the majority of them pursue a policy of masterly inactivity. Only a few of them take much interest in the place.

1564.

C. P. B.  
 Clubbe,  
 M.R.C.S.E.,  
 L.R.C.P.

26 May, 1899.

1564. I see that the large majority of the Board are ladies? There are twenty-two ladies, fourteen gentlemen members, and four senior honorary medical officers, making eighteen. There are eighteen men and twenty-two women, so that we have an unwieldy board of forty.
1565. Is there a house committee? There is a house committee appointed from the Board, composed entirely of ladies, and that is practically the executive of the hospital. I think it would be much better if the house committee consisted solely of men, or half of men and half of women.
1566. There are no Government representatives on the Board, I think? No. The President and the Secretary, and, I think, the Treasurer, really are *ex officio* members of the house committee, but they rarely attend. The hospital is managed pretty well entirely by the house committee.
1567. Then it is managed chiefly by ladies? Yes.
1568. You do not think the management by ladies quite satisfactory? I do not. They have not the business capacity.
1569. Not because they are too economical? No; I do not think that.
1570. You have taken a very active part with regard to the diphtheria branch? Yes.
1571. You have performed most of the operations there for many years? Yes. I have had entire charge till quite recently.
1572. Now you have given over the charge of that branch to Dr. Gill? Yes.
1573. I suppose it is practically a separate hospital? It is really a separate hospital, but it is nursed from the general hospital.
1574. But even the medical attendants are separate, so that there is no danger of infection? Dr. Gill is the pathologist, and he has no beds on the general side.
1575. And the resident medical officer only goes in case of emergency to the diphtheria hospital? Yes.
1576. The anti-toxin treatment has been used there now for some years? We began to use it in 1895.
1577. Has it been a very great success? Yes. It has lowered the death-rate from 50 to 24 per cent. The death-rate last year was 17 per cent.
1578. What was it the year before? The year before that it was 18 per cent.
1579. I ask for the two years to show that this lowered death rate was not an exceptional thing? This year there has been no death at all so far.
1580. Do you think it likely that the death-rate will be further decreased? Yes; I feel sure that it will. Formerly we did not give enough anti-toxin. In the first place it was very expensive, and we did not know much about it. We find that we can give much larger doses. If it is given earlier and in sufficient quantities I believe there will not be any deaths from diphtheria at all.
1581. Then the diphtheria hospital has been a very useful institution? Yes; 884 children have passed through it since it opened in 1893, and there are only twelve beds. We opened the hospital in July, 1893, when there were 75 cases with 43 deaths. In 1894, there were 137 cases with 68 deaths; in 1895, 184 cases with 42 deaths; in 1896, 177 cases with 34 deaths; in 1897, 160 cases with 31 deaths; in 1898, 151 cases with 26 deaths.
1582. The hospital has been objected to as likely to be a focus of disease;—has there been any real ground for that objection? No; as a matter of fact there have been very few cases of diphtheria in the Glebe. We hardly get any cases from the Glebe; but if it was a focus of infection, we should get more of them.
1583. The number of cases from the Glebe has not been greater in proportion to the population than those from other districts? No; I think the number has been less. We have a table in the report showing where the cases come from. There were nine cases from the Glebe last year.
1584. You do not know of any case that was fairly attributable to the presence of the hospital in that district? I do not know of one.
1585. I think it is proposed that the new hospital shall be built upon the site on which the diphtheria branch now stands? Yes.
1586. Do you think that a good site? I think it is as good a site as we are likely to get near Sydney.
1587. Then would you require a new place for the diphtheria hospital? We could not build our new hospital there until some provision was made for diphtheria cases.
1588. Have you formed any opinion as to where a new infectious diseases hospital should be? I think should be somewhere central. It should be get-at-able, so that acute cases may be safely conveyed to it.
1589. The necessity for its being near has more applicability to diphtheria than to other infectious diseases? Yes; because the children are very frequently brought when they require an immediate operation.
1590. So that if you had a small hospital fairly near for diphtheria and urgent cases, there would be no difficulty in having your ordinary infectious diseases hospital at some distance? No.
1591. What diseases should go to an infectious diseases hospital? Diphtheria, scarlet fever, measles typhoid, and whooping-cough, I suppose. There is no provision for children with whooping-cough in Sydney, and though many of these children are very seriously ill, we cannot take them in, because we have no means of isolating them.
1592. You would add erysipelas and lock cases? Yes.
1593. That would involve the necessity for a large hospital with divisions? Yes; separate pavilions.
1594. You are not likely to get a site of that kind very near Sydney? No. Probably there would be a disturbance in any locality in which we proposed to start it.
1595. I gather that the diphtheria branch of the Glebe Hospital is very expensive? It is expensive. Each bed costs £81, and the cost of each patient is £6 5s., whereas on the general side the cost of each patient is only £4 13s. It is not very expensive.
1596. It is expensive comparatively? Yes.
1597. And that arises from the fact that you have to have a so much larger proportionate nursing staff? Yes; it has always to be kept up because you never know when a rush of diphtheria is coming.
1598. And your nurses are only able to spend a smaller number of hours on duty than in an ordinary hospital? Yes. They have eight hours on duty instead of twelve. There are three relays.
1599. Partly from the strain of the cases, and partly from the atmosphere in which they live? I think so.
1600. What is the average stay of the children in the hospital? It has not been calculated out, but it is about three weeks.

C. P. B.  
 Clubbe,  
 M.R.C.S.F.,  
 L.R.C.P.  
 26 May, 1899.

1601. And then what do you do with them after that? If we can, we send them to the Coast Hospital; we even send them before they have been in three weeks; but very often the Coast Hospital cannot take them. Then we have to keep our beds full of convalescent cases which are still infectious. It ties the beds up. It would be better to transfer the cases after they had been in a fortnight to a convalescent hospital.
1602. They are in an infectious condition for how long a time? For a month or six weeks, but before we send them out to their homes, unless we are very crowded, we make sure that they are not infectious by taking a cultivation from the throat. This is done when they are getting well every day till we find no bacilli; then we know that they are safe.
1603. Do Dr. Gill's duties include diagnoses for outside practitioners? No.
1604. He does nothing of that sort now? He may do it as a matter of courtesy.
1605. It was done at one time, was it not? Yes; when we had a house surgeon there.
1606. I suppose it is now done in Macquarie-street, at the Board of Health establishment? I do not think it is done officially there. I do not think it is done anywhere. As a matter of courtesy, we do it at the Glebe occasionally.
1607. Are fees charged for that? No.
1608. *Mr. Barling.*] The public will read with great satisfaction your statement as to the increasingly successful effect of the anti-toxin treatment:—are there any after ill-effects resulting from the use of anti-toxin? We have not noticed any ill-effects resulting even after very large doses.
1609. In the early stages of its use I believe that even the doctors were fearful on that score; but their fears have not been borne out? No; nor have they been in Europe.
1610. With regard to the general hospital for children, you said that it was most unsuitable? Yes.
1611. What steps have been taken, beyond obtaining the requisite land, to get a better hospital? No steps have been taken.
1612. *Mr. Walker.*] Have you many typhoid cases in the hospital? Yes, a good many.
1613. Have you more than your usual number there? Yes, there have been more recently.
1614. Do those cases come from the neighbourhood of the Glebe or from other parts? From other parts.
1615. The number is rather in excess of what it used to be? Yes; I think so. If a case of typhoid comes we take it in, no matter where it comes from, if we have a bed.
1616. With regard to the diphtheria hospital, there seems some increase there? Yes; diphtheria cases come from all parts of Sydney. Although the hospital is situated in the Glebe, we do not consider it a local hospital. It is the Sydney Children's Hospital.
1617. Complaints have been made that there are more cases than you ought to have there, both typhoid and diphtheria cases? We get as many diphtheria cases as we possibly can. That is the object of the hospital, is it not?
1618. Yes, it was established originally only in connection with the Glebe? It has always been a general children's hospital for Sydney.
1619. I do not think so. Have you heard of an application being made for a site for a children's hospital elsewhere? We made application for a site at Paddington, above the old rifle-butts; that was two or three years ago.
1620. That was refused? Yes; because it was thought that it would injure the sale of the sites around the Centennial Park.
1621. Then they made another application for a site at Kensington? I do not know. I should not agree to that; it is too far away from Sydney.
1622. *Dr. Manning.*] With regard to diphtheria;—do you think it would do if there was a small receiving hospital somewhere near Sydney for diphtheria and urgent cases, and the majority of the cases went to the Coast Hospital? I think it might.
1623. The Commission would like to know your views as to the pay system in the hospital; the question is, should the hospital be only for the necessitous poor, or should sums according to the means of the applicants be charged? I do not think that they ought to be charged anything at all.
1624. Then, would you take in gratuitously people of moderate means who could afford to pay 5s., 7s. 6d., or 10s. a week? If they could only pay 5s. a week I should say that they are fit subjects for hospital treatment.
1625. Then where would you draw the line, as far as payment is concerned? If a man could pay 30s. a week he ought not to go into a hospital; he ought to be in some provident society. Perhaps one would have to draw the line in cases requiring an operation, where they could not pay for the operation; but if it was a purely medical case I would not take the patient in if he could pay £1 a week, because I think by that we are pauperising people. In fact, the hospitals are not doing their legitimate work. People who have no money at all are crowded out, whilst well-to-do people, who can afford to pay proper fees, come into the hospital, and they do not feel any shame in doing so. They say, "We are paying;" but they are not paying.
1626. You think it is taxing the honorary medical officers unfairly to take in these cases? Very unfairly.
1627. Besides that, it is competing with the general practitioner? Yes.
1628. There do not appear to be any hospitals in Sydney—private hospitals or nurses' homes—to take in cases that can pay only small amounts per week? Some of the nurses' homes will take them in for £2 per week.
1629. Then the doctors' fees are in addition to that? Yes.
1630. If the hospital did not take in those cases, it is possible that private hospitals or homes might be established for them? They would spring up at once.
1631. At a cheaper rate? I think so.
1632. You do not think it right that the hospital should make a profit out of any of their cases? Certainly not.
1633. You do not object to people going into the general wards who can afford to pay for maintenance? The maintenance at the Prince Alfred Hospital is over £1 a week.
1634. You do not object to that, but you object to cases going in out of which the hospital makes a profit? Very much. Still, as I said, I object altogether to the payment system.
1635. But you see the difficulty that surrounds the matter? It is the difficulty as to funds. The charitable public ought to subscribe, and I think they would if they knew that only poor people went into the hospital.

C. P. B.  
Clubbo,  
M.R.C.S.E.,  
L.R.C.P.

26 May, 1893.

1636. You think that taking in richer people, and getting payment from them, rather deters subscribers? I think so.

1637. Speaking of out-patients, do you approve of payment by out-patients for registration? No.

1638. Have you any system of that kind at the Glebe? We have. The out-patients formerly were asked to contribute what they could at every attendance. Recently there has been a rule passed, according to which each out-patient at the first attendance has to pay 1s., if he or she can afford it; but they are not pressed. I do not think it is a good plan.

1639. What are the objections to it? I think if they are so poor that they have to come to the hospital, they ought not to be asked to pay anything. In coming from a distance they have to pay tram fares, and it is very hard on some, and those on whom it is not hard ought not to come.

1640. Do you think everything possible is done by the hospital authorities to detect abuses in connection with the out-patients' department? They make an effort. I do not know whether everything possible is done: but frequently, at the Prince Alfred Hospital, people slip in who can well afford to pay. I can give an instance. I operated upon a man in Prince Alfred Hospital some three years ago, and when that man made application to the hospital he was asked what he was earning, and he said he was not earning anything. It was found, however, that he had £10,000 put by. He went into the hospital for the express purpose of cheating me. He had seen some friend who had been operated upon by me, and he was told what the man paid me. He said, "O you are a fool, I am going in to Prince Alfred Hospital to get it done for nothing by the same man." There are many cases of that kind.

1641. Do not you think it is advisable that there should be some officers on the staff whose duty it should be to make inquiries at the peoples own homes? Yes, it is a very good idea. That is what they do in Manchester. They cannot inquire into every case, but they send an officer to inquire into about one case in every ten.

1642. The very fact of its being known that is done will very likely act as a deterrent? Yes.

1643. I gather that some inquiries have been made here, but they have only been spasmodic? It has not been done regularly.

1644. The enlargement of your out-patients' department has led to a very large increase in the number of patients has it not? Yes. For years and years we had no out-patients' department at all. The out-patients kept coming, however, in spite of our efforts to prevent them, and we found that we had to make some provision for them. It is only quite recently that we engaged a dispenser to dispense drugs for them.

1645. In every case where you enlarge a department or give extra facilities you get them taken advantage of to a very large extent by the public? Yes.

1646. People find out that they have got complaints that require medical treatment when they think they can get them treated very easily? Yes. Very strict inquiry is made into the position of every applicant to the out-patients' department and people are refused every day.

1647. Those inquiries are only made at the hospitals—the people are not followed to their homes? No.

1648. Do you think the hospital accommodation at Sydney is sufficient at the present time? I think it probably would be if a lot of those people who have no right in the hospitals were excluded.

1649. That is if paying patients were kept out? Yes.

1650. If this is to take place, can you give any suggestion as to the best way in which it can be carried out? The Childrens' Hospital should certainly be increased in size. In summer we have to refuse many cases. The cases of gastro-enteritis are more numerous than any others, and mortality from that is very large indeed. There are many other cases that we could save if we had more hospital accommodation. You were asking how we could increase the accommodation. Well, in the case of the Glebe, funds might be got, and a new hospital built, one with double the number of beds that we have at present.

1651. Then in connection with other hospitals, what would be the most advisable way of increasing the accommodation? It could be done at the Prince Alfred Hospital by building the proposed wing and new pavilions.

1652. You think that would be the best way? It would be a very dear way; but Prince Alfred Hospital is a large central hospital; it is used for educational purposes; and it is important that the beds should be there rather than a distance away.

1653. Why do you say it is a very dear way;—can you point out a cheaper way? I suppose there is no cheaper way of building at Prince Alfred Hospital, if you carry out the lines on which the present building has been erected. As you know there is a much cheaper way of building a hospital. Look at the Coast Hospital.

1654. Would you advocate a cheaper hospital on another site? No. I think it would be better to add to the Prince Alfred Hospital, as it is a medical school.

1655. Especially as the administrative parts are already built? Yes.

1656. Do you know how many private hospitals there are in Sydney? I suppose there are quite a dozen.

1657. And in the suburbs? I include the city and suburbs.

1658. Are those private hospitals well conducted, as a rule? Yes, they are very well conducted.

1659. Is the nursing in them satisfactory? Very satisfactory.

1660. Have you heard of any abuses in connection with them? No.

1661. Do you think it is necessary to register or license them? I do not think so, except the lying-in hospitals.

1662. You think that it would be a good thing as regards those hospitals? Yes; I believe the lying-in hospitals have to be registered. If, however, they were not well conducted the doctors would not support them.

1663. Might they not be used for abortion and things of that kind? Yes; but it would soon be found out, and respectable medical men would not send their cases there.

1664. You say they are good institutions;—do they supply all that is necessary for private cases? Yes.

1665. *Mr. Barling.*] I think we understood you to say that you advocate that no payment whatever should be made for hospital accommodation? No.

1666. Without exception you would eliminate payment, so that hospitals can be used entirely for the necessitous poor? Quite so.

1667. There is a certain class of cases that have exercised the serious consideration of the Commission, namely, that portion of the population, not belonging to the working classes, who have incomes from £200

C. P. B.  
Clubbe,  
M.R.C.S.E.,  
L.R.C.P.  
26 May, 1899.

- £200 or even up to £300 a year; it would be almost impossible for them to pay the fees that would have to be paid if they could not go to a hospital, and we are anxious to get opinions as to how that class of cases are to be dealt with? They can be dealt with if they join the Medical Aid Society.
1668. But they do not do that; that class of the population are almost shut out? The Medical Aid Society take them up to £300 a year.
1669. I refer to a class of persons that are not brought into contact with the working classes, and you could hardly mix them up together? They would not have to mix up at all if they joined the Medical Aid Society.
1670. What is that Society? The medical men of Sydney started a society, called the Sydney and Suburban Medical Aid Society. Every doctor in Sydney belongs to it or can belong to it, and certain of us are on the consulting staff. The fees are very small. I think the doctors would get on the average about £1 a year. A patient must stick to the same doctor for a quarter. He may choose any doctor he likes, and if he is not satisfied after the expiry of the quarter he can choose another doctor for another quarter. If a patient is seriously ill, and the doctor wants a consultation, he gets a member of the consulting staff, who sees him for half fee.
1671. How long has that society been in existence? About two or three years.
1672. It is not generally known, I think? It ought to be more widely known.
1673. Can you give us details with respect to it;—it will be interesting to the public to know something about it? It would be better to have before you the treasurer and secretary of the society.
1674. How are cases dealt with in which operations are required? Those cases would have to go into the hospital.
1675. But you would not take them in the general hospital? Yes; I would take them in; but I would not let them pay anything.
1676. If a person is getting £200 or £300 a year it would be hardly fair to let him come in without paying something? You think they would feel that they were being pauperised?
1677. They would like to pay something, but they could not pay the heavy fees necessary in a private hospital? A great many medical men will take such cases in a private hospital, and not charge a fee at all.
1678. What are the fees at a private hospital? From eight to three guineas a week. The difficulty can be got over in this way. Lots of men would far sooner do a case in a private hospital for nothing than go into the general hospital. It is done at present. I know doctors who frequently do large operations, and charge nothing, provided they pay the private hospital fees.
1679. *Mr. Walker.*] Is there any membership of the society, or is it a society got up to deal with all cases? With all poor people. There is a wage limit in connection with it.
1680. Do they subscribe anything, and do they have tickets of admission? No; they pay so much a week or so much a month.
1681. And there is no memorandum or ticket to indicate that they can come to the Medical Aid Society? No.
1682. The Medical Aid Society visit them? Yes; but they have to belong to the society before they can call in a doctor.
1683. Their names are registered? Yes; the valuable part of it is that all the decent and respectable doctors of Sydney belong to it, and all the senior men are consulting doctors. Dr. Rennie was the secretary.
1684. *Dr. Manning.*] Are there any other particulars that you would like to give us? I should like to explain something that I said at first about the ladies. What I meant to imply was, that I think the hospital would be better managed, if managed by more men. I do not mean to say that it is badly managed now.

James Graham, M.B., M.S., M.P., sworn and examined:—

J. Graham,  
M.B., M.S.,  
M.P.  
26 May, 1899.

1685. *Dr. Manning.*] You are a Director of Sydney Hospital and of Prince Alfred Hospital? Yes.
1686. You were formerly Medical Superintendent, and then one of the honorary physicians to the Prince Alfred Hospital? Yes.
1687. You have given much attention to hospital matters? Yes.
1688. Are you aware of the conditions under which the dispensary in Regent-street is managed by the Sydney Hospital? It is managed purely and entirely as a dispensary, a place for dispensing medicines for men and women who come there casually. There is little or no systematic surgical or medical treatment carried on there such as is done in the outdoor department attached to the main hospital. None of the minor surgical operations are done there, no extraction of teeth, no opening of abscesses, dressing of wounds, setting of fractures. It is simply a place where people get medicine.
1689. So it is not a dispensary in the sense understood in Great Britain? No.
1690. There is no visiting of patients at their own homes from it? No; some years ago the officers appointed to look after it were paid a small sum, and one of their duties was to visit patients at their homes, but the thing fell into disuse, and now nothing of the sort is done. There is no visitation at all.
1691. What is the amount of the Government subsidy? The Government subsidy is £600 or £700 a year. I should like to say that I brought under the notice of the Board of Management in the Sydney Hospital the unsatisfactory character of the work done at the dispensary, and was the means of persuading the Board to abolish it. The Board agreed to give it up, but unfortunately we had a lease of the building for two years to run, and we had to make some use of the building. When the place was abolished about three years ago, the parson of the district, Mr. Boyce, and Mr. McGowen, M.L.A., made representations to the Government to the effect that it was a hardship to the people to rob them of this charity, with the result that the Government stepped in and said, "Well, we will persuade the hospital authorities to carry it on," and a sufficient provision being made in money to carry it on, the hospital was obliged to take it up again.
1692. What rent is paid for the place? About £130 a year with taxes.
1693. What are the other expenses in connection with it? Purely the cost of medicine.

1694.

1694. Have you a dispenser there? There is no special dispenser; he is the dispenser attached to the main building. J. Graham,  
M.B., M.S.,  
M.P.

1695. You do not think it is necessary or useful work? I think it is an absolute discredit to us as now conducted. That is my view of the question, but I think it could possibly be made to do good work, and if my suggestions had been carried out it would have done good work. It would if it was established as a dispensary similar to those in the Old Country, where a doctor resides and attends casualties, sets broken arms, extracts teeth, makes casual visits to deliver women taken ill, and so on. We should make a pure dispensary of it, and put it under the rule of some charitable organisation; then I think it could be made to do good work, but as it is now I do not think it is a credit to any scientific institution. 26 May, 1899.

