SUMMARY

This statistical indicators publication sets out labour force trends for the 15 regions of Greater Sydney for the period May 2000 to May 2014. It is a companion paper to the Research Service publications, *Labour force trends in Regional NSW* and *NSW regional labour force trends by labour force indicator*.

The ABS releases labour force data for the 28 NSW Statistical Areas Level 4 (SA4s) (see maps from page 8 of this paper) in two publications: [Labour Force, Australia, Detailed – Electronic Delivery, May 2014](#); and [Labour Force, Australia, Detailed, Quarterly, May 2014](#). 15 of these SA4s are located in Greater Sydney and 13 in Regional NSW.

In this paper, all 93 NSW Electorates, for both the 2013 and 2004 Redistributions, are matched to their corresponding SA4s. On pages 11 to 15, the electorates are matched to three SA4s at most (note that several electorates lie across more than three SA4s). Tables list the percentage of each electorate's population located in an SA4, as calculated using the 2011 Census.

31 labour force indicators feature in this publication. The first 12 include key labour force indicators such as employment, the unemployment rate, the youth unemployment rate and the participation rate. Except in the case of long-term unemployment, these indicators are broken down by gender and by age – total, persons aged 15 years and over, and youth, persons aged 15 to 24. The last 19 indicators concern employment by industry. Two tables are provided for each industry: a count of persons employed in the industry; and the percentage of total employed persons employed in the industry.

Each regional profile contains the data on all 31 labour force indicators, together with graphs of key indicators. The NSW electorates (2013 Redistribution) located in each region are listed in the profile, together with the percentage of their population located in the region. Every region is ranked from highest (1st) to lowest (28th) for those indicators which are percentages or ratios. Greater Sydney figures are also included in each profile for ease of comparison. A section at the end of the paper contains all the NSW, Greater Sydney and Regional NSW figures.

This publication starts with a section on key labour force concepts and youth unemployment. Reading this chapter prior to the rest of the paper is recommended in order to best understand the figures presented, especially with regards to youth unemployment. Several less well-known labour force indicators aid interpretation of such key indicators as the youth unemployment rate. These include, for example, the youth unemployment *ratio* and the ratio of youth-to-adult unemployment rates.

The following tables summarise the key figures for all 28 regions. The commentary draws attention to interesting labour force trends at the NSW level, providing a context for the regional labour force trends.

May 2014: Employment, part-time employment and youth full-time employment

Region	Employment		Part-time employment		Youth full-time employment	
	No. ('000) May 14	Av. ann. growth (%) 2000-14	No. ('000) May 14	Av. ann. growth (%) 2000-14	No. ('000) May 14	Av. ann. growth (%) 2000-14
Greater Sydney	2,407.3	1.6%	686.8	3.5%	162.4	-2.1%
Baulkham Hills & Hawkesbury	126.5	2.0%	40.6	3.3%	7.0	-1.9%
Blacktown	153.1	2.0%	38.3	3.8%	12.1	-1.8%
Central Coast	147.7	2.2%	49.0	3.9%	14.3	0.5%
City & Inner South	186.8	3.3%	42.7	5.4%	13.4	0.5%
Eastern Suburbs	159.3	1.3%	40.7	2.6%	6.2	-5.8%
Inner South West	262.3	1.4%	79.1	3.5%	14.6	-3.0%
Inner West	160.5	1.6%	39.1	3.2%	10.8	-0.6%
North Sydney & Hornsby	222.2	1.5%	66.2	3.5%	10.7	-0.9%
Northern Beaches	139.2	0.9%	43.1	2.7%	7.4	-3.6%

