GOVERNMENT DEBENTURES.

No. 1.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

The Treasury, New South Wales,

21 May, 1857.

SIR,

The time has now arrived when I propose to give effect to the arrangement entered into between the Government and the Oriental Bank.

I would, before proceeding to the subject matter in hand, acknowledge, briefly, your letter of 23rd April, in the contents of which I generally concur.

The spirit of the agreement between us shall, in all cases, be strictly acted up to and I approve of your having thus placed on record your remarks upon the contingencies which may arise to affect, from time to time, the terms on which the Bank are to be called upon to advance upon Government Debentures transmitted to London for sale. I am now to inform you that this Government propose to make the following payments, in London, through the Agency of the Oriental Bank, advices to be forwarded per "Simla" steamer, to-morrow :—

The Colonial Agent General, to meet Debentures falling due on 13th August, 1857	£ 50,000
The same, to provide for Stores for the Colonial Service	5,000
	<u>£55,000</u>
Her Majesty's Land and Emigration Commissioners, London	15,000
The Commissioners of Railways, for transmission to Messrs. P. W. Flower & Co., London ...	20,000
Ninety thousand pounds—say	<u>£ 90,000</u>

I have obtained from the Executive Council authority to issue Debentures, secured upon the Consolidated Revenue of the Colony, under the Acts 19 Victoria, Nos. 38 and 40, to the extent of £100,000, and, in terms of our agreement, I could now call upon the Oriental Bank to place in London, at the disposal of this Government, the sum of £90,000, or 90 per cent. on the nominal value of these Debentures; but the advices from home by the "Simla" being so far unsatisfactory, that we are not aware of any recent actual sales of Government Debentures by which we can fix the London market value, (owing to temporary and local causes affecting the money market of England at that date), I do not intend to avail myself of the advances to nearly its full extent.

But I propose to place in your hands, for remittance to London, Oriental Bank Bills for £50,000, payment for which is now made to you here, at the exchange of the day, and to transmit the Debentures for £100,000 for sale in the London market, (provided the price be satisfactory), in terms following, that is to say :—

The total sum which may be required at present being only £40,000 in excess of the remittance in Bills, I propose that no more than that amount of Debentures shall, *under any circumstances, be disposed of on worse terms than 95 per cent.*, that being the limit agreed upon in case the last quoted rate shall have been par.

But, inasmuch as the payments to—

The Emigration Commissioners.....	£15,000
The Colonial Agent General—Stores	5,000
The Agents of the Commissioners of Railways...	20,000
	<u>£40,000</u>

will

will not, in all probability, be called for immediately, and possibly not for several weeks after advice reaching home, it will be very desirable that no forced sales of any portion of these Debentures should be made in London.

This being the first transaction under the new arrangement, I am most anxious to introduce those Securities, not only under the most favorable auspices, which I feel confident they will secure by the Agency and care of the Oriental Bank, but also in such a way as to shew that we do not desire to realize unless the market be favorable.

Should the money market in London allow of these Debentures assuming their proper position on the Stock Exchange, which I do not think I overrate when I calculate upon their being steadily realizable at *par*, the Bank may sell the whole amount; but, in that case, you will please instruct the London Branch to place at interest upon notice (say not less than 10 nor more than 30 days) the whole sum of Sixty Thousand Pounds; that is to say, the value of Debentures over and above the £40,000 now intended to be provided for.

Further Remittances to England will be shortly required, and I shall be guided by the advices which we may receive in the meantime as to the mode in which they will be made.

In now opening the business with the Oriental Bank, I would beg to impress upon you the great importance of bringing out these Securities in London in the best possible way; and I feel certain that every attention to the interests of this Government will be bestowed upon this subject by your powerful institution.

I am, &c.,

G. K. INGELow, Esq.,

STUART A. DONALDSON.

Manager of the

Oriental Bank Corporation.

P.S.—I wish to add—1st. That although included in the requisition to-day, the Letter of Credit for Twenty Thousand Pounds, for the Commissioners for Railways, will not be taken up for this Mail.

2nd. That, in order to adhere to the Regulations with respect to Debentures transmitted to England, by which it is understood that six months notice must, in every case, be given before interest be claimed in London, the Coupons for interest on the Debentures now handed to you, due on 1st July, 1857, have been cut off, and are retained in the Treasury here.

The first interest accruing on these Debentures will, therefore, be the half-year's interest due 1st January, 1858.

STUART A. DONALDSON.

No. 2.

THE HONORABLE THE TREASURER to G. K. INGELow, Esq.

The Treasury, New South Wales,

23 May, 1857.

SIR,

Referring to my letter No. 1 of this date, I now hand you herewith the following Bills and Securities for transmission to the Oriental Bank, London, for the credit of the Government of New South Wales.

£50,000.

Bills of Exchange for Fifty Thousand Pounds, drawn by the Oriental Bank, Sydney, in favor of, and on the Oriental Bank, London, on account of the Government of New South Wales, at thirty days after sight.

£100,000.

New South Wales Government Debentures for One Hundred Thousand Pounds, issued under the Acts of Parliament of New South Wales, 19 Vict., Nos. 38 and 40, viz.:—

SERIES M.

Nos. 2,001 @ 2,200, of £100 each, dated 1st January, 1857 ... 20,000 0 0
(Interest in London, from 1 July, 1857)

SERIES N.

Nos. 2,032 @ 2,151, of £500 each, Interest 5 per cent.; 25
years or more, at will of Government ... 60,000 0 0

SERIES O.

Nos. 2,001 @ 2,020, of £1,000 each ... 20,000 0 0

TOTAL ... £100,000 0 0

The receipt whereof please acknowledge.

GOVERNMENT DEBENTURES.

5

I have now to request the issue of the following Letters of Credit, in duplicate, in favor of—

Edward Barnard, Esq., Colonial Agent General for	50,000	0	0
Ditto.	ditto.	...	5,000	0	0
The Commissioners of Railways, Sydney, for transmission to Messrs. P. W. Flower & Co., London, for	20,000	0	0
Her Majesty's Land and Emigration Commissioners, Park-street, London	15,000	0	0
			<u>£90,000</u>	<u>0</u>	<u>0</u>

I have, &c.,

G. K. INGELow, Esq.,
Manager, Oriental Bank.

STUART A. DONALDSON.

[Memorandum enclosed in No 2.]

I take this opportunity of suggesting, as a matter of form, that the following be the mode of recording our money transactions with the "Oriental Bank" here.

1. A Pass Book shall be kept written up, and regularly delivered to the Treasurer's order, from time to time.

2. In this book shall be credited all moneys handed to the Bank for transmission to London.

In the case of Bills, the full amount of such Drafts in this instance ... £50,000

In the case of Debentures, the full amount, in an inner column, with the rate of advance agreed, carried out, in this instance, 90 per cent ... £90,000

3. In delivery of all Letters of Credit, their amount shall be entered in the Pass Book to the debit of the account, and a cheque may pass, should you deem it desirable, in each case, for the amount so appropriated.

4. In case of directions to pay Pensions or other sums, the amount of which will not be certainly ascertained until the party entitled shall have received the same in London, I do not propose that any entry shall be made in the Pass Book.

5. But regularly at the expiration of each half-yearly period, which I propose to fix in the Colony at 30th June and 31st December, in each year, the Pass Book shall be written up from the London Account of the "Oriental Bank," such account being furnished, in duplicate, to the Treasurer, from time to time, as the same may be received.

STUART A. DONALDSON.

No. 3.

G. K. INGELow, Esq., to THE HONORABLE THE TREASURER.

Oriental Bank Corporation,
Sydney, 13 July, 1857.

Sir,

I beg to hand, for the information of the Government, the following extract from our London advices by last Mail.

"At present, New South Wales Government Debentures are all but unsaleable, "94½ having been offered for those of 1876, while for the series of 1882 we could find no "buyer at any price."

This advice is altogether unconnected with the £100,000 of Debentures subsequently forwarded on account of the Government, and refers solely to some Debentures of the two classes forwarded by a previous Mail from this Office, with a view to test the London market.

As there does not appear to be any reasonable probability of any such change taking place in England, either from money becoming cheap, or from a more favorable tone prevailing (at present) in respect to these particular securities, as would enable the Bank to negotiate that portion of those now in its hands against which credits have been granted, and a limit of 95 per cent. given for sale, I would beg to suggest the desirability of measures being taken to prevent the loss which would arise from the high rate of interest chargeable on the advances made on the securities, and the sacrifice that would have to be made before they could be disposed of in England.

I have, &c.,

GEO. K. INGELow,
Manager.

THE HONORABLE
THE TREASURER.

40—B

No. 4.

No. 4.

TREASURY MINUTE.

16 July, 1857.

THE recent advices from London render it extremely doubtful if the Debentures of this Colony will be saleable there, excepting at a very heavy discount.

Of the payments in London provided for through the Oriental Bank, the sum of £40,000 (Forty thousand Pounds) has been represented by Debentures transmitted for sale under the arrangement with that institution; but with injunctions *not to force a sale at a price lower than 95 per cent.*

As it appears very likely, in the present and prospective state of the money markets of Europe, that the market for Colonial stocks will not improve soon, and as we strengthen the hands of our agent (the Oriental Bank) as well as improve the character of our securities, by not offering for sale our Debentures in a very adverse market, I propose to remit, in Bills of Exchange, £40,000 (Forty thousand Pounds) by the "Columbian's" mail, replacing the sum, as soon as may be deemed expedient, by the sale of Debentures in the Colony. By this means the Oriental Bank will hold the whole of the £100,000 Debentures untouched for better times.

I circulate this for the approval of His Excellency the Governor General, after the Members of the Government have minuted their opinions.

STUART A. DONALDSON.

No. 5.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

The Treasury, New South Wales,

17 July, 1857.

SIR,

I beg to enclose herewith Bills of Exchange for £40,000, (Forty thousand Pounds,) drawn by the Oriental Bank, Sydney, at thirty days sight, in favor of the Oriental Bank, London, with a request that they may be transmitted to England, to the credit of this Government, in order to prevent the necessity for selling Debentures at an unfavorable rate—the last advices leading me to suppose that such may be the state of the English money market.

This remittance is made to cover the whole demand made upon the Oriental Bank for credits issued,—the whole £100,000 of Debentures handed to them for sale remaining untouched.

I am, &c.,

G. K. INGELOW, Esq.,
Manager, Oriental Bank,
Sydney.

STUART A. DONALDSON,

No. 6.

THE HONORABLE THE TREASURER, to G. K. INGELOW, Esq.

The Treasury, New South Wales,

17 August, 1857.

SIR,

With reference to the first paragraph of the agreement under which your Bank undertook to transact the Banking Agency of this Government in London, I now beg to hand you, enclosed, a list of Debentures current in England, as a preliminary step to further arrangements, which will be made to enable the Bank to prepare for the payment of the interest thereon, which will fall due on 1 January, 1858.

You will perceive that the form of Debentures issued by the New South Wales Government has varied on several occasions since the commencement of the issue in 1853.

As it is desirable that the Bank should be in possession of all these forms, I now hand you copies of all the various documents by which the public debt is, at present, represented. They are numbered 1 to 13, for future reference.

You will perceive that the Debentures issued by the Government since February, 1857, are different from all others in these three particulars:—

1.

1. They are payable after the expiration of 25 years from the date of issue, at the option of *the Government only*.
2. They are accompanied by 20 years' Coupons for interest payable half-yearly.
3. They are distinguished by a series *letter and number* peculiar to the issue under each Act specified.

Whether the issue of Debentures of this character be continued or not, the system of attaching a series letter and number to the issue under each Act will doubtless be persevered in, as it appears to afford a great check to forgery and to fraud in the peculation of the Coupons.

In order that you may be advised of the letters and numbers attached to each set of Debentures granted since this plan came into operation, I hand you, herewith, a complete list of the same, with a request that you will draw the particular attention of the Bank in London to this arrangement, which is similar to that adopted in many of the European Loans upon Debentures and Scrip.

Supplementary lists will be furnished to you from time to time.

I shall shortly have occasion to address you again upon this matter, and am, &c.,

STUART A. DONALDSON.

G. K. INGELOW, Esq.,

Manager, Oriental Bank.

No. 7.

THE SECRETARY TO THE TREASURY to G. K. INGELOW, Esq.

The Treasury, New South Wales,

2 September, 1857.

SIR,

In transmitting to you the enclosed List of Colonial Pensions, Salaries, &c., payable in London for the half-year ending 31 December, 1857, I am directed to request that you will invite your London Bank to place themselves in communication with Mr. Barnard on the subject.

I have, &c.,

HENRY LANE.

GEO. K. INGELOW, Esq.,

Manager, Oriental Bank Corporation.

No. 8.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

The Treasury, New South Wales,

5 September, 1857.

SIR,

I beg to hand you, enclosed, Bills of Exchange for the sum of Sixty-five thousand one hundred and eighteen pounds, drawn upon the Oriental Bank Corporation, London, at sixty days' sight, and have to request the issue of the following Letters of Credit, viz. :—

In favor of the Bank of New South Wales, London, payable on the 31st December, 1857, for	£17,000
In favor of the Oriental Bank Corporation, London, for.....	18,000
In favor of H. M. Colonial Land and Emigration Commissioners ...	15,000
Do. do. do.	1,118
Lloyd, Beilby & Co, London	10,000
And in favor of the Oriental Bank Corporation, London, for	4,000
	<hr/> £65,118 <hr/>

Special communication will be made to you respecting those of the Letters of Credit which are intended for the Bank in London, and I shall feel obliged by your expediting their preparation as much as convenient.

I am, &c.,

STUART A. DONALDSON.

G. K. INGELOW, Esq.,

Manager, Oriental Bank Corporation.

No. 9.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

*The Treasury, New South Wales,
5 September, 1857.*

SIR,

Referring to my letter of this date, No. 1049, I beg to hand you herewith a further set of Bills of Exchange on London for £500, at sixty days' sight, for which amount you will have the goodness to issue a Letter of Credit on the Oriental Bank Corporation, London, in favor of Messrs. Lloyd, Beilby & Co., London.

I am, &c.,

STUART A. DONALDSON.

G. K. INGELOW, Esq.,

Manager, Oriental Bank Corporation.

No. 10.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

*The Treasury, New South Wales,
5 September, 1857.*

SIR,

With reference to my letter of the 17th ultimo, forwarding a list of New South Wales Government Debentures current in England, I now beg to enclose a Letter of Credit (No. 7-7) for £18,000 issued by your establishment in favor of the Oriental Bank Corporation, and to request that you will transmit the same to London by this Mail, for the purpose of being applied in the payment of the interest due 1st January, 1858, on the Debentures above referred to.

This remittance is intended to be applied towards covering the interest due on Debentures to the amount of £735,740, which has hitherto been paid by Mr. Barnard, the Agent General. The interest on the £680,000 Debentures negotiated through the Bank of New South Wales will, at the request of that institution, continue to be paid at their Banking House in London.

Requesting the favor of an acknowledgment of the enclosure,

I am, &c.,

STUART A. DONALDSON.

GEO. K. INGELOW, Esq.,

Manager, Oriental Bank.

No. 11.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

*The Treasury, New South Wales,
5 September, 1857.*

SIR,

I beg to enclose herewith Letter of Credit, No. 7-11, for £4,000, on your London Establishment, and to request that you will cause that amount to be placed to the credit of this Government with the Oriental Bank, London, and to be held at the disposal of the undermentioned parties, for the services hereafter described:—

Messrs. Lloyd, Beilby, & Co., for the purchase of	
Naval Stores	£2,000
The Master of the Mint (Purchase of Automaton	
Balance)	240
	<hr/>
	2,240
The Residue of	1,760 is
	<hr/>
	£4,000

intended to cover demands

upon your London Branch, for the payment of Pensions, &c., of which a list has already been forwarded to you, and respecting which the late Agent General, Mr. Barnard, has been requested to afford the Bank all necessary information, as regards autographs and other particulars, by which to identify the recipients forms of vouchers prescribed by the regulations, &c.

Requesting the favor of an acknowledgment of the enclosure,

I am, &c.,

STUART A. DONALDSON.

G. K. INGELOW, Esq.,

Manager, Oriental Bank Corporation.

No. 12.

THE HONORABLE THE TREASURER to G. K. INGELOW, ESQ.

The Treasury, New South Wales,

3 October, 1857.

SIR,

By the Mail which leaves here on the 11th instant, this Government are desirous of having placed to their credit in London a sum of from £27,000 to £30,000.

As no advices have yet been received here respecting the £100,000 in Debentures placed in your hands on the 21st May last, to be transmitted to London for sale at certain stated limits, and as the last advices from there show that it was not likely that the securities could be sold at the limits given, I do not deem it advisable to take any advances at present on account of these Debentures. I am, therefore, desirous of knowing on what terms you will, under these circumstances, be prepared to place a sum, say not exceeding £30,000, to the credit of this Government in London, to be drawn against by the Mail which leaves Sydney on the 11th instant.

I am, &c.,

R. JONES,

Treasurer.

GEO. K. INGELOW, ESQ.,

Sydney.

No. 13.

G. K. INGELOW, ESQ., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,**Sydney, 5 October, 1857.*

SIR,

I beg to acknowledge receipt of your letter of the 3rd instant, stating that the Government are desirous of having a sum of about £30,000 placed at their disposal in London by the out-going Mail, and that, as the securities now in the Bank's hands are not likely to be sold at the limit given, you desire to know on what terms such credit can be granted.

The securities in the Bank's hands in London are not now held for sale, or any portion of them, under the terms of the agreement. When first handed over, the Bank agreed to grant credits to the extent of £40,000 at a limit of 95 per cent., (the last then received London price for Terminable Debentures being par), but a subsequent advice showing that this limit was not only too high to admit of their being disposed of, but that they were reported as unsaleable, the credits were paid off.

It does not appear that the Government is now in a position to take any credits against these securities, as it would be necessary, in the first place, to fix a limit for sale 5 per cent. below the last London quotation.

I propose, therefore, that the Government shall cause to be prepared Debentures of a terminable character for a sufficient amount to cover the above-required advance, and that a limit be fixed for the sale, in accordance with the terms of the agreement.

Should this plan not be acceptable, owing to the short time now remaining before the departure of the Mail for the consideration of the matter, and the preparation of the documents, I then propose that the Government transfer a like sum of money to their credit in this office, to lie here as a part of their cash balance in the Colony, and bearing interest at the rate they now receive elsewhere—this sum to remain untouched until there has been sufficient time for the preparation of other arrangements.

I have, &c.,

GEO. K. INGELOW,

Manager,

THE HONORABLE
THE TREASURER.

No. 14.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

*The Treasury, New South Wales,
5 October, 1857.*

SIR,

In your reply, of this day's date, to my letter of the 3rd instant, you propose, if the time should be too short to prepare Terminable Debentures for the Mail of the 11th instant, that the Government should place a sum of say £30,000 to their credit in your Bank here, to lie there as part of their cash balance, and bearing interest at the rate they now receive from the Joint Stock Bank, to remain untouched until other arrangements are made to cover the amount; but you omit to state what you will be prepared to do in the event of the Government acting on your suggestion. Will you now be good enough to supply this omission?

I have, &c.,

R. JONES,

Treasurer.

GEO. K. INGELOW, Esq.,

Manager, Oriental Bank Corporation.

No. 15.

G. K. INGELOW, Esq., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,
Sydney, 5 October, 1857.*

SIR,

In reply to your letter, No. 1055, just received. As the second suggestion in my former letter—of making a deposit here—was offered in case the other plan, of handing in Terminable Securities with a limit for sale, should not be deemed acceptable, I intended the Government to understand that we would issue credits against the security of such deposit.

If the Government should afterwards determine upon the issue of Terminable Debentures to the Bank, to cover the amount of these credits, the deposit, with the accrued interest, will, of course, be again at the disposal of the Government; or, if the Government should determine upon meeting the credits by purchasing the Bank's Drafts on London, then this deposit can be applied in payment of such Bills. In either case the plan is offered as an alternative by which the requisite credits can be granted, and, at the same time, the Government obtain leisure to consider upon the best course to be finally adopted.

I have, &c.,

GEO. K. INGELOW,

Manager.

THE HONORABLE

THE TREASURER.

No. 16.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

*The Treasury, New South Wales,
6 October, 1857.*

SIR,

As it will not be convenient to prepare Terminable Debentures for transmission to London by the Mail of the 11th instant, I have given instructions for the preparation of a Warrant to enable me to forward to you a cheque on the Joint Stock Bank, Sydney, for the sum of Thirty thousand Pounds, which, when received, I will thank you to place to the credit of the Government here, on the terms stated in your letter of yesterday's date, with a view to the like amount being placed at the disposal of this Government in London.

In the course of the next two or three days particulars will be furnished to you of the letters of credit we require on London.

I am, &c.,

R. JONES,

Treasurer.

SIR,

With reference to my letter of yesterday's date, No. 1,092, I am directed to enclose an additional cheque for £1,234, drawn against the deposit of £30,000, and to request the favour of your preparing a Letter of Credit in favour of H. M. Colonial Land and Emigration Commissioners in time to be forwarded by this Mail.

I have, &c.,

HENRY LANE.

GEO. K. INGELOW, ESQ.

No. 20.

G. K. INGELOW, ESQ., to THE HONORABLE THE TREASURER.

Oriental Bank Corporation,

Sydney, 21 October, 1857.

SIR,

I beg to hand, for your information, copy of an extract from the Minutes of the Court of Directors of this Bank of the 6th August, on the subject of the Financial Agency.

Whilst the Court confirm the arrangement generally, they do so, you will find, subject to explanation on three points. The first point they advert to, namely, arranging the form to the satisfaction of the public, is one which arises from the very necessity of the case, and which it is indispensable should be attended to.

The

The second point regards the mode of transmitting the Securities; any risk attending such transmission the Directors think it reasonable should be borne by the Government.

The third point is one which it was necessary they should arrange on a definite plan; and, although they state that it is not the custom of the Bank of England and private bankers to allow interest on current accounts, nor for the Joint Stock Banks to do so beyond a limited extent, and only at rates varying from 1 to 2 per cent. per annum, they agree to allow interest on any balance lying in their hands at 1 per cent. below the Bank of England rate of discount, charging on any overdraft 1 per cent. above that rate. As regards the £100,000 of Interminable Debentures, forwarded for sale on the 23rd May last, they have for the present retained them, but expect that the Government will take immediate steps for replacing them with other Debentures in the "usual form." Their letter was written when they had advice of credits to the extent of £40,000 against these Securities. Those credits having been subsequently paid off, the remarks are applicable to the credits granted last Mail and to others which may hereafter be required. I presume, in using the expression "usual form," they refer to Securities redeemable at the option of the holder on the expiry of a term of years.

I would suggest, as regards the transmission of the Securities, that the Government send forward the originals at least one Mail before they require the credits, the following Mail taking duplicates, thus any contingent inconvenience arising from the loss of one set of Securities in transit would be remedied.

The quotation of New South Wales Redeemable Debentures was 97 @ 98, but these rates are only for small amounts. A large sum could not be disposed of, unless ample time was given for the negotiation, except at a considerable reduction on these quotations.

I have, &c.,

GEO. K. INGELOW,
Manager.

THE HONORABLE,
THE TREASURER.

[Enclosure in No. 20.]

EXTRACT from the Minutes of the Court of Directors of the Oriental Bank Corporation, London, dated 6th August, 1857.

"Submitted—

"Copies of Correspondence between the Secretary for Finance and Trade of the New South Wales Government and the Manager of our Sydney Branch, on the subject of an English Agency.

"Resolved:—

"That the arrangement with the New South Wales Government, whereby this Corporation is appointed the English Financial Agents for the New South Wales Government, be, and it is hereby approved, and confirmed, subject to the following conditions and explanations on certain points, viz.:—

"I. That the tenor of the Debentures to be offered for sale is to be modified to suit the London Market, there being at present a positive objection to those in the form now received from Sydney, which are payable only at the option of the New South Wales Government.

"II. That all Debentures to be placed in our hands for sale are to be transmitted by the Government direct to this Office, and only a note of the same given to the Manager in Sydney by the Financial Secretary. The extent of credit agreed upon will take effect on the receipt, at this Office, of the Debentures so transmitted.

"III. That as the custom of London Bankers regarding interest varies considerably, it is understood that daily current interest will be allowed on the credit balance of 1 per cent. per annum under the Bank of England rate of discount; on the other hand, that interest will be charged on any debit balance, at 1 per cent. over the Bank of England rate of discount of the day."

(A true Copy.)

W. W. CARGILL,
Chief Manager.

No. 21.

The Oriental Bank Agency.

I submit for the consideration of their Excellencies the Administrators of the Government and the Executive Council the accompanying letter from the Sydney Manager of the Oriental Bank, transmitting extract from the Minutes of the Court of Directors, London, dated

dated August 6th, 1857, approving and confirming the arrangement made by the Sydney Manager with this Government, subject to three conditions specified in such extract.

1. As the Interminable Debentures are unsaleable, I recommend that the £100,000 in these securities, now lodged with the Oriental Bank, London, be replaced by Terminable Debentures to a like amount, having a currency of fifteen years, and with the interest and principal payable in Sydney or London; and I request authority to issue these Debentures accordingly for transmission by the November Mail.

2. Condition II is not an unreasonable one, and I recommend that it be acceded to.

3. Condition III I regard as an equitable and satisfactory arrangement, as to the interest to be received and paid; I, therefore, recommend that it be acceded to.

R. J.

Treasury, 22 October, 1857.

No. 22.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

*The Treasury, New South Wales,
5 November, 1857.*

SIR,

I beg to acknowledge the receipt of your letter of the 21st ultimo, enclosing extract from the Minutes of the Court of Directors of the Oriental Bank Corporation, London, of 6th August last, respecting the arrangements made between the Bank and this Government, for the transaction of their English Banking Agency.

In reply, I beg to acquaint you that I submitted your letter, with its enclosure, for the consideration of the Executive Council, and I now enclose a copy of the Minute of Proceedings thereon, for the information of yourself and the Court of Directors.

In conformity with the authority conveyed to me in that Minute, by their Excellencies the Administrators of the Government and the Executive Council, I propose transmitting, by the Mail of the 11th instant the sum of £100,000 in Debentures, terminable on the 1st January, 1873, principal and interest payable in Sydney or London—the interest accruing from the 1st January, 1858.

These Debentures being intended to replace the Interminable Debentures to a like amount now held by the Bank in London, on account of this Government, I have to request that you will have the goodness to advise the Court of Directors to that effect, and desire them to cause these Interminable Debentures to be sent back by return Mail.

With reference to your suggestion, to issue duplicates of Debentures, the Government are not prepared to act thereon; the risk of loss is so very slight, and the inconvenience and labor arising from the preparation of duplicates would be so great, that they think it inexpedient to adopt that course.

As regards the probable rate obtainable for the Debentures now proposed to be transmitted, the Government are not prepared to authorise their sale at a price lower than 95 per cent., but the Bank are hereby authorised to dispose of any amount they may be able to sell at and above that figure; and it is hoped that, as the English Money Market is getting easier, there will be no difficulty in disposing of the Debentures now transmitted at rates at least equal to those last advised.

The Government do not, at present, contemplate taking any further advances against the Debentures to be remitted by this Mail.

In conclusion I beg to state, that if there should be any difficulty in disposing of Debentures, at the limit given, to the amount already advanced on the Debentures now held, the Government will be prepared to repay the £30,000, or make arrangements that will allow of the Bank disposing of Debentures to that amount.

I have, &c.,

R. JONES.
Treasurer.

GEO. K. INGELOW, Esq.,
Manager, Oriental Bank, Sydney.

No. 23.

PROCEEDINGS of the Executive Council on the 26th October, 1857, with respect to the arrangement with the Oriental Bank for Colonial Agency.

Minute No. 57-52. Confirmed 2nd November, 1857.

REFERRING to the Proceedings on the 21st April last, with respect to the establishment of a Banking Agency in London, their Excellencies the Administrators of the Government lay before the Council a letter from the Sydney Manager of the Oriental Bank, transmitting the copy of an extract from the Minute of the Court of Directors in London, approving and confirming the arrangement made by him with this Government, subject to the following conditions, viz :—

- 1st. That the tenor of the Debentures to be offered for sale be modified to suit the London market, there being, at present, a positive objection to the Interminable Debentures.
 - 2nd. That all Debentures to be placed in the hands of the Bank for sale be transmitted by the Government direct to the Office in London, and only a note of the same given to the Sydney Manager by the Colonial Treasurer. The extent of credit agreed upon to take effect on the receipt, at the said Office, of the Debentures so transmitted.
 - 3rd. That, as the Custom of London Bankers regarding interest varies considerably, it be understood that current daily interest will be allowed on the credit balance at 1 per cent. per annum under the Bank of England rate of discount, and, on the other hand, that interest will be charged on any debit balance at 1 per cent. over the Bank of England rate of discount of the day.
2. Having carefully weighed the reasons urged by the Court of Directors, and their Sydney Manager, for proposing the modification of the original arrangement involved in these conditions, the Council advise in respect of them as follows :—

- 1st. That as the Interminable Debentures are not suited to the London market, the securities of that description, now lodged with the Oriental Bank in London, amounting to £100,000, be replaced by Terminable Debentures to a like amount, having a currency of 15 years, and with the interest and principal payable in Sydney or London, and that their Excellencies the Administrators of the Government should issue fresh Debentures accordingly, for transmission by the November Mail.
- 2nd. That Condition No. II be acceded to, and that Condition No. III, which they regard as an equitable and satisfactory arrangement, as to the interest to be received and paid, be also acceded to.

EDWARD C. MEREWETHER,
Clerk of the Council.

*Executive Council Office,
Sydney, 4 November, 1857.*

No. 24.

THE SECRETARY TO THE TREASURY to G. K. INGELOW, Esq.

The Treasury, New South Wales,

7 November, 1857.

SIR,

I am directed to submit, for the purpose of being noted in your office,—

Four Hundred Terminable Government Debentures, of fifteen years currency, with Interest at five per cent. per annum, from 1st January next. Principal and Interest payable either in Sydney or in London.

Series T.	Nos. 1 to 250 of £100	25,000	0	0
" U.	" 1 to 150 of £500	75,000	0	0
					£160,000	0	0

Amounting to One hundred thousand Pounds,

and to advise you of the Honorable the Treasurer's intention to transmit these Securities, per steamer "City of Sydney," to the Chief Manager of your Bank, in London, for the purpose of being substituted for those forwarded for sale in May last, to the form of which, it is stated, by the Court of Directors that there, at present, exists a positive objection in the London Market.

I have, &c.,

G. K. INGELOW, Esq.,
Manager, Oriental Bank, Sydney.

HENRY LANE.

No. 25.

THE HONORABLE THE TREASURER to W. W. CARGILL, Esq.

The Treasury, New South Wales,

7 November, 1857.

SIR,

In terms of the second condition expressed in the Copy of an Extract from the Minutes of the Court of Directors of your Bank, dated from London, 6th August, 1857, and conveyed to me by letter from your Sydney Manager, No. 7-16, dated the 21st ultimo, I have the honor to transmit herewith,—

400 Terminable New South Wales Government Debentures, amounting to (£100,000)

One hundred thousand Pounds,

for the purpose of replacing the Interminable Debentures, of like amount, which were forwarded for sale on the 23rd May last, and are now held by your Bank in London, on account of this Government.

You will have the goodness to acknowledge the receipt of the accompanying Debentures, and to cause those at present retained by you to be returned to the Colony by the first eligible opportunity.

I have, &c.,

W. W. CARGILL, Esq.,

Chief Manager of the

Oriental Bank Corporation, London.

R. JONES,

Treasurer.

SCHEDULE of DEBENTURES referred to in the Colonial Treasurer's letter of 7th November, 1857, as transmitted per Mail Steamer "City of Sydney" to the Chief Manager of the Oriental Bank Corporation, London.

New South Wales Government Debentures, terminable on 1st January, 1873, with interest at 5 per cent. per annum, from 1st January, 1858,—the principal and interest payable either in Sydney or London:—

Series T—Numbers 1 to 250, of £100 each £25,000

Series U—Numbers 1 to 150, of £500 each 75,000

£100,000

Amounting to One hundred thousand Pounds.

No. 26.

THE SECRETARY TO THE TREASURY to G. K. INGELOW, Esq.

*The Treasury, New South Wales,**Sydney, 7 November, 1857.*

SIR,

I am directed to enclose a set of Bills of Exchange for £16,000, drawn by Lieut. Colonel Robbins, of the Bengal Army, on the Honorable the Court of Directors of the East India Company, in favor of the Colonial Treasurer of New South Wales, and to request that you will place the amount of the Bills, less your commission of one-half per cent., to the credit of this Government, in your Bank in London.

I am also directed to request that you will furnish me with a Letter of Credit on your Bank in London, in favor of Her Majesty's Land and Emigration Commissioners, Park-street, Westminster, for the sum of £8,000, and to inform you that the remaining moiety of the £16,000 will be hereafter drawn for as the necessities of the Government may require.

I am further directed to request, that as, from advices lately received, there is reason to suppose that the sum of £8,000, about to be placed at the disposal of the Commissioners, may, possibly, prove insufficient to meet engagements actually entered into by the Commissioners carrying on Emigration from the United Kingdom, you will have the goodness to notify to your London establishment the wish of this Government, that, in the event of this being the case, the Cheques and Drafts of the Emigration Commissioners should be duly honored, to the extent of £10,000, in addition to the £8,000 herein referred to, to be charged against any funds the Bank may have standing to the credit of this Government; or if there be no such credits, to be then charged as advances on the Debentures transmitted by this Mail.

I have, &c.,

G. K. INGELOW, Esq.,

Manager of the Oriental Bank.

HENRY LANE.

No. 27.

THE SECRETARY TO THE TREASURY to G. K. INGELOW, Esq.

The Treasury, New South Wales,

9 November, 1857.

SIR,

With reference to my letter of the 7th instant, accompanying the Terminable Debentures for £100,000 sent by this Government, to replace those of like amount transmitted to London in May last, I am directed by the Treasurer to request, that you will invite the Chief Manager's attention to the statement made on the face of each of these documents, to the effect that, "when the Debenture is issued, the place at which the purchaser wishes the interest first falling due to be paid shall be stamped or written thereon, and any change in the place of payment of interest be registered at the Office of the Banking Agents six months prior to the date on which such interest shall be payable, and the substitution of one place for the other endorsed on the Debenture," and that you will impress upon Mr. Cargill the necessity for careful compliance with these conditions, in every instance of sales or transfers being effected through the agency of the Bank in London.

I have, &c.,

HENRY LANE.

G. K. INGELOW, Esq.,

Manager, Oriental Bank, Sydney.

P.S.—It may not be unnecessary to add, that notification to you of the intended transfer of Debentures from London to Sydney should at once be made, with a view to the payment of the interest in the latter place being duly provided.

No. 28.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

The Treasury, New South Wales,

1 February, 1858.

SIR,

I do myself the honor to invite attention to your two letters addressed to my predecessor, dated the 5th October, 1857, wherein you proposed, with the view of placing Thirty thousand Pounds at their disposal in the London Oriental Bank, the Colonial Government should deposit a like sum to their credit in the Sydney Branch, and that, on the Government placing Terminable Debentures in your hands, this Thirty thousand Pounds might, if requisite, be applied in the purchase of Bills of Exchange to meet any credits that may have been issued in London against the security of the deposit.

This proposal, in reference to the deposit of the Thirty thousand Pounds and to the issue of the Debentures, was agreed to by my predecessor, and, in further compliance with the terms thereof,—

I have now to inform you that at an early opportunity I intend to forward a cheque on the Oriental Bank, Sydney, for the purchase of your Drafts at 30 days, in order that the sum of (£29,000) Twenty-nine thousand Pounds may be transferred to your London Establishment to cover the advances there made on the security of the aforesaid deposit.

I have, &c.,

R. CAMPBELL.

GEO. K. INGELOW, Esq.

Manager, Oriental Bank Corporation.

No. 29.

THE SECRETARY TO THE TREASURY to G. K. INGELOW, Esq.

The Treasury, New South Wales,

6 February, 1858.

SIR,

I have the honor to enclose herewith a set of Bills of Exchange on London for the sum of £29,000, and to request that you will have the goodness to transmit the same to the Chief Manager of the Oriental Bank Corporation, London, for the purpose of being applied as explained in the letter from this Department, dated 1 February, No. 16.

An acknowledgment of the enclosure is requested.

I have, &c.,

HENRY LANE.

GEO. K. INGELOW, Esq.

Manager, Oriental Bank Corporation.

No. 30.

THE HONORABLE THE TREASURER to G. K. INGELOW, ESQ.

The Treasury, New South Wales,

4 February, 1858.

SIR,

I have the honor to inform you that this Government will require, for the payment of their expenses in London, a sum of Eighteen thousand seven hundred and ninety-^{£18,791 7s. 2d.} one pounds seven shillings and two-pence of the amount (£90,000) placed to the credit of the Colony on account of the Terminable Debentures for One hundred thousand Pounds transmitted for sale by my predecessor on the 7th November, 1857. I have, accordingly, to enclose cheques Nos. 40 to 43 for the respective sums of £7,500, £1,079, £10,000, and £212 7s. 2d., and to request that you will at once supply me with Letters of Credit on the Court of Directors in London in favor of:—

The Colonial Land and Emigration Commissioners	...	£ 7,500	0	0	
Do.	do.	...	1,079	0	0
Ed. Barnard, Esq., late Colonial Agent General	...	10,000	0	0	
The Oriental Bank Corporation, London	...	212	7	2	

In all £18,791 7 2

charging the same against the aforesaid £90,000 held by your London Bank at the disposal of the Colonial Government.

I have, &c.,

RT. CAMPBELL.

GEO. K. INGELOW, ESQ.,

Manager, Oriental Bank Corporation.

No. 31.

G. K. INGELOW, ESQ., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,**Sydney, 5 February, 1858.*

SIR,

I acknowledge receipt of your letter, 58-19, of 4th instant, stating that the Government will require certain credits in London, aggregating £18,791 7s. 2d., against the Terminable Debentures for £100,000, transmitted for sale on the 7th November last.

2. Reference to this letter (1,112 of 5th November,) will show that the Government obtained no credit against these Securities, not being prepared to authorize their sale at any limit below the then ruling quotation for New South Wales Debentures (in small amounts) in London.

3. The limit then named by the Government for the sale of the £100,000 was 95—a rate which later advices show to be above the price they will realize, leaving altogether out of the question the margin the Bank are entitled to demand between the last London quotation and the limit to be given for sale.

4. Before entertaining the question of granting credits in London against Government Debentures, I beg to receive your views on this important preliminary matter, namely—the limit for sale to be given to the Bank, in London.

I have, &c.,

GEO. K. INGELOW,

Manager.

THE HONORABLE

THE TREASURER.

No. 32.

THE HONORABLE THE TREASURER to G. K. INGELOW, ESQ.

The Treasury, New South Wales,

5 February, 1858.

SIR,

Replying to your letter of this date upon the subject of the credits required by this Government against the Terminable Debentures of £100,000, transmitted for sale on 7th November last, it would appear that the limit at which the Government are prepared to sanction the sale of these Debentures was fixed by my predecessor, in his letter of 5th

November last, at 95 per cent., being in terms of the original agreement, under which I now propose to draw.

The continual fluctuations in the prices of Securities in the London market justify my assuming that this limit of 95 per cent. will be obtained; but as the question cannot be discussed until the arrival of the April Mail, it appears to me premature at present to enter upon the consideration of the subject of altering the limit given to the Bank, in London.

Under the circumstances of my asking the Bank to negotiate a new set of Debentures, I admit that this question respecting the limit for sale might be fairly submitted for consideration, but, in the present state of the matter, I conceive it to be irrelevant.

I have, &c.,

R. CAMPBELL.

GEO. K. INGELOW, ESQ.,

Manager, Oriental Bank.

No. 33.

G. K. INGELOW, ESQ., to THE HONORABLE THE TREASURER.

Oriental Bank Corporation,

Sydney, 6 February 1858.

SIR,

In reply to your letter No. 58-20, I beg to state that your predecessor in office did not fix a limit of 95 per cent. on the sale of the £100,000 of Terminable Debentures in terms of the original agreement. By reference to the correspondence at that date, you will find that the Government declined taking advances at all on these Securities in terms of the agreement or on any terms at all; but preferred adopting another course altogether, namely, that of obtaining credits against a deposit of cash, leaving the securities entirely free, and instructing their sale at or above a certain rate then named by themselves. To that limit the Bank was no party, and it was free to the Government to have fixed any rate they chose on the sale.

2nd. Government now, for the first time, wish to obtain credits on the securities deposited in the Bank's hands for sale—but consider the question of the limit to be given to the Bank for sale as *irrelevant*.

3rd. I am at a loss to conceive how such a view can be taken, seeing that the whole correspondence which has passed between the Government and the Bank, from the very commencement, will show most clearly that the limit to be given from time to time upon the sale of any securities on which the Bank might be called upon to issue credits, was the most prominent feature in the agreement, and one which was only arranged after considerable discussion.

4th. The terms of this agreement having, at last, been brought to a conclusion betwixt the Government and myself (as the representative of the Bank in the Colony,) was ratified by the Court of Directors in England, with some modifications; and I am certainly not prepared, the more particularly at the present time, to consent to a complete overthrow of the most essential point in that agreement.

5th. I would moreover submit to your consideration the arguments made use of by myself when discussing with your predecessor, Mr. Donaldson, the desirability of the Bank having such a latitude in the disposal of securities as would in all reasonable probability ensure a sale, as it would be highly detrimental to the interests of the Government, should the limit at any time given prevent the negotiation of the securities. I need hardly point out with what force this argument now applies, when the Bank of England minimum rate of discount is 10 per cent., with prospect of its being still higher—under such circumstances the Government would have to pay not less than 11 per cent. upon any advances the Bank might have made in London.

I have, &c.,

GEO. K. INGELOW,

Manager.

THE HONORABLE

THE TREASURER.

No. 34.

G. K. INGELOW, ESQ., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,
Sydney, 8 February, 1858.*

SIR,

As you intimated to me, in the interview I had with you at the Treasury on Saturday, that you considered my demurring to grant credits on London to the Government, against securities, unless the Bank was allowed to open the question of the limit to be fixed for the sale of these securities as tantamount to a repudiation of the terms of the contract between the Government and the Bank, and that you should, therefore, bring the matter in dispute under the notice of your colleagues, this day,—I beg to pen a few remarks, with a view to exhibit, in as condensed a form as possible, the position held by the Bank on the one side, with that which I understand you to hold, as Treasurer, on the other.

The Bank holds that the Government, when requiring credits, on any occasion, against securities, must first fix a limit for sale, "to be computed at a margin of 5 per cent. below the last actual selling rate advised from London," and, that being done, the Bank can be called upon to grant these credits to the extent of 90 per cent. of the nominal value, (if the securities are not quoted below par,) or to such an extent "as will bear such an approximate relation to the limit given for sale, and the last reported London sales (that is on the 11th April, 1857, when the quotation was par,) as now obtains."

3. The whole correspondence shows that this position cannot be controverted, and the first and only transaction, up to this date, entered into under this agreement, fully illustrates the position; thus, your predecessor in office, Mr. Donaldson, when handing the Bank £100,000 of Debentures, gave a limit of 95 for the sale of such portion of them as he then required credits for—the last reported London sale for £100,000 held by the Bank of New South Wales being par, against the remainder (for which he required no credits,) he gave his own limit for sale, which was par, and which had nothing to do with the agreement. On the other side, the position I understand you to assume is that your predecessor, Mr. Jones, having handed to the Bank £100,000 of securities in November last, *against which he took no credits*, and on the sale of which he fixed a limit of 95 per cent., the Bank is now bound to act, as, by their silence, they gave consent to that limit. To which I reply, in the first place, that so long as the Government did not ask for credits against the securities, it was no business of the Bank to interfere in the matter, and that, if we had assumed such a position, we should have laid ourselves open to the reply, that it would be time enough for us to discuss the question when we were called upon to make our advances. If the then Treasurer had fixed a limit of 50 per cent. premium on the sale, we should have made no remark, under the circumstances, but have declined to grant credits if they had been asked for, either at that price or at the 95 per cent., as the latter figure would not have left us the margin of 5 per cent. on the then last reported London sales.

4. But even allowing, for the sake of argument, that we were parties at that time to a limit of 95, and had even granted credits with such a limit, we could not be called upon to do so afterwards to any further extent at the same limit, if, in the mean time, later news had been received from England shewing a fall in the price of securities, as the limit for sale, whenever credits are asked for, must be adjusted to the last reported London rates.

5. What the Bank cannot do is this, that, having granted credits, they cannot call upon the Government to amend their limit for sale until advice reaches the Colony that the first received limit is not obtainable.

6. I beg to express my perfect willingness to meet the wishes of the Government by granting them the credits they ask for, but not whilst the Government hold the position they are now doing. I will not strain any point in the agreement, but, on the contrary, I will waive what may appear any unnecessary precaution on the part of the Bank, or otherwise endeavor to meet their requirements for this Mail.

I have, &c.,

GEO. K. INGELOW,
Manager.THE HONORABLE
THE TREASURER.

No. 35.

No. 35.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

The Treasury, New South Wales,

10 February, 1858.

SIR,

I do myself the honor to inform you, that I have placed myself in communication with the Law Officers of the Crown upon the subject of your letters of the 6th and 8th instant, and especially with reference to the position maintained by you, that the Government, when requiring credits on any occasion against securities, must first fix a limit for sale, to be computed at a margin of 5 per cent. below the last actual selling rate advised from London.

I have just been favored with their opinion upon the terms of the agreement now under discussion; and I am advised, that the liability of the Bank to make advances arises the moment that Debentures are placed with the Bank, and has nothing whatever to do with any limit to be fixed by the Government for the sale of the Debentures; and that if the Bank desires now to make its advances conditional on a limit being fixed, the Bank violates its agreement.

I shall therefore consider it my duty, without delay, to bring the correspondence which has passed between us under the consideration of the Executive Council.

But as the Mail will close to-morrow, and in order to avoid any delay in the arrangements already made for remittances by the "Simla," I now beg to enclose, *under protest*, a cheque for the sum of £18,791 7s. 2d., against which you will have the goodness to furnish me with a Draft at thirty days' sight on your London Office.

The decision of the Government upon the point raised by the Crown Law Officers shall be made known to you as early as possible.

I have, &c.,

RT. CAMPBELL.

GEO. K. INGELOW, Esq.,

Manager, Oriental Bank Corporation.

No. 36.

G. K. INGELOW, Esq., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,**Sydney, 12 February, 1858.*

SIR,

I beg to acknowledge receipt of your letter No. 27, of 10th instant, in which you state that having consulted the Crown Law Officers, they have given it as their opinion that the liability of the Bank to make advances on Debentures "has nothing whatever to do with any limit to be fixed by the Government for sale," and that, therefore, if the Bank desires now to make a limit for sale one of the conditions on which it will make the advances, it violates its agreement.

2. The opinion thus communicated to me being in direct opposition to the "Précis of Terms," as drawn up by the Secretary of Finance and Trade of date the 18th April, 1857, I do not see that any conclusion is left open to me to draw than that the Crown Law Officers have not had the opportunity of consulting all the documents relating thereto.

3. I beg, therefore, that when the matter is brought under the consideration of the Executive Council, attention may be drawn to the clause commencing with the words "the limit within which the Debentures are to be held, &c."

4. There is one other point to which I will again refer, and that is the question raised as to whether the Bank was not now bound to act upon a limit for sale as fixed by your predecessor in his letter of 5th November, at 95 per cent., "being in terms of the original agreement."

5. I have had the opportunity of consulting with your predecessor, Mr. Jones, on this point since the date of my last letter, and I find that he entirely confirms the views I have already expressed—namely, that the Bank was no party to that limit—that it was not given with reference to the agreement—and that it was understood that the Bank would not give credits

credits at a limit for sale of 95—that the Government at the time adopted a plan at the suggestion of the Bank, which avoided the discussion of the question, and left it open for consideration should credits be required before the return advices to that Mail had reached the Colony.

6. I am, therefore, thus completely relieved from the conclusion which has been drawn, that I am not now willing to carry out a special arrangement entered into with your predecessor, whilst at the same time the offer I made to you verbally on the 9th instant, to forego, for this Mail, the margin of 5 per cent., which I consider the Bank entitled to receive, and to grant the desired credits at a margin for sale of only $1\frac{1}{2}$ on the last London quotations—(say 92½ against 94)—will show that I had no wish to interpret the agreement in an illiberal spirit.

I have, &c.,

GEO. K. INGELOW,

Manager.

THE HONORABLE

THE TREASURER.

No. 37.

G. K. INGELOW, Esq., to THE HONORABLE THE TREASURER.

Oriental Bank Corporation,

Sydney, 19 February, 1858.

SIR,

Referring to the interview which I had with yourself and colleagues on Tuesday last, when the questions at issue between the Government and the Bank on the matters detailed in the late correspondence were discussed, I have to inform you that I am prepared to authorise the cancelment of the Bills of Exchange purchased by you for last Mail, and to return the money paid for the same, on the understanding that the Government withdraw the limit for sale of 95, fixed by your predecessor in office, Mr. Jones, in his letter of 5 November last, on the £100,000 of Debentures then handed in for transmission to London, the Bank being at liberty to proceed, under the terms of the agreement, to the sale of a sufficient quantity of these securities as will provide funds for the advances thus made to the Government.

I have, &c.,

GEO. K. INGELOW,

Manager.

THE HONORABLE

THE TREASURER.

No. 38.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

The Treasury, New South Wales,

22 February, 1858.

SIR,

I have the honor to acknowledge the receipt of your letter of the 19th instant, No. 8-14, in reference to an advance required by me upon the Terminable Debentures for £100,000, which were placed in your hands by my predecessor, Mr. Jones, on the 5th November last, and, in reply, I beg to convey to you the assent of the Government to the cancellation of that part of Mr. Jones' letter which refers to a limit upon the sale of these Debentures, leaving the Bank in London to dispose of them upon the terms fixed in the original agreement.

Any further advances upon these securities that may be required by the Government will, of course, be made upon similar terms.

You will now have the goodness to return me the sum of £18,791 7 2
paid by me under protest, together with the premium thereon of 234 17 10

Amounting together to £19,026 5 0

charging the first-mentioned sum against the Debentures held by your Bank in London, as originally requested in my letter of 4th instant.

I have, &c.,

RT. CAMPBELL.

GEO. K. INGELOW, Esq.,

Manager, Oriental Bank Corporation.

No. 39.

ARCHD. STEWART, Esq., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,**Sydney, 23 February, 1858.*

SIR,

In Mr. Ingelow's absence, I have the honor to acknowledge receipt of your letter of yesterday, cancelling the limit for sale at 95 per cent. of the £100,000 Debentures forwarded to London on the 7th November last, and directing us to proceed in terms of the original agreement to sell a sufficient amount of the said Debentures to meet the credits for £18,791 7s. 2d., issued to you on the 10th instant.

The sum of £19,026 6s. cash which you handed to us in payment of our Draft on London for £18,791 7s. 2d., against which the credits were charged in the first instance, we now return you, as requested, by our cheque in your favor. The entries for the Draft in question have, with exchange, been reversed in your general account, and we shall feel obliged by your sending us your cheques as a voucher.

I have, &c.,

ARCHD. STEWART,

*Pro Manager.*THE HONORABLE
THE TREASURER.

No. 40.

THE HONORABLE THE TREASURER to G. K. INGELOW, Esq.

*The Treasury, New South Wales,**4 March, 1858.*

SIR,

With reference to my letter of the 22nd ultimo, I have the honor to inform you that this Government will require, for the payment of their expenses in London, a further sum of £42,358 12s. 4d., to be charged against the proceeds of the Terminable Debentures for £100,000, transmitted for sale on the 7th November last.

I have accordingly to enclose cheques, No. 57 to 62, for the respective sums of £16,953 1s. 1d., £17,082 10s., £1,141, £5,050, £1,957 1s. 3d., and £175, and to request that you will supply me with Letters of Credit on the Court of Directors in London in favor of—

The Oriental Bank, for Interest on Debentures	16,953	1	1
The Bank of New South Wales, ditto	17,082	10	0
Emigration Commissioners	1,141	0	0

I have, &c.,

RT. CAMPBELL.

G. K. INGELOW, Esq.,
Manager, Oriental Bank Corporation.

No. 41.

G. K. INGELOW, Esq., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,**Sydney, 8 March, 1858.*

SIR,

I acknowledge receipt of your letter, No. 58-60, of 4th instant, in which application is made for further credits on London to the extent of £42,358 12s. 4d., to be charged against proceeds of Debentures forwarded for sale in November last.

The Government have been fully advised as to the position of these Securities, and that they are not negotiable, at present, to anything but a very limited extent—nor were the

the credits applied for last Mail granted by the Bank until after considerable discussion had taken place, and the Government made aware of the impossibility of their relying upon the sale of Debentures. To meet what was represented as a pressing emergency, and on the verbal communication from the Treasurer that no further credits would be asked for, at present, against Debentures, the Bank agreed to return the money previously paid in for the purchase of its Bills on London, and have now to instruct their Head Office to endeavour to dispose of about £30,000 of these Securities.

Under these circumstances the Government will be prepared to learn that I am not disposed to issue the further large sum of credits now applied for, as the Bank is most fully entitled to avail itself of the position afforded to it by the concluding paragraphs of letter of 23rd April, 1857, together with the Treasurer's reply thereto, of date 21st May.

Although the Government do not appear to admit, by their correspondence, the fact of their Securities not being negotiable instruments in London, in any large amount, notwithstanding the continued advices to that effect, which for many months past I have continually pressed upon their consideration, I am still desirous to assist in meeting this further demand. I have already placed myself in communication with the Joint Stock and Bank of New South Wales, with a view to their making, in conjunction with ourselves, a temporary advance to the Government. The result shall be communicated in the course of to-day or to-morrow.

THE HONORABLE
THE TREASURER.

I have, &c.,
GEO. K. INGELOW,
Manager.

THE HONORABLE
THE TREASURER.

No. 43.

G. K. INGELOW, Esq., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation;
Sydney, 18 March, 1858.*

SIR,

I have the pleasure to advise you, that we are in receipt of information, by this Mail, of a more favorable character than for some time previously, as regards the general aspect of the money market, and the consequent effect upon the position of Colonial Securities, which had been all but unsaleable.

The receipt is acknowledged of the £100,000 of Terminable Bonds transmitted in November last, upon which your predecessor then fixed a limit for sale of 95 per cent.; and although that price was not obtainable at the date of their letter (16th January), the quotation being 93½ to 94½, they hold out the hope that they may be placed at that figure.

Under

Under these circumstances, I have given instructions for the preparation of the credits applied for in your letter of the 4th March, for payment of the interest and pensions due in London on the 1st July next, charging the amount of the same against the anticipated proceeds of the sale of the above-mentioned Bonds.

I have, &c.,

GEO. K. INGELOW,
Manager.

THE HONORABLE
THE TREASURER.

BANK ASSISTANCE TO GOVERNMENT.

No. 1.

PROCEEDINGS of the Executive Council on the 31st August, 1857, with respect to the return of Debentures from London.

Minute No. 57-41. Confirmed 7th September, 1857.

At the instance of the Honorable the Colonial Treasurer, His Excellency the Governor General informs the Council that certain Debentures, both Terminable and Intermittent, which had been transferred to the London Register, have recently been presented at the Treasury, and the interest thereon claimed to be paid in the Colony, from which it is inferred that the Money Market in England is not favorable to further sales of Debentures on Government account. Under these circumstances, His Excellency consults the Council as to the propriety of making arrangements for obtaining credit from one of the Banks for such sum as may be considered sufficient to provide, during the next eight months, for the prosecution of Public Works, actually in progress or contracted for, so as to avoid the necessity to borrow money by a further issue of Debentures, in case the Money Market should become so unfavorable as to reduce their market price much below the present rates.

2. Having deliberated upon this matter at some length, the Council express their opinion that, before resorting to other expedients, it would be desirable to test the local Money Market, and recommend, therefore, that the Honorable the Treasurer should, under authority already granted by them, call for Tenders for Debentures to the extent of £25,000; but, should the prices offered not be such as to render it desirable to sell at those rates, they advise that he be then authorized to sell, upon application at the Treasury, Debentures to the extent of £25,000, without competition, and, until further advised, at the rate of £98 for each £100 applied for.

EDWARD C. MEREWETHER,

Clerk of the Council.

Executive Council Office,

Sydney, 9 September, 1857.

No. 57-631.

No. 2.

MINUTE of Colonial Treasurer respecting Advertisement for Tenders for Intermittent Debentures.

I submit, for the information of His Excellency and the Executive Council, a statement shewing that in reply to the advertisement calling for Tenders for the sum of £25,000 in Intermittent Debentures, on or before Thursday last, Tenders were sent in for £3,000, of which £1,400 was accepted at and above 98 per cent., and £1,600 declined.

This, taken in connection with the result of the previous sale, shews that the local demand for our Intermittent Debentures has, for the present, almost ceased. Under these circumstances, I cannot advise that the suggestion of my predecessor, viz., that these Debentures be offered for private sale, at a fixed price, be acted upon. It would not, I think, in the present condition of the money market, lead to the sale of any amount of Debentures, and would have a tendency to depress their value below the present rates.

What the real nature of the engagements of the Government under the Loan Acts is, I am now endeavouring to ascertain. If those of a pressing nature cannot be met by the sale of Debentures, at a price that may be deemed satisfactory, it may become necessary that a temporary loan should be negotiated with one or more of the Banks. But this is a step which should only be resorted to under the pressure of urgent necessity. As a necessity of this kind may arise during the absence of the Governor, it may be advisable to take the sanction of His Excellency for such a step prior to his departure.

So

So soon as I can ascertain the extent of the pressing Loan requirements of the Government, up to the close of the present year, and during the first six months of 1858, I shall be prepared with specific recommendations for meeting these requirements. In the meantime, I may state, for the information of His Excellency and the Council, that I have been informed, by the Manager of the Oriental Bank, that there is scarcely a possibility of any portion of the £100,000 remitted to London in Interminable Debentures being disposed of, and that he advises that these securities should be recalled, and others of a different character substituted for them. Should this course become necessary by the ensuing Mail, who is to sign these Debentures in lieu of His Excellency?

R. J.

September 14, 1857.

No. 3.

EXTRACT from Proceedings on the 14th September, 1857, with respect to the mode of providing Funds for public purposes. Minute No. 57-44.

The Executive Council advise that, if during the next few months it be found that the pressing engagements of the Government under the Loan Acts cannot be met by the sale of Debentures at satisfactory prices, the Treasurer be authorised to negotiate with one or more of the local Banks a temporary credit for an amount not exceeding £200,000.

EDWARD C. MEREWETHER,
Clerk of the Council.

24 September, 1857.—No. 57-671.

No. 4.

G. K. INGELow, Esq, to THE HONORABLE THE TREASURER.

• Oriental Bank Corporation,
Sydney, 13 November, 1857.

DEAR SIR,

I have been, for some little time past, intending to urge upon your attention the necessity which exists, in my opinion, for the adoption of some alteration in the mode by which money is raised on loan.

The course which has been hitherto pursued is one opposed to the usual mode of proceeding where England or any of the Colonies or Foreign States borrowing money in England propose contracting a public loan. There, when the Government propose to borrow money for home service, or offer a guarantee upon any Colonial loan to be raised in England, the whole scheme in its entirety is laid before the public, and who thus have all the data before them necessary to enable any one to form an opinion of the value of the security—the probable position it will bear upon the Stock Exchange—the ability of the Government to meet the additional burden—the effect which the loans will have on other securities of a like character, and so on. Capitalists are then always found who will come forward and tender, whether it is a matter of £100,000 for one of the West India Islands, half a million for Canada or New Zealand, or 10 to 20 millions for extraordinary home charges; but here, on the contrary, there has never been any regular system or plan. The Ministry, from time to time, ask for authority to borrow such sums of money as it may appear desirable or necessary to raise for the public service, and then to make use of that authority, from time to time, as the exigencies of that service require. The public are left entirely in the dark as regards the future—they have no means for forming an opinion as to the amount of loan the Ministry may propose to contract, nor, when that amount has been announced, have they any means of ascertaining when and how the loan will be issued, nor even the terms.

The consequences inevitably resulting from such a course of proceeding are, that all classes of buyers are driven away, whether they are buyers for investment or speculators; such uncertainty attends upon the market value that no one is prepared to make a reasonable offer, and not only that, but all the present holders become anxious to realize, from a fear that they may be left in the back ground in some future movement by the Government. This is the case at the present moment—there are very few buyers, but plenty of sellers; and whilst the present system is pursued, the more the Government attempt to raise money, the greater will be the difficulty experienced in raising it.

In

In lieu, therefore, of the present mode of proceeding, I would suggest the advisability of the Government laying down a definite scheme before they take any further steps for raising money. Let this comprise the total amount proposed to be raised on loan for public works (not mere yearly instalments). Let the public and capitalists have the opportunity of examining this proposed loan, and forming an opinion as to its reasonable or unreasonable character, as regards the position of the Colony, the number of its inhabitants, and the probability of the Revenue of the Colony being able to bear the additional burden. Let it be shown to capitalists at home that the works upon which the money is to be expended are of a nature likely to develop the resources of the Colony; let there be a guarantee that no further sums of money will be raised during the emission of this loan, or any other steps taken to the prejudice of the public creditor; if all this were done, then, I think a negotiation for a considerable sum of money (to be taken up, if it is thought desirable, by instalments,) could be successfully conducted, but until some change of this character is introduced, I feel persuaded that nothing but failure and mortification will be the result. It will be all one whether a resort is had to Exchequer Bills or short dated Debentures, or to a higher rate of interest, or issuing at a heavy discount, for every expedient will drive down the market price outside, and create increased eagerness on the part of present holders to get rid of their securities by underselling the Government.

I am, &c.,

GEO. K. INGELOW.

THE HONORABLE

R. JONES, Esq.

P.S.—There is another point which must be considered, and that is the position of the holders of Interminable Debentures. As it is now thought expedient to abandon that mode of raising money, and resort to some other which may be viewed more favorably by lenders, it is evident that the value of the Interminable Debentures will be depreciated, and that just in proportion to the additional value of the new feature introduced or rather re-introduced. The holders, therefore, of these interminables will form a barrier against the efforts of the Government to raise new loans, as they will be offering their securities at a heavy discount.

The course pursued by the Indian Government to relieve themselves from a like position has been as follows:—

About two years ago, when money was very plentiful, they succeeded in converting their five per cent. paper into fours; but requiring shortly after to raise money when it was scarce, they opened a new loan at five per cent. The fours immediately fell from par to 20 per cent. discount, and all the efforts of the Government were abortive, until they resorted to the expedient of inviting the holders of these depreciated fours to subscribe to the new loan, by agreeing to take half payment of their subscriptions in fours *at par*—that is to say, the holder of £1,000 in four per cent. paper, by bringing with him an additional £1,000 in cash, received £2,000 in five per cents. at par. I think it is worth the consideration of Government whether they had not better issue some such invitation to the holders of the Interminable Debentures here.

G. I.

No. 5.

G. K. INGELOW, Esq., to THE HONORABLE THE TREASURER.

Oriental Bank Corporation,

Sydney, 17 November, 1857.

MY DEAR SIR,

I will trouble you with a few more remarks in continuation more particularly of the postscript to my last letter.

I now give you the exact terms which the Government of India lately adopted when requiring to raise money, in order to prevent the holders of securities bearing a lower rate of interest rendering their efforts abortive.

On the 20th July, (the day the Government notification appeared), 5 per cent. was quoted at 1 to 2 dis.; 4 ditto at 17 to 19. Subscriptions to the new five per cent. loan were invited on the following terms:—

56—B

The

The Government to receive,				And issue in exchange:—	
1st.	£50	0	0 in Cash	}	£150 in 5½ per cent. paper at par.
	100	0	0 in 4½ per cent. paper		
2nd.	100	0	0 in Cash	}	£200 in ditto.
	100	0	0 in 4 per cent. paper.		
3rd.	150	0	0 in Cash	}	£250 in ditto.
	100	0	0 in 3½ per cent. paper.		

Now, here the Government had to make a considerable sacrifice, by undoing all their previous work, in lowering the rate of interest on their debt; but it was a sacrifice they could not avoid, and was a lesser one than any they could take which disregarded the position they already occupied with their existing creditors. They had not well weighed the consequences possibly resulting from their (previous) policy, nor had they exercised sufficient foresight when making those alterations.

Now, the position of the Government here is a very similar one—the former Ministry found money here very plentiful, some little time back, and took advantage of that state of matters to issue a security which, whilst going down well at the time, is not saleable now; recourse is, therefore, had to the re-issue of the old description of Debenture, without any regard being paid to the holders of these new (Interminable) securities, and who certainly had purchased under the impression that the Government of the day had well considered their position, and would abide by the change introduced. The holders, therefore, of these Debentures stand in the path of the Government somewhat in the same way as the holders of the “fours” did in India, and they will meet every effort of the Government to raise money by a corresponding effort to dispose of their securities; or, in other words, they will accommodate themselves to the altered state of matters, and will take such a rate, where they want to sell, as will produce to the buyer a better investment than that offered by the Government.

The Government can remedy this evil (and there is, in some measure, a moral obligation to do so,) on far easier terms than the Indian Government had to submit to. You are not called upon, indeed, to make any sacrifice worth mentioning, but only to agree to extinguish a particular form of security for another form bearing the same rate of interest. I need not now go into any calculation as to what I consider would be fair terms between the Government and the holders of these interminables, because I am, on behalf of the Bank, only one holder amongst many; but I am satisfied that with a fair display of moderation on the part of both, that an arrangement might be concluded between the Government and the holders which would be beneficial to both sides.

The difference to the Government between the issue of an interminable and a long dated Terminable Debenture is hardly appreciable, for, at the end of the term of the latter, the Government will take them up either here or in London by the issue of others; and, unless the finances of the Colony are greatly mismanaged during the next 20 years, the ability of the Government to deal in the matter ought to prevent any loss or sacrifice.

I am, &c.,

GEO. K. INGELow.

THE HONORABLE

R. JONES, Esq.

No. 6.

MINUTE of Colonial Treasurer, submitting copy of Bill to authorise issue of Treasury Bills.

I submit, for the information of the Governor General and the Executive Council, a copy of a Bill which I propose to introduce into the Legislative Assembly, to authorise the issue of Treasury Bills to an amount not exceeding £400,000, and I beg to suggest, if the Council concur in the propriety of introducing this measure, that His Excellency will be pleased, on Tuesday next, to transmit a Message to the Assembly, recommending that provision be made by Parliament to authorise the issue of Treasury Bills to the extent above specified.

R. J.

21 November, 1857.

(Here follows draft of Treasury Bills Act.)

The

The Executive Council, concurring in the propriety of introducing the measure within referred to, advise that His Excellency the Governor General should, by Message, submit the subject to the consideration of the Legislative Assembly, and recommend that provision be made by Parliament to authorise the issue of Treasury Bills to the extent specified, viz., £400,000.

EDWARD C. MEREWETHER,

Clerk of the Council.

(Confirmed 30 November, 1857—No. 57-804.)

No. 7.

(CIRCULAR)

The Treasury, New South Wales,
14 December, 1857.

SIR,

The Legislature having passed the Bill to authorise the issue of Treasury Bills to an amount not exceeding £400,000, the Government are desirous of ascertaining whether one, or more, or all of the Banks would be willing to enter into an arrangement to purchase the whole of those Bills which it may be found necessary to issue. I should, therefore, feel obliged if you would bring this subject under the consideration of your Board, and inform me, at your earliest convenience, if they feel disposed to enter into, or join in, such an arrangement.

To assist your Board in deciding whether it will be expedient for your Bank to enter into the arrangement here suggested; I shall briefly explain the views and intentions of the Government in reference to the issue of these Treasury Bills, and the provision to be made for the payment of them as they fall due.

It is intended to issue these Bills (for sums of from £100 upwards) as the requirements of the Government arise. They will have a currency of twelve months, and will bear such rate of interest, not exceeding four pence per centum per diem, as may be agreed upon. It will not be necessary to issue any before the month of February next. From that time the Government will probably require to raise from £25,000 to £40,000 a month—say, on an average, £30,000 a month—until the whole amount be issued, unless, in the mean time, a permanent loan can be negotiated in London.

So soon as the Legislature has decided what amount of loans it will sanction this Session, the Government will make arrangements for negotiating a more permanent loan in London, for the entire amount required by the Colony for a given period, such loan to be paid up in instalments to suit the requirements of the Colony. So much of the permanent loan thus raised as may be necessary to take up the Treasury Bills which may be issued will be applied to this purpose, as these Bills fall due. No portion of the more permanent loan will be offered in Sydney.

The Interest of the Treasury Bills will be provided for out of the Current Revenue of the year in which they fall due.

The Government, in endeavouring to negotiate the temporary loan which it has become necessary to raise on Treasury Bills, in one transaction with the Banks, are mainly influenced by a conviction that such an arrangement will be more convenient for the requirements of the public service, and less disturbing and prejudicial to the ordinary monetary operations of the community, than if these Bills are offered for sale from time to time, as the Debentures have hitherto been.

A Copy of the Treasury Bills' Bill, as passed by the Legislature, is enclosed.

A letter similar to this is being simultaneously addressed to the Managers of all the other Banks in Sydney.

I am, &c ,

R. JONES,

Colonial Treasurer.

THE MANAGER OF THE —

This Circular was addressed to the following Banking Companies:—

Union Bank of Australia.	Oriental Bank.
Australian Joint Stock Bank.	Commercial Bank.
English, Scottish, and Australian	Bank of New South Wales.
Chartered Bank.	London Chartered Bank.
Bank of Australasia.

*Commercial Banking Company,
Sydney, 15 December, 1857.*

SIR,

I beg to acknowledge the receipt of your circular letter of 14th instant, upon the subject of Treasury Bills about to be issued under the Act recently passed.

At to-day's meeting this letter was laid before the Board; but owing to the absence from town of some of the Directors, as well as the importance of the subject, it was deemed advisable to defer any decision until a full Board Meeting can be obtained.

So soon as a decision is arrived at I will again address you.

I am, &c.,

ZACHY. INGOLD,
Manager.

THE HONORABLE
THE COLONIAL TREASURER,

No. 9.

R. WOODHOUSE, ESQ., to THE HONORABLE THE TREASURER

*The Bank of New South Wales,
Sydney, 16 December, 1857.*

SIR,

Before replying to the immediate subject of your letter of the 14th instant, the receipt of which I have the honor to acknowledge, I am desirous of ascertaining if, in the event of this Board making a satisfactory offer to the Government to negotiate the whole or a portion of the Treasury Bills which it is in contemplation to issue (say £400,000), would the Government be prepared to transfer to the Bank its working account, or such portion thereof as would bear a rateable proportion to the amount which the Bank may offer to advance; or, in other words, would the Government transfer its accounts to the extent of one-fourth, one-third, one-half, or the whole, in the event of the Bank's offer for either of these proportions being accepted.

I have, &c.,

THE HONORABLE
THE COLONIAL TREASURER,
Sydney.

R. WOODHOUSE.

No. 10.

THE HON. THE TREASURER to THE SECRETARY TO THE BANK OF NEW SOUTH WALES.

*The Treasury, New South Wales,
Sydney, 16 December, 1857.*

SIR,

In reply to your letter of this day's date, I beg to say that the arrangements into which the Government have entered with the Australian Joint Stock Bank would make it exceedingly difficult to transfer any portion of its account from that Bank to the Bank of New South Wales.

The Government would, therefore, prefer that the Bank of New South Wales should deal with the proposal respecting the purchase of Treasury Bills on its own merits.

I have, &c.,

THE SECRETARY TO THE
BANK OF N. S. WALES,
Sydney.

No. 11.

G. K. INGELOW, Esq., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,
Sydney, 17 December, 1857.*

SIR,

I beg to acknowledge receipt of your letter, No. 1179, of 14th instant, as also copy of the Act authorizing the issue of Treasury Bills.

The question is asked in this letter, whether this Bank will enter into an arrangement, either by itself or in conjunction with the other Banking Institutions in the Colony, for the purchase of the whole of the Bills to be issued under this authority, say to the extent of £400,000, in instalments of about £80,000 per month.

I have, since the receipt of this communication, endeavoured to ascertain how far a combined movement on the part of the Banks on this question would probably take effect; but I do not find, as the result of these inquiries, that there is any probability of such conclusion being arrived at.

I am not prepared at the present time to enter, on behalf of this Bank, into any negotiation with the Government in which we should be called upon to act otherwise than in conjunction with our neighbours.

I have, &c.,

GEO. K. INGELOW,
Manager.THE HONORABLE
THE TREASURER.

No. 12.

C. ROBERTSON, Esq., to THE HONORABLE THE TREASURER.

*Union Bank of Australia,
Sydney, 21 December, 1857.*

SIR,

In reply to your Circular of the 14th instant, relative to the purchase of Treasury Bills, I have the honor to inform you, that the subject was brought under the consideration of the Board of Directors, who declined to entertain the application.

I have, &c.,

C. ROBERTSON,
Manager.THE HONORABLE
THE COLONIAL TREASURER.

No. 13.

JOHN YOUNG, Esq., to THE HONORABLE THE TREASURER.

*English Scottish and Australian Chartered Bank,
Sydney, 22 December, 1857.*

SIR,

I have the honor to acknowledge the receipt of your letter of the 14th instant, informing me that the Government are desirous of ascertaining whether one or more of the Banks would be willing to enter into an arrangement to purchase the whole of the Treasury Bills which it may be found necessary to issue under the Act which has lately passed the Legislature, authorising the issue of such Bills to an amount not exceeding £400,000.

I beg to state, in reply, that this Bank is not prepared to enter into arrangements binding itself in advance to purchase any amount of the Bills in question, though it is possible it may from time to time, as issues of such Bills are notified, find it convenient to offer terms for the purchase of portions of the same.

I have, &c.,

JOHN YOUNG.

THE HONORABLE
THE COLONIAL TREASURER.

No. 14.

R. WOODHOUSE, ESQ., to THE HONORABLE THE TREASURER.

*Bank of New South Wales,
Sydney, 23 December, 1857.*

SIR,

Having received your reply to my letter of the 16th instant, I now do myself the honor to acquaint you with the decision of the Board of Directors relative to advancing, on the security of Treasury Bills, redeemable in twelve months by means of a permanent loan to be raised in London, as set forth in your circular of the 14th instant, and more particularly in the "Treasury Bills Bill" you were good enough to favor me with, which decision is to, at present, decline to offer to negotiate any portion of the loan or advance.

In coming to this decision, the Board is mainly influenced by the information that the Government cannot, without great difficulty, transfer to the Bank any portion of its accounts, owing to certain arrangements with the Australian Joint Stock Bank; had it been otherwise, and the Government been able to have transferred to this Bank the management of the whole, or a portion of its banking business, the Bank on its part would have been prepared to tender for an equivalent proportion of the proposed issue, or to have entered into any mutually advantageous arrangement for their disposal on behalf of the Government.

I have, &c.,

R. WOODHOUSE,

Secretary.

THE HONORABLE

THE COLONIAL TREASURER.

No. 15.

E. WRENCH, ESQ., to THE HONORABLE THE TREASURER.

*Australian Joint Stock Bank,
Sydney, 23 December, 1857.*

SIR,

I have had the honor to receive your letter, dated the 14th instant, in which you state that you are desirous of ascertaining whether one or more, or all, the Banks would be willing to enter into an arrangement with the Treasury to purchase the whole of the Treasury Bills, not exceeding £400,000, which the Government are authorized by the Legislature to issue.

I have, agreeably with your request, brought the subject under the consideration of the Board of Directors of this Bank, and they have given the matter, as well as the explanation you are pleased to make of the views and intentions of the Government in reference to the issue of these Treasury Bills, their most anxious and deliberate consideration.

With respect to the amount (£400,000) you state that you would not require more than £25,000 to £40,000 per month, or on the average £30,000 per month. The negotiating a loan by the payment of monthly instalments as aforesaid, would be a comparatively easy matter, if the Government Securities had a currency in this Colony the same as they have in Europe and America. The Bank, in such a case, could either hold or dispose of them, from time to time, as the state of their finances or the value of money may render most advisable, and such a loan could be negotiated by the Banks without at all interfering with the usual course of their business. But to negotiate a loan, payable as you state by instalments of about £30,000 a month, without being able to re-negotiate any portion of the same, would necessitate the Bank to set apart within the term of eleven months no less a sum than £330,000; and this our Directors regret, that in justice to our shareholders and the customers of the Bank, they do not feel themselves in a position to do.

Although I have, agreeably with your request, waited on the Managers of the several Banks, I have not been able to learn the intentions of their respective Boards with respect to the proposed loan; but I am instructed by my Directors to say that this Bank will cheerfully join with the other Sydney Banks in supplying the Government with such funds as they may now require, and would subscribe their quota towards the amount of loan proposed to be raised by Treasury Bills.

I

I am further requested by my Directors to suggest, for your consideration, whether it would not be more to the interest of the Government to place the Treasury Bills in the hands of this Bank for negotiation, rather than offer them to the Banks generally for absolute purchase. If this suggestion were acceded to, this Bank would strive to give them a currency, by making advances on them to a certain extent, at a fair rate of interest, in like manner as the Bank of England is required by its Charter to act with Exchequer Bills. So soon as it became generally known that liberal advances could be obtained, any moment, at moderate interest, on the security of Treasury Bills, a currency would be given to them, and, once establish a currency for Government Securities, it would, in my opinion, be easier to negotiate loans for tens of thousands of pounds than it is now for hundreds. The reason is obvious—an investment in Government Securities is now nearly as much a dead weight (so far as respects its convertibility) as an investment in houses or land. Indeed houses or lands in some situations would be far more ready of sale, and cause infinitely more competition, than Government Debentures; but as real property can be purchased to produce a much higher rate of interest than that payable on Government Securities, it naturally follows that the former will be purchased in preference to the latter, by the great majority of those who have money to invest. This is the reason that Government Securities are so much neglected by the capitalists in this Colony; but if they were convertible into cash, at a moment's notice, a low rate of interest would satisfy the capitalist, where scarcely any rate of interest would tempt many of them to lock up a large portion of their funds in what is termed a dead weight, or, in other words, a security which there was a difficulty in realizing. The British Government finds no difficulty in raising, within a very limited term, loans equal to double the amount of the coined gold and silver in the United Kingdom, and this without any serious derangement of the money market. The reason is, that the loan itself answers almost all the functions of money; and although it may be contracted for by only one or more persons, it soon becomes absorbed by the vast numbers throughout the United Kingdom. An amount in the Funds could be realized and converted into sovereigns in London very nearly as speedily as a cheque could be cashed at a Banker's; hence money invested in the British Funds and money deposited at a Banker's in London are nearly synonymous. I believe it is possible to give a currency to the Government Debentures of this Colony which would make them as available for conversion into cash, at a moment's notice, as are the British Funds. If this were the case, the Government would not have the least difficulty in raising, in the Colony, whatever sums they might require for public works. All classes should also have the privilege of investing their savings in Government Securities; and the Government should certainly not refuse to receive Debentures for small sums as cash in payment for land at their public and other sales. The more opportunities there are of making use of Government Securities as cash, the more freely they will be purchased, and the more reluctantly they will be parted with. Men do not draw their balances out of a Bank because they *can* do so; but it is because they can do so *at any moment* that they let them remain until they are actually required. When the Prussian Government wished to make its Treasury Notes a circulating medium, it was not by making them a legal tender, but by compelling all persons having payments to make to the Government to do so by at least one third part of their own Treasury Notes, which were in sums as low as one dollar (3s.) The result was, that the Treasury Notes, although bearing no interest, were for many years at a premium; and, notwithstanding coin could be obtained for them at a moment's notice, none was ever, or hardly ever, applied for.

I have to apologize for writing you at this length, but the importance of the subject must plead my excuse.

In conclusion, I have only to request that you will freely command the services of this Bank whenever you may require them.

I have, &c.,

E. WRENCH,

General Manager.

J. HENDERSON, ESQ., to THE HONORABLE THE SECRETARY FOR FINANCE AND TRADE.

*Bank of Australasia,
Sydney, New South Wales,
24 December, 1857.*

SIR,

I beg to acknowledge the receipt of your letter of the 14th instant, intimating the intention of the Government to issue Treasury Bills to the extent of four hundred thousand pounds (£400,000), and inquiring whether one or all the Banks would be willing to enter into an arrangement to purchase the whole of that amount.

Having placed your letter before the Local Board of this Bank, I am directed to inform you, that as the time of re-payment of the Bills in question is somewhat indefinite, I decline, for the present, to enter into an arrangement for purchasing them.

I have, &c.,

J. HENDERSON,
Manager.

No. 19.

A. H. RICHARDSON, Esq., to THE HONORABLE THE TREASURER.

*Australian Joint Stock Bank,
Sydney, 15 January, 1858.*

SIR,

I have the honor to acquaint you that I have submitted to the Board of Directors of this Bank the purport of your observations at the interview with which I was favored at the Treasury yesterday, relative to the advances required by Government for the service of the current year, to the amount of the loan for £400,000, authorized to be raised on Exchequer Bills—that is, to the extent of say, £30,000 per month during the ensuing twelve months.

The Directors have again given their serious consideration to this important matter, and, while they desire me to request you will be pleased to refer to a letter from the Bank under date of 23rd ultimo, addressed to the Honorable Richard Jones, Esq., the then Treasurer, they wish to renew the proposition there made to place at disposal of the Government the services of the Bank for negotiation of the Exchequer Bill Loan, upon the Bills being handed to the Bank for the purpose. In that event the Bank would lend its utmost endeavours to give a currency to the Bills with the public, and, by making liberal advances upon them, at a moderate rate of interest, from time to time, and in such sums as it could conveniently spare, to render the security generally acceptable and popular; and, by these means, it is probable the requirements of the Government would be satisfied. Moreover, the Bank would, as already intimated, cheerfully join with the other Sydney Banks in aiding the Government by purchasing an equal proportion of the Exchequer Bills; but without such concurrent action on the part of the Banks generally, this Bank would not feel justified in locking up the large sum of, say, £330,000 which could not, as you will readily suppose, be withdrawn from its ordinary and legitimate business without great injury to itself and the public.

I have, &c.,

General Manager.THE HONORABLE,
THE COLONIAL TREASURER.

No. 20.

THE HONORABLE THE TREASURER to THE SECRETARY TO THE BANK OF NEW SOUTH WALES.

*The Treasury, New South Wales,
19 January, 1858.*

SIR,

The recency of my appointment to the Treasury, coupled with the frequent claims upon my time caused by the business attendant upon the late election, have hitherto prevented my entering upon a careful consideration of your letters of 16th and 23rd ultimo, addressed to my predecessor, on the subject of the proposed loan of £400,000, to be raised by the issue of Treasury Bills, in terms of the Act of the Colonial Parliament, 21 Victoria, of 18th December, 1857. I now have the honor to inform you, that the Government are prepared to receive any proposals, in reference to this loan, which the Bank may be desirous to make; and I beg, therefore, to be favored with the views of the Directors as to the terms which should form the basis of an agreement for the negotiation, by you, of these Treasury Bills, in order that I may at once submit the same for the decision of the Executive Government. It would appear, from your letter of the 23rd ultimo, that the Bank is under the impression that some difficulty exists to the transfer, either in whole or in part, of the Government business from the Joint Stock Bank to the Bank of New South Wales. This difficulty, however, I beg to state, is met by the provision, that the agreement at present subsisting between the Government and that Bank can be terminated at any time, upon either party giving three months' notice.

I have, &c.,

R. WOODHOUSE, Esq.,
Secretary to the Bank of N. S. Wales.

RT. CAMPBELL.

No. 21.

R. WOODHOUSE, Esq., to THE HON. THE MINISTER FOR FINANCE.

*Bank of New South Wales,
Sydney, 26 January, 1858.*

SIR,

I have laid your letter of the 19th instant before the Board of Directors, and have to express regret that the recent monetary intelligence from England by the "Simla" will not warrant the Board to, at present, make any proposal, or enter into any arrangement, for the advance of the large sum required by the Government on the security of its Treasury Bills, as indicated in your predecessor's letter of the 16th ultimo, and that the views previously entertained and alluded to in the closing paragraph of my letter of the 23rd ultimo is now obliged to be abandoned.

I have, &c.,

THE HONORABLE
THE MINISTER FOR FINANCE,
Treasury.

R. WOODHOUSE,
Secretary.

No. 22.

THE HONORABLE THE TREASURER to THE GOVERNOR GENERAL.

*The Treasury, New South Wales,
28 January, 1858.*

SIR,

I do myself the honor to state, for the information of your Excellency, that it is the intention of myself and colleagues to terminate the arrangement at present subsisting with the Australian Joint Stock Bank, under which that institution is charged with the conduct of the local monetary transactions of the Government, by giving the required notice of three months, as stipulated for in the agreement sanctioned by the Minute of the Executive Council of 15th September, 1856.

This step, it is believed, will materially assist in facilitating the negotiation, with the Sydney Banks, of the Loan of £400,000, proposed to be raised by the issue of Treasury Bills, under the provisions of the Act 21 Victoria, dated 18th December, 1857.

It was intended to obtain the sanction of your Excellency in Council to this measure, at the next meeting on Monday, the first proximo; as, however, it is essential that the notice should issue from this Office not later than the 30th instant, I have the honor to request your Excellency's consent to such being at once given, in anticipation of the formal concurrence of the Executive Council on Monday next.

I have, &c.,

HIS EXCELLENCY

RT. CAMPBELL.

SIR WILLIAM T. DENISON, K.C.B.,
GOVERNOR GENERAL,
&c., &c., &c.

For the reasons herein stated, the Executive Council express their concurrence in the propriety of the steps which have been taken in this matter.

EDWARD C. MEREWETHER,
Clerk of the Executive Council.

(Confirmed 8 February, 1858—No. 58-66.)

No. 23.

THE HONORABLE THE TREASURER to A. H. RICHARDSON, Esq.

*The Treasury, New South Wales,
28 January, 1858.*

SIR,

With reference to my letter of the 16th September, 1856, conveying to your Bank the approval by the Government of the terms and conditions upon which the Australian Joint Stock Bank undertook to transact the local monetary business of the Government, and to allow interest at the rate of four per cent. per annum on the minimum balance at the credit

credit of the Government in each week, I now hereby give you notice that it is the intention of the Government to terminate the said agreement with your Bank at the expiration of three calendar months from the 1st February next.

I have, &c.,

RT. CAMPBELL,

Treasurer.

A. H. RICHARDSON, Esq.,

General Manager, Australian Joint Stock Bank.

No. 24.

MINUTE of Colonial Treasurer respecting proposed Loan of £400,000.

The Treasurer begs to acquaint His Excellency the Governor General and the Executive Council that, in reply to a communication made by him to the Bank of New South Wales, on the subject of the proposed loan of £400,000, he has received a letter from the Secretary to that Institution, wherein he is informed that the recent monetary intelligence from England by the "Simla" does not warrant the Board to make any proposal at present, or enter into any arrangement, for the advance of the large sum required by the Government on the security of its Treasury Bills; and that the views previously entertained by the Bank on the subject must now be abandoned.

This circumstance, together with the alleged inability of the other Banks to assist the Government on this occasion, obliges the Treasurer to have recourse to another measure for the raising of the funds required to meet the obligations now pressing, which had been previously incurred. The Treasurer therefore proposes to advertise for the sale of Bills directly from the Treasury, in terms of the Act of Parliament, 21 Vict., of 18th December, 1857.

The Bills not to be sold below par, and to bear interest at 4d. per centum per diem, payable half-yearly.

The Bills to be dated 1st February, 1858, and will be payable in twelve months; after the expiration of twelve months, the Bills will be received by the Collector of Customs in payment of Revenue, and also by any persons authorised to receive the purchase money for land sold, or any rent or assessment payable to the Crown.

The Bills to be signed by the Treasurer, the Auditor General, and the Secretary to the Treasury.

The Treasurer submits the form of a notice inviting applications for the purchase of such Bills, to the extent of £100,000 in the first instance, which he intends for insertion in the *Government Gazette*, and the daily newspapers. The Treasurer requests the sanction of His Excellency in Council to the above proposal.

RT. CAMPBELL.

The Treasury, New South Wales,

1 February, 1858.

No. 25.

PROCEEDINGS of the Executive Council on the 22nd February, 1858, with the respect to the issue of Treasury Bills.

Minute No. 58-10. Confirmed 1st March, 1858.

His Excellency the Governor General lays before the Council a Minute by the Honorable the Colonial Treasurer, intimating that he has been unable to enter into any arrangement with the Directors of the Bank of New South Wales, with whom he has been specially in treaty, or with the Directors of the other Banking Establishments in Sydney, for the advance of the amount required by the Government on the security of its Treasury Bills; and that, under such circumstances, it is necessary to have recourse to some other measure for raising the Funds required to meet pressing obligations already incurred. With this view he therefore proposes to advertise the sale of Bills directly from the Treasury, in terms of the Act of the Colonial Parliament, dated 18th December, 1857, and requests the sanction of the Council to the course.

2. Having deliberated upon this proposal, the Council advise that the Honorable the Treasurer should, by notice to be published in the *Government Gazette*, invite application for the purchase of Treasury Bills to the extent of £100,000, such Bills to bear date the 1st March, and to be issued on the terms set forth in the annexure hereto.

EDWARD C. MEREWETHER,

Clerk of the Council.

No. 28.

Z. INGOLD, ESQ., to THE HONORABLE THE TREASURER.

Commercial Banking Company,

Sydney, 11 March, 1858.

SIR,

Being unable to attend your meeting fixed for to-day, I beg leave to state the views of this Bank respecting your proposals for borrowing all or part of the sum of £400,000.

Our

Our interview on Tuesday last failed in eliciting either the general or particular intentions of the Government as to the initiation of any measures for providing the means of redeeming this loan at the expiry of the twelve months for which you propose to borrow it.

This Bank has the utmost desire to promote the public welfare by assisting your Government to meet present engagements, but our duty, as custodiers of private deposits, compels us to have a definite and clear arrangement made for the re-payment of our advances at the stipulated period. Until this assurance is obtained we dare not entertain your proposals.

If this objection is removed, we then consider the sum of £400,000 to be much larger than we could, in justice to the mercantile interests of the Colony, undertake at this period to supply our quota of; because the demands now made upon us for legitimate assistance are so excessively heavy, that we find it absolutely necessary to have our resources at command. Nevertheless, to prevent the confusion and embarrassment which would ensue, if the Government are not in a position to meet their pressing engagements, we are willing, upon being furnished with clear proofs of their intention to make adequate provision for the re-payment thereof, to unite with the other Banks in a loan of the amount which may be absolutely required for that purpose; deferring the consideration of the full loan for £400,000 until the Government have submitted their financial scheme to Parliament, and the Ways and Means of the current year are decided.

I have, &c.,

ZACHY. INGOLD,
Manager.

THE HONORABLE
THE COLONIAL TREASURER,
Sydney.

No. 29.

RESOLUTION of Inspectors and Managers of various Banks, respecting Advances required by the Government.

The following Resolution,—stated to have been unanimously adopted at a Meeting of Inspectors and Managers of the various Banks, and to convey their deliberate answer to the Private Circular issued from the Treasury,—was put into the Colonial Treasurer's hands by the Manager of the Bank of Australasia (Mr. Henderson), in the presence of Mr. Woodhouse and Mr. McMullen.

Sydney, 11 March, 1858.

"At a meeting of the representatives of the Banks, held this day, it was resolved,—

"That in the absence of satisfactory security for the due repayment of the advances now required by the Government, they are reluctantly compelled, in justice to the various interests confided to their charge, to decline making any loans in the mode proposed by the "Honorable the Colonial Treasurer."

Subsequently the following letters were received from the Joint Stock and Oriental Banks.

No. 30.

A. H. RICHARDSON, Esq., to THE HONORABLE THE TREASURER.

Australian Joint Stock Bank,

Sydney, 12 March, 1858.

SIR,

I have the honor to inform you, that the Board of Directors of this Bank, having taken into consideration the Resolution passed by the representatives of the Banks generally, and sent up to the Treasury yesterday, relative to the temporary advance required by the Government, have instructed me to acquaint you that they do not concur in the tenor and import of that Resolution.

On the contrary, placing full reliance on the undertaking of the Government, they are of opinion that the advance sought ought to have been granted by the Banks, and that no reasonable exception could be taken to the security.

I have, &c.,

A. H. RICHARDSON,
General Manager.

THE HONORABLE
THE COLONIAL TREASURER.

No. 31.

G. K. INGELOW, Esq., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,
Sydney, 13 March, 1858.*

MY DEAR SIR,

As there appears to be an impression on your mind that the Resolution handed in to you at the Treasury on Thursday last by a deputation from the representatives of the Banks here was unanimously agreed to, (although I feel persuaded there was no intention to convey such an impression,) I beg to state that such was not the case, as I was of opinion that it would have been a more politic proceeding on the part of the Banks to have granted the Government such measure of assistance as would have afforded time for the initiation and carrying out of such measures as would relieve them from their present position.

I am, &c.,

GEO. K. INGELOW.

THE HONORABLE

ROBERT CAMPBELL, Esq.

No. 32.

G. K. INGELOW, Esq., to THE HONORABLE THE TREASURER.

*Oriental Bank Corporation,
Sydney, 16 March, 1858.*

SIR,

We beg, as one of the holders of "Interminable" Debentures, to represent to the Government the position we stand in, and to respectfully urge upon your consideration the reasonableness to us as holders, and the advisability on the part of the Government as borrowers of money, of affording to us that measure of relief we now crave at the hands of the Government.

At the time these securities were issued, it was understood on the part of the public that the Government of this Colony did, and intended to abandon, for the future, the raising of money on securities repayable at a fixed period of time; and presuming, therefore, that no opportunity would be afforded to them of investing money in the old form, they subscribed to this new issue, reasonably anticipating that the securities would pass current with the public generally, and that they would be enabled to dispose of those they held at a rate varying with the market value of money, whenever they should find it convenient to otherwise employ their capital.

We do not assert that any distinct pledge was given at the time that no alteration would be made in the mode by which Government would thereafter raise money; but it was certainly not anticipated, by either the borrower or the lenders, that a few months after the issue of these securities the Government would again revert to the old system, and so leave them in the position of holding securities which are altogether unsaleable; for it is evident, that so long as the public can freely obtain Terminable Debentures, those of the character in question will meet with no market.

In many instances this is a very substantial grievance, as many of the holders purchased only for temporary investments, and are now unable to realize upon almost any terms that can be named; and we submit that it is worthy the consideration of the Government to apply a remedy to such a state of matters.

We would wish to point out to the Government the policy, on their part, of acceding to the proposition now made, as it is a matter of notoriety that the depression now existing in the value of all descriptions of public debt of the Colony, and the extreme unwillingness on the part of the public to take up any amount of securities, even at an advanced rate of interest, and on more favorable terms than has ever hitherto obtained, arises mainly from the fact of the holders of these Interminable Debentures, both within the Colony and in England, continually pressing their securities on the market for sale at a heavy discount, and thus frustrating the endeavours of the Government to raise money, by offering to part with their securities at an enormous sacrifice to the seller. So long as this state of matters continues, the Government will find it impossible to raise money in the market by the sale of Debentures, except upon very unfavorable terms.

We

We ask the Government to grant relief, upon terms which are at the same time advantageous to the Colony in general, taking into consideration the views advanced in the preceding paragraphs, and which would entail no loss whatever to the Colony, even if the correctness of those views are not entertained by the Government.

Our proposition is, that the holders of the Interminable Loan have the option of exchanging the Debentures they hold for those having (25) twenty-five years to run, or, say for such a time as will cause the due date to extend to a more distant period than that of any Terminable Debentures now in existence; and, at the same time, to prevent the possibility of any argument being brought forward from any quarter with a view to show that the interests of this particular class had been more consulted than that of the public generally, let the Government make it a condition that the holders of any such Debentures should, on claiming the conversion, be required to take up, at par, an amount of Terminable Securities exceeding that of the interminable so converted by thirty-three and one-third per centum

I have, &c.,

THE HONORABLE
THE TREASURER.

JAMES

BANK ASSISTANCE TO GOVERNMENT.

3

JAMES HENDERSON, Esq., to THE HONORABLE THE TREASURER.

*Bank of Australasia,
Sydney, New South Wales,*

21 April, 1858.

SIR,

I beg to call your attention to the enclosed extract from the printed Correspondence and Minutes relative to Bank Assistance to Government, just laid before the Legislative Assembly, being convinced that you have unintentionally allowed it to go forth—that when handing you the Resolution therein referred to, in presence of Mr. Woodhouse and Mr. M'Mullen, it was stated to have been unanimously adopted by the meeting.

2. What I said was to the effect that the Resolution embodied the conclusion at which the meeting had arrived, and that although the reasons for arriving at it were various, it was agreed to as being the best that could then be adopted; but I did not say that the Resolution was unanimous, nor were any words used at that interview intended (or, in my opinion, calculated) to convey such an impression, and I am borne out in this statement, not only by the wording of the Resolution itself, which merely says, "it was resolved," but also by Mr. Woodhouse and Mr. M'Mullen, who have each referred to their notes of the proceedings, and who have seen, and approved of this communication.

3. I trust, therefore, that you will take an early opportunity of correcting your statement to the Legislative Assembly, and relieve us from the imputation of having conveyed to you an erroneous impression as to the Resolution arrived at by the Banks.

I have, &c.,

THE HONORABLE
THE COLONIAL TREASURER,
Sydney.

JAS. HENDERSON,
Manager.

THE SECRETARY TO THE TREASURY to JAMES HENDERSON, Esq.

*The Treasury, New South Wales,
26 April, 1858.*

SIR,

I am directed to acknowledge the receipt of your letter of the 21st instant, in which you desire to correct an alleged erroneous impression as to the Resolution arrived at by the Banks on the 11th March upon the proposal made to them by the Government on the preceding day.

The Colonial Treasurer desires me to say that he is still under the impression that the Minute as printed is substantially correct, and in that impression he is confirmed by the recollection of the Colonial Secretary, who was present on the occasion, a copy of whose memorandum upon the subject I am instructed to enclose.

Mr. Campbell regrets that you should consider that what took place is not fairly stated; but, at the same time, he does not clearly perceive that you have any real ground of objection to the Minute, as you admit that, though the reasons for arriving at the conclusion were various, it was agreed to as being the best that could then be adopted.

I have, &c.,

JAMES HENDERSON, Esq.,
Manager, Bank of Australasia.

HENRY LANE.

*Colonial Secretary's Office,
24 April, 1858.*

MEMORANDUM.

I beg to make the following remarks upon the letter from Mr. Henderson, of the Bank of Australasia, to the Treasurer:—

It was unquestionably stated by Mr. Henderson, when he and his associates entered Mr. Campbell's office, that they had been detained beyond the time fixed for meeting us from a desire to bring a result which was the unanimous determination of the Managers of the Banks; and I not only understood this to be the case, from what was stated by Mr. Henderson, when he handed in the Resolution, but, when Mr. Campbell subsequently put a question directly to the point,—whether we were to take the Resolution as the unanimous decision of the Banks,—Mr. Henderson and the other gentlemen were understood by me to answer in the affirmative. I do not now understand exactly what is complained of, as Mr. Henderson rather admits an agreement in the conclusion, though he states the reasons for adopting that conclusion were various: that point is not touched in the printed papers.

C. C.

JAMES

BANK ASSISTANCE TO GOVERNMENT.

JAMES HENDERSON, ESQ. to THE SECRETARY TO THE TREASURY.

*Bank of Australasia,**Sydney, New South Wales,*

26 April, 1858.

SIR,

I have to acknowledge receipt of your letter of this date, stating, in reply to mine of the 21st instant, addressed to the Honorable the Colonial Treasurer, that you are desired by that gentleman to say that he is still under the impression that the Minute, as printed, is substantially correct, in which he is confirmed by the recollection of the Colonial Secretary, (a copy of whose memorandum on the subject, dated the 24th instant, I have also to acknowledge as enclosed,) and that he does not clearly perceive that I have any real ground of objection to the Minute, as I admit that, although the reasons for arriving at the conclusion were various, it was agreed to as being the best that could then be adopted.

2. I regret that the Treasurer still retains an erroneous impression of what took place at the interview of the 11th March; and, with reference to the concluding portion of your letter, I cannot see how my having stated that the Resolution was agreed to as being the best that could then be adopted, at all justifies the presumption that I intended to convey it was unanimous.

3. As to the memorandum of the Colonial Secretary, I am glad to perceive it is dated the 24th instant, for I am able to assert, as well from distinct recollection as from notes of the proceedings taken immediately after, that in one essential particular it is erroneous, namely, where it says that Mr. Campbell put a question directly to the point, whether the Resolution was to be taken as the unanimous decision of the Banks? with reference to which, I have to state positively, that the word "unanimous" was never used during our interview, nor was any question put to me, to Mr. Woodhouse, or to Mr. M'Mullen, to the effect stated in the memorandum.

4. In again conveying to the Treasurer my assurance that nothing was said intending to imply that the Resolution was unanimous, I do not think I exceed proper limits in calling his attention to the fact, that he was perfectly aware of the feelings of the two dissenting Banks, both before and after the 11th March, and in expressing my regret that he did not as soon as he became aware, by the receipt of their letters, that the Resolution was not unanimous, afford me an opportunity of correcting the erroneous impression under which he laboured.

5. In confirmation hereof, I now beg to enclose copy of a letter, just received, from Mr. Woodhouse and Mr. M'Mullen, and also copies of the letters received from those gentlemen in corroboration of my letter of the 21st instant; and have again to request, that the Colonial Treasurer will take an early opportunity of correcting the printed paper that has been laid before the Legislative Assembly.

I have, &c.,

HENRY LANE, ESQ.,

Secretary to the Treasury.

JAS. HENDERSON,

Manager.

Sydney, 26 April, 1858.

Dear Sir,

We have seen and approve of your letter of this date to the Secretary of the Treasury.

James Henderson, Esq.,

Bank of Australasia.

R. WOODHOUSE.
JNO. M'MULLEN.*Bank of New South Wales,
Sydney, 21 April, 1858.*

My Dear Sir,

I have carefully read your letter of to-day's date to the Colonial Treasurer, and cordially approve of it.

No words were used on the occasion of our interview, on the 11th March last, with Mr. Campbell and Mr. Cowper intended to convey that the Resolution handed in was unanimously adopted by the Banks; in fact the terms of the Resolution itself indicated that there were dissentients, and, notwithstanding the pointed way in which the Legislative Assembly paper avers that it was stated to be the unanimous and deliberate resolution of the Banks, I am charitable enough to think that its wording, and what passed in conversation afterwards, were misinterpreted unwittingly, rather than by design.

I

I join with you in the hope that Mr. Campbell will take an early opportunity to explain to the Assembly that both himself and Mr. Cowper misunderstood what was said on the occasion referred to, as it is exceedingly unpleasant to be supposed to have joined in a misrepresentation.

James Henderson, Esq.

I remain, &c.,
R. WOODHOUSE.

*Inspector's Office,
Union Bank of Australia,
Sydney, 21 April, 1858.*

My Dear Sir,

1. I fully approve and confirm your letter of this date to the Treasurer.
2. There was not a word said at our interview which was calculated to convey the impression that the Resolution was unanimous; in fact, as you properly observe, the very wording of it implies the contrary, and I cannot doubt the mistake will be immediately rectified.
3. I say "mistake," for, with you, I feel convinced the Treasurer must have been under the impression that the facts were as stated in the printed paper; but, even so, the pointed manner in which the supposed discrepancy is given to the Legislative Assembly appears to me to have been quite unnecessary.
4. You will see that it is the only matter in this very lengthy document which has been made the subject of special comment, and I cannot help thinking it would have been better had the requirements of the House been fully complied with, by the addition of the Minutes retained of the last two meetings at the Treasury.
5. I think we have a right to complain of this omission. I never heard a question more fairly discussed. The Banks were all desirous to assist the Government, if they could have consistently done so; and if our views, as expressed, were fully represented, the Assembly would be able to form a more correct opinion as to the merits of the case.

I am, &c.,
JNO. M'MULLEN,
Inspector.

James Henderson, Esq.

THE SECRETARY TO THE TREASURY to JAMES HENDERSON, ESQ.

*The Treasury, New South Wales,
28 April, 1858.*

SIR,

I am directed by the Treasurer to acknowledge the receipt of your letter of the 26th instant, and to state in reply that he will, as you desire, lay before the Assembly the whole of the correspondence of which it forms a part.

Mr. Campbell regrets that there should have been any misapprehension as to the meaning of the expression used by you in handing in the Resolution of the 11th March; but he is quite willing to concede that your explanation of that expression was what you intended to convey to him.

He cannot, however, admit that he had any such knowledge of the intentions of any other Banks, in reference to the proposal of the Government, as would guide him in arriving at a contrary conclusion, while all that fell from you seemed to bear out the meaning applied by Mr. Cowper and himself, without conference, to the statement you made.

JAMES HENDERSON, ESQ.,
Manager, Bank of Australasia.

I have, &c.,
HENRY LANE.

1858.

*Legislative Assembly.*NEW SOUTH WALES.

ROADS, FERRIES, AND BRIDGES.(APPLICATIONS FOR MONEY FOR CONSTRUCTION OR REPAIRS OF.)

Ordered by the Legislative Assembly to be Printed, 26 March, 1858.

RT. CAMPBELL.

1858.

Legislative Assembly.

NEW SOUTH WALES.

EXPENDITURE AUTHORISED AND UNAUTHORISED BY VOTE SINCE
30 APRIL, 1858.

Ordered by the Legislative Assembly to be Printed, 1 July, 1858.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 18 June, 1858, That there be laid upon the Table of this House :—

“(1.) A Return of all Moneys paid by the Colonial Treasurer
“since the expiration of the Votes of Credit granted by this
“House, (which extended to the 30th April last, or for the
“first four months of 1858,) distinguishing those payments
“which were included in the Expenditure authorised by these
“Votes of Credit from those which had been made without any
“Legislative authority.

“(2.) A Copy of the Minute of the Executive Council (if any)
“which may have been passed upon the subject of issues out
“of the Consolidated Revenue Fund of the Colony in 1858
“without Legislative sanction.” (*Mr. Donaldson.*)

STATEMENT of Disbursements made by the Colonial Treasurer from 1 May to the 18 June, 1858, distinguishing those payments which were included in the Expenditure authorized by Votes of former years, Votes of Credit, or Resolutions of the Assembly, from those which have been made without any Legislative authority.

SERVICES.	Authorised by votes of former years, and Acts of Parliament.	Expenses authorised by votes of credit at the rates sanctioned for 1857.	Authorised by Resolutions of the Assembly.	Disbursements made at the rates sanctioned for 1857, but unauthorised by either votes of credit or Resolutions of the Assembly.

Rt. CAMPBELL.

1858.

Legislative Assembly.
NEW SOUTH WALES.

WARRANT AUTHORISING EXPENDITURE WITHOUT
PARLIAMENTARY SANCTION.

Ordered by the Legislative Assembly to be Printed, 6 August, 1858.

RETURN to an *Address* of the Honorable the Legislative Assembly,
dated 4 August 1858, praying that His Excellency the Governor
General would cause to be laid upon the Table of the House :—

“ A copy of the last Warrant signed by His Excellency the
“ Governor General by which Expenditure has been authorised
“ out of the Consolidated Revenue of the Colony without the
“ sanction of Parliament.” (*Mr. Donaldson.*)

Advance on Account, Payable out of the Consolidated Revenue Fund.

WARRANT No. 263 of 1858.

By His Excellency SIR WILLIAM THOMAS DENISON, Knight Commander of the Most Honorable Order of the Bath, Governor General in and over all Her Majesty's Colonies of New South Wales, Tasmania, Victoria, South Australia, and Western Australia, and Captain General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, and Vice-Admiral of the same, &c., &c., &c.

To ROBERT CAMPBELL, Esq.,
Colonial Treasurer.

Examined and found correct, (Signed) W. C. MAYNE, Auditor General.	You are hereby authorised to advance to the undermentioned Persons, or to their Assigns, the Sums opposite their several names, to enable them to make payments for the purposes specified in the accompanying letters, and in the manner therein stated, viz. :—		AMOUNT.
	Henry Lane	}	448 13 4
	J. G. N. Gibbes		378 7 8
	John Crook		4,763 0 0
	F. O. Darvall... ..		2,013 17 9
			403 0 0
Obtaining from each of them respectively an obligation to furnish to the Auditor General, immediately after the expiration of this month, an Account Current, supported by satisfactory Vouchers for the expenses charged, and by a Certificate from the proper Officer as respects the Balance of Cash in the Bank ; and also a further obligation to repay into the Treasury, at any time when instructed by competent authority so to do, such Balance as may then remain unexpended by them ; and should they fail to furnish the said Accounts, or to repay the Balance when required, you will, on being duly apprised thereof, suspend all payments to them of any nature whatsoever, whether for Salary or otherwise, until the cause of suspension be removed, or until you receive special authority not to continue it.			

GIVEN under my Hand, at Government House, Sydney, New South Wales
this 28th day of July, in the Year of our Lord 1858.

By His EXCELLENCY'S COMMAND,

(Signed) CHARLES COWPER,
Colonial Secretary.

(Signed) W. DENISON.

A true Copy,
Rt. CAMPBELL.

MEMORANDUM.

Warrant No. 263 of 1858, contains the sum of £378 7s. 8d., advanced to the Secretary to the Treasury to pay the Salaries of the Auditor General's Establishment for the month of July, 1858, for which no vote had been taken up to the 28th July, the date of the Warrant.

R. C.

1858.

Legislative Assembly.

NEW SOUTH WALES.

WEEKLY STATE OF THE TREASURY.

(COMPARATIVE STATEMENT IN REFERENCE TO.)

Ordered by the Legislative Assembly to be Printed, 29 July, 1858.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 23 July, 1858, That there be laid upon the Table of this House:—

“ A Return exhibiting the Weekly State of the Treasury at,
 “ or as near as may be at, the following dates:—1 July, 1856,
 “ 1 January, 1857, 1 July, 1857, 1 January, 1858, 1 July, 1858;
 “ specifying all the particulars, on each side of the Accounts,
 “ which are contained in the document called the ‘Weekly State,’
 “ laid before the Colonial Treasurer.”

1858.

Legislative Assembly.
NEW SOUTH WALES.

ESTIMATES FOR 1857-8.

Ordered by the Legislative Assembly to be Printed, 26 March, 1858.

W. DENISON,
Governor General.

Message No. 1.

In compliance with the 54th Clause of the Constitution Act, and in accordance with his opening Speech, the Governor General invites the Legislative Assembly to make provision for the Public Service, agreeably to the Supplementary Estimates for 1857, and the Estimates for 1858, which were submitted and partly voted during the last Session of the first Parliament, with such modifications as are explained in the memorandum which accompanies the copies of these Estimates herewith transmitted.

As the Vote of Credit obtained from the last Parliament will be exhausted on the 31st of March current, and, as considerable sums will be falling due instantly, thereafter, especially for the Mail Contract Service, the Governor General invites the prompt attention of the Assembly to the pressing necessity which exists for perfecting the appropriation of the sums granted in the last Session, and for making immediate provision for those other services for which grants will be asked in accordance with the sums set out in these Estimates.

Government House,
26th March, 1858.

ESTIMATES FOR 1857-8.

MEMORANDUM, explanatory of the alterations proposed to be made in the Estimates of Expenditure for the year 1858, which were laid before the Assembly, on 3rd November, 1857:—

MEMORANDUM.—The Sums not embodied in the Appropriation Act, 22 Vict., No. 21, but which form part of the Expenditure for the year 1858, will (with the exception of £57,950, appropriated under the Schedules to the Constitution Act, and Interest and Endowments sanctioned under various Acts of past Sessions,) be found set out in the undermentioned Acts of the present Session, viz:—

District Courts Act, 22 Vict., No. 18.
Government Loans Act, (to pay of Debentures) 22 Vict., No. 5.
Municipalities Act, 22 Vict., No. 13.

Railway and other Public Works Loan Act, 22 Vict., No. 22.
Scab in Sheep Prevention Act, 22 Vict., No. 10.
Steam Postal Communication Act, 22 Vict., No. 15.

Legislative Assembly Offices,
Sydney, 26 November, 1858.

R. O'CONNOR,
Clerk of the Legislative Assembly.

PARIS EXHIBITION.

(RECEIPTS AND EXPENDITURE OF SYDNEY COMMISSION IN REFERENCE TO.)

Ordered by the Legislative Assembly to be Printed, 19 November, 1858.

RETURN to an *Address* of the Honorable the Legislative Assembly,
dated 19 October, 1858, praying that His Excellency the Governor
General would be pleased to cause to be laid upon the Table of this
House,—

“ A full account of Receipts and Expenditure, both Colonial
“ and European, by the Sydney Commission for furnishing
“ Specimens of Colonial Productions to the Paris Exposition of
“ 1855.”

(*Mr. Donaldson.*)

PARIS EXHIBITION.

SIR ALFRED STEPHEN to THE AUDITOR GENERAL.

Supreme Court,
18 October, 1858.

SIR,

It is with great regret that I find myself still unable to comply with the request so properly made, and now reiterated by you, to be furnished with the accounts of the disbursements of the moneys issued to the Paris Exhibition Commissioners; but I trust that the explanation which follows will wholly exonerate myself from all blame in the matter, and I doubt not that an equally satisfactory explanation can be afforded by the Finance Committee of the Board, to whom the duty of keeping, or at least of making up the accounts, belongs; that which follows will, indeed, tend to a great extent to afford that explanation.

The expenditure within the Colony was under the supervision, and almost exclusively the control of that Committee, consisting of Mr. Merewether, Mr. Thacker, Mr. Gilbert Smith, Mr. James Donaldson, Mr. Kemp, Mr. Riddell, and Mr. Knox. No money was paid without the authority of the Board, of course; but previously the Finance Committee examined the details, and I think in every instance one member of it countersigned each cheque and voucher. I had personally nothing to do with this department. It unfortunately happens, however, that only two out of the seven members were in the Colony at the date of your first application, and that circumstance has occasioned, I understand, much difficulty; another has been the division of the expenditure into so many heads, as, for instance, the expenditure for medals, the expenditure for freight and carriage of the articles sent and returned respectively, the expenditure for salaries, and the expenditure in Paris, in addition to which there have been the receipt of money for sales there, and the repayment of several of the sums to the owners in the Colony, the expenditure and receipts on account of the exhibition at the Museum, and the expenditure on account of the woods; but above all there has been a difficulty in closing the accounts because of the continued neglect of parties to claim the amounts of sales due to them, although repeatedly advertised.

Sir William Macarthur's accounts, I should state, and all Mr. Bousfield's accounts, to the smallest item, have long been rendered to the Board, so that no difficulty exists in that quarter.

The whole, I believe, are now in the hands of an Accountant, and I trust will be shortly completed.

I have, &c.,

ALFRED STEPHEN,
Chairman of the Board.

THE AUDITOR GENERAL.

SIR ALFRED STEPHEN to THE COLONIAL TREASURER.

Hyde Park,
4 November, 1858.

SIR,

I am at length enabled to send you the Accounts of the Paris Exhibition Commissioners.

After careful examination by accountants employed for this purpose, these accounts have been framed under various heads, so as to classify the expenditure, from the books and vouchers kept by the Secretary to the Board here and in Paris; and, finally, having been in their present shape approved of by the Finance Committee, they will, I trust, be found complete.

2. Various circumstances have concurred to induce delay in the preparation or eventual settlement of these accounts, the principal of which have been explained by me in a former communication.

Among

PARIS EXHIBITION.

3

Among the causes are, not only the difficulties induced by absence from the Colony at different periods of some of our most active members, and by unavoidable changes in the employment of Assistant Secretaries after the Secretary's departure, but more recently the time occupied in settling the claims of many individuals in respect of articles sent to Paris and there sold, or for other reasons not returned. The difficulties attending the adjustment of these have been very great.

3. It may be desirable to explain what has been the course of the Commissioners in respect of their expenditure. With the exception of a sum of £200 for procuring woods in the Northern Districts, and the sum of £7 8s. 5d. for certain petty expenses, voted at one of the first meetings of the Board, and also with the exception of the sums returned to exhibitors, as just mentioned, and the moneys remitted to London for medals, and to Paris for the expenses of the Commission there, no sum was ever paid, or sanctioned by the Commissioners, unless under warrants passed and signed at a meeting of the Board, upon the recommendation of their Committee of Finance.

All gold purchases, on the other hand, were made on the recommendation, and under the superintendence of the Committee on Minerals. In these warrants the several items recommended were inserted in detail, and cheques on one of the Banks for the amount sanctioned—(the general funds being deposited in one Bank, and the gold fund in another, for greater distinctness)—were then signed by two Commissioners, usually members of the Committee, and countersigned by the Secretary. It was that gentleman's duty to attend all meetings, equally of the Board and of the Committees, and to enter the proceedings of both in a book kept for that purpose; and the payments, as made, were afterwards entered by him in the cash book. A similar course as to the preparation of warrants, and the entry of all payments in a cash book, appears to have been invariably pursued in Paris, under the direction of Sir William Macarthur, to whose able exertions and never flagging zeal in its service the Colony is so much indebted. The Secretary kept also, in Paris, an account of all sums received for articles, including minerals, sold there.

4. From these several warrants, and the various cheques given, and the entries in those books, the journal and ledger 1 and 2, which accompany this letter (the latter book being the one referred to by its pages in the general balance sheet,) have been compiled; and by reference to these, and to the books marked 3 and 4—being those kept in Paris—every item of receipt and expenditure, with the particular appropriation in each case, appears to me to be ascertainable. The general balance sheet is a summary of these items under separate heads; and the other balance sheet contains an account, in like manner, of the purchases and disposal of the gold. The book No. 4 contains also information respecting sundry contributions, and their disposal, not immediately bearing on the accounts.

5. From the statement made in the preceding paragraph, however, that every item of expenditure is shewn in detail, there is one exception, *i. e.*, in respect of a sum of £64 10s., paid by a cheque, dated 4 April, 1855. That cheque appears to have been authorised by warrant No. 36, and it was signed by two members of the Finance Committee, and countersigned (the Board having at that time no Secretary) by myself. The warrant, however, has by some means been mislaid, and the particulars of that appropriation, therefore, cannot now be afforded.

6. It was the wish of the Board that the accounts should be accompanied by a Report, showing the proceedings of the Commission in this Colony and at Paris; and placing on record more formally than has yet been attempted the awards of medals and other honorable acknowledgments to exhibitors or inhabitants of this Colony by the Imperial Commission, or by this Colonial Board; but it has been found impossible hitherto to accomplish the duty; and, if it be thought that this was more peculiarly my province as Chairman, I can truly assert that other and more urgent claims on me, to an extent not foreseen or expected when I accepted the post, have, from time to time, prevented me from undertaking the task.

I am, &c.,

ALFRED STEPHEN.

THE HONORABLE

THE COLONIAL TREASURER.

PARIS EXHIBITION.

ACCOUNT Current of EXPENDITURE and RECEIPTS for GOLD by the Paris Exhibition Commissioners for New South Wales.

Dr.			Cr.		
1854. Aug. 16	To Colonial Treasury. Amount voted by the Legislative Council	5,000 0 0	1854. Aug. 22 to 1855. April 5	{ By amount expended in the purchase of Gold Collections, as per Journal, folios 20 and 22 .. }	3,938 3 9
			1856. Dec. 5	Colonial Treasury—amount refunded	1,050 16 3

		£ 5,000 0 0			£ 5,000 0 0

E. & O. E.

JAMES L. LAWRENCE,
Accountant.

Sydney, 4 November, 1858.

MEMO.:

As I understand the Journal, the £3,938 3s. 9d. is the actual cost of the Gold purchases, including freight and insurance, and deducting £140 17s. 9d., proceeds of sales of portions to the Mint and Museum, and that £140 17s. 9d. being paid into the Bank forms part of the £1,050 16s. 3d. returned to the Treasury, the sales by the Paris Commissioners—the details of which are in their "Gold Account" book, page 40, sent herewith—amounted to £3,734 8s. 3.; but the expenses (commission, exchange, &c., as there enumerated), were £203 14s. 9d.,—leaving net proceeds, £3,530 13s. 6d., which Sir William Macarthur handed over to the Colonial Agent.

From this statement, the loss would seem to be £407 10s. 3d. on the Gold exhibited; but this sum must be reduced by £66 2s. 1d., mistakenly debited to those expenses in the Paris Account, and afterwards credited in the "General Account" of the Paris Commission, which see.

W. C. MAYNE,
A. G.

Audit Office, Sydney,
15 November, 1858.

