45. What is the gross amount that would be paid under the circumstances? I should think about £300 to £400.
46. Can you state to the Committee the name of the ship that brought these cigars and tobacco to the Colony, and the marks and numbers? The following are the particulars:—
 $\frac{Y}{359}$ || 27-3153, six cases cigars, 450 lbs. net, ex "Arrogant," Dye, from Manila, bonded 3rd October, 1854; $\frac{Y}{364}$ || 1-6, six cases cigars, 306½ lbs. net, bonded 1st November, 1854, ex "Oscar," Videll, from Manila; $\frac{F}{378}$ || 1-2, two cases cigars, weighing 100 lbs. net, bonded 19th January, 1855, ex "Helène," from Hamburgh; $\frac{Q}{411}$ || 14-29, sixteen cases tobacco, 2,080 lbs. net, ex "Telegraph," Warner, from Melbourne, January 14, 1855.

John

John Bell, Esq., called in and examined:—

1. *By the Chairman:* In what capacity are you? I have the direction of the wharf and stores of Messrs. Willis, Merry, and Company. John Bell,
Esq.
2. Is there a bonded store there? Yes, sir.
3. How long have you been in that capacity? I was with the former proprietors; first with Mr. Botts, then during the time of Messrs. Sheppard and Alger, and since that time I have been in the employ of Messrs. Willis, Merry, and Company, since the beginning of 1854, and except about three months I have had the management of it. 18 June, 1858.
4. I suppose there is a large amount of bonded goods in that warehouse? Very large.
5. Chiefly consisting of spirits and tobacco, or of every description? Little tobacco. There is a large quantity of tea and sugar, but a preponderance of spirit.
6. What are the hours during which the bonded store remains open? It opens nominally at nine, and closes at about half-past three; but those hours are hardly sufficient, and we pay a considerable amount for over-time to the officers; we cannot do our business in the time prescribed.
7. Is there any particular locker appointed to your bonded stores? They are occasionally changed; in the course of four years we have had, I think, three lockers.
8. What are the hours of attendance of the lockers? From about half-past nine. They have to go to the Custom House, for the keys, at nine.
9. And they remain there the whole time that the bonded store is open? The whole time.
10. Are they visited during that time by any officer of the department? Since the appointment of an Inspector of Bonded Stores, he has very frequently visited the stores. Other Custom House officers are occasionally round, but whether superintending or on business we cannot possibly tell. We do not allow any one in the bond, not even the locker himself, unless on business; his office is outside the bond.
11. I suppose the proprietor of the bonded store keeps a key as well as the Customs? Yes; we hold one key and the Customs the other.
12. It would not be possible for either to go in without the other? Unless in some clandestine manner, it would be quite impossible.
13. *By Mr. Weekes:* Who supplies the locks? The Customs supply their locks, and we supply ours.
14. Are spirits ever landed on the wharf and suffered to remain there all night? Never at our place.
15. Is that a rule at your place? It is the rule of the Customs that if bonded stores which are landed during the hours they are allowed to be landed be not removed by 4 o'clock, the landing-waiter gives directions for them to be placed inside our bond, and if we did not place them in the bond, a Custom House officer would be appointed to watch them during the night, and the expense would fall on the spirits—to whom they may belong. But in our case I have never known an instance where a man has had to watch them.
16. You are not aware that at some wharves large quantities of spirits are suffered to remain all night long on the wharf? No; I am not aware of it. If the Customs regulations were carried out at their wharves the same as at ours it would not be the case. I never heard of an instance, unless there were persons set to watch them.
17. Did Mr. Still take stock of your warehouse? Yes.
18. Did you have any report that it was correct? We had no official report; we presumed that it was correct, because we heard nothing to the contrary. In the bonded stores generally, I believe, there was hardly an instance where the stocks were found to be incorrect.
19. Where did you gather that information from, that when the stock of the bonded stores was taken they were nearly all found to be correct? From the conversation I had with the Custom House officers themselves. We naturally inquired about the result of the stock-taking, being anxious, partly on our own account. It had not been done by the Customs during the time I had been there, so that I was rather anxious, as far as we were concerned, to know that we were right.
20. Are you aware that the stock in stores reported to be correct has since been alleged to be deficient? I think there were two cases, but I know but little about them.
21. Have you any suggestions that would tend more to the protection of the public interest in regard to bonded stores than the rules which now exist? I do not think the rules at present existing protect the revenue in any way.
22. How do not the present rules protect the Customs in any way? They protect them in some degree, of course; but they afford no efficient protection to the revenue—your protection is derived from quite a different source.
23. In what way? I think the only protection for your revenue is on all goods coming from the United Kingdom,—the English caskets, they are the best protection; and next to them, the probity and respectability of those who keep the stores. All the other machinery is very little protection indeed.
24. *By Mr. Campbell:* No honest Custom House officers? I should be very sorry to say that. Some of them are, I believe, most respectable men; but I think there is no necessity for the larger part of them.
25. *By Mr. Weekes:* In what class of Custom House officers do you consider this reduction might with propriety be made? I think if the manifests were duly entered at the Custom House, all these men who attend the ship while she is discharging might be done away with. They would never be a preventative to smuggling; and all that class of officers who attend the ships from different wharves to take the things away are totally useless—little better than an expense and incumbrance.
26. Why is that? Because, for instance, if goods are being shipped we have now an officer sent down to see them aboard. They go into the charge of the landing-waiter at the wharf.
27. You are now speaking of export? Yes. They are taken to the wharf, and the landing-waiter

John Bell,
Esq.

18 June, 1858.

waiter there would be sufficient—on receiving a pass or a permit from the landing-waiter at the wharf, or the bonded store from which they were sent.

28. Can you state the course pursued in exporting spirits—the party goes to the Custom House with a certificate, and from thence what is the course? He passes an entry at the Custom House through the Custom House Agent. There is an officer appointed then, and a dray or drays to go and take these things from the particular bonded store to the place where they are to be shipped. The officer accompanies the dray. He gets the landing-waiter of that wharf to say that they are duly deposited and delivered over, and I suppose his report is handed in at the Custom House.

29. During that process, which is the unnecessary officer? The officer who attends the removal—who accompanies the dray. All that class of officers I do not consider any protection, but a great impediment to business. For instance, if I wanted to take twenty tons of sugar from our wharf, and ship them to Melbourne, I should have no difficulty probably in getting twenty drays, but it would require twenty officers to accompany them. Consequently, if one man has to do it, it is a great impediment to business.

30. Is it a fact that an officer accompanies each dray? In practice it is not always the case.

31. And you do not consider it necessary? Not in the slightest degree.

32. Do you think it is safe to commit the custody of dutiable goods to the sole care of an ordinary carter? I think it is perfectly so. The usual class of draymen, particularly the licensed draymen, are men of a little standing and property; and, besides, there must be several parties concerned in a transaction of that sort. In taking goods from one place to another, there must be more than one, and that part of the business managed by the Customs officer would, I think, be much better managed by the imposing of fines and penalties. I think there could never be an instance in Sydney of the revenue suffering from draymen.

33. Do you think it possible that without the protection of a Custom House officer spirits confided to the care of an ordinary drayman might be subject to be tampered with on the route, either by extracting some of the contents or otherwise? I think not, if it were done as was the case in London: If there is a certain time allowed on the pass for the landing-waiter of the wharf which is going to receive it, it would be easy to examine the cask and see whether it had been tampered with or otherwise. If just sufficient time were given, I think it would be equally secure with the draymen as with the underpaid officers of the Customs. If I were going to smuggle anything, I would much prefer to have the officer with me, because I fancy I could do it with more impunity. Being underpaid men, they are of course open to the corruption of human nature. It would be rather an assistance than otherwise.

34. In fact, you think it would be safer to smuggle when the goods were in charge of an officer? If they do it under the lynx eyes of the London officers, I think they would be able to do it here.

35. Then does your objection to the necessity of these officers apply to their being inadequately paid, and, therefore, perhaps subject temptation? No; it is merely the non-necessity for them. I do not think they are the slightest use in the way of protection.

36. Are you aware what is the practice at home in this matter? I cannot speak of the last twenty-five years; but in early life I was in a shipping office, and saw a great deal of it.

37. In London and the principal towns of England the bonded stores are generally within docks, are they not? Not in all cases. There are bonding stores independently, but nearly the whole are held by the dock companies of London.

38. Are you aware of the practice pursued with regard to the stores in exporting dutiable goods? I could hardly speak at this distance of time. I could hardly give sufficient information on that subject.

39. Then, if I understand you, you consider that both of these classes of officers—that is, the extra tide-waiters and those officers who accompany goods for exportation to the water side—quite unnecessary? Yes. If you had a proper system by which one landing-waiter communicated with another, he would have to receive the goods within a certain time, and if they did not duly arrive it should be reported to the Customs by the landing-waiter, and fully inquired into. Under the present system the landing-waiters, when efficient, are the best officers for protection to the revenue.

40. Then you consider that the English cocket would be protection enough as against the ship? Yes.

41. And to land all that was on board of her? Exactly so. We had an immense number of ships to discharge—more than any perhaps, except Messrs. Campbell, and I do not know whether last year we were not equal to them—so that I have the opportunity of seeing the whole system of receiving and bonding dutiable goods. If any goods are short-landed, or deficient in quantity, it is easily known to the landing-waiter, by the ship's manifest and his gauging. I have never known an instance where it has passed the observation of that officer, or that the deficiency has been otherwise than satisfactorily accounted for, as far as the ship has been concerned. The best security you have for your English shipments is the English cocket.

42. Are ships limited in the amount of their stores—spirit stores—shipped as stores from home? I cannot speak as to that. It is duly entered on the manifest what stores they bring with them.

43. Would it not leave a door open for smuggling out of that amount of ships' stores without the protection of an extra tide-waiter? The landing-waiter would have full cognizance, by the manifest, of what stores the ship contained, and could at any time demand to see and verify them, and would answer the purpose better, being a superior officer; but if you consider the small amount it would be possible for a ship to dispose of, and the large amount of the cost of collecting, I think the Customs here cost fifteen per cent., while at home, if I recollect aright, it is under five per cent. While you are reducing the expenditure seven-and-a-half per cent., I do not think the loss by smuggling would be half that amount. That is not the point.

point where you have to fear smuggling—it is from goods shipped on board ships when they leave port. If, for instance, I wanted to smuggle, and I could clandestinely enter our stores and empty a certain number of casks of brandy, and fill them with water, and if afterwards I were to take them to a ship going on a voyage to the South Sea Islands, or some other place where there was no Customs—the captain signs the bill of lading; the officer follows the water instead of the spirits; the captain signs bill of lading; the freight is paid here—and they are shipped off to order, and we should probably never hear anything at all about it. But if goods, on the other hand, were shipped from here to Melbourne, or places where there is a known Custom House, it is not from those places you will have to fear. What you want is more police. A vessel going from here might land in the harbour on a dark night. There is no difficulty in a boat going alongside and taking anything out. A good police in the harbour would probably get rid of these difficulties. I have heard that there are such things done, but I do not know it of my own knowledge; still there is a possibility. It is not from ships coming from the United Kingdom that you have to fear. Their cockets, and the honesty and integrity, and respectability, of the occupiers of wharves and stores will, I apprehend, be the largest part of the security you have.

John Bell,
Esq.
18 June, 1868.

44. Have you had any means of ascertaining the vigilance of the watch—of any of the extra tide-waiters that board ships at your wharf? Yes.
45. How did you find it? Well, perhaps at our place they may be rather off their guard. I sleep on the premises myself, and I have a watchman. We are closely walled in, and have never lost a package. The watch has strict orders to stop everything that goes in and out—all goods—after six o'clock. I think it is very possible, and I know it has been the case, that these officers have depended on our watchman on dark nights when it is more comfortable to be at home. I have frequently known the ships to be left in that way by the officer.
46. Left entirely? Left entirely.
47. Left entirely by the extra tide-waiter placed in charge by the Customs? Yes.
48. Have you known that often to be the case? I do not know that I have very often. My means of arriving at the information has been from my own observation that the surveyors have come and found them absent.
49. Are the surveyor's visits made at uncertain hours, or not? Yes, at all times, when he thinks it necessary.
50. When have these absences been detected? They have been generally at night.
51. Are you aware when they remain on board that they turn in and sleep? Yes; there is a cabin provided for them.
52. And they generally sleep? They are generally men who have been in decent circumstances, and the captains generally seem to provide for them in the cabin.
53. Then, for all practical purposes of protection, you think that class of officers useless? Quite useless—an expense to the ship and an impediment to business.
54. Do you know of consequences following the detection of those officers' absence from their duty—either suspension or otherwise? I believe they have been reprimanded, or something of that sort, and put back on the list, unless they could show some very extraordinary excuse for it.
55. But, however guarded and protected the wharf may be by gates and walls, is it not open on the sea side, so that anything could be lowered from the sides of the ship into boats dropping alongside? Yes; but then we have a watchman constantly on the place. He is always on the wharf from six o'clock in the evening.
56. But then he cannot see the other side of the ship? He can have full superintendence. It is part of his business. It is part of my business to see that he is on duty.
57. When ships are alongside are you aware whether a watch is kept by the ship? It ought to be.
58. Is it a fact? In some cases they have been fined for not doing so.
59. Are you aware that all hands turn in? Yes; they have been detected. It is very customary for our watchman to be employed by the captains themselves to watch.
60. Can you suggest any further protection for the export of spirits than that now in operation? No, sir. I think, as far as the system goes, there is no defection in the revenue on account of the present mode, any more than there would be if it were altered.
61. When spirits leave your store for home consumption, are they re-gauged? Almost invariably. There is always evaporation going on, and consequently the buyer likes to pay duty on the smallest quantity.
62. Are you aware whether the duty is paid upon the re-gauge or upon the original certificate? Upon the re-gauge.
63. Have there been any instances on your wharf of spirits increasing not only in bulk but also in strength? Never, but where there was a mistake in the calculation at gauging. I never knew an instance of the strength increasing, excepting in case of a mistake by the gauging officer, in our stores. I presume other stores are conducted in the same manner. There is no possibility of tampering taking place.
64. The spirits are not re-gauged when they are deposited in the store—they are gauged on the wharf at landing, are they not? They are gauged on landing, and a return made to the Customs. Then, on being taken out to pay duty, they are generally re-gauged.
65. On receiving them into your store from the ship—say coming from some other wharf—is it the practice to re-gauge them when they are deposited in your store, generally? When they are lightered the landing takes place at our wharf, and the landing-waiter at our wharf gives the original gauge at our wharf; but if they were brought by drays, the landing-waiter where they were landed would have to gauge them.
66. In that case, what is borne by drays you do not re-gauge? No; the original gauge is taken at the other wharf.
67. When these spirits are conveyed by water from another wharf to your wharf, by lighters, are they not in the custody of a Custom House Officer? They have lately been.

John Bell,
Esq.

18 June, 1858.

68. How lately? I suppose within the last six or eight months.
69. Previous to that it was not the custom? Previous to that it was not the custom.
70. They came simply in the case of the lighterman? Yes.
71. And as to your remark about the non-necessity of anybody to accompany the drays,—does it not apply to lighters also? Immediately we take them in our lighters from the ship, Messrs. Willis, Merry, and Company are liable for anything that occurs to them; and the responsibility is too great for us not to take very great care that we run no risk of that sort. We are far more particular in our stores even than the Customs are. For instance, if a cask is landed at our place, either from a ship discharging or by lighter from another wharf, the landing-waiter gauges them, and enters into a Customs book, kept for that purpose, both what each cask would hold if full, and the actual content, and the strength. We examine this book, and if any cask shows a deficiency of more than three gallons the storekeeper's attention is called to it, and notice given to the owner who has entered it for our bond of the unusual deficiency, and the causes, if any, that he may protect himself and absolve us from further responsibility.
72. The spirits that are brought to your bonded store from other wharves having been previously gauged at those wharves, do you ever ascertain if what professes to be spirit is spirit? No.
73. Then, supposing, in the absence of any protection on the route, spirit is extracted and water put in, it would not be detected until that cask was required for use for home consumption or export? It is very difficult to touch a cask or extract anything from it; it could not be done in the streets. The business of the storekeeper is to look most narrowly at the casks. He can better judge, from the way in which the cooper does his work, whether the casks have been tampered with.
74. The bungs are not protected by any lead or tin? No; it would be simply starting a bung.
75. Starting a bung would enable anybody to get at the contents? Yes.
76. And then it would not be found out until some years after, when that cask might be sold? It might not; but still I do not think your revenue has anything to apprehend from that source.
77. Do you know whether it is the practice at the other bonded stores similar to what you describe at your own—that the store is never opened except for the actual discharge of business? I do not know what is the practice at the other stores. It used not to be so in ours. The locker used to have his office inside. We do not allow the Custom House officer to take a glass of spirits out of any cask, beyond what is necessary to try the strength. On one occasion, on going into the store when some people were there, the locker was seen to open a cask. It was reported to the Customs, and he was suspended.
78. Do not you think for that protection which it is desirable to carry out that bonded stores should never be opened excepting when required, and that the locker should have an office outside the door, instead of inside? I have got it so in ours. On one occasion I found the locker—a temporary one during the illness of the regular one—in with some of his friends. I requested them to go outside, and got the office removed.
79. *By Mr. Egan*: Do you think an officer of the Customs, or some responsible officer, should sign the certificate as well as the bonded storekeeper? No. As far as the Customs' warehouse-keepers are concerned, there never could be a better system—every package is numbered, and known instantly.
80. *By Mr. Weekes*: Is there any other suggestion, Mr. Bell, that you would like to make to the Committee in reference to the subject of bonding goods? I think it would be conducive to the interests of the revenue and the public, that all the officers connected with the bonded and dutiable goods should be concentrated under the direction of one responsible and experienced officer—controlling the landing-waiters, warehouse-keeper, and lockers, and appointing them to their respective stations. The office of Inspector of Bonded Stores, at present with insufficient power and authority, I would merge into it. On all dutiable goods for export I would cause the entry to be passed the day preceding, and also, on all goods for home consumption, and due notice given from the chief officer to the respective officers stationed at the bonds, and at the places of shipping. By this arrangement much unemployed time of various officers would be saved, and time given for the proper examination of export goods. By reducing the duties of the landing-waiters in respect to free goods, for the reasons to be hereafter stated, the landing-waiter would have time to perform the duties of inspector of the bonded stores of that wharf on which he was stationed, and being at all times on the spot, it could be done more effectually than by the present system, where one officer has the inspection of more than twenty bonds. That it is not, I think, good policy to allow private bonds, and that no more should be granted than those at present existing; and where a retail business is carried on, they should be at once abolished. As regards the question of having only one general bond at the Commissariat, and in the hands of Government, I would beg to submit, that it is no part of the functions of a Government to keep bonded stores any more than to keep a wharf, or trade in any other way. That, therefore, if such a store were instituted, it must be farmed out, as the Circular Quay now is, to a lessee; and that lessee would be, to all intents and purposes, in the position of a private bonded storekeeper, and the public deprived of that wholesome competition which is beneficial to their interests. It would require an area twelve times more extensive than the present building to contain the goods, and, as a matter of equity, it would be necessary to indemnify the present bond holders. The whole of the goods would have to be carted or lightered to the store at an expense to the owners, whereas it now costs them nothing. That proper printed instructions should be handed by the Customs to bonded storekeepers, and all new regulations duly notified, which has not been the case hitherto; and if any alterations be made in the hours allowed to the various bonds, a written notice to that effect should be forwarded to the bond-keeper. On one occasion when, during a considerable period, Botts' Bond had been paying for

for over-hours more than one-fourth of the time allowed by the Customs—the hours, without the common courtesy of any notice, were reduced from half past three o'clock to one o'clock. As it arose from the caprice of a sub-official, the difficulty was removed afterwards by the Collector. Having nothing further to say on the subject of bonded goods, I should be glad to be allowed to mention the subject of free goods. The system of passing entries for free goods, and the manner in which the landing is carried out, is a source of great discontent to vessels arriving at this port—subjecting the ships, wharves, and laborers, to great expense and loss of time, and conducted with great expense to the Customs, without any revenue derived from them. As no vessel can discharge free goods without the entry being passed and delivered at the wharf by a Customs messenger to the landing-waiter, a ship is sometimes detained a whole day till it can be obtained, and the loss to the ship and laborers is both heavy and needless. Very serious inconvenience and loss has been sustained by the consignees of goods arriving before Lent and Christmas, and suited to those seasons, but detained till other goods for which entries are not passed are cleared from over them, and the market lost. It would, therefore, be a great boon to all parties, that the necessity of passing entries for free goods be abolished; but, for statistical purposes, to require that every consignee shall, by himself or his agent, declare the nature and value of the goods consigned to him within 48 hours after the manifest of the ship has been deposited at the Customs, or become subject to such penalties as the Customs may think it proper to inflict. By these means a host of unnecessary forms would be got rid of, and the time of the landing-waiter would be spared for the more material purposes mentioned before. In conclusion, I would beg that it should be an instruction to the Customs officers generally, that, having a due regard to the protection of the revenue, every facility should be given to business.

John Bell,
Esq.

18 June, 1858.

TUESDAY, 22 JUNE, 1858.

Present:—

MR. EGAN,
MR. DONALDSON,

MR. WEEKES,
MR. LORD.

DANIEL EGAN, Esq., IN THE CHAIR.

John Nicholas Beit, Esq., called in and examined:—

1. By Mr. Donaldson: Have you favored the Committee by perusing and considering the Customs Consolidation Bill which was introduced last session? I have.
2. Will you favor the Committee with your opinions generally on it, and on some of the details, if there are matters that require modification? I think it would be more desirable if you were to take the details, instead of asking my opinion on the Bill generally.
3. Have you considered the advisability of consolidating the several Customs Acts relating to gunpowder, coasting, &c.? So far as that goes, I think there can be no difference of opinion, if there are several Acts of Parliament relating to that subject.
4. In the schedule there are seven Acts—will you state if it is desirable to consolidate these Acts? There is no question about it. Where there are several Acts it is always desirable for the Legislature to consolidate them into one.
5. More particularly Acts relating to duties? Yes.
6. You know that the same steps were taken in England with regard to the Customs Consolidation Act and the Customs Laws Consolidation Act? Yes.
7. Now, be good enough to state anything in the details that requires amendment in this Bill? I have gone very carefully through it, and, without wishing to express myself very strongly upon the subject, I do not think the Bill as it stands is applicable to the Colony.
8. Please state why? There are a great many clauses that are not applicable, which I will point out to the Committee; and the whole construction appears to have been taken from English Bills, which have been consolidated and regulated. But these particular Bills excite so little attention in England that they are made by the Solicitor of Customs, who takes the old Bills of 120 years ago and cuts out the clauses, and beyond these which are particularly objected to, and which are omitted, he leaves the others standing. There are clauses contained in this Bill which I scarcely think any Member of the House would like to bring forward under his auspices.
9. Why? There are several clauses very objectionable, which give jurisdiction to a single magistrate to inflict penalties, as much as five years on the roads.
10. For certain frauds committed? Yes; it is no matter for what it is. There are many other clauses which are entirely of an obsolete description of legislation. I have made marginal remarks against them, and if you wish it I will go through them. There are a great many things which I think unnecessary. It is an extremely long Bill, and I think might be very advantageously reduced to less than half the size. There is in the eighth clause only an insertion wanted. The clause says, "and the performance of all duties connected therewith, under the control and direction of the Minister of Finance, and to grant to such persons such salaries or allowances, or to permit them to receive such emoluments, for executing the duties of their respective offices as may be proper." I think the salaries allowed from time to time should be sanctioned by the Legislative Assembly. Surely you would not give the Minister of Finance *carte-blanc* to fix the salaries!
11. That means the Executive Government? It is an Act of Parliament.
12. There is nothing in that objection? It is a trifling matter. I think the salaries should be sanctioned beforehand, and not after the appointments. It is generally objected to.

J. N. Beit,
Esq.

22 June, 1858.

J. N. Beit,
Esq.

22 June, 1858.

13. I wish your general opinion of the Bill? Very well; perhaps you will ask me a question on any particular part of it.

14. Is there any thing you see relating to the Customs regarding the Bill that has struck you—have you considered the Bill as bearing upon the Customs law? I have, a very great deal, and am very much opposed to the enactment with respect to the warehousing system. I think this is extremely objectionable, both for the sake of the revenue as well as the convenience and security of the merchants. I think that the chief articles which are charged with high duties, such as spirits and tobacco, should, like in the Mother Country, only be allowed to be warehoused in warehouses of *special security*, which means, in buildings separated by outer walls from all adjoining buildings, and approachable by water carriage on the wharf. I have expressed that opinion for many years; it is nothing new. I believe I expressed it to Mr. Donaldson, when he was in the Treasury. I have, years before Responsible Government was introduced, pressed it on the Government, and am perfectly certain they will never get a good system of Customs established without it. At present the merchant who has not got his own bonded store has no security—the bonded warehouse-keeper not being responsible to the merchant. Even by this Bill he is allowed to charge what he pleases, and from time to time to alter his charges; and the time when you can attend to your goods is limited, and, in point of fact, while very disadvantageous to the merchant, there is a total want of security for the revenue by this system which at present exists. I have considered it very fully, and am perfectly clear that the system adopted at home, to allow spirits and tobacco only to be warehoused in warehouses of special security, is immensely superior, both for the revenue and the merchant.

15. *By the Chairman:* You mean Queen's Warehouses? They are not Queen's Warehouses in England, but subject to the Queen's; they are entirely separated, cannot be entered by any one, and are guarded at night. In the docks are separate warehouses, entirely separated for these purposes, and separate from the other warehouses; and it is not allowed in England to carry these goods, which pay heavy duties, in bond *landwise* at all; they are not allowed to be carried by land at all till the duty is paid, and that is a matter which, I think, is so very much required here. An objection has been urged to that—what is called here vested interest has been created, by giving to some bonded warehouse-keepers the facility to have bonded warehouses, thereby deriving an extra revenue from their premises. In compensation for that, the Government might give greater facilities to the community, and that would afford some indemnity to the warehouse-keepers, by allowing bonded warehouse-keepers other goods—not spirits and tobacco—to be bonded in their warehouses, on sufficient bond and guarantee, without the Queen's lock at all. It would be a great boon to the trading community, and an advantage to the bonded warehouse-keepers, because they would have the advantage of having a great many goods warehoused without any difficulty, and the duties could be charged upon the landing weights and measures.

16. *By Mr. Donaldson:* Under a bond? Yes, under a bond from the warehouse-keeper, with two sureties. The warehouse-keeper first gives a large general bond, with two or more sureties, that nothing is to be allowed to go out of his warehouse until the duty is paid and a discharge from the Customs lodged with him. You then, when goods are put in the warehouse, take the bond of the importer, the warehouse-keeper, and another security; and I think on small duties, such as are payable on tea, sugar, and such like matters, you may well treat in that way, without any necessity for having any officer at all.

17. *By the Chairman:* You would thus do away with a large number of lockers? Yes, because you know what duties are payable from the landing-waiter's report, verified by the landing-surveyor.

18. *By Mr. Donaldson:* How would you regulate the time when the duties should be paid? I should be very liberal in that matter. You would not wish to hamper the merchant, by saying, you must pay your duty if the goods are not to go into consumption. I think it would be time when the goods are to be taken out to pay the duty.

19. Without stating the time? I don't think it ought to be less than in England; I think it is three years.

20. What time would you say here? Two years, I think, would be long enough. It is no consequence, because you can re-bond.

21. You are aware over-time goods are sold here at the end of three years? Yes, unless re-bonded and charges paid up; that is the same time as in England.

22. Would you continue the rule? Yes. It is no consequence; you might take a shorter time, for the purpose of overhauling stock every two years. There is no hardship upon any one, because you can re-bond.

23. No doubt about the goods being there, you would allow to re-bond them? Yes.

24. Is there any other point which you object to? You say, in clause 9 and others, something about sugar houses, and for refining in bond; it is perfectly inapplicable in this Colony. After some explanatory conversation, Mr. Donaldson admitted that he was in error.

25. Have you any further suggestions to make? I object to clauses 12 and 13, as unreasonable. Clause 14 is very bad.

26. What is your objection to that clause? It is very objectionable, and affords no security for the revenue. Here is an extreme facility given for smuggling. Perhaps it was suggested by some bonded storekeeper. The facility given is, that the bond of the warehouse-keeper shall be bond for the goods. It is quite enough that I send them to the bonded warehouse; I have no occasion to give any bond for them; I never heard of such a thing. I think bond ought to be given by the importer, with the warehouse-keeper, and one other security, unless there is a Queen's Warehouse, and even then the importer must give bond, as in England.

27. *By Mr. Weekes:* What is your reason for making the importer give security, when he has no control over the deposit? But he has got a control over it while it goes in and out, and even while in the warehouse.

28. By collusion with the officers of the Customs? He might.

29. Upon what grounds do you justify the imposing a bond upon the importer for goods deposited in a bonded store, keeping in view that on arrival the goods are deposited in the store, and the property has departed from him, he having sold them by certificates—why should the original importer continue bound in a heavy penalty for the safe custody of the goods? It is not for safe custody.

J. N. Doit,
Esq.

22 June, 1858.

30. Well, to secure the duty? It is an objection which may be urged, but I think on the part of the revenue I would never consent to be without it, because you throw too much charge on the bonded warehouse-keeper, or even if there was a Queen's Warehouse, the importer should be held liable for the truth of his declaration of contents, which he signed when the goods were taken out of the ship to go into the warehouse. So far as the goods being removed or taken away from the warehouse without his knowledge or consent, I don't think there is much risk of that. The bona fide merchant or importer that gets the goods in the warehouse cannot be damaged by giving bond for the goods that are there.

31. Supposing he disposes of the goods on arrival (if they are spirits)—on what principle of equity is he to be bound if he has no further interest in the goods? He need not bond them; if he sells them on arrival the purchaser may bond them. If I sell them on arrival, I hand the purchaser my bill of lading.

32. Suppose he disposes of them immediately after he has placed them in a bonded store, why should he be bound and become responsible for the acts of others? How?

33. I understood you to say he is bound for the goods deposited—that is for the duty to be paid to the Queen? That is the form of the bond.

34. Is not that what you aim at,—that all spirits deposited in a bonded store should be exported, or pay duty before the obligation of the importer is ended? Yes, certainly; and if that person thinks there is any risk attached to it, the goods can be re-bonded in the name of the purchaser. There is no difficulty for the person to say, I sell you fifty casks of rum; if you keep them in bond, they must be re-bonded.

35. The objection to that is, that you would require for each fresh sale of a parcel of spirits that they should be re-bonded in the name of the purchaser? I don't think it is necessary; the objection has never been raised. I have had a great many years experience in England, and no importer has felt any difficulty in that respect.

36. It seems hard that a man should be held responsible for goods over which he has parted with his interest long ago—it is not equity, although it may be a good Customs law? But you can protect yourself if you think proper. You have got the means of protecting yourself by—when you transfer the goods from the name of yourself you can likewise transfer the bond.

37. That would involve the system of everlastingly taking bond as the parcels of spirits change hands—sometimes fifty times in a month, in speculative times? If the present seller of goods is so extremely nice that he will have the bond discharged, there are the means of doing it.

38. It is only to protect himself? I cannot see how you can get over the bond being given by the importer with any real security to the revenue, unless you take the bond of the importer. Even if you had a Queen's Warehouse you could not do it, but, in private warehouses I think I would never consent to do away with it. If you did you could never control it, and you would have everlasting swindling. You must recollect that the Legislature, the British Legislature, of a free country must look on their Customs laws—that it is not only to secure the revenue, but also to protect and secure the honest trader. The protection of the revenue is the protection of the honest trader. If you allow any facility to evade the duty you do wrong to the honest trader, besides the loss to the revenue. You cannot be too stringent with the preventative Customs laws.

39. By Mr. Donaldson: What is your opinion of the Bill, as a whole? I think the best thing you could do with it is to put it in the fire. (*Vide Appendix A.*)

40. By the Chairman: You have had some considerable experience in reference to the working of the Customs in Sydney? Yes.

41. Is there any particular branch of the Customs that has come more immediately under your notice—and can you make any suggestions for the better management of it? As I mentioned before, the warehouse department ought to be entirely re-constructed. I think no private bonded warehouse should be permitted for spirits and tobacco.

42. Then, in reality, your view is, that the warehouse immediately under the control of the Government should be the warehouse for bonding that description of dutiable articles? Yes; and the only one.

43. Do you think all other dutiable articles should be bonded in the present warehouses, the importer and warehouse-keeper giving proper security for the payment of the duties? Yes; and without being under Queen's lock.

44. Then you would not, with the exception of spirits and tobacco, have any locks? No lockers; the store should be entirely under the control of the warehouse-keeper.

45. Under a bond for these duties? The warehouse-keeper must be a responsible man, and give sufficient security. I think it would be a great advantage to the public at large, that he should have control of the goods at all times, and the revenue would be just as secure.

46. I think I understood you to say that the bonded warehouse should be in such a position that no carting should be allowed on depositing goods landed from the ships? Spirits and tobacco are not allowed to be carried by land in England until the duty is paid.

47. Not from the ship? If the ship lies some distance away, the goods (spirits and tobacco) are placed on board lighters, under the charge of licensed lightermen, and under lock.

48. Would that give greater satisfaction to the public and security to the revenue? Yes, the security to the revenue is greater; it annihilates smuggling, and is of advantage to the trader, the merchant, and importer—in fact to the whole trading community; they will be as safe under such a system as the merchant is in London.

J. N. Beit,
Esq.

22 June, 1858.

49. The bonded warehouse you would have open from nine to four? I think it ought to be before nine.

50. It may be open before nine for receiving goods, but you would not expect an officer to be there before nine? No. In the Docks it is arranged in this way: The landing-waiters are obliged to be there at the opening of the Docks, which I believe is eight o'clock, so that ships can work.

51. If that course was pursued, what mode would you suggest with reference to granting certificates? Not as at present; the certificates should be granted by the Warehouse-keeper General of Customs, and by a proper arrangement would avoid the possibility of fraud of any kind.

52. I am speaking of the Queen's Warehouse-keeper? At present there is no security beyond the bonded storekeeper who gives the certificate. As to the quantity of certificates he may issue there is no control over him, and the Customs know nothing about it. Here you would have a good security, because the public officer being accountable not only to the revenue for such goods being in the warehouse, he of course would only give one certificate. That certificate is another advantage—a collateral one—because it is so safe and secure that there would not be the least difficulty in obtaining advances on it, which is a very great advantage to the trading community.

53. Is there anything, Mr. Beit, you can suggest in reference to the clerical working of the department, so as to give greater security? No, I could not. I am not sufficiently acquainted with the working of it here. I could not give any information that would be advantageous, except that many of the forms might, with advantage, be simplified.

54. Do you think any alteration should be made in the hours for paying duties. It is only during certain hours that duties are payable, and after that no money is received? It is from ten till half-past two o'clock. I think it is quite long enough. I do not see any necessity for any longer time. It would only give trouble to the department of the Customs, seeing that the Banks close here at three o'clock.

55. Do you think, according to the present mode of bonding goods, that proper supervision of the revenue takes place? I don't, by any means; and I don't see how it can be done without a most expensive staff.

56. I suppose that is in consequence of there being so many bonded warehouses dispersed through the town? Yes.

57. Do you know anything of what is termed extra tide-waiters on board ship; what duties they perform, and whether they are any protection to the revenue? I think they are very unsatisfactory, but at the same time I don't see how you can do without them. The landing-waiter is on shore receiving goods as they come from the ships. I may be prejudiced of what is the practice in England. I don't see how you can do without tide-waiters. I think you require tide-waiters where there are heavy duties. I should certainly like to see a few more higher officers employed and fewer of the subordinates. I think the supervision is not equal to what it ought to be.

58. Do you think any smuggling is going on at all? Yes, I am afraid there is.

59. To any extent? I have no means of telling. I think the whole arrangements that exist in the harbour are insufficient. While on this subject, I would wish to express my view on it. I cannot see the justice (it prevails in New South Wales, contrary to English practice,) of allowing spirits and tobacco to be consumed in bond on board ship.

60. You mean the stores of the ships whilst in harbour? Yes; it is in this way a great deal of smuggling arises—it is almost inviting persons to smuggle. In England, as soon as a ship drops anchor the Custom House Officer who comes on board seals up all the stores, and they are removed to the warehouse in the Docks, or Queen's Warehouse, until the ship sails out again.

61. Is he not allowed to draw off something for the consumption of the vessel? No; no bonded spirits are allowed in the harbour. I cannot see why it should be. It is of great advantage to the shipowner and the public that it should not be. It is for the protection of the subject that it should be altered, because you would not have so much drunkenness.

62. By Mr. Lord: That would apply also to wine and beers? You may do it as you like, but it is not absolutely necessary—I don't see that you must do it.

63. You would only do it in the case of spirits and tobacco? Yes. In England it is upon wines also. But I think it is a matter of consideration whether you would extend it to wines where the duty is comparatively small. I don't think it is scarcely worth while.

64. By the Chairman: You would not have that restriction on wine and beer? Certainly not on beer; and the same also should apply to vessels trading coastwise.

65. Are you not aware that vessels trading coastwise are not allowed spirits duty free? I thought they were. I would just also mention one very great matter with respect to the bonded system at present; even as proposed by the Bill there is not a sufficient provision made against smuggling by allowing crafts of a small size to carry bonded goods.

66. How do you mean—by exporting bonded goods? Yes, exporting bonded goods, and carrying coastwise bonded goods, or importing the same.

67. Is that on the grounds of the unsafety of it? On the ground of the facility of smuggling. Vessels of 50 or 30 tons can run in anywhere. No vessel should be allowed to carry bonded goods, (i. e., spirits and tobacco,) under 200 tons, and should be square rigged.

68. I suppose there are not many harbours where vessels of 200 tons could get in? Then there is no occasion to have bonded goods go in there.

69. Why? Because they should pay the duty.

70. Then, where there was deep water for vessels you would give the preference to places where there was no deep water? I would only give the preference to the harbour where foreign importations can take place. What is the reason, unless to facilitate smuggling, that you should allow bonded goods to be carried coastwise at all? I cannot see it. It is the principle that harbours where duties on importation are paid should be specially where bonded

bonded warehouses are established. They are specially named, and should be specially pro- J. N. Beit, Esq.
claimed.

71. Are you aware that there is nothing to prevent goods being taken to Morpeth, and that there is a bonded warehouse there? It ought not to be; I object to it. Why should there be a bonded warehouse at Morpeth? 22 June, 1868.

72. Don't you think the convenience of the public ought to be studied? It is not the convenience of the public, it is only the convenience for smuggling.

73. Is it not for the convenience of a man who has a great quantity of goods in bond to take them out when he wants them, and is able to pay the duty? Why not leave them here? A bonded warehouse should only be allowed for *direct importations*.

74. *By Mr. Weekes*: In these free stores, where certain dutiable goods are to be placed, when do you propose the duty is to be paid? At any time you would name. It is at present three years; I think a shorter period would be desirable.

75. Do you mean that the total amount of duty is to be paid at the end of two years? Unless the goods are re-bonded.

76. Then the revenue would have to wait all that time for the sum total of dutiable goods that are in that store? No, I beg your pardon, the duties are paid before you take them out.

77. How, when no officers are there? The warehouse-keeper is the officer. He gives a general bond that no goods shall be removed unless the duty is first paid, nor will his certificate be discharged unless he has got the discharge of the Customs with it.

78. Now, take the case of a warehouse devoted to sugar—thousands of tons of sugar coming in and going out—when can you prove that a certain quantity had not gone out without paying duty, or what the quantity was? Any particular pile of sugar warehoused pays duty before it leaves. The ship comes with, say, ten thousand bags; they are, when warehoused, piled, and the name of the ship put against them, and different qualities and different marks in different piles, so that all of one quality or mark is in one pile. Just as a quantity of sugars are required to be taken out the owner pays the duty and proceeds with the certificate of discharge from the duty to the warehouse. The warehouse-keeper cannot allow them to go out of the warehouse until the duty is paid. Thus you make them much more efficient men to look after such small duties than any of your lockers. You have got no security if you depend on your lockers. If you have a substantial man as warehouse-keeper, and get security for the duty he undertakes, I cannot see how any difficulty can arise, or how a single package can be got away.

79. *By Mr. Lord*: If the accounts are kept correctly? Yes. There should be kept a book in which he enters so many packages gone in, or so many chests of tea as he delivered; he is liable to the merchant and to the Customs. It is very easy so to arrange the certificates that it is impossible for the warehouse-keeper to send out any goods before the duty has been paid.

80. *By the Chairman*: They are both liable to the Customs? Yes.

81. *By Mr. Weekes*: But there is no supervision? Yes; the Surveyor of Customs can go in at any time, and say, "Where is the sugar—what is the quantity?"

82. But they are all mixed up with the free goods—you said it was to be a free store? No; it is a bonded store.

83. Not under the control of the Customs or lock? It is carried on just as now.

84. It is a bonded store not under the control or custody of the Customs? It is under the control, but not under the lock of the Customs, so that the owner can always have access to it, and he may work from morning to night, so that it would be of great advantage to the trade.

85. *By the Chairman*: Before removing a bag he must pay the duty? Yes. I have made a superficial calculation that if you establish the Queen's Warehouse, and work it most effectually upon the system that these warehouses are worked in London, and that you do away with the consumption of spirits and tobacco in the harbour, that, both by the reduced expenses and the greater revenue, the revenue will be benefited altogether considerably over £50,000 a year.

86. *By Mr. Weekes*: What is your calculation based upon? It is not based upon statistics, only on approximation.

87. It is conjectured in a great measure? I took the amount consumed and the amount smuggled, and the expenses you can to some degree calculate. A fair amount can be calculated of what is consumed on board ship in this harbour, which does not pay duty, and which is very considerable.

88. *By the Chairman*: The Government would get all the rent of the bonded store? Yes; and the rent of the bonded store is something very considerable. Upon that subject I do not think it necessary to give a very detailed reply, because I have three times given it in writing very elaborately to two of our Finance Ministers, and before that to Mr. Thomson. It is on record in the Government offices over and over again.

89. *By Mr. Lord*: You propose to do away with private bonded stores altogether? I would not allow *spirits and tobacco*, but all other dutiable articles I would let them have, and I would give them greater facilities, which would render their bond more valuable.

90. You are altering the nature of bonded stores altogether by taking away spirits and tobacco? Yes; there is that difference, and it ought never to have been allowed. Because it exists is it for that reason that it should continue? There is no such thing as vested interest,—what is wrong is wrong. I think the Government ought to take the matter fairly into consideration, and that the smaller dutiable articles should be put in the private warehouses without having locks. This would be full compensation; they would derive an adequate benefit, and would have no reason to complain.

91. *By the Chairman*: What do you think of the working of the recent law passed with reference to bonded storekeepers, and the license to be paid by the bonded stores? I wrote very strongly at the time on the subject, and shewed the impropriety of it, and the very great objections to it.

J. N. Beit,
Esq.

22 June, 1858.

92. What is your opinion as to the measurement schedule? The whole concern is bad. I cannot see why there should be any duty put upon them.

93. You don't think they ought to pay any license, or anything else? They may pay a license, just to pay the expenses of the officer to overlook them. Even that I think is paltry and unbecoming in the Legislature. I have written very strongly on the subject; and I told Mr. Donaldson when he introduced the Bill it was a paltry revenue production, and unstatesmanlike. If you put on a duty on the bonded warehouse-keeper, he has a right to make a charge to his customers upon it in the same proportion. If, therefore, it is to be borne by the public, you have done it in the worst way possible. If it were thought right to tax goods bonded, a very simple matter would give a greater revenue without bearing hard upon any body. You need only put a stamp duty on certificates of Gd.

94. A stamp duty on certificates? I say only if you want it, but I do not advocate it.

95. Would you allow the warehouse-keeper the power of regulating the rent as he might think proper? I think I would never allow it. It is one of the objections already raised,—the public are never protected here by any Legislative measure. You favor the bonded storekeeper at the expense of the public. In England, before anything of the kind is granted, it is after you give a list of the maximum of all charges.

96. The charges are regulated by the Government? No; they are allowed to regulate them by the warehouse-keepers themselves. It is his own look-out; he says, these are my charges. That is the principle which exists in the best regulated countries in this and in many other things. In Prussia an hotel-keeper, or public-house or innkeeper, may charge what he likes; but he must, before he gets out the license, give his whole list of charges to the police, and there it remains. When it is stuck up in his house he cannot alter it. He may take less if he likes, but he cannot take more. It is the duty of the Legislature to say, What will you charge? Charge what you like—give us your list, and you cannot take more.

APPENDIX A.

Explanation of Answer to Question 39.

I wish to explain, that upon Mr. Donaldson putting the *general question*, I particularly expressed myself desirous rather to state in *detail* the objections I entertained to the Bill than to express a sweeping opinion, not founded upon *stated facts and arguments*. After considerable conversation—not reported—in which the time required to go into the details was urged, I was pressed to give my opinion *formally* upon the *WHOLE*, and then I could honestly give no other. The result of an examination in detail would, I believe, be the same, as it must appear to be far more convenient and satisfactory to construct a new Bill, adapted to the present age and to the requirements of this country, than to make something tolerable of this extraordinary production.

JOHN N. BEIT.

THURSDAY, 1 JULY, 1858.

Present:—

MR. EGAN, | MR. BUCKLEY,
MR. WEEKES.

DANIEL EGAN, ESQ., IN THE CHAIR.

Walter Lamb, Esq., called in and examined:—

W. Lamb,
Esq.

1 July, 1858.

1. *By the Chairman:* You are a merchant of Sydney, and a bonded storekeeper? Yes.
2. How long have you been a bonded storekeeper? I have been a bonded store proprietor since the year 1847.
3. And I suppose during that period a large quantity of dutiable articles have come into your custody? Yes, very large.
4. I suppose of every description? Every description of dutiable goods.
5. Will you state to the Committee what is the mode in which goods are received into your store from the ship—what is the process previous to their being received, and under whose supervision? In the first place, the warehouse-keeper, in conjunction with the importer, signs a bond for double the amount of duty. The entry, of course, is passed on the strength of that bond for our store. The goods are then lightered round, in the event of the ship not being at our own wharf—wherever the ship may be—under the charge of our boatmen.
6. The lighter, with the goods, are under the charge of your boatman? Yes.
7. Not an officer of the Customs? No. The officer on board the ship takes an account of the goods when they go into the boat, and he sends a note of what the boatmen have to our store.
8. That is what is called the extra tide-waiter? Yes.
9. But no officer accompanies the goods from the ship to the bonded store? None.
10. Who is there to receive the goods when they arrive—any officer of the Customs? Yes, the Custom House locker.
11. The locker or landing-waiter? The landing-waiter is supposed to look after the goods, I presume, until they are in charge of the locker, and are about going into the store; but our place being situated by the water, the locker has them at once under his supervision.
12. Well, but is there no means adopted for ascertaining the qualities and strength before they go into the charge of the locker? Yes; that is the landing-waiter's duty. When the goods

goods come out of the boat they are arranged for examination, and the landing-waiter then comes and gauges. I hardly know the distinct duties of the locker and the landing-waiter, but I suppose the goods pass through the landing-waiter's hands before they come to the locker's.

W. Lamb,
Esq.

1 July, 1858.

13. All spirits are gauged before they come into the store? Yes, all. As soon as they are landed, if they do not come too late.

14. Then it has happened that goods have been landed at such an hour that you were unable to gauge or ascertain the quantities and strength until the following day? Yes, occasionally.

15. Do you know if any dutiable articles were allowed to remain on the wharf? Never.

16. Have you ever heard of it? No. It has sometimes happened that a ship has discharged goods on our wharf intended for some other bonded store, and the Custom House Officer—the landing-waiter—has asked us to put them in our store until he could get them away in the morning.

17. The dutiable articles placed under the lock of the officers of customs—that have not been gauged—you say that they are put into a store: is that store under the charge of a locker? Yes.

18. Have you or the locker the key in such case? We have a lock and the Custom House has a lock.

19. Have you ever, in the course of your experience, known spirits to be gauged, and marked with certain quantities and strength, which have afterwards either exceeded or been of less strength and quantity? Yes, I have known such a case, where the gauger has made a mistake. A case occurred with my own goods at one time, and there was a great difference.

20. Was it in one particular package or in many? Oh! in a great lot—fifty or sixty casks. I can only account for it by the gauger having made a mistake. It struck me directly that the contents given were incorrect. In that case I gave notice to Mr. Garling. Mr. Garling came down to gauge them, and found that the casks were two or three gallons short.

21. But has it never come within your knowledge that dutiable goods have been in the custody of a bonded storekeeper, without being under the control of a locker? Never. Oh! I might mention my own case, which was rather an extraordinary one, and I believe it is the only case that ever occurred. It was discovered while I was in England. I had a long correspondence with the Government about the matter, and I dare say the papers have been laid on the Table.

22. Then there was an instance? Yes; where the Government benefited £120 by my mistake, (if it was a mistake,) but I have always maintained that it was not so much mine as the Custom House officer's.

23. There was an instance where dutiable goods had been left in charge of a bonded storekeeper which had not paid duty at the time? The circumstance must be explained. It occurred in this way: It was an importation of wine, if I remember rightly, from Oporto; at any rate it was port wine, and I think it was direct. To the best of my recollection there were 140 casks landed on this particular day, half of which was duty paid and half intended for bond. The only way I can account for the mistake is this —

24. Will you first state the mistake? The mistake arose in consequence of half the wine having been entered for bond and half for home consumption. The Custom House officer, who was a dreadful invalid at the time, could not have looked properly after the goods, and our storekeeper was in some measure to blame, because he ought to have looked after them as well. It is all a matter of conjecture, of course. I could not trace how the mistake occurred, but believe the wine was placed in the free store under the impression that it was all duty paid. I must explain that whether for bond or whether for duty it would be gauged alike. The confusion I think occurred in this way, and, strange to say, it was never discovered until two years afterwards. I must point out that the wine was all sold and delivered whilst the duty was 1s. per gallon, and that when the mistake was discovered the duty was 2s. per gallon. I always maintained that it was hardly right to come down upon me for double duty, because the Government themselves acknowledged that it all arose from a mistake. We were of course liable upon our bond, but I could never discover why the Government demanded the 2s. duty. It came to a good deal more than what they could claim under the bond. Instead of being a loss to the revenue, it was a gain of £120.

25. That is, when it was discovered? Yes. The full amount of duty was never charged upon our account sales. The account sales went to our constituent, and he never discovered the mistake; and as they extended over a period of two years, perhaps they were made up seven or eight different times. It is strange, after passing through so many hands, the error was never discovered.

26. If I understand you aright, the half of that quantity of wine was duty paid and half not duty paid, but that the whole was put into a free store by some mistake? Yes; but very likely this particular lot of wine was supposed to be duty paid. I cannot say the number of casks now, but there might have been some five or six hundred in all, a certain portion of which was duty paid and a certain portion for bond. I think it was the first time we had bonded wine, and my storekeeper supposed it to be all duty-paid wine.

27. Can you state to the Committee how and by whom it was discovered? I came out here in February last year, and it was discovered about three months before then—at the very end of 1856 I think. I believe it was discovered by the Collector, or some one at the Custom House.

28. Are you aware whether the present Inspector of Bonded Warehouses was appointed at that time? I think he was appointed soon after that.

29. You believe he was not appointed previous to the discovery? Oh! no; some time after.

30. Then it was discovered by the Customs? By the Customs, who called upon us for the amount of duty at 2s., and we disputed it. If we had paid the 2s. nothing would have been said; but we were so conscious of having done nothing wrong that we contended we were only bound to pay 1s. duty, the rate at which we were ready to prove that the wine had been sold and delivered from our free store.

W. Lamb,
Esq.
1 July, 1853.

31. Then, if I understand you right, this mistake occurred some two or three years before it was discovered? It must have been two years, perhaps three years.
32. Is there ever such a circumstance takes place as what is termed stock-taking in the bonded warehouses? The Customs now take stock I think every year; but they did not at that time. I remember them taking stock in former days, but I do not think there was previously any regular system of stock-taking.
33. Until lately? Until lately. No doubt there ought to be every year, if not six months; because then you can trace a mistake. That is what bothered me so much: the mistake was discovered so long after. The storekeeper had left the place, and I tried all in my power to get information relative to the mistake, but could not obtain any. I wrote a letter to the Colonial Treasurer of that time, stating what I believed to be the facts of the case.
34. Then you had to pay the duty upon the wine, which it appears had been taken into a free store by mistake, some years after? Yes; I had to pay double what I ought to have been called upon to pay.
35. You had to pay the additional duty which had been imposed since the period of the sale of it? Just so. I must explain with regard to the custom in our store prior to my going to England. Indeed all along I had given strict orders that—even if the Customs should ask such a thing—bonded goods should never be taken into the free store; or, if such a thing should happen that any goods were landed which could not be stowed away in the store for which they were intended, and placed for the night in a free store, I always insisted upon our storekeeper giving the Custom House officer our key. I do not remember such a case happening.
36. Now, is there anything that you could suggest by way of greater security to the revenue and property in reference to the mode in which it is now carried out—can you suggest any improvement? Nothing more than taking stock more frequently. I think now that there is an Inspector of Bonded Stores who cannot have very heavy duties to perform; he ought to take stock every six months upon spirits and tobacco. You could not do it very well upon goods that are stocked in bulk, such as tea and sugar.
37. There was an Act passed last year called the Bonded Stores Act? Yes.
38. Did that act very well? It acted very oppressively, and it is a wonder that the storekeepers did not agitate more when the Bill was before the Legislature to prevent its passing.
39. But do not you think that they should pay something for a privilege which other people do not enjoy? I do not see why they should not pay something like the wine and spirit merchants.
40. Then you think that they should have a license, and pay an annual amount for it? Yes.
41. What amount do you think would be fair and reasonable, and would you have the same rate for large and small stores? I should put a bonded storekeeper much on the same footing as the spirit merchant. I would charge all alike, because the extent of his business is not considered, and it would have the good effect perhaps of obliging people to take out licenses only for decent sized stores, instead of for little places which are really no accommodation to the public. Such a course as that would probably reduce the expense of the Customs Department.
42. Do you think that what are called the extra tide-waiters in harbour are any precaution against smuggling—you have had vessels lying at your wharf with them aboard? I think they are. I think it is necessary to have some one on board.
43. Do you think that they would be the means of preventing smuggling at night? Yes, and prevent the concealment, I think, of dutiable goods. We must lose sight of the fact that some of the commanders who come here are men of a low stamp, especially the masters of the smaller vessels; they cannot be altogether trusted.
44. You do not think it would be safe unless some person were there? I think it is necessary to have some one there.
45. Are you acquainted with the manner in which the Customs Department is managed—the clerical part of it? I cannot say I am very conversant with that. I cannot say further than this, that I have noticed a great improvement within the last year or two. A great many of the worst officers, I think, have been dismissed.
46. From your knowledge, and from every day mixing with them, do you consider them, as a body, efficient and suitable for the various offices which they hold? I think most of the officers are quite able and competent men, although there are some perhaps who were not quite efficient, particularly amongst the lower branches.
47. Do you know, of your own knowledge, whether any persons connected with the department, who are engaged in receiving and gauging bonded goods, have ever been seen in a state of intoxication whilst on duty? None within the last year or so; previously I have seen them. I have observed none since my return from England—in fact since the introduction of Responsible Government.
48. Then you think, as far as that goes, Responsible Government has improved the Customs? I do, indeed. About three years ago there were some dreadful drunkards in the Customs, but I have missed them of late. I suppose they have been dismissed—that they have died, or been pensioned off, or something of the kind.
49. By Mr. Buckley: What course is pursued in the event of your receiving bonded goods from a vessel not at your wharf? We lighter them. They are all brought by our lighter. I have explained that a note was given to the boatmen, stating what was in the boat, and that that note was handed to the landing-waiter or the locker.
50. As a general rule, are those goods in the lighter generally in charge of a Custom House officer? No, not further than I stated: there is no officer on board the boat.
51. What is the general character of the landing-waiters? The landing-waiters are a very respectable class of men now. The fact was this:—Before Responsible Government was introduced there was no one to complain to—the officers, I believe, holding their appointment from the Home Government. We have reported officers found drunk, and caused them to be dismissed.

52. *By Mr. Weckes*: Is the office of your warehouse-keeper within the store itself, or on the outside? It is outside the store.

53. Then your store is only opened when actual business is required to be transacted? It is open from nine till three, or from ten till three.

54. Kept open? Yes, of course, in case orders should come down. There are orders coming down all day for goods for home consumption; the store must always be open.

55. Yes, but still, the office being outside, when any person came to take goods out they would be able to open this door. As a rule, do you keep the doors open for people to go into it? No, not except business is going on. There is a Custom House officer present, and nothing could pass out without his seeing it. He used to have his office in the store, but there is a new Custom House regulation, and we had to build a new office to fulfil its provisions.

56. Who provides the locks—do the Customs provide their own and you your own? Yes.

57. In the case of which you have spoken, there was a difference in the gauge of a considerable quantity of spirits: was it a smaller quantity or a larger quantity? Oh! a smaller quantity. It happened a long time ago, so that I would not like to name the officer. He is still in the Customs, and is, I believe, a very deserving man. How it happened in this case I cannot imagine. Of course it was to our interest to have the exact gauge, but I saw that the casks held more than the gaugers marked on them. I must explain to you that the officer gave a reason for it. He said the store was dark, and that he could not see very well; of course he ought to have had them rolled out of the store: but perhaps it was a rainy day.

58. Do bonded storekeepers pay for any leakage or deficiency? No; not unless it is a case of bad stowage, and then he is liable, of course, to his constituents—to the party who bonds the goods.

59. But an unexplained case of evaporation or leakage he does not hold himself responsible for? No.

60. You do not know an instance of a bonded storekeeper taking that responsibility. No.

61. As a rule you do not think they do? It would not do in this climate, the evaporation is so great. They do it in England, because there they have arrived at the exact evaporation.

62. Have you been able to form any idea of the average of evaporation here? It varies from one gallon a year in a hogshead of brandy to four gallons—according to the store. If it is on the ground floor perhaps the evaporation is not more than a gallon a year, but if it is placed up-stairs it would perhaps make a difference of one or two gallons more. That makes three gallons a year; but of course it rarely occurs that goods are stowed off the ground. It is only when stores are very full that casks are taken off the ground floor.

63. Then, at that rate, it is very easy to determine how soon a hogshead of brandy would be empty? Oh! yes; it is easy to calculate that, but it is never kept very long. The law provides that in three years goods not released shall be sold for duty, and I think it is provided by the new Act.

64. On what principle do you think bonded storekeepers should be called upon to pay a fee? On the same principle that wine and spirits merchants, and others dealing with this description of goods, have to pay. I do not know of any other. It has never been the custom to pay anything at all until last year, when we were taxed most enormously.

65. Is not the system of private bonded warehouses a convenience to the public, and a necessity, in fact, for the commercial community? There is no doubt that it is a very great convenience to the public.

66. But is it not a necessity, and must not the Government provide these bonded stores, unless the bonded storekeepers build their own, or provide stores for that purpose? You must have bonded stores where the duty is so high; if you had not, people would have to pay the duty on the importation of their goods.

67. That would be impossible—you could not insist upon all datiable goods being paid on landing? No. A man not engaged in the spirit trade may have a consignment of 50 hogsheads of brandy, for instance. It would probably take all his money to pay the duty, and he might not sell the brandy for two years after.

68. Well, then, this being a public convenience, rendered necessary by the tariff of the Government, why should bonded storekeepers, any more than any other class of persons, be called upon to pay a fee? I do not know why they should be; but I, as a bonded storekeeper, would not object to pay a fee. I do not know that there is really any reason for it, unless a fee is required from every one who trades in spirits. The man who sells spirits has to pay a fee; and he may argue that the people who bond spirits ought to pay too. For my part, I do not know why they should not pay a moderate sum.

69. Then you do not object to pay a fee? No; but I should object to pay the whole expense of the lockers.

70. Do you object to the present mode of charge upon the bonded storekeepers? You mean the £300 license. I certainly object to the mode unless the rate is reduced. There is no limitation at present, so that the large bonded store proprietor could swamp the smaller one.

71. Then the present system you think rather tends to a monopoly? It would be so in time. That would be the ultimate effect; and not more than two or three stores would be able to stand longer than three or four years.

72. Then it would be doubly disastrous—it would create a monopoly for two or three at the expense of the rest? The small stores could not have gone on if the license had been imposed—they must have shut up.

73. Do you think it desirable that there should be bonded stores in various parts of the town? I do not like the idea of bonded stores up the town, for fear of accident. If a bonded store caught fire it would blow up all the houses within, at all events, some hundreds of yards, or shake them very severely.

74. But divesting your mind entirely of the idea that you are a bonded store proprietor by the water-side, do you consider it desirable that bonded stores should be confined to the water-side

W. Lamb,
Esq.

1 July, 1858.

W. Lamb,
Esq.
1 July, 1858.

water-side as much as possible? I think that they should either be by the water-side or detached from other buildings. That is the only reason why I object to bonded stores being in the town.

75. Do you think that the present system is preferable to the Government undertaking the bonding themselves? I certainly think that, both as a convenience to the public, and as a matter of justice to those people who have held licenses for a large number of years, the present system is preferable.

76. But setting aside that question? I think the people could never be served so well by the Government as by the bonded store proprietors competing for the business.

77. Do you think the system is as safe to the public as it would be under a Government bond? I think nothing can be safer than the present system, providing the head of the Customs were to use a wise discretion in the granting of licenses.

78. No bonded store can be licensed but by the consent of the Collector, of course? The Collector, I believe, merely recommends now, and the Colonial Treasurer issues the licenses.

79. And therefore that should be a sufficient protection that there will be no unsuitable stores licensed? Yes, if the Government exercises a wise discretion; but more than that, I think a bonded storekeeper ought to come under some bonds. I do not think then that any but respectable persons could find bondsmen. I think that is provided for in this Act.

80. What is the nature of the bond that a bonded storekeeper enters into security, and for what? Security for the duty.

81. That is, that the goods shall pay duty? Yes; if the goods are removed by any accident he must pay. I suppose if they were removed by fraud there would be some other penalty. He has to enter into a bond for double the amount of duty. The bonded storekeeper would, of course, be liable to the full amount.

82. Do you think it would be just that the importer of dutiable goods should be called upon to enter into a bond as well as the bonded storekeeper? No; I never could understand that part of it. I think the bonded storekeeper alone should enter into a bond.

83. Is it not the case that the importer of dutiable goods may often previous to landing, or on landing, part with the certificates representing the goods? Yes.

84. Then why should the liability continue? That is a case of hardship, but it is his own fault. I think he can have the liability transferred, if he chooses. I think that the Act provides for it.

85. But then, would not that create a constant system of taking bonds—of renewal of bonds whenever the certificates changed hands? No doubt. There is, however, one advantage in the importer being joined with the bonded storekeeper; such a course ensures the respectability of the bonded storekeeper, because no man in his senses would join himself with another unless he was convinced of his good character. That is the only advantage I see why the old Act ought to stand as it is.

86. How is the bonded storekeeper able to do any injury to the property placed in his charge, or as rendering it necessary that the importer should satisfy himself as to the respectability of the bonded storekeeper? He could only do it, of course, by bribing the officer in charge. I do not think he could do it in any other way. If you could be quite satisfied as to the respectability of the Custom House officer in charge, of course the bonded storekeeper could do no harm.

87. But a collusion between the bonded warehouse-keeper and the Custom House officer—the locker—might lead to any amount of trickery? Oh! yes, any amount. They might take out the spirits and fill up the casks with water, and play any amount of tricks if the Custom House officer proved corrupt.

88. Do you ever bond spirits that are brought landwards? No.

89. All by water? All by water with us.

90. And therefore, being brought by water they are not gauged on the wharf where the ship lies, but on arrival at your wharf? On arrival at our wharf.

91. It is the case, is it not—or are you aware that spirits which are conveyed from a wharf by a dray to a store are gauged on the wharf? They are gauged on the wharf.

92. Do you know whether they are taken from the wharf to the store in charge of a Custom House officer? I think they are, but I am not quite sure.

93. At all events, your own business only relates to lightering? Entirely to lightering.

94. I think you say you think it desirable that the tide-waiters should be cautioned to board ships immediately on arrival? Yes.

95. Have you had any means of observing how those officers discharge their duties while ships have been lying at your wharf? Not of late; but I did not think much of them when I had a chance of seeing them. I frequently heard of their leaving the ship for a few hours—being away for a few hours and coming back to the ship—especially of an evening.

96. Are you aware whether they keep watch at night? I think they do not. I think they make themselves snug for the night.

97. Is not that the time when smuggling could be carried on with the greatest probability of success? No doubt that is the time; but I think the captain of a ship would always be frightened to attempt anything of the sort, knowing that there was an officer on board.

98. But some of these inferior captains that you have been speaking of, would they not be likely to take advantage of his slumbers? Oh! there is always that risk, but the risk would be greater if there was no officer aboard.

99. Where would that risk exist—only in reference to ships' stores, would it? Would not the London cocket be a sufficient protection otherwise? Well, it might so happen that the captain was an importer, and did not report the goods. There is no doubt he would have to smuggle them aboard to begin with. If they had been shipped through the Custom House authorities in England, or any other port, of course there would be the cocket. He would have, in the first instance, to smuggle them on board, or take a large quantity of ship's stores. Those he can report just as he pleases. If he chooses to act the rogue he can deceive the Customs.

W. Lamb,
Esq.

1 July, 1858.

100. Are you aware if there is any limit to ship's stores in proportion to the tonnage, the number of passengers, or crew? I think there is; but still a ship could take a quantity of spirits, because now there are a good many ships sailing on the teetotal principle. A captain disposed to smuggle could very easily conceal spirits, I think.

101. Have you noticed recently any improvement generally in the mode of conducting the business of the Customs? Yes, certainly. There is a more satisfactory class of officers.

102. And regularity in the discharge of their duties? Yes; and an avoidance of drunkenness, for which some were famous at one time. I make it a point to report every officer I see in that state, and I have not for a long time seen a man guilty of drunkenness of any sort.

103. Do you think that they have been removed, or that they have been cautioned, and have become more steady: do you still find the same men you complained of? I do not see them at all.

104. You think that they have been removed, and a better class of men introduced? Yes. I have seen some of them intoxicated off duty and not on; if I saw them in such a state on duty I would report them at once.

105. *By the Chairman:* Do you think the appointment of a Superintendent of Lockers has been an improvement in that branch of the department? I am rather in favor of that appointment; some of my brethren think him of no use. There are so many bonded stores now that the Landing-surveyor could scarcely attend to them. I think that Mr. Still, always moving about among the stores, does some good.

106. You think he is an efficient officer? Yes; he is a very zealous and efficient officer.

107. Do you think that bonded storekeepers should be allowed to charge whatever rent they thought proper upon bonded goods? I am an advocate for free trade, but I do not wish to see the rates high.

108. Do you know that they were very high? They were very high, but under extraordinary circumstances—never likely to occur again.

109. The importer had no control over the price to be charged for his goods when they got into the store? He could make his own arrangements.

110. But do you not recollect that all of a sudden the rate rose from 200 to 300 per cent. by the bonded storekeepers meeting and arranging the matter between themselves? Yes; the case happened through the insufficiency of store accommodation for the sudden increase of trade consequent on the gold discovery; it could never happen again. I am a great advocate for low rates.

111. Do you not think it advisable that the Government should fix a scale of charges? It would just have this effect: The bonded storekeeper could never exceed it, but he would cut down just as low as ever. I should have no objection to such a course, because I am sure the Government would fix upon a scale which would pay. I think competition has been most beneficial to the trade of this country. I often receive goods here, and am told to ship them to Melbourne when the market is favorable.

112. With reference to the certificates for bonded goods, do you think the present mode is a desirable one—that of the bonded storekeeper alone signing the certificates—do you not think that some officer of the Customs should be identified with those certificates? I did think so at one time, but I have almost changed my mind. If the Government here are particular about the stores they license, about the respectability of the parties, and take sureties, I do not think there is any necessity for it, because the importer of the goods has his own remedy; he should only put his goods into a store where there will be no tricks played.

113. I believe the former course adopted was the Collector of Customs signing the certificate? Yes.

114. And that would pass current, that would be a sort of security that the articles were in the store? There would be that security, but the security is in the hands of the importers and the trade. It may easily be supposed that unless the importer places his goods in a proper store there would be no security.

115. *By Mr. Weekes:* Are not certificates generally used for the purpose of raising money? No doubt, to a large extent.

116. Are you aware of cases where certificates have been issued in duplicate, or even triplicate—that is, that three sets of certificates have been represented by one parcel of goods? I have heard of a case where certificates had been issued in duplicate, but I was informed that the matter had been satisfactorily explained.

117. Under the present system is it not possible for the keeper of a bonded store to issue any amount of certificates represented by nothing? Yes, no doubt he might.

118. And therefore, that being an ordinary mode in mercantile usage of raising money—a common mercantile practice—is the present system not fraught with danger to the community? There is that danger of some man playing the rogue and issuing those duplicate certificates, but, as I said before, the remedy lies in the hands of the people.

119. You say the remedy lies in the hands of the people? In the hands of the constituents of the bonded storekeepers.

120. In what way? They should only put their goods in stores where they know that no such tricks will be played.

121. Is that possible to ascertain? I should say so, certainly; just the same as you know what men to give credit to when you sell goods.

122. Is it not a thing upon which people may differ, as to the character of any keeper of a bonded store? Yes. A man must pay for his error in judgment if he commits an error of that sort.

123. But I understand you to say that they have the remedy in their own hands? They should only put their goods into the hands of respectable people. A consummate rogue would be guilty of the practice you allude to.

124. Then it comes back to this, that the present system leads to their being placed in the hands

W. Lamb, Esq.
1 July, 1858. hands of people who are not trustworthy, does it not? I hardly go that far, because I cannot believe that the Government will issue licenses in that way. I do not think that now I know of a single individual holding a license for a bonded store who is not really trustworthy. It would be a protection if some system of transfer could be recognized by the Customs.

125. But as one certificate represents one parcel of goods—until that parcel is either exported or entered for home consumption, it would not entail very much trouble on the Customs Department, would it, if some official of the Customs were empowered to sign or countersign the certificates; that is, proving to the public generally that at all events what was represented on the certificates had been deposited in the bonded stores? I think such a plan as that would be very feasible, and I do not think it would incur the expense of more than one additional clerk.

126. Do you think it would answer if some small fee for giving this official character to the certificate was charged—a trifling fee? I am rather against those fees and charges at the Customs, because they are all supposed to be paid out of the revenue collected there; but I do not think it would be felt much if you mean such a fee as would pay the man's salary.

127. Where would be the objection to the certificate being countersigned by the locker of the respective warehouses;—the locker and warehouse-keeper having joint custody of the goods, why should not the locker countersign the certificate signed by the bonded store-keeper—that would divide the labor? I think it would be greater protection if it were done at the Custom House, because there would be danger of collusion. You can easily imagine that a man who would not mind issuing a duplicate certificate for the purpose of raising money, would have no hesitation in bribing a man; and, assuming collusion between these two parties, there is no end to the roguery that might be practised. They could very easily, and without fear of immediate detection, obtain a sum of money on certificates thus signed. It is a dangerous power to place in their hands.

128. But, at all events, you think it would be desirable that some Custom House officer should countersign the certificates? Yes. It would not entail so much labor. The writing out of the certificates would take three or four clerks, but the mere comparing and countersigning could be performed by one.

129. And would be more comprehensive, and a greater security to the public? Yes.

Daniel Costigan, Esq., called in and examined:—

- D. Costigan, Esq.
1 July, 1858.
1. *By the Chairman*: What position are you in? I am not in any occupation at present.
 2. *By Mr. Weekes*: But lately what? The last occupation was in the Customs.
 3. *By the Chairman*: When was that? I left the Customs two years last Christmas.
 4. How long were you engaged in the Customs? Three years. I joined it in the early part of 1853.
 5. How long did you remain in it? Until December, 1855—three years within a month.
 6. What office did you hold? I was a tide-waiter.
 7. Is that what is called an extra tide-waiter? Yes.
 8. To board ships? Yes.
 9. Did you ever leave the Customs? I left the Customs in the early part of December, 1855.
 10. How? I was removed from the Customs by order of Colonel Gibbes, the Collector.
 11. Were you dismissed, suspended, or what? Dismissed. He made use of the word "removed."
 12. From being a tide-waiter? From being a tide-waiter, in consequence of—as was alleged against me—being absent from the ship the "Maid of Judah."
 13. Were you not twice employed by the Customs? No. I arrived in the Colony in the early part of January, 1853. I had been known to the late Sir Charles Fitz Roy from my youth, and he recommended me to the Customs, and promised me another appointment, perhaps I need not name, as soon as there was a vacancy; but there was no vacancy during the time.
 14. You were dismissed in consequence of a charge being brought against you of being absent from your duty? Yes. I should rather wish the word "removed." That was the word the Collector made use of, and I rather think it was entered in the book. I do not think there is any difference.
 15. But a man may be removed from one part to another—that is very different from being dismissed altogether? The distinction between being removed and dismissed from the Military or Civil Service is as follows:—The former implies less censure or reproach for a minor offence, whereas the latter includes all great or atrocious offences. My offence (which I did not think was one) was this—I, hearing a noise at the east end of the Circular Wharf, about 8 o'clock at night, a hundred yards or little more from my ship, went to ascertain the cause, thinking it was part of my duty to do so; having satisfied myself I returned to the ship, and had not been absent more than ten or fifteen minutes, which was certified by the Chief Officer who was on board at the time. I remained on board several days after the Collector had sent an order for my removal, in fact until the ship had discharged the whole of her cargo.
 16. *By Mr. Weekes*: You are not in the service now? No.
 17. Did you leave it of your own accord? I did not.
 18. Then, in point of fact, you were dismissed? It is tantamount to a dismissal.
 19. *By the Chairman*: During the time you were employed, were you employed during the whole of that time in the same capacity? No; for several weeks during that time I was off duty, and not employed in any way.
 20. That was because there was no duty to perform? Yes.
 21. Were you ever engaged in performing any duty except that of an extra tide-waiter? No; excepting a day, or perhaps a few hours, when I was in charge of a bond.

22. What was the duty you performed when you were a tide-waiter? I was put on board a ship, perhaps a day or two after her arrival in the harbour, and remained there. I kept account of cargo as it was discharged, and was removed by the tide-surveyor after the ship was out. He came and what is called jerques the ship, and I gave him my book, with a faithful account of all the cargo the ship discharged. D. Costigan,
1851.
4 July, 1858.
23. Do I understand you that a vessel was three or four days in harbour before you would be on board? Some, sometimes, four days—it depends upon the tide-surveyor.
24. Then you were immediately under the surveyor? Yes. The tide-surveyor is supposed to visit the ships every day. There are two now, but when I went into the Customs first there was only one. They take it in turns, a week alternately, one to visit the ships, and the other—I do not know how it is performed. I do not know how the tide-surveyor passes his time in that week when it is not his turn to visit the ships; nor do I believe any one can (in a public point of view) satisfactorily say how. There is also a clerk in the tide-surveyor's office, who, upon an average, has not one hour's employment during the day—of that I feel confident. I often meet him walking during Custom House hours; he is classed as an extra tide-waiter, and did receive £4 4s. per week.
25. Is that duty performed in the manner you describe—that visiting of the extra tide-waiters in charge of vessels? I apprehend you only want the truth.
26. Of course we only want the truth? Well, then, they do not.
27. How frequently do they visit? Just when he pleases. I was on board a ship for 24 days and Mr. Bremer did not visit me once.
28. For 24 days and he never visited you? For 24 or 22 days, I think it was—twenty some days—it might be 21—I cannot tell to a day. It was the ship "Isabella Hercules." As near as I can recollect I was about three weeks on board. During the whole of that time I was on board the "Isabella Hercules"; she discharged her cargo at Moore's Wharf; the tide-surveyor did not come a-board.
29. He never visited you once? No. You cannot detect the irregularity of the tide-surveyor, because when—I should perhaps state that every other day, or every day that he visits he puts the hour of the day and his initials. For instance, it was John Bremer, and he would put J. B. When he took me from the "Isabella Hercules" he inserted all those at the same time.
30. Showing a number of visits that had never taken place at all? Yes. He would put, say, 14 minutes to 4 o'clock, J. B.—or, say, the 16th, 2 o'clock, J. B.—the 18th, 2 o'clock, J. B., and so on; and the captain marks the time. It is a very off-hand way of discharging business.
31. And this was the day previous to being removed that all the memoranda were made upon the inside cover of the book? Yes, the day I was taken from the ship. On one occasion he did not visit me for five weeks. I was five weeks a-board the "Allandale," off Pinchgut. Mr. Collier, the tide-surveyor, visited me.
32. How often? Perhaps twice or three times. Mr. Collier visited me when it was his visiting week.
33. *By Mr. Wickes:* Do you say you were five weeks on board? I was five weeks.
34. Was she outward or inward bound? Inward bound. There was some dispute, and some litigation took place, I think.
35. Then, in his week, Mr. Collier visited you about three times a week, but Mr. Bremer did not visit you at all? No; nor would his name be found, for he could not introduce his name between.
36. He could not very well do so? He could not introduce his initials between Mr. Collier's. Mr. Collier wrote the day of the month and his initials. It could not be done, and therefore the book will convince you that I am speaking the truth, if you choose to send for it.
37. Then you have been often employed on vessels as tide-waiter during the discharge of the cargo? A great many times.
38. Was there ever an instance where it was necessary the vessel should discharge overtime? Yes; I think so.
39. *By the Chairman:* Does any officer of the Customs attend on those occasions—during what they call overtime, I believe, for which some compensation is given? I can tell the Honorable Chairman I took particular notice of many things, though I did not note it down in a book—so many irregularities that I am afraid I made myself unpopular. The first ship I was put aboard of was the ship "Pelham," Anderson, master. She was lying at Campbell's Wharf. The ship discharged overhours, and the landing-waiter was a Mr. Rolleston; he did attend on most occasions during the discharge of the ship at overtime. I believe he has a shilling to so many hundred pounds of salary, but the tide-waiter has only a shilling per hour.
40. Well, during the discharge did he attend? Well, he did attend, certainly, on most occasions, I remember.
41. Are you aware of any occasion when the landing-waiter should have been present at the discharging of goods when he was not there at all? Oh! yes. The next ship I went to was a Dutch ship, called the "Pietars," at Macnamara's Wharf. I was sent to relieve an officer of the name of Rundle, who was taken poorly. This ship was discharging at overhours, and on no occasion did the landing-waiter appear there.
42. Whose duty was it? Should I mention his name?
43. Well, I don't know? Mr. Kidd. On no occasion was Mr. Kidd there. That will be five years last month.
44. For what period of time? I cannot tell exactly, but the weather was very unsettled.
45. Was it more than one day? Yes.
46. How many days do you think—several days? Several days I was on board this ship, but we did not discharge, the weather being so very unfavorable.
47. What description of goods were being discharged? A great quantity. There was a general

- D. Costigan, Esq. general cargo. I remember that the last thing was brandy, or spirits of some kind; brandy, I think it was.
- 1 July, 1862. 48. But if he did not attend for several days what was done with the spirits? I mean that he did not attend the extra hours—not the whole of the day—but for two days I did not see him at all. On one occasion Mr. Kidd was drunk, and fell asleep in his office; at the time there was about one gallon of wine in a utensil on the floor. I saw a person (discharging clerk) drink some of it: whose wine it was, or where it came from, I do not know.
49. But what was done with the spirits landed during overhours? There were no spirits landed during overhours.
50. Other descriptions of cargo? Other descriptions of cargo. On one occasion two casks of spirits were left for two days and two nights on the wharf, and on the third day they were removed. I do not recollect what the spirits were; believe it to have been either brandy or rum; but they were entered in my book as for the gun-room of the "Electra," a sloop-of-war that lay here at the time.
51. They were there for that period not in charge of an officer of the Customs, but whether they were interfered with you do not know? I do not know if they were interfered with.
52. They were afterwards removed? Yes.
53. You do not know where to? No; nor am I positive whether I put them on shore, or whether it was the officer whom I relieved.
54. Do you know any other instance where any dutiable goods were allowed to remain without being under the control of the Customs? No; not of my own knowledge. At present I do not recollect any. The last thing taken from the ship was spirits.
55. Then dutiable goods taken from the ship, either by land or by water, to the various bonded stores, are not accompanied by any Custom House officer? They were not at the time I am speaking of—two years ago.
56. By Mr. Weekes: Are you quite sure that so many days as four or five, as you stated, elapsed without a tide-waiter being placed on ships arriving in harbour? I think I can state for four days—though I cannot tell you the name of the ship; for I know it was the subject of remark by the tide-waiters—so many ships in harbour, and no officer going aboard. It arose, I suppose, from the negligence of Mr. Bremer.
57. Have you any reason to suppose that goods have been landed from ships in harbour at any of the bays of the harbour by night or by day? I could name an instance, but to say that I could prove it would be going too far; I can only state it from report.
58. Was it your custom to keep watch at night? No.
59. Did you turn in then? Oh! yes, always.
60. Then you might as well have been ashore? Just the same.
61. Do you know whether that is the custom generally? Oh! yes, certainly.
62. Then, at the most dangerous period, that is at night, when smuggling could be carried on with the greatest safety, the officer whose particular duty it is to watch over the Customs is asleep? Yes; he is in his berth.
63. Is that part of your instructions, that you are to turn in and sleep? Yes, certainly.
64. Your written instructions? No, I had no written instructions. I saw the Collector, and he gave me verbal instructions. It is well known that the Custom House officers go to bed at night.
65. You say you were instructed—were you instructed either in writing or verbally that you were to turn in at night and keep no watch when on board ship? I do not remember the Collector mentioning a word upon the subject; he gave me no instructions to sit up to watch.
66. Well, then, you naturally turned in at bed-time? Yes. I used to take my bed on board.
67. Then if a tide-waiter slept soundly a ship might be half emptied without his knowing it? Yes; more especially if he is under the influence of liquor.
68. Are you aware whether those Custom House officers that you describe, whether it frequently occurs that they are under the influence of liquor? I am sorry to say it is too true.
69. Officers in responsible positions of that kind? I am sorry to say it is too true.
70. How are you aware of it? By seeing it.
71. Seeing it when you were visiting other ships? Let me explain—are you speaking of officers in general?
72. No: you made a remark that they would sleep particularly sound if they happened to be drunk—that was alluding to the tide-waiters—I ask, within your own knowledge, is that class of officers guilty of it? Yes; I am sorry to say it is so.
73. How do you know that it is so? It is true I do not know that they are drunk aboard ship; but I know there are persons who have been removed from the ship in consequence of intemperate habits, and that others have been reported. It is not that I have been aboard their ships to see them drunk; but a drunken man is known; it is impossible to conceal the habits of an intemperate man.
74. By the Chairman: Is there any other branch of the department that is addicted to the habit? Oh! I am sorry to say it is so.
75. Without giving any names, would you name what branch of the department? There are many.
76. You mean to say then, generally, that drunkenness prevails through the department? Through very many branches.
77. Do you know whether there is any smuggling carried on in any way in the port? I was going to relate a circumstance —
78. By Mr. Weekes: Is that what you know? I do not know it, but I believe it.

TUESDAY, 13 JULY, 1858.

Present:—

Mr. DONALDSON,

Mr. EGAN,

Mr. WEEKES.

DANIEL EGAN, Esq., IN THE CHAIR.

Mr. Hugh Dixon called in and examined:—

1. *By the Chairman:* You are a merchant in Sydney? Yes; a tobaccoist and merchant. Mr. H. Dixon.
2. Are you well acquainted with the mode in which goods are entered, and also discharged from the Custom House? Yes; and have been for nearly the last twenty years in this Colony. 13 July, 1858.
3. Do you consider that the present mode of conducting business in connection with the Custom House one which it is desirable to continue, or are you prepared to suggest any change that would give greater security to the revenue, and benefit to the public, than the present? As far as the Port of Sydney is concerned, I do not think there could be any very material alteration in the mode of landing and bonding goods, but with regard to some of the more distant districts—for instance, the neighbourhood of the Murray, and Albury—there is a great quantity of tobacco and spirits even now brought in which pays duty to the South Australian or Victorian Governments.
4. Brought by way of Melbourne? Brought overland, both from Melbourne and from Adelaide.
5. Do you export much tobacco? Sometimes I have exported largely.
6. Are you aware whether there is any officer of Customs sent in charge of goods during their removal? Yes, generally; indeed I believe there is always an officer of the Customs employed to follow the drays when goods are removed.
7. Have you exported any lately when that officer has been in charge? I have seen lately officers in charge of goods being removed, and about to be exported.
8. Has there been any officer in charge of dutiable goods with which you have been connected? I cannot say positively; I have not taken that particular notice.
9. Do you know an officer who has performed that duty of the name of Rundle? Yes.
10. Was he ever in charge of dutiable goods with which you were connected? He has been in charge of goods, removing them both for export and from store to store.
11. Has there at any time any circumstance taken place which has caused you to feel dissatisfied with this officer in the discharge of that duty? Not in the mere removal of goods.
12. Will you state in what way? There was a matter respecting which I felt a good deal annoyed. The circumstance was this:—He came into my shop while some of my customers were there, and, taking a seat by a cask of tobacco, he pocketed a considerable quantity—in fact he filled his pocket, and went away. I followed him up the street, tapped him on the shoulder, and told him that he must give up to me the tobacco he had taken. He did so, and, being an aged man, out of respect to his grey hairs I kept the thing concealed for a very long while, not liking to expose the poor man; but I afterwards named it in consequence of his shewing a very vindictive spirit to another person, who had been an officer connected with the Customs.
13. Did you make any report of it? The Collector of Customs sent his Landing-surveyor specially to inquire of me about the matter, whether it was true; of course I acknowledged it was true, and stated the particulars, and in consequence of that he was discharged. He has, however, since been taken on again.
14. Since then do you say he has been again employed in the department? Since then I have seen him performing, and he has performed the export duty ever since regularly. He is still employed in a situation of trust in the Custom House, which, in my opinion, he ought not to fulfil.
15. *By Mr. Weekes:* How was it that the information respecting Rundle reached the Custom House authorities at all? The matter reached the Custom House authorities principally in this way:—I had confidentially named it under a promise of secrecy to an officer of the Customs who did not consider himself authorized to name it until another circumstance elicited it. The rumour at length reached the ear of the Collector of Customs, and the matter ended in the Collector sending the Landing-surveyor to me to inquire respecting it.
16. Then you made no written communication to the Collector of Customs? I have not up to the present time.
17. Are you aware that the knowledge of the circumstance reached the Collector of Customs? I am quite cognizant of that; I know it has reached the Collector, and he acted upon it, and fulfilled his duty in that respect by discharging the officer.
18. *By the Chairman:* Are you aware that within the last eighteen months there has been an Inspector of Warehouses appointed? Yes.
19. Do you consider that that appointment has afforded greater protection to the revenue, and greater facility to the public in bonding? No; although I consider the Inspector of Warehouses to be a highly respectable man, and a good Government officer, yet I think it is quite a superfluous appointment, so much so, that the very necessity under which he is of showing that he has something to do, even against his will, inconveniences the trade.
20. Do you not believe that the strict supervision caused by his appointment is a greater protection to the revenue than before existed? I think not; for if people are positively determined to do what is wrong they could evade it notwithstanding. This would afford a greater blind rather than otherwise.
21. You are then of opinion that the mode adopted previous to his appointment was more calculated to secure the public? I think so.
22. Are you aware whether any account was kept of the various bonded goods by the locker

Mr. H. Dixon. at each bonded store previous to his appointment? There were the store-books, and if they were incorrectly kept they ought not to have been.

13 July, 1858. 23. Do you know whether they were frequently examined, so as to ascertain whether the quantity taken out and the quantity remaining amounted together to what should be there? I have no experience of that, for that is in the detail of the working of the Custom House itself.

24. Do you consider such an examination necessary? Yes.

25. If that duty were not performed by any person before, but were now attended to by him, you would consider that a check upon any fraud on the revenue and a security to the public? Yes, if it were not, and could not, be performed by the warehouse-keepers; but I consider it should principally rest with the warehouse-keepers.

26. Do you not think there should be an officer of the Customs? There might be one in that capacity, but so far as that goes there would be no very great difficulty about it. I do not know the internal details of the Custom House business, but it would be a very small matter, I conceive, to take stock and compare the books.

27. Are you aware whether that has been the practice before the appointment of this officer? I know stock has occasionally been taken, formerly by officers visiting the stores by special appointment. That, I think, was a very proper thing, and I think stock ought to be taken at least once a year.

28. By Mr. Donaldson: I do not understand you to say that you think the appointment of an Inspector of Bonded Warehouses was an useless one, from any knowledge you have of what is done: you say you do not know the internal working of the Custom House regulations—you do not know whether more checks are kept upon bonded storekeepers now than before? I cannot say that positively.

29. Therefore, you form that opinion more with reference to the convenience of warehouse-keepers rather than from a knowledge of the duties performed by him? That can only be known to the Collector or some superior officers of the Customs, because the public cannot go into these books.

30. You do not speak from any knowledge of your own with respect to that subject? Not of my own with respect to that subject, but with reference to what may happen to come under my own notice. There were formerly more conveniences and accommodations with respect to getting samples, and not only as to getting samples, but greater facilities for shipping goods prior to the appointment of Mr. Still.

31. Do you not think that facility might have been abused? There is a possibility of abusing every thing.

32. By Mr. Weekes: Can you point out any particular instance in which difficulty has been thrown in the way of exporting goods? Not voluntarily on the part of Mr. Still.

33. Can you state in what the difficulty has consisted? I have known, for instance, goods which required to be shipped, and in consequence perhaps of the difficulty of getting Mr. Still, who of course cannot be in two or three places at one time, they were hindered from being shipped on the day. That might have been accompanied with great inconvenience; supposing the vessel had been going away and could not stay for the clearance of a small quantity of goods. Though the freight of the goods might be small, the shipment of the goods might be of considerable importance in trade.

34. Did the difficulty to which you refer arise simply from the rules of the Custom House being carried out? I think not; I think from the circumstance of not being able to get Mr. Still to attend.

35. It was in consequence of the absence of Mr. Still at the particular warehouse from which the goods were required to be exported? Of his not being procurable at the time. I forget what the circumstance was, but it delayed the shipment of the goods till the next day, and it was by mere accident we got the goods shipped. It does not facilitate the operations of commerce.

36. Where does Mr. Still's interference commence in the respect of goods; is there any document which requires to be passed through his hands, or how does he interpose his authority in any way as the Inspector of Warehouses? A Custom House Agent would be better able to answer that question than I, more especially of late; because, although I have passed entries for home consumption, I have never passed my own entries for export, but leave it to an agent. The only thing I know is, that if I give an agent instructions to pass entries, if the forms are gone through, and the goods are not shipped, there must be some cause.

37. And on inquiry as to the cause of delay, you have been told that it has been the Inspector of Warehouses? On one occasion I was very desirous of shipping goods on a particular day, and I was told they were delayed in consequence of Mr. Still not being procurable.

38. Then, I gather from you that before goods can be exported from any warehouse, it is necessary that Mr. Still should be present? I cannot positively answer that question, because it is out of my ordinary observation.

39. Have you a bonded store of your own now? No.

40. How long have you abandoned it? Since the imposition of a tax.

41. Up to that period when goods were brought to your store were they at all times accompanied by a Custom House officer? Generally, but not in every instance.

42. Your store, I believe, was principally confined to tobacco and cigars? To tobacco and cigars; nothing else.

43. Do you think there was any risk to the revenue from valuable goods like those being left in the custody of a drayman, to convey them from the wharf to the store. Is not the lid of a case generally raised on the wharf, to ascertain the contents? I should never consent to that, if I could by any possibility have them opened and weighed in the store; because the cases are very unsafe when opened—they are very apt to be plundered.

44. Is it not the fact that they have been opened on the wharf? They have been, but not **Mr. H. Dixon.** lately; I have in every instance made a very strong objection to it, as it leaves the goods exposed to carters, porters, and idlers. I have known a whole box of cigars to be walked off 13 July, 1858. in bundles.

45. *By the Chairman:* Do you believe any smuggling is going on in the port of Sydney? There always has been, more or less.

46. Do you believe that smuggling takes place from the cargo, or from the stores of the ship? I think in some instances seamen bring private speculations of their own. There may be instances in which that is connived at by agents and captains, but I have never positively known of any.

47. Have you any further suggestions to offer to the Committee with reference to the subject of this inquiry? I would respectfully suggest that some means be used to save to the revenue of this Colony the large amount of duties which are at present paid to the revenue of Victoria on spirits and tobacco consumed in the District of Albury, in this Colony, and which, on account of convenience of transit, and cheapness of transit, are purchased at Melbourne, and pay Victorian duties, although consumed in New South Wales. I would also suggest, that payment of duties at the Custom House, Sydney, should continue to be received until three or half-past three o'clock, as by their receipt ceasing at half-past two o'clock, as formerly, the advantage to the public of the prolonged hours of attendance of the clerks at the Custom House being by the present arrangement lost. This might easily be carried out, by arranging with one of the banks to receive that particular deposit up to half-past three or four o'clock.

Mr. Robert Adams called in and examined:—

1. *By Mr. Donaldson:* What are you? I manage the business of Mr. Ford, Custom House Agent. **Mr. R. Adams.**

2. The Committee are desirous of obtaining from you some information as to the working of the Custom House system: will you give us your ideas upon the mode in which the revenue is protected by the present system, or any suggestions as to its amendment and improvement—I will begin specially with the landing and bonding of goods? I do not see that there could be any great improvement upon the present system of landing, except that some expenses might be avoided. Under the present system, when a ship comes in with spirits on board, an officer, like the cart followers on shore, has to accompany the boat either to the place of bond or to the ship to which the spirits are to be transhipped. I do not see why a respectable licensed waterman should not be employed in this way—a receipt from him would be sufficient; instead of that I now see people every day coming in for cart followers.

3. We are informed that it is not the practice now to employ cart followers—is your experience to the contrary? I do not think it is so much the case to employ officers as cart followers, and that is where the anomaly strikes me; while goods are on the water in boats an officer accompanies them, but as soon as they are brought on shore and placed in carts they are left to the custody of the carmen, as far as I know, as a general rule.

4. We have it in evidence that very few officers accompany the boats? I do not say it is invariably the rule.

5. Do you think there would be no risk in transferring goods from ships to boats to be brought on shore without the surveillance of an officer? Not if a respectable licensed boatman were employed, such as Bayliss, Lord, &c. I would not give them to Tom, Dick, and Harry.

6. As a matter of fact, are not the goods often conveyed on shore in the ship's boat? I think they seldom go to bond—perhaps they are transhipped in that way. Supposing the captain of one ship buys a few cases of wine of another, it may then be taken in the ship's boat. I have been seven years engaged in business, and I think there is very little smuggling here, as a rule, as far as the mercantile community are concerned—the small dealers in ship's stores may be an exception.

7. With regard to the cartage of goods from the wharf to bonded stores, do you not think there would be some risk in sending goods on a cart unattended by an officer? There might be some risk, but I do not think it sufficient to counterbalance the expense of sending an officer, provided the drayman was a properly licensed man, and himself and owner bound by a bond of reasonable amount, irrespective of any penalty the law may award for smuggling.

8. You do not think there is any smuggling in that way? I do not think there is a reasonable chance of it. A note is given to the drayman for so many packages, and when these are received the note is signed and brought back by the drayman. Suppose a man has 500 cases of gin to cart up, the landing-waiter and the officer of the bond have each a copy of the entry, and the locker is bound to see that these 500 cases are delivered.

9. *By Mr. Weekes:* Suppose the gin is changed for water on the way to the store? It is possible that such a thing might be done; but such a thing never has been done, that I have ever heard of or believe.

10. *By Mr. Donaldson:* Do you believe this could be done? Suppose a man to take fifty cases of gin on a cart, and to take fifty to bond, but on the way to change the cases of gin for cases containing water, and afterwards to export the fifty cases in bond—do you think if that were done there would be any possibility of detection? Such a thing is possible.

11. Do you think such a thing has ever happened? I have never heard of such an instance. But people have come to me and said, "You know the ins and outs of things, would you do "so and so, and I will make it worth your while." That was for a thing that Government had no check upon. If a man wanted to go into smuggling it would be upon the drawbacks.

12. Explain why smuggling by the system of drawbacks is so easy? I do not know that it could be done now; I was referring more particularly to a year or two since; because, under the new tariff—

- Mr. R. Adams. 13. Explain what you refer to, and how under the old system smuggling was easy? I refer to teas more particularly. The chests are generally marked with the name of the ship they are to go by. Suppose the chop is bought in China and marked "Agamemnon," the "Agamemnon" may not take it all, and the remainder may come by another ship. So that the name of the ship on the chest is no guide as to the vessel by which it actually came. In the case to which I have referred, I was offered £50 if I would claim the drawback upon 300 chests of tea which had come out in a vessel under the old tariff, but which the owner wished to claim drawback for as paid under the new.
14. *By Mr. Weekes:* As I understand, that could only take place at the time of an alteration of duty? Yes, or within three years.
15. The chests having the name of a particular ship on them, but coming by another vessel after the alteration of the tariff? Yes. I merely refer to that to shew that the name of the ship on the chests affords no means of checking the quantity imported by a particular ship.
16. How could the drawback be obtained? By a false declaration. If a party claims a drawback, he says, "I declare these goods were imported by such a ship, and that the duty was paid on such a date," and on that he obtains the drawback, if he has paid the former duty; but it could not be done now, because the tariff is over three years old, and you cannot claim the drawback after three years. I think most of the smuggling is in ship's stores. A ship comes in from London, or more particularly from Holland, and other foreign ports; an officer is not put on board for a couple of days, and the captain is then told he may be allowed so much spirits—a gallon per month for each man on board—and is asked to give a faithful report: he may say, "I have sixty gallons on board," when perhaps he has two hundred. When the jerking officer goes on board, the captain may have landed the difference.
17. *By Mr. Donaldson:* As a matter of fact, these jerking officers do not check the statement of the captain? He does, as far as he is able: when he goes on board the captain says, "I have sixty gallons on board"; at the end of the month he says, "I have thirty"; and supposing his crew to consist of thirty men the statements would agree, as the allowed quantity of thirty gallons would have been consumed; and, mixed up as ships' stores generally are, it is almost impossible for a downright correct list to be made by the officer.
18. If the captain says "I have got sixty gallons," does the officer see whether he has that quantity and no more on board? No; that is why I complain of the stores being so mixed up. I never saw an officer take his gauging instruments to gauge the ship's stores, although I have heard of its having been done where any cause for suspicion existed. What I think should be done when a pilot boards a ship is, not to give the captain a long rigmarole which it would take two hours to read through—you must do so and so, and you are not allowed to do so and so—but to put an officer on board, or seal up the stores.
19. Have you had much experience in bonded stores? No farther than as relates to putting goods in bond, and to shipping them again.
20. Do you think there has been any improvement in the bonded store system since Mr. Still has been appointed? Yes; I think Mr. Still has done a great deal of good.
21. They think he is a troublesome person? Yes. He looks after his business and does justice to the Government.
22. Do you think the liability to frauds or little peculations has been diminished since Mr. Still's appointment? I think there was no extent of wrong ever done beyond the lockers or storekeeper taking out a glass of grog; but I do not think anyone can get a nobbler now in bond if disposed for one; and not only that, but the officers are a much better class than a few years since.
23. Are you aware whether there formerly existed a system of checking the stock? Mr. Still, I believe, wanted to check the books by double entry, but Mr. Nash's, (the Warehouse-keeper) system of keeping his books is a very good one, and the only fault I see is, that the nominal returns of goods in the Custom House stores is not checked by the quantity of goods actually in stock, as far as I know; but really, this being a matter I have seen scarcely anything of, I do not feel competent to give a definite answer.
24. Do you know anything about the clerical department of the Custom House—whether it is very strong, or too strong for the requirements? I think—to make a paradox—for the way the work is done, in consequence of the divided duties, there are too many; and to do the work properly there are too few. By properly I refer to the London system, where every ship has a landing-waiter and officer; and therefore my remark is scarcely applicable to the in-door department, where, on consideration, I can only see that one clerk's work could be dispensed with, as in answer 25.
25. How do you unravel that? I think expense is unnecessarily incurred; for instance, there is a jerking clerk, who jerks all the ship's papers; he is an officer appointed entirely for that duty; and I dare say in the course of twelve months may find out what may save the Government £50, or may be £100.
26. *By Mr. Weekes:* Or may be £1,000? That may be possible; but considering that the ship has a tide-waiter on board, that secondly there is a landing-waiter who is supposed to check him, I think it supererogatory to send the books on shore to a clerk to check them; I think the landing-waiter should be sufficient;—he sending in to the clearing clerk a notice if anything was short landed, who would of course refuse to clear the ship till it was accounted for; whilst the clerk who does the duty of jerking at present might assist the warehouse-keeper, who has the most onerous duty in the whole department.
27. *By Mr. Donaldson:* Have you seen the Customs Consolidation Bill? Yes; and as far as I see it is synopsis of the present system. There are, no doubt, many matters of detail which require modification, but this will, I presume, be done when the Bill goes into Committee.
28. Generally, do you think the Bill a good one? Yes.
29. And that it would be useful if brought into operation? Yes; but believing, as I do, that the mercantile community here are very honest, and that there is very little smuggling going on, there are many things which I think rather too restrictive.

30. Generally, you think the alterations proposed to be made are desirable, and that such an Act would work? Yes. Mr. R. Adams.
31. Will you look to the schedule—do you think, with reference to the Acts named there, 13 July, 1853. they should be brought into one Act? I think this should repeal all former Acts.
32. Would not that cause the Bill to be of enormous length? I think the main points are contained in the present Bill. With regard to the time allowed for the discharge of vessels—at present twenty days is the time allowed for all vessels—I think there should be a differential rate; for such a vessel as the ——— for instance, which is about 1,000 tons, I should allowed thirty days.
33. Have you been in the habit of seeing Custom House officers, landing and tide-waiters much engaged? Yes.
34. Do you think them generally a highly respectable and faultless set of men? I am placed in a rather peculiar position, and I would rather not answer the question categorically, but certainly consider them, and more particularly the landing-waiters, as equal to any similar class of gentlemen, and as a whole far superior to what they were some years ago—some of them in fact being in a position far below what their education and abilities have fitted them for.
35. Is it the common practice now for ships to work overtime when discharging? Yes.
36. Are you aware whether it is the practice for dutiable goods to lie on the wharf all night long? I think not. In the case of goods with which I have been connected, when they have been left on the wharf I have sent them to the Queen's Wharf on my own responsibility; but that was only in one instance, some years since.
37. Do you know anything of the duties of tide-waiters, and how they are performed? Yes; they are very simple: they are sent on board ships to check the discharge of cargo.
38. Have you any experience as to how they perform their duties at night—do they keep watch on board vessels, or do they turn in and sleep? That they do. As to keeping watch, I suppose they scarcely dream of such a thing; but, of course, I know very little of this subject of my own knowledge.
39. Is not night the most likely time for smuggling to be carried on? Yes; but it stands to reason that no man can be kept on his legs all day and that he can watch all night too. I think, as a class, these men are much underpaid. I know instances where men having wives and families to support have not received more than thirty shillings at the end of a month, and it is not to be wondered at if men under such circumstances are not proof against temptation, not that I ever knew of but one instance, and he was dismissed. I think a much better class of men would be secured if there were some fixed rate of pay given, or half-pay when off duty.
40. Have you any further suggestions to offer to the Committee? I think that, if practicable, all spirits should be in one Government bond; that duty should be paid up till 3 o'clock; that timber ships and inter-colonial vessels with free cargoes should be allowed to discharge from 6 or 7 in the morning; that certificates of goods in bond should be certified as correct by a Government officer before delivery, (many of them being at present made by private and incompetent persons, and often very incorrect); that the wharf messenger should bring up the gauging-books of all the wharves each day at 4 p.m., and the day's work be jerked by the proper officer before leaving, (paying him of course overtime), whilst the messenger or the landing-waiters could take the books back in the morning; that all casks should be coopered, if necessary, before going into bond and likewise on delivery; that ships should be warned by the pilot not to give up their papers to any but the Customs, and if the boat does not board them by the time the anchor is down, that they should send the manifest and cocket at once to the Customs. And, in conclusion, I think that a form like the accompanying would be of service, to be left by the pilot on his boarding.*

*APPENDIX A.

Memo. for ships entering Port Jackson.

Get up that portion of the stores consisting of spirits, wine, beer, tobacco, cigars, sugar, tea, and coffee, and put some in a cabin for Customs to seal up when officer boards.

You must not take gunpowder above Pinehgut.

You must keep a light burning whilst in the stream and an anchor-watch.

If the Customs boat does not board before anchoring, send the cockets and manifest at once to the Customs, and get receipt for same, and do not deliver the papers to any one else than the Customs.

Make up a list of stores as above enumerated, and bring on shore when going to report at Customs.

And for general information regarding duties respecting ship whilst in port, see Harbour Regulations, left herewith, and peruse same at earliest convenience.

THURSDAY, 15 JULY, 1858.

Present:—

Mr. DONALDSON, | Mr. EGAN,
Mr. WEEKES.

DANIEL EGAN, Esq., IN THE CHAIR.

Walter Lamb, Esq., called in and examined:—

- W. Lamb, Esq.
15 July, 1858.
1. *By Mr. Donaldson*: You have been kind enough to give the Committee evidence, so far as your experience goes, respecting the management of the Customs Department; will you now favor us with your opinion, more particularly with respect to the Bill now before us—the Customs Consolidation Bill? I cannot say that I have gone through it so carefully as may have been desirable, but I can express a general opinion respecting it. I may state, however, that although I am not acquainted with the Act under which the Custom House is now working, I have never heard any complaints respecting it, and I believe it would be quite efficient, with some modifications, to suit the altered circumstances of the Colony.
 2. *By Mr. Weekes*: Would not that go to the effect that this Bill is unnecessary? I am told that very many of the objectionable clauses in the Bill exist in the present Act, which might therefore require amendment.
 3. *By Mr. Donaldson*: Will you look to the schedule of the Acts proposed to be repealed by this Bill; you will see that not only the Customs but a variety of other Acts will be repealed by it? I think it would be an advantage to have them all consolidated into one Act, for all these matters come under the surveillance of the Custom House authorities; but many of the clauses in this Bill are so oppressive that I would defy any merchant, if the Collector of Customs were a strict man, to work under them.
 4. *By Mr. Weekes*: That is, if the Collector of Customs were to do his duty? Yes.
 5. *By Mr. Donaldson*: You are not aware whether the clauses you object to are or are not clauses of the present Bill? Some are, some are not.
 6. Will you point out those you object to? Clause 13 enacts that bonded goods on which charges have been unpaid for six months shall be sold. This is decidedly objectionable. It appears by that clause, that directly the six months have expired the bonded store proprietor has only to give notice to the Collector of Customs, and the goods are then sold. I think the time is too short. I believe this clause has been taken from the Melbourne Act, where the charge for rent was so excessive that in six months it would amount to the value of the goods. The clause in the old Act gives three years, and I think that not too long for spirits, &c., although a shorter period might be fixed for perishable goods.
 7. Will you point out any other clauses you object to? I object to the wording of the 15th clause, as I understand it. I come now to the prohibitions in the 31st clause. Some of these appear to me highly objectionable—for instance, goods are allowed to be imported only in certain sized packages. “Snuff or tobacco, unless in ships of fifty tons burden at least;” and in whole and complete packages, each containing not less than 80lbs. net weight.” Cigars, again, are to be in packages not less than 60lbs. net weight. Now, Manila cigars, No. 3, which have been imported here the last fifty years, are very little over that. I think some of these prohibitions would be found to be inconvenient and unjust, because persons shipping from England and other parts might be ignorant of them, and expose themselves to loss. Eighty pounds is the weight prescribed for tobacco, and a box of cavendish is very little over that. In the 38th clause fresh fish is excepted. No fresh fish comes here.
 8. *By Mr. Weekes*: We have some by coasting craft? I do not know whether coasting craft are amenable to this Act. I would suggest, however, that live stock should be added to this clause. I consider the clause generally objectionable, as, in case of any mistake, goods would be liable to be forfeited, if the Collector of Customs felt it to be his duty to carry out the Act strictly. Clause 48,—With reference to this clause, I think it hard that the importer should be compelled to deliver a bill of entry to the Collector of Customs within forty-eight hours after the report of the ship; nor do I think there is any necessity for it; the goods may be at the bottom of the hold and may not come to hand for a month. I think, if the goods are at hand and no entry is passed, the captain should have power to pass the entry, provided he satisfies the Custom House authorities of such necessity.
 9. An importer living at Maitland, for instance, could not comply with this clause? No. At the end of clause 65 it is provided, “that, if any period after the arrival or report of any ship is specified in the bills of lading for the discharge of her cargo, or any part thereof, and the importer, owner, or consignee of such goods, or his agent, shall neglect to enter and land the same within such period at any port or place approved by the Board, the master or owner of such ship may, immediately on the expiration of such period, enter and land such goods.” This steps in between the captain of a ship and the importer in a way that would give the captain very great power; and I think it is quite unnecessary. For, in fact, it provides that the terms of the bill of lading should be carried out; and captains are in the habit of putting such unreasonable clauses into their bills of lading that they cannot be fulfilled. By such a clause the captain has the complete control over the goods. Clause 66 gives every ship twenty working days. That ought to be regulated by the size of the ship.
 10. *By Mr. Donaldson*: Would you make twenty days the minimum, and give large ships a longer time? I think twenty days too high for a minimum; the time should range from five to forty days. Clause 71 I object to, because goods may often be removed by mistake; I would propose that the words “unless good reason can be shown” should be added after the word “forfeited.” The clause does not provide for any appeal, and I do not think any such provision is made in a subsequent clause. I think the penalty of £5 imposed by the 76th clause is very severe, because in bonded stores sometimes there is nothing doing for a week, and then

then, when a lot of goods arrive from England, there is such a rush, that it is hardly possible to stow them away. The penalty imposed by the 78th clause for goods improperly warehoused or concealed is I think not a proper one, because it might not be found out until after the goods had been shipped off, when their forfeiture would be an impossibility; where it was proved the storekeeper should lose his license. The 79th clause I think quite unnecessary, for I cannot imagine the occurrence of such a case as that for which it provides.

W. Lamb,
Esq.
15 July, 1853

11. *By Mr. Weekes*: Is there any particular quantity allowed for evaporation under the present law? No; the duty is payable on the re-gauge.

12. Then there is no amount of duty payable upon deficiencies? Not at all.

13. Do you think it proper or just that there should be duty payable upon deficiency? Not at all just; I do not think it just even where the deficiency occurs through carelessness, for this reason,—that the bonded storekeeper is liable to the proprietor of the goods, and is punished sufficiently by having to pay for any leakage caused by carelessness; I do not conceive that the Customs is entitled to any duty unless the goods are removed for consumption.

14. May it not be the case that from a defective stave in a cask the spirits or wine may all leak out? Yes; I had a cask which came into our store some time ago, and the next morning half the contents had run out. I had a survey immediately, and found there was an imperfect stave.

15. As that had not been consumed would it have been fair to have charged duty upon it? Certainly not; but I would go further, and say it should not be charged even in case of carelessness.

16. *By the Chairman*: The only ground upon which it could justly be claimed would be that the storekeeper should see that the packages were properly coopered before they were taken in? I think it is sufficient that they are liable to the importer for the value, without the duty.

17. *By Mr. Weekes*: Are you aware whether in this Act under consideration there is any allowance for evaporation or leakage? There is no allowance; when I say no allowance, I am comparing this with the English Act, where there is a certain amount per month or per year allowed for evaporation. It is here said, "to such allowance as hereafter mentioned," and clause 94 provides for that.

18. Is it a fixed allowance? No; duties are payable upon re-gauge or re-weight. Clauses 91 and 92, with regard to the refining of sugar, I do not think at all necessary; indeed they are not applicable to the present circumstances of the Colony.

19. It has been suggested in evidence that licensed watermen should be employed to conduct goods when waterborne to bonded stores—do you think it would be desirable instead of sending boat officers to employ only licensed watermen? I do not think there would be any greater protection than now; the bonded storekeeper is now liable under his bond, and of course he would employ none but proper men.

20. As a matter of fact, do officers accompany boats? No; I explained that when I was last before the Committee.

21. Have you any further observations to make with reference to this Bill? It appears, under this Act, that almost for any offence connected with the landing or removing goods, even when committed by people over whom the owner of such goods has no control, such for instance, as the captain of a ship discharging cargo before the entry has been passed (see clause 38), the penalty is nothing less than forfeiture of the goods; and what makes the law particularly severe under such circumstances, the seizing officer (see clause 205) gets one-third of the net produce. In my opinion, goods should only be forfeited at discretion of a board quite unconnected with the Customs, and disinterested in the payment of moneys realised on the forfeiture.

A clause should be inserted obliging the captain of a ship to land his cargo at the wharf for which the entry is passed, otherwise he might moor his vessel many miles away from the wharf where the consignee wishes the goods landed. Where a ship has a general cargo he should be obliged to deliver to lighters for conveyance to the wharf for which the entry is passed.

TUESDAY, 7 SEPTEMBER, 1858.

Present:—

MR. R. CAMPBELL, | MR. DONALDSON,
MR. EGAN.

DANIEL EGAN, ESQ., IN THE CHAIR.

Colonel J. N. Gibbes again called in, and further examined:—

1. *By the Chairman*: Will you inform the Committee the particulars with reference to some goods that were bonded in Mr. Aldis' bonded warehouse; it has been stated that a large quantity of dutiable goods, tobacco and cigars, was in bond for a certain time, and that afterwards duty was demanded from Mr. Aldis as though they had been abstracted from the store and the duty not paid? It was only with regard to the cigars; the tobacco was all cleared from Pollard's bonded warehouse.

Colonel
J. N. Gibbes.
7 Sept., 1858.

2. That could not have been known by the Customs at the time the demand was made? It was overlooked at the moment, but on reference to the books it was found that the tobacco had been exported on board H. M. S. "Herald" from Pollard's Warehouse. It was merely an error on the part of the warehouse-keeper in going over his books.

3. Was not that some time after Mr. Aldis had ceased to be a bonded warehouse-keeper? Yes.
4.

Colonel
J. N. Gibbs.

7 Sept., 1858.

4. Can you state how it was discovered that these goods had been taken away? Yes. At the end of 1854 and beginning of 1855, nine cases of cigars were warehoused by Mr. Aldis, the tobacconist, in his bonded store. On taking stock for overtime sale at the beginning of the present year, these cigars were not to be found—neither duty, entry, nor export entry could be found, nor were they written off in my Warehouse-keeper's books. Aldis' warehouse had, for some considerable time past, been given up, and the goods removed to Pollard's bonded store, but Mr. Pollard could give no account of these cigars; he believed they had never been transferred to his warehouse. Mr. Aldis was then called on to account for the disposal of these cigars, but pleaded oblivion, and declined to give any information about them; he would not produce his cheque-book to shew that the duty had been paid; he had no document to prove that he had sold the cigars in bond, or had exported them; but, on being threatened with an action, intimated through his solicitor that he would defend it.

5. Have you since discovered anything with reference to these cigars? Nothing.

6. Is the legal process still going on? No; it has not gone on at all, because I was afterwards told the duty would be paid, and the duty has been paid. There can be no doubt but that the absence of these cigars should have been perceived by the Warehouse-keeper of Customs, when a general taking of stock by Mr. Still (then an officer in the Distillery Department) in February of last year (1857) occurred, and he sent in an inventory of the goods in Aldis' bond, without these cigars being included; but Mr. Hayley, the Warehouse-keeper's clerk, to whom the comparison of those inventories with the register was intrusted, complained that the mistakes made by Mr. Still were so numerous in returning goods under a wrong denomination, such as cordials for cigars, &c., that he could not carry it out in a satisfactory manner when he had about 50,000 packages to compare. Still, the Warehouse-keeper's books are so kept that any mistakes which may arise must eventually be discovered, as is shewn by the present case, and that of Messrs. Lamb and Company. It is impossible that anything can escape from our books. After a certain period, when we take stock for overtime sale, a list is sent to the lockers to shew what goods are in our books as having remained in bond more than three years. In the case of Messrs. Lamb and Co., the man who went over the stock in the warehouse found there was a deficiency in the number of casks of wine, and reported it immediately; and that led to the discovery that the wine had been taken into consumption without payment of duty.

7. Will you inform the Committee what took place with respect to the cigars; who was the party who passed the entry and paid the duty? There was an entry since passed, and the duty was paid by Mr. Aldis.

8. You mean in Mr. Aldis' name? Yes.

9. Do you know who passed that entry? One of the Custom House Agents.

10. As the agent of Mr. Aldis? I believe so; we have nothing to do with that; if an entry is tendered it is the duty of the cashier to pass it.

11. You have never learned how these cigars left the bonded warehouse? We have not, and cannot. Of course all we can do in a case of that kind is to put the bond in suit; but the bond was over-time when it was discovered, and therefore could not be put in suit. The next process is to recover the duty, and the duty has been paid. I should have been very glad indeed to have prosecuted Mr. Aldis, but there were some difficulties in the way. I feel satisfied that, originally, these cigars got into consumption without payment of duty.

12. Or without any entry having been passed? Of course.

13. The full amount of duty has since been paid by Mr. Aldis' agent? Yes; there is an entry in Mr. Aldis' name, and passed by one of the agents.

14. Then, I suppose you thought the entry having been passed and the duty paid, it was not necessary to carry on any farther proceedings? Looking to the doubtful state of the affair, I did. In fact I did not know that the entry was passed. I do not see the entries; they are taken by Mr. Maddocks, the cashier. I did not know, until a day or two afterwards, that the duty was paid.

15. Has it come within your knowledge that any one connected with the customs has paid the duty out of his own pocket, and that Mr. Aldis has allowed his name to be used? Such might have been the case, but I have not heard it, and I cannot tell whose money was received by the cashier. If a person comes to pass an entry, he is not asked whether it is for himself or for any one else.

16. Do you not think if any one connected with the Customs has called upon Mr. Aldis and asked permission to pay the very duty he was charged with, that is a matter which ought to be inquired into? Perhaps it ought to be inquired into, if there is reason to suppose it is so; but I do not know that it is the case, and I do not know what it would lead to.

17. How do you account for such mistakes occurring in the Custom House as for goods to be shipped from bond without discovery, and then a considerable time afterwards a demand to be made upon the party to whom the goods had belonged for the payment of duty? I do not quite understand this question. If it alludes to the cigars, they never were shipped from bond; it is not known what became of them, although some boxes of them have, I am told, been recently seen in Mr. Aldis' shop, they being of a very peculiar character; and it is possible that such an arrangement might have been made by Mr. Aldis with the officiating locker that the goods never went into the bonded warehouse at all, for I cannot believe that they could have been got out of bond without payment of duty.

18. With reference to this tobacco—how do you account for that? It was simply that on looking over his books it escaped Mr. Nash's observation that the tobacco had been sent on board H.M.S. "Herald;" nevertheless it had been so written off. Our books are very voluminous, and there is a vast deal of business in this department—this might have caused him to overlook the matter. He said he believed the tobacco was at Pollard's stores, and we applied to Mr. Pollard to know if he could throw any light upon this matter, but Captain M. Crae, his managing man, denied point blank that it had ever been in Mr. Pollard's warehouse; nevertheless we have since proved that every package had been in that store.

19. I suppose you do not trust to the bonded storekeeper for the correctness of the goods in his store? No; but we knew the goods had been there, and, from the omission or oversight of Mr. Nash, we thought they were still there. Colonel J. N. Gibbes.
20. *By Mr. Campbell:* Is there any check upon the Custom House officer in charge of the bond letting goods go out of the store? Yes, of course; the lockers order is sent down. 7 Sept., 1858.
21. What check is there upon the officer allowing goods to go out of the store without a locker's order? Of course there is none; if a man is a rogue he may allow packages to go out of the store.
22. The Custom House officer could allow things to go out? Yes; but he would incur the danger of discovery, of course.
23. There is no check upon him? No; I consider that there is very little check. For instance, at some warehouses, (take Sir Daniel Cooper's) there are no landing-waiters. At Moore's Wharf, and others, there is a landing-waiter, and he might if he pleased interfere; although I believe the Inspector of Warehouses fancies that no one, not even his superior officer, the Landing Surveyor, has any right to interfere with the lockers; but I differ with him. The lockers are of inferior grade to the landing-waiters; and I consider that if the latter saw anything wrong going on they would be justified in checking it, and reporting to me.
24. Your answer is that there is no check? I think there is no other real check than our books.
25. The check of the Custom House is the taking of stock? Yes; every six months for overtime sales.
26. That is the only check you have upon the Custom House officer doing his duty faithfully? Yes.
27. In consequence of the discovery of this irregularity in connection with Aldis' store, do you not think it would be prudent on the part of your department to provide that the bonded storekeeper should have authority, together with the Custom House officer, to prevent goods going out without the production of the document from the Custom House—I apprehend that is the case: surely your storekeeper would not allow goods to go out without his consent: besides, how is a locker to remove a pipe of brandy without the warehouse-keeper's men—and who orders these men? The Custom House officer has no power in such a matter, but the warehouse occupier. The warehouse occupier orders the men to get out such a cask, the locker producing the order for the delivery.
28. That is not a regulation, is it? Yes. I have given the order more than once.
29. Then, in fact, the bonded storekeeper is now responsible for the delivery of these goods? Yes, I should say he was.
30. Do you not think the delivery of these goods at Aldis' stores makes it imperative upon the Custom House to make some rule for the prevention of a repetition of such an occurrence? Yes. I shall take steps to prevent any closed stores being in future allowed: I look upon it that all this has arisen from that store not having been regularly attended, and regularly opened; and it is the only case, to the best of my recollection, that has led me to believe it to be necessary to send cart-followers from the ship to the warehouse, where there may be no locker constantly in attendance. We do send them when goods are exported from the warehouse to the ship, or when for drawback; but, from motives of economy, we do not send them from the ship to the warehouse.
31. You mean that the bonded storekeeper should be made responsible with the Custom House officer for the delivery of the goods—but the storekeepers do not acknowledge that responsibility at present? If, upon examination of my books, I found that fifty cases had been delivered from Mr. John Campbell's stores without a locker's order, I could have been fined £5 for every one of those packages: that is the law.
32. I understand that the bonded storekeeper considers himself to be entirely at the mercy of the Custom House officer? I do not consider so at all. On the contrary, it is the province of the locker to say, "Here is the warrant for the removal of ten hogshheads of brandy marked so and so; will you get the goods removed out of the store."
33. The bonded storekeeper has full authority to let no goods go out of bond without having your authority shown to him by the Custom House officer in charge? No question about it.
34. How long has that arrangement been pursued by your department? I cannot tell you; but I have given orders to that effect—it is a long standing order. The officers may not have attended to it; but it is my order. A complaint was made to me that a locker at some particular warehouse—I do not remember which, for it is a long time ago—refused to show the locker's order to the bonded storekeeper, and I wrote a minute upon it immediately, and sent it down; but as it was a solitary instance I did not write any general circular afterwards.
35. The bonded storekeeper should be a check upon the locker in the issue of dutiable goods? Yes, for his own sake, I may say, he should.
36. *By Mr. Donaldson:* You have stated, "There can be no doubt but that the absence of these cigars should have been perceived by the Warehouse-keeper of Customs when a general taking of stock by Mr. Still (then an officer in the Distillery Department) in February of last year (1857) took place."—I do not gather from you that you imply any blame to Mr. Still, the present Inspector of Warehouses? Not the least. The case of the cigars Mr. Still could have had nothing to do with; he was not instrumental to the discovery, nor could he have known anything respecting it.
37. He merely took stock of what he found there? Yes.
38. *By the Chairman:* Will you state the system pursued in your department with reference to drawbacks? Duties, of course, are paid upon certain articles, and for these articles, if afterwards exported, the parties to whom they belong may claim the drawback, or the full amount of the duty paid.
39. Is it ascertained by some officer of the department that the same article is exported as that upon which the duty has been paid? Yes.

- Colonel J. N. Gibbs. 40. Is that always the case? Yes.
- 7 Sept., 1868. 41. No imposition can be practised upon the Customs in that way? I think not; there is no drawback allowed upon spirits of any kind or upon tobacco—they are excluded.
42. Upon tea and sugar? Tea, sugar, coffee, ale, and porter—but there are not many articles liable to duty. The drawback is obtained upon wine as a matter of course.
43. Have you a person employed in the department of the name of Rundle? I have.
44. Has his conduct ever been of such a nature as to call for his dismissal? Yes.
45. Could you state the circumstances? I cannot at this moment state what the circumstances were.
46. He was dismissed? Yes.
47. Has he since been reinstated by you? Not by me—by orders from the Government.
48. Are you not aware that the man went into a tobaccoist's shop, filled his pockets with tobacco, and was followed by the tobaccoist, who took the stolen tobacco from him—was not that the ground of his dismissal? I think not; but I am taken at unawares with the question. I shall be happy to give the Committee all the information I can upon the subject.
49. Did not Mr. Dixon report the circumstance to you? I do not think it was regularly reported to me, for I did not hear of it until two years after it had occurred.
50. *By Mr. Campbell:* Has Rundle been the cause of several cases of smuggling having been discovered? Of only two, I think, and one of those was an accidental circumstance. He went and told one of my officers that he had got wind of some tobacco being in a certain place. The officers went to the place named, and found the premises all secured. They broke in and found no tobacco, but, to their utter astonishment, they discovered an extensive distillery. Rundle, however, knew nothing whatever of it—it was at the old Commercial Hotel.
51. He was the cause of the discovery of that? Yes, in that way. He is a man who has been playing upon Government continually. At one time he was a tide-waiter, and afterwards he was a baggage searcher—the offices of baggage searchers were not of my appointment originally; they became useless, and I proposed they should be done away with. He was one of those who were removed, and I then put him on as punt follower and cart follower. I have known him to go away with a punt at ten o'clock in the morning, say to Lamb's Wharf, and not return until three o'clock in the afternoon, and charge a whole day's work for what might have been done in a couple of hours.
52. But you never reported him as an improper person to be an officer of Customs? No; but I have recently broken the system down.
53. How long has he been in the Customs? A good while.
54. It has been brought under my notice that there are two officers in your department employed on fixed duties, one as a clerk in the Custom House and one as acting locker, who are paid out of the vote for extra tide-waiters? Yes, and it is perfectly right.
55. You conceive that you have a right out of that vote to pay for the services of these fixed officers? Most assuredly. They are not fixed officers; they are tide-waiters, and they are paid out of the tide-waiters' fund, and the Government have now come to the conclusion that it must be so, as there are no other funds for it. Supposing a locker is ill, and laid up for a week or a month, who am I to send to take the duty but one of these tide-waiters; he must be a man of character, and of course there are some of the tide-waiters whom I could not send; they have not brains enough—from what fund is he to be paid? There is a vote for twenty tide-waiters, and therefore he is paid out of that fund. Whatever the duty required to be performed, whether cart following, punt following, or anything else, he is paid from this; there is no other means of paying him, unless you mean to say the sick man is to lose his salary, or to pay out of his own pocket for these extra lockers.
56. In the estimate for the Customs Department there are salaries voted for eight acting lockers? Yes.
57. You have appointed a ninth acting locker, and paid him out of the extra tide-waiters' vote? Yes, I have; for a new store was appointed, with the approbation of the Governor General, and it was necessary that a person should be appointed to officiate as locker.
58. You have also paid out of the tide-waiters' vote the salary of a clerk in the Customs, Mr. Lockyer? Yes.
59. That has been the custom of the department? Yes; but I do not call that a fixed duty. At any time when the shipping duty was falling off I could send him back to his true position of tide-waiter, and when business increased recal him to the office, where he would perform the clerical duty for the two tide-surveyors, who cannot perform it for themselves. The matter is already before the Government. He is now an extra tide-waiter.
60. Before the matter was brought to your notice he was employed in the Custom House as a clerk? Yes, in the tide-surveyor's office; I must insist upon that, because it is a distinct thing. The tide-surveyors are the head of his branch; he goes there to perform a duty which those officers cannot perform themselves. If Sir William Denison, Mr. Cowper, and Mr. Browne will cease to require the returns of every ship that comes in, such clerical assistance might be dispensed with.
61. These two officers have been paid out of the vote for extra tide-waiters when they should have been returned as fixed officers? They could not have been; there was no vote for them. Contingencies must arise, and they can only be provided for in that way. At this moment I have one of the lockers very ill indeed, and I have a tide-waiter doing his duty. The Governor General has lately approved of an additional warehouse as a bonded store, and, of course, no goods could be taken in until some one was there to attend to it; and according to established usage, I have ordered Mr. Bernon to attend to that bond.
62. *By the Chairman:* Is that a warehouse lately appointed? Appointed this year.
63. Did you consider an additional warehouse to be necessary, considering the number there are already? No; but I did not think I had any right to object to it. I have had discussions with some bonded storekeepers, who seem to think they have a right to a monopoly, and

- and that so long as they have a crevice in their own stores into which anything could be put, Government should not approve the opening of a new one.
64. Is that a small store? It is —
65. Near the Custom House? Close to it.
66. Is it the case that the outer door which leads to the ordinary business premises leads to this very bond? Yes; you enter the building by folding doors, and the goods are hoisted in the presence of the locker to the floor above, which is separated from the free part by thick sheets of iron.
67. The lower part of the building is in no way connected with the bonded warehouse? Not at all.
68. Although you must go through the ordinary business store to get into the bonded store? No; the one has nothing at all to do with the other. It is a common thing for bonded storekeepers to have a warehouse for ordinary goods below, and a bonded store above.
69. Does not the door, in this instance, which leads to the bonded store lead also to a wine and spirit store? I should think not a spirit store. I should think the storekeeper would naturally put any goods of that kind into the bonded store.
70. Unless this private store were opened nothing could be put into the bonded store? They are quite separate.
71. But there is the same front door to both? Yes; but when the the front door is locked our locks are on it as well as the storekeeper's, and no one can get in.
72. How can the party have access to his ordinary business premises supposing he wanted to go there at seven or eight o'clock? He could not get in.
73. Nor could you go in? No; nobody lives in the place.
74. Supposing a fire were to break out out in the building, the Custom House officer would not be able to enter? He could only open our own locks; but in such a case he would break the others.
75. Do you not think it objectionable to allow a private store in the same building with a bonded store? It has been the practice ever since this has been a port.
76. Do you think it a practice desirable to be continued—would it not be better that a bonded store should be altogether separate? I think it would be better. But even where they have been distinct they have been broken into. Unwin's store was broken into from the outside, and so also was Willis'. In neither of those cases was there connection with a private store. You can never guard against that, but by a watchman. Willis' store was twice broken into; and I was surprised that in both instances the Government should have allowed a remission of duty. After the first occasion I called upon him to have a watchman; he had one, but a short time afterwards the warehouse was again broken into and robbed, and the duty on the stolen property was again remitted.

Colonel
J. N. Gibbes.
7 Sept., 1858.

ADDENDUM.

I find that I omitted to state that the warehouses of Mr. Dixon and Mr. Aldis were unlike any others.

They were too insignificant to be allowed to have the attendance of a locker.

They were closed warehouses, only opened on a requisition from the occupier to have them so opened for the purpose of taking in or delivering out goods, when an officer was sent with the keys, who unlocked the stores and closed them again on the transaction being finished.

Such is the practice in many ports in England.

But Mr. Aldis was negligent, and did not always make the requisition, so that it has happened that when goods have arrived from the ship at his store they could not be taken in, but were obliged to be carried away to another bond which was open, which created much confusion.

Mr. William Almond called in and examined:—

1. *By the Chairman:* You have charge of Campbell's Bonded Store? I have.
2. How long have you been so employed? Six years, next month.
3. Are you acquainted with the officers employed in that department of the Customs? I think I know almost the whole of them.
4. Have you seen anything in the conduct of any of them that would lead you to think they were not proper persons to be so employed? There are some of them who are not what they ought to be, no doubt—to what particular department do you refer?
5. To those engaged in the bonded warehouses? We have some very excellent men; of course there are others—
6. That you think are unfit to be employed? I should not say unfit to be employed, but there is a vast difference between the officers, as to their ability and conduct. I could not bring a charge against any man.
7. By "conduct" do you allude to want of sobriety? I have seen instances of that.
8. Are you aware whether any check is kept, or do you keep any check respecting goods bonded at your warehouse? Yes.
9. What course is taken when overtime goods have to be disposed of by the Customs Department? Of course my book and the locker's book correspond, and shew the quantity on hand. It was formerly usual to hold the sale in the bonded store, but within the last two years samples have been taken to the Custom House, and the goods have been sold there.
10. It is not then from the entries in your book that the Customs ascertain the quantity of overtime goods in the store? No, from the locker's book; the Customs Department has nothing to do with my book.
11. Do you consider that you are in any way responsible for goods taken out of the store by any

Mr. W.
Almond.
7 Sept., 1858.

Mr. W.
Almond.

7 Sept., 1858.

any of the lockers—for instance, supposing a locker were to order certain goods to go out, you might suppose he was authorized to do so? It would be impossible for him to do so without authority. I must see the warrant.

12. Do you always see the warrant? We always do now.

13. That is lately? For some years past. I consider it to be as much my duty to see the warrant as it is the locker's.

14. Supposing any goods should be taken out by the locker without your seeing the warrant, you would consider yourself responsible for them? To a certain extent. There is one observation I would wish to make: I think it an objectionable practice to remove the landing-waiters every three months. We have at our wharf felt the ill effects of it most grievously. You are aware that our bond and wharf are, perhaps, the most extensive in Sydney; at times we have a very large amount of business, and there is a great difference in the landing-waiters, as to their ability and quickness; for three months we may have a very excellent man, and for the next three we may have a man not fit to be upon a busy wharf.

15. *By Mr. Donaldson*: You would rather have one set of men always? No doubt.

16. *By the Chairman*: Have you any further suggestions to offer to the Committee? I may state, that my motive in making the above observations was not to praise one officer more than another—or I should mention the names of Messrs. Hindmarsh, Birnie, Kidd, &c.—but to shew how necessary it is that the most efficient and active men should be placed where the greatest amount of business is done. These remarks apply equally both to lockers and landing-waiters.

TUESDAY, 19 OCTOBER, 1858.

Present:—

MR. CAMPBELL,
MR. DONALDSON,

MR. EGAN,
MR. GORDON,

MR. WEEKES.

DANIEL EGAN, ESQ., IN THE CHAIR.

Michael Metcalfe, Esq., called in and examined:—

M. Metcalfe,
Esq.

19 Oct., 1858.

1. *By the Chairman*: Have you looked into the proposed Customs Consolidation Bill? Yes, with the exception of the last ninety clauses, to which I have not paid much attention. Half of it appears to me to be unnecessary.

2. *By Mr. Donaldson*: You are aware that the Bill is a compilation from the Customs Consolidation Act, the Customs Laws Consolidation Act of England, and the Victorian Customs Consolidation Act? Yes.

3. And some portions of the Customs Regulations necessary in England might be necessary here—have you formed an opinion favorable or unfavorable to the Bill as it stands? I have, quite unfavorable. It appears to me that the Bill is not what we require here, and that, altogether, it is not so good as the Act at present in force.

4. But we have no Consolidation Act at present? No; but you will observe that this is a consolidation of parts only of some four or five Acts: for instance, of that which refers to gunpowder only a small part is taken, and there is nothing said about the post office with regard to the Customs, which appears to me to be very important. The length of the Act is altogether too great.

5. Can you state generally what are your objections to the Bill, beyond the one you have mentioned, that it is too lengthy? I could not state generally—I should have to go through the Bill clause by clause. Out of 130 clauses I think there are 70 I should object to.

6. Do you think a Consolidation Bill is desirable? Yes.

7. Will you state on what grounds you would frame your Bill? I do not mean to say that the English Consolidation Act, or the Melbourne Act, should not be taken into consideration, but I think in the case of the Bill before the Committee the scissors have been used too freely, and clauses have been admitted without reference to their applicability to the circumstances of the port. For instance, in this Bill reference is made to the Finance Minister, who may be utterly unacquainted with everything belonging to the Customs. This, in my opinion, is objectionable. I think it would be desirable that there should be a Board similar to the Pilot Board, composed of men who understood matters connected with the Customs. This might be conducted at a very small expense, as there would be no salaries to pay, and the non-official members who attended might be paid by fees.

8. You are in favor of a Board of Customs? Yes; I think the establishment of such a Board imperatively necessary.

9. Will you state what class of officials you would put on that Board? I could not say what class of officials; they should not be put on unless they understood the business.

10. Of what kind of men should the Board be composed? There should be two merchants, or gentlemen conversant with Custom House business, at least, and two or three persons official or non-official, acquainted with such matters.

11. *By Mr. Weekes*: You would have no members simply *ex officio*? I think Government should have a representative at every Board; but I mean to say that I do not think the Auditor General, for instance, should be a member, unless he understood the working of the Customs Department. It is a department which requires an amount of business acquaintance

in

in order to deal with peculiar cases, and if a man do not understand it he is likely to make mistakes, and to do things injurious to the whole department. M. Metcalfe,
Esq.

12. *By Mr. Donaldson:* This Bill has been based upon the English Customs Consolidation Act, and drawn up under the superintendence of the Collector of Customs himself—what plan would you suggest for the framing of an Act? I think this Bill might be remodelled by two or three gentlemen who understood the matter. It is to be remembered that the Collector of Customs has been some fifty years in the department, and is naturally wedded to old-fashioned rules. 19 Oct., 1858.

13. You recommend that it should be considered by gentlemen outside? Yes; by not more than three.

14. *By the Chairman:* And these three should be merchants, conversant with the matter? Yes, merchants or other gentlemen conversant with the business. There are a great many things exceedingly objectionable in this Bill; but it would take a long while to go through the whole. There is one point, however, which I think would, upon a moment's thought, strike any one as objectionable: All the lowest officers in the Customs are excluded from making a seizure, and these are the very men best suited to perform that duty. It is said that no man being a tide-waiter shall make a seizure, and he is the very man who is likely to see anything that may be going wrong, and, if he is not able to make a seizure, the probability is that the party will escape.

15. *By Mr. Weekes:* How long have you been connected with the Customs of this port? Twenty-two years; and for some time in England, although not in the Customs. I was in the St. Katharine Docks, in London, where I saw a good deal of the working of the Customs.

16. *By the Chairman:* From your experience, are you of opinion that any alteration could be made in the department that would lessen the expense of the department, or give greater facility to the public, than the present mode of conducting the business? Yes. I will begin with the outside branch: There are four people employed—according to the English practice—export officers or cart followers—all of whom might, in my opinion, be dispensed with. It appears to me that they are a clog to the business of the port, and that they are not the slightest protection to the revenue.

17. *By Mr. Weekes:* Are they cart followers in name only, or do they follow carts? They do follow carts.

18. In every case? I believe so. I think the greater part of them perform their duty very well when called upon to do so; but they are utterly unnecessary.

19. Is it not the custom to send bonded goods from the wharf, perhaps, to some distant store, in the custody only of a drayman? I can hardly answer that point correctly. I know such things have been done, but I believe rarely. I regard the attendance of the officer as an absurdity.

20. Then, as you consider the cart follower as an absurdity, you must suppose that there is no risk attending the transit of these bonded goods from the wharf to the store, however distant? Not the slightest.

21. In whose custody and under whose protection would these bonded goods be from the time they left the wharf until they reached the bonded store? They would be under the same conditions as when they were in bond. The carter would be the responsible man; they would be in his custody, and if he did not deliver them of course he might be brought up at the Police Office.

22. Then, for the time being the carter is the custodian of the goods on behalf of the Queen? Certainly not; these goods are under bond.

23. Exactly; but while they are in his cart he is their sole keeper? Yes, of course, they are under his charge, but they are still under bond.

24. Supposing that in the removal of six casks of brandy from the wharf to the store they are half emptied and filled up with water, how is that to be discovered? I do not know how that would be detected, if they had been gauged on the wharf, until they were taken out of bond again.

25. That might be years after? Yes; but I cannot conceive that a carter would do such a thing as that.

26. It appears to me that it would be a strong temptation to some men if they had a valuable dray load of bonded goods entirely under their control? The temptation would be as great if he had to remove a quantity of spirits from one merchant to another, and the danger would be greater. If such a thing as that you have supposed were done, the party who signs the bond would be liable. The party in that bond becomes liable to a penalty, according to the amount of duty payable, "from the first landing thereof to any time within three years." So that if a cask were half empty, or were 10 U. P. instead of 20 O. P. the bond would be liable.

27. When gauged on the wharf you would not regauge spirits on being deposited at the bonded store? No.

28. Supposing, therefore, that on the transit to the store casks of spirits were tampered with, and some inferior spirit or water were put in, and subsequently these casks were taken out of the store and shipped as being full of spirits, how could that possibly be detected? In such a case as that the detection would be difficult; but all goods are re-gauged when taken out of bond for exportation.

29. Are they gauged to ascertain the strength as well as the quantity? Only if the merchant requires it.

30. It is not the ordinary practice to gauge the strength as well as the quantity? I think not. You are supposing a case of downright fraud.

31. I am supposing a case that I believe to be a possible one? It does not appear to be so to me.

32. A carter is in collusion with somebody, and instead of going to the bonded store direct he

M. Metcalfe, he takes his dray load of spirits into some by yard, where the spirits are taken out and the
Esq. casks filled up with water; he then goes to the bonded store, gives in his dray load, and
gets his receipts—that appears to be a very probable case? I think not.

19 Oct., 1838. 33. After perhaps two or three years the spirits are found to be only half the proper strength; upon whom, in such a case, could the guilt be placed—how could it be traced? That is a case which I conceive to be almost an impossible one; but the possibility of such an occurrence might be entirely prevented by sending an officer with the goods; but I believe the Government would lose more by keeping officers to follow carts than by any such frauds as that supposed.

34. If these frauds should exist they might never be discovered, and therefore the amount of which the revenue might be defrauded could never be known? I can hardly conceive that, for most merchants sell their goods within a year.

35. *By the Chairman:* Do you not think that in cases where goods were intended for exportation, and were being removed from a bonded store at some distance, a cart follower should go with them? I do not think a cart follower should go with them, but that an officer should be placed on board the ship at the expense of the exporter, or the ship, and that he should have the particulars of the goods being passed, and should remain on board till the ship goes to sea. And, again, I think all men employed to take spirits from bonded warehouses to ships should be licensed carters, the same as in England.

36. Such a course is not pursued as that you have suggested of placing an officer on board a ship? It is pursued if there is any suspicion.

37. Vessels going to the Islands, for instance? Yes; they ought to have officers put on board.

38. But they are not put on board now? No.

39. Is it not possible, then, that the goods after being taken from the store might be taken to some other place and not be shipped at all? Yes, but the Customs take this precaution—they make the officer sign that he has shipped the goods on board, and they also have a receipt from the master or mate of the ship; therefore, in any such fraud as that supposed there must be collusion between two or three persons.

40. But the officer is not there at the shipping of the goods, you say? Yes, he is present; he takes the goods down to the ship.

41. Do you know that now in every case an officer does follow the goods to the ship? I believe so; I do not know of my own knowledge.

42. Is it not frequently the case that a large amount of bonded goods are entered out, and have to be delivered in the course of a day—is the staff sufficiently strong to attend to this duty in such cases? Yes, there are a number of men—I think nearly a dozen—extra officers, who have not earned a shilling for a month or two.

43. Extra tide-waiters? Yes; these men are employed when the four cart followers are occupied.

44. What means have the Customs of knowing whether goods entered out for exportation have really been shipped—what check is there? The check I have mentioned—the receipt is signed by the master and mate.

45. Are these things examined before a ship is allowed to clear? That is supposed to be the case; that is the duty of the clearing clerk.

46. Have you any further information to give the Committee with reference to that particular branch of the department? I think not. I have already said that when a ship is going to a place where there is no recognized custom house, it would be better to put an officer on board at the expense of the exporter or of the ship, but that the maintenance of the present cart followers is a waste of money.

47. Are there any changes you would suggest in the clerical department of the Customs: do you think it is at present efficient, or that any reduction might be made in the expense? I think improvements might be made; I do not think the gentlemen who are there have their time fully occupied, by any means, or that there is a sufficient check kept upon the duties; for instance, a man pays duty, which is properly entered in the cash-book immediately, but that cash-book does not contain particulars by which the goods on which the duty has been paid can be traced. In illustration of the necessity for this check, I may state that the fact came under my notice in the case of one importer (Mr. Aldis) to whose books I had occasion to refer. In his books I found that in 1854 a sum was paid for duty on imported cigars, and on looking (with my partner, Mr. Powell,) through the cash-books and warrants at the Audit Office, I found that this sum had actually passed through the Custom House and been accounted for as a cash receipt, but was not traceable to any particular mark or parcel of goods.

48. Are you aware whether the duty upon these goods for which application was made to Mr. Aldis has since been paid? I believe so.

49. Then, in your opinion, the duty has been twice paid? Yes.

50. That was owing to the insufficient manner of keeping the books? That is my impression.

51. *By Mr. Donaldson:* With reference to the system of re-gauging spirits which have been some time in bond, are you aware whether when spirits are taken out of bond duty is paid upon the old, and not upon the new gauge? We used to consider we had a privilege of this description; if a cask gauged a gallon more than when it went in, we could destroy the paper of the new gauge and take the first gauge.

52. You actually thought you ought to pay upon the smaller quantity? Yes: these are the very words of the Act, "according to the first account taken thereof." In such a case there is no fraud committed; but it does not occur once in three years. The difference might be owing to the state of the atmosphere and its effect upon the spirit, and in some cases the advantage would be given to the Crown, and in others to the merchant.

53. You do not suggest any modification of the regulation with regard to re-gauges? No; I do not think any objection can be taken to that.

54. You think the original gauges are sufficiently correct to satisfy the scrupulous; and have *M. Metcalfe, Esq.* any further remarks to offer with reference to the warehouses? Yes. In all warehouses where there is nothing but sugar and coffee, or articles on which there is a small duty, I think there should be no locker at all. The Customs have the merchant's bond, and should take care that the duty is paid. 19 Oct., 1858.

55. *By Mr. Gordon*: Does it come within your knowledge that persons employed to gauge and re-gauge are altogether incompetent? I believe some of the lockers are not competent.

56. *By Mr. Donaldson*: They are the persons upon whose gauge you would depend? I think they get some one to gauge for them in cases of doubt.

57. *By the Chairman*: From your experience in the Customs I suppose you are somewhat acquainted with the general management of bonded stores? Yes.

58. Do you believe the present management to be such as to secure the due protection of the revenue? I think so, generally; but I object to the number of bonded stores. In England spirits would not be allowed to go into a store unless it were a warehouse of special security, detached, and being surrounded by a wall.

59. Do you think any place should be licensed as a bonded store where the door through which the goods are received, or delivered, is used for the purposes of a private store as well? Certainly not; I think it highly objectionable.

60. You are aware that there are buildings used both as private and as bonded stores? Yes, there are; in some cases spirits are sold in the store below while they are in bond up-stairs.

61. *By Mr. Donaldson*: Then the up-stairs portion is supposed to be locked? Yes, of course.

62. *By the Chairman*: There is no access to that store to which, I presume, you particularly refer, except through the door leading to the bonded store? I have never been in the store, therefore I cannot say.

63. *By Mr. Weekes*: Are you speaking of a store now in operation? Yes.

64. *By the Chairman*: Will you have the kindness to favor the Committee with any suggestions that may occur to you for the improvement of the internal management of the Customs Department? I beg to offer the following suggestions for the information of the Committee.

ADDENDUM.

I think the present system of the Landing Department very inefficient, and in lieu thereof I beg to make the following recommendations:—

1. That the duties of Landing Surveyor and Surveyor of Warehouses should be performed by the same person, who should be allowed forage for a horse, as, from the great extent of wharves and warehouses at this port, it is impossible without a horse to do the duties satisfactorily.

2. That the officers now termed landing waiters should be employed as gaugers and supervisors of the junior waterside officers.

3. That the officers now designated tide-waiters should be termed *landing clerks*, and should be paid by the Government a fixed salary of £100 a-year each, and for the remainder of their subsistence they should look to the ships on which they are stationed, *e. g.*, on every ship arriving with cargo from places beyond the seas one of these officers should be boarded, for whose maintenance the ship should be charged with five shillings per day, to be paid to the Collector at the Custom House, at or before the clearing of the ship outwards; and that the ship on which such officer is boarded should have the privilege of discharging cargo one or two hours before and one or two hours after the usual hours of business (Saturdays excepted) without extra charge; that these officers should be responsible for the landing of the whole of the cargo, (and should keep an account thereof), and should weigh such portion (not being tobacco or cigars) as may require to be weighed, but that the gauging and measuring of wines and spirits, and the weighing of tobacco and cigars, should be attended to by the landing-waiters, who should have notice given them by the landing clerks for the purpose; and that, whenever deemed advisable, the landing clerks should remain on board the ship on which they are stationed during the night. I believe that if such a plan were adopted a class of intelligent and respectable young men might be procured who would protect the revenue, and not bring the department into the contempt that the present system of tide-waiters renders it peculiarly obnoxious to, and that it would not cost the Government more than the present inefficient system. All promotion to the office of landing-waiter should be from the landing clerks.

4. That the lockers should keep a book of all the goods in the warehouse under their charge, and should make a return, daily, at the close of each day to the Warehouse-keeper at the Custom House of the deliveries which have taken place during the day, which return the lockers should have certified by the proprietor of the warehouse, or the person who may have charge of the same.

5. That the Warehouse-keeper should on the following morning compare such return with the warrants he has received from the Cashier, and if any discrepancy should be discovered, he should make immediate inquiry into the matter, and post up his Register from the lockers' returns, and afterwards endorse the same, and deposit them in a place of safety. I beg also to recommend an alteration in the form of the Warehouse-keeper's Registers, which are at present unwieldy and expensive, and might easily be reduced both in bulk and cost.

6. That a book be kept in the Long Room containing the particulars of all goods on which duty has been paid, and that such book be compared the following day with the Cashier's cash-book.

7. That an officer be appointed, to be called Deputy or Assistant Collector, who should be a person thoroughly conversant with the in-door and out-door duties of the department, and whose duty should be to assist the Collector in the thorough supervision of every branch of the department, and who should in the absence of the Collector be able to take the management thereof.

M. Metcalfe,
Esq.

19 Oct., 1858.

8. That the appendix to the Consolidation Act should contain a specimen of all the forms required in the transaction of business at the Custom House, and that the same be *not* printed (as at present) for distribution, but that, as in Melbourne, the stationers of the City should have the benefit of supplying them to parties requiring them, at fair charges. I believe that the Government now pay a considerable sum annually for printing Custom House forms and bonds.

9. There are several other subjects on which I could offer suggestions, but as they are chiefly matters of detail, it is perhaps unnecessary to enter into them at present. The remarks I have above made are intended to be taken in connection with my evidence.

M. METCALFE.

Charles Smith, Esq., called in and examined:—

C. Smith,
Esq.

19 Oct., 1858.

1. *By the Chairman*: You are, I believe, a shipowner and merchant? Yes.
2. And have been for some considerable period? Yes, for some fourteen years.
3. During that period you have had, I suppose, a great deal to do with the Customs Department? Yes; more particularly within the last eight years.
4. Are you acquainted with the course adopted with reference to the importation and exportation of bonded goods? Yes, I have a general knowledge of Custom House business.
5. Can you favor the Committee with any suggestions, the adoption of which would give greater protection to the revenue, greater convenience to the public, or tend to lessen the expense of the department? There is an Act in force in England—the Customs Consolidation Act—which might, I think, be adopted with advantage here. Portions of it might require to be modified to suit the wants of the Colony, but, generally speaking, I believe such an Act would work very well. I have a memorandum here of the several parts which I think would be beneficial for us here. The second section provides that sureties shall be given by all Custom House Officers. This, I think, should be adopted here. The third section is a very good one. The fourth section enacts that bonded warehouse-keepers shall enter into a bond. The sixteenth, that bonds shall be entered into by Custom House Agents. These I would also recommend. The thirty-third and thirty-fourth sections enact that an open court shall be held for the redress of any grievance with reference to duties, or for hearing complaints against Custom House Officers. The nature of this open court is more particularised in the London Custom House Order of the 26th November, 1853. In the Act there is a Comptroller of Customs named, and I think it would be necessary if a new Act were passed here that such an officer should be appointed. In England there is now a court held twice a week, in which a Commissioner sits, and where evidence is taken, and if the complainant is dissatisfied with the decision of the Commissioner he can apply to another court.
6. Have you any other suggestions to make with reference to this Act? I do not know that I have any other general suggestion. The subject came more particularly under my notice in consequence of some irregularities that have occurred in the Customs.
7. Will you have the goodness to state what those irregularities were? The first case that came under my notice was when I was one of the arbitrators in the matter of the “Catherine Adamson.” It was then clearly shewn to me that a quantity of bonded goods that were taken into the Custom House warehouse were never accounted for, to either the salvager or the agents of the vessel.
8. Into what Custom House bond were they put? Into the Sydney Custom House bond—the Government Warehouse in the rear of the Custom House. A large quantity of brandy, champagne, and other wine, was never accounted for.
9. Was there a considerable quantity? A considerable quantity.
10. Will you state any further circumstances that came under your notice? A recent irregularity has come under my notice, where the Customs Department has been defrauded to a large amount.
11. Will you state the particulars? A vessel was cleared out here, and a large portion of the bonded goods which were entered outwards by her were not shipped.
12. When did this occur? She cleared here in last September.
13. Do you know her name? The “Louisa.”
14. Are you making this statement of your own knowledge? Yes, of my own knowledge.
15. The “Louisa” cleared out in September last as having a quantity of dutiable goods in her, which goods were never put on board? Part of them were never put on board; part of them were not taken out of the warehouse till the day after the vessel had sailed from here.
16. Do you know what became of the goods? No.
17. *By Mr. Weekes*: Do you know whose bonded store they were taken from? They were taken from Walker’s wharf. These goods that I refer to generally were said to have been taken from five different stores for exportation to New Caledonia.
18. *By the Chairman*: Were the goods you speak of taken from the bonded stores and shipped on board the vessel? They could not have been, for they were taken out of bond the day after the vessel sailed. I have taken particular pains to investigate this matter, and, as I believe I am now in a position to prove the various facts connected with it, I have communicated with the Executive Government upon the subject.

TUESDAY, 9 NOVEMBER, 1858.

Present:—

Mr. EGAN,
Mr. WEEKES,Mr. R. CAMPBELL,
Mr. DONALDSON.

DANIEL EGAN, Esq., IN THE CHAIR.

Charles Smith, Esq., called in, and further examined:—

1. *By the Chairman:* Captain Smith, I may remark to you, in reference to your last examination here, that the subject is now being inquired into by the Government, and that we decline to further proceed in that matter. A Commission having been appointed for the purpose of making full inquiry into that matter, we shall not think it necessary to examine you upon the subject; but there are other matters we should be glad to have your evidence upon. You understand me, do you? Yes, perfectly.
2. You have been already examined here? Yes.
3. You are a merchant and shipowner? Yes.
4. And have been for some considerable time? Yes, for thirteen or fourteen years.
5. During that period you have had many transactions with the department of the Customs? A great many.
6. In the various matters of your business? Yes.
7. Such as the shipping, and passing of entries and clearances? Yes; goods and clearances, and that.
8. Have you found, in the course of your business with the Customs Department, that facilities were given in every way for the dispatch of public business, in such a way as you thought desirable for the benefit of the public? I have not had much to complain of in that way.
9. Not much to complain of? No.
10. A ready compliance when an application has been made in reference to the duties connected with that department—no impediments thrown in the way? Yes; an impediment occurred in regard to the "Freak," the last time she was here—a vessel belonging to me.
11. What was the nature of the impediment? If you will allow me I will just state the case to you, and you can ask me what questions you please afterwards. I think that will, perhaps, be the shortest way.
12. I may first ask you whether this impediment was during the process of loading or discharging? After the vessel had cleared for sea.
13. This was no impediment then connected with the working of the department? No. The brig "Freak" duly cleared at the Customs on the 13th August, and hauled off the wharf on the morning of the 16th, and at 9 a.m., when preparing to get under-way, a Customs boat went alongside and a Mr. Berney, in plain clothes, went on deck, armed.
14. Who? Mr. Berney.
15. What is he? Assistant landing-waiter.
16. *By Mr. Campbell:* He is fifth landing-waiter? He is, and the Collector's son-in-law. The boat's crew went on deck, armed with pistols and cutlasses, and began breaking out the cargo.
17. *By the Chairman:* I beg your pardon—were you there? I was on board afterwards.
18. *By Mr. Weekes:* This is what you saw? Yes. I saw them breaking out the cargo, and I saw the pistols and the cutlasses lying on the skylight.
19. *By the Chairman:* Was there anything said to you previously? Nothing whatever.
20. No statement made to you, and no request? None whatever. The captain hailed me, and asked me to come aboard.
21. This was done without any complaint, or any fault in any way was stated to you? None stated to me, nor do I believe there was any made to the captain. The captain asked Mr. Berney what he required, and the answer was, that he had orders to search the ship, and that she could not proceed to sea until he had done so. Mr. Berney then ordered the pilot to take the vessel back to the wharf, which was done by the Customs boat's crew—the captain having given up all charge to the Customs people. I must state, that from the time of going on board first I went up to the Customs to try and see the Collector, to see what reason he had for the manner in which he was acting towards the vessel, but I could not find him. I then went to my solicitor, and instructed him to inform the Collector that I should hold him responsible for damage, at the rate of £100 per day, and for other damages which might arise from such detention. When I got back I told the captain that as they seemed to have taken all power out of his hands he had better write to the officer saying that he considered the vessel under his charge, and leave her to them. They ordered the pilot to take her back to the wharf, where she was made fast, and they broke out part of the goods and put them into my store.
22. *By Mr. Weekes:* All this was done by the Customs people? Yes.
23. The moving of the ship, I mean? Yes; they ordered the pilot to move the ship back.
24. *By the Chairman:* And the goods also? Yes. Mr. Berney wanted me—in fact he said to me on the wharf, "You had better give us all the facilities you can, and I will make it easier for you afterwards." I said, "My good fellow, you have got the ship entirely under your own control—you have got every convenience—I have placed a store at your disposal—you must do what you like with the vessel. If it is my people you want," I said, "you will certainly not have them." Whilst the boat's crew were discharging a portion of the tobacco into my store, the Collector paid a visit on board, but said nothing to me regarding the seizure or detention of the vessel. In the afternoon the tobacco was returned to the vessel, and the clearance left with a clerk in my office. On the 17th, at ten a.m., the clerk returned the clearance to the Collector, and at 1 p.m. the clearance was tendered

C. Smith,
Esq.

9 Nov., 1858.

C. Smith,
Esq.
9 Nov., 1858.

tendered to the captain by a tide-surveyor, and declined, (I was by when it was tendered to the captain), unless I received a note from the Collector stating that the vessel was all correct, and at liberty to proceed to sea. In the afternoon I received, through my solicitor, the clearance, and a note from the Collector, stating that the vessel was found to be correct, and was at liberty to proceed to sea. With regard to that note from my solicitor, I may mention that he made it a condition that I should stop proceedings against the Customs, and I took it up to my solicitor. He did it in this way,—that the officer tendering the clearance should say that I said if I got this note from the Collector I would stop any proceeding with regard to the vessel. I did not state that; I said I had no wish to be at variance with the Customs, and that if they would enclose the clearance in a note, stating that the vessel had been found to be correct, I would allow the captain to accept the clearance. When I received this note from the Collector, through my solicitor, I took it back to him, saying that I would not accept the clearance on these conditions. My solicitor's advice to me was, that as I had not stated such a thing it would be of no effect; therefore I accepted it. On the 18th (that is after this had occurred) at 6 a.m., hove the vessel off the wharf, and at 9 a.m. the Collector, with Mr. Berney, went on board, and again detained the vessel until she was again searched—at least they pretended to search her. They never, in fact, searched her at all, properly. There were five tierces of tobacco, which were never seen, in the vessel—which they never did see. That was the reason I would not allow her to proceed to sea until I had his note stating that she was all correct. He ordered the pilot not to remove her until he had further orders.

25. Was that after she had been taken away from the wharf? That is the second time, after she was off the wharf. When the Collector came on shore—that is, after detaining her the second time—he informed me that he had received further information at nine o'clock last night, and that he must detain the vessel—again detain the vessel. After consulting with his officers for some time, and going on board and sampling the tobacco, the Collector finally left the vessel.

26. Did you say "sampling" the tobacco? Yes.

27. Then he must have seen the tobacco? He took up one, and sampled it according to representations which I will make to you directly. He finally left the vessel, and when in the boat he told the captain that he might now go and do what he pleased.

28. That was the Collector? Yes. That was about afternoon.

29. Thereby releasing her, I presume? Yes; but it was done in such a way.

30. But I presume it was understood that he had no further ground for detaining her? It was not stated in that way. After detaining the vessel the second time, the Collector told me that it was the tobacco on which the suspicion rested; and I replied that it appeared to me a very foolish affair, as his (Customs) locker at Pollard's would testify that the quality of the tobacco was such that it could not be worth smuggling; and further, that his son-in-law had acted in a most insulting manner; and was going on to explain in reference to his conduct, when I was stopped short by the Collector, stating that he had his authority for all that he had done. This of course precluded me from again seeking redress from the Collector; but he stated to my agent, Mr. Metcalf, that he thought I was entitled to the name of the informer, although he would not give it me without that person's authority. I believe that is all in reference to that matter.

31. That is all with reference to it? Yes.

32. Then what you have stated to the Committee is the substance of what you conceive was an impediment in your way in reference to that particular vessel? Yes.

33. *By Mr. Weekes:* Did you ever ascertain from the Collector, or any other officer of the Customs, what was their object in detaining the vessel, or upon what grounds they proceeded? No. They would give me no grounds of procedure. That was where I consider I was badly used. I knew the information was malicious, and I considered that I had a right, by British law, to have the name of the informer given up to me, so that I might prosecute him.

34. There was no allegation then that the cargo did not correspond with the clearance? None whatever.

35. Or something to justify their interference? No.

36. No explanation at all? None whatever, further than the Collector stating that he had "received further information at nine o'clock last night."

37. Without saying what? Without saying what.

38. *By Mr. Campbell:* You are aware that the authority under which Colonel Gibbs rummaged the vessel was under the 5th section of the 13th Victoria, No. 43, and the 40th section of the 9th Victoria, No. 15? I do not object to that. He had a right to rummage the vessel if he had any information; but the manner in which he did rummage it—in not sending a proper officer; and when he found that the information must have been malicious, then his duty afterwards was, I think, to have given me the name of the informer.

39. *By Mr. Weekes:* The "Freak" is your property? I am the resident owner. The captain has a share.

40. Was the cargo your property? Not exclusively.

41. None going on freight? No. She is a vessel in the Island trade, and she took away less dutiable goods the last time than she is in the habit of doing.

42. *By the Chairman:* It is inferior tobacco taken to the islands which none would pay duty for here? No. I could furnish the names of the parties from whom I bought the tobacco.

43. *By Mr. Campbell:* Have you that letter in your possession which the Collector wrote and which he mentions? Those are all the letters—(pointing to the return). Those papers are arranged so as to mislead parties.

44. *By Mr. Weekes:* You have in your hand, Captain Smith, a return moved for by Mr. Williamson, and ordered by the House to be printed, on the 16th September, containing certain correspondence between your solicitors and Colonel Gibbs? Yes.

45. Are those letters as printed in the order in which they were sent? No.

46. Will you state how they should run? The first one is right; but I may mention that it is stated here that the vessel was not seized. Now, if taking possession by an armed force is not seizing I do not know what is. The letter dated the 16th August is No. 1. The letter dated the 17th August, on page 3 of the Return, should be No. 2. The letter dated the 17th August, on page 2—that of Messrs. Spain and Young—should be No. 3, and the one dated 17th August, half-past one, should be No. 4—to which last letter the note of Colonel Gibbes, at the end of the Return, dated the 1st of September, 1858, refers.

C. Smith,
Esq.
9 Nov., 1858.

47. Is this occurrence which you describe as having happened to the "Freak" a usual occurrence in the port of Sydney? It is a very unusual occurrence.

48. *By the Chairman*: And after the Collector left the vessel, and said, "You can do as you like," was there any further proceedings before proceeding to sea? No.

49. *By Mr. Campbell*: Did you ever hear of a vessel being rummaged in the harbour before? I do not recollect where she discharged her cargo again. This tobacco was stowed on the top ground tier.

50. Did you ever hear of the Customs Department rummaging a vessel before as they rummaged the "Freak"? No.

51. *By Mr. Weekes*: How long was the vessel detained in consequence? Three days.

52. What particular circumstance is it that you complain of in this transaction? I complain in not having the name of the informer given up to me.

53. That is the principal ground of complaint? That is the principal ground of complaint.

54. Do you complain of the way in which the search was made—that there was any unnecessary? I complain of the insulting manner in which the officer executed his duty—insulting me in the execution of it—and the detention of the vessel. Had the proper tide-surveyor come round and told me that there was something the matter with the tobacco, I could have shown it to him in one hour, and we could have proceeded to sea; and two days afterwards the Collector telling me it was only the tobacco, I considered that it was not my duty to put myself forward to convince him that it was right, but let him come and find it out himself. These five tierces of tobacco they did not see. I could have shown them in ten minutes, by taking a plank or two out of the fore-castle bulkhead.

55. You do not complain of the proceeding as an illegal one? Certainly not.

56. But of the mode in which it was carried out? Just so.

57. As giving more inconvenience than was necessary? Than was necessary.

58. And therefore causing loss to you? Yes. I may mention my reason. I considered that being here, and owning ships, sometimes 12 or 14 of them at a time, either wholly or in conjunction with respectable firms, it was due to me to let me know what was wrong with my vessel. The collector stating that the officer had his authority for all that he had done, stopped me from applying for the information; but you see I sent my agent to see if the information could not be given, and the answer was that he thought I was entitled to it, but he would not give it me.

59. Are you aware whether it is customary at home to give up the name of the informer? Where the information is malicious.

60. Do you know that to be the case? I know it. I will tell you how it is arrived at: it is held in an open court.

61. *By the Chairman*: The inquiry? Yes. If this had occurred in London—this being on Monday morning—I had only to write a note to one of the Commissioners of the Customs, who sits on a Tuesday in open court in the Custom House. I could have had up the officers and examined them; I could have had the Collector there too, and have put what questions I pleased. He would not have given me the name of the informer, but I could have gathered whether the information was malicious or not; and if circumstances appeared to make it malicious, I could have asked the Commissioner to have given me the name of the informer, and I believe he would have considered himself bound to do so.

62. If the result of the inquiry showed that it was a malicious information? Yes.

63. *By Mr. Weekes*: Did you apply to the Customs for the name of the informer? No, I did not apply.

64. Did you or your agent apply? I cannot say. I considered what had passed between me and the Collector precluded me from having anything more to say to him.

65. I understood that one of the grounds of your complaint was, that they would not give up the name of the informer? Yes.

66. But now you say you did not apply for it? I did not apply for it. I considered it was just to me to have it without the application. I applied for it indirectly, but not directly. I found out what the Collector's sentiments were on the matter, and I would not risk a refusal from him. You understand that after what had passed between him and me I would not again place myself in a position to receive a refusal from him.

67. *By the Chairman*: You had determined not to place yourself in communication with him any further upon the subject? Yes.

68. *By Mr. Weekes*: Then the refusal of the Customs to give up the name of the informer is rather an inference or supposition than a fact? I may state that I mentioned the circumstance to a Member of the Legislature, who applied for that information, and it was not given through the House; that information has been refused through the House.

69. *By the Chairman*: I do not think it was asked for, the name of the informer? If we got the information it would lead to the informer.

70. *By Mr. Weekes*: Are you aware whether these informations to the Customs are made upon oath? They are made in various ways. I believe the Collector can take it upon oath if he chooses. I believe in this instance it was so stated that the informer offered either to make an affidavit or to face me—so I was informed by Mr. Metcalf, my agent.

71. *By the Chairman*: Have you any other suggestions to make in reference to the Customs Department? It is my opinion that the Customs require entirely remodelling, and that half the officers are unfit to fulfil their duties.

Mr.

Mr. Christopher Clanchy called in and examined :—

C. Clanchy,
Esq.

9 Nov., 1858.

1. *By the Chairman* : You are attached to the Customs Department? Yes.
2. What office do you hold? That of a tide-waiter.
3. How long have you held that office? Since 1850. I was put on the list of tide-waiters in 1852.
4. Is there a greater number of tide-waiters now than there was at that period? Double the quantity; I may say three times the number.
5. How many were there when you first joined? I think there might be about eight or ten.
6. And how many are there now? I think there are about thirty.
7. And what are the duties generally performed by these tide-waiters? The duty?—the moment a ship arrives and casts anchor officers are just put on board, and they have to remain until the cargo is discharged.
8. Is there any difference in the manner in which that duty is discharged now and when you first joined? Yes.
9. Will you state in what way? In the first place, in Mr. Bramwell's time—
10. It is Mr. Bramwell's time now; he was there all the while? He was a tide-surveyor then, and he did the duty of three—tide-surveyor and clerk—
11. Then you mean to say that there was only him at that time? At that time.
12. How many are there employed now? There have been three until lately, and one of the clerks who acted in the room of the tide-surveyor has been removed.
13. Who are the tide-surveyors now? Mr. Collier and Mr. Bremer.
14. Is the same course pursued in reference to vessels arriving with dutiable cargoes on board as that which was pursued when you first joined that department? Far from it.
15. Will you state what is the mode of conducting that branch of the business at present, after the arrival of vessels? When a vessel arrived and cast anchor, Mr. Bramwell, as tide-surveyor, sent an officer immediately on board.
16. That was when you first joined? Yes.
17. There was always an officer put on board the moment she cast anchor? Yes.
18. Is that the course now? No.
19. What is the course adopted now? Perhaps two or three days after a vessel casts anchor an officer is placed aboard.
20. *By Mr. Weekes* : Do you mean that as a rule generally? I do not believe it to be a general rule. I believe if the Collector were to know it he would not allow it.
21. But are you speaking of exceptional cases, or as a general rule, that tide-waiters are not put on ships for several days? In many instances they are not. I know of one instance, where I was put aboard a ship myself, that the ship had been at anchor for three days before I was put on board of her. I do not say it is generally the case, but it often occurred.
22. *By the Chairman* : You say you know of one instance where a tide-waiter was not put aboard for three days? I know that in one case the vessel was three days anchored before I was put on board.
23. And whose duty was it to see that there was an officer put on board that particular ship? The tide surveyor's.
24. And what tide surveyor was that? I believe it was Mr. Bremer.
25. *By Mr. Weekes* : Can you account for the negligence which took place on that occasion? I cannot.
26. *By the Chairman* : The rule has been departed from since Mr. Bramwell has been removed as landing waiter? In his time he would scarcely allow a vessel to cast anchor before he placed an officer on board.
27. And did you make any report or statement to any of the principal tide surveyors in reference to this matter? I did.
28. To whom? Mr. Bremer.
29. And were there any steps taken in consequence? No; the matter passed over.
30. There are only two surveyors now? Two now.
31. Are those persons who attend strictly to their duty and are generally in a state fit to carry it out? One of them very much so.
32. Who is that? Mr. Collier.
33. The other, what is his name? Mr. Bremer.
34. And what have you to say in reference to the manner in which Mr. Bremer discharges his duty : what have you ever seen which leads you to believe that the duty is not properly discharged by Mr. Bremer : did you ever hear anything, or do you know of anything yourself which leads you to believe that the duty is not properly discharged by Mr. Bremer : did you ever know of any circumstance taking place in reference to either of them which led you to believe that one of them did not do his duty occasionally, or that something took place which prevented him from doing it? The last ship but one—the "David M'Iver"—had dutiable goods on board, and I was taken off before the ship was discharged. She discharged during four days after I was taken off.
35. She had dutiable goods on board, which she discharged four days after you were removed? I do not say that dutiable goods were discharged, but I say I was taken off four days before the cargo was discharged. Four days, I am almost certain.
36. Did anything take place at all in connection with that vessel and the tide-surveyor? Nothing particular.
37. Do you know of any accident that happened to any one connected with the Customs in the discharge of his duty. Was he on board (Mr. Bremer) while you were there? Yes.
38. Did you notice anything taking place—did anything happen which attracted your attention? The captain induced him to take me off.
39. That is not the question. Did you notice anything in his conduct or manner? Nothing particular.

40. And you did not know of anything happening to him at all? I heard that formerly— C. Clanchy, Esq.
not on the present ship—
41. Will you tell us anything that you know of your own knowledge in reference to the officer you now speak of, and the mode and manner of his discharging his duty? I cannot 9 Nov., 1858.
recollect anything particular for the last three, four, or five years. He had leave of absence and went home.
42. I do not want to know about his leave of absence, but in reference to the manner in which he discharges his duty—anything within your own knowledge? He generally comes sober in the morning.
43. What about the remainder of the day—are you in the habit of seeing him in the remaining part of the day? Perhaps twice or three times he may come on board to sign my book: every visit they sign; the tide surveyors put their initials in the books.
44. And you do not recollect any accident happening to any officer in the discharge of his duty? I recollect, previous to his going to England, that he got his leg dislocated.
45. Are the Customs officers in the habit of purchasing anything on board the ships where they have duty to perform—or are they prohibited by the regulations? I believe they would not be allowed to purchase anything.
46. Have you ever known them to purchase anything, or to receive anything as presents? I have.
47. Who has ever received any presents, to your knowledge, or purchased anything? I have seen, on the last ship—the David M'Iver—a barrel of flour. I saw it given to Mr. Bremer, and put over the side into the Customs boat, and put into the office at the Custom House.
48. You do not know whether he purchased it, or whether it was given to him as a present? No.
49. *By Mr. Weekes*: Did you ever see anything else put over the side at any time? No, nothing else, except by order of the surveyor, who would not allow it.
50. *By the Chairman*: But have you seen anything else—of what kind was it, and to whom? I never saw any presents further than that cask of flour.
51. *By Mr. Donaldson*: Do you sleep on board these ships? We are obliged.
52. What time do you go to bed, generally? At any hour we think proper after the hatches go down.
53. What time do you get up, generally? Five o'clock, generally.
54. Now, from the time you go to sleep to the time you get up, do you know anything that goes on in the ship as to putting things over the side, or anything of that sort? I have not seen anything.
55. But have you the means of knowing what goes over the ship's side during that time? As you ask me that question I believe I can tell you, as one that I recollect, of a circumstance that occurred on board a foreign ship, where a collier—a coal ship—anchored within a short distance of us.
56. *By Mr. Weekes*: What is the name of the ship? I cannot tell without reference to my books. The collier anchored nigh her, and the captain of the collier sent on board to speak to the foreign captain. This ship I happened to board three days after. I had not seen it, but having been told by a young lad that I knew, and could place the greatest reliance in that his information was correct—I do not know whether it was ten or fifteen hogsheads of brandy were taken out of this foreign ship and put into this collier; I intimated this to Mr. Bremer, and told him I would bring him proof of it, but he passed the matter over.
57. Were you on board? Yes, after.
58. *By Mr. Donaldson*: Do you know this of your own knowledge? No.
59. I come back to my former question. You say you sleep on board these ships: now, I ask you, from the time you lie down to the time of your getting up, have you any knowledge—do you know anything of what goes on aboard these ships? I have never seen any.
60. No, but could you know anything, or do you know anything? No; I never detected it.
61. But I am asking you if you could detect it; you state that the hatches are battened down, but is it not constantly the case that communication exists by a door, or trap, or hatch—is there not generally a means of access from the deck without going through the hatches? In some ships there is, but not in many.
62. But in those where that means of access exists you know nothing about the moving of packages, such as single cases of gin, or cigars, or flour? No.
63. Was that the ship to which you alluded in your previous evidence when you said that there was no officer on board for two or three days, and that you had heard, upon good authority, that some casks were sent aboard the collier? Yes.
64. And you reported that circumstance? Yes.
65. And there was no notice taken of it? No.

ADDENDUM.

I beg to add in addition, that when I was put on board the "Clarence Packet," bound for New Caledonia, on the 10th instant, two days previous to my being placed on board dutiable goods were put on board the said brig, and such goods might and could have been made away with previous to my being sent on board the brig.

SEPARATE APPENDIX.

(A.)

A RETURN of the Extra Tide-waiters employed in the Customs Department, with the Date of Appointment and Rate per Day when employed.

NAME OF TIDE-WAITER.	DATE OF APPOINTMENT.	RATE PER DAY.
Robert Cragy	1st June, 1853	10s. 6d. per day.
Frederick Field	22nd August, 1853	
Peter Smithwick	4th January, 1854	
Charles Lockyer	5th March, 1854	
Christopher Clanchy	13th November, 1854	
Alcide Bernon	11th December, 1854	
Joseph King	5th February, 1854	
Loftus Dickinson	15th January, 1856	
Charles Kelly	18th January, 1856	
Henry Moore	2nd February, 1856	
Frederick Darling	5th October, 1856	
Robert Donelan	28th October, 1856	
George Lewis	2nd January, 1857	
Nehemiah Rundle	2nd January, 1857	
Charles Smith	2nd March, 1857	
Philip Henry	3rd March, 1857	
Richard Douglas	21st March, 1857

Legislative Assembly.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(MESSRS. CATTLEY AND CROUCH, ON BEHALF OF THE ALLIANCE FOR THE
SUPPRESSION OF INTEMPERANCE.)

Ordered by the Legislative Assembly to be Printed, 1 June, 1858.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned, on behalf of the Committee and Members of the New South Wales Alliance for the Suppression of Intemperance, and for the moral, social, and intellectual elevation of the people,—

HUMBLY SHEWETH :—

That we are deeply impressed by the conviction, that the opening of Public Houses on any part of the Lord's Day promotes the demoralization of the people, whilst it allures many persons from the public worship of Almighty God, and the discharge of important religious duties.

That the Lord's Day being with a majority of persons their only day of leisure, is that on which they are peculiarly exposed to temptations, and it is therefore highly inexpedient to increase the force of these temptations by any change in the law.

That the statistics of crime clearly prove that the sale of intoxicating drinks on the Lord's Day is a prolific source of immorality.

That the recent closing of Public Houses in Scotland on the Sabbath Day has been followed by a considerable diminution of the number of committals for offences of all kinds.

Your Petitioners, therefore, humbly pray your Honorable House not to assent to any measure which will give to publicans the privilege of opening their houses for the sale of intoxicating liquors on Sunday evenings.

And your Petitioners, as in duty bound, will ever pray.

J. G. CATTLEY,
G. J. CROUCH,
Secretaries.

Signed on behalf of the Committee and Members (in number seven hundred) of the Alliance for the Suppression of Intemperance.

Legislative Assembly.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(YOUNG MEN'S CHRISTIAN ASSOCIATION.)

Ordered by the Legislative Assembly to be Printed, 8 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Members and Subscribers of the Young Men's Christian Association of Sydney,—

HUMBLY SHEWETH:—

That having viewed with deep concern a clause in a Bill now before your Honorable House, intituled, "*A Bill to amend and consolidate the Laws relating to the licensing of Public Houses and the sale of fermented and spirituous Liquors*," we find that the forty-fifth clause of this Bill provides for the opening of Public Houses on the afternoon and evening of the Sabbath Day; we would, therefore, respectfully urge upon the attention of your Honorable House the injury that is likely to be done to the morality of this city if such provision be carried out.

We would further plead, that as we believe that Christianity exalteth a people, so we think that desecrating the day commemorative of a risen Saviour, by the sale of liquors, cannot but bring evil consequences upon us as a community; and we think that if Public Houses are opened on the Sabbath, many young men will be found in them instead of attending Places of Worship, and thus the Christianity that as a nation we love will be despised.

We would, therefore, pray your Honorable House, alike for the sake of decency, morality, and Christianity, to so alter or modify the forty-fifth clause of this Bill, that no spirituous liquors may be sold on the Sabbath Day, and especially between the hours of eight and ten on the evening of that day.

And your Petitioners will ever pray.

Legislative Assembly.
NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(SOCIETY FOR PROMOTING THE DUE OBSERVANCE OF THE LORD'S DAY.)

Ordered by the Legislative Assembly to be Printed, 9 June, 1858.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of the undersigned Members of Committee of the Society for promoting the observance of the Lord's Day,—

HUMBLY SHEWETH:—

(1.) That your Petitioners are the representatives of a Society consisting of a large number of persons in the Colony whose earnest desire it is to advance the religious and moral interests of the community, by promoting the observance of the Lord's Day.

(2.) That they have already been the means of forwarding to your Honorable House several Petitions with reference to this important subject, one of which was signed by upwards of 5,600 persons.

(3.) That they have learnt with the deepest alarm that a Bill has been brought before your Honorable House providing for the opening of Public Houses on the Lord's Day.

(4.) That they deeply regret to observe that not only is such provision therein made, but also permission is given to open the Public Houses on the Sunday evening, thereby affording additional facilities for the desecration of the Holy Sabbath beyond those hitherto possessed.

(5.) That the evils which will certainly result from such a permission being given, appear to your Petitioners to be of so grave and serious a nature as to justify their humbly approaching your Honorable House to implore protection from so grievous a calamity.

(6.) Your Petitioners therefore pray that your Honorable House will be pleased to withhold your sanction from any clause which will have so sad an effect upon the morals and religion of the community.

And your Petitioners will ever pray.

[Here follow 21 Signatures.]

1858.

Legislative Assembly.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(S. CALLAGHAN, AS CHAIRMAN OF THE CHRISTIAN TOTAL ABSTINENCE SOCIETY.)

Ordered by the Legislative Assembly to be Printed, 22 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Christian Total Abstinence Society,—

SHEWETH :—

(1.) That your Petitioners have learned that a Bill has been recently introduced into your Honorable House, intituled, "*A Bill to amend and consolidate the Laws relating to the licensing of Public Houses, and the sale of fermented and spirituous Liquors.*"

(2.) That your Petitioners find, that in addition to the hours already authorised for the opening of Public Houses on the Sunday, it is proposed to embody in the Bill a provision for opening those houses also from 8 o'clock to 10 o'clock on the Sunday evening, thereby materially interfering with attendance on Divine Worship, and the peace and good order of that day.

(3.) That your Petitioners further find, that it is proposed to open the Public Houses, on the week days from 4 o'clock a.m., till 12 o'clock p.m., instead of, as at present, from 6 o'clock a.m., to 10 o'clock p.m., thus affording increased inducements to intemperance.

(4.) That your Petitioners regard those provisions as fraught with incalculable mischief to the moral interests of the whole country.

(5.) That your Petitioners regard drunkenness as the bane of the Colony, and as the parent of almost every form of crime; and they consider that the Bill before your Honorable House will greatly increase an evil which is already alarmingly prevalent in the community.

(6.) That your Petitioners are strongly persuaded of the many important benefits, social, moral, and religious, which accrue to every community from the due observance of the Lord's Day, and of the numerous evils which would arise from its desecration; and that they earnestly deprecate the increased violation of that day, and the abounding licentiousness and evil which they cannot but fear will result from the passing of the Bill containing the provisions above referred to.

(7.) That your Petitioners are aware that in the Colonies of Victoria and Tasmania, and in two of the Provinces of New Zealand, the Public Houses are wholly closed upon the Sunday; and that this arrangement gives entire satisfaction to the respectable and orderly inhabitants of those Colonies.

(8.) That your Petitioners believe that the entire closing of all Public Houses on the Lord's Day would confer an inestimable boon to the community.

Your Petitioners therefore humbly pray your Honorable House to take the foregoing premises into your serious consideration. And, as in duty bound, will ever pray, &c.

Signed, on behalf of the Society,

SAML. CALLAGHAN,

Chairman.

Legislative Assembly.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(PETITION FROM COMMITTEE OF TEMPERANCE ALLIANCE.)

Ordered by the Legislative Assembly to be Printed, 23 July, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Committee of the New South Wales Alliance for the suppression of Intemperance, and for the social, moral, and intellectual elevation of the people,—

SHewETH:—

That your Petitioners are strongly persuaded of the many evils which arise to every community, and particularly to this Colony, from the sin of intemperance, and especially, from its prevalence on the Lord's Day.

That your Petitioners, convinced that the opening of the Public Houses for the sale of intoxicating drinks on any part of that day is at variance with its sacred character, unnecessary, and productive of much evil, are earnestly desirous of obtaining such alteration in the existing law regarding Public Houses as may effectually prohibit their sale on that day.

That your Petitioners are aware that in the Colonies of Victoria and Tasmania, and in two Provinces of New Zealand, the Public Houses are wholly closed upon the Sunday, and that this arrangement gives entire satisfaction to the respectable and orderly inhabitants of those Colonies.

That your Petitioners have observed that a Bill, intituled, "*A Bill to amend the Publicans' Licensing Act,*" is now before your Honorable House.

That they are of opinion that a clause might be introduced into the said Bill enacting that all Public Houses be closed during the whole of the Lord's Day.

Your Petitioners therefore pray that your Honorable House will introduce such a clause as shall entirely prohibit the sale of intoxicating drinks on the Sunday.

And your Petitioners, as in duty bound, will ever pray.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(WHOLESALE WINE AND SPIRIT MERCHANTS, SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 2 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, Wholesale Wine and Spirit Merchants, of Sydney.

We, the undersigned, humbly petition against the passing of the fifth clause, Schedule A in the Bill now before your Honorable House, entitled, "A Bill to amend and consolidate the laws relating to the Licensing of Public Houses, and the sale of fermented and spirituous Liquors."

The clause provides for the sale of liquors by Wholesale Wine and Spirit Dealers in quantities not less than five gallons, of any one and the same description of liquors, and that the rate of license is also to be increased to the sum of fifty pounds sterling.

Your Petitioners most humbly submit, that the clause is quite opposed to the existing laws of England; the law there provides for the sale of liquors in quantities of two gallons or more, as at present in force here. The effect of the passing of this clause would be, that no private family either in town or country could purchase from the wholesale dealer a case or cask of either wines, spirits, or fermented liquors, containing a less quantity than five gallons, equal to nearly three dozen—and thus force the private trade on to the publican, which your Petitioners submit would be highly objectionable to private parties, and at the same time would entail a serious injury and loss of trade to your Petitioners, who are now duly licensed and subject to the same amount of license as paid by the publican.

Your Petitioners, therefore, humbly pray that the law at present in force with respect to Wholesale Wine and Spirit Dealers may not be altered.

And your Petitioners, as in duty bound, will ever pray, &c., &c., &c.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(CERTAIN INHABITANTS OF SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 8 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, Ministers of Religion, Magistrates, and other Inhabitants of the City of Sydney, and its suburbs, in Public Meeting assembled,—

SHewETH :—

(1.) That your Petitioners have learned that a Bill has been recently introduced into your Honorable House, intituled, "*A Bill to amend and consolidate the Laws relating to the licensing of Public Houses, and the sale of fermented and spirituous Liquors.*"

(2.) That your Petitioners find that in addition to the hours already authorised for the opening of Public Houses on the Sunday, it is proposed to embody in the Bill a provision for opening those houses also from 8 to 10 o'clock on the Sunday evening, thereby materially interfering with Divine Worship, and the peace and good order of that day.

(3.) That your Petitioners further find that it is proposed to open the Public Houses on the week days from 4 o'clock a.m., till 12 o'clock p.m., instead of, as at present, from 6 o'clock a.m., to 10 o'clock p.m., thus affording increased inducements to intemperance.

(4.) That your Petitioners regard those provisions as fraught with incalculable mischief to the moral interests of the whole country.

(5.) That your Petitioners regard drunkenness as the bane of the Colony, and as the parent of almost every form of crime, and they consider that the Bill before the Honorable House will greatly increase an evil which is already prevalent alarmingly in the community.

(6.) That your Petitioners are strongly persuaded of the many important benefits, social, moral, and religious, which accrue to every community from the due observance of the Lord's Day, and of the numerous evils which arise from its desecration; and that they earnestly deprecate the increased violation of that day, and the abounding licentiousness and riot which they cannot but fear will result from the passing of the Bill containing the provisions above referred to.

(7.) That your Petitioners are aware that in the Colonies of Victoria and Tasmania, and in two of the Provinces of New Zealand, the Public Houses are wholly closed upon the Sunday, and that this arrangement gives entire satisfaction to the respectable and orderly inhabitants of those Colonies.

(8.) That with these views, and upon these grounds, your Petitioners pray that your Honorable House will so modify the 45th clause of the Bill as that Public Houses shall not be open more hours than at present, either during the week or on the Sunday.

And your Petitioners will ever pray.

Signed on behalf of the meeting,

THOMAS HOLT,

Chairman.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(CHAMBER OF COMMERCE, SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 8 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Members of the Sydney Chamber of Commerce,—

SHEWETH :—

That your Petitioners have taken into consideration a Bill which is now before your Honorable House, intituled, "*A Bill to amend and consolidate the Laws relating to the licensing of Public Houses, and the sale of fermented and spirituous Liquors.*"

That the said Bill, although purporting to be a Publicans' Licensing Bill, and providing only for the repeal of the Acts of Council 13 Vict., 29, and 17 Vict., 6, (which are specially applicable to that class of traders,) appears, in fact, to assume the entire control over the sale of any fermented or spirituous liquor, inasmuch as by clause 3 it is proposed to enact that "every person who shall sell in any house or place in the Colony any liquors "without a license granted under or in accordance with this Act," shall be liable to certain penalties :—the term "liquors," being previously interpreted as "any fermented or spirituous "liquor, or any mixed liquor partly fermented or partly spirituous."

Notwithstanding the comprehensive nature of the measure, as thus interpreted, the succeeding clause provides that only four descriptions of license, and no others, shall be granted, namely :—(1) The Wholesale Spirit ; (2) The Publican's ; (3) The Packet ; and (4) The Confectioner's Licenses.

According to clause 5, "every Wholesale Spirit License may be granted to any "merchant, storekeeper, or other wholesale vendor, who shall thereby be authorised to sell "all or any liquors provided that not less than five gallons be delivered at any one time, the "whole so delivered being of any one and the same description of liquors."

Clause 24 prescribes that the annual fee for such license shall be Fifty pounds, (that of the other licenses being respectively Thirty pounds, Five pounds, and Three pounds.)

Without pausing to inquire in how far Wholesale Spirit Dealers, registered under the provisions of the Act 13 Vict., 26, who are now liable to an annual registration fee of Thirty pounds, under the 20 Vict., 37, would be affected by the enactment of such a measure as that under review, your Petitioners are of opinion that the clauses to which they have adverted are in themselves highly objectionable, and would, if carried into effect, form an oppressive interference with the free course of trade.

Your Petitioners deem it unnecessary to enter into the merits or bearing of the other clauses, which relate more particularly to the ostensible character of the Bill, but cannot refrain from directing attention,—

- (1) To clause 10, which provides that no license shall be granted (amongst others) to any licensed Auctioneer,—on what grounds, or to what useful end, your Petitioners are at a loss to imagine.
- (2) To clauses 75, 76, and 77, which, viewing the general applicability of the Bill, appear to your Petitioners to contain many elements of annoyance and oppression.

Your Petitioners therefore humbly pray that the Bill now before your Honorable House may not be passed.

Signed, by order of a General Meeting, for and on behalf of
the Members of the Sydney Chamber of Commerce,

JOSEPH S. WILLIS, Chairman.

PUBLICANS' LICENSING BILL.

(MERCHANTS, &c, SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 8 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Merchants and Traders of the City of Sydney, and others,—

SHEWETH :—

That your Petitioners have taken into consideration a Bill which is now before your Honorable House, intituled, "*A Bill to amend and consolidate the Laws relating to the licensing of Public Houses, and the sale of fermented and spirituous Liquors.*"

That the said Bill, although purporting to be a Publicans' Licensing Bill, and providing only for the repeal of the Acts of Council 13 Vict., 29, and 17 Vict., 6, (which are specially applicable to that class of traders,) appears, in fact, to assume the entire control over the sale of any fermented or spirituous liquor, inasmuch as by clause 3 it is proposed to enact that "every person who shall sell in any house or place in the Colony any liquors without a license granted under or in accordance with this Act," shall be liable to certain penalties:—the term "liquors," being previously interpreted as "any fermented or spirituous liquor, or any mixed liquor partly fermented or partly spirituous."

Notwithstanding the comprehensive nature of the measure, as thus interpreted, the succeeding clause provides that only four descriptions of license, and no others, shall be granted, namely:—(1) The Wholesale Spirit; (2) The Publican's; (3) The Packet; and (4) The Confectioner's Licenses.

According to clause 5, "every Wholesale Spirit License may be granted to any merchant, storekeeper, or other wholesale vendor, who shall thereby be authorised to sell all or any liquors provided that not less than five gallons be delivered at any one time, the whole so delivered being of any one and the same description of liquors."

Clause 24 prescribes that the annual fee for such license shall be Fifty pounds, (that of the other licenses being respectively Thirty pounds, Five pounds, and Three pounds.)

Without pausing to inquire in how far Wholesale Spirit Dealers, registered under the provisions of the Act 13 Vict., 26, who are now liable to an annual registration fee of Thirty pounds, under the 20 Vict., 37, would be affected by the enactment of such a measure as that under review, your Petitioners are of opinion that the clauses to which they have adverted are in themselves highly objectionable, and would, if carried into effect, form an oppressive interference with the free course of trade.

Your Petitioners deem it unnecessary to enter into the merits or bearing of the other clauses, which relate more particularly to the ostensible character of the Bill, but cannot refrain from directing attention,—

- (1) To clause 10, which provides that no license shall be granted (amongst others) to any licensed Auctioneer,—on what grounds, or to what useful end, your Petitioners are at a loss to imagine.

PUBLICANS' LICENSING BILL.

(MINISTERS OF RELIGION AND OTHERS RESIDENT IN SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 20 July, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Ministers of Religion, Magistrates, and other Inhabitants of the City of Sydney and its Suburbs, in Public Meeting assembled, July 14th, 1858,—

SHEWETH :—

1. That your Petitioners have learned that a Bill has been recently introduced into your Honorable House intituled, "*A Bill to amend the Publicans' Licensing Act.*"

2. That, in the opinion of this Meeting, the closing of Public Houses entirely on the Sunday would tend greatly to promote the good order and peace of society on that day.

3. That your Petitioners regard drunkenness as the bane of the Colony, and as the parent of almost every form of crime ; and they consider that the Bill before your Honorable House would tend greatly to check the evil if it provided for such closing of the Public Houses on the Lord's Day.

4. That your Petitioners are desirous that this community should fully enjoy the many important benefits, social, moral, and religious, which accrue to every community from the due observance of the Lord's Day, but which benefits cannot be fully realized so long as the Public Houses are allowed to be opened on that day.

5. That your Petitioners are aware that in the Colonies of Victoria and Tasmania, and in two of the Provinces of New Zealand, the Public Houses are wholly closed upon the Sunday, and that this arrangement gives entire satisfaction to the respectable and orderly inhabitants of those Colonies.

6. That, with these views and upon these grounds, your Petitioners pray that your Honorable House will introduce a clause into the Bill disallowing altogether the opening of the Public Houses on the Lord's Day.

And your Petitioners will ever pray.

Signed, on behalf of the Meeting,

J. R. HOULDING,
Chairman.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(MINISTER AND OFFICERS OF PRESBYTERIAN CHURCH, PITT STREET, SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 11 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Minister, Elders, and Deacons of the Presbyterian Church,
Pitt-street South, Sydney,—

RESPECTFULLY SHEWETH:—

That your Petitioners have learnt that a Bill has been introduced in your Honorable House making legal provision for opening Public Houses on Sabbath Days from one till three o'clock in the afternoon, and from eight till ten o'clock in the evening, and on week days from four o'clock a.m. till twelve o'clock p.m.; and they regard such a provision as directly calculated to increase drunkenness, and to promote vice and immorality throughout the whole Colony.

Your Petitioners think that none but the intemperate and abandoned can desire to have Public Houses opened on the Sabbath Days, and before six o'clock in the morning and after ten at night on week days.

Your Petitioners submit, respectfully, that as God Almighty has commanded us "to remember the Sabbath Day to keep it holy," it is not competent for the Members of any Legislature to sanction, by a legal enactment, the desecration of the Sabbath.

That the history of the world shews that national sins are followed by national judgments, and that the desecration of the Sabbath has in every country been productive of licentiousness and crime.

Your Petitioners humbly pray, therefore, that your Honorable House will not sanction any measure in contravention of the known commands of Almighty God,—that you will protect the Publicans and the rest of the community in the enjoyment of the privileges of the Sabbath,—and discourage everything calculated to promote intemperance, vice, and immorality.

And your Petitioners will ever pray.

[Here follow 7 Signatures.]

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.
(MINISTERS AND OFFICERS OF THE SCOTS CHURCH, SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 11 June, 1858.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Ministers, Elders, and Members of the congregation of the Scots Church, Sydney,—

HUMBLY SHEWETH :—

That your Petitioners have learned with sincere regret that in a Bill now before your Honorable House, called the "Publicans' Licensing Bill," it is proposed to allow Public Houses to be kept open between the hours of eight and ten p.m. on the Christian Sabbath.

That, in the opinion of your Petitioners, there is no conceivable necessity, in so far as the wants of the well disposed portion of the community are concerned, for allowing Public Houses to be open on the Christian Sabbath at all; and that to allow them to be open between the hours of eight and ten of the evening of that day would only be multiplying the temptations to intemperance, with all its accompanying vices, for the worst part of the city population, besides creating in every neighbourhood a serious nuisance and annoyance to the peaceful and orderly inhabitants of the city.

Your Petitioners, therefore, humbly pray that your Honorable House will, if possible, prevent the opening of Public Houses on the Christian Sabbath altogether; but if this cannot be done, that you will not allow them to be opened between the hours of eight and ten in the evening of that day.

And your Petitioners, as in duty bound, will ever pray, &c., &c., &c.

Ordered by the Legislative Assembly to be Printed, 15 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Humble Petition of the undersigned Ministers, Leaders, Stewards, and Congregation of the Prince-street Wesleyan Methodist Chapel,—

SHewETH :—

That your Petitioners are strongly persuaded of the many important benefits, social, moral, and religious, which accrue to every community from the due observance of the Lord's Day, and of the numerous evils which arise from its desecration.

That Your Petitioners, influenced by these considerations, as well as by the Divine Command to "Remember the Sabbath Day to keep it holy," are desirous for the adoption of such measures as may tend to the better observance of the Lord's Day.

That your Petitioners, convinced that the opening of the Public Houses for the sale of liquors on any part of that holy day is at variance with its sacred character, and productive of much evil, are earnestly desirous of obtaining such alterations in existing laws regarding Public Houses as may effectually prohibit all Sunday trading.

That your Petitioners learn, with feelings of deep regret, that a Bill is now before your Honorable House, one clause of which will empower publicans to open their houses for the sale of liquors from the hour of eight till ten o'clock on the Lord's Day evenings, and your Petitioners believe that such an act will be a fruitful source of increased evil, and desecration of that Holy Day.

Your Petitioners therefore pray that your Honorable House will reject this clause from the Bill, and also make such alterations in existing laws relating to this subject as may effectually prohibit Public Houses from being opened for the sale of liquors on any hour of the Sabbath.

And your Petitioners, as in duty bound, will ever pray.

Legislative Assembly.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(WESLEYAN METHODIST CHURCH, NEWTOWN.)

Ordered by the Legislative Assembly to be Printed, 18 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Minister, Members, and Congregation of the Wesleyan Methodist Church at Newtown,—

SHWETH :—

That your Petitioners have learned that a Bill has been recently introduced into your Honorable House, intituled, "*A Bill to amend and consolidate the Laws relating to the Licensing of Public Houses, and the sale of fermented and spirituous Liquors.*"

That your Petitioners find, that in addition to the hours already authorised for the opening of Public Houses on the Sunday, it is proposed to embody in the Bill a provision for opening those houses also from 8 to 10 o'clock on the Sunday evening, thereby materially interfering with attendance on Divine Worship, and the peace and good order of that day.

That your Petitioners further find, that it is proposed to open the Public Houses on the week days from 4 o'clock a.m. till 12 o'clock p.m., instead of, as at present, from 6 o'clock a.m. till 10 o'clock p.m., thus affording increased inducements to intemperance.

That your Petitioners regard these provisions as fraught with incalculable mischiefs to the moral interests of the whole country.

That your Petitioners are strongly persuaded of the many important benefits, social, moral, and religious, which accrue to every community from the due observance of the Lord's Day, and of the numerous evils which arise from its desecration; and that they earnestly deprecate the increased violation of that day, and the abounding licentiousness and riot which they cannot but fear will result from the passing of the Bill containing the provisions above referred to.

That with these views, and upon these grounds, your Petitioners pray that your Honorable House will so modify the 45th clause of the Bill as that Public Houses shall not be open more hours than at present, either during the week or on the Sunday.

And your Petitioners will ever pray.

Legislative Assembly.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(WESLEYAN METHODISTS OF EAST MAITLAND.)

Ordered by the Legislative Assembly to be Printed, 22 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Members of the Congregation of the Wesleyan Methodist Chapel, and others at East Maitland,—

HUMBLY SHEWETH:—

That your Petitioners are fully persuaded that the Lord's Day is commanded in the Sacred Scriptures to be kept holy, and that the observance of this Sacred Day, as thus commanded, is conducive to the temporal as well as to the spiritual welfare of man.

Your Petitioners, entertaining these views, are grieved to find that in a Bill now before your Honorable House, intituled "*A Bill to amend and consolidate the Laws relating to the Licensing of Public Houses, and the sale of fermented and spirituous Liquors*," a paragraph is inserted in the 45th clause which will permit Public Houses to be opened, and liquors to be sold, on the Sabbath Day between one and three o'clock in the afternoon, and between eight and ten o'clock in the evening.

Of the liberty to open Public Houses on the Lord's Day, except to travellers, granted by the law as it now stands, your Petitioners strongly disapprove; but they view with especial alarm the extension of that liberty as contemplated in the paragraph above quoted, for they are assured that whilst the existing arrangement leads to the desecration of the Lord's Day, and to produce demoralization, the extended liberty would greatly increase these evils.

Your Petitioners therefore pray your Honorable House that the words "and between eight and ten o'clock in the evening," which are inserted in the 45th clause, may not obtain the consent of your Honorable House.

And your Petitioners will ever pray.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(WAVERLEY METHODIST CONGREGATION.)

Ordered by the Legislative Assembly to be Printed, 8 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Ministers, Stewards, Leaders, and
Congregation of the Waverley Methodist Chapel,—

SHEWETH:—

That your Petitioners are strongly persuaded of the many important benefits, social, moral, and religious, which accrue to every community from the due observance of the Lord's Day, and of the numerous evils which arise from its desecration.

That your Petitioners, influenced by these considerations, as well as by the Divine Command to "Remember the Sabbath Day to keep it holy," are anxious for the adoption of such measures as may tend to the better observance of the Lord's Day.

That your Petitioners, convinced that the opening of the Public Houses for the sale of liquors on any part of that holy day is at variance with its sacred character, unnecessary, and productive of much evil, are earnestly desirous of obtaining such alterations in existing laws regarding Public Houses as may effectually prohibit all Sunday trading.

That your Petitioners have heard with feelings of unmitigated regret that a Bill is now before your Honorable House, one clause of which will empower publicans to open their houses for the sale of liquors from the hours of eight till ten o'clock on the Lord's Day evenings,—and your Petitioners believe that such an Act will be a fruitful source of much evil, and increased desecration of that holy day.

Your Petitioners therefore pray that your Honorable House will be pleased to make such alterations in the law relating to this subject as in your wisdom may be deemed fit.

And your Petitioners, as in duty bound, will every pray.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.
(SABBATH SCHOOL TEACHERS, YORK-STREET CHAPEL.)

Ordered by the Legislative Assembly, to be Printed, 15 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Sabbath School Teachers, in connexion with the Wesleyan Church, York-street, in the City of Sydney,—

SHEWETH:—

That your Petitioners have learned that a Bill has been recently introduced into your Honorable House, intituled, "*A Bill to amend and consolidate the Laws relating to the Licensing of Public Houses, and the Sale of Fermented and Spirituous Liquors.*"

That your Petitioners find, that in addition to the hours already authorised for the opening of Public Houses on the Sunday, it is proposed to embody in the Bill a provision for opening those houses also from eight till ten o'clock on the Sunday evening, thereby materially interfering with attendance on Divine Worship, and the peace and good order of that day.

That your Petitioners further find, that it is proposed to open the Public Houses on the week days from four o'clock, a. m., till twelve o'clock, p. m., instead of, as at present, from six o'clock, a. m., to ten o'clock, p. m., thus affording increased inducements to intemperance.

That your Petitioners regard these provisions as fraught with incalculable mischiefs to the moral interests of the whole Country, and especially to the youth of this Colony.

That your Petitioners regard drunkenness as the bane of the Colony, and as the parent of almost every form of crime; and they consider that the Bill before your Honorable House will greatly increase an evil which is already alarmingly prevalent in the community.

That your Petitioners are strongly persuaded of the many important benefits, social, moral, and religious, which accrue to every community from the due observance of the Lord's Day, and of the numerous evils which arise from its desecration; and that they earnestly deprecate the violation of that day, and the abounding licentiousness and riot which they cannot but fear will result from the passing of the Bill containing the provisions above referred to.

That your Petitioners are aware that in the Colonies of Victoria and Tasmania, and in two of the provinces of New Zealand, the Public Houses are wholly closed upon the Sunday, and that this arrangement gives entire satisfaction to the respectable and orderly inhabitants of those Colonies.

That, with these views, and upon these grounds, your Petitioners pray that your Honorable House will so modify the forty-fifth clause of the Bill, as that Public Houses shall not be open more hours than at present during the week, and wholly closed upon the Sunday.

And your Petitioners, as in duty bound, will ever pray.

PUBLICANS' LICENSING BILL.

(RICHMOND AND ITS VICINITY.)

Ordered by the Legislative Assembly to be Printed, 15 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of Richmond
and its vicinity,—

HUMBLY SHEWETH:—

1. That your Petitioners have learned that a Bill has been recently introduced into your Honorable House, entitled, "*A Bill to amend and consolidate the Laws relating to the licensing of Public Houses and the sale of fermented and spirituous Liquors.*"

2. That your Petitioners find, that in addition to the hours already authorized for the opening of Public Houses on the Sunday, it is proposed to embody in the Bill a provision for opening those houses also from eight to ten o'clock on the Sunday evening, thereby materially interfering with attendance on Divine Worship, and the peace and good order of that day.

3. That your Petitioners further find, that it is proposed to open the Public Houses on the week-days from four o'clock a.m., till twelve o'clock p.m., instead of, as at present, from six o'clock a.m., to ten p.m., thus affording increased inducements to intemperance.

4. That your Petitioners regard those provisions as fraught with incalculable mischiefs to the moral interests of the whole country.

5. That your Petitioners regard drunkenness as the bane of the Colony, and as the parent of almost every form of crime; and they consider that the Bill before your Honorable House will greatly increase an evil which is already alarmingly prevalent in the community.

6. That your Petitioners are strongly persuaded of the many important benefits, social, moral, and religious, which accrue to every community from the due observance of the Lord's Day, and of the numerous evils which arise from its desecration; and that they earnestly deprecate the increased violation of that day, and the abounding licentiousness and riot which they cannot but fear will result from the passing of the Bill containing the provisions above referred to.

7. That your Petitioners are aware that in the Colonies of Victoria and Tasmania, and in two of the Provinces of New Zealand, the Public Houses are wholly closed upon the Sunday, and that this arrangement gives entire satisfaction to the respectable and orderly inhabitants of those Colonies.

8. That, with these views, and upon these grounds, your Petitioners pray that your Honorable House will so modify the 45th clause of the Bill, as that Public Houses shall not be open more hours than at present, either during the week or on the Sunday.

And your Petitioners will ever pray.

(PETITION FROM HUNTER RIVER VINEYARD ASSOCIATION.)

Ordered by the Legislative Assembly to be Printed, 28 May, 1858.

To the Legislative Assembly of the Colony of New South Wales.

The Petition of the Hunter River Vineyard Association,—

HUMBLY SHEWETH :—

That in the Bill now before your Honorable House, entitled "*A Bill to amend and consolidate the Laws relating to the licensing of Public Houses and the sale of fermented and spirituous Liquors*," it is proposed by clause the third "that this enactment shall not apply to any grower or maker of wine from grapes the produce of the Colony selling the same in any quantity not less than five gallons of one and the same sort of wine at one time." Your Petitioners respectfully submit,—

That this clause, proposing as it does to prevent the sale of Colonial wines in quantities not less than five gallons (instead of two gallons, as heretofore), is an alteration of the existing law which is not called for by expediency, nor justified by necessity; and your Petitioners beg to urge their respectful but earnest remonstrance against its enactment, for the following reasons :—

That it has been admitted by all statesmen in this and the Continental States of Europe, that the consumption of wine, particularly wine produced in the country in which it is consumed, is conducive to sober habits in the mass of the people.

That it will entail a grievance on the consumers of wine, by preventing the purchase of small quantities.

That the quantity proposed being larger, it will not be so portable, nor within the compass of the poor man's means.

That the larger quantity will afford inducement and facility to consume a greater portion at one time.

That the successful cultivation of the vine on poor soils, unfit for the profitable growth of cereals, by the wine-growers of the Hunter River and of the Colony generally, has given a value to lands which otherwise they would not have possessed; so that, if wine culture be not discouraged and fettered by arbitrary and repressive enactments, persons will be induced to buy such lands at the Government sales for the culture of the vine only.

That the alteration of quantity will be highly injurious to wine-growers, because it will deprive them of the opportunity of a free disposal of an article of daily increasing consumption, in the perfecting of which many thousands of pounds have been expended, after a long period of toil, expectation, and years of inadequate return to their expenditure.

That now that a prospect of success is in the distance, this disheartening prohibition would mar a legitimate branch of agriculture, prevent the cultivation of land of otherwise useless quality, the introduction of an orderly class of persons from the European wine countries,

countries, and the employment of the labor of the vignerons now in the Colony in that description of work with which they are most conversant, and in which their skill is most valuable to the Colony.

That the change, it is submitted with all deference, would be an invasion of the rights, and hurtful to the interests, of those who have purchased land with a view to the cultivation of the grape.

That your Petitioners have with patience toiled many years, under great discouragements, without asking for protective measures, and have (with others) succeeded in making Colonial wine in such perfection that it has become one of the staple products of the Colony, and thereby drawn the attention of distant countries to the capabilities of the soil for producing superior wines; so that, if any exodus from the German, Spanish, Portuguese, or French wine districts should at any time take place, we may reasonably expect that New South Wales would be their chosen home, because offering the best field for their labor and skill;—the effect of which would be to make this Colony a large wine-producing and wine-exporting country. And that the wine-growing interests deserve the careful legislation of Parliament.

That it being universally admitted that increasing the facilities for the disposal of wine in small quantities will be conducive to the cause of temperance and morality.

Your Petitioners respectfully pray that you will favorably consider the premises, and enact that the sale of wines by the makers be permitted in quantities as small as heretofore, of one and the same sort of wine at one time.

And your Petitioners, as in duty bound, will ever pray.

Legislative Assembly.
NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(MAITLAND BRANCH OF THE LORD'S DAY OBSERVANCE SOCIETY.)

Ordered by the Legislative Assembly to be Printed, 28 May, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned, Members of the Committee of the Maitland Branch
of the Society for promoting the due Observance of the Lord's Day,—

RESPECTFULLY SHEWETH:—

That your Petitioners are fully persuaded that the Lord's Day is commanded in the Sacred Scriptures to be observed and kept holy, and that the observance of this sacred day, as thus commanded, is conducive to the temporal as well as the spiritual welfare of man.

Your Petitioners, entertaining these views, are grieved to find that in a Bill now before your Honorable House, entitled, "*A Bill to amend and consolidate the Laws relating to the licensing of Public Houses, and the sale of fermented and spirituous liquors,*" a paragraph is inserted in the 45th clause which will permit public houses to be opened, and liquor to be sold, on the Sabbath Day, "between one and three o'clock in the afternoon, and *between eight and ten o'clock in the evening.*"

Of the liberty to open public houses on the Lord's Day, except to travellers, granted by the law, as it now stands, your Petitioners strongly disapprove, but they regard with special alarm the extension of that liberty, as contemplated in the paragraph above quoted, and expressed by the words "*between eight and ten o'clock in the evening,*" feeling assured that whilst the existing arrangement tends to promote the desecration of the Lord's Day, and to produce demoralization, the extended liberty will greatly increase these evils.

Your Petitioners, therefore, pray your Honorable House that the words objected to may not obtain the consent of your Honorable House.

And your Petitioners will ever pray.

1858.

Legislative Assembly.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(J. BINGLE, AS CHAIRMAN OF NEWCASTLE CHAMBER OF COMMERCE.)

Ordered by the Legislative Assembly to be Printed, 9 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Newcastle Chamber of Commerce,—

HUMBLY SHEWETH:—

That a Bill has been introduced into your Honorable House, intituled, "*A Bill to amend and consolidate the laws relating to the licensing of Public Houses, and the sale of fermented and spirituous Liquors.*"

That the necessity for the leading provisions of such Bill, which as a legislative measure has originated in no responsible or official source, has not been ascertained by any previous inquiry, nor is it justified by any well grounded complaints of the existing law, or by any public requirement.

That the principle of the Bill in question, where it would interfere with the existing regulations applying to wholesale spirit licenses, is a restriction on the free course of trade, for, as it seems to your Petitioners, the benefit of a class without conferring any real or assumed advantage on the consumer or on the public.

That your Petitioners, therefore, pray your Honorable House against the said Bill, and that the same may not pass into law.

And your Petitioners will ever pray.

For the Chamber,

JOHN BINGLE,

Chairman.

1858.

Legislative Assembly.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(PETITION FROM R. MASON, DUNGOG.)

Ordered by the Legislative Assembly to be Printed, 20 July, 1858.

To the Honorable the Representatives of the Colony of New South Wales, in
Parliament assembled.

The Petition of Robert Mason, of Dungog,—

HUMBLY SHEWETH:—

That your Petitioner having observed that a Bill is now before your Honorable House for the purpose of amending the Publicans' General Licensing Act, and as the first clause of the said Bill is rather ambiguous, your Petitioner prays that some way may be pointed out to applicants how to proceed to obtain the necessary certificate.

That your Petitioner having sustained much loss from animosity, having thereby been almost ruined by the regulations of the existing Act, your Petitioner prays that in case of refusal by a majority of Magistrates, an application signed by at least twenty respectable householders, and delivered to the Clerk of Petty Sessions, shall be deemed a sufficient warrant and guarantee for the party applying, and that the said Clerk of Petty Sessions shall forward the said application to the authority to receive the same, and if approved of, a certificate be returned to the Clerk of Petty Sessions, who shall furnish the applicant with the certificate, and on presentation of the certificate to the Colonial Secretary, or his deputy, by the applicant or his agent, and by paying the fee thereon, a license be issued.

That your Petitioner feels dissatisfied with the section of the existing Act whereby a publican is not allowed to sell liquors to the aborigines, who are native born subjects of the Crown, and acknowledged so by Vice-Regal authority, by Order in Council, issued in March, 1840 or 41, and often since that time aborigines have been convicted and suffered under the administration of British Law, thereby confirming the said Order in Council,—the aborigines thus being refused a privilege enjoyed by aliens, against whom, recently, a stringent Act has been passed by your Honorable House.

Your Petitioner therefore prays that the 4th section of the existing Publicans' Licensing Act may be absolutely repealed.

And your Petitioner, as in duty bound, will ever pray.

ROBT. MASON.

Dungog, July, 1858.

1858.

Legislative Assembly.
NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(WHOLESALE SPIRIT DEALERS, GOULBURN.)

Ordered by the Legislative Assembly to be Printed, 9 June, 1858.

To the Honorable the Legislative Assembly, in Parliament assembled.

The humble Petition of the Licensed Wholesale Wine and Spirit Dealers of the
 Town of Goulburn,—

HUMBLY SHEWETH:—

That your Petitioners view with alarm the Bill now before your Honorable House
 entitled "The Publicans' Licensing Bill, 1858."

That the clauses contained therein, whereby the Registry Fee for Wholesale Wine
 and Spirit Dealers is made £50, and quantity to be sold not less than five gallons, while the
 Publicans' License Fee is only £30, with liberty to sell in any quantity, appear to your
 Petitioners unequal and unjust.

That the increased fee of £30, with the proposed enactment disallowing the sale in
 quantities of less than five gallons of any one kind of wine or spirits, amount, in the minds
 of your Petitioners, to a prohibition of selling wines and spirits altogether.

That your Petitioners believe that the obnoxious clauses would tend to increase sly
 grog selling and intemperance, rather than diminish these evils, the over-stringency of laws
 invariably engendering evasion.

Your Petitioners, therefore, humbly pray that your Honorable House will take the
 premises into consideration, and that you will not sanction the foregoing clause or clauses to
 stand part of the aforesaid Bill.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

[Here follow 10 Signatures.]

1858.

Legislative Assembly.

NEW SOUTH WALES.

PUBLICANS' LICENSING BILL.

(MEMBERS OF PRESBYTERIAN CHURCH, SHOALHAVEN.)

Ordered by the Legislative Assembly to be Printed, 23 June, 1858.

Unto the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned, Members and adherents of the Free Presbyterian Church of Shoalhaven, and others,—

HUMBLY SHEWETH:—

That your Petitioners regard the Christian Sabbath as an institution of Divine appointment, and of perpetual obligation, and that they consider all unnecessary work performed on that day as a breach of the Divine Command.

That your Petitioners have seen with regret that an attempt is being made to give Legislative sanction to the desecration of the Sabbath, by the introduction into your Honorable House of a Bill to regulate the Licensing of Publicans; in which Bill there is a clause giving permission to Licensed Publicans to sell spirituous liquors at certain hours on Sabbath.

That your Petitioners would deprecate the passing of the Publicans' Licensing Bill without the omission of this objectionable clause, as in itself a very great evil, and fraught with incalculable mischief to the best interests of multitudes of our population.

That your Petitioners would therefore earnestly, but respectfully, pray your Honorable House to refuse your sanction to any proposal for opening the Public Houses on Sabbath,—especially that you will be pleased to expunge any such provision from the Publicans' Licensing Bill now before your Honorable House.

And your Petitioners will ever pray.

[Here follow 122 Signatures.]

REMOVAL OF CAPTAIN POCKLEY AND MR. DREW.

No. 1.

TREASURY MINUTE.

As provision is not made beyond the 31st March instant for the Light, Pilot, and Navigation Board, I beg to submit, for the consideration of my colleagues, what, after much consideration, appears to me the proper mode of dealing with this subject under existing circumstances.

The Assembly having rejected the Bill for incorporating a Board with extended powers, I cannot recommend that in the ensuing short Session any attempt be made to legislate upon this matter, nor can I advise a continuance, beyond the 31st instant, of the present complicated and expensive machinery.

My predecessor intended, I believe, to dispense with the services of the Warden and his colleagues on the 31st December last, and only continued them in consequence of the resolution providing for the same expenditure for three months longer; but from all the information which I can glean, one Board is not only quite sufficient for all the requirements of the service, but that the existence of two is injurious rather than beneficial.

I propose, therefore, that the Warden and his colleagues be informed, in a complimentary letter having reference to their past services, that their functions will cease on the 31st instant.

That, the Steam Navigation Board be requested to perform the duties of the late Pilot Board.

That as the Assembly have not made any provision for the office of Superintendent of Lights, Pilots, and Navigation, and as the notification of that appointment was not favorably received, that no proposal be made for the salary of that office, which, in my opinion, is not necessary.

I would also recommend that all the Pilot and other Fees or Dues be in future collected at the Custom House.

The clerical duties of the Board generally are, in my opinion, not such as to justify the maintenance of the Office Department upon the scale now authorized.

I propose, therefore, that Messrs. Pockley and Drew be informed that their services will not be required beyond the 31st instant.

That Mr. Wilshire, the present Clerk to the Establishment, be retained as the Clerk to the Board, who, with Mr. Hinton, the present second Clerk, will be found fully competent to perform all the clerical duties of the Board and the Department.

Mr. Wilshire should, in consideration of his increased duties, receive an additional £100 per annum to his stipend.

The state of the Board and its officers will be as enumerated in the accompanying Schedule.

R. C.

*The Treasury, New South Wales,
12 March, 1858.*

STATE

STATE of the Steam Navigation and Pilot Board.

SITUATION.	NAME.	SALARY OR ALLOWANCE.	REMARKS.
Chairman	H. H. Browne		
Members	G. K. Mann	300 0 0	
	W. S. Deloitte		
	B. Darley		
	S. North		
Clerk to Board	W. J. Wilshire	350 0 0	
Engineer Surveyor	E. O. Moriarty	375 0 0	
Shipwright do.	John Cuthbert	175 0 0	
Harbour Master	John Crook	400 0 0	
Assistant do.	B. Shaw	300 0 0	
	J. R. Myhill	300 0 0	
	T. McVeigh	300 0 0	
Clerk	Alfred Hinton	200 0 0	
Messenger (Boy)	52 0 0	
		£2,752 0 0	

R. C.

The Assistant Harbour Masters' situations will be abolished when the Bill for increased Pilotage is passed.

This Bill substitutes for them Mud Pilots, under certain fees to be received by themselves without any fixed salary, as the Government may direct.

These officers will perform precisely the same duties as the Assistant Harbour Masters.

Present Estimate of Salaries for 1858 £3,720

Proposed do. 2,752

Saving under proposed Estimate, in consequence of increased taxation £968

The Treasury, New South Wales,
12 March, 1858.

R. C.

Having carefully considered this Minute and the proposals therein contained, the Executive Council, concurring in the views expressed by the Honorable the Treasurer on the subject, advise the adoption of the several measures recommended by him.

EDWD. C. MEREWETHER,
Clerk of the Council.

Confirmed 22 March, 1858.—No. 58-169.

No. 2.

THE HONORABLE THE TREASURER to THE HONORABLE JOHN LAMB, M.L.C., R.N.

The Treasury, New South Wales,
17 March, 1858.

SIR,

With reference to the personal conference which I had with you recently, in company with the Chief Secretary, and to your subsequent communication to him, I now do myself the honor to acquaint you, that the Government has determined that the functions of the Light, Pilot, and Navigation Board shall cease on the 31st instant, no provision having been made by Parliament for its continuance beyond that date.

The functions of the Pilot Board will be resumed by the Steam Navigation Board, of which, with the exception of yourself, all your present colleagues are members.

I take this opportunity of conveying to you the thanks of the Government for the readiness with which you have at all times given your attention to such questions as were submitted for your consideration.

I beg to request that you will also communicate the same to your colleagues.

I have, &c.,

THE HON. JOHN LAMB, M.L.C.,
Commander, R. N.,
Senior Warden,

R. CAMPBELL.

Light, Pilot, and Navigation Board.

No. 3.

No. 3.

THE HONORABLE THE TREASURER to THE STEAM NAVIGATION BOARD.

The Treasury, New South Wales,

18 March, 1858.

GENTLEMEN,

The Assembly not having entertained the Bill for incorporating the Light, Pilot, and Navigation Board, I have the honor to acquaint you that after the 31st instant the members of that Board will be released from office.

The Warden and his colleagues have, accordingly, been informed by me that their functions will cease on that date; and I have now the honor, under the authority of a Minute of the Governor General and Executive Council, to request that you will resume the duties of the Pilot Board, from which you were relieved by Mr. Donaldson's letter of 21 July last.

No salary for the office of Superintendent of Lights, Pilots, and Navigation has been provided by the Legislature, and Mr. Pockley has been apprised accordingly.

As the Board has been dissolved, the services of Mr. Drew, the Secretary to that Board, will not be required; and I have intimated to him that his engagement with the Government will also cease from the 31st instant.

Mr. Wilshire, the second clerk in the establishment, will perform the clerical duties required by the Steam Navigation Board.

I have, &c.,

THE CHAIRMAN AND MEMBERS OF
THE STEAM NAVIGATION BOARD.

R. CAMPBELL.

No. 4.

THE CHAIRMAN OF THE STEAM NAVIGATION BOARD to THE HONORABLE THE TREASURER.

Steam Navigation Office, Sydney,

25 March, 1858.

SIR,

I have the honor to acknowledge the receipt of your communication, informing me that the functions of the Light, Pilot, and Navigation Board will cease on the 31st instant, and requesting the Steam Navigation Board to perform the duties of the late Pilot Board.

Having laid your letter before the Steam Navigation Board, I am requested to inform you that they are willing to perform the duties of a Pilot Board, agreeably with the wishes of the Government.

They also wish me to explain their regret that it has become necessary to supersede Mr. Drew in the office of Secretary of the Steam Navigation Board, that gentleman having for the last eight months performed the duties which devolved on him with considerable ability and assiduity.

I have, &c.,

H. H. BROWNE.

THE HONORABLE THE TREASURER.

The Executive Council express their opinion that the Superannuation Regulations for service under 10 years should be applied in such cases—that is, one month's salary for each year of service; and advise that Mr. Drew and Captain Pockley should receive compensation in accordance with that rule.

EDWD. C. MEREWETHER,

Clerk of the Council.

Confirmed 10 May, 1858.—No. 58-271.

Approved,

W. D.,
18 May, 1858.

No. 5.

THE HONORABLE THE TREASURER to ROBERT F. POCKLEY, ESQ.

*The Treasury, New South Wales,
18 March, 1858.*

SIR,

I beg to inform you that, as no provision has been made by Parliament beyond the 31st instant for the payment of a salary for a Superintendent of Lights, Pilots, and Navigation, and His Excellency the Governor General and the Executive Council not having considered it desirable to make any proposal to the Assembly for such stipend, your engagement under the Government will be considered at an end from the date above-mentioned.

At the close of the month, therefore, you will please transfer over all books, papers, &c., confided to your charge, to Mr. John Crook, Assistant Harbour Master.

I have, &c.,

ROBERT F. POCKLEY, ESQ.,
Superintendent of
Lights, Pilots, and Navigation.

R. CAMPBELL.

No. 6.

ROBERT F. POCKLEY, ESQ., to THE HONORABLE THE TREASURER.

*The Port Office, Sydney,
20 March, 1858.*

SIR,

I do myself the honor to acknowledge the receipt of your letter of the 18th instant, No. 58-48, informing me that, as no provision has been made by Parliament beyond the 31st instant for the payment of a salary for a Superintendent of Lights, Pilots, and Navigation, and that His Excellency the Governor General and the Executive Council not having considered it desirable to make any proposal to the Assembly for such stipend, my engagement under the Government will be considered at an end from the date above-mentioned.

In reply, I respectfully beg to express my regret that the Government finds itself under the necessity of dispensing with the office of Superintendent of Lights, Pilots, and Navigation, and at the same time to state my willingness to continue to perform the duties of Harbour Master, to which station I was appointed by the Government on the 22nd July, 1857; and I trust that my endeavors to efficiently perform the duties of that office have merited the approval of the Government, and will entitle me to be continued in the appointment.

I have, &c.,

ROBT. F. POCKLEY,
Superintendent of Lights, Pilots, &c., and
Port and Harbour Master, N. S. W.

THE HONORABLE THE MINISTER
FOR FINANCE AND TRADE.

No. 7.

ROBERT F. POCKLEY, ESQ., to THE SECRETARY TO THE TREASURY.

*The Port Office, Sydney,
29 March, 1858.*

SIR,

I have the honor to request that you will bring under the consideration of the Honorable the Minister for Finance and Trade, that in consequence of receiving no reply to my letter to that Minister of 20 March instant, I am left ignorant of the intentions of the Government respecting my continuance in office. I have, therefore, most respectfully to request to be informed whether I am to consider myself dismissed from the service of the Government after the 31st instant; and whether I am, in obedience to the instructions contained in the letter of the Honorable the Treasurer, dated 18th March, to hand over the charge of my Department to the Deputy Harbour Master, Mr. John Crook.

I have, &c.,

ROBT. F. POCKLEY,
Superintendent of Lights, Pilots, &c.

THE SECRETARY TO THE TREASURY.

No. 8.

No. 8.

THE SECRETARY TO THE TREASURY to ROBERT F. POCKLEY, Esq.

*The Treasury, New South Wales,
29 March, 1858.*

SIR,

I am directed to acknowledge the receipt of your letter of the 20th instant, and in reply to inform you that, no provision having been made for the continuance of the office now held by you after the 31st instant, The Honorable the Treasurer regrets that he cannot sanction the retention of your services beyond that date.

I have, &c.,

HENRY LANE.

R. F. POCKLEY, Esq.,

Superintendent of Lights,

Pilots and Navigation.

No. 9.

ROBERT F. POCKLEY, Esq., to THE SECRETARY TO THE TREASURY.

*The Port Office,
Sydney, 31 March, 1858.*

SIR,

I have the honor to acknowledge the receipt of your letter of the 29th instant, conveying the regret of the Honorable the Treasurer that he cannot sanction the retention of my services after this date.

I shall, therefore, in obedience to the instructions communicated to me in a letter from that Minister, dated 18 March, 1858, hand over the charge of the Department to Mr. John Crook accordingly.

I would now beg most respectfully to be informed whether I am, in thus being discharged from the service of the Government, chargeable with any misconduct or dereliction of duty, which will preclude me from seeking re-employment from them, or compensation for loss of my appointment.

I have, &c.,

ROBT. F. POCKLEY,

THE SECRETARY TO THE TREASURY.

Superintendent of Lights, &c.

No. 10.

THE SECRETARY TO THE TREASURY to ROBERT F. POCKLEY, Esq.

*The Treasury, New South Wales,
1 April, 1858.*

SIR,

In reply to your letter of yesterday's date, I am directed by the Honorable the Treasurer to state, that the short time he has been in office will only permit him to say, that he has not been informed of any misconduct, and that he has not observed any dereliction of duty on your part.

I am to add, that your removal arose from the vote of the Legislature, and will not prevent your seeking re-employment under the Government.

I have, &c.,

HENRY LANE.

19 May, 1858.

SIR,

In reply to your letter of the 21st ultimo, I am directed by the Honorable the Treasurer to acquaint you, that His Excellency the Governor General and Executive Council approve of your receiving compensation on the abolition of your office, at the rate authorised by the Superannuation Regulations for service under 10 years, viz.:—One month's salary for each year of service.

I have, &c.,

ROBERT POCKLEY, ESQ.,
Late Superintendent of Lights,
Pilots, and Navigation.

HENRY LANE.

No. 15.

ROBERT F. POCKLEY, ESQ., to THE SECRETARY TO THE TREASURY.

Pictonville, North Shore,

25 May, 1858.

SIR,

I have the honor to acknowledge the receipt of your letter of the 19th instant, informing me that His Excellency the Governor General and Executive Council approve of my receiving compensation for the loss of my appointment according to the rate authorised by the Superannuation Regulations, viz., one month's pay for each year's service. I have therefore the honor to request, that you will cause the Honorable the Minister for Finance and Trade to be informed that, with all respect to that Honorable Minister, I beg leave to doubt that the Superannuation Regulations will be found to apply to my extraordinary case, viz.: that of being summarily dismissed without cause. The award, therefore, of so paltry a sum as that proposed, I can only consider as an insult added to the monstrous injustice I have sustained

sustained at the hands of the present Government, such, as I believe, has no parallel in the history of any British Country.

I beg to request that you will represent to the Honorable the Treasurer that the consequences of such an unceremonious and unexpected removal from office will be most ruinous to me. When I received my appointment, I made such arrangements in my private affairs as would enable me to devote all my energies to the performance of my public duties; and never doubting but that I should be retained in the service during good behaviour, I depended entirely upon my salary for the maintenance of my family, and was consequently quite unprepared to find myself so suddenly deprived of the means for their support. Nevertheless, when I discovered that I was obnoxious to the Honorable the Minister, and that he wished to fill my place with another person, I determined (that, as remonstrance against the injustice of my dismissal would be of little avail, and that as the Honorable the Treasurer had told me that I was entitled to compensation in consideration of such removal,) not to take further trouble than would be necessary to place before the public the fact, that I was not dismissed in consequence of any incapacity or misconduct on my part. The insignificance of the amount of the proposed compensation dictates now, however, in common justice to my family's welfare, a different course.

I now, therefore, most respectfully but firmly protest against the inadequacy of the amount of the compensation approved of by His Excellency the Governor General and the Executive Council, and to state my intention of seeking, by every constitutional means, redress for the wrongs I have suffered.

I have, &c.,

ROBT. F. POCKLEY.

THE SECRETARY TO THE TREASURY.

No. 16.

THE HONORABLE THE TREASURER to W. L. G. DREW, Esq.

The Treasury, New South Wales,

18 March, 1858.

SIR,

I beg to inform you, that as no provision has been made by Parliament beyond the 31st instant for the payment of a salary for a Secretary to the Light, Pilot, and Navigation Board, and His Excellency the Governor General and the Executive Council not having considered it desirable to make any proposal to the Assembly for such service, your engagement under the Government will be considered as at an end from the date above-mentioned. At the close of the month you will please to deliver over to Mr. Wilshire all books, papers, and documents confided to your care.

I have, &c.,

R. CAMPBELL.

W. L. G. DREW, Esq.,

Secretary, Light, Pilot, and

Navigation Board.

No. 17.

W. L. G. DREW, Esq., to THE HONORABLE THE TREASURER.

Port Office, Sydney,

19 March, 1858.

SIR,

I do myself the honor to acknowledge the receipt of your communication of yesterday's date, intimating to me that as no provision has been made by Parliament beyond the 31st instant for the payment of a salary for a Secretary to the Light, Pilot, and Navigation Board, that therefore my engagement under Government will be considered at an end from that date.

I feel it my duty, Sir, to point out, in reply, that it by no means follows that because the Bill incorporating the Light, Pilot, and Navigation Board was rejected by the Assembly, that therefore I should be deprived of other offices I hold under Government, viz., those of Secretary to the Steam Navigation Board, and Accountant for this and the out-ports; the papers connected with which appointments you inform me are to be transferred to Mr. Wilshire, clerk in this department.

The Steam Navigation Board are still in the active discharge of their duties; and not only so, but have this day been requested by the Government to perform in addition the duties which formerly devolved upon the Pilot Board; nor could I have been in any way prepared for this sudden announcement of the intentions of the Government, when I knew that in the Estimates prepared by the present Ministry, although no provision is made for the Light, Pilot, and Navigation Board, a salary is nevertheless provided for a Secretary and Accountant.

The Government possess the undoubted right to propose such salaries only as they may think commensurate with the duties of each particular appointment; and to whatever amount they may think proper to reduce the salary of the offices I hold, I must submit, and either perform the duties with the salary reduced, or resign; but it is contrary to long-established usage, and I beg to add, contrary to justice, to compel the senior to resign in favor of the junior, without giving him any option in the matter.

In this instance, Mr. Wilshire, without (as you are aware) any knowledge whatever of accounts, is to perform the duties of public accountant, with nearly £30,000 a year passing through his hands; his salary being raised by £100 beyond that of his present appointment, or £50 only below that which I have received for all duties.

I do now, therefore, respectfully but firmly protest against the injustice of removing me from an appointment in which I have worked hard, and have given general satisfaction, in order to appoint another in my place; and I claim the privilege which I understand has always been accorded to the senior in any office where reductions have taken place, viz., the option of accepting the reduced salary or resigning.

I have, &c.,

W. L. G. DREW.

THE HONORABLE

THE COLONIAL TREASURER.

No. 18.

TREASURY MINUTE.

I feel assured whatever claims Mr. Drew may have, the Government will give to them a careful and attentive consideration. I can have no personal knowledge of his services to this Government, but from his own statement I think there must be many more who have greater claims than ever he had.

In making this minute upon Mr. Drew's application, it is my duty, as Colonial Treasurer, to observe upon his conduct on the occasion of his waiting upon me, and to state that he had received the verbal private communication through Captain Pockley in reference to this subject. He then availed himself of the opportunity to make observations and insinuations upon Members of the Government which were highly improper. He also added this statement, that he was glad I (the Treasurer) could honestly feel that I had done my duty in the matter, but he felt that he had been dishonestly dealt with—immediately leaving me, giving me no time to reprimand him for his conduct.

This display of temper and language justify me in not recommending Mr. Drew to another appointment under this Government.

SIR,

In reply to your letter of this date, I am directed to inform you that you will be required to hand over to Mr. Wilshire all books and papers in your possession, as stated in the letter from this office dated 18th instant.

I have, &c.,

HENRY LANE.

W. L. G. DREW, Esq.,

Secretary to the

Light, Pilot, and Navigation Board.

No. 23.

W. L. G. DREW, Esq. to ALFRED DENISON, Esq.

*Light, Pilot, and Navigation Office,
Sydney, 27 March, 1858.*

SIR,

I have the honor to request you will be pleased to lay before His Excellency the Governor General the accompanying copies of letters marked 1 and 2.* The former addressed to me by the Honorable the Finance Minister, conveying the intimation that my engagement under Government will cease from the 31st instant, and directing me to deliver over to Mr. Wilshire all books, papers, documents, &c., confided to my care; and the latter a copy of my reply, respectfully remonstrating against what I cannot but feel to be most unjustifiable treatment.

I am aware that under Responsible Government it is not the usual course to address His Excellency the Governor General; but as more than a week has elapsed since my letter of remonstrance was delivered to the head of my department, and as no notice whatever has been

* See Nos. 16 & 17, p. 9.

been taken of that communication, and as four days only remain between this and the day of my contemplated removal from office, I have not hesitated to bring the matter before His Excellency, with a view to the subject being reconsidered in Council, or to such other steps being taken as justice may require, and as to His Excellency may appear fitting.

ALFRED DENISON, Esq.,
Private Secretary.

I have, &c.,
W. L. G. DREW.

No. 24.

W. L. G. DREW, Esq., to ALFRED DENISON, Esq.

North Shore,
31 March, 1858.

SIR,

I have the honor to thankfully acknowledge the receipt of your note of the 27th instant, acquainting me that the subject of my contemplated removal from the offices of Secretary of the Steam Navigation Board and Accountant should (by His Excellency's desire) be brought before the Executive Council.

In connection with the foregoing, I have now the honor to enclose copies of two letters* I have received from the Honorable the Finance Minister, intimating that my case has been submitted by His Excellency the Governor General for the consideration of the Executive Council, and that their decision, when given, will be communicated to me; and the second informing me that I am to hand over all books, papers, &c., as originally directed, to Mr. Wilshire, my successor, and which I have this day accordingly done.

It is with the greatest reluctance I again venture to address His Excellency, but Mr. Campbell having taken upon himself to remove me from the Government Service whilst the very question of my removal or retention was under the consideration of the Executive Council, appears to me to be a manifest injustice to me personally, and to take away all practical utility in an appeal to that high body in questions of this nature. I am at a loss to understand the treatment I have received at the hands of Mr. Campbell throughout this matter. I had hoped that unremitting attention to the duties of my office, and a sincere desire to do all in my power for the benefit of the service, would have secured me the support of the head of my department; but, on the contrary, when the intelligence of my contemplated removal was first communicated, and I sought an explanation from that Minister, he informed me that the intended changes were for the greater *efficiency*, as well as economy, of the Public Service, and further added, that if I felt aggrieved I had better appeal to Parliament.

Encl. 3. I beg to enclose a copy of a letter this day addressed to Mr. Campbell by Captain Lamb, Senior Warden of the late Light, Pilot, and Navigation Board, and also an extract
Encl. 4. from a letter from the Chairman of the Steam Navigation Board, which I submit are at least sufficient to shew that the implied inefficiency cannot be substantiated. It was urged by a Member of the present Government, as an objection to my late appointment, that as a Naval Officer I was but a temporary resident in the Colony, and it may consequently be inferred that my removal is not so great a hardship as it would be under other circumstances. In reply to this I would state, that in returning to the Colony my intention was, and still is, to remain here, and in accepting employment under Government I had no idea of its being a temporary measure, nor can I now recognise it in any other light than as a change of persons and not of office.

Feeling, as I do, that the treatment I am now experiencing might at any time overtake me, it is not my intention again to solicit employment under Government, and it only remains for me, therefore, whilst apologising to His Excellency for the length at which I have addressed him, to request he will be pleased to direct this letter, with its enclosures, to be submitted to the Executive Council, in order that I may be granted the compensation for loss of office which I understand is provided for cases of this nature.

I have, &c.,
W. L. G. DREW.

ALFRED DENISON, Esq.,
Private Secretary.

[Enclosure]

REMOVAL OF CAPTAIN POCKLEY AND MR. DREW.

13

[Enclosure 3 to No. 24.]

*Light, Pilot, and Navigation Office,
March 31, 1858.*

Sir,

The Light, Pilot, and Navigation Board, being desirous of obtaining from Government a favourable consideration of the case of Mr. Drew, beg leave to lay before you the annexed Extract from the Minutes of their proceedings:—

"At this their last meeting the Board think it right to record their approbation of the very efficient services of Mr. Drew, and their hope that the zeal and ability he has displayed in the discharge of his duties as Secretary to the Light, Pilot, and Navigation Board, may be rendered available to the public service, by his appointment to some other office in lieu of that which is now abolished."

To the Honorable
Robert Campbell,
Minister for Finance and Trade.

I have, &c.,
JNO. LAMB,
Senior Warden.

[Enclosure 4 to No. 24.]

Extract from a letter from the Steam Navigation Board, addressed to the Honorable the Finance Minister, under date March 25, 1858.

"The Board also wish me to express their regret that it has become necessary to supersede Mr. Drew in the office of Secretary of the Steam Navigation Board, that gentleman having, for this last eight months, performed the duties which devolved upon him with considerable ability and assiduity."

H. H. BROWNE,
Chairman.

The Executive Council advise that Mr. Drew be granted the compensation for the loss of his office to which he is entitled under existing regulations by rank and length of service.

EDWD. C. MEREWETHER,
Clerk of the Council.

Approved,
W. D.
12 April, 1858.

Confirmed, 12 April, 1858.—No. 58-209.

No. 25.

THE SECRETARY TO THE TREASURY to W. L. G. DREW, Esq.

*The Treasury, New South Wales,
15 April, 1858.*

Sir,

Recurring to my letter of the 30th ultimo, I am now directed to inform you that the Executive Council having had your case under their consideration, advised that you be granted the compensation for the loss of your office to which you may be entitled under existing Regulations by rank and length of service; and that the Auditor General has been requested to compute the same.

W. L. G. DREW, Esq.

I have, &c.,
HENRY LANE.

No. 26.

THE SECRETARY TO THE TREASURY to W. L. G. DREW, Esq.

*The Treasury, New South Wales,
19 May, 1858.*

Sir,

Referring to your letter of the 31st March last to the Private Secretary, I am directed by the Honorable the Treasurer to acquaint you, that His Excellency the Governor General and Executive Council approve of your receiving compensation on the abolition of your office, at the rate authorised by the Superannuation Regulations for service under ten years, viz.:—One month's salary for each year of service.

W. L. G. DREW, Esq.,
Late Secretary to the
Light, Pilot and Navigation Board.

I have, &c.,
HENRY LANE.

most common cause of death in the United States is heart disease. It is a disease of the heart muscle, which is the organ that pumps blood throughout the body. The heart muscle is made up of cells that are very sensitive to oxygen. If the heart muscle does not get enough oxygen, it can become damaged and eventually die. This is what happens in heart disease. The heart muscle becomes weak and cannot pump blood as effectively as it should. This can lead to a variety of symptoms, including chest pain, shortness of breath, and fatigue. In some cases, heart disease can lead to a heart attack, which is a medical emergency.

1858.

Legislative Assembly,

NEW SOUTH WALES.

STEAM DREDGE FOR HUNTER RIVER.

(PAPERS RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 26 March, 1858.

E. O. MORIARTY, ESQ., to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

33 Hunter-street,

20 February, 1858.

SIR,

I have the honor to report, for the information of the Honorable the Secretary for Lands and Public Works, that the operations on the Hunter River at the Flats are being attended with considerable success.

The upper flat, which was the principal impediment to the navigation after the floods of last year, has, since the formation of the stone dykes, been deepened over 18 inches, and the process of deepening is still going on.

The new channel which I opened by means of the Steam Dredge has now not less than 8 feet 6 inches water at the shallowest place, being 1 foot to 18 inches deeper than the old channel.

Before the convenience of the new channel will be fully felt, it will be necessary to widen it at the lower end; this I was unable to do when the dredge was down, as I was obliged to send her away after having merely opened the channel. As, however, it is now so much deeper than the old channel, and only requires buoying out to render it available for steamers and other craft, I have the honor to request permission of the Honorable the Secretary for Lands and Works to expend the sum of £30 in purchasing and laying down buoys.

I have, &c.,

E. O. MORIARTY.

M. FITZPATRICK, ESQ.,

Under Secretary for Lands
and Public Works.

E. W. GEARY, to E. O. MORIARTY, ESQ.

Newcastle, 23 March, 1858.

SIR,

I have the honor to inform you that I have carried the Eastern Dyke down along the edge of Long Bank, as you directed, and have raised the upper portion of it to the level of high water.

The next place which will require raising is the Dyke, from your trigonometrical point round to Snapper Hole piling, all of which has sunk some inches since it was put down.

There has been a good supply of stone coming in during the last month, and we may expect it to continue for some months yet. The steamers always make use of the new channel now, and so do the sailing vessels, in preference to the old one, and I hear no complaint about the sharp turn at the entrance.

The buoys are constantly breaking away, because the chains by which they are fastened are old ones, and not sufficiently strong, otherwise they suit very well.

All the piling is secure, and no difference in the channels that I can see.

I am, &c.,

E. W. GEARY.

E. O. MORIARTY, ESQ.

1858.

Legislative Assembly.

NEW SOUTH WALES.

BREAKWATER AT STOCKTON.

(REPORT OF MR. MORIARTY UPON ADVISABILITY OF.)

Ordered by the Legislative Assembly to be Printed, 27 April, 1858.

RETURN to an *Order* of the Honorable the Legislative Assembly, dated
16 April, 1858, for,—

“ The Report, Plans, and Estimates, furnished by Mr. Moriarty,
“ Civil Engineer, respecting the advisableness of constructing a
“ small and inexpensive Breakwater, to run seawards from the
“ south-east end of Stockton, in order to secure the entrance to
“ the Harbour of Newcastle from all obstructions, by preventing
“ the continual shifting of the sand at this particular point, and
“ by stopping the heavy drift of the same from the Long Beach,
“ caused by the prevalent north-easterly winds, both tending to
“ the formation of shoals and the narrowing of the channel.

BREAKWATER AT STOCKTON.

MR. MORIARTY to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

25, Pitt-street,
April 4, 1857.

SIR,

In reply to your letter of the 4th March, enclosing a communication from the Secretary to the Newcastle Chamber of Commerce, on the subject of the obstructions in the Coal or South Channel of the Harbour, on which you request me to report,—I now do myself the honor to forward, for the consideration of the Honorable Secretary for Lands and Public Works, a full statement of my views on the subject of the harbour improvements generally.

Before, however, going into the question at large, perhaps it is as well I should state my opinion that although there may be, and undoubtedly are, some obstructions in the Coal Channel, of the kind described in the letter of the Secretary to the Chamber of Commerce, yet that the principal impediments to the navigation in that channel arise from other and remoter causes, and that if we seek to effect a permanent cure we must go at once to the root of the evil. It would be in vain that we expended time and money in removing a few heaps of ballast or coal, unless, at the same time, we took measures to prevent the sand from forming in their places.

The natural drawbacks to the Harbour of Newcastle may be classed under two heads.

1st. Those at its entrance, which render it at times almost inaccessible to sailing vessels, and always difficult and dangerous either to enter or leave, except with a fair wind and flood tide; and, 2ndly, the extensive banks of sand within the harbour, whereby the space available for large vessels is so greatly contracted.

The dangers of the entrance to the port are—1st, the Bar; 2nd, the Oyster Bank, (a large and dangerous bank with only five feet water on it, which extends right into the harbour's mouth,) and, 3rd, the peculiar set of the ebb current, which runs in a direction right across the Oyster Bank, and which is, I believe, the immediate cause of most of the wrecks which have taken place.

I have myself frequently observed vessels, when attempting to enter the harbour with a light or an adverse wind and ebb tide, obliged to anchor, in order to avoid being set by the current across the banks, and if while in this position it should come on to blow hard from the east, south-east, or south, (which are the prevailing points from which the gales on this coast come,) they run serious risk of dragging their anchors, (the bottom being of the very worst kind for holding,) and going on shore either on the Oyster Bank or on the Long Beach, where they would inevitably be lost.

I saw this very strikingly illustrated when the "Eleanor Lancaster" and four other vessels were wrecked, in the early part of last summer.

They all passed the Bar in safety, but, as it was blowing hard from the south-east, they were unable "to beat up" into the harbour, and had to anchor outside; their anchors held on till the ebb tide set down in force, when they began to drag, and eventually they all drifted down into the "bight," and were lost—the "Rover" going on shore about twelve miles to the north of the entrance. On the same occasion I observed the life-boat, which had broken adrift from the buoy to which she had been moored, after drifting away nearly due north for about eight miles to where the current lost its force, when she was forced by the waves in on the beach, and broken to pieces; but the most convincing proof of the northerly or along shore set of the ebb current is furnished in times of the land floods, when the brown discolored water of the river may be seen extending to the northward as far as the eye can reach, while immediately to the eastward, or seaward of Nobby, may be seen the pure green of the sea.