1696. You would have more than one medical officer for the whole of Sydney? I think one man could do the work, because the amount of casualty work that you get is very slight. I know from my experience of the Old Country that one resident dispenser in a huge district can do a great deal of work of that kind. I think there is a want of that type of assistance. I suggested when I got the Board to abolish the institution, that it might be handed over to the Students' Medical Society, who might run it themselves. It might be conducted as a medical mission where you combine religion with medical work. That type of work is carried on all the world over.

1697. A medical mission? Yes, or purely a dispensary.

1698. On English lines, visiting people in their own homes? Yes.

1699. You are of opinion that there is a want of that sort? Yes, a distinct want. The experience of every medical man in the city is that there is a difficulty of knowing what to tell poor people when they come begging you to see a sick man or woman. You send them to a hospital unless you go and attend them as a matter of charity, which you often have to do. A man comes weeping and tells you that his child has broken its arm, or that he has a wife who is dying, and he is in destitute circumstances, and you must either attend as a matter of charity or send the case to the hospital.

1700. Then they go to the police, the police surgeon is sent for, and they are sent into the hospital to occupy beds, he not having time to attend them? Yes.

1701. Do you think an institution of this kind properly administered would prevent a good many people being sent to the hospital who are now sent there? Yes, I think it would. It would relieve the hospital very much of a form of congestion which should not exist.

1702. You talk of putting them under the Students' Medical Society;—do you not think it would be well administered as part of the Benevolent Society? I do not think so. I think that anything connected with scientific work should be out of their hands, and you cannot dissociate the scientific from this class of work.

1703. You say it will be done at a very much more reasonable rate if done by an organisation already existing than by one started as a separate affair? Yes; because you would require a good deal of voluntary work which you would readily get from such an organisation as the Students' Medical Society. You would have to put in such a type of doctor as is found in the Students' Medical Society,—young graduates. There are plenty in the society who would do good work, and, moreover, it would be educational work for the students. Their course of study prescribes that kind of work, and they must get it either at the hospital or from a doctor, or else in some way that has not yet been established, from a dispensary. I mean the term that he has to put in for outdoor visiting or medical work. He could get that education from such an organisation as the dispensary, so it would be educational work too.

1704. The Commission would like to know your views as regards the pay system in hospitals; whether hospitals should be only for the necessitous poor, or whether a sum according to the means of the applicants should be charged? That is a matter which has been a difficult question experienced by all administrators of hospitals. It is a question that has been prominently before the British public for the last year or two especially, and they do not seem to get "any for'rarder," as they say. No doubt the thing has to be managed entirely by the Board of Management. No outside law can be brought in for their guidance. When they do try to manage it the Board of Management find themselves in a hopeless quagmire. Some years ago the Prince Alfred Hospital directors appointed a detective at a salary of £3 a week for three months to go amongst the out-patients and watch those who applied, and to follow them up to their homes and take a note of the circumstances surrounding the case and report thereon to them. The sum and substance of the report was very interesting, but it only amounted to this, that whilst here and there there seems to be a case which might easily be regarded as a case of swindling, as far as a man can be said to swindle who comes for relief when he should not, they were mostly cases of respectable poverty. It was suspected in the first instance that some were cases that should not come to the hospital; but with the services of a paid detective we could not find any very substantial ground on which to take action. It seems to me that the most you can hope for is to try and educate public opinion up to the fact that the hospital is only a place for poor people. No man or woman ever seeks to go into the hospital unless driven to it in Scotland. I think there are more abuses in the hospital system in England. In Sydney it is abused, but I have, at all events, not been able to find any serious amount of abuse; and I have watched the thing very closely. In cases that I have thought were cases of abuse, on inquiry, I have found sometimes that the cause of their coming to the hospital was a recommendation of some doctor. For example, I remember one case in which a patient presented herself at the hospital and said that she was willing to pay £20. I said, "If you can pay £20 you have no right to come here." She said, "I have been to a hospital surgeon and he will not operate under 50 guineas. I can sell the things in my house and realise £20, but I cannot raise 50 guineas, and the doctor tells me that I had better go into the hospital." There was a patient whom I certainly regarded as not a suitable person to go into the hospital, but I was forced to admit her. It will be found that many of these cases are sent by the doctors themselves, who would rather send the case to the hospital and forego their fees, and have the comfort of no responsibility.

1705. Do you think that the hospital should receive sums of 5s., 10s., and 15s. a week from patients; and, if so, what limit would you place upon the amounts? In admitting patients it is a good thing no doubt to regulate the admissions by the wage-earning limit; then the difficulty comes in, and you have to leave it to the discretion of the Board. A man who earns over the wage limit may be ineligible; say it is a case of bronchitis, but next month he may be highly eligible; he may have a tumour in the abdomen. Each case must be left to the discretion of the management. I do not see what harm you do in collecting a few shillings from patients who come to you. You relieve the patients of the bitter feeling that he is at the hospital entirely

- J. Graham,  
M.B., M.S.,  
M.P.  
26 May, 1899.
- entirely on sufferance. I think it is a humane kind of thing to say pay what you can. I have taken 6d., I have taken 2s. 6d., and 7s. 6d. I have taken various sums acting on that principle.
1706. Would you adopt a limit as to the sums you would take? Well, if a patient would pay readily £2 or £3 a week, I would not take that patient in unless I thought his circumstances demanded it. There again you have to leave it to the discretion of the management. If the patient had bronchitis I would not take him in. If it was a case of hernia, which required two doctors and two nurses and the great expense of a surgical operation, I would recommend that case without hesitation.
1707. Do you think hospitals should ever make a profit? No; I think it is wrong. That is an unjustifiable position for any hospital to take up.
1708. Then the hospital ought not to charge more than the maintenance rate? The question is, what is the maintenance rate. Perhaps you mean what they are actually out of pocket by the end of the year.
1709. I mean the average cost per bed? No, I do not think they ought to charge more than that.
1710. Do you approve of any payment for the registering of out-patients? Well, that comes under the same category as taking a collection from the patients who come in. I have watched the type of patients who come in now and the type who came before the shilling was charged, and I find that it is not altered. It comes to this, however, that we get over £600 a year by the payment of a shilling each from the same class of people from whom we got nothing before.
1711. It has not acted in any way as a deterrent as regards the number who come to the hospital? No; I do not think that is the source of attraction to patients. I think the principle that gives honorary medical officers the liberty to develop out-patients' departments is the principle that causes all the trouble. The Sydney Hospital has something like 100,000 out-patients in the year. That evil has arisen because there has been no serious check upon the honorary staff, who have a large say in the management, and every man who gets appointed wants to have as big a clientele as possible. It is the road to professional success, and the Board have been lax in allowing huge out-patients' departments to spring up in a building entirely unsuited for out-patients' work. If you get a man to start a special department he will get dozens to come. If you start fifty more out-patients' departments you will get them all largely attended.
1712. Every enlargement of the out-patients' department, and every new specialist appointed, will bring a large number of patients? Yes.
1713. Then there must be considerable abuse? It comes to this: Disease in many instances is a subjective thing—it is a nervous business—and a man may come with a rash thinking he has skin disease, though that man could get on very well without a doctor. That class is common amongst outdoor patients. A large number are attracted to the hospital thinking that a bottle of medicine is the elixir of life, a panacea for all human ills.
1714. Do you think the present hospital accommodation of Sydney is sufficient? I think the present accommodation at the Sydney Hospital is sufficient, and I think that the out-patients' annex is altogether too large and ought to be abolished or reduced, but I do not think that the hospital accommodation at Prince Alfred is sufficient for it either as a general hospital or as a teaching school.
1715. If the hospital accommodation is to be increased, what will be the best way of doing it? I think it will be by the completion of the original plan of the Prince Alfred Hospital.
1716. By adding two or more pavilions? Yes. I do not approve of the suggestion that has been thrown out of the Government taking up the work and carrying it out at Little Bay, because there the work is carried on by paid officers, and it is never so well done as when it is done under the full light of public criticism.
1717. That is particularly with regard to operations? Yes.
1718. You think a large number of cases at the Coast Hospital—some of a chronic character—could be treated quite as well at the Government asylum under proper conditions? Yes. Nature will often cure them.
1719. The operations, especially major operations, ought to be done in the hospital within the city under the intelligent supervision of members of the profession? Yes; because the average man who lays himself out specially for that work is always very subject to the keen criticism of the casual practitioner who is entitled to come and see what is doing, and professional criticism always keeps that man up to the mark.
1720. So you think that the place situated at Little Bay should never be used for operations? No, unless for casual work.
1721. Do you know all about Moorecliff? I know something about it.
1722. Do you think that institution is really necessary? No, I do not think it is necessary; but I think it has arisen like the other out-patients' departments, because members of the staff have had a considerable say in the management of the Sydney Hospital, and naturally enough each man looked after his own department. I do not think Moorecliff is necessary for this reason: Many of the cases there are chronic lid cases, which certainly could be treated just as well, and better, at Little Bay.
1723. Or in any properly-officered Government institution? Yes; the great bulk of the eye cases there—there are between sixty and seventy beds—ought to be treated in some other Government institution. They are nearly all Government patients to start with, and the rest of the cases could be accommodated at the Prince Alfred Hospital, or in that portion of the Sydney Hospital which is now used for lock cases, which ought not to be there, but which ought to be transferred to some other Government institution. There is a portion of the Sydney Hospital building set apart for lock cases, but I think the place is totally unsuited for that line of work. That part of the hospital ought to be emptied of its present cases, and the eye cases should be put in there.
1724. So that Moorecliff could be done away with by sending a few cases to the Sydney Hospital, and certain other cases to the Prince Alfred Hospital, and a large majority could be put into other Government institutions? Yes; Moorecliff has become a huge department, with four honorary doctors.
1725. Have you any knowledge of private hospitals and nursing homes in Sydney? Yes.
1726. Do you know how many there are? I could not say; they are increasing every month. Every nurse that goes out thinks it her duty to start a private hospital. I think it is a good thing; but it is a pity that there should not be some kind of supervision over them.

1727. On the whole, you think they are well conducted? Yes; they are chiefly managed by nurses that one personally knows, and has helped to train—Sydney Hospital and Prince Alfred Hospital nurses.

1728. You think they ought to be registered and licensed? I think so; I think it is a healthy rule.

1729. Both for sanitary reasons and for reasons applicable to the management? Yes.

1730. You are aware that there is a licensing system in Melbourne under the Board of Health? Yes.

1731. It would be necessary also to keep a register of the patients admitted and their form of disease, so as to prevent abuses? I think that would be a necessary portion of the registration. Of course, for statistical purposes it will be desirable, and also to see that the clauses of the Public Health Act are carried out. For example, there may be infectious cases, which they may fail to report.

1732. What about the charges;—do they vary? They are coming down very much. The law of supply and demand is bringing them down. There are plenty of respectable, cleanly, well-conducted places that will take in a patient at from £1 a week upwards. That is what it is coming to now; and I think it is a very good thing. One has no compunction now about sending patients to a general hospital who can pay a few shillings a week, knowing that there are private hospitals which will be as considerate to the patients as a general hospital.

1733. Can you tell us anything about the newly-established Medical Aid Society? There are two Medical Aid Societies—one established by a private company, and the other by the British Medical Association. The one established by a company is an organisation out of which they hope to get large profits. They send out collectors to induce people to join the society to get the advice and skill of "a man of standing." They pay so much to the "man of standing" whom they employ, a small proportion of what they get, and keep the rest and divide it. The "man of standing" is, of course, regarded by his professional brethren as being beneath professional notice; and those who have lent themselves to the work are tabooed by the profession. The Medical Society, recognising the danger of such an organisation, thought they might start one on similar lines, only, instead of dividing the profit, they divide the money amongst those who offer their services.

1734. What is the principle on which it is done;—what is the amount of subscriptions of those who join, and what are the fees paid? I think they do not have any entrance-fee to pay. They pay about 6d. a week, and the sum total is divided among those who give in their names as being willing to attend. I think the thing has worked out very well. Medical men who have given their services in that way tell us that their remuneration has averaged something like 7s. 6d. a visit.

1735. It is really a provident medical aid society? Yes.

1736. For people rather above the working class? Yes.

1737. And in your view it is satisfactory in its working? It seems to have been satisfactory, and to have met with the approval of the profession as a whole. Of course the unsatisfactory part would be carrying it on on lines similar to those of the other organisation,—sweating the medical men.

1738. *Mr. Barling.*] One question with regard to the Sydney Hospital: I believe that the Government representatives on the Board are appointed for life? Yes.

1739. Can you tell us how it works;—does the Government get proper representation? As regards the management of Sydney Hospital I think the Board is altogether too large. There are about twenty-six members, half of them being Government nominees, and there are two doctors from the staff to advocate the claims of the staff, and a president and two vice-presidents in addition; therefore there are twenty-eight men on the Board. A short time ago the whole of the honorary medical staff were entitled to come in; there were as many as forty then, so that it was a perfect Parliament. That is ridiculous. After a great deal of trouble I introduced a rule to exclude the members of the staff. That was carried, so we do not get them; but we still have a large number of directors.

1740. What would you suggest? A Board similar to that at Prince Alfred Hospital. It is a smaller Board; there are three Government representatives, and from three to six ordinary subscribers' directors. The Government have often sent a type of man who has never taken the slightest interest in the institution, and who is very often absent. On the other hand some have come who took a real live interest in the work.

1741. Would you confine the appointment to medical men? No. I would be very careful about that.

1742. What type of person do you think should be appointed? At the Prince Alfred Hospital you see a type of men who would manage any organisation well. I think they have been singularly fortunate in their selection. I always hold up the Prince Alfred Hospital as being a model institution as regards the Board of Management. There is never the slightest friction, the slightest irritation; but the management conducts the business in accordance with the principles of reason and common sense. I think you could not get a better type of men. I would not exclude medical men, but I would be very careful not to have too many of them. I think it is wrong to have on the Board professional men actively engaged in the hospital work. In the Sydney Hospital we used to have the whole staff on the Board. Now the Act of Parliament compels us to have two. The staff meet once a year and elect two of their number to represent them. I do not know whether it works well; I doubt it. I do not think it is a sound principle. The Prince Alfred Hospital staff thought they would like to have men on the Board, but the Board said "No; they did not think it was a good principle, but if the staff cared to put a man up when vacancies were declared they would leave it to the subscribers to say whether or not they should be represented." I think that is the best way. When you get the medical element largely represented, especially if actively engaged in the hospital, no doubt, they may be imbued with high and philanthropic principles; but every man is apt to look after himself, and naturally enough he cannot but be an interested party.

Edward Thomas Thring, F.R.C.S., Eng., L.R.C.P., London, sworn and examined:—

1743. *President.*] The Commission would like to know your views as to the payment system by patients in hospitals—whether the hospitals should be only for the necessitous poor or the patients should pay according to their means? It is a difficult question. As far as my own experience goes, any abuse which takes place is more likely to be found amongst in-patients than amongst out-patients, and particularly amongst the surgical cases rather than amongst the medical cases. Many patients who require to have some more or less serious operation performed say they are not able to pay the ordinary fees or the nursing

J. Graham,  
M.B., M.S.,

London.

26 May, 1899.

E. T. Thring, nursing expenses, and they go into a public hospital; then we find out afterwards that they were really able to afford, at all events, the necessary fees for nursing, if not the full fee for the surgeon, or some very fair proportion of that fee. It has always struck me that such people have no right to fill up beds in public hospitals, which are primarily charitable institutions, when they could afford to go into a private hospital or to have their nursing done at home. I know the objection is made that they cannot afford to pay, but you do not find that a surgeon refuses what is necessary, because he does not get his fee. I have tried to help in my small way to prevent abuses by saying, "Well, if you cannot pay my fee I will do the operation for you if you will pay the nursing fees," thus keeping them out of the hospital.

F.R.C.S.,  
Eng.;  
L.R.C.P.,  
London.

16 May, 1899.

1744. Is that practice generally followed? It is very generally followed I could name men who do that. I find, however, that patients do get into the hospital, who ought not to be there. An instance occurs to me in which we found out that a woman's husband was ready to pay a fifty guinea fee, but she was admitted into my ward, and I operated on her. That was an abuse of charity, and I was wondering whether we could recover the amount.

1745. Having discovered that, is there any power to recover? I do not think there is. In this case the patient simply went home. At the same time such patients simply take up beds that are intended for necessitous cases, and they are practically defrauding the honorary staff.

1746. Does that apply to out-patients? I do not think there is much abuse in connection with the out-patients department, or not as much as there used to be.

1747. Can you tell us what means are taken to discover the means of in-patients? They are always asked questions by the Medical Superintendent, and I believe by the secretary, as to whether they are able to pay the ordinary fees outside.

1748. Do you know whether the inquiries are followed up? I am not sure whether they are at present. At one time they were. The Prince Alfred Hospital employed a private detective to make some inquiries; that was some years ago.

1749. Would you be in favour of receiving sums of any amount from patients? It is very difficult to say either yes or no to that. I believe that if it were recognised by patients who go into the hospital that they go in on entirely charitable lines, that they pay nothing, there would be a greater effort made by many of them to have their needs seen to outside. If it were made a more purely charitable thing, they would scruple to accept it. As it is they pay 10s. or £1 a week, and they look upon it as if they had "bought the place," as was remarked to me the other day. That rather bears in favour of making the system purely charitable. Then on the other hand a man with a small income and a wife and several children to keep cannot be expected to pay several guineas a week. I might point out this, too, that of late years that want has been catered for by private hospitals. There are at least three good private hospitals where the nursing is the best you can get in which patients are received for three guineas a week.

1750. Those hospitals will be beyond the reach of the class you mention? Yes; but they reach a class who might require to be in for a week or two, and who could not pay five or six guineas a week.

1751. Is not that class catered for by a society recently formed called the Medical Aid Society? I do not know. That has not come under my notice.

1752. Then you find it difficult to lay down a general rule? I do certainly.

1753. Supposing the hospitals do receive them, do you consider that in any case they should charge more than the fee for maintenance, that they should make any profit? No; I do not think they should make a profit. The hospital should not be conducted on commercial lines. It should be a charity.

1754. The maximum charge should be the mere cost of maintenance? Yes. It being understood that the patient is not able to pay the ordinary fee for outside attendance.

1755. I suppose you consider that if the hospital requires the payment of something by the patient it would be unfair to the profession outside? There is no doubt that it does affect the profession outside very much. A small accident happens, say, the fracture of a collar-bone, which a general practitioner would be quite able to deal with, no prolonged attendance being required or any great skill. The instinct is for the patient at once to go to the hospital.

1756. And that would not cost very much? It would not.

1757. Do you approve of the practice of charging a fee for registering out-patients? I do not think I do. If they can pay a fee they can pay an ordinary lodge subscription. That class of patient is really catered for by the lodges.

1758. Would there be a danger of an out-patient, who is asked to pay a fee of 1s., presuming upon that and forgetting that it was a matter of charity? I think so. I know that in many cases they do.

1759. Do you think anything could be done in the way of checking abuses by well-to-do patients;—anything more in the way of inquiry? That I am doubtful about, unless you can make them tell the truth, and that you cannot do very often.

1760. Do you think the out-patients department has assumed undue dimensions at the Sydney Hospital? I do.

1761. What do you suppose has led to that? Well, the very easy way in which people can be admitted to the out-patients' department simply on application. They prefer—one hears it over and over again—to go to the hospital because they believe they get the best advice for nothing. They can go to a specialist to get his advice about anything, but if they go to his house they have to satisfy him that they are poor and unable to pay the fee.

1762. The new branches to the out-patients department tend to bring a lot more patients? Yes; and many of those patients could really be treated very well by the ordinary general practitioners. Many of the out-patients one has to deal with really could get the advice they need from their lodge doctor.

1763. Do you think that the hospital accommodation of Sydney for in-door patients is sufficient for the present demand? Well, perhaps not in some directions, particularly in midwifery work, gynaecological, and abdominal work. I am speaking of my own experience at the Prince Alfred Hospital. We have constantly a list of patients waiting to come in for necessary treatment, as we have not the number of beds required.

1764. Do you know how many private hospitals there are in Sydney? I cannot tell you off-hand; I know most of them.

1765. In your opinion, are they well conducted? Some of them, but there are some that I certainly would not send patients to.

1766.

1766. Would you advise that they should be registered and licensed? I would, and particularly for this: I know that in some instances young girls come in and are put on night duty to look after patients who have possibly undergone some serious operation or are seriously ill. Those girls are put in that position long before they are fully competent.

E. T. Thring,  
F.R.C.S.,  
Eng.;  
L.R.C.P.,  
London.

1767. There is a danger that the proprietors of private hospitals may employ cheap labour? Yes, I know that is an abuse which exists.

26 May, 1899.

1768. Have you heard of any other abuses in connection with private hospitals? I do not think so.

1769. What provision would you make as regards registration? For one thing I would suggest the limitation of the number of probationers to the number of beds in each institution. I think that is the principal thing.