The Accounts Current of the Paris Exhibition Commissioners have been examined and the entries therein are found to correspond with those shewn in the account books transmitted to me for examination. As it will occupy a considerable time to examine these books thoroughly, and to distribute the expenditure in Europe into the several heads of salaries, &c., it may be as well, perhaps, to furnish these papers as they are for the information of Parliament, and, if necessary, a more detailed account could be given at a future time, after audit.

B. C. 12 Nov., 1858.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES No. 14. TUESDAY, 20 APRIL, 1858.

5. Retrenchment in the Public Expenditure:—Mr. Parkes moved, pursuant to notice, "That" this House, having in view the present circumstances of the Colony, and the necessity for retrenchment in the public expenditure, resolves—

(1) That a re-organization of the Departments which shall place the duties of public employment more equally under the control of Ministers, and secure their more economical performance, is urgently required, and ought not to be delayed.

(2.) That in the preparation of the Estimates of Expenditure for the ensuing year all salaries above £250 per annum ought to be subjected to a rateable reduction according to amount, in each case considered in reference to the nature of the service performed.

(3.) That the salaries paid to the Responsible Ministers of the Crown ought to be equal in amount, and not higher than £1,200 per annum.

(4.) That an Address, embodying the foregoing Resolutions, be presented to His Excellency the Governor General, praying that the same may be submitted for the early consideration of the Executive Council.

Mr. Cowper moved, That the Question be amended by the omission of all the words following the word "That," at the commencement, with a view to the insertion in their place of the words, "a Select Committee be appointed to inquire and report what changes can be made in the respective Departments of the Government, with a view to promoting their efficiency, and at the same time reducing their cost to the public, and that such Committee have power to send for persons and papers.

"(2.) That the Committee consist of ten Members, viz.:—Mr. Robertson, Mr. Donaldson, Mr. Flood, Mr. Forster, Mr. Jones, Mr. Parkes, Mr. Piddington, Mr. Smith, Mr. Weekes, and the Mover."

Debate ensued.

And the Original Question being, by consent, amended in section (2), so as to stand thus:—

"(2.) That the Estimates of Expenditure for the ensuing year, ought to be framed upon a basis of reduction according to amount, in each case considered in reference to the nature of the service performed;"—

And it being agreed to put the proposed Resolutions in the Original Question *seriatim*, in case the proposed amendment be negatived,—

Question put, That the words proposed to be omitted stand part of the Question.

The House divided.

Ayes, 19.

Mr. Faucett,

Question,—That the words proposed to be inserted in place of the words omitted, be so inserted,—put and passed;—

Whereupon Question,—

(1.) That a Select Committee be appointed to inquire and report what changes can be made in the respective Departments of the Government, with a view to promoting their efficiency, and at the same time reducing their cost to the public, and that such Committee have power to send for persons and papers;—

(2.) That the Committee consist of ten Members, viz.:—Mr. Robertson, Mr. Donaldson, Mr. Flood, Mr. Forster, Mr. Jones, Mr. Parkes, Mr. Piddington, Mr. Smith, Mr. Weekes, and the Mover,—put and passed.

VOTES No. 28. FRIDAY, 14 MAY, 1858.

6. Attendance of President of the Legislative Council:—Mr. Cowper moved, without previous notice, That the following Message be carried to the Legislative Council:—

The Legislative Assembly having appointed a Select Committee to inquire into and report upon what changes can be made in the Public Departments, with a view to promote their efficiency and reduce their cost to the public, with power to send for persons and papers, and such Committee being desirous to examine the
Honorable

Honorable the President on the subject of their inquiry, as regards the department of the Legislative Council, begs, in due form, to request that the Legislative Council will give leave to the Honorable the President to attend such Committee accordingly, for the purpose aforesaid, on such day and days as shall be arranged between him and such Committee.

*Legislative Assembly Chamber,
Sydney, 14 May, 1858.*

Speaker.

Question put and passed.

VOTES NO. 30. WEDNESDAY, 19 MAY, 1858.

10. Messages from the Legislative Council:—The Speaker reported that whilst the House was in Committee, the following Messages were received from the Legislative Council:—

(1.) Attendance of President of Legislative Council:—

MR. SPEAKER,

In answer to the Message from the Legislative Assembly dated the 14th instant, requesting leave for the Honorable the President of the Legislative Council to attend and be examined before a Committee of the Legislative Assembly, on "Retrenchment in Public Expenditure," the Council acquaints the Legislative Assembly that leave has been granted to the President to attend and be examined by the said Committee, if he think fit.

*Legislative Council Chamber,
Sydney, 19 May, 1858.*

W. W. BURTON,
President.

* * * * *

VOTES NO. 48. TUESDAY, 22 JUNE, 1858.

16. Attendance of Clerk of Legislative Council:—Mr. Cowper moved, That the following Message be carried to the Legislative Council:—

The Legislative Assembly having appointed a Select Committee to inquire into and report upon Retrenchment in the Public Expenditure, and that Committee being desirous to examine the Clerk of the Legislative Council in reference thereto, begs to request that the Legislative Council will give leave to its said Clerk to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,
Sydney, 22 June, 1858.*

Speaker.

Question put and passed.

VOTES, NO. 51. FRIDAY, 25 JUNE, 1858.

13. Messages from the Legislative Council:—The Speaker reported, That during the Debate on the motion for the third reading of the Deserted Wives and Children's Act Amendment Bill, the following Messages were received from the Legislative Council:—

* * * * *

(2.) Attendance of Clerk of Legislative Council:—

MR. SPEAKER,

In answer to the Message of the Legislative Assembly, dated the 22nd instant, requesting leave for the Clerk of the Legislative Council to attend and be examined before a Committee of the Legislative Assembly, upon Retrenchment in the Public Expenditure, the Council acquaints the Legislative Assembly that leave has been granted to the Clerk of the Legislative Council to attend and be examined by the said Committee.

*Legislative Council Chamber,
Sydney, 24 June, 1858.*

W. W. BURTON,
President.

* * * * *

VOTES, NO. 81. TUESDAY, 24 AUGUST, 1858.

9. Clerks of Petty Sessions at Deniliquin and Moulamein:—Mr. George Macleay moved, pursuant to notice, That the Petition of the Magistrates, Stockholders, and other residents in the Police District of Deniliquin and Moulamein, for and on behalf of the Clerks of Petty Sessions of those Districts, presented on the 9th of January, 1857, be referred to the Select Committee on "Retrenchment in Public Expenditure," now sitting.

Question put and passed.

VOTES, NO. 111. FRIDAY, 29 OCTOBER, 1858.

2. Retrenchment in the Public Expenditure:—Mr. Cowper, as Chairman, brought up a Progress Report from, and laid upon the Table the Evidence taken before the Select Committee appointed on the 20th April, 1858, to inquire and report what changes can be made in the respective Departments of the Government, with a view to promoting their efficiency, and at the same time reducing their cost to the public, with power to send for persons and papers—together with Minutes of Proceedings and Appendices.

Ordered to be printed, (except certain Schedules forming a portion of the "Separate Appendix" to the Report.)

1858.

 RETRENCHMENT IN THE PUBLIC EXPENDITURE

 PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 20th April, 1858, "to inquire into and report what changes can be made in the respective Departments of the Government, with a view to promoting their efficiency, and at the same time reducing their cost to the public, and that such Committee have power to send for persons and papers;"—and to whom was referred on the 24th August last, "the Petition of the Magistrates, Stockholders, and other residents in the Police Districts of Deniliquin and Moulamein, for and on behalf of the Clerks of Petty Sessions of those Districts,"—have agreed to the following Progress Report:—

In the consideration of the matters referred to them, your Committee have taken the evidence of several witnesses; but the importance and extent of the subject,—the present incomplete state of the inquiry,—and the advanced period of the Session, will render its completion therein altogether impossible; and they therefore deem it advisable to submit at once to your Honorable House the evidence which has been taken by them, and to recommend a resumption of the inquiry at an early period during the ensuing Session.

CHARLES COWPER,

Chairman.

Legislative Assembly Chamber,

Sydney, 29 October, 1858.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 6 MAY, 1858.

MEMBERS PRESENT:—

Mr. Cowper,
Mr. Parkes,
Mr. Robertson,

Mr. Donaldson,
Mr. Piddington,
Mr. Forster.

Mr. Cowper was called to the Chair.

By direction of the Chairman, Resolution of the House appointing the Committee read by the Clerk.

Committee deliberated, and it was *Resolved*:—

“That before determining on any definite course of action to be pursued by the Committee with reference to this inquiry, it is expedient to request a full attendance of the Members thereof.”

[Adjourned till Thursday next, at Ten o'clock.]

THURSDAY, 13 MAY, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Parkes,
Mr. Forster,

Mr. Flood,
Mr. Jones,

Mr. Robertson.

Committee met, pursuant to a Resolution agreed to at their last meeting, to determine as to their course of proceedings.

The Chairman having before him the Report of the Select Committee of the House of Commons on “Miscellaneous Expenditure” in 1848, and on “Official Salaries” in 1851, read certain portions thereof.

Committee deliberated, and it was *Resolved*:—

- “1. That for the purposes of this inquiry it is expedient to take evidence.
- “2. That the Heads and certain of the Officers in each of the Public Departments be first examined, and then such persons, engaged in the principal Mercantile, Banking, and other business establishments of the Colony, as to the Committee may seem expedient.”

The Chairman having laid before the Committee a form of Schedule, prepared by the Clerk of Select Committees, a copy of which he proposed transmitting to each of the Public Departments, to be there *filled in* for the information of the Committee,—read the various headings thereof, viz.:—

1. No.
2. Nature of office, and where employed,
3. Name of Holder,
4. Whether holding any other office, and, if so, what?
5. Epitome of duties,
6. Date of appointment to public service,
7. Date of appointment to present office,
8. Total length of service,

SALARY.

9. Rate received on appointment to public service,
10. Rate received on appointment to present office,
11. Rate now received,
12. Whether in receipt of any other remuneration, and, if so, what?
13. Total,
14. Contingencies,
15. Total expense of department,
16. Whether provided with quarters,
17. Remarks,—

and desired the opinion of the Committee thereupon.

Committee deliberated.

Motion made (Mr. Flood) and *Question*,—“That in this form of Schedule after the heading ‘Epitome of Duties,’ there be inserted the following heading, viz.:—

“If any arrears of Business, of what nature, and from what cause arising”—
agreed to.

Deliberation continued.

Motion

Motion made (Mr. Jones) and Question, "That the form of Schedule, as amended, be forthwith transmitted to the Colonial Secretary, with a letter stating the desire of the Committee that he should cause copies thereof, as soon as may be, to be sent to the several Public Departments in the Colony, with an instruction to comply with its requirements, as far as practicable; but that it is not intended to prevent the Departments from preparing any further information which may prove useful in bringing the labors of the Committee to a complete and satisfactory issue, provided such information is concise in form and speedily supplied"—*agreed to.*

Committee then deliberated as to the expediency of adjourning the inquiry till the production of these Returns, and being of opinion that such a course of proceeding was unnecessary,—

Motion made and Question—"That the Honorable the President of the Legislative Council, the Honorable the Speaker of the Legislative Assembly, and the Private Secretary, be requested to attend before the Committee, on Wednesday next, for the purpose of being examined"—*agreed to.*

[Adjourned till Wednesday next, at Ten o'clock.]

WEDNESDAY, 19 MAY, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Parkes,	Mr. Robertson,
Mr. Piddington,	Mr. Donaldson,
Mr. Forster,	Mr. Jones.

By direction of the Chairman, Letter from the Clerk of the Legislative Assembly to the Honorable the Colonial Secretary, dated 13th instant, in accordance with the terms of the Resolution agreed to by the Committee at their last meeting on motion of Mr. Jones,—read by the Clerk.

Ordered to be printed in Appendix. (Vide Separate Appendix A.)

The Chairman at the same time laid before the Committee a Proof of the Schedule referred to in the above-mentioned letter.

The Honorable Sir W. W. Burton, Knight, President of the Legislative Council, attending by permission of the Council, and the Honorable Sir Daniel Cooper, Knight, Speaker of the Legislative Assembly, examined.

Committee then deliberated as to the expediency of taking all the necessary evidence upon, and coming to certain Resolutions relative to each Department, separately and conclusively, proceeding through the various Departments *seriatim*, in the order they stand in the Estimates for 1858.

Deliberation adjourned.

[Adjourned till Thursday, 27th instant, at Eleven o'clock]

THURSDAY, 27 MAY, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Jones,	Mr. Smith,
Mr. Forster,	Mr. Piddington,
Mr. Donaldson,	Mr. Weekes,
Mr. Parkes.	

Committee further deliberated as to the expediency of taking all the necessary evidence upon, and coming to select certain Resolutions relative to, each Department separately and conclusively; proceeding through the various Departments *seriatim* in the order they stand in the Estimates for 1858.

Deliberation again adjourned.

Mr. Alfred Denison, Private Secretary to the Governor General,

Mr. E. C. Merewether, Clerk of the Executive Council, and

Mr. William Elyard, Principal Under Secretary,—

severally examined.

[Adjourned till Friday, 25 proximo, at Eleven o'clock.]

FRIDAY, 25 JUNE, 1858.

MEMBERS PRESENT:—

Mr. Cowper,	Mr. Weekes.
-------------	-------------

Mr. W. Elyard was in attendance as a witness, but a quorum of the Committee was not present.

[Adjourned till Thursday next at Eleven o'clock.]

THURSDAY,

THURSDAY, 1 JULY, 1858.

MEMBERS PRESENT:—

Mr. Forster, | Mr. Piddington.

Mr. W. Elyard and Mr. W. Macpherson were in attendance as witnesses, but a quorum of the Committee was not present.

[Adjourned]

TUESDAY, 20 JULY, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Forster, | Mr. Piddington.

Mr. William Elyard further examined.

Mr. William Macpherson, Clerk of the Legislative Council, examined.

[Adjourned till to-morrow at Eleven o'clock.]

WEDNESDAY, 21 JULY, 1858.

MEMBER PRESENT:—

Mr. Cowper.

Mr. R. O'Connor and Mr. W. H. Christie were in attendance as witnesses, but a quorum of the Committee was not present.

[Adjourned till Wednesday next, at Eleven o'clock.]

WEDNESDAY, 28 JULY, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Piddington, | Mr. Parkes,
Mr. Forster.

The Chairman laid before the Committee:—

1. Letter from the Principal Under Secretary to the Clerk of the Legislative Assembly, dated 20th instant, in reply to a communication from that officer of the 13th May last, transmitting certain *filled in* forms of Schedule from the Department of the Principal Secretary, and twenty-four of the Departments immediately under his control, with a list specifying the said twenty-four Departments, appended thereto.
2. Further letter from the Principal Under Secretary, dated 24th instant, transmitting copy of a communication from the Under Secretary for Lands and Public Works, together with certain *filled in* forms of Schedule from his own Department and twelve of the Departments immediately under his control, with a list specifying the said twelve Departments, appended thereto.

Ordered, that these letters, together with the lists appended thereto, be printed in the Appendix. (*Vide separate Appendices B and C.*)

Committee then deliberated as to the expediency of ordering the printing of the forms of Schedule,—and it was Resolved:—

“That it would be inexpedient to incur the expense of printing the Schedules prior to ascertaining their practical utility for the conduct of the inquiry.”

Mr. R. O'Connor, Clerk of the Legislative Assembly, examined.

During his examination the witness handed in a *filled in* form of Schedule of the Department of the Legislative Assembly.

[Adjourned till Friday next, at Eleven o'clock.]

FRIDAY, 30 JULY, 1858.

MEMBERS PRESENT:—

Mr. Cowper, | Mr. Piddington.

Mr. W. H. Christie was in attendance as a witness, but a Quorum of the Committee not being present,—

[Adjourned till Wednesday next, at Eleven o'clock.]

WEDNESDAY,

WEDNESDAY, 4 AUGUST, 1858.

MEMBERS PRESENT :—

Mr. Jones,		Mr. Forster.
------------	--	--------------

Mr. J. O'Neil Brennan, the Sheriff, examined.

[Adjourned till Tuesday next, at *Eleven* o'clock.]

TUESDAY, 24 AUGUST, 1858.

MEMBERS PRESENT :—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Jones,		Mr. Parkes,
Mr. Piddington.		

The Chairman laid before the Committee :—

Further letter from Principal Under Secretary, dated 20th August, 1858, transmitting copy of communication from Inspector General of Police, covering certain filled in forms of Schedule from the Department of the Metropolitan Police, and 67 of the Rural Police Districts.

Ordered, that the letter be printed in the Appendix. (*Vide "Separate Appendix D."*)
Dr. Alleyne, Health Officer, and Mr. W. Hanson, Government Printer, examined.

[Adjourned till Friday next, at *Eleven* o'clock.]

FRIDAY, 27 AUGUST, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Forster, | Mr. Jones.

The Chairman laid before the Committee:—

Further letter from Principal Under Secretary, dated 23rd August, 1858, transmitting *filled in* form of Schedule of the Department of "Internal Communications."*Ordered*, that the letter be printed in the Appendix. (*Vide "Separate Appendix E."*)

By direction of the Chairman, Resolution of the House referring to the Committee on 24th instant,—

"A Petition from certain Magistrates, Stockholders, and other Residents in the
 "Police Districts of Deulliquin and Moulamein, against any reduction in the
 "Salaries of the Clerks of Petty Sessions of those Districts, presented to the
 "House by Mr. George Macleay, on 7 January, 1857,"—

read by the Clerk.

Mr. R. A. Hunt, Superintendent of the Letter Branch in the General Post Office, examined:—

Dr. Campbell and Dr. Greenup were also in attendance as witnesses, but the Committee being unable to proceed to their examination *this day*,—It was *Resolved*:—

"That Dr. Campbell and Dr. Greenup be summoned before the Committee, as
 "witnesses, for Thursday next."

[Adjourned till Thursday next, at *Eleven o'clock*.]

THURSDAY, 2 SEPTEMBER, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Jones, | Mr. Forster,
Mr. Piddington.

The Chairman laid before the Committee:—

Further letter from Principal Under Secretary, dated 27th August, 1858, transmitting *filled in* form of Schedule of the Department of the "Legislative Council."*Ordered*, that the letter be printed in the Appendix. (*Vide "Separate Appendix F."*)

The Chairman also laid before the Committee:—

Scale showing the linear proportion of the different branches of public expenditure
 in the United Kingdom for the year 1825, prepared by Mr. John Thompson,
 Deputy Surveyor General for the Home Government, and transmitted by him
 for the information of the Committee.

Dr. F. Campbell, Medical Superintendent of the Lunatic Asylum, Tarban, and

Dr. R. Greenup, Medical Superintendent of the Lunatic Asylum, Parramatta,—
examined.[Adjourned till Wednesday next at *Eleven o'clock*.]

WEDNESDAY, 8 SEPTEMBER, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Jones, | Mr. Forster,
Mr. Piddington.

The Chairman laid before the Committee:—

Further letter from Principal Under Secretary, dated 2nd September, 1858, transmitting two *filled in* forms of Schedule of the Police Departments at "Glen Innes" and "Shoalhaven."*Ordered*, that the letter be printed in the Appendix. (*Vide separate Appendix G.*)

Captain W. C. Mayne, Auditor General, examined.

Committee deliberated, and it was *Resolved*:—

"1. That it is expedient to proceed now to take evidence with respect to the
 "departments under the Administrative control of the Treasurer and Secretary
 "for Finance and Trade.

"2. That Henry Lane, Esquire, Secretary to the Treasury, be summoned before
 "the Committee as a witness for Wednesday next."

[Adjourned till Wednesday next at *Eleven o'clock*.]

WEDNESDAY, 15 SEPTEMBER, 1858.

The meeting of the Committee convened for *this day* lapsed, in consequence of the
 adjournment of the House from Tuesday the 14th to Thursday the 16th instant.

THURSDAY,

THURSDAY, 23 SEPTEMBER, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Piddington, | Mr. Robertson,
Mr. Donaldson.

The Chairman laid before the Committee:—

Letter from Secretary to the Treasury, dated 10th instant, transmitting *filled in* forms of Schedule from the various Departments (*with the exception of the "Colonial Storekeeper's" Department*) immediately under the control of the Minister for Finance and Trade.

Further letter from Secretary to the Treasury, dated 13th instant, transmitting *filled in* form of Schedule of the "Colonial Storekeeper's" Department.

Further letter from Principal Under Secretary, dated 14th instant, transmitting *filled in* form of Schedule of Police District of "Tamworth."

Ordered, that these letters be printed in the Appendix. (*Vide "Separate Appendices H, I, & J."*)

Committee then further deliberated as to the expediency of printing the forms of Schedule,—and it was *Resolved*:—

- "1. That, as these forms of Schedule contain information which may prove of great value to the Members of the House in the consideration of the Estimates for 1859, as well as to the public at large, it is expedient that the same be printed."
- "2. That, nevertheless, as it is understood that the said forms cannot be printed in time to form part of the volumes of 'Votes and Proceedings' of the present Session, it is advisable, in laying the same upon the Table of the House, not to move for their printing, but that the Principal Secretary should, on an early day during the ensuing Session, make a motion to that effect."

Mr. Henry Lane, Secretary to the Treasury, examined.

During his examination the witness handed in a *filled in* form of Schedule of the Department of the "Colonial Treasury."

Committee deliberated.

[Adjourned.]

THURSDAY, 21 OCTOBER, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Donaldson, | Mr. Piddington,
Mr. Jones, | Mr. Forster.

The Chairman stated that he caused the present meeting of the Committee to be convened for the purpose of ascertaining their opinion as to whether it would be the more expedient course to take further evidence, or to at once report the evidence already taken to the House.

Committee deliberated, and it was *Resolved*:—

- "1. That at this late period of the Session it is inexpedient to take further evidence with reference to this inquiry."
- "2. That in the opinion of this Committee the importance and extent of the subject,—the present incomplete state of the inquiry,—and the advanced period of the Session, render its completion therein impracticable, and it is advisable therefore to submit at once to the House the evidence taken, with a recommendation that the inquiry be resumed at an early period during the ensuing Session."
- "3. That the Chairman do prepare a Progress Report for the consideration of the Committee, embodying the purport of these Resolutions."

[Adjourned, till Thursday next, at Eleven o'clock.]

THURSDAY, 28 OCTOBER, 1858.

MEMBERS PRESENT:—

The Honorable Charles Cowper, Esquire, in the Chair.

Mr. Jones, | Mr. Piddington,
Mr. Robertson.

The Chairman laid before the Committee:—

Further letter from Principal Under Secretary, dated 22nd instant, transmitting copy of communication from the Secretary to the Crown Law Officers, covering certain *filled in* forms of Schedule of the Department of the Crown Law Officers, and 15 of the Departments immediately under their control,—with a list specifying the said Departments appended thereto.

Ordered, that these letters, together with the list appended thereto, be printed in the Appendix. (*Vide "Separate Appendix K, Nos. 1 and 2."*)

The Chairman then laid before the Committee a Draft Progress Report.

Report read, and agreed to without amendment.

Whereupon Motion made and Question—"That this Draft Report be the Progress Report of the Committee"—*agreed to*.

Chairman requested to Report Progress to the House.

1858.

Legislative Assembly.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

RETRENCHMENT IN THE PUBLIC EXPENDITURE.

WEDNESDAY, 19 MAY, 1858.

Present:—

Mr. COWPER,
Mr. DONALDSON,
Mr. FLOOD,
Mr. FORSTER,

Mr. JONES,
Mr. HAY,
Mr. PARKES,
Mr. PIDDINGTON,

Mr. ROBERTSON.

C. COWPER, Esq., IN THE CHAIR.

The Honorable Sir William Westbrooke Burton, Knt., President of the Legislative Council,
examined:—

1. *By the Chairman:* I presume, Sir William, you understand the object of the inquiry to be pursued by this Committee? I think it is embodied in your Resolution; and I hope I need scarcely say to you, that you will find me at all times ready to co-operate with your House, in any measure to introduce economy into the department to which I belong. If there is any point upon which it can be introduced I shall be most happy indeed to assist in it; but, at the same time, I think the mode in which the expenses of the establishment has been cast has been very well considered, and that the department has been cast upon as economical a system as the respectability of the establishment would admit. This I may generally say; but there are some minor points upon which I think, perhaps, a little more economy might still be exercised. You provide for a staff of clerks which I think amply sufficient for conducting the business; but you provide for contingencies two extra copying clerks, which I do not think necessary; I think five clerks quite competent to do the whole business of the department, both in session and in recess. We have usually employed only one of these extra copying clerks; and there is one in the office now, not under my appointment. I have given directions that no one shall be appointed for the future but upon my sanction; but an arrangement had been made before I took office, by which the first clerk of the department, who was in a very bad state of health, was allowed a very liberal leave of absence—I think for six months—at the end of which period he was expected to resign. I believe that was an arrangement of my predecessor and of the Government. I should not have approved of it myself, or have recommended it to the Government; because, I think if a gentleman's health is so bad as that, resignation at the time is the proper course, and that he should not be borne upon the establishment; but the result has been, that one of these extra clerks has been called into the department, to help to perform the duty of the office. That I disapprove of, as I believe there was no other call for him than to make up for the services of the gentleman who was absent. I shall therefore recommend upon that point—and I take the liberty of doing so now—that instead of two extra copying clerks being attached to the establishment, it should be understood, or perhaps entered upon the Estimates, that whenever extra services require them they may be employed; that there should not be two extra copying clerks to be called in whenever the Clerk of the Council thinks fit, but if there be a real necessity for additional assistance, through the President it should be asked for and granted. Then I take the liberty of mentioning to the Committee that I think in casting the salaries for the officers of the Legislative Council, one principle has been lost sight of. A certain economy has been introduced, but

Sir W. W.

Sir W. W.
Burton, Knt.

19 May, 1858.

but I think not a consistent one—I mean not consistent with the liberality of the House that has assessed these salaries—and that is, that the clerks are assessed at a lower rate than those of the Legislative Assembly. I think that is a grievance, and I have had the honor of addressing you, as the head of the Government, upon that subject, and I can only say that in making that address to you, I only did what I thought was my duty to the officers of the establishment, and I shall expect from the Government they will do that which is right. I have done my duty in simply representing the facts, but I do think where equal duties are performed they should be admitted, and that the officers who do them should be equally compensated. The clerks of the Legislative Council are assessed at lower salaries than those of the Legislative Assembly. The work these gentlemen have to do is of a similar character, the responsibilities, the attainments required in their situations are all similar, and they must necessarily be occupied in the business of their respective departments during the whole of their time. It is very true that the labors of the clerks in one house are excessively in advance of the labors of the other in point of amount, arising from various circumstances, but that is met by the corresponding increase in the number of persons employed to do the work, so that it does not really fall more heavily upon the clerks of one establishment than upon the clerks of the other. And then I must say that I would commit it to the liberality and generous feeling, which may always be associated with strict economy, of the Legislative Assembly, that they would consider that these two Houses are equal in importance, and that the employment in one is of equal importance with the employment in the other, and that where no overwhelming reason exists, the officers of the two establishments should be treated *pari passu*, that they should be equal in their emoluments as in the duties which have to be performed by them. The duties of both are very laborious, and they do occupy the whole of their time during the Session. The Legislative Assembly, sitting to a much later time of night than the Legislative Council, occupy their clerks at the Table a very great deal longer time than our own are engaged there, but our clerks are engaged after the House has risen in the business, I mean in getting up the records, sending them away to the printer; so that, although the business of the House may terminate at nine, or half-past nine o'clock, they are not away from the office until twelve or one o'clock. So that, in comparing the labors of the clerks of the two Houses, there is really no great difference. It is, no doubt, a harder case for a man to be deprived of his rest until one or two o'clock than to be deprived of it until twelve or one; but I mean you obtain enough of a man's services if after nine o'clock you keep him at his papers until twelve or half-past twelve; one so occupied may be considered as performing a full day's work. In the recess there is a period of time when the labors of all are very small. The three permanent clerks—as the Clerk, the Clerk Assistant, and the First Clerk—might be supposed during these periods capable of doing the whole of the business of the office. The recess has not, in my experience, lasted more than about six weeks—that is, some period of relaxation. Then there are two junior clerks, who are absolutely necessary during all the session, and I suppose the same remark applies to both Houses of the Parliament; but their labors are not so important during the recess but that they might be laid upon other persons. But as to these, I apprehend that an establishment such as either of these Houses of Parliament should not be dependent upon temporary clerks to do the work—that these persons should not be turned adrift after the labor of the session is over. You must employ persons who will rise in the department by acquaintance with the duties, and who certainly could not be called upon to work and be paid for their services only during the session; and so, I say, although three clerks might in the recess do all the work, still, the five being necessary for the session, and the five altogether not too large a number for that business, these ought all to be considered permanent clerks, and I do not think the department admits of the reduction of putting these two junior clerks upon mere sessional employment. I hope I explain myself sufficiently upon that point. I mean, when you employ a man for an office like that of a clerk of the Assembly or Council, the whole energies of his mind are applied to that department; and if he is to be turned out at the end of the session—if he is to be only a sessionally employed person—you might get some one inexperienced in the duties for an officer; a man who is employed only half a year, and paid for half a year, will not be likely to devote his services to such employment. I suppose no establishment in the place would be provided with clerks upon the understanding that when the press of business was over they would be dismissed. Therefore, without being asked any questions by you as to specific items, I have thought fit to lay before you these few remarks, out of which you may elicit matter for questions. My general impression is, as I have stated, that the establishment is as economically fixed as it could fairly be, and all the guiding principles I have spoken of as to the permanent establishment apply in the same way to the Legislative Assembly. I am sure the gentlemen on the establishment of the Legislative Council will be perfectly satisfied, and I, as President, shall be perfectly satisfied, with their being upon the same footing as gentlemen holding corresponding offices in the Legislative Assembly; and I think that is a principle you and your colleagues will have pleasure in carrying out.

2. Are the Committee then to understand you that five clerks on the permanent establishment are absolutely necessary? I think them absolutely necessary in this way—they are absolutely necessary certainly during the session; I cannot say that their whole time is occupied during the recess, but what I meant to convey was, that you cannot employ half a man's time—you must employ him as a clerk upon the establishment or not—if he is to be dismissed at the end of the session you lose the services of one who might otherwise be trained to the duties of the department. Gentlemen obtain these appointments for their maintenance, and they do get such maintenance as £250 a year will give them; but if there is to be employment only during the session, I think a very different class of men will be put into their places, and the work will not be satisfactorily done. Now, the two junior clerks are of course in expectation that by changes in the office they might

might rise, but if they were only employed as sessional clerks they would be put in a very different position. The same remarks apply to those who are similarly employed in the Legislative Assembly; they are no more employed in the recess than these are in the Legislative Council, and what would be the consequence of turning adrift, I may say, for that period so many gentlemen who are depending upon the office not only for employment but for the means of living? I therefore say it is absolutely necessary for the service of Parliament that they should be retained, although not employed, for the whole period.

Sir W. W.
Burton, Knt.
19 May, 1858.

3. With regard to the Clerk of the Council, Mr. Macpherson, do you find at his time of life and in his present circumstances, he is able to perform what may be considered a fair share of the duties properly attached to his office, or, may not the performance of part of the duty that should be attended to by the Chief Clerk render the position of the subordinate officers more onerous? Mr. Macpherson is an exceedingly old officer of the Government, perhaps none of us remember the beginning of his employment. I remember twenty-six years ago he was in office, a very laborious clerk to the Executive Council, and his habits are such, of such a plodding and correct nature, that he is a most valuable person. Although very old, and now becoming very infirm, Mr. Macpherson is quite capable of performing all those duties belonging to his position, excepting such as depend upon distinct articulation—as reading from the Table. As to putting his duties upon any one else, with the view of lessening his salary, I know of none that could be imposed upon others, excepting that of reading from the Table.

4. The object I have in view in carrying out the inquiry is to ascertain whether the expenditure might be lessened, and the efficiency of the service might be promoted. I wished to learn whether Mr. Macpherson might be retained in office, at his present salary, or whether the time might not have arrived when, by an equitable arrangement as regards Mr. Macpherson, the public service might not be performed in a more efficient manner, and probably at a less cost? I do not think you could employ an efficient officer in that position at a less cost, and I think Mr. Macpherson, although old, is efficient—not so efficient as a younger man might be; he has not the bodily activity or energy of a younger man, but he applies himself most closely to his duties, and I know that he does not leave the office until twelve or half-past twelve at night. Of course if I were commencing the establishment I would not put a man of Mr. Macpherson's age into the office, but would ask the Government to pension him. I do not know who commenced making the appointments, but I would not have acquiesced in this if I had been here, simply on account of the place requiring a man of more energy—still Mr. Macpherson is perfectly effective.

5. You would not, then, at the present moment, suggest his retirement? No; that is, as President of the Council I see nothing in the conduct of his duty that would make me desirous of his retirement. If Mr. Macpherson desired his retirement, and the Government desired it, and if an arrangement were made between them, I should be happy to see it, if it were on terms that pleased both; but I should be sorry to see Mr. Macpherson put out of his employment, certainly, upon the ground of inefficiency.

6. With regard to the emoluments—do you think the salaries are excessive, or more than a fair remuneration for the duties these gentlemen perform? I think they are moderate—that the gentlemen are only fairly remunerated for the duty they perform. They are less than the salaries paid to the officers of the Assembly, and you do not require a better class of men in the Assembly than in the Council.

7. The number of records kept in the Council is much smaller than the number kept in the Assembly? Very much smaller, and the business is very much smaller. The notices of motion are more numerous, and the business of your House is larger, and always will be in a representative body than in a body like the Council, but still you want the men to do the work. I cannot say that I think any salary is too high. The salary of the Chairman of Committees is the same in both Houses. The Clerk of the Assembly has £100 a year more than the Clerk of the Council. I do not think that unreasonable, because his labors are greater; still, I must say, it would have been a fairer mode of assessing the salaries of both officers to have put them both on the same footing. The Clerk Assistant has £400 a year in the Council and £600 in the Assembly; then there is a second Clerk Assistant in the Assembly, which office does not exist in the other House; then the Clerk of Records receives £400 in the Assembly, and but £300 in the Council. The other clerks receive £300 in the Assembly and £250 in the Council. Then the Assembly has a clerk in charge of printed papers, and extra clerks in the contingencies as well, which we have not; so that whilst I say the business is considerably greater the establishment is correspondingly greater. No man does more in one, I think, than in the other, though I have no doubt each gentleman does all he can. As far as the Legislative Council is concerned, I am satisfied the emoluments of the officers are not excessive, and with regard to the subordinate officers, I may say there is no reason apparent to me why we should not be allowed an assistant messenger as well as the other House. I see one assistant messenger and the President's messenger at 3s. a day, why that has been so assessed I know not I am sure.

8. Do I understand you that you do not consider the President's messenger necessary? I do indeed. I think we should have two messengers, as the Assembly has—they have two assistant messengers, and a principal messenger, and we have one assistant messenger and a President's messenger, at 3s. a day.

9. In your opinion the strength of five clerks in the Council is not more than the relative number of eight in the Assembly, as far as you are aware of the duties to be performed by those gentlemen? That is my opinion.

10. There is one item of expense which does not appear in this estimate—I allude to the item of printing—since you addressed me on that subject, have your views at all altered, or do you still think a considerable reduction might be made in the number of papers? My views have not been altered, but I have been very considerably overruled. My attention was called to the matter as involving a very considerable waste in the printing department, and

Sir W. W.
Burton, Knt.

19 May, 1858.

and I had a conference with the Speaker and Mr. O'Connor on the subject, but the opinions on that side of the House were so strong against ours, in maintaining that the parts of the printing I proposed to dispense with could not be dispensed with, that I have been disappointed in carrying out my intention; but there will be a saving carried out in my department, as I still entertain the opinion that a considerable saving may be made, although not to the extent I had hoped.

11. You were under the impression that nearly half might be dispensed with? I was, but I was overruled. I thought that for proofs to be published as well as other copies of the Minutes was a double expense, and that half that might be dispensed with. I was answered upon that, the proofs could by no means be dispensed with, because they only could be got out early in the morning, to apprise gentlemen of the business that was coming on during the day. Then the papers laid upon the Table by command, and which both Houses print, I objected to that, but was met upon that with the statement that these papers are really printed before they come, so that there is no reprinting. The printer, however, explained, that by this plan a much larger number is printed than is reasonable, and that a large number are sent out to persons. I was not before aware of the liberality of Government in this respect; everybody seems supplied with copies of papers, which increases the expense very prodigiously; I think that, however, is a matter with which the Government have more to do with than we. I am answered by the Speaker and Mr. O'Connor, that the House of Assembly will not suffer their papers to be less than they are.

12. I think I understood that four hundred copies of parliamentary papers are struck off, irrespectively of proofs—you think that number not necessary? I think three hundred would be quite enough. I did think two hundred would be sufficient; however, upon that subject I would rather say, generally, that I still am of opinion that a reduction may be made in these points. I am prepared to make it, and will send a letter to the Government, in the course of a day or two, in which I will state the final result of what I am able to effect.

13. I think I understood from your note that there is a large accumulation of papers in the office—the waste paper office as it is called—in store for future requirements, that have hitherto not been required? Yes, I understand it is so, and those cases upstairs contain them.

14. Do you think, from your observation during the short time you have been in the office, that this extra number is likely to be called for, for many years to come? No. I think there is a fondness for accumulating these papers, which I cannot account for, except in the same way as I should account for some men having a miserly attachment to their gold. Some old clerks have a fondness for keeping old papers, and it would almost break their hearts to take them away; still I think they ought to be taken away.

15. *By Mr. Jones:* What are the ordinary hours of attendance of the various clerks connected with the Council during the time the House is in session? I am there very rarely later than nine or half-past nine, and they are in attendance during the whole sitting of the House, and do not leave the office until half-past eleven or twelve.

16. At what hour do they go to the office? At half-past nine, or ten.

17. And attend during the actual sitting of the House? Yes; and after the rising of the House, in perfecting the papers.

18. What are these hours during the session, on days when the Council does not sit? I should say they are from ten to five.

19. And during the recess, what are their hours, in general? The same—from ten to five; but, occasionally, they have leave in the recess, one at a time.

20. I understand you to say that the services of the whole of these five clerks are absolutely required during the session? Yes.

21. During the recess, is there supposed to be work for the whole? There is supposed to be work for the whole of them. I desired each gentleman to give me a précis of his duties. They have done so, and I have them here. (*The President handed in the same. Vide Appendix A.*)

22. Do you believe there are any peculiar qualifications required in the clerks of the Council other than would be required to fit them for the business of any private mercantile or banking establishment? None at all. I should say that the clerks in both Houses require similar qualifications, that is all.

23. Do you think there is any special qualification required in a clerk of the Council that would not be required in a large mercantile or banking establishment? Certainly not. I think the qualifications required in the clerks of one establishment are pretty much the same as those required in clerks of the other: they require neither law-latin nor French.

24. No special qualifications of any kind? No.

25. Is the Usher of the Black Rod presumed to be in attendance during the recess? No; he only attends at a levee, or anything of that kind. He is the analogous officer to the Serjeant-at-Arms in the Assembly.

26. *By Mr. Piddington:* With reference to the offices and salaries of the Clerk of Council, the Clerk Assistant, and the First Clerk, I wish to ask you whether it is your opinion that it is impossible to secure the services of three gentlemen competent to perform the duties of these three officers unless the amount of salaries at present placed on the Estimates are retained? I do not know that; that requires an acquaintance with the clerical market, of which I have none.

27. Do you believe it to be necessary that these salaries should be voted to secure the services of competent clerks, for the purpose of performing these three specific duties? That is a question for the Legislative Assembly. The Assembly have voted these salaries, and therefore, I take it, they have voted that which they thought reasonable.

28. I merely ask you, as President of the Council, whether, from your experience in that office, and your knowledge of the world, you conceive that these salaries are necessary for the purpose of securing the services of gentlemen competent to perform the duties? I do not

not think so, as a matter of fact, because I think that at whatever amount the Legislative Assembly shall assess the salaries, you will find gentlemen to fill the offices.

Sir W. W.
Burton, Kat.

29. I ask you if you could offer the Committee an opinion upon the sum necessary to secure the services of gentlemen competent to perform the duty? That is the very question for the Assembly, and it has no relation to the office at all, but it has relation to what you can get a gentleman to perform the duties of Clerk of the Council for. The Assembly have said £700 a year; if they think that a reasonable sum, am I to say it is not a reasonable sum? and so of the Clerk Assistant, and the First Clerk. I think the Assembly are the best judges of the matter of what are the sums sufficient to secure the efficient services of these gentlemen, and what they will vote for them.

19 May, 1858.

30. My question was more directed to the obtaining of your opinion with regard to the specific sums already appropriated, not to whether you could go into the question, how much less, or how much more, but whether in your opinion the sums are sufficient for the purpose, or whether you think they could be obtained for less? I am of opinion that they are amply sufficient, for, as I told the Honorable Chairman, I think the salaries are fixed on a fair and moderate, but not expensive scale. As to whether gentlemen could be got upon lower salaries, I have no doubt the answer to that would be that you could get gentlemen at lower salaries; but I do not know as to who or what they would be, or whether the arrangement would be so satisfactory. You will understand that I found the establishment thus, and I cannot say that I have given much consideration to whether the work could be done for less. Perhaps if I were upon a mercantile establishment, and were looking into what these different clerks did, I might not pay out of my own pocket such sums as the Legislature have decided upon. However, it is a hard and difficult thing to come to such questions as these; I am sure you must feel it yourself.

31. I think I understood you to say that the three first clerks were sufficient to perform the duties of the department during the recess? Yes, I did; but at the same time I said this—that as the two others are necessary during the session, it would be unwise to cut them off during the recess.

32. That may be, but certainly, as a matter of fact, you expressed your opinion that the three clerks were amply sufficient during the recess; the other portion of your statement was as to the question of expediency,—as to retaining sessional clerks or permanent officers? Yes; my own opinion is that they should be retained as permanent officers.

33. With respect to the Usher of the Black Rod, is not that officer in attendance upon the Council during its sittings? Yes; his duties are precisely those of the Sergeant-at-Arms, and I suppose he has equal attendance.

34. *By the Chairman:* But he has no duty during the recess? None whatever; he is merely what I should call the Master of Ceremonies.

35. *By Mr. Donaldson:* Do you think an officer of such a character and standing as the Usher of the Black Rod in the House of Lords is essential in the Legislative Council? Yes, I do; looking at it from a higher than a merely utilitarian point of view—looking at it as a matter of state—just as I consider the Sergeant-at-Arms of the Legislative Assembly to be necessary for the state of that House. I think you must have an officer of that kind, and there might be occasions, although they never have occurred, in which his services would be absolutely necessary.

36. *By Mr. Piddington:* Within the walls of the Council during the session, does not the Usher of the Black Rod perform practically similar duties to those of the Sergeant-at-Arms within the walls of the Assembly? Yes.

37. *By the Chairman:* With reference to the short-hand writers' duties, you dissented from the proposition of the Standing Orders Committee of the Assembly—may I ask what your particular views were upon that subject. The Standing Orders Committee wished to retain the same control over the short-hand writers during the recess as during the time the Parliament were sitting. You, as I understood, expressed an opinion in rather a contrary direction? My opinion was expressed in a letter written, by my direction, by the Clerk of the Council to the Clerk of the Assembly, and I have seen a letter from the Speaker in which that is quoted, but the Honorable the Speaker has rather mistaken my view upon that subject. My view is, not that the short-hand writers should not be at the order of the House and of the Government during the recess as well as during the session; I wish to be distinctly understood on the contrary. They are short-hand writers not only to perform the duties the House requires in Committee, but to perform all the duties which the Government requires, which includes more than the session, because Government inquiries are chiefly in the recess. This would require their attendance in recess. My objection was this, that I would not subject these gentlemen—who are professional short-hand writers, brought up to their profession as perfectly and independently of all others, as a barrister is to his—I would not bring them to the position of copying clerks or clerks in the office, but would employ them exclusively in session and in recess as short-hand writers. That was the principal extent of my recommendation. I said I could not approve of a gentleman who had been fifteen years in a known service being placed in the position of a copying clerk; for a gentleman—a clerk in the office—might then say to him, "You are not wanted for short-hand writing to-day, please go and copy that document, and come to-morrow morning and go on with it;" that, I think, would be unbecoming to those who would impose it, and degrading to the short-hand writer.

38. I think the words used in the letter were, that they should be under the same direction and control, and I may say that the Standing Orders Committee never contemplated that they should be called upon to perform ordinary clerical duty? The words are so.

39. Therefore you have no objection to their being required to attend, and to place themselves under the same control during the recess—you do not propose to relieve these gentlemen from the public service during the recess? On the contrary, I suppose the Government would require their services at that time, but still as short-hand writers.

- Sir W. W. Burton, Knt.
19 May, 1853.
40. With regard to the principle of preparing the estimates for the Legislative Council, it has been contended by the President of the Council who preceded you, and by the Speaker of the present Legislative Assembly, that any estimate the President or Speaker laid before the Government should be printed and submitted to the Legislature—what is your opinion as to that? My opinion is that the Government are the custodians of the public purse, and nobody else; and I care not about any recommendation of mine going further than the Government, if the Government do not think proper to adopt it. I think all of us should have that kind of trust in the conduct of the Government to believe that the Government knew better than we what money they could afford to spend, and therefore I should never support such a principle.
41. *By Mr. Piddington*: In reference to this particular question, are you not of opinion with respect to the expenditure of both Houses of Parliament, that the initiative of that expenditure should be retained by the high officers of these Houses on a different principle from that of subordinate departments of Government? I do not think so. I do not think that any public expenditure should be different in the principle of being carried out from another. I think the highest and lowest departments are equally under the superintendence of Government, and there ought to be no distinction made. I do not think the head of a department is to dictate to the Government what the expenses of his department are to be, except in the way of opinion—"I am of opinion that the duties cannot be carried out without you allow me so-and-so." I think the estimate formed of a department is for the instruction of Government, not for their leading and guidance.
42. I ask you, not with regard to the ultimate result—the vote of the Assembly—but whether you view the Houses of Parliament in the same light as you would departments of Government? I do look upon them as departments of Government, except when the action of Government might interfere with the freedom of action of the House. I think if the Government were to impose anything upon either House which that House did not choose to adopt, the House would be perfectly free to act—
43. This is not a question where Government is supposed to impose anything, but whether the initiative of various expenses connected with the dignities and duties of either House ought not to originate with the President of the Council or the Speaker of the Assembly, together with the Standing Orders Committees of the respective Houses appointed to regulate these matters? I think, so far as suggestion—
44. They cannot go farther than suggestion—to control is the ultimate result—the vote of the Assembly? It should end with suggestion; the Government are free to act or not. I maintain the propriety as well as the duty of suggestion would be with me; but the action upon it—the judgment upon it—must all be with the Government. I do not conceive the Government are bound to propose what I recommend.
45. Could you not draw a distinction between the Government advocating, as the Government, any proposition of this nature, emanating from the Government, and laying it before the Legislature as the necessary expenditure recommended by the President or Speaker? I think there is a vast difference, if the Government choose to act as the Duke of Wellington did when he said, "I lay this petition upon the Table, but I do not support the prayer of it."
46. *By the Chairman*: Or to be quiescent merely? Or to be quiescent merely.
47. *By Mr. Piddington*: Do you not think it necessary there should be a strong line of demarcation between the Executive and both Houses of the Legislature, even in financial matters? I think not in financial matters, because the Legislative Assembly have so perfectly the power in their own hands.
48. You seem to misunderstand my question—I mean, not as between the two Houses of the Legislature, but as between the two Houses and the Executive? I speak of the Legislative Assembly, because we have nothing to do with the purse; but I think the Assembly will always take care to have their establishment properly maintained, therefore it is safe. As you have the money you will always vote enough, and not more than enough. (*The President handed in a comparative Statement of Salaries voted for the year 1858 for the officers of the Legislative Council and Legislative Assembly. Vide Appendix B.*)

APPENDIX A.

CLERK OF THE COUNCIL.

The duty of the Clerk of the Council, who is a sworn officer of the House, is to attend the sittings of the Council, and to make true entries of the things then done and passed in the House;—to direct and regulate all proceedings in the office for the proper carrying out of every order relating to the service and requirements of the House;—to personally sign all orders for the attendance of persons and papers, all certificates upon Bills, &c., and generally to carry into effect all directions of the President of the Council;—to be charged with the custody of all its documents and the control of the officers employed in the department; and, as acting Clerk of Parliaments, to authenticate for Royal Assent, and, after Assent or Reservation, to transmit (or otherwise) for registration and publication, such Acts so assented to, reserved, or otherwise disposed of.

The Clerk of the Council is further charged with the control, and is responsible for the correctness, of the accounts, &c., of the joint departments of the Council and Assembly.

CLERK ASSISTANT.

The duty of the Clerk Assistant is to attend the House upon its sittings;—to assist the Clerk in the supervision of all business immediately connected with the Proceedings of the Council, Messages and Addresses to the Governor General, Orders for Papers, printing of Petitions, and compilation of the Minutes of the Council;—to officiate as clerk when the Council is in Committee of the whole, and conjointly with the Chairman of Committees to
note,

note, revise, reprint, and read all the Council Bills during their several amendments and progress through Committee;—to make out the Reports from such Committees, and from Committees of the whole House on Bills, be responsible for their final accuracy, private certification by the Chairman of Committees and Clerk of the Council;—to note and furnish schedules of all amendments made in Bills received from the Assembly; to compare all Bills when finally passed by both Houses; and, after Royal Assent, to see that the provisions of the several Registration Acts are implicitly complied with, and due publicity given to such Acts.

To see that the House is in proper order and the Table duly prepared with the necessary papers, books, Bills, &c.;—to regulate and supervise the arrangements for the reception of the Governor General, House of Assembly, and visitors, on occasions of opening and proroguing Parliament.

The preparation of Returns, the compilation of the Sessional Journals of the House, the preparation of Journal Indexes, the Abstracts of Debates and Divisions in Committee of the whole Council, and attendance upon the Standing Orders and Library Committees, form portions also of the duties of the Clerk Assistant.

FIRST CLERK. (UP-STAIRS.)

The First Clerk has the direction of the clerks subordinate to him in their several duties; and is responsible for the correct keeping of the records and accounts, and for the correspondence and general departmental business, and attends the Select Committees, performing the work incidental thereto.

He conducts the business connected with the joint department of the Council and Assembly, which includes the accounts of, and the salaries of, the officers connected with the Libraries, Refreshment Room, and short-hand writers.

He has the arrangement of all Acts of Parliament assented to or reserved with respect to their registration, publication, and transmission to the departments in England through His Excellency the Governor General.

He has to keep Registers of all Bills introduced into the Council and brought from the Assembly, shewing their various stages; and Registers, also, of all Addresses, Orders for Papers, and Messages.

SECOND CLERK.

The Second Clerk is charged with the distribution and proper custody of all the printed papers of the Council, and of such as are supplied by the Assembly; and with the collation of all Council papers for binding.

He has to furnish the Council Table with the Orders of the Day, Bills, papers, stationery, &c., for the use of Members, ready for each day appointed for the meeting of the Council; to keep a Register of all the papers ordered to be printed jointly and severally by the Council and Assembly; to engross Addresses; to assist in the general work of the office, under direction of the First Clerk; to file papers, make indexes, copy papers, and perform other necessary duties, too numerous to detail.

THIRD CLERK.

The Third Clerk is charged with the revision of the press, the details of which are too numerous to be particularised, unless specially desired.

He has to attend for one hour every day in the Library, and to assist, when able, in the general business of the department.

EXTRA CLERKS.

Hitherto two extra clerks have been authorized to be employed, but up to the present time one only has been engaged.

APPENDIX B.

COMPARATIVE Statement of Salaries Voted for the year 1858 for the Officers of the Legislative Council and Legislative Assembly.

COUNCIL.	ASSEMBLY.	DIFFERENCE.
		£ s. d.
President £1,200	Speaker £1,200
Chairman of Committees 500	Chairman of Committees 500
Clerk of the Council 700	Clerk of the Assembly 800	100 0 0
Clerk Assistant 400	Clerk Assistant 600	200 0 0
1st Clerk 300	Second Clerk Assistant 400	100 0 0
2nd Clerk 250	Clerk of Records 400	150 0 0
3rd Clerk 250	Clerk of Printing Branch 300	50 0 0
	Clerk of Select Committees 300	50 0 0

The

The Honorable Sir Daniel Cooper, Knt., examined:—

The Hon.
Sir D. Cooper,
Knt.

19 May, 1855.

1. *By the Chairman:* The Committee would be glad to hear from you your opinion of the estimate of the Legislative Assembly Department at present established—do you think the number of officers of the Assembly could be reduced, or their salaries at all lowered, without injury to the public service? Before I send in the estimate to the Government I always consult with the Clerk of the House, as I hold the Clerk responsible for all under him; and I hold him responsible that all the work that devolves upon the establishment is done efficiently and properly, and I always go into details with him. Of course I have to depend upon him as to the number of clerks, and the work they have to do, but I always urge upon him the matter of economy, and to do with as few as he possibly can; and I believe now that the number of clerks and messengers is as few as the Assembly can go on with.
2. Do you think it necessary to retain the whole of them during the recess—I mean the fixed establishment? Since I have been Speaker, I have always found—and I attend here almost as regularly in the recess as when the House is sitting—that only one clerk is allowed away at a time—a month or three weeks is allowed, as in other Government departments; and Mr. O'Connor informs me that the others are always kept at work pulling up arrears. Getting the Votes and Proceedings and financial volumes together, arranging the papers, compiling and paging them, and other duties, he says, keeps them fully occupied.
3. The whole of them? The whole of them.
4. Who gives them leave of absence when they apply for it? Mr. O'Connor gives them leave of absence during the recess.
5. Without reference to you? No, he generally speaks to me.
6. He does not officially submit the matter to you? If he gives the leave when I am out of town, when I come back he immediately reports what he has done; he never does anything on his own responsibility.
7. You consider that you really grant the leave? Yes.
8. He would not venture to grant it without your authority? No. Ever since I have been Speaker, whilst I have recognized the Clerk as official head, I have insisted upon being Parliamentary head of the department, and that everything done in it, except the mere minor details, should be reported to me.
9. You think there is full occupation for the whole of the time during the recess? So Mr. O'Connor reports, and I have been very particular in my inquiries about it.
10. You are not prepared to recommend any reduction of the establishment, as it appears on the estimate before you? No; I should not like to recommend any reduction, because, before I sent the estimate, my inquiries were so particular, and whenever I pointed out a reduction, there was always an objection urged against it.
11. And, in your opinion, a valid objection? Yes, always. Our House sits so very late at times, and we are obliged to keep the whole establishment there while the House is sitting, as we do not know at what moment they may be wanted, or documents may be required to be copied.
12. With regard to the remuneration given to these gentlemen, what is your opinion of that remuneration with reference to what, from your connection with many companies in Sydney, you must know to be given to their officers—do you think the officers of the Legislative Assembly are paid higher than officers of equal ability and standing in public companies in Sydney? No, they are not. Many companies pay far higher salaries; they go up to £1,200 and £1,500 a-year in companies.
13. That is where there are large pecuniary responsibilities? There is large responsibility, but no handling of money—no chance of losing by handling of money.
14. You consider these salaries are moderate compared with the salaries of gentlemen holding offices in companies, or large mercantile establishments? I consider them good salaries, but I consider the officers themselves are good.
15. It was upon your application that the Clerk of the Assembly was raised to £800? Yes, I recommended the increase of the salary of the Clerk. I do not think he gets any too much. Of course there is much less responsibility upon the other clerks; but there is a great deal of responsibility with the Chief Clerk.
16. With regard to the Printing Department, do you not think that a good deal of the expense incurred there might be saved to the country in the number of documents printed—the item does not appear in the estimate of this department, but, as you must be aware, it is a heavy item in the Government expenditure? The printing has been under my notice, in consequence of something that took place in the Legislative Council. The President was under the impression that there were a great many documents distributed in duplicate, but, on examination, it was found that there were very few. Mr. O'Connor has a tabular statement shewing the documents distributed, and that statement will also shew where the duplicate distribution took place.
17. We can then get that information in detail from Mr. O'Connor? Yes. The result of that statement was, that it was arranged the Government Printer should try and regulate this distribution, so that there should be no duplicates distributed—still there is a great deal of unnecessary printing connected with the Legislative Assembly.
18. Can you state in what way? I think if there were a Printing Committee many documents which are now printed would not be printed.
19. You do not think the number of copies struck off for Parliament is excessive? No, I do not.
20. You are aware that the Cockatoo Island Report occupied seventy reams of paper? Yes, I know the Report on Cockatoo Island was very expensive; I believe it cost about £300,—but there are a number of unnecessary documents printed. With reference to the number of copies, we have to keep extra copies of all the documents printed in our House, which the clerk who has charge of these papers, puts away—we never know when these may be called for; sometimes the Government here, and sometimes that of neighbouring Colonies send to us for copies

copies—as many as ten at one time have been required—and it is only for the clerk to “pull,” as it is called, these documents and make them up. If only the exact quantity required at the time were printed, and these documents were afterwards wanted, the printer would have to set up the type, and the same expense would have to be incurred as was originally gone to, whereas by having twenty spare copies they last over several years, during which any sudden call may be made for them.

The Hon.
Sir D. Cooper,
Knt.
19 May, 1858.

21. Twenty extra copies one might not object to, but when it comes to the difference between two hundred and four hundred, the expense becomes a serious matter? Mr. O'Connor can give the exact detail. There is, at times, a very great demand for our papers.

22. The Standing Orders Committee have recently had under consideration the department of the short-hand writer? Yes; they have.

23. They have proposed some modification of the system hitherto adopted? The Committee have recommended that there be a short-hand writer expressly for the Legislative Council and one for the Legislative Assembly, and, as most of the duty is likely to devolve upon the short-hand writer connected with the Assembly, that the one getting the highest pay should be attached to the Assembly. The two short-hand writers will be under the direction of the Speaker and President, or the Clerks of each House, and they will also be made use of by both Houses, as occasion may require; that is to say, if the services of the second short-hand writer—the short-hand writer attached to the Council—are required by the Assembly, the Clerk of the Assembly will apply to the Clerk of the Council, and if the short-hand writer to the Council should not be required by a Committee of that House, he will attend the Committee of the Assembly; but, in the event of both short-hand writers being occupied when a requisition of this sort is made, it is intended that short-hand writers shall be employed for the exigency, instead of having a third permanent short-hand writer. I have no doubt in that way expense will be saved.

24. You think the department will work more satisfactorily? I think it will be worked more satisfactorily.

25. I believe I am correct in assuming that it is not the intention of the Standing Orders Committee in requiring that the short-hand writers during the recess shall be at the call of the officers of the House to employ them as ordinary clerks—that was not contemplated? No; it is not intended to employ them as ordinary clerks. The stipulation is, that they shall be under direction as ordinary clerks, but their duty will be merely short-hand writing.

26. *By Mr. Forster:* Has it ever occurred to you, to compare the hours of attendance of the clerks of the two different bodies, of the Legislative Council and the Legislative Assembly—have you ever made any comparison, or been able to do so? I have never made any comparison; but the clerks of the Council must have much less to do than the clerks of the Assembly.

27. The hours of attendance are much less numerous? Yes; because when the Council does not sit the clerks go away at the usual office hours, and the Council sit only three days a week, while the Assembly sit four.

28. Even allowing for the difference in the number of clerks employed, the amount of labor done in the Assembly you take to be far greater, in proportion to the number of clerks, than is the case with the Council? Yes, I am certain of it.

29. Would not that lead to the inference that they have more clerks in the Council than are necessary for the work we naturally suppose them to do, without going into details? I should not like to say that, for I have never gone into the details of the establishment.

30. I am only speaking of a general deduction from what we suppose their duties to be; they may have duties which do not come under your cognizance; but, judging from the hours they occupy in their sittings, and supposing the duties of the clerks to be the same in both Houses, would you not consider that they have rather more clerks than they have business for? I know the clerks of the Assembly are very much pushed to get through their work at times, when the House is sitting late and doing much business; and they have to be very precise in doing their work, to avoid any mistakes. I know the Chief Clerk has generally to remain two or three hours after the house breaks up, and he keeps a portion of the establishment with him, in case he requires their services. The clerks have also to be here at the usual hour in the morning, even if we sit till daylight.

31. Should you not judge, in a general way, that the business done by the clerks of the Assembly is much greater than that done by the clerks of the Council? Yes, generally.

32. Have you any mode of ascertaining whether the average attendance of the officers of the Legislative Assembly is greater than the average attendance of the officers of the Council? The only way I have of judging is, by comparing the time when the Council breaks up with the time when the Assembly breaks up. Our average sitting has been between seven and eight hours, and I should say the average sitting of the Council is not over three hours, and the sittings are only three times a week, instead of four.

33. You say, then, that our average sittings occupy double the time of theirs? They occupy more than double the time of theirs. Our Committees in the day-time are heavier. The general work of the establishment, our correspondence, and all our business, bears the same proportion to theirs as our sittings.

34. Which you think is double, upon the whole? Yes.

35. You stated that you held the Clerk responsible for everything that occurs, and for the efficiency of the department? Yes.

36. In what way is this responsibility enforced after a dissolution, and previous to the meeting of a new Assembly—to whom is he responsible? The responsibility then chiefly devolves upon the Clerk himself.

37. To whom is he considered accountable during that time? You may say he ought not to be responsible exactly to any one; but directly the Parliament meets, if he have neglected his duty, he becomes responsible immediately to the Speaker, or, through the Speaker, to the House. But I may say that, during the time I was not Speaker, after the last dissolution,

The Hon.
Sir D. Cooper,
Knt.
19 May, 1858

Mr. O'Connor consulted me in just the same way on important matters as if I were Speaker. 38. You have held him responsible for all that occurred during that interval? Yes. The Colonial Secretary is aware that, with the Clerk, I called upon himself during the dissolution. It is a constitutional point that the Government ought to have as little to do with regulations of Parliament, and the officers of Parliament, as possible, and he becomes responsible for his department directly the Parliament meets again, and if any complaints were made they would be inquired into.

39. Supposing the Clerk to commit some wrong act that would require his dismissal, by whom would he be dismissed? The Government would, on its own responsibility, dismiss him at once. I had a little trouble when I was first elected Speaker—the Government wished to make the appointments in the Assembly without reference to the Speaker; I demurred to it, and some rather angry correspondence took place between me and the first Responsible Ministry.

40. I understand you to say, that, from the necessity of the case, the Clerk is held responsible, virtually or practically, to the Executive Government during the interim of a dissolution and general election, but that, to secure the independence of the House, when a Speaker does exist, the responsibility is left to him? In making appointments, the Chief Clerk, who is responsible for all the officers under him, recommends to the Speaker, and the Speaker recommends to the Government. Of course the Speaker keeps a veto over the Clerk, and the Government have a veto over the Speaker; but there is no active interference by either party, either by the Speaker or by the Government, unless there be some grave and substantial objection to the party about to be appointed. I may say I have introduced a difference in the practice of the office—I allow of no order being given to any clerk under the Chief Clerk, except the order goes through the Chief Clerk, so that he knows exactly what work they have to do.

41. *By the Chairman:* In fact he has the subordinate control of the department—you are the Chief Officer of the department, but he is the practical head? Yes, as I have before said, I am the Parliamentary head—he is the Official head. I cannot watch the details as he can.

42. *By Mr. Forster:* With reference to a suggestion of yours about the establishment of a Printing Committee, do you think any danger would arise from the appointment of such Committee, and giving it a power over the printing of documents in particular cases—might it not obstruct that publicity which is so essential to Responsible Government, and so much to the interest of the public to promote—might not the Committee, not understanding the peculiarity of certain cases, prevent documents being printed, of which the individual who placed them on the Table of the House could alone see the value? The Printing Committee would not have the power of determining, conclusively, what should, and what should not, be printed, but it would be their province only in the first instance to say what should be printed; the House would always retain the ultimate power of ordering any paper to be printed.

43. So that the individual bringing in a document would have the power to move the printing of it, even though the Committee should not have so decided? Yes; he could, by motion in the House, obtain the order to print. No Committee can usurp the function of the House; it can only be delegated to the Committee to act under the orders of the House, and the House can order otherwise than they determine, if it thinks proper.

44. With regard to the clerks, has it ever occurred to you to meet with any difficulty in procuring clerks when they have been required—are they easily procured, or is there generally competition for the vacancies? The new clerks that were taken into this establishment came from the Secretary's Office; the Secretary's staff was reduced, and the extra clerks were sent here.

45. Then you have not had sufficient experience to speak to that? I think all the clerks are here that were here when I was first elected Speaker; the only change has, I think, been one of the juniors.

46. Do you think there would be any difficulty in obtaining clerks, supposing vacancies were to occur? There would be plenty of applications, but there would be great difficulty in getting the proper style of men.

47. You think there is some peculiar capability required for a clerk in the Legislative Department, as compared with clerks in other Government offices? Yes. I think they must be very methodical and precise. I think a clerk in the Assembly requires considerable skill, and more reasoning power than is required in ordinary Government offices.

48. Do you think, generally, the subordinate clerks of the Assembly have higher responsibilities than other Government clerks? No, I do not think so.

49. For I observe that considerable stress is laid, in a document handed in to the Committee by Sir William Burton, upon the responsibility of some subordinate clerks in the Council? The great responsibility rests with the Chief Clerk and the Assistant Clerk, who is clerk to the Chairman of Committees. The latter gentleman has considerable responsibility, for he has charge of the Estimates, and he has to be very precise in order to prevent the Estimates from becoming confused.

50. Do you consider the Clerk of the Assembly to stand in rank equivalent with that of an Under Secretary? Yes; and I always cast upon him the same duties that an Under Secretary would have cast upon him.

51. Do you consider his responsibilities and duties to be upon a par with theirs? Yes.

52. And that the office requires a person of equal capacity and intelligence with the gentlemen who fill those offices? Yes; it is an office requiring ready perception, considerable facility in construction, a good general business knowledge, and great accuracy; it requires a great deal of labor and precision to get out the Votes and Proceedings within the short period during which they have to be got out. There is also a great deal of labor in the origination of documents thrown upon the Clerk.

53. I think I understood you to say, that the short-hand writers occupied an anomalous position, as compared with other officers; Yes; as they have carried on their duties, they are between the two Houses, and their responsibility has not been so direct as the responsibility of other officers. The Hon. Sir D. Cooper, Knt.

54. They have not such permanent occupation? A great deal depends upon the sittings of Committees. 19 May, 1858.

55. During the sitting of the House, their labors must be very considerable? No doubt.

56. Much greater than that of the other officers? No doubt, when there are many Committees sitting, their labors must be heavy.

57. Is not that compensated for when the House is not sitting? When the House is not sitting there is no employment for them.

58. Do they receive salaries during the whole period? Yes.

59. They are still attached to the establishment, although they have no employment? Yes.

60. You consider the want of employment during one period as compensated by the greater amount of labor they have to perform when the Committees are sitting? Yes. When an immense quantity of labor is thrown upon a man at one particular period, and he is allowed to remain inactive at another, his health must suffer more than it would do, if the same labor were thrown over a more extended period. +

61. Have you observed that the health of any officer of this department has been affected by the labor to which he has been subjected? Mr. Palmer's health has suffered, occasionally.

62. Has that been attributable to the labor to which he has been subjected? I expect it has been caused by the labor; it has been when the House has been in full work.

63. Is it the practice to allow the short-hand writer to undertake private occupation, apart altogether from his public duties, in times when he is not required? There has not been that control over the short-hand writers in that respect I should like to see. They are paid by the Government for attending inquiries, but I am not aware whether they have earned money from any other source.

64. They have been employed on Government inquiries not connected with the House, and have been paid extra for that duty? Yes, such as the inquiry respecting Cockatoo Island, and inquiries before the Immigration Board, relative to irregularities on board immigrant ships.

65. That arrangement, I understand, does not accord with your opinion? The Standing Orders Committee of the Assembly have recommended that the salaries paid to the short-hand writers should be for work done during the sitting of the House and in recess, either for Parliament or for the Executive Government. The country pays them salaries, and if anything can be saved by including this Executive work in the salaries paid them by the Parliament, the country will be benefited by it. This ought to be considered in passing the estimate if the suggestion be carried out.

66. *By Mr. Parkes:* You spoke of unnecessary printing. I think it would be desirable if the Committee were informed what portion of the printing you deem most unnecessary? Where documents are moved for and laid upon the Table of the House, all the information that the House might require might be selected, and those portions which would not give any information to the House might be dropped out, so that only the necessary portions would be printed. Printing

67. Have you not noticed that there is a very wide difference in the value of these papers; while some are full of general interest, and likely to be permanently called for, others refer only to particular spots, can only be interesting to a few persons, and of no value after the occasion has gone by which called them forth, but which cost quite as much money in printing as more valuable documents? No doubt there is great difference in the value of these documents; some give information only for temporary purposes. In some cases returns are moved for, to obtain information upon subjects respecting which papers have already been published, and the printing Committee, would in such cases be able to drop out any papers already printed, and instead of reprinting them they would put in memoranda shewing where that information might be found; sometimes there are two or three notices on our Votes and Proceedings of motions for papers that are already printed, and a great deal of expense might be saved, and unnecessary trouble to the House and to individual Members, if they could be told where they could get the information required.

68. Do you contemplate if the Printing Committee were regularly appointed sessionally, that all motions made by Members of the Government pro forma that all papers be printed should be dispensed with, and that all papers laid upon the Table should be decided upon by the Committee, as well as the ordinary returns moved for by private Members? The Government papers should be treated as papers moved for by ordinary Members; but the Government would be able to say whether the papers placed on the Table of the House were really valuable or not. In the case of papers moved for by private Members, it would not be known until the papers were seen whether or not it were absolutely necessary to have them printed. +

69. Take two examples—perhaps on one day a return of all correspondence respecting the appointment of a Police Magistrate, and also an elaborate estimate for some public work are laid on the Table, the practical result of sending these to the Committee would be, that the former paper being of little value would not be, and the estimate would be—sure to be—recommended to be printed? If the paper bore particularly on some Bill before the House, or upon some portion of the Estimates, and the information contained in it would be of general interest, or would guide Members to a conclusion as to the Estimate or Bill, the Committee would recommend it to be printed; but sometimes when a correspondence is moved for, it is found that there are letters which absolutely contain nothing at all included in the series; these could be dropped out, and that portion only which was absolutely necessary, printed.

70. *By the Chairman:* There were some filthy allusions contained in some papers printed last year? Yes; in the Report of an inquiry at the Gaol at Moreton Bay there was some very

The Hon. Sir D. Cooper, Knt. very nasty evidence. These papers were sent to the Members with their ordinary papers, and if not looked into by Members, they might have been left lying about in their houses, and children might have had access to them.

19 May, 1858. 71. By Mr. Piddington: Still that might be desirable information to place in the hands of Members? The Committee would have prevented the circulation of improper portions of the evidence.

72. How could they do that without expunging that particular portion? They might expunge that particular portion.

73. By Mr. Parkes: You consider it necessary, not only to save expense, but to save our decency, that this Committee should be appointed? Occasionally.

74. It was stated by Sir William Burton that Parliamentary papers were distributed indiscriminately to strangers as I understood him? It was a statement of that kind which caused the interview between the President and myself, and I thought he was convinced there was not a distribution regardless of economy.

75. So far as your knowledge extends, do you know of any unnecessary distribution beyond the distribution to Members of both Houses? There is a list of fifty-four officers of Government and other parties to whom the papers are sent, and in some of these cases a double distribution has taken place; that is by the Assembly and by the Council, but the Members of each House only get one copy of the documents—that is arranged through the Government Printer. He sends them, and takes care not to send two copies to any one Member; and it has been proposed that he should have the distribution to all the parties who get the documents of Parliament in the same way, and he would see that none of them got duplicate copies.

76. As to the number of copies of each document, generally speaking, do you not think it absolutely necessary that a sufficient number should be reserved to supply any demand that may arise within the next four or five or ten years? I have before stated that it is necessary a certain number should be retained, because we have a constant demand for copies, sometimes from neighbouring Colonies, from Europe, and even from America. Sometimes a Member requires a set of papers, and by having these reserved, the clerk who has charge of them compiles a regular series, whereas if these extra papers had not been retained, and copies were required either by the Government or by the House, it would be necessary to set up the type again.

77. I put my last question more with a view to know whether anything of this kind has come within your knowledge since you have been Speaker:—that copies of an inquiry which had taken place years ago, the report on which had remained a dead letter, have from circumstances of recent interest been in sudden and general demand as a guide to some other inquiry? Occasionally, Mr. O'Connor reports to me, that he has been called upon suddenly for so many as ten copies of papers that were printed some years before.

78. Papers that have become incidentally of importance? Yes.

79. With respect to the Estimate for the Parliamentary Establishment, I should gather from what you have already stated that you think the virtual control of the expenditure incident to carrying on the business of Parliament, should be separate and independent from the control of ordinary departments of the Government? Yes.

80. Because it has been stated by the Honorable President of the other House, that he thinks the preparation of this Estimate should be placed on the same level as the Estimates for ordinary departments. I should be glad if you would state definitely what your opinion upon that point is? I do not think the Government ought to interfere with the Parliament at all. It is always the rule that Parliament regulates itself and its own officers. The Government is only a party for a day, and it is a constitutional point that Parliament shall regulate itself and its own officers, and no Government for the time being shall interfere with either the Parliament or its officers.

81. With regard to the officers of the Assembly immediately under your control, have you inquired as to whether in their duties and authority as you have assigned their duties and authority to them they occupy a similar position to officers in the House of Commons or in other Legislatures? Yes, as far as I can see, the duties of the Clerk, the Clerk Assistant, the Second Clerk, and others, are very similar to the duties of the clerks attached to the House of Commons, and of clerks of the different Assemblies in America—the American principle is something similar to our own.

82. By the Chairman: Have you ever turned your attention to the question as to whether the expenses of the Parliamentary establishment in New South Wales are comparatively more or less than in other Colonies, considering the population and circumstances? The expenses of our Parliament are much less than those of the Victorian Parliament—I think they are £3,000 less.

83. By Mr. Piddington: Do you not think the President of the Legislative Council and the Speaker of the Legislative Assembly should possess the privilege of proposing the officers of their respective Chambers they conceive to be necessary for the proper conduct of the public business, as well as also the sum of money they consider to be necessary to secure the services of competent persons? Yes; I think so.

84. You take that view in connection with the necessity which you think exists to preserve the line of distinction between the Legislative and the Executive? Yes; in the case of the Speaker particularly so, because he is accountable at any moment to the Assembly.

85. Without reference to that particular point. I would put it as a general question? The reason I was so strong in maintaining that position, was because I am responsible to the House, which the President is not.

86. In the event of the proposals being made that these sums of money should be appropriated, these recommendations would be merely in the shape of suggestions, inasmuch as the Assembly in the last resort would decide both as to the number of officers and the amount to be paid to them? The Speaker recommends to the Government, and if they put a less sum on the Estimates than the Speaker recommended, it would be out of the power of the House to increase the amount.

87. But with regard to any possibility of reduction, not of increase? The House would deal with it as with any other department.
88. The House would have authority to reduce the number? Yes, they would have as full power as they have over any other department. The only distinction I draw is between the Speaker as the mouth-piece of the Assembly and the head of a Governmental department is to disconnect him from the Government.
89. Can you speak from your own experience whether all the clerks of the Assembly are necessary for the performance of the duty of the House? Yes; I think we have as few clerks as we can do with.
90. I think you stated that your opinion is that the salaries now received by the clerks of the Assembly were not more than equivalent to the salaries paid to officers in similar positions in public companies? That they were not above the pay of officers in public companies, rather below.
91. Which officers in public companies do you now allude to in making the comparison? I allude particularly to those employed in the Bank of New South Wales, with which I have been connected for about ten years, and they pay their officers rather less than other banking institutions. The Clerk of the Assembly would correspond in position with the Secretary of that institution—the clerk gets £800 a year, and the Secretary £1,200, and a house to live in. He is called the Inspector now.
92. Is it not in the nature of the office held by the gentleman you now allude to, that particular responsibilities connected with pecuniary matters attach to it? I think not; he has charge of all the officers of the Bank—the Bank Board are the really responsible parties.
93. *By Mr. Parkes*: Can you state what are the salaries paid to Secretaries of Insurance Offices? Some £800 a year, some £1,000, and houses to live in, which is a consideration.
94. *By Mr. Piddington*: I gather from your evidence that it is impossible to secure the services of gentlemen competent to perform the duties of the House at a lower rate of remuneration than that now upon the Estimates? I do not think you could get men of the proper class, and of proper ability at less sums.
95. With reference to the short-hand writing department, is it your opinion, as it is proposed that one short-hand writer should be peculiarly attached to one House, and the other to the other, that the officers of the House should treat either of those gentlemen in respect to the services they should render in the recess and out of recess differently from the other? No, I do not; they ought to be exactly the same.
96. *By Mr. Flood*: Is it necessary to have two clerks, besides the Clerk of the House, at the Table in the Legislative Assembly? I think there would be great difficulty at times unless we had an extra clerk.
97. You think his services could not be dispensed with? No; the business in time of pressure would become so much in arrear that I think great confusion might occur if we attempted to dispense with the third clerk. I know the Clerk Assistant has at times great difficulty in keeping up his work, especially when the Estimates are being pushed on rapidly.

The Hon.
Sir D. Cooper,
Knt.
19 May, 1858.

THURSDAY, 27 MAY, 1858.

Present:—

MR. COWPER,
MR. DONALDSON,
MR. FORSTER,
MR. JONES,

MR. PARKES,
MR. PIDDINGTON,
MR. SMITH,
MR. WEEKES.

C. COWPER, Esq., IN THE CHAIR.

Alfred Denison, Esq., called in and examined:—

1. *By the Chairman*: You are Private Secretary to His Excellency the Governor General? A. Denison, Esq.
2. The Committee would be obliged if you would state to them the duties you perform in the fulfilment of that office? The duties I have to perform as Private Secretary are these:—The whole correspondence which occurs between the Governor General and all the different offices, and, in fact, I may say that every single paper which comes to the Governor General, of every kind whatever, passes through my hands, and from the Governor General to the different offices, with the exception of any confidential communications which he may have to make to his Ministers, which he may write and send himself. I have the reading and verbal correction of all the despatches; they are copied by the clerk attached to my office, and then I have to re-read them, and compare them with the original drafts; I see that all the enclosures are correct that come from the different offices, and which I have previously sent for.
3. Do you find that you require the assistance of a clerk to enable you to perform these duties? It is absolutely necessary; and if the conduct and business of the office now and in previous years, and under previous Governors, were compared, it would be found that there is a great deal more done in the Private Secretary's Office now than there ever used to be; for this reason;—I think I may go back as far as the time of Sir George Gipps, when a demand was made to the Secretary of State for the allowance of a clerk to assist Mr. Parker; that was refused, and the result was that there were two clerks in the Colonial Secretary's Office entirely employed in doing nothing whatever but in the business which is done now entirely in my office. It is to be borne in mind that the average number of despatches—I am speaking now rather without book—per month, as something like from

27 May, 1858.

- A. Denison, Esq.
27 May, 1858.
- twenty-five to thirty; and some of them are very voluminous indeed, and that every despatch has to be written in triplicate. There is the original despatch, the duplicate despatch—that is the despatch which goes by the succeeding mail—and then, thirdly, the entry in the despatch book. Not once in a hundred times is there any demand made upon the Colonial Secretary's Office, with the exception of copies of enclosures which go through that office, and it is the custom that the enclosures are always copied in the Colonial Secretary's Office. In Sir Charles Fitz Roy's time, notwithstanding the Private Secretary had a clerk, all the formal despatches of various kinds that did not require the Governor General's consideration were written in the Colonial Secretary's Office; these are written in mine now. I do not think there is one formal despatch in two months sent up from the Colonial Secretary's Office.
4. Do you find the time of yourself and the clerk is wholly occupied? His time is; he comes at ten and goes away at four; and I know it is repeatedly a question whether he will find time to copy a despatch, and I go to the Governor General and request him to put it off till the next mail, because there is not time to prepare it. Many of these despatches are very voluminous. It may possibly be borne in mind that not very long ago there was a Blue Book Despatch, which was very long and voluminous; there was positively not time to finish it, and I sent it to the office of the Colonial Secretary, with a request that it might be copied. I omitted to put my initials at the bottom of the memorandum, and it was sent back, with a request to know whether it was my demand or the demand of the clerk. The clerk, Mr. Barton, has been eighteen years in the service, and would, if he had been in any other office, have been a first class clerk. His salary is £315 a year, which is, I believe, a slight reduction upon what it was last year.
5. I see by the Estimates that there is also a messenger attached to your office? The messenger, who is entered upon the pay abstract and estimate, is the porter in the hall, whose sole duty it is to attend upon the offices of the Governor General, the office of the Aide-de-camp, the office of the Private Secretary, and the clerk's office, and to show in those who wait upon the Governor General and myself officially; that is his sole duty.
6. Deputations, and persons wishing for official intercourse with His Excellency? Yes; and the moment official hours are over the porter leaves the hall. He is purely an official servant.
7. With regard to the orderlies? With regard to the orderlies, I will give the Committee what information I can about them; but I have nothing whatever to do with the Governor General's Establishment—the whole conduct of it rests entirely with the Aide-de-camp. But, knowing I should come here to-day, I requested the Aide-de-camp to give me what information he could with reference to the orderlies, and I have brought up the pay abstract, in order to furnish that information to the Committee. The mounted orderlies consist of a sergeant, a corporal, and three troopers, who are likewise messengers from the Governor General's and from my office to all the other Government Offices. There is always some official on duty in the hall to carry messages; there is always on duty a mounted man to carry the more distant communications, and there is one who is told off duty in readiness to attend upon the Governor General when he rides out. There is one man who is told off for night duty; and, with reference to the horses, one has to attend in the stable.
8. Are they military men? They are all military men, and for that reason they are very much cheaper, as far as the country is concerned, than they would be if they were civilians. I was speaking with reference to that only yesterday to a gentleman from Victoria, who is staying at Government House, and he tells me that the cost of their mounted messengers, who are from the mounted police, of which there is a very large body—
9. Attached to Sir Henry Barkly? Two are attached personally to him as orderlies, their cost being defrayed from the contingent personal allowance of £5000 a-year to the Governor-in-Chief; but there are likewise mounted police, which is a very large body, and they are used as messengers by the different Ministers, and the Governor, in addition to the two personal attendants, has any number of these mounted policemen to carry communications to different offices, and their cost is estimated at something like twenty-five shillings a day each.
10. If the orderlies employed here are soldiers, do you understand why we provide provisions for them—are they struck off from the military rations? I really cannot tell; all the information I received from Captain Scott, this morning was, that the sergeant received 3s. 8½d. a day; the corporal 2s. 8½d.; and the three troopers 1s. 8½d. each, and rations; the Governor General provides quarters for them in the stable. I am not prepared to give you that information.
11. But they are military men? They are soldiers; and when there is any change in the regiments here, as a kind of matter of course, the orderlies are transferred from one regiment to another. I have nothing whatever to do with the orderlies. Captain Scott is a kind of *ex officio* commandant, and they never come beneath my notice, except with reference to signing their pay abstract, when I inquire whether there is any change in the pay, or in the names of the individuals.
12. Can you state why, as there are only five individuals, forage is asked for for the seven horses? That I think must include the Aide-de-camp's forage; he is allowed forage for two horses. I suppose that is the case, but really I am not aware.
13. For what is the item fuel and light? That is for the offices. The fires are kept up during the office hours and are allowed to go out, or are raked out by the porter, who has the entire charge. It is but fair to say, in addition to his duty of attending in the hall, and introducing every body who comes to the Governor General, or private Secretary, he has the entire charge of cleaning the offices. It is a perfectly distinct department from the house, and the porter has the duty of cleaning all the rooms—the Governor General's, the Aide-de-camp's, the Private Secretary's, and the clerk's offices, the lighting of fires, and every thing of that kind.
14. How is the stationery supplied; is this the mere estimated amount of the stationery received from the Colonial Storekeeper, or do you purchase your stationery? The stationery is

is supplied through the Storekeeper. When stationery is required for the Governor General's offices, I make a requisition and send it down to the Storekeeper, who supplies it. You must allow me to say, that worse stationery it is impossible to get; so difficult is it to get good stationery that Mr. Barton constantly comes to me to complain of the impossibility of writing despatches upon the paper so supplied. Nothing can be worse than the foolscap paper; it is so thin that the despatches can be read through it; quires and quires come so greasy that it is impossible to write upon them.

A. Denison,
Esq.

27 May, 1858.

15. I believe it is obtained through the Stationery Office in London? I imagine so.

16. What was the expenditure for postage during the last year; I see the sum of £117 is put down here—why was that particular sum fixed upon? I did not come prepared with reference to the item of postage.

17. It seems a curious sum to fix upon—why was it not put down at £110, or £120? I cannot say; the expense of postage is very considerable. The despatch bags go according to weight; and all returns are sent in in duplicate—the enormous Blue Books, volumes of returns, and Legislative Proceedings go home in duplicate. I know it has required a mounted man sometimes to make three trips to carry the despatch bags from the Government House to the Post Office; all these books are charged by weight. With reference to other postage, everything passes through my office, and I make the usual requisition, when I require postage stamps for official purposes, to the Postmaster General; and he sends in a quarterly account to me to fill up, requiring to know how many stamps I have on hand. I make a formal declaration that all the other stamps have been used for official purposes only, and return the account; but I am not prepared to say at all what has been the amount, because these forms are not kept in my office—they are sent from my office to the Postmaster General.

18. The next item is "clothing and saddlery for the orderlies, and mail bags, £120"? That I cannot speak to at all.

19. The item of "incidental expenses, £150"—are you aware what that is appropriated for? I have nothing whatever to do with that; the whole conduct of the Governor General's establishment is under Captain Scott, who would be able to give you all the information you require with reference to everything of that kind, but it is wholly out of my province.

20. The expenditure does not pass through you? Not in the smallest degree of any kind whatever.

21. Are there no incidental expenses which pass through your hands connected with your office as Private Secretary? With the exception of stamps, and things of that kind—stationery and stamps—nothing else.

22. *By Mr. Jones:* What is the nature of the clerk's duties—simply copying? Simply copying.

23. He has no original composition to perform? None; he is a confidential clerk who copies the despatches. He writes out formal despatches—having been so long in the office it is not worth my taking the trouble to write out the drafts; he therefore writes them and submits them to me.

24. Any gentleman who could write a fair hand, and was careful in copying a despatch set before him, would be quite competent to perform the duties of the office? Provided he had other qualities which are very desirable in a position of that kind—great prudence, great discretion, and not too great a tendency to talk. Very great evils have arisen occasionally from the absence of these qualities in persons in such a position.

25. *By Mr. Smith:* He is a person in whom you can place implicit confidence? I never found the smallest reason to complain in any way as regards his discretion, and it must be obvious that that is an important quality—one which is not possessed by the mass.

26. *By Mr. Jones:* You cannot say, of your own knowledge, whether the whole of these orderlies are required for the duties entrusted to them? I do not see how it is possible it could be managed with fewer.

27. *By the Chairman:* They attend His Excellency when he goes out officially? They are invariably in attendance upon him; they are part of the establishment, but their principal duty is to act as messengers.

28. *By Mr. Jones:* Between the office of the Governor General and the various public offices? Not merely the public offices, but in conveying the various communications the Governor General and Private Secretary have to make to all quarters, as far as they are within reach.

29. *By Mr. Forster:* Will you be good enough to state to the Committee what is the nature of that additional business which you say was once done by two clerks in the Colonial Secretary's Office, but is now done by your clerk? It was the copying of despatches. When the Secretary of State, under the former régime refused to allow a clerk to the Governor General's Office, the whole of the copying business not done by the Private Secretary was done in the Colonial Secretary's Office, as well as the whole mass of formal despatches which did not require the consideration of the Governor; now, the whole of that is done in the Private Secretary's Office. Of course I am speaking only from hearsay; but I know the facts very well, having talked over the matter with Mr. Parker, whom I knew intimately when he was Private Secretary to Sir George Gipps, and I know there was a very large amount of business then done in the Colonial Secretary's Office. It was in the latter years of Sir George Gipps' time that a clerk was allowed, and for the last fifteen or sixteen years it has been considered preferable to have a clerk attached to the Governor General's Office, to do what is really the business of the Governor General's Office, than to have a clerk from the Colonial Secretary's Office told off to do the work. I think it will be found, if my memory is not incorrect, that Mr. Vallack was the clerk to whom this duty was allotted.

30. Do you think the present provision sufficient for all the duties of that kind—are you at all obliged to apply to the Colonial Secretary's Office now? No, except in isolated instances. There was a very great pressure in the month in which the Statistical Accounts of the Colony was sent home. The Blue Book Despatch had been copied twice in my office, and had to be copied

A. Denison, Esq.
27 May, 1858. copied a third time; there was a very great pressure at the time, and it was absolutely necessary that the duplicate despatch should follow by the next mail, and I sent to the Colonial Secretary's Office to ask that it might be done there. With the exception of that, I think there is no business which should have been done by the clerk in the Governor General's Office that has been done at the Colonial Secretary's.

31. You are aware that certain new regulations have been published by the Governor General with regard to other offices, as to the hours of attendance—do you consider that these should apply to your office? With regard to the hours of attendance I have made no alteration at all—the clerk comes at ten and leaves at four.

32. You do not consider these new regulations to apply to your office at all? I am far from saying they do not; but I have not made the alteration.

33. With regard to the travelling expenses here allowed, do you consider them quite adequate to the purpose, or are they fully sufficient for the contingency? That does not fall within my province at all. I have nothing to do with the financial part of the Governor General's position. I believe, however, the sum of £500 has never been drawn, but only what is actually expended; and the vouchers, to the best of my belief, are always kept in order to be sent in. It always has been the case with the present Governor General.

34. I merely wished to know whether that was about the sum required? I do not think it has been drawn; although it would have been last year if the Governor General had been able to carry out his views. It has never been exceeded, I think.

35. *By Mr. Piddington*: I think I understood you to say the average number of despatches was from twenty-five to thirty? Sometimes more, sometimes less; I think between twenty and thirty. The number is very large, indeed.

36. That would be scarcely one per day? But it will be borne in mind that they are in triplicate.

37. I suppose it is not the custom of your office to use any mechanical means for economising clerical labor in copying? No; the despatches are copied in the regular formal great despatch books, which do not admit of that.

38. You think mechanical appliances, such as a copying machine, could not be used properly? No, not with reference to despatches.

39. It is your decided opinion that it is necessary to attach a clerk to the office of Private Secretary, for the purpose of transacting the business? It would be wholly impossible for any Private Secretary to do it. There must be one of two things, either a clerk must be told off from the Colonial Secretary's Office to perform the duty, or there must be a clerk attached to the office.

40. You say that with the knowledge of the actual business arising from one despatch a day? Yes, one despatch; but there is other correspondence besides the despatches; he is the copying clerk.

41. Other correspondence with various offices? Yes; documents of one kind and another, of which the Governor General may wish to retain copies, and which it is desirable should be entered in the correspondence book; he has to do that as well. He copies what I do not, but I copy private and confidential letters myself.

42. I suppose it is the practise to send despatches per mail once a month? Yes.

43. So that any arrear of despatch writing might, by a little arrangement, be brought up during the currency of the month; for instance, if you had a heavy despatch, such as that you have alluded to, to be copied at the commencement of the month you would have the entire month before you? Yes; but the original, we will say, is sent off on the 9th May, then it happens that there is a great pressure with original despatches, which the Governor General requires to have sent by the next mail; there may be a vast number of very long despatches, and duplicates to be copied—for the original despatch sent on the 9th May has to be entered in the Governor General's Despatch Book—and he may not have time to write the duplicate despatch which it is absolutely necessary should go by the next mail, to fill up the series.

44. With respect to the postage, I think I understood you to say that in the amount of £117 is included the postage of the Legislative papers? It includes the postage of the despatch bags, which contain all the great returns, and I think the Votes and Proceedings of the Legislative Council and Assembly—these go to the Secretary of State in duplicate.

45. Of course, being so bulky, these would cost something? Yes. The correspondence is very considerable in my office from all parts of the country, and to all parts of the country, as every letter which is received by me, on behalf of the Governor General, is nearly invariably acknowledged by me, if even only the receipt of it.

46. *By the Chairman*: You have alluded to the Blue Book—are you in a position to state to the Committee whether any steps have been taken with a view of getting that document reduced, or whether His Excellency has it in contemplation to make further representations to the Secretary of State upon the subject? I know the Governor General has made a representation to the Secretary of State to reduce the number of returns as much as possible.

Edward C. Merewether, Esq., called in and examined:—

Edward C. Merewether, Esq.
27 May, 1858.

1. *By the Chairman*: You are Clerk of the Executive Council? I am.

2. The Committee would be glad to have information from you with reference to the duties performed in the office attached to the Executive Council? The establishment consists of myself, a clerk under me, and an extra clerk, who has been employed for no very great length of time, and is only now employed temporarily. The duties I have to perform myself are attending meetings of the Executive Council; these as a general rule occur only once a week—on Monday; but special meetings are occasionally summoned during the week, to consider cases of emergency or matters which could not conveniently be deferred until the regular day of

of meeting. I sit in the Council Chamber and listen to the deliberations of the members upon each subject brought under consideration by His Excellency the Governor General, and take a short note of the decision arrived at, as well as of any particular points dwelt upon by the Council and to be prominently referred to in the minutes; during the week prior to the next meeting I condense each subject into a minute, as brief as is consistent with clearness, together with the decision arrived at by the Council. A good many of the matters laid before the Council are mere matters of form, and minutes in these cases are merely copies or nearly so of previous entries—*mutatis mutandis*. But the mass of cases, however, demand considerable care and attention in extracting the subject and recording the decision thereon, and these are not unfrequently cases of importance submitted to the Council, which entail upon me much labor and careful investigation, as *précis* rarely accompany the papers. The other business I have to transact is to see that the clerk under me extracts correctly the substance of the minutes of the Council according to my directions. I write upon the minute itself whether he shall merely put the substance, or whether he shall copy the whole minute. After he has written it I see that it is really the substance of the decision, sign it and send it to the Governor General for his approval.

Edward C.
Mercwether,
Esq.

27 May, 1858.

3. That is, a copy of each minute to be transmitted to each Minister to be acted upon? Yes; I send the minute when approved to the special Minister who is to take action upon it. There are cases where there are copies of general regulations, and in these I have to give a full copy to each Minister.

4. Can you state anything in detail as to the number of these minutes? I prepared some short time ago, for the information of the Colonial Secretary, a memorandum stating what the clerical duties of the office are. It will perhaps be well to read from that memorandum; as the duties are there stated as shortly as possible. "The clerical business of the office consists—1st. Registering and noting papers when they come in and the like when sent out."

5. That is all papers from each Minister? Yes. "Making fair copies of the recommendations of the Council, to be acted upon." As a rule and to save clerical labor, the advice only is copied upon the papers; but, in many instances, it is necessary to copy the whole minute, and in cases of general regulations, copies have to be furnished to each of the Ministerial departments. "3rd. Transcribing the minutes in full into the Record Books, and comparing them with the roughs. 4th. Indexing the Registry, Summary, and Minute Books. 5th. Making copies in duplicate of all minutes required by the Governor General, for transmission to the Secretary of State."

6. May I ask if that is still complied with by the Governor General? He frequently writes despatches, enclosing extracts from the minutes, and these are copied in duplicate.

7. Not copies of all the minutes or proceedings of the Council? Not of all the proceedings, but copies of all minutes required by the Governor General connected with his despatches.

8. When he requires them? When he requires them. Copies of minutes required by either branch of the Legislature are also made in my Office. The clerical work further consists in "making weekly lists of all appointments for the Auditor General, of papers for circulation, and in duplicate, of the papers laid before the Council at each meeting." I have had the additional duty lately put upon me of furnishing the Auditor General with a copy of all minutes relating to all matters of finance and expenditure. Then there is the notification of new roads, and objections thereto. The correspondence connected with these is at times very considerable, and gives great trouble, by rendering references back to former proceedings of the Council necessary. There is also the correspondence with their Honors the Judges, in reference to capital convictions. The number of cases laid before the Council in 1853, 1854, and 1855, was 368, 353, and 296 respectively; in 1856 it was 397; during 1857 it was 889; and in the first four months of this year between 240 and 250—maintaining the average; it has a little fallen off since the Parliament met. I may inform the Committee that for many years prior to the establishment of Responsible Government, the office of Clerk of the Executive Council was held in conjunction with some other office, but after the initiation of the new order of things, the business of the Council increased so much, that it was considered expedient to appoint an officer specially to perform the duties, and I was so appointed. Mr. Fitzpatrick, who held the office for nearly a year after the establishment of Responsible Government, commenced with one clerk, but found that assistance insufficient, and ere the Legislative Assembly decided what the staff of the department should be, he had to apply for an additional clerk, who was granted by the Government. The Assembly fixed the establishment at the Clerk of the Council and one assistant clerk, with whom I attempted for some time to perform the business; but I found that everything fell into arrear, and I also had to apply to the Government, who sanctioned the employment of a second assistant clerk. One reason for applying for this additional clerk was, the existence of extensive arrears in the office. On many occasions I have to refer back to old minutes, which are neither indexed nor entered. The earliest minutes of the office bear date 1825, from which period to 1850 they have not been indexed, and during the following years they have not been entered at all; they are merely in a rough state. I have from the end of November 1833 to December 1841 no entries. They are then entered up to October, 1846; but from that date to December, 1847, they are not entered. They are then entered for six months; but from July, 1848, to December of the same year, they are unentered. They are again entered from December, 1848, to May, 1849; but from May to December of that year they are unentered. I need not say that I am not responsible for this irregularity; but it is very desirable that these records should be completed, as, from their not being so, much time is wasted in referring back to them. I think with the establishment I now have, I shall be able to complete the work in the course of a little more than a year.

9. You think you will be able to enter up all these arrears, and complete the record, in about a year? I would rather qualify what I have said. In going back to the time when Mr. Macpherson was Clerk of the Council, he appears in some instances to have doubted what

Edward C.
Merewether,
Esq.
27 May, 1853.

what was the intention of the Council, or whether his own impression respecting it was correct, and has left a blank in the entry with a memorandum in pencil to be referred to the Council for decision; in many cases these papers are mislaid, or there is nothing to show where these paragraphs should come in. In Mr. Francis Merewether's time, also, there are many minutes wanting, which I cannot trace; but I think a year or eighteen months will suffice, with the present staff, to enter up all arrears as far as the minutes are perfect, or capable of being made so.

10. At present, what with the arrears and the current business, yourself and two clerks are wholly occupied? Yes; but I do not profess to occupy myself with entering these papers. I do not consider that I am placed in my present position to do clerical duty. When I have time, I compare the minutes with the clerk, because I can take that up and leave it at any moment; but my time is, as a rule, fully occupied. Besides being Clerk of the Executive Council, I am a member of the Land Board for opening tenders; that Board I attend as frequently as I can, but I do not go so much as I ought. In addition to that, I have been employed of late upon various Boards, which have occupied a great deal of time, and have obliged me to take home my legitimate work—scarcely a night passes that I have not to do so. I do not speak of it as complaining of the work, but to shew that my time is fully occupied.

11. Still your time is occupied for the public service? Yes.

12. And the time of your clerk also in your respective duties? Yes; he is at the office at nine o'clock, and frequently remains till five in the evening; and, as far as my frequent absence from the office will permit me to judge, he faithfully performs his duties.

13. You have adopted in your department the new office hours? Yes; in obedience to instructions.

14. What are the duties of the messenger? To carry out papers for circulation, and summonses to the Members of Council. There is a good deal of correspondence at times.

15. He has a very high salary, has he not? Yes; but he is a very old servant of the public, and cannot last very long.

16. How long has he been in the service? Some thirteen years, I think; he is a very old man, and I do not wish to remove him, but as soon as he resigns, or becomes incapable of duty, I propose to reduce the pay of the messenger nearly one-half; £60 or £70, I think, would be sufficient remuneration for the duties to be performed.

17. Who obtains the £18, down in the Estimates, for office-keeping? The same person who looks after the Colonial Secretary's Office; I believe she hires a servant for the purpose. But I may be allowed to observe, that if I had a separate office, which, in the first instance, was intended, somebody must be employed to look after it; it was merely the fact of there being two rooms unoccupied in the Colonial Secretary's Office that led to my having an office under the same roof with him.

18. Your present office is very convenient, is it not? I do not object to it; indeed there is this advantage connected with its position, that I have ready access to papers in the Colonial Secretary's Office.

19. Your stationery, I suppose, like all other Government Departments, you obtain from the Colonial Storekeeper? Yes; and the amount for stationery is cut down to the very lowest; indeed all the contingencies are, I think, put as low as possible.

20. *By Mr. Jones:* What is the nature of the duties of your chief clerk? I gave, just now, the general clerical duties of the office, and he conducts the main part of these. When, also, I have references to make to any foregone proceedings that occurred before my time, as he has been a long time in the office he is of considerable service to me in this respect, and I must lean upon him to a considerable extent for information connected with any such proceedings; he copies the minutes from my original drafts.

21. His duties are chiefly of a copying nature. Yes.

22. Do you occasionally trust to him in composition? Occasionally I give him some of the ordinary minutes, but nothing requiring any great care, or of an important nature.

23. Is anything more than ordinary clerical ability required? A certain degree of secrecy is required, and, of course, confidence reposed.

24. And a certain knowledge of the business of the office? Yes.

25. Beyond that, any one competent to perform an ordinary clerk's duty well would be competent to perform the duty of this clerk of the second class? Yes.

26. *By Mr. Forster:* I think you said you did not consider clerical duties a part of your duty? Yes.

27. I presume you mean to infer by that that you have such a number of other duties to do that you have not time for that? Yes; my time can be more profitably occupied for the public service, and is—

28. Do you mean to say that these other profitable occupations prevent your giving that attention to the duties of your office you could wish? Not quite that; and yet I would go further, and say I do not conceive I am paid the salary attached to my office to be made a copying machine.

29. I do not quite understand you? What I mean is, that although I have arrears of business in my office, which accrued before my time, I do not consider it to be my duty to act as a copying clerk to bring up those arrears.

30. That is to say, your time is better employed? Yes, my time is better employed for the public service.

31. These other duties, such as attendance on Boards, are they included in your office as Clerk of the Executive Council, or are they customarily performed by that officer? It is customary for the Clerk of the Executive Council to be a member of the Land Board.

32. Then, by custom it has become part of the duty? It has; but I am specially appointed a member of the Board.

33. *By the Chairman:* You are permanently on that Board, and occasionally employed in other cases? Yes.

34. *By Mr. Forster:* Do you not think it would add to the efficiency of the Clerk of the Executive Council if he were confined to the performance of the duties of his office? No, I do not. I believe my efficiency is materially increased by the opportunities these Boards afford me of becoming acquainted with public business in other matters, and on that ground I do not cavil at the extra trouble it gives me.

Edward G.
Moreweather,
Esq.

27 May, 1855.

35. You consider that your time is fully employed by this duty? Yes; I am frequently employed until a late hour at night by the business of the office. The business brought before the Council varies very much; when it is heavy, I am occupied till late at night at home, in consequence of being employed during the day in these extra duties, which is more, I imagine, than is required of me.

36. There is no extra remuneration allowed for attendance at these Boards? For the Land Board I get nothing whatever, and from the others I get nothing but occasional ill-will.

William Elyard, Esq., called in and examined:—

1. *By the Chairman:* You are Under Secretary to the Government? Yes.
2. How long have you been in the public service? Thirty-six years and three months.
3. Will you state to the Committee generally the duties which now devolve upon you in the office you fill at present? I have the general supervision of the department, conducting the correspondence, and assisting in the duties and business generally, subject to the instructions of the Minister on the different cases or matters submitted to him. But it is difficult, of course, to enumerate the various duties or matters that require my personal attention. I am fully occupied during the whole day. All official letters or documents which come into the office, in their progress to the Minister, or to be dealt with in different branches of the office, pass through my hands, and, as I suppose is the case in other establishments than those of the Government where there is a large business, much time is taken up in personal directions relating to it, or to the duties of the persons employed. Independently of papers to be read or attended to by myself, there are other matters which occupy time. I have to give interviews to persons making personal inquiries on matters passing through the department, or connected with the different establishments under the Principal Secretary, and considerable time is occupied in communication with the Minister, in submitting papers to him and taking his instructions upon them. I do not know, however, how I could clearly define all the numerous duties which I have to perform or the various matters which I have to attend to throughout the day.

W. Elyard,
Esq.

27 May, 1868.

4. What is the number of departments under the Principal Secretary? That is fixed by the notice of Administrative Arrangements.

5. What date is that? It is dated 8th October, 1856.

6. Then you have correspondence with all the departments named in that notice? Yes; and with some that are not precisely under the Principal Secretary,—as the Judges of the Supreme Court, the President of the Legislative Council, the Speaker of the Legislative Assembly, &c., with whom there is occasional correspondence. I think the departments, strictly speaking, might be taken at about eighteen, but there are several establishments under one head, as in the case of the Gaols, the number of which does not appear in the notice.

7. Do the Visiting Justices communicate direct to the Colonial Secretary? The Visiting Justices make their reports direct to the Colonial Secretary. They send in monthly reports independently of the reports they make from time to time upon matters which require to be brought under the notice of the Government. The Gaoler is under the control of the Sheriff, and any directions affecting the former go through the Sheriff; but there are many matters of correspondence between the Colonial Secretary and the Visiting Magistrates. When the Sheriff wishes to have the assistance of a Visiting Magistrate in any inquiry, he communicates with him direct. Then the department of the Inspector General of Police forms one item in the notice; but connected with it there are all the Police Establishments in the country, and there are constantly points arising affecting them that have to be submitted by the Inspector General to the Principal Secretary from the different Benches. There is, in addition, considerable correspondence between the Benches and the office, with reference to the establishment of new Courts of Petty Sessions, the increase of the police, the extension or alteration in the districts, and various other matters it would be difficult to enumerate without going very much into detail. This occupies much of the time of the Minister as well as of the establishment. With reference to the Police Department, I may state, that there are now twenty-three Police Magistrates besides the Inspector General of Police, and about sixty-seven clerks, including a few that are provided for in the estimate in addition.

8. You mean Clerks of Benches? Yes; and there will be about eighty Benches, and all of these have more or less correspondence with the Colonial Secretary's Office. On mere police matters the correspondence would be with the Inspector General of Police; but on some of these the Inspector General has to obtain the instructions of the Minister; he has, also, often personal communications with myself and the Minister upon such matters, and with reference to the revision or alteration in regulations, or before submitting reports, or acting upon directions which may have been given to him.

9. What was the strength of the office when Mr. Deas Thomson was the Colonial Secretary? I have taken the strength in 1855, which was the year prior to the introduction of the new arrangements, and there were then thirty-one clerks, that is to say, thirty clerks besides the Chief Clerk.

10. That is yourself? Yes. The expense of the department, as appears by the printed statement, was then £14,201 17s. 11d. At that time, of course, almost everything requiring the instructions or decision of the Government came into the office, including business since assigned to other Ministers. I have not taken a note of the whole expenses in 1856; but

W. Elyard, Esq.
27 May, 1853. but in that year the alterations were going on, and I see a sum of £11,702 15s. 6d. was charged to the office. A portion of the clerks were transferred to other departments; during part of the year these were borne on our establishment, and for the remainder upon others. In 1857, there were fourteen clerks exclusive of myself, the only difference being that I had the designation of Under Secretary, performing generally much the same duty as I had been accustomed to do previously; my office of Chief Clerk having been substituted for that of Assistant Secretary in 1841. My time, however, is now I think more frequently occupied in seeing heads of departments and others than it was formerly. Previous to the recent changes I thought, from the establishment being more limited, with a less number of clerks to superintend, and fewer papers passing through my hands, I should have had more leisure than I had been accustomed to—indeed, I never had any at all and it was with great difficulty I could get through the business I had to attend to; but I have found that, with personal communications, not only with the public, but with the different officers connected with the departments, and with the Minister, my time is fully occupied.

11. As fully as before? As fully as before. I think more so in that way, upon the whole. The Colonial Secretary as a departmental or permanent officer, although charged with large Legislative duties, as the principal representative of the Government under the former system, entered perhaps more into the detail duties of the office, rendering it necessary for persons to see him on some matters on which, in my present position, it is sufficient to refer to me. As the head of a Responsible Ministry, the Principal Secretary, besides extensive Parliamentary and other duties has, of course, his time much taken up in conferences or consultations, with other Ministers, as well as in giving audiences to the public, deputations, &c.

12. Of these thirty clerks who were in the office in Mr. Thomson's time, are all in the public service now, or has there been any actual reduction—have they all been transferred to other departments, or has there been any actual reduction? No; I think there has been no reduction. One or two resigned; but they desired to leave—it was not strictly a reduction.

13. No matter from what cause, are there fewer individuals now in the public departments? No, I do not think there are; for I imagine that besides those transferred from the Colonial Secretary's Office, in some of the new departments additional appointments have been made, so that probably there is an equal number, or it may be more. I do not know that the division has caused any reduction so far. In 1857 there were fourteen clerks, the expense being £8,408 6s. 8d. For 1858 there are thirteen clerks, being one less than placed on the Estimates, because a vacancy which has occurred has not been filled up. Since 1855 the establishment has been reduced by eighteen clerks, seven of these were transferred to the office of Lands and Public Works, five to other departments, one died, and five have resigned, or been appointed Clerks of Petty Sessions. That is the way some of them were provided for when the reductions were made—they were appointed Clerks of Petty Sessions in the country.

14. Still that would be a virtual reduction of the clerical strength in Sydney? Yes. I mentioned that seven were transferred from the Colonial Secretary's Office to Lands and Public Works, when that department was established, but it does not follow that they formed the whole strength of the establishment, and I cannot say whether the number generally is more or less than when there was one chief office for the business, of which a portion has since been placed in other departments. Some additions have arisen from the extension of the Legislature and the population of the Colony.

15. With regard to the duties of Chief Clerk, who has a salary of £630 a-year, what are the duties of this gentleman, who is the head of a branch? He has charge of the chief branch, designated the correspondence and general business branch. That, I think, designates it properly, and it consists, besides Mr. Vallack, of five clerks. Mr. Vallack has the conduct of the branch, prepares letters, reports on papers, references, &c.

16. Does Mr. Vallack have to perform any duties of an original character beyond writing letters on minutes? No—excepting, for instance, preparing schedules of papers moved for in Parliament.

17. That is making a précis? Yes, a précis, or abstract.

18. Condensing the titles of letters or documents? Yes; but it requires considerable care and some experience to do this properly, and he has the general superintendence of the clerks under him.

19. Has he five clerks under him, or four and himself? Five clerks under him. When cases are decided upon by the Minister, or any directions are given upon them by myself, I put them in his hands, and he directs the clerks to act upon them—such clerks as he finds it convenient so to employ; or he attends to them himself. Generally he sees that the business is kept up, that the letters are properly written and despatched when they are given out again. But his duties are very various, including in them much of personal communication with him by gentlemen connected with the departments, who come to make inquiries in matters of detail that they do not find it necessary to refer to me upon.

20. Mr. Vallack has attained his present salary rather by length of service than a necessity to remunerate this office with so high a stipend? Yes. I think you must take that into account in almost all the cases where the salary is larger than it may be considered the same class of duties would otherwise command.

21. How many years has he been in the service? Thirty-one years and five months.

22. His salary has been gradually augmented under the regulations for an annual increase and by promotion? Yes; his salary was originally £100, which has been gradually augmented by annual increase, and by promotion from one class to another, as he became more experienced in the office, had more important duties to discharge, and as vacancies have occurred. He obtained the maximum allowed in the classes, that is, £400 a year; then he received £100 a year as a special case, in consideration of his long service as well as the manner in which his duties have been performed; that, with the temporary increase, made up his salary to £675, which was reduced to £630 when the temporary increase

increase was discontinued as such, and a portion of the amount was amalgamated with and became a part of his fixed salary. It is in that way he has acquired his present rate of salary. I may be allowed to remark, with regard to the salaries that have been arrived at by some of the officers who have served a number of years in the department, that, although it might happen that persons would be found to seek office at much lower rates, independently of what might be considered the proper remuneration for the duties, such appointments would be followed by continued applications for augmentation of pay. The positions which have been acquired by these gentlemen—take for instance the case of Mr. Vallack—are not better than would have been attained by them if they had devoted the same attention in any other line of life. I do not think that they have obtained any advantage beyond what might have been reasonably looked for in other positions by perseverance and attention to business; and if there were no such advantage to be gained from length of service—if no change of position were to be looked forward to—perhaps there would not be the same encouragement to continue in a department, or that attachment to the service which has been generally found to exist amongst those who have now been a long time in it. My object is simply to shew that in other pursuits, independently of the duties performed, parties may look forward to and do acquire some advantage from the continued pursuit of any profession, trade, or whatever it may be; and that these rates viewed in that way are, perhaps, not so much as the same individuals, if they had followed different pursuits, would at this time have been in the receipt of—looking to banks, commercial houses, and other establishments in which gentlemen have continued for a length of time.

W. Elyard,
Esq.
27 May, 1858.

23. That is in reference generally to the salaries paid to the officers in your department? In reference to Mr. Vallack in particular, as to the question how he acquired the rate of pay he now receives, but it may be applied generally.

24. The next salary is £400 a-year—what are the duties of the Clerk of Records? They are given in this Return—(referring to a Return)—prepared at the wish of the Committee. "Registration of Addresses and Orders of the Legislative Council and Assembly, Despatches from Secretary of State," registering letters, &c. A short abstract of each despatch is kept in the office in case of its being sent away or otherwise dealt with.

25. Is that in a book? Yes, with an index. These are despatches sent by the Governor General to be acted on by the departments, and many of them are forwarded in original to the other Ministers, a record being kept, by referring to which we know in what department the despatches are to be found.

26. Does not the Governor General send to the Colonial Secretary the duplicate? He sends the original, excepting perhaps those despatches which are of a personal nature, and retains the duplicate.

27. Those that apply to other Ministers are transferred to them, and a short abstract is made in the book in the office? Yes. The Clerk of Records has further to prepare indices to the Registers and also to search for former correspondence. This is a very laborious duty; it always has been so, and will continue to be so in the Record Branch of this department more than in any other, because we have, in addition to the current papers relating to our own duties, a number of papers relating to old cases, which from time to time require to be transferred to the new offices.

28. To the new branches? Yes; to the new divisions of Government. They are furnished as cases arise, either similar to those to which they relate—in which claims are founded upon them—or in which some reference is made to them. For instance, a person claims on some old promise of land, and very likely the documents connected with it are in the Colonial Secretary's Office. The application on the subject is made to the Office of Land and Public Works; but the former papers have to be obtained, and the Clerk of Records, who searches them out, before they are sent away, that we may not lose the clue to them, notes them in the Register. This occupies considerable time.

29. Is that all done by Mr. Goodman? He has two clerks assisting him, but the principal portion of the work is done by him, because his knowledge of the Records, from the time he has been in the office, enables him to do it with much greater facility than any other person could. In fact, it would be very difficult for a stranger to find readily these documents.

30. His duties will gradually decrease, as you get rid of these documents by transferring them to the other departments? No doubt. They have been very heavy, and since the establishment of Responsible Government they have rather increased than otherwise. His other duties are answering references from other departments, notation of papers finally disposed of, collating Parliamentary Papers for binding, distribution of the Acts of Parliament, and general supervision of the duties of the Branch.

31. What do you mean by collating Parliamentary Papers for binding? I refer to the papers of the Imperial Parliament received from England.

32. Are these kept up? There are a great many still to do.

33. You do not bind up all these Blue Books? There are some extra copies sent which are not bound up.

34. By Mr. Piddington: You bind up a copy of each report? Yes; the series of Parliamentary Papers. They are not altogether perfect, and I am not sure that they send out everything. Sometimes these papers are borrowed for public purposes, and it is difficult to get them back again, so as to bind them into volumes. They form an useful record for the Colony. To the letters which are opened in the morning, or throughout the day, a short heading is given, and they are then entered in a Register containing the name of the party from whom received, the dates, the dates of receipt, the numbers of the letters in the register, (which are also put upon the letters themselves,) and brief notes of the contents, so as to identify them. This duty is done chiefly by one of the assistant clerks, Mr. Connell, who also assists in searching for former correspondence. If a letter comes in referring to a previous correspondence, in order that any decision or instruction may be consistent with, or that it may be known what has been done before, the correspondence is searched

W. Elyard, Esq.
27 May, 1858. searched for and placed with the later letter. When these papers are acted upon, this gentleman also assists Mr. Goodman in noting them in the Register, so that by turning to it you can ascertain how the papers or cases are disposed of; afterwards they are put by in the Record Room. The Registers have each an index, and occasionally there is some small correspondence, informing parties that their letters have been referred to certain other departments. The Record Clerks have also to send away papers, such as Acts of Parliament that come out from England, and are received in the Secretary's Office. Several copies are sent—one copy for the Governor General, one for the Executive Council, one for the Legislative Assembly, and one for the Law Officers. These are the various duties performed by the branch over which Mr. Goodman presides. Besides Mr. Connell, there is another clerk who is in charge of the register of letters, notes original documents sent to other departments, blank cover references, files the *Government Gazette*, &c.

35. *By the Chairman*: In fact he assists Mr. Goodman? Yes, he is under Mr. Goodman's direction, and so also is Mr. Connell. The rule of the office is, that those gentlemen who are at the head of particular branches shall be responsible for the duties performed in them; but although the different clerks so far perform particular duties, they are available for any other business for which they may be required. For instance, if any copying has to be done in a short time, they may all be taken off their ordinary duties and applied to this, and thus they assist each other in getting through any pressure of business.

36. In whose branch are the Returns in answer to Parliamentary Addresses? There is a register kept of these. In addition to the register of despatches and letters, there is a separate register of the Addresses of the Legislative Council, or of the Legislative Assembly; it is more convenient to have two or three books with indices than to enter everything in one.

37. Who prepares the Returns to Addresses? When they are received they are first of all entered in the Register in the Record Branch, they are then submitted to me. If they are Addresses for Correspondence they are sent to Mr. Vallack, who gets the papers from Mr. Goodman, and arranges and submits them to me with a schedule. Sometimes I prepare this schedule myself, at other times he does it. Occasionally I have to obtain instructions, or refer to the head of the department, respecting documents authorised to be furnished, before they are finally prepared to be laid before Parliament.

38. There are two clerks at £375 a-year,—are they under Mr. Vallack, Mr. Goodman, or both? These are both under Mr. Vallack. The duties of one of these gentlemen are correspondence relating chiefly to Appointments, Expenditure, Miscellaneous subjects, Immigration, Schools, Clergy, Police, and other business, as required by the head of the branch. Mr. Allan is also engaged in correspondence relating to Parliamentary Returns, Elections, Acts of Parliament, Sentences of Prisoners, Police, Pardons, Establishment of Petty Sessions, &c. He has also to look over the *Government Gazette*, a proof of which is sent to the office before publication, not that any alteration is generally made in anything sent for publication, but it is to prevent the insertion of anything inconsistent with the character of a *Government Gazette*, such as tradesmen's advertisements. Poundkeepers' advertisements are admitted by payment, as also are announcements of the dissolution of partnerships; but if anything were inserted not such as should appear in such a publication, it would be struck out, or be brought under notice.

39. The Government Printer is required to send to the Colonial Secretary's Office a final copy before publication, that he may get authority before publishing the *Gazette*? Yes; but other departments are responsible for what they send to the *Gazette*. Mr. Gratton, who is one of the clerks at £375 a-year, prepares Commissions, Certificates of Naturalization, indices of letter-book, stamps letters, and keeps account of postage stamps and petty expenses. He attends to the dispatch and making up of any letters for England and other Colonies when the mails leave, and he assists in correspondence and otherwise in the business of the office, as he is required by Mr. Vallack. Then the other two clerks are copying clerks.

40. What salaries do they receive? £175 each, which is the lowest rate at present given, with the exception of one in the Record Room at £150. They copy papers for Parliament, enclosures to the Governor General's despatches, enter letters, place seals to deeds of land sold by the Crown, and assist the corresponding clerks when there are lengthy enclosures for letters. They make up letters, and have also charge of the periodical reports and returns which are made to the office.

41. From the gaols and other Government establishments? Yes; so as to keep them ready for reference.

42. Are not these handed over to Mr. Goodman? They may after a time, but they are now sent to the branch where a list of Returns is kept.