Outer West & Blue Mountains	154.6	0.7%	46.0	2.1%	13.9	-1.6%
Parramatta	196.4	1.8%	56.3	5.5%	12.3	-3.3%
Ryde	92.8	0.8%	27.8	2.4%	8.3	-0.5%
South West	159.3	1.5%	44.9	4.7%	13.2	-2.1%
Sutherland	121.5	0.3%	37.7	2.0%	8.3	-4.3%
Regional NSW	1,190.6	1.2%	400.1	2.5%	103.5	0.3%
Capital Region	100.5	1.4%	34.5	2.5%	7.3	-1.1%
Central West	103.6	1.0%	28.2	1.9%	11.4	1.4%
Coffs Harbour - Grafton	58.8	1.8%	23.5	4.0%	5.8	3.0%
Far West & Orana	47.2	-1.6%	13.9	0.3%	3.4	-1.1%
Hunter Valley ex Newcastle	127.0	2.3%	38.2	3.1%	12.3	0.8%
Illawarra	132.1	1.0%	44.5	2.7%	10.7	-1.2%
Mid North Coast	77.4	1.5%	27.8	1.9%	5.1	-0.4%
Murray	44.7	0.6%	16.0	2.7%	3.6	-0.1%
New England & North West	81.0	0.2%	24.2	0.9%	8.2	2.4%
Newcastle & Lake Macquarie	170.9	1.8%	58.6	3.0%	13.0	-0.3%
Richmond - Tweed	101.5	1.6%	41.6	2.9%	9.2	0.3%
Riverina	83.6	0.6%	25.6	1.8%	9.6	0.6%
Southern Highlands & Shoalhaven	62.2	2.7%	23.4	4.7%	4.0	0.4%
NSW	3,597.8	1.4%	1,086.8	3.1%	266.0	-1.3%

Between May 2000 and May 2014, employment in NSW grew by 1.4% per annum. Female employment grew faster (1.9% per annum) than male employment (1.1% per annum). Part-time employment grew faster (3.1% per annum) than full-time employment (0.8% per annum).

While youth employment grew at 0.4% per annum, youth full-time employment decreased at a rate of -1.3% per annum from 317,800 in May 2000 to 266,000 in May 2014. Youth part-time employment grew at 2.6% per annum. In May 2014, the proportion of employed youth in part-time employment was 51.5%, up from 38.3% in May 2000.

May 2014: Unemployment rate, youth unemployment rate and participation rate

Region	Unemployment rate		Youth unemployment rate		Participation rate	
	% May 14	Change 2000-14	% May 14	Change 2000-14	% May 14	Change 2000-14

Southern Highlands & Shoalhaven	5.7%	-3.6%	8.2%	-6.9%	55.4%	6.2%
NSW	5.7%	-0.2%	12.1%	0.8%	63.2%	1.5%

In May 2014, the NSW unemployment rate (5.7%) was 0.2 percentage points lower than it was in May 2000 (5.9%). The female unemployment rate remained the same (5.8%) while the male unemployment rate was 0.4 percentage points lower in 2014 (5.5%). The total participation rate (63.2%; +1.5 percentage points) and female participation rate (57.1%; +4.7 percentage points) were both higher in 2014, whereas the male participation rate (69.6%) was lower by 1.7 percentage points.

In May 2014, the youth unemployment rate (12.1%) was 0.8 percentage points higher than it was in May 2000 (see **page 5** for notes on the interpretation of youth unemployment rates). The youth participation rate (64.3%) was 3.8 percentage points lower in 2014.

May 2014: top six industries in NSW

NSW	442.2	3.6%	365.3	0.9%	300.9	2.1%

In May 2000, the top six employing industries in NSW had the following share of the total workforce: manufacturing (11.2%); retail trade (10.9%); health care & social assistance (9.3%); construction (7.7%); professional, scientific & technical services (7.6%); and accommodation & food services (7.2%). All of these industries were still in the top six in May 2014, with the exception of accommodation & food services, although in a different order. In May 2014, accommodation & food services was ranked 7th, still with 7.2% of the total workforce.

In May 2014, the top six employing industries in NSW had the following share of the total workforce: health care & social assistance (12.3%); retail trade (10.2%); professional, scientific & technical services (8.4%); construction (8.3%); education & training (7.8%); and manufacturing (7.7%).

Southern Highlands & Shoalhaven	7.9	4.7%	4.3	-0.6%	3.5	-4.6%
NSW	297.6	2.0%	280.5	2.4%	275.8	-1.5%

The six industries which had the fastest employment growth in NSW between May 2000 and May 2014 were as follows: mining (9.3% per annum); health care & social assistance (3.6% per annum); arts & recreation services (3.6% per annum); electricity, gas, water & waste services (3.4% per annum); public administration & safety (2.9% per annum); and education & training (2.4% per annum). Three industries shrank over this time period: information media & telecommunications (-1.2% per annum); manufacturing (-1.5% per annum); and agriculture, fishing & forestry (-3.0% per annum).