1770. Then would you provide for inspection? Yes, I think so. There is another point. Sometimes the proprietor of such an institution is really not thoroughly trained herself, and, therefore, with possibly the best intentions is not competent to see that things are properly and efficiently carried out, and the supervision is entirely in that person's hands.

1771. The best thing then would really be to see to the competency of the proprietor or of the staff? Yes.

1772. Do you know what is the Melbourne practice? I do not.

1773. Do you consider that the Board of Health would be the proper body to supervise and license private hospitals? I should think so, the machinery is already there.

1774. There is no supervision at present? There is none whatever; anyone may start a private hospital.

1775. *Mr. Barling.*] I should like to ask whether you have any suggestion to make as to how the management of public hospitals generally could be improved? No. I think, speaking for the Prince Alfred Hospital and the Sydney Hospital, that the general management is very good. I do not know anything personally about the Benevolent Asylum. There is one other thing to consider that is the multiplication of Cottage Hospitals, district hospitals, and the real reason for which they are started.

1776. We should like to hear anything you have to say on the matter? It is only this, I suppose the cottage hospitals were originally intended chiefly for emergency cases, but now there is a tendency to develop them into subsidiary metropolitan hospitals, at which all sorts of major work is done, and possibly in some cases without as good an equipment as you would get at a metropolitan hospital.

1777. You are referring to cottage hospitals in the suburbs? Yes; I think they are going a little beyond the original intention, and the purpose for which they are most eminently suited—that is to provide for emergency cases, and accidents, and so forth. For such serious cases as are not emergency cases there is always time, and there are facilities for bringing the patients into the metropolitan hospitals where they are under better control, and under better conditions as a rule.

1778. Of course, the local doctors would naturally like to take part in operations of that sort? Yes; I think that has a distinct bearing on the matter.

1779. I understand you to mean that the expense of those institutions is largely increased at the cost of the charitable donors? Certainly. There has already been a difficulty with regard to the diphtheria branch of the Children's Hospital at the Glebe. The residents object, I think without reason, to its being there. I do not think that there has been any increase of diphtheria at the Glebe in consequence of the Children's Hospital being in that locality. That particular hospital, or branch of it, has been most excellently worked; but every case of scarlet fever and measles has to go to the Coast Hospital unless it is nursed in a private house. I think the provision of special accommodation would be a distinct advantage, because people are now reduced to great straits. A man in a boarding house gets the scarlet fever, what is he to do? he must go to the Coast Hospital.

1780. Where do you think such a hospital should be placed, and what character of buildings should be provided? Dr. Manning will be able to express an opinion on that better than I can.

1781. If you could give us some information on that point we should be glad? I suppose a pavilion hospital would be best.

1782. A very cheap building? One that could be easily cleaned or renewed.

1783. Somewhere near the centre of population? Sufficiently near, and with a sufficient space around it.

1784. What space would be required for a hospital of that kind—10 or 12 acres? It would be very nice to get that area, but you could do with less.

1785. What size should the hospital be;—how many beds would it require? It would be necessary to go into statistics to answer that question. The Board of Health would be able to tell you.

1786. *Dr. Manning.*] There is an idea that these private hospitals are used to some extent for abortion cases? I know that that is so. It so happens that I know of one instance. I do not think it exists at the present moment; but that it was used extensively for this purpose I have fairly convincing evidence.

1787. There is, therefore, all the more reason why private hospitals should be inspected, and that there should be registration, not only of the names of the proprietors, but also of the names of the people who go into them? Yes; this was a very flagrant case. It was worked by a firm of abortion-mongers to a great extent. They had two places, in fact; and when anything went wrong with one of the cases admitted, they passed it on to a private hospital. That has been broken up.

1788. You do not object to the cottage hospitals that you are speaking of receiving medical cases of all kinds? No.

1789. You think they might very fairly receive typhoid cases, cases of pneumonia, and similar cases; but you object to their receiving surgical cases and major operation cases? Yes; because they have not in the majority of cases the requisite equipment, and possibly the staff, as a rule, have not had the necessary experience. There are exceptions.

1790. Why do you object to the Coast Hospital? I do not object to it; but it is a long way for patients to travel, especially patients suffering from a serious attack of diphtheria or scarlet fever.

1791. Yes, a diphtheria patient; but in the majority of cases could not scarlet fever patients, well wrapped up, be got there safely? Yes.

1792. An infectious disease hospital should take in all infectious diseases, diphtheria, scarlet fever, German measles, whooping cough, lock cases, and erysipelas, and it would require to be a very large hospital? Yes, with pavilions for each.

1793. That would require a very large area? Yes.

1794. Which would be difficult to get near Sydney? Yes.

- E. T. Thring, 1795. You think that the Coast Hospital would not do for acute cases of diphtheria, but that the hospital should be nearer Sydney? Yes.
- F.R.C.S.,  
Eng.;  
L.R.U.P.,  
London.
1796. Suppose the present hospital at the Glebe is done away with, it would be necessary to have some receiving hospital for bad cases of diphtheria near the centre of population? I think so.
1797. Do you not think it is possible that there will be fewer cases of diphtheria sent to the hospital soon? Yes; in consequence of the use of anti-toxin.
- 26 May, 1899.
1798. Do you not think the doctors will employ it in private houses now that it is better known? Yes; they are doing it now.
1799. That will tend to diminish the necessity for a diphtheria hospital? Yes.
1800. You will not want one of the present size? No; because the duration of the cases is shorter. You mentioned the question of a lock hospital, and I have heard the question raised as to the advisability of founding a lock hospital. It seems to me that the want in that respect would probably be better met by having a lock ward attached to the general hospitals for various reasons. For one reason, I suppose we must look upon the metropolitan hospitals as teaching-schools, and if the lock wards were there the students could utilise them more easily. The second reason is, that there is no doubt that to go into a lock hospital and come out of it attaches a stigma to any man or woman. As I suppose we may hope to get some control over contagious diseases some day or other, it would be easier to get women to go into a lock ward of a general hospital than into a lock hospital.
1801. That would be an argument in favour of having the lock wards in the infectious diseases hospital instead of in a separate institution? Yes.
1802. No one knows who goes into the lock ward at the Coast Hospital? No.
1803. They go with the other patients in the ambulance and come back, and no one knows their destination? No.

THURSDAY, 1 JUNE, 1899.

[The Commission met at the Offices of the Public Service Board at 2.30 o'clock, p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT.)

F. NORTON MANNING, Esq., M.D.  
J. POWELL, Esq., J.P.

J. BARLING, Esq., J.P.  
CRITCHETT WALKER, Esq., C.M.G.

Joseph Foreman, M.R.C.S., sworn and examined:—

- J. Foreman,  
M.R.C.S.  
1 June, 1899.
1804. *President.*] How long have you been connected with the Prince Alfred Hospital and the Sydney Hospital? I have been connected with the Prince Alfred Hospital about fifteen years, and I have been for three years a director of the Sydney Hospital.
1805. Will you give us your views as to the system of payment by patients in hospitals? Yes. I think it is absolutely wrong in principle.
1806. Under any circumstances? Well, my opinion is that they have no right whatever to charge in a public hospital.
1807. On the ground that it is a charity? Yes, it is a charity.
1808. Intended only for people in necessitous circumstances? Yes. Those are the people for whom the hospital was built, and for whom the honorary medical men attend, which they do with pleasure. Those people, however, are not the persons who derive the benefit. The friendless are always the ones who are put in the background, and those who are able to pay can get attention at once. If they can pay £1 they are taken without question; if they can pay £2 they are received with open arms. It is a fact; I know a great many instances of it. My statement was recently called in question by the Secretary, and the next day I got a note from one of the honorary medical men in reference to a boy, whom he had to attend in the out-patients' room. The boy came in with a woman, whom they took to be his mother. The boy was so rude to the woman, however, that the doctor said, "You should not talk like that to your mother." The boy replied, "She is not my mother." The doctor said, "Who is she?" "She is the housekeeper," said the boy. The doctor then told him that if they could keep a housekeeper the boy was not a fit person to be there, and sent him away. The father came in in a towering rage the next day, forced his way in, abused the doctor, and said that his wife had been in the hospital and had died there, and that he had paid two guineas a week for her. It turned out on inquiry that the man kept a large boot shop in George-street. There are a great many cases that I know of myself in the Prince Alfred Hospital in which they pay 30s. or £2 a week.
1809. Is there not a very large section of people who are able to pay a little, not £1 a week, and who could not pay medical fees or the nursing fees outside? Yes. It is a very hard drain on those who can pay only 10s. a week. I know that from nearly twenty years' practice in the hospitals. It is a very hard struggle indeed for them. It is worse for those people to pay 10s. a week than for many others to pay a nurse outside two guineas a week.
1810. Then, your opinion is that the hospital should be confined to the use of people in necessitous circumstances? I think that those who by hard grinding are able to pay only 10s. a week will find it a serious matter. If a man, getting £2 a week, has to pay 10s. a week for his wife in the hospital I do not think that is a case in which they ought to take the 10s. a week from him. If he has to keep a family on £2 a week he is entitled to hospital treatment. It is a very serious matter for people in that position to pay 10s. a week for an indefinite time too. They very often have to pay some woman to take care of the children. It is not only that they have to pay the 10s. a week, but they have to find somebody to take the wife's place at home.
1811. That is assuming that those who are prepared to pay 5s. or 10s. a week only do it by a great struggle? Yes, in the majority of cases. My opinion is that if they had a box for free offerings in the hospital, and instead of making a charge it was made known that each one was expected to put in what he could afford, the difference in the results from that system and the other would be comparatively little

J. Foreman,  
M.R.C.S.  
1 June, 1890.

at the end of the year. It would be a very desirable thing for both hospital and the people, because the present system is demoralising the people. When they pay 5s. or 10s. a week the idea of charity ceases. If they pay £1 a week they think they are entitled to extra attention. If they pay £2 a week the airs they put on towards the other unfortunates in the ward you could not really believe unless you saw them.

1812. You think that if a box were provided and the attention of patients was directed to it, and they were invited to give what they could afford, that would be a good system? I do not think the difference would amount to anything at all, but we should be on a proper footing with the patients, and we should have more control over them.

1813. Do you consider it fair to the honorary medical officers that people should be taken in who can pay £1 or £2 a week? No; I do not think they ought to be taken in to pay that. I think that if their circumstances were inquired into they ought to be taken in, and we ought to trust to them to give what they can really afford. Many people can afford to pay £5 or £10, but cannot afford to pay £30 or £40.

1814. That would be in cases of operations? Yes; or of long illness. I think that people ought to have every consideration.

1815. Do you approve of payments by out-patients for registration? Certainly not. I do not think they ought to take a penny in the out-patients' room.

1816. What are the objections? It makes them feel that they are paying for what they are receiving, but the payment is so inadequate that I do not think that they ought to be put in that position.

1817. The benefits received are so much out of proportion to the payments? It is not that, but they feel that they have a right to it, as they are paying. It is only people who are absolutely poor who have a right to hospital treatment, in my opinion.

1818. Do you think that the system of out-patients is very much abused? Well, it is in some cases. As far as my own department is concerned, I do not think there is much abuse.

1819. Do you think that the hospital authorities use every means in their power to find out whether people have means? That is a question that I am not competent to answer. I only know that a vast number get into the hospital under false pretences. People come (particularly from the country)—they are asked if they can afford outside attendance, and they say "No," and we have to take their word.

1820. Unless you follow it up by subsequent inquiry? The damage is done then. You can hardly keep them waiting till you find out in every case whether the parties are proper persons for hospital treatment. The only way would be for people coming from the country to bring letters either from their medical men, or from local clergymen, giving the requisite information. I do not see any other way of doing it. I can give you an instance. The other day Dr. Jenkins told me that he had received a letter from a medical man in Forbes, saying that there were three patients coming to attend the hospital—one was a publican, another was a storekeeper, and I forget what the other one was. They were all able to pay, and were not fit subjects for hospital treatment. I can give another instance which occurred ten days ago. I was asked by Dr. Skirving to see a patient of his in a medical ward suffering from extra uterine gestation. I was going up to examine her when the sister of the ward said that the patient was going out, that arrangements had been made for her to be operated on on Friday, and she was to pay eighty guineas altogether. I did not see the patient, and I do not know whom she went under. That is only a very recent occurrence.

1821. Then it is your experience that the privilege is very much abused by people who are well able to pay? Unquestionably. What I say is that those poor people for whom the hospital is built, and whom we attend with very great pleasure, do not get their rights because their proper privileges are taken away by people in better circumstances, and who practically have no right there unless they come after the others. One patient came to me who had been in the hospital and offered me 100 guineas for operating on her.

1822. Is it not a fact that every particular branch added to the out-patients' department tends to bring many more people into that department? I think that is unquestionable. It must necessarily be so.

1823. Do you think the hospital accommodation for Sydney and the suburbs is sufficient for present requirements? I do not think so.

1824. What would you suggest as a means of meeting the deficiency? I think there ought to be 150 or 200 more beds.

1825. By way of additions to the present hospital or in the form of a new hospital? I should think by means of additions to the present hospital. I do not think it is a wise thing to multiply hospitals, with all the extra expense attached to each one.

1826. Which hospital would you suggest could be best added to? That goes without saying. They cannot add much to the Sydney Hospital—there is not much room there. At the Prince Alfred Hospital there is plenty of room.

1827. Supposing that the Government asylums were put in a position to be managed on hospital principles, and patients were treated there—would not that relieve the Sydney Hospital very much? I have no doubt whatever that they could take the chronic cases there.

1828. You have got many Government cases in the hospital from time to time, I think? Yes, of course. Those are the ones who ought to be there—they are the poor and the needy. It is their privilege and their right to be in the hospital.

1829. Do you know how many private hospitals there are in Sydney? No; they are increasing every day. There must be at least a dozen.

1830. Do you know anything about their management? Some of them.

1831. Are they well conducted? Some of them are very well conducted. There are three or four that were first established . . . the management of which is very good.

1832. Is the nursing satisfactory, as far as you know? I know that at . . . and at . . . it is, and, I believe, it is at . . . too. I know the first two very well.

1833. Do you think that private hospitals ought to be licensed and registered? Most decidedly. I think it is a very great pity that there is not some control and supervision over them.

1834. At present anybody can start a private hospital? Yes, anybody. I know the system is very much abused.

1835. Would you be in favour of the private hospitals being inspected from time to time? Certainly. I think it is an absolute necessity.

1836. To see that they provide proper medical attendance and proper nursing? I should think so.

- J. Foreman,  
M.R.C.S.  
1 June, 1899.
1837. Do they license private hospitals in Melbourne? I do not think so.
1838. At present there is no such provision in Sydney? Absolutely none.
1839. Do you know what the charge is in private hospitals? The charge varies in different hospitals from 2 guineas to 6 and 8 guineas a week. It depends upon the room and, to a great extent, upon the nature of the operation. Sometimes a case requires an extra nurse.
1840. *Dr. Manning.*] Are there any cheaper private hospitals than those you have mentioned at which the lowest charge is 3 guineas a week? I could not say. I think Nurse . . . charges 2 guineas, but I am not sure.
1841. Do you think there is a want of cheaper accommodation at private hospitals? It would be better; but it would have to be on such a large scale.
1842. You think that a cheaper private hospital is a thing much to be desired, but it would have to be on a large scale to make it pay? I think it would have to be on a very large scale.
1843. You have heard, I suppose, that these private hospitals are being abused in connection with abortion? I have.
1844. On good authority? Yes, on very good authority.
1845. Can you give us any idea as to how the number of out-patients at the hospitals could be limited? I do not see how it is possible. Their rule, if they carried it out (but, of course, the honorary medical men cannot enter into that), is that people who belong to clubs are not eligible for out-patients' relief; but that is not always carried out. I think that when a person belongs to a club he ought always to bring a letter from the club doctor.
1846. There is no scheme to limit the number of out-patients;—the number is very excessive now, is it not? Chiefly in the medical department, I think.
1847. You have spoken of patients bringing with them certificates from clergymen;—do you believe much in certificates of that kind? I think they ought to bring letters from their doctors to show whether or not they are proper recipients for hospital treatment.
1848. You prefer one from a doctor to one from a clergyman? Yes; he knows more about the matter than the clergyman would.
1849. Would it not be better, instead of having a certificate, to have these cases followed up to their own homes and inquiries made by a proper officer? I think so. I think there ought to be such an officer; but, of course, in the country you could not carry out such inquiries very well.
1850. *President.*] Do you think that a central inquiry office for all the Sydney hospitals would do—cases for inquiry to be remitted to the central office, and followed up all over the country? I think that would be the best plan.
1851. The hospitals might simply make their own inquiries; then send the name of the person to the central office, so that the inquiry should be followed up wherever necessary? I should think that is the only way that you could do it. You might have one inquiry office, more particularly as the hospitals practically are Government institutions.
1852. *Mr. Barling.*] It has been pointed out very forcibly to the Commission that the salary-earning class, getting from £150 to £250 a year, are utterly unable to pay the high fees charged in private hospitals; do you not think that hospitals are required to take in such cases? I think you ought to have a different hospital altogether if you are going to do that.
1853. Is it not very possible, almost certain, that the abuses which have taken place in connection with the public hospitals are due to the fact that there is no adequate place for that class of the population? No; what we complain of as the honorary staff is not of those people who are gaining from £150 to £200 a year. They cannot afford a long illness—it ruins them; but there is no question whatever that they are treated very leniently indeed by medical men. It is not the medical men who get their money; in a great many instances those people do not pay at all. If they go into a private hospital, very often the medical men attend them for nothing.
1854. I am not referring to the medical men's fees, but to expenses generally? Yes; they are not always obliged to go into a private hospital; when they do go it is nearly always for operations.
1855. Then supposing the medical fees were remitted, still the expenses of the hospital would go on, and these persons could not afford to pay 3 guineas a week? It depends a good deal upon how long they would be there. If a man is receiving £250 a year, and his expenses are about 25 guineas, I think he is able to manage it, because, as a rule, the patient is not in the hospital more than two or three weeks. If the case is a serious one it goes to the general hospital, and one would prefer that it should go there.
1856. That class of the population would rather pay something; and if you debar anybody from going into the hospitals, unless he goes in free, it might keep that kind of patient out;—do you not think that there should be a hospital to meet the class of cases I speak of? No; I do not. I think it is very much better that a few should keep out than that the whole community, practically, should be demoralised, by telling lies as to their means and getting in under false pretences.
1857. Then you do not think there is any need for further accommodation in connection with that class of the population? I do not, because you will find that there are not very many cases of that class. Medical men never object to attend them in the hospital. When they give a clear outline of their circumstances the doctors put them in there themselves.
1858. Into private hospitals? Either into private or public hospitals. If a man has £200 a year and a large family he cannot afford medical attendance, and he ought to belong to a club. £200 a year is the limit as regards membership of clubs. All who have more than that income, we think, are able to pay for outside attendance—at any rate, to some extent; but if a man has less than £200 a year to be provident he ought to belong to a club, then he has not got medical expenses going on. It costs about 2s. a week to be a member of a club, and the payment of that is no great hardship to a man with £200 a year. If he will not make that provision, and if he gets ill, it comes hard on him, but you cannot legislate for anyone who will not take care of himself.
1859. But that class of population would be hardly likely to join clubs; the members of clubs are working men, and you do not find that the two classes of population mix very well? The club practice is more abused than hospital practice.
1860. Is it a fact that clerks in the city belong to clubs? They do; they have an association of their own. The question is whether we should admit into the clubs people who have as much as £300 a year. We have made the limit £200 a year. Some want to make it £500 a year. There are a lot in the clubs  
now

now who have a good deal more than any of us here, and they take advantage of the doctors. The thing is very much abused. J. Foreman, M.R.C.S.

1861. So that class of population whom I have spoken of belong to clubs? There are clubs for those whose incomes do not exceed £100 a year. I do not see what hardships they have to meet with. If the doctor knows them and sends them to the hospital they ought to be taken in without question. 1 June, 1899.

1862. The President was asking you something about hospital accommodation, and I think you said you thought that 100 additional beds would be sufficient to meet the further requirements of the city and suburbs; we have had the evidence of a number of other doctors to the effect that we should require 300 beds;—would you stick to your estimate of 100 beds? I said between 100 and 200 beds.

1863. Do you think that 200 would be the limit? I think it would be ample. You can tell that by the way the beds are filled. Taking it all the year round, there are generally a few empty beds in the hospital. Sometimes you have a rush and a lot of patients waiting. Taking the year round, I think that 200 beds would be sufficient. There would always be plenty of room for urgent cases.

1864. Would they be able to provide that additional accommodation at the Prince Alfred Hospital by adding on to the wings? Yes; there is provision for that—provision for two or more pavilions there.

1865. So that the additional accommodation could be easily provided at the Prince Alfred Hospital? Yes. According to the original plan, each pavilion to cost about £8,000, I think.