The

The along shore direction taken by the ebb current on leaving the harbour is, I think, in a great measure due to the breakwater and the stony point under Nobby. I believe, therefore, that the first step to be taken in order to render Newcastle at all a safe or convenient harbour, should be to form the south and east shore to an uniform or fair curve, and to run out a pier from the north shore in such a direction as would give the ebb tide a seaward set. This latter would not only make the harbour to open in a direction more favorable for receiving as well as discharging the tidal wave, and for concentrating its action on the bar, but would also tend, in a great degree, to prevent the inrun of sand during flood tide.

Such a work would, therefore, improve the inner parts of the port as well as the entrance, and, by bringing the south and east sides to a fair curve, the tidal waters would be allowed an uninterrupted flow along the front of the wharf.

It is an axiom in hydraulic engineering, that a harbour should always be made, if possible, to open in such a direction as will correspond as nearly as can be with the set of the tidal currents on the coast, while it should at the same time afford shelter against the prevailing gales. By the former, the tidal wave is allowed to flow more freely into and out of the harbour, without forming those eddies and counter-currents which always lead to the deposit of sand. By the latter, vessels are always enabled to run into the port for shelter or to leave it in bad weather. Sailing vessels attempting to enter Newcastle now during an easterly, south-easterly, or southerly gale, would encounter almost inevitable destruction.

Another principle which has been laid down by all the most experienced hydraulic engineers,—Smeaton, Telford, Milne, and the Rennies,—a principle which they never lost sight of in their designs for harbours, is, that in forming or improving a harbour on a sandy or shingly shore, it is essential, to prevent the inrun of sand from the adjoining beaches during flood tide, and to preserve sufficient back water space to scour the entrance or bar on the return or ebb tide. The littoral curve and waves beating on the beach stir up the sand or shingle, and keep it in constant motion, so that it is gradually drawn into the harbour during the flood tides, where it immediately settles in the still water; to prevent this, therefore, and concentrate the power of the ebb tides, it is generally necessary to carry the entrance beyond the line of the beach, which is done by forming piers on each side extending into deep water, always taking care that they point in such a direction as will correspond with the prevailing currents, and afford protection during storms, without being so oblique to their direction as to prevent vessels freely entering or leaving during their prevalence, by straightening and deepening the inside channel a larger body of the tidal water is admitted and discharged, each tide, and so tends to scour the bottom and keep down the bar, if there should happen to be one at the entrance.

On these principles have been improved the harbours of Newhaven, on the River Ouse, by the elder Rennie, namely, by straightening the channel of the river, and preventing the inrun of sand during flood tides by constructing parallel piers, which project considerably beyond the line of the beach; also Shoreham Harbour (which much resembles Newcastle), Rye, and Dover Harbours, both suffer from the constantly moving shingle or sand, which threatened eventually to fill them up, for which the remedies proposed and recommended by Sir John Rennie were—"Extension of piers in a proper direction, straightening and deepening, and duly regulating the width of the river channel, and increasing the tidal backwater as far as practicable."

In Sunderland Harbour, which was formerly far worse and more dangerous than Newcastle now is, the most beneficial results have been obtained from straightening the channel, which has been cut through a quick sand, and protecting the entrance by parallel piers projecting beyond the reach of the sand, and by regulating the channel within. I quote from Sir John Rennie's remarks on Sunderland Harbour:—"The principal defect of the lower part of the river arose from its want of depth and the numerous shallows, and the proper course to be adopted was to regularize the channel and quays in such a manner as to avoid the eddies as far as practicable, and to increase the quantity of tidal water, which should act as a scour upon the channel and bar in the most effectual manner; also to construct piers at the entrance for the furtherance of the same object, and to prevent the too great inrun of waves during storms."

"These works, as far as they have been executed, have produced very satisfactory results upon the channel and bar, and should be continued further."

Many

Many other instances might be adduced, as Aberdeen, Leith, Dublin, Yarmouth, &c., in which the general principles above laid down have been acted upon, and have produced the most beneficial results.

That the set of the tidal wave upon this coast is nearly east and west, and that, therefore, the harbours should be made to open nearly in the same direction, there are abundant facts to prove.

Time of High Water, Full, and change of Moon, at—	U. N.
Norfolk Island.....	7:45
about 800 miles to the eastward of this coast.	
Port Curtis	9:45
Moreton Bay	9:30
Port Stephens	9:15
Newcastle	9:45
Broken Bay	8:0
Sydney Heads	8:0
Sydney	8:30
Botany Bay	8:0
Shoalhaven	8:20
Twofold Bay	10:0
Kent's Group	11:0
Wilson's Promon- tory.....	12:0
Port Phillip Heads	12:30

The time of high water at full and change of the moon at the different ports noted in the margin will show that the tide-wave moves from the east to the west, and that its crest reaches nearly all the parts of this coast about the same time; the slight difference in the times of high water arising from local circumstances—the depth of water off them, or the conformation of the coast. But although the great tidal-wave runs nearly east and west, the currents immediately on the coast are a southerly current of from $\frac{1}{2}$ to $1\frac{1}{2}$ miles per hour outside the principal headlands, and an eddy, or counter current, of about the same velocity, running to the northward, within those headlands—increasing during the flood-tide, and falling away almost to nothing during the ebbs.

The points of the compass from which we have usually the heaviest gales are east, south-east, and south; as a general rule, therefore, all harbours on this coast should be made to open somewhat to the north of east, so as to afford shelter and to preserve smooth water within, while they should be easily accessible during southerly gales, and the ebb currents would have a seaward set, which would be of the greatest service in assisting vessels to work off the land, if they should miss or be unable to reach the entrance of the port.

The harbour of Newcastle opens nearly due north, and the form of the entrance is such as to set the ebb current in the most dangerous direction it could possibly take, namely, across a shallow sandbank, and parallel with the beach, on which there is almost always a heavy surf. So long, therefore, as the current is allowed to take this direction, Newcastle must continue to be a most dangerous port, and quite unapproachable by vessels in distress. It appears to me therefore, that one of the first steps to be taken for the improvement of the harbour should be to endeavour to render it safe and accessible at all times—or, at all events so much so that vessels might make the attempt without risking almost certain destruction if they failed to get in. The most effectual means, as far as I can see, of attaining this object, is by the formation of a north pier, which would carry the entrance into deep water, at the same time that it would alter the direction taken by the ebb tide at present, giving it a set more to seaward; and even during southerly gales, vessels might attempt to work in on a flood tide, as, when once they got within the influence of piers, they would have a stronger and more concentrated tide under their lee, while the width of channel available for navigation would not be diminished.

I now come to the obstructions within the harbour. The sand all along the beach to the northward of Newcastle is kept in constant motion by the beating of the surf upon the shore, so that quantities of it are drawn into the harbour during the flood tide, and settle down in the neutral lines of the currents. On looking at the soundings it will be observed that a shallow rocky ledge extends from the foot of the Signal Station Hill, about half across the inner entrance, to what is called the 13-feet Rock, and on studying the course of the flood-currents, indicated by the blue lines on the accompanying plan, it will be observed that they follow as nearly as can be the general outline of this rocky ledge; the consequence is, that the main body of the flood water passes up the north channel, leaving a broad space on the south side, in front of the town, in a comparative still water, when, of course, the sand brought in by the tide settles, forming what is commonly called the Great Horseshoe Bank.

It is the constant accumulation of sand upon this bank, and its extension in towards the wharfs, which is, in my opinion, the cause of the shallowness of the coal channel; although it may be, and no doubt is, aggravated in places by heaps of stone ballast, or of coal dropped from the shoots, as stated in the letter of the Secretary to the Chamber of Commerce. The evident remedy for this is, first, to stop as far as possible the indraft of sand from the sea. Unless we do so we would most likely find that fresh deposits of sand would form as fast as we removed it; but if we once stop its entrance into the harbour, we may then confidently hope that the ebb currents, if properly concentrated and directed, and assisted by dredging, would soon diminish the banks, and perhaps ultimately remove them altogether.

The

The most effectual means of checking the indraft of sand, as far as I can see, is by forming the north pier to which I have alluded, and extending it from the beach into deep water: as it is a well known fact that waves do not agitate or disturb the bottom to a greater depth than from ten to fifteen feet below the ordinary water level. A pier, such as I have mentioned, would be useful from the very beginning of its construction, and might be gradually extended as its advantages were felt, and as the trade of the port increased. Active measures should also be taken to reduce the Sand Hills on the south side, and prevent the large quantities of sand which are blown across them from entering the harbour.

That the sand from which the lower banks are formed is a pure sea sand the most cursory examination will show. It is totally different from the alluvial deposit which forms mud banks, and which is found in all the upper parts of the river where the tidal influence is not so strong.

A most effectual means of deepening the coal channel, and of preserving deep water in front of the town, would be either to remove altogether the stony ledge I have alluded to as extending across the harbour, or to cut a channel through it, so as to admit the flood water to pass up along the wharf. I do not propose undertaking this work at present, as it would be too costly and tedious, and would not, perhaps, be justified by the present amount of traffic to the port; but I believe at some future time it will be carried out; and even now I think it might be accomplished, if the water frontage were leased for a term of years to private parties or companies, on condition of their deepening the channel in front. However, in the meantime we must trust to the effect of the ebb currents to keep this channel open, which can only be done by bringing in wharfs to a fair curve, and by setting as much of the ebb water against them as possible. To accomplish these objects, the first step will be to fill in the indentations in the wharf line with ballast, and bring it to one uniform sweep. The next will be to lay a border of ballast along the face of the bank, extending from Bullock Island to opposite the A. A. Company's coal staiths, in the manner shewn in the accompanying plan. By these means a commencement would be made for an extensive line of wharfs, and the wide space between it and Honeysuckle Point, as well as back of Bullock Island, would become a large sluicing reservoir, and all the water received into it, or discharged from it, would be made to pass up and down the coal channel, the effect of which would soon be to widen and deepen it. This might be assisted artificially by the use of the Marine Harrow and Steam Dredge.

The cost of lining this bank with ballast would be about £3,500. Sluicing reservoirs, intended to attain the same object as that here sought to be obtained, have been artificially constructed at great cost in many of the harbours in England, as at Dover, Hartlepool, Bristol, and many others.

I think some steps should, if possible, be immediately taken to prevent the townspeople removing the stone ballast from the wharfs, as nothing can be done till they are brought to a fair curve in front; and after that is done, the ballast will take twelve months to settle before it would be safe to found a wall upon it.

In framing the estimate for the north pier, I have allowed liberally both for material and price; the sum I have estimated (£22,792) would be fully sufficient to complete it. Stone, fit for the purpose, could be got from a quarry close to the line of the Maitland Railway, at about two and a half or three miles from Newcastle, from which place it could be brought down by rail for about two shillings per ton, or less.

If my plans for the formation of the wharfs at Newcastle have been approved by the Honorable the Secretary for Lands and Public Works, it would be well to take measures for importing the cast iron piles, so as to have them ready when the works commence.

I have, &c.,

MICHAEL FITZPATRICK, Esq.,

E. O. MORIARTY.

Under Secretary for Lands and Public Works.

1858.

Legislative Assembly.

NEW SOUTH WALES.

SIGNAL STAFF, NEWCASTLE.

(REMOVAL OF.)

Ordered by the Legislative Assembly to be Printed, 9 November, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Merchants, Traders, and Masters of Vessels,
resident at, or trading to the Port of Newcastle,—

HUMBLY SHEWETH:—

That, contrary to remonstrance from a Committee of the inhabitants of Newcastle, praying further inquiry, (of which remonstrance no cognizance whatever was taken) and without any previous public inquiry or notice, the Signal Station at Newcastle has been removed by the "Steam Navigation and Pilot Board" from its former position—to the situation of which no complaints had been made—to the peninsula called Nobby's, more than half a mile to the northward of it.

That, as will be certified by every respectable ship master having any experience of the Port of Newcastle, such removal is pregnant with risk to life and property, by endangering the safety of vessels approaching the harbour.

That the position of the entrance of the Port of Newcastle, and the circumstance that its trade is almost exclusively with places to the southward of itself, make it most important that vessels approaching it from that quarter should, at some distance before making the harbour, be able to discern the signals, it being dangerous at certain times of tide, &c., with the wind strong from the south or south south-east, to approach too near the port, as at such periods vessels in light ballast trim (as nearly all are which come here for coal,) being unable to enter the harbour, or to clear Point Stephens, are in much danger of being driven ashore in the bight.

That, it being necessary for security, therefore, that the signals, which it is difficult to distinguish in hazy weather, when they are most required, should be placed at some distance to the southward of the port, instead of at the entrance at Nobby's,—

Your Petitioners pray that the Signal Station may be removed, without delay, to its former position.

And your Petitioners will ever pray.

[Here follow 79 Signatures.]

1858.

Legislative Assembly.
NEW SOUTH WALES.

SIGNAL STAFF, NEWCASTLE.

(RETURN RELATIVE TO REMOVAL OF.)

Ordered by the Legislative Assembly to be Printed, 25 November, 1858.

RETURN to an *Order* of the Honorable the Legislative Assembly, dated 2 November, 1858, That there be laid upon the Table of the House,—

“Copies of all Correspondence and Papers connected with the
“removal of the Signal Staff at Newcastle to its present
“position at Nobby’s.”

(*Mr. Hodgson.*)

SIGNAL STAFF, NEWCASTLE.

EXTRACT from the Report of the Chairman of the Steam Navigation Board, and of the Harbour Master of Sydney, on the Tour of Inspection made by them to the Port of Newcastle.

Having on the evening of Thursday, the 8th instant, proceeded to Newcastle, and having, on our arrival there, made a careful inspection of the Light House, Buoys, Beacons, Signal Station, Wharfs, &c., and also inquired into the manner in which the Harbour Master's Department is conducted, and the system on which the Pilots' Duties are carried out,—we propose, first, to submit a Report of the result of our inquiries and inspection, and then to make such recommendations for the consideration of the Board as the several matters which come under our notice seemed to warrant.

Although it was arranged that the Member for Newcastle, Dr. Bowker, should meet us there on our arrival, and point out the several subjects requiring our most immediate attention, that gentleman was unavoidably prevented from attending, but in his absence we availed ourselves of the assistance of the Sub-Collector of Customs, Mr Bolton, an officer who, by his long residence at that port and local experience, was, in conjunction with the Harbour Master, Captain Livingstone, able to afford us much information and assistance.

THE SIGNAL STATION.

A new Signal Master's house has been lately erected in the vicinity of the position of the old Coal Beacon, at an expense of about £1,200, and the signals continue to be made from this hill as heretofore.

This establishment was in tolerable order, but the person in charge—an old servant of the Government—appeared to us to be almost physically incapacitated by age and infirmity from performing the duty devolving upon him.

* * * * *

RECOMMENDATIONS.

* * * * *

We advise that the Signal Stations, as at present existing, be abolished, and that the Flag-staff be moved, or, if not capable of removal, another be erected on Nobby's Island, and placed in charge of the Principal Light Keeper, who might be allowed an additional salary of £20 to perform the duties now performed by the Signal Master, which would not only cause a saving to the Government of one hundred pounds a year, but would also, from its position, be more available for vessels at sea, and at the same time be more distinctly visible in the town.

Having disposed of the Signal Station, we would advise that the house lately erected there be made the residence of the Harbour Master, and that the old buildings in its vicinity—a portion of which is now occupied by the late Shipping Master and boats' crews—be devoted to the accommodation of one of the Pilots, and about six of the men employed in the boats. This arrangement would make a Pilot and crew always available in case of emergency, and would enable a good look-out to be kept, instead of depending altogether on the Signal-man for information.

We would also recommend that, either at this Station or at the Light House, a strict watch be kept, by both night and day, by the Pilots or their crews; and that regulations for their guidance be framed and printed on conspicuous placards, and, as in Sydney, furnished to each of the Pilots—as also to be exhibited at the Custom House and Harbour Master's Office.

* * * * *

H. H. BROWNE,
Chairman.
JOHN CROOK,
Harbour Master.

EXTRACT

EXTRACT from a Letter from THE UNDER SECRETARY TO THE TREASURY to the HARBOUR MASTER. Dated 27 August, 1858.

SIR,

In acknowledging the receipt of your letter of the 16th ultimo, enclosing the Report of the Chairman of the Steam Navigation and Pilot Board, and of yourself, upon the Harbour Department of the Port of Newcastle, I have the honor to inform you that the Honorable the Treasurer, having maturely considered the Report in question, now directs that the following recommendations, therein made, be carried out with as little delay as possible, viz. :—

1. That the Signal Stations as at present existing be abolished, and that the Flag-staff be moved, or, if not capable of removal, another be erected on Nobby's Island, and placed in charge of the Principal Light Keeper.

2. That the house lately erected at the Signal Station be made the residence of the Harbour Master, and that the old buildings in its vicinity—a portion of which is now occupied by the late Shipping Master and boats' crews—be devoted to the accommodation of one of the Pilots, and about six of the men employed in the boats.

3. That, either at the Signal Station or at the Light House, a strict watch be kept, night and day, by the Pilots or their crews; and that regulations for their guidance be framed and printed on conspicuous placards, and, as in Sydney, furnished to each of the Pilots—as also to be exhibited at the Custom House and Harbour Master's Office.

* * * * *

THE HARBOUR MASTER SYDNEY to THE HARBOUR MASTER NEWCASTLE.

The Port Office, Sydney,

3 September, 1858.

SIR,

I am directed by the Steam Navigation and Pilot Board to request that you will have the Flag-staff removed as soon as possible, and at such a time as will be least inconvenient to the shipping interest.

THE HARBOUR MASTER,
Newcastle.

I have, &c.,
JOHN CROOK,
Harbour Master.

EXTRACT of a Letter from HARBOUR MASTER, NEWCASTLE, respecting removal of Flag-staff.

Harbour Master's Office,

Newcastle, 4 September, 1858.

SIR,

I have the honor to acknowledge the receipt of your letter of yesterday's date, requesting the Flag-staff to be removed to Nobby's, which I shall lose no time to accomplish, or so soon as I can obtain the means of doing so. At present I am entirely without means, without coming under obligations to private individuals, which I am much averse to. I have only 1 block (14-in. treble), neither pick nor shovel, or any means of transit for the mast, which can only be speedily accomplished by dray, and I have no authority to hire any; to attempt the removal by manual labor would be attended with much loss of time.

I have inspected and fixed on a site for the mast on Nobby; the present one and all attached are in good condition; the lower mast is iron bark, about 38 feet long by 16 inches diameter.

THE HARBOUR MASTER,
Sydney.

DAVID T. ALLAN,
Harbour Master.

THE HARBOUR MASTER, SYDNEY, to THE HARBOUR MASTER, NEWCASTLE.

The Port Office, Sydney,

6 September, 1858.

SIR,

In reply to your letter respecting the removal of the Flag-staff, I am directed by the Steam, Navigation and Pilot Board to inform you, that you are authorized to incur whatever expense may be necessary, either in the hiring of a dray or the purchase of materials, for the purpose; and to request that you will forward, when the removal is completed, a report of the same, and of the expenses incurred.

THE HARBOUR MASTER,
Newcastle.

I have, &c.,
JOHN CROOK,
Harbour Master.

TO THE HONORABLE THE PILOT BOARD,
SYDNEY.

WE, the undersigned Shipowners, Merchants, Agents, &c., Masters of Vessels, hearing that the Pilot Board purpose the removal of the present Flag-staff to Nobby's, respectfully beg to represent:—

1st. That such removal, instead of a benefit, will be attended with considerable inconvenience and danger to the seafaring community.

2nd. That the removal to Nobby's is too far to leeward when vessels are running for Newcastle, especially when the winds are from the south to west. That this being the only time the signals are at all serviceable, such removal as the one contemplated will be entirely useless for all practical purposes, as light vessels upon making the signals would then be too far to leeward to recover themselves.

3rd. That, should it be deemed necessary and advisable for your Honorable Board to remove the present Signal-staff, at all, that it be removed farther to the south than any farther to the north.

Signed by

ANGUS CAMPBELL, Master of "H. M. Warfield."
WILLIAM FIRTH, "Viceroy."
PETER SLATER, "Fayaway."
LAURENCE WILLIAMSON.
W. & J. DONALDSON, Shipowners.
W. T. BOYCE, Agent for Underwriters, Sydney and Melbourne.
BINGLE & SON, Lloyd's Agents.
HENRY S. BLAY, Agent
HENRY G. COLE, Master Mariner.
EDWD. HILL, Master and Owner of "Martha Ellen."
ROBT. SIMMONS, Master of Schooner "Athol."
GEO. MITCHELL, U. S. Vice-Consul.
ALEXR. DUGUID, Master of Schooner "Ariel."
JOHN JOHNSTON, Master of Brig "Janet."
JAMES DONALDSON, Coal Merchant.
GEORGE BERNER, Agent.
WM. HENRY WHITE, Agent and Shipowner.
W. F. WEATHERILL, Master Mariner and Surveyor.

THE HARBOUR MASTER to MESSRS. A. CAMPBELL AND OTHERS.

The Port Office, Sydney,

25 September, 1858.

GENTLEMEN,

In reply to your petition of the 9th instant, respecting the proposed removal of the Flag-staff to Nobby's Head, I have the honor, by direction of the Steam Navigation and Pilot Board, to inform you that the Board have fully considered the reasons urged against the removal in question; and further, that they have taken the opportunity of examining the masters of vessels who have been before them for certificates of competency upon the subject, and, from the answers given by a considerable number, the Board do not consider that the objections made by the petitioners are valid.

Being

Being thus supported in their own practical opinion, in which I also fully concur, the Board see no reason why they should depart from their original recommendation, that the Flag-staff should be removed to Nobby's Head.

I have, &c.,

MESSRS. ANGUS CAMPBELL, WILLIAM FIRTH,
and the other Petitioners.

JOHN CROOK,
Harbour Master.

THE HARBOUR MASTER, SYDNEY, to THE HARBOUR MASTER, NEWCASTLE.

The Port Office, Sydney,
25 September, 1858.

SIR,

I have the honor, by direction of the Steam Navigation and Pilot Board, to request that you will be good enough to proceed forthwith with the removal of the Flag-staff to Nobby's Head.

I have, &c.,

THE HARBOUR MASTER,
Newcastle.

JOHN CROOK,
Harbour Master.

MR. S. WRIGHT to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Chamber of Commerce,
Newcastle, 29 September, 1858.

SIR,

I am instructed by the Newcastle Chamber of Commerce to bring under your notice the intention of the Government to remove forthwith the Flag-staff of this port from its present position, and place it upon Nobby's, near the Light House, and to assign its reasons against such removal.

In the first place,—If the Flag-staff be placed upon Nobby's it will be too far to the northward for vessels making for the port from the southward, with a strong and fair wind, for the Masters to see the tide signals in time to stand off, if so required, and in hazy weather, with a heavy swell of the sea on, vessels would get too far to leeward before the signals could possibly be seen in time to enable them to clear Point Stephens, and would consequently be placed in great danger of being wrecked, unless the wind at the time should be from the west (going northward till it comes) to south-south-east.

Secondly.—The distance of the Nobby's is too far off for the flags to be distinguished with the naked eye, more especially so during the winter months, when the sun is more to the northward, then, in the fore part of the day, even with the aid of a telescope, it is attended with much difficulty. It is also a matter of much importance to the inhabitants and travelling community at Newcastle, as well as to the Pilot Establishment, that every facility should be afforded in giving timely notice of the approach of vessels to the port, more especially the steamers.

Thirdly.—That should the Flag-staff be removed without due notice being given, (at least three months) through the public papers, to masters of vessels coming to this port; the sailing directions would be so changed as to endanger their vessels before such alteration would be discovered, more particularly so with masters of vessels who are strangers to the port. I am therefore requested further to state, that, in the opinion of this Chamber, which is supported in its views by masters of vessels who for many years have been well acquainted with the navigation of this port, that instead of removing the Flag-staff more to the northward it ought to be more to the southward, where the tide signals could be seen much earlier from vessels approaching the port than at present, as it would then afford ample space to stand off and on without danger, till the proper time of the tide for entering the port.

The Chamber begs to solicit that further inquiry on the part of Government will be made, and the objections herein stated be duly considered, before such contemplated removal of said Flag-staff from its present position be carried out.

I have, &c.,

THE HONORABLE THE SECRETARY
FOR LANDS AND PUBLIC WORKS,
Sydney.

S. WRIGHT,
Hon. Secretary.

P. MACAULIFFE ESQ., to THE STEAM NAVIGATION AND PILOT BOARD.

Newcastle, 30 September, 1858.

GENTLEMEN,

Instructed by the Committee appointed here in public meeting in reference to the affairs of this Port, I have the honor to state, that they have been informed that it is the intention of your Board to remove the Signal Station at this port from its present position to Nobby's Peninsula; and that as the Committee has good reason to believe that such removal would prevent the signals from being perceptible to vessels approaching the harbour from the southward, under the important conditions in which they are now found most useful, until too late to be availed of,—I am desired to beg the favor of your causing the removal to be suspended, until the Committee can supply your Board with that further information or evidence which the Committee feel assured it would be your desire to have under the grave circumstances here mentioned.

I have, &c.,

STEAM NAVIGATION AND
PILOT BOARD,
Port Office, Sydney.

P. MACAULIFFE,
Secretary.

P. MACAULIFFE, ESQ., to THE MINISTER FOR FINANCE AND TRADE.

Newcastle, 30 September, 1858.

SIR,

Instructed by the Committee appointed here in public meeting in reference to the affairs of this port, I have the honor to state, that they are informed that it is the intention of the Steam Navigation and Pilot Board to remove the Signal Station at this harbour from its present position to Nobby's Peninsula; and that as such removal would seriously impair the utility of the signals to vessels approaching here from the southward with a strong wind (to which they are now of greatest importance), by preventing them from being perceptible until the vessels were too far to leeward, when probably the signals would be intended to indicate that the port could not then be entered,—I am desired to beg that the removal may be suspended, until at least the Committee can furnish the Board with further information or evidence on the subject, to which effect, as in your Department, I am instructed to request the favor of your interference.

I have, &c.,

THE HONORABLE THE MINISTER
FOR FINANCE AND TRADE,
Sydney.

P. MACAULIFFE,
Secretary.

THE SECRETARY TO THE TREASURY to P. MACAULIFFE, ESQ.

The Treasury, New South Wales,
5 October, 1858.

SIR,

I am directed by the Honorable the Treasurer to inform you, that upon the receipt of your letter of the 30th ultimo, upon the subject of the contemplated removal of the Signal Station at Newcastle, it was without delay referred to the Steam Navigation and Pilot Board. Their Report was laid before Mr. Campbell this morning, and returned for further evidence.

So soon as the Report in question shall have been completed, you will be again communicated with upon the subject.

I have, &c.,

P. MACAULIFFE, ESQ.,
Newcastle.

HENRY LANE.

THE HARBOUR MASTER to THE SECRETARY TO THE TREASURY.

The Port Office, Sydney,
2 October, 1858.

SIR,

With reference to the enclosed communications respecting the removal of the Flag-staff at Newcastle to Nobby's Head, I have the honor, by direction of the Steam Navigation and Pilot Board, to forward, for the information of the Honorable the Treasurer, a copy of a letter which has been addressed to certain petitioners upon the subject, and to request that you will be good enough to intimate to that Minister that the Board have examined masters of vessels (whose names are in the margin hereof) in the coasting trade, and who are therefore likely to be well acquainted with the Port of Newcastle, upon the question.

R. W. Sharpe of the
"Triton,"
J. D. Harleys, "Clarence,"
J. Cummins, "Ripley,"
R. Darby, "Architect,"
J. S. Walsh, "Fortune,"
R. Henderson, "Har-
"graves," "doubtful,"
S. Hellow, "Pearl," J. J.
Warner, "Telegraph,"
disapprover.
W. Keft, "William IV,"
C. H. Fletcher, "Pros-
"pector,"
J. George, "Caroline."

Eight of the eleven individuals mentioned are in favor of the removal of the Flag-staff to Nobby's, two opposed to it, and one doubtful upon the subject,—and, in the absence of anything to justify the Board in arriving at a different conclusion from that set forth in the letter in reply to the petition, they do not feel inclined to rescind the instruction given to the Harbour Master at Newcastle to remove the Flag-staff.

Should the Honorable the Treasurer, however, consider that there is anything material in the petition now forwarded, the Board will have no objection to take additional evidence upon the subject; but their own impression is that Nobby's is the proper place at which the signals ought to be made.

I have, &c.,

JOHN CROOK,

Harbour Master.

THE SECRETARY TO THE TREASURY.

THE HARBOUR MASTER, NEWCASTLE, to THE HARBOUR MASTER, SYDNEY.

Harbour Office, Newcastle,

16 October, 1858.

SIR,

I have the honor to inform you that the Flag-staff was placed on Nobby yesterday; and, according to your instructions, the signals will, on and after Monday, the 18th instant, be hoisted from that place, under the care of Mr. Hannell. I would recommend that the present tide-signals be continued, with this difference, that they should only be hoisted half up to the yard-arm until half flood, then close up until high water, when they are changed to the other yard-arm, and there to remain until half ebb, then again to be lowered half down until low water.

DAVID. T. ALLAN,

Harbour Master.

THE HARBOUR MASTER,
Sydney.

P. MACAULIFFE, ESQ., to THE COLONIAL TREASURER.

Newcastle, 19 October, 1858.

SIR,

Instructed by the Committee appointed in public meeting in reference to the affairs of this port, I have the honor to acknowledge receipt of your communication of 5th instant, and to express its sense of your courteous attention to the subject of the intended removal of the Signal Station here to Nobby's Peninsula, in reference to which, I am desired to inform you, that—contrary to the tenor of your letter, which the Committee understood as conveying a promise that the Station would not be removed until they had been again communicated with—it was removed on Saturday last to Nobby's.

I am desired to add, that in the present position of the subject the Committee deems it well to apprise you of the removal, without comment, and to state that a memorial declaratory of opinion on the question will be forwarded to you in a day or two.

I have, &c.,

THE HONORABLE
THE COLONIAL TREASURER,
Sydney.

P. MACAULIFFE,

Secretary.

THE

THE HARBOUR MASTER to THE SECRETARY TO THE TREASURY.

The Port Office, Sydney,
22 October, 1858.

SIR,

In returning the correspondence which has taken place respecting the removal of the Flag-staff at Newcastle, I am directed by the Steam Navigation and Pilot Board to state, for the information of the Honorable the Treasurer, that the Board have examined masters of vessels (whose names are mentioned in the margin hereof, in addition to those already reported,) upon the subject, all of whom concur in the view taken by the Board, that Nobby's Island is the proper place at which the Flag-staff should be placed.

Capt. McLean, "Hebe"
J. C. Thomas, "Dora."
R. Paddle, "City of
Sydney."
W. J. Lowe, "Nora
Croina," Schooner.
J. Toeb, "Ranger."

The Board cannot but regret that the views taken by them in this matter have been misconstrued by the Chamber of Commerce at Newcastle, as their object in carrying out this measure was the improvement of the port only; and the Board cannot but consider that any practical person who may take the trouble to look at the locality, as marked on a chart, will at once observe that the placing of the Flag-staff on Nobby's Island is an advantage to the shipping generally.

Some of the masters of vessels who were examined by the Board described the position of the yard on the old site, being north and south, as inconvenient during southerly winds, and spoke of the flags as being too small, to remedy which I have been directed to cause the yard to be placed east and west, and to furnish a new set of larger flags.

Under all the circumstances the Board see no reason to alter the decision arrived at, and as the Flag-staff is now removed and reported in working order, the Board hope to be able to carry out their other arrangements, as to the placing of the Pilots in the immediate vicinity thereof.

I have, &c.,

JOHN CROOK,

THE SECRETARY TO THE TREASURY.

Harbour Master.

Approved.—It seems to me that the residents at Newcastle, from the proceedings of a meeting as reported in the newspaper of this week, wished to have had the old Flag-staff retained, for giving information of vessels approaching the city, and not because it was of use for the safety of vessels approaching the harbour. This, I think, was not prominently mentioned, or perhaps it might have been provided for; but I hope that as the size of the flags is to be increased, the signals may be seen as distinctly from Nobby's as they were from the old site.

If this be so, it may be communicated to the gentlemen, with this report from the Harbour Master.

R. C.
23 October.

23 October, 1858.

The Board did examine several additional witnesses on the subject of the Flag-staff at Newcastle, and the result has been already communicated to the Treasurer; and as the opinion of these persons was equally conclusive with that given on a previous occasion, the Board did not consider it necessary to revoke the order formerly given to the Harbour Master for the removal of the staff; neither did they conceive by the Treasurer's minute that such a step was intended, or that any fresh authority was requisite, unless a different opinion were arrived at by the Board on the subject.

The quarters occupied by the Signal-man are urgently required for the use of the Harbour Master, to enable him to make his Pilots and crews available; and as this could not be done until the staff was removed, the Board did not hesitate to adopt a course which was, in their opinion, for the benefit of the port.

The Harbour Master having, in accordance with his previous instructions, removed the staff, the Board have taken the necessary step to afford the information to the public, and have notified the same in the usual way in the public journals, and forwarded copies of the notices to the various Boards of the neighbouring Colonies.

H. H. BROWNE.

The Honorable the Minister
for Finance and Trade.

THE

THE UNDER-SECRETARY TO THE TREASURY to P. MACAULIFFE, ESQ.

New South Wales,

The Treasury, Sydney,

26 October, 1858.

SIR,

Referring to previous correspondence upon the subject of the removal of the Flag-staff at Newcastle to Nobby's Head, I am directed by the Honorable the Treasurer to forward, for the information of the Committee appointed in reference to the affairs of the Port of Newcastle, copies of two communications received from the Steam Navigation and Pilot Board, by which it will be observed that nearly all the Masters of coasting vessels examined in reference to the proper site for the Flag-staff are in favor of Nobby's Head.

It will, however, be seen, that the second objection raised by the Committee has been met by increasing the size of the flags to be used at the new Signal Station, so as to make them more distinguishable at Newcastle.

Mr. Campbell therefore trusts that the conclusions arrived at by the Board, after much inquiry and deliberation, will be considered by the Committee as satisfactory.

I have, &c.,

P. MACAULIFFE, ESQ.,
Newcastle.

HENRY LANE,
Under-Secretary.

P. MACAULIFFE, ESQ., to THE COLONIAL TREASURER.

Newcastle, 26 October, 1858.

SIR,

I have the honor to forward to you, under separate cover, by this post, a Memorial from Merchants, Traders, and Masters of Vessels at this port praying against the removal of the Signal Station to Nobby's Peninsula, which Memorial was referred to in mine of 19th instant, and the transmission of which has been delayed in order to afford an opportunity to Captains arriving here in the interim to record their opinion of the propriety of the removal by signing it, which, I am desired by the Committee for which I have the honor to act to state, has, without exception, been done by all to whom it was offered for signature, being thirty-six Masters of vessels in all.

I have, &c.,

THE HONORABLE
THE COLONIAL TREASURER,
Sydney.

P. MACAULIFFE,
Secretary.

TO THE HONORABLE THE COLONIAL TREASURER.

The Memorial of the undersigned, Masters of Vessels, Merchants, and others, trading to or interested in the Port of Newcastle,—

RESPECTFULLY SHEWETH:—

That your Memorialists have heard, with regret, that it is proposed to remove the Signal Station at Newcastle from its present position to Nobby's Peninsula.

That your Memorialists, who number amongst them several of the most experienced Masters of vessels frequenting the port, have reason for believing that such removal would be inexpedient, and dangerous to the safety of vessels trading to Newcastle.

That, without detailing the reasons which enter into the consideration of the subject, it may be sufficient here to state, that the position of the Port of Newcastle, the difficulty sometimes of entering it, and the circumstance that its trade is principally with places to the southward of itself, make it important that vessels approaching it from that quarter should, at some distance before making the harbour, be able to discern the tide signals; it being dangerous at certain times, with the wind strong from the south, or south-south-east, to approach near the port, as at such periods vessels in light ballast trim (as almost all vessels are which come here for coal), being unable to enter the port, or to clear Point Stephens, are in much danger of being driven on shore in the bight between here and Port Stephens.

603—C

That

That for these reasons, which may be more detailed by inquiry, and because that Nobby's is considerably to the northward of the present station, your Memorialists pray that the removal of the Signal Station, as contemplated, may not be permitted.

And your Memorialists will pray.

Legislative Assembly.

NEW SOUTH WALES.

NAVIGATION OF CASUARINA CREEK.

(LETTER FROM MR. COMMISSIONER WISEMAN RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 30 September, 1858.

W. H. WISEMAN, ESQ., C.C.L. to THE CHIEF COMMISSIONER OF CROWN LANDS.

*Leichhardt, Crown Lands Office,
17 September, 1858.*

SIR,

I do myself the honor to report to you, for the information of His Excellency the Governor General's Government, that I rode down to the mouth of the Casuarina Creek, about 35 miles from here, where I found, by appointment, Mr. William Archer, in his small vessel, engaged in bringing up a cargo for Mr. Landsborough's sheep station on that creek.

2. Mr. Archer excused himself from taking me in his boat for the purpose of taking soundings, as he was anxious to return to the "Eagle," at that time in Keppel Bay. But Mr. Archer is of opinion, from what he saw of this creek, and of another large channel running into it on the west, and being nearly parallel with the Fitz Roy River, that there is anchorage and wharfage for hundreds of large vessels. As I could ascertain then no more I returned; but by this you will be able to judge whether further survey is desirable. This creek runs into Keppel Bay.

3. The Captain of the "Eagle" steamer, notwithstanding that his vessel was delayed for two days from sticking on a mudbank, reports that the Fitz Roy, when marked with buoys, will be the best navigable river yet seen by him in Australia.

I have, &c.,

W. H. WISEMAN,

THE CHIEF COMMISSIONER OF CROWN LANDS,
Crown Lands Office, Sydney.

Legislative Assembly.

NEW SOUTH WALES.

NAVIGATION OF RIVER MURRAY AND ITS EFFLUENTS.

(CAPTAIN CADELL'S CORRESPONDENCE UPON.)

Ordered by the Legislative Assembly to be Printed, 27 April, 1858.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 15 December, 1857, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table of this House :—

“ (1.) Captain F. Cadell's last Report respecting the clearing
“ of the River Murray, addressed to the Commissioner of
“ Public Works, South Australia, and a Letter addressed by
“ that gentleman to the Honorable the Secretary for Lands and
“ Public Works, dated the 8th December, 1857.

“ (2.) All Correspondence that has taken place between the
“ Executive and other Colonial Governments, relative to the
“ clearing of the River Murray, since 5 June, 1854.

“ (3.) All Correspondence that has taken place between the
“ Executive Government and other parties, respecting the
“ clearing of the River Murray, since 27 May, 1856.

“ (4.) Letter from Mr. Crawford, addressed to the Governor
“ General, relative to the cultivation of land on the banks of
“ the River Nile.”

SCHEDULE.

NO.

PAGE.

I.—CAPTAIN CADELL'S REPORTS.

1. Extract of a letter from Captain Cadell to Commissioner of Public Works, South Australia, respecting the clearing of the River Murray 3
2. Captain Cadell to Secretary for Land and Public Works, New South Wales, relative to the sum of £2,000, voted for clearing the River Murray, 9 December, 1857 3

II.—CORRESPONDENCE BETWEEN THE EXECUTIVE GOVERNMENTS OF NEW SOUTH WALES AND SOUTH AUSTRALIA, SINCE 5 JUNE, 1854.

1. Chief Secretary, South Australia, to Chief Secretary, New South Wales, respecting appropriation of £2,000 for the River Murray, to be expended under the direction of Captain Cadell, 9 February, 1857 4
2. Chief Secretary, New South Wales, to Chief Secretary, South Australia, in reply, 1 April, 1857 .. 5
3. Same to same, forwarding copy of Notice respecting rules to be observed by Masters of Steamers, &c., 11 April, 1857 6
4. Chief Secretary, South Australia, to Chief Secretary, New South Wales, acknowledging his letter of 1st April, and returning thanks, 14 May, 1857 6
5. Chief Secretary, South Australia, to Chief Secretary, New South Wales, with enclosure relative to removal of snags, River Murray, 30 July, 1857 7
6. Chief Secretary, New South Wales, to Chief Secretary, South Australia, in reply, 9 October, 1857 8

III.—CORRESPONDENCE IN NEW SOUTH WALES.

1. Chief Commissioner of Crown Lands to Under Secretary for Land and Public Works, with enclosure, respecting disposal of certain money realized by sale of Timber cut by the Murray River party, 27 February, 1857 8
2. Chief Commissioner of Crown Lands to Under Secretary for Land and Public Works, with enclosure, respecting payment of money, 16 March, 1857 9
3. & 4. Under Secretary for Land and Public Works to Chief Commissioner of Crown Lands, in reply, two letters, both dated 23 March, 1857 10-11
5. Under Secretary for Land and Public Works to Principal Under Secretary—transfer to Captain Cadell of unexpended money, and with the "Plant," 23 March, 1857 11
6. & 7. Under Secretary for Land and Public Works to Secretary to Treasury, and Auditor General—money to be placed to Commissioner Lockhart's credit, 23 March, 1857 11-12
8. Chief Commissioner of Crown Lands to Under Secretary for Land and Public Works, as to funds available, 27 April, 1857 12

IV.—MR. CRAWFORD'S LETTER.

- Mr. Crawford to Principal Secretary of State, as to irrigation of the valley of the River Murray, New South Wales, 28 April, 1857, with reports thereon by Surveyor General and Chief Commissioner of Railways 12

NAVIGATION OF RIVER MURRAY AND ITS EFFLUENTS.

I.—CAPTAIN CADELL'S REPORTS.

No. 1.

EXTRACT of a letter, dated 5 June, 1857, to the Commissioner of Public Works in South Australia, with regard to clearing the River Murray.

" In my letter stating the probable cost of a snag steamer at about £6,000, I was guided in my calculations by economy and the strength of the current in the river, being well aware at the same time that a much larger description of vessel, with more powerful engines, (equal to about 200 horse-power), is employed on the American rivers, but that they are frequently used to tow off steamers when aground,—a contingency not contemplated on the Murray.

" In my letter to the Chief Secretary, assigning 50 miles of clearing per annum as a boat's work, I alluded to the worst parts of the river, and such distance must only be considered as approximate, being possessed of no data as to the performance of a snag steamer in the removal of heavy timber, such as yarra-gum.

" My own opinion is, that I have under-estimated the boat's power of clearing. Setting down the navigable waters of South-eastern Australia at 4,500 miles, (the Mississippi being estimated at 25,000), a large portion of which requires no clearing; and allowing 100 miles per annum as one boat's work, she would take forty-five years in the execution of the whole, and three steamers would necessarily occupy fifteen years.

" Estimating the cost of three snag steamers at £6,000 13s. 4d. each, and the	£20,000
" annual working expenses, including the keeping up of the machinery at £2,500, would	112,500
" make a total of=£132,500, which, expended over a distance of 4,500 miles, would show a	£132,500
" cost of clearing, per mile, of under £30. Allowing that about four miles and two-thirds	
" of this immense river frontage were sold per annum, at the upset price, or say seventy	
" miles in fifteen years, it would fully repay the outlay to each Colony. The basin of the	
" Murray comprises upwards of 500,000 square miles, the sale of a two-thousandth part of	
" which would more than cover the expenditure.	

" But it would be preposterous to imagine that the enhanced value of Crown Lands, owing to the improvements of the rivers, would not exceed this calculation, as it would be absurd to suppose that such a small portion only would be sold during a period of fifteen years; and I would be afraid to commit to paper the future which I foresee for the valley of the Murray, many portions of which are, doubtless, capable of, and destined to support a large Anglo-Saxon population.

" F. CADELL."

" N. B.—It is also proposed to have a Sapper, or other competent surveyor, attached to each snag-boat, so as to chart the river, commencing from a given trigonometrical station on the Victoria Bank. Such charts should delineate an accurate longitudinal section of the levels of the waterbed, and shew how advantageous, or otherwise, the removal of any of the bars might prove to the permanent deepening of the river.

" F. C."

No. 2.

CAPTAIN CADELL to THE SECRETARY FOR LANDS AND PUBLIC WORKS, NEW SOUTH WALES.

Sydney, 9 December, 1857.

SIR,

I have the honor to submit the following suggestions relative to the sum of £2,000, on the Estimates for clearing the channel of the Murray.

Having stated in my evidence before the Committee of the House, now sitting, that the South Australian Government have a snag steamer all but completed for the purpose of
totally

totally extracting from the bed of the Murray all the fallen timber,—the proposed vote of £2,000 from your Government is, therefore, rendered practically useless.

I therefore proposed to the Committee that the sum in question should be transferred to the clearing of the Murrumbidgee, in addition to balance of £500 remaining out of vote in 1855.

And to carry into effect such proposition I would submit that clearing parties should be organized at the following points of the river, viz. :—No. 1, Wagga Wagga; No. 2, Yanko; No. 3, Burraboggy; No. 4, Kieta,—the last locality being the position where the clearing party belonging to the New South Wales Government left off in 1856. Should your Government deem it advisable to commence such operations in the early part of next month, the River Murrumbidgee would be cleared of all impeding timber, down to its lowest summer level, before the annual rise of its waters, and be rendered navigable during the six or eight months' continuance of such rise.

I have, &c.,

THE HONORABLE T. A. MURRAY,
Minister of Crown Lands and Public Works.

FRAS. CADELL.

II.—CORRESPONDENCE BETWEEN THE EXECUTIVE GOVERNMENTS OF NEW SOUTH WALES AND SOUTH AUSTRALIA.

No. 1.

THE CHIEF SECRETARY, SOUTH AUSTRALIA, to THE CHIEF SECRETARY, NEW SOUTH WALES.

*South Australia,
Chief Secretary's Office,
Adelaide, 9 February, 1857.*

SIR,

I have the honor to inform you that the Legislature of this Colony has appropriated the sum of Two thousand pounds, to be expended in improving the navigation of the River Murray, by removing snags and other impediments; but as the obstacles within the South Australian Territory are comparatively unimportant, it is proposed to expend the greater part of this sum in clearing the river wherever the greatest amount of benefit can be secured.

2. With this view Captain Francis Cadell has been furnished with funds, and appointed by this Government to superintend the work, which he proposes to commence immediately; and as the greater part, if not the whole, of his operations have to be carried on in that portion of the River Murray which is beyond the limits of South Australia, and within the Territory of Victoria or New South Wales, I have the honor to request you to move the Government of New South Wales to favor this project by instructing their officers who may have jurisdiction over the river and its banks to permit the operations of the working parties under Captain Cadell's command to be carried on without hinderance. A copy of the directions, as suggested by himself, under which Captain Cadell will act for the present, at the cost of this Colony, is herewith forwarded.

3. I cannot omit this opportunity of alluding to the importance to the several Colonies which are watered by the Murray of a combined effort to improve the navigation of the river; and to express a hope that a sense of general benefit will lead the several Legislatures to grant sums in proportion to their means to effect the common object, which may be expended by mutual arrangement, to be hereafter settled, under one general superintendence.

4. I have only to add that a similar communication has been addressed to the Government of Victoria.

I have, &c.

B. T. FINNISS,
Chief Secretary.

THE HONORABLE
THE COLONIAL SECRETARY,
New South Wales.

[Enclosure

[Enclosure in No. 1.]

Adelaide,
6 February, 1857.

SIR,

I have the honor to make the following propositions regarding the most advantageous method of expending the vote of £2,000 for the purpose of clearing the River Murray.

I would propose that two, or, if possible, three parties should be organized with as little delay as possible, and that they should commence operations from the following points.

1st party should commence at the junction station (near the junction of the Owens) where the clearing operations conducted at the expense of the New South Wales Government terminated last season.

No. 1 party have my instructions to make use of the boats, punts, cutting tools, &c., &c., the property of the New South Wales Government. I have advised the Commissioner of Crown Lands of the Murrumbidgee District on this head, and will arrange the matter with him, as it saves much valuable time when the water is low.

No. 1 party, provided early floods do not come down, could probably clear a channel flush with the low water level as far as Garrawangy or Boomanoomana, a distance by the river of about one hundred miles.

I would propose that Mr. Dorward, pilot of the R. M. N. Company, should leave for Melbourne this day per "White Swan;" from thence he should immediately proceed to the Murray District and comply with my letter of instructions, copy of which I enclose herewith.

Enclosure not sent.

No. 2 party having received their outfit from Melbourne, should commence at Boomanoomana, and, with the same proviso as to the early floods, should be able to clear flush with low water mark to Hennessy's (Bombabula,) or to the old Police Paddock, distance a little under one hundred miles.

When in that locality they would likely find the water rising so much on them as to put a stop to all profitable clearing in the bed of the stream; in such a case they would at once desist from any useless expenditure, and make the best of their way to the narrow channel of Lake Moira, where they would cut down the overhanging timber, which in some places impedes so much as not to leave above thirty feet of clear water across. Having accomplished this, the party would proceed to Maiden's Punt, and there be broken up.

No. 3 party, if found desirable that such a party should be started, at Gunawarra, about one hundred miles by land above Maiden's. This party would commence clearing the Victorian Channel of Campbell's Island, having effected which they would push down to Coghill's Run, (Pyangil,) and clear from its upper end to the junction of the Wakeool, where it would be broken up.

I enclose list of cutting tools necessary for the outfit of punts, of one officer and ten men, together with a list of material requisite for the punts and cooking utensils.

To meet the preliminary expenses of the parties, I would wish to draw from the Colonial Treasury (£600) six hundred pounds on account, as agreed upon during yesterday's interview.

I have, &c.,
FRAS. CADELL.The Honorable
The Chief Secretary.

No. 2.

THE CHIEF SECRETARY, NEW SOUTH WALES, to THE CHIEF SECRETARY, SOUTH AUSTRALIA.

New South Wales,
Colonial Secretary's Office,
Sydney, 1 April, 1857.

SIR,

I have the honor to acknowledge the receipt of your letter of the 9th February last, notifying the appropriation, by the Legislature of South Australia, of £2,000, for improving the navigation of the River Murray, by the removal of snags and other impediments, and stating, that as the obstacles within the South Australian Territory are comparatively unimportant, it is proposed to expend the greater part of that sum in clearing the river wherever the greatest amount of benefit can be secured; and in reply, to enclose a copy of a letter from the Secretary of the Department of Land and Public Works in this Colony, by which you will perceive that measures have been taken by this Government, not only to give Captain Cadell the use of the plant belonging to it, but also to authorize the expenditure by him of the residue of the money voted by the Legislature of this Colony for improving the navigation of the Murray River.

I have, &c.,
HY. WATSON PARKER.THE HONORABLE
THE CHIEF SECRETARY,
South Australia.

No. 3.

THE CHIEF SECRETARY, NEW SOUTH WALES, to THE CHIEF SECRETARY, SOUTH AUSTRALIA.

*New South Wales,
Colonial Secretary's Office,
Sydney, 11 April, 1857.*

SIR,

In transmitting herewith the copy of a Notice recently issued by this Government, respecting the rules to be observed by the Masters of Steamers navigating the River Murray, and by the owners or lessees of Punts or Ferries traversing that river,—I have the honor to request that you will be good enough to cause the purport thereof to be conveyed to the Masters of the Steamers which clear at Goolwa, bound up the River Murray.

I have, &c.,

THE HONORABLE

THE CHIEF SECRETARY,
South Australia.

HY. WATSON PARKER.

[Enclosure in No. 3.]

*Department of Lands and Public Works,
Sydney, 27 March, 1857.*

NAVIGATION OF THE MURRAY.

THE attention of Masters of Steam Vessels plying on the river Murray, and of lessees or owners of punts or ferries traversing that river, is invited to the propriety of observing the course indicated hereunder, for the prevention of injury to property,—the neglect of which may expose them, in case of collision, to legal consequences.

1. Whenever a steam vessel, passing up or down the river, shall arrive within one mile of a crossing place where a punt or ferry is established, the Master, or other person having charge of such vessel, shall give reasonable notice of the steamer's approach.

2. The lessee, or owner of the punt or ferry, should thereupon (due regard being had to the current, and to the position of the steamer with respect to the dangers of the channel,) keep as far as practicable to one or other side of the river until the steamer passes, and lower the ropes or chains (which should at all times be kept ready for sinking) to a sufficient depth below the surface of the water to keep clear of the paddles or screw of the steamers.

3. Masters of Steamers should on no account anchor, moor, or warp their vessels at any crossing-place, in a way that it will interfere with or obstruct the working of a punt.

JOHN HAY.

No. 4.

THE CHIEF SECRETARY, SOUTH AUSTRALIA, to THE CHIEF SECRETARY, NEW SOUTH WALES.

*South Australia,
Chief Secretary's Office,
Adelaide, 14 May, 1857.*

SIR,

Your letter of the 1st ultimo, reporting the measures adopted by the Government of New South Wales to assist in improving the navigation of the River Murray, having been forwarded to the Commissioner of Public Works in this Colony, for his information and remarks, I have now the honor to annex copy of that officer's reply.

"The thanks of this Government are due to the Government of New South Wales for the ready and serviceable co-operation tendered by them in aid of Captain Cadell's works for the development of the Murray Navigation."

I beg to express my entire concurrence in the above remarks.

I have, &c.,

THE HONORABLE

THE COLONIAL SECRETARY,
New South Wales.

T. B. FINNISS,

Chief Secretary.

No. 5.

THE CHIEF SECRETARY, SOUTH AUSTRALIA, to THE CHIEF SECRETARY, NEW
SOUTH WALES.

*South Australia,
Chief Secretary's Office,
Adelaide, 30 July, 1857.*

SIR,

I have the honor to enclose, for the information of the Government of New South Wales, a copy of a letter addressed to me by the Commissioner of Public Works in this Province, relative to the removal of snags from the bed of the River Murray.

In forwarding this communication the Government of Sir R. G. Macdonnell desire to express their hope that the mode of proceeding therein recommended will meet with the concurrence of the Government of New South Wales.

I have, &c.,

THE HONORABLE

THE COLONIAL SECRETARY,
New South Wales.

B. T. FINNISS,

Chief Secretary.

[Enclosure in No. 5.]

*Commissioner of Public Works' Department,
Adelaide, 15 July, 1857.*

SIR,

I have the honor to call your attention to the position of the measures directed towards rendering navigable the River Murray and its tributaries, with a view of those measures being submitted to the notice of the Governments of New South Wales and Victoria, in order to secure the greater advantages and economy of combined operations.

It seems now practically admitted that the development of this system of river navigation is the common interest of the three Colonies; and the extent to which both New South Wales and Victoria have recently indicated their willingness to contribute towards that end appears to justify the conclusion that these Governments will join that of South Australia in any reasonable scheme of common co-operation.

The present provision made by South Australia consists of an appropriation for the current year of the total sum of £10,000.

Of this sum, £2000 voted in the estimates of the year is being expended in maintaining at work three clearing gangs at as many separate parts of the river line. The limited mechanical means possessed by them allows no more than the cutting down of snags to the level of low water-mark. Their operations to the present time have extended over a distance of 300 miles.

The inadequacy of the means to produce that amount of clearance which the importance of the navigation demands, both as affecting the depth of draught of vessels which may be engaged in the service, and the length of the season over which they may ply, has led to the adoption of the more powerful instrumentality of a steam snag-boat, for the immediate construction and working of which the House of Assembly of this Province has, by resolution, pledged itself to appropriate a sum of £8,000.

It is estimated that a steam snag-boat, to cost from £600 to £700, will haul out from beneath low water-mark the various snag obstructions existing in the river, at the rate of 50 miles clearance per annum, and that the annual working cost will be about £2,500, exclusive of superintendence.

Captain Cadell has been authorised to proceed with the construction of this snag-boat, and when completed, its working will be confided to his charge.

The Government have tendered to Captain Cadell the annual sum of £250, with £100 additional as a covering allowance for travelling expenses incurred for this service, on behalf of South Australia.

Such being the relationship of South Australian expenditure in Murray River navigation clearance works, it is submitted, for the favorable consideration of the Governments of New South Wales and Victoria, whether common advantages would not accrue from an arrangement under which the means they also may respectively devote to the common end of these navigation facilities shall be placed under the charge of the same experienced and practical agent, Captain Cadell, to whom also would fall the additional proportionate shares of their annual remuneration.

In the event of the adoption by the three Colonies of such joint co-operation, under Captain Cadell, it is proposed that he be instructed, from time to time, to issue progress reports to the several Governments, detailing to each the nature and result of the expenditure of the common fund, as well as to the Government addressed the nature and result of the expenditure of its specific contribution.

I have, &c.,

SAML. DAVENPORT,

Commissioner of Public Works.

The Honorable

The Chief Secretary,
South Australia.

No. 6.

THE CHIEF SECRETARY, NEW SOUTH WALES, to THE CHIEF SECRETARY, SOUTH AUSTRALIA.

*New South Wales,
Colonial Secretary's Office,
Sydney, 9 October, 1857.*

SIR,

I have the honor to acknowledge the receipt of your letter of the 30th July last, enclosing the copy of one addressed to you by the Commissioner of Public Works in South Australia; relative to the removal of snags from the bed of the River Murray, and expressing a hope that the mode of proceeding therein recommended will meet with the concurrence of the Government of New South Wales; and I now transmit, for your information, the copy of a letter from the Department of Land and Public Works in this Colony on the subject, by which you will observe that the inquiry made in your communication cannot be definitely answered until the Legislative Assembly, to which it is proposed to submit the question of facilitating the navigation of the Murray, shall have expressed an opinion upon the entire matter.

I have, &c.,
CHARLES COWPER.

THE HONORABLE
THE CHIEF SECRETARY,
South Australia.

[Enclosure 1 in No. 6.]

*Department of Land and Public Works,
Sydney, 2 October, 1857.*

SIR,

With reference to your letter of the 25th ultimo, relative to the inquiry on the part of the Government of South Australia, as to whether any funds voted by this Colony for the improvement of the navigation of the Murray will be entrusted to Captain Cadell, for expenditure,—I am directed by the Honorable the Secretary for Lands and Public Works to request, that you will have the goodness to move the Honorable the Colonial Secretary to cause the South Australian Government to be informed that there is every probability that the question of facilitating the navigation of the Murray will be referred to a Select Committee of the Legislative Assembly; and that the question put by that Government cannot be definitely answered until the Assembly shall have expressed an opinion upon the entire matter.

I have, &c.,
MICL. FITZPATRICK.

The Principal Under Secretary.

III.—CORRESPONDENCE IN NEW SOUTH WALES.

No. 1.

THE CHIEF COMMISSIONER OF CROWN LANDS to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Crown Lands Office,
Sydney, 27 February, 1857.*

SIR,

In transmitting the enclosed communication from Commissioner Lockhart, requesting instructions relative to the disposal of a certain sum of money realized by the disposal of Timber cut by the Murray River clearing party, and suggesting that he may receive authority to hand over the amount in question to Captain Cadell, I do myself the honor, under the circumstances stated, to recommend that Commissioner Lockhart's request may be complied with.

I have, &c.,
GEO. BARNEY,
Chief Commissioner of Crown Lands.

THE UNDER SECRETARY FOR
LANDS AND PUBLIC WORKS.

[Enclosure

[Enclosure in No. 1.]

Murrumbidgee District,
Crown Lands Office,
17 February, 1857.

SIR,

I do myself the honor to submit, for your consideration, the following circumstances connected with the expenditure of the money voted for clearing the bed of the River Murray from obstructions to its navigation.

It is necessary for me to recall to your memory the manner in which Mr. Francis Cadell, the Managing Director of the Company, to whom the expenditure of the money voted was entrusted, proceeded to carry out the object in view. The plan adopted was by taking the low summer level of the water of the river as the basis of operations, and cutting all snags down flush with that level. Putting on one side the consideration as to whether these snags or the cut timber could be fairly considered as permanently got rid of; it would appear on the face of the *modus operandi* that any subsequent rise in the river would leave a clear navigable stream of the depth of that rise.

But this *modus operandi* to become practically beneficial pre-supposes two circumstances which in 1856 were not to be found:—

1. That the river shall be at the time of operation at or about the usual level of the summer season.
2. That whatever the level might be, it should be steady for some lengthened period, and that any variation should be slight.

In the summer of 1856, however, that the river never fell to its usual summer level was well known to the inhabitants of the district, being caused by the unusual quantity of rain—and that rain falling in heavy occasional gushes kept the pitch of the water constantly fluctuating.

It was, therefore, soon found by Mr. Cadell that cutting away the snags during these freshes was worse than useless, and it was agreed between us that the clearing party should, on these occasions, be employed in cutting and stacking wood fuel for the steamers, the same to be purchased by the Company, and the proceeds to be held at the disposal of the Government of the Colony of New South Wales.

I have, therefore, withheld from the last instalment now being paid to Mr. Cadell the sum of £187, until I receive further instructions on the matter from the Department. Mr. Cadell signs the voucher in full, including this sum of money, which, in reality, I apprehend, should be paid by me into the Treasury, as a collection on account of Government property sold; but it must be remembered that for the actual saving of this money the Treasury may be considered as actually indebted to the personal exertions of Mr. Cadell; and that had the party been allowed to sit down idle because they could not go on with the clearing (as would have happened in many cases) there would have been no question as to how this money might be disposed of—it would not have been in existence.

If the money be paid into the Treasury, it cannot be made available for clearing without a vote for the purpose of making it so available.

As Captain Cadell has informed me that he has obtained £2,000 from the Government of South Australia, and that the balance available from New South Wales will be highly welcome as a supplement, I do myself the honor to request that Captain Cadell may be informed that the sum of £187 may be added to the actual balance, and may be expended by him for the clearing of the River Murray.

I have, &c.,
CHARLES LOCKHART,
Commissioner of Crown Lands.

The Chief Commissioner
of Crown Lands,
Sydney.

No. 2.

THE CHIEF COMMISSIONER OF CROWN LANDS TO THE UNDER SECRETARY FOR LAND AND PUBLIC WORKS.

Crown Lands Office,
Sydney, 16 March, 1857.

SIR,

The sum of £2,000 having been voted to enable Captain Cadell to clear the Rivers Murray and Murrumbidgee, namely, £1,000 for each river, the expenditure, as intimated to me by the Colonial Secretary's letter of 27 May, 1856, was entrusted to Mr. Commissioner Lockhart, and, as it would appear, advances to the amount of £2,000 were made to him. At the end of last year he rendered an account, with a certificate, of the moneys disbursed. From that certificate it is to be gathered that the sum of £687 18s. 4d. was still available, and at the same time Mr. Lockhart returned to the Treasury, as unexpended cash, the sum of £616 7s. 10d., making the whole sum still available amount to £1,304 6s. 2d.

2. It will be seen from the letter of Mr. Lockhart, dated 7th instant, (copy of which is enclosed), that Captain Cadell is about to renew his operations, and Mr. Lockhart requests that the sum of £616 7s. 10d. may be again placed to his public credit in the London

Chartered Bank. To this, I conclude, there will be no objection; and I beg, therefore, to recommend that the authority of the Honorable the Secretary for Lands and Public Works may be obtained for the issue of the required amount, and that the Auditor General be instructed accordingly.

I have, &c.,

THE UNDER SECRETARY FOR
LAND AND PUBLIC WORKS.

GEO. BARNEY.

[Enclosure in No. 2.]

Murrumbidgee District,
Crown Lands Office,
7 March, 1857.

SIR,

I do myself the honor to report that Mr. Francis Cadell, the Managing Director of the Murray River Steam Navigation Company, has again commenced operations on the river by removing obstructions to the navigation.

Having submitted all the accounts for moneys expended out of the vote of £2,000 by the Colony of New South Wales, and having, on the 23rd January last, forwarded the balance, amounting to £616, to the Treasury, Sydney, I now do myself the honor to request that the sum of £616 may be re-placed to my credit in the London Chartered Bank, Sydney, in order to enable me to make prompt payments for the labor performed by the clearing parties.

I have, &c.,

The Chief Commissioner
of Crown Lands,
Sydney.

C. G. N. LOCKHART.

No. 3.

THE UNDER SECRETARY FOR LAND AND PUBLIC WORKS to THE CHIEF COMMISSIONER
OF CROWN LANDS.

Department of Land and Public Works,
Sydney, 23 March, 1857.

SIR,

Alluding to your letter of the 16th instant, in which, in reference to the improvement of the navigation of the River Murray by removing snags and other impediments, you request, in consequence of Captain Cadell being about to renew operations, that the unexpended balance, part of the vote of £2,000 for this purpose, may be placed to the public credit of the Commissioner of Crown Lands for the Murrumbidgee District, who has previously been entrusted with this work as far as this Colony was concerned,—I am directed to inform you that no replacement of the balance, namely, £616 7s. 10d., to Mr. Commissioner Lockhart's public credit has been authorized.

2. I am, at the same time, to apprise you that a communication has been received from the Government of South Australia, stating that the Legislature of that Colony has appropriated the sum of £2,000 to be expended for the like purpose, and that Captain F. Cadell has been furnished with funds and appointed to superintend the work, the greater part of which will have to be carried on within this Colony; and I am to request that you will be so good as to instruct the Commissioner of Crown Lands for the Murrumbidgee District to permit to Captain Cadell the use of the plant belonging to the Government of New South Wales, in the clearing of the Murray, during the present season, under the Government of South Australia.

3. I am also to request you to instruct the Commissioners to make arrangements with Captain Cadell for the expenditure of the residue of the vote of last year of the Legislature of this Colony in clearing the channels of the Murray and Murrumbidgee, in conjunction with the work now going on under that gentleman, if he can make arrangements for the expenditure of such balance beneficially, in addition to the South Australian vote.

4. I am, at the same time, to impress upon you the necessity of no time being lost in the matter, as the season will be too far gone for operations.

5. In conclusion, I am to request that you will be so good as to explain the conclusion of the first paragraph of your letter, now under reply, in which it is stated that the whole sum still available amounts to £1,304 6s. 2d.

I have, &c.,

THE CHIEF COMMISSIONER
OF CROWN LANDS.

MICL. FITZPATRICK.

THE CHIEF COMMISSIONER OF CROWN LANDS to THE UNDER SECRETARY FOR LAND AND PUBLIC WORKS.

*Crown Lands Office,
Sydney, 27 April, 1857.*

SIR,

In reference to the 5th paragraph of your letter, No. 57-950, of 23rd March, relative to funds appropriated for clearing the rivers Murray and Murrumbidgee by which you request me to explain the conclusion of the first paragraph of my letter of 16th March, in which it is stated that the whole sum still available amounts to £1,304 6s. 2d.—I have the honor to state, for the information of the Honorable the Secretary for Land and Public Works, that the object of the remarks alluded to was to shew the present state of the fund; but I now perceive that there was no necessity for an allusion to the £687 18s. 4d., for, although it is stated in Mr. Lockhart's summary of his account to be a balance in the Bank of New South Wales, still, on further reference to his certificate, it appears that this £687 18s. 4d. is due to Mr. Cadell, and, consequently, that there is only £616 7s. 10d. really available.

I have, &c.,

THE UNDER SECRETARY FOR
LAND AND PUBLIC WORKS.GEO. BARNEY,
Chief Commissioner of Crown Lands.

IV.—MR. CRAWFORD'S LETTER.

JAMES C. CRAWFORD, ESQ., to THE SECRETARY OF STATE FOR THE COLONIES.

*Reform Club, Pall Mall, London,
28 April, 1857.*

SIR,

During the summer of 1838-39 (south latitude) I proceeded down the Murrumbidgee and the Murray, from New South Wales to Adelaide. Two years afterwards I passed through Egypt on my way to England, and was then impressed with the possibility of converting the basin of the Murray into an Australian Egypt. I then foresaw the destiny of that valley in an indefinite future; but I could not then perceive that the rapid progress of colonization, brought about by the discovery of gold, would render a consideration of the subject desirable as early as the present moment.

From the Australian Alps, the highest known land on that continent, the principal sources of the Murray, viz., the Murrumbidgee, and the main branch of the Murray, (called the Hume before its junction with the Murrumbidgee) take their rise. Flowing at first through a mountainous country, as we proceed to the westward the ranges rapidly decrease in height, until immense plains are reached, covered with a scanty herbage of shrubs, and separated by narrow hillocks of sandy pine scrubs. These plains only require moisture to give them immense fertility.

The

The plains continue not much above the level of the river until the latter commences, in South Australia, to wear a deep bed through the fossiliferous limestone formation which is here reached. The valley from this point to Lake Alexandrina is narrow, and consists of alluvium, covered by a fine forest, the river meandering between steep cliffs, some 200 or 300 feet high.

The table-land is here desert. What I propose is, that before the Valley of the Murray shall have passed into private hands, a survey should be made, and plans adopted, for damming the Murray and its tributaries, at various points, and of forming irrigating canals through the plains.

Whether or not these proposed plans can be made subservient to the internal navigation of the country should also be inquired into. Connected with a system of railways diverging in three directions—to Sydney, to Melbourne, and to Adelaide—the irrigation of the Valley of the Murray would be tantamount to the creation of a new empire.

What I have to ask is, that you will submit my project to the consideration of the Government of New South Wales, Victoria, and South Australia.

I am, &c.,

JAMES C. CRAWFORD.

THE RIGHT HONORABLE

H. LABOUCHERE,

&c., &c., &c.

Foregoing forwarded to the Surveyor General, for his Report, under Blank Cover of 25 August, 1857.

M. F. P.

THE SURVEYOR GENERAL'S REPORT.

The reserves Murray and Murrumbidgee have been surveyed from their sources to the boundary of South Australia, with circumferentor and chain.

No levels have been taken, neither has any gauge of the waters been made, by this Department.

Some of the Royal Engineers (who are now under the supervision of the Chief Commissioner of Railways) are, I believe, engaged in preliminary railway survey in the Valley of the Murrumbidgee, and any survey, levelling, or gauging, which it may be considered desirable should be made, could, perhaps, be economically performed by them, otherwise the work could be done by contract, under the direction of the District Surveyor.

A copy of the Map has been furnished to Mr. George Macleay, for the use of the Committee of the Assembly.

GEO. BARNEY,

Surveyor General.

Surveyor General's Office,
Sydney, 21 November, 1857.

The foregoing Report, together with Mr. Crawford's letter, forwarded to the Chief Commissioner of Railways, with a request that he would state whether any Sappers and Miners are surveying in the Valley of the Murray, or that of the Murrumbidgee; and if so, whether they have sent in any report or sections.

B. C.

T. A. M.

2 December, 1857.

THE CHIEF COMMISSIONER OF RAILWAYS REPORT.

In reply to the Honorable the Secretary for Lands and Public Works (Minute 57-8822), herewith returned, on a proposed survey of the Valley of the Murray,—there are two Sappers now exploring the country between Yass and Albury, with a view to ascertain the best line for a railway; but the reports sent in from time to time by them are confined to this subject.

B. H. MARTINDALE.

1858.

Legislative Assembly.

NEW SOUTH WALES.

SNAG BOAT FOR RIVER MURRAY.

(FURTHER CORRESPONDENCE RELATIVE TO.)

*Ordered by the Legislative Assembly to be Printed, 9 June, 1858.**FURTHER Correspondence from the South Australian Government respecting the Snag Boat lately constructed by that Colony for clearing the River Murray.*

CHIEF SECRETARY, SOUTH AUSTRALIA, to COLONIAL SECRETARY, NEW SOUTH WALES.

*South Australia.**Chief Secretary's Office,
Adelaide, 20 May, 1858.*

SIR,

By instructions from His Excellency Sir R. G. MacDonnell, I have the honor to enclose, for the information of the Government of New South Wales, copy of a communication received from the Commissioner of Public Works in this Colony, covering a Report on the condition and capabilities of the Snag Boat recently constructed near Echuca, at the expense of the Government of South Australia, for the purpose of assisting to clear away the impediments at present existing in the bed of the River Murray.

The successful prosecution of this work may be regarded as necessary to the development of a route for the cheap transit of goods and produce to and from the interior of New South Wales, whilst its cost, if divided amongst the Colonies interested, will be trifling when compared with the advantages which must accrue to the resident population. I am, therefore, confident that these reasons will induce the Government of New South Wales to take their part in the scheme proposed in the letter of the Commissioner of Public Works of South Australia, dated 15th July, 1857.

I may add that, from data furnished to this Government, more than 5,000 tons of goods were forwarded during the season of 1857-8 up the River Murray for the consumption of the settlers and others in the interior of New South Wales and Victoria; and there exists good grounds for believing that were the impediments to the safe navigation of the river removed, the cost of the transit of these commodities would be much reduced, and the supplies consequently furnished to the consumers at a proportionately reduced price.

I have, &c.,

WM. YOUNGHUSBAND,
Chief Secretary.THE HONORABLE
THE COLONIAL SECRETARY,
New South Wales.

[Enclosure to the foregoing]

Public Works Office,
29 April, 1858.

Sir,

I have the honor to state, for the information of His Excellency the Governor-in-Chief, that the Snag Boat for the clearance of the Murray River, for which a sum of £8,000 was voted during 1857, has been completed and launched, and is now engaged in removing obstacles to the navigation of the river in the Upper Murray, beyond the frontiers of South Australia.

The Honorable the Treasurer during his recent visit to Victoria was requested by me to visit and examine the Snag Boat, and to furnish such a report thereon as his observation would justify.

From that report, a copy of which is enclosed, it will be seen that this Colony has every reason to be satisfied with the exertions of Captain Cadell, and with the result he has produced; and, so far as South Australia is concerned, the clearance of the river can now be proceeded with, with energy and success.

The question, however, arises, as to whether the burthen of the clearance of the Murray is to fall exclusively on South Australia. In the letter of Mr. Davenport to Mr. Finnis, of the 15th of July, 1857, (255-57), it is estimated that such a Snag Boat as has been built is capable of clearing fifty miles per annum. If the work does not proceed more rapidly, it is obvious that a very small impression will be made upon the obstructions which beset the navigation of the stream.

In view of this fact, Mr. Davenport recommended that the co-operation of the Victorian and New South Wales Governments should be invited to aid in carrying out this important undertaking; and accordingly letters were sent to those Governments on the 30th July, 1857.

The reply of the Victorian Government merely stated that the subject had been brought under the notice of the President of the Board of Land and Works; while that of New South Wales intimated that a definite answer could not be given until the House of Assembly had expressed its views thereon.

Whether any further action has been taken in the matter is not known; but as the uncertainty which exists has the effect of casting the onus of the clearing operations upon South Australia, it is desirable that the position of this Colony should be properly determined.

I have therefore the honor to suggest that the Governments of New South Wales and Victoria should be again addressed on the subject, that the whole of the circumstances should be brought before them, and a definite reply urgently requested.

I have, &c.,

T. REYNOLDS,
Comr. Public Works.

The Honorable

The Chief Secretary.

[Sub-Enclosure.]

Treasurer's Office, Adelaide,
23 April, 1858.

Sir,

In compliance with the request contained in your letter of the 30th ultimo, that I should visit Echuca, and hold a survey on the Steam Snag Boat that had been constructed for the South Australian Government,—I have the honor to report that, accompanied by Captain Cadell, I left Melbourne on the 7th instant, and arrived at Echuca on the evening of the 9th.

On the morning of the 10th I made a minute examination of the "Grappler," and report that she is complete, and fit for service. At noon, in order to test her power and efficiency, steam was got up, and the vessel proceeded against the stream at the rate of three miles per hour, and when abreast of the township several large snags were removed from the channel with great ease and rapidity, and were landed on the bank. Judging from this trial, I consider the vessel, in her model and fittings, well adapted for the purpose designated.

The "Grappler" is 80 feet long on deck, 26 feet beam in the widest part within the sponsons, with a depth of 6 feet 6 inches, and is propelled by paddle-wheels of 13 feet 6 inches in diameter; she is fitted with two 15 horse-power horizontal engines, by Napier, of Sydney, which work smoothly and satisfactorily; gearing for the lifting power is by means of leathern straps; she is fitted with three large substantial davits, each with a three-fold purchase, and has a powerful crane with a beam 27 feet long, capable of swinging snags of any weight high on the bank of the river; the scantling of the hull of the vessel is of red gum of superior quality, and the planking of the sides is of New Zealand and American pine, of 2½ inches thickness; she is flat-bottomed, and will probably draw a little over two feet water with her stores on board; she appears to have been well put together; she has ample space for the comfortable accommodation of the crew and officers. The only objection made was, that I considered the number and dimensions of the beams were not in proportion equal to the other scantling, and the only suggestions I offered to Captain Cadell were, that an extra beam should be placed at the after part of the paddle-boxes, and that as there was no inside lining, the floor should be lined in the way of the crews' quarters to prevent injury to the outer planking.

After

SNAG BOAT FOR RIVER MURRAY.

3

After the survey and trial of the boat, I proceeded to examine, with Captain Cadell, the papers relative to the cost of building; but as the whole of the accounts and vouchers had not been furnished, I could only arrive at an approximation of the cost of construction. The vouched accounts were as follows:—

			£	s.	d.
22 October, Account	No. 1	...	1,459	9	7
"	No. 2	...	1,238	9	5
26 February	No. 3	...	1,569	9	6
Vouched, but not yet forwarded to Commissioner ...	No. 4	...	1,799	18	11
Accounts not rendered (say)		...	500	0	0
			£6,567	7	5

To this sum has to be added the charge of Captain Cadell for superintendence.

The vessel will, therefore, cost the Government about £7,000, which sum, considering the high rate of labor at Echuca, and that so large a portion of the building materials, and the whole of the machinery, have been carted 170 miles from Melbourne, is not in excess of what might have been expected.

In conformity with the further instructions contained in your letter, I conferred with Captain Cadell in reference to his suggestions for the future employment of the vessel. In the course of conversation Captain Cadell informed me that he did not propose taking any action in, or continuous superintendence of the workings. He shewed me the correspondence between himself and the late Commissioner, Mr. Davenport, by which it appeared that a scheme had been proposed for building, at an estimated cost of £20,000, three steam Snag Boats, at the joint expense of the three Colonies of New South Wales, Victoria, and South Australia. They were to be constructed under the superintendence of Captain Cadell, and to be employed under his management for the general improvement of the navigation of the river. For his services he was to receive £250 per annum, and an allowance of £100 for travelling expenses from each Government. That the other Governments have not fallen into the proposed scheme for building the boat you are aware.

The question as to where the South Australian boat is to be employed will, I presume, depend on whether or not the other Colonies join in the working expenses now to be incurred; and I should have recommended Captain Cadell, under all the circumstances, to suspend the working until he could communicate with this Government on the subject; but, unfortunately, the crew had, for the most part, been shipped under written engagement for various periods, as set forth in the enclosed list. I thought it more advisable, therefore, not to interfere with the existing arrangement.

The comparative uselessness of South Australia attempting single-handed to clear the navigation of the river to the extent required is apparent; and as the greatest portion of the work to be accomplished is within the territories of the other Colonies, I have but little doubt that they would, in a spirit of fairness, if applied to, join in what must be considered a great Australian undertaking, or, otherwise, this Colony will have to bear the whole expense to be incurred in the employment of Captain Cadell, or some other equally competent person as superintendent and surveyor, without which there can be no satisfactory supervision over the workings of the boat, and no control exercised over the large monthly expenditure that must necessarily be disbursed in cash by the master.

I have, &c.,

JOHN HART,
Treasurer.

The Honorable
The Commissioner of Public Works.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 21. TUESDAY, 27 OCTOBER, 1857.

5. Navigation of the Murray and its Effluents :—Mr. George Macleay moved, pursuant to notice :—
- (1.) That a Select Committee be appointed to report upon the advantages likely to accrue to the Colony of New South Wales from opening up the navigation of the Murray and its Effluents, the Murrumbidgee and the Darling, and upon the best mode of clearing the Channels of these Rivers.
- (2.) That such Committee consist of the following Members :—Mr. Donaldson, Mr. Garland, Mr. Hay, Mr. Jamison, Mr. Jones, Mr. Lang, Mr. W. Macleay, Mr. Murray, and Mr. Suttor.
- Question—(1.) That a Select Committee be appointed to report upon the advantages likely to accrue to the Colony of New South Wales from opening up the navigation of the Murray and its Effluents, the Murrumbidgee and the Darling, and upon the best mode of clearing the Channels of these Rivers—put and passed.
- Question—(2.) That such Committee consist of the following Members :—Mr. Donaldson, Mr. Garland, Mr. Hay, Mr. Jamison, Mr. Jones, Mr. Lang, Mr. W. Macleay, Mr. Murray, and Mr. Suttor—put and passed.

VOTES No. 49. TUESDAY, 15 DECEMBER, 1857.

10. Navigation of the Murray and its Effluents :—Mr. George Macleay moved, pursuant to *amended* notice, That an Address be presented to the Governor General, praying that His Excellency will be pleased to cause to be laid upon the Table of this House, copies of the following Papers, with a view to their being referred to the Select Committee now sitting on the Navigation of the Murray and its Effluents :—
- (1.) Captain F. Cadell's last Report respecting the clearing of the River Murray, addressed to the Commissioner of Public Works, South Australia, and a letter addressed by that gentleman to the Honorable the Secretary for Lands and Public Works, dated the 8th December, 1857.
- (2.) All Correspondence that has taken place between the Executive and other Colonial Governments, relative to the clearing of the River Murray, since 5th June, 1854.
- (3.) All Correspondence that has taken place between the Executive Government and other parties respecting the clearing of the River Murray, since 27th May, 1856.
- (4.) Letter from Mr. Crawford, addressed to the Governor General, relative to the cultivation of land on the banks of the River Nile.
- Question put and passed.

[*Further Proceedings stopped by Prorogation.*]

1858.

VOTES No. 10. TUESDAY, 13 APRIL, 1858.

12. Navigation of the Murray :—Mr. George Macleay moved, pursuant to *amended* notice,—
- (1.) That a Select Committee be appointed to report upon the advantages likely to accrue to the Colony of New South Wales from opening up the navigation of the Murray, the Wakool, the Edwards, the Murrumbidgee, and the Darling—and upon the best mode of clearing the Channels of those Rivers ;—and that all proceedings before the Select Committee of last Session be referred to this Committee.
- (2.) That such Committee consist of the following Members,—Mr. Donaldson, Mr. Hay, Mr. Jamison, Mr. Jones, Mr. William Macleay, Mr. Murray, Mr. Robertson, Mr. Suttor, Mr. White, and the mover.
- Question put and passed.

VOTES

VOTES No. 21. FRIDAY, 30 APRIL, 1858.

18. Navigation of the Murray :—Mr. George Macleay moved, pursuant to notice, That the Return to the Address in reference to the Navigation of the Murray and its Effluents, adopted on motion of Mr. George Macleay, on the 15th December, 1857, and ordered to be printed on the 27th April, 1858, be referred to the Select Committee on the Navigation of the Murray, the Murrumbidgee, the Wakool, the Edwards, and the Darling.
Question put and passed.
-

VOTES No. 76. FRIDAY, 13 AUGUST, 1858.

8. Navigation of the Murray and its Effluents :—Mr. William Macleay moved, pursuant to notice given by Mr. George Macleay, That the Copies of Mr. Surveyor McCabe's Reports to the Surveyor General on the River Darling, laid upon the Table of this House on the 3rd instant, be referred to the Select Committee now sitting on the "Navigation of the Murray and its Effluents."
Question put and passed.
-

VOTES No. 111. FRIDAY, 29 OCTOBER, 1858.

3. Navigation of the Murray :—Mr. Hay, on behalf of Mr. George Macleay, as Chairman, brought up the Report from, and laid upon the Table the Evidence taken before the Select Committee appointed on the 13th April last, to report upon the advantages likely to accrue to the Colony of New South Wales from opening up the Navigation of the Murray, the Wakool, the Edwards, the Murrumbidgee, and the Darling, and upon the best mode of clearing the channels of those rivers, with Minutes of Proceedings and Appendix.
Ordered to be printed.
-

1858.

NAVIGATION OF THE MURRAY, &c.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly appointed on the 13th April last, "to report upon the advantages likely to accrue to the Colony of New South Wales from "opening up the Navigation of the Murray, the Wakool, the Edward, the Murrumbidgee, "and the Darling, and upon the best mode of clearing the Channels of these Rivers;" and to whom at the same time were referred "all Proceedings of the Select Committee "of last Session;" on the 30th April last, "the Return to the Address in reference to "the Navigation of the Murray and its Effluents, adopted on motion of Mr. George "Macleay, on the 15th December, 1857;" and on the 13th ultimo, "Copies of Mr. "Surveyor M' Cabe's report to the Surveyor General on the River Darling,"—have agreed to the follow Report:—

Your Committee have to express their regret that they should not have laid their Report upon the Table of your Honorable House before this late period of the Session. The delay is to be attributed to the hope which they have entertained, up to the last moment, of being able to procure further information on the very important subjects which they have had under their consideration.

Of the five rivers embraced in their inquiry, your Committee may now state that three, the Murray, its anabranch the Wakool, and the Murrumbidgee, have been navigated either completely or partially. The channels of the other two, the Darling and the Edward, another anabranch of the Murray, have not yet been entered.

The navigation of the Murray was first opened in 1853, and for some years past a considerable number of large steam-boats, with their attendant barges, have been plying on its waters, from its embouchure to Albury, a distance of nearly 1,800 miles,—1,300 of which are within the Territory of New South Wales.

Vide Appendix A. to evidence given by Captain Cadell on 12 Nov., 1857.

The channel of the Wakool has been tested for 50 miles, and within the last few weeks the highly gratifying fact has been made known to the Colony that the navigation of the Murrumbidgee has also been achieved.

Captain Francis Cadell, who so honorably distinguished himself by taking the first steam-boat to Albury, has now passed up the Murrumbidgee to Gundagai in a similar vessel,—the towns Albury and Gundagai being regarded as the extreme points on their respective rivers which at present it is considered desirable to attain.

Vide separate Appendix D.

Thus, within the Territory of New South Wales:—

The Murray has been navigated about ...	1,300 miles
The Wakool	50 "
The Murrumbidgee	800 "
Making a total of	2,150 "

To which may be added as yet to be navigated:—

The Edward and Wakool about...	350 miles
The Darling	800 "
Making an aggregate amount of navigable water	—
of	3,300 miles.

394—b

Adding

Adding 200 miles for lakes in connection with the Murray, and the navigable portion of that river above Albury, Captain Cadell makes this aggregate 3,500 miles—an enormous amount of water carriage, which in some measure compensates the Colony for the want of a seaboard on its southern and western limits. It must, however, be borne in mind, that from the tortuosity of all these rivers this aggregate would be represented on land by less than half of the distance.

The Rivers Murray and Murrumbidgee have their *basins* in a country rich in minerals, and admirably adapted, so far as soil and climate go, for agriculture; and both of them are navigable for some considerable distance within this superior region. Where they fall into the depressed levels of the interior, from the peculiar aridity of the climate, agriculture ceases to be practicable. On the other hand, the dry temperature and the saline vegetation of the vast and open plains on their banks, are singularly congenial to the flocks and herds there depastured. The latter remarks apply also to the country watered by the Wakool, the Edward, and the Darling.

The Murray, with its anabranches abovenamed, and the Murrumbidgee may be said to be navigable, as a matter of certainty, from May to the end of December in every year, and for the whole twelve months in those years when more than the average amount of snow and rain falls in the Alpine country in which they take their rise. The Darling not having its sources in mountains of such altitude, though it drains an enormous extent of country, cannot be looked upon as so certain; though Captain Cadell is of opinion that it would be navigable in all ordinary seasons were the drift timber, which at present encumbers it, once removed.

The boats and barges employed, when laden, are said to draw on the average 4 feet 6 inches. If this amount could be reduced to 2 feet, as is the case with the steamers on the Rhone, and many other shallow rivers in other parts of the world, there can be little doubt but that the two principal rivers could be made available for traffic from one year's end to the other; but their courses are so sinuous, their bends so numerous and so short, that it is impossible, according to Captain Cadell, to use vessels of that size which would give the displacement requisite for such light draught.

Before entering upon the advantages which in the opinion of your Committee the Colony must derive from the opening up of these rivers, they would wish to combat the idea, which seems to have obtained in Sydney, that the interest of that city must necessarily suffer thereby. Your Committee would point out that the large saving derived from water carriage necessarily ensures at a much earlier period than would otherwise take place the complete occupation of the districts in question, and that the certain result of such occupation is the increased production of animal food, a matter which has lately become to Sydney a question of the greatest interest, of far more import, in fact, to the inhabitants of the city at large than the retention of the traffic which has passed, or may pass, into the hands of the South Australian merchants. Your Committee would also take this opportunity of repelling the assertion that commercial severance must, as a consequence, be attended sooner or later by political separation. All frontier states must necessarily be more or less commercially connected with those with which they are conterminous; yet experience shows that it is precisely on the frontiers that annexation is always most unpopular. Your Committee are not disposed to ignore the fact that in the districts watered by these rivers a cry for separation has already arisen; but the desire, as at present expressed, is not for a junction with that Colony with which there is most traffic, but for a *distinct existence*; and this desire, your Committee believe, would entirely cease, were the fair and legitimate demands of the inhabitants to be met in an equitable and liberal spirit.

Proceeding with the benefits which are likely to result from carrying out the objects in view, your Committee would indicate, first, the social improvement that must inevitably attend the facilities for intercourse thus obtained throughout the whole length of the country permeated by these rivers, but more especially in the pastoral districts before described, through which the cheap transmission of the comforts and conveniences of life, heretofore unattainable, will give a fixed and civilized character to a society which has been up to the present time comparatively rude and nomadic. Under such improved circumstances families will be found where previously a male population only existed, and towns will arise

as commercial depôts, and as stations for laborers and mechanics, from whence in due time Churches and Schools will each dispense their own peculiar blessings.

With reference to the more direct and material advantages, among the chief may be classed the demand which must arise for the possession of the adjacent land, and this not only in the mountain country, which is so well adapted for agricultural occupation, but also in the level and exclusively pastoral districts. With the conveniencies and certainty secured by water communication, it cannot be doubted that many proprietors of stations will become fixed and permanent residents, and as such seek to obtain the fee simple of the land on which they may have placed their establishments. Your Committee are fortified in this belief by the fact, that even at this early period of the navigation of these rivers, upwards of 71,000 acres of land in their neighbourhood have already been sold, while twenty towns,—some of them of considerable size, such as Albury, Deniliquin, Gundagai, Tumut, and Wagga Wagga,—have been called into existence, to be augmented in a short time by seven more, about to be proclaimed.

The land on the banks of the earlier settled rivers, and on the Darling, as high as Fort Bourke, is all held under pastoral license, as are also the intermediate countries lying between the Murray and the Murrumbidgee, and between that river and the Lachlan; but the almost boundless plains which stretch from the Lachlan to the Darling, and from the western bank of that river to the South Australian boundary, are still unoccupied. These extensive regions contain areas sufficient to depasture many millions of sheep and cattle, and are believed to be, like other salt-bush countries, especially adapted for that purpose. Unfortunately they are without natural supplies of water, and under ordinary circumstances would, in all probability, be left untenanted for generations yet to come. With the facilities, however, offered for such operations by cheap access, there is reason to believe that, before any great lapse of time, these countries will be supplied with water by artificial means, and become as thickly covered by flocks and herds as the immediate banks of the river. Thus will the general wealth of the Colony be enormously increased, and its revenue proportionably improved. And while on this subject, your Committee would refer to Mr. Commissioner Perry's letter, (Appendix A, page 17), as evidencing the great enhancement of the value of leases of Crown Lands in the western interior districts, which has already been brought about by the successful navigation of the Murray River alone. Not only, however, will this new country be made available by the means just mentioned for pastoral purposes, but, from the possession of similar facilities, the back country in the other localities already specified may be made to depasture far more stock than at present—a consideration, as has been said before, of great and increasing importance, the price of butcher's meat throughout the whole Colony being now nearly as high as it is in the Mother Country.

Your Committee feel that too much stress cannot be laid upon the fact, that, unless it were for the medium offered by the waters of the Murray, by far the greater part of the dutiable goods consumed by the frontier population would be brought from Victoria, and that no revenue would be derived from these articles by New South Wales unless through the agency of frontier Custom Houses—a peculiarly unpopular, and, as experience has pointed out, a most inefficient system. By the arrangement at present subsisting with South Australia—an arrangement which evinces great liberality on the part of that Colony, and for the history of which your Committee would refer to the evidence of the Honorable Stuart Donaldson, Esquire—New South Wales secures the whole of the revenue of the articles that are river borne. And your Committee would here mention, that, though the proposed Railway from Melbourne to Echuca, when completed, may enable the Victorian merchants to undersell those of Adelaide in that immediate neighbourhood, this will not affect the traffic on the Darling, the Murrumbidgee, and the Lachlan; and, as the carriage from Echuca to Albury, &c., must continue to be by water, the same means, if a proper arrangement can be entered into with the Victorian Government, will still be offered for the collection of duties on goods to be conveyed upwards.

That the basins of both the Murray and Murrumbidgee are highly auriferous, and that they contain other valuable metals are now recognized facts. The gold fields of these districts, though yet in their infancy, are beginning to attract general attention. One of them indeed, Adelong, which is situated within 16 miles of a point already reached by the steamer "Albury," promises shortly to take a high rank among the most remunerative diggings

diggings of New South Wales. For the proper development of the wealth of these gold fields, abundant supplies, both of food and machinery, accompanied by certainty of delivery, are absolutely essential, and it is by water carriage alone that these accessories can be obtained.

Your Committee finally would point out—among the benefits to be derived from supplying the wants of these districts by water—the great amount of labor now employed in carting up goods by land, which would thus be rendered available for other purposes; to which may be added the saving of human food in the bullocks that are now in great numbers annually wasted in such employment.

The advantages, then, that this Colony would obtain by the opening up the navigation of these rivers may be thus summed up:—

A rapid settlement of the country on their banks.

An improved social condition of the population.

A great increase of the general wealth of the Colony.

A large addition to the revenue through the increased sale of land and leases of runs.

The means of collecting the whole of the duties leviable upon goods consumed in the adjacent districts.

An increased impulse given to the development of the gold fields in the neighbourhood.

The saving of human labor, and the saving of human food.

All these, your Committee submit, are matters of deep import, and not the less worthy of consideration from the fact of this Colony just now being threatened with a very great curtailment of her eastern sea-board.

With respect to the next branch of their inquiry,—as to what has been done in the way of clearing the channels of the rivers enumerated, your Committee have to report, that on

THE MURRAY

About 700 miles have been partially cleared, that is, the drift timber for that distance, in the places where it offered most obstruction, has been cut down to the lowest water-mark. For the most part, this has been done at the expense of South Australia, but about 220 miles have been so cleared at the cost of New South Wales. These operations have not been continuous, since many reaches of the river were found comparatively free from obstructions of this nature; as they have, however, been put into effect where most needed, the Murray may be said to be cleared for the whole distance from its mouth to Albury, so far as hand labor can be rendered effectual for that purpose. There is, indeed, an exception of a small portion above the Wakool, but for this there are South Australian funds in hand. The whole of the operations which have been done in this way have been carried on by the River Murray Navigation Company, under the immediate superintendence of Captain Cadell, and that the work has been well done is shewn by the certificates given by Masters of steamers which were running in opposition to the boats of the Company. Latterly, a complete and effectual process for clearing the channel of this river has been commenced by the South Australian Government, through the agency of a snag-steamer.

Vide page 20 of Evidence.

THE MURRUMBIDGEE.

Of this river about 70 miles have been cleared in the partial manner above mentioned, commencing at the junction of the Lachlan and going downwards—that portion of its channel offering most obstruction. This work, also carried on under the superintendence of Captain Cadell, cost £500. In the opinion of that Gentleman, the sum now in hand (including the sum of £2,000 voted during the present Session) available for the purpose, will be sufficient to clear the whole river in this mode, from its junction with the Murray to Wagga Wagga, and a further sum of £1,000 would suffice for the same process between that town and Gundagai.

THE WAKOOL, THE EDWARD, AND THE DARLING.

Remain still in their natural state.

With

With respect to the means through which these operations have been carried on, your Committee have to state, that in 1855 a sum of £1,000 was voted by the Legislative Council of New South Wales for the purpose of clearing the Murray, and a further sum of £1,000 for the clearing of the Murrumbidgee, of which latter vote £500 only, as above mentioned, has been expended. Your Honorable House has just voted £2,000 with a like view—thus, by New South Wales, £4,000 in all has been devoted to the purpose described.

In 1857, South Australia, following the example of New South Wales, voted £2,000 to be applied to the clearing of the Murray, and in the same Session a sum of £8,000 for the construction of a snag-steamer, and to meet its working expenses, was placed on the Estimates, and passed.

MODES OF CLEARING.

The partial clearing alluded to consists in cutting off, at the season when the water is lowest, all projecting timber, allowing the lighter boughs to float down the stream and rolling the logs into the deep holes. This process, though it enables the various vessels navigating the Murray, and your Committee may now add the Murrumbidgee, to pass up and down, has not freed them altogether from risk of injury, and still less from the annoyance of continual "bumping" when the water is low. It is obviously an imperfect mode of obtaining the object in view, but is perhaps the only practical method where immediate effect is desired, and that at no considerable cost.

The South Australian Government, as before mentioned, has lately placed a snag-steamboat upon the Murray, which is understood to be doing its work most effectually. This boat cost between £5,000 and £6,000, and the remaining portion of the vote of £8,000 is considered sufficient to pay its working expenses for twelve months, in which time Captain Cadell calculates that it will clear thoroughly about 50 miles of the river.

Vide Mr. Treasurer Hart's letter, Separate Appendix C.

It was originally proposed by the South Australian Government that New South Wales and Victoria should each build and equip a similar boat; and it was understood that this proposal was favorably entertained by the then existing Governments of both these colonies. This arrangement however has not been carried out; on the part of New South Wales, your Committee believe principally, if not entirely, from the difficulty which has existed in raising the requisite funds.

This state of things having happily now passed away, your Committee cannot but express the strongest hope that the Government will at once take steps to ascertain by the examination of a competent officer the degree of success which has attended the use of the snag-steamboat thus far, and should it be found to have accomplished its object without materially exceeding the estimated expenditure, to make the necessary arrangements for preparing and equipping two such boats—one for the Murray, and the other for the Murrumbidgee.

It will be seen on reference to Captain Cadell's evidence, page 23, in his answer to questions 99 *et seq.*, that he is of opinion that the Colony of Victoria is so deeply interested in this matter, from the fact that the Murray is regarded as the great feeder for the River Murray Railway, that it would be prepared, in conjunction with South Australia alone, to do all that is needful on this river. Should this be found to be the case, one such boat on the Murrumbidgee would be all that at present perhaps could be expected.

Before leaving this part of the subject, your Committee would beg to refer to the letter of Mr. Eaton, obtained through the kindness of the late American Consul Mr. Williams.

Vide separate Appendix B.

The machine described in the latter part of Mr. Eaton's communication your Committee are inclined to believe might be found of great service, in the narrow parts of the Murrumbidgee more especially. It is simple and cheap, and, as some of the Members of your Committee have had an opportunity of observing, of extraordinary power: such machines might easily be constructed on the spot where required; and your Committee would suggest that Captain Cadell, to whom it is understood the superintendence of these works is to be committed, should be directed to test their efficiency at once.

One thousand pounds appear from Captain Cadell's evidence to be still required for this preliminary clearing of the Murrumbidgee between Wagga Wagga and Gundagai. As the same general superintendence could take in hand a number of detached parties as easily

as a few, and as it is desirable to get the whole line of the river cleared during the next working season, your Committee would beg to recommend that a further sum of £1,000 be put on the Supplementary Estimates for 1858, for this purpose.

The clearing of the channels of the Wakool and the Edward is comparatively of less importance; but the clearing of the Darling, which runs so far into the north-western interior, scarcely otherwise approachable, is of little less consequence than the opening of the two principal rivers, and no time should unnecessarily be lost in paying due attention to so desirable a work.

Your Honorable House will not have failed to observe that much has already been done in the matters under consideration, and that, at an expense which may be regarded as trifling when compared with the important results obtained. Your Committee feel it their duty to point out how very much of this has been done by Captain Cadell.

Since the year 1852 the whole of that gentleman's time and energies has been devoted to the opening up of these rivers. In 1854 he reached Albury, in the "Lady Augusta," a steamer of 72 tons, and he has just succeeded in attaining Gundagai, a town which occupies the same position on the Murrumbidgee as Albury does on the Murray, in a steamer of still larger tonnage: thus opening up for commercial purposes at least 2,600 miles of internal water carriage. He has in the meantime also proved that the sea mouth, which is common to all these rivers, and which had been regarded as peculiarly dangerous, is with proper precautions a perfectly practicable exit.

He has further superintended the clearing of both the Murray and the Murrumbidgee so far as this operation has gone, and that in a manner which probably could have been carried out by no other person than himself.

For these services the Legislature of South Australia has awarded him—or rather the company to which he belonged—£6,500, the third of which sum only fell to his share. From New South Wales, deriving at least as much benefit from his exertions as South Australia, Captain Cadell has received *nothing*.

In 1854 a motion was made in the Legislative Council that a sum of £3,000 should be granted to Captain Cadell in requital of his services on the Murray, which was subsequently altered into a proposition that a bonus of £2,000 should be given to Captain Cadell upon his taking a steamer to Albury, and another bonus of a like amount upon his carrying up a steamer to Gundagai. This motion was withdrawn, on the understanding that it was to be brought on again at some subsequent period.

Your Committee feel that they are doing but an act of common justice when they recommend that a sum of money, somewhat commensurate with that which he has received from South Australia, should be awarded by the Government of New South Wales to this most enterprising Colonist, as an acknowledgment of the extraordinary zeal and energy which he has devoted to this particular cause, and of the great practical skill which has so effectually secured its consummation.

With respect to the letter which has been referred to your Committee, addressed by Mr. Crawford to the Secretary of State for the Colonies, drawing a comparison between the valley of the Nile and that of the Lower Murray, and suggesting that no land in the latter district should be alienated until after some general plan for its irrigation might be determined upon, your Committee are of opinion that as an enormous amount of rich agricultural land, requiring no expensive preparation of this description, is available in other parts of the Colony, such a gigantic work as that contemplated cannot be required or looked for, for many years to come; and that, when the proper time arrives for such operations, they can be carried on as well by private proprietors under Legislative enactment, as by the Government.

Your Committee therefore are not inclined to urge the adoption of Mr. Crawford's recommendation.

Mr.

Mr. Surveyor McCabe's reports on the River Darling, also referred to your Committee, contain a great amount of valuable information; but as they refer almost exclusively to the character of the country on its immediate banks, now occupied, and not to the channel and capabilities of the river itself, and are, moreover, very voluminous, your Committee have not thought it worth while to append them to this Report.

Your Committee in the course of their inquiry, while seeking for information respecting the quantity of live stock and goods which passes across the frontier from New South Wales to Victoria, have been struck by the fact that it is in the latter Colony alone that a registry of it is kept. From the Appendix to Captain Cadell's evidence of 20 November, 1857, and separate Appendix F, Nos. 1, 2, and 3, it will be seen that it is very great indeed—amounting at this time, probably, in value to not less than a million and a half sterling annually.

It is obvious that, for the sake of the commercial credit of New South Wales, this most important traffic, far from being ignored, should be recorded regularly in the financial statistics of the Colony.

Your Committee, therefore, in addition to the recommendations contained in this Report—though the matter may not come strictly within the scope of their inquiry—would strongly urge that proper steps be taken to collect this information at all the principal crossing-places on the frontiers both of Victoria and South Australia.

GEO. MACLEAY,
Chairman.

*Legislative Assembly Chamber,
Sydney, 29 October, 1858.*

1857.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 12 NOVEMBER, 1857.

MEMBERS PRESENT:—

Mr. G. Macleay,		Mr. Garland,
Mr. W. Macleay,		Mr. Hay,
	Mr. Suttor.	

Mr. G. Macleay was called to the Chair.
Committee deliberated.

The Chairman requested the various members of the Committee then present to supply him with the names of any witnesses whose evidence might, in their opinion, be found serviceable in rendering this inquiry as complete as possible, and directed the Clerk to take a list of such names as a datum to direct the Committee in their subsequent selection of witnesses.

After further deliberation,—
Captain F. Cadell examined.

[Adjourned till Tuesday next, at Ten o'clock.]

TUESDAY, 17 NOVEMBER, 1857.

MEMBERS PRESENT:—

George Macleay, Esquire, in the Chair.

Mr. Jones,		Mr. Donaldson,
Mr. Suttor,		Mr. Hay,
Mr. W. Macleay,		Mr. Garland.

The Chairman, having before him the manuscript evidence given by Captain F. Cadell on the 12th instant, read the same.

Captain F. Cadell further examined.
Committee deliberated.

Motion made and *Question*,—"That a letter be forthwith addressed by the Chairman to the Under Secretary for Lands and Public Works, requesting him to supply the Committee, at his earliest convenience, with the undermentioned documents, viz. :—

- "(1) Captain F. Cadell's last Report respecting the clearing of the Murray River addressed to the Commissioner of Public Works, South Australia.
- "(2) All correspondence that has taken place between the Executive Government and other Colonial Governments relative to the clearing of the River Murray, since 5th June, 1854.
- "(3) All correspondence that has taken place between the Executive Government and other parties respecting the clearing of the River Murray, since 27th May, 1856.
- "(4) A letter from Mr. Crawford, supposed to be addressed to the Secretary for Lands and Public Works, relative to the cultivation of land on the banks of the River Nile."

[Adjourned till Friday next, at Ten o'clock.]

FRIDAY, 20 NOVEMBER, 1857.

MEMBERS PRESENT:—

George Macleay, Esquire, in the Chair.

Mr. Donaldson,		Mr. Hay,
Mr. W. Macleay,		Mr. Suttor,
Mr. Garland,		Mr. Jamison.

Captain F. Cadell further examined.

Motion made and *Question*—"That the Reverend W. B. Clarke be summoned before this Committee as a witness on Thursday next, for the purpose of being examined relative to the auriferous and other mineralogical features of the basin of the River Murray"—
agreed to.

[Adjourned till Thursday next, at Ten o'clock.]

THURSDAY,

THURSDAY, 26 NOVEMBER, 1857.

MEMBERS PRESENT:—

Mr. Hay,		Mr. Donaldson,
Mr. Garland,		Mr. Suttor,
Mr. Jamison,		Mr. W. Macleay.

Mr. Hay, in the absence of the Chairman, was called to the Chair.

Committee deliberated, and it was *Resolved*:—

"That the two plans appended to the evidence given by Captain F. Cadell before the Committee on 20th instant be lithographed."

By direction of the Chairman, letter from the Under Secretary for Lands and Public Works, in reply to a communication addressed to him by the Chairman, requesting to be supplied with certain documents, &c., for the information of the Committee, under a Resolution agreed to on the 17th instant,—read by the Clerk.

Committee deliberated.

Motion made (Mr. W. Macleay) and *Question*,—"That the Chairman be now requested to move in the House, That an Address be presented to the Governor General, praying that His Excellency will be pleased to cause to be laid upon the Table of the House, copies of the following papers, with a view to their being referred to the Committee."

- "(1.) Captain F. Cadell's last Report respecting the clearing of the River Murray, addressed to the Commissioner of Public Works, South Australia, and a letter addressed by that gentleman to the Honorable the Secretary for Lands and Public Works, dated the 8th December, 1857.
- "(2.) All correspondence that has taken place between the Executive and other Colonial Governments relative to the clearing of the River Murray, since 5th June, 1854.
- "(3.) All Correspondence that has taken place between the Executive Government and other parties respecting the clearing of the River Murray, since 27th May, 1856.
- "(4.) Letter from Mr. Crawford, addressed to the Governor General, relative to the cultivation of land on the banks of the River Nile."

Captain F. Cadell, further examined.

Rev. W. B. Clarke, examined.

[Adjourned till Wednesday next, at Ten o'clock.]

WEDNESDAY, 2 DECEMBER, 1857.

MEMBERS PRESENT:—

George Macleay, Esquire, in the Chair.

Mr. Donaldson,		Mr. Suttor,
Mr. Jamison,		Mr. Jones,
Mr. W. Macleay,		Mr. Hay.

The Honorable S. A. Donaldson, a member of the Committee, examined in his place.

Committee deliberated.

[Adjourned till Thursday, 17th instant, at Ten o'clock.]

THURSDAY 17 DECEMBER, 1857.

MEMBERS PRESENT:—

George Macleay, Esquire, in the Chair.

Mr. Hay,		Mr. Jones.
----------	--	------------

Committee deliberated relative to the expediency of making a Progress Report to the House, and as to the tenor of such Report.

Motion made (Mr. Hay) and *Question*,—"That the Chairman be requested to draft a Progress Report for the consideration of the Committee"—*agreed to*.

[Adjourned.]

[Further Proceedings stopped by Prorogation.]

1858.

WEDNESDAY, 9 JUNE, 1858.

MEMBERS PRESENT:—

Mr. G. Macleay,
Mr. White,
Mr. Suttor,

Mr. Hay.

Mr. Jones,
Mr. Donaldson,
Mr. W. Macleay,

Mr. George Macleay was called to the Chair.

By direction of the Chairman, Resolution of the House appointing the Committee, and referring thereto all Proceedings of the Committee of last Session—read by the Clerk.

Committee deliberated.

Motion made and *Question*—"That these Proceedings be now adopted as part of the "Proceedings of this Committee"—*agreed to*.

The Chairman stated that the Clerk had already, under his instructions, transmitted a copy of the Minutes of Evidence taken before the Committee of last Session to each member of the Committee.

By direction of the Chairman, Resolution of the House, dated 30th April last, referring to the Committee a Return to an Address moved for by the Chairman on the 15th December last under a Resolution agreed to by the Committee of last Session on the 26th November last—read by the Clerk.

The Chairman then stated that as he was desirous of taking the evidence of Mr. G. B. White, a member of the Committee, upon the subject, he had requested that gentleman to attend in his place *this day* for the purpose of being examined, and that Mr. White was consequently now present, and willing to be examined.

Whereupon Mr. G. B. White, a member of the Committee, examined in his place.

Mr. W. H. Suttor, junior, examined.

[Adjourned till Wednesday next, at *Eleven o'clock*

WEDNESDAY, 15 JUNE, 1858.

MEMBERS PRESENT:—

George Macleay, Esquire, in the Chair.

Mr. Jamison,
Mr. Suttor,

Mr. Hay.

Mr. Donaldson,
Mr. William Macleay,

Mr. A. G. McLean, Chief Draftsman in the Survey Department, examined.

The Chairman read a letter—addressed to Messrs. Wilkinson, Brothers, and Company, of Collins-street, Melbourne, by Mr. C. L. Eaton, of Creswick, on the 15th January last—relative to the removal of snags from the beds of rivers.

Ordered to be printed in Appendix. (Vide Separate Appendix B.)

Committee deliberated.

Motion made and *Question*—"That the Chairman do move that there be laid upon the Table of the House copies of any Reports made by Mr. McCabe relative to the "Darling River, with a view to their being referred to this Committee"—*agreed to*.

[Adjourned till Wednesday next, at *Eleven o'clock*.]

WEDNESDAY, 23 JUNE, 1858.

MEMBERS PRESENT:—

George Macleay, Esquire, in the Chair.

Mr. Suttor,

Mr. Jamison.

Mr. W. Macleay,

Mr. J. Tyson and Mr. F. A. Gwynne, examined.

Committee deliberated, and it was *Resolved*:—

"That this Committee will, at its next meeting, on Wednesday, 30th instant, proceed to consider the heads of a Report."

[Adjourned till Wednesday next, at *Eleven o'clock*.]

WEDNESDAY, 30 JUNE, 1858.

By direction of the Chairman, the meeting of the Committee convened for *this day*
[Postponed till Thursday next, at *Eleven o'clock*.]

THURSDAY,

THURSDAY, 1 JULY, 1858.

MEMBERS PRESENT:—

George Macleay, Esquire, in the Chair.

Mr. Suttor,

Mr. William Macleay.

Committee having met, pursuant to a Resolution agreed to at their last meeting, to consider the heads of their Report, deliberated, and it was *Resolved*:—

- "1. That, in the opinion of this Committee, without a larger attendance of members it is inexpedient to proceed to the consideration of the heads of a Report."
- "2. That this Committee do now therefore adjourn till Ten o'clock on Wednesday next."

[Adjourned till Wednesday next, at Ten o'clock.]

WEDNESDAY, 7 JULY, 1858.

By direction of the Chairman, the meeting of the Committee convened for *this day*
[Postponed till to-morrow, at Eleven o'clock.]

THURSDAY 8 JULY, 1858.

The meeting of the Committee convened for *this day* lapsed, in consequence of the adjournment of the House from Tuesday, 6th instant, to Tuesday, 13th instant, owing to the demise of the Venerable Archdeacon Cowper, Father of the Principal Secretary.

WEDNESDAY, 14 JULY, 1858.

MEMBERS PRESENT:—

George Macleay, Esquire, in the Chair.

Mr. W. Macleay,

Mr. Hay,

Mr. Jamison,

Mr. Suttor.

Committee deliberated as to the heads of a Report.

[Adjourned till Wednesday next, at half-past Ten o'clock.]

WEDNESDAY, 21 JULY, 1858.

MEMBERS PRESENT:—

George Macleay, Esquire, in the Chair.

Mr. Jones,

Mr. Suttor,

Mr. William Macleay,

Mr. Jamison,

Mr. Hay.

The Chairman laid before the Committee certain Resolutions to form the basis of a Report.

Motion made and *Question*—"That these Resolutions be now read and considered *seriatim*"—*agreed to*.

Whereupon the following Resolutions 1, 2, 3, 4, 5, and 6, read, and considered *seriatim*, viz:—

- "1. That it is expedient to report upon the advantages which the Colony will derive from the means of communication offered by the principal Western Rivers.
- "2. Upon what has been done and is now doing in the way of clearing the channels of the Rivers Murray and Murrumbidgee; their present state in this respect, and the different modes of clearing, preliminary and complete, by means of steam snag-boats; and to refer also to the lever boats in use on the Mississippi.
- "3. That it is expedient to recommend that the sum of £2,000, already on the Estimates, for clearing the channels of the River Murray and Murrumbidgee, be expended on the latter river.
- "4. That Captain Cadell be appointed to superintend such operation.
- "5. That Captain Cadell, if so appointed, be instructed to test the Mississippi lever plan on the River Murrumbidgee.
- "6. That provided such mode of clearing proves efficacious, the Government should then employ without loss of time boats of this kind on the Rivers Murray and Murrumbidgee, and as soon as practicable on the Rivers Darling, Wakool, and Edwards also."

Whereupon Motion made, and *Question*—"That the purport of these Resolutions be embodied in the Report"—*agreed to*.

The following Resolution, 7, then read and considered, viz:—

- "7. That it is expedient to recommend that a donation of £1,000 be awarded to Captain Cadell for the meritorious services he has already rendered to the Colony in opening up the navigation of the River Murray."

Whereupon Motion made and *Question put*—"That the purport of this Resolution be embodied in the Report."

Committee

Committee divided.

Ayes, 4.
Mr. W. Macleay,
Mr. Jamison,
Mr. Hay,
Mr. Suttor.

No, 1.
Mr. Jones.

The remaining Resolutions, 8, 9, 10, and 11, then read and considered *seriatim*, viz. :—

- " 8. That it is expedient to recommend that a further sum of £1,000 be proposed as a *bonus* to Captain Cadell, provided he keeps a steam-boat for two seasons running on the River Murrumbidgee as high as Wagga Wagga.
- " 9. That officers be appointed at certain spots along the frontiers for the purpose of collecting the amount of traffic existing between the three Colonies.
- " 10. That reference be made to Mr. Crawford's letter, to the effect that it is not desirable to adopt the recommendations contained therein.
- " 11. That incidental allusion be made to the probable effect which the remission of assessment dues might have upon the occupation of the back country on both sides of the River Darling."

Whereupon Motion made, and *Question*—"That the purport of these Resolutions be also embodied in the Report"—*agreed to*.

Committee deliberated, and it was Resolved :—"That the Chairman do, at his earliest convenience, prepare a Draft Report for the consideration of the Committee."

[Adjourned]

THURSDAY, 14 OCTOBER, 1858.

MEMBERS PRESENT :—

George Macleay, Esquire, in the Chair.

Mr. Donaldson, | Mr. Hay,
Mr. White.

By direction of the Chairman, Resolution of the House referring to the Committee on the 18th August last, "Copies of Mr. Surveyor McCabe's Reports to the Surveyor General on the River Darling,"—read by the Clerk.

Committee considered these Reports.

The Chairman then laid before the Committee a Draft Report.

Report read 1^o.

Committee deliberated.

Motion made (Mr. Donaldson) and *Question*,—"That prior to the final consideration of, and agreement to, this Draft Report, it is expedient that the same be printed,"—*agreed to*.

Committee further deliberated, and it was Resolved,—"That the following documents be printed in the Separate Appendix to the Report of this Committee, viz. :—

- " 1. Copy of Report of a Survey, dated 23rd April last, held by Mr. John Hart, Treasurer, on the Steam Snag-boat constructed by Captain Cadell, for clearing the River Murray, furnished to the Commissioner of Public Works, South Australia, by Mr. Hart. (*Vide "Separate Appendix C."*)
- " 2. Extract from *Sydney Morning Herald*, notifying the arrival of the steamer "Albury," of Captain Cadell's line of steamers, at Gundagai. (*Vide "Separate Appendix D."*)
- " 3. Comparative Table shewing the distances of the most remarkable places along the Murray River from Goolwa to Albury, compiled October 1856. (Extract from *South Australian Register*.) (*Vide "Separate Appendix E."*)
- " 4. Return of goods imported during the quarters ending 31st March and 30th June, 1857, respectively. (*Vide "Separate Appendix F, Nos. 1 & 2," and Appendix to evidence given by Captain F. Cadell on 20th November, 1857."*)

[Adjourned till Thursday next, at Eleven o'clock]

THURSDAY, 21 OCTOBER, 1858.

By direction of the Chairman, the meeting of the Committee convened for *this day*.

[Postponed till to-morrow, at Twelve o'clock]

FRIDAY, 22 OCTOBER, 1858.

MEMBERS PRESENT :—

George Macleay, Esquire, in the Chair.

Mr. Donaldson, | Mr. Jones,
Mr. Hay.

Printed copies of the Draft Report proposed by the Chairman laid before the Committee.

Committee deliberated upon and *verbally* amended the same.

Motion made, and *Question*,—"That this Report, as *verbally* amended, be the "Report of the Committee"—*agreed to*.

Chairman requested to report.

LIST OF APPENDIX.

(*To evidence given by Captain Cadell on 12 November, 1857.*)

APPENDIX A.

List of Steamers and Barges on the Murray River	9
---	---------	---

(*To evidence given by Captain Cadell on 17 November, 1857.*)

APPENDIX A.

Letter from G. M. Perry, Esquire, C. C. Lands, Albert District, to Captain Cadell, dated 6 August, 1857	17
---	---------	----

APPENDIX B.

Summary of Goods shipped per R. M. N. Co's. vessels, during the season 1856-7	17
---	---------	----

APPENDIX C.

Return of Goods shipped for Upper Murray in the steamers "Sturt," "Leichhardt," and "Mosquito," during the season of 1857	18
---	---------	----

APPENDIX D.

Statement showing the average rates of carriage from Melbourne to Albury, and from Sydney to Albury, from 1853 to 1857, inclusive	19
---	---------	----

(*To evidence given by Captain Cadell on 20 November, 1857.*)

APPENDIX A.

Return showing the number of Live Stock which have crossed the Murray from New South Wales into the Colonies of Victoria and South Australia, in the year 1857	28
--	---------	----

[*Further Proceedings stopped by Prorogation.*]

1858.

(*To evidence given by Mr. A. G. Maclean on 16 June, 1858.*)

APPENDIX A.

Towns and proposed or intended Towns:—

(1.) On the Murray River	9
(2.) In the Valley of the Murray River, or on its Effluents	9
(3.) On the Murrumbidgee River, below the confluence of the Yass River	9
(4.) On the Lachlan River, below the confluence of the Belubala River	9
(5.) In the valley of the Murrumbidgee River, below the confluence of the Yass River	10
Town on the Lachlan tributaries	10

APPENDIX B.

Memorandum showing the Lands alienated by the Crown in the valley of the Murray River, and in that of the Murrumbidgee River below the confluence of the Yass River, and in the Colony of New South Wales	19
---	---------	----

18

1857.

SEPARATE APPENDIX.

A.

Plan of Design for *Caissons* for damming back the waters of the River Darling, and Plan of a horizontal self-adjusting Water-wheel for Australian Rivers.

[Further Proceedings stopped by Prorogation.]

1858.

B.

Page.

Letter from Mr. C. L. Eaton, of Crosswick, to Messrs. Wilkinson, Brothers, & Co., of Collins-street, Melbourne, dated 15 January, 1858, relative to the removal of snags from river beds 16

C.

Copy of Report, dated 23 April, 1858, of a survey and trial of the steam snag-boat "Grappler," constructed by Captain Cadell; furnished to the Commissioner of Public Works, South Australia, by Mr. John Hart, Treasurer, together with an approximation of the cost of construction 17

D.

Extracts from the *Sydney Morning Herald* notifying the arrival of the steamer "Albury," of Captain Cadell's line of steamers, at Gundagai 18

E.

Tabular Return shewing the distances of the most remarkable places along the Murray River, from Goolwa to Albury.—Compiled, October, 1856 18

Legislative Assembly.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

NAVIGATION OF THE MURRAY AND ITS EFFLUENTS.

THURSDAY, 12 NOVEMBER, 1857.

Present:—

Mr. GARLAND,
Mr. HAY,Mr. G. MACLEAY,
Mr. W. MACLEAY,

Mr. SUTTON.

GEORGE MACLEAY, ESQ., IN THE CHAIR.

Captain Francis Cadell, called in and examined:—

1. *By the Chairman:* You are a sailor by profession? Yes.
2. You have been living for some years past in South Australia, and on the banks of the River Murray? Almost solely on the banks of the river, and on the river; not very much in South Australia.
3. You have turned your attention to the navigation of the Murray? Yes; I have devoted my entire time to it for some years.
4. When did you first take the matter into your consideration? In 1848.
5. When did you first become practically acquainted with the navigation of the river? Not till 1852.
6. You then, I believe, went down the river in a boat? I examined the river, from Swan Hill to its estuary, in a small canvas boat.
7. How many miles is it from Swan Hill to the mouth of the river? By the best maps it is generally termed from eleven to twelve hundred miles.
8. When were steamers first introduced on the Murray, and by whom? I introduced the "Lady Augusta," through the sea mouth, in 1853. Another small steamer, the "Mary Ann," was put on the river in the same year by Mr. Randell.
9. Were you assisted in any way by the South Australian Government in your first attempt? I received considerable assistance from the South Australian Legislature and Government.
10. To what extent? For the steamer "Lady Augusta," under the conditions on which she was placed on the river, I received altogether, £2,500.
11. Was the "Lady Augusta" built at your expense? She was laid on at my expense; but before she was built, I took two other partners into the enterprise.
12. Your association with them formed the germ of the Murray River Steam Navigation Company? It did. Mr. Turnbull, of Melbourne, and Mr. Younghusband, of South Australia, were my two partners.
13. In 1851, I believe, the Government of South Australia had offered a bonus of £4,000 to any one who would place two steamers on the Murray? Yes; they were very anxious to have the river navigated. They were apprehensive that it could not be ascended higher than the junction of the Darling; and they offered £2,000 each for two iron steamers to reach that point.
14. You did not endeavor to obtain that bonus? It was out of my power, on account of iron steamers being required. The conditions distinctly stated that they should be iron steamers.
15. You had not the means of getting iron steamers? Not at that time in the Colonies.

Captain F.
Cadell.

12 Nov., 1857.

Captain F.
Cadell.

12 Nov., 1857.

16. I presume there was some difficulty in building even wooden vessels at that time in the Colonies? Yes, very great difficulty.
17. Were iron steamers looked upon as indispensable, on account of the snags in the river? Yes, and on account of the very light draught required. They thought it would be most advisable to have iron steamers, for strength and a lightness, I suppose.
18. That proposal was afterwards withdrawn? Yes. Sir Henry Young accompanied me in the first steam voyage up the Murray, and immediately after his return to Adelaide, with the advice of his Council, these bonuses were withdrawn.
19. He accompanied you in the "Lady Augusta"? Yes. We ascended many hundred miles beyond the junction of the Darling, so that these bonuses were not required.
20. The objects they were intended to accomplish were already attained by your exertions? Yes, and more than attained.
21. Then the two sums of £2,000 were given to you instead, the South Australian Government looking upon you as having done all that they had expected? Two fresh votes were made out, solely in my name, for equal sums of £2,000 each.
22. Then you received £4,000? Yes, £4,000, for two more steamers.
23. Immediately after the "Lady Augusta" was built, you built a second steamer? We sent home to England for two more.
24. Where was the "Lady Augusta" built? In Sydney. The machinery was also constructed in Sydney, by Messrs. Russell & Co.
25. What did she cost? About £8,000. It cost nearly £1,000 to take her round to the Murray mouth.
26. Had you any difficulty in getting her across the bar? Not any great difficulty; we selected our opportunity, but had to wait some time for it.
27. She was taken in eventually, without damage? Yes.
28. Does that bar operate as a very serious impediment to the navigation? It is a shifting bar, and more or less changes with almost every gale of wind. It is by no means a safe entrance.
29. Accidents have occurred? There have been frequent boat accidents, and one other accident, the stranding of a steamer, very lately.
30. No system of buoying could alleviate the danger? I think the buoys would require to be frequently renewed and shifted.
31. Two or three times in the course of a year? More than that even.
32. That would be attended with great expense? It would. The sea-mouth, I may mention, was surveyed by an engineer (Mr. Abernethy) the other day, and he proposes to the South Australian Government that it should be piled along both sides of the channel towards Encounter Bay, and the water retained within those rows of piles.
33. Following the present channel, or digging a canal through the sand hummocks? Following and confining the present channel.
34. Is that plan likely to succeed? I think so. The estimated cost is £24,000.
35. Failing that, the port will be at the Goolwa? The trade will continue for some time as at present between Port Elliot and the Goolwa.
36. On what conditions did you receive those two sums of £2,000 each from the South Australian Government? That the steamers should be kept plying on the rivers for three years.
37. There was no monopoly granted to you? Not the slightest.
38. The navigation of the river was open to any others? It was open to every one.
39. You mentioned that Mr. Randell had built a small boat—did she continue to ply? He very soon improved and enlarged her very much. He got new machinery for her, and made her double the size she was originally. She is still plying.
40. Did Mr. Randell receive any assistance from the Government? He had no stipulation with the Government that he was to receive assistance; but the Legislative Assembly voted him either three or five hundred pounds.
41. On the same conditions as in your case? On no conditions whatever.
42. Was the "Lady Augusta" capable of carrying much cargo? She and a barge were very useful vessels; at that time they could freight one hundred and forty tons up, and six hundred bales of wool down.
43. Did she ever do that? She has done that—upwards of six hundred bales.
44. Is wool sent down from both sides of the river? From both sides of the Murray, and from the Darling, the Murrumbidgee, and the Lachlan.
45. By Mr. Garland: And from the Albert District? Yes.
46. By the Chairman: Since the year 1853 there has been a very great increase in the number of steamers on the river, has there not? A very great increase.
47. How many steamers were plying on the river at the end of 1856? Eight. There are now ten.
48. And how many barges? Nine barges.
49. Are there any more building? There is another steamer launched, and nearly ready for starting, and another iron barge coming from England.
50. What is the power of these steamers generally? They average about forty horse power.
51. What is the average capacity of the barges? I can hand in to the Committee a statement showing the number of steamers and barges, and their capacities. (*The Witness handed in the same. Vide Appendix.*)
52. You never take goods on board the steamers themselves, I believe? We do, to a certain extent—seventy or eighty tons, a hundred tons, or even more sometimes.
53. These steamers have been principally built upon the river, have they not? The steamers are all British built, with the exception of three.
54. Have they all crossed the bar, with the exception of three? No; some came out in sections, and have been put up on the lake.

Captain F.
Cadell.

12 Nov., 1857.

55. They have been carried across by land to the Goolwa? Yes.
56. Have all the barges been built on the river? All the wooden barges have been built on the river; the iron ones came out from England, in the same way as the steamers. Three of the iron steamers were built at Port Adelaide, after having been imported from England.
57. What is the draught of these steamers generally? When laden, four feet six inches, or five feet when very deeply laden; but it is only on rare occasions they are so deep. The best steamers on the river draw about twenty-one inches when light.
58. If the river were low you would not load the steamers? The system of working the traffic is by towing in barges, not loading the steamers.
59. What is the draught of the barges when laden? Four feet, or four feet six inches.
60. Since your acquaintance with the River Murray—that is, since the year 1852—have there been any years when the steamers with their barges could have passed up throughout the whole of the twelve months, provided the timber were removed? In the summer of 1854, I think the steamers could not have passed; but, in other years, I believe they could have done so.
61. Are there any sand banks or bars in the river which act as obstructions to the navigation, in seasons when the water is low? There are sand banks and rocky bars of sandstone.
62. How many of these bars exist in the river? They are very numerous below the junction of the Murrumbidgee.
63. I presume they might be removed by the agency of gunpowder? Yes; the sandstone is very soft indeed.
64. What is the depth of water on the upper side of these bars—would it make any difference in the navigation above them, if these obstructions were removed? I rather think not; but, until a proper engineering survey has been made, it would be difficult to offer an opinion.
65. These bars act as falls, do they not? Very slight falls; they are rather rapids than falls. There is only an acceleration of the current.
66. As far as your observation has gone at present, you do not think their removal would be injurious to the navigation? I think not; I think it would benefit the navigation of the river.
67. In the summer of 1854 you say the river was so low that you believe steam-boats could not have passed up—could they have plied on the river all through the year 1853? I think they could, had the river been quite clear of timber.
68. Were there no boats on the river then? No. Our object was to complete all the work during the favorable season for the navigation, not to run the risk of hurting the boats in the dry season.
69. Could the "Lady Augusta" have plied in the winter of 1853 and 1854? She did ply. The "Lady Augusta," in the winter of the driest season ever known on the Murray, reached within twenty-four miles of Albury, when the river was in a perfect state of nature.
70. Have there been many accidents on the river? There have been some accidents, but none of very serious importance—no entire losses.
71. Have these been owing to the obstructions offered by timber in the channel of the river? Entirely, with one exception.
72. These, in fact, are the only obstructions that are in any way dangerous? They are the only obstructions that are dangerous.
73. In the last two years the steamers have increased from five to ten—just double? I think that is the number.
74. Do you suppose any further increase will take place—is it likely the number of steamers will go on increasing? I think, with the exception of that steamer which, as I have said, is now ready for starting, there will not be an increase on the main Murray.
75. So far as that river goes, you think there are a sufficient number of boats for all the traffic required? Yes, I think so, considering that freight is scarce now.
76. Are the upward freights greater than those down? The boats are always full going up, but about three-fourths of the cargo is upon owners' account.
77. *By Mr. Hay:* I suppose the same number of boats could do a much larger trade if the river was cleared? They could, because they would be enabled to run during more months in the year if the obstructions were removed.
78. About double the time on the average? About a fourth more. The boats have been running for the last nine months. One year we kept up the navigation to the Darling uninterruptedly.
79. *By the Chairman:* Do you believe that if the timber and the rocky obstructions were removed the river would be navigable for the whole twelve months? In every common season it would; in seasons of drought, perhaps not.
80. Did you ever see the river so low that a boat drawing two feet could not pass up? In summer time it is often as low as that; in such a year as 1854, for instance.
81. Have you ever seen it lower than that? I have known it so low that there were only eighteen inches of water on the bars.
82. I spoke of those being removed? There is plenty of water in other places.
83. If these and the timber were removed, could vessels drawing two feet and a-half ply all the year round? In every common year they could; but in some years they might not be able to run for three or four months.
84. *By Mr. Garland:* To what distance? To Albury.
85. *By the Chairman:* Are you particularly acquainted with the River Murrumbidgee? I have descended it for two hundred miles in a boat. I am also generally acquainted with it from Gundagai to its junction with the Murray.
86. Will what you have said apply to the Murrumbidgee also? I think so, with the exception of the bars of sandstone: I do not know any to exist in the Murrumbidgee.
87. Have you any acquaintance with the Darling? For about one hundred and sixty miles by land, and for two or three hundred miles by the river. I have a pretty fair knowledge of its lower portion.

Captain F.
Cadell.

12 Nov., 1867.

88. Would you say the same in reference to the Darling as you have said of the Murray and Murrumbidgee? I think not. The Darling is the most uncertain river of them all; the floods do not come down it with the same regularity as on the other rivers.
89. The truth is, the basins of the Murray and Murrumbidgee being in an Alpine country, their waters are supplied from the annual fall of snow? To a great extent they are.
90. That is not the case with the Darling, which rises to the north? It is not.
91. You say the steamers are fully employed just now on the Murray going up? They are fully employed going up; the cargoes are principally on owners' account. The greater portion of the traffic is connected with the supply of the Ovens gold field.
92. What proportion should you say? Fully three-fourths of the cargoes up are on account of the Gold Fields.
93. Of what character are the cargoes down? Almost entirely wool, what there are; but the boats generally go down empty, or nearly so.
94. Are hides sent down at all? To a very limited extent.
95. Is the whole of the wool grown on the banks of the Lower Murray sent down by the steamers to be shipped at Adelaide, or what proportion of it? All the wool grown below Swan Hill goes to Adelaide, with the exception of that from two stations.
96. And from above Swan Hill where does it go? It generally goes to Melbourne.
97. What is the rate of carriage by land to Melbourne? Do you allude to winter or summer?
98. Summer carriage it would be—the rate for wool? About £12 a ton, or sometimes as low as £10.
99. What is the charge by the steamers? To the Goolwa ten shillings a bale; to Adelaide one pound—from the station to Adelaide.
100. How much would that be per ton? About £7 altogether to Adelaide.
101. Why is it, under these circumstances, that the wool grown above Swan Hill does not go down by water to be shipped at Adelaide? One reason, I think, is, that Melbourne is a very much better wool market than Adelaide. They have not been in the habit of giving such a high price for wool sold at Adelaide as for wool sold at Melbourne.
102. Is that the sole reason? I think the character of the South Australian wool is inferior to that of the wool grown on the Murray.
103. But although shipped from Adelaide it might be marked as coming from the Murray, so that its character in the home market would not be affected? Each shipment is accompanied by a certificate of produce from the settler who grows the wool, attested by the captains of steamers who receive it, upon which the Collector of Customs at Port Adelaide issues a fresh certificate. It is only in the Colonial Market it will not fetch its full price.
104. Are not the settlers on the Murray likely to ship their wool home themselves? The settlers we have done business with generally sell; they are anxious to sell.
105. *By Mr. Hay:* Do you not think the previously established mercantile connection of the settlers with Melbourne houses has something to do with the preference? That has very much to do with it; the settlers do not like to shift their accounts.
106. *By the Chairman:* What is the distance from Melbourne to Swan Hill? About two hundred miles.
107. What time does the carriage by land take? Drays are about a fortnight going down.
108. Not more than that? No, not much.
109. What length of time do your barges take from that point to Adelaide? Nine or ten days to Adelaide.
110. From the fact that a steamer has just been constructed, as you have stated, I suppose we may conclude that the present number of boats is not in excess? Not on the main Murray, if owners will continue shipping on their own account.
111. How many companies exist at the present time who have taken this matter of the navigation of the Murray in hand? Only one public company; but there are two private companies, the other boats being held by individuals.
112. What do you mean by private companies—firms? Several firms associated together.
113. Then there are three proprietaries? Five altogether.
114. With how many boats to each? Five steamers and seven barges belong to the Murray River Steam Navigation Company; two large boats held in the name of Ackerman, Maine, Lindsay, and Company; and the other three boats are held by private individuals, of whom two or three may be associated together. I do not exactly know how they stand.
115. *By Mr. Garland:* Is the Murray River Steam Navigation Company an incorporated company? It is.
116. *By the Chairman:* Was the £4,000 voted to you by the South Australian Legislature handed over to that company? It went in equal shares to myself and my co-proprietors, whom I mentioned to you before, before the company received their Colonial charter.
117. You personally received only a portion of it? Only a third.
118. Do you think, if the Darling and the Murrumbidgee, tributaries of the Murray, were open for navigation, there would be an increased number of steamers; or would those already on the Murray be sufficient to undertake the traffic of both these rivers in addition? I think small steamers might find employment on the tributaries, if they received encouragement or assistance.
119. What do you mean by encouragement? The same encouragement that South Australia held out for reaching certain points on the rivers, and voting sums of money for clearing away obstructions.
120. Would not the traffic be sufficient to pay them, if the obstructions were once removed? I think it might pay them, but the augmentation in the number of steamers would be more gradual if they only trusted to their freights to pay them.
121. Would it be requisite to have a great number of steamers—is it at all desirable to have a greater number of steamers than what would be sufficient to carry away the produce and supply the wants of consumers on the banks of the rivers—I presume the traffic would call into

into action exactly the number required? A very considerable demand exists now, but no steamer has ever gone beyond Balranald.

Captain F.
Cadell.

122. Is not the difficulty of passing through the timber the cause of the steamers not going up? That is the principal cause.

12 Nov., 1857.

123. Is not that the only cause? There is a disinclination on the part of steam-boat proprietors to send steamers on a new and unknown river.

124. If they went up for the sake of a bonus in the first instance, are they not likely to require one for the second trip? The bonuses ought to be made out in the same form as those of the South Australian Government; that is to say, with restrictions as to plying on the river for a certain number of years.

125. *By Mr. Hay:* The Chairman supposes the obstacles removed, in the first instance, by the Government, and then asks you whether, in that case, there would be any further disinclination to send steamers up and take whatever freight might offer? I think if the obstacles were removed the steamers would gradually find their way up to the head of the navigation.

126. Is there not greater inducement to settlers to send their produce by the steamers from the Murrumbidgee than from the Murray? There ought to be; their land carriage is higher.

127. *By the Chairman:* Do you happen to know what the rate of carriage is from the lower Murrumbidgee to Sydney and Melbourne? There is no carriage from that quarter to Sydney. I think Mr. Morris is paying £12 or £14 per ton from Kieta to Melbourne.

128. Do the flockowners thereabouts send their wool to Sydney or to Melbourne? There is no other sheep proprietor there but Mr. Morris, except Messrs. Phelps and Chadwick, and they have been accustomed to send to Adelaide.

129. What are the rates of carriage from the country about Yanco Creek? The last rates up there have been about £26 for horse-drays, from Melbourne; Mr. Lang has paid that.

130. Do you think the rate would be the same, or nearly the same, to Sydney? Very nearly as much.

131. One-half that sum would pay a company very well, would it not, to take wool down by steamers? I think it would. A company would not charge so much as one-half.

132. So that there would be reason to believe that the whole of the wool from that neighbourhood would be sent down by water? I think a company would only charge £10 a ton at the outside.

133. Therefore the inducement to send by water would be great? Yes, it would be.

134. Why then should any bonus be offered to steamers for ascending the river when they would be certain of all that custom? The steamers would naturally only work on the lower part of the river; perhaps they would be years and years before they got to the head of the navigation of the Murrumbidgee.

135. At the head of the navigation of the Murrumbidgee people come within the influence of Sydney agencies; it is, therefore, rather the lower and intermediate country that would receive the greatest benefit from steamers? Yes.

136. *By Mr. Hay:* From the Yanco downwards? Yes.

137. *By the Chairman:* Did it come within your knowledge that the numbers of sheep in that country—on the Murray and Murrumbidgee—have decreased very considerably; that sheep have been removed to make way for cattle? In the season of 1855 there was a very great decrease in the number of sheep in the Murrumbidgee District—upwards of three hundred thousand—but now the tendency is quite the other way—cattle are being removed to make room for sheep.

138. Do you think that, with the facilities afforded by water communication, sheep will again take the place of cattle? I think, owing to the low rates of carriage by the steamers, sheep will very much increase in the valleys of the Murray, Murrumbidgee, and Darling.

139. So that even from these valleys alone you may look for a great increase of freights from wool? I think we will never take wool down from higher up the Murray than at present.

140. But might not many of the stations there now occupied by cattle be occupied by sheep? I think that will be the tendency.

141. And also on the Murrumbidgee? I think so; and on the lower Lachlan also.

142. And with respect to the Darling,—is there not a great deal of country on the banks of that river not yet taken up? For about three hundred miles the country is taken up.

143. For cattle or sheep stations? Principally sheep. When I say taken up, I mean that the country is stocked for three hundred miles; it is taken up as far as Fort Bourke.

144. Is that country well adapted for sheep? Yes.

145. Would it not tend very much to induce the proprietors of these stations to put sheep upon them if they had the advantage of water carriage to bring up their supplies and take their wool down to market? I am quite sure it would.

146. *By Mr. Sutter:* Do you think the Darling would be generally navigable in ordinary seasons? I think so; if the timber were cleared away.

147. Do you know what has been the state of the Darling for the last two years? Generally speaking, floods have prevailed—indeed almost uninterruptedly to a certain extent—for the last two years.

148. *By the Chairman:* Is a sufficient amount of produce grown on the Darling to make it worth while to send a boat up there now? A boat might pay very well for a trip, if the timber were removed so far as the stations extend; or, even in its present state, when the river is very high she might make a run up and down.

149. Is there any probability of any other produce being grown upon the banks of these rivers which it would be worth while to convey to a distant market? I think there may be an increase in the articles of hides and tallow shortly.

150. Could wheat be grown, or any other grain, on the level country on the banks of these rivers? Wheat could be grown extensively in the neighbourhood of Albury.

- Captain F. 151. I mean in the level country. Have you ever been in Egypt? I have.
 Cad. Al. 152. Two or three particular kinds of wheat are grown in Egypt which ripen in a very short
 12 Nov., 1857. period of time—within two or three months of being put into the ground? I believe such
 is the case.
153. There is a strong similarity, is there not, between the climates of Egypt and our western interior? I think, with regard to the dryness of the climate, there is a very strong similarity.
154. Do you think a system of irrigation could be introduced which would enable grain to be grown in these level countries? I think it is quite possible to introduce a system of irrigation; but when so much fine land is to be found on other portions of the river it would not be resorted to.
155. People are not likely to grow grain there for exportation? I think not for exportation. I can, however, mention instances of wheat having been grown in these parts. Below the junction of the Edward, about twenty miles from Deniliquin, wheat has been grown for years, at Mr. Maclaren's station.
156. Is the land irrigated? It is not. It is simply land on the sand hills that have been covered with pine, cleared and cultivated.
157. Year after year? Year after year. Cattle are occasionally folded there.
158. How many bushels are produced to the acre? I have had some difficulty in ascertaining; but I believe about thirty bushels.
159. How is it that example has not been followed? It does not appear to be worth while; so little does Mr. Maclaren think of it that he intends to give it up. It is the expense of getting the grain taken to a mill that will induce him to give it up. He has grown it for about ten or twelve years. At another point, about fifty miles from the junction of the Darling, wheat has been grown for years consecutively, at a place called Tarpaulin.
160. It is only on the sand hills? Only on the sand hills.
161. On the level back plains it would be impossible to grow anything whatever after the warm weather sets in? I should not be desirous of forming a conjecture on that head; but these plains are never harder than the Adelaide Plains.
162. Where grain is grown? Yes; nothing can be harder than the Adelaide Plains.
163. Are they of the same character of soil? Very much the same, and grain is now grown down at the Campaspe more than it has been.
164. The rains are periodical at Adelaide? Yes, generally.
165. And the hot winds are not quite so blighting? I think they are quite as blighting.
166. Do you, then, look upon the Lower Murray and Murrumbidgee as likely to become agricultural districts? I think not; but the vine grows on the Murray without irrigation.
167. What is the difference between the plains of the Campaspe and those we have been speaking of? There is much less moisture on the latter.
168. *By Mr. Hay*: Is there not some peculiarity in the situation of the land at Mr. Maclaren's, where you have spoken of wheat being grown; is it not surrounded by extensive swamps? It is generally a very level flooded country about it; but I do not think those swamps have any effect upon the sand hills.
169. *By the Chairman*: Does not the sand act as a sponge—there must be a great absorption? The altitude of this sand hill is considerable.
170. *By Mr. Hay*: Do you not think the effect of the swamps is to moderate the influence of the hot winds? There are no swamps to the north of that sand hill, and they are dried up before the hot winds set in.
171. Nor to the north-westward? Nor to the north-westward: it is intersected by water-courses, however.
172. Is there not an extensive scope of timbered land to the north and north-westward of Mr. Maclaren's place? Yes, a good deal of timbered land.
173. And land subject to inundation? Yes.
174. It is known in that part of the country as a place peculiarly favorable for gardening and crops? It is known as a favorable spot, because the attempt has been made there.
175. Have you ever seen any crops grown on the clay plains there? Never. It has never been attempted.
176. Was it not attempted at Warbreccan? Not with wheat, that I know of; barley grows very well, I believe.
177. On the plains? On the plains; close to the head station it has been tried.
178. *By the Chairman*: Have you ever ridden over these plains in summer time? Yes, frequently and repeatedly.
179. What was then the appearance of the grass and vegetation generally? Completely burnt up.
180. In winter these plains look green and luxuriant? Yes.
181. But become burnt up by the month of November? Generally before that time.
182. In October? I think so.
183. That is invariably the case, year after year? Yes.
184. Is not the country of the same character as that bordering the valley of the Nile? The valley of the Nile is a very much more hopeless-looking country; but I mention those cases where wheat has been grown as isolated cases, as no others have occurred.
185. Do you think, if there were great facilities afforded to the settlement of these districts, by means of vessels plying on the rivers, that any people would at any time attempt agriculture there? I think not; I do not look upon it as an agricultural country at all—the valley of the Lower Murray.
186. Do you think villages and towns would arise? I think that would be the natural tendency of events.
187. From what sources would the people of these villages and towns derive their means of existence? On the Lower Murray do you mean?

188. On the Lower Murray, or the Murrumbidgee, or the Darling. I speak on the understanding that steamers would be plying on the rivers, conveying all that they might want from other parts of the world at a cheap rate? On the Upper Murray I conceive they would live by agriculture.

Captain F.
Cadell.

12 Nov., 1857.

189. I am talking of the peculiar country of which we have been speaking—the level country of the interior? I do not think the present generation will see a very numerous population on that portion of the Murray.

190. Do you think any number of villages would arise on the rivers dependent on the pastoral population? Not under the present system of “pastoral occupation.”

191. Would tradesmen, for instance, settle there and form small communities? Not to any extent under existing circumstances.

192. But small villages might be formed you think? I think on some favorable points small villages might be formed.

193. You have reached Albury in the “Lady Augusta,” and steamers have been there frequently since? Yes.

194. Albury is in the mountain country? Yes, just at the base of the mountainous country.

195. There is rich land and a favorable climate there? Yes, a great deal of rich land.

196. For how many miles below Albury down the river? I should think to about the neighbourhood of Mullally.

197. How many miles is that from Albury? About sixty-four miles.

198. That district is emphatically a good agricultural country? I think it is a good agricultural district, especially the upper portion.

199. At present they find a market for their produce at the gold fields of Victoria? A ready market.

200. Suppose that market were fully supplied, could they send their wheat and potatoes down to South Australia for sale? It will be many years before they will do that. At present, the South Australian farmer can send his flour up to them much cheaper than they can produce it there.

201. That is owing to the high price of labor ruling in the neighbourhood of the gold fields, is it not? I think that has not so much to do with it as the very small quantity of land that has been sold.

202. I do not see how that can affect the case? There is less breadth of land under cultivation.

203. I spoke of there being a surplus there. At present we of course know they get first rate prices at the neighbouring gold fields; but the question I asked was this: supposing the gold fields ceased to be productive, and the people upon them left the neighbourhood, if the farmers there had a quantity of wheat and potatoes on hand, would it pay to send those products to Adelaide to be consumed there, or taken to other parts of the world? Unless matters are entirely altered, it would not pay them. They never can produce cheaper than the South Australian people.

204. Could the farmers of Albury hope to share with the South Australians in the profits they are drawing from exportation? I think Albury for many years will have enough to do to supply the interior of New South Wales, and the gold fields of Victoria.

205. Looking to the future, and the prospective advantages of steam communication on the river, what is your opinion? I think in the event of a surplus, the Albury farmer would be forced to do what other farmers do in other parts of the world—ship his produce down the stream.

206. What is the freight down from Albury? For weight alone, such as tin ore, £4 10s. per ton.

207. What do you suppose would be the price for wheat or potatoes? The proprietors of the South Australian steamers would endeavour to lay on a very heavy freight on these productions.

208. There might be steamers belonging to Albury? No doubt.

209. £4 10s. a ton would be about half-a-crown a bushel; would not less than half-a-crown a bushel pay the proprietors of steamers? I think when the time has arrived when the Albury farmer would need to send down his produce to South Australia, the proprietors of steamers would take much less than that—perhaps a shilling a bushel.

210. *By Mr. Suttor*: We may understand from your answers that for a very long time the Albury farmer will not be able to compete with the Adelaide farmer? He will be almost shut out from exportation for a long time.

211. *By Mr. Hay*: I understand you to mean that we must look to the market of the interior for Albury produce? Yes.

212. And you think that will be sufficient for many years to come to take off all the produce of that district? Yes.

213. *By the Chairman*: A large quantity of flour is brought here from South America? Yes.

214. Do you not conceive that flour might be ground at Albury and sent down the Murray, and conveyed from thence to Sydney, which would compete with the Chilian exporter? I would remark, that all the Chilian wheat is grown very near the sea coast, close to water carriage.

215. But then there is a long sea voyage? I think it must be a very remote period before the Albury farmer would send his produce to Sydney, to compete with the Chilian producer.

216. No doubt it will be a considerable time, but I want to know whether you do not think the time might arrive when it would be worth his while to grow, to send to Sydney round by water? I believe the time *might* arrive.

217. Could this produce hereafter be taken down the stream by barges, without the aid of steamers, if the river were free from obstructions—a number of these barges being towed back again together by a steamer? I think it will always be economical to combine steamers with barges, the saving of time would be so great.

- Captain F. Cadell.
12 Nov., 1857.
218. Do you know of any other products grown in Egypt that could be introduced into the country we have been speaking of? I believe on the middle Murray there is a splendid rice country, self irrigating, fully equal to any I have seen in any part of the world.
219. Within the boundaries of New South Wales? Yes.
220. Are the rises of the floods in the Murray sufficiently regular, so periodical that the growers of rice could hope for success—that is, I believe, an absolute essential? In the part of the country I speak of, I believe they are sufficiently regular.
221. *By Mr. Hay*: Whereabouts is that? In the neighbourhood of Swan Hill.
222. In what are called the Reed Beds? Yes.
223. *By the Chairman*: How many thousand acres do you suppose there are in that area adapted for this purpose? On the New South Wales bank of the river, I should say upwards of one hundred thousand acres.
224. Do you know of any other product which would suit that climate, such as beans that are grown in Egypt? I believe beans, such as are grown in Egypt, could be produced there also.
225. For horse food? Yes.
226. How is that country occupied now? Entirely under pastoral lease.
227. With cattle? Cattle, chiefly.
228. The whole of the land on the Murray and Murrumbidgee is taken up? The whole of it is entirely taken up.
229. Do you know anything of the country between the Murrumbidgee and the Lachlan? I know there is a vast tract of country there not taken up.
230. If the Murrumbidgee were navigated, the people living on the Lachlan would of course take advantage of the facilities afforded by the steamers? It would be supposed that they would; but I believe the navigation of the Darling would have much more to do with that country being taken up.
231. There is country between the Lachlan and Murrumbidgee not occupied? I believe there is.
232. The occupation of that country would be affected by the facilities afforded by the navigation of the Murrumbidgee? Yes.
233. I believe it is not occupied now because of the want of water; but if steamers could carry up men and machinery to enable the stockholders to sink for water, its occupation would be facilitated? I believe the more the navigation is facilitated the greater effect it will have in getting all the Waste Lands of the Crown taken up.
234. Have you turned your attention to irrigating these dry countries with water? I have, to some considerable extent; as irrigation is the panacea for all the evils of the interior.
235. You were consulted as to the practicability of the scheme for supplying the country between Billabong and Murrumbidgee with water, in the neighbourhood of Yanco Creek, by deepening that creek? Yes.
236. That work has been carried into effect? It has, and answers remarkably well.
237. Are there other ana branches similar to the Yanco that might be rendered available for irrigating the country? I believe there are numerous ana branches that might be made useful in the same way.
238. You are aware that a company has been formed for sinking Artesian Wells on the back plains? I am.
239. Can you give any information respecting that company? I can give a little general information. I may state that Mr. Woolley, late Secretary to the Mount Alexander and Murray River Railway Company, has undertaken the contract for sinking these Artesian Wells on the back country of the Murrumbidgee, and that he is prepared to go to the depth of six hundred feet, certainly, at so much per foot, namely:—six shillings for the first hundred feet, if through sand, and nine shillings, if clay; with an addition of three shillings a foot in either case for the next hundred feet. There are also clauses in the agreement, that in the event of his striking rock he is to receive an additional sum for the boring.
240. If this experiment should be successful, I presume these wells will be sunk in abundance? I think there can be no doubt of it.
241. The machinery required for boring, being rather cumbrous, would eventually come by water? I conceive so.
242. So that facilities of water communication will tend very much to increase the advantages at present enjoyed by the lessees of the runs within reach of it, and will enable them to keep much more stock? Yes; a very much larger amount of stock may be eventually carried.
243. And in that way increase not only the general wealth but the public revenue? Yes.
244. *By Mr. Garland*: Do you think there is any danger of the water being impregnated with salt? I am very apprehensive that such may be the case.
245. *By the Chairman*: Why do you think so? All the wells that have been sunk as yet have always been salt; I should say most of the wells, I cannot say all, because I believe Mr. John Brougham has obtained very fair water at eighty feet deep on the Billabong. I would remark also, that the Murrumbidgee navigation would have the effect of opening out the Adelong gold field, by enabling them to get machinery up there.
246. *By Mr. Suttor*: You allude to wells sunk in that part of the country, when you say the water is brackish? Yes.
247. *By the Chairman*: There is a very great extent of country between the Lachlan and the Darling quite unoccupied? Yes.
248. Do you know anything of that country? I know generally that the country is a good pastoral country—quite a prairie. I have been out to short distances on it myself.
249. There are some millions of acres at present unoccupied? Hundreds of square miles totally unoccupied.
250. But which, if supplied with water, would be taken up in a few years? No doubt of it.

APPENDIX.

NUMBER OF STEAMERS and BARGES on the MURRAY RIVER.

Captain F.
Cadell.

12 Nov., 1867.

NAMES OF STEAMERS.	H. P.	GROSS TONNAGE.	NAMES OF BARGES.	TONNAGE.
Albury	50	156	Darling	150
Gundagai	50	156	Murrumbidgee	100
Melbourne	45	135	Eureka	100
Lady Augusta	40	72	Wakool	100
Leichhardt	60	250	Mitta Mitta	40
Sturt	60	250	Goolwa	40
Gemini	30	140	Arcoa	30
Moulgwart	20	72	Kennedy	140
Corio	30	120	Lady of the Lake	40
Mosquito	8	40		
TOTAL	393	1,391	TOTAL	740
			Steam-boat Tonnage ...	1,391
			TOTAL AMOUNT OF TONNAGE	2,131

TUESDAY, 17 NOVEMBER, 1857.

Present:—

MR. G. MACLEAY,
MR. SUTTOR,
MR. JONES,MR. GARLAND,
MR. W. MACLEAY,
MR. HAY,

MR. DONALDSON.

GEORGE MACLEAY, ESQUIRE, IN THE CHAIR.

Captain Francis Cadell, called in and further examined:—

1. *By the Chairman:* On your last examination, in speaking of sinking Artesian Wells on the back plains of the Murrumbidgee, you were saying that there is some danger of the water in those wells being brackish? I imagine there is.
2. It is a matter of doubt even whether the principle of Artesian Wells will be found to apply to that part of the country? It is a matter of very great doubt, I think.
3. In the event of the experiment proving a failure, what would you suggest in lieu of these wells as a mode of procuring water for these plains far back from the river? I would suggest the formation of tanks, such as those that have been found to answer so well on the Billibong.
4. Are you practically acquainted with the formation of tanks? I have some information with regard to them that may be interesting to the Committee.
5. Have you yourself constructed any? I have not constructed any; but I have seen tanks that have retained water for years, ever since they were formed in fact. These tanks were covered in, and the runs on which they were made were entirely dependent upon them for water.
6. They were not fed by water draining from the river? They were not fed by water from the river, nor from any creek, but were supplied just by taking advantage of the natural hollows of the surface.
7. To what depth have these excavations been made? Nine to ten feet.
8. Are these tanks covered to prevent evaporation? The best tanks are such as Mr. Robert Brown's, at the back of Ballindina, and Mr. Robert Kennedy's. The water is always very cool, and the evaporation very trifling indeed.
9. Are trees planted over them? Not as yet; though I am of opinion that trees might be very advantageously planted over such water tanks, to shade them.
10. How are the covers formed? They are merely bark roofs.
11. Rafters being placed across, and the bark laid on the top? Yes. Mr. Kennedy's is simply like a common bark roof on any hut.
12. At an angle? At a slight angle, I think.
13. There is no soil placed on the top? No soil.
14. What is the width of the tanks? Mr. Kennedy's is sixty feet wide.
15. *By Mr. W. Macleay:* Is it sufficiently large to supply stock with water? Yes; Mr. Brown's tank watered 3,000 sheep during the whole year. It was constructed previous to the opening of the gold fields, and has never been dry since.
16. What is the capacity of that tank? About 25,000 cubic feet.
17. Do you know what it cost? It cost £40 for the whole excavation, roofing, and every thing.

Captain F.
Cadell.

17 Nov., 1867.

- Captain F. Cadell.
17 Nov., 1837.
18. *By the Chairman*: How was the excavation made—by bullocks, with ploughs? That tank was not made in that way; it was done by hand labor, in the cheap times. Mr. Kennedy's was made by the scoop and plough.
19. A much cheaper process? A much cheaper process than even the digging in cheap times. I calculate that the expense of excavation by the scoop and plough is about 3d. per cubic yard.
20. Is Mr. Kennedy's of the same capacity? It is much larger—100 yards by 20 yards in width by 3 in depth.
21. How long has that been in existence? I think about three years now.
22. Has it not been exhausted at any time? Not that I know of for a certainty, although a report circulated in the district that it was dry this season. I am quite sure that Mr. Brown's has never been exhausted, though it has been longer formed.
23. Is the water drawn from it to supply the sheep? Mr. Kennedy's is a cattle station. The water was drawn from Mr. Brown's tank.
24. In winter sheep do not require to be supplied artificially with water, inasmuch as they get, from surface water on the plains, and from succulent plants, moisture enough for their support? I believe such is the case.
25. Tanks of this description might be formed, I presume, over all the plains of the interior? I see no reason why they should not.
26. On these prairies or plains, could timber be found at a moderate distance? Quite sufficient timber for the purpose of roofing.
27. The tanks are not slabbed on the inside? They should be slabbed. That is the opinion of those who have had experience in the formation of them. The tank at Mr. Brown's, which I have alluded to, has given way at the sides.
28. That would add considerably to the expense? It would add to the expense.
29. *By Mr. Hay*: The country where Mr. Brown's tank is formed is not a plain country, is it? It is very slightly undulating indeed.
30. A great portion of it is covered with timber? There is timber at no great distance. The tank is about twenty miles back from the head station.
31. It is not on the Billibong Plains, properly speaking? It is not on the Great Billibong Plain, but it is on one of the back plains which form the commencement of the Billibong.
32. Is it not in one of the tracts of timbered country? There are tracts of timbered country almost all over the Billibong.
33. There are not any belts of timber at a distance of ten miles or so back from the creek—no forest country? Not forest country, but there are belts of timber here and there.
34. Are there not plains on which it would be impossible to find enough timber even for the roofing of such tanks, between the Murrumbidgee and the Billibong Creek? It would be very difficult to find sufficient for the bark roofing on many of the plains.
35. *By the Chairman*: Do they not procure bark in that part of the country only from the Yarra tree? Flooded box is generally used.
36. Do you think any substitute could be found for that bark? Long wire grass or reeds would do; but on these dry plains no reeds occur, of course.
37. Salt bush and plants allied to it are found over the whole of these plains? To a certain extent they occur over all these plains; but the salt bush is diminishing in quantity from the cattle eating it so much.
38. There is myall also? Plenty of myall.
39. Could faggots be formed of these plants sufficiently dense to be laid on the roofs of tanks to prevent evaporation? I think that could easily be managed.
40. You think there would be no practical difficulty then in forming these tanks over all the plains of the interior? No practical difficulty throughout the majority of them. I may state that Mr. Kennedy—who has done more, perhaps, than any other man in this way—when sinking the last tank came on hard red sandstone, and was obliged to give it up. The other tanks have been made with very great facility.
41. The soil is generally of a retentive character on these plains? Extremely retentive.
42. The loss to be prevented is not so much loss by absorption as loss by evaporation? Just so.
43. *By Mr. Donaldson*: I suppose you would not allow the salt bush to come in contact with the water when using it to roof the tanks—it must be kept clear of the water? It possibly might impregnate the water; but I think it is not at all applicable for the purpose when there are so many other descriptions of trees and shrubs.
44. *By Mr. Hay*: The plains at a considerable distance from the water are not much covered with salt bush? Not much. The salt bush is disappearing.
45. Would it not be worth while, when the expense of carriage is reduced by the operation of steamers on the rivers, to use iron in the construction of these tanks? The settlers are finding that iron is the cheapest roof they can put on their woolsheds and other buildings.
46. Galvanized iron? Yes.
47. Would it not be much cheaper and more effectual for lining the tanks than slabs, where timber is scarce? I think it might be cheaper. Sawn stuff is very dear in the interior.
48. Galvanized iron, I presume, would be almost everlasting? It would be very durable. On the Billibong zinc has been employed in facing the dams, to prevent the crabs from eating through them, by Mr. Broadribb and others.
49. The cheapness of that sort of material would depend on facilities of carriage? No doubt of it.
50. Is there not a great disposition to increase the quantity of fencing on runs in that district? A very great disposition. I can mention one run, the fencing of which is just now being completed, and on which there are upwards of forty-one miles of fencing. I allude to a run of Mr. Maiden's, on the Murray. It cost about £100 a mile. It is a cattle station. There has been a contract taken at Deniliquin for fencing at £80 a mile. I think all the runs on the Edward will be fenced in ere long.

51. There is a pretty good supply of timber in that part of the country? On the Murray there is a good supply of splitting timber, but on the Edward it requires to be cut by a saw-mill, because the timber does not split well. Captain F. Cadell.
52. Do you think iron fencing would answer? I think iron fencing below, with a top rail of strong timber, would be cheaper, and answer better. I do not think it will pay a saw-mill at £80 a mile. 17 Nov., 1867.
53. *By the Chairman:* If tanks of the kind you have been describing could be formed without any extraordinary expense, the number of sheep on the stations on the banks of the rivers would be materially increased? Yes.
54. Have you formed any idea to what extent? The runs would carry fully one-half more stock if that system of tanks were carried out sufficiently.
55. There would be an enormous extent of country taken up which at present is not occupied? Yes.
56. It is proposed, I believe, by the Victorian Government, to form a Railway from Melbourne to Echuca? Yes; there is a line known as the Mount Alexander and Murray River Railway.
57. Would not the facility afforded by such a Railway for the transit of goods and wool very materially interfere with the profits of the steamers on the Murray? I think not. I think more traffic would be engendered from that cause. The lines of Railway must be fed by the rivers.
58. Would the steamers carry weighty goods, like wool, cheaper to Adelaide than the Railway could carry them to Melbourne? Not if the wool were delivered at the Railway station at Echuca; but the difficulty would be to get the wool there. The mere cost of Railway carriage would be very trifling, I imagine.
59. The steamers could collect the wool at various points on the banks of the rivers, whereas it would have to be carried to the Railway from all the stations? Yes.
60. Which would add considerably to the expense? It would. I have no doubt the Railway will do a large business with the Upper Murray when it is established.
61. That Railway would not have much effect on the producers of wool, or any other articles of commerce, on the Murrumbidgee or the Darling? I am apt to imagine it would be a competitor for the entire traffic of the interior.
62. *By Mr. Donaldson:* From your experience of that country, do you think the trade of the districts to the north of the Murrumbidgee is tending towards the traffic of the River Murray, or would it do so to the Railway if there were one—would supplies find their way to Tarcutta and to places higher up the Murrumbidgee, either by the steamers or by the Railway? I think they would from both sources.
63. In preference to the land carriage from Sydney? I think so.
64. Can you give me any idea of the distance on the river northwards to which the carriage would naturally flow from the river or the rail, in preference to coming overland from Sydney—how far would carriage by river or rail have the advantage over carriage from Sydney? I am inclined to imagine that from Gundagai, and all below that, goods supplied by water would compete successfully with land carriage from Sydney.
65. Not north or north-east of Gundagai—Yass, for instance? With my present knowledge of that part of the country, which is not very precise, I do not think we can supply Yass to any extent; but the proximity of the steamers would materially lower the rates of carriage.
66. To within how many miles of Yass can you carry at a rate lower than the carriage by land? You must understand that I am speaking of what will be done when we can go to Gundagai, which may be looked upon as the head of the navigation of the Murrumbidgee.
67. How far is that from Yass? About sixty miles.
68. Then you contemplate carrying by water to within sixty miles of Yass? Yes.
69. *By Mr. W. Macleay:* What will be about the cost to Gundagai by steamer? I think about ten pounds.
70. Do you know what the rate of carriage from Sydney to Gundagai is now? I believe at present it may be quoted at fully twenty pounds.
71. In that case, do you not think the storekeepers in Gundagai might compete, even in Yass, with goods brought from Sydney? I do think so, to a certain extent, though we might not supply it exclusively.
72. *By the Chairman:* Your goods would be conveyed up by water during the winter? Yes.
73. And during the winter months the roads between Sydney and Yass are generally very bad? They have sometimes been impassable for the mails even this year.
74. So that goods taken up by water would be on the spot at a time when they could not be brought by land? Yes; it would supply the great want of internal communication. In the Lower Murrumbidgee District this year, we have always received our recent Sydney intelligence by Melbourne.
75. Have there not been frequent complaints of the quality of the goods sent up the river by the steamers? There have been some complaints.
76. They have been of an inferior class? Some of the goods have been inferior; but it was the manifest interest of the storekeepers, who had other connections, to vilify that description of goods if possible; and, I think, a great deal that has been said is to be attributed to that cause.
77. Has there not been much truth in the assertion? I believe there has been some truth in it.
78. The goods have not been first class? I believe some goods have been complained of with reason.
79. Had they been of superior quality, would there not have been a great demand for them on the banks of the Murray—would not all parties rather have procured them by water than have sent to Melbourne, as I understand some have done? I think if the goods had been uniformly good the demand would necessarily have been greater.
80. Have you ever been on any of the American rivers? Not on the Atlantic rivers. I have been on the Amazon, and some of the Brazilian rivers. 81.

Captain F.
Cudell.

17 Nov., 1857.

81. Can you give us any information as to the character of the steamers that run up the great rivers of America? I am acquainted with the nature of their construction and dimensions.
82. Are there not vessels employed on those rivers which draw even less water than you have stated the steamers on the Murray do? There are vessels which draw less water.
83. Why has not that particular class of vessels been adopted on the Murray? I am of opinion that we never can have upon the Murray the same description of steamers that they have on the American rivers.
84. Why not? The sinuosities of our rivers are so very great that we cannot get length into our steamers.
85. The sudden bends would prevent the use of steamers of great length? Yes. We cannot have them of that *great size which gives displacement*, and, consequently, light draught of water. I may also state that we have had to make our steamers very strong and heavy, to reduce the risk from the timber collected at different places.
86. The Murrumbidgee is very sinuous? Extremely sinuous.
87. But the Murray up to the junction is not so? Not so extremely sinuous, although there are very great sinuosities there also. Here is a Map of the Murray and its tributaries, which will show the sinuous character of these streams. (*The witness placed the same on the table.*)
88. *By Mr. Hay*: Are there not steamers of a smaller class than those you have described, which are employed on the branches of the great American rivers—vessels of little displacement? I believe steamers of a smaller class are employed in towing barges; but I may say I think there is very great misapprehension existing as to the very small draught of water with which these very light steamers are said to run upon the American streams; they are rather passenger boats than cargo boats; they run up the rivers when they are comparatively low. When you come to put cargo in a vessel you must have displacement of water. Some of our barges are very beautifully formed vessels, 120 feet long, by 14½ beam.
89. *By Mr. Donaldson*: Are they flat on the floor? Quite flat.
90. When is the proper season for navigating the Murray? We imagine the season commences in May and ends about January.
91. But you are of opinion that if barges could be constructed to draw no more than two and a half feet of water, they could find employment all the year round, provided the snags were removed? Yes, in all common seasons, if they are constructed when laden not to draw more than 2½ feet.
92. *By Mr. Hay*: Have you ever seen a season when you could not reach Albury under such circumstances? In the summer of 1854 Albury was not approachable by water.
93. Where did the difficulty present itself? The first difficulty occurred within the South Australian boundary, where the river spreads itself out into broad sheets of water, and sand banks occur.
94. In one particular place? No, in many places.
95. About what part of the river? Perhaps a hundred and fifty miles on the South Australian side of the boundary.
96. Near the Great Bend? Yes, a little below the Great Bend.
97. Coming upwards, where would you have met with the next difficulty? We would have met with a succession of difficulties in the dry season of 1854.
98. Where did the different shallows occur below Albury? The first great shallow occurred at Dight's, Ginginderra; a succession of crossing places might have been found on the river that year.
99. What was the depth of water on these crossing places? Many of these places were not more than eighteen inches or two feet deep.
100. *By Mr. Jones*: What did the difficulty of navigation chiefly arise from in 1854? Simply from the want of water along the entire bed of the river.
101. From these natural shallows? From the natural shallows, and from the timber existing there.
102. From what cause did the difficulty chiefly arise—from the shallows or the timber? Chiefly from the timber.
103. Would the removal of the timber in the upper portion of the navigation have been of any advantage, so long as the shallows existed below the South Australian boundary? The removal of the timber, in such a year as 1854, would not have been of any great avail.
104. *By Mr. Hay*: The navigation could not have been carried on, even though the timber had been removed? No.
105. *By the Chairman*: Do you think it likely that, if the timber were removed, these shallows would be swept away by the augmented force of the current? I think there would be such a tendency.
106. *By Mr. Jones*: Might not the removal of the timber have the effect of leaving the water above it shallower than before? The removal of the bars might have that effect; but in any common season the timber is the only obstruction, not the bars.
107. In common seasons, when you can cross the shallow points without difficulty, is the timber a very serious obstruction? It is.
108. *By the Chairman*: During 1854, would the navigation have been impeded by these natural bars alone? For from three to four months, at the outside, it would.
109. The river Murray is supplied periodically with water, by the melting of the snow in the range of mountains where it takes its rise? Yes.
110. Its supply of water is derived principally from that source? I should say it receives quite as great a supply from melted snow as from other causes.
111. It is that which gives it its character as a true river—a constantly running stream? It is.
112. What is the rate of the current? The average rate is about two miles and a half an hour.

113. Until you reach Moorundce—the bend? It is rather more sluggish below the bend.
114. Are the two ana branches—the Edward and the Wakool—navigable in ordinary seasons? The Wakool is decidedly navigable in ordinary seasons up to Boon Boon; and the Edward also, as far as Deniliquin from its lower junction with the Murray.
115. Have their navigable qualities been tested yet—have any boats passed up? No boats have passed up the Edward. I speak of its navigability with reference to the depth of water; but there is some timber which I consider should be removed before the navigation will be safe.
116. Steamers would pass up both these branches if the timber were removed? Steamers have been on the Wakool repeatedly; in fact, every year since the navigation was opened.
117. How many miles have steamers been on the Wakool? About fifty miles.
118. What is the length of the Wakool from the time it leaves till the time it rejoins the main river? I can hardly answer that question, because the Wakool is formed by a number of creeks converging into one. It is not navigable more than fifty or sixty miles at any time.
119. *By Mr. Garland:* The Edward is the largest? The Edward is the largest in the upper part of its course; but the Wakool, having been augmented by so many streams falling into it, becomes very much larger than the main Murray; it is fully three times larger than the main river where it joins it again; the Murray seems a perfect ditch in comparison.
120. *By Mr. W. Macleay:* In navigating the Edward, you go up the Wakool first? Yes. The Edward, the Billibong, the Yanco, and a number of creeks, all flow into it.
121. *By the Chairman:* Could you pass up the Edward from the place where it rejoins to the place where it flows from the Murray? To do so you would require to go through gum forests and reed beds; it cannot be termed navigable at present for steamers.
122. Taking these two ana branches together, for how many miles do you consider them navigable? Four hundred miles.
123. All within the Colony of New South Wales? All within the Colony of New South Wales.
124. For how many miles is the Murray navigable within the Colony of New South Wales? About twelve or thirteen hundred miles, by the best maps.
125. From the boundary of South Australia to Albury? Yes. The river has never been thoroughly surveyed, so that we cannot speak with precision.
126. Is Albury the extreme point of the navigation—in winter time could steamers go beyond Albury? I do not look on Albury as the permanent head of the navigation.
127. In building a bridge there, then, you would suggest that allowance should be made for vessels to pass through? Decidedly. I think we may look for considerable traffic above Albury.
128. You have said the Murray is navigable for twelve or thirteen hundred miles, and its two ana branches, the Edward and Wakool, for four hundred miles in addition, within the boundary of this Colony—will you now state for how many miles the Murrumbidgee is navigable? About eight hundred miles.
129. To Gundagai? Yes.
130. And the Darling? The Darling, in such a year as this, is navigable for eight hundred or a thousand miles.
131. Up to what place? Decidedly up to Fort Bourke, and beyond there, I believe.
132. That makes altogether an aggregate of three thousand and three hundred miles of navigable waters within the boundary of this Colony—does it not? I consider there are more; I think our internal water communication is above four thousand miles, of which the Murray is the main trunk.
133. Do you include that portion of the Murray which is below our boundary, or only those within the Colony of New South Wales? The waters I consider peculiarly belonging to New South Wales are navigable for about three thousand five hundred miles altogether above the boundary.
134. *By Mr. Garland:* Have you any acquaintance with the Lachlan? With the Lower Lachlan I have.
135. Is it navigable? That portion I have seen is decidedly so. It is a perfect canal.
136. For what distance? I only speak of thirty or forty miles of the lower portion of it. When I speak of navigable waters, I allude to the proper season—not during the dry season.
137. *By the Chairman:* Perhaps you saw the river during a time of great flood? I saw it in the middle of summer—it was then in flood.
138. *By Mr. Suttor:* Is there any well defined channel for some miles from the Murrumbidgee? The Lachlan waters hardly ever reach the Murrumbidgee; it loses itself in reed beds.
139. How then would it be navigable? A boat must be built upon it.
140. *By the Chairman:* It must be an isolated navigation? Yes, to be permanent.
141. *By Mr. Garland:* Would it not be capable of canalization? I think so, highly.
142. *By Mr. Hay:* In its present state there is no open communication between the Lachlan and the Murrumbidgee, even in times of flood? No. It is a matter of dispute whether the waters of the Lachlan ever reach the Murrumbidgee. One settler on one side of the river says they never reach it; but the Messrs. Tyson, who, I think, know the river better, say they do. I speak from actual knowledge when I say I have seen the river come down bank and bank within a few miles of, and yet not a drop has reached the Murrumbidgee. There is a hard dry road between.
143. *By Mr. Suttor:* Have you noticed that lately? In the summer of 1856.
144. *By the Chairman:* Is the Railway or Tramway finished between the Goolwa and Port Elliott? It was finished in 1853.
145. What is the charge per ton for the transit of goods from the Goolwa to Port Elliott? It began at sixpence a mile; it is now a shilling.
146. Are these charges included in the charge made by the Steam Company per ton for taking goods down the river? When we used the Railway they were.

Captain F.
Cadell.
17 Nov., 1857.

Captain F.
Cadell.

17 Nov., 1857.

147. *By Mr. W. Macleay*: You do not use the Railway now? Not since we got a steamer to run through the sea mouth. I may mention that by far the larger amount of our trade is in flour, and that is grown on the shores of the lake.
148. Near the Goolwa? Near the Goolwa, on the shores of the lake. About 500 tons of flour and 10,000 bushels of wheat have been shipped this season at Milong, a small port which has been called into existence since the navigation of the Murray.
149. *By the Chairman*: What is the amount of freight by the steamers to the junction of the Darling? About £4 10s. per ton.
150. About what amount of wool—how many bales—is grown on the Darling now? I think they have shorn about a hundred thousand sheep on the Darling.
151. *By Mr. Suttor*: That is on the lower Darling? Yes. We calculate that there will be this year from one thousand to twelve hundred bales of wool on the Darling.
152. *By the Chairman*: That wool is taken down to Adelaide? All of it; every bale.
153. I suppose no owner of a station on the Darling would dream of taking his wool from there to Sydney? Before the navigation of the river was opened one settler did take his wool to Sydney.
154. What length of time did it take him to do so? About six months and a half, going and coming. He was connected in Sydney, and could not help himself.
155. Stations have been taken up on the Darling with great rapidity since the steamers have plied to the junction? They have.
156. *By Mr. W. Macleay*: How far up do the stations extend? The outer station now is at Mount Murchison, belonging to the Messrs. Jamison, about three hundred miles up the Darling. I can produce a letter from Mr. Perry, the Commissioner of the Albert District, with regard to the pastoral leases taken up since the navigation was opened, stating the effect that circumstance has had upon the demand for runs in that district, and upon the rates of premium obtained for them. (*The Witness handed in the same. Vide Appendix A.*)
157. *By the Chairman*: What is the highest amount of premium you have heard of? I believe £232 for a block supposed to be capable of carrying four thousand sheep or their equivalent in cattle, is Mr. Perry's quotation.
158. *By Mr. Donaldson*: You mean premium on the whole lease, not annually? The annual rent, not premium.
159. *By Mr. Hay*: Do you know the particular run that was let for £232? I think I do—immediately below the junction.
160. It is what is called a junction run, is it not? Yes; Mr. Cameron is the lessee; Nilpo is the name of the run, I think.
161. Do you know anything of that station? I know the station.
162. Do you think it is not capable of depasturing more than four thousand sheep as an actual fact? I think there are more upon it.
163. These blocks were adjusted by Mr. Lockhart, the Crown Lands Commissioner, were they not? I only know they were not leased until perhaps two years after Mr. Lockhart had been there: they were not leased until after Mr. Perry went down.
164. You are not aware of the circumstances then? I am not.
165. You are not aware that these runs were laid out by Mr. Lockhart with the view of enabling the Government to realize their full value, without reference to the way in which they had been previously taken up? I am not minutely aware of the circumstances.
166. You are aware that they are of various capabilities? I am.
167. Those that brought the highest prices were valuable blocks of comparatively rich country? I believe they were only comparatively rich; the navigation of the river gave them value.
168. *By the Chairman*: They are in the salt bush country? Yes.
169. Fit only for pastoral purposes? Fit only for pastoral purposes. I may mention that the Darling settlers were not at all well used with regard to their country; they did not get their country at all as they ought.
170. *By Mr. Hay*: This country had all been occupied for years before the runs were put up to tender? Yes; the present occupants are not the parties who originally took up the runs. The particular run we have been speaking of did not belong to the present occupant.
171. *By the Chairman*: The present occupants came in over the heads of those who were so long in possession of the runs? Yes. What I wished to point out was, that the Sydney men came in over the heads of the Darling men, because they had not time to send in tenders. The very day the advices came to the Darling junction that the runs were offered for tender the tenders were received in Sydney.
172. *By Mr. Hay*: That was in the case of a second batch of runs, not the ones we have been speaking of? Yes; they were further up the river.
173. *By Mr. Jones*: So that the original occupants not only did not get their runs but did not get the chance of competing for them? No; they had fought for these runs for years and did not get them after all. Some of the settlers were so annoyed that they sold out and left the country.
174. *By the Chairman*: These runs on the Darling were at one time comparatively valueless, from their enormous distance from head quarters, and they have been rendered very valuable by the prospect of water carriage? That is the only reason to which we can attribute their present value.
175. *By Mr. W. Macleay*: Have the company any intention of taking up the navigation of the Murrumbidgee? They have no immediate intention of doing so, unless the settlers will guarantee them a certain amount of freight.
176. If guaranteed a certain amount of freight they would take it up? If it were put on board I believe they would send a boat up.
177. If the river were cleared of the timber that at present obstructs the channel, do you think the company would then send their boats up? Not as long as there was trade on the main Murray. I have not been able to induce them to do so.

178. *By the Chairman:* Is there sufficient trade on the Murray to occupy ten steamers? Captain F.
CadeH.
Up to the present time we have found sufficient up traffic; the boats carrying on owners' account.
179. On the Murrumbidgee it would be up and down? It would. By my last advices I 17 Nov., 1857.
learn that we are glutting the Ovens gold fields with our supplies just now.
180. *By Mr. W. Macleay:* You say you have been on the Murrumbidgee for three hundred miles—was that on the lower part of it? The lower part principally; but I am acquainted with the stream generally from Gundagai downwards.
181. You believe it would be perfectly navigable for many months in the year? Yes.
182. *By the Chairman:* A Captain Robinson was sent by your Company to ascertain the fitness of the Murrumbidgee for navigation? Yes.
183. What was his report? It was highly favorable.
184. *By Mr. W. Macleay:* Is there as much water as would render it navigable for ships of the same size as those employed on the Murray? The breadth of the stream is less, and its sinuosities are greater than on the Murray; and, from its being a narrower stream, the timber occupies more of the water bed of the river.
185. *By Mr. Hay:* Where is the obstruction most remarkable? On the lower part of the river, from Kinta downwards.
186. To its junction with the Murray? Yes.
187. Then the worst portion is near the junction? Yes, by far the greatest portion of the timber lies in that part of the river.
188. The great difficulty, therefore, is to get the boats on the river? Boats have never been on it, except a small one to Balranald.
189. *By Mr. W. Macleay:* The steamer that went up to Balranald had to overcome considerable difficulty? Yes, as far as the timber was concerned.
190. *By Mr. Garland:* The timber is not a permanent difficulty—that is to say, the timber that might present difficulty in one year might not do so another year—the timber moves in times of flood, does it not? The timber that obstructs the navigation, I conceive, never moves. The drift timber is nothing.
191. *By Mr. Hay:* Trees which fall into the river remain *in situ*, and accumulate the drift? Yes, it lies where it falls. The drift timber is very trifling in quantity—just charred timber, which comes off the plains.
192. *By the Chairman:* If the timber were once removed from the rivers, would there be danger of its accumulating again if continual care were not taken? To a very limited extent. There would always be some trees falling in.
193. Are there many trees growing on the banks of the Murray? Yes, a great number. Its general course is through a forest.
194. Are there any casuarina trees growing on in banks? They never approach near enough to the river to fall into it.
195. No very great amount of care would be required then to keep the channel free if it were once cleared? No great amount of care.
196. *By Mr. Hay:* The timber at present impeding the navigation is the accumulation of centuries? Yes.
197. It seems to last a very long time? Yes.
198. *By the Chairman:* I presume all the rivers in the world have been in a similar state when first opened for navigation? I should imagine so. A tree newly fallen can never hurt a steamer, because the force of collision is broken by the small branches and leaves, so that no danger is to be apprehended from that source. All the small branches eventually get broken off, until only the stout strong branches and the barrel remain, these then are dangerous.
199. The timber becomes hardened by lying in the water, does it not? By lying in the water, and by exposure.
200. Is it not rather by the action of the water and the adhesion of small aquatic plants? From all these causes it becomes much harder.
201. The wood does not decompose? Decomposition is very slow.
202. *By Mr. Jones:* What is the general character of the supplies taken up the Murray by the steamers? Rations for the supply of stations, and the general supplies required upon the gold fields; flour is much the largest article.
203. Are there many goods taken up the Murray which are subject to duties? Not a very large proportion.
204. From what place is the tract of country lying between the southern boundary of the Colony and Gundagai on the Murrumbidgee, including the lower part of the Lachlan and the lower part of the Darling, supplied with the bulk of the articles consumed there? Partly from Adelaide, and partly from Melbourne.
205. Scarcely at all from Sydney? Scarcely at all from Sydney, below Mr. Lang's station. Above Mr. Lang's station, on both sides of the Murrumbidgee, they draw their supplies from Sydney.
206. But below that point, to the southward, they draw their supplies from Victoria, or from South Australia? Yes.
207. So that the duties payable on dutiable goods consumed in this tract of country are paid not in this Colony but in the neighbouring Colonies? Yes; but South Australia refunds to New South Wales her proper proportion.
208. Where do the people on the Yanko and Billibong get their supplies? From Melbourne and South Australia.
209. And those living in the main valley of the Murray? From South Australia.
210. Whence is Albury supplied? Conjointly from South Australia and Victoria, and, to a limited extent, from Sydney.
211. Have you any idea what the amount of duty paid over to this Colony by South Australia

- Captain F. Cadell.
17 Nov., 1867.
- Australia is at the present time? I have no idea what it is this year? I can furnish the Committee with an account of the quantities of goods taken up the Murray since the trade has been opened, as read by Mr. Younghusband in the Legislative Assembly of South Australia:—"During the first season, (1853-4,) there were taken up 276 tons of goods, and 1,362 bales of wool were brought down; the whole valued at about £25,000. In the second season, (1854-5), 365 tons were taken up, and 3,009 bales of wool brought down; valued at £35,000. During the third season, (1855-6,) there were 700 tons up, and 2,700 bales of wool down; value, £50,000; and in the fourth season, (1856-7,) when the trade to the Ovens Diggings commenced, and there were three more steamers on the river, 3,629 tons of goods were carried up, and 2,370 bales of wool were brought down; the whole valued at £247,000 for that season."
212. Is there any attempt made to collect Customs duties on the Murray? Not the slightest. South Australia has a Custom House at the Goolwa.
213. The revenue derived from dutiable goods brought up the river by the steamers is paid either to the Government of South Australia or that of Victoria, and retained by them, excepting the portion which is handed over to New South Wales by the Government of South Australia? Victoria, in one respect, gains the advantage from the duties, as there are no Border Custom Houses. South Australia derives no advantage from them, because she pays a portion over to New South Wales.
214. By Mr. Hay: Except the portion paid over by South Australia to New South Wales, the South Australian and Victorian Governments derive the whole of the benefit? New South Wales and Victoria divide the amount, so that South Australia makes no direct gain.
215. By Mr. Jones: The only Customs revenue derived by this Colony from such of these goods as are consumed within its territories, is the amount annually paid over to us by the Government of South Australia? Yes. Victoria sends her goods across the frontier free.
216. So that, in point of fact, a great proportion of our Customs duties, which should go to support the expenses of our Government, in this section of the territory of New South Wales, passes to Victoria or to South Australia? South Australia pays the contribution which is due to New South Wales—and more than the proper contribution—because three-fourths of the goods brought up the Murray are landed in Victoria, while New South Wales receives payment for one-half.
217. By Mr. Donaldson: You have means of knowing that? I have. I hand in Returns of the amount of goods shipped in seven steamers during the present season, characterising the Colony in which they were landed. (*The Witness handed in the same. Vide Appendices B and C.*)
218. By Mr. Jones: Supposing the navigable channel of the Murray to be improved, would that tend to increase the supply of dutiable goods by way of South Australia? The more the navigation of the river is rendered easy, the cheaper will the goods be brought up from South Australia; and the more likely they will be, therefore, to displace goods brought from Victoria. This will be especially the case with regard to that portion of the Murrumbidgee which is supplied with spirits and tobacco from Victoria.
219. What is the present rate of freight from the Goolwa to Albury by the Murray? £10 10s or £11, I am not sure which.
220. Have you any idea what is the rate per ton from Melbourne to Albury? £24 per ton is the lowest rate at present.
221. By Mr. Hay: When you say at present, you mean at this particular season of the year? Yes.
222. Does it not fall much below that rate in summer? The rate is £12 in summer.
223. By Mr. Jones: Then, in point of fact, in the summer season, the rate of freight from Melbourne to Albury is about the same as from the Goolwa to Albury? Nearly so.
224. What is the present rate from Sydney to Albury? I can furnish the Committee with the average rates of carriage from Melbourne to Albury, and from Sydney to Albury, for the last four or five years. (*The Witness handed in the same. Vide Appendix D.*) As an illustration of the delay which sometimes takes place on the roads, I have heard of an instance which occurred at Albury, where a carrier left that place to go to Sydney, and another man left about the same time to go to England; the man went home and came back again before the carrier had returned to Albury from Sydney.
225. By Mr. Hay: Even supposing the navigation of the Murray to be closed altogether, do you think it would extend the present traffic between Sydney and the Southern Districts very much—would the traffic which was so created go to Melbourne or to Sydney? To Melbourne.
226. Almost exclusively? Almost exclusively.
227. By Mr. W. Macleay: But if the navigation of the river is extended as much as it may be, Sydney will suffer a good deal by that? I think Sydney will suffer, but New South Wales will benefit.
228. By Mr. Donaldson: What is the character of the country upon the boundary line of New South Wales on the banks of the Murray? The most wretched country imaginable.
229. That locality would be inconvenient then for the establishment of a Custom House? Yes; it is a miserable country.
230. By Mr. Hay: It would be very difficult to evade a Custom House there? No man could go up there without its being known to all on the river bank.
231. It would be very difficult to land goods from a steamer anywhere in the neighbourhood, within the South Australian boundary, and convey them to a point higher up, on the New South Wales side? It would be impossible, I think, to make the trade profitable.
232. By the Chairman: The Castlereagh, the Macquarie, and the Bogan are tributaries of the Darling? They are.

233. These rivers are occupied by stations, I believe? Yes.

234. Would the inhabitants of those districts derive their supplies, if the Darling were navigable for eight hundred miles, from that source, rather than get them by land from Sydney *via* Wellington? Undoubtedly. Carriage to Mount Murchison or Fort Bourke by water would not exceed ten guineas.

235. What would be the rate of carriage from Sydney *via* Wellington? About £40 a ton, I should say.

Captain W.
Cadell.

17 Nov., 1857.

APPENDIX A.

Crown Lands Office,
Moorua, Albert District,
6 August, 1857.

MY DEAR SIR,

I have to acknowledge the receipt of your letter of the 20th ultimo, in which you request me to point out any beneficial results that may have occurred with reference to the value of Crown Lands in this district by the successful navigation of the River Murray. I have very great pleasure in being able to state, that I am of opinion that the high rates of premium offered, and accepted by Government, for certain runs (21 in number) in this district, in the year 1854, would not have been obtained had the navigation of the Murray proved a failure, instead of, as it did, a successful and beneficial result. It may be well to remark, that the runs before mentioned realised premiums from £100 to £232 per annum, for the pasturage of 4,000 sheep, or their equivalent in cattle. At a subsequent period (in April 1855), fifteen adjusted runs in this district, on the River Darling, were offered to public competition, commencing at about 100 miles from the confluence of the Darling and Murray, and extending upwards. These runs also realised the very high rates of premium, ranging from £70 to £125 per annum (notwithstanding the distance from the present head of navigation). It is my decided opinion, and I may venture to say that it is the opinion of residents here, that such extraordinary high rates of premium would not have been offered had the navigation of the Murray proved a failure. The Darling is now occupied for a distance of three hundred miles, and wool is conveyed by drays to the present head of the navigation, and there would not be any difficulty in ascending the Darling this season to that point, provided there was sufficient inducement. If you wish this information to be placed in an official shape I shall have much pleasure in doing so. Meantime,

I remain,

Yours very truly,

G. M. PERRY.

CAPTAIN CADELL.

APPENDIX B.

SUMMARY of Goods shipped per R. M. N. Company's Vessels, Season 1857-8.

VICTORIA.

MERCHANDIZE.

48,200 feet flooring boards.
18,388 " 11 x 3 deal.
23,843 " 9 x 3 "
7,376 " 8 x 3 "
9,704 " 7 x 3 "
Suppose 50 tons deal per "Gundagai."
310 packages cedar.
805 tons flour.
140 " bran.
1,574 bags salt.
19 barrels "
149 bags sugar.
776 casks bottled beer.
50 hds. beer.
132 cases brandy.
194 " whiskey.
212 " wine, each 1 doz.
18 " " 3 "
90 " sublime oil.
20 " raisins, each 2 qrs.
5 " figs, each 2-2 qrs.
4 " candles, each 5 qrs.
308 bags rice, 32 tons.
53 " coffee.
2 cases cheese.
50 barrels plaster Paris.
20 " oatmeal.
199 bales hay.
2 cases bedstead.
57 tons bar and rod iron.
10 " galvanized corrugated iron (sheet).
4 cwt. rivets, burrs, &c.
5 bales paper.
37 crates earthenware.
16 casks glassware.
3 cases "

197—F

NEW SOUTH WALES.

MERCHANDIZE.

3 packages hardware.
5 hds. earthenware.
12 packages oilmen's stores.
18 bags sugar.
5 cases champagne.

SETTLERS' STORES.

2 hds. sugar.
1 cask "
1 case "
195 bags "
29 chests tea.
14 half chests tea.
1 cask tobacco.
2 half tierces tobacco.
2 quarter " "
1 case tobacco.
3 quarter casks wine.
10 cases wine.
4 " brandy.
3 " gin.
1 quarter cask whiskey.
4 casks bottled beer.
1 bag coffee.
1 " rice.
1 " pearl barley.
10 " oats.
1 " biscuit.
1 cask peas.
1 " oatmeal.
2 cases Lucerne seed.
20 bags salt.
34 boxes soap.
4 boxes raisins.
1 cask dried apples.
40 bushels wheat.

SETTLERS

Captain F.
Cadell.

APPENDIX B.—Continued.

17 Nov., 1857.	VICTORIA. SETTLERS (OR MISCELLANEOUS) STORES.	NEW SOUTH WALES. SETTLERS' STORES—Continued.
	56 bags sugar.	10 bags potatoes.
	12 chests tea.	35 packages oilmen's stores or groceries.
	4 half chests tea.	33 packages slops, drapery.
	1 case tobacco.	2 trunks boots.
	3 „ wine.	7 cases saddlery.
	1 octave „	6 bales woolpacks.
	2 cases brandy.	1 package tarpaulins.
	2 cases gin.	3,000 palings.
	2 casks bottled beer.	25 packages timber.
	2 bags rice.	113 pieces hardwood qtns.
	3 „ oats.	103 deals.
	2 „ bran.	4 packages building materials.
	9 boxes soap.	4 casks pitch.
	41 packages groceries or oilmen's stores.	2 „ resin.
	18 „ furniture.	4 „ tar.
	1 pianoforte.	8 bundles oakum.
	1 weighing machine.	4 kegs nails.
	1 hay rake.	10 bundles rod iron.
	4 casks hardware.	16 packages hardware.
	21 packages „	3 „ agricultural implements.
	3,000 palings.	2 reaping machines.
	15 bundles deals and boards.	1 gig.
	3 packages building materials.	5 packages fruit trees.
	5 „ leather.	1 case stationery.
	1 trunk boots.	1 pianoforte.
	1 case saddlery.	29 packages furniture.
	1 bale woolpacks.	24 tons flour.
	1 case drapery.	
	1 „ hams.	
	9 tons flour.	

Total freight to date, 2,170 tons weight.

Goolwa, 8 November, 1857.

APPENDIX C.

A RETURN of Goods shipped for Upper Murray, in the Steamers "Sturt," "Leichhardt," and "Mosquito," during the Season of 1857.

VICTORIA.	NEW SOUTH WALES.
3,399 bags flour, 319 tons.	480 bags flour, 48 tons.
1,089 „ bran, 66 „	5 „ biscuits.
389 „ oats, 1,570 bushels.	2 cases confectionary.
12 „ malt, 46 „	22 $\frac{1}{2}$ chests tea.
144 bales hay, 17 tons.	242 bags sugar, 15 tons.
227 bags potatoes, 12 tons.	4 „ coffee.
953 „ rice, 70 $\frac{1}{2}$ „	47 „ salt.
723 „ salt, 36 $\frac{1}{2}$ „	4 casks vinegar.
— „ bacon, 1 „	99 boxes groceries.
326 bags sugar, 21 $\frac{1}{2}$ „	8 crates and 1 cask earthenware.
109 $\frac{1}{2}$ chests tea.	183 packages sundries.
1 bag coffee.	479 sheets galvanized iron.
12 $\frac{1}{2}$ casks 4 $\frac{1}{4}$ do. vinegar, 322 gallons.	14 kegs nails.
340 boxes soap.	4 packages drapery.
10 cases oilmen's stores.	16 deals.
134 packages groceries.	2,069 pieces timber.
50 cases bottled fruits.	2 casks and 58 cases brandy, 150 gals.
6 firkins butter.	1 „ rum, 5 gallons.
51 cases and 2 hds. brandy, 193 gallons.	8 „ and 4 casks wine, 190 gallons.
6 hds., 1 cask, 1 punch. rum, 475 „	191 „ and 22 cases bottled beer, 2,036
2 casks and 50 cases whiskey, 128 „	gallons.
1 cask and 86 cases gin, 158 „	21 cases gin, 47 gallons.
51 packages wine.	
730 casks bottled beer, 6,538 gallons.	
1 cask ironmongery.	
iron bars, 23 cwt.	
1 bale woolpacks.	
1 cask glassware	
12 cases drapery.	
267 cases sundries.	
2,295 flooring boards.	
100 cedar boards.	
469 deals and planks.	
12,000 6 feet paling.	

APPENDIX D.

CARRIAGE from Melbourne to Albury, and from Sydney to Albury, during 1853, 1854, 1855, 1856, 1857.

Captain F.
Cadell.

17 Nov., 1857.

Average from Melbourne to Albury, 1853, £80 per ton. In this year it reached as high as £140 per ton.

Average from Melbourne to Albury, 1854, £60 per ton. In this year it reached as high as £110 per ton.

In 1855, £40 per ton; in 1856, £30 per ton; in 1857, £25 per ton.

From Sydney to Albury.

Year 1853	1854	1855	1856	1857	} all averaged.
Per Ton £80	£60	£40	£35	£35	

FRIDAY, 20 NOVEMBER, 1857.

Present:—

Mr. G. MACLEAY,
Mr. W. MACLEAY,
Mr. SUTTOR,

Mr. JAMISON,
Mr. DONALDSON,
Mr. HAY,

Mr. GARLAND.

GEORGE MACLEAY, ESQUIRE, IN THE CHAIR.

Captain Francis Cadell, called in and further examined:—

1. *By the Chairman:* Before I proceed to ask you to give us information upon the subject of clearing the rivers, I should like to ask a question having reference rather to a matter inquired into previously. Sir Henry Young was on board the "Lady Augusta" when you went up the Murray the first time; and, as appears from a letter written by him subsequently to that voyage to the Government of New South Wales, as well as from the measures he himself took with respect to the land on the banks of the Murray within South Australia, he formed a very high opinion as to the qualities of the country: Now, as you have since told us that you do not look upon that as an agricultural country, I wish to ask you how you account for the discrepancy of opinion? I am inclined to imagine that Sir Henry Young's opinion was influenced by the very favorable season in which he saw the valley of the Murray; the country looked beautiful and promising; everything looked green and luxuriant; but I am not aware that Sir Henry Young has ever been so high up the Murray as the neighbourhood of Swan Hill, or even the junction of the Murrumbidgee, during an average season. It was a particularly favorable season when Sir Henry Young went up.

Captain F.
Cadell.

20 Nov., 1857.

2. In what month was it? In the months of September and October.

3. At which time the country always looks green and luxuriant? Yes, and in that year particularly so.

4. You have had opportunities of seeing the same country at all seasons of the year? Yes.

5. And have formed your opinion from those opportunities? Yes. I look upon it as a pastoral not an agricultural country.

6. In the year 1855 a sum of £1,000 was voted by the Legislature of this Colony for clearing the channel of the Murray, and another sum of £1,000 for clearing the channel of the Murrumbidgee? Yes.

7. These sums have been expended by the River Murray Navigation Company, under the superintendence of the Commissioner of Crown Lands of the district? Yes; those were the conditions specified in the vote.

8. You were employed by the company to clear the rivers? I cannot say I was employed by them. They would have nothing to do with the clearance of the river until they had the funds in hand to set about it. I volunteered to carry on the operations.

9. Then you took upon yourself, with the assent of the company, to superintend the expenditure of these votes? I did.

10. Subject to the general supervision of the Commissioner of the district? Yes.

11. Was the money immediately available for the purpose? It was not immediately available. All the preliminary expenses were carried on at my own individual outlay.

12. What length of time elapsed before you could get the money? Nearly a year; but for a portion of that time the money was kept out of my hands, through some informality in the papers. If the proper forms had been used, I should have got the money perhaps four or five months sooner.

13. Through whose fault did that informality take place? I believe principally through my own. I had not been accustomed much to Government returns.

14. But there was some delay on the part of the Government in placing that money at the disposal of the Commissioner? Yes; the Commissioner himself had not the money for several months.

15. A correspondence took place between the Commissioner, the representative of the district, and the Government, I believe? Yes.

16. Has the whole of that sum of one thousand pounds been expended for the purpose intended? I may say the whole of the money voted for the Murray has been expended to all practical purposes; the exact amount is £996 7s. 11d., in the two seasons, leaving the small balance of £3 12s. 1d. The punts and cutting tools are still forthcoming.

Captain F.
Cadell.
20 Nov., 1857.

17. And available for any further operations? Yes.
18. What amount of money was expended on the punts and other requisite apparatus? I suppose the cutting tools and punts may be worth some £40 or £50; they have undergone a good deal of hard work in the two seasons.
19. What did they originally cost? The outfit cost about £140, I think, including punts, carriage of materials, &c., &c.
20. How much was expended more immediately upon the clearing of the river—somewhere about £700, was it not? Yes, including the rations and necessary travelling expenses.
21. How many miles of the Murray were cleared with that money? In round numbers, about two hundred and twenty miles were cleared, to the lowest water mark.
22. When you say "cleared," you do not mean that the timber was altogether removed from the bed of the river? No; it was cut down to the lowest water mark, and in some bad places, where there was not much room in the river, we cut it below the water, at a good deal of trouble.
23. What was done with the portions of timber so removed from the trees in the channel? They were sunk into deep holes in the river.
24. Is there any danger of the timber so sunk in the deep holes being afterwards carried on further by floods, and becoming injurious to the navigation of the river? Very slight; hardly anything will move that timber when it gets in one of those deep holes.
25. Is there any danger of sand accumulating about them, and thus of the pools becoming shallower? There may be some slight danger, but not great.
26. Practically, you do not think any mischief is likely to ensue from that system? I think it was the only system we could adopt at that time. We could do nothing else, not having funds sufficient to take the timber out of the river altogether.
27. That would be an expensive process? Yes. I imagine it could only be done economically by the aid of steam.
28. It would be requisite to burn this timber if taken out of the river, otherwise floods might carry it back again? I think it ought to be burnt.
29. That would add to the expense? Yes. I can read to the Committee, with your permission, a copy of a certificate which I received from two of the captains of steamers running on the river—the only two, excepting those in the service of the R.M.N. Company, who have been over that portion of the river cleared by New South Wales. I may also state that these steamers were running in opposition to ours.

"Captain Cadell.

"Adelaide,
"February, 1857.

"Sir,

"With reference to our opinions regarding your clearing operations, we beg to state that the moment we reached that portion of the river cleared by your party, we were relieved from the incessant bumping we had previously been subjected to, and that during the remainder of our voyage to Wahgunyah we only touched once, and we believe we were then a little out of the channel.

"(Signed) A. M'COY, Master, Steamer 'Sturt.'

"(Signed) — DAVIDSON, Master, Steamer 'Leichhardt.'"

There is also a postscript from the managing owner, who happened to be on board at the time, to this effect:—

"Having been on board the 'Leichhardt' at the time above alluded to, I can, personally, vouch for the truth of the above statement.

"(Signed) — ACRAMAN,

"Acraman, Main, and Lindesay."

30. Was this clearing continuous? It was continuous from Albury downwards. We drifted down with the stream.

31. You did not go below to the spots where the obstruction was greatest? Everything above the water was cleared off.

32. Why did you commence at Albury? Because we could not work the punts up the stream. Albury was the most convenient place for getting the punts built, and for hiring men.

33. Is the timber now abundant in the higher parts of the river? As a rule, such is the case.

34. *By Mr. Donaldson:* Did you cut off the timber level with the water's edge? Level with the water at the lowest fall of the river; thus securing an average rise of some fourteen feet to work upon during the navigable season.

35. *By the Chairman:* You worked during the summer months, when the river was lowest? Yes.

36. *By Mr. Donaldson:* I presume the timber was a considerable distance above the water at that time? Yes, sometimes twelve to thirteen feet; on average five to seven feet above the water.

37. *By the Chairman:* What did you do with the lighter branches? Being light they floated down the stream.

38. What do you calculate would be the expense per mile of such a mode of clearing the whole river, making allowance for some portions being all but free from timber, and others comparatively less obstructed? That clearing which I have spoken of as having been effected at the expense of New South Wales cost about £4 10s. a mile.

39. Could the whole river be cleared in the same way, and at the same rate? The whole river could be cleared in the same manner, at a less rate than that, now that the punts and tools are there for the purpose.

40. *By Mr. W. Macleay:* At what rate could you get on with these punts? In a fair season, one party, composed of three or four punts and twelve men, ought to clear about a hundred and fifty miles of the river.

Captain F.
Cadell.

20 Nov., 1867.

41. Allowing the season to last how long? About four months.
42. That is rather over the usual length of the dry season, is it not? Rather more. Three or four months we generally consider the dry season.
43. *By Mr. Hay:* How much of the River Murray has been cleared altogether by this process? From six to seven hundred miles.
44. What are the parts of the Murray which still remain uncleared in this partial manner? From about four miles above the junction of the Wakool downwards to the junction it has not been cleared, and that portion of the river between Moama and Campbell's Island has not been cleared; but these are fine portions of the river, except the small portion above the Wakool, which is bad, and will be cleared by South Australia, the funds being in hand.
45. These four miles? Yes. There are quite sufficient funds to clear the whole of the Murray that requires clearing, in the way that has been stated to the Committee; the balance of the South Australian vote.
46. *By the Chairman:* What class of men did you employ as laborers? I employed seamen when I could get them. There are a good many seamen about the bush.
47. Did you employ the aborigines at all? Not at all: the aborigines are all but extinct now on the Upper Murray.
48. Could they be made available on the Lower Murray? I think not. I would rather not have anything to do with them, they take so much looking after; although, to a trifling extent, they made themselves useful on several occasions.
49. You think it is cheaper to employ white labor, even at a high rate, than to get the natives to work for blankets, tomahawks, and other articles? I think it is much cheaper.
50. With respect to the thousand pounds voted for clearing the Murrumbidgee, what portion of that sum has been expended, and under whose superintendence? £500 17s. 11d. was the amount expended on the Murrumbidgee, under my superintendence also.
51. How was it the whole of the money was not expended? I waited at Albury for funds a long time, and at last, as I saw the season was going away, I moved the party down, providing the funds, in the first instance, from my own resources. If the money had been in hand, the operations there would have been commenced nearly as early as on the Murray, in '56. I may say that last summer was not very favourable for clearing operations; the river was not very low.
52. Was the difficulty in getting the money owing to the informality you have previously alluded to? Not at all; the Commissioner had no money then.
53. You commenced operations before the Government had placed the money at the disposal of the Commissioner? I did, on both the Murray and Murrumbidgee; had I not done so, the dry season of '56 would have passed away without anything being done.
54. How much had you advanced from your own funds before the money voted was available? One way and another some six or seven hundred pounds.
55. *By Mr. Jamison:* How much of the Murrumbidgee has been cleared? About seventy miles.
56. Commencing where? At the reputed junction of the Lachlan, and going downwards.
57. *By the Chairman:* Is that the worst portion of the Murrumbidgee, as far as timber is concerned? It is. The worst portion of the Murrumbidgee is the lower portion. Had the floods not come on us suddenly we should have been able to have cleared to the junction of the Murray.
58. *By Mr. W. Macleay:* How much further would that have been? About one hundred and fifty miles, following the course of the river. I may state that, on both the Murray and Murrumbidgee, the clearing parties suffered very severely from ophthalmia, which retarded our operations very much. I had it myself very badly. We could get no medical appliances whatever in the locality where we were. For several consecutive nights many of us never slept.
59. *By the Chairman:* In cutting down the timber on the Murrumbidgee, did you remove it sufficiently to enable the steamers you have working on the Murray to travel up the river? Quite sufficiently for that purpose.
60. In the same way as you cleared the channel of the Murray? In the same way and the same degree.
61. I think you have stated that you have a general knowledge of the Murrumbidgee from Gundagai downwards? I have. I have been all along the banks.
62. Allowing for any difference that has taken place in the price of labor, what do you calculate would be the cost of clearing that river, in the particular way you have described, from Gundagai downwards to its junction with the Murray? That portion actually cleared cost about £7 a mile, but under very unfavourable circumstances; I think it would not cost now more than from £3 to £4 a mile.
63. Rolling the timber to the bottom of the pools? Yes. A good deal of that timber is light enough, as the current runs swiftly over them, to float over the shallows; but, generally, as it gets into the deep pools it sinks of itself.
64. From what you know of the Murrumbidgee, after such a process, you think that during the six winter months steamers could ply upon it? I think so, decidedly.
65. You have not been in the United States? I have never been in the Atlantic States.
66. Have you ever been in any other country where the rivers have been undergoing improvements? I have been in California and South America.
67. Have you seen any operations carried on there for the purpose of clearing the rivers? I have not.
68. *By Mr. Garland:* Have you been on the Amazon? Yes.
69. Nothing of the sort is required there? No, nothing.
70. *By Mr. Donaldson:* Have you been on the Mississippi? I have not.
71. *By the Chairman:* Would you be willing to take a contract to clear the river from Gundagai downwards at the rate you have mentioned; or do you know any other person who

Captain F.
Cadell.

20 Nov., 1857.

who would be willing to take such a contract? I dare say contractors could be found to take the contracts; but it would depend very much upon who was to pass the work.

70. I mean to do the work as effectually as in those portions of the rivers you describe as partially cleared? I am inclined to imagine that any contractor would slim over his work; as it would be much easier for him to cut off a tree six or eight inches above the water than the same distance below it.

71. Then are you of opinion that the work should be done under the immediate superintendence of one of the companies trading on the river, or of the Government? I think if any of the companies undertook it, it might be more economically done than by Government, but Government would likely do it more effectually.

72. How would you suggest, then, that any money which might be voted for the purpose should be expended? In the same way as previously; but individually I would not superintend any operation of that sort again, unless I was paid for it.

73. You received no pay whatever for your former superintendence? Not from the New South Wales Government. My travelling expenses were paid.

74. You were paid by the South Australian Government? I was, but only during the time I was expending their own vote on the Murray.

75. So that you have received no compensation for your services in clearing the New South rivers? None whatever. But I am quite willing to expend the balance of £500, which remains from the Murrumbidgee vote, without any recompense, because I took it in hand.

77. At the time you were spending this money on the Murray and Murrumbidgee, was any contemporaneous vote from the South Australian Government being expended in a similar manner? South Australia did not vote any money for clearing the Murray until February in this year, 1857, a considerable time after the vote from New South Wales.

78. I understood you to say, that at the time you were superintending the expenditure of the money on the Murrumbidgee you were receiving pay from the South Australian Government? I was receiving nothing from them at that time. South Australia had not then voted any money for clearing the river; New South Wales was in advance of her in that respect. It was not till upwards of a year after New South Wales had passed her vote that South Australia brought forward hers.

79. What amount of money has the South Australian Legislature voted for clearing the Murray? For the partial clearing of the Murray, in the same way as it was carried on by New South Wales, £2,000 was voted; subsequently £8,000 has been voted for the construction of a snag steamer, and to cover her working expenses.

80. *By Mr. Garland:* Is that vote limited to any particular distance on the river? It is looked upon as the vote for one year.

81. Does it authorise the clearing of the Murray and all its tributaries? The tributaries are not specified; the Murray alone is named in the vote.

82. *By the Chairman:* You have stated that a sum of £2,000 was intended to be appropriated to the partial clearing of the Murray, in the same way as by New South Wales—was it voted with the expressed intention of using hand labor? Yes, expressly with that intention.

83. Why was it not to be expended through the snag-steamer party? The snag-steamer had not then been built.

84. That vote preceded the vote for the snag-steamer? Yes.

85. *By Mr. Hay:* That was to complete the partial clearing of the river? Yes. It would be years before the snag-steamer could go over the whole river.

86. *By the Chairman:* Some time must necessarily be taken up in building a snag-steamer? Yes.

87. What was presumed to be the expense of a snag-steamer? The estimated cost is between five and six thousand pounds.

88. The machinery for this vessel is to be constructed in Sydney? Yes; it is nearly finished; a portion of it has already been shipped to the Murray.

89. It was a proposition of yours that a boat of this description should be employed? The project of employing a snag-steamer had been frequently mooted by the present Governor of South Australia, Sir Richard McDonnell, and the Government of that day; but it may have been owing to a proposition of mine, communicated to the Commissioner of Public Works in South Australia that the construction of the snag-steamer was more immediately entered upon. Her hull, and the arrangement of the machinery, are executed from designs furnished by me.

90. How will this snag-steamer work—is it proposed to draw out the trees completely from the bed of the river, or to work with saws under water? To extract the timber almost solely; she may cut occasionally under the water. If I may be permitted, I will read an extract from a letter to the Government of South Australia, detailing the method of clearing I had pursued, and as to the more effectual plan I proposed should be adopted.—Extract of a letter dated May 28th, 1857:—"The method I have adopted in clearing is precisely similar to that practised last year, and consists simply in cutting off all snags flush with the low water mark, thus securing a safe navigable channel during a moderate flood. I hold certificates from the river captains of the beneficial effects to the navigation derived therefrom, as during last summer, as also during the present, has the Upper Murray (as far as mere depth of the water is concerned) been navigable to the present head of the navigation, the fallen timber being the only barrier, and the eradication of which must be effected by steam power." In another letter, dated 9th June, 1857, and addressed to the Commissioner of Public Works in the Colony of South Australia, Captain Cadell says:—"In conformity with your request to be informed if I would urge on the Government the construction of a snag-steamer, and, if so, upon what grounds, also my reasons for the application of means so much more powerful than at present employed, I would adduce the following:—The strongest reason for the immediate construction of a snag-steamer resolves itself

" itself into the fact, unless the necessary steps are shortly taken, the next summer, i. e., the next dry season of '57 and '58, will slip away before she can be brought to work. I beg your reference to my communication of 2nd April, detailing the present method of clearing the river, and I enclose certificates of captains of steamers plying on the river as to the benefits derived therefrom. But, at the best, the above method of clearance is only beneficial during the navigable season, and is but temporising with what ought to be done effectually, for, as I have before stated, the thorough eradication of 'the timber obstructing the deep water channel must be effected by steam power.' Since my interview with you this morning, when you appeared anxious that the South Australian snag-steamer should be convertible into some other use after the extraction of all the timber, it has struck me that she could be designed to work as a dredge, as it might be desirable to remove some of the bars of the Murray, provided that such removal could be accomplished without materially affecting the water-bed of the river. Some of the channels in Lake Alexandrina, and the entrance to the Coorong, might also be beneficially deepened by such dredge." So that I am perfectly aware that it is only a temporary measure that I have been executing hitherto. The funds at my disposal, I regret to say, were not sufficient to enable me to do anything of a more effectual character.

Captain F.
Cadell.

20 Nov., 1857.

91. This vote of £8,000, on the part of the South Australian Legislature, is looked upon as only an instalment—it is not regarded as a final vote for the purpose? Not at all; I believe South Australia looks forward to voting an annual sum for keeping up that boat and working her.

92. Has any communication that you are aware of taken place between the South Australian Government and this Government, inviting co-operation? I believe such a communication has taken place. I am aware that it was moved in the Upper House, by Mr. Younghusband, that the Governor of South Australia should put himself in communication with His Excellency the Governor General on the subject.

93. Has any similar communication passed between the Governments of South Australia and Victoria? A precisely similar one, I believe.

94. Do you know if the Government of Victoria have responded in any degree? I am not exactly aware of their reply; but I am aware they have put down, or are to put down, a sum of £10,000 on the Estimates. The Commissioner of Trade and Customs so informed me.

95. *By Mr. Garland:* Is that £10,000 to be appropriated for the purpose of constructing and working a snag machine? Yes.

96. Not for the partial clearing of the river? No. It was proposed that each Colony should build and equip a snag-steamer, and that each maintain her from year to year for clearing the western rivers.

97. *By the Chairman:* What do you suppose, under that system, would be the cost price of thoroughly removing the timber? I calculate—putting down the navigable waters of the interior at some four thousand five hundred miles—that about £30 a mile would clear all the rivers.

98. *By Mr. W. Macleay:* That would amount to an enormous sum? The amount may appear enormous; but that I have shown, or attempted to show, in a letter to the South Australian Government, on the estimated cost of clearing the rivers their navigable distances, it would be very reproductive; and that if each Colony sold annually only five square miles on the banks of the river, at the upset price of £1 per acre, the proceeds of land thus sold would more than repay the annual working expenses of a snag-boat.

99. Would South Australia and Victoria of themselves clear the main Murray? That was not the original intention; but perhaps it would be better to leave the frontier rivers to the frontier States.

100. *By the Chairman:* The Murray is a frontier river of New South Wales also? I am aware of that; but the others impinge upon it.

101. Do you think it probable that South Australia and Victoria will take the clearing of the Murray on themselves? I think they will, if New South Wales will operate to an equal extent upon her own streams.

102. That might have some effect on the Government of South Australia; but would it also operate on the Government of Victoria? The Government of Victoria look on the Murray as the great feeder for their Murray River Railway.

103. Do you think it would be fair and right that the Government of New South Wales should withdraw from taking a share of the expenditure on the Murray? I think it would be fair and right if New South Wales expends equal sums on her own rivers.

104. You mean on account of the greater advantages that South Australia and Victoria would derive from the clearance of the Murray? Yes; and because it forms the boundary of the latter to a greater extent than it does the boundary of New South Wales. It is in her own country to a great extent, or virtually so.

105. *By Mr. Hay:* Do you think it likely the Colony of Victoria will consent to an arrangement of this sort, on the understanding that New South Wales is not to contribute to the clearing of the frontier river? They have generally said they would be influenced, in a great measure, by the course taken by New South Wales in regard to the clearance of the Murray.

106. I presume the relation of South Australia to the other rivers above its own boundary is precisely the same as it is in regard to the Murray above its own boundary? I believe South Australia has the same interest with respect to all these rivers.

107. *By the Chairman:* There is a very great difference of expense between the two modes of clearing which you have characterised—the partial clearing and the perfect clearing? There is necessarily a great difference.

108. Some seven hundred per cent.? Yes.

109. Do you think the navigation of these rivers of such importance as to make it worth while

Captain F.
Cadell.

20 Nov., 1857.

while to go to this much greater expense when the earlier mode to which you have had recourse would apparently almost suffice? I think the navigation of the rivers is of sufficient importance to warrant the additional expenditure, especially when such expenditure will be reproductive.

110. How many miles do you suppose, on the average, a party employed in one of these snag-boats could clear in the course of the available season? I have no data on which to base calculations for the performance of a snag-steamer on that particular description of heavy timber, but I put her down at fifty miles a year, and I think the boat would perform much more than that. I think I am under the mark in my calculation.

111. Therefore, if fifty miles a year only could be done, it is very desirable that, instead of one Colony only having a snag-boat of this kind, the three Colonies should each have one, in order that all the benefits to be derived from the clearing of the river should be brought about in a moderate time? Yes. If I am right in my calculations as to the number of miles of navigable water—about 4,500 miles—one boat would necessarily occupy a great number of years; three boats would, of course, do it in a third of the time.

112. You are aware that on the Estimates of this year in New South Wales a sum of £2,000 has been placed for the purpose of clearing the River Murray? I am aware of that.

113. Could that sum be employed in connection with the snag-boat now about to be built with the South Australian money? It is possible that it could be so employed, but it would complicate the accounts between the two Governments very much.

114. Could you, in that snag-boat, employ profitably a greater number of men than you contemplate employing at the present time under the South Australian vote? I believe South Australia will vote quite sufficient funds to carry on the work as it ought to be done, without any adventitious aid from another Colony, on board her own steamer.

115. That steamer will be enabled to do all she can do with the supply provided by South Australia? Yes.

116. Therefore, the £2,000 proposed to be voted by New South Wales is not required to assist the operations of the snag-boat party? Not at all. I look upon the £2,000 put down for clearing the River Murray as in a great measure useless.

117. It is not required for that particular operation, and would be of comparatively little value in paying for hand labor? What is required to be done by hand labor has already, in a great measure, been performed.

118. Then you do not think this sum can be employed profitably by hand labor on the Murray? I think not. All that can be done by hand labor on the Murray has already been performed, or can be, by the funds in hand.

119. But if a sum of £10,000 were to be voted, very great good might be effected by the employment of another snag-boat and party? Yes, very great.

120. What would you propose to do with the £2,000 when voted? If my opinion were asked in the matter I should propose that it should be transferred to the Murrumbidgee.

121. *By Mr. W. Macleay:* You think it should be exclusively employed in clearing the Murrumbidgee? I think so.

122. *By the Chairman:* Could it be employed there by hand labor profitably? I think very profitably.

123. *By Mr. W. Macleay:* So as to render the Murrumbidgee as navigable as the Murray is at present? Yes.

124. *By Mr. Hay:* In conjunction with the sum now in hand—£500—it would go a long way towards making the Murrumbidgee navigable throughout? Yes, to a very considerable distance.

125. *By the Chairman:* Would it enable you to reach Wagga Wagga? Yes, I think so.

126. *By Mr. Hay:* It would enable you to clear the Murrumbidgee to Wagga Wagga as effectually as the Murray has been cleared to Albury? I think so.

127. *By Mr. W. Macleay:* Have you seen the Murrumbidgee between Wagga Wagga and Gundagai? I have seen many portions of it; I have ridden along its banks for many miles; I have a general acquaintance with it.

128. Very little clearing is required there? Very little in the shape of timber. The timber is not heavy in the Murrumbidgee.

129. *By the Chairman:* Would that mode of clearing last long, or would it be necessary to have an annual sum voted? I think not; there is now to be cleared away the accumulation of ages.

130. Is there not heavy timber now growing on the banks of the Murrumbidgee, portions of which are brought down by floods continually? I think the timber is lighter on the Murrumbidgee than on any other of the rivers, with the exception of the Darling, perhaps; the quantity of drift timber is very moderate, it is only in seasons of great flood that charred timber comes off the plains.

131. Would the companies or proprietors of the steamers be willing to expend a sum themselves annually for keeping the channel open if the river were once cleared? Unless there is more co-operation among them than exists at present they would not be willing to do so.

132. And co-operation amongst rival companies for any purpose is scarcely to be expected? Scarcely.

133. *By Mr. Hay:* It would be easy to provide for the annual expense of keeping the river clear by a small tax or tonnage duty? I think so.

134. The tax need not be heavy? No.

135. *By the Chairman:* You think a light tonnage duty would suffice for the purpose? I think it would.

136. The imposition of such a duty is not likely to stop the navigation of the river? Not of a light duty.

137. Would you recommend any mode of management under which the proposed vote of two thousand pounds could be beneficially expended? Unless I were to recommend myself, I really

really do not know any one who has any knowledge of the localities or the rivers who would take the trouble of superintending the outlay; and I should certainly not do so unless paid for it. I have had no thanks for what I have done, but the reverse.

Captain F.
Caird.

20 Nov., 1857.

138. You could not afford to expend the time? I would not expend the time.

139. *By Mr. Hay*: That would make it proportionably more expensive? It would not make a great difference.

140. *By the Chairman*: Practically, the supervision of the Commissioner of Crown Lands is of no service whatever? None whatever.

141. He could not give up his other duties to look after work of that kind? No. Mr. Lockhart was never near the spot; and the Tumut is a most distant and out of the way place to communicate with.

142. *By Mr. W. Macleay*: In expending £2,500 this summer, you would require parties to commence at two or three different places on the river? Yes. Whoever will have to superintend the work should be able to make his arrangements so as to commence at an early date. I think there should be at least three parties—one to commence at the Yanco, another at Currarberry, and the third at Kieta, where the former party left off.

143. Not going so high as Wagga Wagga? I think that ought to be left to the discretion of the person who has the supervision.

144. Could one person take the supervision of all these parties? He could, by going from one party to the other.

145. *By Mr. Hay*: You could yourself? I could take the same supervision as I did before; but over each party there should be an officer in charge.

146. How many parties would be required to clear the river from Wagga Wagga downwards? Four parties at least. Some of the cutting tools belonging to New South Wales, for the Murray, would be at hand and available for one of the parties on the Murrumbidgee. The material for the construction of punts ought to be taken over in time.

147. *By Mr. W. Macleay*: Are there people to be found at Wagga Wagga and other places who could make these punts? I should recommend that a ship carpenter should be sent up; a carpenter would have to be engaged for keeping the tools and working gear in order. The mates of the steamers would be the most likely men to get hold of to superintend the working parties during the time the boats are not running; they have been on the rivers for several years and understand the work. I would stop some of them from going down the last trip.

148. *By Mr. Hay*: Would the sum of £2,500 be sufficient to pay the expense of four parties for the season? More than sufficient.

149. The object would be, to do as much to clear the river as £2,500 would enable you to do during the present summer? Quite so. The difficulty is to get good officers over the men; it takes a pushing hard headed fellow to get the work done in the water as it ought to be.

150. *By Mr. Garland*: It is desirable, I presume, to make the clearing continuous? Yes; by spacing the parties in the way I have mentioned you would make it so.

151. *By Mr. Hay*: The more parties the less danger there would be of disconnection in case floods should occur sooner than usual? Yes.

152. You would have as many parties as you could get well supervised? Yes.

153. *By the Chairman*: According to your calculation, £3,500 altogether would be sufficient to clear the whole navigable portion of the Murrumbidgee from Gundagai downwards? Yes, according to the method that has been detailed.

154. Would you propose that a snag-boat should be subsequently placed upon the river for the purpose of completing the clearing? I would advise that; this partial clearing makes the river immediately navigable; the other would take a length of time to effect, but when effected, would make the navigation of a more permanent character.

155. Boats of the same description are employed in America? To a very large extent.

156. Is your snag-boat taken from the American model? She is, in great measure; but she will lift over the stem instead of over the stern, as the Mississippi boats generally do. Some of the Canadian snag-boats lift over the stem in the same way as we propose doing.

157. *By Mr. Hay*: Is there any reason for the difference? I think it is more convenient; the vessel can be handled better after the timber is lifted when it is hanging over the bows, and the logs can be deposited on the banks as we go working up the stream.

158. Are these boats employed on many of the American rivers? They are.

159. At the expense of the States in which they are situated, or of the Federal Government? I think the operations on the Red River, which were the most extensive ever carried on, were undertaken at the expense of the Federal Government. I believe the Americans on that river cut through a solid raft of timber three hundred miles in length.

160. *By Mr. Garland*: I think you said these snag-boats are in use also in Canada? Yes, on some of the Canadian rivers.

161. Are they used on the St. Lawrence? On the tributaries of the St. Lawrence. As you mention the St. Lawrence, I may remark that the Murray is, and the Murrumbidgee will be, navigable for more months during the year than the St. Lawrence. The St. Lawrence is only navigable six months out of the twelve.

162. But from a different cause? Yes; the ice obstructs the navigation in the case of the St. Lawrence.

163. *By Mr. W. Macleay*: Do you think anything can be done on the Darling this year—does it require much clearing? Not very much. I have before stated that I consider it one of the most uncertain of the rivers; at the same time I consider it will eventually be the most important river of them all.

164. If found to be navigable? If found to be navigable.

165. *By Mr. Garland*: Why do you hold that opinion? I hold that opinion chiefly from the direction of its course. The country adjacent to the other rivers is approachable from the seaboard to a certain extent, while the country in the vicinity of the Darling can only be opened up by the navigation of the river itself.

Captain F.
Cadell.

20 Nov., 1837.

166. Have you any reason to suppose the country is valuable in the vicinity of the Darling? I believe it is fine pastoral country, as far as we know of it as yet.

167. What reasons have you for believing so? I have been so informed by many of the settlers who have been on the upper portion of the Darling; and I also judge from the avidity with which it is taken up.

168. You think the navigation of the Darling would give a great impetus to the occupation of the interior? A very great impetus.

169. If the Government of New South Wales were to vote any money for the purpose of clearing the Darling, do you think it could be profitably expended? I think it could be very profitably expended.

170. Do you think the Darling could be made navigable at a reasonable cost? I think it could be made navigable at a reasonable cost. I believe from the very slight fall in the country the river could be canalized at a very moderate cost. I have prepared a design for caissons to be applied to that river, at intervals, as a means of rendering the navigation permanent, by damming back the water, and establishing a system of locks.

[The Witness handed in the plan referred to, with a written explanation attached—vide Appendix A (1); and also a plan of a horizontal self-adjusting water-wheel, designed for Australian rivers—vide Appendix A (2).]

171. Have you any idea of the fall of the river from Fort Bourke to its junction with the Murray? About 150 feet to 200 feet, according to Sturt.

172. You do not think it would require a very expensive system of locking to make the Darling navigable? I think not. One lock would back the water up for an immense distance, and secure, say 100 miles of navigable water. I may state that the back waters of the Murray extend a very great distance up the Darling—by the road seventy miles, and nearly fifty miles in a straight line.

173. Is there not an ana branch of the Darling? There is.

174. Would that be affected in any way by the system of locking which you propose? I believe the ana branch country could be at once made a splendid pastoral country if water was thrown down by the system I recommend, and its benefits would nowhere be so fully developed, or productive of greater and more immediate results.

175. By the Chairman: Do you think the Darling loses as much water by effluxion as by absorption and evaporation—are not the waters driven back for many months of the year by the waters of the Murray? The waters of the Darling are backed up for many months in the year by the waters of the Murray; and I think the Darling must lose a great deal by the waters flowing out into the back country billabongs.

176. No system of locking would prevent that? I am not prepared to say so. These rivers are all in a complete state of nature, and if a conservancy was exercised over them they must be very much improved and their capabilities developed.

177. Do you not think absorption and evaporation together would prevent any system of locking from being of much service to that river? I am not of that opinion. I think a perennial navigation could be obtained from that system of locking, and calculate that eight to ten locks would secure such a navigation.

178. By Mr. Garland: Would these caissons be expensive? I think not. It would depend greatly upon the required number of them. If one caisson only were to be made it would be expensive, but if a number were to be made they would not be so expensive in proportion.

179. A good deal would depend upon the breadth of the river? The river is about two hundred feet wide in the places where these caissons should be put.

180. By the Chairman: What would be the expense of one of them, supposing there were a number to be made? About £2,000.

181. Would there be any expense incurred besides for clearing the channel of the timber—is there much timber in the Darling? There is not much.

182. Do you propose such a system for any other river? Yes; I have proposed to adopt it, or, I should say, a dam formed by a caisson, in the Murrumbidgee, to throw water down the Yanco Creek. I first designed the caisson with reference to the Yanco. I submit that such a contrivance would combine irrigation with navigation, which in a country similar to our interior should go hand in hand.

183. Are there not other ana branches, commonly dry, into which it is very desirable to throw water in dry seasons? I think so. I would submit that these are applicable for all such cases.

184. By Mr. Garland: Would not the same purpose be effected by making the Yanco cutting deeper? It would, but at very much greater cost. The present cutting has cost £10,000.

185. By Mr. Hay: Every additional foot of depth costs a proportionately larger sum? Yes.

186. Do you think such a scheme of locking as you propose in the flat country would tend to increase the quantity of water retained in the interior altogether, which water would be very valuable as giving a greater extent of pastoral land as well as for navigation? I do think it would have that effect. It would increase the quantity of stock the land would then be capable of carrying, as well as facilitate the navigation.

187. Keeping the beds of these rivers always full would have a tendency to prevent the great absorption that now takes place in summer? Yes.

188. And there is greater absorption when the bed of the river gets filled after having been dry? Quite so.

189. I do not know whether you have stated how many feet of available water, on the average, you would procure by the more perfect mode of clearing which you have proposed to the South Australian Government, and to this Government, over the depth gained by the present partial system of cutting the timber to the surface of the ordinary summer level.—What number of feet would you gain by extracting the timber by means of a snag-boat? In an average season, from three to four feet; sufficient for a properly constructed river steamer to run on.

190. Upon what part of the Murray do you think the advantage of such a perfect system of clearing would be most felt—where would you propose to begin, in fact, so as to derive the greatest advantage from it? At the station called Wopparena, a little below the effluence of the Tuppai. But I should state that before the snag-boat reached that point she would remove some of the timber which obstructs the narrow channel of Lake Moira, where the river is very narrow.

Captain F.
Cadell.
20 Nov., 1857.

191. That is between the effluence of the Edward and the junction of the Goulburn? Yes. There is another large lake on the other side of the river to Lake Moira, and these two drain off the Murray until it becomes a mere ditch.

192. Then the portions of the river where you would commence with this more perfect clearing are those in which, from the narrowness of the river, or other causes, you find great difficulty now? Yes; that is where the steamers have turned on several occasions, being unable to proceed higher.

193. If there were a perfectly clear bed there, that would increase the availability of the whole stream? Yes, it would.

194. Do you think you can so go on with this more perfect clearing as to render every step of it advantageous as it proceeds? I think so.

195. It would not require to be completed before the benefit would be felt? Every mile of it would tend to benefit the navigation.

196. Are those parts of the River Murray where it is most necessary to commence with this complete clearing within the territory of New South Wales? Yes.

197. Not within the South Australian boundary? Not near the South Australian boundary.

198. The part of the river within the Colony of South Australia does not require so much attention? Not from snag-steamers.

199. *By Mr. Garland:* You have said this perfect clearing would give an additional three or four feet of water—is that irrespective of the bars? Irrespective of the bars, in an average season.

200. *By the Chairman:* After that clearing had taken place there would be no danger whatever to steamers from obstructions? There ought never to be any danger from the bars, because those in charge of steamers should know their positions.

201. There would be no danger to be dreaded? I consider the danger would be reduced to a very great extent indeed.

202. And freights would be much lower in proportion? Much lower.

203. Have any public wharves been constructed on the river? No public wharves; one private individual has constructed a good wharf.

204. Where? At Wahgunyah, on the Victoria side, about thirty miles below Albury.

205. It is constructed of wood, I presume? Of wood and stone.

206. Is there any wharf at Albury? Not any; I have never thought a wharf was required there.

207. *By Mr. W. Macleay:* The steamers lie alongside the banks? Quite well. There are more pressing wants than a wharf at Albury; there is any quantity of bank accommodation.

208. *By the Chairman:* Are not the banks worn away by the action of the steamers? It is easy to shift to another part.

209. Is there any danger of the whole bank being destroyed? I think not.

210. *By Mr. Hay:* Do you not think a badly constructed wharf tends to endanger the bank rather than protect it, by interfering with the current? I should think a badly constructed wharf would do so.

211. *By the Chairman:* The channel at the town of Albury has not, up to the present time, been injured by the action of the steamers on the bank? Certainly not.

212. Is it, in your opinion, advisable to alienate the land on the bank of which you speak, to which the steamers find such easy access; or, would it be better to retain it in the hands of the Government? I should think, looking to the future, that it will be better to retain it in the hands of the Government.

213. *By Mr. W. Macleay:* I do not think you have mentioned the speed of the steamers on the Murray—how many miles do they average an hour? A good deal depends on the tow they have—the barges they are towing.

214. I mean as they are ordinarily loaded? About six miles an hour is the average speed.

215. Against the sluggish stream of the river? Yes; I speak of heavily laden steamers.

216. Going down, what is the speed? Twelve knots.

217. *By Mr. Hay:* Slightly laden, what is the greatest speed going up? Boats run up at the rate of nine and a-half and ten knots easily, with the floats moderately immersed.

218. *By Mr. W. Macleay:* They never run except in daylight, I believe? We do sometimes steam night and day.

219. If the navigation were rendered as perfect as possible, by the plans you recommend, you would always be able to steam night and day? Yes; on some portions of the river which we know well we run all night; but when the river is properly cleared, people with a fair knowledge of it would be able to continue under weigh much longer.

220. *By Mr. Hay:* Can you give an idea of the average passages upwards of laden steamers? Up to Wahgunyah, the usual time occupied is about three weeks.

221. What is the time from Wahgunyah to the Goolwa? One boat has gone in eight days and a-half; that was a very good passage.

222. Are three weeks a good passage up? Yes.

223. *By Mr. Garland:* What would be about the time, after the river was properly cleared, each way? With the same weight we would not have much augmentation to the speed, because during the navigable season we have plenty of water now; but when the river was comparatively low, we would feel the benefit of the clearing, and our speed would be increased.

224. *By the Chairman:* Since 1852, up to the present time, I believe you have been occupied in furthering in every way in your power the navigation of the River Murray? Yes, in every way I could think of and devise.

Captain F.
Cadell.

20 Nov., 1857.

225. And also in doing what you could towards opening up the River Murrumbidgee, as far as the means at your disposal went? Yes, as far as my means extended.
226. You have received from the Government of South Australia some acknowledgment of your services? Yes, in the shape of a bonus to the steamers.
227. To what amount? £6,500. A third of that sum came to myself; the rest to my two partners.
228. I think I have heard that you received a gold medal also, which was voted you by the South Australian Legislature? Yes, the South Australian Legislature voted me a gold medal.
229. You have received nothing whatever from the Government of New South Wales? Nothing.
230. *By Mr. Hay*: Nor has the company with which you are connected received anything? Not anything.
231. *By the Chairman*: A proposition was once made in the Legislative Council of this Colony that a sum of £2,000 should be granted to you for your services in opening up the navigation of the Murray? I believe such a motion was brought forward by yourself.
232. That was subsequently altered into a proposition that a bonus of £2,000 should be given to the first person who took a steamer up to Albury, and another bonus of the same amount for a steamer to Gundagai? I believe those were the propositions.
233. And that change was suggested by yourself? It was suggested by me, with an idea that it would encourage the further development of the navigation.
234. That motion was not pressed at the time? It was not.
235. It was withdrawn, on the understanding that it was to be brought forward at a subsequent period? I believe such was the understanding.
236. The whole of your time, since the period I have named, has been devoted exclusively to the object of opening the navigation of these great internal rivers? Exclusively; and I may say not at all to my own individual benefit.
237. *By Mr. Garland*: Are there any suggestions you have to offer of your own, besides what you have already stated? I cannot say I have any additional suggestions to make. I could give some information to the Committee with regard to the quantity of stock passing overland; and, as the parties travelling with such stock require supplies, that extensive traffic bears on the trade of the river.
238. *By Mr. Macleay*: Have you any papers that will show the traffic in stock between New South Wales and Victoria. I have prepared returns upon the subject, which I beg to hand in to the Committee. [*The witness handed in the same. Vide Appendix.*]
239. *By the Chairman*: How has the amount of that traffic been taken? All stock must now be registered as it passes into Victoria; and these numbers are taken from official returns, wherever official returns are kept.
240. *By Mr. Hay*: In that case the numbers cannot be set down as too high, but may be considerably under the mark? They are more likely to be under than over.
241. It takes a person in charge of an overland party somewhat out of his way to go to Echuca to register? About a mile if he crosses at Moama, but it is on the high road, crossing at Echuca—it is not out of the way at all.

APPENDIX.

A RETURN shewing the number of Live Stock which have crossed the Murray from New South Wales into the Colonies of Victoria and South Australia, in the year 1857.

THURSDAY, 26 NOVEMBER, 1857.

Present:—

MR. HAY,
MR. W. MACLEAY,
MR. JAMISON,

MR. SUTTOR,
MR. GARLAND,
MR. DONALDSON.

JOHN HAY, ESQUIRE, IN THE CHAIR.

Captain Francis Cadell, called in and further examined:—

1. *By the Chairman:* Do you think the mineral traffic on the River Murray is likely to be extensive? I think we may look for an extension of traffic from the great mineral wealth of the country in the vicinity of the river. Captain F. Cadell.
2. Can you give us any particulars as to that mineral wealth, so far as it has been developed? 26 Nov., 1857.
I can state what minerals we have on the river, and the different localities where they are produced.
3. Perhaps you will be good enough to do so, commencing from the embouchure of the river? Lead and silver, selenite, gold, tin ore, antimony, iron, native zinc, platina, (the two last minerals in very minute quantities) copper and salt.
4. *By Mr. Donaldson:* Rock salt? No, not rock salt; still it is a mineral, I presume.
5. *By the Chairman:* Do these minerals, so far as you know, lie within the South Australian territory? The first four I have mentioned lie within the South Australian territory; and I believe copper and lead also exist in the New South Wales territory; but the extensive lead and silver mines are near the Lake. I can read to the Committee a report, dated 7th October, 1857, as to one mine that has been opened in that locality, which shows what has been done in six months. It is from the proprietor of the mine; and the produce, as this letter will show, is partly water-borne:—"The Wheal Ellen Mine was opened only in February last. To the end of September more than one thousand tons of ore had been brought to grass; and over eight hundred and fifty tons had left the mine, the greater part of which had reached Adelaide. The "Corio" has been bringing out through the Murray mouth every week about thirty tons, and to this time safely, though she has had several hard knocks on the bottom. The ore will give an average produce of over 33½ for lead, and over 64 ozs. of silver to the ton of ore. There can be no doubt but that a large district between Strathalbyn and the Bremer country is highly mineralogical, and that many more mines than are now known will be found; and that the many now known, which as yet have been only partly opened will be hereafter worked very largely, and probably with great profit."
6. You think there is likely to be, at an early period, a considerable development of mining operations there? Very considerable, I imagine.
7. Do you think the produce of these mines will find its way to Adelaide by the sea mouth of the Murray? Principally through the sea mouth of the Murray.
8. In what way will the opening of these mines influence the navigation of the Murray, as far as this Colony is concerned? The ore will afford profitable ballast for ships loading wool home, and the wool freights will be cheapened in that manner.
9. Will it tend to open up and perhaps lead to the improvement of the mouth of the river? I think such will be the tendency. It would be an additional reason for turning attention to the sea mouth of the Murray, because a range of mountains exists between the mining district and Adelaide, rendering land carriage expensive.
10. Do you think it is not likely that a Railway will be carried out between the Lake and Adelaide? I think eventually there will be a Railway, but not in that district. It will top the Murray at Moorundee, and will be an extension of the present Gawler Town line.
11. It would not interfere with the traffic in the produce of these mines? Not at all.
12. You are not aware of the existence of any extensive mining districts, either in New South Wales or Victoria, adjoining the Murray, except auriferous mining? I believe lead has been found on the New South Wales side, above Albury. I have found antimony myself within a mile of the river, near Albury. Tin ore has been shipped down the river from the Ovens gold fields, and that also exists on the New South Wales side. If it exists on one side of the river it must exist on the other.
13. Is that likely to become an important article of traffic? Not at present; the yield has rather declined; they are not finding it in such large quantities as before on the Ovens.
14. You scarcely anticipate any great increase of traffic from that article? Not from the present source; but I think in the alluvial flats on the Murray, especially in the vicinity of the junction of the Mitta Mitta and Murray, it will be found in large quantities.
15. If found in large quantities, as you think it may be, would it pay to take it by the Murray to Adelaide? Decidedly, it will all go down the Murray, or nearly all.
16. Will it be so valuable that it will be worth while to export it to any extent? Yes; it was worth about £80 a ton at one time.
17. Do you know what it is worth now? About £54 on the gold field, by last quotation.
18. As to salt, where is that found? There are no salt lakes on the New South Wales side above Boonboon; there are salt lakes there. There are also large salt lakes at Mcena, below the junction of the Darling.
19. Is the salt found there in such large quantities as to be likely to create a trade? I think so. It supplies many of the stations now. Many hundreds of tons could be collected.
20. Is it sufficiently good in quality for curing? It is not equal to Liverpool salt, but it is almost exclusively used on many stations.
21. Do you think it could be used in competition with Liverpool salt in the adjoining Colonies? For internal consumption it could be used largely.
22. You think the consumption of this salt will be principally confined to the country along the

Captain F.
Cadell.

26 Nov., 1857.

the banks of the Murray? I think so; because we have a quantity of the same salt near the mouth of the river on the lakes.

23. Are you aware whether the country in the neighbourhood of the Murray, otherwise than the points you have specified, is possessed of much mineral wealth in the shape of copper and lead mines? About the head of the Murrumbidgee, I believe there is country which yields copper ore.

24. What part of the country? In the neighbourhood of Yass.

25. *By Mr. Donaldson*: It has never been worked? No.

26. *By the Chairman*: You think that if mines at all equal in richness to those of South Australia were to be discovered in the neighbourhood of the Murray, or its tributaries, the carriage by way of that river would be sufficiently cheap to make the working of the mines profitable? I have no doubt of it. We could bring ore down the Murray from the head of the navigation at Albury to the Lake, at about one-third more than it costs to send the Burra Burra ore to Adelaide.

27. As to the gold mines on the country bordering on the Murray, what effect do you think they have on the traffic of the river? The more they are developed the greater will be the traffic in supplying them. I believe that gold will yet be found nearer the Murray than it has yet been worked systematically.

28. What is your belief, from all you have seen and heard lately, as to the prospects of the Ovens gold fields—do you think they are likely to continue as productive as hitherto? At present they are not as productive as they have been; but there is a very large auriferous country still unopened.

29. Do you think, on the whole, the product from these mines is likely to continue? I think the produce of the gold fields, of which Beechworth is the centre, will increase, rather than decrease, on both sides of the river.

30. Machinery is now used on the Ovens gold fields? There is a considerable quantity of machinery employed in quartz crushing, especially at the Buckland.

31. Is there not a greater degree of combination in working the mines there, than on any other gold field? There has been considerable combination. The mining regulations were such as to induce combination in working the bed claims.

32. Do you think there is a prospect of the gold mines on the New South Wales side of the Murray, above Albury, between that and the Tumut, increasing very much in productiveness? I think there is. I have washed out gold myself within half a mile of the Murray, twenty specks to the pan, in prospecting. At Gingellick, I believe there are diggings paying well; and on the Black Range, about two miles from Albury, there are from twelve to twenty men at work at present. I think, judging from what I can ascertain, there is a large auriferous country still unworked on the New South Wales side.

33. All that country would be dependent on the Murray for supplies if the navigation of the river was opened, and gold mining extensively developed? Principally upon the Murray.

34. Do you think you can give us any further information of importance with regard to mineral prospects? I think I have mentioned all the minerals that exist on the Murray.

35. You know the country lying upon the boundary between New South Wales and Victoria? I do.

36. Judging from the experience you have had of the trade of the Murray, do you think it would be practicable to establish Customs Regulations, to regulate the trade, or to collect duties along that boundary? I am perfectly certain it would be impracticable.

37. *By Mr. Garland*: Would the navigation of the Murrumbidgee have any effect in developing the gold fields at Adelong? I am of opinion that it would.

38. The traffic to and from Adelong would of course go by the Murrumbidgee? I think the steamers would be made useful in taking up machinery for working the quartz reefs that are there.

39. I think you have stated in your evidence that the farmers about Albury would have no chance in competing with the farmers of South Australia—what are your reasons for holding that opinion? I think I stated that I thought the Albury farmer did not farm on a sufficiently large scale.

40. What has been the average price of grain at Albury since the gold discovery? I can state the different prices that have ruled at Albury for the last seven years:—

1850	15s. to 18s. per bushel
1851	20s. to 25s. "
1852	25s. "
1853	30s. "
1854	38s. "
1855	30s. "
1856	16s. "
1857	10s. "

41. *By the Chairman*: In competition with the South Australian farmer in producing wheat for export, would not the extra expense, however little, of carrying along the river operate against the Albury farmer? Yes, I think so.

42. *By Mr. Garland*: Do you think the settlers along the banks of these rivers are disposed to appreciate your services in opening up the navigation? The settlers have behaved very well to me; on the whole I have no fault to find.

43. Have they given you any expression of their approval? The settlers of the Murray and Lower Darling presented me with an address a short time ago.

44. You are of opinion that the extent and resources of the country along the Darling are yet but imperfectly known? Very imperfectly known. I shall endeavour to gain more accurate information from personal observation, and furnish it to this Government. I shall be anxious to open up the Darling as the Murray has been opened up.