43. Do you find that the whole of these clerks are constantly occupied? Yes; to the best of my knowledge. I make frequent inquiries of the heads of the branches as to their being fully occupied. I have occasion also to be often in different parts of the office, and I have reason to believe that the establishment is as low as it can be—in fact I am never certain what the business will be, because there is a succession of demands upon the office, and I usually find that when the pressure from one thing is got rid of something else occurs, either with reference to the Government or to some matter in the public service, which provides full employment for those who are in the office. I think there will be even additional duties in carrying out some Acts of Parliament now under consideration. For instance, under the Municipal Act there must be a record of certain applications, and that record will have to be kept with some care. In the first instance, too, considerable correspondence will arise out of the establishment of Municipal Bodies.

44. *By Mr. Smith*: These will be temporary duties? Yes; but, probably, next year there will be new duties arising from some other Act, so that there is a succession of new business and duties to be performed, arising from what is done in Parliament as well as from various casual matters that are constantly occurring. For instance, take the case of the unemployed, which is now occupying some attention; a variety of other things arise in a similar way.

45. *By the Chairman:* What do you think has been the effect of extending the office hours—has it enabled you to bring up arrears at all, or have you found the work of the office more slack—it is a virtual extension of how much a day for each clerk? The regulation of course extended the office time one hour.

W. Elyard,
Esq.

27 May, 1858.

46. Besides the lunch time? Besides the lunch time; but in the Colonial Secretary's Office, although it was the practice of some of the clerks to go out to luncheon, it was not general; many did not do it, but took some refreshment in the office, or in the best way they could, as they do now. I think the attendance generally, since the new regulation, has been as regular as could be expected, and I believe, although they felt the inconvenience of coming to the office so early in the morning, they have been desirous of obeying the regulation and acting upon it. Sometimes, perhaps, they may be a few minutes after, and sometimes before nine—seldom extending beyond it a quarter of an hour.

47. Do you find that this virtual addition to the time devoted to office duty of fifteen hours a day has had any marked effect upon the business—it ought to be as good as a couple of clerks to the office? We have one clerk less than we had.

48. Has it had any sensible effect upon the duties of the office? I cannot say that, because the duties vary very much. In an office where the duties are so very uncertain, I do not know that you would observe it, even if there were a greater extension of time. The object is to get the business that comes into the office done; and I believe that, generally, we have been able to do that.

49. Your opinion is that the office strength is not too large? Yes.

50. Do you think, from what you have seen going on for the last two years, that as soon as the Government departments are thoroughly formed, and this constant reference for old documents ceases, it will be necessary to retain the establishment of the Colonial Secretary at the present strength? Yes, I think so; because the correspondence and general business branch of the office is likely to have increased duties, and I do not think they could be well performed with a less establishment than we have now.

51. There is one branch of the office—the Blue Book and Statistical Branch—that is always very much in arrears is it not? It takes a considerable time to prepare the Blue Book.

52. To collect the information you mean? Yes. In the first instance that information has to be written for—that is usually commenced to be done before the termination of the year for which the Blue Book is to be made up; various departments have to be written to, asking them to send in the information necessary for compiling it. The documents sent in, in consequence of such applications, have to be examined, which is usually done by the head of the branch, Mr. Greville, and they often have to undergo a good deal of revision, and to be returned to the departments, or explanations have to be obtained upon them. There is much delay in getting some of this information; for instance, documents from the Audit Office, connected with expenditure, cannot probably be prepared until the Accounts are closed for the past year; the preparation of these documents, in addition to the pressure of their own more immediate duties also, I suppose, creates some delay in rendering them; and it is necessary frequently to remind the departments of what is required to continue or complete the book. After these documents are collected and examined, they have to be copied; and there are three copies made of the Blue Book—two are sent to the Secretary of State, one is the office fair copy, and is laid on the Table of the Legislative Assembly.

53. If these were not required for transmission to the Secretary of State, these two clerks, at all events, would not be necessary? It takes about three months to copy one of these books in its present state, supposing all the information to be arranged for it.

54. Of Mr. Greville himself, or both clerks? No; it is done chiefly by Mr. Newcombe.

55. Mr. Greville does not occupy his time in copying? No; his time is fully occupied in collecting information for the Blue Book and Statistics, and the latter are all printed as he prepares them, so that they are not copied. It is only the manuscript book which is copied by his assistant clerk, and it is done very neatly. Of course, if any of these copies were dispensed with, or should be more limited in their contents, there would not be a necessity for the same amount of clerical assistance. These documents have, however, to be compared, which can only be done by two clerks; so that if one of these at present engaged for this duty were dispensed with, it would be necessary to afford assistance from some other branch of the office.

56. Was it not intended when the office of Registrar General was formed to transfer all the statistics of Government to that department? It is a matter which has been under the consideration of different Governments, whether the Blue Books and Statistics, now prepared in the Colonial Secretary's Office, should not be placed under the Registrar General.

57. Was it not part of the original intention in forming the office of Registrar General, previous to the establishment of Responsible Government, that eventually the statistics of the Colony should be transferred to that office? The Government might have had it in view to make that department eventually the general statistical office of the Colony; but I do not know that it is on record. The Registrar General was first appointed to carry out the new Registration Act for Births, Deaths, and Marriages. Subsequently the business connected with the registration of deeds, and the records of mortgages, transfers of property, &c., formerly transacted in the Supreme Court, has been placed under him, and probably it would be a very desirable arrangement to concentrate everything of that kind in his department, where there would be more facilities for the proper discharge of such duties than in an office where the chief attention is directed to other matters. Of course, if this should be done, that portion or branch of the office might be discontinued.

58. It would, in fact, take away all the correspondence as well as a proportion of your Statistics and Blue Book? No, I do not think it would take away all our correspondence under this head, for the Registrar General's Department being one of those under the control of the Colonial Secretary, applications or references would be made occasionally to him upon the subject; but it would not be to the same extent. That correspondence also is prepared by Mr. Greville, as far as relates to the Blue Book.

59.

- W. Elyard, Esq.
27 May, 1858.
59. Is there ample employment for these messengers? Yes; sometimes we are at a loss for messengers. We used to have three messengers, but one was discontinued in 1857, when the new arrangements were made. They are fully employed, for, besides the mere delivery of official letters and matters they have to attend to in the office, there are constant messages and notes to be sent. Much can be done by means of notes, where official letters are not sent, in making inquiries, and these, although not recorded, form a considerable item of business.
60. Has any other department of Government besides the Colonial Secretary's a watchman, or how is the matter arranged—does that man watch regularly every night? Yes, and he resides close at hand.
61. The office-keeper is resident on the spot—does the watchman also reside on the premises? It is not part of the premises, but it is a Government building, and formerly belonged to the old Treasury.
62. He does live near the place? Yes; he is allowed quarters, immediately adjoining.
63. Has this vote of £250 for extra clerical assistance ever been drawn upon lately? Yes, to a slight extent. There is a young man who is employed in making copies of papers, and rendering other assistance, who is paid at the rate of £20 a-year, as a gratuity; but there was something more last year—I think about £40 were then paid for extra clerical assistance. Of course this extra assistance is limited as much as possible, as the provision is as a contingency for any pressure that cannot be foreseen. The returns that have been called for this session have not hitherto been so heavy as they have been previously, although we have at times had a great deal to do in this way. Still there are one or two to be furnished which will involve much labor, and I have already had applications from the clerks for some assistance for them. I always endeavor, if I can get the work done within any reasonable time, to do it with the establishment of the office.
64. You get your stationery from the Colonial Storekeeper? Yes; it is kept in the Record Room, by Mr. Goodman, and is issued upon the requisition of the heads of the different branches, who submit their requisitions in the first instance to me.
65. Why is this item still continued—"Preparing an Index to the New South Wales Government Gazette, £30"? It was originally allowed to Mr. Newcombe.
66. Who does it now? Mr. Allan. It has been allowed for some years, and is considered an appendage to the salary of the clerk who examines the *Gazette* and prepares the Index.
67. By Mr. Jones: When does he prepare the Index? I am not certain that he does not do part of it during office hours, but I think he keeps up the Index as he goes on, and then arranges it afterwards for printing, which is an extra duty. It was in consideration of that, that the allowance was originally made, not originally to him, but to a gentleman then in the office, who has now left it.

TUESDAY, 20 JULY, 1858.

Present:—

MR. COWPER, | MR. FORSTER,
MR. PIDDINGTON.

THE HON. CHARLES COWPER, Esq., IN THE CHAIR.

W. Elyard, Esq., called in and further examined:—

- W. Elyard, Esq.
20 July, 1858.
1. By the Chairman: Can you state what are the circumstances which interpose such delay in preparing the Blue Book annually—could not some means be devised of obtaining this statistical information from the different sources which it has to be obtained, so that it could be condensed in the Blue Book some months earlier than has hitherto been usual? I think I mentioned, when under examination before, that one cause of delay is the time it takes to obtain the information from other offices. I do not know how far an arrangement might be made to obviate this difficulty; but I think that much of the Blue Book might be so arranged as to be printed.
2. And so reduce the expense of clerical labor; and so, also, that a portion of it might be made available each year, without repeating every year the information given in the preceding books, which has to be copied by the pen? Yes, to some extent. I think also, that a portion of what is comprised in the Blue Book might be omitted. There is a list of buildings and public works in it, and I do not know that there is any utility in retaining this. The chief object of the Blue Book formerly was, as well as it is at present, to furnish the Home Government with information relating to the Colony.
3. To the Secretary of State? Yes. I do not know that any such return as that alluded to would be of any use in the present state of the Colony. If it should be required at any time by the local legislature, a special return could always be prepared. There are also the particulars referring to gaols, which occupy much time in copying, and considerable space: by omitting some of these things, I think the Blue Book might be got out earlier.
4. Could not the various country Benchers and other departments receive circulars before the end of the year, requiring them to send in their returns to the Colonial Secretary's Office soon after the year expired? I believe that is done now. These circulars are generally prepared before the expiration of the year, and I think they are sent out about the beginning of January. It does not, however, depend so much upon this as upon the time taken to collect the information in the different districts. It is frequently necessary to repeat the application for the information before it is obtained from the remote districts.

5. At what time do you receive the information, so that the whole of the Blue Book can be compiled? Some has not yet been received.
6. For last year? We have not got the Emigration Returns. I have had to repeat the application for them, and to urge their being sent in without delay.
7. What reason is urged by that department for not sending in the returns? The reduction in the clerical strength, and the difficulty in getting them prepared.
8. Are they elaborate returns? Not very elaborate when placed in the Blue Book; but I suppose the work in preparing them is very considerable. Statistical work generally does not appear so much when put into shape, although it often occupies a great deal of time in the preparation. You can hardly form an opinion of the time occupied in preparing statistical returns.
9. In the Colonial Secretary's Office what is the strength occupied in this particular duty? We have Mr. Greville.
10. At what salary? Mr. Greville's salary is £550 a-year.
11. What assistance has he? Mr. Newcombe, at a salary of £230 a-year. I think I explained this in my former examination.
12. Generally, you did. Now, with reference to this particular branch, what duties do they perform besides this? This is their chief duty—the Blue-Book, and the Statistics, which form part of the Blue Book. They have also some other returns to make out.
13. Would not this duty, which is performed in the Colonial Secretary's Office, more properly belong to the Registrar General's Department? Yes; I think it might properly be placed in that department with other statistics. It is possible such returns as these might be prepared with greater facility there than in an office where the business chiefly is of a different character; because it would not then require a special establishment for the purpose. It would form one of the items of business, and the clerks engaged in other statistical work would be occasionally available to assist in this, without prejudice to other duties of the same description.
14. Is there not a large proportion of the Blue Book consisting of names of every subordinate officer of the Government, which does not appear to be of great importance? That has been, to some extent, curtailed in the Blue Book of the present year, with a view to diminish its size, and the labor of compiling it. I am not sure that it might not be still more shortened.
15. Was there not one year when the Blue Book was actually printed? Yes, it was printed in 1828.
16. Then the facilities for printing for Government were not so great as they are at the present time? No. This was not found to answer. I believe it occupied a very long time. I do not find that it has been got up in the same way in any other subsequent year.
17. Do you understand why it was not printed since? The Government had not the means at its disposal of printing it readily, as prepared, and it was not considered, I believe, that it facilitated or expedited the preparation of the book. But I think it is possible that it would be different now.
18. It would not be necessary to prepare the copies in the same elaborate careful style of penmanship that has been adopted hitherto in writing out the Blue Book? No.
19. The drafts would, of course, in many cases, be available for printing? They would require careful comparison. It is necessary to keep in view one object of the Blue Book—which is, to afford information to the Government at home, as well as, perhaps, to furnish the means of answering inquiries in England. A copy is also laid on the Table of the Legislative Assembly, for information, during the Session.
20. These salaries partly arise from the length of service of the gentlemen employed? Mr. Greville has been thirty-three years and upwards in the department; Mr. Newcombe upwards of six years.
21. By Mr. Forster: I presume that the Colonial Secretary is the sole officer of Government responsible for all that is done in your department—he is the sole responsible person for all that is done in your department? Of course, the persons employed under him are responsible to him.
22. Do you consider, since the advent of Responsible Government, the responsibility is better enforced than it was formerly, or worse? Formerly the responsibility of the officers of the Government was to the Governor General, and although questions might be put to them in Council, or explanations obtained on different matters, the responsibility was different, because this had no influence upon the position of the officers; there is, therefore, now a greater or more direct responsibility than formerly existed—the Ministers being immediately answerable to Parliament for the transactions of the Government.
23. You consider your department quite as efficient as it was under the former system of Government? Yes.
24. Do you consider it quite as efficient as it might be made, or as it ought to be? I think that when the new system of Government, by which the public business is more divided, has been longer in operation, and regulations established and brought into force, on different subjects, the department may be made more effective, and the control over the public service, which Ministers have to exercise, be made more complete.
25. You consider there is room for improvement still? By the establishment or revision of rules occasionally, as required by circumstances, there are few departments in which some improvement might not at different times be effected.
26. You consider that the system is pretty good, and only requires to be properly carried out? I do not see that any immediate alteration is required.
27. Do you consider all the officers of your department are sufficiently rewarded for the work they do? I do not think, without reference to the higher offices, that the scale of salaries can be considered too high, looking at the service of the individuals as well as the duty

- W. Elyard, Esq.
20 July, 1868.
- duty they perform. If they had something more, particularly in the lower grades, they would not be overpaid.
28. Not overpaid—do you think they get enough? No; I do not think the scale of salaries at present is what it might be.
29. Do you allude to all the salaries generally, or merely to the salaries under a certain amount? I allude to the salaries under a certain amount; I do not include my own, or the Chief Clerk's, or Mr. Greville's, who, besides the duty he performs, has considerable length of service.
30. Will you state under what amount you consider the salaries not sufficient for the work done? I do not take into account merely the work; some regard should be had to the service of the individuals. I think that below a certain scale, or a certain grade, some advantage should accrue from length of service. With reference to the higher offices, to which certain fixed salaries have been attached, they may not look for increase, but I think that persons below these should be paid not only for the work they do, but also derive some advantage from length of service. Looking at it in that view, I think that all persons under £400 might have something more.
31. Supposing you admit the principle of additional advantage from length of service, can it be resolved the amount of remuneration you must pay in another way. It is another way of remunerating the public servants, paying so much for work and so much for length of service. It all resolves itself into additional remuneration? Yes.
32. Don't you think it would come to the same thing if the officers of the Government were always paid a certain salary, so as to give them something to live on and something to lay by? It might be difficult to fix the different scales for this.
33. Do you infer, by what you state, that every public servant has a kind of claim to additional remuneration for length of service, apart from the quality of the work done? There are clerks on different rates of pay; some have £175 a-year, others higher rates. If a vacancy occurs in the latter, a clerk on the former might not be altogether eligible for the promotion, although a desirable person to retain on the establishment, and by giving some advantage for continued service there would be an inducement for him to remain.
34. Don't you think that a man is induced to remain longer in an office in the hope of preferment—that being on the spot, so that in the event of a vacancy occurring, being better qualified to be selected in preference to a stranger out of doors? Yes, that is one inducement; and, if qualified to undertake the duties of the office that might become vacant, he would, no doubt, have a fair claim to expect the preference.
35. You do not mean to say that any claim should be given to length of service, or seniority, in favor of a person unqualified, or less qualified than another? In saying that some consideration should be given for length of service, I referred to the case of persons who might be very useful in their position, but not so well qualified for promotion, or where there might not be opportunities for early advancement. On a recent occasion a very useful clerk in the department, who might not have been considered eligible for promotion to another grade, and who was on the scale of £175, left, and sought for employment in a mercantile establishment, where he has obtained a larger salary. If he had received £200 a-year instead of £175 he would, probably, have preferred to remain. He is, I understand, receiving more than that now.
36. In this particular case you refer to, is the work which was done by that person less efficiently done now? I am not prepared to say it is less efficiently done. He was a very useful person, and one it would have been desirable to have retained in the department. Frequent changes are inconvenient. A person coming into an establishment is not for a time so useful in the business in which he is employed as one accustomed to it, and acquainted with everything he has to perform.
37. Do you mean after the clerk has been in the public service some time he should have an additional salary given him as being so long in the service, without reference to the work he does? I think that length of service ought to give some advantage.
38. Without regard to capabilities? Provided he is capable of doing what he is engaged for. Below certain rates of salary it seems necessary to afford encouragement in the way I have mentioned. Since the appointment of this Committee I have given some consideration to this subject, and I have come to the conclusion, that, where the salaries are below a certain amount, something should be allowed, beyond the remuneration for the duty, for length of service. Formerly it used to be the practice to give an annual increase, but this has been discontinued.
39. Ought not the salaries of the public officers be sufficient to retain them in the average condition of rank to which they belong? Yes.
40. I mean by the average condition, a certain style. Every man is supposed to be married, and to have a certain number of children. Taking the average, don't you think the salary of every public servant ought to be sufficient to keep him in the average condition of society to which he belongs? I think it ought. This will be found to be the case, I believe, in mercantile business, and in almost every other line of life. Persons generally acquire the means of living in a manner suitable to their position, and public servants should be able to do the same.
41. Do you think the salaries of the lower class of Government officers—I mean as to salary only—do you think their salaries are up to the mark which I have indicated? No, I do not think so. It is difficult to give an opinion as to the proper amount of salaries; but I know that this class of officers do not consider that they are paid on a scale sufficiently high; and applications are frequently made for augmentations of salary.
42. Suppose an application was made for an augmentation of salary, and refused—so long as they retain their situations, is not that sufficient to prove that they consider their salary quite enough? I don't know that that can be considered an evidence of it. A person

employed

employed in a business in which he has been engaged for a certain time of life, and to which he has become accustomed, may be unwilling to change if he can avoid it.

43. Supposing it is a fact that the salaries of the lower classes of clerks are not sufficient, is not that likely to lead to the employment of an inferior class of men in those grades to which I have referred? It leads, no doubt, where vacancies occur, to applications from such persons for these offices; because good clerks will of course seek situations where they would be better paid. Therefore, to have a low scale of salaries for the public servants is to induce, naturally enough, persons less qualified to apply, and deter those better suited. It frequently happens that people become, by practice and attention, more efficient than when they first enter a department, and useful assistants. These persons naturally look for some advantage from this circumstance.

44. The circumstance, in fact, of their being trained in the public service—the public service trains them and pays them for it? No; the public service has the advantage of their training.

45. What advantage does the public derive from their training? The advantage of any improvement.

46. Don't you think that under these circumstances in a merchant's office a premium would be exacted for the training of a clerk who was not efficient at first? Not, I think, of the class alluded to. A person is seldom as useful on first entering on a new occupation or situation as he afterwards becomes.

47. To give them an inferior salary while being trained; that is like exacting a premium—giving them a low salary? Although a person usually becomes more useful after being some time in a situation which affords him the opportunity of improvement, the advantage which he may thus derive is not such as that for which a premium is required.

48. Supposing a public servant is fully up to his work, is not the principle adhered to, that in all cases full ability shall be given to the office, and that his work shall be as efficiently performed as it is in his power to perform it? Yes, of course, that is the case.

49. Suppose he remains in the service a certain number of years, upon what principle would you increase his salary? Perhaps after some stated period; but I am not certain that it should be by annual increase, as was the case formerly.

50. If the public made him useful, ought not the public have some remuneration for the time he was receiving salary, and not up to the duty? It would not follow that he might not be sufficiently qualified for the duty he was engaged to perform, although he might become more useful after some time; such a person, if he remained long in the same position, should have some advantage from his service. The opinion I wish to express is, that without this you may not retain the most desirable persons. I mentioned an instance of a very good clerk who left the department in consequence of his being on so low a scale of salary, which was £175 a year.

51. Upon what principle do you think higher salaries above the average ought to be awarded—for superior skill or superior honesty? I think that several circumstances are to be considered in deciding upon such salaries—the character of the office with respect to duties or labor, its responsibility, or whether of a confidential nature, as well as its position with reference to others. The salaries thus fixed would probably be such as to command the services of competent persons at any time without the inducement of augmentation for length of service. This I understand to be the case in England; where the higher officers, or heads of departments, are usually paid a certain salary without reference to their periods of service. But, in other grades, I believe that the practice of giving an advantage for service by an annual increase is there general.

52. For mere length of service? Yes. They commence at a certain rate in the class, and increase gradually.

53. These annual increases stop at a certain point? Yes. One class may receive £200 a year, and be augmented to £250 or £300, and this would be the salary of the clerk until promoted.

54. I suppose there is a fixed rate at which the increase stops—it does not go on indefinitely? It stops at the maximum of the class.

55. That is remunerating the clerk by two modes, by actual salary and by an annual increase? Yes. If he has the necessary qualifications, and there is an opportunity, perhaps he may be promoted to a higher class, but otherwise an annual increase is granted.

56. Is that system adopted here now? No; it has been discontinued.

57. You approve of it? I had some doubts whether the system of granting an annual increase was desirable. It may be difficult to resist claims made under it, after the prescribed period, although the individuals may not be strictly entitled to the benefit. But, without saying that I think this system ought to be revived, something equivalent to it should, in my opinion, be adopted for the advantage of the lower grades after certain service.

58. Is it not difficult, under such a system, to avoid favoritism—to avoid improper applications, and of persons getting what they are not fairly entitled to? The regulations required a certificate from the head of the department that the individuals were deserving of the increase, the condition attached to it being that of *approved* service. I am not prepared to say that the heads of departments did not give this certificate in some cases in which strictly it should have been withheld; and this is the objection to the system that the increase may be viewed too much as a matter of course.

59. *By the Chairman:* I think it was according to a regulation, that, preliminary to the extra clerks getting on as class clerks of the establishment, that they should undergo an examination? Yes.

60. *By Mr. Forster:* As regards the average class, I mean as required for the public service generally, without reference to those required for particular skill, what are the qualities generally required—is any peculiar talent required for the public service? I think that the

business

W. Elyard,
Esq.
20 July, 1858.

W. Elyard,
Esq.

20 July, 1858.

business of the public departments is of a character requiring some peculiar qualifications, which are sometimes best acquired in the service.

61. Do you think any natural talent is required? The measures or transactions of the Government require, in many cases, a different mode of proceeding for carrying them into effect than those of an individual, who can use more of his own discretion, or of a banking institution, or other establishment confined to a particular business, or subject to one direction. In the public service it is often necessary to consult other departments, or officers, to obtain their authority, concurrence, or opinion, and when action is taken, to give such instructions, or make such communications to the several offices concerned, as may ensure their acting in concert, and making suitable arrangements for the execution of the service. Persons in the public departments to whom such duties are entrusted should possess the qualifications which will enable them to perform them properly.

62. Don't you think any man of common industry and honesty might, up to a certain point, fill any office of the Government? To be a good clerk it is necessary to write a good hand, and to be intelligent.

63. That is a common qualification—writing a good hand? Yes; but many people otherwise well qualified for an office do not write good hands.

64. Do you think any of the persons receiving over £500 a-year are over-paid? I am not prepared to say that that is the case. The value of money is not equal to what it was; although the salaries may appear in some cases large, they are not equivalent to what they were formerly.

65. You made a comparison of the class of officers receiving £600 with those receiving only £200 or £300—can you state what peculiar qualifications are required by the higher officers that are not necessarily possessed by those holding lower offices? Apart from the qualifications for which an officer may have been selected, I think a higher position is usually accompanied by greater responsibility as well as labor.

66. Generally the labor is greater—physical labor? The labor is that which attends a close application to business, mental and otherwise. These officers also fill places of responsibility and confidence, circumstances to be considered when fixing their remuneration.

67. When vacancies occur with reference to offices above £500 a-year, is there any difficulty in filling them up from applicants out of doors? There are always a variety of applications for every office that falls vacant, whether with large or small emoluments. It does not always follow, however, that these applicants are the best suited for it. I may mention that it is not within my province to decide upon applications for appointments.

68. As a general rule, do you think there is much difficulty in getting persons above £500 a-year salary, fully competent persons, when vacancies occur? I am not aware that there is: these vacancies are not of very frequent occurrence.

69. Do you think that those gentlemen remain in the public service with a knowledge of their not being fully remunerated, from a love of the country, or the public good? No; I think it very possible that when gentlemen have been for a long time in a particular line of life, they do not desire to leave it, if they can obtain the means of living without doing so.

70. You think that they prefer remaining even where they are not fully remunerated to leaving it? Yes. It is not always easy, or at any time of life, to make new arrangements, or to embark in new occupations, of which they may have little knowledge; and I think that in many cases they would strive to remain in the service, although not receiving such remuneration as they would wish, or may have hoped to obtain.

71. Is there at present any supervision exercised by the Colonial Secretary over other departments—I mean other departments that are personally under the control of other Ministers? Not the departmental control.

72. Is there any supervision at all? Of course the Colonial Secretary exercises a certain supervision over the whole affairs of the Government.

73. Do you think the Colonial Secretary would have any responsibility arising out of the mistakes of those departments, apart from what he has in his own department? He shares the responsibility which attaches to the Ministry as a body, for the transactions of the Government in the different departments.

74. Do you think the responsibility of the Colonial Secretary is greater than the responsibility of other Ministers—does the weight of responsibility rest on him? As the chief Minister and head of the Government, I should think the responsibility of the Colonial Secretary greater than that of his colleagues.

75. Don't you think that there are many departments placed under the Colonial Secretary which do not properly belong to him under present arrangements—the police for instance? I am not aware that the police are not properly placed under him; should any modification take place in the administrative arrangements, some of the departments placed under the Principal Secretary might be transferred to a new Minister.

76. Don't you think the supervision of the police belongs to the function of a Minister of Justice? I believe in England it is not so. I think the position of the Colonial Secretary corresponds in this respect to that of the Home Secretary. I believe the police are considered attached to the Ministry of the Home Secretary.

77. Are not the affairs of the police more connected with law than any of the other departments placed under the Colonial Secretary? I do not know that it follows; of course questions arise occasionally which have to be referred to the law officers. The police is not a judicial establishment. Under the existing administrative arrangements the magistrates communicate with the law officers on judicial matters.

78. Don't you think, compared with other countries, that we pay a good deal for the expense of government—don't you think that the whole expenses of the Government very extravagant? If you take only the cost of Government, properly so called, separating what in other

other countries appertains more to local establishments, or municipal institutions, and consider the expenses of living in this Colony, I do not think that it is excessive. If you make allowance for this difference, the expenses of Government will not be so great. But I am not prepared with the means of making a comparison with other places.

W. Elyard,
Esq.
20 July, 1858.

79. Are copying presses used in your department? No, we have not used them.
80. Don't you think that copying presses would save labor and expense? I am not aware that they would. I think they are not much suited to the business of the Government. They are used by merchants, and may be convenient for their correspondence; but the paper required for them is not durable, and does not form so complete a record as it is desirable to keep in public offices. Moreover, I do not know that these presses can be made available for making copies of papers such as those to be laid before Parliament. In some of the offices they are used to copy letters, but there seems to be the objection which I have stated, that there is not a durable record.

81. *By the Chairman:* Are you aware what is the opinion of the officers in which it has been attempted to be introduced? Not that I recollect, but I have seen the books kept in some of the offices.

82. *By Mr. Forster:* What is your opinion of the system of competitive examination of candidates for the public service, spoken of as the custom at home? I have seen some of the reports of the Commissioners in England on the subject, but I am doubtful if the time has arrived when the system could be brought generally into operation here with advantage; or if persons such as it would be desirable should compete, would on all occasions be found to do so. I think, however, that the system might be applied, under some regulations, for gradually introducing into the service young persons, with qualifications likely to render them useful in the departments of Government, and eligible, after a certain probation, on small salaries, for periods not less than two or three years, for appointments on the fixed establishment.

83. Did you not state that something of the kind was in use now? Not exactly. When a person was nominated for an appointment as a clerk of the third or junior class, he used to be examined by a Board.

84. Is that the case now? No. The system or regulation under which this was done is not now acted on.

85. That was the system of increase of salary? Yes. Such increases were provided for by the regulations referred to. The examination which they required was to ascertain the fitness of a particular person nominated for an office; but, under the system to which you allude, several persons, I believe, compete for an appointment, and a selection is afterwards made by the Minister or officer on the report he receives. I observe that this is done partially in Victoria, in the case of surveyors.

86. That is where a peculiar education and particular skill is required? Yes.

87. In the ordinary public services the qualifications are not of that peculiar character, and are not the parties selected on partial grounds? I believe there is every desire to select and appoint properly qualified and eligible persons.

88. *By Mr. Piddington:* With reference to the Blue Book, do you think there is any necessity to compile the information contained in the Blue Book in a special form? I think it is a desirable work; it is a return which is furnished to the Secretary of State, and, I believe, very useful to the Home Government.

89. Leaving out of consideration the Secretary of State's interest in the document, and viewing it as a document containing statistical information only, do you think it necessary that all the information contained in the Blue Book should be compiled in a particular form? It includes the returns or statistics which are laid annually before the Assembly, and it would be necessary, at any rate, to prepare these. There is also much information which it may be useful to refer to occasionally. I am not prepared to say that, excepting as a return to be sent to England, or so far as it may be considered of use to the Assembly, that it is necessary to compile this book. It shows the different establishments and salaries from year to year—the alterations that are made—the length of time the officers have been in the departments or in the service, and other particulars, and by continuing the book from year to year these particulars are brought up to the latest date.

90. Do you think the information compiled in the Blue Book is so useful to the public as to justify the expenditure of £700 a-year for two clerks in compiling it? It has been found necessary to appropriate these clerks exclusively to this duty to collect information, to correct and arrange it before it is copied into the book, of which three copies are made. I think I explained this when I was examined before.

91. I don't question the necessity, but do you think the information of such value to the public as to justify the appropriation of two clerks at the aggregate salary of £700 a-year? Under other circumstances you might not require two clerks at the same rate of pay. As I mentioned before, one of the clerks has acquired his present salary after a great length of service. Perhaps, as it includes statistical returns, it could be prepared in the Registry Office, with other business of the same sort, at less cost. The value of the book hitherto has been chiefly as a return for the Home Government, and I believe much importance is attached to its being regularly furnished. I think it very desirable that they should possess some book of this description, affording information without a reference to the Colony.

92. Apart from the convenience which the Blue Book affords to the Imperial Authorities, are you of opinion that all the information embraced in the limits of the Blue Book should be compiled for the benefit of the public within the Colony? I think there is a portion of it which might be omitted.

93. How large a portion: have you any idea—one-third, one-quarter, or one-half? No, I am not prepared to say. I think there is a portion which might be omitted, as well as that it might be otherwise curtailed. I mentioned before the returns relating to buildings and gaols.

- W. Elyard, Esq.
20 July, 1858.
94. You have no idea of how large a portion of the Blue Book is compiled? I have not an estimate of what might be omitted.
95. Are you of opinion that every clerk should receive an annual sum beyond his salary, solely on account of long service? I had some doubt on the subject, for the reason I have mentioned before. But I think they should derive some advantage from continued service.
96. Is there no other way of rewarding them, except in the shape of a gratuity, for long service? Only by promotion when opportunities offer; but it may be a long time before this is the case; and sometimes when vacancies occur, they may not be such as they may be considered so eligible for as others, while in the position they are in their services may, notwithstanding, be valuable.
97. Should the gratuity for long standing bear a proportion to the salary of the individuals? Such used to be the case.
98. Should it, in your opinion? I think it should.
99. Upon what principle do you think promotion from one grade to another ought to proceed? It must, in the first place, depend on a vacancy in the class above.
100. Of course I assume there is a vacancy? If eligible for the vacancy, I should say that the senior would have a fair claim to be considered in filling it up.
101. And if he is regular in attendance to his duties? Yes: he should be punctual in his attendance, attentive to his duties, and his conduct otherwise unexceptionable.
102. Don't you think the head of the department is the best judge of the qualifications of the subordinate to fill the vacancy arising? Yes. I have known instances of clerks who have passed their examination but indifferently prove useful assistants. I think heads of departments best able to judge of the qualifications of those who serve under them.
103. Then you think the system of promotion from one grade would operate to stimulate the exertions of the clerks, and so retain them in the public service? The hope of promotion would no doubt be an inducement to persevere in the line of life on which they had entered.
104. Do you think that the natural hope of promotion a sufficient stimulus, without a gratuity of the kind you alluded to for length of service? I do not think it is of itself, because promotion is uncertain. It depends, in the first place, on a vacancy, and sometimes there are arrangements connected with the service which might interfere with the claims of particular persons.
105. I think in the course of your examination you assumed that some gentlemen in a particular grade of the public service may not be qualified for promotion? Yes. They may be exceedingly well qualified for the duties in which they are then engaged, but would not be so useful for others; for instance, some clerks for preparing certain documents are almost invaluable, whereas they may have little ability for correspondence or general business.
106. Then some clerks in the public service are mere mechanical agents—mere automatons? I can hardly say that; a certain degree of intelligence is necessary. Much of their time no doubt is occupied in copying; but they are made available for other duties of some trust, or which require some intelligence.
107. Do you think it desirable that the public service should be filled by gentlemen devoid of any laudable ambition to qualify themselves for the duties of a higher grade? I think it desirable of course that they should endeavour to improve themselves. This has been found to be more the case with those who have entered the service comparatively young, and it would be so with the class I have before alluded to, if possessing a fair education, writing a good hand, or, what with practice would prove so, and, likely to take an interest in the service. Much depends on whether a person likes the line of life he has entered upon, as, if he does, he is more earnest in pursuing it. I believe that these make the most useful clerks eventually, and improve themselves very much in the public service, and qualify themselves for promotion.
108. Do you think persons should be of this class who are accustomed to a certain business, to a certain class of duties: take lawyers' offices, for instance; there are certain persons who perform the same duties, and never advance above that? They engross or copy, without performing the higher duties of a solicitor's office. I believe these gentlemen are invaluable in their position. So in the public offices there must be people to perform similar duties.
109. Are there any duties in the public offices of so mechanical a nature as to be compared to the duties of an engrossing clerk? There is copying, which is, I believe, similar to engrossing.
110. Engrossing is copying in a particular style? It is done by those who perform it as ordinary copying by others.
111. Do you think it desirable that the public service should be filled up by gentlemen who are not likely to improve themselves, and make themselves useful to the public in other positions? I think it necessary to have some of the class of persons that I have mentioned to perform these duties.
112. Are you of opinion that all the clerks in the Colonial Secretary's Office receiving less than £400 a-year are under paid? I think that, with reference to their duties and the position of the office, that the scale is rather low.
113. You think that they are under paid? Yes. I think a small advance might be made, without its being open to be considered in any way extravagant.
114. How many clerks are there in that office who receive salaries below £400 per annum? There are ten clerks receiving salaries less than £400 per annum. In my remark I had partly in view the services of those at present employed.
115. How many gentlemen employed as clerks, excluding yourself, within the office of the Colonial Secretary? Thirteen.
116. Then ten out of the thirteen are under paid? Yes, I think so; more particularly those receiving £175 a year.
117. Suppose all the offices under £400 per annum were vacant, do you think the Government would be enabled to fill the offices with gentlemen able to fill the offices as well as those

those who are filling the present offices? I conclude it would be easy to get persons from other departments to fill up the vacancies, so far as they gave them promotion.

118. I am not speaking of taking them from other departments, but from the public? I have no doubt there would be candidates for any vacancies that might occur, and that there would be persons willing to take the situations, whatever the salaries. You could only judge of their qualifications afterwards.

W. Elyard,
Esq.

20 July, 1858.

119. I did not ask as to candidates. I ask whether the Government could not fill the places with gentlemen—persons equally qualified as those who now filled the offices? By persons not in the public service?

120. From persons either in or out of the public service? There would be no difficulty, perhaps, in filling their places by persons in the service.

121. And from persons well qualified, wherever they may find them? I do not think they could all be filled from persons who had not been in the service, without inconvenience to the department.

122. Do I understand you to doubt whether persons equally qualified could be engaged? The applications from persons seeking employment in the Government service are not generally from those best qualified for it. Employment in other pursuits is, I believe, in many cases more profitable; besides, persons holding situations in commercial establishments have the opportunity of making a connexion and acquiring a knowledge of mercantile transactions, which enables them to join firms, or to enter into business on their own account. I do not, therefore, know that eligible candidates would always be found.

123. I think you to be of opinion that if ten offices were vacant that the Government could not fill them up at the same salaries and equal qualifications? I do not think that they could be filled by persons who, for a time, would be so eligible as those who are accustomed to the duties. Supposing there were individuals disengaged, otherwise equally eligible, I am not certain that they would desire to look to the service for permanent employment, or that they would do so without seeking to obtain higher salaries; and, so far as my observation goes, there does not seem to be a desire at present, on the part of qualified persons engaged in other employments to quit them for the public service.

124. There would be some rate of salary at which you could assume the Government could fill up these situations from the public at large—such offices as I now allude to? I do not think that a scale with less than £400 as the maximum would generally be sufficient.

125. Do you think an increase of twenty-five, fifty, or a hundred per cent. on the existing salaries would enable the Government to secure gentlemen competent to fill those situations? The salaries being of different amounts the same scale of increase would not perhaps be suitable for all. It may be difficult to say what rates would effect the object you contemplate, as this could only be known by the result. I think there should be some advantage besides for length of service.

126. These incidental advantages arrive under fixed salaries the same? I understood your question to refer to some fixed salary without advantage from service.

127. In connection with the hopes of holding other offices by promotion? The rates fixed would then be all they were to expect, unless there were higher offices, which, probably, they would not look forward to.

128. I don't see why not? The heads of departments. If qualified for the charge of a department this might be one inducement; although this has not hitherto, with a few exceptions, been the case, and the prospect would be distant.

129. You are not prepared to say positively what amount you would fix? No. I have some hesitation in suggesting a scale, and particularly what should be the lowest rate or commencement. The present rate of £150 or £175 is, from all I can learn, insufficient to maintain them in a proper way without difficulty.

130. If the Government could fill the situations at the present rate of salaries, might not that fact afford a proof that the salaries are sufficient? I do not think this would be a sufficient proof that they are what they should be if persons remain in the situations, or have been induced by different circumstances to continue in them.

131. Are you acquainted with many cases where the qualifications of the gentlemen engaged, united with seniority of service, have not had their weight with the Government in making their appointments? It is possible there may have been cases where it may have been considered that other arrangements might have been made, but I do not recollect any particular instance. I have no doubt it is the desire of the Government to make the best arrangements they can for the public service.

132. If there were any cases occurring where the Government have not regarded length of service they would come within your recollection and knowledge, would they not? I do not recollect any case at the moment. Of course, as there are generally several candidates, or expectants, some must be disappointed when an office is filled up. Many may consider that they have been passed over, and that they have a cause of grievance; that is, no doubt, sometimes the case: and there may also have been circumstances connected with the arrangements of the Government, or of different offices, which may have interfered with claims which might otherwise have been attended to.

133. I think you have been in the service upwards of thirty years? Upwards of thirty-six years.

134. Then, if you find it impossible to recollect an instance of the kind, is it not fair to assume the patronage of the department has been fairly exercised? Generally, I believe it has. Speaking of appointments generally—there may be several persons equally eligible, and any of these may consider that they are not dealt fairly with if not preferred; but, I presume, it is open to a Minister to select, from equally eligible candidates, such as he may prefer or deem best qualified, from personal knowledge or otherwise, or such as from some arrangements for the public service may be most desirable. So far as it comes within my knowledge, there is, I think, every disposition to consider the fair claims of individuals, and the interests of the service.

W. Elyard, Esq.
20 July, 1868. 135. Have you any reason to doubt that the Colonial Secretary exercises an efficient ministerial control over the several departments contained in the report that come within his department? Over the departments assigned to him in the notice of administrative arrangements?

136. The same ministerial control as other Ministers of departments? Yes: these departments make their reports to the Colonial Secretary, under whose authority they act in many matters, and whose sanction to different things it is necessary for them to obtain. In any revision which may be made of the administrative arrangements, some modification of the present distribution might be desirable. It will be observed by the notice referred to, as well as by the Estimates, that the establishments placed under the Principal Secretary are more numerous than those under any other Minister. Although in other branches of the service the business is very extensive, as in the Department of Lands and Public Works, there are more establishments and officers under the Principal Secretary, and his attention, of course, is more divided. There is also a large country correspondence with the Benches.

137. Looking at the departments of the Principal Secretary, do you think it necessary to appoint another Minister on account of the multifarious duties of the department, leaving out of consideration all other matters? I think it has been suggested that a Minister of Public Instruction would be desirable. If such a Minister should at any time be appointed, matters relating to educational establishments, ecclesiastical affairs, &c., might, perhaps, form a portion of his charge.

138. Are you of opinion that a Minister with the title of Minister of Public Instruction should be appointed? Yes; I think it would be a desirable appointment, as there are matters of sufficient importance to engage the attention of such a Minister, who, as a Member of the Cabinet, having, perhaps, more leisure than others, might be able to afford valuable assistance in the discussion and decision of many things of consequence.

139. You would have a new Minister, who you would call a Minister of Public Instruction? Yes.

140. Would you have any other Minister to be called a Minister of Justice, to have authority over the police, gaols, and law? I am not prepared to say I think this required. I believe, however, that it is by many considered that it would be a desirable arrangement.

141. Do you consider it desirable? I cannot say that in my opinion it is so. I believe the duties which would probably be assigned to him might properly be placed under the Minister corresponding with the Home Secretary at home, if relieved of some other duties.

142. As I understand you, you are decidedly of opinion that a Minister of Instruction should be created, but not a Minister of Justice? Yes, that is my opinion. A Minister of Justice may possibly be desirable; but, so far as I am able to judge, it does not appear necessary, although I think the appointment of a Minister of Public Instruction would be a very useful one, and one of considerable value to a Ministry in their general business.

143. Do you think it desirable to divide the duties of the Secretary for Lands and Works? I know that when formerly the business connected with Public Works was performed in a branch of the Colonial Secretary's Office it was very extensive, and it is not likely that it will be less as the Colony advances, and railways are extended. I therefore think that the appointment of a Commissioner or a Minister of Public Works, to be charged with these duties, and the Parliamentary and other business connected with them, would be of advantage to the public.

144. I gather from your remarks that you are of opinion that two Responsible Ministers are required? Yes; I think it would be an improvement on the present arrangement.

145. You are not of opinion that a Minister of Justice is desirable? I am not prepared to say I think one necessary at present.

146. *By the Chairman:* Have you ever considered the question of making a deduction from the salaries of officers of the Government, in the same way as is done by the Police and Ministerial Departments, in order to provide a fund, which might be called a Superannuation Fund, to provide for officers of the Government some retiring allowance after they retire at a certain age? I believe that the question has been several times under consideration, without any conclusion having been arrived at. One difficulty is, perhaps, that the service is not at present sufficiently large to admit of an arrangement of this description without requiring too great a deduction from each individual. Moreover, those already in the service have, under existing regulations, and according to the practice hitherto followed, a claim to a certain amount as an allowance or superannuation on the termination of their employment. I do not know in what way any new regulation should be applied to their cases. The arrangement should, perhaps, be prospective or limited in respect to deductions from salary to future appointments.

147. If there were such a fund, might it not tend to the efficiency of the public service, and induce officers to retire some years sooner than they would otherwise be inclined to do in the absence of a retiring allowance? Yes, I think so decidedly, supposing an adequate allowance to be given.

148. You think the service is too limited at present to justify your supposing that a deduction, not felt oppressive, could be made from the small number of officers to create a fund that could at all meet the claims which would be necessary, and must be satisfied by the service? I think so, without some other aid; and I have heard the same opinion expressed by others.

149. The principle works well in the police, does it not? Yes. I believe the Police Superannuation Fund is in a flourishing condition; but they are a large body. It is only after a long service that they become entitled to the benefit of the fund; and many changes take place without their having acquired any claim on it, notwithstanding their contributions.

150. They do not claim as soon as they are entitled to it; they go on in service, and afterwards become entitled to it? They cannot claim unless under a medical certificate, or in case of injury received in the discharge of their duties, until they arrive at a certain age, and

and have served for some years. The changes I referred to as taking place without their having any claim to an allowance are those arising from misconduct or resignation.

151. *By Mr. Piddington*: Are you acquainted with the highest rate of superannuation allowed to a police officer—I believe it is fixed by law? Yes.

152. A small sum? No; after a long service it would amount to a considerable sum—equal to the full salary or pay of the police officer.

W. Elyard,
Esq.

20 July, 1858.

William Macpherson, Esq., Clerk of the Legislative Council, called in and examined:—

1. *By the Chairman*: You are now Clerk of the Legislative Council? Yes.

2. How long have you been in the service of this Colony? Twenty-eight years on the 11th of October last.

3. What offices have you filled under the Government of New South Wales? I was first Collector of Internal Revenue for seven years; then Clerk of both Executive and Legislative Councils, for seven years; out of which time I was for eighteen months Acting Registrar of the Supreme Court.

4. Acting for whom? Mr. Manning; not acting for him, but appointed; which appointment was not, however, confirmed by the Queen. I was appointed to the office upon Mr. Manning's removal.

5. And before somebody was sent from England to fill the office? Yes. The duties were divided after I left that office, because Mr. Manning complained that he had too much work. When I was appointed, I found he was mistaken: I brought up all the arrears. However, the duties were divided: Mr. Gregory, the Prothonotary, got part of them; the Master of the Supreme Court, Mr. Milford, got another part; and Mr. Carter, the Registrar General, got another part; his portion being made a separate department of: so that the various duties, all of which I found myself capable of performing, were divided among three officers.

6. Without any other duties being attached to them? The Master of the Supreme Court had his own previous duties, and the charge of Intestate Estates was joined to them. The Prothonotary had his duty as Registrar of the Supreme Court, the particulars of which, as afterwards arranged, I am not aware of. The Registrar General had no other duties attached but those of the registration of Deeds, Births, Marriages, Deaths, &c.

7. Since 1843? From 1st July, 1843, I was Clerk of the former Legislative Council until the establishment of the new Parliament, and since that time, Clerk of the present Legislative Council.

8. You have probably had an opportunity of reading the evidence of the President of the Legislative Council—Sir William Burton? I have had no opportunity; I was not aware it was printed.

9. What is your opinion of the present state of the establishment of which you are the head—is it sufficiently numerous, or is it more than sufficient for the duties devolving on it? I think it sufficiently numerous, but not more than sufficient for the duties devolving on it; that is during the Session, of course; but in the recess there is not a great deal to do, unless for about a month before the commencement of a Session, and from one to two months after it, during which there is as much to do as in Session, with the exception of the night-work.

10. Do you find the duties devolving on these gentlemen sufficient to occupy the whole of their time? Quite sufficient.

11. And during the recess have they much leisure? No doubt they have, excepting as before mentioned.

12. Then, during the recess they are not very much occupied? No, certainly not, excepting as already mentioned.

13. Do you think that the duties are likely to be lighter after the Legislature is established for some time, or do you think it is likely always to continue? I think it likely always to continue. The existence of the Session must cause the addition of a great deal of work, and when the Session terminates, then there must be a great deal less, particularly as regards night work.

14. Do you find there is more leisure, in comparison, for the clerks in the present Legislative Council than there was for the officers of the late Legislative Council in the recess? No—much the same.

15. Do you consider that during the recess the officers of the Legislative Assembly have a considerable amount of leisure? I cannot speak of them, they not being in any way under my immediate observation.

16. You were for many years Clerk of the Legislative Assembly? No; I was Clerk of the late Legislative Council.

17. What was your experience there? I say the leisure there was much the same as it is here, but with a larger body.

18. Do you consider your clerks work as much as the clerks of the late Legislative Council did when you were Clerk? Yes—more.

19. You think the work is harder? Yes; because the hours are later than they were in the late Council, generally speaking, although occasionally the sittings of the former Council were very late.

20. You don't meet until four o'clock, or half-past? Four o'clock very punctually; five or ten minutes past, or a quarter past, generally.

21. Four o'clock is the hour, with half an hour's grace? Yes, but we generally meet by a quarter past four o'clock.

22. What is the average sitting? Until 9 to 10 o'clock.

23. The average? 9 o'clock in the early part of the Session, and 10 o'clock in the later part, or even 11 o'clock.

William
Macpherson,
Esq.
20 July, 1858.

24. There are some weeks they do not meet until Wednesday? In the early part of the Session they sit three days, in the latter part of it four.
25. Do they meet to-day? No. The number of days on which the Council meets depends much on the business sent from the Legislative Assembly; when the business becomes pressing, then the Council meets four days in the week.
26. Have you any suggestions to make to the Committee with a view of making your department more efficient, and more economical to the country? I have not any.
27. You don't consider it possible to reduce it? No, certainly not.
28. Now, with reference to yourself, do you find your own duties are so onerous as they were in the former Council? Much heavier: I can easily explain how.
29. If you please? In the former Council I had two Clerks Assistant—Mr. O'Connor and Mr. Tompson: I only read such documents as were required to be read. Mr. O'Connor took the Minutes when the Speaker was in the Chair, and Mr. Tompson took the Minutes when the Speaker was out of the Chair. Now, I have only one Clerk Assistant. I take the Minutes when the President is in the Chair, and the Clerk Assistant takes the Minutes when the President is out of the Chair. I have now the Table duties to perform, which Mr. O'Connor performed in the other House. I could then leave as soon as the House adjourned; in the present House I have always to sit for from one to two hours, or more, after the House rises.
30. Preparing the Minutes of Proceedings for the printer? Yes. If a debate begins early in the evening, and there is much business to follow, on the Paper, it takes longer to prepare the Minutes after the House adjourns. If the House gets through the business in the beginning of the evening, and the debate comes on at the end, I have time to write up the Minutes, and I am not detained so long after the Council is over.
31. You do it yourself? With the assistance of Mr. Eldershaw, the Clerk Assistant, who takes down the Notices of Motion and puts them in order: I do the most part of the proceedings of the day.
32. Do you find yourself, even at your advanced age, equal to it? Without any difficulty: I never feel any the worse from my work.
33. You gave to the President a memorandum of your duties, did you not? Yes.
34. And, in addition to that, is there anything you desire to state to the Committee? I am not aware of anything further I have to say.

WEDNESDAY, 28 JULY, 1858.

Present:—

MR. COWPER,
MR. FORSTER,

MR. PARKES,
MR. PIDDINGTON.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

R. O'Connor,
Esq.
28 July, 1858.

Richard O'Connor, Esq., Clerk of the Legislative Assembly, called in and examined:—

1. *By the Chairman:* You have probably had an opportunity of reading the evidence of Sir Daniel Cooper, the Speaker, given before this Committee? I have.
2. Perhaps the readiest way of getting any suggestions from you would be to ask you whether, in reading that evidence, there were any points that struck you as matters on which you desire to give any explanation to the Committee? In looking over that evidence I considered it to refer only generally to the department; Sir Daniel avoided, in fact, entering into details. The Speaker could not be supposed to be acquainted with details. If the Committee desire information as to what the work of the establishment is, I fancy I only can give that.
3. With reference to the strength of your department, the number of clerks employed there—are they sufficient, or do you feel that a smaller number would be adequate to the efficient performance of the duties? Taking the general run of business, no doubt my present staff is sufficient for present demands, though, even as matters stand now, there are times in which we are very much pressed indeed; but, looking to what will come of the Electoral Bill, that is to the increase in the number of Members it will bring about, there can be no question that it will put me to the hardest possible shift to transact the business of the new Assembly with my present staff. Nevertheless, I will endeavour to do it, and will not increase the establishment, unless the House itself, from experience of the necessity, shall demand the increase.
4. Do you not think that after the important question of representation has been settled, we may have shorter sittings, and not such a recurrence of two Sessions in the year, or of adjournments, as has taken place during the last two years on the early introduction of Responsible Government? I should hope that we may not in future so often have two Sessions in one year; because, in point of fact, their frequent recurrence of late years has allowed us no breathing time. The gentlemen in my department have not had any leave of absence, except one week, for the last two Sessions; and I myself have had no cessation from labor for four consecutive Sessions, for there are always between the close of one and the opening of another Session very many important matters to wind up and prepare; and these preparations are made or directed by me.
5. What portion of time, since January, 1857, has the House sat? Members constantly express a desire that the Sessions should be of shorter duration, yet, somehow or other, we find their duration rather on the increase than otherwise; the duration of a Session is not within the control of Members apparently. I have here a statement; shewing the duration, and a few particulars of the business of the respective Sessions of the former Legislative Council, from 1843 to 1851; and from 1852, when the Constitution immediately preceding the present one came into operation, to 1855 inclusive; and of the Assembly, during the Session

Session of 1856-7. (*The witness handed in the same. Vide Appendix A 1, and A 2.*) R. O'Connor, Esq.
 I have also here a statement, extracted from the "Home News for Australia," of 16th November, 1857, of the corresponding business of the House of Commons during the year 1857, and perhaps a comparison with it of the statement I have just handed in, will give the Committee a better notion of the actual amount of the business of the Assembly than they could otherwise obtain. I beg to hand it in. (*The witness handed in the same. Vide Appendix B 1, and B 2.*) My computation is, that we transact about one-half as much public business as the House of Commons; and the Committee know what proportion our staff bears to theirs. It appears from this extract that the House of Commons, in the Session of 1857, sat 116 days, occupying 903½ hours in all, of which 91½ were after midnight. Now, in the Session of 1856-7 the Assembly sat 107 days, occupying 773 hours 47 minutes, of which 31½ hours were after midnight. The daily sittings of the House of Commons averaged 7 hours 47 minutes in length, while ours averaged 7 hours 14 minutes. The number of entries in their Votes and Proceedings was 7,963: the number of entries in our Votes was 5,191. Any Member of the Committee going into this will see that my calculation is within the mark, if the private business (for which there is a separate staff) and the business got up by command, without the House, be excluded from the computation.

28 July, 1858.

6. By Mr. Forster: Can you state the number of the staff of the House of Commons? Under the Clerk alone they have about 42. Then there is the Speaker's staff, the Private Bills Office staff, and others; in all, probably from sixty to seventy, exclusive of messengers, &c.

7. By Mr. Piddington: We must sit a much longer time during the Session; because the House of Commons sits on five days of the week, and we sit only on four? It would seem so.

8. By the Chairman: Do they sit on Monday or Saturday? On Monday. After the House breaks up, it takes me sometimes two hours, sometimes one hour, sometimes half an hour, to prepare the Votes and Proceedings for the printer; and I am sometimes only able to get three or four hours sleep in my office, for many consecutive nights, before I begin business again at ten o'clock in the morning. Fortunately, I have a good constitution, and can stand it. Every one of the clerks under me also has to remain until the House rises, and he is discharged by me from further attendance. Some of them have occasionally to remain after the House adjourns, to bring up business.

9. We sat nearly ten months last year? Yes.

10. You have stated the general business of the House: can you give anything like a similar statement with regard to Select Committees—have you prepared any information in reference to them? I have not prepared a table of the business of Select Committees; but I may state, from the current registers kept by the Clerk of Select Committees, that the number of meetings of Committees called in Session 1856-7 was about 240, which, taking the total number of days on which the Committees sat at 80, would give an average of 3 meetings per diem. The number of meetings in 1855, when there were 47 Committees appointed, was 115. Up to the present time, in this Session, 30 Committees have been appointed; and the number of meetings has been in greater proportion than during any previous Session, and the amount of evidence much larger. I beg to hand in the tabular statement, prepared in conformity with the request of the Committee, giving a broad sheet view of the duties and salaries of the different officers of my department, with various other particulars. The statement of duties it contains is necessarily so very concise, that I fear gentlemen going over it could not form from it any fair estimate of the amount of thought, labor, and skill bestowed upon them. (*The witness handed in the same. Vide extract therefrom, Appendix C.*)

11. This is similar to the return which has been called for from all departments? Yes.

12. It appears you have been twenty-two years in the service? My twenty-third year of service will terminate with the present year.

13. And during the whole of that time you have been in the office of the Legislature? Yes. I had previously served three years in a leading mercantile house, and six years in a very extensive public company in Van Diemen's Land. I came to the department a thorough man of business, and it was well I did so, for I have had to meet and provide for every change, and there have been many changes since I entered it. Every one of the forms of any kind of business you have owes its origination to me, and our forms are followed in all the Colonies of Australasia. I mention these particulars in no spirit of personal vanity, but solely with the desire that the Committee should have a true apprehension of some of the qualifications which are required for the office of Clerk, independently of a fair knowledge of the law and practice of Parliament, without which, in the Clerk, upon any change of Speaker the House would find itself in many contradictions and difficulties until the new Speaker himself became acquainted with these things.

14. You do not consider it possible to reduce the staff in numbers? No; I should not consider it possible, with advantage to the public, even now, because there would be frequent occasions, if we attempted it, in which the business of the country would be at a stand, or, if got through, it would necessarily be in such a hurried way that there would not be that guarantee for accuracy that we have at present. But, with the increased number of Members we shall have under the new Electoral Law, there is no doubt whatever that the increase of business will afford the fullest occupation, night and day, to every one in the department. I should hope the business will not increase in exact proportion to the increase in the number of our Members; but, judging from the past, I cannot but expect a very considerable increase.

15. Do you know the expense of the Parliamentary Establishments of the neighbouring Colonies? I have a statement here comparing the expense of our establishment with that of the Colony of Victoria only. It would seem they exceed us in expense by about £3,270. I beg to hand in this comparative statement. (*The witness handed in the same. Vide Appendix D.*)

16. Could you prepare the same kind of comparative statement with reference to South Australia

- R. O'Connor, Esq.
28 July, 1858.
- Australia and Tasmania? I will do so. (*Vide Appendix E*.) In regard to the expense of printing in our department, I think a large amount might be saved to the public by some better arrangement. A considerable saving has been effected already, in the large item of Bills, by a method arranged by the Government Printer and myself. Formerly they would occasionally have to be re-printed many times. Now, by keeping the type standing, and by the use of rules and black letter, to shew amendments, Bills pass to their final stage with only the cost of marking those amendments, added to the cost of setting them up in the first instance. The arrangement I would suggest may be stated as follows:—Provision might be made in the Standing Orders that all Petitions should be printed as a matter of course, leaving it in the option of Members to make the motion, and all other papers might go to a Standing Committee, who should look over them, and direct only such to be printed as would be of public importance, and even in regard to some of these to have abstracts made, and printed, instead of the whole, where practicable. Again: Members desiring to move for Papers might consult with some officer, whose duty it should be to attend to these matters; and who could prepare a form in which the motion ought to be made, which would save in the first instance—before the Papers come to the House—a vast deal of time, labor, and expense, which otherwise must be expended in their preparation in the various public departments bound to supply them. By this system of abstracting before and after motions for Papers, and of selection by the Printing Committee, there would be three important things gained:—1st. A very considerable saving of expense in preparing and copying in the departments. 2nd. A greater saving still in printing; and, 3rd. When printed, the Papers would be in a more concise and business-like form, and would be better understood by, and more useful to, the general public.
17. The information would be condensed, and more easily accessible? Just so.
18. Do you mean that the Members should arrange with the officer in charge of the printing, without the intervention of the Committee, or would you suggest the appointment of a Printing Committee? The arrangement between the Members and the officer would be before the action of the Committee would be required, that is, before the motion for the papers. The action of the Committee would be after papers have been laid upon the Table. Many descriptions of papers could not be reduced to abstract forms, and these, when laid upon the Table, would go to the Printing Committee, who would make their own selection; but of course it would still be in the power of the Member on whose motion any particular paper may have been laid upon the Table, to move that it be printed, notwithstanding that the Committee might not recommend it to be printed. In fact, neither the House nor the Member would yield up absolutely any right whatsoever by the adoption of this system, although the House and the Members would probably acquiesce, generally, because a large portion of these papers are required for an occasion of the moment, and when that is served they are of no further use. In the House of Commons, the Librarian, or some one acting for him, makes these abstracts of papers to be moved for. This system would be a saving throughout. It would save expense in copying in the public departments that have to render these returns; and it would save expense in the printing. The printing of the simplest paper costs a great deal, taking into account the number of copies that have to be struck off.
19. Is there not rather a larger number of copies struck off than is necessary? We have 500 copies of each paper struck off, and I do not see that we could, with advantage to the public, do with less, because we are constantly called upon to collate and furnish sets; and if we had not the papers we should have to get them re-printed, which would be very expensive, while the cost of pulling a few additional copies, in the first instance, is but a trifling addition to the simple cost of the paper.
20. What do you do with the 500 copies? I beg to hand in a memorandum and return, which will explain how these printed papers, and the Bills (of which we have 200 copies) are distributed. (*The witness handed in the same. Vide Appendix F.*) Large numbers of papers are printed before they come to the House at all, and are laid upon the Table in a printed form.
21. Government papers? Yes. This, at home, has been the subject of much discussion between the Government and the House. The House seems to consider that if those documents were laid upon the Table in manuscript, and the House allowed to exercise its own judgment in the matter of printing, a great deal of expense might be saved. It does not tell with so much force here, however, because at home the appendices to these reports are enormous; whilst here they are not very extensive, although, sometimes sufficiently expensive.
22. Are the 500 copies of papers received by the Assembly exclusive of those received by the Legislative Council? Yes. An arrangement with the Council has been recently come to, by which the number of papers required has been reduced. The Legislative Council get now from the Government Printer only 60 copies of our papers, exclusive of our 500, and 12 copies of our Bills, exclusive of our 200, and we get the same numbers of theirs.
23. Has the number been reduced since the correspondence with Sir William Burton? It has. But they reduced their number below what they actually required, and finding that I had a few to spare, they came to me to supplement their insufficient supply; but I told them if they wanted to economise, they must do it at the expense of their own department, and reduced our numbers by those I found we had in excess of actual demand for distribution to Members only.
24. Then that accumulation of papers in the office of the Legislative Council, which Sir William Burton admitted was taking place, has been put a stop to? Yes; to the extent of 40 copies of each paper.
25. In sending round papers to the public offices, who regulates the number required by each Department; for instance, when I came to the Colonial Secretary's Office I found that a number of these papers were sent there to different rooms. Who gives the order for these? Properly

Properly these papers ought not to be supplied except on the requisition of the head of the department; but the practice was, that when a particular branch was established, and the head of that branch said they wanted the papers for general reference, or for a particular purpose, we took it for granted that they did want them, and supplied them accordingly. Some few copies have been struck off since, and I believe now that you really have as few as you need.

R. O'Connor,
Esq.

23 July, 1858.

26. How do you get the book-binding done now? Through an establishment in connection with the present Printing Office.

27. Why, then, is the item put with the Estimate for your department this year—book-binding £125? That estimate was framed before the binding establishment was formed, and the item was placed there as a charge which properly fell on this department. These estimates have been unusually long under consideration; they have in fact been submitted to two consecutive Parliaments, and I imagine it has been an oversight on the part of those charged with bringing them before Parliament not to have transferred this item to the book-binding establishment when it was formed. It covers the expense of binding the books we send to Members.

28. It is your estimate? The amount I dare say is my estimate; but I am not responsible for retaining it where it is, with the knowledge of a book-binding establishment in existence at the time. The binding is very well done now, better than formerly by private establishments, so far as I have had an opportunity of judging.

29. Have you any further observations to make with regard to the occupation of the officers of the House during recess, for instance? I will read to the Committee some of those things which I have put down here as occupying the officers in recess. It takes from six weeks to two months to bring up the arrears of printing. Then there is the Index to the Votes and Proceedings to prepare; and that cannot be completed until the printing is complete, the papers classified, and the volumes struck. Nor can the Table of Contents be completed until all the papers are printed, because they are arranged under subjects, and to each paper I put the page to guide in arranging for binding, and to refer to the papers readily when bound. Great care is taken that the subjects shall run one into the other, as naturally as we can make them, to facilitate reference to them. After that, we have to collate and arrange for the binder 200 sets, of three volumes each, according to a pattern set previously collated and paged. Then the paging of the Index goes on with its several checks. Three hundred and ninety of these volumes are then sent to the binder, the remaining seventy sets, or 210 volumes, are kept on hand to meet occasional demands. When these volumes come back from the binder, we have to subject them to examination before they are sent to have the pages stamped upon them, for in some, notwithstanding all the care that was taken, we found occasionally, that the indices did not point correctly to the pages, in consequence of two pages of the same matter being stitched together in some instances, or of half a sheet or a sheet being dropped in others. When these volumes come back from the paging machine they are again examined, and then distributed. Concurrently with these works, we have to prepare Alphabetical Registers of Addresses, and of Orders for Papers—Alphabetical Registers of Bills in all their stages, originated in the Assembly, or coming to the Assembly from the Legislative Council. General Summaries of Petitions received during the Session—Lists of Committees appointed during the Session—Statements of the Business of these Committees—Statements of the Business of the House during the Session—to compile which, the whole of the Votes have to be gone over. The Financial Abstracts and Notes Explanatory, shewing in gross, and in detail, the proceedings in finance of the Committees of Supply and Ways and Means. Fifty sets of the financial papers to collate, page, index, and distribute. Then we have to put away, and index, all the manuscript and printed papers of the Session, and to re-arrange presses, and re-adjust our indices to them, as accumulations put us to shifts for room. Then we have to correspond with the Government departments, and with private parties; and I am in constant personal communication with officers of Government, and with private parties upon a variety of Parliamentary subjects—our accounts also occupy time; and then, by the time these arrears are brought up, we have to commence our preparations for the next ensuing Session. Every person is busily employed in preparing for his own particular duties; and I myself am called upon not only to prepare for my own department but also to assist, in many ways, the heads of other departments who have business to be brought before Parliament. Before the meeting of the first Parliament, I had to go through the Standing Orders of the American Senate and Congress, and of the various States of America, as well as the Standing Orders of the House of Commons, to frame Standing Orders for our own Assembly. I had also to draft a programme of the proceedings in opening our Parliament. I had also to prepare Standing Orders for this present Parliament, and shall have to prepare Standing Orders for the next; but there are many other matters in demand from time to time, and I must be ever ready to undertake them, and so in his position with each officer in my department. Of course there are many minor matters to attend to, which, while they occupy time, cannot be prominently set out; but the Sessions have of late followed each other so rapidly, that, in point of fact, one Session has considerably advanced before the work of the previous Session has been fairly out of my hands, and hence the officers of the department have of late been unable to obtain the leave of absence common in other departments, whilst I myself have had no relaxation for four consecutive Sessions.

30. With reference to the subordinate clerks, do you find ample occupation for them during the recess? Yes; they are employed as I have mentioned, and so fully employed, that in the last recess, notwithstanding they were entitled, by the rule of the service, to a month's leave of absence, I could not give any of them more than a week, and to some of them I could only give five days. I beg to hand in the statement of work to be done in recess, from which I have read to the Committee. (*The witness handed in the same. Vide Appendix G.*)

R. O'Connor, Esq.
28 July, 1858. 31. Have you ever made any estimate as to the comparative length of the sittings, or of the amount of work done, as between the Representative Assembly, and the Legislative Council? I have a statement with me, shewing the hours of sitting of the Legislative Council, during the Session 1856-7, which I beg to hand in. (*The witness handed in the same. Vide Appendix H.*) The sittings seem to be nearly three times as long, on an average, in the Assembly as in the Council. Their daily average is two hours forty-six minutes, ours is seven hours fourteen minutes.

32. Have you ever made any calculation as to the strength of the two establishments, as compared with the work? No, I have not. I certainly have not three times their strength.

33. They have five clerks, including the Clerk of the Council, and your strength is eight, including yourself? Yes. If you look at the business done, and the hours of sitting, you will find that the number I have is not so great in proportion to our increased hours of sitting, and increased amount of work, including, as it does, a very heavy description of work with which they have nothing to do: I mean the work of the Committees of Supply and Ways and Means—the compilation of the Money Resolutions and Appropriation Bill, and the Financial Statements at the end of the Session—to say nothing of the very much greater amount of Select Committee business in our House.

34. Their sittings are not often on four days in the week? No, generally three. Lately they have very seldom sat four times a week.

35. *By Mr. Forster:* Do you infer that the business of the Houses will be increased if an additional number of Members be appointed? Yes.

36. On what grounds do you draw that inference? In the first place, I have the experience of the past; when the number of Members was increased from 36 to 54, the business increased very much, as the appendices I have handed in will shew.

37. Does it follow that the increase of business was caused by the additional number of Members—may it not have been owing to the different mode of conducting the business under the new system of Government, or to our being merely in a transition state? Adjournments in consequence of ministerial changes have, doubtless, protracted the Sessions, and retarded the work, by the lapse of one set of measures, and the introduction of another, which has occasioned an increase of labor to the extent of the stages to which the lapsed measures had attained; but I do not think the new system of Government has had much to do with the increase of business in the Assembly, because the work has been put before the House pretty much in the same fashion as formerly; whilst by an increased number of Members, the wants of the people have become more generally known, and the measures to supply them have been more earnestly pressed by their Representatives.

38. Is not that, to state in other words, what I wish to infer, that the increase of business is owing to the system of Responsible Government, and not to the additional number of Members? If you take the Assembly as a branch of the Government, then, no doubt, to some extent, the change in the form of Government will affect the business, inasmuch as the Executive will feel under more pressure from Members, and Members will be more under pressure from constituencies than heretofore under the old system.

39. Do you not think it possible that the increase of business has been caused by the circumstance that we have not yet properly settled down, as it were, and that we are only shaping out the direction which public business is to assume in time? My own impression is, that we have not yet settled down, and that there will be a much larger amount of business when we really do settle down.

40. Does not settling down imply condensation? What I should understand by settling down, as applied to this matter, would be that this struggle, whatever it has been, will have ended in the dominance of some particular parties for a considerable time, and that then the business which has to be done will really commence.

41. What do you mean by parties—political parties? Political parties. The Government of the country will be in the hands of a set of Ministers for a period much longer than any previous term of office under Responsible Government.

42. Does not that imply that as we settle down we shall be able to reduce the amount of business? I cannot understand it in that way; I think, on the contrary, that as these causes of contention subside, the Members and the country will look about to see what are their wants, and these will be pressed on the attention of Members by their constituents, and again by Members on the Executive.

43. Do you not think the increase of business may have been owing to the changes of which you speak, and which you say will not occur so frequently for the future? I do not think there has been any amount of business actually transacted compared with that which will be done when matters settle down.

44. Real business? Real business.

45. Then what we have been doing hitherto has not been real business? Looking to the measures lapsed and revived, it is my own opinion that there has been comparatively little real and substantial business done for the time consumed in its transaction.

46. You think the increase of business in future will consist in substitution of real, for imaginary business? I do not look upon what has hitherto been done as imaginary business, but if you bear in mind the length of time that has been occupied in the consideration of certain measures, and the amount of labor which they have involved, and then consider the reason why they have been thrown over, instead of being now the law of the land, I think you will see what I mean to convey in reference to our past business.

47. I understand you to mean that we are passing through a great change, which has involved a number of circumstances which will not occur again, and that we may in time settle down, and be able to transact business in a more off hand way than hitherto? Yes, and to a considerably greater extent.

48. But I should imagine that would lead to the contrary result from what you indicate. Should you not say, that when we get rid of the difficulties the change imposes upon us, we shall then be able to condense and simplify our business? You will be able to conduct your business

business more uninterruptedly, and you will be able to get through it more rapidly; but at the same time the circumstances that enable you to do this, will also increase the business upon you considerably, because you will have leisure, and you will have inducements to look about you to discover the capabilities of the country, and what is required to draw them out. There will be pressure from without no doubt, and Parliament and the Government will have to look into these things, and you will find numerous measures to introduce which you have not leisure for now.

R. O'Connor,
Esq.
23 July, 1858.

49. You infer, whatever the result may be as regards actual business, that a larger amount of work will be imposed on your department? I cannot infer any thing else, either from the past or the future, as it looms to my mind.

50. As regards the attendance of the clerks—is it necessary that all the clerks should attend at all times, or could not the business they are attending on be done by a portion of them? No: any one well acquainted with it will see that the business of this department is more in the nature of a profession. There is much to learn in every branch of it; chance or occasional assistants could not do it; we must have a trained set of officers. It would very much retard the public business, and be very injurious to it, to depend on persons not thoroughly initiated in the clerical labor of this department. The public time will be saved, and the business of the country considerably facilitated, by having at all times a well-trained band of officers in the departments of the Legislature.

51. In contingencies that occur, as regards the occupation of your department, which you cannot calculate upon—for instance, the time occupied by Committees of the whole House, by late sittings, by adjournments that were not calculated upon, by countings out of the House,—in all these cases of contingency is it necessary to have the whole staff of your clerks in attendance, and is the same amount of duty imposed upon them in all these cases? They must necessarily be in attendance to bring up the previous work, and because I am unaware what I may be called upon to do at any particular moment, while it is my business to be ever ready, and ever able to do whatever is required of me, and I must, therefore, always have at hand the means of doing it.

52. Admitting what you say, that their attendance is necessary, does it not follow that in some of these cases that I have put there cannot be full employment for the whole staff? I do not mean to say that from the time the House meets at three o'clock until it may rise at twelve, the officers of the department are unremittingly employed. Even if the business required it, I do not think it would be in human power to do it for any length of time. But there is not an officer here who does not begin a hard day's work at ten o'clock in the morning, and then when the House meets at three o'clock begin a second hard day's work in the evening, which keeps him from home, from recreation, and from social enjoyments of every kind, which are open to his brethren in other public departments.

53. You say it is not in human nature to support the fatigue of constant employment during the whole time the House is sitting, as well as during the day; but in certain cases, from the contingencies to which I refer, being different from your expectations, may not the work to be done be far less than human power will support? Sometimes, undoubtedly: looking at the work at night, if the officers could do each other's work as well as their own, we might dispense with one, or he might go home; but something might arise of a sudden, and the absent officer might be the only officer able to comply with my orders, and enable me to carry out the wishes of the House.

54. Then of the large staff to which you refer, a great portion is kept up to meet work which may be done? Yes; but also to meet work which must be done.

55. If this work does not take place, this portion of the staff kept up to meet work which may be done is not employed at all? It is employed, and well employed, but not unremittingly; every gentleman in the department has his own work to do. During the whole evening there are summonses to Committees and witnesses; circulars with evidence; Reports from Select Committees to prepare and copy; Addresses and Orders to prepare and copy; Messages to prepare and copy; Registers of Bills, Addresses, and Orders, to be kept; Papers and Petitions to prepare for press; Papers and Bills in all stages to revise; fair prints of Acts to revise and prepare for Royal Assent; and a great variety of other matters. All this work is going on up-stairs. They do not work so hard at this at night as they do during the day—they have necessary intervals of rest; but they are there; and if a sudden pressure comes, every officer being there is ready to do his work, and he does it. If any one of them were away, perhaps no other could supply his place upon an emergency. I might observe, that the business of this department, extensive and complicated though it be, is conducted on such a system that there never seems to be a hitch—one would scarcely believe that there is any work going on at all. I would wish the Committee not to suppose from this circumstance that there is no work to do, but rather that work may be done so systematically that the House, not feeling any inconvenience from hinderances of any kind, may not be conscious that the amount of work is really so great as it is, and be disposed to construe injuriously that for which the department deserves credit.

56. It is presumed, is it not, that in all public departments the work is done in the best possible style? I should hope so.

57. In some cases, does it not happen that the work falls far short of what you calculate upon—suppose an adjournment for a month, in that case would you not have less work? No doubt.

58. And so in proportion with similar adjournments for shorter periods? No doubt; but in all these cases we have to pull up the previous work; and we may be called upon at any time during these adjournments to prepare various matters for the re-assembling of the House, and our attendance is therefore as regular as in other departments; and it is always in the power of the House to grant leave to its Select Committees to sit during any adjournment; and the Committees occasionally invoke this power, and sit, and of course must have the means to conduct their business.

- R. O'Connor, Esq.
28 July, 1858.
59. I think your observations would lead to this inference,—that the large staff of this department is caused by the necessity of providing for contingencies? Not so: there are times when the staff of this department is not so fully employed as at other times, but the general run of times are those in which it is fully employed. If we had not this staff the business could not go on. There being comparative leisure sometimes is a mere incident; the rule is full employment. Contingencies, however, must always be kept in view, to a certain extent, for experience proves in practice that neither the duration of a Session, the business of a Session, nor any of the various matters incident to a Session, can be controlled by the Members individually or collectively.
60. In organizing this staff, did you look forward to the very long sittings which the Assembly has gone through? I did not look for such long sittings. I made my calculations from previous years; and, as I have already shown by the returns I have handed in, the recent sittings have been very greatly in excess of those of former Sessions.
61. Do you consider the statement of the President of the Council, that the officers employed there are as fully occupied as those of the Assembly, to be correct? We have a physical contradiction of that before us in the smallness of their volumes, and in the shortness of their hours of sitting. To that extent—to the extent which I can see—I should say no, in answer to your question. Their average sittings in 1856-7 was 2 hours and 40 minutes—ours 7 hours and 14 minutes. Their Journals and Papers are contained in one small volume, whilst our Votes and Proceedings consist of three volumes of much larger size. I do not say that the officers of the Council are not fully employed during their attendance, but I do say, and I have shewn, that they cannot by any means have so much work in the offices of the Council as in those of the Assembly.
62. Then, as compared with the staff of the Legislative Council, you would hardly consider your staff sufficient? Certainly not in that view.
63. Has any Parliamentary paper been printed shewing the work of the Legislative Council in the same way as it has been shewn in the Legislative Assembly? I think not.
64. Are the same number of holidays granted to the officers of your department as to those of other departments? I believe the custom of the service is that one month's leave of absence in the year is allowed to each officer, and in this department we grant no more at the outside, but it frequently happens that we cannot grant so much. During the last recess seven days was the longest and five days the shortest leave granted to any of the officers. For myself, as I said before, for four consecutive Sessions I have had no cessation from labor whatever.
65. What rule of the service do you allude to which you say entitles clerks to leave of absence? I should perhaps rather say the usage of the service; I found it so when I joined the department, more than twenty-two years ago, and I took it for granted that there had been originally a rule or regulation.
66. It was a custom or rule of a former Government? It was in practice at the time I joined the service in January, 1836, and it has been continued ever since.
67. Is it not reasonable to infer that a new system of Government would introduce new rules? I fancy it is perfectly within the power of any Government to introduce its own rules, or, if displeased with existing rules, to make new ones.
68. I think you have stated that in your own discretion you grant leave of absence? It is not exactly so. I acquaint the Speaker that Mr. A. or Mr. B. has applied for leave of absence, and, if I say he can be spared, the Speaker consents, and I then give him leave; but I alone can judge whether the applicant can be spared, and it is so arranged that the public business shall not suffer during his absence. It is also a rule in other public departments that the officers go away for half the day on Saturday, but that is not so in my department. I keep half the staff here with myself during the entire Saturday, so that Members and the public may be attended to throughout the day.
69. Does this rule prevail in recess as well as Session? Yes.
70. You do not mean to say that the same amount of work falls upon the department in recess as in Session? No, because in Session we have night work, in addition to our day work; the summary which I have handed in contains an outline of the more prominent occupations in recess. The hours of attendance in recess are from ten till four o'clock. All the officers are required to attend during these hours, and would subject themselves to suspension if they did not attend, without reasonable excuse for their absence.
71. I suppose their remuneration is arranged with a view to the alternations of work at different times? I do not think that is so. If it be borne in mind that while they serve twelve months in other departments we serve upwards of eighteen months here, and that this extra service is rendered in the evening hours, when the officers of other departments are consulting their health and enjoyment, I think it will be evident that the remuneration of the officers of this department has been fixed without any reference whatever to the alternations of work, by which they are distinguished from officers in all other departments of the public service.
72. You do not then consider the remuneration sufficient? The officers seem satisfied, and I do not desire to press for increase; but if you look over the salaries on the estimates for other departments, and then consider that the gentlemen in this department are required to attend at ten o'clock in the morning, and to remain in attendance until the House breaks up late at night, whilst in other departments they leave regularly at four o'clock in the afternoon; and, if you also consider that the work in this department is more in the nature of a profession, and that it would be a very serious business indeed if the officers were not well up to their work here, I think you will admit that the remuneration allowed to the officers of this department cannot have been calculated with any reference whatever to the alternation, amount, or responsible character of their duties.
73. Do you find any difficulty in filling vacancies when they occur? We have had only one occasion of the kind; that was on the establishment of the two houses, and we found so little

- little willingness to volunteer from other departments of the service that actually only temporary clerks did so; no clerk on the fixed establishments volunteered from any department. It has happened fortunately, with regard to those who did volunteer—and I feel it due to them to say so—that they have turned out good clerks; but it might have been very different. The salary was insufficient, in fact, to tempt clerks on any of the classes or fixed establishments to volunteer to such hours of attendance and labor as would be required of them here.
74. Do you not think the lighter work in some cases balances the heavier—do you think the one balances the other in any degree at all? Considering myself a competent judge of business, and confining my answer to the work in recess, to which only the question can at all apply, I think I could fairly put the work of the gentlemen under me in competition with the work of any other department, either as to amount, responsibility, or finish.
75. Have the salaries in your department been arranged on a principle of gradation? That was one thing in which I always thought we had a great deal to complain of. Whilst the officers in other departments were classified and put on scales, and lived up to increase of salary under those scales, we were kept steadily at particular amounts, and could not by any merit or chance get beyond them. The old Council occasionally bore hard upon the departments, and the departments bore hard upon the officers of the Council, so they thought, and so they conceived they had good reason to think.
76. *By the Chairman:* Are not the salaries of the clerks subordinate to you fixed upon some scale alleged to be in accordance with the proportions observed in the House of Commons? The proportions are in exact accordance with the scale observed in the House of Commons. The Clerk of the House of Commons receives now upwards of £3,000 a year, but his successor will have a fixed salary of £2,000; then the First Clerk Assistant will have £1,500, and the second Clerk Assistant £1,000; and our salaries stand exactly in the same proportions here.
77. *By Mr. Forster:* Do you think that in your department there is less chance of a clerk bettering his condition by promotion than in any other department? I should think so. At present there are not any very old men among us—I believe I am the oldest—and if you should kill or disable me by hard work, I do hope the promotion will take place within the department.
78. You think there is not so much room for promotion in your department as in others? No: gentlemen in other departments have the entire range of the service before them; here they devote their attention to particular duties in the nature of a profession.
79. Is there any allowance to your clerks for overtime? None whatever.
80. Is that the case in other departments? I have heard that when there is a heavy pressure of work in some other departments the clerks have taken some of that work home, and have been allowed so much per folio or hour for doing it over time.
81. You have already given the hours of your clerks' attendance? I have stated that in recess they attend from ten to four, and in Session from ten till the House breaks up, or as soon afterwards as I can relieve them from further attendance.
82. Have your clerks been obliged to remain to the very latest hour of the very late sittings that we have had occasionally? Always; and they were obliged to be here at ten o'clock on the following morning to carry on the business.
83. Do you consider yourself solely responsible, or is there any divided responsibility between you and any other officer? There is no divided responsibility here. It all rests with me. I alone am accountable to the House, through the Speaker. I give my personal superintendence to every thing. Of course, as the officers become more acquainted with the work I get more relief. I am ready at all times, not only to give my opinion and assistance to them, but also to numbers of persons, including public officers, Members, lawyers, and others, who come to consult me about every kind of Parliamentary business,—I am pressed in every direction, both verbally and in writing, for information on these subjects. These matters occupy much thought and time but make little show.
84. Do you consider the individual responsibility of the officers under you superior to the responsibility of officers in other departments? With the exception of the copying clerks and the Clerk in Charge of Papers, I have no hesitation in saying that their responsibility is considerably in excess of that of clerks correspondingly paid in other departments.
85. Are the duties of the Clerk of Select Committees here quite similar to those of the Clerks of Select Committees in Melbourne and in England? As regards Melbourne, so far as we can see, they have followed us, so far as they understand us; and so I may say of the other Colonies. The duties are exactly the same in their nature as those which devolve on the Clerk of Select Committees in the House of Commons, with this difference, that in the House of Commons there is a distinct establishment, called the Private Bills Office, to which all Private Bills are sent, without reference to the office of the Clerk of Select Committees; but our Clerk of Select Committees has the Private Bill business as well as the ordinary Select Committee business.
86. Has the Clerk of Select Committees here the same salary as the Clerk of Committees in England and in Melbourne? It falls very far short indeed in actual amount of the salary of the Clerk of Select Committees in England, but I believe it bears the same proportion to mine as his bears to that of the Clerk of the House of Commons. In Melbourne there is no special Clerk of Select Committees upon the estimates, though there is a clerk put down there as third clerk, with a salary just the same as that of our Clerk of Select Committees.
87. He is the clerk who does the duty? Yes, I have no doubt of it.
88. In this point, then, they have not followed us? I do not know how they may be acting in regard to transacting the business of Select Committees—whether they transact it in the same fashion as we do,—but there is a clerk upon their estimates corresponding to our Clerk of Select Committees, with an equal salary, £300.
89. What is the meaning of the Clerks Assistant of the Legislative Assembly? It is a title derived from the House of Commons; the duties are these:—The First Clerk Assistant takes all minutes

R. O'Connor, Esq., minutes with the Chairman of Committees in the Chair, occupying, in fact, towards the Chairman the same position as the Clerk of the House occupies towards the Speaker; and he has, besides Bills committed, the financial matters, including the resolutions of the Committees of Supply and Ways and Means, and the preparation of the Appropriation Bill. He conducts the whole of the financial business, as well as minutes the proceedings on Bills committed. There is a financial statement, which he makes out in recess, which shows all the original propositions of the Government for votes of money, and the additional propositions made from time to time afterwards, as well as the dealings with them by the Committee of Supply. The Second Clerk Assistant keeps up registers and indices, (references to which are of great use to us,) reads the Proof Votes to me every morning, and Resolutions and Divisions in Committees of the whole to the first Clerk Assistant, makes references constantly, as required by Members and myself, and would take the duties of the First Clerk Assistant if he were ill.

90. Are the Clerks Assistant the gentlemen that sit in the House with you? Yes.

91. In the House is it not often the case that they have not much to do in consequence of our being engaged in talking? No doubt; but while they seem to be idle they are, in point of fact, attending to their business in listening to the debates. We must be as attentive to the debates as the Speaker or Chairman, otherwise we could not state matters as they arise.

92. *By the Chairman:* Is there anything further that you would like to add to your evidence? There is nothing further having bearing upon my own department, which it would be of consequence the Committee should know.

APPENDIX B (2.)

Extract from the "Home News for Australia," November 16, 1857.

From a Return just issued, in continuation of those which used to be moved for by the late Mr. Brotherton, it appears that the House of Commons sat this year 116 days, occupying 903½ hours in all, of which 91½ were after midnight. The sittings averaged 7 hours 47 minutes, in length. The number of Entries in the daily Votes was 7,963.

EXTRACT FROM APPENDIX C.

CLERK OF LEGISLATIVE ASSEMBLY.

The duty of the Clerk of the Legislative Assembly is to record the Votes of the House;—to originate and draft on all subjects incidental to the business of the House, including forms and precedents of all kinds;—to make written and verbal communications to all persons on all Parliamentary subjects;—to inspect the accounts;—to attend daily upon, and consult with, the Speaker;—to revise Proof Votes;—to Certify Bills in all their stages between the Houses;—to sign summonses, accounts, and correspondence;—to give his opinion on all matters submitted, and personally to direct the general business of the Department.

CLERK

CLERK ASSISTANT.

The duty of the Clerk Assistant is to attend Committees of the whole House, including Supply and Ways and Means, and keep Minutes of their Proceedings;—to compare Bills ready for Assent with the Chairman;—to prepare and publish Weekly Reports of Divisions in Committees of the whole House;—to take notes of Proceedings in the house; to prepare Resolutions of Supply and Ways and Means, Appropriation Bill, and Explanatory Abstracts of sums proposed and voted respectively;—and to officiate as Clerk's Representative in case of his absence.

R. O'Connor,
Esq.
28 July, 1858.

SECOND CLERK ASSISTANT.

The duty of the Second Clerk Assistant is to take notes of Proceedings in the House;—to read Votes with the Clerk, and Resolutions and Divisions in Committee with the Clerk Assistant;—to see that all Papers, &c., required are on the Table every day;—to keep Registers of Addresses and Orders, and Summary of Bills;—to make Index to Votes;—to search for Precedents;—to prepare Table of Contents;—to assist Clerk in any way he may direct;—to take place of Clerk Assistant in case of his absence;—and to attend upon Committee of Elections and Qualifications.

CLERK OF RECORDS.

The duty of the Clerk of Records is to make entry in Register of all Documents; to Index Register and Letter Books;—to keep Alphabetical Register of Bills; and Registers of Addresses and Orders;—to make out Monthly Cash Account, Salary Abstracts, Contingent and other Expenses Account;—to write out Cheques and make payments;—to keep Postage Stamps Account;—to superintend the Copying Clerks;—to write letters to Public Officers and others;—to examine all Correspondence and Addresses;—to prepare Writs of Election, and Messages to Legislative Council;—to answer all inquiries made in the office, take charge of the stationery, stores, &c., and to assist generally in the office.

CLERK OF PRINTING BRANCH.

The duty of the Clerk of the Printing Branch is to revise Votes for literals, revise Bills in all their stages, and read Bills with Chairman;—to attend Select Committees on certain occasions;—to publish the daily Memo, and the Weekly Abstract and General Summary of Petitions;—to keep Register of and prepare for press all papers ordered to be printed;—to generally superintend the binding and paging of volumes of Votes and Proceedings, and financial papers;—to generally assist in the office;—and to revise and correct for press all Contingent Notices of Motion.

CLERK OF SELECT COMMITTEES.

The duty of the Clerk of Select Committees is to issue summonses;—to attend and take Minutes of Proceedings;—to take charge of all documents, and prepare *Preces* of the same;—to compile and sometimes draw up Reports;—to note Amendments made by Committees in Bills, and prepare Schedule shewing the same;—to keep Committee Registers;—to conduct Correspondence in connection with Committees;—to compile Parliamentary Papers—"Business of the Session," and "Standing and Select Committees appointed during the Session";—and to supervise all Select Committee business.

COPYING CLERKS.

The duty of the Copying Clerk is to make fair copies of Addresses to the Governor General in duplicate;—to make fair copies of Messages to Legislative Council;—to copy and transmit to the Colonial Secretary all Orders for Papers;—to make fair copies of all letters, &c., drafted by the Clerk;—to assist the Clerk of Records whenever called upon;—to attend Select Committees when a press of business may require it;—to assist the Clerk of Select Committees in issuing summonses;—to make fair copies of Reports, Proceedings, &c., and to render any other assistance that may be required.

CLERK IN CHARGE OF PRINTED PAPERS.

The duty of this Clerk is to keep Registers of all Papers ordered to be printed;—to distribute all printed papers to Members, Government Departments in Sydney and the neighbouring Colonies, newspaper proprietors, &c.;—to supply all printed papers when required;—to supply and place on the Table of the House, daily, all papers, stationery, &c., necessary for the business of the day;—to collate and deliver to the binder 200 copies of the Votes and other printed papers, and 50 copies of the financial volumes;—and to take the Librarian's place during his necessary absence from the Library.

SERGEANT-AT-ARMS.

The duty of the Sergeant-at-Arms is to attend upon the House.

EXTRA COPYING CLERKS (2, for 6 months)

The duty of these two Clerks is to enter in Letter Books all Correspondence, Addresses, and Orders;—to assist in filling up Summonses, copying Petitions ordered to be printed, &c.;—to assist the Clerk of Printed Papers in the distribution of papers;—to assist in daily indexing six files of printed papers;—to read with Clerk of Printing Branch, and otherwise assist in the general business of the office.

The following persons are in attendance upon the House and Offices:—

Principal Messenger.

Principal Doorkeeper.

Assistant Messengers (2)

Extra Messengers (4, for 6 months.)

APPENDIX D.

			Deduct S. Australia Estimate ..	2,300 0 0	
			Plus Tasmania	956 0 0	

APPENDIX F.

R. O'Connor,
Esq.

28 July, 1858.

MEMO.

The Papers printed by order of the Legislative Assembly may be classified under three heads,—

1. Papers laid before both Houses, as Statistics, Census, Reports from Boards and Commissions, &c. &c. ... 500 copies.
2. Papers originating in the Legislative Assembly, as Votes and Proceedings, Reports of Select Committees, Returns to Addresses and Orders, &c. &c. ... 500 „
- and
3. Bills originating in the Assembly ... 200 „

DISTRIBUTION.

1. and 2. The actual number of copies required of the Papers under the first and second heads may be stated as follows:—

For distribution to Members of Assembly	...	54
Public Offices in Sydney	...	45
Do. out of Sydney	...	24
Newspapers in Sydney	...	7
Do. out of Sydney	...	11
		141
For current use of Members, Officers of the House, and Reporters of the Press	...	60
Collated and bound for Members and Departments of the Government	...	100
Collated and stitched for neighbouring Governments, &c.	...	30
Collated and kept on hand	...	70
		200
		401

In addition to this number 50 copies are required for the Financial volumes, when the paper relates in any way to Finance, making in all 451 copies.

3. Public Bills originating in the Assembly are distributed to Members, Public Officers, and Newspapers, 141 in number, leaving 50 copies for current use in Chamber and Offices.

These numbers have hitherto proved sufficient for all demands upon the Department.

APPENDIX G.

Summary of the Business of the Department of the Legislative Assembly during Recess.

1. Arrears of Printing, occupying usually from six weeks to two months.
2. Alphabetical Registers of—
Addresses.
Orders for Papers
Bills originated in the Assembly, showing all their stages.
Bills from the Legislative Council, ditto.
3. Summary of Petitions received during the Session.
„ of Standing and Select Committees appointed during the Session.
„ of Business of Standing and Select Committees during the Session.
„ of Business of the Assembly during the Session.
4. Explanatory Abstract of the sums Estimated and Voted respectively for the service of the year.
Notes Explanatory of ditto.
Ditto for the Supplemental service of the previous year.
Notes Explanatory of ditto.
5. Classifying printed papers by repeated lists.
6. Table of Contents classified—with pages.
7. Pattern Volumes with pages—compiled from Table of Contents.
8. Collating 200 sets of three volumes each, or 600 volumes, in accordance with Pattern Volumes.
9. Collating 50 sets of Financial Papers.
10. Indices to Votes and Proceedings, with pages and various checkings.
11. Indices to Financial Volumes, with ditto.
12. Examining Votes and Proceedings after binding.
13. Ditto after coming from paging machine.
14. Distribution of Votes and Proceedings.
„ Financial Volumes.
„ Acts of Parliament.
15. Accounts of the Department.
16. Storing and Indexing Manuscript and Printed Papers of the Session—re-arranging those of previous Sessions, as accumulations render contrivances for room more necessary.
17. Correspondence and personal communications with Public Officers and private parties on Parliamentary subjects, involving thought, research, and time.
18. Preparation for the ensuing Session, occupying several weeks, and involving thought, research, and labor in every branch of the department.

MEMO:—The Sessions have followed each other in such rapid succession lately, that the business of one Session is considerably advanced before the business of the previous Session is fairly out of hand; and thus of late years employment has been, in point of fact, unremitted from one Session to another.

APPENDIX

R. O'Connor,
Esq.

APPENDIX H.

28 July, 1858. TABULAR Statement showing the Hours of Sitting of the LEGISLATIVE COUNCIL during the Session of 1856-7.

(Commencing 23rd May, 1856, and closing 18th March, 1857.)

Average daily Sitting during Session.	Longest daily Sitting.	Shortest daily Sitting.	Number of times counted out.	Days when no Sitting through want of Quorum.
hrs. min. sec. 2 46 28	hrs. min. 7 5 (16 March, 1857.)	20 Minutes.	0	2 (5th December, 1856, and 15th February, 1857.)

N.B.—Hour of Adjournment on three days not specified, viz, 27th May, 6th August, and 3rd October, 1856.

WEDNESDAY, 4 AUGUST, 1858.

Present:—

Mr. COWPER, | Mr. JONES,
Mr. FORSTER, | Mr. PARKES,
Mr. PIDDINGTON.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

William Harvie Christie, Esq., Postmaster General, called in and examined:—

W.H.Christie,
Esq.

4 Aug., 1858.

1. By the Chairman: The Committee are desirous to obtain information generally with reference to your department, as to the means placed at your disposal for carrying out the duties which devolve upon you and your subordinates—whether, in your opinion, a smaller number of officials might not be employed, to carry out with efficiency the duties of the department? One of the greatest difficulties we have to contend with is the Post Office building itself; it is so very badly adapted to the purpose, that we require more officials than we otherwise should. I think we could get rid of four clerks in the Letter Branch, if the suite of rooms were so made that due surveillance could be kept by the senior clerks.
2. Do you mean with reference to sorting? I mean in the Letter Branch: they are all detached. I have one clerk in charge of the Inland Room, one in the Ship Room, another in the Delivery Room, another in the Sale of Stamps Room, and another in the Registry Office. All these departments may be said to be isolated; and the consequence is, that we must have more clerks, whereas if we had a proper suite of rooms fewer clerks in charge might suffice. That is one obvious mode of retrenchment.
3. With regard to sorting—is the accommodation for sorting newspapers and letters sufficient? With regard to the newspapers, since we have had the new room we have done very well; but as to the letters, we require a very great addition to our Inland Room, and such an addition has been sanctioned; but of course it will not meet all demands—there will still be the isolation I have alluded to.
4. You have authority to employ extra labor during extra hours—do you exercise that authority at any other time than when mails arrive out of the usual hours of the office? No.
5. That is for the employment of clerks out of the ordinary hours, when mails arrive or are despatched? Yes; or when the clerks are employed out of their usual hours. The regular Post Office hours commence at seven and end at six o'clock, and when a clerk is employed more than seven hours a day he is paid a gratuity of two shillings an hour.
6. Your department seems to be subdivided under different heads: in the Correspondence and Cash Branch you seem to have seven clerks, including the Secretary and Cashier? Yes.
7. Do you find ample employment for those seven gentlemen? I do, most certainly.
8. Do you not think the correspondence might be cut down in some respects—is it not made more voluminous than necessary by the mode in which it is conducted? I do not think so; it is done almost entirely by blank cover. The correspondence is very large; I received last quarter upwards of 8,000 letters.
9. These letters are, many of them, printed, enclosing returns? There are of course returns, advices, and remittances, but there are also a great number of applications for newspapers and letters.
10. There are, I suppose, very few letters of importance requiring any composition, or anything more than a mere knowledge of routine? Indeed there are a great many that require considerable attention. There are constantly letters about British postal arrangements, postal lines, changes of time table, complaints from magistrates and contractors, that require immediate attention and great consideration. We have now a copying machine for all letters, which I do not much like; it was adopted for the purpose of saving work, but I think it hardly proper that the only record of important letters should be made upon this thin tissue paper.

11. I will take the case of yourself, the Secretary, and the Chief Clerk. You have "the general supervision of the department;" the Secretary has "the general superintendence of the Correspondence and Cash Branches;" and the senior clerk "has charge of all papers and correspondence": is not that subdividing the duties very much—what is the Secretary more than Chief Clerk? He is the Cashier, and, of course, has a separate room; all the cash passes through his hands, and therefore he cannot look after the room in which the other clerks are. I do not know which particular clerk you allude to, but Mr. Levinge, as senior clerk of the room, has, of course, a general control over the other clerks who are in his room, and all have their separate duties to attend to. Mr. Levinge takes the correspondence about the postal lines and contracts; Mr. Dillon takes the official correspondence relating to the Post Office Establishment; one clerk is employed entirely in giving out stores and stationery for country postmasters; one attends to applications for letters and newspapers, and this takes up the whole of his time; and the others are employed in copying and registering letters.
12. With respect to the correspondence, you are stated in the return before the Committee to have "the general supervision of the department." I apprehend that when letters are received they are opened and submitted to you, and that you give the general direction for the answer? They are all opened by the Secretary and registered, and if he has any remark to make upon them he makes it.
13. Before you see it? Yes; in matters of detail, for instance, a minute may be made, "Papers in this case gone to the Postmaster General," or, "Decision given in this case ten months ago;" but I minute the letters myself.
14. You do not open your own letters? Not now.
15. The Secretary reads them first, and submits them to you with a minute? I may state that they used to be all opened by me, but I found that this sometimes caused delay, and it was therefore ordered for the sake of greater quickness, particularly in the case of applications for letters, that the letters should be opened by the Secretary and registered; and then when they are applications for letters, they are passed to the Letter Branch, and when for newspapers, to the Newspaper Branch; they are then minuted by the respective clerks, and brought in a perfect state before me, when such course is necessary.
16. Is every letter recorded in a book? Yes, every one is registered very fully.
17. What are your duties comprised under the term "general supervision?" Everything; there are 386 individuals more or less under my control.
18. Your supervision is mostly in answering these letters? No. There are sixty-six persons in the General Post Office. If any clerk, boatman, or letter-carrier misbehaves, I have to inquire into the matter, and to punish him when it is proved, or if any country postmaster or contractor fails to perform his duties properly, I have to impose a fine, or otherwise decide the matter.
19. How do you ascertain the conduct of the contractors? There is a report on the time-bill, which accompanies every mail, and that shews a late arrival, and besides every postmaster is bound to report a late arrival, at any particular place, or any irregularity that occurs; and there are generally plenty of gentlemen ready to complain when any occasion for complaint is given.
20. The matter is brought under your notice by the correspondence, and your decision upon the correspondence involves the decision upon the complaint? Yes.
21. With regard to the Cash Branch, how do remittances of money come down—by letter? Some come by letter. In the Sydney branch all the office collections are paid in daily to the Cashier; the country postmasters send remittances by letter.
22. Mr. Hunt is the gentleman who receives the money and hands it to Mr. Abbott? I do not think he has any concern with it. There are returns of the cash received made up daily in the Delivery Branch, the Sale of Stamps Branch, and the Inland Branch, which gives the letter-carriers' receipts.
23. It is not Mr. Hunt's department or branch? Yes; but the cash does not pass through him, but is paid direct to the Cashier.
24. Why is he called Superintendent of the branch if he is not responsible? The whole branch is under him, but it is the quickest way for the person who sells stamps to settle at once with the Cashier; it would only involve unnecessary time if the money went through the head of the Letter Branch, who has to exercise a general control.
25. I do not understand what is meant by this general superintendence and chief management? Mr. Hunt is constantly engaged in inspecting the rooms and in seeing that all the clerks and their subordinates are doing their work. If there are any complaints of the letter-carriers, &c., or if the clerks do not attend to their duty, he inquires into the matter, and sends up a minute to me. He sees that the general duties of the Letter Branch are fully carried out. There are some thirty-five persons under him.
26. You look to him for the proper conduct of the business in the Registry Office, the Stamp Office, the Sale of Stamps Office, the Inland Room, the Newspaper Room, the Foreign Office, and the Delivery Branch? Yes.
27. What supervision do you exercise over Mr. Hunt? Every complaint, report, or change of system has to come before me.
28. With regard to the number of persons employed under him, is he the sole judge whether additional assistance is wanted? No; in all matters not of detail he refers to me. I know when there are arrears of business, and must provide for them. With regard to the letter-carriers, they are all told off to their several beats, which are fairly divided, and I cannot do with less than four boatmen. The Dead-letter Office is the only portion of the department a little in arrear, and I know that the clerks on mail days are well kept up to their work. No doubt the work in the Letter Branch is fitful; but unfortunately that cannot be helped: sometimes the clerks there have not so much to do as they might, but, on the other hand, upon mail days their work is more severe than it ought to be.

- W.H.Christie, Esq.
4 Aug. 1858.
29. What are Mr. Abbott's duties as Cashier? He receives all the cash, has to keep his two cash-books, and pay the money into the bank. The Accountant takes cognizance of these books, which, of course, also show all the disbursements of the department.
30. Does he pay the money into the bank, or how does he dispose of it? He pays it into the bank daily, and into the Treasury weekly.
31. In what mode do you exercise a supervision over him? Indirectly through the Accountant, as I have nothing to do with the cash. Every month I have to give in a statement of the postage receipts from the General and the Country Post Offices. All the accounts are then brought before me; I then examine the books, and get a certificate from the bank as to the actual balance in hand. The cash paid in is journalised weekly. I have several indirect checks on the Cashier, who is, however, solely responsible, and has given large securities. Having ascertained the bank balance, I go over with the Accountant the several receipts from the General and the Country Post Offices on account of postages and stamps.
32. Does he act irrespectively of you in money matters? Entirely as to receipts; I never see the cash at all. He receives all cash, and pays it into the bank. The Accountant debits the General Post Office and the country postmasters, with the issue of stamps, and credits them with the amount shown in cash-book; and as the item for postages is small, the issue of stamps virtually checks the Cashier and the country postmaster, to whom accounts are forwarded half-yearly giving their stamp and postage account. Out of the £40,000 we receive annually, I do not think more than £2,000 is for postage, the balance being on account of postage stamps. The Inspector of Stamps every month furnishes an account of what he issues, and I see the stock in hand in the General Post Office, and the issue made to the country postmasters, public offices, and the Sydney public, which added together must amount to the total issue during the month. Country postmasters are not allowed postage stamps until they have paid seventy-five per cent on former supplies.
33. With regard to the duties of the Accountant, his branch seems to have a large number of clerks for what may be considered to be the mere duty of checking accounts? There are many more accounts than might be supposed. Altogether there are 792 accounts. The Accountant is a very valuable officer. I think if we could get rid of the forms sent to the Auditor General we might retrench in this branch; and I must confess that I have thought the office might be managed almost like a banking or other public establishment.
34. In what way do queries from the Audit Office cause unnecessary trouble? We have to furnish all copies of accounts to the Audit Office, and there is a great deal of correspondence, and what I think unnecessary forms. I think if the accounts were conducted as they are now, and proper persons were appointed from the Audit Office to inspect the books in a department like the Post Office that would be sufficient. I am told that in England in the Army and Navy they are only under what is called an appropriation audit; they do not go into every item. I could reduce this branch of the establishment by one clerk if it were not for these forms and returns.
35. The copies of authorities? Yes; and of all the accounts. Lately I wanted a release from the Audit Office for moneys advanced to me since 1852; and I was required to copy and send in all the accounts, even for the last-named year.
36. How many clerks are there in that branch besides the Accountant? Four: one is a temporary clerk, he is not on the establishment. Mr. Nelson, the senior clerk, is entirely engaged in looking over the letter bills, which form the basis of the accounts of the country postmasters. These have to be bound up, and the accounts are checked from them.
37. Do you find that the country postmasters send in their accounts more regularly than was formerly the case? Yes.
38. They pay up, and are not allowed to get into arrear? In no instance do we allow them to receive postage stamps without the payment of seventy-five per cent. upon the previous supply. If a post office is short of stamps, and letters are prepaid in money, I at once call on the postmaster for an explanation.
39. You think you might reduce the establishment by four clerks, with such modifications as you suggest? With a new Post Office; but the work of the office I consider on the average increases fifteen per cent. each year, take the business all through.
40. You were a member of the Board of Inquiry appointed to inquire into the management of the Post Office under a former postmaster? Yes.
41. How many years is it since you received the appointment of Postmaster General? I was appointed on the 1st of May, 1852.
42. Can you, from your experience of the working of the department, suggest to the Committee any alteration in its arrangements, independently of the defects of the building itself, by which the business can be carried on efficiently with a smaller number of men better paid; or do you think you could dispense with any of these persons? I really do not think so. As I have already stated, if we had a good Post Office we could do with fewer clerks; but at the present time, when there is a pressure, they can only get the work done by sitting up till twelve at night, when they are quite worn out: on the despatch of a mail, in the Ship Room all will be engaged.
43. That is only when an English mail arrives or is despatched? Yes; that is all.
44. The hours of attendance of clerks in the Post Office are not longer than those of clerks in other public departments? No; they used to be, but under the new arrangement they are the same as in other offices.
45. Does the Secretary of the Correspondence Branch sign letters for you, or do you sign letters yourself? I sign them myself; if I am absent the Secretary signs.
46. He does not correspond with the country postmasters himself? No; he might sign a memorandum calling for a report, or he might send a blank cover on some matter of detail.
47. His pecuniary responsibility is not great, owing to the transactions taking place with stamps? I did not say that; but that the system of postage stamps, and the charges made on that account against the country postmasters, check the receipt of money.

48. Then the postmasters do remit their money through him? Yes, of course every remittance goes through the Cashier's hands, who has to send a receipt by return of post.
49. There is a check between the Accountant and Cashier every month? Every day you may say; and all the money collected in the department is paid into the Treasury weekly.
50. *By Mr. Jones:* I see your boatmen are paid £132 a-year each, is there any reason existing that you know of why they should be paid so much more than other boatmen in the public service? They have much more night-work; but I believe the reason is, that that sum is paid to the letter carriers, and these men are employed not only as boatmen, but when not engaged with their boats they mend the mail bags, assist in sorting the newspapers, and sometimes in delivering them, and in packing and unpacking the mails.
51. They are employed in other duties besides those of boatmen? Yes; they are obliged to be up at night whenever mails are expected, and they are at work early in the morning. I think they are worked much harder than other Government boatmen.
52. Is there any work done in the Correspondence Branch of the Post Office that you think could be safely dispensed with—any forms in reference to recording or copying letters? I do not think so. We have now, as I have already stated, a copying machine, consequent on a modified recommendation by the last Board held on the Post Office Department; but I do not approve of it: I think important letters should not be copied upon mere tissue paper. We are obliged to have our register books in the Correspondence Office very correctly kept, because a person may say, "I wrote a letter on such a day, why was it not attended to?" and it is necessary that we should be able at once to refer to the date of the letter. No department requires to be more accurate in that way.
53. You do not think there is any work done that could safely be dispensed with? I do not. I think the Correspondence Branch is hard worked; the Letter Branch is least worked continuously; but we must be prepared for an emergency—that is the peculiarity of a post office.
54. *By Mr. Piddington:* What are the usual hours of attendance of the clerks in the Post Office? The clerks in the Correspondence and Account Branches arrive at nine and leave at four, but the others take their seven hours at different times. We commence at seven o'clock and keep open till six; but all the clerks have seven hours a day.
55. Have you any means of ascertaining whether the clerks who should come at nine and leave at four do come at the proper hour? There is an attendance book in each room, and the clerks are bound in honor to put down the time at which they arrive. The clerk in charge initials the entries, and the book is brought before me, when I have nothing in hand, perhaps once a month, and I see the attendance.
56. If the names are merely written in a book without any check, how can you ascertain whether the clerks do not come at eleven instead of nine? The names are entered in the order in which the clerks come in, and the clerk in charge initials the entries.
57. Do you leave it to the individual clerk to enter the hour at which he arrives? Yes.
58. Would it not be better for the inspecting clerk, or the clerk in charge, to draw a line after each period, say a quarter past nine, so that any one coming after that time must enter his name below the line? I have thought of that; and if there had been one hour at which all the clerks should come to the office I would have adopted it; but my department is cut up into so many branches, and the hours of attendance vary so much, that it would be difficult to carry out such a plan.
59. There are few clerks who come at these hours? Only the Cash and Correspondence Branches.
60. How many days in a month are clerks in the office compelled to attend over hours? That would depend upon the business—the mails coming in.
61. Taking the whole office, what would the average number of days in a month be? I never pay the Correspondence Branch for over hours; when there is work I give an order, "Tell the Correspondence Branch they cannot go." Perhaps I keep them once a month till five or half-past five. With regard to the Letter Branch, I should say that five days in the month they are paid overtime—three on the receipt of a mail and two on its dispatch.
62. What proportion of the gross receipts of the Post Office do you receive in money? It is all in money eventually; about £38,000 is received from the sale of stamps, and about £2,000 for postages.
63. Is the issue of stamps checked to your satisfaction? Yes; the stock in hand in the General Post Office is taken every month.
64. There is a special clerk for the receipt of the inland revenue? There is one clerk who makes up the letter carriers' accounts, and receives their daily receipts, and those of the Delivery Room, and this clerk, and the clerk who sells stamps, communicate direct with the Cashier.
65. What are the separate duties of the officer who is called here Secretary and Cashier—what proportion of his duties consist of those of Secretary, and what of those of Cashier? As Secretary he has the charge, under me, of the whole of the Corresponding Branch of that department. I dare say the Cashier's duties take him two hours a day, viz., to receive the money, make up the cash-books, forward receipts, and prepare cheques. I hardly think the Secretary's and Cashier's duties are properly united; but I would not recommend that the Cashier's duty should be transferred to the Accountant's Branch, because the check might be lost.
66. Do you think it would be possible for the Postmaster General to do the duty of Cashier, with the assistance he might derive from the Accountant? I do not say it would be impossible, but I could not then do my other work as I now do. I seldom leave the office till five o'clock, and take home my despatch-box twice a week.
67. You say the duties of the Cashier occupy the Secretary two hours a day? Yes.
68. And you think this two hours duty could not be discharged by the Postmaster General? It could be done, but at the loss of something else.
69. Do you think other duties of importance would be undischarged by him if he assumed the duty of Cashier? Yes.

W.H. Christie, Esq. 70. *By Mr. Forster*: Have you ever heard complaints made of the efficiency of your department? Yes.

71. Have those complaints been very general? I think not altogether, under the peculiar circumstances of a post office.

4 Aug., 1853.

72. In what form have these complaints reached you? In the country, postmasters complain of the contractors and mailmen, and the public complain of postal errors and the contractor and mailmen.

73. Do you think complaints are justified in any case? Yes, in some cases, I think so, certainly; but I would say, without exaggeration, in twenty-nine cases out of thirty we satisfactorily account for or punish the defaulting party.

74. Have you at any time received complaints of the loss of papers, and packets, or letters, in the Post Office? Yes.

75. Have you been able to satisfy the parties in most of those instances? In some we have not. In such cases all we can say is, that it is a very extensive country, that, from the difficulty of procuring eligible ones, we cannot depend much upon the mailmen, and the postmasters, who receive but £12 a-year are, many of them, inefficient, and sometimes worse.

76. Do you consider that these errors have generally been committed in the country post offices and not at the Post Office in Sydney? I think so.

77. You come to that conclusion from examination into the different cases? Yes: more irregularity occurs in the extreme northern districts, which I attribute to the mails passing through so many post offices, and to these being far away from the central inspection.

78. Have many of the complaints to which I allude been made against the General Post Office itself? Some have.

79. Have you found them justifiable at all? Sometimes, of course, clerks mis-send letters, and I have to fine them. We fine them a shilling for every letter, and sixpence for every newspaper, when they are discovered to have been mis-sent. I am sorry to say there have been cases of a worse nature, where I have been compelled to dismiss letter carriers under the impression that they have committed theft.

80. When a charge is made against the General Post Office which involves the censure of a particular clerk, what is your practice—do you allow the answer of the clerk to be conclusive against the complainant? Certainly not; I hear both sides.

81. Suppose it ends in the complaint being directly contradicted by the clerk, do you generally consider the answer of the clerk conclusive? No.

82. Do you ever in any case? I do not think I have done so. I do not know the particular case you allude to. I can hardly suppose a case where one clerk is the only person to consult. If a particular letter were mis-sent, I should find out the first clerk who sorted the division, and then the party who put it in the drawer; I should also be guided by my experience as to the clerk being truthful and trustworthy.

83. I wished to know whether in cases of this kind you had the power to check the statement of one clerk by that of another, or whether you were obliged to rely upon the statement of one alone? In most cases there is some corroborative evidence.

84. There have still been some cases which you have not been able to clear up satisfactorily? You mean in reference to registered letters?

85. Yes, registered and lost letters? Yes. I have had a return made out with regard to registered letters in 1856 and 1857. In 1857 there were 86,000 registered letters passed through the General Post Office, Sydney. Here is a return (*producing the same*) of every complaint that has been made with regard to registered letters during that year.

86. State the number of complaints during that year? 120 letters have come with inquiries or complaints as to registered letters, and of these I have satisfactorily disposed of all but the following:—There was one case relating to a letter sent to a party in George-street, as to which I could find no clue to the money that was sent, although I have no reason to suppose that the money was not enclosed. In another case a letter was lost, which was sent down to the postmaster at Dapto. I considered that the Inland Room was in fault, and made them pay the amount. The third case was one I have never been able to fathom: the bill case that contained the registered letters was missing when it arrived at Shoalhaven, but my opinion is that it was opened on board the steamer, or on the road. The bills have never been presented.

87. How could it have been opened on board the steamer; must not the mail bag in that case have had the seal broken? It was done when the steamers were not so careful about the locker for the mail bag as they now are. It was when the steamers were first employed for the conveyance of that mail; we used previously to send it overland; we supposed that in this case they had been a little less careful, and that some party might have got access to it. In the next case, a party said he had enclosed money in a letter, but we believe it never was enclosed; we inquired at the bank, and they were of our opinion. In another case, the Post Office authorities in London sent out to say that a sovereign had been taken out of a letter, but upon looking at the card, in which it was said the money was sent, we found that a sovereign would not pass through the incision made; only a half-sovereign or sixpence could have been put through; we considered, therefore, that the statement was not correct.

88. Could not two half-sovereigns have been put in it? I do not think they could; it was a very small slit in the card, and the party stated that a single sovereign had been sent. The only other case was from Grafton; and in that I do not think the money was enclosed, from the inquiry I made at the post office. These are the only six cases which were not satisfactorily explained.

89. Have you any account of the number of complaints made as to the loss of other letters or packages not registered? I have not here; I could ascertain.

90. You could not state the number? I could not.

91. *By the Chairman*: Does that account for the complaints in 1857 include the case in which one of the letter carriers was dismissed, and a clerk removed from the department?

Y. ca.

92.

92. *By Mr. Forster*: Of course such losses and defalcations as we are speaking of occur under the General Post Office at home? So far as the abstraction of money from unregistered letters is concerned, cases are much more frequent in England. The case to which I have referred is the only one which has been brought under my notice from England, but we have many complaints in the year of sovereigns and half-sovereigns having been taken out of letters addressed to England. So frequently has this been the case, that I lately recommended to the post office authorities in England that some means should be employed to watch the parties engaged in sorting the Australian mails, and that some scheme for ensuring detection should be had recourse to.

W.H.Christie,
Esq.
10 Aug., 1868.

93. I understand you then to say, that in this respect the Post Office here is as efficient as the Post Office in England? Yes, I think so. I think loose sovereigns in letters not registered have a much better chance of being delivered here than at home.

94. Have you ever considered the system of money orders? Yes.

95. Do you think that would be applicable to this country? Not so applicable as at home, and more difficult.

96. Do you think it would be at all beneficial in this Colony? Yes; but it would be very expensive. You must have another set of country postmasters.

97. The matter to be considered is, whether the advantage to the public would more than counterbalance the cost? My opinion is that we are not ripe for it with the present staff or building: we should require a more expensive establishment.

98. *By the Chairman*: You are aware that they have established the money order system at Melbourne? Yes.

99. Have they adopted the English system, or have they modified it to suit the Colony? I do not know. I used to correspond with the Postmaster General of Victoria, but I do not now. I have always felt that in this Colony the utility of these money orders would be more than counterbalanced by the expense, for we could only have money order offices in places where there are branch banks; in out-stations the postmasters, generally, are not efficient enough to conduct money order offices.

100. In cases of letters being lost, or of complaints in reference to your department, you do not act in such matters upon your own responsibility? I would not trouble the Government with details of this kind, unless in cases of serious loss of registered letters.

101. In the case of the loss of the Shoalhaven bill case, the whole matter was reported to the Government, and determined by the Executive Council? Yes.

102. *By Mr. Forster*: I presume you would always hold a preliminary inquiry, to satisfy the parties, without reference? Yes.

103. *By the Chairman*: How are the country postmasters appointed? Entirely by myself.

104. You appropriate that vote altogether? There are 213 country postmasters, and about £6,200 a-year is paid to them. The maximum salary is that paid to the postmaster at Bathurst, £230, and the minimum, which is the sum received by the greater number of country postmasters, is £12 a-year. They are entirely appointed by myself.

105. Do you fix the salary of the postmaster at Bathurst at £230, at Brisbane at £175, at Campbelltown at £100, and so on? When I took charge there were certain fixed salaries; now, when I know the amount of the vote for the year granted, I call for a return of the aggregate business performed, and make a revision of the salaries.