1866. A good deal of evidence has been given about nurses; it has been stated in Parliament and elsewhere that the nurses are very much overworked. I should like to draw your attention to a pamphlet prepared by the lady superintendent of the Johns Hopkins Hospital on the subject of the hours of duty for nurses. She points out that in America the hours of duty are as follows:—

In	2 hospitals	nurses	are on duty	in the wards	for 8 hours	daily.
"	11	"	"	"	9	"
"	29	"	"	"	9½	"
"	14	"	"	"	10	"
"	31	"	"	"	10½	"
"	3	"	"	"	11	"
"	14	"	"	"	11½	"
"	3	"	"	"	12	"
"	1	"	"	"	13	"
"	1	"	"	"	13½	"
"	1	(and I am glad to say but one)	"	"	15	"

Showing an average of something like ten and a half hours. That is the number of hours of duty in the Prince Alfred Hospital. The conclusions the writer comes to are—

- 1st. The working hours in the wards being but a portion of the day's work are now in almost all hospitals too long. They should be so arranged as under no circumstances to exceed nine hours, and should, when possible, be limited to eight hours.
- 2nd. The hours set apart for rest and recreation are now necessarily and frequently infringed upon by class lectures or study, in order that the pupil may perform the work required of her. This should, in no case, be done, but these hours should be reserved for the purposes for which they were intended.
- 3rd. When an increase in the theoretical course of instruction becomes necessary or advisable, it should, on adoption, be followed up by a certain corresponding decrease in the amount of practical work required, if necessary increasing the total length of the period of training.

We should be glad of your views on that subject? It is desirable that one should not work more than eight hours, if possible; but it simply means that you must be prepared to meet extra expense; it is simply a question of expense. Nine hours a day is quite long enough for the nurses to work; but you will have to pay if you want anything different.

1867. It would mean a considerable additional cost; but your experience would show that nurses ought not to be worked more than nine hours a day? I cannot say that with regard to their health.

1868. It affects their health? No; they go into the hospitals sometimes not well and strong, and they come out as strong as horses. It certainly does not affect their health. I know several instances in which nurses have had easier times afterwards, and have fallen off. When they were in hard training they were strong.

1869. So you think that ten and a half hours work a day does not have a prejudicial effect on their health; but if the expense could be afforded it would be desirable to reduce the hours to nine per day? Yes; I believe in their having a fair thing; I think that eight or nine hours a day is long enough to work; but as for the hours affecting their health, I have not seen any instance in which it has done so. I have known a great many cases to the contrary—cases in which they have gone into the hospital not strong, and have come out the picture of health.

1870. *President.*] I have here a copy of the rules of the Provident Medical Association, which gives the privilege of membership to people with incomes up to £200 a year? Yes, that is up to £200 a year; many of the clubs go up to £300 a year. If people will have a little foresight, they have not much to complain of. A great many doctors send club patients to the hospital, particularly where they want operations performed, and those patients are always accepted without any question. The majority of the practice in Sydney is club practice.

1871. It would be a proper thing for a club doctor to send patients to the hospital for operations? Every day patients are admitted, particularly in urgent cases. They are sent in with a note, and admitted without question.

1872. *Mr. Walker.*] I think you said that the amount of outdoor relief given by the Sydney Hospital and the Prince Alfred Hospital is rather large? Yes, it is large.

1873. Do you think it is on the increase? Yes, because I think people are very much poorer now than they were.

1874. You could not give us the cost per head? No.

1875. Do you think the institutions are imposed upon by people applying who should not apply? Yes, unquestionably. I have given several instances.

1876. That is rather in going into the hospital altogether, is it not? No; they come to the out-patients' room. It is no uncommon thing for people to come to the out-patients' room and say, "I don't want any medicine; I have just come for an opinion; my doctor told me so and so." They want to confirm it. The practice is abused, and must always be abused; you cannot help it. The only thing you can do is to minimise the abuse.

- J. Foreman, M.R.C.S. 1877. Can you give us any suggestion with regard to minimising it;—you said that an inspector might be appointed, or an inquiry office established, which the two hospitals could refer to, but would not that be rather detrimental to the out-door relief itself if you referred every case for inquiry? It would not be necessary to refer every case.
- 1 June, 1899. 1878. You think that one officer would be able to carry out the whole of the inquiry? No; one man would not be able to do all that.
1879. You think that a central inquiry office would be very desirable to assist you to detect fraudulent attempts to obtain assistance gratis? Yes.
1880. Do you think with the growing state of the city that the additions which you suggested at Prince Alfred Hospital would meet all requirements? They would for a number of years, at any rate.
1881. But what about the northern part of the metropolis, which is increasing to a large extent, would it not be inconvenient to bring patients from there? They ought to have a hospital there, and they are going to build one. They have got the ground, I believe, and they have got some of the money. North Sydney is too large a place to be dependent upon the city.
1882. Could you give us any suggestion as to the accommodation in that locality? I was not considering that at all. I know they are going to build a much larger hospital there, which will provide for all their wants.

Acland O'Hara, M.B. et M.S., Edin., sworn and examined:—

- A. O'Hara, M.B. et M.S. 1883. *President.*] You are hon. secretary of the City and Suburban Provident Medical Association? Yes.
- 1 June, 1899. 1884. Will you tell us when this association was started? It was started about eighteen months ago. I was not secretary when it was started. It existed in a primitive way about ten months before that.
1885. Do you know the circumstances under which it was started? It was mainly started in consequence of the bad effects the proprietary lodges and medical benefit societies were having on the medical profession as well as on the community at large. It was considered that they were doing a lot of damage.
1886. What do you call proprietary societies? They are lodges which farm out the doctors, and those who run them know nothing about doctoring or about medicine. They hire the doctors and make use of them, and of course a large amount of canvassing is done. Any man they can get hold of is sent round the city knocking at everybody's door, canvassing doctors' patients and telling them all sorts of stories to induce them to leave their own medical men. It had a bad effect on the people, as well as on the medical men.
1887. So the society was started as a matter of self defence? Yes.
1888. Was it started on the model of any similar society? It was started exactly on the lines of the society at Eastbourne in England. That society has always been commended by the *British Medical Journal* and the *Lancet*, and even the *London Times*, as being an excellent association. This society is conducted on exactly the same lines as the one at Eastbourne, which has been a great success there.
1889. It would appear that there must be a good deal of clerical work attached to it;—what staff have you? I have an assistant secretary for keeping the lists, and we have collectors.
1890. That is the only clerical assistance that you have? Yes, at present I think that in the near future it is intended to have a good active manager; we had to begin economically at first.
1891. The collector collects the weekly subscriptions? Yes.
1892. Does the collector go round for them? Yes. The people do not need to come to the office unless there is some misunderstanding.
1893. Is the society largely availed of? It is since I took the matter up. Dr. Rennie was secretary before me. I took it over at the end of September last. The money taken now is nearly double what it was when I took it over.
1894. Could you say what the income is? It now averages about £36 a week—that is after I have paid the collectors.
1895. How is the society managed? We have a committee and a sub-committee.
1896. Is the committee elected by the medical men? Yes; the work is mostly done by the sub-committee. The time of the medical men is so irregular.
1897. Does this arrangement enable the medical men to get reasonable fees from this class of patient? It does. The medical men have a horror of canvassing, so I have asked the medical men on the staff of the association to make notes of any patients who have been coming to them, and who were not able to pay the ordinary fees, and I hand those notes to the collector, who goes and endeavours to get the parties to join. That is the way we get them. I have to strictly forbid canvassing.
1898. So the heads of families who plead that they are unable to give the doctor his fees are waited upon by the collector, and have the privilege of joining the society? Yes.
1899. *Mr. Barling.*] How many persons are there belonging to the society? I think there must be 1,700 financial members. We have enrolled altogether about 2,500, but they are a very poor class of patients—people who are very often out of work, and when they are more than four weeks in arrears we lapse them for the time being.
1900. What class do they belong to mostly? The working classes. As regards their income, we have a form [*produced*], which shows the questions that are asked. The members are usually earning about £100 a year. The limit of income for membership is £200 a year.
1901. Do you find that many of the clerical class come in? Not many.
1902. How are the chemists paid? At the rate of 8s. a year. I believe that is the highest lodge-rate that is paid.
1903. That is paid out of the fees? Yes; we pay all that before we divide our money. We have no debts.
1904. These payments of 6d. and 7d. a week cover the cost of all the medicine? Yes; the attendance of the doctor and the cost of the medicine too.
1905. In case of a consultation being required, half fees are charged, I believe? Yes.
1906. Does that mean a consultation at the patient's house? Yes. I am on the active staff myself, and when I have sent for a member of the consulting staff, he has come and only charged half the fee in each case.

1907. Is there a scale of fees? No; the fee for an ordinary consultation is two guineas. The members of the society are charged one guinea.

A. O'Hara,  
M.B. et M.S.

1908. I suppose the society is largely increasing? It is. My great difficulty is to get at the poor people without getting the doctors' private patients. The doctors will never tolerate a man going all over the place. If I could get at the poor people without house-to-house canvassing, no doubt we should have ten times the present number of members; but I have to keep a firm hand on the collectors, and not let them go anywhere except where we are told that someone wishes to join.

1 June, 1899.

1909. Then the clerical staff of the community do not take advantage of this society at all, although they could with salaries up to £200? With salaries up to £200 they could. The society is not generally known. It is not advertised. I may say that one hospital has already taken an interest in it. The resident medical officer of the Prince Alfred Hospital has been good enough to tell people about it and to give us names and addresses, and we have succeeded in getting members in that way. That is the way that the society could help a charitable institution.

1910. It would be a very proper way? A very proper way. We might have a kind of canvassing if we only had the names of the people going to the charitable institutions, and we could have them interviewed. This would do away with the opposition of the medical men, and lighten the charities as well. A great many could pay much more than they have to pay at the hospital, where they have, I believe, to pay a small fee.

1911. *Dr. Manning.*] What do you pay your medical men in the first instance? We pay all expenses, including the chemist, and the rest of the money is divided amongst the doctors according to the number of patients they have on their list. One patient a month constitutes one share. It is the same with regard to the chemist. Last time I was able to pay the ordinary lodge rate of 16s. a year. I could have paid as much as 18s. 6d., but instead of doing that we put some money into the reserve fund.

1912. In addition to that, you paid 8s. for medicine, making altogether £1 4s.? Yes.

1913. And the very highest for a lodge patient is 26s.? Yes.

1914. And the amount for a great many is from 18s. to 20s.? Yes.

1915. So you were paying more than is paid by the lodges generally? I do not think that the lodges pay more than 16s. That is the regular fee in the city.

1916. *President.*] Is there anything else that you wish to say? I think that the charitable institutions could greatly help themselves and help this society if it were an instruction to the resident medical officers to give all the names and addresses of patients that they know could pay a little, instead of treating them out of charity, because the medical men have a great objection to the charge of 1s. that is made in the hospital. They are sore about it, because it gives people the idea that they are paying for doctor and medicine. A number of them have spoken to me about it, and they say that it is a wrong principle altogether. They maintain that those who cannot afford to pay anything should not be charged at all, and that others who can pay ought not to be there.

Cecil Griffiths sworn and examined:—

1917. *President.*] You are Hon. Treasurer of the Children's Hospital? Yes.

C. Griffiths.

1918. How long have you been connected with that hospital? I have been treasurer for eleven years.

1 June, 1899

1919. Were you connected with it in any capacity before that time? No; I may say that I audited the books for some time before I took up the treasurership.

1920. When was the hospital established? In 1879.

1921. Was that on the present site? Yes; it has never been on any other site, to my knowledge.

1922. Was the present building erected for a hospital? No; it was erected for a school, I believe. The hospital bought it.

1923. Were there many alterations made in the building when it was taken over? I could not tell you.

1924. Has the hospital added to the buildings in any way? Yes, very considerably, but mostly wooden structures.

1925. What are the additions that they have made? They made a big room at the back which was originally started as a diphtheria ward. It is in the grounds behind the main building, and there are the washhouses, the observation wards, and the mortuary.

1926. What is the area of the land? I think about three-quarters of an acre for the main hospital.

1927. Is it freehold? Yes. Then there is the diphtheria hospital. When it was found that it was supposed to be dangerous, we asked the Government to assist us to get some building that would do for a diphtheria ward, and the Government granted £250 a year towards the rent of such a building. We had the greatest difficulty in getting hold of anything at all that would suit, or be sufficiently near to the hospital to enable us to look after it. Then the idea struck us that the ground opposite, belonging to Miss Botts, which was in the market, was suitable, and we eventually bought it for £4,000. Then we established the diphtheria ward over there. That is an area of just under 4 acres.

1928. Was the diphtheria ward attached to the hospital from the beginning? No; I think it has been about six years in existence.

1929. Both the main hospital and the diphtheria cottage are now the property of the trustees? Yes; there is a debt on the diphtheria hospital.

1930. Do you know the cost of the main building? I think they gave £6,000 for it.

1931. That would be the cost plus the additions you have made to it? Yes.

1932. Could you get the information as to what the property has cost, plus the additions? I suppose we could get it. Mr. S. A. Stephen used to be the Treasurer, and I do not know whether he has kept a record. I will try to get it.

1933. Do you know what was the cost of the diphtheria cottage? We gave £4,000 for that.

1934. Has it cost anything since? It cost £4,400, including furniture.

1935. What was the cost per bed? About £45. We have about fifty-four beds in the main building, and we should have to reckon the total cost with all the additions. In the diphtheria ward there are twelve beds.

1936. How was the money raised for all this expenditure? I believe the Government assisted at the beginning. With regard to the diphtheria cottage I could not tell you, but we borrowed about £3,000 from Mr. Mitchell's estate; we took £1,400 from the endowment fund. We had no endowments then. We have paid off £500.

1937.

- C. Griffiths. 1937. Is the other property clear? Yes.
- 1 June, 1899. 1938. I do not find from the report what money has been received from the Government? Since I have been treasurer we received a special grant of £500 one year. The other moneys received from the Government are £ per £ on the money raised by subscription.
1939. Have you had Government aid for building purposes? Only one item.
1940. *Mr. Walker.*] You mentioned an endowment fund from which you took £1,400 towards the building;—is there anything of that now? No; the only amount in the endowment fund now is a sum of £40 12s., which was given for special purposes. Mr. Craven gave £100 for building purposes which we had to keep separate. Mrs. Hunter-Baillie left in her will one-third of a residuary estate, and we have had out of that £7,850.
1941. What were the conditions attached to that? It was to be vested in trustees and the interest was to be devoted to the general expenses of the hospital.
1942. According to that you must retain the principal? Yes. Mr. Walker left in his will £750, the interest to be devoted to the general expenses of the hospital. In the event of the hospital ceasing to exist that money goes to something else.
1943. Are there any other legacies or donations? Not that we can afford to keep. They go into the general expenses. We got them every year. Our list for last year shows legacies of £100, £40 1s. 10d., £250, and £200, which had to go in general expenses.
1944. Am I right in supposing that any donations or legacies, not specifically appropriated by the testator, are put into the general fund? Yes; if we could make both ends meet without them we would put them into the endowment fund and invest them. These small amounts are put in the City Bank in the name of the treasurer. I think we shall get another £2,000 from the Hunter-Baillie estate. An annuity was left to a Miss Mackie, but she is dead and the money falls into the residuary estate.
1945. There is a fund called the Perpetual Subscribers' Fund? That is the £750 Mr. Walker left.
1946. Then what are the chief sources of income? The chief sources of income are the ordinary subscriptions, the £ per £ from the Government, interest on deposits, and the patients payments, which come to about £450 a year.
1947. What arrangement is made about auditing the accounts? We name auditors every year and ask them to take the position.
1948. Outside auditors? Mr. Stephen would not allow us to name any member of the Board for the position of auditor. In this case the auditors are two accountants, Messrs. Pratt and Mackenzie. It is not easy to get honorary auditor.
1949. What do you think the annual cost per bed is? We calculate that it is about £45. We make the proposal to anyone who will give us £50 in one year to give them a right to a cot, the cost of which is rather under £50.
1950. How many have subscribed in that way? Only two. Mrs. Sulman has two cots. There are certain conditions laid down in our rules with regard to that. A cot only allows the nomination of one patient. If a cot is occupied, or no nomination exists, when a child is put into it the nomination lapses until the child goes out. Children of all denominations are taken into the hospital if the doctor certifies that they are proper subjects for hospital treatment, and there is a bed vacant.
1951. Does the cost £45 a head include both the main hospital and the diphtheria ward? Yes. Of course, you will see that the diphtheria ward is the great crux. It costs us nearly double as much to keep up the diphtheria beds as it does to keep up the general hospital beds.
1952. Are the accounts kept separate? Yes; the expenses but not the receipts. The expenditure, as you will see from the report, is £1,900 for the general hospital, and £900 for the diphtheria hospital. On an average of fifty cots in the general hospital, that would come to rather less than £40 a bed. In the diphtheria wards the average is £80 a cot. We calculate that the diphtheria beds cost nearly double what those in the ordinary hospital cost.
1953. The apparently high cost is accounted for by the diphtheria wards? Yes.
1954. What makes the diphtheria branch so expensive? The nursing is very heavy, and we pay £2 or £3 a month more for gas for the diphtheria cottage than we do for the general hospital. At present we are not paying anything for medical attendance in the diphtheria hospital. It is done by the honorary medical officer, Dr. Gibbs.
1955. Do you consider the building suitable and satisfactory? No; most unsuitable and unsatisfactory.
1956. Have the Committee discussed any proposal with regard to a new one? We have had no proposal. We tried to get some land from the Government some years ago, and they almost promised to give a piece of land behind the old Paddington Rifle Range. It was virtually granted to us, but some other institution put in a claim, and neither of us got it.
1957. Did the Paddington people object? Every municipality will object.
1958. *Mr. Barling.*] I think the hospital is pretty nearly always full? Yes, fairly full. It varies a great deal. It is in such a condition, having been so long used as a hospital, without being properly constructed for the purpose, that we are getting a great deal more infectious cases than we used to get, and immediately we find an infectious case in a ward we have to shut up that ward and disinfect it. That limits our space and makes everything more difficult to manage.
1959. I suppose you are aware that great complaints have been made as to the want of room in the Prince Alfred and Sydney Hospitals, and in both the hospitals there are cots for children;—could you make provision, without any large expense, for the accommodation of those patients? We could not make any provision in the present premises for any more. It would not be possible.
1960. You are up to the extreme limit now? Yes.
1961. You could not help the Sydney Hospital by taking in children from there? No; we often have to send cases away.
1962. That shows the necessity for a new hospital? Distinctly.
1963. Have any steps been taken to obtain funds for a new hospital? No; the times have been rather against us. If any philanthropic person would start the thing, I believe we should have no difficulty in getting funds. The difficulty is to get somebody to put down a sufficiently large sum to give us a fair start. One of our Directors was so shocked when he saw how badly we are situated that he talked about one gentleman planking down £25,000, but we have not heard anything more of it. There is a scheme which we have thought of to purchase some land adjoining our diphtheria hospital on which to build a general

- general hospital on proper lines. It is a very healthy place, and the hospital being there already the Glebe people could not object to it so much as another municipality might if we were going to shift. I believe that the people would not mind the hospital if they could get the diphtheria ward shunted. C. Griffiths.  
1 June, 1899.
1964. I think, with regard to diphtheria, that you take in any patient without asking whether the parents have means to pay? We take all cases of diphtheria without question. They are cases of life and death. We have had to send children away, and they have died in the arms of the women who brought them.
1965. Placing the diphtheria patients there removes infection from other districts? I do not hold that there is much infection; I think there is a good deal of unnecessary talk about that. The unfortunate part about it is that diphtheria patients very often come in with measles or scarlet fever then the difficulty is to know what to do with them. You cannot take it into the diphtheria ward; you cannot send it out to Little Bay, because the child would die on the road. If the Government would relieve us of the diphtheria cases, and assist us to build a main hospital on the scheme that we suggest on the present site of the diphtheria ward by buying the land alongside, I believe we could raise subscriptions to do the thing well with an endowment. In Melbourne the Children's Hospital has an endowment of £40,000. There is no reason why the Sydney people should not assist; but, seeing the position we are in, they say, "What is the use? You will be no better off if we do assist you now."
1966. *Mr. Walker.*] What is the extent of that piece of land next to the diphtheria ward? It belongs to Mr. Marks. It has a terrace on it. There is a bit of land between the terrace of houses and the diphtheria ward. Mr Kent, who was secretary for about thirteen years, has planned a hospital in his own mind, and you could not get anybody better, because his scheme was the first in the competition with regard to the Children's Hospital at Melbourne when they called for tenders. He thinks we could get another 100 feet.
1967. That would not include the terrace? No. If we had that land we could work on proper plans, and build a proper hospital.
1968. And that would take all the patients that you have in the general hospital and in the diphtheria hospital? I think we could build a hospital to hold 150 patients.
1969. What would become of your diphtheria ward? We depend upon the Government to take it over. We could not possibly continue the diphtheria ward on that ground.
1970. Not with the Children's Hospital? We should have to sell that to gain funds. We calculate that we ought to get £5,000 or £6,000 for that, which would form the nucleus of a fund for a new hospital.
1971. You think of putting the diphtheria patients somewhere else? We cannot go on taking diphtheria patients in that building. It is getting so full of bacteria that it is becoming unsafe for diphtheria patients.
1972. You advocate the removal of it, then? Yes; entirely.
1973. You want a separate and distinct institution altogether? Yes.
1974. Your only idea is to dispose of the present site and obtain that piece of land as a new site for the Children's Hospital? Yes; that is what we have come to. I can assure you that it is very much wanted. If a new hospital were built we could relieve the Sydney and the Prince Alfred Hospitals of their cases.
1975. You could relieve them of the children in those hospitals? Yes; we calculate that we can take all the children, and we reckon that to do that we ought to have 150 beds.
1976. *President.*] About the management;—have you a committee? Yes; there is a Board of Management of about twenty-four members.
1977. Have you any life members? Only two. We made a rule the other day that only those who had assisted materially in the management of the hospital should be made life members.
1978. Are they elected? Yes, annually; a certain number retiring—that is, in regard to the Board of Management.
1979. How many go out year? I think six.
1980. How often are meetings held? We have an annual meeting of subscribers; we have a Board meeting every second Monday in the month; and the Board elect a House Committee who meet every Tuesday at the hospital. The House Committee consists of six members and the officers.
1981. The House Committee meet once a week? Yes.
1982. Are there ladies on the committee? The House Committee virtually consists of ladies, the only gentleman who attends being the secretary.
1983. Do they take an active interest in the management? Yes; a very active interest. I do not think that there is another institution in Sydney the committee of which take such an interest in it.
1984. Their work is satisfactory, then? Yes; very satisfactory.
1985. Has the medical staff seats on the Board? Yes; they are all honorary members of the Board, and they are virtually honorary members of the House Committee too. They come whenever they are asked, and give assistance to the Committee.
1986. The Board appears to be a large one;—do you think it is too large? No; I think that we get people to take more interest in the institution by having a fairly large Board.
1987. Have you any Government nominees on the Board? No.
1988. What are the arrangements with regard to the resident medical officer? We have not a resident medical officer at all, but we used to get fourth and fifth year men, who had to live in lodgings close to the hospital, and who could be reached at a moment's notice. At present we have only honorary medical attendants at the diphtheria ward; but we have a high-class man who is in the general hospital always, although he does not reside there, and we give him £200 a year. We find that it works better than having two. We had two lady doctors one year.
1989. What nursing staff have you? In the general hospital there are the matron, 3 sisters, 2 staff nurses, 5 nurses, 14 probationers—altogether 25.
1990. What is the matron's salary? £90 a year she commenced with, and it is increased by £10 after she has been there two or three years. One of our matrons remained a long time with us, and her salary went up to £120.
1991. What do the sisters get? There are 3 sisters at £60 per year each, 2 staff nurses at £35 a year, 5 nurses at £25 a year, and 14 probationers at £20 a year each.
1992. Do you have lectures for the nurses? Yes; the medical staff give lectures in the hospital, and the nurses have to pass examinations.
1993. And you give certificates? Yes.
1994. Are there many applications for the position of nurses? We have no difficulty about getting nurses. There seems to be always a number on the list ready to be taken on.