The Reverend William Branwhite Clarke, M.A., called in and examined:—

1. *By the Chairman:* You have paid a great deal of attention to the mineral character of this country? Yes. Rev. W. B. Clarke, M.A.
26 Nov., 1867.
2. Have you ever been upon the Murray? Not on the Lower Murray; I have been on some of the heads of it.
3. What branches of the Murray have you visited? Those that come down from the Munyong Mountains.
4. The heads of the main branch of the Murray? Yes, *i.e.*, of the Hume.
5. You crossed that branch of the river which forms the boundary of the two Colonies somewhere near a place called Tangaruecan? I came from Omeo to Tangaruecan, and then went across Mount Kosciusko to the Snowy River.
6. Mount Kosciusko is an elevated peak of the Munyong range? Yes, it is the highest point of it. I encamped on a bed of old snow there on 21st December, 1851.
7. And that range is supposed to be the highest ground in Australia? It is. I make it higher than Strzelecki has made it, *viz.*:—7,300 feet. It is very extraordinary that snow should be on it all the year round in that latitude, considering it is so low in elevation above the sea.
8. With regard to what you saw there, did it seem to indicate a country at all rich in mineral wealth? There is a great deal of gold to the west of it.
9. You suppose that a large tract of country on the western side of the range is auriferous? There is no doubt of it.
10. Comparing what you saw with the descriptions of Strzelecki and others, you came to that conclusion? Strzelecki gives no information as to gold; but, from my personal observations, and communications from private individuals, I come to that conclusion.
11. Do you suppose the auriferous country to be extensive? Yes, very extensive.
12. Have you been on the Tumut? Yes, the heads of the Tumut.
13. Is the country there of the same character? Yes.
14. Have you been on the upper part of the Murrumbidgee—I mean in the neighbourhood of Yass? I have been on all the chief sources of the Murrumbidgee, and have carefully explored it as far as the 149th meridian, but not beyond Jugion Creek.
15. What is your opinion of that country? That it is auriferous in places the whole way, from the Jugion up to the Dividing Range, at the back of Lake George. There is an auriferous tract on the Yass River. And to the westward most of the creeks are auriferous so far as the 147th meridian. Nor is it improbable that there are auriferous localities north of the Murray, even so far as 144 east, judging by what is known of the strike of the rocks south of that river.
16. Do you think that portion of the country is likely to prove rich in other minerals besides gold? There are lead and iron—(abundance of iron)—and copper also.
17. Do you think it is at all probable that any of these minerals will be worked, if cheap carriage be provided? I have no doubt of it; but they cannot be worked now, because labor is too expensive.
18. Even copper mines could not be worked there now, I suppose? They might be worked probably in the same way as the copper mines are worked in the Bathurst country; I do not think they could be worked cheaper.
19. The expense of inland carriage is a very great drawback? Yes, and the expense of labor too. I imagine the whole of the country extending from the Macquarie to the Murray and the Murrumbidgee is auriferous, and also contains abundance of copper. There is no doubt that the whole of the country on that meridian, running down to the south, is a rich metalliferous region.
20. Do you think, from what you have seen of the interior of the country, that the smaller ranges which protrude from the level country are likely to be auriferous? They might be, to a certain extent, in longitude; but beyond a certain point you will find scarcely anything but a flat country of drift sand and mud, or deposits of tertiary formation. There can be no reason why there should not be minerals discovered, if this upper crust were all cleared off; but nobody would undertake such works as these.
21. But, where the primary strata break through, we may expect to find minerals? No doubt. All the metalliferous rocks run on a meridian line north and south, or nearly so, with a little oscillation from a point or two west to a point or two east; and they may be supposed occasionally to break through at some distance from the places of their greatest prominence; but the country is so covered with drift and tertiary deposits, that it would be difficult to find any indications of the presence of metals throughout the greater portion of it.
22. In Victoria, such ranges as Mount Korong—which breaks through a perfectly level country—are found to be auriferous? Yes. About Mount Korong the gold was found on the surface, in the Mallee Scrub.
23. From your knowledge of the geological formation of the interior, do you think it likely that Artesian wells might be sunk in the level country with success? No doubt they might in suitable localities; because the structure of the country to the westward and south-westward is precisely that which, in other countries, supplies Artesian wells.
24. Will you explain what is that structure? The older rocks underlie the surface of the country, which is of drift and tertiary formation, and basins probably exist below, in which the water must accumulate, there being no outlet.
25. *By Mr. Donaldson:* To make Artesian wells useful, you must have the water accumulated to a level equal to the level at which you begin to sink, otherwise the water will not flow out as from a true Artesian well? That is correct; but there are large plains on the northern side of the Murrumbidgee on which there is now no water at all, and yet there are water courses; and then the question arises, whither does the water go if it is not accumulated in the basins of the older rocks beneath the tertiary deposits?

Rev. W. B. Clarke, M.A.

26 Nov., 1857.

26. Do you know of any feature of the country which persuades you that these wells would be practically useful if sunk upon the plains? It is a problem whether or not the water would come to the surface. In London there are wells at some of the breweries which do not now bring the water to the surface; but still they are Artesian wells, for at first they overflowed.

27. *By the Chairman:* The reason why Artesian wells bring the water to the surface is, that it comes from a point higher than that at which you commence to sink? No doubt. The most beautiful illustration of the action of such springs in nature that I ever saw, was not far from Table Mountain, a few miles from Cape Town. I saw, near the bed of Dry River, a series of bubbling jets of water, throwing out 850,000 gallons *per diem*, and able to turn two mills at once. This water is not known to be affected in quantity, but in force only, by variations of aerial pressure on Table Mountain. I published, in 1841, the particulars in a paper on the geology of the neighbourhood of Cape Town; and Sir John Herschel, at the discussion of the paper before the Geological Society, mentioned the latter fact. It proves that the source is in the Table Mountain Ranges.

28. But it is prevented rising to the surface at the point where you commence to sink by the superincumbent strata? That is the theory.

29. By boring through the superincumbent strata the water is enabled to rise? Yes.

30. And you think it probable, that, in the districts of which we have been speaking, Artesian boring might lead to the production of water on the surface? Yes; or to within a few feet of the surface. It is so on Liverpool Plains, where the flocks are supplied by wells not much over 100 feet in depth, if so deep as that.

31. In boring Artesian wells it is an object to exclude all the surface springs which rise in the tertiary formation itself, so as to get only the water accumulated on the surface of the older rocks below? Yes.

32. *By Mr. W. Macleay:* What is likely to be the depth of the tertiary beds? We know only how thick they are on the south coast—six hundred feet of cliff in the Australian Bight.

33. *By the Chairman:* The depth of the tertiary beds must be very various? Undoubtedly, for they are simply the filling in of the hollows of the rocks of older formation.

34. Experiment alone can teach us the depth it will be necessary to sink for water on the Artesian principle? I think so. It seems to be the experience of everybody who has studied the subject, that Artesian wells are more productive in a country where tertiary beds, lying nearly horizontal, rest on older rocks; but there must be, at the edges of every such basin, an outcrop of permeable strata to a height greater than that of the general level.

35. And that is precisely the character of our interior? Yes. I have often thought there has been a great want of attention to the subject. There is nothing more improbable in the existence of springs of a permanent character in the deserts even of Australia than in those of Asia and Africa, where wells, of probable Artesian character, have existed during the whole of the historical period.

36. You would not suppose one experiment to be satisfactory? Certainly not.

37. Because, as the surfaces of the rocks which form these basins are uneven, the boring might touch on a point elevated above the surrounding parts of the same formation, where no accumulation of water could take place? Just so. There are localities, such as Yeo Plains, for instance, and amidst Jones' Hills, (between Bland's Plains and the Lachlan,) which have been pointed out to me, where the ranges are composed of old rocks cropping up through the overlying deposits, and where there is no surface water; but there are ancient watercourses, proving that there must have been at one time plenty of water; and where the trees have been barked by the blacks, in forming their canoes. Springs, however, yet rise, at the junction of the formations, 250 feet above Bland's Plains. There are springs also in other places perpetually welling out, which are, in fact, natural Artesian wells. I have had collections of the superficial sands and clays sent to me from parts of country near the Lower Murray, and they appeared to be much like the superficial deposits of England. There is every probability that you would find a great deal of water by boring; but whether it would rise in a true Artesian well, or be always fresh, is another question. The water that falls over the low interior must pass away, in part, by absorption or through fissures; it cannot all be evaporated. Yet some of the rivers terminate in lakes, having very little fall, and these lakes are extremely salt, from evaporation; the salt accumulating in vast masses of commercial importance.

38. Is it your opinion, with regard to such a river as the Darling, which flows over an extremely level country, that the permanency of the water in its bed would be much increased by a system of locking? Of course it would. If you could accumulate a sufficiency of water in a succession of locks you might in time make it a navigable stream where it is not so already.

39. It is supposed that the fall of the Darling, from Fort Bourke to the junction of the Murray, is very slight? It must be very slight. According to Sir Thomas Mitchell, *even in times of flood*, the velocity of the Darling is not more than a mile an hour. Captain Sturt makes the general fall about *four inches in the mile*. I have, however, no great reliance on the barometric measurements of Sir Thomas; because he makes the Darling (less than 300 miles from Fort Bourke,) not more than seven, and four, and three feet above the sea.

40. Would not the retention of the water, by a series of locks, decrease that power of absorption which the soil has after a long drought? It would, perhaps, but you would still have to contend against evaporation. A great many of the smaller rivers of England are navigable only by means of locks. Every time a vessel goes up or down, the water must be staunched to make it deep enough, or to allow for rise and fall.

41. Would not the occasional showers that fall tend at all events to balance the evaporation, supposing the bed of the river was kept full? I do not know. No one has yet made more than occasional experiments as to the amount of evaporation in that part of the country. The evaporation even near the sea is sometimes greater than the fall of rain, or dew, in a given

given period of time. Captain Sturt states, that the water at his Depôt Camp, (situated not much more than four degrees of latitude north of the junction of the Darling with the Murray,) evaporated, during the hotter months of the year 1845, at the rate of *an inch a day*; this is also the rate of rise of the usual periodical floods in the Murray. During the summer of 1851-2, I saw a creek dry up day by day, under my own eyes, in Maneroo, from evaporation.

Rev. W. B.
Clarke, M.A.
26 Nov., 1857.

42. *By Mr. W. Macleay*: Are hard rocks frequent in the tertiary beds? Some of the tertiary rocks are hard and concreted where iron or lime is present.

43. *By the Chairman*: In isolated localities these rocks, generally soft, may become very hard from the cause you mention? They vary according to circumstances. Water, filtering through a bed of decomposed shells, will convert it into hard rock, on account of the presence of lime; and many streams, containing iron in solution, by their action make the rocks hard. Many of the tertiary rocks are hard limestone or ironstone.

44. For this reason, in boring Artesian wells we might sometimes have to pass through hard rocks? Yes.

45. *By Mr. Garland*: You might find water in basins of these hard rocks? No doubt; but it might turn out to be very salt where certain kinds of mineral matter are present. In fact, we know from the occurrence of boring, as well as of fresh-water springs in the banks and bed of the Darling and other rivers, that sometimes there are considerable bodies of water in the well-defined basins of drainage in Australia, which, owing to its saline properties is useless for domestic purposes. The occurrence of briny water is a common phenomenon even in the cultivated districts of this Colony, and I know of numerous wells that contain it. Most of the shales of the upper carboniferous beds of the County of Cumberland produce saline water. There would, therefore, be nothing extraordinary in the occurrence of saline or briny water in deep sinkings along the Murray. I feel convinced, from the inquiries I have made and the information I have collected, that it is very likely there are several subterranean water levels in the interior, and that the alternation of fresh and briny springs along the river Darling, for instance, is due to the fissures of underlying deposits or rock masses, which give vent to the springs that may have their origin in very different and distant portions of the higher regions; so that one source might come from the mountains of New South Wales, another from Victoria, another from South Australia, and another from the North West Coast. In the case of the ancient "Artesian" wells of the Oasis of Thebes, the outcrop of the permeable strata which supplied those wells is not nearer than the Darfour Hills—ten degrees of latitude to the southward. Whatever be the origin of springs that well out from the banks of the rivers, any very deep supplies of water in the interior must come from very great distances. At present no experiments have been made to test this question; but, taking into account the experience of other countries, those nearest in character to Australia, and the facts which deep sinkings on the gold fields have determined, it is almost certain that water will be found to exist in considerable volumes far below the surface. Nor should the fact that the interior rivers often flow over merely a hard clay bottom offer any opposition to this view of the case; because in those districts which have been determined to be of tertiary formation, the harder strata are frequently the highest in geological position, and below the concreted beds, (as on the Australian Bight,) the deposits are soft and permeable. A considerable portion of the tertiary formation about Brighton, in Port Phillip, is a hard impervious ironstone or ferruginous sandstone; yet it is there that Artesian wells have been made. Geological investigation shows the great extent of strata of similar character in many other localities in Australia; and therefore, in places similarly situated as the neighborhood of Brighton happens to be, that is, on the flanks of old crystalline rocks or inclined strata, such as must occur abundantly below the superficial drift of the Murray basin, where the tertiary deposits underlie the alluvial and overlie older formations, it is a just inference to conclude that the boring rod will be able to tap deep-seated water levels. The existence of natural springs, such as those of Rock Flat Creek, near Cooma, and of Gummun Plains, in the basin of the Goulburn River, (both of which are mineral springs,) and of that on Panuara Creek, westward of Carcoar, which is a warm spring, as well as others too numerous to mention, which are pointed out in the various journals of explorers, ought to be a sufficient justification of the belief that Australia, however dry may be its general climate, and however singular some of its characteristic phenomena, is not without such aids as nature supplies to the inhabitants of the Arabian or African deserts, who knew, ages ago, how to obtain water where the surface was (in regions similar to the interior of Australia) waterless.

WEDNESDAY, 2 DECEMBER, 1857.

Present:—

MR. G. MACLEAY,
MR. SUTTOR,
MR. JONES,

MR. JAMISON,
MR. DONALDSON,
MR. HAY,

MR. W. MACLEAY.

GEORGE MACLEAY, ESQUIRE, IN THE CHAIR.

The Honorable Stuart Alexander Donaldson, Esq., M.P., a Member of the Committee, examined in his place:—

The Hon.
Stuart A.
Donaldson,
Esq.

1. *By the Chairman*: You filled the office of Minister of Finance and Trade from the month of October, 1856, until a recent period? Yes; from October, 1856, to September, 1857.

2. During the time you held that office, was the question of the collection of revenue on the Murray brought especially under your attention? It was, on more than one occasion; first,

2 Dec., 1857.

The Hon.
Stuart A.
Donaldson,
Esq.

2 Dec., 1857.

by a delegation of Mr. Dryburgh, the Collector of Customs of Victoria, sent here by the Victorian Government to endeavour to induce this Government to come to an arrangement by which border Custom Houses should be established on the boundary between Victoria and New South Wales, and South Australia; and, in the second instance, in consequence of a correspondence that had taken place between this Government and the Governments of Victoria and South Australia, on the subject of the trade of the Murray, which resulted in the arrangement at present in existence. This correspondence with Mr. Dryburgh took place in the beginning of 1857, and has been laid upon the Table of the Assembly.

3. Will you have the goodness to state what that arrangement is, and how it was arrived at? Since the passing of the Murray River Bill of 1854, a temporary arrangement had been carried on, by which the duties collected in South Australia upon goods river-borne were divided equally between Victoria and New South Wales, upon the South Australian tariff. That arrangement was very much demurred to by Victoria, in the years 1855 and 1856, on account of the large quantity of dutiable goods, especially tobacco, which were smuggled into Victoria under the existing arrangement. As the duty in South Australia on the article of tobacco alone was one shilling, while in Victoria it was three shillings, it is manifest that the revenue of Victoria lost considerably by every pound of tobacco so brought into that Colony. In consequence of this inconvenience and loss which Victoria was suffering, some correspondence took place, almost of a hostile character, between the Governments of Victoria and South Australia. Mr. Childers, then Commissioner for Trade in Victoria, threatened that unless South Australia came into an arrangement by which the revenue of Victoria could be thoroughly protected, he should establish a Custom House on the Murray, at the boundary between South Australia and Victoria—and, indeed, a cordon of Custom Houses all along the boundary line. But it was found that the agreement of New South Wales was absolutely essential before any such plan could be carried into effect; first, because by law the waters of the Murray belong to New South Wales, and therefore it was absolutely impossible for any arrangement made on the part of Victoria to stop the trade of the river; and, secondly, because, even if the river were at the disposal of Victoria, a large amount of smuggling traffic would take place through the Territory of New South Wales, by passing the boundary to the north of the river. Under these circumstances, Mr. Dryburgh was delegated by the Government of Victoria, in the beginning of 1857, to confer with this Government, with a view to obtain its acquiescence in such a proposal; but the Executive Council, of which I was a Member, objected to fall into that plan, for many obvious reasons,—among others from an indisposition to be discourteous to South Australia, with whom we had had no quarrel, and from an appreciation of the extreme difficulty, if not an absolute prohibition, on the trade as would be imposed by forcing vessels passing up the river to unload at the point of junction between South Australia and Victoria. In consequence of that opinion of this Government, letters were written to Mr. Dryburgh—which are now in fact on the Table of the House—stating that this Government would prefer, before agreeing to any arrangement with Victoria, conferring with South Australia; but that the basis of any new arrangement should be, first, an absolute assimilation of the tariffs of New South Wales and Victoria; or, failing that, an assimilation of tariffs for the purposes of the river traffic; but that New South Wales objected, *in toto*, to any plan which should interpose an almost entire prohibition to the trade, by forcing all vessels to unload at the boundary. Victoria, then represented by Mr. Dryburgh, who, it appeared, came authorised to go so far, at once conceded the assimilation of tariffs, and agreed that that should form no impediment to the new arrangement, by making the tariffs of New South Wales and Victoria absolutely identical on all goods passing up the River Murray; and on corresponding with South Australia, a very practical suggestion was made by Mr. Torrens, then Minister of Trade there, by which goods sent up the Murray might be taken account of at Goolwa, or other shipping port within South Australia; and, in pursuance of his suggestion, a proposal was made to collect all the duties for the River Murray on the joint tariffs, as they now are, of Victoria and New South Wales. By this plan, the objection of Victoria to the collection of duties at the South Australian tariff was of course overcome, and the only difficulty that remained was the division of the revenue arising therefrom. Mr. Maculloch, who was at this time Minister for Trade in Victoria, proposed, without any valid reason, that Victoria should take three-fourths of the duties so collected, and New South Wales one-fourth. This Government replied that that was an unreasonable proposal, but that if Victoria would concur in an equal division, all the real difficulties appeared to vanish, and the contract might be fulfilled by our passing an Act (which has since become law) authorising South Australia to collect duties on goods river borne, on the assimilated tariff of New South Wales and Victoria; an equal subdivision being made between the two. This Government, I may state, was always of opinion that, looking to the trade, vastly important as it is, on the Murray, the real solution of all difficulties between the three Governments was only to be found in an absolute assimilation of the tariffs of the three Colonies for goods river-borne; but as South Australia has persisted in the imposition of *ad valorem* duties, and indeed has declined to bind herself at all to the tariff which New South Wales and Victoria had settled, that idea appears to have been set aside.

4. Do you think that half the duties belong fairly to New South Wales? I think, so far as we have any information, the arrangement is quite a just one. The centres of population collected about Beechworth and Bendigo would certainly point to a larger consumption of dutiable goods within the Colony of Victoria than probably any population so near to the northern bank of the river would indicate within the territory of New South Wales; but as I am of opinion that the traffic of the Murray, if it goes on increasing as it promises to do, will in point of fact supply the population of New South Wales up the Murrumbidgee quite as far as Gundagai, and also the dense populations on each side of the Murrumbidgee, such as Wagga Wagga and Tarcutta, I do not think I exaggerate when I entertain an opinion that,

that, until we obtain a more accurate knowledge of the extent to which the river traffic will go, and of the populations in both Colonies which it may be supposed to feed, the equal division of the duties is quite a just arrangement.

5. Taking a prospective view of it? Just so.

6. You are aware, no doubt, that much larger quantities of dutiable articles are brought across the river from the Victorian side to Albury and its neighbourhood than from Sydney to the Victorian side? Yes, I think that must be manifest to any one who considers the difference in the price of carriage from Melbourne and from Sydney; that is in favour of my argument.

7. *By Mr. Jamison:* Not only at Albury, but at Swan Hill and Moama also? Yes. I take the fact to be this,—that wherever by the Murray River the freight by water and the carriage by land taken together to any point shall be less than the price of carriage from Sydney to that point, the Murray River will manifestly, in a mercantile point of view, have that trade; and therefore I think the population of New South Wales, coming within the range of that trade—especially when the navigation of the river shall be improved—will be much larger than any person will allow himself to believe just now; because the land carriage from Sydney, for years to come, in the probable absence of railways, will certainly not diminish in price; while, on the other hand, every thing that civilization and good Government can do to improve the traffic of the river, will, I imagine, be done.

8. *By Mr. Hay:* As to the reasons for the present arrangement for the division of duties,—do you not think that the balance of dutiable articles imported overland from Melbourne to New South Wales over those exported from New South Wales to Victoria, upon the whole amount of which balance the duty is gained by Victoria, would form a reason for a more favorable distribution to New South Wales of the sums arising from the duties collected on the river? Yes, I think it forms a very strong additional argument to those which I have urged for a very favorable adjustment to New South Wales.

9. *By the Chairman:* Taking all these matters into consideration, you think half to each is a just apportionment? I do.

10. Paving such an arrangement as the one you have described, New South Wales, for self protection, would be compelled to put up Custom Houses along the frontier? Either on the river or on the frontier.

11. And it could scarcely be considered desirable to have Custom Houses on the frontier between two colonies of the same race, the same language, and under the same rule? It would be very undesirable; and it would also be extremely undesirable to interfere with the traffic of the river, besides being very expensive. If New South Wales can come to a fair agreement with Victoria, and South Australia will act as collector, I believe all that is necessary to protect both Governments from smuggling will be done.

12. Besides having the merit of great simplicity, the present arrangement is an exceedingly inexpensive one? Yes, the expense is very small.

The Hon.
Stuart A.
Donaldson,
Esq.

2 Dec., 1857.

PLAN.

SCALE 10 FEET TO AN INCH.

AUSTRALIAN FLOATING DAM.

Designed to improve the Navigation and Irrigation
by F. Cadell.

REFERENCES.

- A.A.** Caisson in two parts constructed of logs and planking, caulked and made watertight.
B.B. Water Wheels and pumps for the purpose of lightening Caisson when required to be removed to admit of a Steamers passage.
C.C.C.C. Capstans for heaving and retaining Caisson in its place.
D.D. Passages filled with Sluice gates for the escape of the Water while the Caisson is being placed, and also to be opened before commencing to remove it.
 The lower Water line shows the supposed ordinary height of the River, and the upper Water line shows the Artificial level attained by the use of the Caisson, and the Water flowing down the Creek.
E.E. Shows the Creek to be irrigated.
F.F. Shows a portion of the Caisson which can be removed to allow a sufficient quantity of Water to pass into the Lock to float a Steamer through and to admit of a Steamers Passage without moving the Main Caisson.
N.B. This Design is intended to show the principle only. — in practice many modifications would be adopted. During Floods the Caissons would be floated and dropped down, alongside the river banks. When the Caissons are in use, a slight platform will be erected for a crossing place, also when a Lock is required it would be formed by two sets of Caissons about 150 feet apart.

LONGITUDINAL SECTION.

HORIZONTAL SELF ADJUSTING
AUSTRALIAN WATER WHEEL.
Designed by F. Cadell

REFERENCES

- C** - The river at its natural width, and also showing it contracted to increase the velocity of the Stream at the Water Wheel.
D - The Water Wheel constructed in the form of a watertight Drum or Disc which will adjust itself by sliding on its Shaft, according to the rise and fall of the river
EE - Calches for striking and setting the Flats
F - Bent wheel, pinion shaft for transmitting the power to any purpose required
H - Shaft the section of which will be octagon, loosely fitted to the boss of the wheel.

SECTION AT AB

1858.

WEDNESDAY, 9 JUNE, 1858.

Present:—

MR. G. MACLEAY,
MR. DONALDSON,
MR. W. MACLEAY,

MR. SUTTON,
MR. JONES,
MR. HAY,

MR. WHITE.

GEORGE MACLEAY, ESQ., IN THE CHAIR.

George Boyle White, Esq., a Member of the Committee, examined in his place:—

1. *By the Chairman:* You were for a considerable time in the Survey Department of this Colony? I was, for twenty-seven years. G. B. White,
Esq.
9 June, 1858.
2. Were you employed in your professional capacity in the interior of the country? A good deal.
3. Upon the banks of any of the large western rivers? Yes.
4. Upon the Darling? Yes.
5. And upon the Murray and Murrumbidgee? I have been down them, but I was not employed on them.
6. In what year did you commence your survey of the Darling? I was on the Darling as far back as 1833.
7. It must have been then in a perfectly wild state? Perfectly so. The natives were very troublesome.
8. At that time I presume there was no talk of the occupation of that country? No.
9. It must have been within four or five years of its discovery by Captain Sturt? Yes; he went there in 1828.
10. What was the special object of your going on the Darling 1833? To trace the river. I traced down the Peel to the Darling the whole way. At that time they had an idea that the Peel went to the north-west. Sir Thomas Mitchell first went out, and merely sketched the river as he passed along the country. Afterwards I was sent to trace it, which I did.
11. *By Mr. W. Macleay:* Did you trace it down to the junction of the Murray? No; only as far as Fort Bourke.
12. *By the Chairman:* Which river did you go down, the Bogan? No, down the Namoi.
13. Did you at that time proceed below Fort Bourke? Not at that time; afterwards, in 1847, I carried on the survey down to the junction with the Murray.
14. Did you survey the river the whole way to the junction of the Murray? Yes.
15. For what length of time were you employed on that survey? About eighteen months, I think.
16. So that you had a good opportunity of judging of the general character of the climate in that part of the country? Yes. I was four years employed there altogether, tracing all these upper streams at the same time. I traced the Macquarie. If you recollect, the survey of the Macquarie did not go further than the swamps below Mount Forster; it was very difficult to trace it; there was a swamp of something like fifty miles long, by ten miles broad. I followed that swamp round, and then found it take itself up again.
17. You detected the main channel? I detected the main channel—the Wamarawa of the natives—but it was a very small one, and in dry weather it was perfectly dry. It is only to be followed when the river is flooded.
18. What is the width of the valley of the Darling? It is perfectly flat for miles.
19. There is no berg—no outer bank? No.
20. Is that its character all the way down? Not all the way; there is a very deep chasm when you get to the river itself; the banks are fifty or sixty feet high.
21. At Fort Bourke do you mean? Yes; between the junction of the Macquarie and Fort Bourke.
22. *By Mr. Suttor:* That is what is now called the Barwan? Yes; but we knew it then as the Darling. It was afterwards called the Barwan.
23. *By the Chairman:* Below Fort Bourke, what is the character of the immediate banks of the River Darling? The banks are very high; the country flat on either side, scrubby, and very poor.
24. No rich alluvial land? None. There had been stations formed in 1848, and abandoned again.
25. *By Mr. W. Macleay:* Below Fort Bourke? No; above Fort Bourke.
26. *By the Chairman:* Does the same description of country obtain the whole way to the junction with the Murray? Mostly.
27. There is no country then on its banks, where the climate is suitable, which would be available for the purpose of cultivation? Not at all; it is about the poorest country I have ever seen.
28. Used you to go to any distance from the immediate banks of the river? No; my object was merely to trace the stream.

- G. B. White, Esq.
9 June, 1858.
29. Then you know nothing of the back country? Yes; to the east and west I have been a considerable distance.
30. To what distance? Seventy or eighty miles.
31. *By Mr. W. Macleay:* From Fort Bourke? Yes; starting away westward.
32. *By the Chairman:* Did there appear to be any alteration in the character of the country at this distance from the river? No: now and then there were patches of good country, but generally speaking it was very indifferent.
33. What was the character of the season when you were there—was it a dry season? Yes, very dry when I was there in 1847; but shortly after the river became flooded, and the whole country was covered, the water being up to the wall-plates of some of the deserted huts.
34. *By Mr. W. Macleay:* That was above Fort Bourke? Yes; between Fort Bourke and the junction of the Bogan. It appears to me like a dried-up delta; there are ana-branches which form a perfect net-work of rivers. It reminds me of the Hooghly. I have seen the sand heads of the Hooghly at low-water, when you can see the different sand banks coming up amidst a net-work of channels. That country appears to me to have been formed in the same way.
35. *By the Chairman:* Is not the soil in that country, on the Darling, very compact and hard? Yes.
36. Is not that against what you say as to its aspect as a delta? I do not know that it is. I have an idea that the whole of the interior, from the Gulf of Carpentaria to Spencer's Gulf, has been a dried up sea.
37. Drained through the action of upheaval? It may be. An upheaval is generally supposed to be going on.
38. With respect to these ana-branches, do you think they could by any arrangement be made to convey water to the east and west, so as to render the country at the back available for occupation? I think they might.
39. That is the character of the country you followed down—the ana-branches appeared to exist throughout the whole of it? Yes. Large lagoons were formed whenever the river overflowed.
40. Had you any communication with the natives on the Darling? Frequently.
41. Did you ever hear from them of lakes existing to the east or west of the river? No; on the contrary, whenever they went away from the Darling they were provided with skins to carry water.
42. Did they ever speak of large floods having occurred? Not only did they speak of them, but there were marks of them all over the country.
43. Do you think there have been floods at any time that would render the country dangerous for occupation? I am sure of it. I have travelled over that country for miles with the wreck left by the flood up to my shoulders on horseback.
44. Was the country a dead level—although it might appear to the eye level, strictly speaking there would be some elevations? They were very slight. It appeared to me like travelling on the ocean; the sun rose and set as if it were on a sea horizon.
45. *By Mr. Donaldson:* Was there no timber on the horizon to interrupt the view? Now and then there were belts of timber, but no large timber.
46. Was the country well grassed? No, very indifferently grassed. It was principally salt-bush.
47. *By the Chairman:* During the time you were there had you any means of ascertaining whether the rains were periodical? No.
48. Could the natives not give you any information on that point? We were obliged to keep them at a distance. They were very troublesome, about the Bogan especially. The only way of preventing danger was to keep them away as much as possible. I never allowed them to be near the tents at night.
49. Was the soil of such a character that tanks or dams might be made sufficiently retentive? Yes; it was clay principally.
50. When you went seventy miles from the river, as you have said, did you carry water with you? Yes, on pack-horses.
51. You never had occasion to sink wells? Never.
52. Are you aware that the whole of that country is now taken up and occupied? I believe it is: it was not so in 1848; it had been taken up and deserted. I frequently fell in with the old huts.
53. There had been very dry seasons for some time previously? Yes: it had been very much burnt up.
54. Can you form any idea whether wells could be sunk with advantage? I think if wells were sunk you would get salt water. I sometimes found very deep reaches of the river, extending for a mile or a mile and a-half, to be salt; but below them again I found the water very good.
55. That is just what Captain Start found to be the case? Exactly. It depends entirely, I believe, on the quantity of water in the river: if there is plenty of water it is not salt, but if there has been no flow into the river for some time from the upper streams, it then becomes salt. The banks are very steep. There appears to be a sort of red clay from fifteen to twenty feet deep; and the river is more a chasm than is usually the case. The water has not sufficient impetus to work its way to form a bed for itself. It appears to me to be warmed out, and it is excessively tortuous. In many instances I have known the river to be within a hundred yards from point to point, and nine miles round. I took the height of the river at the junction of the Macquarie with it, and I think I made it some four hundred feet above the level of the sea.
56. You have no very high opinion, from your own experience, of the capabilities of that country? I think it fit for nothing but grazing purposes.
57. Having gone only seventy miles to the west, you of course cannot venture to give an opinion as to the character of the country more towards the South Australian boundary? No.

No. But the further I went in that direction, the worse it appeared to get. From what I could learn from the natives, they appeared to say that they never went further, because they could not get water or food. G. B. White,
Esq.

58. *By Mr. Hay*: From what particular point did you start when you went seventy miles into the interior? From Fort Bourke. I have gone forty or fifty miles into the country from different parts of the river. 9 June, 1858.

59. That particular trip was made from Fort Bourke north-westward? Yes.

60. Did you observe any material difference between the country on the Darling above Fort Bourke and that below Fort Bourke, to the junction with the Murray? It is much better above Fort Bourke.

61. A better grassed country? Yes; much better grassed.

62. Did it seem equally liable to flood? Yes.

63. You said the country was scrubby—what are we to understand by that? There is a great deal of polygonum junceum, a sort of wire grass, growing on the banks. I only found it where the land is liable to be overflowed. It is very difficult to get through it for surveying purposes. Over all that country it was almost impossible to get through that polygonum scrub to get near the river. I found the greatest difficulty in carrying on the survey.

64. Did this polygonum junceum extend to any considerable distance from the river? It did. It was found everywhere where there were watermarks. As we got up to the higher country we lost it altogether.

65. Was there a belt of this polygonum along the river, generally speaking, all the way from Fort Bourke? Yes.

66. Both above and below Fort Bourke? Yes. Whenever we came to flooded country, it was marked at once by the polygonum junceum.

67. After passing through this belt of polygonum from the river what was the style of country? Open plains.

68. What sort of vegetation? A great deal of salt-bush; in fact it was principally salt-bush.

69. *By Mr. W. Macleay*: The open plain, I suppose, often came into the river? Very frequently; but still the polygonum took possession of it even there.

70. *By Mr. Hay*: Did you not observe on the open places a shrub different from the polygonum—a prickly shrub, from nine inches to two feet high? I do not think I did.

71. *By the Chairman*: All these shrubs are saline? Yes, they are all salsolaceous plants.

72. *By Mr. Suttor*: Did you keep principally on one side of the Darling? Yes; on the left, or south-east bank.

73. *By Mr. Hay*: Then you were not upon the right bank from Fort Bourke downwards? Whenever we got an opportunity we crossed over and examined the country. There were many bars of sandstone right across the river, upon which we could pass over. I was sometimes away for three, four, or five days, examining the country on the right bank. I took a man with me leading a pack-horse carrying water in iron cans such as oil is placed in.

74. What draught animals had you with you, horses or bullocks? Both.

75. How did they thrive? The horses did not thrive; the bullocks seemed to do much better. I would sooner have bullocks than horses; though slower they are surer.

76. The bullocks kept their condition? Yes.

77. What did they eat? They seemed to live a good deal on the young plants of the polygonum junceum, and on the little pickings mixed with it—salt-bush, and so on.

78. Do you think, with regard to the scrub you speak of as growing on the plains, that it is possible you might have mistaken another species of shrub for the polygonum junceum? I might have done so; but I know it too well. I never saw it growing on the plain in any quantity, only where the plain joins the river.

79. *By Mr. Suttor*: On land subject to inundation? On land subject to inundation.

80. *By Mr. Hay*: Are not the whole of these plains subject to inundation? I am sure of it. I saw watermarks when I was there so high that if a flood had come at that time of the same height we should have been all lost. Even where the banks were sixty or seventy feet high, when the flood came the water was up to the wall-plates of the huts standing upon them. It looked exactly like a sea. I am sure there must have been one hundred and fifty miles of country under water.

81. Did you observe any sandy elevations? Now and then there were pine ridges, but they were very few.

82. *By the Chairman*: What was their general direction—were they at right angles with the river? They generally took the crown of the ridge dividing the waters. I think about north and south was their general direction.

83. You say they took the crown of the ridge dividing the waters—what waters do you mean? The waters supplying the rivers.

84. They were at right angles, then, for the most part? No; the general direction was nearly parallel with the river. They were not very extensive—something like a waterwash, as if the sand had been banked up by the water, and the pines had grown there. There was no continuous range or watershed.

85. They were isolated ridges? Isolated completely.

86. Were they sufficiently numerous to afford an asylum in case of such inundations as you speak of? I think they were sufficiently high, but not sufficiently numerous.

87. *By Mr. Suttor*: You saw no high land in all this country? No; when once I lost the escarpment of the main ranges I saw no high land afterwards.

88. *By the Chairman*: What was the rate of the current in the ordinary state of the river? Very slow indeed—scarcely perceptible—I should say not half a mile an hour. Sometimes you come to a reach a mile and a half long, and you would think it stagnant water.

89. These reaches are very deep? Very deep—perfect chasms in some places.

90. Were the natural dams you spoke of rock or hardened clay? Indurated clay—sometimes sandstone.

G. B. White, Esq. 91. They serve as dams, in fact? Yes.

92. Do you think by taking advantage of these natural dams as situations for locks the river could be made navigable? I think so. In clearing a river of that description I should not advise keeping the course of the tortuous bends. There are places where a cut of a hundred yards will save nine miles.

9 June, 1858.

93. Did you see much timber in the river? Yes; perfect barriers of timber occasionally. The water does not appear sufficiently strong to take them away, except in extraordinary floods.

94. The presence of this timber would add greatly to the expense of rendering the river navigable? Very much indeed.

95. Do you think the country is of a character that would pay for the expense of rendering the river navigable? I think not. I think all that portion of the country is only fit for grazing purposes; and a party must have a great extent of country to make it useful at all.

96. There is an enormous extent of country on that river to the east and west which would all be available for pastoral purposes if it could be permanently watered? Yes.

97. It has been found that sheep and cattle do better there than on richer soils, notwithstanding the unfavorable appearance it presents to the eye? Yes. I believe the whole of the country on the bank of the river has since had sheep depasturing on it.

98. On the immediate banks of the river? Yes.

99. But from want of water enormous tracts of country, between the Darling and the South Australian boundary on the west, and between it and the Lachlan on the east, are unoccupied? Yes; a great deal of land may be made available for grazing in this country, and will be made available by and by, by dams and proper drainage.

100. That is an expensive process in the interior? It is.

101. Do you think it probable that individuals would go far away to the right and left of the river, paying at the same time an assessment on their stock and a rent for their land, upon the chance of getting water by tanks or wells? They never could afford to do it until labor gets cheaper, and the country becomes more thickly populated.

102. Do you think it would be worth while for the Government to offer runs there to individuals gratuitously, on condition of their forming water tanks? I think it would.

103. That country if watered would keep some millions of sheep, I presume? Yes. Sheep are found to thrive very well there. At one time sheep were not placed on those runs, because it was thought they would not do any good; but it has been found to be the best pasturage for sheep. However, they will lose all the sheep if the water once comes over the country.

104. Could not the sheep take refuge on the sand-hills you spoke of? Some of these sand-hills are thirty or forty miles apart. From the junction of the Namoi up to Bucklebone, a distance of forty miles, there is not a sand-hill. It is a country that does not appear to be thickly populated by the natives. Now and then I met a tribe of blacks, but from my experience of them I should say they were not very well fed. They had to travel a good deal to get their food. They seemed principally to subsist on fish.

105. Fish are very abundant in the Darling? Yes; you may get any quantity. I should have starved there myself if it had not been for the fish; supplies not having been sent me by the Government.

106. *By Mr. Hay:* Do you not think, that by making dams along this river you would run a great risk of filling up the reaches by a deposit of mud? It might have that effect.

107. It would require that provision should be made to prevent that? I think it would.

108. A system of locks would be better? Yes; such as are used in canals. In fact the river has more the appearance of a canal than a river.

109. Its waters are sometimes greatly charged with mud, I presume? Yes; sometimes the water is nearly as thick as pea-soup, I might almost say, with the washings of the whole country.

110. *By the Chairman:* If the country to the right and left of the Darling were fully occupied by sheep and cattle, would there not be traffic enough to make it worth while to go to the expense of rendering it navigable? I do not think it would be worth while for a very long time. The time may come when it will be expedient to do so.

111. What makes you say the time may come—why should not the country be occupied forthwith? I think as individuals get richer they may try to reclaim the country back from the river, but just now it would not be worth their while to attempt it. In fifty or a hundred years time there will be a necessity for more country, and then no doubt this back country will be occupied.

112. You have seen Mr. Crawford's letter to the Secretary of State for the Colonies, dated 28 April, 1857, and published in a Return to an Address of the Legislative Assembly, respecting the Navigation of the Murray, in which the following passage occurs: "What I propose is, that before the valley of the Murray shall have passed into private hands, a survey should be made, and plans adopted, for damming the Murray and its tributaries, at various points, and of forming irrigating canals through the plains." What Mr. Crawford proposes is, that the Government should make surveys with a view to the damming of the Murray and its tributaries, and that sales should take place only in connection with such surveys—do you think it is worth while for the Government to take that matter into consideration at present? It would require an immense expenditure, as the surveys would require to be very elaborate.

113. The expense of carrying out such works would be so enormous that it is impossible to name a time when it is likely that would be commenced? Quite impossible. It would be quite impossible even to make an estimate of the expense.

114. Do you think the distant probability of such works being carried on by the Government would have any effect on the value of the land with intending purchasers or occupiers? Not in our age.

115. You have read Captain Cadell's evidence before this Committee last Session? I have. G. B. White,
Esq.
116. You are aware of what the South Australian Government have been doing on the River Murray? I am.
117. You are aware they have gone to the expense of building a steam snag-boat, and that that boat is now at work? Yes. 9 June, 1858.
118. You are not perhaps aware that its operations have been perfectly successful? No, I was not aware of that.
119. Do you think it would be worth while for the Government of this Colony to go to the same expense as the Government of South Australia in opening up the navigation of the Murray by clearing its channel? Yes; I think it quite possible for the Government to lay out money to advantage in that way.
120. You are aware that the river is navigable up to the base of the mountain country? I see that Captain Cadell says so.
121. And that it leads to a rich agricultural country? Yes. I think, considering the advantages the Murray possesses in its gold fields and alluvial lands, that it would be worth while for the Government to expend a considerable sum of money in clearing the channel; but I think Captain Cadell has under-estimated the expense.
122. *By Mr. Hay*: You are aware that the snag-boat has been built within the estimate of Captain Cadell? Yes; but I allude to the working expenses of clearing the river.
123. *By the Chairman*: Do you think it would be advisable for this Government to combine with the Governments of the two Colonies of Victoria and South Australia, and to go to the same expense as they seem disposed to incur? Yes.
124. *By Mr. Hay*: Did you say whether there was much timber in the Darling? Yes, perfect walls of timber. I remember being once sent by Sir Thomas Mitchell with a party of men and a boat to clear a passage, and I think it took us three or four days to get as many miles.
125. Was there more timber in the higher part of the river than below. As the banks of the river are so destitute of timber for the last three or four hundred miles of its course, I should suppose the accumulation of timber would be much less? That part of the country is so very flat, that if one snag stops the current is not sufficient to carry it through, and the timber accumulates at that spot.
126. You could not say clearly, at this distance of time, whether the river below Fort Bourke was less encumbered with timber than above? No; I could not.

William Henry Suttor, junr., Esq., called in and examined:—

1. *By the Chairman*: You have been a good deal in the western interior? Yes.
2. Are you acquainted at all with the country between the Lachlan and Darling? Yes; I have been across the country between the Lachlan and the Darling.
3. At what time? In June, 1857. W. H. Suttor,
junr., Esq.
9 June, 1858.
4. From what part of the Lachlan did you make your start? We started from about three miles below a place called Burrabadimba on the map, about one hundred and forty miles from the junction of the Lachlan and Murrumbidgee.
5. In what direction did you strike across? West north-west. We hit the Darling about two hundred miles from its junction with the Murray.
6. What is the character of the intermediate country? For the first ninety miles it is an almost uninterrupted large plain; then we came into low undulating country, which continued to within about fifteen miles of the Darling.
7. When you say undulating, do you mean downs or hilly country? Not hilly country. It was thinly wooded.
8. *By Mr. W. Macleay*: Was it rocky? No. We saw occasional rocky ridges.
9. Did the country improve in character as you proceeded—did it become better grassed than in the immediate neighbourhood of the Lachlan? It was rather better grassed in the undulating country.
10. Is the soil in the undulating country sandy? Hardly sandy—more a red loam.
11. *By the Chairman*: Is it covered with salt-bush? There is a small kind of salt-bush growing over it.
12. *By Mr. White*: You found some of the reaches in the river very large, did you not? The river was then very high; we could not distinguish the reaches.
13. *By the Chairman*: Did you meet with water in the country you passed over? No permanent water, merely pools on the plains.
14. What is the height of the ranges that appear on the map to the right of your track—could you see them? They look much higher on that level country than they really are.
15. What height did they appear to be—three or four hundred feet? About that.
16. I suppose you did not approach sufficiently near to see whether they were covered with timber? We did not. One low ridge that intercepted our route was not wooded with large trees.
17. Did you find the mesembryanthemum, or pig's face, as it is called by the shepherds, in the country between the two rivers? Yes; the pig's face grew occasionally on the harder plains, and not generally throughout the country.
18. So that sheep might be kept there for some time in dry weather without water? Yes.
19. Was the whole of the country you traversed fit for stock? The whole of it. There were occasionally small pieces that were bare of grass; but they were thickly covered with salt-bush.
20. How long have you been acquainted with the Lachlan country? Five or six years.
21. In the course of time, have you observed any improvement in the character of the vegetation, so as to render it fitter for stock? I think it is getting more abundant.

W. H. Suttor,
junr., Esq.
9 June, 1858.

22. In the hilly country, the pasturage appears rather to suffer from the presence of stock—gum trees, and other trees spring up abundantly in the neighbourhood of the stations, and the country appears rather to deteriorate? The underwood generally grows more thickly than on the plains.
23. On the other hand, the pasturage on the plains manifestly improves? Yes.
24. As far as you could judge of the character of the country you travelled through between the Lachlan and the Darling, did it appear fitted for collecting water, from the inequalities of the ground, and the character of the soil? I think so. We saw some places very well fitted for collecting water; in other places we saw a great deal of water lying on the surface of the ground that might have been kept a long time if it had been collected.
25. Did you cross the Darling? We just crossed, but did not go far back into the country on the other side.
26. The whole of the country you traversed appeared very much of the same character as far as pasturage is concerned? Not exactly the same.
27. But the whole of it was fit for pasture? Yes. The undulating ground is more fit for cattle than for sheep, as there are some grasses growing there, the seeds of which often destroy lambs, and deteriorate the wool.
28. Have you heard any description of the intermediate country between the two rivers further to the north of your route? Yes; I have heard reports of some places. Some of our people went out to some of the ridges a few years ago.
29. Did they find any springs? They found two or three springs, one of which appeared to be permanent; the blacks were living at it for a long time.
30. What was the character of that country for grass? Very good. The country itself consisted of undulating stony ridges; it was more ridgy than where I went through.
31. With salsolaceous plants? I think not about the ridges.
32. Do you believe from what you have heard that the whole country between the two rivers is fit for stock? A great portion of it is, but in some places there is a great deal of mallee scrub, which is quite useless.
33. Is mallee found on the Darling to any extent? Not that I saw; I believe it is found lower down.
34. *By Mr. Suttor*: You saw no mallee at all? Only a few bunches.
35. *By Mr. Hay*: You did not pass through any mallee at all on your route? No; excepting a few bunches occasionally.
36. Was there any scrub at all? It was all a kind of scrub on the undulating ground, but not at all thick, consisting of acacia, broom stuff, quandongs, and so on.
37. With smaller plants intervening? Yes. Some of it was the prettiest country I have seen. There were occasional belts of oak separating small plains. Oak was the prevailing timber.
38. *By the Chairman*: With weeping acacias of different kinds? No; a kind of acacia we call the mulga, with a leaf very like the myall, but growing straight up, and stiff.
39. *By Mr. Hay*: Not scented? No.
40. *By the Chairman*: Did you see any pine? We saw but few pines.
41. *By Mr. Hay*: Did you see any box timber? Occasionally, in the hollow places.
42. In belts? On the plains there were belts of timber, but not in the undulating country.
43. *By the Chairman*: Did the country appear to rise much in the centre between the two rivers? No.
44. Did you see any appearance of its being subject to inundation? No, I think not.
45. *By Mr. W. Macleay*: You say you saw belts of timber on the plains? They were hardly belts, but a kind of clumps. One long belt follows the line of a creek that comes from the Lachlan and loses itself on the plain.
46. *By Mr. White*: There are many watercourses there that lose themselves in that way? Yes.
47. *By the Chairman*: There are some lakes, are there not, in connection with the Lachlan? I believe there are a few lower down, but not any distance from the river.
48. *By Mr. Hay*: You started from the Lachlan near a spot marked Burrabadimba on the map? Yes.
49. You know Macculloch's Range, which you see marked on the map on the table? Yes.
50. By reference to Macculloch's Range, could you fix the point at which you reached the Darling? We reached the Darling about fifty miles below the point opposite Macculloch's Range.
51. How far up the river did you go? About sixty miles. When we first reached the river we went downwards a short way, perhaps sixteen or seventeen miles, and then turned back and went up.
52. What route did you follow in coming back? We left the river within about twenty miles of where we reached it.
53. Then you struck back? Yes, on the old course.
54. Did you see Macculloch's Range at all? Yes, we saw it away on our right.
55. You saw it sufficiently to be able to ascertain, in a general way, the position of the spot where you reached the Darling? Yes.
56. How far did the plains you have spoken of extend back from the Lachlan? Nearly ninety miles. I believe these plains are wider to the south-west of our route.
57. The salt-bush plains? Yes.
58. With box clumps in the depressions? Yes.
59. How far do you think you passed, then, through the undulating country of which you have spoken? About eighty or ninety miles.
60. Between that and the Darling, what was the character of the country? Low soft plains for about fifteen miles; this was the character on our track into the river; as we came out some miles higher up the country was not quite so open, was more thickly grassed, and the plains of a harder description.

61. Was there much polygonum on those plains? Very little. We saw the stumps of it quite dead in some places where it had been burnt off. The remains of the polygonum were on the plains immediately on the banks of the river. W. H. Suttor,
junr., Esq.
9 June, 1858.
62. *By the Chairman*: What was the character of the soil? Soft alluvium.
63. *By Mr. Hay*: Do you think it a good country for stock? Very good.
64. Do you know a small prickly bush that grows on the plains on that part of the country? Yes—without a leaf.
65. Stock eat that readily? Yes.
66. They are very fond of it apparently? Yes.
67. And are supposed to fatten on it? Yes.
68. Did you see any of that on the plains near the Darling? It was not very thick.
69. What is the character of the vegetation on these plains? It consists principally of that kind of grass known as oat grass, and large bunch grass; there are other kinds of grasses—occasional bunches of kangaroo grass.
70. Nearly the whole of the country you passed over is good for stock if watered? Yes.
71. Do you think it would be good for agriculture? I think not.
72. Do you think any of the country on the Lower Lachlan, or what you saw on the Darling, is fit for agriculture? I think the ground is good enough, but the climate would not suit.
73. Do cabbages succeed with you there? In the winter months.
74. *By the Chairman*: Did you ever see any potatoes grown there? I believe one man did grow a dish of potatoes there once.
75. It is owing to the intense heat setting in so early in the year that vegetables do not grow there, not from any want of moisture in the winter or of goodness in the soil? Just so.
76. When you reached the Darling, I think you stated it was bank high? It was very high, and rising then.
77. Did you hear anything of the state it had been in previously? People we met told us it had been very high a long time; about eighteen months before it had been very low, but a flood had then come down, and it had been high ever since.
78. What was the rate of the current then? I should think three or four miles an hour.
79. Could steamers, in your opinion, have plied on it at that time? I think they could, without any difficulty.
80. What was its width? In some places quite a hundred yards, in others not more than sixty. I considered it a good shot across the river with a gun.
81. *By Mr. Jones*: Could you ford it in any place? No.
82. *By Mr. Hay*: Was the timber large on the banks of the river? No; generally very small.
83. Gum? Yes.
84. Was there any timber back from the river on the plains you have described? No; only small low box trees—a kind of flooded box.
85. Was the timber generally confined to the bank of the river? Yes.
86. Then, settlers would have to encounter a good deal of difficulty from want of timber? They would.
87. *By the Chairman*: Did you see anything of the sheep depastured on the banks of the Darling? I did not see the sheep, but we heard there were sheep there. We saw Mr. Jamison, who owns the sheep.
88. Had you any conversation with him as to the character of the country as sheep pasture? Yes.
89. Did he make a good report of it? Yes, a very good report; he was quite satisfied with it.
90. Have you heard generally that the country is well fitted for sheep? Yes.
91. And for horned cattle? Yes. I may mention that a party whose station we were at has sent cattle since then to Melbourne, where they were considered very good, and brought a high price.
92. *By Mr. W. Macleay*: It must be a distance of six hundred miles from that part of the river to Melbourne? Yes. It is about four hundred and fifty miles to Bendigo.
93. *By the Chairman*: If water could be procured in the intermediate country, it would be taken up at once for stock? I think so.
94. *By Mr. Jones*: You mean the country between the Lachlan and the Darling? Yes.
95. Was the country taken up on the Darling at the point you reached? It was all taken up, but not occupied.
96. *By the Chairman*: Tendered for but not stocked? Yes.
97. *By Mr. Jones*: And above where you reached as well? I heard it had all been tendered for.
98. Was there any stock at all there? Not above where Mr. Jamison's sheep were.
99. Where was that? About two hundred and fifty miles from the junction with the Murray.
100. *By the Chairman*: Do any parties travelling with stock to Melbourne market take the Darling in their line of route? Yes.
101. From Moreton Bay? Yes.
102. Do you think that route likely to become more in vogue? I think so, certainly. I believe the fear of the blacks alone prevents parties from using that route.

WEDNESDAY, 16 JUNE, 1858.

Present:—

MR. G. MACLEAY,
MR. W. MACLEAY,
MR. DONALDSON,

MR. HAY,
MR. SUTTON,
MR. JAMISON.

GEORGE MACLEAY, Esq., IN THE CHAIR.

A. G. McLean, Esq., called in and examined:—

- A. G. McLean, Esq.
16 June, 1858.
1. *By the Chairman:* You are the principal draftsman in the Surveyor General's Department? I am the chief draftsman in the Surveyor General's Department.
 2. Can you state, Mr. McLean, what amount of land has been alienated in the valley of the Murray River? In the valley of the Murray River and tributaries, according to the present state of the returns, the alienations are—by auction sale, 11,394 acres, and by pre-emptive purchases, 14,270 acres.
 3. In the valley of the Murray? Yes; that is, in the valley of the Murray and its minor tributaries.
 4. What is the amount of land that has been alienated in the valley of the Murrumbidgee? West of the old settled districts, below the confluence of the Yass River, the land sold by auction on the Murrumbidgee and minor tributaries has been 14,823 acres, and by pre-emptive sale, 32,690 acres.
 5. Are there any new applications? These pre-emptive purchases are not entirely paid for. They are all measured, but not all paid for.
 6. *By Mr. W. Macleay:* Does that include all the tributaries of these rivers? All the small tributaries, but not the large tributaries, such as the Lachlan and Darling.
 7. Does it include the Tumut? Yes.
 8. On the Darling River no land has been alienated? No.
 9. *By Mr. Sutton:* Nor on the Lachlan? Little or none west of the old settled districts.
 10. *By the Chairman:* Will you have the goodness to state the number of townships, and their names, that are in the valley of the Murray, the Murrumbidgee, and Lachlan Rivers? I have made a rough memorandum of the towns. (*Witness handed in the same. Vide Appendix A.*) I have separated the towns on the Murray River—those on its tributaries and effluents—those on the Murrumbidgee River—those on its tributaries—and those on the Lachlan River and its tributaries.
 11. Are there any other contemplated towns? Yes; I have mentioned the contemplated townships also.
 12. Have you put down the towns at Lang's Crossing-place? Yes.
 13. Do you think it likely, if the navigation of these rivers were to be improved, that more townships than at present exist, and are contemplated, would be laid out upon their banks? I think the navigation has already given rise to the demand for one township, and it will probably give rise to others—that is the township of Brocklesby or Corowa; it is opposite to "Wahgunyah," on the Victoria side.
 14. You think it will be the means of originating others? I think undoubtedly so.
 15. In time very many? In time very many, no doubt.
 16. Even although agriculture should not be found possible to any great extent on the banks of these rivers? There is no question that it will to some extent, even on those parts of the rivers where agriculture may not be carried on.
 17. The whole of the land on the immediate banks of the River Darling is occupied I believe—held under pastoral licenses? It is all tendered for. There is no vacant land so far as Fort Bourke.
 18. On the banks of the other rivers? It is wholly occupied.
 19. Has much of the back country been tendered for lately on the Darling? I cannot say on the Darling River.
 20. The whole of the back country between the Murrumbidgee and the Murray is tendered for? Yes. If there is any land vacant, it is only vacant because people don't know what is vacant.
 21. If the whole of this extensive country became occupied by stations, a considerable demand must arise in the neighbourhood for mechanics' work, I presume? Undoubtedly some demand will arise for mechanics' work.
 22. So, settlements would arise upon the banks of the river, I presume, upon which these people would congregate for the supply of the pastoral occupants? Yes.
 23. The rivers Murray, Wakool, Edward, Murrumbidgee, and Lachlan, have been regularly surveyed? Yes; traversed with the circumferenter and chain.
 24. Has the River Darling been also surveyed? It has, for nearly two-thirds of the distance from the Murray to Fort Bourke. The survey reaches to near Mount Macpherson.
 25. *By Mr. Sutton:* By whom? By Mr. McCabe. He also travelled up the river from the termination of his survey to Fort Bourke.
 26. *By the Chairman:* Mr. McCabe sent in a report, as a matter of course? He sent in many reports, which contained most valuable information at that time, because the country was then little known, and they are valuable still.
 27. You have read Mr. Crawford's letter addressed to the Secretary of State for the Colonies? Yes.
 28. On the desirability of irrigating the valley of the Murray? Yes.
 29. He proposes, before the valley of the Murray passes into private hands, that a survey should be made, and plans adopted for damming the river, and forming canals through the plains for irrigation? Yes; so far as I remember, that is his proposal.
 30. It would be a very gigantic work? Yes; very gigantic.
 31. Far beyond the means of this Colony, I presume, for generations to come? Yes; I should think so. On the Victoria side the land has been alienated to a greater extent than on this side of the river.

32. Is it desirable to prevent this land from passing into private hands, until such time as a proper survey has been made for the purpose of irrigation? I think it would not be desirable to defer the sale and settlement of the country for so speculative a project. A. G. McLean,
Esq.
16 June, 1858.
33. Do you think it would take a long time before the survey could be made? I don't think the survey would take a very long time, if several surveyors were put upon it. The levelling would be the principal work.
34. The levelling would occupy an immense amount of labor, and would be very expensive work—would it not? I think it might be conducted without very great expense, by the sappers who are employed in the Railway Department, and who are competent to perform the work under direction.
35. Would it be right to go to the expense, looking at the ultimate object? I presume Mr. Crawford would wish that this land only should be sold, if sold at all, with a view to the mode in which it might be laid out for the purposes of applying irrigation? I think it might be desirable to make such surveys as would determine the practicability and cost of carrying out Mr. Crawford's proposal, in a portion of the course of the river, as an experiment; but I cannot think that the land should not be alienated until a survey was made and the question considered.
36. Could not the surveys be made just as well after the land was alienated as before? No doubt the surveys could be made after the alienation of the land.
37. And as the work is of such gigantic character, it is very improbable that it would be carried out for ages yet to come? Yes, I should think so. And it might, I presume, be carried out even after the alienation of the land, by legislative enactment, if desirable.
38. So, you think if any demand arose for this land it would not be worth while to prevent its alienation for the purpose of waiting for this survey? Certainly not. I think the alienation is now going on. I have here a lithograph map shewing the towns and localities. It shews that the whole course of the River Murray is being spotted with towns.
39. *By Mr. W. Macleay:* This town of Mourquong is laid at the junction of the Darling River? It is near the junction, but a town is to be laid out on the Darling River at the crossing-place of the Adelaide Road.
40. These are the towns that are laid out? Yes. Some of them have not yet been proclaimed.
41. *By the Chairman:* It would be requisite to come to some understanding with Victoria when we talk of damming up the river for the purpose of irrigation? Yes, although the river is within the New South Wales Colony, for the irrigation would, of course, affect land on the Victoria side. (*Witness then handed in a Memorandum of lands alienated by the Crown in the Valley of the Murray River, in the Colony of New South Wales, and in that of the Murrumbidgee River, below the confluence of the Yass River. Vide Appendix B.*)

APPENDIX A.

(1).—*Towns, and proposed or intended Towns, on the Murray River.*

- ALBURY.—At the crossing-place of the Sydney and Melbourne Road over the Murray or Hume River, and the present head of steam navigation of that river.
- HOWLONG.—About 20 miles (by land) below Albury, and the point where Sir Thomas Mitchell crossed the Murray or Hume on his return route from "Australia Felix."
- UNNAMED.—At Corowa or Brocklesby—not yet proclaimed—about 40 miles (by land) below Albury, and nearly opposite to "Wahgunyah," a private town, and "Carlisle," a Government town, in Victoria.
- MULWALA.—Not yet proclaimed—at a ferry over the Murray River, about 62 miles (by land) below Albury, and about the lowest point on the river at which it is supposed that agriculture can be carried on with success.
- MOAMA.—At the principal crossing-place over the Murray River for stock travelling to Victoria, between the confluences—on the opposite or Victoria side of the river—of the Goulburn and Campaspe Rivers with the Murray,—nearly opposite to the Town of "Echuca," in Victoria, on the proposed terminus of the Murray River Railway.
- EUSTON.—About 35 miles (by land) below the confluence of the Murrumbidgee River, and the head-quarters of the Commissioner of Crown Lands of the Lower Darling District.
- MOURQUONG.—At Mount Look-out—about 5 miles above the confluence of the Darling River with the Murray, and which will probably be superseded by a town which it is intended to lay out at that confluence.
- UNNAMED.—At the confluence of the Darling River with the Murray, and where the former river is crossed by the Adelaide Road—not yet laid out.

(2).—*Towns, or proposed Towns, in the Valley of the Murray River, or on its effluents.*

- DENILIKUIN.—On the Edward River, at the crossing-place of the stock tracks from the Northern Districts, by the Lachlan River and Lang's Crossing-place, and by Wagga Wagga and the Yanko Creek.
- MOULAMBIL.—At the junction of the Billabong Creek with the Edward River, about 70 miles westerly from Deniliquin.
- UNNAMED.—At Redbank, on the Gulpa Creek—one of those effluents of the Murray River which form the Edward—about midway between Deniliquin and Moama, and on the main stock track to Victoria—not yet proclaimed.
- UNNAMED.—At the crossing-place of the Sydney and Melbourne Road over the Billabong Creek, about 50 miles on the Sydney side of Albury.

(3).—*Towns, and proposed or intended Towns, on the Murrumbidgee River, below the confluence of the Yass River.*

- GUNDAGAI.—On both sides of the River Murrumbidgee, at the crossing of the Albury and Melbourne Road.

A. G. M'Lean, Esq., JUGIONG.—On the north side of the River Murrumbidgee, near the confluence of the Jugiong Creek with the Murrumbidgee, and about 20 miles (by land) above Gundagai.

16 June, 1858. WAGGA WAGGA.—Almost entirely on the south side of the River Murrumbidgee, about 50 miles (by land) below Gundagai.

UNNAMED.—At the principal crossing-place of the Murrumbidgee River for stock travelling towards Victoria, known as "Lang's Crossing-place," and about 55 miles above the confluence of the Lachlan River—not yet laid out.

BALRANALD.—On the north side of the River Murrumbidgee, about 25 miles above the junction with the Murray.

(4).—*Towns, and proposed or intended Towns, on the Lachlan River, below the confluence of the Belubula River.*

OXLEY.—On the north side of the Lachlan River, about 18 miles above its confluence with the Murrumbidgee River.

UNNAMED.—At Condoblin or Condobolin, on the north side of the River Lachlan, about 260 miles above its junction with the Murrumbidgee, and about 180 miles from Bathurst.

(5).—*Towns, and proposed Towns, in the valley of the Murrumbidgee River, below the confluence of the Yass River.*

TUMUT.—On the Tumut River, at the junction of the Goobarragandra River, about 22 miles from Gundagai, and in the vicinity of the Adelong Creek gold field.

UNNAMED.—At the Adelong Creek gold field, about 11 miles from Tumut—not yet laid out.

BOWNING.—On the Sydney and Melbourne Road, about 8 miles beyond Yass.

BOOKHAM.—On the Sydney and Melbourne Road, about 22 miles beyond Yass.

BINALONG.—On a branch of Jugiong Creek, on a road from Yass to Wagga Wagga, to the north of the Sydney and Melbourne Road, and about 23 miles from Yass.

CUNNINGHAM.—At Cunningham Plains, on the same road as Binalong, and about 14 miles beyond Binalong.

MURRIMBOOLA.—On Cunningham's Creek, on the same road as Binalong and Cunningham, and about 3 miles beyond the latter place—not yet proclaimed.

Town on the Lachlan tributaries.

MURRINGO.—On a road from Binalong to the Lachlan River, and about 30 miles northerly from Binalong.

APPENDIX B.

MEMORANDUM of Lands alienated by the Crown in the Valley of the Murray River, within New South Wales, and in that of the Murrumbidgee River, below the confluence of the Yass River.

ON THE MURRAY AND TRIBUTARIES.

Sold at Auction.

	Acres.
Albury	6,730
Howlong	2,118
Corowa	1,000
Mulwala	465
Moama	157
Moulamein... ..	10
Mourquong	—
Billabong	287
Deniliquin... ..	624
Euston	3
	11,394

ON THE MURRUMBIDGEE AND TRIBUTARIES.

Sold at Auction.

Balranald	13
Oxley... ..	—
Wagga Wagga	2,041
Gundagai	4,517
Tumut	6,172
Jugiong	1,774
Binalong	211
Bowning	81
Bookham	14
	14,823
Total... ..	26,217

PRE-EMPTIVE PURCHASES.

On the Murray and Tributaries	14,270
On the Murrumbidgee and Tributaries	32,690
	46,960
	73,177

NOTE.—The areas of lands sold by auction are taken from the maps of the Surveyor General's Office, on which the result of several sales, the returns of which have not yet come to hand, have not been entered.

The pre-emptive purchase areas embrace all lands which have been measured as pre-emptive purchases, although some have not yet been paid for.

WEDNESDAY,

WEDNESDAY, 23 JUNE, 1858.

Present:—

MR. G. MACLEAY,
MR. W. MACLEAY,MR. SUTTON,
MR. JAMISON.

GEORGE MACLEAY, Esq., IN THE CHAIR.

James Tyson, Esq., called in and examined:—

1. *By the Chairman*: You have been for some time past, and are now, an occupant of Crown Lands in the Murrumbidgee District? Yes. James Tyson, Esq.
2. You have stations, I believe, in the immediate neighbourhood of the River Murray? On the Edward River. 23 June, 1858.
3. Are you at all acquainted with the operations that have been carried on under Captain Cadell in improving the navigation of that river? No; I do not know a great deal about that. These last two or three years I have been up at Moreton Bay; and it is not until these last two or three years that there has been much done in the navigation of these rivers.
4. Have you ever been a passenger by any of the steamers that have gone up and down? No.
5. Have you observed the transit of any of the steamers at any time? Yes, I have.
6. And they appeared to move in the channel without much difficulty? Yes.
7. Do you recollect what was the condition of the river as to the drift timber before Captain Cadell commenced his operations? Yes; I have known the river for a long time.
8. Is there any material difference at this present time in that respect? In those portions that Captain Cadell has been over, he has cut off the dangerous snags and let them into deep water.
9. Has that process considerably facilitated the passage of the steamers? Yes; and especially the Murrumbidgee, where there was much less room to turn.
10. There are no steamers on the Murrumbidgee as yet? No; but there will be some soon.
11. The general opinion is that the Murray River is now safely navigable? Well, for vessels of moderate tonnage it is considered to be pretty safe.
12. There is room for improvement in that respect? Yes.
13. You are aware, I presume, that there is a snag-steamer at work? Yes. As increasing traffic comes it will be desirable to remove a number of impediments that are still in existence on the Murray; but you see most of the captains of these vessels have become acquainted with the different little obstacles, and they guard against them nicely; and especially when the water becomes very low they require to be very cautious in that respect. When the river is high, and there is plenty of water, they have more room and less danger.
14. Have you heard of any accident resulting from the presence of snags? Not lately.
15. Have you been at all upon the banks of the river at the place where the snag-steamer is at work? Not since it has been in operation.
16. But you are aware that there is such an operation going on? Yes.
17. Have you heard any thing as to its working? Just now, before I came away, I was in company with Captain Cadell for a short time, and he told me it was at work and was answering very well indeed—that it was twisting the logs about like nothing at all.
18. Removing them altogether from the channel? Yes.
19. Could the two rivers, the Edward and the Wakool, which run out of the Murray be made navigable by the same process? Well, I think it would take a long time to make them safe to navigate. You see they are very tortuous, and there is a great deal of low ground on either bank, so that when the river rises to a certain height it overflows, and, therefore, there is not as big a channel in comparison to the quantity of water sent down as what there would be in the Murray, because there is not so much flooded ground on the Murray. The stream of the Edward is scarcely ever great, except in one spot, and that is at Deniliquin.
20. There is not sufficient current to carry away the drift timber, which consequently accumulates there in a greater quantities than in the main river? Yes. Instead of the water washing a sufficient gut for itself, its volume is lost over the country; and timber is growing over the low ground. In many places along the Edward the timber is growing right across the river. In high floods there is no doubt it could be navigated, but I do not think it could be made safely navigable, except at a great outlay.
21. From the character of the land along the Wakool and the Edward, would it be worth while to undergo that outlay? I would scarcely think it was. I am sure it would be a great expense. Instead of the water making a gut sufficiently large for itself, its force is lost in the neighbouring country. It is invariably either on the one side or on the other. Where the salt-bush plain comes in on one side of the river the opposite is always inundated.
22. There is a great deal of alluvial land on the banks of both those rivers, is there not? Yes, but poor.
23. Is it at all fitted for agriculture, or would the climate admit of its being cultivated for any useful purpose? No. We have tried for these last two years that we have been settled at the Deniliquin—three years now, nearly—we have tried to grow a little vegetables in the garden—potatoes amongst other things; but during the last twelve months we have had to send down to Melbourne for potatoes, at sixpence per pound: Wheat, barley, and oats will grow to a certain height, and then the summer's sun is so scorching that it turns it all white in about twenty-four hours.
24. The heat of the early summer and the hot winds blast all vegetation? Yes. In the course of one day you would not know the field again.
25. Then, in your opinion, that country must remain a pastoral country? I am satisfied of it.
26. Do you think any system of irrigation would correct that effect of the temperature? No, I do not think it would. The summer's sun is such that it would never affect it, and the quality of the land is not good enough. The higher you go up, the richer the country is.

James Tyson, Esq. is. All the cream of the deposit by the waters is left long before they come into this level country.

23 June, 1858. 27. That country then being exclusively a pastoral country, you do not think it worth while to go to the expense of clearing the channels of these two rivers? No, I do not.

28. It would not pay? I feel satisfied it would not. Except the Edward be high, it is a wood. The trees are growing right across it in many places where there are shoals.

29. But the Murray River, as it runs through an enormous extent of country, and is the means of communication with the rich mountain country, would amply repay any moderate expenditure incurred in the clearing of its channel? Yes; I think so. It is quite different altogether. There is a large quantity of water in the river.

30. Do you think that the rendering of that river thoroughly navigable would tend to the creation of townships upon its banks? The Murray?

31. Yes? Well, to a certain extent—to a limited extent—where it is fitted for cultivation; but it never can support a large population where the country is not fit for cultivation.

32. You think the banks of the Murray unfit for cultivation until you reach the mountain country? They are unfit for cultivation. They may be cultivated as far down as the junction of the Loddon, but only in patches, below Mulwala.

33. By Mr. W. Macleay: That is below Maiden's Punt? Below Maiden's Punt.

34. By Mr. G. Macleay: And below that? The country becomes barren, and the mallee comes in.

35. Do you think the banks of the Murray between Albury and the Campaspie could be cultivated? I think they could. But then, at the same time, as you go from Albury the ground becomes worse as you come down all the way until you get to the junction of the Loddon; but the streams of the Loddon and Campaspie bring a sort of fertility which is then lost again.

36. But is it not more attributable to the intensely hot weather in early summer than to the want of fertility in the soil that the banks of the river are not available for agricultural purposes? I look upon it as the two combined. If you dig in the salt-bush plains, or in the neighbourhood, the soil is very thin, and the clay is very, very hard, and if you go further down there are large cracks in the ground. There is never sufficient rain to go any distance into the ground.

37. The rains are pretty regular—the rains are abundant every winter, are they not? Light rains.

38. Have you seen wheat grown in that country? I have seen it grown, but not to perfection. I have seen it grown and fail, repeatedly.

39. On the sand hills? I have never seen it grown on the sand hills. I have seen it all get as white as these walls in a few hours.

40. Do you think that land will ever be bought up for cultivation? I think it is likely the sand hills will be bought up as required for growing hay for the consumption of the district.

41. But not for the purpose of growing grain? Oh! no.

42. It will be much cheaper for parties either to bring up flour from Adelaide or to have it brought from Albury? It would not pay to compete with those in a better neighbourhood.

43. But when the river is made completely navigable, an improved state of things will be brought about, I presume; and as townships are formed this land will be taken up, to a certain extent, for the purposes of agriculture, in the immediate neighbourhood of the towns? Yes, I think so; the sandy ground will sell.

44. You are very well acquainted with the Murrumbidgee country, I think? Very well.

45. And with the general aspect of the Murrumbidgee River? Yes.

46. Is that river as susceptible of improvement as the Murray? I think the Murrumbidgee is navigable; I always thought so.

47. Are you aware that operations have already been commenced upon that river by Captain Cadell? Yes.

48. Have you had an opportunity of observing what has been done? I have not.

49. Have you heard of what has been done there? I heard my brother say that they were clearing the river by cutting the snags, and leading them into deep water, and that they reckoned on coming up this winter with the steamer.

50. Do you think that system of cutting off the tops of the snags, and throwing them to the bottom of the river, will answer there? I think it will.

51. The channel of the river being deep? They take them away from the shallows, and throw them into deep water. They should be particular in that, or they might do damage.

52. The floods are periodical, are they not, in that river? Mostly.

53. So that about from four to six months every year you might calculate upon that river being navigable? I do not think every year. I have known the Murrumbidgee to be two years with scarcely a fresh in it.

54. Two years, summer and winter, consecutively? Yes.

55. When was that? I think at the time of the three years' drought, just before the year of Black Thursday. In 1851 it was very dry.

56. And it was immediately followed by that terrific flood? Yes, in February, 1851.

57. Do you think it is worth while, Mr. Tyson, to go to any amount of expenditure in clearing the Murrumbidgee? Well, Sir, I think that the Murrumbidgee is navigable all the way to Gundagai.

58. Would it be worth while to expend £10,000 upon it to render it as navigable as the Murray is at the present time? Well, I think that it would.

59. The enhancement of the value of the land on its banks would, in your opinion, amply repay the Government, without taking into consideration the advantages that would accrue to the resident population? I think it would be a great public benefit, and the expenditure would be a wise one.

60. You are aware that there is a great deal of fertile land down the river as far as Wagga Wagga,

- Wagga, and indeed to a distance below that,—do you think that land would come more rapidly into the market if that river was made navigable? Yes, I do.
61. Some hundreds of thousands of acres? Some hundreds of thousands—some millions of acres. It is the finest land in the country, and the most of it together.
62. And that would be brought into the market very many years earlier than it otherwise would, by its being approachable by means of the river? Such is my opinion.
63. Do you know anything of the country between the Murrumbidgee and the Lachlan? Yes, I know it well.
64. Some of that country is still unoccupied, I believe? There are portions of the plain here and there unoccupied, but most of the best of it is taken up.
65. Do you know anything of the country between the Lachlan and the Darling? Yes.
66. A considerable portion of that country is still unoccupied? Still unoccupied.
67. It is well adapted for stock, I believe? It is well adapted for stock.
68. But void of water? Yes, and not calculated to carry many stock in proportion to its number of acres. It would not bear to be heavily stocked; it is thinly grassed.
69. But that was very much the character of the whole of the western country before it was occupied? The open country between the Murray and the Murrumbidgee, and the Murrumbidgee and the Lachlan, has improved very much by the fact of its being occupied by stock? Yes. That is the case.
70. The grass has become thereby very much thickened? Yes.
71. And the same improvement would probably take place in the country of which we are now speaking? Yes; but the entire country is quite different; it is covered with what we call the dwarf salt-bush—a little salt-bush that never grows in the neighbourhood of a thickly grassed country. The character of the country is entirely changed when you get down to the low salt-bush country.
72. But still this particular kind of salt-bush is well fitted for fattening purposes? Yes.
73. And herbage springs up, whenever there is a shower of rain, which has fattening qualities? Yes, it fattens stock rapidly.
74. That country would be occupied if it possessed water? Yes.
75. And a large amount of fat stock might be sent from that country to the markets of Sydney, Melbourne, and Adelaide? Yes.
76. There are many millions of acres in that district? There is a very great tract of country which could be rendered available if there was water.
77. Do you think that water could be collected there by means of tanks or dams? No, Sir, I do not think it can. The light rains that fall are very soon absorbed, and there are no creeks. There is nothing in the features of the country which could warrant such a supposition.
78. No hollows which could be dammed up? No; not until you get into the dividing country between the Lachlan and the Darling. There is a ridge which ends as it runs into the plains. In that neighbourhood there are creeks and hollows, but you see they are so sandy that whenever the water comes it is absorbed in these beds of sand. There are little creeks leading from the ranges, but it would appear that there are no water-holes to keep the water in. It is all sand.
79. Is there no clay? Not there, where the water comes.
80. Then it is your opinion that neither tanks nor dams could be formed there with advantage? It is my opinion.
81. Do you think there would be any chance of getting water by sinking wells? I think if there is any mode of getting water it must be by artesian wells.
82. Do you understand the principle of artesian wells? Not well.
83. *By Mr. Suttor*: You have travelled on the Darling? I have been down the Darling.
84. You can form an opinion as to whether the main Darling would be navigable? I can form a pretty good opinion of it. It is navigable periodically—when the river is flooded.
85. *By the Chairman*: The floods there are not regular? Very irregular.
86. The Darling is not fed, as the Murray and the Murrumbidgee are, by melted snow in the mountains? No: it runs through a level country; there are no tributary streams, and the major part of it is absorbed in lakes and lagoons, about the flood country, before it gets to the Murray. There are many large tributaries above that I could name, thrice larger than the Darling where it joins the Murray: That is to say, some 400 or 500 miles up, the tributaries are thrice larger than the Darling where it joins the Murray.
87. The Darling never runs dry? It has always water-holes.
88. These water-holes are continuous? There is always water in the bends or angles.
89. That will, I presume, be the great route for the drovers who bring stock from the northward to Melbourne? I think so, eventually.
90. *By Mr. Suttor*: What part of this country between the Lachlan and the Darling is it that you have been over? A great deal of it.
91. The lower part? Yes.
92. You have not been higher up from Wallondra? No.
93. *By the Chairman*: You have been for some years past taking stock to Melbourne from different parts of New South Wales, I believe? Yes.
94. Can you form any opinion as to the quantity of sheep and cattle taken there annually, in round numbers? I confess I could not tell, only from report. I have never kept any note of it. I never had sufficient interest to take note so as to speak of my own personal knowledge.
95. Unfortunately no account has been kept by any person; but what should you imagine the number of sheep and the number of cattle conveyed in the course of twelve months—of fat and store? I am not aware.
96. With reference to country between the Lachlan and the Darling which it is so desirable should be occupied, do you think it would tend to its occupation if the Government were to

- Jamés Tyson, Esq.
23 June, 1858.
- remit all license fees, and all assessment, for a certain number of years, to the people settling on it, on condition of occupation, of course,—this they could not do without getting water in some way themselves? Yes, I do think so, because, I will tell you why: if people could look upon the matter in this way:—if they were sure that there would be permanency of tenure—if they could make sure of their holdings—they would be induced to lay out considerable sums of money to render the country available and find water. They must either bore for it, or in certain localities they might get places where, by great outlay, they could make available the surface water.
97. The occupation of that country would tend very much to increase the national wealth? I think so.
98. It is equal to about one-third of the territory of New South Wales? Yes; and there is a great deal of very good country that is now waste.
99. That country is safe from inundation—not likely to be inundated? It is quite dry.
100. *By Mr. Jamison*: Have you heard of any lakes in that tract of country between the Darling and the Lachlan? Yes; there are several very large lakes—dry lakes.
101. *By the Chairman*: Only filled when the river is very high? They have been filled at some time or other. There is one twenty miles across and about sixty miles round.
102. *By Mr. Jamison*: Have you not heard from the blacks that there are still such lakes? Yes; but you know you must not rely too much upon what they say, because they will say very often anything to please you.
103. You are aware that there are large numbers of blacks coming in at certain seasons of the year? Not in large numbers: the blacks do come in at certain seasons.

Francis Anthony Gwynne, Esq., called in and examined:—

- F.A. Gwynne, Esq.
23 June, 1858.
1. *By the Chairman*: You have been for some time, and still are, an occupant of Crown Lands in the Murrumbidgee District? Since 1842.
2. Have you had an opportunity of seeing what Captain Cadell has been doing upon the Murray? I have not had an opportunity of observing what he has cleared as yet. I have seen parts of it, and I have heard a great deal about it.
3. You are aware that for some time his operations were confined to cutting off, by means of saws, the tops of the snags, and rolling them to the bottom of the stream? Yes.
4. But that latterly he has had a snag-steamer at work? He has had a snag-steamer for the last three months.
5. By which he proposes to remove the snags? Yes; and toss them on to the banks.
6. Was the navigation of the river facilitated by the first operation? I believe so—very much.
7. Do you think the money expended on that operation was well bestowed? I think so—very well bestowed.
8. Have you been a passenger in many of the steamers? Only a short distance—from Echuca to Moama.
9. Was that when the river was very high? No; about half bank high.
10. Did you meet with any difficulty on the passage? None at all.
11. Do you yourself receive your supplies by the steamers? Indirectly I do. I get them from Deniliquin or Echuca, from which the greater portion of them comes from Adelaide.
12. By far the greater number on the banks of the Murray are supplied by the steamers? Lower down they are, but I think that in the neighbourhood of Echuca they are supplied from Melbourne—with the exception of flour, tobacco, and sugar.
13. If the supplies were equally good in quality as those obtained from Melbourne, and could be delivered at the same cost, I presume they would prefer to receive them by the steamers, inasmuch as they would be left at their doors? No doubt of it.
14. The provisions, up to the present time, have not been of the first quality? They have been of an inferior quality. In the first instance they sent all the rubbish they had in their stores.
15. That evil, I presume, will be prevented by competition? No doubt of it.
16. It is proposed by the Melbourne Government to have a railway to Echuca, is it not? It is.
17. Will the wool from that part of the country be sent down by railway to Melbourne, rather than by water? I have no doubt it will go down to Melbourne—the prices there are so much better generally.
18. What is the rate charged now per ton from Echuca to the Goolwa? I believe it is £7 or £8 per ton.
19. Do you think it could be carried as cheap by railway from Echuca? I believe far cheaper; but I believe also that they might carry it very much cheaper down to Goolwa.
20. Have you heard any sum less than that named as likely to pay the Companies? I have heard that it would pay at £5.
21. But that would be more than is likely to be charged for transit by railway? No doubt of it.
22. Then, again, when it goes by rail to Melbourne it is at once conveyed to the port, whereas by the other route there is all the annoyance and danger of transit overland—shifting and so forth? Yes.
23. Having the probability of this railway being perfected in view, do you think it is well to go on with further operations for facilitating the navigation of the River Murray? I think so, more than ever.
24. Inasmuch as the Murray will then be made a feeder of the railway? Yes.
25. Those on the banks, above and below, would take advantage of the river to convey their goods to the terminus of the railway? No doubt about it.
26. Would the Colony of New South Wales, in that case, benefit in any degree? I think, indirectly

indirectly it would benefit. It would not benefit so much as Victoria would; but still it F.A. Gwynne, Esq. would no doubt benefit, in the enhancement of the value of the land along the banks of the river very much.

27. Under such a state of things—the facility of access to Melbourne, and the easy approach to the terminus, owing to the river being made navigable—land would become much more valuable on the banks of the river, above and below? No doubt of it; and I have also to remark, that there are large quantities of goods which people never think it worth while saving on account of the great expense of carriage which would then be saved on every station.

28. The wealth of the squatters would thereby be increased, and they would be much more likely to become purchasers of land? I have no doubt of it.

29. All the country, I presume, on the New South Wales side of the river, in the neighbourhood of Echuca, would at once be sought for? I have no doubt of it.

30. If the river could be made navigable, townships would arise at particular spots? No doubt.

31. The townships at present existing on the banks of the river, and of the Wakool and Edward, are thriving, are they not? Some of them are thriving in an extraordinary degree.

32. You are well acquainted with Deniliquin, I presume? Very well acquainted.

33. That is a most thriving place? A wonderfully thriving place for the short time it has been in existence, and considering that it is not an agricultural country.

34. There are two branch banks there, I believe? Only one at present; but it is in contemplation to have a local bank there.

35. Very large quantities of stock pass through Deniliquin? Immense quantities.

36. The fact is, it is becoming an entrepôt for the sale of stock—the dealers go there from Melbourne to purchase? I have no doubt that will be the great exchange mart for the whole of the southward.

37. Do you think, from the character of the soil and of the climate, that the Murray District will ever become an agricultural country? Never purely agricultural. Hay may be grown; but I think that wheat can never be grown, except in favored spots.

38. The harvest will be so uncertain that it would always be better worth the while of the residents to have their flour from either Adelaide or Albury, I presume? There can be no doubt of it.

39. Would a system of irrigation produce any difference, do you think, in that respect? I have no doubt it would produce a great difference, and that anything may be grown; but it will be a long time before labor will be sufficiently reasonable.

40. It would not, in fact, pay for many years to come; until, in fact, population becomes very dense? Just so.

41. Are you at all acquainted with the Murrumbidgee country? Yes, pretty well acquainted.

42. The Lower Murrumbidgee is very much of the same character of country as the Lower Murray? Very similar.

43. And the remarks made in reference to the Murray would apply also to the Murrumbidgee? Yes.

44. Have you paid any attention to the character of the channel of the River Murrumbidgee? I have, in cases where I have been on it. I have always paid attention to it.

45. Is that susceptible of improvement as well as that of the Murray? I think quite as much.

46. The drift timber is not quite so abundant as in the Murray? I would say it is not quite so large in the Lower Murrumbidgee.

47. Is it desirable, do you think, to go to any expense in clearing the River Murrumbidgee? I can have no doubt of it; it would be very desirable.

48. £1,000 has already been expended, and for £2,000 more Captain Cadell thinks he could clear the river by sawing off the snags, in the way to which you have already adverted, as far as Wagga Wagga—would it be worth while to expend that sum of £2,000? I should certainly think it would.

49. An enormous quantity of land would be likely to be brought into the market? No doubt of it; and instead of getting your flour brought up from Adelaide, you would be more likely to get it from Wagga Wagga.

50. The Lower Murrumbidgee would be supplied from New South Wales, and not from Adelaide, with bread stuffs? Yes.

51. Do you know anything of the Darling River? No, not personally.

52. The Wakool and Edward you are acquainted with? I am well acquainted with them.

53. Do you think it necessary to go to any expense in clearing those two rivers? The Edward, I think, at a comparatively small expense, could be made navigable up to Deniliquin for four or five months every year, on an average. The Wakool is every year navigable as far as Poonoon.

54. Steamers have constantly gone up there? Yes.

55. Nothing is sent from those two rivers but wool and a small quantity of hides? Nothing.

56. By far the greatest amount of stores sent up the River Murray by steam are for the gold fields? They are.

57. You are aware, I presume, that the gold fields on the Tumut River are rapidly becoming developed? I was very lately up there, and I was a great deal about, but I did not visit them. I saw a great many people going to them.

58. Supplies would be sent up the Murrumbidgee, I presume, if that river were made navigable, to the Tumut gold fields? Yes, I have no doubt, as far as Wagga Wagga.

59. By Mr. W. Macleay: Or Gundagai? Or Gundagai.

60. By the Chairman: And they could be conveyed at a much cheaper rate by water than overland from Sydney? There is no doubt of it.

61. And that cheapness of supplies would tend very much to the development of those fields?

F.A. Gwynne, Esq. fields? No doubt; and it would enable people as passengers to go a long way. I have no doubt in that way it would tend in a great measure to the development of the gold fields.

62. It must be always an advantage to the gold fields if provisions could be sent there at a moderate rate? Yes.

23 June, 1858. 63. You are aware that the snag-steamer employed upon the Murray has been built, and its operations are now being carried on, at the expense of the South Australian Government? I am aware of that.

64. You may be aware, also, having been in communication lately with Captain Cadell, that it is working well, and that upon calculation the steamer is clearing at the rate of 50 miles of river in a year? I have no doubt of it, from what I heard from others.

65. From the Goolwa to Albury, the distance is about 1,900 miles, I believe? I believe it is.

66. So that it would take thirty-eight years, at that rate, for this one snag-steamer to clear the river in a perfect manner? I think this is more the upper part of the Murray than the lower part of the Murray. From what I heard, there is comparatively little clearing necessary in the lower Murray, to render it navigable, with the snag-steamer.

67. Well, at any rate it will take a great number of years? No doubt of it.

68. Would it be worth while, do you think, for New South Wales to go to a similar expense as that incurred by South Australia, namely £10,000, to put another snag-steamer at work upon the river? No question.

69. You think that money would be well expended? I think it would be well expended.

70. In consideration of the large quantity of land that will be brought into the market, and the general advantage of the inhabitants upon its banks? No doubt.

71. Are you at all acquainted, Mr. Gwynne, with the country between the Lachlan and the Darling—have you been across the country? I have been several times across.

72. At what distance from the junction of the Darling and the Murray? Oh! I am not acquainted with the intermediate country between the Lachlan and the Darling.

1858.

SEPARATE APPENDIX.

B.

Creswick,

15 January, 1858.

GENTLEMEN,

I beg to acknowledge the receipt of your favor of the 9th instant, making inquiries, on behalf of Mr. Williams, of your Sydney house, relating to the removal of snags from river beds. I am not aware that there are any Americans in the country who have had much experience in the business. My brothers and myself are somewhat familiar with the machinery used for the purpose on the Mississippi and its tributaries, although we have not had much experience in its actual working. The snag-boats used on the larger rivers are generally constructed with a double hull, connected fore and aft, leaving a space of some feet in the middle between the hulls; over this space is a drum, or windlass, around which the chains are worked; the boat is floated over the snag to be operated upon, so that it will appear in the open space; the chains are then made fast to the snag, and the windlass set in motion, when the hitching point of the snag is wound up to the windlass; if it is not detached from its bed it is cut off, and another hitch taken lower down, and so on, until it is all removed, or as much of it as is required. Steam power is generally used for working the windlass on the larger rivers; on the narrow rivers the snags are frequently drawn from the shore, without the use of a snag-boat, by various kinds of machinery. I believe the most efficient machine for this purpose is one recently invented, within a few years, for extracting trees and stumps from the ground; it is an adaptation of the lever principle, and is peculiarly fitted for removing snags from narrow rivers, on account of its simplicity, cheapness, the great power derived from it, and the readiness with which it can be moved from point to point. We have had one of them in use in this Colony recently in pulling up trees and stumps. You will get an idea of its power and efficiency, when I state that three men will draw any tree in the Colony entirely out of the ground, by the roots, in the space of half an hour with it. In any river where the snags would not be more than fifty or one hundred yards from the banks, I have no doubt but it would be more efficient than any other process; it could be worked by five or six men, with no other power, and would only require a small boat to attend it. This principle could also be used on a snag-boat in wide rivers, if it was desirable to avoid the expense of steam machinery. If I should meet with any person who has had much experience in the business I will not fail to inform you. In the meantime, I will be most happy to furnish Mr. Williams any further information on the subject I can.

I am, &c.,

C. L. EATON.

MESSRS. WILKINSON BROTHERS, & Co.,
Collins-street, Melbourne.

C.

THE MURRAY SNAG-BOAT.

The following report of a survey held on the steam snag-boat constructed by Mr. Cadell, for clearing the Murray, furnished to the Commissioner of Public Works by Mr. John Hart, while Treasurer, has been placed in our hands for publication:—

"Treasurer's Office, Adelaide,
23 April, 1858.

"Sir,

"In compliance with the request contained in your letter of the 30th ult., that I should visit Echuca, and hold a survey on the steam snag-boat that had been constructed for the South Australian Government, I have the honor to report that, accompanied by Captain Cadell, I left Melbourne on the 7th instant, and arrived at Echuca on the evening of the 9th.

"On the morning of the 10th I made a minute examination of the 'Grappler,' and report that she is completed and fit for service. At noon, in order to test her power and efficiency, steam was got up, and the vessel proceeded against the stream at the rate of three miles per hour; and when abreast of the township several large snags were removed from the channel with great ease and rapidity, and were landed on the bank. Judging from this trial I consider the vessel, in her model and fittings, well adapted for the purpose designed.

"The 'Grappler' is 80 feet long on deck, 26 feet beam in the widest part within the sponsons, with a depth of 6 feet 6 inches, and is propelled by paddle-wheels of 13 feet 6 inches diameter. She is fitted with two 15-horse power horizontal engines, by Napier of Sydney, which work smoothly and satisfactorily. Gearing for the lifting power is by means of leathern straps. She is fitted with three large substantial davits, each with a three-fold purchase, and has a powerful crane, with a beam of 27 feet long, capable of swinging snags of any weight high on the bank of the river. The scantling of the hull of the vessel is of red gum, of superior quality, and the planking of the sides is of New Zealand and American pine, of 2½-inch thickness. She is flat-bottomed, and will probably draw a little over 2 feet water when her stores are on board. She appears to have been well put together. She has ample space for the comfortable accommodation of the crew and officers. The only objection made was, that I considered the number and dimensions of the beams were not, in proportion, equal to the other scantling; and the only suggestions I offered to Captain Cadell were, that an extra beam should be placed at the after part of the paddle-boxes, and that, as there was no inside lining, the floor should be lined in the way of the crew's quarters to prevent injury to the outer planking.

"After the survey and trial of the boat, I proceeded to examine, with Captain Cadell, the papers relative to the cost of building; but as the whole of the accounts and vouchers had not been furnished I could only arrive at an approximation of the cost of construction. The vouched accounts were as follows:—

Oct. 22.	Account No. 1	£1,459	9	7
	Account No. 2	1,238	9	5
Feb. 26.	Account No. 3	1,569	9	6
	Vouched, but not yet forwarded to Commissioner,						
	(Account No. 4)	1,799	18	11
	Accounts not rendered (say)	500	0	0
					<hr/>		
					£6,567		
					7		
					5		

"To this sum has to be added the charge of Captain Cadell for superintendence.

"The vessel will therefore cost the Government about £7,000, which sum, considering the high rate of labour at Echuca, and that so large a portion of the building material and the whole of the machinery have been carted 170 miles from Melbourne, is not in excess of what might have been expected.

"In conformity with the other instructions contained in your letter, I conferred with Captain Cadell in reference to his suggestions for the future employment of the vessel. In the course of conversation, Captain Cadell informed me that he did not propose taking any action in, or continuous superintendence of, the workings. He showed me the correspondence between himself and the Commissioner, Mr. Davenport, by which it appeared that a scheme had been proposed for building, at an estimated cost of £20,000 three steam snag-boats, at the joint expense of the three Colonies of New South Wales, Victoria, and South Australia. They were to be constructed under the superintendence of Captain Cadell, and to be employed under his management, for the general improvement of the navigation of the river. For his services he was to receive £250 per annum, and an allowance of £100 for travelling expenses from each Government. That the other Governments have not fallen into the scheme for building the boats you are aware.

"The question as to where the South Australian boat is to be employed will, I presume, depend on whether or not the other Colonies join in the working expenses now to be incurred; and I should have recommended Captain Cadell, under all the circumstances, to suspend the working until he could communicate with this Government on the subject; but unfortunately the crew had for the most part been shipped under written agreements for various periods, as set forth in the enclosed list. I thought it more advisable, therefore, not to interfere with the existing arrangements.

"The comparative uselessness of South Australia attempting single-handed to clear the navigation of the river to the extent required is apparent; and as the greater portion of the work to be accomplished is within the territories of the other Colonies, I have but little doubt that they would in a spirit of fairness, if applied to, join in what must be considered a great Australian undertaking, or otherwise this Colony will have to bear the whole expense to be incurred in the employment of Captain Cadell, or some other equally competent person

as Superintendent or Surveyor, without which there can be no satisfactory supervision over the working of the boat, and no control exercised over the monthly expenditure that must necessarily be disbursed in cash by the Master.

"The Honorable
The Commissioner of Public Works."
—*Adelaide Register*.

"I have, &c.,
"JOHN HART,
Treasurer.

D.
GUNDAGAI.
[BY ELECTRIC TELEGRAPH.]

Thursday, half-past 10 a.m.

The steamer "Albury," of Captain Cadell's line of steamers, arrived here about half an hour since. She will start for South Australia at dawn to-morrow.

Thursday, half-past 4, p.m.

Since my telegram this morning I have obtained the following particulars from Capt. F. Cadell:—

NAVIGATION OF THE MURRUMBIDGEE.

Captain F. Cadell has much pleasure in notifying the arrival of the steamer "Albury" at 10 a.m. this morning at the head of the navigation of the Murrumbidgee, and expresses his sincere hope that the introduction of steam on its waters will exercise the same stimulating effect in causing New South Wales to extend her southern line of railway to the Murrumbidgee, as the navigation of the Murray had in the projection by Victoria of the Mount Alexander and Murray River Railway. The following is an extract from the log of the "Albury," commanded by Captain Johnson:—Left Alexandria on 12th August, with the barges "Wakool," "Eureka," and "Mitta Mitta," in tow; arrived at Moorundee on 13th, at Darling junction on 21st, Murrumbidgee junction on 27th August; cast off the "Eureka." Arrived at Balranald on 28th, Nicola and Pike on 30th August; cast off the "Mitta Mitta." Arrived at Lachlan station on 1st and Lang station on 4th September; cast off the "Wakool." Arrived at Yanko on 10th, and Wagga Wagga on 13th September. Left Wagga Wagga on 14th, and arrived at Gundagai on 16th. Thus having steamed more than (2,000) two thousand miles, and discharged at stations two hundred tons of cargo, in (329) three hundred and twenty-nine hours!

E.

The following Table of the distances of several places on the Murray from each other, which has been compiled with some trouble, is from the "South Australian Register."

COMPARATIVE TABLE of Distances of most remarkable places along the Murray, from the Goolwa to Albury.—Compiled October, 1856.

1858.

Legislative Assembly.
NEW SOUTH WALES.

MR. GEORGE UNDERWOOD ALLEY.

(PETITION RELATIVE TO NAVIGATION OF SHOALHAVEN RIVER.)

Ordered by the Legislative Assembly to be Printed, 7 May, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, George Underwood Alley, of Shoalhaven,—
SHEWETH:—

That a Petition to your Honorable House, in reference to the Navigation of the Shoalhaven River, is being "*got up*" in this district, which is not the legitimate expression of public opinion. The meeting at which it was prepared was limited to a *selected few*, privately invited, and the signatures were obtained by delegates going from house to house, with blank sheets of paper, without any Petition or explanatory heading.

That, while your Petitioner values the right of petitioning your Honorable House, that right, to be respected, should be fairly, openly, and honorably exercised; if a public Petition, upon a subject in which the public is interested, it should have the sanction of public approval before being submitted to your Honorable House; but a Petition *designedly* got up in the *secret* manner herein stated, to prevent others who have taken a deep and active interest in the state of the river, is an imposition upon your Honorable House, and an insult to an intelligent people.

That until the Surveyor's Report on the subject be made public, it is premature for any Petitioner to express an opinion for or against it; and the contemplated work to be done is of such magnitude, such importance, and so costly, that that Report will require very careful, critical, and scientific examination, before it will be prudent to expend any money upon it. Already £300 has been granted for the purpose, and, having been placed in unskilled and inefficient hands, £100 of it was uselessly, mischievously, and extravagantly thrown away, and the remainder has been lying idle in the hands of the local Treasurer, although the Ministers for Finance of former Governments have frequently applied for it.

That, in the opinion of your Petitioner, the survey has been too limited to afford any correct data upon which to form a correct estimate of the cost that will be incurred to effect anything permanent or practical, as the obstructions to the free navigation, and the *cause* of those obstructions, occur *twelve* miles higher up the river than where the survey has been made.

That, no doubt, any work that will clear away the deposits from the Numba Canal and Crookhaven would be of great service, but it will principally tend to enhance the value of private property of *one* proprietor, (which has never contributed one farthing to the country) without effecting that permanent, practical, and *extended* benefit to the public which is intended, and is so much required.

That there are other considerations of a financial character which require *serious deliberation* before a work of such magnitude and cost be sanctioned; that the work is necessary there can be no doubt of, but to do it incompletely, or inefficiently, and to be of but *partial* and *temporary* benefit, would be a *waste* of the public money, and an injury to the community.

Petitioner prays your Honorable House will take these premises into your favorable consideration, and that you will not permit the right of petitioning to be so abused as the Petitioners referred to would attempt.

And your Petitioner, as in duty bound, will ever pray.

April 26, 1858.

GEORGE UNDERWOOD ALLEY.

1858.

Legislative Assembly.
NEW SOUTH WALES.

NAVIGATION OF THE SHOALHAVEN RIVER.

Ordered by the Legislative Assembly to be Printed, 11 May, 1858.

The Petition of the undersigned Inhabitants of the Police District of Shoalhaven, to the
Honorable the Legislative Assembly of New South Wales,—

SH EWETH :—

That the District of your Petitioners is intersected by the Shoalhaven River, which is navigable for nearly forty miles, having an average depth of from thirteen to seventeen feet, with the exception of about two miles near its mouth, where at low water the depth is but two or three feet.

That a survey has been held on this part, at the instance of the Government, and that it is understood that the Surveyor reports favorably on the facilities for deepening the channel.

That the channel grows worse by delay ; as vessels grounding, and remaining often for a fortnight, leave behind them a large accumulation of sand, deposited against their sides by the action of the tides.

That the District of your Petitioners contains (3,300) three thousand three hundred inhabitants, and supplies Sydney more largely than any other District with potatoes and other perishable cargo ; the statistics of the present year, though necessarily imperfect, and the crop far below the average, (owing to excessive wet,) shewing a produce of (6,000) six thousand tons of potatoes, (40,000) forty thousand bushels of wheat, (50,000) fifty thousand bushels of other grain, and other produce of less moment, besides live stock and dairy produce, of which the statistics take no notice.

That, owing to the long detention of vessels on the shallow flats, many of your Petitioners have sustained great loss, at various times, from the perishable nature of the produce.

That the existence of steam communication does not prevent losses ; as the produce suffers by the transhipment from the river craft to the sea-going steamer, whilst the company exact an excessive rate of freight, on account of the great expense of maintaining the double service.

That the District of your Petitioners has contributed nearly (£27,000) twenty-seven thousand pounds to the Territorial Revenue during the last four years.

That, moreover, the District of your Petitioners has not been burdensome to the General Revenue ; and they only ask that the Report of the Surveyor be considered by your Honorable House, and that such steps may be taken thereon as to your Honorable House may seem befitting the nature of the case.

And your Petitioners will ever pray.

[Here follow 343 Signatures.]

1858.

Legislative Assembly.
NEW SOUTH WALES.

CROOKHAVEN RIVER.

(REPORT OF MR. SURVEYOR DEBENHAM ON OBSTRUCTIONS.)

Ordered by the Legislative Assembly to be Printed, 24 June, 1858.

REPORT upon the Obstructions existing in the Crookhaven River, and upon the best method for removing them.

Sydney, 31 May, 1858.

Sir,

In reply to your verbal request, that I should proceed to the Crookhaven River to take a series of tidal observations simultaneously at different parts of the Crookhaven River, also to make a survey of the entrance to the Shoalhaven River, and in compliance with your letter, No. 58-165, dated February 8, 1858, accepting my tender for the performance of these surveys,—I do myself the honor to report as follows.

Firstly.—In order to ascertain the correct range of the tidal lines at various points of the Crookhaven River, I selected, as the most important stations for tidal observations, the Crookhaven Heads, Greenwell Point, Numbaa Point, and the junction of the Crookhaven with the Shoalhaven; and I am enabled, after seventeen days' observation, taken day and night, to lay before you the following results, viz. :—

Rise of tide at the Crookhaven Heads at ordinary spring tides... 3 ft. 3 in. to 5 ft.		
Do.	do.	neap tides... 0 ft. 10 in. to 3 ft. 11 in.
Do.	at Greenwell Point at ordinary spring tides	2 ft. 7½ in. to 3 ft. 9 in.
Do.	do.	neap tides... 0 ft. 6 in. to 2 ft. 8½ in.
Do.	at Numbaa Point at ordinary spring tides	2 ft. 2 in. to 3 ft. 1 in.
Do.	do.	neap tides... 0 ft. 4 in. to 2 ft. 7½ in.
Do.	at junction of the Crookhaven with the Shoal-	
	haven at ordinary spring tides.....	1 ft. 7½ in. to 3 ft.
Do.	do.	neap tides... 0 ft. 6 in. to 2 ft. 6½ in.
The average of the rise of tide at the Crookhaven Heads		
Do.	do.	Greenwell Point 2 5½
Do.	do.	Numbaa Point ... 2 3
Do.	do.	Shoalhaven... .. 2 0½

The average level of the low water at the Crookhaven Heads is 1 foot 6 inches below the level of that at Greenwell Point, giving, in a distance of 2 miles, an average fall of 9 inches per mile; the average level of the low water at Greenwell Point is 1 foot 2 inches below the level of that at Numbaa Point, giving, in a distance of 2 miles, an average fall of 7 inches per mile; and the average level of the low water at Numbaa Point is 2 inches below the level of that at the junction of the Crookhaven with the Shoalhaven, giving, in a distance of 1¼ mile, an average fall of 1½ in. per mile.

Accompanying this Report I have furnished two diagrams; the one shewing the approximate forms assumed by the tidal lines of the highest flood and lowest ebb at ordinary spring tides, the other shewing the approximate forms assumed by the tidal lines of a neap tide rising only 4 inches at Numbaa Point.

Having given the main results of the tidal observations, I shall proceed to notice the action of the tidal currents in that part of the Crookhaven between the Horse-shoe Flats and the Shoalhaven River.

As the Horse-shoe Flats is the point of meeting of the two tides—the one flowing from the Shoalhaven the other from the Crookhaven—the following irregularity in the action of the tidal currents in that part of the channel takes place.

The tide flows in a regular current up the Shoalhaven and up the Crookhaven, towards the flats, for the first three-quarters of the flood tide, meeting at the flats the flood tide from Greenwell Point, which at this stage of the tide has reached the same level as that in the Shoalhaven.

From data furnished at the commencement of this Report, the average level of the low water at Numbaa Point is 2 inches below the level of that at the Shoalhaven, and that the average rise of tide at Numbaa Point is 2 feet 3 inches, while the average of that at the Shoalhaven is only 2 feet and $\frac{1}{2}$ an inch; the tidal line from Greenwell Point having, therefore, at the flats at three-quarter flood tide, reached the same level with that of the Shoalhaven; it has, during the remaining quarter of the flood tide, to rise $\frac{1}{2}$ an inch higher at the flats than at the Shoalhaven, and, as the tidal current from Greenwell Point possesses a greater velocity, from its already increased rise, than that in the Shoalhaven, it passes beyond the flats and continues to flow on till it meets the flood tide in the Shoalhaven. The current in this part of the Crookhaven continues to flow in the same direction, viz., towards the Shoalhaven, till $\frac{1}{4}$ ebb tide, when the tidal line at the flats has again reached the same level with that in the Shoalhaven; but the tidal current in the Crookhaven ebbing towards Greenwell Point possessing a greater velocity, and having to ebb $2\frac{1}{2}$ inches below the average level of the low water at the Shoalhaven, commences to assume one gradual incline from the Shoalhaven to Greenwell Point, the ebb tide in the Shoalhaven consequently enters the Crookhaven, and continues to ebb with the tide towards the Crookhaven Heads for the remaining $\frac{3}{4}$ of the ebb tide.

From a series of observations, I find the velocity of the currents between the Horse-shoe Flats and the Shoalhaven, to range as follows:—

At low water the current averages $\frac{3}{4}$ mile per hour.

$\frac{1}{4}$ flood	“	“	$\frac{1}{2}$ a mile.
$\frac{1}{2}$ flood	“	“	$\frac{1}{4}$ “

At $\frac{3}{4}$ flood and high water, current scarcely perceptible. At low water the ebb scour attains the greatest velocity.

By reference to the section of the Crookhaven, accompanying this Report, it will be seen that the greatest obstruction to the free navigation of the Crookhaven exists at the Horse-shoe Flats, which is mainly caused by the meeting of the two tidal currents at that point in the manner I have explained; the force of the currents being here neutralized, the sediment is deposited on the bottom, the ebb scour being too sluggish to carry off any of that deposit.

There are two other flats in the Crookhaven which demand attention,—one immediately above Greenwell Point, and the other below it. It is impossible to assign any particular cause for these deposits; I believe them to be the effect produced by a multiplicity of evils, and exist in nearly every river in the vicinity of its embouchure, when marked by a sudden enlargement of or irregularity in the channel, or when unprotected by high or rocky headlands. In the Crookhaven we may trace the origin of these flats partly to the meeting of the two currents of the branches of the Crookhaven at Greenwell Point, consequently checking the direction of the current from the flats, or to the sudden expansion of the bed of the river at Apple-tree Orchard Island, or to the several inlets into Cumarong Island and its low flat banks, which are covered at high water at ordinary spring tides, drawing such a body of water from what ought to be the main channel as almost to nullify the power of the ebb scour, which otherwise might assist in carrying off the sediment which at present is deposited on the bottom.

Lastly

Lastly, it remains for me to devise some means of removing these several obstructions.

From the close proximity of the Shoalhaven with the Crookhaven, in order to remove the deposit caused by the meeting of the tides at the Horse-shoe Flats, dredging must be had recourse to:—nature, in this instance, cannot be induced to remedy the evils she has created. In my opinion, dredging will effectually overcome these difficulties; and were a channel once cleared in the Crookhaven, the flood tide from Greenwell Point would then meet and join the flood tide in the Shoalhaven River; for I find the level of the average of high water at the Shoalhaven Heads to be nearly level with that at the Crookhaven Heads; the ebb current in the Shoalhaven would also ebb the whole tide through the Crookhaven, and the cause of the present main obstruction at the flats would be entirely removed. I have no doubt that dredging, to a greater or lesser extent, will have to be employed at the flats near Greenwell Point to secure the permanent navigation of the Crookhaven, even after a channel has once been dredged. I would recommend that the entrances to the channels round Apple-tree Orchard Island should not be interfered with, for they form an outlet for the drainage and the discharge of the surface water from an extensive flat country higher up the Shoalhaven. I would, however, propose to block up the several inlets into Cumarong Island, and raise the banks of the island where they are covered at high water spring tides, by piling and filling up behind with the matter raised by the dredge. These improvements would confine the current of the tide to the one channel, increase the force of the ebb tide, and, consequently, to a certain extent, assist in maintaining a clear and navigable channel.

I estimate the expense of dredging the Crookhaven, from the Heads to its junction with the Shoalhaven, to an uniform depth of seven feet (as shown on section) at low water ordinary spring tides, independent of the cost of dredges and punts, at £5,000.

Before closing the Report, I beg to add a few words relative to the entrance to the Shoalhaven River, as it is supposed by many persons that a safe and navigable entrance can be effected.

The Shoalhaven discharges itself into the sea in what is termed the Shoalhaven Bight; its entrance is not only exposed to the action of both wind and waves,—it is entirely unprotected by headlands, and is blockaded by a shifting bar.

The sand banks and shoals inside the bar are also daily shifting their position, and are formed of a very fine drifting sand, which is swept along the surface with the force of the wind; one important shifting in these banks occurred during the period I was engaged upon this survey, and which I have delineated on the plan accompanying this Report.

The difficulty and cost of improving an entrance to a river with a bar entrance is always great; any works which might be projected for the improvement of that at the Shoalhaven would be of a costly and stupendous character, and would be constantly met with engineering difficulties.

NEW SOUTH WALES.

KIAMA HARBOUR.

(REPORT OF MR. SURVEYOR DEBENHAM, IN REFERENCE TO.)

Ordered by the Legislative Assembly to be Printed, 28 July, 1858.

MR. J. DEBENHAM, C.E., to THE SURVEYOR GENERAL, forwarding Plan of and Report upon Kiama Harbour.

9, Hunter-street,
July 19, 1858.

SIR,

In pursuance of your verbal request to me to make a survey of Kiama Harbour, and to ascertain, by a series of borings, the nature of the bottom of the bay, with the view of hereafter extending the present jetty on piles, I have the honor to forward you a plan of my survey, and to report as follows:—

From several borings taken across the harbour, in a line with a jetty, (*vide* section on plan), I am enabled to state that the bottom of the bay is formed of rock; in places there is a depth of from 1 to 3 feet of sand and boulders before coming to the rock. The idea of extending the jetty on piles, as was suggested, becomes impracticable; even supposing it otherwise, such a work would not afford the necessary shelter to vessels,—the site of the present jetty is too near the head of the bay, and the water is too shallow to admit of vessels working in and out with safety.

The bay itself is but a slight indentation of the coast line, and is exposed to winds from the N. N.W. to E.S.E. points of the compass; after heavy southerly weather the bay is most affected by rollers. On the eastern extremity of the southern side of the bay are two reefs of rocks, upon which the sea breaks; the breakers curl round the southern shore, break over the present jetty, and the surf is carried up the beach as high as the Scots' Church. At the extremity of the northern side is another reef, upon which the sea breaks with equal violence, the breakers rolling up the bay.

The entrance to the bay is very much narrowed through the position of these reefs, and as the anchorage is bad, from the rocky nature of the bottom, it not unfrequently happens in stormy seasons steamers cannot enter the harbour; they return to Sydney without landing either mails or passengers. In fine north-easterly weather I have seen so much swell on in the bay that the landing of passengers in open boats was dangerous, and the cargo more or less damaged.

Seeing the impracticability of extending the present jetty, my attention was attracted to another point of the harbour, where a breakwater might be formed, and at a moderate cost, which would afford a safe asylum for vessels in any weather, and, by constructing a wharf south of and immediately under the shelter of the breakwater, the present impediments to the Kiama shipping interest would be removed.

I would suggest that a breakwater be formed on the innermost reef of the southern shore, in a north-westerly direction, commencing at the foot of the hill, to extend in a straight line about 88 yards from low-water mark, with an arm 22 yards long, inclining 165 degrees to the main arm; the breakwater to be formed by throwing down large blocks of unsquared stone,

stone, weighing each from 1 to $2\frac{1}{2}$ tons; the outer or sea slopes to be 3 feet horizontal to 1 foot perpendicular, till the breakwater reaches low water mark spring tides; from low water to be raised 16 feet or 10 feet above high water spring tides, with a width of 30 feet at top, and a sea slope of 5 feet horizontal to 1 foot perpendicular; the inner slope to have an uniform inclination of 2 feet horizontal to 1 foot perpendicular.

There is abundance of stone convenient to the proposed site; on the north side of the bay is a hard freestone with a vertical facing of about 40 feet in height, which can be easily quarried and used for the interior of the breakwater, while the whinstone on the south side of the bay would make an excellent facing to the breakwater.

I propose that a wharf, 130 feet in length and 30 feet in width, be constructed about forty-five yards south of the breakwater; a wharf, built of stone, of the above dimensions, would afford accommodation for two vessels, and, if placed in the position I have indicated on the plan, be so completely sheltered that steamers might enter the harbour in the severest weather, and steam alongside with every safety.

I estimate the cost of constructing breakwater and wharf, according to my design, including extension of road from the present jetty, at (£20,000,) twenty thousand pounds.

I have, &c.,

JNO. DEBENHAM, C.E.

MASSACRES AT THE ISLANDS OF TANNA AND WOODLARK.

(PROCEEDINGS OF H. M. S. "IRIS" IN REFERENCE TO.)

Ordered by the Legislative Assembly to be Printed, 8 September, 1858.

CAPTAIN LORING, R. N., to THE GOVERNOR GENERAL.

*"Iris," at Sydney,**6 September, 1858.*

SIR,

With reference to the murder of the master and two of the crew of the schooner "Anne and Jane," on the Island of Tanna, in December last; and also with reference to the massacre of the crew of the "Gazelle," at Woodlark Island, in 1855,—I have the honor to enclose, for your information, an extract from my letter to the Secretary of the Admiralty, reporting the proceedings of Her Majesty's Ship "Iris," during her late cruise.

Mr. Alexr. Barrack, late master of the "Favorite" schooner, and who was sent by your Excellency's Government to assist me with his local knowledge at Woodlark Island, has fulfilled the conditions of his service in a satisfactory manner; and I have much pleasure in recommending him to your notice as a zealous, steady, and trustworthy person.

I have, &c.,

WILLIAM LORING,

Captain in Command of the
Australian Station.

HIS EXCELLENCY

SIR WM. DENISON, K. C. B.,

Governor General, New South Wales.

[Enclosure in the foregoing.]

(True Copy.)

WILLIAM LORING,

Captain in Command of the Australian Station.

Extract from letter to the Secretary of the Admiralty, dated 6 September, 1858.

15. On June 21st we left Port de France and called at Aniteum; and then, in consequence of a requisition from His Excellency Sir William Denison, proceeded to Tanna.

16. In December last the Master and two seamen of the Sydney schooner "Anne and Jane" had been barbarously and treacherously murdered, by the Tribe of Wagha, on the north-west side of the Island of Tanna. I fully ascertained the fact, and also the locality of the murder, and all other possible information; and I succeeded in seizing Wān Attāway, the Chief of the Tribe; and in the spirit of their Lordships' letter of 13th of October, 1857, (M), anchored the ship off the beach, at 9 A.M., July 1st. In order to prevent unnecessary bloodshed, and as a sort of Declaration of War, a few shot and shell were fired, to drive away the savages who had assembled on the beach. We then landed with a hundred men, under the command of Lieuts. Deane and Bell, R.N., and Lieut. Bent, R.M., and burnt the principal settlement, cutting down the cocoa-nut and bread-fruit trees, and destroying the bananas, &c., in the immediate neighbourhood of the village of the Chief. In performing this service we were much assisted by the Masters and native crews of the trading vessels "Terror," "New Forest," and "Hirondelle,"—Messrs. Edwards, Mare, and Rodd. We found the scrub very dense; and the eyes and ears of these native auxiliaries were very necessary to scout and give warning, as the savages were close upon us, and watching for an opportunity during the whole of our proceedings.

17. I regret to have to report the loss of Mr. Edward M. Tupper, Mate, and Wm. Kennedy, Captain of the Hold, who separated themselves too far from the main party, and were taken at advantage and cut off by the savages. We succeeded in recovering the body of Mr. Tupper, but not that of Wm. Kennedy, and we re-embarked at 3 P. M.

18. But for the loss of Mr. Tupper and Wm. Kennedy, I should have considered the day's work of destruction of property sufficient; but it now became advisable to show that this loss had nothing to do with our retiring, and on the following day we relanded, and committed further destruction amongst the fruit trees, without any molestation from the savages, and then returned on board and proceeded to the anchorage at Black Beach.

19. I beg permission to call the attention of their Lordships to the zealous and trustworthy conduct of Lieutenant Deane, the Senior Lieutenant of this ship, who on this, as on every other occasion, proved himself an able and efficient officer.

Lieutenants Bell, R. N., and Bent, R. M., also performed their duties in a creditable and judicious manner.

20. That same night a change of weather obliged me to put to sea, and I proceeded to Lifu and Erromango. At the latter place I landed the Wagūs Chief, and left him in charge of Mr. Edwards.

21. I then called at Havannah Harbour, Sandwich Island, to complete water, and proceeded on, anchoring at Woodlark Island on July 21st, under the lee of a small island about three miles distant from the remains of the wreck of the brig "Gazelle," the murder of whose crew is referred to in their Lordships' letter of 13th October, 1857. (M.)

22. For several days the S. E. trade blew so strong that I could do nothing. As opportunity offered, Mr. Arquinban, the Master, ascertained by soundings that it would not be prudent to attempt to take the ship any higher up, and having made myself well acquainted with the localities of the guilty tribe of "Guasup," I proceeded on Tuesday, July 27th, with the boats and small-arm men, &c., commanded as before, to the main village.

We landed, and burnt and destroyed the houses and canoes, and re-embarked without casualty, or indeed any show of opposition. The loss of property has been considerable, and I trust that any future shipwrecked seamen will be treated with humanity, as, through the medium of two natives who had been at Sydney, and could speak a little English, it was fully explained that the burning of the villages was in retribution for the murder of the crew of the "Gazelle."

23. I do not consider that Woodlark Island is likely at any time to be a place of trade or importance. It appears that the inhabitants are not numerous, that there are no articles of commerce, and the navigation to the anchorage is so intricate and dangerous as to be quite unfit for a sailing ship of any size. I could not have found my way to the place except for the assistance of Mr. Alexander Barrack, formerly Master of the schooner "Favorite," who had been sent with me by the Colonial Government at Sydney to give me the benefit of his local knowledge; and in running in to the anchorage the ship struck on a small and detached rock, though, I trust, without material damage. The weather was unfavorable during our stay of eight days, and I did not think that the place was of sufficient importance to delay longer in order to make a regular survey.

24. We weighed and worked out on Thursday, July 29th, but with some difficulty and risk; and I was very thankful to get the ship once more into deep water, and clear of such dangerous navigation.

25. I have since revisited the New Hebrides, and am glad to be able to report that there has been no fresh outrages at Tanna; and I have every reason to suppose that our operations at Wagūs will prove to have been salutary and sufficient.

26. I have endeavoured, but it is very difficult, to ascertain the loss of life on the part of the savages: I think that, in all probability, it did not exceed 5, as our object was to destroy property and not life, except when attacked.

RAILWAYS AND PUBLIC WORKS, NEW SOUTH WALES.

No. 1.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

No. 98.—*Executive.**Government House,
Sydney, 14 July, 1855.*

MY LORD,

In my opening speech to the Legislative Council, a copy of which was forwarded in my Despatch No. 97 of this date, I pointed out, in paragraph 8, the necessity of placing at the disposal of the Government a staff of officers thoroughly competent to superintend the construction of the various works which must soon be carried out, and especially of the Railroads, upon the effective and yet economical construction of which the prosperity of the Colony must mainly depend.

2. In a Minute which was laid before the Executive Council, I submitted a scheme for the formation of a proper Board of Works, and for providing the officers of this Board with an efficient establishment of subordinates.

3. The subject was brought under the consideration of the Legislative Council; and although the Members were not inclined to pledge themselves to the hasty adoption of the complete scheme until the Estimates of Revenue and Expenditure had been submitted, they were so aware of the absolute necessity of speedy action on the part of the Government that they presented an Address to me, a copy of which is enclosed, requesting me to ^{11 July, 1855.} take steps to procure an efficient person to superintend the construction of Railroads, at a salary not exceeding £1,000 per annum, with the usual temporary increase, which will raise the amount to £1,200.

4. My object in addressing your Lordship on this occasion is to request that you would exercise your influence with the Master General of the Ordnance, and induce him to allow an Officer of Engineers to act in the capacity of Superintendent of Railroads, or Chairman of Board of Works.

5. There are many reasons why it is desirable to appoint Officers of Engineers to situations of this kind in the Colonies. In the first place, their services are procured at a cheaper rate; and as they have been trained in an economical school, and subjected to strict responsibility, they are likely to bring to the work habits and a system widely different from those of the ordinary class of Railway Engineers; the Colony will, therefore, be better served by such men. Then there is an advantage to the Home Government in having in the Colonies men on whom, in case of war, dependence can be placed, and who being thoroughly conversant with the country and its resources, will be able to develop all the means of defence which may be available. I trust, therefore, that your Lordship will sanction this application to the Master General of the Ordnance, and give it every support; and that I may be able to reckon upon the services of a competent officer, without whose services I shall hardly be able to carry out that system of internal communication upon which the prosperity of this Colony must be entirely dependent.

6. I shall have to address your Lordship hereafter with relation to the proposed constitution of the Board of Works; and I therefore postpone till then the transmission of the proceedings of the Executive Council with relation to this Body.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

LORD JOHN RUSSELL,
&c., &c., &c.

[Enclosure]

[Enclosure in No. 1.]

To His Excellency SIR WILLIAM THOMAS DENISON, Knight, Governor General in and over all Her Majesty's Colonies of New South Wales, Van Diemen's Land, Victoria, South Australia, and Western Australia, and Captain-General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, and Vice-Admiral of the same.

MAY IT PLEASE YOUR EXCELLENCY:—

We, Her Majesty's most dutiful and loyal subjects, the Members of the Legislative Council of New South Wales, in Council assembled, beg respectively to communicate to your Excellency the following Resolutions adopted this day by the Council; and in accordance with the third of them, to request that your Excellency will be pleased to cause the same to be carried into effect.

1. That the general proposition contained in the Governor General's Message, No. 24, be taken into consideration with the Estimates.

2. That this Council, without pledging itself to the general scheme set forth in His Excellency's Message No. 24, considers that immediate measures should be taken to engage a competent person to undertake the direction of Railways in this Colony, at a salary not exceeding £1,000 per annum, with the usual temporary increase allowed to that scale.

3. That the second of the foregoing Resolutions be embodied in an Address to His Excellency the Governor General, with a request that he would be pleased to take measures to carry the same into effect.

Legislative Council Chamber,
Sydney, 11 July, 1855.

CHARLES NICHOLSON,
Speaker.

No. 2.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

No. 150.

Government House,
Sydney, 18 September, 1855.

SIR,

In my Despatch, No. 98, dated 14th July, 1855, I requested your Lordship to move the Master General of the Ordnance to sanction the employment of an Officer of Engineers in the double capacity of Chairman of the Board of Works and Superintendent of Roads and Railroads. I take this opportunity of reiterating the expression of my anxious desire that this arrangement should be carried out, and of requesting that, should such an officer be appointed, he should be instructed to engage the services of a competent Railway Engineer, at a salary not exceeding £1,500 per annum, as well as of a certain number, say at present six, competent Surveyors, whose services will be required to lay out proper lines of Railway in different parts of the country. The officer should also be instructed to provide a sufficient number of proper Instruments, both for surveying and levelling, as from the mode in which the survey of this Colony has been conducted, no dependence can be placed upon any of the surveys which have been made, so far as regards the determination of the direction of roads, &c.

I forward herewith a statement of the probable requirements of the department; but it is very probable that articles may have been omitted which may, in the opinion of the officer in question, be necessary to enable him to do his duty properly. Should this be the case, I trust that full liberty will be given to him to procure whatsoever may appear to be necessary or desirable. The funds required for the purpose of meeting the cost of these articles will be forwarded herewith, and the charge for the passage of the Officer, the Engineer, and the Surveyors may be defrayed, in the first place, from the funds at the disposal of the Land and Emigration Commissioners. Should your Lordship not be able to secure the services of an Officer of Engineers as Superintendent of Roads and Railroads, we should still require a competent Railway Engineer and the same number of Surveyors; but it must be distinctly understood that the Railway Engineer is to be a mere executive officer, and is to act altogether under the instructions of the Superintendent of Roads and Railroads. I would submit that it would be advisable to call upon the Railway Department of the Board of Trade to recommend a competent Engineer. A person who has to act in this capacity in New South Wales should have a thorough knowledge of the principles upon which Railways are constructed—should be well acquainted with the details of Foreign as well as of English Railways; but it is most desirable that he should not be so far wedded to any particular system as to render it difficult for him to adopt general principles to the peculiar circumstances of the Colony.

3. The state of the country as regards means of procuring labor, character of materials of which the Railway is composed, nature of a traffic from which a revenue is to be derived, &c., is so different from that of any country in Europe as to render the systems applicable to those countries inapplicable in a great measure to New South Wales; and it is on this account that I lay such stress upon the power of the Engineer to think for himself, instead of being tied down by precedents, which can have no authority here.

I have, &c.,

THE RIGHT HONORABLE

LORD JOHN RUSSELL,
&c., &c., &c.

W. DENISON.

No. 3.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

No. 67.—*Executive.*

Government House,

Sydney, 24 April, 1856.

SIR,

I have the honor to acknowledge the receipt of your Despatch No. 51, dated 18th of December, 1855, in reply to the request contained in my Despatch No. 98, of 14th July, 1855, that I might have the services of an Engineer Officer to superintend the Railroads which are about to be carried out extensively in this Colony.

2. I can quite understand that, at the time the request was made, Lord Panmure and the Commander-in-Chief should have been unwilling to detach an experienced officer to a Colony so distant as this; but I am willing to hope that the change which has taken place in the political relations of the Mother Country will have removed his Lordship's objections to comply with my application.

3. Indeed, looking to the possibility of a war with the United States of America, I might almost say that even on political grounds it would be advisable that an officer should be sent here upon whom, though paid by the Colony, the Government might depend, in case it should be necessary to call upon him to act in his military capacity. I do not, however, lay so much stress upon this as upon the essential importance of his services to the Colony in superintending the great works which are in contemplation, and upon which the future prosperity of the Colony must mainly depend.

4. I press this matter upon your notice the more urgently from the difficulty, amounting indeed to an impossibility, of procuring the services of persons competent to take an enlarged view of our own position and requirements. A mere civil engineer will look into details, but we require more than that; and although I can discuss these subjects when they are brought before me, my time is too much occupied to allow me to devote a sufficient portion of it to matters like these, which involve not only general principles and questions of finance, but also detailed arrangements, which require minute attention.

5. I trust, therefore, that Lord Panmure will, under present circumstances, take a more favorable view of my application, which I assure you I should not have made had I not conceived it to be a matter of the most pressing importance.

I have, &c.,

THE RIGHT HONORABLE

HENRY LABOUCHERE,
&c., &c., &c.

W. DENISON.

No. 4.

F. PEEL, ESQ., to MAJOR-GENERAL SIR C. YORKE.

War Department,

6 September, 1856.

SIR,

With reference to my letter of the 21st November, and your reply thereto, dated 3rd December, of last year, I am directed by Lord Panmure to transmit to you, for the consideration of His Royal Highness the General Commanding-in-Chief, the enclosed copy of a Despatch from the Governor of New South Wales, renewing his request for the services of an Engineer Officer to superintend the Railroads which are about to be constructed in that Colony.

447—B

Lord

6 RAILWAYS AND PUBLIC WORKS, NEW SOUTH WALES.

Lord Panmure is of opinion, that under the circumstances adverted to in this Despatch, it would be at once proper and desirable that effect should be given to Sir Wm. Denison's application.

11 September, 1856.

I am, &c.,

F. PEEL.

Referred to the Inspector General of Fortifications for his opinion and report.

By order,

J. H. ASH.

To MAJOR-GENERAL SIR C. YORKE, K.C.B.

No. 5.

SIR J. BURGoyNE to GENERAL SIR C. YORKE.

War Department,

Whitehall, 15 December, 1856.

SIR,

The reference made to me by Minute dated 11th September, on the subject of an Officer of Royal Engineers to be sent out to New South Wales to superintend Railroads, on the application of the Governor General, has remained thus long unanswered owing to the difficulty I have found in obtaining any one whom I could recommend to undertake the service, the impression being that under the present working of the Constitution in that Colony the situation might be subject to many embarrassments, and be altogether too precarious in tenure and emoluments to induce men who had already become well known for their capabilities to venture upon it. Three or four have already declined, but Captain Martindale, an officer of considerable zeal and intelligence, and whom I can strongly recommend, is willing to take the appointment, if approved by H. R. H. the Commander-in-Chief, and the Secretaries of State for War and for the Colonies, and if the latter should think proper to engage him without further reference to the Colony after so long a lapse of time since the application was made by the Governor.

I have, &c.,

J. F. BURGoyNE,

To GENERAL SIR CHARLES YORKE, K.C.B.

I. G. F.

No. 6.

GENERAL SIR C. YORKE to F. PEEL, Esq.

Horse Guards,

23 December, 1856.

SIR,

With reference to your letter of the 6th September last, in which you enclosed a copy of a Despatch from the Governor of New South Wales, dated 24th April, 1856, renewing his request for the services of an Engineer Officer to superintend the Railroads which are about to be constructed in that Colony, I am directed by the General Commanding-in-Chief to transmit to you, for the information of Lord Panmure, the enclosed copy of a letter from Sir John Burgoyne, the Inspector General of Fortifications, recommending Captain Martindale of the Royal Engineers for this duty; and I am to state, that there is no objection on the part of His Royal Highness to the appointment of this officer.

I have, &c.,

C. YORKE.

Send a copy of Sir John Burgoyne's letter to the Colonial Office.

H. A. GREENE. 28.12.

and request to know whether Captain Martindale's services may be engaged at once.

29 December, 1856.

SIR,

With reference to your letter of the 30th August last, I am directed by Lord Panmure to transmit to you, for the information of Mr. Secretary Labouchere, the enclosed copy of a letter from Lieutenant General Sir John Burgoyne, in which he recommends Captain Martindale of the Royal Engineers as being an officer well qualified to superintend the Railways which are about to be constructed in New South Wales; and I am to request that you will inform me whether Captain Martindale's services may be engaged at once.

No. 8.

H. MERIVALE, ESQ., to F. PEEL, ESQ.

Downing-street,

4 January, 1857.

SIR,

With reference to your letter of the 29th ultimo, I am directed to request you will inform Lord Panmure that Mr. Secretary Labouchere considers that there will be no difficulty in at once engaging the services of Captain Martindale, R. E., to superintend the construction of Railways and other Public Works in New South Wales, and the necessary intimation of that selection will be made to the Governor without further delay.

I have, &c.,

HERMAN MERIVALE.

For the information of the Inspector General of Fortifications.

No. 9.

CAPTAIN MARTINDALE to THE SECRETARY OF STATE FOR THE COLONIES.

War Department, Whitehall,

2 February, 1857.

SIR,

With reference to your letter of the 4th ultimo, addressed to Mr. Peel, notifying my appointment to superintend the construction of Railways and other Public Works in New South Wales, and my letter thereon to you of the 16th ultimo, acquainting you that I should be ready to embark in March next for that Colony, I have the honor to inform you that in reading the Despatches connected with the subject, I observe that when Sir William Denison first proposed that an Officer of the Royal Engineers should be placed at the head of the Department of Public Works in New South Wales, he stated, as one among other reasons for such a proposal, that the services of an officer of that corps could be procured at a cheaper rate than those of a civilian. I presume that this opinion was based on the supposition that Officers of the Royal Engineers when employed upon civil duties continued, as was the practice until recently, to receive the Military pay attached to their rank in the Army in addition to their civil salary, and that it was in consequence of that opinion that the rate of remuneration attached to the office I have the honor to hold was fixed at £1,000, with a temporary increase of £200 a-year, while that of the Civil Engineer, required "as an Executive Officer to act altogether under the instructions of the Superintendent," was fixed at £1,500 a-year, at which salary a gentleman has already gone out to the Colony.

By

By a late order, however, officers of Royal Engineers are hereafter when charged with civil duties to derive no pecuniary benefit from their rank, so that the effect of the present arrangement will be that my salary, as head of the Department, will be considerably less than that of my immediate Assistant.

I am informed that even the larger sum cannot be considered as by any means high in a country where the necessaries and comforts of life are so dear as in New South Wales.

I feel, however, that I am personally too much interested in this question to judge how far the present arrangement may or may not be conducive to the public interests; but I have considered it my duty to bring the subject to your notice, and having done so I am quite contented to leave it for the decision of the proper authorities.

I have, &c.,

B. H. MARTINDALE,

Captain R.E.

THE RIGHT HONORABLE

THE SECRETARY OF STATE

FOR THE COLONIES.

No. 10.

H. MERIVALE, Esq., to CAPTAIN MARTINDALE.

Downing-street,

7 February, 1857.

SIR,

I am directed by Mr. Secretary Labouchere to acknowledge your letters of the 16th ultimo and 2nd of this month, containing certain proposals with reference to your future salary as Superintendent of Railways in New South Wales, and of the 5th of this month, referring thereto. Mr. Labouchere has also had under his consideration the Inspector General of Fortifications' letter of the 13th ultimo.

I am to state that Mr. Secretary Labouchere will take upon himself to authorise the payment to you of half salary, from the date of your relinquishment of your appointment in this country—that is, apparently, the 15th ultimo.

He does not, however, feel himself at liberty to authorise such a departure from general rules as would be occasioned by your receiving whole salary from the date of embarkation, instead of arrival in the Colony. Any further representation you may have to make on this head must, therefore, be addressed to Sir Wm. Denison, on your arrival.

With reference to the observations contained in your letter of the 2nd instant, Mr. Labouchere thinks you are very probably right in supposing that Sir William Denison, when he proposed the salary of £1,000 (or £1,200 with extra allowance), supposed that you would continue to receive the Military pay attached to your rank in the Army.

He thinks that your representations are, therefore, made on reasonable grounds; but he has not, as Secretary of State, such control over the funds of the Colony as would justify him in making any augmentation on his own authority. He can only leave the question to the consideration of Sir William Denison, to whom copy of this correspondence shall be transmitted.

The free passage to be ordered for you will include yourself and family, and one servant, such being the ordinary rule.

I am, &c.,

H. MERIVALE.

CAPTAIN MARTINDALE,

&c., &c., &c.

1858.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY OFFICERS & SERVANTS.

(RETURN RELATIVE TO APPOINTMENT AND DUTIES OF.)

Ordered by the Legislative Assembly to be Printed, 30 September, 1858.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 25 May, 1858, That there be laid upon the Table of this House,—

“ A nominal Return of all Officers and Servants appointed under
 “ the provisions of the second, fourth, and sixth sections of the
 “ Act of Council, 18 Victoria, No. 40, intituled, “ The Govern-
 “ ‘ ment Railways Act of 1854,’ from 2nd December, 1854, to
 “ the 31st March, 1858, shewing the name of the officer or
 “ servant, the date of the appointment, the nature of his duties,
 “ the locality in which employed, the rate of salary or allowance,
 “ and the amount of salary, allowance, or other emolument
 “ received by him in each year of the period mentioned.”

1858.

Legislative Assembly.
NEW SOUTH WALES.

AUDITING RAILWAY ACCOUNTS.

(LETTER FROM CAPTAIN MARTINDALE UPON.)

Ordered by the Legislative Assembly to be Printed; 8 April, 1858.

CAPTAIN MARTINDALE to THE SECRETARY FOR LANDS AND WORKS.

*Railway Department, Sydney,
7 April, 1858.*

SIR,

I have the honor to request your consideration to the necessity of making provision, in the Government Railways Bill, now before the Legislature, for the audit of Railway Accounts.

The most effectual audit of any public account is that which is conducted by persons responsible to Parliament alone, and which follows most closely on the expenditure; for, the more speedily the check of the auditors follows the work of the accountant, the greater will be the security to the public, and the greater the relief to the Head of the Department entrusted with the expenditure of the public money.

The system of audit I have now to submit for your consideration will combine these advantages in a pre-eminent degree.

I propose that auditors shall be appointed by Parliament, whose duty it shall be to audit the accounts of the Railway Department, under the provisions of the Railway Act, and under such instructions as shall, from time to time, be issued by Parliament.

The auditors so appointed should be required to examine the entire accounts of the Department, so that no portion of the audit shall be more than one month in arrear of the expenditure; and it should be the duty of the auditors to ascertain that the several subsidiary books are kept so that every item of revenue is properly collected, and brought to the credit of the public, and that every expenditure is on due authority.

At the end of every quarter the Railway Department should prepare, to be forwarded to the Auditor General, an Abstract of the Expenditure of the past Quarter, shewing the appropriation of the receipts and expenditure under the several votes of Parliament, and the balance remaining in hand to the credit of each vote or head of receipt.

This account should be verified by the signature of the auditors, and will enable the Auditor General to check the gross expenditure, under the revised votes, and to connect the whole with the general account of the Colony.

In comparing this system of audit with that at present contemplated for the Railway Department, it will be seen that no one desirable check is lost sight of, while the following beneficial results will be secured by its adoption. The audit may, at the discretion of the auditors, take place the day after the expenditure is carried to account, and cannot follow at an interval greater than one month. The audit will be conducted by gentlemen responsible

to Parliament alone, and not through the Auditor General to the Government. Every information regarding the accounts, and on every other point, will, as before, be accessible to Government, who will possess also the same control in this respect, as well as over the expenditure, through their officer, the Commissioner, as the Bill now provides.

The immense labor of preparing duplicate cash and store accounts, vouchers of every description in duplicate, including duplicate way-bills, ticket returns, counterfoils, butts of receipts, &c., &c., will be avoided; and by the appointment of the same men to audit continually the complicated transactions of the Department, they will become conversant with the details of Railway business, and questions raised can be decided by conference with the Commissioner on the spot, instead of giving rise to endless queries and replies in writing, and a chain of correspondence.

Were the Railway Accounts to be audited in the Department of the Auditor General, I understand a special additional staff would be required for the purpose; and it would be in vain to attempt to render accounts in duplicate to the Auditor General without a large addition, also, to the Railway Staff, and a consequent heavy increase of expense. Even with such an addition, the extra duties thrown upon the superior officers would tend greatly to draw off their attention from more important duties; and the further Railways extend, and the more prosperous their condition, the more these evils would be felt.

It may be anticipated, also, from the numerous and complicated details of Railway accounts, that considerable intervals would elapse between the expenditure by the Department and a release being given to it by the Auditor General; and it appears to me neither fair to the public nor to the Commissioner to permit such an accumulation as might thus arise, of unaudited accounts, where it can be prevented without the surrender of one necessary or desirable check.

I have, &c,

B. H. MARTINDALE.

THE HONORABLE

THE SECRETARY FOR LANDS AND WORKS.

P. S.—Should the views I have submitted be adopted, it will be necessary to make provision for their being carried out by the insertion of a clause in the present Government Railways Bill.

1858.

Legislative Assembly.

NEW SOUTH WALES.

EXTENSION OF RAILWAYS.

(CITIZENS OF SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 20 July, 1858.

To the Honorable the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the Citizens of Sydney, in Public Meeting assembled,—

RESPECTFULLY SHEWETH :—

That the following Resolutions were unanimously adopted at a Public Meeting, held at the Prince of Wales Theatre, Castlereagh-street, on Wednesday evening, the seventh of July, 1858, consisting of upwards of three thousand Citizens,—Alderman James Murphy, of Sydney, in the Chair.

1. That New South Wales, from its geographical position, from its splendid harbours, and extent of country, with its variety of soil and climate, and vast material resources, is fitted by nature for occupying the first place among the Australian Colonies; and that it is the opinion of this Meeting, that unless some energetic measures be taken to develop these resources, this country will soon descend to the position of a second or third rate Colony.
2. That, in the opinion of this Meeting, it is absolutely necessary to the present and future prosperity of this Colony that a large and immediate extension of Railways be carried on, as it only requires the means of cheap and expeditious transit to open up the natural resources of New South Wales.
3. That, taking into consideration the present depressed state of trade, the general depression of every description of real estate, the want of employment generally admitted to exist,—this Meeting considers the present time peculiarly favorable for the rapid extension of Railways throughout the Colony.
4. That, in the opinion of this Meeting, unless immediate steps be taken to carry out an extensive system of Railways, as recommended, a great portion of our mechanics and other enterprising colonists will be compelled to seek in other Colonies (which are now spending large sums of money on public works) that fair remuneration for their industry which they cannot find in New South Wales.

That a Petition, embodying the Resolutions just passed, be adopted by this Meeting, for presentation to the Legislative Assembly and Legislative Council; and that the said Petition be signed by the Chairman, on behalf of this Meeting; and that the Honorable Charles Cowper be respectfully requested to present the Petition and support the prayer of the same in the Assembly; and that the Honorable James Norton be requested to present the Petition to the Legislative Council.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take the foregoing premises into your favorable consideration, and adopt such means for extending Railways throughout the Colony as to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray, &c.,

JAMES MURPHY,

Chairman.

1858.

Legislative Assembly.
NEW SOUTH WALES.

RAILWAY EXTENSION TO SINGLETON.

(PETITION RELATIVE TO POSITION OF TERMINUS OF THE LINE.)

Ordered by the Legislative Assembly to be Printed, 30 July, 1858.

To the Honorable the Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The Petition of the Inhabitants of Singleton and its neighbourhood,—

MOST RESPECTFULLY SHEWETH:—

That your Petitioners are inhabitants of Singleton, and its neighbourhood, in the district of Patrick's Plains, Hunter River.

That your Petitioners are led to suppose that the line of the Great Northern Railway, now nearly completed to West Maitland, will be continued towards Singleton, and they, your Petitioners, would respectfully pray the consideration of your Honorable House.

That the town of Singleton is the centre of a large agricultural district, and has been so nearly thirty-five years, requiring only the means of rapid and cheap transit to make it one of the most productive in the Colony.

That it is the point of junction of all the western, north-western, and northern roads, leading from the interior towards Newcastle, on which is carried upwards of one-third of the country trade of the Colony; and it is a well authenticated fact, that more than one-third of the wool exported passes through this town.

That we are paralyzed in our efforts at improvement, from our ignorance of the intention of the Government with reference to where the line shall be brought; while, at the same time, we are certain that at Singleton is the best crossing-place on the river, for many miles, as well for Railway purposes as for our common trade.

And we would therefore most respectfully pray information and relief from your Honorable House, so that, should the determination of the Government be adverse to our opinions and wishes, we may be allowed an opportunity of considering the same, and perhaps be enabled to point out such objections as might be considered of sufficient importance as to induce a change.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 132 Signatures.]

1858.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY COMMUNICATION.

(EXTENSION OF TO WINDSOR.)

Ordered by the Legislative Assembly to be Printed, 9 April, 1858.

To the Honorable the Legislative Assembly of the Colony of New South Wales.

The humble Petition of the undersigned Inhabitants of the Town and District of Windsor,—

RESPECTFULLY SHEWETH:—

That your Petitioners believe,—in accordance with a Report of a Select Committee of your Honorable House on the subject of Railways, dated the 6th day of March, 1857, and signed by the Honorable Charles Cowper, Chairman,—the sum of one hundred and seven thousand pounds (£107,000) was voted last Session of Parliament for rails, &c., for extensions—say fifty-three and one half miles of Railways; forty thousand pounds (£40,000) of which was understood to be for rails for extensions to Penrith and Windsor.

That, as appears by the Report of Captain Martindale, R. E., Chief Commissioner for Railways, to the Honorable the Secretary for Lands and Public Works, dated the twenty-first day of August last,—means have been taken to ascertain the practicability and cost (*inter alia*) of an extension of Railway from Parramatta to Penrith, *with a branch to Windsor*—thirty-four miles; and that the cost of the line from Parramatta to Penrith, *with a branch to Windsor*, will be about nine thousand pounds (£9,000) per mile; the worst gradient, 1 in 80; and the smallest radius of a curve, 30 chains.

That your Petitioners have since learnt with regret, notwithstanding the premises and the pledged assurances of the late Government, that, as appears by an answer lately given by the Honorable the Colonial Secretary to a question from one of your late Honorable Members (Mr. Holroyd), the present Government do not intend to take in hand or promote the construction of any branch line to the District of Windsor.

That your Petitioners submit, this resolution of the Government, if acted upon, will be a manifest injustice to the inhabitants of this District. The better to estimate its magnitude and importance, your Petitioners subjoin the following statistics and facts:—

1. The District of Windsor, through which runs the splendid river Hawkesbury, is one of the oldest established, most extensive, fertile, and populous Districts in the Colony. Its population, last census, was, in round numbers, (8,500) eight thousand five hundred—being considerably in excess of Goulburn, and surpassed only by Maitland, Parramatta, and Bathurst.
2. That in it is a large quantity of land under cultivation, namely, about fourteen thousand (14,000) acres, yielding agricultural products to such an extent as, in a great measure, to supply the wants of the Sydney markets and the Colony generally.

3. That, besides the agricultural resources of the district, there are large commercial transactions constantly connected with it, which cause an immense amount of traffic on the road between Windsor and Sydney.
4. That not less than 2,250 tons of hay, 1,125 tons of straw, 244,832 bushels, or about 6,120 tons of grain, 200 tons of potatoes, besides an incalculable quantity of poultry, pigs, fruit, dairy and other produce of the district, are annually transported from Windsor to Sydney; whilst about 3,000 tons of goods of various kinds are imported into the town and immediate neighbourhood of Windsor alone, making a total up and down traffic of about thirteen thousand (13,000) tons annually.
5. That two large four-horse coaches run daily between Windsor and Parramatta, meeting the Railway Train at the latter place at stated times, which coaches are well supported by the public in the way of passenger traffic. A coach also runs daily to and from Richmond and Parramatta.
6. That, although the Railway at Parramatta is situated about midway between Windsor and Sydney, and it might consequently be supposed that the transporters of goods and agricultural produce would avail themselves of the rail from thence in the transit of their property to and from Sydney, yet such is not the case, inasmuch as the trouble, inconvenience, and loss of time, occasioned by unloading and re-loading at Parramatta, would not be repaid by such a seeming advantage, and the practice of carriers to and from this district and Sydney is to take their loading entirely through by the turnpike road.
7. In the event of a branch line of Railway being constructed to Windsor, the whole of the extensive goods and passenger traffic before mentioned, between Windsor and the Metropolis, which is now carried on by means of teams, horse-coaches, carriages, and the like, besides other traffic which will hereafter spring up, would be effected by means of such branch Railway.

That your Petitioners are of opinion, that the establishment of the said branch line of Railway to Windsor District would be attended with many other at present indefinite, but inevitably beneficial results, conducive not only to the interests of this immediate district, but of the Colony generally. We also believe it would be the means of developing the resources of this extensive and interesting district to an extent otherwise unattainable. And we are farther of opinion, that considering the short distance of the said branch line, and its comparative smallness of cost, with the extensive passenger and goods traffic to undertake, it would prove at once highly advantageous and remunerative in an economic and a commercial point of view.

Your Petitioners therefore humbly pray your Honorable House to take the premises into your consideration, and in your wisdom to devise means to ensure an extension, as early as possible, (at any rate *pari passu* with the other lines of Railway now in hand,) of a branch line of Railway to the District of Windsor; or otherwise in the premises, as to your Honorable House shall seem meet and proper.

And your Petitioners will ever pray.

[Here follow 190 Signatures.]

Windsor, March, 1858.

1858.

Legislative Assembly.

NEW SOUTH WALES.

EXTENSION OF RAILWAYS

(TO PICTON, PENRITH, AND SINGLETON.)

Ordered by the Legislative Assembly to be Printed, 17 August, 1858.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 23 July, 1858, That there be laid upon the Table of this House :—

“Copies of the Plans, Sections, and Books of Reference of
“the proposed new lines of Railway to Picton, Penrith, and
“Singleton.”

(Mr. Forster.)

REPORT to THE HONORABLE THE SECRETARY FOR LANDS AND WORKS, transmitting copies of the Plans and Sections of the Railway Extensions authorized to Singleton, Picton, and Penrith, by CAPTAIN MARTINDALE, R. E., Chief Commissioner for Railways, &c, &c.

*Railway Department,
Sydney, 17 August, 1858.*

SIR,

I have the honor to transmit herewith, the Plans and Sections of the Extensions authorized to Singleton, Picton, and Penrith, upon which the Estimates voted by the House have been founded.

These plans and sections are trial plans and sections only, and may be considerably modified before the lines are proclaimed; but any modification will be in diminution of the estimated cost.

No Books of Reference can yet be furnished, as these are not prepared until the lines are finally decided upon as they are to be proclaimed for execution; but they can be laid upon the Table of the House as each portion of any of the lines is proclaimed.

I have, &c.,

B. H. MARTINDALE.

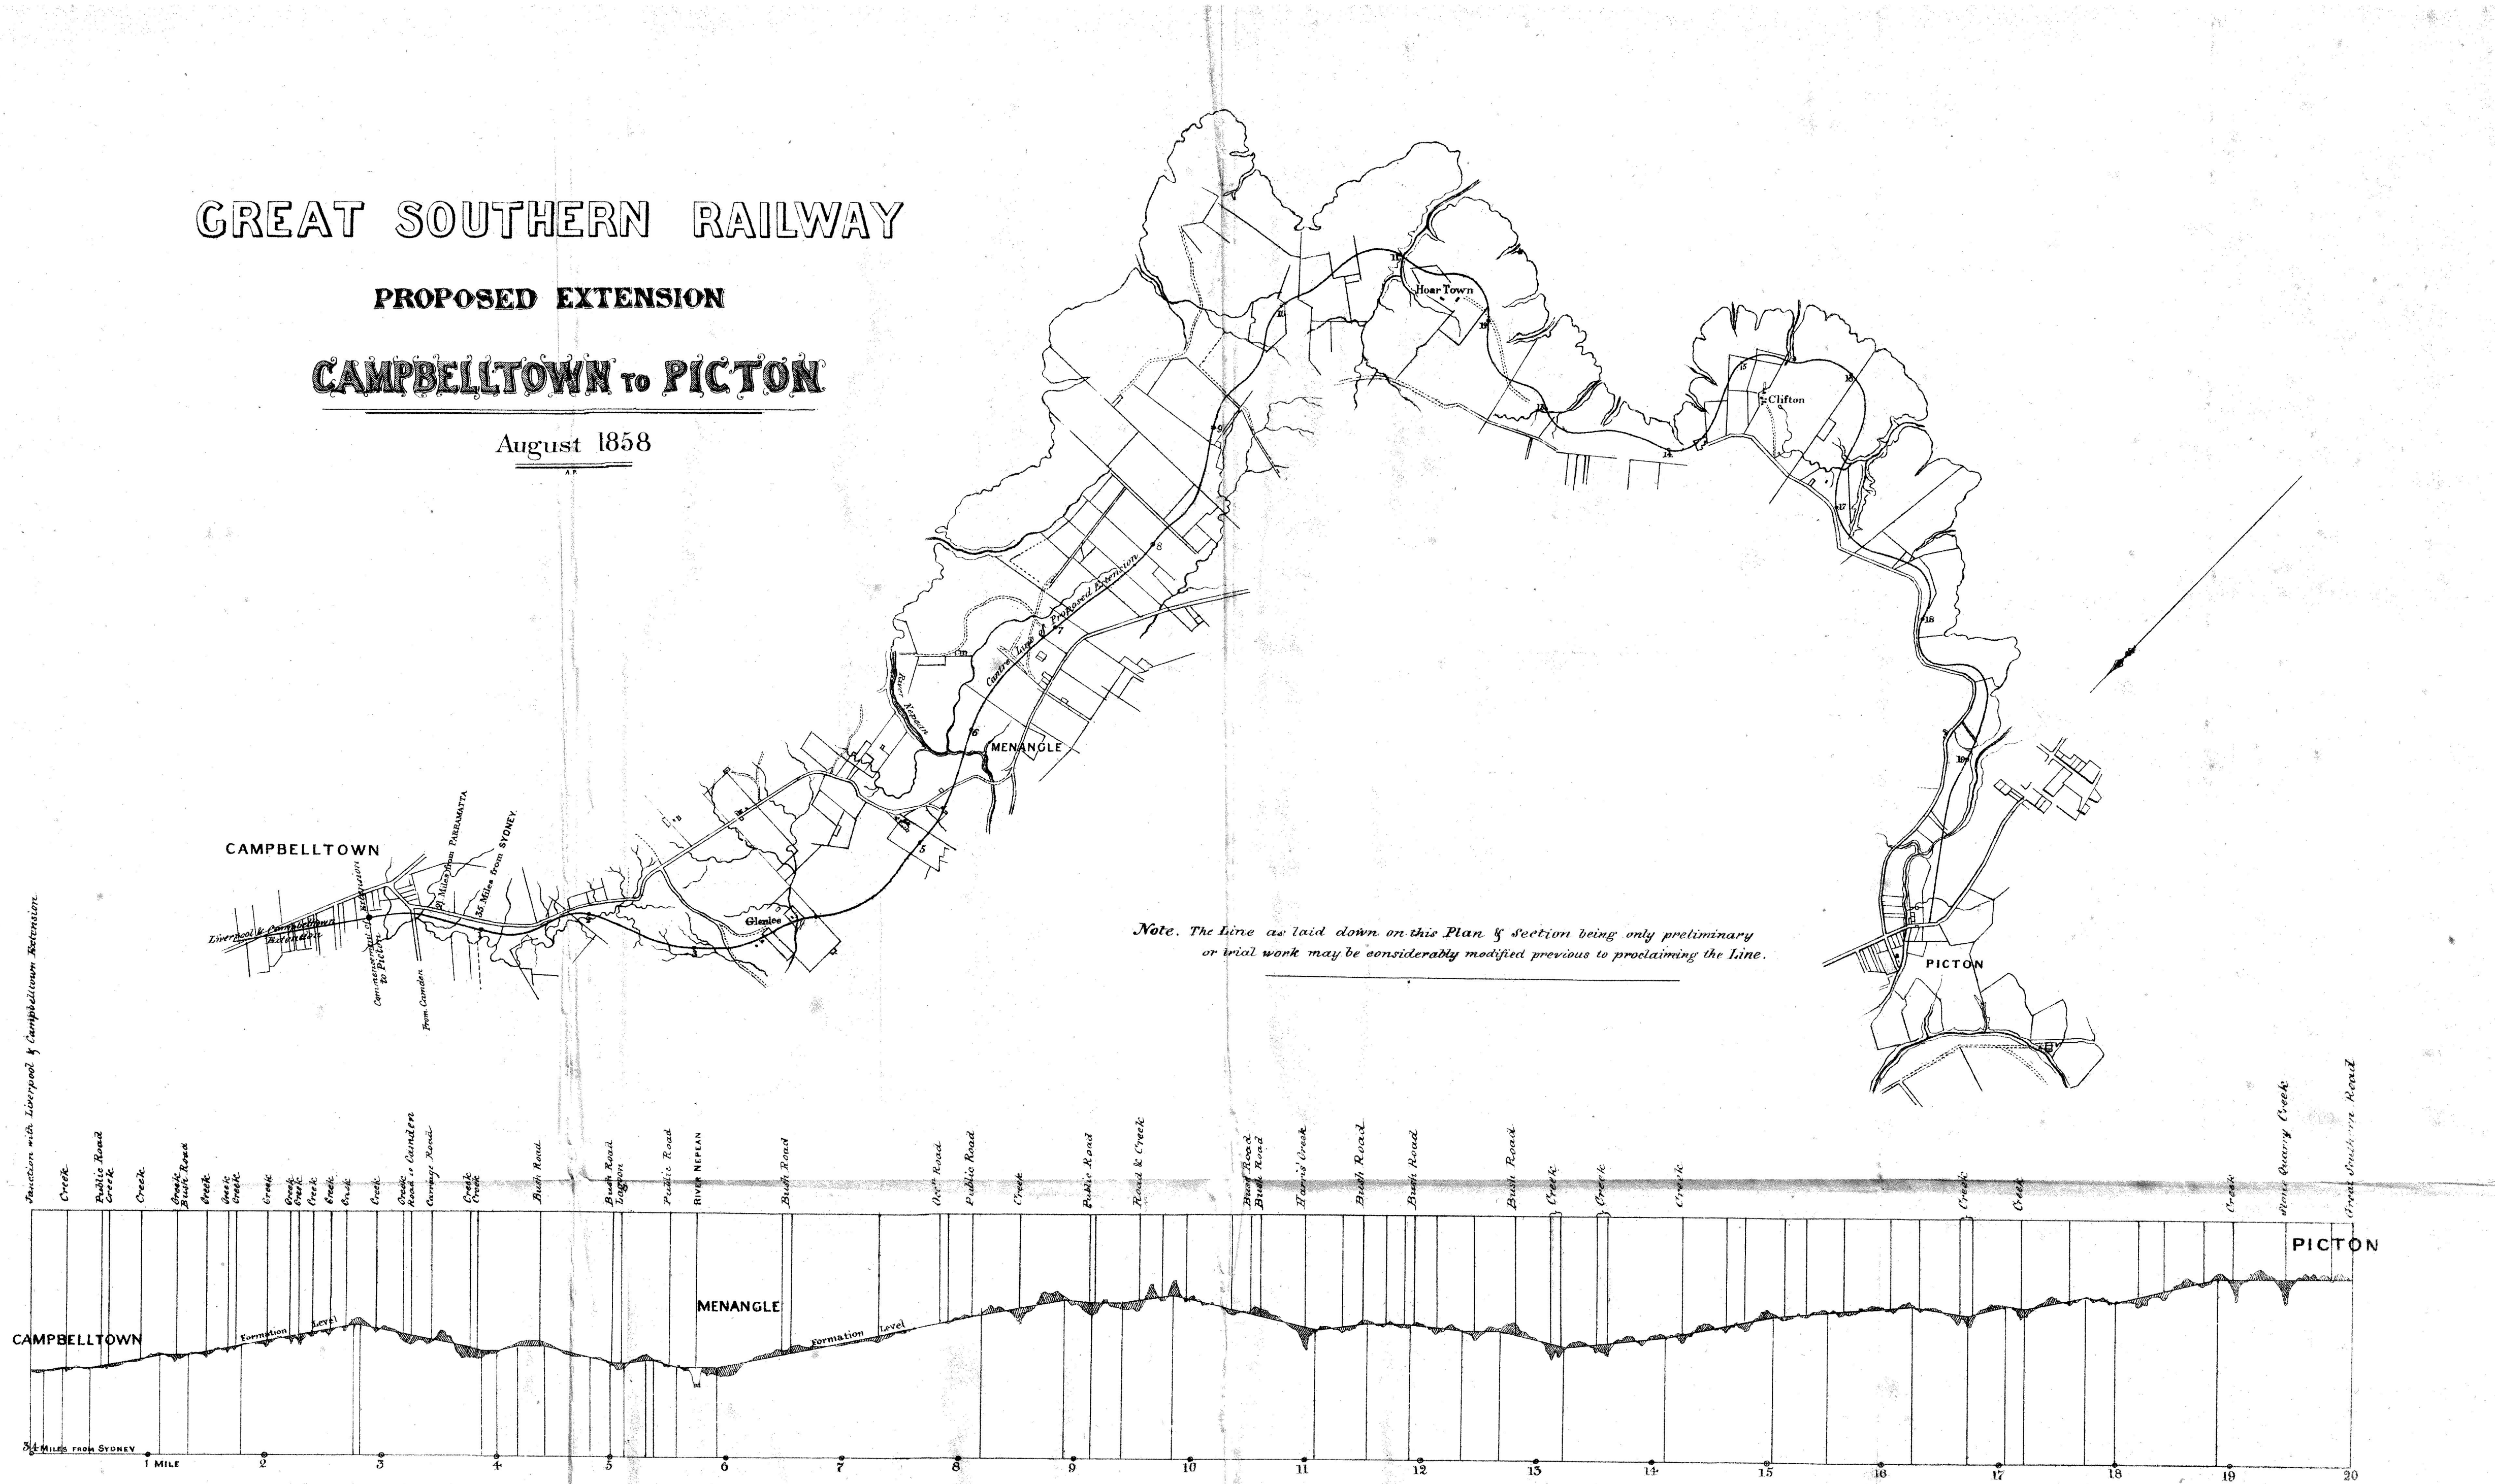

THE HONORABLE THE SECRETARY
FOR LANDS AND PUBLIC WORKS.

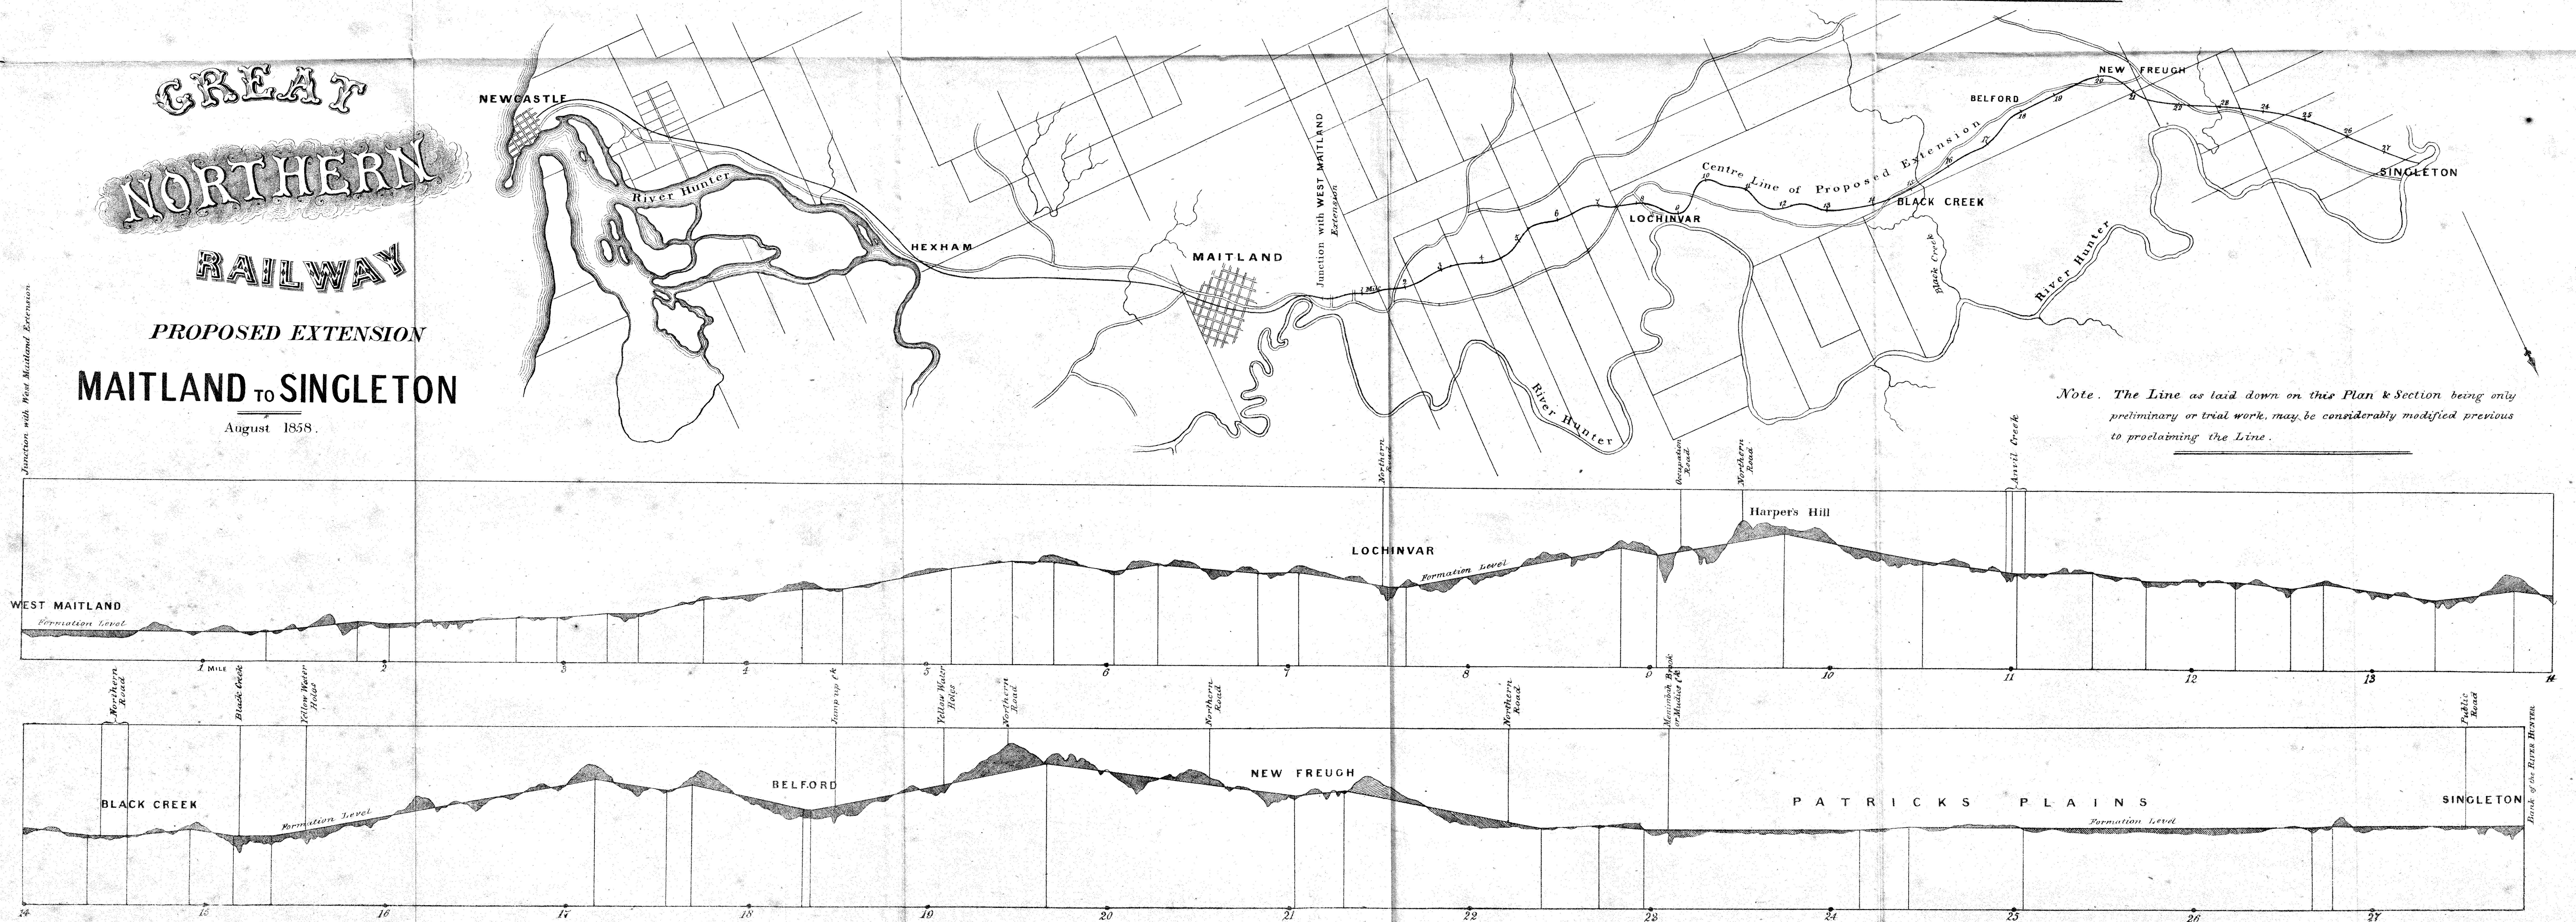

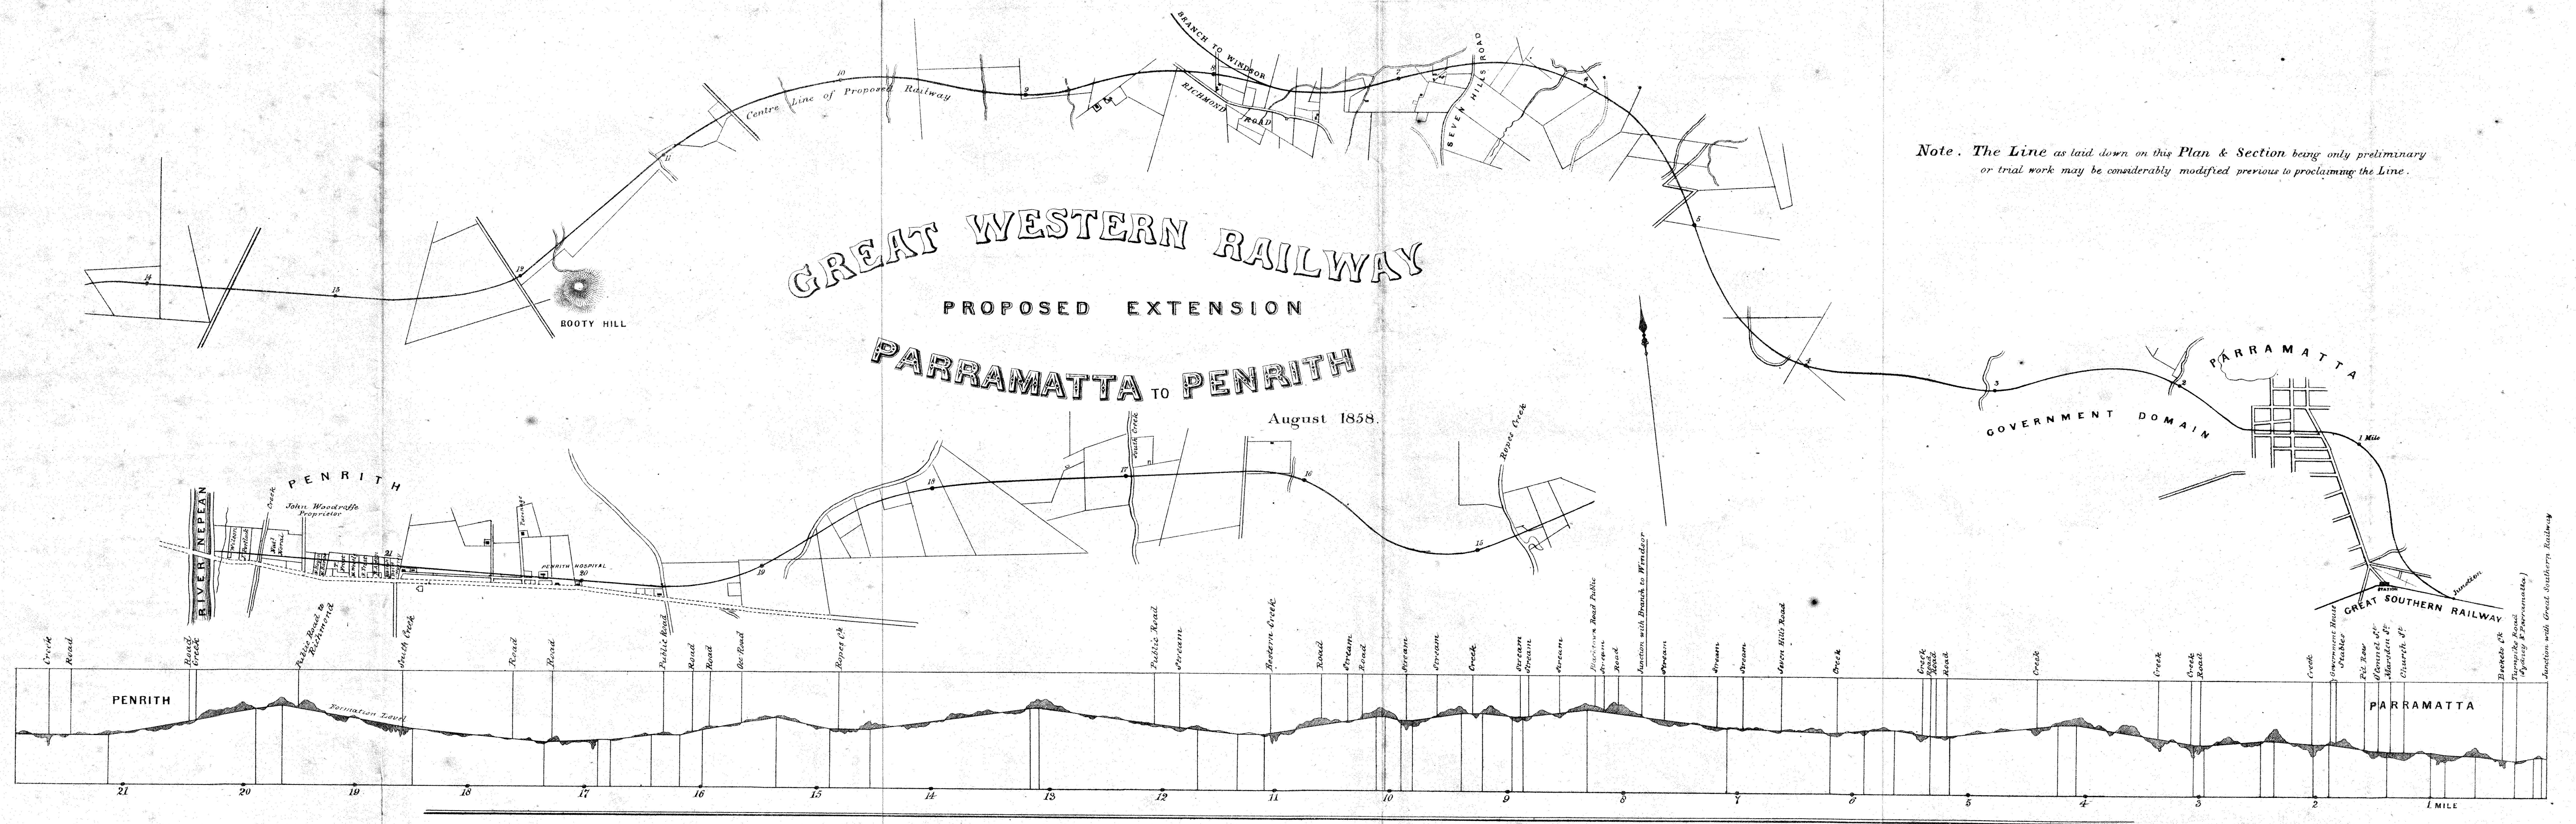

GREAT SOUTHERN RAILWAY

PROPOSED EXTENSION

CAMPBELLTOWN TO PICTON

August 1858

1858.

Legislative Assembly.
NEW SOUTH WALES.

RAILWAY EXTENSION.

(PETITION IN FAVOR OF.)

Ordered by the Legislative Assembly to be Printed, 4 November, 1858.

To the Honorable the Legislative Assembly of the Colony of New South Wales, in
 Parliament assembled.

The humble Petition of the undersigned Colonists of New South Wales,—

RESPECTFULLY SHEWETH:—

That your Petitioners view with no little concern the stagnation of trade, the great depreciation of property, and the number of industrious people at present out of employment.

That your Petitioners are led to believe, that in such circumstances a more favorable opportunity could not occur than the present for the formation and further extension of the Southern and Western Railways, as they would traverse districts abounding in mineral wealth, such as coal, copper, iron, lead, limestone, &c., within a moderate distance of the metropolis, and be the means of giving employment to great numbers of the population, while the opening up of the agricultural lands along their course will add materially to the wealth and prosperity of the country.

That your Petitioners have observed with much satisfaction the decision of your Honorable House of the 14th July, appropriating the sum of seven hundred and twelve thousand pounds for the extension of Railways. Without attempting to depreciate the merits of the Northern Railway, your Petitioners are of opinion that the Southern and Western Lines have prior claims upon the attention of your Honorable House, taking into consideration the much greater population, the vast mineral and agricultural resources of the country in those directions, with the greater prospect of an immediate and more ample return for the capital invested in their construction.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take into your immediate consideration the further extension of the Southern and Western Railways.

And your Petitioners will ever pray, &c.

[Here follow 1,100 Signatures.]

RAILWAY PLANS AND SECTIONS.

(CORRESPONDENCE RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 5 November, 1858.

THE UNDER SECRETARY FOR LAND AND PUBLIC WORKS to THE COMMISSIONER FOR
INTERNAL COMMUNICATIONS.

*Department of Land and Public Works,
Sydney, 5 November, 1858.*

SIR,

Referring to the question which Mr. Forster purposes asking in the Legislative Assembly this evening on the subject of the missing Railway Plans, I am directed to request that you will immediately cause to be made copies of all correspondence that has passed in the matter between this Department and yours, and also with that of the Surveyor General, together with copies of all Minutes and Memoranda in any way bearing on the matter.

2. I am further to request that you will report the result of the search made for the Plans moved for by Mr. Forster on the 1st ultimo, and any explanation that may appear necessary to be made in the matter.

3. In order to ensure this information being in time, I am to invite you to transmit it direct to Mr. Secretary Robertson at the Legislative Assembly.

I have, &c.,

THE COMMISSIONER
FOR INTERNAL COMMUNICATIONS.

MICHL. FITZPATRICK.

THE UNDER SECRETARY FOR LAND AND PUBLIC WORKS to THE CHIEF COMMISSIONER
FOR RAILWAYS.

*Department of Land and Public Works,
Sydney, 8 October, 1858.*

SIR,

I am directed by the Secretary for Lands and Public Works to request that you will have the goodness to forward to this office, in satisfaction of the motion made in the Honorable the Legislative Assembly by Mr. Forster on the 1st instant:—

“ A Plan shewing a Line of Railway Extension from Parramatta to the Western Interior, formerly surveyed by the Government, beginning west from the terminus south of the line now proposed passing near the Government Quarry at Prospect and the Township of Stratheden, and crossing the Nepean River at a point reported upon in 1832 by the late Sir Thomas Mitchell, and in 1854 by the Colonial Architect, Mr. William Weaver, as to the most suitable spot in that vicinity for a bridge over the river.”

I have, &c.,

THE CHIEF COMMISSIONER
FOR RAILWAYS.

MICHL. FITZPATRICK.

COPY OF MEMO.

Reply, this Department has never had such a plan, and suggest inquiry be made from Surveyor General.

Secy.

B. H. M.
9/10.

THE CHIEF COMMISSIONER FOR RAILWAYS to THE SECRETARY FOR LAND AND PUBLIC WORKS.

Railway Branch.
Department of Internal Communications,
Sydney, 11 October, 1858.

SIR,

In reference to your letter of the 8th instant, relative to the motion made in the Honorable the Legislative Assembly by Mr. Forster on the 1st instant, respecting "A Plan showing a Line of Railway Extension from Parramatta to the Western Interior, to a point reported upon in 1832 by the late Sir Thomas Mitchell, and in 1854 by the then Colonial Architect, Mr. William Weaver,"—I have the honor to inform you this Department has never had such a plan, and to suggest inquiry be made from the Surveyor General.

I have, &c.,

THE HONORABLE THE SECRETARY
FOR LAND AND PUBLIC WORKS.

B. H. MARTINDALE.

The plan referred to must be one of those made by the Sappers, under the direction of Captain Hawkins, R. E. The point on the Nepean River referred to is nearly due east of the Town of Emu, and upwards of a mile to the south of Penrith.

It is believed that the Sappers surveyed and made a section of a projected line of Railway on the south side of the main Western Road, leaving the Great Southern Railway at or about Fairfield, and pending northerly towards Penrith, near the Bringelly Road.

Such a line would, if continued westerly instead of turning towards Penrith, have met the Nepean River in the vicinity of the crossing-place suggested by Sir Thomas Mitchell.

All the Railway Plans made by this Department, as well as those made by the Sappers, have from time to time been transmitted to the Railway Department; and the plan now sought may, with the assistance of the above explanation, be found there.

Surveyor General's Office,
18 October, 1858.

GEO. BARNEY,
Surveyor General.

Ask the further Report of the Chief Commissioner of Railways.
B. C., 19 Oct.

M. F.

Every search must be made by the Engineer-in-Chief and by Sergeant Quodling for this Plan; and, if found, it must be transmitted to the Honorable the Secretary for Land and Public Works.

21/10. To Mr. Whitton.

B. H. M.
20/10.

A Plan and Section was made by the Sappers, under the direction of Captain Hawkins, from a point near to the Fairfield Station as far as the Nepean to Penrith, running parallel to and on the south side of the Western Road, and is now in this office. This Plan does not, however, extend to the point on the River Nepean mentioned in Mr. Forster's motion.

J. W.,

THE COMMISSIONER FOR
INTERNAL COMMUNICATIONS.

THE COMMISSIONER FOR INTERNAL COMMUNICATIONS to THE SECRETARY FOR
LAND AND PUBLIC WORKS.

Railway Branch.

*Department of Internal Communications,
Sydney, 5 November, 1858.*

SIR,

With reference to your B. C. Minute of the 19th ultimo requesting a further Report on the Plan referred to in Mr. Forster's motion of the 1st ultimo, I have the honor to transmit a Plan and Section, made by the Sappers under the direction of Captain Hawkins, from a point near to the Fairfield Station as far as the Nepean at Penrith, running parallel to and on the south side of the Western Road. This Plan, however, starts from near Fairfield instead of Parramatta, and does not extend to the point on the Nepean mentioned in Mr. Forster's motion, but it is the only Plan in this Department in any way answering the description of the one asked for.

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE THE SECRETARY
FOR LAND AND WORKS.

THE COMMISSIONER FOR INTERNAL COMMUNICATIONS to THE SECRETARY FOR
LAND AND PUBLIC WORKS.

*Department of Internal Communications,
Sydney, 5 November, 1858.*

SIR,

In compliance with your letter of this day's date, relative to the missing Railway Plans, I have the honor to transmit herewith copies of all correspondence that has passed in the matter between the Department of Land and Works and this Department, and also with that of the Surveyor General, together with copies of all Minutes and Memoranda in any way bearing on the matter.

2. I have only this morning returned from a tour of inspection of the Great Western Road as far as Wellington, and learn that a number of Plans and Sections on separate sheets have been found of Surveys in the Western District, from which such a Plan and Section as asked for by Mr. Forster may probably be compiled, but no such Plan and Section have yet been traced.

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE THE SECRETARY
FOR LAND AND WORKS.

1858.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY PLANS AND SECTIONS.

(LETTER OF CAPTAIN MARTINDALE RELATIVE TO.)

*Ordered by the Legislative Assembly to be Printed, 9 November, 1858.*THE COMMISSIONER FOR INTERNAL COMMUNICATIONS to THE SECRETARY FOR
LAND AND PUBLIC WORKS.*Railway Branch,
Department of Internal Communications,
Sydney, 8 November, 1858.*

SIR,

In further reference to your letter of the 5th instant, and my reply of the same date, it may, perhaps, be advisable that I should enter more into detail than I was then able, from want of time, to do.

Upon receipt of your letter of the 8th ultimo, I made inquiries from the Engineer-in-Chief as to whether he had such a Plan as was asked for therein, or whether he was aware of such a Plan being in existence.

Upon his reply in the negative I answered your letter, stating that there was no such Plan in this Department, and suggesting that inquiry should be made from the Surveyor General.

At this time both Mr. Whitton, and myself were under the impression that the Plan asked for was one of a survey formerly made for the Government by Mr. Weaver himself.

The Minute of the Surveyor General of the 18th ultimo was received in this office, and laid before me on the 20th ultimo. This Minute suggested that the Plan asked for was one made by the Sappers and Miners. I immediately instructed the Engineer-in-Chief and Sergeant Quodling to search for it.

Upon my return from Wellington on the 5th instant, the Plans of the different surveys made by the Sappers in the Western District were laid before me.

Several trial lines are laid down upon these Plans, one commencing from near Parramatta, another from near Fairfield, and others from various points between Parramatta and Penrith, but they all terminate at or near the present Penrith bridge; and I cannot learn that any survey has ever been made crossing the river at or near the point indicated in Mr. Forster's motion.

Surveys have, however, been made in addition to those above-named from or near to the Penrith Bridge, along the Great Western Road itself, and on either side of it, one of which strikes the river on the western bank at a point nearly opposite the Cloth Manufactory, and runs for some distance towards the Penrith Bridge along that bank of the river.

A short additional survey would enable the lines already surveyed to be connected together, so as to furnish the Plan described in Mr. Forster's motion, and this can be at once undertaken, should the Government think fit to order it, and a Plan made and laid upon the Table of the House in satisfaction of Mr. Forster's motion. But the various lines shewn on these Plans have been under consideration, and have been rejected in favor of the proclaimed line.

I may, in conclusion, remark, that the exact western line is only considered to be finally settled as far as is now proclaimed, viz., to the Blacktown Road: its further course will greatly depend upon that of the best line beyond the Nepean for a Railway to Bathurst.

To assist in determining this, the Sappers are now again employed in surveying the Valley of the Grose, (from which they were driven out last winter by floods), and when this is completed it is considered sufficient data will have been procured to enable the further course of the Great Western Railway to be decided on: should the weather prove favorable this information will be obtained within three or four months.

I have, &c.,

B. H. MARTINDALE.

P. S.—In looking over the papers transmitted with my letter of the 5th instant, I find that in the hurry of preparing them for the Assembly the clerk placed among them the draft of a letter to you of the same date, having reference to your B.C. Minute of the 19th ultimo. This draft was never transmitted, but cancelled, and should not have been placed among the papers.

THE HONORABLE THE SECRETARY
FOR LAND AND PUBLIC WORKS.

RAILWAY PLANS AND SECTIONS.

No. 1.

THE SECRETARY FOR LANDS AND PUBLIC WORKS to THE COMMISSIONER FOR
INTERNAL COMMUNICATION.

*Department of Lands and Public Works,
Sydney, 15 November, 1858.*

SIR,

I am directed by the Honorable the Secretary for Lands and Public Works to invite your immediate attention once more to the subject of the Plans of the projected Railway Line moved for in the Legislative Assembly, in the hope of eliciting a clearer explanation of this matter.

2. The Plan originally moved for by Mr. Forster was described by him very minutely, and the description was transcribed into my letter to you of the 8th October last. It was as follows:—"A Plan shewing a Line of Railway Extension from Parramatta to the "Western Interior, formerly surveyed by the Government, beginning west from the terminus "south of the line now proposed, passing near the Government Quarry at Prospect and the "Township of Stratheden, and crossing the Nepean River at a point reported upon in 1832 "by the late Sir Thomas Mitchell, and in 1854 by the Colonial Architect, Mr. William "Weaver, as the most suitable spot in that vicinity for a bridge over the river."

3. In your letter of the 11th ultimo it was stated that the Railway Department had never had such a Plan, and reference to the Survey Department was suggested.

4. In his reply of the 20th ultimo, the Surveyor General stated, without the slightest hesitation, that the Plan asked for *must* be one of those made by the Sappers under Captain Hawkins, R.E., all of which had been handed over to your Department; and he added such particulars as appeared to make its identification a matter of no difficulty. The Plan asked for was, however, still not forthcoming.

5. Passing over intermediate correspondence, I am in the next place to observe, that from your letter of the 8th instant, and more especially from your personal explanation, Mr. Secretary Robertson now understands that practically a Plan does exist, and was all along known to exist, showing a projected Line from the Parramatta Terminus to within (say) a mile of the point on the Nepean indicated by Mr. Forster, diverging thence nearly at right angles to Penrith.

6. This, then, being the fact, it is quite unintelligible to Mr. Secretary Robertson how your Department, with a Plan in its possession differing so little from the description given by Mr. Forster, was unable to recognise its practical identity with what was asked for, whilst in the Department of the Surveyor General no hesitation whatever was felt in doing so merely from memory.

7. As a general principle, Mr. Secretary Robertson conceives it to be the bounden duty of all Heads of Departments, and indeed of the Government itself, to meet in a spirit of candour motions of this kind made by individual Members of the Legislature, even though the plans or documents sought for may not be described by them with minute accuracy; and he would regard as extremely reprehensible any denial of documents or information on captious or merely technical grounds.

8. I am instructed to add that it will afford Mr. Secretary Robertson peculiar satisfaction to find, from a further and fuller explanation, that the present case does not come within that category.

I have, &c.,

THE COMMISSIONER FOR
INTERNAL COMMUNICATION.

MICHL. FITZPATRICK.

No. 2.

THE COMMISSIONER FOR INTERNAL COMMUNICATION TO THE SECRETARY FOR LANDS
AND PUBLIC WORKS.

RAILWAY BRANCH.

*Department of Internal Communication,
Sydney, 15 November, 1858.*

SIR,

I have the honor to acknowledge your letter of this day's date, inviting my attention once more to the subject of the Plans of the projected Railway Line, moved for in the Legislative Assembly, in the hope of eliciting a clearer explanation of this matter.

2. I enclose a Report from Mr. Whitton, the Engineer-in-Chief, to whom I have referred the above letter, and from whom I had this morning already called for a report, in compliance with the wish you expressed in my interview with you on the 12th instant.

3. I am not aware that I can add anything to that report and the information I have already given you upon this matter.

4. It will be seen by reference to the correspondence already laid upon the Table of the House, and printed, that having referred your letter of the 8th ultimo, on its receipt, to the Engineer-in-Chief, he informed me that he had no such Plan, nor was he aware of any such Plan as that asked for being in existence. Mr. Whitton was at the time under the impression, in which I coincided, that the Plan asked for was one of a survey made for the Government by Mr. Weaver.

5. In reply, therefore, to your letter of the 8th ultimo, I informed you that "this Department had never had such a Plan," and suggested that "inquiry should be made from the Surveyor General."

6. The Surveyor General's Minute of the 18th ultimo, in reply, stating that "the Plan referred to must be one of those made by the Sappers, under the direction of Captain Hawkins, R. E.", did not reach this Department until the 20th ultimo, the day after you suggested in the House, in reply to Mr. Forster, that the Plan might be lost.

7. Upon the receipt of the Surveyor General's Minute I directed every search to be made for the Plan required, and (as I was about to leave Sydney) that, if found, it should be transmitted to you.

8. On the 21st ultimo I left Sydney for Wellington.

9. Immediately after my return, on the morning of the 5th instant, I brought with me to your office all the plans bearing upon the subject (which had been put together in my absence,) together with the draft of a letter based upon Mr. Whitton's Minute of the 28th ultimo.

10. A cursory examination of the Plans made while the papers asked for by your letter of the 5th instant were being got ready, induced me to cancel my first letter of the 5th instant, and to substitute another of the same date; but in the hurry to get the whole of the information ready for the Legislative Assembly that day, both the letters were inadvertently included among the papers laid upon the Table of the House.

11. My letter of the 8th instant and memorandum of the 9th instant furnished those details regarding the Plans, and the steps taken in reference to them, which I had not time to give, or which I was not acquainted with on the 5th instant.

12. These papers minutely detail the character and extent of the above-named Plans, point out in what they differ from the Plan described in Mr. Forster's motion, and the information necessary to be obtained to furnish such a Plan.

13. From their perusal, it will be seen that this Department has no knowledge of any survey or Plan ever having been made crossing the Nepean at the point named in Mr. Forster's motion, and that, however minute Mr. Forster's description may have been, it was so far inaccurate that neither the Engineer-in-Chief nor myself considered it as referring to the Plans of the Trial Lines of the Sappers.

14. In reference to the 7th paragraph of your letter, I entirely assent to the general principle, that it is "the bounden duty of all Heads of Departments, and indeed of the Government

15. I do not consider it necessary to refer more particularly to the terms in which you have thought it right to address me in your letter of this day's date; and, under the circumstances, I am not careful to justify myself against the charge that is implied in the two last paragraphs of that letter, as I am conscious that an investigation into the manner in which I have discharged my duties during the period that I have had the honor of serving the Government of this Colony will shew that I have acted throughout with uniform integrity and candour.

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE

THE SECRETARY FOR

LANDS AND PUBLIC WORKS.

[Enclosure in No. 2.]

Railway Department,

Sydney, 15 November, 1858.

Sir,

With reference to your Minute of the 15th instant, received this day on my return from the Hunter, requesting to know, for the information of the Government, what steps I took to comply with Mr. Forster's motion, I have the honor to state, that when my attention was first called to the subject I was under the impression that the Plan asked for was one prepared by Mr. Weaver, shewing a proposed line of Railway from Parramatta to the western interior, and crossing the Nepean River at a point about a mile and a-half above Penrith. This impression was probably created by Mr. Weaver's name being mentioned in the motion, and from the fact of Mr. Russell having previously named to me that the best crossing for a Railway to Bathurst would be about the place indicated in the motion, and stating that Mr. Weaver had reported to this effect to the Government.

The subject was therefore not a new one—my attention having been previously called to it; and as I had carefully examined all the Plans and Sections in this office of trial lines taken between Parramatta and Penrith, before deciding upon that portion of the western line already proclaimed, I was in a position at once to inform you that no such Plan as the one asked for was in this office.

After reading Colonel Barney's minute of the 18th October, suggesting that the Plan referred to might be one made by the Sappers, under the direction of Captain Hawkins, I made the following minute, dated October 28th, on the paper forwarded to me:—

"A Plan and Section was made by the Sappers, under the direction of Captain Hawkins, from a point near to the Fairfield Station, as far as the Nepean River at Penrith, running parallel to and on the south side of the Western Road, and is now in this office. This plan does not however extend to the point on the River Nepean mentioned in Mr. Forster's motion."

This minute was, I believe, laid before you immediately on your return from an inspection of the Western Roads, on the 5th instant; and the Plan and Section was forwarded to you, at your request, the same day.

In reference to the letter of this day's date from the Honorable the Secretary for Lands and Works, I think it is not necessary for me to assure you that there was no intention on my part to withhold any Plans, or other information asked for by the Legislative Assembly.

I have, &c.,

JOHN WHITTON.

Captain B. H. Martindale,

Chief Commissioner of Railways.

No. 3.

It is assumed in the letter from this Department of yesterday's date that there is a Survey of a line from Parramatta Terminus to within, say, a mile of the point on the Nepean indicated by Mr. Forster. This position is neither admitted nor denied in Captain Martindale's letter yesterday, nor in the published minute to which he refers. Mr. Robertson therefore wishes Captain Martindale to have the goodness to say whether the fact is as above stated?

There is a Survey of a line from a point about a mile south-west of the present Parramatta Station to within, say, a mile of the point on the Nepean indicated by Mr. Forster. This line is alluded to in my letters of the 5th (No. 2) and 8th instant, and fully detailed in my memorandum of the 9th instant.

Does

Does the line in fact commence at Parramatta, or at Parramatta Terminus?

It commences about a mile south-west of the present Parramatta Station.

If not, how far from the Terminus does it commence, and in what direction?

To within what distance from the point on the Nepean indicated by Mr. Forster does the line in question reach?

About $1\frac{1}{2}$ miles—say 1 mile.

It will be a great convenience if these questions can be answered hereon in time for the Assembly to-day.

B. H. M.
16 November, 1858.

No. 4.

THE SECRETARY FOR LANDS AND PUBLIC WORKS TO THE COMMISSIONER FOR INTERNAL COMMUNICATION.

*Department of Lands and Public Works,
Sydney, 18 November, 1858.*

SIR,

Having received replies to the queries contained in my B. C. reference of the 16th instant, on the subject of the Railway Plans moved for by Mr. Forster in the Legislative Assembly, the Secretary for Lands and Public Works is now in a position to reply more formally than has yet been done to your explanatory letter of the day previous.

2. From that letter it appears, first—That when the Plans were first called for, yourself and the Engineer-in-Chief were misled into the belief that they related to a survey made by Mr. Weaver. Second—That as far back as the 5th instant you were aware of the existence of a Railway survey from a point about a mile south-west of the present Parramatta Station to within (say) a mile of the point on the Nepean River indicated by Mr. Forster.

3. On the first point, the Secretary for Lands and Public Works can only regret the mistake growing out of the misinterpretation of the words of Mr. Forster's motion, in which, it is worthy of notice, Mr. Weaver's name is not used in connexion with the Railway survey, but only as helping to identify the precise spot on the Nepean over or to which the survey was supposed to have been conducted.

4. As for the rest, it is a subject of still deeper regret to Mr. Secretary Robertson that from this mistake the Government should be placed, to all appearances at least, in the position of withholding from the Legislative Assembly Plans so closely in accordance with the terms of their Address.

I have, &c.

MICHL. FITZPATRICK.

THE COMMISSIONER FOR
INTERNAL COMMUNICATION.

1. The first of these is the fact that the *Journal* is a very

1858.

Legislative Assembly.
NEW SOUTH WALES.

RAILWAY CROSSING IN ABBOTT STREET, WEST MAITLAND.

(I. ROBINSON, AS CHAIRMAN OF PUBLIC MEETING.)

Ordered by the Legislative Assembly to be Printed, 1 June, 1858.

To the Honorable the House of Assembly.

The Memorial of Land-owners, Household-ers, Farmers, and others, resident at and beneficially interested in land and premises lying on and near to the road leading from the east end of West Maitland to Louth Park, Buchanan, Buttai, Brooks' Flat, Sugar Loaf, Brisbane Water, &c., &c., &c.,—

RESPECTFULLY SHEWETH:—

That a Memorial signed by upward of three hundred residents in the localities above-mentioned was laid before the Railway Commissioners, by deputation, praying them to construct a level crossing at the intersection of Abbott-street, by the Great Northern Railway, it being the principal thoroughfare leading from the south side of Maitland to the above-mentioned extensive grain producing localities; and to give your Honorable House an idea of the value of landed property in these districts, upwards of eighty thousand pounds worth of land has been disposed of during the last four years in the immediate vicinity.

Captain Martindale promised to send up a person to inspect and report. Mr. Bell did inspect, and expressed surprise at the great extent of agricultural country, of which Abbott-street is the leading and only direct outlet, but beyond that nothing further was made known to your Memorialists.

Your Memorialists then applied to their representatives in Parliament—Messrs. Weekes and Dickson—to wait upon the Commissioners to learn their intentions upon the subject, and have since received, through these gentlemen, the following decision of the Commissioners, viz.:—"That a level crossing at Devonshire-street, and a new road running "parallel with the Railway from High to Devonshire-street, would be sufficient."

Your Memorialists consider that the Commissioners are acting in a very unconstitutional and arbitrary manner in thus closing up the leading and direct thoroughfare, and forcing all the traffic of a populous district through a narrow and boggy road, and causing the inhabitants to perform a zigzag route to gain High-street,—Abbott-street possessing the advantages of a higher level, exemplified as being the only street leading south available for traffic for weeks after the late disastrous floods, and also possesses greater width, and by having a level crossing would do away with the necessity and expense of purchasing land and metalling the proposed parallel road, at a great saving to the Revenue.

Your Memorialists further pray that your Honorable House, taking into consideration the great distance of the Terminus from the east end of West Maitland, would grant them a passenger platform, either at the intersection of High or Abbott-street by the Great Northern Railway. The greater facilities offered to travellers would amply compensate for any additional expense that may be incurred; and as a precedent has been established by forming a Station at Honeysuckle Point, and another at Warratah, with not ten per cent of the inhabitants or producing capabilities.

Your Memorialists conceive that unless a crossing place is afforded them at the locality mentioned, a great injustice and a public wrong will be done them, and such an injustice as no amount of ordinary compensation could remove.

Your Memorialists therefore pray that your Honorable House will take the premises into consideration, and that you will be pleased to order and allow that a crossing place may be constructed at the intersection of Abbott-street, West Maitland, by the Great Northern Railway, and of a passenger platform at Abbott or High-street.

And your Memorialists will ever pray, &c.

ISACK ROBINSON,
Chairman of the Public Meeting.

West Maitland,
25 May, 1858.

1858.

Legislative Assembly.

NEW SOUTH WALES.

WALLIS' CREEK.

(CUTTINGS MADE BY RAILWAY COMMISSIONERS.)

Ordered by the Legislative Assembly to be Printed, 22 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, being Landowners and others interested in the object of this Petition,—

HUMBLY SHEWETH:—

That the Railway Commissioners, in extending the line of Railroad from East Maitland to West Maitland, have dammed up the natural outlet of the waters of Wallis' Creek, and the district drained thereby. In lieu thereof they have made a new cut from Wallis' Creek to the Hunter River, and which cut is not to the level of the natural outlet. This arrangement has caused a great loss to your Petitioners, by flooding their lands, and also prevented the drainage of the same.

Your Petitioners beg respectfully to acquaint your Honorable House that Wallis' Creek runs from two to three miles within banks which gradually decrease in height to the level of the surrounding country until it reaches Brooks' Swamps on one side and Hungerford's Swamps on the other side. The greater portion of these swamps are drained by this creek, and the slightest rise above highwater-mark begins to overflow them—and other localities on both sides of the creek are more or less most seriously injured, being now covered with four feet of water. In addition to this, there are various cuttings through the banks of the said creek, made at great expense, to drain the intermediate low lands lying on both sides of the creek. These cuttings are made to low-water mark, with self acting flood-gates at their mouths, therefore, if the water be kept stationary even at highwater-mark, or from any obstacles causing the slightest rise of the water in the creek, it begins to interfere with the necessary drainage of the land, to the injury of great numbers of your Petitioners.

Your Petitioners having applied to the Railway Commissioners, and not having obtained a satisfactory redress of their grievances, humbly pray that your Honorable House will be pleased to take such immediate steps as shall cause the new cutting to be made to the original depth of the natural outlet that has been dammed up.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 242 Signatures.]

1858.

Legislative Assembly.

NEW SOUTH WALES.

LANDS TAKEN FOR RAILWAY PURPOSES AT HONEYSUCKLE POINT.

(PETITION FROM LESSEES.)

Ordered by the Legislative Assembly to be Printed, 10 September, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Lessees of Land at Honeysuckle Point,
Newcastle,—

HUMBLY SHEWETH:—

That your Petitioners are Lessees, from the Bishop of Newcastle, or his authorized agent, of land at Honeysuckle Point, Newcastle.

That your Petitioners had been for some years in quiet possession of same, and had, in several instances, erected buildings and other improvements thereon, when, in or about the month of July, in the year 1854, it was taken from them, respectively, by the Hunter River Railway Company, under the powers of, and for the purposes of, their Act,—your Petitioners having in all respects, by payment of rent and otherwise, fulfilled the conditions of their tenancy up to such end of their period of occupation.

That, in compliance with the requirements of their Act, the Hunter River Railway Company served notices on your Petitioners of their intention to purchase their respective interests in the said land, and had already sent down Commissioners to arrange the different amounts of compensation, when, unfortunately for your Petitioners, a dispute occurred between the Bishop of Newcastle and the Trustees of the Land as to the validity of the leases, and a point of law was raised which suspended the arrangement, without any fault or blame being attachable to your Petitioners.

That while the question was thus undecided, the said Railway passed by an Act of the Legislature into the hands of the Government; and that, although your Petitioners have since omitted no opportunity of urging a settlement of their just claims to compensation, they, as well as the Trustees, still continue unremunerated for their several interests in the land.

That had not the land been thus taken for Railway purposes your Petitioners had still continued undisturbed in its possession.

That previous to handing over the line to the Government, the Hunter River Railway Company expressed an anxious desire to meet the claims of your Petitioners, knowing, as they said, the injustice of the case, and that the Railway Commissioners have since, on several occasions, admitted their claims to compensation; but that, although the latter have held meetings at Newcastle for an adjustment of the question, its settlement seems as remote as ever.

That as the Government (which assumed the position and liabilities of the Hunter River Railway Company), have thus, for several years past, had possession of this land—on which the Honeysuckle Point Station is now built—without having given any compensation to your Petitioners, your Petitioners are at length obliged to approach your Honorable House to ask that equitable adjustment of their claims which they are unable otherwise to obtain.

That your Petitioners, therefore, pray that your Honorable House will be pleased to concede to your Petitioners that justice for which, after such a period of delay, they humbly conceive themselves entitled to beg, and that your Honorable House will be pleased to order such an adjustment of their claims as will meet the equity of the case; and that, as the claims of the Trustees of the land are involved in the terms of the leases granted to your Petitioners, your Honorable House will be pleased to order a coincident adjustment of both accordingly, to which course there can be no just objection.

And your Petitioners will ever pray.

[Here follow 16 Signatures.]

*

1858.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY TERMINUS, PARRAMATTA.

(PETITION FROM CERTAIN INHABITANTS.)

Ordered by the Legislative Assembly to be Printed, 31 August, 1858.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of the undersigned Landowners, Residents, Tradesmen, and Inhabitants generally of Parramatta south, and the neighbourhood,—

SHIWEETH :—

That your Petitioners hear with surprise, disappointment, and alarm, the contemplated change of the site of the Railway Terminus at Parramatta.

That your Petitioners have in many cases purchased, and at a very dear time, land in the vicinity of the present situation of the Railway Terminus at Parramatta south, and on most of which are erected buildings and improvements—some of a very expensive character.

That your Petitioners would not have purchased and improved in this locality, only on faith in the permanency of the present site.

That should the contemplated change take place, the deterioration in the value of such lands, property, &c., will be very great.

That, therefore, feeling the unfairness and injustice that your Petitioners would suffer in the event of this change taking place, they most humbly pray that your Honorable House may see the propriety and equity of permitting the Terminus to remain in its present site.

And your Petitioners will ever pray.

[Here follow 42 Signatures.]

1858.

Legislative Assembly.

NEW SOUTH WALES.

GOVERNMENT RAILWAYS BILL.

(PETITION FROM MUNICIPAL COUNCIL.)

Ordered by the Legislative Assembly to be Printed, 29 July, 1858.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the Municipal Council of the City of Sydney,—

SHEWETH:—

That, by a Bill now under the consideration of your Honorable House, intituled "*The Government Railways Bill of 1858*," it is proposed to grant to the Commissioner for Railways power to divert, or alter, or raise, or sink the level of any road or street, as he may think fit, for the purpose of constructing any line of Railway.

That your Petitioners respectfully submit, that the citizens have incurred great expense in forming the streets of the City, and in laying down water mains, constructing sewers, and providing means for lighting; and that, under the authority of certain Acts, the said streets have been duly proclaimed, and permanent levels fixed, to which the stores and shops have been built.

That it is necessary from time to time to open the streets for the purpose of forming house connections with the main sewers, and for laying or repairing water mains, or connecting service pipes therewith.

That the width of the principal thoroughfares is found to be insufficient even at the present time for the business traffic of the City.

That your Petitioners believe that great public inconvenience will arise from two Bodies Corporate having equal extensive power over the streets of the City, inasmuch as it may happen that streets formed by the Municipal Council, at very great cost, may be at any time entered upon by the Commissioner for Railways, and destroyed by his operations.

That the power proposed to be conferred upon the Commissioner by the said Act will enable the Commissioner to arbitrarily alter the levels of the streets, to the injury of the property of the citizens, and to interrupt or altogether divert the traffic in the public thoroughfares, and interfere with the regular supply of gas and water to the inhabitants.

Your Petitioners therefore humbly pray that your Honorable House will exempt the City of Sydney from the operations of the Government Railways Bill now under your consideration, and that no Railway, Tramway, or extension of the same, may be made within the limits of the City, unless under the authority of a special enactment by the Parliament for that purpose only.

And your Petitioners will ever pray.

(L.S.)

JOHN WILLIAMS,
Mayor.

1858.

Legislative Assembly.

NEW SOUTH WALES.

GOVERNMENT RAILWAYS BILL.

(LETTER FROM TOWN CLERK, AND REPORT OF CITY ENGINEER UPON.)

Ordered by the Legislative Assembly to be Printed, 8 April, 1858.

THE TOWN CLERK to THE COLONIAL SECRETARY, forwarding copy of City Engineer's Report on Railway Bill.

*Town Clerk's Office,**Sydney, 7 April, 1858.*

SIR,

I have the honor, by direction of the Right Worshipful the Mayor, to transmit herewith a copy of a Report received from the City Engineer, pointing out the difficulties which may arise in carrying out the works under the control of the Corporation from the extensive, and apparently uncontrolled, power over the streets of the City proposed to be granted to the Commissioner for Railways by the Bill now under the consideration of the Legislature.

2. His Worship would beg to submit, for your consideration, that the difficulties contemplated will be entirely avoided by excepting the City from the operations of the Act, as it will be most inconvenient that the Railway Commissioner should have the power, in opposition to the wishes of the Municipal Council, permanently to alter the course or level of the streets as he may think proper, as contemplated by the 10th section of the Act, and referred to in the accompanying Report.

I have, &c.,

CHAS. H. WOOLCOTT,

Town Clerk.

THE HONORABLE

THE COLONIAL SECRETARY,

&c., &c., &c.

*City Engineer's Office,**Sydney, 6 April, 1858.*

GENTLEMEN,

Since your Worship placed in my hands, on Thursday last, the Government Railway Bill of 1858, entitled "*A Bill to make more effectual provision for the construction of Railways in the Colony of New South Wales, and for the regulation of the same*," I have devoted to it my most careful attention, with the view to report in what manner the interest of the citizens of Sydney may be affected by the powers and various provisions contained in it.

2. The general character of the Bill throughout would convey an impression that the power sought by it is to enable the Government, through the Chief Commissioner, to make Railways through any part of the rural and suburban districts of New South Wales, when it thinks proper or convenient, without being under the necessity of applying to the Legislature for a special enactment for every new line, or extension of existing lines, into the interior of the Colony. In fact the whole of the clauses and provisions are so peculiarly adapted to the purposes of opening out this young Colony, by forming railway communication between the several towns, that if the power sought were confined to that particular and laudable object,

every inhabitant of New South Wales might rejoice in seeing the Bill become the law of the land, and the more so to see its very extensive powers equitably carried into execution.

3. The powers sought for in this "Government Railways Bill" are, however, not to be confined to the rural districts; the Commissioner of Railways, who has to administer them, may extend his jurisdiction throughout the whole City of Sydney, as forming part and parcel of the said Colony.

4. Before the Municipal Act of 1857, the administration of the affairs of the City of Sydney, and the conduct of all its works, were vested in three Commissioners, appointed in like manner to this Railway Commissioner; then the Municipal Act of 1857 vested the management of all the City affairs in the hands of the Municipal Council.

Clause 7.
Clause 137,
p. 47.

5. The Government Railway Bill of 1858 constitutes the Commissioner of Railways a "Corporation Sole," who may at any time, without the special consent of the Legislature being first obtained, and without any previous notice to the Municipal Council, be empowered by the Government to carry his works throughout the City,—to construct Railways along George, Pitt, and any other streets or places in Sydney that may be thought by the Government expedient for the interests of the public at large; and the management of such streets, Railways, and works within them will be entirely under the control of the Commissioner of Railways and his officials.

6. Clause 10 empowers the Commissioner of Railways to take and appropriate to Railway purposes such parts of the City as he may require, and form such trenches, cuttings, and embankments along the streets as are suitable for Railways, without regard to the adopted levels or the present elevation of the houses on such lines of street. He may take up the water pipes, cut through the sewers, and any materials which may be dug up he may use and appropriate to the purposes of such Railways; he may remove any obstructions to his course in carrying out the works, and generally do all other acts necessary for making, altering, or using the Railway.

7. The new sewers constructed in the City have cost £200,000, and if Railways be constructed over them the citizens will either be debarred from utilising those sewers, or the Railway must be subject to frequent interruption and stoppage from the opening of streets to make connections with the sewers. In fact, should this Bill become law in Sydney, it will very seriously clash with the Water and Sewerage Acts of 1853, as well as the Municipal Act of 1857. For instance, should a Railway be made where sewers have not yet been constructed, the Municipal Council might, under the powers of the Sewerage Act, take up, remove, or cart away the materials of such Railway, and put down the sewers without giving any notice of their intention whatsoever, and any obstruction to their officers or people in the execution of the works would subject persons interfering to a penalty not exceeding ten pounds for every offence; and so in like manner with the Water Act. If the Government Commissioner wishes to make his Railway and Terminus in Hyde Park, or elsewhere within the City, the Municipal Council may, under the Water Act of 1853, take possession of the land and forthwith commence the construction of the contemplated Storing Reservoirs, and thus prevent Railway operations entirely; and any interference or obstruction would subject the offender to ten pounds penalty for every offence. In fact, under three such conflicting Acts, it would be absolutely impossible for the public to derive any benefit. Either the Government Railways Bill of 1858 must be declared not to extend to the City of Sydney, or the Water and Sewerage Acts of 1853 must be repealed.—In the former event, the Commissioner of Railways would have to obtain a special enactment of the Legislature for his Railway Extension into the City, as is done elsewhere; in the latter case, the City affairs would chiefly revert to the care of one Commissioner.

8. The suggestion of making a Railway from the station at Redfern along Pitt-street to the Circular Quay is contained in the Report of the Commissioners of Railways to the Secretary of Lands and Works, under date the 21st August, 1857; and the extension to, and Terminus in, Hyde Park also.

9. The 13th and 14th sections, page 7, requires a map or plan of the intended line, with book of reference, to be exhibited at the Commissioner's Office; and any "well grounded objections" may be sent in for consideration within one month after the publication of the notice of the "extent and direction of the intended line." Suppose the line along Pitt-street, contemplated in the Railway Commissioner's Report of the 21st of August last, were in question, it would not be possible to learn from a map or plan what was intended to be done by the Commissioner beyond the extent and direction of the work. It would contain, probably, no more than two red, blue, or black lines; the plan of Pitt-street, which would indicate the "extent and direction" of the lines of rail, and the book of reference would contain only what is usual—the names of the owners of land on the line, and the quantity required for the purposes of the Railway.

10. From this information the citizens could form no idea of the detail of the works contemplated, and consequently would not be in a position to make any "well grounded objection."

11. Complete plans and sections in detail must be exhibited, before an owner, or any professional man he may employ, can form an idea of the damage he may sustain by the intended works. Again, three or four hundred proprietors along the line of Pitt-street could never obtain all the information they require from one set of such plans deposited at the Railway Office, and be prepared to send in "well grounded objections" within one month of the date of the first notice in the *Gazette*. It is doubtful if any of them ever see the *Gazette*; and the majority of the owners, particularly the poorer ones, would, through ignorance, allow the month to elapse without stirring in the matter. Here I would observe—and from the general tone of the Act it is only a reasonable conclusion—that it could scarcely have been the intention of the original framers of the Bill to apply the powers of it to the City of Sydney; or it would surely have provided for the deposit of at least one set of

of plans and books of reference with the Mayor at the Town Hall, in order that the representatives of the citizens might watch over their interests for them, whilst attending to the business of the City generally. Further, because the Bill in no way mentions the City or the Municipal Council, but merely states that, after final approval of the line, a map and book of reference will be deposited with the Clerk of Petty Sessions.

12. And, further, I find no specific provision for compensating citizens for the goodwill of their business, when deprived of it; or for interruption to business, and perhaps ruin, which may devolve upon individuals in consequence of the construction of such works.

13. There are, however, some few clauses of the Act which refer to streets, and the last clause which defines who shall be deemed "owners" of property, and which make it tolerably apparent that the Sole Commissioner will be in a position to take possession of any streets in Sydney, and any lands in the City, one hundred or more yards in width, as may be thought expedient for his purposes, without any notice to or of the Municipal Council in the matter.

14. In all other countries, excepting those under absolute or arbitrary Governments, it is customary when seeking power to make Railways through cities or towns to obtain from the Legislature a special enactment for the purpose. After the second reading of such Bill in the House of Representatives, a special committee is appointed by the House to take evidence from the promoters of, and also the opponents to, the Bill. Before such committee every requisite level and other detail is thoroughly sifted and canvassed on both sides, until no reasonable objection can be found to exist; and any incorrectness which can be shown in the levels, or defect in the details, invariably affects the success of the Bill. Every Member of the House must be furnished with a complete set of lithographed plans and sections of the line. All corporate bodies interested, and Clerks of Petty Sessions, must have similar copies served upon them before the Bill is brought into the House.

15. Thus every citizen has a fair opportunity to attend to and protect his own interests before the Committee of the House of Representatives, and the City Members being fully cognizant of all the details of the line, can protect the interests of their constituents.

16. The value of property in Pitt-street, should a Railway be made through it, would be very seriously deteriorated, and the more so should the Commissioner avail himself of the powers of this Act to draw his trains through that street by locomotives. Wharf and warehouse property at or near the Circular Quay would be considerably enhanced in value; but these would be matters for the consideration of a Committee of the House of Assembly, if special enactments for power to construct a Railway along Pitt-street, were sought for.

17. Having submitted these observations to your notice on some of the clauses which I conclude would be most obnoxious to the citizens, and prejudicial to their interests, if the powers delegated by the Act to the Sole Commissioner are allowed to extend over the City of Sydney, I would earnestly advise an appeal from the Corporation of Sydney to the Legislative Assembly, praying that the citizens may not be subject to the operation of this General Railway Bill; and further, if it be the intent to extend the present Railway into Sydney, it may not be done without a special enactment of the Legislature.

I have, &c.,

E. BELL,

City Engineer.

THE RIGHT WORSHIPFUL

MAYOR AND ALDERMEN,

City of Sydney.

NEW SOUTH WALES.

RAILWAY ACCIDENT.

(REPORTS AND EVIDENCE RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 13 July, 1858. ▶

REPORTS from the Chief Commissioner of Railways, Engineer-in-Chief, Traffic Manager, Traffic Inspector, Locomotive Foreman, and Inspector of Permanent Way; with a Statement of the particulars of the killed and injured by the Accident on the Great Southern Railway, on the 10th July, 1858.

Also,

The Evidence taken at the Coroner's Inquest.

RAILWAY ACCIDENT.

THE CHIEF COMMISSIONER FOR RAILWAYS to THE SECRETARY FOR LANDS AND
PUBLIC WORKS.

10 July, 1858.

SIR,

I have the honor to report that a serious accident has occurred on the Great Southern Railway, this morning.

The carriages appear to have left the line at Haslam's Creek Bridge, and, after running about three hundred yards, the horse-boxes and three carriages fell over the bank, and three others were thrown off the line.

It is with deep regret I have to add that two persons have been killed, other persons seriously wounded, and three, more or less wounded.

The names of those killed are, George Want, Esq., of Parramatta, and Mrs. Hackett, of Pennant Hills Road; those seriously wounded are, Mrs. Mobbs, of Pennant Hills Road, and a young man named Southwell, and his sister. Several other persons are slightly injured, and among them J. H. Atkinson, Esq., of Liverpool.

I am at present inquiring into the cause of the accident, with the Engineer-in-Chief and the Traffic Manager.

I have, &c.,

B. H. MARTINDALE.

THE HON. SECRETARY
FOR LANDS AND PUBLIC WORKS.

THE CHIEF COMMISSIONER FOR RAILWAYS to THE SECRETARY FOR LANDS AND
PUBLIC WORKS.

Railway Department, Sydney,
13 July, 1858.

SIR,

I have the honor to submit, for the information of the Government, a further Report upon the late melancholy accident on the Great Southern Railway.

I received the first information of the catastrophe by a telegraphic message from the Sydney Station, a few minutes before 10, A.M., on the 10th instant, and immediately proceeded to the Station, where I found the Engineer-in-Chief, and left, accompanied by him, by the 10 o'clock train, which was detained for me a few minutes. I ascertained, before leaving, that the Traffic Manager, with ample medical attendance, together with the Permanent Way Inspector and a sufficient body of laborers, had gone down the line by a special train half an hour before, and I learned that you were with that train.

Finding, on reaching the spot, that every possible assistance had been, or was being, rendered to those injured, I turned my attention to ascertain, if possible, the cause of the accident. I examined the line with the Engineer-in-Chief, and found that one carriage or truck had first quitted it. I have since found reason to believe that this was the horse-box next to the tender. The spot where the horse-box quitted the line is close to Haslam's Creek Bridge, about $2\frac{1}{2}$ miles from Parramatta, and about 250 yards from the place where the carriages were overturned. The line for about half a mile before the bridge is straight, and falling with an easy gradient, it is then straight and level for a short distance, after which there is a rising gradient on a sharp curve. The horse-box left the line almost immediately after entering the level. I saw the line tried about the bridge with a gauge rod, it was in true gauge and good order. Nearer the curve, some of the heads of the dogs that fasten the nails to the sleepers were cut off, and strewed about the line, and still nearer the scene of accident, about two chains length of the line was broken up. These injuries were, no doubt

doubt, caused by the train leaving the line. I next examined the carriages: Two horse-boxes were thrown over the embankment (which is here about 15 feet high) on the right hand side, looking towards Sydney, and also one third class carriage; two other third class carriages were thrown down on the edge of the bank, and the break-van and remaining carriages and trucks were standing along the roadway. There was no wheel nor axle broken, but the axles were bent and twisted, and the carriages damaged in the way that might have been expected from such an accident, and which renders it impossible to state what their condition was immediately before the accident. The engine sustained no damage, but started for Sydney to obtain assistance immediately after the driver learned what had happened.

Soon after I had inspected the carriages, Mr. Darvall, the Magistrate at Parramatta, came up and informed me that he had sent for the Coroner, and that if he did not come within an hour he should wish the bodies of the two persons who were so unhappily killed taken to Parramatta; and that if the Coroner could not be found, he should take upon himself the responsibility of holding the inquest. I informed him that whatever he wished should be done, and that I would take care all the witnesses connected with the Railway should be in attendance.

Soon after this the Coroner arrived, and the bodies were conveyed to Parramatta, where the inquest was held. I attended the inquest, and had every person present connected with the Railway Department who, I had then ascertained, could throw any light on the matter; and I rendered what assistance I could towards ascertaining the facts of the case.

The verdict returned was as follows:—"We find that the deaths of the deceased parties, Mr. George Want and Mrs. Hackett, was caused by an accident on the Railway, the cause of which accident has not been proved by evidence. We are unanimously of opinion that the management of the Railway is careful and efficient, and that no blame attaches to any person connected with it."

I returned to Sydney by the last train that night, travelling along the up-line, upon which the accident happened, which had in the meantime been repaired. On the following day (Sunday the 11th) I visited those who had been injured, as far as time permitted, stopping upon the way to Parramatta to make a second inspection of the line and carriages.

Among the reports annexed will be found a list of the persons so unfortunately killed and injured, furnished to me by Dr. Gwynne of Parramatta, who, together with Dr. Rutter of the same place, have taken joint charge of the sufferers, with the exception of three cases in Sydney. These gentlemen were good enough to accompany me in visiting their patients, and I had the pleasure to hear them report favorably of them all. The opinion they then expressed has been further confirmed by a report I have received from them this day.

I can only reiterate the expression of my deep regret that two persons should have met their deaths, and so many have been injured, by this melancholy accident.

I felt it my duty yesterday (the 12th inst.), while the occurrence was yet recent, to take the evidence of all officers and servants of the Railway Department who have been considered able to furnish any information upon it; and I now enclose their evidence for the information of the Government, together with reports from the Engineer-in-Chief, Traffic Manager, Traffic Inspector, Foreman of Locomotives, and the Inspector of Permanent Way.

From the evidence and information thus obtained, I can only conclude that the accident was not the result of carelessness or furious driving, of any defect in the permanent way, nor of defective coupling of any one carriage to another, or to the engine.

I think it my duty, however, to draw particular attention to the fact, that the two horse-boxes were not coupled together with a screw coupling, but by side chains and centre links. This would, unquestionably, permit of greater oscillation than if the buffers had been brought into contact by a screw coupling; but I concur in the opinion expressed in his annexed report by the Engineer-in-Chief,—that this would not be sufficient to cause such oscillation as to throw the horse-box off the line, except the train were proceeding at a far greater speed than has been stated, and that, even supposing the speed to have been far greater, it does not follow as a consequence that the absence of the screw coupling would have caused sufficient oscillation to throw the box off the line.

The inspection of the line, and the information and evidence obtained, lead to the belief that the horse-box next to the tender was the first to leave the line; that, in consequence, the coupling between the engine and the horse-box broke, occasioning the former to shoot

shoot a-head, and that immediately after the remainder of the train, arriving at the curve, was drawn off the line by the leading horse-box proceeding straight forwards, till it fell over the embankment.

The impression that is current that the horse-box was forced off the line by the speed at which the train was travelling is not borne out by any evidence I have been able to obtain. A gentleman called at this office yesterday, and informed me that Mr. Atkinson, who was in the train, had said, just before the accident occurred, "What a fearful speed we are travelling at." It will be seen from the annexed report of the Traffic Manager, that Mr. Atkinson has informed him he never said anything of the kind. It is but natural, however, that such rumours should spread.

The impression that the horse-box is light when empty, and unfit to travel by a passenger train, especially next to the engine, is erroneous; and I may refer the Government for information upon this point to the evidence given by the Engineer-in-Chief at the Coroner's Inquest, a copy of which will be found among the papers annexed.

Assuming, therefore, the concurrent evidence of the witnesses as to the rate of speed to be true, I am led to suppose that some derangement in the running gear of the horse-box may have been the immediate cause of its leaving the line. This must have taken place between the time of the train leaving Parramatta and that of the accident, as both boxes had travelled from Sydney to Parramatta the same morning, and it may possibly have happened immediately before the sad occurrence took place.

While thus stating my view of the cause of the accident, I cannot claim for it more weight than for a mere conjecture.

I purpose still to make such further inquiries as suggest themselves to my mind, and some experiments as to the working of the horse-box; but I am unwilling to have this further touched at present, in case the Government should wish to have an independent inquiry made.

It may be satisfactory to the public to know that the trains are timed to run at a very moderate speed, and every carriage is constantly and carefully examined; and that an additional officer was appointed on the 3rd June last to act as Traffic Inspector, under the Manager, whose special duty it is to see to the proper arrangement of the carriages in the trains, and to their regular running; and to transmit a daily report for the information of the Chief Commissioner, stating in detail every irregularity that has come under his notice during the preceding day.

I am aware, however, that the inquiry I have instituted may not be satisfactory to the public, inasmuch as there is wanting the evidence of those unconnected with the Railway Department, who may be able to afford information in this matter. It was beyond the power of the Commissioners, nor has the time permitted them to command the attendance of any but their own officers and servants; at the same time, it appeared to be their duty to furnish to the Government, with the least possible delay, every information within their reach.

While, therefore, the Commissioners have endeavoured to discharge their duty in connection with this said event, I am confident it is the desire of the Railway Department generally that the investigation into the cause of it may be of the fullest character—one that shall at the same time be satisfactory to the friends and relatives of the deceased and injured, and to the public generally.

I have, &c,

THE HON. THE SECRETARY
FOR LANDS AND PUBLIC WORKS.

B. H. MARTINDALE.

THE ENGINEER-IN-CHIEF to THE RAILWAY COMMISSIONERS.

*Railway Department,
Sydney, 13 July, 1858.*

GENTLEMEN,

Immediately after receiving information that an accident had occurred on the Great Southern Railway, I proceeded down the line to Haslam's Creek, where I found the whole of the carriages of the 7 35 A.M. up-train from Campbelltown off the rails; the engine did not leave the rails, having broken the coupling attaching the first horse-box to the tender.

On

On a careful examination of the road, I discovered that the wheels of a carriage or horse-box had left the rails about 250 yards on the Parramatta side of where the carriages had been overturned; but at this point the permanent way was in perfectly good condition, both as to gauge and level.

I afterwards examined the wheels, axles, axle-boxes, and springs of both carriages and horse-boxes, but there was nothing in their condition that might not have been caused after being thrown off the rails. There was no broken wheel, axle, axle-box, or spring; but these were all so much strained and driven out of position, that it is now impossible to state their condition immediately preceding the accident.

The horse-boxes, which I believe first left the rails, are of the usual construction, having wheels, axles, axle-boxes, and springs, sent out from England, the framework only being made in the Colony, and they are in every respect well and properly constructed.

The line where the carriages first left the rails is level for about 200 yards, and for half a mile towards Parramatta is perfectly straight, with a falling gradient in the direction of Homebush at the rate of 40 feet per mile; after passing over this level portion, the rails are on an incline of one in a hundred, and a curve of 20 chains radius.

After a most careful examination of the rolling stock and permanent way, I am satisfied that there is nothing in the general construction of either that could have been the cause of the accident; but some derangement may have taken place of the axle-boxes or springs of the horse-boxes after leaving Parramatta, which would account for the accident.

My impression, after having inspected the line and carriages, was, that the accident might have been caused by excessive speed, combined with slack couplings between the carriages; but this supposition is destroyed by the direct evidence given as to the speed at the time of the accident, and the state of the couplings before leaving Parramatta.

From the evidence of the porters at Parramatta, and the guard of the train, the whole of the carriages and horse-boxes were connected by screw couplings, except the coupling between the two horse-boxes, which was not a screw coupling, but had centre links and side chains; the buffers, therefore, of the horse-boxes would not be in contact, and greater oscillation would take place than if a screw coupling had been used; but if the train were not proceeding at a far greater speed than that stated, this would not be sufficient to throw the horse-boxes off the line. Nor does it follow that even at a much higher speed those horse-boxes would necessarily have been thrown off the line in consequence of not having screw couplings, as waggons constantly travel by goods trains at a speed of 30 miles an hour and upwards, on which trains screw couplings are never used. Waggons also are frequently attached to passenger trains, both here and in England, and are connected only with centre links and side chains.

The speed of this train having been spoken to so positively by so many witnesses as not being greater than 25 miles an hour, I regret that I am not in a position at present to trace any cause for this lamentable accident. I can merely suggest that some derangement may have taken place in the wheels, axles, axle-boxes, or springs to one of the horse-boxes, after the train left the Station at Parramatta.

I have, &c.,

THE COMMISSIONERS FOR RAILWAYS.

JOHN WHITTON.

THE TRAFFIC MANAGER to THE CHIEF COMMISSIONER FOR RAILWAYS.

Sydney, 12 July, 1858.

SIR,

I have the honor to inform you, that on Saturday last, shortly after 9 o'clock A.M., I received a message from the Inspector that an accident had occurred on the Great Southern Line; no particulars had arrived, but it was stated that several persons were killed. I immediately hastened to the station, and proceeded by special train to the scene of the disaster. Upon the arrival of the engine bringing the melancholy tidings, the Inspector had formed a train to bring on the wounded, prepared necessary comforts and stimulants, and called in the assistance of four medical men, with whom, and the Locomotive Foreman and Inspector of Works, who had collected their hands and material, and a strong body of porters, I immediately started. The Minister for Lands and Works coming up just as we were moving, accompanied the train.

358—B

Arriving

Arriving at Haslam's Creek, about 3 miles beyond Homebush, we found the crippled train in the following position:—On the down side of the line, and nearest to Parramatta, were two horse-boxes,—these were over the embankment, one lying with its roof parallel to the fence, the other nearly at right angles to it; a few yards nearer to Sydney a 3rd class carriage—over the bank, and roof nearly parallel to the fence; then two 3rd class on the edge of the bank over-turned. Next the guard's break-van across the space between the two lines of rails, and partly over the down-line; then two carriages nearer to Parramatta, off the up-line; and then the remainder of the train on the line. The passengers were all extricated before I arrived; and I regret to state that Mr. George Want, of Parramatta, and Mrs. Hacket, of Pennant Hills Road, were found dead—the skull being fractured in both cases. Several persons were seriously wounded, some slightly, and a few suffered only from the shock. Two gentlemen are reported to have jumped from the train and escaped unhurt, but I have not been able to see them. I found the usual precautions for the protection of approaching trains had been taken, and I immediately made arrangements for the running of the usual trains, which were carefully carried out by my assistant, Mr. Beeston. Two medical men had arrived from Parramatta, and were rendering every aid to the sufferers. The injured were conveyed, some by spring cart, to an inn on the road, and afterwards to Parramatta, and some to Parramatta on a lorry formed into a couch with cushions and blankets, and driven by our men to Parramatta; the remainder, with those passengers uninjured, or slightly, were forwarded to Sydney soon after your arrival with the Engineer-in-Chief. When I found that the accident had been attended with fatal consequences, I sent a messenger for the Coroner; but he not having arrived till some two hours after, Mr. Darvall, the Police Magistrate at Parramatta, requested me to have the bodies placed on a truck, and removed to Parramatta, which was done.

I examined the road immediately after my arrival on the spot, and traced where the horse-box first left the line, to where the train got off, but could see nothing to cause the accident. I may add that, hearing a rumour that Mr. Atkinson, who was a passenger in the train, and conversing with the deceased Mr. Want at the time of the accident, had remarked to that gentleman that the train was going at a fearful rate, I inquired of Mr. Atkinson if such was the fact, and he informed me that he had said no such thing, but that they were just exchanging newspapers at the time. Mr. Atkinson was seriously shaken by the fall.

I have, &c,

CHARLES J. NEALDS,

THE CHIEF COMMISSIONER FOR RAILWAYS.

Manager.

INSPECTOR to MANAGER.

REPORT on the Accident, July 10, 1858.

ABOUT 9-20 A.M., No. 1 engine arrived empty; the driver informing me that his train had run off the line at Haslam's Creek, and several persons were seriously injured. I at once communicated with the Manager, Inspector of Works, and Locomotive Foreman, who were on the spot immediately after the news was brought. I gave instructions for a train to be made ready, consisting of carriages and two low-sided waggons. I sent several of the porters for medical men, and others getting ready blankets and other articles that I considered might be useful—amongst which was two bottles of brandy. I sent a telegram to the Chief Commissioner, and left orders for the 10 A.M. train to wait his arrival. The Manager, myself, Inspector of Works, and Locomotive Foreman, left Sydney by special train a little before 10 o'clock, and arrived at the scene of accident about 10-30, where I saw the whole of the carriages off the rails. Three third class, and two horse-boxes being to the right; one first class, second class, inclining to the left; the break-van being partially over betwixt the two lines. I regret to say that I found two of the passengers dead, and several wounded. I commenced to get the wounded into the train as soon as possible—three of which were brought to Sydney, and two forwarded to Parramatta on a lorry. I proceeded about 1-20 to Liverpool with the train that left Sydney at 2 P.M., and returned with the one leaving Campbelltown at 10-45. The whole of the trains were run afterwards, being each a few minutes late.

JNO. L. BEESTON.

10th July, 1858.

INSPECTOR

INSPECTOR to MANAGER.

12 July, 1858.

Report of the No. and position of the carriages, &c., of the 7.35 up-train on the 10th instant.

Train consisted of—

- Engine No. 1,
- 1 first class carriage.
- 1 second class carriage.
- 4 third class carriages.
- 1 break-van.
- 2 horse-boxes.
- 3 goods-trucks.

Position at the time of leaving Parramatta where the horse-boxes were attached.

- 1.—Engine.
- 2.—2 horse-boxes.
- 3.—3 third class carriages.
- 4.—1 break-van.
- 5.—1 first class.
- 6.—1 second.
- 7.—1 third.
- 8.—1 B goods-truck.
- 9.—1 C goods-truck.
- 10.—1 A goods-truck.

The horse boxes were thrown down the embankment on the down side of the line. The three 3rd class carriages first in the train on the edge of the embankment all turned on their sides; the break-van was partially over between the two roads; the first class, second class, and last third class, were all off the rails, but in upright position, inclining to the embankment on the up-side of the line. The waggons did not get off the rails. The casualties appear to have occurred principally in the two first 3rd class.

Mr. Want and Mrs. Hackett both being in the first carriage, and from the best information that I can collect, nearly the whole of the others were in either the first or second 3rd class. The number of passengers supposed to be in the train at the time of the accident were—

- 2 first class.
- 1 second class.
- 39 third class.

JNO. L. BEESTON.

MEMORANDUM TO CAPTAIN MARTINDALE.

Engineer's Department.

Sydney, 12 July, 1858.

SIR,

In reply to your request of yesterday, I beg to forward the following information respecting the character of the line where the accident occurred of the 10th instant, on the Great Southern Railway, at Haslam's Creek.

- 1st. The train first left the line at the bottom of a decline and approaching an incline.
- 2nd. The decline is about half a mile in length.
- 3rd. Where the train first left the line is straight, and about three chains from a curve.
- 4th. From where the train first left the line to where it fell over the embankment is about eleven chains and a half.
- 5th. The height of the embankment is about fifteen feet.
- 6th. Damage done to the line,—about two chains in length broken up.
- 7th. The particulars of the gradients and radius of the curve will be found on the plans in the Engineer's Office.

I am, &c.,

WILLIAM MORGAN,

Inspector of Way and Works.

The

THE LOCOMOTIVE FOREMAN to THE CHIEF COMMISSIONER FOR RAILWAYS.

12 July, 1858.

SIR,

Herewith you will receive a rough statement of the damage sustained to the rolling stock on the G. S. Railway, at the accident on the 10th instant.

No. 3.—First Class Carriage:—

- 4 Broken panels in the end of body.
- 1 Buffer-head stock broken.
- 1 Inside seat displaced.

No. 2.—Second Class Carriage:—

- 2 Bent axles.
- 2 Broken step-boards.

No. 8.—Third Class Carriage:—

- Roof broken all to pieces; also, the body severely smashed.
- 4 Broken axle-boxes.
- 4 Bent horn plates.
- 2 Strained axles.

No. 12.—Third Class Carriage:—

- 1 Broken head stock.
- 1 Broken stay rod.
- 2 Broken doors and a few panels.
- 1 Safety chair.
- 1 Step-board.

No. 13.—Third Class Carriage, G. N. R.:—

- 2 Broken doors.
- 2 Footstep boards.
- 2 Buffer head stocks.
- 2 Safety chains.

No. 23.—Third Class Carriage, G. N. R.:—

- 2 Bent axles.

No. 2.—First Class Break Van:—

- 2 Buffer head stocks broken.
- 1 End of body completely smashed.
- 1 Side of body broken.
- 1 Broken safety chain
- 2 Footsteps.
- 1 Break screw.
- 2 Buffer heads.

No. 2.—Horse-box:—

- The body is very much damaged, and will require rebuilding again.
- 2 Strained axles.
- 4 Broken axle-boxes.
- 4 Strained iron plates.

No. 5.—Horse Box:—

- 4 Broken axle-boxes.
- 4 Strained horn plates.
- 1 Strained axle.
- 1 End and one side of the body damaged.

Length of coupling betwixt engine and horse-box, 20 inches.

From hook to hook, $21\frac{1}{2}$ inches.

Length of safety chain belonging to the horse-box, 2 feet $3\frac{1}{2}$ inches.

From chain to drawhook, 2 feet 1 inch.

I am, &c.,

J. TWISS.

THE CHIEF COMMISSIONER FOR RAILWAYS.

THE

THE INQUEST.

By direction of Mr. Robertson, the Police Magistrate and Coroner of Parramatta (Mr. F. O. Darvall and Mr. C. B. Lyons) were sent for, and the latter proceeded at once to the Vauxhall Inn, where the bodies lay, to hold an Inquest upon the remains of Mr. Want and Mrs. Hackett.

A jury was impanelled, with Mr. A. O. Grant as foreman. There were also present Captain Martindale, Mr. Whitton, Mr. Nealds, several friends of the deceased, and a numerous auditory.

The Coroner having delivered his charge to the jury the first witness called was

Charles Coles, who deposed: I am a farm labourer, serving Mr. Smith, publican, on the Sydney Road; the house is about 100 yards from the line, and about 200 yards from that portion of it where the accident occurred; about nine o'clock this (Saturday) morning I was within 100 yards of the railway bridge; I was coming up with a load of billet-wood, when I heard a crash; I saw the horse-boxes run off the line, and, leaving my horse and dray, I ran to the place of the accident, and saw the train off the line; some gentlemen told me to go and get the spring cart belonging to my master; I went, and came back to the train with the spring cart; I do not know how the accident occurred; many people must have seen the dead bodies before I got back with my cart; the accident occurred near Haslam's Bridge.

Robert Boan, being sworn, deposed: I am a railway engine-driver in the employ of the Railway Commissioners; I drove the engine of the train which left Parramatta at 847; it should have left at 845, but it was delayed two minutes; I took the usual precautions to see that all was right before I started; when about two miles and a half from Parramatta, two horse-boxes which were next to the engine went off the line, and threw three third-class carriages off also; I found the couplings had broken, and the engine immediately separated from the horse-boxes; I stopped the engine as soon as I could, and came back to the spot in two or three minutes; the engine was not off the line at all; when I came back I saw the two horse-boxes over the embankment on the right hand side of the road when proceeding towards Sydney; there were three 3rd class carriages, two of them off the line, over the embankment on the same side, and one lying on the edge of the line; I cannot account for the horse-boxes going off the line; it is customary to keep the horse-boxes next the engine; there is a very slight curve at that part of the line; where I reversed the engine was about sixty yards from where the accident occurred; I have been six years on railways in England, and six months as an engine-driver on the line in this colony; where the carriages went off the line is nearly straight; we were going at the rate of about twenty-two miles an hour when the accident occurred; that is the usual speed at that part of the line; excepting the stage between Liverpool and Campbelltown this is the longest stage on the line; I could not see anything wrong about the rails at this place, neither can I account for the accident; I saw nothing wrong; had not the coupling broken, the carriages would not have taken the engine off the line; the first that I knew of the accident was, that we shot forward on account of our having broken away from the train; I put on the breaks and stopped as soon as I could—about sixty or eighty yards from the spot.

John Whitton, having been sworn, deposed: I am Engineer-in-Chief for Railways in New South Wales; the line is perfectly straight at the place where the carriages left the engine, and the rail at that point is in good order; there is nothing in the condition of the line to throw the train off; the speed at which the trains travel on this line is perfectly safe, and rather a slow speed; the horse-boxes are usually placed in front of the train, next to the engine; there is no general rule for so doing, but here they are generally placed next the engine; I consider that is the safest place for horse-boxes, for there is less oscillation near the engine than at the tail end of the train; the weight of a horse-box is five tons; they are very large boxes, and very heavy ones; the weight of ordinary carriages varies from four to five tons; I do not consider a horse-box less safe than any other, but rather, from their greater weight, they are more likely to retain their position than other carriages; we bring down meat from Liverpool to Sydney in carriages like horse-boxes, in which the meat is suspended from the roof, and have found no danger or inconvenience from so doing; I do not consider that the position of the horse-boxes in the train caused the accident; I have examined both the line and the carriages this morning, since the accident, and cannot account for it; the wheels of the carriages left the line before they came to the curve; it is a rare instance where a carriage, having left the line, recovers its place; they did not get off in consequence of the curves in the line; they left the line about two hundred yards before they came to the curve; there is no doubt that the coupling breaking would not have thrown the train off the line, for the mere effect would be to allow the engine to proceed alone; I examined the axles, axle-boxes, springs, and couplings, and found them strained a little, but not broken by the accident; I cannot account for the accident; the wheels of the carriages and engines are always examined before the train leaves; they were all perfect except from the strains which they had had in the accident; I know that an additional inspector has been put on the trains to ensure greater safety to the public; his duty is constantly to travel with the trains, and see that the carriages are put in proper order; I am quite positive it was not the curve which occasioned the accident; the carriages would not have left the road had it been perfectly straight, nor would they have gone over on that side; I consider the horse-boxes would not have been safer if horses had been in them; the additional weight would have had no effect whatever.

Richard Darby, deposed: I am a railway guard, in the employ of the Railway Commissioners; I have been a guard ever since the line was opened; I was the guard on the train to which the accident occurred; it was going at a speed of about twenty-three miles an hour; I cannot in any way account for the accident; there was no visible effect in the line, or in the carriages, previous to the accident; I saw the carriage lying on the edge of the line;

I saw the carriages put together this (Saturday) morning; I examined them before leaving Campbelltown; I did not feel the swerve from the line until I found the break gone, and immediately afterwards I was upset; I did not see anything else; I am perfectly certain the train was not travelling at an unusual speed; there was no necessity for going at a quicker rate; the time we actually left Parramatta was 8.47.

Robert Champley Rutter, deposed: I am a surgeon; some person from the Railway called upon me this morning, to tell me of the accident, and I went immediately to the spot; I saw both the bodies as they now are, dead, from the nature of the injuries received; I should consider that they did not exist one moment after the accident took place; Mr. Want's head must have been propelled against the carriage; in both cases there was a fracture of the skull; I did not perceive that any of their limbs were broken.

Mr. Whitton, in answer to a jurymen, deposed that railway accidents frequently occurred in England to which it was impossible to trace the causes; it would be very satisfactory to all if some cause could be discovered in the present instance.

The Coroner having briefly addressed the jury, after a short deliberation they returned the following verdict:—"We, the jury, are of opinion that the deceased came by their deaths by accident on the Railway. We have not been able to arrive at a knowledge of the cause of the accident by any evidence we have heard, and we are anxious to express an opinion that the management of the Railway is efficient and careful, and that there is no blame to be attached to any officer connected with it."

KILLED.

George Want.
Mrs. Hackett.

SERIOUSLY INJURED.

— Bowden, foot crushed.
Mr. Bergin, arm broken.
Mrs. Bergin, do.
James Tappsett, contused.
Mrs. Frances de Courcy, injury to right eye.
Alice Cater, fracture of arm.
Richard Cater, injury to hip joint.

SLIGHTLY INJURED.

Samuel Hodges, contused.
Josiah Southwell, cut on right eye.
Richard McGee, cut on side of head.
Mrs. Mobbs, generally contused.
Mrs. Trott, cut on forehead.
Mr. Trott, shaken.

EVIDENCE TAKEN AT AN INQUIRY CONDUCTED BY THE CHIEF COMMISSIONER, INTO THE ACCIDENT ON THE GREAT SOUTHERN RAILWAY, ON THE 10TH JULY, 1858.

The Engineer-in-Chief and Traffic Manager in attendance.

Captain Ward was present during a portion of the day, but was compelled to leave about one o'clock by other duties.