106. You have a scale by which you adjust the amount of compensation, according to the labor performed? I get a return of the number of mails made up, the number of letters passing through the office, and the amount of stamps sold, and from this I see the importance of the office, and decide by that entirely.

107. £12 a-year is the minimum paid to a postmaster wherever Government establishes a post office, and this is raised as the business increases? Yes; but on the gold fields they are paid more: there was great difficulty in getting postmasters originally at these fields, and they were paid from the gold fund.

108. What means have you of checking the performance of these duties by the postmasters beyond what you derive from correspondence—have you any personal inspection of them either by yourself or by deputy? At one time £100 a-year was allowed for supervision, and with that sum I made long tours of inspection. This, although not a very efficient supervision, was productive of some good. Now that a postal inspector is appointed we shall, I hope, gradually make postmasters more efficient.

109. You have recently had a case where money has been taken out of a mail bag? Yes.

110. You have not been able to trace that money, except as a mere matter of suspicion? No; we suppose that a mailman opened the bag.

111. Did it not come out on the inspection by your officer that the mail bag, which had been some time in use, was not fit for the purpose? Yes; he reported that he found a hole in it. The postmaster has, however, since reported that the bag was not the one usually used, and that it was mended on the following day.

112. Should not the mail contractor report the circumstance if a postmaster constantly sends a bag in such a state as that a man, as was assumed in this case, could put in his hand and withdraw a letter? I do not think the abstraction took place from a fault in the bag; but, of course, having no postal inspector these matters cannot be properly looked into. The contractor should report the circumstance if he has a faulty bag sent systematically; or the country postmaster should report that a bag has arrived in such a state. I have no other means of accurately ascertaining the state of the bags.

113. Might not some authority be given either to the Clerk of Petty Sessions, or to some resident magistrate, to make a periodical inspection of the district post office, as it would be impossible for the Postmaster General, living in Sydney, to exercise a proper supervision? I took a step in that direction, and the Commissioners of Crown Lands were directed to make periodical reports; but very few did so; and as it was foreign to the other duties they had to attend to, they let it fall into disuse.

- W.H.Christie, Esq.
4 Aug., 1858.
114. Might you not arrange for some periodical inspection, if only quarterly or half-yearly? I think it would be well for the Government to direct the Benches to report upon the state of the post offices, but I do not think it could be very well initiated in my office, as the Benches or Clerks of Petty Sessions would not be under my control. But in practice, if there is a bad postmaster in a district, the Benches usually make a report on the subject.
115. With regard to these three gentlemen who appear as sub-heads in your department, do they act each irrespectively of the other—does the Accountant act as head in his branch, the Superintendent as head in his, and the Cashier as head in his? Yes, and I am head over them.
116. What is your mode of inquiring into the way in which these three heads carry on the business of their branches: do you interfere at all in the detail by any active supervision? Yes; with regard to the Secretary, he is with me every day, and I very soon know if there are any arrears; and if I get back a letter not properly copied or signed, he is immediately made aware of it by me. With regard to the Accountant, the moment the Auditor General sends back an imperfect document it comes under my notice. With regard to the Letter Branch, every report must come under my notice. The complaints against mis-sorting in the General Post Office come to me first, and if I find that any of the parties in the Letter Branch have been careless, I consider the Superintendent to some extent accountable.
117. You speak of the Secretary having the general superintendence of the correspondence, and of the cash: what is the general superintendence he exercises—you have the general superintendence? I call for former papers, and he has to see that all the papers are put up. I make my minute, and he has to see that the minute is implicitly followed, and the work of the Corresponding Branch properly performed: he has also to fulfil his duties of Secretary and Cashier, to look after the room, and see that the clerks attend to their work.
118. That is in his own branch? Yes.
119. You say, "in the absence of the Postmaster he acts as his representative"—you are seldom absent, are you not? I have mentioned that I used to be absent about a month in the year on tours of inspection.
120. Not now? I have not been absent this year, but last year I was absent six weeks at the postal conference in Melbourne.
121. What is the meaning of this statement in the return,—“the whole correspondence of the department passes through his hands, is read and remarked upon by him, and fully disposed of by him, when acted upon by the Postmaster General”—Does not that seem very circuitous? Perhaps it might have been expressed in fewer words. He sees the letters properly registered and distributed, and brings them all before me, with the former papers, in a complete state; he has to see that my minute is attended to and duly carried out.
122. If you make your own minute and sign the letter, you can see yourself whether the letter carries out your view? There is no doubt about that; but he would send it back if it were not according to my minute, and not bring it before me until corrected.
123. With regard to the duties of the Cashier, the return says—"the whole revenue and disbursements of the department pass through his hands, for which he is responsible."—What responsibility has he—is it not merely that he does not pocket the money? He has to receive the money, keep his cash-books, and pay cheques.
124. Do both the Accountant and the Cashier sign every cheque you sign? The Postmaster General and Cashier sign, and the Accountant initials every cheque. There were 598 cheques issued in the first quarter of this year.
125. You state to the Committee that you are not prepared to recommend any reduction in the department at present; that each of these officers is fully employed; and that neither with respect to salaries nor numbers can you suggest any alteration? As I said before, if we had a proper post office we could do away with three or four clerks in the Letter Branch; if the audit were not so minute we could get rid of a clerk in the Account Branch; and I am not going to ask for any increase next year in the clerical department, although I think there will be an increase of fifteen per cent. in the business. Under these circumstances, it is as you state—I can suggest no reduction.
126. I see in this return there are extra clerks, who receive annual salaries out of the sum voted for temporary extra clerks—do you consider that regular? Yes, I do. I believe the original design of that vote was that we should bring in clerks when there was a great deal of business, such as contracts and bonds; but gradually we have required clerks for the whole year, and these have been retained.
127. They are now fixtures, paid by salaries for the year? Yes. Sometimes more are employed, sometimes less; some of them are permanently paid.
128. By Mr. Jones: Can you not provide for them among the permanent clerks of the establishment? It is a matter of economy. We now pay them only £70 a-year for the first three months, and £100 a-year afterwards; whereas if they were on the Government establishment they would receive £150 a-year, and we could not get rid of them so readily if found inefficient.
129. I think you said that generally your hours of attendance were seven hours a day? Yes.
130. Have you any knowledge of what are the usual hours of attendance in mercantile establishments, banks, and like institutions about town? I should say about the same; I think the attendance hours very fair at present.
131. Do you think there are any special qualifications required for persons filling clerkships, or any offices in the Post Office, over and above what are required for clerks in ordinary private establishments? No, I should say not. There is a peculiarity about the Letter Branch; some clerks are much sharper than others in the sorting of letters.
132. A clerk of ordinary quickness and attention would be able to acquire the necessary technical knowledge in a few months? Yes; in the Letter Branch the employment is very mechanical.
133. Do you think the average amount of salaries paid for good clerks in private establishments

ments, or in banks in the town, would be sufficient to secure good clerks in the General Post Office? Yes; but, of course, clerks who have been a long time in the Post Office have acquired an amount of experience, and a degree of efficiency which cannot be bought. I could name a clerk who has been many years in the department, whose services you could not replace if you paid another person £1,000 a-year. I think the junior clerks are sufficiently paid.

W.H. Christie,
Esq.
4 Aug., 1858.

134. *By the Chairman:* It has been stated that a large number of letters go by the ship's bag, in each Melbourne steamer, because your department does not close sufficiently late to enable people to send their letters through you; that you close somewhere about two hours before the steamer leaves, and that, therefore, letters inclosing invoices, and matters of that kind, are sent in the ship's bag; and that, although stamps are affixed to these letters to enable them to be taken, these stamps are not obliterated, but are sent back to the Colony, whereby several hundred pounds a year are lost to your department? I know the difficulty of taking off the stamps from letters, and I think few would do so; still it might be worth while where there was a large correspondence.

135. Would it not be a more gracious way of increasing the efficiency of the department if the Post Office were kept open until a later hour, and an arrangement were made with the Post Office authorities at Victoria to send a clerk from the office here to deface all stamps coming from them through the ship's letter bags, they doing the same on their side? It is usual in every part of the world for parties to take advantage of the last moment before the starting of a ship to send letters by her bag. The Melbourne mail, except by the mail contract ships, closes half an hour before the starting of the steamer. By the English mail steamer the Post Office requires two hours. In one particular case a party may collect these undefaced stamps, but I do not think it is general; that might, however, be met by asking to see the ship's bag, and defacing the stamps.

136. *By Mr. Forster:* Would the gain be worth the labor of the clerk? It might be more satisfactory.

137. *By Mr. Jones:* Who takes the mail on board? Mr. M'Mahon.

138. How long before the ship starts does he deliver it? He leaves the Post Office as soon as the mail is made up.

139. Up to what time do they take letters on board? Up to the last moment.

140. Would it not answer the purpose if the Post Office sent down a bag to the ship, with the understanding that the bag should be kept open till the last moment, and that M'Mahon should take possession of the bag and seal it, to be delivered with the other letters at Melbourne? Then they would not deface our stamps; they would not acknowledge our stamps; they would not take any trouble about our stamps.

141. Could you not make an arrangement with the Post Office there, that if they would undertake to deface ours you would undertake to deface theirs? If stamps come up from Melbourne undefaced, we get sixpence a letter on them, and in the same way the Post Office at Melbourne gets sixpence on a letter from New South Wales, with an undefaced stamp; therefore, as far as the revenue is concerned, it is as broad as it is long, though no doubt it would be more regular if all letters went through the Post Office.

142. Then, in point of fact, the letters sent in this letter bag are paid on twice? Yes, and taken in this light the party addressed has every right to employ the undefaced stamps as he pleases.

TUESDAY, 10 AUGUST, 1858.

Present:—

MR. COWPER,

MR. JONES,

MR. PARKES.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

Christopher Rolleston, Esq., Registrar General, called in and examined:—

1. *By the Chairman:* What are the duties at present performed by you in the various branches of the department of Registrar General? I have the general supervision of the two branches of the department—the Registration of Births, Deaths, and Marriages, and the Registration of Deeds. In connection with this I have the whole of the correspondence to supervise; I draft nearly the whole of the letters myself, in reply; I sign all the deeds of grant that are issued, and the enrolments of them; I make the different reports that are necessary; I have had the control and management of the census, and the preparation of all returns connected with the population of the country.

C. Rolleston,
Esq.
10 Aug., 1858.

2. You perform those duties under two Acts of the Legislature? Yes, under the Act 19th Victoria, No. 34, and 7th Victoria, No. 16.

3. What is the strength of your department in each branch? I have four clerks for the registration of births, deaths, and marriages, and six clerks in the branch for the registration of deeds, including the Deputy Registrar.

4. Do you find them more than sufficient for the performance of the duties that devolve upon them? No; I want an extra clerk (an indexing clerk) for the registration of births, deaths, and marriages.

5. In addition to the clerical assistance that can be provided by the vote for £200? No; I can do it with that sum, but it is not so satisfactory as having a clerk attached to the establishment whose particular duty it is to carefully compile the indices.

- C. Rolleston, Esq.
10 Aug., 1858.
6. Instead of having the assistance of gentlemen temporarily to perform this duty you would like to have an officer fixed to the department? Yes, I should; for a person employed temporarily does not care how the work is done, and requires a greater amount of supervision, and this being the key to the whole of the business, it is most important that it should be well done, as if not properly performed it is comparatively useless. As an instance, I may mention that the indices of baptisms, marriages, and burials, transferred to me from the Supreme Court were done in that way, and they are not to be depended on.
 7. Are you doing anything to remedy the defects in them? I cannot. I have not the strength to go over these old records, which cover the space of so many years. It would require a great deal of labor.
 8. This vote for unforeseen expenses is a contingent vote? It was proposed by myself, to cover the charge for indexing, which I saw would be necessary.
 9. Would a qualified clerk at £200 a-year meet all your wants? I think it would; it is a small salary for a man who performs so important a duty, for it is most important to have the indices correct.
 10. What duties devolve upon these four clerks in the registration of births, marriages, and deaths? Mr. Macdonnell, the senior clerk, is the Accountant; he enters all the inward correspondence, minutes it, places it with the former papers, and sends it up to me; he tabulates the monthly mortality of Sydney; he assists in compiling the annual tabulations which are necessary for the report; and performs many other smaller duties, which I cannot very well describe.
 11. How long has your department been in existence? Since the 1st March, 1850.
 12. Do you find the entries increasing? Very much indeed.
 13. What is the number of entries? Last year about 20,000.
 14. Do you find that the public co-operate with you more cordially in carrying out the Act than they did in the first instance? Yes, very much so; there is a strong feeling springing up in favor of the department; I hear the same from many of the country registrars.
 15. Was there not a complaint that you commenced your duties by a number of queries which, apparently, were not necessary, and which were considered rather inquisitive? There was, and there are still some few objectors to the system of registration established.
 16. Do you find that the district registrars fill up their returns pretty regularly and carefully? Yes.
 17. Have you any difficulty to get gentlemen to perform the duties satisfactorily? No, we have a very good class of men, generally.
 18. Do you consider these four clerks absolutely necessary? They are, indeed.
 19. Do you keep up your work? Yes.
 20. You have no arrears? We never have an arrear for two days. The system I have commenced, and intend to carry on, will not admit of arrears accumulating.
 21. With regard to the Registration of Deeds Branch, there were a large number of arrears, were there not? Yes, I believe so.
 22. How do those arrears stand now? They are completely got up. There were two or three clerks employed temporarily to get up these arrears, and they were nearly completed when the branch was handed over to me.
 23. Are the indices completed too? Yes, they are all complete, with the exception of indices from 1838 to 1848, which are still most imperfect, and require to be re-done altogether.
 24. Are you doing anything to them? No; I cannot touch them.
 25. Under whom were they prepared? Mr. Elyard, in the Supreme Court.
 26. They require to be re-made? Yes.
 27. Have you had any explanation of the cause of their being in this imperfect state? On account of the deficient staff of the department; they were done in a chance or catch way, whenever a clerk could be spared from other duties for half an hour. The consequence has been, that sometimes they have been entered under a wrong name, and there is very great difficulty in tracing the deeds during these ten years.
 28. If the clerk were fit for the work at all he must have been able to have done it correctly? The indexing of deeds requires some legal knowledge; in some instances there may be a dozen names connected with the property dealt with, and there ought to be an index of every one of these names. It is very probable, from deficiency of knowledge, that a clerk may have entered the wrong names. I understand, from Mr. Jaques, that this has been the case. Since 1848 Mr. Jaques has done the duty himself, and the indices from that time are quite perfect.
 29. Are these defective indices a great drawback to the value of your office? Yes, they are a great drawback. When the business was first handed over to me, I represented to the former Government the inconvenience which would result from it.
 30. How long would it take a qualified clerk to make new indices of all these deeds? Two good clerks twelve months.
 31. The information you now have would assist them? It might be used; but they would have to go to every deed again to ascertain whether it was correctly indexed.
 32. Would that take two clerks twelve months? I think so, at least Mr. Jaques seems to think so, and he has had a good deal of experience in indexing, having done it himself for ten years.
 33. Mr. Jaques is the gentleman who is put down here at £350 a-year? Yes.
 34. Is there any necessity for dividing the department into two branches, and to give a messenger to each—one under the name of book porter? The messenger in the Deeds Branch is book porter; he has charge of all the volumes, and unless he were there, the parties who come to search would throw the volumes about, down upon the floor, or in any direction—the registers would thus receive injury; and it is this man's duty to look after them and put them

them back in their proper places; if he were not employed, one of the clerks would have to attend in his place.

35. You say he is not an office messenger? He is not an office messenger, but book porter, and if he were not there we should have at the end of the day, perhaps, five hundred of these volumes strewn over the floor. The other man is the out-door messenger. I thought the book porter was unnecessary when I was first appointed to take charge of the Deeds Branch, and refused to recommend his continuance; but I found the office could not be abolished without detriment.

C. Rolleston,
Esq.
10 Aug., 1858.

36. With regard to the office accommodation, is it such as to be a safeguard for the important deeds and records you have? No.

37. Do you take any means to prevent accidents by fire? We have our own fires put out immediately after four o'clock.

38. These deeds are not in any safes or fire-proof rooms? No; they are in the midst of a stack of buildings occupied by families.

39. You have given evidence upon this subject before another Committee? I have.

40. You consider it absolutely necessary for the safety of these records that some better provision should be made for their safe keeping? Yes.

41. With regard to the sum of £2,500 for deputy registrars, how do you distribute that amount? They are paid by a fee of 3s. for every correct record of a birth, death, or marriage sent in during the quarter.

42. Is that fee paid by Act of Parliament? No; it is fixed by regulation.

43. In the more populous districts do you not consider that more than sufficient? I do not know that it is; perhaps half-a-crown might be sufficient in a very densely populated district. Half-a-crown is the fee in Victoria, and I commenced with half-a-crown here, but I found the district registrars were so disgusted with the smallness of the remuneration that I thought it advisable to increase the amount to three shillings.

44. Will you state the largest amount received by the registrar of any district? Something under £200. Mr. Carter, the registrar at Maitland, I think, received nearly £200 last year.

45. That district is now divided? Yes, and his income will thereby be reduced.

46. Have you ever considered whether the Act might not be brought into better operation by having Sydney divided into districts, and a district registrar appointed in each of those districts? I think the registration of births, marriages, and deaths would be very much facilitated by so doing, and I have recommended it in my report.

47. Would that cause additional expense to the country? It would—not less than £500 a-year, supposing the registrars to be paid at the same rate as other district registrars.

48. Do you think it necessary to give gentlemen in those districts where entries are numerous so much for each entry as you would to those where population is sparse? I think we could not give them less than half-a-crown for each entry, as it is necessary to have respectable persons to fill the office.

49. What number of entries are made in the course of the year for the City of Sydney? Last year the entries were 4,636: of course they are increasing.

50. What is your opinion of the desirableness of such an arrangement? I think it is very necessary to keep pace with the increase of the population. The births are not increasing as they ought to do.

51. That is to say, the entries of them? Yes.

52. Do you think there are many children born who are not registered? I think there are a good many births not registered; there is still great ignorance in some parts of the city notwithstanding all that has been done to give publicity to the law—at least the parties plead ignorance when they come, and are reminded of their neglect.

53. Do you take any steps to keep the public informed of the law with respect to registration? Yes. We issue notices, and post placards in all public places; we look at all the papers to see what births take place, and send notices to the parents.

54. How do you ascertain those that are not announced? We have no legal means of doing so. The other steps I have taken have been to search the Registers at St. Mary's Cathedral, and to ask the clergy to inform me of baptisms performed by them, and I have supplied them with forms; but I have found them very indisposed to assist me. I have asked them to send me a monthly return of baptisms, but they will not do it. That is the only check I have thought practicable to enable me to get at unregistered births.

55. Have you reason, from any information obtained in that way, to suppose that a number of the children who are baptised are not registered? Yes; from returns obtained from St. Mary's I found that a number of children who had been baptised had not been registered.

56. Would the appointment of district registrars in Sydney relieve your office of any labor? Yes; it would relieve the office of the clerk whose duty is the registration of births, deaths, and marriages.

57. What is his salary? I think it is £150.

58. That would be saved, and would go towards the payment of the fees to be given to these district registrars? Yes.

59. Have you made any suggestion to the Committee on the Registration of Deeds as to the office accommodation you would require, further than to recommend the erection of a new building? I gave no specification.

60. Is there any one particular site which you think more appropriate than another? I think the site of the watch-house at the back of the Supreme Court a most suitable position, as it would be convenient for attorneys, who constantly frequent and send to the office.

61. What do you suppose, in round numbers, the building would cost? I think £8,000 or £10,000 would do it.

62. With fire-proof rooms? I should think so; it would want no ornamentation.

63. Do you think it would cost so much? I should not like to say less.

64. I see in the estimate the sum of £150 for postage—is that sum necessary? My postage

C. Rolleston, Esq.
10 Aug., 1853.

is very heavy. All the forms go through the post, and the work of the office is done entirely by forms. I cannot get the- to the country districts in any other way than by post. In Victoria, and, I believe, in the other Colonies, all forms and correspondence on registration matters are exempted from postage.

65. Have you any suggestions to make to the Committee with reference to the department, to improve its efficiency, or to render it less costly to the public? No: I think to improve its efficiency it must be more costly to the public.

66. In what respect? I think that the gentlemen employed in the establishment are at too low salaries. Mr. Macdonnell, the senior clerk in the branch for the registration of births, marriages, and deaths, gets less than when he entered the service. He is the accountant, has £5,000 or £8,000 a year passing through his hands, and is a very efficient clerk. He has only £200 10s per annum.

67. Is it not through your hands the money passes—you are the head of the department? Yes; but he keeps the cash and account books.

68. Do you refer to the fees? No; he draws all the cheques and I sign them.

69. Have you not lately had an application made from Melbourne to take away some of your documents or records? Not to take them away—to extract them.

70. Then the originals will still remain with you? Yes. They pay for the copying; all we find is the paper and the forms.

71. Does the appointment of the district registrars rest with yourself? Yes. It was found very troublesome to have them first recommended to the Colonial Secretary, and then to the Governor General; and a notice was published in the *Government Gazette* that I was authorized to make the appointments.

72. Do you find that they often resign? No; unless in the case of a person leaving a district, there are few changes; the system is working very easily now.

73. Those who take the office do not find it irksome? No, not in well-regulated districts.

74. Clerks of Benches in many instances are district registrars? In some instances; about twenty-five of them, I think.

75. What other class of persons is employed in this way? There are various classes—school-masters, magistrates, storekeepers, postmasters, and gentlemen who have no other occupation.

76. You think if this ten years index were brought up your office would be, on the whole, in a satisfactory state? Yes, quite, as regards what has been done hitherto.

77. You consider the registration and indexing now going on quite satisfactory? Yes, so far as the law permits; but I think the present system of registration of deeds is very imperfect.

78. Do you find any inconvenience from the want of registers from the Bishop of Sydney's office? No, not personally.

79. Will it be any advantage to your office to have them? It would be a great convenience to the public to have one place for the registration of records of that kind.

80. Does it often cause fruitless searches in your office from not knowing where a particular register is deposited? No, because the date informs us. If the registration be one made before the year 1856, we know the record is in the Bishop of Sydney's office.

81. Then, in fact, your office is an office available for records only since the year 1855? No, I am misleading you; it is available for records almost from the commencement of the Colony. We have the records of baptisms, burials, and marriages, performed by all the denominations, with the exception of the Church of England.

82. You are deficient of them? Yes, and they are most important.

83. So far your department is defective? Yes, so far it is.

84. By Mr. Jones: How do you come to be in possession of the registers of births, deaths, and marriages of all other denominations but the Church of England? By the Act 20 Victoria, No. 27, passed in 1856, for the transfer of all the documents from the Supreme Court to the Registrar General.

85. How does it happen that the registers from the various denominations were sent to the Supreme Court, with the exception of the Church of England? That was done by 5 Wm. IV. No. 2, 3 Vic. No. 23, 4 Vic. No. 14—special Acts—which provided that all the other denominations should furnish periodically their returns to the Supreme Court, with the exception of the Church of England. The duty of registering for the Church of England was thrown upon the church itself by 6 Geo. IV. No. 21.

86. Then the duty of registering and indexing these returns from the various denominations, except the Church of England, was performed by some paid servant connected with the Supreme Court? Yes.

87. Who performed the similar duty in connection with the Church of England? Mr. James has done it of his own accord, in the hope, as he says, of getting remuneration eventually.

88. Has he received any remuneration from the public for the performance of this duty? He has, in the way of fees for searches, but to a very small extent.

89. By the Chairman: Is that stated in the correspondence? Yes; the fees he has received are stated there.

90. By Mr. Jones: Has he been in the receipt of any public salary at all while he has been compiling these various matters? None whatever, to the best of my knowledge.

91. Do I understand that he has performed this duty entirely at his own cost? Entirely; it was not incumbent upon him to do it at all, but he saw the importance of preserving these records, and has kept them up, at great personal trouble and expense.

92. Over what period do the registers he possesses extend? From the earliest days of the Colony up to 1856, the date at which the duties were transferred to me; and for over twenty years he has kept the registers in a very perfect manner.

93. What do you think would be the value of the services he has rendered in this way? I think £3,000 would not more than remunerate him.

94. That is at the rate of £150 a-year for the time he has been engaged in keeping these registers? Yes. I have looked through them; they are carefully kept, and very nicely indexed. C. Rolleston,
Esq.
10 Aug., 1858.
95. Do you believe it would be an advantage to have these records transferred from the Bishop of Sydney's Registrar to your custody as Registrar General? I do, very great.
96. Would their transfer lead to any increased cost in the staff of your department? No, I think not.
97. Would the public derive any fees from the inspection of these records? They would be a source of emolument to the public.
98. To what amount annually? That I have no means of judging. If the fees were fixed at the same rate as our own at present (5s. for search, and 2s. for a certified copy), the emoluments might be £100 a-year; I do not suppose more.
99. *By the Chairman:* As the Colony grows every year, the importance of these records would be increased? Yes; every year must enhance their value.
100. *By Mr. Jones:* Do you think the arrangements in your office are the best fitted to ensure efficiency and economy? I am about to introduce a new arrangement: instead of keeping the two branches separate, as they have been hitherto, I think of amalgamating them—dovetailing them more into each other; but the duties are so distinct that I am not sure it will work well. I think I may save labor in that way, but not to any great extent; I may get the work done more harmoniously, perhaps.
101. Do you think there is any duty performed in connection with the registration of births, marriages, and deaths, that could be safely dispensed with, so as to economise labor in your department? I do not think there is anything I could dispense with.
102. When you have effected this amalgamation, do you think you will be able to spare any of your present staff? No; I want an indexing clerk if I can get one.
103. You do not think the improvement resulting from amalgamation will enable you to reduce your present staff? Until I try it I cannot say. I am doubtful of the experiment answering. I think there will be some little saving, but not to the extent of the clerical labor of one person. You see the office is growing every day; as population increases the labor of the department increases, and the labor depends not only upon the population but upon transactions in land, and these increase daily.
104. How do the salaries of your department range in comparison with the salaries paid to officers in other departments? I am placed at a very great disadvantage in this respect. In proof of this I may mention that I have lost three excellent clerks, who have been transferred to other departments at higher salaries, and performing very much less important duties. One was a very good clerk, at £150 a-year; he was transferred to the Crown Law Officers, at £200 a-year, where he is a mere copyist: with me he was doing head-work—employed upon statistics: he was the first man I lost. The registering clerk, who was a very good clerk, receiving £150 a-year with me, was next taken away, and is now clerk to the Government Resident at Brisbane, with a salary of £200 a-year, and recommended for £250. A third clerk, who was also in receipt of £150 with me, has gone to the Immigration Office at £200 a-year. That is an illustration of the disadvantage I have been placed in throughout. I have had good clerks, but they have been induced to leave by the higher salaries given in other departments.
105. Have you found any difficulty in obtaining clerks at the salary given in your department? I have, very great. I had two persons on trial who put back the work of the office six weeks.
106. Does not the difficulty lie rather in retaining than in obtaining? I have had great difficulty in obtaining good clerks; for, as I have stated, I had two men who kept all the clerks in the office looking after them, or in correcting their mistakes.
107. You have spoken of having lost three very efficient clerks, who were receiving only £150? Yes.
108. Does not that imply that you can obtain them at that salary? No, not necessarily. I will state how I got them: At the time the reduction was made in the Government service these clerks were recommended strongly for employment from the Immigration Office, and rather than remain idle they came to me at the reduced salary, but as soon as they heard of vacancies in other departments, with an increase of £50 a-year, they left me.
109. Then it follows that either clerks in your department are underpaid, or that clerks in other departments are overpaid? Yes; there is too great an inequality in this respect in the service.
110. The duties in your office require more head-work—more capacity—than the duties of clerks in other offices? Statistics require extreme care, an accurate knowledge of figures, and an amount of system and intelligence which is not at all necessary in copying clerks.
111. Have you supplied the vacancies caused by the transferring of the three clerks to whom you have alluded? Yes.
112. How are their places supplied? I happen to have found a very intelligent clerk as registering clerk; and, in the place of one clerk, I have made an experiment, and taken two boys, between whom I have divided the salary of £150; they are doing very well, and I think, in a year or two, will make very good clerks.
113. With regard to the third vacancy? I have got a very intelligent person as examining clerk.
114. Have you, in fact, filled up the vacancies satisfactorily? Yes, after two or three trials I have.
115. Even at the present rates of remuneration you are authorised to pay? Just so; but they look to an increase of pay.
116. Do you think if there were not vacancies falling in, in other departments of the Government service, where the duties perhaps are inferior, and where a higher rate of remuneration

- C. Rolleston, Esq.
10 Aug., 1858.
- is given, these clerks would have left you? They would have left me if they could have bettered themselves in any other way.
117. By going into private service? Yes. One of my clerks has been offered £300 a-year in private service; he receives only £209 10s., but he remains in hope of an increase.
118. Is that the gentleman who performs the duty of accountant? Yes, the senior clerk; he is a very intelligent man, and gives me great assistance in the department.
119. By the Chairman: Have you many marriages performed by the district registrars? Not many.
120. Are they on the increase? I cannot say they are.
121. What is the total number? Ninety-four throughout the Colony in 1857.
122. Have you ever had the means of informing yourself as to the cause of these marriages, whether it has arisen from a desire on the part of the persons so married to conceal the circumstance? I can only speak from the marriages celebrated by myself; some have been rather incongruous.
123. How many have you performed? I performed four last year.
124. The others have been in country districts? The others have been in the country, principally in the outlying districts, and this proves that the principle of the Act is sound and good. Where the means of obtaining the religious ceremony is accessible parties do not come to the registrar.
125. Then you think the larger portion of these marriages are performed by the district registrar because ministers cannot be obtained? I believe so, in most instances.
126. Have you had any difficulty with reference to the particular expression in the Act "duly qualified minister"? I have.
127. Do you think that expression might be so altered as to make the Act more efficacious? I think there should be some evidence required that a person claiming to be registered under the Marriage Act to celebrate marriages should be attached to some religious denomination which has some fixed place of worship. At present a Mormon minister—a mere wanderer on the face of the earth—can claim to be registered. This I think is liable to abuse. Perhaps the Committee will allow me to add, that Mr. Jaques, the Deputy Registrar of Deeds, who has been over twenty years in the service of Government, and who is receiving only £350 a-year, complains of not having been put on a better footing. His duties are very important, and he has not had the same consideration shown to him as other servants of the public of the same standing.

Hutchinson Hothersall Browne, Esq., called in and examined:—

- H. H. Browne, Esq.
10 Aug., 1858.
1. By the Chairman: You are the Agent for Immigration? Yes.
2. How long have you held that office? Since the middle of 1851.
3. Are the salaries as they appear in page 22 of the Estimates those paid this year? Yes; with the exception of the salaries paid to myself and to the Chief Clerk: I receive £650, and the Chief Clerk £350.
4. The department was much larger some year or two ago than it is present? Very considerable larger in 1856.
5. What was the strength of it at that time? Thirteen clerks besides myself.
6. How many have you now? Now I have five.
7. Do you find any inconvenience from the reduction then made, or do you think your present strength adequate to the requirements of the office? I did find considerable inconvenience, in consequence of the reduction having been made so suddenly on the eve of a very large immigration that took place in 1857. The business of the department has thereby been retarded; but with the present amount of immigration, if the arrears were brought up, I should feel no difficulty in carrying on the department with the present strength.
8. How do you account for the necessity of having had thirteen clerks up to the time when the Assembly made the reduction? That may be very easily accounted for. The working of the Assisted Immigration Act entailed upon the department an enormous amount of business, and of itself was sufficient to require the addition. Four or five ships being on hand for days and weeks, and required the continual attendance of a clerk, or of myself, on board.
9. Was the amount of immigration up to that time very much in excess of what it has been since? In 1855 the immigration amounted to nearly 15,000; in 1856 to 6,000; in 1857 to upwards of 10,000; and this year, up to the present time, somewhere about 4,000.
10. What were the duties performed by those clerks as compared with the duties performed by the present establishment? The duties were different. The clerks now have no collection of moneys on board ship on the hiring of immigrants, as they formerly had. The business of the shipping department is reduced simply to that of hiring the immigrants on board, or hiring the single girls at the dépôt, and making out the ordinary inspection lists for the use of the Board. When the Assisted Immigration Act was brought into operation, it entailed the necessity of keeping a clerk continually on board to make out and witness these agreements, to receive payments, to refer to me as to whether promissory notes should be taken from certain individuals or not, and to see that all moneys were paid into the bank each night by the several clerks.
11. There are no promissory notes given now? No; the system is abolished.
12. Was that system in operation up to the time of this reduction? No; it was repealed in 1855; but it left behind it a very large amount of business in connection with the collection of these promissory notes, to the amount of many thousand pounds. These were sent to the Treasury from the department, and, if not paid at maturity, they were sent back to us. Of course this caused us a considerable amount of correspondence, as we had to write to people in the country for payment. This involved a large amount of clerical labor; in fact the correspondence of the office, and other matters contingent upon this Act, increased the business

business something like three or four fold what it had been in former years, and the department, when at its greatest strength, was less in number than had been formerly required by my predecessor when no such system existed. The Returns that were sent home to the Secretary of State and the Commissioners were also then very voluminous, and as they all had to be made out in triplicate, they entailed a very large amount of clerical labor—all these have been got rid of.

H. H. Browne,
Esq.
10 Aug., 1858.

13. You say the immigration of last year amounted to 10,000? Upward of 10,000.

14. What do you suppose it will amount to this year? About 6,000.

15. Is not this chiefly assisted immigration? A large proportion consists of people introduced under the Remittance Regulations; but we have a considerable number of ordinary immigrants as well, particularly single females.

16. You have very little trouble with them in regard to making agreements? No: we used to have a great deal of trouble with them, but we now throw the trouble of making the agreement upon the party hiring. We put a clerk in the room, and leave each person to make out his agreement.

17. You find no inconvenience? It is a great inconvenience to some of the employers; they do not like it; but I do not think it is necessary for the Government to provide clerks to make out the agreements; the public are gradually falling into the system, and it does not give so much umbrage as it did at first. Yesterday we hired about seventy girls in three hours, without any great difficulty. We had two clerks in the room to assist.

18. What are the duties now performed by the office—you say that the Returns which used to go home to the Secretary of State are got rid of, that the collection of promissory notes and matters connected with them are got rid of? The duty of the Chief Clerk consists in receiving and registering all correspondence which comes to the office, writing letters from my minute, and copying them into the letter book, or pressing those that are pressed. He has the general superintendence of the other clerks, and carries on the business during my absences on board ship, which, during large immigrations, are frequent.

19. How many ships have you on the average—one a month? More than that. I think we have had about eleven ships this year; last year we had twenty-eight or twenty-nine.

20. One a fortnight? They do not come in, of course, in that regular way. If they came in one a week, or one a fortnight, arrangements could be made to meet the demand upon us, but sometimes two come in together. Last year we had three together, and with the small force I then had I was obliged to put aside every other duty, as they must be attended to.

21. When they come you are required on board them? Yes, and the clerks too. When we were reduced in 1856 to three clerks, I was obliged on some occasions to shut the gates, for there was nobody left in the office to answer a question. We had for the first three months only three clerks, but on a representation made to the Government that it would be impossible to carry on the business, they gave me an accountant, and another clerk.

22. Do you find that sufficient? For the present immigration it is. My duties are entirely contingent upon the amount of immigration that comes to the Colony. If we have a less amount of immigration than at present, there will be no necessity for so large a staff; but the applications made under the Remittance Regulations —

23. How are those applications going on—are they on the increase? Very much on the increase. During the last month we received £2,200, and up to this morning, which is the 10th of the month, £970. I believe if the system were worked satisfactorily by country agents they would amount to something considerable.

24. Who are the country agents? The Clerks of Petty Sessions.

25. In what respect do you think the system is not satisfactorily worked by those gentlemen? I do not think the laboring classes have afforded to them the information that might be given. I have taken a great deal of trouble to circulate information among the country Benches; but notwithstanding this, I daily receive applications from persons in the country who express their entire ignorance as to the working of the regulations, and the parties to whom they should apply to make these deposits. These parties should not apply to me at all, but should know that by applying to the Bench they would get the information they required.

26. What proportion of labor does it entail upon your office to attend to applications with respect to these regulations? It requires one clerk entirely to attend to that duty. He stands at a counter in an open office, where he receives the applications, and in nine cases out of ten he has to write these applications himself, from the dictation of the party applying, the party being unable to write, or, if able, likely to occupy a longer time doing so than would be occupied by the clerk. When the application is filled up it is handed to the Accountant, who sits in the next room; he receives the money, makes out the receipt, and sends it in for my signature, and after the closing of the office for the receipt of money at two o'clock, it is the duty of the clerk at the counter to make out the passage certificate and transmit them to the country districts to the Clerks of Petty Sessions, or hand them to the persons who made the deposits in the morning. These passage certificates in some instances are numerous, in other cases they consist of a single document.

27. Do you not think these forms are multiplied unnecessarily? I think they are as simple as they can be now, for we keep no office copies as we used formerly to do. We merely have a book which contains a transcript of the passage certificate, and as the money is paid in it is written up in the book, and from the book copies of the certificate to the Commissioners in triplicate are made out. I do not think we could simplify the matter any more with due regard to accuracy.

28. What other duties have you beyond correspondence and making up returns to the Government. A large number of the persons who come out now go to their friends at once, do they not, and thus cause very little trouble to the department? Yes. There is one clerk who has the duty of the shipping branch.

29. What does that involve? On the arrival of a ship he proceeds on board, and makes out

H. H. Browne, Esq.
10 Aug., 1868. an inspection list by which the Immigration Board examine and pass the immigrants. After that list is made out he inserts a notice in the papers, stating the names of the parties who have arrived under the Remittance Regulations, so that their friends may know when to apply for them. He also makes out a list of those who are intended for hire. After the Board has sat, at which he has to be present, he remains on board, usually for three days.

30. The Board sits on board each immigrant ship? Yes.

31. And passes every immigrant? Yes. He then attends to the hiring of the people, and after the third day, to save time, he leaves blank agreements with the surgeon, who is authorised to hire out the few who may remain in the ship.

32. Does not the Board sit in your barracks to examine and pass the single girls? Yes: they are removed to the barracks immediately.

33. They are not brought before the Board in the ship? No. I make it a rule to remove the girls to the dépôt as soon as possible after the arrival of a vessel, in order to prevent any acquaintance being formed in the harbour, or if there has been any intimacy to cut it short as soon as possible. Then the shipping clerk after he has finished with the ship makes out the arrival list, on which the moiety of the passage money is payable, and it is his duty to copy my draft reports which are made on each ship; he has to make this out in triplicate, and send it to your office for transmission home. There are a great many other matters connected with the shipping branch incidental to each ship, of which it is almost impossible to give a detail.

34. According to a return sent in to the Committee, it appears that you have one clerk in charge of the remittance branch, another clerk keeping the register of the remittance branch and preparing abstracts, and then an Accountant who receives all moneys under the Remittance Regulations—does it not seem from that that there are three clerks mainly engaged in duties connected with these remittances? No, not exactly. The Accountant, being Accountant and Cashier, is the person responsible for the receipt and payment of all moneys, therefore he must be a party to the transaction, so far as the receipt of the money goes, and his book is a check upon the clerk who receives applications at the counter, and the applications at the counter are a check upon the other. The other clerk referred to is simply a junior clerk, who is supplied to the office for copying purposes, and when, as was the case yesterday and is the case to-day, the remittance branch is full of work, owing to the departure of a mail, and a large number of persons are waiting to receive passage certificates, he assists in making out these certificates.

35. Is there much correspondence between your office and country agents? A great deal.

36. What is the class of correspondence? The Remittance Regulations bring about a great amount of correspondence, in consequence of misunderstandings on the part of the country agents. Insufficient sums are sometimes transmitted, and the matter requires to be explained, but the principal part of the correspondence is connected with the return of money, in consequence of the person in whose favor the money has been remitted not having availed himself of the passage. We are now getting monthly returns from the Commissioners which, I hope, will reduce that correspondence very much. The information was formerly sent out in a very irregular and unsatisfactory way, and, consequently, we were applied to week after week, and month after month, for the return of money, and the only answer we could give was "No instruction from home respecting this." After applying to me, and finding they could not get the money, they went on to the Colonial Secretary, and then were sent back to me. This has entailed a large amount of correspondence, but there always will be a large correspondence, which it appears to be part of my business to attend to. On the arrival of these people, I frequently receive letters from their friends in the country, transmitting one, two, or three pounds, requesting me to hand the money to the parties, and to tell them where to go, by what coach, steam-boat, or other conveyance. All this requires time and attention; but these people are so ignorant, and would be so much adrift if they did not get this assistance, that I cannot refuse to afford it; and, besides, they seem to consider themselves entitled to it, having been brought under an arrangement of the Government.

37. Do you find that many persons whose friends have sent home money to pay their passages do not come? Of course there are a good many, but it is not in consequence of a disinclination to come here. Sometimes it turns out that the health of the party prevents; sometimes the party has emigrated to America, or has entered the army or militia.

38. Still you speak of a considerable amount of correspondence in answer to applications for the return of moneys by parties whose friends have not come out? Yes. I can tell the amount paid back during the last three months: In June we paid back about £500, in July £450, and this month about £250.

39. The amount appropriated to immigration is less this year than it was? Yes, by £25,000.

40. Of course then your duties will not be increased? We have a balance remaining from last year, and we have not as yet transmitted the whole of the funds voted for this year.

41. They are in course of transmission? Yes; but the Commissioners have sufficient funds to carry on, and it is not necessary to give them a balance of more than £25,000 or £30,000.

42. Seeing that the chief portion of the duty arises from the arrival of vessels with immigrants, do you think it necessary to keep up the staff? I do not think in the present state of immigration it would be wise to reduce it. We can easily be guided by the extent of the funds provided by the Government for immigration for next year. If the legislature decide upon spending no money, then the department ceases to be necessary to be kept up. It all depends upon the amount of immigration.

43. Supposing the same amount is voted next year, and no more, now that you have got up your arrears of work —? I am sorry to say our arrears are not worked off. The register, the record of the receipt and dispatch of letters, is in arrear since September last year. I am in hope they will be worked up in the next month.

44. You refer to the book in which should be entered an abstract of every letter that comes in? Yes, and it is the most important in the office. H.H. Browne,
Esq.
45. What is the record of the dispatch? The records contains an abstract of the letter received, and shows the disposal of the letter, the answer that was sent, and in what folio of the book it could be found. 10 Aug., 1858.
46. How much is that in arrear? Seven or eight months.
47. What are the duties of the Chief Clerk? I have explained that it is part of his duty to keep up that record since the reduction of the office. Before that time there was a separate record clerk, and a separate statistical clerk, the Accountant also had an assistant. Since the reduction there has been no record clerk, no statistical clerk, and no assistant to the Accountant.
48. Who prepares the statistical returns? It is done by almost everybody in the office: I have done it myself this year; I have had nobody to put on it; but I have been able to devote only an occasional half hour or hour to it. It is necessary in preparing these returns that the person employed should not be interrupted; but in our office this is impossible, as on the arrival of a ship the place is like a fair.
49. By the last ship how many immigrants had you for hire besides the seventy females you have referred to? We had a very large number for hire—the principal portion—sixty single men, and about thirty-five married couples.
50. Are they a good class of immigrants? Very good. They hired out very well, with the exception of two or three very large families on board. There is a great demand for good agricultural labor, and there will be still greater as summer opens.
51. Have you anything you wish to suggest to the Committee? I merely wish to impress upon the Committee that I should wish the strength of the department to depend entirely upon the amount of work thrown upon it. Its permanent staff may be considered small, but I would not wish it to be increased, even if immigration were to be continued on a very large scale, because of the inconvenience and difficulty of reducing a large establishment when the work ceases. I think it better to have a permanent staff of four or five clerks as we have now, and as immigration increases to procure extra assistance; but I believe it would not be wise at present to cut down the office any lower than it is, if the Government have it in contemplation to spend anything like £100,000 in immigration during the year 1859.
52. What means have you of knowing that these clerks are fully occupied? The number of duplicates and triplicates sent into your own office from ours shows a great amount of labor. Everything must be in triplicate. If thirty ships come in during a year, there are ninety reports to be made out, and with each remittance there is sent a paper, which contains perhaps a hundred names, with a number of particulars. Each year there are thirty-six of these to make out. All these matters have to be carefully compiled, as great inconvenience would arise if they were not correct: they cannot be slurred over.
53. The Chief Clerk has lately been removed for some irregularity? Yes.
54. Do you believe that for some time past he did his proper amount of work. I do not. I regret to say that since his removal from the office, upon an examination of the papers in his office, that I do not think he did that amount of work which might have been expected of him. He was a very excellent man for a very large office, but he was better in commanding than in carrying out. I think he felt so much the serious change in his position, by the reduction in his salary with a few day's notice of something like £200 a-year, which brought him from a state of comfort to a state of misery, that he had not strength of mind to bear up against it, and gave way to intemperate habits, and in consequence neglected his duty.
55. You were not aware of this neglect of duty till the time of the late inquiry? I was not. I never saw him but on one occasion really intoxicated, and he used to come into my room often, I should say twenty times a day. I never observed him in a state of intoxication but on that occasion. He was always in a bustle, and appeared to be doing a great deal of work; but it is quite clear that since his removal we have done much better.
56. What steps have you adopted since, with a view of making yourself more completely master of what these gentlemen do, so as to guard against the Chief Clerk at present neglecting his duty? I have done away with that part of the control which formerly rested in the Chief Clerk, which required that every document and every order should pass through his hands. He, as the Chief Clerk of a large office, to a certain extent controlled everybody under him; he received his orders direct from me, and saw that they were carried out; but I now find it more convenient to communicate more directly with the party who is charged with the performance of any particular branch, but I still hold the Chief Clerk responsible for the discipline of the office and management of the clerks who are subordinate to him: with respect to that which appertains to the Chief Clerk, I apply to him; I apply to the Accountant with reference to that which appertains to him, and so on. By this means I have more direct control over the different clerks than I could have, by sending all my communications through the Chief Clerk.
57. I see it is stated here that the Accountant receives and pays all moneys against the department—in what way does he do so, independently of you? He cannot do so independently of me, because every cheque paid away is signed by myself; it is brought in with the account checked by the Accountant as correct, the cash-book is brought in also. I sign the cheque which is initialled by him, but he can pay nothing without my signature.
58. He has no control over moneys? None: a rough cash-book is kept by the clerk who receives the applications at the counter; that cash-book is initialled by the Accountant, as well as by the clerk; the papers are then examined by the Chief Clerk, to see whether they agree with the entries on the book; they are then brought in to me, and I see that they tally with the check kept by the Accountant, and with the amount paid to the Government. Each time a deposit is made of money from the Treasury it is paid direct to the Government account in the Bank.

H. H. Browne, Esq.
10 Aug., 1858.

59. Does the Chief Clerk receive money now? Only with regard to remittance letters; he is present at the opening of remittance letters, and initials the book in which every remittance letter is entered, with the amount of the contents of the letter, whether in notes or cheques. The Chief Clerk initials this, as a check upon the Accountant.

60. *By Mr. Jones:* How long had you reason to believe the late Chief Clerk neglected his duty? I think I may say he really neglected his duty only for a period of a few months—principally since the commencement of 1858. Since his removal I have found letters in his desk which were not attended to. In the year 1857 I do not think by any possibility he could have kept up his register, for the demand upon his time and upon the time of everybody in the office was excessive, in consequence of the large immigration we had, and the small force to carry out the work. I do not blame him for neglect in 1857; I do for 1858.

61. How does it occur that, even for a few months, he could have gone on neglecting his duty without the neglect being discovered? The neglect I have spoken of was such as would not immediately come under my notice, because they were not acts of neglect of a very serious nature. They were little matters which ought to have been acted upon, respecting which he had received my directions, but which he had not acted upon. With the exception of one document from Van Diemen's Land, I do not think there was anything of such importance came under my notice as would have formed matter of inquiry. He was very clever, a very good clerk indeed, a very clever man and well-educated, and I very much regret that he should have placed himself in such a position.

62. Was it possible that the late Chief Clerk could have a letter in his desk for some months not replied to—does not that imply that there was not a very efficient supervision? That was in consequence of the record not being written up. If the register had been written up no letter could have remained a day unanswered, because it would have been seen at once; but it is impossible to carry every communication in one's head, when perhaps there are twenty-five or thirty a day. The register is the record by which we could ascertain at once.

63. How then is the head of a department in any case to know whether his directions have been attended to? When the record was kept up, the record clerk furnished me with a record of every letter not answered; and every week I had an absolute return of all that had not been replied to.

64. When the record book was not kept up, did you not think you should take means, week by week, to ascertain whether your directions were carried out? I did as far as I could. I kept a private memorandum of anything I thought was important, particularly with reference to money matters. I felt that to be the most important matter, and it was almost the only matter I could keep up with the strength I had at the time. I did however keep it up, without any complaint from the Auditor General or any one else. With a reduction in the strength of a department of from thirteen to three, it is easy to understand how difficult it must have been to bring a thing so disorganised into system again, and I need hardly tell you that it gave me a great many sleepless nights. If it had not been that I was told by my friends I should be laughed at if I did so, I would at the end of 1856 have given up my situation in disgust, so much did I feel the responsibility thrown upon me.

65. This irregularity, for which the Chief Clerk was dismissed seems to have occurred this year, but you have referred to instances of neglect that happened some twelve or fifteen months ago? They were irregularities that did not come under my notice. His fellow clerks did observe him in a state of intoxication, but they did not report it to me, except on one occasion. Many persons who have constantly visited have said they never saw him in that state, though others have said they have seen him intoxicated.

66. Have you had any complaints from the public as to the incivility of officers of your department? I have had, and they did apply principally to the late Chief Clerk.

67. You are not aware that it was a matter of notoriety that persons who had to go to your department were treated with incivility? I have had many cases which I have inquired into, and in most of these I have found that the persons who made the complaints had forgotten themselves quite as much as the Chief Clerk. They have come to ask the department to interfere in matters with which they had really nothing to do—matters of disagreement between themselves and their servants, and because the Chief Clerk has declined to interfere, and has said they must apply to the Police Office, the parties complaining have felt aggrieved, thinking we were there to redress every grievance of the kind.

68. Have you reason to believe that the deportment of the gentlemen connected with the establishment has improved, with regard to their intercourse with members of the community who have business to transact there? I think very much. I did not like the manners of the Chief Clerk to the majority of the public, but I found him in the office with very strong testimonials, and merely because he had a disagreeable way of speaking I did not think that sufficient to justify me in removing him. He had certainly a very unpleasant way of speaking to people.

THURSDAY, 12 AUGUST, 1858.

Present:—

MR. COWPER, | MR. FORSTER,
MR. PIDDINGTON.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

John M'Levie, Esq., Inspector General of Police, called in and examined:—

1. *By the Chairman:* You are now Inspector General of Police and Superintendent of the Metropolitan and Metropolitan District Police? Yes.
2. You are aware, I dare say, that very many complaints have been made as to the generally expensive character of the police throughout the Colony, and that this Committee has been appointed to consider the means of reducing the public expenditure. Can you suggest to the Committee any way in which, in your opinion, the police expenditure might be reduced, without impairing its efficiency? Keeping in view the immense extent of the territory and the varied description of the population, I do not think it is possible, with safety, to reduce the present police force of the Colony, without adopting, at the same time, some means to improve its efficiency, to meet such reduction.
3. Do you think there is a way by which the numbers of the police force could be reduced, and its efficiency at the same time kept up? I think there is.
4. Will you state to the Committee your views upon the matter? By making use of our increasing means of ready communication by electric telegraph, and by having the police centralized, I think the efficiency of the force could be very much improved, at less expense than the cost of the existing force.
5. In what way would the use of the telegraph enable you to reduce the number of the police? By affording ready means of communication between the different Benches of the Colony and Sydney, and also internally between the several Benches, and increasing thereby the facilities for the publication and detection of crime.
6. Such information as would pass through the telegraph, I apprehend, now generally passes through the Post Office, rather than by means of personal communication? Through the Post Office at present. Under the existing system there is a want of unity of action in the several Police Districts of the Colony that tends to prevent that information being acted on promptly and properly. The police of each Bench is responsible only to its own Bench of Magistrates.
7. Was there not once an effort made to centralize the police, and place it under one head, and that effort was objected to? There was. That centralized system was in existence for two years.
8. And gave great dissatisfaction? It did.
9. Did not the local Benches complain that they were not allowed independent action? I believe that was one of the complaints.
10. Do you think that proposal would be received with more favor now? I think it would. I have been in conversation with many of the country Magistrates, who are evidently coming round to the absolute necessity of centralization. The executive duties of the police are, in my opinion, entirely independent of the duties of the Magistrates.
11. Would not the unpaid Magistrates of the districts feel annoyed, as they did on the former occasion, when they came to see that the executive duties were taken out of their hands, and that the executive officers of police acted only under the directions of a central head in Sydney? I do not see that they would have more grounds of complaint in that respect than the Magistracy of the district of Sydney. I have never had a single complaint of the kind from a Magistrate; and here the executive duties of the police are carried on entirely under my own directions.
12. Supposing the matter did find favor with the public or with the unpaid Magistrates, what would you propose as the means of carrying it out, so as to reduce the number of the police, and consequently the expense? I think the police might be reduced numerically, and their efficiency be improved, by mounting more of them.
13. Would not purchasing horses and finding forage for an additional number of mounted police be very expensive? Certainly, those are considerable items of police expenditure, but it would be an expense well laid out.
14. Would the total cost be less than the expenditure is at present? I think it might even be less than at present. At present we have mounted police on two of the principal thoroughfares of the Colony, and instead of confining them, as they are now, to the main roads, they might be distributed through the different Benches in that neighbourhood. Again, there is the Gold Police, a number of whom are mounted. I find that in the Colony of Victoria there are no less than four hundred mounted constables.
15. To what extent do you think mounting more constables would enable you to reduce the present numbers? That would be a matter requiring time for arrangement; but I am quite sure that in many towns the numbers might be very much reduced, and efficiency promoted, by mounting them. At present there is a vote of £3,000 for mounting constables, and I fear, from all I can learn, that it is not very well expended.
16. Was not that vote resorted to more as an allowance to enable constables to have a horse when necessary, in order to get rid of the enormous cost of forage found previously to be so burdensome? No; I think when the system was changed again from that of centralization to the present system, it was considered that the police would be perfectly inefficient without some of them being mounted, and therefore an allowance of £20 per man was given to a certain number of constables of each Bench to enable them to keep horses.
17. Previous to that was there not an allowance of forage, or were not some police horses supplied with forage, from contractors, at a very heavy cost? Yes.

John McLeir, Esq.
12 Aug., 1866.

18. Did not that produce repeated discussions in the Legislature, and in consequence the arrangement now made was adopted? I am not aware that it was on the score of the expense of forage that the change was made.
19. With regard to your scheme of finding horses, I apprehend you would have a public horse found for each trooper or mounted constable, with a regular allowance of forage? Yes.
20. At what amount do you calculate the expense of that? At present forage in some parts of the Colony is at a very high rate indeed; but I think if there were police paddocks, where the horses might be grazed at certain periods of the year, the horses might be kept, on the average, for £30 a-year.
21. If we once come to put them on forage allowance, would it not be considered officially correct to draw a forage allowance for each horse all the year round? No.
22. Has not that generally been the rule? That has been the rule, but I broke through the rule, only a few days ago, with respect to the patrol on the Western Road. The Superintendent reported that during the grass season forage was not so much required, and requested my authority not to draw forage for one month, as he had saved, while grass was plentiful, sufficient forage to last for that period.
23. Used it not to be the system formerly for the mounted police to draw from the contractor their regular allowance of forage for each horse, and then the police stables to be the place where gentlemen from the surrounding districts used to put up their horses instead of taking them to livery stables? Yes, such was found to be the practice in some instances, but during the time I was paymaster of that force we checked it as much as possible.
24. Would not that very item of forage, if put upon the usual official scale, and taken from contractors, add very enormously to the expense of the police, unless some very stringent check were adopted? It would be quite practicable to establish such a check as would prevent anything of the kind you have alluded to. For instance, in the old mounted police there was a diary of the duties kept, and forwarded monthly to head quarters. For every day the horses were absent from the station one day's rations of forage for the number of horses was struck off in checking the contractor's accounts for forage chargeable for the month.
25. If I understand you rightly, you do not propose to give a regular scale of forage allowance? I would give it for every day the horses were actually stabled, and receiving full rations of forage at the stations, in the same way as with the regular cavalry—when they are absent from barracks forage is not drawn for them. A system of check might be established, by which it could be ascertained when the full rations of forage were not issued to the horses in consequence of the absence of some of them, or when the regulated allowance might be reduced if grass was plentiful near the station, and thereby prevent any misapplication of the allowance.
26. Have you any idea what number of horses would be necessary to supply a sufficient body of mounted police under the system you propose? We have sixty-five Benches, and, of course, some would require a larger number of horses than the others.
27. What would be the average number of horses required by the Benches? I think an average of four for the whole Colony would be sufficient—say 260 horses.
28. You would buy these horses and forage them at the expense of the country? Yes.
29. What number of constables do you think that would enable you to reduce from these sixty-five Benches? The effective strength of all the country Benches at present is 65 chief constables, 44 district constables, 378 ordinary constables, and there are, besides, 59 troopers of the Western and Southern Road Patrols; in all, 546 of all ranks.
30. Is that the whole of the country police? Yes, excluding the Gold Police.
31. An average of about eight to the Benches? Yes. With the prospect of the extension of telegraphic communication, and the amalgamation of all the police, I think that number might safely be reduced to about 360, with the means I propose of increasing their efficiency.
32. Does your scheme contemplate the erection of barracks, or not? At some stations barracks would be necessary where the force was large, but in some districts, where there is only a watch-house, I do not think barracks would be necessary.
33. What do you suppose would be the cost, in round numbers, of barracks for these police stations where you think they would be required? There are a number of places in the country where police barracks are still standing, and would merely require some repairs—for instance, Bathurst, Goulburn, Parramatta—unless they have been appropriated in some other way, and at the gold fields, I believe, they have barracks.
34. Are the Gold Police under your control? Under the Police Act the appointments and dismissals are vested in me, but I exercise no control beyond confirming the appointments or dismissals recommended by the Commissioners.
35. Why do they communicate with you at all? Because the Act requires it, and I have the payment of them.
36. Why do you not exercise the same control over them as you do over the other police? Because it has never been the case in the department. I found it was a mere nominal control, in order to carry out the provisions of the Act; but the nomination of the constabulary on the gold fields was left to the Gold Commissioners, and the appointments and dismissals were merely approved by the Inspector General, as the Act required.
37. Do you see any reason why that police should be on a different system from the other police? I do not.
38. Do you think advantages would arise from the police being all on one system? I do.
39. In the event of the adoption of such a system of police as you suggest, would you contemplate the appointment of any District Superintendents of Police under the Inspector General, or do you think he could exercise a sufficient control over the executive duties without District Superintendents? I think the Inspector General could exercise all necessary control within the County of Cumberland, considering the improved means of communication by railway, and that beyond the County of Cumberland the immediate control in the Western and

and Southern Districts might be entrusted to the present Superintendents of the Patrols on those roads, and in the Northern Districts to an additional Superintendent, to be appointed for the purpose. John M'Leir, Esq.

40. You think Captain Zouch could do the duty to the south, and Captain Battye to the west, and that another gentlemen should be appointed to the north? Yes, with proper grades of rank under them. 12 Aug., 1859.

41. Inspectors or sergeants? Sub-inspectors and sergeants.

42. Would you require to pay these men higher rates than you give to the present country police? No, I do not think so, as long as there is no necessity for increasing the present rate of pay.

43. What is your opinion of the present rate of pay of the police—do you think it might now safely be reduced? I do not, at the present rate of labor in the Colony.

44. When you have vacancies have you more applicants than are required to fill them? Lately I have not—not the description of men I would take; and within the last few days resignations are beginning to come in again from men who are serving. I take that as a test that they are not over-paid. Within the last week I have had three notices—three months' notice.

45. Do men who resign lose any benefit which may have arisen to them from the Police Fund? They lose everything.

46. Are these all good men? Yes, all. Whenever there is a good report from the gold fields I am sure of resignations in a day or two afterwards.

47. Do you know what occupation these men have generally gone to—whether they get better permanent employment, or whether their resignations are merely speculative? I think they are more speculative than otherwise. They think they can do better at the gold fields; and in some instances they go down to Victoria, expecting to get better appointments there; but I know the applicants are so numerous there that there is not much chance. The pay is also much better in Victoria than in this Colony.

48. What is the relative proportion of the pay of the Victorian Police and that of this Colony? Excluding the ranks of Inspector and Sub-Inspector, which we have not here, I find they have 120 sergeants, 60 of whom have ten shillings and 60 have nine shillings a day, with quarters, fuel, light, and water.

49. What is the pay of the same class in New South Wales? We have only the rank of sergeant in the city; in the country the relative rank is that of district constable. The pay of a district constable is six shillings and three-pence a day.

50. Without other advantages? Without other advantages. In the City Police the pay of a sergeant is eight shillings a day.

51. Have they barracks? No barracks. Of ordinary constables in Victoria there are 1,100, 400 of them mounted, who receive eight shillings and sixpence a day, and 700 foot, at eight shillings, with quarters, fuel, and light.

52. That is about double the number of police that we have? More than double the number. They have 1,285 persons altogether in the police force, from the Commissioner himself to the ordinary constables—not including the Detective Police, of which no particulars are given. They merely take a vote of £10,000 for the Detective Police, without giving particulars; and I know they have detective policemen all over the Colony, but the number I cannot ascertain.

53. Do I understand your suggestion to go to the extent of depriving the local magistracy of all right to interfere in the operations of the constabulary at all? In the detection of crime, certainly—not in the prosecution of crime.

54. In fact you would put the country Magistrates on the same footing as the Sydney Magistrates now are? Exactly; and on the same footing as Magistrates are in the neighbouring Colony of Victoria and in the mother country. I do not see that, either socially or otherwise, the Magistrates of this Colony are superior to them, and yet they have no control over the police.

55. To what extent do you think this would reduce the police expenditure;—have you at hand the total expenditure for the police of the Colony? The gross amount voted for the Executive Police only for the current year, not including Police Magistrates or Clerks of Petty Sessions, is £122,800.

56. *By Mr. Piddington:* Does that include the Gold Guards and Native Police? It includes the Gold Guards, but not the Native Police.

57. *By the Chairman:* Does it include the City Police? It includes the City Police, the Country Police, the Water Police, the Detective Police, the Road Patrols, the Gold Fields Police, and the Gold Escorts.

58. *By Mr. Piddington:* What is the total cost, including the Native Police? The Native Police vote is £17,696 for this year.

59. That makes a total of £140,496? Yes. But it must be borne in mind that the Native Police is never employed in the real police service of the Colony.

60. *By the Chairman:* Then the cost of police is about ten shillings per head of the whole population of the Colony? By calculation I make it 9s. 2½d. per head, taking the population from the Registrar General's last return, but that must be very much under the present amount of population.

61. What is the proportion in Victoria? I do not know the number of their population. Their police vote is £268,221; but there are certain items of expenditure included in our police vote as contingencies which do not appear in theirs; therefore those items should be deducted from our expenditure in instituting any comparison with that of the Victorian police. I see that the vote for forage to the police in Victoria is £25,000.

62. *By Mr. Piddington:* Are you aware of the population of England? About eighteen millions, I think.

63. If the cost of the English police reached the same amount per head as the cost of the police

John M'Lerie, Esq.
12 Aug., 1858. police of New South Wales, what would be the total cost of the police of the mother country? I do not think that should be taken as a basis. Look to the extent of country over which our police is spread. One of our Police Districts alone is equal to the whole of England in extent of area.

64. If the police of England cost the same rate per head of the population as the police of New South Wales, would not the total annual cost amount to nine millions sterling? I have no doubt of it, if you took the population as the basis only.

65. *By the Chairman:* You do not know what the police expense of England is? I have no recent returns. I have the Commissioners' Report of eight or nine years ago, but of course there is a great change since then. As I said before, there are some districts of this Colony of equal extent to all England, with four constables in them.

66. Do I understand you to say that, from your experience as Inspector General of Police, and from the means you have of becoming acquainted with the views of the magistracy generally, you would recommend the introduction of such a system as you have described? I would. I dare say many of the Magistrates would be at first opposed to the introduction of such a system; but if it was properly carried out, I have no doubt they would be obliged to acknowledge the improvement.

67. And you think a reduction might be made in the number of constables that would more than counterbalance the expense of forage for the horses of the additional mounted constables you would require? Yes, that is my present impression, without going into detail.

68. In round numbers, the total police vote is £120,000—what reduction on that sum might be made on the system you propose—you think we might reduce 180 constables, that would be a reduction of what per head? Say £100 a-year each.

69. That would be £18,000 a year? I was going to say £20,000.

70. What do you think the additional forage would cost—how many horses did you say? There is a vote of £3,000 for forage at present, and I think £7,000 in addition would be sufficient under the new system.

71. Do I understand you to be of opinion that in no other way could we reduce the expense of the police at present? I do not think it is possible.

72. You consider that unless they are mounted, disciplined, and directed on the system of centralization, acting under the orders of an executive chief, you could not reduce the present numbers of the police of the Colony at all? I do not think it is possible. In a great many instances, within my own knowledge, under the existing system, the duties of a constable are with him merely a secondary consideration. A great many are engaged in trade and farming, and one thing or another, in the country, and the duties of constables are merely a means of adding to their income.

73. Are they of any use in that way? Not at all.

74. Then might we not reduce them even as they are considerably? It is possible that might be done; but then you would have the local magistracy opposing it in every possible way.

75. You have been recently corresponding with the different Benches of Magistrates in preparing the Estimates for next year? I have.

76. Can you state any information you have received, in answer to your circular asking for the necessary information to enable you to prepare the Estimates? I have made out a schedule of the increases proposed by the Benches, and I find they are not so great in the districts beyond the boundaries as in those within the settled districts. Beyond the boundaries the gross increase proposed is £1,000, whereas the increase proposed by the Benches within the boundaries is £2,200.

77. Is that increase for additional constables? Not altogether. There are some extraordinary propositions—increase to the Clerks of Petty Sessions and to Chief Constables. The other items are principally recommendations to increase the constabulary.

78. Do you consider the office of Chief Constable necessary in the country districts? Not in every instance. I think an intelligent sergeant, at a reduced rate of pay, would be of equal advantage to the public service.

79. What pay would you propose to give the sergeant? You could not give him less than the rate of pay given to the sergeants in Sydney. I would change the designation altogether, and do away with the rank of Chief Constable.

80. What would you call them? Sub-Inspectors; and Sub-Inspectors should be confined to the principal Benches of the Colony in large towns. At other Benches, where the police duties are not at all heavy, a sergeant of police would be quite sufficient. I find that in some country districts the Chief Constable is engaged in trade as well as other members of the constabulary.

81. Would it not be desirable that the Government should issue a circular, to the effect that no constable should occupy himself in any other business? Such were the orders under the Inspector General before the system of centralization was done away, and such are the orders now existing in the Metropolitan District.

82. On what data do you express an opinion that frequently in the country districts the constables are following other vocations? Reports have been frequently made to me of Chief Constables keeping stores in townships, but as they are entirely under the control of the local Benches I have always been obliged to refer the writers of those letters to the Benches of Magistrates.

83. Do you think it would be a good measure for the Government to write a circular insisting on every person in the pay of the Government as a policeman confining himself entirely to his duty? I do. A gentleman, who is a Member of the Assembly and a Magistrate, brought under my notice an instance where the district constable of the part of the country where he resides is a large landholder, renting land from one of the Magistrates of the Bench, and, as I said before, making his duty as a constable a mere secondary consideration.

84. Referring again to the memorandum you have prepared from the replies to your circular with regard to the Estimates, is there any one particular district where there is a great demand for increase? The greatest demand for increase is from Parramatta. They ask for six additional constables. John M^r Lerie,
Esq.
12 Aug., 1853.
85. *By Mr. Piddington*: Is there any demand from Ryde? That is part of the Parramatta District.
86. *By the Chairman*: Did the Parramatta Bench state any particular reason for asking that increase? They say the increase of crime recently has induced them to do so; but I have seen the Police Magistrate at Parramatta since, and I have pointed out to him that I shall be able, by arrangement with the Railway Department, to relieve them from a large portion of the escort duty, which presses hard upon them. At present all prisoners coming down from the Western and Southern Roads are obliged to be escorted by the Parramatta Police.
87. Then you do not consider it necessary to give them this increase? Not so many as six constables. It might be a question for the Government as to the number they should have.
88. With regard to the City and District Police, I see you have 124 constables, besides sergeants and inspectors—are these absolutely necessary? They are.
89. You have also some mounted troopers, have you not? I have.
90. If you had more mounted police, could you do with less ordinary constables? I do not think I could. The duties are of a different nature altogether. Those of the mounted men are more of a protective kind than anything else.
91. To what extent do these constables go—they are not merely for the city—they include the Metropolitan District, do they not? The whole district.
92. It extends midway towards Parramatta and Liverpool, does it not? On the Parramatta Road to the western boundary of the Parish of Concord; on the Liverpool Road to the western boundary of the Parish of St. George; and from Botany Heads to Broken Bay Heads.
93. What is the Central Police Station I see here? It is the principal station for the reception of prisoners in the city, being close to the Central Police Office.
94. Why is it put separately on your Estimates? Because there is a separate establishment there. That has always been the case. The men employed there have no other duty to perform.
95. Is the St. James' Watch-house still occupied? Not as a police station.
96. Why did you give that up? On the reduction of the number of inspectors and sergeants, some time ago.
97. Is it at all required as a police station? I do not think it is. We can do without it very well.
98. Is crime on the increase, or otherwise? The only crime on the increase is shoplifting, especially by abandoned females who have been leading a life of crime ever since they have been in the Colony. Shoplifting and stealing show-goods are on the increase.
99. Have there been many convictions? The convictions are principally summary, and they are so uncertain that I do not think the system works well. Perhaps a prisoner may be brought before one Magistrate to-day, and may get six months in prison, whereas another, for a more serious offence, may get three weeks the next day. That species of crime has very much increased since summary jurisdiction has been given to Magistrates to the extent of forty shillings.
100. Previously they were committed for trial? Yes, at the Quarter Sessions, and then the amount of punishment was certain to be fixed according to the degree of the offence and the previous character of the offender.
101. Have you observed that in consequence of the alleged want of employment of persons in Sydney there has been any increase of crime? I have been unable to perceive any change in the state of crime on that account.
102. Then everything is quiet in Sydney as regards the police? Perfectly quiet.
103. But you do not consider that you could reduce the constabulary in numbers or emolument? No.
104. What collateral advantages have they besides the pay? They have clothing.
105. Every constable has clothing in addition to his pay? Yes. That, by the by, is a difference between the Victorian police and ours; there they pay for their own clothing.
106. Your constables have no quarters? As far as old and otherwise unoccupied public buildings will go I make them available, by allowing deserving men to occupy them. For instance, two men are now occupying St. James' Watch-house.
107. The police in Sydney are attended by a medical officer? They are.
108. But they have no other advantage? No other advantage from the Government; but I am glad to say they are often rewarded by private persons for extraordinary exertions in the detection and prosecution of crime. I keep a record of all such rewards, and no reward is taken without being entered in a book and approved by me; and I find that in some months the amount is something considerable.
109. With regard to your office establishment, I believe the salaries have been modified since this estimate was framed, in consequence of some casualty which occurred in your office? Yes; the office of Accountant became vacant by the death of the last holder.
110. What is the salary now paid to the Accountant? There is no recognised Accountant now; the duties of the late Accountant are performed in a room where there are four clerks, the principal clerk in which is Mr. Bligh, with a salary of £300 a-year; he has charge of the duty.
111. What is the salary of the next? £275.
112. And of the next? £175.
113. In your Police Branch — ? The branches are amalgamated now; the duties are done throughout the office.

John M^r Leric, Esq. 114. Then you have reorganized your office? Yes. I beg to hand in a paper which will show the duties of the office. It is an "Average Statistical Précis of Correspondence, Police Accounts, and Crime Intelligence, received and acted upon monthly in the Office of the Inspector General of Police." (*The witness handed in the same. Vide Appendix A.*)

12 Aug., 1858. The criminal branch is done by the detectives; there are no clerks. I have an office for them in the same building, where everything connected with detective duty is done by the inspector and the men he has with him.

115. Have you four clerks employed in reference to your accounts? No, three; the junior clerk at £125 is a copying clerk, employed in any way that is necessary. The Account Branch of my office is the most important with respect to its duties at present.

116. It involves correspondence with the country Benches? It does. All their various accounts pass through the office, and the examination they undergo is the same with respect to every item of expenditure from nine-pence to a thousand pounds—all are obliged to pass through the same number of entries.

117. Your Chief Clerk gets £375 a year? Yes.

118. Do you put him in charge of the whole? Yes.

119. Who has the immediate responsibility under yourself as to the money? No money passes through our hands; everything is paid by cheque.

120. Why was this gentleman called Accountant before? Because his duties were to examine the accounts.

121. But there was no money? Very little. Sometimes surcharges against country Benches were sent down; but all money payments are made by cheques, and, if possible, by crossed cheques.

122. Have you prepared any suggestions to the Committee with reference to the police generally, beyond what I have extracted from you in answer to previous questions, or any measures with a view of carrying out immediately what you propose. Supposing the Government were to adopt your proposal, when do you think it could take effect? It could not take effect without an Act of Parliament.

123. It would cause a total reorganization of the police? Yes. In reference to the important duties connected with the Account Branch, I beg to hand in to the Committee some vouchers which will show the nature of the examinations we have to make. (*The Witness handed in the same. Vide Appendix B.*) We have to receive the accounts of sixty-five Benches in the course of the month, and almost every Bench has a different rate of contract.

124. These are to shew the mode in which you query the accounts before payment is passed? Before they are sent to the Audit Office.

125. I perceive amongst these accounts one for the agistment of three horses supposed to have been stolen—does the country pay for that? Yes; you will see my query, and the reply to it.

126. There is another account for the keep of a stolen calf, 10s.: in both these cases did the country pay the expense without any return? Yes.

127. You query all the accounts of the country Benches in this way? As accounts are received they are examined and checked, and when found to be correct payment is made.

128. In auditing these accounts have you to comply with all the requirements of the Auditor General—if one person signs for another, are you obliged to produce a written authority for his doing so? I have an abstract which embraces all the accounts under one head, and the Clerk of Petty Sessions signs an acquittance to me for all the payments.

129. The expenditure for the whole police of the country passes through your hands? Yes. The total expenditure that passes through my office is about £12,000 a month.

130. All by cheques? All by cheques. In order that the police in the country districts may be paid as soon as possible after their pay is due, wherever there is a branch bank I have arranged with the head bank in Sydney that the Magistrates or Clerk of Petty Sessions shall be authorised to draw for the amount of the pay for the preceding month, and that is then paid to the men at once, and I honor the draft in Sydney by giving a cheque to the bank for the amount.

131. The rations and forage are supplied under contracts entered into by the Government? Not in all cases. Sometimes there are no contracts, and in some cases a very objectionable system prevails, for I find that police supplies are furnished sometimes by the Clerks of Petty Sessions, and sometimes by Magistrates.

132. Only where it is inevitable, I presume? I should suppose so.

133. Does it go to any great extent? In one district it does.

134. What district is that? Balranald. The Clerk of Petty Sessions there has been contractor ever since I have been in office.

135. What is his name? Edwards.

136. What amount does he receive yearly for supplies? His receipts must be considerable, for the police on the border are allowed rations.

137. Any forage? No.

138. By Mr. Forster: You seem to think that the most effective mode of dealing with the police question is to increase the centralization of the department? I do.

139. Are you not aware that the country districts have been for a long time complaining of the excessive centralization of the Government in all matters? I am not aware of it. I am speaking of police matters only.

140. Has not the feeling of discontent I speak of been produced by the supposition that the Government, or the head of a department at a distance, cannot well understand the local wants or requirements? That may be applicable to other matters, but not, in my opinion, to the police.

141. You mentioned, in giving your ideas of the way in which your plan should be carried out, that there were duties in the districts up the country in which the Magistrates would require to have the supervision of the police? In judicial matters.

John M'Levie,
Esq.
12 Aug., 1858.

142. Were they acted judicially, not ministerially? Just so.
143. Does not that lead to the inference that it would be desirable to have two sorts of police in the country districts—to have, in a great many cases at least, a small body of local police not under the superintendence of the central authority, conducting at the same time all other branches of the operations of the sort of body you speak of? I think if there were two bodies such as you refer to the duties would so clash that the system would be inoperative. That is exactly the case at present; there is a jealousy between the local police of the different Benches and between the police of many of the country Benches and the Sydney police. I find that in practice. A very short time ago I had an application for a detective officer to go four or five hundred miles to detect cattle stealing. I sent him up, and he has succeeded in getting a committal; but he reports that not only did he receive no assistance from the local police, but that they retarded him in every possible way, and actually allowed him to be assaulted by parties connected with the prisoner.
144. It seems he managed to get on without their assistance? He did.
145. And as to the assault on the policeman, the ordinary tribunals of the country could have given him satisfaction? The man was so glad to get away that after he got the case completed he did not wait for that purpose.
146. The gist of your argument is, that the central police would not be assisted by the local police? They would not.
147. If the central police were an efficient body it would not require the assistance of the local police? At this moment, as I said before, if I send a detective policeman to the country, I am aware that he will get so little assistance from the local police that I confine his identity as a Sydney detective to one or two Magistrates.
148. In that case all that would be necessary would be that you should have an efficient body of central police, and if that was the case they would not require assistance from the local police? I cannot at present see what would be the object of a local police co-existing with the central police.
149. Because you yourself have admitted that there are two branches of duty in which the Benches employ the police force? No; you misunderstand me. The duties of a Magistrate are entirely independent of police duties, or at least they would be so under a system of centralization. They would merely have to carry out the law judicially, when breaches of it were brought to their notice.
150. But they have two branches of duty, they act judicially and ministerially? They do at present, except in the City of Sydney.
151. In the City of Sydney the Magistrates perform no ministerial duty? No.
152. I speak of ministerial duty such as the preliminary inquiry into a murder or case of felony, where a Magistrate would commit for trial; in that case he would require the assistance of the police. Is it not necessary also that, acting judicially, he should have police under his direction, if only to keep order in the Court? So he has. Whenever a Court is open the police in that Court are under the orders of the Magistrate presiding. That is perfectly understood here.
153. If a Magistrate sees a trifling breach of the law committed in the streets——? The police are obliged to act.
154. If I understand you rightly, you would deprive the local Magistrates of that power? No; you misunderstand me entirely. Of course I would not; because during the two years of centralization, the police were bound to execute all warrants and lawful orders given by Magistrates.
155. I do not know whether it has come to your knowledge that it has been the habit of police officers, particularly officers of the Native Police, to carry warrants about with them for years, and to execute them at their own pleasure? Wherever that officer may be he was amenable to the law.
156. In what manner could that responsibility be practically enforced? If it could be ascertained that he had omitted, through default on his own part, to execute the warrant, he would be punishable by law; it is an indictable offence.
157. He might be punishable by dismissal, but that you must admit is a punishment of no great consequence, under present circumstances? I think it is an indictable offence, failing to apprehend a prisoner for whom an officer holds a warrant.
158. With regard to this plan you speak of, or at least to your mode of purchasing forage, rations, and so on, has it ever come under your consideration that a plan has been mooted of allowing Government officers up the country, police officers included, to provide themselves with accoutrements? No. The only thing they provide themselves with now is forage.
159. Are you favorable to a plan of that kind? No.
160. You think it would work badly? Yes.
161. That it would be likely to lead to a trafficking system? It would.
162. Are you favorable to the extension of Police Magistrates through the interior—do you think the police would be made more efficient by that? I do not think so, if we could get the co-operation of the unpaid Magistrates.
163. Do you find that the unpaid Magistrates in general are so efficient as to make it undesirable that Police Magistrates should be appointed? In some instances I find them very efficient; from some Benches we have the greatest possible amount of co-operation.
164. Do you not think the circumstance of the Police Magistrate being a paid officer, and, in some sense, a professional man, without being a lawyer, because from his constant attendance on the Bench he would acquire a greater knowledge of the administration of the law, would render him a more efficient administrator of justice than unpaid Magistrates can be? A paid Magistrate must of necessity be a more independent Magistrate than an unpaid one, because he would, or ought to have, no local interests or jealousies to move him in the performance of his duty.
165. Then do you think the public service would be benefited by the appointment of Police Magistrates?

John M'Leric, Esq.
12 Aug., 1858. Magistrates? Not as regards the police. I look upon it that a paid Magistrate should have no more control over the police than an unpaid one. The police in Sydney, when in Court, look to the Magistrates generally, without reference to whether they are paid or not, and they are bound to pay the same respect to the orders of an unpaid Magistrate as to those of a paid Police Magistrate.

166. Then in fact the sum of all your proposed improvements consists in centralization as it is carried out in Victoria and at home? Yes.

167. Are you able to state, from your own observation, or from the experience of others communicated to you, that this system has worked well in Victoria? I have reason to believe it has.

168. Do you think they have a more efficient police than we have? If the prevalence of crime be taken as a test we have the more efficient police, but certainly our population is of a different kind.

169. With regard to the opinion you have expressed that the police are more highly remunerated in Victoria, is not a good deal of the difference nominal rather than real, owing to the prices of provisions and other requisites being higher there than they are here? No; I have heard that living is as cheap in Victoria as in New South Wales.

170. Have you never heard that it costs just twice as much to stay at an inn or a club in Melbourne as it does in Sydney? I am not aware how that may be; but I was in conversation not very long ago with a Magistrate of Victoria, and he told me that living in Victoria was as cheap as in New South Wales.

171. With regard to prohibiting constables from engaging in private business, would you carry out that rule strictly? Yes.

172. Do you not think the same rule equally applicable to all branches of the public service? Yes, if an officer's salary is sufficient to support him.

173. To the Crown Law Officers as well as others? There are certain opinions with respect to that particular profession, concerning the correctness of which I should not like to decide. But the Crown Law Officers, if not allowed to practise, would have to receive much higher salaries.

174. Has it come to your knowledge that public-houses have been extended through the interior very much of late, even to places where there are no constables at all? There are instances of communications having been made to my department applying for additional constabulary, and the establishment of public-houses has been given as ground of necessity for the required increase.

175. Do you think that where public-houses are established there is good reason for having constables? Breaches of the peace are more likely to occur where public-houses are than at other places; but I do not think it follows that where the local Magistrates choose to license a public-house the country is to be burdened with additional police on that account.

176. Do you think the increase of crime is in any way connected with the increase of public-houses? I have no doubt of it. Public-houses lead to drunkenness, and drunkenness is the origin of nine-tenths of the crime committed in this Colony.

177. That is as much as to say that the extension of public-houses renders necessary a larger body of police? Yes.

178. Do you think the system of allowing spirits to be sold generally would have a good effect? No. I have seen the effect of that in a town where that system prevails.

179. Could you suggest any system of licensing public-houses, or conducting the sale of spirits, which would have the effect of diminishing crime, and consequently of rendering our police less numerous? There are no means of doing so, so long as the existing system of licensing is maintained.

180. Do you consider the existing system a bad one? I do.

181. Will you mention in what particular respects you think it is bad? Because there is no limit to it.

182. You think the number of public-houses in a district ought to be limited? Yes, by the requirements of the district.

183. You think the issue of a license should not depend upon the ability of the man applying for it to offer a certain amount of accommodation in his house, but by the requirements of the district? Just so.

184. That is to say, by the necessity for the accommodation for travellers? Yes.

185. Then where there were no travellers you would allow no public-houses? No. I look upon public-houses as being established for the public benefit, for the advantage and accommodation of travellers.

186. Not for the sale of spirits in itself? No.

187. Then, I presume you would say that a public-house established for no other object than the mere sale of spirits was a nuisance? Yes; it is falling back to the London gin shops, which are the greatest nuisances in existence.

188. I imagine, from the tenor of your remarks, that you consider a great number of public-houses to have been established for no other object? I do.

189. As the law at present stands, do you not consider that the Magistrates are bound to grant a license where there is no objection to the house, nor to the applicant? They are certainly not bound to do so; but I regret to say that in many cases they do so, looking merely at the accommodations the house contains.

190. Have you considered at all the changes in the licensing law which are about to be introduced by the Bill now passing through the Assembly? At present if a license is refused by the Magistrates there appears to be, practically, no remedy for the publican if he thinks himself aggrieved, and this Bill proposes to allow the Government to consider such a case, and to grant a license if they think proper—what is your opinion of that? I think the Government should have that power, because in many instances licenses are refused not on public grounds.

191. Unjustly? Unjustly.

192. And there is no remedy at present? No.

193.

193. You think licenses are sometimes refused when it is for the public benefit that they should be granted? Yes. John McLerie,
Esq.
12 Aug., 1868.
194. *By Mr. Piddington*: Do you think it in the least degree probable that two classes of policemen, one national and the other local, would work together with advantage to the public? Certainly not; the very constitution of the two bodies would tend to their clashing.
195. What system of centralization of authority, in reference to the control of the police of the country, do you allude to? For the performance of their duties the police would be responsible to the officers under whom they were serving in the districts.
196. Would that system tend to do away with the want of union in the Police Districts which you have alluded to? It would certainly have that effect.
197. The police of each Bench of Magistrates are now, I understand you to say, responsible only to that particular Bench? Yes.
198. From that limitation of responsibility to the local authorities you think evil arises? I do.
199. Do you think it is reasonable that the police should be paid by the central Government, and that the power to control the police should be left in the hands of the local authorities? I do not. In placing the accounts before this Committee I have shown the disadvantages of the system.
200. What advantages are secured to the public by continuing the control of the police in the hands of the local Magistrates? None to the public, certainly.
201. Would not the system of centralization you allude to, or rather the supreme control of the police by one responsible head, tend to improve the efficiency of the force? Certainly it would have that effect, because a code of rules would be drawn up which would be applicable to the whole force, whereas at present one Bench issues orders of one kind, another Bench orders of another kind, and in many instances, where the Magistrates of the same Benches do not work together harmoniously, the constabulary frequently receiving conflicting orders.
202. Such a system must operate directly to impair the efficiency of the police? Certainly. I can give you an instance. A short time ago an application was made to me by a Bench of Magistrates to nominate for their police a trained constable from Sydney; I had selected a man to send up to them, when I received a second communication requesting me to take no further steps in the matter, as the Chief Constable had, upon his own responsibility, and without the knowledge of the Bench, selected a man himself, had taken him to the residence of a Magistrate with whom they were not working harmoniously, and had had him sworn in.
203. I think you have stated that uniformity of management of the country police exists in England? It does.
204. The metropolitan system of police has been extended to all the country and urban districts of England? Yes; all the police of England and Scotland report to the Home Secretary.
205. The system is that of centralization, the authority and management of the police being vested in the hands of one or two individuals? It is.
206. With reference to the opinion you have expressed with regard to the increase of crime by the prevalence of the habit of drunkenness, what objection have you to the abolition of the system of licensing public-houses? Do you mean to the entire abolition of the licensing system, and throwing open the trade without license?
207. Yes? I think it would have a bad effect. There should be some public control over houses of that description.
208. What particular evils do you think would arise from permission being given to all persons to sell spirits without a license, provided the public are not permitted to consume the spirits on the premises? I can only form an opinion from what I have observed in Glasgow, where that system prevails to a great extent. Every small shop is licensed to sell spirits over the counter; and in no town in the world—and I have been in a good many—have I seen so much drunkenness.
209. *By the Chairman*: What is the sum paid for a license? I believe it depends on the rent of the house, or something of that kind.
210. *By Mr. Piddington*: Something similar to the licenses for the sale of pepper, and so on? Yes.
211. *By Mr. Forster*: There is, in fact, free trade in spirits? Almost free trade.
212. *By Mr. Piddington*: Under the licenses you allude to in Glasgow, is the consumption of spirits allowed on the premises? In some instances there are rooms behind, called dram-rooms, where the purchaser can go in to consume them.
213. Do you believe the principle of allowing every one to sell spirits, while denying the right of consumption on the premises, would increase drunkenness? It would have the effect of screening from the public eye the drunkenness that of necessity comes before it now, by leading to sly drinking at home, which would, in my opinion, be worse as an example to a family than drinking at a public-house.
214. Do you not think the system of fitting up luxurious rooms in public-houses, for the purpose of inducing individuals to go in and drink liquor, is likely to increase the crime of drunkenness? It must have that effect. The allurements a house offers draw people there to drink, who perhaps would not otherwise think of it.
215. Do you not think that in the absence of such allurements there would be less drunkenness? Perhaps with a certain class of society there would be less drunkenness, but a species of drunkenness would then become fashionable that, in my opinion, would be more objectionable—sottish, sly drinking at home.
216. Do you not think many young men who have given way to drunkenness owe the origin of their habit to the allurements of public-houses? I have no doubt of it.
217. With reference to the Sydney horse patrol, what are the duties of that patrol? They patrol the City and District of Sydney at night, and in case of disturbances they are available to turn out at a moment's notice; and whenever there are fires or large concourses of people,

John M'Leir, Esq., from any cause, they are more effective in preserving order and keeping the crowd back than a much larger number of foot police. The sixteen men of the horse patrol in Sydney would do more work of that kind than a hundred footmen.

12 Aug., 1858. 218. Does the horse patrol remain out all night? They commence patrolling at a certain hour in the evening.

219. During what hours of the night are they expected and required to be on duty? In winter they go out at seven o'clock, and never come in till one o'clock, or until all the public-houses are shut and everything is perfectly quiet.

220. Are the men left to judge of the propriety of their return? No; there is a responsible officer in charge of the patrol.

221. How many men go together? Two is the usual number; sometimes there are more.

222. Is there a corporal with every other man? No. When there is no corporal the senior trooper is responsible.

223. Do you think it wise to entrust the performance of this duty to the charge of a trooper? If anything occurs, his orders are to communicate at once with a patrol where there is a corporal.

224. When both the senior trooper and his companion have a common interest in returning to barracks at night, do you not think it is likely they will return as soon as possible? They cannot return before the proper time, because there is a check at the barracks.

225. In what does that check consist? There is a responsible officer at the barracks who receives their report.

226. Do you not think many robberies might take place after the hour of one o'clock? If the mounted patrol were employed for the prevention of robberies alone, I have no doubt robbers would watch them; but they are, as I said before, more a protective than detective force, and when they come in the foot police are all on their beats.

227. Do you not think the horse patrol would be very efficient in checking highway robberies? Of course they are. Whenever there are any highway robberies reported to have been committed on the roads, a patrol is started off at once in pursuit.

228. If the horse patrol are absent from one o'clock in the morning, during the long winter nights, will not their absence give highway robbers opportunity? No; after one o'clock the streets are clear, and the attention of the ordinary police is more readily drawn to people prowling about than before.

229. From your experience as to the practise of highwaymen, do you think they go home at one o'clock in the morning? No.

230. If persons who live by depredations of that sort do not go home at that hour, why should those who are set to watch them go home? Because, as I said before, persons prowling about are more likely to be detected by the ordinary police.

231. The ordinary police, after one o'clock, are more vigilant in observing people moving about? Of course, from the fewer number in the streets.

232. Do you think that vigilance is sufficient without the presence of the horse patrol? Judging from the small number of depredations committed, it is. Such things as highway robberies or street robberies are scarcely ever reported; they are very few indeed; and when they do take place they are generally committed before one o'clock.

233. Do you know what is the custom of the horse patrol in the neighbourhood of London? Yes.

234. Do they go home at one o'clock? On the roads near London the horse patrols meet one another and then return, and it is the same here; the patrol that goes along the Parramatta Road meets the Longbottom patrol, and then they either return or take the Liverpool Road.

235. Are you aware whether the London patrols leave their duty at one o'clock? I cannot say what the system is at present, but I know that was the system when I was in England.

236. I am not speaking of the mode in which the duty is carried on, but of the time when they leave off patrolling to go home to bed? The road patrol of London is similar with respect to its duties to the patrol of Sydney. They are called out on extraordinary occasions to —

237. My question only refers to the time of their leaving their duties? You will understand that though I have said the men of our patrol do not go home before one o'clock, it does not follow that they should go home at that hour.

238. But they possess a discretion to do so? Yes; under certain restrictions.

239. Then you think it not at all desirable that the horse patrol should patrol all night? Circumstances may arise which would render it necessary. It has been done all night. When the ordinary police was so much reduced at the time of the gold discovery, they patrolled all night; then I saw a necessity for it.

240. If the horse patrol are only out till one o'clock in the morning, do you not think those duties, merely riding about, are very light? It is not mere riding; the men have their horses and accoutrements to keep clean.

241. If a mounted policeman is on duty only from seven o'clock to one, has he not more than sufficient time to keep his horse clean? He is not always engaged, certainly.

242. Would you not think such light duties would be very attractive to many persons? They are; and for that reason I have a superior description of men in the patrol.

243. You think it is not at all necessary that there should be a horse patrol out all night? Circumstances may arise to render it necessary.

244. As a general rule? Not as a general rule.

245. By the Chairman: Have you the control of the Southern and Western Patrols? I have.

246. Have you ever satisfied yourself as to the necessity for these patrols on the Southern and Western Roads, when there is none on the Northern Road? I confess I never could see why any difference should be made, particularly as there are gold fields in the Northern Districts as well as in the other districts.

247. Do these patrols perform any particular duties, or are you aware that they render any essential service in the detection or prevention of crime? The duty on which they are principally engaged is the apprehension of cattle stealers, an offence which prevails to a great extent in the Colony at present. John M. Leric,
Esq.
12 Aug., 1858.
248. Does it not prevail to the northward? It does equally so.
249. Have you ever heard that there is any necessity for establishing a similar patrol to the north? There is this difference between the Northern and the other roads—that the townships and Police Benches are nearer together on the Northern Road.
250. Is the number of police greater? There is not a greater number, but there are more in comparison with the length of the road.
251. In what proportion? Perhaps about three on the northern to two on the other roads on the same length of road, owing to the short distances between the Benches.
252. I see that you have estimated for forage for fifty-eight horses on the Southern and Western Roads, and none on the Northern; in the event of the amalgamation of the police as you propose, I suppose these could be brought to account in the general arrangements? Certainly; that is what I propose; and the horses of the Gold Police also.
253. You think it desirable to bring all the police bodies under one system? I do.
254. Supposing they were all amalgamated, might there not be by these means some very considerable reduction? Yes; and there might also be a reduction in the mounted patrol in Sydney, because while the men were training here for country duty they would be available for Sydney duty.
255. You propose to put them under training before you send them off? Yes; both horse and foot.
256. Have you ever turned your attention to the number of police Benches where Clerks of Petty Sessions are employed—do you think there are more than are required, or not? Looking to the extent of our territory, I do not think there are. If you refer to the map you will find places where there are three or four hundred miles between Benches.
257. In some districts? In some districts; not within the settled districts, certainly.
258. Nor between Armidale, Tamworth, and many of these districts? Well, I think the Benches to the north might perhaps in some instances be reduced; but a necessity exists for the establishment of a Bench between Grafton and Armidale, a distance of 160 miles. The means of communication between these two places are so difficult that prisoners remanded from the Bench at Grafton to the Bench at Armidale must be sent to Sydney to go to Armidale, and *vice versa*.
259. How is the item of £4,000 for the expenses of provisions expended? For provisions for watch-houses, and rations allowed to the police, at Deniliquin, Balranald, and other police stations on the border of Victoria.
260. What are the data on which you make this estimate of £2,200 for clothing and £1,170 for stores? Taking the number of the police at so much per head for clothing, which they get from the Colonial Storekeeper.
261. All the police throughout the country? We clothe those within the settled districts; all those beyond the settled districts have an allowance in lieu.
262. Is that paid out of this amount? Yes; ordinary constables have three-pence a day in lieu of clothing, and Chief Constables sixpence.
263. What are the stores? They are watch-house stores—blankets, clothing, utensils, arms, ammunition, handcuffs, and other equipments of the police not included in the articles of clothing.
264. How is this lumping sum of £1,170 made up? The amount of stores required by each Bench is calculated. The amounts are generally taken from those of the previous year, and the sums added together. I think there has been no variation in this estimate for the last two or three years.
265. That amount is yearly expended? Yes. I think sometimes it is exceeded, and then authority has to be applied for to charge the excess to another account.
266. The next item is stationery and postage—what is the stationery for? For the use of the Benches in the country.
267. Is it supplied by the Colonial Storekeeper? Yes.
268. It is an arbitrary amount? Yes.
269. How do you check it? Requisitions are received from the Benches in my office and are forwarded to the Colonial Storekeeper, who checks them before issuing the stores, and obtains the authority of the Chief Secretary for doing so. When issued, the accounts are made up and paid by me to the Colonial Storekeeper.
270. He does not make purchases in the Colony? No.
271. Would it not be better to put all such matters in one vote for all departments—why should there be any necessity for putting this separately? I do not see any necessity. I suppose it is done with the view of keeping the police votes distinct.
272. How is the vote for postage expended? All the Clerks of Petty Sessions purchase from the postmasters the stamps they require, and on reference to my office the accounts are paid by me. They are signed by the postmasters, and certified by two Magistrates.
273. Have you ever considered the distribution of the police amongst the different Benches, so as to form an opinion whether fourteen at Bathurst, ten at Goulburn, nine at Maitland, thirteen at Parramatta, twelve at Windsor, and so on, are a fair proportion with reference to the requirements of the districts? The requirements depends so much on the out stations that it is impossible to say. For instance, at Maitland they have several out stations where constables must be placed.
274. Are not thirteen at Parramatta, so near to Sydney and without a Circuit Court, more than a fair proportion, as compared with Bathurst or Maitland? Not in proportion to the population. They are applying for more.
275. As far as you can judge, the number of constables is not excessive throughout the country?

- John M'Levie, Esq.
12 Aug., 1858.
- country? Not excessive while the present system is maintained; but I think if they were properly organized and confined entirely to police duty, the number might be reduced.
276. Under what regulations is this amount of £2,500, for rewards for service and good conduct, expended? Every constable who has served three years continuously, and maintained a good character, receives three-pence per diem, in addition to his pay.
277. Do you find that that induces many to remain in the service? It does.
278. Is this appropriated irrespective of the police fund to which the parties subscribe? That is a deduction from their pay.
279. Does the Government give anything to that fund? No; it arises entirely from the contributions of the men themselves. The amount now invested for the two funds is £20,500. The Police Superannuation Fund is created by a deduction of two per cent. from the pay of the police; and the Police Reward Fund by the payment of a moiety of the fines to which the police were before personally entitled, and fines inflicted on the police for misconduct.
280. By Mr. Piddington: Who has the power of recommending persons to receive good conduct pay? The Bench of Magistrates under whom they serve. There is a form specially for the purpose.
281. Is it granted as a matter of course? Yes, when recommended.
282. You exercise no control? No. The applications were formerly approved by the Governor General, but since the introduction of Responsible Government they are sent to the Inspector General, who approves, under the authority of the Chief Secretary.
283. Your authority is merely formal? Yes.
284. By the Chairman: You have been examined by another Committee this Session with reference to the Native Police? Yes.
285. The Gold Guards for the conveyance of gold are irrespective of the Gold Police? Yes.
286. Are they under you? Yes.
287. Could they work in as a part of one force, or should they still be kept independent? They might work in as one force. I do not see why they should not, as they do in Victoria.
288. Does the number, 546, which you have stated, include the Gold Guards? No. The number is not very large—I think about thirty. There are four escorts on the main roads of four men each, and twelve mounted men for the conveyance of gold between the different gold fields.

APPENDIX A.

AVERAGE Statistical Précis of Correspondence, Police Accounts, and Crime intelligence received and acted upon, monthly, in the Office of the Inspector General of Police.

Office Divisional Arrangement.	No. of Clerks employed.	No. of Docu- ments Received and Recorded.	Letters Despatched.	B. Cover refer- ences replied to.	Pay Abstracts and Police Accounts paid. No. of Vouchers.	Amount of Expenditure.	Amount of Postage Stamps actually used.

APPENDIX B.

(1.)

No. to Warrant No. of 185 Voucher No. 5473.

John M'Lerie,
Esq.

12 Aug., 1858.

THE DEPARTMENT of the POLICE, at KIAMA,

Dr. to JOHN MACDONNELL.

For the undermentioned full daily Rations of Provisions, and Articles supplied to Prisoners confined in the Watch-House at Kiama, and to other Parties for the period from the 1st October to the 31st December, 1857, inclusive:—		AMOUNT.
11 Rations of Provisions, according to Scale No. 2, @ 1s. 6d. per Ration ..		0 16 6
23 Rations of Provisions, according to Scale No. 8, @ 6d. per Ration.....		0 11 6
8,280 Pounds Firewood, @ 1s. per 100 lbs.		4 2 9
11½ Pounds Candles, @ 8d. per lb.		0 7 8
_____ Gills Common Oil, @ _____ per Gallon.....	
36 Casks of Water—each 50 Gallons—1,800 Gallons, @ 4s. per 100		3 12 0
TOTAL AMOUNT		£ 9 10 5

Signature of the Contractor

JOHN MACDONNELL.

I do solemnly and sincerely declare, that Eleven Rations of Provisions according to Scale No. 2, and Twenty-three Rations according to Scale No. 8, together with the quantities of Fuel and Light, and other Articles above charged for, have been actually supplied by JOHN MACDONNELL Contractor, for the use of the Prisoners confined in the Watch-House at Kiama, and of others, who were entitled to Rations during the period specified; that the same were in conformity with the Regulations, as to description and quantities, and that the whole of the Articles were of a satisfactory quality; and I make this solemn Declaration conscientiously believing the same to be true.

TUESDAY, 17 AUGUST, 1858.

Present:

MR. COWPER,
MR. JONES,MR. FORSTER,
MR. PIDDINGTON.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

David Forbes, Esq., J.P., called in and examined:—

- David Forbes, Esq., J.P.
17 Aug., 1858.
- By the Chairman: You are Police Magistrate of the City of Sydney? I am.
 - Do you hold any other office? I am *ex officio* Visiting Justice of Darlinghurst Gaol. I received my appointment on the 19th February, 1857.
 - Previous to that you were Police Magistrate at Parramatta? Yes, and also Visiting Justice to Parramatta Gaol, and Superintendent of the Protestant Orphan School.
 - You are aware that this Committee has been appointed with the view of ascertaining whether it is possible to reduce the expenditure of the public without injuring the efficiency of the departments. With reference to the department of the Central Police Office in Sydney, is it your opinion that you have a larger number of persons than are necessary for the performance of the duties? When I received the appointment there were nine clerks and a Police Magistrate, and it was proposed to appoint, as one of the clerks was to retire, a second Police Magistrate. I suggested that I would do the work myself, and that would do away with the necessity of the appointment of a second Police Magistrate. Since that time I have carried on the business with eight clerks and myself, instead of eight clerks and two Police Magistrates,

Magistrates, provided for in the Estimates for 1857. I find that during the first six months of the present year the total collections of fines, fees, and other matters of that kind, was £2,642, and that for the corresponding six months of the previous year it was £2,006, shewing an increase of about £100 a month in the fees, fines, and collections of different kinds, consequently the work has very much increased in the office, and this additional work having been performed with one clerk less than the number estimated for the previous year, in the face of an increase of business, with the work still increasing, I hardly think I could advise any decrease in the number of clerks. At the same time I would remark that I have drawn up a Bill to facilitate the duties of Magistrates in summary proceedings, and to facilitate the carrying out of the work in the office. If that were passed it would enable me to do the work with one clerk less. A great portion of the work in the Central Police Office consists in filling up a number of forms, which might be very much shortened. To give one instance: Suppose a vagrant to be brought up for being drunk and using obscene language in the street, although the deposition of the constable would not occupy above three or four lines, it would be necessary to fill up a long form with five or six times the quantity of writing there was in the deposition upon which the party was convicted. The remedy I would suggest for that would be to adopt the same plan as that pursued at Quarter Sessions, at the Supreme Court, or at our office with reference to drunkards,—to put down the names, the offences, and the penalties of the various prisoners on one sheet, and to have that sheet signed by the Magistrate. Instead of having, as we now have every day, about twenty or thirty of these documents, it would then be necessary to have only one. Unless that Bill were passed I could not recommend any further reduction, because there has been already a decrease in the expenditure of £300 a-year, in the face of an increase in the collections of upwards of £1,000 a-year. I find that the average amount of the monthly collections is about £400, of which about £230 goes to the Treasury, about £110 to the Benevolent Institution, and the remainder, £120 or thereabouts, to the City Fund, and what we call returnable costs to plaintiffs and informers—that is, wages, recoverable poundage fees, moiety to informers, costs, &c.

David Forbes,
Esq., J.P.
17 Aug., 1858.

5. Your answer to the last question seems to have reference more to the number of persons who were employed previously to your taking charge than to the number now necessary—might it not be possible that up to that time more were employed than were absolutely required, do you think that was the case? I think it was, but I have shewn that there is now £100 a month more collected, and that shews the work is increasing and has increased. I think the clerks have now quite as much as they can do. I do not think we could do the work with one clerk less, except the Act I suggest were passed, or something of that kind; if that were done I think I could dispense with one clerk. I think, too, if this Act were passed, and the one clerk were not taken away, we could do all our own work and the work of the Water Police Office, exclusive of the sailors and the shipping.

6. As you have suggested one amendment of the law by which you think your work might be reduced, can you suggest any other amendment by which there might be a still further reduction? I think, with reference to some forms where Magistrates act ministerially, there might be some alteration in them; but I have not had time to draw up any suggestion upon that subject, and I did not think it would be necessary to do so until the other matter was considered.

7. For instance, will not the abolition of the recognizances of publicans cause some still further reduction? No doubt of it; but that business occupies a clerk only for about one month in the twelve at different times.

8. Still it does occupy a clerk for a month? Yes.

9. And without any benefit? Yes, without much benefit. I have always looked upon publicans entering into recognizances as a useless form and ceremony, because I do not know a single instance during the time I was in Parramatta, or during the time I have been in Sydney, where any recognizance has been estreated; and I am quite sure the amount of money paid for making out the recognizances would exceed anything received from the estreating of them.

10. With regard to your own particular duties, have you not been considerably relieved by the co-operation of unpaid Magistrates of late? They have very much relieved me, but then there is a great deal more work done in the Police Office now than there used to be, and I can explain it in this way:—When I went to the office, I found that only one Court had been open each day—the opening of a second Court was an extraordinary affair; the consequence of this was that the sheet was not completed during the day, and there were not unfrequently from fifty to sixty cases standing over from day to day, until at length, persons being tired of attending, many of these were written off “no parties,” which I considered to be a denial of justice. By opening two Courts we get through the whole business, and the postponement of any case is the exception and not the rule, as it used to be. In order to accomplish this I go to the office at nine o'clock every morning, and remain in my office till ten to see any person who may desire to see me. I then open the Court at ten for the convenience of Magistrates and of the public. Both the summons Court and the other Court are opened at the same time, and both Courts sit till one; but the one I am in sits till one, two, or four, or even later.

11. Still you are enabled by the arrangements you now make to get through the business of each day daily? Yes, and I think I might do what is done at the Water Police Office, so far as the land business went. With the number of clerks I have now I would undertake to do my own work and the Water Police Office work, except that connected with sailors, if the Bill to which I have before alluded were passed.

12. Is there any division of district duty between you and the Water Police Office? Yes. The division is the street leading from Government House Gate, down Bridge-street, up Church Hill, to Darling Harbour. The Water Police Office takes the North Sydney, so that there are only these two horns of land under the jurisdiction of the Water Police Office.

David Forbes, Esq., J.P. Then I have all the sailors who are taken up in my district or division brought before me. Now, I think a proper distribution of the duty would be, that all landmen should be brought before the Central Police Office, and that all the sailors from any part should be taken to the Water Police Office. I think the Water Police might very well do that work, and look after the whole shipping department.

17 Aug., 1858.

13. You think that would be a better division of the duty than the present? I think so.

14. Do you suppose, or have you the means of knowing, that Mr. North, by undertaking the duties to which you refer, has many cases brought before him? I do not think so; I do not see how he can.

15. The Rocks is a very disorderly part of Sydney, is it not? I do not think it is so disorderly as Duraud's Alley, in my division.

16. The number of cases brought before you is stated in the return sent in by you to the Committee? Yes.

17. Do you find your business—that is to say, business which does not cause an increase of fees—is increasing—criminal matters? I do not think the criminal business is increasing; I think it is about the same as it was when I entered the office. The number of summons cases is increasing.

18. You have spoken of the increase of revenue in your office—have you been able to trace out, or to classify, the various cases. There is an increase in summons cases.

19. Is that increase in cases of assault, or in what particular class? In cases of all kinds—cases of assault, cases of wages, cases where parties seek to recover tenements; there are also a great number of cases of affiliation, cases where wives get maintenance from their husbands. All of these are productive of fees, except the tenement cases; and, as I have stated before, under the previous way of managing the office, these cases were written off “no parties,” because the parties were tired of waiting about the precincts of the Court. Many preferred suffering an injury to seeking a remedy at the Police Office, as they were taken away from their business, and kept so long waiting that they thought it was not worth their while to wait any longer.

20. You say you have reduced the expenditure of your office, but have you not been for some time past urging the Government to increase the salaries of some clerks employed under you? I have, for I consider that the reduction of £300 a-year was more than ought to have been made. I considered that the reduction of one clerk should have been from the bottom of the list; that instead of £300 it should have been £175, which would have been a reduction of one clerk; and that the increase in the work might have been some reason for a trifling increase in the salaries of others. The principle I go upon is this, that, in order to get the work efficiently done, you ought not to cut down salaries more than you can possibly help; but I should insist upon having efficient men in every situation, and that each one should be fully occupied.

21. Was not the arrangement of salaries originally your own suggestion? It was; but then the salaries having been originally voted up on a certain scale, I did not consider that I was at liberty to alter the rate of salary proposed in the estimate for each individual; all I could do was to go down the list. The first salary was my own, £630; the next man was put down at £430 a-year. I left that for the Chief Clerk, and I divided a hundred a year between the two next clerks; these suggestions were made merely in a private note written to Mr. Parker within a week after I took charge of the department, so that I had not time to consider the matter further than to make up my mind as to what I could do myself.

22. With regard to this particular arrangement, you have since desired to make some modification of it, on the ground that the salaries given to the clerks in your department, and especially to those on the lower rates, have not been sufficient to remunerate them? Yes I think, upon comparison with other departments, the clerks in the Central Police Office, from top to bottom, are underpaid, comparatively with any other department of the Government service.

23. You were aware of the salaries given to clerks in other departments when you proposed the salaries for your own? I was not aware of the sort of work they did for it; and had I imagined that my private note written to Mr. Parker a few days after I was appointed would have had the effect of preventing my being allowed to make any other suggestions after I became fully acquainted with the working of my department, I most certainly would never have written such a note.

24. Do you still hold the opinion you have expressed to the Government repeatedly, that these gentlemen ought to have their salaries increased? Yes, I do. I would not increase the number of men, but I would allow the work to increase. If the Bill to which I have referred were passed, we should do more work with a fewer number of men, and there would still be a saving, as there would be an increase of revenue and a fewer number of men to do the work.

25. I apprehend that your great object is, that gentlemen, after they have been some time in the public service, should have some promotion: What do you think of this suggestion—that those who have been a certain time in your office should be promoted to the office of Clerks of Petty Sessions—that your office should, in fact, be a sort of training office for that purpose? I think, if anything of that kind were held out, the two lower clerks might receive salaries of £100 or £150 a-year; but with the understanding that after a time they would receive promotion to the office of Clerks of Petty Sessions.

26. Would these three, four, or five clerks in your office at low salaries be willing, so far as you know, to go into the country as Clerks of Petty Sessions? I think two of them might.

27. Are all of them efficient? All efficient; they have all been a considerable time in the Government service. The work in my department is very different from the work in other departments—we have very little copying of letters, or work of that description. The clerk who keeps the accounts receives only £175 a-year; he keeps the accounts of the collection of small sums, amounting to £2,642 in six months. He writes an excellent hand, and keeps the

the accounts very well; and this is attended with considerable labor, for these are sums received in 2s. and 3s., and it is necessary that they should be entered very accurately, or there would, of course, be a complaint. David Forbes,
Esq., J.P.

28. Does this gentleman receive any large sums of money at one time? He receives none—17 Aug., 1858.
at least it is in this way: the Chief Clerk is the man who receives all the money paid in, but the other keeps the account of it.

29. Mr. Warburton receives the money? Yes; but Mr. Ormiston keeps the accounts and audits them.

30. Does Mr. Warburton give any security? I believe he does, to the sum of £500.

31. What check do you exercise over these receipts? In the first place, each morning there are the sheets of the day made out—the charge sheets, and the summons sheets—these are put before the Magistrates; those that require the jurisdiction of one, and those that require the jurisdiction of two Magistrates, are separate; then, as the Magistrate inflicts the penalty or reward, it is entered in the sheet. These sheets are filed and kept. They are sent to Mr. Ormiston, who keeps the account; then the Chief Clerk keeps what he calls a cash-book, into which the entries are made of all moneys that are brought to him and paid in. The depositions, on which are also written the sentences or awards of the Court, are looked over by another clerk, who has to make out warrants and processes for recovery by levy, &c. This clerk finds out those who have paid, those who have not paid, and those who are sent to gaol for default; and it is his duty to enter in a book kept for that purpose the name of each prisoner, plaintiff, or defendant, with the result of each case. This book—the cash-book—kept by the Chief Clerk, and the sheets are all examined by Mr. Ormiston, the Accountant, who compares them.

32. How often are moneys paid into the bank? Two or three times in the week.

33. Where are they lodged in the meantime? In the iron safe; some of them remain in the hands of the Chief Clerk as long as two years.

34. When you say in the hands of the Chief Clerk, I suppose you mean that he deposits these sums in the bank? Yes, to his public account; they are small sums which do not belong to the public, but to private individuals, as, for instance, awards for wages, awards of part penalty to informers, which these persons neglect to call for.

35. By what rule or law is he allowed to retain these moneys for two years; and if they are not claimed, what is done with them? They are paid over to the Treasury after a certain time as moneys unclaimed.

36. Are there distinct accounts and returns of all these moneys? Yes; a most accurate account is kept every month, shewing the amounts claimed and those standing over unclaimed. These may be called for at any moment; any person may come in and say, "The week before last I had an award of £5 for wages, will you pay me?"

37. How often do you supervise the Chief Clerk's accounts? I have no regular period for doing so; I look over them, perhaps, about twice a month, at different times.

38. If he received a large amount of fees, it would be desirable that he should pay them in more frequently than if the amount were small? The book shews that they are paid in regularly. There is nothing entered in the book that is not done.

39. You frequently supervise the accounts? Yes.

40. To what extent have you any control over the police? I have no control over the police, except, of course, that in Court they are bound to carry out the orders of myself, and the other Magistrates. I have no more control over them than any other Magistrate.

41. At one time there was an impression that it would be necessary to have either an Assistant Police Magistrate or to give power to your clerk to take certain preliminary proceedings—I apprehend that that is no longer a matter of requirement? I have provided for that in the Bill I have suggested to Government. If that were passed it would facilitate the work very much. At present many of the informations require to be sworn, and parties laying them go to the Chief Clerk and make their complaint to him. If I am on the Bench, if there is any difficulty in the matter, he comes to me, and speaks about it; but the cases that occur are generally of a straightforward character, and there is no necessity for that. He gets the information made out, brings it to me; I look over it, swear the party, and it is taken back to the office. I write on the information whether a summons or a warrant is to be issued. The document is then properly drawn out, and brought to me, or any other Magistrate who may be on the Bench, for signature. Almost all the informations are brought to me for the facility of signing the summonses when they are drawn up, which is sometimes not until the evening. The Act I drew up provided that wherever a summons was required there should be a simple form, the same as that under 19 Vic., No. 24, stating the name of the complainant, of the defendant, the nature of the offence, the date when committed. This is looked over, and the summons signed by the Magistrate. This should be in the nature of an exhibit, and if there were anything requiring explanation the person wanting to see the Magistrate could always do so.

42. It is not necessary that all these informations should be signed by you? All the informations must be signed by a Magistrate, and they are usually signed by me, in order that I may sign the warrants or summonses afterwards, when they are prepared; but I think a great many of the informations are unnecessarily required to be on oath, those, for instance, for trifling assaults—thus, if one old woman throws water over another old woman, who lays an information, if that information is not on oath an objection is taken to it. The objection, perhaps, is overruled by the Magistrates, and the party is fined. She may then go to the Supreme Court, obtain a writ of prohibition, and quash the proceedings, simply because the information has not been on oath, and without reference to the merits of the case.

43. I apprehend that if there were such a case between two old women, the Magistrate would soon put a stop to it by dismissing it? It might be so; but all assaults of that kind require punishment, as they may lead to others of a worse character. I have seen a fine of five shillings imposed in such cases.

David Forbes,
Esq., J.P.

17 Aug., 1858.

44. Does it not appear to you, that in order to prevent these frivolous cases there should be an air of greater solemnity thrown over the proceedings? I think the best way to check such complaints is to make the proceedings more expensive. Instead of 3s. 6d. for the whole cost of information and summons—involving perhaps the serving of it at a distance miles away in the country—I would make it much more. I have submitted a scale of fees in the Return I have forwarded to the Committee, which I think would be an improvement on the present scale.

45. Do you not think that might act oppressively where the parties were really seeking for justice? No; for where the parties could show a case of hardship and were unable to pay, credit could be allowed. At present, instances sometimes occur where perhaps a woman has been cruelly beaten by her husband, and who has not a farthing in the world. "Credit" is marked on the information, and the costs have to be paid by the defendant if found guilty; if not, the money is lost.

46. Is that done by the sanction of law, or in the exercise of your own discretion? I think it is not contrary to law, and I found it the custom when I took the office.

47. Have you any suggestions to make with reference to your own particular department. I think from what has fallen from you, that your department is more up to the requirements of the public now than it was last year; that you have remedied what was then complained of, and that you have no arrears? No arrears; everything is regularly kept up; and although I am away from the office to attend this Committee to-day, the whole of the work will be done the same as if I were there.

48. In addition to the office respecting which you have now been examined, you also hold that of "Visiting Justice to Darlinghurst Gaol, with limited authority";—will you state what is your position with reference to that establishment? I have never been able to find out what my position is. I believe by the Act regulating gaols (4 Victoria, chapter 29), that the Governor is empowered to appoint Visiting Justices, who should be Magistrates of the Territory. I thought I was so appointed; but I have been told that in fact the Sheriff is Visiting Justice, and that I am required to do what the Sheriff cannot do, in consequence of his not being a Magistrate. How that arrangement was made I have no idea; but it is a very awkward position for me to be placed in, as I never know what my authority is, what my duty is, or what my responsibility is. At Parramatta Gaol I had pretty much the management of the whole establishment, but in Sydney I always consider myself a sort of interloper whenever I go up to the gaol.

49. What do you do when you go there? I write my name in the book, look round the establishment and see the different prisoners, look through the cells and see that they are clean, see any men that are working, look how the building is going on, and so forth; and I ask whether there is any case that requires my attention, and being answered in the negative, walk away.

50. When you go there it is more to perform magisterial duty than for any other purpose? Yes.

51. Then the Sheriff is the Visiting Justice really? The Sheriff is the Visiting Justice really, as I am informed.

52. Did you ever find any inconvenience resulting from this arrangement? To myself?

53. Yes? There is this, that I should be sorry to be responsible for anything there. I consider myself responsible only for what occurs in the Central Police Office; I do not consider myself responsible for Darlinghurst Gaol at all, nor would I hold myself responsible, for I know nothing whatever of what is going on there. I hand in a copy of the letter appointing me Visiting Justice. (*The witness handed in the same. Vide Appendix A.*) And it appears from that letter that I was appointed for the purpose of carrying out the 12th and 13th sections of the Act 4th Victoria, No. 29. Now, the 7th clause of that Act runs as follows:—"Be it enacted, that it shall and may be lawful for the said Governor to "nominate and appoint some fit and proper person, being a Magistrate of the Territory, to "be the Visiting Justice of each gaol, prison, or house of correction within the said Colony, "and the said Visiting Justice to remove or displace, and to appoint another or others in his "stead,—(this, I take it, means that the Governor is bound to appoint a Visiting Justice, and that that Visiting Justice must be a Magistrate of the Territory),—"and every Visiting "Justice so appointed shall be required to visit such gaol, prison, or house of correction, at "least once in every week, unless prevented by illness or other sufficient cause; and shall "from time to time make such reports to the Colonial Secretary as may be required by the "said Governor." I should imagine from that, that if the Sheriff has been appointed by the Government such Visiting Justice, it is contrary to the 7th clause of the Act of Council, because he is not a Magistrate of the Territory, nor can he be so long as he is Sheriff. Then, I find the 12th clause says, among other things, "The said Visiting Justice shall also hear "and determine all complaints of idleness or negligence in work, or wilful mismanagement "of work." Therefore, I take it that it is part of his province to look into the work department; at least that is the way I have read the clause.