- C. Griffiths. 1995. Then these nurses will be trained as they are in the other hospitals? Yes; the honorary medical staff look after that.
- 1 June, 1899. 1996. How are patients admitted to the hospital? If any child is brought there, and the surgeon says that it is a proper case for admission, it is admitted at once if there is a bed vacant. The parents are asked if they can afford to pay anything. The relations of the patient visit the hospital on Sundays, and one of the assistants collects whatever they like to give.
1997. What is the number of beds? We can make up fifty-four. We have generally about fifty.
1998. Have you any wards for the separation of boys and girls? We have one small observation ward outside, but if a case of infectious disease occurs in any of the wards, that ward has to be immediately cleared and disinfected, and we lose the use of it.
1999. Is there any special means of separating the boys and girls? Yes; we endeavour, as far as possible, to keep the girls' and boys' wards entirely separate.
2000. Have you returns of the number of patients in 1896, 1897, and 1898? I have not that with me.
2001. What is the average number of beds occupied in a year? It would be very hard to say. Much depends upon the difficulty we have with regard to closing wards in consequence of infectious disease having broken out. We ought to have about forty-five beds always occupied in the general ward.
2002. What is the number of patients in the diphtheria cottage? We have only twelve beds there.
2003. Have you had to turn patients away? Yes, a great many patients are turned away. If the doctors would telephone before they send patients we could tell them whether there is a bed vacant or not; but they do not take the trouble. We have less room available of late since the anti-toxin cure for diphtheria came into use; we find that after the use of anti-toxin the children remain much longer in the hospital because it is some days before the doctors are sure that it may not have bad effects on the child. The Walker Convalescent Hospital is very good to us; I think they have six or eight cots, and we send our convalescent children there.
2004. Have you any private wards? We have none, and we have no Government cases. We have no Government subsidy for any patients.
2005. The subsidy is on the collections? Yes, £ for £.
2006. What sums are received from the patients? They vary from about £300 up to £500. Last year the amount was £408.
2007. Do you receive any payment in any instance in excess of the cost? No, never. The only case of that sort would be one in which a person has got into better circumstances, and is so pleased, that he has made a donation.
2008. You said that the total payments amount to £300 or £400;—what are the amounts contributed in individual cases? The highest I think that we ever got was 15s. or £1 a week, and they go down to 2s. and 1s.
2009. You said there was a great deal of pressure on your space in both hospitals? Yes.
2010. And that more accommodation is necessary? Yes; absolutely necessary.
2011. Have you any out-patients? Yes. Last year there were 4,000 out-patients, with an aggregate attendance of something like 10,000.
2012. Have you any registration fee for that? No; we have not. Lately we found that dispensing was very badly managed outside. We used to give orders on the chemists, and the chemists used to charge 1s. for the medicine. We are now trying a new system. We are registering the patients, and asking them to pay 1s. when they first receive their medicine. We have a paid dispenser at the hospital.
2013. So there is a registration fee? We do not enforce it; if they will pay they do pay.
2014. Do you get any donations apart from that? This system I am speaking of is only being newly tried. Last month the out-patients paid £6 10s., but that is not anything like what a shilling each would come to.
2015. It appears that in 1898 the number of patients was 4,082, with 10,885 attendances? Yes.
2016. There is an increase over 1897 of 1,230 in the number of cases, and 3,716 in the attendances, so it is largely growing? Yes.
2017. Can you account for the increase? People are taking more advantage of the hospital than they did formerly, and I think they are poorer than they used to be.
2018. What is the cost of this Department? It is not kept separate. The only cost is the attendance of the sisters and a nurse besides the dispenser and the medicine. There are two honorary medical officers attached to that department who attend about four times a week.
2019. What inquiry is made as regards the means of the parents or guardians of the children? They merely ask what the parents are earning.
2020. Do you take their statement? Yes; whenever we can get it; we do not force them to give it. There is a form which the medical officer attending is supposed to get them to sign; but that is not enforced.
2021. Is the inquiry followed up at all afterwards? No.
2022. Does that apply to out-patients too? Yes. The out-patients belong to very poor people as a rule.
2023. Do you think there is much abuse of the hospital? Not of the general hospital; there is of the out-patients' department. I have no doubt about that.
2024. Which, I suppose, is difficult to cope with? The Directors are trying to find some means of meeting it. If we find, in any case, that people are bringing their children there who can afford medical fees, we decline to treat them.
2025. *Mr. Walker.*] How many nurses have you at the hospital? Nineteen nurses, two staff nurses, and three sisters.
2026. What are their hours? I could not tell you.
2027. Do you take any probationers in? Yes; we have fourteen probationers there now. We give them £20 a year. There are no unpaid nurses in our hospital.

William Chisholm, M.D., sworn and examined :—

2028. *President.*] You are honorary surgeon at the Sydney Hospital? Yes.
2029. Last year you were President of the New South Wales Branch of the British Medical Association? Yes.
2030. Will you give us your views as to the system of receiving pay for patients in the hospital? I am not in favour of having a system of payment at all by patients.
2031. On what ground? On the ground that hospitals are charitable institutions and the honorary staff give their services to the sick poor.
2032. You think they should not give their services to those who are able to pay? Certainly not.
2033. What provision would you make for persons who are able to pay something but could not pay the current rates which medical men and nurses charge outside; take the case of clerks with £150 or £200 a year having illness in their families? If the man has shown his willingness to provide for ordinary ailments, the patient should be taken in and given hospital treatment free.
2034. Suppose that he prefers, for a certain feeling, to pay something? I do not know that there would be any objection to the patient, when he leaves the hospital, sending a cheque according to his means.
2035. He can do it as a donation? Yes.
2036. Do you approve of payment for the registration of out-patients? No, it is practically the same thing; you are exploiting poor persons, but you give it a different name.
2037. A further objection might be that you are taking a shilling from a man who is able to pay, and giving him an excuse for not paying more? You make him feel that he is paying for what he is getting, and that is one objection to it.
2038. Do you think the hospital is very much abused by people who are in a position to pay? I think it is most shamefully abused, by both in-patients and out-patients.
2039. Do you think sufficient trouble is taken to minimise that abuse? It seems to me that the authorities at the hospital that I am connected with do not take any trouble at all.
2040. Beyond making certain inquiries? I refer to certain departments—I refer to the casualty department of the Sydney Hospital. Anyone who likes can drive up there in a cab and go in and be treated.
2041. Have you any suggestion as to how to deal with that? I think the hospital authorities might take more pains to point out to people who come to the hospital that it is really only a charitable institution, and people should be asked why they do not make some provision for meeting their ordinary medical needs. They should be told that it is their duty to do so. Nine-tenths of the people who come to that casualty department could well be treated at home, or by any ordinary medical man. There are people who come from such places as Waterloo with a cut finger.
2042. Do you think the inquiries that are made at the hospital should be followed up later on at the homes of the patients? I think it is absolutely necessary. Of course a man would have to be ubiquitous almost, but it is necessary, if you want to prevent abuse, to have an inquiry officer to visit the homes of the patients.
2043. If you had a central office, could that inquiry officer make inquiries on behalf of all the hospitals? At first it might be difficult, but when it began to be known that endeavours were being made to prevent abuse there would be less need for his services.
2044. Do you think the hospital accommodation in Sydney is sufficient for existing requirements? Not the way they are conducting the hospitals. They will want it three times as large the way they are going on now; if they are going to call everybody into the hospitals.
2045. I understand that if the hospitals are confined to the proper class, possibly the accommodation may be sufficient? Yes. I think the present hospital accommodation should be sufficient for the proper class. I might qualify that by saying that perhaps some provision might be made for hopeless cases of consumption. We really do want some provision for them, and a lot of the patients who are now in the medical wards of the hospital might be drafted off. I think that is the only thing that is wanted.
2046. Do you know anything about private hospitals? Yes; I know most of them.
2047. How many do you think there are? I think there are about five good hospitals; certainly there are three. As far as the buildings are concerned, I think these three are very suitable. There are two or three others admirably managed, but I do not know that the buildings are quite suitable.
2048. Are there any others besides those? I believe that in most of the suburbs there are private hospitals; a surgeon may have a house that he uses as a private hospital.
2049. Do you think they are well conducted? As far as I know they are very well conducted.
2050. Have you heard of any abuses in connection with any of them? No; the complaint against them is that they charge too much.
2051. What is the usual charge? They will take patients at three guineas, but the charges run up to eight or nine guineas a week; it all depends on the nursing.
2052. Very few can pay those high rates? They are very high; five or six guineas a week after operations, I think, is the average.
2053. Do you think the private hospitals ought to be registered and inspected? I see no objection to that; I think it would be a very good thing.
2054. At present there is no check upon them at all? No.
2055. Are these hospitals liable to great abuse without inspection? Yes, I suppose so. One sees homes for ladies advertised in the papers; those are simply the advertisements of abortionists.
2056. It is reported that some of them are used for that purpose? I do not think that medical men send their cases there, but some are advertised as lying-in homes, and I have no doubt that they are used for that purpose.
2057. *Mr. Walker.*] You say there is some abuse of the out-door and in-door relief systems? Yes.
2058. Can you suggest any remedy? I think that one might limit hospital attendance to cases of serious illness. A large number of people who come to the out-patients' department and the casualty department come with such trivial ailments.
2059. That would rest with the officers of the institution? There ought to be someone told off to inspect these cases. There is a notice put up, I believe, in the out-patients' department, that it is intended only for the relief of indigent sick persons, but they do not take any notice of that.
2060. Do you not think it could be checked if there was a suburban dispensary established, which could be run more cheaply than even the cost of those institutions? I think there would still be the same amount

W. Chisholm,  
M.D.  
1 June, 1899.

W. Chisholm, M.D.  
1 June, 1899.

amount of relief given to people who do not deserve it. We ought to endeavour to point out the need for people to provide for their minor ailments. A large number will come to the out-patients' department suffering from coughs, colds, and that sort of thing. Surely by paying a few shillings a year a husband could make provision for the treatment of such ailments in his family; but people will not do that when they can come to the hospital and get things for nothing.

2061. The difficulty is in checking it? Yes; that is the difficulty.

2062. Do you think an inquiry officer might check it? Yes, to some extent; I do not see why the hospital authorities should not let it be known that people are expected to make provision for their own ordinary medical needs. People come to the hospital with bronchitis and other ailments which would be much better treated at home by their own doctor.

2063. Do you get imposed upon by club patients? Well, the greatest abuse in connection with club patients is owing to the medical men. The club doctors are to blame for some of the worst cases of hospital abuse, more especially in the surgical line. A patient gets ill and requires an operation. The doctor may not be in the way of doing operations, but he does not like to say, "I do not feel equal to doing it; you may get someone else;" but he says, "your house is not suitable for such an operation; you ought to go to the hospital;" and thus people are sent to the hospital who are well able to pay. I myself operated on a man a few years ago who lived in a house of his own off Glenmore Road.

2064. Do you often get patients a second time—say a man breaks his finger, then afterwards comes with a cut over his eye? We get that sometimes.

2065. You are satisfied in your own mind that the thing is abused? It is grossly abused. I might quote the case of a professional man who received an injury on the railway. He had his arm out of a carriage window when it was struck by an open door on a passing train. He was a solicitor. He was taken to the Sydney Hospital and I was called in to operate on him. He was in the hospital some weeks, and his elbow joint was opened. He made an excellent recovery, and when he was well enough to leave the hospital I said, "you are quite able to go to your own doctor now;" but he said "I would rather you would see me," and he came to my house afterwards. That man tried to get very heavy damages from the Government, and I heard that he was paid a sum of £175 as compensation. He was taken into an institution which is half maintained by the Government, turned round and got damages from the Government, and he gave £5 to the hospital. That sort of thing should not be allowed.

2066. *Dr. Manning.*] You think the number of out-patients is very excessive? I did when compiling figures for my address to the Association, but thinking I might be asked for definite information, I looked up the figures in the *British Medical Journal* last night, and I was rather surprised to find a statement showing that there are places that are worse than we are in this respect. Under date July 16, 1898, it is stated that the proportion of out-patients to population for Edinburgh was 371 per thousand; the in-patients and out-patients altogether, for the four hospitals here, were less than one-eighth of the population of Sydney. I think it is 55,000 people for Sydney and suburbs. In Edinburgh the out-patients numbered 371 per thousand, as I have said. That strikes me as being a very large proportion, over one-third of the population. In Glasgow the proportion is 139 per thousand; at Aberdeen 115 per thousand.

2067. The population of Glasgow and Edinburgh are not nearly as well off as they are here? No. Too large a proportion go to the hospital.

2068. Do you approve of this Provident Medical Association that has been started? Yes; I am one of the consulting officers. I believe it is getting on well, and is properly conducted. I advised my own coachman to join it.

2069. Do you think it is on proper lines, and will do something towards diminishing the number of patients at the hospital? Yes.

2070. Both out and in-patients? I do not know so much about the in-patients. You see we must have a safe place to send them to.

2071. You think it will diminish the number of out-patients? Yes.

2072. And it will encourage a spirit of providence? Yes. There is an article on the subject in the last issue of the *Australasian Medical Gazette*, which I will leave with the Commission. I think the association is on proper lines. We want to encourage people to make some sort of provision for their medical needs. I think that a man getting 35s. or £2 a week should belong to a club, and pay 25s. or 30s. a year, so as to obtain treatment for minor ailments. If he is unfortunate enough to break his leg, take him into the hospital, and let us give him all that we can give him without extorting any money from him.

THURSDAY, 15 JUNE, 1899.

[The Commission sat at the offices of the Public Service Board at 2:30 o'clock p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).	
F. NORTON MANNING, Esq., M.D.	J. BARLING, Esq., J.P.
J. POWELL, Esq., J.P.	CRITCHETT WALKER, Esq., C.M.G.

Cecil Purser, M.B. et Ch.M., Syd., sworn and examined:—

C. Purser, M.B. et Ch.M., Syd.  
15 June, 1899.

2073. *President.*] You are a duly-qualified medical practitioner? Yes.

2074. Have you any official position in connection with any hospital now? Yes. I am Medical Hon. Secretary of the Carrington Hospital for Convalescents, and Queen Victoria Home for Consumptives at Thirlmere.

2075. *Dr. Manning.*] You were for some years Superintendent of the Prince Alfred Hospital? Yes. In 1891, 1892, and 1893. I am Honorary Physician there now.

2076. Can you give us the date when the Carrington Hospital was established? It was in 1890.

2077. Have you the cost of the buildings there? The cost was £19,101 10s. 7d. for the buildings proper; then there are supplementary buildings. The Masonic cottage cost £1,472 7s. 6d.

2078. That was put up entirely by the Masonic body? Yes.

2079. How were the funds provided for building the main hospital? The land was given by the late Mr. Paling with £10,000 in hard cash, and the rest was raised by subscription.

2080. Was there any Government contribution towards it? At a public meeting, held in Sydney in 1883, I think, a further sum of £5,000 was subscribed in addition to the late Mr. Paling's gift, and this £5,000 was subsidised to the extent of another £5,000 by the Government.

2081. What is the number of beds in that hospital? One hundred altogether; the main building contains ninety-four and the Masonic cottage six.

C. Purser,  
M.B. et  
Ch.M., Syd.  
15 June, 1899.

2082. What is the system under which patients are admitted? No recommendation is needed from any one for admission. As a matter of fact, it is really a relieving hospital for the main city hospitals—the Sydney Hospital, the Prince Alfred Hospital, and St. Vincent's Hospital. The convalescent cases from there constitute the majority of the admissions. The Government Medical Officer recommends any patients that he thinks suitable amongst those whom he sees at the depôt. Then as regards what are termed outside applicants, any medical practitioner who has a patient who will be benefited by a change of air sends that patient to one of our examining medical officers, and the patient is admitted without question.

2083. Who are the examining medical officers? The Medical Superintendent of the Prince Alfred Hospital, the Medical Superintendent of the Sydney Hospital, the Resident Medical Officer of St. Vincent's Hospital, Dr. Clubbe for the Children's Hospital, the Government Medical Officer, Dr. Taylor, and Dr. Gwynne Hughes, for the Masonic patients, and sometimes it falls to my lot to send patients in.

2084. The patients furnished with certificates of fitness from those gentlemen you have named, are admitted to beds in the hospital? Yes; we send them by railway ambulance from Redfern to Camden, and thence to the hospital. That is done by the hospital, free of cost. We have to pay the Railway Commissioners for railway carriage.

2085. What is the cost of the ambulance service? Including the nurse and those in charge of the patient, roughly, about £400 a year.

2086. That includes the railway fares and the wagonettes for the conveyance of patients from Camden station to the hospital? Yes.

2087. I see that your beds have not been very fully occupied during the last few years; can you give a reason for that? At certain periods of the year the beds are over occupied, although not at the present time, but, for this season of the year, they are fairly full. We have a daily average in the summer months of from seventy-five to seventy-eight, which is a workable number. Sometimes there are more on the male side, sometimes more on the female side. We have as many as from ninety-four to ninety-six sometimes, in the summer months. There are ninety-four beds in the hospital proper, and six beds in the Masonic cottage—which are occupied by Masons only, recommended by that fraternity. The daily average of seventy-eight out of ninety-four is a fair workable number to be occupied.

2088. I see that the daily average for last year was seventy-six, and the average for the previous year was seventy-eight? Yes.

2089. Mention is made in the report of an emergency branch at Carrington, of what does that consist? We have sick wards, one on the male side and one on the female side, and, up to last month, we always had to take in any police cases that might be brought to us in the Camden district. That was originally brought about by the Board of Health. We asked to be relieved of that, but they said that, as we were subsidised, we should have to take in these cases. Some patients, after being admitted into the ordinary wards, have developed sickness; these are then transferred to the sick or emergency wards.

2090. They were local cases of sickness? Yes; accidents and emergency cases in the district.

2091. How are they provided for now? A cottage hospital has been opened, and we have been led to believe that, for the future, we shall not be troubled with such cases.