George Fitzmaurice examined:—

I am station master at Sydney, in training for traffic inspector; the 7.35 up-train arrived at Parramatta from Campbelltown at the regular time; at Parramatta two horse-boxes were put on, which had travelled from Sydney that morning; the newest one was next the engine, I believe; we left Parramatta at 8.47, being two minutes late; I saw the horse-boxes coupled to the tender; I satisfied myself, by inspection, that they were properly coupled; we proceeded towards Homebush at the usual speed; I travelled on the engine; about three and a half miles from Parramatta the stoker turned, and cried to the engine-driver "Oh! stop, Bob!"; I immediately looked round, and perceived the first horse-box at a distance of about one hundred to one hundred and fifty yards making a circuit, followed by the third class carriages, and they fell over the embankment; we were then travelling at a speed not exceeding twenty-four miles an hour; the engine was stopped within eighty or one hundred yards; I got off the engine to ascertain the nature of the accident; the engine backed after me; I spoke to the guard, who sent the engine on to Sydney for assistance; I sent men up and down the line to stop the traffic; I also sent to Parramatta for medical assistance, giving notice to the station master at Parramatta of what had occurred; all the passengers that were able were assisting to extricate the others; the first thing that I saw was a dead dog; the next, the body of Mr. Want lying on the bank, with the face towards the ground; I examined the iron fastenings of the rails, and found them firm; when the carriages first left the line it was all right; I saw the track of only one carriage, which seemed to indicate that only one carriage had gone off at first; I traced it up

to

to the scene of the accident; it became deeper as it proceeded; and the rails were torn up under the 2nd class carriages; I then got on the uppermost side of one of the 3rd class carriages while some persons were extricating those inside; I then saw the body of Mrs. Hackett in the carriage; I had the bodies laid on the ground to await the Inquest; I endeavored to ascertain the nature of the injuries received; Drs. Gwynne and Rutter arrived from Parramatta at this time, and then the Traffic Manager from Sydney; I cannot account for the accident; immediately before it happened, we felt two or three bumps; we felt nothing unusual before this; I do not think that between Parramatta and the place where the accident occurred we were travelling more than 24 miles an hour; the lever was in the extreme notch of forward gear when the accident happened; I saw this, and the regulator was about a quarter on; I think it was the same all down the decline; the coupling was screwed up between the horse-box and the tender, before the train started from Parramatta.

Robert Boan examined:—

I was driver of the 7-30 up-train from Campbelltown on the morning of the 10th instant; we left Parramatta at 8-47, two minutes late; I saw the engine was all right before we left; we proceeded towards Homebush. About 3 miles from Parramatta I felt the engine rush forward; I looked back and saw the horse-boxes running across the line; I reversed the engine, and stopped as soon as I could; I came back to the guard and asked him if I might go on to Sydney for assistance; he told me to go, and I went; I returned with the ten o'clock train; the shooting forward of the engine was the first I know of the accident; at the time we were travelling about 22 miles an hour; between that and Parramatta we had travelled about the same rate, which is the usual speed; the lever was in the first notch, and very little steam on; I altered it to the first notch at the Duck River; I usually ran engine No. 1—which was the one in use that morning—on the first notch; I shut off the steam at the top of the incline, and put steam on nearly at the bottom, as usual; I put on just sufficient steam to hear the engine beat; the accident occurred at 8-56 a.m.; I took the time at the moment the accident occurred; I cannot state any cause for the accident; I started with the lever in forward gear till I got the engine in speed; I then pulled it back to the first notch at Duck River, after which I did not alter it; there were two horse-boxes on; the new one was next the engine; when I first looked round, only the first horse-box was off the line, and it dragged the other after it, as far as I could perceive; I have been driving six months on this line; I was fireman and engine-driver for six years in England.

James Grant examined:—

I was fireman to Boan on the 7-35 up-train from Campbelltown on the 10th instant; we left Parramatta at 8-47, two minutes late, and drove for Homebush; we were coming down the bank, at the usual speed of 22 miles an hour, about three miles from Parramatta; as we got on the curve, I looked round, and saw the horse-boxes rushing across the line; I had looked round two or three minutes before, and the train was all right; I had not felt the slightest unusual motion before this; I looked round at the curve, according to my usual custom, without any particular cause; my hand was on the break, and I cried to the driver, "Hold hard," and put on the break as hard as I could; the engine was away from the horse-boxes at this time, about eighty yards; I felt no jerk in parting from the carriages; the engineman reversed the engine, turned on steam, and stopped it in two or three seconds; we went back about sixty yards, and immediately afterwards went on to Sydney; coming down the bank we generally travel about the usual pace, and this morning we did so; I do not know the position of the lever when the accident occurred; the steam was on when I called to the driver to stop, and I think it was on part of the way down the decline, but I am not positive; I saw Boan look at his watch the instant the accident happened, and he said, "It's 56 minutes past 8;" I think the new box was next the tender; when I first looked round both the horse-boxes were rushing across the line.

John Fishlock examined:—

I am the ganger of the Homebush length—where the accident occurred; I am the ganger of the length from 9 to 11½ miles; I saw the train to which the accident happened pass me that morning; I noticed the horse-box next the engine rolling about very much when it passed me—this was upwards of half a mile from where the accident happened; it was rolling more than I have generally seen it; I thought the train passed me faster than usual, perhaps 25 or 26 miles an hour, and not more; I thought the horse-box would be off the line from the way it was rolling; the second horse-box and the rest of the train was running the same as usual; the gang all noticed how the horse-box was rolling; we looked after the train; the next thing was, that Tom Markham, who was at the end of the curve and could see farther than I, said "They are gone over, Jack"; I went and looked and saw the carriages over; all the gang then ran up to where the accident happened; the two horse-boxes were lying on the slope of the bank and three carriages; the break was standing in the middle of the road; there were two or three carriages on the down line, and the rest of the carriages on the rails; the old horse-box was lying next to Sydney, and the carriages beyond the horse-boxes nearest to Sydney; I think the meat-box was next the tender when it passed me; the first thing I did was to take a rail out of the fence, and, with the assistance of the gang, lift up one of the carriages and release the woman alive from the one who was dead; after this I began to see after repairing the damage done to the road; I have not touched the road where the carriages first left the line since the accident; it can be seen now, and is in perfectly good order; there was nothing in the state of my length of road to cause the rolling; it was rolling as far as I could see it—½ of a mile before it passed me; the horse-box left the line on the straight.

Thomas

Thomas Markham :—

I am plate-layer in Fishlock's gang, from 9 to 11½ miles—where the accident happened; I saw the train pass on the 10th; I noticed the horse-box next the engine rolling; it was the old box, I think stone color; it always does roll; I never mentioned to any one that it had rolled formerly; I said to the ganger "that horse-box rolls very much," and he said "it does"; the train was passing at what appeared the usual pace; not above 24 miles an hour; I watched the train as it went along, and then went to work; directly after, I turned my head and said "the train's over, Jack"; we threw the shovels down and ran to the scene where the accident happened; I was the last who got there, and returned for the tools to repair the road; the second horse-box was not rolling; I said "that horse-box 'always rolled,' because I have noticed one that does roll, and I supposed that was the one; during the five weeks I have recently been on the line, I have always noticed that a box rolled—it was a stone color; this time it was the one next the tender that was rolling; I know there are red horse-boxes; I have noticed the horse-box roll two or three times (not more) since I have been on the line.

John Hooper :—

I am porter at Parramatta; I saw the 8-45 up-train on Saturday last; I coupled the engine to a horse-box, I believe the new one; I screwed up the couplings till the buffers touched; I did not notice the box particularly.

George Kingston :—

I am head porter at Parramatta; I saw the 8-45 train at Parramatta, it left at 8-47 A.M.; I helped to put two horse-boxes on; I coupled the horse-boxes together; the new horse box No. 1 was next the tender; I coupled the two horse-boxes together by means of the centre chain, and hooked the side chains together; both horse-boxes came down to Parramatta by the first train; I examined the doors and keys when they were in dock to see if all was right, but nothing further; when the chains are fastened the buffers are about three or four inches apart; there was no screw coupling between the two horse-boxes.

John Creasy :—

I am porter at Parramatta; on the 10th I coupled the second horse-box to a third class carriage; there was a screw coupling; I put on one side chain and crew, Darby put on the other; I screwed up the coupling till the buffers met; it was the old box that was next the third class carriage, so that the new box was next the engine.

Richard Griffiths :—

I am railway porter, and act as assistant guard by the first down-train from Sydney and the second up; I was in the break-van when the accident happened; the first I knew was Darby laying hold of the break and putting it on, and then the front of the van was driven in; we were travelling, I am quite certain, at the usual speed from Parramatta—about 23 or 24 miles per hour; I felt nothing unusual before the accident; about 1½ minutes before I was looking out to see if there was anything wrong—all was right; I did not see the horse-boxes rolling; after the accident I lent what help I could.

Richard Darby :—

I am railway guard, and was so on the 10th; I left Campbelltown with the 7-35 train; I saw the train coupled up and in perfect order before I left; we arrived at Parramatta in proper time; we took on two horse-boxes at Parramatta, an old one and a new one; the new one was next the engine; I helped to couple the old one to the third class carriage; there was a screw coupling and two side chains; I put on one side chain, and saw Creasy put on the other, and screwed up the couplings till the buffers touched; I noticed nothing wrong about the horse-boxes; we left Parramatta two minutes late for Homebush, at usual speed for about three miles; I am quite certain the speed was not greater than usual—about from 20 to 25 miles an hour. The first I knew of the accident was—I thought I felt something wrong, by the carriage shaking from one side to the other, about three lengths of the carriages from where they went over; I observed nothing before; I ran to the break, and before I had time to do more than just screw it up I was knocked through the open door-way into the van; when I recovered myself, I found the new horse-box over the bank next to Parramatta, the old box beyond it, nearer Sydney, and beyond both, still near Sydney, three third class carriages, one right over, and two on the edge—all upset; the break stood cross-ways over the 6-foot, and partly on the down-line; the next was a first class carriage, partly on the 6-foot and partly on the up-line; next, a second class, just off the rails; then a third class, and the remainder of the train not off the rails; as soon as I got out of the van, I saw a young woman fastened by the legs under a carriage next me; I took off my coat and helped her out; I then assisted a man and woman out of another carriage; I then walked the line to ascertain, if possible, the cause of the accident, all the passengers being by this time out; I could find no cause for the accident; I was the first who walked over after the accident occurred; it was a straight road where the train left the line; I did not notice anything particular about the horse-boxes before leaving Parramatta; I am constantly looking out to see that the carriages are travelling properly; I did not see either of the horse-boxes shaking about; I have not noticed the horse-boxes shake about more than the carriages; I have frequently taken two horse-boxes together without a screw coupling; I think they would travel more steadily with a screw coupling, properly screwed up; directly after the accident the engine driver consulted me what he was to do; I told him to go on to Sydney; I sent a man each way to stop any trains coming in either direction; shortly after this the Manager arrived.

James

RAILWAY ACCIDENT.

13

James Kay :—

I am carriage inspector at the Sydney station ; I have seen the two horse-boxes that were with the train to which the accident happened on the 10th instant ; one is a new one (No. 5), and the other an old one (No. 2) ; No. 5, the new box, has been running about two months ; No. 5 went to Parramatta at 4.35 P. M. on the 9th ; I examined it in the siding before it went out ; I made a thorough examination of it inside and out, and underneath, to see if it was all right ; and on the morning of the 9th I had examined the wheels and axles and sounded the tires ; I found it all in perfect order ; I examined No. 2 about two days or less before the accident ; I am positive it was in perfect running condition ; the new box has side chains and centre links ; I do not think the horse-boxes would oscillate more than the carriages ; I know nothing to make them do so ; the only objection I see would be to send those boxes as a trailing carriage behind trains ; the only cause I can see for oscillation is the coupling not being properly screwed up.

Joseph Twiss :—

I am Locomotive Superintendent of the Great Southern Railway ; I have seen the two horse-boxes that were broken on Saturday ; one is a new one, built at Sydney under my inspection, the other is an old one, built by Mr. Randle ; I know nothing in the build of these boxes that would cause them to oscillate more than an ordinary carriage ; I have examined the wheels, axles, and axle boxes, and springs, since the accident, and find them in perfect order, except what may have been caused by the strain ; there is no defect that would not be accounted for by the accident ; I know nothing that can account for the accident.

DRS. RUTTER AND GWYNNE to THE CHIEF COMMISSIONER FOR RAILWAYS.

Parramatta, 12 July, 1858.

SIR,

We have the honor to report the state of the casualties under our care, which, in all cases, are favorable. They have been visited by us this day, and all their wants and medical requisites have been duly administered.

We have, &c.,

ROBT. CHAMPLEY RUTTER,
GORDON GWYNNE,

Surgeons.

THE CHIEF COMMISSIONER FOR RAILWAYS.

N. B.—Should any unfavorable symptoms occur in any case, information will be immediately forwarded.

[Transmitted for the information of The Hon. the Secretary for Lands and Works.]

B. H. M.

1858.

Legislative Assembly.
NEW SOUTH WALES.

RAILWAY ACCIDENT.

(COMMISSION TO INQUIRE INTO CAUSES OF.)

Ordered by the Legislative Assembly to be Printed, 20 July, 1858.

COPY of the COMMISSION appointing CAPTAIN DENHAM, R.N.,
M. B. PELL, Esquire, B.A., and E. O. MORIARTY, Esquire, C.E.,
to inquire into the causes, &c., of the late fatal Accident on the
Great Southern Railway.

RAILWAY ACCIDENT.—COPY OF COMMISSION.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth.

To Our trusty and well-beloved HENRY MANGLES DENHAM, Esquire, F.R.S., Captain in Our Royal Navy; MORRIS BIRKBECK PELL, Esquire, B.A., Mathematical Professor of the University of Sydney; and EDWARD ORPEN MORIARTY, Esquire, B.A., Civil Engineer:

KNOW ye, that We, reposing great trust and confidence in your zeal, industry, discretion, and integrity, with the advice of Our Executive Council of Our Colony of New South Wales, do by these presents authorise and appoint you, or any two of you, as hereinafter mentioned, to make a diligent and full inquiry into the cause or causes of the accident on the Great Southern Railway, in Our said Colony, on Saturday, the 10th day of July instant, which resulted in the death of two of the persons travelling by the said Railway, and serious injuries to various other persons also travelling thereby; and whether any, and if any, what person or persons is or are blameable for or in respect of such accident; and, generally, whether the Regulations now in force with respect to Railways in Our said Colony, and the general Management of such Railways, afford proper security and protection for persons travelling on such Railways, and all others Our subjects: And for the better discovery of the truth in the premises, We do by these presents give and grant to you, or any two of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you shall judge necessary by whom you may be better informed of the truth in the premises; and to visit and inspect the said Railway, and all Stations, Station Houses, and other Buildings, together with all Engines, Carriages, and other Railway appliances whatsoever; and to require the production of all such charts, maps, plans, drawings, tracings, books, papers, writings, and all other documents, as you may deem expedient, and to visit and inspect the same at the offices or places where the same, or any of them, may be deposited; and to hold any meeting or meetings (whereat any two of you shall be a quorum,) for the purposes of this Commission at the Office of the Chief Commissioner of Railways, in Sydney, in Our said Territory, or at any other place or places you, or any two of you, may think fit; and to inquire of the premises by all other lawful ways and means; and also, when the same shall appear requisite, to administer an Oath or Affirmation to any or every person to be examined before you as aforesaid, touching or concerning the premises: And Our further will and pleasure is, that you, or any two of you, after due examination of the premises, do, and shall, so soon as the same can reasonably be, but not being later than the expiration of one month from the date of this Our Commission, or such extended time as the Governor of Our said Territory before the expiration of such period of one month by writing under his hand shall appoint, certify to Us, in the Office of Our Secretary for Lands and Public Works, under your, or any two of your hands and seals, what you shall find touching the premises, and what, if any, alterations, modifications, improvements, and regulations respecting such matters as aforesaid, or any of them, you shall think fit to be made and established: And this Commission shall continue in full force, although the proceedings thereunder shall not be continued by adjournment from time to time; and you, or any two of you, as aforesaid, may from time to time, if you shall see fit, without waiting for your full and complete Report, certify your several proceedings in Our said Office as the same shall be respectively perfected: And We do hereby command all

Government

Government officers and other persons whomsoever within the said Colony, that they be assistant to you, and each of you, in the execution of these presents: And We give you power, at your discretion, to procure such clerical or other assistance as may be absolutely necessary for enabling you duly to execute this Commission. IN TESTIMONY WHEREOF, We have caused these Our Letters to be made patent, and the Great Seal of Our said Colony to be hereunto also affixed.

WITNESS Our trusty and well-beloved SIR WILLIAM THOMAS DENISON, Knight Commander of the Most Honorable Order of the Bath, Governor General in and over all Our Colonies of New South Wales, Tasmania, Victoria, South Australia, and Western Australia, and Captain General and Governor in Chief of our Territory of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this twentieth day of July, in the twenty-second year of Our Reign, and in the year of Our Lord one thousand eight hundred and fifty-eight.

(Signed) W. DENISON.

By His Excellency's Command,

(Signed) JOHN ROBERTSON.

Legislative Assembly.
NEW SOUTH WALES.

RAILWAY ACCIDENT.
(EXTENSION OF TIME TO COMMISSION OF INQUIRY.)

Ordered by the Legislative Assembly to be Printed, 19 August, 1858.

By His Excellency SIR WILLIAM THOMAS DENISON, Knight Commander of the Most Honorable Order of the Bath, Governor General in and over all Her Majesty's Colonies of New South Wales, Tasmania, Victoria, South Australia, and Western Australia, and Captain-General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, and Vice-Admiral of the same, &c., &c., &c.

WHEREAS by a Commission, bearing date the twentieth day of July, one thousand eight hundred and fifty-eight, Her Majesty was pleased to authorize Henry Mangles Denham, Esquire, F. R. S., Captain Royal Navy, Morris Birbeck Pell, Esquire, B. A., Mathematical Professor of the University of Sydney, and Edward Orpen Moriarty, Esquire, B. A., Civil Engineer, to make a diligent and full inquiry into the cause or causes of the accident on the Great Southern Railway, in the Territory aforesaid, on Saturday, the tenth day of July last, which resulted in the death of two of the persons travelling by the said Railway, and serious injuries to various other persons also travelling thereby, and whether any, and if any, what person or persons was or were blameable for or in respect of such accident, and generally whether the Regulations in force with respect to Railways in the said Territory, and the general management of such Railways, afforded proper security and protection for persons travelling on such Railways, and all other Her Majesty's subjects; and whereas it was by the said Commission provided that the persons thereby appointed, or any two of them, after due examination of the premises, should as soon as the same could reasonably be, but being not later than the expiration of one month from the date of the said Commission, or such extended time as the Governor of the said Territory, before the expiration of such period of one month, should, by writing, under his hand appoint, certify to Her Majesty in the Office of the Secretary for Lands and Public Works, under their or any two of their hands and Seals, what they should find touching the premises, and what, if any, alterations, modifications, improvements, and regulations respecting such matters as aforesaid, or any of them, they should think fit to be made and established; and whereas it is deemed expedient to extend such period as aforesaid: Now, therefore, I, the Governor and Governor General aforesaid, with the advice of the Executive Council of the said Territory, do hereby direct and appoint, that the period within which the persons appointed by Her Majesty's said Commission shall certify to Her Majesty touching the premises shall be extended, and is hereby extended to the twentieth day of September now next ensuing.

Given under my Hand, at Government House, Sydney, this seventeenth day of August, in the year of our Lord One thousand eight hundred and fifty-eight, and in the twenty-second year of Her Majesty's Reign.

W. DENISON.

By His Excellency's Command,
JOHN ROBERTSON.

NEW SOUTH WALES.

RAILWAY ACCIDENT.

(FIRST PROGRESS REPORT FROM COMMISSION OF INQUIRY.)

Ordered by the Legislative Assembly to be Printed, 19 August, 1858.

FIRST PROGRESS REPORT of the Commissioners appointed to inquire into the causes of the recent accident upon the Great Southern Railway, and to report whether the existing regulations and the general management of Railways in this Colony are such as adequately to ensure the safety of persons travelling by rail.

MAY IT PLEASE YOUR EXCELLENCY,

1. We, the Commissioners appointed to inquire into the causes of the recent accident upon the Great Southern Railway, and to report whether the existing regulations and the general management upon Railways in this Colony are such as adequately to ensure the safety of persons travelling by rail, are happy in being able to report, that we have been, in a great measure, successful in determining the cause of the recent accident upon the Great Southern Railway.

2. Before giving any explanation of the course of reasoning by which we have been led to the following results, or entering into an analysis of the mass of circumstantial evidence by which our conclusions are borne out, we will give a detailed account of the manner in which the accident occurred.

3. When the steam was shut off at the top of the incline leading down towards Haslem's Bridge, everything was right in the train. The steam being shut off the carriages overran the engine, and the buffers came into contact. The propelling power upon the leading horse-box, which was connected to the next by a loose coupling only, was thus from behind. About half-way down the incline, at a short distance on this side of the 11th mile post, and about half a mile from Haslem's Bridge, on account of some defect in the permanent way, the precise character and position of which it is now impossible to determine, the hind wheels of the leading horse-box were thrown off the rails to the right, the front wheels remaining in their proper position. The flange of the right hind wheel rested on the outer flange of the rail, and from the position of the horse-box on the incline the weight was thrown forward, and was taken entirely off the left hind wheel. The hind wheels were thus slightly below their usual position, and four inches out of line. The tire of the left hind wheel was half an inch clear of the inner edge of the rail, and its flange just clear of the edge of the lower flange of the rail. The strength of the spring brought down the flange of this wheel barely to the level of the sleepers. It could not, therefore, cut the sleepers, or make more than slight and occasional marks upon the ballast. It will be observed, that the position of the box on the incline tended to prevent the weight of the box from depressing the left hind wheel. The horse-box ran in this way down the rest of the incline, for a distance of about half a mile towards Haslem's Bridge. But, on ascending the incline up to the bridge, the weight of the horse-box was thrown back on account of the rising gradient. At a few yards from the bridge the left hand wheel began to cut into the ballast, and to diverge from the rail; and when it reached the centre of the bridge it cut deeply into one of the sleepers, the flange of the right hind wheel being still upon the outside lower flange of the rail. At this instant the hind wheels were so far to the right of their proper position that the flanges of the front wheels were pinched between the rails. This gave a momentary check to the motion of the box, broke both the front axle-boxes, and strained the axle. It will be observed that the left hind wheel being lower than the right, the leading wheel was above its proper position,

position, and its flange had but a slight hold of the rail. The pressure being thus exerted upon a small surface left a deep mark on the inside of the right rail, and a corresponding mark upon the flange of the wheel. The momentary check was followed by a jerk from the engine, which drew the right leading wheel over the rail to the right, leaving a scratch on the outside of the rail. After this the right wheels travelled upon the outside flange for about 250 yards, when, partly owing to the curve and partly to the strained axle, and two broken axle-boxes, the box diverged altogether from the rails, and the final catastrophe occurred.

4. We will now give a detailed account of the actual course of our inquiry; for, in this way alone can the full force of the evidence by which the above conclusions are borne out, be made apparent.

5. Upon first undertaking our commission, we endeavoured, by an examination of the evidence already published, and from the additional particulars furnished by Mr. Whitton, to learn, as nearly as possible, what had actually occurred after the train passed Haslem's Bridge.

6. It appeared from the testimony of witnesses, and still more certainly from the position of the carriages after the accident, that the new horse-box was next to the tender, and that it was the first to diverge from the rails, dragging the rest of the train after it. It appeared, also, from the evidence of Mr. Whitton, that the wheels of this box began to diverge from the rails at a few yards to the west of Haslem's Bridge. This was determined by Mr. Whitton immediately after the accident, by marks on the ballast, which were soon effaced, the first mark on the sleepers being at the centre of the bridge.

7. We then satisfied ourselves from the evidence, that there was at the time no defect in the permanent way, at that part of the line, which could possibly account for the accident.

8. It seemed to us, in the next place, extremely improbable that the accident could have been occasioned by excessive speed; for that alone, we believe (and Mr. Whitton is of the same opinion) would have caused the engine first to leave the rails. The evidence also of the two guards, and of the plate-layers—all persons accustomed to judge of the rate of a train, and not in any way interested in the matter, and all agreeing in their estimate of the speed—combined with the positive testimony of Mr. Fitz Maurice, that the steam was shut off all the way down the incline, seemed to us to establish beyond a doubt that the train, when it reached Haslem's Bridge, was not moving at a greater rate than thirty miles an hour. We have been since confirmed in this opinion by the evidence of the plate-layers Milton and Goulder, which will be appended to this our Report. The evidence of passengers we did not consider to have much weight, as they cannot generally be regarded as competent judges in such a matter. And we think, moreover, that the impression which seemed to prevail amongst some of the passengers, that the speed was excessive in coming down the incline, may be otherwise accounted for.

9. We next proceeded to consider whether the absence of a screw coupling between the two horse-boxes could in any way account for the accident. A train having been put together of exactly the same kind, both as to carriages and couplings, as that to which the accident happened, we observed the motion of the horse-boxes when travelling at the rate of from twenty-seven to thirty miles an hour; but neither from the side of the road, nor from the tender, could we detect any rolling or oscillation which could possibly be considered sufficient to throw them off the rails.

10. It having been suggested by Mr. Whitton, that if the steam were suddenly shut off, the train being in rapid motion, the buffers of the tender might possibly be brought into contact with those of the leading horse-box, with sufficient force to lift it off the rails,—we tried the experiment; but the buffers came together in so very gradual and gentle a manner that the idea was at once abandoned. The effect of suddenly turning on the steam we found to be equally slight.

11. All these possible causes having been thus eliminated, we were driven to the conclusion that the true cause had some especial reference to the leading horse-box itself. It seemed to us, however, extremely improbable that there should have been any serious defect in so new a horse-box, which had been only in use six weeks, and which had been inspected the day before. It appeared also, from the evidence, that no defect could be detected which
could

could probably be supposed to have existed before the accident. We still, however, felt convinced that there was something particular in the state of that horse-box, which caused it to diverge from the rails at Haslem's Bridge.

12. It then occurred to us, that possibly the wheels of the horse-box might have been thrown out of their proper position by some defect in the permanent way, at some point of the line farther back towards Parramatta, and might have run with the flanges of two of the wheels on the outer flange of one rail, and those of the other two on the inner flange of the other rail, without leaving any obvious traces upon the ballast, or making more than occasional cuts upon the sleepers. In examining the line from Haslem's Bridge towards Parramatta, with the object of finding traces of such a motion, we discovered a great number of old cuts upon the sleepers, which were caused, no doubt, by a horse-box which ran off the rails at the tail of a train, as we are informed, about nine months ago. On that occasion the horse-box was thrown off the rails at about half-a-mile from Haslem's Bridge, and dragged along for about a mile with the flanges of the right wheels resting on the outer flange of the rail, and the left wheels jumping upon the sleepers, before the circumstance was discovered, and the train stopped. In order to be quite sure that these marks had no connection with the subject of our inquiry, we traced them from near the 11th mile-post to a point entirely beyond the scene of the recent accident. We observed that upon that occasion the wheels of the horse-box had preserved an almost uniform distance from the rails, even in going round the curve at Haslem's Bridge. We were so far confirmed in our opinion that a carriage with its wheels out of their proper position on the rails might run for a considerable distance with tolerable steadiness. We found, however, upon making exact measurements, that if both right wheels were outside the rails, the left wheels must necessarily cut the sleepers, and as the first recent cut upon them is upon Haslem's Bridge, we were obliged reluctantly to abandon our theory. At the same time, this singular coincidence that two horse-boxes should have run off the rails, at about the same place, within one year, suggested to us the probability that there was something more than an accidental connection between the two cases, and led us to consider afresh whether the recent accident might not still be attributed to some defect in the permanent way at some point of the line to the west of Haslem's Bridge.

13. It then occurred to us that possibly the horse-box might have run for some distance with two wheels only off the top of the rails, the other two remaining in their usual position, without cutting the sleepers, or making much impression upon the ballast. Upon making exact measurements, and trying the experiment with a waggon, we concluded that the supposition was not improbable; our first idea being that the front wheels alone were first thrown out of position.

14. We then proceeded to consider what indications of such a motion we might expect to find upon the rails and upon the wheels. Upon considering that, if our supposition was correct, one of the right wheels must have rolled for some distance with its flange against the inclined surface the outer flange of the rail, with sand from the ballast almost constantly between the surfaces in contact, we concluded that such a motion must necessarily leave traces of *continuous grinding* upon the inner side of the flange of the wheel. Upon inquiry we found, to our great disappointment, that all the wheels of the horse-boxes had been removed a few hours after the accident, and replaced by new ones, with the exception of one pair of wheels of the leading horse-box, which had been restored to their original position; but whether or not they had been reversed from right to left, no one could remember. We were able, however, to determine, from indications afforded by the box, that these were the hind wheels, and, from marks upon the wheels themselves, which had been the right and which the left. All around the inner side of the flange of the right wheel we found precisely the kind of mark which we had expected, evidently produced by grinding, and not by any sudden blow, and entirely different in character from any mark upon any of the other wheels. We had no longer any doubt that we had at last discovered the clue which would lead to the solution of the whole difficulty.

15. We then went down to Haslem's Bridge, to make a more minute inspection of the rails, with the object of detecting any traces of rubbing, which might have been left by the flange of the wheel upon the outer edge of the top of the right rail. We had, however, very small hopes of finding any very decisive indications upon the straight line, for, with one exception, all the marks made upon the rails by the horse-box running in an irregular manner from Haslem's Bridge to a distance of 250 yards, are by no means conspicuous; so
that

that any traces of the more steady motion which we conceived to have existed before it arrived at that point, could scarcely be expected to remain. Being under the impression, however, that the derangement in the position of the horse-box had taken place farther back than we have since ascertained to be the case, we were in hopes of finding upon the curve, at the top of the incline, some strong confirmation of our theory. From Haslem's Bridge, however, for a considerable distance along the line, we detected traces of cutting and rubbing against the outer edge of the rail, such as we had expected. In some places the marks are conspicuous, and obviously recent. We were not able, however, to trace any indications beyond the level crossing at the eleventh mile-post; and in carefully examining the side of the rail from that point to Parramatta, we could discover no marks of the same character as those between Haslem's Bridge and the level crossing.

16. We remarked, also, that in running down the incline, the couplings having been slack, the right hind wheel had not constantly pressed against the side of the rail; but when the steam was put on, and the couplings became stretched, the wheel pressed more constantly and with greater force against the side of the rail, and the marks upon the rail on the ascending gradient towards Haslem's Bridge are stronger and more continuous.

17. After this minute examination of the rails, our attention was particularly directed to the deep mark upon the inside of the right rail at Haslem's Bridge, with the accompanying scratch on the outside, being convinced from its prominence compared with any other mark to be found upon the rails, that it was connected with some particular crisis in the accident. The explanation which we have given of the manner in which it was caused is, we think, satisfactory, and affords a strong proof that, after the hind wheels were off the rails, the front wheels were still in their usual position. Upon the flange of the right leading wheel there is a mark corresponding to the mark on the rail; and the cuts on the outer edge of the rail, caused by the flange of the wheel as it rubbed down against it, are of precisely the same character as those caused by the right hind wheel between the bridge and the 11th mile-post.

18. We next more particularly examined the wheels and axles which had been removed from the horse-boxes, and from the evidence of Mr. Twiss, the Locomotive Superintendent, and from marks upon the wheels, determined the positions which they had occupied in the train. As the horse-boxes turned to the right, just before falling over the embankment, the weight was thrown upon the left wheels, and the inside of the flanges of those wheels were deeply cut in crossing the down rails. The right wheels were comparatively uninjured. This renders more striking the evidence afforded by the mark of grinding on the inside of the flange of the right hind wheel of the leading horse-box. The axles of the second horse-box, and of those of a third-class carriage, were strained in being jerked suddenly sideways off the rails. By the time that this had been effected the rails were torn up, and the remaining wheels ran off with their axles uninjured. The axle of the front wheels of the leading horse-box was strained, as already described, at Haslem's Bridge. The hind wheels having been off the rails from the beginning, their axle escaped without injury.

19. Being thus convinced that the original cause of the accident was a defective state of the permanent way, not very far to the east of the 11th mile-post, our next object was to determine, if possible, the precise character and position of that defect; but in this we have not been entirely successful. We found that that part of the line was not inspected by any officer of the department before it had been repaired by the plate-layers, and that Fishlock, the foreman, and his gang were the only persons in possession of the information which we were anxious to obtain. Upon the evidence of Fishlock we are not disposed to place much reliance, for reasons which it is not worth while to explain particularly, but which may be abundantly illustrated by comparing his evidence before us with his former evidence at the inquest, and before Captain Martindale, and with that of other members of his gang. It may be particularly remarked, however, that in direct contradiction to what he formerly stated, and to the evidence of the other plate-layers, he is now desirous that the accident should be attributed to excessive speed. He admitted, however, before he became aware of the drift of our inquiry, that the embankment extending from the 11th mile-post towards Haslem's Bridge, is one of the most troublesome places in his length; that the roadway is constantly sinking, on account of a bad clay foundation, that, in consequence of the insufficient width of the embankment, the ballast is constantly washed away from between the sleepers, and that do what he will, the joints will go down. His evidence as to the character of this embankment is in some measure borne out by the evidence of Mr. Whitton.

RAILWAY ACCIDENT.

6

20. All the plate-layers denied that since the accident any particular repairs had been made on this part of the line; but upon going down a third time to inspect it, we found that from the 11th mile-post to a distance of several hundred yards towards Haslem's Bridge, the up-line has been entirely re-set, and is now in very good condition, the down-line having been scarcely touched.

21. In this our last inspection of the line, we determined that the hind-wheels of the leading horse-box were thrown off the rails at a short distance east of the 11th mile-post, and very near the spot where the plate-layers were at work at the time the train passed, and within two hundred yards of the place where, on a former occasion, a horse-box ran off the line. It is our opinion that the recent accident commenced about 50 yards on this side of the 11th mile-post.

22. We have no doubt that the unusual motion of the horse-boxes observed by the plate-layers was closely connected with the commencement of the accident, and that the defective state of the permanent way, which was the original cause of the disaster, gave rise also to a vibration in the carriages, which produced an impression amongst some of the passengers that the speed was excessive. It is, moreover, not impossible that the extraordinary position of the horse-box, the buffers being all in contact, may have communicated an unusual trembling motion to the other carriages.

23. We have observed that some parts of the embankment to which we have so often alluded, are extremely defective and dangerous. At one particular point, about 200 yards east of the level crossing, at the highest part of the embankment, the ends of the sleepers extend to the very edge of the bank, so that the ballast is continually washed away; and it seems to us impossible that during wet weather the roadway can be maintained in good condition. It was at this spot that the former accident to a horse-box occurred.

24. The facts which have come to light confirm, in a striking manner, the account given by Boan of his driving upon this occasion. That the hind-wheels were the first to leave the rails, affords strong evidence that the carriages were over-running the engine, and that the steam was shut off in descending the decline. If the speed had been excessive, and the couplings stretched out, the hind-wheels could scarcely have diverged from the rails, as they did, upon approaching the bridge. We feel no hesitation in asserting that Boan is entirely free from blame in this instance, and in the face of the strong and united testimony of his immediate superiors to his high character for steadiness and skill, we do not attach much importance to the solitary complaint of Mr. Mason and Mr. Morgan. It is obvious, that in order to accomplish the distance from station to station in the required time, it must be sometimes necessary to travel at a rate exceeding the authorised average. It is only those in the constant habit of travelling upon the engine that are capable of judging upon what parts of the line the average speed may be safely exceeded, in order that it may be reduced below the average upon others.

25. After agreeing to the above portion of this Report, we thought it necessary, on account of certain circumstances which came to light, to re-examine Mr. Morgan, and also some of the laborers who were employed upon the line immediately after the accident. This examination has resulted in a remarkable confirmation of the truth of the conclusions at which we had already arrived. It appears that on the very day of the accident, when it would be supposed that all the available hands would have been required at the spot where the carriages were over-turned, a large number of plate-layers and laborers from other parts of the line, were employed, without the knowledge of Captain Martindale or of Mr. Whitton, in repairing the line from Haslem's Bridge to the 11th mile-post, at a distance of nearly three-quarters of a mile from the scene of the final disaster.

We have the honor to be,

Your Excellency's most obedient

and most dutiful servants,

M. B. PELL, Chairman.

H. M. DENHAM.

RAILWAY ACCIDENT.

(SECOND PROGRESS REPORT FROM COMMISSION OF INQUIRY.)

Ordered by the Legislative Assembly to be Printed, 3 September, 1858.

SECOND PROGRESS REPORT

Of THE COMMISSIONERS appointed to inquire into the Causes of the recent Accident upon the Great Southern Railway, and to report whether any, and, if any, what person or persons is or are blameable in respect of such Accident.

MAY IT PLEASE YOUR EXCELLENCY,

We, the Commissioners appointed to inquire into the causes of the recent accident upon the Great Southern Railway, and to report whether any, and, if any, what person or persons is or are blameable in respect of such accident, since the date of our first Report have been engaged in further investigations concerning the accident at Haslem's Bridge.

Nothing which has since transpired has given us any reason to change the opinions which we have already expressed; but, on the contrary, a full consideration of all the circumstances connected with the recent accident has convinced us that there can be no longer any reasonable doubt of the truth of the conclusions expressed in our first Report.

It is quite certain that one pair of wheels left the rails upon Haslem's Bridge. This is proved by the evidence of Mr. Morgan, by that of Mr. Fitz Maurice, and by that of Darby, the guard, who traced the mark left by the wheels upon the outside flange of the right rail from near the place where the carriages were overturned to where it passes over the rail upon the bridge. This track, and the point where it passes over the rail, is still perceptible. A careful investigation of all the circumstances leaves no doubt that these wheels were the front wheels of the leading horse-box. A recent cut upon a sleeper 8 feet 6 inches further back, (which is precisely the distance between the axles of the horse-box), proves that at the instant when the front wheels left the rails, the hind wheels were already at a considerable distance to the right of their usual position. Marks upon the ballast caused by the left hind wheel, extending about twenty yards farther back, were observed by Mr. Whitten immediately after the accident. It is thus established beyond question that when the horse-box approached the bridge the hind wheels were off and the front wheels on the rails.

At the level crossing at the eleventh mile-post, pieces of wood are placed longitudinally upon the ballast, so near to the rails that if the hind wheels had been off before the train passed that spot those pieces of wood must necessarily have been torn up. They have not been recently disturbed, and therefore the derangement in the position of the horse-box must have taken place after it had passed this spot.

The right hind wheel, in the position we have described, would necessarily produce at intervals upon the outside of the right rail marks of a certain character. Marks of that

character exist upon that rail at irregular intervals between the eleventh mile-post and Haslem's Bridge. The first of these marks is within fifty yards of the eleventh mile-post, and consequently the hind wheels must have been thrown off somewhere within that space.

The plate-layers who observed an unusual motion of the horse-boxes were at work at this spot, and the commencement of the accident took place whilst they were looking at the train.

We feel it our duty to recapitulate the evidence by which it is established that the speed was not excessive at the time when the accident occurred:—

- (1.) The evidence of nine officers and servants of the railway, to the effect that the speed did not exceed 25 miles an hour, one alone of whom was responsible in the matter.
- (2.) The positive evidence of Mr. Fitz Maurice that the steam was shut off all the way down the incline. There seems absolutely no reason whatever to doubt the truth of this gentleman's evidence.
- (3.) That the *hind* wheels were first thrown off confirms the statement that the steam was shut off.
- (4.) That the hind wheels diverged from the rails upon approaching the bridge is sufficient to prove that the speed was moderate. This evidence is, in our opinion, more conclusive than the testimony of ten eye witnesses.
- (5.) The opinion which has been expressed, that the distance which the carriages ran after leaving the rails is evidence of excessive speed, seems to be founded upon a strange and total misconception of what took place after the train passed Haslem's Bridge. It seems to have been supposed that the coupling between the tender and horse-box parted immediately after the latter was thrown off the rails at the bridge, and that the horse-box was pushed in front of the train for 250 yards, a part of which is upon the curve, whereas it is obvious that it could not have travelled in that way for ten yards. It is, moreover, proved in the evidence, that the coupling did not part until the instant before the horse-box fell over the bank.
- (6.) On the other hand, there is the evidence of two passengers that the speed was greater than usual, and of three others that it was excessive. It appears in the evidence of these three gentlemen that their attention was attracted to the speed by a vibratory, trembling, swaying, motion of the carriages. This unusual motion was produced, as we have already explained, by the defective state of the permanent way, and the deranged position of the horse-box.

It is no longer a matter of opinion, but an obvious fact, that Boan is entirely free from blame in this instance; and we have been confirmed in the opinion which we have before expressed, as to his general character for steadiness and skill, by the evidence of Mr. Mason, which places in an altogether new light the complaint against Boan, in which Mr. Mason's name has been coupled with that of Mr. Morgan. Mr. Mason states that upon the occasion referred to by Mr. Morgan, Boan was not driving in a reckless or dangerous manner, and that the only complaint made against him was, that he did not ease the engine quite so much as he should have done in going round the curves; but that he did not think the matter of sufficient importance to be reported to Mr. Whitton. Mr. Mason further states, that he has had frequent opportunities of observing Boan's manner of driving; that he never before had occasion to find fault with him; and that he considers him to be a steady and skilful driver.

Since the date of our first Report we have made a particular investigation of the circumstances under which a considerable portion of the line near Haslem's Bridge was repaired upon the day of the accident.

It was not until near the close of our inquiry, and after having ascertained by personal observation that repairs to a considerable extent have been recently carried out, that we were able, by a severe cross-examination of a number of witnesses, to bring the truth to light.

From

From the mass of contradictions and inconsistencies of which a large portion of the evidence upon this part of the subject consists, we have succeeded in extracting the following facts, which seem to be well established.

Within a short time after the accident a number of plate-layers and other laborers were collected from various parts of the line. They first of all cleared the down line of the obstructions, and repaired the damage caused by the accident. When this was completed, and the traffic re-opened upon the down line, the men dined. Up to this time nothing had been done towards repairing the up line where the rails were torn up, and the horse-boxes and two carriages were still in the position in which they had been left by the accident. It was about this time that Captain Martindale, Mr. Whitton, Mr. Morgan, and others went to Parramatta to attend the inquest. Mr. Morgan left instructions with Mr. Richardson as to how the plate-layers were to be employed during the afternoon.

All the plate-layers after dinner were removed from the scene of the accident, and employed in repairing the up line from that point to the eleventh mile-post, a distance of nearly three-quarters of a mile. It will be observed that the common answer of all the plate-layers when questioned as to their occupation during that afternoon, is "taking up slacks." They were all employed upon the up line, with the exception of a party of about four men, who were sent to complete a job which had been left unfinished by Fishlock. Towards evening the part of the line where the rails were torn up was repaired, the whole being completed just before dark.

For what reason the plate-layers were diverted from the purpose for which they were brought together, and for what reason they were directed to confine their attention to the up line exclusively, and to carry out the repairs as far as the eleventh mile-post and no further, does not clearly appear in the evidence.

It is stated by Mr. Morgan that there was nothing particular for the men to do at the time, as they were waiting for some new rails which were expected from Parramatta. It appears, however, that in the meantime nothing was done towards preparing the road for laying down the rails, that those which came from Parramatta proved too short, and that the rails which were eventually made use of were upon the ground before 12 o'clock.

So far from there having been nothing in particular to be done at the time, the plate-layers were again collected upon the following morning (Sunday), and were employed during the whole of that day, in company with the men belonging to the Locomotive Department, in raising the carriages which had fallen over the bank. During the same day (Sunday) Fishlock, with his gang, was employed upon his length.

No report was made to Captain Martindale, or to Mr. Whitton, of the manner in which the plate-layers were employed whilst those gentlemen were attending the inquest at Parramatta; and they did not become in any degree aware of what had taken place until it came partially to light through the evidence taken before the Select Committee of the Legislative Assembly. A letter from Mr. Whitton upon this subject will be found appended to this Report.

It does not appear that Mr. Morgan made any personal inspection of the line for more than a few chains beyond the bridge, and there seems no reason to suppose that either he or any other person whatever had any idea of the manner in which the accident occurred.

Since the day of the accident some further repairs have been carried out upon the up line, from the eleventh mile-post towards Haslem's Bridge.

The facts which we have related cannot, we think, be satisfactorily explained, except by supposing that upon the day of the accident the up line for some distance on either side of Haslem's Bridge was in very bad repair; and with the positive evidence which we have before us as to the general character of that part of the line where the accident commenced, and as to the repairs which have been since made; and in the total absence of any other assignable cause, we feel no hesitation in attributing the accident to a defective state of the permanent way.

Having been perfectly satisfied, by the evidence of Mr. Whitton, that there was no dangerous defect in the permanent way at the place near Haslem's Bridge, where it was originally supposed that the horse-box had been thrown off the rails, we have only incidentally

made

made any inquiry respecting the "slack" to which Mr. Richardson has drawn attention. The extent of this deflection was not measured, and was variously estimated as follows:—

	in.
Fishlock, who is responsible for this portion of the line... ..	0
Mr. Morgan	$\frac{1}{2}$
White, the Sydney Ganger	$\frac{3}{4}$
Vincent, who repaired the defect	1
Heffer, who assisted Vincent	$1\frac{1}{2}$
Mr. Richardson	2

Mr. Richardson's evidence does not differ from that of the other witnesses, except in his estimate of the extent of this depression; and everything else which he has stated respecting the manner in which the men were employed upon the day of the accident is fully borne out by the evidence. We have not considered it to lie within our province to inquire whether or not Mr. Richardson exaggerated this defect with a malicious intention. #

Whatever doubt may exist in this matter, one thing is quite certain, the hind wheels of the horse-box were off the rails before they came to this "slack," and all the other wheels in the train passed safely over it.

In conclusion, we are happy in being able to state that works were undertaken by Mr. Whitton several months ago which will have the effect of permanently improving the condition of the line between Sydney and Parramatta.

We have the honor to be,

Your Excellency's

Most obedient and most dutiful servants,

M. B. PELL.

H. M. DENHAM.

E. O. MORLARTY.

Given under our hands and seals, at Sydney, on this first day of September, A.D., 1858.

APPENDIX.

*Railway Office,
Sydney, August 17th, 1858.*

MY DEAR MR. PELL,

I regret that your note of this morning, addressed to me, was not received until after 12 o'clock.

I was not aware until after Richardson's statement to the Select Committee that any portion of the line on the Parramatta side of Haslem's Creek Bridge had been repaired on the day of the accident. On hearing this, I made inquiry from Morgan, and he told me that Richardson asked him, immediately after the accident, to be allowed to put on men to repair a slack which he said existed at the Bridge; this, Morgan properly refused until I had inspected the line. Shortly after I had seen the line, and before Morgan left to attend the inquest at Parramatta, Richardson again asked Morgan to let him take some of the men and pick up slacks in the line between Haslem's Creek and the curve at the top of the incline. Morgan then gave permission for Richardson to take White and the Newtown gang, probably six or seven men, they having nothing important at this time to do, and lift a few "slacks," stated by Richardson to exist on the incline. From my own inspection of the road I am satisfied that there was no slack, so far as I inspected the line, (about 200 yards from the Bridge) requiring immediate attention.

Very sincerely yours,
JOHN WHITTON.

PROFESSOR PELL.

RAILWAY ACCIDENT.

FINAL REPORT

OF THE COMMISSIONERS appointed to inquire into the Causes of the recent Accident upon the Great Southern Railway, and to report whether the existing Regulations and the general management of Railways in this Colony are such as adequately to ensure the safety of persons travelling by rail.

MAY IT PLEASE YOUR EXCELLENCY:—

We, the Commissioners appointed to inquire into the causes of the recent accident upon the Great Southern Railway, and to report whether the existing regulations and the general management of Railways in this Colony are such as adequately to ensure the safety of persons travelling by rail, in making inquiries with respect to the general regulations upon Railways in this Colony, have considered the subject under the three following heads—

- (1) The Permanent Way.
- (2) The Rolling Stock.
- (3) The Management of the Traffic.

The Railway between Sydney and Parramatta we find to be defective in several respects. The cuttings and embankments are too narrow. The bridges are badly designed, and of improper materials. The number of sleepers originally laid down is insufficient; the ballast is deficient both in quantity and quality. It may be remarked, also, that the excessive rains of this country aggravate the inconveniences arising from the above sources.

The rails which have been laid down are not of the form which secures the greatest strength with a given quantity of metal; but we do not consider that any danger or inconvenience is likely to arise from this source, for the rails are of amply sufficient strength for any amount of traffic for which they are likely to be required.

It is to be observed, also, that the defects which have been pointed out increase the expense of maintaining the Railway, but do not, under careful management, necessarily involve any actual danger in the conduct of the traffic; and, as we have already reported, steps were taken several months ago by Mr. Whitton to ameliorate the condition of the roadway; and we are glad to find that he has not been in any way hampered in carrying out such works as he may have thought necessary or advisable.

The system which has been established by Mr. Whitton for the maintenance of the permanent way seems as efficient as the peculiar circumstances of this Colony admit; and we do not find it necessary to recommend any measures supplementary to those which he has already initiated or carried out.

With the exception of the locomotive engines, the rolling stock is of the same kind as that made use of in England under similar circumstances, and is of the best and most approved construction. We do not find it necessary to recommend any change in the system of supervision and inspection in this branch of the service.

The locomotive engines are, obviously, unfit for the service in which they are employed; they are unnecessarily heavy, and consequently severe upon the permanent way; and, in consequence of other defects, they are unusually expensive in maintenance, for the amount of work which they perform. An ultimate saving would, probably, be effected by the adoption of Mr. Whitton's recommendation, that these engines should be replaced by others of a more suitable construction.

In the conduct of the traffic all the usual precautions have been adopted, and we cannot find that any alteration is required in the code of signals, or in the general regulations. We consider, however, that it would conduce to the safety of the passenger trains if some plan were adopted for securing a certain means of communication between the guard and the engine-driver.

We are convinced, after a careful investigation of the subject, that in a passenger train horse-boxes and trucks should be placed at the tail of the train. We do not, however, consider that the danger is increased in any material degree by placing them in any other part of the train; and it seems to be the generally received opinion that they should be placed next to the tender. This part of the subject will be found fully discussed in our last examination of Mr. Whitton.

We are surprised to find that the Electric Telegraph has not yet, in consequence of the want of instruments, been made fully available as a means of facilitating the safe and efficient conduct of the traffic. We understand, however, that this defect will soon be remedied. If at any future time there be any appreciable amount of traffic upon the Northern Line, both safety and economy will probably be secured by the establishment of telegraphic communication between the stations.

In concluding this long and laborious investigation, we cannot forbear from remarking, that the extreme difficulty which we have encountered with respect to the recent accident was in a great measure occasioned by two circumstances:—

- (1.) The time which elapsed before the commencement of our inquiry.
- (2.) The extent to which the condition of the roadway and of the carriages was altered before we had any opportunity of inspecting them.

In order to prevent such difficulty in future, it seems to us advisable that some person or persons not connected with the Railway Department should be appointed to take cognizance of accidents; and that measures should be adopted to prevent any repairs being made of the roadway or alteration in the condition or position of the carriages (more than might be necessary for the rescue of passengers) until the whole had been inspected by the persons appointed for that purpose.

We are happy in being able to state, that in carrying on our inquiry we have received every possible assistance from the Chief Commissioner, from Mr. Whitton, and from the other officers of the department.

We have the honor to be,

Your Excellency's most obedient and
most dutiful servants,

M. B. PELL, *Chairman*.
E. O. MORIARTY.

Given under our hands and seals, at Sydney, on this sixteenth day of September, A. D. 1858.

1858.

ACCIDENT UPON GREAT SOUTHERN RAILWAY.

MINUTES OF EVIDENCE.

JULY 26, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

CAPTAIN DENHAM, | MR. MORIARTY.

Captain Martindale examined:—

1. *By the Chairman:* Has anything transpired since the date of your last report upon the recent accident which has enabled you to form any clear idea of the cause? Nothing which has enabled me to form anything more than a conjecture upon the subject. Some additional evidence has been given before the Select Committee of the Legislative Assembly respecting the rate at which the train was travelling immediately before the accident. This evidence will be laid before you, and you will be able to judge how far it is reliable.
2. Is there any person specially in charge of the permanent way? Yes, Mr. Wm. Morgan is Inspector of Permanent Way, under the Engineer-in-Chief, and I consider him a perfectly competent and trustworthy person.
3. Has any portion of a train upon any other occasion run off the line? Not to my knowledge, except upon one or two occasions, and then from obvious causes, such as cattle on the line, points being wrongly held at a station, &c. I do not think such a thing could have occurred for months past without being reported to me.
4. *By Captain Denham:* Do you think that the accident might have been occasioned by something falling from the engine or tender and passing under the wheels of the horse-boxes? I do not think it possible that the accident could have been caused in such a way, nor by anything upon the line.
5. Has it been a question whether the horse-boxes should be placed next the tender, or in any other part of the train? It has; but I consider that the safest and most convenient place for them is next to the tender.
6. *By the Chairman:* Is there any general order respecting the position to be occupied by horse-boxes or trucks in the trains? Yes; that they must invariably be placed next to the tender.
7. *By Captain Denham:* Are the horse-boxes more top-heavy than the passenger carriages? No; nearly the whole weight of the boxes is in the lower part.
8. Do you approve of screw-couplings being omitted in any part of a passenger train? No; but I do not attach any great importance to their omission in a train travelling at the speed authorised upon the Southern Railway.
9. Have any alterations been made in the regulations since the date of the recent accident? None; but a special order has been given that screw-couplings shall never be omitted in passenger trains.
10. Are you satisfied with the strength and efficiency of your staff for carrying on the duties of the department? Yes, for the work at present to be done; but the department is one that must increase in proportion as railways are extended, and the difficulties it has to contend with in a new country are very considerable.

Captain
Martindale.

26 July, 1858.

JULY 27, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

CAPTAIN DENHAM, | MR. MORIARTY.

Mr. Whitton examined:—

11. *By the Chairman:* How soon after the recent accident did you visit the spot? Within two hours.
12. Did you see the horse-boxes before they had been removed? The couplings had been removed, but their original positions had been very little altered. (*Mr. Whitton here described the position in which he found the horse-boxes relatively to the line and to one another.*)
13. Do you not think it certain, from the positions in which these boxes were found, that the leading one ran off first? Yes.
14. Supposing the accident to have occurred on account of the want of screw-couplings between

Mr. Whitton. between the horse-boxes, which of the two do you think would have run off first? I do not think that this accident could have occurred entirely from this cause; the want of a screw-coupling would give rise to greater oscillation in both boxes, and would tend to throw off one as much as the other.

27 July, 1858.

15. Did you immediately examine the horse-boxes? Yes.
16. Did you remove the wheels and examine the bearings? No, but they have since been removed, and the bearings were found in perfect order. They may now be seen as they were found.
17. Did you discover in either of the boxes any defect which might have existed before the accident, and have caused it? I did not find any defect which could, with any degree of probability, be supposed to have existed before the accident.
18. Is there any person whose special duty it is to inspect the rolling stock? Yes, the Inspector of Carriages; no carriage or truck leaves Sydney without having been inspected by him. I do not think it to be necessary that a carriage should be again inspected until its return.
19. Do you think that excessive speed, say 40 miles per hour, would have been likely to cause such an accident as occurred? I think it extremely improbable. The line is quite straight where the horse-box left it. Excessive speed would in such a case cause the engine, if anything, to run off the line. I do not think 30 miles an hour would be a dangerous speed for a train at that point, but it would be imprudent to travel upon the next curve at so great a rate. If the steam were suddenly shut off whilst the train was moving at this rate, the buffers of the tender would be brought suddenly into collision with those of the horse-box, which might thus be thrown off. There is not however, as far as I am aware, any evidence that such was really case.
20. By Captain Denham: Do you consider that the side chains are of any use? No, rather the contrary; in case the regular coupling should give way, the side chains would be very likely, under certain circumstances, to throw the train off the line.
21. Do you think then that they had better not be used? Yes.
22. Do you think that the horse-boxes are more liable to oscillate than passenger carriages? Yes, such as are made in England, but only in consequence of their having a shorter wheel base; here the frames are made of ironbark, which is a very heavy timber; the weight of the box is therefore entirely in the lower part, and tends to steady them.
23. Do you approve of screw-couplings being in any case omitted in passenger trains? No.
24. Do you consider that these couplings tend to prevent oscillation? Yes, they tend to make the whole train run more steadily.
25. By the Chairman: Was there, before the accident, any general order respecting the couplings in passenger trains? No positive order, except that the trains should be properly coupled; the meaning of this being, that screw-couplings should always be used. These boxes however have been running ever since they were built with loose couplings.
26. Do you approve of this? No.
27. Do you consider that there was a neglect of duty on the part of any of the Railway officers or servants in omitting to put on the screw-coupling? No; I cannot say this was a neglect of duty on the part of the porter at Parramatta, as these boxes had been sent from Sydney the same morning without a screw-coupling being used between the boxes.
28. Did you immediately after the accident examine the permanent way? Yes.
29. How did you determine the point at which the horse-box first left the rails? By tracing back the marks of the wheels upon the ballast at the side of the rails.
30. Were you able to trace these marks over the top of the rails? No.
31. Did you particularly examine this part of the line? I gauged the line at this point, and satisfied myself that there was not, within 200 yards, any defect in gauge or level that could possibly have occasioned the accident.
32. Has this part of the line been repaired since the accident? The plate-layers went over it, in the regular course of their duty, about four hours after the accident; but I had examined it, and satisfied myself that no defect existed that could account for the accident before it was touched by them.
33. By Mr. Moriarty: Do you think it possible that a horse-box, after having been thrown from its proper position on the top of the rails, might run for a considerable distance before being thrown entirely off? I do not think it could run far in that way. (Mr. Moriarty here explained his meaning with the help of a diagram)
34. Do you not think that from the form of the rails and of the wheels that there would be a tendency of the wheels to return to their original position on the rails, and that this tendency might for some time prevent them from receding farther from the centre of the rails? There is no doubt such a tendency would exist, but I do not think that it would long prevent the wheels from being thrown entirely off the rails.
35. By the Chairman: Do you think that a horse-box supported at one end by the tender, and at the other by the rest of the train, might run for a considerable distance, say 200 yards, without being thrown entirely off the rails? I am of opinion that it certainly could not run in that way so far as 200 yards.
36. By Mr. Moriarty: Do you think it possible that the unusual rolling of the leading horse-box, observed by Fishlock and his gang, might have been occasioned by the box being at that time actually off the rails? I do not think it possible.
37. By the Chairman: Are you satisfied with the strength and efficiency of the staff of officers and men in charge of the permanent way and rolling stock? I am quite satisfied. Most of them were appointed upon my own recommendation.
38. Are you satisfied with the strength and efficiency of the staff of officers and men employed in conducting the traffic? I am not responsible for that department, but I am satisfied that the staff is sufficient.
39. Have you ever been hampered by undue regard to economy in carrying out any measures which you have considered necessary or advisable for securing the safe and efficient conduct of the traffic? Never.

FRIDAY, 30 JULY, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

CAPTAIN DENHAM,

MR. MORIARTY.

Mr. Beeston, called in and examined:—

40. *By the Chairman:* Are you Traffic Manager on the Great Southern Line? I am Traffic Inspector. Mr. Beeston.
41. Is it any part of your duty to see the carriages of a train properly coupled together prior to their starting? Yes, all those that I possibly can; but I cannot see to every train that leaves, as I am frequently absent. 30 July, 1858.
42. If a train were starting from the Sydney station, and you happened to be on the spot, you would then feel it to be your duty to inspect them? Yes, always.
43. Had there, prior to this accident, been any general orders as to the kind of couplings to be used in passenger trains? No general order had been issued, but it was understood that where it was possible screw-couplings should be used, except in the case of horse-boxes. With this understanding we always used screw-couplings where it was possible or practicable. Sometimes on the horse-boxes there were no screw-couplings, and we had to attach them by centre-chains.
44. Have you ever seen passenger carriages attached to a train without screw-couplings? No, I have not.
45. If you had seen them what would you have said? I should have had the guard fined, and, in addition, would have reported him to the Chief Commissioner.
46. If you had seen horse-boxes attached to passenger carriages without screw-couplings, and with a centre-chain only, what would you have done? I should have reported it; because I consider that the side-chains are a protection. When I look to the couplings I always see that the carriages are fairly coupled, so that one side-chain shall not be longer than the other.
47. If you had seen two horse-boxes attached to each other without screw-couplings would you have made any inquiries into the circumstance? No; I should not generally have taken notice of such a thing. I might have said that they ought to put on screw-couplings, where they had them; but as there were none on the horse-boxes I should have made no remark.
48. In such a case do you consider screw-couplings necessary? Not absolutely necessary; but if you have the screw-couplings it of course makes the oscillation less, because you can screw up as close as you like to the carriage ahead.
49. Has it been a common practice to run with centre-chains only attaching the horse-boxes to the train? I have not noticed that it was so particularly; but I have only been a short time in my present position. The old boxes, I think, have only got the side-chains on.
50. Do you consider that the recent accident was caused by any neglect of duty on the part of any one of the railway servants in omitting to examine or to do anything with the couplings? No, I do not; not in the least.
51. You have said that you use the screw-couplings where convenient; now, would there have been any inconvenience in attaching screw-couplings to the horse-boxes? No. It was merely a matter of form. If there had been screw-couplings, I should have told them to put them on.
52. Has there been any specific order on this subject since? I have never officially received any order on the subject, though, I believe, and in fact I know that Mr. Nealds has given an order about it.
53. Then, if you saw a train come in with horse-boxes attached only by a centre-coupling, you would report it? Yes, I would; because I know that Mr. Nealds has issued an order to have them attached by screw-couplings.
54. Previous to the accident, was there any order as to the position of the horse-boxes in the train? The order was that they were to go in front.
55. Is that order still in force? It is.
56. Then, if you saw them at the tail of the train what would you do? I should report it, and have the guard fined.
57. If you saw them leaving Sydney at the tail of the train would you do so? No. There is a reason for their doing so just now: there is a difficulty at present in the way of getting them to the front, and it would take too long a time to do so. Some repairs are now going on, and when these are completed, notice will be taken of such a thing.
58. Is there any particular place in the train for goods-trucks travelling with a passenger train? Yes; they go next to the engine, the same as horse-boxes.
59. In the train to which the accident happened I believe there were some goods-trucks? Yes, there were.
60. There is, however, no specific order as to the position they should occupy? No. I believe a verbal direction has been given by the Chief Commissioner that the goods-trucks should go at the head of the train, and the horse-boxes behind them again. We always send them in front where practicable; but it is more a matter of convenience than anything else when we put them at the tail of a train. It is a general practice on all the lines I have seen to send the goods-trucks and horse-boxes in front of the train.
61. *By Captain Denham:* Why do you not allow passenger carriages to proceed without screw-couplings? Because it has always been customary everywhere not to permit it; and because, without them there is always a greater amount of oscillation, and that this would cause inconvenience to the passengers. The carriages would jerk so much that the passengers would be thrown one against another in a way that would be disagreeable. The screw-couplings are put on more for the convenience of passengers than for anything else.

- Mr. Beeston. 62. Then it is to prevent oscillation that the screw-couplings are put on? Yes, as by the screw the carriages are drawn up closer to each other, and the oscillation is prevented.
- 30 July, 1858. 63. Would it not be likely to have the same effect upon horse-boxes as upon passenger carriages, if screw-couplings were used, and at the least inconvenience to the horses, who for the time being must be regarded as passengers, be thereby prevented? Of course; the tighter the horse-boxes are screwed up to the carriages the less oscillation there is likely to be.
64. Do you then consider it to be a justifiable omission in their having only chain-couplings to the horse-boxes? Yes, I do. I consider these couplings to be perfectly safe, as I have seen trains running with them continually without an accident.
65. I cannot understand how you make this tally with your previous remarks—you said, I believe, that the screw-couplings prevented oscillation? I did; but, when I speak of the horse-boxes being safe without them, I mean that they are safe whilst travelling at the rate we do here—of not more than 30 miles an hour. I cannot, however, say that they would be safe with chain-couplings when travelling at the rate of 50 or 60 miles an hour, or at the rate of some of the fast trains at home.
66. In any case, however, you conceive that the screw-couplings are the safer? Yes; no doubt.
67. Then, we have had a serious accident, having some reference to horse-boxes not being securely fastened to the train by screw-couplings; so that your opinion is, to some extent, carried out by the accident occurring in that part of the train that was not secured—how can you reconcile this with the assertion you have just made, that horse-boxes can be safe with chain-couplings; if there were three horse-boxes all attached in the same way by chain-couplings would you look upon this with equal indifference? Yes. You can get the boxes up to each other nearly as closely as you can by the screw-couplings, or, at all events, so closely as that there would be nothing to prevent you travelling 40 or 45 miles an hour.
68. The way you would do this would be to run the carriages hard up against each other, and by having a man standing by to hook on the chain when the buffers were compressed? Yes.
69. By Mr. Moriarty: Have you ever heard of horse-boxes getting off the line before this? Yes; I have heard of such a thing occurring once, but it did not come within my knowledge.
70. Where did this happen? That I do not know; I only heard of the thing.
71. From whom did you hear of it? From one of the engine drivers.
72. What was his name? Ticksmith; he is not employed by the Commissioners now.
73. Has he ever been examined on the subject? That I cannot say.
74. By the Chairman: Do you think that the absence of screw-couplings had any thing to do with the recent accident? I do not think that it had the slightest effect upon it.
75. To what then do you attribute it? I cannot give any cause at all for it; I am quite at a loss how to account for it. Without something had given way in the running gear of the horse-boxes, or something had been wrong in the permanent way, I can attribute it to nothing. Such things have occurred before. I have seen, in England, a truck jump right off the line, without there being any thing at all to account for it, where there has been no defect in the permanent way, and every thing right with its running gear.
76. By Mr. Moriarty: Had not the trains been running very irregularly for some time previous to this accident? Not for nearly a month before.
77. They had been very bad then? Yes, for a short time.
78. They had been late? Yes, they had been a good deal over time.
79. What trains were these? Sometimes one and sometimes another. One train or another was always late during the day.
80. How long did this continue? Not long; we had been running very regularly for a month previous to the accident.
81. What was the cause of the irregularity? It was mostly caused by delays at the stations—the station-masters not exerting themselves as they ought to have done to get the trains away. There was a complete looseness pervading the business of nearly all the stations.
82. Was this reported to the Commissioner? It was, and that was the time that I was appointed to look after the line, and to put all these little irregularities right.
83. That was in the time of Mr. Nealds, then? Yes; but at that time he had more on his hands than he could well attend to, particularly after the Campbelltown line was opened.
84. By Captain Denham: Then you were appointed to relieve Mr. Nealds of part of his duty? Yes.
85. You were appointed under the memo. of 3rd June? Yes.
86. And received your instructions? Yes.
87. By the Chairman: What precautions are taken at Campbelltown to see that all the trains are in good running order? There are none taken there.
88. It is thought to be unnecessary, I presume, and that the Sydney inspection is sufficient? Yes, quite sufficient for a journey of 34 miles.
89. You are acquainted with the system of railway management in England? I am.
90. How far do the carriages there run without being inspected? In some parts 25 miles, in others not more than 15 miles. The reason of this is, that at distances of about 15 to 25 miles there are important stations situated, and here permanent inspectors are appointed. The stations being important ones, carriages are left there; and the inspector is also a repairer of carriages, so that it was his duty to look after them and see if anything was wanted.
91. Then, in England they examine the carriages at the most every 25 miles? Yes.
92. And yet you said that here it would be sufficient if the carriages were examined on returning to Sydney, when they would have gone a journey of sixty miles? Yes, but I explain the reason—that there are particular stations where a number of carriages are left, and at which men are stationed to do all necessary repairs; thus, it was their duty to come and examine every train that passed, to see if anything was required.
93. Would there be any difficulty in the way of having an inspection of carriages at Campbelltown?

belltown? None. The only thing we should require would be a thoroughly experienced ^{Mr. Beeston.} man.

94. Would such an appointment be advantageous? I scarcely think it would be necessary, ^{30 July, 1858.} so long as there is a thorough inspection by the guard, and by the man in charge of the station.

95. Is it not possible that a carriage may receive an injury, and then be put on the train at Campbelltown without the injury being discovered? I scarcely think it possible, because there is a very good man in charge of the Campbelltown station, and all the guards are very efficient.

96. And you think they would do all in their power to prevent any accident, and to discover any defect? I am sure they would, because I know of circumstances that have occurred, in which, if they had not been very attentive indeed, the mischief would not have been discovered.

97. *By Mr. Moriarty:* Did you ever observe that the horse-boxes on this line oscillated more than ordinary? No. I never observed any particular oscillation in them.

98. Had your attention ever been drawn to this particular horse-box? Never.

99. Oscillation would be produced by an irregularity in the permanent way? That would cause it.

100. And the greater the irregularity the greater the oscillation? Certainly.

101. Then if you saw a horse-box rolling would you attribute it to a defect in the permanent way, or to some fault in the horse-box itself? Unless there was some perceivable fault in the horse-box, I should say that there was a defect in the permanent way.

102. Would a defect in the permanent way cause a horse-box to roll more than a passenger carriage? No. The horse-boxes, being higher, appear to roll more than the passenger carriages; but they do not do so more than is usual, or more than ordinarily occurs elsewhere.

103. But if there be a defect in the permanent way sufficient to make the horse-boxes roll in such a manner as to excite attention, would not that cause the passenger carriages to roll also? It ought to do so; but the horse-boxes being higher appear to roll more than the carriages. If you stand close to the line and watch the train the horse-boxes always appear to roll more than the carriages, but they do not do so, although, being higher, the rolling is more perceptible in them than in the carriages.

104. *By Captain Denham:* Then the chains by which the horse-boxes are attached, working more loosely than the screw-coupling, make this effect still greater? Yes, they do.

105. *By Mr. Moriarty:* Should there not be some arrangement on the break-van so as to allow of the guard having a better view of the line; at present he can only see the line by leaning out at the side of the van;—do you not think that if he had a high seat so as to see over the carriages it would be better—some such an arrangement as was adopted on the Great Western line? I have seen this on the Great Western; but these high seats have all been taken away since, because, being perched up so high and exposed to the wind, the guard was almost perished.

106. But there is a difference between the climate here and in England? Yes; but the guard would still be greatly exposed.

107. *By the Chairman:* Could not the guard have a place made just above the line of the top of the carriages, so that he could see over;—would not that be an improvement on the present inconvenient plan? It might be; but these arrangements do not appear to have found any favor in England. At one time all the break-vans were made with these high seats, but they were not found to answer, and since then the principal part of them are made the same way as ours.

108. *By Mr. Moriarty:* You never heard of any train getting off the line prior to this accident? No; I never heard of anything except the horse-box I mentioned. I have only been about eight months on the line, and the greater part of that time I was minding a station, and therefore saw nothing that was going on on other parts of the line. With regard to this accident, I can only say that I travelled over the line the night before it happened, with the same driver to whom the accident occurred, and I saw nothing in particular to call for attention either in that or in any other part of the line.

109. With the same carriages? Yes, the very same.

110. And the same horse-box? I cannot say that, for I do not remember whether we had a horse-box with us.

111. What was the driver's name? Boan.

112. Did you ever observe that he was addicted to driving fast? Only on one occasion, and that was the day after he was appointed. This I considered excusable, because, being new on the line, he did not know the road and the places where it was necessary to pull-up for the curves. He was then running too fast, and I told him so, and that he would be before his time. When I told him this he said "Shall I, Sir?" and immediately shut off the steam and reduced his speed.

113. Have you had opportunities of observing whether Boan drove steadily or not? Yes, for there was scarcely a day that I was not with him on one part of the line or another.

114. And you consider that he drove steadily? Yes. I always considered him the best driver on the line. I am not an engineer to give a professional opinion on his capability, but, having been many years connected with railways, I can judge from observation of a man's efficiency, and I consider him to be the best driver on the line.

115. Both for skill and steadiness? Yes. He ran too quickly the first day or two after he was appointed, but this was owing to his not well knowing the road, and being anxious not to be behind time; but afterwards he drove very steadily, so much so that I have had to speak to him to keep up to his time.

116. *By the Chairman:* Was he addicted to drinking? I never saw him drunk.

117. Did you see him after the accident? Yes, almost directly afterwards.

Mr. Beeston. 118. Was he then quite sober? Yes, quite. He appeared very nervous and frightened at such an accident having occurred to him; but there was nothing else more than ordinary about him.

30 July, 1858.

119. Now, do you think that this accident was in any way occasioned by the excessive speed at which the train was going at the time? No, the speed had nothing to do with it; they might have come along at the rate of 30 or 40 miles an hour with perfect safety. Then the driver was well up to his time, and there was therefore nothing to make him go beyond the ordinary speed.

120. You were in the train with us yesterday? Yes.

121. What was the greatest speed at which we went? Barely 30 miles an hour; she ran the half-mile in a minute and two seconds; but I can tell the speed without timing the distance between the mileposts with a watch, being so accustomed to notice and calculate the speed.

122. You travelled with us to Sydney? Yes.

123. What was the greatest speed we attained? Twenty-seven or twenty-eight miles an hour; that was the fastest I noticed.

124. We never reached 30 miles? No. The greatest speed was near Homebush, and after passing Ashfield she did not do more than 20 or 22 miles an hour. The greatest speed was as near 27 miles an hour as possible. I thought you were trying experiments with the engine, because she was going faster than the general speed.

125. By Mr. Moriarty: If you saw two carriages linked together with the buffers not brought up equally on both sides, would you take notice of it? Yes, if it was on a straight part of the line, but on a curve the buffer on one side is always closer than that on the other. If I saw such a thing I should call the attention of the Inspector to it. Sometimes the spring of a buffer gets weak and draws in, but when this is the case it has no effect on the carriage.

126. Which way were the gangers working on the day of the accident? I cannot say. They belong to the permanent way department.

127. Do you know when the horse-box that went off the line had been inspected? No; but there is an Inspector of carriages, and he most likely looked to it with the others.

128. You have nothing to do with this officer? No; only if I noticed a carriage defective I should mention it to him; in fact, if I saw one I should at once stop it, and not allow it to go out.

THURSDAY, 5 AUGUST, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

CAPTAIN DENHAM.

MR. MORIARTY.

John Fishlock called in and examined:—

J. Fishlock. 129. By the Chairman: You are a ganger on the Great Southern line? Yes.

130. You saw the train pass on the morning of the accident? Yes.

5 Aug., 1858. 131. Did you on that occasion observe anything unusual in the motion of the horse-boxes? I did.

132. How many were there? There were two of them.

133. Did you observe this unusual motion in both of them, or in one only? The lead-colored one was rolling the worst.

134. Was that the one next the engine? Yes, I think it was.

135. What was the other horse-box? A red one.

136. There was nothing unusual then in the motion of the red one? No.

137. You have seen trains passing repeatedly, I presume—have you seen the horse-boxes roll particularly before this accident? Yes, I have noticed them roll time after time.

138. Did you ever remark that it was any particular horse-box that rolled? No, I never noticed the number, and that was the only thing to fix it by.

139. You could not say then that it was the same box that was rolling on other occasions? No, I could not, without seeing the number.

140. Were they the lead-colored boxes that you saw roll? Yes, I think they were mostly; I never saw anything particular about the red ones.

141. Have you noticed any difference then as regards rolling between the red-colored boxes and the lead-colored ones? Yes; I have noticed the rolling in the lead-colored ones, but not in the new ones.

142. When you saw this rolling did you say anything to any one? Yes; I said it would be a case with them if they went round the curve like that.

143. Who did you say this to? To the men working with me.

144. Did they say anything? Yes; they said what I did. We all stood and looked at it—we all took notice of it. There is a man here who took notice of it the same as me.

145. Mr. Whitton tells us that at the place where the train turned off the line there was a slight low joint, not more than a quarter of an inch low—would that have been likely to cause this accident? No; no such a thing as that would cause it.

146. You often find a joint worse than that? Yes, a good deal worse.

147. And you have seen the trains go safely over them? Yes. I was seven years on the lines in England, and I have seen trains go over very much worse joints than these.

148. If it had been an inch low instead of a quarter of an inch, would that have caused it? No; an inch would not throw a train off the line.

149. Your duty is to go along the line, and see where any joint is low, and where you find one you set it up? Yes.

150. Do you often find them low? Yes; go which way you will you will always find plenty of work to do; and there is no occasion to stand idle a minute. I know this, and I have tried all I could to get my part of the line in good fettle, and any one will say that it is a great deal better than it was before I took it up. J. Fishlock.
5 Aug., 1858.
151. When you are going over the line how low would you call a bad joint—would you call them bad if they were down an inch? Yes; I should think them bad if they were down half an inch.
152. When they are down half an inch can you see them easily? Oh! yes; a man used to it can see a joint that is down half an inch when he gets within three hundred or four hundred yards of it.
153. Have you set up any joint between the bridge and the upper curve? Yes; I have been over it three or four times since I have been on that part of the line.
154. And I suppose that that very train to which the accident happened had on its up trip been over worse joints than that spoken of by Mr. Whitton? Yes, a great deal worse.
155. What is the worst low joint that has been found on your part of the line? I cannot say; I have only just taken to setting up the joints there.
156. Where were you employed? Farther back, towards Parramatta.
157. And what is about the worst joint that you have found? I never picked up a joint that was above half an inch low.
158. Have you set up any joints on the long incline? Yes; I fix them regularly all along my part of the line.
159. Have you been along there since the accident? Yes.
160. Did you find anything amiss there? No; nothing more than usual.
161. You found no low joints? No; not more than I always do. I go along and look after the low joints, and set them up where I find them; and I put sleepers in, in the really bad places, in order to keep them up.
162. Do you find that the clay embankment on the line is more likely than the others to get out of order? Yes; there is a deal more work about it than ever I had before.
163. The joints there are more liable to get low than they are elsewhere? Yes, indeed.
164. You don't remember finding anything particular between the bridge and Parramatta—anything very bad? No, there was nothing bad near that place, or on the road at the time, for nothing passes me, and for a week previously I had been on that way.
165. *By Captain Denham*: Did that box roll unusually that morning? Yes, it did; I made sure it would be over, even before it got to me.
166. You are sure it was the lead-colored box? Yes, quite sure.
167. How far were you from the spot where the accident occurred? Near on half a mile. I was near the level-crossing, just against the 11th milestone.
168. How near the crossing? Within about 6 yards of it. I was picking up a joint, and was down on my hands and knees at work at it when the train came up.
169. When you first saw the horse-box rolling, as you say, might it not then have been off the rails? No, it was not off when I first saw it; at all events, when it passed me it was on the rails.
170. And you were not more than half a mile from where the accident occurred? Barely that.
171. You are quite sure the box was not off the rails when it passed you? Quite sure.
172. If it had been off you would have been sure to have seen it? Certain sure.
173. Did you notice that it increased its rolling after passing you? Yes; it followed on rolling very bad until it got out of my sight.
174. *By Mr. Moriarty*: You said to your mates that you thought the carriages would run off the line? Yes; I said, "It is a case to me if ever that box gets round the curve." I was on my hands and knees on the down line, and the train was soon out of my sight; but my mate, who was raising the joint, was out at the far end of the lever, and being up higher and out farther could see farther than I could. He said to me, "That train has gone over." I said, "Nonsense." He said, "It has, though." I stopped the men at their work and said, "Hold on a bit." I put my ear down on the rails, but I heard nothing, and then I knew something was wrong; so I jumped up and said, "Come on, men." I ran along the line for a bit, but I had to go off it before I could see anything, and then off the bank I saw the carriages over.
175. What height was this bank on which you were standing? Not more than 18 inches. It was just off the line. I had to go off the line, and get over the fence to see along the line.
176. It was about half way down the incline, then, where you were standing when you first caught sight of the accident? Yes, about that.
177. On the accident side of the level crossing-place? Yes.
178. Did it not occur to you to draw the attention of the guard to the train when you saw the horse-box rolling so? There was not much chance to do that, with the train going as she did.
179. You never thought of doing so? I thought they were going too fast.
180. At what speed do you think they were going? I could not say. It is difficult to judge of the speed when you are standing on the line, and the train passing you. It was faster than I ever saw them go before or since.
181. Might not a train go at the rate of sixty miles an hour in perfect safety along a good line—such a one as that from Sydney to Parramatta? On a good line they might go sixty miles; but if I was to say that this was a good line I should tell a lie, and that would not be worth while.
182. You do not consider that piece where you are working is a good bit of road? No; it is all clay, and the bottom is never good.
183. It is a troublesome piece, then, to keep in order? Yes; and I do all I can to keep it right. I have been on different lines for the last fourteen years—been on them over and over again—and I never have had an indictment against me before now.

- J. Fishlock. 184. There is no indictment against you, nor are you charged with neglect—all we want is to learn from you what you know about this accident. This embankment is worse in wet weather? Yes. If a heavy shower of rain comes, down goes the embankment, and down goes both sides of the road, and then the joints go down, and nobody can help that. I know I have done all I could to keep it up, and have put in double sleepers in most places to keep them right.
- 5 Aug., 1858. 185. There had been a good deal of wet weather just prior to the accident? Yes, there had, a good deal, so much that it washed the ballast from all the sleepers.
186. Does it cost more labor to keep this embankment in repair than it does other parts of the line? Oh! yes. In wet weather there is always work to do on it; and even when it is fine the wind blows away the ballast.
187. The embankment being of clay is more liable to sink in wet weather than are other portions of the line? Yes.
188. Do you find it more difficult, where the embankment is heavy, to keep it in repair far down its sides, than you do to keep in repair spots where you have the natural surface drainage to carry the water off the line? Of course; and the higher the embankment the more trouble it gives us.
189. Is this always the case? It ought not to be, where there is slope enough to the bank; but it is here, because the line is nothing like wide enough.
190. What quantity of ballast do you always require on these embankments? We ballast right up to the out-end of the sleeper.
191. And beyond this I believe it is generally necessary to have a couple of feet of footing? Yes, two feet at least, and in some places there ought to be four feet.
192. Is that so here? No, it is not, indeed.
193. What footing have you? Different in different places; some have have a very good footing, and some none at all.
194. In working that embankment do you go regularly from one end of it to the other, setting up what is amiss—or how do you go on? No; I walk round, and that which I see the worst I go to. I do this because there is some of it that I can trust, and more that always wants working at.
195. *By the Chairman*: Where did you go to work the morning after the accident? I believe I came to the second cutting beyond the tents, half a mile this side of where the accident occurred.
196. Where did you go to work on the day of the accident—after it had occurred? I did nothing that day; I went to Parramatta on the inquest.
197. Mr. Whitton has said that the line was looked over within four hours of the accident—did you do nothing to it? Nothing was done to it by me.
198. Did you not help to examine the line? Yes; we examined it two hours after the accident, and found everything right. It was not the line. If the driver had taken his proper time there would have been no accident.
199. But in England they never hesitate about running at a speed of over 40 miles an hour, especially on parts of the line kept by so careful a man as you appear to be? I don't know. I have as much as ever I can do, and more too, for I cannot do all I wish to the line. I have worked day after day as hard as I could, and never missed a day, and yet I cannot keep it going as it should be.
200. How many men have you with you? Four men.
201. And what length of road have you? About two and a-half miles.
202. If you cannot do the work, why do you not apply for an extra man? I have one extra hand now; but if I have I have extra work to do.
203. What extra work? Putting in extra sleepers where I think them necessary.
204. There was no extra work then required at the place where the accident occurred? No; the line was as solid as a rock there.
205. None of the joints were down there? No.
206. You have been over it since? Yes; we must keep going backwards and forwards over every part, and I may have been over it a dozen times since.
207. And there was no difference between that and any other part of the line? None at all.
208. Do you do your work by contract? No; ours is by day wages.
209. Would it not then be as well to apply for extra hands to assist you if you cannot keep the work down—if you represented the matter to the Commissioner, would he not give you another hand or two to enable you to keep up the line? Well, I don't know. I have seen as many as 14 or 15 men put on to laying sleepers and all sorts of work on the length next to mine.
210. And what distance is the length next to you? The same as mine—two and a-half miles.
211. Why then would not the same thing be done to you if you made application? Well, I never applied. If there had been anything bad on my length I should have applied; but I never had anything bad with me.
212. Nothing at all likely to cause an accident? No, nothing like it.
213. In your evidence before the Chief Commissioner you say that the "meat-box" was next the tender—is that a mistake? I never said anything about a meat-box.
214. It must have been mistake then in taking down your evidence? They might take down what they liked; I know I never said it.
215. You say it was a lead-colored horse-box that was rolling? Yes, that I am sure of.
216. Was that the second one from the tender? No, it was the first one.
217. Are you quite satisfied that it was a lead-colored box, and not a red one, that was rolling? Yes.
218. And that this box was next to the tender? That I will not say positively; but I think so.

219. Would you be most likely to mistake the color of the carriage or its position in the train? Its position in the train I am not sure of, but I have no doubt about its color. J. Fishlock.
220. Or about its rolling? No. I am certain that it was a lead-colored carriage that was rolling, but I am not certain whether it was next to the engine. I know that it was next to the red one, and I believe that the lead-color was nearest to the engine. 5 Aug., 1858.
221. You did nothing to the rails on the day of the accident? No, nothing at all.
222. Who did then? That I do not know.
223. It has been said that the joints were set up after the accident: now we want to know who did it? I cannot say, because I went up to Parramatta to give evidence on the inquest.
224. Captain Martindale and Mr. Whitton were with you? Yes; there were seven or eight gentlemen present, and they all went with me.
225. How far did you go? About 400 yards—over 200 yards above the bridge down to where the accident occurred. I went down with the gauge, and run it along the whole way.
226. And you found nothing wrong? Not in the least.
227. Had you observed Mr. Morgan on the line previously to this accident? Yes; I think I saw him on the line two or three days before.
228. Did he give you any instructions about any part of the line? No. I have had very little instructions given to me since I have been there, for I can do my work without them, and the line is now ten degrees better than when I took it. When I went there it was so bad that I did not know where to start at, and I have been working hard at it every day since, trying to get it into something like good fettle, the same as we have them in England. I have had seven years of this work at home, and I know what it is; and I have been, altogether, one and twenty years working on lines at home.
229. As a plate layer? No, at everything.
230. Did you examine that part of the line where the horse-box ran off? Yes; the place was quite plain to be seen, and is so now.
231. What marks did it leave on the line? I do not think it left any marks on the line. It made a clean jump off both the rails, right off the metal altogether. It then ran two or three lengths on the ends of the sleepers, and then got on to the rails again, the flange of the wheel running on the flange of the rail. They ran this way for a good piece, two or three of the carriages being on the rails, and the rest off them, until they went over.
232. How many carriages were upset? There were three carriages over.
233. Then you think that the box took a jump off the rails right on to the sleeper, and then came on to the rails again? Yes; not fairly on to the rails, but with the flange of the wheel running on the lower flange of the rails.
234. How far did they run in this way? About one hundred and sixty or one hundred and seventy yards.
235. Until they came to the curve? No; they run round that sixty or eighty yards—it run from the creek right up to the bridge. There is the place now—the road has never been touched since—where it run is still plain to be seen now.
236. Then it did not go off in consequence of the coupling giving way? No.
237. The coupling was more likely to have broken when the box went over? Yes; that must have been when it broke.
238. By Captain Denham: Then you think that a shower of rain would have the effect of damaging the permanent way about the embankment? Not a shower, but a heavy rain would.
239. Did anything like such a rain as would damage the permanent way occur immediately prior to the accident? Not that I remember.
240. The line then on the morning of the accident was in its ordinary state? Yes, exactly.
241. There had been no rain previously? No, I think not; at all events there had been none sufficient to do any damage.
242. Did you see the previous train come up? Yes.
243. Did you observe that the horse-boxes attached to that rolled at all? I did not; I do not remember whether there was any horse-box with that train. I believe there was none with the first morning train.
244. Then the first train went all right? Yes, it went on very nicely; I noticed nothing at all uncommon about it.
245. You did with the next train? The only thing we saw was the horse-box rolling.
246. And what did you say when you observed it? I said it would be sure to get off on the top of the curve.
247. When it passed you, rolling in the way you have spoken of, it could not have been off the rails without your knowing it? No; I must have seen it. It was not off the rails.

Thomas Markham called in and examined:—

248. By the Chairman: You saw the second up-train pass on the morning of the accident? T. Markham. Yes.
249. Did you observe anything particular about one of the horse-boxes? Yes; I saw one of them rolling very much. 5 Aug., 1858.
250. What colored one was it? A stone colored one.
251. Was that the one next to the engine? Yes, the one next the tender.
252. Are you sure it was the one next the engine? Yes, I think it was.
253. Were you standing on the line as it went by? Yes; I was working on the road, and stood up as it passed.
254. Do you think the horse-box rolled more than horse-boxes generally do? I have not seen one roll so much since.
255. Nor before? No, nor yet before.

- T. Markham. 256. Had you ever seen horse-boxes rolling before this? Yes; I might have seen one rolling two or three times.
- 5 Aug., 1858. 257. When the train passed I suppose you resumed your work? Yes, we turned to again.
258. Then it was not rolling sufficiently to cause you to look after it? No, not at all.
259. You have observed horse-boxes to roll prior to this accident, but could you say whether it was always the same box that rolled? No, I will not say that. I never took sufficient notice for that.
260. When you saw this box rolling did you say anything to any one? Yes. I said to the ganger, "That box rolls a goodish bit, Jack."
261. What did he reply? He said "Yes."
262. Was that all that was said? Yes.
263. Do you assist in setting up the joints? Yes, that or anything else I am told to do.
264. Have you ever set up any joints along that incline? No, I have never set up any.
265. But you have assisted Fishlock? Yes.
266. Have you been on that incline since the accident? We have not been within 200 yards of where the accident occurred.
267. Have you done anything to the line further back since then? Yes; we have done something to the line nearer Parramatta, and also to the line nearer Sydney, since then.
268. That is since the accident? Yes.
269. Upon the incline? No, not on that. We were only just in the hollow, where the incline commences from Parramatta, but no more than that.
270. You have not done anything to the incline beyond that point? No, nothing.
271. Are you certain about the color of the horse-box? Yes.
272. You feel quite certain that it was a stone-colored one that was rolling? Yes, I believe it was.
273. The train was coming to you when you saw the box rolling? Yes; and going from us, too, after it had passed.
274. How far? We did not take much notice after it had passed. We set to work again.
275. You said in your evidence on the inquiry that you were the last of the gang that got to the scene of the accident, and that you went back for the tools? Yes.
276. Did you bring them back? Yes.
277. All the shovels? Yes.
278. What did you do when you came back with them? Set to work throwing the stuff off the line, so as to let the carriages go on.
279. Did you notice any thing uncommon in the ballast? No, I did not.
280. Did you hear any one say that he noticed any thing? No.
281. Had you been along the line prior to the accident, to see if there was any thing wrong? No; it is not my place to go walking about. I am working with Fishlock, and he tells me what to do, and then I go and do it.
282. You had been working on the line for about five weeks prior to the accident? Yes.
283. Had you been employed between the level crossing and Haslam's Bridge? No; we were about a fortnight putting in new sleepers on the far end of the length near Parramatta.
284. On what line were you at work before you joined Fishlock's gang? On the Parramatta length.
285. Can you say how long it is since any thing was done to the piece of line between the level crossing and Haslam's Bridge? No, I cannot.
286. Had you been long with Fishlock before the accident? No, I had not. I was a fortnight at work cleaning out the drip sewers. I had been about a week, or a fortnight at the outside, with Fishlock when the accident happened.
287. Have you heard the ganger complain that his part of the line was difficult to keep in order? No; he says very little to us about such things.

MONDAY, 9 AUGUST, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

CAPTAIN DENHAM,

MR. MORIARTY.

John Milton called in and examined:—

- John Milton. 288. *By the Chairman:* Are you one of the men employed in Fishlock's gang? Yes.
- 5 Aug., 1858. 289. Did you see the second up-train pass on the morning of the accident? Yes.
290. Did you see any horse-boxes attached to it? Yes.
291. Did you notice anything particular about them? Yes; they were wabbling about very much.
292. Was one rolling more than the other? Yes.
293. Which one was that? A stone-colored one.
294. Where were they situated? Next to the tender.
295. And you noticed them particularly? Yes; we saw them wabbling about.
296. And they were both wabbling, as you call it? Yes, both of them.
297. But the stone-colored one the worst? Yes, rather; but they both wobbled a goodish bit.
298. Did any of the gang say anything when they saw this? Yes, they said the engine was going over fast.
299. At what rate were they going? Something about three or four and twenty miles an hour.

300. Did they all take notice of the horse-boxes rolling? Yes; they were wabbling very much, and we all saw it. John Milton.
301. Were they rolling more than you ever saw them do before? Well, I cannot say; we don't take much notice of them when we are working on the line. 9 Aug., 1858.
302. What did you do when the train passed? Went to work again.
303. Did you hear any one say that the horse-box would run off the line? No.
304. You did not hear any one say it to Fishlock, or Fishlock say it to any one? No.
305. If it had been said could you have heard it? Yes. I never heard it.
306. But you could have heard it, had it been said? Well, I reckon so.
307. How far from Fishlock was the place where you were working when the train passed? About six yards.
308. So that he could not say anything without your hearing it? No.
309. Do the trains throw up the dust much as they pass? No.
310. Would not the rolling of the horse-box make it throw up the dust? I can't say; I did not see any dust.
311. Whereabouts were you working? There is a level crossing just at the 11th milepost, and we were there.
312. Were you on this side of the level crossing or on the other? On this side.
313. Did you go from there down to where the accident occurred? Yes; when one of my mates said that train was over we all ran down there.
314. Did you notice anything on the incline? No.
315. *By Mr. Moriarty:* Were you all standing up when the train passed? Yes; when the ganger called out "look out" we all stood up.
316. On which line were you working? On the line to Parramatta.
317. On the up line or the down line? On the down line.
318. You were all working together in a bunch? Yes.
319. On adjoining sleepers? Yes, all together.
320. So that nothing could have been said about the train running off the line without your hearing it? No.
321. And no person said anything about the horse-boxes wabbling? Yes; Fishlock said they were wabbling over much.
322. Was that before the train went over? Yes.
323. *By the Chairman:* Had you ever heard any one say previously that the horse-boxes rolled? No.
324. Not before this occasion? No.
325. You have been working with Fishlock ever since the accident? Yes.
326. And how long before? I have been with him about six months.
327. Fishlock tells us that there is a piece of the line on the clay embankment that is very bad to work, is that so? Yes, it is. Sometimes we have a bank there, and sometimes we have none. After we have made it up, if it comes on wet it all runs away, and we have our work to do again.
328. You have been at work there? Yes; putting in sleepers, and setting up the joints.
329. Is that your usual work? Yes; I have been at that since I have been there.
330. Have you set up any joints since the accident? Yes.
331. Upon that part of the line? Yes.
332. Have you found any bad places since then? No.
333. Not on that incline? No.
334. *By Mr. Moriarty:* Have you put in many new sleepers on your length of the line? Yes, a goodish few.
335. How many—a hundred? No, not so many as that, but somewhere about 60; that is about the number; but when you have to put in new sleepers all along the whole line you can't keep account of the number you have to lift up.
336. You have put in a good many? Yes; but I can't say the number exactly.
337. On that part of the line where the accident occurred? Yes: wherever we saw a bad place we put in a new sleeper.
338. How near to the place where the accident occurred? I do not mean that we put them in at the spot where the train went off.
339. The line was in good order there? Yes; I think that part of the line had been repaired very well.
340. *By the Chairman:* They say that one of the joints on the up line, near Haslam's Bridge, was a quarter of an inch low,—would that be sufficient to make the train run off? No, I think not.
341. If it had been down an inch would it have made the train run off? No; there was not a joint so low as that on our part of the line.
342. Have you seen them as low as half an inch? No.
343. You have never seen them as low as that? No.
344. Have you seen them as low in England? No.
345. Could a train go safely over a joint half an inch low? That I do not know.
346. *By Mr. Moriarty:* Are you certain that both the horse-boxes rolled when they passed you? Yes.
347. And the stone-colored one more than the other? Yes, if anything; but there was not much difference.
348. Then both of them were wabbling sufficiently to attract your attention? Yes.
349. *By the Chairman:* Did you see any one look out from the train after it had passed you? No, I did not notice; I turned to my work at once.
350. How long before the accident was it that you did anything to that part of the line where the accident occurred? I cannot say.
351. You cannot say? No; we are up and down the line every other day, and when we see a bad place we set to work at it.

- John Milton. 352. What do you call a bad place? A place that is not fit for the train to go along.
 353. *By Mr. Moriarty:* And what kind of a place is that? Well, I don't know. Where we find the sleepers loose we raise them, and stop them up.
 9 Aug., 1858. 354. You judge of a sleeper being loose by the ballast being slack around it? Yes.
 355. Have you any recollection at all of how long before the accident anything had been done to that part of the line where it occurred? No; we had not touched anything there for a long time.
 356. For how long? For a week, I suppose. I cannot say how many days.
 357. You were putting in sleepers there? We never put in sleepers where they are not wanted.
 358. And they were not wanted there? No. We only put them in where we see bad places.
 359. They are putting in sleepers now all along the line? Yes.
 360. Had you put in any extra sleepers at Haslam's Bridge? Yes, we put in two or three there.
 361. Since the accident? Yes, and some before.
 362. It is a pretty solid piece of line just about Haslam's Bridge? Well, I can't say that. There is a good deal of pipeclay about there.
 363. *By Captain Denham:* Had you, just prior to the accident, moved any part of the line between the place where the accident occurred and a mile towards Parramatta? No, not before the accident happened.
 364. If the horse-boxes had been off the rails when they were passing you could you have seen it? No, we could not see the horse-boxes when they were off the rails.
 365. But I mean when they were passing you would you have noticed them if they had been off the rails? I did not see them off the rails; they were only rolling.

John Goulder called in and examined:—

- John Goulder. 366. *By the Chairman:* You are one of the men working in Fishlock's gang? Yes.
 367. Did you see the train to which the accident happened pass that morning? Yes.
 9 Aug., 1858. 368. Did you see any horse-boxes attached to them? Yes, there were two of them.
 369. What color were they? One was a stone-colored one.
 370. Where were they in the train? Near the engine.
 371. Did you notice anything particular about their motion? Yes, I saw them rolling, as I have seen them before.
 372. You have generally noticed that the horse-boxes rolled? Yes, I have seen them roll.
 373. Before that? Yes, and since.
 374. But never so much as on that occasion? No.
 375. They rolled unusually on that day? Yes.
 376. Which one rolled the worst? That I can't say; my back was to the train as I was at work, and the ganger said, "Stand up, Jack." Then I stood up and moved away a piece.
 377. Was there nothing said about the horse-box rolling? The ganger, I think, said "Those horse-boxes roll very much."
 378. Did he say that they would be off the line? No; I did not hear him say so.
 379. Was nothing else said? Yes; I made the remark myself that the horse-boxes rolled very much sometimes.
 380. *By Mr. Moriarty:* You have frequently observed them roll, both before and since? Yes, several times.
 381. Where were you at the time? We were working by the 11th mile-post when the train passed us. I was at work with my back turned to the train, and only got up when it was passing us. In this way I did not take much notice.
 382. Were you directly opposite the 11th mile-post? Yes, very nearly.
 383. Do the trains throw up any dust as they pass you? No, not generally.
 384. When they are rolling much do they not throw up the dust? No, not that I have noticed.
 385. You have seen them rolling before? Yes.
 386. Is Glover's length as heavy to keep in order as Fishlock's? I will not say that it is.
 387. Fishlock's length requires more looking after? Yes, it must; there is a great deal more cutting in it. There are three cuttings in our length, and that makes more work.
 388. Then it wants more looking after where there are cuttings? Yes, I believe so.
 389. Did you ever observe the horse-boxes rolling when you were with Glover? I never took notice of them, because when I was with him we were just at the station of Homebush, when the trains always pull up a bit.
 390. They have put in all fresh sleepers into Glover's length? Not that I know of; I never put in any.
 391. They have put in fresh sleepers towards Parramatta? Yes.
 392. And are coming down this way with them? Yes, I believe so.
 393. How far down this way have they put them in? I cannot answer for farther than our own length, and that has been put in for about half a mile.
 394. Before or after the accident? Some before and some after.
 395. That embankment which forms the incline is, I believe, a very troublesome bit in Fishlock's length—I mean from the level crossing down to the bridge? It is not a very good bit—it is mostly clay, and bad in wet weather, and, besides, it is not wide enough.
 396. You say that you have observed the horse-boxes rolling before this; now can you pick out any particular box or boxes that you have observed to roll more than the others? No; the only thing I noticed was their rolling from time to time; but it is not always possible to tell the one that rolls when the train is coming towards you.

397. Was there any deficiency in ballast in that part of the line? No; only we could do John Goulder with a little more. We are better off for it now than we have ever been.
398. You were set to work repairing the line immediately after the accident? Yes; but ^{9 Aug., 1858.} the first thing I did when I got up was to help a lady up the bank. I then got a passenger out from the carriage, and then I went to fetch the tools to repair the line.
399. Where the line was ripped up? No, the other line, so as to make it clear for the next train from Sydney to Parramatta to pass along.
400. What did you do? We cleared the metal, and repaired the road where the accident had occurred.
401. Some rails were torn out, were they not? No, not on the down line.
402. On the up-line there were? Yes; two rails were torn out.
403. Did you see where the carriage jumped off? Yes. I think it jumped off by the side of Haslam's Creek.
404. You saw no mark on the sleepers where the wheels had been running? No. I did not stop to look for any marks. I ran as hard as I could to give assistance. We all threw down our shovels when they said the train was over, and ran up to give help. We all ran as fast as we could; I know I did, for I was first on the spot.
405. Did you put any fresh dogs on the sleepers lately? No. We have put in fresh sleepers, both before and since the accident, where we thought they wanted them.
406. But no fresh dogs on the old sleepers? No.
407. Where have you put in the sleepers since the accident? All over the line, from one end of it to the other, wherever the ganger thinks they are wanted, and whenever he gets time to put them in.
408. But he has not much time for this? No, not much. The ordinary work keeps him constantly going.
409. It is a troublesome bit of line? Yes; there are six of us, and we have enough to do to keep the work up.
410. How fast do you think the train was going that morning? Twenty-three or twenty-four miles an hour.
411. That was about its usual speed? Yes, I think so.
412. Did you observe that the engine was beating when going down the incline? No.
413. Was the steam shut off? I think so.
414. Would you have noticed the engine if she had been beating? Well, I cannot say. I only stood up and let the train pass, and then I went to work again directly; my back was turned to her all the time.
415. Did you hear one of your mates say to the other that the horse-boxes were rolling? Yes; the remark was made that the boxes were rolling a great deal.
416. The remark was made generally about the horse-boxes? Yes.
417. What do you suppose was the cause of their rolling? Well, I do not know; they are higher than the other carriages, and that makes them roll. The wheels, perhaps, were not quite right.
418. Would you be certain that all the carriages were not rolling as much as the horse-boxes? They did not roll so much; they are not so high, and they never do.
419. Have you ever heard of a train running of the line at this place before this accident? No.
420. Did you ever find any marks on any of the sleepers on any part of the line where you have been working? No, except where this accident was.
421. There are some there? Yes.
422. Did you ever see any marks on that incline? No, I never noticed any.
423. *By the Chairman:* You go over every foot of the line? Yes; we go over our length every week, from one end to the other.
424. *By Mr. Moriarty:* Have you been employed at this kind of work in England? No.
425. On what part of the length have you been principally employed since the accident? Sometimes on the other side of where it occurred, and sometimes on this side.
426. Putting in new sleepers? Yes, that and setting up the joints.
427. How many have you put in since then? I can't say; we have put in a good many whenever we have had time.
428. More than before the accident? No, not so many since as before.
429. Did you observe any defects in the line? No.
430. Neither before nor since the accident? No.
431. You know a low joint when you see one? Indeed I do.
432. What do you call a low joint? Why, a joint that is down.
433. Down how much? Well, some look to be down a goodish bit; but they are not down so much after all when they come to be taken up.
434. What do you call much—two inches? If they are down an inch they are down too much.
435. The setting up the joints forms the greater part of your work? Yes.
436. You are more at that than at putting in new sleepers? Yes; they keep us going with the repairs from Monday morning till Saturday night.
437. Where do you most frequently find the slack joints—on the embankments or in the cuttings? Most times in the cuttings.
438. What do you think is the cause of this? There is more clay there, I believe.
439. Have you ever known a slack joint to occur on that incline by the level crossing where you were at work on the morning of the accident? No, I did not; I never knew of one there.
440. They do not get low there? No, never more than a quarter of an inch; and I do not think that is being down.
441. You mean by this that you never had occasion to set them up? I don't mean that;

John Goulden. we have lifted the lot sometimes to repair them. We have taken up from 20 to 40 rods altogether to set them up afresh; but we never had to do it through one joint being low.
 9 Aug., 1858. 442. When were they lifted last? I cannot say when; but the last time we were at it we lifted about 30 rods at once, and laid them afresh.
 443. Where was that? Near Haslam's Creek, by the level crossing.
 444. Was that the up line? No, the down line.
 445. How long ago? About a week ago.
 446. How was it that you came to pull it up? There was nothing particular the matter with it, only we pulled it up to set it fair again.

Wm. Morgan called in and examined:—

Wm. Morgan. 447. *By the Chairman:* You are Inspector of the Permanent Way on the Great Southern Line? I am.
 9 Aug., 1858. 448. It is your duty to make yourself acquainted with all portions of the line, particularly such as are liable to get out of order? It is.
 449. Do you pay more particular attention to those parts of the line than to the others? Yes; I am obliged to look close after them.
 450. Have you found any portion of the line about Haslam's Bridge liable to get out of order? No, not more than elsewhere.
 451. Not near the curve? Through the curve is not so good. The cuttings are more liable to get out of order in wet seasons than the embankments are, and on the top of the hill also.
 452. How is that? I do not know, but it is so; the cutting and the top of the hill get out of order in wet weather.
 453. Between there and the bridge is a bad place? No, it stands very well, though it requires attention; but above the level crossing towards Parramatta is a very bad place.
 454. But on this side of the crossing? No, it only requires attention, but nothing more than common.
 455. Do you consider the embankment well made? Yes; I do not know that it is not well made.
 456. Do you think it is wide enough at the top—wide enough for safety? Yes, I do.
 457. And that the angle is sufficient? Yes; if there were more it would have been as well. There are one or two slight places where it has slipped a little, but nothing of consequence.
 458. You never heard the ganger complain of this embankment being difficult to keep in order? No, never.
 459. Is there a sufficiency of ballast on this part of the line? Yes; but it is all sand ballast and it will not stand. It is too weak, and the heavy engines that run on the line cause slacks.
 460. This is owing to the use of sand ballast? Yes; and another objection to it is, that the trains always oscillate considerably on the embankments, and this knocks the rails out of line.
 461. Is that the case only on the embankment? No; it is the same in all straight pieces. The oscillation is always greater on a straight piece than on a curve.
 462. Then I suppose the rails being out of line would cause the next train that passed to oscillate still more than the one that preceded it? Yes. This is the only thing against the embankment that I know of.
 463. Do you consider Fishlock's to be a troublesome length to keep up? Yes; his and the one next to him are the two worst on the line.
 464. You are putting new sleepers down along the whole line? Yes; and since then I have given him an extra hand, with directions to put in the sleepers whenever he had an opportunity,—not to neglect the road, but wherever he met with a flat place to put in the sleepers.
 465. Have you inspected the incline towards the level crossing since the accident? Yes. I generally go down the line once or twice a week.
 466. How soon after the accident did you inspect it? Within two hours after.
 467. Did you inspect it closely? Yes. I looked at it all along as I went up in the next train.
 468. You were in the train at the time? Yes. I did not walk over it to look it over. I first went up by the train.
 469. How soon after the accident was it that you walked over this part of the line to examine it? I cannot say how soon—it might have been two or three days. There was no cause for inspecting it more than any other part of the line.
 470. Not on account of the accident? No, I think not.
 471. How long have you been in your present situation? Six or seven months.
 472. You were not in the employment of the Commissioners when the former accident occurred here? No. I have not been more than seven months altogether in their employment.
 473. Were you aware that a similar accident had occurred there? No, not before this accident happened, and then the remark was made.
 474. You never observed any marks of carriages having been off the line? No; and besides the waggons are so often off the line that if I had seen such marks I should not have noticed them.
 475. *By Captain Denham:* Has anything been done to that portion of the line between the spot where the accident occurred and a mile towards Parramatta—within a day or two, or a week previous to the accident? Nothing has been done there except to keep the line in repair.
 476. And since then? Nothing; only putting in the new sleepers, and digging up the slacks where they found any.
 477. Are you aware that there are decided marks on the sleepers of wheels having passed over them for more than half-a-mile down to where the accident occurred? No; I am not.
 478. Were you never told that these marks existed? No.
 479. Do you think that they were caused by the late accident, or that they are the remains of

- of some former accident? I should rather say that they were the remains of some former Wm. Morgan. accident than of the recent one.
480. Could you say how far it was from the bridge that the horse-box on the late occasion ^{9 Aug., 1858.} first got off the line? It first got off on the bridge.
481. Can you trace the spot across the crown of the metal? Yes, very clearly. I saw the place at once when I took the gauge down the line with the ganger.
482. *By the Chairman:* There is a place where there is a deep indent in the right hand rail and a scratch upon the outside rail? Yes; that was where it first went off.
483. *By Captain Denham:* Do you think that there would have been time for the guard, if he had looked forward from his van, to have noticed that the horse-box was off the line, between the time it got off, and the time it actually upset? The distance was only 11 chains and some few links, and there could only have been a few seconds between its getting off and its upsetting.
484. Then there would not have been time for him to notice it? Hardly.
485. Would a carriage being six inches off the rails throw it out of the line sufficiently to enable the guard, supposing he looked out, at once to see that there was something wrong? I hardly know. If he was at the tail of the train, where he ought to be, it would be difficult for him to see it; and besides that there would not have been time.
486. But if the distance and the time between the getting off the rails and the upsetting had been greater, would the carriage being six inches off the rails have permitted the guard to see it? No, it would not; for the carriages were on the curve, and therefore the head of the train would have been hidden from him.
487. Is there any signal that the gangers could give the guard and that he would understand that would cause him to stop the train? Yes, but a guard would not always be on the look-out. He has a good deal to do in his box, particularly when nearing a station. He has the sorting out of the parcels for the different stations, and this occupies his attention a good deal. The drivers and firemen are those that are generally on the look-out.
488. They look out ahead, but in passing any thing they would not notice a signal—what I mean is, if a ganger as the train passed him saw a carriage off the line, is there any recognised signal he could make to warn the guard of danger? Yes, by putting up both hands high over his head. If the guard saw this he would at once know that something was wrong. That is the signal used in England, and would stop any train on an English line.
489. What would the guard do? He would put on the break, I imagine.
490. Could he to any thing more? No.
491. He has no means of communicating with the engine driver? No, not after starting.
492. Has he not a whistle? That is only used at starting; when the train is in motion it would not be heard.
493. Are there no signals used on the line? Yes; the permanent way men are supplied with green and red flags, and the drivers have orders to look out for them.
494. Do you conceive it to be possible, from your experience of railways, for a ganger, or any one standing near the line, when a train passed at a speed of 25 miles an hour to see if any one carriage was off the rails? Yes, quite possible.
495. Then in that case would it not be an important thing that there should be some means of calling the guard's attention to such an accident, so that the train might be stopped? Yes, it would be, if it were possible.
496. Have you no means now of doing that? No; nothing more than by putting up the hands, as I have said.
497. And if the guard sees it he has no means of communicating with the driver, and stopping the train? No; only by putting on the break.
498. Would that stop the engine? No; but it would so far impede the progress of the train that the engine driver's attention would be drawn to it, and then, looking round, he would see something was wrong, and would shut off the steam.
499. *By the Chairman:* Is it not dangerous to put on the breaks with the engine at full speed? Yes; it is not safe, but it is often done. The guard puts on the break the moment the driver signals with the whistle, however fast the train is going.
500. But it is dangerous? Yes. The slightest check is likely to throw a carriage off the line; sometimes the most trivial thing causes an accident, such a thing as would never be imagined could cause. I see by the last English papers that an accident, by which three lives were lost, was caused on one of the lines by the engine just striking a cow that had strayed on to the line; the engine merely touched the animal, and yet the train was thrown off. I have more than once, when a train has been starting, seen a light vehicle jumped clean off the rails when the steam has been put on too suddenly.
501. *By Captain Denham:* Then, if there had been a very light substance, such as a chip from the sleeper, or anything of that kind, left on the rails, it might have thrown the train off? No; nothing of that kind would have done it.
502. But, if just striking a cow would have that effect, surely it would be caused by a chip or other light substance? No; not on the rails. The accident I speak of was caused by the sudden jerk given to the carriages by the check to the progress of the engine, and this threw the carriages off.
503. Would not a bolt, or a piece of chain, or a chisel being left on the rails by a workman, throw the train off? Yes; such things as those are the most dangerous things that could be left on the line, but there was nothing of that kind in the recent accident; for if there had been the engine would have been thrown off first.
504. Do you know if the wheels of the engine betray the presence of anything of the kind? They do not.
505. Has Fishlock been long with you? About five or six months; he has been about five months on the length he now has. I had him at first working in the Sydney gang, and then I sent him out where he now is, in place of a man who was there who did not give me satisfaction;

Wm. Morgan. satisfaction; he has made a very great improvement in his length since he has been there; I consider it now to be 25 per cent. better than when he first went to it.
 9 Aug., 1858. 506. Then you think him a very trustworthy man? Yes; from what I have seen of him I certainly do.

Mr. Joseph Twiss called in and examined:—

Mr. J. Twiss. 507. *By the Chairman*: I am Locomotive Superintendent on the Great Southern Railway.
 508. I went up to Haslam's Creek Bridge, on the day of the accident, to bring the carriages back.
 509. I had the carriages and horse-boxes lifted back on to the line.
 510. We took the wheels off to enable us to do so with greater ease.
 511. *By Mr. Moriarty*: I put a fresh pair of wheels on the new horse-box, but cannot say as to whether the old pair were placed in the same position as they had occupied before the accident, but I think they were. I cannot say as to whether it was the leading, or following, pair of wheels of the new horse-box, which was most injured.
 512. *By the Chairman*: I was only anxious to get the carriages home, and did not pay much attention to the position of the wheels.
 513. I put two fresh pairs of wheels on the old horse-box.
 514. I cannot now pick out the pair of wheels which came off the new horse-box.
 515. I cannot be sure of the position of any of the wheels, but can form a tolerably correct idea.
 516. I do not know the positions of the horse-boxes when they ran off.
 517. *By the Chairman*: I examined the carriages.
 518. *By Mr. Moriarty*: I examined particularly the bearings of the wheels, both of the horse-boxes and carriages.
 519. *By the Chairman*: All the damage about the wheels must have been caused by the accident.
 520. *By Mr. Moriarty*: I carefully inspected the bearings, they were all bright and clean.
 521. *By the Chairman*: Kay is Inspector of Carriages under me.
 522. I have sometimes found defects in the carriages; as, for instance, the brasses will wear out, or dirt may get in and cut up the bearing. I have also sometimes found the wheels get loose on the axles, and slide out or in so as to alter the gauge; or occasionally the wheel may break, or the axle may break short off at the neck. We generally find that the tiers get worn down first; they are then taken off and turned up true.
 523. *By Mr. Moriarty*: I have never known an accident occur from defects in the brasses.
 524. *By the Chairman*: The new horse-box to which the accident occurred has done a great deal of work since it went out.
 525. I generally sound the tiers of the wheels to ascertain if they are all right. I think it very improbable that there was anything wrong with the horse-box before the accident.
 526. I never before heard of this, or either of the other horse-boxes rolling.
 527. When, on a former occasion, horse-box No. 2 ran off the line near the incline, I inspected it carefully, and found nothing wrong with it.
 528. *By Mr. Moriarty*: The same wheels have been under it until last week, so that it could have sustained no injury. The wheels are now in the yard.
 529. *By Captain Denham*: I never heard of any other horse-box having run off the line.
 530. *By the Chairman*: I went to Homebush to bring it back. We put on new axle boxes, as one of the brasses was broken, and brought it back with its own wheels.
 531. It is the Traffic Manager's duty to report such accidents as the running off the line of a carriage or horse-box.
 532. I should consider it my duty to report such an accident, if it had not been done by the proper officer.
 533. *By Mr. Moriarty*: I put two new axle boxes under the old horse-box when it ran off the line. I cannot say whether they were put on the front or rear of the horse-box.
 534. In the recent accident several of the axle-boxes of the carriages were broken. I do not remember how many of the axle-boxes of the horse-boxes were injured, or whether they were on the front or rear of the carriages.
 535. If the axles of the horse-boxes had heated, and stuck in their bearings, I should have immediately detected the marks.
 536. I do not think it is possible the accident could have been caused by the bearings heating, and the axles sticking fast in them; the bearings were too bright and clean.
 537. There was positively nothing wrong with the axle-boxes or bearings of the horse-boxes, as far as I could discover, and if anything had been wrong I think I must have discovered it.
 538. *By the Chairman*: The wheels generally wear out on the root or sole of the tire, and on the flange where it bears against the rail.
 539. *By Mr. Moriarty*: Most accidents, such as running off the line, occur from defects in the permanent way, low joints, and such like.
 540. *By Captain Denham*: I could discover by the marks on the wheels if the line was out of gauge; but it would take some time to mark the wheels—some days.
 541. We always turn up both wheels of each set or pair to the same diameter; we try them with calipers to see that they are uniform.
 542. *By the Chairman*: I have had a great deal of experience in England, and have heard of a great many accidents.
 543. I should not hesitate to run at a speed of sixty miles an hour on the Sydney and Campbelltown Railway if the line were in good order.
 544. If a train were travelling at a great speed it might run off the line on a sharp curve, if the joints were low, or the line otherwise in a bad condition; it would be very apt to do so.
 545. I have never known a train run off a curve if the line was in good order. The carriages are more likely to run off the line than the engine or tender, in consequence of their being so much lighter.
 546. *By Mr. Moriarty*: If the Sydney Railway were in good order, and there was nothing wrong with the wheels of the carriages, I consider that a train might travel at almost any speed without danger.

WEDNESDAY,

COMMISSION OF INQUIRY ON THE RAILWAY ACCIDENT.

WEDNESDAY, 11 AUGUST, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

CAPTAIN DENHAM, | MR. MORIARTY.

Richard Darby called in and examined:—

547. *By the Chairman:* You are a guard on the Great Southern Line? I am. R. Darby.
548. You were guard to the train to which the accident happened? I was.
549. Do you recollect coming down the incline on the morning of the accident? Not more 11 Aug., 1858
than any other morning.
550. Do you recollect seeing the plate-layers at the level crossing? I cannot say I do.
551. Griffiths was in the van with you I believe? He was.
552. He says, that about half way down the incline he looked out to see if there was anything wrong—do you remember his doing so? I do not recollect his doing so that day any more than on any other. He was accustomed to keep a look-out, as well as myself.
553. There was no particular noise or motion, then, to make him look out? No, certainly not; if there had he would have told me.
554. Did you notice the speed at which you were going down the incline? We were only going at the average speed at which we went every other day.
555. At what rate was that—twenty-five miles an hour? Between twenty and twenty-five miles an hour; twenty-five miles at the very outside.
556. Of course you have been over the line since then? Yes.
557. What was the first occasion upon which you brought up a train after the accident? I came up from Parramatta with my wife, in a third-class carriage, the same day. She heard I was injured, and came down to see me, and we returned to Sydney together. That was the first time afterwards that I passed along the line.
558. Did you notice anything particular in going down that incline? No.
559. Did you ever hear any remarks made about the nature of the road on that embankment? No.
560. You were guard, I believe, on a former occasion when a horse-box ran off the line? Yes.
561. Where did that horse-box run off? At some place between where the recent accident occurred and Homebush; on this side of where the accident occurred.
562. Where was the horse-box on that occasion? It was at the tail of the train.
563. How soon after it ran off was it that you discovered the accident? I cannot exactly say, but it ran a good bit—I could not say how far, but it ran a good piece on the sleepers, and with the jerking broke the axle-boxes of the wheels.
564. You could not say, then, how long it had been running? No, I could not say how long, but certainly it had been off longer than on the present occasion. When I looked out and saw the box off, I used the usual signals—all I could use—to bring the engine-driver's attention to it. It was some time before I could do this, and when I did the train was stopped.
565. Then you succeeded in arresting his attention? Yes.
566. And he stopped the train? Yes; we brought the box on to Homebush, and then cast it off and left it there.
567. Was it upright? Yes; but the wheels had got off the metal.
568. It did not turn round? No; the wheels got off, but it ran perfectly straight.
569. You were the first then to discover the fact that the horse-box was off the line? I was the first certainly to draw attention to it; I knew of it before the people on the engine.
570. How did you happen to discover it? I am generally on the look out; and on that occasion happening to look back along the train, I saw the box off.
571. You came on to Sydney afterwards, leaving the horse-box at Homebush? Yes.
572. Did you report this circumstance on your arrival? Yes.
573. To whom? Well, I do not recollect who was manager at that time; but I think it was to Mr. Brady.
574. Then it was your duty to report this circumstance to the manager? Yes.
575. And you did so? Yes.
576. Did you hear anything more about the matter? No; they sent a special engine down to Homebush to fetch up the horse-box, with a man to repair it for the journey. That was all I heard of the matter.
577. Did you hear whether any steps had been taken to determine the cause of its leaving the line? Not that I know of.
578. Nor the spot where it left the line? No.
579. You heard nothing then of any inquiry? No; they told me nothing—they would not do so—I did not expect it; but I supposed that of course an inquiry was made into the circumstance.
580. Do you recollect the date of the occurrence of this accident? I do not.
581. Was it in last October? No; I do not think that it was so long back as that.
582. How long were you detained on that occasion? Well, I do not recollect that either.
583. Were you detained an hour? No, not so long; perhaps half an hour. There was a gentleman who was in the train at that time, and he said that he was delayed on that occasion two hours and a half; but he told me the other day that he had made a mistake in this, and that it had been on another occasion that he had been delayed. The time he meant was once when an engine broke at Fairfield—some accident occurred to the machinery, what, I cannot say; we were then delayed a long time; we had to send to a farm house to borrow chains to get along with, and then we had to go on with one engine to Liverpool.

- R. Darby.** We came back to Parramatta, and there another engine met us, having been sent on because we were so long. That was the cause of the delay at that time.
- 11 Aug., 1858. 584. Then, with the exception of the recent accident, the occasion you refer to was the only one upon which you have known a train to run off the line? Yes, with the exception of one occasion that I call to mind since I gave my last evidence. There was another occasion, near Newtown, where a tender got off the metal.
585. Was this some considerable time ago? I do not know the exact time.
586. How long were you delayed on that occasion? I could not say, because I had to come in to Sydney from there. The manager sent me on to get another engine for the passengers.
587. Could you tell when in your van, from the motion of the train, whether the engine driver has got his steam on or off? I could not say exactly.
588. The only way you would have of knowing this would be by looking out and seeing the working of the engine? Yes; the only way of knowing surely.
589. Could you say whether the steam had been shut off by the driver when going down the incline? I could not.
590. What means have you of communicating from your van with the driver? I hold out a red flag in order to make him stop.
591. But sometimes they may not be on the look-out? They are supposed to be always so but, if I could not attract his attention to the flag I should screw the break up tight, so as to make the carriages jerk, and this would at once draw his notice to the signal.
592. Have you ever experienced any inconvenience from not being able readily to communicate with the engine-driver? No, not for any length of time. It might happen that for a second or two he would not notice my signal; but, if I could not catch the attention of the engine-driver, I should turn to the other door to attract the notice of the fireman, and one or the other would be sure to see me.
593. What signals could the plate-layers use to warn you in case they perceived any danger? They are provided with flags—white, green, and red—to use as required.
594. But suppose they were not readily accessible—not near at hand—is there any other signal they could use? Yes; he would hold up his two hands above his head, and the driver would at once know that there was danger, and would stop.
595. But suppose the engine driver had passed him before the danger was perceived, how could he communicate with you? Whenever I saw him put his hands up as I have described, I would stop the train as soon as I could, by communicating with the driver.
596. And the engine-driver would stop if he saw this signal? Yes; if he saw it he dare not go on.
597. *By Captain Denham:* You say that the engine-driver dare not go on, how is that? Those are his instructions.
598. But suppose that the plate-layer saw that a carriage was off the rails after the tender had gone past him, and then wished you to know that there was danger, could you understand his signals? Yes; if I saw him hold up his hands I should at once know that something was wrong, and would communicate with the driver as quickly as I could.
599. Do you ordinarily look out for the plate-layers and any signals they may make? Yes, always.
600. On all occasions? Yes; and we do not merely look out for them, for we are always on the look-out.
601. Do you remember seeing and passing the plate-layers that morning? No, I do not remember particularly noticing them at all that morning.
602. How far distant were you from the horse-boxes on the morning of the accident? There were three third class carriages between me and them.
603. Do you recollect looking out immediately before the accident? I cannot say how shortly before that I looked out.
604. Was it within five minutes previously? Yes, and within two minutes.
605. Did you observe the horse-boxes rolling, or remark that they were out of the line of the other carriages? I did not.
606. At that time you were on the straight line. Yes.
607. But if you had been on the curve might you not have attributed any alteration in position to the effect of the curve? I might; but we were then on the straight line.
608. *By the Chairman:* Are you sure that the box got off before you reached the curve? Yes, I am, for I was the first to walk the line after the accident occurred. After giving what assistance I could to the passengers, I walked down the line and traced the wheels of the box all along to the place where it had slipped over the metal.
609. Where did you find the marks whereby to trace it? On the flange of the metal.
610. Did you not see the tracks on the ballast? No, it never went on the ballast at all; it ran all the way from Haslam's Bridge on the flange of the metal.
611. How far from Haslam's Bridge was it that the carriages overturned? About 200 yards from where the box first got off.
612. It was about the centre of the bridge I believe that it first got off? I cannot remember exactly, I was only once along the place.
613. Did you notice that the sleepers were cut? No, I did not notice that.
614. Or that the ballast had been ploughed up? No; the ballast on the flange of the metal was marked by the wheels, but nowhere else. The place you mention must have been where the train crossed the road.
615. No, I mean higher up to where it first went off? From the time it got off I could see no mark in the ballast in any place except on the flanges of the rails, right up to where it crossed the road.
616. On the centre of the bridge the rails are marked across where the wheels went over; now Mr. Whitton tells us that he can trace the mark of the wheels right up the ballast beyond

- beyond that? I never went beyond that; I just went along to where the train slipped over the metal, and, having satisfied myself that that was the place, I went no farther.
617. Did you notice that the ballast was ploughed up at all? No; and I am almost positive that it was not. There were some places where the sand lay rather thickly on the flange of the rail, and there the mark of the wheel was perceptible.
618. But you saw no marks outside of the metal? No, I could see none. In tracing up the marks I found them so slight in some places that I could but just detect them.
619. Might not these be the places where the wheels went off the flange of the rail on to the ballast? No. I could still trace the marks, though, as I say, it was so slight in some places that I could hardly see it. However, all I did was to follow the tracks up to where the wheel came over the metal, and there I stopped.
620. At the place where it came over did you see the top of the rail scratched? Yes, that is the place where I stopped.
621. And you are positive that there were no conspicuous marks on the ballast? Yes, I am sure of it, for I brought some of the passengers' things and put them in the six-foot, and I must have seen any marks there were.
622. Were the rails well covered with ballast? Yes. In some places the flanges were completely covered with ballast—that was where I found it difficult to trace the wheels—and other places were bare.
623. Still you did trace the wheels? Yes; on moving the sand I could see a slight mark on the metal, as if a barrow had been wheeled over it.
624. It was perceptible then on the iron? Yes, it was just a little scratched.
625. And you are sure that the ballast was not ploughed up? To the best of my recollection it was not; but I cannot be very positive, for I was in a great fright at the time, and had been very much knocked about just before, the part of my van where I stood having been knocked to pieces all round me.
626. *By Captain Denham*: Do you think that the position of the guard's van in the centre of the train is as good as need be for commanding a view of the carriages? No. The best place for the break-van is behind. The reason it was put in the centre was that we always left half our train at Parramatta, and the van was put just before them, because when they were taken off the van was in its proper place, behind those that remained.
627. Do you think it is more difficult to communicate with the engine-driver from the side doors than it would be if you had some other position, say in the centre of and above the van? No, not at all.
628. Or, if your position in the train were altered, and you were brought nearer to the engine? No. The driver can see any signal I may make as well from the tail of the train as from the centre of it, and the position is better, because the power of the break is much greater right behind.
629. And you think that looking out of the door is better than having such a position as to see over the roofs of the carriages? Yes, much better.
630. Where there is a curve part of the carriages must be hidden from you? If they are hidden from one door I have only to look out of the other.
631. The signal you could make then depends mainly for its success on the working of the break? Yes, in extreme cases; but the driver and fireman both keep a sharp look-out, and it would be rare that neither the one nor the other would be a signal.
632. What night signal do you use? We have a lamp with different colored glasses, the same as the flags. If I want the driver to stop I turn on the red light and hold it out.
633. And do the driver and fireman keep a good look-out for the guard's signals? Yes, very good indeed—always.
634. That is always when they are not actually firing or attending to the engine? Yes.
635. That is part of their duty, I believe? Yes; they have to keep a look-out for the guard's signals.
636. Have they any instructions to keep a look-out for the plate-layers? Yes.
637. Have you travelled often before this accident with Boan as engine-driver? No, not often. He had not been more than a couple of months in the situation.
638. You have travelled with him? Yes.
639. But not often? No; he had been only a couple of months, and I travelled with him occasionally as his turn came.
640. Had you ever had any complaint to make against him? No, none.
641. He was not in the habit of travelling faster than the other engine-drivers? No; I do not recollect that ever he did so.
642. Do you consider him a steady man? Yes; I consider him as good a driver as there is on the line.

Mr. George Fitzmaurice called in and examined:—

643. *By the Chairman*: You were with the train on the morning of the recent accident? Yes.
644. On the engine, I believe? Yes.
645. Do you recollect coming down the incline on that morning? Yes, I do.
646. Were you looking forwards or backwards on that occasion? Forwards.
647. Did you notice the plate-layers at work near the level crossing? Not particularly.
648. You kept a look-out forwards? Yes.
649. But did not notice them? No.
650. And you continued looking out ahead until the accident occurred? Yes.
651. *By Captain Denham*: You recollect coming down the incline? Yes.
652. Can you say if the steam was shut off coming down the incline? Yes, it was.
653. Whereabouts? Just on the dip of the incline.

Mr. George Fitzmaurice.

11 Aug., 1868.

- Mr. George Fitzmaurice. 654. Are you sure? Yes, pretty sure.
 655. You had an opportunity of remarking this? Yes. I was looking at him at the time, and I saw his hand on the regulator; when near the top of the incline he shut off the steam.
 11 Aug., 1858. 656. When was it put on again? Within a hundred yards of the bridge, as near as I can guess.
 657. *By the Chairman*: There is a slight curve near the top of the incline, was that where the steam was shut off? Yes.
 658. And where was the exact spot where the steam was put on again? To the best of my belief, it was just before we reached the bridge that he put the steam on again.
 659. Are you sure? Yes, I think so.
 660. You say in your evidence before the Chief Commissioner that you felt two or three bumps—where was the train at that time? My impression is, that when we felt the bumps was when the horse-box first got off the line, and when it was bumping over the sleepers.
 661. Had the steam been put on before that time? Yes, to the best of my knowledge—it was either immediately before or immediately after. I think it was immediately after that I felt the bumps.
 662. Was the break put on? Yes; the stoker put on the break when the engine broke loose.
 663. But to the train? No, there was not time to put it on.
 664. *By Captain Denham*: Did the bumps you speak of feel like a jerk caused by the starting forwards of the carriages from the effect of the steam being put on sharp? No; the jerk I felt caused the engine to shoot ahead suddenly.
 665. Do you think it was caused by the too sudden putting on of the steam? No, I think not. I have seen the steam put on much sharper than it was then.
 666. *By the Chairman*: The bumping you think was over the sleepers? Yes.
 667. Did you go back to look if that were the case? I went back along the line to try and ascertain the cause of the train coming off, and I traced the marks of the wheels over the sleepers.
 668. Was the ballast much torn up? Yes, just about where the accident occurred.
 669. And where did you trace it to have first come off? It appeared to me to have come off on the bridge.
 670. What indication of this did you find? A slight indentation upon the face of the metal where the wheels had passed over. From that spot, as I got on nearer to the place of accident, the ballast was much more torn.
 671. Does this plan give a correct notion of the locality and the position of the carriages at the time of the accident? Yes, pretty fair. (*The witness here explained the position in which the carriages lay after the accident.*)
 672. *By Captain Denham*: From what you saw of Boan's driving on that morning, could you say whether or not he was driving in his usual manner? Yes, he was. We were two minutes late in leaving Parramatta, but he did not hurry on that account. I have travelled with other drivers who have gone much faster than we were going that morning.
 673. He was not driving unsteadily then? Not in the least.
 674. And the maximum rate of speed amounted to what? We were averaging about 25 miles an hour.
 675. Not above that? I do not think so, though I will not say positively. There was no need for Boan to hurry though he was two minutes late. If it had not been from his fault that the delay occurred he would not have been blamed.
 676. Would he have been reported? He would have been only two minutes late, and if reported the charge would have been entered against him without remark.
 677. You are quite sure that you could not on that morning have been going at the rate of 30 miles an hour? No, I do not think that we were going over 25 miles an hour.
 678. And you are a pretty good judge of the rate of speed? Yes, from travelling pretty often, I am. I was travelling since with another driver, who said when we were going very fast "There, that is 25 miles an hour," and I immediately answered that we were then going faster than we were on the morning of the accident.

THURSDAY, 12 AUGUST, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

CAPTAIN DENHAM, | MR. MORIARTY.

Robert Boan called in and examined:—

- Robert Boan. 679. *By the Chairman*: You say in your evidence before the Commissioners that on the morning of the accident you shut off the steam just on the top of the incline? Yes.
 13 Aug., 1858. 680. You said that you put it on again—now can you tell us the exact spot where you did this? I put it on again just at the ascending part of the incline.
 681. I understood you to say that it was just at the bottom of the incline that you put the steam on? No, it was just at the ascending part of the incline. I was obliged to put on steam there in order to send us up the opposite incline.
 682. Then it is just at the rise of the incline that you always put the steam on? Yes, to push us up the other side. If we went farther down the train would be at a stand still, and we should have difficulty in getting her on to speed again.
 683. It must have been somewhere about Haslam's Bridge? Yes; the rise is about a hundred yards from the bridge.
 684. Mr. Fitzmaurice was under the impression that it was not until you were over the bridge

bridge that you put the steam on again—he must be mistaken then? Yes. I should have Robert Boan. checked the progress of the engine too much if I had gone that far. The train would have been at a stand-still if I had not put the steam on before passing the bridge. 12 Aug., 1868.

685. Did you see the plate-layers that morning? Yes, I did see them; but I could not exactly say that I noticed them.

686. As you were passing over the piece of the line that runs over the embankment near there, did you feel anything unusual in the motion of the train? No.

687. Can you, from travelling over it frequently, form any idea of the state of the road over which you pass—that is to say whether the road is in good order, or the reverse? Oh! yes; we can tell very well when a piece of road is out of order.

688. Then you know from observation, I suppose, the parts of the line most likely to get out of order? Yes; there are parts that get out of order in wet weather, and these we always keep a look-out for. It is mostly in the cuttings that there are bad places, and on parts of the embankments where they have been badly made.

689. What do you think of the embankment coming up to Haslam's Bridge? It is very bad in some places—at the upper curve, and at the other curve as well, between the 10th and the 12th mile-posts.

690. And near Haslam's Bridge? It is not very good there, and it is not particularly bad either.

691. You do not consider it to be an unusually bad piece of road? No, not particularly so.

692. *By Captain Denham*: Have you ever been sensible when driving over this part of the line of anything like a feeling of top-heaviness or shaking in this embankment, arising from a looseness of foundation? No, not particularly, except in those two places—at the curves I mentioned.

693. Have you any marks on the line—the same as perhaps you know they have in England—to show you when you are on an ascent or a descent? No, we have not.

694. Then it is from custom only from travelling the road often that you know when to shut off and put on steam? Yes; we soon find out the places.

695. The gradients are marked, I believe, on the English lines by posts? Yes; the posts are marked both ways, to show the rise and fall.

696. Have you found any inconvenience arise from the absence of these marks from the lines here? No; we know the road very well after we have been up and down it a few times.

697. *By Mr. Moriarty*: At about what speed were you going when you put on steam? At about 20 miles an hour.

698. Then you could not have continued on at that speed if you had not put steam on? No, not farther than the bridge. We should have been pretty well at a stand-still there.

699. Were you on the incline before you shut off steam? Yes, just on it; we had just come round the curve.

700. Did you come round the curve at full speed? I came round with the steam full on; but I had a very full train, and we did not go faster than usual. It wanted all the steam to get us round the bank.

701. Do you know where that incline commences? Yes.

702. How do you know it? By looking at the road.

703. At what part of the curve does it commence? It commences just as you round the curve.

704. At this end, or at the far end? At this end.

705. And that was where you shut off steam? Yes.

706. And you put it on again just before you came to the bridge? Yes.

707. How did you do this? With the regulator.

708. I mean did you turn the steam full on, or how? No, I did not put it full on. When I first put it on, I did it so as just to put a strain upon the carriages. I put on just about enough to make the engine beat.

709. You put on very little at first, then? Yes, very little.

710. You are sure there was not enough to make a jerk upon the train? Yes, quite sure.

711. What would be the effect of suddenly putting on the steam quite full? Well, it might do harm, and it might not; it might jerk the train so as to be noticed, or it might not. All would depend upon the couplings; if they were good and screwed up tight no jerk would be felt. If you were going very slowly, or if the carriages were loosely coupled, it would certainly give them a jerk; but with a train running at a good speed it would hardly be felt.

712. The day we were down with you, you turned the steam on full and quite suddenly? Yes, as full as it would go; it was quite open.

713. And you shut it right off? Yes, right off.

714. It made no perceptible difference in the motion of the train? No; and I have noticed this, not once but a hundred times; when the train is in motion turning the steam on full makes no difference, and if the couplings are good all is right.

715. *By the Chairman*: In ascending the incline towards the bridge did you notice that the speed was abating? Yes; and that was the time I put on steam again. I put on just steam enough to regulate the speed.

716. *By Mr. Moriarty*: Can you not tell by the springs of your engine when the road you are going over is out of order? Yes; the springs being of Indian rubber you can tell in a minute.

717. *By the Chairman*: Did you feel any unusual motion in the engine before you put the steam on? No.

718. Nothing to give you cause for alarm? No, nothing.

719. *By Captain Denham*: Did you feel any bumping just before the accident occurred? No, not particularly.

720. Just after getting over Haslam's Bridge? No, I did not.

- Robert Doan. 721. Did you hear that any body else did? No.
 722. Did you ever hear it remarked by any one? No.
 12 Aug., 1858. 723. When you are on the engine, if you had your eyes shut, would you, do you think, experience any marked difference between running over a bridge and running over an embankment? Yes, I could tell with my eyes shut when we were going over a bridge from when we were going on an embankment.
 724. On this occasion did you notice when you went over the bridge? No, I cannot say I did particularly. You can generally feel a slight spring on coming off the solid ground on to a bridge.
 725. There was nothing, then, that you are aware of, to cause the engine to make a jerk upon the couplings? No, nothing.
 726. *By the Chairman*: Did you know that you were behind time on leaving Parramatta? Yes, we were two minutes late.
 727. Did you consider it to be your duty to make up by speed for this lost time? No.
 728. You have no orders to that effect? No.
 729. It would have been wrong if you had tried to do so? Yes.
 730. And you did not attempt it? No.

John Whitton, Esq., called in and examined:—

- J. Whitton, Esq.
 12 Aug., 1858. 731. *By the Chairman*: In your opinion, is the construction of the embankment from the level crossing to Haslam's Bridge defective—do you consider it well formed? I do not consider it very objectionable; I have noticed nothing faulty in it.
 732. Neither in width, in angle, or in material? I have not noticed anything of the kind; I know that it subsides in places. It is made of soft material, and is continually settling, particularly in wet weather.
 733. Were you ever made aware that there was not sufficient space, in consequence of its narrowness at top, for firmly bedding in the sleepers? There is certainly not too much space; but the width would by no means affect the safety of the line, provided the embankment were made of harder materials.
 734. It is soft then? Yes; in the parts where it is made of clay in particular.
 735. This is a piece of line, then, that requires more than ordinary attention? Yes. I have had reports sent in to me of its going down frequently.
 736. From whom? From the Inspectors: from Morgan, I believe. He tells me that it goes down, particularly after wet weather; but that is the case with all the cuttings.
 737. Are the others the same as this? No, there are many of them that are worse.
 738. You have heard them complain of the cuttings as well as of the embankments? Yes, almost every cutting has been complained of at some time or another.
 739. But have they complained particularly about this embankment? No, not particularly; as I say, they complain of all parts at times.
 740. Have they ever told you that it was insufficiently ballasted? That is the case with the whole line from end to end, but it is not more so upon this embankment than upon any other parts of the line.
 741. Then you have not had more complaints of this than of any other part of the line? No. Morgan may have told me that it wanted ballast, or that it settled after wet weather, or that it required some additional men upon it, but that is every day the case with some part or other of the line. I am every day receiving reports of the material compressing, or of there not being sufficient ballast.
 742. *By Captain Denham*: Is the width of material at the top of the embankment sufficient to give the proper amount of solidity to the roadway? If it were not I should have noticed it, but I have never remarked it, nor have I had my attention drawn to it; consequently, I have assumed that it was the proper width—30 feet.
 743. Have you ever had complaints that the ballast was continually washing away, in consequence of the insufficient width of the roadway? No, none.
 744. *By Mr. Moriarty*: Are the drains deep enough in the cuttings? I do not know that they are, or that they are not; I assume that they are the ordinary side drains, but the cuttings themselves are much too narrow; they are only 27 ft. or 28 ft. at the outside, instead of being 30 ft., and this may have prevented the formation of side drains of sufficient depth; in fact the whole line is badly constructed from end to end, both as regards the works and the permanent way.
 745. Is it so bad as to be unsafe? No; it is not unsafe for the speed at which our trains travel, nor is it so bad as not to be able to be maintained in fair running order from end to end. This will be the case when it is improved, but will not be without improvements, and they will take a long time. Then, again, the ballast itself is bad; it is only sand, and there is no substance in it, even if a large coat is put on; and then, if heavy rains occur, it all washes away, and we are obliged to re-ballast from one end to the other.
 746. Do you not use burnt clay? No; it has been used formerly on the line, but I do not like it, unless it is vitrified, unless this be done it wears away very quickly, and soon becomes clay again. As to the drip drains, the reason why you imagine they are not deep enough is that with every shower of rain they fill up from the ballast washing into them; this is so much the case that after every shower the men have to go round and clean them out.
 747. And that is in consequence of the insufficient width of the cutting? The slopes are all too small, and the risings are too steep; they ought to be 1 or 2, instead of which they are not more than $\frac{1}{2}$.
 748. *By the Chairman*: They are not made then according to specification? I do not think they were made under a specification, or that there ever was any specification; I have never been able to find one.

749. There were drawings? Yes; but not a single thing was carried out according to them, either in the width, in the formation, or in the levels of the roadway. J. Whitton, Esq.

750. *By Captain Denham:* According to your impression of the imperfect construction of the roadway, have you a corresponding amount of inspection, and of gangers to keep up the permanent way, and to meet the effects of the heavy rains which this climate occasionally brings down? Yes. 13 Aug., 1858.

751. Is there any part of the line that could by any possibility be twenty-four hours without supervision? No. The gangers have instructions to walk over their portion of the line once in every twenty-four hours, including Sundays. We employ far more than the average number of men; we are now employing at the rate of three men per mile, and on the best lines in England they have not more than this number, whilst on the greater part of them they have not more than one or one and a-half man to the mile. This extra outlay for labor is all owing to the defective construction of the line in the first instance; if it had been well laid and well ballasted when first constructed, it would now cost us only about a third of the amount of labor that we are now compelled to give it.

MONDAY, 16 AUGUST, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

CAPTAIN DENHAM,

|

MR. MORIARTY.

William Morgan called in and re-examined.

752. *By the Chairman:* I suppose that you were acquainted with the work that was going on between Haslam's Bridge and the level crossing on the day of the accident? Yes. Wm. Morgan. 16 Aug., 1858.

753. Several hundred yards of road could not be taken up and completely reset without your knowing it—one particular quarter of a mile, for instance, could not be entirely reset without your knowledge? There may be slacks that may be reset without my knowing anything about it.

754. They could not go from one end to the other of a half or a quarter of a mile resetting the rails without your knowing of it? No. I should be sure to see them as I walked along the line.

755. Are you aware that for several hundred yards, from Haslam's Bridge up towards the level crossing, the whole line has been completely reset? I know that it has been repaired since the accident.

756. Did you give orders for this to be done? At the time of the accident there were two or three slacks that I noticed, and I gave orders to Mr. Richardson to repair those slacks at once.

757. Did you observe them yourself? Yes.

758. Were they upon the hill? Yes.

759. Are you aware that that part of the way was in a particularly bad state? No, not more so than it usually is.

760. Is it usually in a bad state, then? No; it is usual to have slacks on it; and it is bad on this account. The slacks are owing to the sand ballast used; this works away, and then the joints go down.

761. Are you aware that that there was a particularly bad place within fifty yards of the level crossing? No, not there. On the other side of the level crossing there is a bad place, and in wet weather it is very bad.

762. Are you aware of this fact, that the rolling of the horse-boxes noticed on the morning of the accident by Fishlock and his gang was occasioned by a defective state of the permanent way? No, I am not.

763. Did you ever hear it suggested that it was caused in this way? No.

764. I thought I understood you to say that you had not inspected that part of the line from Haslam's Bridge to the level crossing between the time of the accident and the time it was repaired? I think I said that I had not inspected it closely on that day; but since then I must have walked over it at least a dozen times.

765. Before the repairs were made? No, not before those slacks were repaired that I ordered to be picked up. On the day of the accident I rode over the line on the engine to Parramatta, on the inquest, with Fishlock, and going there I saw the slacks, and ordered them to be repaired.

766. Could you perceive them in this way? Yes, they were easy enough to be seen; any one could see them at once who knows what the road is.

767. Were they repaired before you went over the ground on the subsequent occasions? Yes; they were picked up the same day.

768. Who repaired them? Some of the men there. They are now waiting outside.

769. Were they men of Fishlock's gang? I cannot say. There were some thirty or forty men on the ground, all higgledy-piggledy, and I cannot say which of them did it.

770. To whom did you issue the order for it to be done? To Mr. Richardson. When the gauge was taken down the line I said to him, "As the line has been examined to gauge, you had better repair those slacks whilst you are about it."

771. Are these the slacks that Mr. Richardson refers to in his evidence? I suppose so; I know of no others.

772. You admit, however, that that part of the line from the level crossing towards Haslam's Bridge was not in good order on the day of the accident? There were two or three slacks, but nothing sufficient to cause an accident. It was in good running order at the time, and

Wm. Morgan. was far better than many other parts of the line after rain. At that time it was in very good order.

13 Aug., 1858. 773. *By Mr. Moriarty*: The line since then has been reset from the bridge towards the level crossing? The outer rail is being continually reset. It is liable to get down more than the inner rail, and we always like to have it higher than the inner rail.

774. What was the last occasion on which you examined this part of the road? I cannot say, but it was only a few days ago—one day last week—I think on Friday last.

775. Are you sure that the up-line is not down now? I cannot say; it gets down very quick. The line is continually going down by the outer rail working down, so much so that in a very short time we have to reset it from end to end.

776. *By the Chairman*: Did it never occur to you, when you heard of the carriages rolling, to go and examine the place? No. It was never explained to me that the carriages were rolling there particularly—not more there than anywhere else on the line. The place where Fishlock saw them was on the straight, and horse-boxes and carriages too will oscillate more on the straight than on a curve. Anything will oscillate on the straight line.

777. You say there are some men outside to whom you gave orders for repairing the road, did you give these people instructions to attend here? Yes. I got orders to attend here about the repairs of the road, and I called upon them to come in and give evidence on the subject.

778. Who are they? They are White, the ganger, and his men, that I took up from Sydney with me.

779. *By Mr. Moriarty*: Did you say anything to Richardson about Glover on the morning of the accident? No, not to my recollection.

780. To whom did you give orders about setting up the slacks? To Mr. Richardson.

781. In what terms did you convey the order to him? He said to me "There is a small 'slack up there.' This was when we were standing by the spot of the accident, and were looking back along the line. I said "Yes; but that has nothing to do with the accident." He said "No." He then said "Shall I get the men to repair it?" I said "No, let it be 'there until it is examined.'"

782. *By the Chairman*: And who afterwards called your attention to the slacks on the road? Nobody did; I saw them myself.

783. Were they very prominent then? No, they were only ordinary slacks.

784. How far were they from the place of accident where you stood? Between 200 and 300 yards.

785. You could scarcely be aware of them at that distance? No, not from where I then was. I saw them from Haslam's Bridge.

786. Are not the slacks very bad between there and the level crossing? No, I never noticed them in particular; they cannot be very bad. The principal work that has been done since the accident commences at the level crossing for over a quarter of a mile down towards the bridge.

787. Did you see that part of the line after the accident? Yes.

788. Did you see it before it was repaired? Yes.

789. On the day of the accident? No.

790. Did you find any slacks there? No; not more than are generally to be found on the line. I would not however say that there are no slacks upon this, or upon any portion of the line; because it is quite impossible to say that this or any part of the line is without slacks. All I can say is, that on the day of the accident the line was in good running order, better than ever I saw it for a long time.

791. *By Captain Denham*: Are you aware that the outer rails between the eleventh mile-post and the bridge have become considerably depressed within the last few days? No, I am not. I was over it on Friday last; I walked over it then; it was all very right then.

792. When you say you perceived the slacks, did you try it with the gauge? No; I could see them easily enough with my eye, so could any one, used to it, do the same.

793. You have remarked that the outer rail of the line is more liable than the other to get depressed? Yes; they are apt to get down. The outer rail has been lifted since the accident on this account.

794. On that bit of line more than any other? Yes; it is a straight piece, and the rails go down more on a straight line than they do on a curve.

795. Have you remarked on that bit of line that the outer rail of the up line is more liable to get out of order than the outer rail of the down line? No; the outer rails on either line are more apt to get down than the inner ones, but not more on one side than on the other.

796. To what depth could you afford to allow a depression of one rail below another on a straight line, without affecting the safe running of the train? We always endeavour to keep the two lines of rail as level as we can, or, if anything, to have the outer rail the highest.

797. Can you not state in inches how much of a depression you could afford without danger to the train? I have seen them down two and two and a-half inches, not only on this, but on other lines; but where I have seen them I have always had them picked up as soon as possible.

798. Would you consider a depression of two inches to be dangerous? It ought to be picked up as soon as possible; such a depression ought not to be allowed on the line.

799. Both the outer rails were much depressed on Saturday last? I was not aware of it.

800. And the outer rail of the up line more so than the outer rail of the down line, and this was the line on which the accident occurred? Yes, it was on that line.

801. How would you prevent this depression—what would be the remedy that you would suggest? The only remedy would be to put in good stone ballast upon it.

802. Would that be sufficient without altering the width of the embankment? Generally it would; but there are some places that would be much better for having some more stuff tipped in on them.

803. Have you ever represented to the Commissioners that these parts of the embankment ought to be widened? No. I never considered that it was so defective in this respect as to endanger the traffic over it; but I certainly consider that stone is much better ballast for the permanent way than sand. Stone gives more solidity to the road, and does not require so much repairing; whilst sand washes away with every shower. I never saw sand used as ballast before I saw it here.

804. Except upon very wide embankments the sand is apt to drift? Yes; it is not at all fit for ballast.

805. *By the Chairman:* Did you give orders for having the piece of road repaired between the 11th mile-post and the bridge? At the time of the accident I saw a few slacks, and I gave orders to have them at once set up.

806. But since then did you give orders for having any portion of the road between the level crossing and Haslam's Bridge entirely reset? Yes; I gave orders to pick up the outer rail. It was down one day when I came by, and I ordered it to be done. The line wants re-laying now in several places, many of the places are clayey, and the clay works up through the sand, especially after rain.

807. *By Mr. Moriarty:* That piece of road then is liable to get out of order? Yes. The outer rail is continually getting low, and it requires particular attention to be paid to it, to pick up the rail at once as soon as it is noticed to be down.

808. From the level crossing down to the culvert is, I believe, a very bad place? No; it is not so bad as higher up towards the curve.

809. Are the side drains deep enough do you think? Yes, if we had stone ballast. As it is now the sand fills them up. The sand is not at all fit for ballast, especially with the class of engines we have here. They are very heavy, and are stiff on the springs, and the wheels come down like sledge hammers upon the roadway.

810. *By Captain Denham:* Then all the difficulties and defects to which you have alluded are lying within half or three quarters of a mile of where the accident occurred? No; it is not more defective there than in any other place.

811. Still, all you say about the sinking of the outer rail and the slacks has more particular reference to this spot than to any other? Yes.

812. And to the up-line? Yes. I have had the metal picked up there on the up line, but I have also had repairs done on the down line, though certainly not to the same extent; the metal has been picked up on both rails.

813. And this half or three-quarters of a mile immediately precedes the spot where the accident occurred? Yes; but then after you pass the bridge and get round the curve there is a worse portion of the road again than this.

William White called in and examined:—

814. *By the Chairman:* You are a plate-layer? Yes.

815. And a ganger? Yes.

816. Where is your length? The Sydney length—from Sydney to Newtown.

817. Mr. Richardson, in his evidence, speaks of a low joint he found near the spot where the accident occurred, did you assist him to raise it? Yes; I lifted about a quarter of a mile of joints; wherever the slack joints were I picked them up.

818. Who directed you to do this? Mr. Richardson gave me the orders.

819. Do you know any thing of one slack joint in particular that he ordered you to pick up? Yes. There was one about three or four lengths from the bridge that he pointed out to me.

820. How low was that? It might have been about $\frac{3}{4}$ of an inch down.

821. How far did you go? We went up about a quarter of a mile from the bridge.

822. Up to the level crossing? No, not quite so far as that.

823. How near to it did you go? Within 50 or 100 yards.

824. Was that piece of road very bad? Well, no, not so very bad; it was not so bad as the piece farther up.

825. But about the level crossing was it very bad? No more than any other place.

826. There were a good many slack joints? Yes. Wherever we saw a low place we picked it up. Mr. Richardson told me to go along and do this, and to take my men with me.

827. The up-rails on that piece of road were not in very good order? Not particularly. There were a few little slack joints, but so there are all along the line. There are sure to be slacks more or less. It was no worse in this respect than elsewhere, especially after rain.

Richard Woddaps called in and examined:—

828. *By the Chairman:* You are one of the workmen in White's gang? Yes.

829. You are a plate-layer? Yes.

830. Were you down with White repairing the roadway immediately after the late accident? Yes.

831. Did you go from Haslam's Bridge up towards the level crossing, picking up the slacks, on that day? Yes.

832. Did you find the line up there in good order? Yes; it was very good about the bridge.

833. But farther on towards Parramatta, between the bridge and the level crossing? Yes; it was in pretty good order. It was the same as anywhere else. I could see no difference.

834. Did you not find the outer rails much depressed? No. It was not worse there than it was further up.

835. Did you find any bad slacks in going along there? No; there were a few of them—but nothing out of the way.

* 435—G

Wm. White.

16 Aug., 1858.

R. Woddaps.

16 Aug., 1858.

R. Woddaps. 836. Do you know any thing about a very bad slack that has been alluded to by Mr. Richardson, and which was pointed out by him close to the bridge? There were slacks all along, but I did not notice one more than another.

16 Aug., 1858. 837. You saw Mr. Richardson there at that time? Yes.

838. Did you hear him say any thing? No, not that I remember.

839. *By Mr. Moriarty*: Were any of Fishlock's gang along with you? No; they were working lower down.

840. Nearer to the place where the accident happened? Yes.

MONDAY, 23 AUGUST, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

Mr. MORIARTY.

Mr. Richardson called in and examined:—

Mr. Richardson. 841. *By the Chairman*: You were at the scene of the accident, I believe, soon after it occurred? I was.

842. How soon after? Within nine or ten minutes.

23 Aug., 1858. 843. What did you set about doing immediately on your arrival? First of all we got the people clear of the carriages; we then found we could do no more until the Commissioners arrived, when they brought assistance with them. The Commissioner, Mr. Whitton and Mr. Morgan, with a lot of other persons, came down.

844. That was about 11 o'clock? Yes.

845. What did you do then? We set about getting the carriages up.

846. You did not begin at once to repair the rails? No; not till we had got the carriages up, and had made clear the down line.

847. You all went then to the inquest? No, not all. Mr. Whitton, Mr. Morgan, and some others went there.

848. At what time was this? About 12 o'clock.

849. You are aware that the statements you have made as to what took place afterwards have been disputed, and it would appear from the evidence taken that those statements were not quite correct? I know that is the impression, and that is the reason that I have now come before you. All I am here for is to ask you, as you are entering into the matter, to get from the Railway Commissioners the evidence they had taken before them on Wednesday last.

850. *By Mr. Moriarty*: Knowing the evidence that has been taken, I presume you have come here to tell us the correct truth as to what took place? I wish to do nothing else, and I am prepared to verify all I say.

851. When Mr. Whitton and Mr. Morgan went on to Parramatta to the inquest, were there any orders left for you to do any particular things? Yes.

852. Who gave you those orders? Mr. Morgan.

853. What were the orders you received? To take the men and repair the whole line from the bridge up to the level crossing, and to stop there.

854. Did he give you any reason for doing this? No.

855. Did you have any conversation with him on the subject? No.

856. Did you say nothing to him about a low joint you noticed? Yes; as to that, I said to him, "Have you noticed that low joint there?" pointing to one. He said, "Yes, I see it, and there are a number more of them up this bank."

857. Did you come up to the crossing with him to examine the line? No. When we came to the spot where the rails were marked we stopped there and looked up the line.

858. Where was this? About two hundred chains beyond the bridge.

859. You did not go up the line with him on the engine? No.

860. How many men did he tell you to take with you? All the men.

861. Were there none of the men then left on the place of the accident? Yes; all the carpenters and laborers that had been brought up from Sydney were left there. I only took the gang men with me—the men regularly employed on the road—the permanent way men.

862. Were all the rails set right when you left? No; one set was clear and that was all.

863. What were these carpenters and laborers doing when you came down to the bridge to pick up the slacks? They were getting the carriages up.

864. Then you took all the permanent way men with you? Yes.

865. How many of them were there? Nineteen or twenty.

866. And what did you do—where did you begin? I began at the Sydney end, near to the place where the accident occurred, about six chains from the bridge, and up towards the 11th mile-post. The Newtown gang I put on the nearest bridge, and the Sydney gang nearest the level crossing.

867. Then you repaired the road from the bridge to the 11th mile-post in one direction, and from the bridge for six chains towards Sydney in the other? Yes.

868. And the Newtown gang were employed on the part nearest to the place of the accident? Yes.

869. Have you the names of those men? Yes.

870. Could you bring them up here? It would be scarcely possible for me to do so.

871. *By the Chairman*: Are they to be got at? Certainly; the most part of them are now in the service of the Commissioners.

872. How many men were working up towards the 11th mile-post? About 10 or 12.

873.

873. There was more than a gang? Yes. The men in that direction were all working with White's gang.
874. Was there any other ganger with them? I think not.
875. Then who had charge of them? White.
876. And to which portion of the line did you particularly devote your attention? From the bridge towards Sydney.
877. And why? Because I considered that to be the most important part.
878. Where was White? He was working the other way.
879. This work was commenced after the gentlemen had gone on to Parramatta to the inquest? Yes.
880. How soon did they come back? I think about five o'clock.
881. Where were the men? They were all still at work.
882. Where? On the line; but almost all the men had got up past the bridge by that time—past the bridge towards Sydney.
883. Did the train that brought the gentlemen back stop at the bridge to let them out? That I can hardly remember. Some of them came up the last thing at night; I think Captain Martindale did.
884. But it has been proved that if there had been a low joint of even two or three inches that would not have caused the accident? I do not say that it did; I merely say that there were low joints.
885. You still persist then in saying that there were deflections in the line to the extent of two inches? I do.
886. And who put up such a deflection as this? The Newtown ganger—Vincent.
887. Who was with him? The men of his gang.
888. What are their names? I do not know all their names; but two are called Hammond and Heffer.
889. In setting up a joint I believe all do not go to work equally, but one man stands by to give directions to the rest, and to see when it is level? Yes.
890. And who did this on the occasion you refer to? The ganger—Vincent.
891. Where is his length? It extends from Newtown to beyond the Petersham station.
892. And he set up this joint you speak of? Yes.
893. How far was this bad spot to the bridge? It extended all the way along the incline, but the worst place was the two joints nearest the bridge, this way.
894. You could see them clearly? Yes, very distinctly.
895. Were they unusually low? Yes, very much so; and, besides that, they were alone. Supposing there are 16 or 17 low joints in succession, you would not so much notice them in the train; but where there happens to be only one low joint, it is sure to make the carriages jump. The short fall is always more dangerous than the long one.
896. This was done before the rails under where the carriages were overturned were repaired? Yes, before the up line was repaired.
897. The down line had been repaired? Yes.
898. And why not the up line? We could not repair it until the carriages were got out of the way.
899. Which line was the worst? The up line. The down line was bad, but nothing at all to compare with the up line. The two metals on that line were bent into a regular semi-circle.
900. Were these gangs employed in setting up the line towards the 11th mile-post at the time when the up line was not in a condition to receive traffic? Most assuredly. It was so late when we put that line in repair that we could hardly see to put in the last rails. It was getting night as near as possible when we had finished, and we had to put down the last in the dark; so much so that, as I lived close by, I brought down some men with me in the morning to see if the work had been done properly. I found it had not been, and I had the rails laid afresh.
901. How was that? Because there were low joints left that we could not see in the dark. I made them commence again at a spot near where the tents are, and we worked along down towards the place where the accident happened, resetting the work.
902. By Mr. Moriarty: Did you have any particular directions to go to the 11th mile-post? We do not call it that on the line. What you call the level crossing we call Grant's crossing. What Mr. Morgan said to me was, "Go up as far as Grant's crossing."
903. He did not say that you were not to go any farther? No.
904. Did he say why you were to go there? No; no more than when I showed him the low joints he said, "Yes, and there are more there up towards the bank."
905. All these circumstances you have mentioned can be established by the testimony of the people employed? Yes, I believe so.
906. By the Chairman: Then no part of this work was commenced until Captain Martindale and Mr. Whittton had gone away to the inquest? No, it was not.
907. And Morgan left instructions with you to have it done? Yes.
908. By Mr. Moriarty: Was any person present at the time the orders were given? No.
909. They were given to you because you were second to Mr. Morgan in command? Yes.
910. You could not, standing on the bridge, see the slacks in the line half a mile off? No, certainly not.
911. Then what made him say to you to go up to Grant's crossing? That I cannot say; but he said "pick up the slacks and work up towards Grant's crossing."
912. And no person was present? No; but an inquiry has been held privately before the Commissioners, and evidence has been given on this subject. That is the reason I asked you to look over that evidence, as I am most anxious to clear my character.
913. Does any other person know of this? Yes, Flood does. He is the ganger of the Parramatta length. He was working a short distance from Fishblock, as their lengths join
and

Mr.
Richardson.
23 Aug., 1853.

- Mr. Richardson. and he saw the accident. He gave evidence before the Commissioners, and since then has been reduced to the gang. His office of ganger has been taken from.
- 23 Aug., 1858. 914. Who by? By Mr. Morgan.
915. Has he the power to do this? Yes.
916. Without reporting him to the Commissioners, or making any accusation against him? Yes, he has.
917. Are the gangers and the men working in the gangs permanent servants of the Commissioners? No. They are paid day labor, and can leave when they like, or can be discharged by their superiors at will.
918. But so long as a ganger conducts himself properly he is left in charge of a gang? Yes; so long as he does this he is supposed not to be dismissed.
919. Does the power of dismissal rest solely and arbitrarily with the Inspector of the permanent way? Yes.
920. How came Flood to know of the slacks? Because when he saw the accident he and Evans, one of his gang, ran down to the spot.
921. How did it happen that they were the only men of the gang that did this? They were laying sleepers on the straight, at the Parramatta end of the curve, away from the rest of the gang. Their length just comes down to the curve. They could see the accident from there, and ran down the line to the spot.
922. And they gave evidence on the subject? Yes.
923. When? On Wednesday last, before Captain Martindale and Captain Ward.

TUESDAY, 24 AUGUST, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

MR. MORIARTY.

William White called in and examined:—

- Wm. White. 924. By the Chairman: By what train did you go down to the scene of the accident? By the train that was sent down with assistance.
- 24 Aug., 1858. 925. You went with Mr. Morgan, Mr. Twiss, and the others? Yes.
926. A good many men went down with you? Yes.
927. Did all your gang go with you? Yes.
928. How many men are there in that? There were eight or nine. We had some extra hands employed at the time on the line.
929. Who ordered you to go down? Mr. Morgan.
930. Did he say what it was for? Yes; to clear the line.
931. And you took the necessary implements with you? Yes; when he told us, we took our shovels, sets, gauges, bars, and all that we thought we should want.
932. Did you take any fresh rails with you? We only took two.
933. You took fresh rails to replace those that had been injured? Yes, we took two; one a 20-ft. rail, and the other a 19-ft. rail.
934. Those were the only new rails you took with you? Yes.
935. You got down to the scene of the accident a little after ten o'clock? Yes, within a few minutes of ten o'clock.
936. On reaching the spot what did you set about first? Getting up the carriages that were down on the road; getting them on the rails.
937. And then what did you do? We had our dinners.
938. Had Captain Martindale, and the other gentlemen who came to the spot, gone to Parramatta at that time? Yes; they went off when the engine went up, after we had cleared the down line.
939. Had you put in the new rails at that time? No, we could not put them in. We had to get two more rails from Parramatta, because we brought a 19-ft. and a 20-ft. rail from Sydney; and what was wanted were two 19-ft. rails. When we started we did not know the length of rail required, so we took up two on guess.
940. By what train did these rails come from Parramatta? Well, I cannot say; but we got them in before dark.
941. At what time did they arrive on the ground? Well, I suppose somewhere between four and five o'clock.
942. At what hour did you have dinner? Between twelve and one o'clock.
943. What did you do between dinner time and the hour when the rails came from Parramatta? We picked up the slacks on the up line; then we put the carriages on, and took the luggage down to Homebush. We repaired the whole of the up line except putting in the rails, and we could not do that because we had no rails to do it with. We gauged the line for about a quarter of a mile, and picked up two or three little slacks we found in it.
944. How many men did you take with you to pick up these slacks? There were six or seven of us.
945. Did you not have all your gang with you? I will not be sure whether I had them all or not; I think there were one or two with Vincent.
946. Were you the only man in charge of a gang—the only ganger on the spot? No, there was Vincent there.
947. Where was Fishlock? He was nearer to Homebush, picking up some slacks on the down line.

948. How far back from the scene of accident did you go? Nearly a quarter of a mile. Wm. White. Beyond the bridge, towards Parramatta.
949. Who was on the other part? Vincent came from the bridge down to the place where 24 Aug., 1858, the accident happened.
950. Were the horse-boxes and all the carriages raised up before you went to dinner? No; some of them were not got up till Sunday.
951. The accident happened on Saturday? Yes. All we did was to clear the line so as to open it for traffic. All those that were on the line we got up so as not to stop the traffic.
952. Was Mr. Twiss with you? Yes; he was helping to get up the carriages.
953. Was he there all the afternoon? He was there all the time, except when the inquest was going on.
954. Was he there on Sunday? Yes; he was with us until we got all the carriages picked up.
955. When you were picking up the slacks where was Mr. Twiss? I believe he had gone to Parramatta to the inquest.
956. Were his mechanics at work there during the afternoon? No; most of them had gone away then. They got the line clear, and then went away in the next train.
957. Did it not strike you as strange that you should be set to work on Fishlock's length to do what ought to have been his every day-work? No. In an accident like that they always send all the men they can get to put the line in order again.
958. But did it not seem strange to you that you should be set to picking up slacks,—they were not caused by the accident? No. We might as well be at work doing something as standing still looking at each other. We had got the carriages up, and got the line clear as far as we could. We could not get back to our own work till the rails were put in, and so were set to work at the slacks till the rails came.
959. There were three gangers present, were they not—the one from Ashfield? Yes, but he was at work on the down line.
960. How was that—that line was not injured? He was set to work with Fishlock. Fishlock's gang had left a lift when they had run down from their work to give assistance at the accident. The sleepers, I believe, wanted filling in, and one gang was sent there. We went on gauging the road.
961. Who told you to do this? Mr. Richardson.
962. What did he say? He said we were to go up and pick up what ever slacks we found.
963. You went on with this work till when? For about two hours. We gauged the road, and picked up three or four little slacks we found, but nothing more than usual.
964. When did you leave off this work? We had finished and had the rails down before dark. We were later over this job, because we had another rail to find. They brought us down two 19-ft. rails from Parramatta and neither would do.
965. Where then did you get the rail you ultimately used? We got it on Fishlock's length. It was a spare rail that one of the men remembered was lying by the road side, a quarter of a mile from where the accident happened. We sent some men down to fetch it up.
966. What time did you get this last rail? Before 5 o'clock.
967. No one thought to look for it until you had the rails down from Parramatta and found they would not do? No; because we were not aware that they were not bringing us two 20-ft. rails. Instead of that they brought us two 19-ft. rails, and they were no good.
968. What did you want with two rails, seeing that you had brought one with you from Sydney? We had brought one with us, but it was no good, it was bent.
969. Who sent for the rails to Parramatta? Mr. Morgan.
970. Who took up the rails at Newtown? Mr. Morgan. He told me to take up a couple of rails. We did not measure them. We put on two that we thought nearest the length, as we could not tell what lengths we wanted until we got to the place.
971. When did you send to Parramatta for the rails—did the messenger go up in the same train with Captain Martindale and the other gentlemen? I cannot say; but I think he went up with the next engine that passed, and came down in one of the trains.
972. What other gang was at work beyond you on Fishlock's length? The Ashfield gang.
973. What is the ganger's name? David Prime.
974. How many men had he with him? Three or four.
975. Did he go up in the same train with you? Yes, we all went together.
976. And he assisted to get the carriages up? Yes; we all gave a hand to get them on the line.
977. *By Mr. Moriarty:* What time did you get the carriages on the line? A little after 12 o'clock, but not much after.
978. You are sure it was not 2 o'clock? Yes, I am quite sure it was not so late as that. I am quite sure it was not 1 o'clock. As soon as we got the carriages up and on the line, Mr. Richardson said, "Well, men, we may as well have a bit of dinner."
979. Were there any persons at work at the carriages when you went to your dinners? No.
980. Are you quite sure? I should not like to swear it, but I do not think there were.
981. How far from the carriages was it that you went to get your dinners? Not more than 200 yards. The men that repaired the carriages went out with us; but I should not like to say positively that none of them were at work on them whilst we were getting dinner.
982. What was the state of the up line where the carriages upset—was it much torn up? Only those two metals that we put in fresh. One of them was bent nearly as crooked as a rainbow, where the wheels had twisted it in going off.
983. That rail was taken out? Yes.
984. Was it loose—torn out? No, it was not loose till we cut the rivets. It was the outside rails that were bent. The inside ones were hardly touched.
985. Which do you call the outside rails? Those on the left hand side coming to Sydney.

- Wm. White. 986. The others were all right? Yes, those next the six-foot were.
 987. Then you made the line all right before you went to dinner, with the exception of
 24 Aug., 1858. putting in the new rails? No. We did not cut out the rails. We got the line clear—that was all.
 988. The bent rail was left there all the afternoon? Yes, until we got rails to put in.
 989. So that when you went to your dinner the line had not been made ready to receive the new rails? No, it was not.
 990. How long have you known Prime? Since I have been here.
 991. For what time? Since January last.
 992. Where is your length? From Sydney to Newtown.
 993. Were you ever at work with Prime at home? No.
 994. You have worked on lines at home? Yes; I have been on a good many in my time. I have worked on them for the last twenty-three years. I have never done anything else.
 995. Mr. Richardson set you to examine the line? Yes.
 996. Immediately after dinner? Yes. He told us before we went to dinner that we were to do it. He said, "Get your dinner as quick as you can, as I should like you afterwards to go and gauge the line, and pick up any slacks you find."
 997. How far did you gauge? I gauged up to the next cutting from the bridge.
 998. Would it not have been as well to have cut out the two damaged rails, and to have had everything ready for putting down the new rails, before you set to work picking up the slacks? It made no difference. It would not take us more than five minutes to cut out the rails.
 999. I have know it take more time than that to cut one rivet? It all depends upon the state of your sets, and I took up two new sets with me in the morning.
 1000. But you had one rail with you that you had brought up from Newtown—why was not that at least put in? Because it was a little crooked. It was rather hollow in the middle.
 1001. But it was put in at last? Yes.
 1002. And how did you do—did you straighten it before putting it in? No; we put him in, and then knocked him down with a sledge.
 1003. Where did you get the sledge? We took up mauls and sledges with us in the morning.
 1004. When the rails came, did you all go to work, and put them in? No; we kept on at what we were doing, and a couple of men were set to work to get all ready.
 1005. Then you did nothing before dinner but clear the line of carriages? No, that was all.
 1006. Do you know a man working on the line named Flood? No, I don't think I do.
 1007. Whose servant do you consider you are? Well, I cannot tell; Mr. Morgan gives me my orders.
 1008. But who pays you—who pays you your money? A gentleman from this office—a cashier comes up and pays us.
 1009. And he comes from the Commissioners? Yes.
 1010. Then I suppose you are the servant of those who pay you—the Commissioners? I believe so.

Mr. William Morgan called and re-examined:—

- Mr. Wm. Morgan. 1011. *By the Chairman:* We understand that when you left on the day of the accident for Parramatta you gave orders to Richardson that the men of three of the regular road gangs—those of White, Vincent, and Prime—should be set about what you describe to be some trifling repairs to the road—this being at a time when nothing had been done upon the up line at the spot where the accident had occurred—to make it passable for traffic? That is not true, because I stopped until the road was clear for traffic.
 24 Aug., 1858. 1012. Hear me out, if you please. The road had been cleared of the carriages, but nothing had been done to repair the metals. Instead of this being done, the men of the three gangs were engaged in doing Fishlock's every-day work, from the place where the accident occurred up past the curve. This work was going on all the afternoon, and you did not think it worth your while to report the circumstances, either to the Chief Commissioner or to the Engineer-in-Chief. We would wish to have from you some explanation of why a report was not made? The first thing you say is, that I sent these men away to do Fishlock's work, when they might have been otherwise engaged.
 1013. No; what I say is, that you did not repair the road at the point where repairs were most needed; and that you sent the men away to do Fishlock's work, when the road had not been prepared to receive the rails whenever they might have arrived? I took the men up as soon as I could get them together up to the scene of the accident, with their tools, and all that I thought was necessary. I also took up two 20-ft. metals. When I got there I set the men to work to get up the carriages, and worked with them myself. We cleared the down line first, so as to open the traffic for the next train. I then gauged the up line myself, and got the men to put in dogs wherever they had been injured by the wheels of the carriages. Then the up line was cleared, but we found that some metals were required, where they had been bent by the carriages going off them.
 1014. *By Mr. Moriarty:* How many men were there? There were some 20 or 30 of my men, besides those that Mr. Twiss took up with him. When we got the lines clear my men had their dinners. Until the metals came from Parramatta, there was nothing for the men to do. I took up two 20-ft. rails with me, but one of them turned out to be crooked, and it would not come in. We sent off for others to Parramatta. While they were away at Parramatta after the rails the men were set to work upon the road that had been damaged by the accident, and in picking up the slacks on the up line. Fishlock's men were at work on the down line, and they went to finish up a lift they had left when they ran down to give assistance. There were slacks on the road, but they were nothing—no more than ordinary slacks.
 1015.

1015. Have you any idea what rails were put in, in the place of those damaged? Yes; they were 20-ft. rails.

1016. And how many? Either two or three; one that we took up with us could not be used; it was crooked.

1017. How did it happen then that they put it in afterwards? I am not aware that it was put in.

1018. We understand that the crooked rail was put in? I think not; but I will not say positively.

1019. It was put in, and straitened after it was in? It may be; I know that I sent to Parramatta for rails, but some mistake was made, and that gave us some further trouble. The road was set to rights however after the rails came from Parramatta.

1020. But those rails did not go in? I think you will find that they did.

1021. White tells us not; and that after all they had to put in the crooked rail, with a spare rail that was lying by the road side on Fishlock's length? That may be; I cannot precisely recollect all these circumstances.

1022. But at the time all these men were set to work taking up the slacks, the up line had not been touched, the bent rails had not been taken up, neither had steps been taken to prepare this line for the passage of a train? Oh! yes, I believe there had; there ought to have been, if there had not; but I was not present, as I had to go up on the inquest. I went up in the train that took up the bodies, and I had a man with me to take back the metals.

1023. As you were with him, how did it happen that proper metals were not selected? I do not know; I left the matter with one of the gangers who went with me—a man named Hollis, I think—but it is impossible to remember all these minute circumstances, or to say who did this and who did that at such a time as that was, and especially after such a lapse of time; I would not attempt to do so. When I said the line was clear, I understood you to say the down line, which was cleared first for the passing of the trains.

1024. That is as regards the down line, but we are alluding to the up line? There was a heavy carriage down on this line, right over the spot where the metals had been damaged; this could not be got up, and we had to lift it afterwards with jacks. When we found this we had to set the men at work, one party was to go down to the bridge, and to clear and make good the road thence to the spot of the accident; another party went beyond this up the hill. I considered it much better to set the men at work than to keep them idling and smoking.

1025. How was it that the road was not prepared to receive these new metals until late at night? Because the metals were not there to put in; as soon as we got the carriage up and out of the way this was done.

1026. At what time did you get this carriage on to the line? I cannot say.

1027. Do you know when the rails were put in? I cannot say exactly, but when I came back from the inquest we put them in. This must have been about 4 o'clock. The men would have all been standing still for the metals if I had not set them to work.

1028. At what hour did you come back from Parramatta? Four o'clock.

1029. And what hour was it when you started? About 1 o'clock.

1030. The man you took up with you did not bring back the metals immediately? No; he came back in the same train with me after the inquest.

1031. Was it a full train that brought you back? No; it was an engine and trucks that had been sent up to Sydney on purpose for our use.

1032. Whose duty is it to see that the line is in proper working order? It is mine.

1033. How was it that you did not look after it on this day? I should have done so if I had remained; but when I went to Parramatta I left the responsibility in the hands of Richardson.

1034. But at such a time you ought not to have been absent, especially as you were not required in Parramatta,—you were not examined on the inquest? No; but Mr. Whitton told me that probably I might be required. Mr. Whitton also thought that Fishlock, having charge of the length, would likewise be required; so Fishlock and I were told to go up with the engine.

1035. Who was left in charge of Fishlock's gang? Prime was put in charge of it.

1036. When did you become aware of all this work having been done whilst you were away at Parramatta? I was not aware of all this work being done. There was not much done—nothing more than usual. There were a few slacks, but no more than can be found at any time. Richardson pointed out a few slacks to me near the bridge, and I said, "Very well; get them picked up, and let them go up the hill and pick up what there are there."

1037. You say there were only two or three slacks, and yet it seems that three gangs of men were at work at them for at least three hours? No, there were only two gangs. David Prime and his gang were not on the up-line. They were on the down-line.

1038. How do you know this? Because I have asked him, since there has been all this stir about the works, and he told me that he went on the down line to run up a lift that Fishlock had left.

1039. He would not have been more than an hour over setting up a lift? He was more than that. It was a long lift, I know. I think some eight or nine lengths were lifted.

1040. But, independently of Prime, there were two whole gangs at work. Yes, one was at work this side of the bridge.

1041. They did all the work from the bridge to the place of accident? Yes.

1042. Which gang was that? Vincent's. White started from the bridge up to the level crossing and worked down to the bridge.

1043. How do you know all this, since you were not there? Because I have asked about it since there have been such statements made; and, besides, I heard the evidence given before the Commissioners the other day.

- Mr. Wm. Morgan.
21 Aug., 1858.
1044. You did not see them at work then? No. When I came back from Parramatta most of the men were doing nothing—there was nothing more to do.
1045. Have you conversed much with the men on this subject since this inquiry has been going on? No; no more than asking them where they were at work on that day, and what they had done. I asked Prime, for instance, what he had been doing, and he said that he set in at a lift that Fishlock had left. Besides this there was the evidence, as I said, that was given before the Commissioners the other day, and I then heard the men say where they worked.
1046. *By the Chairman:* Do you consider Fishlock's gang to be strong enough? Yes. There were only four men and the ganger on that length when I took the line. I increased it to five and the ganger, and that is the number now.
1047. Let me understand you perfectly; did you leave full instructions with Richardson before you started for Parramatta as to the repairs that were to be done? I intended Richardson to have gone to Parramatta for the rails, as I thought my presence was most required on the place of the accident. Mr. Whitton, however, told me that he thought I should be wanted in Parramatta on the inquest; as Inspector of Permanent Way the jury might have wished to examine me. Richardson was about to get up on the engine when I stopped him, and told him that Mr. Whitton thought I might be wanted. I said to him, "You had better begin at once gauging the road with Vincent and his men, and let the rest of the men take up on the hill." He asked who he should send up; and I said "Let White go up the hill, and old David Prime can run out the lift that Fishlock picked up this morning."
1048. These were the orders you left with Richardson? Yes. I understood to tell Richardson that Prime should go on the lift picked up by Fishlock, and that White should pick up the slacks. I said, "Take them up on the hill and pick up the slacks there."

John Vincent called in and examined:—

- John Vincent.
24 Aug., 1858.
1049. *By the Chairman:* You are ganger on the Petersham length? Yes.
1050. Were you taken down to Haslam's Bridge on the morning of the accident? Yes.
1051. How did you go down? We went upon the engine that was sent up with assistance.
1052. What did you set about immediately on arriving? We got the carriages on the road.
1053. What did you do afterwards? We went and got our dinners.
1054. Then when you went to your dinners had nothing been done to the roadway where the carriages fell over, either to the up or down line of rail? Nothing had been done by myself.
1055. *By Mr. Moriarty:* Did you see any other persons doing any thing to it? No, I did not.
1056. Were the old and bent rails left on the ground where they had been twisted? I do not remember.
1057. If much had been done to the road you would have no doubt seen it? Why, yes, I think so.
1058. Where did you go to get dinner? Just a piece off.
1059. Not far from your work? No, no great distance.
1060. Were either of the lines open when you went to dinner? Yes, the down line was.
1061. And how was the other one? It was not quite clear, not so as a train might get by.
1062. Were the carriages off it? No; there was one wrong side up, so that nothing could get by.
1063. Where were the carriages that had been got up? We shoved them ahead.
1064. Standing on the line? Yes.
1065. What did you do after you had your dinner? We went back and repaired the line.
1066. Where? Two joints this side of the bridge. The men went along and gauged the line.
1067. How many men did you have with you? I cannot say, because I did not know them.
1068. And you really do not know how many men were with you? No, I do not.
1069. Had you a dozen? No.
1070. Had you three? Yes, I had three.
1071. Had you six? Well, I don't know what they were.
1072. Had you charge of the gang? Yes.
1073. Then surely you could say how many men you had under your charge, or near to how many? I was in charge of the men, but I did not know them, and couldn't say how many there were.
1074. Did you know what you and the men were doing at all? Yes, I know what we were doing, but I do not know how many men there were.
1075. Were all your gang with you? No.
1076. How many of them were there? Two.
1077. You are sure of that then? Yes.
1078. Who had charge of the gang that was employed between the bridge and the place of the accident? I had charge of them.
1079. And you mean to say that you did not know how many men you had? No.
1080. Nor yet make a guess? No. I would not swear to one, because I did not take particular notice of any of them.
1081. Where were the rest of your gang? One of them was boring a hole to put in a dog behind me from the bridge towards the carriages.
1082. You were working towards the bridge yourself? Yes, two lengths the other side towards Parramatta.
1083. How long were you at work on it? I cannot say; I never took particular notice of the time.
1084. Cannot you say somewhere about the time? No, nor no more could any man at such a time as that, because we were doing many jobs of one kind and another.

1085. Can you not give a guess as to how many hours you were at work from the bridge to John Vincent, the carriages? No, I cannot; perhaps we might have been an hour or an hour and a-half; 24 Aug., 1868.
I would say that before I would say more.
1086. Did you see the train come back with Mr. Morgan, after the inquest at Parramatta?
Well, I do not remember.
1087. Do you mean to say that when you are working on the road a train could pass you and you not to notice it? I remember seeing the train come down, but I do not recollect Mr. Morgan being in it.
1088. Were you at work when that train came up? Yes.
1089. And you had been at work till then from the time you had your dinner? Yes; but we did not get our dinner until between 2 and 3 o'clock.
1090. Did you have your dinner before Mr. Morgan started for Parramatta? I cannot say.
1091. Why, you know when the train went up to the inquest? Yes, I saw that.
1092. Had you had your dinner when that started? No.
1093. How far towards Parramatta did you go with your work? To the first joint next to the bridge on the Parramatta side.
1094. How low was that joint? It was not particularly low.
1095. Was it an inch down? It might have been an inch.
1096. Was it less than an inch? Well, it might have been—hardly an inch.
1097. Was there any joint lower than that? No, that was the worst; all the rest were pretty well.
1098. Were there many slacks about this place? No; the chief work I did was on this side of the bridge.
1099. Now do you think that the joint was as much as an inch down? It was very close upon an inch; but I would rather say that it was not an inch rather than that it was over.
1100. *By Mr. Moriarty*: White started with you and worked on the other way, I believe? Yes.
1101. And what did Prime do? I do not know, but I know that he went by us on towards Parramatta.
1102. You know an inch when you see it? Well, I ought to.
1103. You would not be likely to mistake an inch for a quarter of an inch? I should think not; I have been on such work too long to make such a mistake.
1104. Would a joint an inch down throw a carriage off the line? No, or else the carriages would have been off long ago.
1105. Was this a short or a long slack? Why, you can't make a long slack out of one rail.
1106. Perhaps you did not look behind you to see if the other joints were down? But I did though. I looked behind me, and saw nothing that wanted touching.
1107. Is was short slack then? Yes, of course.
1108. Is a short or a long slack the most dangerous to the traffic? A short one, of course.
1109. What time was it when you set in to pick up that slack? I cannot say.
1110. Was it after Mr. Whitton had examined the line? I can't say, but I know he was there before that.
1111. However, it was after you had had your dinner? Yes.
1112. And after the train had gone off to the inquest? Yes.
1113. *By the Chairman*: Do you know anything about the two new rails that were put in there? No; I had nothing to do with putting them in.
1114. After you had had your dinner and came back to commence your work, what was the condition of the up line at the point where the carriages were thrown off? That was not interfered with.
1115. The bent rails and the upset carriage were still there? Yes.
1116. And it was left all the afternoon just as you found it on returning from your dinner? Yes.
1117. Then no train could pass there? Yes; we cleared the down line, and the down trains had all clear.
1118. But the other line—the up line? That was not done anything to.
1119. Not till evening? No.

William Hammond called in and examined:—

1120. *By the Chairman*: Are you one of Vincent's gang? Yes.
1121. You went up with him to the scene of the accident? Yes.
1122. What did you do after you had your dinner? We went to work picking up slacks.
1123. Which way? Outside the bridge.
1124. Towards Parramatta? Yes.
1125. Did you find any slacks near the bridge? Yes, we got some.
1126. Can you say how low they were? Well, I could not, for I was working the lever, and therefore I couldn't say.
1127. How long were you at work there? We started after dinner, and left off between 4 and 5 o'clock.
1128. At what time did you have dinner? Somewhere about 1 o'clock.
1129. Did you have your dinner at the same time as Vincent had his? Yes.
1130. Had they gone off to the inquest before you had dinner? Yes, they were all gone away.
1131. Then you were at work picking up these slacks from 1 or half-past 1 o'clock until between 4 and 5 o'clock? Yes, in picking up the slacks and filling them in.
1132. Did you find many dogs broken as you went along? No, not many.
1133. Then your chief work must have been picking up slacks? Yes.
1134. And I suppose in that time you must have picked up a good many? Yes, a goodish few.

W. Hammond.

24 Aug., 1868.

- W. Hammond. 1135. Were they very low? Some were down more than others—the same as anywhere else.
 1136. And when did they set about repairing the up line, where the rails had been pulled out? Why, they were just getting the rails in as we got down to them, and I bored the last hole for setting them fast.
 1137. What o'clock was that? Between four and five o'clock.
 1138. Who was doing that? Well, I cannot say for certain, but I think it was Prime, if I am not mistaken.
 1139. We were told that he went up the line to work, towards Parramatta? Yes; after dinner he went up to do a job that Fishlock had left.
 1140. Did you observe White and his gang working up the hill? Yes, I did.
 1141. How long were they at work there? They came down just before we left off.
 1142. They began directly after dinner? Yes; at the same time as we did.
 1143. And left off at the same time as you? Yes; a few minutes before us.
 1144. What o'clock was it when you left off picking up the slacks? Between four and five o'clock. We worked down to them just as they got in the last rail, and I went and bored the last hole for the rail.
 1145. Was that after the train had come in from Parramatta? Yes.
 1146. Could you say how long after? No, I could not. It was Heffer who picked up the slacks on the bridge, and he knows more about it than I do.
 1147. Is he here? No. He has not been examined at all yet.

Charles Youffs called in and examined:—

- J Youffs. 1148. *By the Chairman*: You are one of Vincent's gang? Yes.
 1149. On the day of the accident you went down to the spot with the rest of the gang? Yes.
 24 Aug., 1858. 1150. Did you go to your dinner at the same time as Vincent? Yes.
 1151. What did you do afterwards? We went to pick up slacks.
 1152. How far did you go? About two joints on the other side of the bridge.
 1153. Did you find any slacks there? Where I was we only picked up two on the inside rail.
 1154. *By Mr. Moriarty*: What sort of slacks were they? I don't know.
 1155. How low were they? They might have been an inch down.
 1156. Were they an inch and a-half? No.
 1157. What did you do when you had picked up the two slacks? I went to gauge the road, and then I had to put in the dogs where they had been cut off by the flange of the wheel.
 1158. Did you find many dogs broken? Yes, a good many.
 1159. And you helped to replace them? Yes.
 1160. About what o'clock was it when you set to work? I do not know what time it was.
 1161. Was it after the train had gone to Parramatta to the inquest? Yes, it was.
 1162. How long did you keep at work? I do not know.
 1163. Did you go on till dark? Yes.
 1164. Where was White at work? On the other side of us, up the hill.
 1165. What was he doing? Picking up slacks.
 1166. Did you see him come back from his work? Yes.
 1167. What time was it? I do not know.
 1168. Was it getting on towards dusk? I do not know.
 1169. Where did Prime go to? I do not know.
 1170. Did you see him come back? Yes.
 1171. At what time? I do not know.

THURSDAY, 26 AUGUST, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

MR. MORIARTY.

Peter Heffer called in and examined:—

- Peter Heffer. 1172. *By the Chairman*: Were you down at the spot on the day of the accident? Yes.
 1173. After you had had your dinner what did you set about? Repairing the road.
 26 Aug., 1858. 1174. Whereabout? One or two lengths on the other side of the bridge.
 1175. Did you find any slack there? Yes, a bit of a one.
 1176. How far from the bridge? Two lengths.
 1177. How low was the slack? I hardly know how low to say, it might have been an inch and a-half.
 1178. Was it two inches? No; I will not say it was so low as that.
 1179. Did it strike you as being a dangerous slack? I do not know hardly what to say respecting that; if they had thought it a dangerous place they would have picked it up before.
 1180. You were picking up slacks all the afternoon? Yes.
 1181. For how long a time? For about two hours and a-half.
 1182. Where was White at work? A good bit from us, up the hill.
 1183. He was not near you then? No; he was further off towards Parramatta.
 1184. What state was that part of the line in? I do not know; we began a good bit off.
 1185. Where was Prime working? I understood from him—for he is a neighbour of mine, and told me what he was doing—that he was doing a piece of work that had been left by Fishlock, when he came up to help at the accident.

1186.

1186. What did he do afterwards, when he had finished that job? I never saw him doing ^{Peter Heffer.} anything else.
1187. Do you know anything about the rails that were laid down? They were two rails ^{26 Aug., 1853.} that came from Parramatta, but where they were put in I can't say.
1188. Were those rails that came from Parramatta laid down? Yes, I believe so.
1189. Are you sure of it? Well, yes.
1190. Are you sure that they were not two that had come from Sydney? So far as I know, they were the two that had come from Parramatta; but I wouldn't be on my oath about it.
1191. Did you hear any one say that the rails which came from Parramatta were too short? No; but we did not put them down.
1192. Who did? Either White or Glover, I am not sure which.
1193. About what o'clock was all the work completed? I am sure I cannot tell, but I know that it was near nine o'clock before I got home.
1194. Was it near dark when you left the ground? Yes, it was quite—what we call dusky.
1195. Did all the gangs go home that night? Yes.
1196. Did you go there afterwards? Yes; we went there the next day.
1197. On Sunday? Yes.
1198. What did you go for? There was one carriage and two horse-boxes that had to be got up, and we went to do it.
1199. Who sent you down? Mr. Morgan.
1200. Were the other men there also? Yes; there were about twenty of us men there.
1201. What, plate-layers—road-men? Yes.
1202. To whose gangs did they belong? There was White's gang, Vincent's gang, Prime's gang, and some of Glover's gang.
1203. Was Fishlock's gang with you? No; they were repairing their own line, on which the accident occurred.
1204. Where were they at work? On the other side of the line—on the Sydney side of where the accident occurred.
1205. Was Mr. Twiss there? Yes, and Mr. Morgan.
1206. Did Mr. Twiss have his men with him? Yes.
1207. *By Mr. Moriarty:* Is it customary for your gangs to work on the Sunday? It was a thing that I never did before.
1208. Had Fishlock his whole gang with him? Yes.
1209. How many men? There were six or seven men; all his men were there.
1210. And were they picking up slacks? Yes.
1211. It was not likely that they were putting in new sleepers? No, they were not.
1212. *By the Chairman:* Directly after dinner you began picking up the slacks? Yes.
1213. And you left the carriages where they were? Yes.
1214. What time was it when you went to dinner? I could not say what time it was.
1215. Did you not think it strange that you should be taken from your work to do Fishlock's every-day work? No; I have seen the same thing done at home when an accident has happened.
1216. But not in repairing the road where the accident did not happen? No.
1217. Do you mean to say that it is customary, or that you have seen it, to repair the line for half a mile from where the accident happened? No; I have seen them repair the line so that a train could run.
1218. But not for half a mile? I will not say that; I did not take that particular notice.
1219. What was the reason that you were set to work picking up slacks on the line instead of getting the carriages up? All the carriages were got up before we set to work on the line.
1220. But there was one that was not raised till the next day? Yes, they were all up but one; we got the road all clear except that, and that was not got up till Sunday.
1221. Why was not that raised instead of repairing the line? That I cannot say.
1222. You cannot give any reason for this? No, I cannot; I never thought about it. I am only a working man, and I follow the ganger and do what he orders.
1223. Did you hear any remark made as to why this had been done? No; there was no one there to make a remark; we were all at work.
1224. Can you give any idea as to what was the cause of the accident? I am hardly able to judge that. I am sure I cannot say.
1225. Have you heard any one say what they imagined to be the cause? No, no one.
1226. *By Mr. Moriarty:* Did you ever hear it said that it was caused by excessive driving? Yes, I have heard that said.
1227. Where? Amongst the public lately.
1228. But by the men—the men on the line? No; I never heard them say it. I never heard them say it was the driving at all.
1229. What do they think caused the accident? I cannot say. I know that there was a joint down, and that I packed it; and that it was down an inch or an inch and a-half. I know that, but I can't say that I know any more.
1230. Was this low joint in the outside rail? Yes.
1231. And it was down an inch and a-half? Yes. It must have been, because I can judge from being always in the habit of measuring the slacks.
1232. And why did you not measure this one? Because we were sent away in a bustle, and were taken at a moment when neither of us had a rule about us.
1233. *By the Chairman:* Do you know that the horse-boxes got off by the level crossing place? No; I did not take notice of that.

- Peter Haffor. 1234. Do you know the level crossing? I cannot say that I do; but I know that the carriages must have slipped off and run a long way on the flanges of the wheels.
- 26 Aug., 1858. 1235. Before they came to the bridge? I could not say, because I only began at the second joint beyond the bridge.
1236. *By Mr. Moriarty*: Did you pay any attention to the ballast? Not particularly; but it seemed to be the same as everywhere else.
1237. You did not notice it to be disturbed? I did not.

Mr. Mason examined:—

- Mr. Mason. 1238. *By the Chairman*: Did you hear Mr. Morgan speak to Boan on the subject of his driving shortly before the accident? No.
- 26 Aug., 1858. 1239. Did you consider Boan's driving to be dangerous? No, it was not at all dangerous; it was merely that he did not ease his engine round the curves so much as he might have done. I told Boan to be more careful in going round the curves; if it had been of any importance I should have mentioned it to Mr. Whitton, but I did not consider it to be so.
1240. Have you had many opportunities of observing Boan's driving? Yes, I have frequently seen him driving, and have never had occasion to find fault with him. I consider him to be a very good and careful driver.
1241. Were you at the scene of the accident shortly after its occurrence? Yes. I went down to Haslam's Bridge with Mr. Whitton and Captain Martindale.
1242. About what time did they start for the inquest? We left about 3 o'clock.
1243. Did you give any instructions to Morgan about the permanent way? No. I gave him no orders about the permanent way.
1244. Do you know how the people were employed after your departure for Parramatta? I believe they were employed getting the line in order, and lifting the carriages up.
1245. About what time did you pass Haslam's Bridge on your return from Parramatta? It was not quite dark.
1246. Did you observe what the people were doing when you passed? No.
1247. Do you know of any work having been done in repairing the line, both at the scene of the accident and in other places, on the next day (Sunday)? No, I do not.

THURSDAY, 2 SEPTEMBER, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

MR. MORIARTY.

John Whitton, Esq., called in and examined:—

- J. Whitton, Esq. 1248. *By the Chairman*: You are aware that the Government have directed the Commission to continue their inquiry, more particularly into the general direction and management of the railway line? I am.
- 2 Sept., 1858. 1249. We wish to obtain your opinion upon certain points in connection with this subject; and first, with respect to the permanent way, its structure and maintenance,—do you think that the permanent way between Sydney and Parramatta is worse than the other lines? I do.
1250. In what way—with respect to the earthworks? The cuttings are of less width, and the slopes are steeper than shewn on the original sections.
1251. Are you in possession of the original drawings by which the works were to be constructed? Yes, they are in the office. The cuttings were to have been 30 feet wide, with slopes of 1 to 1; but I have seen no specifications.
1252. Are these works not executed, then, in accordance with these drawings? They are not.
1253. Is there very much difference between the drawings and the actual cuttings? Yes in some of the cuttings there is a considerable difference.
1254. Was the contractor paid according to the drawings, or according to the work actually done? He was paid for quantities taken from the sections.
1255. Have you found by measurement that the cuttings were not in accordance with the drawings? Yes; the cuttings, which have been measured, are less in quantity than stated on the original sections.
1256. Is the defective character of the works owing to their not having been made in accordance with the drawings? Yes, so far as relates to the earthwork; had the cuttings been wider, and the slopes flatter, the cost of maintenance would have been considerably reduced.
1257. They are narrower than the drawings? Yes.
1258. Have you any work in progress intended to effect a permanent improvement in the earth works? No, not in the earth works; the improvements we are making are in the permanent way, by putting in more sleepers, and using a better description of ballast than the sand ballast hitherto used.
1259. Have these improvements been going on for any length of time? Yes, for some months, since the beginning of the year.
1260. Are there any measures that you would wish to see carried out with respect to the earthworks, so as to give additional security to them? No; the cuttings are the most defective, and it would entail a very serious expense to increase them in width. Besides, even

even if this were now done, it would hardly be worth the cost; the present cuttings might answer the purpose if a better description of ballast were used. J. Whitton, Esq.

1261. You have not measured the embankments? No.

1262. Have you reason to suppose that they are not of the measurement that they ought to be? The only reason I have for thinking they are not is, that I have not found the works generally on the line executed in accordance with the drawings. 2 Sept., 1858.

1263. Are there not some of the embankments that have their sides very steep? I cannot speak so clearly to the embankments as I can to the cuttings; I have not had my attention particularly drawn to them; I have not noticed anything defective in the embankments. So long as the sleepers have a good bearing, a few inches more or less is not of much importance.

1264. There should be some space between the extreme edge of the bank and the end of the sleeper? The width of the embankments ought not to be less than thirty feet; of this the two rows of sleepers would require twenty feet from outside to outside, leaving a space of five feet on each side of the line.

1265. Then, so far as the earthworks are concerned, you conceive that the line may be maintained in safe running order without any alteration in them? Yes; by using a better description of ballast.

1266. You are now, I believe, using a new kind of ballast on the line? Yes; we are now using broken stone for ballasting the cuttings. Hitherto sand has been used, and in wet weather it was impossible to maintain the cuttings in good order with this kind of ballast.

1267. Are you aware whether the sleepers were originally laid on the clay, or on ballast? I am not certain whether they were laid on the clay or not; but my impression is that they were.

1268. From my own observation I should think that they were? I think so too. The ordinary plan pursued is to lay the sleepers on the formation, and then to lift the roadway twelve inches by packing the ballast underneath. It is very possible that these sleepers may have been laid on the formation and left there. The whole line, however, has been very badly ballasted.

1269. *By Mr. Moriarty*: Nothing but sand has been used for ballasting? That has been the ballast chiefly used.

1270. It has been for the saving of expense, I presume? Yes.

1271. Broken stone would make the ballasting very costly? Yes; it would take something like eight thousand yards of broken stone to the mile, and that would make the ballasting of the line from Sydney to Parramatta come to about £40,000.

1272. *By the Chairman*: The general character of the earthworks on the other lines is much better than that of the works on the line between Sydney and Parramatta? Yes. On the northern line the earthworks have been better executed. The line between Parramatta and Liverpool is also very much better than that between Parramatta and Sydney.

1273. Is that owing to the character of the country, the nature of the soil passed over, or to the works having been carried out in a superior manner? It is no doubt partly owing to the character of the country, but chiefly to the work having been better done.

1274. With respect to the bridges and viaducts—is there anything in them that requires alteration? Yes; they all require, or have had done to them considerable repairs. We are now repairing the Long Cove viaduct. Several bridges must shortly be taken down and entirely rebuilt.

1275. Steps are being taken then for putting these in order? Yes; the superstruction of the Ashfield bridge was taken down some short time back and entirely rebuilt.

1276. *By Mr. Moriarty*: Is that an overhead bridge? Yes.

1277. Of timber? Yes. It was built of inferior timber, which on examination was found to be completely rotten.

1278. *By the Chairman*: Have you no specifications according to which this bridge was built? No. I believe there was no specification. It was built from a drawing only.

1279. Was there nothing then to bind the contractor as to the quantity or quality of the material used? No, I believe not.

1280. How did they manage, then? A drawing, I believe, was forwarded to the contractor by the engineer, requesting to know at what prices he would execute the works; the contractor's tender then appears to have been recommended to the Board for acceptance.

1281. There was nothing then to check the contractor? I believe not.

1282. Then he did the work on a schedule of prices, framed by himself? Yes, so far as I have been able to ascertain, I believe this to have been the case.

1283. The defective character of this bridge was owing, then, to its not being carried out in accordance with the drawing handed over to the contractor? No; it was executed in accordance with the drawings, but the timbers were too weak.

1284. Was there nothing to check the contractor in the quality of the materials used? I presume that some supervision was exercised, but I cannot say what that supervision was.

1285. You are changing the Barlow rail for the double-headed rail throughout the line? No. The double-headed rails are being used only on the new lines.

1286. Is there sufficient accommodation in sidings on the line? Yes, I think so. With regard to the construction of the permanent way, I may state that the Barlow rail was originally laid on this line with three sleepers only to each rail; additional sleepers were put in by Mr. Randle at his own expense.

1287. *By Mr. Moriarty*: As he had to keep the line in repair, it would be a saving of expense to him to do so? No doubt. The more firm the rails, the less the expense of keeping the road in order.

1288. *By the Chairman*: I should like to know who first recommended these Barlow rails? I think it must have been Mr. Wallace, for I found in his office a piece of the Barlow rail, which had been addressed to him in London, I presume, previous to his departure for this Colony.

J. Whittom,
Esq.
2 Sept., 1858.

1289. Are they much used at home? Not at present. The patent was only granted in 1890, and, I believe, were very little used before 1852. Since that time they have been fairly tried, and are generally admitted to be a failure. I believe they have been little used on the Continent.

1291. There are very few lines there that have so heavy a rail as this laid down? Yes; the rail here is 75 lbs. to the yard, and that is the lightest rail ever rolled of this pattern.

1292. You do not think, then, that any permanent alteration in the roadway is required? The alteration required is better ballast and additional sleepers.

1293. Would it be advisable to replace the Barlow rail by the double-headed rail? No. The Barlow rail, if properly laid, with a sufficient number of sleepers and better ballast, will make a sufficiently good roadway, without incurring the expense of replacing them by any other description of rail.

1294. *By Mr. Moriarty:* The great objection to them is that they have not the strength of the double-headed rail? Yes, that is the chief objection.

1295. And then again, when worn out, you cannot convert them to any use? No, not in this Colony. In England you could get them re-rolled, but here you cannot.

1296. Can you do nothing with them here when they are thus worn? They are good iron, and when worn out might be cut up and hammered into bars.

1297. I am afraid you would get no demand for the bars? I do not mean for sale, but for our own use.

1298. *By the Chairman:* Do you think the way in which the sleepers have been laid down has had much to do with the difficulty you have experienced in maintaining the line? Yes, certainly. They have been improperly laid with the round side downwards. Many of them are small, especially those put in by Mr. Randle at his own expense.

1299. You require to employ more men on the Parramatta than on any other line? Yes.

1300. I see by your list that White has eight men in his gang—what is the reason that he has so many more than the usual complement? It is on account of the bad state of the road on his length, which is now being lifted and thoroughly repaired. A portion also of this length has been relaid, from the station to the first embankment, and White had additional men given to him for that work. So soon as that part of the line is in good order the number of men in his gang will be reduced.

1301. That first embankment that you speak of is a sand embankment, is it not? Yes.

1302. How does it stand? Very well, and is in good condition.

1303. Does not the sand wash down from the sides of the bank? No, not that I am aware of; I have not noticed any defect of that kind.

1304. They have given it a good slope, I presume? Yes, it has a slope of about $1\frac{1}{2}$ to 1.

1305. Do not the sides of the cuttings wash down very much? Yes; and this, combined with the sand ballast, fills up the side drains, and considerably increases the cost of maintenance.

1306. Fishlock, I see, has also more than the ordinary number of men in his gang—is that owing to the bad state of his length? Yes. A greater number of men are employed on Fishlock's length, as also on Hollis's, the next length to Fishlock's; but they are putting in additional sleepers on those lengths. The whole of these men are not paid out of the revenue, but are charged to a special vote granted for the improvement of the permanent way.

1307. What is the proportion of men per mile on this line, and how does it range as compared with similar lines in England? There are more than three times the number of men per mile on this line between Sydney and Parramatta than are employed on English lines with the same amount of traffic. The average between here and Parramatta is about three men to a mile. In England one man to a mile would be sufficient. At present more men are employed on the Campbelltown extension than will be required a few months hence, owing to its very recent formation; but when the earthworks shall have become properly consolidated a considerable reduction will be made.

1308. Do you find any difficulty in procuring efficient men to act as gangers? No, we have had no great difficulty so far in obtaining gangers, but most of the men we require are common laborers.

1309. Are they men that have been accustomed to railway work? Not always. The men we have as laborers have generally had no experience elsewhere.

1310. Not on lines in England? No, except in a very few cases.

1311. Can you depend upon these men to execute the work entrusted to them, and to keep the line in proper order? Yes, they do their work pretty well; I receive few complaints against them; but it is most important to have a good inspector over them; for with such a man they are made to do their work properly.

1312. Then you have no trouble with them? No, I have had few complaints against the gangers.

1313. Is it not a very important thing to have good gangers on the line? Yes, no doubt; but it is still more important to have a good inspector, who thoroughly understands the work, and will see that it be properly done.

1314. Laborers skilled in this kind of work are not so essential? No, it is not of so much importance to have laborers who have been accustomed to the work.

1315. How much do you pay them? The laborers are paid 7s. a-day, and the gangers 10s. a-day. The gangers had formerly 12s. a-day, and the laborers 10s., but they were reduced.

1316. When was that reduction made? In January last.

1317. And you find no difficulty in getting men at the rates you mention? None whatever.

1318. Not since the reduction of the wages? No; on the contrary, I believe we have better men since the reduction than we had before it.

1319. You do not think that you would get better men by giving them English wages? No. They get more than English wages now; they have three times the amount they would receive for similar work in England. There 3s. to 3s. 4d. per day is the ordinary pay of a ganger,

ganger, whilst the laborers' wages run from 2s. to 2s. 6d. a day. I never paid more than 3s. 4d. a day to a ganger in England, unless under some very special circumstances. I think the wages we are now paying, both for gangers and laborers, are sufficient to secure the best men. J. Whitton, Esq. 2 Sept., 1853.

1320. The amount of wages is, I suppose, a matter that you give and take upon—when wages rise you increase yours, and when they fall you lower yours also? Yes; when we find that we cannot get such men as we want at the rate we offer, we rise the wages. We have already lost many of our best hands, and if the railway works that were contemplated in Victoria had been gone on with, we should have had to pay much more than we now do, if we wished to keep the men we now have on the line; otherwise we do not pay higher for our labor than other people do.

1321. Did Mr. Morgan come out from England to fill his present position? No, certainly not.

1322. You did not send for him? I did not.

1323. Did you know him in England? Yes; he was on the Oxford and Worcester line, as one of my inspectors, for four years, and was there when I first went.

1324. You have known him for some time? Yes, for the period I have mentioned, and I believe him to be one of the best inspectors of permanent way and works that could be obtained. He is an active, energetic man, and thoroughly understands his work. He was on the South Devon line, I believe, for some time before he came upon the Oxford line. He came out here purely on speculation, and, as I thought it would be to the advantage of the Commissioners to have him employed, I recommended him. Another very good inspector, from the same line, has also come out here lately, but neither of them were sent for by me.

1325. These persons, then, came out on their own account? Yes; they came out merely on speculation, in the hope of bettering their condition.

1326. Are they getting higher salaries here than they received in England? Yes, more than double what they would get in similar situations in England. All wages here are much higher than is paid for corresponding situations in England.

1327. When Morgan was with you was he on the permanent way? No; he was Inspector of Works, and in that position he had to travel almost daily up and down the line, to execute whatever works were required. In his journeys backwards and forwards I directed him, if he found anything wrong in the permanent way, to report it to me.

1328. What length had he? He had the inspection of the works on the whole length of the line.

1329. Then he had no special charge of the permanent way? No, he had not; he had no charge of the permanent way, only a direction from me to report to me anything he might see amiss.

1330. What made him leave that line? I assume that it was under the impression that he would get better wages by coming out here.

1331. Then he left to come out here? I believe so.

1332. Was there an Inspector of the Permanent Way on that line? Yes, there were several. I had one inspector to every twenty miles. The line was ninety-four miles in length, and I had five inspectors. There was only one Inspector of Works—that was Morgan; his duty was to take charge of the workshops, and to see that all the work for the line was properly done.

1333. Is he a working engineer? No, he is not.

1334. The permanent way men were in no way under him or his orders? No. He had to superintend the construction of all buildings, the repairs to all bridges and viaducts, to make the crossings and switches, and such other works as were wanted on the line. If there was any work to be done at any of the stations he had to superintend it.

1335. Do you know what situation he filled before he came to you? No, I do not.

1336. Who is responsible for the proper maintenance of the permanent way on the Maitland line? George Bewick. He is a very good man. He has just been appointed as Inspector of the Permanent Way and Works.

1337. There is only one man in charge of the whole works on the Maitland line? That is all. Bewick does everything.

1338. His duties, then, are something like those of a resident engineer? Exactly; in fact, he does all the work that a resident engineer would do, without being dignified with that title.

1339. His work is, I suppose, to maintain and to keep in repair the works already executed? Yes; and, in addition, he would have to superintend any new work that might be required on any portion of the line already opened. As soon as the line is opened for public traffic it is given over into the charge of the inspector for the time being, and he is responsible for everything.

1340. By Mr. Moriarty: Then, generally, throughout the line everything that you consider necessary to be done is being done, to put the line in a good and efficient position? It is.

1341. And these works have been going on for some time past? Yes, they have.

1342. How long have these improvements been going on? For the last seven or eight months—since the beginning of the year.

1343. Then everything that you could recommend by way of improvement either has been or is in course of being carried out? Yes. We had a special vote at the beginning of this year for the improvement of the permanent way. The improvements now being made are paid for out of this vote.

1344. Is the timber you obtain of a good kind for sleepers? Yes, the very best; it is sound ironbark.

1345. What is the size of the sleepers you are now putting in? 9 feet long, 9 by 4½.

1346. Do you find that the white ants destroy the sleepers? No, I have not found that they do so.

1347. Do you think that kyanising the sleepers would tend to their preservation? It would do so, but I prefer creosote.

MONDAY, 6 SEPTEMBER, 1858.

Present:—

PROFESSOR PELL IN THE CHAIR.

MR. MORIARTY.

John Whitton, Esq., called in further examined:—

- J. Whitton, Esq.
6 Sept., 1858.
1348. *By the Chairman:* Are you satisfied with the character of the rolling stock on these lines? With everything except the engines.
1349. The carriages answer well? Yes, very well; but the engines are not suitable for the traffic.
1350. Are they found to be hard upon the line? They are very heavy, and the general design is bad.
1351. Have you any plan for altering or replacing the present engines? No; but engines might be got out much more suitable for the traffic, and which would work more advantageously, particularly on that part of the line between Parramatta and Campbelltown.
1352. You think it would be a saving even to go to the expense of getting out new engines of a lighter character? Undoubtedly.
1353. Would you lay the old engines up? It would be an advantage to do even that; but I would keep the old engines for the goods traffic on this end of the line, between Sydney and Parramatta. They might be used to work them only at a slow speed. I do not anticipate any heavy traffic beyond Parramatta for some time to come. We could work the goods traffic with the present engines, though they are unnecessarily heavy. The cylinders are larger than required for the traffic, and the leading wheels being the same size as the driving wheels is objectionable.
1354. Would it be possible to diminish the size of the leading wheels? Only at considerable expense.
1355. Are the engines well made? Yes, they are well put together; but the design is altogether bad, and the large wheels being in front is most objectionable.
1356. Are you able to get suitable persons to maintain the rolling stock in good order? We might get better men by sending for them to England; still we have tolerably good men.
1357. Are they generally efficient? Yes. They are as good as we can get in the Colony.
1358. Then you think that the carriages and engines are inspected carefully, and have confidence in the men, in so far as their industry and attention are concerned? I have. Twiss, the foreman, has charge of this department, and has the assistance of a carriage inspector.
1359. The carriages in use here are of the same character as those employed in England? Yes.
1360. You have stated to us that you did not consider yourself responsible for the traffic on the line? Yes. I do not consider that I have any responsibility in that respect.
1361. But questions relative to the traffic are sometimes referred to you? Yes, occasionally.
1362. You have had some considerable experience in the management of railway traffic? Yes.
1363. Is there any person to whom questions relative to the traffic department are usually referred? Traffic matters have occasionally been forwarded to me for my opinion.
1364. Is there any person in the department connected with the traffic who has had sufficient experience to be able to take all responsibility in that branch from you? I repeat, that I do not consider myself responsible in any way for the traffic management. If a question be asked of me, I answer it as a matter of course, but I do not profess to interfere in any way with the traffic management.
1365. But you are the person to whom they must come for the decision of any matter of importance? If it be thought necessary to ask my opinion upon any point I always give it; if it be not thought necessary the matter is attended to without.
1366. With respect to such a thing as the arrangement of carriages in a train, would that be referred to you? Not necessarily; but since the accident my opinion has been asked as to the best position for horse-boxes, which is undoubtedly next the engine.
1367. You think, then, that the safest place for a carriage to be is next the engine? No doubt.
1368. They are less liable to get off the line when next the engine? Yes.
1369. Then, is not the placing in this position those carriages that are the most likely to get off the line—such as horse-boxes—more likely to result in an accident, such as we have witnessed, than if these carriages were placed at the tail of the train? No, the reverse. If the couplings hold, the horse-box next the engine is less likely to cause an accident than if placed at the tail of the train.
1370. But looking at the two accidents that have occurred, they will hardly bear out your opinion? There was a difference in the two cases; in the first the horse-box was at the tail of the train, and in the second it was next the engine.
1371. And the consequences were different also; for in the former accident the horse-box was got on to the line again without any serious occurrence; whilst in the latter it took several carriages off with it, and was attended with lamentable results? That was owing to the couplings breaking; if they had held good the same results would not have followed.
1372. *By Mr. Moriarty:* But is it not impossible for the couplings to hold good for any length of time, because of the great weight of the train behind, acting in concert with the resistance offered by the sleepers to the progress of the carriage when off the rails? I do not think the weight of the train would have much effect if the couplings were sound.
1373. But then the jerking on the sleepers in addition? That did not break the couplings in the former accident.
1374. The horse-box being off the line would receive a check every time it came into contact with the sleepers. This would produce a corresponding check upon the carriages behind when

when they were thrown up against the one that was off. Then the next tug of the engine would act more heavily upon the couplings than if the train was going steadily; and this would be repeated every time a sleeper was encountered, until the couplings must go? No, not necessarily; the couplings in the former accident did not break, although the box was dragged nearly a mile. J. Whitton,
Esq.
6 Sept., 1888.

1375. Would not every bump upon the sleepers to some extent retard the engine? I think not, but would be an additional strain upon the couplings.

1376. *By the Chairman:* In the former accident, however, the horse-box being at the tail of the train, was dragged for more than a mile without taking anything off the line with it—does not this shew that a serious accident is not so likely to occur with the horse-boxes at the head of the train as it is when they are next the engine? No, I think not. If the couplings do not part, an accident is more likely to occur with the horse-box behind than in front.

1377. Then, as I understand you, if the couplings hold good it is no matter where you place the horse-box in a train? It is best in front.

1378. But supposing the couplings to part? Then the tail of the train would be the best. If, when in that position, it leaves the line and the couplings hold, it is very likely to pull off the other carriages in front. A case might occur like that which happened nine months ago, in which the hind wheels got off the metal, and no serious result followed, but if the fore wheels had gone off instead it would very likely have pulled off the carriage immediately in front.

1379. Under any circumstances I do not see how it would be likely to result in such an accident as the last fatal one that occurred? It might do so. If the couplings held good, a horse-box at the tail of the train might pull all the carriages off the rails.

1380. But it would not so certainly pull them off and upset them as it would when it was the leading carriage of the train? Probably not, but it is possible that it might do so. There can be no doubt, however, that the risk of accident is increased by placing the horse-box behind the train, as in that position it is more likely to leave the rails than if placed in front.

1381. But having left the rails, in which position is it more likely to be attended with serious results? If the couplings part, then, of course, the tail of the train is best; so long as the couplings hold the head of the train is best.

1382. *By Mr. Moriarty:* It seems to me that if a carriage goes off the line it becomes a mere question of time how long the couplings will hold; they must go before very long, as in the more recent accident? Not necessarily; they may hold until attention is drawn to the carriage off the line.

1383. No couplings could stand for any great time against the continued succession of checks and jerks that must follow the bumping over the sleepers? They might stand long enough to have the accident remarked.

1384. *By the Chairman:* Suppose the carriage next to the engine got off the rails, and the engine-driver remarking it shut off the steam, would such a thing be likely to result in a serious accident? I do not think so.

1385. Might not the rushing of the carriages against it have the effect of throwing it over? No, I think not.

1386. After the steam is shut off, and the motive power thus removed, would not the carriages behind be thrown violently up against those in front? Not enough to do injury. Shutting off the steam suddenly is a matter of very little consideration unless there be some derangement in the carriages themselves, either in the axles or elsewhere. In England, where trains run 60 miles an hour, I have never known horse-boxes to go off the line in consequence of the speed.

1387. You would have no objection, however, to have the horse-boxes placed at the tail of the train? None whatever. If I had the responsibility of working the line I should, nevertheless, prefer putting the horse-boxes next the engine.

1388. Are there any persons having the management of the traffic department who have had much experience in this branch, except that which they have gained in this Colony? I am not able to say what experience the officers generally in the traffic department may have had, but I believe Mr. Beeston has had considerable experience.

1389. Do you consider him to be an efficient officer? Yes, from what I have seen of him, I do.

1390. Who is Mr. Beeston's superior in this branch? Mr. Nealds; and, probably, he also may have had great experience on lines in England, but I am not aware of it.

1391. At all events, the position of Traffic Manager is one in which a man ought to have very considerable experience to fit him for the situation? Unquestionably, it is a very important and responsible office.

1392. Mr. Nealds is now stationed at Newcastle, I believe? Yes, at present.

1393. Is he placed there permanently, or has he been sent down for a special purpose? He has been sent down as General Manager of the line for a short time, in consequence of the person who was Clerk and Traffic Manager having been removed.

Then Mr. Beeston has actually the management of the traffic department here at the present time? He has.

1394. Are the signals made use of on these lines the same as those employed in England? Yes, those now in use are the same as those used in England; but I do not consider these lines to be perfectly signalled.

1395. You consider that something further is wanting? Yes. All that we require, however, is about being done.

1396. Any thing that you would recommend in this respect is already in contemplation? Yes; but as we run few trains there is at present no liability to accident from collisions, especially as we run no fast trains or trains by night. Still it is better to be prepared against the time when such trains will be required.

J. Whitton,
Esq.

8 Sept., 1838.

1397. In the management of the traffic department have they adopted all the ordinary precautions in use on the lines in Europe? Yes, all the ordinary precautions adopted in England.
1398. What is the position of the guard in the train and his means of communicating with the engine-driver in case of accident? He has no means of communication.
1399. Has not the establishment of such a means been considered a desideratum in England? It has been considered so; but no means have ever yet been generally adopted for such a purpose.
1400. Has that been from their not having been able to devise any means? From their not being able to find any convenient mode of communication.
1401. Is there no mode of communication at all in use? Yes; on a few lines they have a system of communicating by means of a rope running along the sides of the carriages. This leads to the whistle of the engine, which is opened on the rope being pulled by the guard, or to a bell fixed on the tender.
1402. Can the passengers make use of this signal? No, only the guard. It is not thought advisable to allow the passengers to communicate in this way. The plan has been found to be very inconvenient and has been but partially adopted. It was found to interfere with the working of the traffic.
1403. Then it had to be taken off when the train stopped? Yes, if carriages were left or taken on.
1404. Was that the best means of communication that has been discovered? Yes; several means have been devised. The great difficulty in the way of perfecting any plan on the English lines is that there are so many junctions where carriages are being taken up or dropped.
1405. Such objection would not apply here with our small trains and our direct line? Not to the same extent; but they have found a difficulty in applying any system in England.
1406. Is there any particular difficulty in the way of using it here? There is no difficulty, but it is very inconvenient; nor do I know any time when such a plan would have proved serviceable on this line.
1407. There was one case when it would have proved a convenience, when the old accident occurred? I do not think it would have been an advantage then.
1408. It was the guard who discovered the accident, and communicated it to the engine-driver, and he had some considerable difficulty in doing so? I do not think it was the guard; I understood it was the plate-layers who first discovered the accident.
1409. We have it in evidence that it was the guard, and that he communicated with the engine driver by screwing the break tight down? It may have been so; however, if it be thought advisable to adopt a means of communication, I see no great objection to it.
1410. Have you any special arrangements on the single lines in order to prevent collisions? Yes.
1411. Will you describe them? I can give you a copy of the special regulations by which the traffic is conducted. The guard of the ordinary trains takes up a staff at Parramatta which he carries on to Liverpool, and this staff is brought back to Parramatta by the returning train. No guard is allowed to pass without taking this up, so that two trains cannot be on the line at once, unless by some special arrangement, of which due notice is given, to prevent accidents. This was the arrangement some time ago, and which I believe is still acted upon.
1412. What is done then in the case of a special train being ordered? Such a train can only be obtained after full notice, so that all parties on the line may be aware of it; and even then they cannot be taken at a time that would interfere with other trains. A special train may be ordered, but only on notice, and they are only given for such times as will not interfere with the ordinary traffic on the line.
1413. How do you manage with the ballast trains on the single lines; is the time they will be on the line always known? Yes. If a special engine be placed on the line for any purpose, notice is always given that such will be the case.
1414. Do you consider that the regulations for the management of the traffic are as good as they could be? Yes, I think they are, so far as I know of the arrangements.
1415. Are the railway stations made telegraph stations also? No, they are not.
1416. Is not that a pity? It is in consequence of not being able to get instruments in the Colony; that is the only reason, I believe, that they are not so.
1417. Would not their being made so prove a great convenience and safety in working a single line? It would be a great convenience. The stations at Liverpool and Campbelltown are telegraph stations also, but the one at Parramatta is not.
1418. Is not that an oversight? No. It would have been made one had the necessary instruments been in the Colony.
1419. Have you all the necessary accommodation you require on the line in the way of sidings and stations? Yes, I think sufficient for the existing traffic.
1420. By Mr Moriarty: Are the station masters at Liverpool and Campbelltown instructed in the use of the telegraph, so as to be enabled to communicate messages? No, I believe not; but there are separate clerks for the purpose at each station.
1421. The regulations that you speak of as being in force on the single line between Parramatta and Campbelltown apply equally to the Newcastle line? That line is worked with one engine only, so that there is no fear of a collision. Between Newcastle and Honey-suckle Point a small engine is used for the purpose of passing under the deficient headway given by the Australian Agricultural Company's Bridge; from Honey-suckle Point to Maitland the train is taken by one of the large engines.
1422. Have you made any distinct proposition to the Government with reference to replacing the present with smaller engines? No, not to the Government; but I have had a conversation with the Chief Commissioner on the subject, and have stated my views to him.
1423. Do you intend to submit any proposal to the Government? No; but I believe it is the intention to order out lighter engines. A vote was granted this Session for the rolling stock

stock for the authorized extensions, and I think it would be better, in every respect, to replace the old ones with those we are about to order. We should then run lighter engines on the whole line, which would be far more suitable for our traffic south and west of Parramatta, and more particularly on the Newcastle line.

J. Whitton,
Esq.
6 Sept., 1858.

1424. Are the engines on the Newcastle line the same as those on the Sydney line? Yes, exactly the same, except that the former have steel and the latter have India-rubber springs.

1425. Would not engines of this character be considered heavy even on English lines? Yes. There are few lines where such heavy engines are used, except on the southern portion of the London and North Western.

1426. Might not engines be made much smaller, that would yet take a greater weight? Yes. These engines are unnecessarily large, and are not properly proportioned for taking heavy loads.

1427. Even on the London and North Western Railway the engines used for the passenger traffic are not so heavy as those upon our lines? Yes; on the southern portion of the line they are, but on the northern portion the engines are much lighter.

1428. They employ heavier engines on one end of the line than they do on the other? Yes.

1429. Is that on account of the traffic, or is it owing to the difference of construction of the permanent way? Partly to the permanent way, but more particularly to a difference of opinion in the management as to the advisability of employing light or heavy engines. It is considered more economical on the northern section to send two light engines with a large train than to send one heavy one, and I am of that opinion.

1430. You consider that the two light engines do less injury to the permanent way than would one heavy one? Undoubtedly.

SYDNEY :

PRINTED BY WILLIAM HANSON, GOVERNMENT PRINTER,
PHILLIP-STREET.

1858.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES No. 58. WEDNESDAY, 14 JULY, 1858.

4. **Railway Accident:**—A discussion arising upon a question put by Mr. Gordon to the Minister for Lands and Public Works, in reference to the accident on the Great Southern Railway on the 10th instant—
And Mr. Oakes offering to speak in prolongation of the discussion,—
The Speaker said it would be irregular to allow this discussion to assume the character of a Debate.
Mr. Donaldson then, to give, as he observed, regularity to the discussion, offered a motion to the effect that this House, at its rising, do adjourn until Wednesday next, at three o'clock ;—
Whereupon the Speaker ruled that that motion would be irregular, and quoted the like ruling of the Speaker of the House of Commons, given at page 24 of Bourke's "Decisions," on the occasion when Mr. Duncombe offered a similar motion for a similar object in the House of Commons,—but allowed Mr. Oakes to conclude his observations, upon the understanding that the irregularity which had been permitted in this instance only because of the great public importance of the matter in which it originated, should not be drawn into a precedent upon any future occasion.
Mr. Donaldson then moved, without previous notice, That the Standing Orders be suspended to enable him to move, That the management of the Railways of this Colony—more especially the management of the Sydney and Parramatta Railway—with reference to the fatal accident which occurred on Saturday last, be referred to a Select Committee to be appointed by Ballot.
Debate ensued.
Question put and passed.
Mr. Donaldson then moved, That the management of the Sydney and Parramatta Railway, with reference to the fatal accident that occurred on Saturday last, be referred to a Select Committee of ten Members, inclusive of the Mover, to be appointed by Ballot.
Question put and passed ;—
Whereupon the House proceeded to the Ballot, and the Speaker declared the following Members to be, with the Mover, the Committee duly appointed, viz :—Mr. Jones, Mr. Robertson, Mr. Scott, Mr. Weekes, Mr. Egan, Mr. Oakes, Mr. Parkes, Mr. Hay, and Mr. Murray.

VOTES No. 59. THURSDAY, 15 JULY, 1858.

5. Railway Accident:—Mr. Donaldson offering to make a motion, without notice, for extended powers to the Select Committee appointed yesterday on the recent Railway accident, including a power of adjournment from place to place,—
The Speaker said, that, before he could put the question, it would be necessary Mr. Donaldson should obtain the suspension of the Standing Orders, to enable him to make his motion without notice, and recommended Mr. Donaldson to withdraw that portion of it which would give power to the Committee to adjourn from place to place;—
Whereupon Mr. Donaldson moved, *by consent*, That the Standing Orders be suspended to enable him to move, without notice, That power be given to the Select Committee appointed yesterday to inquire into the causes of the fatal Railway accident on Saturday last, to send for persons and papers, and that all papers laid upon the Table by the Government upon the subject of the said Railway accident be referred to the said Committee, and that such Committee be empowered to sit during any adjournment of this House.
Debate ensued.
Question put.
The House divided.
Ayes, 23. Noes, 8.
* * * * *
Whereupon Mr. Donaldson moved, That power be given to the Select Committee appointed yesterday to inquire into the causes of the fatal Railway accident on Saturday last, to send for persons and papers, and that all papers laid upon the Table by the Government upon the subject of the said Railway accident be referred to the said Committee, and that such Committee be empowered to sit during any adjournment of this House.
Question put and passed.

VOTES No. 64. FRIDAY, 23 JULY, 1858.

4. Railway Accident:—Mr. Donaldson, as Chairman, having brought up a Progress Report from the Select Committee appointed on the 14th instant, to inquire into the recent Railway Accident,—moved
- (1.) That this Report be now adopted.
Question put and passed.
- (2.) That a copy of this Report be forthwith communicated, by Message, to the Governor General, with a request that His Excellency will be pleased to take it into present consideration.
Question put and passed.
- (3.) That this Report be printed.
Question put and passed.
Ordered to be printed.

1858.

RAILWAY ACCIDENT.

PROGRESS REPORT.

THE SELECT COMMITTEE of the LEGISLATIVE ASSEMBLY appointed on the 14th July, 1858,
*"to inquire into the management of the Sydney and Parramatta Railway, with reference
 "to the fatal accident that occurred on Saturday last,"* have agreed to the following
 Progress Report :—

That your Committee have examined several witnesses, whose concurrent testimony is to the effect that the engine-driver, Robert Boan, who drove the engine attached to the early train on the morning of Saturday, 10th July, on which day the fatal accident occurred, is unfitted to have so serious a responsibility placed upon him; and believe that the safety and confidence of the public travelling by Railway would be considerably increased by steps being immediately taken to secure a more careful system of driving.

STUART A. DONALDSON,
Chairman.

4. Railway Accident:—A discussion arising upon a question put by Mr. Gordon to the Minister for Lands and Public Works, in reference to the accident on the Great Southern Railway on the 10th instant—
And Mr. Oakes offering to speak in prolongation of the discussion,—
The Speaker said it would be irregular to allow this discussion to assume the character of a Debate.
Mr. Donaldson then, to give, as he observed, regularity to the discussion, offered a motion to the effect that this House, at its rising, do adjourn until Wednesday next, at three o'clock;—
Whereupon the Speaker ruled that that motion would be irregular, and quoted the like ruling of the Speaker of the House of Commons, given at page 24 of Bourke's "Decisions," on the occasion when Mr. Duncombe offered a similar motion for a similar object in the House of Commons,—but allowed Mr. Oakes to conclude his observations; upon the understanding that the irregularity which had been permitted in this instance only because of the great public importance of the matter in which it originated, should not be drawn into a precedent upon any future occasion.
Mr. Donaldson then moved, without previous notice, That the Standing Orders be suspended to enable him to move, That the management of the Railways of this Colony—more especially the management of the Sydney and Parramatta Railway—with reference to the fatal accident which occurred on Saturday last, be referred to a Select Committee to be appointed by Ballot.
Debate ensued.
Question put and passed.
Mr. Donaldson then moved, That the management of the Sydney and Parramatta Railway, with reference to the fatal accident that occurred on Saturday last, be referred to a Select Committee of ten Members, inclusive of the Mover, to be appointed by Ballot.
Question put and passed;—
Whereupon the House proceeded to the Ballot, and the Speaker declared the following Members to be, with the Mover, the Committee duly appointed, viz.:—Mr. Jones, Mr. Robertson, Mr. Scott, Mr. Weekes, Mr. Egan, Mr. Oakes, Mr. Parkes, Mr. Hay, and Mr. Murray.

VOTES No. 59. THURSDAY, 15 JULY, 1858.

5. Railway Accident:—Mr. Donaldson offering to make a motion, without notice, for extended powers to the Select Committee appointed yesterday on the recent Railway accident, including a power of adjournment from place to place,—
The Speaker said, that, before he could put the question, it would be necessary Mr. Donaldson should obtain the suspension of the Standing Orders, to enable him to make his motion without notice, and recommended Mr. Donaldson to withdraw that portion of it which would give power to the Committee to adjourn from place to place;—
Whereupon Mr. Donaldson moved, *by consent*, That the Standing Orders be suspended to enable him to move, without notice, That power be given to the Select Committee appointed yesterday to inquire into the causes of the fatal Railway accident on Saturday last, to send for persons and papers, and that all papers laid upon the Table by the Government upon the subject of the said Railway accident be referred to the said Committee, and that such Committee be empowered to sit during any adjournment of this House.
Debate ensued.
Question put.
The House divided.

Ayes, 23.

Noes, 8.

* * * * *
Whereupon Mr. Donaldson moved, That power be given to the Select Committee appointed yesterday to inquire into the causes of the fatal Railway accident on Saturday last, to send for persons and papers, and that all papers laid upon the Table by the Government upon the subject of the said Railway accident be referred to the said Committee, and that such Committee be empowered to sit during any adjournment of this House.
Question put and passed.

VOTES No. 64. FRIDAY, 23 JULY, 1858.

4. Railway Accident:—Mr. Donaldson, as Chairman, having brought up a Progress Report from the Select Committee appointed on the 14th instant, to inquire into the recent Railway Accident,—moved
- (1.) That this Report be now adopted.
Question put and passed.
- (2.) That a copy of this Report be forthwith communicated, by Message, to the Governor General, with a request that His Excellency will be pleased to take it into present consideration.
Question put and passed.
- (3.) That this Report be printed.
Question put and passed.
- Ordered to be printed.
-

VOTES No. 75. THURSDAY, 12 AUGUST, 1858.

4. Railway Accident:—Mr. Donaldson, as Chairman, having brought up the Report from, and laid upon the Table the Evidence taken before, the Select Committee appointed on Wednesday the 14th July last, "to inquire into the management of the Sydney "and Parramatta Railway, with reference to the fatal accident that occurred on "Saturday last,"—
- The Report was read at length by the Clerk,—
- And ordered to be printed, together with the accompanying Evidence and Minutes of Proceedings.
-

1858.

RAILWAY ACCIDENT.

FINAL REPORT.

THE SELECT COMMITTEE of the Legislative Assembly appointed on Wednesday, the 14th July, 1858, to inquire into the management of the Sydney and Parramatta Railway, with reference to the fatal accident that occurred on Saturday last," to whom on the 15th ultimo, power was given to send for persons and Papers, and to sit during any adjournment of the House," and to whom was referred on the same day "all Papers laid upon the Table by the Government upon the subject of the said Railway Accident," have agreed to the following Final Report:—

Your Committee having undertaken the duty intrusted to them with a full persuasion that a cause or causes for the late deplorable railway accident were capable of discovery and explanation, directed their attention immediately to the following points of inquiry:—

1. What was the rate of speed at which the train was travelling at the time of the accident.
2. What were the condition and arrangement of the carriages in the train; and was the coupling of the safest and best description.
3. What was the state of the permanent way, generally, on the Parramatta line; and, in particular, did any defect exist at the spot where the accident occurred.
4. What has been the system of discipline among the engine men and servants of the Company; and what the character of the responsibility attaching to the various departments of the management;—

together with the incidental inquiries arising out of these important facts and circumstances.

With these views, your Committee on the 17 July proceeded personally to examine the scene of the accident, and to inspect the carriages forming the train, which were kept in precisely the condition in which the disaster had left them.

Your Committee then sat *de die in diem*, until the mass of evidence taken required that a day or two should be allowed to the short-hand writers to transcribe the testimony, afforded by the different witnesses examined.

Your Committee desirous of allowing the Chief Commissioner and the Engineer-in-Chief every opportunity of hearing (or reading after it was given) all the evidence taken before them, also delayed for a day or two the conclusion of their labors, until these officers should have an opportunity of considering, and, if necessary, of rebutting any evidence of a professional or scientific character which might seem to reflect upon the performance of their duties.

Under these circumstances, as well as from the protracted nature of the inquiry itself, a longer period has elapsed than would have been necessary to arrive at a determination of the cause or causes which have led to the sad accident of the 10th July last.

During the inquiry, upwards of thirty-five witnesses have been examined, including, besides Captain Martindale and Mr. Whitton, many enginemen and servants of the Commissioners,—as the traffic manager, locomotive foreman, drivers, firemen, station-masters, and others—several gentlemen, and intelligent passengers by the train, and eye-witnesses of the accident; and, particularly, scientific and practical witnesses—Mr. Bell, the City Engineer, and others—who have kindly afforded much valuable information to your Committee.

Your Committee, without finding themselves in a position absolutely to name the specific cause of the accident, are unanimously of opinion—

1st. That several causes are proved to have contributed to the fatal results which ensued.

2ndly. That these causes are of a character which may for the future, by increased precautions, be avoided.

Your Committee are satisfied, from the evidence given before them, that the speed at the time of the accident was excessive. According to the evidence of Mr. Brown, Mr. McDougall, Mr. Atkinson, and Mr. Carter, in all probability, it exceeded forty miles an hour; but their evidence is not supported by that of the servants of the Railway. In the evidence of Mr. Whitton it is admitted that, if the speed exceeded forty miles an hour, it was excessive on that portion of the line; in that of Mr. Morgan, Mr. Twiss, Mr. Mason, and Mr. Richardson, (all servants of the Commissioners), that the driving of Boan was unsteady, and that it had been on the day preceding the accident, dangerous, which evidence is supported by the passengers then on the train.

Your Committee find that the practice admitted on all hands to be universally adopted in passenger trains in England, of fastening all the carriages together, and of fastening the train itself to the engine and tender by what are termed screw-couplings, (by which the buffers are brought into close contact) and not by the centre-links or loose chains sometimes used in luggage trains, has not been generally followed on this line, when two horse-boxes are coupled together. The two horse-boxes which ran at the head of the train, next the engine and tender, were fastened together by the centre-link, or loose chain, and not by the screw-coupling, on the occasion of the accident.

Without fixing upon this circumstance as the cause of the accident, your Committee refer to the evidence to shew that at all events the tendency to oscillation by the boxes or carriages so fastened together was by this means increased, and the liability to accident enhanced.

It appears to your Committee that the placing of loaded trucks at the end of a passenger train (three of which are proved to have been so attached on the morning of the accident), tended to aggravate the disaster after the carriages at the head of the train had left the line.

There seems to exist among the witnesses a difference of opinion as to the place which ought to be occupied by horse-boxes on any passenger train. On the occasion of the accident, the two horse-boxes were placed at the head of the train, next to the tender. The opinion of your Committee upon this point is, that although the position occupied by any horse-box in a passenger train least liable to lead to their leaving the line, should be next to the tender; the liability to accidents which may cause loss of life, or injury to the person, would be diminished by horse-boxes being placed at the tail of the train.

The scene of the occurrence being at the commencement of a curve, and at the foot, or just after passing the foot of a decline of 1 in 132 (straight running), your Committee are of opinion that, the speed at which the driver was proceeding—the position of the horse-boxes next the tender—the fastening with loose chain (or centre-link) instead of screw-coupling—the snapping of the coupling between the first horse-box and the tender, which occurred soon after the first horse-box left the line, and immediately before the catastrophe—independently altogether of the condition of the permanent way, on which your Committee will hereafter remark;—all assisted to produce the fatal accident.

Mr. Whitton, in his evidence, states that he has failed to discover any cause for the accident, otherwise than a possible derangement of the axle-boxes or the axle of the new horse-box.

Your Committee have endeavoured to obtain evidence as to the condition of the permanent way on the Parramatta line; and they regret to say, it appears to have been badly laid out, and badly constructed. The bridges (for example those at Canterbury, now undergoing repairs,) are faulty, both in design and materials.

The

The rail laid down—Barlow's rail—is not adapted to the nature of the soil; the cross sleepers, for which this description of rail was not designed, were found not to have been originally laid down in sufficient numbers, nor in the proper way, and the ballast employed is not adapted for the purpose.

The curves upon the line are not only unnecessarily numerous, but most objectionably severe; and in many instances curves are found where a straight line would have proved to be easier, safer, and more economical.

Your Committee have however much satisfaction in stating their belief, that material improvements are being made by the present Commissioner and Engineer-in-Chief, both with respect to the more complete safety of the rail, by laying extra sleepers, and with reference to the ballasting of the line.

It should be remarked, that these objections to the permanent way do not apply to the line beyond Parramatta.

With respect to the condition of the permanent way at the spot on the morning of the accident, Mr. Richardson alleges in his evidence that a slack, or deflexion, of the left hand rail on the up line (that on which the accident occurred) close to Haslam's Creek Bridge had existence on the morning in question, and that this slack, or deflexion, which he assisted to pick up or set right, amounted to two inches, and was, in his opinion, the cause of the horse-box having been thrown off the line. This allegation is not, however, borne out by any other evidence, and is in direct contradiction to that of Mr. Whitton, Mr. Morgan, and Fishlock, and is not in the opinion of your Committee well founded.

Your Committee are of opinion, that considerable laxity appears to have formerly existed in the discipline among the Railway servants; and although, since the present Chief Commissioner assumed the direction a better system has been introduced, it does not appear to your Committee that, up to the time of the accident, that undivided and clear responsibility which it is so desirable should attach personally to those public servants who have the charge daily and hourly of so many valuable lives has been fully and effectually enforced.

It appears from the evidence of Mr. Mason and Mr. Morgan that the dangerous driving of Boan, the engineman, was reported by those gentlemen to Mr. Twiss, upon the day before the accident; but, although it was the expressed intention of Mr. Twiss to speak to Boan the next morning, no instant steps were taken by him to prevent Boan from driving again until his conduct had been reported to the Chief Commissioner or Engineer-in-Chief.

Mr. Twiss, moreover, who is looked upon by the Engineer-in-Chief as responsible for the drivers, does not consider himself to be so responsible while they are on the road. The printed Rules and Regulations which existed at the time of the accident contained this clause,—Rule 11 of the section relating to "Instructions to Enginemen":—"Enginemen are on no account to make up time by increased speed, without special instructions from the Manager." This clause your Committee deemed most objectionable; and its interpretation appears to have led to an irregularity in the speed of driving which ought never to have been allowed. (*Vide Evidence of Peter Woods, Engine Driver.*)

Your Committee have great satisfaction in stating, that they now learn from Captain Martindale that since this inquiry commenced the latter part of the regulation 11, as above quoted, has been abrogated; and no discretion whatever is now given to any officer employed upon the line to alter the rate of travelling prescribed by the Time Table. They also are gratified in being able to report, that in like manner instructions have been put in force, that for the future no carriages, horse-boxes, or trucks, upon a passenger train, are ever to be coupled otherwise than by the screw-coupling—the fastening by loose chains or centre-links being entirely abandoned.

Referring to the statistics of railway travelling in Great Britain, your Committee beg to record their opinion, that, with ordinary care, the risk to life and limb by railway travelling is less than by any other method of locomotion; and they cannot forbear remarking, that although nearly one million of persons had travelled by the Parramatta Railway up to the 10th July last—on which day the accident occurred—not a single passenger had up to that time been injured.

With

With reference to the Progress Report brought up by your Committee, and adopted by your Honorable House, on the 23rd ultimo, your Committee desire to state, that nothing has transpired in the subsequent conduct of their inquiry to induce them to modify the opinions expressed in the said Report, either with regard to "the unfitness of the engine-driver, Robert Boan, to have so serious responsibility placed upon him, or the expediency of steps being immediately taken to secure a more careful system of driving."

Your Committee desire, before closing their Report, to bring under the special notice of your Honorable House the circumstance, that Mr. Ralph Richardson was summarily suspended by the Railway Commissioners from his office of time-keeper on the Great Southern Line, in consequence of certain statements made in a communication (*vide separate Appendix A.*) addressed by him, on the 30th ultimo, to the Chairman of your Committee, touching the causes which led to the fatal accident; but which statement the evidence taken on the 5th instant (appended hereto) failed to substantiate. Your Committee are of opinion, that your Honorable House ought to mark with its disapproval so irregular and precipitate a proceeding on the part of the Commissioners for Railways. Your Committee, moreover, desire to state, that any communications made by them to the Chief Commissioner for Railways, and the Engineer-in-Chief, throughout their inquiry, were of an entirely privileged character, and such as they could not have become cognizant of, otherwise than by the indulgence of your Committee. Your Committee therefore, consider the proceeding of the Commissioners in this matter, a Breach of the Privileges of your Honorable House, inasmuch, as the step taken by them was so taken before your Committee had reported to your Honorable House; and may be calculated to discourage, if not to deter, subordinate officers in the Public Service from affording to Select Committees of your Honorable House information that may be of the utmost consequence to the conduct of the public business of the Country.

Your Committee feel it right, however, to state, that the resolution arrived at by them—that the charges brought forward in Richardson's letter had not been substantiated—was communicated by the Chairman in accordance with the arrangement explained in paragraph 4 of this Report to the Chief Commissioner, and may have influenced the Railway Board in taking immediate action with regard to Richardson.

Your Committee, in conclusion, suggest that, among other steps to ensure, as far as human foresight and experience can do, the safety of all who travel by rail, every precaution adopted on the railways of Great Britain be at once put in force in this Colony.

STUART A. DONALDSON,
Chairman.

*Legislative Assembly Chamber,
Sydney, 12 August, 1858.*

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 16 JULY, 1858.

Members Present:—

Mr. Donaldson,
Mr. Robertson,
Mr. Parkes,
Mr. Weekes,

Mr. Jones.

Mr. Egan,
Mr. Hay,
Mr. Oakes,
Mr. Scott,

Mr. Donaldson was called to the Chair.

By direction of the Chairman, Resolution of the House referring to the Committee on the 15th instant,—*All Papers laid upon the Table of the House by the Government relating to the Accident, and empowering the Committee to send for persons and papers, and to sit during any adjournment of the House,*—read by the Clerk.

The Chairman desired the opinion of the Committee as to the advisability of permitting Captain Martindale, the Chief Commissioner for Railways, and Mr. Whitton, the Engineer-in-Chief, to be present in the room during the inquiry.

Committee deliberated, and it was *Resolved* :—

"That Captain Martindale and Mr. Whitton be permitted to be present during the examination of witnesses."

The Chairman then read the following extract relating to the coupling of railway carriages from Dr. Dionysius Lardner's work on "Railway Economy" :—

"The evil consequences resulting from collision are frequently aggravated by the manner in which the carriages or waggons composing the trains are connected with or adapted to each other. The mode of connecting the successive carriages forming a train is as follows: From the end of the frame supporting each carriage project two strong iron rods which rest against spiral springs, and which are terminated by circular cushions, about a foot in diameter, called buffers. When two successive coaches are brought into contact, these buffers ought to meet each other so that their centres should coincide. This requires that the buffers of all the carriages should have the same gauge,—that is to say, that there should be the same distance between their centres; and, secondly, that they should be at the same height above the rails. If this be not the case, a collision would have the effect of causing one carriage to push the other either aside, or upwards, as the case might be; aside, if the centre of the buffer deviated horizontally, and upwards if it deviated vertically. In any case there would be a tendency of the coaches to throw each other off the rails."