54. You were appointed to go there to hear complaints of idle or disorderly conduct? Yes, so it seems; but I may mention that I have had a difficulty throughout in determining exactly what I was appointed to do, because I could not understand how I could be appointed Visiting Justice at all without being appointed under the 7th section of the Act, and to perform the duties named in that section. I have, therefore, been doubtful what power I have had in the gaol.

55. How often do you inspect the gaol? In consequence of this difficulty, not perhaps more than once a month, or once in three weeks.

56. Then how are prisoners dealt with when charges are brought against them, are they kept for you until you go there? I have told them to let me know when I am wanted; but I have never been sent for, although the opportunity of sending for me occurs daily, as some prisoners are sent to the Police Office from the gaol every morning.

David Forbes,
Esq., J.P.

17 Aug., 1858.

57. Does the Gaoler then punish them without you? I do not know.

58. Have you ever had any prisoner brought before you under that section? About three.

59. What is your inspection of the gaol? What I have described. I walk about, ask whether I am wanted, and upon being told that I am not, walk away again.

60. Have you made inquiries as to the mode in which the men are employed, or do you examine the books, or the statements as to the amount of work done, or the estimated value of the work? Yes. The work done in Darlinghurst Gaol is of two kinds,—that for persons outside of the gaol, and that which has been estimated arbitrarily on the new buildings inside. I took one week's return, the particulars of which I have given in a letter addressed to the Colonial Secretary.

61. After you were summoned to attend this Committee? Yes. I went up to see what was going on, that I might inform myself before coming here. I found some of the men engaged on the building, which has been going on very slowly indeed for the last two years and a-half—a wing of the building containing a number of cells capable of holding a hundred prisoners. That is all the work they can show that has been done inside the gaol during the last two or three years; and I think it will be a dear building for £6,000—the amount which has been voted by the Legislature for the purpose of keeping the prisoners employed, and which I imagine must have been spent in that way. I find that the quantity of stone cut during the week I have alluded to was altogether 322 feet.

62. Of the men confined in gaol, how many were employed on this particular work of erecting this building? About 42 men were employed on this building, and that was the only work which it appeared to me was going on, excepting that there was some stone being cut, which I understood was for another building to be erected behind, but there was a very small quantity of it; the rest of the men were picking oakum, and so forth. I always find about four in the afternoon that there is no work at all going on. 322 feet of stone cut in the week would give 1,300 feet a month. Now I know that in Parramatta Gaol the prisoners used to cut upwards of 5,000 feet a month when I was Visiting Justice there.

63. With how many men? We had sometimes from 60 to 80 stone-cutters, almost the whole of whom learned the art in the gaol.

64. And the total number of men confined in the gaol was fewer than in Darlinghurst? The total number was seldom if ever more than 250. I find here that Mr. Brennan charges £2 per week per man, excepting two men, who are charged £3 each; that is a higher rate of wages than is paid by people in town.

65. How are these two men employed? In cutting reveals and sparrow-picking. I find that this week's work is estimated at £94 3s. 8d., and that the other work paid for amounts to £9 10s. 1d. Now, estimating the whole of this work at Parramatta prices, that is to say, the work connected with the building, it would amount to only £10 19s. 10d., because we used to reckon only the amount actually paid for work. I dare say Mr. Brennan may say that the stone is not measured on all sides, but only on the sides that show: we, however, used to measure in precisely the same way at Parramatta. If this work—the quantity of stone cut, the blacksmiths' and carpenters' work—had been done at Parramatta, it would have been estimated at £10 19s. 10d. That is what the people in the town would have paid for the work. The prices fixed at Parramatta were not fixed arbitrarily, as they appear to have been here; but the people having complained that prison labor interfered with the work in town, we called for tenders, and I spoke to every body I could find that I thought would be desirous to tender, and the utmost I could get was three-pence a foot for ashler and six-pence for moulding stone. But if you add together the cost of sharpening picks and chisels, which in Parramatta was included in the cost of the stone, you will find that it brings up the cost of the stone to 4s. 2½d a foot in Darlinghurst Gaol, but you can get the same kind of work done in the City for 5d. per foot.

66. Had you no means of knowing how the remainder of the men were employed? No.

67. You never considered it to be your duty to inquire? I never considered it my duty to inquire into anything further than I saw.

68. What is your impression of the establishment? From what opportunity I have had of judging, my impression is that this establishment is irregularly and expensively managed, and that the labor of the prisoners is wasted. I know that there had been an order, at the suggestion of the Board appointed by the Government in 1856, that no prisoner sentenced to hard labor should receive hard labor rations unless he were absolutely working; and I found on my first visit to Darlinghurst Gaol that there were upwards of sixty men who were receiving hard labor rations, and doing nothing. I made a report of the circumstance to the Government, and had my suggestion been acted upon £500 a-year would have been saved; but whether anything was done in the matter, whether the rations were discontinued, I cannot say, for I never received any acknowledgment of my report. I have repeatedly endeavored to bring this matter and others before the Government, previous to the present Administration taking office; but I imagined I was not listened to, and I therefore ceased to do it. I find that there are about 350 prisoners at Darlinghurst, and 250 at Parramatta Gaol; that the salaries paid to the officers of the former amount to £3,899, while at the latter they are only £1,800, making a difference of upwards of £2,000; while there are only 100 prisoners more in the one establishment than in the other. I imagine that the larger the number of prisoners in these establishments the more cheaply they may be individually managed, and that instead of Darlinghurst being double the expense of Parramatta Gaol, even supposing there were 500 prisoners at Darlinghurst, the cost of management should not be double. There are, however, more than double the number of turnkeys in one establishment than in the other, there being 19 at Sydney, and 9 at Parramatta Gaol.

69. Are the other expenses of the establishment fewer, or in excess—the provisions and stores? No; the stores are about the same; in fact they can hardly be otherwise, for the ration is fixed on the same scale in all the gaols. Probably they may be a trifle less at Darlinghurst, as the contract may be taken at a lower price in Sydney than in the country.

David Forbes, 70. Did you make any investigation with reference to the other men employed, not upon the building? There were 66 of them, I think, picking oakum.

Esq., J.P. 71. Were there no men tailoring or shoemaking? Very few; there were five tailoring and one shoemaking. On referring to the extract I took of the week's work at Darlinghurst Gaol, I see one item, which is a trifling one—"four flower-boxes made for Dr. O'Brien." There is no charge for that.

17 Aug., 1858.

72. Does Dr. O'Brien visit the gaol now? Not in his official capacity, I believe.

73. Who is the medical officer? Dr. West, who gets £220 a-year for it. I will mention another matter, which it comes partly within my province as Police Magistrate to know. In consequence of some lunatics having been detained too long at Darlinghurst Gaol, there was an order from Government that all lunatics should be forwarded at once to Tarban Creek. At first this order was attended to, but after a time it was neglected; they are left there now until there are three or four together, in order that they may be sent in a batch. I think it a very great pity that they should be detained there any time, as I do not think a gaol is a proper place for a lunatic. I would suggest to the Committee that Dr. Alleyne should be examined, as I believe he could give a good deal of information respecting these matters in Darlinghurst Gaol. I do not know why 13 turnkeys and constables, 6 wardsmen, and 2 female turnkeys and wardsmen should be required at Darlinghurst, while there are only 11 altogether in Parramatta Gaol. Then, with regard to decreasing the expenditure, I believe if there were some one appointed to look after the work of the prisoners, the prisoners might be made in a great measure to support themselves, if not wholly in part. It has been done in Ireland, under Captain Crawford, and I believe I suggested a similar plan to the Government here before it was suggested by that gentleman to the home authorities.

74. Is not the Gaoler appointed there, with a very high salary, to see that duty performed? I do not think the Sheriff would let him.

75. Have you reason to believe he has ever prevented him? I believe he acts entirely under the orders of the Sheriff. The Sheriff makes the rules and regulations he proceeds upon, and he has frequently said that the work has been delayed in consequence of the materials not having been supplied.

76. Does he mean that the stone has not been supplied? Yes; and wood-work for framing the roof of the new building.

77. You have no power, I believe, to sentence drunkards to hard labor? Yes we have; under the Vagrant Act those who have been convicted three times within twelve months may be sentenced for so long a time as two years.

78. Do you carry out the law in that respect? The attention of the Magistrate is drawn to the fact by the police, who keep a record of the conviction of drunkards, and when the same person is convicted a second or third time it is notified, and a sentence of two, three, or even six months imprisonment with hard labor follows.

79. With regard to the women: do you think it desirable to have male and female prisoners in the same gaol? I think not; it increases the expense very much; one half the vigilance of the turnkeys is necessary to prevent intercourse between the sexes; besides, the male turnkeys themselves are a class of men not unlikely, unless carefully looked after, to commit improper acts with single females.

80. Who has the specific charge of the females? The matron, Mrs. Beverley.

81. Are you aware whether she interferes in their management? I do not know, but I imagine it is left pretty much to the female turnkeys.

82. Do you inspect the females' wards when you visit the gaol? Once or twice I have done so, but I do not visit them as a rule. In fact I have found my visits are so disagreeable that I have interfered as little as possible.

83. So far as you see, do you think the men are not properly worked, or that there is not proper discipline? I think if a return is called for from the Visiting Justice of Parramatta Gaol, where there are two hundred and fifty prisoners, it will be found that there is three times as much work done at Parramatta as at Darlinghurst. I am sure I am within the mark when I say three times as much. There appears to me to be a thorough want of system in the management of the whole establishment.

84. By Mr Forster: You consider it to be your duty when you go to the gaol to inspect it in some way or other? I thought it was my duty, but as I was frequently told it was not, and as I received no answer to the first letter I wrote to the Government on the subject, I have not inspected the gaol as I should otherwise have done.

85. You have not latterly done so, but you did at one time? I did for the first two visits.

86. If you saw anything wrong going on you would report it, I suppose? I cannot say that I have seen anything positively going wrong; if I had I do not know that I should. I have never seen anything going wrong of a character which I deemed it absolutely necessary to report, excepting the idleness of prisoners, and the want of regularity and order in the whole establishment. A good many of the prisoners are dirty; and there is, perhaps, a want of sufficient attention on the part of the medical officer.

87. Do you think there is any want of an inspecting officer, such as you at one time considered you were, until you were informed to the contrary? Yes; I think such an officer is necessary.

88. You think the gaol would be the better for being inspected? I have no doubt of it.

89. In what way do the Government obtain information of anything going wrong in the gaol? I do not think they could obtain it all, except through me. The Sheriff appoints his officers, and of course it is not likely they would report anything against him or themselves.

90. Then, in point of fact, the Sheriff is his own inspector? The Sheriff is his own inspector; he appoints his own men, and does whatever he likes.

91. I suppose even if the gaol were continued under the Sheriff it could lead to no wrong, but would rather be a public good, if the Government were to have the power of looking over it,

- it, and of knowing what was going on in it? I think the power possessed by the Sheriff is too much to put in any man's hand without supervision.
92. Is the chief duty the Sheriff has to perform to look after the gaol? No; he has to carry out the orders of the Court in civil matters.
93. Are the other gaols of the Colony under the superintendence of the Sheriff? Yes.
94. Is there not a Visiting Justice at Parramatta at present? Yes, but he is merely Visiting Justice. I assumed much more power when I was there than the Act gave me.
95. You made an attempt to get some information, which was refused? Yes; I asked for a return from one of the books in Darlinghurst Gaol, and received a letter, (a copy of which I forwarded to the Colonial Secretary,) refusing the information.
96. Have you ever been refused to be allowed to look at the books, when you have been there to examine the gaol? No.
97. Whenever you have been there, has any obstacle been thrown in the way of your examining anything? No; but then I never attempted to examine thoroughly into the establishment or the working of it; and the only time I asked for a return of the work it was refused me, as I have related. I used to get weekly returns when I was Visiting Justice at Parramatta Gaol.
98. Do you think you have a right to insist upon examining anything in the gaol, either as to the books or the conduct of prisoners? I think not, under my letter of instructions; under the Act I have, I think.
99. *By the Chairman:* I perceive in the memorandum that accompanies the return you transmitted of your department, you suggest that the fines and fees should be paid into the Treasury, instead of being divided, and the portions to which public institutions or charities were entitled being paid by you;—have you carried out the law and your instructions with reference to this? The division is made under certain Acts of Council; for instance, the whole of the drunkards' fines go to the Benevolent Asylum.
100. There is nothing in the law to prevent the Government distributing it, instead of your doing so? It would be necessary that the law should be altered for the several Acts state that the fines should be distributed in a certain way. A short Act would be necessary, to over-ride the whole of those Acts in which a certain portion of the fees are appropriated to certain institutions, and the other portion to the Treasury. Sometimes there is such portion to the informer as the Magistrate shall award.
101. You would not propose that the Treasury should pay the portion to the informer? No; I would propose an Act to the effect that all those portions now paid to the Benevolent Asylum and other charitable institutions, to the City Fund, (but not including that paid to informers,) should go into the Treasury, and that these institutions should be supported by money from the Treasury.
102. You would abolish the whole of the specific appropriations? Yes; and let the Government give what they thought necessary to these institutions.
103. You think that would save a number of accounts? It would save a great number of accounts, and make these funds such as the institutions might calculate upon with certainty, and enable them to curtail some of their expenses. Now they sometimes receive a great deal when they do not want it; and at other times, when they do require it, they receive very little.
104. Do you think it a good suggestion to transfer the whole of the license business to the Corporation? I think the power of the Magistrates with reference to licensing public-houses has been more abused than any other.
105. Do you think it would be better in the hands of the City Corporation? I think it would be better in the hands of any one. I think the way in which the Magistrates have exercised their jurisdiction in this respect has been most improper. I could pick out names from the books of certain Magistrates who would be sure to refuse licenses, and I could pick out the names of others who would be certain to grant every license that came before them.
106. The question of granting a license might depend upon some principle—some Magistrates might think that if an applicant could produce certain certificates it would no longer be a matter of discretion with them? The Magistrates hold opposite opinions on this subject. One set of Magistrates think that the Act requires certain things, namely, that an applicant should not be a prisoner of the Crown, or otherwise legally disqualified, that he should enter into certain recognizances, and that the house sought to be licensed should contain a certain number of rooms or accommodation; and if the person applying could satisfy the Magistrates that everything required by the Act was complied with, the Magistrates then have no power to refuse a license. This was the opinion of the majority, perhaps two-thirds of the Bench. The other set of Magistrates think that their discretion is to be exercised as to the number of public-houses to be in any town or other place. I have frequently seen a license refused to an applicant because the house for which he was applying was next door to another public-house. Now I hold that if a man wants a license for his house, and complies with all the requirements of the Act, we have no more right to refuse it because there is a public-house next door than we have to prevent a man opening a draper's shop because another draper lived at the next house. Almost all the licenses that have been refused have been refused simply because the Magistrates have said there were too many public-houses in the neighbourhood.
107. Do you not think it is a point upon which the Magistrates may fairly exercise their judgment, whether they shall have 300 or 500 public-houses in Sydney? I think not: I think it was never intended; and I believe the fewer the public-houses within a certain limit the greater will be the amount of drunkenness; because the fewer the number of public-houses the greater the chance of friend meeting friend, and drinking together.
108. according to your principle, is there any benefit in licensing beyond that of being the means of collecting so much money? No.

David Forbes,
Esq., J.P.

17 Aug., 1853.

- David Forbes, Esq., J.P. 109. According to your principle, then, you would allow each person upon going to the Treasury and paying a certain fee to receive a license? Yes, without making the Magistrate the judge in the matter.
- 17 Aug., 1858. 110. Would you retain the present fee, or would you increase it? I think I should be inclined to increase it.
111. Would you, as a matter of police, give the power to the Magistrates to take away the license? No, I would not, unless there were an appeal to the Quarter Sessions.

APPENDIX A.

*Colonial Secretary's Office,
Sydney, 2nd March, 1857.*

SIR,

I am directed to inform you that His Excellency the Governor General, with the advice of the Executive Council, has been pleased to appoint you to be Visiting Magistrate of Darlinghurst Gaol, for the purpose of carrying out the provisions of the 12th and 13th Sections of the Act 4th Victoria, No. 29.

DAVID FORBES, Esq.,
Police Magistrate,
Sydney.

I have, &c.,
W. ELYARD.

Samuel North, Esq., J.P., called in and examined:—

- S. North, Esq., J.P. 1. *By the Chairman:* You are the Water Police Magistrate? Yes.
- 17 Aug., 1858. 2. How long have you held that office? Nearly five years. I was appointed on the 1st January, 1854.
3. When you were appointed your duties were more onerous than they are at present? Yes.
4. The cases of seamen were more numerous than they are at present? Yes.
5. What is the state of the department at present—how many hours a day are you occupied in the judicial portion of your duties? The judicial part is very uncertain; sometimes the court is over by twelve o'clock. Last week it was not over on two evenings until between five and six.
6. Except on extraordinary occasions, it generally closes by twelve? I would not say generally; on some days it is over by twelve, generally by two.
7. Are your duties chiefly with reference to shipping, or have you much land duty? I have the northern part of the district from the Parramatta District to the sea, and from Port Jackson to Broken Bay.
8. You have not the North Shore? Yes. I have all north of Bridge-street.
9. Are you prepared to express any opinion with reference to any reduction which may be made in your department, or in your own immediate office? I have only one Clerk of Petty Sessions and one assistant.
10. Do you find them sufficient for performing these duties? Yes.
11. Could you do with less? It is quite impossible. We had three until the reduction, from the 1st of January, 1857; there was then one clerk taken from me, and an additional clerk was afterwards given me, in consequence of my taking a portion of the City duty. The additional (or 3rd) clerk was given in consequence of a portion of the City cases being taken at the Water Police Court, and reduced again on 1st January, 1857.
12. Has that increased your duties very much? I cannot say it has increased them very much; there is nothing but what I can do, easily.
13. Are people bound to come to you if they reside in that particular part of Sydney, or may they take their choice, and either come to you or go to the Central Police Office? They sometimes do, but I do not think they can legally; for instance, all cases under the Masters' and Servants', and some other Act, must be tried in the Court of Petty Sessions in the district where the service has been performed.
14. What portion of the City do you consider as within your boundaries—an eighth, a fourth, or a fifth? About a fifth, I should say, not more. I have nearly the whole of two wards—Gipps and Bourke Wards.
15. You have also the control of the boats' crews, have you not? Yes; I have three boats' crews, two sub-inspectors and fourteen constables. There are three boats every day at work.
16. How are these men employed? The employment of one boat is in clearing ships, a duty which properly belongs to the Customs Department, but it has always been performed by the Water Police.
17. Why is it not done by the Customs? It was done by the direction of the Government. At one time a Water Police boat was stationed at South Head, but on the reduction it was found necessary to remove the boat from that place.
18. Where are the boats cleared from now? The Circular Quay head station. That one boat is employed in that duty, the other is in attendance upon the office, in proceeding to ships, conveying prisoners backwards and forwards, and serving summonses—the third boat is now employed in Cockatoo Island business. I may here add that one Water Police constable is placed on board every emigrant vessel on its arrival, and is continued sometimes for weeks, until the emigrants are all landed. Very often two constables, and I think on one occasion three have been so employed. In cases of mutinous crews it is usual to place Water Police on board, and it frequently happens that the Water Police weigh the anchors to enable ships to proceed to sea. They are also employed in preservation of life and property in cases of accident or wreck.
19. You are the Visiting Justice of Cockatoo Island? Yes, I am.

20. How often does that boat go to Cockatoo Island? I think about ten times a week, and it takes myself, the Visiting Surgeon, the Chaplain of the Church of England, the Chaplain of the Church of Rome—conveys prisoners backwards and forwards between the island and Sydney.
21. Has the visitors' boat been abolished? Yes; by which a saving of £500 a-year has been effected. The duties are now performed by the Water Police.
22. Do you find this arrangement satisfactory? Yes; I find no difficulty in performing the duty. I would mention also that there is a row-guard during the night; a boat rows among the shipping.
23. During what hours? From sunset to sunrise till the reduction of the police, but since the Cockatoo Island duty has been given to me, one boat is constantly at work till twelve o'clock, it then rests a couple of hours, and afterwards takes it rounds until daylight. It is reported to me what hours they have been out, and the course they have taken during the night.
24. Is that sufficient to keep the ships in proper order? Yes; they look after the ships, see that there are no robberies, and that the ships in the fair-way keep their lights and watch on deck; if they do not, informations are laid against them and they are fined.
25. Do you not think you could perform the duties of Shipping Master as well as those of your own office? That would depend a good deal upon the assistance given in the Shipping Office. It could not be done without a Deputy Shipping Master.
26. That is to say, a kind of intelligent clerk? Yes; one of the present officers, Captain Shorter, was Deputy Shipping Master before he was reduced.
27. You think if you had a clerk of that department in the office you could perform the duty? I do not know how Mr. Venour gets on with the duties; but I have often heard him complain that he had not sufficient clerical assistance, and if one of these clerks had to perform the duty of Deputy Shipping Master I do not know how it could be done.
28. If, as Police Magistrate, you are occupied only two or three hours a day, you could perform these duties? Yes; but I am Visiting Justice to Cockatoo Island, and I could not perform the duties of Shipping Master if I had to go to Cockatoo. Amongst the duties of Visiting Magistrate of Cockatoo I may mention that all requisitions connected with the expenses of the island, all vouchers for payment of expenses and salaries, pass through my hands; all payments, amounting to about £12,000 a-year, are made by me. I am held responsible for this expenditure, for which I receive no remuneration, being the first Visiting Magistrate for whom a salary was not voted.
29. How often do you go there? I am obliged to go there once a week; and I am required there much oftener. I also go one Sunday in every month, on which day I muster the prisoners and attend Divine Service with them. There are several other duties which I perform which take me away from the office, and the Shipping Master should be always there. I am on the Pilot and Steam Navigation Board, the Convict Classification, and the Police Reward Fund Board. I have to attend these when I am summoned, and they take me away from the office a good deal.
30. Do you not think the Department of the Shipping Master will work well with that of the Water Police Magistrate? Yes, I think so.
31. There is no occasion for the two departments? No; I think it might be made one department; we are now under one roof, and there is nothing to prevent a Deputy Shipping Master performing the duty. The present Shipping Master would perhaps make a very good Water Police Magistrate.
32. Are you prepared to resign? If the Government are prepared to give me the pension to which I am entitled under the Superannuation Regulations. I believe I am entitled to retire upon two-thirds of my salary after a service of thirty-one years. I have been upwards of thirty-one years in the Civil Service of this Colony, am sixty-eight years of age, and would be glad, if permitted, to retire on a pension of £420 a-year, being two-thirds of my present salary, to which I am entitled under the Superannuation Act.
33. I suppose you have no means of judging whether in the department of the Shipping Master the number of clerks is more than sufficient? According to the best of my opinion it is not more than sufficient, and I doubt very much whether Mr. Venour carries on the business to his own satisfaction.
34. The public convenience has been very much promoted by putting both departments under one roof? Yes; it is very convenient.
35. Are not some of the forms unnecessary—might not the duties be simplified? I am not exactly aware of the way in which the duties of the office are conducted.
36. Are you prepared to make any recommendation to the Committee with reference to your department; can you say whether any further reduction could take place either in the number of the boats, or of the police generally? I do not think it is possible to reduce any further; the men have very severe and hard duty to perform. We have now two boats' crews stationed at Phillip-street, and one at Goat Island. The boat at Goat Island takes its turn of duty with the other two boats, and they have to leave a man at the station when they come away; we have also to leave a man at the station—this man cooks for the others.
37. Have you a sub-inspector at Goat Island? Yes—one boat's crew, a coxswain, four boatmen, and a sub-inspector.
38. Do these men go round the harbour in the night alternately? Yes, each of the three boats takes it alternately. The boat which attends to the office duty during the day has the guard at night. One boat does nothing else during the day but clear vessels, and go down the harbour for any emergency. For instance, they were yesterday searching for the unfortunate young man who was drowned; and they have to give their assistance on all similar occasions. I do not think it possible any reduction could be made in the number of constables: our police were reduced to the very lowest at the last reduction.
39. You are the Visiting Justice at Cockatoo Island? Yes.
40. Has the business gone on well since the removal of the military? There are always little jealousies between the Superintendent and the officer in charge of the police: they have not been agreeing very well lately.

S. North,
Esq., J.P.

17 Aug., 1859.

FRIDAY, 20 AUGUST, 1858.

Present:—

Mr. COWPER,

Mr. FORSTER,

Mr. JONES.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

John O'Neill Brennan, Esq., called in and examined:—

- John O'Neill Brennan, Esq.
20 Aug., 1858.
1. *By the Chairman:* You are Sheriff of the Colony of New South Wales? Yes.
 2. And have jurisdiction over all the gaols within the Colony? Yes; under the 4th Victoria, No. 29, section 3.
 3. Subject to the control of the Governor for the time being? Yes.
 4. What is the nature of the control that you exercise over the gaols? I have the general supervision, the appointment of all the officers, the suspension or dismissal of any of the officers who misconduct themselves, and the general direction of the establishments.
 5. When you say all the officers, do you include the highest—the gaolers? Yes.
 6. Is that vested in you by law? It is.
 7. By a clause in the Act to which you have referred? Yes. All persons employed in the gaols of the Colony are nominated and appointed by me, subject to the approval of His Excellency the Governor, and they are all responsible to me for the due performance of their duties, and I am responsible to the Governor for the appointment of proper parties.
 8. You are aware that this Committee has been appointed with a view of ascertaining how far the public expenditure can be reduced without impairing the efficiency of the establishments of the Government? I am.
 9. I apprehend you are more intimately acquainted with the Darlinghurst Gaol than with the country gaols? I am more intimately acquainted with it, as I see it oftener.
 10. But you will be able to give any information with regard to all of them? Yes.
 11. With respect to the Sydney Gaol, do you consider that the establishment there can be in any respect reduced under existing circumstances, or under any modifications of the buildings, or arrangements which you are prepared to recommend? I think the number of subordinate officers, such as turnkeys and wardsmen, might be reduced, but in recommending a reduction in number I would not recommend a reduction in point of expenditure.
 12. Do you mean that you would recommend the same amount of money to be divided among a smaller number of persons? Yes. The number of officers in the Sydney Gaol has of late years been increased, and it was on my recommendation, on the following grounds: Darlinghurst Gaol is the receptacle for all the vagrants, drunkards, disorderly characters, and lunatics of Sydney and other districts; and in consequence of the unfinished state of the buildings the prisoners were obliged to be scattered over a large space of ground, and they therefore required a greater amount of supervision. But I think, according as the establishment is improved, so the number of officers may be decreased, to a certain extent.
 13. What do you mean by the expression “as the establishment is improved”? I mean as the additional buildings proposed are completed, which will enable us to confine the prisoners in more compact bodies, so that they will require fewer individuals to guard them. Where a number of prisoners are scattered over a very large yard, and in different buildings, employed in different occupations, it is impossible for one or two men to watch them. But if they were put to work in one building, partitioned off according to the different trades, then one person could mind them as well as two can now. In Darlinghurst Gaol there is the stockade, where there are thirty or forty men stone-cutting; a number of men employed at the trade of blacksmiths are in a building; those employed as carpenters work in another building; those picking oakum, and at tailor's work, are in different buildings in different parts of the establishment. And it is self evident, that when prisoners are thus scattered, they require a greater amount of supervision than they would if they were in a long tier of buildings, or in a quadrangular building of workshops, where two or three overseers could keep their eyes on a couple of hundred men.
 14. Have you free head mechanics in each of these branches? No; that is what I was about to recommend. I would suggest the reduction of two or three of the wardsmen—you will see by the estimate there are six—and I would divide their pay, and appoint four free mechanics as free overseers.
 15. You would have no wardsmen? No, but four mechanics instead of the six wardsmen. It is in that way that I would recommend a reduction, but not in the cost of the establishment at present; but I would improve the supervision. As the gaol is improved I think the turnkeys might be reduced. There are thirteen at present, and I think they may ultimately be reduced to eleven; but I do not think in the present state of the Darlinghurst Gaol, when we do away with the six wardsmen, we can reduce the number of turnkeys.
 16. What do these wardsmen do at present? They attend to the wings. One is placed over the wing in which the lunatics are, one over the gaol yard, and one over the confine yard. One turnkey superintends the stone work; another the carpenters' and blacksmiths' work.
 17. The turnkeys do that? Yes, the turnkeys do that at present.
 18. Is that all the modification of the establishment you would propose at present? Yes; I do not see that it can be modified any further.
 19. What are the duties of the Gaoler, as you understand them? He has the general supervision of the establishment; he has to visit the cells every day, see any prisoners who may be confined by any of the officers of the establishment, and ascertain the grounds on which they are confined. He has to see that all the accounts are kept properly, and all the correspondence of the establishment goes through him. He signs the abstracts, and has the general custody and

and supervision of the establishment. He is bound to keep the keys at night, and to see that the prisoners are locked up at the proper time, and that they are released in the morning to their work at the proper hour. John O'Neill
Brenan, Esq.

20. Are you aware in what way he practically superintends the gaol, beyond carrying out what you define, as a general supervision: how far is he cognizant of the details, by actual inspection and movement about, in the different parts of the establishment? He is aware of the details by going about every day. 20 Aug. 1868.

21. He is understood to be bound to perform that duty? Yes.

22. He does not leave it to the principal turnkey? He does leave a good deal of that duty to the principal turnkey. The principal turnkey is supposed to be the immediate and general supervisor under the Gaoler; he is constantly in the yard. The Gaoler has office duty to perform, to see that the accounts are kept properly. The principal turnkey acts as a head overseer.

23. He has a clerk for that? Yes. He has generally to receive the prisoners when they come to the gaol.

24. Does he do that himself? He generally does, except when he may be absent from the gaol on other business.

25. Is he at liberty to absent himself without your permission? He is quite at liberty to do so, for a temporary absence, but not to sleep out of the gaol.

26. He may be out for several hours without obtaining your permission? Yes; that is in his own discretion.

27. Do you limit him to any period of absence? No.

28. You have no means of knowing to what extent he leaves the practical superintendence of the gaol to the principal turnkey? I am quite aware that he leaves a great deal of the practical superintendence to the principal turnkey, but he is well aware of what the principal turnkey does. The principal turnkey reports everything to the Gaoler on the day on which he does it; if the Gaoler is within the walls of the establishment he consults with him; if not, he does what is necessary and reports it.

29. The mere duties of correspondence and the inspection of the accounts must be very light indeed, compared with the responsibility of the actual examination into the details of the working of the prison? Yes; but the Gaoler is responsible for all.

30. What do you mean by responsible? He is responsible to me and to the Government. No one is responsible in the gaol but the Gaoler.

31. For keeping the prisoners within the walls? And for everything that occurs within the gaol. If he permits an officer to illtreat a prisoner he is liable for that, both criminally and responsible to the head of the department.

32. Take the converse—suppose he allows lax discipline, how is that ascertained? He is responsible for it.

33. How often do you make a personal visit to the gaol? Generally once a week, sometimes not so often, sometimes once in ten days, sometimes twice a week; I do not pay regular visits.

34. What inspection do you make? I go round the wings and ask if there are any prisoners in confinement; if there are I see them, and ascertain what they are in confinement for. I see that the men are at work, and if there are any unemployed I ask the reason why. I go into the various departments, and into the female department, and see that the females are kept at work so long as there is work for them to do; and those that are not at work, both male and female, I direct to be kept on confine ration, in accordance with the late instructions.

35. Who controls the character of the rations issued to the prisoners—the Gaoler? I do not quite understand your question.

36. Was there not some order issued in 1856 that men not actually employed on hard work should not have the hard labor ration? Yes; that is what I allude to when I said that the prisoners not at work were put upon confine rations. The reason of that is that men may be at work to-day and not to-morrow. Every day they are at work they get the hard labor ration, but if they are not at work it is struck off. The plan adopted in Darlinghurst Gaol is to put all the hard labor men not employed into the confine yard, and according as there is material and work for them to be put at they are drafted from that yard into the hard labor yard, or the stockade.

37. You speak of some men sentenced to hard labor not being employed in accordance with their sentences for want of material—are there many unemployed in that way? Sometimes there are several.

38. To what cause is it owing that there is a deficiency of material? To the difficulty of getting a sufficient quantity of stone supplied to the establishment.

39. If the men were well supplied with stone and other material more work could be done than is done? Yes, decidedly.

40. How do you get supplied with stone or timber? Through the Colonial Architect's Office, on requisition from the Gaoler.

41. Are you generally supplied in accordance with the requisition, or is there much delay? Sometimes there is considerable delay.

42. Have you taken any steps to prevent that delay? I have seen the Colonial Architect personally, and I have written to him; and he informs me that there is great difficulty in getting the contracts fulfilled, and that sometimes the state of the roads after wet weather prevents the quarrymen or contractors from sending the stone, which is quarried at Pyrmont. To prevent the recurrence of that delay, and in order to insure a proper supply of stone as material for the men at Darlinghurst Gaol, I have, as you are I believe already aware, placed myself in a very difficult and embarrassing position. In 1855, seeing the difficulty of getting a sufficient quantity of stone supplied to the gaol—labor then was very high, and stone was very dear—I directed my attention to a piece of quarry land, or land that could be converted into a very admirable quarry, and out of it the stone of which the present establishment—the

John O'Neill the older buildings—had been erected; the quarry was worked by prison labor. I thought it would be very desirable for the Government to purchase that land for the purpose of working the quarry by prisoners or by free labor. I waited on His Excellency the Governor, and I represented this matter to him. I brought him a plan, and shewed him the importance of the Government securing this piece of land. I then informed His Excellency that I came to him personally, as I thought that if the matter went through the usual official routine it might ooze out, and the public would become aware that the Government were in the market for this piece of land; and that I was quite confident that if it was known they could not purchase it under double its value. I therefore suggested that some private individual should be appointed to purchase this piece of land, and I then understood His Excellency to assent in these words, "Well, suppose you purchase it in your own name, and the Government will take it off your hands afterwards." I understood him to say so; but I believe the Governor denies that he said so. Of course, I am bound to submit to his denial, but as far as my recollection bears me out those were His Excellency's words. I, very incautiously, I must say—unofficial like, I must say—took that as an authority, and purchased this land in my own name. On the very morning I purchased it I went to Government House to inform His Excellency that I had done so, and I was then told I had no authority. I said, I had understood from what His Excellency said that I was to purchase the land; and that I had but one motive—the benefit of the public service. I paid the deposit of £500 upon it. His Excellency then desired me to see Mr. Riddell about it, and write an official letter. I did so; and Mr. Riddell, who was then acting as Colonial Secretary, said he would not have anything to do with it—he had no money; and the consequence was the land was left on my hands, and I was at the loss of my £500 ready money; and I have been obliged to mortgage the land and pay the interest ever since. I have applied to the Government, and I believe the matter is now under consideration. I take this opportunity of stating this matter, to show that I was not backward in endeavouring to secure, as I thought, the best way of obtaining a constant supply of stone for the prisoners in the Darlinghurst Gaol. I am still of the same opinion, that it is most desirable that that quarry should be worked, and that there never can be a proper supply of stone to carry on the buildings and improvements that are required in the gaol, except from these quarries. Whenever the weather is bad it is impossible to get stone from Pyrmont; but this piece of land is within about fifty yards of the gaol gate; in fact, it is a portion of the quarry from which the stone of which the present buildings are erected was taken.

43. At present you are entirely dependent on a contract from Pyrmont, through the Colonial Architect? Yes.

44. Is the stone supplied under that contract at a fixed price? It is.

45. Do they deliver it at the gaol? They quarry it at Pyrmont, and then deliver it at the gaol. I must say I should have oftener brought the matter under the notice of the Government, but that I felt I should be doing, perhaps, an injustice to Mr. Dawson, the Colonial Architect, for it was almost impossible to get men to keep their contracts, owing to the state of the weather. Some men contracted at a cheap rate, and then threw up the contract, and the Colonial Architect was in continual hot water with the contractors.

46. The Committee are to understand you to say, that whenever, from want of material, or any other cause, the men in the gaol are not employed on hard work, they do not get the hard labor ration? They do not. If they are employed at all when sentenced to hard labor, at anything but picking oakum, they get hard labor rations. If they are employed at wheeling the water-casks, drawing the trucks, or moving stone from one part of the yard to another, they get the hard labor ration; but they do not get it when there is not that description of work for them—not when they are picking oakum, which description of work I compel the convicts—men that are not sentenced to hard labor—to work at; I compel every convict in the gaol to pick a certain quantity of oakum per day.

47. The hard labor men are employed at that when there is not hard labor for them to do? Yes.

48. But they do not get the hard labor ration for that? No.

49. Mr. Forbes is the Visiting Justice of your gaol? Yes; to carry out the 12th and 13th sections of the Act.

50. You consider his functions limited to that? I do.

51. You consider that he has no authority to make such reports as are provided for by the seventh clause of that Act? I think he has not.

52. Do you consider him expressly excluded from doing so? I do.

53. Of what benefit, then, are his visits to the gaol? No further benefit than would be those of any ordinary Magistrate—to punish offenders.

54. If the Gaoler brings forward any to be punished? Yes.

55. The Gaoler himself has a power of punishing? His power only amounts to confining them, and not restricting them to bread and water.

56. To what extent do his powers of ordering prisoners into confinement go? He can only do so until the Visiting Justice or the Sheriff visits the gaol.

57. May he not confine a man for a week? No; he is bound to report at once. He may keep a man in separate confinement for a week, but he must give him a full allowance of rations, and a certain portion of daily exercise, under the directions of the surgeon. You will see that the Act gives the Gaoler power, and limits it.

58. Have you any knowledge of the number of cases brought before the Visiting Justice? They are very few; I could not call to my recollection how many.

59. Are there three in the year? Not many more; there may be six.

60. I presume you would object to Mr. Forbes making any inspection of the gaol, as the Visiting Justice does in the gaols in other parts of the Colony? Most decidedly.

61. That is entirely within your own province? That is entirely within my own province.

62. You are aware that Mr. Forbes inspected the books a few days ago at the gaol? I was informed so. Every Magistrate, by my orders, is allowed to inspect the book. That is the reason I had the book kept in that way. John O'Neill
Brennan, Esq.

63. There is a book in which all the work performed is entered, with the valuation of it? 20 Aug., 1858.

Yes. I forget the date, but it was some considerable after I had undertaken the management of the gaol that I made this new regulation—that the number of men at work each day, and the nature of the work they were employed upon, were to be entered in a book, and a weekly statement made up and sent to me. The direction I gave to the Gaoler and the principal turnkey was, to have the book in the office for the inspection of any Magistrate or any visitor that might wish to see it. The honorable member Mr. Parkes went there and inspected the book himself on one or two occasions; and it was my positive order to the Gaoler and the principal turnkey to ask any Magistrate or any visitor who wished to see the establishment to go in and look at the book.

64. Then you consider Mr. Forbes the same in that respect as any other Magistrate or a Member of the Assembly? Yes.

65. You are aware that he asked for some returns from the Gaoler? Yes.

66. And that, in consequence of his being about to make a copy himself, the Gaoler told him there would be no occasion to do so, as he could have the information sent him? Yes.

67. By that memorandum it appears that 285 feet of stone are entered as cut by eight men, and valued at £14 5s. 8d., and 37 feet of moulding at £5 11s. 6d.; and in addition to that charge there is £36 charged for eighteen men preparing stone for the cutters, £2 a week. There is also an item for 528 chisels pointed, £4 8s., and 288 picks pointed, £4 16s. You value this stone at a shilling a foot do you not? Yes.

68. Mr. Forbes states that it can be obtained in the town at five-pence, and that the total cost in the gaol is about 4s. 2d. a foot. Do you know anything of the date on which these entries are made in the book? Yes. The orders I gave were, that the Clerk of Works who visits the gaol constantly, Mr. Sharkey, belonging to the Colonial Architect's Office, should be applied to—

69. Is he employed exclusively on the gaol? No.

70. Because he was some years ago? He was exclusively at one time, but he is not so now. He visits the gaol as one of the departments under his charge to see that the works are properly done. When I gave directions for this book to be kept in this way I gave orders that Mr. Sharkey should be consulted as to what ought to be charged. Having heard something of this memorandum before, I asked the Gaoler yesterday about this matter, and he said the principal turnkey not only asked Mr. Sharkey, but also inquired from private tradesmen in Sydney and outside Sydney, and they said they would not work for less than the charges made in the gaol. The charge was at first two shillings, it was then reduced to one shilling and nine-pence, then to eighteen-pence, then to one and three-pence, and ultimately to a shilling. But it is not wherever the chisel goes that we charge for; three sides of the stone are cut, and we only measure one side. Cutting stone for a gaol is very different from ordinary cutting—scabbling, just chiseling the edges of the stone. Mr. Forbes, no doubt, may get that done cheaper; but if the stone has to be cut in a particular way, so that the stones may dovetail into each other, and to be chiseled and dabbled all over, he will find the charge much increased.

71. There is an extra charge for a man "cutting reveals" and "sparrow picking," which, I apprehend, will be what you mean? That is only ten shillings a day.

72. Still, that is in addition to these other charges? That is different work.

73. It does not apply to the same stone? No. For instance, there is a handsome moulding for a window intended for the Colonial Architect's Office.

74. With regard to the quantity of stone work, it appears that eight men have only cut 285 feet in a week? It is the superficial measurement. There are three sides of the stone in most cases cut, and only one face is measured.

75. It is alleged that the men in Parramatta Gaol do of the same work at least three times as much? It may be so. They measure wherever the chisel goes.

76. Is any work done for private individuals in the gaol without your authority—for instance, I see here four flower-boxes made for Dr. O'Brien? He pays for them.

77. There is no charge here? There ought to be.

78. Under what circumstances do private individuals get work done in the gaol? They send it to the Gaoler and he puts down what is to be charged for it. That omitted charge will be explained. I have not got a return with me, but the way the returns are made out is this: the work done for the Government and estimated for is put in black ink, and the work done for private individuals, and supposed to be paid for, is put in red ink, in different columns. Everything supposed to be paid for is put in red ink.

79. Do you ever make any actual examination of the books or returns, or do you leave it entirely to the Gaoler? I continually make examinations myself, and I have these returns sent to me every week.

80. What is the length of your visit when you go to the gaol? Sometimes an hour, sometimes an hour and a-half. I go over the gaol, and ask what the men are doing, and if I see that the work is not going on fast enough—in the new building for instance—I ask why, and the reason is assigned to me. I go into the hospital, and into every portion of the establishment. The accounts connected with the work, and the amounts received, are sent by the Gaoler, by direction of the Government, directly to the Auditor General; they do not go through me, for convenience sake; but weekly returns are made out to shew me the amount of work done and to be paid for. The only work done for private individuals is done by my permission; and the only work done and not charged for is for the late Matron, Mrs. Webster, the widow of the late Governor of the gaol, Captain Webster; there is some needlework done for her, which I took the responsibility of ordering should not be charged for. But I never gave

John O'Neill
Brennan, Esq.

20 Aug., 1878.

any authority for Dr. O'Brien to get anything done. If it has been done without being paid for, it has been a breach of duty.

81. Is the impression correct, that the principal turnkey of Darlinghurst Gaol has himself been a convict? Yes, I believe it is.

82. What is his history? His history is a very good one. He has been a great number of years in the public service, and has worked himself up to his present position.

83. Did he ever undergo a second conviction in the Colony? I am not aware.

84. Was there not an order issued by the Government since 1849 that no person who had been himself a convict should be employed in any of the gaols? I believe there was. I was not aware till recently of that order.

85. Did you appoint Harrison? No.

86. Who did? My predecessor.

87. Captain Elliott? Yes.

88. After an order from the Government that no person who had been a prisoner should be appointed? He was not aware of the circumstance that Harrison was a prisoner. I ascertained that. Harrison has been long in the service, and must have been a very young lad when he was transported. He was for a number of years at Newcastle, and also a turnkey at Darlinghurst before he was appointed. Mr. Wallace, the Gaoler at Maitland, was the principal turnkey, and Harrison was promoted when he was appointed to Maitland.

89. Do you not consider it a very responsible office for a man who is apparently the practical head of the gaol to hold? It is a responsible one, there is no doubt.

90. Are you not aware that complaints have been made that Harrison shows his sympathy with the convicts? I am aware complaints have been made, but I am quite certain that is not the case. I have made every inquiry, and I have ascertained that he is very strict with them.

91. What are the numbers of males and females you generally have, as an average, in your prison? Between three and four hundred.

92. Of both sexes? Yes.

93. Can you state how many of each? By the last return there were about 360 altogether; I think 229 males and 130 females.

94. Do you know the number in Parramatta Gaol? About 200 altogether, male and female; 40 or 50 females, and 160 or 170 males. But perhaps before leaving the subject of Harrison you will allow me to say, as I have stated, I was informed he was a convict, but I only became acquainted with the fact, and that by rumour, some two years ago; and having made some inquiries, I ascertained—not from the man himself, for I thought it rather a delicate thing to ask—almost to a certainty that he was. I then made every inquiry as to his previous history, and I had his testimonials examined, and learned that they were very good; but, considering that the Committee were on the whole right in their recommendation, I wrote to the Government stating that in consequence of the very exemplary conduct of Mr. Harrison, I thought he ought not to be removed from his office until there was a suitable appointment provided for him, but that if he could be promoted I would recommend that course, because I thought that from his long service and general good conduct and attention to his duties he ought not to be deprived of his situation altogether merely on that ground.

95. May not a person in his position make the amount of work, and therefore the public expenditure, to be much greater or much less, according as he is qualified or not—if he shows his sympathy with the convicts, may it not affect the public expenditure? No doubt it may, but unlikely, as he has officers under him who have the immediate control of the men. For instance, the man that is over the stone cutters reports to Mr. Harrison every week the amount of stone cut by each man, and the prisoner gets the indulgence of tea and sugar, according to the report of this officer; so that Mr. Harrison has nothing to do with it directly. There are also men over the carpenters and blacksmiths, who report in the same way, and Mr. Harrison reports to the Gaoler. Then, if any indulgence is to be withdrawn or given, he informs the Gaoler. So that he does not take the immediate control of the men; he merely takes the general direction and supervision of the work, more as an overseer of the work than an actual overseer of the men. He does not interfere with the prisoners in any way except through the medium of an officer. If an officer has any complaint against a prisoner he makes it either to Mr. Harrison or the Gaoler, if either is on the spot at the time of the prisoner's misconduct; but if neither be on the spot the turnkey locks up the prisoner himself, and then reports it immediately. So that the idea of Harrison's sympathy with the prisoners is to a great degree a fallacy, for that reason, as there is always a person between him and the prisoner.

96. You admit that the principle is correct that the principal turnkey of a large gaol ought not to have been a convict? Yes, I quite admit that.

97. According to your statement the number of prisoners in Darlinghurst Gaol is 360, and the number in Parramatta Gaol 210. Taking the expenditure of the two gaols together, does it not appear that yours is very much greater than that of the Parramatta Gaol—How do you account for the great difference of expense between the two establishments? As I said before, the number of officers required in Darlinghurst Gaol is much greater.

98. Owing to the different construction of the prison? Yes. Here is a plan of the Parramatta Gaol. There the prisoners are confined in small spaces within walls or iron rails, and all can be supervised by one person; but where you have an immense stockade, in which the carpenters are at work at one end, stone cutters at another, and blacksmiths in a third place, you must have a greater number of officers to supervise them. One man could not look after them all, because if he turned his head to look after the stone cutters the carpenters might do anything they liked; or if they attempt to break out, all they have to do is to attract the attention of the officer to one end of the yard, and then the body of the prisoners might make a rush.

99. But the salaries seem to be on a higher scale—for instance, the Gaoler at Darlinghurst has

has £300 a-year, while the Gaoler at Parramatta has £175? These salaries were fixed when the Parramatta Gaol had not more than forty prisoners, and there had been always in the Sydney Gaol a couple of hundred. I think the salary of the Gaoler at Parramatta is too low for the responsibility that is cast upon him now; but I think there is much greater re-sponsibility in Darlinghurst Gaol, on account of the number and description of the prisoners confined therein, which is, as I have already stated, another cause for the great number of men employed as officers. Drunkards, disorderly characters, and persons confined there for assaults, obscene language, and various minor offences, are continually going in and out, and require much greater supervision to prevent spirits or tobacco, or prohibited articles, also letters or communications, from being brought in and out of the gaol. This class of prisoners is much more difficult to manage than long sentence men. The position of the Sydney Gaoler is far more responsible on that account, and therefore I think his salary is not too high at £300.

John O'Neill
Brenan, Esq.

20 Aug. 1858.

100. Then there is the salary of the Visiting Surgeon—in Sydney it is £220, in Parramatta £78—does not that seem a disproportionate allowance in the one case, or insufficient compensation in the other? I am not aware —

101. These estimates are prepared by you, are they not? They are, but I have nothing to do with the Visiting Surgeons' salaries; they are regulated by the Government.

102. Does not the application come through you? No.

103. Do you know how these sums were fixed? No, I do not.

104. Then the clerk in the Sydney Gaol gets £230, in Parramatta £120—there cannot be such a great difference in their duties? The clerk at Parramatta Gaol, as I have often said and represented to the Government, is most inadequately paid; and I do not think it is a salary which ought to be offered to any person holding a respectable position, and having the responsibilities that he has.

105. Have you a good man now at Parramatta? Pretty good.

106. Qualified for the office? I think he is. I hear no complaints of him from Mr. Darvall, who is the Visiting Justice. He has charge of all the money of the establishment, receives money for the prisoners' work, and pays, through the Visiting Justice, the salaries of the officers; he is accountable to the Visiting Justice for all this money; and I do not think, when that is considered, he ought to be paid the same salary as a common turnkey. The other gentleman, Mr. Wickham, at the Sydney Gaol, was placed upon the third-class of clerks, after having passed his examination. He is a very efficient officer, does his duties well, is a very good accountant, and a respectable well conducted person.

107. Then you have a dispenser at Sydney at £132, and at Parramatta at £63? That I have nothing to do with.

108. There is on the whole a difference of £1,000 a-year for salaries between the two establishments? Yes. The salaries are as they were originally put down, and have not been altered for years. I think the Gaoler at Parramatta is underpaid.

109. Then take what are called contingencies: In Sydney the item for provisions is £3,150, in Parramatta, £1,830—can you explain the difference? They way these estimates are made up is from calculation of the number of prisoners that are received during the year. It is not the number that may appear upon the weekly return, but the number of rations issued in the last year. We go upon that data, and call for the same this year. If the number of prisoners has been gradually increasing, we put down the average increase, and call for that number of rations. And then there may be some difference in the contract prices, which may increase the amount.

110. The contract prices ought to be cheaper in Sydney than in Parramatta? I do not know that.

111. There must be greater competition? I do not think they consider that.

112. There is a difference of £1,672 between the contingencies of the Parramatta Gaol and the Sydney Gaol, while there are only one hundred and fifty persons more in one gaol than the other? As I said before, the numbers fluctuate very much in Sydney; there are a greater number of short sentenced persons, who are in to-day and out to-morrow, and we are bound to provide them with rations. For instance, there are a great number of drunkards sentenced to twenty-four or forty-eight hours imprisonment, who must be provided with bread; and there are also disorderly women of the town sent there for misconduct. We estimate the sum for provisions according to the number of rations drawn in the previous year.

113. So that we see by your estimate your actual expenditure? The actual expenditure.

114. Why should the actual expenditure on account of 360 persons be so much greater than the expenditure for 210, a difference of 150? That is the number by only one return, but the number fluctuates very much; we have had as many as 400 in Darlinghurst Gaol, and there are rarely under 350 or 300.

115. The clothing in one case is £454, and I think in the other it is £500—there is but a small difference there? Because clothing is not provided except for prisoners who are long sentenced and sentenced to hard labor.

116. You think there are comparatively more long sentenced men in Parramatta Gaol than in Sydney? Yes. Prisoners sentenced to imprisonment alone are not provided with clothing. I think the long sentenced men are 4 to 3, or 4 to 2½ in Parramatta Gaol compared with Sydney Gaol.

117. Have you any remarks to make with respect to the other country gaols, at Bathurst, Goulburn, Maitland, and Brisbane—I apprehend you have very little control over the Brisbane Gaol? It is not under me.

118. Then as to the others, have you any suggestion to make with respect to them, as to whether the expenditure can be reduced? I do not think it can; but I think if they were properly managed there must be additional expenditure.

119. The operation of the Hard Labor Bill, recently passed, will cause some additional expense? Yes.

John O'Neill
Brennan, Esq.

20 Aug., 1858.

120. Do you suppose it will be found practicable to employ the prisoners outside the walls, without great increase of expense? Quite so. All I would ask for would be one additional turnkey, and an overseer—a practical quarryman.
121. Could you not do it with the present establishment? If it is not reduced in the way I say, I might.
122. Has it ever occurred to you that some saving might be effected, or that the labor of the prisoners might be turned to better account, if the females were all in one gaol? Yes.
123. Do you think it would be possible to remove all the females to Parramatta, and bring all the males from there down to Sydney, and so expedite the completion of the Sydney Gaol? Yes, I think it could be done. I think the wing where the females are at present confined in Darlinghurst Gaol, and the new wing, which is now nearly completed, having only the roof to be put on, would hold all the male prisoners from Parramatta.
124. Is that the last wing which remains to be erected? No; there will be another to be built after that.
125. When the gaol is complete, how many prisoners will it hold? If we put them all in separate cells it would not accommodate more than 400. The new wing that is building will hold about 97 in separate confinement; and the wing I propose to build will hold about 132 in the same way: that will make 229. Then the other three wings will hold I dare say about 300, by having three in a cell, as they are now.
126. *By Mr. Forster:* You recollect giving evidence before a Committee last year as to certain improvements in prison discipline? Yes.
127. Have you been carrying these out since? Yes.
128. Some of the questions you have already answered have had reference to them? Yes. I told you on that occasion that there had been no improvement in the discipline, further than classifying the prisoners and keeping them in employment, as far as practicable.
129. Are you still in favor of carrying that system out in a more comprehensive way? Most decidedly. I think the way the Chairman proposes is the only way of doing it at present,—to make one gaol thoroughly a good one, by making in it all the necessary improvements, and then to move a sufficient number of the prisoners to another gaol—thus improving the different gaols one after the other.
130. In round numbers, can you say what proportion the expenditure of the gaol bears to the net proceeds? I think the prisoners earn a little better than half the expenditure.
131. By carrying out the system more fully I suppose the net proceeds will be greatly increased? The net proceeds would be greatly increased; and they would fully pay expenses if the prisoners were kept constantly supplied with materials, valuing their work as Government work; but the question has yet to be decided whether they can earn a sufficient amount to pay the expenses of the establishment, when provided with work from the public.
132. From your evidence I gather that you act as Inspector of the Gaol, in fact? Yes.
133. You consider the Gaoler responsible to you, and yourself responsible to the Executive Government? Yes.
134. You do not consider a Visiting Justice is necessary? No, not in Sydney, except to try cases. But I think at Bathurst, Goulburn, Maitland, and Parramatta, Visiting Justices are required, because it is impossible for me to go there sufficiently often; and whether you have an Inspector General of Prisons or not you must have a Visiting Justice to every country gaol, for the same reason.
135. Have the provisions of the Hard Labor Bill lately passed been carried out under your superintendence? No, they have not as yet. The matter is still under consideration.
136. *By the Chairman:* The Government submitted a copy to you, and invited you to make suggestions? Yes.
137. *By Mr. Forster:* You think it will be beneficial? Yes; and I think also that in the towns of Goulburn, Maitland, and Bathurst, the men can be worked with advantage in the streets.
138. You have stated that the Gaoler at Parramatta receives an inadequate salary? Yes.
139. Has he ever made any complaint on the subject? He has.
140. How long as he held the office? I believe ever since the establishment was opened.
141. How is it he has remained in the public service so long on an inadequate salary? I suppose it suited him.
142. Knowing what you do of the man, do you think he would be likely to make more out of it than in any other occupation? He was formerly a police officer in Ireland, and not in any trade, and I do not think he could make more in any other business, when you take into consideration his perquisites. But I do not think that is a fair way of testing the services of a public officer.
143. If the duties are adequately performed, which you seem to consider they are, and if he would not be likely to do better in any other occupation, why should the public pay him more? I only say the duties are adequately performed as the system is at present; but as the system is improved I think the Gaoler ought to be a man of a different stamp.
144. You think that under a more comprehensive system of prison discipline you would require a better man and pay him more? Yes; that is in education.
145. At present you say he is equal to the duties he does perform? Yes, under the supervision of the Visiting Justice; but I think the responsibility he has is greater than he ought to be expected to be under for his present salary. I think it ought to be £200 at least.

TUESDAY, 24 AUGUST, 1858.

Present:—

Mr. COWPER,
Mr. JONES,Mr. PARKES,
Mr. PIDDINGTON.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

Haynes Gibbes Alleyne, Esq., M.D., Health Officer of the Port of Sydney, called in and examined:—

1. *By the Chairman:* You are Health Officer? Yes.
2. What are the duties you generally perform in that capacity? To be in readiness to board all vessels entering the port at any time during the day, and occasionally at night also, and to ascertain their state of health, and report it.
3. To carry out, in fact, the instructions issued in January, 1839? Yes. I have also to take medical charge of all immigrants brought out by the Government while they are under the care of the Immigration authorities.
4. Is the Quarantine Ground under you? Yes.
5. Are immigrants who may be placed there under your charge? Yes, of course; I do not live in quarantine with them, but I have the supervision of them. I have also medical charge of all immigrants not in quarantine, when lying in the harbour here before they are engaged.
6. And you make arrangements for the medical treatment of those who are in quarantine? Yes.
7. Where do you reside? In Fort-street.
8. Do you find that the most convenient place for your residence? Yes.
9. You are aware it has been suggested that it would be better if you resided at South Head? It was, some time ago; but it was found that that would be attended with difficulties. In the first place, the Act must be altered, for if it was not, ships would be put to great inconvenience. At present ships are allowed to come up as far as Neutral Bay without being visited.
10. Without fixing the site of your residence at South Head, would it be better for the performance of your duties if you were residing lower down the harbour? No, I do not think so. Where I am living now is near the Signal Station, and I get immediate intelligence of what is going on.
11. You have four boatmen, have you not? Yes.
12. Would all these be necessary if you lived lower down the harbour? Yes, I think they would be even more so than they are now. The only thing that makes four boatmen necessary at all is, that occasionally the weather is not fine, and of course I am obliged to go off at all times, without respect to the weather. I should be in rougher water if I lived lower down.
13. Where do you generally board vessels? I generally board them off Bradley's Head, but in the case of immigrant ships I board them between the Heads. My usual practice, the moment a vessel is numbered, and I know where she is from, is to start off to her.
14. Vessels are numbered from the South Head? Yes.
15. Would it not be more convenient for you then to put off from South Head and board them? It would not be so convenient for the vessels.
16. The only time when it is necessary for you to communicate with the Government is when there is disease on board, and that is seldom the case? That is seldom the case; but in that event all vessels would have to anchor at South Head.
17. Why? Because as many come in at night as during the day. I could not efficiently perform my duties if I lived anywhere than in Sydney. It would be imprudent to compel vessels coming in at night to anchor lower down the harbour than Neutral Bay, when the wind happened to be favorable for their reaching Neutral Bay, as, although vessels are sometimes compelled to bring up between the Heads and in North Harbour, they do not select such anchorage if it can be avoided; but always try to reach beyond Bradley's Head before coming to anchor. If I lived at South Head, I should be compelled to pull to Sydney every morning, to ascertain what vessels had entered during the night, and instead of boarding them at daylight, as I do now, I should not be able to board them until at least an hour and a-half later in the day, as it would require at least that time to come from South Head to where the vessels usually run up to. No inconvenience has ever arisen from my residing where I do; my duties have always been well and strictly performed, and I do not believe that I could perform them efficiently if I lived anywhere else than in Sydney.
18. How far is the anchorage at Neutral Bay from South Head? I do not know. It is on the opposite side of the harbour to this, on this side Bradley's Head.
19. Is it necessary for you to have a boat entirely at your command—might not the same boat that goes down for the Customs or for the Post Office be used to convey you? That was the case once. The boat that went from the Customs conveyed the Health Officer, and also brought up the mail. But it is not their duty to go away immediately, a ship is signalled; in fact they seem to have other duties, or, whether they have or not, they go when it suits their convenience or their time; at all events, they do not go off immediately. For instance, if a vessel were to come in after four o'clock, the Customs boat would not be prepared to go off to her perhaps till next morning, because their object would be to get her papers from the ship in time to present them at the Custom House when it opened. Delays occurring in this way led to a great many complaints about the Health Officer, which, of course, ought not to have fallen on his shoulders; and I believe that was the reason why a boat was first given to the Health Officer, in order that there might be no delay in boarding vessels.

H.G. Alleyne,
Esq., M.D.
24 Aug., 1858.

- H.G. Alleyne, Esq., M.D. 20. Then there are now three boats—the Post Office boat, the Customs boat, and the Health Officer's—all visiting ships on arrival? Yes.
- 24 Aug., 1858. 21. It does not appear that any inconvenience would arise to your department by obliging one of the other boats to take you off to board vessels—it seems to be more for their convenience than yours that the separate boats are necessary? It would answer my purpose, if they were ready to go immediately.
22. What do your men do—do they find constant employment to row you about? They never do anything but that; I make it a point never to allow them to do anything for me. The Customs boat very seldom goes down to the Heads.
23. What amount of occupation have these men during the week, on the average? They have a great deal of idle time on their hands; for instance, all to-day they will probably be idle, because it is not likely there will be any ships in, unless a southerly wind should spring up. However, they have Sunday work, which other men in Government employment have not, as well as to work on all other days which are holidays to others.
24. Between dark and day-light are they on duty? Not often.
25. What other duties do you perform except those of Health Officer? No others, except attending the immigrants, and as a member of the Immigration Board.
26. Do you attend the immigrants so long as they are in the barracks? Yes; there are always some there; I go there every day.
27. Then you are in fact medical officer to the Immigration Department generally? Yes; there are always a certain number of invalids there, and generally a few women waiting to be confined, who may have come out to join their husbands; if they are in the family-way they cannot be sent away.
28. Are there many of that class of immigrants? Not many; there are none now—but lately there were as many as five there at one time.
29. Women who had come out to join their husbands? Some of them were. One or two were single women who were found to be in the family-way.
30. From irregularities during the voyage? No, it must have been before. When a woman is seen to be in that state, of course she is not allowed to engage herself.
31. *By Mr. Jones:* Can you suggest any arrangement, by which the expense of your boat's crew would be saved? I do not know of any, except it be done as it used to be before, by my going in the Customs boat; but they went off at times entirely suited to their own convenience, irrespective of my duties, and there were constant complaints, so much so that I was every now and then getting very unjustly into a scrape from no fault of mine. I always get up at daylight, and go the first thing to see if any ships have come in; and under the old arrangement I have often walked on the quay for two or three hours before breakfast, waiting for the boat; and in the same way at night, after they had gone away, I was constantly put to expense myself in paying for boats to go off, because I never got taken off by them after office hours. All that I want is, that somebody should take me off when I want to go, but when I was left to the mercy of the Customs boat, it was impossible that my duties could be performed as they should be. The person in command of the Customs boat had his special duties to perform, and taking me on board was a matter of secondary consideration. If it happened that in the performance of their duties they visited the vessel immediately on her arrival, I then visited her in proper time; in many cases, the performance of other duties appertaining to the Customs Department delayed them, and in those cases I did not visit the vessel until some time after it was my duty to have done so. I used to spend a great portion of my pay in paying boats to take me off, because I knew I would get into a scrape if I did not.
32. *By Mr. Piddington:* Do you know how many boat's crews belong to the Customs Department? I do not.
33. Do you know how many boat's crews are attached to the Water Police? No. Once I made a proposal that the Water Police should have instructions to take me off whenever it was necessary, but they raised an objection to it.
34. Are you aware of any reasonable objection to the Water Police boat taking you off? There is none that I know of; there may be an objection.
35. Do you ever board ships at night? Not often; I do occasionally; for instance, when I am aware that an Immigrant ship is coming in, in the evening, I board her the same night.
36. You never board ships outside the harbour? There is no necessity. I sometimes do go out, for the sake of saving trouble.
37. It is not necessary, in your opinion? No; there is no necessity for my boarding ships until they come to where the law allows them to come, except under particular circumstances.
38. *By the Chairman:* Have you had any opportunities of inspecting Darlinghurst Gaol, or have you been there lately? I have been occasionally visiting there lately for the Visiting Surgeon, Dr. West, who has been ill.
39. You have been acting for him? Not altogether—whenever I have had time; he has written to me very often lately to go. I have not seen him; but he has been ill for the last two months, and I have been in the habit of going up there.
40. Have you had sufficient opportunities of observing whether the prisoners are constantly employed or not? They are not all of them constantly employed, because I often see many of them not doing anything. I believe some they call hard labor men, and others are merely confines. Those who are not employed may be confines.
41. Did it strike you that they looked as if they were not in a state of discipline, or not constantly employed? They certainly are not constantly employed, because I see them walking about doing nothing, sometimes.
42. Did you at all draw any conclusions that the discipline of the gaol was at fault from what you saw there? I was looking chiefly at the medical department of the gaol when I

was there. There is no doubt I have seen men walking about there who did not appear to be actively employed.

H.G. Alleyne,
Esq., M.D.
24 Aug., 1859.

43. Did you, in any subsequent conversation, express that opinion to Mr. Forbes, the Visiting Justice of the Gaol? Yes, something to that effect.

44. Accompanied with any more extended observations? No; it was exactly that about the people, referring to their walking about. Our conversation was about the works done in the gaols. I had been reading some papers on gaol discipline, and we were talking on the subject. Mr. Forbes was speaking of what he had been doing at Parramatta, and I said I thought the discipline of the Sydney Gaol might be improved, and that the people seemed to be walking about, not having any very active employment.

45. Your impression was that the punishment they endured was not very severe? Not with regard to hard labor, certainly.

46. But you have no means of forming any opinion as to the manner in which the gaol generally is managed? No. It is clean, certainly.

47. Are the men disciplined as confines in a gaol are expected to be? I have no means of knowing that.

48. You do not make any inquiries then, when acting for Dr. West? No; I did not know that it was any part of his duty to do so. I went into the hospital, and also saw all the persons who were brought up on that day.

49. But a good many of the convicts there are not at hard labor? So it appeared to me.

50. You visit Chinese immigrant ships, and make an examination of them when they arrive? Yes.

51. What kind of examination do you make—do you find them much crowded? I have made very particular examinations lately, since the question has been discussed about these Chinese. They appear more crowded than our own ships; but they come under a different Emigration Act, which was passed for the Chinese specially.

52. Do they comply with that Act? Yes.

53. Have you made inquiries whether there are any breaches of that Act? I do not think there are. They get a certificate at Hong-Kong that the Act has been complied with, before the ship leaves.

54. Is the tonnage of the ship fairly estimated? Yes; and the space, which is more important, is so too; they are large ships, with 'tween decks of good height. There is always a disagreeable and abominable smell on board these ships, arising from want of ventilation—the ships being generally North American built ships, with neither scuttles nor ports. There is the same smell on board German immigrant ships, and also American ships. The last ship that came in from China was an exception, and as clean as any ship I ever saw in my life—as clean as our own immigrant ships.

55. And not over-crowded? And not over-crowded. The space allowed to each passenger by the Hong-Kong Act is twelve square feet; our own people are allowed fifteen feet on one deck and eighteen on the other.

56. What kind of treatment do these people generally receive on board ship? They seem to be well contented.

57. Do they arrive in a good state of bodily health? Yes, better than any men who come here. Since the discussions which have taken place about them, I have been in the habit of mustering them on deck by tens, stripping off their clothes, and examining them; and I never saw people so clean and free from any kind of skin disease.

58. You think the sickly ones could not be kept below from your observation? No. They come here in excellent health. The mortality on board these ships is less than on board any other ships in the world; it has not exceeded two in each ship, with the exception of one ship, which was five months out—the usual passage being under two months—and I think she lost ten from dysentery, which may be accounted for from her having stopped at Sourabaya, a notoriously unhealthy place, for six or eight weeks. That was the only ship in which there was any noticeable unhealthiness or mortality.

59. You are of opinion, then, that none of them come here laboring under infectious disease? I am quite sure of it, because I have them all stripped as naked as when they were born.

60. They do not resist it? No; I have only to tell the interpreter what I wish done, and he has them brought up with as great facility as if they were a troop of soldiers.

61. Do you do that with all the Chinese ships? Yes, lately only, since the matter has been so much talked of; I have no authority for so doing, but the people do not object.

62. As far as you can judge, they have received hitherto very good treatment? Yes; they seem to be perfectly contented. I think they would have complained if it had not been the case, because there are always some persons amongst them who have been to this Colony or Victoria before, and the interpreters are generally very intelligent men; I think most of them come from Victoria College at Hong-Kong.

63. How long is it before they are cleared out of the ship? Within forty-eight hours. There are one or two Chinamen here who make it a trade to make arrangements for landing them and sending them up the country.

64. Do they remain long in Sydney? I think not—not more than a week.

65. Have you ever been where they are housed? I have.

66. Are they not generally very much crowded? They were, now they have better houses; but the houses in which they were usually stowed away were some of those old and badly ventilated and built houses in Lower George-street; there they were very much crowded.

67. But you think they are not long enough there to generate disease? No. I do not think they suffer in that respect as much as the German immigrants do who come out here.

68. Have you ever visited the houses where the German immigrants are lodged? Yes.

69. Were you examined before a Committee of the Legislative Council on the subject? I was examined, not on that subject, but on the subject of German immigration.

70. Do you think any disease is introduced by German immigrants? No. I think some of them

M.G. Alleyne, Esq., M.D. them have lost their lives from neglect, over-crowding, and want of proper food and accommodation after their arrival in the Colony. Many of the people are landed in a low state of health.

24 Aug., 1858. 71. Has that been caused by bad treatment on the voyage? Yes; I have no doubt of it. During the last twelve months they have been better; but before that the ships were dreadfully crowded, and no proper food was put on board for children or invalids, so that when they got sick, under such circumstances, the mortality used to be very great.

William Hanson, Esq., called in and examined:—

Wm. Hanson, Esq. 1. By the Chairman: You are Government Printer? Yes; and Inspector of Stamps also.
2. How long have you held those offices? In March, 1854, I was appointed Government Printer, and in January, 1857, Inspector of Stamps.

24 Aug., 1858. 3. What is the annual expense of your department? Last year the gross amount was £14,751 8s. 5d.

4. How was that sum expended? For printing, bookbinding, and printing postage stamps.

5. Is that for wages? The principal sum is for wages to compositors and pressmen.

6. In fact it is stated in detail in the returns laid upon the Table of the House, and ordered to be printed, on the 17th June last? Yes.

7. How is the number of your men regulated? It depends upon the quantity of work in hand. During the Session we generally have a few more hands than in the recess. Since the introduction of Responsible Government each recess has not been more than sufficient to enable us to bring up arrears, and consequently we have kept about regular in number.

8. It is left with you to see that those men who are employed are properly worked, and to put on more men if the Government work requires it? Yes.

9. How are the demands for Government work made upon you regulated—has each department power to ask you to do any work it pleases? Yes.

10. Unlimited? Unlimited.

11. On requisition of any head of a department? Yes. The whole of the printed forms are supplied on requisition, and when I feel that they are exorbitant I generally refer to the Principal Under Secretary, who always co-operates with me in reducing them.

12. Have you many requisitions from the Colonial Storekeeper's Department for work of the character you allude to? No. In 1854 I found the jobbing work very oppressive, and I made an application to the Government to have the custody of the printed forms transferred to me, and in the following year, 1855, this was done. In the year 1854, 217,197 sheets of job printing were supplied to the Storekeeper's Department for issue; and in the year 1857, when under my charge, the number was reduced to 86,320 sheets.

13. Do you think the reduction was owing to stricter supervision? Entirely.

14. Can you suggest any means now, by the introduction of any new regulations by the Government, by which any better or more wholesome check could be put on the different departments ordering work which might be dispensed with? No, I do not think it at present. We know pretty well what forms are required by the different departments; and in case anything extraordinary is required, I always refer the matter back to the head of the department. Taking that precaution, I do not think there is any extravagance in the supply of printed forms at present.

15. The expense of your department goes on annually increasing—have you any large increase in the amount of work? A very great annual increase.

16. Do you find that the establishment of another House of the Legislature has increased the amount of printing very much? Yes, very much indeed.

17. Are there no means of keeping that printing down? I think it might be, perhaps, rendered less expensive.

18. There has been a correspondence on the subject, has there not, in the early part of this year? Yes.

19. What was the result—did it end in any very great reduction? No.

20. Do you think the printing might still be reduced? There are two or three points where, I think, it might be reduced. For instance, the issue of proofs of the printed Votes, which we are compelled to have out at eight o'clock in the morning, entails a very heavy expense during the sitting of Parliament.

21. In what way? It is insisted on that the Proof Votes shall be delivered at eight o'clock every morning, and however late the House may sit, the men have to be at their frames two or three hours later to prepare the Votes, ready to send away from the office at eight o'clock in the morning. As you are aware, the House sometimes sits the whole night, and the Superintendent and six or seven of the men are compelled to be there the whole night also. The overtime commences at seven o'clock in the evening, and the men are paid eighteen-pence an hour. This Session the average amount of such payments has been £17 18s. 10d. per week. That expense I attribute entirely to the Proof Votes.

22. How many men do you find it necessary to keep? We are uncertain whether the Votes will be long or short; they may run four or five pages, and we must be prepared in any case. I would suggest that ten o'clock in the day would be soon enough to get out the Proof Votes, and then that expense would be saved. I spoke to Mr. Donaldson, when he was Premier, to Mr. Parker, when he was Premier, and to yourself on the subject, and all concurred in the opinion that the early issue of the Proof Votes is unnecessary; but still Mr. O'Connor is immovable in the matter.

23. What is the total amount of this extra expense this Session? £383 14s. for twenty-two weeks.

24. Are the men detained in this way employed at any other work? They are; but you can understand that when they are waiting for the Votes, expecting them every hour, they do

do not go on with their work in the same spirit as at other times. When they have been there the whole day it is very oppressive. Wm. Hanson, Esq.

25. Do you keep the same men there all day and all night? Sometimes; but generally the men come back by turns, the Superintendent deciding the number each evening. 24 Aug., 1858.

26. Could you not take on three or four fresh men and give them fresh work until the Votes could be put in hand? We must have two sets of men then. No doubt in the early history of the Council it was necessary the Votes should be on the breakfast tables of Members; but the question is whether it is absolutely necessary they should be ready at eight o'clock.

27. You wish to postpone them till ten o'clock? Till half-past nine or ten.

28. How do you regulate the work of the establishment, do you supervise it yourself, or does the overseer? The Superintendent, Mr. Richards, and myself have the joint management of the department.

29. What number of persons are now employed in the Government Printing Office? You will see by the Return ordered to be printed on the 17th June last, that in July, in the year 1852, there were 55 hands; in 1854 the same number—(this was my first year); in 1856, when Responsible Government commenced, there were 60; and in April, 1858, there were 70.

30. Are these wages above or below the rates paid in private printing establishments? They are the ordinary rates of wages; not so high, of course, as if they were working by the piece. On the newspapers those on the "stab" get, at the present moment, £4 a-week, and the majority of mine get £3 12s., some few £4 a-week. There are four, who act as sub-overseers of branches, who get 15s. 4d. a-day.

31. I see you have thirty compositors, three pressmen, two readers, a publisher, three machinists, three assistants at the machines, besides apprentices—these men are all necessary? They are. I cannot keep the work under with them: I have a large accumulation now.

32. How many hours do they work for their daily pay? From eight o'clock in the morning till six in the evening, with one hour's interval, from one to two o'clock.

33. Are those the usual hours at other establishments? Yes. At seven they commence overtime.

34. How many men are generally employed overtime? Eight or ten usually. The men take it in regular turns; the same men who come back to-night do not come back to-morrow. We always arrange so as not to have the same set of men two nights following.

35. Is there no way you can suggest a reduction of the expenditure? No. You must understand that we have now an enormous amount of printing from the Railway Department.

36. That was not done at one time? No, only recently.

37. When? Within the last year.

38. Do you print all their tickets? No; they are done in the Railway Office, by a machine. I may here mention that the printing must necessarily increase: in 1854 there were thirty-one departments only; and in 1857 they had increased to fifty-two. Almost every Act of Parliament permanently entails a considerable amount of printing, in the shape of forms.

39. The heads of departments make their requisitions to you direct? Yes.

40. They do not even go through the Colonial Storekeeper? No; that was found to be a great nuisance, and the cause of great extravagance.

41. You refer to the Colonial Secretary's Department if you have any doubt as the propriety of any requisition? Yes.

42. You now have the Bookbinding Establishment attached to your department—how is that working? Very well indeed.

43. Can you state the amount of work done, as well as the present cost? I have tested it by comparison with the contract prices formerly paid for binding. Take, for instance, the Votes and Proceedings; there are one hundred sets of these bound, making, when there are three volumes, three hundred volumes. The contract price was 12s. 6d. per volume, and I found that we could do them very much cheaper in the office.

44. What do you think they cost us now? I cannot say exactly.

45. Do you think there is an equal reduction on other work? I should be very glad to alter my position, and do the printing for the Government by the piece, charging the trade prices for it.

46. Have you much work in arrear in the binding department? No; when the sessional volumes are out of hand, then we can get on very well with the binding. Everything that is bound for the Government is bound by me.

47. Do you do much for the Surveyor General's Department? Yes.

48. How is the Postage Stamp Department working? Very well.

49. What number of persons are employed on that work? One man.

50. What are his wages? £1 a day.

51. That is all you have? No one else. I have delivered every stamp with my own hands since I have had charge of the department. Last month I issued to the Postmaster above £4,000 worth of stamps, or at the rate of £50,000 a-year, and one man prints the whole of them.

52. What was the expense of the department when it was transferred to you? I think it was about £3,000 a-year.

53. What is this item for printing and gumming postage stamps? That is for printing. The materials are in a separate item,—£350 for printing and gumming, and £150 for materials.

54. Is it necessary to give £1 a day to the man employed on this work? Yes; if you saw the nature of the work you would think so.

55. Is he a mechanic? He is a copper-plate printer. The former printer, before I took charge, was paid half-a-crown a thousand for printing the stamps. There are 120 heads on each plate, and he could easily work off every day 18,000 stamps, thereby earning at the rate of about £700 per annum. I find that one man does the printing very well.

- Wm. Hanson, Esq.
24 Aug., 1858.
56. And can go on supplying the requirements of the department? Yes, and could do half as many again.
57. *By Mr. Parkes*: Can you give us a return of the number of stamps, distinguishing the number of each kind issued from the beginning of last year? I will prepare a return. (*Vide Appendix A.*)
58. *By the Chairman*: Have you yet commenced working the lithographing branch? I have not. I am just about to commence it.
59. You have got the room erected? Yes.
60. Until that was done you could not begin? No.
61. When will it be in operation? In less than a fortnight.
62. Have you got all the materials? Yes.
63. Do you think there will be a reduction in the expense of lithographing? I am quite satisfied of it.
64. Besides adding to the convenience of the public service? Yes. The printing of the debentures is a very considerable matter, and all these have the initials of the Colonial Treasurer printed on every coupon; now we have to send them to a lithographer in town to have the initials of the Treasurer printed on them, but in future we will do it ourselves.
65. You are satisfied that you use every proper vigilance in keeping down the expense of your department? Quite so.
66. *By Mr. Parkes*: Is much printing done in your office which does not come before the public—I may call it amateur printing—for the different departments, when any scheme is propounded by any head of a department who wishes to see it in print—do you ever do much work which is set up, a few proofs struck off, and then the matter distributed? Never, except for the Government.
67. Do you do much of that? No: the Estimates undergo a great deal of revision.
68. *By the Chairman*: How is the admission of apprentices into the department regulated—does it rest entirely with yourself? It does.
69. Do they not generally turn out well? Some of them; but I have had a great deal of trouble with one or two.
70. For how many years has your department been receiving apprentices? I found the system in operation when I took charge of it.
71. Do you find any desire on the part of the youth of the Colony to become apprentices? Yes. I have fifty applications now.
72. Do they remain when they come? Yes.
73. Do they turn out good printers? Yes; I have some of the best printers in the Colony, who were apprenticed there.
74. Who have served their time, and still remain? Yes. The present Superintendent has been there many years; he entered as an apprentice, in 1846, and has remained ever since.
75. What is his name? Richards.
76. Do many of the apprentices turn out well? The majority of them do.
77. Do you not encourage them by some small pay? Yes; but they are troublesome, because we are obliged to select a man to take each boy under his charge.
78. Does that man get anything for that? No. It is also a responsibility on my shoulders in having them bound; and if they misbehave I cannot well get rid of them.
79. Do you not take the boys on trial? Yes.
80. What is the rate of pay given to them? It commences at 2s. a day, and increases up to 5s.
81. *By Mr. Piddington*: I find there is one at 6s. 8d.? Yes, but he is not an apprentice. I have here a Comparative Statement of the annual expense of the Government Printing Offices in Victoria and New South Wales. In Victoria, the annual expense is £31,264; in New South Wales, £12,687. These amounts are exclusive of the cost of paper and parchment in both cases. (*The witness handed in the Statement referred to. Vide Appendix B.*)
82. Do you know the revenue of Victoria? I do; it is large.
83. *By the Chairman*: What do you do with your old type? Three-pence per pound is allowed for it, and deducted from the price of the new type.
84. How long does new type last you? It lasts a considerable time; but it depends on the way it is used. We are constantly compelled to add new type; but I have not thrown any old type into the melting pot, excepting waste.
85. I thought you were prepared to make some suggestions relative to Parliamentary printing, with a view to a reduction in the expense? The printing of the proof Votes is the subject which deserves your consideration, as regards economy. The correspondence you have referred to was with regard to papers laid on the Tables of both Houses, by command. That is a matter that would lead to economy if it were set right. When a paper is laid on the Table by command, the practice at home is to look upon it as a Parliamentary Paper, not as a paper the property of either House; and all papers of this kind form a parliamentary volume at the end of the year. Here, it is moved in your House that it be printed, and the words "ordered to be printed by the Legislative Assembly" are put upon it; the same thing is done in the Legislative Council with the same paper, and consequently a double distribution necessarily takes place of that document.
86. *By Mr. Jones*: What is the general rate of printer's wages in Sydney at present? £3 12s. a-week.
87. How is it you pay a number of your hands something higher? I can state that this arrangement works well; it encourages the better class of workmen to come into and remain in the office, on the certainty of promotion whenever a change takes place. Those who receive the higher pay are really superior men, and have been in the office many years. They understand the Parliamentary work better than any others; and they receive 1s. 4d. a-day more than those who are not on what is called the "stab." The others are supernumeraries, discharged and taken on as occasion may require. Many of these, I may say, have been in the office for a very long time, and they are first-rate workmen.

88. Is not £3 12s. a-week the very highest rate of pay in jobbing offices? I think it is. Wm. Hanson, Esq.
89. Are you aware whether any are paid a lower rate than that? I have heard of some being paid £3 6s.
90. Do you think you are bound to retain these men at 18s. 4d. a day, supposing wages fall below what they are now? I do not think you can obtain good men like these at £3 12s., to work the same number of hours. Besides, it is a great advantage to be able to retain men who have, by years of service, become experienced in the business of the office. Our work differs very much from that of newspaper and jobbing offices, and really good compositors require to be with us some time before they can be considered efficient. It would be bad policy to run the risk of continual changes by reducing the wages too low.
91. What hours do they work? From eight o'clock to six, with an hour's interval.
92. Nine hours work? Yes.
93. What are the hours in printing offices generally? I worked from six to six, with two hours interval, when I was employed in that way.
94. Those are the regular hours, are they not? Yes.
95. Then your men, in addition to being paid something more than the regular wages, work one hour a day less? Yes.
96. What is the necessity for that? It has always been the rule.
97. Supposing that in ordinary establishments the men worked nine hours, do you think your men would work ten? I think whatever agreement is made with the men we are bound to carry it out.
98. I presume your agreements are from fortnight to fortnight? Yes.
99. Do you think the men would continue to work ten hours in your establishment if others worked only nine hours? I scarcely know what would be their action in the matter.
100. Can you see any reason why the Government should pay more than the current rate of wages to men who work a less number of hours? In my office the men are very superior men, and they have not the advantage, which other men have, of earning more than a fixed rate. If they were paid by the piece, they would earn much more—as much again. It is that the office is more comfortable that keeps them there. They are a very superior class of men, and I consider they are better worth £4 a-week than many are worth £3 6s.
101. *By Mr. Parkes:* Would your men earn £8 a-week if paid by the piece? I think they would. I would be very glad to do all the Government printing at a fixed rate instead of the way it is done.
102. *By Mr. Jones:* Do you think if you were to assimilate your hours to the hours in other establishments these men would leave you? Yes; I should have the greatest disturbance in the office.
103. Where would they go to? I do not know. I should be very sorry to be obliged to carry that out.
104. Is it a fact that printers are willing to leave any establishment in town to come to the Government Printing Office? Yes.
105. Do you not know that many are desirous of escaping the night work at the daily paper offices? Yes. But at the same time I have had men leave me to go to night work, because they could earn more.
106. But these were exceptions, I presume—the rule is that men desire to leave other offices to come to yours? Yes.
107. What is the rate paid to apprentices in other establishments? I do not know at all.
108. Does it not occur to you that the rate of wages paid to apprentices at the Government Printing Office are very high, ranging from 2s. a day up to 6s. 8d.? The one who is receiving the 6s. 8d. is not an apprentice. According to their indentures they are bound to serve at such rate of wages as the Governor for the time being shall award, so that they do not fix the rates; it depends on what we think they are worth. In the year 1850 they were receiving from 1s. 8d. to 2s. 6d. per day; some of my boys are now receiving 2s., and the majority of them 3s.
109. *By the Chairman:* When do you raise them? Generally on promotion from one branch of the office to another.
110. *By Mr. Jones:* Do they not rise from year to year, regularly? Not regularly.
111. *By Mr. Piddington:* How many apprentices have you? Twenty-six.
112. How many below 3s. a-day? Only four below 3s.
113. And twenty-two above it? Yes. Ten of them have 3s.
114. *By Mr. Jones:* For what time are they generally bound? So that they shall be out of their time when they become twenty-one years of age.
115. Do you believe that the work is done cheaper by men on the “stab” than it would be by piece-work? Yes, very much.
116. Have you ever made any computation of what the probable cost of the Government printing would be if it were done by piece-work? I have carried to each department an exact account of the work done since I have been there, each item separately. You could get an independent person to price it.
117. You have never priced it yourself? No. I know, from the quantity of paper we use that it would amount to a large sum. We average 250 reams of double-foolscap per month.
118. You are quite sure it would be more expensive by piece-work? Yes; I am quite sure the expense would be very enormous, from the corrections the different documents undergo.
119. It would be very difficult to do much of the Government work in that way, on account of the corrections, would it not? They do it at home; no printing is done except by piece-work. There are five printers who print for the Government, and they all charge by the piece.
120. *By Mr. Piddington:* They print by contract, do they not? Yes.
121. And Hansard as well? Yes. Harrison prints the *Gazette*, Hansard the debates, Spottiswoode prints for the House of Commons. There everything is paid for by the piece.
122. According to a fixed scale of prices? Yes.

- Wm. Hanson, Esq.
24 Aug., 1858.
123. There are thirty men in this Return put down as compositors—do you retain these thirty during the whole year? No.
124. How many do you generally discontinue? At the present moment I have two less than this number. When this Return was made up there was a pressure of work, and we had two men employed who have since been discharged. When the Session is over, it will take, perhaps, two months to get up arrears, and then I dare say I shall be able to discharge four or five—say four.
125. You discharge four as an average number for part of the recess? Yes.
126. Can you give the Committee any information as to the cost price per ream of paper and parchment used in the Printing Office, distinguishing the different kinds of paper? I can have a Return made out. (*Vide Appendix C.*) The amount voted is £3,000 for paper and parchment.
127. Do you perform all the bookbinding for the various Government offices? No one has any authority to get it done anywhere else.
128. You do it all? Yes.
129. *By Mr. Parkes:* Do you do the binding for the library? Yes.
130. *By Mr. Piddington:* Every description of binding? Yes.
131. Elegant work as well as common? We have no elegant work to do.
132. When you speak of binding for the library, what binding do you mean? Plain half calf.
133. *By Mr. Parkes:* You do not bind printed books for the library then? Yes.
134. *By the Chairman:* You can do the most finished kind of binding? Yes.
135. *By Mr. Piddington:* Have you any finishers? Yes.

APPENDIX A.

A RETURN of the number of different kinds of Postage Stamps issued to Postmaster General for the Years 1856 and 1857.

VALUE OF STAMP.	ISSUED 1856.	ISSUED 1857.
One penny	968,262	1,050,720
Two-penny	1,794,116	1,965,960
Three-penny	205,559	92,280
Five-penny	700	2,900
Six-penny	172,228	312,900
Eight-penny	10,664	12,600
Shilling	47,308	91,419
Register (6d.)	74,590	87,200
	3,273,426	3,615,979

W. HANSON.

APPENDIX B.

COMPARATIVE Expense of Printing Offices, Victoria and New South Wales. 1858.

VICTORIA.	NEW SOUTH WALES.
Government Printer, with House, Fuel, Light, and Water	Government Printer and Inspector of Stamps.....
Overseer	Superintendent
Three Clerks—£500, £350, £200 ..	Accountant
Two Sub-Overseers—£450 & £400 ..	Wages to Compositors and Press- men
Wages to Compositors and Pressmen	Overseer of Binders
Overseer of Bookbinding	Wages of Binders, Sewers, &c. ..
Wages of Binders, Sewers, &c.	
CONTINGENCIES (exclusive of Paper and Parchment)	CONTINGENCIES (exclusive of Paper and Parchment)
LITHOGRAPHING	LITHOGRAPHING
POSTAGE STAMPS. Inspector of Stamps.....	POSTAGE STAMPS. Printing and Gumming; purchase of Materials, and other Contin- gencies
Printing, &c. (not Materials)	
£34,864 12 0	£14,087 10 0

* This sum does not include the entire cost of printing Postage Stamps. They are printed by contract, and I have no means of ascertaining the annual expense.

APPENDIX C.

Wm. Hanson,
Esq.RETURN of the Current Prices of PAPER and PARCHMENT used in the Government
Printing Office.

24 Aug., 1858.

	PER REAM.		PER REAM.
	£ s. d.		£ s. d.
Cartridge, Royal	1 11 0	Medium, Ruled, Writing	1 14 0
Do. Imperial		Do. Writing	1 14 0
Crown Double, Printing		Post, Bank	1 5 0
Demy, Writing	1 8 0	Do. Printing, Folio	0 18 0
Do. Ruled	1 8 0	Do. Medium do.	1 5 0
Do. Printing Single	0 16 0	Do. Quarto	0 9 0
Do. Colored do.	0 16 0	Do. Cream Laid, Folio	0 18 0
Do. Blue	0 16 0	Do. do. do. 4to	0 9 0
Do. Double, Colored	1 10 0	Royal, Printing, Double	2 5 0
Do. do. Printing	1 10 0	Do. do. Single	1 2 6
Foolscap, Double, B.W.	1 0 0	Do. Writing	2 2 0
Do. do. Colored	1 0 0	Do. do. Ruled	2 2 0
Do. do. Yel. Wove	1 0 0	Do. do. Super.	2 12 0
Imperial, Ruled	4 10 0	Tissue Paper, White	
Do. Writing	4 10 0	Parchment, 24 x 34, per Roll	7 10 0
Loan Paper, D. C., Yel. Wove	7 10 0	Do. 14 x 17, do.	1 18 0

I beg also to append the following statement to my Evidence:—

The Printing, actual and estimated, for the Assembly during the present Session (up to this date) amounts to 3,200 pages, being nearly double the quantity performed in the entire Session of 1857. In this calculation no account is taken of Bills, Proof Votes, Contingent Notice Papers, Memos., Additional Clause to Bills, Proofs of Estimates and corrections, and Returns which were not laid officially before the House.

In the Council Printing there has been a considerable increase upon last Session.

Since the Session commenced 2,095 Debentures have been printed and stamped.

WM. HANSON,
Government Printer.

24 August, 1858.

FRIDAY, 27 AUGUST, 1858.

Present:—

Mr. COWPER,

Mr. JONES,

Mr. FORSTER.

THE HON. CHARLES COWPER, Esq., IN THE CHAIR.

Robert Allen Hunt, Esq., called in and examined.

1. By the Chairman: What is your designation in the Post Office? Superintendent of the Letter Branch of the Post Office. B. A. Hunt,
Esq.
2. Of the Revenue Branch? Of the Letter Branch
3. Are you confined generally to one particular branch of the office? Yes, to the one particular branch. 27 Aug., 1858.
4. What branch is that? The Letter Branch.
5. The receipt and delivery of letters? Yes.
6. How long have you been in the Post Office? Upwards of twenty-five years.
7. And during that time you have paid a visit to England? Yes.
8. While there did you make inquiry into the working of the Post Office there? Yes, I attended there regularly. (*The witness handed in two letters that he received from the Secretary of the General Post Office, London. See Appendix A*)
9. At the London Post Office? Yes. I got permission from Lord Canning to attend whenever I liked; he gave me an authority to attend every evening I wished.
10. During that time did you obtain much information as to the working of the department? Yes.
11. With reference to the working of the department in Sydney and the working in London, what is your opinion? They are similar, or nearly so, as far as I could see.
12. With regard to the number of persons appropriated for the operations of your department in Sydney, have you sufficient, or more than sufficient? I have sufficient. If we had a proper building the same number would suffice for five years to come.
13. As it is at present could the number be now reduced? Not at present.
14. If you had a new building? Yes; the same staff would do for five years to come.
15. In your particular branch? Yes. I have eighteen clerks under me. There are ten apertures in the Letter Branch for the delivery and receipt of letters and sale of stamps; and whether the public come or not I am obliged to keep clerks there.
16. Are you entirely confined to the building in the yard? No; I am in the front and back. I have eight rooms to look after.
17. In the two separate buildings? In the three separate buildings.
18. It is owing to that, that you require additional persons to do the work? Yes, by the offices being detached.
19. Supposing you had proper accommodation, what number of persons less could you do with? Perhaps, on a rough calculation, I think two. In the Shipping Room there are two clerks placed to act there between seven o'clock in the morning till six o'clock in the evening.

- R. A. Hunt, Esq.
27 Aug., 1838.
- There is not sufficient work for them to do except when the packets are coming in and going out; but we cannot detach them from that room—they must be there.
20. At present all your officers are fully employed? Yes. The only reduction I could make would be in the number of boatmen. I think two boatmen would be sufficient.
21. Is it necessary to have a special boat for the Post Office—could not the boat service be undertaken by the departments generally? I have made a memorandum of what I think ought to be done, if you will allow me to read it: "Before you attempt to carry out any retractionment you must give the public servants an incentive, as follows:—promotion by merit, progressive payments, pensions or life insurance, because at present they have nothing to hope for; hence they have become dogged and lazy; therefore, until their condition is ameliorated, the labor of the Committee, in my opinion, will be fruitless." I have examined the Estimates —
22. You mean of the service generally? Yes. "It appears that there are ten accountants, with salaries varying from £100 per annum to £530, distributed among the various public offices to examine the accounts before they are sent to the Audit Office, where they are re-examined by a third class clerk with a salary of about £200. But there is one exception to the above, and that is the Custom House—the Accountant of that department is located in the Audit Office. In fact the accounts of the Letter Branch, for stamps and postages, amounting to £20,000 annually, are checked by a clerk having a salary of only £100 per annum."
23. Checked by you? No; checked by a clerk in the Accountant's office.
24. Does not the Superintendent exercise a supervision? No; it is checked by a young man named Howell. Then the commission for selling postage stamps is too high. It is now ten per cent., and in England they only allow three and a-half per cent.
25. You think some alteration ought to be made? Yes. I suggested that the five per cent. usually allowed to private individuals should be discontinued, and that the ten per cent. allowed to country postmasters and stamp sellers be reduced to five.
26. Who do you allude to now? This reduction of ten per cent. is allowed to the stamp sellers and the country postmasters. In England they only get three and a-half per cent. allowed them.
27. You would have it fixed at that rate? I think that would be almost too low.
28. What reduction would you make? I would reduce it to five or six per cent.
29. What saving would that make? About £1,000 per annum. There is from £18,000 to £20,000 worth of stamps sold in a year.
30. Can you suggest any reduction in the boat service in your department? I would suggest a Government Boat Depot to be formed, or give boat hire in lieu to the parties entitled to it, in the same manner as the Government make allowance for forage for horses.
31. You would allow boat hire? Yes. I would allow the officers of the Post Office to hire when a sufficient crew could not be obtained at the depot.
32. Would it work well in your department? Yes.
33. You would have to pay boat hire for every vessel you received the mails from? We require two boatmen, and if we wanted additional boatmen we could hire them. Two boatmen are quite enough for our department; but in case emergency should arise there ought to be an authority to hire.
34. You think the service might be performed more satisfactorily by hiring boats? I think a great saving might be effected by the plan I have proposed.
35. What arrangement would you make? I would allow boat hire when required, and let the heads of the departments send in their accounts.
36. Are there persons willing to contract and place their boats at the disposal of the Post Office? Yes.
37. Boats sufficiently large for carrying the mails? Yes; we have had offers.
38. You would be put in the same position as the shipping reporters of the newspapers? Yes, exactly, with regard to hiring additional hands, if necessary.
39. You think it would reduce the expense? Yes, I know it would. When I want a boat I don't want four men to pull me over when I can be pulled to where I am going by one man, at the cost of one shilling or two. There is another thing which I wish to allude to: The officers of this department ought to open all tenders for the conveyance of mails, and be held responsible, instead of the present irresponsible Board. I am confident a very large saving may be effected if the above is adopted.
40. What officers of the department do you allude to? I mean the senior officer (the Postmaster General); I allude to myself and the Secretary. We ought to open the tenders, the same as the Commissariat do.
41. Do you mean that all the Commissariat officers are assembled together at the opening of tenders? A certain number are appointed, and open them.
42. You think that some of the higher officers of the Post Office, besides the Postmaster General, ought to have some voice in this matter, and that the public service would be better performed thereby? I think it would. I don't know myself, but I hear a good many remarks about it at present. The next thing is, that the postage for inland letters ought to be raised to four-pence, or assimilated with that of Melbourne, which is sixpence. No very great objection could be raised against it, as the department does not pay its own expenses.
43. You say the uniform rate for inland letters in Melbourne is sixpence? No; sixpence is the uniform rate in Melbourne on letters sent out of the Colony, but from one post town to another it is four-pence, and for town letters two-pence; and it has brought in a very large increase to their revenue.
44. On the ground of public policy, do you think it desirable to raise the present rate? I think you might, to four-pence. The department does not pay its own expenses. This would

bring

bring in £10,000 or £15,000 a-year, without any grumbling. It was I who suggested the two-penny rate in 1849 to the Government, and they adopted it. The next thing is, that the postmasters should be compelled to pay the full amount of postage stamps, instead of allowing them to retain a quarter or twenty-five per cent. R. A. Hunt,
Esq.
27 Aug., 1853.

45. You mean the district postmasters? Yes. In England they are allowed a small stock to commence with, but they must pay up for all they receive afterwards in cash. The stamps sold amount from £40,000 to £50,000 a-year, and if the country postmasters paid for their stamps on delivery it would relieve the Accountant of a great deal of work.

46. You mean they should pre-pay? They should get a certain stock, and pay on delivery for all they receive afterwards.

47. *By Mr. Jones*: Do you see any necessity for giving them any stock, even to the amount of £10—why not make them pay for it beforehand as well as any body else? Yes, they should. In fact they pass as bank notes in the country.

48. *By the Chairman*: You say this allowing the district postmaster to have stamps on credit adds to the work of the Accountant? Yes.

49. *By Mr. Jones*: If he paid for the stamps as he got them it would require no more book-keeping than if they sold the stamps at the window? No more. There is another thing I have to suggest,—that there should be two floating offices in Sydney, so that letters could be received up to the last moment of the steamers leaving. As soon as the third bell rang the bag could be tied up, sealed, and put on board. This would be a great accommodation to the inhabitants. I would have one erected on the Hunter's River Wharf, and the other on the Circular Quay. They should be something like the one or two wooden houses you see there now. I would not make up mails except for London *via* Southampton and Melbourne; there should be no intermediate mails made up. When the Postmaster General was examined I drew his attention to the matter, and suggested that some arrangement should be made for a late mail by the Melbourne steamers. It would be a great convenience to the public.

50. *By the Chairman*: It is asserted that your office closes two hours before the steamers leave for Melbourne? It closes at half-past two o'clock, and the steamers are supposed to leave at three o'clock, in fact generally do so.

51. During the last half hour a large number of letters are sent down to the vessel with the postage stamps not obliterated, and very frequently they come back again as a remittance? I dare say this practice is pursued.

52. Don't you think some means could be adopted for making your department more efficient? I think the way I suggested would.

53. And your suggestion with regard to floating offices only refers to the English mails? I would have one on the Circular Quay, and one on the Hunter's River Wharf, for English Melbourne letters. This is not a new idea of mine, I made the suggestion before, when I came back from England.

54. What would be the expense of these offices? Very little beyond putting up a box about the size of a sentry box; I could send a clerk down an hour before the steamer left, who would receive the letters till the third bell rang, and then tie up his bag, seal it, and put it on board. I will now state the number of clerks, &c., under my superintendence.—In the Inland Room there are 7 clerks, 2 stampers, 15 letter carriers, 2 messengers, 2 mail boys. In the Delivery Room 5 clerks. In the Foreign Room 2 clerks, 1 stamper, 1 shipping officer, 4 boatmen. Registry Office, 2 clerks. Sale of Stamps, 2 clerks. Dead Letter Office, 1 clerk. Newspaper Delivery and Receiving Rooms, 6 sorters. Total, 52 for eight rooms, and 1 Balmain letter carrier. There is an additional clerk on the Estimates for the Dead Letter Office now, because the business has so much increased. The Postmaster General tried to draft a clerk from the Foreign Office, and put another clerk in the Dead Letter Office, but the officers in the Delivery Room found it attended with great inconvenience, and it could not be carried out.

55. As a whole, do you think the persons employed are not more than necessary? Not more, except the two boatmen; I think the number of boatmen excessive; I think two boatmen would be sufficient.

56. *By Mr. Jones*: When you speak of two boatmen, do you mean two boats' crews? No; I mean a boat and two men; we have now four men. I intend to suggest again that we should have a third delivery in Sydney, with a slight increase in our staff. I could have a third delivery in the afternoon within a certain radius, say as far as the Haymarket to the south and the full extent to the north. In that case I should require two letter-carriers. I think these two men might do that duty, and I would make them available to pull if required. The average number of mails that have to be received and despatched from seven in the morning till six in the evening are 140.

57. *By the Chairman*: Daily? Yes. The average number of letters passing through the Post Office daily are 6,500, and the number of persons employed in the Inland Letter Office are 7 clerks and 2 stampers. There are 5 clerks attached to the Delivery Office, whose duty it is to sort all letters addressed to private boxes, and those addressed to the Post Office. The average number of letters is 1,000 daily, including 90 registered, each of which has to be entered, and a receipt taken prior to its delivery. There are at least twenty applications requiring the re-direction of letters, and all these have to be attended to, and a record made of the address. The number of private boxes in use is 258; the holders pay £1 1s. per annum for them; the great bulk of the mercantile and banking correspondence of the city is delivered through them. There are also 35 boxes apportioned to the public departments, but upon these the Post Office receives no fee. The number of letters re-directed after the arrival of the London Mail, irrespective of the daily average, is about 500. The people in England direct to the Post Office here, and they have to be re-directed to the streets and localities in the country where the parties reside. This takes up a great deal of time. Although the clerks in the Delivery Office are not at work all day they must stand at the window

H. A. Hunt, Esq. window to answer the public whenever they come. The following is a Return of the number of mails, letters, and newspapers, passing through the Foreign Letter Office, during the quarter ended 30th June, 1858.

27 Aug., 1858.

	RECEIVED.			DESPATCHED.		
	Mails	Letters	Newspapers	Mails	Letters	Newspapers
Europe.....	423	53,656	73,139	387	58,731	65,058
Asia.....	83	2,407	3,531	144	2,226	2,646
Africa.....	17	208	202	42	264	358
America North.....	12	682	447	30	553	585
Do. South.....	52	117	244
Australasia ..	291	32,504	19,692	500	35,528	19,257
Polynesia.....	11	504	61	57	441	558
TOTAL.....	837	89,961	97,072	1,212	97,860	108,706

These returns are made up by two clerks, who some days have little or nothing to do; on this account, although these two young men sometimes are at work till 10 o'clock at night, they get no extra pay for overtime. That is the way we work it out of them for the days they have little to do.

58. Are they there every day? Yes.

59. What are their regular hours? From 7 to 6 o'clock. One goes on from 7 to 9, the other then goes on—and so at dinner time. The number of registered letters received and despatched from the General Post Office, Sydney, during the month of July, 1858, was as follows:—Received—Ship, 387; North Road, 1,512; South Road, 1,944; Western Road, 1,296. Total, 5,139. Despatched—Ship, 1,042; Inland, 2,088. Total, 3,130. Number of letters received and despatched, 8,269. The inland registered letters received are entered in the road books whence received—when those for town delivery and the morning mails are signed for at once by the letter carriers and clerks who make up these mails. Those designed for despatch by the evening and ship mails are re-entered in the Registry Office in the necessary books, from which they are transferred to the sheets or letter bills which accompany the mails. I now come to the Stamp Office. The following is a return of the stamps issued in the Colony during the years 1855, 1856, 1857, and 1858. In 1855 the whole issue in New South Wales was £26,474 4s. 3d. In 1856, £30,378 15s. 7d. In 1858, £37,008 7s. 4d., and for the half-year ending 30th June, 1858, £20,731 18s. 1d., or at the rate of £41,463 16s. 2d. for the year.

60. Would you not facilitate the sale of stamps by having other stamps than those already in use? I don't think you would save any thing by doing so. If you had stamps of a higher value you would open the door for forgery.

61. You don't think it would be desirable to have other stamps? No. Some years ago I called the attention of the Government to this fact. Before they got paper with the water mark they used to impress their plates on foolscap or letter paper, and it was very easy to imitate the stamps. It appears that a man who was here a short time ago was taken up in Melbourne for this very act, and a large quantity of forged stamps were found under his bed, and he was prosecuted for it.

62. You never tested the system of perforating the stamps, to facilitate the putting of them on? No; that is the fault of the Government, not mine. We had a man who offered to perforate; but they objected to the expense.

63. It would not require any great expense? I think not; but I did not ascertain the expense.

64. Would it not be a convenience to the public? Yes; you could then snap the stamps asunder at once. The two gentlemen employed in the Stamp Office are Mr. Henry Reeve and Mr. F. E. Salisbury; their hours of attendance are—Mr. Reeve, from half-past 9 o'clock to half-past 4; Mr. Salisbury, from 9 to 6 p.m., with two hours intermission. The retail window is kept open nine hours for the sale of postage stamps, daily. Mr. Reeve has charge of all postage stamps issued to every part of the Colony, and obtains his supplies on requisition to the Inspector of Stamps, under the signature of the Postmaster General. For the purpose of keeping account with postmasters, public officers, &c., five books are kept by Mr. Reeve, giving an account of the amount charged to each postmaster and public office. On despatching stamps to the country they have to be checked, packed, and bills sent with each parcel, shewing the amount charged and discount allowed to each postmaster. Mr. Salisbury is employed for the most part in selling stamps retail, but is often required in assisting Mr. Reeve in checking the number and value of stamps despatched, when, of course, Mr. Reeve has to attend to the retail window. Mr. Salisbury has to keep two books, one shewing the daily retail sale of stamps to the Sydney public, and the other the discount sales made to stamp sellers and suburban office keepers, who are licensed to sell stamps, and are allowed discount at the rate of ten per cent. It will be seen that the responsible duty of issuing stamps for the whole Colony devolves on two clerks. The issue for the present year cannot be estimated at less than £41,000. The following was the issue for the year 1857:—Sydney, public, £17,082; public offices, £1,530; postmasters, £18,455. Total, in round numbers, £37,067. The return of stamps issued for the quarter ending the 31st of March, 1858, was—Sydney, public, £4,482 6s. 8d.; public offices, £414 1s. 8d.; country postmasters,

masters, £5,090. Total for the quarter, £9,986 8s. 4d. Now this gentleman, therefore, R. A. Hunt, Esq.

65. What is his designation? Seller of Stamps. He is a clerk of the third class.

66. Who hands over to him the number of stamps he has to sell? He is supplied on requisition to the Inspector of Stamps, under the signature of the Postmaster General. He gets the stamps from Mr. Hanson. 27 Aug., 1858.

67. Is it entirely between the Postmaster General, Mr. Reeve, and Mr. Hanson? Mr. Reeve draws out a requisition every morning, and it is taken up to the Postmaster General for his signature; when signed, Mr. Reeve takes it to the Inspector and receives the number of stamps required, which are entered in a book. This book is checked between Mr. Hanson and himself every month.

68. Only a monthly issue of stamps? The accounts are checked every month. He may draw his stamps every other day, or so as he requires them. He sends up his money every morning to the Cashier. Here is a copy of receipt of money from Mr. Reeve:—

NEW SOUTH WALES.

No. 931.

*General Post Office,
Sydney, 26th August, 1858.*

Received from Mr. Reeve the sum of Thirty-eight pounds eight shillings and two-pence, sterling, being

For Stamps	38 8 2
Postage
	<hr/>
	£38 8 2

£38 8s. 2d. Stg.

For the Postmaster General,
T. K. ABBOTT,
Cashier.

69. What is the salary of this gentleman? £240 a-year.

70. What is his name? Henry Reeve.

71. Does he give security? Yes, the usual security of £100. He is recommended to be put on the second-class in consequence of his responsibility.

72. Don't you think it would be better if the Secretary or the Postmaster General made the requisition for the stamps and received them? It passes through them; the requisition passes through the Secretary to the Postmaster General.

73. The Secretary has cognizance of it? Yes.

74. It is not possible for the clerk going to Mr. Hanson to get them at once? Certainly not. Mr. Peel Raymond, when Inspector of Stamps, would not give them on my requisition; they must be given only on the requisition signed by the Postmaster General.

75. What I wish particularly to know is, if the Secretary exercises any supervision between the Postmaster General and Mr. Hanson? He does not. Mr. Hanson is an independent officer.

76. As I understand you, the clerk goes to the Postmaster General and gets his authority, and then goes to the Inspector of Stamps and gets them. What I wish to understand is, whether the Secretary is not the proper person to hand them over to this clerk? It might be so; it is immaterial.

77. It is a large amount of stamps to pass through the hands of a subordinate clerk? He pays the money he receives every morning to the Cashier.

78. Who checks him? A clerk in the Accountant's Office.

79. Do I understand you to say that the Secretary has control over this? The requisition is filled in by Mr. Reeve and sent up to the Secretary, and from the Secretary it goes to the Postmaster General for his signature—all these things pass through the Secretary's hands.

80. Now, with regard to the management of the department generally, don't you think a great deal of this machinery is very complicated? In part, very complicated. The offices of Secretary and Cashier are filled by one person. I think these duties are antagonistic, and I stated so four or five years ago. If any defalcation did take place I don't say that such is at present possible, the Secretary being a very meritorious man. But these things might occur where the Cashier was a defaulter and the Secretary would be required to report himself.

81. Who ought to do the duty of Cashier? I think a clerk under the Postmaster General's own observation.

82. Could not the Postmaster General receive the money and take charge of it? He might; but if he had not time a clerk could do it.

83. What are the duties of Postmaster General, besides supervision? I think the principal things are the contracts and supervision. On the 11th of August the amount received was £299 15s. 4d.; on the 10th of August, £142 9s. 6d.; and on the 12th of August, £134 19s. 11d.; that is the Cashier's receipt to him for the money. Now, with reference to Mr. Reeve, he keeps a number of books: (1.) Requisition book for obtaining stamps from the Inspector of Stamps. (2.) Stamp issue in account with the Inspector of Stamps, a Dr. and Cr. account of all stamps issued. (3.) Book for registering requisitions made by postmasters and public officers for stamps. (4.) Book with an account of damaged stamps returned from the postmaster, and are exchanged for undamaged by the Inspector of Stamps. (5.) Cash book containing cash received from the Sydney public, for stamps retail and at a discount.

84. Are there more books kept than are necessary? The original books are kept in the sale of stamps room; the duplicates or copies are kept by the Accountant; and if ready money were paid for all stamps we could dispense with nearly all this book keeping.

85. How many clerks would that render unnecessary? Perhaps two, on a rough calculation: if the postmasters paid cash, the amount could be sent to the Cashier the following morning.

- E. A. Hunt, Esq. 86. You have to sell stamps on credit throughout all the districts? Yes. I would make some remark with reference to the commission of ten per cent.: I think the rate allowed is too much.
- 27 Aug., 1858. 87. With regard to the mode in which the department is conducted, you are not prepared to recommend any reduction or modification of the system by which the officers could do the duty? I have already stated that two clerks under the Accountant ought to do it.
88. Take the higher branches—you have a Postmaster General, the Secretary, and yourself; and the Accountant is another head—do you find that all these divisions of the department facilitate business or not? I think the offices ought to be amalgamated—the place is split up.
89. By Mr. Jones: In too many heads? Yes.
90. By the Chairman: Would it simplify the matter and make it more economical if there were fewer, as regards yourself for instance? I don't like to speak about myself, but there is no officer that has received greater reductions than I have. In the year 1850 I received fees amounting to £180, and the Government took them from me, and gave me £140. The same fees would now amount to £1,000 or £1,200.
91. What fees? The fees on registered letters. The fees I suggested and had introduced were on late letters, private boxes, and registered letters; the Government then allowed me to keep the registration fee, by the old Postage Act. I made out a return of the fees I received, and they struck the balance and gave me £140; now the same fees amount to £1,200.
92. Is there any necessity for the distinct office of Secretary? The principal thing is the correspondence I think. The Secretary is a gentleman who was brought into the office under me; he is practically acquainted with the whole routine, and I don't think Major Christie could get on without him, from his knowledge of the department. He was with me in the office, and Mr. Stone; and prior to 1850, if it had not been for them the business of the office could not have been carried on.
93. The Postmaster General signs his own letters, chiefly, and the Secretary does the correspondence? Yes.
94. He is really not Secretary, but Chief Clerk? Every thing I see is signed "For the Postmaster General."
95. The Postmaster General is the actual party who signs? I don't think the Secretary is allowed to sign any letters. Here is a receipt for 1s. 4d., signed "For the Postmaster General, T. K. Abbott, Cashier."
96. What are the duties of Cashier? He takes the money, and signs the postage receipts for the Postmaster General.
97. What is that receipt for 1s. 4d. for? That is the postage received from a letter-carrier. The postage received from the letter-carriers amounts altogether to about £600 a-year.
98. If I understand you with regard to the sale of stamps, the clerk gets them from the Government Printer; but who receives the cash for these stamps? The next morning the clerk gives the Cashier the money he has received during the day.
99. Who supplies the stamps to the country districts? Mr. Reeve supplies them. All the moneys received from the country districts go direct to the Cashier.
100. The duty he performs in other respects are more those of a Chief Clerk? He signs for the Postmaster General.
101. He exercises no functions like that of Deputy Postmaster General? Except in the Postmaster General's absence; he then delegates that power to the Secretary. I appealed against it, but it was ruled against me. I said I ought to have it; being senior officer I was entitled to it. The Government of the day said the constitution and office of Secretary in the London and Sydney offices were different; in London he holds his appointment from the Queen.
102. The Postmaster General there is a political office? Yes. The Secretary holds his appointment from the Queen.
103. The Secretary is, practically, the head of the department? Yes.
104. With regard to the taking of mails, or particular working of the office beyond your sphere, have you any suggestion to offer, so that the mail contracts might be made at less cost than they are at present? I have. (See Appendix B)
105. Who comes in contact with them? The Postmaster General and the Secretary. I think you had better get him up, and examine him, if you want further information upon that point. There is a contract for a mail by road to Wollongong, to be carried by two horses. I don't see any reason why you should have two parallel mails, one by road and the other by steam. All the mails should go by steamers to the places where steam communication is kept up with.
106. The Government don't pay for this passenger mail? I think they pay a contractor for a cart and two horses.
107. Is there no supervision—no departmental supervision—to ascertain when a mail line has been in existence for a time that, by the progress of the country, it would be to the interest of the citizens to take it through a different route, and thus dispense with these mail contracts? I don't think there is proper supervision at present; the Postal Inspector about to be appointed will be the proper person to attend to that.
108. An application was made to me within the last week with reference to the line the mail passes through to Good's Inn—do you know that post? It is near to the Darling Downs.
109. Although the whole country about there is largely populated, only a few stations are benefited by the post? That is where you want postal inspection.
110. Cannot the Postmaster General get it? I believe he depends upon the different Benchets for his information.
111. Has the department any means of revising these lines? I don't know; that is between the Secretary and the Postmaster General.
112. Your duties are principally in reference to the receipt and delivery of letters? Yes.

113. You know nothing of the working of the mails? Nothing beyond Sydney
 114. From your knowledge of the department, you don't believe more persons are employed than are necessary? Only the boatmen, and in the Account Branch—not more than I have stated.

R. A. Hunt,
Esq.

27 Aug., 1858.

115. With regard to the building itself, do you think the present site better than the one in Barrack Square? Yes; I was always in favor of it.

116. Could the Government proceed with the erection of the new building on the present site while the main office is in existence? They could not, without getting possession of Mrs. Therry's land in Pitt-street.

117. You think it should be taken back into Pitt-street? Yes. I think, as I suggested, it would be better to sell the land on the hill.

118. How much land would be required in Pitt-street? I think about the same frontage as in George-street.

119. That piece of land belongs to Mr. Polack? A part of it is his and a part of it Mrs. Therry's. Land in Pitt-street, near by, was sold to Mr. Teillard the other day at £100 per foot.

120. You think that is the best site? Yes. I would sell the land on the hill. I think its remaining unsold is so much out of the revenue.

121. How long would it take to erect the new Post Office? About three years.

122. Is there any plan of it? Yes.

123. Was it not objected to? Yes. They put the offices in the wrong position. They put the Letter Branch up-stairs and the Secretary below. It is a matter easily altered. I understand that the gentleman who got the premium in Melbourne got it in consequence of seeing this plan in Mr. Dawson's office.

124. He adopted its main features? Yes.

125. Is it considered a good plan? Yes.

126. There are some alterations about to be made to your office? I think the more alterations that are made the more the office is divided, and additional obstacles presented to the proper performance of the business.

127. Was not the alteration in the Letter Room made in order to correct irregularities that had occurred? The alteration proposed would, for the reason given in my last answer, have an entirely opposite tendency.

128. Some letters were missing? I think they were taken out on the road; but opinions differed as to that.

129. Are not your letter-sorters and stampers too much together? That is the very plan to prevent pilfering. I would rather see them together? It is the only way to detect them. If a person is in a corner by himself he may take advantage of it.

130. Is the pay of your subordinates more than is necessary? I don't think so. I have three clerks under me who only receive £100 a-year. I think that too low.

131. You refer to the £132 for stampers? They are not those I allude to. Of the junior clerks I have three at £100 a-year, which is a lower salary than the messengers receive.

132. I suppose they are lads? No, they are young men.

133. Why do they come if they could get more? I don't know.

134. Are they efficient? Yes.

135. They know their business? I would not be ashamed to take the staff I have under me and put them against those in the London Office. They can do anything which may be required in a Post Office. They are allowed extra pay for overtime, at the rate of 2s an hour, which comes to about £300 a-year. I think this pay should be divided equally amongst those who do the work, that is, that a fixed sum should be given to each in lieu of overtime. I find there is a little jealousy about this overtime. I would rather see the sum given added to their pay.

136. Do you think there are many mail lines established without much necessity for them in the interior part of the country? I have heard so; I don't know it from my own knowledge. I think the Secretary is the best person to get this information from.