The industries which experienced the largest increase in share of the total workforce were health care & social assistance (+3.0%), public administration & safety (+1.0%) and education & training (+1.0%). The industries which experienced the largest fall in share of the total workforce were manufacturing (-3.5%), agriculture, fishing & forestry (-1.8%) and information media & telecommunications (-0.8%).

KEY LABOUR FORCE CONCEPTS AND YOUTH UNEMPLOYMENT

This section sets out some key labour force concepts, discussing in particular the issues associated with interpreting youth unemployment figures.

Methodological notes

Labour force data from the [ABS Labour Force Survey](#) is relatively different to data from the Census. The Census provides the most accurate set of labour force data, albeit only on a five-yearly basis. In contrast, the Labour Force Survey is a monthly survey of private dwellings (approximately 26,000 houses, flats etc.) and non-private dwellings, such as hotels and motels. The sample covers about 0.32% of the Australian civilian population aged 15 years or over. The primary purpose of the survey is to provide labour force estimates for the nation and, secondarily, for each State and Territory. Consequently, regional-level data is more likely to be subject to [sampling error](#). Due to the small sample size involved, the sampling errors for data such as the youth unemployment rate are likely to be quite high. The estimates should therefore be interpreted with caution.

An additional caveat is that, while labour force data is normally subject to seasonal adjustment, this only applies to National and State level data; it does not apply to regional level data. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from a time series so that the effects of other influences on the series can be more clearly recognised. Seasonal influences include, for example, seasons and their related weather conditions and social events such as Christmas and the associated holiday season. Seasonally adjusted employment figures, participation rates and unemployment rates for NSW can be found in the Research Service publication, [Economic Indicators NSW \(July 2014\)](#).

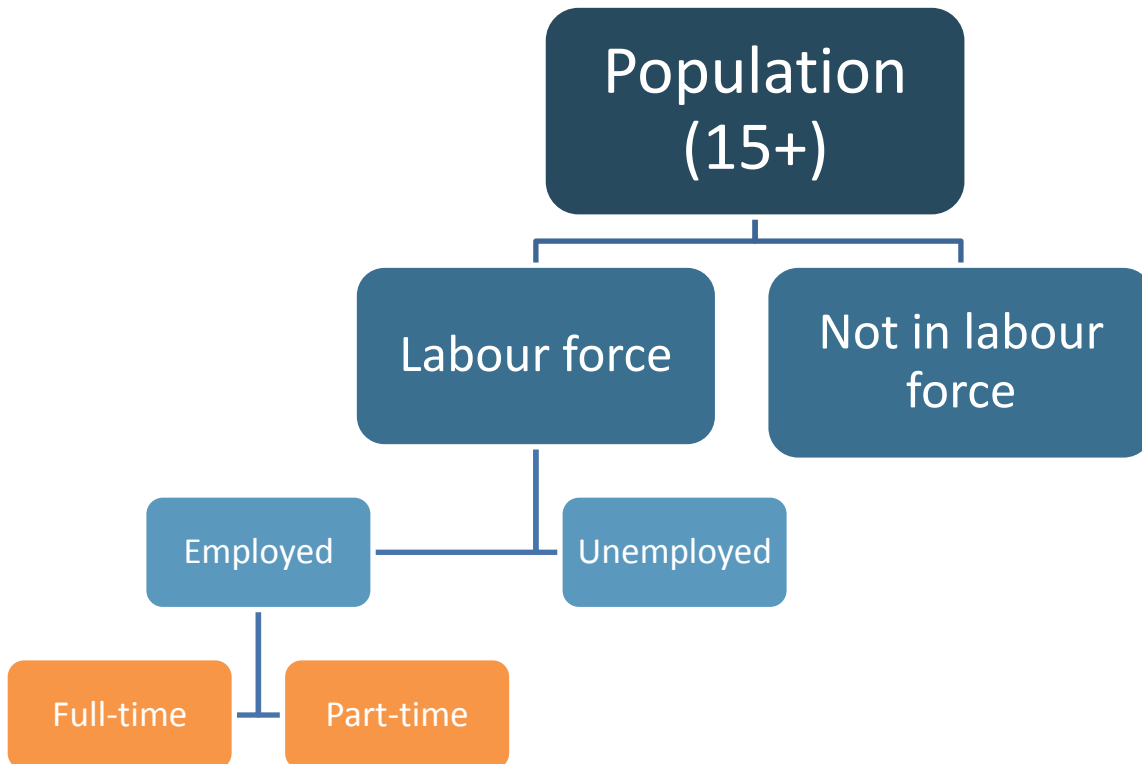

For comparative purposes, original, non-seasonally adjusted State level data is included in this paper. This is presented alongside the regional data, which is original, non-seasonally adjusted data, based on monthly estimates. Note that monthly estimates are subject to fluctuations throughout the year and may not be entirely reflective of the labour market situation. These estimates should therefore be interpreted with caution.