"The successive coaches forming a train were originally held together by a chain, which was necessarily always a little slack, so that when the power of the engine was driving the train, the buffers were not in close contact, and whenever the train stopped, or even slackened its speed, the hinder carriages ran against the foremost ones with a collision, the force of which was proportional to the difference of their speeds."

"This mode of connection was replaced by a coupling-screw, by means of which the carriages are drawn together, so that the buffers are pressed into close contact, and their springs a little compressed."

"In this manner the train is formed into one complete column, and the change of speed to which it is subject does not produce the partial collision just mentioned."

"One of the means, therefore, of diminishing the chances of injuries resulting from collision, is to provide against the occurrence of eccentric buffers, and to ensure the proper coupling of the trains."

Committee then deliberated as to their course of procedure, and it was *Resolved* :—

"1. That the evidence of Captain Martindale, R. E., Chief Commissioner for Railways, and Mr. John Whitton, Engineer-in-Chief, be taken to-morrow, for the purpose of initiating the inquiry."

"2. That these gentlemen be summoned accordingly."

"3. That after the examination of Captain Martindale and Mr. Whitton, the evidence of certain of the persons employed on the Sydney and Parramatta Railway, connected with the accident, be taken."

"4. That the Chief Commissioner be requested to cause such persons to be in attendance to-morrow."

Committee then considered as to the advisability of advertising for persons able and willing to give evidence respecting the accident, or practically acquainted with the working of Railways; and it was *Resolved* :—

"That the following advertisement be inserted for three consecutive days in the Sydney Morning Herald and Empire, newspapers, and in to-morrow's issue of the various Weekly Papers, viz :—

"LATE RAILWAY ACCIDENT.

"Persons able and willing to give evidence respecting the Fatal Accident on the Sydney and Parramatta Railway, on Saturday last, or practically acquainted with the working of Railways, and willing to give information

" in relation thereto, are hereby invited, by order of the Select Committee
 " appointed by the Legislative Assembly to inquire into and report upon this
 " subject, forthwith to forward their names and addresses to,
 " *Legislative Assembly Offices,*
 " Macquarie-street, Sydney,
 " 16 July, 1858.

R. O'CONNOR,
 Clerk of the Legislative Assembly."

Committee deliberated as to the practicability of convening meetings for to-morrow (Saturday) and Monday next, it appearing, from the large amount of business transacting in the Committee Branch, and the numerous evidences taken during the week awaiting to be transcribed, that considerable difficulty would occur in procuring the services of an efficient short-hand writer for these days, without taking him from other important and urgent duties, and it was *Resolved* :—

" That, inasmuch as it would be highly inexpedient to permit any circumstances to
 " delay the progress of this particular inquiry, or to prevent the Committee
 " from sitting *de die in diem*, when possible, meetings of the Committee be
 " convened for to-morrow and Monday next, and Mr. Palmer be requested to
 " ensure the attendance of some efficient short-hand writer on those days, in
 " the event of his own and Mr. Scarr's inability to attend the Committee."

Mr. Palmer, short-hand writer to the Legislative Assembly, then called in and informed by the Chairman in the terms of the foregoing Resolution.

Committee then adjourned, with the intention of proceeding to inspect the scene of the accident.

[Adjourned till to-morrow (Saturday) at Eleven o'clock.]

SATURDAY, 17 JULY, 1858.

Members Present:—

The Honorable Stuart A. Donaldson, Esq., in the Chair.	
Mr. Parkes,	Mr. Weekes,
Mr. Scott,	Mr. Egan,
Mr. Hay,	Mr. Jones.

The Chairman desired the opinion of the Committee as to the expediency of rescinding so much of the Resolution agreed to yesterday permitting the presence of the Chief Commissioner for Railways and Engineer-in-Chief in the room, on all occasions, during the examination of witnesses, as relates to the examination of persons employed in the Railway Department.

Committee deliberated, and it was *Resolved* :—

" That Captain Martindale and Mr. Whitton be informed, that in the opinion of
 " the Committee it will be more expedient that they should, on this occasion,
 " not be present in the room during the examination of any persons employed
 " in the Railway Department."

Captain B. H. Martindale, R. E., Chief Commissioner for Railways, and
 Mr. John Whitton, Engineer-in-Chief, examined.

At the close of their examination, the Chairman informed these gentlemen, in the terms of the Resolution agreed to this day.

Witnesses thereupon withdrew.

Mr. Robert Boan, Engine Driver, examined.

Witness withdrew.

Mr. Richard Darby, Railway Guard, examined.

Mr. George Kingston, Head Porter,

John Hooper and John Creasy, Porters at Parramatta,—examined.

Witnesses withdrew.

Mr. George Fitzmaurice, Station Master, Sydney, examined.

Witness withdrew.

Committee *Resolved* :—

" That it is not necessary to transmit the evidences of Robert Boan, Mr. Richard
 " Darby, Mr. George Kingston, John Hooper, John Creasy, or Mr. George
 " Fitzmaurice, to then for correction."

[Adjourned till Monday next, at Eleven o'clock.]

MONDAY, 19 JULY, 1858.

Members Present:—

The Honorable Stuart A. Donaldson, Esq., in the Chair.	
Mr. Parkes,	Mr. Egan,
Mr. Weekes,	Mr. Scott,
Mr. Hay.	

Captain Martindale and Mr. Whitton present in the room during the examination of the witnesses.

The Chairman laid before the Committee,—

Letter From Mr. J. Trott, of Parramatta, dated 18th instant, excusing his attendance before the Committee as a witness for this day, owing to his inability to leave home in consequence of injuries received in the Railway Accident.

Letters

Letters from Mr. H. Sanderson, C. E., of College-street, Sydney, and Mr. J. A. Parfitt, coach-builder, of York-street, Sydney, enclosing their names and addresses, in reply to advertisement.

Letter from Mr. H. Sanderson, C. E., to the Chairman, dated 16th instant, requesting an advance of £3 from the Committee to enable him to make certain inquiries and a proper examination of the line, prior to giving evidence.

Committee deliberated as to the expediency of acceding to the proposal contained in Mr. Sanderson's letter to the Chairman, and it was *Resolved* :—

"That at the present period of the inquiry, and prior to taking the evidence of other practical engineers, it would be inexpedient to authorise any expenditure for the purposes set forth in Mr. Sanderson's communication."

Committee then deliberated as to the expediency of permitting the various witnesses summoned to be present in the room, and it was *Resolved* :—

"That no witness, unless by special permission from the Committee, be present in the room, except when actually under examination."

Mr. Alfred Brown examined.

Witness withdrew.

The Chairman informed the Committee that Dr. Galbraith was in attendance, and was desirous of suggesting the names of certain persons capable of giving valuable evidence to the Committee.

Motion made and Question—"That Dr. Galbraith be now called in, and requested by the Chairman to state the names of these persons, and the nature of the evidence they are competent to give"—*agreed to*.

Whereupon Dr. Galbraith was called in, and, on being questioned by the Chairman, gave the names and addresses of certain persons, a list of which the Clerk, by direction of the Chairman, took, as a datum to direct the Committee, should they subsequently desire to summon any of them as witnesses.

Dr. Galbraith then withdrew.

Mr. F. M'Dougal examined.

Witness withdrew.

Mr. F. Arthur, coach-builder, examined.

By direction of the Chairman, the short-hand writer, during the examination of this witness, read over to him, from his notes, a portion of his evidence.

Witness withdrew.

Committee further deliberated, and it was *Resolved* :—

- "1. That any questions that Captain Martindale or Mr. Whitton may from time to time desire to put to the witnesses be so put through the Chair.
- "2. That the persons named by Dr. Galbraith, as shewn in the list taken by the Clerk, be summoned before the Committee, as witnesses, for to-morrow."

[Adjourned till to-morrow, at Eleven o'clock.]

TUESDAY, 10 JULY, 1858.

Members Present :—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Weekes,	Mr. Scott,
Mr. Oakes,	Mr. Jones,
Mr. Parkes,	Mr. Egan,
Mr. Hay,	Mr. Robertson.

Captain Martindale and Mr. Whitton present in the room during the examination of the witnesses.

The Chairman laid before the Committee,—Letter from Mr. John Hatton, of Crown-street, Sydney, dated 19th instant, in reply to advertisement.

Committee considered the same, and were of opinion that the matters treated of therein were irrelevant to the subject of the inquiry.

Mr. J. H. Atkinson examined.

Witness withdrew.

Mr. W. Fullogar examined.

Witness withdrew.

Mr. C. S. Oakes examined.

Witness withdrew.

Mr. J. A. Parfitt examined.

Witness withdrew.

Captain Martindale, R. E., further examined.

Mr. James Shea examined.

Witness withdrew.

Mr. C. J. Nealds Traffic Manager, examined.

Witness withdrew.

[Adjourned till to-morrow, at Eleven o'clock.]

WEDNESDAY,

WEDNESDAY, 21 JULY, 1858.

Members Present:—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Weekes,
Mr. Oakes,
Mr. Hay,Mr. Scott,
Mr. Parkes,
Mr. Egan,

Mr. Jones.

Captain Martindale and Mr. Whitten present in the room during the examination of the witnesses.

Mr. E. O. Moriarty, C. E., who was in attendance, as a witness, was called in and informed by the Chairman that the Committee did not consider it necessary to take his evidence.

Mr. Moriarty then withdrew.

Mr. Edward Bell, M. Inst., C. E., City Engineer, called in.

At the request of the witness, Committee ordered:—

"That it be recorded in *this day's* Minutes of Proceedings, that Mr. Edward Bell attends in deference to the summons of the Committee to give such evidence as is in his power, but wishes it to be clearly understood, that without such summons he would not have moved in any way in the matter, as he considers such a course of proceeding would be inconsistent with professional etiquette."

Mr. Bell then examined.

Mr. Fesq examined.

Witness withdrew.

George Carter examined.

And George Carter, at the close of his examination, applying to the Committee for the sum of *ten shillings*, in compensation for the loss of a day's wages, incurred by his attendance before the Committee; and it appearing that the witness was a poor working man;—

Committee deliberated, and it was *Resolved*:—

"1. That the sum of *ten shillings* be paid to George Carter, for the loss of one day's wages, incurred by his attendance to give evidence before the Committee *this day*, 21st July, 1858."

"2. That the Chairman do certify to this Resolution of the Committee."

Witness then withdrew.

The Chairman informed the Committee that Captain Martindale had made application to be supplied with a copy of the evidence taken, with the view of enabling him to send in a written statement to the Committee in refutation of the evidence given by certain of the witnesses.

Committee deliberated, and it was *Resolved*:—

"1. That before arriving at any decision relative to this application, the matter be fully deliberated upon by the Committee, and that such deliberation be deferred for the present."

"2. That Captain Martindale be informed to this effect."

Captain Martindale informed by the Chairman accordingly.

The Chairman laid before the Committee,—Letter (*without date or signature*) addressed to the Clerk of the Legislative Assembly, relative to the reduction in the number of repairs on the line, and the incompetency of certain persons employed thereon.

Committee *Resolved*:—

"That it is not necessary to transmit the evidences of Mr. W. Fullagar, Mr. J. A. Parfitt, Mr. C. J. Nealds, Mr. Fesq, or George Carter, to them for correction."

[Adjourned till to-morrow, at *Eleven o'clock*]

THURSDAY, 22 JULY, 1858.

Members Present:—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Hay,
Mr. Weekes,
Mr. Parkes,Mr. Oakes,
Mr. Scott,
Mr. Egan,

Mr. Jones.

Captain Martindale and Mr. John Whitten present in the room during the examination of the witnesses.

Mr. Charles H. Storey, C. E., examined.

Witness withdrew.

Mr. John Trott examined.

Witness withdrew.

Mr. George Wood examined.

Witness withdrew.

Mr. George Oakes, a Member of the Committee, examined in his place.

Captain Martindale, R. E., further examined.

Committee

Committee deliberated relative to the application made by Captain Martindale at their last meeting for a copy of the evidence taken, and it was *Resolved* :—

"1. That the evidence of the various witnesses be transmitted to Captain Martindale, to afford him, or the Engineer-in-Chief, the opportunity of making such statements to the Committee in reference thereto as he may deem necessary."

"2. That Captain Martindale be informed to this effect."

Captain Martindale informed by the Chairman accordingly.

Committee then deliberated as to whether it would be the more expedient course to print all the evidence taken, or only such portions thereof as bear directly upon the subject of the inquiry.

Motion made and *Question*—"That in the opinion of this Committee it is expedient to print all the evidence taken"—*agreed to*.

Committee *Resolved*—"That it is not necessary to transmit the evidence of Mr. George Wood to him for correction."

[Adjourned till to-morrow, at Eleven o'clock.]

FRIDAY, 23 JULY, 1858.

Members Present:—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Weekes,
Mr. Parkes,
Mr. Hay,

Mr. Egan,
Mr. Oakes,
Mr. Scott,

Mr. Robertson.

Mr. Whitton present in the room during the examination of the witnesses.

The Chairman laid before the Committee,—Letter from J. Higham, Esq., C.B., dated East Maitland, 21st instant, stating his practical acquaintance with the working of Railways, and his willingness to give evidence relative to their general management, should the Committee so desire.

Committee *Resolved* :—

"That a letter be forthwith addressed to Mr. Higham, thanking him for the offer made in his communication, but informing him that the Committee do not think it necessary to avail themselves of his services, as they are already in possession of sufficient scientific evidence for the purposes of their inquiry."

The Chairman then laid before the Committee,—Letter from J. F. Downes, Esq., of Prospect, dated 22nd instant, stating that his summons reached him at too late an hour on Wednesday, the 21st instant, to enable him to attend before the Committee on that day.

Committee *Resolved* :—

"That the evidence of Mr. Downes will not now be necessary for the purposes of the inquiry."

The Chairman then laid before the Committee,—Plan prepared by the Engineer-in-Chief of that portion of the line where the accident occurred.

Committee examined the same, and deliberated thereupon.

Motion made (Mr. Scott) and *Question*—"That this plan be lithographed, and published with the Proceedings of the Committee"—*agreed to*. (*Vide Separate Appendix C.*)

Mr. Edward Bell further examined.

Witness withdrew.

Mr. David Houston examined.

Witness withdrew.

Mr. R. Richardson, Inspector of Permanent Way, examined.

Witness withdrew.

Mr. Hay, during the temporary absence of the Chairman, was here called to the Chair.

Mr. Richard Darby further examined.

Witness withdrew.

Mr. James Robinson, Railway Guard, examined.

Witness withdrew.

Mr. F. W. Donkin examined.

Witness withdrew.

Mr. W. Morgan, Inspector of Permanent Way, examined.

Witness withdrew.

Peter Woods, Engine Driver, examined.

Witness withdrew.

Mr. Donaldson here resumed the Chair.

Committee deliberated, more particularly as to the conduct of the engine-driver, Robert Boan, who was driving the train on which the accident occurred, and who was shown, by the evidence of several witnesses, to be in the habit of driving recklessly; and being of opinion that the public safety requires his immediate suspension from duty, pending the result of their inquiry, it was *Resolved* :—

"1. That this Committee have examined several witnesses, whose concurrent testimony is to the effect that the engine-driver, Robert Boan, who drove the engine attached to the early train on the morning of Saturday, 10th July, on which day the fatal accident occurred, is unfitted to have so serious

- " a responsibility placed upon him ; and believe that the safety and confidence
 " of the public travelling by Railway would be considerably increased by steps
 " being immediately taken to secure a more careful system of driving."
 " 2. That this Resolution be embodied in a Progress Report."
 " 3. That such Progress Report be brought up; and laid upon the Table of the
 " House by the Chairman *this day*."
 " 4. That the Chairman do then move for its adoption, and that a copy thereof be
 " forthwith communicated, by Message, to the Governor General, with a
 " request that His Excellency will be pleased to take the same into present
 " consideration."

Committee then *Resolved* :—

- " That it is not necessary to transmit the evidence of any witness examined *this*
 " *day*, except that of Mr. E. Bell, for correction."

[Adjourned till *Tuesday* next, at *Eleven* o'clock.]

TUESDAY, 27 JULY, 1858.

Members Present :—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Hay,		Mr. Parkes,
		Mr. Scott.

Mr. Whitton present in the room during the examination of Mr. Banks.

Mr. *Twiss*, Locomotive Foreman, examined.

Witness withdrew.

Mr. *J. C. Banks* examined.

Witness withdrew.

The Chairman laid before the Committee,—Letter from Mr. Joseph Johnson, dated Penrith, 21st instant, stating his practical acquaintance, as an assistant engineer, with the making of Railways in England and France; and offering to examine the line and carriages, upon receiving an order from the Committee to that effect.

Committee *Resolved* :—

- " That a letter be forthwith addressed to Mr. Johnson, thanking him for the offer
 " made in his communication; but informing him that the Committee do not
 " think it necessary to avail themselves of his services, as they are already in
 " possession of sufficient scientific evidence for the purposes of their inquiry."

The Chairman then laid before the Committee,—Letter from Mr. J. Lackey, of Woodville, near Parramatta, dated 24th instant, stating that his summonses in both instances reached him too late to enable him to attend before the Committee on the day specified therein.

Committee *Resolved* :—

- " That the evidence of Mr. J. Lackey will not now be necessary for the purposes
 " of the inquiry."

Committee deliberated as to their course of procedure, and it was *Resolved* :—

- " 1. That the next meeting of the Committee be convened for *Friday* next, and
 " that the Engineer-in-Chief be then examined with respect to the evidence
 " given by certain of the witnesses."
 " 2. That at the close of Mr. Whitton's examination, the Committee do proceed to
 " consider the heads of a Final Report."

Committee then *Resolved* :—

- " That it is not necessary to transmit the evidences of Mr. Twiss or Mr. J. C. Banks
 " to them for correction."

[Adjourned till *Friday* next, at *Eleven* o'clock.]

FRIDAY, 30 JULY, 1858.

Members Present :—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Hay,		Mr. Robertson,
Mr. Weekes,		Mr. Oakes,
Mr. Parkes,		Mr. Egan.

The Chairman laid before the Committee,—Letter from Professor Pell, one of the Members of the Commission appointed by the Government to inquire into the causes of the late fatal accident, addressed to the Chairman *this day*, requesting to be supplied with a copy of such portion of the evidence taken by the Committee as may be already in print.

Committee deliberated, and it was *Resolved* :—

- " 1. That in the opinion of this Committee it would be highly inexpedient to
 " furnish a copy of the evidence to any person prior to laying the same, with
 " the Final Report, upon the Table of this House."
 " 2. That a communication be forthwith addressed to Professor Pell, apprising
 " him to this effect."

Peter

Peter Woods further examined.

Witness withdrew.

Captain *Martindale*, R.E., and

Mr. *John Whitton* further examined.

Witnesses withdrew.

The Chairman then laid before the Committee certain Resolutions to form the basis of a Report.

Committee deliberated, and it was *Resolved* :—

“That for the purpose of enabling certain Members of the Committee to peruse

“carefully the evidence taken; the consideration of these Resolutions be post-

“poned till Thursday next.”

[Adjourned till Thursday next, at *Eleven o'clock*]

THURSDAY, 5 AUGUST, 1858.

Members Present:—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Weekes,

Mr. Robertson,

Mr. Jones,

Mr. Hay,

Mr. Parkes,

Mr. Oakes,

Mr. Scott.

The Chairman having laid before the Committee,—Letter from Mr. R. Richardson, *Time-keeper*, dated 30 July, 1858, alluding to the incompleteness of the evidence given by on the 23rd ultimo, offering certain information relative to the state of the permanent way at the time of, and immediately after, the accident,—and suggesting the names of certain gangers able to afford important evidences upon this subject,—

Committee considered the same.

The Chairman stated that, in consequence of the receipt of this communication, he had caused Mr. Richardson, and certain other persons employed on the line, to be summoned before the Committee *this day* for the purpose of being examined.

Whereupon Motion made and *Question*—“That, prior to the examination of the “witnesses in attendance, Mr. Richardson be called in and questioned with respect to the “statements made in his communication”—*agreed to*.

Mr. R. Richardson further examined.

Witness withdrew.

John Fishlock, Ganger, examined.

Witness withdrew.

William Glover, Ganger, examined.

Witness withdrew.

Thomas Markham, Platelayer, examined.

Witness withdrew.

Mr. *William Morgan* and Mr. R. Richardson further examined.

Witnesses withdrew.

Committee deliberated, and it was *Resolved* :—

“1. That, after hearing the evidence of these witnesses, the Committee are of “opinion that the statements made in Mr. Richardson’s communication are “not substantiated thereby.”

“2. That, prior to closing this inquiry, it is, however, advisable to call in Captain “Martindale and Mr. Whitton, in order that the Chairman may read to them “Mr. Richardson’s communication, and state the purport of the evidence “taken, and the Resolution just agreed to, by the Committee in reference “thereto.”

The Chairman having then laid before the Committee letter from Captain Martindale, dated 4th August, 1858, to the effect that since his last examination before the Committee certain documents had been discovered in his department reporting the fact of a horse-box having on a previous occasion got off the rails between Parramatta and Homebush, and having been *thus* dragged for some distance, but without doing any injury,—

Committee considered the same.

Motion made (*Mr. Oakes*) and *Question*,—“That when Captain Martindale and Mr. “Whitton are called into the room for the purpose of having Mr. Richardson’s letter read “to them by the Chairman, Captain Martindale be questioned as to whether any steps were “taken by him, in consequence of receiving information of the accident referred to in his “communication, and if so, what?”—*agreed to*.

Captain Martindale and Mr. Whitton then called in.

The Chairman read Mr. Richardson’s letter, stated the purport of the evidence taken, and of the Resolution agreed to by the Committee in reference thereto.

Mr. J. Whitton M. Inst. C. E., and Captain Martindale R. E., further examined.

Mr. Whitton relative to the statements made in Mr. Richardson’s letter, and Captain Martindale with respect to the steps taken by him in consequence of the accident referred to in his communication of *yesterday’s* date.

Witnesses then withdrew.

Committee deliberated, and it was *Resolved* :—

“That the Chairman do frame the Resolutions laid by him before the Committee “at their last meeting, but not then considered, into a Draft Final Report for “their consideration to-morrow.”

Committee further *Resolved* :—

“That it is not necessary to transmit the evidence taken *this day* to any of the “witnesses for correction.”

[Adjourned till to to-morrow, at *Twelve o'clock*]

FRIDAY,

FRIDAY, 6 AUGUST, 1858.

Members Present:—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Scott

Mr. Oakes,

Mr. Egan,

Mr. Weekes,

Mr. Parkes,

Mr. Jones,

Mr. Hay.

The Chairman having brought under the notice of the Committee a Memorandum addressed to him *this day* by the Clerk of Select Committees, read the same, viz. :—

MEMO :—

“ Mr. Ralph Richardson, who was examined before this Committee on the 23rd ultimo, and who subsequently addressed a communication to you, as Chairman, offering certain information relative to the state of the permanent way at the time of, and immediately after the accident, and suggesting therein the names of certain gangers able to afford important evidence upon the subject, (*vide Separate Appendix A.*) and upon the consideration of which letter and taking evidence thereupon, this Committee yesterday *Resolved*, that the statements made therein were *not substantiated*,—is now in attendance, and desires to complain of having been summarily suspended from his office of Time-keeper, because of such letter, and to claim from this Committee that protection which is afforded by Parliament to witnesses giving *bond fide* evidence before its Select Committees.

JOHN J. CALVERT,

Clerk of Select Committees.

“ To the Honorable

“ Stuart A. Donaldson, Esq., M. P.,

“ Chairman of the Select Committee on the

“ Railway Accident.”

“ 6 August, 1858.”

Committee deliberated, and it was *Resolved* :—“ That a letter be forthwith addressed to Captain Martindale, requesting his immediate attendance before the Committee.”

Letter despatched to Captain Martindale accordingly.

The Chairman then laid before the Committee a Draft Final Report.

Draft Report read 1^o, viz. :—

1. Your Committee having undertaken the duty intrusted to them with a full persuasion that a *cause* or *causes* for the late deplorable railway accident had existence, and might be capable of discovery and explanation, directed their attention immediately to the following points of inquiry :—

1. What was the rate of speed at which the train was travelling at the time of the accident.
2. What were the condition and arrangement of the carriages in the train; and was the coupling of the safest and best description.
3. What was the state of the permanent way, generally, on the Parramatta line; and, in particular, did any defect exist at the spot where the accident occurred.
4. What has been the system of discipline among the enginemen and servants of the Company; and what the character of the responsibility attaching to the various departments of the management;—

together with the incidental inquiries arising out of these important facts and circumstances.

2. With these views, your Committee at once proceeded personally to examine the scene of the accident, and to inspect the carriages which formed the train, which were kept in precisely the condition in which the disaster had left them.

3. Your Committee then sat *de die in diem*, until the mass of evidence taken required that a day or two should be allowed to the short-hand writers to transcribe the testimony afforded by the different witnesses examined.

4. Your Committee desirous of allowing the Chief Commissioner and the Engineer-in-Chief every opportunity of hearing (or reading after it was given) all the evidence taken before them, also delayed for a day or two the conclusion of their labors, until these officers should have an opportunity of considering, and, if necessary, of rebutting any evidence of a professional or scientific character which might seem to reflect upon their performance of their duties.

5. Under these circumstances, as well as from the searching nature of the inquiry itself, a longer period has elapsed than would have been necessary to arrive at a determination of the cause or causes which have led to the sad accident of the 10th July last.

6. During the inquiry, upwards of thirty-five witnesses have been carefully examined, including, besides Captain Martindale and Mr. Whitton, many enginemen and servants of the Commissioners,—as the traffic manager, locomotive foreman, drivers, firemen, station-masters, and others—several gentlemen, and intelligent passengers by the train, and eye-witnesses of the accident; and, particularly, scientific and practical witnesses—Mr. Bell, the City Engineer, and others—who have kindly afforded much valuable information to your Committee.

7. Your Committee, without finding themselves in a position absolutely to name *one* cause for the accident, are unanimously of opinion—

- 1st. That several causes, combining to render the passage of that particular train dangerous, are proved to have contributed to the fatal results which ensued.
- 2ndly. That, in the absence of these causes, all of which, separately, were capable of being prevented, no accident could have occurred; and,
- 3rdly. That these causes are entirely of a character which may for the future, by increased precautions, with absolute certainty (humanly speaking) be avoided.

8. *Firstly*.—Your Committee are satisfied, from the evidence of Mr. Brown, Mr. McDougall, Mr. Atkinson, Mr. Carter, and others, that *the speed at the time of the accident was dangerous*—that, in all probability, it exceeded forty miles an hour; from the evidence of Mr. Whitton it is admitted that, *if* the speed was in excess of forty miles an hour, it was dangerous; from that of Mr. Morgan, Mr. Twiss, Mr. Mason, and Mr. Richardson, (all servants of the Commissioners), that the driving of Boan was unsteady, and that it had been on the day preceding the accident dangerous.

9. *Secondly*.—Your Committee find that the practice admitted on all hands to be universally adopted in passenger trains in England, of fastening all the carriages together, and of fastening the train itself to the engine and tender by what are termed screw-couplings, (by which the buffers are brought into close contact) and not by the centre-links or loose chains sometimes used in luggage trains—was departed from on the occasion of the accident.

10. The two horse-boxes which ran at the head of the train, next the engine and tender, were fastened together by the centre-link, or loose chain, and *not* by the screw-coupling.

11. Without fixing upon this circumstance as the sole cause of the accident, your Committee refer to the evidence to shew that at all events the tendency to oscillation by the boxes or carriages so fastened together was by this means increased, and the liability to accident enhanced.

12. *Thirdly*.—It appears to your Committee that the placing of loaded trucks at the end of a passenger train (three of which are proved to have been so attached on the morning of the accident), tended to aggravate the disaster after the carriages at the head of the train had left the line.

13. There seems to exist among the witnesses a difference of opinion as to the place which ought to be occupied by horse-boxes on any passenger train. On the occasion of the accident, the two horse-boxes were placed at the head of the train, next to the tender; but, seeing that they were *empty*, while heavier carriages were in their rear, your Committee are of opinion that it would have been safer to have placed the horse-boxes at the end, instead of at the head of the train.

14. The scene of the accident being at the commencement of a curve, and at the foot, or just after passing the foot of a decline of 1 in 132 (straight running) your Committee are of opinion that, without seeking further for causes for the accident, the speed at which the driver was proceeding—the arrangement of the horse-boxes next to the tender—the fastening with loose chain (or centre link) instead of screw coupling—the “clapping on the steam” just before coming to the curve, and after (as it appears) the first horse-box was off the line—the snapping of the coupling between the first horse box and the tender, which occurred just before the catastrophe—independently altogether of the condition of the permanent way, on which your Committee will forthwith remark;—all assisted to produce an accident, and in the belief of your Committee, were mainly instrumental in having caused it.

15. *Secondly*.—Your Committee have endeavored to obtain evidence as to the condition of the permanent way on the Parramatta line, and as to its original construction.

16. They regret to say that as to the latter the evidence is not satisfactory.

17. The Parramatta line appears to have been badly laid out, and badly constructed. The bridges (for example those of Canterbury, now undergoing repairs,) are faulty both in design and materials.

18. The rail laid down—Barlow's rail—is not adapted for the soil on which the line is laid; the cross sleepers, for which the rail was not designed, were found not to have been at first laid down in sufficient numbers, and the ballast employed (mostly sand or sandstone) is ill adapted for the purpose.

19. The curves upon the line are not only unnecessarily numerous, but most objectionably severe; and in many instances curves are found where a straight line would have proved to be easier, more economical, and more safe.

20. Your Committee have however much satisfaction in stating their belief, that so long as the present rail (Barlow's rail) is allowed to remain upon the Parramatta line, great and satisfactory improvements are being made by the present Commissioner and Engineer-in-Chief, both with respect to the more complete safety of the rail by laying extra sleepers, and with reference to the ballasting of the line.

21. It should be remarked, that these objections to the permanent way apply to no part of the line beyond Parramatta, nor to the Campbelltown extension.

22. With respect to the condition of the permanent way at the spot on the morning of the accident, the evidence of Mr. Richardson goes to prove that a slack, or deflexion, of the left hand rail on the up line (that on which the accident occurred) close to Haslam's Creek Bridge, had existence on the morning in question.

23. That this slack, or deflexion, which he assisted to pick up, or set right, amounted to two inches, and was, in his opinion, partly the cause of the horse-box having been thrown off the line.

24. But the evidence of Mr. Morgan and Mr. Witton do not confirm the opinion of Mr. Richardson, either as to the extent of the deflection, or its possible consequences, although the existence of the slack is not denied by Mr. Morgan.

25. *Thirdly*.—Your Committee are of opinion, that with reference to the discipline among the servants employed upon the line, very considerable laxity appears to have existed under the former management; and although, since the present Chief Commissioner assumed the direction great and important improvements have been effected in this respect, it does not appear to your Committee that, up to the time of the accident, that undivided and clear responsibility which it is so desirable should attach personally to those public servants who have the charge daily and hourly of so many valuable lives has been fully and effectually enforced.

26. It appears from the evidence of Mr. Mason, Mr. Morgan, and Mr. Twiss, that the irregular—even dangerous—driving of Boan, the engineman, was noticed and commented upon, the day before the accident, by all these officers; but, although it appears to have been the intention of Mr. Twiss to have “spoken to Boan” the next morning, no instant report to the Chief Commissioner or Engineer-in-Chief appears to have been made on the evening of Friday, when this fact was ascertained and canvassed by him and others.

27. Mr. Twiss, moreover, who is looked upon by the Engineer-in-Chief as responsible for the drivers, does not consider himself to be so responsible *while they are on the road*.

28. The printed Rules and Regulations which existed at the time of the accident contained this clause,—Rule 11 of the section relating to “Instructions to Enginemen” :—
“Enginemen are on no account to make up time by increased speed, *without special instructions from the Manager*.”

29. This clause your Committee deemed most objectionable; and its interpretation appears to have led to an irregularity in the speed of driving which ought never to have been allowed.

30. Your Committee have great satisfaction in stating, that they now learn from Captain Martindale that since this inquiry commenced the latter part of the regulation 11, as above quoted, has been abrogated; and no discretion whatever is now given to any officer employed upon the line to alter the rate of travelling prescribed by the Time Table.

31. They also are gratified in being able to report, that in like manner instructions have been put in force, that for the future no carriages, horse-boxes, or trucks, upon a passenger train, are ever to be coupled otherwise than by the screw-coupling—the fastening by loose chains or centre-links being entirely abandoned.

32. Referring to the statistics of railway travelling in Great Britain, your Committee beg to record their opinion, that, with ordinary care, the risk to life and limb by railway travelling is less than by any other method of locomotion; and they cannot forbear remarking, that although nearly *one million of persons* had travelled by the Parramatta Railway up to the 10th July last—on which day the accident occurred—not a single passenger up to that time had been injured.

33. With reference to the Progress Report brought up by your Committee, and adopted by your Honorable House, on the 23rd ultimo, your Committee desire to state, that nothing has transpired in the subsequent conduct of their inquiry to induce them to modify the opinions expressed in the said Report, either with regard to “the unfitness of the engine-driver, Robert Boan, to have so serious responsibility placed upon him, or the expediency of steps being immediately taken to secure a more careful system of driving.”

34. Your Committee, in conclusion, report that they are persuaded that, with the precautions now adopted on the railway, all risk of accident may for the future be so diminished as to be said to have almost no existence; and they suggest that, among other steps to ensure, as far as human foresight and experience can do, the safety of all who travel by rail, every precaution adopted on the railways of Great Britain be at once put in force in this Colony.

Committee deliberated thereupon:

Motion made (Mr. Scott) and Question,—“That it is expedient that this Draft Report be printed without delay, and a copy thereof transmitted to each Member of the Committee for his perusal, and that, if thus circulated, Wednesday next be the day fixed for its consideration”—*agreed to*.

The Chairman informed the Committee that he had been apprised by the Clerk that when his communication reached the Railway Department Captain Martindale was absent therefrom on duty elsewhere, but that a message had been sent in reply, to the effect that the letter would be duly delivered to him immediately on his return.

Committee thereupon *Resolved* :—

“That in order, if possible, to obviate further delay in the consideration of their Report, the Chairman do communicate personally with Captain Martindale relative to the suspension of Mr. Richardson; and, if necessary, summon that gentleman before the Committee, as a witness, for Wednesday next.”

[Adjourned till Wednesday next, at Eleven o'clock.]

WEDNESDAY, 11 AUGUST, 1858.

Members Present :—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Oakes,	Mr. Robertson,
Mr. Parkes,	Mr. Hay,
Mr. Jones,	Mr. Weekes.

The Chairman stated, that he was informed by the Clerk that a printed copy of the proposed Draft Final Report had *yesterday* been transmitted to each Member of the Committee; and that, in accordance with his direction, Captain Martindale had been summoned, and was now in attendance as a witness.

Captain Martindale thereupon called in.

A portion of the Minutes of the Proceedings of the Committee, taken at their last meeting, comprising the Memo. from the Clerk of Select Committees relative to the dismissal of Mr. R. Richardson by the Railway Commissioners,—read by the Chairman.

Captain Martindale, R. E., further examined—

And, during his examination, the witness having made a statement to the Committee of certain facts relating to Mr. Richardson's dismissal,—

By

By direction of the Chairman, the short-hand writer read the same from his notes, and, at the suggestion of Captain Martindale, certain corrections were made therein.

Witness then withdrew.

Committee deliberated.

The Chairman read a portion of the evidence given by Mr. W. Morgan on the 23rd ultimo, and by William Glover on the 5th instant.

Committee further deliberated, and it was *Resolved* :—

“ That in the opinion of this Committee, it is expedient that notice be taken in their Report of the hasty and irregular proceeding of the Railway Commissioners in dismissing Mr. Richardson.”

The Chairman then submitted, for the consideration of the Committee, two paragraphs, proposed by him to be inserted in the Draft Report, in reference to this matter, viz. :—

Your Committee desire, before closing their Report, to bring under the special notice of your Honorable House the circumstance, that Mr. Ralph Richardson was summarily suspended by the Railway Commissioners from his office of Time-keeper on the Great Southern Line, because of certain statements made in a communication (*vide Separate Appendix A*) addressed by him, on the 30th ultimo, to the Chairman of your Committee, touching the causes which led to the accident, but which statements the evidence taken on the 5th instant (appended hereto) *failed to substantiate*.

Your Committee are of opinion that your Honorable House ought to mark with its disapproval so irregular a proceeding on the part of the Commissioners for Railways, calculated, as it is, to discourage, if not to deter, subordinate officers in the Public Service from affording to Select Committees of your Honorable House information that may be of the utmost consequence to the safety of the lives of colonists, or the conduct of the Public Business of the Colony,—to say nothing of the Breach of Privilege, involved in this particular case, in the notice taken of the proceedings of your Committee before they were reported to your Honorable House.

Committee deliberated thereupon.

Paragraphs, *by consent*, amended.

The Chairman then read the same, as follows :—

Your Committee desire, before closing their Report, to bring under the special notice of your Honorable House the circumstance, that Mr. Ralph Richardson was summarily suspended by the Railway Commissioners from his office of Time-keeper on the Great Southern Line in consequence of certain statements made in a communication addressed by him on the 30th ultimo to the Chairman of your Committee touching the causes which led to the fatal accident, but which statements the evidence taken on the 5th instant (*appended hereto*) *failed to substantiate*. Your Committee are of opinion that your Honorable House ought to mark with its disapproval so irregular and precipitate a proceeding on the part of the Commissioners for Railways,—calculated, as it is, to discourage, if not to deter, subordinate officers in the Public Service from affording to Select Committees of your Honorable House information that may be of the utmost consequence to the conduct of the public business of the country.

Your Committee moreover desire to state, that any communication made by them to the Chief Commissioner for Railways and the Engineer-in-Chief throughout their inquiry were entirely of a privileged character, and such as they could not have become cognizant of otherwise than by the indulgence of your Committee. Your Committee, therefore, consider the proceeding of the Commissioners in this matter a Breach of the Privileges of your Honorable House, inasmuch as the step taken by them was so taken before your Committee had reported to your Honorable House.

Motion then made (the *Chairman*) and *Question proposed*—“ That these paragraphs, as amended, be inserted in the Draft Final Report of the Committee.”

Committee deliberated.

Amendment proposed, (Mr. Robertson)—“ That the Question be amended by omitting all the words after the word ‘ That ’ at the commencement, with a view to add the words ‘ these paragraphs be amended, by the omission, in paragraph 1, of all the words after the words ‘ Commissioners for Railways,’ with a view to add, at the end of paragraph 2, the words *and may be calculated to discourage, if not to deter, subordinate officers in the Public Service from affording to Select Committees of your Honorable House information that may be of the utmost consequence to the conduct of the public business of the country.* ”

Question put—“ That the words proposed to be omitted stand part of the Question ”

Committee divided.

Ayes, 2.
Mr. Oakes,
Mr. Parkes.

Noes, 4.
Mr. Robertson,
Mr. Hay,
Mr. Jones,
Mr. Weekes.

Whereupon *Question*—“ That the words proposed to be added in the place of the words omitted be so added ”—*agreed to*.

Original Question then put and agreed to.

Paragraph

Paragraph amended accordingly.

The Chairman read the same as follows:—

Your Committee desire, before closing their Report, to bring under the special notice of your Honorable House the circumstance, that Mr. Ralph Richardson was summarily suspended by the Railway Commissioners from his office of Time-keeper on the Great Southern Line, in consequence of certain statements made in a communication addressed by him on the 30th ultimo to the Chairman of your Committee, touching the causes which led to the fatal accident, but which statement the evidence taken on the 5th instant (appended hereto) failed to substantiate. Your Committee are of opinion that your Honorable House ought to mark with its disapproval so irregular and precipitate a proceeding on the part of the Commissioners for Railways.

Your Committee, moreover, desire to state, that any communications made by them to the Chief Commissioner for Railways and the Engineer-in-Chief, throughout their inquiry, were of an entirely privileged character, and such as they could not have become cognizant of otherwise than by the indulgence of your Committee. Your Committee, therefore, consider the proceedings of the Commissioners in this matter a Breach of the Privileges of your Honorable House, inasmuch as the step taken by them was so taken before your Committee had reported to your Honorable House; and may be calculated to discourage, if not to deter, subordinate officers in the Public Service from affording to Select Committees of your Honorable House information that may be of the utmost consequence to the conduct of the public business of the country.

Whereupon Motion made and Question,—“That this paragraph, as amended, be inserted in the Report of the Committee”—*agreed to.*

Committee further deliberated, and it was *Resolved*:—

“That the consideration of the Draft Report, paragraph by paragraph, be postponed till to-morrow.”

[Adjourned till to-morrow, at Ten o'clock.]

THURSDAY, 12 AUGUST, 1858.

Members Present:—

The Honorable Stuart A. Donaldson, Esq., in the Chair.

Mr. Jones,
Mr. Weekes,
Mr. Hay,

Mr. Oakes,
Mr. Parkes,
Mr. Scott.

Committee met, pursuant to agreement, for the consideration of the Draft Report proposed by the Chairman, paragraph by paragraph.

Initiatory paragraph of Report, and paragraphs 1 and 2, read, considered, *verbally* amended, and agreed to.

Paragraphs 3 and 4 read, considered, and agreed to without amendment.

Paragraphs 5 and 6 read, considered, *verbally* amended, and agreed to.

Paragraphs 7, 8, 9, 10, 11, 12, 13, and 14, read, considered, amended, and agreed to.

Motion made (Mr. Hay) and Question,—“That the following paragraph be here inserted in the Draft Report:—‘Mr. Whitton, in his evidence, states that he has failed to discover any cause for the accident, otherwise than a possible derangement of the axle-boxes or the axle of the new horse-box’”—*agreed to.*

Paragraph inserted accordingly.

Paragraphs 15, 16, 17, and 18, read, considered, amended, and agreed to.

Paragraph 19 read, considered, and agreed to without amendment.

Paragraphs 20, 21, 22, and 23, read, considered, amended, and agreed to.

Paragraph 24 read.

Motion made (Mr. Hay) and Question proposed,—“That this paragraph be struck out from the Draft Report, with the view to the insertion of the following paragraph instead thereof:—‘This allegation is not, however, borne out by any other evidence, and is in direct contradiction to that of Mr. Whitton, Mr. Morgan, and Fishlock, and is not in the opinion of your Committee well founded.’”

Committee deliberated.

Question put and agreed to.

Paragraph struck out accordingly, and new paragraph inserted instead thereof.

Paragraphs 25 and 26 read, considered, amended, and agreed to.

Paragraphs 27, 28, 29, 30, 31, 32, and 33, read, considered, and agreed to without amendment.

Motion then made (the Chairman) and Question proposed,—“That the paragraph framed and agreed to by the Committee yesterday, relative to the dismissal of Mr. Richardson, be here inserted in the Draft Report.”

Committee deliberated.

Question put and agreed to.

Paragraph inserted accordingly.

Motion made (Mr. Weekes) and Question proposed,—“That the following paragraph be here inserted in the Draft Report:—‘Your Committee feel it right, however, to state, that the resolution arrived at by them—that the charges brought forward in Richardson’s letter had not been substantiated—was communicated by the Chairman, in accordance with

"with the arrangement explained in paragraph 4 of this Report, to the Chief Commissioner, and may have influenced the Railway Board in taking immediate action with regard to Richardson."

Committee deliberated.

Question put and agreed to.

Paragraph inserted accordingly.

Concluding paragraph (34) read, considered, amended, and agreed to.

Whereupon motion made and Question,—“That this Report, as amended, be the Report of the Committee.”

Committee further deliberated, and it was Resolved:—

“1. That the Chairman do Report finally to the House.

“2. That the Chairman do then give notice, that he will on Friday, the 20th instant, move, that this Report be adopted by the House, and a copy thereof forwarded by Address to His Excellency the Governor General.”

EXPENSES OF WITNESSES.

LIST OF APPENDIX.

To Evidence given by Captain Martindale, R.E., on 17 July, 1858.

APPENDIX A.

PAGE.

Memo. of the Engineer-in-Chief, dated 28 June, 1858, with reference to late Trains 7

APPENDIX B.

Rules and Regulations to be followed by all persons employed by the Railway Commissioners, in working the Great Southern Line, dated 28 June, 1858 7

To Evidence given by Captain Martindale, R.E., on 22 July, 1858.

APPENDIX A.

Return showing total number of Passengers who travelled on the Great Southern Line, between 26 September, 1855, and 30 June, 1858, and on the Great Northern Line, between 30 March, 1857, and 30 June, 1858 47

APPENDIX B.

Extract from Report relating to Railways in the United Kingdom, for the years 1856-57, shewing the proportion of passengers killed and injured from causes beyond their own control, in the several years from 1852 to 1856, inclusive 48

APPENDIX C.

Extract from a confidential memorandum, addressed by the Chief Commissioner for Railways to the Traffic Manager, on 13th October, 1857, instructing him as to the conduct of his duties 48

To Evidence given by Mr. Twiss, Locomotive Foreman, on 27 July, 1858.

APPENDIX A.

Memo. from the Locomotive Foreman to Cobb, Berry, and Bean, Engine Drivers, conveying to them certain instructions, received from the Engineer-in-Chief. (*Vide Appendix A to Evidence given by Captain Martindale, on 17 July, 1858*) 64

To Evidence given by Mr. J. Whitton, M. Inst., C. E., on 30 July, 1858.

APPENDIX A.

Statement, prepared by Locomotive Foreman, showing dimensions of Buffers on the First, Second, and Third Class Carriages, and on the Engine, Tender, new and old Horse-boxes respectively; and specifying the width from centre to centre, and height from rail to centre 73

APPENDIX B.

Memo. from Engineer-in-Chief to Locomotive Foreman, dated 21 May, 1858, with reference to making up time by increased speed 73

LIST OF SEPARATE APPENDIX.

A.

Letter from Mr. B. Richardson, *Time-keeper*, to the Chairman, dated 30 July, 1858, offering certain information relative to the state of the Permanent Way at the time of, and immediately after, the accident; and suggesting the names of certain gangers capable of affording important evidence upon this subject 83

B.

Letter from Captain Martindale, R. E., to the Chairman, dated 4 August, 1858, to the effect that since his last examination by the Committee certain documents had been discovered in his department, reporting the fact of a horse-box having on a previous occasion got off the rails, between Pirramatta and Homebush, and having been thus dragged for some distance, but without doing any injury 83

C.

Plan prepared by the Engineer-in-Chief, shewing the portion of the Great Southern Line where the accident occurred.

1858.

Legislative Assembly.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

RAILWAY ACCIDENT.

SATURDAY, 17 JULY, 1858.

Present:—

Mr. DONALDSON,
Mr. WEEKES,
Mr. PARKES,Mr. EGAN,
Mr. HAY,
Mr. SCOTT,

Mr. JONES,

THE HON. STUART A. DONALDSON, ESQ., IN THE CHAIR.

Captain B. H. Martindale, R. E., Chief Commissioner of Railways, called in and examined:—

1. *By the Chairman:* The Committee have before them the report made to the Government, dated 13th July, 1858—I allude to the second letter, in which a more elaborate report of the accident is given. Some reason is given at the end of page 3 why it appears to you this accident may be accounted for, with some difference in the circumstances, especially in regard to the speed—will you state if anything has occurred to you since the report just made to throw any more light on this fatal accident? Nothing. Capt. B. H. Martindale, R. E.
2. Are you of opinion that if it might be shown by evidence which has not come before you, that the speed at which the train was travelling was very much greater than that stated—that the loose coupling-chains which fastened the two horse-boxes, instead of a screw-coupling, usually used in coupling passengers travelling carriages, might be the cause of the accident, owing to the greater oscillation, if the speed was much greater? I think it might possibly account for it.
3. Would it not probably account for it? There is one thing which makes me throw less stress on the fact of the coupling, viz., that on coming to the top of the decline, about half a mile before the spot where the train left the line, the driver would naturally shut off steam. The first effect of this would be to bring the buffers together; and it would be a matter of little importance, as regards oscillation, so long as they remained in contact, whether the coupling was a screw-coupling or centre-links.
4. Would that reasoning still be considered by you if full steam had again been put on to the engine? No.
5. So, if the horse-boxes ran off the rail after the steam was put on by the engineman, that previous remark hardly has any operation on the cause? I think it has. It would depend upon the time the steam was put on. The main considerations in reference to the coupling in this case, are the speed and the length of time the train had been proceeding at that speed. In a train travelling a considerable time with the buffers apart, at high speed, great oscillation might be caused. In descending a decline the buffers might be together during part of the distance, and it would be immaterial then whether there was a screw-coupling or centre-links.
6. You, therefore, govern your opinion as to the difference of risk by the buffers being together or apart? Yes; so far as oscillation is concerned.
7. Have any directions been given to lock the carriages together always with a screw-coupling, or otherwise? If the Committee will allow me, I will read a portion of a memorandum made on the 3rd of June, which is six weeks before the accident happened.

Capt. B. H. Martindale, R.E. (The witness read the following extract from a memorandum on the Traffic Department of the Great Southern Railway):—

"Railway Department,
"Sydney, 3 June, 1858.

17 July, 1858.

"I propose, therefore, to make Mr. Beeston Traffic Inspector; and that his duties should be as follows: To see that all trains arrive and depart punctually, and run to time. For this purpose he should be constantly, at uncertain periods, along the line, and through it at least once daily. To see that the trains are properly put together, the horse-boxes, carriage-trucks, carriages, goods-trucks, and empty waggons (when any) are in their proper places in the train, and properly coupled together. He should assist the Manager by seeing that horses and carriages are properly loaded. The Traffic Inspector is to take notice of every irregularity of every kind, whether on the part of the locomotive department while running, or of the traffic department, and call attention at the moment to the irregularity, and have it remedied, invariably reporting the circumstances daily to the Commissioners, through the Manager. If the drivers are not running to time; if the guards are sluggish or inert; the porters dirty or idle; if trains are badly put together or not coupled up—he is at once to draw attention to it, and report the circumstance. He is to send in, through the Manager, to whom he is entirely subordinate, a daily report containing an account of every irregularity, whether remedied at the time or not, that has come under his observation during the day. This report is to be addressed to the Chief Commissioner, to whom the original is to be forwarded every morning, through the Manager, and the Commissioner will rely upon this report containing a full and true account of every irregularity of every kind the Inspector is acquainted with. The Inspector should be furnished by the guards with such information as to enable him to keep an accurate record of the character, size, and working of every train. His attention should incessantly be given to insure the proper as well as the economical working of the line, and to develop the traffic upon it, and to suggest improvements in the working of the system. At the Sydney end of the line the Inspector should take entire charge when present of the arrangement of the trains, and give such orders as are necessary, and start the train when present, first communicating with the station master; he should acquaint the station master whenever he leaves Sydney, in order that the latter may then superintend the arrangement of the the train."

"B. H. MARTINDALE."

"CAPTAIN WARD."

8. With reference to that order, I don't see any allusion to the coupling order—using screw-coupling? Certainly not. Many trains have not screw-coupling—such as goods trains.

9. In passenger trains do you not think screw-coupling desirable? I do.

10. In this case where the accident occurred, the train was composed of first, second, and third class passenger carriages—the invariable use of screw-coupling was omitted? It was.

11. That would not be the proper arrangement of the train then? It would not.

12. Dr. Dionisius Lardner, in the last edition, 1850, of his book on Railways, page 326, says:—"The successive coaches forming a train were originally held together by a chain, which was necessarily always a little slack, so that when the power of the engine was driving the train the buffers were not in close contact, and whenever the train stopped, or even slackened its speed, the hinder carriages ran against the foremost ones with a collision the force of which was proportional to the difference of their speeds. This mode of connection was replaced by a coupling-screw, by means of which the carriages are drawn together, so that the buffers are pressed into close contact, and their springs a little compressed. In this manner the train is formed into one close complete column, and the change of speed to which it is subject does not produce the partial collision just mentioned. One of the means, therefore, of diminishing the chances of injuries resulting from collision, is to provide against the occurrence of eccentric buffers, and to ensure the proper coupling of the trains."—Is there great force in that passage from Dr. Lardner's book? There is no question that the use of screw-coupling tends to diminish the chance of injury, because the buffers while in contact tend to prevent oscillation; but, as a matter of fact, the buffers in a train are very frequently not in contact when travelling, and their distance apart depends on the strength of the spring of the draw-bar, the weight of the train, and the gradients upon which the train is travelling.

13. But only the screw-coupling causes no distance between the buffers—the distance caused by the excessive power of traction is incidentally re-augmented without it? It is the draw on the spring of the draw-bar which prevents the buffers being in contact.

14. Is it the same thing with loose chains if the buffers have springs? The carriages are not likely to be so close with loose chains as with screw-coupling.

15. In this particular case it is in the report that coupling-chains and centre-links were used? Yes.

16. Do you think it of sufficient importance to give orders that such a thing should never occur? Certainly.

17. You would never allow passenger trains to go with the centre-links and side-chains? No; I was not aware that centre-links were used before, and an order has been given that carriages in passenger trains are to be coupled with screw-couplings for the future.

18. Do you not think some neglect of duty is chargeable to the Traffic Manager, or some other officer, that these trains were allowed to leave the terminus coupled with a centre-link and side-chains, instead of a screw-coupling? I could not call it a neglect of duty. Travelling at anything like an ordinary speed, I think the train would be quite safe with the centre-links.

19. For the future—you thought it of sufficient importance to direct that in future no train carrying passengers should go coupled with centre-links and side-chains? Yes.

20. Do you attach any value to the custom that prevails in England, of placing a dummy carriage between the train and the tender? The value is, in case of collision, to give greater safety to the passengers. Capt. B. H. Martindale, R.E.
21. It is of that value? Yes, for that object.
22. It is adopted as a matter of precaution? Yes; the horse-boxes answer the same purpose. 17 July, 1858.
- They were not put there for that purpose; they were put there for the convenience of shunting.
23. Are they not furnished with side-chains, as hitherto? Yes.
24. I infer, then, that a horse-box would not answer the place of a dummy—has a dummy side-chains furnished to it? It has.
25. Is it not the case invariably in England that a dummy carriage is used between the train and the tender? There is an order of the Board of Trade to that effect.
26. Is it not desirable to follow that custom and adopt it here? I don't think there is the same risk of collision as there is in England, where the trains are travelling so often.
27. Is there not some risk of collision, so that it would be a good plan to adopt it for the future? There is no objection to have a dummy, beyond the expense of having an extra carriage running. I scarcely think it necessary while we have the horse-boxes.
28. Don't you think, as a matter of prudence, where the engine-drivers cannot here be so experienced, and the knowledge of those engaged in the traffic and various details is not so great as in the older country, that every precaution known in the older country should be adopted here? Every precaution ought to be adopted; but I think if the horse-boxes are placed between the carriages and the tender, they afford all the protection that could be attained from a dummy.
29. *By Mr. Weekes:* Was the first horse-box connected with the tender by a screw-coupling? Yes; every carriage in the train was, but the two horse-boxes.
30. The horse-box next to the tender was connected with a screw-coupling? Yes.
31. So that it was only between the two horse-boxes there were centre-links and side chains instead of a screw-coupling? Yes.
32. *By Mr. Jones:* Have you reason to know, Captain Martindale, which of the horse-boxes was the first to get off the rail? I have every reason to believe that it was the first.
33. The one connected by a screw-coupling? Yes, with the tender.
34. *By Mr. Weekes:* In the evidence it is said that a great amount of oscillation was observed in the first horse-box? Yes.
35. That horse-box being connected with a coupling-screw, therefore, it would almost appear that the centre-links and side-chains connecting the second box with the first box were not the cause of any extra amount of oscillation; because a greater amount of oscillation was observed in the one joined with a screw-coupling? I think the first box being connected with the tender by a screw-coupling, and the hinder part with centre-links and chains, the fore part being held fast, the hinder part might oscillate more.
36. *By the Chairman:* And affect the carriage to a certain extent? It would affect it to a certain extent.
37. *By Mr. Jones:* In that case would not the second horse-box be more likely to oscillate than the first one? As a matter of fact, all the witnesses have said that it was the first carriage that was oscillating.
38. I say, looking at the fact the first horse-box was connected with a screw-coupling, and the second was only connected with centre-links, would not the second horse-box have a greater tendency to oscillation than the first horse-box? I think there not having been a screw-coupling between the horse-boxes, there would be as much oscillation in the tail of the leading box as in the front part of the second one.
39. *By Mr. Weekes:* The first horse-box being only connected with the second horse-box by loose chains caused oscillation to the second one? They were not loose chains. There was three and a half inches between the buffers, and I think that a part of the oscillation was communicated to the second carriage; because, even with screw-coupling, the oscillation runs through the train. Each carriage communicates part of its oscillation to the others in the train.
40. Has there ever been a screw-coupling to this particular carriage? The screw-couplings are separate, and can be put on any carriage. The screw-coupling is put on the hook of the carriage when required.
41. Is it left optional with any of the subordinate officers (who are responsible) to put on screw-couplings or centre-links to the carriages? Certainly not; we have no carriages fitted with centre-links, except the new horse-boxes and goods-waggons. The carriages are not fitted with centre-links; they cannot put them on. The new horse-boxes have centre-links, with the intention, I have since ascertained, of allowing the horse-boxes to travel with the goods train without screw-couplings. The carriages have no centre-links.
42. That portion of the horse-box nearest to the tender had a screw-coupling? Yes.
43. Each carriage has a screw-coupling at each end—you did not have a screw-coupling between the horse-boxes—therefore, you had not one kind of fastening between one kind of horse-box and another? The carriage had no centre-links, therefore it could not be coupled to the horse-box without a screw-coupling.
44. A screw-coupling leads through the carriage to itself with a very powerful spring to the draw-bar? Yes.
45. And existed at the fore-part of the horse-box, to connect it with the engine? Yes.
46. The fore part was connected with the engine by a screw-coupling, and a similar mode existed at the end of that particular carriage? Yes; and there was the usual draw-bar and hook, to admit of a screw-coupling being used.
47. It was not so connected with the other? No.
48. Was it because the second, being an old horse-box, had no such apparatus? It was because the porter did not put on the screw-coupling; he put on the centre-links instead.
- 49.

Capt. B. H.
Martindale,
R. E.

17 July, 1868.

49. Is it optional with any body—any one of the subordinates—to put on a screw-coupling, or one of the centre-links, that is in a passenger train, because there might be no screw-coupling by? In every case except horse-boxes they must put on screw-coupling, because the passengers carriages are not furnished with centre-links. Some horse-boxes have been lately built, and they have been fitted with centre-links.
50. These two horse-boxes might have been connected by a screw-coupling? Yes.
51. And were not done so, for what reason? Simply, I suppose, because the porter found the centre-links upon the horse-box, and put them on instead.
52. Was that in violation of any order? No special order, that I am aware of.
53. Is it optional with any subordinate to put on centre-links or screw-couplings? There is no order except what I have read, viz., that the inspecting officer is to see the train properly coupled together. An order has been given now on that subject; but as Commissioner I should not have thought of giving a detail order of that kind.
54. The rails from here—Sydney to Parramatta—are all on Barlow's principle? Yes.
55. Is that principle more liable to accidents of this particular character than other descriptions of rail? I don't think it is, especially as here the rails are used with sleepers, to stiffen them. The intention of Barlow was not to use sleepers with them, but he supposed the earth would give sufficient support to the rail, as it had a broad base. Here, when Barlow's rails were laid down, they were not found sufficiently stiff, and they have been strengthened by the introduction of sleepers underneath them, and fresh sleepers have been put in lately. Under these circumstances, I don't think the Barlow rail would be more liable to cause the oscillation than the double-headed rail.
56. With these additional sleepers introduced under the rail, you consider them perfectly safe for all the ordinary purposes of railway traffic? I do; especially at the speed at which the trains run on this line.
57. Are the Barlow rails suitable for a high rate of speed, or safe at a high rate of speed? I think so, stiffened as they are here.
58. *By Mr. Scott:* The rails, Captain Martindale, you said, are of the Barlow sort—are they light or heavy? They are seventy-five pounds to the yard.
59. What is the gauge adopted on this road? (Sydney to Parramatta.) Four feet eight and a-half.
60. There are several kinds of gauges used in England? Yes.
61. What are they? There is the seven feet gauge of the Great Western Railway, and the four feet eight and a-half gauge.
62. There is a difference in Ireland? Yes; the gauge there is five feet three.
63. So that this gauge of the present road is the smallest? Yes; and the one most in use in England. It is in general use in England.
64. But, being so narrow, would not a great speed make it more dangerous? They travel on it in England at a very high speed—fifty miles an hour.
65. On this narrow gauge? Yes; in fact the narrow gauge is almost universal. Even the Great Western Railway Company is laying down the narrow gauge, as a matter of convenience.
66. Which do you think the safest, the narrow or middle gauge? I think they are all safe.
67. Would not the horse-boxes on a narrow gauge be more dangerous than on a broader gauge? The broader the base the safer the carriage would be.
68. Are you aware of what the Melbourne gauge is? Five feet three.
69. Do you consider that as good, or not so good, as our own? Better.
70. And do you not think, in consequence, that if this line should have to be altered, would you still recommend us continuing this narrow gauge, as ultimately we are in expectation of meeting the Melbourne line? If we alter our gauge we must get entirely new rolling stock.
71. I suppose different axles would be required? You would have to lengthen the axles, and this would be very troublesome.
72. As we have only a few miles of rail, would it not be better to adopt the Melbourne gauge, or Melbourne ours? Yes.
73. Ought we not to adopt at once a better system as regards the gauge? If we did we should have to lay down an entirely new line to Campbelltown, and get new rolling stock and new engines.
74. But is it not a pity to continue in error in such a work? Four feet eight and a-half gauge is sufficient for all purposes. In a few years no other gauge will be used in England. I don't know what progress the Victorian Government has made; but if that Government took our gauge, I think it would be preferable to our taking up thirty-four miles of line.
75. What speed can you go with safety on our present line? I have travelled at the rate of thirty to thirty-five miles an hour.
76. Would you reckon that safe with these horse-boxes and other carriages? I think you might travel at an average speed of perhaps thirty miles. I should not wish to travel, as a rule, at a greater speed than twenty-five miles an hour.
77. And these boxes—these large horse-boxes—do they oscillate more in a straight line, or going round a curve? Going round a curve would steady them if they were oscillating.
78. I believe this horse-box had been remarked to oscillate before this occasion? I never heard of it until after this inquiry.
79. They would oscillate most on a straight line? Yes.
80. Do you go with greater speed on a straight line? Yes.
81. You go slowly round a curve? Yes.
82. Do you think that would account for the accident of the horse-box going off the rail, suppose they were going at an unusual speed? If they were going at an unusual speed the oscillation would be greater, and the risk of getting off the line greater.
83. I presume the flanges of the various wheels are all of the same size? Yes.
84. Is the flange narrower? They are all about the same size.

85. Is there not considerable play on the rails themselves as the train goes over? In some places there may be, if the line is in bad order.
86. Are you aware at all of the system carried on in Prussia with regard to railroads? I have travelled over them, but know nothing about their system.
87. Is there not provision of this sort, that every carriage should have a flag inside, and if a passenger puts it out of the window, the train must stop—do you not think it a safe one? I don't know whether that would work well; people might put out their flags as a joke, and you might have the train stopped once a mile.
88. But there are heavy penalties enforced in Prussia for doing that? You might not be able to enforce them here.
89. The carriages are connected by a platform, on which the guard is constantly walking around, and collects the money while the train is going? In America the cars are connected in this way. I have not heard of these carriages in Prussia.
90. Ought this driver, or engine-driver, or guard—ought they not to have known, with common precaution and attention, that one of the horse-boxes was off the rail for the space of 300 or 400 yards? I think not. The driver was just approaching a curve; he was looking forward, which is the direction in which the driver generally looks. The duty of the fireman is to look back, and he stated in his evidence that he looked back two or three minutes before, and had seen nothing wrong.
91. *By the Chairman:* He said two or three minutes before? That is not a very long time; he cannot always be looking back; he has a great many things to do.
92. *By Mr. Hay:* Two or three minutes—that is about a mile? Yes.
93. *By Mr. Scott:* I wish you to point out whether you have recommended any preventative for the future, such as placing the guard in a different position, so as to be able to see in case of a carriage getting off the line? The guard is in the break, which it is the custom here to put in the centre of the train; he looks forward to the engine. It is his duty constantly to look out, and see if there is anything wrong in the train. He stated he did look out, and perceived nothing wrong. This particular train usually had an assistant guard, who travels with it, and it is the only train that has one.
94. What position was he in—was he in the centre? There were six carriages behind, and five and the engine before.
95. Is there any means of communicating with the driver, supposing the guard, or any one else, discovered the accident to the carriage? No. If the guard sees anything wrong, he puts on the break, and the driver feels that directly.
96. Are you aware whether in England there is any plan? I believe there is nothing adopted yet. Very many experiments have been tried, of various kinds, but I am not aware of any having been adopted.
97. Will you favor the Committee, Captain Martindale, with any general statement bearing on this question? I wish to state that the time allowed for travelling now is greater than it has ever been before.
98. *By the Chairman:* Have any regulations been made since you became Chief Commissioner with regard to making up time in case a train started late from any of the intermediate stations? There were printed regulations that time was not to be made up. These regulations specially instructed the drivers that the time they were late in leaving from a station was not to be made up.
99. That is, if a train started two minutes late from Parramatta the driver was not to make it up—he was to arrive two minutes late in Sydney? Yes, certainly.
100. It is in evidence that they were two minutes late in leaving Parramatta? Yes.
101. Have you any means of knowing whether they were trying to make up time? All the evidence I have is, that they were not.
102. *By Mr. Weekes:* Is such distinct notice taken of the time of this train starting from the station that the driver is not under the apprehension that he will be made to answer for the deficiency of time which may have arisen before the starting of the train: That is, in this particular instance, the train was two minutes after time—was that taken a particular account of—is it the duty of anybody to register the particular time, so that the driver is not under any alarm that he will be fined if he does not make the two minutes up? The time of arriving and departure is noted.
103. Is the driver quite clear that he will not be made responsible for being late when the train started? Yes.
104. Have any fines been inflicted on the drivers? No fine.
105. Or any of the servants for being late? No. There is an order given on the subject which I can read. This order was issued on the 28th of June, 1858. If ten minutes is allowed for running between any two stations the driver is not to exceed that time, nor arrive before. (*The witness read and handed in a copy of the order referred to. Vide Appendix A.*)
106. Is the running the train between the principal stations and the intermediate ones regulated, or the time of the whole journey? The time between every station is regulated. Between each station the train is timed to run at the rate of twenty miles an hour, and one minute is allowed for stopping. By one train between Parramatta and Homebush, twenty-four miles an hour is the rate—that is the 7-35 up-train; then five minutes are allowed for stopping at Parramatta and five minutes at Liverpool, which brings the speed of the train, including stoppages, to seventeen miles an hour.
107. Does the driver of each train know the time at which he starts from each station? He always has a watch.
108. Are they presumed to note the time at which they start? They have a book for that purpose. The station master also keeps the time.
109. Then each driver, as a matter of practice, knows the time? He enters it in a book.

Capt. B. H.
Martindale,
R. F.

17 July, 1858.

Capt. B. H.
Martindale,
R. F.

17 July, 1858.

110. And knows the time allowed to run from station to station, and from end to end? Yes, by his time-table.
111. If he does not run in that time he is accountable for a fine? Yes.
112. And is not accountable for any delay at the stations? No.
113. *By Mr. Parkes*: Whose duty is it to order the making up of the train? The station master's.
114. *By Mr. Weekes*: Then the greatest speed in running is between Parramatta and Homebush? Yes; one of the longest runs, and only by one train—the 7.35.
115. That is the train that met with the accident? Yes. I may mention that in May the trains ran faster, and did the entire distance in one quarter of an hour less time. They did in one hour forty-five minutes what they now run in two hours. When I altered the time, in the beginning of June, I was told there would be great discontent at the slowness of the speed. I knew it could make no difference except to business men, and the train by which they usually travel was timed to run in five minutes less than the others.
116. That is, the 7.35 train gains five minutes on the whole distance between Sydney and Campbelltown, and gaining that distance the train in the month of June runs slower than it did in the month of May? Yes, by ten minutes. The time now between Parramatta and Homebush is one minute more than it has ever been since the beginning of 1857. The time allowed in February, 1857, was fourteen minutes; the time now allowed by one train is fifteen minutes, every other train is allowed eighteen minutes.
117. What is the distance between Parramatta and Homebush? Five and three-quarter miles.
118. *By Mr. Scott*: I forgot to ask whether the trains—passenger carriages or horse-boxes—ever ran off the line before? I have no recollection of any report of it.
119. *By Mr. Jones*: Can you tell me the exact distance between Parramatta and the exact spot at which the horse-box is presumed to have left the line? Not the exact distance.
120. Can you give a pretty close approximation? About two and a-half miles.
121. There would be no difficulty in ascertaining what the distance was? No.
122. *By Mr. Scott*: When did you see the engine-driver and carriages after the accident? Within an hour.
123. They are well-conducted people? I have had no reports against them. I ought to mention that I don't interfere personally with the subordinates. Any complaint that comes to me against the engine-driver or fireman goes to the head of that particular department, who is responsible for their conduct.
124. You saw the men themselves, and were talking to them? Yes.
125. They were then perfectly sober? Yes.
126. *By Mr. Weekes*: You state, Captain Martindale, that the spot where the accident occurred was about two miles and a-half from Parramatta;—it is stated in evidence by the driver, that the moment of the accident occurring it was fifty-six minutes past eight o'clock? Yes.
127. Now, fix that as the time the accident occurred, the distance being two and a-half miles, of course you can tell the average speed they had gone over that distance at? From eighteen to twenty miles an hour.
128. *By Mr. Hay*: That was considerably less speed than the average allowed? Twenty-three miles an hour is the time allowed. By all other trains it is twenty miles an hour.
129. *By Mr. Egan*: You say it was never reported to you before that train had run off the line? I have no recollection of it.
130. If that were the case, would it not be reported to you? It would.
131. It might not have been reported? I think it would have been. The Manager has orders to report every accident, and brings up himself to me every Tuesday morning a report of every irregularity that has occurred during the week. He brings it up himself, in order that I may have the opportunity of inquiring into, with him, any irregularity that has happened. Therefore, if there was such an accident as the train getting off the line, he would have reported it immediately, and I should certainly have heard of it also in his weekly report.
132. If such a thing had happened, and he had not reported it to you, he would have neglected his duty? Yes.
133. *By Mr. Hay*: You would have expected him to have reported it to you even if a carriage got off the line and was got on the line again, without any particular delay or injury? I should expect him to report it; I think it is his duty to do so.
134. You can ascertain whether any report was made before the next examination? Yes.
135. Is it not desirable in a great work of this kind that a particular report should be made to you if anything of this kind occurs, whether an accident took place or not? The Traffic Manager brings me weekly a report of anything irregular that has taken place. There is also a daily report from the Traffic Inspector.
136. This report relates to the general carrying out of your instructions, and working of the line? Yes; and of every irregularity that occurs. (*The Witness handed in the Rules and Regulations to be followed by all persons employed by the Commissioners for Railways in working the line. Vide Appendix B.*)

APPENDIX A.

GREAT SOUTHERN RAILWAY.

No. 28.

*Engineer's Department,
Sydney, 28 June, 1858.*Capt. B. H.
Martindale,
R. E.

17 July, 1858.

MEMORANDUM TO JOSEPH TWISS.

I am not satisfied with the reports of either Woods or Cobb relative to the late trains. It is clear that Woods has neglected the engine (No. 7.) Let Boan run Woods' train, and bring Woods into Boan's place, at Sydney. Cobb, I think, is equally to blame, and deserves to be severely punished. I am not inclined to believe the story about the slippery state of the rails; he lost, according to his own account, thirty minutes in twelve miles, so that his average speed over the twelve miles was about eleven miles an hour. Give notice, in writing, to all the drivers, and say, that excuses of this kind will not in future be admitted; and, unless some accident occurs, the driver of any engine losing time in running will be fined one day's pay for every late train; and, if frequently late, will be discharged.

JOHN WHITTON.

APPENDIX B.

GREAT SOUTHERN RAILWAY.

RULES AND REGULATIONS

To be followed by all persons employed by the Commissioners for Railways, in working the Line.

1. No Special Engine shall be allowed to run on the Single line, unless a WRITTEN NOTICE has been previously left by the person in charge of the Engine with the Station Clerk at Parramatta; and in no case shall such notice interfere with the proper working of the Passenger Trains.
2. No Passenger Train shall be detained at any Station for the arrival of any Special Train, or Special Engine, and the person in charge of any Special Engine will be entirely responsible for such Special Train or Engine being clear of the main line at such time as any Passenger Train is due upon such portion of the line.
3. No Engine, whether with a Goods or Passenger Train, shall leave any Station before the time fixed in the Time Table for the arrival and departure of such Train at the different Stations.
4. No Special Trains, whether for Goods or Passengers, shall run on the Single line, unless previous written notice shall have been given to the Station Clerks and the Inspector of Permanent Way; nor shall any Special Engine at any time be permitted to run on the Single line between the hours of the arrival of the last Passenger Train at Sydney in the evening, and the departure of the first Train from Sydney in the morning, without a previous written notice of 24 hours being given to the Engineer-in-Chief, except the Special Engine between Liverpool and Parramatta, when required for the Mails.
5. In cases of emergency Special Engines, when required, must be accompanied by the Traffic Manager himself, or, in his absence, by the Traffic Inspector, who must be prepared to justify the emergency; and all notices for such Special Trains must be given in writing to the Foreman of Locomotives.

By Order of the Commissioners,

Railway Department,
Sydney, 28 June, 1858.

JOHN RAE, Secretary.

John Whitton, Esq., Engineer-in-Chief, M. Inst. C. E., called in and examined:—

1. *By the Chairman:* The Committee have before them your report to the Railway Commissioners, dated 13th July, 1858, on the subject of the late fatal accident. I perceive you state with reference to the coupling of the horse-boxes, by centre-links and side-chains instead of a screw-coupling, as follows:—"From the evidence of the porters at Parramatta, and the guard of the train, the whole of the carriages and horse-boxes were connected by screw-couplings, except the coupling between the two horse-boxes, which was not a screw-coupling, but had centre-links and side-chains; the buffers, therefore, of the horse-boxes would not be in contact, and greater oscillation would take place than if a screw-coupling had been used; but, if the train were not proceeding at a far greater speed than that stated, this would not be sufficient to throw the horse-boxes off the line. Nor does it follow that even at a much higher speed those horse-boxes would necessarily have been thrown off the line in consequence of not having screw-couplings, as waggons constantly travel by goods trains at a speed of eighty miles an hour and upwards, on which trains screw-couplings are never used. Waggons, also, are frequently attached to passenger trains, both here and in England, and are connected only with centre-links and side-chains. The speed of this train having been spoken to so positively by so many witnesses as not being greater than twenty-five miles an hour, I regret that I am not in a position, at present, to trace any cause for this lamentable accident. I can merely suggest that some derangement may have taken place in the wheels, axles, axle-boxes, or springs to one of the horse-boxes, after

J. Whitton,
Esq.

17 July, 1858.

- J. Whitton, Esq.
17 July, 1858.
- "after the train left the station at Parramatta." Am I to infer from that, that if, supposing it could be shown that the speed was considerably greater than twenty-five miles an hour, you would attribute the accident to the coupling by centre-links instead of a screw-coupling? I think the absence of a screw-coupling would not have caused the accident. No doubt that being coupled with centre-links, instead of a screw-coupling, greater oscillation would take place than if a screw-coupling had been used. I do not think if the speed had been thirty or forty miles an hour that this would have caused the accident.
2. You think that screw-coupling does diminish the chance of an accident? Yes; I think it does.
 3. In passenger trains, in England, centre-links are never used to connect any part of the train with the engine? They are not, as a rule.
 4. Would you not think it of importance in this country that this precaution ought to be observed here? Yes; I think it should with passenger trains.
 5. Do you look on the exception that was made to be blameable on some one in charge as manager of the traffic? I think the screw-coupling should have been used.
 6. On the whole, would that duty fall on the Traffic Inspector or Manager? The duty would fall upon the person who coupled the carriages—the head porter at Parramatta.
 7. Would you say that he was to blame for attaching it without reporting it to his superior? I do not know what instructions he received from his superior.
 8. Is it not their duty to see that the operation of coupling is properly performed? Yes, or to give proper instructions.
 9. Are they not held responsible in case of — ? They cannot be held responsible if they have given instructions.
 10. In case of accident, on whom would fall the responsibility, the subordinate or superior officer? On the man who disobeyed his instructions.
 11. Have you not known of cases that have occurred in England where the punishment has fallen on the person who disobeyed the instructions? Yes; but not for neglecting to put on a screw-coupling. I never heard an instance of a carriage coming off the line in consequence of a screw-coupling not having been used.
 12. Have you known ever of a charge of manslaughter being brought against an officer of the Railway for neglect of duty in the coupling of the carriages? No; I have not.
 13. For any neglect of duty? Yes, for neglect of duty; where the engine-drivers neglected their instructions, or the pointsmen neglected their duty.
 14. Is it the case, and are you aware of the fact, that the Directors of the English Railways are held personally liable for accidents that happen on the line? I believe they are not.
 15. Have you any remarks to make to this Committee in addition to the report you handed in to the Railway Commissioners, dated 13th of July, 1858, which have a bearing on the cause of this accident? No, I have not.
 16. Do you wish to modify your evidence given before the coroner and jury? Only so far as my evidence was incorrectly reported.
 17. Will you state the words incorrectly reported? In the third line of my evidence the word "engine" should be taken out and "road" inserted. The sentence would then read—"the line is perfectly straight at the place where the carriages left the 'road,' and the rail 'at that point is in good order'; and, in the last line but two, I am made to say—"the carriages would not have left the road had it been perfectly straight, nor would they have 'gone over on that side.' It should have been—"the carriages might not have gone over 'the embankment, had the line been perfectly straight, nor would they, probably, have gone 'over on that side.' This was in answer to a question from one of the jury.
 18. I understood you to attribute to a very increased speed over twenty-five miles an hour some very probable cause of the accident under the circumstances with which you are acquainted? There may have been a combination of circumstances with regard to the train at that time with which I am not acquainted; but, unless the speed was excessive, the want of a screw-coupling would not have caused the accident.
 19. From the probability of the buffers of the carriages coming into collision as they came down the half mile before the carriages ran off the rails, was that liability very much increased by having the carriages coupled by centre-links instead of a screw-coupling? It would be increased, but not sufficient to cause the accident.
 20. Not even if the speed was very high? No, I think not.
 21. By Mr. Weekes: It was not considered of such importance that there should be screw-couplings instead of centre-links and loose chains as to cause an order to be issued by the Commissioners? An order was not given; but I was not aware that the horse-boxes were running without screw-couplings.
 22. By the Chairman: If you had seen it would you have stopped it? I should have mentioned it to the Manager.
 23. By Mr. Weekes: Then, in the present instance it arose from no neglect of duty in any of the superior or any of the subordinate officers? I think not. Unless the porters have positive orders to put on a screw-coupling, I don't see that any blame can be attached to them.
 24. There is no general order? No.
 25. By the Chairman: There is a general order that all passengers carriages are to be properly coupled? Yes.
 26. You are aware that in passengers traffic in England screw-coupling is always used? Yes.
 27. By Mr. Scott: You saw the engine-driver and guard after the accident? Yes.
 28. They are competent, well-conducted men, generally? Yes.
 29. You have said that excessive speed might have caused a greater degree of oscillation if the centre-links and chains were used—what do you consider as excessive speed? I should say forty miles an hour is excessive speed on that portion of the line.
 30. With a train joined on to the engine? Yes.
 31. Would not this be quite sufficient to tilt one of the horse-boxes off the line? I think not

- not in itself—not the speed. I have frequently travelled in England forty miles an hour with waggons hooked together with side-chains and centre-links.
32. Would that forty miles an hour tend to make the horse-boxes oscillate and tilt off the line? They would oscillate more in consequence of not having a screw-coupling.
33. Is the oscillation greatest on a straight line or on a curve? It is the greatest on a straight line.
34. Have you ever heard of a train being off the line before—goods train or carriages? I never heard of a carriage or waggon being off the line, except in station yards, since I had charge of the permanent way.
35. Have you heard of it previously? I have, since this accident, heard of one horse-box being off the line, and I know carriages have been thrown off by running over horses. These accidents, however, could be clearly traced.
36. If the buffers were brought in contact with each other by the screw-coupling, would they be apart when the train started? That would depend on the strength of the draw-bar springs, the weight of the train, and the incline of the roadway.
37. Can you suggest, in order to allay the mind of the public with regard to the public railways, any preventive not now in use? I believe every prevention is taken here that is taken on the best managed lines in England.
38. *By Mr. Jones*: I presume you are satisfied that for the future where a horse-box is used it should be coupled together with a screw-coupling? Yes; I was not aware they were coupled with centre-links.
39. If the horse-box were placed in the centre, or rear, would it prevent accidents? No; but the best position is next to the tender. There is no general rule on the subject in England; they are frequently put near to the tender, in the middle, and at the end of the trains. It depends very much where they are to be left. If they are intended for road-side stations, they are put at the tail of the train, because it is far more convenient for shunting; but next to the tender is decidedly the best position in the train.
40. When alterations are required in the line, I believe you are strengthening the line by additional sleepers? Yes.
41. That will strengthen the line, and prevent oscillation? Yes.
42. And make them more secure? Yes.
43. *By Mr. Scott*: Do you consider, Mr. Whitton, that fracture of the link indicates that article to be of the best wrought iron? (*Witness looks at the screw-coupling chain produced, and the fracture of one of the links.*) I do not consider it the best wrought iron; the best wrought iron would have left a fibre, but this is cut clean off.
44. *By the Chairman*: You find a piece absolutely wanting? Yes.
45. *By Mr. Jones*: Do you think if it was of the best wrought iron it would have held? I do not think it would.
46. You think any description of iron under the circumstances would have gone? Yes.
47. *By Mr. Scott*: If there was a stronger coupling in case of accident, would it not be better when the horse-box got off and comes to the sudden curve? I think you could scarcely make a coupling for ordinary use to bear such a strain.
48. *By Mr. Jones*: When horse-boxes are put on passengers trains, is it invariably the custom to couple them with a screw-coupling? It is.
49. You think it ought to have been done here? Yes.
50. Suppose you were at Parramatta, and saw the porters coupling the horse-boxes together with centre-links instead of a screw-coupling, would you have attached sufficient importance to it to have caused them to re-couple them with a coupling-screw? Yes; I should have made them put on a coupling-screw.
51. Have horse-boxes a greater tendency to get off the line than passengers carriages have? I don't think they have generally, particularly the horse-boxes in use here. They are made much heavier than the horse-boxes used in England.
52. *By Mr. Hay*: Don't you think from the great height of the boxes, that the oscillation once commenced was likely to become greater in the journey? I do not think it is; the upper part of the first-class carriages is much heavier than the horse-boxes.
53. Not so lofty? They are, within a few inches.
54. How many inches? I think six inches.
55. *By the Chairman*: Excepting the ventilator part? No; including the ventilator.
56. *By Mr. Jones*: Could the porter at Parramatta have coupled the horse-box with a screw-coupling—would the arrangements there allow him to do so? I believe so.
57. There was no necessity for his coupling the horse-boxes with centre-links? No; not that I am aware of.
58. He had one there? I cannot say that he had.
59. This new horse-box—could it have been attached by means of a screw-coupling? It could.
60. *By the Chairman*: It is a fact that the passengers carriages have no means of being coupled by centre-links? It is.
61. Only the horse-boxes? Yes. They are made with centre-links, so as to run with the goods trains.
62. You would not allow any of the passengers carriages to be connected by centre-links? No.
63. *By Mr. Jones*: From the knowledge you now possess, would you incline to attribute the accident to the fact of the two horse-boxes being coupled together with centre-links instead of a screw-coupling? The absence of a screw-coupling is not sufficient to account for the accident, but there may have been other circumstances, of which I am not aware.
64. Such as an increased rate of speed? Yes.
65. Any other circumstance except oscillation? Yes, unsteady driving, and some derangement in the axle-boxes or springs. I cannot otherwise at present understand how the horse-boxes got off the line.

J. Whitton,
Esq.
17 July, 1858.

J. Whitton,
Esq.

17 July, 1858.

66. Have you examined to see whether there was any thing wrong with the wheels, to account for their getting off the line? I have examined the wheels and springs, and found nothing broken, except they are much strained. There is nothing in the running to strain them as they are now.

67. *By Mr. Hay:* Do you know, Mr. Whitton, whether there is any difference in the elevation of the buffers on these horse-boxes from those of the tender and those of the third-class carriages? They are nearly the same. They are all made the same height.

68. But the buffers when used a long time do get down? Yes, a little, perhaps two inches; I have not measured to see the exact distance, but it is not lower than that.

69. Do you think the depression of the springs of the third-class carriages was caused by the accident, or partly existed before? The depression partly existed before, but has been increased by the accident.

70. Which would lower the buffers? Yes.

71. Are you aware if the carriages and all the rolling stock on the line is of the same width from the centre of the buffers? Nearly the same width.

72. I think I pointed out a considerable difference between the horse-boxes and the tender? The difference pointed out was between a first-class and tender.

73. From centre to centre there is a considerable difference between the buffers of some of the rolling stock? No; there is only a slight difference, indeed so small as to be of no practical importance.

74. But in case of the man shutting off the steam at the point where the train had the accident—there being considerable momenta—might not the buffers come then in violent contact, and cause the carriages to ruck up in a way? Yes, there would be increased pressure; but the buffers being equidistant from the centre of the carriage, the effect would be to compress them in their direct line of action.

75. Suppose any particular carriages or horse-box were oscillating violently at the time, would they not be rucked up—might there not be action (if the buffers were not opposite to each other) so as to throw one particular carriage upwards or towards the side, assuming that the carriages were oscillating violently? It might be so, if the buffers on one side of the carriages only came in contact.

76. If the carriages were oscillating the whole train would be rucked up if the centre of the buffer struck against the other which was not opposite;—the centre of one buffer might very much injure the centre of the other buffer, and might, in that way, give the carriage an impulse to the side? Yes; in theory it may do so, but in practice it would have little effect.

77. Then the carriages might have got off the line in that way? No; we have evidence that the steam was shut off on the top of the incline, and put on again before the accident occurred.

78. Are you sure that the horse-boxes did not run off the flange of the rail before they ran off the line? I could find no trace of a carriage having left the rails for more than twenty yards from Haslam's Creek Bridge. If it had done so, there must have been some mark on the ballast or sleepers.

79. Do you think the mark on the sleepers is caused by the flanges of the wheel? I do.

80. Do not you think it could be caused by any other part of the rolling stock getting deranged? I don't; for when I inspected the carriages and horse-boxes I found everything complete on them.

81. Suppose the man had not put on the steam when he said he put it on—at the level running, near the curve, preparing to take the incline on the other side—might not the horse-boxes, being off the line at the time,—might not the locomotive suddenly starting forward contribute to snap the coupling-chain? Yes; but we have strong evidence that the first horse-box was coupled to the tender with a screw-coupling, so that any pressure put on the engine would draw direct on the horse-box, without a jerk.

82. Does this not seem more like a jerk than a gradual pull? This might have been caused by the horse-boxes being off the line and coming in collision with the sleepers, so that, the whole train being retarded, occasioned the breaking of the screw-coupling.

83. Did it not strike you, on examining the line, that the train had not left the general direction of the rails on which it was running until opposite the first turn of the curve? Yes.

84. It had followed round for the first portion of the curve? Yes.

85. There was a part of the rail which was comparatively straight, and then a second bend? No; the curve at this part of the line is a regular curve.

86. The curve does not seem equally; it looks as if it were divided into two sharp points; it is a very difficult looking curve; my impression that it is divided into two curves; it is not at all uniform? It is being measured, and will be laid before the Committee.

87. *By Mr. Parkes:* You say that you discovered the first indication of the accident on the Parramatta side of Haslam's Creek—when you arrived on the spot, on which side did you find the rails? I found the mark of the carriage having left the rail on the right hand side of the roadway; but no damage was done to the roadway until the train had passed over the second bridge.

88. Near Sydney? Yes.

89. You did find some of the rails torn up? They were torn up on the Sydney side of the small bridge.

90. How many? I think three or four lengths of rails.

91. Did you immediately after the accident occurred cause an examination to be made of the rails, from where you first traced it up to Parramatta, to see if there was any impediment to assist in throwing the carriage off the rails? Not to Parramatta. I could not find that any impediment had been placed on the rails for a distance of 200 yards from where the horse-box got off the line.

92. You are satisfied with the rails? I am quite satisfied the rails had nothing to do with the accident.

93. *By Mr. Jones:* Is that part of the line in better condition than the other part? Yes; J. Whitton, Esq.
and the best part, except where additional sleepers have been inserted.
94. *By Mr. Scott:* You are perfectly satisfied that the carriages and horse-boxes went off the line, and not through the breaking of the screw-coupling? Yes. 17 July, 1858.
95. And the accident was not from the breaking of the coupling? No.
96. *By Mr. Jones:* The accident occurred before the coupling broke? Yes.
97. *By The Chairman:* Will you read that quotation from Dr. Lardner, with regard to the buffers.—“The evil consequences resulting from collision are frequently aggravated by the manner in which the carriages or waggons composing the trains are connected with, or adapted to each other. The mode of connecting the successive carriages forming a train is as follows:—From the end of the frame supporting each carriage, project two strong iron rods, which rest against spiral springs, and which are terminated by circular cushions about a foot in diameter, called buffers. When two successive coaches are brought into contact these buffers ought to meet each other, so that their centres should coincide. This requires that the buffers of all the carriages should have the same gauge, that is to say that there should be the same distance between their centres; and, secondly, that they should be at the same height above the rails. If this be not the case, a collision would have the effect of causing one carriage to push the other either under or upwards, as the case might be—aside, if the centre of the buffer deviated horizontally, and upwards, if it deviated vertically. In any case there would be a tendency of the coaches to throw each other off the rails.” There is no doubt that, theoretically, that is quite correct; but in this case there was no collision.
98. *By Mr. Hay:* If the train had been going at a considerable velocity—a great velocity—on approaching the top of the incline, and then the driver had shut off the steam at the top of the incline, the momentum thus given, might not that cause the train itself, the carriages, to rack up and produce the same action as is produced by a collision? I think the check thus given would not be sufficient to produce such an effect.
99. Still, *pro tanto*, it would have that effect? Yes.
100. And, combined with other causes, might assist in throwing the carriages off the line? We have it in evidence that the steam was not off the engine at the time of the accident, the driver having put it on at the foot of the incline.
101. That is, if it could be ascertained when the horse-box first got off the line? I could not trace any mark on the sleepers or sand, except at the point where I have stated the horse-box first got off the line.
102. Can you state from the first indications that you saw how far that was from Haslam's Bridge? I think about fifteen or twenty yards.
103. *By Mr. Weekes:* At what particular period did you take charge of the line? In September last.
104. Is it usual to test any portion of the iron-work of the carriages? No; it is not usual to do so.
105. Had a test been applied to this coupling-chain would it not have shown that it was made of inferior iron? If a strain had been applied to this coupling sufficient to break inferior iron, so severe a test would have permanently injured a coupling made of iron of the best quality.
106. Does it not have the appearance of cast-iron? It has not a good appearance.
107. *By Mr. Hay:* Could it be ascertained now, from any test, what is its quality? Yes.
108. *By Mr. Weekes:* Is it not clean broke, like cast-iron? Yes, it is.
109. Had it been tough iron would it not have broken with a rugged appearance? Yes.

Robert Boan, Engine-driver, called in and examined:—

1. *By the Chairman:* You are the driver of the train that left Campbelltown at 7-30 on Robert Boan Saturday morning, the 10th instant? Yes. 17 July, 1858.
2. When you left Parramatta for Homebush, did you drive at any part of the line until the accident happened above the usual speed? No, Sir.
3. In coming down the incline, before coming to Haslam's Bridge, do you think the incline, or any other cause, gave additional speed to the train? I cannot say any more than the incline.
4. You say you put on the steam at the foot of the incline? Yes.
5. Did you perceive the engine to jump away in any way unusual, and when? No, Sir, not until the accident had happened.
6. How far was it from where you clapped on steam to where you first perceived the engine jump away? I should think 200 yards—200 or 150 yards.
7. From where you first clapped on the steam and where you felt the engine jump away? Yes.
8. Two hundred yards? Yes.
9. Was that between Haslam's Creek Bridge and Parramatta—was it on this, the Sydney side, of Haslam's Creek Bridge, or the Parramatta side? It was on the Homebush side.
10. From the foot of the decline to Haslam's Creek Bridge, what is the distance, more or less? I cannot say.
11. Did you perceive in coming down the incline, or have you any means of knowing whether the train rucked up, or came up to the engine, and the engine drew it all the time you were going down the incline? I could not tell, because the buffers were close to the engine, and did not cause any push, except the usual running down an incline.
12. You could not feel it? No.
13. Do you believe the carriages run near one another down the decline at the speed you were going? Sometimes they do, and sometimes they don't; it just depends on chance.

- Robert Doan. 14. You perceived no collision of any sort? Not in the least.
15. You have no means of accounting for the accident except what you stated to Captain Martindale? No, I cannot.
16. Have you any knowledge of how the carriages were coupled? I know the engine was coupled with a screw-coupling. I did not know how the others were.
17. If you knew that the horse-boxes were coupled with centre-links instead of a screw-coupling, would you think it dangerous? It is usual to be coupled with a screw-coupling, and sometimes in another way.
18. Have you driven engines much in England? Yes. I was one year and a-half on railways in Ireland.
19. Have you noticed whether in passenger trains the horse-boxes and carriages are coupled with centre-links, and not with a screw-coupling? Generally with a screw-coupling.
20. Was it not always so? I cannot say. Every railway I have been on always had screw-couplings.
21. You think in fact that passenger carriages and trains were always coupled with screw-couplings? Yes; I never remember seeing it otherwise.
22. Would you think it dangerous if it were not so? They would be steadier if they had screw-couplings.
23. *By Mr. Jones*: They would be less liable to oscillate? Yes.
24. We have the evidence of one of the gangers that there was an unusual oscillation observed in the horse-box next to the engine—did you observe it? The horse-boxes generally do oscillate more than the carriages.
25. Did these horse-boxes oscillate more than usual? I can't say. I don't think they did oscillate more than usual.
26. It is stated in evidence that you pulled up your engine within 80 or 100 yards of where the accident happened? Yes.
27. Do you think it was that distance from where the engine jumped away and where the accident happened? Yes, from where the carriages turned over the point.
28. You are sure that it was that distance from where the engine was stopped? Yes.
29. How are you sure it was that distance from where it stopped? I reversed the engine, and put on the steam and stopped it, and then came back.
30. You were about 100 yards from where the carriages were lying on the bank? Yes.
31. They followed you for some distance? I felt nothing when they parted from the engine. The fireman cried, "stop." I reversed the engine, and when I turned round I saw the horse-boxes going off the line.
32. Can you form an idea how long the time was? A very few seconds.
33. *By Mr. Parkes*: Some of the carriages fell on each side? I don't know.
34. *By Mr. Hay*: Did you observe the particular position of the train after the accident? No. I did not stop one minute after I went back to the guard.
35. *By the Chairman*: You saw a fatal accident had occurred and went to Sydney? Yes. I first asked the guard if I should go back to Sydney.
36. *By Mr. Parkes*: Will you state what you witnessed when you got your engine back to the spot where the accident occurred? I saw one of the carriages lying on one side, and one across the down-line. I did not see anything else. I asked the guard if I should go on to Sydney for help, and he said go on.
37. *By the Chairman*: Did you ask if any body was killed? I don't think I did, and I thought some body was lamed.
38. Where were the other carriages? I think they were on the same line I came down.
39. Did you only see one carriage on this side? Yes, only one.
40. Did you see the horse-box on the other side? I can't answer for it; I did not look at them. I do not know whether it was on this side or on the other.
41. At the moment of the accident, did any cause for it occur to your mind? No, I could not say.
42. Nothing occurred to you? Nothing at that particular time.
43. *By Mr. Hay*: Have you formed any opinion since? I could not say, unless it was a bad joint.
44. In the rails? I did not notice it.
45. Could you from your experience, and looking at the speed—do you think the oscillation might increase by not having a screw-coupling, and the accident be caused by the centre-links being used instead of a screw-coupling? It would cause a little more oscillation.
46. Would it render such an accident more likely to happen? I should think it would.
47. Will you state to the Committee what is your impression as to any order being issued from the head of the department as regards making up time when you start late? We have not to make up the time we stop at a station. We only have to go at a pace so as not to lose time in the actual running.
48. On this occasion were you late in leaving Parramatta? Two minutes.
49. Did you drive any faster on that account? No.
50. Did you ever drive any faster on that account? No; I never did.
51. *By Mr. Jones*: You are simply responsible for keeping your own running time? Yes.
52. What speed are you limited to on that portion of the road between Parramatta and Homebush? Just the regular running time.
53. The time that is given to you to go between Parramatta and Liverpool will require what amount of speed? About 24 miles an hour.
54. Are you quite clear that you went not exceeding that rate before the accident took place? Yes, I am.
55. Did you pay particular attention to the oscillation of the horse-boxes? Not particular.
56. Is it part of your duty to pay attention to anything behind you? Yes; I generally look behind whenever I have the opportunity. My duty is to look forward and see there is nothing on the rails.

57. Is it the duty of any one to look, after the starting of the train, backward? Yes, the Robert Boan, fireman; it is his duty to look behind.
58. Have you ever been fined for losing time? No.
59. Are you aware of any drivers at present on the line that have been fined? No, Sir.
60. *By the Chairman:* Have any old drivers lately been dismissed from the service? No; I don't think there has.
61. You don't know of any change in the drivers? Yes; there has been one change.
62. What was that change? A driver was taken off the passengers train and put on piloting.
63. Why? I could not say.
64. *By Mr. Jones:* What is the duty of a pilot engine—is it to take the engine when it comes in with the train, and to take special trains? Yes.
65. This is a promotion? No; it is less wages.
66. *By the Chairman:* Was he an old driver? I don't know.
67. Do you know why this change was made? No.
68. *By Mr. Weekes:* Are there any drivers on the line noted for being fast drivers? Not that I know of.
69. Do you know of any trains that were brought in before the appointed time? No.
70. Then, drivers keep the time as given them, and you know of no fines that have taken place? No.
71. *By Mr. Jones:* Do you recollect what time it was you left Parramatta on that morning? Forty-seven minutes past eight o'clock.
72. Did you ascertain the time the moment the accident occurred? Yes; I pulled out my watch at the minute.
73. What time was it? Fifty-six minutes past eight.
74. Then you had been nine minutes travelling to that point where the accident occurred? Yes.
75. Are you quite clear where you put on your steam before the accident occurred? Yes. I generally put it on at a particular place, and keep it on clear up the hill.
76. Coming down the incline? I did not say I put it on coming down the incline.
77. I understood you to say, when you got to the bottom of the incline you put on your steam? Yes.
78. Are you sure you put it on before you got on to the level? No, I did not. I did not put it on until I began to go up the incline.
79. You shut off your steam when you got to the top of the incline? Yes.
80. You shut it off before reaching Haslam's Creek Bridge? Yes.
81. When did you put on the steam again? When I was rising the next incline.
82. *By Mr. Weekes:* Is the incline before you come to the curve? No; the curve is on the incline.
83. *By Mr. Hay:* Is there not some distance of level running between the two inclines? Very little.
84. Where did you put the steam on, as near as you can recollect? I cannot recollect. I know it was the bottom of the incline. When I am rising the other incline I generally put the steam on.
85. How long before you felt the carriages break away had you put the steam on? I think 150 to 200 yards.
86. You mean, from the spot where the coupling-iron broke you think it was 150 to 200 yards from where you had put on the steam? Yes.
87. Then, in point of fact, you believe you had left the down incline before you put on the steam? Yes.
88. And were preparing to take the up incline to Homebush? Yes.
89. Had you felt anything unusual before the coupling-iron broke? Nothing at all.
90. *By the Chairman:* Look at that coupling-iron—do you think it good iron? It is short; in my opinion it is short iron.
91. What do you mean by short? Brittle.
92. If good iron, would it have broken in three pieces or two pieces—would that be the case with good iron? It depends on circumstances. Some iron straightens right out, some tears away.
93. Does it give you the idea of being broken by a sudden jerk or being broken by pressure? I think a sudden jerk.
94. From the horse-boxes being off the rail? Yes, and getting into the sand.
95. *By Mr. Weekes:* Have you had much experience in the qualities of iron? I have been about railways and machinery all my life, and served my time to an engineer.
96. Would not cast iron fracture in that way? Yes, just like that.
97. Would not the appearance in some qualities of iron be different according to the pull, or sudden jerk or blow? I could not tell.
98. Under any circumstances, tough iron would break in a rugged form? Yes, it would.
99. *By Mr. Parkes:* You had been a driver eighteen months, I think, before you came here, and six months on this line? Yes.
100. Were you ever driving at the time of any accident here or in England? No.
101. Have you ever apprehended an accident since you held that position, from any cause—have you expected, or been under a feeling of alarm lest an accident should occur when driving? No, not particularly, as I always take very great care.
102. Nothing has occurred during your experience to give you an extra reason for being careful? I could not say that.
103. You have never, at any time, thought within yourself of an accident occurring, or of something that might cause one? Yes, and that always makes me very careful, especially when I am running the trains, to be always on the look out for anything to occur.
104. On this particular occasion you had no apprehension of any accident whatever? Not in the least.

- Robert Boan. 105. And you cannot ascertain any cause for the accident? I cannot, unless something was wrong with the rails which I did not notice; I cannot tell anything else.
- 17 July, 1858. 106. *By Mr. Weekes*: You did not feel more alarm in driving on this railway than you did in driving on the railway in Ireland? It just depended on circumstances.
107. Generally speaking? Generally speaking, I did not.
108. *By the Chairman*: Did you find more jumping on these rails than you were accustomed to at home? They do. They are not so good as other lines.
109. What lines? All I was on.
110. Did you notice any difference in the line between Liverpool and Campbelltown, and Sydney and Parramatta? Yes.
111. Which is the best? Liverpool and Campbelltown. I never drove on any rails like those before.
112. *By Mr. Weekes*: Is the oscillation very much greater on the line from Sydney to Parramatta than from Liverpool to Campbelltown? I think it is.
113. What other peculiarity did you notice in your engine or carriages on the Parramatta line as compared with the Campbelltown line? I cannot say, except the rails.
114. What effect—do you find more jumping with these rails? I do.
115. You find a perceptible difference? Yes; a great deal of difference.
116. *By Mr. Purkes*: Since this accident occurred you have been since driving on this line? Yes.
117. Don't you think if this accident occurred without any assignable cause that you are still in danger of some other accident occurring of a similar character? I dare say there might.
118. Do you feel any alarm in consequence? Not for myself.
119. *By Mr. Hay*: Were you accustomed to go at a considerable speed on Irish railways? Yes; we went very fast both in England and Ireland.
120. That is one of the best pieces of the Sydney line between Parramatta and Homebush? Not particularly the best.
121. There are not so many curves as approaching to Sydney? Yes.
122. More straight running? Yes.
123. Were you going at all fast beyond the incline on that occasion when the accident happened? No, I was not.
124. You were not going at any particular speed? No, I was not.
125. Have you ever known of carriages and rolling stock going off the line before? Yes, at Campbelltown.
126. In your running? No.
127. You have heard of a carriage being off the Campbelltown line? I think it was a carriage.
128. You have not heard of carriages being off the Sydney line? No, I have not.
129. If you have heard it, you had better let us know? I heard that a horse-box went off the rails nine months ago between Parramatta and Homebush.
130. *By the Chairman*: From whom did you hear it? I cannot say.
131. Do you believe it was true, from the person you heard it? Yes.
132. *By Mr. Weekes*: It was talked among the drivers and men generally? Yes.
133. *By the Chairman*: Do you recollect in Ireland and England the position of the horse-boxes, whether they were next to the engine or at the end of the train? I have seen them in both places.
134. There is no particular rule? No.
135. *By Mr. Jones*: Where would you think the horse-boxes should be stationed—near to the engine, or far from it? I should prefer to put them on behind.
136. Would not the possibility of their getting off the line be greater? I don't know.
137. Where is there the most oscillation? Generally at the end.
138. *By Mr. Weekes*: You have driven with horse-boxes near to the engine, and with the carriages after? Yes; sometimes placed at one end and sometimes at another.

Mr. Richard Darby, Railway Guard, called in, and examined:—

- Mr. R. Darby. 1. *By the Chairman*: You were with the train on Saturday, the 10th instant, when the accident happened? I was.
- 17 July, 1858. 2. Have you anything to add to the evidence you have given before Captain Martindale? No, nothing. I told him what I knew.
3. You are satisfied that the pace did not exceed twenty-five miles an hour? I am.
4. Have you any evidence or authority to give to shew that your opinion was well founded? I know we were not going beyond our ordinary speed, and our time is sufficient to shew us that we did not gain, or lose either, at that pace.
5. Has anything occurred since the accident that will give you an idea why it happened? No.
6. Have you travelled long on the Parramatta line? Since it opened.
7. Have you travelled on any other line? Yes. I have done duty on railways twenty years ago.
8. Where? In England and Ireland.
9. Do you know anything of coupling of passengers' trains and carriages in England? I do.
10. Is there an invariable rule of coupling carriages and horse-boxes with screw-couplings instead of centre-links? We generally couple the horse-boxes with the carriages with a screw-coupling, and the horse-boxes together by drop-chains, when we have two horse-boxes together.
11. What is the rule at home—in Ireland and England? I cannot say.
12. You say that is commonly the case? Always, wherever I have been.
13. Do you think now, from your experience, that the practice of fastening horse-boxes together

- together by centre-links is dangerous? I think it more safe if they were fastened by a ^{Mr. R. Darby.} screw-coupling.
14. Has there been any order on this subject from the Chief Commissioner since the accident? ^{17 July, 1858.} I have not heard it.
15. He has said he gave an order? I have not heard it. There has been nothing said about using a screw-coupling.
16. Have you ever heard of carriages having gone off the line before? I have.
17. When? I cannot recollect the time.
18. More than once, or only once? Once a horse-box got off, pretty near the same place as the accident occurred.
19. When was that? Eight or nine months ago.
20. Was it coming this way? Yes.
21. Near to the same place? Yes; between Homebush and Parramatta.
22. Do you remember how near the horse-box was to the engine on that occasion? It was on at the end of the train.
23. No serious consequences resulted from that accident? Yes.
24. Did you report it? Yes.
25. Who did you report it to? I think to Mr. Brady.
26. What was done at the time of the accident? We got it on the line as well as we could.
27. Were you guard of the train at the time? Yes.
28. What did you do? We stopped the train as soon as we could.
29. How? By my screwing on the break, and the engine-driver putting off the steam.
30. How far was it driven before it stopped? A good distance.
31. About how far? I could not say.
32. *By Mr. Hay:* Was it half a mile? Not half a mile, or quarter of a mile.
33. *By Mr. Parkes:* Was it 300 yards? It might be, but I could not recollect.
34. You put on the break, and the engine-driver felt it, and stopped? Yes. I got down and found the wheel off the rail, and by the help of some man on the road, and Mr. Gibbons, we got it on again.
35. And the train went on as usual? No; it went at a slow pace to Homebush.
36. Was any damage done to the horse-box? Damage was done to the horse-box.
37. Did you carry it on? No; we left it at Homebush, and went on to Sydney for another instead.
38. *By Mr. Hay:* The horse-box was the very last on the train? Yes.
39. Only one horse-box? Yes.
40. How were they coupled? They must have been coupled with a screw-coupling, because there are no centre-links to our carriages.
41. *By the Chairman:* Do you think with a screw-coupling the accident would have occurred? I cannot say.
42. Was that the only instance you know of carriages going off the line? I cannot say. I have known the engine many times to mount and get over two wheels or so.
43. Has that been while running on a curve, or a straight line? I know it has happened on the Parramatta side, in the straight line.
44. What was done on this occasion? We lifted on with a screw-jack.
45. Has this been reported to the proper officer? Yes.
46. Was anything done in consequence? Always to see that the road was the proper gauge. I don't know what was the cause.
47. Did this happen more than once to the engine? Yes.
48. Do you know what engine it was? Yes.
49. *By Mr. Hay:* How long ago? This might be something more than the time of the horse-box going off.
50. Did it happen to the Governor General Engine? No, I don't think it was.
51. *By the Chairman:* Do you recollect any case where the goods train got off? Yes; I recollect the goods train got off at Burwood. It was no fault of the carriages, but the handle of the break got down into the road.
52. Was that reported? Yes; all things like that are reported.
53. Do you remember how long that was ago? It was a good while ago, may be four or five months ago.
54. *By Mr. Jones:* You have known one instance, or many, of engines mounting and getting off the line—have you heard of the speed they were going at, or was it when starting? Generally at starting; I never knew of it going off the line when running, unless it came in contact with some animal—it has jumped off the line by killing a bull.
55. You never knew the engine to go off the line after starting? No; generally at starting, and over our cross points of the line.
56. Do you think a horse-box or any carriage is more likely to get over Barlow's rails, or double headed rails? I could not say.
57. Have the Barlow rails a tendency to be inclined? I think them pretty straight.
58. The edges are put on either side? They are not put on each sleeper.
59. Is not one outside one sleeper and one inside on the other? I heard that some new edges were put on near where it is supposed the horse-box got off the line.
60. The shape of Barlow's rail being broad, if affected by heavy traffic would it not be more likely that a light machine like the horse-box, compared with the engine, would get over it sooner than if it were a double-headed rail? I don't know. I could not form any idea.
61. *By the Chairman:* On the day of the accident had you your attention directed to the horse-boxes more than usual? No.
62. You did not notice more oscillation? No.
63. How do you communicate with the driver, in case of noticing an accident? The only way

Mr. R. Darby. way is, I keep a constant look-out; I have a red flag, and if I see anything wrong I hold it out, and screw the break on and whip it off, that gives a jerk. That generally catches their notice. In the day-time I have a red flag in my hand, if it is in the night I have a signal lamp with the same colors.

- 17 July, 1858.
64. Have you often occasion to do that? Yes; sometimes.
65. Does it produce a shock of any consequence, your suddenly screwing the break on and suddenly letting it off? Not more than they may feel it.
66. It is strong enough to be felt by the engine-driver from the end of the train? I don't know what shock it gives him—that is what I do.
67. It is sufficient to call their attention? Yes, I think so, if put on tight.
68. Do you think that guard is likely to test any part of the machinery, such as the coupling-iron? I don't think so.
69. Are you a judge of iron—have you any experience in iron? No.
70. *By Mr. Parkes:* I think you said, before the accident happened you never had any instructions as to the mode of coupling? My instructions were to couple the passengers carriages with screw-couplings.
71. Not with the horse-boxes? I always put on centre-links and loose chains when there are two horse-boxes.
72. What were the instructions you had, whether verbal or in writing, respecting coupling the various carriages and horse-boxes? My instructions were to see them properly coupled up and screwed tight.
73. Did you receive the instructions in writing? Yes; I have them at home.
74. And do they expressly state that you were to couple the horse-boxes with side-chains? Nothing in them with regard to horse-boxes. We always consider that the proper way, and it is always done.
75. You never had any directions as to the connection of horse-boxes? No.
76. Since the accident occurred, if any instructions were issued they ought to have reached you? I was at Campbelltown yesterday, perhaps when the instructions were issued. I did not get them.
77. At this time you know nothing of the instructions? Nothing further than from what I heard from the men. I saw two horse-boxes going on the line with horses belonging to Mr. Buck; I saw that the horse-boxes and carriage trucks were put together with a screw-coupling.
78. Did you make any remark on this to any of the servants on the line? One did make a remark to me; he said that there was an order that screw-couplings should go to the horse-boxes.
79. *By Mr. Hay:* Talking of screw-couplings—how are the goods trucks coupled? Always with draw-chains.
80. Instead of screw-coupling? I have seen them generally with draw-chains.
81. In fact the same rule is applied to coupling horse-boxes as to goods trains? Yes.
82. *By the Chairman:* Have you altered your opinion as to this accident? No.
83. *By Mr. Jones:* Do you recollect the time you left Parramatta on the day of the accident? Two minutes late—47 minutes past 8.
84. Did you notice the time the accident occurred? I did not; I was too much frightened; I did not know what I was doing; I did not think of looking. The reason I am so particular about knowing the time we left Parramatta was, we had two horse-boxes put on, and we were trying to keep our time. The head porter at Parramatta said to me, "How much late is it?" I said, "Only two minutes, George;" and he said, "Only two minutes—that is 'nothing'."
85. *By the Chairman:* The horse-boxes were put on at Parramatta? Yes.
86. *By Mr. Jones:* Were you engaged in putting them on? Yes, I assisted in doing so, while the porter was screwing up the coupling. I put on one chain one side, and waited until I saw him put up the other.
87. Were you sure that the horse-box coupled to the tender, and the horse-box coupled to the carriage, were coupled properly? Quite so; I am quite certain that they were attached properly.
88. The two horse-boxes? I am.
89. Do I understand you to say, that it is an invariable plan where there are two or more horse-boxes, and when the train is a passengers train, to connect the horse-boxes by means of centre-links and side-chains instead of a screw-coupling? No; I have seen screw-coupling used sometimes.
90. And you say you couple them with centre-links and side-chains? Yes.
91. Do horse-boxes frequently travel with passengers trains? Yes.
92. Have you had more than two? I have had frequently two, and sometimes three.
93. You don't see any reason why this accident should occur in this way, because the two horse-boxes were coupled together with centre-links? No; I have frequently travelled with them in the same way.
94. And quite as high rate of speed as the morning of the accident? At a greater speed sometimes on some part of the road. There is a smooth part of the road where we have travelled at a greater speed than we travelled that morning.
95. Are you inclined to think the accident arose from the way the two horse-boxes were coupled together? I cannot think so.
96. Where do the horse-boxes generally travel? Generally next to the engine coming from Parramatta.
97. Are they supposed to be steadier there, or more convenient for getting the horses out? I think they ought to be more steady there. I have frequently noticed they roll more behind than before.
98. Did you take any special notice of the horse-boxes on the morning of the accident—were they

- they rolling in an unusual way? I did not notice; the morning was very cold, and I kept walking up to the break.
99. Did you observe anything unusual? No.
100. Did you observe anything unusual as you came down to the incline at Haslam's Bridge? I did not.
101. Did you observe any sudden increase of speed from the incline to the bottom of the bridge? I did not.
102. Were you aware of the accident before the centre-piece broke away? I was not aware of it for half a minute before it occurred.
103. Is there any difference in the horse-boxes used on the line—have you observed one or other horse-boxes more inclined to oscillate on the line? I never noticed one more than another.
104. This one is the one made in the Colony? Yes; we always considered it a good one.
105. What do you mean by a good one? A good, steady, running one.
106. Less likely to oscillate than the other horse-boxes? Yes.
107. *By Mr. Hay*: Did you take particular notice of the train after the accident happened? I did.
108. Where was the new horse-box? The new horse-box was down the bank, and near the bottom of the embankment; the other horse-box was next to that.
109. Was it so far down the embankment? Yes.
110. Where were the three third-class carriages? On the edge of the bank.
111. All on their sides? Yes.
112. *By Mr. Jones*: Was not the first of the third class carriages partly down the embankment? Yes, a little.
113. *By Mr. Hay*: And where was the break-van? It stood across the 6-feet road, with the two fore wheels on the up-line, about half way across.
114. Did all the couplings remain unbroken—did the carriages remain coupled together? They were not broken until afterwards.
115. Did many of the couplings remain good? I don't know.
116. *By the Chairman*: Did the train make a sort of curve? Yes; the first horse-box that was near to the engine was nearly up to the third-class carriage at the middle of the train.
117. *By Mr. Hay*: When the horse-boxes went on the bank they came to a stop by the depth which they ploughed into the sand and clay; if the box then swerved, the position would have been reversed? Yes.
118. And thrown on the opposite side? Yes.
119. The break-van stood right across? Yes.
120. And the first and second class carriages? The first-class carriage was next to the break, and got the fore wheels on to the six-feet, and the other wheels got behind.
121. Where was the second-class carriage? It was right behind the first-class carriage, with all four wheels off the line.
122. Which side? The same side we were running on. The third-class carriage was behind that. I am not sure whether two wheels were off the line or not.
123. Off the rails? Yes.
124. *By the Chairman*: The train formed a complete curve? Yes.
125. Were any of the first-class passengers injured? No. One person who was injured came and spoke to me afterwards.
126. Did you hear of Mr. Fullager and Mr. Roberts jumping out of the train? No.
127. *By Mr. Weekes*: You have had great experience in railways from being guard for many years? I was not railway guard in Ireland.
128. What were you? I was mail guard, travelling by the railway.
129. With all your experience, are you satisfied that on the morning of the accident the train was not going faster than 20 to 25 miles an hour? Between 20 and 25 miles. If it was 25 miles I go to the utmost.
130. You have no doubt of it? I have not the slightest doubt of it. I think, if I had not run to the break, it would have brought another carriage with it. I put it on as fast as I could, until I was knocked away, and the break was broken.
131. What broke it? The concussion. I was thrown into the door.
132. You might have lost your life? Yes; if it was not for the door I might have been killed. I think I stated that by screwing it up I prevented more carriages going over.

George Kingston, Head Porter at Parramatta, called in and examined:—

1. *By the Chairman*: Have you considered the evidence you gave to Captain Martindale, and have you anything to add to it? No.
2. Is there any particular instruction as to coupling with centre-links instead of screw-couplings? There is no general rule.
3. What is the rule? To couple with links when they are on them.
4. When there are no links? We put on a screw-coupling.
5. Have you been accustomed to railways in England, and do they couple with centre-links there? Yes, in the case of trucks.
6. But do they on passenger trains couple with centre-links—are they not always coupled by screw-couplings? Most of the horse-boxes have no centre-links on them, and a screw-coupling is forced to be used.
7. You don't know that as a rule screw-coupling is used? No.
8. Do you consider there is any danger from the centre-links being used? No.
9. *By Mr. Hay*: Who do you look to for your orders? It depends what they are. Mr. Falding, when any work is doing.

- G. Kingston. 10. As to the coupling of trains? We all look to him. Every one does his work, and the guard looks and sees that the train is all right.
- 17 July, 1858. 11. Who do you look to for instructions, if you want any? The guard tells us if anything is to come off or be put on, and we do it.
12. Men in your position are expected to have a certain education? Yes, to do the work as it ought to be.
13. *By Mr. Parkes*: When were you first employed on this line? In 1856.
14. You have been employed in the same capacity ever since? No; I went first as policeman at Parramatta; I was changed up to Liverpool, and am now porter at Parramatta.
15. How long have you been porter at Parramatta? Twelve months, I think.
16. When you were first appointed porter, had you ever been porter before on a railway? No; I was pointsman.
17. When you were appointed as porter, did any one give you instructions as to your duty? Mr. Brady.
18. You could not be supposed to understand them without instructions? I had worked with porters at home.
19. You had to be told what to do—there was always one with you to give you instructions as to any work you had to do? Yes.
20. What did your instructions consist of—did you have any printed instructions; or did they consist of being told for two or three days by some other person what to do? We had a book of rules—the rules of the railway when we first entered the service. I cannot say what they are now.
21. I am speaking of the time you were appointed;—when you obtained the situation as porter how did you get acquainted with the work? By working with some of the porters, who saw whether we could do the work.
22. When you first went on the railway at home you were examined to see whether you could do your work or not? Yes. Not so here.
23. What railway was that? The North London.
24. How long were you there? Five years.
25. What duty did you perform? Pointsman, and part of the time second porter.
26. What was your examination when you were made pointsman? I was asked all about points. I did the turns and signals. The first three days I was there, there was another man with me.
27. The first three days after your appointment there was another man to see that you did understand them? Yes.
28. You went through no examination here? No.
29. Was any person appointed to see you do your duty after the first three days? No. We have the regulations printed, as in England.
30. Do you regard them the same as you do in England? Yes.
31. *By Mr. Jones*: You coupled the horse-boxes together? Yes.
32. You are quite sure you coupled them correctly? Yes, and secured them with side-chains.
33. *By the Chairman*: Were any instructions given to you about coupling with only screw-couplings for the future? No instructions. We had before to see that all was properly coupled.
34. When did you leave the line to come here? At 8:45.
35. No orders had reached Parramatta at that time to couple only with screw-couplings? We have coupled since the accident with screw-couplings, but there are no orders.
36. Why have you done this? I don't know why we have done so.
37. Does not any reason occur to you for doing so? I don't know. I think the centre-links hold the train as tight.
38. As you have a good opinion of coupling with side-chains and centre-links, what made you put the screw-coupling on instead? I don't know any particular reason.
39. Was any thing said at the examination on Saturday last about these centre-links that induced you to put a screw-coupling on since—were you told at the examination to put them on? No.
40. *By Mr. Weekes*: Are you allowed to make these alterations? No; but when a screw-coupling is handy we put it on.
41. Suppose with passengers carriages the screw-coupling was not handy would you put it on? We could not couple the carriages without it. It is the horse-boxes that are coupled with centre-links.
42. *By Mr. Parkes*: It would appear you fastened the horse-boxes with centre-links without any particular reason? Yes.
43. You now, since the accident, fasten with a screw-coupling, without any reason? Yes. I think there has only been one horse-box put on since the accident. I noticed it was from Sydney—it had a screw-coupling.
44. *By the Chairman*: Have you been some time on the line? Yes.
45. Do you know any thing of carriages having gone off the line before? I heard of a horse-box.
46. Do you know it of your own knowledge or did you hear of it? No, I heard of of it.

John Hooper, Porter at Parramatta, called in and examined:—

- John Hooper. 1. *By the Chairman*: You have nothing to add to the evidence you gave before Captain Martindale? No.
- 17 July, 1858. 2. *By Mr. Jones*: Did you couple the engine with the horse-box? Yes.
3. You are sure you screwed up the coupling tight? Yes.

John

John Creasy, Porter at Parramatta, called in and examined:—

1. *By the Chairman*: You have nothing to add to the evidence you gave before Captain Martindale? No.

John Creasy.
17 July, 1858.

Mr. George Fitzmaurice, Station Master, Sydney, called in and examined:—

1. *By the Chairman*: You gave evidence to Captain Martindale—have you anything to add? Yes.
2. Is it an error? Yes. In the evidence it is stated I saw the lever—it was the regulator I saw. I could not see the lever, because a man stood in front of me. The lever I did not see; we were going at full speed.
3. Do you think you were going more than twenty-five miles an hour? Not more than twenty-four miles.
4. Have you, since the accident, had anything suggested to yourself so as to form any opinion of the cause of the accident? I only have the convictions of my mind.
5. What is your conviction? Such a thing may occur if, coming down the incline, the steam is put on too suddenly; it would cause the horse-boxes to jerk up on a deflection of the line. I have not traced the circumstances.
6. Was the steam put on too quick? I am not sure; I did not watch the man.
7. Where did he put on the steam? At the foot of the incline.
8. How far from Haslam's Bridge from Sydney? About this side of the bridge.
9. Was it a considerable distance off the incline? When I noticed him touch the regulator it was this side of the bridge.
10. Do you know anything about the coupling of carriages? Yes.
11. Does it strike you that two horse-boxes being coupled with centre-links instead of a screw-coupling would have anything to do with the oscillation? It would make a decided difference.
12. Have you been accustomed to railways at home? No.
13. You don't know what they do practically in England? I don't.
14. You think when coupled with chains they make less oscillation? I think they make more.
15. Do you think that sufficiently great, coupled with some other trifling cause, to throw them off the line? I should think not.
16. Have you ever heard of carriages, horse-boxes, or trains being off the line? I have heard of trucks being off the line.
17. How long ago? I think a month ago.
18. How long have you been on the line? Three months.
19. On the Parramatta line? Yes.
20. *By Mr. Jones*: Can you recollect about what distance from the spot where the engine left the train the steam was put on—the distance before the severance? I think about 100 yards. I know scarcely any time before he reversed the engine.
21. *By the Chairman*: Did you feel the engine jump away? I felt it shoot a-head.
22. *By Mr. Jones*: When the breakage took place? Yes.
23. You think it was 100 yards? Yes.
24. Was the steam not put on in an unusual way? No; I believe in the usual way. I was watching the regulator when the steam was put on. I did not perceive it, it was so gentle.
25. It was so gentle that you could not perceive it? If it had been put on quick I must have noticed it.
26. *By Mr. Weekes*: Was the engine shooting a-head the first notice you had of the accident? The stoker turned round to see if there was anything.
27. Before it occurred, did you feel anything? I felt a jump just before the stoker looked round.
28. A shock? A jump.
29. *By Mr. Hay*: Had the train been proceeding at a more rapid pace from Parramatta to this place where it happened, and as you came to the top of the incline? It had. On approaching the incline the man shut-off the steam.
30. Before that the train was proceeding at a rapid pace? I should say a considerable pace; I should say for within a mile of the accident.
31. *By Mr. Jones*: At what rate? Twenty-three or twenty-four miles an hour.
32. Not more? No.
33. Did you know the time of the accident? No, I did not.
34. *By the Chairman*: Did you come up to Sydney? No. I stopped behind, and tried to find out the cause of the accident.
35. *By Mr. Weekes*: Are you aware that any complaints were made of the drivers being late long before this time? They were complained of about the beginning of June. I was appointed Traffic Inspector to keep them in their proper time, and for ascertaining the cause of their being late, whether they were delayed at the stations or not.
36. Are they subject to any punishment or fine for losing any of their running time? If they lose time in running they are subject to punishment. If detained at the stations beyond the time we come in so many minutes later.
37. Are they subject to the same penalty for arriving too soon as well as too late? It is just as bad to be too soon as too late.
38. Are they held responsible for one as well as the other? Yes.
39. *By the Chairman*: Do you know any instance of the station master being punished for the late starting of the train? No.
40. Or for any cause? We have had station masters removed.

MONDAY,

MONDAY, 19 JULY 1858.

Present:—

Mr. DONALDSON,
Mr. EGAN,
Mr. HAY,

Mr. PARKES,
Mr. SCOTT,
Mr. WEEKES.

THE HON. STUART A. DONALDSON, ESQ., IN THE CHAIR.

Captain B. H. Martindale, R.E., Chief Commissioner for Railways, and John Whittton, Esq., Engineer-in-Chief, present in the room.

Alfred Brown, Esq., of Wide Bay, called in and examined:—

- A. Brown, Esq.
19 July, 1858.
1. *By the Chairman:* Were you a passenger in the railway train on Saturday, the 10th instant, when the fatal accident occurred near Haslam's Creek? Yes.
 2. What carriage were you sitting in? A first-class carriage; I believe the only first-class carriage in the train.
 3. You were in no danger? No.
 4. Will you favor the Committee with any impression the accident has left on your mind as to the cause of the accident, whether the rate of speed at which you were travelling was usual or unusual? I consider our highest rate of travelling to have been about forty miles an hour. It is difficult to estimate the time in such cases, and I can hardly say how long we were going at that rate, but until we were about a mile from the place where the accident occurred we were going at a moderate pace. The speed was then increased, and Mr. McDougal, who was with me—indeed we both—noticed the unusual speed that the train was going. My impression is that it was going fully forty miles an hour.
 5. Have you travelled much by railway in other countries? Yes, both on the Continent and in England.
 6. Have you been in the habit of timing the rapidity of trains on railways on the Continent and in England, by your watch? I have occasionally done it in England.
 7. You feel some confidence then in expressing an opinion as to the speed at which this particular train was travelling? I do; perfect confidence.
 8. Can you inform the Committee whether the sudden increase of speed began at the top of the incline before you cross Haslam's Creek? I know there is such an incline, and I believe it commenced about that spot. My impression is that the speed increased when we were about a mile from the spot where the accident occurred, for we had time to remark upon the speed before it happened.
 9. Did you notice any check to the train by the rucking up, or falling down, of the carriage, before the accident? What my attention was first called to was a slight shock, and then I felt convinced that we were off the line, for the carriage appeared as if it were drawn very rapidly through the ground—as though it were ploughing the ground.
 10. As a matter of fact, was your carriage off the rail when you pulled up? Yes; our carriage was the first after those that were thrown off, and was standing in the direction of the line, but not upon the line.
 11. Had it crossed the other line? No; indeed it had gone in the contrary direction; all the others had gone to the right of the line, ours had gone to the left.
 12. Would you recognise if I read the order of the carriages on the line:—"Position at the time of leaving Parramatta, where the horse-boxes were attached:—
 " 1. Engine.
 " 2. 2 horse-boxes.
 " 3. 3 third-class carriages.
 " 4. 1 break-van.
 " 5. 1 first-class.
 " 6. 1 second.
 " 7. 1 third.
 " 8. 1 B goods-truck.
 " 9. 1 C goods-truck.
 " 10. 1 A goods-truck"?
- I think that is correct.
13. That you recognize as the position of your first-class carriage? Yes.
 14. The other carriages had gone off to the right of the line, yours to the left? Yes.
 15. Facing Sydney? Yes. I know that upon stepping out of our carriage it was leaning to the left.
 16. Might not that have been the case if the wheels had been between the rails? Yes, it is just possible.
 17. It might have been the case if the right hand wheels were between the lines of rails? Yes, it might be so; but I do not think it probable, because the ballast is level with the rails.
 18. On what side did you get out? The left.
 19. And you found the carriage leaning over? Yes.
 20. Did you get on the bank? On the left bank of the railway, just on the edge.
 21. Do you recollect the position of the break-van in relation to your carriage? No.
 22. Did you embark, as it is termed, on the train at Parramatta? Yes.
 23. Did you notice in what way the horse-boxes were fastened to each other, or to the tender? No; they were attached in a very short space of time.

24.

24. Was your attention drawn to it after the accident? No; after the accident I was engaged in attending to the passengers.
25. Have you often travelled on the Sydney and Parramatta Railway? Yes.
26. Have you noticed the speed at which the train has travelled between Parramatta and Homebush on previous occasions? I think it travels more rapidly there than between any other stations.
27. Did the speed when you thought it increased to nearly forty miles an hour cause apprehension to yourself, or other passengers? I did not feel any fear, but it struck me as somewhat unusual, and perhaps dangerous; more, I think, from the oscillation of the carriage, from the line of the rail not being so steady between this and Parramatta, as on those lines I have travelled upon at home.
28. Have you ever known or heard of an instance of any carriage or horse-box having been thrown off this Parramatta line before? I have not known it myself; I have heard of it as a matter of conversation, and it has been spoken of in the course of conversation as though it were not uncommon.
29. With whom have you had conversation—who has so spoken of it? I think it was with a stranger in the train.
30. Can you recollect with any distinctness when you first felt this plunging through the ground, as though the carriage were off the line? I felt it very distinctly.
31. Where was that? I calculate it by time,—though I was certainly in suspense, and it is difficult to estimate time under such circumstances. I said to my friend, "Something serious is going to happen;" and I sat still, expecting every minute the train would be over the embankment, and then the train came to a stop.
32. How many seconds should you say elapsed? I think fully a minute—at least so it appeared to me. My impression at first was that there was a collision. I looked to the right hand and saw the carriages on the opposite rail; these must have been the carriages that were thrown off.
33. You passed those that were doubled up backwards towards Parramatta? Yes.
34. That could have been the operation of a very few seconds? Yes.
35. You felt the concussion before you saw the carriages? Between the time that I felt apprehensive something would occur and the actual occurrence of the accident, there was, I think, a lapse of about a minute. The curves upon these lines appear to me to be unnecessary.
36. *By Mr. Weekes*: Do you find an unnecessary amount of oscillation on this line, as compared with others with which you are acquainted? Yes.
37. Have you travelled on the Liverpool or Campbelltown line? I never have.
38. Do you think on this particular morning the train was going faster than usual at this spot? Yes, decidedly. I timed it this morning coming down every quarter of a mile, and I thought we were going very slowly indeed the whole time, comparatively speaking, and even then we got a rate of nearly thirty miles an hour—about twenty-six, I think, it was.
39. You are quite sure that on the morning of the accident the train was going much faster than it was this morning—you have no doubt of it? I have not the slightest doubt of it.
40. *By Mr. Scott*: What profession are you? A grazier.
41. A squatter? Yes.
42. You stated that the engine was going forty miles an hour, I think? Yes.
43. I believe this morning, in company with another gentleman, you timed the speed? Yes.
44. Is it from taking the time this morning you calculate that the speed on the morning of the accident was forty miles an hour? That merely confirms my previous impression. I stated before, that we were going at the rate of forty miles an hour, and I am now convinced that at that particular spot we were going fully that speed.
45. When the steam was put on—when you had this increase of speed—were you at the top of an incline, going downwards, or was it just before you were going to take a rise? I could not say, being in the carriage. I can only state, from the time that elapsed, that it was about a mile from the spot where the accident occurred.
46. You stated that you felt the carriage, or carriages, plunging the ground before the accident? Yes.
47. Was it a considerable distance from the spot where the accident occurred? It could not be far; it appeared to me to be about a minute before the carriage stopped.
48. Were you under the impression that it was the horse-box, or your own carriage? My own carriage: It was off the line—that was only latterly. At first, when I felt the accident I believe we were on. My first sensation was a slight shock, and then I felt as I have described—being drawn off the rail, and passing heavily through the ground.
49. That was a minute before the actual capsizing of the horse-box? About that.
50. You felt that your own carriage must be off the line? My own, or one near it; my own I think.
51. You could not judge whether it was the horse-box or your own carriage? I should say it was my own carriage, because the horse-box was four or five carriages before us.
52. Then your own carriage must have been off the line about a minute before the capsizing of the horse-boxes; Yes, that is my impression.
53. I think you said just now there are unnecessary curves on this line? I consider so.
54. Do you consider it was the curve that was the cause of the accident? No; we had not reached the curve at the time of the accident. I am speaking generally of the laying out of the line, and I consider it to be dangerous.
55. Your opinion is that the straight line was the cause of the accident? It was upon the straight line the accident occurred; whether it was the cause I cannot say.
56. *By the Chairman*: Was any observation made by you or by any other passenger, as to the rate of speed, before the jolting you speak of occurred? I think it was a simultaneous

A. Brown,
Esq.

19 July, 1858.

remark

- A. Brown, Esq. remark that we were going extremely fast. I think Mr. McDougal said something to this effect,—“We are going at a terrific pace.”
- 19 July, 1858. 57. *By Mr. Weekes*: Did you time your speed this morning by the quarter mile posts on the side of the road? Yes.
58. What was the smallest number of seconds between two quarter mile posts? Thirty or thirty-one.
59. *By the Chairman*: And you are quite satisfied that the speed on the morning of the accident was greater than that? Yes.
60. *By Mr. Hay*: By the second hand of your watch I suppose you timed the distance? Yes.

John Frederick McDougal, Esq., of Merton, Brisbane, called in and examined:—

- J.F. McDougal, Esq. 1. *By the Chairman*: Were you on the railway train on Saturday, the 10th instant, at the time of the fatal accident? Yes.
- 19 July, 1858. 2. In what carriage were you? In a first-class carriage.
3. Were there any other passengers with you? Mr. Brown.
4. Did any conversation take place between you and Mr. Brown with reference to the speed at which the train was going before the accident occurred? Yes.
5. Did the speed appear to you to be great? So much so, that I remarked it to Mr. Brown.
6. What was the remark you made to Mr. Brown? Do you wish me to state my very words?
7. Yes? I said, “By Jove! we are travelling at a devil of a bat.” It struck me we were going at a most unusual pace.
8. Would you now state at what pace you were going at the time, before the accident occurred? I think we were going between five-and-thirty and forty miles an hour.
9. For how long before the first jolt occurred, as near as you can judge, were you travelling at that pace? For some very short time previous.
10. Can you give us any idea of the distance you travelled at that speed? I think for about half-a-mile, perhaps.
11. Do you remember whether there was an incline downwards or upwards, or whether it was a dead level at the time you noticed the speed? No; I could not speak of my own knowledge of that fact. I have not since examined the spot.
12. Have you travelled much on railways in Europe? No. I have travelled very frequently upon this line. I was on it when it was first opened.
13. Have you since the accident travelled on this line? Yes; I came down this morning.
14. Have you, with accuracy, timed the rate of travelling? Yes; I timed it this morning.
15. At what rate were you travelling this morning? Very much slower. As nearly as we could arrive at it, about a mile in two minutes was the fastest rate at which we travelled this morning.
16. At that spot? At that spot.
17. About thirty miles an hour? Yes.
18. Could you compare, by recollection, the speed at which you were travelling on Saturday morning with the speed this morning, and say which was the greater? I have not the slightest hesitation in saying that the speed was very much greater on Saturday than it was this morning.
19. Did you notice on Saturday, the day of the accident, anything particular about the coupling of the carriages and horse-boxes? I did not; I merely noticed that the horse-boxes were next the engine.
20. You are not in the habit of noticing the coupling at all? No.
21. Did you notice any remarkable oscillation before you were struck with the speed at which you were travelling on the morning of the accident? No, I cannot say I did, for we were talking, laughing, and chatting away, till my attention was called to the fact of the speed at which we were going. Looking out of the window, I saw, from the indistinct view I had of objects as we passed them, that we were going at a great speed. That is a very good guide.
22. Can you say with any great certainty how far from the first collision, or jolt, you noticed the speed—what was your first impression of any actual danger to yourself? The increased motion in our carriage.
23. Of what character was that motion? It was an oscillatory motion—a slight jumping in the carriages.
24. Did that give you an idea that any accident had occurred? Yes.
25. It alarmed you? It alarmed us.
26. Did you think you were off the rail? No; my impression was that something had happened to the engine—that it had gone down; this arose from the jerking; it seemed to me as if it were going down some place and we were following it.
27. What did you do—did you put yourselves in an attitude of greater safety? Yes. I was in the centre seat, and I put my arms round the supports on either side, and held on.
28. Were you back or face to the engine? Face.
29. How was Mr. Brown? With his back to the engine, opposite to me.
30. Did you come in collision? No.
31. Did you notice, when you passed, the debris of the train, or any of the carriages over the bank? Yes; and it gave me the idea of passing another train as we passed it.
32. Very shortly after you noticed that were you brought to a stand-still? Immediately after.
33. Was there any shock? A decided shock.
34. How do you account for yourself and Mr. Brown not being thrown together? Because

- I secured myself on the seat as well as I possibly could. There was sufficient time to prepare one's self for the worst, and I did so. I thought it the safest to keep in the centre of the carriage. If I had not held on so I dare say I should have been precipitated forward.
35. *By Mr. Weekes:* You have not the slightest doubt on your mind that the conversation you have referred to took place before the slightest indication of the accident? Before the slightest indication; I am perfectly clear upon that point.
36. Did you, this morning, time the speed as well as Mr. Brown? He watched the posts, and I made the entries as he called them out.
37. What was the fewest number of seconds between one quarter of a mile post and another? Thirty-one, I think.
38. *By Mr. Parkes:* You say you have travelled several times by this line? Frequently.
39. How many times do you suppose—twenty? I should think sixty times.
40. Extending over the whole period since the railway was established? I was present at the opening, and I have travelled upon it repeatedly since; I should say at least sixty times, perhaps more.
41. Did you ever notice that you were travelling at as great a speed before? I do not remember ever going at the rate we did on that occasion.
42. Did you ever go at what you considered an unusual speed before that morning? No.
43. Then, in fact, perhaps that is the only time you have noticed it? The only time I considered we were going at an unusual rate.
44. *By Mr. Scott:* Did you experience any feeling as if one of the carriages were off the line before the absolute accident occurred? No, I did not; not before we were aware something wrong was about to take place.
45. When were you aware something wrong was about to take place? Some few seconds only elapsed before we were brought to a stand.
46. Three or four hundred yards before capsizing? Probably between two and three hundred yards.
47. Did you then experience a sensation as if any of the carriages were off the train? We felt there was an unusual motion.
48. Did you think your own carriage, the first-class carriage, was off the train? I did not until immediately before we were brought up; then I knew at once from our position that we were off the line—I did not before that.
49. You experienced no feeling as if your own carriage were ploughing the ground? I did not.
50. *By Mr. Egan:* I think you said you have travelled on that line probably sixty times before the accident? Yes.
51. Did you ever know any instance of any of the carriages being off the line before? I never heard of it. I was never aware of any thing of the kind.
52. *By Mr. Hay:* Had the train been going at what you consider an excessive speed for any length of time, or only for a very short time? Only for a very short time. I am sure if it had been going at the time I made my remark it could not have escaped my notice.
53. You think that remark was partly called forth by you looking out at the window? Yes, partly; that enabled me to judge of the rate at which we were travelling.
54. The speed might have been accelerated for some little time before? It might have been slightly increased. I had been in conversation with Mr. Brown, and I then looked out and found we were going at an enormous rate. I believe we could not have been going at that pace for any length of time, or we must have observed it.
55. From any peculiarity of motion of the carriages, or from the rapidity with which objects seemed to pass you? I may explain that there was an increased vibratory motion—a tremulous motion—which I felt as well.
56. *By Mr. Egan:* Were there many carriages beside your own that did not capsize? All behind ours—ours was a first-class carriage, and there were two other carriages.
57. *By Mr. Weekes:* Whenever you have been travelling on the Parramatta line, have you found at that particular spot that the speed of the train has been greater than at any other part of the line. Yes, I have generally found that the speed was increased at that particular spot.
58. You never noticed that it was increased to so great an extent as on the morning of the accident? Never.
59. *By Mr. Scott:* From the frequency of your travelling on the line, do you know the engine-driver and guard? No, I do not; but I spoke to the engine-driver on this occasion.
60. What did you say? I asked him some question connected with the railway.
61. Was that previous to, or after the accident? Previously.
62. Was he then perfectly sober? I am inclined to think the man was in an excited state—I should not say from drink—it was more from anxiety, or annoyance, I should rather say.
63. From what cause? At being delayed. He beckoned to the man who was bringing up the horse-boxes; he made an angry gesture, and I saw by the expression in his face that he was excited, not by intoxication, but vexation. I saw it in the way he walked about. It struck me at the time, and I was going to make the remark to a gentleman who was with me, "That man seems a little out of temper," when he turned and left; and I did not think of it again.
64. You think this excitement on the part of the engine-driver arose from annoyance? Yes, at the little delay.

Mr. Edward Arthur called in and examined:—

- Mr. E. Arthur. 1. *By the Chairman*: You are a carriage builder? Yes.
2. Have you had much experience in the building of carriages? Yes.
- 19 July, 1858. 3. Of railway carriages? Yes, for nearly nine years; I had the first contract on the London and Birmingham Railway.
4. During that time you had to do with the manufacture of carriages of all classes? Yes; I also took the whole contract of the Derby and Gloucester lines.
5. Will you favor the Committee with any information which, in your opinion, will elucidate the cause of the late railway accident? After I received the note from the Committee requiring my attendance here, I went to the railway, and examined the carriages. My opinion as regards the accident is, that there was a great deal of negligence; the tires of the wheels are worn hollow, instead of being flat, and the flanges of the wheels are worn very much from knocking backwards and forwards upon the rails sideways. It is my opinion that the cause of the accident was, that the engineer was travelling at a sharp pace, and, casing his engine off too suddenly, the carriages were thrown together, the buffers of one carriage being higher than the others, and being like a dead block of wood, had thrown the carriages off the line.
6. Have you examined the buffers of these carriages? Yes, and they are completely useless.
7. Have you any evidence to support that opinion? The buffers are carried away. (*The witness produced a brass casting.*) Here is evidence to show that the wheels could not keep their proper gear on the line. This is the bush which I produce, and it is completely worn out.
8. What carriage is that from? The one smashed all to pieces, now at the terminus at Sydney.
9. Will you explain where you find the defect in that bush? The brasses are worn by the action of the wheel travelling upon the rails, and by being worn it causes the flanges of the wheels to strike against the side of the rail.
10. Will you state which end of the brass is next to the wheel, and which is next to the journal? The end that is worn, that marked 78, is against the journal, the other end is against the wheel.
11. *By Mr. Parkes*: Can you state what particular carriage you took that from? No, I cannot, for it is all to pieces.
12. *By the Chairman*: Are these fixed or moveable brasses? They are kept in by pressure; this bush presses into a hollow in the casting of the metal, this is dropped in, and lies on the arm under the spring.
13. *By Mr. Hay*: What is the object of these holes? For greasing.
14. Was that taken from a third-class carriage? I cannot say, as the carriage was broken all to pieces.
15. Did you take it from the carriage? I took it from the boxes and wheels.
16. You do not know the identical carriage it came from? No.
17. You did not examine the number? No.
18. So that you do not know what carriage it came from? No.
19. *By Mr. Egan*: Do you know that it was from one of the carriages destroyed by the late accident? I do not know it myself, but two men who had charge of the carriages took me to the boxes and wheels, where I found it.
20. Who were they? I do not know their names, but I know one of them was engaged on the Derby Railway.
21. *By Mr. Weekes*: When you say they were broken to pieces, do you mean that the bodies of the carriages were destroyed? Yes; the bodies were broken.
22. *By the Chairman*: Does that brass you have produced remain stationary in the axle-boxes, or is it moveable? It must remain stationary when the weight is on it.
23. Did you apply for permission to go on the station works? Yes, I did, to the managing man—a little, short man.
24. Did he give you permission to bring away that brass? He did not, but I asked permission of the man who was with me, and told him what I required it for; and he did not object.
25. What man? The two men who had charge of the carriages.
26. You do not know the name of the men? I know them by sight; one man was with Mr. Wright.
27. They did not object to your carrying this off? No.
28. *By Mr. Parkes*: Did you state when you went on the premises that you were going to give evidence before a Committee of the Legislative Assembly? Yes.
29. And for that reason you wished to see the railway carriages? Yes.
30. When you asked for the brass, did you state the same reason for taking it away? Yes.
31. *By Mr. Weekes*: Was the body of the carriage on the foundation? No, it was not; the boxes were all lying in pieces together.
32. You were told that it was one that was broken by the late accident? Yes.
33. When these brasses are new are they made square up to the ends? No, according as the point of the arm is turned, the brasses are cast to suit the arm.
34. Is the whole of this which appears to be worn away turned in that manner, or is it worn away? The greater portion of it is worn away.
35. *By the Chairman*: How can you ascertain how much is worn away? By placing this on the arm, and trying it.
36. Did you place this on the arm? I did, and I should say the brass is worn about half an inch. The usual way of making these brasses is to place two together, and bore them out for the journal, to work in the brass.
37. That is to say, longitudinally? Yes.
38. Is there anything else in the construction of the carriages that strikes you as likely to have

- have caused this accident? The buffers are badly constructed, and not at all suitable to this ^{Mr. E. Arthur.} climate, or in any other respects.
39. On what ground? The India-rubber becomes soft and sticky, and prevents the buffer ^{19 July, 1858.} from working.
40. Are the buffers of India-rubber? Most of them. I saw one that came from Newcastle that was not.
41. Did you notice the buffers of this particular carriage? Yes; one of the buffers had not above an inch play, and the other had above five inches—one was in, the other out.
42. Sticking in? Yes.
43. Have you noticed that the elevation above the rail of the buffers of the carriages has been accurately observed in manufacturing these carriages? They are of different heights.
44. So that, in fact, the centre of the buffer of one carriage would not meet the centre of the buffer of the carriage next to it? Just so.
45. So that, in fact, it would be liable to depress or raise it—is that so? Yes; but the wear and tear of the springs will differ; sometimes the springs are soft, and sink.
46. Can you state the difference in the height of the centres of the buffers on various carriages from the rails? There is a difference of from four to five inches, and they are, therefore, that distance either above or below the buffers against which they come.
47. What sinking of the centres of the buffers, as compared with the centres of the buffers in front, would you consider consistent with perfect safety in travelling, and what would you consider dangerous? If the buffer acted, it would make very little difference whether it was above or below, because the buffer would play, but the buffers are almost solid, like blocks of wood.
48. Are you prepared to say that in some instances one buffer will play while the other is stationary? Yes; I saw carriages come in yesterday where the buffers were in that state.
49. *By Mr. Weekes:* Do you mean that one buffer refused to yield at all? One buffer was completely stuck up. Springs will do the same if the buffer rods or bushes wear. The coupling chains had large links. The usual way of fastening in England is by screw-coupling.
50. *By the Chairman:* Are you prepared to say, from your experience, that it is the invariable practice in England to couple carriages with screw-couplings? Invariably. We tried the chains on the London and Birmingham, and we found we could not bring the carriages close together, because there was a side motion, and the buffers would not meet.
51. Supposing a train consisting of about twelve carriages and trucks were fastened by screw-coupling, excepting two horse-boxes at the head of the train, and these two were fastened by centre-links and side-chains, would you prefer the screw-coupling? I prefer screw-coupling.
52. Why would you prefer the screw-coupling to the centre-link to the horse-boxes to draw with? I prefer them because they are more easily disconnected from the engine in case of an accident, they fly apart, and the engine goes away, but unless you break the link it will drive the carriages on one another.
53. Have you had sufficient experience to say whether in England horse-boxes are generally put in the front or in the rear of a train? Generally in front; either that or a luggage-van next the tender.
54. Are you prepared to say whether in such cases centre-links or screw-couplings are used? Screw-couplings. Centre-links were used formerly; but they are done away with. We did not consider them safe.
55. *By Mr. Weekes:* Do I understand you to say that it is the practice of this Company to use centre-links? Yes.
56. To connect passenger carriages by centre-links? No; all passenger carriages are connected by screw-coupling.
57. What carriages on this line are fastened by centre-links? The trucks and horse-boxes.
58. With passenger trains? Yes.
59. Do you think that objectionable? Yes; unless you have one horse-box between two carriages where the buffers act, and then they travel steadily. The horse-boxes are without buffers; they have merely blocks, or caps, stuffed with hair; when between two carriages they act upon the carriage buffers.
60. *By Mr. Hay:* Have these horse-boxes here merely dead buffers? I did not notice that.
61. Then your reply to the previous question applies only to horse-boxes without spring-buffers? Yes.
62. *By the Chairman:* You do not mean to say that horse-boxes without spring-buffers would be so safe as horse-boxes with spring-buffers? Certainly not; but I say they were used formerly.
63. Are they now? No.
64. Are the passenger carriages now coupled with screw-coupling? Yes.
65. *By Mr. Hay:* With regard to screw-coupling, do I understand you to say, that to attach horse-boxes to each other with centre-links—these horse-boxes having spring-buffers—would be objectionable? Yes; because you cannot bring the buffers up to bear.
66. The reason of your objection to these links, that in case of accident they will not give way? They will not give way from the tender. The object in such cases is to relieve the train of the engine.
67. You think that is more readily accomplished by using the screw-coupling than by using centre-links? Yes.
68. It is because the centre-links hold the train too much that you object to them? Yes; they are too long. When carriages are travelling with a centre-link there is a side motion between the two carriages so linked; if they have screw-couplings, with the buffers close together, the couplings being screwed up, instead of rolling about they go on steadily, and the buffers act with each other.

- Mr. E. Arthur. 69. Does it consist with your knowledge that the carriages are linked together with centre-links, not with screw-couplings? Yes, some of them.
- 19 July, 1858. 70. Do you know that the passengers carriages are attached together by centre-links only? I have seen them put on.
71. Without screw-couplings? Without screw-couplings. I have seen the men pick them up and put them on. I saw that at Parramatta the other day.
72. *By Mr. Weekes*: Connecting one passenger carriage with another? Yes.
73. *By Mr. Parkes*: Have you often travelled by this railway? Yes.
74. Have you, before this accident occurred, taken particular notice of the railway? I have. There is a very uneasy motion on it. The wheels are continually striking like a hammer upon the rails.
75. Had you formed any opinion of the railway before this accident occurred? I had. I told Mr. Randle when the first carriage arrived that it would not answer.
76. What would not answer? The carriage itself, without the buffers.
77. *By Mr. Hay*: Do you mean that the India-rubber buffers would not answer? Yes.
78. Had you any other reason to form an unfavorable opinion? Yes. I was satisfied, from the way the line was laid out, that there would be great wear and tear upon the wheels and rails, from the curves being too sharp, the length of the carriages, and the great distance between the wheels. There are great numbers of wheels now upon the rails that are a quarter of an inch hollow.
79. Do you think the number of curves upon the permanent way cause unusual wear and tear to the rolling stock? Yes. The carriages ought to be examined every month and picketed; the tires ought to be round—I do not mean to say round, but quite level—now they are sometimes a quarter of an inch hollow. No wheel can travel a rail safely when it is hollow.
80. What do you think of Barlow's rail? I do not like them so well as the common rail; it is used now on the Birmingham line. I think the rails ought to be laid on longitudinal sleepers.
81. Do you think the timber of this country is suitable for longitudinal sleepers? I think so.
82. Would it not be liable to warp? I think not, if cross-tied and angled.
83. Do you think if the wheels were much worn, and Barlow's rails were at all beaten down, there would be any chance of the flange of the wheel running upon the rail instead of the bottom of the wheel? Certainly there would.
84. In that case there would be a tendency to run off the rail? Yes; and if the rails projected the least bit at the side it would do it—the eighth of an inch would do it, particularly if there was any roughness in the tires of the wheel.
85. *By the Chairman*: How much play have the carriages between the flanges and the rail? I did not measure; but I know it is usual for them to have about three-eighths of an inch.
86. How then could the eighth of an inch throw a carriage off the rail? I did not say that; I said they were apt to jump, particularly if they were on a curve.
87. *By Mr. Hay*: In point of fact, upon the supposition that at the time this accident happened there were two horse-boxes in front, next to the tender; that the first of these horse-boxes was connected with the tender by screw-coupling; that the second horse-box was connected with the carriage by screw-coupling; and that the carriages were all connected together by screw-coupling; but that the two horse-boxes were connected by centre-links;—do you think that would be a particularly dangerous arrangement? I should think so.
88. On what ground? I do not like centre-links at all.
89. Then your sole objection to the arrangement is that the two horse-boxes were connected by centre-links, and not by screw-couplings? Yes.
90. You think that would cause the horse-boxes to be more likely to go off the line? No, I do not.
91. Why, then, do you object to them? Because they cannot be released in case of an accident.
92. *By Mr. Hay*: Did you ever know a carriage to be thrown off on account of being coupled with centre-links? Yes, I have. I have seen them jump one on the top of another.
93. *By the Chairman*: Why do you say carriages are more easily released if they have screw-coupling? Because the links are turned and go on to a centre-nut, and they fly open in case of any collision.
94. *By Mr. Parkes*: You mean that they fly open at the eyes where the bolt goes through them? Yes.
95. Do you know that the screw-coupling in this case did not fly open? No, I do not. (*The screw-coupling was produced.*) I hold in my hand the screw-coupling from the railway. This is a common one—a square thread is the proper thing.
96. *By the Chairman*: Why do you say a square thread is proper? It is more powerful, and sooner screwed up.
97. *By Mr. Hay*: Might not a link have broken in the same way as that? No.
98. Why not? This is secured at both ends, and more easily drawn together.
99. Are you a judge of iron? This is common iron.
100. *By the Chairman*: Why do you say it is common? You would not see a link break like that if were good—it would tear.
101. Become more ragged? Yes.
102. *By Mr. Hay*: Have you any way of testing these links before they are used? Yes.
103. How do you test them? With two screw-jacks.
104. Would you do that to all, or only to samples? We used to do it to all, and we tested the springs as well.
105. Might not that testing weaken the iron, supposing it did not break it? No.
106. It would have no injurious effect? No.
107. *By Mr. Scott*: Your opinion is, that the flanges of the various wheels of the carriages, and

and the brass bushes in which the axles work, being much worn, would cause considerable tremulous motion, and much additional oscillation? Yes. Mr. E. Arthur.

108. And you have ascertained that the centres of the buffers were at different heights, and that many of them were not in working order? Yes. 19 July, 1868.

109. Then is it your opinion that the wear and tear, and the imperfect state of the buffers, were the chief causes of the carriage, or carriages, going off the rail when the train was proceeding at a rapid rate? Yes; no question of it.

110. Can you state whether any of the joints where the rails met each other were unequally laid? I saw some in the station-house shameful. There is one rail there which I consider ought not to be allowed to remain an hour; it is like a piece of scale; it is all battered; it is equally as bad in the station as out of the station; I have seen carriages smashed in a station through a simple thing like that.

111. Do you know of any preventives against accident, used in England or elsewhere, that are omitted here, as regards the situation of the guard or engine-driver on the train? Generally there are two guards, one in front and one at the back of the train, and they communicate with the engine-driver by a whistle; and when he intends to slacken the speed, he gives a signal and they apply the breaks.

112. Do you think the guard being placed at the tail of the train he would be so likely to see when any carriage or horse-box was off the rail? Yes, he could, if he were paying attention to his business.

113. Could he communicate by whistle to the engine-driver to stop the engine? Yes; in England he would communicate to the other guard, who would communicate to the engineer.

114. If that had been done here, might that have prevented the accident that occurred? Yes; but sometimes an accident of that kind is momentary where there is an incline.

115. *By Mr. Hay:* If the guard were not at the end of the train, but about the middle of it, would he have so good an opportunity of seeing if any horse-box were off the line? No; because if he were at the end his eyes would be directed along the train.

116. *By Mr. Scott:* Suppose the guard is placed in the middle of a train, can he see any of the after carriages that may go off the line? It depends upon the way he is sitting—whether he is looking forward or backward.

117. *By Mr. Hay:* Have you visited the locality where this accident happened? No, I have not.

118. Are you aware that the horse-box appears, so far as we can ascertain, to have gone off the line first? That might be so.

119. Do you suppose, if the third class carriage attached to the second horse-box got off the line, it would be likely to drag off the two horse-boxes along with it? No question of it.

120. What position would they have assumed then—would the third-class carriage have gone past the horse-box? It would depend upon how they came up to each other; some would go one way, some the other; it would depend upon the way they struck. I have seen some go on one side of an embankment and some on the other.

121. Do you know that the first horse-box lay at the bottom of the embankment, nearest to Parramatta; the second horse-box lay at the bottom of the embankment, nearer to Sydney; and that the three third-class carriages were overturned at the top of the embankment, and in the reverse order to that in which they had come along the road? Yes.

122. In that case, could you form an opinion as to whether the horse-box went off the line first, or whether the third-class carriage did so? I believe the third-class carriage went off first and struck the horse-box. One could hardly judge unless he saw the spot and the position they were in. I have known a carriage to be struck and turned the reverse way from the collision.

123. Do you think, if the accident had occurred as you suppose, that the horse-boxes would not have been on the other side of the third-class carriage? It depends upon which corner of the carriage was struck, whether it was the left or right hand corner.

124. The third-class carriage going off the line must have struck the horse-box, so as to twist it round and turn the hind part foremost? It all depends upon how it was struck—whether the carriage jumped; I do not know exactly how the road was; the carriage might roll or alter its position going down the embankment.

125. *By the Chairman:* Is it usual to have two guards on ordinary trains in England? All the time I knew anything about it, it was.

126. Do you know who made the carriages we have here? Yes.

127. Is he a good maker? Yes; he makes very good work, and some very inferior. I was with him.

128. Is he one of the best? No; he is not.

129. Is Mr. Wright the builder for the London and Northern line? Yes; and he had the contract for the London and Birmingham. It all depends upon the price; a carriage may be built for £600 or for £250.

130. *By Mr. Parkes:* Whom do you consider to be the best builder in England? Mr. Brown.

131. Do you know how the goods trains were coupled at home? With centre-links.

132. Do you know at what speed goods trains travel? No; I had nothing at all to do with that; my business was to look to the carriages; I had nothing to do with goods trains. I was employed on the Derby, Gloucester, and London lines.

133. *By Mr. Hay:* What was the respective positions of the two guards upon trains in England? One at the back and one at the front; generally, the horse-boxes were in front, next to the engine or the passengers luggage van.

134. *By the Chairman:* Had you two break-vans upon the ordinary trains? Yes; I never saw them without.

135. *By Mr. Hay:* Do you think one of these horse-boxes would be much more apt to oscillate than a first-class carriage? It depends upon how it is made; if top-heavy it would be.

136.

Mr. E. Arthur. 136. If it is made with heavy iron-bark framing, and with pine planking upwards, would there be more oscillation? It would be more steady then.

19 July, 1858. 137. In that case there would be no greater oscillation than in first-class carriage? No.
138. *By the Chairman:* Do you think on English trains, with a guard at the first break-van and one at the end, the first guard would hear the whistle of the other when the train was going at full speed? Yes; you could hear it half a mile before it came to the station; it is an ivory whistle, blown by the mouth.

TUESDAY, 20 JULY, 1858.

Present:—

Mr. DONALDSON,
Mr. EGAN,
Mr. HAY,
Mr. JONES,

Mr. OAKES,
Mr. PARKES,
Mr. ROBERTSON,
Mr. SCOTT,

Mr. WEEKES.

THE HON. STUART A. DONALDSON, Esq., IN THE CHAIR.

Capt. B. H. Martindale, R.E., Chief Commissioner of Railways, and John Whitton, Esq., Engineer-in-Chief, present in the Room.

James H. Atkinson, Esq., of Sophienburg, near Liverpool, called in and examined:—

J.H. Atkinson
Esq.

20 July, 1858.

1. *By the Chairman:* Were you a passenger in the railway train on the day of the fatal accident, on Saturday, 10th July? I was.
2. Are you able to state to the Committee, with any accuracy approaching to certainty, the speed at which the train was travelling when the accident occurred? My impression is that we were going about forty miles an hour.
3. Have you travelled on other railways besides these in Australia? Yes, a great deal.
4. Have you been in the habit of estimating the speed at which the trains you have travelled in have proceeded? Yes; I have been very curious in these matters.
5. Have you had any opportunity of travelling by the Sydney Railway since the accident? I have.
6. Have you on any occasion timed the rate of travelling since? Not since, but frequently before.
7. Do you draw your conclusion as to the rate of travelling on that particular day from comparison with other rates that you have actually timed? Yes.
8. Can you state, from recollection, how far from where the actual oversetting took place did you feel the carriage to be off the line? I think about one hundred and fifty yards; I cannot state positively.
9. Was it long enough before the collision for you to make any remark to any of your fellow passengers? Yes. The first buck-jump, if I may term it so, from the horse-box being off the rail, and going over the sleepers, gave me the idea that something was wrong, and at the second jump I rose from my seat, and exclaimed, "Hillo!" or something of the sort, and immediately it was evident we were off the line; the next thing I heard was Mr. Want saying "My God!" and over the carriage went. I jumped on one side, and he fell to the other side; I held on for a short time, and the lady close to me I shoved up with me, and at the last tumble we fell down on poor Want, who had previously fallen.
10. Did the carriage slew round? Yes. He, in fact, was thrown from one side of the carriage to the other.
11. On which side of the carriage, facing Sydney, was the deceased Mr. Want sitting? On the left hand side.
12. Was his back to the engine, or his face? He was sitting sideways.
13. How were you sitting? With my back to the engine, very near the centre of the carriage, slightly inclined to the left.
14. Have you formed any opinion in your own mind as to the immediate cause of the accident? I can only state my impression: After the parties who were injured had been attended to, my next feeling was to get out the horses from the horse-boxes that had been thrown over, but the guard said there were no horses in them, and my impression then was that the lightness of the horse-boxes, from being empty, was the cause of the accident.
15. Do you recollect the colour of the horse-boxes, so as to be able to identify them? No.
16. Have you any means of knowing, from any observation on the spot, which carriage it was that first went off the line? No; it is impossible for me to say.
17. *By Mr. Weekes:* You have been a very constant traveller on the railway? I have.
18. Have you noticed that at that part of the line between Homebush and Parramatta a greater speed is usually or always attained than at any other part? Frequently so. I have gone at the rate of fifty miles an hour on that piece of ground.
19. On an ordinary train? No; on an engine I timed it. We have frequently gone at quite as high a speed as what we were going on the day of the accident.
20. Have you ever timed the speed by the quarter-mile posts? Yes, frequently.
21. Do you remember the smallest number of seconds in which one quarter of a mile was done? No; I cannot speak from memory as to any particular quarter-mile.

22. What was about the average speed at those times when you timed it? On some parts ^{J.H. Atkinson Esq.} it was quicker than others; frequently up to thirty-eight miles an hour.
23. Was the greatest speed on that particular spot between these two stations, Homebush and Parramatta? Yes. ^{20 July, 1868.}
24. Did you ever hear of any carriages or horse-boxes being off the line? I have heard of a train being off the line.
25. The Parramatta line I am alluding to? And on the Liverpool too. I was not present on those occasions; but I know it did take place.
26. Can you say when? No. I recollect Mr. Downes being detained on the road some time in consequence of the train getting off the line.
27. Did you notice any slackening of the speed of the train shortly before, or immediately before, the accident? No. I was in earnest conversation with Mr. Want at the time.
28. Did the great speed at which you were going on that particular morning excite any remark, either from yourself or Mr. Want, previous to the first indication of accident? No.
29. Have you ever noticed, either at that part of the line or any other, a particular jerk? Frequently.
30. What did you conceive that arose from? The unevenness of the line, I should suppose.
31. You are aware that in coming down a decline the steam is generally shut off? Yes.
32. And when the decline is past the steam is again put on? Yes.
33. Do you think putting on the steam suddenly would occasion that jerk? I should think it very likely, but I cannot say it did.
34. You think the horse-box being empty would have a tendency to make it fly off the line, or to oscillate? I think decidedly it would, more so than if laden. That is my impression.
35. Supposing the box to be full of horses, would not the principal weight of the horses be about a yard from the floor of the box, and not on the bottom? I think it would.
36. Which do you think left the line first, one of the horse-boxes or your own third-class carriage? The only thing I knew of it was from the jumping of the carriages; but whether our carriage or the horse-box was off first, I cannot tell. I should say, from the position in which we tumbled over, that the horse-box must have come off first.
37. You have no doubt in your own mind that speed is attained on that line at the rate of forty miles an hour, on particular parts of the line? I have travelled at that rate frequently.
38. *By Mr. Scott:* I think you stated you were going at the rate of forty miles an hour just previous to the accident? Yes, at the time of the accident.
39. Had you continued at that speed the whole way from Parramatta? No.
40. Did you experience any particular difference as regards the swaying to and fro when going at this additional speed? It was slightly increased, but nothing to cause alarm.
41. Have you travelled a great deal on English railways? Yes.
42. Have you experienced any difference in roughness or smoothness between the English and our railways? No. Some of the railways in England are even rougher than ours. I remember on one occasion travelling on an English line, and bumping about all the way.
43. What line was that? From Peterborough to Leicester.
44. Have you heard of any accident occurring on that railway? No.
45. Do you know the engine-driver and guard of the train you came down in on the day of the accident? I know the guard very well, but not the engine-driver; I think he has not been long on the line.
46. Did you speak to him at all on that day? No; I spoke to the guard.
47. You have no reason to believe but that all were sober? No.
48. *By Mr. Weekes:* Did you make any remark on the speed at which the train was going on that morning, between Parramatta and the place where the accident occurred? No, I cannot recollect that I did.

Mr. William Fullagar, called in and examined:—

1. *By the Chairman:* Were you in the railway train on the morning of the 10th July, the day of the late fatal accident? I was. ^{Mr. William Fullagar.}
2. Are you able to state to the Committee an opinion, amounting to a strong conviction on your part, as to the rate of travelling at that time? I have no idea of the rate, but we were going very fast at the time—faster than usual; I do not know that I ever went so fast before. ^{20 July, 1868.}
3. Have you ever timed the train? I have not.
4. You have no comparison by which you could state the number of miles per hour? No.
5. *By Mr. Parkes:* You have travelled frequently by the Sydney Railway? Yes.
6. *By the Chairman:* Were you going faster before the accident than at any other time? Just before the accident I thought we were going faster than ever before.
7. For how long? Just before.
8. Do you know if there is a slope or decline in the railway near the place where the accident occurred? I think there is.
9. How long before the actual collision took place did you perceive any jolting or motion of a kind to cause alarm? A very short time. The first I heard was a kind of creaking, then the carriage bumped my back two or three times; I thought there was something the matter, and jumped up, and I then saw the carriage was off the line, and I got out through the window.
10. Was the carriage moving fast at that time? No, it was not.
11. Were you hurt? I did not feel it at the time, but I have felt it ever since across my loins.
12. What did you see when you first became conscious of what was passing, after you got out of the window? I saw a lot of carriages over at the other side.
13. They must have been going over at the time you jumped out? I think they must. I was the only person out on the side I got out at.
14. Was your carriage off the line? Yes, at the edge of the bank.

- Mr. William Fullagar. 15. Which carriage were you in? A second-class carriage.
 16. In what position in the train? There was a first class-carriage a-head of me; I was next to that.
 20 July, 1858. 17. Was the first-class carriage off the line? Yes.
 18. On which side? On the left hand side coming down.
 19. The rest of the carriages were on the other side? Yes.
 20. Have you been much in the habit of travelling on the Parramatta line? Yes, since they started.
 21. Have you ever noticed that at that particular part of the line where the accident occurred they go faster than at any other time? No; that was the first time I noticed them going very fast.
 22. Did you make any remark to any of your fellow passengers about the speed? No; there was no one in the carriage but myself.
 23. By Mr. Weekes: You are quite clear that the speed struck you as being excessive, before the accident occurred? Yes, before the accident.
 24. And from your experience in railway travelling, you are quite sure the train was going at a very unusual rate of speed? Faster than ever I recollect going before.

Charles Shelley Oakes, Esq., called in and examined:—

- C. S. Oakes, Esq. 1. By the Chairman: You reside in Parramatta? Yes.
 2. You have been in the habit of travelling frequently on the railway? Yes.
 20 July, 1858. 3. You were not, I believe, in the train on the 10th July, when the accident occurred? No.
 4. Are you able to inform the Committee whether on any occasion when you have been travelling on the line, or at stations, you have known a carriage, or horse-box, or truck, to be off the line? On two occasions I have known it to happen.
 5. Can you state the dates? No, I could not. On one occasion it was the tender, and on another a horse-box.
 6. Do you recollect whereabouts? In the case of the tender, I think it was about three quarters of a mile beyond Newtown from here; and of the horse-box, about half-way between Parramatta and Homebush.
 7. Near Haslam's Creek bridge? I could not say. I think it was within a mile of it.
 8. Coming towards Sydney? Coming towards Sydney both times.
 9. Was the speed greater than usual at the time the horse-box bent off? I do not recollect that it was unusually fast.
 10. What happened on that occasion? I knew nothing at all about it till the train was stopped, and nearly all the passengers got out and saw it put on again.
 11. How long did it take to put it on? Half-an-hour.
 12. At what part of the train was the horse-box attached? To the last carriage.
 13. On the occasion of the tender getting off the line was the train going at any unusual speed? Yes; but I dare say being so close to the station the speed may have been slackened a little.
 14. Was there any delay? Yes, great delay; I think it must have been off the line for nearly half-a-mile, as nearly as I recollect.
 15. Did any carriages go off as well as the tender? No.
 16. Could you state nearly the dates at which these accidents occurred? I could not say any nearer than that I believe it was within the last twelve months.
 17. Did they happen near together, or was there some interval of time between the two? I could not say, really.
 18. You were present on both occasions? Yes. The same afternoon of the day the tender got off, I believe, they were trying a new engine, and it got off the line at the same place where the tender came off.
 19. Do you know that? I saw it off. We were delayed some time at the station before we could start, in consequence.
 20. That was within the last twelve months? Yes; I think it was all within the last twelve months.
 21. Were you on the train the day before the accident? Yes.
 22. Did you notice anything remarkable about the rate of speed at which you travelled? Yes, I did; I remarked to a fellow passenger that the speed was much greater than usual, and the carriages not only swayed from side to side, but jumped very much.
 23. Where was that? Between Parramatta and Homebush, and along the straight running. There is one long piece of straight running about three miles from Parramatta.
 24. Do you know Haslam's Creek Bridge? I did not know it by that name then, but I know it now.
 25. Was it near that place? We went very much faster than usual all the way.
 26. Do you recollect whether there were any horse-boxes with the train? I believe there were, but I will not be certain.
 27. Have you been in the habit of noticing where the horse-boxes are generally placed? Generally next the engine and tender.
 28. Has that always been the case? No, but generally. I know they go to a good deal of trouble in getting them between the carriages and the engine.
 29. Have they made any decided alteration in placing the horse-boxes since the Campbelltown trains began to run? I do not know that they have. A great many passengers remarked, on the Friday before the accident, that the speed was very much greater than usual. The gentleman I was sitting with said that the carriage knocked about so much that he was obliged to put away his newspaper.
 30. Who was that? Mr. Rabone, of Parramatta.

31. Have you ever timed the train by looking at the quarter mile posts? Yes, but I could not recollect the time. C. S. Oakes, Esq.
32. Was the train drawn by the same engine on Friday as on the following day when the accident happened? I cannot say. 20 July, 1868.
33. Was it the same train, the morning train? Yes; a quarter to nine o'clock.
34. *By Mr. Wickes:* The early train from Campbelltown? Yes.
35. *By the Chairman:* Have you been in the habit of travelling by the railway very often? Yes; twice a day for more than twelve months.
36. And of observing the speed? Yes; I have become so thoroughly accustomed to the speed, that I can always tell when we go faster than usual.
37. *By Mr. Wickes:* Have you noticed before that there has been any increase of speed at a particular part of the line? I think we always went faster along this straight running than at any other place.
38. Just previous to arriving at Haslam's Creek? I cannot say.
39. At all events, between Homebush and Parramatta? Yes; I think about three miles from Parramatta.
40. There you always found an increase of speed? Yes, both coming and going.
41. What was the first indication when the tender or horse-box you spoke of got off the line, that such an event had happened? We did not know anything about the horse-box being off till the train was stopped. The tender stirred up so much dust that we were nearly smothered—that was how we knew something was off the line.
42. Most of your travelling on the Parramatta line has been by the early train? Yes, and in the afternoon.
43. Were you in the habit of seeing the same guards, or noticing the same drivers by the early train? Before the alteration in June, I think, there was always the same guard; but since then I could not tell, for sometimes I saw them, and sometimes I did not. I think they did not keep to the same trains so strictly as they did before.
44. *By Mr. Scott:* Do you know the engine-drivers and guards on the railway? I know the guards, and I know the engine-driver by sight.
45. Have you generally found them steady, sober, and well-conducted men? Yes.

Mr. John Aaron Parfitt, carriage builder, called in and examined:—

1. *By the Chairman:* Have you had much experience in building railway carriages? I have often been tempted to go into the building of them, but I never would touch them. Mr. J. A. Parfitt.
2. Do you understand them? Yes, as a mechanical observer. That is my object in coming here. 20 July, 1868.
3. Will you state, from your knowledge as a mechanical observer, what is your opinion of the carriages on the Sydney Railway? They are unadapted for speed, and very bad in their arrangement. Perhaps it may be as well, as this a matter of mechanical opinion, to hand in this document, to show that I am a man that understands the matter (*handing a paper to the Chairman*).
4. Will you state why you think the carriages on the Sydney line unadapted for speed, and otherwise objectionable? I wish you to understand that I have been a traveller on the Great Western line in England, and I have observed the experiments they have tried for oscillation; and from that I go direct to the differences I have observed in the carriages here. The bodies are hung too high above the wheels, and they overhang the wheels too much.
5. Is there any other defect? The machinery itself is too taught—to much on the principle of a tight rope for a dancer.
6. What machinery do you allude to? The under machinery—the rolling machinery—couplings, fastenings, scroll-irons; they are calculated to give an impetus to oscillation.
7. Do you know the builder of these carriages, Wright? I do not know him personally, but I have been at his yard, and admired the work there.
8. Is he a good builder? One of the best builders.
9. Do you see anything in these carriages different from those built by others? They are notorious for the same kind of accidents.
10. In what part of England? On the line between Reading and Reigate, and on the North-eastern.
11. Was Wright the builder for the North-eastern? I cannot say, but the principle of the machinery seems to me about the same; the gauge has something to do with it. I have been at Parramatta twice, and I said the same to a gentleman who used to travel that way as I tell you now.
12. What remedy would you suggest for the defects you have pointed out? The wheels of the carriages on the Great Western, which was the principal line of my observation, appear to me to be ten inches or a foot larger in diameter than the wheels of the carriages here, and still the bodies of these carriages are at least six or eight inches nearer the ground. It is well known to persons in the habit of travelling, that there are certain carriages they would not get into, known for oscillation, and they will pass half-a-dozen to come to one made by a particular maker.
13. Do these observations of yours extend to the horse-boxes? I have noticed the horse-boxes too here, and there is the same defect in them. I went up on Sunday, having no other time, and measured them, and there are about ten inches and a-half between the circumference of the wheel and the bottom of the carriage, which, in the Great Western, would be lower than the top of the wheel.
14. *By Mr. Wickes:* You consider Wright a very good builder? Yes.
15. Do you know what line Wright makes for? He makes a great number of carriages for exportation.

Mr. J. A.
Parfitt.

20 July, 1858.

exportation. I cannot tell you what lines he makes for in England. His establishment was formed about 1848.

16. Do you think these carriages are built on a safe principle? They cannot be safe on that principle. If the bodies are built so much higher they cannot be as safe. For example, if the bodies are hung ten inches above the bearing of the wheel they cannot be so safe as if hung a foot lower.

17. Do you know whether hanging the carriages low is a peculiarity of the Great Western line—or can you say what is the average height at which they are hung on other lines? I cannot say so much about other lines. That is the line I travelled on most.

18. Are you aware whether there are more or fewer accidents on the Great Western Railway than on other lines? There are less of that sort—by trains running off the line. I do not remember more than one which became a public matter. I have known many accidents where trains have worked themselves off the sidings.

19. When you say that the machinery is too taught, do you mean that the couplings are screwed up too tight? I mean that it is too much on the principle of a tight rope, and calculated to give an impetus to oscillation.

20. Do you believe the screwing of the couplings up tight has a tendency to cause oscillation? That is not what I mean. I should think not. I mean the back-plates, the springs, scroll-irons, and couplings.

21. When you speak of couplings, do you mean what fastens the various carriages together? No; the couplings between the scroll-irons and the spring-backs. They would have a tendency when too taught, with a certain amount of oscillation, to trip, and lift the wheel with them, the bearing of the bodies being outside the wheel. There is a difference between fair oscillation and oscillation produced by bad machinery.

22. Are you aware whether the carriages now running on the Great Southern Railway are higher from the ground than the generality of those used in England? I believe they are, for the diameter of the wheels.

23. Do you say that from your own knowledge? From my own observation.

24. *By Mr. Scott:* Have you, since or before the accident, examined carefully the various portions of the machinery? I went up on Sunday morning, having no other time, and examined the carriages that were running, and then I asked permission to look at the carriages that were used at the time of the accident, and I observed the same defects in both.

25. What were those defects? Deficiency of bolts and clips.

26. Did you see any other deficiency? No, excepting what I saw in the springs, which are drawn too straight.

27. Did you make any observation with respect to the buffers? Yes; I looked at them, and saw they were on two or three different principles. There is nothing in that.

28. Was there anything, in your opinion, in the position or manufacture of the buffers that would assist the carriages in getting off the rail when going at speed? No, not at all.

29. Did you make any observations with regard to the flanges of the wheels? I made observations with regard to the axletree-bolts.

30. Not the flanges? No.

31. Which gauge do you reckon the safest? The broad gauge, undoubtedly.

32. Is it your opinion, from your examination of the carriages here, that if they were going at a great rate they would sway much? I think they would. I noticed it immediately I got on the line. I have been twice on the line, and I observed what I would not call fair oscillation. I think the position of the springs has a tendency to give an impetus to oscillation.

33. Do you think that if the train was going at the rate of forty miles an hour at the time, it would be quite sufficient to account for the accident? Yes. I do not think those carriages can go with safety more than twenty-five miles an hour. I would not say that caused the accident, but it would be quite sufficient to cause a similar accident. I have nothing to guide me but the observations of the jury as to whether the horse-box first got off the line; but I may say that the wheels of these horse-boxes are closer than any wheels I ever saw, and I believe they are four feet closer than those on the Great Western.

34. *By Mr. Weekes:* What is the gauge of the Great Western? 5 ft. 2 in., I think.

35. Do you not think it is seven feet? It may be seven feet.

36. Are not the majority of railways in England—in fact nearly all but the Great Western—on a similar gauge to that of the Parramatta line? They are.

37. Then the result of their experience would seem to be, that the 4 ft. 8½ in. gauge is considered by railway authorities in England the safest? No; I do not think so. I think they have got the railways laid down, and they act up to them.

Captain B. H. Martindale, R.E., Chief Commissioner of Railways, further examined:—

Capt. B. H.
Martindale,
R. E.

20 July, 1858.

1. *By the Chairman:* Since you were examined first we have had evidence, both from the guard of the railway, who was present at the accident, and from some of the passengers; and we have also had evidence of different vehicles—a horse-box, an engine, and a tender—having been off the line at different times, though we have been able to arrive at no absolute certainty as yet as to the date; but it has been stated that two of these occurrences happened within nine months, and all within twelve months: will you state to the Committee whether, during your experience as Chief Commissioner, you have had reports of any such accidents? I have been in the Colony about twelve months, and I remember hearing, when I first came, that there were two of the engines that were faulty in construction, and did not run safely; they were taken into the shop to be altered, in consequence, and were altered, and have run safely since.

2. *By Mr. Hay:* Were these new engines? Yes; Nos. 6 and 7.

Capt. B. H.
Martindale,
R. R.

20 July, 1858.

3. Was it upon the first occasion of their being tried that they proved to be faulty? Shortly after they began to run. I mentioned it in my first report. The only accidents of which I can trace reports since I came here were of a very trifling character, and always, or almost always, within stations; and the causes have been invariably traced, and found to be ordinary causes.
4. *By the Chairman:* Then you have no report of a horse-box having been off the line between Parramatta and Homebush within the last twelve months? I have no report.
5. Nor of a tender being off the line within three-quarters of a mile from Newtown? No.
6. Supposing these occurrences to have taken place, no reports having been made to you, does not that indicate great irregularity on the part of the servants of the railway? It does. They should have been reported, according to orders, if they occurred. I may say that, within the last twelve months the management of the railway has been entirely changed.
7. *By Mr. Weekes:* Whose duty is it to report any accident occurring on the line? The Manager's.
8. Whose duty is it first to report an accident, the driver's or the guard's? The guard should report to the Manager, and the driver to the Foreman of Locomotives; they would both report.
9. Independently of each other? Yes.
10. Each to his immediate superior? Each to his immediate superior.
11. *By Mr. Hay:* How would the report come to you? The Manager's report would come direct to me, and the report of the Foreman of Locomotives would come to me through the Engineer-in-chief, who has for the present taken charge of that branch of the department in addition to his own proper duties.
12. *By Mr. Weekes:* There must have been some dereliction of duty in these several instances not having been reported, supposing what these witnesses have stated to be true? Yes. The orders are much stricter now about reporting than they were some months ago. They are very strict now.
13. An accident of that kind occurring—an engine or tender getting off the line—must be known to a great number of persons? Unquestionably. It would be known to every body in the train, at any rate.
14. Is it not singular, therefore, that some account of these accidents did not find their way to the Chief Commissioner? The Chief Commissioner has a great deal to do.
15. I mean, does it not show that there was some desire on the part of the officials to blink or screen them from the immediate notice of the Chief of the department? I would not say that. I think when I came to the Colony the régime was defective in some respects, and reports did not come in with the same regularity that they do now.
16. You found the system lax when you took charge of it? I do not think it was a perfect system. It wanted a good deal of looking up, in different ways. Each man has his own way of directing such a department as the Railway Department. What I might think lax another man might think sufficient, or *vice versa*.
17. Can you tell whether it is the same driver who drives any particular train at a certain time of the day? Yes.
18. The driver of the early train from Campbelltown, for instance, this morning will drive also to-morrow morning? He will.
19. Then, the man who drove the train on the Friday morning before the accident was the same driver that drove on the day of the accident? He was.
20. What is the rate allowed by the authorities for the railway trains on the Parramatta line to travel at? Twenty miles an hour, with the exception of the distance between Parramatta and Homebush, where it is twenty-four miles an hour by one train.
21. *By the Chairman:* In your former examination you stated to the Committee that you thought—the evidence then before you being that the highest speed at which the train was driven before the accident was twenty-five miles an hour—there was nothing in the coupling of the carriages to account for the accident. You have since heard the evidence of Messrs. Brown and McDougal, and this morning of Mr. Atkinson, who pointedly declared that they were certain the train was travelling at the rate of forty miles an hour—on that evidence do you now see any reason to account for the accident, owing to the coupling of the horse-boxes by what is called a centre-link instead of a screw-coupling? I could not say positively that that would account for the accident. If the train was travelling at forty miles an hour, the buffers would probably not have been together, either with screw-couplings or centre-links.
22. We have it in evidence from Mr. Whitton, the Engineer-in-Chief, that if the speed was excessive the accident might be accounted for, and that he thought forty miles an hour an excessive speed? Mr. Whitton may have been referring more to the curves on the line than to the couplings, when speaking of the speed.
23. *By Mr. Scott:* I think you have just stated that from twenty to twenty-three miles an hour is the utmost speed allowed by the authorities: You have heard the evidence, and the general impression is that the train was going nearer forty miles an hour; do you believe in that? I have no evidence from which to judge, excepting that which the Committee has; and I think it is necessary to be particularly careful in accepting statements as to the speed.
24. If the engine-driver was going at the rate of forty miles an hour down that decline, would you consider it dangerous? I should not think it enough to throw a train off the line on that decline. It is a good road, it is in good order, and it is straight. I do not think on a straight decline that speed is sufficient to account for the accident; though forty miles an hour on the whole line would be a dangerous speed, especially on account of the curves.
25. If you should feel satisfied that the engine-driver did go at forty miles an hour, against your orders, would you think it necessary to make an example? Certainly.
26. *By Mr. Weekes:* As we have the concurring testimony of a variety of passengers, calculating the speed at different times, and all agreeing in the fact of a very high rate of speed,

Capt. B. H.
Martindale,
R.E.

20 July, 1853.

would you be induced to believe that evidence? I have no wish to throw the least discredit on the evidence of the passengers, but I think the Committee might bear this in mind, that immediately after an accident of this kind, as a rule, a great variety of reasons are started to account for it, and one of the commonest of those reasons is high speed; and the common rumour may have had a certain influence on the judgment of those gentlemen. I cannot, of course, say that it has; but just as I should receive the evidence of the railway servants with caution, on the one hand, so I would receive the evidence of the passengers with caution on the other.

27. *By Mr. Parkes:* These rumours could not possibly have affected the opinions of passengers formed before the accident occurred? No; I should attach more weight to a remark upon the speed made before the accident than to any opinion formed after it happened.

28. *By Mr. Hay:* When was the change made in the office of Traffic Manager? About the middle of September.

29. The former Traffic Manager was then removed? Yes.

30. Had you reason to be satisfied with his management? I removed him because I was dissatisfied.

31. Do you think he had been careful on all occasions to report those things which happened on the railway, and which, in your opinion, ought to have been reported? I removed him principally because I thought his general management was loose. I thought he was getting a high salary, and, in fact, doing nothing for it. That was the main ground on which I removed him.

32. Is it an easy thing to get a good Traffic Manager in this country? No, it is not. The present manager is very zealous.

33. I suppose, if any passengers on the railway were to make it known to you that any portion of the train had been off the line, or that any irregularity whatever had been committed on the line, you would be very glad to have the opportunity of investigating? Yes. Every complaint that comes to me in writing is made the subject of an immediate inquiry and separate report.

34. You would be glad if any passenger did report such an occurrence to you? Most certainly. It is one of the greatest protections to the Chief Commissioner in the execution of his duty, when the public come forward openly to tell him of any irregularity.

35. The public have a great deal of power in that way in their own hands? They have this power, that I should instantly order an inquiry and report, whenever they came forward openly. I never take notice of anonymous communications.

36. Supposing the speed attained at the top of this decline had been forty miles an hour, and supposing the steam to have been then shut off, do you not think there was danger of the momentum of the train throwing the carriages up together, to a certain extent, in coming down the decline? There is a gradient just on the other side, and I doubt if that speed would have been attained coming up that gradient.

37. Supposing that speed to have been attained, what would have been the effect upon the carriages coming down the decline? I think the effect of that would have been to bring the buffers together, and so to have done away with the evil that might arise from having centre-links instead of screw-couplings. If the steam was shut off the engine would act, at first, as a drag on the carriages, and tend to keep them closer together.

38. Do you not think any irregularity in the rail, or any tendency to oscillate in any portion of the train, would be aggravated in such a long piece of straight running as that, at such a speed as forty miles an hour? Yes; I think that running at a high speed on a long decline would have a tendency to increase oscillation.

39. And that, combined with any imperfection in any part of the rolling stock, or in the rails, might cause an accident, though none of these causes alone would be sufficient to produce it? Yes; any defect, such as loose coupling, or too great play in the journals, or any defect in the construction of the rolling stock, together with such a high rate of speed, might cause such oscillation as would throw the train off the line.

40. Supposing the speed was such as has been stated, and taking everything into account as you know it now, do you not think that likely to have been the cause? I do, assuming the fact of the speed.

41. *By Mr. Scott:* Was it reported to you, previous to the accident, that the speed the day before had been excessive? It was not. I had no report of the day before, the 9th, owing to the accident having occurred early in the day on the 10th, and the attention of everybody having been absorbed in it. It is the only day on which I have had no report since the appointment of the Traffic Inspector.

42. Were you not told that the speed of the train was excessive the day before the accident? I did hear so.

43. Previous to the accident occurring? No; I heard they had been travelling faster than usual the day before; but I do not recollect who told me so.

44. *By Mr. Weekes:* Is not that particular part of the line where the accident occurred dangerous for a high rate of speed, on account of its proximity to a curve? It is.

45. Then, in travelling at a high rate of speed the driver exhibited great indiscretion? He did, on the account you mention—the proximity to a curve.

46. Was the time the train left the day before reported to you? I had no report of the 9th, in consequence, as I have said, of the accident on the 10th; but I can let the Committee know. The reports for each day come in on the day following.

47. *By Mr. Egan:* The Committee have it in evidence that on one occasion a horse-box, and, on another, a tender, got off the line, and that on each occasion there was a delay of half an hour—were not those matters that ought to have been reported? Yes, certainly.

48. They never have been? No.

49. *By Mr. Weekes:* Is the driver at all held responsible for starting late from the stations? Not in the least.

50. It was given in evidence by one of the witnesses that the driver of the fatal train, I may call it, exhibited considerable symptoms of impatience and irritation at being detained,—would it not seem that the man was under some apprehension that he was in a manner responsible for the delay that took place? I understood the witness to say that he beckoned with his hand to the other man in an impatient way. Perhaps I ought to furnish to the Committee some details respecting the general system of management of the railway. I do not myself come into collision with any of the drivers, nor any of the subordinates. The department is divided into four branches—the Secretary's, the Engineer-in-Chief's, the Accountant's, and the Traffic Manager's. Any fault I have to find, or any orders I have to give, I give to the gentleman at the head of each branch, and they give their orders to those for whom they are responsible in each branch; therefore, any order to an engine-driver or a porter would not be given by me direct, but by the head of the branch; and, with reference to what has been said about screw-coupling, I never should give a detail order of that kind; I should appoint a proper officer, and such details would be left to him, unless my attention was specially called, and then I should direct the head of the proper branch, and he would give the order.

Capt. B. H.
Martindale,
R. E.

20 July, 1858.

51. It would be impossible for you to control details? It would relieve the proper officer of his responsibility if I did so.

52. *By the Chairman:* As a matter of fact, an order has been given that no carriages should be coupled in future except with screw-couplings? Yes.

53. *By Mr. Parkes:* Are there any printed regulations for the respective branches? There are general instructions for the working of the line.

54. Printed? Yes, printed for the working of the line. Mr. Nealds has his separate instructions. To Mr. Whitton I have never given any instructions, excepting on matters that arise from day to day.

55. No written instructions, comprehending the whole of the respective duties, have been issued to the heads of the separate departments? Not in a condensed form; but I think each has had at different times papers laying down his duties. I will explain the system on which the department is worked:—Everything is done by writing; there are no verbal orders given at all. There is a system of minute papers, and everything that occurs is entered on one of these minute papers; the report is made on the same minute paper, and if it goes through twenty hands, everything respecting the matter appears on this minute paper. Therefore, any instructions I have given have been on these minute papers, which are registered, and kept for reference.

56. Did you create the situation of Traffic Manager? No; there was a General Manager and a Traffic Manager, and when the present Traffic Manager was appointed, the place of General Manager was done away with.

57. You appointed Mr. Nealds? Yes.

58. Had he written instructions? He had.

59. Did they comprehend the whole of his duties? The general instructions did. In fact, there were confidential instructions to him.

60. The Engineer-in-Chief does not stand at all in the same relation as these other officers—he must have a more general control over the whole railway—the Traffic Manager, for instance, would only have to attend to the routine of the traffic? He would.

61. And the Secretary would only have to conduct the correspondence? He would.

62. But the Engineer-in-Chief holds a more responsible position? He has duties far more important.

63. Everything with regard to the construction of all the lines of railway in the country, as well as the construction of the carriages, or any change in the rolling stock, must be directed by the Engineer-in-Chief? It is so here; but at home all matters connected with the rolling stock would be directed by a superintendent of locomotives. The Engineer-in-Chief is doing that duty, in addition to his own proper duty, which is the superintendence of the line. There is no superintendent of locomotives here.

64. *By Mr. Hay:* Do you think we ought to have a superintendent of locomotives? In answer to that question, although Mr. Whitton is present, I must say, that if I had not a gentleman of Whitton's ability, I think we ought to have a superintendent of locomotives.

65. *By Mr. Weekes:* Do the multifarious duties of the Engineer-in-Chief permit him to give that rigid examination to the rolling stock, which is the particular duty of a locomotive superintendent, taking into account that his duties may frequently take him from Sydney on matters connected with the construction of the different lines of railway? Mr. Whitton has felt himself able to perform them so far, but as the lines increase in extent, it will be necessary to have a locomotive superintendent. I have no wish to incur so large an amount of expense until we are obliged. We could not get a good locomotive superintendent under £1,000 or £1,200 a year.

Mr. James Shea, called in and examined:—

1. *By the Chairman:* Were you travelling in the railway train to which the accident happened on Saturday the 10th July? I was.

Mr. J. Shea.

2. Were you injured in any way? Yes; on my legs and on my side. I would have been seriously injured only that I had my business papers in my breast-pocket, and they saved me.

20 July, 1858.

3. What carriage were you in? A third-class carriage.

4. Which of them? I went in the next but one to that in which Mr. Want, who was killed, was—the third third-class carriage.

5.

- Mr. J. Shea. 5. Did you notice anything particular in the speed at which you were travelling? Being used to railway travelling I did not notice the speed until the chuck came, and I thought they were putting on high pressure to go on the straight line. When that came I looked out, and the carriages began to bump.
6. Were they off the line? No. The party next to me then said, "Keep your seats, because it is bad to rush to one side;" and the words were hardly out when I looked over again, and the carriage then was off the line. Then I saw the engine fly along, and I did the best I could to get out; and that was all I knew until I was picked up again.
7. Were you insensible? Yes, for about a quarter of an hour.
8. You jumped out on the bank? I do not know whether I jumped out or was thrown out, but when I got a little sensible I found I was on the top of another man.
9. Then you did not notice any thing in the speed to alarm you, previous to the accident? No, but I thought they were coming on the straight line, and they generally go at a greater speed there than when just leaving the station. I thought it was rather more than the general speed. I had been travelling on the railway nearly all the week.
10. By Mr. Hay: At the time it did not strike you that the train was going at any very great speed? No.
11. By Mr. Jones: Did you notice any difference in the speed between the time you started, or soon after leaving Parramatta, and the time immediately preceding the accident? Yes, because when they have started from Parramatta they always put on more speed.
12. Immediately after they leave Parramatta? Not immediately after; they increase the speed gradually.
13. For instance, at two miles from Parramatta did they appear to be travelling at a slower pace than at the part of the line immediately preceding the spot where the accident occurred? Yes, I think they were.
14. By Mr. Weekes: Do you say that when you felt the first jerk the carriage you were in was not off the line? It was not off the line then.
15. By Mr. Jones: Was the horse-box off the rail? I could not see that.
16. By Mr. Weekes: You consider that the jerk was caused by putting on steam again? Yes.
17. Have you been in the habit of feeling similar jerks? Yes.
18. By Mr. Parkes: Did you enter into any conversation with any person, previous to the accident, on the subject of the railway, or the speed at which you were travelling? No.

Charles John Nealds, Esq., Traffic Manager of the Sydney Railway, called in and examined:—

- C. J. Nealds, Esq. 1. By the Chairman: Were you on the railway line on the day of the late accident? I was during the day, but not in the early part of the day.
- 20 July, 1858. 2. Since you have taken charge as Traffic Manager, has every instance of a truck, or horse-box, or other vehicle getting off the line, been reported to you? I believe every case has been reported to me of anything that has got off the line in running; and I believe also, every case that has got off the sidings.
3. When were you appointed Traffic Manager? In January, I think it was. I was Inspector previously, doing the same duty.
4. By Mr. Hay: When did you take charge? I think it was in September.
5. Under the title of Inspector? Yes.
6. By the Chairman: Have you known an instance of a horse-box getting off the line between Homebush and Parramatta since you took charge of the traffic? No.
7. Nor of a tender getting off within three-quarters of a mile of Newtown? No.
8. Nor of an engine getting off the line near the same spot? No.
9. If such cases did happen no reports were made to you. Had you any report, in any way, of any great speed having been attained by the early train between Parramatta and Homebush on the Friday preceding the accident? I have heard of it since, but not before.
10. Before you were Traffic Inspector did you ever know an instance of a carriage getting off the line that was not reported? Not in running, except in the case when a carriage got off from running over a cow: that was on the Liverpool line.
11. You have not heard of such a thing between Parramatta and Sydney? No. An engine got off the sidings at Newtown; perhaps that is what you were alluding to.
12. By Mr. Hay: Do you not recollect some of the new engines getting off the line shortly after they were tried? That was long before I took charge.
13. That, you believe, was reported? Yes, as far as I am aware.
14. You never heard of a horse-box getting off the line, about nine months ago, near Haslam's Bridge? No.

WEDNESDAY,

WEDNESDAY, 21 JULY, 1858.

Present:—

MR. DONALDSON,
MR. EGAN,
MR. HAY,
MR. JONES,

MR. OAKES,
MR. PARKES,
MR. SCOTT,
MR. WEEKES.

THE HON. STUART A. DONALDSON, Esq., IN THE CHAIR.

Edward Bell, Esq., M. Inst. C. E., called in and examined:—

1. *By the Chairman:* You have had considerable experience in the management and traffic of railways in Great Britain? Yes; and in other countries. Edward Bell,
Esq., C.E.
2. Can you inform the Committee whether there is any invariable rule in Great Britain as to the coupling of carriages on ordinary or passenger trains? There is an invariable rule to put screw-coupling on in trains for passengers—on every carriage in passenger trains. 21 July, 1858.
3. Did you ever know horse-boxes on passenger trains to be fastened by centre-links without screw-coupling? I never knew it, without it were done contrary to instructions. The horse-boxes had screw-coupling as well as side-links.
4. Would you conceive that in travelling with passenger trains there was some danger, if the train were going at a considerable speed, in having any carriages connected with centre-links without screw-coupling? Yes; unless the buffers were brought up to have their proper bearing; but without screw-coupling it would be impossible to bring the buffers together.
5. What rate of speed would you say would be dangerous if two horse-boxes were placed in contiguity to the tender, and between that and the passenger carriages, and were coupled by a centre-link without screw-coupling? The answer to that question would depend very much upon a variety of other circumstances.
6. Will you state what circumstances would modify your answer? There might be so many local and collateral circumstances connected with the whole matter, that without seeing the locality, and becoming more acquainted with it and the line, it is scarcely possible to give correct opinions on the subject; and I quite concur in the remarks of the Honorable Chairman, that it is highly important I should see the line before attempting to give an opinion. It might depend upon whether the carriages were four-wheeled, and whether the buffers of the horse-boxes were higher than the buffers of the tender. If the latter were the case, it would be more dangerous than if the buffers were central; and the more the hindmost were above the foremost the more dangerous it would be.
7. Then you do assume that there would be some danger in the state of things you have described? I assume that there is great danger in putting the horse-boxes where they were.
8. *By Mr. Parkes:* It has been given in evidence that the probable cause of this accident was the buffers being in the state you have supposed—one having jumped upon the other? With the oscillation there appears to have been upon the carriages at the time they were descending the hill, it is only what I should have expected, if the buffers of the horse-box were above the buffers of the tender, and the horse-box received some pressure from behind at the time of the oscillation; and if that pressure came on when the axis of the buffers of the horse-box were at an angle with that of the tender, and the centre of the buffer of the horse-box were above the centre of the buffer of the tender, it would necessarily be jammed, and so prevented from taking its proper position, and assist in turning the horse-truck off the line.
9. *By the Chairman:* We have it in evidence that before coming to the point where the first carriage left the line there is a considerable decline, one in one hundred and thirty-two, extending over a considerable distance, perhaps half a mile, and that at the bottom of this decline there is a level of from two hundred to three hundred yards: we have it also in evidence that the speed was considerable coming down this decline: we have it further in evidence that the carriage which first left the line left it after passing over the level before coming to a curve to the left, and that the carriage that left the line ran off both the lines, and left the railway at the bank on the right hand side of the line: that the following was the position of the carriages and trucks,—two horse-boxes next the tender, then three third-class carriages, then a break-van, then a first, second, and third-class carriage, and then three goods trucks:—Would you say that these circumstances would cause an impetus from behind the carriage—the tender and horse-boxes being connected with centre-links, and not with screw-couplings? Those circumstances would be quite sufficient to push the horse-trucks off the line, the horse-trucks having only four wheels, which I understand is the case here.
10. If the steam were shut off at the top of the decline, and the carriages had run down by their own impetus to the level; if, again, the steam were put on after passing the level, or on the level—if we find the horse-boxes had left the line before the steam was put on and the engine had broken away from the train, would you attribute that breaking away of the engine from the train, under ordinary circumstances, to the fact of clapping on the steam just there? I conceive the chains were broken by the horse-boxes passing off the line. As soon as the boxes were off the line the impetus of the engine was sufficient to break the chains.
11. We have it in evidence—the best evidence we can have—from the observation of passengers—that the train was travelling at about forty miles an hour just before the accident occurred. Under all the circumstances I have detailed, would you give the Committee the benefit of your professional opinion as to the cause of the accident? I think there is no doubt about the speed having been high at the time the train ran off the line, from the circumstance of some of the carriages having travelled two hundred and fifty yards after they left the line. I never knew an instance before where they travelled so far off the line.

Edward Bell,
Esq., C.M.

21 July, 1868.

12. Assuming that state of circumstances:—that the speed was excessive—forty miles an hour—that the position of the carriages was as I have stated—that there were links instead of screw-couplings between the two horse-boxes, and that the other circumstances were as I have detailed them to you,—do you think you could give the Committee an opinion that would enable them to account for the accident? Premising that the basis upon which I am to form an opinion is correct, I think the arrangement of the train was altogether injudicious, inasmuch as two empty horse-boxes, or even one empty horse-box, ought never to have been put next the tender, or in front of the passenger carriages. I think, also, no loaded goods trucks, if there were loaded goods trucks, ought to have been put in the rear; if sent with passenger trains they ought to have been put in the front. There is a particular order to that effect in England, where I have known three or four accidents to occur from the neglect of that rule. I, in point of fact, in a great measure, attribute the origin of the accident to the placing of these three loaded goods trucks, assuming that they were loaded, at the rear of that train, and of the two empty horse-trucks next to the tender, or in front of any heavy carriages. Such a thing is very unusual at home. It occurs to me that it would be very ill-judged for an engine-driver descending an incline so rapid as one in one hundred and thirty-two, (for I must observe, that although that is an easy gradient to ascend, is a rapid gradient to descend, having a curve immediately before him of thirty-six chains radius,) to turn the steam on before he came to that curve.

13. We have the evidence of the driver himself that he did turn the steam on before he came to that curve, after he descended the incline, at the rising of the next incline? He ought to have done it before he got to the foot of the downward incline, then he would not have jammed his horse-boxes between the tender and the carriages; he should have led his horse-boxes by the engine. The danger in this case was the pressure from behind, and not in front. If they had been led they probably never would have gone off the line.

14. *By Mr. Weekes:* Are you aware whether it is the practice in England to run horse-boxes with passenger trains? Always; when carriages and horses have to go with the passengers, they go with the passenger trains.

15. Are you aware of any invariable rule as to the position in a train of horse-boxes when travelling with passenger carriages? In most cases they run in front of the truck which carries the passengers carriages, and that is almost invariably in the rear of the train.

16. Is not a position close to the tender the steadiest for a carriage—more steady than the tail of a train? While the engine is drawing the train, it is. When the carriages are running free down an incline, and in danger of being pressed from behind, the tail of a train is the safest.

17. Do you know the number of wheels on the passenger carriages on this line? I have seen none on the present line with less than six.

18. Do you think the horse-boxes are more disposed to oscillate from having only four wheels than they would be if they had six? Undoubtedly. I may say four-wheeled carriages and engines, on all railways in England, are now being abolished—the oscillation of the engines used to be so severe—with the exception of horse-boxes; but the Great Western have six-wheeled horse-boxes.

19. Some of the witnesses have stated that immediately preceding the accident they felt a considerable jerk before the engine was off the line, which gave them a momentum forward; do you think that was occasioned by the steam being put on the engine, and therefore tightening everything which had been slackened by coming down the descent? If the passengers sat with their faces to the engine, and felt a forward movement of the train, that would rather throw their bodies backwards; but if their bodies made a forward motion, that would have been caused by some check, probably by the striking of the wheel against the first sleeper it came in contact with after getting off the rail.

20. The two horse-boxes being connected with loose coupling-chains, in coming down the incline the pressure of the train behind would bring together buffer to buffer, and leave the chain slack, and when the engine went a-head, would there not be a jerk, caused by bringing the chain taught. Yes.

21. As that occurred about the spot where the accident began, do you think the putting on of the steam under these peculiar circumstances caused the accident? I cannot say; I think the putting on of the steam at the particular spot where it was put on was too late. If the steam were put on there, the result of a jerk would be to break the chains; it would not throw the truck off the line, it would help to keep it on; but had the steam been applied to the engine before they got to that point, and so have kept the chains stretched, there might have been no accident.

(The screw-coupling was produced.)

22. Will you look at that screw-coupling, and say whether that is the ordinary kind of screw-coupling for that purpose? Yes; there is a little difference in the making of them, but this is the most ordinary kind.

23. Will you look at that broken link. *(The witness examined the same.)* What is your opinion of the quality of the iron, from the fracture? It is not very good iron; it seems very short.

24. Would good, tough iron break in that way? It seems to me as though it had been rather burnt in the forging—that it had been over heated.

25. That would have a tendency to make it brittle? Yes; and that is the place where it would be heated in making.

26. Should you expect that the fracture would take place in that particular part of the link from a sudden strain—you see a piece has been pulled out altogether? Yes; that is the part I should have expected to give way, the iron being in this state.

27. If that link had been made of the best soft iron, and had not given way, what would have been the result of the train being off the line? Something else would have given way—some of the links.

28. The attention of the driver would naturally have been attracted to it immediately, and, by stopping the engine, might not this catastrophe been avoided, although the train had been off the line? The fracture of this must have been immediate. If it had been double the strength it must have gone if the train had got off the rail.

Edward Bell,
Esq., C.E.
21 July, 1868.

29. Was not the breaking of that link the cause of the accident being of so calamitous a nature—if that link had held, even though the train was off the line, might not the catastrophe have been avoided? I do not think it would have made any difference—something must have gone; the weight of the engine alone, the rate at which it was going, must have carried something away. I have been acquainted with several such accidents, and in two or three cases have been in the train at the time, and I know of no case where the carriages and trucks travelled so far after they left the rail as in this instance.

30. Do you not know of an instance where a train has gone off the line and the engine has gone a considerable distance without the coupling breaking? Yes.

31. *By Mr. Parkes:* Do you not think if the screw-coupling had not gone the accident would have been more serious? I think it is much better for the engine to be free as soon as possible.

32. *By the Chairman:* I understand you to attribute the distance which the carriages went off the line, or after they had left the line, to the impetus they had by the excessive speed, or by the pressure from behind, rather than to the possibility of the engine drawing it that distance? I am certain the engine did not draw them, but the impetus carried them that distance; and I think that impetus must have been increased by the trucks in the rear, if they were loaded. I think the rear of the train must have been on the downward incline, described to me, when the carriages went off the rail.

33. *By Mr. Parkes:* How long have you been in the Colony? About two years and a-half.

34. I think you have filled the office of City Engineer, first under the Commissioners, and then under the Municipal Council? Yes.

35. Has your attention at all been turned, from reasons arising out of your profession, to railway communication in this Colony—the question having been frequently agitated? Yes.

36. Have you frequently travelled by railway between Sydney and Parramatta? Yes; only on the Great Southern Railway.

37. Your attention having been turned to the question generally, have you paid particular attention to the construction of this line, and of the carriages, and to the way in which the railway is worked generally? I could pay particular attention only at such stations as I had to stop at; one cannot pay particular attention to a line in merely passing over it.

38. Have you ever expressed an opinion upon the improper construction of the carriages, or the improper mode of fastening them, before the accident occurred? No, I do not remember, excepting that at one time I made the remark that the sleepers between this and Parramatta seemed to be too great a distance apart. I think they were much further apart than they are now.

39. How long is it since you left England? Two years and three-quarters.

40. Then the evidence you have given, so far as it relates to what is going on in England, is based upon that recent experience? Yes.

41. *By Mr. Jones:* Were you employed at all upon railways at home? Several times in the course of my life.

42. In what capacity? As engineer to some of them, and as assistant engineer to others.

43. In speaking then of the practice in England you speak from your own actual experience? Yes.

44. How recently have you been engaged upon railways at home? I was so engaged before I went to Russia—about eight years ago. I was in Russia five years, nearly.

45. Have you examined this line of railway since this accident occurred? No.

46. Do I understand you to say that the engine must have parted from the horse-boxes as soon as they got off the rail? Yes.

47. And the train was overturned by its own momentum? Yes. I have not seen the site of the accident; I speak only from what I have seen before.

48. *By Mr. Weckes:* Are you acquainted with the Barlow rail? Yes.

49. What is your opinion of that rail, as to its safety for traffic generally? It is always considered a very safe rail; in fact, most of the continental railways have no other rail than this, and it is very rare for any accident to occur on them. I have been on railways in Holland, Austria, Prussia, and Russia, and I never knew an instance of an accident from Barlow's rail; but there is the greatest possible care taken.

50. *By Mr. Hay:* Are they on longitudinal sleepers? Yes. Barlow's rail requires a continuous bearing. Here there are not longitudinal sleepers, and I do not think it so safe, by any means.

51. Do you not think Barlow's rail is one that requires a continuous bearing? I think it does.

52. If laid down on sleepers a considerable distance from each other, is it not liable to be beaten down and flattened? Yes; and between every sleeper there would be an undulation, on account of deflection.

53. The rail becomes battered down, and, to a certain extent, loses its proper shape? I do not think it would alter its shape permanently.

54. Do you not think this portion of the elbow, being so worn, would give way? Yes.

55. Do you not think if the wheels of the carriages were at all worn they would be more liable to go off this rail than a double-headed rail? They would, to some extent, because these undulations would stimulate the oscillation of the horse-boxes.

56. There would be less resistance to the flange of the wheel leaving the rail than if it were a double-headed rail? No less resistance, but it would be more unsafe. From the undulations I speak of, it would be more likely to cause the carriages to oscillate and run off the rail.

Edward Bell, 57. *By Mr. Jones*: Do you think that from the moment the whole of the horse-boxes got off the rail, from that moment they must have been detached from the line? Yes.

Esq., C.E.
21 July, 1858. 58 Do you think it at all possible that, with the leading carriage off the rail, the other carriages would run a distance of a hundred or a hundred and fifty yards? Yes; but every carriage that went off the rail afterwards would tend to decrease the speed of the train.

59. Supposing the engine were detached from the train, the moment this first horse-box got off the line, would not the very fact of that horse-box being off the line diminish the speed of that carriage, from having to pass over the rough road instead of the rail? Yes, it would diminish the speed; but the running of the hinder carriages upon the horse-box maintained its velocity longer than otherwise.

60. If it can be shewn that there is the mark of only one vehicle off the line from the time of its being first discovered until the whole of the carriages were off the line, will you not then imagine that the severance of the connection between the horse-boxes and engines did not take place till the leading carriages went off the line? I should not conclude so. It is perfectly clear that the horse-box must have been driven by pressure from behind, and it would, therefore, still continue to travel in the same course, although off the rail, until it came to some serious obstruction.

61. Such as a curve? Yes, or such as a more projecting sleeper than the others.

62. *By Mr. Hay*: Do you not think, if it will appear by marks on the sleepers that the horse-box after it first went off the rail kept at a distance of eight inches from the rail, as shewn by the marks of the flanges, the horse-box was still attached to the tender at that particular time? No, I do not. I think it was more probable it would run in a straight line than in a crooked one.

63 Do you not think, if the horse-box were off the line, and the carriages on the line, the impulse being given by the carriages behind would still further turn the horse-box off? No, not necessarily.

64. Would not the buffer strike the horse-box and turn it off still further? If the pressure were on one buffer it might.

65. The centres of the buffers would not correspond in that case? But if both the buffers were pushing, the horse-box would still keep on its forward course.

66. Suppose the carriage strikes the near side of the carriage in front, will not that turn it off the straight course? It would merely push it on one side.

67. If the carriage which is still on the line forcing on the horse-box which is off the line, must not the impulse given by the carriage tend to drive the horse-box still further off? Not if both the buffers of the one carriage were pushing against the buffers of the other.

68. But the centre of the buffers would not correspond—would not eight inches make the difference of the semi-diameter of the buffer? Yes, but not of the two buffers.

69. Are not the buffers round on the surface? Yes; not very much so, but they are rounded.

70. The rounded surface of one buffer coming inside the rounded surface of the other, would not that have the tendency to drive the forward carriage still further off the rail? No.

71. Did you ever hear of the resolution of forces? Yes.

72. Do you not think that is in opposition to the resolution of forces? No, decidedly not.

73. What railway were you last employed upon in England? On the Taff Vale Railway.

74. As engineer? As consulting engineer.

75. Was it a broad or narrow gauge? Narrow gauge. It was chiefly used for goods traffic; there was very little passenger traffic upon it.

76. Are you aware whether four-wheeled carriages are not generally employed upon narrow gauge railways now in England? At the present time I cannot tell you, but when I was there they were not; four-wheeled carriages were in constant use on the Taff line to carry coals, but they never travelled with passenger trains.

77. Are you aware whether four-wheeled carriages for passengers are, or are not, in general use now upon narrow gauge railways in England? I am not aware: there may be a few on the Northern lines; I think I have seen a few come into York.

78. You do not think they are generally used? Certainly not—they are very rare; they are used chiefly on coal lines.

79. Are you aware whether upon the secondary railways in England—not main trunks—loaded goods trucks are run with passenger carriages? On secondary lines goods trucks seldom run with passengers.

80. Not even for the carriage of perishable goods? I think vans carrying milk and fish in small quantities, in baskets, were admitted upon most lines in South Wales, to take them up or down the country, but nearly all the traffic there was coal.

81. Still, loaded goods trucks were occasionally run on such lines? Not loaded goods trucks, but the guard's van would carry about four or five tons, and that was always put next the engine.

82. Then, on secondary railways—not main trunks—goods were not run along with passengers? No. I have known, on an emergency, a goods truck to be put on the train, but always next the tender.

83. Why do you think it dangerous to run horse-boxes next the engine? One reason is, that they have but four wheels, and another, that when they are empty they are more subject to oscillation.

84. Do you think they are more liable to oscillation in that position than they would be if they were at the tail of the train? They are more liable to severe oscillation if they are pushed occasionally from behind.

85. I think you said that, in point of fact, they do not run next the engine in England? No, I never knew it as a rule; they may occasionally put them on for convenience, but it is certainly contrary to regulation.

86. Is there any special order at home with reference to loaded goods trucks? There is a regulation with regard to loading and placing those trucks that carry goods liable to take fire

- fire; they are not allowed too near the engine. They are put in the rear of the goods trains. There are regulations with regard to the goods train not running with the passenger train, although, I believe, on some lines goods trains did run with the Parliamentary train; but, I believe, since an accident occurred on one of the Northern lines that has been prohibited.
87. *By Mr. Scott:* Are you acquainted with Continental railways? Yes, with several.
88. Will you mention which? With most of those in France, with those through the northern part of Germany, through Austria, all the way to Warsaw, and with those lately opened in Russia, from Petersburg to Moscow, and from Petersburg to Warsaw.
89. At what rate of speed do trains usually travel on the Continent? Generally from thirty to thirty-five miles an hour.
90. Are accidents on these lines as frequent as they are in England? I think they are less frequent; in fact they are very rare.
91. Can you state to the Committee why, in your opinion, accidents are of less frequent occurrence upon Continental than upon English railways? One cause is the moderate speed at which they run. If an accident occurs no serious mischief arises. They do not run thirty-five miles an hour on the average—I should say that would be their highest speed—and the railways are under very strict regulations.
92. I think you stated that the Barlow rails are used on these railways? Yes, very generally.
93. On longitudinal sleepers? Yes.
94. That is much safer than cross sleepers? Yes, with the Barlow rail.

Edward Bell,
Esq., C.E.
21 July, 1868.

George Fesq, Esq., called in and examined:—

1. *By the Chairman:* Have you been in the habit of travelling frequently on the Sydney and Parramatta Railway? Yes, every day, morning and evening.
2. Can you call to mind and inform the Committee whether on any occasion you have seen any engine, carriage, or horse-box, or truck off the line? Yes; twice.
3. Will you state the date and the peculiar circumstances under which you saw these occurrences? I cannot state the date, it is not present in my memory now, but it was between Petersham and Newtown, about fifteen months ago, I saw a third-class carriage off the line.
4. Did you see a similar occurrence on any other occasion? Yes; on another occasion, about ten months ago, between Homebush and Duck River, I saw a horse-box off the rail.
5. Do you know Haslam's Creek? No.
6. Do you know a decline on the rail, about two miles from Homebush? It is where some men live in tents that I saw the horse-box off the rail.
7. How long did that detain the train? About twenty minutes.
8. Was it coming to Sydney? Coming to Sydney in the morning.
9. Did you make any report of the circumstance to any of the officials? No.
10. It was attended with no serious consequences? No.
11. What was the position of the horse-box? The last on the train; the farthest from the engine.
12. On the occasion of the third-class carriage going off the rail between Petersham and Newtown, do you recollect what was the position of that carriage on the train? It was the first carriage next the tender.
13. Can you state the exact spot where the accident occurred? Where you commence to see Newtown station—at the turn there.
14. Between Petersham and Newtown? Yes.
15. *By Mr. Scott:* Have you lately travelled on that road? Not for the last four months; I left Parramatta about four months since.
16. *By Mr. Hay:* Up to four months ago you were in the habit of travelling constantly on this railway? Yes; ever since the railway opened.
17. *By Mr. Jones:* Are you pretty clear as to the time that has elapsed since the carriage got off the line near Newtown? I cannot say I am quite sure; but about fourteen or fifteen months ago.
18. Did any accident occur to any one at that time? No.
19. Was the train going on at speed? No, very slowly.
20. What means were adopted to get the carriage on the rail? It was done by means of a lever.
21. How long is it since this horse-box got off the line? Between nine and ten months ago.
22. You are sure it was about that time—not longer? Yes.
23. The getting the horse-box on the line led to a detention of some twenty minutes? Yes.
24. *By Mr. Wickes:* When the horse-box got off the line did it cause any alarm? No. It was raining at the time.
25. Did the train stop suddenly? No, it stopped gently, not suddenly. A tall gentleman who was on the train was the first who perceived that the horse-box was off the line.
26. Was he in your carriage? No; he was on the engine. I forget his name.
27. Was his name Gibbons? Yes.
28. *By Mr. Hay:* Did you observe that there was any particular cause for the horse-box getting off the line? No; I did not know the cause.
29. There was no obstacle to be seen? No.
30. Did you observe any particular cause for the carriage getting off at Newtown? No.
31. On neither occasion was the train running very fast? No; very slow.

George Fesq,
Esq.
21 July, 1868.

George Carter, called in and examined:—

- Geo. Carter. 1. *By the Chairman*: On Saturday, the 10th July, were you a witness of the accident that occurred on the Parramatta Railway? Yes.
- 21 July, 1858. 2. Where were you? I was standing with my horses, about ten yards from the second bridge, watching the train coming through that cutting, and as I saw the train coming I passed the remark to myself, "If that driver comes along at that speed he will be off when he comes to that curve."
3. What made you think that? The train was on such a sway. I have been travelling that way twelve months, and I never saw the train coming quicker.
4. Was there an unusual oscillation or motion? Yes; it was just the same as a load of hay going over a rough road.
5. Then it struck you that there was some danger that morning in particular? There was in particular, for I never saw a train coming quicker.
6. Have you any idea of the rate at which they were coming? If it had kept on the speed it was going, it was forty miles an hour.
7. What did you actually see when the train did come towards you? I passed the remark, "If the driver keeps on at that rate he will be off the line," and before I had said the words the first horse-box sprung the first two wheels off the road, and carries them that way for, I should think, about a hundred yards.
8. Was it separated from the tender at that time, or still attached? Still attached. The steam was in full motion.
9. You could tell that by the puffs of steam? Yes; and I could tell it by the sound of the stroke.
10. Was it the horse-box next to the tender that first went off? Yes—two wheels.
11. What followed? The pitch of the sleeper chucked the hind wheels off, and she was carried past by me with the four wheels off; there was no other carriage then off. Then, when it was past me about from thirty to fifty yards the horse-box ran inside the line, when the coupling broke like an arrow, and the engine flew towards Homebush. The second horse-box then pitched across the buffer of the other horse-box, to the right; the carriage catches her buffer and pitches her right round at a circle, and brings the other round the bank, and the break-van across the line. I immediately ran up, and the first I came to was a gentleman with his head under a carriage.
12. Was he quite dead? No; he just gave two kicks, and died. I found the poor old lady under the same carriage. The horse-box had caught the telegraph pole, and the wire had whizzed round.
13. Did you notice the after-part of the train, whether there were any trucks behind the carriage? There were.
14. Were they loaded or not? They were covered with black tarpaulin, and stood on the line.
15. Do you recollect how many there were? No; I did not count them, for I was in a bustle, seeing men and women about me with their faces bleeding.
16. You are quite clear that they had black tarpaulin on them, as if they had something under the tarpaulin? Yes.
17. Have you been able to form any opinion of the cause of the accident, besides the speed at which they were travelling? I will tell the truth, and nothing but the truth: I have been travelling that way for the last twelve or fifteen months, and I never saw the train coming faster. Without telling a word of a lie, the speed was about forty miles an hour. I was employed on the North Union Railway, and I have seen on that line a luggage-waggon drawn for four miles by the side-chains with the wheels off—gone altogether.
18. Still connected with the tender by the side-chains? Yes.
19. With the hind wheels running on the line? Yes.
20. *By Mr. Wecker*: Was there a centre-chain as well as the two outside chains? Yes—screw-coupling in the centre.
21. Was it a goods truck? Yes; on what they call a luggage train.
22. On that line did they always couple goods trucks by screw-couples? Yes, always; the one next to the tender is coupled and screwed up, so that when the train starts it has not so much play. Then there are side-chains, so that if the coupling gives way there are side-chains to carry on with.
23. *By Mr. Jones*: Do you say you have been employed upon a line of railway at home? Yes.
24. Is there, besides the screw-coupling, side-chains connecting the tender with the carriage? There are two side-chains on each side of the buffers. There used not to be, but after there were so many accidents, because the couplings used to snap, perhaps from bad welding, the side-chains were put on. So that if the coupling gave way the chains would carry on.
25. *By Mr. Hay*: You are employed in the neighbourhood of the railway? Yes. I am driving a team for Mr. Thomson, of Liberty Plains, near Parramatta.
26. Do you know any of the men on the line? No. I have been with Mr. Thompson ever since I have been here.
27. You did not know this engine-driver at all? No. If he had taken the signal from me when I was waving my hand round, and shut the valve, the accident would not have happened.
28. When did you wave your hand? Just as the train came to the bridge. The fireman had his eye on me, and I took my hat off and cooeyed, but it had no effect—he was past me like lightning.
29. You waved your hat to try to attract the attention of the driver, seeing the horse-box was off the line? Yes.
30. *By the Chairman*: Can you state with certainty what was the color of the horse-box first, next the tender? No.
31. You are quite sure it was the first horse-box got off first? Yes.

32. Are you quite sure they were the foremost and not the hindmost wheels of the horse-box that were off the line? The two first wheels; the hind wheels would not have gone off at all only for the pitch of the sleepers. I gave my name to a gentleman, to be examined on the inquest, but I was not called. I did not expect the inquest to be closed so soon.
33. Did you expect to be examined? Yes. I was in charge of three horses going from Haslam's Creek with timber. I have been carting through that bridge for the last fifteen months.
34. Have you been very much in the habit of noticing the trains? Yes.
35. You do not make these remarks from any sudden impulse arising from the late accident, but because you have observed the train at other times? Yes.

THURSDAY, 22 JULY, 1858.

Present:—

Mr. DONALDSON,	Mr. JONES,
Mr. HAY,	Mr. EGAN,
Mr. WEEKES,	Mr. PARKES,
Mr. SCOTT,	Mr. OAKES.

THE HON. STUART A. DONALDSON, Esq., IN THE CHAIR.

Charles Henry Storey, Esq., called in and examined:—

1. *By the Chairman:* You have been engaged as a practical engineer for a number of years? C. H. Storey, Esq. Yes, I have. I was with Mr. Jackson for ten years.
2. Have you been engaged in this Colony in similar pursuits? Yes, I have.
3. Since when? Since 1855. About fifteen months.
4. You were engaged with Mr. Randle? Yes.
5. During the traffic on the Parramatta line? Yes.
6. Were you engaged before the railway was entirely finished? Yes; I arrived just one week after the opening.
7. Had you charge of anything? Not on the line. They were merely details that came to my hands in the office.
8. Can you favor the Committee with any practical suggestions in reference to the construction of that Parramatta line—as to whether you deem it good, or bad, or indifferent? I have not travelled on that line since March, 1857, but I have travelled previously, both in carriages and on the engine, and at the time I travelled I considered it a very defective road.
9. Defective—how? Defective in the construction, inasmuch as the rails were concerned.
10. That is, Barlow's rails? Barlow's rails; I did not consider them equal to the double-headed rails.
11. Why? There was a less number of sleepers under them, and I did not think they would be so easily packed as the ordinary transverse sleepers.
12. Well, as to the formation of the Barlow rail, do you think any particular danger arises from the possibility of its flattening, and the opening of the angle which forms the rail, by heavy traffic? If the sleepers be too far apart.
13. Are the sleepers too far apart on the Parramatta line? They were when I travelled over it.
14. Your particular objection to the Barlow rail appears to me to consist in its liability to spring, as it were, unless there are more sleepers used than you saw? Yes.
15. Can you conceive that if a sufficient number of sleepers were used the Barlow rail would become unobjectionable? I should not object to them then.
16. Would you recommend longitudinal supports, as in the case of the Great Western? No; only a sufficient number of sleepers. The value of a permanent way consists of a good bearing surface on the ballast.
17. During your experience of the railway in Mr. Randle's time, have you known carriages to run off the line? No. I perhaps have heard of such a thing, I think, once; but I do not recollect.
18. You have not heard sufficiently often of such instances to make an impression? No.
19. Do you think the railway constructed on this line of a safe character, and properly adapted to the engines? I do not like the engines at all. I think they are too cumbersome—too heavy.
20. And the speed? I do not think the speed too great; but, with such a heavy engine, high speed is objectionable on a permanent way of that description.
21. Why? Unless the permanent way be very strong, heavy engines impair its efficiency, and there is great wear and tear.
22. Does the heavy engine cause more jumping? Decidedly; it is the heavy engine passing over a line constructed of Barlow's rails.
23. Will not that tend to cause more oscillation? No; because the top portion of that rail is very much like the rail used on the Great Western Railway in England.
24. But do not you think that the deflection caused in the railway between sleeper and sleeper, by the passing of a heavy engine, will tend also to cause a jumping, and, therefore, an oscillating motion in horse-boxes or carriages following such an engine? Certainly, if the sleepers are not close enough together.
25. How many sleepers were there, do you remember, to every six feet, or per length of rail? Generally they should average one to every three feet.
26. Should average? Should average upon the ordinary double-headed rail.

27.

- C. H. Storey, Esq. 27. Upon this what would you suggest? At the time I recollect seeing it there were only three to each length of rail—one at each joint and one in the centre—that is, a distance of seven and a-half feet between each sleeper from centre to centre.
28. You say that with the T rail, which you consider stronger than the Barlow rail, there should be one sleeper every three feet? Yes, on an average.
29. How many would you suggest for this Barlow rail, to render it as safe as the T rail? I think only one less—four in fifteen feet, instead of five, as in the ordinary double-headed rail.
30. Then you suggest fewer sleepers? I do not think it would do with less than one.
31. I gather, then, from your observations, that, instead of one for 7 ft. 6 in., you would recommend two for 7 ft. 6 in.? Yes; I would divide it into four, instead of five. I understand that there has been one sleeper added between each two—that is to say, two more to each length, and that, I should say, ought to be sufficient for that section of rail.
32. *By Mr. Weekes*: You are not acquainted with anything on the line since March, 1857? Nothing at all.
33. That is since the present management of the railway has been in existence? I have been on the line only once since the time when it was in Mr. Randle's hands.
34. Did you ever call the attention of Mr. Randle to what you considered the insecure state of the rail? I have often told him that I considered it a bad permanent way as it was then—with one sleeper between the joints.
35. Did you tell him that you considered it unsafe with the number of sleepers it had? Yes; the badness consisted in the want of additional sleepers. By these observations I do not imply that any blame attached to Mr. Randle.
36. With a sufficient number of sleepers do you consider the Barlow rail preferable to the double-headed rail? No; I prefer the double-headed rail.
37. But, with the proper amount of sleepers underneath, you think the Barlow rail has no more inclination for a train to run off than a double-headed rail? I think not.
38. The Barlow rail, in your opinion, being stronger, I think you said, than the double-headed rail? It depends upon the weight of rail. The Barlow rail varies up to 100 lbs. I have seen them 90 lbs. and 80 lbs. I have seen the double-headed rail also of the same weight—therefore, I consider that the same weight in a double-headed rail is stronger than in the Barlow rail.
39. You said that the great weight of the engines rendered the oscillation greater,—is that on account of the weakness of the rail, or on account of the great weight of the engines? I think it is the weight of the engine combined with the weakness of the permanent way—the two combined.
40. Does not weight in an engine tend to give steadiness to the driving, where the rail is of sufficient strength? When the permanent way is sufficient for the weight to travel over it.
41. Are you aware whether Barlow's rails are used in the mother country? They have been used a great deal, but I believe they have been taken up again. I first saw a specimen laid down on the Midland line, near to Derby, which I went to inspect with Mr. Jackson; but I do not know what the result of that experiment was. I have a letter from Mr. Barlow to a friend of mine, pointing out the advantages of it, but it is not yet, I believe, generally approved.
42. You think that in England it is condemned? I think generally it is, although it has been used on a great many lines. I think I have six sections of six different rails of Barlow's which have been used on different railways in England.
43. *By Mr. Oakes*: Do you know whether the round or flat side of the sleepers were put down next the ground formerly? I could not positively say; but knowing that the flat side of the sleepers has been laid down hitherto—lately—in permanent ways in England, I presume it is done so on this line.
44. You think it would be better to have the flat side laid down? Decidedly; because then there is no slipping surface. If you put the round side down, there would be a rolling surface upon the ballast.
45. *By the Chairman*: Was it intended by Barlow himself with his rail to put down sleepers at all? Not at all.
46. Merely transverse iron ties at the joints, and it would support itself? By packing it.
47. Has that been found to fail? I would not say it has been found to fail, but I have no doubt in my mind about it.
48. At all events, Barlow's rails have been removed? In several cases, I believe.
49. Do you know what was the speed at which they travelled on this line in your time—at the time of which you speak? Well, they cannot travel at a very great speed on this line between Parramatta and Sydney, because there is no time to get up the speed, except between Parramatta and Homebush. The stoppages are so short, and consequently they have to slacken speed at each station.
50. At that particular time—between Homebush and Parramatta (at the time you knew it)—what was the speed, as a usual thing? I should say between twenty and thirty miles; but I do not think they could get up any speed which would affect the safety at that distance. I have travelled on the North-western at a speed of thirty-five miles, including stoppages.
51. What is the weight of the Barlow rail, used on this line, per yard? I think 80 lbs. It is a light rail for that section of rail.
52. Was the rail laid down, do you know, on the Midland line in England, done by the patentee and engineer of the Midland Counties Line? It was done by Mr. Barlow himself, as an experiment. I went with Mr. Jackson and Mr. Barlow.
53. And you know, of your own knowledge, that those rails have been lifted? I will not say positively that they have been removed, but my impression is that it is so.
54. *By Mr. Weekes*: You say it is impossible that a high rate of speed could be obtained on this line? Yes, in that length of run.

55. Then, supposing witnesses have stated that a speed of forty miles is attained, do you think that they are deceived? I should say that speed is impossible. C. H. Storey,
Esq.
56. Say between Parramatta and Homebush? Take the medium of the line—it is about three miles in round numbers—and you could not get up such a speed. 22 July, 1858.
57. In a decline say of 1 in 130? Not with the steam off. No engine-driver who knows his duty will keep on the steam on an incline of 1 in 130.

John Trott, Esq., called in and examined:—

1. *By the Chairman:* You were on the railway train on the occasion of the late accident, on Saturday, the 10th of July? I was John Trott,
Esq.
2. In what carriage? In a third-class carriage. 22 July, 1858.
3. Which? The first after the engine.
4. With Mr. Want? Yes.
5. You were injured, I am sorry to hear? I was greatly bruised and knocked about, but I have no broken bones, thank God.
6. Before you met the with the accident, did the speed at which the train was travelling strike you as being very great? I thought we were going very fast, but I cannot say at what rate.
7. Were you going faster than usual? I have been in the train many times before, and sometimes you go faster than at others.
8. You thought at that time that you were going very fast? Yes.
9. Did you remark it to your fellow passengers? No.
10. It merely passed in your mind? It merely passed in my mind.
11. What was your first sensation? Mrs. Trott was sitting on the outside, so that she could look out, and she said "Oh, Trott, we are off the line!"
12. Were you facing the tender at the time, or did you have your back to it? We had our backs to the tender.
13. On which side was Mrs. Trott? On the Parramatta Road side, coming towards Sydney.
14. Will you state what occurred? Mrs. Trott looked out, and said "Oh, Trott, we are off the line!" and before I had the presence of mind to look over, she held fast by the side of the carriage with one hand and caught me by the sleeve with the other, and over we went. She tore my coat sleeve off, and shirt and all.
15. And the carriage turned right over? Yes; to my left hand, as I was sitting.
16. So the seven of you were facing Sydney? Yes.
17. Where was Mr. Want sitting? He was on the other side: I was sitting on one side and Mr. Want on the other.
18. Did you feel any bumping sensation? After it was off the line it shook about.
19. After Mrs. Trott spoke? Yes, before it went altogether.
20. Have you any idea, after all you have experienced, what could have caused the accident? I think it was the horse-boxes.
21. Do you mean their position with regard to the rest of the train? I think I have often observed that it jumps about much more than another carriage, in my little way of thinking. They have a short pressure, and they have not got so much power as when they are long.
22. They have only four wheels and the carriages have six? Yes.
23. Did you chance to notice how the carriages were coupled together? No.
24. Did you ever before travel with the horse-boxes in the same position? I never took any notice of them before. Experienced men say it is the safest place for them, from what I have seen in the papers.
25. We do not want the opinion of the papers—what is your opinion? I do not know.
26. You have an impression that it would be better they should not be there? I think so.
27. You cannot inform us which carriage went off first? Well, really, it seemed very remarkable to me altogether; the hindmost carriage on leaving Parramatta was in advance of us after the carriage I was in was upset, and it was also upset; it must have passed up, of course, after the upsetting of our carriage.
28. You are aware after the accident that the position of the train was reversed? Yes; the hindmost carriages were before me, and the horse-boxes behind me. That was quite enough of the railway.
29. Would not you travel any more by the railway? Oh, yes; but not between Parramatta and Sydney.
30. Have you an idea that this accident can be prevented in future by greater care? Well, my firm belief is—if my voice would be of any service—I would have all horse-boxes and meat-vans, and all empty trucks, go by the luggage train. I was coming down, either eight or nine months ago, and within a few yards of the same place where this railway accident took place, two empty trucks—horse-boxes—went off the line, and they had been off for a little time, coming from Parramatta to Sydney.
31. Before you noticed it? Yes. The gang on the line made a signal to stop.
32. Can you state the date of that occurrence? I cannot; I think it must have been eight months ago, or more.
33. You can state within a month—it was eight or nine months ago? Yes.
34. Do you know if any report was made of that occurrence? No.
35. Did you report it to anybody? No. I never thought we were off the line till the train stopped.
36. Do not you think it would be desirable that intelligent persons like yourself travelling on the line should tell the authorities of such occurrences? Yes.

- John Trott, Esq.
22 July, 1858.
37. Why did you not tell them? I thought reports were made regularly by those in care of the railway.
 38. Captain Martindale is desirous of asking you—are you sure as to the day? I am not.
 39. To the month? No.
 40. *By Mr. Oakes*: Do you know what train it was by? I think it was the 8 o'clock train.
 41. Do you think my son was there? I think so.
 42. Could it have been eight or nine months ago? I think so.
 43. Are you sure it was two empty trucks, or a horse-box? It was two empty trucks, or horse-boxes.
 44. *By Mr. Weekes*: On that occasion what was the first indication of the trucks being off the line that you received? The train stopping and the passengers getting out. I did not get out.
 45. You only knew of it by the stoppage of the train? Yes; then we saw the trucks or horse-boxes off.
 46. Did you get out of the train? I did not, but a great many did, and went and got the gang working about a quarter of a mile off to put them on the rail again.
 47. *By Mr. Oakes*: How long were you delayed? About half-an-hour.
 48. Do you know where it was? Near the tents.
 49. That is between Haslam's Bridge and Homebush, or between Haslam's Creek and Parramatta? It was between Homebush and Parramatta.
 50. *By Mr. Weekes*: Then, between the first indication you felt, the exclamation of Mrs. Trott, and you being precipitated out of the carriage, was only a moment? It could not be more than a moment; and I think, after we did get over, I think we were, by the appearance of it, drawn along three or four yards, by the rumbling and the tearing of the irons.
 51. *By the Chairman*: The time of the trucks being off the line—what train was it? It reached Sydney at half-past nine.
 52. And how many months ago? Well, I think it is about eight months ago, or more.
 53. Was it three or nine? On after consideration I find it is about eight or nine months.

Mr. George Wood, called in and examined:—

- Mr. G. Wood.
22 July, 1858.
1. *By the Chairman*: Have you been employed on railways in London at all? On the Dover and Brighton Railway.
 2. In what capacity? I first went as porter, and from that I rose to occasionally going as guard, and then to a ticket-platform.
 3. As porter or as guard, was it your duty to attend to the coupling of the carriages? No.
 4. Do you know anything about it? As a porter I had it to do.
 5. Is there any invariable rule as to the coupling of carriages? Hooking them with loose couplings and screwing them up, and leaving the side chains at the full extent, so that in case of coming round a curve the draw-bar will draw out further than the buffer will give to, so that if anything breaks it allows sufficient room for them to feel the weight again before the chain snatches; but, if they are hooked short, and the coupling breaks, of course it does not allow sufficient room to the buffers to give.
 6. When you say couplings, do you mean screw-couplings? Yes.
 7. Did you do that where the buffers pressed closed together always in England? Yes.
 8. Did you ever know an instance of a passenger train in England travelling with horse-boxes coupled with a centre-link without a coupling? Yes.
 9. When and where was it? On the Dover and Brighton Railway. It is an every-day occurrence—the engine and tender being hooked with the hook-chain with a spare link.
 10. And what is next to the tender in that case? Generally a break.
 11. What do you call a break? A break-van, or a parcels van, is what they put next to the engine and tender always on the London lines, and hooked on by what they call a chain and a loose link, and if so be that is not long enough they have got couplings which they put on.
 12. Do you mean that they use the loose chain constantly? If it will reach. There is always a chain on the tender—a fixture; and in order to make the chain work level they have got a loose link, so that the hook always hooks downwards.
 13. Is there any screw-coupling in that case? No.
 14. How long is it since you were on the Dover and Brighton Railway? It is ten years since I was there.
 15. You do not know anything about the practice of coupling carriages since that? No; only by travelling, when I was not engaged as a servant. I have been following the sea for the last ten years.
 16. *By Mr. Hay*: Do you say that you have observed it? Yes, Sir.
 17. Of late years? Yes, Sir.
 18. *By the Chairman*: In passenger trains? Yes, Sir.
 19. Could you give us any information as to the cause of this accident, as far as your experience in England would lead you to form an accurate opinion? No; unless it was the coupling breaking, being of insufficient strength to draw the train. There might be a flaw in the iron, and then the sudden jerk would draw it off, particularly if the chains were hooked, as I say, tight.

George

George Oakes, Esq., a Member of the Committee, examined in his place:—

1. *By the Chairman:* Did you travel by the Parramatta Railway on Friday, the 9th July? George Oakes, Esq. 22 July, 1858.
I did.
2. The day before the fatal accident? Yes.
3. Had you occasion to notice the speed at which the morning train, arriving in Sydney at half-past nine o'clock, travelled on any part of the line? I noticed, and remarked at the time, that they were going very fast—unusually fast.
4. At what particular point? At different parts between Parramatta and Homebush.
5. Did you time the difference between Parramatta and Homebush—the whole distance? I could not say exactly to a minute, but it was under ten minutes.
6. That was at the rate of between 34 and 35 miles; that was the whole distance, although they might at times have been going faster than that? I have travelled on the line from its first opening, and it was the first time I was alarmed.
7. Did you notice the speed coming down the incline towards Haslam's Creek? No; not at particular times.
8. At all events you were alarmed? Yes, and I mentioned the speed to my brother, who was sitting by my side—that they were going unusually fast at the time.
9. Did you make any report? No; I intended to do so, but the first time I saw Captain Martindale was after the accident. On the occasion of Friday, the 9th instant, they were late on leaving the Parramatta station, about four minutes, and they gained that time between Parramatta and Homebush. On the occasion in question, my brother and I came to the station rather late, and I noticed the circumstance because we were in time for the train. I remarked in going down, as we were reading the newspaper, how extremely fast we were going.
10. Did you ever know on any previous occasion, or was your attention ever drawn to it, of time being made up after starting late? I never knew them to do it under twelve minutes before, and I have timed them.

Captain Martindale called in, and further examined:—

1. *By Mr. Weekes:* Can you furnish the Committee with a statement of the total number of passengers carried on the Great Southern Railway since its opening? I hand in a statement shewing the number carried on the Great Southern line since its opening. Capt. B. H. Martindale, R. E. 22 July, 1858.
(Witness handed in the same. *Vide Appendix A.*)
2. Will you state the total number carried during that period? On the Great Southern Railway, between the 26th September, 1855, and the 30th June, 1858, the number was 924,348.
3. Is the recent accident the first that has happened to passengers during that period? The first involving injury to passengers.
4. Have you a similar return in reference to the Northern line? The number between the 30th March, 1857, and the 30th June, 1858, on the Great Northern Railway was 56,838, making the total number on the two lines since their opening 981,186 passengers. (*Vide Appendix A*)
5. Have there been any injuries to passengers on the Northern line? None.
6. Can you furnish a similar return in reference to railways in Great Britain? I hand in an extract from a Report of Captain Galton, of the Board of Trade, for the years 1856 and 1857, shewing the proportion of passengers killed and injured from causes beyond their own control, per million, for the several years from 1852 to 1856, inclusive, from which it appears that, in round numbers, only one person in sixteen millions who travelled has been killed from causes beyond his own control. (*Witness handed in the same. Vide Appendix B.*) I wish also to put in an extract from a confidential memorandum given when the Traffic Manager was appointed—shewing the instructions he received with reference to the reports he was to make. (*Witness handed in the same. Vide Appendix C.*)

APPENDIX A.

RAILWAYS IN NEW SOUTH WALES.

The number of passengers who travelled over the New South Wales Lines was—

Great Southern Railway, between the 26th Sept., 1855, and 30th June, 1858.....	924,348
Great Northern Railway, between the 30th March, 1857, and 30th June, 1858 ...	56,838
	981,186

The present is the first accident involving injury to passengers that has occurred.

APPENDIX

Capt. B. H.
Martindale,
R. E.

APPENDIX B.

EXTRACT from Report relating to Railways for the Year 1856-7.

22 July, 1858. THE following Table shows the proportion of passengers killed and injured from causes beyond their own control, per million, conveyed in the several years from 1852 to 1856 inclusive.

	ENGLAND.		SCOTLAND.		IRELAND.		GREAT BRITAIN AND IRELAND.	
	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
1852	14	4.3	0	5.8	0	3.2	11	420
1853	23	2.6	0.9	4.5	2.4	1.6	35	2.80
1854	0.9	3.08	1.6	3.51	1.4	5.7	10	2.97
1855	0.8	2.51	0.8	4.50	1.4	9.7	0.8	2.70
1856	0.7	2.35	1.92	2.5	0.7	2.18

It thus appears that only one person in 16,168,449 who travelled has been killed, and one in 458,370 who travelled has been injured, from causes beyond their own control; and that the degree of safety with which passengers have been conveyed is greater than in any year since 1851.

APPENDIX C.

Extract from a Confidential Memorandum to Mr. Nealds.

" Railway Department,
" 13 October, 1857.

" The Commissioners have decided, therefore, to try Mr. Nealds' competence to take the place of Mr. Newdick till the end of the year, with the title of Traffic Inspector, at his present salary.

" The arrangements for next year will depend upon the pleasure of the Legislature, and the capabilities Mr. Nealds displays for the position.

" The Chief Commissioner has some points to which he wishes to call Mr. Nealds' attention.

" He considers Mr. Nealds as immediately responsible to himself for the convenience and safety of the public travelling by the railway; and for the good conduct of all the officials travelling along the line.

" All accidents involving risk to human life must be reported as early as practicable; and a weekly report must be furnished to the Chief Commissioner, every Tuesday, in a tabular form, shewing all punishments, accidents, or other unusual circumstances that may have happened during the past week, including all complaints of goods not delivered, or from passengers of incivility, &c., &c.

" All reports from those employed in the Traffic Department must pass through Mr. Nealds, and be accompanied by such full explanations on his part as to avoid the necessity for further reference.

" Mr. Nealds' position, and constant presence on the line, will enable him to detect irregularities better than any other person. He will remember it is his duty to check them whenever they exist; and where the department is not under his immediate control to report them to the head of the department concerned.

" The Chief Commissioner will always be happy to see Mr. Nealds in person, and would wish to see him at least every Tuesday, at 10 o'clock, with the report already named.

" In conclusion, Mr. Nealds will consider it his duty to keep the Chief Commissioner fully informed of everything material for him to know in the department under Mr. Nealds' immediate charge."

" B. H. MARTINDALE."

FRIDAY, 23 JULY, 1858.

Present:—

MR. DONALDSON,
MR. EGAN,
MR. HAY,

MR. OAKES,
MR. PARKES,
MR. SCOTT,

MR. WEEKES.

THE HON. STUART A. DONALDSON, ESQ., IN THE CHAIR.