137. Have you any suggestion to make that would tend to improve the efficiency of the Department? This is a regulation of the London Post Office, which I would recommend. (*Witness read the following regulation from the Rules for Postmasters in England and Wales, with reference to postage stamps.*) :—"127. Every Head Postmaster is, in the first instance, supplied on credit with a certain stock of stamps and envelopes, considered and called the 'full stock' of his office, a certain portion thereof being termed the 'reserve stock,' and on a day appointed in each month he must make a return in the prescribed form to the Metropolitan Office, shewing the stock then on hand of entire pounds' worth of labels and complete half-reams of envelopes, and also shewing what number of pounds' worth of labels and half-reams of envelopes is wanting to make up his 'full stock.' Further, whenever he draws on his 'reserve stock' for any kind of label or envelope, he must immediately make application, in one of the 'requisition forms' for the necessary supply, at the same time remitting money in payment."

138. I don't understand the credit system? They give him so many pounds' worth of stamps, and if he wants more he must send the money. I will now read from the second report of the Postmaster General on the Post Office, with reference to the appointment of clerks, &c :—"Mr. Beaufort, one of the English surveyors, reports—'The great feature of the past year is the new system comprising appointments by examination of candidates, progressive payments, and promotion by merit; although but partially carried out at present, its effects are already strikingly apparent in giving a higher tone to the service, inducing steadiness and good conduct, and inciting men to an honorable rivalry.' The appointment of officers of merit to the higher postmasterships has been attended with very beneficial results in my district, and the employment of postmasters in establishing and

"regulating

R. A. Hunt, Esq., "regulating subordinate offices—duties formerly done by the surveyor in person—is found to work well, in every respect, where the postmasters are competent men."

27 Aug., 1858. 139. There is no opportunity of making appointments to the country post offices? There is Moreton Bay—that is likely to be a good appointment. The following extract, bearing on the subject of health, is taken from the report of Mr. Bokenham, Controller of the Circulation Department:—"The attendance of the clerks during the year has been good, and an improvement has shewn itself in their general health. This is highly satisfactory, and the decreased amount of absence from illness may, I think, greatly be traced to the good effects which the annual holiday has produced upon them, in the temporary relaxation which it gives from their labors. The Saturday half-holiday, too, has not been without its influence. The duty, certainly, has not suffered by the establishment of that measure, both for the ordinary business of the week, and for any extra work that has required to be done—(and in the District Branch the pressure has been very great)—the officers have cheerfully attended beyond the regular official hours, in order that no arrears might accrue. The privileges are felt to be most valuable, and every effort will be made by the officers to retain them." They are allowed three weeks a-year holiday.

140. Your office closes at one o'clock on Saturday? No. Saturday is a very busy day; a great number of mails leave on Saturday.

141. All the Government departments close at one on Saturday? Ours does not.

142. The corresponding clerks could go away, and those not engaged in preparing the mails? I let half go one Saturday and half the next, but not all together. Last month the mail was overdue, and I could not let them go for upwards of six weeks.

143. You let half do the work one Saturday and half the rest? Yes.

144. Have you any suggestion to make with regard to the appointment of country postmasters? No. Some of them are very unfit persons, but we are obliged to put up with them, because we cannot get better. There are some very good postmasters in the larger towns—in Parramatta and Maitland, for instance, where the salary is very good.

145. Do you know anything about railway mails? There is the Railway Act in the last Report; I lent it to Captain Martindale. There is one thing I would wish to mention, and that is, there should be an amalgamation of the railway mail and gold guards. I think there would be a great saving by amalgamating the railway mail and gold escort guards.

146. The gold escort guard does not travel always? I think some amalgamation would cause a saving.

147. By Mr. Jones: How is it the salary of the postmaster at Bathurst is higher than the others? I don't know.

148. Which has the heaviest work to do? I think the postmistress at Maitland—she has the heaviest work to do.

APPENDIX A.

General Post Office,
13 April, 1855.

Dear Sir,

Mr. Frederic Hill desires me to say that he has given the necessary instructions for admitting you to see the sorting and despatch of the Evening Mails on Monday next, and that on presenting your card at the Inland Office you will gain entrance. The order also admits of your taking three friends with you.

Yours, &c.,
A. B. HAWKES.

R. A. Hunt, Esq.

General Post Office,
1 September, 1854.

Sir,

I have to acknowledge the receipt of your letter of the 29th ultimo, and to thank you for your suggestions for accelerating the delivery in the United Kingdom of the mails from Brazil, Australia, &c., by appointing, in lieu of the Admiralty Agents, persons who could be occupied during the voyage in sorting and charging the correspondence; and I have to state, that this subject has already occupied the attention of the Postmaster General.

The object to which you refer has been attained, to a great extent, as regards the mails from Brazil, by the Packet Agents at the several ports dividing the correspondence, before closing the mails for the United Kingdom, into six portions, so as to facilitate the delivery of the letters, &c., for the most important places in the Kingdom, on the arrival of the packets.

I am, &c.,
F. HILL,
Assistant Secretary.

R. A. Hunt, Esq.,
14, Albion Street,
Hyde Park.

APPENDIX B.

SUGGESTIONS by the Superintendent of the Letter Branch of the General Post Office.

1st.—By discontinuing all credit accounts for postage stamps with the postmasters and the public departments, and making them pay cash on delivery, the Accountant and one clerk under him may be dispensed with, which will effect a saving of £905 per annum, and £5,000 more will be in the Treasury, instead of being in the hands of the Postmasters.

2nd.—By reducing the boat's crew two men a saving of £264 may be effected.

3rd.

3rd.—By reducing the discount allowed to postmasters and licensed sellers of stamps from ten per cent. to five, about £1,500 may be saved, and which will increase every year as their sale increases. R. A. HUNT,
Esq.

4th.—By assimilating the postage with that of Victoria, which has been for years as follows:— 27 Aug., 1858.

For letters sent out of Victoria, either by sea or land ...	6d. under $\frac{1}{2}$ oz.
Between Post Towns in Victoria	4d. under $\frac{1}{2}$ oz.
Town Delivery	2d. under $\frac{1}{2}$ oz.

The above would increase our Revenue about £10,000. The public could not object to that increase; because, from an estimate which the Superintendent made in 1856, the expense of transmitting a letter inland, irrespective of weight or distance, is seven-pence (7d.), therefore the Government have to pay (5d.) five-pence in addition to the (2d.) two-pence paid by the writer.

5th.—By importing covered mail carts for one or two horses, with duplicate sets of wheels, axles, springs, &c., and contracting with the innkeepers on the respective roads to horse—in fact, carrying out what has been pursued in both England and Ireland for years—£5,000 per annum, may be saved.

6th.—Before any new postal line is sanctioned, inquiry ought to be instituted as to its necessity for public convenience or private accommodation; if for the latter, the parties applying should pay the additional expense, the Government allowing the amount of postages received for letters, &c., conveyed on the line, to be estimated from the number posted for or by the inhabitants during the first and last quarter of the year; that is what is termed in England conventional posts, because it is unfair that the General Revenue should be saddled with the expense of conveying private letter bags to stations situated in isolated districts.

7th.—The Superintendent's designation ought to be altered to that of Postmaster at Sydney, and to have a seat on the Board for opening and accepting tenders.

8th.—No tender to be taken for a longer period than one year, (1859) and in the interim the Government may import the mail carts.

R. A. HUNT,
Superintendent.

2nd September, 1858.

THURSDAY, 2 SEPTEMBER, 1858.

Present:—

MR. COWPER,
MR. JONES,

MR. FORSTER,
MR. PIDDINGTON.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

Francis Campbell, Esq., M.D., called in and examined:—

1. *By the Chairman:* You are Medical Superintendent of the Lunatic Asylum at Tarban Creek? Yes. F. Campbell,
Esq., M.D.,
2 Sept., 1858.
2. What number of patients have you in that establishment now? I do not know to one or two, but I think there are 228. There have been two or three discharges lately, but there have been also two or three admissions. I have been absent for the last few days, which prevents me from stating the precise number.
3. Can you make any suggestion to the Committee by the adoption of which the expenditure of the institution can be reduced, without its efficiency being at all impaired? No, Sir, I cannot. I have been thinking seriously upon that matter, but I cannot reduce the expenditure in any way. There has been a false estimate generally made in former years, which was always in excess. The expenditure does not in reality amount to more than a few pounds over £9,000, while it is set down at £12,000.
4. In the estimates? In the estimates.
5. The actual expenditure? I do not believe is more than £100 or £200 above the £9,000.
6. And what is the saving chiefly effected upon? There is no particular saving: I believe it has never been higher.
7. No, but as between the estimate—what necessity is there for making the estimate £12,000, when the actual expenditure is far below it? That I cannot tell. It is an old practice that was carried out before I took charge of the establishment.
8. Do you prepare these estimates? I direct the preparation of them, as to method and amount, and correct them in the rough.
9. Then why do you prepare them so if you do not know the principle? I prepare my own estimates, but I go upon the expectation that there may be a sudden influx of patients from some unusual disturbance in the natural increase of the population, which I can know nothing of at the time. The discovery of gold, for example, gave a very sudden and marked increase of both the sane and insane population of the Colony. Hence it might be that in some years I could not draw upon the Treasury for so large an amount as would be required.
10. *By Mr. Jones:* You think it is safer to over-estimate than to under-estimate? Yes, for the reason just mentioned: the money is never drawn, of course, unless it is required.

F. Campbell,
Esq., M.D.

2 Sept., 1853.

11. But a margin of £3,000 is a very large margin, is it not? Yes; but in former times it was absolutely necessary. I recollect that on one occasion I was three months without a horse, because there was nothing put down expressly for the purchase of a horse, although there was an excess of the general estimates.

12. *By the Chairman:* But if you estimated for provisions and medical comforts to any extent, the Government would not feel justified in giving you out of that the means of buying a horse, would they? No. That is a principle upon which they seem to have acted in former years: every amount had its object.

13. Therefore, if you put in, as you have done in these estimates, £50 for the expenses of a horse, if required, that would be a fixed sum; but you might still put your estimates of medical comforts within a reasonable amount of cost? I have done so for the ensuing year.

14. In the estimates now sent in? In the estimates which will be sent in to-morrow.

15. What is the total amount of those estimates? Nine thousand and a few odd pounds.

16. For the next year? For the next year. Then there is a drawback of about £900 for the maintenance of pay patients to be deducted.

17. So that really—? Not more than eight thousand and one or two hundreds will be required. I think it will not be much more than that sum.

18. Now, with regard to the officials: have you more than you require, or do you find them all necessary? I have hardly enough. I am satisfied to struggle on, however, with the present limited number, till the Asylum is enlarged so as to afford accommodation for all the attendants, some of whom are obliged to sleep out of the establishment for want of room in it. According to the general rule in Asylums at home, for every ten individuals there should be one attendant; and we should have one or two extra in case of illness or accident. I have no extras; I have not even a messenger to send to the post-office, three miles off, so that I am oftentimes obliged to wait indefinite lengths of time for the letters.

19. What does your carter do? He is almost constantly engaged in drawing water from the creek.

20. Do you not get a large supply of water from the tank on the premises? There is a good deal collected during heavy rains, but it soon diminishes. There is an immense quantity used on the establishment; there are not less than about one thousand gallons a day wanted for the various purposes of cleanliness, health, and cooking.

21. But could you not find time to send him for your letters? I always send him when he can be spared.

22. But you would not wish to keep a messenger for the purpose of fetching your letters? No; if a letter-bag were allowed it would be a great boon to the establishment. I represent 260 individuals, sane and lunatic, in it, and I have a considerable correspondence with the friends of patients, so that really a bag, which would not cost the Post Office more than £10 a-year, would save much trouble and loss of time.

23. And who would be responsible for it—where would it be made up—in Sydney? Yes, of course.

24. And where would you propose to leave it? It would be received from and delivered to the steward of the steamer at the wharf near the Asylum, by a confidential person sent on purpose every day.

25. Who would receive this £10—the steam-boat proprietors? I do not presume to know exactly what expense would be actually incurred.

26. It would be the steam-boat that would have to be paid? I am not certain; I do not know what the expense would be, but I remember being told by an official gentleman that it would not put the Government to a greater expense than £10.

27. Where do you get your letters from now—from Ryde? Yes.

28. They go up to Ryde, and then they have to be sent for? Yes; and when I cannot send for them they are forwarded by the first trustworthy opportunity that offers. In wet weather I have experienced very great difficulty sometimes in getting them. I applied to the Postmaster General for a bag to be made up for this Asylum, but he refused; and I applied again lately to the Government, but I am still where I was in respect to that difficulty.

29. Have you any suggestions to make to the Committee with reference to your establishment generally, as to its reorganization or re-arrangement? I would suggest the carrying out of a plan there rendered (*pointing to a return*).

30. You refer the Committee to the departmental return in answer to a circular which you received from the Government? I do.

31. To what would you draw attention in that paper? I require a clerk. I cannot get on at all without one. I have frequently to get my sons or my daughter, or any confidential person at hand, to write my official letters.

32. But you have a clerk to be paid for here—a steward and clerk? The double office; neither the one nor the other can be properly and faithfully performed. What I propose to do is to give a clerk £150, and to do away with the expense of the master-attendant, making up the rest of the amount by a few inconsiderable reductions. A steward need not be a man of education, but only an active clever man, who can keep an account of his receipts and issues of stores, see to the state of the provisions, and take the place in other respects of master-attendant. I am quite sure that by that means the efficiency of the establishment would be increased instead of diminished. The master-attendant, with every good intention, is not very useful to me; still he cannot be turned off. I am convinced this arrangement would render the establishment much more efficient and complete than it is. I should then be in a condition to have the clerical work of the establishment properly conducted, which, on account of the incongruous union, is all, I confess, in a state of disorganization, and has been for years.

33. How do you mean “cannot be turned off—” do you propose that he should be pensioned? By no means; but he might be removed to a more suitable office in some other department.

34. What would he be suitable for? He is a very trustworthy man, and he would be a very good doorkeeper or messenger. He is a strong man, but no longer so fit for his difficult and dangerous duties as is necessary. His energies are not so vigorous and available as they were when he entered the service.

F. Campbell,
Esq., M.D.

2 Sept., 1858.

35. But do you consider that there is ample employment for yourself, the medical assistant and dispenser, and for the steward also? I think there is. I do not know how it is, but we are always as busy as we can possibly be. Our duties are perfectly distinct. In the Asylums in France and England it happens, some how or other, that the authorities do not consider twice the number of officers to be more than sufficient for Asylums no larger than that of Tarban, but a hundred times more munificently endowed.

36. For instance, your medical assistant and dispenser has his whole time occupied? Yes, in dispensing and giving me what assistance he can. The name medical assistant is a simple fallacy; it is a mere change of name and not of office. The dispenser is nominally assistant surgeon, who is a member of the Royal College of Surgeons; but he is still precisely the same dispenser as before. The advantage and the virtue of change of name are this, that when I am obliged to leave, or when I am laid up by ill-health, there is a qualified member of the profession to take my place, where I had not any before, and this gives confidence to all concerned. It is, therefore, a mere change of name; he is to all intents and purposes the dispenser, and his time is as fully occupied as it can be in his vocation. With respect to my own "ample employment," all I have to say is, that if you could find any single practitioner in private practice to undertake the management of 260 sound minded patients, and do them full justice, and have any time for amusement or healthy relaxation, I shall confess I have nothing to do, and wonder at the phenomenon. As Superintendent I am, as it were, a part of every office and occupation, and an actor in everything down to the duties of the lowest drudge, besides being responsible for every individual and every act that is done. As to the steward, I can vouch for his having plenty to do, if he do his duty well, which is not confined to the simple issue and receipt of stores, but pervades every part and minor office of the establishment.

37. But the individual who would issue these stores would keep an account of their issue, would he not? Yes, of the issue and receipts, and he would hand them over to the clerk, who, I propose, should be his superior in the category of officers.

38. Then what do you want a clerk for? If you saw the establishment—I mean if you were aware of the state of the books of the establishment, and of the actual amount of writing necessary to be got through—you would, I am confident, be satisfied of the necessity of a clerk.

39. I have seen it? The duties of a clerk are of necessity sedentary; and he should be as little subject as possible to disturbance. Those of a steward are of an active and ubiquitous nature, and the excellence of his qualifications are in proportion to his activity and presence everywhere.

40. Are your accounts all up now? They are pretty well forward.

41. The accounts I allude to are those of the late man, who had to leave you? No. They never can be now. The Auditor General appears satisfied with things as far as they go; but there is some neglected work that can never be brought forward now.

42. And the other attendants, then, you think absolutely necessary? Yes, every one. In fact, referring again to the work of a clerk, the person who left was one of the most efficient clerks that could be found in any office, yet, I assure you, he was driven almost mad with the quantity and kind of work he had to do. It is proposed that the clerk would take precedence of all the non-professional subordinate officers. The steward would, with the altered name of storekeeper, more properly represent the change I propose in reference to the present master-attendant.

43. What reductions do you propose? I propose first to abolish the salary of the master-attendant with the office, namely £90.

44. That is by a re-arrangement of offices? Yes.

45. But how do you mean "done away with," you would have to pay it to the steward? To the clerk, not to the steward. It would, in reality, form part of the clerk's salary, which it is intended should be completed by several small reductions necessary to be made to equalize the pay of some of the attendants, which would effect a saving in the end of £3 to the revenue.

46. Three pounds per annum? Yes; that is all I can conscientiously make of it. Thus—ninety pounds from the pay of the master attendant; thirty pounds from the salary of the steward, leaving it, by the proposed new arrangement, at £100 per annum; thirteen pounds from the wages of the gardener; four pounds from the carter, and sixteen pounds from the female attendants, to assimilate their salaries to those of the same class of servants at the Parramatta Asylum,—making a total of (£153) one hundred and fifty-three pounds.

47. You have, at my instance, had a conference with Dr. Greenup, with a view to placing both establishments on the same footing, have you not? Yes, and I have approached as near as I dare conscientiously. I find that upon the whole, under the new arrangements—a plan of which I shall send you in to-morrow—that there will be a saving instead of an increase of expenditure of about £3. It will be a very great object to me to have a clerk. We always had a clerk until the last one died, and I never could induce the Government to allow his place to be supplied. The clerical work has, therefore, never been executed with any approach to satisfaction since his decease.

48. The Committee are to understand you that your next estimate is, in fact, about £3,000 less than this—£9,100 I think you said? Nine thousand odd pounds. I do not recollect the precise amount.

49. By Mr. Forster: Have you any idea of the average number of lunatics that come under your care in the course of a year? The daily average, do you mean?

F. Campbell, Esq., M.D. 50. I mean the average in the year? At the end of the present year the average number will be about 230 for the whole year.

51. In the year? Yes.

2 Sept., 1853. 52. *By Mr. Jones:* That is the standing number in the asylum generally? That is as many as the asylum can safely take in.

53. *By Mr. Forster:* Can you state the average number that are sent away cured? Thirty per cent. were discharged cured during the year 1857. This will be considered a fair average when the nature of the hospital is understood; for it has undergone no change or improvement in respect to the character, forms, and conditions of the cases, admitted as they are found in all institutions of a similar miscellaneous kind in Europe. It continues to be precisely what it was in its design and origin—a refuge for every phase, state, and degree of intensity, in which deranged intellect can manifest itself, associated with the direst forms of physical degeneration and helplessness. This is not the place or the time to bring under notice the causes of the increasing progress and extension of this most melancholy of all human afflictions, and most interesting of all subjects of contemplation to “the lordly sons of pride,” and which visits with impartial step the cottage of the peasant and the palace of the king. But I may observe that insanity goes on increasing everywhere in the wake of civilization, and is flowing hitherward from every quarter of the globe, and every part of the Colony, with such constant and swelling tide, that, to use the expressive language of our science, the asylum is kept in a state of unnatural repletion. I cannot therefore but feel an excusable pride in being able to show this respectable ratio of recoveries; but the results of only one year's labor is at best a very indifferent example of success. I therefore hand you a cloud of witnesses in a tabular form, collected from the statistics of lunacy in the Asylum under my charge for the last ten years, to testify that, notwithstanding the numerous acknowledged disadvantages and discouraging obstacles this establishment has had to contend with for a long period of time, especially in respect to want of room, and the means of salutary classification, it has at least kept pace in the number of cures with the best endowed of such hospitals for the cure of the insane in the Northern Hemisphere, as have the same fundamental constitution and regulations as those of the Tarban Asylum. These tables will fully elucidate your question; they were constructed to exhibit the daily condition and movements of the inmates of this asylum during the seven years ending 1854, and to furnish to the Government a correct notion of the degree of success which has resulted from the general management, compared with the rate of recovery in the asylums of other countries. Every care has been taken to avoid error or involuntary fallacy; and the cures are computed on the average number under treatment on each day in the year: to obtain which the sums of the daily numbers are added together and divided by 365, which gives the daily average number of patients in the asylum throughout the year; I adopted this method because it is considered by the highest authorities on these matters to be the fairest way of arriving at the truth. I have been prevented, through disappointment in being supplied with the proper data from Europe, from carrying on the interesting comparison through the years 1855, 1856, and 1857; and have been obliged on that account to content myself with the simple record for these years, with which the tables close. (*Vide Appendix A.*)

54. What is the average number sent to Parramatta as incurable? We do not send any now.

55. Then your establishment is not connected with Parramatta now? No.

56. Well, with regard to those that you have, have you fit accommodation for them? No; I have not accommodation, properly speaking, for more than one hundred and ninety, or two hundred at the outside.

57. Your average number, two hundred and thirty, you have not accommodation for those? No.

58. Then do you consider that you accommodate them under any disadvantages to the lunatic themselves? No doubt, very great.

59. Do you think that their treatment is affected in any way by want of accommodation? The health must be affected more or less by the cramming every place—the corridors, which should be open spaces, are full of beds.

60. You have not accommodation to carry on your treatment effectively? No; I have not had for years, and every day is making it worse.

61. *By the Chairman:* But you are aware that £6,000 has been voted for additions to your establishment? Yes.

62. And that the Colonial Architect will have instructions to make those additions? When that takes place we shall be able to accommodate more. I do not expect to get all the necessary bed-rooms at once; but if a sum were voted annually for a few years, the asylum might be rendered fit to accommodate all the cases that should present themselves for an indefinite period of time.

63. But after a personal inspection, and a conference with yourself, you remember that this is intended to carry out the plan which you yourself and I agreed upon when I was up there? Yes, the carrying out of the plan.

64. *By Mr. Forster:* Do you think the difficulties you find at present will be sufficiently met by the plan proposed? Yes. As soon as I get ten or twelve single sleeping apartments for frantic and dangerous lunatics I shall be able to accommodate the proportion of twice that number of ordinary cases of insanity in the dormitories.

65. What do you do with the incurable cases now? They continue in the asylum.

66. There to remain permanently? If the place is enlarged.

67. *By the Chairman:* As vacancies occur in the Parramatta Asylum they are removed there still. There is no order to the contrary. It only arises from the Parramatta establishment being full at present? That is all. I got notice from the Under Secretary stating that they were full.

68. *By Mr. Forster*: Then, in fact, both establishments are full now? Yes.
69. What becomes of other cases if they occur? They are sent to me.
70. Would you be compelled to receive them now? I must receive them under all circumstances. I have got no instructions to the contrary.
71. *By Mr. Jones*: What would be done supposing you could not possibly make room for patients? I do not know. I should be very hard put to it if I could not make some arrangements, but they would not consist with health and comfort.
72. *By Mr. Forster*: You consider that now every addition to your numbers endangers the health and the treatment of the other patients? Yes; every place is literally crammed—every sleeping apartment, and the corridors leading to the sleeping apartments, which should give a free ventilation, are full of patients. Where they are females I can put them two and two, but I dare not double the men, for certain cogent reasons, and am, therefore, oftentimes obliged to place three together in a sleeping apartment—three where there is only room for one.
73. That interferes with the proper classification of lunatics, and subdivision? Yes. I require three more wards for the male side and two for the females.
74. Do you think you have a sufficient number of attendants and officers? In the meantime I have all that I want; but as the Asylum enlarges I shall have to come upon the Government for more. In truth I have no accommodation for all the attendants, and am obliged to let the married men sleep out of doors instead of in the place.
75. Do you consider that the officers of your establishment are sufficiently remunerated? Yes.
76. In cases of vacancy have you any difficulty in filling their places? No.
77. Is there any officer exercising the duty of inspector over your establishment? There are three gentlemen visitors who come weekly.
78. What style of inspection is it? They go regularly round every part of the establishment.
79. I suppose you expect their visit at certain times? I do not.
80. They come at any time? Yes.
81. *By Mr. Jones*: Do they come together? Always two together.
82. *By Mr. Forster*: They are not in the habit of giving you notice? No; sometimes they come in the morning and sometimes in the evening, on any day in the week; but I never know or trouble myself to learn when they shall visit.
83. I presume, in case any public man comes to visit you, you have no objection? The place is open to the public at all hours, from 10 o'clock a.m. to 4 o'clock p.m., every day in the week, Saturday and Sunday excepted.
84. You have been visited by Members of the Assembly sometimes? Not often.
85. Do you consider the residence of some person in your position to be essential to the proper management of the establishment? In a curative establishment a resident medical officer is indispensable. I think, speaking generally of Lunatic Asylums, indeed, no such establishment can be efficiently carried on unless one medical officer resides upon the spot. There is much night work as well as day work in all similar institutions which require the actual presence of a medical man.
86. In which, I suppose, the subordinate officers of your establishment are engaged as well as yourself? Some of them—those most concerned with the individual under treatment at the time.
87. I suppose they are remunerated with a view to their being employed both night and day? Yes; such is an understanding and a condition in their engagement.
88. Do you employ the lunatics at all on the establishment in any way that is beneficial either to themselves or to the establishment? Yes; all that I can employ are so occupied.
89. Have you been able to use them in putting up any public works at all? No; I have no mechanics amongst them. I erected one moderate-sized building with the help of some of them and the master-attendant—a wooden building, that accommodates twelve additional patients for the time.
90. I suppose if you can employ lunatics in that way it is beneficial to them? Yes. I employ them when I can. Many are employed indoors as ward assistants, and others are always engaged out in the wood yard; some in the garden, and some out in the various outdoor occupations useful to the Asylum or to the public.
91. Were it not for that I suppose the expense of the establishment would be much greater? I believe it would.
92. Is the establishment well supplied with water? It will be better supplied henceforth. The dam has been in a measure cured of the former defects.
93. You have constructed a good dam? The Government has caused to be constructed a dam across the fresh water creek, and it holds I think about three times more water than formerly.
94. Then do you think there is enough there? I cannot tell yet until I have experience of a dry season; but I have enlarged it, by means of the lunatics, very much, and when it decreases sufficiently this year I intend to enlarge it still more. I consider the dam was not carried far enough; it ought to have been carried right over; it would have enabled me, with the men of the establishment, to enlarge the place accordingly.
95. If that were carried out it would be quite sufficient? I think we should always have sufficient water without having recourse to Sydney.
96. I suppose in emptying the dams in dry weather—which is a common practice—you can always employ the lunatics in that way? When it got low I have always cleaned it out—taken all the silt out and made it as capacious as I could; but of course my working hands could not have done what has been lately effected by the Colonial Architect.
97. In what way do you get supplies—by steamers? No, by boat, coming from Sydney. Mr. Johnson sends a boat.

- N. Campbell, Esq., M.D.*
2 Sept. 1858
98. That is the cheapest way? I presume it is. The milk is got near the establishment, and the hay is got from any of the farmers around. The bread and the meat come from Sydney; that is the only difficulty we have; when it is bad, if I return it I cannot get it replaced for twenty-four hours.
99. If you get a bad supply you are obliged to put up with it or to do that? Yes.
100. Has that occurred very frequently? Generally about once a month.
101. I suppose you always report these cases to the Government? No, I do not think it necessary on all occasions: I threaten to do so.
102. Do you not think that in that case it is allowing an impunity which ought not to exist? I do not allow it; he is punished enough by the article being returned to him. If there was any grave cause of complaint I would report it immediately.
103. It has not gone to such an extent that you consider it necessary? No; I used to have occasion to report in former years: some of the contractors did not conduct themselves so well as Johnson does. I have little to find fault with in Johnson; but when there is a bad piece of meat I return it.
104. But in some of these cases, I suppose, you have considered that it might have happened accidentally, and on that account you would not consider it necessary? Yes; and he does what he can to remove any difficulty of that kind, and to make amends.
105. *By Mr. Jones:* Has there been any observable increase in cases of lunacy during the last few years? I think there has been; but I have not been able to ascertain whether it is owing to the general increase of the population. In every additional five or six hundred we expect one lunatic. In the proportion of every two ships that arrive here we expect a lunatic.
106. That is in every thousand of the population you look for two lunatics? In nearly that proportion.
107. So that you cannot say whether the increase of lunatics has been beyond the increase of the population? No; but I fear it is increasing. It is increasing in Europe. There is, as I have observed in answer to a former question, a degeneracy of the human species pervading all civilized life, and that degeneracy is one of the prime causes of the increase and extension of lunacy.
108. That kind of degeneracy is scarcely likely to take place in a new country? Just the same. Civilization has as much effect upon the mind in a new country, and perhaps more, than in an old country; because there are so many additional deteriorating influences in operation on the human constitution in a new country, till perfect acclimation has been effected after centuries.
109. *By Mr. Piddington:* Do you think that degeneracy arises from the representative institutions in the world? No; but from excess of civilization, with all its agencies at work, no doubt.
110. *By the Chairman:* Are your padded rooms all right now? Yes. They are very complete.

APPENDIX A.

TABLES I. to IV., with SUPPLEMENT illustrative of the result of the Treatment and Cures effected in the TARBAN LUNATIC ASYLUM, NEW SOUTH WALES, as compared with ASYLUMS in EUROPE, during the Years 1848 to 1854 inclusive, and shewing, in SUPPLEMENT, the per centage of Cures in the TARBAN ASYLUM, 1855, 1856, and 1857.

TABLE I.

SHewing the daily average number of Patients treated in the Tarban Lunatic Asylum, and the per centage of Cures in each year, from 1st January, 1848, to 31st December, 1854, inclusive.

YEAR.	The number remaining in the Asylum on the 1st January.			The number admitted during the year.			The average daily number under treatment during the year.			The number of Recoveries during the year.			The per centage of Recoveries during the year.	The number of Partial Recoveries during the year.			The number transferred to the Asylum at Parramatta, during the year.			The number of Deaths during the year.

According to a regulation of St. Luke's Hospital, London, no applicant is admitted who is not judged to be perfectly curable, upon a rigid personal examination, and a satisfactory history of the individual. The candidate is subject to nine objections, any one of which is fatal to his admission.

The operation of this rule develops a truth of the highest value in the treatment of insanity; it proves, among other facts, that when disorders of the mental functions are submitted early to salutary influences, the recoveries amount to seventy and eighty in the hundred. It would appear to show also that, acting on the same principle, any other Asylum consecrated to the use of the insane might produce an equally broad margin of recoveries. Accordingly the following Table (No. II.) has been framed, for the purpose of practically determining this postulate in the Tarban Lunatic Asylum; but I have only been able to avail myself of one of the nine objections to be overcome at St. Luke's, since I am obliged, from the nature of the Institution, to admit every case that presents, and mostly without a syllable of history to guide my choice, or throw light on the obscure nature of the malady. Two years have been taken indiscriminately from the seven, and the selection made from the patients actually admitted during each of these two years. The Table, it is true, is only an *ex post facto* proof; but the great truth it embraces of the curability of insanity, when subjected to early treatment, is only the more confirmed by the additional fact its construction has evolved, viz.:—that most of the remainder of the curable patients admitted in the above period, but who are not included in the number of recoveries in their respective years, were cured in the first and second quarters of the ensuing year.

The Regulations of the Bethlem Hospital are less restrictive. There, the patients are treated for one year, and if not cured at the end of that term they are discharged; the officers having the power to retain for a few months longer any case that may be in progress of recovery. Tables II. and III. are, therefore, framed with the view of shewing that equal success will follow the same exclusive rule in any Asylum in the world.

TABLE

F. Campbell,
Esq., M.D.
2 Sept., 1858.

F. Campbell,
Esq., M.D.

TABLE II.

2 Sept, 1858.

Is only preliminary to Table III, shewing the number of Cases admitted into the Tarban Lunatic Asylum, and the per centage on the *admissions* during each year, from 1848 to 1854, inclusive.

YEAR.	Admitted during the year.			Per Centage of Cures on the admissions.
	Males.	Females.	Total.	
1848	42	13	55	56.36
1849	51	27	78	35.89
1850	62	30	92	32.60
1851	50	35	85	37.64
1852	70	31	101	36.63
1853	71	52	123	38.21
1854	94	48	142	37.32
Mean.. .. .	9.657			39.23

TABLE III.

Is constructed on the severely eclectic plan followed at St. Luke's, to show practically the per centage of Recoveries on the Curable Cases admitted into the Tarban Lunatic Asylum during each of two years, taken indiscriminately from seven, of the foregoing Tables; and that the same happy effects would result from the strict observance of the rule anywhere.

YEAR.	Average daily number of cases treated during the year.			Number of cases admitted during the year.			Number of supposed curable cases admitted during the year.			Number of Cures on the average daily number under treatment.	Per Centage of Recoveries upon the curable cases admitted during the year.
	M.	F.	Total.	M.	F.	Total.	M.	F.	Total.		
1850 ..	64	49	113	62	30	92	29	13	42	26.43	71
1854 ..	120	73	193	94	48	142	46	30	76	27.45	70

TABLE IV.

F. Campbell,
Esq., M.D.

EXHIBITING the measure of success in different Lunatic Asylums in Europe, compared with that of the Lunatic Asylum, Tarban, New South Wales, from the Year 1848 to 1854, inclusive.

2 Sept, 1853.

(It will be observed that several of the European Asylums have not afforded us the means of ascertaining the daily Average Number of Patients under Treatment during the year; consequently the whole number under Treatment is in these cases given with the per centage of cures calculated thereupon.)

SUPPLEMENT (1858) TO TABLE IV.

Per centage of Cures Effected in the TARBAN LUNATIC ASYLUM

For the year 1855 was 26½

For the year 1856 " 20.

For the year 1857 " 30.

Richard

Richard Greenup, Esq., M.D., called in and examined:—

1. *By the Chairman:* You are Medical Superintendent of the Lunatic Asylum at Parramatta? R. Greenup, Esq., M.D. I am.
2. And do you, although called Medical Superintendent, exercise a general charge? I have the entire charge of the establishment. I am responsible for everything that is done there. 2 Sept., 1868.
3. But do not reside on the establishment? No.
4. Is there any medical officer residing on the establishment? No; not on the establishment. The dispenser resides close to it but not on it. Shall I explain why it is so?
5. If you please? The quarters were so bad at one time—the roof was so leaky that he was driven out by the wet, and he is now obliged to occupy a place outside the establishment. I am more there now than I used to be when I had other establishments in charge. I had given up my office to him to reside in, and since I have been obliged to take my own office back again.
6. There is in fact no accommodation on the establishment? There is no fit accommodation. There was only one room for the dispenser, which, as he was a married man, it was impossible for him to occupy. It is now used as a dispensary—which we much wanted.
7. How far does he reside from the establishment? One hundred yards, perhaps.
8. Then he is always available in the event of being required? Yes: he may be one hundred and fifty yards off.
9. You reside in Parramatta? Yes.
10. How far is that from the establishment? About three-quarters of a mile.
11. How often do you visit it? I visit it every day, of course, and in general twice. It can hardly be called a visit, because my whole morning—every morning—is spent there.
12. Do you go round the institution and in the different wards frequently? It is divided into two. One part—the male invalid branch—is in Macquarie-street. I visit that first. I set out early in the morning, so as to be there just after breakfast—about 9 o'clock; and, as I have only to attend to the sick there, there is not much to do. The clerk meets me there every morning at 9 o'clock to receive directions as to the diet, &c., and to give out the medical comforts. I go from there to the Lunatic Asylum, where I stay all the morning—going round the wards and attending to the state of the patients generally.
13. The class of patients you have are chiefly chronic, are they not? Yes.
14. Have you any others? Yes; those that come in from the prisons.
15. A class of criminal lunatics? Yes; all the criminal lunatics come to Parramatta.
16. Can you make any suggestions to the Committee which will enable them to reduce the expense of the establishment, without impairing its efficiency? I cannot. It has been my business throughout to carry it on as economically as possible. I do not see how it can be reduced: certainly not in the salaries.
17. The estimate as printed for the year 1858 amounts to £13,355, and I see by your Return the actual cost of the establishment last year was under £12,000? It was £11,894 15s. 6d.
18. Of which the British Government paid £3,720 3s. 4d.? The repayment from the British Government was £3,720 for 1857. It was £4,034 for 1856.
19. Leaving the actual cost to the Colony last year £8,174 2s. 2d.? Yes.
20. I see by this return that you are allowed forage for a horse; that does not appear on the estimates? Yes; forage for two horses is set down on the estimates.
21. That is one for yourself? Yes.
22. There is no forage in your estimate? It was sent in so. I do not know how it has occurred with us, but the same items are not given that were sent in.
23. Then the estimate as it appears in the printed document laid before Parliament is not a copy of the document you sent in to the Government? No, because we always put in the forage; it is always made a separate item of.
24. But was it part of your allowance when you were appointed that you were to have forage for a horse? Yes; and my predecessor had it also.
25. He visited other establishments though, did he not, beside this? Yes; but the forage was always in that part of his appointment as commissariat officer; he had that independent of the other places.
26. Who was your predecessor? Dr. Patrick Hill.
27. He was Colonial Surgeon, was he not? He was Colonial Surgeon.
28. Then did you succeed to his appointment as Colonial Surgeon? Yes. I do not know whether I was called Colonial Surgeon; Medical Superintendent was the name given to me, I think, when I first went there.
29. Then did you receive, as set down here, 15s. a day from the Commissariat, and £162 from the Colony? That was what I received—15s. per day from the Imperial Government, and £100 a year from the Colony. That was my first appointment. £100 was given the second year; it was given in lieu of the gold advance, because I had nothing at all before that from the Colony for attending to about 100 patients. When I was appointed to Parramatta I was appointed to three other offices besides that—I was surgeon to the Gaol and to the two Orphan Schools; but when the Lunatic Asylum became so very large that I could not give sufficient time to the other places, I gave them up. But I had then, as you see, an assistant, who is also given up. He took my smaller offices, and I took the Lunatic Asylum.
30. The patients in that institution were chiefly Imperial convicts? Yes; but now the Colonial element is far the greater. The number of Commissariat patients is 133 now; our full number is 525; so that the Imperial element is now only one-fourth.
31. What amount of time do you daily devote to this establishment? The whole morning of every day except Sunday. I consider all my time due to it; I do not give all my time to it, but I consider all my time due to it, Sundays and all.
32. Are you ever called upon to visit the establishment at night? Yes; in case of sickness.

R. Greenup,
Esq., M.D.

2 Sept., 1858.

A very few nights ago I was called to draw a man's water off, and very shortly before I was up half the night with a poor fellow in the same condition.

33. You consider that if you have a patient there requiring nightly attention you are bound to give it, and do afford it? Yes.

34. What are the duties of the storekeeper under you? To attend to the receiving and giving out of provisions and stores in general.

35. You consider yourself responsible as head of the establishment? Yes.

36. He has not an independent responsibility from you? No; I think myself responsible.

37. Who deals with the contractors? Everything is done in my name, but I am obliged to delegate the immediate dealing with the contractor to the storekeeper; I have not the time.

38. Still, in the event of any matter of dispute he appeals to you? Of course.

39. And do you make an inspection of the food yourself? Every day. I never pass a day—Sunday or other day—without examining the food, on Sundays more particularly; I always visit twice on Sundays.

40. I suppose you admit that it would be better if you resided on the establishment, if there were quarters for you? Certainly; one would always be on the spot then. I do not know that I should be really employed more time, but I should always be on the spot.

41. But there are no buildings on the premises which could be converted into a suitable place? No; but there is a property just by, belonging to Mr. Blaxland, with a good house, which I think might be bought cheap.

42. Does it adjoin the premises? Yes, it lies between the premises and the gaol; and I have very little doubt the gaol will be complained of, because the drainage of the gaol runs by it, and is a nuisance. But if the Government took it, giving Mr. Blaxland land in exchange for it, it might be turned to good account, and the drainage used for manure. It was granted to the Rev. Mr. Marsden, and then came to Mr. John Betts, and then to Mr. Blaxland, who holds it on account of non-payment of mortgage.

43. Do you think it necessary to have a clerk as well as a storekeeper? Yes. The storekeeper has all the books to keep except the medical registers. He keeps store books also, so that there is no need to visit the store to know what is in it, as it may be learnt from the books. I am responsible for the correctness of all the accounts, but the storekeeper does all the calculations and writing. I examine and sign all before they are sent in.

The Total Annual Expense of the Lunatic Asylum at

Parramatta, for 1857 £11,894 15 6

Daily Average of Patients, for the year 1857, 465 $\frac{1}{2}$.

Dissection of the actual Expense of the year:—

For Salaries	£3,113 12 1	or for each patient	£6 13 10 $\frac{1}{2}$
Rations	6,202 11 9	"	13 6 9
Clothing... ..	2,394 0 11	"	5 2 11
Contingencies	184 10 9	"	0 8 0

£11,894 15 6 or per head £25 11 6 $\frac{1}{2}$

44. *By Mr. Piddington:* What is the total average cost of each patient? £25 11s. 6 $\frac{1}{2}$ d. includes every expense, medical and other attendance, food, clothing, washing, and everything else. Part of what appears as expenses of this establishment are economies, which, with the help of the storekeeper and matron, I have been enabled to carry out. For instance,—it is not very long since I asked the Government to allow me to have a washerman. The clothes for the male lunatics used to be washed by the lunatics; but it was nobody's business to attend to it, and of course there was a considerable amount of waste. By appointing this washerman he attends to the mending and the washing; and I do not think that without such attention any establishment could be clothed at £5 2s. 10d. a head, or anything like it. The storekeeper attends to that business.

45. *By the Chairman:* And what does your clerk do now? He is employed entirely in his clerical duties. Exception:—he gives out the medical comforts and extras in Macquarie-street, and also generally at the Asylum.

46. What amount of duty can there be if the storekeeper keeps the accounts? We keep two different kinds of accounts. Even now we keep separate accounts on account of having the Commissariat element; the work is double what it would be if there were no account kept of stores. It would be easy to give out stores as wanted, but by keeping an account we see who gets them and who is wasteful. The storekeeper unlocks the gates at sunrise; receives supplies from the contractor, and issues them before breakfast. At 9 o'clock begin the office duties; reports to Medical Superintendent on arrival and visits the yards every day; keeps an account of the diet and medical comforts or extras of every patient, of their bedding, clothing, &c.; keeps the cash account and checks every expense with reference to the sum allowed; examines and makes out all the contractors' accounts for the Audit Office; in the afternoon or evening visits the Macquarie-street branch, and issues stores there; looks to and is responsible for the general management of the establishment in the Superintendent's absence; receives nightly report at 10 o'clock and locks up, taking the keys to his bed-room.

47. *By Mr. Piddington:* Could not the office of storekeeper and clerk be united in one individual? There are a great many things to be done which could not be done so. The duties are too multifarious to be discharged by one person. In so large an establishment there are so many interruptions that no one person could attend to the accounts at the same time; he cannot be certain of a quarter of an hour free from some call. The principal work comes at the beginning of the month, and it keeps two people hard at work for many days. At that time, too, probably visitors come, and we are obliged to have some one to go round with them. I have known more than a day or a week taken up by visitors. It is better that

that they should see the Asylum, and they must have some person to go round with them; but I think the clerical duties are quite sufficient. R. Greenup,
Esq., M.D.

48. Could not the master-attendant go round with the visitors? He does on his side—the master-attendant and matron on their respective sides; but it is better that there should be another officer as well: the storekeeper goes round too; I think that is desirable, because it is a check on the attendant. I very seldom go round with visitors unless a personal acquaintance, or some one asks me particularly to go round with him. 2 Sept., 1858.

49. *By the Chairman:* Your master-attendant I see receives £130 a-year, whereas at the other establishment he is only put down at £90, and Mr. Campbell states he considers he might be dispensed with. What are the duties of the master-attendant with you? Does Dr. Campbell think he might be dispensed with at his establishment?

50. Yes? I should be very sorry to see the master-attendant at Parramatta dispensed with, and for this reason:—I have the sole and unassisted medical charge of 525 patients, and I try to see every day every one of them, and if I have entirely to depend upon my own eye, you may think what time it would take; you may calculate if I gave only a minute to each patient.

51. You have a head wardsman besides, and thirteen other attendants? Those are nineteen a day men.

52. The head wardsman gets £75 a-year, besides lodging and rations? He has charge of the Asylum in Macquarie-street; that is more than a mile from the other Asylum.

53. The head wardsman has charge of the Macquarie-street Asylum, where you have removed lately a number of invalids? Yes.

54. How many? Forty-six.

55. Then how many male attendants have you transferred to that establishment? Nine of the "nine-penny" men.

56. Yes; but I mean of these thirteen? None of them.

57. You keep all those? Yes.

58. But you have twelve others whom you call convict attendants, or bond attendants? The "nine-penny" men are all bond; the others are not.

59. Are they still convicts? They are "lifers," as it is called.

60. And with no indulgence? They have none of them got a pardon. There are seventeen male lunatics to each attendant. Taking all the people employed on the male side into account, actually each attendant in charge of lunatics has charge of 22.

61. What proportion have you of persons affected with active lunacy as opposed to chronic? I do not quite understand you. I should consider all our patients as active lunatics.

62. Are there not many of them merely imbecile—broken down in mind and body? Some are, but these are more troublesome. Many of our poor people have to be fed at every meal, and changed three or four times a day, and it is for those cases that the master-attendant is so useful. When I go round, if I see a man wet and dirty, I ask how that is, and if I see it repeated I should, unless some good reason were given, discharge the man in charge. The first thing I do on coming to the Asylum is to make an examination of all that has occurred in my absence; then I get a report from the master-attendant of where all the attendants are. Then I know who has charge of the particular classes of patients, and who to blame if anything is wrong. That is the only way I can get through attending to 525 patients—by making everybody attentive to their business. My great help on the male side is, of course, the master-attendant.

63. Does your dispenser devote his whole time, or has he other occupation? He makes up medicines for the gaol, and for the two orphan schools.

64. Is he in private practice as a dispenser? Oh! no.

65. He is entirely occupied by Government establishments? Yes.

66. What other salaries does he get? I think £50 a-year for the gaol.

67. Has he any medical education? He is a very good medical man, but unfortunately he has no diploma. His name is known in London—it is Longstaff. Everybody must have heard of Longstaff's collection of specimens of morbid and other anatomy. His father was so devoted to this collection (most interesting, and a part of which was bought by the Royal College of Surgeons,) that his son was always attending to his patients, and he never got him passed either at Apothecaries Hall, or at the Royal College of Surgeons. We require for the master-attendant a man to be above the ordinary class of attendants. We have got a very good one now: we had a very indifferent one before. I feel the advantage of this one: it would entail another officer with a higher salary if we lost him. He is just as useful on the one side as the matron is on the other.

68. You have charge also of the establishment in Macquarie-street? Yes.

69. How often do you visit that establishment? Every day. I try to be there at nine o'clock in the morning, and I think I generally arrive within a few minutes of that hour. I could go earlier, but that they have not got their breakfasts before then and swept up.

70. You consider all these subordinates necessary for the efficient management of the establishment, and that they are not overpaid? If any alteration were made the effect would be found to increase the expense some other way. I am quite sure the expense has been kept down as much as possible.

71. Have you got possession of a portion of the late Parramatta Domain, for the benefit of the establishment, yet? No.

72. Are you likely to get possession soon? I have not heard anything of it.

73. Do you know what causes the delay? I have heard nothing of it since I called on you one day many months ago.

74. Do you ever allow the lunatics to be employed outside the establishment? As much as possible.

75. Is that still continued? Not on any private account, except three or four times a week

R. Greenup, Esq., M.D. I have a party coming to my house and employed in the garden. They remain about two hours and a half at a time.

2 Sept., 1858. 76. Upon no other private establishment? My own I do not consider a private establishment. I am in Government quarters, and it is no gain to me. I do not raise vegetables enough for myself. I should give the system up at once if I did not think it did the lunatics good. They are a little humanised by being brought over to my place. I have given up sending any to Mr. Statham's farm, and I can see a visible deterioration in the condition of those who used to go. I am sorry the observation was made. There was a most interesting article in the *Quarterly* on Lunatic Asylums, that was sent down to me by the Government, and I was asked if I could do anything in that way, and I recommended a farm; and it appears what I was doing then is exactly what is recommended—that they should be taken right away from the asylum.

77. But if these men were employed on the farm, that would answer the purpose? Yes; but of course we shall require somebody to take charge of it.

78. It would enable you to get better supplied with vegetables and milk, and other things? Yes.

79. *By Mr. Forster*: Have you full accommodation for all the lunatics? Not such accommodation as I should wish; we have no day-rooms.

80. *By the Chairman*: You have got some sheds erected lately, have you not? No.

81. *By Mr. Forster*: If any more cases were to present themselves you could not accommodate them? I send in a monthly report. I think we could accommodate five women, but we have two men over and above the proper complement.

82. Have you refused to take in any? It is not for me to refuse. I have written to the Government to say that I consider the place quite full on the male side, but that there is room for five on the female side. The deaths are more than filled up by those that come in from the gaols. We have had this last month three from the gaols, and our deaths were two, and cures two—making four departures. The three arrivals make the number only one fewer than we had last month.

83. Then you would consider it to be inconsistent with the duties confided to you if the number was increased? Of course, without additional buildings.

84. Is there any intention to increase your means of accommodation? That I do not know.

85. Have you made any recommendation to the Government? No. I have pointed out to the Government several matters.

86. *By the Chairman*: At an early part of this year there was a new establishment, called the Invalid Establishment, formed in the town, and you removed 46 patients from your place to that establishment? Yes. That relieved the establishment up to a certain point. Since that I think there has been no accumulation. The daily average for the last year was 465½. The daily average this year will be about our present number, 525; so that we have 60 more this year than we had last year.

87. That is in the two buildings? Yes.

88. *By Mr. Forster*: Have you sufficient attendants? I think so. I made application for additional ones, because, of course, as we kept having additional patients we wanted more attendants. Here, I may say, that all the women's clothing, or nearly all, is made by themselves. Part of the matron's duty is to see who is capable of doing the work. One day she may have half-a-dozen who will work, and another day ten, and another day she may have not one. You know they are very capricious. We give little rewards to them, and so induce them to work. The consequence is, that the cost of clothes is small. It is saved in this way: We get our articles from the Colonial Storekeeper. They charge us, we will say, 6s. for a flannel shirt: we can make it for 3s. They will supply us with the flannel, and if we can make it we do make it.

89. Do you keep any regular account of the work done in that way by the people themselves? At the end of my monthly report I send in a list of everything done on the women's side. I cannot send in a list of what is done on the male side. It is principally cutting wood (which is difficult to measure.) We do all the work of the Catholic Orphan School; that is in some degree why it is cheaper than the other. We cut all the wood, and do some of their garden work.

90. The Catholic Orphan School is near you? It is next door. The great point for the attendants is to get the patients out of their beds, to get them washed and dressed in time for breakfast, and then to get them to breakfast is a serious task—when you consider that each man has 22 to look to. Then there is a lull after breakfast till dinner. Then you have the same thing again. Those who are capable of being employed are employed in helping to carry out the dinner, and so forth. We do very well, except in wet weather, and then, having no day-rooms, we are obliged to put the men into their dormitories.

91. That is for want of accommodation of grounds? Not of grounds, but of buildings. It is happy that in this climate it is not very common; but for a model asylum we ought to have day-rooms for all. For the sick we manage to have them.

92. Are any recommendations made to the Government for these day-rooms? Only for sheds.

93. But I suppose all these accommodations could be added within the walls? Oh! yes; a very large day-room might be made. There is the old walking hall of the invalid branch—72 feet by 21 feet; with a new roof and floor this might be made available; the roof is now so bad that the room cannot be used, and the floor is also bad.

94. Your establishment contains a large number of incurable cases? We get all the incurable cases.

95. The chronic cases are what are termed incurable? If any are supposed to be curable, Dr. Campbell has the power, and exercises it very properly, of keeping them at Tarban Creek. We have patients come up who have been kept there three years. Most of them have been kept there a year; of course the mere paralytics and idiots are sent up immediately. It is known

- known that there is no cure for them. Some few of what have been considered hopeless cases have been cured.
96. There are certain public visitors who attend your establishment, are there not? Yes.
97. Do they come regularly once a week? Oh! dear, no, not above once a quarter.
98. Do they come without notice? They come both with and without notice.
99. Are there any clerical gentlemen—any clergymen who visit regularly? Not since the invalids were removed. If any person wishes to see a minister I send for him, and he comes.
100. There is no regular attendance? No. I read prayers to those who are Protestants and will attend.
101. And do you find that the clergymen of the different persuasions attend often? They do attend occasionally. Mr. Coutts comes, but there is no regular attendance.
102. I suppose the proportion of lunatics is about equal to the common proportion that prevails between the different sects—do you find that you have a larger proportion of one sect than another? That is a point I can hardly say, but I think we have most Roman Catholics. But there is a reason for that: there are more of the lower classes who are Irish. There are a great number of Irish.
103. That is a class from which a large proportion generally comes to you? Yes; we have also several from the Isle of Skye. It is remarkable that so small an island should have sent three or four.
104. These are Roman Catholics too, are they not—celtic? Yes, one I know is.
105. And you do not find that the clergy often come? No. They do come, but more as other visitors do. Nobody makes a regular duty of it. I should except the Rev. Mr. Gore, who visits the invalids every week; he visits both male and female invalids, and has done for many years. A Roman Catholic priest also regularly visits the invalids in Macquarie-street, a Mr. Ambrosoli.
106. *By Mr. Piddington:* Do you read prayers every Sunday, as a rule? Every Sunday afternoon, and have done for several years. The matron reads prayers to the women. I have a congregation of from 60 to 80. Sometimes a man won't come, and sometimes he is too excited to be allowed to come.
107. Does the matron read prayers, as a rule, every Sunday to the female inmates? Yes, as a rule.

R. Greenup,
Esq., M.D.
2 Sept., 1858.

WEDNESDAY, 8 SEPTEMBER, 1858.

Present:—

MR. COWPER,
MR. FORSTER,

MR. JONES,
MR. PIDDINGTON.

THE HON. CHARLES COWPER, Esq., IN THE CHAIR.

William Colburn Mayne, Esq., Auditor General, called in and examined:—

1. *By the Chairman:* You are at present Auditor General of the Colony? I am.
2. How long have you held that office? Very nearly two years—within a few days.
3. You are aware that this Committee has been appointed with a view of considering the possibility of retrenching the expenditure of the public departments without impairing their efficiency—can you favor the Committee with any suggestions that may enable them to recommend some reduction in your department? The only reductions it was considered possible to effect in the department, by the Board who carefully inquired into its business and constitution, were made so long since as the beginning of 1857; and I confess that, as far as I have been able to see, I am not prepared to say that any further reduction could be made in it without impairing its efficiency; but if arrangements which I have recommended are carried out, it is possible they may effect farther reductions in work, which would eventually lead to a reduction of the expenditure; though, until they are actually tested I should not like to commit myself to say that they will.
4. You had on the 18th June, 1856, seventeen clerks, exclusive of the Chief Clerk, the Inspector of Revenue, and the Accountant? Yes, at the date of the original report.
5. What reductions have been effected since then? A reduction of four clerks has been made in the department, bringing down the number to one below what that Board considered to be the lowest it could be reduced to with the reductions in work which they recommended. But those reductions in work have not even yet been fully carried out.
6. Have any of them been carried out? The advance system has been extended since that report was made—the system of making advances instead of paying all accounts by final warrants through the Treasury.
7. Do you still examine the claims, in the first instance, as you used to do? No; only those that are paid through the Treasury still, out of advances to the Under Secretary, and by final warrants; those we still examine.
8. Previously? Previously.
9. Do you think that is a proper course? Not in principle. I think the system of audit ought to be one purely after payment. But this has been done in the Audit Office in consequence of the Treasury not being able to undertake the duty, as a relief to that office.
10. Why is the Treasury not in a position to undertake this duty? I really am not in a position to say; but I know the Secretary to the Treasury has always considered that it would be a very great relief to him that it should be done by us. You are aware that the Miscellaneous Department that was contemplated by that Board has never been established in the Treasury. The Secretary to the Treasury receives advances and pays miscellaneous charges

W. C. Mayne,
Esq.
8 Sept., 1858.

W. C. Mayne, Esq., charges, but there never has been such a branch established as was recommended in that report.

8 Sept., 1858. 11. How often, according to the present system, are the accounts paid by the Government examined—There will be of course an examination by each head of a department, or by the accountant under the direction of the head? Yes.

12. Subsequently to that, what other examinations are accounts subjected to—do the Treasury examine into their correctness? No; but the expenditure is rigidly tested and examined in my office, after the vouchers are received.

13. Are there only these two examinations, one by the department previous to payment, and the other by you upon receipt of the vouchers? That is in all cases where the money is paid by the department; but where it is paid by a sub-accountant, that sub-accountant is supposed to examine also.

14. What class of payments are made by sub-accountants? For instance, payments on the Gold Fields. The Inspector General receives advances, and the officer in immediate charge of the particular service prepares and pays the accounts. For instance, also, the officers in charge of the Road Patrols, who prepare the accounts, are held responsible for their correctness, and examine them of course. Then they are again examined in the Inspector General's Office and in the Audit Office. But in case of payments by a department itself the accounts undergo only two examinations.

15. Do you prepare the warrants now, or do the Treasury? The Audit Office does it still.

16. Do you think that a right system? In principle perhaps it is not strictly so, but it would not relieve the Audit Office of labor if the Treasury had to prepare them, because as we would have to verify them the labor would be the same, except the mere clerical part of writing, which is inappreciable.

17. Do you mean to examine the accounts before payment is made? No. As I have already mentioned, most of the payments are now made by the departments through a system of advances.

18. Advances founded upon the Estimates? Yes. For instance, the head of a department applies for an advance of, say, one-twelfth, to carry on his department for a month. There is no examination then, except to see that the advance does not exceed the appropriation in the first instance; but the officer receiving is held responsible for adjusting that advance.

19. What portion of the duty that is performed in your office is also done in the Treasury? I believe the Treasury keep an entire set of books and accounts for all the Colonial expenditure in detail; but I think it is quite unnecessary. They must be kept in the Audit Office, and I do not see that it is in the least necessary that they should be kept in detail in two departments.

20. Has any Board given any opinion on that point? Not that I am aware of.

21. It did not form a part of the inquiry? I think not. I think the first Board to some extent refers to it, not perhaps so plainly as I have now stated the view I hold.

22. At all events there is the fact that at present this work is done twice over, that is to say, by two departments? Yes, that is my belief.

23. And the registration of debentures also? I am not in a position to say that that is done in the Treasury. We register them.

24. Are you aware of anything else that is done in both offices? I am not. I speak with diffidence of the arrangements of the Treasury, because I am not conversant with them.

25. Supposing one of the departments were relieved of this duty, what reduction of clerical labor would that cause? I cannot speak of what can be done in the Treasury. It is impossible it could be dispensed with in the Audit Office.

26. How many clerks do you employ in this branch of duty? We employ in the Account Branch the Accountant and four clerks, with the assistance of one of the extra and probationary clerks.

27. Merely on this work to which you allude? In keeping the accounts, which is indispensable; we cannot check or audit without keeping the accounts most thoroughly and fully.

28. With reference to your strength now, and the mode in which the duty is at present performed, do you feel justified in recommending to the Committee that any number of your officers should be dispensed with? I do not, certainly. As I have already said, when the arrangements I have suggested are carried out, if they are approved, it is possible that they may cause a further reduction of work, which may lead to a reduction of the number of clerks.

29. Do you allude to the suggestions made by you in your letter to the Colonial Government, dated 12th August last? Yes, I allude to that, and to the subsequent matter concerning which I have been in conference with the Secretary of the Treasury.

30. And which is detailed in a joint minute signed by both of you? Yes.

31. You have also submitted to the Government a memorandum, in which you propose to carry on the audit of railway accounts in future in your department? Yes.

32. Relaxing some of the stricter rules of your department, with a view of accommodating the duty to the particular circumstances of the railway machinery? Yes.

33. In that memorandum you suggest that possibly an additional clerk may be necessary for enabling you to carry on that duty? I think there will, because he must be restricted to that duty, which will fully occupy his time.

34. If the Government should see that they can make some change with regard to the mode of entering up the accounts, as between the Audit Office and the Treasury, and having in view the adoption of your suggestions made in the communication already referred to, is it not more than probable that, on the whole, a reduction in your department may be made? I must be careful not to commit myself to say that. I can only say that, if it is possible, I will be as anxious to effect it as anyone can be. But you will bear in mind that the proposal respecting the examination of railway accounts was written subsequently to the other suggestions.

35. *By Mr. Jonts*: I understood you to say that in the Audit Office the accounts of every department in the service are kept? Of every one.
36. And you have reason to believe that similar accounts are kept in the Treasury? So I understand: I am not certain of the fact. I mean, that the disbursements are kept under separate heads, in detail, in the Treasury; and that we keep them in the Audit Office under the separate heads of salaries and contingencies.
37. It is, of course, absolutely necessary that these accounts should be kept in the Audit Office? Yes.
38. Do you see any necessity for a similar system of accounts being kept up in the Treasury? I do not. It appears to me that the Treasury stands very much in the position of a Pay Office—of the Paymaster General at home. It is an office simply of receipt and disbursement.
39. And the Treasury should trust to the Audit Department entirely to see that the expenditure is correct? So it appears to me.
40. You are of opinion that the keeping of these accounts in the Treasury may be dispensed with? Yes, I think so.
41. Does your present system of auditing the accounts involve any labor that can safely be dispensed with? I do not think so. I do not think you can safely relax the rigidity of examination.
42. Have you not some forms which consume a great deal of labor, which are not essential? It is to some of those forms I address myself in the memorandum; and I meant also, particularly in the general observation at the end of it, to devolve on the Auditor General the discretion and responsibility of dispensing with some of these mere technicalities, but that the examination should never be relaxed; that every one of those matters that are wanting to the perfectness of accounts should be brought under his notice, because you thereby insure that every separate item, and every part of an account is thoroughly sifted—in fact, that is the course pursued. They are so examined; and every objection, every query, every defect, is brought under my own notice; and as far as the regulations allow me, when they are mere matters of form, I do dispense with the reference back to the accountants.
43. Do you consider that the present audit of the accounts of the Colony is a satisfactory one? It is satisfactory, excepting as not being sufficiently close—not sufficiently near to the event; but that is a defect inherent in every system of audit in the world.
44. In other respects you consider the audit thorough, so as to check any mal-appropriation? I think mal-appropriation is impossible without detection; I should have made an exception of moneys received by land agents for selections of land offered for sale at auction, but not bid for; the check in the cases is defective.
45. *By the Chairman*: You hope, by the adoption of the suggestions you have made, to keep the audit closer up than ever has been the case? When once the arrears are got rid of, I do.
46. *By Mr. Piddington*: I see you have sixteen clerks on the Estimate for 1858? Yes.
47. Are these sixteen clerks entirely occupied in auditing the public accounts? In the different branches—the account branch, the examination branch, and the revenue branch,—with the Chief Clerk.
48. Does not that number of clerks, whose salaries alone amount to £4,725 per annum, appear to be an undue number for the purpose of auditing accounts not reaching above a million per annum, or thereabouts? I think not; but the safety it involves is the point which I look at. I may mention to you, perhaps, as an illustration bearing in some degree upon it, that in the War Office at home alone, which merely involves the military accounts, there are one hundred and forty clerks.
49. Do you recollect the total war expenditure that comes under the supervision of those one hundred and forty clerks? I think it may be from eight to eleven millions—say nine on the average.
50. Including the Ordnance expenditure? No.
51. Do not these clerks check the Ordnance expenditure? I think not; that is done by the Ordnance Department itself; and that is independent of some examination made by the Commissioners of Audit afterwards.
52. Were these clerks in the War Office during the late war? Yes.
53. But the expenditure during the late war amounted to nearly double nine millions, did it not? For the military it may have done. The staff of the War Office during the war (that engaged in the examination of accounts) was, I believe, the same as that previously employed. The audit of military accounts at home is a mere appropriation audit, so far as the Commissioners of Audit are concerned.
54. Do I understand that the entire staff in your office have nothing foreign to the duties of the office to do—they do not perform any other duties than those of audit? I am sorry to say they do, for they are constantly called on to answer references and prepare voluminous and laborious returns, which sometimes absorb the time of two clerks for months.
55. To what returns do you allude? Returns for the information of the Government and of the Legislature. Many of these returns will, I apprehend, be eventually prepared by the different departments instead of by the Audit Office.
56. Then it is your opinion that it is absolutely necessary, in order to carry out a perfect system of audit, that your department should include as many as sixteen clerks? As far as I can see at present it is.
57. Are you satisfied that the salaries awarded to these sixteen gentlemen do not exceed the amount that is necessary to secure the services of similarly qualified men? The best answer I can give to that question is the fact that I find the greatest possible difficulty in retaining the clerks in the office; that I have constant changes, which most seriously cripple its efficiency.
58. Do these changes take place among the subordinate clerks, or among those of the superior class? Both.
59. Have there been many changes in the office of Chief Clerk or Accountant? I have had

W. C. Mayne, Esq. a change in the office of Accountant. The late Accountant was transferred to another branch of the public service, where he received a higher rate of remuneration.

60. He did not leave in consequence of the inadequacy of his salary? He left for his own advantage—because he received a better appointment.

8 Sept., 1858.

61. With respect to the Inspector of Customs Revenue, or the examination clerk, have either of those gentlemen been changed since you have held office? Neither of those.

62. Then, I presume, your remark applies to the clerks of secondary grade? Yes, inferior to the heads of branches. The heads of branches are the Accountant, the Examiner, and the Inspector of Revenue Accounts.

63. By Mr. Forster: You cannot suggest any mode of simplifying the audit? I really cannot. It is, I think, as simple as we can now bring it to, with the suggestions that I have made. Form is absolutely necessary to expedite the examination of accounts, and to expedite reference. It will be apparent that if every one were allowed to prepare accounts as they pleased, it would take a much longer time to examine; whereas, if the different accounts are sent in, in the same form, a man accustomed to it takes in the several points almost at a glance.

64. How soon, in general, after the expenditure of any item is it submitted to your department? We receive from the several departments their monthly cash accounts, which they are bound to furnish as soon after the expiration of each month as they can be made up.

65. Then, I presume, when the arrears you speak of are got rid of you will be able to audit the accounts for each month in the next succeeding month? I doubt that.

66. How long after an item is expended can it pass your office? That must depend in a great measure on the correctness with which the accounts are furnished to us. If the accounts were all strictly correct they would pass very rapidly; but a large portion of our time is taken up in correcting and obtaining the correction of errors.

67. Then that involves some defect in other departments? Yes, the inevitable defect of everything human, I imagine—imperfection.

68. Do you think these errors are above or below the average one might expect? I think in many branches of the public service they are excessive.

69. Then, of course, if we can arrive at a better mode of keeping the accounts in the other departments your business would be lessened? I think it would, unquestionably.

70. Has it ever occurred to you to institute any comparison between the business that now comes before you, under Responsible Government, and the business which previously came before the department under what is called irresponsible Government? You mean whether the change has lightened the duty?

71. Yes? It has not, certainly.

72. Do you attribute that to the state of transition through which we have been passing? A good deal of it has arisen from the state of transition. When things are once settled there may be more expedition, and more perfect arrangements. There have been inevitable delays in carrying out matters.

73. Then I understand you to say that you have not been able to lighten the business since you took office? I have not.

74. Has it been increasing since? I will not say it has been increasing, but it certainly has not been lightened.

75. Have you ever examined certain Bills that were introduced at different times for regulating the business of your department? Yes.

76. Do you think those Bills were calculated to be beneficial, or were they required at all? That must be regarded in two points of view. If you ask me the question as to the constitutional bearing of those Bills, I may say I think the last Bill introduced was calculated to improve the status and usefulness of my office.

77. Do you think such a Bill is necessary now? I think it is, constitutionally. I may perhaps state what my view with regard to that aspect of the question is: I regard the Auditor General, in a Constitutional point of view, as essentially the officer of Parliament, particularly the officer of the House of Assembly. I look upon him as their sentinel, to watch that the expenditure is in strict accordance with the appropriation, and their guarantee that any departures from appropriation must be brought under their notice.

78. You consider your business to be directly derived from the Appropriation Acts, as they pass every session? Yes; the Appropriation Act is my guide for audit.

79. What has been your course when the Appropriation Act cannot be passed in time, as has been the case lately? The same course as has invariably been adopted ever since I have known this Government: The expenditure must in certain cases anticipate the appropriation.

80. In that case in what way do you regulate it—by the previous Appropriation Act? It is regulated by instructions.

81. But without these instructions, do you take the Appropriation Act itself? I could not take a preceding Appropriation Act without instructions. The Appropriation Act of a preceding year has discharged its duty at the close of that year.

82. Have you proceeded to audit the accounts this year much in the same way as previously? To examine, not to audit. It is impossible to audit when there is no Appropriation Act; but the examination of accounts goes on quite as strictly.

83. Practically it amounts to the same thing? The examination does, but not the audit.

84. Since when has auditing ceased altogether? In the strict sense of the term, in the absence of an Appropriation Act there could not be an audit.

85. Would you consider it to be your duty to decline auditing where no Appropriation Act existed? I cannot decline to do so; I am simply an officer of the Executive.

86. Have you been in the habit of auditing the accounts for sums passed by the warrants of the Governor, unauthorised by any Appropriation Act? Not auditing.

87. You have merely examined them? Merely examined them. I have temporarily admitted

admitted the vouchers of the Colonial Treasurer, pending the passing of the Appropriation Act. W. C. Mayo, Esq.

88. Would you consider it your duty to apply the Appropriation Act retrospectively. If the Appropriation Bill now in preparation passes, will you consider it to authorise you to audit your accounts up to this time? Certainly. 8 Sept., 1858

89. Does the passing of an Appropriation Act in the usual course, that is, at an early period of the session, expedite the business of your department, or the reverse? It enables the audit to be proceeded with, and therefore expedites business.

90. Then all the delay that has taken place in the passing of the Appropriation Act has increased the business of your department? I cannot say it has increased it, but it has caused more frequent references for instructions; the examination has gone on. It is, in fact, a thing which occurs every year; it is inevitable. Every Supplementary Estimate is an illustration of it. In every year expenditure has been called for which has been inevitable, but to meet which there has been no appropriation until the Supplementary Estimate has been passed.

91. The only distinction you seem to draw is, that you follow the instructions of the Appropriation Act in the one case, and in the other you take instructions from the Executive Government, pending the passing of that Act? Yes. Of course if any expenditure be not sanctioned by the Appropriation Act I should be compelled to disallow it.

92. That is, when you come ultimately to audit the accounts, anything you find then not sanctioned, you are compelled to disallow? Yes.

93. Your examination, in the meantime, is merely pending the final audit? Yes; the final audit, which is the closing of the account, must of course depend on the Appropriation Act.

94. *By Mr. Jones:* The effect of our not passing the Appropriation Act prior to the commencement of the expenditure is this, that it leads you to temporarily examine the accounts, leaving the final audit, to discharge the persons expending the money, till the Appropriation Act is passed? Exactly so.

95. So that, regarding the present year's expenditure, if you find any sums are not sanctioned you will surcharge the parties with those amounts? Yes, certainly.

96. Do serious inconveniences arise to the Audit Department from the Appropriation Act not being passed before the expenditure commences? There is inconvenience to a certain extent, which it is always desirable should be avoided.

97. It tends to increase the work of your department? It does. It requires continued reference for instructions and authorities.

98. And increased vigilance as regards the temporary sanction given to expenditure? Of course.

THURSDAY, 23 SEPTEMBER, 1858.

Present:—

MR. COWPER,
MR. DONALDSON,

MR. PIDDINGTON,
MR. ROBERTSON.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

Henry Lane, Esq., called in and examined:—

1. *By the Chairman:* You are Under Secretary to the Treasury? I am.
2. You are, I dare say, aware that this Committee has been appointed with the view of considering in what respects the different departments of the Government can be reduced, and the expenditure retrenched, without impairing the efficiency of the public service: can you favor the Committee with any suggestions in promotion of this object with reference to the department of the Treasury? Any remark I may make should have reference also to the Audit Office, to the two offices combined. The public accounts of the Colony are kept in both offices, and unnecessary work is occasioned thereby. Henry Lane, Esq.
23 Sept., 1858.
3. Will you point out to the Committee in what respect you consider any amount of work done in either office to be unnecessary? The account branch, in one or other department, might be dispensed with.
4. What reduction would that cause? If the account branch were transferred from the Treasury to the Audit Office, two clerks in the Treasury might be dispensed with for the present.
5. But if you transfer the work from your department to the Audit Office, can you state whether the clerks will not have to be transferred also? No, inasmuch as the same work is performed by the two offices.
6. Then, what you wish is, that the Government shall determine upon what system the Treasury accounts shall be conducted? Yes.
7. Do you think the Treasury or the Auditor General's the proper office? The Auditor General has the more perfect means of keeping the accounts.
8. And therefore you, of course, think it is the department where they ought to be kept? I think so.
9. Would that at all interfere with your office having any amount of information which it is desirable it should at any time possess, or do you contemplate that there shall be the means of immediate reference to the Audit Office, at any time, for such information as you desire? Yes; the Audit Office should be accessible to us for information at all times, if the accounts be kept there.

Henry Lane,
Esq.
23 Sept. 1858.

10. Have the alterations suggested in the report drawn up by Captain Ward and Mr. Rolleston, and dated 18th June, 1856, been carried out? The recommendations in that report were found to be in some measure impracticable. The Honorable Mr. Donaldson caused the appointment of a Board to inquire into the public accounts; a report was drawn up, and in compliance therewith, the system of advances to public officers was introduced.
11. *By Mr. Donaldson*: You refer to the report dated 11th August, 1857, and signed by myself, Mr. Knox, Mr. King, Capt. Ward, and Capt. Mayne? Yes.
12. *By the Chairman*: Has that system of advances worked well? It was an improvement upon the previous system, but it did not work so satisfactorily as we had anticipated.
13. The Government have recently carried out some further modification of that system? Yes. The inconvenience felt under the system recommended by the Board is now attempted to be obviated by introducing a system of credit, instead of advances, thereby rendering unnecessary the preparation of warrants; the duty of making which had been a vexed question between the two offices, the Treasury and Audit.
14. Will you state shortly the system now adopted? The course that had been observed under the above report was, that each head of a department made application for an advance; if found correct a warrant was prepared by the Auditor General, sent to the Treasury, and the amount placed to the credit of the officer in the Bank. This course involved the necessity of preparing warrants.
15. In lieu of that, what is now proposed? It is proposed to introduce a system of bank credits, which will be carried out in this way:—On the first day of the month the Auditor General will notify to the Manager of the Bank the sums authorised to be drawn during the month by the several public officers for whom credits are opened with the Bank; and will on the same day furnish a duplicate of this notification to the Treasury. On the first day of the following month the respective public officers will furnish to the Auditor General, with their bank pass-books, statements of the drafts on the Bank made by them during the preceding month. The Auditor General will examine and forward the statements to the Treasury on the same day, with a warrant of authority for the Governor General's signature, to replace from public moneys in hand the amount advanced by the Bank to meet the cheques drawn by the public officers in that month; the statement of drafts as examined by the Auditor General, and the warrant, to be the Treasurer's voucher and full discharge for the transfer of the amount. It is in fact an extension to the public accounts generally of the system which has been hitherto confined to the "Trust Moneys Deposit Account," on the plan suggested by the late Treasurer, Mr. Donaldson.
16. That will relieve the department of work? It will relieve it of the necessity of preparing warrants. We have during the present year, to this date, prepared 747 warrants, and this new system will reduce the number to two or three in a month at the utmost.
17. Do you not think the transfer of the account branch of your department to the Audit Office might be accompanied by a larger reduction in the clerical staff than you have suggested; would you require an accountant then? I should not like to propose a larger reduction at present, for we shall still have to keep an account, not the general account of the Colony, but the Treasury account, and the accounts of the revenues; besides I, as Under Secretary, shall have to keep the extensive account of "Miscellaneous Expenditure."
18. But is there not a good deal of work irrespective of this, as the registration of debentures and other work, done in both offices? Yes.
19. You will admit, I suppose, that the same principle applies to this work, that it need be done in one office only? Yes.
20. If it were done in one office only, would not that cause a further reduction of labor? I think the registration of debentures should be kept in the Treasury.
21. Not in the Audit Office? I think it is more important that it should be done in the Treasury than in the Audit Office.
22. Do you know why the Auditor General has hitherto registered them as well as the Treasurer? There is no legal obligation that he should do so, but the form of the debenture renders it necessary; there is a blank in the debenture for his signature.
23. You think at present you could recommend the reduction of only two clerks? That is all at present.
24. Is there any other business you think unnecessary, or which might be dispensed with, without impairing the efficiency of the service? I am not aware of any.
25. Have you any suggestion to make with reference to the working of your department, or which would promote the efficient performance of the duties in that or any other department? I have not. We have reduced the work of our department as far as I think we possibly could; and as regards other departments I have no suggestion to make.
26. How has the alteration with reference to land sales worked, as to the examination in the Surveyor General's Office, and the receipt of the money by you—do you find it has worked satisfactorily? I do not find it satisfactory.
27. What is the ground of the dissatisfaction: is it not the fact that the money is remitted to you without any detailed statement, while the documents connected with the transaction go to the Surveyor General? Yes.
28. Then how can you ascertain what the money is sent to you for? Some accounts of sales in the early part of the year are not yet closed for want of information.
29. How long after these sales take place do you get the report from the Surveyor General as to the particulars? No report is officially made from that office.
30. Then what communication have you with the land department, so that you may know what the money is sent to you for? By personal inquiry on our part, not by any official report on theirs. We have hitherto arranged by communicating with Mr. Smith, who has been transferred from our department to the Survey; we have to communicate with him for the purpose of checking the balances on sales.
31. How do you make entries of sales in your books? From the statements that accompany the

the remittances. These would do very well if we could retain them, but they must pass the next day to the Audit Office. It is on these statements as vouchers we make the entry and carry the amount to credit. Henry Lane, Esq.

32. When does the Auditor General receive any information from the Surveyor General—does he get any information from him? He has communication with the Surveyor General, but in addition to that he gets a further statement from the land agent. 23 Sept., 1868.

33. Has the land agent to furnish separate accounts to the three offices—to the Treasury, the Audit, and the Survey offices? Yes.

34. Is that necessary? It is. The attested account is periodically furnished to the Audit Office. Vouchers are furnished—one to the Treasury, and one to the Survey Office; and then there is the report of sales also sent to the Survey Office.

35. Are the documents sent to you, or have you the information in so detailed a form as to enable you to check the accounts? No; in order to a satisfactory check, a comparison with the final report of the sale, which we have not, would be necessary.

36. What would you recommend in order to put this on a proper footing; that the Surveyor General should receive the money, or that the accounts of sale should come to you? Either the one course or the other would be the remedy. I think as the transfer to the Survey Office of Mr. Smith has not been found to answer, he should be returned to the Treasury.

37. Would not that require an alteration in the instructions under which these land sales are held? A slight modification.

38. *By Mr. Robertson*: When the new mode of remitting money is brought into operation this modification might be made? It would be a good opportunity.

39. *By the Chairman*: You think some change necessary? Yes.

40. What reduction has taken place in the number of clerks in your department since the introduction of Responsible Government? There were 28 clerks in the year 1856, at an expenditure of £6,489; and we have now 15, at an expense of £4,315.

41. Have the clerks whose employment in your office has ceased gone to any other department? Two of them have.

42. Only two? Yes. The only sensible diminution of the work of the office consists in the transfer to the land department of one clerk, and to the gold receiving department one clerk also.

43. Then, taking the present number at 17, there is an actual reduction of six clerks?

44. Can you state to the Committee, from the official information you possess, whether any considerable amount of reduction has taken place in the various departments since Responsible Government was established? I have made a comparative statement of the number and expense of clerks in five of the principal departments in 1856 and 1858. (*The witness handed in the same. Vide Appendix A.*)

45. *By Mr. Donaldson*: Do you remember a minute drawn up by me suggesting a complete modification of the system of receipts and payments,—that the Treasurer should be entirely relieved from the duty of signing cheques, that that duty should be transferred to the Under Secretary, and that all receipts should be paid into the Bank? Yes.

46. Do you recollect whether you had a favorable opinion of that plan at the time? I had.

47. Has anything been done to carry out that suggestion, or is it in contemplation to do so? Under the new plan the Treasurer will be nearly altogether relieved from the duty of signing cheques, which will be imposed upon the Under Secretary, as having charge of miscellaneous payments.

48. Will the miscellaneous payments be extended largely? Not more extended than before; but it has always been a very heavy branch of public expenditure, averaging £10,000 to £12,000 a month.

49. Are you not of opinion that it would be of great advantage to relieve the Treasury of being made the receiving house, to transfer the duty of signing cheques to the actual Treasurer, and the duty of receiving to the Bank? I think it would be desirable.

50. With regard to the payments out of the Treasury for the last year, it is a matter well known that a large amount has been out without the parliamentary sanction formerly obtained—the Appropriation Act? Yes.

51. Will you state who drew the warrants for the payment? The Auditor General, in the usual form.

52. As a warrant of advance? Either as a warrant of advance or as a final payment.

53. Formerly there was a communication between the two offices with reference to the daily transactions? Yes.

54. Is that still persevered in? Yes.

55. How did you pass, under the supervision of the Auditor General, the daily payments on these warrants not drawn under Parliamentary sanction? They were passed through the cash books, which, I presume, were examined by the Auditor General in the usual way.

56. Then was the same audit gone through as formerly? We did not hear to the contrary.

57. You knew nothing to the contrary? No.

58. As far as the Treasury goes the accounts appear quite regular? Yes.

59. So that accounts for any amount of public money might be passed in the Audit Office without you, as Under Secretary, knowing of any irregularity? Yes, when no surcharge is made.

60. You are not aware of any surcharge made by the Auditor General for the year in anticipation of the vote of the House? No.

Henry Lane,
Esq.

APPENDIX A.

23 Sept., 1858. COMPARATIVE STATEMENT of the NUMBER and EXPENSE of CLERKS in the undermentioned Establishments in 1856 and 1858.

DEPARTMENTS.	1856.		1858.	
	No.	Expense.	No.	Expense.
		£		£
Treasury	23	6,489	15	*4,315
Principal Secretary	39	9,393	12	*3,730
Lands and Works	11	*2,525

23 September, 1858.

HENRY LANE,
Under Secretary.

SEPARATE APPENDIX.

A.

The Clerk of the Legislative Assembly to the Honorable the Colonial Secretary, transmitting a form of Schedule prepared by the Select Committee on "Retrenchment in the Public Expenditure," for circulation to the various Public Departments.

58-8.

*Legislative Assembly Offices,
Sydney, 13 May, 1858.*

Sir,

I am directed by the Chairman of the Select Committee of the Legislative Assembly on Retrenchment in the Public Expenditure to transmit to you the enclosed form of Schedule, indicating certain points with respect to which the Committee are especially desirous of eliciting the fullest information for the purposes of their inquiry; and to request that you will at your earliest convenience communicate a copy thereof to the several Public Departments in the Colony, with an instruction to supply, as soon as may be, a return in conformity therewith. I am at the same time directed to inform you that the Committee wish it to be distinctly understood in transmitting this Schedule that although they are desirous to have, as far as practicable, its requirements strictly complied with, they nevertheless have no intention to exclude, but on the contrary would rather invite, any further information within the scope of their inquiry which the Departments may consider as likely to prove useful in bringing the labors of the Committee to a complete and satisfactory issue, provided such further information be concise in form and speedily supplied.

I have, &c.,

The Honorable
The Colonial Secretary,
&c., &c., &c.

R. O'CONNOR,
Clerk of Legislative Assembly.

B.

*Colonial Secretary's Office,
Sydney, 20 July, 1858.*

Sir,

With reference to your letter of the 13th of May last, I am directed by the Colonial Secretary to transmit to you, for the information of the Select Committee of the Legislative Assembly on "Retrenchment in the Public Expenditure," the Schedules of the Departments under his control mentioned in the annexed list, which have been obtained in compliance with the desire of the Committee. The Returns from the other Departments will be forwarded to you as soon as received.

2. I am desired to add, that a communication has been made to the other Ministers, with a view to Returns being furnished to the Committee of the Departments and Establishments under their direction.

I have, &c.,

R. O'Connor, Esq.,
Clerk of the Legislative Assembly.

W. ELYARD.

DEPARTMENTS OF THE:—

Executive Council.
Colonial Secretary.
Government Resident, Moreton Bay.
Registrar General.
Postmaster General.
Protestant Orphan School.
Roman Catholic Orphan School.
Agent for Immigration, Sydney.
" " Moreton Bay.
Sydney Police, Judicial Department.
Water Police Magistrate.
Gaols—Darlinghurst.

Goulburn.
Bathurst.
Maitland.
Cockatoo Island.
Government Printer.
Astronomer.
Health Officer, Sydney.
" " Newcastle.
Vaccinator, Sydney.
Lunatic Asylum, Parramatta.
" " Tarban Creek.
Auditor General.

C.

*Colonial Secretary's Office,
Sydney, 24 July, 1858.*

Sir,

I am directed by the Colonial Secretary to transmit, for the information of the Select Committee of the Legislative Assembly on "Retrenchment in the Public Expenditure," the enclosed Returns, received from the Office of Lands and Public Works, together with a copy of a letter which accompanied them from the Under Secretary of that Department.

The Clerk of the Legislative Assembly.

I have, &c.,
W. ELYARD.

*Department of Land and Public Works,
Sydney, 22 July, 1858.*

Sir,

With reference to your letter of the 22nd ultimo, I am directed to transmit to you a Return of this Department, shewing the several particulars required by the Select Committee of the Legislative Assembly on "Retrenchment in the Public Expenditure."

2. I am likewise instructed to enclose similar Returns of the several Departments under the control of the Secretary for Lands and Public Works, enumerated in the annexed list.

3. The Return for the Railway Department will be forwarded as soon as it is received.

The Principal Under Secretary.

I have, &c.,
MICL. FITZPATRICK.

DEPARTMENTS OF—

Surveyor General and Chief Commissioner of Crown Lands.
Colonial Architect.
Agent for Church and School Estates.
Director of Botanic Gardens.
Examiner of Coal Fields, Newcastle.
Commissioner in charge of the Western Districts.
Commissioner in charge of the Southern Districts.
Assistant Gold Commissioner Buchanan.
" " " Douglass.
" " " Lynch.
" " " Griffin.

APPENDIX D.

(1.)

58-73.

*Colonial Secretary's Office,
Sydney, 20 August, 1858.*

Sir,

With reference to my letter of the 20th ultimo, I am directed by the Colonial Secretary to transmit, for the information of the Select Committee of the Legislative Assembly on "Retrenchment in Public Expenditure," the accompanying copy of a communication from the Inspector General of Police, forwarding the Schedule of the Department for Metropolitan Police, and the Schedules for sixty-seven of the Rural Police Districts.

I have, &c.,
W. ELYARD.

R. O'Connor, Esq.,
Clerk of the Legislative Assembly.

The Inspector General of Police to the Principal Under Secretary, transmitting Police Schedules for Committee on Retrenchment.

*Office of Inspector General of Police,
Sydney, 17 August, 1858.*

Sir,

In compliance with the instructions contained in your letter of the 26th June last, I do myself the honor to transmit, for the information of the Chief Secretary, forms of Schedule—departmentally—for the Metropolitan Police, and for sixty-seven of the Rural Police Districts, indicating certain points upon which the Committee of the Legislative Assembly on "Retrenchment in the Public Expenditure" are desirous of obtaining information as regards the Police.

Those Benches from which Returns have not yet been received have been again written to for them.

I have, &c.,
JNO. M'LERIE,
Inspector General of Police.

The Principal Under Secretary.

Goulburn.
Tamworth.
Shoalhaven.
Balranald.
Glen Innes.

(2.)

(2.)

LIST specifying the sixty-seven Rural Police Districts from whom filled in forms of Schedule were received by the Committee, on 20 August, 1858.

1. Albury.	35. Molong.
2. Armidale.	36. Moulamein.
3. Bathurst.	37. Mounted Patrol, Bathurst.
4. Berrima.	38. Mudgee.
5. Binalong.	39. Murrumbidgee.
6. Bombala.	40. Musclebrook.
7. Braidwood.	41. Newcastle.
8. Brisbane, Moreton Bay.	42. Orange.
9. Brisbane Water.	43. Parramatta.
10. Broulee.	44. Paterson.
11. Camden, Narellan, and Picton.	45. Patrick's Plains.
12. Campbelltown and Appin.	46. Peurith.
13. Carecar.	47. Port Curtis.
14. Casino.	48. Port Macquarie.
15. Condamine, Darling Downs. *	49. Port Stephens.
16. Cooma.	50. Queanbeyan.
17. Dalby, Darling Downs.	51. Raymond Terrace.
18. Deniliquin.	52. Rylstone.
19. Drayton.	53. Scone.
20. Dubbo.	54. Shoalhaven.
21. Eden.	55. Taroom.
22. Gayndah.	56. Tenterfield, New England.
23. Grafton.	57. Tumut.

CENTRAL POLICE OFFICE CLERKS.

No. 1.

THE POLICE MAGISTRATE to THE COLONIAL SECRETARY.

*Central Police Office,
Sydney, 3 January, 1855.*

SIR,

I have the honor to inform you, for the information of His Excellency the Governor General, that Mr. M'Koy, a clerk of the 3rd class in the Judicial Branch of this department, having been recommended to be removed to the Executive Branch immediately under the control of the Metropolitan Superintendent of Police, I do myself the honor to request that His Excellency the Governor General will sanction the Police Magistrates, as heretofore, receiving applications from candidates for the vacancy caused thereby, so that they may recommend the applicant (whom they may consider most fit to perform the duties) to the favorable consideration of His Excellency the Governor General.

I have, &c.,

THE HONORABLE
THE COLONIAL SECRETARY.

JAMES S. DOWLING, P. M.

No. 2.

THE COLONIAL SECRETARY to THE POLICE MAGISTRATE.

*Colonial Secretary's Office,
Sydney, 10 January, 1855.*

SIR,

In acknowledging the receipt of your letter of the 3rd instant, No. 55-78, stating that Mr. M'Koy, clerk of the 3rd class in the Judicial Branch of your department, has been recommended to be removed to the Executive Branch under the control of the Metropolitan Superintendent of Police,—I am directed to inform you that His Excellency the Governor General approves of your receiving applications from candidates for the vacancy caused thereby, with a view to the most eligible being recommended for the appointment.

I have, &c.,

THE POLICE MAGISTRATE,
Sydney.

W. ELYARD.

No. 3.

THE POLICE MAGISTRATE to THE COLONIAL SECRETARY.

*Central Police Office,
Sydney, 15 January, 1855.*

SIR,

I do myself the honor to acknowledge the receipt of your letter of 10th instant, No. 55-126, informing me that His Excellency the Governor General approved of my receiving applications from candidates for the vacancy caused by Mr. M'Koy, a clerk of the 3rd class in this department, being removed to the Executive Branch under the control of the Metropolitan Superintendent of Police.

2. With the concurrence of the Police Magistrates, I beg to recommend, for the approval of His Excellency the Governor General, that Mr. James Martin, an assistant clerk in this office, and who has always performed his duties in a very efficient manner, be promoted to the 3rd class, in the room of Mr. M'Koy.

3.

3. Several applications for the additional assistant clerkship, created by the promotion of Mr. Martin, having been made to the Police Magistrates, they, after mature deliberation, beg to recommend, therefore, Mr. Francis Burnand Davidson, a gentleman who has been highly recommended to their notice.

I have, &c.,

THE HONORABLE

JAMES S. DOWLING, P. M.

THE COLONIAL SECRETARY.

No. 4.

THE COLONIAL SECRETARY to THE POLICE MAGISTRATE.

Colonial Secretary's Office,

Sydney, 19 January, 1855.

SIR,

I am directed by the Governor General to request that you will have the goodness to meet the Acting Auditor General and the Clerk of the Legislative Council, at this Office, on Tuesday morning, the 30th instant, at eleven o'clock, for the purpose of forming a Board to examine into and report upon the qualifications of Mr. James Martin, for a situation of a clerk of the 3rd class in your department, to which it is His Excellency's intention to appoint him, should he be deemed competent by the Board.

You will have the goodness to instruct Mr. Martin to attend at the time and place specified.

I have, &c.,

W. ELYARD.

THE POLICE MAGISTRATE,

Sydney.

P.S.—I am to add, that His Excellency approves of the employment of Mr. Francis Burnand Davidson, as an extra clerk, in the room of Mr. Martin, with pay at the rate of 5s. per day, and the usual temporary allowance, from the date of his commencing duty.

No. 5.

THE POLICE MAGISTRATE to THE COLONIAL SECRETARY.

Central Police Office,

Sydney, 8 February, 1855.

SIR,

In compliance with your letter of the 19th ultimo, (No. 55-570), I instructed Mr. James Martin to attend at the Honorable the Colonial Secretary's Office on the 30th January.

I have now the honor to enclose the Report of the Board of Examiners held on the 6th instant, (to which day the Board had been adjourned), stating "that Mr. James Martin is fully qualified to be appointed a clerk of the 3rd class in this department."

I have, &c.,

JAMES S. DOWLING, P. M.

REPORT of a Board appointed by the Honorable the Colonial Secretary's Letter of 19 January, 1855, to report upon the qualifications of Mr. James Martin, proposed to be appointed a Clerk of the 3rd Class in the Central Police Department.

The Board having examined Mr. James Martin in Orthography, English Grammar, and Arithmetic, feel satisfied that he is fully qualified for the situation of a clerk of the 3rd class. He wrote the prescribed memorandum in eight minutes. He is 54 years of age. This Report is a specimen of his handwriting.

JOHN STIRLING.

WM. MACPHERSON.

Sydney.

No. 9.

MR. GEORGE WARBURTON to THE COLONIAL SECRETARY.

*Central Police Office,
Sydney, 7 November, 1856.*

SIR,

Understanding that it is the intention of the Government to superannuate the Chief Clerk of this department, and to support another in his stead, who will also, as a Magistrate, have to discharge the Chamber duties,—

I beg most respectfully to lay before you my claims for that appointment.

I have been upwards of sixteen years in this office, and am next in seniority; for my competency to discharge satisfactorily the duties required, I beg to refer you to the accompanying testimonials from Members of Parliament and Magistrates, most of whom have known me since I entered the public service.

Mr. Nichols.
Mr. Martin.
Mr. Weekes.
Mr. Gordon.

I have, &c.,

GEO. WARBURTON.

THE HONORABLE
HENRY WATSON PARKER, Esq.,
Premier, &c., &c., &c.

CENTRAL POLICE OFFICE CLERKS.

No 10.

MR. GEORGE WARBURTON to THE COLONIAL SECRETARY.

*Central Police Office,
Sydney, 17 November, 1856.*

SIR,

It is with pride and pleasure I enclose to you the accompanying testimonial in my favor from Mr. Plunkett, who must above most men, as the Attorney General of this Colony for many years, be best able to say whether I deserve and am fitted for the appointment I now seek. I say this, for, of course, almost all the depositions taken by me during the number of years I have been in the service have been acted upon by that gentleman.

I cannot help entertaining a hope, from this and the testimonials submitted in my former communication, that my application will be favorably entertained, and, if so, I beg to say that I will be most happy to perform the duties of the appointment to the end of the year at my present salary; and should it so happen that the Assembly do not vote a salary for the office, I can but return to my present duties.

I make this proposition with a view to obviate any difficulty that may be felt in at once making an appointment which I believe is well understood to be urgently necessary.

I have, &c.,

GEO. WARBURTON.

THE HONORABLE

THE COLONIAL SECRETARY.

P.S.—I take leave also to enclose a note received from D. Egan, Esquire, since writing the foregoing.

No. 11.

THE POLICE MAGISTRATE to THE COLONIAL SECRETARY.

*Central Police Office,
Sydney, 20 November, 1856.*

SIR,

I do myself the honor herewith to transmit three letters received this day by me from Messrs. J. P. Ormiston, W. Crane, and Edward Reeve, applying to be placed upon the 3rd class in this department from the 1st January next, and requesting me to recommend the same to the favorable consideration of Her Majesty's Government.

I have great pleasure in recommending each of their individual claims to promotion, as they have, one and all, given me every satisfaction during the time they have respectively been under my immediate supervision and control. Their duties are, I beg to observe, in each case of an irksome and responsible nature, and their position in discharging them of a very different character to that of clerks of the same standing in other Government offices. Under all these circumstances, however, I have always found them ready, willing, and attentive to their different duties, and have no hesitation whatever in requesting that their claims may be favorably considered, especially as I understand that the promotion solicited will not entail any additional expense upon the Government during the ensuing year.

I have, &c.,

JAMES S. DOWLING, P.M.

THE HONORABLE

THE COLONIAL SECRETARY.

[Enclosure 1 in No. 11.]

*Central Police Office,
Sydney, 30 November, 1856.*

SIR,

I do myself the honor most respectfully to request that you will be pleased to forward this my application to the Honorable the Executive Council, that I may be placed upon the 3rd class from the 1st day of January, 1856.

I have been a clerk in this office for nearly three years, and during that period my time has been chiefly occupied as keeper of the Records, and in making out warrants of commitment, &c.

I trust that the manner in which I have discharged those duties, and other business which has devolved upon me, has met with your approbation, and that you will give this my application your recommendation and support.

I have, &c.,

WILLIAM CRANE.

J. S. Dowling, Esq.,
Police Magistrate.

[Enclosure

CENTRAL POLICE OFFICE CLERKS.

7

[Enclosure 2 in No. 11.]

Central Police Office,
Sydney, 19 November, 1856.

Sir,

I do myself the honor most respectfully to solicit that you will be pleased to recommend me to the Government for appointment as a 3rd class clerk in your department from the 1st of January next.

For the last three years and a-half I have had the conduct and management of the Accounts of this department; and I earnestly trust that, from the manner in which I have performed those duties, I shall be entitled to your favorable recommendation and support.

I have, &c.,

JAMES P. ORMISTON.

J. S. Dowling, Esq.,
Police Magistrate.

[Enclosure 3 in No. 11.]

Central Police Office,
Sydney, 20 November, 1856.

Sir,

I do myself the honor most respectfully to request that you will be pleased to submit this my application for promotion to a 3rd class clerkship for the favorable consideration of Her Majesty's Colonial Government; and in so doing I venture to express a hope that you will herein see no reason to refuse me the sanction of your recommendation and support.

2. Although the prospect of a heavy reduction of £41, or thereabouts, in my next year's salary is the immediate cause of my troubling you with this application, I trust I shall be excused for drawing attention to the fact that I have now uninterruptedly served the Government as an extra clerk for upwards of *eight years*—since the 16th October, 1848. At that time I was appointed an extra clerk in the Immigration Office, to be paid and rated as such, but under the name of "Clerk to the Orphan Committee," to perform the whole secretarial and clerical duty of that sub-department. On the discontinuance of Orphan Immigration, towards the close of the year 1851, I was placed on duty as an extra clerk in the Immigration Department, in which capacity, as previously, I ever exerted myself to give satisfaction to my superiors, as will appear by the testimonials of those gentlemen (herewith enclosed) and to which I now crave reference.

3. There is, moreover, a circumstance as to the period previous to my joining this department to which I beg respectfully to invite attention, as shewing that (although my services in the Immigration Office were not unappreciated) my case has been, for a considerable time past, one of some hardship as regards promotion. It is, in few words, as follows:—In the month of February, 1852, a Mr. G. W. Newcombe, the clerk next above me, and a clerk on the 3rd class, formally resigned his appointment in the Immigration Office, and accepted a situation in a Bank; on his resignation the Agent for Immigration, by an official memorandum, directed that "Mr. Newcombe's resignation should be accepted, and that Mr. Reeve should have the vacancy;" unfortunately, however, Mr. Newcombe did not, on trial, find his engagement at the Bank a suitable one, and he, therefore, by letter, after a few days, requested leave to withdraw his resignation, and to be allowed to return to the Immigration Office, which was accordingly permitted, and I thus continued to be paid and rated as an extra clerk, until, disappointed in all hopes of promotion there, I left the Immigration Department on the 11th of January, 1854, and entered the Central Police Office, wherein I have since remained, never having had any cause to regret the change then made, although still only an extra clerk.

4. Under all these circumstances, my length of service, and the manner in which I have performed the multifarious duties devolving upon me, under your supervision and control in this department entitle me, as I conceive, to indulge in the belief that you will assist me in this my application for that promotion of which I am not undeserving, and to which I have for so many years looked forward in vain.

I have, &c.,

EDWARD REEVE.

James Sheen Dowling, Esq.,
Police Magistrate,
Sydney.

No. 12.

THE COLONIAL SECRETARY to THE POLICE MAGISTRATE.

Colonial Secretary's Office,
Sydney, 27 November, 1856.

Sir,

With reference to your letter of the 20th instant, transmitting and recommending the applications of Messrs. J. P. Ormiston, W. Crane, and Edward Reeve, for promotion to the 3rd class of clerks in your department, from the 1st January next, I am directed to inform you that, it is regretted, that this application is too late to be considered during the present Session of Parliament.

I have, &c.,

W. ELYARD.

THE POLICE MAGISTRATE,
Sydney.

No 13.

No. 13.

CLERKS IN THE POLICE OFFICE to THE COLONIAL SECRETARY.

*Central Police Office,
Sydney, 19 February, 1857.*

SIR,

We, the undersigned, clerks of the Central Police Office, having heard with some surprise that a gentleman wholly unconnected with this department has received the appointment of Chief Clerk, to the exclusion of such of us as have, from official experience, general ability and length of service, a fair claim to an interest in that promotion, beg respectfully to represent (without any prejudice or animus against the party alluded to, who is, as yet, personally unknown to us,) that the appointment of any one out of this department over our heads is an unmerited stigma and disgrace to us all, collectively and individually; since it plainly and distinctly denies the ability, character, and competency of any of us to discharge the duties incumbent upon the abovementioned officer; further, that the operation of such an appointment as is now respectfully animadverted upon, is a general and particular injustice to the clerks of this establishment, a great and wholly undeserved denial of promotion, and a serious discouragement to all subordinate employes in the civil service of this Colony.

We, therefore, respectfully request that you will be pleased to submit this our representation to His Excellency the Governor General and the Honorable the Executive Council, for their consideration of the same.

We have, &c.,

GEO. WARBURTON.
J. MARTIN.
WILLIAM CRANE.
C. J. SMITHERS.
J. P. ORMISTON.
EDWARD REEVE.
FRANCIS B. DAVIDSON.

THE HONORABLE
THE COLONIAL SECRETARY.

No. 14.

THE COLONIAL SECRETARY to GEORGE WARBURTON, ESQ., AND OTHERS.

*Colonial Secretary's Office,
Sydney, 20 February, 1857.*

GENTLEMEN,

In acknowledging the receipt of your letter of the 19th instant, on the subject of the vacancy now existing in the office of Chief Clerk in the Central Police Office, and in which you remonstrate against any one unconnected with the department being appointed over you in that capacity,—I am directed by the Colonial Secretary to state, that the tone of your letter is altogether such as you are in no way justified in adopting.

2. At the same time I am to inform you, that without in any respect calling in question your ability for the efficient discharge of the duties to which you are appointed, the Government can only be guided in the selection of a gentleman to fill the newly created office by a sense of what will best conduce to the advantage of the public service.

I have, &c.,

GEORGE WARBURTON, ESQ.,
and the other Clerks in the Police Office
signing the letter of the 19th instant.

W. ELYARD.

No. 15.

GEORGE WARBURTON, ESQ., to THE COLONIAL SECRETARY.

*Central Police Office,
Sydney, 28 February, 1857.*

SIR,

Referring to your letter of the 20th instant, and being assured that the appointment of Chief Clerk and Assistant Police Magistrate for this department has not yet been made by the Government, I have now the honor to forward for perusal—and I trust for approval

CENTRAL POLICE OFFICE CLERKS.

9

approval—the accompanying certificate from certain Magistrates of this City who have known me in their official capacity for several years past, and also from several members of the legal profession who have been in the habit of attending at this Court. These additional certificates will, I trust, be sufficient to satisfy the Government that I am both eligible for, and deserving of, this appointment.

With reference to a letter signed by me and other clerks in this department, respecting the above appointment, I beg, for myself and them, to express an unfeigned regret that there should have been any apparent impropriety in its tone; and especially as regards yourself, for whom we entertain the highest esteem and respect.

I have, &c.,

THE HONORABLE

THE COLONIAL SECRETARY.

GEO. WARBURTON.

No. 16.

THE POLICE MAGISTRATE to THE COLONIAL SECRETARY.

Sydney, 2 March, 1857.

MY DEAR SIR,

As you requested, I have carefully considered the matter you referred to on Saturday, and I am decidedly of opinion that no second or Assistant Magistrate is required at the Central Police Office. I feel quite competent to perform the whole of the duties without assistance, and I think the number of clerks now in the office amply sufficient.

I have, &c.,

THE HONORABLE

H. W. PARKER,

&c., &c., &c.

DAVID FORBES.

No. 17.

THE POLICE MAGISTRATE to THE COLONIAL SECRETARY.

Police Office,

Sydney, 4 March, 1857.

MY DEAR SIR,

I think the better way to answer your note of yesterday is to give the name, salaries, and duties of the clerks now in the office, and the same as I propose to arrange them, which you will find on the last sheet. The saving thus shown will be £275 per annum, while the actual strength of the department will not be less than at present, as Mr. Ormiston, senior, does little or nothing, and an active Chief Clerk would more than compensate for his loss. I think there should be two Deposition Clerks, because when there is a Mayor the two Courts will be open together every morning.

I have, &c.,

THE HONORABLE

H. W. PARKER, M.P.,

&c., &c., &c.

DAVID FORBES.

As at present:—

1. Mr. Ormiston£130	... Chief Clerk.
2. Mr. Warburton 375	... Deposition Clerk.
3. Mr. Smithers 275	... Clerk and Assistant Deposition Clerk.
4. Mr. Nathan 275	... Licenses and Informations.
5. Mr. Martin 230	... Index and Informations.
6. Mr. Ormiston, jun. 175	... Accountant.
7. Mr. Crane 175	} Preparing warrants, summonses, binding parties over, records, letters, &c., &c.
8. Mr. Reeve 175	
9. Mr. Davidson 175	

No. 18.

THE COLONIAL SECRETARY to THE POLICE MAGISTRATE.

*Colonial Secretary's Office,
Sydney, 16 March, 1857.*

SIR,

I am directed to inform you that His Excellency the Governor General and the Executive Council have had before them your letter of the 4th instant, proposing certain changes in the Central Police Office, consequent upon the superannuation of Mr. Ormiston, the present Chief Clerk.

2. I am further to inform you that, with the advice of the Council, His Excellency has been pleased, in accordance with your recommendation, to sanction the following appointment and promotions, viz. :—

Mr. George Warburton to be Chief Clerk and Clerk of Petty Sessions, in the Central Police Office, with the salary of £430 a-year.

Mr. C. J. Smithers to be first Deposition Clerk, with a salary of £350 a-year.

Mr. F. F. S. Nathan to be second Deposition and Licensing Clerk, with a salary of £300 a-year.

I have, &c.,

W. ELYARD.

THE POLICE MAGISTRATE,
Sydney.

No. 19.

THE POLICE MAGISTRATE to THE COLONIAL SECRETARY.

*Central Police Office,
Sydney, 11 April, 1857.*

SIR,

I have the honor to forward herewith four enclosures,—numbers 1, 2, and 3 being letters from the junior clerks in this office, seeking promotion, and in some cases increase of salary, and 4, a Table of the Salaries paid to the officers of this department in the year 1856, those voted for 1857, those now paid, and a scale which I would beg to submit for your consideration.

2. The number of clerks for whom salaries were voted for the present year was nine, namely, one chief, one 2nd class, three 3rd class, and four assistant clerks. When, therefore, Mr. Warburton, the 2nd class clerk, was promoted to the office of Chief Clerk, it would perhaps have been more in accordance with the usual custom had all the other clerks been promoted a step, leaving the last vacancy unfilled, as eight clerks are considered sufficient.

3. Taking this view of the case, the applications made in enclosures 1 and 2 appear to be reasonable.

4. With regard to enclosure No. 3, signed by the assistant clerks, I would remark that the name "assistant clerks" appears to me altogether a misnomer, as applied to officers performing such duties as are required from the officers in this department so designated. The duties usually performed by assistant clerks involve no responsibility or knowledge beyond the requisites of an ordinary copying clerk; whereas clerks of this class in this office are employed in filling up informations, warrants, summonses, and other legal forms—to do which correctly, it is necessary for them to possess an intimate knowledge of the several Acts of Council, and the ability to refer to them readily: mistakes in these matters would cause much inconvenience and delay; and I think that a less number of really efficient officers would perform their duties more satisfactorily than a greater number of inefficient officers. It was upon this principle that I recommended eight clerks instead of nine; and upon the same principle I now recommend that no clerk in this office should be rated lower than a third class clerk.

5. In reference to enclosure 4, it will be seen that in the year 1856 the number of officers belonging to this establishment was fourteen, and the amount of their salaries £3,682 3s.; that the number of officers whose salaries were voted for the present year was twelve, and the amount voted £3,073; and that the number now actually attached is eleven, whose salaries at the present rate would only amount to £2,798, or £275 less than the sum voted

voted for the present year, and £834 3s. less than what was paid for the same services last year.

6. In the scale which I have submitted I have left the salaries of the Chief Clerk, 2nd class clerk, and the first clerk of the 3rd class, at the same amount as those voted, the gentlemen filling those offices having been so recently promoted; and I have filled in the others at the same rate as those paid in 1856. I would observe, that if this scale be adopted, there will still be a saving on the original estimate voted, at the rate of £80 per annum; while at the same time, under the arrangement I propose, I have no doubt the work of this office would be more efficiently performed than if the original arrangement had been carried into effect.

I have, &c.,

THE HONORABLE

DAVID FORBES, P. M.

THE COLONIAL SECRETARY.

[Enclosure 1 in No. 19]

Central Police Office,
Sydney, 16 March, 1857.

Sir,

I take the liberty respectfully to represent to you that Mr. George Warburton's duties in this office having, in consequence of his being appointed Clerk of Petty Sessions, been transferred to Messrs. Smithers and Nathan, as First and Second Deposition Clerks, a considerable additional amount of labor has devolved upon me, in the preparation of the whole of the Informations on application for Warrants and Summonses, which, as you are aware, require the utmost accuracy, and frequent reference to Acts of Council. I trust I shall not be considered presumptuous in requesting the favor of your recommending me to the Honorable the Colonial Secretary for promotion from the 3rd to the 2nd class, to supply the vacancy in that class occasioned by the promotion of Mr. Warburton.

I beg to be allowed to add, that during the four years I have occupied my present position I have faithfully performed my duties (as your predecessor, Mr. Dowling, will most readily testify); and my promotion to a higher class will be an additional incentive to a zealous and faithful discharge of those which are now entrusted to me by the changes to which I have referred.

I have, &c.,

DAVID FORBES, Esq.,
Police Magistrate.

JAMES MARTIN.

[Enclosure 2 in No. 19.]

Central Police Office,
Sydney, 24 March, 1857.

Sir,

I have the honor to request that you will be pleased to recommend to the Honorable the Colonial Secretary that I may receive the 3rd class clerkship now vacant in this department through the advancement of Mr. G. J. Smithers to the office of Deposition Clerk.

In making this application, I beg to state that I was placed in my present situation as an assistant clerk on the 1st July, 1853, and on the appointment of my father, Mr. R. Ormiston, as Chief Clerk, on the 1st January, 1854, was entrusted with the sole management of the accounts for this department, which are of an intricate and responsible nature.

As to the manner in which I have at all times discharged the above duty, I would solicit attention to the enclosed certificate, handed to me by J. S. Dowling, Esq., late Police Magistrate, and in conclusion express my hope that you will, under the circumstances, by your recommendation, obtain for me the promotion for which I now tender my application.

I have, &c.,

David Forbes, Esq.,
Police Magistrate,
Sydney.

J. P. ORMISTON.

[Enclosure 3 in No. 19.]

Central Police Office,
Sydney, 7 April, 1857.

Sir,

We the undersigned, designated the "assistant clerks" in your office, most respectfully beg that you will appeal to the Government in our behalf against the great hardships sustained by us under recent arrangements. And we are the more emboldened to do so because we feel sure that it must be now quite apparent to you that our individual duties are not merely of a distinct and independent character, but also onerous and responsible to a very great degree—requiring far greater abilities than are requisite for ordinary "assistant clerks" in the Government service, and an intimate acquaintance with criminal jurisprudence and business generally.

We

We respectfully, but urgently, desire your attention to the fact, that whilst not one of the senior clerks in this department has lost more than £10 on last year's salary, "we assistants" who receive much less, (and could least afford any reduction) have had £34 10s. deducted from each of our annual incomes.

Trusting that your Report will satisfy the Executive that this our application for an immediate augmentation of salary is but just and reasonable—that nine shillings and seven-pence per diem to men with families is wholly insufficient to subsist upon, and an inadequate remuneration for the duties which we have to perform.

We have, &c.,

David Forbes, Esq.,
Police Magistrate.

WILLIAM CRANE.
EDWARD REEVE.
FRANCIS B. DAVIDSON.

No. 20.

THE COLONIAL SECRETARY to THE POLICE MAGISTRATE.

Colonial Secretary's Office,
Sydney, 20 April, 1857.

SIR,

In acknowledging the receipt of your letter of the 11th instant, submitting with your recommendation communications from the junior clerks in your office, seeking promotion, and in some cases increase of salary,—I am directed to observe, that when you received your present appointment you were requested by the Colonial Secretary to say in what way you proposed to carry out the office arrangements, and at what salaries; and in consequence of your reply, and recommendation of the present plan, deliberately given, the Government abandoned the intention of carrying on the business of the Central Police Office upon an entirely different system.

2 I am further to inform you, that having upon your responsibility consented to your arrangement, the Colonial Secretary regrets his inability now to allow that arrangement to be suddenly disturbed.

I have, &c.,

THE POLICE MAGISTRATE,
Sydney.

W. ELYARD.

CENTRAL POLICE OFFICE CLERKS.

No. 1.

THE UNDER SECRETARY to THE POLICE MAGISTRATE, SYDNEY.

*Colonial Secretary's Office,
Sydney, 12 December, 1857.*

SIR,

I am directed to acknowledge the receipt of your letter of the 11th instant, submitting a communication addressed to you by Mr. James Martin, pointing out that in the Estimates for your department for 1858, his salary, as a clerk of the third class, is inserted at £230, being the pay at present received by him, although he is entitled to an annual increase of £15,—and to request that you will inform Mr. Martin, in reply, that the Government have abolished the Class Regulations, providing for an annual increase, and that the salaries of the Police Department appear to have been fixed as recommended in your communication of the 4th March last.

I have, &c.,

THE POLICE MAGISTRATE,
Sydney.

W. ELYARD.

No. 2.

THE POLICE MAGISTRATE, SYDNEY, to THE COLONIAL SECRETARY.

*Central Police Office,
Sydney, 18 December, 1857.*

SIR,

I have the honor to acknowledge the receipt of a communication from your department, dated the 12th instant, requesting that I would inform Mr. Martin, in reply to his application for an annual increase of salary of £15, that the Government have abolished the Class Regulations providing for an annual increase.

2. I have notified to Mr. Martin the reply to his application, which I had previously told him I could not recommend, but which I consented to forward at his most urgent request.

3. With reference to the latter part of your letter, in which you state that the salaries for the Police Department appear to have been fixed as recommended in my communication of the 4th of March last, I beg to remark that the communication to which you refer was an answer to a private note from Mr. Parker, the late Premier, made a very few days after my appointment to this office, and in which I put the salaries down as they appeared on the Estimate—conceiving that they were so fixed for the year—and that my opinion with respect to them was never asked. For my opinion upon this subject I must refer you to my subsequent official communications of the 11th of April and 15th of May last.

4. I mention this because whenever an allusion is made to the salaries of officers of this department by me, I am always referred back to this communication, made under the circumstances I have mentioned.

I have, &c.,

THE HONORABLE
THE COLONIAL SECRETARY,
&c., &c., &c.DAVID FORBES,
Police Magistrate.

No. 3.

THE POLICE MAGISTRATE, SYDNEY, to THE COLONIAL SECRETARY.

*Central Police Office,**Sydney, 15 February, 1858.*

SIR,

At the request of Mr. Ormiston, the Senior Assistant Clerk in this Office, I have the honor to forward herewith the enclosed Memorial, accompanied by a certificate from Mr. J. S. Dowling, my late predecessor in office, testifying to the careful and zealous manner in which Mr. Ormiston had performed his duties, to which I would add that during the time I have had charge of the department Mr. Ormiston has acquitted himself to my entire satisfaction.

I have, &c.,

DAVID FORBES,

Police Magistrate.

THE HONORABLE,

THE COLONIAL SECRETARY.

[Enclosure 1 in No. 3.]

To the Honorable the Chief Secretary and the Honorable Members of the Executive Council of New South Wales, &c., &c., &c.

The Memorial of the undersigned, James Potts Ormiston, a Clerk in the Judicial Department of the Central Police Office at Sydney,—

HUMBLY SHEWETH:—

That your Memorialist was appointed an Assistant Clerk in the Judicial Department of the Central Police Office at Sydney on the first of July, 1853, with the salary (then payable to a clerk of such status) of £200 10s. sterling per annum, and that from that date until now your Memorialist, although he has at all times given satisfaction to his immediate superiors, has not merely been suffered to remain without promotion of any kind, but has been, without any just cause, denied the same when it evidently came to his turn, and has, moreover, been so injuriously affected by the operation of a certain regulation framed by a late Ministry of Her Majesty's Government in this Colony (and designed, as it would seem, to apply to junior clerks only,) that his yearly salary, instead of being increased, has been greatly reduced—from that at first received by him to £175.

That your Memorialist was, on his appointment as above-mentioned, immediately deputed to assist his father, Mr. Robert Ormiston, then Accountant in the aforesaid department, and, on the promotion of that relative to the position of Chief Clerk, was entrusted with the charge of the whole of the duties of Accountant, without any increase of salary whatever, and that those duties he has discharged, and still continues to discharge, in such a manner as to give entire satisfaction to his superiors, the heads of the Central Police Department, as will be clearly seen from a perusal of the certificate furnished him by Mr. James Sheen Dowling, the late Police Magistrate, on his vacating that office, and as must also be apparent on reference to the deliberate opinion of Mr. David Forbes, the present Police Magistrate.

The following are briefly the circumstances under which promotion came, as he conceives, to the turn of your Memorialist, and was without just cause refused him: The strength of the Central Police Office, in January, 1857, consisted of a Chief Clerk and eight subordinate clerks, of whom four were what is termed "classed" clerks and four wholly unclassed, your Memorialist being the senior of these last named uncovenanted individuals; on the retirement of your Memorialist's father, the next senior classed clerk, Mr. George Warburton, gained promotion and became Chief Clerk, leaving by consequence a vacancy for a second class clerk; Mr. C. J. Smithers, the next in the department to Mr. Warburton, thus became a second class clerk, with an increase of salary amounting to £75 per annum; Mr. T. F. S. Nathan, the next in the department to Mr. Smithers, became senior third class clerk, with an increase of salary amounting to £25 per annum; and the last of the other classed clerks, Mr. James Martin, already in receipt of £55 per annum more than your Memorialist, the next under him, moved, without additional salary, from the position of third to second of those upon the third class, obviously leaving thereby a vacancy for a junior third class clerk. This place which has not been filled up, and which, by any construction of the regulations would be at least £225 per annum, your Memorialist has applied for, as fairly entitled to receive, by character, seniority, and the ordinary routine of the service. But, so far from having received such promotion, your Memorialist, by the general regulation before alluded to as regards unclassed clerks, which came into operation in the commencement of the year 1857, has actually had his salary reduced from £209 10s. to £175; suffering a positive loss in his annual income of £34 10s., instead of receiving by promotion an increase of £15 10s. in excess of his original salary; to say nothing of the very superior position in which he would, in the alternative, have stood as to rank in the department. Your Memorialist, although out of respect for bearing to call attention to the many painful circumstances more or less directly resulting to him herefrom, feels, nevertheless, that duty to himself and family compels him to submit to you

you in forcible language that this denial of promotion (aggravated by a concurrent reduction of salary) is a very unmerited discouragement, and grievous hardship. Promotion, caused by a vacancy at the head of the office, ran through the upper clerks of the department, and only stopped when it came to the uncovenanted clerks, who of all others required it most.