Other relevant methodological notes include the following:

- Using the methodology [recommended](#) by the ABS for regional labour force indicators, all the data presented are 12-month averages except for the industry data, which are four-quarter averages;
- The data is based on a count of persons by *place of usual residence*, rather than *place of work*. For example, it is the count of the number of *residents* employed in manufacturing in a particular area, rather than the number of manufacturing *jobs* located in that area; and
- Care needs to be taken in interpreting the data given figures are only provided for four points in time over the period May 2000 to May 2014. Labour force indicators can fluctuate significantly over time; graphs of key labour force indicators are included in the Research Service publications *Labour force trends in Greater Sydney* and *Labour force trends in Regional NSW*, but not in the publication *NSW regional labour force trends by labour force indicator*.

Labour force framework

The labour force framework

The labour force framework sets out the way in which the population is divided into population subsets for the purpose of calculating labour force statistics. The blue boxes represent the basic framework. The orange boxes provide an example of one way in which further subdivisions may be made. Other ways of subdividing these populations include by gender, by age (youth/adult) or, in the case of the unemployed, by the duration of unemployment (short-term (less than 26 weeks), medium-term (26 to 52 weeks) and long-term (52 weeks or longer)).

Definitions

Adult population	Persons aged 25 years and over.
Employed	All persons aged 15 years and over who, during the week of the Labour Force Survey: <ul style="list-style-type: none"> • worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm; or • worked for one hour or more without pay in a family business or on a farm; or • were employees who had a job but were not at work; or • were employers or own account workers, who had a job, business or farm, but were not at work.
Employment by industry	Industry is categorised according to the Australian and New Zealand Standard Industrial Classification (ANZSIC 2006) (see also Appendix 1).
Employment to population ratio	The number of employed persons expressed as a percentage of the civilian population in the same age group.
Full-time employed	Employed persons who usually worked 35 hours or more a week (in all jobs) and those who, although usually working fewer than 35 hours a week, worked 35 hours or more during the Labour Force Survey week.
Labour force	The total number of employed and unemployed persons.
Long-term unemployed	All persons unemployed for 52 weeks or over.
Long-term unemployment rate	The number of persons unemployed for 52 weeks or over expressed as a percentage of the labour force.
Not in labour force	Persons not in the categories employed or unemployed.
Participation rate	The labour force expressed as a percentage of the civilian population in the same age group.
Part-time employed	Employed persons who usually worked fewer than 35 hours a week (in all jobs) and either did so during the Labour Force Survey week or were not at work during the reference week.

Ratio of youth-to-adult unemployment rates	This measures the difference between the youth unemployment rate and the adult unemployment rate, where youth are persons aged 15 to 24 and adults are persons aged 25 and over. It is calculated by dividing the youth unemployment rate by the adult unemployment rate.
Unemployed	Persons aged 15 years and over who were not employed during the week of the Labour Force Survey, and: <ul style="list-style-type: none">• had actively looked for full time or part time work at any time in the four weeks up to the end of the reference week and were available for work in the reference week; or• were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the job had been available then.
Unemployment rate	The number of unemployed persons expressed as a percentage of the labour force.
Working age population	Persons aged 15 years and over.
Youth population	Persons aged 15 to 24.
Youth unemployment rate	The number of unemployed youth expressed as a percentage of the youth labour force.
Youth unemployment ratio	The number of unemployed youth expressed as a percentage of the youth population.

Youth unemployment

Youth unemployment is a complex issue, the interpretation of which can be approached from a number of perspectives. One of these is the youth unemployment rate, a subject which is currently making headlines across the country¹. It is the case, however, that the youth unemployment rate only paints *part of the picture* of youth unemployment. This is discussed in this section by reference to the strengths and weaknesses of youth labour force indicators and, using NSW youth labour force figures as a case study, by showing how interpretation of the youth unemployment rate is best done with reference to other indicators.