Edward Bell, Esq., C.E., again called in, and further examined:—

Edward Bell, Esq., C.E.
23 July, 1858. 1. By the Chairman: You were kind enough, upon a former occasion, to give the Committee some evidence before you visited the scene of the late fatal accident; will you now state, having, as I understand, visited it yesterday, any information which bears upon the cause of the accident, or resulting from your personal inspection of the line and rolling stock? I went to the station about ten o'clock yesterday morning, and found that instead of the arrangement having been made for the ten o'clock train, I was to go by a special engine at a quarter past ten. I started at about twenty minutes past, and was asked by a gentleman who was accompanying that engine, whom I did not know, but who I was informed was Mr. Mason,

Mason, whether I would go upon that engine, or whether I would have a first-class carriage. Edward Bell, Esq., C.E. I preferred the engine. I put a few questions to the gentleman with regard to the alterations I saw making in the sleepers under the rails. I think the question I put was, "Are you putting down additional sleepers?" His answer was, "No; we are repairing the line." 23 July, 1858. When the engine stopped to put down some person from the engine, whose name I do not know, I looked over the side and asked a man at work on the line if they were putting down additional sleepers. I got no answer. The man who got off the train appeared to be superintending the men, and did not look up when I spoke. The engine went on, and there was not time to ask another question, and I did not think it of sufficient importance to ask them to stop. When we had reached about twelve or thirteen miles from Sydney, the engine stopped and put me down. Mr. Mason got off at the same time. I said, "Is this the scene of the accident?" He said, "Yes," and left me. I saw him going about six or eight chains up the line, and proceed to take some dimensions with a tape. I had a youth with me, of the name of Statham, whom I requested to accompany me, that I might ask some questions of the gentleman who had got off the engine. I asked Mr. Mason if he could inform me which was the person sent down to inform me of anything that it was important for me to know or see, and to acquaint me with any information I wanted. He said, no, he could not. I asked him if he was the person sent down to do so. He said, no, he was not. I said, "Are you quite sure you received no instructions from Captain Martindale or from Mr. Whitton to furnish me with any information, or to point out anything it is fitting for me to see or observe?" He said, "None whatever." "Are you willing to give me any information?" I asked. He said, "Yes; such as I know I will give you." I said, "Captain Martindale, the Chief Commissioner, promised yesterday to send some person with me, as I am quite a stranger on the line, to give any information I might ask for with regard to where the carriages went off, and so on; and am I distinctly to understand that you are not sent, and that you know of no one who was sent to do it?" He said, "Decidedly so." Then I said, "Any information you give to me, I am to understand as a personal favor to me, and is given as such?" He said, "Yes, it was." The first question I asked was, "Show me, if you please, where the carriage left the line?" He said he did not exactly know, as he was not there at the time. A man was present, to whom Mr. Mason had beckoned on the line, and told to "come down to the bridge." I asked him, Fishlock, if he knew where the carriage went off the line. He said, "Yes." I said, "Shew it to me." He proceeded to do so; he went to the bridge a little lower down, I followed the man, and Mr. Mason followed me, and said to the man "Mind and be particular; do that right, state exactly the spot, be very careful, do not do it wrong." The man uncovered the sleeper at the first joint upon Haslam's Creek Bridge. He said that was where the horse-box went off the rail. He went to the first joint on the bridge to examine it, and, on turning the ballast on one side, we could observe no mark of the train having been off there, but he said, "That is the joint," pointing to the third joint, about forty feet further on. Then the first mark which appears of any wheel striking the sleeper is about twenty feet nearer this way, and about nine inches from the inner edge of the rail. I could trace these marks along some few sleepers, but all trace of the wheel marks and of the accident beyond that, excepting a mark on the outer rail of the up-line, where the wheel had run along the outside of it, had vanished, excepting at the bank where the carriages had turned over, some considerable distance further on. I did not devote much more attention to the indications and marks upon the line, because I saw that all the ballast had been lately removed and trimmed up again, and that it would, under these circumstances, be difficult for me to draw any conclusions from those marks. I then directed my attention to the line at that part generally, and observed to Mr. Mason, to whom I went some distance back to speak, that it did not appear to me there was any level at the foot of the incline; it appeared as if it were an undulation, that the upward curve commenced at the bottom of the downward curve, and that there was no level. He said, yes, there was a level, I asked him, "Where?" He said, he did not know where it was, but that he knew there was a short piece, but where it was he could not point out. I said my conviction was that there was none. I then remarked to him what had occurred to me in going down the line, that it was customary on all lines of any importance in England, carrying passenger trains particularly, to have posts erected at the side of the line, on which should be indicated the gradients of the line. Such posts are always erected at every change of gradient, in that style—(*The witness made a slight sketch of a post with an arm projecting on each side, on which should be painted in black figures on a white ground the gradient or level of the line, as the case may be, on each side of the post.*)

2. Is that universal on the lines in England? Yes; it is indispensable upon any line, as a guide to the driver; for where there are no such indications as this, it is hardly possible for any one to know what the state of the line is, whether a level or a gradient, and their extent. The arms on the post are made—of an ascending gradient, to point upwards, if a descending gradient, to point downward, and if a level, the arm is fixed horizontally, and written on "level," and the extent of it in yards. With these posts any engine-driver would at any time know exactly the nature of the portion of the line over which he was travelling, and what duty he had to perform; and any new engine-driver put upon the line would become more readily acquainted with the curves and gradients than otherwise he possibly could. Besides, in the event of an accident like this, there could be no diversity of opinion, whether it occurred on a level or on a gradient, if an inquiry were instituted by a jury, a committee, or any body of gentlemen. On visiting the line they could at once ascertain whether it were on a level or on a gradient, and would have some reliable data upon which to form an opinion; but when I was under examination the other day, I think there were two or three different opinions as to the gradients, and the length of the radius of the curve the train was approaching. Even now I am quite ignorant what the

Edward Bell,
Esq., C.E.

23 July, 1858.

radius of the curve is, what the level is, or what the gradients are. I cannot possibly know the latter without the use of my levelling instruments.

3. Would you recommend the adoption of these posts throughout the Australian railways, as a matter of precaution, and to indicate to engine-drivers or to passengers what the gradients on the lines are? Yes, without any exception.

4. Are there not further precautions adopted on the English lines—are not the words "Stop," "Slow," written in large letters on certain parts of lines? There are signals to shew these things; in very rare instances are they written in letters. There are signals which can be seen by night or by day. I made one remark to Mr. Mason, which I may mention here:—I said it was not at all extraordinary that the engine-drivers did not know the state of the line, when it seemed that the Engineer-in-Chief himself, as I understood the other day, could only give his statement from the plans, and that his assistant could give no information whatever. I then inquired when the train would be up, with a view to seeing the train pass over the line at that spot, and as it was expected in a short time I remained there; but I observed that the whole of the sleepers on that part of the line—at any rate as far as I examined it—were five feet apart, and that the ballast is composed chiefly of sand, which, having been lately removed, appears to be quite alive, as we term it, that is, easily moved. As the train came up a few minutes afterwards, I observed that it had to ascend a very considerable incline before it reached Haslam's Bridge, and that the steam was full on, as far as I could judge from the beating of the engine; indeed it must have been nearly full on for the train to ascend the hill. I noticed that in ascending the hill the carriages led well—followed the engine very steadily.

5. That was between the bridges? No, that was coming up to Haslam's Bridge, before you reach the curve; but I noticed as the engine passed me a very considerable deflection in the rails, and an excessive movement, I might say—some of the sleepers rebounding sufficiently to toss up the loose sand that laid upon them. I inquired of the plate-layer, Fishlock, after the train was passed—(in the absence of Mr. Mason, who had gone some considerable distance up the line)—whether he was not employed in laying additional sleepers upon the line. He said, yes, he was, he had been employed at it some time. "You do not take out any of the old ones?" He said he did not, there was no occasion for it, they were as good as new ones. "Then you are putting in additional sleepers?" He replied, "I am putting in more at every joint." I said, "You are laying them flat side downwards, I perceive the round side up?" "Yes," he said, he was; all the new ones were laid the flat side downwards, and the round side up. I said, "I observe all the old ones are laid round side down and flat side up." He said, yes, they were. I asked him how long he had been about it. He said, he had been only about ten weeks stationed at that part of the line himself. I asked him his name, and he said it was Fishlock. I then, shortly afterwards, saw a train come along the line, within a few yards of the spot where I had seen the up-train pass,—when I saw a few yards, it might have been twenty or thirty yards either way. I saw the same deflection, and I fancied rather more—over one sleeper in particular there was more. At that particular spot one sleeper moved very much indeed, more than the generality, while the engine was passing over, and as the tender moved over the same rail it appeared that the motion of the rail, caused by the engine, had not ceased. I then waited till the special engine returned from Parramatta, and stated to Mr. Mason that, as I had been requested by the Committee to examine the line, and stock generally, and to take particular notice of it, in order that they might benefit by any observation I might make, I should like the engine to stop on the way up. He said it was so arranged, and that I could stop where I pleased; as there was no train coming up for some time. I consequently stopped at the first place which I thought appeared as if there had been considerable alteration in the sleepers. There were several sleepers lying between the lines, and on the sides, and I got down to examine them. I found six sleepers to each rail there.

6. Extra sleepers? They were lying at the side, as if they were about to be put in. At the spot near the scene of the accident the sleepers were five feet apart, and as the rails are twenty feet long consequently there were four. I may observe that where there are four sleepers, one sleeper comes immediately under the joint of two rails; where there are six sleepers under each rail the sleepers are not placed at the joint, but on each side of it. Now, I observed that the engine in passing over the rails where six sleepers were laid to each rail, and consequently one on each side of a joint, they being only three feet three inches apart, there was very little deflection when the special engine passed gently over them, excepting at the joint, and when the leading wheel of the engine passed over the joint the depression was very great between the two sleepers—the line where these extra sleepers are put in is much steadier.

7. Do I understand you that the sleepers were put too far from the end of the joint—that they should have been nearer? Yes; but they are semicircular, and the flat side is laid downwards, so that it would be difficult to put them nearer together.

8. Do you prefer a single sleeper at the joints? I do not prefer cross sleepers at all with this kind of rail—Barlow's. I think they should be longitudinal sleepers throughout. I observed coming over the Long Cove viaduct that the rails are laid on longitudinal sleepers there. I stopped the engine there and got down to look, and found they are laid on longitudinal sleepers of hardwood.

9. Are these longitudinal sleepers laid upon transverse sleepers? No, I could see none; but the rail is nailed at every four feet on each side; there are hardwood transoms between the longitudinal sleepers, and the gauge of the rails is secured by iron ties or distance pieces, which are furnished with this particular kind of rail for the purpose. There was an inch bolt near some of the transoms at the ends or joints of the rails. My impression is, that sooner or later these rails must be laid on longitudinal timbers. The quantity required would be forty lineal feet to each pair of rails. If I was right in taking the length of the present transverse sleepers at seven feet six inches, their combined length, to each pair of

rails

rails of twenty lineal feet, would be forty-six feet. But the present sleepers are certainly not squared as the longitudinal sleepers would require to be, so that the difference of expense would be trifling. Edward Bell,
Esq., C.E.

10. Longitudinal sleepers would require to be broader and heavier than transverse? Not less than twelve inches broad, and six inches thick. 23 July, 1858.

11. Would you state your opinion as to the length of the sleepers? Longitudinal sleepers might run any length, so that the joint of the sleeper did not come at the joint of the rail; the rail would, if laid on longitudinal sleepers, still require to have the iron distance bar keyed on to the lower part of the rail, below it; of course the longer the longitudinal sleeper the better—but they should not be less than twenty or thirty feet. I examined the two horse-boxes when I returned, and found them in the station. The wheels and axles appear, from not having been painted, to have been merely temporarily put on. I could judge nothing from them. I looked at the couplings, and found that the centre-link is torn out of the new horse-box; all the side-chains are perfect. Of No. 2 horse-box both centre-links are bent.

12. *By Mr. Weekes:* When you say all the side-chains are perfect, you mean of that particular box? Yes. The centre-hooks are bent of No. 2—both are bent in the direction of the same side to a curve—both are pointing to the same rail. Of No. 2 horse-box one of the side-chains is broken off, the other three are perfect. Before I went down I measured the distance between the centre of the axles of the horse-box, and found them to be eight feet six inches. All the carriages on the line—first, second, and third class—have but four wheels.

13. *By the Chairman:* Have none more than four? I saw none; and their axles are eleven feet apart between the centres.

14. I judge from your remark that you think it objectionable that they should have only four? Four wheels for such short carriages are enough; their axles are much farther apart than those of the horse-boxes, therefore there is less danger of their going off the line by oscillation. On my former examination I was under the impression that the carriages used upon the Great Southern Railway were "Composite," which are being generally introduced at home, and which have six wheels. I think composite bodies are best suited to the traffic of this line. Then arises an engineering question, whether six wheels to those carriages would suit the sharp curves of this railway. This is a question; but composite bodies may be mounted upon four wheels, and be safer than the short carriages now in use.

15. *By Mr. Weekes:* Do you mean as compared with six-wheeled carriages? As compared with the horse-boxes.

16. On account of their greater length? The shorter the distance between the forward and after axle, the greater the danger of going off the line by oscillation. Instability of the line would cause oscillation. They would be as likely to jump as the others.

17. *By the Chairman:* From what you have seen on the line itself, from what you observed of the permanent way, and from your remarks upon the rolling stock, can you now form any opinion, amounting to a reliable opinion, as to the cause of the accident? Yes. I am decidedly of opinion that the accident was occasioned by excessive speed upon a line which is not able to bear it.

18. That in itself, or coupled with any other circumstances? I think if the carriage next the tender had been a heavy carriage, loaded in any way, there would have been less chance of its going off the line; but the motion I saw on the rail while the engine was upon it, and as it was leaving, was sufficient to cause any light carriage similar to that horse-box, top-heavy, to oscillate and come off the line.

19. Have you informed yourself, since you favored the Committee with your evidence the other day, whether the trucks were loaded or not? No. I had nobody but Mr. Mason to ask, who said he knew nothing. But I must distinctly state that I do not now consider that the loaded goods trucks were the original cause of the accident, or in any way assisted to promote it; but loaded goods trucks being placed at the rear of the passenger carriages tended to aggravate the accident, and render it much more disastrous in its effects than if no loaded goods trucks had been there.

20. Considering the circumstances,—that the first horse-box was attached to the tender by screw coupling, and by that alone—that the two horse-boxes were together, and connected by a centre-link—and that the rest of the train was coupled up as usual with screw-coupling,—do you attach much importance to the fact of the two horse-boxes being connected with side-chains and not with a screw-coupling, as the cause of the accident? I think it would have been much safer if the buffers had been brought together by a screw-coupling, inasmuch as the oscillation of the horse-boxes would have been less.

21. You think Mr. Mason did not give you all the information he should have done? No. I distinctly state that I wanted no assistance or opinion from Mr. Mason. I simply wanted from some person—(the Chief Commissioner volunteered to send the Inspector of Permanent Way)—information with regard to the accident; and while the man Fishlock was with me he was called away by Mr. Mason (who was at a distance) three times I am certain, but I believe four times. The Committee will remember, that when I was asked the other day by the Honorable Member, Mr. Parkes, whether I had made any remark to any one relative to the railway accident, it did not then occur to me that I had done so. I have since called to mind that I had said something on the subject at the time of the occurrence. Whatever information I then had was obtained from official reports of the 13th July, of the Engineer-in-Chief, which stated that the engine and train was on the level when the accident occurred; and the train, according to that report, was just approaching the curve; and believing that to be correct, I expressed my opinion that the steam should have been partly shut off, and the speed slackened as usual, on approaching the curve; and under such circumstances, it was possible that the accident might have been caused by the train pressing upon the horse-boxes immediately at the rear of the engine, whose high speed had just received a shock. And I beg to remind the Honorable Chairman

of

Edward Bell, Esq., C.E.
23 July, 1858.

of the fact of my having, on the former occasion, expressed my disinclination to give any opinion as to the cause of the accident until I had an opportunity of inspecting the railway at the scene of the accident, and making myself acquainted with the circumstances of the case.

22. *By Mr. Hay:* Have you now, having seen the line, formed an opinion as to what caused the accident—what caused the horse-box in the first instance to go off the line? I think the state of the line on that part, with a train passing at high speed was quite sufficient to cause the accident.

23. Have you any idea of the probable speed that would have been necessary under the circumstances to have caused the train to go off the line? I think the speed could not have been less than forty miles per hour at the time the horse-box went off the line. I have been off the rail in a train three times, and never saw carriages travel so far after leaving the rail as they did in this instance, and I am quite sure, from the carriages travelling so far after leaving the rail on an ascending incline of 1 in 192, the speed must have been excessive.

24. That, coupled with the state of the line, you think would have caused the horse-box to get off the line? Yes, I think so. I was at first upon the tender when I noticed that the motion of it on the rails was undulating, and I then got off the tender on to the engine, with a view of ascertaining whether there was much difference in the motion there, and I found that the deflection of the rails was excessive; and I believed if the engine went slowly, the deflection on the rails between the sleepers was such that with closed eyes one could almost count the number of sleepers under the rails as you passed along them. That is where the sleepers are five feet apart, as was the case at the scene of the accident.

25. You think, then, considering the condition of the permanent way, the excessive speed at which the engine must have been running was sufficient to have caused the horse-box to run off the rail? Yes.

26. Being off the rails as it turned the curve — ? It was a little before it came to the curve.

27. But, having been off the rails when it came to the curve, the momentum of the train would then tend to throw the horse-box further off the rails in the direction of a tangent, and so break the coupling? When the horse-box left the rail it was on the straight and not upon the curve; the horse-box would, therefore, proceed by its own momentum and that of the train behind it. Its course, as I before stated, would depend upon what it came in contact with; if it met no serious obstruction, its course would be straight; and, consequently, its distance from the curve would gradually increase, I consider.

28. And in this way the accident was caused? Yes, coupled with the reasons I have just given.

29. You do not think, notwithstanding the deficiencies to which you have alluded in the line, this accident would not have taken place unless the engine had been driven at the time at an excessive speed? I do not think it would, but it might possibly have happened. I cannot draw a line and say what speed the rails would stand. I would not consider myself safe upon those places on the line if I were in a train going over twenty-five miles an hour. 30. *By the Chairman:* If it were going forty miles an hour would you think that was exceedingly dangerous? Yes. The information afforded to me with regard to the accident yesterday by the gentleman, Mr. Mason, who was on the line, amounted to nothing. I do not recollect any information he gave me beyond what I have stated. I never met any person calling himself engineer on a line, or any where else, who so utterly disregarded the usages of professional etiquette by which, without compromising himself in any way, he ought to have afforded me spontaneously such information with regard to the line as would form the basis of my opinion to be given to the Committee. Instead of this, he gave me no information, and appeared to be quite indifferent in the matter. I am quite sure had Mr. Whitton himself been present he would never have behaved so.

31. *By Mr. Parkes:* Did you seek to give evidence before this Committee? No, never in any way. The first remark I made when I came before the Committee on the previous occasion was, that I had no desire to give evidence—that I should not have appeared before the Committee if I had not been summoned to do so. It would have been unprofessional to have put myself forward for such purpose.

ADDENDA.

I would respectfully draw the attention of the Committee to the importance of shewing that it was at the request of the Committee I visited the line on the 22nd instant. That the Engineer-in-Chief, who was present during the whole of my examination, was the person who suggested that I should go by the 10 a.m. train on the 22nd, and return by the 1 p.m. up-train. That the Chief Commissioner promised to send a competent person (the Inspector of Permanent Way) to point out the localities and facts in connection with the accident; and also that I was requested by the Committee to direct my attention to the line generally, and favor the Committee with any opinion and remarks I might be able, on the 23rd July. Being a member of the Institution of Civil Engineers, it is important that I should not be taxed with a want of professional etiquette towards a fellow-member; and I am quite sure, if the points I have mentioned be put in their true light, I cannot be justly taxed with having acted unprofessionally towards any person for complying, as I have done, strictly in accordance with the instruction and expressed wish of the Committee.

E. BELL, C.E.
26-7-58.

David

SELECT COMMITTEE ON THE RAILWAY ACCIDENT.

David Houison, Esq., called in and examined:—

1. *By the Chairman:* Will you inform the Committee whether upon any occasion, when you have been travelling upon the Sydney and Parramatta Railway, you have known any engine, carriage, truck, or tender to go off the line? Yes; a horse-box once.
2. Can you state the date? I cannot state exactly the date.
3. Within a month? Twelve or thirteen months since.
4. At what part of the railway? Between Homebush and Parramatta.
5. Where was the horse-box that went off the line? The last on.
6. Was there much delay in getting it on again? Not above an hour.
7. There were no serious consequences? No.
8. Did you report the circumstance to any one? No.
9. Do you recollect whether Mr. Trott was in the train on that occasion? I do not remember.
10. Do you think he was not? I think he was not.
11. Do you recollect any other time when either carriage, horse-truck, or tender went off the line? I remember the tender going off.
12. When—at a later date? About twelve months; it was about half a mile from Newtown. I have not travelled on the railway since the latter end of last July, so that it must have been above twelve months since.

D. Houison,
Esq.
23 July, 1858.

Mr. Ralph Richardson called in and examined:—

1. *By the Chairman:* Are you engaged in the service of the railway? Yes.
2. In what capacity? Since March I have been time-keeper.
3. Were you Inspector of Permanent Way at any time? Yes, for rather more than a year—from about March, 1857 to March, 1858.
4. You are well acquainted then, from your experience, with the state of the permanent way? Yes, I am, perfectly.
5. Can you give the Committee any information which you think valuable as to the cause of the fatal accident on the 10th of July, between Homebush and Parramatta. Were you on the spot immediately after it occurred? I should imagine somewhere about nine minutes after.
6. Were you the first official of the railway on the spot? Yes.
7. Will you state to the Committee what you first found when you arrived on the spot? When I got there I saw the horse-boxes, and so forth, over the embankment, and, of course, I immediately went to look at the line to see if I could make out how the thing happened. I noticed on the up-line, on the Parramatta side, and close to Haslam's Creek Bridge, the outside rail bent downwards.
8. Did you take any steps beyond merely noticing that at the time? I mentioned it.
9. To whom? To Mr. Morgan, the Inspector of Permanent Way.
10. What was done about it? I moved it up—prized it up, with some men I had with me.
11. Was it at a joint? Yes.
12. Was it part of two rails? Yes.
13. The deflection, or bending, was at the ends of the two rails then? Yes.
14. Do you think the sleeper had sunk at that spot? Yes, I should fancy it had.
15. Did you pick up the sleeper and pack it then? Yes.
16. Was that done before any one else came up? No, not till the afternoon.
17. Did Mr. Whitton see it in the state in which you saw it at first? I cannot say. I did not see Mr. Whitton go there.
18. What did Mr. Morgan do—did he give any orders immediately? I suppose about noon-time. About noon-time he said "Take some men and get this place packed up."
19. When had you got it packed up? I suppose about half an hour after.
20. How many yards from Haslam's Creek was that? I should say not above a yard and a half.
21. That was the last joint? Yes, next the bridge.
22. Do you know where the horse-box first went off the line? It seemed to me to be on the bridge.
23. How far from where you noticed that bending down of the rail? I should say two yards.
24. Do you think the horse-box jumped off in consequence of the bending or depression of the rail? I cannot say; it looked to me so.
25. If that were the cause of the horse-box jumping off the rail, would the effect be the throwing off first the near wheel of the horse-box? It would. I fancied she jumped off from here to this (*Pointing out the position on the plan before the Committee.*)
26. Would not that cause the engine to jump off? No, for that is much heavier.
27. Did you see the train coming that morning? No.
28. Where were you at the time? Somewhere about Newtown.
29. How did you come to the spot? By a special engine.
30. On account of the accident? No; we left Sydney to come after billet-wood.
31. Therefore, you were accidentally the first upon the spot? Yes.
32. Did you stop your engine there? Yes, and remained there till night-time.
33. Had you any men with you, or were you alone? I think I had about eighteen or nineteen men with me.
34. Did they also get off the special engine? Yes.
35. Where was Mr. Morgan at that time? I do not know.
36. How long after that did you see Mr. Morgan? I should say nearly an hour.
37. Did he come from Sydney? Yes.
38. You pointed out this defect to him the moment he came on the line? Yes.
39. And his order to you was to get some men and pack it up? Yes.

Mr. Ralph
Richardson.
23 July, 1858.

- Mr. Ralph Richardson. 40. The accident happened about nine o'clock—do you remember when you were first there? I suppose it would be about nine, within a few minutes.
- 23 July, 1858. 41. And it was three hours, you think, before that was repaired? We had seventeen or eighteen men all the way up this up-line.
42. Was there any reason why this was not packed up at once—were the men occupied with the broken carriages, or in any other way on the line? I would not do it till Mr. Morgan came.
43. After you got the order from Mr. Morgan, which was in about an hour, did you immediately go about it? No; not till the inquest had left for Parramatta.
44. Had any engine passed over the line after the accident, and before you packed it up? No, none at all.
45. It was packed up and repaired before another engine came up to the spot? Yes.
46. Did you understand it to be the intention of Mr. Morgan that it should be packed up before another engine came? I presume so by his having it packed up.
47. Do you attribute the accident to any other cause but that from what you know of the circumstances? I should be almost inclined to believe that the thing would not have happened if the man had not run at such an enormous speed, which I have seen him do several times myself.
48. You have yourself seen him drive at an enormous speed? I have, almost at that spot.
49. Do you think him an indiscreet driver? I do.
50. Was that from a habit of making up time, or rashness, or what? From what I know of the man, he is a man that does not know his business, for I have seen him riding down that incline, near Liverpool, which is tolerably steep, flying as if he were mad.
51. Have you been employed on English railways? On the making of them for more than eleven years.
52. You understand, therefore, from observation, the usual practice of driving on railways? Yes.
53. *By Mr. Parkes:* When you express this opinion of the driver, do you mean he is a man who cannot realize to himself his responsibility, having so much property and so many lives under his care? No, I would not say that, but he seems to me a man who has no notion as to the speed he ought to go at.
54. *By the Chairman:* You say so from repeated observation of his driving when you have been at the side of the line superintending the work? Yes.
55. Did you notice anything particular in this man's style of driving—was it more or less dangerous than is adopted in England? They go much faster there than here.
56. Do you consider this man's style of driving different from what would be practised in England? Supposing the road were good, I should not consider it dangerous.
57. Do you think from the state of the permanent way his driving was not safe? I do.
58. *By Mr. Hay:* Do you consider him an unsteady driver, an irregular driver? Yes, I do.
59. *By Mr. Weekes:* You think he drives without judgment? Upon this old line from Sydney to Parramatta, I think it is.
60. *By the Chairman:* You would not say that upon a very perfect road in England his driving would be dangerous, but, from the mode of construction and peculiarities of the Sydney and Parramatta line, you think it dangerous? Yes.
61. *By Mr. Hay:* You do not consider the line to Liverpool to be a very bad line? No; no more than that for a mile or a mile and three-quarters before reaching Liverpool there is a very steep incline.
62. Do you think, apart from the imperfection of the line, he is a cautious or an incautious driver? No.
63. Do you not think going down an incline like that near Liverpool his style of driving would be dangerous from other causes as well as from the bad character of the permanent way? Near Liverpool there is a nasty incline, and I have seen him go down that very fast.
64. Is there not some danger in entering the Liverpool station at that speed? Yes; but he would not enter Liverpool at that speed.
65. How far is this incline from the Liverpool station? A mile and three-quarters.
66. Is not that approaching one of the level crossings? Yes; there is a level crossing just at the commencement of it.
67. Do you not think the driving of an engine down that incline, with a level crossing ahead, is in itself very dangerous? Yes, I think so.
68. Although the line on the permanent way is very good? Yes.
69. *By Mr. Oakes:* Did you see Captain Martindale or Mr. Whitton on the line soon after the accident? Yes.
70. How soon? Within an hour.
71. Did any one point out the state of the railway at the part to which you have referred? I do not know.
72. Do you know that they were trying to trace out the cause of the accident? Yes.
73. Did they see the state of the rail? I do not know.
74. *By the Chairman:* Was Mr. Morgan there at the time? Yes.
75. Did you think you had discharged your duty by telling him the state of the line? Yes.
76. Did you see Mr. Morgan in communication with Captain Martindale and Mr. Whitton on the spot? Yes.
77. Before it was packed up? Yes.
78. I suppose Captain Martindale and Mr. Whitton could have seen you with the gang of men? No; they had left by that time.
79. *By Mr. Hay:* With regard to this joint of the two rails, which I understand you to say was depressed—was there anything remarkable in the position of the two opposite ends of these rails, the junction of which was depressed? No, because they could not get away.
80. You did not observe anything remarkable at the other two ends? No.

81. You did not observe any bending in these rails? No. The same rails are there now.
82. You simply raised the middle sleeper and repacked it? Yes; put a little sand under it.
83. That was all the repair that was necessary? Yes.
84. You have said that was on the outside rail? Yes.
85. You are aware the carriage went off in the other direction towards the inside? Yes.
86. Upon the opposite side of the line from this depressed rail? Yes.
87. Do you think that would have been the likely effect of passing over a depression of the rail? I do not know.
88. Do you not think it would rather have the contrary effect to prevent the wheel going off on the right side, the depressed rail being upon the left? It certainly looks more likely.
89. On a curve are not the inside rails depressed all round the curve? Yes.
90. To prevent the centrifugal action throwing the train off the rail? Yes.
91. *By the Chairman:* Did you ever report to any of the authorities this dangerous driving on the part of Boan? I did, to Mr. Morgan.
92. You considered him your official superior, and to him alone you reported it? Yes.
93. When did you report it? Several times.
94. Within what time? Within the last month.
95. When were you removed from the office of Permanent Way Inspector? Last March.
96. During the time you were Permanent Way Inspector had you any impression as to the condition of the permanent way, as to its goodness or badness, its efficiency, soundness, and fitness for traffic? Yes; I have always said it was not what we call a good road.
97. Not a road upon which you would travel at a high rate of speed? No.
98. Why were you removed from the office of Inspector of Permanent Way? Mr. Whitton informed me that Mr. Morgan had been sent for before I was engaged.
99. Mr. Morgan is now Permanent Way Inspector? Yes.
100. What position does he hold relatively to yourself that you deem him your superior officer? Because I could not give directions to a man without Mr. Morgan's consent.
101. What are you now? Time-keeper of the men.
102. *By Mr. Weckes:* You have had constant opportunities of seeing the running of the trains on the Parramatta line, have you not? Yes, daily.
103. Have you seen any other driver exhibit the same want of judgment, or drive so carelessly, as Boan? None.
104. You think the others are steady, careful drivers? Yes, the whole of them.
105. Have you ever seen them attain the same speed as Boan? Not one of them.
106. *By Mr. Egan:* During the time you were Permanent Way Inspector did you ever know any part of the carriages, trucks, or horse-boxes to be off the line? Yes; about a year ago.
107. What was off? Mr. Houson said one of the horse-boxes was off.
108. That is the circumstance you refer to? Yes.
109. Did you ever, on any other occasion, know any engine, truck, or carriage to go off the line? No. We have them get off in the Sydney yard sometimes.
110. I mean on the way between Sydney and Parramatta? No; except at the Newtown station, where this horse-box got off.
111. *By Mr. Hay:* You say the horse-box got off at the Newtown station? No; the horse-box got off, if I recollect right, about half a mile off this spot at Haslam's Creek.
112. Was anything off at the Newtown station? Yes; about a year ago, just as she was moving off from the station, the hind wheels of the tender went off the rail.
113. How long ago do you think that was? I think that must have been nearly a year.
114. Was that half a mile from the station? No, just at the station.

Mr. Ralph
Richardson.
23 July, 1858.

Mr. Richard Darby called in and further examined:—

1. *By Mr. Hay:* With respect to the evidence given by you on a former day, are you quite certain that there were six goods trucks attached to the train that day? I am.
2. I think you said three of them were loaded and three were empty? Yes.
3. Where did you take them up? At Campbelltown.
4. The whole of them? Yes.
5. You brought the whole of them from Campbelltown to the spot where the accident happened? Yes.
6. Were they all covered over with tarpaulins? No; the empty ones were not.

Mr. R. Darby.
23 July, 1858.

Mr. James Robinson called in and examined:—

1. *By Mr. Hay:* You are a guard on the Sydney Railway? Yes.
2. How long have you been employed in that way? Ever since the line has been opened.
3. You were not travelling on the occasion of the late accident? No.
4. Have you ever known any part of the train to be off the line before? On two instances, I have; there have been accidents from cattle being on the line—nothing else.
5. Did you ever know of a horse-box being off the line on a previous occasion, somewhere in the vicinity of Haslam's Creek? I remember hearing of it, but was not with it at the time.
6. How long was that ago? I could not say exactly to the date.
7. Do you remember a tender being off the line about half a mile from Newtown? No.
8. Did you hear of that? No.
9. Are the engine-drivers in the practice of making up lost time between Parramatta and Homebush? Not between Parramatta and Homebush; if they are a little late, it is occasionally when they have a good piece of road, such as that between Liverpool and Parramatta,

Mr. James
Robinson.
23 July, 1858.

Mr. James
Robinson.

Parramatta, where they can make up time with great safety; not so much between Parramatta and Sydney.

23 July, 1858.

10. Between Liverpool and Parramatta the road is straighter and better than the other? It is straighter.

11. Do they, in point of fact, run faster? No; they have plenty of time to do it in. They are allowed near upon eighteen minutes to run from Parramatta to Homebush—at least they were a little while ago.

12. Have you had occasion to run with all the engine-drivers at one time or another? I have run with all of them; but, generally, I am stationed with one driver.

13. Have you been accustomed to accompany the driver, Boan? Never, but on one occasion, and that was during the Homebush races; I was taken off my train and put on this, because we were rather in a bustle.

14. Did you observe anything peculiar in his driving, anything different from that of the others? No; I have not known him a sufficient time for that; I have been with him only once.

15. You would be able to tell the difference between a steady driver—one who knew his business, and one who did not? Yes.

16. Did you observe that he was unsteady in his driving? I could not notice it at this time, for we were so busy, and we had to make what haste we could; I had not sufficient time to notice him.

17. Have you formed any opinion with regard to the late accident? No; I could not form any opinion how it happened.

18. *By Mr. Oakes:* You say the time allowed between Parramatta and Homebush is eighteen minutes? Yes.

19. Is that the case when the train goes at a quarter to nine? Yes, I think so.

20. Have you seen the time-table? I have seen it, but have not taken particular notice.

Frederick William Donkin, Esq., called in and examined:—

F. W. Donkin,
Esq.

23 July, 1858.

1. *By Mr. Hay:* Are you much in the way of travelling between Parramatta and Sydney? I used to travel up and down every day, but do not now.

2. How long is it ago since you ceased to travel that way? About two months ago.

3. How long had you been in the way of travelling by the rail? For about two years, with the exception of about two months last winter, when I stopped in Sydney.

4. By what train did you travel? I generally got to Sydney about ten; I came by the train that left Parramatta at a quarter to nine, and left Sydney again about half-past four.

5. Did you ever know any carriages or horse-boxes to be off the line? On one occasion a horse-box got off between Parramatta and Homebush, somewhere near Haslam's Creek, about where the late accident occurred.

6. When was that? As near as I can find from the time-book in the office, on the 2nd April, 1857. I find from the book that I was late on that day on account of a railway accident, and I believe it was on that day.

7. Have you known any instance of a tender being off the line near Newtown? Yes. I was on the train on that occasion, and I think it was about three months after the horse-box got off, as near as I can recollect.

8. How far were you from the station when the tender got off? About a quarter of a mile—just as the station was in sight.

9. After leaving the station? No, before coming to the station from Parramatta.

10. At the time you travelled did the drivers run the train at a rapid rate at that particular part of the line from Parramatta to Homebush? They used to run faster there than perhaps on any other part of the line.

11. Do you know the engine-driver, Boan? No; I do not know any of the engine-drivers by name.

12. *By Mr. Egan:* Did you at any other time know any of the carriages, horse-boxes, or trucks to be off the line? No, never, during the whole time I was travelling.

Mr. William Morgan called in and examined:—

Mr. William
Morgan.

23 July, 1858.

1. *By Mr. Hay:* How long have you been in this Colony? Between six and seven months.

2. You are Inspector of the Permanent Way? I am.

3. When did you receive that appointment? Somewhere about the time I came here.

4. Have you been accustomed to railways in England? Yes.

5. What position did you hold in England? I was Inspector of Works—it was the same as I hold here.

6. Is Inspector of Works and Permanent Way Inspector the same? Both offices are combined.

7. What opinion have you formed as to the character of the permanent way on the Sydney and Parramatta railway generally? I think it is in good running condition.

8. Do you consider it a good permanent way in itself? Not so good as some lines laid down in England; but I have seen lines as bad as that in England—quite as bad running lines, on some parts of them.

9. On passenger lines? Yes.

10. Do you consider the particular rail that is used on the Parramatta and Sydney railway to be a good rail? It is a rail not generally used in England, although it is a very strong rail.

11. It is suitable for laying down on cross sleepers? Yes; it is intended for that.

12. Barlow's rail? Yes; it is never intended for longitudinal sleepers.

13. Do you think the cross sleepers are sufficiently near each other to support that rail on the Sydney and Parramatta line? In weak places perhaps it would be well to have more sleepers; and we have been improving the line by putting down additional sleepers.
14. You were on the ground shortly after the late accident took place? Yes. Mr. William Morgan.
23 July, 1868.
15. How long after? From three-quarters of an hour to an hour. I went with an engine from Sydney.
16. Did you observe anything in the permanent way likely to have caused the accident? I did not.
17. Did you observe any depression in the rail at any particular place where it appeared the horse-box got off the line—did Mr. Richardson point out any depression to you? Not where the horse-box got off.
18. Did he point out any depression at all? He merely said, "There is a slack up yonder." That was at a joint some distance from the bridge.
19. What distance from the bridge? Perhaps a chain from the bridge.
20. It was not at Haslam's Creek Bridge? No.
21. In what direction from Haslam's Creek Bridge? Towards Parramatta.
22. Did the horse-box, from what you observed, go off on this or on that side of the depression? On this side of the depression.
23. Did you examine the spot? Yes.
24. And found such a depression in the rail? Yes; that is, a slight slack in the joint, about a chain from the bridge I should think, but nothing to cause the accident.
25. How many inches was the depression? I should think not above half-an-inch, not so much as that perhaps.
26. You do not think it sufficient to have caused the accident? It was not at the spot; it was this side of it. It was on the bridge where the vehicle got off.
27. You are positive the depression of the joint was not at the bridge? I am.
28. I understood you to say it was on the Parramatta side of the spot where the horse-box got off the rail? Yes.
29. Did you examine particularly into the marks made by the train? I did.
30. Did you observe where the first marks of the horse-box being off the rail were? Yes—on the bridge.
31. Did you observe any marks on the sand before that to show it had been off the rail? No.
32. You think it went off, in the first instance, on the bridge? Yes; I observed the mark on the crown of the metal before it got on to the flange.
33. At what particular part did you observe this mark on the top of the metal? On Haslam's Creek Bridge.
34. Could you see the mark on the sand to correspond with that? Yes.
35. Did you observe marks on the sleepers? Yes.
36. Did the horse-box seem to have taken a course away from the rail immediately, or did it seem to have followed pretty much along the rail? On the flange of the metal for some time—the flange of the rail.
37. Where it marked the sleepers it must have been off the rail? Yes. I am speaking of three or four chains after the accident first happened; when it began to drive on the sleepers the sleepers were covered with sand so that you could not observe any mark on many sleepers.
38. You could have observed recent marks on the sand when you were there? Yes.
39. Where do you think the horse-box left the rail altogether? On the bridge.
40. Which bridge? Haslam's Creek Bridge.
41. It left the rail, but it did not take a course towards the side of the roadway at that time? No, it took a straight direction; where it began to pull from the line was at the commencement of the curve, by the marks on the sand. I believe Mr. Nealds made a mark on the coping-stone of the bridge to show where it went off.
42. Will you look at this plan? (*The witness examined the plan appended.*)
43. Did you examine the sleepers there? Yes, after the accident.
44. Did you not see any mark upon the cross-sleepers as near the bridge as the spot marked upon this plan? No; although it might have passed over the sleeper there was so much sand that it left no impression.
45. *By Mr. Wickes:* It was on the bridge itself you observed the mark going over the crown of the rail? Yes.
46. Did you take particular notice of the position of the train after the accident? Not particular notice. I merely noticed that the two horse-boxes were on the opposite banks—the new horse-box lying towards Parramatta, and the old one towards Sydney.
47. Were they still attached together? Yes.
48. Near the bottom of the embankment? Yes.
49. Were there two third-class carriages? I could not answer that; I think there was one third-class carriage towards Sydney; but I did not notice particularly, for the moment I got there I got to work to clear the line.
50. How many goods trucks were there in that train? I believe three.
51. Did you take notice of that particularly? I saw some, and I believe there were three.
52. *By Mr. Hay:* Do you say that from your own observation? From my own observation I believe there were three.
53. Covered with tarpaulin? One was covered with tarpaulin. My men assisted in pushing them back; they were not off the road. All the rest were off the road, more or less.
54. I suppose you have often had occasion to observe the way in which the trains were conducted along the line—have you observed the drivers proceed at a rapid rate along that portion of the line? I have observed them driving furiously.
55. What would you consider an excessive speed at that portion of the line, taking the circumstances

Mr. William Morgan. 23 July, 1888. circumstances of that portion of the line into consideration? Thirty to thirty-five miles an hour.

56. *By Mr. Weekes*: You mean an excessive speed for that quality of line? For that particular spot at the curve. There, I think, thirty to thirty-five miles is excessive.

57. *By Mr. Parkes*: And, in your opinion, dangerous? Yes; but not on that portion of the line where the accident occurred. It is a straight piece there, and I would not mind travelling over such a portion of the line at forty-five miles, or even fifty.

58. *By Mr. Hay*: Was it not approaching a curve? It was about three chains off.

59. Would you consider that in approaching a curve of thirty-six chains radius you could safely drive at forty miles an hour? I should say not very safely.

60. Is there not a motion in the rail there from the way in which it is supported by cross sleepers—is there not considerable vibration on the rail? There may be a very little vibration as regards the metal, but the rails have very strong sleepers under them. All metals will more or less move under an engine.

61. At this particular spot, have you observed the engine-drivers in the habit of driving fast? Not particularly there; more particularly between Newtown and Petersham; I have observed them, round the curves in particular—these sharp curves—these S curves.

62. Did you ever take notice of the style of driving of this man Boan, who was driving when this accident occurred? I have.

63. Do you think he is a steady driver? I think not. I spoke to him about his driving round the curves.

64. Have you had any report made to you as to the character of his driving? Richardson spoke to me some few days before the accident.

65. What did you do in consequence? I gave Mr. Richardson instructions to tell the gangers of lengths to report to him if I did not see him before they did; and the day before the accident I spoke to the driver about his fast driving, cautioning him.

66. *By Mr. Parkes*: What did he say? He said he was not going to be fined for any one.

67. *By Mr. Egan*: You spoke to him in consequence of his fast driving the day previous? Yes. I was on the engine with him the previous day, when he went rapidly round the curves.

68. *By Mr. Hay*: What time was that? Ten o'clock, from Sydney.

69. You cautioned him? Yes, at Petersham Station.

70. Is the engine-driver under you? No.

71. He is under the Traffic Manager? Under the Locomotive Foreman, Mr. Twiss.

72. Then you did not speak to him as his direct superior, but merely cautioned him? I did, and I spoke to Mr. Twiss when I came in.

73. That was the day previous to the accident? Yes.

74. Would it not be your duty if Richardson reported to you a circumstance of that sort to report it to the Chief Engineer? At the time Mr. Richardson spoke to me about this man, he said the ganger at Parramatta said Boan drove furiously round these curves, and I told him to send in the report in writing, so that I intended to report to the Engineer-in-Chief. I thought I would first report it to Mr. Twiss, and if Boan persisted in driving in the same way I intended to report it to the Engineer-in-Chief; but I had no time to do it. Having reported it to the foreman, he said he would see him about it, and caution him.

75. *By Mr. Parkes*: Will you state to the Committee what conversation passed between you and Boan? I was on the engine the day previous to the accident on the line, between Newtown and Petersham, in company with Mr. Mason, the Assistant-Engineer, and I said, "This man is driving very recklessly." He said, "Yes." I said, "I am afraid he will be off the road if he persists in driving like this," and he said, "Well, it looks very much like it." I said, "I will speak to him." I went back and spoke to him, and that is the answer I got.

76. Nothing more took place? Nothing more. I then made it my business to mention it to the foreman, that Boan did not use proper caution in driving round the curves, and perhaps he would prevent his doing so in future. Had I noticed his doing so again I intended to report it to the Commissioner.

77. Mr. Mason, with whom this conversation took place, is next in authority to Mr. Whitton? Yes.

78. What did you understand him to mean when he said he was not going to be fined for anybody—are the drivers responsible for loss of time? I believe they are responsible for what time they lose in running, as in England.

79. Is the time of starting registered? Yes.

80. So that they are not responsible for the time lost by delay at the station? Yes.

81. *By Mr. Weekes*: Then if they are limited to a moderate rate of speed on the line, an enormous rate is without justification at all? Yes, it is.

82. And is not at all necessary for keeping the running time? Not at all necessary.

83. *By Mr. Parkes*: Should you consider Boan a judicious, careful driver upon more solid ways, such as exist in England? He might be safe if he were driving along a straight line, but not as he drove the other day round these curves.

84. Do you consider that he is a careful, judicious driver, feeling the responsibility he is entrusted with in having so many lives and so much property entrusted to him? I consider him not a cautious driver.

85. *By Mr. Hay*: Of course the risk would be less if the line were more solid and straight? I consider that he is not cautious enough in driving round these curves. I never noticed his driving round this particular spot.

86. Are there generally marks on the lines in England indicating the nature of the gradients, so as to be guides to the drivers? On some lines, not on all.

87. Not on all passenger lines? No.

88. Do you consider that to be very useful? No, not particularly; in fact, many drivers would not be able to read them if they were put up; they would hardly know the figures.
89. The position of the arms would in some measure indicate the abruptness of the decline? Yes, it would indicate in some measure.
90. They would understand that? They would not understand what the gradient was unless they could read the figures, which many of the drivers in England cannot.
91. *By Mr. Weekes*: Then, however ignorant a driver may be, if he have sense enough to understand the telegraph signals that is considered qualification sufficient? Yes, the signals—red, blue, and green—if competent to manage an engine. Men are first employed as firemen, and if they are found competent to manage an engine, they go on as drivers.
92. Generally speaking, are drivers an uneducated class? Generally.
93. Having mere mechanical skill—? Some are without mechanical skill; many drivers are not mechanics.
94. They have simply skill sufficient to drive the engine? Yes; and to know when the water is in the boiler, and to understand their cocks.
95. *By Mr. Oakes*: Have you any cause to complain of any other engine-driver besides Boan? No, I do not know that I have.
96. *By Mr. Egan*: You state that it was pointed out to you by Mr. Richardson that there was some settlement in a part of the rail where the train had passed over—on examining that, did you not consider it of sufficient importance to report it to the Chief Engineer? There was no settlement, it was merely a slack.
97. It was on the Parramatta side, where the accident occurred? It is impossible to keep up the rails exactly.
98. You did not consider this of sufficient importance to report it to the Chief Engineer when he was examining the line? I did not; there it was left, it was hardly discernible.
99. But you thought it necessary to raise it and repack it? Afterwards.
100. *By Mr. Hay*: Was it in the same state when the Engineer-in-Chief went over it as when it was reported to you? Yes. Mr. Richardson said "There is a slack back yonder," and I said, "Do nothing till Mr. Whitton and Captain Martindale have examined it." I tried the road by gauge, and there was as good a gauge as could be. There was a good top on the road.
101. *By Mr. Egan*: That defect was not pointed out to Captain Martindale or to Mr. Whitton? No; I did not think it of sufficient importance, although there are many slacks on the line.
102. Still, that same day you thought it necessary to raise and repack it? I thought it desirable to get up any slack, which slacks will get in a railway where the ballast is not very good—joints will go down, but not sufficiently to endanger the traffic.
103. *By Mr. Weekes*: Are not lines ballasted with sand particularly liable to slacks? They are.
104. *By Mr. Egan*: Have you heard of other instances of either carriages, horse-boxes, or tenders being off the line? No; there have been none, with the exception of the one that occurred at Fairfield, when the engine ran into a truck loading with goods there, and that knocked the engine off the road.
105. *By Mr. Weekes*: How often are the roads inspected? Every day.
106. From end to end? No.
107. To enable you to detect any serious slack? The ganger is responsible for his length. There is a ganger with a certain number of men, and I have to inspect them at their work, or ride over the length, as the work will allow.
108. Is the line covered with gangers from one end to the other? Yes.
109. So that during every day the line is in fact under inspection from one end to the other? The gangers' instructions are, that they are to walk the line twice a day—that is, their length. It is not inspected by me every day; that would be impossible, as sometimes I have to stop a whole day at one place, or I may walk eight or nine miles.
110. Still the state of the line, every inch of it, is ascertained every day? Yes, if the men do their duty. The gangers are expected to walk their lengths twice every day, and examine everything connected with them.
111. Is each gang superintended by a competent intelligent man? Yes.
112. *By Mr. Hay*: Have they to make any memorandum to shew that they have performed this work? No.
113. Are they educated men? Not generally.
114. Some of them, I suppose, cannot write? Many of them are not able to write.
115. It is your duty to see that they perform their duty? It is my duty to examine all the lengths, although they are held responsible, and they are instructed if they consider that anything is giving way, or that there is anything in their lengths likely to cause an accident, to stop the train, or to caution the driver. They are all supplied with signal flags, and everything they require.
116. *By Mr. Weekes*: Has each ganger sets of red and green signal lamps, as well as flags? Some of them have.

Mr. William Morgan.

23 July, 1868.

Mr.

Mr. Peter Woods called in and examined:—

- Mr. P. Woods. 1. *By the Chairman*: Have you been long driving on the Parramatta and Sydney Railway? Between twelve and thirteen months.
- 23 July, 1858. 2. Have you been driving on the Campbelltown extension since it opened? Yes; I drive between Liverpool and Campbelltown.
3. Do you consider, from your experience in driving, that this is a line which requires more caution than a line in England? I never did much work in England.
4. Where did you learn engine-driving? What I have learned I have learned here. I have been working on the line here ever since locomotives have been running.
5. You began as a fireman, I suppose? Yes.
6. And were promoted to be an engine-driver? Yes.
7. Then you have no means of making a comparison between this and English railways, as to whether it requires more or less caution? No.
8. Do you drive very cautiously? I drive more cautiously in bad than in good places.
9. Which do you consider bad places? I consider that there are not many worse places than where the accident happened.
10. Do you consider that there is any danger in approaching the decline at Haslam's Creek Bridge? Not much, if the train went at an ordinary speed.
11. What do you call ordinary speed? From twenty to twenty-four miles an hour. It is a line where there is fifteen minutes to run, though some trains have eighteen minutes. That was in June; I have not been on it since.
12. Would you say if a train were running thirty-five miles an hour over that decline it was unsafe? I should not like to risk it.
13. Would you say forty miles an hour dangerous? Yes, in a place like that.
14. Why do say "in a place like that"? Because it is not so good. For one thing, it is a curve; and for another, it is very rough.
15. What do you mean by "rough"? Not so safe to travel. I can tell by the motion of the engine.
16. By its jumping? Yes.
17. *By Mr. Weekes*: Do you mean on the straight line, before you come on to the bridge? Not on the straight line—when you come on the curve.
18. *By the Chairman*: When you come from Parramatta to Homebush, where do you shut off the steam as you approach the decline? It depends upon what speed you are going. If you are making speed I might shut off at about half-way down the decline.
19. Where do you put it on? Just where you see the engine coming steady.
20. Where is that—at the bottom of the decline, further on? A little on the curve, when she comes nice and steady.
21. Did you find as a general rule, at ordinary speed, that the hinder carriages press up against the engine after you had shut off the steam? I have known the buffer of the first carriage come down on the tender; but then we are always screwed up.
22. Have you noticed the coupling used on the line between the carriages? No. I have noticed it between the tender and the carriages.
23. What kind of coupling was it? Screw-coupling. I have seen them when there have been waggons or carriages coupled with links, but that has been very rare.
24. Have you known that to be done even with passenger-trains? Yes.
25. Do you consider that safe and prudent? I would not say it was safe, though I have seen them screwed so that there was very little slack.
26. If there were a little slack, would that or would it not cause an oscillation in the horse-box? It might cause a little oscillation, but that I cannot say—I mean to say that they are quite as steady when screwed up together.
27. *By Mr. Weekes*: Are you ever required to make up time;—suppose you start five minutes behind time at Parramatta, are you required to make up that time if you can in your journey to Sydney? Yes.
28. Is that in your regulations or orders? No, verbal orders.
29. To make up time? Yes.
30. From whom do you receive your orders? From Mr. Twiss, Locomotive Foreman; I have also received it from the Manager, and I have received it from Captain Martindale, the Chief Commissioner, who was with me, and the Manager told me to make up the time between there and Parramatta. I forget how much it was late—perhaps seven or eight minutes—and I told him it was against rules, I could not fetch up any time without orders. He told me he thought his word was sufficient—at all events, I might fetch up a little. The following day I received an order from the Locomotive Foreman: he told me to fetch up what time I could where the road was good, but not where the road was not fit; of course, after that, I made up time where I could, but I ran cautiously where the road was rough.
31. That is, you made up time as far as was consistent with safety? Yes, but not to get before time.
32. Did you understand that you should be fined if you did not make up any of this time? I had no orders that I should be fined, but I had orders that the next time I came in late I should be dismissed from the premises, except in case of accident, or I could give a satisfactory reason.
33. Have you been late since then? Yes.
34. From what cause? My engine went into the shop to be washed, and it had been standing there four or five days with a dirty fire—I cannot say whether it was that—but it would not make steam. The Manager and Chief Commissioner were with me, and I could not make any steam. After that I was put back from driving into the shop, and I have not been driving since.
35. What is the highest rate of speed at which you have driven your engine with passengers when

SELECT COMMITTEE ON THE RAILWAY ACCIDENT.

- when you have been endeavoring to fetch up time? I think I have fetched up five minutes ^{Mr. P. Woods.} between Parramatta and Homebush. 23 July, 1858.
36. What is the distance? Between five miles and three quarters and six miles; I believe there are fifteen minutes allowed, and I have done it in ten.
37. *By the Chairman:* Generally, as I understand your instructions to be, that if you are late at starting you are to come in punctually? Not punctually, but if I am late at starting to fetch up all I can with safety.
38. *By Mr. Oakes:* What is the shortest time in which you have performed the journey from Parramatta to Homebush? I do not know that I ever came in less than that.
39. *By the Chairman:* If you travelled from Parramatta to Homebush in ten minutes, from station to station, including getting up steam and slackening steam, what do you suppose was the highest rate of speed at any part,—as you were going at an average rate of thirty miles the whole distance, what do you suppose was the highest rate? Perhaps between thirty-five and thirty-eight miles.
40. Do you not think that highly perilous? Not where the road is good.
41. You say there are very bad parts on this portion of the line? Yes; but I should slacken the speed on the bad parts.
42. Then the safety of the train depends upon your judgment in slackening or increasing the speed? Yes.
43. Do you not think that dangerous? I do not think so; if the road is bad I go more cautiously, and I make up the speed where it is good.
44. Would it not be better if you were only required to keep your proper time in running—would not that make travelling more steady and safe? Yes.

TUESDAY, 27 JULY, 1858.

Present:—

MR. DONALDSON,
MR. HAY,MR. PARKES,
MR. SCOTT.

THE HON. STUART A. DONALDSON, ESQ., IN THE CHAIR.

Mr. Joseph Twiss called in and examined:—

1. *By the Chairman:* You are Locomotive Foreman on the Great Southern Line of Railway? ^{Mr. J. Twiss.} Yes. 27 July, 1858.
2. Will you state to the Committee the tenor of the instructions which you have received from the head of the department, and which you have communicated to those under you, with regard to the rate of travelling when trains are late, and more particularly the regulation as to the making up time on the railway? I beg to submit the copy of instructions which I received from the Chief Commissioner. *(The witness handed in the same. Vide Appendix A, and Appendix A to evidence given by Captain Martindale, on 17th July, 1858.)*
3. Have you not a printed book of instructions? I have a book of rules, but I have not brought a copy with me.
4. Do you remember their tenor from memory—what was your understanding of the instruction as to making up time on the line? It is a thing I have always been opposed to from the first.
5. What were you opposed to? To fetching up time; it is altogether contrary to rule. On some lines in England running in conjunction with other lines, it is endeavored to fetch up time; others will not allow it.
6. What have been your instructions to drivers on that point? Nothing in particular, only what is written there.
7. Do the drivers understand that when a train starts from Parramatta, or from Sydney, say a few minutes behind time, they are to make up the time on the line? I have given no instructions to them to do it; they know the rules, and they must know that I have spoken to them. They may have had verbal instructions from some of the officers, but not from me.
8. From what officers? There are so many officers in connection with the line.
9. We understand that you are the engine drivers' immediate superior officer? They are under me when they are in the shop, but when they are on the line they are not considered to be under me—not out of the shop. So long as I see their engines are in good working order, that their conduct is good, that everything is right, everything is fit for the road, I am done with them. If I see anything wrong when they are out, of course I then reprimand them for it. If I see them running at any improper speed, I have control, but not in respect to their time; I have nothing to do with that in any shape or form—they are considered to be under the guard, in the traffic department. In fact, I believe they have all the impression that they are under him when they are on the road; and of course I have said I consider that to be the regular thing, that they should be under the guard and station master.
10. You do not consider yourself responsible for their over driving? No.
11. *By Mr. Parkes:* Do I understand from what you say, that you considered yourself simply over the driver as to the condition of the carriages, as the engineer—but that you have

- Mr. J. Twiss. have nothing to do with the working of the carriages? Only to see that every thing is in an efficient state, and that the men are not the worse for drink, but in proper order to go out.
- 27 July, 1858. 12. You are in reality the engineer overseer? Yes.
13. As far as the work is concerned? I have to see that all the rolling stock is in a proper state. I have to superintend the whole—engines, carriages, and waggons. We have one person appointed who looks after the passengers' carriages.
14. *By the Chairman:* Supposing one of the drivers, Wood, or either of the others, were five minutes late at Parramatta, and made up the time between Parramatta and Homebush, for which fifteen minutes is allowed, in ten minutes, would you consider you had any thing to do with that? No, unless I had had given them a written order to do so.
15. In fact, you are more overseer of the machinery than of the running? Yes; if there were any thing wrong with the engine I should see to it.
16. If you saw them ill using the engine, or mis-driving in any way, you would interfere, but you do not consider yourself responsible for the driving at all? No. If I found they were late I should ask the cause of it—perhaps they would say they were detained at the station; and I might ask "Is the engine right?" If I find any negligence, of course I look to the matter, and occasionally report it to Mr. Whitton, if I think it necessary. If it is anything frivolous, perhaps I give the man a reprimand, and there is no more about it.
17. *By Mr. Parkes:* Is there any one in the engineering department between you and Mr. Whitton? Yes.
18. *By the Chairman:* I see that instructions from Mr. Whitton come to you with regard to late trains? That is a copy I made this morning of Mr. Whitton's memorandum.
19. How is it that you are instructed by Mr. Whitton upon this point, if you have no responsibility with regard to the drivers? If they are late, they will look upon it as our fault that they are behind time. But we have nothing to do with the fetching up time; I have always been opposed to it; my experience tells me better.
20. Does your experience tell you that it is a dangerous plan to make up time? Yes.
21. Is it a source of accident elsewhere? I do not know that I ever knew of an accident from it; but, of course, they must be more liable to danger when they are doing so.
22. Have you been much accustomed to locomotives? Yes, I have been brought up to it.
23. What is your general opinion of the Parramatta line—is it good, middling, or bad? From the first I consider it has been as ill constructed a line as ever I saw.
24. Why so? In consequence of so many curves with small radius for the engines to go round.
25. Is there anything in the rail which you consider objectionable? That is a matter of opinion; it is not a rail I approve of.
26. Looking to the state of the permanent way, would you consider it dangerous for a man to drive from Parramatta to Homebush, a distance of five miles and three-quarters, in ten minutes? I would not consider it a high speed at home.
27. Looking to the curves and inclines on the road? Provided the driver eased the engines round the curves, he might do it with safety. It is customary to reduce the speed going round a curve, and when the engine gets off to give a little more speed. They do not run at a uniform speed.
28. We have it in evidence that one of the drivers, when five minutes late in starting from Parramatta, repeatedly made up that five minutes in the five miles and three-quarters between Parramatta and Homebush—would you consider that dangerous on that part of the line? I should say, as a general thing, the speed was too great; sometimes the line is in a better state than at others, owing to the state of the weather. If we got a week's wet weather, it affects the line very much. If we were without rain for a few weeks, and the line were attended to as it ought to be, I should not think there was the least danger; because it would only be about thirty-four miles an hour, and that is a very limited speed. We should consider it very limited at home.
29. *By Mr. Hay:* Do you consider it your business to see that the drivers are regular in their time of running? If they are late and lose time, they must give an account whether it is the fault of the engine or their own negligence—not if any detention has occurred at the station. We expect them to run to the time-table; that is the instruction I have invariably given, and not to exceed it. If I have told them that once, I have, not to exaggerate, told them a dozen times.
30. It is your business to see that the trains run neither too fast nor too slow? Yes. If I saw them running too fast I should speak to them, because it destroys the machinery. It is a line that will not stand too high a rate of speed, and we have to guard against anything of that kind.
31. It is your duty to see that they do not run either at too high or at too low a rate of speed? I do not go on the line often; I have to look over the work in the establishment, and if I have time I go upon the line.
32. It is one part of your duty to ascertain as far as possible that they run neither too fast nor too slow? That they run at a uniform rate.
33. If you found from your own observation, or from the report of others, that any man were running at too rapid a speed, would you not feel it to be your duty to reprimand him, or to report him? Yes, or to reduce him. In some cases we have inflicted a small fine. It must be understood, that when they are on the line they are not under my direction. If I ascertained from my own personal observation that through their neglect of the engine they had lost time, and then ran at too great speed to make it up, I should reprimand them for it. We expect they will ease the engine in going round a curve, and also in going down an incline.
34. Are the engine-drivers, for the proper running of the engines, or the proper management of the engines, responsible to you? Yes, as regards the working of the thing, but I do not hold them responsible if they are detained at the station.

35. For any irregularity in running between the stations are they responsible to you? Yes. Mr. J. Twiss.
36. Was it reported to you, previous to this accident, by any of the men, that Boan was an irregular driver? Yes. 27 July, 1868.
37. Do you recollect by whom? Yes, by Mr. Morgan, on the previous night.
38. What did you do in consequence of that? It was just as the last train from Sydney was going out, the 5-45 train, and Mr. Morgan came to me about a minute or two minutes before the train was going, and said that he and Mr. Mason had just come down, and that the driver had been going round the curves too quick. I told Mr. Mason that Boan had told me about it, and wanted to know what Mr. Mason had to do with his running. Mr. Morgan said, "I do not think Mr. Mason has anything to do with that." Boan told me, "At the time he spoke to me I was behind time, and I was not running at an improper speed." I said, "Your own judgment ought to tell you whether you were running at an improper speed. I have always told you to run slow when you are running round a curve, because it injures the engine." I told Mr. Morgan I would speak to Boan in the morning; but I never saw him to speak to him till he came up with the empty engine on Saturday morning. I never had an opportunity to reprimand him.
39. Mr. Morgan said he was running too fast? Yes. He told me that he and Mr. Mason had been with Boan on the Friday.
40. Would you not consider, when both Mr. Morgan and Mr. Mason concurred in saying that this man was running too fast, that in point of fact he must have been? It would have been a difficult thing for me to form an opinion, because sometimes a man will fancy an engine is running too quick when it is not doing so; he may make a mistake unless he is practised to ride on an engine.
41. Are not both Mr. Morgan and Mr. Mason in the practice of riding upon engines? The engine-driver ought to be the best judge himself, but then, of course, we ought not to take his evidence.
42. Could you expect to have better evidence than that of Mr. Morgan or Mr. Mason as to the rate at which the engine ran—unless you saw it yourself? But the question was whether he was running to the time, and as he told me he was two minutes under time. He remarked to me that he told Mr. Mason at the time he could not do it in consequence of his order not to lose time.
43. Had you ever heard before that he drove too fast? No; that is the only complaint I have heard of him. He had not been running on the line regularly very long; perhaps it is about a month since he commenced to run regularly with the passenger train.
44. Do you never try to ascertain from any trustworthy person employed upon the line, as Mr. Morgan or Mr. Richardson, at what rate these persons do drive when you do not see them? It is their place to report to me if they see anything of that kind. I have heard these things spoken of occasionally, but, not seeing it myself, the engineer might deny it.
45. Do you not think, if Mr. Morgan reported to you that he and Mr. Mason had been on the engine when it was running at a dangerous speed, that it was your duty to report the circumstance to the Chief Engineer? The time did not admit.
46. Did you intend to report it? Things of this sort might take all my time up if I made a report of every frivolous thing.
47. Did you think this a frivolous thing? I could not tell whether this was or not.
48. You heard what Mr. Morgan said? Yes; and I heard what the man said, and I was going to question him about it again in the morning.
49. Did you not think it a matter of sufficient importance to refer it to the Chief Engineer? Certainly, if I heard that a man did anything likely to result in an accident, or anything likely to impede the working of the line—which I frequently do.
50. Did you not think Mr. Morgan's evidence, combined with Mr. Mason's, was sufficient to shew you that there was a *prima facie* case against the man of going too fast? I did not hear Mr. Mason say anything about it.
51. Did not Mr. Morgan say that Mr. Mason was on the train, and that Mr. Mason had remarked at the time that the train was going too fast? Yes.
52. Then, in point of fact, you had not formed the resolution to report the circumstance to the Chief Engineer? Of course, anything of that kind, where there was gross neglect to make a report of. I intended to draw the attention of the Chief Engineer to it.
53. It appears to me, from what I understand of your statement, that you did not exactly speak to Boan in words of warning, in consequence of what Mr. Morgan said to you? Boan told me that Mr. Mason and Mr. Morgan went down with him upon the down train, and he said Mr. Mason had been grumbling at him, and speaking to him about running too quick round the curves. I said, "You know I have told you not to run too quick round the curves, for I do not consider it safe." He said, "I was only running my regular time." I believe he told me he was two minutes behind time. I said, "Your own judgment ought to tell you, and you know very well that you ought not to run too quickly round a curve." He said, "What am I to do, I am to run to time?" I said, "You have plenty of time without running at any irregular speed." In fact he spoke, prior to that, what Mr. Mason had to do with it. I said, I did not know what Mr. Mason had to do with him, if any person thought proper to speak to him to caution him he could do so, but anything beyond that Mr. Mason had nothing to do with him—which he had not.
54. You told him so? He had nothing to do with him further than this—If I saw a person not particularly under my direction doing wrong I should feel it my duty to speak to him.
55. Did the man leave you with an impression that the facts would be investigated? He must have known from what I said that he must not run quick. I told him so invariably, time after time.
56. You did not tell him that he was running too quick? No, I did not, because I could not tell then.

Mr. J. Twiss. 57. Had not Mr. Morgan and Mason informed you? I had not seen Mr. Morgan at that time. When Mr. Morgan spoke to me I said, "I will speak to the man in the morning."
 27 July, 1858. The following morning the accident occurred, and I had no time to speak to him.
 58. Did Richardson ever speak to you about this man's driving? I have no recollection of it. If he has it has escaped my memory.

APPENDIX A.

GREAT SOUTHERN RAILWAY.

Engineer's Department,
 Sydney, 29th June, 1858.

Memorandum to Cobb, Berry, & Boan, engine-drivers.

I am instructed to inform you that, owing to so many late trains having been run of late, and the excuses which have been made by the drivers not being satisfactory, in future any engine-driver losing time in running, (except in the event of an accident), will be fined one day's pay for every late train, and if frequently late, will be discharged from the service.

J. TWISS.

N.B.—Copy of memo. to Joseph Twiss from Engineer-in-Chief. Vide Appendix A to evidence given by Captain Martindale on the 17th July, 1858.

Mr. John Charles Banks called in and examined:—

Mr. J. C.
 Banks.
 27 July, 1858.

1. By the Chairman: Where do you reside? At the Glebe Road.
2. Are you able to afford the Committee any information as to the accident which happened on the Parramatta line on the 10th of July? The information I have obtained was from one of the men who were employed in repairing it.
3. Can you give the name of that person? If I did so Mr. Whitton would discharge him. I should not like to give the man's name, but I can give you information which will enable you to find out the circumstances.
4. What was the character of the information he gave you,—was it of a kind he should not have given? No.
5. Do you know Mr. Whitton? Yes.
6. You do not consider the information given by this man was of a kind he should not have given? No further than this,—he is a servant of the Commissioners, and if he said anything calculated to throw blame upon them they would dismiss him.
7. Can you state the nature of the information he gave you? I will explain the cause of the accident. On the line there are two rails running parallel, one of the rails was perfectly sound and level, on the other side the sleeper had sunk, and there was a hollow on the rail. When the train came to this place the horse-box was oscillating from side to side, and it jumped, as it naturally would do when it came to this hollow, and the flange which clips the rail pitched on the top of the sunken rail, and the consequence was that it ran along the bar of the rail for a short time, and then ran off. The cause of the accident was that hollow with the motion of the horse-box moving from side to side.
8. Was there any mark upon the rail which showed that the flange had run there? I did not see it myself; I had it from the person who saw it. I can give you the name of Mr. Richardson, and the reason I give his name is this, that he was on the ballast waggon at the time with a number of men. I cannot tell you the names of these men, although I know them by sight. Mr. Richardson can give the names of each man; but, being a servant of the Commissioners, he would be rather cautious what he said, still he knows perfectly well there was a hollow there.
9. You did not see it yourself? No; I know it from one of the men who repaired the damage.
10. Were you employed by the Commissioners during the time Mr. Richardson was Inspector of the Permanent Way? Yes, I was—painting, plumbing, and glazing. I know Mr. Richardson is the most efficient servant on the line. I have known him to be up all night.
11. Since Mr. Richardson ceased to be Inspector of the Permanent Way has any work been done by you? No, none by me. I may state that the men have had a reduction in their pay, and the carriages have not been kept in proper repair. The object of this close cutting economy has been to give the public a report to show that the line has been worked very cheaply; but the next half-yearly, or yearly report will show a very considerable increase in the expenditure, to make good what is now neglected.
12. These reductions have been made on the score of economy? Yes; but it is a mistaken economy to reduce men from 9s. to 7s. a day, as the best men have left.

FRIDAY, 30 JULY, 1858.

Present:—

MR. DONALDSON,
MR. WEEKES,
MR. OAKES,

MR. EGAN.

MR. HAY,
MR. PARKES,
MR. ROBERTSON,

THE HON. STUART A. DONALDSON, Esq., IN THE CHAIR.

Peter Woods, engine-driver, called in and further examined:—

1. *By the Chairman:* You are an engine-driver, and have been previously examined before Peter Woods, this Committee? Yes.
2. Now, I wish to read to you a portion of your evidence, to see if you recollect what you ^{30 July, 1858.} said, and I then wish to ask you a question about it:—"26. *By Mr. Weekes:* Are you ever required to make up time;—suppose you start five minutes behind time at Parramatta, are you required to make up that time if you can in your journey to Sydney? Yes. 27. Is that in your regulations or orders? No, verbal orders. 28. To make up time? Yes. 29. From whom do you receive your orders? From Mr. Twiss, Locomotive Foreman; I have also received it from the Manager, and I have received it from Captain Martindale, the Chief Commissioner, who was with me; and the Manager told me to make up the time between there and Parramatta. I forget how much it was late—perhaps seven or eight minutes—and I told him it was against rules; I could not fetch up any time against orders. He told me he thought his word was sufficient—at all events, I ought to fetch up a little. The following day I received an order from the Locomotive Foreman: he told me to fetch up what time I could where the road was good, but not where the road was not fit. Of course, after that I made up time where I could, but I ran cautiously where the road was rough."
3. That is correct, is it? Yes.
4. Can you state upon what occasion this conversation took place? Captain Martindale was riding on the engine with me, along with the Manager. I was something like (I cannot exactly tell you) six or seven minutes behind time on leaving Liverpool, but he wished me to fetch the time up between Liverpool and Parramatta. I told him it was against rules.
5. Then it was the Chief Commissioner, and not the Manager? All the Chief Commissioner told me was, I could fetch the time up between there and Parramatta.
6. Can you identify the day in any way? No; it was in June some time.
7. In June last? Yes; I believe it was last June.
8. That was last month? It would be early in June.
9. Do you remember anybody else on the engine at that time? There was the fireman opposite the Manager.
10. The fireman, the Manager, and Captain Martindale? Yes.
11. No strangers? No.
12. When you say the Manager, you mean Mr. Nealds? Yes.
13. And Mr. Nealds and Captain Martindale were on the engine at the time you speak of? Yes.
14. Did Captain Martindale seem to approve of that? It was only on this occasion that Captain Martindale ever said anything to me about making up time.
15. *By Mr. Weekes:* You say he told you "he thought his word was sufficient:" is that the Manager's word was sufficient? No, Captain Martindale's.
16. You are certain it was early in June? It was early in June.

Captain B. H. Martindale, R. E., Chief Commissioner of Railways, called in to be further examined, desired to call the attention of the Committee to the evidence of Peter Woods, question 29, and requested that the engine-driver (Woods) might be re-examined in reference to the conversation concerning the making up of time. The engine-driver was re-examined; and on Captain Martindale returning to the room, (which he left ^{30 July, 1858.} while the evidence was being taken,) the evidence was read over to him by the shorthand writer.

Capt. B. H.
Martindale,
R. E.

1. *By the Chairman:* Have you any statement to make in reply? I think I can give the Committee convincing proofs that that statement is incorrect. In the first place, I never do give orders to the drivers if their immediate superior is present: any order I have to give I give to that superior. In the next place, I never should have used such language as the driver states I did; and if the Committee will look at that language for one moment, they will see that it is such as I never should have used. Woods says—"he told me he thought his word was sufficient." What I should have said to any driver who questioned my orders would have been, "Obey your orders, sir;" but I should certainly not have entered into any conversation as to whether my word was sufficient or not. I am perfectly convinced that conversation never took place.
2. Do you recollect riding on the engine early in June? Yes, very frequently, in early June, owing to the want of punctuality in the trains. I distinctly remember giving an order to the Manager to make up time, when travelling on one occasion by the last train, at night, between Parramatta and Homebush. I told the Manager himself to go upon the engine and to make up a minute or two between Parramatta and Homebush, but to mind and drive steady. That is the only occasion that I can recollect upon which I have given an order to make up time. The Manager had a discretionary power to make up time, which I have now withdrawn.

Capt. B. H.
Martindale,
R. E.

30 July, 1858.

3. Since when have you withdrawn it? Since this accident.
4. Then the Committee in'or that you are persuaded now, at all events, whatever may have been your opinion when these rules were framed, that no such discretion should be given? I did not make these rules; they have been in operation since 1855.
5. Whatever may have been the intentions of the framer, you are of opinion that no discretion should be with the Manager? Yes.
6. *By Mr. Wakes:* Allowing that that minute or two was made up, what would be the speed of the engine over that space? Eighteen minutes was allowed; and supposing three minutes were made up, it would then bring the time down to fifteen.
7. What rate per hour? Twenty-three miles.
8. *By Mr. Hay:* The same rate as the morning train runs in? The same rate as the morning train runs in. The reason that I gave the order that night was, that I had a great number of complaints about want of punctuality and I was anxious to bring the train in to time. I had gone down the line specially that day to watch the running of the trains.
9. *By the Chairman:* You have had an opportunity afforded you to see and hear the evidence taken before this Committee—is there any part of that evidence which you wish to draw attention to, as deserving of comment on your part? There are certain parts. I will take first the evidence of Mr. Bell. I will not go into that evidence in detail, because it will be more properly done by the Engineer-in-Chief, with whom I have gone through the evidence this morning. Mr. Bell must have left, I think, the impression upon the Committee by his evidence, that I did not fulfil the engagement I made to the Committee to send him down by a certain train, and to provide a proper person to point out the site and the circumstances of the accident to him. I informed the Committee that I would send Mr. Bell down by the ten o'clock train, and that he might come back by an afternoon train; and that the Inspector of Permanent Way should be sent to point out the circumstances to him, as being the best person. After I left the Committee I made the following alteration in that arrangement:—Instead of sending Mr. Bell by the ordinary train I ordered a special engine for him, for two reasons—one, that the passengers should not be alarmed by the ordinary train stopping at Haslam's Creek Bridge unexpectedly; and the other, that a special engine afforded Mr. Bell the opportunity of getting down wherever he wished to inspect the line, which an ordinary train would not have done; and I requested the Engineer-in-Chief to direct the Inspector of Permanent Way to be in attendance next morning, according to the pledge I gave. He did give those directions, but, owing to circumstances which he will explain, they were not carried out, and his principal assistant, as I understand, Mr. Mason, was directed to go in the Inspector's place, and to give the information necessary. That is all I have to say upon Mr. Bell's evidence—without the Committee have anything they wish to ask me in reference to it. The other point I wish to call the attention of the Committee to, is the evidence that has been given respecting a horse-box having got off the line some considerable time ago. I find, on looking over the evidence, that Mr. Donkin states that the horse-box got off the line in April, 1857; Mr. Richardson states it was about a year ago; Mr. Houson states that it was twelve or thirteen months since; and that appears to be very good evidence, because Mr. Houson states, that he has not travelled on the line since that time, and if he is correct it could not have happened since that time. Mr. Esq. states, it was ten months ago. That evidence corroborates the impression I have, that this accident could not have happened since Mr. Nealds was appointed Traffic Manager, which was in October last, for I am certain, from the system of reports which has been enforced since that time, that the accident could not have happened without my hearing of it. I may call the attention of the Committee, perhaps, to the fact that this appears to be the only accident that has occurred during all that time. This does not show careless management; for I believe upon no line in England, or elsewhere, would it be found that no accident had occurred of any kind during a similar period. I have given considerable attention to the matter since the accident happened, and endeavoured to satisfy myself as to the cause of it: I retain the impression I formed at first, that the speed at which the train was travelling is not sufficient to account for the accident, and I attach no great importance to the centre-links having been used in place of screw-couplings. I wish to call the attention of the Committee to the statement made by one witness, viz., that the first horse-box was oscillating very considerably nearly half a mile before it reached the place where the accident happened. That induces me to think that there must have been something in the condition of that horse-box of which I am not aware that led to that unusual oscillation; which, together with, possibly, some unsteadiness in the driving, or some slight defect in the road, of which, however, I have no proof, may have caused the horse-box to leave the rails. I have been unable to satisfy my mind that any speed at which the train was driven, and the use of centre-links in place of a screw-coupling, are sufficient causes to account for the accident.

John Whitton, Esq., Engineer-in-Chief, M Inst. C. E., called in and further examined:—

J. Whitton,
Esq.

30 July, 1858.

1. *By the Chairman:* You have had an opportunity afforded you of hearing, or seeing after it has been taken, the evidence given before this Committee: would you state if there is anything in that evidence on which you wish to comment—and would you favor the Committee with your remarks upon such parts as you think require comment at your hands? Yes. The first evidence upon which I wish to offer any remark is that of Mr. Arthur. He states that “the tires of the wheels are worn hollow, instead of being flat, and the flanges of the “wheels are worn very much from knocking backwards and forwards upon the rails sideways. “It is my opinion that the cause of the accident was, that the engineer was travelling at a “sharp pace, and easing his engine off too suddenly the carriages were thrown together—the “buffers of one carriage being higher than the others, and being like a dead block of wood, “had

"had thrown the carriages off the line." In reply, with reference to the tires, I can only say that they are in good condition, and the carriage buffers are, for all practical purposes, the same height; the difference being $\frac{1}{2}$ inches, and the horse-boxes $2\frac{1}{2}$ inches. In question No. 6 Mr. Arthur says, the buffers are "completely useless." In reply, I say that the buffers are India-rubber buffers of the usual construction, and they are in good order. In question No. 7 he says, the bush "is completely worn out." In reply, I say it is not so; the brass is in good condition. In question 10 he says, the end marked 78 "is against the journal, the other is against the wheel." I wished that question at the time to be particularly asked of Mr. Arthur, because, from the manner in which he stated it, it was very evident that he did not either understand the nature of the axle-boxes or the brasses. The end marked 78, which he said was against the end of the journal, is against the boss of the wheel, so that the brass, in fact, was put on by him in the very reverse position to that in which it is used. In question No. 11 Mr. Arthur states, that he "cannot say to which carriage the brass belongs." In reply, I say that, perhaps, it did not belong to any of the carriages in the late accident: it appears that he picked it up in the station yard; but to what carriage it belongs he was unable to state. In question No. 22 Mr. Arthur states, that the brass "must remain stationary when the weight is on it." This is not so, as the brasses have a lateral motion when weighted: the brasses, in addition to the play which they acquire when working, have a lateral motion in the axle-boxes, to enable them to run more freely round the curves. In question 36 Mr. Arthur states, "the usual way of making these brasses is to place two together, and bore them out for the journal to work in the brass." In reply to that, I say only one brass is required, and only one is used: two brasses are never used in the axle-box of a railway carriage. In question No. 39 Mr. Arthur states, "India-rubber becomes soft and sticky, and prevents the buffer-frame working." In reply, I say that India-rubber springs are used for the engines close alongside the boiler, and are not damaged by the heat. In question 41 Mr. Arthur states, "one of the buffers had not above an inch play, and the other had above five inches—one was in, the other out." In reply, I say this is not so: I have examined the carriages and can find nothing of the kind. In question 46 Mr. Arthur states, that "there is a difference in the height of the buffers of from four to five inches." In reply, I say that this statement is incorrect. The carriage which, I am informed, was measured by Mr. Arthur, was off the springs and blocked up with wood. I have, since the accident, had the carriages measured, and this is a correct list of their widths, and the heights of the buffers. (*Witness handed in the same. Vide Appendix A.*) When the carriages are loaded, the springs, of course, will come down a little, and after they have been constantly in use for any length of time the springs "become set," and lower probably half an inch or an inch. The new horse-boxes are higher because they are new, but after being in use for some time they will come down nearly to the height of the other carriages. In questions 70 and 71, Mr. Arthur states, that "he has seen carriages put on without screw-couplings." (I believe Mr. Arthur was alluding to the carriages on this line. It is not distinctly stated, I think, in his evidence whether he alludes to these carriages or to carriages in England, but I believe he alluded to this line. It is impossible that he can have done so, as there are no centre-links on any of the carriages on this line.) In question 78, Mr. Arthur states, "there are great numbers of wheels now upon the rails that are a quarter of an inch hollow." This is simply incorrect. In questions 107, 108, and 109, Mr. Arthur states, that "the wear and tear of the flanges of the various wheels and brass bushes, and the imperfect state of the buffers were the chief cause of the carriages going off the rail." As it is generally believed that the horse-box was the first that left the rail—and, I think, we have pretty clear evidence that that was so—I may say that the horse-box which left the rail has only been running about two months, and was in excellent condition, both wheels and brasses. In question 110, Mr. Arthur states, that there are bad rails in the station yard, and he said something about their being as soft as cake. In reply, I say this is not so; the statement is incorrect, and I may also say I never saw a station yard where the rails were in better condition than they are in the Sydney station yard. In answer to question 112—"Do you know of any preventives against accident used in England or elsewhere that are omitted here, as regards the situation of the guard or engine-driver on the train?" Mr. Arthur states: "Generally there are two guards—one in front and one at the back of the train, and they communicate with the engine-driver by a whistle; and when he intends to slacken the speed he gives a signal, and they apply the breaks." In reply to that, I say that two guards are never used with passenger trains, excepting express trains or very lengthy ones, and on the leading lines in England where the traffic is great. In reply to question 129, Mr. Arthur states, that "the builder of those carriages is not one of the best." My reply to that is, that the builders of these carriages are the Messrs. Wright of Birmingham, and I believe that they are amongst the best builders of railway stock in the world. That is all I have to reply to in the answers given by Mr. Arthur. Mr. Parfitt is the next, but he is so thoroughly ignorant of the subject on which he has given his opinion, that it is not necessary for me to trouble the Committee with any remarks upon his evidence. Mr. Bell's evidence is the next upon which I wish to make any remark. Mr. Bell states, in answer to question No. 7, "I assume that there is great danger in putting the horse-boxes where they were in the train." Mr. Bell gave that opinion without (according to his own admission) having had any experience in the working of railways; and I can state, after an experience of above twelve years of the daily working of railways, that the position of those horse-boxes was, by far, the best in the train. In confirmation of my opinion I refer the Committee to a work by Clark; who is the best authority on rolling stock, with regard to the position of horse-boxes.

2. *By Mr. Parkes:* Is that the best authority? I believe so. It is a recent one, and I believe it is the best on rolling stock. Clark says:—"Horse-boxes are made with stalls to receive three horses. Their length is regulated by that of a horse, and it is supplemented with two dog-boxes, one at each end—useful for carrying dogs and harness. The full length

J. Whitton,
Esq.
30 July, 1853.

J. Whittom, Esq.
30 July, 1858. "length so obtained makes a reasonably long under-frame, with wheels properly apart for steady running. It so happens, inconveniently in this respect, that horse-boxes, to be readily uncoupled at the proper stations, are in general placed at the end of the train, where there is most liberty for unsteady carriages—thus, a proper length of wheel-base is indispensable for horse-boxes."

3. *By the Chairman*: At the end of the train? He says, they are "inconveniently placed at the end of the train, where there is most liberty for unsteady carriages." Horse-boxes, having a shorter wheel-base, are, as a rule, more unsteady than carriages of greater length; but on this line the horse-boxes used are built with frames of iron-bark, and are consequently much heavier than the horse-boxes used in England. And I may state that the wheel-base of the horse-boxes in use here is the same as those on the English lines, except the one which fell off the line, and this is eight feet six inches from centre to centre of the axles—being six inches longer than those in England. In answer to question No. 9, Mr. Bell states, "The circumstances [stated by the Chairman] would be quite sufficient to push the horse-trucks off the line, the horse trucks having only four wheels." In reply to that, I say that I never saw a horse-box with more than four wheels either on a broad or a narrow gauge; nor could any impetus from behind have caused the horse-box to leave the line. In answer to question 11, Mr. Bell alluded to the circumstance of some of the carriages having travelled two hundred and fifty yards after they left the line. His answer was, "that having travelled two hundred and fifty yards off the line," he assumed that they must have travelled at a very high speed. In reply to that I have to say, that this is a mis-statement. The carriages only ran about fifty yards after breaking away from the engine. In answer to question 12, Mr. Bell states: "I attribute the origin of the accident to the placing of three loaded goods-trucks at the rear of the train, and the horse-box next the tender."

4. He modified that in his second examination, after he had seen the spot and had become acquainted with all the circumstances? I think he modified it generally. Mr. Bell did not modify that particular opinion, he modified the whole of his evidence. He said, had he seen the spot he should not have given the evidence he did as to the cause of the accident. The trucks were in the best possible position, excepting in the case of collision, and in this case there was no collision. The guard's break, being the heaviest, is always placed at the tail of the train when travelling at high speeds.

5. *By Mr. May*: He did not think, after seeing the scene of the accident, that it resulted from the impulse of the train behind? No; but I can scarcely see what difference the examination could make in his opinion upon that subject, because he certainly gave it as his opinion that the engine broke away, and that the carriages ran by their own impetus 250 yards.

6. Mr. Bell was under a misapprehension as to the facts of the case? Probably he was. My opinion was at the time, that as he evidently was under a misapprehension, it would have been better not to have given an opinion; but as he gave it, I must reply to it. In answer to question 13, Mr. Bell states: "The danger in this case was the pressure from behind." My reply to that is, that this assumption is against evidence. The engine-driver having the steam on, (which all the witnesses have spoken to,) it could not have been caused by pressure from behind. As the engine was leading the train, there could have been no pressure from behind. In answer to question 17, Mr. Bell states: "I have seen no passenger carriage on the present line with less than six wheels." In reply to that, I say that all the carriages on this line have four wheels, and carriages with six wheels are seldom used anywhere on narrow gauge lines. In answer to question 51, Mr. Bell states, that the "Barlow rail requires a longitudinal bearing"—

7. *By Mr. Donaldson*: A continuous bearing he said? That is a longitudinal bearing; the original intention of Barlow was to dispense with sleepers altogether, either longitudinal or transverse. It was supposed that the ballast would collect underneath the rail, and that it would form a solid and good permanent way, but this is a fallacy; but Barlow's rails have never been laid down in England on longitudinal bearers, and Mr. Bell never saw an instance of it. My impression was at the time Mr. Bell was speaking of the Barlow rail, that he was confounding the Barlow rail with the bridge rail: A bridge rail is always in England laid on longitudinal sleepers.

8. What is the bridge rail? The bridge rail is on the upper part nearly of the same form as the Barlow rail, but the depth is usually only $3\frac{1}{2}$ inches with vertical sides, having horizontal flanges about 2 inches wide each, by which the rail is secured to the timber. The only instance, I believe, of the bridge rail being used on cross sleepers for a main line, is by Sir John McNeil on the Irish railways, where he uses the bridge rail on cross sleepers, in preference to the double-headed rail and chairs. In Mr. Bell's second evidence, in reply to question No. 2, he states, that "gradient posts are indispensable upon any line as a guide to the driver." In reply to that I say, that if gradient posts are indispensable for a driver, all night travelling must be prohibited. Gradient posts are thoroughly useless for any driver; no driver ever reads them or looks for them. A man after travelling over a line a few days knows it perfectly well, and can always tell from his engine whether he be going up hill or down hill. They were used, and some engineers put them up now; but they are not at all necessary for the working of a line, and are only useful to the engineer himself, to be able when he is upon the line to say what the gradient is. They are not of the slightest use to the drivers.

9. *By Mr. Parkes*: So far as your statement goes as to the uselessness of these gradient posts for night service, would not any one working on the line get sufficiently acquainted with them during the day, or by means of getting better acquainted with the road during the day, would not they enable him to tell the road better at night? No man is ever put on as a driver on any line until he has become acquainted with the road, either in the capacity of fireman or of assistant driver.

10. Would not he naturally get the better acquainted with the road with those posts as his guide?

guide? He would never look at them; and if he looked at them I do not believe that there is one driver in a thousand that would know what they meant. They are of no use, excepting where you have a very steep incline, which makes it dangerous to go down, and then you have proper signals for the drivers to pull up, and to proceed slowly to a certain spot.

J. Whitton,
Esq.

30 July, 1858.

11. *By Mr. Hay:* Are they permanent signals? Yes, permanent signals. If gradient posts be necessary, driving at night would become almost an impossibility, unless a man was kept at each of the gradient posts with a light to show the driver the incline.

12. *By Mr. Parker:* That is precisely what I do not see. I think a person by his day experience would know where he was at night? Not by gradient posts, but by experience in travelling over the line.

13. But that experience must rest upon external objects? The driver of an engine can tell from his daily experience on the line, and the working of the engine, whether it is rising or descending.

14. Still it is by some exterior object—the formation of the road at all events? In the day time he can see the road, and he has the working of the engine at night.

15. If the drivers, as a whole, are so uninformed that they would not know the meaning of them, that would settle the matter? The driver is never informed what is the meaning of gradient posts, or told what is the radius of any curve on the line, except in cases where the curve may be of very small radius, or the incline very steep, making it dangerous to travel either on the curve or down the incline at his ordinary speed. I have now almost replied to the answer Mr. Bell gave to question 4. He says, "There are signals to show 'stop,' 'slow,' 'written sometimes in letters.'" The signals "written sometimes in letters" are permanent signals, to shew the driver some unusual curve or incline; and there are also signals not "written in letters," used by plate-layers, and all persons engaged in the working of the line, such as porters and policemen, and others, by which trains can be stopped, or the speed slackened. In answer to question No. 6, Mr. Bell states, on his examination of the road where the new sleepers are being put in, that "when the leading wheel of the engine passed over the joint the depression was very great between the sleepers." In making that statement, whether Mr. Bell understood that the ends of the rails were supported by a strong saddle-plate underneath the joint I cannot tell, but I am satisfied that he is wrong in his statement, as there is no deflection when the engine passes over the joints in the new road that has been made anything more than the ordinary deflection of the rails. All rails do deflect. These rails have a proper fish-joint. The introduction of sleepers to the Barlow rail has considerably improved it, and when completed will make a very good permanent way.

16. *By Mr. Hay:* With the double-headed rail, do you place the sleepers on each side or under the joint? The sleepers are placed on each side of the joint, but where the sleeper is placed under the joint it has been found impossible to maintain the road in good condition.

17. *By the Chairman:* Are these fish-joints put on throughout the line now? They were put on when the rails were originally laid. The only alteration that has been made is in laying down additional sleepers, so as to reduce the length of the bearing, and in putting the sleepers on each side the joint, instead of under the joint.

18. That is being done now throughout the Parramatta line? It is. I have omitted to notice Mr. Bell's answer to question No. 3: he there states, "I am quite ignorant what the 'radius of the curve is.'" In reply to question No. 12, Mr. Bell's first examination, he stated the radius of the curve correctly, on information given to him by me; his reply, therefore, to question No. 3 is incorrect. In answer to question No. 7, Mr. Bell states, that "the sleepers are semicircular, and the flat side is laid downwards, so that it would be 'difficult to put them nearer.'" That is a very extraordinary statement, the sleepers being two feet apart from centre to centre, and being only nine inches wide, I can see no reason why they should not be put close together, if that be advisable, but they are put in the position they now are because it is not necessary to put them nearer together. In answer to question No. 10, Mr. Bell states, that "the difference of expense between longitudinal and transverse sleepers would be trifling." That is another extraordinary statement to have been made by an engineer. I have prepared an estimate of the cost of laying down on the line longitudinal sleepers, and also of the cross-sleepers now being laid down; and, to frame a good longitudinal road would cost above £58,000.

19. *By Mr. Weekes:* On what extent of line? Between Sydney and Parramatta; and when laid down it would not be so good, or so economical to maintain, as a cross-sleeper road. The expense of putting in the cross-sleepers will not be more than £5,000. Mr. Bell stated the size of the longitudinal timbers to be 12 x 6, but the width of the Barlow rail would require a wider timber than twelve inches—fourteen inches would be the least that could be used—in addition to which, when the Barlow rail becomes worn out, the longitudinal timbers would not be required, unless the line was re-laid either with the Barlow rail or the bridge rail. The intention in using the cross-sleepers in preference to any other made, in addition to their being much less expensive was, that as the Barlow rail wears out, to take it up entirely, and renew the rail with the double-headed rail, and the sleepers now being used for the Barlow rail will then be serviceable to lay down the double-headed rail throughout. In answer to question 14, Mr. Bell states, "four wheels for such short carriages are enough." In reply to that, I say that the carriages are the same length as those used on the narrow gauge lines in England. There are some other remarks of Mr. Bell which I had not time to read; but one thing which struck my attention was the statement about the horse-boxes being top-heavy. This is certainly a mistake: the horse-boxes are not top-heavy: they run as steadily as any carriages we have on the line.

20. *By Mr. Hay:* Do you mean the new or the old horse-boxes? The new horse-boxes. There is only one other matter I think that I have to name to the Committee, and that is with reference to Mr. Bell's statement as to the incivility or inattention shown to him by Mr. Mason. Captain Martindale has already explained the arrangement made for sending Mr. Bell

J. Whitton,
Esq.
30 July, 1858.

Bell down the line. I wrote to the Inspector of Permanent Way on the same day that the Committee broke up, requesting him to be at my office on the following morning at nine o'clock. At twenty minutes past nine he had not arrived, and Mr. Mason having to go to Haslam's Creek to take some dimensions for me that morning, I wrote to him at the station (he having left previously) requesting him to accompany Mr. Bell on the special engine, in preference to stopping the passenger train at Haslam's Creek. I had not time to write a long note to him, but I sent down my clerk, Mr. Quodling, requesting him to see Mr. Mason, and tell him to accompany Mr. Bell to Haslam's Creek, and give him any information he might require as to the position of the carriages, and the marks on the rails. I also sent a special request that Mr. Mason should not give Mr. Bell any information as to the different descriptions of permanent way in use. I did that from the strong impression on my mind, which has not yet been removed, that Mr. Bell did not know the difference between the Barlow rail and the bridge rail; and, although according to Mr. Bell's statement, Mr. Mason was not perhaps so communicative as he could have wished him to be, I think Mr. Bell himself admitted that everything he required, with regard to the position of the accident, and the marks on the sleepers, had been shown to him by Mr. Mason. It was not the intention (indeed I do not know that any intention of the kind has ever been imputed to any one.) that Mr. Bell should be sent down there without some one being with him to give him every necessary information.

21. *By the Chairman:* That is all you have to state? There is a statement of Richardson's with regard to the permanent way, which I wish to notice. Richardson states that a low joint, a short distance from Haslam's Creek Bridge, was, in his opinion, the cause of the accident. Immediately after the accident Richardson, I am informed, told Morgan, the Permanent Way Inspector, that there was a "slack" in the road on the Parramatta side of Haslam's Creek Bridge, and asked permission from Morgan to send for the nearest gang and have it taken out before any one saw it. Morgan declined to do so, and told Richardson to leave the road until I had seen it; and I can positively state that the remarks made by Richardson with regard to the permanent way are untrue. There was no such slack. The road was in as good running condition as I would wish to see any road. On all lines of course there are slacks, but not slacks of a serious nature; and that there was any such slack or depression in the rails as spoken of by Richardson I positively deny.

22. *By Mr. Weekes:* Then you inspected the particular slack alluded to by Richardson before it was touched? I examined the road very carefully, and I put my head down to the rails on the other side of the bridge, and looked along the line, and there was nothing to cause either oscillation or a carriage to go off the line. The road was in good condition.

23. Your attention was called to that particular slack mentioned by Richardson? It was not. But after mentioning the matter afterwards to the Permanent Way Inspector, he said it was so small that he did not think it worth while calling my attention to it, and that was the reason he did not mention it to me. I examined the road carefully myself, and I am very glad I did so before it was touched.

24. And when you inspected that part of the line nothing had been done to it since the accident? Nothing; the road had not been touched.

25. *By Mr. Egan:* I would like to know whether Mr. Whitton has stated anything to the Committee in reference to the evidence we have before us, that a horse-box and tender have been off the line before, which had never been reported, and nothing taken to prevent it in future? I have had no report that I remember, neither do I believe that any horse-box, or carriage-truck, or engine, or tender, have been off the line since I had charge of the permanent way—nine months ago; and I am quite satisfied that anything of the kind occurring, if not reported, the person neglecting to do so would be visited with very severe punishment.

26. Yes; but supposing it went off twelve months ago, and no report had ever been made of it, and no step taken for preventing similar accidents, is it not as likely to take place again as at any previous period? The railway is managed very differently now to what it was twelve months ago, and I believe that nothing of the kind could possibly occur at the present time without it being reported.

27. My question is this—that, supposing it did take place (which we have evidence that it did,) and we have no doubt that such a thing did happen at some time—no step has been taken to prevent a similar accident? I may again state that the railway now is managed very differently to what it was twelve months ago. At that time Mr. Brady was Manager, and possibly it may have been reported to him, and he may not have reported it elsewhere; but I had nothing to do with the permanent way at that time; and I can say that I do not remember to have heard of such a report until after this accident.

28. *By Mr. Hay:* I suppose the only way to prevent such accidents is to see that the permanent way and rolling stock are kept in good condition, and that the driving is not excessive? That is the only way. If the permanent way and the rolling stock be kept in good order, (which they now are,) every precaution will then have been taken to prevent a recurrence of accidents of this kind.

29. Have you had an opportunity since the accident of turning your attention to the causes of it, and can you tell us if you have seen causes which have induced you to modify your expressed opinion in your evidence on the subject? I have heard no evidence, and I can find nothing since my last examination that could justify me in expressing any positive opinion as to the causes of the accident. The speed is stated by several of the witnesses as being forty miles an hour, and by those in charge of the train, who could have no interest in stating incorrectly the speed, such as the guards, that it was only twenty-six miles. It is quite possible the train may have been running at thirty miles an hour; but there is nothing in the speed, the condition of the road, or rolling stock, that I know of, that could cause the accident. I can only believe that some derangement had taken place in the axle-boxes, or the axles of the horse-box, that caused it to leave the line. With regard to the driver,
Boan,

Boan, I wish to say that previous to this inquiry I believed him to be the best and steadiest driver on the line. I have travelled frequently with him on the engine, and never saw him travelling at an excessive speed; and he certainly understands his business as well as any man I ever saw. From the report of the inspector as to his having driven at an excessive speed, I am induced to believe that he has done so occasionally.

J. Whitton,
Esq.

30 July, 1858.

30. We have it in evidence from Mr. Morgan, that he was on the engine on the Friday, and that he noticed a reckless and dangerous style of driving, and pointed it out to Boan, and that he had reported this to Mr. Twiss on the Friday afternoon; Mr. Mason having also remarked it, and that it was their intention to have reported it on Saturday morning—taking that with the other evidence, do not you think the speed must have been excessive and dangerous—for Morgan and Mason had evidence which was satisfactory to them on that point? The evidence they speak to is no doubt positive as to his having done so; but the evidence of Saturday morning is presumptive, merely.

31. But we are speaking of evidence on Friday: when we have it in evidence of Friday that the man had been driving carelessly, and in the opinion of Morgan and Mason dangerously, do you not consider that, added to the evidence of persons who have no occasion to tell an untruth in reference to the matter—gentlemen of intelligence—that this is irrefutable evidence that the speed was excessive? With regard to the speed spoken of by Morgan and Mr. Mason, I have not the slightest doubt of it; but it is a very difficult thing to estimate speed by any person not accustomed to travel on railways.

32. Do you not think, as matter of prudence, that it would have been better if Morgan and Mason had reported to head-quarters? Probably it would.

33. Is it not to be regretted that it was not done on the spot, and that a delay of twenty-four hours took place in making this report to Captain Martindale, or to you, because I have a strong impression there was some culpability about it; I think when a thing affecting life is at stake the report should have been made instantly? This might have been the first time (Friday previous to the accident) that Mr. Mason saw Boan driving at an excessive speed, and he might have thought that it would be sufficient to caution Boan against driving too fast.

34. *By the Chairman:* I have read you some evidence given by Morgan,—do you not consider, from what I have said, that on witnessing reckless driving it was his duty to have reported to you, or Captain Martindale? The engine-drivers are not supposed to have any connection whatever with the Permanent Way Inspectors, and as the time is kept of the trains at every station he might not think it necessary, and that it would be sufficient to caution Boan about it; and I think that Morgan, in mentioning the matter to the foreman, Twiss, had done all that may be considered necessary.

35. Who is really responsible between the engine-driver and the head of the department—who is the party to report to in such cases? All the engine-drivers are responsible to Twiss, as Locomotive Foreman. I have taken the charge of the locomotive department, and Twiss is appointed there as foreman, to see that the engines are kept in proper repair, and that the drivers are well conducted, and to report any irregularity at once to me.

36. *By Mr. Egan:* Then, in reality, Morgan did his duty by reporting it to Twiss? He did so. When a driver leaves a station he is in charge of the guard, but any report made to Twiss, with reference to the excessive driving of any man on the line, should at once be reported by him to me.

37. In this case—the day before the fatal accident—the report made to him by Morgan was not reported to you? It was reported to Twiss late in the evening, and the accident occurred at nine o'clock on the following morning; he had, therefore, not time to do so. With reference to Boan's statement, that he was "not going to be fined," I wish to read a memorandum which I wrote to Twiss on the 21st of May with reference to speed. (*Witness here read the memorandum, and handed in the same. Vide Appendix B.*) The Committee will see that the discretionary power given to the Manager I struck out in this order.

38. *By Mr. Weekes:* You stated that your impression was, that the accident was caused from some derangement of axle-boxes, or the axles of the horse-box; but from your examination of that particular horse-box, have you seen anything to confirm that impression? The axles are bent now, and they are so much twisted that it is impossible to say in what shape they were immediately preceding the accident; but as I can trace no other cause, it may have been from some derangement of the axle-boxes or axles; it certainly was not the speed, or the want of a screw-coupling, in my opinion, or anything in the state of the permanent way; and I can only imagine it must have been some other cause that has not been traced, and such derangement would be one of the most probable causes I can imagine.

39. *By Mr. Hay:* Have you known accidents resulting from such a cause? Not from such a cause; but I have known accidents frequently, the causes of which never could be traced, of carriages being off the line.

40. *By Mr. Oakes:* Would you be kind enough to state why this train, which leaves Parramatta at 30 minutes after 9, has to run over to Homebush quicker than any other; it does it in fifteen minutes, and I believe eighteen minutes is the time? I believe it is done for bringing in the early train, viz., the business train, from Parramatta. [*Captain Martindale explained:* The trains in May ran in an hour and three-quarters; they were in June altered to two hours. I was told when I altered them, that there would be great discontent among the ordinary passengers by the half-past nine train, on account of the loss of the quarter of an hour's time, and I therefore went through the time-table with Mr. Whitton, and I found that the speed between Parramatta and Homebush had always been fourteen minutes before. I, therefore, kept the same speed, fourteen minutes, and gave an additional minute for stopping at the station, which makes it fifteen minutes. It was thought that that was the only train by which passengers would be inconvenienced by loss of time, and that train runs in five minutes less than any other train. It has run safely since February, 1857, at that particular speed; the present time allowed is one minute more than it ever had before, and the speed is

now

J. Whitton,
Esq.

30 July, 1858.

now only twenty-four miles an hour.] *Mr. Whitton resumed:* There has been a great deal said about the reduction in the number of men on the permanent-way between Sydney and Parramatta. I wish to state, that the reduction in wages was made on the 16th of January, in consequence of our paying a higher rate than that generally paid. At that time, before the reduction took place, the men employed were thirty-five, between Sydney and Parramatta. The number of men employed on the 3rd of July, ten days before the accident, was thirty-seven, and the number of the men employed on that portion of the railway on the day preceding the accident was thirty-eight; so that there were three men more on the railway at the time of the accident than when the reduction took place in January.

41. *By the Chairman:* What wages do you pay to drivers? Fourteen shillings a day each; probably that is a matter which I may give some explanation upon. When I first came to the Colony there were only two men that could be considered experienced drivers; but there were very good firemen on the line, who were quite competent to drive engines. One of the old drivers was dismissed in consequence of repeated acts of insubordination to the station clerks, and making use of abusive language on the platform. After being repeatedly cautioned, without effect, his services were dispensed with. The other engine-driver, I believe, took a farm somewhere up the country, and he gave notice to leave, and did leave. The present engine-drivers had been accustomed to take out special trains and to running goods trains, and were, in fact, in every way competent as engine-drivers. They were promoted from their original pay of ten shillings a day to fourteen shillings, and there has been no cause of complaint against any of these men since they began running the trains, and I believe them to be thoroughly efficient as drivers.

42. What was the wages of the old drivers? The old drivers originally were paid one and a quarter day's pay for one day, and they had 22s. 6d. a day. I stated to the Commissioners that I thought it unnecessary to pay these men for a day and a quarter for working one day, and that a short day, for the number of miles run was only one hundred and thirty. The quarter day was then taken off, and the drivers only had 18s.; they were afterwards reduced to 16s., but no complaint was ever made by the drivers about the reduction. The drivers in England are paid from 5s. to 7s. per day; the best drivers are only paid 7s., and I hardly thought it necessary to pay engine-drivers here 18s. a day for driving a much less mileage.

43. *By Mr. Parkes:* Are the drivers in England a similar class of men to those here? They are.

44. Promoted to their duties in the same manner? Precisely.

45. *By Mr. Weekes:* Generally from firemen? Always.

46. What rate of wages is given to the English firemen? They receive from 3s. 6d. to 5s.; it depends upon length of service; but it is usual for men to be firemen for three to four, or five years, and some men not showing sufficient capacity to be promoted never get beyond that of firemen.

47. *By Mr. Hay:* What are the wages of firemen here? The firemen here are now paid 9s. per day.

48. *By Mr. Oakes:* Up to the present time, can you state the condition of the permanent way all through—the general condition of the permanent way, now—to day? The general condition of the line between Sydney and Parramatta is good for the speed that we are running, and perfectly safe at a speed of thirty miles an hour. It has been considerably improved within the last nine months. I have no doubt that within six months from the present time it will be a good permanent way.

49. *By Mr. Hay:* Will it take six months to put the extra sleepers in the permanent way? I think it will take nearly that time.

50. And when that is done, you think it will be in very good order? Yes, in very good order; it is now in good condition for thirty miles an hour. I travelled upon it yesterday, with a special train, thirty miles an hour, as steadily as could be desired. Between Parramatta and Liverpool the line is in very good condition, and, excepting for the curves, you might run fifty miles an hour. Between Liverpool and Campbelltown the road is in excellent order.

51. *By Mr. Parkes:* Which is the best part of the road? The best part of the road is between Parramatta and Liverpool, at present, but when the embankments on the Campbelltown extension have become properly consolidated this portion will be the best.

52. *By the Chairman:* The Campbelltown extension will eventually be the best? Yes.

53. Can you state whether extra sleepers were put in at the place of the accident? They were not.

54. Are they at the present time? They are not, but they are being put in.

55. *By Mr. Hay:* I suppose the permanent way will always be liable to get out of order, until you can get a better description of ballast? We have been for some time getting a better ballast for the Sydney Railway, of broken stone. The road can never be maintained economically until we get better ballast. There is no ballast in this country, that I have seen, specially fitted for a permanent way, excepting stone, which is very expensive.

56. What should the best ballast be? Strong gravel.

57. *By Mr. Parkes:* Would you state, Sir, what your opinion is as to the original formation of the road between Sydney and Parramatta, as you found it when you took charge of it, and as compared with other roads with which you are acquainted in Europe? I must say that when I took charge of the Sydney and Parramatta Railway, I believe it was one of the worst railways that I ever saw; not only with regard to the manner in which it had been laid out, but to the manner in which the works on the line had been executed, and in which the permanent way had been laid. The whole of the line was, also, badly ballasted, and was not in a condition that it should have been for even a second-class permanent way.

58. Was it necessary, in your opinion, to have had the sharp curves which really exist in the railway in the original survey of it? It was not.

59. *By Mr. Weekes*: Are there not curves in that line for which it is impossible to account? *J. Whittan, Esq.*
 Yes; I can see no reason for them, excepting that the person who laid them out must have gone into very elaborate calculations, to show where, by one foot less cutting, he could save expense; not considering by so doing that he was lengthening the line, and making it far more dangerous and expensive to work. There is no reason why there should have been so many curves on the Parramatta Railway, and those required might have been of much larger radius. 30 July, 1858.

J. TWISS.

APPENDIX B.

GREAT SOUTHERN RAILWAY.

(No. 202.)

*Engineer's Department,
 Sydney, May 21, 1858.*

MEMORANDUM TO JOSEPH TWISS.

I spoke to you last evening relative to the speed at which some of the drivers travel when behind time, and intended writing an order on that subject; but, on referring to their regulations, page 12, I find the following: "Enginemen are on no account to make up time by increased speed." Call the attention of the drivers immediately to this, and say, that for the first offence against this rule, the driver will be fined one day's pay; and for the second offence he will be discharged.

JOHN WHITTON.

THURSDAY, 5 AUGUST, 1858.

Present:—

MR. DONALDSON,
MR. HAY,
MR. WEEKES,
MR. JONES,

MR. SCOTT,
MR. PARKES,
MR. OAKES,
MR. ROBERTSON.

THE HON. STUART A. DONALDSON, ESQ., IN THE CHAIR.

Mr. Ralph Richardson called in, and further examined:—

Mr. Ralph
Richardson.

5 Aug., 1858.

1. *By the Chairman:* You have been re-called partly in consequence of the letter you addressed to me on the 30th of July, and which you did not intend as a privileged and private communication. Are you of opinion that you have it in your power to prove what you state there? Yes.
2. Do you still adhere to what you have stated there is the truth? Yes, I do.
3. Can you suggest what course we should adopt in examining Fishlock and Glover? I must leave the Committee on the contents of my letter to ask what they think fit.
4. You have no suggestion to offer as to which of these men we should call first? Not at all.
5. You state, in the second paragraph of your letter, that "I think when I mention two circumstances, it will prove beyond doubt whether the permanent way was in 'perfect order' as stated." Do you mean as stated by any officials—by papers, or by whom? Both by the ganger, and by Mr. Morgan, and Mr. Whitton.
6. You mean by their evidence before the Chief Commissioner? Yes; both before the Commissioner and at the inquest.
7. Is there any statement you wish to make to the Committee this morning before we call the other witnesses? Nothing.
8. *By Mr. Weekes:* Do you say that Mr. Whitton saw the spot which you referred to where there was the deflection of the outside rail of the Parramatta line before it was repaired? He did; Mr. Whitton and Mr. Morgan saw it.
9. In your former examination, question 17, it is asked of you, "Did Mr. Whitton see it in the state in which you saw it at first?" and you said, "I cannot say; I did not see Mr. Whitton go there." How do you explain that discrepancy? From what this man Fishlock, the ganger, said.
10. You do not know it of your own knowledge? No, I do not.
11. *By Mr. Hay:* You say in this letter that you have observed, from observation, that a low joint on one side has the effect of throwing the carriages to the other side? Yes.
12. How do you mean,—does it throw the carriage in an upper direction? I mean—say this is the engine, and next to this is the horse-box, not quite tumbled off, if the engine gets over, and comes down to this place, it makes an effort to go down, but as the engine presses forward it necessarily makes a jump on to the reverse side. You can see that hourly.
13. But, in throwing it to the other side, do you mean throwing the whole of the carriages right off the line on the other side? That would, of course, depend if it is a short lowness or much: if it is an inch low it would naturally go down and make another bound again, unless it is something enormous, of course she must jump.
14. Is the effect to throw the top of the carriage over, or to throw the carriage off the line? It would check the direction of the carriage.
15. How could you ascertain it by observation? You might see it now by going along the line; you would notice as you go along, if you got behind the tail: you would see them go down at the low spots.
16. As long as the wheel did not go off the line, how do you observe the difference in the direction of the carriage? You see that by the play the carriages get: you see that when the flange strikes against the opposite side of the rail, and I imagine if she was going at a sharpish speed, it would of course increase that effect.
17. Have you ever known an ascertained instance of a carriage being thrown off the line from the adverse side of a low joint? No, I have not.
18. Have you ever read of it in any work? No, I have not.
19. *By the Chairman:* What is your impression of the length of the deflection—the length of the drop? I should say more than two inches.
20. Below the level of the line? Yes.
21. *By Mr. Hay:* You saw the picking up of the joint? Yes.

John Fishlock, ganger, called in and examined:—

J. Fishlock.

5 Aug., 1858.

1. *By the Chairman:* What are you? Well, I am a ganger of a length.
2. On the length where the accident happened on Saturday, the 10th of July? Yes.
3. Do you know anything of the joint being down, or slack, as they call it, on the up-line near Haslam Creek Bridge? No; it might be a little slack at a distance from the bridge.
4. How far? About one hundred yards.
5. What do you call a little slack, or deflection? It was not more than half an inch.
6. Do you mean the perpendicular depth from the gauging? Not more than half an inch.
7. Have you measured it, or do you mean you are guided by your eye? Yes.
8. There was a slack? Yes; but not enough to make a disturbance of the train.
9. You think there was not enough to cause a carriage to roll more than usual? No, I do not.
10. Do you remember giving evidence before the Commissioners, at the office? Yes.
11. Had you any conversation with Mr. Morgan before giving your evidence? No.

12. Did he give you any instructions what you ought to say, or not? Not a word, either backward or forward. J. Fishlock.
13. *By Mr. Hay:* Was there another slack at the bridge close to Haslam's Creek Bridge? 5 Aug., 1858. No, I believe not.
14. Are you quite sure? No, I am not quite certain; I believe there was not another slack within one hundred and fifty yards of Haslam Creek Bridge.
15. But within a few yards past was there not a slack? I do not believe there was a slack upon that road that varied more than half an inch.
16. *By the Chairman:* Did you tell the whole of the truth before the Commissioners on the occasion you were examined—did you tell everything you knew? Yes; I have said just what I thought was the truth.
17. Are you responsible for that length you were on? Yes.
18. Have you had any conversation with Mr. Richardson since the accident—lately? No, Sir.
19. Have you not spoken to him within the last week? I cannot say I have not spoken to him; he came and delivered some stores the other morning.
20. Did he talk to you? Yes; he came and took the time from the men.
21. You had some conversation about the accident? Yes, a few words.
22. Did you say anything about Mr. Morgan having desired you to say what you said before the Commissioners at the office? No.
23. Nothing of the kind? No. Mr. Morgan never said a word backwards or forwards, or any way to me.
24. *By Mr. Weekes:* Was Mr. Richardson the first officer of the railway on the spot after the accident, that you know of? Yes; I believe he was.
25. Did you see him noticing a considerable slack, as it is termed, in the rails, and pointing it out as the probable cause of the accident? No, Sir.
26. Did you repair that slack on the day of the accident? No, Sir.
27. By whom was it repaired? I do not know. I must say I was sent off to Parramatta.
28. It is part of your especial duties to attend to these slacks, and the rails generally, on that part of the line? Yes.
29. How was it not given to you to repair, and why did you not repair the slack when it was pointed out? I was put to work where the sleepers did not stand, and was repairing that part of the line; we were putting in extra sleepers, to make them stiff.
30. Were you sent away from the spot shortly after the accident occurred? Yes; I was sent to Parramatta to the inquest.
31. With your gang? No, only myself.
32. Do you know whether your gang repaired that slack? No.
33. You did not think it your duty to inquire of the men placed in your charge whether they repaired that slack? No, I did not, because I did not see any slack.
34. Was Mr. Morgan on the spot where the accident occurred before you left for Parramatta to attend the inquest? Yes.
35. Did you see Mr. Richardson take Mr. Morgan and point out the slack referred to? No, I did not.
36. Do you think it possible that a slack could have existed to the extent of two inches without it coming to your knowledge? No, I am certain it could not—not half that.
37. Do you yourself, or your gang, make a rigid investigation of the rails on your length? Yes, twice a day. If I find a slack I send one man one way and another down the other way, and they see that all is right.
38. After the accident occurred, you saw no particular slack pointed out by Mr. Richardson, or any one else, as the cause of the accident? No.
39. You heard nothing of it at all? No: he asked me where the gauge was; I fetched the gauge and I went down and gauged the road. Mr. Morgan was there, and there were three or four other gentlemen there also.
40. Is there a man named Glover in your gang? No; he is on the next length to me.
41. Was he there, on the particular spot, although not on the one he is ordinarily fixed on? Yes.
42. He came there on account of the accident? Yes.
43. Did he remain there, or was he sent away for any purpose? He remained there.
44. Do you know whether he repaired the slack? I do not.
45. Do you know whether your gang or any one repaired the slack? I do not. My gang never went near the spot; they were working at the top when the carriages were thrown over.
46. Your gang was repairing the spot—the scene of the accident? They were not; they were put to work at the top when the carriages fell over.
47. *By the Chairman:* Is it a matter of fact that Mr. Richardson came with a gang from Newtown, and did they not mend the permanent way? I do not know; there was something done when I was sent to Parramatta to attend the inquest.

William Glover, ganger, called in and examined:—

1. *By the Chairman:* What are you? I am foreman of the gang of repairers on the railway. Wm. Glover.
2. What gang? The Homebush gang.
3. Under Fishlock? No; I am this side of Fishlock.
4. Nearer Sydney than Fishlock? Yes.
5. You recollect the morning of the accident very distinctly? Yes.
6. After the accident happened, was your attention in any way called to the slack, as it is called, in one of the joints of the rail near Haslam Creek Bridge? No.
7. You know nothing about it? No.

5 Aug., 1858.

- Wm. Glover. 8. You did not see any slack, or deflection? No; not at the place where the accident happened.
- 5 Aug., 1868. 9. At Haslam Creek Bridge? No. I understand perfectly well what you mean.
10. Do you recollect being sent away by Mr. Richardson that morning—after the accident happened? Yes.
11. Were you sent away by Mr. Richardson or by Mr. Morgan? By Mr. Richardson. I was going towards Parramatta, and was called back, and ordered to keep this way.
12. Towards Sydney? Yes.
13. Did you understand why the order was given? No.
14. Have you any idea? No.
15. Did you walk over as far from Sydney as over to the bridge? No; I did not go on to the bridge.
16. You could not see the permanent way on the Parramatta side of Haslam Creek Bridge? No.
17. Did you get an order why he would not let you go there? He said he was ordered by Mr. Morgan.
18. By Mr. Hay: He told you so at that time? Yes.
19. Did it come into your mind that there was any reason why he desired you should not see anything? There was a desire upon my mind to see where the fault was.
20. What was the reason of your going up the line? I went to see the rails. I should have went there—not before I knew anything about it, but it was so far distant from the scene of the accident. I thought my services would be required at the place of the accident; I went back, and did not go to the farthest end.
21. Did it occur to you, when Mr. Richardson told you that Mr. Morgan had given him orders to order you away, that it was because it was not desirable that you should see the permanent way? Something did strike me, but I could not tell you why I was not allowed to go; it might be that there was something they did not wish me to see.
22. You did not lend any assistance to pick up the slack? No.
23. By Mr. Weekes: Yours is the portion of the road adjoining Fishlock's? Yes.
24. Where is the boundary? At the nine-mile post.
25. How near is that to Haslam Creek Bridge? About $1\frac{1}{2}$ mile.
26. That is the end of your portion of the line—does it not come within Haslam Creek Bridge nearer than $1\frac{1}{2}$ mile? No; I think it is rather more if anything.
27. How soon after the accident were you on the spot? About a quarter of an hour.
28. Who gave you the first information of the accident? The ballast-train was coming up there after the accident, and they picked us all up (the gang), and took us to the accident.
29. You saw no slack near to the bridge: Had you heard of any slack existing near to Parramatta? No. I did not examine the road all the distance. I went no further than where the track of the wheels went over the side of the rails. I was tracing where the wheels ran off. I went a certain distance, and I saw I had much further to go, and I thought my services were required at the scene of the accident, and so I went back. I did not go to the place where it went off; I should have gone afterwards, but I was told not to go, by Mr. Richardson.
30. Was Mr. Richardson on the spot when you arrived? He was; he was on the ballast train—he was on the engine.
31. Did you see Mr. Richardson examine a particular portion of the rail at that time? No, I did not; I saw him go that way.
32. Did you hear him make any remarks about a particular joint of the rails to any one? No, I did not.
33. You know nothing about the repairs which took place that day? No more than the repairs that were made where the rails were torn out, and where the sleepers were torn to pieces.
34. You never saw anything, or heard anything, of a particular slack having taken place to the extent of two inches? No.
35. Did you hear anything of it? No. I heard there was a slack, but to what depth I do not know. There was some speaking of a slack, but what it was I do not know. Whether it was the place we were repairing where the rails were torn up I do not know. I do not know where the slack was.
36. Did you and Mr. Morgan and Mr. Richardson examine a certain spot on the day of the account? No.
37. Is it possible for a deflection, or slack, of two inches to exist on any portion of the line without coming to the notice of the ganger, or some of his gang? It is almost impossible; but such a thing might be in very wet weather; in very wet seasons the rails go down almost suddenly.
38. Had there been any wet weather preceding the accident? Yes; a good deal of rain before that.
39. By Mr. Jones: And you say, when you first got down you were proceeding to cross the line, tracing the track of the wheels of the horse-boxes? Yes, I was tracing the track of the wheels.
40. How far did you proceed? Near to Haslam's Creek Bridge.
41. Were you stopped at that time? No; I went on my way straight.
42. You could have gone on till you lost the track of the wheels on the sleepers? Yes, I could have gone on; but, as I said before, I thought if the place had not been so far distant, I should have examined it; but I thought my services would be required at the accident where the carriages were thrown off, and so I returned again.
43. At this particular time no one interfered with your examining the line? No.
44. Did you have any conversation with Mr. Richardson since about the deflection of the line on that particular spot? No.

45. *By Mr. Hay*: How long after your first tracing, and when you went back, do you think it was till Mr. Richardson told you not to go on in that direction? I should think something like three hours. Wm. Glover.
5 Aug., 1858.
46. Then a great many people had been looking at the spot in the interval? Yes, a great many people; I cannot say how many; I saw a great many passing and repassing. When I came back my time was occupied in getting up the carriages and repairing the railway, so I did not attempt to go that way, or take much notice of what was going forward afterwards.
47. A great number of people might see the slack if it existed? I do not know; persons that were ignorant of what a slack is might not take notice of it; but persons who examined the slack, and were acquainted with it, would have seen it.
48. Any person acquainted with railways would have noticed it—the Chief Engineer, he would notice it? Certainly; if he examined it, he must have seen if there was any such defect.
49. The men employed in picking up these sleepers must be quite aware of the existence of the deflection—they would understand it I suppose? Yes. Most likely they did examine it, but I cannot tell whether they did or not.
50. You said you heard nothing of the slack? Yes; somebody spoke of it.
51. Do you know who spoke of it? No, nor where it was; whether it was at the place where the carriages were thrown off, or farther on to Parramatta.
52. Did Mr. Richardson speak of it? I do not recollect it.
53. Was it spoken of as a slack of any consequence? I don't know. I was busy getting up the carriages; I did not take further notice of what was said.
54. You said something passed through your mind that the reason Mr. Richardson ordered you back was that you might not see something on the line—do you think it was in reference to the slack? I cannot say: I think there might be something there, and that was why I was not allowed to go.
55. Where were you when Mr. Richardson talked to you? I was where the carriages were turned over.
56. You were not proceeding along the line—he did not stop you as you were proceeding along the line? No; I may have been walking there; I was looking for some packing.
57. You did not seem to be going to look at the line? No.
58. You were three hours at the place where the carriages were? Yes.
59. What did Mr. Richardson say—do you recollect the precise words, or as nearly as possible what he said? I think he asked where I was going that way. I think he said something about going down to examine the place. I was walking down that way, and he said, "You must not go down that way, I want you to work up this way." I said, "How is that?" He said, "The fact is, I was ordered not to allow you to go that way." I said, "By whom?" and he said, "By Mr. Morgan." "Very well," said I, "what can be the occasion of it?" He said he did not know. That was all that passed between us.
60. Do you think you said something first to Mr. Richardson, that you wished to go on to examine it? To the best of my recollection, I was going for some packing; whether he thought I was going down the line to examine it I do not know. He said, "I want you up this way," and I said, "very well." He said, "You are not to go down that way"; and some words passed which I spoke of before.
61. Is a slack of two inches very observable on any part of the line? Oh! yes, according to the distance; there is a long slack and a short slack, some of the length of twenty feet, and some forty feet.
62. What is the length of the rails? Some are twenty feet, and some eighteen.
63. *By the Chairman*: Of course the slack is more dangerous if it is a short slack? Yes.
64. *By Mr. Hay*: If there is only one rail? Yes.
65. Did you observe on that, or any occasion, a slack of two inches on one rail? Very seldom, unless it is in very wet weather.
66. Do you think you have known of instances where trains have passed over slacks of that description? I cannot say; it is very seldom if they did. I have no instance to mention that I am aware of to that depth.
67. Might you not have been ordered to go back and attend to your own business on the line? Yes, I have been ordered by my Inspector.
68. Upon that particular occasion might not the order be given to you to go back to Sydney to attend to your own business—to your own part of the line? It might have been so, but it was not.
69. How do you know what was the reason that you were ordered back? I do not know.
70. Might it not have been that the order was to go back to your own part of the line? It was not there. I was a quarter of a mile from there.
71. Where were you? I was at the scene of the accident, where the carriages were turned over; I was ordered to go there.
72. You were ordered to go back there? Yes; that was the spot where they were repairing the railway; I was not to go forward.
73. Were your men employed in rectifying the carriages? Yes.
74. Your gang? Yes.
75. How long did you remain there? Till nearly seven o'clock.
76. You never went forward to Haslam Creek Bridge? Not that day.
77. Did you ever hear since, from any one, that there was a slack of two inches at Haslam Creek Bridge? No, nothing about it. I heard some one speak of a slack, but I did not know where it was.
78. You never heard Mr. Richardson say so? No, not to my knowledge; he might have said so. There were so many speaking I did not take great notice of what they said, as I was busy at the time.
79. Do you think a slack of this sort—two inches—would throw the train off the line? According to the distance.

- Wm. Glover. 80. Suppose it were upon two rails the one length of the rails? I would run in a straight line. Unless there was great oscillation of the carriage I should say not.
- 5 Aug., 1858. 81. It is a straight line at Haslam Creek Bridge? I should say so.
82. *By Mr. Jones*: Were all your gang engaged in getting up the carriages and repairing them? Yes.
83. Would it not be natural to remain with your own gang, to see that they did their work properly? No; there were two gangs; my gang was too small—only four men; so there were two gangs—not one.
84. At the scene of the accident? Yes.
85. You say the whole of your gang was at the scene of the accident—was it not natural for you to remain there? I was there.
86. Was it not natural that you should remain there instead of going to look at the slack? I was there first of all, before I went down the railway.
87. I am speaking of the time Mr. Richardson told you not to go forward—your gang was at work with the carriages, was it not natural you should remain where your gang was employed? Yes; unless I was sent away.
88. Nobody sent you—you were going of your own accord? I was not going, I was looking for some packing to get up the carriages.
89. You spoke of Mr. Richardson speaking to you as you were going down the rails? Yes.
90. He told you not to go that way? Yes.
91. Who were sent to repair the rails? There were two gangs sent—the two nearest to Sydney.
92. Was there any reason why they were sent in preference to you? I do not know, I was sent to repair the place where the carriages were turned over, and where the rails were torn out.
93. Do you know any reason why you were not sent to the particular place where the deflection was any more than the Sydney hands? No.
94. Have you made yourself remarkable for pointing out defects? No.
95. Are either Mr. Richardson or Mr. Morgan aware that you make complaints respecting the line, and that that is the reason why they would not send your gang? Not that I am aware of.
96. Whoever was sent would see where the deflection was? Yes.
97. Anybody would be as well able to notice it as you would be? Yes.
98. You say you know no reason why other persons should be sent, and you not sent? No.
99. *By Mr. Parkes*: Have you ever, since the accident occurred, expressed an opinion among your friends of the cause of the accident? No.
100. You never thought about it? No; I never knew what it was, therefore, I did not express an opinion.

Thomas Markham, plate-layer, called in and examined:—

- T. Markham. 1. *By the Chairman*: You were examined before the Commissioners? Yes.
- 5 Aug., 1858. 2. You are a plate-layer in Fishlock's gang? Yes.
3. Did you know anything of the deflection—the slack on the rail—up near Haslam Creek Bridge on the morning of the accident? No.
4. You never saw it? No.
5. Where were you on the morning of the accident? With the men, half-a-mile from the spot.
6. You were not sent to that spot? I was sent up to where the accident was.
7. You ran to the place when the accident occurred? Yes.
8. You did not return to the Haslam Creek Bridge? Yes; I went to fetch the tools we were repairing the permanent-way with above Haslam Creek Bridge.
9. Did you see anybody repairing the permanent-way on the bridge? There was somebody there, but I do not know what they were doing.
10. *By Mr. Weekes*: Did you see Mr. Richardson on the spot? He was there, and he sent me another way.
11. Where did he send you to? He sent me to where the accident happened, to help to clear the muck off the rails.

Mr. W. Morgan, called in and examined:—

- Mr. W. Morgan. 1. *By the Chairman*: Do you know anything of a slack—a deflection—on the rails on the Parramatta up-line, near Haslam Creek Bridge, on the morning of the accident? Yes; it happened that Mr. Richardson pointed it out to me. I said, "There are two or three up the hill." He said, "Had it nothing to do with the accident?" and I said, "No, nothing." He said, "Shall I get it repaired?" and I said, "No, let it remain till the line is examined."
- 5 Aug., 1858. 2. When you examined it, did you give Mr. Richardson any instructions about Glover? When I was examining it, Richardson asked me who ought to repair it and gauge it. When I saw Mr. Whitton he had said he would require me and Fishlock to go to the inquest at Parramatta. We went off to Parramatta; but before going I told Richardson to repair it, to set the gauge, and get the line in thorough repair, and send to Prime and a gang of men to where Fishlock was lifting, previous to the accident. He asked me who he should take to repair the late damage. I said, "Fishlock has left: you had better take White."
3. Did you give him any orders about not sending Glover? No, not any order about sending Glover.
4. Had you any desire that Glover should not see the slack? No; it was not a bad slack. I have seen slacks on the line forty times worse than that slack.

Mr. W.
Morgan.

5 Aug., 1858.

5. You never desired Richardson to send Glover away? No.
6. We have it in evidence from Glover that Richardson did send Glover away in consequence of your orders? No; I have no recollection of giving any orders of the kind.
7. *By Mr. Parkes*: Did you give any orders that he was not to send anybody forward to that place? I did not give him any particular orders. He asked me who was to go with Fishlock's men; and I said, "White."
8. Did you give any orders as to any one not going to that particular place? Yes; before it was examined by the Engineer-in-Chief.
9. *By the Chairman*: After it was examined by the Engineer-in-Chief? No.
10. *By Mr. Jones*: All your orders to Richardson were of a positive character—you told him to take so and so to that particular part of the line? He asked me whether he should take Fishlock to repair that part of the line, and I said "you had better take White," who is another ganger on the line.
11. Where was he stationed? At Sydney.
12. He had gone down with the ballast train to Sydney? No, to the scene of the accident to assist.
13. You said, take a certain ganger and the men to repair a certain part of the line? Richardson must have asked me who he should take; I said "White;" I thought him more useful.
14. You did not say do not take so and so to that place? No, I do not recollect anything of the sort. I believe Richardson is capable of saying anything. I am his successor, and I am well aware that being appointed there, I have put a stop to many things which were carried on, and which ought not to have been carried on.
15. *By the Chairman*: You think he is not favorable to you? Yes.
16. And as regards Glover? I think he is not favorable to me; I have reasons for saying so. Previous to Fishlock's being appointed, there was a man of the name of Garrett, a brother-in-law of Glover's: he was a ganger. The first time I was on his length I said to the ganger, "How many men have you?" He said, "Four." I said, "The road is in a very rough state?" He said, "I have not been here very long." I told him to get the joints fastened down, and he said he had not got the dogs to do it with. I told him I should try him, of course, and give him a fair trial, and if he did not get his length in fair condition I would appoint some one else in his place. At the same time I supplied him with dogs and tools. In fact he had not a gauge for his length, which is the most essential thing a ganger should have.
17. *By Mr. Jones*: Did you examine the length of the spot where the accident occurred, immediately after the accident? I did.
18. Did you examine it with a view to see if there was any deflection? I did. I examined it well.
19. From what point? I examined from where I considered the first carriage got off the line—the horse-box. I examined the crown or top of metal, and saw where the flange ran across the middle down to the place that was on the bridge.
20. You examined the road carefully from that part where the carriages had gone over the rail and off the road? Yes, I did.
21. You examined it with a view to see if there was any deflection? I did. It was in good running condition, for the stipulated speed in the time table.
22. What did you consider the depth of any of the slacks? It might have been half-an-inch, or three-quarters, and it might be a little more.
23. In any case did you observe a deflection of two inches—or anything approaching two inches? No.
24. Did you observe anything on the line where the carriages were thrown off? No; there was no slack at all.
25. You did not attribute the accident to the slack? No, nothing whatever to do with it. I do not wish to conceal anything. I am not responsible if the accident occurred from the state of the road. I am not responsible; the ganger is responsible for his length, and Richardson is responsible to me. He was under my direction. I have directed him on several occasions about this part of the line. He lives between Parramatta and Haslam Creek Bridge. These two lengths were always the roughest lengths.
26. What two lengths? Fishlock's and Glover's lengths.
27. And the next between Fishlock's and Haslam Creek Bridge? Yes; they have always been the places, the ballast being bad. It is the fault of this length to have sand ballast. I have directed Richardson to walk this length every morning coming down to Sydney. It is his practice to meet me and get his instructions. Every time he has been down, I said, "Richardson, how did you find it; in what condition?" and he has said sometimes "very wet." We know where the soft places are, and when the weather is wet there are a good many slacks in the joints.
28. Then it is Richardson's especial business to see the two lengths when he goes to get instructions from you? Yes, as much as the ganger is—
29. You say the ganger is first responsible, then Richardson to you, and you beyond Richardson? Yes; it is impossible for me to inspect the whole line if the ganger is not held responsible. He is responsible. When he first came the length which Fishlock had was about the worst of all the lengths, and he has very greatly improved it. I would swear on oath that it is 25 per cent. better than when he took charge of it.
30. He is a reliable man—a careful man? I have always found him such.
31. Would you rely upon his word—upon any thing he stated? Yes, I would upon any thing he stated with regard to the line. I never had occasion to doubt his word.
32. *By Mr. Hay*: You consider your responsibility of a general nature, to see Richardson and the gangers have done their duty? Yes.
33. And would ascertain by occasional inspection of the actual facts themselves. You consider yourself

Mr. W.
Morgan.
5 Aug., 1858.

yourself responsible for the men doing their duty—you do not consider yourself bound to ascertain the facts of every particular slack on the line? No, I do not consider myself responsible if the ganger neglects his instructions—if he neglects to examine any part of the length in case of slacks. If there should be slacks where he works and he should not repair them every morning I am not responsible.

34. If he habitually neglected his duty you would be responsible for that man remaining in his situation? Of course; if he neglected his duty I would discharge him.

35. It is your duty to see that he does his duty? Yes. I walk on the line as often as I can; sometimes I am not able to walk to Parramatta. Most of the days I go to Long Cove viaduct.

36. If you found the ganger neglect his duty you would report him? I would discharge him at once. With reference to Richardson, I have instructed him as regards the slacks. I have seen him coming by the train perhaps when I have not been able to go there, and I have asked him if he has felt such a place: he may say, it is a very rough place, and I have then said, "Go back, and take a gang and keep them at work at it till it is done." These are the instructions I have given him when he has said there is a slack at a certain place. I have said "Go back at once, and take a gang with you, and wait till it is done, and do not leave till it is done."

37. By Mr. Weekes: Did Richardson point out a slack to you since the accident, and did Mr. Whitton inspect that slack—was it of sufficient importance to call his attention to? I did not consider it of sufficient importance to call his attention to it. Had it been of such sufficient importance it would have caught Mr. Whitton's eye. I went down with Mr. Whitton and gauged the line.

38. With Mr. Whitton? Yes, with Mr. Whitton, Captain Martindale, and Mr. Twiss. I would not let the line be touched till it was examined.

39. If there was any unusual deflection on the line Mr. Whitton would have detected it almost instantaneously? No doubt of it, if there was any slack of importance.

40. Did you have any reason to wish to prevent Glover more than any other ganger from seeing this portion of the line? No. All I can say is, as nearly as I can remember, I discharged Garrett, a relation of Glover's, and he wanted me to discharge another man and let Garrett take his place. I said "You never complained of that man before, and I would not feel justified in discharging him."

41. You selected Prime and White as the most handy men and the best adapted for the work to be done to this spot? Yes; I had no other motive than that.

42. By Mr. Oakes: Was this particular slack repaired before or after you went away? After.

43. Do you know the particular men employed in repairing it? No.

44. What hour did you leave Parramatta? I cannot say.

45. About what time? Nine or ten o'clock. When I arrived at the spot I began to look out to clear the road for traffic.

46. By Mr. Scott: In what order is the permanent way now? It is in good running condition; it is for the stipulated speed in the time sheets.

47. Is it better than it used to be? Yes; it is 25 per cent. better than when I took it.

48. Is it better than it was before the accident—is it better now than it was the day before the accident? I don't think it is; there might be a slack in consequence of the wet; some of the joints go down directly we have a heavy shower of rain.

49. Are you not improving the line with ballast? Yes, there is some part being improved; we are putting extra sleepers.

50. I am not alluding to that? I thought you meant the condition of the line as regards the repairing of the line.

51. I mean the whole condition of the line,—are you not putting additional sleepers and better ballast? Yes, to some part of the line; where we have put additional sleepers there is not a part of the line in better condition.

52. By Mr. Oakes: Are the bridges in a bad state? All of them, but not in a dangerous state.

53. Not in a dangerous state? No; I watch them, and get them stretched. There is Potts', which I have got stretched, on the Canterbury Road.

54. Are they propped in any way? When the sides are coming together—the abutments of the flat top bridges—we put a stretch between them.

55. By Mr. Weekes: You are referring to the bridges the trains run under, not over? I am referring to the bridges the trains run over: the bridges are all safe.

56. By Mr. Scott: Are the bridges of bad construction—bad materials? Bad design—no counterfeits at the back.

57. Bad construction or bad design? Bad design and construction also.

58. What are the materials? The materials in the bridge are pretty good.

59. But badly put together? Yes. We can tell more when they are taken down; both have to come down.

60. Would you consider them as slop-work? Not the work I have been used to.

61. By the Chairman: I will read the passage of Mr. Richardson's letter which we have referred to:—"After Mr. Whitton and Mr. Morgan had examined the spot, the latter came to me and desired me to send 'Glover,' one of the gangers, away, in order that he might not see it, because he might cause mischief, and to take men there myself, and pick up or repair that spot, and to get the half-mile on the Parramatta side of the accident repaired also."—What is your story in reply to that? What I told you before. I told him nothing about Glover. What I said before is what I said to him, to the best of my recollection. I had no reason why Glover should not see it.

62. By Mr. Weekes: Did you give any general order that the men should confine themselves chiefly to this spot? No more than what I told you. He asked me who should go with the men: I said, "White"; he was a useful man. He said, "Who shall we send up to where
"Fishlock

"Fishlock was lifting?" I said, "Send Prime; he is doing nothing." I had no motive in doing that.

62. *By Mr. Jones*: Prime was disengaged when he was speaking to you? Yes.

63. You mentioned White particularly, because you considered him a good man—a handy man to do the work? Yes. Mr. W. Morgan.
5 Aug., 1858.

64. *By Mr. Weekes*: You examined the particular slack referred to by Mr. Richardson? I was standing at a small distance where the horse-box went across the road.

65. How far was that from the spot where the horse-box left the line? About a chain. It was on the Parramatta side.

66. Suppose the slack had been to the extent Mr. Richardson referred to, it would not have been the cause of the accident, because that occurred a chain from where the horse-box left the line? Yes.

Mr. R. Richardson called in and further examined, in the presence of Mr. Morgan:—

1. *By Mr. Parkes*: Did you write that letter? Yes. (*Letter read. Vide Separate Appendix A*) Mr. R. Richardson.
5 Aug., 1858.

2. That is correct—the statement just read? Yes; this is correct.

3. You re-affirm what you have written to Mr. Donaldson? Yes, I do, most solemnly.

4. *By the Chairman*: Who were the men who lifted up the deflection? The Newtown ganger.

5. Do you know his name? No, I don't.

6. Was it Prime or White? No; both the men were half a mile away from this spot.

7. *By Mr. Hay*: Don't you recollect the party in charge who lifted up the sleeper? The party was in charge of himself.

8. No overseer? No. I was the sole overseer.

John Whitton, Esq., called in and further examined:—

(*Mr. Richardson's letter read to witness. Vide Separate Appendix A*)

1. *By the Chairman*: Did you and Mr. Morgan examine the line before the slack was picked up? Yes, before the time it is stated to have been picked up. J. Whitton, Esq.
5 Aug., 1858.

2. Did you notice any deflection whatever? No, none whatever.

3. Not near to Haslam's Creek Bridge? No, I did not. Mr. Gibbons also examined the line, and is now waiting to give evidence, if the Committee desire it. Captain Martindale also examined the line.

Captain Martindale called in and examined:—

1. *By the Chairman*: Were there any steps taken by you as Chief Commissioner, or the Commissioners, to ascertain the cause of the horse-box getting off the line? I had a report from Mr. Whitton, from the Traffic Manager, and, through Mr. Whitton, from the Inspector of the Permanent Way. Different causes were assigned: one was, the breaking of the axle-boxes; another, suggested by the engine-driver, was, that the permanent way was rough. I was not able to trace the cause. Capt. B. H. Martindale, R.E.
5 Aug., 1858.

2. *By Mr. Hay*: Did the Chief Engineer give an opinion as to the cause of the horse-box getting off the rail? Yes; but not from examination. He suggested it might have been from loose coupling. The cause was not traced.

WEDNESDAY, 11 AUGUST, 1858.

Present:—

MR. DONALDSON,
MR. WEEKES,
MR. JONES,

MR. PARKES,
MR. HAY,
MR. OAKES,

MR. ROBERTSON.

THE HON. STUART A. DONALDSON, Esq., IN THE CHAIR.

Captain B. H. Martindale, R.E., Chief Commissioner of Railways, being in attendance, the Chairman read, from the Minutes of Proceedings a Memorandum made by the Clerk of Select Committees to him, at the last meeting of the Committee, relating to the suspension of Mr. Richardson from his duty in the service of the Railway Department, and Captain Martindale was then examined as follows:—

1. *By the Chairman*: Will you state to the Committee whether Richardson has been suspended? He has. Capt. B. H. Martindale, R.E.
11 Aug., 1858.

2. When? On the 5th instant.

3. Was his suspension agreed upon by any formal Minute of the Commissioners of Railway? Yes.

4. Will you state how that Minute was arrived at? A report was received from the Engineer-in-Chief, charging Mr. Richardson with having made a false and malicious statement against his superior officer in the execution of his duty. Upon that report from the Engineer-in-Chief the Board suspended Mr. Richardson, until they could make inquiry into the circumstances.

Capt. B. H.
Martindale,
R.E.

11 Aug., 1858.

5. Was the report from the Engineer-in-Chief made in consequence of anything that took place before this Committee? It was; after a conversation with myself, in which I directed him to make that report.

6. Then the report, as I understand you, was made at the direction or suggestion of the Chief Commissioner, in consequence of what took place before this Committee of the Legislative Assembly? It was made by direction of the Chief Commissioner, to put the matter in an official shape.

7. You had no grounds, as I understand you, for saying or suggesting that Richardson had made a false or malicious statement relating to the conduct of one of his superiors in the execution of his duty, but from what you had heard in consequence of the permission granted to you to be present at all examinations before this Committee? The ground on which the Commissioners acted was the report made by the Engineer-in-Chief.

8. You say he made that report at your suggestion? The Engineer-in-Chief stated to me, in an unofficial conversation, what he thought of the matter, and, to put the matter in an official shape, I suggested that he should send in a report.

9. Will you state how the malicious statement charged against Richardson was made, and to whom? It was made here to the Committee, and read by the Committee to me.

10. Had you any copy of any communication of the kind given to you, or was it merely read to you in the same way as you were allowed to see the evidence? It was merely read to me.

11. In the same way as you were allowed to see the evidence? Yes, except that in this case the evidence was read to me by the Chairman, in place of being sent to me to read.

12. Is Richardson still under suspension? He is.

13. He has not returned to his duty since that time? He has not.

14. Has he had any communication in writing from the Chief Commissioner on the subject? He is not in a position to receive an official communication from the Chief Commissioner.

15. From whom did he receive his notice of suspension? From his immediate superior, Morgan.

16. Do you desire to make any further statement with respect to this matter? Yes. I have been given to understand that the Commissioners have committed a breach of some of the privileges of the House, or of this Committee, in having taken action upon evidence taken before this Committee before it was published. I can only say, that the Commissioners had no wish or intention of interfering with the privileges of the House, or of this Committee. They had no idea at the time they took action that such privileges existed. The Committee will remember, that upon the first day evidence was taken I was informed the Committee was open to the public, and that it was even desirable the public should be present. Subsequently, on the same day, I was requested not to attend when any of the officers or servants of the Commissioners were examined; and I have, therefore, never been present upon any such occasion, except when the Engineer-in-Chief has been examined, the Committee having been pleased to sanction the evidence being sent to me for perusal, and when necessary for reply. I was, therefore, entirely under the impression that the Committee was acting as a public tribunal, and that any communication made to me by the Committee was a public communication. As such at the time I regarded the letter from Richardson read to me by the Chairman, and his comment upon it; and I may repeat that, in the course they pursued in reference to this letter, the Commissioners had no idea of interfering with the privileges of the Committee. They acted upon a report from one of their officers, and they took the mildest action in their power, by suspending the person complained of until they could inquire into the circumstances. I think the Commissioners would have been guilty of a dereliction of duty if they had not done so. It was practically impossible for Morgan and Richardson to go on working together. There was no charge whatever against Morgan. There was a charge against Richardson of having maliciously given such evidence as, supposing it to be true, would necessitate the discharge of Morgan from the Commissioners' service, and not only so, but would have blasted his character for life. I think, if the Commissioners had not stepped in to inquire into the circumstances, and to afford Morgan that protection to which he might be entitled, that it would be perfectly impossible for them to retain in their service any man worth the having. If Richardson had succeeded in getting only one man to back his statement, presuming it to be a false statement, it would have been almost impossible for Morgan to have cleared himself. I think the position in which that puts Morgan, or any other officer in charge of a public department, or branch of a public department, is a most fearful one. It happens every day, for instance, that I am obliged to dismiss, or to punish, or to reprimand my subordinates. If any two of these were to join together to make a false accusation to this Committee, impugning my conduct or character, or that of any principal officer of the department, it would be almost impossible for me or for that officer to clear ourselves; but if, in addition to that danger, a man is to come forward and make a statement to this Committee, and, when that statement is reported to the Commissioners by the head of the branch to which that man belongs, he is to shelter himself under the privileges of this Committee, then I do not see how it is possible for the Commissioners to expect to retain any man worth the having in their department. I believe in the whole annals of railway experience, no railway management has ever been subjected to such an ordeal as the present Commissioners for Railways have been. Owing to an accident which no one can deplore more than they do. An inquest was held, which, in the first place, acquitted the Commissioners and their servants of all blame. Since then, a Select Committee has been appointed, and is now sitting, before which the servants and subordinates of the department have been examined on matters of every kind: they have had every opportunity of saying anything they liked against their superiors. In addition to this; there is now a Royal Commission sitting. I believe that is such an ordeal as no railway management ever went through. The result has been, so far as I am yet aware, that nothing has been said to impugn the conduct or management of those charged with the direction of the department, or of their principal officers. I make no complaint of the steps

steps which have been taken, which may be necessary for the public service; but I do say this, that if, in addition to such an ordeal, any man is to come forward to give evidence against his superior officers, and the Commissioners are to receive a report that such evidence is false and malicious, and then they are to take no steps in the matter, even though they may think such steps absolutely necessary for carrying on the public service, then I do say that is a fearful position in which to place any man having responsible authority.

17. *By Mr. Oakes:* It has been told to me that, on or about the 1st June two passenger trains—one going to and the other coming from Liverpool—met on the single line near to the Fairfield station, and that only by the greatest exertion was collision prevented—have you had any official report of that circumstance? I had an official report of a special engine and a passenger train nearly meeting upon the single line, and the result was the issuing of certain regulations about the running of special engines, which I have already laid before the Committee.

Capt. B. H.
Martindale,
R.E.
11 Aug., 1858.

SEPARATE APPENDIX.

A.

*Great Southern Railway,
30 July, 1858.*

To the Honorable S. A. Donaldson, Esq.,
Chairman of the Railway Accident Committee.

Sir,

Thinking that I might be recalled, I have refrained from disclosing some few facts which I consider of great importance to your Committee. I do this not, I assure you, with any malice, but as my duty, both towards the public and those connected with this unfortunate affair.

Seeing no other person than myself is called to give evidence as to the state of the permanent way, I am of course anxious that what I have stated to you should be clearly proved, as I feel confident of the cause, and I think when I mention two circumstances it will prove beyond doubt, whether the permanent way was in "perfect order," as stated.

1st. After Mr. Whitton and Mr. Morgan had examined the spot, the latter came to me, and desired me to send "Glover," one of the Gangers away, in order that he might not see it, because he might cause mischief; and to take men there myself, and pick up or repair that spot, and to get the half mile on the Parramatta side of the accident repaired also.

I have observed, from observation within this week, that a low joint on one side has the effect of throwing the carriage to the other, which can be easily proved, of course, by experiment.

2nd. I am informed by the ganger "Fishlock," upon asking him why he did not speak the truth on his examination before the Commissioners, that he had been desired by Mr. Morgan to say what he did.

The men are fearful of being discharged, otherwise they would all speak as to what I have asserted.

I have, &c.,
RALPH RICHARDSON.

B.

*Railway Department,
Sydney, 4 August, 1858.*

Sir,

In reference to the evidence given by me before the Select Committee now sitting upon the late Railway Accident, to the effect that I had no recollection of having received a report of a horse-box having got off the line between Parramatta and Homebush, and that I could trace no such report; but that I felt certain, from the system of reports now in use, that such an accident must have been reported had it occurred, I have the honor to inform you that the Secretary yesterday brought to me a report of such an accident having happened on the 10th October last.

Repeated search had been previously made to see if such a paper existed; but a clerk, no longer employed in the department, having omitted to enter it in the Index, it was only accidentally discovered at this late period.

Reports of this accident were received by me from the Engineer-in-Chief, and the Traffic Inspector, and, through the former, from the Inspector of Permanent Way, and the Foreman of Locomotives. The horse-box was the last carriage in the train; and was dragged for a considerable distance after it got off the rails, without doing any injury. Various causes were assigned at the time for the accident, but the actual cause was not ascertained.

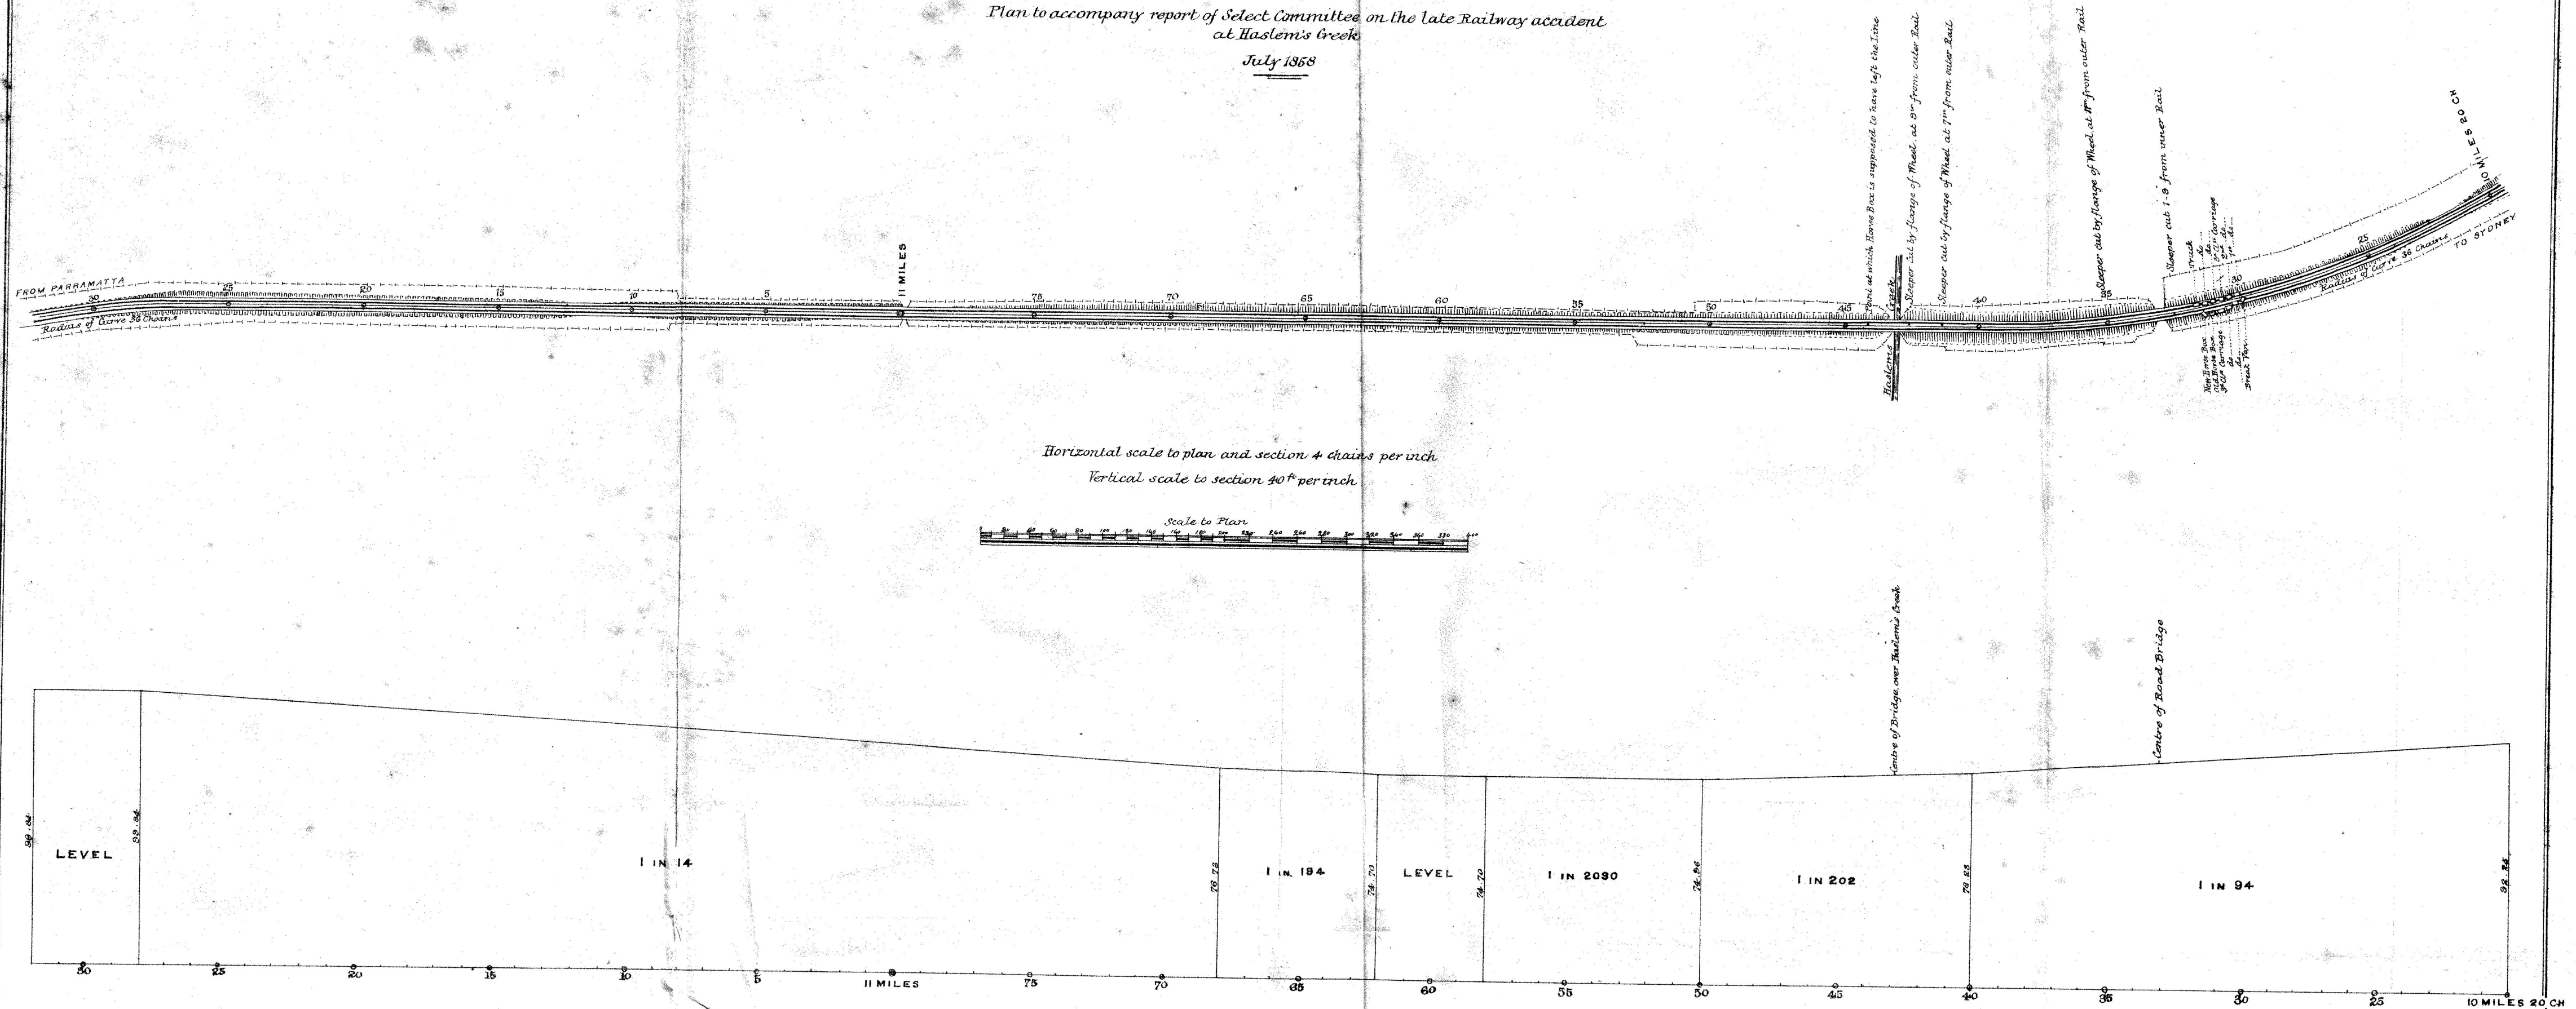

I have, &c.,
B. H. MARTINDALE.

The Hon. S. A. Donaldson, Esq., M.P.,
&c., &c., &c.

C

GREAT SOUTHERN RAILWAY SYDNEY TO PARRAMATTA

*Plan to accompany report of Select Committee on the late Railway accident
at Haslem's Creek
July 1858*

1858.

Legislative Assembly.

NEW SOUTH WALES.

GREAT SOUTHERN RAILWAY.

(CORRESPONDENCE RELATIVE TO TIME TABLE AND SCALE OF FARES.)

*Ordered by the Legislative Assembly to be Printed, 5 August, 1858.*THE CHIEF COMMISSIONER FOR RAILWAYS to THE SECRETARY FOR LANDS AND
PUBLIC WORKS.*Railway Department,**Sydney, 7 May, 1858.*

SIR,

The opening for traffic of the Great Southern Railway as far as Campbelltown rendering necessary a complete revision of the time-table and fares, I have the honor to lay before you the time-table and fares proposed; the determination of the scale of charges to be adopted being a matter of such importance as to induce the Commissioners to consider it their duty to submit the alterations proposed for the consideration of the Government before they are published.

2. It will be sufficient to observe, that the alterations in the time-table are such only as the additional length of line to be travelled over has rendered necessary to provide for the convenience of the public, the carriage of the mails, and the safety of the trains while travelling upon the single line.

3. The fares have been revised in accordance with the principles laid down in my Report upon the Internal Communications on the 17th ultimo, in which this subject is discussed in detail, and in which I trust I have satisfactorily shewn that the present rates are so low as to require revision, and that the revised rates proposed cannot prove burdensome to the public using the railway.

4. In addition to what I have there stated in reference to season tickets, I may observe that the issue of these tickets in the mother country is never made as a matter of right, but as a matter of favor; and that even at the increased rates now proposed, third class passengers using season tickets will travel upon the line at a rate fifty per cent. lower than ordinary passengers of the same class; and first class passengers at a rate eighty-three per cent. lower than ordinary passengers of the first class.

5. At the same time, the public will have a convenience not hitherto afforded, viz., that of taking a season ticket for a period of one month only at a time.

No alteration has been made in the return tickets.

6. It may be observed, that as long as the Government retain the management in their own hands, there can be no objection to lowering rates again as soon as the line becomes self-supporting.

7. His lordship the Bishop of Sydney, and other influential gentlemen, have pressed upon my attention the subject of not running trains upon the Sunday. I concur with those gentlemen in considering that Sunday trains in this Colony cannot be defended on the ground

of necessity, and that this country has a noble opportunity of shewing its appreciation of the day of rest by refusing to sanction Sunday traffic.

It is impossible that those employed in the Railway Department can enjoy the full benefit of the Sunday while such traffic exists.

Some pecuniary loss might arise from the cessation of this traffic, but I believe the prosperity of the railway would on the whole be increased.

I have, however, made no alterations in the Sunday trains, except such as are necessary to meet the increased length of line opened; because the Commissioners consider the social question to be of too general a character to be dealt with by them, and they seek, therefore, the opinion of the Government upon it.

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE THE SECRETARY
FOR LANDS AND PUBLIC WORKS.

P.S.—The proposed increase in the rate of fares renders it desirable the tramway from Redfern to the Circular Quay should be laid down with as little delay as possible.

THE SECRETARY FOR LANDS AND PUBLIC WORKS to THE CHIEF COMMISSIONER
FOR RAILWAYS.

*Department of Land and Public Works,
Sydney, 3 June, 1858.*

SIR,

I am directed to acknowledge the receipt of your letter of the 7th ultimo, submitting for the consideration of the Government a revised scale of charges and time-table for the Great Southern Railway, consequent on the opening of the Campbelltown extension.

2. The letter was personally handed by you to the Secretary for Lands and Public Works on or about the day of its date, and having been returned to you with the verbal approval of his time-table and fares, was again officially transmitted to this Department on the 29th ultimo.

3. There are two questions touched upon in that letter which appears to the Secretary for Lands and Public Works to require official answers. The first of these occurs in the 4th paragraph, wherein you state that in the mother country the issue of season tickets is never made a matter of right, but as a matter of favor. This, I am instructed to observe, may be the case in England, where the railways are the property of persons other than the Government, but such a proposal cannot be entertained in this Colony, where an entirely different order of things prevails.

4. A far more important question, however, is raised in the 7th paragraph of your letter, in which you state that his lordship the Bishop of Sydney, and other influential gentlemen, have pressed upon your attention the subject of not running trains upon the Sunday, and you express your concurrence with those gentlemen in considering that Sunday trains in this Colony cannot be defended on the ground of necessity, and that this country has now a noble opportunity of shewing its appreciation of the day of rest by refusing to sanction Sunday traffic.

5. In reply, I am directed to inform you that Mr. Secretary Robertson cannot concur in thinking it either expedient or proper to abstain from running the trains on Sundays, especially as Sundays are the only days on which a large portion of the people can use them. And if, I am to add, the principle be admitted that Sunday travelling should be prevented, it will be necessary to destroy the efficiency of the entire postal arrangements of the Colony.

I have, &c.,

NICHL. FITZPATRICK.

THE CHIEF COMMISSIONER
OF RAILWAYS.

1858.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY FARES.

(PETITION IN REFERENCE TO.)

Ordered by the Legislative Assembly to be Printed, 25 November, 1858

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned inhabitants of Parramatta and its neighbourhood,—

SHEWETH:—

That your Petitioners, recognizing Railways as calculated to confer immense advantages, both material and moral, in their peculiar adaptation to the circumstances of this Colony, are of opinion, that, in consequence of the system of fickle management and high charges hitherto adopted, those advantages have not been attained.

That your Petitioners are of opinion that the following scale of fares, permanently fixed, would be calculated not only to make these great and essential public works popular, but yield ultimately a much larger revenue, and render the resources of the Colony available to the public.

SCALE OF FARES.

CLASS CARRIAGES.

	1ST.	2ND.	3RD.
Single Fares.....	-/2	-/1½	-/1 per milc.
Return Fares.....	-/1	3/4	-/0½ "
Monthly Fares.....	5/6	4/-	2/6 "
Quarterly Fares.....	15/-	10/-	7/- "
Half-yearly Fares.....	25/-	18/-	12/6 "
Yearly Fares.....	40/-	30/-	20/- "

Together with a corresponding reduction in all other Charges.

That the foregoing statements having been repeatedly pressed on the attention of the Commissioners, and disregarded by them; your Petitioners, therefore, have no confidence in their management, and are further of opinion that the appointment of a responsible Minister for Railways and Internal Communications would contribute powerfully to the development of this great national enterprise.

That as there is no public question of more permanent importance to this Colony, nor one in which the public at large are more deeply interested than the progress and proper management of Railways,—

Your Petitioners respectfully, but earnestly pray that you will see fit to cause such steps to be taken as will give effect to the subject matter of this Petition.

And your Petitioners will ever pray.

Parramatta, the 9th day of November, 1858.

G. B. SUTTON,
Chairman.

1858.

Legislative Assembly.

NEW SOUTH WALES.

MESSRS. BISS AND MALTBY.

(PRAYING COMPENSATION FOR LOSS OF RAILWAY CARRYING BUSINESS.)

Ordered by the Legislative Assembly to be Printed, 25 August, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of John L. Biss and William W. Maltby, late Railway Carriers,—

SHEWETH:—

That your Petitioners had during the year 1856 observed with regret the great want of traffic on the Great Southern Railway, and more especially in the goods department, and that from various circumstances they were led at that time to form the conclusion that a well arranged carrying company, similar to that of Pickford's, in England, would not only remunerate those who should establish it, but would likewise prove a great public benefit, by creating a traffic hitherto unknown in carriage of goods, and likewise increase the passenger traffic, by reason of the carriers who having passed their goods, and left their teams at Liverpool, would naturally come to Sydney themselves by the line.

That your Petitioners, in accordance with such views, made application in 1856 to the late Commissioners of Railways for certain privileges and advantages from the Government to enable them to carry out their views with some prospect of success.

That the late Commissioners, taking a favorable view of the undertaking, in reference to the advantage it might prove to the Railway traffic, and consequently to the Government, did consent to grant certain privileges and advantages; and that in consequence of this your Petitioners did on the 22nd of January, 1857, commence an undertaking pronounced by all arduous and doubtful in its issue, and by many a probable failure.

That for the first six months your Petitioners had a most laborious and discouraging undertaking, experiencing much difficulty in combating old prejudices against using the line, and encountering not only much opposition but likewise a considerable pecuniary loss during that period; nevertheless, feeling sure of ultimate success, your Petitioners persevered, and had that satisfaction, as time proved the great advantages they offered the public, to see many of those who had at first discouraged them become their most strenuous supporters.

That in consequence of assiduity and exertion, the undertaking that for the first six months appeared so doubtful, and occasioned so great a loss of time and money, became in the second six months assured, safe, and encouraging, and likewise remunerative; and that your Petitioners flattered themselves that they should now reap the reward of their labors, time and anxiety, and money, and become established in life.

That at this period the Chief Commissioner for Railways, who had succeeded the late Commissioners (under whose auspices your Petitioners had commenced their undertaking), having their attention called to the large traffic which passed through the agency of your Petitioners (and probably without bearing in mind that such traffic was produced solely by

your Petitioners' exertions, and that the advantage arising to the Railway was attributable to such, and was, therefore, in every sense, a benefit to the Railway, caused by your Petitioners), wrote to inform them that their occupation as Railway Carriers must cease, and that Government had decided to appropriate to itself the business thus established by them.

That your Petitioners having represented the case to the merchants of Sydney, and others who supported them, subsequently presented to the Chief Commissioner a memorial, signed by 50 of the chief merchants, &c., of Sydney, praying him to re-consider his decision, and representing the advantage they (the merchants) considered the Carrying Company had afforded the commercial community.

That in consequence of the said memorial the Chief Commissioner had opened fresh negotiations with your Petitioners, which were protracted until the 22nd of December, 1857, when they received a notice on the 29th to close their establishment on the 31st instant, thus virtually receiving only two days' notice.

That by this sudden close of their business the Government reaped the entire benefit of their twelve months' exertions, whilst your Petitioners have experienced considerable loss in collection of debts, forced sale of stock, and unemployed time, to say nothing of the utter disappointment to have *formed* a business and to be thus called upon to relinquish it.

That your Petitioners humbly pray your Honorable House will be pleased to take into consideration the advantages derived by the Government from the foregoing facts, and the loss and injury sustained by your Petitioners; and will afford your Petitioners such compensation as your Honorable House may deem just.

And your Petitioners, as in duty bound, will ever pray.

JOHN L. BISS,
Per W. MALTBY.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES, No. 55. FRIDAY, 2 JULY, 1858.

8. Railway Services of Thomas Woore, Esquire:—Mr. Murray moved, pursuant to *amended* notice,—
 (1.) That a Select Committee be appointed to inquire into and report upon the services rendered to the cause of Railway Communication in this Colony by Thomas Woore, Esquire, in the years 1846, 1847, 1848, 1849, and 1850.
 (2.) That such Committee consist of Mr. Macarthur, Mr. G. Macleay, Mr. Faucett, Mr. Deniehy, Mr. Lee, Mr. Robertson, and the Mover.
 Question put and passed.
-

VOTES, No. 64. FRIDAY, 23 JULY, 1858.

12. Railway Services of Thomas Woore, Esquire:—Mr. Deniehy moved, pursuant to notice, That the Report from the Select Committee on Railways in 1848 be referred to the Select Committee now sitting to inquire into and report upon the Railway Services of Thomas Woore, Esquire.
 Question put and passed.
-

VOTES, No. 115. FRIDAY, 5 NOVEMBER, 1858.

2. Railway Services of Thomas Woore, Esquire:—Mr. Murray, as Chairman, brought up the Report from, and laid upon the Table the Evidence taken before the Select Committee appointed on the 2nd July last, to inquire into and report upon the Railway Services of Thomas Woore, Esq., with Minutes of Proceedings, and Appendix.
 Ordered to be printed.

RAILWAY SERVICES OF THOMAS WOORE, ESQ.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 2nd July last, "to inquire into and report upon the Services rendered to the cause of Railway Communication in this Colony by Thomas Woore, Esquire, in the years 1846, 1847, 1848, 1849, and 1850," and to whom was referred, on the 23rd of the same month, "the Report from the Select Committee on Railways in 1848"—have agreed to the following Report:—

From the evidence taken by your Committee it appears that Mr. Woore, under the directions of the Provisional Committee, in 1845 undertook to solve the question—then regarded as very doubtful,—whether, from the nature of the country, railway communication was practicable between Sydney and the inland districts of the Colony. The Provisional Committee undertook to defray the actual cost of the surveying party, towards which the Government contributed £500, the remuneration to Mr. Woore for his personal services being left open, and dependent upon the ultimate settlement of the railway question.

It appears that Mr. Woore devoted two years and nine months to a general examination and survey of the country between Sydney and Goulburn; he traced three distinct lines, and furnished a valuable report, clearly demonstrating that railways could, without much difficulty, be extended to the interior of the country.

In the performance of this service Mr. Woore displayed great energy, as well as ability. The difficulties he had to encounter can now be scarcely understood, much less appreciated.

The immediate result of his Report was the formation of the Sydney and Goulburn Railway Company—a body which, after a short existence, transferred all its interests and liabilities to the Government. Up to this time, however, Mr. Woore has received no remuneration for his services, nor compensation for loss of time, and injury sustained in his private affairs while engaged in the survey. He has not even been fully reimbursed the expenses actually incurred in the prosecution of the survey.

Your Committee refer in particular to the evidence of the Revd. Ralph Mansfield, and that of Mr. C. Kemp, in proof of the high character of Mr. Woore's services. Captain Ward, viewing his surveys as an engineer, thinks that, at the present time, with the greatly increased facilities that are available, he could get those surveys done by a professional Railway Surveyor for £500. But, looking at the fact that when Mr. Woore entered upon the important duty entrusted to him, the field was entirely uninvestigated,—taking into consideration, also, the time, energy, and professional ability which, to the serious injury of his private affairs, he devoted to the investigation of the whole subject, and the completion of his plans, your Committee are of opinion that, under all the circumstances, the services rendered by him to the public cannot be estimated at less than £1,500; and they, therefore, strongly recommend that that sum should be awarded to him.

Legislative Assembly,
Sydney, 5 November, 1858.

T. A. MURRAY,
Chairman.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 13 JULY, 1858.

MEMBERS PRESENT:—

Mr. Murray, | Mr. Faucett.
 Mr. Lee,

Mr. Murray was called to the Chair.

Committee deliberated as to their course of procedure, and it was *Resolved*:—

- " 1. That a letter be forthwith addressed to Thomas Woore, Esquire, requesting
" him to state the earliest day on which he will be able to attend as a witness
" before the Committee.
- " 2. That, as it will be more expedient for this inquiry to be initiated by the
" examination of Mr. Woore, no further meeting of the Committee be
" convened until a reply has been received from that gentleman."

Committee further deliberated.

Motion made and *Question*,—" That the Chairman do move in the House, That the
" Report from the Select Committee on Railways in 1848 be referred to this Committee,"—
agreed to.

[Adjourned.]

WEDNESDAY, 1 SEPTEMBER, 1858.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esquire, in the Chair.
Mr. Macarthur, | Mr. Faucett,
 Mr. G. Macleay.

By direction of the Chairman, Resolution of the House referring to the Committee
on 23 July last Reports from Select Committee on Railways in 1848, read by the Clerk.
Mr. Thomas Woore examined.

[Adjourned till to-morrow, at Eleven o'clock.]

THURSDAY, 2 SEPTEMBER, 1858.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esquire, in the Chair.
Mr. G. Macleay, | Mr. Faucett,
 Mr. Macarthur.

Mr. Thomas Woore further examined.

Committee deliberated.

[Adjourned.]

FRIDAY, 29 OCTOBER, 1858.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esquire, in the Chair.
Mr. Faucett, | Mr. G. Macleay.

Mr. T. Woore was present in the room during the examination of the witnesses.
Captain Ward, R.E., Deputy Master of the Royal Mint, and Commissioner for Rail-
ways, and—
The Reverend Ralph Mansfield, examined.

[Adjourned till Tuesday next, at Two o'clock.]

TUESDAY, 2 NOVEMBER, 1858.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esquire, in the Chair.
Mr. G. Macleay, | Mr. Macarthur,
 Mr. Faucett.

Mr. T. Woore was present in the room during the examination of the witnesses.

Mr. John Whitton, M. Inst. C.E., Engineer-in-Chief, and—

Mr. Charles Kemp, examined.

The Chairman, at the close of Mr. Kemp's examination by the Committee, having
asked Mr. Woore whether he was desirous of putting any questions to that gentleman,
through the Chair.

Mr.

Mr. Woore stated that there were no questions he was desirous to have put to Mr. Kemp.

The Chairman then desired the opinion of the Committee as to the necessity of taking further evidence.

Committee deliberated, and it was *Resolved* :—

"1. That sufficient evidence has been taken for the purposes of this inquiry.

"2. That a meeting of the Committee be convened for *to-morrow*, to consider "their course of proceeding."

[Adjourned till to-morrow, at *Two o'clock*.]

WEDNESDAY, 3 NOVEMBER, 1858.

MEMBERS PRESENT :—

The Honorable T. A. Murray, Esquire, in the Chair.

Mr. G. Macleay, | Mr. Macarthur.

Committee met, pursuant to Resolution agreed to *yesterday*, to consider course of proceeding.

Committee thereupon deliberated, and requested the Chairman to prepare a Draft Report for their consideration—

And the Chairman, having prepared such Report accordingly, read the same 1^o.

Committee deliberated thereupon.

[Adjourned till to-morrow, at *half-past Twelve o'clock*.]

THURSDAY, 4 NOVEMBER, 1858.

MEMBERS PRESENT :

The Honorable T. A. Murray, Esquire, in the Chair.

Mr. G. Macleay, | Mr. Macarthur,

Mr. Faucett.

Draft Report, proposed by the Chairman, read 2^o.

Committee considered, and *verbally* amended the same.

Motion then made, and *Question*,—"That this Report, as *verbally* amended, be the Report of the Committee,"—*agreed to*.

Further Motion made, and *Question*,—"That a Motion be made in the House for "the Adoption of this Report,"—*agreed to*.

Chairman requested to report to the House.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

RAILWAY SERVICES OF THOMAS WOORE, ESQ.

WEDNESDAY, 1 SEPTEMBER, 1853.

Present:—

Mr. MURRAY,
Mr. MACARTHUR,

Mr. G. MACLEAY,
Mr. FAUCETT.

THE HON. T. A. MURRAY, ESQ., IN THE CHAIR.

Thomas Woore, Esq., called in and examined:—

1. *By the Chairman:* You were engaged for some time in surveying a line to Goulburn? I was.
2. When did you begin? On the 6th May, 1846.
3. How long did it occupy you? Two years and nine months.
4. Were you engaged in it during the whole of that time? I was.
5. In the field and making plans? In the field making plans, and endeavouring to bring the matter to maturity in Sydney.
6. You say you were thus employed for two years? For two years and nine months.
7. And you submitted your plans to the Government I suppose? Not to the Government, but to a public meeting. I was acting under a Committee appointed by a public meeting of the citizens of Sydney.
8. The public meeting had for its object the establishment of Railway communication? Yes.
9. Did you make any agreement with the Committee? I did—to make a survey of three lines to Goulburn.
10. Have you a copy of that agreement? I have not. I am sorry to say it is mislaid. I believe you read it over once.
11. Will you state the purport of it? I offered my services gratuitously to the Committee in making such surveys, provided they paid the current expenses as they occurred—that is, all the expenses attending the work as they occurred, leaving my remuneration to be paid by whatever Company was formed afterwards to carry out the undertaking.
12. The remuneration for your personal services? Yes. I was not to be out of pocket any sum.
13. And did the Committee pay all the expenses immediately they were incurred in carrying out the survey? They did not.
14. You have been a loser in that way? I have been a loser to the amount of £25. I beg to offer an account of expenses I incurred, which I kept in my tent at the time; this shews a deficiency of £25 6s. 5d.
15. Have you received any compensation for your personal services? None whatever.
16. Did you make any application at all to the Committee on the subject? I did.
17. And what was the reply? I was refused.
18. By the Committee? Yes. The Committee said they were not in possession of funds to remunerate me.
19. Who composed the Committee? I do not recollect all the names. There were a great number of gentlemen in the Committee—Sir Charles Nicholson, Messrs. Lamb, Gilbert Smith, Barker, Lyons, Mansfield, Walker, and Robey, took the leading part. I will not be certain who was Chairman.
20. *By Mr. G. Macleay:* Do you think Mr. Lamb was Chairman? He was sometimes. There was not any permanent Chairman. I know Sir Charles Nicholson was Chairman frequently. The agreement that I made was signed by Sir Charles Nicholson, Mr. Henry Gilbert

T. Woore,
Esq.

1 Sept., 1853.

T. Woore, Esq. Gilbert Smith, and Mr. Lyons. These three gentlemen signed it for the Committee, and Sir Charles Nicholson was Chairman at that time.

1 Sept., 1858. 21. *By Mr. Faucett*: He handed in the Report as Chairman which is printed on page 3 of the Evidence of the Select Committee on Railways in 1848? He did.

22. *By Mr. Macarthur*: How long were you employed in this survey? From the 6th of May, 1846, to the 29th of January, 1849—two years and nine months.

23. Can you state to the Committee what part of the country you examined when you made your survey? I have prepared a statement of the whole, which I have here, and think it would save the time of the Committee if I am permitted to read it.

24. You examined the southern line, did you not, to Pheasant's Nest? I examined three lines between the County of Cumberland and Goulburn. I did not measure the sections of all three, but examined them with the intention of doing so ultimately.

25. Just state shortly to the Committee the three lines? One from Sydney, by the eastern or coast ridges, crossing the Pheasant's Nest to Bong Bong. The summit height between Sydney and Goulburn is in the Gap on the Mittagong Range near Bong Bong. I examined another line by Liverpool, Campbelltown, Picton, and the Little Forest, to the summit at Bong Bong; and a third line, from the Nepean River at Shaucomore by the Oaks, up the ridge which lies between the Nattai and Bargo lines to Bong Bong.

26. I think you also examined some part of the County of Cumberland in the direction of Windsor? I did; and several other branch lines in the County of Cumberland, to Penrith and to Camden, &c. They are all described in this Report which lies on the table.

27. That is already in record, in the Minutes of the Select Committee in 1848? It is.

28. *By the Chairman*: The Report at page 9 you allude to? Yes. I have my maps here also to shew you. The first map I prepared describes these lines when I made a preliminary Report. You will understand, in the first instance I examined the three lines I have just described to ascertain whether it was likely any of these would permit of a locomotive engine and train being driven up them into Argyle, and if so, that a detailed survey might be made. A map shewing these lines, and a preliminary report, I exhibited at a public meeting, when a Committee was appointed that employed me to make such survey; and these drawings and report now lying on the table were made by me, and brought before a public meeting by that Committee.

29. You examined three distinct lines during the two years and nine months? I did.

30. Besides making a regular survey? Yes.

31. For your services in that way you received no compensation whatever? None whatever.

32. *By Mr. Faucett*: That statement you are about to read is not a copy of the report? No; this is a statement I have prepared, and is relating to my claim for compensation. The Witness then read the following:—

“Statement of a claim for remuneration on account of services rendered to the establishment of Railways in New South Wales by Thomas Woore.

“On the 29th January, 1846, the railway movement was first commenced by a public meeting held at Sydney, called at the instance of the late Mr. Percy Earl and Sir Charles Nicholson. The former had just arrived from England, bearing overtures from certain capitalists in England, to the effect that if it could be made to appear that the Colony was ripe for railway operations, there would be no lack of funds for extending their benefit to New-South Wales. At this meeting, which was attended by many of the leading colonists, a Provisional Committee was appointed to collect information on the subject. Without a survey of the country shewing the difficulties to be contended with in their construction, and the probable expense of overcoming them, it soon became evident that the undertaking could not be advanced. The Government were not disposed to effect it through their officers, nor were the public sufficiently interested in the enterprise to provide the necessary funds. Foreseeing the great advantages that must attend the establishment of railways in this Colony, and being desirous of their speedy introduction: I, under these circumstances, and with the hope of interesting the public more strongly in the matter, determined on devoting a few months to making a preliminary survey, that such a detailed one might afterwards be effected as would carry conviction to the minds of the British public of their safety in entering into such a speculation. The Provisional Committee being of opinion that the most practicable line on which to commence operations would be that between Sydney and Goulburn, I left my home on the 6th May, 1846, and set on foot a diligent examination of that country, which examination, with the preparation of a map shewing three different lines for future investigation, and a report on the subject, occupied me until the sixth of August following, when the Committee called a general meeting to receive their report, to which mine became a necessary adjunct. On this occasion much praise was bestowed on my voluntary exertions, and the following vote of thanks proposed by James Macarthur, Esquire, and seconded by Major Lockyer, was passed:—‘That the best thanks of the meeting be presented to Thomas Woore, Esquire, for the laborious survey he has made, and the map and report which he has presented.’

“And for the purpose of effecting a detailed survey of the proposed lines, it was decided that a subscription, which the Government promised to aid to the extent of £500, should at once be raised. The public generally did not second these exertions, subscriptions came slowly in, and it seemed clear that the amount realized would not be sufficient to cover the necessary expenses of surveying one line, though conflicting interests required that all three should be examined.

“When in possession of about £700, the Provisional Committee advertised for tenders to perform the surveys, but no eligible offer was made, in fact that particular branch of surveying, or rather engineering, was then a novelty in this Colony, and the necessary instruments, together with proper tables for facilitating the calculations of the earthworks,

"so impossible to be obtained on the spot, that no efficient person would undertake the work, more particularly as it was known that sufficient funds to defray his labor were not in hand. In this dilemma I again came forward and offered to undertake the surveys the Committee required, on condition that they paid *all necessary expenses in executing the same, as they occurred, and bound themselves to use their influence with any company that might hereafter be formed to carry out the work for the proper remuneration of my services.* This proposal was gladly accepted; I commenced operations, and subsequently an agreement (which, however, did not exactly express the tenor of my offer) was drawn out and signed." That agreement I have not on hand—it has been mislaid, but there are three gentlemen—Messrs. Robey, Mansfield, or Gilbert Smith—could prove its existence and tenor; and I believe Mr. Murray is cognizant of its having existence.

T. Woore,
Esq.

1 Sept., 1858.

33. *By the Chairman:* I suppose there is a copy somewhere? I don't know, but will inquire.

34. *By Mr. Mucarthur:* Mr. Mansfield would know something about it? Mr. Robey prepared it in Committee.

35. *By Mr. Fancett:* You have stated the purport of it? I have. (*Witness reads*)—"The instruments that could not be procured in the Colony I had made, and myself constructed tables to facilitate the calculations of the earthworks, after algebraically solving the problem on which the rule is framed." I have the algebraical calculation here, which I should like to lay before you.

36. *By Mr. G. Macleay:* These tables are in the hands of the Railway Board? I left them with Captain Ward, at the request of His Excellency the Governor General, and they went into the Railway Department, and have been there mislaid. I had some difficulty in searching out the drawings I left there. At the time I undertook this survey there were no books of tables to be procured in the Colony, and before I could make a survey I was obliged to solve the problem, and this is the solution:—

The above figure is meant to represent a longitudinal section of a railway embankment in which $ABba$ shews the horizontal roadway of uniform width, to the direction of which the vertical sections $ACDB$, $acdb$ are at right angles, but of unequal depths BP , bp , of which BP is the greater.

Through cd the base of the smaller section, a plane $cdfg$ is supposed to pass parallel to the roadway, $ABba$, whereby the whole embankment is divided into two parts, whereof the upper $Agfdba$ assumes the form of a Prism, and the lower part $gCddc$ that of a wedge whose base $gCdf$ is perpendicular to its upper surface $gfdc$, while its sides fDd , gCc are equally inclined from that surface.

The following are the "Data" by means of which it is required to calculate the solid contents of the whole embankment, viz:—

$AB = ab$, the breadth of the roadway $= b$, suppose

$Bb = fd$, the length of embankment $= l$, suppose

BP , the height of the greatest vertical section $= h$, suppose

bp , the height of the lesser vertical section $= h'$ suppose.

$PD : BP = pd : bp$, the ratio of the base of the sloping plane $BDDp$ to its perpendicular height $= r$, suppose.

Now the volume of the whole embankment $=$ the volume of the Prism $+$ the volume of the wedge.

And the volume of the Prism $= Bb \times$ area of section $acdb$

$$= l \times (ab + pd) bp$$

$$= l \times (b + rh') h'$$

For $pd = r \cdot p b = rh'$ by hypothesis.

To calculate the Volume of the Wedge $gCddc$.

Suppose two vertical planes gnc , fNd , to be dropped through the lines gc , fd , thereby dividing the wedge into three parts, viz:—A simple rectangular wedge, $gNfde$, and two equal pyramids $Cgnc$, $DfNd$, whose vertices are c and d , and their bases the right angled triangles gnc , fNd .

Now if it be reflected that gn , fN are respectively perpendicular to gc the contents of these three solids may be easily calculated.

For

T. Woore, Esq.
1 Sept, 1858.

For the volume of the simple wedge $g n N f d c$ = the area of triangle $f N d \times g f$ or $c d$.
 Now $f N = P Q = P B - Q B = P B - p b = h - h'$
 and $c d = a b + 2 p d = a b + 2 r p b = b + 2 r h'$
 therefore, area of triangle $f N d = \frac{1}{2} f N \times f d = \frac{1}{2} (h - h') l$
 and volume of $g n N f d c = \frac{1}{3} (h - h') b + 2 r h'$

$$\begin{aligned} \text{Again volume of Pyramids } d f N D &= \frac{1}{3} f d \times \text{area } f N D \\ \text{Now the area of } f N D &= \frac{1}{2} f N \times N D \\ &= \frac{1}{2} (h - h') r (h - h') \\ \text{therefore volume of Pyramids} &= \frac{r}{6} (h - h')^2 \\ &= \frac{2}{3} \frac{r}{2} (h - h')^2 \\ &= \frac{r}{3} (h - h')^2 \end{aligned}$$

We have now the volume of the whole embankment in the following expression:—

$$\begin{aligned} & l (b + r h) h' + \frac{1}{3} (h - h') b + 2 r h' + \frac{r}{3} (h - h')^2 \\ &= \frac{1}{3} 6 h' (b + r h) + 3 (h - h') (b + 2 r h') + 2 r (h - h')^2 \\ &= \frac{1}{3} 6 b h' + 6 r h'^2 + 3 h b + 6 r h h' - 3 h' b - 6 r h'^2 + 2 r h^2 - 4 r h h' + 2 r h'^2 \\ &= \frac{1}{3} 3 b h' + 3 b h + 2 r h h' + 2 r h^2 + 2 r h'^2 \\ &= \frac{1}{3} 3 b (h + h') + 2 r (h' + h^2 + h h') \end{aligned}$$

Whence we deduce the following rule:—

- 1st.—Multiply the sum of the two given depths by three times the breadth of the roadway.
 - 2nd.—To the sum of the squares of the two depths add the product of the depths, and multiply the result by 2 r (or twice the ratio of the base of the slope to its height)
 - 3rd.—Add together the two former numbers.
 - 4th.—Multiply the same by one-sixth of the length of the embankment.
- The result will be the sum of this whole section of the embankment in cubic feet, which may be reduced to cubic yards by dividing by 3 and 9.

When the lesser depths becomes 0:—

- 1st.—Multiply the remaining depth by 3 times the breadth of roadway.
- 2nd.—Multiply the square of depth by 2 r .
- 3rd.—Add together the two former numbers and proceed as in the former case.

For Example:—

$$\begin{aligned} \text{Let } h &= 50 \text{ feet} \\ h' &= 20 \\ b &= 30 \\ r &= 2.5 \\ l &= 400 \end{aligned}$$

By that rule I calculated my tables. This is an example worked out by my method, and here is one worked out by Sir John McNeil, which comes to the same result:—

Example worked out by Mr. Woore's method:—

1st greatest depth ...	50 feet
Lesser do....	20
	70
Roadway 30ft. \times 3 ...	90
	6300
	ft. ft.
Square of greater depth ...	50 \times 50 = 2500
do. lesser do....	20 \times 20 = 400
Product of depths ...	50 \times 20 = 1000
	3900
Slope... ..	$2\frac{1}{2} \times 2 = 5$
	19500
Add 1st operation ...	6300
	25800
Length of embankment \times	400 ft.
	6)10320000
	3)1720000
	9)573333 333
Volume of section	63703.703 cubic yards.

The

ON THE RAILWAY SERVICES OF THOMAS WOORE, ESQ.

The same section calculated by Sir John McNeil's formula:—

T. Woore,
Esq.
1 Sept., 1858.

Lesser height	20	Greater height	50	50
Slope	2.5	Slope	2.5	20
	100		250	2)70
	40		100	
	50.0		125.0	mean height 35
base	30	base	30	slope 2.5
	80.0		155	175
height	20	height	50	70
area =	1600.0	area =	7750	87.5
				base 30
				117.5
				mean height 35
				5875
				3525
				mean area 4112.5
				4
				Four times middle area = 16450.0
				Area of greater end = 7750.0
				Area of lesser end = 1600.0
				6)25800
				3)4300
				9)1483.33
				159.26
				Length of embankment 400
				Volume of section 63704.00 cubic yards.

37. These tables were constructed by yourself? They were. I received Sir John McNeil's volume of tables from England afterwards. Here is Sir John McNeil's solution, and here is his formula. You will see by it that I worked mine out at one-third the number of figures less than he has done, which afforded a great saving of mental labor. I was obliged to calculate a set of tables similar to these, (Sir J McNeil's,) but not so extensive, before I could compute the earthworks. I was also obliged to get all the instruments I required made in the Colony, with the exception of the level. This table is similar to one of the pages of the tables I was obliged to make. There were 45 pages similar to this. If I had not been capable of doing so, the survey must have fallen to the ground for that time.

TABLE IV.

Roadway 30 feet wide; inclination of sides $2\frac{1}{2}$ feet by 1 foot.

DEPTH OF EMBANKMENT OR CUTTING IN FEET.

(Witness continued to read from his statement.) In undertaking such a work, I was not blind to the difficulties attending its performance, nor of the necessity of executing it in such a manner as would bear the scrutiny and win the confidence of English Engineers, to whom I expected it would ultimately be presented, and on whose testimony I thought depended not only its immediate success, but the remuneration justly my due for a long and arduous service.

T. Woore, Esq.
1 Sept., 1838. vice. I was not blind to this, nor was I oblivious to the risk I ran of finding it impracticable to construct a working line to the summit height of Bong Bong, (an elevation of 2,300 feet,) on the success of which line again depended a return for my services. The funds at the disposal of the Committee were so limited that I could not employ any assistance beyond that of the laboring men who cleared the line of vision, drew the chain along, and carried the instruments. The burthen therefore rested solely on me; notwithstanding by the 17th of January, 1848, I had completed a section to Goulburn, with branches to Parramatta, Windsor, Penrith, Liverpool, and Camden, comprising in all a distance of 177 miles, and prepared a report, accompanied by a vast amount of drawing and calculation, which I laid before the Provisional Committee on that day, and with which they expressed themselves greatly pleased.

I may here state the views I entertained at that time in reference to carrying out the enterprize, after having devoted myself exclusively to the subject for a year and nine months. I considered that although the Colony was quite ripe for the introduction of railways of an economical construction, the formation of them was so little understood by any person within it, that it was absolutely necessary reference should be made to England, and more particularly to America, before any steps whatever were taken towards the actual construction of the line, that we might guard against errors being committed, which must be of serious consequence in a work of so costly a nature; and I considered as I had effected one accurate section of the country between Sydney and Goulburn, shewing the elevations we had to contend with, and had become intimately acquainted with the nature of the localities through which it passed, I should be best able to prosecute the inquiry further. It was not a necessary consequence that the line I measured should be the one adopted when the scheme was more matured. It was selected by me as presenting the *easiest ascent to Bong Bong from having the longest base line* to ascend the necessary height, and from the Nepean River to the southward was meant as a trial section, to shew the difficulties to be overcome, but carried out in detail, that a tolerably accurate estimate of the cost of construction might be arrived at.

Although I felt satisfied with the general direction of the line, it would have been folly to conceive it could not have been improved in detail. I had neither time nor means at command to go into that minutiae necessary before the works were commenced, nor did I think it advisable under the circumstances. I considered the time would be better spent in consulting these examples afforded us in England and America, and endeavouring to form an efficient Company to carry out the undertaking. Had these objects first been effected we should have been better prepared to examine the country more in detail, and decide on the nature of the works to be constructed, than we were on commencing the present road; and a much more effective line would most probably then have been constructed, at a saving to the Colony of a vast amount of money. I, therefore, proposed carrying the plans I had made to England, and there obtaining the opinion of those Engineers most conversant with the subject, *as to the best mode of working such a line*—and in visiting the Americans have profited by their experience in constructing the works, for in no other country has the same skill, judgment, and energy been displayed in adopting their native resources to this great means of internal communication. The Provisional Committee immediately on receiving my report and plans called a general meeting, which was held on the 27th January, 1848. To shew the estimation in which my labors were held by them I transcribe the following extract from their report:—"Your Committee have now the pleasure of reporting that Mr. Woore has just brought his labors to a close, and has accomplished his task to their entire satisfaction. His numerous drawings are now laid upon your table, and the neatness of their execution, with the elaborate minuteness of their details, will afford the best testimony to the persevering diligence and eminent ability with which his survey has been conducted. He will also read to you an abstract of the report which he has addressed to your Committee, the document in its original form having been printed for general information, and being deemed too voluminous to be read at a public meeting. Considering the arduous nature of Mr. Woore's work, and the liberal terms on which it has been performed, your Committee are of opinion that he is entitled to the warmest thanks of the meeting, and to the gratitude of the whole Colony."

38. *By the Chairman*: Who signed that report? I do not remember. It was most likely Sir Charles Nicholson, who was generally Chairman at that time.

39. That was the resolution which was adopted? That was the Committee's report to the general meeting.

40. *By Mr. Macarthur*: Did you get it from a newspaper? It was published in the *Sydney Herald* the next day, from which paper I took it.

41. *By the Chairman*: What was the date of that report? 27th January, 1848.

42. *By Mr. G. Macleay*: I think I was in the chair on that occasion? You were; the meeting was held at Lyons' Rooms, in George-street. I think Mr. Mansfield drew up the report and resolutions.

43. It must have been agreed to by the Committee before the public meeting? It was, at a special meeting called for that purpose. (*Witness reads*) "The following resolutions were passed at this public meeting:—

"3rd. That this meeting offers to Thomas Woore, Esquire, its best thanks for the able and zealous manner in which he has conducted the survey entrusted to him by the Committee, and embodied its results in the elaborate report and drawings now lying on your table, and is of opinion that the expenses of his proposed visit to England for the purpose of drawing the attention of the British capitalists to the advantages of introducing railways into this Colony ought to be paid by his brother colonists.

"4th. From all the information which has been collected relative to the amount of traffic now carried upon the public roads of the Colony, and especially from the facts communicated in the report and drawings of Mr. Woore, this meeting is of opinion that the introduction of railways into New South Wales would not only be of inestimable importance to the development of its resources, but afford a safe and profitable investment for capital."

Now

Now that is of importance, as it shows the Company was framed principally on the evidence I produced, founded on my works.

"A subscription in aid of my proposed visit to England was opened. However, the necessity of referring to England and America was not generally entertained, or rather when there was a prospect of salaried officers being appointed, other interests began to operate, and the result of my exertions was a determination, on the part of those interested, to form the late Company, and proceed with the works at once; and consequently an advertisement appeared requesting applications for the office of engineer. Although I did not approve of the proceeding, but considered it a step in the wrong direction, for the foregoing reasons, and, perhaps, too strongly expressed that opinion, I offered myself as a candidate for the office, having by this time become deeply interested in the enterprize, and thinking that by being thus employed I might have greater influence in carrying out my views, but my application was rejected. I then applied for remuneration for my services, which was also refused, and, on my calling the attention of the Committee to their contract with me, they were not disposed to recognise it."

T. Woore,
Esq.

1 Sept., 1838.

44. *By the Chairman:* What was the date when the Committee came to this determination? The 29th of January, 1849.

"From the commencement of my survey the Committee broke their faith with me. My tender expressly stipulated that I would voluntarily devote my services to the pursuit, provided the public found funds to meet the expenses as they occurred; nevertheless they obliged me to advance them out of my private resources, to the great detriment of my farming establishment, which, at the time, was suffering severely from my continued absence. This I never contemplated doing, and it was only by my threat of discontinuing the survey altogether, in consequence of their breach of faith which I was forced to from a want of funds, that they were induced to make remittances. Their objection to doing so arose from their considering it their duty to require tracings of my drawings; these being in an unfinished and undigested state, I could not give them until the whole was completed. As will be seen by the accounts which accompany this paper, there is still a balance of £25 6s. 5d. due to me for current expenses of the survey."

45. *By Mr. G. Macleay:* That sum you are positively out of pocket? I am, as will be seen by the book I kept in my tent of the expenses incurred.

"These and other circumstances did not tend to promote a cordial feeling between us. The gratifying manner in which my plans were received at the general meeting of the 27th January, 1848, and the encouragement given to my proposed visit to England, led me to break up my home establishment and prepare for the voyage—no doubt too prematurely. However, this, coupled with my long previous absence from home while effecting the survey, and the expenses attending my sojourn in Sydney afterwards in endeavouring to bring the matter to maturity (i.e., up to the 29th of January, 1847, when my application for the office of Engineer was refused, and all connection with the Committee ceased) has led to very serious loss and inconvenience, which I have not yet recovered from."

46. *By the Chairman:* Who communicated to you on the occasion you referred to in the statement as to your services being discontinued? Mr. Cowper.

47. Was he then acting as Chairman? He was taking a leading part at the time, whether he was appointed Chairman or not I do not recollect.

48. He communicated to you? He did.

49. Sir Charles Nicholson was Chairman of the Company? I think he was at first.

50. *By Mr. Faucett:* Was it the Company refused? It was.

51. Not the former Committee? They were the same persons. They refused in both capacities; but I do not consider they were bound to remunerate me until they formed themselves into a Company.

52. *By the Chairman:* The Committee acknowledged your services in 1848, and it was the Company you had to deal with in 1849? Yes.

53. When that resolution was passed? The Company never acknowledged it. These resolutions emanated from the Committee. The Company was formed in consequence of them. (*Witness reads.*)—"I believe it is generally admitted I was the prime mover in bringing the enterprize to a favorable issue before salaried officers were appointed. I was thus occupied for two years and nine months, and, considering the amount of work performed by me during that time, together with my liberal exertions in initiating the affair, I trust it will be admitted I have a strong claim on the public for remuneration, especially as all persons connected with this matter, save myself, have been remunerated for their services."

54. *By Mr. Macarthur:* In the statement you refer to the report of your survey—look, is it the same as is printed in the appendix to your evidence before the Select Committee of the late Legislature? It is.

55. *By the Chairman:* That is the report you referred to in your statement? Yes.

56. Did the Company ever identify themselves at all, or acknowledge themselves to be bound by the agreement entered into by the Provisional Committee? No, they never did.

57. Did the Company continue your services on the same terms? On the same terms they did. They frequently applied to me for information and drawings, after the Company was formed, without paying me—which were the terms I was working on throughout.

58. Was the survey completed after the Company was formed? It was completed before the Company was formed; but they applied to me for further information after. They particularly applied to me for information on forming tramways. They asked me to give them a plan for a tramroad, which I did.

59. *By Mr. Faucett:* Were these plans finished? Yes.

60. And handed in before the Committee? Yes.

61. *By Mr. G. Macleay:* Did the Company take possession of these plans and charts of yours? No, I think not; they were left in charge of Mr. Dawes, the Secretary, and he retained possession of them. But the Company kept my report which contained the germ of my plans, and made use of it extensively to carry out their views.

- I. Woore, Esq.
1 Sept., 1858.
62. *By the Chairman:* How long was the Company established before you received this letter from Mr. Cowper intimating that your services would not be required? I think five or six months.
63. Up to that time you were still working? I was up to that time working with him and others in endeavouring to establish a Company, and carrying out the work. I was the first to propose to Mr. Cowper to come down from Wivenhoe and interest himself in the undertaking, and I did so with the sanction and concurrence of those in high authority, who were interested in the matter.
64. You received no compensation for this six months service? No, none whatever.

TUESDAY, 2 SEPTEMBER, 1858.

Present:—

MR. MURRAY,
MR. MACARTHUR,

MR. G. MACLEAY,
MR. FAUCETT.

THE HON. T. A. MURRAY, ESQ., IN THE CHAIR.

Thomas Woore, Esq., called in and further examined:—

- T. Woore, Esq.
2 Sept., 1858.
1. *By the Chairman:* Do you recollect who was Chairman? I did not recollect distinctly yesterday who was Chairman. I now recollect that Sir Charles Nicholson and Captain Lamb were Chairmen of the Committee appointed to have a survey made. Some little time, say a month after the meeting of January, 1848, Mr. Cowper began to take a personal interest in the matter. From that time I was always in communication with him, and at his request I made several plans, particularly of tramways.
2. At Mr. Cowper's request? Yes, that is, at the request of the Committee, through Mr. Cowper. At that time it was proposed to establish tramways, not railways, and they wished for further information.
3. Mr. Cowper as Secretary or Chairman corresponded with you on the subject? He did.
4. Your engagement by the Company was clearly acknowledged? I think it was.
5. You considered it an acknowledgment? I did. I was requested to make plans for a tramway on the same terms I had been acting on, and my report was constantly referred to.
6. You made and furnished these plans? I did, and gave them to the Company.
7. *By Mr. G. Macleay:* These plans were made subsequent to the termination of the existence of the Committee? They were. I made all those on the table for the Committee, who presented them to the public meeting held on the 27th January, 1848, and on the information thus obtained the Company was formed. They remained with the Secretary of the Survey Committee, and never went into the hands of the Company to my knowledge; but I made other plans, particularly for a tramway, which Mr. Cowper's Committee received directly from me.
8. Never went into the hands of the Company—who had them? Mr. Dawes, Secretary to the Survey Committee, was directed to retain them. The Committee refused to give them back to me.
9. With Mr. Dawes the Secretary to the Committee? Yes. When I left them with Mr. Dawes I sealed the cases up, but was requested to open them.
10. Who requested you to open them? The Committee of which Sir Charles Nicholson was then Chairman.
11. They would not receive them sealed? No, they would only receive them open. I thought I was justified in having them sealed until my remuneration was acknowledged.
12. They retained them for a considerable period? Yes.
13. Have you any reason to suppose they used them for any purpose? I know they were examined. When I went to the Railway Office I could not learn any thing of my drawings or calculations; I then applied to the Governor General who gave me a note requesting search to be made for them, when I found these plans in that office. There was some difficulty in finding the keys. However, they were discovered in a drawer, apparently used every day; when the tin cases were opened I found other plans with mine, and that the principal ones had been taken out of the cases.
14. No doubt they had been used? I do not know whether they were or not. They appear to have been examined. I am inclined to think they were used otherwise.
15. *By the Chairman:* You, I presume, have no doubt they obtained information from them as to the country? There is no doubt the Company was formed from the information my plans afforded. My report was acknowledged and publicly used.
16. Did you fix any value or compensation for your services? I asked for £2,000 in the Company's shares, which I considered valuable property.
17. And they declined to give it? They did.
18. Through whom did you make the application? Through Mr. Cowper.
19. Was the offer submitted to the Company? I think so. Mr. Cowper wrote to me to say they declined it.
20. *By Mr. G. Macleay:* The directors you mean? Yes.
21. Did they make you any offer at all for them? No.
22. No offer? No.
23. Did they refuse to give them up to you? They had only possession of my report; the plans remained with Mr. Dawes.
24. What claim had Mr. Dawes—when the Company was formed the Provisional Committee ceased to act? None; the Survey Committee ceased naturally.

25. What had Mr. Dawes to do with the Company—was he employed? He had nothing to do with the Company. T. Woore, Esq.
26. *By Mr. Macarthur:* Was there any understanding between you and the Committee that you were to be allowed to retain these plans, or that they were to be left in the Company's Offices for security, but were to be considered as your private property—were you at liberty to dispose of them to any Company that might be formed, or possibly to the Government, in event of their undertaking the management of the Railway? There was not any agreement of that kind; the Committee retained them for the public benefit. 2 Sept., 1858.
27. No agreement or understanding? There was an understanding. I had a claim on the plans; but I was not allowed to use them, or to look at them. I wanted to keep the plans in my possession; but the Committee objected to my doing so. I then handed them over sealed; but they would not allow them to remain sealed, and required me to unseal them.
28. *By Mr. G. Macleay:* They regarded the plans as their property? As the property of the public. They admitted I had a claim to them, and said they would do all they could to have me remunerated.
29. *By Mr. Macarthur:* When you made the offer to give up these plans for £2,000, was that with the sanction of the Committee? The Committee were not in existence, and it therefore could not be with their sanction. The Committee had ceased to exist twelve months before; but their late Secretary still held the plans.
30. Was there not some understanding to this effect—that you should take the plans and offer them to the Company, and make your own terms for these plans? Yes, that was the tenor of the original agreement, and they promised to assist me in every way while they acted as a Survey Committee; but when those gentlemen formed a part of the Company they forgot their agreement, and refused to treat with me for them.
31. They did not object to this? They did.
32. *By the Chairman:* And the Company declined to purchase the plans? They did.
33. Do you know at all if in any of the plans that have been made whether your line in part has been adopted by any subsequent surveyor? I do not.
34. You don't think it has? No, I think not.
35. What way does Mr. Shields' line run? It commences more to the southward than my line, and crosses it to the northward at Newtown, and again runs into mine at Ashfield, crossing the Liverpool Road at the spot I proposed.
36. Where does it go then? It then runs to the north of my line into Parramatta, from whence it takes a southerly direction direct to Liverpool and Campbelltown, whilst mine runs due west on the top of the dividing ridge in to Prospect, to which place I considered it a trunk line; and from there it branches off to Windsor, Penrith and Goulburn.
37. Where does it cross the Cowpasture River on the way to Goulburn? At Shancomore. The whole distance to Goulburn on my line is 180 miles.
38. Now, according to the estimate of the work you made, what did you estimate the expense of making a line at the ordinary rate? I estimated it at £2,500 per mile, without iron rails. At that time it was doubtful whether it would be desirable to use wooden rails or iron rails. The expense of iron rails, and securing them, would have to be added to this.
39. That is, all the cutting, levelling, and filling up would amount to £2,500 a mile? I estimated that the whole cost of constructing a single line (if wooden rails could be used) would be £2,500 per mile.
40. If iron rails were used you would require sleepers, and ballasting besides? No; if iron rails had been used, I would have laid them on the timber I estimated for wooden rails; a very light iron rail would have sufficed, and no extra sleepers or ballasting would have been required.
41. What would be the extra cost of the iron rails, and rods for securing them? About £600 or £700 a mile.
42. Not more than that? It would depend on the cost of the iron.
43. That would amount to £3,100 a mile—do you know what the value of the rolling stock is? I included it in that sum.
44. That is rather a low estimate, £600 for the rails? I don't think it would have been more than that. I should have used a very light rail, strengthened by rough timber.
45. *By Mr. G. Macleay:* When you made that estimate in 1847 what was the rate of labor then? There was a considerable difference between then and now. The rate of wages was £20 per annum for a laboring man, and now we have to pay £40 per annum in the country.
46. *By the Chairman:* That is an increase of one hundred per cent. You think then this line might have been done for £5,000 a mile, allowing for the additional value of labor at the present time. You estimated it at £2,500 at that time, and labor is assumed to be doubled in value? I believe that at the present value of labor and material, lines could be constructed at £5,000 or £6,000 per mile. There are a great many expenses that I should not have had attached to them, had I undertaken their construction, in superintendence, surveying, &c. I believe I could have made an effective line to Goulburn for £5,000 a mile.
47. Rolling stock and all? Yes; I should have had the whole thing completed from Sydney to Goulburn for £5,000 a mile.
48. You are very well acquainted with the lines between Parramatta and Sydney? I am acquainted with the country—not with the present line.
49. You know the line—the present line? Yes, I know it from having passed over it; I have never examined it.
50. Can you form any comparison with the present line and your own, with regard to the amount of work in one or the other? No.
51. Would there be as much cutting in your line? I cannot answer that question. I have not sufficiently examined the present line; I have merely passed over it in a carriage.
52. Did you ever know of any objection being made with regard to yourself, with respect to this survey, on account of your being merely a marine surveyor? Yes; I know when I

T. Moore,
Esq.

2 Sept., 1858.

wished to become the engineer of the late Company I was objected to because I was not a professional engineer.

53. That would make a different branch of knowledge I fancy—a surveyor is not an engineer? He is not; the latter must combine mechanical knowledge and other qualifications with surveying, to understand his business. The Committee did not think they would be authorized in employing me in carrying on such a work, not being a professional engineer.

54. Did you think yourself there was any validity in that objection? I think they were justified in coming to that conclusion, as they were acting for the public in a very responsible position. They could not understand my powers, and perhaps there were no means at hand of testing them. I felt I was master of the subject, and laid everything before them in minute detail, in the hope of winning their confidence, but did not succeed.

55. Would you require a great deal more knowledge, and particularly more mechanical genius, for making land surveys? I imagine a man must not only be a good surveyor, but a good mathematician, a good mechanic, and possess considerable inventive genius, to enable him to make a railway in any country, and more particularly in such as this.

56. How is his mechanical talent brought to bear on it? In connection with the survey he is obliged to bear in mind the mechanical works he is about to make. He must form the survey with reference to the works that are to follow; for instance, when he comes to a deep ravine, before surveying it he ought to determine in his mind the nature of the bridge he will throw over it.

57. The man who surveys the line is not the person who plans the bridge or embankments? It is not usual in Europe; but an engineer ought to be able to do both in such a country as this. I understand the engineer directs the whole; he has surveyors under him knowing nothing of the mechanical department; but the engineer, who surveys, directs, and is master of the whole, has a decided advantage over three separate persons. A man carrying a railway through a new country like this ought to have inventive ability to construct it properly, and sufficient energy to take the field himself.

58. Did you conceive, in carrying out this survey, the construction of all those works formed part of your duty in connection with this line? I did, and the most material part of it.

59. Did you make any plan of what the works ought to be? I did.

60. Did you prepare them for the Company? No. I laid them all before the Survey Committee, with the other plans, and subsequently before the Company's late engineer, Mr. Wallace.

61. Where are they now? I have them here. I knew that we had small means to carry out railways in this country, and therefore all the ability I possessed was exerted to keep the cost low. I always bore that in mind in constructing my works, and I believe you will find these plans of as simple a nature as were ever constructed. (*Witness then handed in his plans and drawings, which numbered 185.*) Here is one plan that cost me a vast deal of consideration in order to keep the expense down: it is a simple method of constructing timber viaducts, which I intended using very generally. Here is one over Bargo River.

62. What was the height of that viaduct? One hundred feet. It is a very deep ravine; but there is splendid timber, and good stone to be quarried on the spot; so that the work would not be very expensive. It is a very material thing to come at a simple method of constructing these bridges, which are numerous.

63. By Mr. Macarthur: Did the plans for bridges and viaducts, and the drawings of the general construction of the line you have put in, originate with yourself, or did you derive the idea from the works written on the subject, either English or American? I got all the information I could on the works of both countries, and, without copying any, I applied whatever I thought applicable in principle to our circumstances. The principal part of my works is original.

64. Have you looked at all the viaducts or bridges on the present line of railway? I have. There is only one viaduct on the line, I think.

65. That is at Petersham, is it not? It is near Petersham, over what I called Ironstone Creek.

66. Do you think that an unnecessary degree of expense has been gone to in that viaduct? I do; and if my line had been adopted there would have been no necessity for it at all. I designed only a small bridge to cross that creek, higher up.

67. Supposing the present line to be adopted, do you think that a viaduct of a cheaper construction might have been adopted? No doubt there could.

68. Would you make the same remarks as to any of the other bridges—are you in a position to give an opinion about them? No, I am not. I have never examined any of the other bridges.

69. I wanted to call your attention to page 14 of your own report, as printed in the proceedings of the Select Committee on Railways in 1848. At the top of the page there is this passage: "We then descend the Monument Range and cross Cedar Creek, where it breaks into two heads on a descending gradient of 1 in 50 of 1,767 yards, or about a mile. The crossing of this creek will be performed by means of the rough wooden viaducts before mentioned, a plan of which is laid before you. We then have gradients 1 in 98, 1 in 575, and 1 in 370, ascending which brings us to the Great Lagoon; on the bank of which, 20 miles from the Nepean, I propose forming a watering station, as from this we ascend a dry barren ridge, where that necessary is not to be obtained." At the latter part you speak of a Great Lagoon, where is that Great Lagoon? It lies on the ridge at the heads of Stone Quarry Creek and Myrtle Creek, about 3 or 4 miles north-west of Grey's Inn at Myrtle Creek.

70. You are not acquainted with Mr. Shields' line? No, I am not.

71. In the report there is this passage:—"We now commence a gradual ascent to the Gap in the Mittagong Range, by gradients of 1 in 151, 1 in 74, 1 in 43 of 900 yards, 1 in 85, and 1 in 242, where we cross over the Great South Road at Mrs. Cutter's Inn; then a level, and 1 in 36 of rather more than 1½ mile, which brings us to the Gap, which is 2,307 feet

- "feet above the datum line, or high water level. Here the heaviest cutting in this section of the line will be required, amounting to 92,186 cubic yards." The Gap there spoken of is called the Mittagong Gap? It is.
72. Are you aware whether the other lines pass through that Gap—Mr. Shone's line, or Mr. Shields' line? I am not aware of where these gentlemen measured lines, and I doubt whether they ever measured any so far towards Goulburn. I know there is no other way to get into Argyle than through that Gap.
73. Have you ever heard that every surveyor was obliged to come to that point, whether he took the southern line or any other line—that every survey between Sydney and Goulburn was obliged to pass through that Gap? I have heard that all surveyors admit a line must go through that Gap in going to Argyle.
74. Have you ever heard any comparison between the levels of other surveyors—Mr. Shone and Mr. Shields, and a scientific gentleman, the Rev. Mr. Clarke—whether the level height you have given corresponds very nearly with the elevation of the other surveyors and Mr. Clarke? Both Mr. Clarke and Admiral King gave me a memoranda of their elevations, and they both told me my report agreed with theirs exactly.
75. You don't know anything of Mr. Shone's or Mr. Shields' line? I do not.
76. *By the Chairman:* They must all come through that Gap? Yes.
77. What is the elevation of that Gap? 2,300 feet above the sea.
78. How do you propose to get to that elevation? By ascending the ridge that lies between the Nattai and the Bargo rivers.
79. Where would you ascend that ridge? I would commence to ascend it opposite Shancomore.
80. Do you know what the elevation of Picton is? I do not exactly.
81. Do you know at all near the point? No. I never measured into Picton.
82. You think, then, this Gap at the Mittagong Range is comparatively easy of ascent by your route? Yes, comparatively easy. I believe it is the easiest ascent, in consequence of the base line being most extensive, it being one-third more in length than any other line proposed.
83. Then you rise more gradually to the elevation as you have to go over a greater distance in gaining it? Yes.
84. The gradients are not so steep in any one part? They are not.
85. How do you think that elevation could be obtained from Picton? I think the ascent from Picton to the Gap at Mittagong is too great. I don't think a locomotive could be worked from Picton to the Mittagong Gap. I consider my line at the lagoon in the neighbourhood of Picton is 700 feet above the level of Picton.
86. At the same distance from Sydney? At the same distance from the Mittagong Gap, and about the same distance from Sydney.
87. At the same distance from the Mittagong Gap as Picton: your line has obtained an elevation of 700 feet over Picton—is there any descent after that? Nothing of any consequence.
88. You go on gradually ascending till you reach the Gap? Yes.
89. Stone Quarry Creek, below the bridge, is 482 feet above the sea? It is, by Count Streletzki's measurements. The elevation of the bridge would not be more than 500 feet.
90. What would be the distance from that place to the Mittagong Gap? $28\frac{1}{2}$ miles.
91. In this $28\frac{1}{2}$ miles an elevation of 1800 feet to reach that Gap must be obtained? Yes; there is that difference in the elevation of the two places.
92. That would be something like 70 feet a mile on an average? Nearly so.
93. What do you make the steepest gradient in that distance on your line? One in thirty, on which I proposed to work a very powerful engine—that is the greatest ascent on the whole line, and one of the places I propose to lift the train up by extra power. There are two such on the line. The gradient of 1 in 30 is capable of considerable improvement.
94. By a stationary engine? No, by a powerful locomotive: if that can be accomplished the whole line may be worked by motive power.
95. Of what power? Not much greater than those engines which are now used, but of a different construction. Those I consider very powerful.
96. More powerful than there is an occasion for on the line? Yes, a great deal more.
97. I suppose you are anxious to have these plans of yours inquired into by some persons who are able to judge of these kinds of work? They are open to any scrutiny.
98. From your knowledge of the country there, do you think this Gap at Mittagong could be approached with the same ease from Picton by any other route? I do not think it could. My impression has always been, that there is but one line capable of a locomotive being worked upon—namely, that between the Nattai and Bargo Rivers.
99. *By Mr. G. Macleay:* That is through the Gap? Yes, up the ridge of land that lies between the Bargo and the Nattai Rivers. I don't think it possible to drive a locomotive up any other ridge, or by any other way. I fully satisfied my mind on this point before I recommended the line.
100. *By Mr. Macarthur:* Are you speaking now of the country after you pass the Bargo River? I am speaking of the country between the Nepean River, where it bounds the County of Cumberland at Shancomore, and the Gap at Mittagong, up the ridge between the Nattai and Bargo Rivers. I do not believe there is any other way.
101. *By Mr. G. Macleay:* You have been along all the other lines? I have.
102. You do not believe there is any other line except what you term in your Report the Western Line? I do not. I don't think it is possible to drive a locomotive up any other line, and 'twill be difficult to do so on this.
103. You never examined Mr. Shields' line? No.
104. Have you ever been over Mr. Shields' line? I have been over the country which it is

said

T. Woore,
Esq.
2 Sept., 1858.

- T. Wore, Esq.
2 Sept., 1858.
- said he measured. I never traced his line. I gave that as my opinion from the beginning, and my opinion has been since confirmed.
105. The question is, have you ever examined Mr. Shields' line? I cannot say I have. I don't know it. It never has been pointed out to me. I have no conception of it, further than that it went through Picton somewhere; but I know all that country well.
106. Your answer has reference to a general knowledge of the country, rather than any comparison with particular lines of roads? Yes. I know of no other measured line than that I measured myself.
107. *By the Chairman*: Do you know the elevation of Lupton's Inn? Only from the publication of Count Streletski's work, where it is stated to be 1,260 feet.
108. Do you think there would be any great difficulty in continuing the line from Picton as far as that? I think it is impossible for a locomotive to be worked up there.
109. Where would be the difficulty? The whole ascent would be too great, and parts of it impracticable.
110. In so many miles? Yes. I don't think you could work a locomotive up it.
111. That is 400 feet in about 16 miles? But I don't look at it in that way. You cannot lay down imaginary gradients. I say that particular parts are too steep to work the line.
112. I don't recollect any part too steep? There is a very great ascent to Grey's, at Myrtle Creek, then a level to Bargo River, and then there is a long ascent from that to Lupton's Inn.
113. From what you know of the proposed line from Campbelltown to Picton, are you of opinion that it will add to or shorten the distance between Campbelltown and Goulburn—if you look at your plans? I do not think the line ought to go to Picton at all.
114. Do you think that going to Picton adds to the distance? I do; but the material objection is, that it does not gain height—it does not gain sufficient elevation as it approaches the Gap.
115. *By Mr. Macarthur*: You have examined the Menangle Valley, near Dr. Douglass'? Yes, I went along it, but without bringing any instruments to bear on it.
116. In order to carry out a line most advantageously, would it be necessary to cross the Stone Quarry near its junction with the Nepean, and then to proceed in a direct line towards Gray's Inn, at Myrtle Creek? I think so. I think it is diverging too much north by going to Picton.
117. You diverge too much to the north by going to Picton? Yes; there is no doubt of that.
118. With the disadvantage of crossing a great many spurs of the Razorback ranges? Yes; it would be an expensive road to make, and difficult to keep in order, from that cause.
119. *By Mr. G. Macleay*: Could the line be taken from Campbelltown to any point to enable the line you suggest to be taken advantage of—namely, from Croft's Inn? It is quite possible to do so, but that would be going back to Sydney; you would not be gaining any distance towards Goulburn.
120. About how many miles are lost by it? I should suppose fifteen or sixteen miles.
121. Without going to the same point you propose to cross the Nepean, you could not take advantage of the ridge you propose? You could not get upon that ridge in any other way to the eastward of that point, but it might be ascended with greater ease to the westward.
122. *By the Chairman*: What is the shortest distance between Picton and the Mittagong Gap? Up the ridge between the Nepean and the Bargo Rivers.
123. What do you suppose is the distance between Picton and Mittagong Gap? It is about 28 miles.
124. Is that going by the range you followed? No; by the range on which the present mail road is; it would be about 30 miles by the other ridge.
125. The difference of elevation between the two places is very great, Mittagong being 2,300 feet, and Picton 500 feet, the difference, 1,800 feet, to be ascended in 28 miles—this would give you an average gradient of 1 in 80? Yes, or about 65 feet per mile.
126. Is that practical for a locomotive engine? I believe not.
127. *By Mr. Faucett*: That comes to 1 in 88 feet—is that an impossible gradient? In so great a distance it is quite impracticable.
128. *By the Chairman*: 1 in 30—that is the maximum? It is; but the distance must then be short, and the engine powerful.
129. *By Mr. Faucett*: There is one of your plans in which 1 in 53 you take as an average gradient? I never calculate average gradients.
130. Take a uniform gradient? There is no such thing in practice. I say there are gradients on that line which could not be worked by a locomotive. There is a gradient of 1 in 21 between the Little Forest and Mittagong that cannot be reduced, nor be ascended by a locomotive.
131. Can you get through it? No.
132. Is it necessary to go up there? Yes, to get to Mittagong.
133. *By Mr. G. Macleay*: You have avoided that in your western line? Yes, I have.
134. *By Mr. Faucett*: It appears that the line you think impossible is the line the Government is adopting at present? I do not know what they are adopting.
135. The line to Picton? It is impossible to drive a locomotive from Picton to Mittagong by Lupton's Inn and the Little Forest.
136. By adopting your course they would avoid the greater gradients, and have practicable gradients? They would; I believe the gradients on my line could be worked. There is no gradient on my line, as laid down on my plan, that is not capable of being improved. I had no time to make minute examinations before laying down my gradients, which was done principally to enable me to make an estimate of the cost.
137. It is necessary, in order to form a bridge, that the gradients should be laid out? It is; I could not calculate the bridge without. I never made a second section of the line I measured.

138. Will the gradients you laid down, taking them altogether, be practicable? I believe so, when improved—that is, to work a locomotive on. T. Woore,
Esq.
139. *By the Chairman:* Suppose a line was extended from Campbelltown, by Appin, to Lupton's Inn, crossing the Cataract River—do you think it possible by that route to gain an elevation so that a locomotive might travel? No, you could not, for there is still the gradient of 1 in 21 to ascend from Little Forest. 2 Sept., 1858.
140. You stated in the early period of your evidence you were employed under the Company some six months? No; I don't think that is what I said.
141. Were you engaged in these operations after the formation of the Company? I was. What I did, and suggested, caused the formation of the Company, and I was employed by the Directors after its formation.
142. *By Mr. Faucett:* After the formation of the Company you were engaged in making these plans? No, but in making other plans, more particularly for tramways, which remained in their possession. I was employed up to the 28th January, 1849, when my application for the office of Engineer was refused.
143. You recollect the circumstance of the Company being formed at that time? It was formed previous to that.
144. Before the refusal of that application, or up to the time of the refusal, were you engaged in making these plans? I was. I was in constant communication with the Directors, and I drew several plans.
145. Plans in connection with the survey? Yes. At that time it was proposed to have a tramway. I was applied to for plans by the Company—by Mr. Cowper on behalf of the Company.
146. Did you receive any payment for anything you did from the Company; either for your expenses or services? No.
147. *By the Chairman:* Not for your expenses? No, nothing from the Company.
148. *By Mr. Faucett:* Then you merely did the work, and supplied them with the result of your labors? Quite gratuitously.
149. And they made you no return? None.
150. *By Mr. G. Macleay:* Would the Company have been formed if it had not been for your plans, shewing the practicability of the route to Goulburn? I do not believe it would. There is no doubt the information I afforded was the cause of the Company being formed, and the plans laid before the public, and the sensation created at the time gave confidence to the Government to grant a guarantee of £4 per cent. interest on the capital subscribed, and to the people to join it.
151. Have the Company ever acknowledged your labors? Mr. Cowper told me they had my report, which gave them all the information they required.
152. *By Mr. Macarthur:* But no official acknowledgment of your services on the part of the Company, notwithstanding that you were constantly communicating with them, and so much engaged in forming the Company and assisting to develop railway enterprise in connection with them? No, although I was exclusively engaged in endeavouring to establish that line; and they knew it.
153. *By Mr. Macleay:* If the summit elevation could be obtained by any other route but your own—for instance, by Shields' line—would any difficulty exist between that point and Goulburn? There would not.
154. You know no line except your own which would obtain that height up which an engine could go? I do not believe it could be done on any other line.
155. *By the Chairman:* Did the Government ever acknowledge your services in connection with the railway? No, not officially.
156. I heard some member say, but I cannot find it out, that a vote of £500 was passed at one time? It was.
157. When was that? On the 17th September, 1846. The Committee that was appointed by the public to make the survey applied to the Government for assistance, when the Executive Council granted £500 out of the land fund to meet the expenses, providing the public raised an equal sum by subscription.
158. Was that sum paid to you? A large portion of it was; and these accounts shew the receipts and disbursements. I received £917 6s. 11d., and expended £912 13s. 4d., as will be seen by these accounts.
159. It was not a reward for your services, but merely to provide the expenditure that actually occurred? It was to provide for the expenditure that was absolutely necessary.
160. When was that vote arrived at—in what year? The end of 1846.
161. Were you personally mentioned in connection with that vote? No.
162. *By Mr. Faucett:* Were those plans in the hands of the Company? I cannot say; I left them in the care of Mr. Dawes; I did not see them again for years.
163. Where did you get them? From a store in George-street, after Mr. Dawes' death.
164. In what store—did it not belong to the Company? No, it did not. It was a private store, where some old effects of Mr. Dawes were lying.
165. They are well preserved? They were in tin cases, locked up, and did not receive injury. I then gave them to Mr. Wallace, the engineer of the Company, in the hope of forwarding the work. I subsequently offered them to the Governor General. They have been in the hands of the Company and Government ever since I recovered them from amongst the late Mr. Dawes' effects.

FRIDAY, 29 OCTOBER, 1858.

Present:—

MR. MURRAY, | MR. G. MACLEAY,
MR. FAUCETT.

THE HON. T. A. MURRAY, ESQ., IN THE CHAIR.

Present in the Room:—Thos. Woore, Esq.

Captain Edward Wolstenholme Ward, R.E., called in and examined:—

- Capt. E. W. Ward, R.E. 29 Oct., 1858.
1. *By the Chairman:* You are a Captain of Engineers? Yes.
 2. Have you looked over the evidence of Mr. Woore? I have.
 3. Will you be good enough to give the Committee any information you can in regard to the value of the services rendered to the Colony by Mr. Woore in making the surveys he did with a view to the introduction of railways? I have endeavoured to confine myself to valuing the surveys as an engineer would value them, setting aside what may be due to Mr. Woore for having exerted himself under the peculiar circumstances of the Colony at that time; for I was not here then, and therefore cannot give an opinion on that point. Therefore I have simply valued the service, in the way of so much labor bestowed by Mr. Woore, at the rate the Railway Department would pay an efficient engineer for doing the same amount of work for the railway. And that I might make myself understood, I have written my estimate out in the form which I now submit to the Committee. (*The witness handed in the same.*
Vide Appendix A.)
 4. *By Mr. Faucett:* That is, considering the whole matter simply as an engineer would do? Yes. I assume that I take one of our best railway surveyors and say to him,—Examine the country for a railway on the different branches mentioned in that paper, and, having examined it, take a trial level of the lines you think best, without taking any cross sections (which Mr. Woore has not taken), and prepare plans and estimates, and let me have them in such a shape that I can put them before Parliament, in order to say how much per mile that railway with its branches will cost. And if I gave such an order to a skilled engineer here, I should expect to have the work efficiently done for the sum I have named there, £535, and his actual field expenses; and if you assume that Mr. Woore has efficiently performed the work, and has furnished reliable plans, sections, and estimates, he also has performed services of the value of £535.
 5. *By the Chairman:* Were the professional engineers now employed in the Colony engaged here or brought out from England? From England.
 6. At the expense of the Government, in addition to the salaries they receive? Yes, I believe they had their passages paid out.
 7. Have there been any instances of their leaving the Government service after they came here? No, I think not.
 8. They still remain? Yes.
 9. Did they come under engagement for a particular period? They are under an understood engagement; but Mr. Whitton could give you more information about them than I can: I consider they are well paid, but not over-paid.
 10. *By Mr. Macleay:* Do you know whether they have any ultimate prospect of increased salary? No; £500 a-year is a good salary for them.
 11. *By Mr. Faucett:* That is at home? No. At home you would get them for much less.
 12. At home £500 a-year would be considered a large salary? Yes.
 13. And it is a good salary here? It is quite sufficient; it is quite sufficient to retain their services.
 14. *By the Chairman:* Have you seen by Mr. Woore's evidence that he was engaged in drawing up certain tables—that he had to make instruments and tables for himself? Yes.
 15. Was the calculation of those tables a matter involving time or difficulty? It would involve time, but not a great deal of time.
 16. He says in his evidence—"At the time I undertook this survey there were no books of tables to be procured in the Colony, and before I could make a survey I was obliged to solve the problem." There were tables existing in England. There was a set of tables published by Mr. Law, Civil Engineer, in 1845; and they are framed very much on the principle of this table prepared by Mr. Woore.
 17. Were those tables published in 1845? Yes.
 18. Mr. Woore framed his in 1846? Yes.
 19. Then the presumption is that those had not arrived in the Colony? No. I am not assuming that Mr. Woore had seen them; no doubt he worked out his tables by his own original genius.
 20. What are the instruments required for a survey? A levelling instrument, a levelling staff and chain, a levelling instrument which gives a forward and back level, a staff for determining the level, and a chain for measuring the distance between these levels.
 21. Are those the only instruments required? Those are the only instruments required for taking trial levels.
 22. The chain is a simple matter, of course? Yes.
 23. You saw Mr. Woore's plans? Yes.
 24. They were in your possession for some time? Yes.
 25. What became of them afterwards? Those plans came into my possession when I was Chief Commissioner of Railways in 1855. They were sent to me from the Governor General; and Mr. Woore called and explained the circumstances under which they were prepared. I looked at one or two of them, and I found that the direction of the line passed about four miles

miles to the south of Parramatta, and went on to Prospect Hill, and so took another line to Goulburn, distinct from the line then in contemplation to Goulburn. The railway to Parramatta at that time was almost a fact; at all events the line was decided on, and under construction, and therefore Mr. Woore's plans could not have helped us to construct the line to Parramatta or to Liverpool; so I put them aside, intending to refer to them at some future day, when they might be required. If discussion with respect to other lines ever had arisen, then Mr. Woore's plans might have been valuable to refer to.

26. They remained in the Railway Office? Yes.

27. Do you think they have been of any service at all in reference to the survey of the line to Goulburn? I think not, because they have reference to an entirely different direction. Mr. Woore's line leaves Parramatta about four miles to the north, then goes on to Prospect Hill, and crosses the present line of railway to Liverpool, between Parramatta and Liverpool; then it takes a distinct line of its own, *via* Bong Bong; it does not go near Picton. Therefore there was no necessity to refer to these plans; they would not have guided us.

28. *By Mr. Foucett:* Of course in this estimate you take no account of the difference between the value of labor at the present time and its value when this work was performed? I have made the estimate as the skilled labor of an engineer would be valued at the present time, not on its value in 1848. I assume from the evidence that Mr. Woore was re-paid the expenses he incurred in the field, and every outlay, with the exception of £25.

29. Then, if you were to do the work at the present time you would employ all the labor external to the engineer himself, provide for all the expenses, and pay him the sum you have named for his own skilled labor only? Yes.

30. In the estimate you have handed in, you have considered the labor expended by an engineer in making such a survey as this with reference to the facilities that now exist—the facilities of roads, and other facilities that will easily suggest themselves to your mind? What facilities do you refer to?

31. The difficulties of going through the country in 1845 or 46? I do not know what they were.

32. Then you have considered this work with reference to the facilities, whatever they are, that exist at the present time? Yes; my estimate is in accordance with the circumstances under which the work would be done at the present time.

33. Can you form any estimate of the cost of a survey similar to this of the line at present adopted between Sydney and Goulburn? I cannot, because we take cross sections very often. These are trial levels taken straight a-head. It is not overwork to expect a man to take three miles of trial levels in a day, and estimating at that rate and allowing for Sundays, wet days, and so on, I have given five months for taking 177 miles of levels.

34. *By the Chairman, at the suggestion of Mr. Woore:* Do you think a surveyor could go into the bush, superintend his men to get it cleared in order to have a line of vision, make his survey and plot it down, or even make up his field-book, at the rate of three miles a day? Not through the whole of the country perhaps; but I have given extra time as an allowance for extra labor. If the whole of the country was dense scrub it would not be possible to proceed at three miles a day. The time I have allowed (5 months) for the survey is at the rate of a day for every $1\frac{1}{2}$ miles of work, and I have allowed extra time besides for plotting down, or preparing plans, &c.

APPENDIX A.

ESTIMATE of the labor bestowed by Mr. Woore on behalf of Railways in this Colony.

To form an estimate of the labor bestowed by Mr. Woore on behalf of Railways in this Colony, I have perused his evidence given this year before the Select Committee of the Legislative Assembly, and examined the plans, sections, elevations, and other drawings, together with his estimates and calculations, having reference to the line he surveyed.

2. Mr. Woore appears to have taken about 177 miles of trial levels between the undermentioned places, viz. :—

Sydney to Goulburn <i>via</i> Bong Bong	130 miles.
Branch from main line to Camden	10 $\frac{1}{2}$ "
Ditto to Liverpool	7 $\frac{1}{2}$ "
Ditto to Penrith	9 $\frac{1}{2}$ "
Ditto to Parramatta	3 $\frac{1}{2}$ "
Ditto to Windsor	15 $\frac{1}{2}$ "

He has also prepared two sets of plans and sections of these lines on the following scales :—

- 1st. Plan to a scale of 800 feet to an inch. Section to do., horizontal scale and 100 feet vertical.
- 2nd. General plan to a scale of 1 mile to an inch. Section do., horizontal scale, and 600 feet vertical.

He has also prepared drawings of sundry bridges, permanent ways, &c., and submitted an estimate of the cost of the proposed line of railway.

The time that it ought to take a railway surveyor to execute the work Mr. Woore has done I estimate as follows :—

Examining country for lines...	3 months.
Taking 180 miles of trial levels	5 "
Preparing plans, sections, &c., of do.	3 "
Estimate and report of do.	1 "

Total... .. 12 months.

Capt. E. W.
Ward, R.E.
29 Oct., 1858.

4. The salary paid to our best railway surveyors is £500 per annum, exclusive of field and travelling expenses, and men's wages; but, as it appears from Mr. Woore's evidence that his expenses were paid, with the exception of £25, or so, a fair estimate of the service he has performed (supposing it to have been efficiently performed) would be:—

12 months salary at £500 per annum...	£500
Amount of expenses due to Mr. Woore	25
Drawing paper, field-books, use of field and office instruments	10
	<hr/> £535

5. I must, however, guard myself from being supposed to convey the idea that the plans, sections, and estimates prepared by Mr. Woore are sufficient for the purpose they appear intended,—viz., to convey an adequate idea of the cost of the line proposed—or are such as a railway surveyor would submit to a Company or Government with that view. The 1st set of plans and sections before mentioned are on a scale too small to take out the quantities, or to prepare an estimate even with a rough approximation to accuracy. The 2nd set being intended to shew generally the line, and the gradients obtainable are for this purpose sufficient.

6. On the other hand, Mr. Woore has put a great deal more work into his plans than a railway surveyor would do, and has prepared many drawings which were unnecessary for the preparation of the estimates; and some consideration is due to the energy with which Mr. Woore exerted himself in the cause of railways, and endeavoured to qualify himself to perform the duties of Engineer-in-Chief.

7. On the whole, I consider the estimate which I have made of the *labor bestowed* by Mr. Woore on behalf of railways to be fair, as well as liberal.

8. I assume that I am not called on to estimate the *value* of Mr. Woore's labors to the Colony, or to give an opinion on his claim to receive compensation for his services from the public purse.

E. W. WARD.
28 October, 1858.

The Reverend Ralph Mansfield called in and examined:—

The Rev.
R. Mansfield.
29 Oct., 1858.

1. *By the Chairman:* You remember the establishment of a company here some years ago in reference to the introduction of railway communication? I do.

2. You held some office in connection with that company? I was a member of the Provisional Committee, appointed at the first public meeting held in January, 1846; I had no other office.

3. Were you not Honorary Secretary? No, merely a member of the Committee, and Chairman of one of its sub-committees.

4. Do you remember any engagement having been made with Mr. Woore in reference to the making of a survey of a line towards Goulburn? Yes, I do, generally.

5. Do you remember at all what the nature of that agreement, if any, was, that was entered into with Mr. Woore at that time? The principal duty of the Committee was to ascertain the practicability of forming railways in this country—of course, by practicability I mean commercial practicability—whether the expense of forming them would be such as to give a reasonable hope of a return for the capital that would be invested in their construction. The first point to which the Committee's attention was turned was, of course, the character of the country through which the railway would have to be carried—what the engineering difficulties would be in forming a railroad; and we were very much embarrassed from the circumstance that there were no railway engineers, so far as we could ascertain, in the Colony. I think we advertised—at any rate we sent circulars to all the gentlemen we could think of professing to be civil engineers; but not one could we find who met our views of the proper qualification for the office of railway surveyor; and under these circumstances Mr. Woore was introduced to our notice. I do not just now remember how that came to pass, but he was introduced to our notice, and the result of our consultations with him was an arrangement that he should make a preliminary survey—for we were satisfied that he was the most competent of any one we had examined to undertake that duty, and he was willing to undertake it on terms that seemed to us very reasonable. As far as I remember, he stipulated that all the Committee should do in the way of expenditure was to defray the current expenses he should incur, without at all remunerating him for his services—that we should save him harmless out of his own pocket, leaving his remuneration to be met by any company that might result from our preliminary operations. That was the general nature of the arrangement.

6. In those days, then, there were no engineers here who could undertake the duty? None whatever, so far as we could find.

7. You advertised for them? My impression is that we advertised; but I am quite certain that if we did not we sent circulars to all the civil engineers whom any member of the Committee happened to know.

8. *By Mr. Macleay:* Were there applications for employment at that time? No; I think every engineer we examined disclaimed competency for the work we wished done.

9. *By the Chairman:* Mr. Woore made you a report subsequently? He did.

10. What was the opinion of the Committee on that report? As far as we could judge, we thought very highly both of the plans that he prepared and the reports that he wrote.

11. There were two reports, were there not—do you remember the second? I think I do not remember more than one report. There may have been two.

12. You were generally satisfied with what Mr. Woore had done? We were.
13. Was the company then formed in consequence of Mr. Woore's reports being favorable? I should state that the preliminary operations extended over about two years, and when we arrived at that point at which the preliminary operations ceased and the organization of the company commenced, I retired. I stated to the Committee that my avocations would not permit of my doing more than I had done; that I had entered on the inquiry with a determination to spare no pains to prosecute the preliminary part of the business, but with an intention to retire when that branch of the labor had been completed. It was, I think, in 1848 that I retired, a company being then on the eve of formation; and Mr. Charles Cowper being appointed its secretary, he undertook all the secretarial duties. We recommended to that company, to the best of my recollection, that they should remunerate Mr. Woore for his services.
14. Do you know at all if Mr. Woore was remunerated? I do not know from my own official acquaintance with the circumstances, because up to the time that I retired the question of remuneration, except as a prospective one, had not been raised. I think he never was. I never heard that he was. I have heard that he was not.
15. *By Mr. Macleay:* The recommendation you speak of was a general one—not specific? Yes, a general one.
16. No sum was mentioned? No, not that I remember.
17. *By the Chairman:* Looking back to the whole matter, are you of opinion that Mr. Woore rendered any material service to railways in this Colony, by the surveys he made at this time? I am of opinion that he did—very essential service.
18. Do you think his co-operation contributed to their establishment at an earlier period than would otherwise have been the case? I do, decidedly.
19. I presume you must have paid some attention to the reports at the time, although you may not remember them now—what their character was in detail;—did they serve to shew that the establishment of railways was practicable? They did. I based upon Mr. Woore's report the reports of the Committee to their constituents, the general meetings.
20. The practicability of railways in a broken country like this was at that time very much doubted, was it not? Yes; we were all profoundly in the dark, until Mr. Woore brought the light of actual investigation to bear upon the subject.
21. Had these reports been at all unfavorable no company would have been formed? Certainly not at that time. It would have thrown it in abeyance for some years at least.
22. Do you think Mr. Woore is fairly entitled to some compensation from the country for the course of action he pursued at that period? Undoubtedly I do.
23. It has been suggested in evidence before the Committee that the services rendered by Mr. Woore are to be estimated by the remuneration that would be given at the present time to any ordinary railway surveyor employed to carry out the same work. For instance, it is said that a well-qualified railway engineer can be had now for £500 a-year. Under all the circumstances, do you think a payment of £500 a-year would be a fair remuneration to Mr. Woore? I think that the lowest sum that could be reasonably named. I do not think any one knowing the circumstances in which we as a Committee were at that time placed, could for a moment doubt that we should have given £500 a-year most cheerfully, or even twice that amount. We should not have hesitated a moment if we had had the means.
24. The services rendered then by Mr. Woore were much more comprehensive in their character than those rendered in a survey by a railway engineer? Yes; he had to break the ground entirely. A railway engineer who has entered into the country since that time has found at any rate the southern line comparatively an open one. Before, it was completely shut up; we knew nothing at all about it as regards railways. Many persons said that it was physically impossible—that there were engineering difficulties so formidable that the idea of a railway being constructed to Goulburn was preposterous, at least in a commercial point of view; but Mr. Woore solved that problem at any rate—he silenced that objection.
25. A survey is now merely a mechanical matter? I think quite so.
26. But then the field was quite unexplored? Quite.
27. All questions of doubt were then solved by Mr. Woore? Yes; to our satisfaction at least.
28. And without regard to other consideration to himself than that which would follow from the success of the experiment? Yes—from the elaborate report he presented, and the plans which accompanied it.
29. You have never heard since that period that any doubt was thrown on the correctness of Mr. Woore's survey? I do not recollect that I have.
30. Nothing has turned up to show that it was inaccurate? I never heard of it.
31. *By Mr. Faucett:* With respect to compensation being due to Mr. Woore, I suppose you mean, first, that compensation was due from the company that was formed? Yes.
32. And then, when the powers of that company were transferred to the Government, that the Government ought to remunerate him? That is my view.
33. And as the Government represents the country the country ought to remunerate him? Yes.
34. Then I understand you say that £1,000 a-year would, at the time, have been a moderate compensation? I feel quite sure the Committee would have thought so.
35. You were of course acquainted with the circumstances of the Colony at the time, and are able to draw a comparison between those circumstances and those which exist now. I think I am.
36. Comparing the circumstances of the two periods, would you say that if £500 be a fair remuneration for the work done, if it were done now, £1,000 would be a fair remuneration for the work as it was done then? I think so.

- The Rev. R. Mansfield. 29 Oct., 1858. 37. The plans are said to be somewhat elaborate—do you think it was advisable at that time to get more elaborate plans than would be actually necessary at the present time, in order to shew the feasibility of railways in a commercial point of view, or any other point of view? I should think it was necessary at that time, for, as I said before, we were all in utter darkness as to the character of the country, and we required very circumstantial evidence to enable us to meet the objections that were presented on every hand as to the feasibility of the railway.
38. Do you consider that it was desirable then to get plans more minute than would perhaps be required by a practical engineer in carrying out the work after it had been determined on? I do.