Your Memorialist virtually joined the Central Police Department on the same day as Mr. James Martin, who, when a vacancy occurred under circumstances similar to those now alluded to, succeeded, on the first of January, 1855, to the position of a third class clerk, as a matter of course, no opposition being invidiously offered thereto by your Memorialist.

Your Memorialist is aware that the classification of clerks under the regulations most commonly considered as in force is now to a certain extent modified, or done away with; but he feels confident that such a measure of reform could never have been intended to operate upon the salaries of clerks in any one department in a manner so unjust as this must appear to be when patiently investigated. The service of your Memorialist is, to say the least, identical with that of Mr. Martin, the next above him on the Salary Abstract; and yet, instead of receiving the same pay, or having any reasonable prospect of receiving anything like the same, your Memorialist is annually paid £55 pounds sterling less; and that in the face of the fact that the vacancy for promotion (whether that step be called a *classification* or not) still remains open next above him.

Under these circumstances, the prayer and petition of your Memorialist is that an allowance may be made to your Memorialist equivalent to the pecuniary loss sustained by him on account of his promotion being denied him (from the 16th March to the 31st December, 1857,) to the extent of £39 17s. 3d. And your Memorialist most respectfully makes instance for this equivalent in money, conceiving it to be the only mode of compensation which now that the Class Regulations are done away, is left open for him in justice to himself to submit for favorable consideration.

And your Memorialist, as in duty bound, will ever pray, &c., &c., &c.

JAMES POTTS ORMISTON.

Sydney, February, 1858.

[Enclosure in No. 3]

Sydney, 2 March, 1857.

Mr. James P. Ormiston held for upwards of three years the position of Accountant in the Central Police Office, whilst that department was under my charge, during the whole of which time he gave the greatest satisfaction. I ever found him careful and zealous in the performance of his duties.

JAMES S. DOWLING.

No. 4.

THE POLICE MAGISTRATE, SYDNEY, to THE COLONIAL SECRETARY.

Central Police Office,

Sydney, 19 February, 1858.

SIR,

I have the honor to forward a letter to my address received from Mr. Davidson, a clerk in this department, enclosing a Memorial to His Excellency the Governor General and the Honorable the Executive Council.

I have, &c.,

D. FORBES,

Police Magistrate.

THE HONORABLE

THE COLONIAL SECRETARY.

[Enclosure in No. 4.]

Central Police Office,

Sydney, 19 February, 1858.

Sir,

I beg most respectfully to request, that you will be so good as to forward, for the favorable consideration of His Excellency the Governor General and his Executive Council, the enclosed Memorial, praying for some allowance for the extra duties I have had to perform owing to the continued existence of a vacancy in this department, and to the great increase of business generally.

I trust that, backed by your recommendation, so fair a claim will not be rejected.

I have, &c.,

David Forbes, Esq.,
Police Magistrate, &c.,
Sydney.

FRANCIS B. DAVIDSON.

[Sub-

[*Sub-Enclosure in No. 4.*]

To His Excellency SIR WILLIAM THOMAS DENISON, Knight Commander of the Most Honorable Order of the Bath, &c., &c., &c., and the Honorable the Members of the Executive Council.

The humble Memorial of Francis Burnan Davidson, a Clerk in the Central Police Office, Sydney,—

RESPECTFULLY SHEWETH :—

That above three years ago your Memorialist accepted an appointment as extra clerk in the Central Police Office, in the expectation of speedy promotion to a "class," with increasing and annually increasing remuneration.

That your Memorialist is now in his fourth year of service under this Government, but in lieu of an increased, is in receipt of a considerably diminished income.

That this reduction is not attributable to any misconduct on the part of your Memorialist, nor to any diminution in the extent or responsibility of his duties, which have, on the contrary, been increased in both respects.

That originally your Memorialist received, as fixed salary, £109 10s per annum, with a gold increase of £100, and that, upon subjecting such gold increase to the intended reduction of 25 per cent., your Memorialist would have received £109 10s. and £75, making together £184 10s.

That through some error your Memorialist is only in the receipt of £175.

That on the retirement of the late Chief Clerk, and the promotion of others, a vacancy was left in one of the clerkships, whereby £275 voted by the Assembly for this department has remained unexpended.

That your Memorialist is fairly and equitably entitled to a proportionate share of this sum of £275, inasmuch as he bears, and has borne, a proportionate share in the performance of the extra duties occasioned by the continued existence of the vacancy.

That during this vacancy your Memorialist and others in the department have frequently had to take work home, in addition to attend in office early and late, sometimes so early as eight in the morning, in order to complete the urgent business of the day.

That your Memorialist's work is not adequately paid for by his salary, which is only at the rate of 9s. 7d. per diem, and that such salary is not sufficient for the support of himself, his wife, and child.

And your Memorialist will ever pray.

FRANCIS B. DAVIDSON.

Sydney, February 19, 1858.

1858.

Legislative Assembly.
NEW SOUTH WALES.

MR. JOHN M. BATE.

Ordered by the Legislative Assembly to be Printed, 23 April, 1858.

To the Honorable the Legislative Assembly of New South Wales, &c., &c., &c.

The humble Petition of John Murray Bate, at present First Clerk in the
 Office of the Legislative Council,—

RESPECTFULLY SHEWETH:—

That Petitioner's health having become so impaired in consequence of the protracted attendance required of him in his present situation, it has been thought necessary to recommend that Petitioner should leave the situation he at present fills, on a retiring allowance. Petitioner's case having been brought under the notice of His Excellency the Governor General and the Executive Council, it has been decided that Petitioner can leave the service of the Government on a retiring allowance of one month's pay for every year of service. Petitioner respectfully submits that the allowance as above is that given to Officers of the Government who have had to leave their situations from ill-health; but the case of the Officers of the Legislative Departments is very different, for, where the daily attendance in other Departments of the Government seldom exceeds more than six or seven hours, those of the Legislative are never less than that, and for six months in the year are rarely shorter than from ten to twelve hours, and sometimes considerably longer. It is the opinion of Petitioner's medical attendant that the long confinement has been the main cause of Petitioner's present state of health.

Your Petitioner begs to refer to the case of Mr. Henry Canny, who held the same post under the old Council that Petitioner holds under the present one. The late Legislative Council were so decidedly of opinion that exception should be made in his case, that they granted Mr. Canny a pension of £200 per annum: the cases of Mr. Canny and Petitioner are parallel ones. Petitioner, at comparatively an early age, has so suffered in health by the nature of his duties, that it has been decided necessary that Petitioner should leave his present situation; and he is, in consequence, with a large family depending on him, deprived of his principal means of support.

Your Petitioner, after several years of service in the late Legislative Council as Clerk of Select Committees, was, on the formation of the two Houses of Legislature, promoted to his present situation; he, therefore, as an old servant of both Houses, respectfully appeals to your Honorable House for such redress as, in your wisdom, you may consider Petitioner deserving of.

And your Petitioner will ever pray.

JNO. M. BATE.

Sydney, 7 April, 1858.

1858.

Legislative Assembly.

NEW SOUTH WALES.

LIEUTENANT C. SEAVER, R. N.

(DISMISSAL OF FROM OFFICE.)

Ordered by the Legislative Assembly to be Printed, 2 July, 1858.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of Lieutenant Charles Seaver, R. N., late Shipping
Master and Assistant Harbour Master of the Port of Newcastle,—

SHEWETH:—

That your Petitioner humbly submits his case for the consideration of your
Parliament.

That your Petitioner did fill the above two situations with strict attention, and without fault, from the 1st of January, 1854, as Shipping Master, and from the 1st of July, 1857, to the 16th of April, 1858, that of Assistant Harbour Master; when your Petitioner received the accompanying letter, No. 1, and an inquiry was ordered respecting the efficiency of your Petitioner, and also of any charges that your Petitioner might have against the general working of the Harbour Department.

That the two judges appointed for this inquiry were both laymen, quite unacquainted with nautical matters.

That your Petitioner, in his charges about the working of the Department, clearly proved, by the Sub-Collector of Customs, that the financial irregularities which your Petitioner mentioned in the course of his defence were correct, and the clerk was dismissed.

That your Petitioner, as a Magistrate, was in the habit of taking frequently the said Mr. Livingstone's monthly declarations for all collections made by him, and that he, Mr. Livingstone, must have been well aware that much more money was received in his department than had been forwarded to the Treasury—a deficiency of £120 having been proved in 1857—and that your Petitioner, without any charges being proved against him, received a letter, No. 2, dispensing with his further services in both offices. Had your Petitioner been guilty of any misconduct, neglect of duty, or disobedience of orders, he might have expected a dismissal. All the papers have been called for, and your Honorable House will clearly see that not one charge has been substantiated.

Frequently, from want of Magistrates, your Petitioner has been obliged to attend the Bench with your Petitioner's departed friend, Major Innes.

Your Petitioner therefore prays that your Honorable House will take the premises into your favorable consideration.

CHAS. SEAVER, Lt. R. N.

1858.

Legislative Assembly.
NEW SOUTH WALES.

MR. ROBERT F. POCKLEY.
(PRAYING REDRESS.)

Ordered by the Legislative Assembly to be Printed, 13 July, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Robert Francis Pockley, of Sydney, Master Mariner,—

SHEWETH UNTO YOUR HONORABLE HOUSE:—

That your Petitioner was, on the twenty-second day of July, 1857, appointed by His Excellency the Governor General, with the advice of the Executive Council, to the control of the Harbour Master's Department, under the name and style of Superintendent of Lights, Pilots, and Navigation, and Harbour Master of the Colony of New South Wales, with a salary of six hundred pounds (£600) per annum.

That your Petitioner accepted such appointment, and undertook and commenced the duties thereof, in the full and perfect belief that he would be allowed to retain such appointment during his good behaviour and proper conduct in the discharge of the duties of his office.

That, under such belief, your Petitioner neglected to prefer the claims he had upon his former employers, for future engagement in his profession of master mariner, and otherwise disposed of and arranged his affairs so as to render him free to devote the whole of his time and energies to his public duties.

That at the time your Petitioner accepted such appointment he had under consideration several offers of employment in his profession of master mariner, presenting many and permanent advantages, which your Petitioner was compelled to decline and forego on accepting such appointment.

That your Petitioner continued to discharge the duties of his said offices from the time of his appointment to the twentieth day of March, 1858, and during that period devoted the whole of his time and energies to the performance of the duties of his station, with satisfaction to the several Ministers of Finance and Trade who severally held office during that period.

That on the said twentieth day of March, your Petitioner was informed, by letter, signed by the Honorable Robert Campbell, Esquire, the Minister for Finance and Trade, that your Petitioner's services as such Superintendent of Lights, Pilots, and Navigation, and as such Harbour Master as aforesaid, would not be required after the thirty-first day of that month, and from which date your Petitioner was no longer to consider himself as holding the said appointment.

That your Petitioner, dreading the consequences of so sudden a removal from office upon his means of supporting himself and his family, urgently requested the Honorable the Minister for Finance and Trade to allow your Petitioner to retain his situation of Harbour Master; but, notwithstanding such request, your Petitioner was, on the said thirty-first day of March last, dismissed from the Government Service.

That on the removal of your Petitioner from his said offices, an inferior officer of your Petitioner's department was selected and promoted to fill the appointment rendered vacant by your Petitioner's removal.

That your Petitioner has been informed, and believes it is the invariable, or, at least, usual custom in all departments of the Government Service, that upon the reduction of the salary of any officer holding the situation of the head of a department, such officer shall be permitted to retain his situation at such inferior salary, if it shall appear good to him so to do.

That your Petitioner was not permitted to hold his said office, the salary of which had been reduced, although he was willing and anxious to retain the same.

That your Petitioner was never charged with any misconduct, or any incapacity, or negligence, in performing the duties of his said offices.

That your Petitioner, by being deposed so suddenly and unexpectedly from his said office, has suffered most seriously in his pecuniary affairs and in his prospects for the future.

That your Petitioner has been awarded by the Government the sum of thirty-three pounds six shillings and eight-pence, as compensation for the loss of his said office.

That your Petitioner conceives the amount to be totally inadequate to meet the requirements of the case, as, in addition to the loss of the emoluments attached to his said office, he has been prevented availing himself of many opportunities of being suitably employed in positions presenting many and permanent advantages.

That your Petitioner, in consequence of the arrangements entered into by him, and as by the disposal of his private affairs so as to leave Petitioner free for the uninterrupted discharge of his public duties, is now without any income whatever for supporting himself and his family.

Your Petitioner therefore humbly prays that your Honorable House will take into its favorable consideration the hardship attendant on your Petitioner's case, and afford to your Petitioner such redress as the circumstances appear to your Honorable House to warrant.

And your Petitioner will ever pray, &c.

ROBT. F. POCKLEY.

1858.

Legislative Assembly.

NEW SOUTH WALES.

MR. PERCY SIMPSON.

(PRAYING REDRESS)

Ordered by the Legislative Assembly to be Printed, 23 September, 1858.

The Honorable the Speaker and Honorable Members of the Legislative Assembly, in
Parliament sitting.

The Petition of Percy Simpson,—

MOST HUMBLY SHEWETH:—

That your Petitioner arrived in Sydney, November, 1822, bringing letters of introduction to Governor Sir Thomas Brisbane from the late Sir Henry Torrens, Adjutant-General, in which he states "that your Petitioner has held the situation of Judge Advocate, "and subsequently local Governor of one of the Ionian Islands for some years, and he "returned to this country in consequence of the reduction of the Regiment to which he "belonged, bringing with him a strong recommendation from Sir Thomas Maitland, with a "request from the General that I would exert myself in the behalf of Mr. Simpson, and I "feel assured that should you have an opportunity of serving him he will prove himself "worthy of your favorable notice and protection." Also a letter from the late Lord Bathurst, then Secretary for the Colonies.

Horse Guards, 16 March, 1822.

That on your Petitioner's return from the Ionian Islands to England he married; and, with the permission of His Royal Highness the late Duke of York, then Commander-in-Chief, your Petitioner embarked for this Colony, bringing with him a capital of money that entitled him to a grant of land (2,000 acres), 20 head of breeding cattle, 20 assigned convict servants, and rations for himself and family for six months from the Commissariat Stores.

Downing-street, 13 May, 1822.
R. Wilmot to Major-General Sir Herbert Taylor, in reply, &c., &c. Government Regulations.

That your Petitioner in December, 1822, entered into an engagement with the late Sir John Jamison to take on thirds 700 head of cattle, the property of Colonel Mole, for whom Sir John was agent. Your Petitioner agreed also with the late Reverend Samuel Marsden to purchase 2,000 sheep on most reasonable terms, when your Petitioner was solicited by Governor Sir Thomas Brisbane to relinquish these advantages, and undertake on account of Government the formation of a Penal Settlement at Wellington Valley, with a view to lessen the expense of maintaining about 8,000 convicts then rationed by the Commissariat Department in Sydney and elsewhere; and the successful formation of such an establishment was considered as being intimately connected with the rising interest of the Colony.

Colonial Secretary's letter, 10 February, 1823, and 2 April, 1823.

That your Petitioner, in order to carry out the views of Government, undertook the sole direction and management from Sydney of so difficult and cumbersome an expedition to be conducted 100 miles beyond Bathurst, through an unknown country that had never been previously explored or trodden over by a white man, an undertaking in those days of more than ordinary difficulty, great personal deprivation, and hardship to your Petitioner, who devoted his sole attention to the arduous duties entrusted to him for three and a half years at Wellington Valley; after which period it was considered no longer desirable to continue, and which was therefore finally broken up, your Petitioner's agreement with Sir Thomas Brisbane annulled, and your Petitioner's services discontinued, without his claim on Government being liquidated or settled.

Gore's New Gazette, 30 June, 1826.

That in the month of June, 1828, your Petitioner was offered and accepted the appointment of Assistant Surveyor of Roads and Bridges to proceed to Wiseman's Ferry, for the purpose of constructing some heavy works there, and also for the formation of the Great Northern Road, considered at that time very important—steam navigation with the Hunter not being then in existence.

That

That your Petitioner during a period of eleven years continued as Assistant Surveyor of Roads, superintending various public works in the counties of Northumberland, Cumberland, and Westmoreland; designed and executed the alteration of the Road from Lapstone Hill to that of Mitchell's Pass at Emu Plains, the Government Wharf at Parramatta, Wellombi, Lansdowne, and other Bridges; placed portable wooden houses for housing convicts in iron gangs, and other useful undertakings. But without entering into detail of the various works executed under your Petitioner's superintendence, he most respectfully begs leave to submit to your Honorable House the written testimonials of the late Major Goulburn, General Sir Richard Bourke, Sir Thomas Mitchell, Deputy Surveyor General Perry, and Sir Ralph Darling. Sir Richard Bourke states that he cannot forget the very useful services your Petitioner rendered to the Government of New South Wales during the period he had charge of it, as many of your Petitioner's labors were performed in great measure under his own eye. The manner in which your Petitioner designed and executed works fully satisfied him of your Petitioner's competency to lay out public works and superintend their execution, and should be happy to hear of your Petitioner being again employed in this way either at home or in Australia, as he is sure the public in either hemisphere would be benefited by your Petitioner's exertions and knowledge; and regrets that after such long service in New South Wales your Petitioner should have been obliged to come to England to seek for new employment, as he should have conceived that on the late reduction your Petitioner was at least entitled to some retiring allowance; adding, that at all times he should be ready to do your Petitioner justice by expressing his favorable opinion of your Petitioner's capacity and conduct. Sir Richard Bourke's despatch to Downing-street also makes favorable mention of your Petitioner.

21 February, 1844.

To Lord Goderich, 24 March, 1834.

7 August, 1850; 16 April, 1855; 20 March, 1818.

Sir Thomas Mitchell states that your Petitioner gave great satisfaction, not only in the manner of executing the public works, but, which was then of equal importance, in the progress made, and that he knows of no officer in the Colony to whom he could with better expectations as to the result entrust any works connected with the formation of roads or bridges, and tact in directing and arranging the means applicable to such public works.

Surveyor General's Office, 14 September, 1842.

The late Captain Perry, Deputy Surveyor General, states that in all the transactions he had with your Petitioner he always found the duties entrusted to your Petitioner's superintendence were performed in a manner highly creditable to your Petitioner, and advantageous to the public.

15 September, 1843.

The late Sir Ralph Darling also bears favorable testimony, by stating that your Petitioner always evinced the utmost zeal in the performance of his duties, which he discharged in a very satisfactory and efficient manner.

The Road Department under the Surveyor General having been transferred to Colonel Barney, and Military Superintendence, your Petitioner's appointment ceased February, 1839, after which he was appointed successor to Captain Forbes, as Police Magistrate at Patrick's Plains, at a salary of £250, his salary as Assistant Surveyor of Roads being £300, exclusive of 2s. 6d. per diem forage money.

Colonial Secretary, 3 September, 1842.

On the 31st December, 1842, your Petitioner's appointment as Police Magistrate, together with some twelve or more Police Magistrates, was discontinued, as a measure of public retrenchment by the late Sir George Gipps, who promised your Petitioner employment when an opportunity offered; but after waiting some months without any probability of being employed under that Governor, your Petitioner returned to England to obtain employment, in which he succeeded as Resident Engineer on two different Railways.

Your Petitioner now humbly prays that your Honorable House may be graciously pleased to take into consideration his services under Government for a period exceeding seventeen years, without making any provision for support in his declining years, having invariably devoted his whole energies and attention to the Government Service, trusting that long and faithful service would not be unrewarded or ignored; and therefore now implores that your Honorable House may in its liberality take your Petitioner's case into favorable consideration, in accordance with the spirit of the Act of Parliament 4th and 5th William 4th, and Treasury Minute dated 21st June, 1831.

And your Petitioner, as in duty bound, will ever pray.

PERCY SIMPSON.

1858.

Legislative Assembly.

NEW SOUTH WALES.

MR. JAMES PEGG.

(PRAYING RELIEF.)

Ordered by the Legislative Assembly to be Printed, 22 October, 1858.

To the Honorable the Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of James Pegg, of Sydney, in the Colony of New South
Wales, painter and glazier,—

RESPECTFULLY SHEWETH:—

That your Petitioner entered the Military Service, as a private of the 17th
Regiment of Foot, on the eighth day of August, 1811.

That he arrived with his Regiment in India, in July, 1812, and served two campaigns
under the Marquis of Hastings, in the Nepaul War, and was present at the attack on the
Pass of Bitul, under General J. S. Wood; at the capture of the Town and Territory of
Jubbelpore, in the Magpoor Country, in the war against the Pendaracs and Maharattas, in
1817 and 1818, under the command of Brigadier Hardyman.

That your Petitioner returned to England with his Regiment in 1823, and was
selected as one of the Veterans' Company, in 1826, to proceed to New South Wales as an
Overseer of Convicts; and a promise was made to him of a grant of land and his discharge.

That your Petitioner was discharged, in 1831, from the service; and a grant of land
at Banks' Meadows, Botany, was given to your Petitioner, who took possession.

That your Petitioner, in consequence of the swamp not being drained, could not
obtain a livelihood, and was compelled to remove his wife and family into Sydney; and in
consequence of his not being a resident on the ground the grant was cancelled.

That your Petitioner made an application for a fresh deed of grant, and has been
informed that another was awarded to him in the parish of St. Luke, Windsor, or elsewhere,
of which he never received intimation from the Government, and consequently could not
take possession of it; and further, that both the said lands have been sold.

That your Petitioner begs to call the attention of your Honorable House to an Act
of Council, 20 Victoria, No. 15, entitled, "*An Act to give relief to persons having claims
against the Government of New South Wales.*"

That such Act of Council was introduced by the late Honorable Mr. G. R. Nichols,
for the express purpose of rendering relief to your Petitioner and others having claims
against the Government.

That your Petitioner, in accordance with that portion of the first clause of the said
Act, did in the month of April last present a Petition to His Excellency the Governor
General, praying for relief under the said Act; but he believes that no steps were taken in
the matter, beyond an acknowledgment of the receipt of his application.

That then your Petitioner addressed a letter to the Honorable the Secretary for
Lands and Public Works, on the same subject, and received a reply that his "claim could
not be entertained."

That your Petitioner is now aged and infirm, and has several children to support;
and he therefore hopes, that from his long military services, the disappointments in not
getting possession of the land promised to him, that your Honorable House will be pleased,
under all the circumstances of his case, to recommend such "relief" as may be deemed meet.

And your humble Petitioner will ever pray, &c.

JAMES PEGG.

Sydney, 16 August, 1858.

1858.

Legislative Assembly.
NEW SOUTH WALES.

BONDED WAREHOUSES.

(PETITION PRAYING REPEAL OF BONDED WAREHOUSES ACT OF 1857.)

Ordered by the Legislative Assembly to be Printed, 31 March, 1858.

To the Honorable the Members of the Legislative Assembly.

The humble Petition of the undersigned Bonded Storekeepers in the City of Sydney,—

SHEWETH:—

That your Petitioners have for many years been Licensed Storekeepers, under the provisions of the 9th Vic., No. 15.

That they have, at great cost, erected or leased suitable buildings in the City, for the storage of all kinds of dutiable merchandize, and for the general accommodation of the Customs and the public.

That, with the exception of three years following the Gold discovery, your Petitioners have, in their character of Bonded Storekeepers, barely escaped loss, and at the present moment are in a less favorable condition.

That an Act was passed in February, 1857, No. 21, authorizing a tax of (£50) fifty pounds per annum upon all Bonded Storekeepers, with an additional space tax of (£1) one pound for every ten tons of measurement.

That your Petitioners have reason to believe that this Act was based upon the erroneous assumption of large profits accruing to them as Bonded Storekeepers, and levied for the avowed purpose of providing a fund for the payment of Government Lockers.

That your Petitioners beg respectfully to submit, that any tax imposed for such purposes exhibits the clear aspect of class legislation; and on this objectionable ground cannot fail, in aid of this Petition, to secure the favorable consideration of your Honorable House.

Your Petitioners further say, that the Lockers in Bonded Warehouses are appointed by the Government for the security and protection of the Revenue, and facilitation of the business of the Customs, and are in no respect the servants of your Petitioners, or dependent on their orders or instructions.

Your Petitioners believe that the Act now petitioned against is entirely without precedent in the Mother Country; and have no hesitation in characterising it as a hasty, partial, and most oppressive measure, crying aloud for amendment or repeal.

Your Petitioners, while most humbly and respectfully urging upon the consideration of your Honorable House the repeal of the Bonded Warehouse Act of the 23rd February, 1857, express their willingness to concur in any fiscal measure for the improvement of the Revenue, based upon equitable and rateable principles.

And your Petitioners will ever pray, &c.

[Here follow 15 Signatures.]

1858.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 44. FRIDAY, 4 DECEMBER, 1857.

7. Seizure of Gold on board the "Ethereal":—Mr. Forster moved, pursuant to notice,—
(1.) That a Select Committee be appointed to inquire into and report upon the circumstances connected with the late Seizure of Gold Dust and Sovereigns on board the "Ethereal," on October 16th, 1857, from certain Chinamen, and, in particular, upon the manner in which the proceeds of the said seizure have been distributed by the Executive Government.
(2.) That such Committee consist of Mr. Dalley, Mr. Jones, Mr. Donaldson, Mr. Hay, Mr. Gordon, Mr. Robertson, Mr. Faucett, Mr. Jamison, and Mr. Cox.
Debate ensued.
Question put—(1.) That a Select Committee be appointed to inquire into and report upon the circumstances connected with the late Seizure of Gold Dust and Sovereigns on board the "Ethereal," on October 16th, 1857, from certain Chinamen, and, in particular, upon the manner in which the proceeds of the said seizure have been distributed by the Executive Government.
The House divided.

Ayes, 16.

Noes, 14.

* * * * *
Whereupon Question—(2.) That such Committee consist of Mr. Dalley, Mr. Jones, Mr. Donaldson, Mr. Hay, Mr. Gordon, Mr. Robertson, Mr. Faucett, Mr. Jamison, and Mr. Cox—put and passed.

VOTES NO. 47. THURSDAY, 10 DECEMBER, 1857.

9. Seizure of Gold on board the "Ethereal":—Mr. Forster moved, pursuant to notice, That the two Petitions from certain Chinamen, ordered to be printed on the 30th October and 6th November respectively, be referred to the Select Committee on the Seizure of Gold on board the "Ethereal."
Question put and passed.

[Further Proceedings stopped by Prorogation.]

1858.

VOTES NO. 44. TUESDAY, 15 JUNE, 1858.

5. Seizure of Gold Dust on board the "Ethereal" and "Mary Nicholson":—Mr. Forster moved, pursuant to notice,—
(1.) That a Select Committee be appointed to inquire into and report upon "the" circumstances connected with the late Seizure of Gold Dust and Sovereigns on board the "Ethereal," and "Mary Nicholson," on October 16th, 1857, from certain Chinamen, and, in particular, upon the manner in which the proceeds of the said seizure have been distributed by the Executive Government; and that all proceedings of the Select Committee of last Session, and the two Petitions from certain Chinamen, presented by Mr. Dalley on the 13th and 16th April last, be referred to this Committee.
(2.) That such Committee consist of Mr. Dalley, Mr. Jones, Mr. Donaldson, Mr. Hay, Mr. Gordon, Mr. Robertson, Mr. Faucett, Mr. Jamison, and Mr. Cox.
Debate ensued.
Mr. Robertson moved, That the Question be amended by the omission of all the words of section (1) following the word "the" on the first line before the word "circumstances," with a view to the insertion in their place of the words "working" of the Acts 19 Victoria, No. 17, of 12th February, and No. 22, of 23rd February, "1857."

Debate

Debate continued.

Question put—That the words proposed to be omitted stand part of the Question.
The House divided.

Ayes, 25.

Noes, 12.

SEIZURE OF GOLD ON BOARD THE "ETHEREAL" AND "MARY NICHOLSON."

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly appointed on the 15th June last, "to inquire into and report upon the circumstances connected with the late Seizure of Gold Dust and Sovereigns on board the 'Ethereal' and 'Mary Nicholson,' on October 16, 1857, from certain Chinamen, and in particular upon the manner in which the proceeds of the said Seizure have been distributed by the Executive Government;" and to whom were at the same time referred "all Proceedings of the Select Committee of last Session, and the two Petitions from certain Chinamen presented by Mr. Dalley on the 13th and 16th April last," have agreed to the following Report:—

The subject referred to your Committee being in substance the same with that which engaged the attention of a similar Committee appointed by the late Assembly, your Committee resumed their inquiry at the point to which it had been brought when broken off by the abrupt termination of the Session. The evidence taken before the former has, of course, been made available by the present Committee, but it has been found necessary considerably to supplement the same by additional evidence. In both cases the witnesses examined have consisted principally of Government Officers, employed in or officially cognizant of the seizure,—of certain of the most intelligent among the Chinese directly interested therein, and of other persons, both Chinese and British, who, throughout the transaction, had been friends or agents of such Chinese, or who were, from previous circumstances, acquainted with Chinese habits and modes of life in this Colony.

Your Committee see no good grounds for concluding that the proceedings of those officers, whether Colonial or Imperial, who were engaged in the seizure, have been in any respect contrary to law, or unwarranted by the circumstances of the case. At the same time it does not appear to your Committee that any deliberate and criminal design of defrauding the Revenue has been proved against the Chinese from whose possession the seizure was made; on the contrary, it seems probable that these Chinese were at the time very imperfectly, if at all, acquainted with the recent alterations in our laws, imposing an export duty upon gold.

In corroboration of this supposition, your Committee beg leave to direct the attention of your Honorable House to a remarkable avowal, made in the course of his examination, by Mr. John Black, of the firm of Mollison and Black, Sydney, a gentleman who before and since the seizure has greatly interested himself on behalf of the parties concerned, and who, in the case of the "Ethereal," was employed as an agent for the Chinese on board that vessel. It will be seen by reference to the evidence that Mr. Black expresses himself to the effect, that before the seizure took place both he and his partners, from whom it is but reasonable to presume that their Chinese customers or constituents would expect information and advice upon a point so vital, were themselves entirely ignorant of the law in question as it now stands. It further appears to your Committee, as beyond all question, that the gold seized in the two cases referred to was for the most part not the actual property of the various individuals in whose possession it was found, but was by them held in trust for parties at a distance, most of whom were at the time of the seizure, and are now, absent from the Colony.

Your Committee, therefore, need scarcely point out the heavy loss which the seizure in question must have been the means of inflicting upon innocent persons, who, however legally, and, in general, justly held responsible for the action of their accredited representatives, could not in this particular instance have foreseen, or in the least controlled, the proceedings which have entailed upon them such severe consequences.

Your Committee are accordingly of opinion that, under the peculiar circumstances of the case, so much of the gold seized as remains in possession of the Government should be restored to the individuals from whom it was taken, in proportions rateable according to the quantity held by each at the time of seizure. Your Committee, however, must guard themselves from possible misconception by stating their opinion that such restitution ought to be regarded rather as an act of grace, applied to mitigate the unduly severe operation of a recent law, against parties most of whom could not have been, and none of whom are proved to have been implicated in any deliberately fraudulent design, than as imperatively demanded by the strict requirements of justice.

With reference to the question of distribution of proceeds of the total quantity of gold and sovereigns seized in the two cases referred,—your Committee having examined most of the parties therein directly interested, and having found no complaints whatsoever emanate from them, or from any other source, do not feel themselves called upon to express any formal opinion.

*Legislative Assembly Chamber,
Sydney, 13 August, 1858.*

WILLIAM FORSTER,
Chairman.

1857.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY 10 DECEMBER, 1857.

Members Present:—

Mr. Forster,	Mr. Hay,
Mr. Jones.	

Mr. Forster was called to the Chair.

Committee deliberated as to their course of proceedings, and decided upon taking evidence.

Whereupon Motion made and *Question*—"That the Collector of Customs and First Tide Surveyor be summoned before this Committee, as witnesses, for to-morrow"—*agreed to*.

[Adjourned till to-morrow at Ten o'clock.]

FRIDAY, 11 DECEMBER, 1857.

Members Present:—

William Forster, Esquire, in the Chair.

Mr. Jones,	Mr. Robertson,
Mr. Cox,	Mr. Hay,
	Mr. Gordon.

By direction of the Chairman, Resolution of the House referring to Committee yesterday, "Two Petitions from certain Chinamen, ordered to be printed on 30 October, and "6 November," read by the Clerk.

Petitions then read.

Committee deliberated.

Colonel *Gibbes*, Collector of Customs, and Mr. *J. De Courcey Bremer*, First Tide Surveyor, examined.

[Adjourned till Thursday next, at Eleven o'clock.]

THURSDAY 17 DECEMBER, 1857.

Members Present:—

William Forster, Esquire, in the Chair.

Mr. Hay,	Mr. Robertson,
Mr. Cox,	Mr. Donaldson,
	Mr. Jones.

Lieutenant *Napier*, H. M. S. "Herald," and Mr. Henry Newbon, solicitor, examined.

And Mr. Newbon having, in the course of his examination, stated that certain of the Chinamen from whom the seizure was made, and whose Petitions were referred for the consideration of the Committee, were then in attendance, together with an interpreter.

Committee deliberated, and being of opinion that it would be expedient to examine these men and their interpreter,—

Interpreter and certain of the Petitioners called in.

Senhor *J. J. Lopez*, interpreter, examined.*Ayong* and *Aheng*, two Chinamen, then examined, through the interpreter.

[Adjourned till to-morrow, at Eleven o'clock.]

FRIDAY, 18 DECEMBER, 1857.

Members Present:—

William Forster, Esquire, in the Chair.

Mr. Donaldson,	Mr. Robertson,
Mr. Hay.	

Committee permitted Mr. Henry Newbon to be present in the room to watch the proceedings.

Mr. *C. Lockyer*, tidewaiter in the Customs, examined.Senhor *J. J. Lopez*, the interpreter, called in.*Sung Hye* or *Asseng* and *Seng-How* or *Ong-Sing*, two Chinamen, then examined through the interpreter.*Aheng*, Chinaman, further examined through the interpreter.

The

The room was then cleared, and Committee were considering the heads of their Report, when the Clerk of the House entered the room, and laid before the Chairman a copy of the *Government Gazette Extraordinary*, No. 190, of this day's date, proroguing the Parliament until Tuesday, 2nd February next.

[Further Proceedings stopped by Prorogation.]

1858.

TUESDAY, 22 JUNE, 1858.

Members Present:—

Mr. Forster,	Mr. Jones,
Mr. Cox,	Mr. Dalley.

Mr. Forster was called to the Chair.

By direction of the Chairman, Resolution of the House, dated 15th instant, appointing the Committee, and referring thereto all proceedings of the Select Committee of last Session, and the two Petitions from certain Chinamen presented to the House by Mr. Dalley on the 13th and 16th April last, read by the Clerk.

Committee deliberated.

Motion made (Mr. Jones) and Question—"That these proceedings be now adopted as "part of the proceedings of this Committee"—*agreed to*.

The two Petitions then read.

Ordered to be printed in Appendix. (*Vide separate Appendices A and B.*)

Committee deliberated as to their course of procedure, and decided to take further evidence.

Whereupon Motion made and Question—"That Captain Ward, R.E., and H. M'Lean, Esquire, Chief Gold Commissioner for the Western Districts, be summoned before the "Committee, as witnesses, for Friday next"—*agreed to*.

[Adjourned till Friday next, at Eleven o'clock.]

FRIDAY, 25 JUNE, 1858.

Members Present:—

W. Forster, Esquire, in the Chair.

Mr. Donaldson,	Mr. Jones,
Mr. Hay,	Mr. Cox.

Mr. Harold M'Lean, Chief Commissioner, Western Gold Districts, and Captain Ward, R.E., Deputy Master of the Royal Mint, examined. Committee deliberated.

[Adjourned till Wednesday next, at Eleven o'clock.]

WEDNESDAY, 30 JUNE, 1858.

Members Present:—

Mr. Forster,	Mr. Jones.
--------------	------------

Mr. J. De Courcy Bremer, Mr. H. Newbon, and several Chinamen, were in attendance, as witnesses, but a Quorum of the Committee not being present,—

[Adjourned till Friday next, at Eleven o'clock.]

FRIDAY, 2 JULY, 1858.

Members Present:—

William Forster, Esquire, in the Chair.

Mr. Donaldson,	Mr. Jones,
Mr. Cox,	Mr. Hay.

Mr. J. De Courcy Bremer, and

Mr. Henry Newbon, Solicitor, further examined.

Committee permitted Mr. Newbon to remain in the room after his examination was concluded.

Leau Appa, Chinaman, interpreter, examined.

Hu-hon and Appa, two Chinamen, examined through the interpreter.

Chin Ateak, a Chinese merchant, examined.

The room was then cleared.

Committee deliberated.

[Adjourned till Thursday next, at Eleven o'clock.]

THURSDAY,

THURSDAY, 8 JULY, 1858.

The meeting of the Committee convened for *this day* lapsed, in consequence of the adjournment of the House from Tuesday, 6th instant, till Tuesday, 13th instant, owing to the demise of the Venerable Archdeacon Cowper, father of the Principal Secretary.

FRIDAY, 16 JULY, 1858.

Members Present:—

William Forster, Esquire, in the Chair.

Mr. Jones, | Mr. Hay.

Mr. J. Black and certain Chinamen were in attendance, as witnesses.

Committee deliberated, and it was *Resolved*:—

- "1. That as two of the Members of the Committee, *then present* (Mr. Jones and Mr. Hay), are Members of the Committee on the 'Railway Accident,' now sitting, and are desirous of proceeding forthwith, with the Chairman and other Members of that Committee, to inspect the scene of the accident, it will be inexpedient to proceed to business this day.
- "2. That the witnesses be informed to this effect."

Witnesses informed accordingly.

[Adjourned till Thursday next, at *half-past Ten* o'clock.]

THURSDAY, 22 JULY, 1858.

Members Present:—

William Forster, Esquire, in the Chair.

Mr. Jones, | Mr. Hay.

Mr. J. Black, of the firm of Melison and Black, examined.

Chin Ateak, Mr. H. Newbon, and *Lean Appa*, further examined.

Aheng further examined, through the Interpreter.

Witnesses withdrew.

Committee deliberated.

Motion made and *Question*—

- "1. That sufficient evidence has now been taken for the purposes of this inquiry.
- "2. That the Chairman do draw up a series of Resolutions to form the basis of a Report, for the consideration of the Committee"—
agreed to.

[Adjourned till Thursday next, at *half-past Ten* o'clock.]

THURSDAY, 29 JULY, 1858.

Members Present:—

William Forster, Esquire, in the Chair.

Mr. Hay, | Mr. Jamison.

The Chairman brought up and laid before the Committee certain Resolutions to form the basis of a Report.

Resolutions read 1^o.

Committee deliberated thereupon.

Deliberation adjourned.

[Adjourned till Friday, 6 proximo, at *Eleven* o'clock.]

FRIDAY, 6 AUGUST, 1858.

Members Present:—

William Forster, Esquire, in the Chair.

Mr. Hay, | Mr. Jones,
Mr. Donaldson.

Resolutions proposed by the Chairman read 2^o.

Committee further deliberated thereupon.

Motion made (Mr. Jones) and *Question*,—"That these Resolutions be now read 3^o, and be considered *seriatim*,"—*agreed to.*

Whereupon Resolutions 1, 2, 3, 4, 5, and 6 read *seriatim*, considered, verbally amended, and agreed to.

Motion then made (Mr. Jones) and *Question*,—"That the Chairman do prepare a Draft Report, embodying the purport of these amended Resolutions, for the consideration of the Committee,"—*agreed to.*

[Adjourned till Thursday next, at *Eleven* o'clock.]

THURSDAY, 12 AUGUST, 1858.

Members Present:—

Mr. Forster.

A Quorum of the Committee not being present,—

[Adjourned till to-morrow, at Eleven o'clock.]

FRIDAY, 13 AUGUST, 1858.

Members Present:—

William Forster, Esquire, in the Chair.

Mr. Jones,

Mr. Jamison.

Mr. Hay,

The Chairman brought up and laid before the Committee a Draft Report.

Motion made (Mr. Jamison) and Question,—“That the Draft Report proposed by
“ the Chairman be now read and considered paragraph by paragraph,”—*agreed to.*Draft Report read accordingly, considered paragraph by paragraph, and certain verbal
amendments made therein.Whereupon, Motion made and Question,—“That this Report, as amended, be the
“ Report of the Committee,”—*agreed to.*

Motion then made and Question,—

“1. That the Chairman do now Report to the House.

“2. That the Chairman do then give notice, that he will on Friday, the

“27th instant, move, That the Report be adopted, and that an Address

“be presented to His Excellency the Governor General, transmitting

“a copy of the same,”—

agreed to.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

SEIZURE OF GOLD ON BOARD THE "ETHEREAL."

FRIDAY, 11 DECEMBER, 1857.

Present:—

MR. COX,
MR. FORSTER,
MR. GORDON,

MR. HAY,
MR. JONES,
MR. ROBERTSON.

WILLIAM FORSTER, ESQUIRE, IN THE CHAIR.

Colonel Nathaniel Gibbes called in and examined:—

1. *By the Chairman:* Will you be kind enough to state in what capacity you are employed by the Government? As Collector of Customs.
2. You are aware that a seizure was recently made of gold dust and sovereigns on board a vessel bound to China? Yes.
3. Will you state the circumstances under which the matter came to your knowledge, and, as far as you know, what occurred with regard to the seizure? I received information that a number of Chinamen were embarked on board certain vessels down the harbour who had a quantity of gold with them upon which duty had not been paid.
4. From whom did you receive that information? We are not bound to give the name of informers.
5. You decline answering that question? Yes. I have really no personal objection to do so, but it is contrary to the English practice altogether.
6. I understand you to do it upon official grounds? Upon official grounds—upon none other. There are many informations made to us anonymously; the parties do not choose to sign their names, but afterwards contrive to get the reward.
7. I may ask, before we go any further, whether you mean to say that the name of the informer has been communicated to you as in private confidence, or that it is known to the Government, and that you do not wish to divulge it as a matter that is the property of the Government? The informer on this occasion belongs to the department; perhaps, therefore, there would be the less objection to giving his name.
8. I think I understood you to say that the information is in the hands of the Government, and that on official grounds merely you decline to answer the question? Yes, that is all. I received the information from the party, and on receiving it I did think of proceeding down the harbour myself, but I was particularly occupied at the moment, and therefore I sent for one of my officers, Mr. Bremer, to board these vessels, to see how the matter stood, and, if he found the information to be correct, to seize the goods jointly with myself in my name. I could have gone myself, as I had at first intended, and have got the advantage of the whole of the seizing officer's share.
9. *By Mr. Hay:* What was Mr. Bremer's position? Tide Surveyor. I could have selected any other officer, as a matter of course, but I took him.
10. *By the Chairman:* Will you be kind enough to state any other circumstances that came to your knowledge? He immediately proceeded down the harbour and boarded the two vessels.
11. I presume all this is matter of report? The last statement is matter of report, but I know it to have been the case, because the parties returned and brought the gold to me.

Colonel N.
Gibbes.

11 Dec., 1857.

Colonel N.
Gibbes.

11, Dec., 1857.

12. Will you be kind enough to state what you yourself know relative to the seizure, and what took place afterwards? All I know after having sent away Mr. Bremer is, that about seven o'clock on the same evening, whilst I was at dinner, Mr. Bremer, together with an officer of H.M.S. "Herald," came to my house on the North Shore, and stated to me that he had carried out my orders and seized a large quantity of gold, which was in his boat. That was his official report to me.

13. He, of course, gave you the particulars of the amount seized, and the names of the persons from whom he had taken it? No he did not, for he did not know them. He stated that he had seized it from Chinamen on board; and he also stated that there was some show of resistance, and he had therefore procured assistance from the "Herald." I believe the First Lieutenant sent Mr. Napier with a boat's crew and some marines to render assistance, and after that the gold was given up.

14. Can you state the quantity and value of the gold seized, and what was subsequently done with it? I have weighed it, but only in bulk. The packages are very numerous and very heavy—I mean the external packages. I cannot tell exactly, but I should say there is somewhere about 2,000 ounces, rather more than less.

15. Did you open the packages and look at their contents? Not then, but I have since, and I have weighed such packages as could be weighed net, and have weighed the others as they stood, in their bags, bag within bag in many of them.

16. What value do you set upon the whole in round numbers in the present state of the market? At from £3 10s. to £3 15s. an ounce—nearly £8,000.

17. Did the seizure consist entirely of gold dust, or were any sovereigns mixed up or attached to it? There were six or eight and twenty sovereigns only, but when the interpreter came to me I think he said there were about 600.

18. Were these mixed up among the dust? Yes, some among the dust and some in small separate packages; in no one packet belonging to one man more than five, and mostly one or two.

19. Will you be kind enough to state what has been done with the gold? It is lying in the Bank of Australasia for safety. I do not consider the Custom House a safe place of deposit, and therefore I lodged it in the Bank of Australasia, where it is kept without charge.

20. Were the sovereigns lodged with the other gold? No, they are in the Custom House; they were taken out, for although according to my idea by law these sovereigns are confiscated, it was my intention to give them up to these men without reference to any bonus, in consequence of the appeal made to me by the interpreter.

21. You consider the sovereigns were part of the seizure? Undoubtedly, because all articles, though themselves duty free, packed with articles liable to forfeiture, are themselves liable; but I considered I might use my discretion in giving up so small a sum to the parties.

22. It was your intention to give these sovereigns back? Yes.

23. Is that the intention of the Government? I do not think the Government have taken the matter into consideration.

24. Speaking of the Government, I mean yourself; you say you consider you have a right to use your discretion, and it is your intention to give back these sovereigns? It is my intention, unless it is shown that I ought not to do so; but I have no power to adopt such a course as a matter of right, or without consulting the Government.

25. Has any distribution been made of the seizure? None.

26. Is any particular distribution contemplated? Yes, the usual one.

27. Do you consider that the discretion as to the way in which this sum is to be distributed rests with yourself altogether? Altogether. I consider that the Government has nothing to do with the distribution of the seizure; the law defines how it is to be distributed, and I propose to carry its directions out.

28. Will you state what your intentions are with regard to the entire proceeds of the seizure? My intention is to divide it into three parts—one-third to the Crown, one-third to the seizing officers, and one-third to the informer.

29. That is of course not including the sovereigns? No. It is not exactly optional with me, but I apprehend from what passed between the Government and myself that they would not object—in fact the sum is so paltry I am pretty sure they would not; it is only from twenty-five to twenty-eight sovereigns.

30. Do you mean by "informer" one or more? Only one.

31. This one would be entitled to a third of the proceeds of the seizure? Yes.

32. The general Government would get another third? Yes.

33. And the other third would go to the seizing officer? Yes.

34. Will you state whether the seizing officer implies one person or a number of persons, and if the latter, to what persons you intend the proceeds should be given? I consider that the "seizing officer" means one or more. In this case there are three, and, therefore, the officers' share will be divided into three.

35. Three and no more? No more.

36. Will you state the names of the persons to whom, under such distribution, the proceeds will be distributed as seizing officer or officers? The seizing officers' share will be divided between myself, Mr. Bremer, and H.M.S. "Herald," Captain Denham.

37. By Captain Denham you mean himself? No, I do not mean that, for I doubt whether he will be entitled to it; but Captain Denham having sent an officer of his ship and a boat's crew to assist in the seizure he claims a share. I happen to know that whatever may come to the "Herald" will be divided between Captain Denham and the whole ship's company down to the men.

38. You did not hear that officially? No; but Captain Denham came to me and made his claim. He said he should have to report the circumstance to the Admiral on the Station, and he claimed on behalf of himself and officers.

39. By Mr. Jones: It has come to your knowledge since that the intention is to distribute the money from Captain Denham downwards throughout the ship? Yes.

Colonel N.
Gibbes.

11 Dec., 1857.

40. *By the Chairman:* Does Captain Denham state that he claims this as prize money or as a reward to his ship for certain services? He claims it as his right, from his representative, Mr. Napier, being present at the seizure, as a smuggling case; it has nothing to do with prize money. By law he is authorized to seize all contraband goods, and if he had heard that this gold was on board he could have sent one of his officers and seized it. Any officer of the Navy on full pay has power to seize. Captain Denham did not seize, but he was called upon by us to give us protection while making the seizure.
41. The distribution you speak of, I presume, is made under the Customs Regulation Act, passed last Session? Yes.
42. The phrase under which you distribute, I think, is in the singular; the Act says "the seizing officer"? No, I think not, but I am not positive about that. At all events the law specifies that an officer or officers of the Customs may seize; it is both singular and plural there.
43. Will you be kind enough to state the names, so far as you know them, of the persons actually present at the seizure of this gold? I know only of Mr. Bremer, the Tide Surveyor, Mr. Napier, of the "Herald," and Mr. Lockyer, of my department, who is in fact the informer. I have no wish to conceal Mr. Lockyer's name, and as he is one of my department perhaps he may as well be named.
44. You state that Mr. Lockyer is the informer? Yes. I will take this opportunity of stating that Mr. Lockyer could not seize himself, as he is not an officer of the Customs within the meaning of the Act, and therefore he gave information. I may add that, of course, I could have gone myself and made the seizure, but I thought proper to depute another officer to join with me in it.
45. *By Mr. Hay:* What is Mr. Lockyer's position in the Customs? He is a tide waiter, and is not an officer of the Customs within the meaning of the Act. Mr. Bremer is Tide Surveyor, and is at the head of all the tide waiters. His office is to board vessels coming in or going out, or at any time he thinks proper. I believe the idea prevails that an officer of Customs can only board vessels at certain periods, but that is quite erroneous. Some suppose that a ship cannot be boarded until she is cleared, but if that were the case, while the master was at the Custom House clearing his vessel the chief officer might, having received previous orders from the captain, get his ship under weigh, so that the moment the captain returned he might push to sea before the officer of Customs could board him, and he might have had dutiable goods on board and reloaded them. The officer of Customs can board at all times, and make seizures at all times.
46. *By the Chairman:* You state that Mr. Lockyer had no power to seize the gold? No; if he had had he would not have given the information, for if an officer receives information himself, or accidentally falls upon articles that are contraband any where, he may immediately seize them, and he then becomes the sole seizer. The Collector of Customs in such a case gets no portion of the proceeds of the seizure.
47. In this case you could have made the seizure yourself? Yes, without asking any party to accompany me; but I took another course.
48. Will you be kind enough to state whether any correspondence has taken place between your office and other portions of the Executive Government upon this subject? Some correspondence has taken place. The circumstance was reported to the Government, and petitions have been sent in, which they have declined to receive.
49. There has been a general correspondence between your office and the Government upon the subject of the seizure and its distribution? Not upon the distribution, but upon the seizure.
50. The distribution has been left in your hands altogether? Entirely.
51. Have any applications from the Chinamen come to your knowledge, or have you any knowledge of the persons who were the owners of this gold previously? I have not any knowledge of them. I have a letter here from those whom I may consider the Chinamen, through their interpreter, in which they ask for a small quantity of gold to take them back to the diggings. In consequence of that I addressed the Government on the subject, and proposed the sum of £640 to be given to the men remaining here to carry them to the diggings. The Government did not think proper to interfere on that occasion, but, to a certain extent, left it in my hands, and I, in fact, drew a cheque for the purpose of giving it to Mr. George Hill (who has interested himself a good deal about these people), in order that he might see it properly divided among them, that is, equally divided without reference to the sums they had lost. I thought the men should have £10 each, which would enable them to return to the diggings.
52. You consider that to be within your discretion? I did not consider it to be within my discretion without acquainting the Government.
53. *By Mr. Jones:* The Government did not prohibit you? They would not interfere, but left it in my hands, and my intention was to have given that, or more, if necessary, out of the seizure.
54. The Government simply declined to interfere in any way in the matter? Yes. I stated to Mr. Hill that I would not do this without a receipt signed by all the parties, and he undertook to get it arranged. I believe the receipt is signed by the majority of the people, but there are some who do not choose to sign, and therefore the matter remains unsettled.
55. *By Mr. Cox:* What number of Chinamen were there? Sixty-four, I believe.
56. *By the Chairman:* I see the 10th clause of the Customs Regulation Act, under which the distribution you propose is to be made, states, that "All fines, penalties, and forfeitures recovered under this Act"—have the forfeitures of these people been recovered at all? The property has been seized, but no penalty has been enforced; we could proceed against them for three times the amount of the gold.
57. The matter has not come before adjudicating Justices? No; that is not necessary unless a claim is put in. If an article seized is claimed, the real owner of the property must be

Colonel N.
Gibbes.

11 Dec., 1857.

be shewn, and he must enter into securities to prosecute, and to abide all the costs of the prosecution; and if no such claim is put in within one month from the date of the seizure, the goods are forfeited under the law.

58. Then you consider that the decision upon the words whether "any such information led to any seizure, forfeiture, or conviction," rests with yourself? Yes. Where there is an informer I divide the seizure into three, as I have already said.

59. Were there any other seizures or forfeitures of vessels or articles connected with the gold? None.

60. *By Mr. Gordon:* Under what clause of the Act is it necessary to claim? Under the 110th clause of the 9th Victoria, No. 15. These Acts are merely a continuation of the General Acts, and we are as much bound by one as by another. This Act has been in force many years.

61. *By Mr. Jones:* Had you reason to believe before you issued instructions for the seizure of this gold that it had been placed on board this vessel illegally? I had.

62. Without duty having been paid? Yes; it was illegally carried on board.

63. Without the Customs Regulations having been complied with? They were not. No entry had been passed for this gold, neither had duty been paid upon it—it was therefore forfeited; and if goods of any kind, free or dutiable, are shipped before a vessel is entered out, and before due entry of the goods is made, the master of the ship is liable to a penalty of £50, and the shipper of £20. There seems to be a misunderstanding abroad with regard to a ship being "entered out" and being "cleared;" they are quite distinct things. When a vessel enters outward it is entered in a book, which gives the name of the vessel, of the master, where bound to, whether to load in ballast or in goods, and any gold placed on board before that entry is liable to forfeiture; but we have not carried out these rules stringently, because this is a peculiar place, and I cannot have personal knowledge of everything going on. When a ship is half loaded, perhaps, the master enters her outwards, but I cannot personally know that he has goods on board. The entry of the ship is quite distinct from the clearance. The goods (if gold) shipped before that entry is made and duty is paid upon them are liable to forfeiture. In the present instance the vessel had entered out, but no entries had been passed, and no duty had been paid for the gold that was seized, consequently it was illegally shipped.

64. In the course of the transaction had you any reason to believe that the Chinese from whom this gold was seized were ignorant that the law required a duty of 2s. 6d. an ounce to be paid? I have no reason to believe that they were. They had shewn an acquaintance with the law on all other occasions; and one of my tide waiters heard the captain of the "Ethereal" tell them that if they had any gold about them they had better pay the duty.

65. What did they say in reply to that? I did not hear. My informant is a respectable young man, the son of the Church of England Clergyman at Penrith, and one of my tide waiters. His sister was on board the vessel, going to Hong Kong, and he was seeing her off. He was not on duty at the time.

66. Are you quite satisfied that the steps taken in seizing the gold were strictly legal. Yes, I believe they were perfectly right.

67. And quite regular? Quite regular, I have no reason to think them otherwise. I took the trouble of going to the Mint, and of seeing Captain Ward's books, in which quantities of gold are entered for which duty has been paid by Chinamen. I could not say that it had been paid by some of these very people, but I know that some of them afterwards came and paid duty to me, but of course they had got experience then.

68. Some of these people whose gold was seized? Some of the men who were on board the ship, but I do not know that they had had their gold seized.

69. In sending their gold to the Mint to be coined, did they pay duty at the Mint? Yes.

70. Have you reason to believe, from what Captain Ward told you, that the Chinese who took their gold to be coined supposed that the duty to be paid was confined to that? No. I merely wanted to ascertain whether they were sufficiently acquainted with the laws or not, and it looked very much as if they did know what they were about, by taking their gold to the Mint and having it converted into sovereigns.

71. *By Mr. Cox:* Had these Chinamen paid duty previously on gold? I am not able to answer the question off-hand. I am doubtful whether any ever did pay before or not.

72. *By Mr. Jones:* From information you had at the Mint you were led to believe that a number of Chinamen were acquainted with the gold regulations of the Colony? Yes; I saw the names of twenty or thirty who had taken a small quantity.

73. Apparently more to ascertain the price than for any other purpose? Yes.

74. In all such cases they would have had to pay a duty of 2s. 6d. an ounce? No, 2s. 3d; it is 2s. 6d. when exported uncoined.

75. Were any applications made to you on behalf of the Chinese in reference to the gold you had seized? Yes.

76. What was their nature? The first application, and almost the only one, came from the Solicitors, Messrs. Dunsmure and Stafford, stating that they were instructed to call upon me to restore the gold.

77. What reply did you make to that communication? I replied that I declined to do so.

78. Did you receive any further letter from them in reference to that application? No. On the day following that on which I wrote declining to restore the gold, I wrote requesting them to inform me of the names of the parties who had instructed them to apply for the gold, and to let me know whether I was to understand that they were in a position to claim the gold, and to defend their case in the Supreme Court should I take it there. I got no answer to that for six days. I then wrote to them reminding them I had received no answer, and I then had a letter from them stating that they had heard nothing more about the business—in short the matter was dropped.

79. Within a calendar month from the time of the seizure you had no application in the nature

nature of that required by the Customs Act, and you declared the gold forfeited? Yes, under the 110th clause. Colonel N. Gibbs.

80. And the gold is now forfeited according to law? Yes, it is.

81. And all that now remains to be done in regard to that seizure is to distribute the proceeds of the forfeiture? That is all that remains to be done. 11 Dec., 1857.

82. And the determination of how the proceeds of the forfeiture are to be distributed rests, according to law, with the Collector of Customs? It does.

83. In accordance with what you conceive to be the law, you have decided that of the proceeds of this seizure one-third shall go to Government, one-third to the seizing officers, and one-third to the informer? Yes.

84. And that is the way you intend to apply the proceeds? Yes, it is.

85. In the event of any difference of opinion arising between the seizing officers as to the distribution of the third of the forfeiture falling to them, how would these differences be decided—by an appeal to the Government or an appeal to the courts of law? If any dispute arose as to the distribution of the seizing officers' share: supposing, for instance, that Captain Denham considered that he was entitled to a larger share than one-third, I should tell him to find his own remedy; I should not give it to him, but should leave that one-third of the seizing officers' share in the Bank to the credit of the Seizure Account, and let him take his remedy in what way he thought proper.

86. Do you think Government would be called upon to interfere in the differences that might arise between you and the other seizing officer? I should be glad of the opinion of the Government, and, most likely, should refer to them, but otherwise I should not feel bound.

87. You consider it to be a question to be determined by a court of law, and not by the Government? Yes.

88. What functions do you think the Government could exercise in the distribution of the proceeds of a seizure—what are they entitled to do in the matter? I do not consider that they have any power to interfere with regard to the distribution. I look upon it that the Executive have the power to restore any seizure. I do not know that there is any law for it, but in England the Lords of the Treasury can restore a seizure, in whole or in part, and there should be some such power here; but I consider that the power lies with the Crown and the Executive, the representative of the Crown; but I do not consider that they have any power to interfere in the distribution. There is a law which decides how the distribution shall be made. In some cases there are seizures made which cost a great deal of money. I may mention one in which I was concerned: When I was first made Collector of Customs at Jamaica I seized a small brig; I prosecuted that case in the Court of Vice Admiralty, and the vessel was condemned, and, to the best of my recollection, the proceeds were between £3,000 and £4,000. But Jamaica is a very extravagant Colony, and the law expenses were so heavy that the net proceeds were reduced to £1,500. The whole of the expenses were then deducted from the gross proceeds and the residue was divided into three parts,—one part went to the Crown, one-third to the Governor of the Colony, and one-third to myself, as seizing officer; so that all I got for my share was about £500.

89. In the event of any difference arising between you and Captain Denham, you would leave him to appeal to the law? I should.

90. From what you say, I gather that you consider the Government are not entitled to interfere in regard to the distribution? I may be wrong, but I think not.

91. But, under the 110th clause, the Government would be entitled to satisfy themselves whether a third party had a just claim to a share, because, if there were no informer, the Government would be entitled to one-half? If there were no informer the proceeds would be divided into two parts,—one part to go to the Government and the other to the seizing officer or officers, whether one, two, three, or more persons. There seems to be an impression that the head of a department has no right to share in anything of this sort, but I should like to know why. I could have gone and made this seizure alone; but if it is imagined that because I depute another to do so I lose my claim, I maintain that that is an erroneous opinion. Instead of Mr. Bremer I might have chosen Mr. Bramwell, Mr. Hindmarsh, or any other officer, to join with myself and thereby to share with me. When I sent Mr. Bremer he fully understood that he was to be joint seizing officer with me, and was told to proceed in my name and his own. I may add that I have never had so much trouble with any seizure as with this. I have had written and verbal applications made to me, and interviews with various parties, respecting it, although I have not had much communication with Government. I, therefore, cannot see why it should be supposed that I ought not to share, under these circumstances, as well as any one else. I will, to illustrate my position, suppose that Captain Loring is at sea during war, and spies a merchant ship at a distance during a dead calm; he mans his barge and sends a Lieutenant to make her a prize. Captain Loring will have a share of that although he does nothing more than order his Lieutenant to go and board her. I will take another case—a case in which I was personally concerned. I was at the capture of Monte Video. The Commander of the Forces was not present at the attack. I was in the second company that entered the breach to storm the place; we succeeded. Sir Samuel Auchmuty, the Commander of the Forces, got £30,000, and I, who was a Lieutenant at the time, got £75. I merely mention this to shew how prize money is shared in the Army and Navy, where the chief, though not present, receives the chief's portion. It is not precisely analogous, as in the Customs the head of the department receives nothing, if he is ignorant of the attempt to smuggle, and neither seizes himself or orders the seizure to be made. But in either of the latter cases he shares. And why should it not be so, when it in no way affects the Crown's share, or the informer's share, but only that of the officer to whom he has given the advantage of joining with himself in the seizure?

92. In the event of any difference arising between you and the other officer seizing, the question would have to be decided in a court of law? No, I think that would be a matter I should refer to the Government.

Colonel N.
Gibbes.

11 Dec., 1857.

93. Supposing the seizing officer were not satisfied with his share, and thought himself entitled to the whole of the third, as seizing officer, his remedy in that case would be in a court of law? I do not think so. I do not think a court of law could decide. The law defines that the seizing officer shall receive one-third of the seizure. I should refer the matter to the Government; but in all my experience such a case never did arise.

94. But that would not prevent the person appealing to a court of law to right himself; all that the Government have to do is to see that they get their full and fair share of the seizure? Yes, that is all.

95. You say that when the seizure took place you reported the circumstance to the Government; what course did the Government take then? I do not know; I really cannot recollect the circumstances attending on the seizure.

96. Can you state substantially what the Government intimated to you regarding the seizure—did they state that they declined to interfere? Not upon that occasion; when a petition was sent in they declined to interfere.

97. And they then intimated to you that they declined to interfere with the ordinary course of the law? Yes.

98. And left you to take what steps you pleased on your own responsibility? Yes.

99. And they have since declined to interfere in any way? Yes.

100. *By Mr. Cox:* You have already stated that you believed the Chinamen were aware of the Act now in force? I think they were, from one reason that I have stated, and from perceiving that they are as well acquainted with all the regulations of the gold fields as our own people.

101. You have also stated that you are not aware whether any of these Chinamen had paid duty previously? I am not aware. I dare say I could ascertain that.

102. Have you not reason to believe that during the many months this Act has been in force Chinamen have left to return to their own country? That I could not answer.

103. What was the demeanour of these men when the officer boarded the vessel—did they attempt to resist? I was not present. Mr. Bremer could tell you; he said one of them drew a knife, I think.

104. In the event of your remitting £10 each to these sixty-four Chinamen, would that be taken from the gross amount, or from which of the portions? Out of the whole seizure, so that it would fall equally upon each share. Call it £600, it would then lessen the Crown's, the informer's, and the seizing officers', each £200.

105. In any case of a large seizure have you ever remitted any portion of the seizure to the suffering parties? No, never of the seizure.

106. Is it occasionally done in the Customs Department? I do not know that it is, but it is frequently so with penalties.

107. So that this would be an unprecedented case? It would be an unprecedented case. In consequence of the supposed destitution of these people, I am myself willing to relinquish that portion, or even to make it more than £10, if necessary.

108. No one but yourself has any authority to make this remission? I do not consider that I have any authority to do it; but when the Government was made acquainted with the circumstance, and did not order me not to do it, I took it upon myself—

109. Then, you as seizing officer, would have to get the consent of the Government and of the informer for this remission to be made? No; I should not consider it necessary to consult the informer at all, nor my brother seizing officer; but, of course, I consider it right to consult the Government. At the same time it is to be understood, that it is the net proceeds of seizures that are to be distributed, and that an informer has no claim beyond one-third of such net proceeds.

110. *By Mr. Jones:* It will be open to the Government to refuse to remit any of the proceeds, when their portion of the amount is handed over to them, and to throw this entirely upon you? Yes, they might do so, because they leave it entirely upon my responsibility; but I take it for granted that they would not do so, and I should have ventured to have given a cheque to Mr. Hill, taking it for granted that the Government would not object to its being deducted, like any other contingency, from the general seizure.

111. *By Mr. Cox:* The informer may object to any person being generous at his expense, because a portion of it is his share? That is a question I have not considered; I should take the chance of that, but law charges (if any), rent, cartage, &c., &c., are always deducted from the gross proceeds, and the net (as stated above) divided into three, when there is an informer, who must take his third or none.

112. *By Mr. Jones:* In case of his being dissatisfied he could recover by law if he chose to proceed in the matter? These are points I am not prepared to give any opinion upon, but I do not think he could. I have been thirty-seven years in the Customs, and such a case has never arisen. I do not suppose, if he were like most informers, he would take any such steps. I lately received a letter informing me of certain illegal proceedings, and winding up by saying, "I expect a portion of the reward, and you will hear from me again." I sent an officer who made the seizure, but I do not know the name of the informer, and no accounts will be rendered to him, but he will get his share when he applies for it.

113. *By Mr. Gordon:* I presume, if you chose to remit the whole of that seizure, the informer would have no claim whatever upon you? No. A man might write a letter like that without a signature, and I might take no further notice of it; I do not mean to say that I should do so in any case, for if it is shewn to me that a person is carrying on an illegal trade, it is my duty to see whether the statement is true or not.

114. Supposing the Government said they chose to remit the whole amount to these Chinamen, and you did not agree to that proposal, how would the matter be settled then? In this way: I might say, although the Government desire to have this matter remitted I will not restore it, but will take it into the Supreme Court on my own responsibility, as is sometimes the case in England.

Colonel N.
Gibbes.

11 Dec., 1867.

115. Then, in fact, the Government have no control over your department in regard to seizures? Yes, I think the Executive has, or ought to have, the power to restore a seizure when they see good grounds for so doing. The proceeding is an extreme case, and would very seldom be resorted to.
116. Supposing the Government conceived that these Chinamen were not aware of these regulations, and that this were a hardship upon them, as they were not acquainted with the law, how would you then act? I should certainly immediately give it up, if ordered to do so.
117. *By Mr. Jones*: That is to say, you would have given it up prior to the forfeiture? Prior to the forfeiture, or even after the Government met my views, and I saw that from charitable views, or other cause, they desired to restore the seizure, I should not resist the order; but if I thought there were no proper grounds upon which the Government should restore the seizure, I should, if pressed, adopt the course I have mentioned.
118. *By Mr. Gordon*: Appeal to the law? Yes.
119. Will you inform the Committee whether it was subsequent or previous to the seizure that you made the inquiry at the Mint whether these people were in the habit of paying duty or not? Subsequent. I made the inquiry because an opinion seemed to exist, that they were ignorant of the state of the law, and, from my inquiries at the Mint, it seemed clear that they did know that duty was to be paid, and had taken their gold there.
120. Can you state on what amount of gold the Chinamen had paid duty? No; some Chinamen have paid as much as £15 duty, and as the duty is half a crown an ounce that would shew a considerable weight of gold; some have paid £5, some £10, but no very large amount altogether has been paid by them.
121. I think you stated that you thought some of these Chinamen from whom this gold was seized had paid duty on the gold? Yes, but their names were so much alike as they were taken down that I could not say positively that it was so; I have reason to believe some of them had.
122. *By Mr. Cox*: Might not the Chinamen have supposed that the amount of two shillings and three-pence an ounce which they had to pay at the Mint was for coining, and not for duty? I really cannot answer that. I do not know why that duty was fixed at all. I suppose there is some other gain on the part of the Government or the Mint, or else I do not see why there should be a difference between the export duty and that.
123. *By Mr. Gordon*: Have you reason to believe that these Chinamen were aware of the law that it was necessary for them to claim within a month? No; I should think, in all probability, they did not know of the existence of such a law.
124. Then do you think they should be strictly bound by such a law, if they were to make a claim and had good cause to shew? I do not consider that that would have anything to do with it, because either they or some of their kind friends must have known it. They put it into the hands of lawyers, and many persons interfered in the matter and wrote petitions in their behalf. One gentleman interfered very improperly, as I thought, considering his position. These people ought to have known how the law stood on that point, although I am inclined to think they did not.
125. I think you stated that there seemed to be an impression abroad that the entry and clearance of a ship were the same, but that they were in fact not at all the same? Not at all the same.
126. I presume that would not be the opinion held by any person accustomed to commercial business? It ought to be.
127. Is it not the case after a ship is entered out, say a ship from London, that merchants commence shipping their goods on board, either dutiable or free, before the entries are passed at the Customs? I am afraid it is, but every one of them is liable to seizure, and it is only that I know I should not be upheld by various parties in retaining them that I have not attempted to seize.
128. My reason for asking this question is, because I think it a very important one to the present issue. Is it not within your knowledge that mercantile men do ship gold before it is entered at the Custom House? I am not aware that they ship gold before it is entered at the Customs, excepting sovereigns. But it has not been the practice hitherto to have any entry made for coin; coin is free to come into and to go out of the country,—indeed gold is free to come into the country. We have no inward duty; but I think entries should be passed for gold whether coined or uncoined, as I can never make up any statistical returns satisfactorily without.
129. I wish to know whether it is not the custom of the port, and whether it is not within your own knowledge, that dutiable articles, as well as free, are put on board ships daily without entries having been passed at the Customs? I hope not daily, but I am afraid it is very frequently. The Rules and Regulations of the Customs are very much set at defiance, and I have thought of putting a stop to these proceedings by forcible means.
130. Supposing any information came to you, and brought under your knowledge that such was the fact? I should feel bound to go on board, seize the goods, and, as I think every mercantile gentleman should know the law, and act upon it, I do not think it would be harsh to do so.
131. In this instance your attention was drawn to the shipment, and you made a seizure at once, and in any other case you would have acted similarly? Yes; under information I should feel bound to do so. But there is great difference, I apprehend, between this case and that you have alluded to, especially as you have named a London ship; a London ship is generally a number of weeks loading, and if the captain has omitted to enter his vessel, and you commence to load with your goods, it may go on for many weeks, your not being aware that he has neglected to do what was necessary; when, however he comes to enter, I should not think of inquiring whether he had received any goods on board.
132. *By Mr. Jones*: I believe gold is the only article upon which there is an export duty? Yes it is.

Colonel N.
Gibbes.
11 Dec., 1857.

133. You never knew gold to be shipped on board any ship not entered outwards, or before that gold had been entered at the Customs? I think not; parties never think of shipping gold dust, and I think I may say coin, until the very morning before going to sea.

134. If you had reason to believe that gold had been placed on board any vessel without being entered at the Customs, and duty having been paid, would you consider it your duty to seize the gold? Yes, I should.

135. With or without information? Many of our seizures are made without information, and if I knew that gold had been shipped without duty having been paid, I should feel it to be my duty to seize it.

136. *By Mr. Gordon:* I think you stated previously that you believe it has been too much the case that dutiable goods have been shipped without entries at the Customs having been passed? Yes, I am afraid it has been.

137. With regard to gold, as well as to any other dutiable article? No, I do not think gold dust is shipped before it is duly entered, and duty paid upon it. If I said that before, I said it in error. I am not aware that such is the case. There is a clause in the Act which says that an officer of the Customs may board vessels after clearance, but that is introduced, in fact, to enable them to ascertain that the goods entered in the clearance outwards are on board the ship, and that there are no goods on board that are not entered on that clearance, for if there were they would be liable to seizure. When the master of a ship gets his manifest and outward papers, he proceeds on board his ship and gets under-way, but if any officer of Customs has reason to suppose it desirable to go on board, although the vessel is cleared and under-way, he can call upon the captain to produce his manifest, and examine whether every thing is correct according to it. He may go on board either before or after the ship is cleared, or even outside the Heads, so long as she is within the limits of the port.

138. *By Mr. Robertson:* Supposing I went on board a ship before she was cleared, and had fifty sovereigns, or gold dust of that value, upon any person, should I be liable to have that seized? That is the law. The officer has the power of searching the person, but if duty is paid upon gold the Customs seal is placed upon the bag or box containing it, and consequently no interference is necessary.

John DeCourcy Bremer, Esq., called in and examined:—

J. DeCourcy
Bremer, Esq.
11 Dec., 1857.

1. *By the Chairman:* You are an officer of the Customs? Yes; I am First Tide Surveyor of Sydney.

2. You have been employed lately in the seizure of certain gold from Chinamen on board the "Ethereal"? Yes.

3. Will you be kind enough to state under what instructions? The Collector sent for me on the 15th October last, and then said he had received information that there was some gold on board the "Mary Nicholson"; the other ship, the "Ethereal," I do not know whether the Collector told me of it. I went on board the "Mary Nicholson," and from her I went to the "Ethereal." When I got on board the "Ethereal," which was lying at that time at Mossman's Bay, or very nearly at Bradley's Head, there were a number of Chinamen on board—I should say about seventy. I believe the correct number was sixty-four.

4. Did you consider yourself as acting on the part of the Collector of Customs, or as the seizing officer yourself? The Collector said there were certain Chinamen on board a vessel or vessels. I have no recollection that he mentioned the "Ethereal" in particular. When I was shoving off from the "Mary Nicholson," one of the men in the boat said you are going, of course, Sir, to the "Ethereal." "Where is she," I asked. "Down in Mossman's Bay" was the reply. One of the men said he thought she had gone to sea, but the other replied that she had not. I said, "Well, we will go down." So I went accordingly. When I got on board the vessel, as I before stated, there were a number of Chinamen—some sixty or seventy—prepared for sea; they had their provisions and water on board, and, I presume, had taken leave of shore.

5. You were aware, I presume, what was the destination of the "Ethereal"? Yes; she was entered out for the port of Hong Kong, and had hauled away from Towns' Wharf, where she had been lying. My instructions were from the Collector, who, from the information he had received, said I was to take my boat and go off, which I did. There was some shew of resistance on board the "Ethereal."

6. How did you ascertain that the men had gold on board—how did you proceed to execute your duty? I was about to search the men, and they would not be searched, in fact one man in the waist of the ship drew steel upon me. I applied to the mate of the vessel, and he said he could not assist me. I said "Very well, hoist up your ensign as a signal to the 'man-of-war.'" He did not do so, and I then went off to the "Herald," and obtained an armed boat's crew.

7. Did the officers of the vessel themselves offer any obstruction to you? No; they said they could do nothing with these men, and I do not think they could have rendered me much assistance. The mate might have hoisted up the ensign to the main truck for a man-of-war's boat, but he said he could not. I said, "Here is a man in the waist who has drawn steel upon me."

8. Was the shew of resistance witnessed by the mate? I do not know where he was at the time. I was surrounded by these men, and when I found that they were disposed to resist, I left two men in charge of the hatchways and went off to the "Herald." Previous to leaving the vessel I asked the men if they had any objection to remain, and they said they had not. I said I should not be long away. I went to the "Herald," stated the circumstances, and the Lieutenant sent Mr. Napier with a boat's crew, and with their assistance we effected the seizure.

9. There was no more assistance afterwards? No. We took them on the poop and searched them as they came down.
10. You mean that the demeanour of the Chinamen was altered after you brought the man-of-war's boat alongside? Yes.
11. You think the presence of this man-of-war's boat was useful to you in effecting the seizure? Yes. I would not have called for assistance if we had been armed, but as we were unarmed, I went to the man-of-war.
12. Will you proceed to state what you did on board, and what was afterwards done with the gold? We got the gold from the persons of the men; some of it was concealed under their arms, and some about other parts of the body—in all about 2,000 ounces.
13. Did you examine the packages? We examined the packages afterwards, but we left them all tied up.
14. It was principally gold dust? Yes.
15. Were there any sovereigns? I think the Collector said there were about twenty-five sovereigns.
16. You did not count them yourself? No.
17. You saw the sovereigns were mixed up among the gold? Yes. I gave these Chinamen their sovereigns back; but these to which I now refer were in the packages mixed up with the gold. I said to them, through the interpreter, it was not the coin I wanted but the gold, and that I would return the sovereigns. I asked them to take their specie out of their packages, and returned it to them.
18. Then some of them did take their sovereigns? Yes, a great number. Mr. Napier, the naval officer, was by at the time, and a serjeant of marines.
19. Can you state in round numbers how many sovereigns you returned? No, I could not.
20. Will you state what you did with the gold? I went with the man-of-war's boat to Colonel Gibbes' house and reported the circumstances of the seizure, and it was taken over to the Gold Room of the Custom House and locked up. The next morning the Collector came over, sealed it up, and sent it to the Bank of Australasia, as he could not keep an officer constantly watching over it.
21. You know nothing of the matter after that? No.
22. Will you state now as to the illegality of the gold being on board—you acted under instructions? Yes; but if I had not received any instructions I should have seized it.
23. Were you personally aware that it had not paid duty? I seized it under the new Gold Act, 20th Victoria, No. 22, as gold shipped, or water borne for exportation, without due entry and payment of duty. If I had been informed that there was a vessel duly entered outward, with a large number of Chinamen who had gold with them, I should have made a seizure of it, without being seizing officer jointly with the Collector.
24. In this case you acted only under instructions, and not on information given to yourself? The Collector told me to go off, as he had received information from some one that there was a quantity of gold on board one of these ships.
25. Was Mr. Lockyer on board? He accompanied me.
26. In what capacity? I cannot tell. I suppose as informer. I do not know. I cannot tell.
27. Is it usual for a Custom House officer to be accompanied? It is quite optional to the Surveyor; if he acted under information, he might take the informer with him, or he might refuse to do so.
28. By Mr. Jones: Mr. Lockyer is attached to the Customs Department? Yes; he is not a seizing officer.
29. By the Chairman: He would not have authority to seize? He may inform but he cannot seize.
30. Did he give you any assistance at all? Yes; he remained in the boat with the first lot of gold.
31. Do you know whether he witnessed the drawing of a knife or steel upon you? No; he was not, to my recollection, on board. I told him to remain in the boat, and he assisted to row to the "Herald," as I was two men short.
32. I presume you are acquainted with the Customs Laws—whom do you consider to have been the seizing officer in this particular case? I am the seizing officer of the gold on board the "Ethereal."
33. Have you made a claim? I claim jointly with the Collector of Customs. In home practice there are sometimes as many as three seizing officers.
34. You consider the Collector of Customs to be one of the seizing officers with you? Yes, and the seizing officers are entitled to one-third of whatever they get.
35. Do you consider that any of the officers of the "Herald" are to be considered as the seizing officer? No; they would have taken the gold if they had been the seizing officers; if they had seized the gold they would not have given it up to the Customs.
36. Do you not consider them to have any claim upon the gold as seizing officers? There is a doubt whether they have a claim; they have at home when their assistance is called for. I do not know whether they have in the Colonies.
37. You are the seizing officer, and as such are directly interested—do you consider yourself and Colonel Gibbes to be the two seizing officers? Yes.
38. But you do not admit the claim of the "Herald"? No. My claim is for half the amount.
39. If the claim of the "Herald" be allowed, your share, of course, will be diminished—do you admit the claim of the "Herald" to be equal to yours? I could not answer that question, for I am not acquainted with the laws relating to men-of-war. I must consider myself the seizing officer because I took the gold.
40. Do you consider that the Captain of the man-of-war has any claim? Captain Denham was not there in the first instance.
41. One of his officers was there? If he, or one of his officers, had been the seizing officer

J. DeCourcy
Bremer, Esq.

11 Dec., 1857.

- J. DeCourcy, officer there would have been three instead of two; whether he would have to share it with the ship, or with the Admiral, I cannot tell.
42. You got assistance from Mr. Napier? Yes. I applied to the First Lieutenant, and he sent Mr. Napier with a boat's crew, who assisted me to make the seizure.
43. Then the seizure was actually effected by you with the assistance of the officer and the boat's crew? Yes.
44. Has any portion of the proceeds of this seizure been paid to you yet? No.
45. Have you made any claim to the Government for it? Yes; a seizing note was sent in; I handed it to the Collector, and he made out the claim.
46. What is your opinion as to the knowledge of the Chinamen as to the laws—do you believe they were ignorant, or not ignorant, of our laws? I should say they were not ignorant, for there was an inclination on board the "Mary Nicholson"—
47. Confine yourself to the "Ethercal"? I should say they did know, for many of them came from the Port Phillip side and from various places.
48. You think they were aware that they were acting against our laws? Yes, I should say they were, for I have heard from another officer, whose sister went in her, that Captain Gorman said to them if they had any gold with them they had better pay the duty.
49. Did you hear that? No; I heard it from Mr. Smith.
50. Had they any knowledge of our language? I communicated with them through an interpreter, who spoke very good English.
51. And he professed to communicate between the captain and them? Yes. I asked him if they had any gold; he said, "Yes," and I said it was against the law.
52. Did the interpreter make any statement as to the unwillingness of the people to give up the gold? I did not see him at first; it was after I came back from the man-of-war.
53. Was the interpreter a Chinaman? Yes; he was better dressed than the rest of his countrymen.
54. Did he seem to have authority among them? Yes; he seemed to hold a similar position to that of a Serang among the Malays.
55. Can you mention his name? I cannot, and I should hardly know him if I were to see him again. There are three interpreters who have been to the Custom House about this matter. The tall one whom I saw in the Collector's room was not the one I saw on board.
56. Have you any idea what was the condition of these men—should you say they were destitute? I should say not, from the quantity of sovereigns myself and Mr. Napier gave back to them.
57. Have you seen any of these men about Sydney? They are so very much alike that I should not know them, besides it was nearly dark when I left the ship.
58. By Mr. Jones: What was the nature of the communication that took place between you and the interpreter? I only asked him to tell his countrymen that if they had any gold about their persons to deliver it up.
59. Did you explain that they had forfeited the gold by not paying the duty? Yes; I said it was liable to duty and they were going to smuggle it away.
60. What did he say? He spoke to his countrymen, and they said they did not know it, they were not aware of it, or something of that kind. They pleaded ignorance, in fact, which they do now.
61. Have you reason to believe from what transpired that the Chinamen were ignorant that they were evading the law? I should say that they were perfectly aware that they were evading the law. I know the Chinese well, for I was engaged in the first Chinese war some years ago, and they are the most knowing among Asiatics. They were aware that they were paying no license, and that they must pay somewhere. Those men who came from Port Phillip came for the express purpose of evading the duty there.
62. Did the interpreter plead that they did not know the law, and express any willingness to pay the duty? No; he did not to me.
63. By Mr. Cox: Had the whole of these Chinamen gold? Yes, more or less. Some had a little bit tied up in a handkerchief, or bit of rag, others had large quantities on board.
64. Are you aware that it was the intention of the Collector of Customs to make some remission to these people? Yes; he said something about this, that he had written to the Government about it. He consulted me, and I expressed my willingness to concur in anything he might do in the matter.
65. By Mr. Robertson: Did you keep an account, in each case, of the names of the persons from whom you took the gold? Most of them put their names, or marks, on their own packages.
66. Even assuming that it had been proved to the satisfaction of Government that these people were not aware of the law and did intend to pay the duty, you would have had no means of knowing to whom to return the gold? I told them, as I could not tell their names, they should put their marks, or names, on their packages, which they did. These have not been touched.
67. By Mr. Cox: Even though you had taken down their names you would not have known the men? No; a good many of the men went on with the ship, but I should think there are forty or fifty of the "Ethercal's" people on shore.
68. By Mr. Robertson: Are you under the impression that you were in any danger in attempting to take this gold? When one of them unsheathed a knife I considered myself in danger, or I should not have gone to the man-of-war.
69. When the men-of-war's men came they shared in the danger? Yes, they would have done so, if there were any; but, of course, an armed force prevented the danger. I do not believe we could have effected the seizure without the assistance of the man-of-war, as we were unarmed.
70. You are of opinion that the man-of-war's men were of essential service in effecting the seizure? Yes.

71. Had you not got the man-of-war's boat's crew these men might have insisted upon going on shore, as you had only two men in charge of the ship? No; all the ship's boats were hoisted up, and before they could have got into the boats to go on shore I should have been on board again, if I had seen any attempts made to leave the vessel. J. DeCourcy
Bremer, Esq.
11 Dec., 1857.
72. When you asked the interpreter whether they had any gold, did he attempt to hide that fact? He talked a great deal to his countrymen, and when they found resistance was useless they produced their gold.
73. When you accused them of having gold on board, did he deny it in any way, or did he acknowledge that they had? He did not deny it.
74. I understood you to say that, seeing some of these people came from Port Phillip, they must have come for the purpose of evading the law? I am told some of them came from Port Phillip.
75. If they came from Port Phillip, where there is a duty, would not that rather shew that they were under the impression that there was no such duty here; for it would be of very little use to leave Port Phillip and to come here for the purpose of evading a law, if the same law were in operation here? Yes.
76. You are acquainted with Chinamen? Yes.
77. You are aware of the fact that the laws of New South Wales are much more liberal to their race than those of Victoria, at which place they are required to pay £10 when they land? Yes.
78. Hence, if these people are so very acute, as you believe them to be, is it not likely that they were under the impression that the laws here were more liberal to Chinamen, as there is no charge here? It is impossible for me to tell—I could not express an opinion upon that point—they are a very cunning race.
79. But as you base one of your reasons for supposing that they knew the law upon the fact that they came from Port Phillip here, I wish to shew that it might bear that very opposite interpretation? Yes.
80. Are you of opinion that if I were to go on board a ship lying in the port, and happened to have a few ounces of gold in my pocket, and any one gave you information of the circumstance, that you would be justified in seizing it? If you had actually paid your passage it would be liable to seizure.
81. Not without? The Act prescribes that all gold water-borne, or found in any boat, lighter, or vessel, or in any vehicle, or in transit upon any beast of burthen, or about the person of any one on board any vessel, shall be liable to seizure.
82. It would be water-borne if taken across a river in a punt? Yes.
83. Did you ascertain that these men had paid their passage? Yes, they had paid their passage—£11 a head.

THURSDAY, 17 DECEMBER, 1857.

Present:—

MR. JONES,
MR. FORSTER,
MR. HAY,

MR. ROBERTSON,
MR. DONALDSON,
MR. COX.

WILLIAM FORSTER, ESQUIRE, IN THE CHAIR.

Lieutenant Richard Henry Napier, R.N., called in and examined:—

1. *By the Chairman:* You are an officer of H.M.S. "Herald"? Yes. Lieut. R. H.
Napier, R.N.
2. Were you not present, on a late occasion, when gold was seized under the authority of the Collector of Customs of this Colony, on board the ship "Etheral"? I was. 17 Dec., 1857.
3. Will you be kind enough to state the circumstances under which you were first instructed to proceed upon that duty, and what occurred under your own observation? Application having been made by Mr. Bremer, the tide surveyor, for assistance from Her Majesty's ship "Herald," that he might be enabled to search the persons of sixty-five Chinese passengers, who had previously resisted his authority on board the "Etheral," and were supposed to be in possession of a large amount of gold for which the requisite duty had not been paid, I, in compliance with an order from Lieutenant J. Hutchinson, at about half-past four on the afternoon of the 15th October, proceeded on board the said ship with an armed boat's crew and a party of marines. I placed a sentry on either side of the poop, in charge of the passengers whom I had ordered up, and I then allowed them to come down on the quarter-deck, where each was searched by the Custom House Officer—two or three only, who had their treasure below, being permitted to go and fetch it, under the surveillance of one of the Custom House boat's crew. Much gold was taken from the vessel; and Mr. Bremer, having stated himself to be satisfied with the search of the ship and passengers, and the gold having been carefully lowered into the Custom House boat by two of my men, I returned on board.
4. Have you any knowledge of the quantity of gold seized? I should think about one hundred and eighty pounds. I could lift it with two hands about a foot off the deck after it was put in a bag.
5. Mr. Bremer was the officer in charge of the party? He was the Custom House Officer who came on board the "Herald" to demand assistance from us, stating that the Chinese had resisted his authority, and that he was unable to make a search without our aid.
6. You consider Mr. Bremer to have been the seizing officer on this occasion? No, I consider myself to have been the officer making the seizure, under orders from my commanding officer, Lieutenant Hutchinson.
7. Will you state whether your presence was absolutely necessary from the demeanour of the Chinamen, or whether the seizure could have been effected without your assistance? My

Lieut. R. H. Napier, R.N. My impression is that it could not. The presence of my boat's crew and marines, either under myself or some other officer, was, I conceive, requisite to ensure the submission of the Chinamen to the search.

17 Dec., 1857.

8. Then, in fact, the seizure was conducted by yourself and Mr. Bremer, together with the assistance of the force under your command, and of his boat's crew—he could not have seized the gold without the assistance rendered from the "Herald"? I believe he could not.

9. Was there any apparent violence shown by the Chinamen while you were there? No; the most I observed was sulkiness and an evident disinclination to deliver the gold from their persons.

10. Did you see any weapons of any kind about them? No, I cannot say I did.

11. Were there any other persons present, on the part of the authorities of this Colony, besides Mr. Bremer? A gentleman, whose name I believe is Lockyer, was on the deck at the time, and went away with Mr. Bremer in the Custom House boat. He came with and departed with him. I understood that he was a Custom House Officer, but I am not prepared to say that he was.

12. Was he giving assistance at the time? He appeared to be in charge of some gold that had been taken from the "Mary Nicholson," but I do not know whether he had any charge in the matter; certainly he did not have anything to say.

13. *By Mr. Jones:* He was not the officer in command? No, he was not the officer in command.

14. *By the Chairman:* By whom was the search actually conducted—who searched the persons of the Chinamen? Some of the Custom House boat's crew took the gold from the Chinamen. It was placed on deck, and given by me into the charge of a sergeant of marines.

15. It was placed in the hands of the sergeant? Some was placed on the deck by the Custom House boat's crew, and some by the sergeant; it was placed under his charge by me.

16. I suppose you are not aware what has been done with the gold since—that cannot have come under your cognizance? Not since I saw it locked up in the Queen's Warehouse that night. I went over to report the circumstance to Colonel Gibbes, after it had taken place, and I then found Mr. Bremer at Colonel Gibbes' house. From there I accompanied Mr. Bremer, by Colonel Gibbes' request, on shore with the gold, my boat pulling alongside; and I saw the gold locked up in the Queen's Warehouse.

17. Have you yourself made any claim to the Government for the services you rendered on this occasion, or are you aware of any such claim having been made on your part or the part of the men present? I believe a claim has been made, but I am not prepared to state the exact nature of it. I was merely the officer acting under the orders of Lieut. Hutcheson.

18. Do you consider that you have any claim on the part of yourself or your boat's crew? I consider the ship has a claim, not myself individually, or the boat's crew. When I speak of having a claim, I mean that I consider we have a claim as a body—the men and officers of the ship.

19. Then, if the Government, in distributing the proceeds of this seizure, should hand over to you and the men that were with you a certain sum of money, would you consider it your duty to hand it to the ship, or to retain it? I should consider it my duty to hand it over to Captain Denham, to be shared among the officers and crew of the ship, according to the Imperial Act with reference to such matters.

20. *By Mr. Hay:* When you say that you do not think the Custom House Officer could have carried out the seizure without the assistance of yourself and your boat's crew, did you judge from anything that occurred before your own eyes, or from the report of the Custom House Officer, Mr. Bremer? I judged from two things;—firstly, from the report of Mr. Bremer, who stated that the Chinese passengers had resisted his authority, and that he was unable to make the search without the assistance which he demanded from the ship. After I had gone on board I placed sentries on the poop, and did all that was requisite to conduct the search in a quiet and orderly manner. I saw that the Chinese passengers, on being searched, appeared to be very unwilling to deliver up their gold, and seemed to think it was not at all right that it should be taken from them under any circumstances; but they made no personal resistance.

21. How was the search conducted—did the Chinese, on being ordered to do so, deliver up their gold, or was the search literally carried out by an examination of the persons and clothes of the whole of them? They were examined.

22. In the first instance, were they not called upon to deliver the gold upon them individually? Yes, they were called upon to do so, through the interpreter. They delivered the gold unwillingly, demurring about it a great deal; but they delivered it, and were asked whether there was any more on their persons, which were then felt.

23. After the gold was delivered up? Yes, they were felt.

24. *By the Chairman:* Would you not assume the necessity of your presence, from the circumstance of the application having been made by the Custom House Officer? Yes, I should, decidedly.

25. Were you aware of any sovereigns having been seized with the gold? I was. Mr. Bremer, through the interpreter, asked—I believe I may say, as far as I can recollect—each individual Chinaman whether he had any sovereigns in the gold he was delivering; and in some cases there were sovereigns, which Mr. Bremer told them particularly to take out, stating that he had no right to take sovereigns, but merely gold; and also, after the whole of the gold had been collected and all the passengers searched, he asked the question, through the interpreter, whether there were any sovereigns in the bag of gold, saying that there were they were to take them out. The interpreter asked the question, and the answer was—whether from one or more I am not sure, but from certain of the Chinese—that there were, I think, thirty sovereigns among the gold; on which the sergeant of marines opened the bag, and the interpreter was allowed to take out the money stated to be in it. It was then asked whether there was any more money in the bag, upon which the interpreter answered no.

26. In that case I imagine you judged they were not in a destitute condition? I should say decidedly they were not, because many of them had as much as ten sovereigns.
27. You saw that money in their hands? Yes, as they took it from their bags before delivering them, in consequence of Mr. Bremer's question.
28. Did the Chinamen give you any notion of their being acquainted with the English language? They did not.
29. *By Mr. Hay:* You say that, from what you saw, you believe they were not left destitute—how many Chinamen might have received sovereigns in the way you mentioned? I can hardly say the exact number, but I think I saw fourteen or fifteen take money before delivering their gold.
30. Did the gold appear to be common stock, from what you saw of the way in which it was packed and these claims were made; or did it seem to be held by individuals or small partnerships? It appeared to belong generally to small partnerships; three or four individuals holding one amount of gold.
31. Then, from aught you could learn from the distribution of the sovereigns, the majority of these men might be destitute, notwithstanding? That is not my opinion. I do not think they were destitute, from the quantity of sovereigns I saw taken out of their pouches.
32. But supposing seventy-five white men had had their gold seized in a similar way, you would not judge from fourteen or fifteen receiving money that the others had money, would you? I could merely judge from what I saw. I saw certain of the Chinese taking back eight or ten sovereigns—others less; and from that I judged they were not destitute.
33. The gold or sovereigns did not seem to be all one common stock in which all the Chinese were interested more or less? All were interested decidedly in the gold.
34. Not in all the gold—the gold was in several packages? Yes, a great many.
35. How many do you suppose? I should say as many as one hundred and fifty small packages.
36. These small packages were given up by different individuals? One individual would have several.
37. But this gold was found upon the persons of a great number of individual Chinamen? It was on many.
38. Had they all gold upon their persons? No.
39. But a great many had? Yes.
40. Could you give us any idea from how many Chinamen the gold was actually received? I am not prepared to state how many. All were searched.
41. But gold was not found upon all? No.
42. You cannot say anything more definite than that it was found upon a great many? No.
43. *By Mr. Cox:* Did you observe that any means were taken by Mr. Bremer of identifying the gold, so that, in the event of any dispute, the same packages could be returned to the Chinamen from whom they were taken? Mr. Bremer, to the best of my belief, put down the names of the Chinamen from whom the packages of gold were taken.
44. Did he mark the bags? All the packages contained Chinese writing.
45. So that there would be no difficulty in identifying the different packages as belonging to their several owners? I should think not.
46. *By Mr. Hay:* You are not aware that any means were taken by Mr. Bremer to identify the individual packages with the names of the Chinamen from whom those packages were taken? The only means that I am aware of was the taking down by Mr. Bremer of the names of the Chinese as they gave up their gold.
47. Do you not think, that, unless some mark was put upon the different bags to identify them with the names of the parties as taken down, it would be impossible afterwards to understand from whom the respective bags had been taken? From my observation I should naturally say that all the Chinamen would know their own gold.
48. Do you think Mr. Bremer could give them each their own, if they did not agree, in case the gold were returned to them? I am not prepared to say.
49. You did not see anything done to lead you to the belief that Mr. Bremer would necessarily know the gold taken from each individual—that he would be able to identify the packages as taken from individuals? Not further than from having taken down the names.
50. He took down the names without marking the bags with the names? That is my belief.
51. How could it be done if there were about hundred and fifty different bags? The gold, it must be remembered, was in long purses that went round the waist; and there were small packages in these purses, which were taken by Mr. Bremer, examined, and put in again. All the small packages were in the pouches, and, had it been my duty, I should have done as Mr. Bremer did.
52. But how could he know afterwards what particular pouches were taken from the persons of the different Chinamen? I am not aware that he could know by any other means than by the names which I believe he took down.
53. Did he attach the names to these pouches, or put any mark upon them by which he could recognise them as having been taken from individual Chinamen? I am not aware.
54. Do you think that afterwards he could tell, by the names of the Chinamen as taken down, from whom each particular pouch was taken? I believe he could, if the Chinese answered to their right names as given in when the gold was taken from them; but he had no further means that I know of.
55. *By Mr. Cox:* Do you think, from the demeanour of the Chinamen, that they were aware they were doing wrong in smuggling the gold? My belief was that they tried to make it appear they were ignorant of it, when they were not so.
56. You do not believe they were ignorant of the law? I do not.

Lieut. R. H.
Napier, R.N.
17 Dec., 1857.

H. Newbon,
Esq.

17 Dec., 1857.

Henry Newbon, Esq., called in and examined:—

1. *By the Chairman:* You have been employed, I believe, by certain Chinamen, whose gold was seized on board the "Ethereal" by the Custom House authorities, as their legal adviser? Yes.
2. Will you be kind enough to state the circumstances of these men, as briefly as you can,—in what position they stand just now, and also in what way you can give us the means of ascertaining the facts of the case from the Chinamen themselves? First of all, I have got from all the Chinese on board the "Ethereal" a Power of Attorney for four of their countrymen, authorizing them to act for them. These four presented the petition. (*The Witness handed in the same. Vide Appendix A.*)
3. What is the number of Chinamen whose property has been seized? There were sixty-five on board.
4. These sixty-five all signed the Power of Attorney? Yes.
5. In what pecuniary circumstances are these men—are they absolutely destitute of property? Yes.
6. Had they no sovereigns? I do not think so.
7. We have it in evidence that they had a large amount in sovereigns in their possession? On the contrary, I have their statement that, besides the quantity of gold dust, fifty-six sovereigns were taken from them.
8. Is your means of communication with them such as to satisfy you that you have arrived at the truth? I have it only through their interpreter.
9. Will you state the name of the interpreter? *Januario Jose Lopez, a Portuguese.*
10. Shall we be able to find him out? He is here now.
11. Will you state what course you have pursued, as the legal adviser of these Chinamen, in applying to the Government? I presented a petition to the Administrators of the Government in the absence of the Governor General, and received the reply which is stated in the petition. The quantity of gold petitioned for was 2,680 ounces. I requested them, through the interpreter, to furnish me with the exact amount taken from them, and obtained this list, shewing the several parties and the amount of gold, and also those who have remained in this country and those who have gone to China. (*The Witness handed in the same. Vide Appendix B.*)
12. The result of all that has been done has been that the Government have refused to take any steps in the matter? Yes.
13. Will you state on what grounds you think these Chinamen have any moral claim on the Government? I think they acted as they did through ignorance of the law, according to the statement they make.
14. You really think they were ignorant of our law? I do. It was only passed this year.
15. I see in the list you have handed in there are some names to which no gold is set down? They said they had none upon them.
16. *By Mr. Cox:* How came they among the petitioners? Because I think they are of a superior class to the others who wished them to act for them.
17. *By the Chairman:* Do you think the gold was held in common stock, or that each had a property in the sum set opposite his name? I believe each had a property in the sum set against his name. Those marked with a star are in the country, and the others are gone away.
18. *By Mr. Donaldson:* Have you been acquainted with these Chinamen from the time of the seizure? Only from seeing them at my office.
19. Have you had interviews with them all? Principally with the four who hold the Power of Attorney; I did not want to be bothered with the whole of them.
20. Have you any means of identifying these petitioners with those whose gold was actually seized? Only through these men.
21. Of the individuals themselves you know nothing? No.
22. *By Mr. Hay:* By whom was this paper drawn up? By the interpreter, Lopez. I must tell you that when they first came to me I saw there was a great deal of difficulty about it, and I said "you had better not all stop here, leave four to manage the thing for you"—four, or as many as they chose to appoint to represent the others. Now, I can produce these four men to show that the men who signed this Power of Attorney were the men who had had their gold seized.
23. These four who hold the Power of Attorney are acquainted with the whole of them? Yes.
24. These four can be identified by yourself and others, and they can identify all the Chinamen? Yes.

APPENDIX A.

MEMO. OF CHINAMEN PASSENGERS PER "ETHEREAL."

KNOW all men by these presents, that we, the undersigned Chinamen, passengers of the ship "Ethereal," now in Sydney, have hereby appointed, constituted, ordained, and by these presents do make, ordain, constitute, and appoint, our trusty friends Ayong, Amang, Alieng, and Akitt, now in this City, our true and lawful Attorneys for us, in our name and to our use, to ask, demand, recover, and receive the sum of two thousand six hundred and eighty ounces of Gold from the respective Government of New South Wales in the said country; therefore, we, by these presents, granting to our said Attorneys our sole and full power and authority to take, pursue, and follow such legal courses that may be necessary for the recovery, receiving, and obtaining of the same without delay or interruption, as we ourselves might or could do, and consequently we, ratifying, allowing, and confirming everything, according

according to their entire denomination by all means and in whatsoever they the said shall lawfully do or cause to be done. And in witness whereof we we have hereunto set our hand and mark this twentieth day of October, of Our Lord God one thousand eight hundred and fifty-seven. H. Newbon,
Esq.
17 Dec., 1857.

*Yatcheong	32½				

With Power of Attorney to receive, are as following:—

Abeng,
A-Yong,
Aman,
Akitt.
— 4 Men.

JAN. J. LOPEZ,
As Witness and as Interpreter.

Senhor

Senhor Jannario Jose Lopez, called in and examined:—

- Senhor J. J. Lopez.
17 Dec., 1857.
1. *By the Chairman*: You are a native of Portugal? Yes.
 2. Have you been long in this Colony? Four years.
 3. You seem to know the English language—have you understood it for some time? Yes.
 4. Do you know the Chinese language? Yes.
 5. Do you understand it well? Yes. I have been a clerk in the East India Company's service six years.
 6. Do you know Chinese as well as you do English? Yes. I know fourteen languages—six dialects of China.
 7. You were not on board the "Ethereal" when certain gold was seized? No; but I know all the circumstances, and all the parties concerned.
 8. Is this man, Ayong, one of the parties? Yes.
 9. What knowledge have you of his having been one of the parties? By consent of all the sixty-five Chinamen.
 10. Will you look to the Power of Attorney and see whether he is one? (*The Witness referred to the Power of Attorney, and pointing to one of the signatures said, "Yes, that is his name."*)

Ayong, a native of China, called in and examined through Senhor J. J. Lopez, who acted as Interpreter:—

- Ayong.
17 Dec., 1857.
1. *By the Chairman*: Your name is Ayong? Yes.
 2. You are a native of China? Yes, of the province of Canton, in China.
 3. How long have you been in this Colony? About a year—a few days to a year.
 4. Are you one of the Chinamen whose gold was lately seized on board the "Ethereal"? Yes.
 5. How much gold did you lose on that occasion—your own private property? Four ounces.
 6. What was the loss of gold altogether? Two thousand eight hundred ounces, a little more or less, altogether.
 7. When you took your gold on board the "Ethereal," did you intend to take it to China? Yes.
 8. Did you know at the time you took it on board that there was a law of this country by which you ought to pay duty on gold? He says he does not know anything about the duties of the Colony, that the Chinamen were ignorant of that point. He says he came last year from China, and that as soon as he got here he started to Turon; and that he was not in Sydney till he came back to get a vessel and embark for China, and that he did not know of the law.
 9. If you had known there had been law of the sort, would you have been willing to have paid the duty? He says he did not know anything about it. If they knew they would be willing to pay,—that they did not wish to lose an ounce of gold for half-a-crown.
 10. Did you take any means in coming to a foreign country to understand what the law was respecting the duty on gold—did you ask any questions about it? He says he never asked any one, and nobody mentioned it to him; and for that reason he took it.
 11. Would Englishmen be allowed to take gold, or anything they liked, out of your country, without paying anything for it? He says he knew foreigners put duty on goods here, but he thought it was only on such things as spirits. He never knew there was any duty upon gold.
 12. Is there no duty upon gold in China? He says he does not know anything about the port of Canton. He belongs to the province; but there was no duty on gold as far as he knows.
 13. Would not your countrymen cut off an Englishman's head if he were to break the laws of your country? He says really he does not know anything about the duty.
 14. Do you know what the meaning of the word "duty" is? He says yes; Chinamen know very well.
 15. What is your condition at present—are you quite destitute—have you no property at all? He says he was obliged to send letters to his friends at the Turon to send him money, and that they are all starving and had no property.
 16. Did you lose any sovereigns at the time the gold dust was seized? He says there were fifty-six sovereigns between the gold altogether, belonging to the whole party.
 17. Did none of the people get back any sovereigns at the time the gold was seized, because it has been stated by the officers who seized the gold that fifty or sixty sovereigns were given back at the time? He says not one of the sixty-five received anything—not one farthing.
 18. *By Mr. Haq*: At the time the seizure was made, when the officers were on board the ship? He says they never gave them back a cowrie—not a farthing.
 19. Were these fifty-six sovereigns in one bundle? No, in different bundles; in some bundles with the gold there were two sovereigns, in some there were five.
 20. *By Mr. Cox*: None of these were returned? None.
 21. *By the Chairman*: When the officer seized the gold, did he not tell you if you had any sovereigns you could take them back again, as he did not want the coin, but only the gold dust? He says that at the time the officer came on board, he asked if they had any gold, and he said yes; he opened his jacket, took out his gold, and delivered it to the officer of Customs, who then asked if they had any sovereigns, and they said yes, they had inside with the gold. He asked them then if they had paid duty, and the Chinamen said they knew nothing about duty. He said they were obliged to pay half-a-crown an ounce for gold, but that they had nothing to pay for sovereigns.
 22. Did he not tell you to take back any sovereigns you had? He says only the Custom House Officer mentioned to him—"Deliver up all your gold; and in case you have sovereigns
"you

- "you have no occasion to pay any duty for them." He says he had some sovereigns inside his bundle, but that he never had a sovereign returned.
23. Were there no sovereigns loose upon your person, or upon the persons of any of the other Chinamen? Not one had a separate sovereign; they were all mixed together with the gold dust.
24. Not one only, but two officers say that they saw loose sovereigns given back to the Chinamen? He says that there were two officers—the officer of the Customs, and of the man-of-war—and they told them they would not have to pay duty for sovereigns; but he says they were all in their bundles, mixed up with their gold.
25. Did not some of the Chinamen present resist the officer when he came on board and asked about the gold? He says, when the officer came on board he asked him (Ayong) if he had any gold; and he (Ayong) said yes, and put his hand under his jacket to take it.
26. Was any resistance made at all? No.
27. Did any Chinaman draw a knife upon the officer? He says they delivered up everything; and one Chinaman stood with a pencil, and put down such a Chinaman such a bundle, as they were given to the Custom House Officer.
28. Was any knife drawn upon the Custom House Officer? No.
29. Was there a knife in the possession of any Chinaman? Not one had a knife or anything at all.
30. Have they no knives now? May be some have got knives for their use, for cutting tobacco; but they never used a knife, except they might be using it to cut tobacco—a small sized pocket knife.
31. Do you know what the Mint is in this country—the place where they make sovereigns—did you ever send gold there? He says he knows what it is, but he never sent gold there.
32. Did any of your countrymen ever send gold to be coined at the Mint? He says he does not know anything about it; when a Chinaman gets gold he goes to the merchants and gets sovereigns for it.
33. Are you a Christian? No.
34. What religion do you call yourself? He is a Mahometan, adoring the sun and moon.
35. Mahometans do not adore the sun and moon—are you a Buddhist? He adores the sun and moon.
36. (To Lopez:) Does he say he adores the sun and moon? They adore the sun and moon, the Emperor, and so on.
37. (To Ayong:) What is your position in your own country—are you a tradesman or a gentleman? When in Canton he sells fruit, oranges, peaches, and vegetables.
38. Are you a married man? Yes.
39. Did you ever send gold to your wife from this country? He never had gold before this time.
40. How does your wife live while you are away? He says when he came here he gave instructions to his relations—to his father and mother—to maintain his wife.
41. Do you intend to return back to this country if you go to China now? He says he does not know about the others, but he intends just to go back to see his wife, his father and mother, to deliver the money to them to buy goods, and then to come back and trade.
42. Would your wife be allowed to come to this country if you wished? Yes; the wife cannot do anything at all of her own will; she could not move from her mother's house without permission.
43. Why do not Chinamen bring their wives to this country? He says they were afraid Chinese women would not be allowed to come here.
44. Will Chinese women come here by and by, if it is known that we allow them to come here? Yes; if that were publicly known, no doubt many women would come here. If there is gold here many men will come, and women too; many of the men who are here have sent for their wives.
45. By Mr. Cox: Are you aware of any of your friends having sent gold to their wives or friends in China? Not one has sent out of this number of sixty-five; only this time, when they came to take the vessel to go to China, they had been in Sydney.
46. Do you know of your own knowledge of any Chinaman having gone to his own country before with gold? He says he does not know about other Chinese; he cannot say—only these sixty-five had no chance of sending their gold.
47. By Mr. Donaldson: Who signed these four signatures (referring to the four signatures with the seals above them)? Three other men outside.
48. Who signed that—your own name? The other head man, Aheng, signed for me.
49. Who signed the other names? They were signed by each other.
50. (To Lopez:) Do you not know the names? Senhor Lopez pointed out the names of Ayong, Aheng, Ackitt, and Amang.

Senhor Lopez further examined:—

1. By Mr. Hay: You have said that you drew up this paper? Yes.
2. Was this done in the presence of all the Chinese, or of one man? In the presence of all the Chinese—all those interested.
3. By whom were these signatures put down? By Aheng, in my presence.
4. By whom were these four marks or names at the bottom of the paper? By Aheng, by consent of the sixty-one.
5. Do you think Aheng made these figures upon the paper? Yes; they came round to my office and mentioned their names.
6. Then these signatures were appended to this paper not in your presence? They were written by one party, by consent of all the parties.
7. Did you see it done? By one party, with the consent of every one.

Senhor
Lopez.

17 Dec., 1857.

Senhor
Lopez.

17 Dec., 1858.

8. Were these signatures made in your presence? Yes; they were written by one party, by consent of all.
9. And you saw that done? Yes; they were signed in my presence; there were so many Chinamen coming to my office, and so much confusion, one saying one thing and one another, that they all consented to have these four to act for them, and Aheng signed, but I cannot say whether it was signed with the authority of every one, or whether it was signed by the other three.

Aheng, a native of China, called in and examined through Senhor Lopez:—

Aheng.

17 Dec., 1857.

1. *By the Chairman*: Are you a native of China? Yes.
2. What position do you hold in China—are you a laborer or what? He says in Canton he has a small shop where he sells tea, sugar, coffee, and so on.
3. Are you a married man? Yes.
4. Can you read and write? Yes.
5. Did you sign that paper? (*Handing the Power of Attorney to the witness.*) Yes, it was done by him; he says every one was signed by him, with the authority of all.
6. You got authority from the others to sign? Yes; every one gave him power to do it.
7. What is meant by the red mark placed over each of the four names? It is a kind of seal.
8. Have you such a seal with you? No.
9. Were you going to China lately, in the "Ethereal"? Yes.
10. On board which ship a quantity of gold was seized by the Government? Yes.
11. *By Mr. Donaldson*: How much was lost by yourself and all the rest on board? He says he had no gold himself, but the gold belonging to the whole sixty-five was 2,800 ounces.
12. Then you lost nothing on board the vessel? Nothing.
13. Of the four persons who signed this paper as the agents of the others, had any of them any gold? Only Ayong had gold, the three others had no gold.
14. How much gold had Ayong? Four ounces. These four men had the confidence of the others.
15. *By the Chairman*: Who paid your passage? He says he paid the captain £10, which belonged to himself.
16. Have you no money now at all? He says nothing at all, at present.
17. Why were you going to China if you had no money? He said his other friends invited him to go because he could do nothing here.
18. *By Mr. Hay*: How did you get the £10 to pay your passage? He says that the gold he got in digging here he sold to some parties, and got the £10 to pay his passage.
19. *By the Chairman*: How long have you been in the country digging? About a year, he says, he has been in this country, and about eight months at the diggings.
20. Did you work eight months at the diggings and only make £10? He says he sent some remittances home by his friends, in sovereigns.
21. Have you no sovereigns at all, or had you none? He says what he had he sent away to China, but that he has none now.
22. If Government would let you go to the gold fields, would you rather go back to dig again, or would you rather return to China? He says in case the Government gives the gold he intends to go back to China, and not to go to the diggings.
23. Did you sign this petition? He says the sixty-one asked the four to do it.
24. You say in this petition that gold dust and sovereigns have been taken away from you—how could you say that if you had neither gold dust nor sovereigns? He says he was obliged to do this, because he does not mention it on his own part, but that he represented the party of sixty-one as their agent.
25. Why did you, seeing that you had lost nothing at all, stay in the country to undertake this matter—what business was it of yours, you had paid your passage, why did you not go on with the vessel? He says he was very willing to go, but the others did not know anything of the Chinese characters—they did not know how to read or write—and they wished him to remain till they settled the matter, and the others would pay his passage.
26. How do you expect to live in this country when you say the others have lost all their gold, and you have got nothing? He says he is thinking the same thing, he is just waiting here for Providence, as regards his friends.
27. When the gold was seized on board by the officer was everything in the shape of either gold or sovereigns taken from the Chinamen? He says yes, he remembers that on Wednesday, at 4 o'clock in the afternoon, the Custom House Officer came on board, and took possession of the gold—he took it all.
28. Did he take any sovereigns? Yes.
29. Did he take all the sovereigns they had? He says yes, they gave everything.
30. Have these Chinamen now no sovereigns or gold at all? He says these Chinamen not one have any gold or sovereigns; only when they want they have to go to a friend to ask for the loan of money.
31. They have none but what they borrow—were there no sovereigns given back by the officers at the time of the seizure of the gold dust? He says not one. I tell him to tell me the truth. The Custom House Officers say they have delivered to you the sovereigns; but he says no.
32. Did any of the Chinamen resist the officer, or draw a knife? He says nothing at all, that there was no resistance; that the Custom House Officer came on board and mentioned that they had gold, and that they then opened their jackets, took off their handkerchiefs, with different bundles of gold in them, and delivered them to the Custom House Officer.
33. Did any Chinaman draw a knife? No.
34. Have you any knives in your possession at all, any of you? No.
35. Are you and all the other Chinamen destitute—are you starving in fact? Yes.

36. In what way have you lived since the gold was taken from you? By borrowing from friends. Aheng.
37. Did you know at the time you were going away with the gold to China without paying duty you were breaking the laws of this country? He says he did not know. 17 Dec., 1857.
38. Did you never ask anybody about the laws of this country before you went on board the vessel? He says he never asked any one, and nobody ever mentioned to him that they had any duty to pay.
39. Did not the captain tell you, through the interpreter, that you would have duty to pay on the gold? He says he never heard that from the captain.
40. Do they let Englishmen, or other people, take gold from China without paying duty? He says he knows that duties have to be paid in China upon goods, but that he does not know anything about gold.
41. Would not an Englishman in China be put to death if he attempted to break the law in such a way? He says he does not know anything about the duties, because he had only been from the diggings two days, and had got a vessel at once to China. He never heard of such a thing before.
42. What religion are you? He says like Mahometan.
43. By Mr. Donaldson: Does he use the word Mahometan? No, he says Sang-ko; but I know, because I have been in China.
44. What is Sang-ko? To adore the sun and moon, just like Mahometan.
45. By the Chairman: Did you ever hear of Christians in China among your own people? He says no; the European is quite a different religion from his.
46. Did you ever hear of any of your own people being called Christians? Yes; he says he knows many Chinamen, but he does not know what the Christian religion is. (*The Interpreter produced a Chinese book, upon which he said the Chinese were sworn.*)
47. By Mr. Donaldson: What book is this? He says the lives of all the virtuous men.
48. Do you look upon that as a sacred or as a moral work? He says he looks upon it the same as the English look upon the Bible.
49. What do the English think of the Bible? He says the book is a good book, because every good man thinks of that.
50. By the Chairman: Why did you not bring your wife to this country with you? He says he was not well enough off to bring his wife here.

FRIDAY, 18 DECEMBER, 1857.

Present:—

MR. DONALDSON,
MR. FORSTER,

MR. HAY,
MR. ROBERTSON.

WILLIAM FORSTER, ESQUIRE, IN THE CHAIR.

Mr. Charles Lockyer, called in and examined:—

1. By the Chairman: Will you state in what capacity you are employed by the Government? I am a tide waiter in the Customs Department. Mr. Charles Lockyer.
2. Do you consider yourself to be a Custom House Officer? I am always given to understand that, although I am attached to the Customs, I am not an established officer; the appointment was made by Colonel Gibbs, not by the Government, that is to say, Colonel Gibbs could dismiss me. 18 Dec., 1857.
3. Did you give the information which led to the seizure of gold on board the "Ethereal"? I did; I reported the two ships to Colonel Gibbs.
4. We wish to know the circumstances connected with the seizure of the gold on board the "Ethereal" merely,—will you state, so far as you feel at liberty, what led to your giving information? Nothing else but seeing an immense number of Chinamen knocking about the streets of Sydney, and at the Domain gates on Sunday. I attend the Custom House on Sundays; I saw that there were ships laid on for China, and as I keep the passenger lists of ships arriving from Melbourne, I saw in them the names of a number of Chinamen. From these circumstances I had a suspicion that they were going away with a large quantity of gold. I had seldom if ever seen a Chinaman come to the Custom House to pay duty on gold previous to this; but since this has taken place I believe something over £200 duty has been paid.
5. Were your suspicions confirmed by any further inquiry? No.
6. You gave information? Yes. I wished to have the two ships searched.
7. Did you yourself give information to Colonel Gibbs? Not for three weeks. To make myself certain, I asked Mr. Llewellyn to go to Colonel Gibbs, and tell him I wanted to see him most particularly. I could not say the words I made use of exactly, but I went and saw the Collector.
8. Did you communicate the information to Colonel Gibbs himself? I did. He asked me if both ships had cleared. I said I could not tell, but I believed one, the "Mary Nicholson," had. I then went and asked if the "Ethereal" had cleared, and found she had not.
9. What proceedings did Colonel Gibbs adopt? The Collector said, "Tell Mr. Bremer when he comes in I want to see him." He said, "You are not a seizing officer; you have not the power to seize, but you had perhaps better go with him."
10. You were sent with Mr. Bremer? Yes.
11. Did you go on board the "Ethereal"? I did not go on board the "Ethereal," but I went with him and took charge of the gold which had been taken from the "Mary Nicholson" while he went on board the "Ethereal."