2092. The reception of these emergency cases was to meet local needs, and it was at the request of the Government? I do not know about the request of the Government, the Government were shown how it put extra work on our staff. They were often severe accident cases, and they required extra nursing, and it was a heavy tax on our limited nursing staff. That is why the Government were approached and asked to relieve us of these cases.

2093. What proportion do patients coming from the Metropolitan hospitals bear to the patients who are brought from outside sources? The majority of the patients come from the hospitals. In 1896 the number of outside patients amounted to ninety-six; that was out of a total of 1,055; there may have been a few more.

2094. So the Carrington Hospital relieved the metropolitan hospitals to the extent of seventy beds? Yes, practically.

2095. And if it were not for the Carrington Hospital there would be a necessity for seventy more beds at the metropolitan hospitals? Yes; absolutely so. I can speak from my experience at the Prince Alfred Hospital; we were able to send patients out there before they were fit to go home. A patient who had not a proper home to go to, and who was well enough to go to Camden, was sent there. Had it not been for the hospital at Camden we should have had to keep the patients at the Prince Alfred Hospital some days longer, because they were unfit to work and needed some little nursing.

2096. Do you know anything of the Walker Convalescent Hospital? Very little. I have occasionally recommended patients from the Prince Alfred Hospital.

2097. The Carrington Hospital is managed by a general committee;—how is it elected? A certain number are elected by subscribers; a certain number are nominated by the Paling family, and a certain number by the Governor.

2098. How often does it meet? The committee meet once a month. The general committee consists of twelve nominated or elected members, three trustees, members *ex officio*. One-third are nominated by His Excellency the Governor, one-third by the representatives of the donors of the estate, and one-third by the majority of those legally present at the annual meeting.

2099. Is the hospital managed directly by a general committee, or is there a house committee? There is the finance committee (termed the House Committee in the By-laws), elected each year, and they simply meet on the same day as the general committee, and go through the finances beforehand; then the general committee meet afterwards.

2100. What is the function of the local committee and the ladies' committee? Practically nil. They visit the hospital occasionally and report on anything that needs attention; but they have only met once or twice since the committee was formed.

2101. They are only a visiting committee? That is all.

2102. They are appointed because of the difficulty, I suppose, of members of the general committee going such a distance? That was originally the idea, but now the administrative honorary secretary visits the hospital not less than once a fortnight.

2103. What does your medical staff consist of? Of the two doctors in Camden.

2104. Are they paid for their services? They will be paid from the 1st of May this year. Before that they were honorary officers, but at the beginning of this year they sent in an application to the committee,

and

C. Purser,  
M.B. et  
Ch.M., Syd.  
15 June, 1899.

and said that they could not continue to give their services free, mentioning several obstacles. They were interviewed by a sub-committee from the general committee, who tried to get them to reconsider their decision; and after two or three interviews it was decided to pay them.

2105. What amount are they paid? 25 guineas each per annum; as a matter of fact, they asked for £50 a year, to be paid to each doctor.

2106. What nursing staff have you? There are a matron, two sisters, and three nurses.

2107. And what are their salaries? The salary of the matron is £175 per annum; of the head sister, £45 per annum; junior sister, £40 a year. The three nurses receive £20 per annum each.

2108. Are they all certified nursing sisters? No. The matron, of course, is a certificated nurse, and the two sisters are certificated nurses, but the other three nurses are probationers. They gradually work their way up. The junior nurse is absolutely a probationer. Our senior nurse has been with us about three years, the second a year, and the probationer was appointed three weeks ago.

2109. Is there any training for these nurses? The visiting doctors occasionally give lectures, and the matron also.

2110. But it is not possible there to train probationers into nurses? No; we do not give certificates, but it is a stepping-stone to the Sydney Hospitals; four or five of our nurses have been admitted to the Prince Alfred Hospital.

2111. The probationers' service has been only preliminary training for their service in the other hospitals? Yes.

2112. What other staff have you? There are the matron's servant, one cook and one laundress, an assistant laundress, two housemaids, and a kitchen-maid; outside there are the gardener, the porter, and the assistant porter.

2113. That seems rather a large general staff? We have our own vegetable garden, and we have a gardener for that; and the porter and the assistant porter help the gardener. We have to pump our own water up from the lake; a man has to manage the gas-engine, and there is also the wood-cutting. We find that we could not carry on with less. We have also a large poultry yard and a piggery to be attended to.

2114. What is generally the duration of the stay of patients in the hospital? I think the average time last year was about twenty-six days.

2115. They are sent there for a month? Yes.

2116. When they have been there a month I suppose their time is renewed if it is found necessary? Yes. The visiting medical officers have the privilege of recommending them for a further stay of twenty-eight days; but, as a matter of fact, we have had cases there that stayed over 100 days—nearly 200 days. They have sometimes developed sickness there, and sometimes they have been sent there rather early, and their illness has recurred. The local cases were nearly always overtime patients. We have had some accident cases in for long periods.

2117. What sum is paid to you by the Government for cases that are sent in by the Government Medical Officer? Two shillings a day.

2118. What was the amount received in 1897 and in 1898 from this source? We received from the Government for patients in 1897, £941 10s. 2d.; in 1898, £1,119 5s. 10d. Then, I might mention, with regard to this discrepancy, that sometimes we do not get all the money due in the same year; from 1897 there might be a fairly large sum standing over till 1898.

2119. What sums did you receive in those two years from patients? In 1897, £199 1s. 8d.; in 1898, £90 18s. 6d.

2120. And of what sums were these amounts made up? Of payments from 2s. 6d. to 10s., 12s. 6d. and 15s. per week. I think that last year there was one who paid over 25s., and one paid £1.

2121. Is there any justification for receiving more than the maintenance rate from any patient? It is stipulated in the by-laws that if a patient comes from a Government institution we are not to receive more than the cost per bed per annum, otherwise it is purely voluntary on the part of the patients to pay. A patient is asked if he can contribute anything, and if he can give 25s. a week it is taken. There were only two cases in which more than £1 was paid last year.

2122. Then, in addition to the sum received for the maintenance of Government patients, do you get a Government subsidy? Yes, £ per £ on the subscriptions and donations.

2123. Will you give the total number of patients treated in 1897 and 1898? The total number of cases admitted in 1897 was 1,092; in 1898, 1,023. Of course there are a number standing over from the previous year who would be included.

2124. Are any out-patients treated at that hospital? No.

2125. What was the cost per bed for 1897 and 1898? For 1897, £35 3s. 9d.; 1898, £35 11s. 4d.

2126. What sources of income are there besides those you have already stated, namely, the Government subsidy, payment for Government patients, the £ per £ for donations and subscriptions, and the payments made by patients? There is an endowment fund from which we receive interest, and the rent received from part of the estate. As a matter of fact, during the last few years the rent has been very little on account of the drought. We have had to remit most of it.

2127. What does the endowment fund consist of? The amount is £774 5s.

2128. Do you know how that has been made up? No; I cannot tell you exactly. It comprises sums that have been given specifically for that object by different people.

2129. I see that at the end of last year you had a balance on the working fund of £131, so we may take it that the hospital is practically free from debt? Yes. One month this year we were not free from debt, but there was money coming in in the next month which just about cleared us.

2130. Do you approve of the Provident Medical Association, of which Dr. O'Hara is secretary? I do.

2131. You are one of the medical officers of it, I believe? Yes; I am one of the active medical officers.

2132. Do you think that the association is working satisfactorily? It is working very satisfactorily.

2133. You approve of the principle on which it is established? Yes. No one is admitted into the association who is receiving over a certain salary. That is a most important stipulation.

2134. Do you think the association is likely to be of use in preventing imposition on the hospitals—preventing people from going into the hospitals unnecessarily? That was one of the objects spoken of at the inception of the movement, but whether it will do that largely I am not prepared to say. I do not know that it will, but it was hoped that it would.

2135. I see that the association takes in people who are in bad health under special circumstances and on payment of special fees? Yes; for instance, if a person came to me and asked to be examined in order

C. Purser,  
M.B. et  
Ch.M., Syd.

15 June, 1890.

order to become a member of the association, and I thought fit to take him, that person would be admitted. It is principally where the head of a family is perhaps unable to do much work, and it is done for the sake of the wife and family.

2136. All persons applying for admission are examined medically before they become members? Yes.

2137. But in special cases, though the person may be sick, he is taken? Yes.

2138. In this respect it differs from the ordinary clubs? Yes.

2139. An ordinary club has attached to it a medical department and does not take people unless they are in good health? No.

2140. Therefore, a good many people who are in indifferent health are precluded from taking advantage of the ordinary clubs? Yes.

2141. I suppose there is a large class of the population who cannot join either the provident medical association or an ordinary club, because of the condition of their health? Yes.

2142. And who must be provided for by charitable means in some form? Yes.

2143. Has it occurred to you what would be the best way of providing for those people who are not sent to the hospital;—do you think it is necessary to establish in Sydney a dispensary on the lines of those in the Old Country? I think it would be a very good thing if it could be done apart from the general hospitals altogether. There are patients situated very far from the general hospitals, and it means a good deal in cost to them to travel in by rail and tram.

2144. But are there not many who would prefer to be treated in their own homes if there was medical provision for doing so? Yes.

2145. And who would not go into a hospital if they could be treated in their own homes? Yes; I am sure there are many who would rather be treated in their own homes if possible.

2146. You think that could be done by the establishment of a dispensary, from which medical officers could be sent out to attend patients in their own homes? In certain districts, yes.

2147. We should like to know your views as to the pay system in hospitals; you have had a great deal to do with it;—do you think it is advisable that payment should be received from in-patients? I do not think there ought to be any set payments per week from the patients.

2148. You would not take any payments at all? No, except in the shape of some little donation—not set payments per week. My experience has caused me to make up my mind in that direction. As a matter of fact, I think it is a pernicious system.

2149. You speak with considerable knowledge, because you were Medical Superintendent at Prince Alfred Hospital for three years? Yes; it was there that I formed the opinion which I have expressed, and it was before I had been at the hospital very long.

2150. Will you tell us your objections to the system? Over and over again the system was abused; because people would get into the hospital under false pretences sometimes—people who had no right to receive charitable aid. I look upon the hospitals as being for the poor and indigent. People get into the hospital who have no right there—people who could pay a fair fee outside; that is one reason why I object to payment. There are other reasons, with regard to subscriptions being given by certain firms or bodies of men. Where each would subscribe only a small sum, a man getting, say, £300 a year thought he had as much right to treatment as a poor man getting 10s. a week, and these people used to get into the hospital. I have known cases in which persons who are not poor and indigent, but because they belonged to a body of men who subscribed to the hospital, thought they were entitled to treatment. I have known them to be treated by the Medical Superintendent by order of the committee.

2151. What are the objections to taking payment of 1s. or 10s. from people who are not able to afford any more? People of that class should be provided for in some other hospital. I object to the system that goes on of paying £1 and £2 a week, or from 25s. to 35s.

2152. You do not think it is right that the hospital should make any profit at all out of patients? No.

2153. You do not think that private wards are necessary in the hospital? No. I do not see why a person who can pay 35s. a week should occupy a bed to the exclusion of persons who cannot pay at all. The hospitals are subsidised by the Government for the poor and indigent, as a matter of fact.

2154. Is it really a fact that patients who are able to pay are more readily received at the hospitals than patients who are not able to pay? I think it is a fact. Although the others are not refused, still they are always glad to get in paying patients as a matter of profit to the hospital. I am sure the committee are more pleased the more paying patients they get each month than they are at having so many non-paying patients.

2155. Do you think the hospitals compete unfairly with the medical practitioners in this way? In certain cases they do; but I must say that I know that medical practitioners have been to blame themselves. Honorary medical men have recommended people to go into the hospital when they should not have done so.

2156. I am speaking of the ordinary outside practitioner not attached to hospitals? Yes; what you speak of has cropped up. Country patients often come to Sydney, who could be treated by the country practitioners quite as well, and who are well able to pay for treatment too.

2157. Do you approve of payment for the registration of out-patients? That is a subject which I have not gone into very much. I do not think it is in vogue at the Prince Alfred Hospital. The patients were asked if they could contribute, and they might give 1s. or 6d.; but to compel everyone to pay would involve hardship on some, because there are many cases in which they are not able to pay even a copper.

2158. We find that the number of out-patients is increasing very rapidly at all the hospitals;—can you give us any idea as to how that could be checked? I cannot. I was assistant physician in Prince Alfred Hospital for three years, and each year the number of out-patients increased to such an extent that it was a very great tax upon the visiting physicians more particularly.

2159. Do you think it could be checked by making all out-patients bring recommendations from medical practitioners? I think that would do some good. Laymen have told me that they could not gauge whether a case was a suitable case for admission to the hospital or not, yet the patient being ill they felt compelled to sign an order, though not convinced that they ought to do so. That crops up with people in the vicinity of Prince Alfred Hospital. Some of the heads of the colleges have said, "How were they to know whether the person was a suitable person for hospital treatment?" yet they felt compelled to fill up the orders.

2160. Prince Alfred Hospital has orders for the admission of out-patients, but none for the admission of in-patients? That is so.

2161.

289

C. Purser,  
M.B. et  
Ch.M., Syd.  
15 June, 1899.

2161. We find that a great many of these out-patients go to special departments;—do you not think it would be advisable if patients for special departments had recommendations from medical practitioners? Yes; in every case. I do not see why it could not be done in ordinary surgical and medical cases as well as in eye, ear, throat, and skin cases.
2162. You think it would lessen the number of out-patients? I think it would.
2163. So that you would get only cases that were more fit for hospital treatment? Yes.
2164. A very large number that come now are trivial cases? Yes; and there are the chronic cases.
2165. And the examination of all these cases takes up a considerable time? Yes.
2166. How much time do you spend each week in the out-patients department as assistant physician? I used to attend at 2 o'clock, and seldom got away before 5.30 or 6 p.m. The number of patients I would see would be fifty; I have seen as many as 136 in one afternoon.
2167. It would be almost impossible to do justice to such a number as that? Yes.
2168. So it would really be better to restrict the number, by not seeing more than a certain number? Yes, far better.
2169. Do you think everything possible is done by the hospital to detect abuses? Yes, as far as I know. In connection with the hospital that I am concerned with, everything possible is done; but still abuses creep in, sometimes with regard to out-door patients. I can mention a case in which a magistrate called and said that if a patient came in the afternoon I was to question him about owning a certain terrace of houses, and I found that he owned a terrace of houses at Newtown. You are supposed to attend to patients if they have an order from a subscriber, a magistrate, or a minister.
2170. You think everything is done by the hospital to prevent abuses; but do you not think it would be advisable to have some officer to visit the addresses given by the patients? If I had any doubt about a case, and I checked them all when they came for admission, I got the collector to call at the person's address. With regard to the country patients, of course you could not get at them at all.
2171. Possibly it might be advisable, in the case of a country patient, to insist on their bringing a medical certificate? Yes. One would be absolutely certain then that they were suitable persons for hospital treatment. I do not think the collector at the Prince Alfred Hospital does inquire into cases now; he is both clerk and collector.
2172. Inquiries have always been made in an intermittent manner? Yes; it was only done where something drew special attention to a case.
2173. *Mr. Barling.*] Have you had much experience of club practice in connection with Friendly Societies? Not very much. I have a few club patients.
2174. We shall be glad if you will give us any information with regard thereto, and especially as to any existing abuses? The system is a bad one, because in any club there is no limit as to membership. Anyone can join a club, whether his salary is £50 or £5,000 a year. In my limited number of club patients, several cases have cropped up in which patients better off than myself were members of clubs.
2175. The statement has been made that persons in receipt of incomes of £1,500 and £2,000 a year have become members of clubs; that they do not take advantage of the clubs in case of death, but they are only too glad to take advantage of them for medical attendance? I know of two cases that I am positive about, in which the patients had incomes of over £1,000 a year, and they took advantage of the medical benefits of a club.
2176. What sums are paid to the medical officers? They receive 16s. or 18s. per annum per case.
2177. A person receiving more than £1,000 a year has taken advantage of the medical benefits of clubs by the payment of 16s. a year? Yes; that is for himself and his wife and children.
2178. Can you tell us what class of the community belong to these clubs? The bulk of my patients are working men, but still there are some who are well-to-do people, who live in their own houses and own several other houses—people who are retired. A case cropped up in the experience of a brother practitioner. A man came to be examined during this year. He was asked his occupation, and his reply was that he was a gentleman; that he had retired.
2179. Can you tell us whether the clerical class of the community, as a rule, belong to clubs? I have not many of them, but I think that a number of them do join clubs. I have about 100 patients, and there are some clerks amongst them.
2180. So you think that, as a whole, that class of the community do not take advantage of these clubs? Yes; but the bulk of my patients are working men. There are very few young men unmarried who belong to the clubs.
2181. So clerks, as a rule, are not provided for in the clubs? Well, they do not belong to the clubs in any large numbers.
2182. What would be the reason? I am not prepared to say.
2183. Is not one reason that the different classes do not associate much with each other? No; they would not have to associate together except at the meetings of a club. In the City and Suburban Medical Provident Association no one knows who is a member of that body.
2184. How is it working? Very well indeed.
2185. Can you tell what class of the community is taking advantage of it? I have recommended many patients; people who are poor, and could not pay my fee, but who were glad to be independent to a certain extent, and could pay the small amount necessary to join the City and Suburban Association. They have not to pay as much as they would have to pay in ordinary clubs. One of the objects of starting the club was that that class of people might come in who were not able to pay the ordinary practitioner's fee. The association is only a new thing.
2186. There is another subject upon which I should like to ask you a question. You said just now that you did not advocate the payment of anything for hospital treatment, and you hinted that there should be another class of hospital in existence which would meet the requirements of certain classes? Yes; that is a hard thing to deal with. The cases which Dr. Manning mentioned of people who could pay 5s. a week, or 12s. 6d., or 15s., or even up to £1, and could not pay any more, should be provided for somehow. The crux is to know how or where. I think that in a general hospital there should be no payment at all. Those hospitals should be for the poor and indigent, and for accident and emergency cases.
2187. Then, for the class of the population referred to, at the present time there is no provision made, or it is very inadequate? Yes.

2188. I suppose, as a matter of fact, that at St. Vincent's Hospital they take in paying patients? Yes; they have private wards.

2189. And they take payment in the general ward? Yes, I believe so; and at the Lewisham Hospital they have some such system. A case went to Lewisham Hospital last week, and the patient was asked to pay 10s. entrance fee and 7s. 6d. a week, but was unable to do so, and afterwards gained admission to Prince Alfred Hospital.

2190. Do you think that a hospital of that kind would meet a decided want in the community? Yes; but there is no limit. I know that abuses creep up over and over again. I know a case in which arrangements were made for an operation—a moderate fee to be paid, which the patient was well able to pay,—but the night before the day for the operation the brother of the patient went to the doctor, and told him that they had altered their minds, and that the patient was going to the Lewisham Hospital, and would pay two guineas a week. They are glad to get them in as paying patients for the sake of the hospital. Whether the patient has £1,000 a year or £100 a year, as long as he pays I believe they do not ask what his means are.

2191. With regard to nurses, do you think from your experience that the nurses in the hospitals are overworked;—what is your opinion? My opinion is that they are not overworked, except on particular occasions. Sometimes, when an extra number of bad cases crop up, they have more work.

2192. You do not think that the ten and a half hours a day during which they are on duty in the Prince Alfred Hospital is too long? No. They are on duty, but they are practically doing no work for part of the time. They are under no physical strain except at certain periods.

2193. *Mr. Powell.*] I suppose the Medical Aid Association is in no sense a charity? None whatever. The point has been mooted whether it would be advisable to introduce some benefits, such as the husband obtaining so much at death, but I do not know whether it will come to anything.

2194. It is not a charity, and is not so regarded by the medical profession? Not that I am aware of.

2195. Dr. Manning has suggested that medical men should give orders to persons who wish to apply at the hospital for out-door relief? Yes.

2196. Would not that be a very great tax on the medical men? I do not think it would, divided amongst the doctors over the big area that supplies the out-patients to the hospital.

2197. It seems to me that it would be needful to make examinations into the cases? Yes.

2198. But you think it would not be objected to by the medical men? I do not think it should be.

2199. *Mr. Barling.*] There is a little pamphlet here, entitled "The Sweating of the Medical Profession by the Friendly Societies of Australasia," and amongst the statements it contains is this:

It must be admitted that the uncertainty of health, and the certainty of having to call in the doctor sooner or later, combined with the comparatively high charges for medical attendance, has induced thousands to join these friendly societies; but medical men are largely to blame for this state by adhering too conservatively to fees which might be fair and equitable twenty years ago, but which sadly require revising in these times of general depression.

Do you think there is anything in that? I do.

2200. And that the medical profession are partly to blame? Yes. I think that medical men might meet the times. If a patient can only pay a fee of 7s. 6d. instead of a fee of 10s. 6d., the medical man ought to be satisfied with it. I know that if a patient comes and tells me his position, I always meet the case if my fees are too high.