TUESDAY, 2 NOVEMBER, 1858.

Present:—

Mr. MURRAY,
Mr. FAUCETT,

Mr. MACLEAY,
Mr. MACARTHUR.

THE HON. T. A. MURRAY, ESQ., IN THE CHAIR.

J. Whitton, Esq., Engineer-in-Chief, called in and examined:—

- J. Whitton, Esq. 2 Nov., 1858.
1. *By the Chairman:* What is the office you hold in the Railway Department? Engineer-in-Chief.
 2. What are the duties that devolve on you in that capacity? The laying out and superintending the construction of all railways in New South Wales.
 3. *By the laying out you mean the surveying?* Yes, and determining the direction.
 4. All the lines adopted are approved of by you? Yes, all are approved of and decided upon by me, so far as relates to engineering matters.
 5. The surveys are under your direction? Yes.
 6. Before any line is decided upon you have to approve of it? Yes.
 7. You decide on the lines in the first instance? Yes, after the general direction has been decided on by the Government.
 8. Could you give us what lines in the southern road have been examined? The southern line, as far as Picton.
 9. Has the survey been extended beyond Picton? It has.
 10. How far? Nearly to Goulburn.
 11. How was that survey conducted? By surveyors, acting under the direction of the Surveyor General, and by the sappers.
 12. How is it conducted now? Nothing has been done to it for some months, and before anything can be done I must go over the country between Picton and Goulburn, to decide upon the line to be adopted.
 13. Have any reports been received from the sappers employed between Picton and Goulburn? Yes, there have.
 14. Are these reports favorable? The surveyors were not under my charge at that time, and I have, as yet, paid but little attention to their reports.
 15. No answer has been given on the subject? Nothing decisive.
 16. The practicability of the line is ascertained? Yes, it is.
 17. It does not come within your own knowledge? Yes; assuming the sections furnished to be correct, of which I have no doubt.
 18. The object we have in view is to ascertain what the cost of the survey generally is per mile? That would depend on a variety of circumstances. It is impossible to say what would be the cost, unless the precise character of the work done was stated. The surveys I have had made are working surveys, with occasional traverse lines and trial levels; but the cost even of this would be of little assistance in arriving at the value of the work done by Mr. Woore.
 19. What we want to know is the cost of the survey just now? The cost will depend on the character of the work done. If working surveys are to be made they will be much more expensive than running trial lines through the country. When stating the cost I should wish to state accurately the nature of the work done.
 20. Could you give us any idea of the cost, in the aggregate, either to Picton or beyond Picton? I could not.
 21. How many men were employed beyond Picton? I think about eight or ten.
 22. How long were they employed? They were employed on trial surveys before my arrival in the Colony.
 23. How long is that? About two years.
 24. What is the rate of pay of these men? I think about £400 a-year salary, and £400 allowed for expenses.
 25. *By Mr. Macarthur:* Do you say ten men at £400 a-year? There were twelve men originally engaged for this purpose, but I cannot say positively the number employed between Picton and Goulburn. I dare say about half-a-dozen were employed. I can easily ascertain.
 26. *By the Chairman:* Perhaps you will ascertain the number, and correct your evidence on that point, and the rate of pay. They have been employed for two years on general surveys? Yes, about that time, between Campbelltown and Goulburn. Probably I may say that there has been something more done than taking trial levels. They have made a traverse survey, and taken sections from Campbelltown, I believe, to Goulburn. In addition to the survey and

- and longitudinal levels, cross levels have been taken throughout. [I find on reference, that six surveyors were employed nearly two years at the rate named by me, and also two sappers for nearly the same period, the total cost being £9,168 0s. 2d.] J. Whitton, Esq. 2 Nov., 1853.
27. So that a competent person looking at the work done would be enabled by that work to see what is the best line to follow? To see the best line, according to the work done; but it is possible that I shall not adopt that line at all.
28. You know very little of the line beyond Picton? Very little.
29. No line is decided on from Picton? No.
30. Do you know if it is ascertained—supposing the railway is extended at Picton—that it will be an easy matter to ascend the leading from that point? I have not a doubt of it; judging from the sections I have seen, and from the surveys already made, I can see no great difficulty in the matter.
31. Do you know what the elevation of Picton is? I do not.
32. You don't remember the elevation of Picton? No.
33. *By Mr. Macarthur*: You can state that by referring? Yes. [On referring I find the height to be 475 feet.]
34. *By the Chairman*: Do you know the highest point to which the line must be carried up? The highest point is at Gibraltar Gap.
35. The absolute level between the two places is not stated; but do you know whether it is practicable in the distance to get a good gradient? I have no doubt that a good working gradient may be had, although it is possible that a circuitous course must be taken; still the entire cost of the works may be considerably less than if a direct line were adopted.
36. It is stated in evidence that in reference to some authority (Count Streletzki's work), the elevation of Picton to the Stone Quarry Creek was 482 feet.—Do you know the elevation of Mittagong Gap? I do not.
37. That is the highest point? I cannot tell without referring to the sections. I may say that in the sections I have seen nothing which I could look upon as a difficulty.
38. You will ascertain the elevation of Mittagong Gap, and insert it in your evidence? Yes. [Height to proposed rail level through Gibraltar Gap, 2,208 feet.]
39. Do you know what the distance between Picton and Mittagong Gap is? I know little beyond Picton.
40. Perhaps you will give it in your evidence? Yes. [On referring to the section from which I have taken the height of Picton and the Gibraltar Gap, the distance is stated to be 26 miles.]
41. Will you be good enough to mention what gradient—what is the largest gradient available under railway communication? It is not advisable to use gradients steeper than 1 in 50, but gradients of 1 in 30 can be worked.
42. To be used by one engine? No; an assistant engine would be necessary.
43. It is stated in evidence that the distance between Picton and the Mittagong Gap is 28½ miles, and in that distance there is an elevation of 1,800 feet—that would be at the rate of about 60 feet a mile? Yes.
44. That, I presume, in the ordinary mode would present great difficulties? I do not think there is any difficulty to be got over between Picton and Goulburn.
45. *By Mr. Macarthur*: Have you particularly examined the line between Campbelltown and Picton? I have.
46. Is that settled exactly? Not beyond Menangle. Some deviations will probably be made when preparing the working surveys between Menangle and Picton.
47. Can you state how it is proposed to cross the Stone Quarry Creek? By a bridge beyond Picton.
48. Beyond Picton—the line runs through the village of Picton and crosses the creek higher up? Yes.
49. You perhaps don't know the place? Yes, I do.
50. But that part of the line you have not examined so minutely as you intend to do? I have examined the country to ascertain generally the best direction, but in preparing the working surveys deviations will most probably be made.
51. Is the place you cross the Nepean River settled? It is.
52. Will that be near the present bridge? About 200 yards higher up.
53. At a rocky place there? Yes.
54. Where the water runs over a rocky bottom? Yes; there is rock nearly the whole distance across the stream.
55. *By the Chairman*: Do you know the distance by the road between Picton and Campbelltown? I think by the road it is about 20 miles.
56. What is the distance by rail? Twenty miles.
57. The same distance? Yes, I believe so.
58. What is the estimated cost of the line per mile between Menangle and Picton? £11,500, including the bridge at Menangle, but exclusive of land.
59. Do you know if any of the proposed lines pass near Lupton's, near Bargo? They do.
60. Are they likely to be east or west of it? I would rather not give any opinion of the district till I have examined it. I can only speak now from the plans furnished to the Railway Department, and I do not wish to bind myself by an opinion founded upon such documents.
61. Do you think a detour to Picton will add to the length of the line? Yes.
62. How much? Probably, three or four miles.

Charles Kemp, Esquire, called in and examined:—

C. Kemp,
Esq.

2 Nov., 1858.

1. *By the Chairman:* You are a long resident in the Colony? Yes.
2. You took an active part in the first attempt made with reference to railway communication in the Colony? I did.
3. You were a member of the Provisional Committee? I was.
4. You were also connected with the Company subsequently established? I was one of the first Directors, and some time Chairman; I was a Director all the time.
5. Will you give the Committee, as briefly as you can, a history of the circumstances which led to the formation of the Provisional Committee in the first instance, and the Company afterwards? Without reference to data I may be liable to error. I believe in the beginning of the year 1846—which was the year of the great railway mania in England—Captain Stokes, of the Navy, and some other gentlemen in England had been interesting themselves in getting up some companies in England, which all turned out complete failures.
6. *By Mr. George Macleay:* Railways in connection with this Colony? Yes. Several companies were proposed—one was from Sydney to Windsor. These gentlemen sent out papers, which led to the meeting held at Lyons' auction room, and at which two committees were formed—one in connection with the western, and the other with the southern districts. The committees were to inquire into the nature of the traffic and the general prospects of a railway to the west—the other to the southern districts. I believe I was not on either of these committees, but Mr. Mansfield made a report on the southern; I don't think much was done with reference to the western line. Mr. Mansfield took up the southern, and gave a great deal of information as to its traffic and population. The result was, that at a subsequent meeting it was determined that the time had arrived when railways should be commenced, and a committee was formed, of which I was one, and Mr. Cowper was one: he was made our Chairman. A number of other gentlemen, whose names I forget, were also members of the committee.
7. Sir Charles Nicholson was one? Yes; and I think you were one, Mr. Macleay. Mr. Mansfield and some dozen gentlemen formed the committee.
8. *By the Chairman:* Mr. Macarthur? Yes, and some dozen gentlemen who took an interest in railways, and who prosecuted the inquiry; and the result was they determined to form a Railway Company for a line from Sydney to Goulburn, which we were led to believe at that time would be done at something under a hundred thousand pounds for the Parramatta line. I forget the amount. We formed a Company, and I was chosen one of the Directors, Sir Charles Nicholson another, and, I think, Captain Lamb and Mr. Cowper were also Directors.
9. Mr. Smart? I forget whether he and Mr. Holt came on first. We formed the Company in small shares of £5 each; 10s. per share to be paid up at a time.
10. *By Mr. Macarthur:* Mr. Lowe was a Director? Yes, he was a Director.
11. *By the Chairman:* You were a Member of the Provisional Committee first appointed? Not the first appointed. There were two committees appointed afterwards, who submitted a report of their proceedings; then another committee was elected, of which I was a member. It is my impression that I was not a member of either committee appointed to get preliminary information.
12. What was the first question parties concerned undertook to solve? I think the first question was the traffic.
13. Did they enter, in the first instance, into the practicability of railway communication in this country? Do you mean the progress through the country?
14. Yes? I don't know what the first committee did—the second Provisional Committee, out of which sprung the Sydney Company did.
15. *By Mr. Macarthur:* You are not positive on this point—you cannot say what the first committee did? I did not belong to it.
16. *By the Chairman:* When was the Company first commenced? The origin of the matter was in the beginning of 1846—the 6th of August, 1846.
17. Was that the date on which, at the meeting at Lyons' room, Captain Stokes' letter was read? Yes—in 1846.
18. There was a report of a meeting held at Lyons' room in 1848, when reference was made to the public meeting held on the 6th of August, 1846? Yes.
19. Are you aware that Mr. Woore was employed to make an investigation? I am. I don't know under what authority he commenced. I know he made a considerable amount of investigation. I think I heard him say he was occupied nearly nine months in the work.
20. I find a report was read at the meeting held on the 27th of January, 1848—do you remember the report being read? I remember the report; it was signed by Mr. Thomas Barker.
21. From that time, in January, 1848, from what you said, I suppose you were connected with the Company. At that meeting this Resolution was passed:—Moved by Mr. Mansfield, "That this meeting offers to Mr. Thomas Woore its best thanks for the zealous and able manner in which he has conducted the survey entrusted to him by the committee, and embodied its results in the elaborate Report and drawings now lying on the table; and is of opinion, that the expenses of his intended visit to England for the purpose of drawing the attention of British capitalists to the advantages of introducing railways into this Colony, ought to be defrayed by his brother colonists." I find this from a report in the *Sydney Morning Herald*? I was present at the meeting, and I remember the resolution. It was moved by Mr. Mansfield, and seconded by Mr. Lyons, and carried unanimously. I said before that Mr. Mansfield was more competent than any other to move the resolution, because he took an active part in the southern line.
22. I find another resolution, to this effect:—"That, from all the information which has been collected relative to the amount of traffic now carried on upon the public roads of the Colony, and especially from the facts communicated in the report and drawings of Mr. Woore,

- "Woore, this Meeting is of opinion that the introduction of railways into New South Wales would not only be of inestimable importance to the development of its resources, but afford a safe and profitable investment for capital." That resolution was moved by Mr. Norton? Yes. I think you will find also that a committee was appointed, of which I was one, and this confirms my recollection. I became then much more interested in the matter.
23. I find in a leading article in the *Herald*, with reference to this matter, the following statement:—"In Mr. Woore's Report there is evidence of great diligence, perseverance, and judgment; and the sections and plans which he exhibited at the meeting on Monday last amply satisfy us that there is in the Colony sufficient talent, knowledge, and experience, to carry on such works as these without putting any company that might be formed to the useless expense of importing its surveyors from England. We have no desire to sound a trumpet before Mr. Woore, but it is but due to that gentleman to state, what we have the completest authority for stating, that though interested parties may presume to question his qualifications, Her Majesty's Navy is considered by persons most competent to form a sound opinion to have sustained some loss by Mr. Woore's retirement from the service, and the anxiety of the Admiralty to secure his employment in the service of Government in Jamaica, which he declined, although unusual inducements were held out to him, is sufficient guarantee that he is fully capable of undertaking all the minutiae of such a work as that which has been so long projected. Mr. Woore will, perhaps, pardon this voluntary and unexpected reference to himself, but it is made for the purpose of justifying the confidence which we place in the report before us, and which we now proceed to consider." It appears from these extracts that Mr. Woore's labors in reference to railway communication in this Colony had great influence in promoting that great object? There is no doubt of it—that he was the first person having any claim to scientific knowledge that put on paper any thing tending to show what was the actual state of the country we would have to pass over, and the practicability of carrying a railway through it, which no body before Mr. Woore had done. Before this we were all in the dark, and Mr. Woore's attainments as a surveyor enabled him to put on paper what were the nature of the difficulties to be overcome.
24. You are aware that Mr. Woore undertook a survey of the whole country, to test the practicability of the thing? Yes—between Sydney and Goulburn.
25. I suppose he occupied a great deal of time in doing that? No doubt.
26. And he received no remuneration, except the expenses he was put to? I believe that is the case.
27. These were the terms, and these were the general opinions as expressed here in the extracts I have read of the services of Mr. Woore? Yes; I have no doubt of it.
28. By Mr. Macarthur: You do not remember whether Mr. Woore surveyed the County of Cumberland generally in any other direction between Windsor and Penrith? No.
29. I am aware the reason your succeeding surveyor made very little use of Mr. Woore's plan was because Mr. Woore went to the northward to the Oaks? If I remember rightly, his line was carried more to the Oaks.
30. The western line? It was afterwards determined that that was not the line to take, therefore the survey through the County of Cumberland was entirely dropped.
31. You do not remember whether Mr. Woore made a survey from Windsor to South Creek—I ask the question, because you limited his surveys to Goulburn? I know he took some experimentary surveys. My impression is, that he confined himself to the southern line.
32. Mr. Shields was employed by the Company of which you were a Director? Yes; by the Directors soon after the Company was formed, and the Directors elected Mr. Shields, who was appointed surveyor.
33. By Mr. George Macleay: And the line adopted by the Company from Sydney in the direction of Parramatta, so far as it went, was laid out by Mr. Shields? Yes.
34. Did Mr. Shields, do you remember, propose to take Mr. Woore's line, or a different line southward in the direction of Goulburn? I have a general recollection that Mr. Shields displayed a feeling—which one surveyor who succeeds another generally feels—to phoo phoo all that was done before him. I have seen that feeling in several instances displayed by professional men.
35. By Mr. Macarthur: He treated his predecessor as he was treated by his successors? Yes.
36. There was another line surveyed by Mr. Shone? Yes; he was employed by Sir Thomas Mitchell, and was placed at the service of the Company for 15 months, and he gave a great deal of valuable information, inasmuch as he showed the impracticability of doing what Sir Thomas Mitchell was anxious to have done. It was just as important to show that it could not be done as that it could. I don't think Mr. Shone had anything to do with the line as it exists, beyond warning us of the dangers of the line by the eastward.
37. There were great difficulties by Sir Thomas Mitchell's proposal? Yes, at a place called the Pheasant's Nest.
38. It was very difficult to get over? Yes.
39. By the Chairman: Do you know if any tenders from any competent persons were received in answer to the advertisements published? I only know by report. I know there were some tenders, but I cannot say whether they were from competent persons. I was not on the committee then. I don't know who the parties were.

1858.

Legislative Assembly.

NEW SOUTH WALES.

ELECTRIC TELEGRAPH.

(REGULATIONS FOR THE MANAGEMENT OF.)

Ordered by the Legislative Assembly to be Printed, 31 March, 1858.

NEW SOUTH WALES ELECTRIC TELEGRAPH.

Offices open from 9 a.m. to 6 p.m. daily, Sundays excepted.

REGULATIONS.

1. Messages must be written with ink, in a clear and legible manner, on the forms provided for that purpose, and must bear a proper date and address; the signature of the sender, in each case, being required in authentication of his Message, and as subscribing to the conditions imposed. Persons bringing Messages written on plain paper will be required to copy the same on the proper official form; or, should any person bringing such Message be unable to write, the Clerk will copy the Message on the official form, and, after reading it to the bearer of the Message, will obtain his or her signature or mark to the said copy. The original will, in all cases, be kept; but the Government will hold itself free from responsibility with respect to the correctness of such copy.

2. As a general rule, all Messages are to be prepaid; but, in cases of emergency or distress, persons may be allowed to send Messages to be paid for by the receiver.

3. RATE OF CHARGES:—*Between Sydney and the South Head*—The charge for Messages not exceeding ten words will be One Shilling and Sixpence, and for every ten words, or portion of ten words additional, One Shilling. *Between Sydney and Liverpool*—Not exceeding ten words, Two Shillings, and for each ten words, or portion of ten words additional, One Shilling. Messages for the Press will be charged at the rate of 1d. per word. *Between the South Head and Liverpool*—Not exceeding ten words, Two Shillings and Sixpence, and for each ten words, or portion of ten words additional, One Shilling. The above charges include delivery within one mile from the office; over that distance, portage or cab hire will be charged, and boat hire on Messages to be delivered on ship board.

4. Where an immediate reply to a Message is required, the sender of such Message is requested to append the word "Reply." The messenger charged with the delivery of the Message will then be directed to wait ten minutes for the Reply, in order to facilitate its transmission to the sender of the Message.

5. Messages can be transmitted in cypher, at 50 $\frac{2}{3}$ cent. above the ordinary rate of charges. Cypher words must not consist of more than three syllables.

6. In order to provide against mistakes in the transmission of Messages by the Electric Telegraph, every Message of consequence ought to be REPEATED, by being sent back from the Station at which it is to be received to the Station from which it is originally sent. Half the usual price for transmission will be charged for repeating the Message. The Government will not be responsible for mistakes in the transmission of unrepeatd Messages, from whatever cause they may arise; nor will the Government be responsible for mistakes in the transmission of a repeated Message, nor for any delay in the transmission or delivery, nor for non-transmission or non-delivery of any Message, whether repeated or unrepeatd, to any extent above £5.

7. Except in cases of emergency, illness, &c., or Messages on the service of the State, Messages will be transmitted in the order in which they are received, and all Messages will be held strictly confidential.

8. If, from any circumstances, a Message is not sent within one hour after being received, the Clerk is instructed to give the person sending the Message information of the fact, with the reason of the delay; it will then be optional with the person to withdraw such Message, and receive back the amount paid.

9. No application for copies of Messages, after delivery, will be entertained, unless at the request of the person to whom the Message is addressed; and, in all cases, the Superintendent will require satisfactory reasons for the application.

10. Duplicates of Messages will be kept in the strict charge of the Superintendent for the space of TWO YEARS, after which they will be burned in the presence of the Superintendent.

B. H. MARTINDALE,
Superintendent.

1858.

Legislative Assembly.
NEW SOUTH WALES.

ELECTRIC TELEGRAPH.

(REPORT UPON LINES TO BATHURST AND THE HUNTER.)

Ordered by the Legislative Assembly to be Printed, 13 August, 1858.

REPORT from CAPTAIN MARTINDALE, R.E., Superintendent of the Electric Telegraph,
on the Construction of Lines of Telegraph to Bathurst and the Hunter.

*Department of Internal Communications,
Sydney, 13 August, 1858.*

SIR,

In reply to your letter of the 25th June last, requesting me to report the estimated cost of establishing telegraphic communication between Sydney and Bathurst and Sydney and the Hunter, the routes which the lines should follow, and the stations to be established, I have the honor to report:—

1st. The line to Bathurst should be constructed along that of the proposed railway to Penrith, and thence follow generally the direction of the main road to Bathurst.

The length of the line would be about 107 miles; the estimated cost £10,500: the stations might be at Parramatta, Penrith, Bowenfels, and Bathurst.

2nd. The line to the Hunter should leave the southern and western lines at Parramatta, and follow the main road to Windsor, thence to Wiseman's Ferry; and *via* Wollombi to Maitland, and from Maitland along the line of railway to Newcastle, and the proposed extension to Singleton.

The length of the line as far as Newcastle would be about 142 miles; the estimated cost £13,000: the stations might be at Parramatta, Wollombi, West Maitland, and Newcastle.

The additional length of line from Maitland to Singleton would be 28 miles, and would require an additional sum of about £3,000, which may be taken as a separate vote.

The terminus on the Hunter should be Newcastle. I have not been over this country myself, but I have put myself in communication with persons well acquainted with this part of the Colony, and, from the information they have been good enough to give me, I recommend this route.

It will be observed that I propose to take the line by way of Windsor to Wiseman's Ferry, in place of by the direct road: the distance will be thus increased by about 5 miles, but the trifling additional expenses thus incurred will be, I conceive, amply repaid by placing in telegraphic communication with Sydney so important a neighbourhood as that of Windsor, at as early a period as practicable.

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE
THE SECRETARY FOR
LANDS AND PUBLIC WORKS.

1858.

Legislative Assembly.

NEW SOUTH WALES.

ELECTRIC TELEGRAPHS.

(PROGRESS AND PRESENT STATE OF IN THE COLONIES.)

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 16 April, 1858, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table of this House,—

“ A Return compiled from the latest official information,
 “ shewing the progress and present state of the Electric
 “ Telegraphs in the Colonies of New South Wales, Victoria,
 “ South Australia, and Tasmania, and the probable date
 “ when the chain of Telegraphic Communication between
 “ the Cities of Sydney, Melbourne, Adelaide, Launceston,
 “ and Hobart Town will be completed.”

(*Mr. Parkes.*)

ELECTRIC TELEGRAPHS.

EXTRACT from the Second Report to the Honorable the Secretary for Lands and Public Works, on the Internal Communications of New South Wales, by Captain Martindale, R. E., &c., &c., &c.

THE ELECTRIC TELEGRAPH.

In reporting, for the first time, upon this branch of my Department, it will be interesting briefly to trace the rise and progress of the Electric Telegraph, not only in New South Wales but in Australia generally, so far as I possess information upon it at present.

THE VICTORIA TELEGRAPH.

The Colony of Victoria took the lead in this great inter-colonial work, the construction of a line of Electric Telegraph to connect Melbourne with Williamstown having been directed as far back as the 10th November, 1853, completed in February, 1854, and publicly opened on the 3rd March, 1854, although, pending the introduction of the Electric Telegraph Act, 17 Victoria, No. 22, no charge was made for the transmission of messages by the public until the 1st May following.*

In September, 1854, an extension of the line was commenced, and on the 5th December following, communication with Geelong was established, and the line from Geelong to the Heads having been in progress simultaneously, communication with Queenscliff was opened on the 30th of January, 1855. A branch line from Melbourne to Sandridge was also completed and placed in operation on the 1st July, 1855, so that at this period there were in operation 72 miles of line as follows:—

Melbourne to Geelong via Williamstown	50 miles
Geelong to Queenscliff.....	20 "
Melbourne to Sandridge	2 "
Total.....	72†

In the month of November, 1855, it was decided to extend lines respectively from Geelong to Ballarat, and from Melbourne to Sandhurst via Castlemaine. The work was commenced early in May, and the line between Geelong and Ballarat, a distance of 58 miles, was permanently opened on the 14th December, 1856, and communication over the line from Melbourne to Sandhurst tested on the 20th of the same month, the distance being 125 miles.

In the year 1856, also, the Governments of Victoria and Tasmania entered into a correspondence relative to the establishment of a submarine telegraph between the two Colonies at their joint expense, the cost of the portion from Tasmania to Cape Otway to be divided equally, and a branch line from Queenscliff or Warrnambool to Cape Otway to be made at the expense of Victoria.

The submarine portion of the line was carefully surveyed by Mr. McGowan in the months of October and November, 1857, and it has been decided the line should leave Victoria at Parker Cove, Cape Otway, and be laid down to a sandy cove in King's Island, named Victoria Cove. From thence it is to be carried across the island to Sea Elephant Bay, and from this point to the north-western bight of Hunter or Barren Island, passing about three quarters of a mile north of Albatross Island; from the north the line passes to a cove on the south side of Hunter Island, nearly opposite the lower end of Stack Island, and thence to a high sand patch about a mile to the westward, and two miles from Cape Grim, in Tasmania.‡

* Report of Mr. S. W. McGowan, Superintendent of the Electric Telegraph in Victoria, dated 31 December, 1856.

† The cost of constructing these lines and stations, the latter being on a permanent scale, was £17,600. In May, 1856, the monthly charges were £360. and monthly receipts about £450.

‡ The particulars of the distances, and the length of submarine cable and land line which it will be necessary to provide, are as follows:—

PLACES.	Actual Distance.	Length of Cable recommended.
	Miles.	Miles.
Cape Otway to Victoria Cove, King's Island	49	56
Victoria Cove to Sea Elephant Bay (land line)	18	..
Sea Elephant Bay to North-west Bight, Hunter Island	48	55
North-west Bight to South Cove (land line)	8	..
South Cove to Tasmania	44	6
Total.....	127‡	117

The cable suggested by Mr. McGowan is a single copper wire cable, the wire of number 16 gauge, the cable to weigh not less than one ton to the mile; the extreme cost of the entire line was estimated at £33,000 in 1856.*

The effect of this line, when carried out, will be to place Hobart Town in instantaneous communication with Adelaide and Sydney, *via* Melbourne, as soon as the inter-colonial lines in progress are completed.

A contract for the portion from Cape Otway to Cape Grim was made on the 7th instant; the date fixed for completion being the 1st May, 1859, and the cost £25,000.

In the course of the year 1857, the telegraphic lines to the western and north-eastern boundaries of Victoria have also been completed; the line *via* Ballarat, Fiery Creek, Hexham, Warrnambool, and Portland, to the South Australian boundary, having been completed on the 29th December, 1857; and that to the River Murray opposite Albury, *via* Sandhurst, Kilmore, Longwood, Benalla, Wangaratta, Beechworth, and Belvoir, on the 5th of the same month. The distance from Ballarat to Portland being 230 miles; and from Melbourne to Portland, 338 miles; and from Melbourne to the River Murray, 250 miles.

The lines contemplated for construction during the year 1858 are an extension from Raglan (Fiery Creek) to Ararat; Castlemaine to Ballarat, embracing, *en route*, Maryborough, Dunolly, Creswick, &c.; Sandhurst to Echuca, on the River Murray; and the line, already alluded to, now fixed from Geelong to Cape Otway to meet the submarine line to Tasmania.

Such have been, up to the present time, the exertions of Victoria to establish inter-colonial telegraphic communications; and one cannot but admire the ability and energy with which they have been carried on.

The system of construction is extremely simple, and in accordance with that pursued in America.

The posts used are saplings of blue gum, red gum, white gum, stringy-bark, and iron-bark, except between Melbourne and Sandridge, the posts there being of Baltic deal.

The measurement of each sapling is usually twenty-five feet in length by nine inches square at the base, tapered to five inches at the top; the base of the post is thoroughly charred and tarred for five feet six inches in height, and is buried five feet in the ground, the holes being bored by earth augers. There are thirty posts to each mile.

The insulators are "bell pattern," of the best quality, of hard baked and highly glazed earthenware.

A single conducting wire of number 6 galvanized iron is found sufficient to meet all the ordinary requirements of traffic.

The cost of the lines has varied considerably,—the first, between Melbourne and Williamstown having been contracted for at £193 15s. per mile; the second, between Williamstown and Queenscliff, at £115 15s. From Geelong to Ballarat the line cost £82, and from Melbourne to Sandhurst £73 per mile; the extensions from Ballarat to the South Australian frontier, and from Melbourne to the Murray, on the New South Wales boundary, having cost respectively £65 10s. and £59 15s. per mile.

The system adopted in working is the Morse, the instrument used being Morse's Recording Telegraph, usually in the single acting form; the double acting Morse instruments, manufactured by Siemens and Halske, of Berlin, being used at important terminal stations.† The battery employed is a Groves Battery, or Chester's patent.

The offices are kept open for the transmission of messages by the public generally from 8.30 a.m. until 8 p.m. The regulations for the transmission of telegrams are of the usual nature.

I understand that the Head Office at Melbourne is kept open all night.

In Table 28 will be found a record of the working of the lines, interesting especially as shewing the rapid increase in the number of messages sent, and consequently in the revenue.

The net receipts for the year 1857, including £1,671 8s. 8d. as the value of despatches on the public service, were £3,531 18s. 2d., affording interest at the rate of nine per cent per annum on £40,000, the round cost of establishing the line,—but Mr. McGowan anticipates, that if office accommodation easy of access were provided at Melbourne, the revenue of that station would receive a marked addition.

SOUTH AUSTRALIAN LINES.

The construction of the Adelaide City, Port, and sea-coast line was commenced in December, 1855, opened to the Port on the 18th February, 1856, and to Le Ferre's Peninsula early in the following month. Between Adelaide and the Port the line is over ground; there are thirty-two posts to the mile, and four wires; the insulators are inverted cones of white porcelain. In the streets of Adelaide a six wire cable is laid under ground in divided iron pipes, and the same has been done at the Port, and across Le Ferre's Peninsula; seven hundred yards of a six wire submarine cable being laid under the creek.

The cost of the line, including the erection of stations, was about £3,024, or £600 per mile under ground, and £228 per mile over ground.

The erection of the line to Gawler Town was commenced in January, 1857, and opened to the public on the 14th of April, 1857.

* Shortland's Bluff to Cape Otway, say 150 miles, at £60.....	9,000
Cape Otway to Cape Grim, at £100.....	15,000
Cape Grim to George Town, at £60	9,000
Total.....	£33,000

† The chief novelty of this instrument consists in its double action, by means of which a message can be transmitted and received by the same instrument at the same moment.

The length of this line is twenty-eight and a-half miles; there are two wires, about twenty-seven posts to the mile, between sixteen and seventeen feet in length along the line of Railway, and twenty-two feet at all level crossings. The cost of the line, exclusive of the Gawler Town station, was £1,576, or £55 5s. 11d. per mile.

The estimated receipts, including £500 for messages on public service, are £1,700 for the year 1857; the expenditure, £1,232; the net receipts, £468.

The number of messages sent is remarkable, being 30,870 for sixteen months, from the 18th February, 1856, to the 30th June, 1857, as compared with 29,284, the number sent during thirty-three months, ending December, 1856, on the Victorian lines.*

In April, 1856, the Governments of South Australia and Victoria entered into communication relative to the establishment of an inter-colonial line of telegraph; and in July of the same year, Mr. Charles Todd, Superintendent of Telegraphs in South Australia, proceeded to Melbourne for the purpose of procuring information to facilitate the execution of the desired object; by whom and Mr. McGowan a joint Report was presented to their respective Governments, dated 25th August, 1856.

This Report, after alluding to the importance of connecting New South Wales with the general system, recommended, among other things, that:—

Each Government should erect the line of telegraph within its own territory, and carry it to a common point on the boundary.

The same description of instrument should be used throughout the Colonies; and the code, regulations, and arrangements be as nearly as possible identical.

There should be an equal division of receipts, derived from all *inter-colonial* messages, between what stations soever they may pass.

These suggestions received the general assent of the two Governments.

Mr. Todd, in returning to Adelaide overland, made a careful survey of the country from Portland, and recommended the following as the route for the line to follow:—

"From Adelaide, by the south road, over Tapley's Hill, through Noarlunga and Willunga to Middleton; thence along the tramway to Port Elliot, and back by the tramway to Goolwa; from Goolwa across to Hindmarsh and Mundoo Islands to Pelican Point, crossing the channels by a single wire submarine cable; and thence along the Coorong to fourteen miles beyond the Salt Creek, or near the Chinamen's Wells; thence to Mount Benson, along the edge of a flat; through Robe Country to Robe Town; from Robe Town towards Mount Muirhead, till about twenty-two or twenty-five miles from Guichen Bay, when it should turn in the direction of Mount Gambier, and from Mount Gambier by the road to the punt near the mouth of the Glenelg,—the distance being about 325 miles."

The Legislature approved of the route recommended, and voted in February, 1857, the sum of £20,500 to erect the line; and a contract was entered into for its construction for £40 a mile, the Government finding wire and fittings, and the estimated expense, excluding buildings, but including instruments, batteries, and station stores, being £60 per mile.

In this is included ten miles of submarine cable, at £80 per mile, laid under the Goolwa Channel, and Lake Alexandrina. The cable weighs only 17 cwt. to the mile, the core consisting of seven copper wires, (No. 18), forming one conductor, well insulated by a thick coating of gutta percha, and the whole protected by 18 strands of (No. 16) iron wire.

The system of construction, the instruments and materials used, and the general arrangements for working, are closely assimilated to those of Victoria. The posts are, however, only 22 feet long in place of 25; a large extent of the country traversed being destitute of serviceable timber.

This line is intended to be opened on the 1st proximo; and it must be very satisfactory to those who by their efforts and cordial co-operation have contributed so materially to its success, to see inter-colonial communication so rapidly advancing.

THE TASMANIAN LINES.

I have not received any official report upon the lines that are being constructed in Tasmania, and am therefore indebted to the reports of Messrs. McGowan and Todd, and to the statements of the daily press, for the scanty information I can at present submit.

I learn, however, that in July, 1856, Mr. Champ, then the Honorable the Colonial Secretary in Tasmania, visited Melbourne for the purpose of inspecting the Electric Telegraph, prior to its introduction into Tasmania, and that, on his return, a line from Georgetown to Mount Lewis was commenced.

In September of the same year a correspondence was opened between the Government of Tasmania and that of Victoria, relative to the establishment of telegraphic inter-communication, the result of which has been the undertaking of the submarine line from Cape Otway to Cape Grim, which I have already detailed in my sketch of the Victoria lines.

This line will be in connexion with that to Hobart Town *via* Circular Head, Georgetown, and Launceston.

I am under the impression that the line, or a portion of the line, between Georgetown, Launceston, and Hobart Town, is now in operation.

The distance between Melbourne and Hobart Town is 682 miles by telegraph, the estimated cost of the line being £45,000.†

WESTERN AUSTRALIA.

I have no information respecting the construction of telegraphic lines in this portion of Australia.

NEW SOUTH WALES LINES.

While the construction of lines was commenced in Victoria as far back as the end of 1853, and in South Australia at the end of 1855, no contract was made for their construction

* Report of Mr. Charles Todd, Observer and Superintendent of Telegraphs, South Australia.

† Reports of Messrs. McGowan and Todd, and "Correspondence relative to the Establishment of Electro-Telegraphic Communication between the Australian Colonies." Victoria, 1856.

in this Colony till the middle of May, 1857; it is not therefore surprising that telegraphic communication should be less advanced here than in the sister Colonies.

As far back, however, as the end of March, 1854, an Estimate of the cost of constructing a line ten miles in length was ordered and sent in to the Government. The estimate amounted to £200 a mile.*

Towards the end of 1855 (November), the attention of the Government appears to have been again turned to this subject,—a Report from Mr. McGowan, of the probable cost of constructing a line between Melbourne and Sydney having been laid before it.†

In August, 1856, a further communication was made to the Government on this subject‡

In September of the same year, the Chief Secretary, Melbourne, addressed the Colonial Secretary, Sydney, requesting to be informed whether, in the event of the Electric Telegraph being extended to the Victoria side of the river Murray, the Government of New South Wales would undertake to construct a line from Sydney to connect with it.

A Select Committee of the Legislative Assembly§ was appointed on the 31st October, to consider and report upon the subject of the introduction into New South Wales of the Electric Telegraph. The Committee recommended, on the 18th December,—

“That immediate steps be taken, in concert with the Government of Victoria, to connect the Cities of Sydney and Melbourne by Electric Telegraph.

“That a sum not exceeding £38,000 be placed on the Estimates for 1857 for that purpose.”

The Committee recommend also the connexion, at an early period, of the town of Bathurst with the metropolis by Electric Telegraph.

The sum of £38,000 was accordingly placed upon the Estimates for 1857.

A contract was entered into for the construction of the line from Liverpool to Albury, on the 11th of May last, tenders having been called for by public competition.

The result appears to afford another proof of the inadequacy of the system of tender by public competition to provide efficiently for the execution of large public works, especially in a new country.

I was not in the Colony at the time, but I am aware that every pains were taken to ascertain the competency of the contractor and his sureties, to whom, as being the lowest tender, the work was given.

At the same time the Government undertook the construction themselves of the line along the Railway to Liverpool.

It soon became apparent that the contractor was incompetent to perform the work he had undertaken, and, after allowing full time to give him a fair trial, the Government terminated the contract on the 12th October, on the only clause giving the power—that of unnecessary delay.

Negotiations were at once entered into, with the view of avoiding delay, with parties competent to execute the work; the Government considered the terms asked too high, and tenders were again called for by public competition.

The usual delays inevitably attendant upon this system of carrying on public works occurred, and, although the tender of the present contractor was provisionally accepted on the 12th November, it was not until the 18th January last the bond was signed.

The line between Berrima and Picton was completed on the 1st instant, a distance of thirty-three miles; since then the progress of the work has been more satisfactory; and the line will be ready to be opened to Goulburn about the 1st proximo; but I cannot anticipate that the line will now be completed in the time specified without the most strenuous exertions on the part of the contractor.

The price of the present contract is £57 per mile, without instruments or buildings; that of the original contract having been £49 14s. 6d.

In the meantime considerable difficulty had been experienced relative to the line between Liverpool and Picton, a distance of thirty-three miles.

When the first contract was terminated, the works were very incomplete upon this portion, and immediately upon its termination several parties waited upon me to state that they had not been paid, either for materials or labor; some of these were apparently laboring men.

It was evident that these parties had no legal claim upon the State, but the Government were very desirous that they should, if practicable, be paid.

I am happy to state that, after a delay of many months, this has been effected, and the claims sent in, up to the time of the signing of a new bond, have been paid.

The arrangement under which this was effected was the making of a second contract with the original contractor, for the completion of the line from Picton to Liverpool, on condition that the sub-contractors, under the original contract, should be paid their several claims.

This contract was made on the 25th February, 1858, and the work completed on the 18th March last, the price paid being £1 per mile less than that first agreed upon, the Government taking the maintenance of the line at once into their own hands.

It is due to the sureties of this second contract to state that it was efficiently carried out.

The line between Sydney and Liverpool, 22 miles, was completed in the early part of October last, but was not then opened.

On the 27th of the same month a line to connect Sydney with the South Head was, by order of the Government, commenced, and was completed early in the following January, at a cost of £657 6s. 8d., or about £91 per mile, including instruments and station fittings.

* By Captain Mann, C.E., letter dated 29 March, 1854.

† By Captain Towns, letter dated 1 November, 1855.

‡ By Mr. Samuel, letter dated 12 August, 1856.

Mr. Parkes, Chairman.

The cost of this line was increased by most of the holes having to be put down in rock for the posts, and by additional labor in coming through the City.

Detailed statements of the Telegraph Accounts to the 31st December, 1857, will be found in the Appendix, Table 27.

Arrangements having been made with the Directors of the Exchange Company for the use of two excellent rooms in the Exchange as a head office for the present, at a nominal rent, an instrument was placed there, and the Liverpool and South Head lines connected with it, instruments being at the same time set up at those stations.

These instruments were Siemen and Halske's recording instruments, there being no single acting Morse instruments to be obtained. They will be found very useful, especially hereafter as the lines extend.

On the 26th January last, the Liverpool and South Head lines were formally opened by His Excellency the Governor General, and on the following day for general use, and they have worked satisfactorily to the present time.*

As soon as the line to Goulburn is opened the Colony will possess the power of instantaneous communication over 130 miles.

The inhabitants of Albury having, at their own cost, continued the Victoria line to Albury, applied to the Government to have a station opened; and the necessary arrangements having been made, the Albury Station was connected with Belvoir on the 9th instant, and opened for public business. The temporary station in use has been erected and fitted at the expense of one of the inhabitants.†

I shall have the honor of immediately submitting, for the consideration of the Government, the terms upon which Mr. McGowan, (with whom I have been in communication upon the subject), proposes the accounts for inter-colonial messages should be arranged.

On the 15th March last the Government directed lines to be constructed to connect the Signal Station at Fort Phillip, the Port Office, and Post Office, and the Railway Office, with the South Head and the Albury lines, at a cost not exceeding £200, including instruments and batteries.

These extensions were completed on the 31st of the same month.‡ and they will ultimately effect a saving of labor, as messengers will no longer be required for the purpose of delivering shipping intelligence between the Harbour Office, Post Office, and Signal Station. The advantage to the Railway Department in meeting the wants, and ensuring the safety of the public using the rail, will be very great; and the more so as single lines extend. Indeed, it is barely safe to work a long single line of Railway without the security afforded by the telegraph.

Arrangements have been made by which messages can be transmitted between the Exchange and the South Head at any hour of the day or night, and the office will immediately be opened for night duty.

In order to form an economical staff of operators, who may at the same time be depended upon, young lads are being paid the nominal wages of 2s. 6d. per week, and trained up to a knowledge of telegraphy. Three are, already, fairly expert operators. I am informed this has given rise to some misconceptions as to the number of persons employed at the Exchange, but the system will be found advantageous to the public in whatever light it is viewed.

It will be necessary to take early measures to construct, or obtain, suitable buildings for stations up the country.

The construction of the New South Wales lines is similar to that of Victoria and South Australia; the instruments and batteries used are the same; and it is proposed to assimilate all the arrangements, as far as possible, to those of the sister Colonies.

The posts are sound saplings, twenty-three feet in length, nine inches at the base, and seven or eight inches at the top. They are of box, iron-bark, or stringy-bark, tarred and charred for five feet up from the butt, and the top bound with hoop-iron. They carry a single wire (No. 6, galvanized,) which is insulated from the posts by a brown earthenware insulator, of the umbrella shape, fixed on the top of the posts by a wooden, or, in some cases, iron pin, and secured by a mixture of resin, shellac, and Venice turpentine,—the wire being bound to the insulator at each point by a binding-wire (No. 16), and very perfect insulation appears to be maintained. The instruments used are Morse's Recording Instruments, and the batteries are Chester's Patent; and a sulphate of copper local battery is also being tried. The Offices are open from 9 A.M. to 6 P.M., daily, Sundays excepted, and messages can be sent at any hour of the day or night between the Exchange and the South Head.

When the line is opened through to Melbourne it may be anticipated the Electric Telegraph will be a reproductive work. Mr McGowan, as I have already stated, is of opinion the Victoria lines will pay more than nine per cent.

I submit for the consideration of the Government, the importance of early extensions, at least, to Bathurst and Newcastle; the latter would, among more important matters, greatly facilitate the effective supervision of the Northern Railway.

The Government are aware of the immense importance of telegraphic communication with England *via* India.

The prosperity of the Colony, and its unity as a State, are inseparable from improvement in the existing condition of Internal Communication, whether Railways, Roads, or the Electric Telegraph be considered.

I have, &c.,

B. H. MARTINDALE.

* These lines were constructed, and the instruments set up, under the immediate superintendence of Mr. Lax, now operating Clerk at Albury.

† Mr. Nichols

‡ The assistance the Government have afforded me, by the appointment of Mr. Cracknell as Assistant Superintendent of Electric Telegraphs, permitted this service to be thus rapidly and efficiently performed.

Legislative Assembly.

NEW SOUTH WALES.

SUBMARINE ELECTRIC TELEGRAPH.

(PETITION FOR FORMATION OF BETWEEN GREAT BRITAIN AND AUSTRALIA.)

Ordered by the Legislative Assembly to be Printed, 18 May, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned, George Bowness Carr, John Alexander Mainley Pinniger, John Wortley de la More, and Henry Masterman, of London, Esquires,—

SHEWETH:—

That your Petitioners are the promoters of a public company having for its object to establish a direct independent Line of Submarine Electric Telegraph between Great Britain and Her Majesty's Australasian Colonies.

They propose to lay down along the eastern coast of Australia such Electric Submarine Telegraphs as will effect a communication *via* Torres Straits between some point on the line of Electric Telegraphs of the Honorable East India Company, or other Electric Telegraphs in, or intended to be brought into, communication with Great Britain or the Continent of Europe and the Australasian Colonies, by which means these Colonies will, on the completion of Telegraphic Lines already in operation or projected, have direct communication by Telegraph with Europe, Great Britain, and America.

The Company will take power to lay down such branches and connecting Lines as may be thought advisable.

Your Petitioners, who are actively engaged, under the sanction of Her Majesty's Government, in carrying out other important undertakings of a similar character, have secured the co-operation of an eminent firm engaged in the business of manufacturing submarine cables, who are ready to undertake the contract for the construction and laying down of the Australian Lines of Submarine Telegraph on favorable terms.

It is intended that the Company shall be incorporated either under the English Joint Stock Companies Act, 1856, or by special Act of the Legislature.

Your Petitioners are desirous of obtaining from the Legislature of this Colony powers to lay down and work their telegraphs to and upon the coast of this Colony, and such other special and exclusive privileges and advantages as the Legislature may consider beneficial to the Company and be willing to accord.

Provided the application of your Petitioners be granted, the undertaking will be completed before or in the course of the year one thousand eight hundred and sixty-two.

A proportion of the capital of the proposed Company will be reserved for allotment in Australia, together with a proportion of seats in the direction of the Company to be filled by gentlemen connected with Australia and resident in England, or in the Colonies, as may be deemed expedient; it is also intended to constitute a Colonial Council.

As it is essential, for the purpose of raising the requisite capital for this great undertaking, that the inducement of a minimum guaranteed interest should be offered to the public, your Petitioners venture to hope that the Government of this Colony alone, or in conjunction with the Imperial and other Colonial Governments, will be willing to enter into an arrangement for securing this object, such as agreeing, upon security being given for the completion of the undertaking, to pay a fixed rate of interest, being not less than six per cent., on the outlay during construction, and to guarantee the same for a fixed period after its completion.

The Company will, in such event, be prepared to place Colonial Government Messages upon the same footing of preference as Imperial Government Messages, and to charge for such messages the same rates as may be demanded for ordinary public or private messages; it being understood that if the Imperial or Colonial Government Messages in any year shall, at the usual tariff rate charged to the public, amount to a larger sum than the interest guaranteed by such Governments respectively, such additional payments shall be made as shall be equivalent thereto.

The Company will also consent that the Imperial and Colonial Governments shall fix the tariff of charges, which shall not be increased, without their joint consent, so long as the contract with such Governments respectively lasts. Each Colonial Government, in common with the Imperial Government, shall be at liberty to appoint an "ex officio" Director on the Board of Directors, to watch their joint interests, and, if they shall so desire, to have agents of their own at any of the stations along the line, to superintend the receipt and transmission of their messages.

Your Petitioners feel that the advantages to be obtained for Great Britain and her most important Colonies by this undertaking are too obvious to need mention, whilst the success which has attended other undertakings of a similar nature carried out by your Petitioners in various parts of the world, leaves no reasonable doubt of the feasibility of that now proposed.

Your Petitioners humbly submit, that the undertaking is one in all respects worthy of the support and assistance of the Colonial Government; and

Your Petitioners therefore humbly pray, that you will be pleased to permit a Bill to be submitted to the Honorable the Legislative Assembly of the Colony of New South Wales, and will extend to it your favorable consideration.

And your Petitioners will ever pray.

G. B. CARR.
J. A. M. PINNIGER.
J. WORTLEY DE LA MORE.
H. MASTERMAN.

1858.

Legislative Assembly.

NEW SOUTH WALES.

SUBMARINE ELECTRIC TELEGRAPH.

(PETITION TO THE GOVERNOR OF NEW SOUTH WALES RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 23 November, 1858.

To the Honorable the Governor, the Government, and Legislature of New South Wales,—

Your Petitioners having individually and jointly been the inventors and pioneers of oceanic telegraphs, and through whose exertions nearly the whole of the oceanic telegraphs in Europe have been established, as well as that of the Atlantic Telegraph to America, embracing an aggregate capital of some millions sterling, connecting England and the Continent by substantial oceanic telegraph lines, *via* France and Belgium and the north of Europe, with about 1,200 miles of oceanic telegraph lines at present in successful operation in the Mediterranean, independent of some thousand miles of land telegraph in the United Kingdom and Ireland, all of which are in union and correspondence with the several telegraphic lines of Europe and America.

For evidence of a portion of the lines established by them, your Petitioners would refer to the accompanying volume, containing the prospectuses of some of these companies which have been successfully carried out through their exertions, and by which it will also be seen, at pages 33 to 35, your Petitioners have constantly had in view the desirability of incorporating the several local Governments of Australia in this important system of telegraphs, in accordance as much as possible of a general postal system, as set forth in the letter to the late Sir Robert Peel, at page 12, and are desirous, now the time has arrived for actual operation, to press upon the attention of your Honorable Legislature a new and distinct proposition, in the furtherance of their original appeals, as entitling them to your serious consideration:

Namely, that they are prepared at once to connect Australia with Ceylon on condition of a guarantee of 5 per cent. per annum on the necessary capital, either by Batavia, Singapore, or direct from Ceylon *via* Keeling's Island to Western Australia, as may be most approved by the united Government of Australia. But your Petitioners would submit that, as their original idea as well as their past experience have proved the benefits of uniting all points of commercial importance, as their lines in the Mediterranean will connect Egypt, Greece, Corfu, Malta, Sardinia, Austria, France, (and be the main route of the Indian and Australian Line,) and that their project further contemplated extensions to China *via* Borneo to Hong-Kong, &c., that a line touching at Batavia and Sumatra would be less costly and more valuable as uniting with these interests.

Your Petitioners would also state that, in addition to the several companies permanently established and acting in unison, as set forth in the accompanying volume, they are individually or severally engaged; first, under contracts and joint guarantees of the English and Austrian Governments in carrying out a substantial line of three telegraphic conductors between Ragusa, Corfu, and Alexandria for the object of these extensions, and that the land lines will be brought into connection with six substantial telegraph conductors between Germany, the north of Europe, (or *via* France, Belgium,) and England, as also for their several conductors of ten electric lines connected with the Atlantic Line, embracing united telegraph operations over an extent of 130,000 miles.

Your

SUBMARINE ELECTRIC TELEGRAPH.—PETITION.

Your Petitioners also anticipate, that should your united Governments of Australia accord their petition of a 5 per cent. guarantee on the principle of the $4\frac{1}{2}$ per cent guarantee accorded by Her Majesty's Government to the Red Sea Telegraph Company, that Her Majesty's Government will aid the enterprise with the assistance of ships, as in the Atlantic Telegraph, and thus a large sum be saved to the Colonial Government.

Your Petitioners are aware that other parties have put forward Petitions to the Colonial Government, both on behalf of your Petitioners, (and possibly independently,) but as the said parties have never had experience, or been instrumental in establishing any oceanic telegraphs to the present time, your Petitioners would desire to be understood as being independent of all such propositions, and as acting on their own peril and responsibility in engaging to complete this undertaking for the Governments of Australia, and will name a representative on their behalf to negotiate with the Colonial Government on their behalf.

We have the honor to remain,

Your humble and obedient servants,

JOHN W. BRETT,

Projector and Contractor.

J. R. CARMICHAEL,

Chairman of the Submarine Telegraph Company, and
Deputy Chairman of the British Magnetic and
Mediterranean Extension Telegraph Companies.

NEW SOUTH WALES.

INTERNAL COMMUNICATIONS OF NEW SOUTH WALES.

(REPORT FROM CHIEF COMMISSIONER FOR RAILWAYS, &c., &c.)

*Ordered by the Legislative Assembly to be Printed, 20 April, 1858.*SECOND REPORT TO THE HONORABLE THE SECRETARY FOR LANDS AND PUBLIC WORKS,
BY CAPTAIN MARTINDALE, ROYAL ENGINEERS.*Railway Department,
Sydney, 17 April, 1858.*

SIR,

I have the honor to submit, for the consideration of the Government, my Second Report on the Railways, and other Public Works connected with the Internal Communications, of the Colony.

RAILWAYS.

It must be considered as a matter of the first consequence, that the Railways of New South Wales should become, as early as possible, self-supporting,* not only on account of the relief that would thus be afforded to the Consolidated Revenue of the country, but also from the impetus that would thus be given to further Extensions.

I have, therefore, carefully studied the past and present working of the existing lines, in order to ascertain whether any causes hinder their prosperity, and, if such exist, to suggest measures for removing them.

In the Tables contained in the Appendix to this Report will be found as complete details of the present Railways as the records of the Department will afford, and these furnish data for reasoning upon every point of importance connected with their present condition and future prospects.

Considerable difficulty was experienced, in the very commencement of the inquiry, in arriving at the exact cost of each line, owing to the charges for permanent way, rolling stock, and other materials procured from England, not having been kept separate for each line; but a careful and very laborious comparison of the accounts with original vouchers and papers has been made,† and the sums given in Table 1 may be relied upon as being as close an approximation to the expense of each length of Railway that has been made, as the records of the Department will afford.

The

* Mr. Locke, M.P., President of the Institution of Civil Engineers, in a most interesting paper read at the Institution in January last, speaks to the following effect on Railway Finance:—"He contended Railways should be so made as, while conferring a public benefit, to produce for their proprietors the benefits in expectation of which funds for their construction had been contributed. Public works would no longer be attempted where experience shewed that, instead of profit, ruin must ensue. Confidence would give way to distrust, capital would seek its harvest in other channels, and the cause of past disappointment would become the object of prejudice, which years of subsequent profit would not entirely eradicate. In every view, then, the successful financial result of the combination of science and capital was the important feature, and the due appreciation of this view concerned the Engineer no less than the Statesman or the Capitalist."

† By the Secretary of the Department, Mr. Rac.

The entire expenditure upon the Government Railways to the 31st December, 1857, was, therefore, £1,366,395 3s. 1d., of which sum there was spent—upon the Southern Line, £942,634 17s.; upon the Northern Line, £366,514 3s. 3d.; and for Stores in stock, on voyage, or by remittances to England, £57,246 2s. 10d.

Of the sum expended upon the Southern Line, £795,875 4s. 5d. is charged against the line from Sydney to Parramatta, £124,888 19s. 6d. against the line from Parramatta to Liverpool, and £21,870 13s. 1d. to the Campbelltown line; but of the first sum £58,649 1s. 11d. was spent for rolling Stock, £35,332 19s. 1d. upon the Darling Harbour Branch, (76 chains in length), £15,142 13s. 7d. for permanent way materials in store at the end of the year, and £19,057 0s. 1d. for stores for the general working of the line, the value of which is gradually repaid to capital by revenue as the stores are used. If these sums be deducted from the gross amount of £795,875 4s. 5d., the cost of the line from Sydney to Parramatta, 13½ miles in length, is £667,693 9s. 9d., or £49,458·7 per mile, for a double line throughout. In this amount is included the entire cost of the workshops, machinery, and store-houses at Sydney, the use of which is common to the whole of the lines, although the cost cannot be separated from that of the construction of the main line to Parramatta.

The cost per mile of the line from Parramatta to Liverpool, 8½ miles long, is £14,692·8, the line being single, with double-way works.

The average cost per mile of the whole line, including the Darling Harbour Branch, is £35,996·3. This amount is exclusive of any outstanding claims for land.

The gross receipts of the line between Sydney and Parramatta, from the 26th September, 1855, the date of opening, to the 1st September, 1856, when the extension to Liverpool was opened, were £23,589 12s. 4d., and the gross expenditure £17,317 2s. 4d., the proportion per cent. of expenditure to receipts being therefore 62·3, and the net receipts £10,772 10s., giving interest at the rate of 1·35 per cent. per annum on £851,612 19s., the capital invested up to the 31st December, 1856, in the construction of the Great Southern Line.*

From the opening of the Extension to Liverpool to the 31st December, 1856, the gross receipts were £12,928 14s. 10d.; the gross expenditure £9,930 1s.; the net receipts £2,998 13s. 10d.; the proportion of expenditure to receipts 76·8 per cent.; and the interest on £851,612 19s. was 35 per cent. on the four months, or at the rate of 1·05 per cent. per annum.

During the year 1857 the gross receipts were £38,935 2s. 2d.; the gross expenditure £28,386 12s. 5d., the net receipts £10,548 9s. 9d.; the proportion of expenditure to receipts 72·9 per cent., and the interest on £905,621 10s. 4d., the capital invested up to the 31st December, 1857, on the line to Liverpool, to 1·16 per cent. per annum.†

The details from which these results have been obtained will be found in Tables 1 and 4.

If the above statements represented the probable permanent condition of the Great Southern Railway, it would have to be considered as a failure in a financial point of view; such, however, is not the case.

The first quarter of the present year shews a marked improvement: the gross receipts for the three months ending the 31st ultimo have amounted to £12,379 0s. 7d.; the gross expenditure has been £7,626 6s. 7d.; the proportion of expenditure to receipts, 61·6 per cent.; the net receipts £4,752 14s., giving interest at the rate of 524 on the quarter, or 2·096 per cent. per annum on £905,621 10s. 4d.‡ as above.

Of the gross receipts in the last quarter, however, about £940 arose from traffic connected with the present extensions; and if, in order not to over-rate any improvement, the

* Of this sum about £100,000 was expended upon the Liverpool Line; if this be deducted the interest will be at the rate of 1·5 per cent. per annum.

† If to this sum be added £21,870 13s. 1d., expended upon the Campbelltown Line, and £15,142 13s. 7d. for permanent way materials in store, making £942,634 17s., and also £57,246 2s. 10d. for materials ordered from England, the rate of interest would be reduced to 1·05 per cent. per annum.

‡ Including the Great Northern Railway, the net receipts from all sources, for the nine months ending 31st December, 1857, were £9,868 16s. 7d., giving interest at the rate of 902 per cent. per annum on £1,366,395 3s. 1d., the total capital invested up to that date on Government Railways.

§ If to this sum be added the same amounts as before, the total will be £999,880 19s. 10d., and the rate of interest will be reduced to 1·9.

the proportionate per centage amount be deducted from the net receipts, the balance will be £4,451 14s. 10d., and the interest will amount to 1·96 per cent. per annum on the same sum, or, in round numbers, 2 per cent.*

It is, as a rule, hazardous to reason on the results of a short period of time; yet, as it appears that the increase in receipts arises mainly from a growing appreciation, on the part of the public, of the convenience of communication by Railway, and from the increased facilities † recent arrangements have afforded for using the Railway; and that the diminution in expenditure is caused by the retrenchments that experience enables the department to effect; it may be anticipated the improvement will be permanent.

Considerable as this improvement is, it is not sufficient, by any means, to render the Railway self-supporting, and the question arises whether any causes exist that hinder the prosperity of the Railway, and of the measures that should be adopted for their removal.

Three principal causes may be named :—

- 1st. The Situation of the Terminal Station at Sydney.
- 2nd. The Present Fares.
- 3rd. The Short Length of the Line.

THE STATION AT REDFERN.

In my first Report I alluded to the inconvenience to the public of the distance to the present terminus at Redfern, an inconvenience which unquestionably operates prejudicially upon the success of the Railway, and I drew attention to the construction of a tramway from Redfern to Sydney Cove as a simple and inexpensive remedy.

I have since laid before the Government ‡ a plan, section, and estimate for this work, and I submit it as one of the measures that should be adopted to promote the prosperity of the Railway in adding to the public convenience.

A project has also been brought under my consideration to extend the Darling Harbour Branch to the Pyrmont Bridge, and to erect a Station at the Bridge. I am unable to recommend that this should be carried out at the public expense; but, should the Directors consider that the advantages to their Company would prove sufficient to warrant the project being carried out by the Company, I am of opinion that every facility should be afforded them necessary for the extension of the line, and liberal terms made with them as regards the working of the line when completed.

THE PRESENT FARES.

For a Railway to succeed financially its charges must be just on the one hand to the public who use the line, and on the other to those by whose funds the line has been constructed, and is worked and maintained. In New South Wales both these classes consist of the general public, the benefit enjoyed by each portion of the community being in direct proportion to its vicinity to the Railway, a circumstance which materially adds to the importance of each line of Railway being self-supporting, and strengthens the necessity for a just scale of charges.

The question of the fares to be charged is one always attended with some difficulties, and especially in a new country. It has received my earnest consideration, and is of such importance as to induce me to request especial attention to it.

In Table 8 will be found the alterations that have been made in the fares and rates of the Great Southern Railway at various times; in Table 7 the changes in the running of trains; Table 6 contains the number of passengers carried and the receipts from passenger traffic, arranged in periods in accordance with the alterations in fares; and Tables 13 to 21 shew in detail the passenger traffic between each station, arranged in similar periods.

It will be seen from these Tables that between the 26th September, 1855, and the 30th April, 1857, the fares were altered six times, the first class fare varying from 6d. to 3d.

per

* The net Receipts for the quarter, including the Great Northern Railway, were £6,455 4s. 6d., giving interest at the rate of 1·88 per cent. per annum on £1,366,395 3s. 1d.; deducting, however, £300 9s. 2d. from the Great Southern Railway, as above, and £643, as being derived from temporary sources on the Great Northern Railway, the interest on the above sum would be at the rate of 1·6 per cent. per annum.

† Among others may be named the arrangements for the collection and delivery of goods, published 28 December, 1857, and the simplification effected by the revised scale of classes and rates for the conveyance of goods, published on the 13th February, 1858.

‡ A copy of my letter, dated 8 March, 1858, will be found in the Appendix, marked A.

per mile, and the mean from 4d. to 3·85d.; the second class varying from 4·5d. to 2d., and the mean from 3·2d. to 2·69d.; and the third class from 3d. to 1·3d., and the mean from 2·19d. to 1·72d.

On the 30th April, 1857, the first class fares varied from 5·6d. to 3·5d. per mile, the mean being 4·34d.; the second class fares from 4·2d. to 3d., the mean being 3·2d.; the third from 2·82d. to 1·77d., the mean being 2·19d.; and the mean of the whole being 3·24d. These rates had then been in existence for seven months.

On the 1st May, 1857, the fares were altered to rates varying from 3·3d. to 2·6d. for the first class, the mean being 2·98d. per mile; from 2·48d. to 2d. for the second class, the mean being 2·29d.; from 1·84d. to 1·41d. for the third class, the mean being 1·56d., and the mean of the whole 2·28d.; and these rates continued unaltered to the end of the year, a period of eight months.

The reduction thus effected was about 31·4 per cent. on first class fares; about 28·5 per cent. on second class fares; and about 28·8 per cent. on third class fares; and 29·5 per cent. on the mean of the whole, or, in round numbers, 30 per cent.

The average number of passengers per month during the first seven months was 20,085, and during the next eight months 28,036; the average receipts, (including special trains and season tickets), £2,462 in the first case, and £2,403 in the second case, per month. The increase in passengers carried therefore was 39·5 per cent., and the decrease in actual receipts, 2·4 per cent.

It is necessary now to examine how much of this increase in passenger traffic must be considered as due to the lowering of the rates, and how much to an increased appreciation on the part of the public of the advantages of railway travelling and other causes.

Table 22 contains a summary of the passengers from the three principal stations—Sydney, Parramatta, and Liverpool—for each month from October, 1856, to April, 1857, and from April to December, 1857.*

If we except from consideration the month of May, in which the Homebush Races are held, and in which a larger number of persons are usually conveyed by rail,† the inconsiderable increase in the passenger traffic for the first four months after the fares were reduced is very striking‡. In the month of September, during which the Liverpool Races are held, there is a large increase; and this is maintained to the end of the year.

About the middle of September the Traffic Department was, after examination, reorganized by the Commissioners.

It must be considered that had the rates existing in April exercised a paramount influence in deterring travellers from using the Railway, the increase in passenger traffic would have shewn itself more decidedly in the first four months, and therefore that a large amount of the increase is due to a greater appreciation by the public of the convenience of travelling by Railway, increasing communication between Sydney and the interior, and additional attention to the wants and convenience of the public.

Some allowance should, perhaps, be made for June, July, and August, being winter months; but it will probably be giving full value to the effect of the reduction in fares if it be allowed that it induced 4,000 additional persons per month to travel by railway.

It follows, therefore, that the remaining 4,000 would, in any case, have travelled at the rates fixed in April.

From

* It is worthy of remark, that the number appears to have obtained its maximum for a time, and that a decrease rather than an increase may be expected. Such an event as the cessation of the influx of Chinese would sensibly affect the numbers and the railway receipts.

† In 1856 the passenger traffic was as follows, from Sydney:—

	1st Class.	2nd Class.	3rd Class.
April	1,460	1,357	11,819
May	1,902	2,238	13,278
June	1,607	1,834	11,661

‡ The traffic was as under:—

	Sydney.			Parramatta.			Liverpool.		
	1st Class.	2nd Class.	3rd Class.	1st Class.	2nd Class.	3rd Class.	1st Class.	2nd Class.	3rd Class.
April....	720	1,239	7,542	303	630	3,785	143	218	1,609
August..	768	1,102	8,569	332	590	3,523	153	272	2,096
Increase	38		1,027	29			10	54	487
Decrease		137			40	262			

From Tables 13 to 21 it may be found that the number of each class of passengers travelling during the eight months ending 31st December, 1857, was 1,324 first class, 2,374 second class, and 18,323 third class, and the average mileage travelled by each class 11·773, 11·828, and 10·364 miles,* the mean fare being 2·98, 2·31, and 1·56 pence per mile.

Assuming that the additional 4,000 passengers per month would have contained the same proportion of each class, and travelled the same average mileage, the increase to railway receipts, had the April rates been maintained, would have been at the rate of £477 0s. 3d.,† in place of the loss of £59 per month, which has followed the reduction.

This, however, does not represent the entire question.

Horses, carriages, and dogs, are conveyed by passenger trains; and it will be seen on reference to Table 11, that there has been a considerable increase in this description of traffic, the average number conveyed for the first seven months being 74 carriages, 254 horses, and 144 dogs per month, at a cost of £125 1s. 10d., and for the latter eight months 88 carriages, 323 horses, and 151 dogs per month, at a cost of £163 4s. 10d., the increase per cent. in receipts being 30·5, the rates having remained unaltered.

It is fair to presume that one-half of this increased traffic arose from the additional passenger traffic caused by the reduction in rates, and the sum of £19 1s. 6d. per month must therefore be deducted from the loss occasioned by that reduction.

On the other hand, the conveyance of so many additional passengers necessarily occasioned an increase in the working expenses of the Railway, during the latter eight months; and on reference to Table 6 it will be seen that the expenditure per train mile run was, in the first period, 7s. 10·3d., and in the second, 9s.; that the proportion of expenditure to receipts, upon passengers only, was 76 per cent. in the first period, and 89·9 in the second; and including horses, carriages, and dogs, 72·5 per cent. in the first, as compared with 84·2 per cent. in the second; the expenditure upon all services being 74·5 per cent. in the first, as compared with 75·5 per cent. in the second period.

It would not, however, be just, to charge the entire of this increased expenditure per train mile run to the increase in passenger traffic. It will probably be sufficient to place it at something less than one-half, or 6d. per train mile run, or £158 16s. per month.

It

* These numbers are the average numbers per month, exclusive of return tickets and season tickets. The accompanying Table is interesting also as shewing the comparative working of each station.

TABLE shewing the average number per month of passengers of each class from each station to all stations, and the number of miles travelled by each class, exclusive of return tickets and season tickets, for the eight months ending 31st December, 1857.

STATION.	PASSENGERS.			MILES TRAVELLED.		
	1ST. CLASS.	2ND. CLASS.	3RD. CLASS.	1ST. CLASS.	2ND. CLASS.	3RD. CLASS.
Sydney	632	1,218	7,543	7520·25	14216·75	84040·75
Newtown	130	161	1,701	393·25	652·25	7656·8
Petersham	19	16	706	88·75	84·0	2486·5
Ashfield	62	84	1,243	269·75	425·25	6335·5
Burwood	23	69	888	147·5	446·25	5563·75
Homebush	25	45	612	193·75	352·25	4551·25
Parramatta	290	556	3,398	3782·5	7103·0	41030·5
Fairfield	3	25	342	53·25	230·75	3253·75
Liverpool	150	238	1,890	3132·75	4520·75	34990·0
Total	1,324	2,374	18,323	15587·75	28081·25	189908·8
Average mileage travelled	11·773	11·828	10·364

† The general proportion of each class of passengers being in the ratio of 6·2, 10·6, and 83·2, the numbers conveyed would be about 248 first class, 424 2nd class, and 3,328 3rd class, of whom about one-fifth would be return and season tickets. The figures are therefore as follows:—

	PASSENGERS.		MILES.		PENCE.		PENCE.
1st Class	200	×	11·773	×	4·34	=	10218·9
Returns ..	48	×	11·773	×	6·51	=	3578·8
2nd Class	340	×	11·828	×	3·2	=	12868·8
Returns ..	84	×	11·828	×	4·8	=	4768·8
3rd Class	2,663	×	10·364	×	2·19	=	60442·4
Returns ..	665	×	10·364	×	3·28	=	22605·7
					Pence	..	114483·4
					Or	£477 0 3

It results, therefore, that the entire loss of revenue to the Railway caused by the reduction in fares may be estimated at £596 6s. 9d. per month.*

It is financially wrong that a Railway should carry 8,000 passengers more per month and lose by it, and in the case of Government Railways it is socially wrong, unless it can be shewn that the conveyance by Railway of these additional passengers confers such benefits upon the country generally that the community at large should pay for it.

I must not be understood as blaming the experiment; it was a fair one to make, and was understood, I believe, at the time to be an experiment; and may yet, by having stimulated the taste for travelling by Railway, contribute ultimately to their financial prosperity. At the same time, I have no doubt the rates require adjustment, and it remains to consider what they ought to be.

In the Mother Country, the lowest rate at which companies are compelled by Act of Parliament to carry passengers is 1d. per mile, while the price of labor† is not more than one-third of the price in this Colony.

The trains by which passengers are conveyed at this rate, (and which are usually called Parliamentary Trains,) are run by the companies at such hours as are found most convenient in reference to the more profitable traffic; and to a large proportion of the passenger trains no third class carriages are attached at all. Here the public have the option of travelling by third class with every train.

Even under the disadvantages of the English system, and of the cold and wet of the English climate, a considerable majority of the passengers travel third class; and to many this is a matter of absolute necessity, from the miserable wages they receive. Here, where the genial character of the climate greatly diminishes any inconveniences arising from travelling third class, and where every facility is afforded for so doing, it is no matter of surprise that a still larger majority are induced by the very low charge to do so. In England, the per-centage proportion of passengers conveyed in 1856 was 13·30 first class, 32·75 second class, 53·92 third class, and ·03 miscellaneous; and the per-centage proportion of receipts was, 30·10 for first class, 35·00 for second class, and 32·79 for third class passengers; the average fares being respectively, 2·07d., 1·44d., and ·83d. per mile,—the ordinary third class fare being reduced by the large amount of excursion traffic.‡

In this Colony, the per-centage proportion of passengers conveyed during the eight months ending 31st December, 1857, was only 6·2 first class, only 10·6 second class, and the astonishing proportion of 83·2 third class; and the per-centage proportion of receipts, 10·9 for first class, 15·3 for second class, and 73·8 for third class.

When the difference in the per-centage proportion of each class travelling in the two countries is taken into consideration, it will be found that the mean Railway fare per mile paid by this country at present does not exceed that paid in England by more than 52 per cent.

I am of opinion, after considering the rate of wages and the cost of the necessaries of life in the two countries, and also the cost of labor and materials necessary for the working of

		£	s.	d.
* The figures are as follows:—				
Receipts in April, from passengers	2,462	0	0
Do. from horses, carriages, and dogs	125	1	10
Estimated receipts from 4,000 additional passengers		477	0	3
Do. do. horses, carriages, and dogs		19	1	6
		£3,083	3	7
Receipts in December, from passengers	2,408	0	0
Do. from horses, carriages, and dogs	163	4	10
		2,566	4	10
Decrease	516	18	9
Add half of increased expenditure	79	8	0
Total loss by reduction of fares per month	596	6	9

† To what an extent this affects the working expenses of the Railway may be seen by reference to Table 23, in which are shewn the relative wages paid to those employed upon Railways at home and here.

‡ Report to the Lords of the Committee of Privy Council for Trade and Foreign Plantations, of the Proceedings of the Department relating to Railways, for the year 1856. Presented to both Houses of Parliament, by Command of Her Majesty, 20th August, 1857.

of the Railway, that the minimum charge in this Colony should not be less than double that fixed by the Parliament in England, or 2d. per mile.

Although the point is one of less importance, I have felt, perhaps, more difficulty in arriving at a conclusion upon the higher rates. It is evident that a moderate increase upon the minimum rate is sufficient to cover any expense incurred in affording the superior accommodation enjoyed, and that any considerable increase tends only to drive travellers into the third class. I consider 3½d. per mile for the first, and 3d. for the second class should be the rate adopted.

The revised scale would, therefore, stand between that of April, 1857, and the reduced scale of May, 1857, as follows:—

	1st Class.	2nd Class.	3rd Class.	Mean.
April, 1857	4-34	3-2	2-10	3-24
May, 1858	3-5	3-0	2-0	2-83
May, 1857	2-98	2-29	1-56	2-28

Upon this scale I have framed the rates to come into force on the opening of the extension to Campbelltown, which I shall have the honor to submit immediately for the consideration of the Government.

It must be observed that the public enjoy one advantage in the Railways of this Colony being public property, which they would not possess were the Railways in the hands of a company, viz., that as soon as they become self-supporting the rates can be lowered.

It may possibly be supposed by some that the proposed increase in rates, however moderate, will prove burdensome to that portion of the public using the Railway; this is a point very necessary to be considered.

By an examination of Tables, 13 to 21, it has been found that the average mileage travelled by each first class passenger from the 1st May, 1857, to the 31st December, 1857, was 11-773 miles; by each second class passenger was 11-828 miles, and by each third class passenger was 10-364 miles; and if we assume that each passenger, not being a season ticket holder, travels upon the line ten times in each year, the entire annual amount each passenger would pay under the revised, as compared with the present rates, would be, of the first class 412-05 pence in place of 350-83, or an increase of 61-22 pence per annum; of the second class 354-84 pence in place of 270-86, or an increase of 84 pence per annum; of the third class 207-28 pence in place of 161-67 pence, or an increase of 45-6 per annum, an increase in each case that could not be sensibly felt by any person in this Colony, but that would make a considerable difference in the revenue gained for the public by the Railways.*

It is necessary, before closing this subject, to draw attention to the system of season tickets established in this Colony.

Season tickets are issued upon any day for a quarter of a year at a time, and for first, second, and third class passengers.

In England third class season tickets are unknown; but by reference to Table 12 it will be seen that here, out of 1,119 season tickets taken between the opening of the line and the 31st December last, 1,035 were third class, only 39 first, and 45 second, having been issued.

This

* The figures stand as follows:—

As each passenger would travel respectively—

1st Class.	2nd Class.	3rd Class.		1st Class.	2nd Class.	3rd Class.	
117-73	118-28	103-64	{ miles per annum.	117-73	118-28	103-64	{ miles per annum.
3-5d.	3d.	2d.	{ fare per mile.	2-98	2-29	1-56	{ fare per mile.
412-05	354-84	207-28	{ payment per ann.	350-83	270-86	161-67	{ payment per ann.

The entire number of passengers who travelled in the eight months ending 31st December, 1857, were:—

1st Class.	2nd Class.	3rd Class.
13919	23785	186584
4639	7928	62194
1855-8	3171-3	21877-8
61-22	84	45-6
£473 5 1	£1,109 19 1	£4,726 15 7

The increase of revenue—the number of passengers continuing the same—would, therefore, be £6,309 19s. 9d. per annum, on a length of 22 miles.

This is not surprising when it is considered that by means of a third class season ticket a passenger using the line once a day each way now travels at the rate of $\frac{1}{2}$ d. per mile.

It might inconvenience a considerable number of persons to decline to issue third class season tickets in future; at the same time it is just that those who derive such great advantages from the Railway should contribute their fair share towards its working expenses.

I am of opinion that only two classes of season tickets should be issued, viz., first and third, the first being calculated at the rate of $1\frac{1}{2}$ d. per mile, and the third at the rate of 1d. per mile.

Thus for 4d. a day the holder of a third class season ticket, and for 6d. a day of a first class season ticket, would travel between Newtown and Sydney.

Under the system of issuing season tickets from day to day, it is difficult to establish a plan by which the collectors of tickets may know precisely the date when each season ticket expires. I propose, therefore, after the 30th instant, to issue season tickets only on the 1st day of each month, and for one month only at a time, as I have reason to believe that monthly in place of quarterly season tickets would prove a convenience to many persons.

The question has been submitted whether a season ticket entitles the holder to travel free between intermediate stations. I am of opinion that he is only entitled to travel free between the two stations named upon the ticket, and that on this condition only, season tickets should be issued.

The great importance of the question will, I trust, be sufficient apology for the length at which I have discussed the prejudicial influence of the present rates on the prosperity of the Railway, and recommended as a remedy their revision.

EFFECT OF THE SHORT LENGTH OF LINE.

The last cause to which I have to direct attention as hindering the financial success of the Railway between Sydney and Liverpool, is its short length.

As a general rule, the shorter the line the heavier will be the working expenses including direction and management; but the ill effect in the present instance is chiefly felt in the goods traffic. For it must be expected that a large majority of the men who bring their drays hundreds of miles from the west or south will not care to unload them when within ten or twenty miles of Sydney, in order to send their goods by rail, especially in summer time, when the roads are good.

It is, therefore, a matter of congratulation that there is a steady, though not rapid, increase in the transport of goods by rail, and I anticipate that the facilities recently afforded* to the public will assist in promoting it. The great hope, however, of a large and remunerative goods traffic consists in judicious extensions.

EFFECT OF THE EXTENSION TO CAMPBELLTOWN.

The line between Liverpool and Campbelltown, 12 miles in length, will be opened in a few days; its probable effect upon the revenue of the Southern Railway may first be considered.

The cost of this extension will, owing to the care and skill of the Engineer-in-Chief,† not exceed £7,000 per mile, exclusive of land and rolling stock, and the entire cost will, I anticipate, not be more than £9,000 per mile.

I estimate the gross receipts of the Southern Line for the year 1859, at £75,000; the gross expenditure at £40,800, the proportion of expenditure to receipts at 54·4 per cent.; the net receipts at £34,200, and the rate of interest at 3·37 on £1,013,621,‡ or nearly 3½ per cent. on the total capital invested on the Great Southern Line.

The

* See arrangements for "The Collection and Delivery of Goods," published 28th December 1857: also the revised scale of "Classes and Rates for Goods Traffic," issued 13th February, 1858.

† Mr. Whitton.

‡ The cost of the Line to Liverpool, 31st December, 1857, was..	£ 905,621	0	0
Campbelltown Line.. .. .	108,000	0	0
	<u>£1,013,621</u>	<u>0</u>	<u>0</u>

The passenger receipts are calculated on the revised rates, and it is assumed the present goods traffic will double within the year. The detailed statement of the estimate will be found in Table 24.

The Campbelltown Extension may, therefore, be considered as likely to prove financially successful.

It is necessary, however, in order to facilitate the transit of goods by the line to improve the condition of the direct road from the Cowpasture Road to Campbelltown, and to this I shall have the honor to request your attention later.

A large increase in passenger traffic can scarcely be expected; but must be dependent on the growth of population and the further settlement of the country. Indeed some time must always be allowed for the development of the traffic of any newly opened line, whether passenger or goods.

COMPARISON BETWEEN RAILWAYS IN THE MOTHER COUNTRY AND IN NEW SOUTH WALES.

It may be useful, before entering into the question of further Railway extensions, to compare the original cost and present receipts and expenditure of the Great Southern Railway with those of Railways in the Mother Country.

The cost of Railways in England has averaged £40,288 per mile, in Scotland £27,750, and in Ireland £14,808; but the average cost of the lines for which Acts have been obtained since 1848, has only been £12,273 per mile in England, £5,408 per mile in Scotland, and £6,716 per mile in Ireland.

The cost of the line to Parramatta has already been stated at £49,458.7 per mile, from Parramatta to Liverpool at £14,692.8 per mile, and to Campbelltown at £7,000 per mile, exclusive of outstanding charges for land; the average cost of the whole per mile being £29,812.4.

When the price of labor in this Colony is considered, the extra charges for freight upon materials from England, and the difficulties and consequently increased expense attendant upon the construction of large works in a new country, it will be admitted that the cost at which Railway works in this Colony are now being constructed will bear a very favorable comparison with the cost of those lately made in the Mother Country, and is such as to present no serious obstacle to further Railway extensions.

The receipts in England in the year 1849 for 4355.5 miles of Railway were £2,345; and in 1856 for 6332 miles opened, were £3,120 per mile per annum; in Scotland in the year 1849, the receipts were £1,498 on 795.5 miles open; and in 1856, £2,022 on 1147 miles; in Ireland, £975 per mile on 428.5 miles in 1849; and £1,092 on 1023 miles in 1856; the average for Great Britain and Ireland being £2,115 per mile on 5579.5 miles open in 1849; and £2,724 per mile on 8502 miles in 1856.

The average working expenses per mile of Railway open in 1856 were in England and Wales £1,531; in Scotland £970, and in Ireland £427.

The proportion per cent. of expenditure to receipts in the year 1856 varied from 92 to 26 per cent, the mean being 49 per cent. in England; from 68 to 42, the mean being 47 in Scotland; from 115 to 37 in Ireland, the mean being 39; and the average for Scotland, England, and Ireland 47.

The interest on the capital invested varied in the year 1854, as regards the English and Welsh Lines from .26 to 8.42, there being in a few cases a deficiency, and the mean being 3.78 per cent. In the year 1856, the interest varied from 1.21 to 8.19, the mean being 4.07.*

The receipts on the Great Southern Railway for the quarter ending 31st ultimo, were £12,379 0s. 7d., or at the rate of £2,250 per mile per annum on 22 miles of Railway only; the working expenses were at the rate of £1,386 per mile per annum; the proportion of expenditure to receipts being 61.6 per cent; and the interest on the capital invested being at the rate of 2 per cent. per annum.

That with a length of only 22 miles of line open the earnings should be £2,250 per mile per annum as compared with £2,724 in the Mother Country, and that with a scale of fares

* Report on the proceedings of the Department relating to Railways for the year 1856, by Captain Douglas Galton, Royal Engineers.

fares fixed at not more than 52 per cent. above those in England, with wages at three times the price, and additional expense for almost every article necessary for the working of the Railway, the proportion per cent. of expenditure to receipts should here be only *61·6 as compared with 49 in England, must be considered as highly satisfactory; and these facts, coupled with that of the reduction in the cost of Railway construction, are perhaps the best refutation that can be given to the inconsiderate statements that are sometimes made relative to Government management of Railways.

If the comparison be further pursued, by taking the effect of the Campbelltown extension into consideration, the result will be still more favorable to the Colony; and it will be conceded that in these comparisons there is nothing to discourage further Railway extensions in this country.

The permanent-way materials in store on the 31st December, 1857, amounting in value to £15,142 13s. 7d. at Sydney, and £17,065 10s. 6d. at Newcastle, are not included in the sum upon which the lines opened should pay interest, as they are not required for these lines, but they furnish a reason for further extension, as the capital invested in them is now lying dead.

EFFECT OF EXTENSIONS TO PENRITH AND PICTON.

In the Estimates now before Parliament, it is proposed to extend to Penrith to the westward, and Picton to the south.

The estimate for the line to Penrith, including land and rolling stock, is £233,000, or £10,071·2 per mile, the distance being 21·75 miles; and the estimate for the line to Picton, including land and rolling stock, and allowing £15,000 for a bridge across the Nepean, at Menangle, is £274,000, or £13,200 per mile, the distance being 20 miles.

It is not possible to state with certainty what the financial result of these extensions will be, but from Table 24 it will be seen that I estimate the gross receipts of the Southern Line, including the extension to Penrith, but exclusive of that to Picton, at £130,000 a year, the gross expenditure at £66,900 a year, the proportion of expenditure to receipts at 51·1 per cent., the net receipts at £63,100, and the interest at the rate of 5·05 on £1,246,621·†

I estimate the gross receipts of the Southern Line, including the extension to Picton, but exclusive of that to Penrith, at £110,000, the gross expenditure at £64,800, the proportion of expenditure to receipts at 58·9 per cent., the net receipts to £46,200, and the interest at the rate of 3·58 on £1,287,621·‡

If both of these extensions be supposed constructed and opened, their joint effect on the Great Southern Railway would be to reduce the mean cost of construction to £20,074·2§ per mile, the proportion of expenditure to receipts to 54·7 per cent., and the rate of interest upon the total capital to 4·66 per cent. per annum.

If, therefore, the data upon which the above estimates are made be considered as sufficiently reliable, the extensions proposed for the Great Southern Railway would render it self-supporting. Its present condition admits of favorable comparison with the Railways of the Mother Country, and neither in its past cost, present working, nor future prospects, is there anything sufficient to prevent such hinderances to its prosperity, as arise from the short length of line at present open, being removed by the construction of judicious extensions.

In

* The proportion per cent. of expenditure to receipts in America varies from 55 to 60 per cent., and in Belgium from 72 to 63 per cent.

Miles open, 75·75 £20074·2 per mile.

In my first Report, dated 21st August, 1857, I ventured to give as strong a recommendation as I felt my short residence in the Colony justified, that the extensions towards Penrith and Picton should be proceeded with; and I have now only to repeat that recommendation.

In so doing, however, I must advert to the fact, to which I shall have the honor later more particularly to request attention, that the best line of country to connect Bathurst with Sydney by rail is not yet determined.

It is necessary, also, that I should draw attention to the high price* asked for land taken and for severance. This forms so serious an item in Railway expenditure in this Colony as to render it advisable for the Government, in all future sales of land, to provide for securing so much as may be necessary for the construction of Railways, or other means of internal communication, upon more reasonable terms as compared with the price originally paid for the land; nor will this entail hardship upon individual owners, since it will be admitted that the advantages arising from the passage of a Railway through the land in any country, and especially in a new country, are in themselves a great compensation for the small portion taken for its construction.

THE GREAT NORTHERN RAILWAY.

I have now the honor to request consideration to the Great Northern Railway, of which I have hitherto avoided almost all mention, for the sake of greater simplicity in reasoning upon the facts I have thus far submitted.

The cost of the line from Honeysuckle Point to East Maitland up to the 31st December, 1857, has been £305,200 13s. 9d., or £18,497 per mile, the distance being 16.5 miles.†

In this amount is included the entire cost of the workshops, machinery, and store-houses at Honeysuckle Point, the advantages of which will be shared equally with the present line by all future extensions. It is exclusive, however, of outstanding claims for land, and surplus stores procured from England, and now in stock.

This line was only opened on the 30th March, 1857; the gross receipts for the nine months ending the 31st December last were £4,451 9s. 5d.; the gross expenditure £2,963 11s. 7d.; the proportion per cent. of expenditure to receipts being, therefore, 66.5 per cent.; and the net receipts £1,487 17s. 10d., giving interest at the rate of 64 per cent. per annum on the capital invested.

The returns for the first quarter of the present year appear somewhat more favorable the gross receipts for the three months ending 31st ultimo having amounted to £2,682 11s. 8d., and the proportion of expenditure to receipts to 37.2 per cent.

It must be observed, however, that of these gross receipts £643 5s. were derived from sources which cannot be regarded as permanent; the way and works also were maintained by the contractor under his contract until the middle of March, and this additional expense is now a charge upon the Railway receipts.

If the amount necessary for maintenance of way be added to the gross expenditure of the last quarter, and the amount derived from temporary sources be deducted from the gross receipts, the working expenses would absorb the entire revenue.

This Railway has labored not only under the disadvantages the Southern Railway has suffered from, but under two others of, at least, equal importance; it has no extensive population at either terminus, and it has to contend with steamers in direct communication with Sydney at one end, and with Morpeth at the other,—a town situated on a river always navigable, and within three or four miles of the terminus at Maitland.

There are, however, extensive coal fields in the neighbourhood of Newcastle, and from these, I am informed, it has always been anticipated a very large share of the traffic upon this

* A value at the rate of £28,000 per acre has in one case been suggested. It is just, however, to add that many claims are reasonable.

† Of the sum of £366,514 3s. 3d. expended upon the Northern Line to the 31st December, 1857, £3,998 1s. 5d. is to be charged against the extension to West Maitland, £39,288 4s. 1d. to rolling stock, £17,065 10s. 6d. for permanent way materials in store, and £961 13s. 6d. for stores for the working of the line.

The Northern Line between Honeysuckle Point and East Maitland is a single line with double way works.

this line would arise; but until proper wharves and appliances for shipping the coal have been constructed at Newcastle, it cannot be expected that these anticipations will be realized.

An extension, 67 chains in length, from Honeysuckle Point into Newcastle was opened on the 19th ultimo. A very inconvenient curve and dip have necessarily been made in this line, in order to enable the trains to pass under the bridge upon which the tramway of the Australian Agricultural Company crosses the Maitland road; but, I understand the Company contemplate the removal of this bridge as early as possible, after which the direct course of the line will be restored.

The attention of the Government has already been drawn to the fact of the Coal and Copper Company crossing this line with a locomotive on the level.

This extension has afforded that advantage to Newcastle which I propose to provide for Sydney by the construction of the tramway from Redfern to Sydney Cove.

Upon the subject of fares I need here only remark they should be equal upon both Railways.

However great the disadvantage of the short length of its line may be to the Southern Railway, the prejudicial effect of the same cause upon the prosperity of the Northern has been even greater. It is not to be expected that carriers will travel from West to East Maitland for the sake of sending their goods 17 miles by Railway to Newcastle, to be there shipped on board the steamer, when they can ship them direct at Morpeth.

Great progress has been made in the extension from East to West Maitland, a distance of 2 miles 67 chains, and I anticipate this length will be opened about the middle of the year.

There are some facts in the history of this short line too instructive to be passed over in silence.

Tenders were called for, as usual, by public competition, and three were received. The lowest was from a party who was considered incompetent, and who, subsequent events have shewn, would have proved incompetent. The second was from the present contractor, and it being known that he had executed large Railway works in England, and his security for the execution of the work being good, it was, as a matter of course, given to him. The result will be a delay of some months in the opening of the line; and, had the work in the middle been taken from the contractor and given to another, supposing even that another willing and competent could have been found to take up a broken contract, the delay would have been as great, or greater, and the expense at the same time increased.

These facts merely strengthen an opinion formed after considerable experience,—that open competition by tender for large public works is not advantageous to the public service, especially in a new country, and should not be resorted to. In following the customs of other countries the chief thing to be regarded is not the customs themselves, but the principles upon which they are founded.

The dam across Wallis' Creek, and the diversion of its waters into the Hunter by another channel, and a deep cutting at East Maitland render the works upon the Maitland extension heavier than usual in this country.

I do not propose to trouble the Government with calculations of the effect these short extensions may be expected to produce upon the Great Northern Railway, similar to those I have submitted in the case of the extension to Campbelltown. It may be expected that the greater facilities the inhabitants of West Maitland will possess for travelling will lead to an increase in the number of passengers; but I am apprehensive no very marked difference will be found in the goods traffic; for the man who has travelled his hundreds of miles will think little of the extra three or four to Morpeth.

The paramount importance of considerable extension for the success of the Northern Railway is apparent; the only question is, how far will such extension pay.

In the Estimates now before Parliament, provision is made to extend as far as Singleton, a distance of 27½ miles, the estimated cost being £312,000, or £11,192 per mile.

Referring to Table 24, it will be seen that I estimate the gross receipts of the Great Northern Line, including the extension to Singleton at £80,000, the gross expenditure at £57,600,

£57,600, the proportion of expenditure to receipts at 72 per cent., the net receipts at £22,400, and the interest at the rate of 3·06 per cent. per annum, or £731,448 12s. 9d.*

These calculations are founded upon the working of the present Southern Railway, and the data made use of in my first Report, upon which too much reliance must not be placed. But as the entire traffic of the rich Northern District passes through Singleton, it is reasonable to suppose that when the Railway reaches that point it will in time become equally with the Western and Southern Lines self supporting.

It is worthy of notice, that the "general experience of Belgian Railways shows that "whatever may be the amount of traffic on any line in the first year of its complete opening, "that amount is doubled in about five years."†

In my previous Report I recommended the construction of the Northern extension then proposed, viz., a length of $18\frac{1}{2}$ miles towards Singleton; and I consider it necessary that the entire length of $27\frac{1}{2}$ miles from Maitland to Singleton should be constructed, if this Railway is to become in time financially successful.

It will be seen that I have discussed the subject of further extensions quite independently of the vast social advantages that may be anticipated from their construction.

MEANS BY WHICH OTHER COUNTRIES HAVE CONSTRUCTED RAILWAYS.

I propose next to consider by what means the country can most advantageously carry out these extensions. It will be useful to see what has been done in other countries.

In England, Railways have been entirely constructed by Companies, the Government exercising a certain limited control. For this purpose, every Railway Bill is in the first instance submitted to the Board of Trade, who furnish a Report to the Select Committee of the House appointed to report upon it. When Parliament has sanctioned the line, and when it has been constructed, the works are inspected by an officer of the Board of Trade,‡ and should the Board consider from his Report that the condition of the line is not satisfactory, they have the power of deferring the opening for public traffic from time to time at pleasure, until a satisfactory report is received. They retain also a power of inspection afterwards.

The practical results§ of the English system of construction by companies have been immense convenience and advantage to the public who use, and inadequate profit to those who have constructed the Railways, a result arising principally from competing lines, the onerous charges of the Parliamentary proceedings, the heavy cost of the viaducts, tunnels, and other expensive works, and the exactions of land owners, and other interested parties.

In the United States,|| Railways have been constructed under four different arrangements.

1st. By the State.

2nd. By a company, to whose shares, capital, or mortgage debt the state has contributed, retaining an interest in the line, and some power of interference.

3rd. By a company, to whom lands have been granted, but which otherwise has not been interfered with.

4th. By a company, unassisted, and therefore not interfered with.

1st. The Railways made by the State, have not been successful, the officers appointed to manage them having been chosen by universal suffrage, sometimes triennially, sometimes annually, and rather for political reasons than as being specially qualified for the duty.

2nd.

* The figures are—

Honeysuckle Point to East Maitland	£349,448 12 9 (a)
West Maitland and Newcastle Extensions	70,000 0 0
	419,448 12 9
Singleton Line	312,000 0 0
	£731,448 12 9

(a) Exclusive of £17,665 10s. 6d. for permanent way materials in store on the 31st December last.

† Bradshaw's Shareholder's Guide, 1857.

‡ Officers of the Royal Engineers, attached to the Board of Trade for this duty.

§ Paper on French and English Railways, by Mr. Locke, M. P., January, 1858.

|| Report on the Railways of the United States, by Captain Douglas Galton, Royal Engineers, 1857.

2nd. The State and Municipal Corporations have, in several instances, given assistance to Railway Companies, the State or Corporation appointing directors in proportion to the amount contributed; but as these directors are generally elected by universal suffrage for short periods, they often desire to regulate the management of the Railway more with reference to local political objects than to its interests as a commercial speculation.

3rd. The system of granting lands to induce a company to construct a Railway, is resorted to in the Western States with remarkable success; the Railway Company being allowed to take in addition to the actual land required for the line a specified quantity in alternate lots of one square mile each on each side within a certain distance from the line.

The State in granting the land generally reserves a per centage on the gross receipts of the company. In one case in which this plan has proved highly successful, this amount is 7 per cent., the line running however for the greater part of its course through prairie land without trees, land, which with a small expenditure of labor, produces most luxuriant crops.

4th. A large number of Railways have been constructed by unassisted companies; and, in considering this fact in connexion with the rapid growth of Railways in the United States, the recent financial panic should not be lost sight of.

In a majority of States, general Railway laws have been passed, enabling corporations to be formed for making Railways, the course of which is to be approved by Railway Commissioners, or some executive authority.

Almost all Railway Companies are required to furnish annually detailed statements shewing the financial condition and working of the line; but this information is not usually made public.

A power of inspection of existing Railways by Government Officers is reserved in some States, as in Connecticut and New York, the expenses of the department being defrayed by the companies.

The New York Act is founded upon the same principles as the English Railway law, viz., that a Railway shall not be opened until in the opinion of a Government department it is ready to receive traffic safely, but that after the line has once been opened the State retains no power over it, except that of inspection. But the New York Legislature has made this power of inspection a reality, instead of its being nearly nominal, as in England. The Railroad Commissioners of New York have full power to inquire into the financial position of Railway Companies, and to publish such inquiries; they have also full power to inquire into the cause of accidents, and to make suggestions, and if these suggestions are not attended to, it is their duty to report the fact to the Legislature.

The profits in the Western States are higher than in the Eastern, where they do not bear a very different ratio to the ordinary rate of interest than is the case in England.

The arrangements for the construction of Railways in India* by Joint Stock Companies are stated to be as follows:—

1st. A uniform gauge of 5 feet 6 inches is established.

2nd. Companies are protected against their own suicidal acts, and against their injurious bearing upon the carrying trade, by giving a close control and supervision to the Government over all their proceedings.

3rd. Companies are exempted from vexatious and costly legal and Parliamentary proceedings and from the frauds attending voluntary arrangements with land-owners; and they are assisted by receiving the land itself as an equivalent for certain advantages secured to the Government.

4th. Government guarantees a limited rate (5 per cent.) of interest to the shareholders, without which no companies would have undertaken the speculation, and consequently no Railways would have been made.

5th. The Government supervision extends to a close scrutiny of companies' accounts and disbursements, thus placing a wholesome check upon any tendency to irregularities or extravagance.

6th.

* "Principles of Railway Construction Analyzed," by Lieut. Colonel J. P. Kennedy, formerly Consulting Engineer to the Supreme Government in India in the Railway Department, and now Managing Director and Chief Engineer of the Bombay Baroda and Central India Railway Company.

6th. In place of a Parliamentary investigation of the fitness of projects, this investigation is retained as a function of the Government itself, aided by one or more consulting engineers at each of the Presidencies; the supreme Government in India having a similar officer attached to it. The consulting engineers are usually officers of the H. E. I. Company's Engineers, specially selected for this duty.

One peculiar feature in the construction of some of the Madras Railway Works has been their execution by the company themselves direct; and under this system the earthworks upon this Railway were constructed at a cost of 1½d. per cubic yard,* in place of 4½d., the Surat Bazaar price for earthwork, and this system Colonel Kennedy recommends for adoption upon the Bombay works.

It possesses obvious advantages in a new country when the best official assistance is secured for superintendence that can be obtained, irrespective of the increased amount paid in salaries, which will always be found to be a very small per centage upon the saving effected by employing only the best men that can be had.

In Belgium 353 miles of Railway have been most successfully constructed and managed by the State alone. The average gross receipt upon the whole of the lines exceeded in 1856 £2,100 per mile per annum, and was rapidly increasing, experience shewing, as has already been stated, that upon these lines the traffic of the first year is doubled within 5 years.

The small State of Belgium had but just established its independence when the statesmen to whom its Government was confided, seeing the contemptuous regards cast upon it by the Powers of the North and East, resolved, by an effort of enterprise and art, to confer upon it that influence which was denied to it by its insignificant territory, its small population, and limited commerce.

They entered, therefore, upon the construction of the Belgian State Railways.

These consist of two great trunk lines, forming a cross, the intersection being at Malines. One line extends from Ostend to Liege, and Verviers, near the Prussian frontier; the other from Antwerp through Brussels by Mons to the French territory near Valenciennes.

There are several secondary lines.

The date of the law sanctioning the project was May, 1834; its execution was commenced in June of the same year. The system was constructed at the national expense, and is worked under national management.

The statesmen to whom the country is indebted for this great work were MM. Lebeau and Rogier.

The progress of the work was as follows:—

	Length in operation. Miles.
In 1841.....	212
1842.....	246
1843.....	300
1844.....	347
1847.....	353

The cost per mile was £18,016. The gross receipts in 1841, £249,250; in 1847, £593,444; in 1856, £741,300.

"The extraordinary expedition with which the Belgian Railroads were completed, has been mainly caused by the circumstance of their having been executed by the State, and their execution being conducted under the superintendence of a special Railway Committee, invested with adequate powers. By this expedient innumerable official formalities were avoided. The two Engineers, M.M. Simon and Deridder, who had proposed the project, were invested with the general direction of the works; and full powers were given them to form contracts, purchase land, and make other definitive arrangements necessary for carrying on the works, without reference to higher official powers."†

The

* The price per cubic yard in New South Wales varies from 21d. to 33d., and for rock from 48d. to 72d., according to the soil, with an additional charge of from 3d. to 6d. per yard for every quarter of a mile of lead.

The average cost of the Bombay line is estimated at £6,000 per mile; the Campbelltown line is being constructed for £7,000, and £9,000 including land and rolling stock.

† Railway Economy, by Dionysius Lardner, D.C.L., &c.

The last system under which Railways have been constructed to which I shall draw attention is the French, the leading characteristics of which are enumerated by Mr. Locke in the paper to which I have already drawn attention, to be as follows :—

1st. The State determines the locality and direction of the main arterial lines of Railway, and forbids competition within special districts. All Railways must originate with, or be sanctioned by, the State.

2nd. When the Minister of Public Works has decided that any project is of "public utility," he selects the most eligible competitor, if there be more than one, and enters into a preliminary treaty, which, when approved by the Government and the Chamber or Senate, and signed by the Emperor, becomes law. The "Cahier des charges," fixing the conditions of the concession, and the powers of the Company are settled at the same time.

The Government furnish any plans or other information in their possession; and the line is then laid out. The Cahier des charges allows considerable latitude in the selection of the line. The preliminary survey is presented by the Company to the Minister of Public Works, who, after consulting with the Conseil des Ponts et Chaussées, signifies his approval through the Préfet to the Company. Meanwhile, plans and references are prepared for each commune, or parish, which, being sent to the Préfet, are by him communicated to the Mayors of the communes. Their receipt is notified on the doors of the Church and of the Mairie, and by the beat of drum, and they remain during eight days for inspection of all who are interested. A procès-verbal is then drawn up, of all objections, for submission to the Préfet, by whom a commission is named, composed of members of the Conseil-General of the Department, the Mayors of the communes interested, and the Engineer of the Company. The report from this commission is sent by the Préfet to the Government Engineers appointed to report on the nature and fitness of the works and to superintend the fulfilment of the clauses of the concession. The report of these Engineers being then sent, with all plans, &c., to the Minister of Public Works, his final decision is obtained. The Préfet then makes his arrêté de cessibilité, declaring transferable for public utility the parcels of land marked for expropriation; the Procureur Impérial of the Civil Court of each district then requires from the Tribunal orders of expropriation; the Civil Tribunal examines whether all the formalities have been regularly fulfilled, decrees the expropriation, and from that moment all the houses, land, &c., become the property of the company, by whom the amount of indemnity, settled by agreement or by jury, must be paid. All these preliminaries occupy from six to twelve months.

3rd. Between 1823 and 1842 concessions were made to companies for various lines, but the whole were either constructed entirely at the expense of the promoters or lapsed. In 1842 a law was passed authorizing the State to construct the Railways up to "formation level," and to let, for a term of years, the working of the lines to companies who would provide the permanent-way, engines, and rolling stock. This had the effect of giving considerable impulse to the Railway system, and induced the importation of foreign capital. The law was subsequently modified by the State granting "subventions" of money instead of constructing the earthworks, &c. Up to 1842 the concessions granted were under 600 miles; but in that year alone upwards of 1,400 miles were sanctioned. Nearly all the concessions since 1842 have been based on the law of that year, or have been in the modified form of giving a "subvention" in lieu of works with a MINIMUM guaranteed interest of 4 per cent., and an extension of term to 99 years. *To this combination of pecuniary aid with a guarantee of interest may be ascribed the rapid increase in the development of the French Railway system since 1842. It is remarkable that this timely aid granted by the State has been thoroughly successful, and in no case has the guarantee for interest ever been claimed. Thus the object has been completely fulfilled without any loss to the State.*

4th. The most remarkable feature in the finance of the French Railways is the proportion which the share-capital bears to the amount raised on obligations, or bonds. In the whole capital engaged to be provided by the French Companies, amounting, in 1856, to £137,960,000, there was then £50,000,000 in shares, while the remaining 63 per cent. had to be raised on obligations, or bonds; the result being, that as the rate of profit earned on the entire cost is in excess of the current rate of interest, the dividend on the shares is increased in proportion to the excess of the rate of profit over the rate of interest; and it is estimated that the profit realized by the French Companies from this system of borrowing amounts to upwards of 3 per cent. on their share capital.

5th.

5th. The accommodation for the public on the French lines is less than on the English, permitting of greater economy, and influencing the profits.

6th. The cost of Railways in France is less than in England; but they have gradually risen from £18,600 per mile in 1841, to £26,664 per mile in 1854.

7th. The general result is, that the French system has reconciled the interests both of the promoters and the State; the average annual dividends between 1854 and 1857, for some of the Railways, having been as follows:—The Nord, 14 per cent., L'Est, 14 per cent.; L'Ouest, 10 per cent.; Lyons to the Mediterranean, in 1855, 17 per cent., and in 1857, 23 per cent.; the State at the same time having received, in return for its aid and protection from rivalry, the gratuitous conveyance of the Mails, and a tax of 10 per cent. on passengers, and on first-class goods; which two items yielded 5 per cent. on the sum of £36,000,000 of subventions. Low tariffs were also fixed for soldiers, sailors, prisoners, paupers, &c.; participation, in some cases, after certain division of profits; and the possession, at the end of the concessions, of all the Railways in France.

8th. The prosperity of the French Railways must be attributed principally to the Government having sanctioned only main arterial lines, and to the assistance given in raising the money by subvention and guarantee.

In reviewing these different systems, under which other countries have carried out Railways, it may be observed that:—

1st. The English system may be dismissed from consideration, as it is improbable UNASSISTED companies will, for many years to come, undertake the construction of main lines in this Colony.

2nd. The construction of Railways in America by the Government failed from political interference in the executive details.

The construction of Railways by companies, assisted by the Government, or Municipal Corporations, failed from those having the management being mixed up with political matters.

Upon this Captain Galton remarks—"This arrangement is false in principle, and combines two conflicting elements. If the Railway is a commercial speculation, the management should be left to the company; if, on the contrary, it is to be worked with a political object, the commercial element should be left out of view, and the line be wholly managed by the State."

In the Western States, where the soil is, for the most part, eminently fertile, the construction of lines by companies, assisted by grants of land, has been very successful.

3rd. The Indian system of the construction of the lines by Joint Stock Companies, assisted by a Government guarantee of 5 per cent. on the capital raised, appears to work successfully.

4th. In Belgium the construction of Railways and their management by the State has proved eminently successful; the Government employed the most able men they could find, and placed entire confidence in them.

5th. In France the Railways have been constructed by companies having concessions of 99 years, and who have been aided by the Government, both by subvention and guarantee; and the result is most satisfactory.

6th. In every country the Government exercises a more or less stringent control over the lines, and the principle now appears to be admitted that such a control, judiciously conducted, is a safeguard both to the public who use the line, and the public whose funds have made the line.

MEANS BY WHICH THE COLONY MAY CARRY OUT THE PROPOSED EXTENSIONS.

I do not apprehend that any serious hindrances need arise to prevent the short extensions at present proposed for this Colony being proceeded with early. Their entire cost amounts to only £820,000, including £107,000 for rails from England, and, if necessary, the expenditure of this sum may be spread over two, or even three years. At the same time, it should be observed that the more rapidly the lines are completed, the quicker will be the returns on the capital invested.

The Government might construct these works under the present system of loans, for it is not unusual after a financial crisis for the money market to become much easier than before.

Or some eminent English contractor or contractors *might be found willing to undertake the work for the Government at fair prices, and either to receive Debentures in payment on reasonable terms, or the guarantee of the Colony for the interest on the capital invested, together with a mortgage on the extensions constructed.

Or, such a firm might desire to undertake the works on the data now furnished, either on their own account alone, or in company with others as a speculation, especially if they received a concession of all future lines to be constructed in New South Wales, and assistance similar to that given in France; the Government retaining similar privileges and sufficient control.

Modifications of these systems will easily present themselves, fair to all parties; but I should deprecate any arrangement with capitalists or companies that involved the transfer to them of the existing lines, including rolling stock and stores, except upon such terms as entirely to free in time the Colony from any burden on account of them, because I believe that the existing lines will become, as I have shewn, self-supporting. Should the lines ever be transferred to companies, the public would at once lose the advantage of the reduction in rates, as soon as the lines became self-supporting, that would certainly take place were they in the hands of Government, and it would be hard, in addition to this, to be burdened with a perpetual tax for interest on any part of the first cost of their construction. In preference to this, I think the Government should proceed with the extensions themselves, and retain the management in their own hands, at any rate until the re-productive character of the lines becomes so evident as to render capitalists glad to take them.

It is not, however, for me, but for the higher authorities, to decide by what means the country can most advantageously carry out the extensions at present proposed to Penrith, Singleton, and Picton.

OBSERVATIONS UPON THE FUTURE MANAGEMENT OF GOVERNMENT RAILWAYS.

Before concluding my Report on the Railway branch of the Department under my direction, I have to submit some observations on the future management of the Railways, should the Government Railways Bill, now under the consideration of the House, be passed.

Some apprehensions have at times crossed my mind as to how far it would be possible to work the Railway efficiently as a purely Government Department; and those apprehensions would have been much stronger but for the confidence and cordial support the Commissioners have enjoyed from both the Governments under whom they have had the honor to serve since my arrival in the Colony.

Whatever phase the department may assume, certain things appear to be essentially necessary, in order to ensure the safety of the public, and the prosperity of the Railways.

- 1st. The direct and undivided responsibility of the Executive Officer entrusted with its direction to the Government.
- 2nd. Freedom from political bias, and from political interference in details.
- 3rd. To work the Railways precisely as if in the hands of a company; and, therefore,—
- 4th. The sanction of the Government to the Executive Officer to expend the sums voted by Parliament for the working expenses, without reference to higher authorities in matters of detail.
- 5th. Entire control over the working staff of the Railway.
- 6th. A speedy and simple system of Auditing the Accounts, at intervals never longer than one month.

To the last point I have already† had the honor of requesting the attention of the Government, and the others, together with this, appear to contain everything necessary to ensure the public safety and the prosperity of the Railways.

Captain Galton, in his Report on the United States Railways speaks as follows of the New York and Erie Railway:—

“The whole system is based upon a principle which seems to be one well adapted to secure economy and efficiency: viz., the maintenance of rigid discipline and such a distribution of duties as will secure *personal accountability* through every grade of the service.” The

* I am the more disposed to think this from having observed in the daily papers that Sir Samuel Morton Peto and Co., had tendered to construct the whole of the Victorian Railways on terms to be agreed upon between that Government and themselves; and that their offer had not been received, as being informal. The difficulty that it may be anticipated would arise as regards this Colony, is the small amount of work proposed to be done at present.

† Letter dated 7th April, 1858,—copy will be found in the Appendix marked B.

" The idea upon which the system is founded is, that to work a line efficiently, the responsible head must possess a complete daily history of the details of working in all their minutiae, and the following general principles are laid down to carry it into effect :—

- " 1. A proper division of responsibilities.
- " 2. Sufficient power to enable the same to be fully carried out, that such responsibilities may be real in their character.
- " 3. The means of knowing whether such responsibilities are faithfully executed.
- " 4. Great promptness in the report of all derelictions of duty, that evils may be at once corrected.
- " 5. Such information to be obtained through a system of daily reports, and checks that will not embarrass principal officers, nor lessen their influence with their subordinates.
- " 6. The adoption of a system, as a whole, which will not only enable the General Superintendent to detect errors immediately, but will also point out the delinquent.

" The General Superintendent is solely responsible to the President of the line."

The President of the line in this Colony would be the Government.

Lieutenant Colonel Kennedy, in his " Principles of Railway Construction Analyzed " writes as follows :—

" The Gold Mining Company may be ruined whilst the rag dealer derives profit from his calling, because the elements most essential to success may be deficient in the former, whilst they are concentrated in the latter.

" These elements may be defined as follows :—

- " 1. An intimate knowledge of the subject undertaken in those who project it and direct its progress.
- " 2. Forethought, perseverance, and caution in its pursuit.
- " 3. Economy and fidelity in the execution.
- " 4. Concentrated responsibility and undivided attention in the executive direction of the means employed.
- " 5. Combination of interests of the agency employed with the success of the enterprise.

" A Board of six able and irresponsible men, by attending an hour each week, would ruin a sound speculation, where a single individual, of very ordinary capacity, having a knowledge of the subject, giving his whole attention to it, and working consistently to accomplish the object in view under rationally laid down principles, would make the result remunerative."

Both these, gentlemen, are high authorities on Railway principles. I have quoted them chiefly with the object of shewing the views they entertain of the direct and individual responsibility necessary for the efficient carrying on of Railways, and of the confidence and authority necessary to be given to those held responsible.

RECAPITULATION.

The various subjects I have had the honor of thus far bringing under consideration may be briefly recapitulated.

1. It is a matter of the first consequence that the Railways of the Colony should become, as early as possible, self supporting.
2. The existing Railways are not so.
3. There is, however, a marked improvement in the present year, which may be looked upon as permanent.
4. Considerable as the improvement is, it is not sufficient to render the Railways self supporting.
5. It becomes necessary, therefore, to inquire whether any causes exist that hinder the prosperity of the Railway, and the measures that should be adopted for their removal.
6. There are three principal causes as regards the Great Southern Railway,—
The situation of the terminal station at Sydney.
The present fares.
The short length of the line.

7. The remedies proposed are—

The construction of a tramway from Redfern to Sydney Cove.

A revised scale of rates, as submitted.

Judicious extensions, including those proposed in the Estimate for 1858 to Picton and Penrith.

8. The Great Northern Railway labors not only under the same disadvantages as the Southern, but also under those of having no extensive population at either terminus, and of having a navigable river running parallel with its course.

9. Further extension is absolutely necessary for the financial prosperity of the Great Northern Railway, and the extension to Singleton, as provided for in the Estimates for 1858, is recommended.

10. The systems under which Railways have been constructed in different countries are discussed, with the view of ascertaining what measures it would be most advantageous for the Colony to adopt to carry out the extensions proposed.

11. Various systems are suggested for the decision of the higher authorities.

12. Some observations are submitted upon the future management of Government Railways.

I have thought it my duty, under the peculiar circumstances in which Railways now stand in this Colony, to discuss each of these subjects in detail, and I trust the Government will consider their great importance as a sufficient warrant for the length at which I have done so.

RAILWAY EXTENSION AND TRIAL SURVEYS.

With the sanction of the Government, I have entirely remodelled this branch of my department.

The Licensed Surveyors who were attached to the Railway Department in 1855 have returned to their duties in the Survey Department, and a saving in the Railway Survey Staff, of £7,200 a year has thus been effected.

Trial surveys have been made by these Surveyors of the country as far north as Armidale, and as far south as Yass, which, I trust, may be found of some value hereafter.

Trial surveys have also been made by the men of the Royal Engineers of the country between Parramatta, Penrith, Windsor, and Bathurst.

Upon these surveys the preliminary plans and sections for the extensions I have proposed have been prepared, and, when the general lines shown in these have been approved of, the working surveys, plans, and sections can immediately be made.

The system I have adopted consolidates for the time the survey staff upon one point; it permits of their effective superintendence, and provides for their labor being used in the most advantageous manner, and, together with other causes, has enabled me to reduce the Estimate for this branch of my department from £27,000 to £12,000 for the present year.

Under this system the country is now being explored and surveyed between the Hawkesbury and Bathurst.

I shall have the honor of submitting, as soon as these surveys have been completed, a Special Report upon this portion of the country, which I hope previously to be able to visit in person.

It will be sufficient, at present, to say that no labor is being spared by the Engineer employed upon this duty, and those under his orders,* to ascertain the best line. Ravines and gullies, never, it is believed, before entered, have been explored, and days passed in the necessary examination of valleys where it is dangerous for man, and impossible for a horse, to pass.

I am not in a position, at present, to point out the best line for a Railway to Bathurst; but I have reason to believe that a practicable line will be found, although it may possibly be necessary to cut or tunnel occasionally through soft sandstone rock, a matter of no great regret, if in so doing coal fields are opened up, which I anticipate they would be.

If

* Mr. Barton and the detachment of Royal Engineers.

If there be any truth in a rumour which has reached me—that the best line to connect Sydney with Melbourne on the one side, and with the Northern Districts on the other, would be found by way of Bathurst, great importance attaches to the present survey, in addition to that arising from a better means of communication being provided between Sydney and the Bathurst District.

Before this point can however be determined, equally careful surveys must be made of the country, both to the south and north,—a matter involving considerable time and labor.

In the meantime the survey to Bathurst is being vigorously pushed.

I do not consider the present uncertainty of the best line to Bathurst beyond the Hawkesbury a sufficient reason for deferring the line to Penrith. A considerable period must in any case elapse before a Railway will be completed to Bathurst, during which time the traffic must pass by the present main road, and *via* Penrith to Sydney; and I have already discussed the propriety of a Railway being constructed under these circumstances.

Should the valley of the Grose ultimately be found to present the best line, the Railway would cross the Hawkesbury between Penrith and Richmond, and join the Parramatta and Penrith line a few miles beyond the river. From the point of junction to Penrith would then be a short branch; and hereafter two others, for which the country is favorable, might connect Windsor and Richmond with the main line.

Whatever direction, however, the main line may ultimately take, it may be anticipated that before its action could interfere with that of a line to Penrith, the development of that part of the country will have been such, from its position as the temporary western terminal station, as to render a branch connecting it with the main line self-supporting.

Reliable trial surveys, such as that now in progress towards Bathurst, convey information absolutely requisite for the consideration of the question of further extensions, in whatever manner such extensions may be ultimately carried out.

THE ROADS.

It is not necessary for me to trouble the Government at any great length with remarks upon those portions of the main roads at present under my general direction, the question of the future management of the main roads of the Colony being already under their consideration in another form. A first step has, however, been taken towards their ultimate improvement, in accordance with the suggestions contained in my former Report.

Having been requested by the Government to undertake the repair of the Denison Bridge, at Bathurst, endangered by the floods of last winter, I selected for this duty an Engineer acquainted with the principles of the construction of roads as well as bridges, and when the duty he was more immediately sent upon was completed, directed him, with the sanction of the Government, to examine in detail the road between Parramatta and Bathurst.

My object in this was to lay before the Government a reliable statement of the cost of placing the present road between these two points in good condition, and of afterwards maintaining it; and also of what deviations, if any, were advisable, and their cost; in order that the relative expense of Railways and Roads for this district might be fairly compared, and in order to facilitate the formation of the road where necessary, and to provide for its repair and maintenance on a defined system, instead of making desultory repairs, scantily done at first with insufficient funds, and too frequently destroyed when scarcely completed.

I shall have the honor of shortly laying a report upon this road before the Government, and I have already recommended that similar steps should be taken in reference to the other Main Roads of the Colony.

There is an expenditure required upon a particular road not under my charge, *viz*, the direct road from Camden to Campbelltown, which I have already alluded to, and to which I have again to request consideration, as it bears immediately upon the future prosperity of the Southern Railway.

This road is at present undrained, and all but unformed; and there is also a part of it (Kenny's Hill) which forms a most serious obstacle to traffic along it.

A glance at the ground will shew that the road never should have passed, as at present, over the highest summit of the hill; it should be diverted into its natural course, and at the same time formed and drained throughout.

I am of opinion this work will tend so directly to increase the goods' traffic of the Railway as to entitle it to be at once considered a reproductive work, and I recommend its immediate execution.

The construction of Plank Roads in districts where metal is scarce and difficult to be obtained, and wood abundant, to which I alluded in my former Report, has received my further attention. The short lengths made at different times in this Colony, chiefly by way of experiment, or as the readiest means of effecting a temporary repair, have, from the absence of machinery and the high price of labor, been rudely put together, and at considerable cost. The reports I have received as to their duration and convenience, compared with other parts of the roads, have been favorable; but I am informed that in Victoria, Plank Roads have been tried on a large scale, and found unsuccessful. Authentic information has been sought on this subject from the Government of that Colony, which, if supplied, will furnish very interesting data for a further consideration of the value of this description of road.*

Whatever may be the description of roadway ultimately found best suited to the resources and wants of each district, the importance of improved means of communication cannot be over-rated, whether the financial prosperity of the Colony be considered or its unity as a State.

THE ELECTRIC TELEGRAPH.

In reporting, for the first time, upon this branch of my Department, it will be interesting briefly to trace the rise and progress of the Electric Telegraph, not only in New South Wales but in Australia generally, so far as I possess information upon it at present.

THE VICTORIA TELEGRAPH.

The Colony of Victoria took the lead in this great inter-colonial work, the construction of a line of Electric Telegraph to connect Melbourne with Williamstown having been directed as far back as the 10th November, 1853, completed in February, 1854, and publicly opened on the 3rd March, 1854, although, pending the introduction of the Electric Telegraph Act, 17 Victoria, No. 22, no charge was made for the transmission of messages by the public until the 1st May following.†

In September, 1854, an extension of the line was commenced, and on the 5th December following, communication with Geelong was established, and the line from Geelong to the Heads having been in progress simultaneously, communication with Queenscliff was opened on the 30th of January, 1855. A branch line from Melbourne to Sandridge was also completed and placed in operation on the 1st July, 1855, so that at this period there were in operation 72 miles of line as follows:—

Melbourne to Geelong <i>via</i> Williamstown	50 miles.
Geelong to Queenscliff	20 "
Melbourne to Sandridge	2 "
Total	72 ‡

In the month of November, 1855, it was decided to extend lines respectively from Geelong to Ballarat, and from Melbourne to Sandhurst *via* Castlemaine. The work was commenced early in May, and the line between Geelong and Ballarat, a distance of 58 miles, was permanently opened on the 14th December, 1856, and communication over the line from Melbourne to Sandhurst tested on the 20th of the same month, the distance being 125 miles.

In the year 1856, also, the Governments of Victoria and Tasmania entered into a correspondence relative to the establishment of a submarine telegraph between the two Colonies at their joint expense, the cost of the portion from Tasmania to Cape Otway to be divided equally, and a branch line from Queenscliff or Warnambool to Cape Otway to be made at the expense of Victoria.

The

* I omitted in my former Report to state the source from which I drew much of the information afforded upon these and other roads, viz., "Gillespie on Roads and Railroads."

† Report of Mr. S. W. McGowan, Superintendent of the Electric Telegraph in Victoria, dated 31 December, 1856.

‡ The cost of constructing these lines and stations, the latter being on a permanent scale, was £17,600. In May, 1856, the monthly charges were £360, and monthly receipts about £450.

The submarine portion of the line was carefully surveyed by Mr. McGowan in the months of October and November, 1857, and it has been decided the line should leave Victoria at Parker Cove, Cape Otway, and be laid down to a sandy cove in King's Island, named Victoria Cove. From thence it is to be carried across the island to Sea Elephant Bay, and from this point to the north-western bight of Hunter or Barren Island, passing about three quarters of a mile north of Albatross Island; from the north the line passes to a cove on the south side of Hunter Island, nearly opposite the lower end of Stack Island, and thence to a high sand patch about a mile to the westward, and two miles from Cape Grim, in Tasmania.*

The cable suggested by Mr. McGowan is a single copper wire cable, the wire of number 16 gauge, the cable to weigh not less than one ton to the mile; the extreme cost of the entire line was estimated at £33,000 in 1856.†

The effect of this line, when carried out, will be to place Hobart Town in instantaneous communication with Adelaide and Sydney *via* Melbourne, as soon as the inter-colonial lines in progress are completed.

A contract for the portion from Cape Otway to Cape Grim was made on the 7th instant; the date fixed for completion being the 1st May, 1859, and the cost £25,000.

In the course of the year 1857 the telegraphic lines to the western and north-eastern boundaries of Victoria have also been completed; the line *via* Ballarat, Fiery Creek, Hexham, Warrnambool, and Portland to the South Australian boundary having been completed on the 29th December, 1857; and that to the River Murray opposite Albury, *via* Sandhurst, Kilmore, Longwood, Benalla, Wangaratta, Beechworth and Belvoir on the 5th of the same month. The distance from Ballarat to Portland being 230 miles; and from Melbourne to Portland, 338 miles; and from Melbourne to the River Murray, 250 miles.

The lines contemplated for construction during the year 1858 are an extension from Raglan (Fiery Creek) to Ararat; Castlemaine to Ballarat, embracing, *en route*, Maryborough, Dunolly, Creswick, &c.; Sandhurst to Echuca on the River Murray; and the line, already alluded to, now fixed from Geelong to Cape Otway to meet the submarine line to Tasmania.

Such have been, up to the present time, the exertions of Victoria to establish inter-colonial telegraphic communications; and one cannot but admire the ability and energy with which they have been carried on.

The system of construction is extremely simple, and in accordance with that pursued in America.

The posts used are saplings of blue gum, red gum, white gum, stringy-bark, and iron-bark, except between Melbourne and Sandridge, the posts there being of Baltic deal.

The measurement of each sapling is usually twenty-five feet in length by nine inches square at the base, tapered to five inches at the top; the base of the post is thoroughly charred and tarred for five feet six inches in height, and is buried five feet in the ground, the holes being bored by earth augers. There are thirty posts to each mile.

The insulators are "bell pattern," of the best quality, of hard baked and highly glazed earthenware.

A

* The particulars of the distances, and the length of submarine cable and land line which it will be necessary to provide, are as follows:—

PLACES.	Actual Distance.	Length of Cable recommended.
	Miles.	Miles.
Cape Otway to Victoria Cove, King's Island.....	49	56
Victoria Cove to Sea Elephant Bay (land line).....	18	..
Sea Elephant Bay to North-west Bight, Hunter Island.....	48	55
North-west Bight to South Cove (land line).....	8	..
South Cove to Tasmania.....	4½	6
TOTAL.....	127½	117

† Shortland's Bluff to Cape Otway, say 150 miles, at £60..... 9,000
Cape Otway to Cape Grim, at £100..... 15,000
Cape Grim to George Town, at £60..... 9,000

Total..... £33,000

A single conducting wire of number 6 galvanized iron is found sufficient to meet all the ordinary requirements of traffic.

The cost of the lines has varied considerably,—the first, between Melbourne and Williamstown having been contracted for at £193 15s. per mile; the second, between Williamstown and Queenscliffe, at £115 15s. From Geelong to Ballarat the line cost £82, and from Melbourne to Sandhurst £73 per mile; the extensions from Ballarat to the South Australian frontier, and from Melbourne to the Murray, on the New South Wales boundary, having cost respectively £65 10s. and £59 15s. per mile.

The system adopted in working is the Morse, the instrument used being Morse's Recording Telegraph, usually in the single acting form; the double acting Morse instruments, manufactured by Siemens and Halske, of Berlin, being used at important terminal stations.* The battery employed is a Groves Battery, or Chester's patent.

The offices are kept open for the transmission of messages by the public generally from 8-30 a. m. until 8 p. m. The regulations for the transmission of telegrams are of the usual nature.

I understand that the Head Office at Melbourne is kept open all night.

In Table 23 will be found a record of the working of the lines, interesting especially as shewing the rapid increase in the number of messages sent, and consequently in the revenue.

The net receipts for the year 1857, including £1,671 8s. 8d. as the value of despatches on the public service, were £3,531 18s. 2d., affording interest at the rate of nine per cent. per annum on £40,000, the round cost of establishing the line,—but Mr. McGowan anticipates, that if office accommodation easy of access were provided at Melbourne, the revenue of that station would receive a marked addition.

SOUTH AUSTRALIAN LINES.

The construction of the Adelaide City, Port, and sea-coast line was commenced in December, 1855, opened to the Port on the 18th February, 1856, and to Le Fevre's Peninsula early in the following month. Between Adelaide and the Port the line is over ground; there are thirty-two posts to the mile, and four wires; the insulators are inverted cones of white porcelain. In the streets of Adelaide a six wire cable is laid under ground in divided iron pipes, and the same has been done at the Port and across Le Fevre's Peninsula; seven hundred yards of a six wire submarine cable being laid under the creek.

The cost of the line, including the erection of stations, was about £3,024, or £600 per mile under ground, and £228 per mile over ground.

The erection of the line to Gawler Town was commenced in January, 1857, and opened to the public on the 14th of April, 1857.

The length of this line is twenty-eight and a-half miles; there are two wires, about twenty-seven posts to the mile, between sixteen and seventeen feet in length along the line of Railway, and twenty-two feet at all level crossings. The cost of the line, exclusive of the Gawler Town station, was £1,576, or £55 5s. 11d. per mile.

The estimated receipts, including £500 for messages on public service, are £1,700 for the year 1857; the expenditure, £1,232; the net receipts, £468.

The number of messages sent is remarkable, being 30,870 for sixteen months, from the 18th February, 1856, to the 30th June, 1857, as compared with 29,284, the number sent during thirty-three months, ending December, 1856, on the Victorian lines.†

In April, 1856, the Governments of South Australia and Victoria entered into communication relative to the establishment of an inter-colonial line of telegraph; and in July of the same year, Mr. Charles Todd, Superintendent of Telegraphs in South Australia, proceeded to Melbourne for the purpose of procuring information to facilitate the execution of the desired object; by whom and Mr. McGowan a joint Report was presented to their respective Governments, dated 25th August, 1856.

This Report, after alluding to the importance of connecting New South Wales with the general system, recommended, among other things, that:—

Each

* The chief novelty of this instrument consists in its double action, by means of which a message can be transmitted and received by the same instrument at the same moment.

† Report of Mr. Charles Todd, Observer and Superintendent of Telegraphs, South Australia.

Each Government should erect the line of telegraph within its own territory, and carry it to a common point on the boundary.

The same description of instrument should be used throughout the Colonies; and the code, regulations, and arrangements be as nearly as possible identical.

There should be an equal division of receipts, derived from all *inter-colonial* messages, between what stations soever they may pass.

These suggestions received the general assent of the two Governments.

Mr. Todd, in returning to Adelaide overland, made a careful survey of the country from Portland, and recommended the following as the route for the line to follow:—

“From Adelaide, by the south road, over Tapley’s Hill, through Noarlunga and Willunga to Middleton; thence along the tramway to Port Elliot, and back by the tramway to Goolwa; from Goolwa across to Hindmarsh and Mundoo Islands to Pelican Point, crossing the channels by a single wire submarine cable; and thence along the Coorong to fourteen miles beyond the Salt Creek, or near the Chinamen’s Wells; thence to Mount Benson, along the edge of a flat; through Robe Country to Robe Town; from Robe Town towards Mount Muirhead, till about twenty-two or twenty-five miles from Guichen Bay, when it should turn in the direction of Mount Gambier, and from Mount Gambier by the road to the punt near the mouth of the Glenelg,—the distance being about 325 miles.”

The Legislature approved of the route recommended, and voted in February, 1857, the sum of £20,500 to erect the line; and a contract was entered into for its construction for £40 a mile, the Government finding wire and fittings, and the estimated expense, excluding buildings, but including instruments, batteries, and station stores, being £60 per mile.

In this is included ten miles of submarine cable, at £80 per mile, laid under the Goolwa Channel and Lake Alexandrina. The cable weighs only 17 cwt. to the mile, the core consisting of seven copper wires, (No. 18), forming one conductor, well insulated by a thick coating of gutta percha, and the whole protected by 18 strands of (No. 16) iron wire.

The system of construction, the instruments and materials used, and the general arrangements for working, are closely assimilated to those of Victoria. The posts are, however, only 22 feet long in place of 25; a large extent of the country traversed being destitute of serviceable timber.

This line is intended to be opened on the 1st proximo; and it must be very satisfactory to those who by their efforts and cordial co-operation, have contributed so materially to its success, to see inter-colonial communication so rapidly advancing.

THE TASMANIAN LINES.

I have not received any official report upon the lines that are being constructed in Tasmania, and am therefore indebted to the Reports of Messrs. McGowan and Todd, and to the statements of the daily press, for the scanty information I can at present submit.

I learn, however, that in July, 1856, Mr. Champ, then the Honorable the Colonial Secretary in Tasmania, visited Melbourne for the purpose of inspecting the Electric Telegraph, prior to its introduction into Tasmania, and that, on his return, a line from Georgetown to Mount Lewis was commenced.

In September of the same year a correspondence was opened between the Government of Tasmania and that of Victoria, relative to the establishment of telegraphic inter-communication, the result of which has been the undertaking of the submarine line from Cape Otway to Cape Grim, which I have already detailed in my sketch of the Victoria lines.

This line will be in connexion with that to Hobart Town, *via* Circular Head, Georgetown, and Launceston.

I am under the impression that the line, or a portion of the line, between Georgetown, Launceston, and Hobart Town, is now in operation.

The distance between Melbourne and Hobart Town is 682 miles by telegraph, the estimated cost of the line being £45,000.*

WESTERN AUSTRALIA.

I have no information respecting the construction of telegraphic lines in this portion of Australia.

NEW

* Reports of Messrs. McGowan and Todd, and “Correspondence relative to the Establishment of Electro-Telegraphic Communication between the Australian Colonies.” Victoria, 1856.

NEW SOUTH WALES LINES.

While the construction of lines was commenced in Victoria as far back as the end of 1853, and in South Australia at the end of 1855, no contract was made for their construction in this Colony till the middle of May, 1857; it is not, therefore, surprising, that telegraphic communication should be less advanced here than in the sister Colonies.

As far back, however, as the end of March, 1854, an Estimate of the cost of constructing a line ten miles in length was ordered and sent in to the Government. The estimate amounted to £200 a mile.*

Towards the end of 1855 (November), the attention of the Government appears to have been again turned to this subject,—a Report from Mr. McGowan, of the probable cost of constructing a line between Melbourne and Sydney having been laid before it †

In August, 1856, a further communication was made to the Government on this subject.‡

In September of the same year, the Chief Secretary, Melbourne, addressed the Colonial Secretary, Sydney, requesting to be informed whether, in the event of the Electric Telegraph being extended to the Victoria side of the river Murray, the Government of New South Wales would undertake to construct a line from Sydney to connect with it.

A Select Committee of the Legislative Assembly§ was appointed on the 31st October, to consider and report upon the subject of the introduction into New South Wales of the Electric Telegraph. The Committee recommended, on the 18th December,—

“That immediate steps be taken, in concert with the Government of Victoria, to connect the Cities of Sydney and Melbourne by Electric Telegraph.

“That a sum not exceeding £38,000 be placed on the Estimates for 1857 for that purpose.”

The Committee recommended also the connexion, at an early period, of the town of Bathurst with the metropolis by Electric Telegraph.

The sum of £38,000 was accordingly placed upon the Estimates for 1857.

A contract was entered into for the construction of the line from Liverpool to Albury, on the 11th of May last, tenders having been called for by public competition.

The result appears to afford another proof of the inadequacy of the system of tender by public competition to provide efficiently for the execution of large public works, especially in a new country.

I was not in the Colony at the time, but I am aware that every pains were taken to ascertain the competency of the contractor and his sureties, to whom, as being the lowest tender, the work was given.

At the same time the Government undertook the construction themselves of the line along the Railway to Liverpool.

It soon became apparent that the contractor was incompetent to perform the work he had undertaken, and, after allowing full time to give him a fair trial, the Government terminated the contract on the 12th October, on the only clause giving the power—that of unnecessary delay.

Negotiations were at once entered into, with the view of avoiding delay, with parties competent to execute the work; the Government considered the terms asked too high, and tenders were again called for by public competition.

The usual delays inevitably attendant upon this system of carrying on public works occurred, and, although the tender of the present contractor was provisionally accepted on the 12th November, it was not until the 18th January last the bond was signed.

The line between Berrima and Picton was completed on the 1st instant, a distance of thirty-three miles; since then the progress of the work has been more satisfactory; and the line will be ready to be opened to Goulburn about the 1st proximo; but I cannot anticipate that the line will now be completed in the time specified without the most strenuous exertions on the part of the contractor.

The

* By Captain Mann, C.E., letter dated 29 March, 1854.

† By Captain Towns, letter dated 1 November, 1855.

‡ By Mr. Samuel, letter dated 12 August, 1856.

§ Mr. Parkes, Chairman.

The price of the present contract is £57 per mile, without instruments or buildings; that of the original contract having been £49 14s. 6d.

In the meantime considerable difficulty had been experienced relative to the line between Liverpool and Pieton, a distance of thirty-three miles.

When the first contract was terminated, the works were very incomplete upon this portion, and immediately upon its termination several parties waited upon me to state that they had not been paid, either for materials or labor; some of these were apparently laboring men.

It was evident that these parties had no legal claim upon the State, but the Government were very desirous that they should, if practicable, be paid.

I am happy to state that, after a delay of many months, this has been effected, and the claims sent in, up to the time of the signing of a new bond, have been paid.

The arrangement, under which this was effected, was the making of a second contract with the original contractor, for the completion of the line from Pieton to Liverpool, on condition that the sub-contractors, under the original contract, should be paid their several claims.

This contract was made on the 25th February, 1858, and the work completed on the 18th March last, the price paid being £1 per mile less than the first agreed upon, the Government taking the maintenance of the line at once into their own hands.

It is due to the sureties of this second contract to state that it was efficiently carried out.

The line between Sydney and Liverpool, 22 miles, was completed in the early part of October last, but was not then opened.

On the 27th of the same month a line to connect Sydney with the South Head was, by order of the Government, commenced, and was completed early in the following January, at a cost of £657 6s. 8d., or about £91 per mile, including instruments and station fittings.

The cost of this line was increased by most of the holes having to be put down in rock for the posts, and by additional labor in coming through the City.

Detailed statements of the Telegraph Accounts to the 31st December, 1857, will be found in the Appendix, Table 27.

Arrangements having been made with the Directors of the Exchange Company for the use of two excellent rooms in the Exchange as a head office for the present, at a nominal rent, an instrument was placed there, and the Liverpool and South Head lines connected with it, instruments being at the same time set up at those stations.

These instruments were Siemen and Halske's recording instruments, there being no single acting Morse instruments to be obtained. They will be found very useful, especially hereafter as the lines extend.

On the 26th January last, the Liverpool and South Head lines were formally opened by His Excellency the Governor General, and on the following day for general use, and they have worked satisfactorily to the present time.*

As soon as the line to Goulburn is opened, the Colony will possess the power of instantaneous communication over 130 miles.

The inhabitants of Albury having, at their own cost, continued the Victoria line to Albury, applied to the Government to have a station opened; and the necessary arrangements having been made, the Albury Station was connected with Belvoir on the 9th instant, and opened for public business. The temporary station in use has been erected and fitted at the expense of one of the inhabitants.†

I shall have the honor of immediately submitting, for the consideration of the Government, the terms upon which Mr. McGowan, (with whom I have been in communication upon the subject), proposes the accounts for inter-colonial messages should be arranged.

On the 15th March last the Government directed lines to be constructed, to connect the Signal Station at Fort Phillip, the Port Office, and Post Office, and the Railway Office, with

* These lines were constructed, and the instruments set up, under the immediate superintendence of Mr. Lay, now operating Clerk at Albury.

† Mr. Nichols.

with the South Head and the Albury lines, at a cost not exceeding £200, including instruments and batteries.

These extensions were completed on the 31st of the same month,* and they will ultimately effect a saving of labor, as messengers will no longer be required for the purpose of delivering shipping intelligence between the Harbour Office, Post Office, and Signal Station. The advantage to the Railway Department in meeting the wants, and ensuring the safety of the public using the rail, will be very great; and the more so as single lines extend. Indeed, it is barely safe to work a long single line of Railway without the security afforded by the telegraph.

Arrangements have been made by which messages can be transmitted between the Exchange and the South Head at any hour of the day or night, and the office will immediately be opened for night duty.

In order to form an economical staff of operators, who may at the same time be depended upon, young lads are being paid the nominal wages of 2s. 6d. per week, and trained up to a knowledge of telegraphy. Three are, already, fairly expert operators. I am informed this has given rise to some misconceptions as to the number of persons employed at the Exchange, but the system will be found advantageous to the public in whatever light it is viewed.

It will be necessary to take early measures to construct, or obtain, suitable buildings for stations up the country.

The construction of the New South Wales lines is similar to that of Victoria and South Australia; the instruments and batteries used are the same; and it is proposed to assimilate all the arrangements, as far as possible, to those of the sister Colonies.

The posts are sound saplings, twenty-three feet in length, nine inches at the base, and seven or eight inches at the top. They are of box, iron-bark, or stringy-bark, tarred and charred for five feet up from the butt, and the top bound with hoop-iron. They carry a single wire (No. 6, galvanized,) which is insulated from the posts by a brown earthenware insulator, of the umbrella shape, fixed on the top of the posts by a wooden, or, in some cases, iron pin, and secured by a mixture of resin, shellac, and Venice turpentine,—the wire being bound to the insulator at each point by binding-wire (No. 16), and very perfect insulation appears to be maintained. The instruments used are Morse's Recording Instruments, and the batteries are Chester's Patent; and a sulphate of copper local battery is also being tried. The Offices are open from 9 A. M. to 6 P. M., daily, Sundays excepted, and messages can be sent at any hour of the day or night between the Exchange and the South Head.

When the line is opened through to Melbourne it may be anticipated the Electric Telegraph will be a reproductive work. Mr. McGowan, as I have already stated, is of opinion the Victoria lines will pay more than nine per cent.

I submit, for the consideration of the Government, the importance of early extensions, at least, to Bathurst and Newcastle; the latter would, among more important matters, greatly facilitate the effective supervision of the Northern Railway.

The Government are aware of the immense importance of telegraphic communication with England via India.

The prosperity of the Colony, and its unity as a State, are inseparable from improvement in the existing condition of Internal Communication, whether Railways, Roads, or the Electric Telegraph be considered.

I have, &c.,

B. H. MARTINDALE.

* The assistance the Government have afforded me, by the appointment of Mr. Cracknell as Assistant Superintendent of Electric Telegraphs, permitted this service to be thus rapidly and efficiently performed.

TABLE XXIV.

APPROXIMATE ESTIMATE of Receipts and Expenditure of Railways in New South Wales, after completion to Campbelltown, Penrith, Picton, and Singleton.

RECEIPTS.

EXPENDITURE.

SYDNEY AND CAMPBELLTOWN LINE FOR 1852.

	£ s. d.		£ s. d.
Assuming the same number of passengers will travel between Campbelltown and all stations as now travel between Liverpool and all stations, and adding traffic between the Towns of Liverpool and Campbelltown themselves :—			
Passenger Traffic between Campbelltown and all stations, per annum	22,534 10 0	Working Expenses, thirty-four miles at £1,200 per mile per annum	40,800 0 0
Passenger Traffic at present on line to Liverpool, at revised rates	36,751 14 0	Net Receipts, Balance	34,200 0 0
	59,286 4 0		
Deduct three-fourths of present Passenger Traffic between Liverpool and all stations, as being through traffic transferred to Campbelltown	10,091 8 0		
Total of Passenger Traffic	49,191 16 0		
Present Receipts from Horses, Carriages, and Dogs, £180 15s. 4d. per month, and allowing this to increase in proportion to the miles open	3,362 0 0		
The Goods Traffic for the last quarter was	3,285 18 and		
Deducting, as not being permanent traffic	940 0		
Leaves	£ 2345 48 x 4 = 0981 02 p. ann.		
Assuming that the opening to Campbelltown will double this within one year :—			
Goods Traffic	18,763 16 0		
Miscellaneous Receipts, from Special Trains, Rents, Creak Rooms, &c., are at the rate of £3,331 per annum, during last quarter	3,692 8 0		
	£170,000 0 0		£ 75,000 0 0
Estimated Cost of Line to Campbelltown	£108,000 0 0		
Add Cost of Line to Liverpool	905,621 0 0		
Total Cost of Line from Sydney to Campbelltown	£1,013,621 10 4		
Upon which £34,200 gives Interest at the rate of 3-37 per annum.			

CAMPBELLTOWN LINE, INCLUDING PENRITH EXTENSION, INCLUSIVE OF PICTON EXTENSION.

	£ s. d.		£ s. d.
Assuming the same number of passengers will travel between Penrith and all stations as now travel between Parramatta and all stations, and adding traffic between the Towns of Picton and Parramatta themselves :—			
Passenger Traffic between Penrith and all stations per ann.	21,558 5 0	Working Expenses of 51-75 miles, at £1,200 per mile, per annum	65,900 0 0
Add existing Passenger Traffic on Campbelltown line	49,191 16 0	Net Receipts, Balance	63,100 0 0
Add 10 per cent. increase in Passenger Traffic from opening of line to Penrith, over thirteen and a-half miles	4,919 3 7		
Horses, Carriages, and Dogs, on Penrith Branch, in proportion to mileage	2,144 8 0		
Horses, Carriages, and Dogs, Campbelltown line	3,362 0 0		
The Goods Traffic between Penrith and Parramatta is said to be 54,000 tons annually, very little of which now comes by rail. Taking it at 27,000, over 35-25 miles	23,793 15 0		
Goods Traffic, Campbelltown line	18,763 15 9		
Miscellaneous	3,266 13 8		
TOTAL	£ 130,000 0 0		£ 130,000 0 0
Estimated Cost of Line to Campbelltown	£1,013,621 10 4		
Add Cost of Penrith Branch	233,000 0 0		
	£1,246,621 10 4		
Upon which £63,100 gives Interest at the rate of 5-05 per annum.			

CAMPBELLTOWN LINE, INCLUDING PICTON EXTENSION, INCLUSIVE OF PENRITH EXTENSION.

	£ s. d.		£ s. d.
Assuming the same number of passengers will travel to Picton, when a Terminal Station, as now travel to Liverpool, and adding Traffic between Liverpool, Campbelltown, and Picton :—			
Passenger Traffic between Picton and all stations	14,336 0 0	Working Expenses of 54 miles of Railway at £1,200 per mile, per annum	64,800 0 0
Add existing Passenger Traffic on Campbelltown Line	49,191 16 0	Net Receipts, Balance	46,200 0 0
Add 20 per cent. increase in Passenger Traffic from opening of line to Picton, over 34 miles	9,818 6 7		
Horses, Carriages, and Dogs, in proportion to mileage	5,324 0 0		
Allowing the Goods Traffic would be increased one-half	28,145 0 0		
Miscellaneous	3,961 0 0		
TOTAL	£ 111,000 0 0		£ 111,000 0 0
Estimated Cost of Line to Campbelltown	£1,013,621 10 4		
" " of Picton Branch	274,000 0 0		
	£1,287,621 10 4		
Upon which £10,200 gives Interest at the rate of 3-58 per cent. per annum.			

TABLE XXIV.—continued.

RECEIPTS.		EXPENDITURE.	
GREAT SOUTHERN LINE, INCLUDING PENRITH AND PICTON EXTENSIONS.			
Gross Receipts—		£ s. d.	£ s. d.
Campbelltown Line, as above, per annum	75,000 0 0	Working-Expenses of 7,575 miles of line at £1,200	90,300 0 0
Penrith Line	55,000 0 0		
Picton Line	35,000 0 0	Balance, Net Receipts	74,100 0 0
PER ANNUM, TOTAL	£ 165,000 0 0		£ 165,000 0 0
Estimated Cost of Campbelltown Line, £1,013,631 10 4			
" " of Penrith Line	270,000 0 0		
" " of Picton Line	274,000 0 0		
			£1,557,631 10 4
Upon which £74,100 gives Interest at the rate of 4-66 per cent. per annum.			
GREAT NORTHERN LINE, INCLUDING EXTENSION TO SINGLETON.			
Assuming that one-third of the average number of passengers on the Southern Line would travel on the Northern Line, and that the mileage travelled by these would be in proportion to the rail age owned:		£ s. d.	£ s. d.
Passenger traffic, Great Northern Line	21,422 1 0	Working Expenses of 48 miles of Railway at £1,200 per mile, per annum	57,600 0 0
Horses, Carriages, and Dogs, on the same assumption	1,584 0 0		
In 1855-6 the Goods Traffic between Singleton and Maitland was said to be 51,000 tons per annum, allowing this to be increased one-half for Coal Traffic, &c.:-		Net Receipts, Balance	22,100 0 0
Goods Traffic	51,000 0 0		
Miscellaneous	2,953 19 0		
TOTAL	£ 80,000 0 0		£ 80,000 0 0
Cost of Line from Honeysuckle Point to East Maitland £ 319,448 12 9			
" Newcastle and West Maitland Extension	70,000 0 0		
" Singleton	312,000 0 0		
			£ 701,448 12 9
Upon which £22,400 gives Interest at the rate of 3-06 per cent. per annum.			

TABLE XXV.

RETURN of Expenditure upon Railway Extension Surveys, from the 1st October (the date on which payments commenced to be made by this Department) to 31st December, 1857.

Description of Work and where situated.	By whom performed, and particulars of Expenditure.	Authority under which it is executed.	Fund from which the Expense is defrayed.	When commenced under this Department.	Whether finished or in progress.	Amount of Expenditure up to present date.
Of the Surveyors some were employed on similar service on the Southern and others on the Northern Extensions. The Railway Engineers and the Detachment of Royal Engineers were principally employed in taking Levels and making Trial Surveys for the Western Extension from Penrith towards Bathurst.	Railway Engineers for Salaries and Travelling Expenses, &c.	Vote of the Legislature.	£50,000.	1st October, 1857.	In Progress.	157 0 10
	Surveyors for Salaries and Allowances					1,066 13 4
	Royal Engineers:—					
	Working Pay					274 7 5½
	Colonial Allowance					30 10 0
	Ration Allowance					166 14 2
	Fuel, Water, and Light					5 10 4
						477 1 11½
	Contingencies.					
	Field Allowances					23 18 0
Forage	37 8 4					
Equipment	45 11 6					
Incidental Expenses	22 16 11					
Chainmen's Wages	100 16 7					
	230 11 3					707 13 2½
						£ 1,831 7 4½

TABLE XXVI.

RETURN of Expenditure upon Roads, for the year 1857.

Description of work, and where situated.	Whether Constructing or under Repair.	Authority under which it is executed.	Fund from which the expense is defrayed.	When commenced.	Whether finished or unfinished.	Amount of Expenditure up to present date.
						£ s. d.
GREAT NORTHERN ROAD	Under Repair	The Legislature.	The Consolidated Revenue.	1 Jan., 1857.	Unfinished.	10,644 14 4
GREAT SOUTHERN ROAD	Do.	Do.	Do.	Do.	Do.	8,853 9 4
GREAT WESTERN ROAD	Do.	Do.	Do.	Do.	Do.	11,794 5 8

Of these three sums £13,380 12s. 8d. were expended under the direction of the Colonial Architect, as follows:—

	£ s. d.
Great Northern Road	3,582 1 10
Great Southern Road	3,416 14 4
Great Western Road	6,381 16 6
	£ 13,380 12 8

TABLE XXVII.

RETURN of Expenditure upon Electric Telegraph, to the 31st December, 1857.

Name of Line.	Authority under which it is executed.	When commenced.	Whether finished or in progress.	Description of Work.	Amount.	Total Expenditure up to present date.	Vote from which the Expenditure is defrayed.
Sydney to South Head	Vote of the Legislature	November, 1857	In progress	Cartage of Poles, Materials, &c.	54 2 9	523 1 5	£700
				Wire	59 8 2		
				Poles	150 0 0

Letter from Chief Commissioner for Railways to the Secretary for Lands and Works, on the proposed Tramway from Redfern to Sydney Cove.

*Railway Department, Sydney,
8 March, 1858.*

Sir,

In my Report upon "The Internal Communications of New South Wales," dated 21st August, 1857, I drew attention to the very inconvenient position of the present Railway Terminus, and pointed out that a simple and inexpensive remedy existed in the construction of an Iron Tramway from Redfern to Sydney Cove.

I have now the honor to submit, for the consideration of the Government, a plan and sections for such a Tramway, at a total estimated cost of £7,500, viz.:-

Construction of Tramway	£5,000.
Goods Shed	£1,000.
Rolling Stock	£1,500.

From the plan it will be seen that after leaving the station at Redfern the line passes along the centre of Pitt-street direct to the Circular Quay; and is continued as far as the yard adjoining the Ordnance Stores, upon a strip of which it is proposed to erect the Goods Shed; a small branch also leads towards the Wool Shed, and this may be continued to any extent that the mercantile and shipping interests demand.

The Goods Shed is intended to meet the wants of those parties to whom it is inconvenient to send goods intended for transmission by railway as far as Redfern; but it is not proposed to be used as a warehouse for the storage of goods.

It will be seen from the section that the tramway can in no degree interfere with the ordinary traffic of the streets; on the contrary, to heavily laden vehicles of the same gauge the iron rails would be found of great advantage: nor would it surprise me to find them after a time generally adopted in the streets of Sydney.

The Rolling Stock is proposed to consist of one or more Omnibuses, drawn by two horses, conveying railway passengers only, each capable of containing fifty or sixty persons, having a separate compartment for ladies, and receptacles to contain the ordinary luggage of passengers. These Omnibuses would run to meet every train, and would thus pass up Pitt-street five or six times a-day, and down as often. They would stop at the corners of cross-streets to take up or put down passengers. Apprehensions, I have been informed, have been expressed that they would interfere with the ordinary traffic; but they would be as completely under control as any other carriage, and a little reflection will shew how groundless such apprehensions are.

Goods would, when desired, be brought by the ordinary goods trucks to the Circular Quay, or from it to Redfern. It is proposed, if they can be built at a reasonable price, that the omnibuses should be constructed in the Colony.

The rails are upon the spot, and should the Government sanction it, the tramway can be at once proceeded with. I believe it would afford, at a small cost, all the principal advantages to be derived from the construction, at a heavy expense, of a station in Hyde Park, and be without some of the defects a station there would have. I am of opinion it would be found a great public convenience, and, by affording additional facilities, increase the transit by railway of both passengers and goods.

The entire cost being, comparatively, so small, may be defrayed from savings on the Campbelltown Extension Line.

I have, &c.,
B. H. MARTINDALE.

THE HONORABLE
THE SECRETARY FOR LANDS AND WORKS.

B.

Letter from Chief Commissioner for Railways to the Secretary for Lands and Works, on the subject of Auditing Railway Accounts.

*Railway Department, Sydney,
7 April, 1858.*

Sir,

I have the honor to request your consideration to the necessity of making provision, in the Government Railways Bill, now before the Legislature, for the audit of Railway Accounts.

The most effectual audit of any public account is that which is conducted by persons responsible to Parliament alone, and which follows most closely on the expenditure; for, the more speedily the check of the auditors follows the work of the accountant, the greater will be the security to the public, and the greater the relief to the Head of the Department entrusted with the expenditure of the public money.

The system of audit I have now to submit for your consideration will combine these advantages in a pre-eminent degree.

I propose that auditors shall be appointed by Parliament whose duty it shall be to audit the accounts of the Railway Department, under the provisions of the Railway Act, and under such instructions as shall, from time to time, be issued by Parliament.

The auditors so appointed should be required to examine the entire accounts of the Department, so that no portion of the audit shall be more than one month in arrear of the expenditure; and it should be the duty of the auditors to ascertain that the several subsidiary books are kept so that every item of revenue is properly collected, and brought to the credit of the public, and that every expenditure is on due authority.

At the end of every quarter the Railway Department should prepare, to be forwarded to the Auditor General, an Abstract of the Expenditure of the past Quarter, shewing the appropriation of the receipts and expenditure under the several votes of Parliament, and the balance remaining in hand to the credit of each vote or head of receipt.

This account should be verified by the signature of the auditors, and will enable the Auditor General to check the gross expenditure, under the revised votes, and to connect the whole with the general account of the Colony.

In comparing this system of audit with that at present contemplated for the Railway Department, it will be seen that no one desirable check is lost sight of, while the following beneficial results will be secured by its adoption. The audit may, at the discretion of the auditors, take place the day after the expenditure is carried to account, and cannot follow at an interval greater than one month. The audit will be conducted by gentlemen responsible to Parliament alone, and not through the Auditor General to the Government. Every information regarding the accounts, and on every other point, will, as before, be accessible to Government, who will possess also the same control in this respect, as well as over the expenditure, through their officer, the Commissioner, as the Bill now provides.

The immense labor of preparing duplicate cash and store accounts, vouchers of every description in duplicate, including duplicate way-bills, ticket returns, counterfoils, butts of receipts, &c., &c., will be avoided; and by the appointment of the same men to audit continually the complicated transactions of the Department, they will become conversant with the details of railway business, and questions raised can be decided by conference with the Commissioner on the spot, instead of giving rise to endless queries and replies in writing, and a chain of correspondence.

Were the Railway Accounts to be audited in the Department of the Auditor General, I understand a special additional staff would be required for the purpose; and it would be in vain to attempt to render accounts in duplicate to the Auditor General without a large addition, also, to the Railway Staff, and a consequent heavy increase of expense. Even with such an addition, the extra duties thrown upon the superior officers would tend greatly to draw off their attention from more important duties; and the further Railways extend, and the more prosperous their condition, the more these evils would be felt.

It may be anticipated, also, from the numerous and complicated details of Railway Accounts, that considerable intervals would elapse between the expenditure by the Department and a release being given to it by the Auditor General; and it appears to me neither fair to the public nor to the Commissioner to permit such an accumulation as might thus arise, of unaudited accounts, where it can be prevented without the surrender of one necessary or desirable check.

I have, &c.,
B. H. MARTINDALE.

THE HONORABLE
THE SECRETARY FOR LANDS AND WORKS.

P. S.—Should the views I have submitted be adopted, it will be necessary to make provision for their being carried out by the insertion of a clause in the present Government Railways Bill.

NEW SOUTH WALES.

GREAT NORTHERN ROAD.

(REPORT FROM COMMISSIONER FOR ROADS.)

REPORT TO THE HONORABLE THE SECRETARY FOR LANDS AND PUBLIC WORKS, BY
CAPTAIN MARTINDALE, R.E., COMMISSIONER FOR ROADS, &c., &c.

Department of Internal Communications
25 September, 1858.

SIR,

I have the honor to submit, for the information of the Government, a Report on the Great Northern Road, from the inspection of which I returned on the 4th instant.

By the Schedule of the Main Roads Management Act, 21 Vic., No. 8, the Great Northern Road is defined as follows:—"From a point in Swan-street, in the Town of Morpeth, one hundred yards easterly from the junction of George-street, *via* Maitland, Singleton, Muswellbrook, Scone, Murrumbidgee and Tamworth to Armidale."

Road extends from Morpeth to Armidale.

The total length thus included is not accurately known, but it is said to be from 230 to 236 miles.

Length of road is 236 miles.

This distance may be conveniently divided into two parts, the first extending from Morpeth to Doughboy Hollow, at the foot of the dividing Range, or about 104 miles, and the second from Doughboy Hollow to Armidale, or about 132 miles. Along the first the general course of the road may be considered as determined: along the second part as undetermined. No portion of the road has ever been completely proclaimed as a main road in a legal manner.

Road may be divided into two parts, determined and undetermined.

No part legally proclaimed.

To decide upon and mark out the exact course and width of the road where not yet defined, and to proclaim it according to law, are among the first things that should be done.

Road should be defined and proclaimed.

Between Morpeth and the dividing Range it appears advisable to deviate as little as possible from the track or road at present in use; for, although a better line might in many instances be followed, avoiding numerous unnecessary ascents and descents, yet a considerable expenditure has been incurred in clearing and forming this portion of the roads, and land has been purchased and buildings erected on the strength of vicinity to the high road.

No unnecessary deviation from the road at present in use should be made.

Some deviations are, however, absolutely necessary.

- 1st. At Falbrook, to meet a bridge urgently required over that dangerous creek, and proposed to be erected as soon as the necessary funds can be obtained. Necessary deviations—
At Falbrook.
- 2nd. Near Muswellbrook, to avoid the long and unnecessary ascent and descent over the Black Hills, through sandstone rock cut into gullies by water, stiff yellow clay, and black soil. At Muswellbrook.
- 3rd. At Warland's Range, up an abrupt spur of which the road now ascends with a gradient of 1 in $4\frac{1}{2}$, having near the base a very sharp and dangerous turn round a creek, which is crossed by a rough timber bridge at right angles to the town. At Warland's Range.

This

This pass I found to be universally considered the worst on the whole Northern Road; it may be greatly and at once improved, at the small cost of £600, and I recommend this work should be immediately proceeded with.

At Murrurundi Gap.

4th. At the dividing range, the ascent up which to the Murrurundi Gap rises with a gradient in some parts of 1 in 5, and with sharp turns exceedingly dangerous to bullock teams.

Careful examination with instruments is desirable before the improvements so necessary at this pass are decided on.

Minor deviations.

5th. Some minor deviations are required, but they are not of sufficient importance to require special mention.

No more land should be sold at Camberwell till diversion at Falbrook is decided upon.

I may observe here, that the diversion at Falbrook will pass through the township of Camberwell; the position of its proposed streets should therefore be clearly marked upon the ground, and no more land should here be sold until the line of the main road is defined.

Streets of all townships should be marked on the ground.

Indeed, generally, it appears desirable that the streets of all the townships through which the road will probably pass should be so marked upon the ground as to be easily recognized.

Measures should be taken to define and proclaim road between Morpeth and the dividing Range.

There is nothing in the deviations required between Morpeth and the dividing Range to prevent measures being immediately taken to mark out the exact course and width of this portion of the road where not yet defined, and subsequently to proclaim it.

Measures required.

A survey party should therefore be at once organized and employed, to obtain the information necessary to make a plan, longitudinal section, and book of reference of this length, starting from Morpeth; and as they advance they should lay out the width wherever the road does not pass between buildings or fences, and define it by unmistakeable and enduring marks.

The width of the road might be regulated as follows:—

Width of road.

- 1st. When the road passes between fences or buildings, the present width to be maintained.
- 2nd. When the road passes through alienated lands, and is not built or fenced in the width to be that reserved.
- 3rd. In all other cases the width to be that specified in 4 Wm. IV., No. 11, viz., 90 feet within 3 miles of towns, and 80 feet elsewhere.
- 4th. Should the width in any case between fences or buildings be less than one chain, each such case to be specially considered.

Present road and proposed deviations to be both surveyed.

As the surveyors reach each point where a deviation is required, the present road and proposed deviation should both be surveyed, and plans of both routes submitted to the Government.

Road to be proclaimed in parts.

When the plans and books of reference of any considerable length of the road have been approved of by the Government, such length might be proclaimed without waiting for the remainder.

Authorized works may proceed in the meantime.

These measures will occasion no delay in the progress of the works for which funds are available for the present year: if at once commenced, they should by the beginning of next year be so far advanced as to permit of the necessary works being undertaken upon a more extended scale than hitherto.

Additional grant required for Lochinvar.

Indeed there is a part of the present road, viz., that in the neighbourhood of Lochinvar, so utterly bad as to make the formation of it a matter of the most urgent necessity, and at the same time to render it a service beyond the funds at my command to execute; and I have therefore to submit, that an additional sum of £1,500 should be appropriated for this work.

It may be objected that the Great Northern Railway will in all probability reach Lochinvar within a few months, and very materially diminish the traffic upon the road; but in the meantime the latter must be used, and when the present Road Act was passed, the principle that the Government should not maintain a public road running parallel or nearly parallel to the public railway, though discussed, was not assented to.

In

In the Appendix marked A will be found a detailed Report upon the Great Northern Road, by the Assistant Engineer* for Roads, who accompanied me over it; I shall not therefore myself now submit any further remarks upon the present condition of the road, or upon the works required, between Morpeth and the dividing Range. I must however observe, that great credit is due to the surveyor of the Northern Road† for the manner in which he has availed himself of the materials at hand to form the road, and by which he has effected great improvements with small means.

Detailed report of Assistant Engineer for Roads.

Existing improvements made by surveyor.

Between Doughboy Hollow and Tamworth the traffic now travels by two distinct routes, running together however, as far as the Willow Tree, a distance of about 6 or 7 miles; from this point one track passes through Quirindi and over a low summit in the Currabubla Range,—the other by Wallabadah and Goonoo Goonoo to Tamworth.

Two roads in use between Doughboy Hollow and Tamworth.

The latter is the present mail road; and after having inspected both, I have no hesitation in giving it the preference—

The road by Wallabadah recommended.

1st. Because, although by no means so level, yet the ground over which it passes is naturally more capable of sustaining traffic, and is far better provided with materials for road making; the present track between Quirindi and Tamworth, a distance between 40 and 50 miles, being over level black soil, destitute of ballast or stone suitable for metal.

2nd. Because it is shorter, the distance between the Willow Tree and Tamworth being, according to the best information that I could obtain, 56 miles by the Currabubla route, and 52 miles *via* Wallabadah; and this difference may be further increased by 6 or 7 miles, by deviations to which I shall immediately draw attention.

Before quitting however the consideration of the Currabubla route, it should be mentioned that the present track to Brocza and the surrounding district diverges from it about half way between the Willow Tree and Tamworth.

The Brocza traffic.

The road to Tamworth by Wallabadah after leaving Doughboy Hollow passes over the intervening hills by a rough, unformed, and very circuitous route, with steep ascents and descents, and principally through black soil, to the Willow Tree, and Loder's station; thence it ascends and follows for some miles the crest of a hill through equally bad ground, after which the character of the soil changes and the track becomes good to Wallabadah.

Description of Wallabadah Road.

Between Wallabadah and Tamworth, a distance of about 37 miles, the road runs generally over a hard gravelly soil, forming an excellent natural road in dry weather, when not cut up by water running across it, and affording every facility for making a good road, for which abundant materials are at hand. There are, however, occasional patches of black alluvium, which becomes general towards Tamworth, the ground lying low and being sometimes flooded.

The first deviation proposed is from Doughboy Hollow by Chilcott's Creek, passing north of the Willow Tree, and also, if practicable, north of Loder's station into the present track, by which the heavy black hills between Doughboy Hollow and Berambil Creek will be avoided, and it is anticipated one or two miles saved in distance.

Deviation proposed by Chilcott's Creek.

It must be observed however, that the Yarra traffic comes into the present track about half way between Doughboy Hollow and the Willow Tree.

The Yarra traffic.

The second deviation proposed is from Wallabadah to Goonoo Goonoo by the Wallabadah Gap, and Sugar Loaf Hill, by which five or six miles will be saved, an indifferent part of the present road be avoided, and an excellent road obtained.

Deviation proposed by Sugar Loaf Hill.

The Assistant Engineer for Roads inspected this deviation while I was engaged upon the Currabubla Road, and I annex his Report‡ recommending that it should be adopted.

Report of Assistant Engineer for Roads on deviation by Sugar Loaf Hill.

While so doing Mr. Bennett met with a severe accident, by his horse falling with him; he was able however to travel on the following day.

During the few hours delay thus occasioned, the Surveyor of the Northern Road examined Chilcott's Creek, and verbally reported to me that he had formed a favorable opinion of the proposed deviation.

Surveyor's Report on Chilcott's Creek deviation.

Both

* Mr. Bennett, C.E.

† Mr. Collett.

‡ Appendix B.

Deviations to be surveyed.

Both this however and the Sugar Loaf Line, must be carefully surveyed and compared with the present route, before the adoption of either is decided upon.

Bridge at Tamworth.

The papers relative to the bridge over the Peel having been referred to me before leaving Sydney, I made when at Tamworth a careful examination of the river banks and neighbourhood; and I recommend the bridge should be built immediately above the present foot bridge.

The plans and estimate for this work will be shortly submitted for final approval, after which it can be at once proceeded with.

No material deviation required between Tamworth and the Moonbics

Between Tamworth and the summit of the Moonbics Pass, a distance of about 18 miles, no material deviation is required. The road traverses a firm hard soil, changing abruptly after about 10 miles from sandstone to granite, and is good until within about 4 miles of the summit when it becomes rugged and much waterworn.

Improvement of the ascent up the Moonbics.

The ascent up the Moonbics Range was as steep and difficult a track as it is possible to suppose could be overcome by loaded vehicles. It has been very judiciously improved at a small cost by Mr. Collett; and I have directed that officer to proceed at once with the works still urgently required, as rapidly as the means I am able to place at his disposal will permit.

Deviation from the Moonbics to Bendemeer.

It is proposed to avoid the treacherous swamps between the Moonbics Pass and Bendemeer, by following a ridge to their west.

Two roads in use between Bendemeer and Armidale. The Uralla Road preferred.

From Bendemeer two tracks exist to Armidale—the one by Salisbury Plains, the other by Uralla. After having travelled over both I consider the latter preferable, and I have reason to believe it may be considerably improved by deviations.

Both roads to be surveyed.

Both routes however should be carefully surveyed before either is decided on.

Two survey parties to be employed.

I recommend, therefore, that two parties of surveyors should be at once organized and employed—the one to start from Doughboy Hollow, the other from Tamworth, to perform duties similar to those already detailed in this Report. In the meantime no expenditure should be incurred upon this half of the Great Northern Road beyond that necessary to keep open the traffic, and remove such obstacles as materially impede it and as can be removed at a small expense.

Vigorous measures to be adopted as soon as any part is proclaimed.

As soon however as any portion of the road is proclaimed, vigorous and systematic measures should be adopted to clear, form, and maintain it.

Principles that should regulate expenditure upon the main roads.

The principles that should guide the public expenditure upon the main roads are—

- 1st. A road thoroughly sufficient for the traffic should be made at the public expense throughout each district.
- 2nd. Once made, the road should be maintained by the traffic upon it, or by local rates.
- 3rd. The more rapidly a good road is made the less will be the cost to the public.
- 4th. The funds to form such a road should be raised by loan if necessary.
- 5th. The interest due upon the loan should be defrayed from the Consolidated Revenue.
- 6th. The loan should be repaid from the funds derived from the sale of Crown Lands along the line of road.

Such a road should be formed between Morpeth and Armidale within two years.

The system under which the main roads should be formed and maintained is,

- 1st. To reduce day labour to a minimum.
- 2nd. To obtain large contracts for clearing and forming the road as proclaimed, under Government direction and supervision.
- 3rd. To let the maintenance of the entire road, or of as large portions as practicable, to one contractor for a term of years, the contractor levying and receiving the tolls fixed by the Government.

Competent contractors can be obtained.

My recent tour in the north leaves no doubt upon my mind that parties would there be found competent and willing to undertake such contracts.

The

The results of the system would be—

Results of system proposed.

- 1st. Government supervision, and therefore the public expenditure for such supervision would be reduced to a minimum.
- 2nd. The work would be both better and more economically done by large contracts.
- 3rd. The road being sooner formed the public would the sooner obtain the comfort and indirect advantages arising from its formation.
- 4th. The loss arising from the employment of toll-gate keepers would be reduced to a minimum, as the contractor would no doubt make arrangements that the wives or children should attend to the gates, while the husbands superintended portions of the road.

An immense difference would be made in the safety of the journey, and in the time occupied in travelling between Morpeth and Armidale were the road even merely cleared throughout and the creeks and rivers made passable. Importance of clearing, and of bridging, creeks and rivers.

At present long circuits are constantly made to obtain a crossing, often difficult at best, over the steep and sidling banks of the creeks, which very ordinary bridges of simple and inexpensive construction would in general obviate. Nothing perhaps is more required than these upon the road—nothing would more facilitate the traffic. Ordinary bridges over creeks required.

At Singleton, the Hunter flows between wide banks, and the traffic, when the river is in flood, is often delayed for days together. A bridge should be erected in connection with the railway. Bridges required over rivers—At Singleton.

At Aberdeen the main road again crosses the Hunter by a good ford; but to perfect the road and provide against floods a bridge is also required here. In the meantime a punt might be supplied at a cost of about £300. At Aberdeen.

The main road passes through the Pago three times; at one of these crossings a bridge of some length will be wanted. Over the Pago.

The ford over the Macdonald at Bendemeer is rough and deep. A memorial has been presented by the inhabitants praying for a bridge, and I propose submitting the necessary plans and estimates shortly. At Bendemeer.

Should the Government approve of the suggestions contained in this Report, the survey parties cannot be despatched too early. Survey parties to be despatched at once.

The measures necessary for their supervision, and for that of the works, should the system I have recommended be carried out, are matters of detail that can be arranged hereafter. Measures for supervision of surveyors and contractors.

I would suggest however to the Government, that arrangements should if possible be made to leave the maintenance of the road between Morpeth and the Toll-bar on Campbell's Hill, which has hitherto been under the Maitland Road Trust, in the hands of local authorities. Forming, as the Great Northern Road here does, part of the towns of Morpeth, East Maitland, and West Maitland, it appears more natural, and would probably be more satisfactory, that the control of this portion of it should rest with those so much interested in it, and who, being on the spot, could constantly give it close supervision. Maintenance of road from Morpeth to Toll-bar on Campbell's Hill to be under local authorities.

In the observations I have submitted to the Government, I have not been unmindful that the Northern Districts naturally look to the extension of the Railway as their ultimate main road; but under the most favorable circumstances this must be a work of some years, and I see no reason why in the meantime the condition of the Great Northern Road should not, by a moderate expenditure, be rendered such as to admit, by night as well as by day, of easy, safe, and rapid intercommunication. Until superseded by a Railway, the Great Northern Road should be such as to admit, by night as well as by day, of easy, safe, and rapid intercommunication.

I have, &c.,

B. H. MARTINDALE.

APPENDIX A.

DETAILED REPORT ON THE MAIN NORTHERN ROAD.

The Main Northern Road commences in the Town of Morpeth, and extends to Armidale.

It may be subdivided into three portions:—

- 1st. From Morpeth to Black Creek, 20 miles; lately in charge of the Maitland Road Trust.
- 2nd. From Black Creek to the Gap of Murrurundi, 83 miles; under the care of the Surveyor of the Northern Road.
- 3rd. From the Gap to Armidale, 133 miles, which has had no regular surveillance.

1ST. DIVISION. MORPETH TO BLACK CREEK.

Through the Town of Morpeth the road though rough is hard; thence to the Morpeth toll-gate the road, six months since, received a covering of soft sandstone, but now requires slight repair.

From the toll-bar to East Maitland Railway Bridge the road is worn into ruts, and the drainage destroyed; it requires immediate and thorough repair.

From East to West Maitland, and through both towns, the road is generally in good order, well shaped, and hard; it will require maintenance. The floor of the Victoria Bridge has been recently covered with rough slabbing, the jolting of heavy vehicles over which will tend very much to injure the framing of the bridge if the slabs are not covered with gravel, or taken up and replaced by planks. Materials for ballast and metal are abundant, and close to the road.

From West Maitland to $\frac{3}{4}$ of a mile beyond Campbell's toll-bar the road is in pretty fair order, and superior metal is available from the trap-dyke at the hospital; thence to the junction of the Wollombi Road is wide and unformed.

From the junction of the Wollombi Road to Spread Eagle Flat the road is over heavy yellow clay, more than $1\frac{1}{2}$ chains wide, with the drains on the extreme margin, having large lumps of stone in the centre, and being greatly cut up at the sides.

At Spread Eagle Flat is the commencement of the worst piece of road between Morpeth and Armidale, extending over a distance of 2 miles to near Lochinvar, over a flat of heavy yellow clay and black alluvium, without perceptible fall in any direction, or any available outlet for drainage. The first mile of this is now under repair by the Maitland Road Trust. The new road is formed by soft sandstone ballast, covered with nine inches of gravel, the surface is very rough, not sufficiently rounded, and the entire too low to have proper fall for the lateral drainage; at the end of this contract is a piece of log road 24 feet wide, of very rude construction; the remainder of this flat is impassable when the weather is at all wet, and the traffic goes over the out-turn through the bush. Repair is more urgently required on this piece than on any part of the entire road.

At the base of Lochinvar Hill is $\frac{1}{4}$ of a mile of road through equally bad black alluvium, but it is judiciously formed, and, though made 3 years since, only requires general repair.

The ascent and descent of Lochinvar Hill are both bad—over black alluvium and yellow clay; an intercepting drain required. Five chains of thorough repair and 3 culverts are urgently required on this part of the road.

Close to the Village of Lochinvar is a mile of undulating road over sandy clay, requiring thorough forming, ballasting, and draining; the available material is blue metal.

At Harper's Hill Flat are 25 chains of a road over heavy yellow clay and black alluvium, which is most dangerous and nearly impassable in wet; one culvert is to be rebuilt, a bridge repaired, and the road formed, at an estimated cost of £150.

The ascent of Harper's Hill is in fair order, and well provided with stone culverts, built by the ironed gangs.

At Oswald's Inn, on the descent from Harper's Hill, there are 15 chains of very bad road, through heavy black soil, to be immediately repaired.

At Little Harper's Hill the road is bad, through sand and yellow clay, but never impassable,—a plank road would be the most advisable remedy.

At Greta is rather a flat heavy sand enclosed by fences, known as the Nailor's—a plank road might also be advisable here, as iron-bark is abundant.

From Greta to Anvil Creek is wide and unformed, over sandy clay with gravel surface,—at present requiring only drainage.

The abutments of the bridge at Anvil Creek require to be defended with sheet piling, as the floods last year have scoured the bottom of the river 7 feet deeper than the foundations.

From Anvil to Black Creek the road is wide, and flat, and a portion, known as Wyndham's road, is very bad in wet weather.

On this division the immediate repairs required are the flat at end of Nixon's contract the Harper Hill Flat, the black soil at Oswald's Inn, and the Anvil Creek Bridge. Next year portions at the junction of Wollombi Road, the Lochinvar Hill, and remainder of Little Harper's Hill will require attention; but any very heavy outlay on this part of the road might be objectionable, as it will be entirely superseded by the Railway in a few months.

2ND DIVISION. BLACK CREEK TO MURRURUNDI.

At Black Creek a bridge built by the Road Surveyor has been swept away; it would probably cost £1,000 to replace it, the expenditure of which would be injudicious, as the Railway will be to Black Creek in a short time.

From

From Black Creek to Singleton the road is generally in very fair order; a narrow track from 12 to 16 feet in width of gravel ballast 9 inches thick, with numerous culverts and side drains, has been formed by the Road Surveyor; several minor bridges of logs have also been constructed.

Near Singleton, on Patrick's Plains, there are at intervals about two miles of heavy sand, which the surveyor has been instructed to clay and ballast. This with a few necessary repairs will put the road as far as Singleton in good order. The streets in Singleton are also very good, being ballasted in a similar way for the entire width.

The crossing of the Hunter at Singleton is frequently interrupted by floods; but as a bridge here would be a most expensive construction, it is not proposed to take any steps towards its erection until the railway design is completed.

Singleton to Barlow's Hill is a narrow ballast road between fences. The ascent and summit of Barlow's Hill require ballasting for $1\frac{1}{4}$ miles; at $3\frac{1}{2}$ miles from Singleton is Rix's Creek, which must ultimately be bridged.

The ascent from Rix's Creek requires more ballast. From Wiseman's Gully to Falbrook is in fair order, requiring ballast from Nolan's fences. The great defect between Singleton and Falbrook is that the road passes over all the minor summits on the ridge instead of contouring round their bases; but as the road is formed, and nothing decidedly objectionable, it does not seem advisable to alter it.

At Falbrook it was proposed to construct a causeway at the present wide crossing-place; but as a most advantageous site for a bridge exists a short distance down stream, trial pits have been sunk, and transverse sections made, with a view to the preparation of a design for a bridge above the flood level, and in the line of one of the streets of Camberwell.

Thence to Foy Brook the road is ballasted and in fair order; a bridge will ultimately be required there.

At Ravensworth, Mr. Collett diverted the road from the summit round the side of the hill, which is an improvement. This has not yet been ballasted, but should be as soon as possible. Near Liddell is $1\frac{1}{4}$ mile of road very soft and bad; wants ballasting and drainage. At Chain of Ponds is a rude bridge, with inclined platform 36 feet span.

The road near Liddell requires ballasting for some distance; at Lagoon Flat is a very bad portion, 400 yards in length, requiring immediate repair. At Leaming's Bridge the road is very rough, and crust weak—wants ballast. At Appletree Flat a bridge is required 30 feet span; along the bank of Saltwater Creek to foot of Grasstree Hill the road is very sandy and heavy, but rather better in wet; two bridges will be required across creeks now logged, and for this portion about $1\frac{1}{2}$ mile of ballasting at intervals.

At the foot of Grasstree Hill a very good bridge has been erected by the Road Surveyor, at a cost of £170; some improvement has been made in the lower ascent, which is now in fair order, the upper portion of ascent is unformed, with an intercepting drain, and being over yellow clay, is evidently very bad in wet weather. This is the first serious difficulty on the road, and some attention must be devoted to improve its inclination and surface.

From Grasstree to Pig Holes Hill the road runs along the ridge, and will require forming and ballasting; near the Pig Holes Hill a change in the direction of the road is proposed, turning off to the right to avoid the unnecessary ascent and descent of the Pig Holes and Black Hills, and the very bad rock and yellow clay of the former, and black soil of the latter; the deviation will have an uniform fall, and pass over good ground; it is about 2 miles in length.

One mile over the flat near Little Muswellbrook will require forming, draining, and ballasting. The bridge at Muswellbrook is an old structure; the foundations are being undermined; the Surveyor was directed to take measures for securing them.

From Muswellbrook to Sandy Creek, 2 miles, the road is undulating over clay soil; has been formed and drained; requires ballasting.

At Sandy Creek a bridge is much required, as the mail is frequently stopped; there is not much driftwood, bottom of creek is sandy, and ironbark abundant.

The flats of St. Hiliers, 2 miles long, want forming and ballasting, the culverts are built; this must be executed next summer at latest, as it is a very bad part of the road.

At Dartmouth Hill a piece of road has been marked out ready to commence when funds are allocated. Thence to Aberdeen the road generally wants forming, draining, and metalling; at Lynch's Gully is a very bad black unformed flat.

The proper entrance to the town of Aberdeen is through Macquarie-street; at present the road makes a detour to the right, to avoid a gully at the intersection of St. Andrew-street. The surveyor has been instructed to bridge this gully, and form the road in its proper direction.

Opposite Grundy's Inn is another difficulty, where the present road runs through an allotment which has been alienated, the legal road being over very bad ground.

The Hunter at Aberdeen is 410 feet in width, at the present crossing-place; its floods frequently interrupt transit, and as a bridge is for the present too expensive, and no boat provided, a small punt should be purchased, at a probable expense of £300.

From Aberdeen to Scone the road is almost level, through black alluvial flats, with only one hill, Mount Ararat, $2\frac{1}{4}$ miles from Aberdeen; it is intended to bring the road to the west side of this hill, the surface being so much harder than the black soil it at present passes over. For 5 miles the road is unformed and undrained, but was cleared of timber by the Road Surveyor last year.

From Mr. Dangar's gate to St. Aubins the road is very bad, but formed and drained, requiring ballast. St. Aubins to Scone one mile has been lately ballasted, but is not yet consolidated.

At Scone the direction of the road through the north end of the town is yet unsettled, as there is some objection to passing through allotments; for $\frac{3}{4}$ of a mile is a narrow ballast causeway, through a very bad black flat; then, for some distance, a similar soil traversed by waterworn gullies, undrained and unformed. At Two-mile Creek a bridge required, estimated at £80. Thence to Highland Home at intervals a considerable length of road has been formed and ballasted, and several bad creeks cut down and paved; there is yet much black alluvial soil unballasted, and some few short abrupt pinches at hills and creeks yet to be improved; at Forsythe's fences ballasting is much wanted, the traffic being there restricted to the breadth of the road.

Near the village of Wingen the road has been formed and ballasted through Raglan-street; the road still requires forming and draining.

The Highland Home Creek, which was very deep, has been cut down.

North of the Highland Home Creek the men were engaged forming a new road; at Bolland's a new and good bridge, but there is a very bad piece of road between fences, which requires ballasting.

At Brimstone Creek the road has been lately drained, and requires ballasting.

At Dangar Creek a bridge of 1-40 feet and 2-15 feet spans is required; thence to foot of Warland's Range the road has been cleared, fenced, and drained.

Warland's Range is the most serious impediment to traffic on the entire road; the present route ascends the abrupt end of a spur, with a sharp incline of 1 in $4\frac{1}{2}$, with a most acute and dangerous bend over a creek at the base, which is crossed by a rude timber causeway at right angles to the direction of the steep incline.

It is proposed to gain some height before coming to the spur by creeping up a lateral range, and crossing a creek to the main spur, with a high level bridge, and then to wind up the left side, changing at plateau to the right, winding into a cutting made on a secondary summit. After passing this summit is a narrow natural causeway, with a very steep ascent, which it has been proposed to avoid, by keeping to the right down the valley, coming on to the road half a mile further on; but it is considered more advisable to embark on this natural bridge, and by diverging half way up to reduce the upper slope considerably.

The easing of this ascent is one of the most necessary works on the entire road. It is of no use whatever doing any work north of this point until its improvement is effected. The sooner this is effected the better, as water is very scarce on the ground.

From the top of the range, for one mile, the descent should be formed and ballasted; the route then passes through a soft flat, with a piece of slab road, which cost 25s. per running yard, and crosses the River Page, where a bridge will ultimately be required—the mail and four horses having been swept away some time ago. The road crosses the Page three times before reaching Murrurundi.

At the village of Blandford there is some dispute about the direction of the road. The portion done under the grant for Warland's Flat commences there, extending towards Murrurundi for two miles; it is now a very good road, but appears to have been a deep swamp, without an outlet for drainage. The road was made by continuing to pour in ballast until a surface was formed, and even now it requires constant renewal; the gravel is in some places 18 inches deep; there are 2 miles of this road, 9 culverts, 3 platforms, the entire costing £900.

At Sutherland's Creek a bridge is required, thence the road is not very good to Drew's Inn, from which there is a very smooth, hard, and good road to Haydenton, consisting of 2 feet deep of ballast laid down two years since.

At Haydenton is the third crossing of the Page. A bridge is required, as the river severs Court House, &c., from the town. The flood range is but four feet; the span would be 120 feet, and the approximate cost £1,200. The road through Murrurundi has been formed and ballasted, but requires another coating. A small bridge required in town.

From Murrurundi to Bolland Bridge No. 2 the road is fenced in, surface hard but in a state of nature, quite uncleared, &c.

This bridge was nearly taken away by floods; and as a diversion is proposed which will avoid it, the rebuilding might be delayed. Before coming to the Deep or Station Creek a considerable deviation has been decided on; a high rocky place suitable for a bridge has been selected for crossing the creek, and the road is to be brought to it. A short distance further on commences the ascent to the Gap of Murrurundi.

Next to Warland's Range this is the great obstruction to traffic on the road. The steepest inclination is at present one in five, on a new piece of road near the summit. To attain even this, considerable excavation was necessary; and it cannot well be avoided, without immense outlay in changing the whole course of the road to the left side of the ravine. The proposal of the Road Surveyor, to ascend the spur on right of present road and cut fourteen feet at the summit of the ridge, would not improve the inclination of the worst pinches, and ought not to be adopted without an instrumental examination of the ravine to the left.

The entire road under the direct control of the Surveyor, from Black Creek to the Gap, is in comparatively good order. The ascents of Grasstree Hill, Warland's and Liverpool Ranges, are the great natural impediments. The two crossings of the Hunter, three of the Page, of Falbrook, and of Black Creek, are the principal points where heavy bridges are required, and the flats at or near Liddell, Muswellbrook, and St. Hiliers, and between Aberdeen and Scone, are the worst points in wet weather. It is proposed at once to alter the ascent to Warland's Range, to build a bridge at Falbrook, and several small bridges, and to proceed with the draining, forming, and ballasting, as far as the funds will permit.

Surveys will be required to determine the best line near Muswellbrook, and the road must be determined and accurately marked out with reference to the streets in Aberdeen, Scone, and Wingen, as well as from Murrurundi to the Gap.

3RD. DIVISION. FROM LIVERPOOL GAP TO ARMIDALE.

Is the third and largest division of the Great Northern Road; it is about 133 miles in length, and may be subdivided into two sections, from the Gap to Tamworth, about 62 miles, and thence to Armidale, 71 miles.

No portion of this road has as yet been properly proclaimed or laid out, but it seems to follow the old bullock track from station to station; it has not been in any responsible charge, but some desultory improvements, under special grants, have been executed by the Surveyor of the Northern Road.

The descent from the Gap of Murrurundi is still very steep, but has been improved, the funds having been allocated from the Doughboy grant.

At the village of Doughboy the streets do not coincide with the direction of the road. The ascent of the Doughboy, Gravestones, or Conical hill commences here; this hill is most objectionable, the ascent and descent being both very steep, and over bad black soil; some works have been executed to improve it, but without much success.

The descent to Berambil Creek is unformed, heavy, and very circuitous.

An alteration has been proposed from Doughboy to Berambil, down Chilcott's Creek, which the Road Surveyor reports would be a most decided improvement, avoiding Doughboy Hill.

From Berambil Creek to the Willow-tree, 5 miles is across a black alluvial flat, evidently very bad in wet.

From the Willow-tree there are two roads at present in use to Tamworth, one to the westward by Quirindi and Currabubla, the other *via* Cooley Creek, Wallabadah, and Goonoo Goonoo; the latter is the mail road. The road by Currabubla is 56 miles in length; by Wallabadah, 52 miles; the former, for a great part of the distance, is through the worst possible black soil. The latter is shorter and better, but still susceptible of great improvement.

Very many routes have been suggested from Doughboy to Wallabadah—a detailed instrumental examination only can determine the best.

From Wallabadah the best route will be found to be an intermediate one, passing close to the east of the Sugar-loaf Hill; this has been the subject of a detailed Report, in which it is stated that a probable expenditure of £3,000 will be required to make it passable—when a distance of 5 or 6 miles will be saved, and the road much improved.

On the existing line *via* Wallabadah there are several pieces of bad black alluvium and steep pinches—good ballast is scarce—and there are numerous creeks difficult to cross, the worst of which is the Yellow Woman's Gully, the descent to which has been lately improved by the Road Surveyor.

At 13 miles from Wallabadah the road comes close to the Goonoo Goonoo Creek, and continues along its left bank to the village site of Goonoo Goonoo, where the proposed new road comes in.

Thence to Tamworth the road continues along the Goonoo Goonoo Creek—the first half very good and hard natural surface; remainder generally over flat alluvium intersected with water-courses, and occasionally flooded.

At Tamworth the road makes a detour of nearly a mile; but as the present is the most advisable point to cross the Peel Valley, no change is recommended.

A bridge has been erected over the Goonoo Goonoo Creek, at Tamworth, and there has been considerable correspondence about a carriage bridge over the Peel, which at present has a bullock-chain suspension foot-bridge. The proper site has been the subject of much discussion, but the bridge, for many and cogent reasons, should be erected close up-stream of the present foot-bridge.

The expenditure on this part of the road should be kept as low as possible, and the works confined merely to the removing or easing impassable obstructions, until the line of road is finally determined on, when the first operation should be the clearing. It will be necessary to have the entire country from the Gap to Tamworth thoroughly examined, and the two or three best lines surveyed and sectioned, to enable a proper determination to be arrived at.

The road out of Tamworth is not yet accurately defined with respect to the direction of the streets; thence for some miles it is in very fair order, running along the alluvial banks of the Boyarra, in the bed of which is abundance of good ballast. There are some small bridges, one quite new, another in bad order, the immediate repair of which was directed; at about 8 miles from Tamworth is a dangerous sidling, where the range encroaches on the river valley; this should at once be put in order; it would cost about £150.

Ten miles from Tamworth the character of the formation changes to granite and igneous rock, the road surface, consisting of decomposed granite, is hard, but water-furrowed, requiring only judicious drainage to make a first-class road; there are some creeks to be bridged.

At McGill's, near the village of Moonbics, the old road has been fenced in, and there is a very bad creek, requiring a bridge; thence to the foot of the Moonbics Range the road is undulating, but hard; some culverts and drainage have been executed under a special grant, but there is still great room for improvement, particularly at one bad sidling close to the range, the work of which would cost £150.

At the Moonbics, the road up the first declivity has been abandoned, and a new and much easier ascent made by the Road Surveyor. The Commissioner pointed out a means of further improvement by lengthening the base, and reducing the inclination to 1 in 9 from 1 in 5 and in 7, to be carried out as funds permit. The surface of the steep incline should be at once metalled.

Thence to the upper ascent is an interval of $1\frac{1}{4}$ mile of undulating granite road the old ascent of the Upper Moonbics has also been abandoned, and a new one made by the Road Surveyor.

From

From the top of the Moonbies to Bendemeer it is proposed to carry the road along a ridge to the west of the present track, avoiding Poison Swamp and Mr. Perry's ground; it will be advisable to decide on the merits of this as soon as possible, as Mr. Perry is about to fence in his land.

At Bendemeer a bridge will be required across the Macdonald; a punt has been applied for, but the cost of a bridge will not be more than double the expense of a punt and its maintenance.

The span will require to be about 100 feet, and the position is a most favorable one; it will however interfere, to some extent, with the street arrangements, and with private property.

From Bendemeer to Armidale many changes have been proposed in the roads; at present there are two routes, one by Kentucky Ponds and Uralla, the other by Salisbury Plains; a modification of the Uralla route it is considered will be the most advisable, especially on account of the rising township and valuable gold field there.

From Bendemeer to Carlyle Gully is common to both routes; the road generally follows the top of a range, is hard, but crossed by some bad creeks; the descent to Rocky Gully is very rough, and the passage of creek at Nine Mile Ponds also circuitous and bad.

Thence to Uralla the road is very indefinite, has several bad creeks and pinches, and crosses a considerable length of black swamp at Kentucky, which might be avoided. Near Uralla the road is on a ridge, and rather better.

From Uralla to Armidale, 14 miles, the road is broken and bad; crosses some bad creeks, and passes through a considerable length of black soil close to Armidale, through the suburban lots of which the road has not yet been defined.

The direction of the road generally, from Tamworth as far as the top of the Moonbies, will not require much attention; so that the sidelings at 9 miles, and at foot of the range, should be at once put in order; and whatever funds are available, devoted to the improvement of the Moonbies ascent. The Bendemeer bridge might be at once constructed; but the route generally from the top of the Moonbies, *via* Bendemeer and Uralla to Armidale, should be closely examined, surveyed, and sectioned, before determining on the line; in the interim anything really dangerous on the road might be improved, as at the Rocky Creek and Collett's Nine Mile Pond, the expense of which would not exceed £150.

WILLIAM C. BENNETT,
Assistant Engineer for Roads.

7 September, 1858.

Captain Martindale, R.E.,
Commissioner for Roads, &c., &c.

APPENDIX B.

Singleton, 2 September, 1858.

SIR,

As directed by you, I left Tamworth on the 30th ultimo, and proceeded by mail to Goonoo Goonoo; thence riding over the country to Wallabadah in a direction nearly due south of Goonoo Goonoo, passing by the east base of the Sugar Loaf Hill, through the Wallabadah Gap, to that village.

For the first eight miles the route is nearly level, over hard ground; the ascent thence to the Sugar Loaf is gentle; from the Sugar Loaf the route passes through a valley intersected by several gullies not difficult to cross, and then has an easy ascent to the Wallabadah Gap, the passage of which is the great difficulty, and but for which the road would have been in use long since. It is a narrow rocky gorge, with steep sides, and a creek in the bottom. Side cutting in rock, about 8 or 9 feet in depth, will be required for a distance of 10 or 12 chains; thence to the village there are no difficulties, the road passing through open forest land.

With an expenditure of about £3000, on clearing, side cutting, and four bridges, the route can be made far superior to either of the lines now used. There is little, if any, black soil; no part liable to flood; the inclinations not worse than on the present line; and the distance about 17 or 18, instead of 23 miles.

I have, therefore, no hesitation in recommending its adoption as the future main road to the North; but, of course, a detailed instrumental examination of the country will be required previous to the exact line being determined.

I have, &c.,

WILLIAM C. BENNETT,
Assistant Engineer for Roads.

Captain Martindale, R.E.,
Commissioner for Roads, &c., &c.

1858.

Legislative Assembly.

NEW SOUTH WALES.

HIGH ROAD NEAR HORSE FLAT, COLLECTOR.

(RETURN RELATIVE TO REPAIRS, &c.)

Ordered by the Legislative Assembly to be Printed, 13 July, 1858.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 29 June, 1858, That there be laid upon the Table of this House,—

“(1.) A Return shewing the extent and the estimated cost of
“the repairs required on the high road near the Horse Flat,
“Collector.

“(2.) The date on which those repairs were commenced, and the
“progress which has been made.

“(3.) The number of men employed thereon per month, since
“those repairs were commenced, and the rates at which they
“have been paid.”

(*Mr. Murray.*)

HIGH ROAD NEAR HORSE FLAT, COLLECTOR.

THE SURVEYOR OF SOUTHERN ROADS to THE CHIEF COMMISSIONER OF RAILWAYS.

Berrima, 5 July, 1858.

SIR,

I have the honor to hand you the Return of work done on the Horse Flat, near Collegdar, as required by your letter of the 30th ultimo.

You will see that the first sum of £500 was made available in July, 1857, (per letter from Colonial Architect, No. 489, dated July 10th, 1857,) or in the middle of last winter, when the Flat was under water, and it would have been madness to commence the repairs. In October, as soon as the weather permitted, the work was begun, and by the 19th June, 1858, the funds were exhausted.

I have further to call your attention to the fact of the causeway at Collegdar Creek having been constructed by the same gang of men, during the same period, as it was not considered advisable to form a new gang to expend the special vote of £100 for that purpose; and three weeks were consumed on this work.

A sum of £120 was granted in 1856 for repairing part of the Collegdar Road, near the Horse Flats. This sum was expended by August, in the same year; from which date to July, 1857, there were no funds available. I mention this, as it may account for Mr. Murray's misapprehension of the time the work has been in hand.

I have, &c.,

H. MOGGRIDGE,

Surveyor of Southern Roads.

THE CHIEF COMMISSIONER
OF RAILWAYS,
Sydney.

RETURN

RETURN showing particulars of Expenditure on HORSE FLATS, near COLLEGDAR.

1858.

Legislative Assembly.

NEW SOUTH WALES.

TENTERFIELD ROAD TRUST.

(RETURNS AND CORRESPONDENCE RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 20 July, 1858.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 8 June, 1858, That there be laid upon the Table of this House :—

“ 1. A Return shewing the amount of money placed at the
“ disposal of the Road Trust of the Tenterfield and Grafton
“ Road, for the years ending 1857 and 1858, respectively.

“ 2. The amount drawn by the Trustees of such Road, from the
“ 1st January, 1857, to the 4th June, 1858.

“ 3. Copies of all correspondence between the Government and
“ the said Road Trustees upon the subject of the funds to be
“ provided by the Government for the years 1857 and 1858,
“ and upon the business of the Trust relating to such Road.”

(*Mr. Taylor.*)

SCHEDULE.

	PAGE.
I.—A Return shewing the amount of money placed at the disposal of the Road Trust of the Tenterfield and Grafton Road, for the years ending 1857 and 1858, respectively ..	3
II.—The amount drawn by the Trustees of such Road, from the 1st January, 1857, to the 4th June, 1858	3
III.—Correspondence :—	
1. Secretary for Lands and Public Works to Bench of Magistrates, Tenterfield, allotting money for the repair of the Road from that place to Grafton. 17 June, 1857	3

26. Same to Secretary to the Treasury, on the same subject. 29 June, 1858	14

TENTERFIELD ROAD TRUST.

I.—A RETURN shewing the amount of money placed at the disposal of the Road Trust of the Tenterfield and Grafton Road, for the years ending 1857 and 1858, respectively.

The amounts placed to the credit of the Bench of Magistrates, Tenterfield, for the repair of the Road from that place to Grafton, for the years 1857 and 1858, respectively :—

15 July, 1857.—First moiety of £500 allotted for this Road, for the year 1857	£250	0	0
31 December, 1857.—Second moiety of ditto	250	0	0
29 April, 1858.—For the first quarter of the year 1858, being the fourth part of the amount allotted for the year 1857	125	0	0
14 May, 1858.—For the purpose of meeting a dishonored cheque ..	75	0	0
29 June, 1858.—With a view to retire a cheque drawn by that Bench in further excess of the amount at their credit	263	3	2
	£963	3	2

II.—THE Amount drawn by the Trustees of such Road, from the 1st January, 1857, to the 4th June, 1858.

Total amount drawn by Bench of Magistrates, Tenterfield, on account of Road from that place to Grafton, from 1 January, 1857, to 4 June, 1858 .. £700 0 0

III.—CORRESPONDENCE.

No. 1.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE BENCH OF
MAGISTRATES, TENTERFIELD.

*Department of Lands and Public Works,
Sydney, 17 June, 1857.*

(Circular.)

GENTLEMEN,

The arrangements having been completed for the distribution of the sums provided by Parliament to be expended during the present year in the repair of the Public Roads, I am directed by the Honorable the Secretary for Lands and Public Works to inform you that the sum of Five hundred pounds (£500) has been allotted for the repair of the road from Grafton to Tenterfield.

2. Assuming that you will charge yourself with the expenditure of this money, Mr. Secretary Hay will cause the amount to be placed to your credit in the Joint Stock Bank, and you may at once make your arrangements for having the work gone on with. As the object of the appropriations is to keep open the communication along the main leading and secondary thoroughfares of the Colony, it is conceived that the most beneficial mode of proceeding will be to lay out the money allotted to each district in repairing, as perfectly as the amount will admit, the worst portions of the road, those portions of it, in fact, which now, more or less, interrupt the traffic. Such being the intention of the Government and Legislature, Mr. Hay feels confident that it will be carried out faithfully by you, and that no division of the funds for any merely local object, however much required in itself, will meet with your sanction.

3. Whilst leaving the matter unreservedly in your hands, Mr. Secretary Hay would wish to suggest to you, that it might be desirable, in many points of view, to associate with you in the actual superintendence of the necessary repairs two or three of the residents in or near the line of road, who are directly interested in the successful employment of the means placed at your disposal, and who, by their active habits, are qualified to superintend with advantage the works that may be undertaken.

4. I am also instructed to intimate to you, that, to avoid confusion in the Public Accounts, it has been resolved not to keep appropriations of this character open for an indefinite period, as heretofore. Any portion, therefore, of the sum now placed at your disposal which may not have been expended, or contracted to be expended, on or before the 31st March, 1858, will be regarded as having lapsed.

5. Should you for any cause be unwilling to charge yourselves with the expenditure of this money, I am to request that you will make an early intimation of that circumstance, in order that other arrangements may be made without delay.

6. It will be satisfactory to be informed of the particulars of the works determined upon, and their progress from time to time, in order that this department may, as far as possible, be in possession of the facts relating to the improvement of the ordinary roads of the Colony; and as everything depends upon the energy of the local management, Mr. Secretary Hay particularly requests your zealous co-operation in the endeavour to secure the full benefit anticipated from the liberality of the Road Vote for the year.

I have, &c.,

MICHL. FITZ PATRICK.

THE BENCH OF MAGISTRATES,
Tenterfield.

No. 2.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE BENCH OF
MAGISTRATES, TENTERFIELD.

*Department of Lands and Public Works,
Sydney, 3rd July, 1857.*

(Circular.)

GENTLEMEN,

Referring to my Circular Letter of the 17th ultimo, I am directed by the Secretary for Lands and Public Works to inform you, that with a view to meet your convenience, as well as that of the Bank, it has been arranged that the money placed to your credit in the Australian Joint Stock Bank, for the repair of the roads, shall be drawn by cheques signed by any one member of your Bench, and countersigned by the Clerk of the Bench.

2. To enable the Bank to judge of the authenticity of the cheques presented to them for payment, it will be necessary that the Clerk of your Bench should, before any such cheque is drawn, send to the Bank a specimen of his autograph, or usual signature, (as well as his name in full); and I am to request that he may be requested to write his name and signature on the fly leaf of this Circular, which may then be torn off and forwarded direct to the Bank.

3. In order to ensure accuracy, and to simplify the keeping of your accounts in this matter, I am further directed to transmit to you a cheque book, and particularly to request that no cheques on account of the Road Appropriations may be drawn except in the forms thus supplied, the numbers of which are recorded at the Treasury.

I have, &c.,

MICHL. FITZ PATRICK.

THE BENCH OF MAGISTRATES,
Tenterfield.

TENTERFIELD ROAD TRUST.

5

No. 3.

F. KING, Esq., to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Tenterfield,

6 August, 1858.

SIR,

I do myself the honor to enclose the accounts of the Tenterfield and Grafton Road Trust for the quarter ending June 30th, 1857.

The works are going on very satisfactorily, and I find Mr. Yates very energetic and skilful in the management of the road repairs.

If it could be arranged, Mr. Yates would make a very good Road Inspector for New England and the Clarence River Districts: he could then have parties on the different roads viz.—the Tenterfield and Grafton line and the Armidale and Grafton line, the Tenterfield Road to Armidale, and the same to the north. An appointment of this sort would secure the services of a good and practical surveyor, for such I consider Mr. Yates to be.

I have, &c.,

THE HONORABLE

THE SECRETARY FOR

LANDS AND PUBLIC WORKS.

FREDERIC KING,

Road Trustee.

No. 4.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE BENCH OF
MAGISTRATES, TENTERFIELD.

(Circular.)

*Department of Lands and Public Works,**Sydney, 14 August, 1857.*

GENTLEMEN,

With reference to previous correspondence on the subject of the expenditure of the money apportioned to you out of the amount voted by the Legislature for the repair of Roads and Bridges generally, I am directed by the Secretary for Lands and Public Works to request that you will have the goodness to cause the Clerk of your Bench to keep proper and accurate accounts of the expenditure of the money entrusted to you, and that you will transmit such accounts quarterly to the Auditor General, accompanied by the proper vouchers for the expenditure. The accounts so rendered should be attested by the declaration of the Clerk, in the usual way, and should be certified by you as having been examined and found to correspond with the several authorised entries in the books kept by him for that purpose.

I have, &c.,

THE BENCH OF MAGISTRATES,
Tenterfield.

MICHL. FITZ PATRICK.

No. 5.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to R. BLIGH, Esq.

*Department of Lands and Public Works,**Sydney, 5 September, 1857.*

SIR,

In transmitting to you the accompanying copy of a communication which has been received from Mr. King, respecting the appointment of Mr. T. B. Yates as Superintendent of Roads for the New England and Clarence River Districts, I am directed to inform you that Mr. Secretary Hay has been pleased to authorise the appointment of Mr. Yates, if you see fit, in concert with Mr. King, to employ him on the Grafton and Armidale Roads.

I have, &c.,

RICHARD BLIGH, Esq.,
Grafton.

MICHL. FITZ PATRICK.

No. 6.

F. KING, Esq., to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Tenterfield, 3 October, 1857.

SIR,

I do myself the honor to enclose a report which has been handed in to me by Mr. T. B. Yates, the Road Superintendent engaged on the Tenterfield and Grafton Road.

In consequence of the very bad state of the road between Tenterfield and Grafton, I instructed Mr. Yates to search for a better and shorter line. He has succeeded, and the enclosed report will inform you of his opinion.

Mr. Yates informs me that the new line can be opened and made good for less money than the old road can be repaired.

I beg respectfully to request that I may be allowed to open this road; and also that a sum of money may be granted for the purpose.

The roads have been in such a shocking state that much inconvenience has been caused to the public.

Mr. Yates is now employed on the old road between Tenterfield and the proposed turn off: he is a clever road surveyor, and I would suggest that he should receive the appointment of Road Surveyor, when he would be able to have overseers and parties under him on the different lines.

I have, &c.,

FREDERIC KING.

THE HONORABLE

THE SECRETARY FOR

LANDS AND PUBLIC WORKS.

*[Enclosure in No. 6.]**Camp, Sandy Creek,
26 September, 1857.*

SIR,

I beg to inform you that I have examined the country near the Rocky River from the falls downwards, and can find nothing suitable for a road into the river. I have also been over the country a second time, from the Moguni Range to Hamilton's Gap, and find that a very good road may be made in that direction. There can also be a very great improvement made on the present line from Tea-tree Creek to Sandy Creek, and also from Sandy Creek to Tenterfield. The following is an estimate of the probable cost of making the line a very fair road from Grafton to Tenterfield.

	£	s.	d.
From Grafton to Clarence River, 45 miles, @ £10 per mile	450	0	0
Two Bridges over Blackman's and Deep Creeks, @ £150 each	300	0	0
Crossing-place at river	200	0	0
Punt for time of flood	300	0	0
Ten miles from river to Hamilton's Gap, @ £10 per mile	100	0	0
Three miles including Gap and Rocky River crossing, @ £500 per mile	1,500	0	0
Forty-five miles to Tenterfield, @ £10 per mile	450	0	0
Team of bullocks, dray, &c.	200	0	0
	£3,500	0	0

I have, &c.,

T. B. YATES.

Frederick King, Esq., J.P.,
Tenterfield.

No. 7.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 31 October, 1857.*

SIR,

In transmitting to you the accompanying communication from Mr. F. King, J.P., Tenterfield, covering a report from Mr. T. B. Yates, on the subject of the improvement of the line of road from that place to Grafton,—

I am directed to request that you will have the goodness, before the alteration of the road therein suggested is approved, to furnish a report to this office on the subject.

I have, &c.,

MICHL. FITZ PATRICK.

THE SURVEYOR GENERAL.

No. 10.

THE SURVEYOR GENERAL to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Surveyor General's Office,
Sydney, 5 February, 1858.*

SIR,

In returning the papers transmitted in your letter of the 31st October last, No. 634, I have the honor to forward, for submission to the Honorable the Secretary for Lands and Public Works, a report, which has been furnished by Mr. Surveyor Darke, in reference to the road from Tenterfield to Grafton.

I have, &c.,

GEO. BARNEY,

Surveyor General.

THE UNDER SECRETARY FOR
LANDS AND PUBLIC WORKS.

[Enclosure

[Enclosure in No. 10.]

Sydney, 5 December, 1857.

Sir,

In attention to your letter of the 13th ultimo, No. 1420, enclosing communications from F. King, Esq., J.P., and Mr. T. B. Yates, relative to a proposed new line of road from Tenterfield to Grafton, or improvements on the line now in use, and desiring me to report on the subject,—

I beg to state that during my surveys in the localities referred to, I formed a strong opinion that a much better and shorter road could be found than the objectionable track then and still in use, which is so bad that any outlay in such improvements as may be practicable in some few places would be injudicious, until the question of the possibility of opening a better shall have been determined.

I cannot offer remarks on the line proposed by Mr. Yates, as I am unacquainted with the names he applies to the localities westward of the Clarence, in the country of the Rocky River; nor am I guided by any mention in his report of the approximate points at which he proposes to cross these streams.

I enclose a tracing from a reduction of my surveys, shewing the general direction that appeared to me to be practicable, of which the only part from (B to C) requires examination.

From Grafton to B the line may be at once used without any outlay worth consideration—the “Coal Ridge” at A presenting no obstacle: this point (where I have left marked trees) is shewn on my maps deposited in your office.

From Tenterfield towards Grafton the route I suggest would follow the Bolivia Road about four miles, then take a general direction east by south four miles to a very favorable part of the Great Dividing Range, which may perhaps with advantage be traversed about a mile southerly, and crossed almost imperceptibly at C, which point is laid down on my map of the locality.

My reason for supposing that the country between C and B is most likely to admit of a practicable road, is from having observed from the summits of the Great Dividing Range, south of C, that the features easterly appear less rugged and broken than in any other part of the mountain tract; and after gaining the watershed eastward of the Rocky River, the road to the ford at B (“Ogilvie’s Horseshoe Bend”) would follow leading features parallel with tributaries of the Clarence.

I have, &c.,

WM. WEDGE DARKE,
Assistant Surveyor.The Surveyor General,
Sydney.

No. 11.

F. KING, Esq., to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Tenterfield,

7 April, 1858.

Sir,

I do myself the honor to inform you that the funds at the disposal of the Trustees of the Grafton and Tenterfield Road are nearly expended, and I wish to be informed if the balance at the Australian Joint Stock Bank can be replenished, so as to prevent the breaking up of the party now at work on the road, under the able superintendence of Mr. T. B. Yates.

Great expense will necessarily be incurred in reorganising a party at any future period.

Mr. T. B. Yates is an experienced and skilful officer, and is making great improvements in the road.

I have, &c.,

FREDERIC KING,
Road Trustee.THE HONORABLE,
THE SECRETARY FOR
LANDS AND PUBLIC WORKS.

TENTERFIELD ROAD TRUST.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SECRETARY TO THE
TREASURY.

*Department of Lands and Public Works,
Sydney, 23 April, 1858.*

SIR,

I am directed by the Honorable the Secretary for Lands and Public Works to request that you will have the goodness to move the Finance Minister to cause the sum of one hundred and twenty-five pounds—the one-fourth of the amount allotted for the repair of the road from Tenterfield to Grafton, for the year 1857—being placed in the Joint Stock Bank to the credit of the Bench of Magistrates at Tenterfield, for the purpose of enabling them to carry on the improvements to the road in question, the same to be charged to the Vote of fifteen thousand pounds, granted for road purposes for the first quarter of the present year. £125. £15,000.

I have, &c.

MICHL. FITZ PATRICK.

THE SECRETARY TO THE TREASURY.

No. 14.

The sum of £500 authorised for this service has been issued in full to the Bench at Tenterfield: the accounts of Expenditure to the 31st of March, 1858, shew an overcharge of £114 18s. 5d., at that date. There were, therefore, no funds available to meet the cheque drawn on 3rd April.

The further sum of £125, just authorised for the same service, is insufficient, it will be seen, to cover the amount required, which appears to be £314 18s. 5d.

B. C. Audit Office, 24 April, 1858.

W. C. MAYNE,
A. G.

THE UNDER SECRETARY FOR
LANDS AND PUBLIC WORKS.

[Enclosure in No. 14.]

Tenterfield, 17 April, 1858.

Sir,

£200.

I do myself the honor to enclose a cheque on the Australian Joint Stock Bank, cancelled. I sent it to the Bank of Australasia, to the credit of Mr. T. B. Yates' public account, and it was refused at the Australian Joint Stock Bank. I have not ascertained the reason yet. The cheque is filled in as on former occasions. I have now filled another out, and have countersigned it myself. I hope you will give instructions to the Manager of the Australian Joint Stock Bank to honor it, as Mr. T. B. Yates has drawn against it.

I have, &c.,

FREDERIC KING.

No. 16.

F. KING, Esq., to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Tenterfield, 4 May, 1858.

Sir,

I do myself the honor to acknowledge the receipt of your letter of the 23rd ultimo, stating that the Secretary for Lands and Public Works had authorised the payment of one hundred and twenty pounds for the repair of the Grafton and Tenterfield Road.

I have to inform you that our Road Committee had a balance in the Australian Joint Stock Bank of £250 at the end of March, but, from some unaccountable reason, our cheques were refused at that Bank, the answer being that this account was closed.

I trust this error may be corrected, and that the cheque for £200 in the hands of the Bank Australasia may be cashed.

The refusal of the Bank to cash our cheques has caused much inconvenience to Mr. Yates, who has the charge of the road repairs.

I have &c.,

FREDERIC KING.

THE HONORABLE
THE SECRETARY FOR
LANDS AND PUBLIC WORKS.

No. 17.

No. 17.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE BENCH OF
MAGISTRATES, TENTERFIELD.

*Department of Lands and Public Works,
Sydney, 10 May, 1858.*

GENTLEMEN,

In acknowledging the receipt of your letter of the 17th ultimo, forwarding a dishonored cheque for the sum two hundred pounds, drawn by you in favor of Mr. £200. T. B. Yates, to be charged to the amount granted for the road from Grafton to Tenterfield, I am directed by the Secretary for Lands and Public Works to inform you that you appear to have overdrawn your account, and to request your explanation of the matter.

2. The sum of five hundred pounds was allotted for the repair of the road from £500. Grafton to Tenterfield, for the year 1857, (as intimated to you in my circular letter of the 17th June last,) the whole of which it appears, from the report of the Auditor General, was placed to your credit in the Joint Stock Bank, to which was added the sum of one hundred £125. and twenty-five pounds, on the 23rd ultimo, out of the amount sanctioned by the Legislative Assembly for roads generally, for the first quarter of present year.

3. The Auditor General states that the accounts forwarded to him by you on the 31st March last shew that at that date you had overdrawn your account to the amount of one hundred and fourteen pounds eighteen shillings and five-pence; the further £114 18s. 5d. sum of one hundred and twenty-five pounds (before alluded to) was then placed to your credit; but even with this amount, you will perceive that there are not sufficient funds to meet the cheque for two hundred pounds given to Mr. Yates.

I have, &c.,

MICHL. FITZ PATRICK.

THE BENCH OF MAGISTRATES,
Tenterfield.

No. 18.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SECRETARY TO THE
TREASURY.

*Department of Lands and Public Works,
Sydney, 13 May, 1858.*

SIR,

With reference to my letter of the 23rd ultimo, I am now directed by the Secretary for Lands and Public Works to request that you will have the goodness to place in the Joint Stock Bank, to the credit of the Bench of Magistrates at Tenterfield, a further sum of seventy-five pounds, in order to meet a cheque drawn by them as Trustees for £75. the repair of the Grafton and Tenterfield Road, in favor of Mr. Yates, for two hundred £200. pounds, the same to be charged in anticipation of the road vote of the present year.

I have, &c.,

MICHL. FITZ PATRICK.

THE SECRETARY TO THE TREASURY.

No. 19.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE BENCH OF
MAGISTRATES, TENTERFIELD.

*Department of Lands and Public Works,
Sydney, 13 May, 1858.*

GENTLEMEN,

In acknowledging the receipt of your further letter of the 4th instant, stating that you had a balance in the Joint Stock Bank of two hundred and fifty pounds, to your £250. credit, at the end of March last, for the repair of the road from Grafton to Tenterfield, and notwithstanding that, your cheque for two hundred pounds, in favor of Mr. Yates, was dishonored,—I am directed to inform you, that from inquiries made at the Bank, it appears that

£500. that you had drawn the whole of the five hundred pounds, allotted for the repair of the road in question for the year 1857, before the end of March, and consequently had nothing to your credit when the cheque for two hundred pounds was presented.

£125. 2. The sum of one hundred and twenty-five pounds was paid into your credit on the
 £75. 23rd ultimo, as intimated to you in my letter of that date, and a further sum of seventy-five pounds will now also be placed to your credit, in order to meet the cheque in favor of Mr. Yates. But Mr. Secretary Robertson desires me, at the same time, to draw your attention to the explanation of this matter, sought in my communication of the 10th instant, and to request that you will have the goodness to state how this apparent error in the accounts has occurred.

SIR,

I do myself the honor to acknowledge your letter of the 10th instant, in which you refer to our overdrawn account in the Australian Joint Stock Bank.

In your circular of the 17th June, 1857, the Bench of Magistrates were informed that the sum of £500 was to be placed to the credit of the Road Committee; again, on the 31st December, it was informed that the sum of £250 had been placed in the Bank; again, on April 29th, it was informed that £125 had been placed to the credit of the Road Committee, making a total of £875.

The Bench, assuming that this sum of £875 had been placed to its credit, drew against it, and now find that the sum of £625 only had been placed to its credit in the Australian Joint Stock Bank.

I hope to be in Sydney in the first week in June, and shall call at the office of the Honorable the Secretary for Lands and Public Works and explain the error.

THE HONORABLE
THE SECRETARY FOR
LANDS AND PUBLIC WORKS.

I have, &c.,
FREDERIC KING.

No. 22.

F. KING, ESQ., to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Tenterfield, 22 May, 1858.

SIR,

I do myself the honor to acknowledge your letter of the 14th instant, in which you state that the sums of £125 and £75 had been placed to the credit of the Tenterfield and Grafton Road Committee.

I have written an explanation of the apparent error, and hope it will shew that it was simply a mistake on my part.

I have, &c.,

FREDERIC KING.

THE HONORABLE

THE SECRETARY FOR

LANDS AND PUBLIC WORKS.

No. 23.

F. KING, ESQ., to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Sydney, 12 June, 1858.

SIR,

I do myself the honor to inform you, that the amount required by the Tenterfield and Grafton Road Committee to meet the vouchers up to the end of the quarter, is £263 3s. 2d. I have received the vouchers, but cannot hand them in until my return to Tenterfield, as I have not the proper forms with me for filling up the statement.

I beg to call your attention to the manner in which money is drawn out of the Australian Joint Stock Bank, and to urge the necessity of your ordering my cheque to be honored without its being countersigned by the Clerk of the Bench.

I have written to Mr. Yates on the subject of his taking the Armidale line in connexion with the Tenterfield and Grafton line of Road. On receipt of his answer I will communicate with you again.

I have, &c.,

FREDERIC KING,

Road Trustee.

THE HONORABLE

THE SECRETARY FOR

LANDS AND PUBLIC WORKS.

No. 24.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to F. KING, ESQ.

*Department of Lands and Public Works,**Sydney, 25 June, 1858.*

SIR,

Referring to your letter of the 12th instant, stating that the amount required by the Tenterfield and Grafton Road Committee to meet the amount of the vouchers for expenses incurred during the first quarter of the current year is two hundred and sixty-
three pounds three shillings and two-pence, and urging the necessity for the payment of your cheque without being countersigned by the Clerk of the Bench,—I am directed to inform you, that the Secretary for Lands and Public Works regrets that the payment asked for cannot be made until the usual vouchers and signatures are obtained.

I am, at the same time, to point out to you, that the expenditure of so large an amount of money without authority is very inconvenient; but Mr. Secretary Robertson is not disposed to make that part of the matter a difficulty in this case, excepting to urge upon you the necessity of exercising more caution for the future.

I have, &c.,

FREDERIC KING, ESQ., J.P.,

Tenterfield.

MICHL. FITZ PATRICK.

TENTERFIELD ROAD TRUST.

No. 25.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE BENCH OF
MAGISTRATES, TENTERFIELD.

*Department of Lands and Public Works,
Sydney, 29 June, 1858.*

GENTLEMEN,

With reference to your letter of the 12th instant, I am now directed to inform you, that the Secretary to the Treasury has been requested to place the sum of £263 3s. 2d. two hundred and sixty-three pounds three shillings and two-pence in the Joint Stock Bank to your credit, with a view to retire cheques drawn by you in farther excess of the amount at your credit on account of the road from Tenterfield to Grafton, the same being charged in anticipation to the road vote for 1858.

I have, &c.,

THE BENCH OF MAGISTRATES,
Tenterfield.

MICHL. FITZ PATRICK.

No. 26.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SECRETARY TO THE
TREASURY.

*Department of Lands and Public Works,
Sydney, 29 June, 1858.*

SIR,

With reference to previous correspondence, I am now directed by the Secretary for Lands and Public Works to request that you will have the goodness to move the Honorable the Finance Minister to cause to be placed in the Joint Stock Bank, to the credit of the Bench of Magistrates, Tenterfield, on account of the road from that place to Grafton, the further sum of two hundred and sixty-three pounds three shillings and two-pence, with a view to retire cheques drawn by that Bench in further excess of the amount at their credit, the same being charged in anticipation to the road vote for 1858.

I have, &c.,

THE SECRETARY TO THE TREASURY.

MICHL. FITZ PATRICK.

1858.

Legislative Assembly.
NEW SOUTH WALES.

BRIDGES IN THE WIDE BAY & BURNETT DISTRICTS.

(BURRAMBA AND GUNDI CREEKS.)

Ordered by the Legislative Assembly to be Printed, 1 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Stockholders of the Wide Bay and Burnett Districts, together with the Inhabitants of the Towns of Maryborough and Gayndah, in the aforesaid Districts,—

HUMBLY SHEWETH:—

That a period of twelve years having transpired since these Districts were first occupied by Europeans for pastoral and other pursuits, during which time a very large increase of stock has taken place; the sheep alone in the two Districts now exceed 600,000, besides cattle and horses to a very large extent.

The population of the Districts has also increased in a proportionate degree. Two towns, the result of private and individual enterprise, each containing a considerable number of inhabitants, have also sprung up. That of Maryborough is the shipping port of these Districts; and Gayndah, distant 84 miles, is situated in the centre of the Districts.

The object of your Petitioners in now entering on these particulars is to shew, that from the number of stock and population in the Districts a very large amount of traffic must necessarily take place, in order to supply all our requirements. This traffic has hitherto been carried on under very trying and unfavorable circumstances, owing to the continued and constant wear and tear of our public roads, and creeks intersecting them. These, for want of repairs, or looking after, coupled with the late fearfully wet season, now present in many places more the appearance of extensive ploughed grounds or quagmires; the difficulty of getting drays over such places may be inferred, when it is well known that few of them have lately made Gayndah from Maryborough in less than from 4 to 5 weeks, but in many cases it has taken double that time to accomplish the journey. The consequence is, that most of the stations in the interior have been put to the greatest straits for want of supplies.

Your Petitioners feel convinced that the future progress and welfare of these Districts depend so much on good thoroughfares, that they cannot urge too strongly on the Legislature the immediate necessity of alleviating to some extent the difficulties now set forth.

Your Petitioners beg to represent that the Baramba Creek, crossing the main line of road between Maryborough and Gayndah, is at all times a barrier to vehicles, but during wet weather to postal and all other communication. The Gundi Creek, on the south-western branch of a leading thoroughfare, stands equally in need of a Bridge, and offers natural facilities for erecting one.

Your Petitioners having given an outline of the necessities of the District, have now only to leave the matter in the hands of your Honorable House, trusting that the urgency of the appeal will meet with that attention which it so much desires.

We shall, as in duty bound, ever pray.

[Here follow 113 Signatures.]

1858.

Legislative Assembly.

NEW SOUTH WALES.

BRIDGE OVER THE MURRAY AT ALBURY.

Ordered by the Legislative Assembly to be Printed, 11 May, 1858.

To the Honorable the Members of the Legislative Assembly of New South Wales.

The Petition of the undersigned Inhabitants of Albury, of the Southern Districts, of the Colony of New South Wales, and the Victorian Provinces adjacent to the Murray River, the boundary of the two Colonies,—

SHAWWETH:—

That, in the month of November, in the year 1856, a Petition was despatched from this place to your Honorable House, praying, for the reasons assigned therein, that a Bridge might be erected over the Murray River at Albury; and, in a communication received from the Department of Lands and Public Works, dated 2nd January, 1857, Petitioners were informed that the Government of New South Wales had entered into a correspondence with the Government of Victoria, for the purpose of securing its co-operation in the erection of a suitable Bridge at Albury, with as little delay as possible, and that the object would be to have the Bridge free to the inhabitants of both Colonies; that, should the Government of Victoria refuse to join in so important an undertaking, it would still be the object of the New South Wales Government to execute the work.

That, on the 7th November, 1856, a debate took place in the Legislative Assembly, with reference to the construction of a Bridge over the Murray, when Mr. George Macleay withdrew the motion before the House in consequence of receiving a pledge that the Government would enter into immediate communication with the Government of Victoria for the purpose of carrying out the object in view, and the motion itself not being strictly in accordance with the Rules of the House.

That a sum was placed on the Estimates of 1857 for the erection of a Bridge over the Murray at Albury; but your Petitioners have been surprised and grieved to find that no such sum has been placed on the Estimates by the present Ministry, for the purpose of carrying out this much-wanted national work: the reason given being that the Surveyor directed to prepare a plan and estimate had not sent in his report on the subject, the Colonial Treasurer at the time, however, stating that, when the report should be received, the Ministry would be quite prepared to place on the Additional Estimate any reasonable amount that the work would cost.

Your Petitioners are cognizant of the fact that the Surveyor's plan, estimate, and report have long since been despatched to the Surveyor General's Office, and trust sincerely that there will be no further impediment to the early commencement of a work of so much national importance.

That your Petitioners have, at various times, transmitted frequent Petitions to your Honorable House, praying for the immediate erection of a Bridge over the River Murray, as a means of averting the great loss of life, the immense sacrifice of property taking place every year during the ordinary floods, and the occasional cessation, for weeks together, of the entire traffic on the main line of road between Sydney and Melbourne; and, so that a correct estimate may be formed of the extent of traffic at this place, your Petitioners insert a synopsis of the Returns furnished by the Victorian Collector of Customs' stationed at Belvoir, two miles from Albury, for the year 1857:—

EXPORTS. 1857.				IMPORTS. 1857.			
First Quarter, 31 March	190,315	9	0	First Quarter, 31 March	50,502	5	0
Second Quarter, 30 June	292,562	16	0	Second Quarter, 30 June	75,130	6	8
Third Quarter, 30 September	212,757	3	0	Third Quarter, 30 September	53,339	4	0
Fourth Quarter, 31 December	168,957	5	0	Fourth Quarter, 31 December	93,478	4	0
	<hr/>				<hr/>		
	£854,592	13	0		£272,444	19	8
	<hr/>				<hr/>		

Your Petitioners deem it unnecessary to revert here to many of the subjects touched upon in their previous Petitions, but content themselves for the present with once more urgently praying for the erection of a Bridge over the River Murray, at the Township of Albury, and that the prayers of your Petitioners will meet with your early and favorable consideration.

And, as in duty bound, your Petitioners will ever pray, &c., &c.

[Here follow 235 Signatures.]

1858.

Legislative Assembly.

NEW SOUTH WALES.

BRIDGE OVER RIVER MURRAY AT ALBURY.
(CORRESPONDENCE RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 5 November, 1858.

RETURN to an *Address* from the Honorable the Legislative Assembly, dated 3 September 1858, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table :—

BRIDGE OVER RIVER MURRAY AT ALBURY.

No. 1.

To the Honorable the Secretary for Lands and Public Works of the Colony of New South Wales.

The Petition of the undersigned Inhabitants of Albury,—

SHEWETH :—

That the rising importance of the town and district of Albury, in conjunction with the increased traffic through the interior, is considerably cramped and restrained by the want of a better mode of crossing the Murray River.

That during the last four months nearly all overland communication between New South Wales and Victoria has been cut off by the Murray River, except by boats. Drays in great numbers, laden with produce, in transition to the Ovens Diggings market, where a highly remunerative price can always be obtained even for goods elsewhere unsaleable, congregate here, and after waiting in hopes of being able to cross the stream, find their means exhausted, and sales have to be made at a ruinous sacrifice, and those who attempt to cross, their goods and merchandize suffer most serious losses.

That your Petitioners regret to have to state the loss of life annually taking place here during the flooded season; this winter no less than four lives, one of them the mailman, have been lost immediately adjacent to this town, which losses are almost entirely attributable to there being no bridge over the river; and, apart from the loss of human life, cattle and horses in great numbers have perished while crossing the river on their way to market.

That great numbers of horses and cattle are daily passing through Albury on their way to the Victorian Markets, all of which have to cross the Murray by swimming that river, and great loss by drowning, and in all cases great trouble and expense, and deterioration in value is occasioned to the owners, and very frequently sheep cannot be crossed at all by the punt in consequence of the high state of the river.

That your Petitioners find that a sum of not less than twenty-six thousand pounds has been paid into the Treasury of the Colony, the proceeds of the sales of land in this district, and that the only sums they have received in return have been fifty pounds for one bridge, twenty pounds for mending the approaches to a creek, six hundred for erecting a lock-up, one hundred pounds for erecting a school house, and a trifling amount for eradicating a few stumps in the streets.

That the traffic through the township of Albury is now very considerable, and if fostered would soon become of such magnitude as to justify almost any outlay incurred for the purpose of facilitating the means of communication between the two Colonies.

Your Petitioners, therefore, pray that steps may be at once taken to have a suitable site selected for a bridge and that designs and estimates be called for, for construction of the same, and that a sum of money be set apart for that purpose.

And, as in duty bound, your Petitioners will ever pray.

[Here follow 241 Signatures.]

No. 2.

CAPTAIN CADELL to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Echuca, 29 November, 1856.

SIR,

I have the honor to address you regarding the bridge across the Murray at Albury, as contemplated by the Government of New South Wales; and I would respectfully point out, that any bridge without some provision for the passage of steamers may prove detrimental to the navigation of the upper river.

One of the R. M. N. Company's steamers has already ascended several miles above Albury, and individually I have prospected rich "gold-bearing creeks" above the confluence of the Mitta Mitta. I submit, therefore, that it is of the highest importance to preserve an open navigation to those future gold fields, as well as to other sources of undeveloped wealth.

There are now two steamers plying on the river, whose extreme breadth of beam from sponson to sponson is about (40) forty feet; and if from my knowledge of the locality I may be permitted to suggest the most advisable description of bridge, I should say that a draw-bridge of some sort possesses advantages in point of expediency and economy over any arch.

I have, &c.,

HON. JOHN HAY, Esq.,

THOS. CADELL.

Commissioner of Crown Lands and Public Works,
Sydney.

Beam to outside of paddle-boxes 33 feet.
Height of paddle-boxes above water, when light 14 feet 6 inches.
Funnel when lowered, above water 21 feet 6 inches.

"STURT" and "LEIGHARDT" Steamers.

No. 3.

THE SECRETARY FOR LANDS AND PUBLIC WORKS to THE COLONIAL SECRETARY.

*Department of Lands and Public Works,
Sydney, 18 December, 1856.*

SIR,

I have the honor to request that you will invite the co-operation of the Government of Victoria in the construction of a bridge over the River Murray at or near Albury.

2. It is considered to be highly desirable that the communication along the main line of road from this city to Melbourne should be subject to as little interruption as possible. There is a natural tendency in population to aggregate itself to a considerable degree on the flanks of the chain of Australian Alps, but particularly to do so in the extensive and fertile valley of the Upper Murray, which belongs in almost equal portions to both colonies, and about the centre of which the great intercolonial road now crosses the river. It is plain that the inhabitants of that valley and of both colonies for a considerable distance beyond would be much benefited by the erection of a bridge at or near Albury, which would enable them to carry their trade into either colony without those interruptions to which it is now subject; and as opening and extending the intercourse between the colonies, it is hoped that the accomplishment of such a work may not only facilitate the natural exchanges of their products, and so enhance the material prosperity of both, but that it may tend to prevent their social isolation with all its evils, and to produce instead a union of feeling and interest between them.

3. It is on grounds such as these that I look upon this as an undertaking which may be called as respects Australia a national one.

4. The structure in that view should be one not unnecessarily expensive, but of a useful and permanent character, worthy of the care of the colonies whose joint property it would be.

5.

BRIDGE OVER RIVER MURRAY AT ALBURY.

7

5. For the purpose of carrying out this work, the first steps to be taken will be, it is presumed, to make such arrangements as will enable two qualified persons—one appointed by each Government—to meet, and after the necessary investigation and survey to report upon the most suitable site for a bridge over the Murray, which shall serve to unite the present towns of Albury and Belvoir, and thus the colonies of New South Wales and Victoria.

6. This report, if approved of, will enable a plan and estimate to be framed at once, according to which votes may be sought from the Colonial Legislatures for the moiety of the total required expenditure, and the work be carried on either by a department of one or other Government, or under an officer expressly appointed by both for this work exclusively.

7. In conclusion, you will probably see fit to assure the Government of Victoria of the earnest anxiety of that of New South Wales that there should be a cordial co-operation of the two in this, as in all matters of an intercolonial or Australian character, and that all difficulties of a formal nature should be as much as possible overlooked or surmounted.

I have, &c.,

JOHN HAY.

THE HONORABLE

THE COLONIAL SECRETARY.

No. 4.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE CHIEF SECRETARY, VICTORIA.

Colonial Secretary's Office,

Sydney, New South Wales,

20 December, 1856.

SIR,

I have the honor to transmit to you a copy of a letter addressed to me by the Secretary for Lands and Public Works in this Colony, suggesting the expediency of an arrangement being made for the erection of a bridge over the River Murray at Albury, at the mutual cost of the Colonies of Victoria and New South Wales; and I request that you will have the goodness to submit the proposed measure for the consideration of your Government, and to favor me with as early a communication on the subject as may be convenient.

2. In inviting the Government of Victoria to join in this important undertaking, I beg to express to you the earnest desire of that of New South Wales that in matters such as this, of an intercolonial character, the two should cordially co-operate for their mutual advantage.

I have, &c.,

HY. WATSON PARKER.

THE CHIEF SECRETARY TO

THE GOVERNMENT OF VICTORIA,

Melbourne.

No. 5.

THE PRINCIPAL UNDER SECRETARY to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

Colonial Secretary's Office,

Sydney, 20 September, 1856.

SIR,

I am directed to state to you, for the information of the Honorable the Secretary for Lands and Public Works, that a copy of his letter of the 18th instant has been forwarded to the Chief Secretary to the Government of Victoria, with an invitation, in accordance with his suggestion, to that Colony to co-operate in the construction of a bridge over the River Murray at Albury.

I have, &c.,

W. ELYARD.

THE UNDER SECRETARY

FOR LANDS AND PUBLIC WORKS.

No. 6.

BRIDGE OVER RIVER MURRAY AT ALBURY.

No. 6.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to CAPTAIN CADELL.

*Department of Lands and Public Works,
Sydney, 31 December, 1856.*

SIR,

I am directed by the Honorable the Secretary for Lands and Public Works to thank you for the suggestions contained in your letter of the 29th November, on the subject of the most desirable kind of bridge for the River Murray, and to suggest to your consideration whether it may not be the readiest way of solving the difficulty, to have the funnels of the steamers intended for trade on the Murray and its tributaries removable, as it will, no doubt, be found necessary to have other bridges besides that proposed at Albury, on these rivers, and draw-bridges must necessarily, he imagines, be found expensive. At the same time I am to assure you that any information or suggestion from you will be highly valued by him.

I have, &c.,

MICHL. FITZPATRICK.

CAPTAIN CADELL,

Echuca.

No. 7.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to HEYWARD ATKINS, ESQ.,
AND OTHERS.*Department of Land and Public Works,
Sydney, 2 January, 1857.*

GENTLEMEN,

In acknowledging the receipt of your Petition, praying, for the reasons therein assigned, that a bridge may be erected over the Murray River at Albury, I am directed to inform you that the Government of this Colony have entered into a correspondence with the Government of Victoria for the purpose of securing its co-operation in the erection, with as little delay as possible, of a suitable bridge at that place, and that if such co-operation be obtained the bridge will be free to the inhabitants of both Colonies.

2. It is not anticipated by the Secretary for Lands and Public Works that the Government of Victoria will refuse to join in this important undertaking, but, if so, it will still be the object of the Government of New South Wales to set about it under the best arrangements which can in such an event be devised.

3. I am also instructed to state, that if the negotiation now on foot cause a certain delay in the erection of the bridge in question, it is hoped that it will lead to the execution of a work which will in every way be more satisfactory to the Colony and to the inhabitants of Albury than could otherwise be accomplished.

I have, &c.,

M. FITZPATRICK.

HEYWARD ATKINS, ESQ.,

and the other Inhabitants of Albury

signing the Petition for the erection of a
Bridge over the Murray River.

No. 8.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to GEORGE MACLEAY, ESQ.

*Department of Lands and Public Works,
Sydney, 2 January, 1857.*

SIR,

With reference to a Petition presented by you from certain of the inhabitants of Albury, praying that a bridge may be erected over the River Murray at that township, I am directed to transmit to you the accompanying copy of a communication which has been addressed to the Petitioners on the subject.

2 January, 1856.

I have, &c.,

M. FITZPATRICK.

GEORGE MACLEAY, ESQ., M. P.,

Sydney.

No. 9.

No. 9.

CAPTAIN CADELL to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Adelaide, 3 February, 1857.

SIR,

I have the honor to acknowledge receipt of your letter of 31st December, 1856, wherein you suggest for my consideration whether or not it would be advisable to have the funnels of the steamers removable, *i. e.* on hinges. In reply, I beg to enclose diagram, received from the owners of the steamers "Leichhardt" and "Start," as they have the greatest breadth of beam of any river boats.

By the said diagram you will perceive that to allow the passage of such steamers under any bridge a height of arch would be required quite out of keeping with the adjoining banks, and involving a considerable elevation on its approaches. The calculations of course would be made from the highest flood level. It was owing to what may have been false notions of economy that I suggested a draw-bridge, as a bridge capable of allowing beneath it the unimpeded navigation of the stream would be of much more solid and durable structure. Any information I can at any time furnish is very much at the service of your department.

I have, &c.,

THOS. CADELL.

THE HONORABLE JOHN HAY, ESQ.,

Minister of Crown Lands and Public Works,
Sydney.

No. 10.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to CAPTAIN CADELL.

*Department of Lands and Public Works,
Sydney, 16 March, 1857.*

SIR,

I am directed to convey to you the thanks of the Honorable the Secretary for Lands and Public Works for your further communication of the 3rd ultimo, on the subject of the proposed bridge over the River Murray at Albury, and at the same time to inform you that the suggestions therein contained will be considered in connexion with the question of bridges on the Murray River.

I have, &c.,

MICHL. FITZPATRICK.

CAPTAIN CADELL,

Adelaide.

No. 11.

THE PRINCIPAL UNDER SECRETARY to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Colonial Secretary's Office,
Sydney, 12 June, 1857.*

SIR,

Referring to my letter of the 20th December last, I am directed to state that a duplicate of the communication addressed to the Chief Secretary of Victoria on that date, on the subject of the erection of a bridge over the Murray at or near Albury, was forwarded to him on the 21st April last, but that no reply has been received from him, and to request that you will move the Secretary for Lands and Public Works to be good enough to cause the Colonial Secretary to be informed whether he desires that further communication should be addressed to the Government of Victoria.

W. ELYARD.

THE UNDER SECRETARY

FOR LANDS AND PUBLIC WORKS.

No. 12.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE PRINCIPAL UNDER SECRETARY.

*Department of Lands and Public Works,
Sydney, 26 June, 1857.*

SIR,

In reference to your letter of the 12th instant, No. 188, stating that a duplicate of the communication addressed to the Chief Secretary of Victoria on the subject of the erection of a bridge over the Murray at or near Albury, was forwarded to him on the

21st April last, but that no reply had been received from him, and inquiring whether a further communication should be addressed to the Government of Victoria,—I am directed to apprise you, for the information of the Honorable the Colonial Secretary, that the Secretary for Lands and Public Works considers it desirable that the Government of Victoria should be addressed once more, and requested to state whether they are desirous of undertaking the work, in conjunction with the Government of New South Wales, as an inter-colonial one.

2. Mr. Secretary Hay would wish that it may at the same time be intimated that he has reluctantly taken steps for the selection of a site without the concurrence of that Government in the survey; but that he trusts if the site be approved of, the erection of the bridge itself may still be carried on as a work of equal importance to the Colonies, and by their united action. At all events, a proper understanding must be come to by the two Governments as to the management of the bridge when erected; and it is hoped that the President of the Board of Lands and Works of Victoria will take the subject under his early consideration.

I have, &c.,

MICHL. FITZPATRICK.

THE PRINCIPAL

UNDER SECRETARY.

No. 13. -

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 26 June, 1857.*

SIR,

I am directed by the Secretary for Lands and Public Works to request that you will have the goodness to instruct Mr. Haage, immediately on his arrival at Albury, to make the necessary surveys, so as to ascertain the best site for a bridge over the Murray at Albury, which shall serve to connect that town with Belvoir, and the Colony of New South Wales with that of Victoria.

2. In selecting such a site Mr. Haage should be instructed to take into consideration the convenience of the approaches, and the expenditure necessary to complete them, as well as the best position for the bridge itself, in so far as security and economy of construction are concerned.

3. With this view, the surveyor should not only indicate the position he himself considers the best on the whole, and furnish a plan and estimate adapted for such position, but also any other positions which may appear to be, in some respects, equally or more eligible. The character of the banks, and of the bottom, and the levels of the approaches, and those of the ordinary or highest floods, according to the best information he can obtain, should also be ascertained and marked by him.

4. A bridge so constructed as that it should, if not now, at a future time, without any very great interference with the plan be converted into a swing or pivot bridge, so as to admit of the passage of river steamers, would be preferable to any other; and it is believed that a structure upon piles, which will answer for such a purpose, if required, will be found best adapted to the character of the river and of the strata at Albury.

5. This, however, so far as the report and plan may go, will be for Mr. Haage to judge of from his personal observation; and, so far as the final decision of the character of the bridge is involved, it will depend upon the professional opinions obtainable after the Government shall have obtained the surveys and reports now called for.

6. In conclusion, I am to impress upon you the desirableness of every means being taken to expedite the report of the surveyor.

I have, &c.,

MICHL. FITZPATRICK.

THE SURVEYOR GENERAL.

No. 14.

THE PRINCIPAL UNDER SECRETARY to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Colonial Secretary's Office,
Sydney, 30 June, 1857.*

SIR,

Referring to previous correspondence, I am now directed to forward herewith a copy of a communication which has been received from the Department of the Chief Secretary, Victoria, relative to the erection of a bridge over the Murray at Albury; and to request that you will move the Secretary for Lands and Public Works to cause the Colonial Secretary to be informed whether, in consequence of the receipt of this letter, he would desire any alteration to be made in the communication proposed to be made to the Government of Victoria on your letter of the 26th instant.

I have, &c.,

W. ELYARD.

THE UNDER SECRETARY

FOR LANDS AND PUBLIC WORKS.

[Enclosure in No. 14.]

*Victoria,
Chief Secretary's Office,
Melbourne, 18 June, 1857.*

Sir,

By desire of the Chief Secretary, I have the honor to acknowledge receipt of your letter of the 20th December last, relating to the proposed erection of a bridge over the River Murray at Albury, in which work the co-operation of the Government of this Colony is desired; and I am directed by Mr. Haines to request you will be so good as to state at what time the Government of New South Wales can arrange that a duly qualified officer shall meet an officer deputed by this Government at Albury, with a view to making a survey and report upon the most suitable site for the proposed bridge.

I have, &c.,

J. MOORE,

Under Secretary.

The Honorable

The Colonial Secretary,

New South Wales.

No. 15.

THE SURVEYOR GENERAL to MR. SURVEYOR HAEGE.

*Surveyor General's Office,
Sydney, 29 June, 1857.*

SIR,

I have, at the request of the Honorable the Secretary for Lands and Public Works, to instruct you that immediately on your arrival at Albury you should make the necessary surveys so as to ascertain the best site for a bridge over the Murray at Albury, which shall serve to connect that town with Belvoir, and the Colony of New South Wales with Victoria.

2. In selecting such a site you will take into consideration the convenience of the approaches, and the expenditure necessary to complete them, as well as the best position for the bridge itself, in so far as security and economy of construction are concerned.

3. With this view, you should not only indicate the position which you yourself consider the best on the whole, and forward a plan and estimate adapted for such position, but also any other positions which may appear to be in some respects equally or more eligible; the character of the banks and of the bottom, and the levels of the approaches, and those of the ordinary or highest floods, according to the best information you can obtain, should also be ascertained and marked by you.

4. Mr. Secretary Hay remarks that a bridge so constructed as that it should, if not now, at a future time, without any very great interference with the plan, be converted into a swing or pivot-bridge, so as to admit of the passage of river steamers, would be preferable to any other; and it is believed, he continues, that a structure upon piles, which will answer for such a purpose if required, will be found best adapted to the character of the river and the strata at Albury.

5.

5. This, however, as far as the report and plan may go, it will be for you to judge of from your personal observation.

6. Your best expedition and attention are requested in this matter, which is, I need not say, one of great importance.

HENRY HAEGE, Esq.,
Surveyor.

I have, &c.,

GEO. BARNEY,
S. G.

No. 16.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 3 July, 1857.*

SIR,

Adverting to the letter to you from this Department of the 26th ultimo, on the subject of the instructions to be issued to Mr. Haege in connexion with the necessary surveys to be made so as to ascertain the best site for a bridge over the River Murray at Albury, I am now directed (the Government of Victoria having since intimated its willingness to join in the survey and report upon the most suitable site for the proposed bridge) to request that you will have the goodness to instruct Mr. Haege to join in such survey, and report with the officer appointed by that Government for the purpose.

2. I am to add, that Mr. Haege may, however, proceed with the necessary preliminary surveys at once.

I have, &c.,

THE SURVEYOR GENERAL.

NICHL. FITZPATRICK.

No. 17.

THE SURVEYOR GENERAL to MR. SURVEYOR HAEGE.

*Surveyor General's Office,
Sydney, 7 July, 1857.*

SIR,

Adverting to my letter of the 27th ultimo, No. 727, directing you to make a survey for the purpose of ascertaining the best site for a bridge over the River Murray at Albury, I have now to inform you that the Government of Victoria has since intimated its willingness to join in the survey and report upon the most suitable site for the proposed bridge, and to request therefore that you will join in such survey, and report with the officer appointed by that Government for the purpose.

2. You may, however, proceed with the necessary preliminary surveys at once.

I have, &c.,

H. HAEGE, Esq.,
Surveyor.

GEO. BARNEY,
S. G.