NSW youth labour force figures: May 2000 to May 2014

Youth labour force indicator	Figures				Average annual growth		
	May 00	May 09	May 13	May 14	14 years	5 years	1 year
Employment	514,700	563,500	548,700	548,100	0.4%	-0.6%	-0.1%
Full-time employment	317,800	301,400	276,800	266,000	-1.3%	-2.5%	-3.9%
Part-time employment	197,000	262,100	272,000	282,200	2.6%	1.5%	3.7%
Unemployment	65,300	75,600	71,400	75,300	1.0%	-0.1%	5.5%
	Percentages and ratios				Change		
	May 00	May 09	May 13	May 14	2000-14	2009-14	2013-14
Employment to population ratio	60.4%	59.3%	56.9%	56.5%	-3.9%	-2.8%	-0.4%
Proportion of employed youth in part-time employment	38.3%	46.5%	49.6%	51.5%	13.2%	5.0%	1.9%
Unemployment rate	11.3%	11.8%	11.5%	12.1%	0.8%	0.3%	0.6%
Ratio of youth-to-adult unemployment rates	2.4	2.9	2.9	2.7	0.3	-0.2	-0.2
Unemployment ratio	7.7%	8.0%	7.4%	7.8%	0.1%	-0.2%	0.4%
Participation rate	68.0%	67.3%	64.3%	64.3%	-3.8%	-3.0%	-0.1%

The **youth unemployment rate** is the number of unemployed youth expressed as a percentage of the *youth labour force*. The following commentary on 'well-known characteristics of youth unemployment' provides some insights into the complexity of interpreting the youth unemployment rate. It suggests that the youth unemployment rate is generally higher than the total unemployment rate and that it may also be an overestimate of youth unemployment:

First, the youth unemployment rate is always higher (usually around twice as high) than aggregate unemployment. Young people exhibit high rates of labour turnover and tend to move in and out of jobs before settling down in the labour market. As a result they also have a higher than average rate of short-term frictional unemployment and a relatively low rate of long-term unemployment. Secondly, youth unemployment is ultra sensitive to the economic cycle, rising relatively quickly during recessions when there are fewer entry level job vacancies and when employers cut their least experienced or least productive staff, but falling relatively quickly during periods of economic recovery.

...

¹ See for example: *Australian Financial Review*, [Senators push for youth jobs](#), 7 July 2014

The relative scale of youth unemployment is only properly understood in the context of consideration of the transformation of the youth labour market in recent decades resulting from greatly increased participation in post-16 education. This has had the effect of reducing the proportion of the 16–24 year age cohort active in the labour market, thereby raising the measured youth unemployment rate for any given level of unemployment.

...

The measurement of youth unemployment is also affected by the categorisation of young people in full-time education who are available and looking for work and thus counted as ILO (International Labour Force) unemployed rather than economically inactive.

...

The inclusion of full-time student jobseekers raises the measured level as well as the measured rate of youth unemployment. Although perhaps counter-intuitive there is a perfectly sensible economic rationale for their inclusion. All jobseekers form part of the effective labour supply and therefore have some influence on the degree of wage pressure in the labour market. However, the inclusion of full-time student jobseekers in the unemployment measure does once again magnify youth unemployment as an indicator of social distress.²

The youth unemployment rate may therefore at times be an overestimate of youth unemployment.

The **ratio of youth-to-adult unemployment rates** is calculated by dividing the youth unemployment rate (persons aged 15 to 24) by the adult unemployment rate (persons aged over 25). Other things being equal, a ratio of 1 would indicate that youth and adults are equally affected by unemployment; however, the likelihood that the youth unemployment rate is an overestimate of youth unemployment suggests that a ratio higher than 1 is the point at which youth and adults are equally affected. Adopting an international perspective, in the Seventh Edition of its Key Indicators of the Labour Market, the International Labour Force (ILO) found that, for the majority of countries, youth unemployment rates were generally between two and six times greater than that of adults.³ Examples of 2013 international figures include the following:

- World average: 2.7; and
- Developed economies and European Union: 2.3.⁴

In May 2014, the Australian ratio was 2.8, up from 2.4 in May 2000.⁵

² John Philpott, [Getting the Measure of Youth Unemployment](#), Work audit, Chartered Institute of Personnel and Development, March 2011, pages 2-3.