2201. *Mr. Powell.*] Is it not a fact that the doctors very often do not get paid at all? Very often, and in the cases of persons who are well able to pay.

2202. *Mr. Walker.*] Those persons belonging to the club get their medicine and attendance free? Yes, for the amount they pay.

2203. Is there anything to prevent these people from going to the hospitals and doing the same thing? If they lie they can do it. If it done I know. Of course, in the out-patients' department it is one of the stipulations that anyone belonging to a club is not supposed to be admitted unless he brings a note from his club doctor stating that he wishes the patient to go to the out-patients' department. Over and over again we have had patients who belong to clubs.

2204. There is no check on that? No. We ask them the question whether they belong to a club.

D. H. Easton sworn and examined:—

2205. *President.*] You are President of the Balmain Hospital? Yes.

2206. When was that hospital established? In 1884, I think.

2207. Was that on its present site? No; it was established on the present site in 1885.

2208. Where was the original hospital? As nearly as possible, on the site of the present Balmain Court-house.

2209. What is the area of the present site? 3 roods 25 perches.

2210. That was purchased in 1885? Yes.

2211. And the hospital was opened in 1885,—was it? Yes.

2212. What was the original accommodation of the hospital? In the present hospital there were originally two wards—a male and a female ward—with, I think, four beds in each.

2213. What additions have since been made? Considerable additions have been made. There was one room that was used as an operating room, which we turned into a ward, and a new operating room was erected at the back of the premises. Since that a new wing has been put on with nine extra beds. That was erected in February, 1897.

2214. There was a building on the site? Yes; the present building was on the site when we purchased it. That cost £3,000.

2215. That is, including the additional buildings? Yes; the whole thing.

2216. What is the cost of the whole of the additions up to date? The cost of the latest additions was £1,605. I do not know exactly what the new operating room cost. It is not included in that estimate.

2217. How was money raised for the purchase of that property? By subscriptions, donations, and Government subsidies.

2218. What grant did you get in aid of the building? No special grant at all.

- D. H. Easton. 2219. Are the only grants that you got the annual subsidies £ per £? We had a special grant previous to the building being erected, but it was not for the purpose of paying for the building. I think the amount was £200. The Treasurer told me that £100 was also given at another time.
- 15 June, 1899. 2220. Except that £200, you had nothing from the Government but the £ per £ subsidy? No.
2221. You say that the cost of the original site and building was £3,000, and £1,600 more was spent on additions and furniture? Yes.
2222. That makes £4,600;—has all that been raised by voluntary subscription? Yes. Subscriptions, donations, and fees from patients who can pay, and the money that we received from the Government.
2223. Have you had any considerable donations or legacies? No. The late Mr. John Booth left us £24 in his will.
2224. What has been the cost per bed for the building? The total cost of the building is nearly £200 a bed, but there is the cost of the new operating-room upon that.
2225. The cost has been somewhat over £200 a bed? Yes.
2226. Are the trustees members of the committee? Yes. They can do everything that a committee-man can do.
2227. How many medical officers have you? We have one paid medical officer and four honorary men.
2228. How much does your paid officer receive? £100 a year, but £50 additional will be paid in future.
2229. How do his duties differ from those of the other officers? Last year his duties were entirely in connection with out-door relief. Now he has to admit any cases of accident that come, and he has entire charge.
2230. So his duties altogether are pretty heavy? Yes, because we have a very large amount of out-door work.
2231. How often do the other four medical men visit the hospital? They have the privilege of sending in cases from outside, and one performs the duties of honorary medical officer each month.
2232. They take the honorary position alternately, then? Yes, month about.
2233. What was the cost per bed for maintenance in 1898? £87 15s.
2234. How many individuals were treated in the out-door department in 1898? 1,558.
2235. Those were separate individuals? Yes; and the number of attendances was 6,608.
2236. That is a large number, is it not? Yes; an enormous number of people come there.
2237. What is the cost of the out-patients' department? The cost of the out-patients' department was £291 10s. in 1898.
2238. How was that made up? We reckoned £100 for the surgeon for the out-door department; £51 for drugs, dressings, &c.; and £140 for other expenses.
2239. *Dr. Manning.*] You have a sum of £71 from patients in your report;—in what amounts was that received? In small sums. They are supposed to pay so much; but if they cannot, we take what they can give.
2240. What did they give? Some 10s, some 5s., some the whole amount that was charged.
2241. What is the highest amount charged? 3s. a day. They are recommended to give a coin before they leave, and if they can pay they do; if they cannot pay they are allowed to go. An inquiry is made into their circumstances, and if the committee think they can pay they are written to for the money.

Frederick Sparrow sworn and examined:—

- F. Sparrow. 2242. *President.*] You are Secretary of the People's Prudential Benefit Society (Limited)? Yes.
- 15 June, 1899. 2243. Some evidence has been given in reference to one or two societies;—can you tell us when that society was established? It has been established about three years.
2244. What are its objects? The primary object is to provide medical attendance and medicine, for a fixed weekly payment, to such members of the community as desire to obtain it through us; and we furthermore, in consideration of a slightly higher payment, guarantee the payment of a fixed sum on the death of a member, or of a member's wife; a fixed sum upon the death of children, according to age; and certain compensation, by way of weekly payments, during certain diseases.
2245. Is it a proprietary concern? Yes; it is registered under the Joint Stock Companies Act.
2246. Is there a paid-up capital? Yes.
2247. What is the amount of the paid-up capital? About £4,000.
2248. How are the executive appointed? The Board of directors are appointed by the shareholders.
2249. Are you the executive officer? Yes.
2250. The revenue consists, then, of the member's weekly or monthly subscription? Yes.
2251. The first charge upon the revenue, I presume, after the ordinary expenses, is the payment of the doctors and chemists? Well, no doubt they would constitute a first charge, but the payments at death are equally important. They are provided for year by year by setting aside a certain reserve.
2252. The prospective payments are made up as a reserve? Yes; and so far the society has set aside towards the credit of the assurance fund the entire excess of income over expenditure.
2253. The payment to the medical men and the druggist would really be part of the annual working expenses? Quite so.
2254. On what scale do members contribute? The contributions of members vary according to the particular benefits desired and according to age.
2255. Do they vary according to income? No; they do not.
2256. They do vary according to age? Yes, and according to the particular class of benefit required. We have several tables, and we allow persons becoming members to select.
2257. Do your rules permit a member to contribute so as to receive merely medical benefits? Yes; a member can do so if he wishes.
2258. What is the limit of age? From 16 to 65 years, the premiums being, of course, according to age. The premiums are not uniform.
2259. Have you any limit as regards income? No, there is no limit imposed, but our medical officers would not attend a person who, in their opinion, was able to pay ordinary medical fees.
2260. But suppose you admitted a man as a member, and the medical man refused to attend him, what would happen? There is no fixed contract with regard to medical attention. In a case of that kind we should refund the premium at once.
- 2261.

2261. Then the benefits vary according to the class of assurance that a man goes in for? Yes, precisely. For instance, he can provide for the payment of £30 on his own death, or £20, or £25. The premium would be in proportion. F. Sparrow.  
15 June, 1899.
2262. Supposing that a member requires only medical benefits, what is the scale of contribution for medical attendance and medicine? That is according to age—7½d., 8d., or 9d.
2263. The member's income makes no difference as regards the contributions? No; I think that at least 99 per cent. of those who subscribe to the society would be incapable of paying the ordinary private fees. Occasionally one who could pay them might creep in. It is absolutely impossible to prevent that.
2264. Then what scale of fees is paid to the medical men and the chemist? The average would be 20s. per member—14s. to the medical officer, and 6s. to the chemist. In some cases the amount is a little less; in some cases it is higher.
2265. Are any dividends paid to the shareholders? No dividend has been paid so far.
2266. Does the constitution provide for dividends? Undoubtedly.
2267. Have you any canvassers and collectors? Yes.
2268. How many? Between thirty and thirty-five collectors. Of course, the number of canvassers varies considerably. We have, on the average, a dozen.
2269. What was the revenue of the society for 1898? About £12,000.
2270. Is that entirely from members' subscriptions? Yes; I think the exact amount was £11,636.
2271. You must have a large number of members? Yes, between 5,000 and 6,000.
2272. That is the whole of the revenue? Yes, exclusive of interest.
2273. *Mr. Barling.*] What advantages over those of other friendly societies would your society give? We contend that it is an advantage for the society to collect the premiums from the members' own residences instead of their being required to attend friendly societies' lodges week by week. Furthermore, we make payments on the death of children up to the age of 16 years, which the friendly societies do not do.
2274. What classes of the community take advantage of your society? The industrial classes entirely.
2275. How are the doctors chosen? We publish our list of medical officers, and any prospective member selects one for himself.
2276. He can select from the list of those doctors who enter into an engagement to attend members of your society? Yes.
2277. How many doctors have you? We have at present seventeen.
2278. In all parts of the city and suburbs? Yes.
2279. I suppose their names are published? Yes.
2280. You say that members can select their own doctor? Yes.
2281. And can they leave him? They can transfer by giving notice from one to another.
2282. Do you find that any of your members belong to the clerical class of the community? I daresay that there may be some few clerks amongst them.
2283. The society is confined mostly to the artisan class? Yes.
2284. How many members do you say you have? Between 5,000 and 6,000—that would mean medical attention for 30,000 individuals.
2285. *Mr. Walker.*] What fee do they pay? It varies; members requiring only medical attention and medicine pay 7½d., 8d., or 9d. a week. If they require benefits of a more substantial character the payment would be something between 1s. and 2s. 6d. a week.
2286. There is nothing in your rules to prevent these people from going to any other institution to get medical advice? No; if they like to go to the hospital we cannot prevent them from doing so.
2287. You do not know whether any of them do go there? It is a very difficult question to answer. I should think that at least 99 per cent. of our members would take advantage of our medical benefits. A man meeting with an accident in the street would be taken to a hospital whether he is entitled to medical attention from us or not. Some do find their way there, but very few, I should imagine.
2288. *Dr. Manning.*] You have a medical examination, I suppose, before admitting a person to the medical benefits? No; we do not absolutely insist upon a medical examination, provided that from the information given by the member we are satisfied that the health of the family is good.
2289. What proof do you require? A written statement and a declaration to that effect. If the declaration is found to be untrue, it invalidates the whole thing.
2290. You differ from ordinary friendly societies, because they insist on a medical examination before a man is put on the list? Yes; we do not insist, though we have a right to do so.
2291. If you know that a person is in bad health, do you make him pay larger fees? No.
2292. You have only one scale of fees, and that is according to age? Quite so.
2293. *Mr. Powell.*] You collect from the people at their homes? Yes.
2294. And in the event of their inability to pay, what course is taken? They are entitled under the regulations to four weeks' grace. If their arrears of premiums do not exceed four weeks they remain good on the books. If the arrears exceed four weeks they are liable to be taken off, and it lapses subject to re-entry on payment of the arrears.

John Gelding sworn and examined:—

2295. *President.*] What position do you hold in respect to the Manchester Unity O.O.F.? I am District Secretary. J. Gelding.  
5 June, 1899.
2296. What is the provision made under your rules for the medical treatment of your members? The provisions are that they pay so much money towards the management expense fund, and the lodges in Sydney band together and have what they call a Medical Institute with doctors and dispensers. They have four doctors, who attend to about 4,000 members and their wives and children. They attend accouchement cases too, for which the member pays 10s. 6d.
2297. That is a special fee? Yes; and the Medical Institute pay the other 10s. 6d., so that the doctor gets 1 guinea.
2298. Is there a special fund? No; it all comes out of the management expenses fund. They pay 6d. or 7d. a week to that, but the Medical Institute, owing to the great numbers that they have, and having a dispensary

J. Gelding. dispensary of their own, and buying their own medicine, and making special arrangements for doctors, are able to do it for 3s. 6d. to 4s. 6d. a quarter for each member. In the suburbs, or in the country, they pay 6s. or 7s.

15 June, 1899.

2299. Is it the largest body in New South Wales? Yes; it is the largest and the richest.

2300. What are the subscriptions paid by members? 8d. to the sick and funeral fund by old members. New members pay according to a sliding scale (A or B, whichever they like). Young men, from 16 to 20 years of age, joining will not have to pay so much as the old ones; it rises up to 40. Then we do not take them in. We pay an extra fee to the management expenses fund, which pays for the expense of management and the doctor's medicines.

2301. Do the members attend at the dispensary? They are supposed to attend if they are able; if not, the doctor has to visit them.

2302. Where is the dispensary? In Elizabeth-street, near the Synagogue.

2303. Is it a usual thing for Friendly Societies to have dispensaries? They are beginning to use them now. They unite together for that purpose. At Balmain they have united together to have a joint dispensary, and doctors. They are able to work it very much more cheaply that way.

2304. How do the doctors like it? There is no grumbling, and we have good doctors. To a doctor, attending Friendly Societies' lodges is a stepping-stone to practice. All our old doctors in New South Wales, who have made their fortunes, had their first practice in Friendly Societies' lodges.

2305. Is there a special subscription required as regards membership of the dispensary, or does the usual fee cover the lot? The usual fee covers the lot.

2306. How many medical men are appointed? There are four at the Medical Institute, Elizabeth-street; and at the Newtown lodge, with nearly a thousand members, they have four doctors.

2307. You have a large membership in the country districts? Yes, all over New South Wales.

2308. What do the medical men receive per member? About 6s. a quarter. In the Medical Institute they get £250 a year altogether. They get the accouchement cases, and it mounts up. In the outlying lodges some of them pay one guinea.

2309. Do your doctors send many members to the hospital? No, very few.

2310. What cases do they send? If they get a chronic case they try to send it to the hospital, but they will not take chronic cases. When they have to have patients for surgical operations they send them to the hospital. They have to come to me for an order, and the rule I make is this: If it is the case of a single man, I say, "You will have to pay so much off your sick pay to the hospital." If it is the case of a married man with a wife and children, I simply write and say that the family want all the money.

2311. Then the weekly payment goes to the wife and children? Yes. If they can pay I say, "You should pay."

2312. Do members take much advantage of the out-patients' department of the hospital? Very few. There might be some from the country.

2313. Do you give orders for the hospital? Yes, I give orders.

2314. Do the societies do anything for the hospital in the way of subscribing or getting up demonstrations or fetes? I think they do pretty well. The Oddfellows go into the demonstrations every year. They perambulate the streets, and hold up the banners, and they gather in money. We pay £10 a year to the Sydney and Prince Alfred Hospitals. They do very well, I think, out of us.

2315. Do you happen to know what proportion of the population are members of Friendly Societies? No. I know that the Sydney District has nearly 10,000. I suppose there are about 19,000 in our Order in New South Wales.

2316. Are your members increasing or falling off? They are increasing now. When the depression took place in 1894 they went down. They could not afford to pay the money, but we made a rule at that time so that every member who paid to the benefit fund was kept good on the books. We lost a great number of members, but during the last year or two we have pulled them up, and we are getting beyond what we had before. The same thing occurred in Victoria.

2317. So that your members are becoming financial again? We are getting a lot more.

2318. How many who dropped out rejoined? Very few have rejoined. When they go out they seldom rejoin. My experience of the working population of New South Wales is that they do not care as long as they have the hospitals to go to.

2319. You have had a wide experience? Yes.

2320. *Mr. Barling.*] How long have you been in your present office? Thirty-two years.

2321. So, of course, hardly anyone in the community can have had so large an experience in these matters as you have had? I have been very active in it for nearly forty years.

2322. What class of the community join these societies? All classes. Even clerks are joining now.

2323. Are there many clerks joining? A good many.

2324. I suppose you ask no questions as to what means they have, as long as they are healthy? We do not interfere with that. If a man chooses to be provident we consider it our duty to take him in. A clerk can generally consume all the money that he earns. It is a splendid thing if a wife has £50 on her husband's death and medical attendance. The medical attendance is as good as you could wish for.

2325. Then, from your knowledge, a large number of the clerical class are now coming in? Yes.

2326. They are coming in in increasing numbers? Yes.

2327. A statement has been made that you have a certain number of members who are called honorary, who do not take advantage of the funeral benefits, but who join for the purpose of getting the medical benefits? We do not allow that; honorary members can have no medical benefits. To do that they must become financial members.

2328. The statement has been made that persons with salaries of from £1,000 to £1,500 a year join the societies and take advantage of the benefits? I do not know anything about that.

2329. It is not the case? No.

2330. What I mean is, that if they choose to become financial members they can do so? Yes; then they can have the benefits.

2331. Have you members with large incomes, who join as financial members to get medical aid? I do not know whether they are getting great wages, but there are clerks amongst the members. From my experience of over forty years I know that when societies get as old as the M.U.O.O.F., if they have no invested funds, they must go down. We started early and have a splendid nest-egg. The others, when they get old and give much money, will have to go.

2332.

2332. Because they were not financially sound? Yes.
2333. *Mr. Walker.*] An individual only pays 8d. a week to the society? Yes; and perhaps 6d. a week to the management expense fund in addition.
2334. That is 1s. 2d. a week? Yes.
2335. You said it was 8d.? Eightpence for the sick and funeral fund. The doctor is paid out of that 6d.
2336. 1s. 2d. is all that a member has to pay, and that includes everything? Yes.
2337. How many people does this 1s. 2d. a week include? If the wife dies before the husband, the husband gets £15.
2338. How much is there for a child? We do not give anything for children.
2339. *Dr. Manning.*] Am I to understand that you pay each of the doctors £250 a year, and such fees as he may get from midwifery cases? Yes.
2340. Then you do not pay the doctors so much a year per member? Yes; where they have not a medical institute it is all under that system.
2341. How much do you pay to the doctor per member? About 6s. a quarter, or £1 to 24s. a year.
2342. Does that include medicine? No; that is separate.
2343. Your payments are from £1 to 24s.? Yes.
2344. The highest amount paid by any society is £1 6s., is it not? Yes.
2345. You give a sum of £10 a year to the hospital? Yes, to the Sydney and Prince Alfred Hospitals, and this year to the Glebe Children's Hospital. There is a row about St. Vincent's in connection with the matter.
2346. And you give orders on the hospital? Yes.
2347. But you do not give orders on the Prince Alfred Hospital, do you? Yes.
2348. What is the form of recommendation? Just a memo. I say, "Please admit So-and-so, who is advised to go into the hospital, and is able to pay so much a week," or, "who is unable to pay anything, having a wife and children depending on his sick pay."
2349. And are those orders always honored by the Sydney Hospital? Yes.
2350. How many do you give in a year to people who are not able to pay at all? I do not think it averages above five or six.
2351. So the society pays about £2 for each of those to whom you give orders? Yes; and I believe the hospital authorities get some money from the Government.
2352. You do not put people on your list of members without at first having them examined medically? No; they have to be examined.
2353. *Mr. Powell.*] The Manchester Unity is in no sense a charity? Not at all.
2354. Suppose that a man with a large or small income comes, you ask him no questions if he stands the test required for membership? No.
2355. Whatever his income may be, he has a right to the same advantages as any other member? Yes, if he pays for them. In case of sickness they get a guinea a week for the first six months, 15s. for the second six months, 10s. a week for the third, then, if the case becomes chronic, the patient gets 5s. a week afterwards.

J. Gelding.  
15 June, 1899.

WEDNESDAY, 21 JUNE, 1899.

[The Commission met at the offices of the Public Service Board at 2.30 o'clock p.m.]

Present:—

F. NORTON MANNING, Esq., M.D., IN THE CHAIR.  
J. BARLING, Esq., J.P. | CRITCHETT WALKER, Esq., C.M.G.  
J. POWELL, Esq., J.P.

Alfred Davis sworn and examined:—

2356. *Dr. Manning.*] What are you? Registrar of Friendly Societies and Trades Unions.
2357. Can you tell us the number of orders of Friendly Societies that there are in New South Wales? Yes, the number of orders is 16. In addition to that 16 orders there are several that we call miscellaneous societies, single bodies without branches.
2358. Do all these orders miscellaneous and otherwise provide medical attendance for their members? They all provide medical attendance, some of them provide for nothing else.
2359. Which are those which provide for nothing else? I cannot tell their names at present. Many of the Daughters of Temperance exist only to provide medical attendance for their members.
2360. There is no other benefit accruing for them to their members except medical attendance? No.
2361. What is the total number of members of the different branch societies, miscellaneous and otherwise? From returns sent in the number is 69,124. Of course these are a few societies which neglect to send in returns. They are societies the existence of which we are not aware of.
2362. What is the total amount paid for medical attendance and medicine by Friendly Societies during the year 1897? The amount is £63,973.
2363. And the amount paid to sick members during the year? The amount for sick allowance during incapacity was £56,561.
2364. What was the average amount paid for medical attendance and medicine during the year per sick member? £5 15s. 9d.
2365. And what was the average allowance to sick members during incapacity? £5 2s. 4d.
2366. *Mr. Barling.*] From a return which I have here, it appears that in 1893 the number of members in connection with the Friendly Societies of New South Wales was 71,218. I think you have given the number as 69,000. Although the Colony has increased in population, it would appear that the number of members is falling off. Can you give us any reason for that? Yes, bad times. In the mining districts especially members are apt to fall off. The numbers are gradually increasing again now, but some of the lodges were actually closed on account of the bad times.
2367. How many were closed? I do not know, but a considerable number, and not only that, many of the miners have had to leave the Colony and go to Western Australia.