No. 18.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE PRINCIPAL UNDER SECRETARY.

*Department of Lands and Public Works,
Sydney, 10 July, 1857.*

SIR,

In reference to your letter of the 30th ultimo, No. 208, forwarding a copy of a communication from the Department of the Chief Secretary at Victoria relative to the erection of a bridge over the Murray at Albury, and inquiring whether, in consequence of the receipt of that letter, any alteration should be made in the communication proposed to be made to the Government of Victoria, in accordance with the letter from this Department of the 25th ultimo, I am directed to state, for the information of the Principal Secretary, that the Secretary for Lands and Public Works considers it will be better for a duplicate of the communication from this office of the 26th ultimo still to go on, as shewing the nature of the instructions under which Mr. Surveyor Haege has been dispatched to Albury.

2. I am to add, that Mr. Secretary Hay will be extremely gratified, however, if the Government of Victoria will now, at once, carry out the proposal of deputing a duly qualified officer to join with Mr. Haage, who will be on the spot, in the survey, and report upon the most suitable plan for the proposed bridge.

I have, &c,

THE PRINCIPAL UNDER SECRETARY.

MICHL. FITZPATRICK.

No. 19.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE CHIEF SECRETARY, MELBOURNE.

Colonial Secretary's Office,

Sydney, New South Wales,

18 July, 1857.

SIR,

With reference to your letter of the 18th June last, respecting the erection of a bridge over the Murray, I have the honor to transmit, for your information, the copies of two letters from the Department of Lands and Public Works in this Colony on the subject, and to state that this Government will be extremely gratified if the Government of Victoria will now carry out the proposal of deputing a duly qualified officer to join with Mr. Haage (who, it will be observed, has been sent from Sydney for the purpose, and will be on the spot,) in the survey, and report upon the most suitable plan for the proposed bridge.

I have, &c,

THE HONORABLE

THE CHIEF SECRETARY,
Melbourne.

HY. WATSON PARKER.

No. 20.

THE PRINCIPAL UNDER SECRETARY to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

Colonial Secretary's Office,

Sydney, 30 September, 1857.

SIR,

Referring to your letter of the 10th July last, I am directed to forward herewith, for the purpose of being laid before the Secretary for Lands and Public Works, a copy of a communication from the Department of the Chief Secretary, Victoria, relative to the site of the proposed bridge over the Murray, near Albury.

I have, &c,

THE UNDER SECRETARY

FOR LANDS AND PUBLIC WORKS.

W. ELYARD.

[Enclosure in No. 20.]

Victoria,

Chief Secretary's Office,

Melbourne, 21 September, 1857.

SIR,

With reference to your Despatch of the 18th July, on the subject of the proposed erection of a bridge over the River Murray at Albury, I have the honor, by desire of the Chief Secretary, to inform you, that it has been brought under the notice of the President of the Board of Land and Public Works, and that it appears by the report received from this Department that the Inspector General of Roads, Mr. Assistant Surveyor Martin, and Mr. Haage, have been unanimous in their selection of a site, but that the report of the officer first named has not yet been received.

I have, &c,

J. MOORE,

The Honorable the Colonial Secretary,
New South Wales.

Under Secretary.

No. 21.

MR. H. HOPWOOD to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

To the Minister of Lands
and Public Works, Sydney.

Eucha, 5 November, 1857.

HONBLE. SIR,

I am informed it is the intention of the Governments of New South Wales and Victoria concurrently to erect a bridge at Albury, and having had experience of Bates' Patent, am prepared to tender to erect one across the Murray upon that principle, together

with the necessary approaches, and have the honor to request a tracing of map from Mr. Haage's return when sent in to you. I beg to forward herewith (for return) tracing and description of a bridge which has been subjected to the "Military Test" by the Victoria Government. • *Vide "Argus," 2nd Nov., '57.*

I have, &c.,

H. HOPWOOD.

The foregoing letter referred for the report of the Chief Commissioner of Railways.—B. C.

No. 22.

MR. H. HOPWOOD to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

To the Secretary of Lands

Echuca, 14 November, 1857.

and Public Works, &c., Sydney.

SIR,

With reference to the Albury bridge, and the statement made in the last paragraph of the second leader in the *Sydney M. Herald*, 6th instant, although, as you know, it is to a certain extent incorrect, I am, if practicable, willing to undertake the work on the presumed terms.

The reason I did not propose to build it on similar terms as the Deniliquin bridge was, I was afraid the boundary question would be re-opened, and, therefore, only used the word "tender" in my communication to you upon the subject.

I have, &c.,

H. HOPWOOD.

No. 23.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to MR. H. HOPWOOD.

Department of Lands and Public Works,

Sydney, 24 November, 1857.

SIR,

In acknowledging the receipt of your further letter of the 14th instant, I am directed to inform you that in all probability the building of the Albury bridge will be offered to public tender, but as the work will be undertaken in concert with the Melbourne Government, no assurance can be given on the subject.

I have, &c.,

MR. H. HOPWOOD,

MICHL. FITZPATRICK.

Echuca.

No. 24.

THE CHIEF COMMISSIONER OF RAILWAYS to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Railway Department,

Sydney, 11 December, 1857.

SIR,

I have the honor to return herewith Mr. Hopwood's letter of the 5th ult., with enclosed papers, and to inform you, that having been compelled by illness to cease work for a few days past as far as practicable, I requested Mr. Whitton to favor me with a report upon the bridge alluded to in Mr. Hopwood's letter, a copy of which I have now the honor to enclose for your information.

I have, &c.,

THE HONORABLE

B. H. MARTINDALE,

THE SECRETARY FOR

Chief Commissioner.

LANDS AND PUBLIC WORKS.

J. W.

Dec. 7th, '57.

No. 25.

No. 25.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to MR. HOPWOOD.

*Department of Lands and Public Works,
Sydney, 18 December, 1857.*

SIR,

Referring to my letter of the 24th ultimo, I am now directed to return to you the tracing and description of a bridge proposed to be erected over the River Murray at Albury, which was forwarded by you on the 5th of last month, and to inform you that, from a report received from the Chief Commissioner for Railways, it appears that the bridge in question would, if well erected, answer the purpose for which it is intended, but it is considered that the structure would be weak laterally.

2. I am to add that Mr. Surveyor Haeghe has been instructed to propose a plan of a bridge for the locality in question, in concert with the surveyor of the Victorian Government.

I have, &c.,

MR. H. HOPWOOD,
Echuca, Murray River.

MICHL. FITZPATRICK.

No. 26.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 19 December, 1857.*

SIR,

With reference to my letters of the 26th June and 3rd July last, requesting you to instruct Mr. Surveyor Haeghe to make the necessary surveys, and ascertain the best site for a bridge over the Murray at Albury, I am directed to draw your attention thereto and to request the favor of your early forwarding the information sought.

I have &c.,

THE SURVEYOR GENERAL.

MICHL. FITZPATRICK.

No. 27.

THE SURVEYOR GENERAL to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Surveyor General's Office,
Sydney, 29 December, 1857.*

SIR,

I have the honor to inform you that, in attention to your letters of the 26th June and 3rd July last, instructions were issued to Mr. Surveyor Haeghe, in concert with an officer to be deputed by the Victorian Government, to select a site for the erection of a bridge over the Murray at Albury, to connect that of Victoria with this Colony, and I now beg to forward a plan and report which I have received from that officer for submission to the Honorable the Secretary for Lands and Public Works.

2. These documents, I may be permitted to add, are very satisfactory, and the Colonial Architect will now be enabled to prepare the necessary plan and estimate for the bridge.

I have, &c.,

THE UNDER SECRETARY FOR
LANDS AND PUBLIC WORKS.

GEO. BARNEY,
S. G.

P. S.—It appearing to me that Mr. Green can have no claim to compensation for the land required for the approach to the bridge, I have called upon Mr. Surveyor Haeghe forthwith to furnish an estimate of the cost of the approach, minus the amount which he had allowed as compensation to Mr. Green, and on receipt of this document I shall do myself the honor to forward it to you.

G. B.

[Enclosure in No. 27.]

*Thurgona, near Albury,
17 December, 1857.*

SIR,

With reference to your letters of the 29th June last, No. 721, of the 7th July last, No. 743, and of the 9th instant, No. 1530, I do myself the honor to state, that I have met in conference the officer deputed by the Victorian Government (the Inspector General of Roads),

Roads,) for the purpose of reporting on the bridge over the Murray at Albury, and that, after a careful inspection of the river in the vicinity of Albury, it was mutually agreed that the spot to which a line of telegraph has been marked out on the Victorian side of the river, and which is nearly opposite the next street south of and parallel to Nurigong-street, offers the only available site for the bridge.

Separate Roll.

2. I have furnished the preliminary survey, and beg to transmit herewith one plan and one sheet sections. The plan shows the proposed site and new line of road from Albury to Belvoir, and, in combination with the sections, minutely illustrates the nature and condition of both the site of the bridge and the approaches.

3. With regard to the mode of construction to be adopted for the bridge, the Victorian officer coincides with me in the opinion that a single arch, either wooden or iron, supported by stone abutments, would be best adapted to the character of the river; the width to be spanned being about 220 feet. A structure on piles, although perhaps more economical, was objected to on account of the danger arising from the obstruction such a bridge would offer to the rapid current and the heavy masses of timber carried down by it at flood times.

4. I have not furnished a plan and estimate of the bridge, as it was impossible for me to get them out without having any work of reference. However, the plan and sections transmitted herewith contain every local information required for making a proper design. I have only to add, that the roadway of the bridge should have sufficient width for the convenient crossing of large mobs of horses or cattle, as those form a considerable portion of the traffic to be accommodated.

5. With regard to building materials and the prices thereof, I have instituted inquiries, and find *timber* (flooded gum) in lengths not exceeding 30 feet is plentiful and close at hand; the Wodonga Steam Saw Mills price is 30s. per 100 feet superficial; by the introduction of another saw mill it might, however, be reduced to 20s. Timber in greater lengths and of suitable size is scarce, and more expensive, on account of the carriage.

Stone, of excellent quality, (a kind of granite) is obtained at Atkin's Hill, about a mile from the proposed site for the bridge; the price at the quarry 12s. per perch.

Roach Lime is obtained at Girogiry, 25 miles distant, and is worth 4s. 6d. per bushel.

Iron-work, of the kind required for a wooden bridge, is 9d. per lb.

6. The expense of forming the approaches on the New South Wales side, that is, raising the road above the level of the highest flood, erecting a wooden bridge over the creek near Green's house, and re-appropriating the land purchased by Green, would amount to £820.

7. I have not formed an estimate of the much more extensive approaches on the Victorian side, as I was informed by the Inspector General of Roads that those would concern the Government of Victoria only; the probable cost might, however, be ascertained from the section I have furnished. In raising the road from the proposed bridge to Belvoir above the level of the highest flood, provision should be made for a sufficient number of openings to allow the flood water to pursue its natural course across the Wodonga Flat, as the stopping up of all those flood water courses would necessarily have the effect of throwing a large body of water into the lower situated portions of the township of Albury. The bridge over Wodonga Creek is in a very unsatisfactory condition, and, in order to make the approaches perfectly safe, and at all times practicable, it should be replaced by a new one.

I have, &c.,

HENRY HAEGE,

Surveyor, 2nd Class.

The Surveyor General.

No. 28.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 9 January, 1858.*

SIR,

With reference to your letter of the 29th ultimo, forwarding a report from Mr. Surveyor Haege relative to the site for a bridge over the Murray at Albury, I am directed to request that you will have the goodness to state whether Mr. Haege could carry this work a stage farther, and prepare a plan, specification, and estimate of the proposed bridge. It is apprehended that both Mr. Adams and Mr. Haege are qualified, from their professional knowledge, to undertake this service; but on this point the Secretary for Land and Public Works would like to be further informed.

2. Provided that you see no objection, there would arise this advantage,—that these gentlemen being already employed upon the spot, the Government would not have to send up another officer.

I have, &c.,

MICHL FITZPATRICK.

THE SURVEYOR GENERAL.

No. 29.

THE SURVEYOR GENERAL to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Surveyor General's Office,
Sydney, 18 January, 1858.*

SIR,

I have the honor to acknowledge the receipt of your letter of the 9th instant, No. 58-75, wherein—with reference to my letter of the 29th ultimo, forwarding a Report from Mr. Surveyor Haage relative to the site for a bridge over the Murray at Albury—you inquire whether Mr. Haage could carry the work a stage farther, and prepare a plan, specification, and estimate of the proposed bridge.

2. In reply thereto I beg to state, for the information of the Honorable the Secretary for Lands and Public Works, that I believe Mr. Haage to be quite qualified to furnish the required documents; but that I should, in giving him instructions for their preparation (should it be so determined), desire him to avail himself of the professional assistance and advice of Mr. District Surveyor Adams, should he find it desirable

I have, &c.,

GEO. BARNEY.

THE UNDER SECRETARY
FOR LANDS AND PUBLIC WORKS.

No. 30.

THE PRINCIPAL UNDER SECRETARY to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Colonial Secretary's Office,
Sydney, 22 January, 1858.*

SIR,

Referring to my letter of the 30th September last, I am directed to enclose, for the information of the Secretary for Lands and Public Works, the copy of a communication from the Department of the Chief Secretary, Victoria, forwarding a copy of the Report furnished by the Inspector General of Roads, in that Colony, relative to the proposed bridge over the Murray River.

I have, &c.,

W. ELYARD.

THE UNDER SECRETARY
FOR LANDS AND PUBLIC WORKS.

[Enclosure in No. 30.]

*Victoria.
Chief Secretary's Office,
Melbourne, 7 January, 1858.*

SIR,

Referring to your letter of the 18th July, upon the subject of the proposed bridge over the River Murray, and to a communication from this Office on the 21st September, in which you were informed that the Report of the Inspector General of Roads had not been furnished, I have now the honor to call your attention to the enclosed copy of the statement which has been submitted by that officer.

I have, &c.,

J. H. KAY,
(for the Under Secretary.)

The Honorable
The Colonial Secretary,
New South Wales.

MEMO.

In compliance with the request of the Secretary that I should state, in writing, what steps I had taken when at Albury (as already reported verbally) with respect to the proposed bridge over the Murray between Wodonga and Albury, I beg to state that having met Mr. Haage (from the New South Wales Government) we decided upon a site already selected by that gentleman as the most eligible—indeed the only eligible site.

2. Mr. Haage undertook, as he had been already instructed, to prepare the preliminary survey, section, &c., of the site, and to furnish copies of this information to our engineer, (or rather to allow him to take copies).

3. I was awaiting this before reporting more definitely, as this information was required to enable me to give anything like an accurate estimate of the cost.

4. In its absence, however, I am of opinion that a sum of ten thousand pounds would cover half the expense of the work in the first instance, as for the present the approaches on the Victoria side need not be carried more than from 5 to 10 chains from the bridge, leaving the rest of the road into Wodonga to be made at a future period: probably this need not be done till land on the Wodonga Flat is sold.

The President of the
Central Road Board.

G. W. HAINES.
25/11/57.

No. 31.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

*Department of Lands and Public Works,
Sydney, 25 January, 1858.*

SIR,

In acknowledging the receipt of your letter of the 18th instant, stating that you consider Mr. Surveyor Haegge fully qualified to furnish a plan, estimate, and specification of the proposed bridge at Albury, I am directed by the Secretary for Lands and Public Works to request that you will have the goodness to instruct that officer to proceed with the preparation of the documents in question, availing himself of the professional assistance of Mr. District Surveyor Adams, should he find it desirable.

THE SURVEYOR GENERAL.

I have, &c.,
MICHL. FITZPATRICK.

No. 32.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE PRINCIPAL UNDER SECRETARY.

*Department of Lands and Public Works,
Sydney, 30 January, 1858.*

SIR,

With reference to your letter of the 22nd instant, enclosing a copy of a communication from the Chief Secretary of Victoria, forwarding a copy of the Report furnished by the Inspector General of Roads relative to the proposed bridge over the Murray, I am directed to inform you, that the Secretary for Lands and Public Works is under the impression, after perusing the Report in question, that it is the intention of the Victorian Government to have plans of the proposed bridge prepared by their officers.

2. Previously, however, to the receipt of your letter, instructions had been given for the preparation of a plan in this Colony. These instructions will not now be countermanded, as it is conceived that there may be some advantage in a comparison of the two plans; and should any question arise as to which of the two is to be preferred, or whether a modification of either is desirable, the Government of Victoria will not perhaps see any objection to remit such question for the final decision of His Excellency the Governor General.

THE PRINCIPAL UNDER SECRETARY.

I have, &c.,
MICHL. FITZPATRICK.

No. 33.

CAPTAIN CADELL to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Adelaide, 3 February, 1858.

SIR,

I have the honor to acknowledge receipt of your letter of 31 Dec., 1856, wherein you suggest for my consideration whether or not it would be advisable to have the funnels of the steamers removable, i. e., on hinges. In reply, I beg to enclose diagram received from the owners of the steamers "Leichhardt" and "Sturt," as they have the greatest breadth of beam of any river boats.

By the said diagram you will perceive that to allow the passage of such steamers under any bridge a height of arch would be required quite out of keeping with the adjoining banks, and involving a considerable elevation on its approaches. The calculations, of course, would be made from the highest flood level. It was owing to what may have been false notions

notions of economy that I suggested a draw-bridge, as a bridge capable of allowing beneath it the unimpeded navigation of the stream would be of much more solid and durable structure.

Any information I can at any time furnish is very much at the service of your Department.

I have, &c.,

THE HONORABLE JOHN HAY, ESQ.,
Minister of Crown Lands and Public Works,
Sydney.

THOS. CADELL.

No. 34.

THE COLONIAL SECRETARY, NEW SOUTH WALES, to THE CHIEF SECRETARY, VICTORIA.

Colonial Secretary's Office,

Sydney, New South Wales,

13 February, 1858.

SIR,

With reference to a letter from your Department of the 7th ultimo, No. 12, forwarding a copy of the report furnished by the Inspector General of Roads relative to the proposed bridge over the Murray, I have the honor to inform you that it is understood from this report that the Government of Victoria intend to have plans of the proposed bridge prepared by their officers; but as instructions had been given previously to the receipt of your communication for the preparation of a plan in this Colony, it is not now proposed to countermand these instructions, as it is conceived that there may be some advantage in a comparison of the plans prepared by the respective Engineers.

2. When the plans shall have been completed, together with specifications and estimates, the question as to which shall be carried out will have to be determined by some competent authority. It was suggested by the Minister of Lands and Works in this Colony that this point should be decided by Sir William Denison, the Governor General; and this suggestion having been submitted to His Excellency, he intimated his willingness, if requested, to give advice or to express an opinion on them, although he does not desire to undertake the responsibility of deciding upon the adoption of either.

3. I beg to add, that when the plan which is to be prepared in this Colony shall have been furnished to Victoria this Government will be glad to be favored with a further communication from you on the subject.

THE HONORABLE
THE CHIEF SECRETARY,
Victoria.

I have, &c.,

CHARLES COWPER.

No. 35.

THE PRINCIPAL UNDER SECRETARY to THE UNDER SECRETARY FOR LANDS AND
PUBLIC WORKS.

Colonial Secretary's Office,

Sydney 13 February, 1858.

SIR,

I am directed by the Colonial Secretary to inform you that a communication has been made to the Chief Secretary for Victoria on the subject of the proposed bridge over the River Murray, in terms of your letter of the 30th ultimo, with the exception that it has been stated that whilst the Governor General will be willing to give his opinion and advice as to the plan of the bridge which it may seem most advantageous to approve of, His Excellency does not desire that the decision which of the two should be adopted should rest with him.

2. I am at the same time desired to forward, for the information of the Secretary for Lands and Public Works, a copy of a letter from the Government of Victoria, by which it appears that the details of the plan proposed by Mr. Haage for the bridge, with an estimate of the cost, were expected to have been furnished by this Colony.

I have, &c.,

THE UNDER SECRETARY
FOR LANDS AND PUBLIC WORKS.

W. ELYARD.

[Enclosure]

[Enclosure in No. 35.]

Victoria,
Chief Secretary's Office,
Melbourne, 5 February, 1858.

Sir,

With reference to the correspondence between the Government of New South Wales and Victoria upon the subject of the proposed bridge over the Murray at Albury, I have the honor, by desire of the Chief Secretary, to inform you that an intimation has been received at this office from the Department of Roads and Bridges to the effect that in the absence of the details of the plan proposed by Mr Haegge, and an estimate of the cost with which it was arranged between him and the late Inspector General of Roads that this Government should be furnished, the President of the Board of Land and Public Works has not considered it advisable to propose any provision of the work on the Estimates for the present year.

I have, &c.,
J. MOORE,
Under Secretary.

The Honorable the Colonial Secretary,
New South Wales.

No. 36.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SURVEYOR GENERAL.

Department of Lands and Public Works,
Sydney, 20 February, 1858.

Sir,

With reference to my letter of the 25th ultimo, I am directed to request that you will forward to me, as soon as possible, a copy of the survey made by Mr. Surveyor Haegge in connection with the intended bridge at Albury, in order that it may be transmitted with a copy of his Report to the Government of Victoria.

I have, &c.,
MICHL. FITZPATRICK.

THE SURVEYOR GENERAL.

No. 37.

THE SURVEYOR GENERAL to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

Surveyor General's Office,
Sydney, 13 March, 1858.

Sir,

In reference to your letter of the 25th January, No. 58-18, directing me to instruct Mr. Haegge to furnish a plan and specification of the proposed bridge at Albury, I have the honor to forward herewith a letter which I have received from Mr. Haegge, wherein he states that, without having books of reference, or any other such information as is usually at the command of a projecting engineer at his command, he is unable to prepare the required plan and specification; but he repeats that the documents already forwarded are the usual ones which pass from the surveyor to the engineer in such cases, and contain every information necessary for the latter.

I have, &c.,
GEO. BARNEY,
Surveyor General.

THE UNDER SECRETARY
FOR LANDS AND PUBLIC WORKS.

[Enclosure in No. 37.]

Camp, near Albury,
3 March, 1858.

Sir,

In answer to your letter of the 1st ultimo, No. 130, requesting me to furnish a plan, specification, and estimate for the proposed bridge over the Murray, I do myself the honor to state, that I have communicated with Mr. District Surveyor Adams, and that, without having books of reference, or any other such information as are usually at the command of a projecting engineer, at our disposal, we find it almost impossible to prepare the required plan and specification. The documents transmitted with my reports of the 17th December last, No. 19, are the usual ones which pass from the surveyor to the engineer in such cases, and contain every information necessary for the latter. I, therefore, beg respectfully to suggest that the above documents should be handed over to the engineering department, in order to obtain the required plan and specification.

I have, &c.,
HENRY HAEGGE.

The Surveyor General.

CAPTAIN CADELL,
Adelaide.

MICHL. FITZPATRICK.

No. 40.

ALBURY BRIDGE.

*Railway Department,
Sydney, 31 March, 1858.*

MINUTE PAPER.

I am of opinion there is sufficient information in these drawings, with the exception of that relative to the foundations, for which purpose the ground ought to be further examined. Borings should also, if practicable, be taken in the bed of the river, to ascertain its character. A bridge of 200 feet span would be very expensive, and it should be clearly shown to be necessary before such an expensive style of construction is resorted to.

Plans returned herewith and papers.

THE HONORABLE THE SECRETARY
FOR LANDS AND PUBLIC WORKS.

B. H. M.

THE PRINCIPAL UNDER SECRETARY to THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Colonial Secretary's Office,
Sydney, 7 April, 1858.*

SIR,

I am directed to state, for the information of the Secretary for Lands and Public Works, that the copy of Mr. Surveyor Haeg's plan of his survey for site of a bridge at Albury, and of his report thereon, which were forwarded under your blank cover of the 9th ultimo, have been transmitted to the Government of Victoria; and that it appears, from a communication received from the Department of the Chief Secretary, that they have been brought under the notice of the Department of Roads and Bridges in that Colony.

I have, &c.,

THE UNDER SECRETARY
FOR LANDS AND PUBLIC WORKS.

W. ELYARD.

P. S.—A copy of the letter from the Government of Victoria is enclosed.

W. E.

23 March, 1858.

575—F

No. 42.

No. 42.

THE CHIEF COMMISSIONER OF RAILWAYS to THE SURVEYOR GENERAL.

*Railway Department,
Sydney, 22 June, 1858.*

SIR,

The Honorable the Secretary for Lands and Public Works having directed me to put myself in communication with you, in order to procure any further information required for preparing plans for a bridge over the River Murray at Albury, I have the honor to request you will instruct Mr. Haegs, who you have been good enough to inform me shall be directed to carry out any instructions I may prepare in reference to this subject, to take the measures necessary to obtain the information requested in the accompanying memorandum.

I have, &c.,

THE SURVEYOR GENERAL.

B. H. MARTINDALE.

[Enclosure in No. 43.]

ALBURY BRIDGE.

Borings to be taken on the Melbourne side of the river to a depth of at least 15 feet below the bottom of the river in the lowest part, unless before arriving at that depth rock of at least 5 feet in thickness be met with. On the New South Wales side of the river the borings should be continued to at least 15 feet below the bed of the river at the lowest point shown on the section, as the gravel met with may only be a thin bed. Borings should also be taken in the centre of the river to a depth of at least 20 feet below the lowest portion of the bed of the river, the thickness and description of the strata being accurately noted.

No. 43.

THE SURVEYOR GENERAL to MR. SURVEYOR HAEGE.

*Surveyor General's Office,
Sydney, 24 June, 1858.*

SIR,

I request that, with as little delay as practicable, you will supply the information required by the enclosed Memo., and which is needed in the preparation of the plans for a bridge over the Murray River at Albury.

I have, &c.,

H. HAEGE, Esq.,
Surveyor.

GEO. BARNEY.

No. 44.

MR. SURVEYOR HAEGE to THE SURVEYOR GENERAL.

Albury, 7 August, 1858.

SIR,

Referring to your letter of the 24th June last, No. 58-908, requesting me to take borings at the site for the bridge across the River Murray at Albury, I have the honor to state—

1. That I have made inquiries at the neighbouring diggings (Adelong and Orens) with the view to obtain a proper boring apparatus, but without success.

2. I then procured such tools as I could get made here on the spot, with which I obtained the results noted on the enclosed diagram.

3. If the information contained therein should not be sufficient in the preparation of plans for a bridge, and if it is required to proceed with the borings to the depth mentioned in the memorandum, herewith returned, it will become necessary to procure a proper boring apparatus, which might most advantageously and expeditiously be obtained from Melbourne.

I have, &c.,

THE SURVEYOR GENERAL.

HENRY HAEGE.

No. 45.

No. 45.

MR. SURVEYOR ADAMS to THE SURVEYOR GENERAL.

Albury, 18 August, 1858.

SIR,

With reference to the bridge over the River Murray at Albury, I have the honor to report that the result of information which I have gathered since I have been in this district leads to the belief that no part of the superstructure of the bridge should be less than five or six feet above the level of the river in 1852, which is the highest known rise.

2. The rain which caused this flood I find to have been partial to the northern waters of the Murray and the south-eastern waters of the Murrumbidgee; but, had the whole body of water fallen into the water-shed of the Murray the rise would have been greater.

3. After the rise obtains this height the sectional area increases so enormously that I do not think any amount of rain would cause a rise of more than a few feet.

I have, &c.,

P. FRANCIS ADAMS,

THE SURVEYOR GENERAL.

District Surveyor.

No. 46.

THE PRINCIPAL UNDER SECRETARY to THE UNDER SECRETARY FOR LANDS AND

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE CHIEF COMMISSIONER
OF RAILWAYS.*Department of Lands and Public Works,**Sydney, 1 September, 1858.*

SIR,

I am directed to request that you will have the goodness to report to this office what progress has been made in the preparation of the plan for the erection of the proposed bridge over the River Murray at Albury.

I have, &c.,

MICHL. FITZPATRICK

THE CHIEF COMMISSIONER OF RAILWAYS.

No. 48.

THE CHIEF COMMISSIONER OF RAILWAYS to THE SECRETARY FOR LANDS AND WORKS.

ROAD BRANCH.

*Department of Internal Communications,**Sydney, 7 September, 1858.*

SIR,

In answer to your letter of the 1st instant, inquiring what progress has been made in the preparation of the plan for the erection of the proposed bridge over the River Murray at Albury, I have the honor to inform you that these papers were first transmitted to me with the plans on the 25th March last, for an opinion as to whether sufficient information had been obtained on the spot to enable a proper plan and specification to be prepared.

On

On the 31st of that month I stated in reply that the information was sufficient, except as regarded the character of the foundations, to ascertain which borings should be taken.

The papers were returned to me on the 12th of June, and on the 22nd of the same month I transmitted to Mr. Haeghe, through the Surveyor General, in compliance with your instructions, directions as to the borings that should be taken.

Reports in reply to those instructions were received in this office on the 25th and 27th ultimo, during my absence inspecting the Great Northern Road.

The borings taken appear to have been the best that could be made with the tools procurable in the immediate neighbourhood, and although not so satisfactory as could be wished, are sufficient to permit it to be assumed that a bed of gravel extends under the river, and for some distance on either side of it, affording good foundations.

The reports and papers in original are transmitted herewith, and as soon as these are returned the plans and specifications for the bridge shall be commenced.

I presume it is the wish of the Government that the bridge should be so constructed as to be capable of being used for Railway traffic when required.

It would be desirable that, while the plans are being prepared, Mr. Haeghe should be authorized to procure boring tools from Melbourne, and to obtain the information required in the previous instructions transmitted to him.

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE THE SECRETARY

THE CHIEF COMMISSIONER OF RAILWAYS to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

*Department of Internal Communications,
14 September 1858.*

SIR,

In reference to my letter of the 7th instant, transmitting to your office the papers and reports relating to the Albury Bridge, I have the honor to request that these may, if convenient, be returned to me, to permit of the plans for the bridge being proceeded with.

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE THE SECRETARY
FOR LANDS AND PUBLIC WORKS.

No. 50.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE CHIEF COMMISSIONER OF RAILWAYS.

*Department of Lands and Public Works,
Sydney, 15 September, 1858.*

SIR,

In returning to you the enclosed papers, which accompanied your letter of the 7th instant, relative to the proposed bridge over the Murray, at Albury, I am directed to inform you that the Secretary for Lands and Public Works approves of your obtaining, without delay, the necessary boring tools from Melbourne, in order that a satisfactory conclusion may be arrived at as to the nature of the foundation to be obtained for the bridge in question.

2. In the meantime, however, I am to request that the preparation of the plans of the proposed bridge (which Mr. Secretary Robertson was some time since informed were in a state of forwardness) may be proceeded with without delay.

3. I am also instructed to inform you, that Mr. Robertson is desirous of having officially on record the memo., which he is under the impression he forwarded to you, with reference to the description of bridge desired, and to request that you will have the goodness to forward the memo., or a copy of it, to this office, for the purpose of being placed with the other papers on the subject.

I have, &c.,

MICHL. FITZPATRICK.

THE CHIEF COMMISSIONER OF RAILWAYS.

1858.

Legislative Assembly.
NEW SOUTH WALES.

COCKFIGHTER'S CREEK BRIDGE.

(DESTRUCTION OF BY FLOODS OF LAST YEAR.)

Ordered by the Legislative Assembly to be Printed, 15 June, 1858.

To the Legislative Assembly of New South Wales.

The humble Petition of the undersigned Inhabitants of Maitland, Singleton,
Wollombi, and Jerry's Plains,—

HUMBLY SHEWETH :—

That at the end of the month of August, in the year one thousand eight hundred and fifty-seven, a portion of the bridge over Cockfighter's Creek, near Jerry's Plains, connecting the main roads from Maitland, Singleton, Wollombi, Jerry's Plains, Cassilis, and Mudgee, with some of the principal of the Western Gold Fields and each other, was broken down by the floods, caused by the heavy rains about that time, and many of the inhabitants of the above-named towns and the surrounding districts have, since the said month of August, been most seriously inconvenienced in their traffic, and injured in their trade in consequence.

That, since the destruction of the said bridge, no loaded drays have been able to cross the said creek at or near the place where the said bridge formerly stood,—the soil at the bed of the creek thereabouts being of a very sandy kind, and loaded drays would sink down axle-tree deep in making the attempt to cross,—and the drivers of the drays have been compelled to unload and carry over their loads in small quantities, in the best way they could, thereby causing a delay whereby both the owners of the goods and the carriers have suffered very serious loss and inconvenience.

That, since the time of the said bridge being destroyed, the drays have been compelled to make a very circuitous route—being at least fifteen miles out of their direct line of journey—having now to cross at a place called Merton.

The traffic over the bridge before it was washed away was very considerable, it being the sole thoroughfare from the towns of Maitland, Goulburn, Gammon Plains, and Cassilis, to the Gold Fields of Mudgee, Tambaroora, Oakley Creek, Louisa Creek, the Turon, and other Diggings.

This road or thoroughfare passes through or near to numerous large squatting runs, farms, and a great many public houses; and all, both squatters, farmers, and publicans, feel the loss and inconvenience of having no crossing-place or bridge at the spot over the said creek where the old bridge formerly stood.

The inhabitants of Jerry's Plains and the surrounding districts suffer very materially both from the inconvenience and delay they now experience in obtaining their goods, as well as the loss they sustain pecuniarily from the traffic now, with few exceptions, taking a road which leaves the township of Jerry's Plains entirely out of the main thoroughfare.

Your Petitioners most humbly pray that your Honorable House will be pleased to take your Petitioners' case into your consideration, and grant such relief unto your Petitioners as your Honorable House may think proper and necessary.

And your Petitioners will ever pray.

[Here follow 127 Signatures.]

(BRIDGE ACROSS BLACKWATTLE SWAMP.)

Ordered by the Legislative Assembly to be Printed, 24 August, 1858.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 17 August, 1858, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table of this House :—

- “ (1.) Copies of the plan and general specification of the Embankment and Bridge proposed to be constructed across Blackwattle Swamp by the Pyrmont Bridge Company, as laid before the Executive Council on the 12th May, 1857.
- “ (2.) Copies of Minutes of all Proceedings of the Executive Council connected therewith.”

(*Mr. Forster.*)

PYRMONT BRIDGE COMPANY'S WORKS.

PROCEEDINGS of the Executive Council on the 6th February, 1857, with respect to the extension of the Pyrmont Bridge Company's line of road from Union-street, Pyrmont, to the Glebe Road.

Extract from Minute No. 57-6, dated 2nd February, 1857.

Present:—

HIS EXCELLENCY THE GOVERNOR GENERAL.
THE HONORABLE THE VICE-PRESIDENT OF THE COUNCIL.
THE HONORABLE THE COLONIAL SECRETARY.
THE HONORABLE THE SOLICITOR GENERAL.
THE HONORABLE THE COLONIAL TREASURER.
THE HONORABLE THE SECRETARY FOR LANDS AND PUBLIC WORKS.

HIS Excellency the Governor General lays before the Council a letter from the Secretary of the Pyrmont Bridge Company, forwarding, in accordance with the 11th section of the Pyrmont Bridge Company's Act of 1855, a copy of the Plan and Book of Reference of the extension of the Company's line of road from Union-street, Pyrmont, across the Ultimo Estate and Blackwattle Swamp Bay to the Glebe Road.

2. The Council advise that this Plan and Book of Reference be referred to the Surveyor General for his report, with the view of ascertaining whether it may be necessary to require any alterations therein.

EDWARD C. MEREWETER,
Clerk of the Council.

PROCEEDINGS of the Executive Council on the 12th May, 1857, with respect to the Pyrmont Bridge Company's Bridge across Blackwattle Swamp.

Extract from Minute No. 58-24. Confirmed 20 May, 1857.

Present:—

HIS EXCELLENCY THE GOVERNOR GENERAL.
THE HONORABLE THE VICE-PRESIDENT OF THE COUNCIL.
THE HONORABLE THE COLONIAL SECRETARY.
THE HONORABLE THE SECRETARY FOR LANDS AND PUBLIC WORKS.

REFERRING to the Proceedings on the 2nd February last, with respect to the extension of the Pyrmont Bridge Company's line of road from Pyrmont, across the Ultimo Estate, to the Glebe Road, HIS Excellency the Governor General now lays before the Council the Report of the Surveyor General, called for on the above date.

2. With this Report HIS Excellency also lays before the Council a letter from the Engineer of the Company, submitting for approval a section of the road and a plan of the Bridge which it is proposed to erect across Blackwattle Swamp.

3. As it appears by the Report of the Surveyor General that it is not necessary to require any modification of the line as proposed, the Council advise that the plan and book of the said extension, together with the section and plan of the Bridge across Blackwattle Swamp, be approved: provided that the latter be so modified as that a clear way of at least 4 feet at high-water spring tides be preserved below the timbers of the Bridge.

EDWARD C. MEREWETHER,
Clerk of the Council.

GENERAL

GENERAL SPECIFICATION of the Embankment and Bridge proposed to be constructed across Blackwattle Swamp by the Pyrmont Bridge Company.

The Pyrmont Bridge Co.'s line of road will be carried across Blackwattle Swamp on an embankment 30 feet wide on the top and 24 feet deep in the centre, having a timber bridge about the middle of its length, 90 feet long, to admit the free passage of boats, as well as to allow the tide to flow in and out.

The bridge, which will be 30 feet wide between the handrails, will consist of three bays or openings, 30 feet span each. The piles to be of the best ironbark, thoroughly seasoned, free from shakes, knots, pipes, and with not more than $1\frac{1}{2}$ in. on the heads, where they will be 14 in. by 14 in. (not less), 11 in. by 11 in. at foot. Ceppered from 2 feet under high water mark to 1 foot into the mud. Each bay of piles to be firmly braced with cross and diagonal braces secured by patent Muntz metal and wrought iron bolts: scantling of braces to be 12 in. by 6 in. Cross caps to be mortised down on the pile heads, to be of ironbark, dye square, 14 in. by 14 in. by 33 feet long. Corbels to be also of ironbark notched down 2 in. on the caps, to which and to the longitudinal girders they will be secured by wrought iron knees with bolts and nuts.

The girders, 4 to each bay, will consist of a simple bow truss, framed in the manner shown on the accompanying drawing, and secured with proper wrought iron bolts, nuts, and washers.

The deck planking, joists, cross and diagonal braces, will consist of the best Colonial (New South Wales) hardwood; i. e., ironbark, spotted or blue gum.

Generally, the bridge will be of the same substantial and permanent character as that which the Company are now constructing across Darling Harbour.

E. O. MORIARTY,
Engineer.

1858.

Legislative Assembly.

NEW SOUTH WALES.

FERRY AT BUMADERRY POINT, SHOALHAVEN.

(PETITION FOR THE ESTABLISHMENT OF.)

Ordered by the Legislative Assembly to be Printed, 18 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Landed Proprietors, Leascholders, Tradesmen, and other Residents in the Police District of Shoalhaven,—

RESPECTFULLY SHEWETH :—

That the aforesaid Police District is divided into two parts by the Shoalhaven River, across which there is a considerable and increasing amount of traffic.

That it is of serious importance to the welfare of the District, and the mutual interests of the public, that a Ferry should be established, under the auspices of Government, for the purpose of permanently promoting and extending the advantage of uninterrupted intercourse and communication between both sides of said river.

That Petitioners most respectfully beg to direct the attention of your Honorable House to Bumaderry Point, as the most eligible site for a public Ferry, being the nearest and best line of communication from Illawarra through the Government township of Nowra to Jervis Bay, Ulladulla, Broulee, Moruya, Twofold Bay, Braidwood, &c.

That, irrespective of Bumaderry Point being the most eligible site for the Ferry, it would have the ulterior object of immediately connecting the Government township of Nowra with Illawarra by means of the new line of road, through the Foxground, to Jamberoo or Kiama, thus avoiding very difficult and dangerous obstacles. The said road would also throw open a great extent of available Crown Land, and confer a great benefit upon all residents and the public in general.

Your Petitioners, therefore, most humbly and earnestly pray that your Honorable House will consider the establishment of a public Ferry connected with the new line of road from Bumaderry Point to Kiama or Jamberoo of serious importance to the rise and welfare of the District, and will be pleased to take such steps as you may consider desirable for carrying out the objects sought for by your Petitioners.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 150 Signatures].

SUPPLY OF WATER TO WOLLONGONG.
(REPORT OF MR. SURVEYOR SHONE.)

Ordered by the Legislative Assembly to be Printed, 20 April, 1858.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 9 April, 1858, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table of this House:—

“ The Report of Mr. Shone, Government Surveyor, and any
“ other Report presented to the Government relating to the
“ Supply of Water to Wollongong.”

SCHEDULE.

No.	Page
1. Petition from the Inhabitants of Wollongong, praying for a sum of money to provide for the Supply of Water to the Town of Wollongong	2
2. The Colonial Secretary's Reply to the Petition, 8 November, 1854	2
3. Colonial Secretary to Acting Auditor General, on same subject, 8 November, 1854	2
4. Surveyor General to the Colonial Secretary, enclosing a Report by Mr. Assistant Surveyor Shone, 17 April, 1858	3
5. Colonial Architect's Report to the Colonial Secretary, 23 May, 1855	3
6. Colonial Secretary to Colonial Architect, in reply, 5 June, 1855	4
7. Colonial Secretary to Surveyor General, on same subject, 5 June, 1855	4
8. Mr. Thomas Garrett to the Colonial Secretary, enclosing a Petition from the Inhabitants of Wollongong, praying for a Grant of £2,000, 9 March, 1855	4
9. Colonial Architect's Report thereon, 24 March, 1858	5

SUPPLY OF WATER TO WOLLONGONG-

No. 1.

To His Excellency SIR CHARLES AUGUSTUS FITZ ROY, Knight Companion
of the Royal Hanoverian Guelphic Order, Knight Commander of the
Bath, Governor General of all Her Majesty's Australian Possessions, and
Captain General and Governor in Chief of New South Wales and its
Dependencies.

The respectful Memorial of the undersigned Landholders, Proprietors and Residents of the
Town of Wollongong,—

RESPECTFULLY SHEWETH :—

That the Town of Wollongong is rising rapidly into importance, with an almost daily increasing population.

That it is the favorite resort of the Colonists who seek health and recreation ; but that its usefulness and value are much diminished from the want of a due supply of water.

That it is at present suffering under great privation from continued drought, the inhabitants being obliged to send a distance of between three and four miles for a daily supply ; and the cattle are dying in scores from the same cause.

That a permanent and sufficient supply of this necessary of life might be obtained by an outlay of three thousand pounds, expended under proper engineer's superintendence.

And your Memorialists therefore humbly pray your Excellency to recommend to the Committee of the Legislative Council on Public Works, now sitting, the appropriation of a sum of money to that amount for the above object.

And your Memorialists, as in duty bound, will ever pray.

[Here follow 118 Signatures.]

SUPPLY OF WATER TO WOLLONGONG.

3

No. 4.

THE SURVEYOR GENERAL to THE COLONIAL SECRETARY.

*Surveyor General's Office,**Sydney, 17 April, 1855.*

SIR,

The increasing wants of the Town of Wollongong rendering the supply of water a subject of much importance to the inhabitants, I have been induced, by applications made on the subject, to instruct Mr. Assistant Surveyor Shone to examine the environs under Mount Keera, and to select from amongst the gullies on its northern or eastern slopes one best suited to form, by means of damming up the water, a reservoir from whence a supply might be conducted in a pipe or pipes to Wollongong.

2. Mr Shone has now transmitted to me his preliminary survey, plan, and report on the subject, which I have the honor to submit for the consideration of His Excellency the Governor General.

I have, &c,

THE HONORABLE
THE COLONIAL SECRETARY.

T. L. MITCHELL.

[Enclosure in No. 4.]

*Camp, near Wollongong,
11 April, 1855.*

SIR,

With reference to your letter of the 13th December last, wherein I am instructed to examine the features of the country in the neighbourhood of Mount Keera, and report, for the information of the Government, the most desirable and economical source from whence a supply of pure water may be obtained for the Town of Wollongong,—I do myself the honor to submit for consideration the accompanying preliminary survey and plan, shewing the situation recommended for affording such supply.

2. After a close examination of the creeks, gullies, and features on the north side of Mount Keera, I found that the more elevated situations on the range were less likely to afford a permanent supply of water than some intermediate point situate between the sea and the summit of the mountain. The reason of this being the porous nature of the ground, the water filtrating through the soil, and again making its appearance in the lower lands, and this, I may remark, appears to me to be the characteristic feature of most of the creeks on the Illawarra side of the mountain range.

3. In the plan now transmitted it will be seen that there are two situations recommended for the construction of dams, marked (A) and (E);—the situation (A) being the most desirable; the banks of the creek at this point are high, the water of good quality, and by the construction of a dam of the requisite dimensions, an adequate supply can always be obtained. The water can be conveyed in pipes to a reservoir marked (B) at the prolongation of Smith-street, on the land at present in the possession of Mr. Wilshire; and should the level of the dam be found sufficient to convey the water over the elevation marked (F), I would recommend the construction of a fountain in the market-place, marked (C), which would be a convenient situation for the inhabitants residing at the eastern extremity of the town. The situation (E) is also a very good one for the formation of a dam, to retain the surface water; but I fear that the nature of the soil is such, being strongly impregnated with alumy and metallic substances, that it might affect the quality of the water.

4. In addition to the recommendations contained in the foregoing paragraph, it would be desirable that the lagoon marked (D) be properly cleaned out, and substantially fenced in, to prevent cattle disturbing the water,—in fact, if this had been done some time since, the inhabitants of the town would not have experienced that great want of water which they endured during the late dry season.

5. There are no doubt many other situations from whence the town may be supplied, such as the Fig-tree, American Creek, &c., but the expense of conveying the water would be much greater than there is any necessity for, and on this account I recommend the situation (A) in preference to any other I am acquainted with.

I have, &c.,

SIR T. L. MITCHELL,
Surveyor General.

WM. SHONE.

[The foregoing papers referred for the report of the Colonial Architect.]

No. 8.

MR. THOMAS GARRETT to THE COLONIAL SECRETARY.

Wollongong, 9 March, 1858.

SIR,

I have the honor to request that you will be pleased to lay the accompanying Petition of the Residents of Wollongong and its vicinity before His Excellency the Governor and the Honorable the Executive Council. On behalf of the Petitioners,

I have, &c.,

THOMAS GARRETT,

THE HONORABLE

Hon. Secretary.

CHARLES COWPER, ESQ.,

Colonial Secretary.

[Enclosure in No. 8.]

To His Excellency SIR WILLIAM THOMAS DENISON, Knight, Governor General in and over all Her Majesty's Colonies of New South Wales, Van Diemen's Land, Victoria, South Australia, and Western Australia, and Captain-General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, and Vice-Admiral of the same;

and

To the Honorable the Executive Council in and for the Colony of New South Wales.

The humble Petition of the undersigned Landowners, Householders, and Residents in and of the Town of Wollongong and its vicinity,—

SHEWETH :—

That the Town of Wollongong, in the County of Camden, on the coast, in the Illawarra District, and sixty-four miles from Sydney, comprising within its bounds a population of at least six hundred souls,—is unrivalled in the beauty of its scenery and the salubrity of its climate; whilst its distance from the metropolis renders it the resort of valetudinarians, and of those seeking relaxation and pleasure from Sydney, and other parts of the Colony.

The trade of Wollongong is every day increasing and becoming more important, and the Town itself is daily being improved and built on; and from these causes, as well as from the operations carried on by reason of its newly discovered and worked Coal Mines, the population is greatly on the increase.

There

There is, however, one drawback, and a most deplorable one it is, to this fair picture, namely, that the only water attainable within a distance of three or four miles from the Town, fit for domestic purposes, save rain water, is that procured from a lagoon in the Town, the lagoon itself not being extensive, whilst into it are driven, at all hours of the day, and especially in the time of drought, (it being the only accessible water), cattle of every description, which "lave their limbs and slake their thirst therein." The consequence is, that the water, precarious and inadequate in its supply, becomes so impure as to engender disease, affecting thereby the health and lives of those who are constrained to use it. The wealthier classes, it is true, can procure good water, but at an immense cost; and shipping are supplied with water from a distance, entailing a carriage cost of not less than twenty shillings a ton.

Your Memorialists beg respectfully to state that, from the insufficiency and bad quality of the water procurable in the Town, visitors become alarmed, and seek some other resort, and the commerce and advancement of the district are greatly retarded, and hence the urgency of the case is imperative.

That your Memorialists have reason to believe it was contemplated by the late Surveyor General, Sir Thomas L. Mitchell, when the Town of Wollongong was first laid out, that it could be well and abundantly supplied with water from one of the numerous creeks meandering down the north side of Mount Keera, and that, in consequence of the Surveyor General's letter, dated from his office on the 13th December, 1854, addressed to Mr. Shone, the District Surveyor, (that gentleman, who is believed to be in every way qualified to judge in the matter,) recommended in his report, or reply to the Surveyor General, and dated "Camp, near Wollongong, 11th April, 1855," a plan for supplying the Town permanently with pure water; and your Memorialists beg respectfully to state, that Mr. Shone's plan for the purpose is generally understood to be perfectly feasible, and comparatively an inexpensive one; the cost of carrying his plan into effect being calculated at about two thousand pounds.

That the late Sir Thomas Mitchell, in his official letter to Mr. Shone, above referred to, says, "This is (the supply of water) of such vital importance to the prosperity of the Town, that I should never have planned a town in that situation had I not felt confident that, under such an elevation as Mount Keera, it would always be possible to select from among the gullies on its northern side the one best suited to form, by means of damming up the water, a reservoir from whence a supply may be conducted in a pipe or pipes to Wollongong."

That your Memorialists, under the circumstances narrated, venture to hope your Excellency and the Honorable the Executive Council may be induced to confer upon your Memorialists the great blessing of pure water, so much and for so many reasons required by the inhabitants of Wollongong and its vicinity; and your Memorialists would beg leave most respectfully to remind your Excellency and the Honorable the Executive Council, that grants from the public funds have been conceded by the Government for the supply of water to the City of Sydney, and to the Towns of Parramatta and Campbelltown, and elsewhere in the Colony.

Wherefore your Memorialists earnestly and respectfully entreat that your Excellency and the Honorable the Executive Council may be pleased to grant a favorable consideration of this Memorial, and to take into consideration the great want of pure water, felt universally by residents in and visitors to Wollongong.

And that your Excellency and the Honorable the Executive Council may be pleased to authorise a sum of two thousand pounds being placed upon the Estimates for the ensuing year, with a view to carrying out the plan recommended by Mr. Shone, or such other plan as to Her Majesty's Government may seem expedient, for procuring an adequate supply of pure water for the use of the Inhabitants of Wollongong and its vicinity.

And your Memorialists, as in duty bound, will ever pray, &c., &c., &c.

[Here follow 292 Signatures.]

[The foregoing papers transmitted to the Secretary for Lands and Public Works, and by him referred for the Report of the Colonial Architect, 22 March, 1858.]

No. 9.

COLONIAL ARCHITECT'S REPORT.

I have seen the locality referred to, but it is impossible to give a definite idea of the expense of carrying out the proposition without making extensive detail surveys and estimates, and these I have not hitherto been a position to procure.

The papers referred to are returned herewith.

Legislative Assembly.

NEW SOUTH WALES.

SUPPLY OF WATER TO WOLLONGONG.

(E. O. MORIARTY'S REPORT UPON.)

Ordered by the Legislative Assembly to be Printed, 25 June, 1858.

E. O. MORIARTY, ESQ., to THE UNDER-SECRETARY FOR LANDS AND PUBLIC WORKS.

33, Hunter-street,

19 June, 1858.

SIR,

I beg to state, for the information of the Honorable the Secretary for Lands and Public Works, that, in accordance with your verbal instructions, I visited Wollongong, with a view to making such surveys and examinations as might be necessary, in order to determine the best source from which to draw a supply of water for the inhabitants.

Having been furnished with the Plan and very able Report of Mr. Assistant Surveyor Shone to the late Sir Thomas L. Mitchell on this subject, wherein two localities are suggested as suitable for the formation of reservoirs—one on the creek adjoining the Dapto Road, marked E on plan, the other on Para Creek, marked A, and the latter of which Mr. Shone thinks preferable on many accounts,—I am happy to be enabled to state, that after a careful examination of both these and many other sources from which water might be taken, I quite agree with Mr. Shone in thinking that Para Creek is the best. The water of the creek, marked E, is sensibly impregnated with salt, alum, and other mineral substances, so much so as to be, in my opinion, quite unfit for human use.

The water of the Para Creek at Mend's, on the contrary, is of very fair quality. The bed of the creek is of rock, and the water-holes, though small, permanent. A little lower down the creek, where it receives the drainage of some branch creeks, the water is said to be brackish in dry seasons, but at Mend's it is stated to be always pure. The area of the basin draining into this creek, and its proximity to the lofty Mount Keera, are sufficient to ensure an adequate supply of water in all ordinary seasons; and if proper means be adopted for catching and storing it, there is no danger, in my opinion, of the inhabitants of Wollongong ever being short of this necessary element, even in the driest seasons. The works, therefore, which will be necessary for supplying the inhabitants with water must be classed under these different heads:—

- 1st—The works which are necessary for catching the surface water, by means of a dam or dams across the creek, at some convenient place or places.
- 2nd—The conveyance of the water, by means of piping, from the reservoir so formed into the town.
- 3rd—The formation of a storage reservoir or reservoirs, in some convenient spot in the neighbourhood of the town.

It is not possible to combine at Wollongong the first and third of these operations, as was done at Parramatta, in consequence of the rapid rise of the bed of the creek from Mend's upwards, and the lowness of its banks, rendering it impossible to construct a reservoir sufficiently large for storage purposes at any reasonable cost. Below Mend's the bed of the creek and its banks are not sufficiently retentive, and the water is bad. At this place, therefore, I should only construct a dam sufficiently large to ensure the feeding of the "main pipe." The storing of the water which may fall in ordinary seasons, and holding it in sufficient quantity to meet a deficiency during dry seasons, must be a distinct operation.

The works which I have now, therefore, the honor to propose for the consideration of the Honorable the Secretary for Lands and Public Works, are as follows:—

1st.—The construction of a stone dam of about 12 feet in height, across the creek at Mend's, so as to form a small reservoir from which to supply a six-inch pipe.

The bed of the creek at this point being of rock, and the water-holes permanent, there are, I think, sufficient grounds for believing that the dam might easily be made water-tight. The cost of this dam would be about £272.

2nd. The laying down of a six-inch cast iron pipe, to convey the water from the catching to the storing reservoir, the fall being considerable—81·90 feet.

I consider a six-inch pipe would be quite sufficient for this purpose for the present, and for many years to come. It is not, I believe, in contemplation, nor indeed do I think it necessary, to expend on these works so large a sum of money as would be necessary for a house service,—the object now being chiefly to ensure the inhabitants against a recurrence of those straits to which they have sometimes been put for want of water during droughts.

3rd.—The formation of a storage reservoir, in some convenient locality in or close to the town.

After a careful examination of several sites, I could see no spot so well adapted to the purpose as the lagoon from which the town is now supplied, and which is at present in fact nothing better than a stagnant pond, receiving all the drainage and sewerage of the lower part of the town. I would propose, in forming the reservoir here, to surround it with an earthen dam of about six feet in height. The ground is, I am informed, a Government reserve. The soil is a strong retentive clay, so that a dam of the height and dimensions I have shewn might be constructed from side cutting at a very moderate cost, and it would effectually exclude the drainage from the town, which would be intercepted and led off by the outer ditch and a small drain.

The water might be partially or entirely turned off from the storage reservoir during the daytime, so as to keep the street service pipes charged, but during the night it might be allowed to run into the reservoir, to supply the waste from evaporation and leakage, while a waste water-pipe, discharging from the other extremity of the reservoir, would maintain a gradual but steady change in the water it contained, and so, to some extent, check the growth of animal and vegetable impurities.

In selecting the water of Para Creek, I have been guided as well by Mr. Shone's Report as that of others from whom I have sought information. I have, however, brought up specimens of the water from this and the other creeks and ponds, which Professor Smith has kindly promised to analyse. On receipt of his analysis and report, I shall do myself the honor of forwarding them to the Honorable Secretary.

I forward herewith a general plan of the works which, in my opinion, will be necessary, with the estimated cost thereof, amounting to about four thousand nine hundred £4,956 5s. 4d. and fifty-six pounds five shillings and four-pence.

There is, of course, no very urgent reason why the exact extent of reservoir that I have proposed should be arbitrarily adhered to. This might be modified to any extent which may be thought desirable; but, as the capacity of the reservoir increases nearly as the square of the cost, it is, of course, desirable to get the greatest cubic content that can be obtained for a reasonable outlay. The reservoir I have sketched could contain about two and a-half years' supply for the present population, numbering 864 persons, and allowing 30 gallons for each person per diem.

I do not think this is too much, when it is considered that, in a young country such as this, we should look to the probable future rather than to present requirements; and Wollongong possesses natural advantages in the extent and value of its adjacent coal fields and agricultural lands, equalled by few other towns in this Colony with which I am acquainted, and which must lead to its rapid advancement in wealth, population, and importance.

I have, &c.,

THE UNDER-SECRETARY

E. O. MORIARTY.

Legislative Assembly.

NEW SOUTH WALES.

SLAUGHTER HOUSES IN SYDNEY AND ABATTOIRS ON GLEBE ISLAND.

(PETITION FROM INHABITANTS OF SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 9 April, 1858.

To the Honorable the Legislative Assembly of New South Wales, in
Parliament assembled.

The Petition of the undersigned Inhabitants of the City of Sydney and its Environs,—

HUMBLY SHewETH:—

That your Petitioners desire respectfully to represent to your Honorable House, that the Slaughter Houses at present established in this City are attended with many and great objections, and that the hurtful and noxious effluvia arising therefrom in several localities is highly prejudicial to the health of the citizens.

That your Petitioners beg to observe, that the great delay already experienced in completing the Abattoirs on Glebe Island has been fraught with serious injury to the entire population of the City of Sydney and Suburbs, and still continues to be so.

That, in a pecuniary as well as a sanitary point of view, the present system of private Slaughter Houses is most objectionable; as the whole community will continue to be charged a higher price for animal food than they would otherwise be.

That the lately erected Abattoirs on Glebe Island—from their isolated position, and yet close and unobjectionable contiguity to the City, (being in distance less than a mile and a half from the George-street Markets.)—are very admirably situated for their intended purpose; and that having been constructed in a most excellent manner, and a good cattle road having been formed and fenced from the Parramatta Road, over a causeway to the island, made at considerable expense, your Petitioners beg to observe, that the completion of these buildings for use (which, from their nature, it is impossible to convert advantageously to other purposes,) would be attended with many sanitary and pecuniary advantages to the citizens generally.

That as the large expenditure of the public money for the erection of the Abattoirs, the causeway, and the cattle road, has cost the Colony about £34,000, and as only a very small comparative outlay is now necessary to complete the buildings and make them available for great and permanent good,—and as, also, the slaughtering superintendence (so desirable to be particularly attended to) could then be concentrated,—your Petitioners humbly trust that an early decision to this effect will be made by your Honorable House; as the Pyrmont Bridge Company are ready to erect a bridge without delay, which will give the necessary substantial access to the island, by a short road from Ballast Point, on Pyrmont.

Your Petitioners, therefore, being certain of the following facts, namely,—that the present Slaughter Houses in Sydney are a nuisance of great magnitude; that the non-completion of the Glebe Island Abattoirs is deplored by the community generally; that such non-completion has already entailed upon the inhabitants a great and unnecessary loss, notwithstanding the large outlay of public money; and your Petitioners feeling at the same time assured, that the compliance of your Honorable House with this their prayer will most certainly be attended with incalculable good to the public;—humbly pray that your Honorable House will be pleased to take the entire subject into your careful consideration, and afford your Petitioners and the community generally such relief as the reason and justice of the case demands.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 1,918 Signatures.]

Legislative Assembly.

NEW SOUTH WALES.

ABATTOIRS AT GLEBE ISLAND.

(BUTCHERS OF SYDNEY AND ITS ENVIRONS.)

Ordered by the Legislative Assembly to be Printed, 26 May, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Butchers of Sydney and its environs,—

HUMBLY SHEWETH:—

That your Petitioners are extremely surprised that no steps have been taken to carry out the Petition presented to your Honorable House on the 13th day of January, 1857.

That your Petitions have been looking forward from that time to the present with considerable anxiety for the completion of the Abattoirs on Glebe Island, by which your Petitioners would be enabled to select their cattle before killing, thus ensuring to the consumer a better article, at a less cost.

That as the Pyrmont Bridge Company are about erecting a bridge from Pyrmont to the Glebe Island, which will bring the Abattoirs within a distance of one mile and a half from the George-street Markets, thus affording to all concerned, such facilities as cannot be had elsewhere,—

Your Petitioners humbly pray that your Honorable House will not (as the buildings can be finished at a very small outlay of money) object now to the completion of the Glebe Island Abattoirs, when their establishment will most certainly be attended with incalculable public benefit.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 73 Signatures.]

Legislative Assembly.

NEW SOUTH WALES.

FITZROY DOCK, COCKATOO.

(REPORT OF CIVIL ENGINEER.)

Ordered by the Legislative Assembly to be Printed, 19 November, 1858.

G. K. MANN, ESQ., to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

*Civil Engineer's Office,
Sydney, 26 October, 1858.*

SIR,

I have the honor to acknowledge the receipt of your B. C. communication of the 14th instant, forwarding a letter from the Superintendent of the Royal Mail Steam Packet Co., herewith returned, requesting further information relative to the capabilities of the Fitz Roy Dock; and in reply transmit a general report of that work, and of the additions now being made thereto. 13 October.

2. In my letter of the 1st I informed you that a vessel of 300 feet keel, 330 feet over all, with 19 feet draft of water and 59 feet beam, could at present be readily docked thereat, and I now remark, that as the upper works of the class of ship indicated would stand well above the general level, it is presumed that the dimensions "over all" practically exceeds 330 feet; but in the absence of actual measurement of the largest class of mail steamers visiting this port, I have confined my statements to figures somewhat within the capabilities of the Dock itself.

3. Enclosed is a plan and section of the works indicating the finished portion and that in progress.

4. About 75,000 cube feet of surface excavation has, up to the present time, been effected of the elongation; but I have not hitherto been able to keep a gang of prisoners permanently employed thereon without interruption to other pressing work, on account of the decrease in the numerical strength and the generally inferior description of the prison labor of late placed at my disposal.

5. Judging, as far as I am now able, I anticipate that the excavation will have sufficiently progressed in the next six months to admit a vessel of 360 to 370 feet over all, and in the next nine or ten months to the full extent; but the entire completion of all the masonry of the invert altars, &c., will not, I fear, be out of hand for the next two years, unless there is an augmentation to the labor. I would, however, remark, that as the excavation proceeds the Dock, if requisite, can at any time be made available to the full extent thereof, the only probable obstacle being a temporary suspension of the operations at the head of it.

6. Recent soundings give an average depth through the entrance to the Dock of 21 feet 9 inches, with 20 feet water on the sill of the caisson; but the bottom requires to be carefully levelled off; and I deem it essential, with the view of ensuring the permanency of this channel, and to guard against the silting up of the entrance (of which, however, I am happy to say I have not as yet observed any tendency), and to prevent a flow of mud into

the Dock, that the depth of water here should be fully 22 feet, increasing towards the harbour with 20 feet water on the sill, and I am pressing on the submarine operations with the view of attaining this depth; it may also be advisable ultimately to remove a few thousand tons of silt from before the entrance to this channel with the steam dredge, now that she can lift from a sufficient depth.

7. I take this opportunity of bringing under your notice the efficiency and willingness with which the prisoners employed as divers have generally performed their work; these men have, in every instance, been instructed on the island, under my orders, and extensively employed both in the bell and with the diving dress. I shall be glad if, on the completion of these arduous operations, any indulgence could be awarded to such of them as I may then be enabled to report favorably of.

8. The machinery ordered from England, of which the following is a list, has all been received; it was landed on the works without accident and in good order; a large portion of it is now permanently erected in the workshops, and this could in case of emergency be made available, by employment of free labor, in ten days or a fortnight, viz.:—

1. A planing machine, by "Fairbairns," capable of working 9 feet by 9 feet and 20 feet long.
2. A planing machine, by "Fairbairns," equal to work 4 feet by 4 feet and 10 feet long.
3. A 5-foot centre self-acting lathe, by "Whitworth."
4. A 12-inch self-acting lathe, by "Whitworth."
5. A foot lathe.
6. A slotting machine, self-acting, equal to work 8 feet in diameter, transverse slide and rotatory table.
7. A boring bar and heads for cylinders from 5 to 8 feet in diameter.
8. A drilling machine to admit work 8 feet diameter, and bore up to 12 inches and 24 inches lead.
9. A 20-ton overhead travelling crane, fixed to traverse the entire length of the workshop.
10. A 25-ton jib crane.
11. A 40-cwt. steam hammer, by "Nasmyth."
12. A 5-cwt. steam hammer, by "Nasmyth."
13. A punching and shearing machine.
14. A rivetting press.
15. A 10-ton weigh-bridge, also tools, vices, stocks, taps, and dies, by "Whitworth."

9. The main shafting for the machine shop has been constructed in the Colony, and is now permanently fixed to be driven by the present engine the length of the workshop.

10. With this "plant" elaborate work could be undertaken and repairs readily effected to first class heavy steam machinery; but it probably will be advisable at a future period to obtain, in addition, from England, an intermediate self-acting lathe, a screw cutting, a shaping machine, and other implements for economising labor, and it will also eventually be requisite to establish a brass and iron foundry in connexion with the works; but I do not consider it essential to recommend any provision for the foregoing at present.

11. The Dock is pumped by means of two double action 19-inch pumps worked by the 20-horse condensing engines, but additional pumping power is now desirable, and will become indispensable on the enlargement of the Dock. Provision for the construction on the works of four 22-inch single action pumps, to be adapted to the present engine power, has been included in the estimates for this department for the ensuing year, and detailed drawings of the proposed alterations will be submitted.

12. The Dock could be at once made available for shipping to the extent indicated in the 2nd paragraph of this Report, and I think by judicious management (for some time to come) without interruption to the discipline of the penal establishment of the island; although ultimately, I am of opinion, it will be found impracticable or inadvisable to maintain a penal establishment of the present character adjacent to that of a dock-yard, but other arrangements might then be made to employ prisoners on these works with advantage to the public service.

13. The lengthening of the Dock interferes with the present road between the wharf and the barracks, &c., and also, with a water tank and filtering bed for general supply.

14. I find that both a shorter and easier ascent can be readily obtained, and with little labor, on the northern side of the island; and this arrangement would have the advantage of diverting the thoroughfare from the vicinity of the Dock. I therefore propose that a road be at once constructed in that direction.

15. Another reservoir, with filtering arrangements, can be better constructed at a higher level and clear of the works; an amount for this service has been voted in the estimates for the current year, and the plan and sections of the tank will form the subject of a distinct letter.

16. I beg leave to refer you to my letter of the 6th January last, reporting on, and suggesting the expediency of admitting Her Majesty's ships free of dues, both to the Dock and workshops, and on the mode and cost of working the establishment.

17. It would, I fear, be found incompatible with the discipline requisite for the present penal establishment, and inconvenient for the efficient prosecution of the works in progress at present, to lease the Dock for a term of years. I therefore submit for consideration, with the view of bringing this important work into operation, the expediency, in the first instance, of allowing the public the use of it, and the machinery, on payment of certain moderate dues, of an amount to be specially agreed upon; and I think the Government would have applications when it became generally known that vessels could be docked on such terms.

18. It is not, however, easy to name an amount that should be charged in this instance. In private establishments a graving dock is often maintained at considerable expense, and no charge made for the use of it, remuneration being derived from the business it attracts—a source of income not open to a Government establishment; and I do not think the rates of 1s. per ton per diem, and 2s. on the days of entry and exit, are strictly adhered to in this harbour; nor would it be judicious, unless the demand for the use of the Dock warranted such a measure, to adopt the scale calculated in my letter of the 6th, based upon a money value of the works.

19. It is important that I should advert to the description and amount of labor at present available for the works; and I trust that, if practicable, a transfer from some other of the penal establishments of the Colony of *able-bodied* men may be authorised, there being a large amount of building required to be done. The wharfs will have to be completed on the lines shewn in the drawing, and it will be requisite to extend the excavation of the surface rock on the northern side of the Dock, besides which it must be anticipated that other operations will from time to time be found essential on so extensive and new a work as the Fitz Roy Dry Dock.

20. Having during the absence of my principal foreman, on medical certificate, been obliged to attend personally to the detail of erection of the machinery, which is all being effected by prison labor, I regret that I have not been able to reply to your communication of the 14th, marked urgent, at an earlier date.

I have, &c.,

GOTHER K. MANN.

THE HONORABLE

THE SECRETARY FOR

LANDS AND PUBLIC WORKS.

1858.

Legislative Assembly.
NEW SOUTH WALES.

SEWERAGE AND WATER SUPPLY.

Ordered by the Legislative Assembly to be Printed, 25 March, 1858.

*FIRST YEARLY REPORT of the Municipal Council of the City of Sydney of their
Proceedings in connexion with the Sewerage and Water Supply.*

IN accordance with the provisions of the 75th section of the Sydney Corporation Act of 1857, the Municipal Council have the honor to submit, for the information of the Parliament of New South Wales, the following Report of their Proceedings, and Statements of their Receipts and Expenditure under the Sewerage Act, 17 Victoria, No. 34, and Water Act, 17 Victoria, No. 35, to the 31st December, 1857.

In so doing, the Municipal Council have thought it advisable to embody in their Report a statement of all the works executed during the past year, although those works were not placed under the control of the Council until the 13th of April last, the day on which the late City Commissioners vacated office.

As it would have been extremely difficult, if not altogether impossible, to separate the portions of the several works carried out under the direction of the Commissioners from those performed by the Council, and as there does not appear to have been any official report made by those gentlemen to the Government since the 31st December, 1856, the Municipal Council have made a general statement of the various contracts entered into, and work executed during the past year, and have also submitted an account of the receipts and disbursements for the same period.

SEWERAGE.

The following are the particulars of the several works undertaken in connexion with the sewerage of the City, in the year 1857.

New Pitt-street, Contract No. 5, entered into by Mr. Mathew Lacey, for diverting the course of, and making a new outlet for, the Tank Stream, comprising 500 feet in length of stone culvert of elliptical form, was entered into 19th November, 1856, and satisfactorily completed on the 18th September, 1857.

Contract No. 6, Section No. 1, entered into by Mr. Thomas Donohoe, for constructing sewers in Lower George-street, and an outlet for same at Queen's Wharf, comprising—

145 lineal feet of 4-feet oviform sewer,
1209 " of 3 " do.
281 " of 12-inch pipe drain,

entered into 24th February, 1857, and satisfactorily completed on 4th August, 1857.

Contract No. 7, Section No. 1, entered into 30th March by Messrs. Gibbons and Brian, for constructing sewers in Bathurst and Market Streets, and a ventilating shaft for the sewers in Hyde Park, comprising—

545 lineal feet of 3-feet sewer,
411 " of 2 do.
45 " of 1-foot pipe drain,

was satisfactorily completed on the 11th December, 1857.

Contract No. 8, Section No. 1, entered into by Mr. Hugh Murphy, for constructing sewers in George-street North, and in Argyle, Essex, Harrington, Cambridge, and Gloucester Streets. Of this contract, was completed in 1857—

1,520 feet of 2-feet sewer,
400 feet of 18-inch ditto,

and the remainder of the work is approaching completion satisfactorily.

Contract No. 9 comprises 265 feet of 4 feet 6-inch sewer, in the water-course in Woolloomooloo, between Stanley and William Streets, constructed by Mr. Charles Simmons, at the joint expense of the City, Mr. Levein, and himself.

Contract No. 10, Section No. 1, entered into September, 1857, by Mr. M. W. Parker, for constructing—

40 feet of 3-feet sewer, and

650 feet of 2-feet ditto,

in O'Connell-street, was satisfactorily completed by him on the 17th November, 1857.

Contract No. 11, Section No. 1, entered into by Mr. Martin Gibbons, for constructing—

320 feet of 2-feet sewer,

in Market-street East, was satisfactorily completed on the 26th November, 1857.

Contract No. 12, Section No. 1, was entered into 4th November, 1857, by Mr. Martin Gibbons, for the construction of sewers in Park, King, and Hunter Streets, but was not commenced in 1857. This contract comprises—

122 feet of 3-feet sewer,

855 feet of 2 feet 6 inch ditto,

1,212 feet of 2-feet ditto,

140 feet of 12-inch pipe drain,

17 Gullies and pipe connections with sewers.

Contract No. 13, Section No. 1, was entered into 4th November, 1857, by Messrs. Bubb and Sons, for the construction of two pieces of iron sewer, for crossing the Tank Stream in King and Hunter Streets, but was not commenced in 1857.

Contract No. 14 was entered into by Mr. Thomas Sinclair, to construct 1,058 feet of 2-feet sewer and 15 street gullies in Erskine-street, from York-street to Darling Harbour, but was not commenced in 1857.

The number of trapped street gullies which were made in 1857, in connection with the new Sewerage Works, in addition to those hereinbefore mentioned as being contracted for, is—

12 in Bridge-street.

18 „ George-street.

1 „ Argyle-street.

21 „ Pitt-street.

4 „ O'Connell-street.

4 „ Castlereagh-street.

3 „ Elizabeth-street.

2 „ Phillip-street.

4 „ Bathurst-street.

2 „ Market-street.

Total 71

The Old Sewers in the following streets have been repaired as required, at a cost of £38 3s. :—

Bent-street, two old sewers.

Culvert across Kent-street.

Sussex-street.

George-street, six old sewers.

Hunter-street, sewer near Union Bank.

Phillip-street.

Macquarie-place.

Market-street.

Pitt-street South, two old sewers.

Barrack-street.

Pottinger-street.

William-street East.

Wynyard-square.

Elizabeth-street South.

Upon entering into office, the Municipal Council found that the Trigonometrical Survey of the City had been so far proceeded with as to allow of the filling in of the detail of the different sections of the City—twenty-four in number—but as the City Engineer was

not

not in possession of a plan shewing the several stations, fixed points, angles, &c., instructions were given for the preparation of the necessary information, and the same is now near completion.

WATER.

The Works completed and commenced in connection with the permanent supply of water to the City during the past twelve months, are as follows:—

PERMANENT SUPPLY.

The contract entered into by Mr. P. N. Russell with the City Commissioners on the 18th December, 1854, for the supply of 2,200 thirty-inch water pipes, was completed to the extent of 2,178 pipes, but, in consequence of a discrepancy which was discovered between the invoiced and actual weight of some pipes, which were tested upon the Sydney weigh-bridge, the whole of the pipes were carefully weighed on the Botany Road, and it was found that the total weight delivered to the City by the contractor is 3,303 tons 5 cwt. 0 qrs. 2 lbs., whilst the weight paid for was 3,405 tons 15 cwt. 3 qrs. 24 lbs., an excess of 102 tons 10 cwt. 3 qrs. 22 lbs., which difference has to be accounted for by Mr. P. N. Russell.

Of the last amount, 18 tons 3 cwt. were for pipes which arrived in Sydney, but, in consequence of their being broken, were not delivered to the City by Mr. Russell, and the balance of 84 tons 7 cwt. 3 qrs. 22 lbs. was short of the weight charged and paid for in England.

The Council, in the absence of definite advices from England, are not at present enabled to explain whether this difference has arisen from the loss in weight since the casting of the pipes, and consequent upon the process of turning and boring, or from erroneous weighing in the first instance.

The necessary documents have been transmitted to the contractor in England for adjusting this discrepancy with the manufacturers, and the amount of deficiency will be deducted upon the final settlement of the accounts with Mr. Russell.

Another contract, taken by Messrs. P. N. Russell and Co., for a further supply of 30-inch pipes for the completion of the line of main to the reservoir in Sydney, and for 20-inch and 12-inch pipes for mains to conduct the water from the reservoirs to the town, is being executed by that firm, and will probably be completed by the time stipulated (the 22nd instant).

The contract entered into by Mr. John Stone for the removal of 1,074 of the 30-inch mains from the Botany Road to the line upon which they are to be laid, was completed by him most satisfactorily.

The contract for the removal of the 30-inch, 20-inch, and 12-inch mains, from the quays to their destination in Crown-street, South Head Road, and Darlinghurst, was entered into by Mr. John Woods, and is being performed satisfactorily.

There were 300,000 bricks, impervious to water, ordered from England for the purpose of lining the reservoirs. These are arriving and being delivered, under the contract entered into by Mr. Henry Horler for the cartage of them to the land selected for the reservoir in Crown-street.

A plot of ground, situate between Crown, Riley, Gipps, and Campbell Streets, containing about two acres, has been entered upon by the Municipal Council, and taken for the purposes of the low level reservoir for these works, the estimated value of which is £9,250.

A contract was entered into on the 5th October, by John Waters, for 37 rods of 6 feet close paling, and has been satisfactorily erected on part of the land entered upon for the reservoir.

The Municipal Council having determined to enter upon the land along the line of 30-inch mains to the extent of half a chain in width throughout its whole length, from the Botany Reserve to Baptist's Garden, and to erect along it a double line of three rail fence, a specification was prepared, and the tender of Messrs. Waters and Dunk accepted, for the supply and erection of the said fence, at the rate of ten shillings per rod. The quantity of fencing required will be about 2,000 rods.

The contract for the erection of an engine-house, boiler, and coal-houses, pump, and sluice-wells at Botany, was entered into by Messrs. Ramsay and Burt, for the sum of £18,250, in October last, for completion in ten months from the date of contract. The excavations when completed exhibited throughout firm, dry, solid sandstone rock, which is in every respect the most suitable foundation which could have been selected.

The

The works connected with the structure are progressing very favourably. The footings of the engine-house walls are laid to the extent of four courses, and those of the boiler and coal-houses, two courses. The bottoms of the pump wells are constructed, and the brickwork, in cement, for the walls of the wells is completed to the height of five feet above the bottom.

The six boilers are all placed in their positions in the boiler-house, and the foundations for the engines and chimney are commenced. The 30-inch main pipes for leading the water into the wells are, some of them, in position, and the others are being placed.

In the Report of the late City Commissioners of their proceedings during the year 1856, a statement was transmitted from the City Engineer, that under the contract entered into with Mr. William Randle, six boilers for the engines, their furniture, and the chief of the heavy parts of the engines had arrived in Sydney, and were being removed to Botany; that it had been found necessary to stop the shipment of the cylinder slides, air-pump, and condenser and fly-wheel shaft of each engine, that they might be altered and adapted to the work for which they were required, on the best principle. The advices received from England, under date 10th November, 1857, from Mr. Homersham, C.E., the agent appointed by the City Commissioners, state, "that the whole of the pumping engines, excepting some minor parts, which will be required for fixing last, are now already shipped, or being shipped, for Sydney."

The air vessels and connections, which were ordered by the City Commissioners to be made in and sent from England, are reported as being nearly completed, and will follow the shipments of the engines.

A ten ton traveller crane, which was ordered from England to fix in the engine-house, for the removal of the heavy parts of the engines, as occasion may require, has been received and carted to the Botany Works.

The contract let to Mr. Joseph Edwards for laying the first portion of the 30-inch mains, which extends 76 chains in a north by easterly direction, from the site of the engine-house at Botany, was, in consequence of the work contracted for not being proceeded with in a satisfactory manner, taken from him by the Municipal Council, and the works to be done under that contract have been carried on by day work for the Municipal Council, under the immediate superintendence of the City Engineer, and will be completed in two weeks hence, without exceeding the contract price.

The laying of the second portion of the 30-inch mains the Municipal Council resolved to do by day work, under the Engineer's supervision. The extent is 77 chains 85 links. One half of the excavation is already performed, and the pipe laying has commenced. This section, it is anticipated, will be completed in two months hence.

A specification has been prepared for the excavation of the low level reservoir, situate in Crown-street, and another for the subsoil drainage of the same. These are already advertised for tenders, and will be commenced early in this year.

CITY SERVICE.

During the past year new mains, to the extent of 7,482 yards, have been laid in **Appendix A.** various parts of the City, as specified in the Return hereunto annexed.

The contract let to Messrs. Bubb and Sons for various castings used for the distributing mains of the City Service in 1857; that of Mr. Robert King for the supply of coals to the Lachlan Swamp engine for 1857; that of Messrs. Halliday and Co. for the supply of 9, 6, and 4-inch water-locks for the City Service; and that of Messrs. Napier Postlethwaite for general castings and fitting work for Water Works, have been all very creditably performed by the several contractors.

A list of the old mains which have been taken up during the past year is also attached **Appendix B.** hereunto.

The supply of water from Lachlan Swamp throughout the year was abundant until the middle of December, when it suddenly decreased so rapidly as to render it necessary to adopt some means for limiting the supply to the lower levels of the City, in order that the water might be forced into higher localities.

Arrangements were accordingly made for shutting the locks supplying that portion of the City south of Liverpool-street, from the hour of eleven in the morning until eight in the morning of the following day, by which system, and by keeping the engine at the swamp constantly at work, the necessary relief was afforded to those parties who were before considerably inconvenienced by the insufficient supply. These arrangements are still being carried

SEWERAGE AND WATER SUPPLY.

5

carried out and it is hoped that, by a more careful use of the water by the citizens, (the necessity for which has been pointed out by the Council), and a strict watchfulness on the part of the officers of the Water Department, the citizens may be saved from a scarcity of water until all danger in that respect be removed by the completion of the works now in progress for a permanent supply.

FINANCIAL.

The subjoined statement shews the particulars of the Receipts and Expenditure on account of the separate Funds, from the 1st of January to the 31st December, 1857.

JOHN WILLIAMS,
Mayor.

Passed by the Municipal Council of the City
of Sydney, this twenty-ninth day of Jan-
uary, A. D. 1858.

1858.

Legislative Assembly.

NEW SOUTH WALES.

JUSTICES OF THE PEACE.

(APPOINTMENT OF UNDER MUNICIPALITIES BILL.)

Ordered by the Legislative Assembly to be Printed, 30 April, 1858.

To the Honorable Legislative Assembly of New South Wales.

The Petition of the undersigned Inhabitants of the Town and District of Wollongong,—

HUMBLY SHEWETH:—

That the present mode of appointing Justices of the Peace has not worked hitherto to the satisfaction of the Colonists, nor been productive of the objects for which the appointments are made.

That your Petitioners believe the grievance they complain of would be removed, and a more satisfactory administration of justice secured, if the individuals elected as Members under the proposed Municipal Councils Bill were, subject to His Excellency the Governor General's veto, empowered to act *ex officio* as Justices of the Peace in and for the district in which the Councils of which they are Members may be situated.

Your Petitioners would also urgently pray that the Local Benches, as at present constituted, may not be empowered to adjudicate, as proposed in clause No. 78 of the Bill, on appeals from the assessment for rates.

Therefore, your Petitioners humbly pray that a clause to the effect that the Councillors shall be *ex officio* Justices of the Peace within the limits of their respective Municipalities may be introduced into the Bill, and that your Honorable House will pass the same, and that appeals from rates may not be decided by the present Local Benches.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 299 Signatures.]

1858.

Legislative Assembly.

NEW SOUTH WALES.

VACCINATION.

(REPORT FROM MEDICAL ADVISER TO GOVERNMENT.)

Ordered by the Legislative Assembly to be Printed, 7 April, 1858.

THE MEDICAL ADVISER TO THE GOVERNMENT to THE HONORABLE THE COLONIAL SECRETARY
with the General Return of Vaccinations for the Year 1857.

Parramatta, 16 February, 1858.

SIR,

I do myself the honor to present, for the information of the Government, the General Return of the number of persons vaccinated at the different Government Vaccine Institutions during the year 1857, distinguishing the age and sex.

2. The total number of successful vaccinations in the year amounts to three thousand six hundred and forty, being an advance of one hundred and fifty per cent. on the numbers in 1856. The totals for 1855, 1856, and 1857, will be found in the margin.

Years.	Totals.
1855.....	964
1856.....	1,423
1857.....	3,640

3. Almost the whole of this great increase is due to the last quarter of the year, when the fear of small-pox, which had been introduced into Melbourne by the ship "Commodore Perry" in September, and the information that some of the passengers in that vessel had come on to Sydney, created a temporary eagerness for the protection afforded by vaccination. Owing to the prompt measures taken at Melbourne, the disease did not spread there, and as no case occurred here, the alarm gradually died away.

4. It was greatest in Sydney; for of the total number vaccinated, two thousand three hundred and sixty-six were in Sydney, and of this number eighteen hundred were in the last quarter.

5. But large as this number is, compared with former years, it is by no means what it ought to be; for as upwards of three thousand births take place yearly in Sydney, and as the reports of former years shew that the vaccinations have never even approached the number of births, so there must be a continually increasing number of unprotected persons.

6. It is most probable that not one-half of the native-born population of Sydney is protected, and the proportion is very much less in the country. The births in the Colony would probably be above twelve thousand in the year, and the public vaccinations of all ages even this year do not amount to one-third of that number.

7. In the country districts, or bush, the native-born children must be generally unprotected. There is at present no Government Vaccinator between Maitland and Moreton Bay to the north, while to the south there is not one between Sydney and the borders of Victoria, with the exception of the narrow mountain-locked strip of Illawarra.

8. The return from Maitland is remarkable for its number, (five hundred and eighty,) as in the second quarter cutaneous eruptions prevented, and in the third the floods and state of the roads put a stop to vaccination. In the fourth quarter Dr. Macartney succeeded in vaccinating a great number by meeting the parents in different districts.

9. In Newcastle, in the hot weather of the first quarter, vaccination produced unpleasant symptoms, such as inflammation, followed by a crop of small pustules, so that Mr. Stacey was obliged to discontinue it for the time.

10. In Brisbane the heat of the weather in the first and also in the last quarter of the year prevented successful vaccination.

*12—

11.

11. Almost all the Vaccinators complain of the apathy of parents.
12. In Sydney the wet weather at the beginning of the year operated as a great hinderance; but in the last quarter Dr. Rutter was overpressed by the numerous applications, and an additional Vaccinator was appointed for two of the suburbs. I annex Dr. Rutter's separate Report.
13. The cost per case varies from a little over ten-pence (a sum far too low for the care and attention required) in Maitland, to something over a pound in Brisbane.
14. Small-pox is so fearful a scourge when it attacks the unprotected—and it is a disease happily so little known here, and therefore too little feared—that it would be very desirable to spread some general information on the subject. Some useful letters have been written by Mr. Bell of Campbelltown, and published in the papers. But the letter of Mr. Simon, Health Officer of the City of London, to the General Board of Health, is such a mine of information, and so full of valuable statistics, that it leaves nothing to be desired. It is unfortunately too long for general reading, and I am now, by your direction, preparing an abridgement for the use of the Colony, which I hope to be able to lay before you in a few days.
15. There is one other part of this subject which deserves consideration—that of re-vaccination. It is found in Europe that an increasing proportion even of those most carefully vaccinated in childhood do, when subjected to re-vaccination at puberty, take and show the symptoms of cow-pox in a manner not to be distinguished from a primary vaccination. As we are precluded from testing the validity of our vaccinations by subsequent inoculation with small-pox, as may still be done in England, so it seems particularly desirable that some carefully conducted experiments should be made and recorded in re-vaccinating persons whom we know by the cicatrix to have been properly vaccinated. It does not follow as a natural consequence that persons who show true signs of cow-pox on re-vaccination would necessarily take the infection of small-pox if exposed to it—for the introduction of lymph under the cuticle is a far more delicate test than any other can be—still it is to be feared that such persons would be amongst the liable to infection, which liability would be taken away by re-vaccination.
16. Enclosed will be found the General Return of Vaccinations, and Dr. Rutter's Report of the Sydney Vaccine Institution.

I have, &c.,

R. GREENUP,

Medical Adviser to the Government.

THE HONORABLE

THE COLONIAL SECRETARY.

*Vaccine Institution,
4 February, 1858.*

SIR,

I do myself the honor to transmit, for the information of His Excellency the Governor General, a Report of my proceedings during the year 1857.

The alarm created in this City by the existence of small-pox in Victoria roused the people from their apathy, and during the three months of October, November, and December, seventeen hundred and seventy-two individuals were brought under the influence of vaccine protection—nearly a thousand of whom were above the age of one year—showing the neglect which had previously existed.

Such was the anxiety of parents to have their children vaccinated, and the large numbers coming to the Institution from the country, that I considered it my duty to recommend to the Government the temporary appointment of a medical man to vaccinate in the populous districts of Newtown and the Parramatta Road,—a report of whose proceedings I have the honor to enclose.

The applications from medical men for vaccine lymph were very numerous, nearly fifteen hundred charges having been supplied, from which I infer that vaccination was carried on to a great extent.

I am sorry to state that during this year, 1858, the old apathy has returned, which nothing will, in my opinion, remedy but compulsory vaccination.

I have further the honor to enclose a detailed account of my duties.

I have, &c.,

JOHN YATES RUTTER,

Superintendent.

1858.

Legislative Assembly.

NEW SOUTH WALES.

HEALTH OFFICER OF PORT JACKSON.

(DUTIES TO BE PERFORMED BY.)

*Ordered by the Legislative Assembly to be Printed, 1 June, 1858.**MEMO. of duties performed by the Health Officer of Port Jackson.*

THE enclosed extract from a Letter of Instructions addressed to Dr. Dobie, 21st January, 1839, details the ordinary duties of the Health Officer of the Port, viz., to visit all Vessels arriving in Port, ascertain the state of health, and report to Government; to make frequent visits to the Quarantine Station, and to assist in carrying into effect the arrangements which may be ordered in cases of Quarantine; and to see that provisions, medicines, &c., of proper quality, are regularly supplied; to afford medical aid to the Emigrants in Port, and, since the establishment of the Dépôt for Females at Hyde Park, the additional duty of medical charge of that institution, in which there are always a number of invalids, from various causes, and of women waiting to be confined before they can join their friends.

1 June, 1858.

H. G. ALLEYNE.

EXTRACT of a letter from the Colonial Secretary to the Health Officer, dated 21 January, 1839.

The questions now enclosed embrace, it is believed, everything to which your inquiries should be directed, in reference to the health of the people arriving, and you will, as soon as possible after your return from any vessel, forward to me a copy with the replies of the Master and Surgeon, or other person in charge, accompanied by a brief report from yourself of anything which may deserve notice; you will also make a report in person at this office. Should there be no cause for preventing communication with the vessel, the Pilot as well as the Officer of Customs should be apprised to that effect; but if any sickness should be on board, or should you have reason to suspect that there is anything requiring investigation, you will interdict all intercourse until due inquiry has been made and the instructions of the Government obtained on the subject. Of course any officer or other person who may have boarded the vessel must, in this case, remain in her until your permission shall be given for his landing.

In case of a vessel arriving, and being reported by the Master, Surgeon, or other person in charge to have any contagious disease on board, or to have touched at any port at which such has prevailed, you will not of course board such vessel, but you will proceed alongside, adopting such precautions as the case may require, and obtain the necessary particulars to enable you to make your report for the information of the Government, by which further instructions will thereupon be given. It will be proper on such occasions to ascertain whether any and what medicines, medical comforts, or other supplies are immediately required, in order that if vessels in the service of Government, steps may be taken for furnishing them; or, if private ships, that the owners or agents may be apprised.

The existing orders are for ships subject to Quarantine to anchor in Spring Cove, and, when necessary, the crews and passengers are disembarked, and placed under medical superintendence on the adjoining shores.

To assist in carrying into effect the arrangements which may be ordered in such cases will form part of your duty, and during the continuance of the Quarantine you will be expected to make frequent visits to the station for the purpose of consulting with the Surgeons in charge on the measures best calculated to promote the comfort and re-establish the health of the persons detained. You will also ascertain the quality of the provisions, and the regularity of their supply; that the Regulations for preventing the infringement of the Quarantine are duly enforced; and that all the measures recommended with the view of providing against the introduction of disease to the Colony are carried into effect. Upon your return from each of these visits, you will personally report the result at this office, pointing out anything in which the orders or intervention of Government may be necessary; and you will subsequently communicate to me, in writing, any suggestions or remarks which you may deem it proper to bring formally under notice.

A daily report is to be made to you by the Surgeon in charge of the Quarantine Station, stating the name and age of each patient, the number of days in hospital, the nature of the disease, and any change for the better or otherwise in the affected person; and this report is to be forwarded to me with your remarks, as early as practicable on the day of its receipt, for the information of the Governor.

To you will also be forwarded all requisitions for medicines, which being countersigned by you, will be supplied from the General Hospital Stores, or otherwise, as may be directed at the time; and demands for medical comforts will be likewise transmitted to you, to be submitted with your remarks to this office, from which orders will be given upon them.

Requisitions for provisions will be complied with by the proper department, but should an inspection or examination of the supplies be at any time necessary, you will be expected to afford your assistance. It must, however, be understood, that in the case of any other than Government ships, the owners or agents will be required to arrange for the supplies. It will further be your duty to make yourself acquainted with the state of health of the crews of vessels in the port not in Quarantine; and in the event of any epidemical disease making its appearance subsequently to the arrival of a vessel, you will lose no time in making the necessary inquiries, and report for the information of the Government. But, under present circumstances, it will be necessary, before proceeding to any vessel, to communicate with the Master, who should be recommended to adopt such measures as you may deem proper, in consequence of any sickness found to exist on board, pending your reference to the Government.

It will be proper for you to keep a Journal of your proceedings, specifying therein:—the vessels which you visit; the result of your enquiries and observation; your consultations with the Medical Officers in Quarantine, and the suggestions made to them; and such other particulars as may be useful for future reference. A Register should also be kept of the reports which you make to this office.

In addition to the reports which you may make from time to time, in the execution of your duties, you will be pleased, at the termination of each year, to furnish me with a general Report for the past twelve months, adverting to the several cases of Quarantine which may have occurred, the origin and progress of the disease which occasioned them, and their duration—stating the general health of the port, and offering any suggestions which may occur to you for improving or rendering more efficient the Regulations relating to Quarantine. This Report you will accompany by a Return of the number of vessels visited during the year; the number placed in Quarantine, distinguishing the ports from which they sailed, and whether Emigrant, Convict, or other ships; the number of sick whilst in detention, and the number of deaths, with a nominal list of the latter.

I am further directed to inform you, that it is to be understood that your engagement included your services in affording medical aid when required to the Emigrants in the Government buildings in Bent-street. The Surgeon of each Emigrant ship is expected to give his attendance at the Emigrant buildings daily, as long as he may be in the pay of the Local Government, and he will, therefore, of course, remain for that time in charge of his own sick; but medical attendance on those who continue longer at the buildings will form a part of the duties of the Health Officer of this port.

HEALTH OFFICER OF PORT JACKSON.

3

HEALTH OFFICER'S REPORT.

QUESTIONS to be put by the Health Officer to the Surgeon and Master, or other person in command of any Ship or Vessel arriving in Port Jackson.

QUESTIONS.	REPLIES.
<ol style="list-style-type: none"> 1. What is the name of the Vessel and Tonnage? 2. What is the Master's name? 3. From whence do you come and when did you sail? 4. At what Ports have you touched on your passage? 5. Did you receive any Cargo or Passengers at the intermediate Ports? 6. What is the nature of the Cargo, and the number of Officers, Mariners, and Passengers? 7. What Vessels have you had intercourse or communication with on your passage, and from whence did they come? 8. Have you any, and what Bill of Health? 9. Are you aware that any epidemical, contagious, or infectious disease prevailed at the place from which you sailed, or at any of the places which you have touched, or on board of any vessel with which you have had communication? If so, state where and when. 10. In the course of your voyage have any persons on board suffered from sickness of any kind, and what was the nature of such sickness, and when did it prevail? How many persons were affected by it, and have any of them died in the course of the voyage? 11. How many sick have you now on board, and from what disease? 12. If any sickness prevailed during the passage, state the date of the first and last case? 13. If any of the crew or passengers have died during the voyage, state the nature of the disease of which they died, and the date? 14. Upon the appearance and prevalence of any disease, was there any unusual state of the weather which might lead you to suppose its existence to depend rather upon atmospherical than upon specific contagion? 15. Are you aware of any circumstances, during the passage or at present, which would render it expedient to place the ship and people in Quarantine? 16. To the correctness of the foregoing statements, are you ready to make declaration if required? 	

1858.

Legislative Assembly.

NEW SOUTH WALES.

HEALTH OFFICER, SYDNEY.

(REPORT FOR 1857.)

*Ordered by the Legislative Assembly to be Printed, 4 June, 1858.*REPORT FROM THE HEALTH OFFICER OF PORT JACKSON FOR THE
YEAR 1857.*Sydney, 10 April, 1858.*

SIR,

I have the honor to submit to you, for the purpose of being laid before the Legislative Assembly, the following Returns:—

- 1st. A nominal List of the Ships visited during the year 1857.
- 2nd. A nominal List of the Government Immigrant Ships which have arrived in the Colony during the year 1857,—shewing the port of departure; the number of passengers; the nature of the diseases prevailing during the voyage; the number of deaths during the voyage, and the disease causing death.
- 3rd. A nominal List of Ships that have been placed in Quarantine,—shewing the ports from which they have sailed; the number of deaths which occurred among the passengers of each ship during its detention in Quarantine; the duration of the Quarantine, and the nature of the disease which occasioned it.

The sanitary state of both Government Emigrant Ships and other vessels arriving in this port has been generally good; and the rate of mortality among the passengers by Government Emigrant Ships contrasts most favorably with that of the passenger ships from England to North America, and other parts of the world.

From the greater attention paid to the inspection of the Immigrants previous to embarkation, and to the sanitary condition of the depôts in England, small-pox has not been of such frequent occurrence on board of Emigrant Vessels as it was during the year 1856; and, notwithstanding its prevalence in the neighbouring Colony of Victoria, we have as yet been happily preserved from its introduction into this port.

Six vessels were placed in Quarantine during the year, in consequence of measles, scarlet fever, typhus fever, and in one instance of small-pox, having prevailed on board of them during the voyage.

On the arrival of the vessels at Spring Cove, the passengers were all landed, with their luggage, and the sick separated from the healthy.

The ships, with the healthy portion of the passengers and crews, were released from Quarantine as soon as all the clothing and bedding had been washed, and the ships thoroughly cleansed; the sick people remaining at the Quarantine Station until they were perfectly restored to health.

Fresh provisions of good quality are daily supplied to all the people who are detained in Quarantine, and fruits and other medical comforts are allowed for the use of such cases as may require them.

I have, &c.,

H. G. ALLEYNE, M.D.,

Health Officer, Port Jackson.

THE PRINCIPAL SECRETARY
TO THE GOVERNMENT.

HEALTH OFFICER, MORETON BAY.

(REPORT FOR 1857.)

Ordered by the Legislative Assembly to be Printed, 4 June, 1858.

REPORT FROM THE HEALTH OFFICER OF MORETON BAY, FOR THE YEAR 1857.

Brisbane, 5 February, 1858.

SIR,

I have the honor to submit to you, pursuant to instructions received in the month of October last, a nominal List of Ships visited during the year 1857, and a nominal List of Emigrant Ships from the United Kingdom and Europe, during the year 1857,—shewing the number of passengers in each; nature of disease prevalent during the voyage; the number of deaths during the voyage; and the cause of death.

The condition of the Emigrant Vessels arriving in this port during the year has been generally good, and the mortality, with one exception, (the Parsee) very small.

I have, &c.,

W. HOBBS,

Health Officer.

THE GOVERNMENT RESIDENT,
Brisbane.

MILITARY FORCE FOR NEW SOUTH WALES.

(CORRESPONDENCE RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 14 October, 1858.

THE BRIGADE MAJOR to THE COLONIAL SECRETARY.

*Brigade Office,
Sydney, 4 October, 1858.*

SIR,

I have the honor, by direction of the Colonel commanding the troops, to enclose a copy of a letter received from the head quarters of the Command, relative to the 28 Sept., 1858. force the Government of this Colony would be inclined to entertain, and to request you will have the goodness to favor me with the information solicited, at your earliest convenience.

I have, &c.,

CHARLES N. LOVELL, CAPT. R. A.,
Brigade Major.

THE HONORABLE

THE COLONIAL SECRETARY,
&c., &c., &c.

[Enclosure.]

*Head Quarters,
Melbourne, 28 September, 1858.*

SIR,

With reference to your letter of the 25th August, and my reply thereto, dated 1st September, I am directed by the Major-General Commanding to request that you will ascertain whether the Government of New South Wales would be inclined to entertain a larger force than is now in that Colony, and if so, to what extent.

Definite information on this subject is necessary, to admit of arrangements being made for the disposal of such men as may volunteer to the 12th from the 58th Regiment.

I have, &c.,

J. MARTIN BLADEN NEILL,
Lt.-Col. Dep. Adj. General.

To

Colonel J. M. Percival, C. B.,
Commanding 12th Regiment,
Sydney.

1858.

Legislative Assembly.

NEW SOUTH WALES.

COMMUTED PENSIONERS.

Ordered by the Legislative Assembly to be Printed, 23 April, 1858.

To the Honorable the Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of Commuted Pensioners,—

RESPECTFULLY SHEWETH :—

That your Petitioners are old Soldiers, who commuted their Pensions for the purpose of emigrating to Australia.

That they expended large sums (to them) in accomplishing such emigration ; many of them, in fact, paying all they had for such purpose.

That, subsequently to their doing so, persons of the same class received Land Orders in proportion to the money expended by them in paying passages of themselves and their families.

That many of your Petitioners have portions of their families unprovided for.

That the admission of your Petitioners to the same privileges as enjoyed by the Commuted Pensioners, under the Regulations of 1832, will aid them materially in providing for the still unsettled portions of their families.

That the Legislative Council of the Colony, in 1850, favorably entertained a like Petition to the present one, the reply to which is hereunto appended.

That your Petitioners believe that in other British Colonies the favor now sought has been granted long since to persons of the same class as your Petitioners, and under precisely similar circumstances.

Your Petitioners, therefore, most respectfully pray that your Honorable House will take their case into consideration.

And they, as in duty bound, will ever pray.

[Here follow 4 Signatures.]

SEPARATION OF MORETON BAY.

No. 1.

PROCEEDINGS of the Executive Council on the subject of the Separation of Moreton Bay.

EXTRACT from Minute No. 56-62, dated 24 November, 1856.

PRESENT:—

HIS EXCELLENCY THE GOVERNOR GENERAL.

The Honorable E. DEAS THOMSON, Esq., C.B., Vice-President of the Council

The Honorable H. W. PARKER, Esq., Colonial Secretary.

The Honorable J. B. DARVALD, Esq., Solicitor General.

The Honorable S. A. DONALDSON, Esq., Colonial Treasurer.

The Honorable JOHN HAY, Esq., Secretary for Lands and Public Works.

HIS EXCELLENCY the Governor General lays before the Council a Despatch from the Right Honorable the Secretary of State for the Colonies, conveying an intimation that it is the intention of Her Majesty's Government to separate the Northern Districts of New South Wales, and to erect them into a distinct Colony. But that before the separation can take place, the following questions have to be determined, on the last of which, especially, the Secretary of State desires to have the opinion of His Excellency and the Council, namely,—

- 1st. The boundary between the two future provinces.
 - 2nd. The future Government of the separated portion; and
 - 3rd. The division of the debt of the province.
2. To enable the Council to form an opinion as to the proportion of the debt which would be chargeable on the revenue of the Northern Districts, the Governor General also lays before them the following Returns, which have been called for with that view:—
- (1.) A Return shewing the relative Areas of the Territory to the southward and exclusive of the Clarence River District, and of that to the northward and inclusive of it, together with the amount of land alienated, leased, and waste, in each of those territories.
 - (2.) A Return shewing the Population in each territory according to the last census.
 - (3.) A Return shewing the amount of the Debt of the Colony, the date and purposes of the several loans, and the amount expressly sanctioned for Public Works in the Northern Territory.
 - (4.) A Return shewing the number of Immigrants introduced by loan, distinguishing, as far as practicable, the number sent to the Northern Territory either directly from England, or indirectly from Sydney.
 - (5.) A Return shewing the Revenue and Expenditure of each territory during 1855.
 - (6.) A Return shewing the Exports and Imports of each territory during 1855.
3. After some deliberation, the Council express a desire to have before them Returns shewing the total Revenue and Expenditure of the Northern Districts during the last 10 years.

EDWARD C. MEREWETHER,
Clerk of the Council.

No. 2.

EXTRACT from Minute No. 56-64, dated 8 December, 1856.

PRESENT :—

HIS EXCELLENCY THE GOVERNOR GENERAL.

The Honorable H. W. PARKER, Esq., Colonial Secretary.

The Honorable W. M. MANNING, Esq., Attorney General.

The Honorable J. B. DARVALL, Esq., Solicitor General.

The Honorable S. A. DONALDSON, Esq., Colonial Treasurer.

The Honorable JOHN HAY, Esq., Secretary for Lands and Public Works.

REFERRING to the proceedings on the 24th November last, respecting the separation of the Northern Districts, the Council being invited thereto by His Excellency the Governor General, resume the consideration of the question of the decision of the debt of the Colony, and the proper proportion which should be chargeable upon the Revenue of the Northern Colony; and having deliberated at some length, defer its further consideration until their next meeting.

EDWARD C. MEREWETHER,

Clerk of the Council.

No. 3.

EXTRACT from Minute No. 56-65, dated 15 December, 1856.

PRESENT :—

HIS EXCELLENCY THE GOVERNOR GENERAL.

The Honorable E. DEAS THOMSON, Esq., Vice-President of the Council.

The Honorable H. W. PARKER, Esq., Colonial Secretary.

The Honorable S. A. DONALDSON, Esq., Colonial Treasurer.

The Honorable JOHN HAY, Esq., Secretary for Lands and Public Works.

REFERRING to the proceedings on the 8th instant and previous date, respecting the separation of the Northern Districts, the Council resume the consideration of the question of the division of the debt of the Colony, and the proper proportion which should be chargeable upon the Revenue of the Moreton Bay District; and having deliberated at some length, again defer its further consideration until they shall have before them the following Returns, viz. :—

- (1.) A Return shewing the Population in the District of Moreton Bay, north of the 30th parallel of latitude, in each year since 1846, as deduced from the several Census Returns, distinguishing the population in the New England and Clarence River Districts north of the 30th parallel.
- (2.) A Return shewing the total Ordinary Revenue collected in that district during the same period, as deduced from the Population Returns relatively to the total population of the whole Colony, and distinguishing the Revenue in the above districts.
- (3.) A Return shewing Total Expenditure chargeable on the Ordinary Revenue during the same period, and in the said districts.
- (4.) A Return shewing total Territorial Revenue collected in the same districts during the same period.
- (5.) A Return shewing Total Charges on the last-mentioned Revenue, and net proceeds of the said Revenue.

EDWARD C. MEREWETHER,

Clerk of the Council.

No. 4.

EXTRACT from Minute No. 57-3, dated 15 January, 1857.

PRESENT :—

HIS EXCELLENCY THE GOVERNOR GENERAL.

The Honorable E. DEAS THOMSON, Esq., Vice-President of the Council.

The Honorable H. W. PARKER Esq., Colonial Secretary.

The Honorable W. M. MANNING, Esq., Attorney General.

The

The Honorable J. B. DARVALL, Esq., Solicitor General.

The Honorable S. A. DONALDSON, Esq., Colonial Treasurer.

The Honorable JOHN HAY, Esq., Secretary for Lands and Public Works.

UPON the invitation of His Excellency the Governor General, the Council resumed the consideration of the question of the share of the public debt of the Colony which ought to be borne by the Northern Districts when separated from New South Wales Proper.

2. This question was initiated on the 24th November last, when His Excellency laid before the Council a Despatch from the Right Honorable the Secretary of State for the Colonies on the subject, and also the following Returns bearing upon it :—

- (1.) A Return shewing the relative Areas of the Territory to the southward, and exclusive of the Clarence River District, and of that to the northward, and inclusive of it, together with the amount of land alienated, leased, and waste, in each of these territories.
- (2.) A Return shewing the amount of the Debt of the Colony, the date and purposes of the several loans, and the amount expressly sanctioned for public works in the Northern Territory.
- (3.) A Return shewing the Population in each territory, according to the last census.
- (4.) A Return shewing the number of Immigrants introduced by loan, distinguishing, as far as practicable, the number sent to the Northern Territory either directly from Europe or indirectly from Sydney.
- (5.) A Return shewing the Revenue and Expenditure of each territory during 1855.
- (6.) A Return shewing the Imports and Exports of each territory during 1855.

3. After some deliberation on that occasion, certain other Returns were called for; the question was further considered on the 8th December, and again resumed on the 15th December, when other additional Returns were also required.

4. The Governor General now lays before the Council two memoranda expressive of his own views upon the subject, both of which have been circulated amongst the Members, together with the following Returns, which complete the information desired by the Council :—

- (1.) A Return shewing the Population in the District of Moreton Bay, north of the 30th parallel of south latitude, in each year since 1846, as deduced from the several Census Returns, distinguishing the population in the New England and Clarence River Districts, north of the 30th parallel.
- (2.) A Return shewing the total Ordinary Revenue collected in that district during the same period, as deduced from the Population Returns relatively to the total population of the whole Colony, and distinguishing the Revenue in the above district.
- (3.) A Return shewing Total Expenditure chargeable on the Ordinary Revenue during the same period, and in the said districts.
- (4.) A Return shewing total Territorial Revenue collected in the same districts, during the same period.
- (5.) A Return shewing Total Charges on the last mentioned Revenue, and net proceeds of the said Revenue.
- (6.) A Return shewing the amount received for the Sale of Land, and the total amount of money paid on account of Immigration.

5. In the Despatch of the Right Honorable the Secretary of State, above referred to, it is stated, "That the basis of the arrangement for the division of the debt should be an equitable division according to the several contributions to the Revenue of the two portions; and the benefit which they respectively derived, or expected to derive, from the public services to which the loans thus contracted were appropriated."

6. The Council find it difficult, if not impossible, to adopt this basis, inasmuch as the principle asserted is inapplicable to some of the items constituting the public debt of the Colony.

7. That debt, amounting in its entirety to £2,234,700, is divisible under five heads, viz. :—

(1.) Sydney Municipal Works	£293,700
(2.) Public Works	290,700
(3.) Railways	1,087,300
(4.) Immigration	413,000
(5.) Deficiency	150,000
	£2,234,700

8. The Council are of opinion that the justice of the case demands that these items should be treated separately; and, after very full deliberation, advise with respect to each as follows :—

Sydney Municipal Works.

- (1.) The Water Supply and the Sewerage of the City of Sydney being works in which the Northern Districts are not directly interested, no portion of the debt incurred on their behalf should be charged upon the new Colony.

Public Works.

- (2.) In respect to Public Works, the Northern Colony should be charged with so much of the Public Debt as has been already directly expended, or at the time of actual separation shall have been expended within the limits thereof.

Railways.

- (3.) No Railway Works have yet been undertaken in the Northern Districts. Preliminary surveys, however, are now in progress, and the amount expended on these, and in course of expenditure, may be the subject of future adjustment, based on the foregoing principle.

Immigration.

- (4.) The proportion in which the debt incurred for Immigration should be divided between the two Colonies should be determined by debiting each Colony with the cost of the passage of the Immigrants who, by the records of the Immigration Department, can be ascertained to have been sent to each, and by crediting each the half of the net proceeds of the Revenue derived from the sales and the leasing of Crown Land, which, in accordance with the provisions of the Land Sales Acts, is devoted to the introduction of Immigrants. The ratio of these differences between Revenue and Expenditure will be the ratio in which the actual outstanding debt should be divided between the two Colonies.

Deficiency.

- (5.) The loan proposed to be incurred for past deficiency in the public service cannot be apportioned so satisfactorily, perhaps, as the preceding items. The deficit has been caused by the General Revenue for two or three years past falling short of the expenditure. It is therefore clearly impossible to say to what extent any particular district of the Colony participated in this over expenditure; and, under the circumstances, the Council recommend that this debt should be apportioned according to the population of the Colonies, as shewn by the census taken on the 1st of March, 1856.

9. In the views which the Council have thus expressed on this subject, they have confined themselves entirely to the question with which they were invited to deal, viz.—the proper distribution of the existing debt of the province; but they are of opinion that to meet the justice of the case, there should be, on the occurrence of separation, an adjustment of accounts between the two Colonies, and a financial balance struck between them, irrespective of the debt.

10. They therefore advise, that on separation actually occurring, a debit and credit account should be taken of the general contributions to, and expenditure of Revenue, in the separated portions in which their proper share of the cost of the central or general Government, computed according to population, should be included.

11. The Council are further of opinion that, except as regards the Territorial Receipts, which can be ascertained with sufficient accuracy, the Revenue contributed by the separated districts should be deduced from the population resident therein at the taking of each quinquennial census, as compared with the total Revenue and total population of the entire province. In this manner the New Colony will receive credit for any portion of the Customs' Revenue which may have been paid in New South Wales Proper, although the goods may have been sent overland (or eastwise) for consumption in the Moreton Bay or Clarence River Districts.

EDWARD C. MEREWETHER,
Clerk of the Council.

No. 5.

EXTRACT from Minute No. 57-58, dated 2 November, 1857.

PRESENT :—

HIS EXCELLENCY THE GOVERNOR GENERAL.

The Honorable CHARLES COWPER, Esq., Vice-President of the Council.

The Honorable JAMES MARTIN, Esq., Attorney General.

The Honorable R. JONES, Esq., Colonial Treasurer.

REFERRING to the proceedings on the 15th January last and previous dates, when the Executive Council had under consideration a Despatch from the Right Honorable the Secretary of State for the Colonies on the subject of the separation of the Northern Districts of New South Wales, and their erection into a distinct Colony, His Excellency the Governor General now lays before the Council two farther Despatches from the Secretary of State in reference to the projected separation; one conveying the decision of Her Majesty's Government with respect to the boundary line between the two provinces, the division of the debt, and the form of constitution to be granted to the new Colony; the other transmitting the copy of some observations on the boundary question, addressed to Her Majesty's Government by Mr. M. H. Marsh, who is largely interested therein.

2. These Despatches have been circulated amongst the Members during the absence of the Governor General at Norfolk Island, and His Excellency now invites from the Council an expression of opinion upon the several matters therein referred to be finally dealt with by the local authorities, or with respect to which further information is required by Her Majesty's Government.

3. The Council accordingly proceed, in the first place, to consider the question of boundary, with a view to the preparation of the Returns necessary to enable them to offer recommendations upon the other points submitted to them. Upon this head the Secretary of State intimates that Her Majesty's Government have decided, in deference to the wish expressed by the inhabitants of the Clarence, New England, and Gwydir Districts, not to be included in the new Colony, to abandon the boundary of the 30th parallel of latitude, originally indicated as probable, and are prepared to adopt a line of demarcation suggested by the Governor General, unless His Excellency should see fit to vary it in accordance with the views propounded by Mr. Marsh.

4. The boundary proposed by His Excellency is as follows :—"A line commencing at Point Danger, following the division of the Districts of Clarence River and Moreton Bay, until that division coincides with the range forming the boundary of the basins of the Richmond and Clarence Rivers, thence along that range until it reaches the parallel of south latitude 29 degrees, thence along that parallel until it reaches the meridian of 141 degrees."

Mr. Marsh, upon the assumption that by this boundary it was intended to give the whole of the Pastoral Districts of Clarence, New England, and Gwydir, to New South Wales, and the Districts of Moreton, Darling Downs, and Maranoa, to the new Colony, suggests that it would be desirable to take in lieu thereof the boundaries of those Districts which have been recognised and acted upon for many years.

After a careful inspection of certain maps prepared by the Surveyor General to illustrate these boundaries, the Council express themselves in favor of the following line of demarcation, viz. :—A line commencing on the sea coast at Point Danger, in latitude about 28 degrees 8 minutes south, by the range thence which divides the waters of the Tweed, Richmond, and Clarence Rivers, from those of the Logan and Brisbane Rivers, westerly to the Great Dividing Range between the waters falling to the East Coast and those of the River Murray; by the Great Dividing Range southerly to the range dividing the waters of Tenterfield Creek from those of the main head of the Dumaresq River; by that range westerly to the confluence of Tenterfield Creek with the Dumaresq River; by the Dumaresq River (which is locally known as the Severn) to its confluence with the Macintyre River; by the Macintyre River, which lower down becomes the Barwan, downward to the 29th parallel of south latitude; and by that parallel westerly to the 141st meridian of east longitude, which is the boundary of South Australia.

By

By the adoption of this boundary, which does not materially differ from that proposed by Mr. Marsh, the whole of the Clarence, New England, and Gwydir Districts, will be preserved to New South Wales, with the exception of such portion of the latter as lies to the northward of the 29th parallel, which, however, is to a great extent unoccupied.

EDWARD C. MEREWETHER,
Clerk of the Council.

No. 6.

EXTRACT from Minute No. 57-57, dated 23 November, 1857.

PRESENT:—

HIS EXCELLENCY THE GOVERNOR GENERAL.

The Honorable CHARLES COWPER, Esq., Vice-President of the Council.

The Honorable A. P. LUTWICHE, Esq., Solicitor General.

The Honorable R. JONES, Esq., Colonial Treasurer.

REFERRING to the proceedings on the 2nd instant, when the Council had under consideration certain Despatches from the Right Honorable the Secretary of State for the Colonies on the subject of the Separation of the Northern Districts, His Excellency the Governor General now invites the attention of the Council to the question of the division of the new Colony into Electoral Districts, and at the same time lays before them a scheme for such division, adopted to the line of demarcation agreed to by the Council on the above date.

2. The Council advise that this project, which is hereinafter set forth at length, be approved, and that His Excellency the Governor General should transmit the same to Her Majesty's Government for insertion in the Order in Council constituting the Government and Legislature of the new Colony.

EDWARD C. MEREWETHER,
Clerk of the Council.

ELECTORAL District Scheme for the Colony of Moreton Bay.

	DISTRICTS.	POPULATION.	MEMBERS.
1	Town of Brisbane (including Western Suburbs and Kangaroo Point)	2,525	3
2	Town of South Brisbane (including Suburbs).....	915	1
3	Hamlet of Fortitude Valley	955	1
4	Town of Ipswich	2,459	3
5	Town of Drayton (including Toowoomba)	528	1
6	Town of Warwick.....	472	1
	Average of Town Population to each Member	785½	10
7	East Moreton (Police District of Brisbane, except Towns and Hamlets, 1, 2, 3)	1,449	2
8	West Moreton (Police District of Ipswich, except Town of Ipswich)	2,099	3
*9	Western Downs (Police District of Drayton, except Town of Drayton); present population, 929; anticipated population	1,200	2
*10	Eastern Downs (Police District of Warwick, except Town of Warwick)	890	1
11	Northern Downs (Police District of Dalby)	678	1
*12	Maranoa (Police District of Surat); present population, 415; anticipated population	500	1
13	Burnett (Police District of Gayndah)	1,809	2
14	Wide Bay (Police District of Maryborough)	669	1
15	Leichhardt and Port Curtis (Police or Squatting Districts)	615	1
	Average of Country District Population to each Member..	672¼	14
	General Average of Population to each Member.....	719¾	24

* In Districts 9, 10, 12, will be included any portion of the New England and Gwydir Districts taken within the boundaries of the Moreton Bay Colony on separation.

No. 7.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

(No. 1.)

*Government House,
Sydney, New South Wales,
1 January 1858.*

SIR,

On the receipt of your Despatches No. 88 and 89, dated 13th July, 1857, on the subject of the steps to be taken in order to prepare for the separation from New South Wales of the districts to the northward, and the establishment of a separate Colony, I proceeded at once to provide for the division of the new Colony into proper Electoral Districts, and I have succeeded in making all the purely executive arrangements. I had also, in concert with my Ministers, prepared a Bill, which would, if passed, have provided the means of settling the question of the division of the debt of New South Wales between the two Colonies. The dissolution of the Legislature, which I reported to you in my Despatch No. 160, dated 20th ultimo, will, of course, postpone all legislative proceedings for upwards of two months; and I think it more than questionable whether, when the Legislature does meet, it will assent to any arrangement with regard to the debt which will exonerate the Territory of Moreton Bay from the liabilities which many people seem to think attach to the whole of the Territory of New South Wales, as it was when the debt was contracted.

Under these circumstances, I propose to bring before you the whole subject in a series of Despatches, dealing with each question which may be raised in a separate Despatch, and thus placing Her Majesty's Government in a position to act, should it be disposed to do so, without waiting for the adoption of any measure by the Legislature, inasmuch as the present feeling of the people of New South Wales is, I think I may safely say, adverse to separation.

I have, &c.,

THE RIGHT HONORABLE

W. DENISON.

HENRY LABOUCHERE,

&c., &c., &c.

No. 8.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

(No. 2.)

*New South Wales,
Government House, Sydney,
2 January, 1858.*

SIR,

In accordance with the directions contained in your Despatches Nos. 88 and 89, dated 13 July, 1857, I forward herewith the necessary Plans and Descriptions, defining, firstly, the boundary line between the new Colony and New South Wales; and, secondly, the different Electoral Districts into which it will be advisable for the present to divide the former.

2. You observe, in your Despatch No. 88, "that Her Majesty's Government will adopt, instead of the boundary line formerly proposed, that suggested by me in my Despatch No. 176, dated 11 November, 1856, which appears to be described in language sufficiently accurate to be inserted at once into the Order in Council, with very little alteration." In describing this boundary, however, in the Despatch in question, a very material deviation has been made from the line proposed by me; for, instead of adhering, as proposed in your Despatch No. 89, to the well known division of existing districts, the line in question cuts off from New South Wales that portion of the Clarence River District which is situated on the Upper Richmond. This, I imagine, must have originated in some misconception of my meaning; as it appears to me very inadvisable to place the upper waters of a river in one Colony and its outlet in another, and still more inadvisable to disregard natural and well known lines of separation, and to adopt arbitrary and undefined boundaries, such as parallels of latitude, about which questions are sure to arise hereafter. I have, therefore, in my description of the boundary line, retained, as suggested by you in your Despatch No. 89, the well known division of existing districts, as by this no inter-

section of existing runs can occur; and I have followed, as nearly as possible, the line proposed in my Despatch before alluded to, which has met with the approval of Her Majesty's Government.

3. In arranging the Electoral Districts, the first point which came under consideration was the number of Members of which the Legislative Assembly should be composed; and, after consulting with parties well acquainted with the country, I have proposed twenty-four; which number, though it bears rather a large proportion to the population, is as few as could with any propriety be placed in an Assembly out of which the Officers of the Executive Government have to be selected. The enclosed Tabular Statement, shewing the Population of the proposed Electoral Districts, and the number of Members to be allotted to each, is sufficient to prove the fairness of the distribution of the representation. With reference to population, and to the mode in which the population is employed, it will be seen that in six districts there are more than one representative; and I would beg to suggest that a principle, the application of which to the election of the Upper House in Tasmania I advocated some years ago, should be adopted as a general rule in Moreton Bay—namely, that no elector should be entitled to more than one vote, or, to speak more correctly, that no elector should be entitled to vote for more than one Member in any given district. Of course, if an elector is registered in several districts, he would be allowed to exercise his right of voting in each. When the population is large enough in any district to entitle it to return two Members, the practice of giving to each elector two votes has the effect, in the first place, of doubling the elector's power of each individual, and thus of placing him in a better position than the electors in a smaller district, and, in the second place, of admitting, and even suggesting combinations, by which a large majority may have the power of returning both Members, and of thus practically depriving a minority, whose numbers may be such as to entitle it to return one Member, of any representation at all.

It may be said, why not then divide the districts, and give to each section a single member? The reply to this is, that in such a case, the representatives are too apt to consider themselves as mere delegates of a small section of the community, and to postpone the interest of the public to that of the particular locality in which they have a special interest.

4. As the Electoral Districts into which it is proposed to divide the new Colony differ altogether from those which return Members to the Legislature of New South Wales, some steps must be taken to register the votes in each of the new districts, and to make all the necessary preparations for the electors of a Legislative Assembly. The persons entitled to vote have been already registered under the provisions of the Electoral Act of New South Wales, and all that is absolutely necessary would be to determine for which of the new districts the voters already registered are entitled to vote; but the simplest plan would be, to direct the adoption, so far as it is applicable to the circumstances of the new Colony, of the New South Wales Electoral Act, 14 Victoria, No. 48.

The Governor will then, on his arrival, cause the provisions of this enactment to be applied to the new Electoral Districts; proper lists of voters will be made, revised, and registered; and the Legislative Assembly, when it meets, will be furnished with a complete set of rules for its guidance.

5. I have, in the present Despatch, given all the information which may be necessary to enable Her Majesty's Government to provide for the election of a Representative Assembly in the proposed new Colony. The questions relative to the appointment by Her Majesty of the Members of the Legislative Council I shall discuss in a separate Despatch.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE
THE SECRETARY OF STATE
FOR THE COLONIES.

SEPARATION OF MORETON BAY.

11

No. 9.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

(No. 3.)

*Government House,
Sydney, New South Wales,
4 January, 1858.*

SIR,

In your Despatch, No. 88, dated 13 July, 1857, you direct me to furnish you with the numbers and names of such persons as I should recommend for Her Majesty's choice as Members of the future Legislative Council of the new Colony of Moreton Bay, your object being to insert in the Order in Council itself, as far as possible, the necessary provisions for constituting the new Government and Legislature.

2. In accordance with your instructions, I have, after consultation with the Members of my Executive Council, and with other persons interested in the new Colony, decided to recommend that the Legislative Council should be composed of not less than twelve Members; and I enclose a list of the names of twelve gentlemen, who, from their position and acquirements, are entitled to have this distinction conferred upon them.

3. I would, however, beg to submit for your consideration, whether it would not be desirable to leave the selection of the Legislative Council to the Governor of the new Colony, who, acting upon information which he will obtain upon the spot, will be better able to judge than I can be of the advisability of appointing the gentlemen I have named to you.

I have no hesitation in expressing my conviction of the fitness of these gentlemen; but it may be very possible that several of them may intend to offer themselves as candidates for the representation of some of the Electoral Districts in the Legislative Assembly, against which their nomination in the Orders in Council may perhaps militate.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE,
&c., &c., &c.

No. 10.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

(Extract)

(No. 4.)

*Government House,
Sydney, New South Wales,
5 January, 1858.*

SIR,

In your Despatch, No. 88, dated 13th July, 1857, you direct me to inform you what Establishment it will be necessary to create at Moreton Bay for the purpose of Local Government, and to accompany this information with any suggestions which I may wish to make, as to the appointment of particular individuals to office there.

2. There are at present existing at Moreton Bay certain Establishments connected with the ordinary machinery of Government; these must be maintained for the present, and all the change which it will be necessary to make in the arrangements respecting them will be that they will have to report to heads of Departments in Brisbane instead of in Sydney. There is, for instance, a Collector of Customs at Brisbane—he, instead of forwarding his receipts and accounts to Sydney, will hand them over to a Treasurer on the spot. There is a Police Establishment, and the officers of this, instead of referring to the Colonial Secretary at Sydney, will report to a similar officer at Brisbane. In the same way the Magistrates, Chairman of Quarter Sessions, &c., must correspond with some authority at Brisbane, instead of with the Attorney General at Sydney. It will then be necessary that the Governor should, on his arrival, be prepared to appoint a Colonial Secretary, a Colonial Treasurer, and an Attorney General, among whom would be distributed the charge of the various Establishments already existing at Moreton Bay. A Solicitor General

General would not be required; neither do I think that it would be necessary to appoint an Auditor General, until the Legislature of the new Colony may be able to decide as to the system upon which their accounts are to be audited. A Board of Audit, composed of persons independent of the Government, might perform the business of the Audit Office for the first few years of the existence of the Colony.

3. Looking to the scanty population and the (probably) trifling Revenues of the new Colony, I should limit the number of officers to those already named, who will form the Executive Council of the Governor.

4. The Judicial business is already provided for by the Act 20 Victoria, No. 25, under which a Judge has been appointed, who resides at Brisbane, and performs there all the functions which are the attributes of the Supreme Court in New South Wales.

5. The only other office to which I think it is necessary to allude is that of the Surveyor General. There is at present a District Surveyor at Moreton Bay, but he would be utterly incompetent to the performance of those duties which devolve on the head of a Department of this kind. In a new Colony like Moreton Bay, where a large amount of Revenue must be derived from the land, it is essential that the Survey Department should be conducted upon the soundest principles, and that money should not be wasted there, as it has been in the Australian Colonies generally, upon incorrect, and, therefore, useless surveys. The business of a Surveyor General would be the establishment of a good system, the superintendence of its working, and the institution of such checks as will enable him to secure the proper performance of their work by his subordinates. In order to do this, he must have a perfect knowledge of the theory and practice of surveying; he must be orderly and methodical, and have had a proper training in the management of an office. In addition to these, or, rather, in order to enable him to avail himself of these qualifications, he should be energetic, and active in body and mind. Many persons are apt to imagine that a Surveyor General should be always in the field; there cannot, however, be a greater delusion than this. The superintendence of surveyors' work is far more effectively exercised in the office,—in fact, it is only those who are altogether ignorant of the system upon which surveys ought to be made who would venture to express such an opinion. As, then, it will be necessary to create a new Survey Department for the Colony of Moreton Bay, I would suggest, for your consideration, the propriety of sending out an Officer of Engineers with a certain number of Sappers, and the necessary instruments, to lay the foundation of a good system at the commencement; to such an officer might be entrusted also the superintendence of the Public Works generally, and I have no doubt that the arrangements would be found both useful and economical.

6. In your Despatch before quoted, you have not alluded to the salaries of the different officers to be appointed; as, however, these will have to be specially provided for, as has been done in the reserved Schedules of the Constitution Act of the different Australian Colonies, I have thought it advisable to allude to them in this Despatch. The probable Revenue of the Colony should, of course, have some influence upon the salaries, but the expense of living should also be borne in mind in fixing the amount.

I do not think that the Governor could maintain his proper position with a smaller income than £3,000 per annum—£1,200 per annum may be given to the Colonial Secretary, £1,000 per annum to the Treasurer, and £800 per annum to the Attorney General. Should you send an officer out in charge of the Survey Department and of the Public Works, both of which offices are likely to be of great importance, I do not think that a less sum than £1,000 per annum should be paid to him.

7. In connection with the subject of the amount to be reserved and placed at the disposal of Her Majesty as a Civil List, I may take the opportunity of suggesting the necessity of applying a certain sum towards the maintenance of Public Worship in the new Colony. At present, a certain number of Clergymen, of different denominations, receive salaries from the sum reserved in Schedule C of the Constitution Act, New South Wales; the payment of these gentlemen must, of course, be transferred to the new Colony. I should not propose to make any deduction from Schedule C on account of this transfer; but I do not think that the amount reserved for the maintenance of Religious Worship in the

new Colony should be limited to that which the existing Clergymen receive. The Colony is extending its boundaries rapidly, and the want of adequate religious instruction is everywhere felt. I should, therefore, suggest that a sum should be reserved, bearing something like the same proportion to the population of Moreton Bay that the amount paid for Religious Worship in New South Wales does to its population, which would make the amount reserved for Moreton Bay about £3,500.

* * * * *

9. Power must, of course, be given to the Governor, with the advice of his Executive Council, to appropriate such sums as may be required for the purposes of Government, without the previous consent of the Legislature. It is evident that, although certain expenses may have been authorised by the Legislature of New South Wales, there will be many items of expenditure which could never have been contemplated, and which must, therefore, be defrayed by the authority of the Governor and Executive Council until the Legislature can act.

* * * * *

I have, &c.,
W. DENISON.

THE RIGHT HONORABLE
HENRY LABOUCHERE,
&c., &c., &c.

No. 11.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

(No. 6.)

*Government House,
Sydney, New South Wales,
7 January, 1858.*

SIR,

Having in former Despatches gone fully into all the questions connected with the separation of the districts to the northward from the Colony of New South Wales, with the exception of that which relates to the division of the outstanding debt of New South Wales between the two Colonies, I now propose to address you on this subject.

2. In your Despatch No. 88, dated 13 July, 1857, you say that the division of the debt, when made, must, according to the opinion of the Law Officers, be embodied in an enactment of the New South Wales Legislature.

Acting, then, in accordance with this opinion, I brought the subject under the consideration of the Executive Council; and, in accordance with their advice a Bill was prepared (a copy of which I forward herewith), embodying the principles which had been adopted by a previous Ministry, and which were reported to you in my Despatch No. 5, dated 5 February, 1857.

3. This Bill was read a second time, but has now lapsed in consequence of the dissolution of the Legislative Assembly; and I am bound to inform you that a strong feeling appears to exist throughout the Colony against a measure, the effect of which would, in the opinion of many people, be to saddle the Colony of New South Wales with a very large proportion of a debt for which the joint capital of the two Colonies was originally pledged, and I do not think it likely that the Bill will pass.

With regard to the Bill itself, I may remark that clauses 1, 2, 3, and 4, embody the principles upon which the *existing* debt of the Colony should be apportioned between New South Wales and Moreton Bay; but clause 5 recognizes the districts about to be separated as partners with New South Wales, and provides for a settlement of the partnership accounts. To this I have always objected. In the first place, it appears to recognize a right on the part of each district or division of a country to claim that the whole of the revenue directly or indirectly raised in such district should be specially appropriated to its particular and direct use and benefit. In the second place, it would be impossible to say what effect the outlay of money upon works of general utility has had upon different sections of the Colony; and the settlement of a set of accounts, upon each item of which discussions would be raised, as to the principle upon which the division was to be based, would not only occupy

a long time, but be productive of jealousies and heart-burnings, which would tend to create an ill-feeling between two Colonies, whose relations with each other ought to be of the most intimate and friendly character.

5. The Bill, and indeed any Bill to be passed by the Legislature of New South Wales, appears to be liable to the objection that it proposes to legislate for another Colony over which, at the very instant when it becomes necessary to enforce the provisions, neither the Government nor the Legislature can exercise any control; so that, in point of fact, without some specific understanding with, or guarantee from, Her Majesty's Government, the whole may be looked upon as a dead letter.

Under these circumstances, I am of opinion that it would be in every way better that Her Majesty's Government should, at once, take upon itself the decision of the question, in accordance with the principles laid down in clauses 1, 2, 3, and 4, with the exception that, in clause 3, the account should shew the number of immigrants introduced within the limits of Moreton Bay within the years 1851, 1852, 1853, 1854, 1855, and 1856, which were the years during which Loans for Immigration were negotiated, together with the cost of introducing the same; and on the credit side, an account should be given of half the *net* Revenue of the Land Fund from all sources. I was in hopes of being able to send with this Despatch the Returns required to exemplify it; but as these cannot be prepared in time, I have thought it better to send the Despatch in its present state. The Returns, and calculations based on them, I will forward by the next Mail.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE,

&c., &c., &c.

No. 12.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

(No. 31.)

Government House,

Sydney, New South Wales,

6 February, 1858.

SIR,

In my Despatch, No. 6, dated 7th ultimo, I stated that I would send by the next Mail the Returns and the calculations, based on these Returns, as to the proportion of the New South Wales debt which should be paid by Moreton Bay. I now forward the following Returns which have been prepared, carrying out the accounts, as far as could be done, to the end of 1856.

No. 1 is a Statement of the amount received for the Sale of Land in the years from 1842 to 1856, inclusive, distinguishing the land sold in the Northern Districts from that sold in the Southern, and marking further the total received in each during the years from 1842 to 1850, and from 1851 to 1856.

No. 2 is a Statement of the amount received as Rent or License Fee for Crown Lands, distinguishing that paid in the Northern Districts from that paid in the Southern, and giving also the total received from 1842 to 1850, and from 1851 to 1856.

No. 3 is a Statement of the share of the expense of Survey, Sale, and Management of Crown Lands chargeable against Moreton Bay for the years from 1851 to 1856, inclusive.

No. 4 is a Return shewing the total Ordinary Revenue collected in the District of Moreton Bay during the years from 1842 to 1856, inclusive. There are no precise data upon which this return could be based. The amount of Custom dues received at the Port of Brisbane would give no approximation to the proper sum to be credited to the Northern Districts, for a large proportion of the imports intended for Moreton Bay pay duty at Sydney, and are shipped coastwise to Brisbane as they are wanted. The only available means of arriving

arriving at any probable result was to divide the whole amount of the Revenue between the two Colonies in proportion to the population of each. No. 4 also contains another Return, showing the amount received for the sale of land in each year from 1842 to 1856, and the total outlay in each year on account of Immigration.

No. 5 is a Return of the amount sanctioned for Public Works, to be paid for by loan in the Northern Districts; and it also contains an account of the debt of New South Wales, under different heads, at the end of 1856.

No. 6 is a Return shewing the number of Assisted Immigrants who have been sent to Moreton Bay in the years from 1848 to 1856.

No. 7 is a Statement of the Expenditure from the Ordinary Revenue upon account of the Northern Districts of the Colony from 1842 to 1856.

No. 8 shews the proportion of the cost of the General Government for the same years which is chargeable to Moreton Bay.

No. 9 is a Statement of the Expenditure charged upon the Territorial Revenue which has been charged to the account of Moreton Bay from 1842 to 1856.

No. 10 is a statement of the number of Immigrants landed in the Colony in the years from 1851 to 1856 inclusive.

2. I will now proceed to explain the use which I propose to make of these Returns with reference to the recommendations contained in the 6th paragraph of my Despatch, No. 6, of 7 January, 1858. There can be no doubt as to the meaning of clause 1 of the Act which charges the debt created for the Sewerage and Water Works of Sydney to the Colony of New South Wales.

3. The meaning of the second clause is also clear, but the amount under this head cannot be defined until separation actually takes place. The Return No. 5 only shews the amount sanctioned up to the end of 1856, and during the whole of 1857, and at the present instant various works are in course of execution, the cost of which is being defrayed from borrowed money.

4. The determination of the proportion of the debt incurred for immigration, amounting, as shewn in the Table No. 5, to £418,000, is a more complicated question, and the mode in which I have arrived at the result, that the sum chargeable in the account against Moreton Bay is £72,750 8s. 2½d., will be seen more clearly by reference to the tabular account (A) appended to this Despatch.

5. On reference to this tabular statement, it will be seen that I have taken into account only the years from 1851 to 1856, being those in which the debt for immigration was incurred. I have, however, credited Moreton Bay with half of the net Land Revenue arising from the leasing, as well as the sale of Crown Lands. That I have done substantial justice to that part of the Colony will be seen by reference to the tabular account B, herewith enclosed, by which it will be seen, that taking the gross revenue of Moreton Bay from all sources, and comparing it with the expenditure fairly chargeable to that part of the Colony, the balance, even upon this rough account at the end of 1856, would not amount to more than £10,000 or £12,000; while if the expenditure of 1857 were introduced into the account, and every small item looked up which might fairly be charged against the Northern Districts, the difference between the receipts and expenditure would be too trifling to merit notice, certainly not enough to justify a course of inquiry, which would spread over a long time, and be productive of very great irritation.

6. The share of the public debt which has been incurred to meet deficiencies in the Revenue cannot of course be determined till the accounts have all been made up, and must be allowed to stand over until the separation of the Colonies; and I have not attempted to forward any return relative to it, as the amount is sure to vary from year to year in proportion as the Revenue is more or less productive.

7. The question, I am perfectly aware, is one which presents very many difficulties; taking, however, for granted that Her Majesty's Government is convinced of the expediency of separating the Northern Districts from New South Wales, and is prepared to take the necessary

necessary steps for the erection of these into a separate Colony, I think it would not be advisable to prolong the state of suspense in which the colonists are placed. In my former Despatches I forwarded all the data required for the formation of the Government of the new Colony; and, with regard to the share of the debt to be charged to it, it will not be difficult for Her Majesty's Government to make arrangements for the determination of the amount due at the time of separation for Public Works, and for the deficiencies in the Revenues, while the share of the Immigration Debt may be put at £72,750, as shewn in the return marked A.

8. The accounts between the two Colonies will thus be simplified, and a definite arrangement having been made by Her Majesty's Government, upon the data furnished by the enclosed returns, no opening will be left for irritating discussion between the Colonies themselves.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE
THE PRINCIPAL SECRETARY OF STATE
FOR THE COLONIES.

[Enclosures in No. 12.]

No. 1.

STATEMENT of the Total PURCHASE PRICE OF LAND SOLD in the COLONY OF NEW SOUTH WALES, between the Years 1842 and 1856, distinguishing whether to the North or South of Point Danger.

Legislative Assembly.

NEW SOUTH WALES.

SEPARATION OF MORETON BAY.

(DESPATCH RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 19 October, 1858.

THE SECRETARY OF STATE FOR THE COLONIES to THE GOVERNOR GENERAL.

No. 11.

*Downing-street,
16 July, 1858.*

SIR,

As the Session of Parliament is drawing towards a close, I think it advisable to inform you by this mail that Her Majesty's Government are not prepared to introduce, before its termination, any measure for removing the obstacles which now exist to the separation of Moreton Bay from New South Wales.

I shall address you more fully on the subject by next mail.

I have, &c.,
E. B. LYTON.

GOVERNOR SIR W. DENISON,
&c., &c., &c.

1858.

Legislative Assembly.

NEW SOUTH WALES.

SEPARATION OF THE NORTHERN DISTRICTS.

(CORRESPONDENCE RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 25 March, 1858.

RETURN to an *Address* from the Honorable the Legislative Assembly of New South Wales, dated 13 November, 1857, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table of the House,—

“Copies of all Despatches received by His Excellency the Governor General from the Right Honorable the Secretary of State for the Colonies relative to the separation of the Northern from the Middle Districts of the Colony of New South Wales, from the 21st July, 1856, down to the present time, excepting Nos. 88 and 89, bearing date July 13th, 1857, respectively, already published; together with copies of all Correspondence from His Excellency the Governor General to the Right Honorable the Secretary of State for the Colonies on the same subject and during the same period, excepting No. 176, bearing date November 11th, 1856, and No. 25, dated February 5th, 1857, already printed.”

SEPARATION OF THE NORTHERN DISTRICTS.

No. 1.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 141.)

*Government House,
Sydney, 10 September, 1856.*

SIR,

I have the honor to forward herewith a Petition addressed to the Right Honorable the Secretary of State for the Colonies, from the landholders and residents in the District of Port Curtis, praying, for the reasons therein stated, that the Northern Districts of the Colony of New South Wales may not be made into a separate Colony.

2. My opinion on the subject of this separation has been so fully stated in former Despatches that it is needless for me to say more than that I fully concur in the prayer of the Petitioners.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE.

No. 2.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 182.)

*Government House,
Sydney, 27 November, 1856.*

SIR,

I have the honor to forward herewith, for presentation to Her Majesty, a Petition signed by six persons, stating themselves to be the Chairman, Directors, and Secretary of the Moreton Bay Immigration and Land Company, praying that the territory to the north of the 30th parallel of latitude may be erected into a separate Colony, to be termed the Colony of Cooksland.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE.

No. 3.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 183.)

*Government House,
Sydney, 28 November, 1856.*

SIR,

I have the honor to forward herewith, for presentation to Her Majesty, a Petition signed by John Dunmore Lang, D.D., and John Richardson, M.L.C., praying that the District of Moreton Bay may be erected into a distinct Colony, to be called Cooksland.

2. I would point out that the Petition is dated 26 January, 1856, at which time Dr. Lang was, as he is therein stated, a Member of the Legislative Council of New South Wales. The document, however, was only presented to me yesterday.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE.

No. 4.

No. 4.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 184.)

*Government House,**Sydney, 29 November, 1856.*

SIR,

I have the honor to forward herewith, for presentation to Her Majesty, a Petition signed by Henry Buckley, John Richardson, and Gordon Sandeman, Esquires, three of the five Members for the District of Moreton Bay, praying that Her Majesty would separate from the Colony of New South Wales all the territory extending northwards from the 30th parallel of south latitude.

2. I do not think it necessary to comment upon the allegations of this Petition, as my views with relation to the principles by which the line of demarcation between the two Colonies should be determined have been fully stated in former Despatches, and as the statements as to matters of fact—that is, as to the wishes of the inhabitants of the Districts of Clarence River and New England—will be brought before Her Majesty's Government in a more direct form.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE.

No. 5.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 185.)

*Government House,**Sydney, 29 November, 1856.*

SIR,

I have the honor to forward herewith, for presentation to Her Majesty, a Petition from certain persons stating themselves to be residents, or owners of property, in Tenterfield, Wellingrove, and the Upper Clarence, praying that those districts and the other parts to the north of New England may remain, as now, a portion of the Colony of New South Wales.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE.

No. 6.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 187.)

*Government House,**Sydney, 7 December, 1856.*

SIR,

I have the honor to forward herewith, for the information of Her Majesty's Government, an Address presented to me by the Legislative Council of this Colony, containing a series of Resolutions with relation to the proposed separation of certain Districts from New South Wales, and the formation of those Districts into a separate and distinct Colony.

2. The 1st Resolution expresses the concurrence of the Council in the opinions expressed by the Legislative Assembly, as notified in certain Resolutions submitted by me for your consideration in my Despatch, No. 176, dated 11th ultimo. The 2nd and 3rd Resolutions question the legal power of Her Majesty to separate any portion of the territory south of latitude 26° south without the assent of the inhabitants of the said territory—being householders—first had and obtained; and assert the positive illegality of any severance of Territory south of the parallel of 30°. With reference to this question, I forward herewith a copy of a letter addressed to me by His Honor Sir Alfred Stephen, the Chief Justice of the Colony, in which the legal points of the case are briefly discussed. The 4th Resolution embodies the views of the Council with reference to the resumption of transportation to Moreton Bay.

3. As my own views upon these subjects have been made known to you in former Despatches, I do not think it necessary to say more at present than to express a hope that the wishes of the inhabitants of the Clarence River District, and of that of New England, will be respected.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE
HENRY LABOUCHERE.

[Enclosure 1 in No. 6]

To His Excellency Sir William Thomas Denison, Knight Commander of the Most Honorable Order of the Bath, Governor General in and over all Her Majesty's Colonies of New South Wales, Tasmania, Victoria, South Australia, and Western Australia, and Captain General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, and Vice Admiral of the same.

MAY IT PLEASE YOUR EXCELLENCY,—

We, Her Majesty's most dutiful and loyal subjects, the Members of the Legislative Council of New South Wales, beg respectfully to present to your Excellency the following Resolutions adopted by the Council, and to request that your Excellency will be pleased to forward, by the earliest opportunity, a copy thereof to the Secretary of State for the Colonies, for the information of Her Majesty's Government.

1. That this Council cordially concurs in, and adopts the following Resolutions agreed to by the Legislative Assembly on the 5th day of November instant, namely:—

- "(1.) That this House has learned, with regret, that it is the intention of the Imperial Government to fix the southern boundary of the proposed new Colony of Moreton Bay at a line south of the 30th parallel of south latitude."
- "(2.) That, as the interests of the various Districts proposed to be included in the new Colony are not identical, this House is of opinion that, in defining the future boundary line of the Colony of Moreton Bay, it is the duty of the Imperial Government to consult the wishes of the several Districts proposed to be included in that Colony."
- "(3.) That, while this House does not feel called upon to dispute the propriety of the Imperial Government erecting the Districts of Moreton Bay and Darling Downs into a separate Colony, if, in accordance with the expressed wish of the majority of the inhabitants thereof, it submits that, on the same principle, it will be unjust to the inhabitants of New England and the Clarence River to include those Districts in such Colony, if they are averse to be so included."
- "(4.) That, in the opinion of this House, the interests and commercial connection of New England and the Clarence River are now, and will continue to be, so completely identified with the Colony of New South Wales, and distinct from those of the Districts of Moreton Bay and Darling Downs, that, if the question whether the first mentioned Districts shall be included in the new Colony be referred to the inhabitants of those Districts, a very large majority will be found to be opposed to their being so included; and, in support of such opinion, this House refers to the Petition, signed by 1,551 inhabitants of New England and Clarence River, praying for the establishment of an Assize Court at Armidale,—in which Petition they assert that they do not desire to be included in any section of the Northern Districts which may be separated from the present Colony of New South Wales."

2. That this Council desires, moreover, to submit to Her Majesty's Government that no power is vested in Her Majesty, under any circumstances, to detach from this Colony any portion of the Territory lying south of the 30th degree of south latitude; or to detach any of the Territories lying between the 26th and 30th degrees of such latitude, except upon the Petition of the inhabitants—householders—of each district or territory proposed to be detached; and that no such Petition signed, or purporting to be signed, by a majority of the inhabitants—householders—of the New England or of the Clarence River Districts, appears to have been presented to Her Majesty.

3. That this Council submits, for these reasons, that the final settlement of the Southern Boundary Line of the new Colony should be deferred by the Imperial Government until the wishes of the inhabitants of the Districts of New England and Clarence River shall have been legally expressed on the subject.

4. That this Council having understood that the question of a recurrence to transportation to some portion of the Territory of Australia has been recently mooted, in connection with the establishment of a Northern Colony, feels it to be a duty further to represent on this occasion, that the transportation or exiling of criminals to a new Colony so immediately adjoining New South Wales, and forming so accessible a portion of the same continent as the intended new Colony of Moreton Bay, would be a measure fraught with the most serious evils to this Colony, political, social, and moral; and this House, therefore, records
its

its earnest protest against the taking of any step, in contemplation of such a measure, in opposition to the deliberately expressed opinion and wishes of the people of New South Wales, whose interests would thereby be so materially compromised.

5. That an Address be presented to the Governor General, requesting His Excellency to forward, by the earliest opportunity, a copy of the above Resolutions to the Secretary of State for the Colonies, for the information of Her Majesty's Government.

ALFRED STEPHEN,
President.

Legislative Council Chamber,
Sydney, 21 November, 1856.

[Enclosure 2 in No. 6.]

25 November, 1856.

My Dear Sir William,

Will you forgive my addressing you on a public matter in this unofficial style, and for the imperfect manner in which I am compelled to write. But I am anxious, having undertaken the full responsibility of concurring in the Resolutions of the Legislative Council, this day to be presented* to you, not to be supposed to have changed, or to be unwilling to abide deliberately by my opinion; and, moreover, as the newspapers have not reported the grounds stated by me in Council for that opinion, and have misreported what I said on the last debate, when the Resolutions, with those suggested by myself, were carried, I wish to be allowed the opportunity of explanation.

I retain, then, my first opinion, that the Queen has not the power to detach any of the Territory between the 26th and 30th degrees of latitude, except on the petition of the inhabitants there, being householders; nor any portion lying south of the 30th degree, under any circumstances. All that I said to qualify this was, that a friend, quite as well, or better able to judge on such a point, inclined to an opposite conclusion; and that I could not therefore feel myself entitled to say that the point was free from doubt. I then gave his view of the matter, which was that the Constitution Act, s. 46, was in effect, though not in terms, an *enabling* enactment; that it was therefore, to that extent, "repugnant" to the 6 Vict., c. 76, s. 51, and 14 Vict., c. 59, s. 34, which had *restrained* the powers of the Crown; and that, consequently, by s. 2 of the 19 Vict., c. 54, those enactments in 6 and 14 Victoria were repealed. I afterwards stated my own reasons for, nevertheless, adhering to my former impression. Reporters for the Press in this City cannot (or never do) follow law arguments; and so, the only notice of the whole is, that the President made a "very lengthy speech," or something to that instructive purport.

I have not time, nor should I feel entitled to weary your Excellency in like manner: but I will, with your permission, indicate very shortly the grounds of my opinion. The Crown, or Parliament, having once granted to the inhabitants of any Territory certain privileges, cannot (or, at least, the Crown, without the aid of the other Estates, cannot) derogate from the grant. But, to the Territory which for the last 25 years has constituted *in fact* New South Wales, various rights and privileges have, by Parliament, been from time to time during those years conceded,* and the 6 Vict., c. 76, s. 51 enacted, that from that Colony (*i. e.* the Territory then constituting it) *no portion south of the 26th degree* should be detached. The 14 Vict., c. 59, s. 34, however, so far altered that enactment as to enable the Crown to detach portions as far as the 30th degree, *on the petition of the inhabitant householders* of those portions. Now, my position is, with all possible respect to Mr. Labouchere, those enactments have never been repealed, but form still the law, binding the Crown on this subject.

If they have been repealed, it can only be because they are "repugnant" to the Constitution Act of this Colony; for all Statutes, or parts of Statutes, so *repugnant* are, by the 19 Vict., c. 54, s. 2, repealed. I maintain that there is nothing in our Constitution Act (though most loosely and slovenly drawn in many parts) which is repugnant to those enactments in 6 and 14 Vict. The only part of our Constitution Act which touches the question is the 46th section. But this, extending the previous boundaries of the Colony considerably, gives no new *enabling* power to the Crown. Had the clause contained no proviso, such as it does contain, the Crown could not have trenched on the newly created boundaries. Then, indeed, it would have been repugnant to (for it would in effect have repealed) the enabling clause in the 14 Victoria. The clause, however, to prevent that repugnancy contains a proviso,—that nothing therein shall be *deemed to prevent* Her Majesty from altering the boundary on the north. In other words, say the Legislature, "we extend our boundaries beyond what they were before,—but *that* extension shall not prevent the Crown from doing what it otherwise and previously might have done."

It is true that the words used are "from altering the boundary *in such manner* as to *Her Majesty may seem fit*." And these words are supposed to have given a power which she had not previously. I conceive such a conclusion to be unwarranted by the context, and equally by the reason of the thing, and the probabilities of the case. That our Legislators, individually, meant to enable the Queen to dismember the Colony to any extent, at Her discretion, up to the very harbour of Sydney (which is the result of the proviso, if rightly construed

28—B

* None of these rights can, therefore, be taken away, or affected, as they would or might be by dismemberment from New South Wales, except by Parliament. Nay, the extent of the Territory thus, as it were, incorporated, becomes part of the concession.

construed by Mr. Labouchere) is incredible; and I feel clear that the true construction of the clause is that, only, which I have expressed,—that the proviso is a mere saving clause to prevent the *new* enactment, that contained in the clause itself, in the extending of the boundaries, *from taking away a power already vested by previous statute*; and which power, but for that proviso, would have been taken away.

I enclose a printed copy of the three enactments,

His Excellency
Sir W. T. Denison, K.C.B.,
Governor General.

And remain, &c.,
ALFRED STEPHEN.

No. 7.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 2.)

Government House,
Sydney, 8 January, 1857.

SIR,

I have the honor to forward herewith an Address to Her Majesty from certain inhabitants of the Northern Districts of New South Wales, expressive of their gratitude for the concession made to their wishes by the erection of these Northern Districts into a separate Colony.

2. The Address also contains a suggestion that a Commission should be appointed equally from both New South Wales and the New Colony, to furnish Her Majesty's Ministers with true data for arriving at an equitable adjustment of the share of the debt due by each. And it farther prays that the boundary between the Colonies should be fixed at or near the 30th parallel of latitude.

3. It is unnecessary for me to comment upon the statements or the views of those who have appended their names to this Address to Her Majesty, as I have in other Despatches distinctly stated my opinion upon all the subjects alluded to.

I have, &c.,
W. DENISON.

THE RIGHT HONORABLE
HENRY LABOUCHERE.

No. 8.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 3.)

Government House,
Sydney, New South Wales,
10 January, 1857.

SIR,

I have the honor to forward herewith, for presentation to Her Majesty, a Petition from the Legislative Council of New South Wales, praying that Her Majesty would not assent to any law by which any portion of the Colony to the south of latitude 30° should be transferred to another Colony, and that none of the territory between the latitudes of 26° and 30° should be separated from New South Wales, except upon the Petition of the inhabitant householders of the districts proposed to be separated.

2. In forwarding this Petition, I do not wish to express any opinion upon the legal point raised by the Council. I believe the fact to be that the inhabitant householders, or, at all events, the majority of the population of the Moreton Bay District, wish to be separated from New South Wales; but I believe also, that the inhabitants of the Clarence River Districts, and of New England, are decidedly averse to the connection with Moreton Bay, and wish to remain, as they now are, a portion of New South Wales. Justice would be done to each, should Her Majesty's Government adopt the line of boundary as explained in my Despatch, No. 176, dated 11th November last. Any other arrangement would only lead to constant heartburning and political disagreement between the adjoining colonies.

I have, &c.,
W. DENISON.

THE RIGHT HONORABLE
HENRY LABOUCHERE.

No. 9.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 9.)

*Government House,
Sydney, New South Wales,
17 January, 1857.*

SIR,

I have the honor to forward herewith a Petition addressed to Her Majesty, by 462 inhabitants of the District of Clarence River, praying that the boundary between New South Wales and the proposed new Colony may not be fixed to the southward of the range of mountains to the northward of the River Tweed, near the 28th parallel of south latitude.

The Petitioners state that they wish to remain in connexion with New South Wales, and that a transference to the new Colony of Moreton Bay will be injurious to their interests.

I have in former Despatches stated my opinion with reference to this question, and I need only therefore say, generally, that I concur in the views of the Petitioners.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE,

&c., &c., &c.

No. 10.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 10.)

*Government House,
Sydney, New South Wales,
17 January, 1857.*

SIR,

I have the honor to forward herewith an abstract of the communications which have been received by the Government on the subject of the proposed Boundary between New South Wales and the Colony to be formed to the northward. The Memorial and Addresses refer, not to the fact of the separation, but to the wishes of the inhabitants in the vicinity of the border to be attached to one Colony or the other.

2. The Petition addressed to Her Majesty by the people of Moreton Bay is an exception: This is a request from people of the territory which, under any circumstances, would be separated from the Colony, that the line should be drawn to the southward so as to include in their territory a tract of land the inhabitants of which are, as far as can be ascertained, averse to such an arrangement.

3. I may be allowed to remark that, as the researches of the North Australian Expedition shew that there is not land enough to admit of the formation of another Colony upon the East Coast of Australia, the whole of the territory to the northward of Moreton Bay will fall within the limits of the new Colony, and there can therefore be no good reason for attaching to that Colony a District which has not any natural connexions with it, and the inhabitants of which are averse to the union.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE.

No. 11.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 11.)

*Government House,
Sydney, New South Wales,
14 February, 1857.*

SIR,

I have the honor to forward herewith a Petition addressed to Her Majesty, by the inhabitants of the District situated between the latitudes of 29° and 51°,—a District which it has been proposed to transfer in part, if not in whole, to the new Colony about to be formed in the northern part of New South Wales.

2. The prayer of the Petition is, that Her Majesty will not, in forming such new Colony, include within its limits any portion of the Pastoral Districts of New England and the Macleay, or of the Clarence and Richmond Rivers, but will leave them, as they are at present, socially and commercially connected with New South Wales.

3. The gentlemen who handed this Petition to me for transmission to Her Majesty, explained that a similar Petition had been addressed to the Legislative Assembly more numerous signed, and that all the names which had been appended to that Petition would, had time allowed, have been attached to that which I forward with this Despatch.

4. You will observe that the names in several of the sheets of parchment are written in one hand; but these have all been transcribed from sheets of paper which have been handed to me, but which I have not thought it necessary to enclose.

5. You are aware, from several former Despatches, that my opinion is in accordance with that of the Petitioners, as to the impolicy of uniting them to a Colony with which they have no community of feeling or interest. I beg, therefore, to submit this Petition for the favorable consideration of Her Majesty.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE,

&c., &c., &c.

No. 12.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 42.)

*Government House,
Sydney, New South Wales,
27 February, 1857.*

SIR,

I have the honor to forward herewith a Petition addressed to Her Majesty by 135 of the inhabitants of the District of the Clarence and Richmond Rivers, praying that Her Majesty will, in pursuance of the powers vested in Her, separate the territory extending northwards from the 30th parallel of south latitude from the Colony of New South Wales, and erect it into a distinct Colony.

2. It is unnecessary that I should express any opinion as to the prayer of the Petition, as I have already on several occasions made my views with relation to the Boundary between these two Colonies known to you.

3. I may remark, however, that a very large proportion of the persons signing this Petition belong to the labouring class.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE,

&c., &c., &c.

No. 13.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 50.)

Government House,
Sydney, New South Wales,
 9 March, 1857.

SIR,

I have the honor to forward herewith a Petition addressed to Her Majesty by several of the large occupiers of land and owners of stock in the Northern Districts of the Colony, praying, that when such Districts are formed into a separate Colony, the form of Government adopted may be similar to that which formerly existed in the Australian Colonies, namely—a Governor, aided by an Executive Council, appointed by the Crown, and a single Legislative Chamber, composed partly of Members nominated by the Crown.

2. It is needless for me to make any remarks with reference to the prayer of this Petition, as the question has been considered and provided for in the Act 18 and 19 Vict., cap. 54, conferring a Constitution upon New South Wales.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE,

&c., &c., &c.

No. 14.

SIR W. DENISON to THE SECRETARY OF STATE.

(No. 51.)

Government House,
Sydney, New South Wales,
 9 March, 1857.

SIR,

I have the honor to forward herewith a Petition addressed to Her Majesty by sundry large occupiers of land and owners of stock in the Districts lying to the north of the thirtieth parallel of south latitude, praying that convicts may be sent to the Northern Colony, when it is separated from New South Wales, under certain conditions therein specified.

2. Without adverting to the conditions under which these gentlemen are disposed to relinquish their natural prejudices against the employment of convicts, I would observe that a compliance with the prayer of this Petition would be considered by the inhabitants of New South Wales as a breach of faith, and by the majority of the inhabitants of the Northern Colony as an evil, which the advantages conferred upon the large proprietors and employers of labor would not, in any degree, palliate. I trust, therefore, that Her Majesty may not be advised to accede to the prayer of the Petition.

I have, &c.,

W. DENISON.

Legislative Assembly.

NEW SOUTH WALES.

PURCHASE OF HORSES FOR ARTILLERY DRAFTED TO INDIA.

(MESSAGE RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 7 April, 1858.

W. DENISON,

*Governor General.**Message No. 3.*

The accompanying Despatch has just been received by His Excellency from the Most Noble the Governor General of India, requesting that such Troops as may be spared from the Australian Colonies may be forwarded forthwith to Calcutta, and particularizing more especially a Regiment of Infantry and a Company of Artillery.

Confiding in the assurances conveyed in the Address of the 24th ultimo, the Governor General does not hesitate to apply to the Legislative Assembly to make provision for the purchase of the Horses which are required, in order to enable the Company of Artillery, which it is proposed to detach to the assistance of the Indian Government, to take the field at once on landing at Calcutta.

The number of Horses required will be 104, and the cost of purchasing them is estimated at £35 per Horse, or £3,640.

*Government House,**Sydney, 7 April, 1858.**[Enclosure to the foregoing.]**Calcutta, 30 January, 1858.*

Sir,

A private letter of the 12th of December, which I had the honor to receive from your Excellency a few days ago, leads me to believe that it may be in the power of your Excellency's Government, when this letter reaches Sydney, to spare from the Forces now stationed in the Australian Colonies one Regiment of Infantry, and perhaps one Company of Artillery.

In the hope that this may be the case, Her Majesty's Steam Transport "Megara" is dispatched to Sydney to bring to Calcutta such portion of the Troops as your Excellency or the Commander-in-Chief may think proper to place in her. For the transport of the remainder the Government of India must trust to your Excellency's good officers in taking measures to provide such tonnage as may be available and suitable. Your Excellency will probably not expect me to give any assurance as to the time at which it may be possible to restore to the Colony the force which you may be able now to spare from it. It may be sufficient to say that the Troops shall not be kept longer than necessary—how long that may be depends not only upon the course of events in India, but also upon the extent to which the army in India may be strengthened by reinforcements from England fit for early service in the field.

It is well that I should add that I attach more importance to an additional Regiment of Infantry than to an increase of Artillery in the field.

I have, &c.,

CANNING.

His Excellency Sir W. Denison,
&c., &c., &c.,
Sydney.

NEW SOUTH WALES.

DISPATCH OF TROOPS TO INDIA.

(DESPATCHES RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 12 August, 1858.

THE GOVERNOR GENERAL OF INDIA to GOVERNOR SIR W. DENISON.

Allahabad, 14 May, 1858.

SIR,

It has afforded me much gratification to receive your Excellency's letter, dated the 27th February last, forwarding a copy of the Minutes of Proceedings of the Executive Council of New South Wales.

I beg that your Excellency will accept for yourself—and convey to the Executive Council—the best thanks of the Government of India for the hearty and patriotic exertions which they have made to assist this Government in its difficulties. My letter of the 30th January will have shewn your Excellency that the assistance is very acceptable.

I have, &c.,

CANNING.

HIS EXCELLENCY

SIR WILLIAM DENISON,

&c, &c., &c.

THE GOVERNOR GENERAL OF INDIA to GOVERNOR SIR W. DENISON.

Allahabad, 22 May, 1858.

SIR,

I have the honor to acknowledge the receipt of your Excellency's letter, dated the 10th ultimo, which arrived within a few days of the despatch of my letter of the 14th instant.

I regret greatly that the liberal and considerate intentions of your Excellency and of the Executive Council should have been the cause of any difference of opinion between your Excellency's Government and the Legislative Assembly.

I assure your Excellency that whilst the Government of India is deeply grateful to the Government and to the people of New South Wales for the warm sympathy evinced towards the sufferers in India, and for the aid which has been given in strengthening the Queen's army in this country, it would have seen with much regret any expenditure incurred by the Colonial authorities on account of India if in any quarter of the Colony the least objection had been felt thereto.

It would, of course, have added much to the completeness of the aid which I am now expecting from your Excellency's Government if horses had been sent with the battery, but the guns and men will be of great service as it is.

I have, &c.,

CANNING.

HIS EXCELLENCY

SIR WILLIAM DENISON,

&c. &c., &c.

GOVERNOR SIR W. DENISON to THE GOVERNOR GENERAL OF INDIA.

*Government House,
Sydney, 10 April, 1858.*

MY LORD,

I received your Lordship's Despatch, dated 30th January, on the 3rd of this month, and have proceeded at once to comply with the request contained in it, so far as was in my power.

2. By the last mail I received instructions from the Secretary of State to forward the 77th Regiment to Hong-Kong, and was on the eve of taking up transports for its conveyance, when the "Megara" arrived. I have, however, induced the General to alter the destination of this Regiment, and to send it at once to Calcutta, and the "Megara" will sail with the men and officers as soon as the necessary fittings can be prepared, and she will be accompanied by a transport conveying the baggage, &c.

3. In my Despatch addressed to your Lordship by the last mail, I stated that the Government had placed at the disposal of the Major-General the whole of the Troops in the Colony, with the exception of two Companies, and had, in addition, agreed to put the Artillery in a position to act at once on landing, by providing them with horses. On opening the Session I alluded in my Speech to the steps then taken, and was assured by the Legislative Assembly that it would have cheerfully and promptly contributed to the expense thus proposed to be thrown upon the Colony had the necessity arisen. When, however, on the receipt of your Lordship's Despatch, I brought the subject again under the notice of the Assembly, and asked for a sum of between £3,000 and £4,000 to enable me to purchase 104 horses, I was met by such a general opposition as obliged the Ministers to withdraw the application for the grant of this sum. I very much regret that it will not be in my power to fulfil the promise made to your Lordship in my former Despatch.

Some opposition will, I understand, be made to the departure of the Artillery, but I hope to be able to embark them, with the harness required for a full battery, as soon as a transport can be procured and prepared to receive them. In my Despatch above quoted, I stated that one, or even two Regiments might perhaps be spared from the Command. I must be allowed to qualify this statement slightly. One strong Regiment would, in all probability, be quite sufficient for the five Australian Colonies; but I am afraid that neither the 12th nor the 40th are strong enough singly for the duty. I will, however, put myself in communication with the Governors of the different Colonies and with the Major-General in Command, and ascertain whether we might not be in a position to detach a Regiment, or, at all events, one wing of a Regiment, should further assistance be required in India.

I have, &c.,

HIS EXCELLENCY

W. DENISON

THE VISCOUNT CANNING,
Governor General of India.

1858.

Legislative Assembly.
NEW SOUTH WALES.

DISPATCH OF TROOPS TO INDIA.
(DESPATCH RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 25 August, 1858.

W. DENISON,
Governor General.

Message No. 22.

The Governor General has great satisfaction in laying before the Legislative Assembly a copy of a Despatch with which he has been honored by the Secretary of State, expressive of the gratification felt by Her Majesty at the alacrity shown by the Government of New South Wales in placing at the disposal of the Government of India such reinforcements of Troops, and such assistance in the shape of Military equipment, as could be spared from the service of the Colony.

Government House,
Sydney, 25 August, 1858.

THE SECRETARY OF STATE FOR THE COLONIES to GOVERNOR SIR W. DENISON.
(No. 28.)

Downing-street,
19 May, 1858.

SIR,

I have received your Despatch No. 46, of the 26th February last, with its enclosures, by which it appeared that the Government of New South Wales, in its desire to assist the Government of India, had agreed to place at the service of the Major-General in Command in Australia the 77th Regiment, now quartered in New South Wales, with the exception of two Companies, which were considered necessary for furnishing the necessary guards. It also appeared that your Government had offered to dispense with the services of the Company of Artillery stationed at Sydney, and further to equip them, at a charge to the Colony of between £3,000 and £4,000, with 100 horses, in order that the troops might be landed in India in an efficient state for immediate service.

In my Despatch No. 2, of the 15th January last, which had not reached you at the date of your Despatch now under acknowledgment, I intimated to you that it was intended to remove the 77th Regiment from Sydney to Hong-Kong; and in a Despatch which I have received from Sir H. Barkly, with reference to the same arrangement, it is stated that there will be no difficulty in supplying from Victoria two Companies of the 40th Regiment for service in New South Wales.

The alacrity with which your Government placed at the service of the Indian Government the Company of Artillery, and the munificent offer of 100 horses for their equipment, is evidence of the loyalty and sympathy of the Colony, which Her Majesty's Government have seen with the deepest satisfaction. I have to acquaint you that I have laid your Despatch before the Queen, and that Her Majesty has commanded me to express to you Her gratification at this fresh instance of devotion and generosity by which your Government has well represented the feelings of the Colony towards the Crown and the Mother Country; nor can I omit to notice your own readiness and thoughtfulness in attending to those pressing wants of the Government in India, which appeared to you to admit of relief from Colonial resources.

I have &c.,
STANLEY.

GOVERNOR
SIR WILLIAM DENISON,
 &c., &c., &c.
 New South Wales.

NEW SOUTH WALES.

DISPATCH OF TROOPS TO INDIA.

(DESPATCH AND PROCEEDINGS RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 8 September, 1858.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 31 August, 1858, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table of this House,—

“ A Copy of the Despatch addressed to the Secretary of
“ State, dated 26th February, 1858, upon the subject of 100
“ Artillery Horses, and certain Military Equipments, stated
“ to have been placed at the disposal of the Government of
“ India by this Government; as well as a copy of the
“ Proceedings of the Executive Council upon the same
“ matter; to which Despatch and Proceedings the Message
“ from His Excellency the Governor General, laid upon the
“ Table of this House on Wednesday, the 25th instant, has
“ reference.”

(Mr. Donaldson.)

SCHEDULE.

NO.	PAGE.
1. Governor General to Secretary of State, 26 February, 1858, relative to placing Company of Artillery, &c., at disposal of Indian Government	2

DISPATCH OF TROOPS TO INDIA.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE.

(No. 46.)

Government House,
Sydney, 26 February, 1858.

SIR,

I have the honor to forward herewith a copy of a Minute addressed by me to the Executive Council, and of the proceedings of the Council thereupon, by which you will perceive that the Government of New South Wales, in its wish to afford assistance to the Government of India in the present crisis, has agreed to dispense with the services of the Company of Artillery at present doing duty at Sydney; it has also placed at the disposal of the Major-General in Command the Regiment quartered in New South Wales, with the exception of two Companies—a force not more than sufficient to mount the necessary guards. And as the services of the Artillery would not be effective unless their guns were horsed, it has further agreed to supply one hundred horses, at its own expense, in order that the Troops when landed at Calcutta might be ready to act at once.

2. I forward the correspondence which has taken place between Major-General Macarthur and myself on this subject, and should the news from India by the next Mail induce him to believe that reinforcements are required, I have no doubt that he will act in accordance with my suggestions, and detach from this Command at all events *one* Regiment and a Company of Artillery: In case of necessity I believe two might be spared.

I have, &c.,

W. DENISON.

THE RIGHT HONORABLE

HENRY LABOUCHERE.

PROCEEDINGS of the Executive Council with respect to the forwarding of a portion of the Military in this Colony to India.

EXTRACT from Minute No. 58-9, dated 15th February, 1858.

Present:

HIS EXCELLENCY THE GOVERNOR GENERAL.

THE HONORABLE THE VICE-PRESIDENT OF THE COUNCIL.

THE HONORABLE THE ATTORNEY GENERAL.

THE HONORABLE THE COLONIAL TREASURER.

THE HONORABLE THE SECRETARY FOR LANDS AND PUBLIC WORKS.

HIS Excellency the Governor General invites the earnest attention of the Council to that portion of the Indian intelligence brought to the Colony by the "Emeu" in which currency is given to a rumoured revolt of the Sikhs. Although this rumour does not merit implicit faith, yet, looking to the disorganized state of the Indian Army, such a revolt is far from improbable, and would, of course, greatly enhance the necessity for large reinforcements of troops. Considering it advisable, therefore, that the Major-General Commanding in Australia should be strengthened by placing it in his power to detach, should he consider it expedient so to do, as strong a body of men as possible to the assistance of the Indian Government, HIS Excellency consults the Council—1st, as to the amount of Military force which it is desirable to retain in this Colony, having regard to the advanced state of the defences of Port Jackson, and to the fact that Great Britain is at peace with every nation from which molestation could be anticipated; 2nd, as to the composition of such force; and, 3rd, in the event of the Artillery being dispensed with, whether this Colony would bear the expense of horsing them, as it is well known that the Indian Government is not in a position to find horses on the spot with sufficient rapidity, and it is desirable that they should land in India ready at once to enter the field.

DISPATCH OF TROOPS TO INDIA.

3.

2. It appears from a Minute laid before the Council by His Excellency, a copy of which is hereto appended, that the present disposable force in this Colony is as follows, viz. :—

77th Regiment...	... 658 men.
Artillery 101 „
	<hr/> 759

3. The Council entirely concur in the general views expressed by His Excellency in this matter, and they desire to record their opinion, that, under present circumstances, two Companies of Infantry of Her Majesty's troops will be an adequate force to retain here, and they advise that, in case Major-General Macarthur should deem it advisable to detach the Company of Artillery, the necessary number of horses to mount the Battery, say one hundred horses, should be provided at the expense of the Colony, and accompany the corps to India.

The cost of these horses, which will probably amount to £4,000, will, of course, require the formal sanction of the Parliament; but the Council have little doubt but that the House of Assembly will gladly seize the opportunity of showing, by such a contribution, the sympathy which is felt by the people of New South Wales for their fellow countrymen in India, in the time of danger and necessity.

EDWARD C. MEREWETHER,
Clerk of the Council.

MINUTE REFERRED TO.

I regret to observe in the papers which have been received from India by the "Hindu" that rumours prevail of the revolt of the Sikhs. Now I am in no way disposed to place implicit faith in such rumours as these, but, looking to the thoroughly disorganized state of our Indian Army, at all events of that large portion of it which is attached to the Bengal Presidency, I do not think it at all improbable that a warlike people like the Sikhs should feel disposed to take advantage of the opportunity of regaining their independence, and perhaps of extending their power over portions of British India, which are now left comparatively defenceless. Should the rumours to which I have alluded prove correct, the Indian Army will require to be reinforced as speedily as possible; should they not be verified immediately, it is probable that the presence of strong reinforcements pouring in from all quarters may put a stop to any attempt at insurrection. It appears to me that under any circumstances it would be very desirable that the hands of the Major-General in Command in Australia should be strengthened by placing it in his power to detach (should he consider it advisable to do so) as strong a body as possible to the assistance of the Indian Government. It is for this purpose that I propose to bring under the consideration of the Council to-day the question of the force which it may be desirable to retain in New South Wales.

From the Return submitted, it appears that the strength of the 77th is 658 men, and that of the Artillery 101. We are at peace with every nation from whom we could anticipate an attack, and it would therefore seem that this force is far in excess of our present wants; so much has been done to strengthen the defence of Sydney, that should a war break out suddenly, a very small amount of preparation would be sufficient to place the Batteries in such a state of efficiency as to render any attack on the City or the Shipping most dangerous to the assailants. Under such circumstances, I am of opinion that a couple of companies would be amply sufficient for the defence of the Colony; and I should be disposed to recommend that the services of the remainder of the existing force, and especially of the Company of Artillery, should be made available for the reinforcements of the Army in India.

In forwarding reinforcements to India, it is essential that they should arrive in a thorough state of efficiency, and be in readiness to take the field immediately on landing—this could not be the case were the Artillery unprovided with horses. We are quite aware that the Indian Government is not in a position to horse a Battery of Artillery from the fact that it has sent down officers to Australia to purchase horses; it would, therefore, be a matter of importance that horses should be sent up with the men. I think it would show the sympathy of the Government of New South Wales with that of India were we to take upon ourselves the expense of providing horses, and of thus placing the reinforcement of Artillery in an efficient condition for active service. I should wish, therefore, to obtain the opinion of the Council as to the amount of the force which it will be desirable to retain in Colony; 2nd, as to the composition of that force; and, 3rd, as to whether I might take upon myself to state to General Macarthur that in case he should feel it advisable to detach the Company of Artillery to India, this Colony would be at the expense of horsing it.

W. D.

15 February, 1858.

The approximate estimate of the number of horses required would be as follows:—

6 Guns, 6 horses to each 36
6 Ammunition Waggon, 4 horses 24
6 extra Carriages of different kinds, 4 horses 24
	<hr/> 84

and, to allow for casualties, I should propose to embark 100 horses, at a cost of from £3,500 to £4,000.

EXTRACT

EXTRACT from Minute No. 58-15, dated 7 April, 1858.

Present :—

HIS EXCELLENCY THE GOVERNOR GENERAL.
 THE HONORABLE THE VICE-PRESIDENT OF THE COUNCIL.
 THE HONORABLE THE ATTORNEY GENERAL.
 THE HONORABLE THE COLONIAL TREASURER.

REFERRING to the proceedings on the 15th February last, with respect to the reinforcements of Her Majesty's Troops in India, His Excellency the Governor General informs the Council that some time previous to the receipt of the news which now particularly induced him to bring the question under the consideration of the Council, he had addressed a private communication to the Governor General of India on the subject, and that, within the last few days, he has received by Her Majesty's Steam Transport "Megæra" a Despatch in reply from Lord Canning, requesting that such Troops as can be spared from the Australian Colonies may be forwarded forthwith to Calcutta, and particularizing more especially a Regiment of Infantry and a Company of Artillery.

This Despatch His Excellency now lays before the Council, and at the same time intimates that, with the concurrence of Major-General Macarthur, he proposes to comply with Lord Canning's request, by dispatching to Calcutta the 77th Regiment now under orders for Hong-Kong, as also the Company of Artillery; and, therefore, consults them as to the propriety of taking immediate steps to carry out their recommendation on the above date, viz., that the horses required to mount the Battery of Artillery should be provided at the expense of the Colony, and accompany the corps to India.

This measure will entail an expense of £3,640, the number of horses required being 104, and their estimated cost £35 each.

2. Confiding in the expressions of sympathy with our fellow subjects in India, conveyed in the Address presented to the Governor General in reply to the speech delivered by him on the occasion of opening the present Session, the Council do not hesitate to advise that His Excellency should at once lay Lord Canning's Despatch before the Legislative Assembly, and invite them to make provision, in accordance with the foregoing Estimate, for the purchase of the horses required to enable the Company of Artillery to take the field immediately on landing at Calcutta.

EDWARD C. MEREWETHER,
Clerk of the Council.

BATHURST SCHOOL OF ARTS BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and Report was referred, on the 30th April last, the "*Bathurst School of Arts Bill*," beg leave to report to your Honorable House,—

That they examined Mr. William Teale, *Agent* for Messrs. M'Intosh and Pinnock, of Bathurst, Solicitors for the Bill, (whose evidence will be found appended hereto,) and that the Preamble having been satisfactorily proved by the evidence of that gentleman, they proceeded with the enacting part of the Bill, in which they found it unnecessary to make any amendment;—

And your Committee now beg to lay before your Honorable House the said Bill, with a *verbal amendment* in the Preamble.

W. H. SUTTOR,
Chairman.

*Legislative Assembly Chamber,
Sydney, 4 June 1858.*

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 4 JUNE, 1858.

Members Present:—

Mr. Sutter,	Mr. Taylor,
Mr. Hay,	Mr. Owen,
Mr. Jones,	Mr. Rotton.

Mr. Sutter was called to the Chair.

Solicitors for the Bill—Messrs. McIntosh and Pinnock, of Bathurst.*Sydney Agent*—Mr. William Teale.

Mr. W. Teale examined.

Witness withdrew.

Committee then considered the Preamble of the Bill, and having *verbally* amended the same—(*vide* "*Schedule of Amendments*")—and being of opinion that the allegations contained therein were satisfactorily proved by the evidence of Mr. Teale;—

Motion made (The *Chairman*) and *Question*—"That this Preamble, as *verbally* amended, stand part of the Bill"—*agreed to*.

Enacting Clause of the Bill then read by the Chairman.

Committee considered and agreed to the same without any amendment.

Chairman requested to report the Bill, as *verbally* amended and agreed to, to the House.

SCHEDULE OF AMENDMENTS.

Preamble—page 1, line 14, *omit*—this present.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

BATHURST SCHOOL OF ARTS BILL.

FRIDAY, 4 JUNE, 1858.

Present:—

Mr. SUTTOR,
Mr. JONES,
Mr. HAY,Mr. OWEN,
Mr. TAYLOR,
Mr. ROTTON.

WILLIAM HENRY SUTTOR, Esq., IN THE CHAIR.

William Teale, Esq., examined:—

1. *By the Chairman:* You are Solicitor for this Bill? I am agent for McIntosh and Pincock, of Bathurst, who are joint Solicitors with Mr. Sergeant for the Bill. W. Teale,
Esq.
2. Have you a copy of the Grant from the Crown of the land sought to be surrendered? I produce an attested copy of the grant of two roods of land at Bathurst, to the Bathurst School of Arts or Mechanics' Institute. *(The witness handed in the same.)* 4 June, 1858.
3. Do you consider it necessary, under that grant, that a Bill of this kind should be passed, to enable the trustees to surrender that portion of land? I see, by the trusts on which this grant is made, that there is a clause against alienation, and, therefore, it is impossible they could surrender the land without the authority of Parliament.
4. Are you at all acquainted with the locality of the land in question? I believe the land originally granted is rather out of the town—somewhere near the Vale Creek; and the land proposed to be granted in lieu of this allotment is in a much more eligible situation, as it is in the centre of the town—a part of the Square.
5. You see by the Bill that it is intended to give this power to the trustees, or a majority of them? Yes; it is drawn in that way because Mr. Thomas Dunningham Syer, one of the trustees, is in England, and to enable him to join in any formal surrender would necessitate sending to England, and of course considerable delay would occur.
6. The object of giving this power to the majority is to avoid that necessity? Yes; that is the only object.
7. Messrs. George Busby, George Rankin, Thomas Dunningham Syer, and Richard Machattie, are the trustees? Yes.
8. These gentlemen are all named in the copy of the grant you produce? Yes.
9. *By Mr. Owen:* Do you know anything of the locality yourself, personally? I do, a little.
10. I suppose this School of Arts consists of trustees and members? Yes—subscribers.
11. Have the subscribers been consulted in this matter? I cannot answer that question.
12. Or is this the mere motion of the trustees themselves? I cannot answer that question at all. *(A Petition to the Assembly, praying for leave to introduce the Bill, was here produced by the Clerk of Committees, and handed to the witness.)*
13. Do you hold in your hand the Petition presented to the Assembly? I do.
14. By whom is it signed? By the President, two Vice-Presidents, and a considerable number of gentlemen whom I know to be subscribers and members of the Society.
15. Do you know how many subscribers there are in the whole to this School of Arts? I do not.
16. Has the intention to apply for this Bill been advertised in the local papers? It has.
17. Is there any building upon the land originally granted? No, I believe not. They are occupying temporary apartments now. This land has been lying in abeyance.
18. Is there any building upon the land proposed to be given in lieu? Not that I am aware of; but it is two years, I may state, since I was at Bathurst.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

'ST. PHILIP'S PARSONAGE BILL.

TUESDAY, 20 JULY, 1858.

Present:—

MR. JENKINS, | MR. OWEN,
MR. THORNTON.

G. THORNTON, ESQ., IN THE CHAIR.

William Barker, Esq., of the firm of Messrs. Norton, Son, and Barker, examined:—

W. Barker,
Esq.

1. *By the Chairman*: Are you the Solicitor for this Bill? I am.
2. Have you prepared the Bill now before the Committee "to authorise the sale, mortgage, or exchange, of the parsonage in connection with the parish of St. Philip, in Sydney?" 20 June, 1858. I have, or rather, I should say it was drawn by counsel, under my instructions. It was prepared under the authority of the Bishop of Sydney, who is the grantee named in the grant recited in the Preamble, and with the concurrence and consent of the Trustees of St. Philip's Church. I have not seen all the Trustees myself, but I have been in communication with Mr. John Campbell, who has been acting on behalf of the other Trustees. I produce the Deed of Grant mentioned in that preamble (*the witness produced the same*), which shews that the land was granted to the "Bishop of Sydney and his successors, Bishops of Sydney, for ever, upon trust for the appropriation thereof as the site of a dwelling-house, garden and other appurtenances for the clergyman duly appointed to officiate in the Church of the United Church of England and Ireland, erected at Sydney, and known as St. Philip's." The house and buildings at present proposed to be sold are known as St. Philip's Parsonage; but, although so called, and hitherto occupied by the Incumbent of St. Philip's, they are in fact situated in the parish of St. James.
3. Has a new church been recently erected? A new church has been erected within the parish of St. Philip's, and I have been informed, by the Bishop of Sydney and Mr. Campbell, one of the Trustees, that sufficient funds have not been obtained to discharge the entire cost of its erection.
4. *By Mr. Owen*: Do you believe that to be correct? I do not know it myself, but I believe it to be correct. I have been informed, both by one of the Trustees and by the Bishop, that, although the church has been completed, or nearly so, a debt remains upon it.
5. *By the Chairman*: Have John Campbell, George Kilgour Ingelow, and John Alexander Mathews, all of Sydney, been duly nominated and appointed Trustees of the said Church? Yes. I have been informed that they have been appointed Trustees, under the Act of Council.
6. Have you any information with reference to the necessity for the erection of another church in the same parish? I have been informed by the Bishop, from whom I received my original instructions to prepare this Bill, that it was considered necessary for the interest of the parishioners to erect another church within the parish.
7. Is it considered expedient by the Bishop and these Trustees to sell or exchange the said land and hereditaments, or to raise money thereon by mortgage, and out of the proceeds, or by application of the hereditaments taken in exchange, to provide a parsonage within the said parish. The principal object in view was to provide a parsonage within the parish, and for that purpose it was necessary to sell the present parsonage; but as it is supposed a larger sum will be realised than will be necessary for a new parsonage, it is considered that it would be a proper appropriation of the surplus to liquidate the present debt, and complete the church; and to devote the residue to the erection of another church.

W. Barker,
Esq.

20 June, 1858.

8. The Bishop is desirous, by an Act of this nature, to be armed with authority to dispose of this property for these purposes? Yes. The buildings at present used could not be disposed of without the authority of Parliament; and the Bishop and the Trustees have, I believe, agreed that it is expedient that the property should be sold, and the proceeds appropriated in the manner mentioned in this Bill.

9. Is it considered expedient that there should be the same Trustees for the church and parsonage of the said parish? It is considered to be more satisfactory that the whole should be vested in the same Trustees. I believe the parishioners or the present Trustees desire it; and His Lordship has no objection, so long as care is taken that the proceeds shall be appropriated for the objects in view; and he is satisfied with the clause which requires his consent in writing to what is done by the Trustees.

10. *By Mr. Jenkins:* I find by the original Deed that the grant was made for a specific purpose, "as the site of a dwelling house, garden, and other appurtenances for the clergyman;"—may not a question arise as to whether it is in the power of the trustees to apply the proceeds to any other purpose? It is for that reason necessary to come to the Legislature; and the parties ask for power to sell, and to appropriate the proceeds as mentioned in the Bill. It is not at all an unusual thing. For instance, a very few Sessions ago I prepared a Bill on behalf of a Presbyterian congregation in Palmer-street. Land had been granted to them for the erection of a Presbyterian Church; they did not think the situation advantageous, and were desirous to sell the land, in order that they might buy land in a more eligible situation. They expected to sell the land not only for a sufficient sum to purchase other land, but to have some left, available for the erection of a church and school-house. An application was made to the Legislature to enable them to sell the land, and apply the proceeds as they desired.

11. *By the Chairman:* That Bill was carried through the House? That was passed, and acted upon.

12. *By Mr. Owen:* Is the parsonage ground and buildings likely to be of a greatly increased value? I should think it would be, as Pitt-street is carried down now to the Circular Quay.

13. Is it proposed, if the Legislature should assent to this Bill, that it should be carried into effect immediately? No doubt the Trustees would be guided by circumstances. I have no doubt it would be thought desirable to provide a parsonage within the parish with as little delay as possible. I know that when instructions were first given to prepare this Bill, the object really was, and the late Archdeacon desired very much that it should be done, to sell that parsonage, and erect one near the church. I was informed he was of opinion that it was not altogether a fit place for the clergyman to reside in; it is very low, and he thought it not healthy.

14. Do all the parties concerned concur in this Bill? Yes; the only parties are the Bishop and the Trustees of the parish.

REPORT.

THE Select Committee of the Legislative Assembly, for whose consideration and Report was referred, on the 18th May last, the "*Pymont Bridge Company's Bill*;" and to whom were referred, at the same time, the "*Report and Proceedings of, and the Bill as amended and agreed to in, the Select Committee of last Session*;" on the 25th May last "*a Petition from John Harris, of Shone's Park, South Creek, and James Fullerton, of the City of Sydney, Minister of the Established Church of Scotland, in opposition to the Bill*;" on the 8th ultimo, "*Two Petitions, from certain Residents of the Glebe, and Thomas Tipple Smith, respectively, praying that Clauses might be introduced into the Bill for the preservation of the Navigation of Black Wattle Creek* :—beg leave to Report to your Honorable House :—

That they carefully perused the Report and Proceedings of, and the Bill as amended and agreed to in, the Select Committee of last Session, referred for their consideration, and examined the *Secretary to the Company (whose evidence will be found appended * E. T. Smith, Esq. hereto), and that the Preamble having been satisfactorily proved by the evidence of that gentleman, and having been found to be identical with the Preamble of the Bill as amended and agreed to by the Select Committee of last Session, they proceeded with the several Clauses of the Bill, in the consideration of which they found it necessary to introduce a *facto* † *vide* Clause 7. Clause, limiting the time allowed for the completion of the works proposed under the Bill to two years; to strike out the Clause‡ in which it was proposed that the words 'roads, † *vide* Clause 10 of original Bill, ways, and approaches,' wherever used in the Bill, or in the Company's Incorporation Act of 1855, should be held to include and apply to Railways and Tramways; and to make certain other amendments therein.

And your Committee now beg to lay before your Honorable House the Bill as amended by them.

Your Committee desire at the same time to bring under the special notice of your Honorable House a provision, § introduced into Clause 1 of the Bill by the Select Committee of last Session, compelling the erection by the Company of rails on either side of the Bridge, between the outer rail of the Bridge and the roadway, for the protection of foot passengers crossing the same, and would suggest the expediency of requesting the Executive Government to adopt such measures as they may deem requisite to cause the Company to provide a similar protection on the Bridge already erected over Darling Harbour, as they conceive such protection on the said Bridge to be essential for the public safety.

PETITION OF MR. JOHN HARRIS AND DR. FULLERTON.

¶ *I* vide Appendix A.

With reference to such portion of the prayer of this Petition as prays that the Company may be compelled, in the construction of any future works on the Ultimo Estate, to adopt the lines of streets and roads laid out thereon by the Petitioners, your Committee having examined the Engineer to the Company† (whose evidence is also appended hereto) upon this subject, were of opinion that it would be inexpedient to assume to themselves a power hitherto exercised by the Executive Council, which would be the case were they to compel the Company to adopt specific lines of streets and roads in the construction of the works contemplated in the Bill; your Committee were, therefore, unable to entertain favorably the prayer of the Petition in this respect.

With

With reference to the remaining portion of the prayer of the Petition, praying that the compensation to be paid by the Company for land taken might be assessed without regard to any alteration in the value of such land from the works of the Company thereon, your Committee were of opinion that any change in the mode of estimating the compensation for land so taken would necessarily involve a departure from the principle laid down in the *seventeenth section** of the Company's original Act of Incorporation, 19 Vic., which they were unwilling to sanction.

* *Fide* Clause 5 of the Bill, and Section 17 of the "Pyrmont Bridge's Company's Act of 1855."

Your Committee were, consequently, unable to entertain favorably the prayer of the Petition in this respect also.

TWO PETITIONS, FROM CERTAIN RESIDENTS OF THE GLEBE, AND THOMAS TIPPLE SMITH, RESPECTIVELY.†

† *Fide* Appendices B & C.

With regard to these Petitions, your Committee, considering that their allegations were directed solely against certain provisions of the Company's original Act of Incorporation, and that the grievance set forth therein was in no way affected by the enactments of the Bill referred for their consideration, were unable to entertain favorably the prayers thereof.

WILLIAM B. DALLEY,
Chairman.

*Legislative Assembly Chamber,
Sydney, 20 July, 1858.*

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 2 JUNE, 1858.

Members Present:—

Mr. Dalley,		Mr. Scott,
Mr. Cowper,		Mr. Weekes,
	Mr. Williamson.	

Mr. Dalley was called to the Chair.

Solicitor for the Bill—Mr. G. W. Allen, junior.

Solicitor for the Petitioners—Mr. H. B. Bradley.

By direction of the Chairman, Resolution of the House appointing the Committee, and referring thereto the Report and Proceedings of, and the Bill as amended and agreed to in, the Select Committee of last Session, read by the Clerk.

Committee considered the same.

By direction of the Chairman, Resolution of the House referring to the Committee on the 25th ultimo:—

"A Petition from John Harris, Esquire, of Shane's Park, South Creek, and the

"Rev. Dr. Fullerton, of Sydney, praying to be heard by themselves, their

"Counsel, Agents, and Witnesses, against certain Clauses of the Bill,"—

read by the Clerk.

Petition then read.

Ordered to be printed in Appendix. (*Vide Appendix A.*)

Clauses 1, 5, and 10 of the Bill and 12 to 15 inclusive of the "Pyrmont Bridge Company's Incorporation Act," 19 Vict., against which the allegations of the Petition were apparently directed, read by the Chairman.

Prayer of the Petition again read.

Committee deliberated as to whether the Petitioners, by the prayer of their Petition, had established for themselves, or their agents, such *locus standi* before the Committee as to entitle them to be heard against the Preamble of the Bill; and being of opinion that the allegations of the Petition were directed solely against certain clauses, without affecting in any way the Preamble thereof,—

It was *Resolved*:—

"1. That the parties be now called in.

"2. That the Chairman direct the Solicitor for the Bill to produce his evidence "in support of the Preamble.

"3. That in case the Solicitor for the Petitioners should desire to be heard by the "Committee against the Preamble, he be informed by the Chairman that the "Committee determine that the allegations of the Petition do not establish "for the Petitioners such *locus standi* before the Committee as to entitle "them to be heard against the Preamble of the Bill, and that his objections "must therefore be confined to the enacting part thereof."

Parties then called in.

The Chairman informed the Solicitor for the Bill that a Petition had been lodged in the House against certain clauses of the Bill, and referred for the consideration of the Committee; and that Mr. H. B. Bradley appeared before the Committee as Solicitor for the Petitioners.

And Mr. Allen thereupon applying, on the part of the Company, for permission to take a copy of the said Petition;—

Motion made and *Question*,—"That the Solicitor for the Bill be permitted to take a "copy of the Petition"—*agreed to*.

The Chairman then directed Mr. Allen to produce his evidence in support of the Preamble of the Bill.

And Mr. Bradley at this juncture stating his desire to make certain observations relative to the Preamble, was informed by the Chairman, under the terms of the Resolution agreed to by the Committee, that he could not then be heard.

Mr. T. Smith, Secretary to the Company, examined.

Committee then proceeded to consider the Preamble, and having compared and found it to be identical with the Preamble of the Bill as amended and agreed to in the Select Committee of last Session, and being of opinion that the allegations contained therein were proved by the evidence of the Secretary to the Company;—

Motion made (The Chairman) and *Question*—"That the Preamble stand part of "the Bill"—*agreed to*.

Clause 1 read by the Chairman.

The Chairman *here* informed the Solicitor for the Petitioners that the Committee were prepared to hear the objections, if any, he had to urge against this clause.

Mr. Bradley thereupon addressed the Committee against the clause, and in the course of his observations handed in certain plans of the Ultimo Estate, shewing the land already taken by the Company, and having the lines of streets and roads which it was generally supposed that the Company proposed to take in their future works, marked thereon,—and urged upon the Committee the propriety of compelling the Company in the construction of any future roads or works upon the Petitioners' property, to adopt the lines of streets and

roads already laid out by the Petitioners,—and stated further, that he was desirous that the Committee should take the evidence of certain Engineers as to the best lines of streets and roads for the Company to adopt in passing through the estate.

The room was then cleared.

Committee deliberated, and it was *Resolved* :—

- " 1. That it is not in the power of this Committee to interfere with any lines of streets or roads, or with any works already constructed by the Company under the provisions of their Act of Incorporation, 19 Vic.
- " 2. That it would be inexpedient for this Committee to arrogate to themselves a power hitherto exercised by the Governor in Council, which would be the case were they to compel the Company to adopt specific lines of streets and roads in the construction of any future works, more especially as the Petitioners have their remedy in an appeal to the Executive Council with respect to this matter.
- " 3. That it is nevertheless desirable to postpone the further consideration of clause 1, in order to obtain the evidence of the Engineer to the Company as to the lines of streets and roads proposed to be taken under this Bill; and that this Committee do therefore adjourn until Eleven o'clock on Wednesday next, for that purpose.
- " 4. That the parties be now called in, and informed by the Chairman of the terms of the foregoing Resolutions."

Parties thereupon called in, and informed accordingly.

[Adjourned till Wednesday next, at Eleven o'clock]

WEDNESDAY, 9 JUNE, 1858.

Members Present :—

Mr. Cowper,
Mr. Scott,

Mr. Williamson,
Mr. Flood.

Mr. Scott, in the absence of the Chairman, was called to the Chair.

By direction of the Chairman, Resolution of the House, dated 8th instant, referring to the Committee :—

- " (1.) A Petition from certain Residents of the Glebe and its neighbourhood, praying that clauses may be introduced into the Bill for the preservation of the Navigation of Black Wattle Creek.
- " (2.) A Petition from Thomas Tipple Smith, of the Glebe, praying that clauses may be introduced into the Bill for the preservation of the Navigation of Black Wattle Creek,"—

read by the Clerk.

Petitions then read.

Ordered to be printed in Appendix. (*Vide Appendices B and C.*)

Committee deliberated as to whether the interests of the Petitioners, as set forth in the allegations of these Petitions, were in any way affected by the provisions of the Bill under their consideration, and determined to hear the Petitioners themselves, or their Counsel, upon this point.

By direction of the Chairman, certain Resolutions, relative to clause 1 of the Bill, agreed to by the Committee at their last meeting, read by the Clerk.

Parties then called in.

In reply to a question put by the Chairman, Mr. Bradley stated that he appeared as Solicitor for the two Petitions referred *yesterday* for the consideration of the Committee.

The Chairman thereupon informed Mr. Bradley that the Committee would shortly be prepared to hear him with reference to these Petitions.

The Chairman then asked the Solicitor for the Bill if, in accordance with a Resolution agreed to by the Committee at their last meeting, the Engineer to the Company was in attendance for the purpose of indicating to the Committee the lines of streets and roads the Company proposed to adopt between Johnson's Bay, Darling Harbour, and Glebe Island, and—

Mr. Allen stating that Mr. Moriarty was now present for the purpose of giving evidence upon this subject ;—

Motion made and *Question*—"That Mr. Moriarty be forthwith examined"—*agreed to*.

Mr. E. O. Moriarty, C.E., Engineer to the Company, then examined.

At the close of witness' examination the Chairman informed the Solicitor for the Petitioners that the Committee were now prepared to hear him as to the allegations of the two Petitions referred *yesterday* for their consideration.

Mr. Bradley then addressed the Committee in support of the allegations of these Petitions, and as to their applicability to the Bill now under consideration.

Mr. Allen addressed the Committee in reply.

The room was then cleared.

Committee deliberated on the two Petitions, and it was *Resolved* :—

- " 1. That, in the opinion of this Committee, the allegations of these Petitions are directed against certain provisions of the *Pymont Bridge Company's original Act of Incorporation*, 19 Vic., and that the grievance complained of therein is in no way affected by the proposed enactments of the Bill referred for their consideration.

" 2. That

- " 2 That it is not, therefore, in the power of this Committee to entertain favorably
 " the prayer of either of these Petitions, inasmuch as the only remedy for the
 " grievance set forth therein lies in the amendment of certain clauses of the
 " Company's original Act of Incorporation, which the Committee are not
 " empowered to alter.
- " 3. That the parties be now called in, and informed by the Chairman in the terms
 " of the foregoing Resolutions.
- " 4. That, after the parties have been thus informed, this Committee do adjourn
 " till this day week, when they will proceed with the consideration of the
 " Petition of Mr John Harris and Dr. Fullerton."
- Parties thereupon called in, and informed accordingly.
 [Adjourned till Wednesday next, at Eleven o'clock.]

WEDNESDAY, 16 JUNE, 1858.

Members Present:—

Mr. Scott,		Mr. Flood,
Mr. Cowper,		Mr. Williamson,
Mr. Weekes.		

Mr. Scott, in the absence of the Chairman, was called to the Chair.
 Committee deliberated.

Parties called in.

Certain Resolutions agreed to at the last meeting of the Committee, relative to the
 two Petitions referred for their consideration on the 8th instant, read by the Chairman.

Committee then proceeded with the further consideration of clause 1 of the Bill;—

And Mr. Weekes, a member of the Committee, putting a certain Question to the
 Secretary of the Pymont Bridge Company, with a view to elicit from him what action the
 Directors of the Company intended to take for the purpose of carrying into effect the desire
 expressed by the Committee, that the provisions introduced into this clause by the Committee
 of last Session for the proper protection of foot passengers, by the erection of rails on either
 side between the outer rail of the Bridge and the Roadway, should be extended to the Darling
 Harbour Bridge, already erected under the Company's original Act of Incorporation;—upon
 the relevancy of which question a deliberation arose, it being the opinion of certain members
 of the Committee that they were incompetent to entertain this matter, inasmuch as in
 the Bill under their consideration no allusion was made to the enactments of the Company's
 original Act on this particular point.

The room was cleared.

Deliberation continued, and it was Resolved:—

- " 1. That, without in any way interfering with the provisions of the present Bill,
 " this Committee will, in reporting the same to the House, recommend that
 " the Executive be requested to adopt such measures as they may think
 " fit to cause the Company to provide proper protection for foot passengers,
 " by the erection of rails on either side of the Bridge already erected
 " across Darling Harbour, between the outer rail and the roadway thereof,
 " unless the Company cause the same to be done in the meantime, as the
 " Committee conceive such protection to be essential for the public safety.
- " 2. That the parties be now called in, and informed by the Chairman of the
 " terms of the foregoing Resolution."

Parties called in, and informed accordingly.

The Chairman then stated that the Committee were prepared to hear further the
 Solicitor for the Petitioners in support of the allegations of the Petition of Mr. John Harris
 and Dr. Fullerton.

Mr. Bradley requested the postponement of the further consideration of clause 1, in
 consequence of the continued inability of Mr. Surveyor Langley to attend, and give evidence
 as to the allegations of the Petition relating thereto.

Committee decided that it would be inexpedient to further postpone the consideration
 of the said clause.

Mr. Bradley thereupon addressed the Committee, and, in the course of such address,
 was proceeding to make certain observations relative to the two Petitions, whose prayers the
 Committee declined to entertain at their last meeting, with the object of producing certain
 evidence relative to, and of drawing certain deductions from the plans and specifications,
 showing the lines of streets and roads proposed to be adopted by the Company for carrying
 out the works sanctioned under their original Act of Incorporation, which said plans and
 specifications were laid before, and approved of, by the Executive Council, prior to the
 adoption by the Company of such lines of streets and roads, when he was stopped by the
 Chairman, and informed that the Committee had previously decided that they had no power
 to entertain favorably the prayer of either of these Petitions, inasmuch as they were directed
 against certain provisions of the Company's original Act of Incorporation, in no way affected
 by the proposed enactments of the Bill under consideration.

And Mr. Bradley continuing to urge that the Committee possessed such power,
 inasmuch as it was recited in the Preamble of the said Bill that the Company sought " to
 " extend the provisions of " and " to amend their Act of Incorporation in certain respects "
 therein, was again stopped by the Chairman, and further informed that the Committee had
 finally decided that their power to alter and repeal the provisions of the Company's Incorpo-
 ration Act, 19 Viet, extended only to those clauses, the alteration or repeal of which was
 distinctly sought by the Company in the Bill specially referred for their consideration, and
 had

had resolved not to permit the question relative to these Petitions to be re-opened, and directed Mr. Bradley therefore to confine his remarks to the Petition of Mr. John Harris and Dr. Fullerton.

Whereupon Mr. Bradley addressed the Committee in respect to the said Petition, requesting that the Company might be compelled in the construction of any future works to adopt specific lines of streets and roads, and that the extent of deviation permissible therefrom might be limited.

At the close of Mr. Bradley's address, the Chairman read a Resolution agreed to by the Committee on the 2nd instant, in which it was determined by the Committee not to legislate on this particular matter, more especially as the Petitioners had their proper remedy in an appeal to the Executive Council, by whom the actual lines of streets and roads to be adopted by the Company would eventually be decided.

Clause 1 then further considered, amended, and agreed to. (*Vide "Schedule of Amendments" appended hereto*)

Clause 2 read, considered, and agreed to, without amendment.

Clause 3 read.

Upon the reading of this clause the Solicitor for the Petitioners requested that the Committee would cause the Sections in the original Act of Incorporation, recited in this clause of the Bill, to be also read.

Sections VII, VIII, IX, X, XI, XII, and XIII, of the "Pymont Bridge Company's Incorporation Act" read accordingly.

Committee deliberated on the wording of certain of these sections, in which there was apparently some defect,—and were of opinion that, as the said sections were *substantially* correct, it would be inexpedient to insert them at length in an amended form in the Bill.

Clause then further considered, amended, and agreed to. (*Vide "Schedule of Amendments" appended hereto*.)

Clause 4 read, and considered.

The Solicitor for the Petitioners addressed the Committee with respect to this clause, urging that its consideration by the Committee would effectually open up the general question of their power to alter and amend the original Act of Incorporation in any way they might think fit, and by so doing would permit the introduction of the particular amendments which the Petitioners sought to have introduced thereinto.

The Solicitor for the Bill heard in reply.

The room was cleared.

Committee deliberated, and it was *Resolved* :—

" 1. That as none of the allegations of the Petitions referred to them in any way touch upon the proposed enactments of this clause, the Committee must decline to consider them in relation thereto.

" 2. That the parties be called in, and informed by the Chairman of the terms of the foregoing Resolution."

Parties called in, and informed accordingly.

Clause then further considered, and agreed to without amendment.

[Adjourned till Wednesday next, at Eleven o'clock.]

WEDNESDAY, 23 JUNE, 1858.

Members Present:—

W. B. Dalley, Esq., in the Chair.

Mr. Flood,

Mr. Scott,

Mr. Cowper,

Mr. Williamson,

Mr. Weekes.

By direction of the Chairman, Resolutions agreed to by the Committee at their last meeting relative to clause 4 of the Bill, read by the Clerk.

Clause 5 read and considered.

Prayer of the Petition from Mr. John Harris and Dr. Fullerton read by the Chairman.

Committee deliberated.

Parties then called in.

The Chairman informed Mr. Bradley that the Committee were prepared to hear any further observations from him relative to clause 5.

Whereupon Mr. Bradley addressed the Committee, and commencing his address by stating that he proposed to confine his objections to the proposal made in this clause to perpetuate the *seventeenth* section of the Company's original Act of Incorporation, 19 Viet., relating to the mode of estimating purchase money and compensation for land taken under its provisions, and requesting the permission of the Committee to call evidence in relation thereto.

Committee desired to deliberate.

The room was therefore cleared.

Committee deliberated.

Section 17 of the Pymont Bridge Company's Incorporation Act of 1855 read by the Chairman, viz. :—

" XVII. In estimating the purchase money or compensation to be paid by the Corporation in any of the cases aforesaid, regard shall be had by the jury, not only to the value of the land to be purchased or taken by the Corporation, but also to the damage (if any) to be sustained by the owner of the lands, by reason
" of

" of the severing of the lands taken from the other lands of such owner, or
 " otherwise injuriously affecting such other lands by the exercise of the powers
 " of this Act, and they shall assess the same according to what they shall find
 " to have been the value of such lands, estate, or interest at the time notice
 " was given of such lands being required for the bridges, roads, and other
 " works, and the said jury in assessing such compensation are authorized and
 " empowered, and shall take into consideration the enhancement in value of
 " the adjoining land belonging to the party to whom compensation is to be
 " made, by the increased facilities of access, or otherwise, by reason of the
 " making of such bridges, roads, and other works, in reduction of such com-
 " pensation."

Deliberation continued; and it was *Resolved* :—

- " 1. That as the question involved in the proposed introduction of the provisions
 " of this clause into the present Bill is one of principle, in the determination
 " of which no evidence as adduced by the Petitioners can in any way affect
 " the ultimate decision of the Committee, they are of opinion that it is
 " unnecessary to take evidence thereupon.
- " 2. That this Committee is nevertheless willing to hear the Solicitor for the
 " Petitioners with respect to the principle enunciated in the provisions of
 " the said section.
- " 3. That the parties be called in, and informed by the Chairman in the terms of
 " the foregoing Resolutions."

Parties called in, and informed accordingly.

Mr. Bradley thereupon stated, that after the first Resolution just agreed to, he was not desirous of troubling the Committee with any further observations in relation to the Bill, and begged therefore, on the part of the Petitioners, to be permitted to withdraw from further opposition thereto, whilst before the Committee.

Whereupon Motion made, and *Question*,—" That leave be given to the Petitioners to
 " withdraw from further opposition to the Bill"—*agreed to*.

Mr. Bradley and Petitioners then withdrew.

Committee permitted Mr. Allen to be present in the room.

Motion then made, and *Question proposed*,—" That this clause (5) stand part of the
 " Bill."

Amendment proposed (Mr. Flood),—" That the clause be amended in the first line,
 " by the omission of the word 'seventeenth,' with a view to insert the words,—'a portion
 " of the seventeenth, viz., from the commencement of the said section to the word 'works' in
 " the tenth line thereof."

Committee deliberated.

Question put,—" That the word proposed to be omitted stand part of the clause."

Committee divided.

Ayes, 4.

No, 1.

Mr. Dalley,
 Mr. Cowper,
 Mr. Williamson,
 Mr. Weekes.

Mr. Flood.

Clause then agreed to without amendment.

Clause 6 read, considered, and agreed to without amendment.

Motion made (Mr. Williamson) and *Question proposed*,—" That after clause 6 there
 " be inserted the following words, to stand clause 7 of the Bill, viz.—'If the said bridge
 " over Johnson's Bay, with the approaches thereto, be not fully and properly completed
 " within two years next after the passing of this Act, the powers given in and by the
 " same shall cease and determine."

Committee deliberated as to whether the limitation of time for the completion of the works was not implied in the terms of clause 11; and being of opinion that it would be the more desirable course to specially define such limitation in the Bill,—

Question put, and agreed to.

Clause inserted. (*Vide "Schedule of Amendments" appended hereto.*)

The Chairman then read to the Committee the following words, handed in by Mr. Allen, and proposed by the Company to be here inserted in the Bill, viz.:—

" So much of the Schedule to the said recited Act as allows children under ten
 " years of age to pass over the Darling Harbour Bridge free, is hereby
 " repealed."

Committee deliberated thereupon, and it was *Resolved* :—

" That in the opinion of this Committee it is inexpedient to legislate with respect
 " to this particular point, as the alteration thus sought by the Company
 " forms a matter more properly for the consideration of the Executive
 " Council."

Clauses 7 (*now* 8), 8 (*now* 9), 9 (*now* 10), read, considered, and agreed to without amendment.

Clause 10 (*now* 11), read.

Mr. Allen here submitted a new clause in substitution for this clause.

Mr. Cowper, a Member of the Committee, and Principal Secretary, read a letter to the Committee, received by him from Captain Martindale, R.E., Chief Commissioner for Railways, relative to the power sought by the Company under this clause.

Paragraph from Captain Martindale's "Second Report on the Internal Communications of New South Wales" relating to the proposed extension of the Darling Harbour Branch of the Railway to the Pyrmont Bridge, read by the Chairman. (*Vide page 3, paragraph*
 259—C

paragraph 6, "Captain Martindale's Second Report on the Internal Communications of New South Wales, dated 29th April, 1858.")

Committee deliberated, and it was *Resolved* :—

"That the consideration of this clause be now postponed till the next meeting of the Committee."

Clauses 11 and 12, and the Schedule, fixing "Scale of Tolls," then read, considered, and agreed to without amendment.

[Adjourned till Wednesday next, at Eleven o'clock.]

WEDNESDAY, 30 JUNE, 1858.

Members Present :—

Mr. Weekes, | Mr. Scott.

The parties were in attendance, but a quorum of the Committee not being present,—

[Adjourned till Wednesday next, at Eleven o'clock.]

WEDNESDAY, 7 JULY, 1858.

The Meeting of the Committee convened for this day lapsed, in consequence of the adjournment of the House from Tuesday, 6th instant, till Tuesday, 13th instant, owing to the demise of the Venerable Archdeacon Cowper, father of the Principal Secretary.

WEDNESDAY, 14 JULY, 1858

Members Present :—

W. B. Dalley, Esq., in the Chair.

Mr. Weekes, | Mr. Hay,
Mr. Scott, | Mr. Williamson.

The Chairman having informed the Committee that the Company, through their Solicitor, were now desirous of withdrawing clause 10, the consideration of which was postponed at their last meeting, from the Bill ;—

Motion made and *Question*,—"That clause 10 be struck out of the Bill"—*agreed to*.

Clause struck out accordingly. (*Vide "Schedule of Amendments" appended hereto.*)

Parties withdrew.

The Chairman then brought up and laid before the Committee a Draft Report.

Motion made and *Question*,—"That the Draft Report proposed by the Chairman "be now read"—*agreed to*.

Draft Report read accordingly.

Committee deliberated thereupon.

Motion made and *Question*,—"That this be the Report of the Committee"—*agreed to*.

Chairman requested to Report the Bill, as amended, to the House.

SCHEDULE OF AMENDMENTS.

Clause 1, page 2, line 18—*after thirty insert five.*

" 3, " 3, " 18—*after other insert roads or.*

" 3, " 3, " 19—*after being done insert or any deviations therefrom.*

New Clause 7 inserted—If the said bridge over Johnson's Bay with the approaches thereto be not fully and properly completed within two years next after the passing of this Act the powers given in and by the same shall cease and determine.

Clause 10, page 5, line 18—*omit this Clause.*

Legislative Assembly.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PYRMONT BRIDGE COMPANY'S AMENDMENT BILL.

WEDNESDAY, 2 JUNE, 1858.

Present :—

Mr. COWPER,
Mr. DALLEY,Mr. SCOTT,
Mr. WEEKES,

Mr. WILLIAMSON.

W. B. DALLEY, Esq., IN THE CHAIR.

G. W. Allen, Esq., appeared as Solicitor on behalf of the promoters of the Bill.

W. B. Bradley, Esq., appeared as Solicitor on behalf of the Petitioners against the Bill.

Thomas Smith, Esq., examined as follows :—

1. *By Mr. Allen :* You are the Secretary to the Pyrmont Bridge Company? I am.
2. Have the Pyrmont Bridge Company nearly completed a bridge across Darling Harbour, from the Market Wharf, Sydney, to or near to Union-street, Pyrmont? They have.
3. Have they entered into a contract for the construction of a road from such bridge, through Pyrmont and the Ultimo Estate, to a point in Blackwattle Bay, opposite the Lyndhurst Estate, at the Glebe? They have.
4. And also to make a good and substantial viaduct, with a bridge in the centre, across such bay to the Lyndhurst Estate, and thence a road through the said estate, crossing the Glebe Road, along the Hereford Road towards the Parramatta Road, at or near Camperdown? They have.
5. Are these works in progress? They are.
6. Do you produce an indenture, bearing date the 22nd April, 1857? I do. (*The witness produced the same.*)
7. By whom is that signed? By all the shareholders.
8. By that deed have the shareholders covenanted and agreed among themselves that the making, constructing, and maintaining a bridge across Johnson's Bay, in Darling Harbour, to Glebe Island, with such roads, ways, and approaches to such bridge, for the connection thereof with the bridges, or bridge and viaduct, authorised by the said recited Act, and with the Parramatta and Balmain Roads, and such other public roads and ways as shall at any time hereafter be deemed desirable, shall form part of the objects of the Company? They have.
9. Is it expedient to authorise these additional works, and to enlarge the powers and authorities of the corporation, for the purposes of these additional works, and to extend the provisions of the original Act for the same purpose? It is.
10. *By Mr. Cowper :* Why is it expedient? For the convenience of the public.
11. "To enlarge the powers and authorities of the said corporation for the purposes of the "additional works,"—that cannot affect the public so much as the Company themselves? I think

T. Smith,
Esq.

2 June, 1858.

T. Smith,
Esq.

2 June, 1858.

think it will be for the benefit of the public as well as for our own benefit, because, if the people are not benefited by our undertakings they will not patronise them, and then we should not obtain a profitable return for our outlay of money.

12. Have the powers already obtained not been sufficient? No, they have not. It is very much desired to obtain an easy access to Glebe Island by means of a bridge, which the Company have no authority to erect without further powers. Several Petitions have been presented to the Legislature from the citizens in general, and the butchers also, in favor of the completion and opening of the Abattoirs already built on that island; these Petitions have been very numerous signed by the most respectable persons, in order that the grievous nuisances arising from the present slaughter-houses within the City may be abated.

13. What difficulty have you experienced in working the Act? The powers already obtained have no reference to the works now intended to be undertaken, and consequently additional powers are required.

14. What is the nature of the contract made for the construction of the road? It is stated that it shall be finished within a certain time.

15. Is there any one particular contractor? Yes—William Randle.

16. You say—"with such roads, ways, and approaches to such bridge, for the connection thereof with the bridges, or bridge and viaduct, authorised by the said recited Act"; to what does that allude—what are those roads—where do they extend to—from what place—to what place? From Pymont Bridge to Camperdown one road, and from Pymont Bridge to Glebe Island the one to the northward; also one to Leichhardt, in connection with the Balmain Road.

17. Do you contemplate to obtain power by this Bill to make tramways from Pymont Bridge to Camperdown? No. The power to make roads, ways, and approaches, is intended to give authority to make a road from Pymont Bridge to Glebe Island.

[Question put—That this Preamble do stand part of the Bill—*Carried.*]

WEDNESDAY, 9 JUNE, 1858.

Present:—

MR. COWPER,
MR. FLOOD,

MR. SCOTT,
MR. WILLIAMSON.

A. W. SCOTT, Esq., IN THE CHAIR.

G. W. Allen, Esq., appeared as Solicitor on behalf of the promoters of the Bill.

W. B. Bradley, Esq., appeared as Solicitor on behalf of all the Petitioners against the Bill.

E. O. Moriarty, Esq., examined:—

- E.O.Moriarty, Esq.
9 June, 1858.
1. *By Mr. Cowper:* Did the original Act give you power to extend your line of road to the Parramatta Road? Yes.
 2. Why did you not get power by the original Act to construct this bridge over Johnson's Bay? Because it was not then in contemplation to go on to Glebe Island.
 3. In the first clause of this Bill you propose to erect a bridge over Johnson's Bay, Darling Harbour, to Glebe Island—is this an extension to the Abattoir of the original line? This is a branch line. (*The witness produced a plan*)
 4. *By the Chairman:* In England it is usual in all such Bills as these to define the exact direction of a road? Within certain limits, that is to say, 600 feet of the line marked on the plan; that we have done.
 5. Is that the plan you are going to abide by? (*Referring to the plan produced*) Yes.
 6. Will you describe the line you propose to adopt? We propose to branch off from the Company's line at a point marked on the plan produced by Mr. Bradley, as the junction of Gipps' Crescent, and then to follow that crescent and Bank-street as far as Ballast Point, better known as Yellow-tail Point—the point immediately opposite Glebe Island—thence to cross Johnson's Bay to Glebe Island by a bridge. We take the usual right which is taken in all English Acts—Railway Acts and others—of carrying the line within certain limits, the limits of deviation, which are 300 feet on either side from the centre of the road; the limits of deviation are marked on this plan.
 7. *By Mr. Cowper:* You propose, in carrying out the Act, that your limits shall not exceed the limits usually given? Yes.
 8. Subject to the confirmation of the Governor and Executive Council? Yes.
 9. Is the width named here, thirty-feet, as the width of the bridge, considered sufficient? I believe so.
 10. It has not been objected to? No; we originally proposed that the width of the bridge should be twenty-one feet; but the Committee who sat on this same Bill when it was introduced last Session required that we should increase it to thirty feet, and we did so.
 11. With regard to the openings being thirty feet wide, is there not an objection to that? I have not heard it.
 12. Have you not heard that the width is not sufficient to allow vessels to pass? Not this bridge.
 13. Would not the same objection apply to this as to the other bridge? The openings in the bridge across Darling Harbour are forty feet wide, but in this bridge they are thirty feet.

14.

14. Have not complaints been made that the openings were not sufficiently wide to allow vessels to pass? Yes; a complaint was made by the captain of the "Bella Vista." I measured the vessel, and found there was twenty feet to spare. E.O. Moriarty,
Esq.
15. Has not damage been done to vessels by the bridge? Yes; one vessel coming down the harbour full sail ran against the bridge, and was cut down to the water's edge. 9 June, 1868.
16. *By Mr. Allen:* Had not the captain previously threatened to do so? Yes. I have heard he said he would see which was the hardest. I did not hear him say so myself.
17. *By the Chairman:* Does the proposed road take up any, and if any, what portion of water frontage? It will take up none of the water frontage, with the exception of the part where it comes down to the water.
18. It does not interfere with the water frontage lying to the north-east of Blackwattle Bay? No; but it gives an admirable road to the wharves which may be constructed there.
19. *By Mr. Cooper:* Were the plans for these bridges and viaducts laid before the Governor and Executive Council? Yes, and they were approved of. With reference to that I may state, that it was proposed by the Company to run a sort of viaduct with the view of reclaiming some land there (*referring to the plan*) which is almost valueless; but the Executive Council proposed that a bridge—the plan of which was approved—of three bays should be substituted, which was done.
20. *By the Chairman:* Is there a bridge across Blackwattle Bay? Yes; there is an embankment on each side, connected by a bridge, and we have given the headway under the height required by the Executive Council, namely, four clear feet above high water spring tides.
21. When was this bridge finished? It is now nearly finished; it is just being finished.
22. What is the width of the road? We propose to make the road thirty feet wide.
23. *By Mr. Cooper:* That is really the amount of land you require, although you desire to have some latitude in order to decide upon the course of your road? Yes; because the lines of streets marked on the plan produced by Mr. Bradley are mere paper roads, imaginary subdivisions, and I think it would be a pity to put a public company to an expense of some thousands simply to prevent their cutting through imaginary roads, which really have no existence.
24. Ought you not to have made a more complete survey before coming to the House for a private Bill? The roads marked on the plan submitted by the petitioners really do not exist.
25. You have made up your minds as to the course your road shall take? Yes, as nearly as we could arrive at the streets marked out on the plan.
26. Your intention is, as far as you can, to avoid interference with the survey of the estate? Yes, as far as it is possible; but we shall really improve the estate, by giving it a good road to the water frontage, which it has not now. I cannot, however, undertake to follow that line entirely; I could not do it, nor could any man in the world.
27. *By Mr. Williamson:* Is there any natural obstruction in the line of the proposed road, in the way of steep cliffs, or anything of that kind? They are a little to the back of it.
28. Are there any such natural obstructions as will require you to deviate to the right or to the left? No; but I think it as well not to pin ourselves down to an inch; it is never done in these matters.
29. Then, as far as you believe, you will deviate very little? Very little, or none at all.
30. *By the Chairman:* With respect to the bridge across Johnson's Bay, you propose that it shall be thirty feet wide? Yes.
31. To be railed on the outer side with an iron railing, and also to have a railing between the footpath and the carriage road? Yes; it was agreed at the last meeting that the Company should do that.
32. What width do you allow for boats and vessels? Thirty feet.
33. Would you object to the opening being extended to thirty-five feet? No.

APPENDIX.

A.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of John Harris, of Shane's Park, South Creek, in the County of Cumberland, in the Colony of New South Wales, Esquire; and James Fullerton, of the City of Sydney, in the said Colony, Minister of the established Church of Scotland,—

RESPECTFULLY SHEWETH:—

That your Petitioner, John Harris, in his own right, and your Petitioner James Fullerton, as trustee of the last will and testament of John Harris, the elder, late of Ultimo, in the said City of Sydney, Esquire, deceased, are seized of, or otherwise well entitled to, a certain real estate within the said City of Sydney, commonly known by the name of the "Ultimo Estate," comprising by estimation two hundred and seventy acres.

That, with the view of dividing the said estate between the persons beneficially entitled to the same (some of whom are infant children of the said John Harris, deceased,) the said estate was, in or about the year one thousand eight hundred and forty-six, surveyed and divided into separate blocks, or portions, and lines of streets to be laid out in and over the same for the more convenient access to the different blocks or portions thereof.

259—D

That,

That, by an Act of Council, passed in the nineteenth year of the reign of Her present Majesty, intituled "*An Act to incorporate the Pyrmont Bridge Company, and for other purposes therein mentioned*," it was amongst other things provided, that it should be lawful for the said Company to take such of the lands therein mentioned as they should think necessary for the purposes therein also mentioned, without any previous agreement with the owner thereof. And it was by the said Act further provided that the owners and all persons interested in the lands used or prejudiced by the said Company under the provisions of the said Act should be entitled to reasonable compensation for the loss or injury sustained by them, such compensation to be ascertained in manner therein mentioned. And it was also provided, that in the assessment of such compensation as therein mentioned, the enhancement in value of the adjoining land belonging to the party to whom compensation was to be made, by reason of the works of the said Company, should be taken into consideration in reduction of such compensation.

That, in pursuance of the powers of the said Act, the said Company have lately entered upon the said estate of your Petitioners, and have taken three acres, three roads, and sixteen perches thereof, and have laid out the land so taken in such a manner as to cut diagonally across certain of the blocks of land into which the said estate has been so divided by your Petitioners, as hereinbefore mentioned, to the great inconvenience and injury of your Petitioners, inasmuch as the said Company have in some places excavated through portions of the said estate to a depth varying from eight feet to eighteen feet, and have thereby cut off in many parts the communication between one portion of the estate and the other, and left several blocks of land at an elevation wholly inconvenient and useless for the purposes of building.

That a Bill is at present depending in your Honorable House, intituled "*A Bill to authorize additional works by the Pyrmont Bridge Company, and to amend their Act of Incorporation*."

That by certain clauses of the said Bill the like powers and authorities for taking land as are vested in the said Company by their said Act of Incorporation are vested in the said Company for the purpose of the additional works authorized by the said Bill, and it is provided that the provisions of the said Act of Incorporation as to compensation shall apply to all lands referred to in the said Bill.

That the said provisions as to compensation are highly injurious to your Petitioners, inasmuch as while the owners of land adjoining, or near to a line of road, or other work made by the said Company, are equally benefited by the enhancement in value of their land by such road, or work, with the owners of the land taken by the said Company, the latter only are made to pay for the benefit in the shape of a reduction from the sum to be allowed to them for compensation under the provisions of the said Act of Incorporation of the said Company.

That your Petitioners are desirous that the compensation to be allowed for any lands taken by the said Company, under the said Bill now depending in your Honorable House, shall be according to what shall be the value of such lands at the time when the said Company shall take the same, without reference to any alteration in such value from the works of the said Company.

That your Petitioners are desirous that the said Company shall, as to any land to be taken under the said Bill, be compelled to adopt the lines of streets and roads laid out by your Petitioners, as hereinbefore mentioned, instead of cutting across the said blocks of land, in manner hereinbefore mentioned.

Your Petitioners, therefore, humbly pray your Honorable House that the said Bill may not pass as it now stands, but that its provisions may be so modified as to compel the said Company, in the construction of any future roads, or works, upon your petitioners said estate, to adopt the lines of streets and roads laid out by your Petitioners, as hereinbefore mentioned. And, further, with regard to the compensation to be paid by the said Company for any land to be taken by them, to provide that such compensation shall be assessed without reference to any alteration in the value of the said land from the works of the said Company. And that your Petitioners may be heard by themselves, their counsel, agents, and witnesses, against the clauses of the said Bill affecting their interests as hereinbefore mentioned. And that your Petitioners may have such further or other relief in the premises as to your Honorable House shall seem meet.

And your Petitioners will ever pray, &c.

J. HARRIS.
JAMES FULLERTON, L.L.D.

B.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents of the Glebe and its neighbourhood, near the City of Sydney, in the Colony of New South Wales,—

RESPECTFULLY SHEWETH:—

That your Petitioners' residences are adjacent to the waters of Blackwattle Bay, which is navigable in great part of its extent for coasting vessels.

That your Petitioners have enjoyed for divers long spaces of time past the facility of receiving timber, lime, and other materials, and things for their necessary use, by means of such navigation.

That,

That, in pursuance of the provisions of an Act of Council passed in the nineteenth year of the reign of Her present Majesty, the "Pymont Bridge Company" have commenced the construction of a viaduct across the said bay, in such a manner as will altogether obstruct the navigation thereof above the said viaduct, in the direction of the premises of your Petitioners.

That your Petitioners have been wholly misled by the language of the sixth section of the said Act with reference to the construction of a bridge across the said bay, which bridge your Petitioners believed was to be passable by small vessels, and your Petitioners were not aware until within the present week, that the navigation of the said bay would be cut off by the operations of the said Company.

That the completion of the said viaduct in the manner proposed by the said Company will be very injurious to your Petitioners, and will enhance the cost of various articles of consumption.

That a Bill is at present depending in your Honorable House, intituled, "*A Bill to authorize additional works of the Pymont Bridge Company, and to amend their Act of Incorporation.*"

That, inasmuch as the said Company are now seeking additional powers from the Legislature, the present is a convenient time to impose such conditions upon them as may be requisite in order to maintain the navigation of the said bay, according to that which your Petitioners submit was the true intention of the Legislature in that behalf in the said Act.

Your Petitioners, therefore, humbly pray your Honorable House that the said Company may obtain further Legislative aid only upon condition of the introduction of such clauses into their Bill as shall preserve the navigation of Blackwattle Bay; and that your Petitioners may be heard by themselves, their counsel, agents, and witnesses, in support of the introduction of such provisions; and that your Petitioners may have such further and other relief in the premises as to your Honorable House shall seem meet.

And your Petitioners will ever pray, &c.,

[Here follow 30 Signatures.]

C.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Thomas Tipple Smith, of the Glebe, near the City of Sydney, in the Colony of New South Wales, builder,—

RESPECTFULLY SHEWETH:—

That your Petitioner has during the last fifteen years been in the occupation of lands at St. Philip's Glebe, Sydney, by virtue of a lease for twenty-eight years, from the trustees of that Glebe, which term is unexpired.

That your Petitioner has been during that period, and prior thereto, extensively engaged in building in and near the City of Sydney.

That your Petitioner, for the purposes and in the course of his trade as a builder, has constructed a wharf from the said land into the waters of Blackwattle Bay, by means whereof he has been in the habit of receiving timber and shells for lime from coasting vessels of from thirty to forty tons burthen, and of shipping therefrom bricks manufactured by him at his yard at the said Glebe, and stones quarried from his premises there, for the purposes of sale and of consumption by him in the course of his business.

That by an Act of Council, passed in the nineteenth year of the reign of Her present Majesty, intituled, "*An Act to incorporate the Pymont Bridge Company, and for other purposes therein mentioned,*" it was amongst other things provided that it should be lawful for the said Corporation to make and construct a good and substantial bridge across Darling Harbour, from the Market Wharf to Union-street, Pymont; and to make and continue a road from such bridge through the Ultimo Estate to Blackwattle Bay aforesaid; and to erect a good and substantial bridge or viaduct across the said Blackwattle Bay to the Glebe; and to make and conduct a road from the said bridge or viaduct to the Glebe Road. Provided that no bridge or viaduct erected by the said Corporation shall be so constructed as to obstruct the navigation of Darling Harbour aforesaid.

That, in pursuance of the provisions of the said Act, the said Corporation have lately made a bridge across Darling Harbour, and a road through the Ultimo Estate to the said Blackwattle Bay, and in reliance upon the said Act, have also commenced a viaduct across the said Bay, with a piled space for the passage of the waters thereof below the land of your Petitioner, and are proceeding to complete the same in such manner as will obstruct all navigation of the said bay above the said viaduct.

That Blackwattle Bay is navigable even at low water for vessels of forty tons burthen, and upwards, for a considerable distance above the works of the said Corporation.

That your Petitioner has been wholly misled by the language of the said Act with reference to the construction of a bridge across the said Blackwattle Bay, which bridge your Petitioner believed was to be passable by small vessels, and was not aware until the second day of June instant that the navigation of the said bay would be cut off by the operations of the said Corporation.

That

That upon the second day of June your Petitioner learned by inquiry of the Secretary of the said Corporation, that it was their intention to leave neither an opening through, nor a space under, their work sufficient to allow the passage of small vessels.

That the language of the sixth section of the Act above mentioned is vague and indistinct, but leads to a general conclusion that the works of the said Company are not to be obstructions to navigation; and your Petitioner has always supposed such to have been the intention of the Legislature in the passing of the said Act.

That the completion of the said viaduct, in the manner proposed by the said Corporation, will be very injurious to your Petitioner in his business.

That a Bill is at present depending in your Honorable House, intituled, "*A Bill to authorize additional works of the Pyrmont Bridge Company, and to amend their Act of Incorporation.*"

That, inasmuch as the said Corporation are now seeking additional powers from the Legislature, the present is a convenient time to impose such conditions upon them as may be requisite, in order to maintain the navigation of the said bay, according to that which your Petitioner submits was the true intention of the Legislature in that behalf in the said Act.

Your Petitioner, therefore, humbly prays your Honorable House that the said Corporation may obtain further Legislative aid only upon condition of the introduction of such clauses into their Bill as shall preserve the navigation of Blackwattle Bay; and that your Petitioner may be heard by himself, his counsel, agents, and witnesses, in support of the introduction of such provisions; and that your Petitioner may have such further and other relief in the premises as to your Honorable House shall seem meet.

And your Petitioner will ever pray, &c.

THOMAS SMITH,
Builder.

KIAMA STEAM NAVIGATION COMPANY'S BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred on the 13th instant, the "*Kiama Steam Navigation Company's Bill*," beg leave to report to your Honorable House :—

That they examined the Manager to the Company* (whose evidence will be * Mr. Edye Manning. found appended hereto), and that the Preamble having been satisfactorily proved by the evidence of that gentleman, they proceeded with the several clauses of the Bill, in the consideration of which they found it necessary to amend the *Third Clause*† by striking out a portion thereof. † *Vide* "Schedule of Amendments" appended hereto.

And your Committee now beg to lay before your Honorable House the Bill, as amended by them.

R. JONES,
Chairman.

*Legislative Assembly Chamber,
Sydney, 23 July, 1858.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 22 JULY, 1858.

Members Present:—

Mr. Jones,

|
Mr. Taylor.

Mr. Suttor,

Mr. Jones was called to the Chair.

Agent to the Solicitor for the Bill—Mr. John Dunsmure.Mr. *Edye Manning*, Manager to the Company, examined.

Committee then considered the Preamble of the Bill, and being of opinion that the allegations contained therein were satisfactorily proved by the evidence of Mr. Manning;—

Motion made (*The Chairman*) and *Question*—"That the Preamble stand part of the Bill"—*agreed to*.

Committee then proceeded to consider the several clauses.

Clauses 1 and 2 read, considered, and agreed to without amendment.

Clause 3 read, considered, amended and agreed to. (*Vide "Schedule of Amendments" appended hereto.*)

Clauses 4, 5, 6, and 7 read, considered, and agreed to without amendment.

The Chairman requested to report the Bill, as amended, to the House.

SCHEDULE OF AMENDMENTS.

Clause 3, Page 2, line 11 to line 13.	{	<i>Omit</i> —And every mortgagee shall be entitled equally to his proportion of such mortgaged premises, according to the sum advanced by him, without any preference by reason of priority of date.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

KIAMA STEAM NAVIGATION COMPANY'S BILL.

THURSDAY, 22 JULY, 1858.

Present:—

MR. JONES, | MR. SUTTOR,
MR. TAYLOR.

RICHARD JONES, Esq., IN THE CHAIR.

John Dunsmure, Esq., Solicitor, appeared as Agent for the Solicitor for the Bill.

Edye Manning, Esq., called in and examined:—

1. *By the Chairman*: Is there a Steam Navigation Company known as the Kiama Steam Navigation Company? There is.
2. Has the business of that Company recently increased to any great extent? It has been gradually increasing for the last two years, very considerably—something like twelve hundred per cent. on what it was when it was first established.
3. Has the Company extended the sphere of its operations? Yes; very much so.
4. Where did it trade to originally? When the original Act was granted it had reference only to the single operation between Kiama and Sydney, which was necessarily a small trade, employing only one boat; but now the operations of the Company are extended from Port Macquarie to Twofold Bay—embracing some ten or a dozen places.
5. You believe, therefore, that it would promote the interests of the Company and extend its utility if the powers of the Corporation were extended in certain respects? Unquestionably.
6. You consider that, owing to the extended operations of the Company, the title of "The Kiama Steam Navigation Company" does not now express its objects? No; it is not sufficiently general.
7. You think it would more clearly indicate the real character of the Company, as it now exists and is carried on, to call it the "Illawarra Steam Navigation Company"? Yes; that has been generally thought by the proprietors as being a more general name to be given to a Company having its main operations in the Illawarra District.
8. The term Illawarra includes Kiama, Wollongong, and Shoalhaven? Yes.
9. Do you think it desirable that the Company should have power to sell any surplus coal it may have on hand? It is quite necessary.
10. In order to enable it to carry out its operations advantageously? In order to enable it to carry out its operations advantageously, and to have some control of those operations.
11. Do you think it a safe provision to insert in this Bill for the incorporation of a new Company, to empower it to borrow money to the extent of £10,000, or to the extent of one-third of the paid up capital? It is only following the plan of similar companies at home, and is intended to enable the Directors to borrow money for temporary purposes, instead of withholding dividends, or compelling the proprietors, at inconvenience or otherwise, to pay up calls, or to increase the capital. It is thought that it will answer the purpose of the Company very much better.

Edye
Manning,
Esq.

22 July, 1858.

Edye
Manning,
Esq.

22 July, 1858.

12. Has any inconvenience been experienced by the present Company from the want of power to borrow money? No. It has been done on one or two occasions entirely on the responsibility of three or four of the proprietors; and there is no reason why, when doing it for an Incorporated Company, three or four of us should be the responsible parties.

13. Do you not think that without a power of this kind in the Act of Incorporation the Board of Directors could borrow money on behalf of the Company, and bind the Company by the transaction? It would be much more certain if they could do so under an Act of Parliament. I think such a provision is generally introduced in Bills of this kind in England.

14. It is with the view of making the Directors safe in operations of this sort that this provision is introduced? Yes. As it stands at present any dissentient shareholder might raise some quibble as to any operation the Directors might enter on with borrowed capital.

15. Do you think it safe to give the Directors power to borrow money to the extent proposed, without compelling them, before borrowing, to appeal to a meeting of the shareholders? Yes. The matter has been before the shareholders at a general meeting, and they are not only willing, but desirous that this Bill should pass as it has been prepared.

16. You mean that this Bill, as now drawn, has been before the body of the shareholders, and that they have assented to it? Yes.

17. With their concurrence, it is now sought to obtain powers to borrow money, without first consulting the general body of shareholders? Yes; it has been before them.

18. I believe you represent a large proportion of the capital yourself? Yes, very nearly two-thirds, with that which I have and have under control. The clause as to the sale of surplus coal has reference also very much to the good of the district and of the Colony, as well as to the advantage of the Company; for it will enable us to employ vessels of a certain class and light draught of water, such as are necessary to carry away the coals obtained in Illawarra. These coals have been found to be very superior in their heating properties to any other coals in the Colony, for steam purposes especially, and the great consumption is for that purpose; but there are no means at present, owing to the nature of the harbour of getting them away.

AUSTRALIAN GAS LIGHT COMPANY'S BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and Report was referred, on the 18th May last, the "*Australian Gas Light Company's Bill*," and to whom was referred, at the same time, the "*Report and Proceedings of, and the Bill as amended and agreed to in, the Select Committee of last Session*,"—beg leave to Report to your Honorable House:—

That they carefully perused the Report and proceedings of, and the Bill as amended and agreed to in, the Select Committee of last Session, referred for their consideration, and examined the Engineer to the Company,* and the Solicitor for the Bill,† (whose Evidence will be found appended hereto), and that the Preamble of the Bill having been satisfactorily proved by the Evidence of those gentlemen, they proceeded with the several Clauses of the Bill, in the consideration of which they found it necessary to make certain Amendments.

* James Barlow,
Esq.
† G. W. Allen,
Jurat, Esq.

Vide Schedule of
Amendments ap-
pended hereto.

And your Committee now beg to lay before your Honorable House the Bill as amended by them.

WILLIAM B. DALLEY,
Chairman.

Legislative Assembly Chamber,
Sydney, 20 July, 1853.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 22 JUNE, 1858

Member Present:—

Mr. Dalley.

A Quorum of the Committee not being present, adjourned till Wednesday, 30th instant, at Twelve o'clock.

WEDNESDAY, 30 JUNE, 1858.

Members Present:—

Mr. Jones,

Mr. Forster,

Mr. Gordon.

Committee appointed Mr. Dalley to be their Chairman.

Mr. Jones, in the absence of the Chairman, was called to the Chair.

Solicitor for the Bill—Mr. G. W. Allen, junior.

Committee deliberated as to what should be their course of procedure in the absence of the Chairman.

Motion made and *Question*—

"1. That, in the opinion of this Committee, it would be inexpedient to proceed with the consideration of the Bill in the absence of the Chairman.

"2. That the Clerk of Select Committees do inform the Chairman of the determination of the Committee to this effect.

"3. That this Committee do now adjourn till Wednesday next, at Twelve o'clock."

Agreed to.

Parties informed by the Chairman accordingly.

[Adjourned till Wednesday next, at Twelve o'clock]

WEDNESDAY, 7 JULY, 1858.

The Meeting of the Committee convened for *this day* lapsed, in consequence of the adjournment of the House from Tuesday, 6th instant, till Tuesday, 13th instant, owing to the demise of the Venerable Archdeacon Cowper, father of the Principal Secretary.

WEDNESDAY, 14 JULY, 1858.

Members Present:—

W. B. Dalley, Esq., in the Chair.

Mr. Jones,

Mr. Williamson.

Mr. Gordon,

Mr. James Barlow, Engineer to the Company, examined.

Committee then considered the Preamble of the Bill, and compared the same with the Preamble of the Bill as amended and agreed to in the Select Committee of last Session, and finding it to differ materially therefrom, requested the Solicitor for the Bill to explain the causes which induced such alterations.

Mr. G. W. Allen, junior, Solicitor for the Bill, thereupon examined.

And it appearing from the evidence of Mr. Allen that the alterations made in the Preamble, and in certain Clauses of the Bill, were in the wording and not in the substance thereof:

Committee deliberated.

Motion made (*the Chairman*) and *Question*—"That this Preamble stand part of the Bill"—*agreed to.*

Committee then proceeded to consider the various Clauses of the Bill.

Clauses 1, 2, 4, and 6 read, considered, and agreed to without amendment.

Clauses 3 and 5 read, considered, amended, and agreed to. (*vide "Schedule of Amendments" appended hereto.*)

Chairman requested to Report the Bill, as amended, to the House.

SCHEDULE OF AMENDMENTS.

- Clause 3, page 2, line 17. *After erect insert in places beyond the City of Sydney.*
 18. *After works omit in places beyond the City of Sydney.*
 Clause 5, page 3, line 23. *After sections insert 52.*

LIST OF WITNESSES.

Wednesday, 14 July, 1858.

1858.

Legislative Assembly.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

AUSTRALIAN GAS LIGHT COMPANY'S BILL.

WEDNESDAY, 14 JULY, 1858.

Present:—

MR. DALLEY, MR. GORDON,		MR. JONES, MR. WILLIAMSON,
WILLIAM BEDE DALLEY, Esq., IN THE CHAIR.		

Mr. G. W. Allen appeared as Solicitor for the Bill.

James Barlow, Esq., called in and examined:—

1. *By Mr. Allen:* Do you produce an Act of Council, passed in the eighth year of the reign of King William the Fourth, for lighting with Gas the Town of Sydney, and establishing the Australian Gas Light Company? I do. (*Witness produced the same.*)
2. Are the Company desirous of carrying on the undertaking beyond the limits of the City of Sydney? They are.
3. Will you state some reasons showing the expediency of granting these powers? We have been solicited repeatedly to carry the public lights much beyond the present boundaries of the City, and also, to light private houses similarly situated.
4. *By Mr. Jones:* Have you heard any objections in any quarter to these additional powers being conferred on the Company? I have not. The only thing that would have borne the semblance of an objection, was that an opposition Company was got up, on the ground that we did not do our duty; but it has not been carried out.

J. Barlow,
Esq.

14 July, 1858.

George Wigram Allen, Esq., Solicitor for the Bill, examined:—

1. *By the Chairman:* The language of the present Bill is somewhat different from that of the Bill that was before a Committee of the House last Session—will you be good enough to explain what are the alterations? The preamble is very much shorter in the present Bill. The former one recited two or three amendments of the original Act, which do not at all apply to the extension of powers now asked for; I have, therefore, cut them out. In the next place, sections three and four of the present Bill are made to contain all the powers included in section five of the Bill submitted last Session. I have set out the powers asked for in the third and fourth sections instead of referring to clauses of the original Act. I should mention that the original Act requires the consent of the Surveyor of the City of Sydney in order that the Company may be enabled to open up the streets for the purpose of laying pipes; but as there is no surveyor in the Hamlets, or beyond, whose consent can be obtained, such a provision in this Bill would be inapplicable.
2. *By Mr. Williamson:* Would it not apply to some other officer? There is no person holding a similar situation.
3. But the Corporation might be extended? Any clauses inserted in an Act appointing a Corporation for the Hamlets, or beyond, would control these; but I think if the Committee consider these clauses they will, I think, find that the restriction is not necessary.
4. *By Mr. Jones:* There are sundry Road Commissions, and other bodies of like character, that have control of the roads beyond the City of Sydney,—is it not equally necessary that

G. W. Allen,
Esq.

14 July, 1858.

G. W. Allen, Esq.
 14 July, 1858. the surveyors of these bodies should be consulted? The fourth clause requires that pavements or roads broken up shall be re-laid "to the satisfaction of the Commissioners, Trustees, Surveyor, or other persons or person having the control, direction, or superintendence of the same." It would be almost impossible to get the consent of the Trustees of Roads out of the City of Sydney for every connection with the mains, because they live in different places, and have no settled offices.

5. *By Mr. Williamson*: Do you not think they would have just cause of complaint if we were to give the Company powers which would enable them to break up a road which had just been laid down, without asking consent? The consent of the surveyor, under the existing Act, is almost a nullity; it has never, I believe, been refused.

6. *By Mr. Jones*: Do you not think, that as the Legislature, when granting the original Act of Incorporation, thought it expedient and just that the Company should obtain the written consent of the Surveyor of the City Corporation before breaking up any of the public thoroughfares, it is equally necessary to provide, that before the Company break up roads beyond the City of Sydney, wherever a Road Trust or similar body exists, they shall obtain the consent of the Surveyor or Engineer of such body? If it were made to apply only to mains, there would be no objection on the part of the Company in their being required to obtain the consent of the Surveyor or other person having control over the roads; but if it were to apply to every connexion between the mains and private houses, it would, I think, be an unnecessary restriction upon the operations of the Company.

7. *By Mr. Williamson*: The original Act gave no exclusive privileges to the Company? No; nor does the Bill now under consideration.

8. *By Mr. Jones*: Have you pointed out all the material differences between this Bill and the Bill which was last before a Committee of the Assembly? Yes.