³ International Labour Organization, [Key Indicators of the Labour Market](#), Seventh Edition, 2012. International Labour Office: Geneva, Chapter 10.

⁴ International Labour Organization, [Global Employment Trends for Youth 2013: A generation at risk](#), 2013, page 84.

⁵ ABS, [Labour Force, Australia, Detailed – Electronic Delivery, May 2014](#), Cat. No. 6291.0.55.001, June 2014

The **youth unemployment ratio** is the number of unemployed youth expressed as a percentage of the *youth population*, including those in full-time education. This ratio places youth unemployment into perspective by showing what share of the youth population unemployment actually touches. It has [been argued](#) that the youth unemployment ratio may underestimate the significance of youth unemployment, and that the true unemployment estimate may lie somewhere between the unemployment rate and the unemployment ratio.

The **employment to population ratio** is the number of employed youth expressed as a percentage of the total youth population. This figure contextualises changes in the number of employed youth by showing how youth employment growth compares to youth population growth.

In May 2014, the youth unemployment rate (12.1%) in NSW was 0.8 percentage points higher than it was in May 2000 (11.3%). Two other youth labour force indicators appear to mitigate the significance of this increase. First, while the **ratio of youth-to-adult unemployment rates** rose over this same period from 2.4 to 2.7, between May 2009 and May 2014, the unemployment rate rose from 11.8% to 12.1% as the ratio fell from 2.9 to 2.7. From these figures, it could be argued that youth have become slightly less affected by unemployment relative to adults in recent years. In other words, the rising youth unemployment rate simply reflects rising unemployment levels across the whole population. As for the second mitigating factor, the **youth unemployment ratio** only rose by 0.1 percentage points between 2000 and 2014; the proportion of the *youth population* affected by unemployment has therefore not significantly changed.

Conversely, several indicators support the argument that youth unemployment or, similarly, the capacity of youth to find employment, has worsened between 2000 and 2014. In contrast to the unemployment ratio, which has barely changed, the **employment to population ratio** has declined substantially from 60.4% to 56.5% — youth employment growth is not keeping pace with youth population growth. Perhaps more significantly, the number of **youth employed in full-time work** has shrunk considerably, from 317,800 to 266,000 persons at an average annual rate of -1.3%. The **proportion of employed youth in full-time work** has concurrently shrunk from 61.7% to 48.5%. Last, the **participation rate**, that is the number of youth in employment or trying to find employment, has declined from 68.0% to 64.3%.

Increased levels of part-time employment, especially when combined with declining levels of full-time employment, may indicate that youth are finding it more difficult to find employment. A declining participation rate may also indicate that youth are experiencing difficulties finding employment, with youth dropping out of the labour force instead of continuing to look for work, or choosing to remain in education or training rather than join the labour force because job prospects are poor. The ABS does not publish figures, at a regional level, which would allow us to offer a more comprehensive picture of why youth participation is declining, because they are engaged in education or training or for other reasons. Such analysis can only be conducted at the State or national levels – see for example the ABS publication, [Education and Work, Australia – Additional data cubes, May 2013](#).

NSW ELECTORATES AND ABS STATISTICAL AREAS LEVEL 4

The current NSW electorates were established through the [2004 Redistribution](#) of electoral boundaries. From the 2015 NSW Election onwards, the NSW electorates will be based on the [2013 Redistribution](#) of electoral boundaries. The following tables match each 2013 and 2004 electorate to three Statistical Areas Level 4 (SA4s) at most (note that several electorates lie across more than three SA4s). The tables list the percentage of each electorate's population located in an SA4, as calculated using the 2011 Census.

In 2011, the average population of the NSW electorates (2013 Redistribution) was 74,243. In contrast, the SA4s varied in size from 110,318 (Murray) to 523,611 (Inner South West). The Inner South West was considerably larger than the second largest region – Parramatta (394,709 people). Electorates in the larger SA4s therefore make up a smaller proportion of the SA4 in which they are located than those electorates in smaller SA4s (see Appendix 2 for a list of all SA4s and their population). For example, the Murray SA4 contains only two electorates – Albury and Murray – while the Inner South West SA4 contains eight electorates.