A. Davis.  
21 June, 1899.

2368.

- A. Davis. 2368. Can you tell me what the population was in 1893 and 1897? No.
2369. It really means that though the Colony has increased in population, there has not only been a standstill, but a decrease in regard to the membership of the Friendly Societies so that that indicated a very large falling off? Yes.
2370. And it is accounted for in the way you speak of? Yes; in any grand centre they will tell you that the mining districts have suffered severely, especially in the Newcastle district.
2371. Can you give an estimate of the number of persons who would reap the benefit of the Societies containing that 69,000 members? The number of members is about 70,000. I think, indeed, there must be over that, because there are some Societies whose returns we have been obliged to send back.
2372. Can you tell me how many that number of members would represent? The number of persons benefited would be four and a half times the number of members. My estimate is four and a half to a family. In England it is 4·7.
2373. Will you tell us the number of members admitted during the year 1897? 8,548.
2374. And the number of members lost? 8,593.
2375. Also the number of members sick during the year? 11,054.
2376. *Mr. Powell.*] Is registration compulsory? If they provide any benefit which is capable of calculation. There is a penalty of £20 for each time of collection unless they are registered—each time they hold a meeting; but the difficulty is to find out about it. Suppose some individual comes and lodges a complaint before me; he will not sign a declaration, so that if I were to try to prosecute, I should find no one willing to give evidence.
2377. You said that some societies have not furnished returns? Some have not.
2378. Have you no power to compel them? I do not know of their existence, and a great many drop out, simply die out. Whenever we miss one like that, if we do not get any information, I write about it.
2379. Do you make any inquiries yourself, or do you leave it to chance to find out whether these societies have died out? We write to the Grand Secretary, and ask the secretaries of the different bodies to give information about the society.
2380. Do you know anything about the financial condition of these various societies? We have an elaborate table, but during the last two years they have not been printed with the details of each individual lodge membership. The table gives every information that could be desired.
2381. Those tables are authorised by you? They are compiled by me.
2382. But have you authority to make it incumbent on these societies to collect under these tables only? There is a penalty for not sending in their returns, but as the Act does not state in what form the returns shall be made out, it is sufficient for the secretary to say receipts so much, expenditure so much.
2383. It is in their own option, then, to charge what they please for benefits? They must charge according to their rules, and the rules and rates of contribution in regard to benefits are supposed to be certified to by an actuary.
2384. Are they so certified? Yes, ever since we took the business over. Mr. Trivett is acting now.
2385. Then they are all subject to the supervision of a Government actuary, are they? There is no Government actuary for Friendly Societies.
2386. Then what position does Mr. Trivett hold? As a Government actuary he is a recognised actuary, and he is willing to do it to save them expense, otherwise they might be charged 50 guineas.
2387. As a matter of fact, he is a Government actuary? He is actuary to the Public Service Board.
2388. It is part of his duty to examine the affairs of these societies? No, it is not his duty. It is done voluntarily.
2389. Is it anybody's duty? No; they supply an actuary's certificate and if they choose to go and pay a fee their certificate must be accepted. I must take any actuary's certificate.
2390. *Dr. Manning.*] There are about 70,000 members of these societies? Yes.
2391. And each of those members represents a family of four and a half? Yes.
2392. So that we have about 315,000 people obtaining medical attendance and medicine, through the Friendly Societies? Yes; there are cases of persons belonging to several societies.
2393. But they would only get medical attendance for one? Only for one.
2394. *Mr. Barling.*] The percentage of members of Friendly Societies and their families to the population is given as 43 in South Australia; the corresponding figures in the other colonies being as follows:—New South Wales, 23 per cent.; Queensland, 16 per cent.; Victoria, 27 per cent.; Western Australia, 9 per cent.; Tasmania, 25 per cent.; New Zealand, 17 per cent. Do you know of any reason to account for the high percentage in South Australia? No; it is a mistake. Medical attendance and medicine in this Colony costs the members of the Friendly Societies between 6d. and 6½d. per head. It is said, that in Sydney 26s. a year is paid for medical attendance and medicine. In England they do not provide medical attendance for members and their families unless they pay extra for it. If a society joins the medical association a member pays 3s.; if an individual member wants to join the association he pays 4s. If he wants his wife to obtain medical benefits he pays an extra 4s., and he pays 5s. for the rest of the family; that is 13s. as compared with 26s. here.
2395. *Dr. Manning.*] How much of the 26s. a year is given to the doctor and how much to the chemist? In Sydney, where they belong to dispensaries, the dispensary provides the doctor and the medicine.
2396. You do not know the average fee paid to the doctor? No.

Odillo Maher, M.D., sworn and examined:—

- O. Maher, M.D. 2397. *Dr. Manning.*] You are one of the ophthalmic surgeons at the Sydney Hospital? Yes.
2398. And as such you have charge of the patients in Moorcliff? Yes.
2399. How long have you been connected with the Sydney Hospital? About thirteen years.
2400. Do you consider the site at Moorcliff a good one? Yes; there is no objection to the site.
2401. Have the results obtained there been satisfactory? Yes, very satisfactory.
2402. And are the buildings suitable and satisfactory? No, not at all. I did not think they are on the plan of a modern hospital, and we have not sufficient room for the number of patients that we accommodate there. We have no operating theatre. I do not think that there is sufficient land to allow the patients that we have there to take proper exercise.
2403. Do you consider the nursing satisfactory? Yes; we get very good results.

2404. If Moorcliff were abolished, what do you think would be the best way to provide for ophthalmic patients? I think there should be an ophthalmic hospital with, at least, 100 beds to accommodate the patients.

O. Maher,  
M.D.

21 June, 1890.

2405. Have you any views as to where that hospital should be? I think on any suitable site in Sydney.

2406. Do you think it should be managed as a distinct institution or in connection with one of the existing hospitals? I think as a distinct institution it would be better.

2407. What would be the advantages of that? I think it would be better, but it could be managed satisfactorily in connection with one of the existing hospitals.

2408. It might be more expensive also? I do not know anything at all about the expense, but I may say that ophthalmic cases are not expensive cases. They involve little or no expense in regard to food, and, being generally of robust health, they do not require extra diet. The dressing is inexpensive, the nursing staff comparatively small, and the instruments last many years and cost very little. The expense is simply a matter of food and the maintenance of the staff. I do not know whether the institution could be managed more economically as a separate institution than in connection with another hospital.

2409. Have you arrived at any conclusion as to what is the cost of patients at Moorcliff? No.

2410. Do you think it is much less than that of ordinary hospital patients? It must necessarily be, but I do not know what the expense is.

2411. We find that a very large number of these cases are cases of granular lids? Yes, I should say that at any time the majority in the hospital are cases of granular lids, but I do not think we admit as many cases of granular lids as of other diseases. The granular cases are chronic cases, and remain in a long time.

2412. Taking the number of beds occupied at any time, what are the majority of cases? Cases of granular lids.

2413. To the extent of three-fourths of the total number? I should think so.

2414. Could not these cases of granular lids be provided for quite as well in an institution in connection with an asylum for the infirm and destitute, supposing it was properly officered as regards medical attendance? Do you mean entirely distinct, and solely and wholly for ophthalmic cases?

2415. Yes, but in connection with one of the asylums? Would the building be quite distinct?

2416. It would be a separate pavilion? There is a great objection to that. The majority of the cases that are chronic cases come from the country; they are people who are not willing to go to what I might call poor-houses; they would resent that. There are the children of farmers, working people, and others to whom I think it would be demoralising to be put into a poor-house in connection with the Government asylums. As far as the treatment goes, of course, any ophthalmic surgeon could treat them in a separate building.

2417. Very often the ordinary practitioner would be quite able to treat cases of granular lids? I do not think so. I consider they are the most difficult cases to treat properly.

2418. The patients are now received at Moorcliff in a Government establishment, why should there be any objection to their getting the same assistance in connection with an asylum for infirm and destitute? It may be purely sentiment. Many would go into Moorcliff who would not go into a Parramatta institution. I think it would be degrading to many of them to go into an institution in connection with the asylums for the infirm and destitute.

2419. But if you removed three-fourths of the cases requiring operation and more active treatment, could they not be dealt with in connection with Prince Alfred or the Sydney Hospital? They could be.

2420. Acute cases require no very great space to move about in because they are mostly in bed? No; there are very few cases kept in bed. I suppose that the cases that are kept longest in bed are cataract cases, and the extreme period will be a week. The patients are always moving about; they may have one eye tied up, but very few are confined to their beds at Moorcliff.

2421. Moorcliff is taken very little advantage of by the students of the University? Very little.

2422. How do you account for that? Well, I think they see in the out-patients department the kind of cases they expect to meet with in private practice. As a rule these students do not intend to be specialists, and they take very little interest in operations. Prince Alfred Hospital is more convenient for them.

2423. The students do not come to Moorcliff even to take advantage of the instruction that they might receive there in minor matters apart from operations? The visiting hours may not suit them. They go to the Sydney Hospital.

2424. *Mr. Barling.*] I think you said, and Dr. Evans gave the same evidence, that the site of the Moorcliff Hospital is peculiarly suitable? Yes, it is very suitable.

2425. Would you insist upon a hospital being provided on a site somewhat similar to that? No, not necessarily.

2426. Is there any site about Sydney that would be equally good? I think there must be numbers of sites about Sydney quite as good.

2427. Your evidence shows that the buildings are utterly unsuitable? Yes.

2428. The same fact was strongly impressed on the members of the Commission when they visited the place;—do you not think that for the same money it would be possible to get more suitable buildings? I think there should be a hospital. If a building is to be got, it should be one that has been erected for a hospital. They pay £300 a year for Moorcliff, but I do not think that you could get any other more suitable building for £300 a year.

2429. I suppose your opinion is that better provision should be made as quickly as possible? Yes, it is an urgent matter. The place is overcrowded, and patients are constantly being sent away. They get orders for admission, but there is no room.

2430. Grave complaints have been made to us by many doctors in Sydney that a large number of cases are sent to the hospital which should not be taken, to the great disadvantage of the medical profession;—has anything of that sort come under your notice? That is constantly taking place. It is very difficult to inquire into the cases, especially when they come from the country. I have no doubt that the hospitals are abused in that respect. I would not say very much abused, but they are abused.

2431. Evidence has been given to show that it was partly due to the high fees charged by the doctors;—do you think there is anything in that? That may apply to some cases, but I do not think it would apply to all.

- O. Maher,  
M.D.  
21 June, 1899.
2432. Or to any large extent? I really could not say. I do not know the circumstances of the patients. It is only by accident that I have found out that persons who have been in the hospital and received gratuitous treatment were fairly well to do. The majority of the cases that I have to deal with come from the country and from the neighbouring colonies to Moorcliff.
2433. *Mr. Walker.*] Do you think there is any possibility of improving the building so as to make it more suitable? It might be done.
2434. Do you think the building is sufficiently substantial to be altered? It appears to me to be substantial enough. The walls are of solid stone.
2435. It is a very suitable place for the treatment of eye diseases? Yes.
2436. And you could not put up a hospital to give the same accommodation that you have there for a sum, the interest on which would amount to £300 a year? No. I think the interest on the money required to put up a hospital and purchase the land would be more than £300 a year.
2437. Do you think there is sufficient ground in that locality which might be acquired by the Government on which to put up a suitable hospital? No; I think there is not sufficient ground. I think that if a hospital were built for ophthalmic patients there should be provision for at least 100 beds, and I do not think there is sufficient land available there for that accommodation to be provided and to allow room for exercise.
2438. Is there any reason why an ophthalmic hospital should be in the centre of population;—could it not be out of town? If the hospital were out of town it would be very inconvenient for specialists to attend it. It would be objectionable to have it too far away.
2439. The great difficulty, I fancy, would be to obtain a site in a locality convenient and suitable to the medical men? Yes.
2440. Do you think the existing establishment satisfies the present requirements of the community? I do not. As I said before, we are overcrowded, and I think the present arrangements are inadequate.
2441. I presume that you would recommend the establishment of a new hospital altogether? Yes, with about 100 beds.
2442. Then it would all depend upon the question of site and the money to erect the hospital? Yes.
2443. *Mr. Barling.*] I suppose you know that this Commission has recommended the resumption of the site of the School of Industry as a site for a maternity hospital? Yes.
2444. Would it be possible in conjunction with that on that ground to build a hospital for ophthalmic cases;—would an ophthalmic hospital, if erected there, interfere with the maternity hospital? I do not think it would if there is sufficient land.
2445. Do you think that if the maternity hospital and the ophthalmic hospital were put there, one would interfere with the other? I do not think they would interfere with each other.
2446. Do you think it would be a good place for an ophthalmic hospital? I see no objection to it.
2447. Suppose the Government got that land, do you think it would be a good plan to carry out what I have suggested? I think it would.
2448. I do not mean that we should have the two institutions in the same building? I do not know whether there would be sufficient land there.
2449. There are about 3 acres of land? Of course, the ophthalmic hospital would be a distinct block. There is one thing I should like to mention with regard to the asylums. I think there are a number of patients who go into those establishments who ought to be treated by specialists. I have had some little experience of the matter, and I think that a great number of the patients who go in there require special treatment. I am certain that they cannot be properly treated by anyone who has not special knowledge. I know that when I was connected with the institution, patients were sent from the hospital when fairly convalescent, such as we considered suitable to go into the asylum. Of course, it was known that they would get special treatment. I do not think the hospital is relieved to that extent now. I am sure that many patients who are admitted to the Parramatta institution might be cured and sent out, and become useful members of society, but I hardly think it likely that that will take place without specialists connected with it. I might mention the case of a person who was in an institution in Parramatta. The doctor thought that the man had cataract, and kept him there till he went blind. Then he sent him to Moorcliff, but he was hopelessly blind, suffering from glaucoma. Had that case been dealt with by a specialist, the man would have been operated on at once, and he would have had the use of his eyes for the rest of his days. Batches of patients are sent down for operations when no operation has to be done, and they are sent back again. I think that a good deal of suffering could be avoided and useful vision retained by many people who go into Government institutions, if ophthalmic surgeons were connected with those establishments.
2450. *Dr. Manning.*] You say that you think the patients would object to going to the asylums for the infirm and destitute, but suppose the Government were to establish a hospital for chronic cases of all kinds apart from the asylums for the infirm and destitute, and corresponding to the sick asylums that exist in England, do you think there would be any objection to patients afflicted with eye diseases going into them? Not at all, provided that they had specialists to attend them. The patients would not go into what they would look upon as a poorhouse.
2451. That is because the present asylums for the infirm and destitute are looked upon more as poorhouses than as hospitals? Precisely.
2452. Whereas if they had no connection with the Government Department of Charities, and there was a hospital on modern principles having wards for special forms of disease you do not think people would object to go to them? No, certainly not; but of course I think that specialists would have to treat the cases.
2453. There would be no more objection to go to an institution of that sort than there is at present to go to Little Bay? No, but there would be an objection to go into an institution that is looked upon as a poor-house such as those at Parramatta.
2454. It is rather an objection to poorhouses as they exist than to hospitals connected with poorhouses as they should be? Yes. It is a matter of sentiment.
2455. *Mr. Walker.*] What area would be necessary for a hospital of that kind? A couple of acres would be ample.

WEDNESDAY, 28 JUNE, 1899.

[The Commission met at the Offices of the Public Service Board at 2.45 p.m.]

Present:—

G. A. WILSON, Esq., J.P. (PRESIDENT).	
F. NORTON MANNING, Esq., M.D.	J. BARLING, Esq., J.P.
J. POWELL, Esq., J.P.	CRITCHETT WALKER, Esq., C.M.G.

Frederick J. T. Sawkins, M.B., Ch.M., sworn and examined:—

2456. *Dr. Manning.*] You were for some years Medical Superintendent at the Prince Alfred Hospital? Yes, for five years.

2457. You are now one of the medical officers of the M.U.O.O.F. Society? Yes; amongst other things.

2458. We wish to ask you a few questions in regard to the system in connection with the M.U.O.O.F.;— you are paid a fixed annual salary in connection with that Society, are you not? Yes.

2459. What do your duties consist of? There are four of us. £1,000 is divided annually between the four doctors who have this lodge, and we are supposed to attend at the rooms at the M.U. Hall three times a week. Two of us go there on Mondays, Wednesdays, and Fridays, and two on Thursdays, Tuesdays, and Saturdays, before 12 o'clock. In addition to that, if any messages are sent requesting the attendance of one of the doctors between 10 and 12, a visit is supposed to be paid that day if possible, but with regard to these visits the name of the doctor has to be specified. The members of the Order have to send in for the doctor whom they wish to see, and it turns out sometimes that one unfortunate man may have to pay four, five, or six calls whilst the other three have not to make any at all.

2460. Nothing is paid for those extra visits? No; it is all included in the salary. There is also the usual fee of 1 guinea for midwifery.

2461. How are medicines obtained? There is a dispensary under the care of a dispenser and an assistant dispenser, who have to dispense all the medicine prescribed for patients.

2462. Are the waiting-rooms for patients convenient? Yes.

2463. Are you satisfied with the drugs that are supplied? Yes.

2464. Are they of good quality? Yes, they are. I think they were about one of the first dispensaries to bring the drugs up to the 98 standard in the new pharmacopœia.

2465. To what class do the people who attend there and whom the doctors attend at their own homes belong? To all classes; from the poorest person to the ex-Crown Minister.

2466. There is no wage limit? No.

2467. They could always find medical men to do the work? Yes, they always could.

2468. Are there any objections to the system as it exists, beyond the fact that the Society has no wage-limit? Yes there is, because the £250 a year for each of the medical men is very small remuneration for the amount of work which may have to be done. As a matter of fact they do not overwork their men as a rule. I have been there for about eight months, and I am perfectly satisfied that the £250 a year has fully compensated for the visiting work I have done. But another man may have to do twice as much work as I do in the way of visiting. Moreover, in case of an epidemic I should not be at all satisfied with the pay.

2469. But you have to take the good with the bad times? Quite so; these lodges are not quite so bad as they are made out to be.

2470. They are doing really good and useful work in a manner to which there is very little exception to be taken? One can hardly say that, because one must take great exception to the want of a wage-limit. A number of those whose incomes are above a certain amount have their own doctors, but there are others of that class who would no more think of sending for an outside doctor than of paying us something extra.

2471. *Mr. Barling.*] Complaints have been made of the high charges of the doctors. It has been suggested that the reason why so many persons who have means join societies of this kind is simply that the charges made by the doctors are so high;—do you think there is anything in that? Yes; I think there is a very great deal in it.

2472. We should be very glad to have your views on that point? I cannot state the exact proportion, but some 75 per cent. of the population have incomes of under, say, £120 per annum. If they call in a doctor who charges 10s. 6d., and if they have to pay 2s. 6d. for medicine, 13s. altogether, that is a big call on a man who is getting less than £2 a week. Then again, from my own knowledge of the wage-earners gained at the time I was in the hospital, and during my connection with the M.U., I find that though they may be earning at the rate of £2 a week, they often are not working half their time, so that they really cannot afford to pay 13s. for a visit and a bottle of medicine.

2473. Does not that also apply, though perhaps not quite so strongly, to the clerical class earning from £150 to £250 a year? Yes. It is very hard to say what is the lowest rate which will enable a man to pay a fee of 10s. 6d. and 2s. 6d. for medicine. Some seem to do it on very little. Apparently any one who has £150 a year can afford to pay usual doctors' fees. A great number seem to do so rather than go to the hospital or join a lodge.

2474. *President.*] That would only be for single visits? Yes. They would not be able to keep it up for long.

2475. *Dr. Manning.*] A person has to obtain a certificate of health before he can join a lodge? Yes.

2476. Is there not a large class who are already damaged in constitution, and who are improvident besides, and not able to join these lodges? Most of the candidates for the lodge that I am connected with are young men who have just married or who are about to marry.

2477. And who are in good health? Yes.

2478. There is a large class who could not join any lodge? Yes. We have, of course, to put certain questions when the examination is made, according to the rules of the lodge, and intending candidates have to sign a declaration, but it is a very poor test. There is really no sufficient test of the candidate's health, and this is a serious fault that needs rectifying.

F. J. T.  
Sawkins,  
M.B., Ch.M.  
28 June, 1899.

F. J. T.  
Sawkins,  
M. B., Ch. M.  
28 June, 1899.

2479. There is a large class who are really not able to join the lodges? There must be.
2480. Do you think there is any necessity in Sydney for a free dispensary to meet the wants of that class, so that they can obtain medicine at some depôt and be visited at their own homes to prevent them from going to the hospital? If it would prevent their going to the hospital, certainly there is a large class.
2481. You know the constitution of the dispensaries in the old country? No, I cannot say that I do.