- Mr. Charles Lockyer.
18 Dec., 1858.
12. You took part in the seizure in that way? I did not take any part in the seizure, but assisted to protect it.
 13. Do you know anything of the circumstances under which the gold was seized—did you notice whether the men resisted at first? No, I could not see; only Mr. Bremer told me when he came into the boat.
 14. Did not Mr. Bremer go to the "Herald" and apply for assistance? He wanted to go to the Water Police, but I said no, he had better go to the "Herald," as it was getting late, and it would take two hours to search sixty or seventy men. He said the "Herald" would not give us assistance. I said they were bound, if we called upon them to do so.
 15. You accompanied him then to the vessel? I did.
 16. You cannot say whether their assistance was absolutely necessary or not? I could not say.
 17. I presume you think it was from application having been made? Yes; he said he could not muster the men on deck at all without assistance.
 18. Did you see the gold at all, or the packages? I did not see the single packages, but the whole together.
 19. What in the rough should you say was the amount? I should say, from the way it was lowered into the boat, at the very least five or six pounds, either over or under two hundred weight.
 20. Have you any idea of the number of Chinamen to whom this belonged? Merely from the passenger list.
 21. What was done with the gold after it was taken away? It was forwarded to the Queen's Store, in Mr. Bremer's charge, for the night.
 22. You saw it deposited there? I did.
 23. You saw nothing further of it after that? I know that it went to the Bank the following morning.
 24. You consider yourself to have acted in the capacity of informer in this seizure? Yes, I was the informer.
 25. Do you lay claim to the whole share as informer? I do, most certainly.
 26. Had you any assistance from any other informer—was there no informer previous to you who might have a claim? None.
 27. You consider that the share of the informer should not be distributed among others? I do.
 28. Have you made any application to Government? No.
 29. *By Mr. Donaldson*: Nor to the Collector for your share? No; it is not settled yet.
 30. *By the Chairman*: You could not identify the Chinamen I suppose? No.
 31. It is stated that they are in a state of destitution, are you acquainted in any way with their circumstances? I know that I asked the Collector to let us go a second time on board the "Mary Nicholson," as I did not believe they had given up all their gold, and from £5 to £100 was found upon them. She had been to sea and come back again.
 32. But you know nothing of the circumstances of the Chinamen on board the "Ethereal"? No, I do not.
 33. *By Mr. Hay*: Nor of the mode in which they were searched? No.
 34. *By the Chairman*: Do you know anything of Coffey, the coxswain? Yes.
 35. Did he ever give you any information? Never in his life; I never heard anything about it till seven weeks afterwards.
 36. Then you did hear that a claim was to be made on his account? Yes; Mr. Bremer told me, seven weeks afterwards, that Coffey had been up to the Collector, and made a fresh information, and I told Mr. Bremer he was at the bottom of it, and he never denied it. When the boat was ordered by the Collector to go to these two ships, neither Mr. Bremer nor the boat's crew knew which way the boat was to go, whether up or down the harbour.

Sang Hyo, or Asseng, called in and examined through J. J. Lopez, the interpreter:—

- Sang Hyo, or Asseng.
18 Dec., 1857.
1. *By the Chairman*: You are a native of China? Of Whampoa, nine miles distant from Canton.
 2. Can you read and write? Neither read nor write.
 3. Can any of the persons whose names appear in this paper (*Referring to the power of Attorney previously handed in*) read or write? None of them know how to read.
 4. What religion are you?
 - J. Lopez*: He says he does not know that there is any religion equal to the Christian, but he only professes the China religion.
 5. *By Mr. Donaldson* (to Lopez): What is his very answer; what are the words he used. I think you must have imported the Christianity into that answer?
 - J. Lopez*: He is a very stupid man; he says he does not know anything about it.
 6. He does not know anything of the foreigners' religion, but does he know anything of his own? He says his religion is to believe a God, and if he do bad he will suffer for it.
 7. *By the Chairman*: What trade or profession are you in China? A workman, at eighteen pence a day.
 8. Are you a married man? Yes.
 9. Why did you not bring your wife with you? He says he did not know he would be allowed to bring his wife.
 10. How long have you been here? He says he came in here last year.
 11. Were you at the gold fields ever since? After two months he went to the diggings, and he was at the diggings eight months.
 12. How much money did you make altogether? Two hundred and a-half ounces of gold.

ON THE SEIZURE OF GOLD ON BOARD THE "ETHEREAL."

31

13. How much did you lose on board the "Ethereal"? He says the Custom House Officer Sang Hye took from him 200½ ounces of gold.

14. Was this all gold dust? Yes.

15. Were there no sovereigns at all among it? No.

16. Have you any sovereigns about you now? Not a farthing.

17. Have you any property left at all? Not a farthing.

18. Did you give up your gold at once without resistance? He says he delivered it as soon as the Custom House Officer asked for it very willingly—no resistance.

19. Did any Chinaman resist? Not one resisted.

20. Did none draw a knife? Not one.

21. Had they no knives about them at the time? No.

22. Have you no knives now? He says no knife.

23. How have you lived since? He says his friends help him—one day one friend, another day another—begging.

24. Were you going to take the gold that was taken from you to China? He says yes, he intended to take it to China.

25. Did you not know that you were breaking our laws by taking it away without paying the duty? He says that being here only a short time, then going to the diggings, and then coming back for a few days only before going to sea, he not know anything of the duty of gold.

26. Was every thing in the shape of gold taken away from all the Chinamen on board? The Custom House Officer took all the gold but nothing more.

27. Did he take any sovereigns from the other Chinamen? He says he do not know about any others, he had no sovereigns.

28. Did you see no sovereigns given to the other Chinamen? Not one; he not see one.

29. Do you know a Chinaman named Aheng? Yes.

30. Had he any gold taken from him? He had none at all.

31. Have you authorized Aheng to act as your agent to do this business for you? Yes.

32. Have you authorised the four men named in the petition to act in your behalf? Yes. Sixty-one gave the power to these four.

33. Had these four no more than four ounces of gold among them? Only Ayong had four ounces, but they agreed to appoint these four because they had confidence in them.

34. Was it on account of their not having gold that they were appointed? On account of Ayong being able to write.

35. Have you full confidence that if these men were to get this money they would give it to you? No doubt for that reason, for they knew well the men.

36. Who paid for their passage if these men had no money? He says three had money to pay their passage, but only enough.

37. Why did these men stay behind with the rest if they had no gold? He said they liked to go to China, but the sixty-one said they had better remain here and we will pay your passage after this is settled.

38. Would you be inclined to go back to the gold fields if you could—if you had the means of doing it? He says if he had the gold he would go back to China, but if he does not get it he cannot help it, he must go back to the diggings.

39. *By Mr. Hay:* If he received as much money as would pay his passage back to China would he go to China or return to the diggings? He says it is no use to go to China without a cowrie in his pocket.

40. *By the Chairman:* Why did these three men wish to go back to China when they had no money? He says these three men intended to return to China because they had sent some remittances in sovereigns some time ago.

41. Do you know what the Mint is? He says he never heard of it before; he don't know nothing about the Mint.

42. *By Mr. Robertson:* I should like to know where he found the gold? He says he has been at Turon and Tambaroora.

43. Did the whole of the gold of the Chinamen come from this side or from Port Phillip? He says they all belonged to this place, to Tambaroora, the Turon, and Louisa Creek.

44. Will you ask him whether he was aware that at Port Phillip there is a tax imposed upon Chinamen upon their landing? He says he does not know anything about that, because he just came here, and then went to the diggings.

45. Did he not hear from the ship owners that if they landed at Port Phillip they would have to pay a tax of £10? He says that may be the case, but he did not know that; he had not been to Port Phillip. I told him that he must be aware from some friend, but he said he did not know nothing about it.

46. Ask when he left his own country? He says he left it to come to this place, and was here only a short time before he went to the diggings.

47. *By Mr. Hay:* Are all the sixty-one of the Chinese who signed this Power of Attorney now in Sydney? Some of the sixty-one are here; part of them are gone to Hong Kong, and the others remain here.

48. How many remain here? He says there remain here thirty-nine.

49. Is A-kin here? He says there were so many men he could not explain whether this man was here or not. He says he do not know so many names; he is very stupid this one.

50. Is Tywang here? He says he cannot say whether he is here or not; he only knows that there are thirty-nine here. I say to him you must know if they are here, how the devil don't you know the names that is here.

51. This list includes the names of sixty-one? (*Referring to the power of Attorney*) Yes.

52. This was drawn out before the ship left? No, after the ship left. [*The Chairman requested Mr. Newbon to explain the circumstances.*]

Mr. Newbon: When I first took this matter in hand, I requested the men to appoint some men

- Sang Hye, or men whom they could trust to act for the rest, and they appointed the four named in the
 Asseng. petition
 18 Dec., 1856. 53. (*By Mr. N. Wilson*): Was this document executed before the ship left? On or about the time.
 54. *By Mr. Hay*: Was it signed by the Chinese who left the country as well as by those who remained behind? It must have been signed by them—not exactly signed by them, but at their request. One man signed for all the rest.
 55. *To Sang Hye, through Lopez*: Was this (*the Power of Attorney*) made in your presence? He says yes, he saw that.
 56. Were these characters written by one Chinaman, and which? The man who did that was Aheng.
 57. Supposing the Government were to distribute a certain amount of money, say £10 each, to enable the men now in Sydney to return to the gold fields, would you be satisfied to have that distributed by the four men named here as Attorneys—Aheng, Ayong, Ackitt, and Amang? He says everything is to go to the hands of these four men, and what the four men do they all agree to.
 58. Would he go back to the gold diggings if he received £10 from Government? He says he obliged to go to the diggings again—but, on his part, he was quite ignorant of the law. In case the Government only give £10 each he shall be obliged to go to the diggings; he do not want £10.
 59. Am I to understand that he would rather take nothing at all than £10? He says he has been so long stopping here that £10 would not be enough to pay his board and lodging.
 60. Tell him the 200 ounces is forfeited to Government, and that other people have a right to that; that the Government cannot give it to them, but might give £10 to each Chinaman, to enable him to go out of Sydney—and ask him whether he would rather take that £10 or go without it? He says he do not know what his companions might do; but, for his own part, he has been suffering so much, and he knows nothing about the law; but, in case Government having no consideration for a poor man, £10 will do nothing for him; it will not pay his debts, and, on his part, he would not receive £10.
 61. *By the Chairman*: Did you hear from any one on board—the captain or any one else—that the gold was liable to duty? He says he never heard from anybody—the captain or any one—anything about the duty.

Seng How, or Ong Sing, called in and examined through J. J. Lopez:—

- Seng How, or Ong Sing.
 18 Dec., 1857. 1. *By the Chairman*: How much money did you lose on board the "Etheral"? 183 ounces, and nine sovereigns.
 2. Did you lose all you had? Yes, everything.
 3. Do you know these men—Aheng, Ayong, Ackitt, and Amang? Yes.
 4. Have you perfect confidence in them as your agents? He says every one agreed to the four.
 5. Are they very honest men? Yes.
 6. They have always had a good character? Yes.
 7. Do you understand English at all? No.
 8. If the Government were to give you any money back, say £10 each, would you go to the gold fields, or return to China? He says he would be very sorry to lose the money, he is a very poor man, but he refuses to receive £10.
 9. Do you not know that you broke the laws of this country in trying to take this gold to China without paying the duty? He says he knows nothing about duty on gold—that he came here to Sydney and only on the second day he took the ship.
 10. Had you any sovereigns taken from you on board the "Etheral"? He says he lost eighteen half-sovereigns.
 11. Where they ever returned to you? No.
 12. *By Mr. Hay*: Were they in the bag of gold, or loose? Joined with the gold inside the bag.
 13. How are you living now? He says he has some friends (Chinamen) and one day he begs of one, and another day he begs of another.
 14. What does he propose to do if he does not get the money back? He says, if he do not receive the money he do not know what he can do; he might go to the diggings; he might die in Sydney, God knows.

Aheng again called in and farther examined through J. J. Lopez:—

- Aheng.
 18 Dec., 1857. 1. *By the Chairman*: The gold dust seized by the Custom House Officers is forfeited, and the Government have not power to give it back; if, however, they were willing to give £10 to each of the Chinamen, to enable them to return to the diggings, would they take it? He says he should be obliged to consult the others; but the money party, although they are now poor men, would not like to take the money; they would rather lose all than receive £10. He says the Custom House Officers did not take the gold by force, consequently they did not resist.
 2. *By Mr. Robertson*: Was the gold that was seized obtained at Port Phillip, or in this Colony? At the Turon, Merroo, and Louisa Creek.

3. *By the Chairman:* If the Committee were to recommend the Government to remit a portion of the fine to the extent of £10, would you and your countrymen be willing to accept it, and return to the diggings? (*A conversation of some length ensued between Aheng and the interpreter.*) I say to him, he is head man, and he had better consult his friends; he says, by himself he can decide it. I say he had better not. He says he has full power. I tell him, "You had better go and consult with your friends, you may not require £10, but the others may; £10 may do many things." On his own part he says he is a poor man, God knows, he might die in Sydney, and £10 can do nothing for him, and he had better lose his life at once.

Aheng.

18 Dec., 1857.

1858.

FRIDAY, 25 JUNE, 1858.

Present:—

Mr. COX,
Mr. DONALDSON,Mr. FORSTER,
Mr. HAY,

Mr. JONES.

W. FORSTER, Esq., IN THE CHAIR.

Harold M'Lean, Esq., called in and examined:—

1. *By the Chairman:* You are a Gold Commissioner, are you not? Yes; I am Commissioner in charge of the Western Gold Fields.
2. Are there many Chinese upon those gold fields? Yes. I estimate the number at the present moment at from five to six thousand, at least.
3. Have you had any acquaintance with them, that will enable you to give the Committee any information respecting them? Yes, I think so.
4. Are they generally tolerably well acquainted with our language? No.
5. Are there interpreters among them in any number? There are interpreters.
6. Do you think there are a sufficient number of interpreters to enable them to transact business, generally, with our people? Yes, to transact business, because their habits of business are such that they soon acquire the mode of transacting it, even without an interpreter.
7. Are these interpreters a superior class of men generally? When I say interpreters, I must explain that I am aware of only one in the Western Gold Fields who may be called an interpreter, although some men act as interpreters from being able to make themselves understood in English.
8. Are these men who act as interpreters Chinese? Yes, Chinese, entirely. I have never known any other person interpret for them.
9. From your knowledge of Chinese, should you say that in general intelligence they are equal or inferior to the laboring class of our own nation you meet with? As regards the transaction of business, I consider them superior in intelligence.
10. Have you observed that they have a tolerable knowledge of our laws? So far as they affect them in money matters they have a full knowledge.
11. In particular, do you consider their knowledge of our laws, as regards their own interests, is fully equal to what is necessary? As regards money and business matters.
12. Should you suppose, from what you have heard, that they have a knowledge of all such laws as affect the production or export of gold in any way? They have now.
13. Do you recollect the period about which a seizure of gold was made on board certain vessels in Sydney Harbour? I remember the circumstance, but not the date.
14. Do you think at that time they had the same general knowledge of our laws as affecting the export of gold as they have now? I am disposed to think they then had a knowledge that a tax or impost was to be paid, but I would not like positively to say so.
15. From your general observation, you come to the conclusion that the existence of a law imposing a duty upon gold was known to the Chinese at the time of the seizure? I believe it was.
16. To the Chinese generally? Yes; but that it was not generally known in what way it would be levied—the particular method of collecting it. But there were people to whom they entrusted the carrying out that part of the business.
17. Do you suppose that the circumstance of this seizure has quickened their intelligence and knowledge upon that particular point? I think it has; their knowledge is full upon the point now.
18. You think they are better acquainted with the law now than they were then? My reason for knowing they are now so well acquainted with the matter, is from a police case which came before me a short time since, in which a man had been entrusted as an agent to convey gold, and it came out in evidence that he had been paid the duty upon every small parcel he conveyed, whether an ounce or half an ounce. He was provided with money to pay all the charges and duty.
19. Have you seen many documents in writing among the Chinese? Yes, various documents.
20. Are you aware whether they have any of our laws translated into Chinese? I am not aware; I believe not.
21. What documents have you seen among them? Letters which have been handed in at the Police Office, and read by the interpreter. I communicate with them by means of written notices, which are written by the interpreter, and posted at the various camps. I find they have the desired effect in every case. They pay every attention to them.
22. Do you think any large majority among the Chinese read and write, or what do you think is the proportion of those who read and write as compared with those who do not? I do not think a very large number read and write; a large number read and write to a certain extent, and almost every one of them can sign their names in Chinese characters.
23. Have you any reason to suppose that among them there is any large proportion of men

H. M'Lean,
Esq.

25 June, 1858.

H. McLean, Esq. of superior class—I may say, in general terms, what we should understand by the term “gentlemen?” Not many; I have seen a few men whom I imagine to belong to the higher class, but not many.

25 June, 1858.

24. Have you reason to suppose many of them are Christians? I have not met with any.
25. What is their general religion—should you imagine them to be Pagans? I have never been able to ascertain.
26. Have you any knowledge of the mode in which the Chinese are employed at the gold fields—are they employed in companies, under the command or authority of an individual, or any number of individuals? There are many of them in organized parties of from twenty to forty, one man, called a head man, defraying all their expenses—he is, consequently, a man of influence among them; but when they pay the expense he has incurred they are released from his service, and go on their own resources.
27. Do you think any of them come here holding a certain amount of capital in trust for other persons? I think a great number, if I understand the question aright.
28. They come entrusted by parties in China with capital, upon which a certain amount of profit has to be paid? I believe so.
29. Should you not infer from that, that men intrusted with money in that way would be men of superior character in their own country? Yes; I should imagine they must be superior to the general run.
30. Can you conceive a large number of laborers of our own nation being sent into a foreign country entrusted in that way with capital? I could not in the case of laborers, but the men who are entrusted with money in this way are what I should call the business class; they keep stores on the gold fields. I know instances of men of this class who can command a thousand pounds, or more than that.
31. *By Mr. Jones:* These are the business men? Yes, who keep stores.
32. *By the Chairman:* Men who, among our own people, would be said to belong to the middle class? Yes. I think they form about the proportion that the European business community forms to the other, or rather a lesser proportion.
33. Should you not say it implies a rather high character for probity, even among the laboring classes, that so many should be sent to a foreign country at the expense of another person, and be entrusted with the property of others in this way? I think it shews great integrity, and I believe the Chinese are celebrated for their integrity in matters of business. They are most punctual and correct in their business transactions with all other persons on the gold fields.
34. Do you think it probable, from what you know of the character of the Chinese on the gold fields, that a large number of them would, in giving evidence before a Committee of this kind, tell a number of falsehoods? Do you mean interested witnesses?
35. Even interested witnesses? No, I think not: I find their evidence in the Police Office to have been generally very truthful.
36. Do you think it would be reasonable for a Committee like this, who, as you are aware, examine witnesses without putting them on oath, to take the evidence of a number of Chinamen, and attach the same degree of credibility to it as we should to the evidence of the same number of laborers of our own nation? I think so.
37. Have you noticed any number of Chinese employed in private service? Not many on the Western Gold Fields.
38. That is not a common occurrence? No.
39. Have you not seen any instances? Yes.
40. Have you reason to believe that those who have been thus employed have been of a different class, either superior or inferior, to those on the gold fields? I think those on the gold fields are of the average class. Those who are in hired service, chiefly as cooks, have generally been unfortunate in their digging pursuits.
41. Have you observed that these men have been as good servants as men of our own nation in the same class of life? I think they make very good servants.
42. From your experience of Police Courts, have you any reason to believe that a larger proportion of crime is committed by a number of Chinese as compared with that committed by an equal number of our own people? I believe the proportion of crime committed by them is less than that committed by our countrymen of the same class, that is, so far as it comes under the cognizance of the law, or my observation.
43. Have they a mode of settling disputes among themselves? They have men of influence among them, who rule them in a great measure.
44. I presume they decide disputes which might otherwise come before you? Yes, many cases they prefer to settle among themselves.
45. Making that allowance, would you say the number of crimes committed by Chinese on the gold fields is equal to, or less than, those committed by the same same number of our own people? Less, certainly.
46. Then your general opinion of the Chinamen on the gold fields appears to be highly in favor of their general intelligence and probity? Yes.
47. Do you consider them a cleanly people generally? They are most cleanly, in all the large camps on the Western Gold Fields, most particularly so. In a large camp of 500 Chinese you would not find one cooking utensil that was not in a clean state; their beds would be rolled up in the same state as on board a man-of-war. They have some sort of discipline in a camp that leads to this cleanliness; whether it is their natural bent or not I cannot say.
48. What is the nature of the work they perform at the gold fields—do they generally work the refuse left by others, or do they by themselves open new gold diggings? They confine themselves almost entirely to the refuse.
49. Should you not then say that they produce gold under circumstances which otherwise would not be produced at all? According to the present system of gold mining they do; but

but I believe that the refuse they work might be beneficially worked, under an improved system, by Europeans. H. M'Lean,
Esq.

50. *By Mr Jones:* You state that, according to your estimate, there are some five or six thousand Chinese on the Western Gold Fields? Yes. 25 June, 1868.

51. At what time did you form that estimate? Towards the end of last month.

52. Before the arrival of the number who have reached the Colony recently? I formed my estimate before the recent arrival, but include in the number now mentioned those I estimate to have since proceeded to the Western Gold Fields. My first estimate was under 5,000.

53. What proportion do these Chinamen on the Western Gold Fields bear to the total mining population? They exceed the total male mining population by nearly 1,000.

54. What proportion do they form to the total population on the Western Gold Fields? More than one-third. That is merely an estimate I have formed on the data of the miner's rights I have issued, and my calculation of those to whom I have been unable to issue them—those who have recently arrived.

55. From your official intercourse with the Chinese have you reason to believe that they are pretty well acquainted with the regulations affecting gold mining? They are now; whether that has arisen from the seizure of gold I cannot say.

56. I do not speak now so much of the export duty as of the general regulations—do you think they are pretty well acquainted with them? They are tolerably well acquainted with the money part; they know what payment is to be made immediately.

57. Have you reason to believe that the Chinese generally are less acquainted with the regulations than the European population? They are less acquainted, from want of sufficient means of communication. The European miners can read the regulations, and can hear at any time the decisions of the Commissioner, and talk over them among themselves. The decisions would of course be unintelligible to Chinamen.

58. Are there not among the Chinese some number who are well acquainted with the regulations? There are some of the leading men who are well acquainted with the regulations, or rather usages.

59. Have you reason to believe that these men inform their countrymen generally as to the nature of these regulations? They are acquainted with the nature but not with the detail of the regulations.

60. Do you find the Chinese as regular in taking out their miner's rights, and paying their fees on these rights, as Europeans? No; they are more averse to paying the fee.

61. Do they seem to understand that the regulations require them to take out these rights? They are perfectly aware.

62. They are perfectly aware that the regulations require them to take out these rights, but they are averse to paying? They are averse to paying the fee, as a general rule.

63. Do you know when the Gold Export Act was passed by the Legislature? I do not recollect the date; I recollect about the period.

64. Do you recollect the time when the nature of this impost was made known on the Western Gold Fields? Yes.

65. Now rather more than twelve months ago? Yes.

66. I suppose a very short time after the Act received the Royal Assent, and it became law, it was known at the gold fields that a duty of half-a-crown an ounce was payable upon gold? Yes.

67. Have you reason to believe that within a few months it was pretty generally known among the Chinese? Yes, I think it must have been.

68. Within, say, three or four months after its passing? Yes, that such a deduction was made in the value of gold was known to their leading or business men.

69. That such a duty was payable on gold exported? Yes.

70. You believe that the business men and head men among the Chinese knew pretty well when and how this duty was to be paid? I doubt whether it was known to those on the gold fields.

71. Do you think in the month of December last, some eight or nine months after this Act became law, that it is at all likely that parties of fifty or sixty Chinese would take passages in Sydney for China with a quantity of gold without some of them knowing that they had to pay a duty of half-a-crown an ounce on the gold? I think most certainly not.

72. Do you think with that knowledge among them there would be a desire to evade the payment of this duty? I think they would willingly evade the payment, but that they would not wish to do so at any risk.

73. You said just now that you generally found the Chinese, although pretty well acquainted with the regulations, averse to paying the fee for the miner's right? Yes; but the Europeans also are averse to paying the mining fees; the Chinese are, however, still more averse. Perhaps I can explain that in one way: The European generally holds a richer claim, and without this mining right he would be dispossessed. The Chinese, who are in large parties, seldom come under consideration with regard to their ground, therefore they have not the same interest in being possessed of a mining right as the European.

74. As a rule, you have found a considerable aversion among them to the payment of the mining fee? Yes.

75. Rather more than you have found among Europeans? Yes.

76. I understood you to say that you think it unlikely a party of fifty or sixty Chinese would come to Sydney and take ship for China with a quantity of gold without knowing that a duty was payable on that gold? I think it must have been known generally among them, that it would have to be paid, but I do not know whether they would be acquainted with the mode of payment.

77. *By Mr Hay:* You think the Chinese, although unwilling to pay mining fees, would not be disposed to run any great risk? Certainly not; I think they are too cunning.

H. McLean, Esq. 78. There is no great risk of forfeiture attending the non-payment of mining fees? No; only the risk of being fined in a small penalty.

25 June, 1858. 79. Have you found some difficulty in managing the Chinese, from the want of a proper interpreter? Yes, very great difficulty.

80. That is the principal difficulty you have found? Yes.

81. Have you an interpreter now attached to your department on the Western Gold Fields? Yes; and I have found great facility in governing them through him, and by means of written notices in the Chinese character.

82. Without a competent interpreter you would have great doubt as to whether the Chinese would understand what they were wished by the Government authorities to do? Very great difficulty indeed to make them understand; in fact it would not be possible to manage them without an interpreter.

83. Do you think your interpreter a competent man? The most competent man I have met with, for this reason, that he is acquainted with all the various dialects of these men.

84. What countryman is he? He belongs to Hong-Kong.

85. Is he a Chinaman? Yes.

86. Is he a British subject? I believe he is. He came from Hong-Kong, from which place he was employed as an interpreter on board ship during the Chinese war.

87. Do you know whether he professes the Christian religion? No, he does not. He does not seem to have any religion whatever, as far as I can gather from him.

88. Does he understand English well? He understands it better than he speaks it. His great qualification is his ability to speak and write the different dialects.

89. Have you found you can put confidence in him? Yes.

90. What salary does he receive? £150 a-year, providing a horse for himself.

91. Has he no means of making anything besides his salary? No; his time is entirely taken up.

92. *By Mr. Jones:* What degree of credence would you attach to the evidence of Chinamen in a case similar to this now before the Committee—that is, where their gold has been seized for non-compliance with the Customs laws—what degree of credence would you attach to their statements, made with a view to recover their gold, or a portion of the proceeds of their gold? I would give considerable credence to their statements, but I would not place implicit reliance upon them. If their statement seemed to be probable I would be inclined to receive it.

93. Would you be inclined to rate their general veracity as highly as you would the general veracity of our countrymen? As far as my own experience has gone, I have found nothing to make me form a lower estimate of their veracity than of the veracity of the lower classes of other countries.

94. *By Mr. Cox:* In the event of Government declining to pay the salary of an interpreter, do you think the Chinese themselves would willingly bear the expense for the sake of getting justice for themselves? I question whether they would be disposed to do so—certainly not until they had fully felt the inconvenience of being without one.

95. In the event of a Chinaman coming to you for a summons, do you think he would object to pay an extra half-crown for the services of an interpreter? In such a case he would not.

96. So that the interpreter might be paid in that way? He might be partly paid in that way; but the Chinese would not pay the interpreter for Government purposes; for instance, in collecting miner's rights from them, and explaining police regulations to them.

97. Then, in any event, it would be necessary to have an interpreter? Absolutely necessary, where they are in such numbers.

98. *By Mr. Hay:* It would be necessary that they should see a very distinct connection between the interpreter and their own advantage before they would consent to pay his salary? Yes.

99. *By Mr. Cox:* Are you aware whether any increased expense has been necessary on the Western Gold Fields in consequence of the large influx of Chinese there? There has been no additional expense incurred, except by the appointment of the interpreter; but increased expense will become necessary to meet the requirements of the district, from which a very large increased revenue has been derived.

100. Do you not think the influx of the same number of Europeans would have rendered an increased police establishment necessary? Yes.

101. An addition to your population of five thousand Europeans would have rendered an increase of your police force necessary before this time? Yes, a small accession.

102. Although you have not received any accession with this increased number of Chinese? No; but although I have not received them, I consider them absolutely necessary.

103. That would imply that Chinamen, as a body, require less police protection or coercion than the same number of Europeans? I think so.

104. *By Mr. Donaldson:* Do you know of your own knowledge that these people are flagrantly immoral? Not to my own knowledge.

105. Has anything come before you to prove that they are so? No.

106. You have never had an instance of a Chinaman brought up before you for any unnatural offence? No.

107. Not one? No.

108. *By the Chairman:* Should you think it at all probable, supposing these Chinamen to be fully acquainted with the Gold Duty Act, or with the fact that a duty was to be paid, they would go on board the vessels from which the gold was seized under the impression that they would pay the duty on board? I think it possible they might have gone on board under that impression.

109. Have you given any consideration to the working of the Act that regulates the duty upon gold? I have not given any consideration to the working of the Act for the collection of duty; it has not come within my province in any way.

110. You cannot give any opinion, I presume, as to whether it has worked satisfactorily or not? On the gold field it has worked well.
111. Do you think it a preferable mode of collecting an impost upon gold to the previous system? Yes. H. McLean,
Esq.
28 June, 1868.
112. Do you think it more satisfactory to the mining population generally, whether Chinese or European, than a direct tax would be in the shape of a miner's right? I think it more satisfactory to the population generally; but there must be a fee paid for the miner's right. They must have a document given to them, and for which they pay a tax, or fee.
113. For the purpose of registration? Yes; and even for the purpose of police regulation. They, the European miners, in general sense, have no objection to the payment of the present fee of ten shillings.
114. A large fee you think would be oppressive? Yes; it presses unequally.
115. You think the miners, generally, are not discontented with the levying of duty on gold? Not in the least; they would rather pay their amount to the revenue in that way, they say, than in any other; many would, of course, rather pay none at all.
116. *By Mr. Hay:* Do you think it much easier to control and manage the miners now than formerly? Yes; than if the licensing system had continued, with the increased population.
117. You have not found the increase of population attended with a great increase of trouble under the new system? No, comparatively, by the advantage of the new system.
118. Are you able to avoid any antagonism with the diggers? In a great measure. The miner's right fee is still a compulsory impost; but, as a general rule, it is unnecessary to resort to coercive measures with regard to the better classes of European miners, the fee being so small.
119. Because it is necessary for them to come before the authorities to assert their rights? There is no objection to taking out the mining right, *generally*, on the part of the European population. I remember having a conversation with the present interpreter, in whom I have considerable confidence, with regard to this particular case of the seizure of the gold, some time back, and he was not aware at the time that his conversation with me would be of any consequence to the parties, and the tenor of what he said was, that the real owners of the gold that was seized had actually paid the duty, or believed that the duty had been paid by the party who was entrusted with conducting the transaction. He blamed one man for appropriating this money.
120. Did he name him? He may have done so, but I cannot recollect his name.
121. *By Mr. Jones:* Have you reason to believe, from the conversation you had with the interpreter, that these persons on whom the gold was found when the seizure was made had other gold than that belonging to themselves, on trust for other parties? It was so stated by the interpreter; and I know it to be the custom for the Chinese at the gold fields to remit their gold by agents to their friends in China, the gold being made up in small parcels by each consignee; and whether they were carrying their own gold or gold for other people could be proved by its being ascertained whether they had it in one package or in a number of small packages.
122. Then, if a Chinaman had gold in one package, the presumption would be that it belonged to himself, but if it were in a number of small packages it would be that it belonged to a number of persons? Yes.
123. That he was conveying it to China for other parties? Yes. It is their custom in such cases for the consignee to pay the agent the commission, duty, or whatever other expenses may be connected with the conveyance of the gold. This is paid by the party at the gold field, before the agent leaves. The interpreter asserted that the gold seized belonged to a number of persons on the gold fields, and not to the sixty men from whom it was taken on board the vessel. If this were so, I believe the consignees would have paid the duty and charges rather than run the risk of losing the whole. The agent might have appropriated the duty to himself. From subsequent inquiries, I have reason to believe that the statement of the interpreter, that the duty money had been entrusted to an agent by whom it had been appropriated, was made on erroneous information. I think it most probable, however, that if the impost were well understood on the gold fields, the amounts to defray the Custom House charges were paid by the numerous consignees into the hands of the sixty persons entrusted with the conveyance.

Captain Edward W. Ward called in and examined:—

1. *By the Chairman:* You are Master of the Mint in this Colony? Yes.
2. Will you state how long you have been so? In Sydney I have been three years and a half.
3. I suppose you scarcely have any record in the Mint which will enable you to distinguish the classes of individuals from whom the gold comes to you? I think we have
4. Could you distinguish the gold that comes to you from Chinese from that which comes to you from Europeans? There are many persons at the diggings who consign gold direct to the Mint, and to whom I return the value through the Gold Commissioner.
5. Would you be able to inform the Committee, in a general way, as to the number of Chinese who have passed gold through the Mint from the time you first had the supervision up to the present date? Yes. I think I could give the name of every Chinaman, and what he sent; but I would guard the Committee against supposing that that would be an account of all the gold obtained by them which finds its way to the Mint, because they may dispose of their gold to a middleman at the diggings, an English storekeeper, or a banking establishment.
6. Would you not say that such a return would give something like a tolerable estimate of the proportion of gold sent down by the Chinese to the Mint? I should not depend upon it myself; because the banks may buy gold of Chinamen, and give them notes in exchange on the

Capt. E. W.
Ward, R.E.
25 June, 1868.

Capt. R. W.
Ward, R.E.

25 June, 1858.

the spot. Then, again, the storekeepers may collect it from them, and give them cash or stores in exchange.

7. Can you give any idea of the proportion of the amount that has come through your hands from the Chinese as distinguished from the proportion paid by Europeans up to the present time? I could not give it now.

8. Could you not state it in round numbers? My idea is that very little comes in the Chinamen's own names.

9. A large quantity of the gold that has passed through your hands has been the property of Chinamen of whom you have no account? It may be so. I do not know how they do their business.

10. Have you observed any difference in the amount of gold with which the Chinese have been connected in any way since the date of the seizure of gold on board the two vessels, of which you must have heard? I may say that very little has been sent to the Mint in the name of Chinamen at all. I have seldom signed a cheque for a Chinaman by name. I know the Oriental Bank buys largely with notes up the country at Stoncy Creek; they buy it on the spot, and it is coined in the name of the bank.

11. Still, in a great number of cases, these parties remain the owners of the gold after it has passed through the Mint in the shape of sovereigns? Not in the case of the gold sent to us by the banks; the banks finally buy it, and when they buy it, it of course becomes their own property.

12. Then you would not say that any large number of Chinamen do convert their gold into sovereigns? Not as far as the records of the Mint show. I have a strong impression that nearly the whole of the proceeds of the gold fields comes to the Mint, whether from Chinese or others.

13. But in the shape of the property of Chinamen very little does come to you? Very little.

14. It is generally the property of others before it reaches the Mint? Yes—of the storekeepers or the banks.

15. Then, in fact, the Chinese seldom use the Mint direct as the means of coining gold into sovereigns? In a very small degree in proportion to other diggers.

16. You are aware of the seizure of gold on board two vessels in October last? Yes.

17. Have you observed any difference since that time as to the quantity of gold passed through your hands as respects the Chinamen? No.

18. Did you observe that a larger proportion passed through the Mint after that seizure? A larger proportion has passed through the Mint, but I do not attribute it to that cause, but to the fact, that a little before that time the Government abolished the escort fee. When the escort fee was paid, perhaps, thirty per cent. of the gold never came to the Mint at all; since that, practically, the whole has come.

19. You attribute the increase in the quantity received at the Mint entirely to other causes—you would not say it had been effected by the seizures on board the "Ethereal" and "Mary Nicholson"? No; I should say certainly not.

20. *By Mr. Donaldson*: You attribute the increase to the release from the escort fee? Yes, entirely to that.

21. *By the Chairman*: You have not observed that the Chinese have directly dealt with the Mint since that time more than before? No, I have not; their dealings with the Mint direct are very insignificant, and ever have been. I have observed nothing that would make me suppose they have been less disposed to evade the gold duty than formerly. That is the object of your question, I presume.

22. Have you given any consideration to the working of the Gold Duty Act? I have.

23. Is it your opinion that the Act has worked well and satisfactorily? I think it has worked very well—that everybody is very contented with it—and that it is very popular at the gold fields.

24. You consider it a better mode to collect a duty than to impose a direct tax on the digger? I think so; because the duty is collected at the Mint at the time the owner realizes on his produce, and the Mint furnishes him with an "Account Sales," shewing every charge. Many, I believe, act as commission agents between the digger and the Mint, charging for agency a commission on our "Account Sales."

25. *By Mr. Jones*: The storekeeper, in fact, sends the digger's gold to the market? Yes.

26. And the digger is credited with the actual amount of coin produced, less the charges? Yes. The storekeepers often consign to the Mint gold for these men. Messrs. Cohen & Co., I believe, send a great quantity down.

27. *By the Chairman*: You have no reason to suppose the imposition of this duty has in any way injured the production of gold? No; it rather encourages it; it makes the people more contented, for they have perfect reliance on the charges and valuations of the Mint.

28. You do not mean to say that the imposition of this duty operates as an encouragement, more than the imposition of a smaller duty would, or more than none at all? I mean to say that this gold duty acts as an encouragement, as compared with the old license fee. In the one case the miner pays nothing unless he obtains gold, in the other he has to pay whether he gets any or not.

29. *By Mr. Jones*: Your observation refers to the change in the system? Yes, to the change from one duty to the other.

30. *By the Chairman*: I am speaking of the duty now paid as compared with no duty—do you think it would lead to any larger production of gold if there were no duty at all, but merely a registration fee imposed? No. I think better gold regulations will do more to increase the production of gold. The subject is now under the consideration of the Government, and it has been proposed to give extended claims, and longer leases, in order to encourage mining as a distinct branch of industry.

31. You think these regulations you speak of would operate as an encouragement to production? Yes, and that a great deal of ground would be worked that cannot be touched now.

32. Do you think the duty is too high or too low? It is very contentedly paid, and does not affect the production. Capt. E. W. Ward, R.E.
33. Suppose it were reduced one-half, would it be likely to increase production? I think not. The great objection to the reduction of the duty would be that we are under a sort of pledge to Victoria that we will not. There was a sort of implied agreement that they would take our sovereigns in consideration of our placing the same duty upon gold as was levied by them. It was thought smuggling would be induced from Victoria to this Colony if coinage of the Sydney Mint obtained legal circulation there, and no gold duty were imposed in New South Wales. 25 June, 1858.
34. You consider this a federal question? I believe it was treated in that way.
35. You do not mean to infer that if we found the Act operate injuriously to our interest we should be still bound to continue it in force? No; certainly not. They would probably take their own measures, and declare our coin to be no longer a legal tender.
36. *By Mr. Jones*: Have you ever received, direct from the Chinese, gold to be coined at the Mint? Yes.
37. In many or in few instances? In few. The quantity of gold received from them has been inconsiderable, as compared with that we have received from other people.
38. In the communication you have had with Chinese had you reason to believe that those who sent their gold direct to the Mint were well acquainted with the mining regulations, and the law affecting the export of gold? Some of them are. I never communicate with them very much direct. Unless they wish to see me personally, the business goes on in another office. Men have been brought to me, who wished to know what they were to do with their gold. Dr. McKellar brought one, who appeared to be a very intelligent man, and who represented a number of others, and I gave him the information he required. Of those who have brought their gold to the Mint, some place their signatures to the receipts, and others merely put a cross; so that I should say some are educated and some are not.
39. Your intercourse with the Chinese has not been sufficient to enable you to say whether they are acquainted with the Gold Export Law or not? No.

FRIDAY, 2 JULY, 1858.

Present:—

Mr. COX,
Mr. DONALDSON,

Mr. FORSTER,
Mr. HAY,

Mr. JONES.

W. FORSTER, Esq., IN THE CHAIR.

John De Courcy Bremer, Esq., called in and examined:—

1. *By the Chairman*: What office do you hold? I am First Tide Surveyor in Sydney. J. De Courcy Bremer, Esq.
2. You recollect giving evidence before a Committee last Session with reference to the seizure of gold on board the "Ethereal"? Yes. 2 July, 1858.
3. Did you not make a similar seizure on board another vessel? Yes; on board the "Mary Nicholson."
4. Will you be so good as to state the circumstances under which the seizure took place, commencing with the information you received, and stating how the seizure was carried out? I was ordered by the Collector to go on board the "Mary Nicholson"; that was the first information I had that the Chinese had gold. The "Mary Nicholson" was the ship I first boarded. I went off, taking Mr. Lockyer, who is attached to the office, in the boat. I went on board and made a seizure of this gold on the persons of these Chinese.
5. State, in round numbers, the quantity of gold you seized, and also the circumstances of the seizure? The quantity of gold sold, seized on board the "Mary Nicholson," was 457 ozs. 8 dwts.
6. From what number of Chinese? I really cannot say.
7. In round numbers, about how many? About forty, I think, more or less.
8. Did you get gold from every one of them? No; some had not gold, if I remember right.
9. Was the gold generally in small packages? It was in belts, round their waists.
10. Did each person possess a number of small packages? Yes, generally speaking; one man might have a large piece tied up separately, or a larger quantity; but generally they had a number of packages tied up separately, and marked in their own language.
11. These packages were distinct? Yes.
12. Were any sovereigns among them? The sovereigns were found afterwards in the packages. I asked them, as I stated when I was before examined, whether they had any sovereigns, and all the sovereigns they had that we could perceive we returned; but when the gold was condemned, and was being weighed at the bank, we found some sovereigns tied up among the gold.
13. You are confident of having returned, how many sovereigns should you say? I think about sixty.
14. You returned about sixty? No. I did not understand the question. I think there were about sixty sovereigns among the gold.
15. How many were returned on board? I could not say; all coin found on them, whether silver or gold, was returned.
16. Was there some silver found on them? I think there were some shillings, or half-crowns, I cannot remember.

- J. De Courcy 17. Are you confident of the fact of having given these sovereigns back to the Chinese themselves? Yes, every one we found upon their persons. I said to Mr. Lockyer, "That is coin of the realm," and I thought we should return it, although it would be liable to confiscation under the Act—still I would not have seized it under any circumstances.
- 2 July, 1856. 18. How did the Chinese take your interference? They were very submissive on board that ship; they allowed themselves to be searched without any resistance. That was not the case on board the "Ethereal."
19. Did they appear to be surprised? Of course; a man does not like to have his gold taken away, but they gave it up, and I do not remember any remonstrance.
20. Had you any means of communicating with them, so as to let them know your purpose? A man acted as interpreter.
21. Did you take him with you? No; he was on board.
22. Was he an Englishman? No; one of the Chinese.
23. Could he speak English pretty well? Not very well.
24. Have you reason to suppose he understood you? I suppose he did.
25. You say there was a marked difference between their demeanour and that of the people on board the "Ethereal"? Yes. I should not have requested the aid of the man-of-war if the seizure of the gold on board the "Ethereal" could have been effected under the same circumstances.
26. Will you proceed to state what you did with the gold? I took the gold into the boat, and mention having been made of the "Ethereal," I then proceeded, as I before stated, to that vessel.
27. The circumstances connected with the seizure on board the "Ethereal" you have stated in the evidence you have already given? Yes. I took the gold in the boat from the "Mary Nicholson," and when I boarded the "Ethereal" I left Mr. Lockyer in charge. The gold from the two vessels was kept in two packages, and when I left the "Ethereal" I proceeded with the row-guard of the man-of-war to Colonel Gibbes at the North Shore.
28. Can you state to the Committee how the information was gained? Colonel Gibbes could state that. I was ordered on that particular duty by the Collector himself.
29. Whom do you consider to be the seizing officer? The seizing officer would, of course, be the Collector and myself.
30. You were the officer of highest rank in charge at the time? I was, with the exception of the officers of the man-of-war, who consider themselves joint seizers.
31. Have you any knowledge whether the gold has been distributed since? Yes.
32. Can you state how it has been distributed? I can only state what I received myself. I received from the proceeds of the gold from the "Mary Nicholson," sold 27th November, £287 18s. 4d., and from the "Ethereal" £1,291, and some shillings.
33. This you received as your share—did you make any distinct claim for it, or was it left for you? It was left in the hands of the Collector, who wrote out the cheques on the seizing account, and sent them to my office for my signature and receipt.
34. Are you aware what proportion that bore to the whole amount realised? No; the Collector himself could give you more information on that matter. I do not know what the gold was sold at.
35. You make no further claim on the Government? No. I was only the servant. The Collector ordered me to go, and I considered myself duly entitled to a share of it, because I was a duly qualified seizing officer. If the Collector had gone himself, I should have received nothing.
36. You are not aware what shares were distributed to other persons? I do not know.
37. You have no fault to find with the distribution? No; as far as I am concerned, none.
38. Have you any further information, with reference to the inquiry before the Committee, you would wish to lay before it? None.

Henry Newbon, Esq., called in and examined:—

H. Newbon,
{Esq.

2 July, 1856

1. By the Chairman: You are a Solicitor? Yes.
2. You gave evidence before a Committee last Session with reference to the seizure of gold on board the "Ethereal"? Yes.
3. Were there not at the same time some Chinese whom you were advising, who had had their gold seized on board the "Mary Nicholson"? I was not so particularly engaged for the "Mary Nicholson" then.
4. Were you acquainted with the Chinese who had had their gold seized on board the "Mary Nicholson"? Then I was specially engaged for the Chinese who had been on board the "Ethereal," but I have now presented a petition for the others.
5. Are you able to give the Committee any information with regard either to the seizure of the gold on board those vessels or to the circumstances of the Chinamen on whose behalf the last petition was presented? I received from Appo, who is outside, this paper. (*The witness produced a paper. Vide Appendix A.*) This paper contains the names of the men whose gold was seized, and the quantity taken from each. Leau Appa, who is also here, will be able to serve as an interpreter.
6. You think he will be able to act here as interpreter between the Chinamen and the Committee? Yes.
7. Do you know whether he in any way has an interest in the matter? I do not think he has the least. He has been engaged in business in Melbourne, I believe, and has recently come to Sydney.
8. Has he arrived since the seizure was made? Yes; he is here only by accident.
9. Are you at all acquainted with his circumstances in life? Not at all.
10. Do you remember Aheng handed in a list of the names of the Chinese whose gold was seized on board the "Ethereal"? Yes.

11. Have you reason to believe that the asterisks against the names in that list denote those who are now in the Colony? There was evidence given respecting those who were then in the Colony. I presume those against whose names there are stars were then in the Colony, for I find the names of Aheng and the others of the four men who had the power of attorney so distinguished.
12. Under what circumstances have the men whose gold was seized been living in Sydney since? So far as I understand from them, they have been living on the charity of other Chinamen here.
13. Do you think the greater number have remained in Sydney ever since? No; the greater number have gone away—some to the diggings and some to China.
14. Have you any knowledge of the circumstances under which they were possessed of the gold at the time it was seized—whether they had it in trust, or whether it was their exclusive property? Not of my own knowledge; the man who was here at the time and wrote down their names could say.
15. *By Mr. Jones:* You cannot state how many of these men are now in the Colony? I have devoted my attention more particularly to the case of the "Mary Nicholson" lately. In the Appendix annexed, which contains, as I believe, the names of the Chinamen on board the "Mary Nicholson," the first seven names, I am informed, are in the Colony; the rest have gone to China. As to the Chinamen on board the "Ethereal," my answer, No. 17, in the minutes of the evidence taken 17th December last, shows, that at that time the names mentioned in Appendix "B" with an asterisk attached were then in the Colony; the others had left.

H. Newbon,
Esq.
2 July, 1858.

Henry Leau Appa called in and examined:—

1. *By the Chairman:* You are a native of China? Yes; I born in China.
2. Do you understand English pretty well? Yes.
3. How long have you known English? I been learning to speak English about seventeen years.
4. Have you been much among Englishmen? I have been in England.
5. What religion are you? I am a Protestant.
6. Of the English Church? Yes: Independent Church—Congregational Church.
7. Were you born a Protestant, or were you converted to that religion? My father and mother were China religion.
8. Are you a naturalised subject of the British Empire? Yes.
9. Have you heard anything about the gold that was seized from some of your countrymen on board the "Ethereal" and "Mary Nicholson" in this harbour? Yes, I do hear it.
10. Are you acquainted with the Chinamen whose gold was seized? I not know every one. I know some Chinamen, tell me. I not know whose gold they take. I only come here the other day.
11. You know some of them? I know some of them.
12. Are you at all interested, in any way, in this gold? Not at all.
13. You have come to the Colony since this affair? Yes.
14. You have nothing to do with it? Nothing to do with it.

Henry
Leau Appa.
2 July, 1858.

Henry
Lean Appa.
2 July, 1858.

15. Can you tell what are the circumstances of these Chinamen—are they very destitute, very poor? Yes, very poor. I saw, the other day, some cry down there.
16. How do they manage to live? They live—other Chinaman give him the food. I ask him, I say, “Why you Chinaman doing here?” and he told me he had leased the gold. But I hear at Melbourne they say the Chinamen got the gold, not pay duty, the Custom House take all that. Then I say to him, “Why you not take the duty before you take the gold to China?” He say, “I no know duty to pay.”
17. Do you think Chinamen generally know about our laws and customs—have they a good knowledge of it? Some want interpreter. Where there is interpreter he tell them; he write a notice, and put up to tell, every place—every place he put one, and that tell Chinaman—he know it.
18. You think the law should be put up in the streets—you think, if it were put up in the Chinese language, it would be very good, and the Chinese would know the law very well? Just so.
19. I suppose they have known the law pretty well since the seizure? I asked him, “You not know the law, the duty to pay of gold?” He said, “English law, he not know English law what to do; if somebody tell him what English law, he must do so.”
20. Were these Chinese sent out by other people—did other people pay their passage money? Some.
21. A great many? Not great many, some.
22. Some came on their own account, with their own money? Yes; their own money pay.
23. Do you think some of these held money for other persons? I beg you pardon.
24. Was some of the money taken from them on board money that belonged to other men—do you think that was the case? No; some belonged to himself; some that persons had sent for to China; some was his; some his friend; some to take to China to his wife.
25. If these men were to go to China now without their money, would there be any danger to them—would they have their heads cut off for not taking the money sent by their friends? They could not go to China that way; for another friend send gold to China, perhaps to his father and mother, perhaps some to wife, some to children, and he write letter. If he go to China, one man ask, “Where the gold my father send home?” Another woman say, “Where the gold my husband send?”
26. What would happen to the man, would they cut off his head? If he not got that gold friend gave him, they would be sure sometimes to take him to prison, sometimes to kick up a row—he could not stop.
27. His life would be miserable? Yes, miserable.
28. Would he have reason to fear that he might be beheaded? If a man take money, he could not cut off his head; if he kill a man, then he can.
29. He would lose his character? Yes.
30. And perhaps be put in prison? Yes.
31. Do you think it would benefit these men if the Government here was to certify that the gold was taken from them—if a writing were given to say the gold was taken from them by the Government—do you think that would be any good for the Chinamen? Not good at all. He did not care about that; he said, “I must want my money”—that is another man—he not believe English come and take it away.
32. Do you know anything of the character of these men with whom you have become acquainted here—what sort of men are they? I am a stranger of this man; but I believe other men tell me he is a very honest man.
33. Do you think these men who come from China are good men or bad men? He could not say every one good.
34. But a good many? A good many good ones, perhaps some bad; I could not tell.
35. They were not persons who had been punished in China, and sent away out of the country—criminals? No.
36. They were not persons who had been put in prison, or punished, and afterwards sent away from the country for being bad? No. He must pay for himself. They say this country plenty gold; English law very good law; and they come to the country and get gold.
37. Why do not Chinamen bring their wives? The Chinese Emperor no approve of Chinese to bring wife; but Chinese women like to stay at home best, at own house. If the husband bring his wife that more expense too.
38. Are a great many of the men who come here married? Yes.
39. What is the general religion of those who come here—are they Protestants? No; China religion. A great many pray to idols; they put them up and pray to them; there good many gods he thinks.
40. Is this the religion of the greater number of the men who come here? Yes; very few Christians.
41. Do you think the story they tell before the Committee—these gentlemen—is to be relied upon—do you think the Chinamen who are here now will tell the truth? I believe he say the truth.
42. Do you think a great many will tell the truth? A great many will tell the truth.
43. By Mr. Cox: Do the merchants or rich people in China send out Chinamen to this Colony—do they give them so much money to pay their passages, and then trust to them to send the money back again? Yes, some do so—rich man in China pay the passage.
44. And then the miner, when he gets gold, sends back the money? Yes: he promise his word, and he tells the truth.
45. By Mr. Hay: Have you advanced money yourself in that way to bring Chinese here? I never bring Chinamen down; but my friend, some ship come over to him, and he pay for sixty-six men passenger money, and he just get back when the men get gold; only four or five men lazy, not get gold; he did not pay him.

46. *By Mr. Cox:* Supposing a rich man come here to get gold, does he sometimes send home money to China to have men sent out to work for him; suppose you wanted to get men to work for you, would you do so? Suppose I like to do it so, I may.

47. Do some of your countrymen do so? I think I heard two or three did so. My friend

send his money to his friends at home and get out the men.

48. Have these men who come out to pay back the money when they get gold? Yes.

49. So that emigration from China is carried on in two ways,—some rich men there send out people here, and pay their passages, and some send from here to China for men to come out as miners? I heard two or three do so.

50. Have you heard that miners on the gold fields when they get gold send it to China by those who happen to go back. In this list I see that Sang-he had 300 ounces of gold, did that all belong to him, do you think? It belonged to some other persons, send to some friends in China.

51. *By Mr. Jones:* Can you tell the expense of bringing your countrymen from China to this country? I think, to pay the passage, with other things, eighty dollars—forty dollars for the passage, sometimes forty-eight, sometimes fifty; they pay for all expense; sometimes they come to Hong-Kong in boats; they live more far up sometimes; then they come here and buy boots and things—everything to go to the diggings costs eighty dollars.

52. What have they to pay the owner of the ship who brings them from Hong-Kong to Sydney? Sometimes forty dollars, sometimes forty-five, sometimes fifty.

53. *By Mr. Hay:* Is it the practice among native bankers to advance money to people to enable them to come here—do they obtain money in advance from money lenders before they come here, on their promise to repay it? Yes, before they come. Only my friend, his name Afoo, send letters to his friend in China to send him a few Chinese: some must send money, some different.

54. Do you know whether the friends of individual Chinamen who come here are sometimes security for the repayment of the money advanced to pay the passages? All pay the passenger money before they come here.

55. Suppose a Chinaman wants to come down here, does he ever get the money from a Chinese banker, leaving his friends as security for the repayment of the money? No, they never do so. All I know it is all paid—the passage to the man who charts the ship.

56. *By Mr. Cox:* Suppose you send to China for a Chinaman to come here, does he sign an agreement to serve so long? Yes; some sign agreements; some without.

57. Some trust to honor? Some trust to honor.

58. *By Mr. Hay:* What is done to those fellows who do not repay their passage—what was done with those whom your friend brought out—those four or five idle fellows? When he got gold he must pay.

59. I speak of those four or five who did not pay: were they punished in any way by their countryman? He did not do anything to him, because he has no money. He said no good to take him up to Court; he got no money; no good.

60. So your friend waits, hoping he may pay by and by? Yes.

Appo was called in.

61. *The Chairman to Leau Appa:* Do you know this man, Appo? Yes.

62. Did you know him before he came to this country? No.

63. Does he come from the same part of China as you? No, a little further.

64. *By Mr. Mr. Jones:* What part of China are you from? Canton, but a little more up; about three days' journey.

65. *By Mr. Hay:* How many miles is a day's journey? It is by a passage boat; if it is a fast boat, and a fair wind, it is sometimes quicker.

66. You say it is about three days' journey: do you know the length of a mile? Yes.

67. About how many miles do you think a day's journey would be? Sometimes about forty miles a day; sometimes more than that.

68. Do you think the place where you were born was about a hundred miles from Canton? I think about a hundred and fifty miles.

Appo examined, through H. Leau Appa:—

1. *By the Chairman:* Are you a native of China? Yes.

2. What part of China? Wychow, near to Canton.

3. How long have you been in this Colony? About two years and two months.

4. What religion are you? China religion—many gods.

5. What do you believe would happen to you if you told lies? He say when he good character he must tell the truth; when he tell a lie, anything story, he be punished.

6. Does he think the gods would punish him if he tells a lie? Yes; he say when man tell a lie God will punish him.

7. You will tell the Committee the truth—you will tell no lie now about what we ask you? He say he must tell the truth.

8. Were you a passenger on board the "Mary Nicholson" in October last? Yes.

9. You were going to China in her? Yes.

10. Had you any gold with you, and how much? Thirty-one ounces.

11. Did you pay any duty on it at all? No.

12. Did you know anything about paying duty? No; he never heard it said he had got the duty to pay.

13. Were there other Chinamen on board, and how many? Thirty-four men passengers altogether, with myself.

14. Had the other Chinamen gold, and how much altogether? He says he only know himself; he does not know about other Chinamen.

Appo.
2 July, 1868.

- Appo. 15. There was more gold on board—the other Chinamen had gold? Yes, another man had gold too.
- 2 July, 1858. 16. Did the gold you had belong to yourself, or to other men? He says he had a large bag that he put it in, but inside was a little bag belonging to another man, sent by him to take to China.
17. How much had you belonging to another man? Four ounces and ten pennyweights belonging to another man.
18. Do you recollect the gold being taken from you by the Custom House officer? Yes.
19. Do you know why it was taken from you? He says the Custom House gentlemen come down and ask to see the gold, and another man say perhaps he want the gold. One man is interpreter for them all. He tell him he go away, he going to pay duty, and then he (Appo) just open his bag and give it to the gentleman; he think he pay duty.
20. You thought the duty was to be paid—did you think the gold would be brought back to you? He says he gave it to the gentleman, and he put it down in a book how much he got, and he said, “to-morrow, eleven o'clock, then I give it back to you.”
21. Were there any sovereigns or silver money among it? No, none.
22. Did you see other gold taken from other Chinamen at the same time? He says there was another man; every one open and gave it him.
23. They did not make any resistance at all? No; he says he not saucy; Custom House gentleman ask, and every one opened his bag and gave it him.
24. Were there any sovereigns or silver money taken from the other Chinamen? No; he says another man no sovereigns, only gold.
25. Did you not see any sovereigns given back to them? He says he could not see every one, only he heard Chinaman say no sovereigns taken.
26. By Mr. Jones: You mean that, as far as he saw, there were no sovereigns taken from the Chinamen? Yes.
27. By the Chairman: Can you read and write? He not read.
28. Do you know anything about that? (*Handing witness the paper produced by Mr. Newbon.*) He say after they came aware the Custom House take the gold, every one came to write down “I got so much, another got so much.”
29. Is that the paper? Not this one; I (*Leau Appo*) write this from another; I copy this.
30. Did you or any other Chinamen give a power of attorney—that is, one man gives a power to another to act for him, to do business for him—to others? Yes, some of his friends trust him, when he get the gold out of the Custom House, to take the money to China.
31. Have you lived in Sydney ever since the gold was seized? Yes.
32. How have you managed to live? Some old men gave him food.
33. Have you not worked all the time? He says he no go to work; he like to do it.
34. Why have you not worked for people in Sydney? He says he liked to do it, but he had no work here to do; but he would like to wait to get back the gold.
35. Have you nothing else—is all taken away? He says he has not one penny to pay for his food.
36. How many Chinamen whose gold was seized on board the “Mary Nicholson” are there now waiting in Sydney? He says there were about eight men wait here, and one man go up to the diggings about two weeks ago. He tell these men to wait in Sydney.
37. How many of the “Mary Nicholson’s” men have gone back to the diggings? He says there were only eight men wait here, one gone to the diggings, and the others all gone to China.
38. Supposing the Government will not give back the gold, or any part, what will you do then? He says he no know what to do if he could not get the gold; he could not go up to the diggings; he says he see the friend and who sent the gold, and he could not do it.
39. If he went to the diggings what would the other Chinaman do? He says perhaps he go up to the diggings his friend get angry, and ask him about the gold; he says perhaps “I send it for my wife—my wife not got one penny, perhaps my wife dead; you must get me back the gold.”
40. By Mr. Cox: If he afraid to go back to China, why not other men afraid to go back who have had their gold taken away? He says, another man go to China is not going home; perhaps many going to other place in China.
41. They would be afraid to go home? Yes.
42. By Mr. Hay: You say you are afraid to go back to the diggings on account of the Chinaman demanding his gold from you; if you had anything from the Government to shew that the gold had been taken from you, would not that be an advantage to you? He says he could not do that; his friend say, “I gave you the gold to take to China, why you let somebody take it away.”
43. Where is this man—at which diggings? The Mercoo.
44. Then cannot he go to the south—to Braidwood? He say he is very sorry.

Henry Leau Appa further examined:—

- Henry Leau Appa. 1. By the Chairman: Do you know this document? (*Referring to the document handed in by Mr. Newbon*) I have read it.
- 2 July, 1858. 2. Did you write any part? I wrote the English.
3. This is a list of the Chinamen who had their gold seized, and the quantity taken from them? Yes—472 ounces.
4. To the best of your belief it is a true statement? Yes; he got it in a book; the other could not write English.
5. Who put down the part in Chinese? Another Chinaman, who lost his gold.
6. By Mr. Jones: Is that the whole quantity of gold seized on board the “Mary Nicholson”? Yes.
7. Then it appears there were five Chinamen who had no gold, for there are only twenty-nine names here, and Appo said there were thirty-four on board? I do not know; I must ask.

Ha-hen

Ha-hon called in and examined, through H. Leau Appa:—

1. *By the Chairman*: Did you write this list? (*Referring to the list produced by Mr. Newbon*) Another man wrote this.
2. (*To Appa*) Do you know his language well? Yes.
3. (*To the witness*) What part of China do you come from? Yung-shang, near Canton.
4. What religion are you? The same as the other man.
5. Do you believe in many gods? Yes.
6. Are you married or single? Single man.
7. How long have you been in the Colony? He says he came about two years.
8. When you came here did you pay your own passage, or did somebody else pay it? He pay himself.
9. What did you pay? 52 dollars.
10. Did you pay with your own money, or did some of your friends give it you? He says his brother gave him the money to pay his passage.
11. To whom did you pay the money, to the captain, or to somebody in China? He pay one gentleman, Englishman, at Hong-Kong, at Stimpson's office.
12. Do you know you have come here to tell the truth? He tell the truth.
13. What do you think will happen to you if you tell a lie? When he tell a lie he will be very sorry.
14. Do you think the gods will punish you if you tell a lie? He says I tell a lie God punish him, if he no tell a lie God could not punish him.
15. Were you on board the "Mary Nicholson," going to China, in October last? He say China months not the same, he not know October.
16. Were you going to China in the "Mary Nicholson"? Yes.
17. Had you any gold with you, and how much? He says 20 ozs 9 dwts. 19 grains.
18. That is not the number here—(*referring to the list*)—it is here 29 ozs. 5 dwts.? He says he has the number here (*producing a paper in Chinese.*) He not speak proper. [*Leau Appa translated the paper as follows:—20 ozs. 9½ dwts. of his own, and 8 ozs. 10½ dwts. of another man.*]
19. How much was your own, and how much belonged to your friend? Twenty ounce nine pennyweight and a half his own.
20. The other portion belonged to another man? Yes.
21. Was the gold all taken from you on board? Yes.
22. Were there any sovereigns or silver money among the gold? No.
23. Did you see a quantity of gold taken from the other Chinamen at the same time? He say, every one.
24. Were there any sovereigns taken from other Chinamen? He says he could not see every Chinaman, but every Chinaman say they got no sovereigns at all.
25. Do you know why the gold was taken from you? He says his gold and another Chinaman's, he put all the gold round here (*the waist*). After the gentleman asked for the gold he took it out and gave it the Custom House—three bags.
26. Do you know for what reason it was taken? He says the gentleman came on the ship, and told all the Chiuamen to stand on one side. Then he says, "You got any gold, your gold must pay duty." Then this man say, "We got duty to pay, we go up to pay duty." He said, "No, you must give me the gold." He said, "It is difficult; at eleven o'clock to-morrow it will be given back again."
27. Did you expect your gold to be given back again? Yes; he thought the gentleman could pay duty, and give it him back again.
28. Did you know anything about the duty to be paid? No; he said he did not know anything about a duty to be paid, if he had he would go the Custom House and pay it.
29. Do you know how much duty you have to pay—how much an ounce? He do not know how much to pay; and he say to pay duty he did not know what to pay for ounce.
30. Have you been destitute—have you been a poor man ever since the gold was taken? Yes, he says he is feeling very poor—he not got one penny expense, only the old man to keep him.
31. *By Mr. Jones*: Why do you not go to the diggings or get work? He says, some belonging to another man to send to China; if he could not go to China, and he go up to his friend, he be getting angry, and doing something bad to him. He do not know what to do.
32. That is the reason you do not go the diggings; what is the reason you are not working for a white man in Sydney? He says he know no English language, and know no one to get work to do; he could not get any down here.
33. *By Mr. Cox*: Do you know whether Chinamen in China have to pay tax to the Government, any duty? He no know that.
34. Do they never pay duty in China? He never pay duty, he say.
35. How do the Government get money in China? *Leau Appa*—I think he keep business; he do not know about that.
36. *To Leau Appa*: How do Government get money to carry on the public business? All pay for house tax and farms—all pay tax.
37. Do people come round and collect the tax? Yes.
38. The people have not to go to any particular place to pay it? Policemen come to the place. Suppose a man got a farm, they pay the tax when the man come.
39. *By Mr. Hay*: Ask him whether, if he got a paper from the Government, written in Chinese, by yourself, under the direction of the Government, to say that this money had been taken from him by the Government, and that he was not dishonest, he would be afraid to go back to the diggings, having that certificate to shew? He says no, that would not do. (*Ha-hon said a few words in a low tone.*)
40. What does he say? He is very sorry; he do not know what to do.

Ha-hon.
2 July, 1858.

- Ha-hon. 41. Tell him he ought to go to the diggings, and make more money? He says if he go to the diggings perhaps not have him life, perhaps dead.
- 2 July, 1858. 42. He is afraid his countrymen will kill him? Yes.
43. By Mr. Cox: Why do not his countrymen kill him in Sydney—why is he not afraid to stay in Sydney as well as to go up there? He says he write a letter to his friend; he thought to get back his gold from Government.
44. By Mr. Jones: What would he have done if Government had given him £10 six months ago? He says £10, he not know what to do with £10; another friend may cast him out.
45. By Mr. Hay, to Leau Appa: I wish to ask you a question or two. Do you think there would be very great danger to these men if they went back to the diggings, supposing the Commissioner at the diggings were to assure the Chinese, through the interpreter, that the men were innocent, that the money had been taken from them by the Government, and they could not help it? Not in this way. I suppose if he did it that way the other Chinamen kick up a row with them.
46. But are not the Chinese very obedient to the Commissioners on the gold fields in Victoria—do not the Chinese believe the announcements made to them by the Commissioners, through the interpreter, to be true? I cannot say that.
47. Do not you think the Chinese know that the gold was taken from these people by the Government by force? Yes.
48. Why should they then hurt these men when they know the money has been taken from them, without any fault on their part—that is to say, when they have not stolen, or made away with it? I suppose this way: another man say, "Why the Government take it away—" "English very good law—he not take it away"—and, perhaps, not believe it; but I think if he got the interpreter to tell about it—but I do not know what way, I am sure.
49. Do you not think that you and other Chinamen who understand these things could explain these matters to your countrymen, so that these men might go back to the diggings without danger of being hurt? I think some one do it so, but I do not know.
50. Do you not think these men, and others, are what we call "sulky," because they have lost their money, and cannot make up their minds to go to work? They thought Government give it back, that is the reason he wait for it here.
51. Because the thing is not decided, that is the reason they hang about Sydney? (Leau Appa interpreted the question to Ha-hon, and replied)—He always think Government give it back, he say.
52. Does he think now there is a chance of Government giving it back? Yes, the Chinamen think so still.

Chin Ateak examined:—

- Chin Ateak. 1. By the Chairman: You are a native of China? Yes.
- 2 July, 1858. 2. What religion are you? China; all the same as joss.
3. Are you a British subject? No.
4. Have you been engaged in the trade from China to this country? No trade to China.
5. Have you been engaged in sending your countrymen from China here? Me never send them China; they come in ship you know.
6. You never paid for any men to come out here? Me no pay.
7. In sending them, do you know whether it is a common custom—do rich men very often send Chinamen here who have not paid their own passages? That a me know; I got friend send some.
8. How do these men pay back the money for their passages? Their passenger money?—that man some time he get money, he pay back.
9. Whenever he gets money? Yes.
10. Does it often happen that they cheat? Suppose some men pay; some cheat.
11. Not often? Great many pay; great many not pay.
12. These men that come here in that way, are they good men? Some men very good; some not very bad, not all—just now come and dig gold some good men—more bad men—very few.
13. Are many who come here married men? Many married men come—Yes.
14. Do you think the men, from what you know of them, who have come here to tell us about the gold, tell us the truth? Yes, me think true; me know this man; he speak true, that.
15. Do you know the men you have seen here? Yes; he very good man—he stop long while away.
16. By Mr. Jones: Do you know what is the cost to the Chinamen who come down here from Hong-Kong and other ports in China? Suppose 48 dollars, suppose 50 dollars, some ship 60 dollars. Suppose he come long way, charge more. He got another man; he go in the country tell him Chinaman "plenty gold; plenty very good law"—that way speak to people.
17. Is there any inducement held out to the Chinamen to come here by persons who want to fill their ships—do they tell the people about the country? Yes, that way, very much talk; suppose getting two or three passengers, they profit so much. Me charter ship, plenty speaking Chinamen very good country; supposing charter ship so many men, speaking that time—that way you know.
18. What do the Chinamen come here for? They come here digging.
19. To get gold? Yes; all like the digging; not like working anything.
20. You think if there were no gold here they would not come here in such numbers? No gold; then grow anything, grow the ground; suppose he like that, stop.
21. They come mainly to dig gold? Yes; they come and all like to dig gold.
22. By Mr. Hay: That is what brings so many of your countrymen here? Yes.

23. *By Mr. Jones:* Would there be any difficulty in getting any more than now come to Chin Ateak. New South Wales? Me say "good law," plenty men like to come; suppose plenty gold, men go away, come back again; some go California, good many like to come this way; 2 July, 1858. suppose they get a little money they go away, like to come back again. Suppose two three thousand men go to Port Phillip, they no get gold, they say Port Phillip no good, they come this side; suppose this side no good, they go back Port Phillip; all go where there is gold.
24. How long will a Chinaman stop in this Colony? He stop long time; very good business, very good law; some men like stop here; some men marry.
25. Some men stop here entirely—remain here? Yes.
26. Do you think many Chinamen will be induced to come here, more than come now? Me think so. No pay £10 plenty come; merchant get plenty; suppose £10 pay, would only get few; suppose pay £10, many men little fright, like Port Phillip—no like come.
27. You think if £10 tax were imposed it would check the number coming? Yes, very few men.
28. You think some would still come? Yes; some like money; he come not so much, very few. Just now he come no pay £10; little few men he come suppose pay £10.
29. Suppose the £10 tax were not put on, how many do you suppose would come in the next twelve months? Four or five thousand men; but just now not so many come; he fright.
30. They are afraid? Yes; he fright £10 pay; he say "No pay £10;" he no like to come; some men like to go Port Phillip too.
31. Suppose the people in China knew that they would not have to pay any tax, how many men do you think would come in a month? I no know that, I cannot speak; great many men in China; we cannot tell; California great many Chinamen; he say "No good California, English very good law." Just now £10 tax Port Phillip, he come here; suppose £10 tax, he go Adelaide, one way six hundred miles; he no pay £10; he like to get walk that way.
32. *By Mr. Hay:* I suppose it depends a good deal upon the quantity of gold they take home how many like to come here—if the diggings are good, and the men take a quantity of gold home to China from this Colony, others are induced to come here? Suppose diggings very good, plenty men come; any man see the gold he very like to come.
33. Have many of these men who have come to our diggings been to California before they came here? California men come down here.
34. The diggings were not so good in California? Just now these diggings better than California.
35. Do the relations of the people who come here advance money to those who come? Yes.
36. Young men get money from their friends? Yes—father, mother. China country poor man very hard work; rich man no want, poor man all working; plenty rich men take two hundred, three hundred men, all work.
37. Do rich men advance money to poor men to enable them to come to the diggings? Suppose rich man he have two hundred, three hundred poor men working, he no pay no wages; he say, "I give you so much land, you grow rice, you give me so much rice"—that way. "If I give you so many ground—suppose you give me how many you give back to me"?—he go working every year.
38. Are they generally the lowest class of men, or really good men, who come to the diggings? Come down digging, all good men. Suppose he got father, suppose mother, suppose wife, suppose children; suppose he not lazy, he like to send a little letter, and little money; he very hard work every day. Suppose he very lazy man, no father, no mother, he very bad man.
39. What wages does a working man get in China? Wages small—in country pay no wages, all give ground—"so many grounds one year, I want so many fruit, so many paddy, so many rice."
40. In town, how much wages do they get? In big town very few wages, not so good wages—carpenter, one month, one dollar; suppose he good, all the same; make table, he get one pound; suppose more coarse, one dollar; suppose you make flour, he get no more wages.
41. Suppose he digs in a garden, how much will he get? Very cheap—one dollar one month.
42. With meat and rice too? Altogether, yes; this head master he feed him.
43. Where were you born? Heang-sang, near up Macao River: we get one and a half day from Canton to Macao.
44. What was your father's profession? A merchant; he keep shop, sell cloth—anything that way.
45. You have been engaged in that sort of business yourself? Yes. Just now me go China country, sell oil, sugar, anything from English ship—American—all sell big lot.
46. You are a wholesale merchant? Yes; Messrs. Jardine me all sell for; suppose me buy opium, me send it Canton.
47. What do you do in this country? Just the same; suppose company send me cargo, I send him money.
48. Are you settled in Sydney now? All business in Sydney now; me come Melbourne.
49. How long is it since you came up from Melbourne? This Colony, six months.
50. How long were you in Victoria? Three years.
51. Are you what we call Buddhists? Me not understand.
52. Have you any priests in your religion? Yes, Emperor.
53. Are you a married man? Yes.
54. Would you like to have your wife here? Me like to have my wife here; she no like to come.
55. Is she afraid? She fright; always stop inside; never go out; all women small feet, could not walk; suppose go out any man carry her out; suppose all day stop inside.
- Leau Appu* said China woman very shy face, no like to face gentlemen.

THURSDAY, 22 JULY, 1858.

Present:—

Mr. FORSTER,

Mr. HAY,

Mr. JONES.

W. FORSTER, Esq., IN THE CHAIR.

John Black, Esq., called in and examined:—

- John Black, Esq.
22 July, 1858.
1. *By the Chairman*: You are resident in Sydney? Yes.
 2. And are engaged in business? Yes; I belong to the firm of Molison and Black, ship brokers and commission agents.
 3. Have you had any thing to do with the importation of Chinese into this Colony? We have arranged for Chinamen on their arrival in the Colony.
 4. They have passed through your hands? They have passed through our hands on their arrival.
 5. And on going out of the Colony? Yes.
 6. In that case I suppose you are tolerably well acquainted with their habits and customs, so far as they can be known from an acquaintance with the people here? I am.
 7. Do you know any thing of their language? I know nothing of their language.
 8. Have you been able to converse with them through an interpreter upon whom you can rely? Invariably.
 9. Are you acquainted at all with any of the Chinamen whose gold was seized on board two vessels in this harbour—the “Mary Nicholson” and the “Ethereal”? We engaged the passages of the Chinamen per “Mary Nicholson,” and arranged for their getting on board. Subsequently to the seizure of gold on board the “Ethereal,” I have become fully acquainted with the matter now under the consideration of the Committee.
 10. You are then tolerably well acquainted with the circumstances connected with the seizure of gold on both those vessels? I am.
 11. Are you acquainted with these circumstances partly from your personal knowledge and partly from communication with the Chinamen? Chiefly from communication with the Chinamen, through an interpreter.
 12. Have you any knowledge of the circumstances of these men when they went on board either of these vessels—whether they all were possessed of gold, or only part, or whether they had any large quantity? I have reason to believe that each of the men had gold in his possession when he went on board the vessel. In the case of the “Mary Nicholson,” the men came to us and asked us, through their interpreter, to secure passages per that vessel to China; we negotiated with Messrs. R. Towns & Co., the owners of the barque, and the men came in a body and paid their passage money to us, part in gold and part in notes. At that time we were not aware, although no doubt it was our duty to have been aware, that there was duty of 2s. 6d. an ounce on gold.
 13. If you had been aware would you have acquainted the Chinamen with it? Most assuredly.
 14. Is it your opinion that the Chinamen had a better knowledge of the law than you had? It is very unlikely: from my knowledge of them I should say they are most obedient to the laws of the country.
 15. From your knowledge of the Chinese, do you think if they had been aware of the existence of this Act they would have taken all the necessary measures to have fulfilled the law? Most readily, I feel certain, from the readiness with which they acquiesce, in all cases, in the laws of the country.
 16. Do you judge that not one of those who went on board the vessel was acquainted with the law as it stood? I do.
 17. Do you think it possible, if they were acquainted with the law, they might have gone on board, expecting that the duty would be collected on board? I think not.
 18. You think they went on board totally ignorant of it? Totally ignorant of it.
 19. Do you know whether they held this money in general as their own actual property, or whether they held it in trust for a large number of individuals? In the case of the “Ethereal,” I know these men held the property of others, and I believe it was so in the case of the “Mary Nicholson;” but I am not so fully acquainted with that. I have, from the books I now produce—*(the witness produced a variety of memorandums and other books containing writing in Chinese characters)*—made a list of the gold held by some of these Chinamen, belonging to other people. *(The witness handed in the same. Vide Appendix A.)*
 20. To the best of your belief, is this a true statement? To the best of my belief, it is a true statement: it is copied by one of my clerks from an interpretation by the Chinese interpreter, Ateak.
 21. I presume that the names given here are likely to be different from the names of the same persons put down on a list previously handed in to the Committee, from the difficulty of catching the precise sound? Yes, very likely.
 22. Still, by a careful comparison of the names, it may be possible to arrive at an identification of two apparently different names? Yes. This is the list of the “Ethereal.” *(The witness handed in the same. Vide Appendix B.)* I find from this that 17 Chinamen carried gold for 370 persons, besides themselves, and that the amount of that gold was 1,292 oz. 18 dwts. 14 grs.
 23. Do you know the actual position of these Chinamen at present—are they in a state of destitution? It is within my knowledge that they are in utter destitution.
 24. How do they live at all? They subsist on the charity of one or two of their countrymen, their kind friends, Appo and Ateak.
 25. Why do they not leave Sydney and try to get back to the gold fields? They state, through

through their interpreter, that they are afraid to go to the diggings, lest their fellow countrymen who entrusted them with the gold should kill them. I am told some of them threaten self destruction, but that may be merely a momentary feeling.

John Black,
Esq.

26. Do you think, supposing our investigation ending in not restoring the gold to the Chinamen, it would be useful to them to give them a statement to the effect that this inquiry had been held, and that they had not fraudulently disposed of the gold entrusted to them? It would be a very necessary document.

22 July, 1858.

27. It would enable them to explain matters to their countrymen more easily? Yes, it would.

28. From what you know of the personal character of the Chinamen in question, are they what you would call persons of good character, comparing them with men of the laboring class among our own countrymen? I think they are.

29. Do you judge that from your personal knowledge of them? From what we knew of them when engaging their passages by the "Mary Nicholson," and from the general knowledge I have of them, from their coming to our establishment.

30. Do they belong to the class of laborers in their own country? That I cannot answer.

31. You cannot tell whether, as it has been stated, that they are the refuse of the population? I cannot.

32. What is your opinion as to the credibility of these persons as witnesses—do you think they are likely to state the truth in an examination before this Committee? So far as they could understand the idiom of our language I have no doubt they would. My knowledge of the Chinese character is this—that if they promise to do any thing they will do it; while, on the other hand, they expect you to do everything you promise.

33. Do you think in any case where self-interest is concerned, as in the present instance, we might rely, with tolerable confidence, upon their evidence in general? I think you might. As I have already said, they readily acquiesce in the laws of the country, and they are most scrupulous in paying to the last farthing what they owe to Government; we pay Customs duty for them mostly every day.

34. *By Mr. Jones:* That is since this seizure? Yes: in fact it is only since then we have had communication with Chinamen.

35. *By the Chairman:* Do you think these men equally as worthy of credit as men of a similar class among our own countrymen? No doubt they have an interested feeling in this matter, and may appear anxious.

36. Are you aware of the circumstances under which many of these men have come to the Colony—it has been stated here that a great many Chinamen come here under engagement to persons of capital in China, who pay their passage money? I believe that is the case in several instances, but not in all.

37. In some cases they have come with capital of their own? Yes.

38. Have you any knowledge of the manner in which these people fulfil their engagements with the parties who advance the money for their passages? I have no personal knowledge.

39. Should you not infer from the circumstance of their being trusted with the means of getting on in the world in that way, that these people must have good characters in their own country for fidelity to their engagements? I have no doubt of it; it bears out my assertion, that they are strict and punctual in their engagements.

40. With regard to the circumstances under which this gold was seized—are you acquainted with any peculiar circumstances that bear upon the case? I am not prepared to say I am.

41. I allude particularly to this: It has been alleged that one of these vessels was not cleared, and that the other was—do you know anything of that? I know from my own knowledge that one vessel was cleared, the "Mary Nicholson"; the "Ethereal" was not cleared.

42. Are you aware whether the claim, or the supposed claim, of the Chinamen has been placed before the Government in any distinct shape at all? I am not aware.

43. Do you know whether they took any steps to appeal to any of the Courts? I believe a representation was made to the Government through some professional man in Sydney.

44. *By Mr. Jones:* You say you have reason to believe the Chinamen remain in Sydney, and do not return to the Gold Fields, because they are afraid of being molested by their countrymen? Yes.

45. Do you not think it is a matter of notoriety among them that the gold on board the "Mary Nicholson" and the "Ethereal" was seized by the Government? It may have become a matter of notoriety in this way—these men not having a knowledge of the law previously, may have wondered that the Government should be so strict with them for their want of knowledge.

46. Do you not think the fact of the Government having seized a large quantity of gold must have become well known to a large number of Chinese upon the gold fields? Yes.

47. Those who had entrusted gold to these men must know that the gold was taken from them by the Government? Still they are likely to blame them for want of attention to their interests when they arrived at Sydney. They might argue this—"Why did you not ascertain whether there was any duty?" They state that they did ask a fellow countryman who had been here many years, and that he said there was no duty.

48. They would be exonerated from any felonious charge if Government gave them a certificate such as that alluded to by the Chairman? If the Government do not return any part of it, such a certificate would be ample for that purpose.

49. *By the Chairman:* Are you aware whether all the requirements of the law were fulfilled with regard to these vessels, with the exception of the gold not having been reported or entered—I mean with regard to the vessels themselves? With regard to the "Mary Nicholson," everything was fulfilled that the law required, other than the payment of duty. With regard to the "Ethereal," she had not cleared out, consequently there was ample time to have paid the duty, although by the Act it is stated that gold shall not be water borne before duty is paid.

- John Black, Esq.
22 July, 1858.
50. *By Mr. Jones*: It must, I presume, have been water borne to have been placed on the "Ethereal"? It must; but the Chinamen always carry their gold upon their persons; they carry it in small bags, deposited in long strips of linen, which they tie round their waists.
51. *By the Chairman*: I presume these men had taken their passages, and intended to remain on board? They intended to remain on board.
52. They could not have intended to have gone on shore to pay duty? One man will do the work for a number; sometimes a dozen, or more, appoint one to act as their agent, and they entrust him with their business.
53. If they were utterly ignorant of the duty they would not appoint one or any number to pay? I do not think any one could have intended to pay, as they were ignorant of the law.
54. *By Mr. Hay*: Do the books you have produced contain accurate lists of every single parcel of gold found on these Chinese? Yes, found on some of them. They are most methodical in their habits. When they come down from China every man who brings any goods with him has one of these little books, in which every article, to the minutest particular, is noted down. In those books now before the Committee the quantity of gold belonging to each man, together with that under their charge, is entered, and the signature or stamp of each individual is attached.
55. The whole of this gold—(referring to the contents of one memorandum-book)—was not in charge of one person? Yes, that was in charge of one person. The man No. 1 on the list of "Ethereal" had gold for seventy persons.

Chin Ateak examined:—

1. *By the Chairman:* Are you acquainted with these documents? (*Referring to the books Chin Ateak, handed in by Mr. Black.*) Yes.
2. Do these contain a true statement of the quantity of gold, and the owners of the gold, 22 July, 1858, seized on board these two vessels? Yes.
3. Do you know this? (*Referring to the translation handed in by Mr. Black.*) Me know that.
4. Is that a true translation of it? Yes.
5. It makes it all right? Make him all right, same as book make him.
6. *By Mr. Jones:* This is the same as the Chinese books rendered into English? Yes.

Henry Newbon, Esq., examined:—

- By the Chairman:* Is there any statement you would wish to make, that you think essential to the interests of the Chinamen whom you represent? I should wish to see whether the list of the quantity of gold now handed in corresponds with that previously laid by me before the Committee—Aheng, who prepared the previous list, is in attendance.

H. Newbon,
Esq.
22 July, 1858.

Aheng called in and examined, through Leau Appa:—

1. *By the Chairman:* Are you one of the Chinamen whose gold was seized on board the "Ethereal"? Yes.
2. Did you give evidence before a Committee last year? Yes.
3. Can you read and write? Yes.
4. Do you know anything of these books before the Committee? Yes.
5. Do they contain an account of the quantity, and the owners of the gold, seized on board these two vessels? He say he put it in a book, and then he tell you how much he has got.
6. Does he know the books? He know the names they belong to.
7. Are they written down properly in these books? He say they put down how much they got.

Aheng.
22 July, 1858.

- Aheng. 8. Is that the right account there? Yes; it is all written down in the books.
 9. Where were those books first written? He say they were written down in the books before they went on board the ship.
 23 July, 1853. 10. By Mr. Hay: Were these books made up at the diggings, or in Sydney? At the diggings.
 11. By the Chairman: Did any of these books belong to you? No.
 12. By Mr. Hay: Do you know this book? (*Handing a book to the witness containing writing in English.*) Yes.
 13. Where was that book written? That book, he says he know it belonged to Yung-ho.
 14. Who wrote the English in it? He do not know who wrote it down.
 15. Do you know which is Sang-how's book? (*The witness selected a book.*)
 16. How much gold had Sang-how? 203 ounces 17 pennyweights.
 17. Is that what belonged to himself and others? All.
 18. How much had he of his own? 24 ounces 3½ pennyweights; and in another bag 2 ounces 17 pennyweights.
 1. The Chairman to Jean Appa: Do you know Lopez? Yes.
 2. Does he know the Chinese language? He can speak some, but not all.
 3. Does he know this man's language? He know some.
 4. You do not think he knows Aheng's language well? No.
 5. To Aheng: Does Lopez know your language well? No; he could not understand all—he understand part—he can speak some words.
 6. To Appa: When one Chinaman carries a quantity of gold for a number of others, does he get anything for his trouble—does he get a commission as we call it? A Chinaman pays two shillings an ounce for carrying gold, because going to China he must take it himself to the man's house—he must find it out—there is no carriage, no post office—he must take it himself. Sometimes a good friend he not charge it—he not take the money. Sometimes English gentleman try to speak Chinese name; he not make it sound.

SEPARATE APPENDIX.

A.

To the Honorable the Speaker, and the other Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble and respectful Petition of Ayong, Amang, Aheng, and Ackitt, Chinamen, on behalf of themselves and the other Chinamen who lately took their passages on board the "Ethereal," bound from the Port of Sydney for Hong-Kong,—

SHEWETH:—

That your Petitioners are foreigners, natives of China, unacquainted with the English language, and came over to this Colony to work at the Gold Fields, and have by their hard work and industry procured a large quantity of Gold Dust and property during the time they have been here.

That your Petitioners intended to take their passage by the "Ethereal," from the Port of Sydney for Hong-Kong, and had paid their passage money by such vessel.

That your Petitioners were on board the "Ethereal" on Friday, the sixteenth day of October last, intending to take their departure for Hong-Kong with their Gold, and on that day your Petitioners had all their Gold Dust taken from them by the Custom House Officers, amounting to two thousand six hundred and eighty (2,680) ounces, and also some money in sovereigns—the officers alleging that such Gold had not paid the duty imposed thereon.

That your Petitioners upon such seizure being made, so soon as they understood the nature of the seizure, voluntarily submitted.

That your Petitioners were not aware that a Gold Duty was payable on the exportation of their Gold.

That your Petitioners, on the twentieth day of October last, presented a Petition to their Excellencies the Administrators of the Government, praying that the Gold might be restored to them on payment of the duty, and that they might be enabled to proceed to Hong-Kong, to which Petition your Petitioners' Solicitor, Mr. Henry Newbon, received the following letter:—

"Colonial Secretary's Office,
 "Sydney, 20 October, 1857.

"MR. HENRY NEWBON, Hunter-street, Sydney.

"Sir,

"With reference to your letter of the 20th instant, addressed to their Excellencies the Administrators of the Government, submitting a Petition from certain Chinese passengers on board the "Ethereal," requesting the return of 2,680 ozs. of Gold, seized upon their persons by the Officers of Customs, in consequence of the non-payment of duty thereon, on the ground that they were ignorant of the Gold Duty Act and unaware of the necessity for paying any duty,—I am directed to request, that you will inform the Petitioners, that

"that having carefully considered their application, and also the circumstances attending the seizure, as reported by the Collector of Customs, their Excellencies and the Executive Council cannot see any ground calling for their interference with the due course of the Law, and decline to take any action in the matter accordingly.

"I have the honor to be,

"Sir,

"Your most obedient Servant,

"W. ELYARD."

That your Petitioners have since their arrival here conducted themselves peaceably, and are very averse to institute proceedings against the Officers of Government, preferring by Petition to represent their grievances, and trust to the generosity of the Colony.

That your Petitioners signing this Petition have lost their passage by the "Ethereal," and have forfeited their passage money, which vessel left the Port of Sydney on Thursday, the twenty-second day of October last.

That your Petitioners presented their Petition to the Members of the Legislative Assembly in the last Session assembled, which was referred to a Select Committee of the House, but in consequence of the then Assembly being dissolved, the matter lapsed.

Your Petitioners therefore humbly pray, that your Honorable House will take their grievances into consideration, and urge on the Government of the Colony to act towards your Petitioners in a manner becoming a British community, and grant your Petitioners such further relief, to facilitate the recovery of their property, as to your Honorable House may seem meet.

And your Petitioners, as in duty bound, will ever pray.

AYONG.

AMANG.

AHENG.

ACKITT.

B.

To the Honorable the Speaker, and the other Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of A-On and A-Po, on behalf of themselves and others, natives of China, who lately took their passages to Hong-Kong, in the ship "Mary Nicholson,"—

MOST HUMBLY SHEWETH:—

That your Petitioners, after having been employed at the Gold Mines in the interior, where they accumulated certain quantities of Gold, returned to Sydney, and engaged their passage on board the ship "Mary Nicholson," bound to China, taking their gold with them.

That the Customs Officers of the Port boarded the vessel, and, after searching your Petitioners' persons and luggage, seized all the Gold of which the passengers were possessed, and declared the same to be forfeited to the Crown, for the non-payment of the export duties, according to a late Act of the Parliament of New South Wales.

That your Petitioners were totally ignorant of the existence of any such Act up to the time of the seizure, never having learned at the mines that any such export duty was required to be paid before embarkation. That after having encountered many hardships in their calling they were desirous to revisit their native land, paid their passage money, and had every fraction of their Gold taken from them; thus plunging them into the miserable condition of paupers in a foreign country, and compelling them to forego their journey to their native land.

That your Petitioners presented their Petition to the Members of the Legislative Assembly of the last Session, which was referred to a Select Committee, but in consequence of the then Assembly being dissolved, the labors of the Committee came to an end.

Your Petitioners thus most humbly and respectfully submit the foregoing circumstances to your most Honorable House; and humbly pray, that your Honorable House will take the premises into your consideration, and be graciously pleased to afford to your Petitioners such an exercise of your generosity as to your Honorable House shall seem proper.

And your Petitioners, as in duty bound, will ever pray.

A-ON.

A-PO.

1858.

Legislative Assembly.

NEW SOUTH WALES.

HUNTER RIVER TONNAGE DUTY ACT.

(CHAMBER OF COMMERCE, NEWCASTLE.)

Ordered by the Legislative Assembly to be Printed, 4 June, 1858.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Newcastle Chamber of Commerce,—

HUMBLY SHEWETH :—

That an Act was passed by the Legislature of this Colony in the Sessions of 1855, intituled, “ An Act to provide funds by means of a Tonnage Duty for making improvements “ to the Navigation of the River Hunter, and to the Ports of Newcastle and Morpeth ”— “ 19th Victoria, No. 25,” whereby certain Dues were to be imposed on the Trade of the Port of Newcastle and of the Hunter generally, for the purposes specified in the Act; and that on the credit of these Dues a sum of forty thousand pounds is understood to have been since raised by Debentures.

That a pledge was given in Parliament at the time of the passing of that Act that the Dues to be levied under it should not be imposed until the contemplated improvements had been effected, in order that when the collection of the Dues commenced those paying them should derive some present benefit from them, for which purpose the collection of the Dues was postponed by the Act until the 1st January, 1857; and that the proposed works being still uncommenced, an Act was passed in the subsequent Session, 20th Victoria, No. 12, further postponing the collection of the Dues until the 1st January, 1858, in conformity with the pledge already mentioned.

That the said improvements in the Port of Newcastle remaining still unbegun, this Chamber addressed the late Legislative Assembly, by Petition, in December last, praying the further postponement of the collection of the Dues, and that in acknowledgment of the said pledge a Bill was introduced into the House postponing the collection of the Dues accordingly, and that such Bill had passed the second reading when the sudden dissolution of Parliament stopped the progress of the measure.

That in consequence of this unexpected result, the collection of the Dues, contrary to justice and the promise of Parliament, was commenced on the first day of January last, and is still being proceeded with, although no improvements have been effected at the Port of Newcastle, neither which nor the shipping frequenting it, and which pays the tax, derives any benefit from the works which are being carried on in the river above it.

That your Petitioners, therefore, pray that your Honorable House will be pleased to cause to be re-introduced, and to sanction, the measure brought into the last Parliament, as aforesaid, for further postponing the collection of the Tonnage Dues, in conformity with the pledges of Parliament already mentioned.

And your Petitioners will ever pray.

For the Newcastle Chamber of Commerce,

JOHN BINGLE,
Chairman.

NEW SOUTH WALES.

ALLEGED SEIZURE OF THE BRIG "FREAK"

(BY H. M. CUSTOMS, AND RELEASE.)

Ordered by the Legislative Assembly to be Printed, 16 September, 1858.

RETURN to an *Order* of the Honorable the Legislative Assembly, dated
9 September, 1858, That there be laid upon the Table of the House,—

“Copies of all Correspondence, Informations, and Report relating
“to the alleged Seizure of the brig ‘Freak,’ on the 16th ultimo,
“by H. M. Customs, and her subsequent Release.”

(*Mr. Williamson.*)

ALLEGED SEIZURE OF THE BRIG "FREAK."

THE COLLECTOR OF CUSTOMS TO THE SECRETARY TO THE TREASURY.

Customs, Sydney,

1 September, 1858.

SIR,

In answer to your letter of this day, informing me of the Notice of Motion given by Captain Williamson in the Legislative Assembly last night, I beg to say that the brig "Freak" was *not seized*, consequently there was no report, neither, (with the exception of a letter from Messrs. Spain and Young, Solicitors, to me, and my replies thereto,) was there any correspondence.

The vessel was detained under suspicious circumstances, for rummage, under the 5th sect. of 13 Vict., No. 43, and 40th sect. of 9 Vict., No. 15.

THE SECRETARY
TO THE TREASURY.

I have, &c.,
J. GIBBES,
Collector.

Exchange, 16 August, 1858.

SIR,

We are instructed by the owners of the brig "Freak" to protest, on their behalf, against the wrongful detention of that vessel, under your order and direction, and to call upon you immediately to withdraw your men from possession, and allow the brig to pursue her voyage, failing which, we hereby give you notice that the owners will hold you responsible for damage, at the rate of £100 per day, and for all losses, costs, damages, and expenses which they may sustain, incur, or be put to by reason or in consequence of your illegal proceedings.

The Collector of Customs,
Sydney.

We are, &c.,
SPAIN & YOUNG.

Custom House, Sydney,
17 August, 1858,
 $\frac{1}{2}$ -past 1 o'clock, P.M.

Gentlemen,

Since writing to you in reply to your letter of this morning, I have had the Clearance papers of the brig "Freak" returned to me by Mr. Bremer, who states that Captain Fairclough refused to take them, but that Captain Smith, who was present, requested him to tell me that if I would send them under cover to him, with a statement that everything on board was found to be correct, he would receive them, and waive all proceedings.

Now, without being in the least apprehensive of the result of any proceedings which might be brought against me, I have no wish that the vessel should be unnecessarily detained a single hour, and therefore no hesitation in meeting Captain Smith's message, by stating that it has been reported to me by the landing-waiter who rummaged the brig that everything on board was found to be correct, as far as his examination went.

I have, &c.,
J. GIBBES,
Collector.

N.B.—Be so good as to forward to Captain Smith the accompanying papers, with an intimation that the tide-waiter will be taken off to-morrow morning.

Messrs. Spain and Young.

J. G.

Exchange, 17 August, 1858.

SIR,

We are instructed by Captain Charles Smith, the resident owner of the "Freak," that this vessel is still unable to pursue her voyage, and that a Customs' Officer is now in charge. We will thank you to inform us on what ground the brig is still detained; and as we presume you are now satisfied that no breach of the law has been committed, none having been attempted, we request you will be so good as to issue the necessary Clearance, and at the same time to state to us that you have found all correct on board. We feel that you will not hesitate to furnish this report, as due to Captain Smith, a shipowner of long standing and respectability in this port, who necessarily feels much hurt at the discredit and suspicion which has been cast upon him by the detention and examination of his vessel.

We shall feel obliged by an early answer.

The Collector of Customs,
Sydney.

We are, &c.,
SPAIN & YOUNG,

Custom

ALLEGED SEIZURE OF THE BRIG "FREAK."

3

Custom House, Sydney,
17 August, 1858.

Gentlemen,

I beg to acknowledge the receipt of your letter of this day's date, and to say that the Clearance of the brig "Freak" was handed over to one of Captain Smith's clerks by 4 o'clock yesterday evening, so that there was no obstacle to the vessel proceeding to sea this morning, as the tide-waiter would have been taken off as she dropped down the harbour.

At about ten o'clock to day the clerk brought the Clearance papers to me,—why, I could not understand, and I therefore desired Mr. Bremer, the tide surveyor, to take them to the "Freak," and withdraw the officer, which I presume has been done.

I shall be quite ready to make the statement you ask for when I have made the inquiries which will enable me, I expect, to do so.

I have, &c.,
J. GIBBES,
Collector.

Messrs. Spain and Young.

1 September, 1858.

Dear Sir,

The letter you inquired for this morning is at present in the hands of Captain Williamson; we are to have it to-morrow morning, when we shall be happy to forward it to you in order to take a copy.

Yours truly,
SPAIN & YOUNG.

Lieut.-Col. Gibbes.

Of this letter no copy was taken, and I have not yet got it back.

2 September, 1858.
J. G.
Collr.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 14. TUESDAY, 20 APRIL, 1858.

13. Customs Department:—Mr. Egan moved, pursuant to *amended* notice,—
 (1.) That a Select Committee be appointed to inquire into the management of the Customs Department of the Colony, and the future arrangement for carrying on the business of that branch of the Public Service; and that all proceedings of the Select Committee of the Session of 1856-7 be referred to this Committee.
 (2.) That such Committee consist of Mr. Robert Campbell, Mr. Gordon, Mr. Buckley, Mr. Lord, Mr. Weekes, Mr. Flood, Mr. Donaldson, Mr. William Macleay, and Mr. Dickson.
 Question put and passed.
-

VOTES No. 40. FRIDAY, 4 JUNE, 1858.

21. Customs Consolidation Bill:—Upon the Order of the Day for the second reading of this Bill being read,—
 Mr. Donaldson moved, That this Bill be referred to the Select Committee now sitting on the Customs Department.
 Question put and passed.
-

VOTES No. 107. FRIDAY, 22 OCTOBER, 1858.

9. Seizure and Release of the brig "Freak":—Mr. Thornton, on behalf of Mr. Williamson, moved, pursuant to notice given by Mr. Williamson, That the Papers relating to the alleged seizure of the brig "Freak," laid on the Table of this House on the 16th ultimo, be referred to the Select Committee now sitting on the Customs Department.
 Question put and passed.
-

VOTES No. 123. FRIDAY, 19 NOVEMBER, 1858.

3. Customs Department:—Mr. Egan, as Chairman, brought up a Progress Report from, and laid upon the Table, the Evidence taken before the Select Committee appointed on 20th April last, to inquire into the management of the Customs Department of the Colony, and the future arrangement for carrying on the business of that branch of the Public Service,—with Minutes of the Proceedings of the Committee, and Appendix.
 Ordered to be printed.
-

1858.

CUSTOMS DEPARTMENT.

PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 20th April, 1858, "to inquire into the Management of the Customs Department of the Colony, and the future arrangement for carrying on the business of that branch of the Public Service," and to whom were at the same time referred "all Proceedings of the Select Committee of the Session of 1856-7," and on the 4th June last, the "Customs Consolidation Bill,"—have agreed to the following Progress Report:—

Your Committee have made considerable progress in the consideration of the matters referred to them, and have taken much valuable evidence; but they regret to state that the numerous daily meetings of other Committees requiring the constant attendance of certain of the Members of your Committee, and the importance and extent of the subject, have up to the present time prevented them from bringing the inquiry to such an issue as would enable them to report finally to your Honorable House at this late period of the Session.

Your Committee, therefore, deem it advisable to submit the evidence taken for the consideration of your Honorable House, with a recommendation that the inquiry be resumed during the ensuing Session.

DANIEL EGAN,
Chairman.

*Legislative Assembly Chamber,
Sydney, 19 November, 1858.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 6 MAY, 1858.

MEMBER PRESENT:—

Mr. Egan.

A Quorum of the Committee was not present.

[Adjourned till Tuesday next, at *Even* o'clock.]

TUESDAY, 11 MAY, 1858.

MEMBERS PRESENT:—

Mr. Egan,

Mr. R. Campbell.

Mr. Dickson,

Mr. Egan was called to the Chair.

By direction of the Chairman, Resolution of the House, dated 20th ultimo, appointing the Committee, and referring thereto the Progress Report and Proceedings of the Select Committee of Session 1856-7, read by the Clerk.

Committee deliberated as to their course of Proceedings, and determined to take evidence.

Whereupon Motion made and *Question*—"That J. De Courcy Bremer, Esquire, "First Tide Surveyor, and J. Collier, Esquire, Second Tide Surveyor, in the Customs "Department, be summoned before this Committee, as witnesses, for Thursday next"—*agreed to*.

Committee then deliberated relative to the mode of conducting the examination of witnesses summoned before them, and the Chairman having read from the Minutes of Proceedings of the Select Committee of Session 1856-7, as shown in the Progress Report made by that Committee, a Resolution on this head, agreed to on the 20th November, 1856;—

Motion made (*Mr. R. Campbell*) and *Question*—"That the Resolution just read be "adopted, as the mode for conducting the examination of witnesses by this Committee"—*agreed to*.

[Adjourned till Thursday next, at *Eleven* o'clock.]

THURSDAY, 13 MAY, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. R. Campbell,

Mr. Donaldson,

Mr. Flood,

Mr. Buckley.

Mr. J. De Courcy Bremer, First Tide Surveyor, and—

Mr. J. Collier, Second Tide Surveyor, examined.

Committee deliberated.

[Adjourned till Friday, 21st instant, at *Eleven* o'clock.]

FRIDAY, 21 MAY, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. Donaldson,

Mr. R. Campbell,

Mr. Flood.

By direction of the Chairman, Letters from Colonel Gibbes, Collector of Customs, and Mr. W. C. Still, Inspector of Bonded Warehouses, excusing their attendance before the Committee, as witnesses for this day, read by the Clerk.

Committee deliberated.

Motion made and *Question*—"That Colonel Gibbes and Mr. W. C. Still be now summoned before the Committee, as witnesses, for Thursday next"—*agreed to*.

Mr. George Thornton, M.P., and Mr. David Nash, Warehouse-keeper in the Customs Department, examined.

[Adjourned till Thursday next, at *Eleven* o'clock.]

THURSDAY,

THURSDAY, 27 MAY, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. Donaldson,		Mr. W. Macleay,
Mr. Weekes,		Mr. R. Campbell.

Committee deliberated.

Colonel Gibbs, Collector of Customs, examined.

[Adjourned till Friday, 4th proximo, at Eleven o'clock.]

FRIDAY, 4 JUNE, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. Donaldson,		Mr. Weekes,
Mr. R. Campbell,		Mr. Flood.

The Chairman laid before the Committee certain Papers relating to the case of Mr. Paget, late a Locker in the Customs Department, transmitted by Colonel Gibbs, when returning his evidence on the 1st instant. (*Vide "Minutes of Evidence of Colonel Gibbs, 27 May, 1858, Q. 121."*)

By direction of the Chairman, Letter from Mr. W. H. Aldis, excusing his attendance, as a witness, before the Committee for this day, read by the Clerk.

Mr. W. C. Still, Inspector of Bonded Warehouses, examined.

[Adjourned till Tuesday next, at Eleven o'clock.]

TUESDAY, 8 JUNE, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. Donaldson,		Mr. Flood,
		Mr. Weekes.

By direction of the Chairman, Resolution of the House, dated 4th instant, referring to the Committee, on motion of Mr. Donaldson, a member of the Committee, "*a Bill to consolidate and amend the Laws relating to Customs and other matters in connexion therewith*,"—read by the Clerk.

Committee deliberated as to the most expedient course to be pursued with regard to this Bill, and determined to take evidence relative to the provisions thereof from the various witnesses summoned before them for examination upon the general subject.

The Chairman then withdrawing,—

Mr. Donaldson was called to the Chair.

Mr. W. C. Still further examined.

At the close of his examination the Chairman handed to Mr. Still a copy of the "*Customs Consolidation Bill*," requesting that he would at his earliest convenience peruse the same, so as to be in a position to furnish the Committee with his opinion thereupon.

[Adjourned till Tuesday next, at Eleven o'clock.]

TUESDAY, 15 JUNE, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. Flood,		Mr. Donaldson,
Mr. Buckley,		Mr. Weekes.

Mr. W. C. Still further examined.

And Mr. Still, at the close of his examination, requesting permission from the Committee to strike out certain portions of his former evidence of a *personal* character,—

Committee deliberated, and it was *Resolved*:—

"That Mr. Still be permitted to strike out those portions of his former evidence
"which contain *personal* charges, as it was understood that the same should
"not be retained as part of his evidence when such evidence was given by
"him."

Mr. Still informed accordingly.

Committee further deliberated.

Motion made, and *Question*:—

"1. That J. Bell, Esquire, and W. H. Aldis, Esquire, be summoned before this
"Committee, as witnesses, for Friday next.

"2. That W. Lamb, Esquire, and R. Adams, Esquire, be summoned before this
"Committee, as witnesses, for Tuesday next, and that a copy of the "*Customs
"Consolidation Bill*" be forthwith transmitted to each of these gentlemen,
"with a request that he will be then prepared to give his opinion there-
"upon"—*agreed to*.

[Adjourned till Friday next, at Eleven o'clock.]

FRIDAY,

FRIDAY, 18 JUNE, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. R. Campbell, | Mr. Weekes.

By direction of the Chairman, Letter from W. Lamb, Esquire, excusing his attendance before the Committee, as a witness, for Tuesday next, read by the Clerk.

Motion made, and *Question*—"That W. Lamb, Esquire, be now summoned before the Committee, as a witness, for Thursday next"—*agreed to*.

Mr. W. H. Aldis, Tobacco Merchant, examined:—

And during the examination of the witness,—

The Chairman, desiring to withdraw from the Room, left the Chair, and

Mr. R. Campbell was called thereto.

Mr. Egan then withdrew.

The Chairman was proceeding with the examination of Mr. Aldis, when the Clerk called his attention to the fact that a Quorum of the Committee was not present.

Deliberation thereupon ensued, and

The Chairman, having before him May's Parliamentary Practice, read therefrom a Standing Order of the House of Commons, No. 226, relating to this matter.—*Vide "May's Parliamentary Practice—Third Edition, (1855,) page 313, viz.:*—

"If at any time during the sitting of a Select Committee of this House the

"Quorum of Members fixed by the House be not present, the Clerk of the

"Committee is to call the attention of the Chairman to the fact, who is

"thereupon to suspend the Proceedings of the Committee until a Quorum be

"present, or to adjourn the Committee to some future day."

Committee were deliberating as to the applicability of this Standing Order to this particular case (the Chairman having only retired *temporarily* from the Room) when

Mr. Egan, re-entering the Committee Room, resumed the Chair.

Mr. Aldis' examination then concluded.

Mr. John Bell, examined,—

And during the examination of the witness, Mr. R. Campbell withdrawing, the Clerk called the attention of the Chairman to the fact that a Quorum of the Committee was not present.

Mr. Bell's examination thereupon stopped by the Chairman.

[Adjourned till Tuesday next, at *Eleven o'clock*.]

TUESDAY, 22 JUNE, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. Donaldson, | Mr. Lord,
Mr. Weekes.

The Chairman, at the request of the Clerk, brought under the notice of the Committee the extensive corrections made by Mr. W. C. Still in the evidence given by him on the 8th instant; and stated that Mr. Still was now in attendance, and desirous of explaining the nature of these corrections, and the reasons which induced him to make them.

Whereupon Motion made, and *Question*—"That Mr. W. C. Still be now called in, "and questioned relative to the necessity for these corrections"—*agreed to*.

Mr. Still called in accordingly.

And, in reply to a question put by the Chairman, Mr. Still having stated that the corrections in the evidence of the 8th instant, made by him, were absolutely requisite for its proper elucidation and completion, and were, moreover, in the wording, and not in the substance thereof,—

Committee deliberated, and it was *Resolved*:—

"That the evidence given before this Committee by Mr. Still on the 8th instant "be printed as corrected by him."

Mr. Still thereupon withdrew.

Mr. J. N. Beit examined.

[Adjourned till Thursday next, at *Eleven o'clock*.]

THURSDAY, 24 JUNE, 1858.

MEMBERS PRESENT:—

Mr. Egan, | Mr. Donaldson.

Mr. Walter Lamb and Mr. Costigan were in attendance, as witnesses, but a Quorum of the Committee was not present.

[Adjourned till to-morrow, at *Eleven o'clock*.]

FRIDAY,

FRIDAY, 25 JUNE, 1858.

MEMBERS PRESENT :—

Mr. Donaldson, | Mr. Weekes.

Mr. R. Adams and Mr. H. Dixon were in attendance, as witnesses, but a Quorum of the Committee was not present.

[Adjourned till Thursday next, at *Eleven* o'clock.]

THURSDAY, 1 JULY, 1858.

MEMBERS PRESENT :—

Daniel Egan, Esquire, in the Chair.

Mr. Buckley, | Mr. Weekes.

Mr. *Walter Lamb*, of the firm of Lamb, Parbury, & Co., examined.

The Chairman laid before the Committee *five* papers, transmitted to him by Mr. Aldis, relating to certain goods missing from his Bonded Stores in March, 1858, with a request that the same might be returned to him, when considered by the Committee.

The Chairman, at the request of the Clerk, then brought under the notice of the Committee an Addendum made by Mr. J. N. Beit to the evidence given by him on the 22nd ultimo, and desired the opinion of the Committee as to the expediency of permitting the printing thereof with his evidence.

Committee deliberated, and it was *Resolved* :—

“ That in the opinion of this Committee, as the Addendum referred to is simply
“ explanatory of an answer given by Mr. Beit to a question put to him by a
“ member of the Committee, it is advisable to permit the printing thereof
“ with his evidence.”

Mr. *D. Costigan*, late Tide-waiter in the Customs Department, then examined.

[Adjourned till Tuesday 13th instant, at *Eleven* o'clock.]

TUESDAY, 13 JULY, 1858.

MEMBERS PRESENT :—

Daniel Egan, Esquire, in the Chair.

Mr. Donaldson, | Mr. Weekes.

Committee deliberated.

Motion made, and *Question*—“ That the Collector of Customs be summoned before this Committee, as a witness, for Tuesday next, for the purpose of giving the Committee all the information in his power relative to certain goods missing from Mr. W. H. Aldis' Bonded Store in March last, together with the name of the person who eventually paid duty thereon, and the date of such payment ”—*agreed to*.

Mr. *Hugh Dixon*, Tobacco Merchant, and

Mr. *R. Adams*, examined.

[Adjourned till Thursday next, at *Eleven* o'clock.]

THURSDAY, 15 JULY, 1858.

MEMBERS PRESENT :—

Daniel Egan, Esquire, in the Chair.

Mr. Donaldson, | Mr. Weekes.

The Chairman brought under the notice of the Committee an answer filled in by Mr. Costigan in reply to a question put to him at the close of his examination on the 1st instant, and desired their opinion as to the expediency of causing the same to be printed with his evidence.

Question and answer referred to read by the Clerk.

Committee deliberated, and it was *Resolved* :—

- “ 1. That inasmuch as the answer referred to contains charges of a personal nature
“ against certain officers of the Customs, and emanates from an officer
“ dismissed from that Department, it is inexpedient to permit the printing
“ thereof with Mr. Costigan's evidence.
- “ 2. That the said question and answer be therefore expunged from Mr. Costigan's
“ evidence.”

Mr. *Walter Lamb* further examined.

[Adjourned till to-morrow, at half-past *Eleven* o'clock.]

FRIDAY, 16 JULY, 1858.

MEMBER PRESENT:—

Mr. Egan.

Mr. Metcalfe was in attendance, as a witness, but a Quorum of the Committee was not present.

[Adjourned till Tuesday next, at *Eleven o'clock*.]

TUESDAY, 20 JULY, 1858.

MEMBERS PRESENT:—

Mr. Egan, | Mr. Buckley.

Colonel Gibbes and Mr. Almond were in attendance, as witnesses, but a Quorum of the Committee was not present.

[Adjourned.]

TUESDAY, 17 AUGUST, 1858.

MEMBERS PRESENT:—

Mr. Egan, | Mr. R. Campbell.

Colonel Gibbes and Mr. Almond were again in attendance, as witnesses, but a Quorum of the Committee was not present.

[Adjourned till Thursday next, at *Eleven o'clock*.]

THURSDAY, 19 AUGUST, 1858.

MEMBERS PRESENT:—

Mr. Egan, | Mr. R. Campbell.

Colonel Gibbes and Mr. Almond were again in attendance, as witnesses, but a Quorum of the Committee was not present.

[Adjourned.]

TUESDAY, 7 SEPTEMBER, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. R. Campbell, | Mr. Donaldson.

Colonel Gibbes further examined.

Mr. W. Almond, Storekeeper to Messrs. Campbell and Co., examined.

[Adjourned till Friday next, at *Eleven o'clock*.]

FRIDAY, 10 SEPTEMBER, 1858.

MEMBERS PRESENT:—

Mr. Egan, | Mr. R. Campbell.

Mr. Metcalfe was again in attendance, as a witness, but a Quorum of the Committee was not present.

[Adjourned.]

THURSDAY, 14 OCTOBER, 1858.

MEMBERS PRESENT:—

Mr. Egan, | Mr. Donaldson.

Mr. Metcalfe was again in attendance, as a witness, but a Quorum of the Committee was not present.

[Adjourned.]

TUESDAY,

TUESDAY, 19 OCTOBER, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. R. Campbell,		Mr. Weekes,
Mr. Donaldson,		Mr. Gordon.

Mr. M. Metcalfe, Custom House Agent, examined.

Committee deliberated.

Captain C. Smith, Merchant and Shipowner, examined,—

And during the course of his examination the witness entering upon the circumstances attending a case of alleged fraudulent irregularity on the part of certain officers connected with the Customs Department, which he stated that he had himself sufficiently investigated to be in a position to prove, and which he had deemed it his duty to bring under the notice of the Executive Government;—

Committee deliberated, and it was *Resolved*:—

“That the further examination of Captain Smith be adjourned till Thursday next, “so as to afford an opportunity of ascertaining whether the Executive Government intend taking any action with respect to this alleged “irregularity.”

[Adjourned till Thursday next, at *Eleven o'clock*.]

THURSDAY, 21 OCTOBER, 1858.

MEMBERS PRESENT:—

Mr. Egan,		Mr. R. Campbell.
-----------	--	------------------

Captain C. Smith was again in attendance, as a witness, but a Quorum of the Committee was not present.

[Adjourned till Tuesday next, at *Eleven o'clock*.]

TUESDAY, 26 OCTOBER, 1858.

MEMBERS PRESENT:—

Mr. Egan,		Mr. R. Campbell.
-----------	--	------------------

Captain C. Smith was again in attendance, as a witness, but a Quorum of the Committee was not present.

[Adjourned till Tuesday, 9 proximo, at *Eleven o'clock*.]

TUESDAY, 9 NOVEMBER, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. Weekes,		Mr. Donaldson,
		Mr. R. Campbell.

The Chairman informed the Committee that since their last meeting he had personally communicated with the Principal Secretary, and had been informed by him that the case of alleged fraudulent irregularity on the part of certain officers of the Customs and other parties, referred to in the evidence given by Captain Smith on the 19th ultimo, was under the consideration of the Executive Government, who had already taken action in the matter.

Committee thereupon *Resolved*:—

“1. That after the statement just made by the Chairman it is for the present not “necessary to examine Captain Smith further with reference to this matter.

“2. That Captain Smith be called in and so informed by the Chairman.”

Capt. C. Smith called in and informed by the Chairman accordingly.

Capt. C. Smith then further examined.

Mr. C. Clanchy, Extra Tide-waiter, examined.

Committee then deliberated, and it was *Resolved*:—

“That it is advisable that a letter should be forthwith addressed to the Collector “of Customs, requesting him to furnish, as speedily as possible, a Return “shewing the extra tide-waiters at present employed in the Customs Department, specifying their names, date of appointment, average rate of pay, and “any other information relative thereto calculated to prove useful to the “Committee.”

Committee then further deliberated, and it was *Resolved*:—

“1. That sufficient evidence has now been taken for the purposes of this inquiry.

“2. That as soon as possible after the printing and circulation thereof to the “various members of the Committee, the Chairman do convene a meeting to “consider their best course of proceeding.”

[Adjourned.]

FRIDAY,

FRIDAY, 19 NOVEMBER, 1858.

MEMBERS PRESENT:—

Daniel Egan, Esquire, in the Chair.

Mr. Donaldson, | Mr. R. Campbell.

The Chairman laid before the Committee—"Return of the extra Tide-waiters employed in the Customs Department, with the date of appointment and rate per day when employed"—transmitted by Colonel Gibbs, for the information of the Committee, on the 11th instant, in compliance with the action taken on the Resolution agreed to by the Committee in reference to this subject at their last meeting.

Ordered to printed in Appendix. (*Vide "Separate Appendix A."*)

The Chairman then stated that he had caused the present meeting of the Committee to be convened to consider their best course of proceeding at this advanced period of the Session, and to submit for their consideration a Draft Progress Report.

Committee deliberated.

Draft Progress Report read.

Committee considered, and verbally amended the same.

Motion then made, and Question—"That this Draft Report, as verbally amended, be the Progress Report of the Committee"—agreed to.

Chairman requested to Report Progress to the House.

1858.

Legislative Assembly.
NEW SOUTH WALES.

MINUTES OF EVIDENCE
TAKEN BEFORE
THE SELECT COMMITTEE
ON THE
CUSTOMS DEPARTMENT.

THURSDAY, 13 MAY, 1858.

Present:—

Mr. EGAN,		Mr. BUCKLEY,
Mr. R. CAMPBELL,		Mr. FLOOD,
Mr. DONALDSON.		

DANIEL EGAN, Esq., IN THE CHAIR.

John De Courcy Bremer, Esq., called in and examined:—

1. *By the Chairman:* You are an Officer of the Customs Department? I am.
2. What position do you hold? I am First Tide Surveyor.
3. Are there any other tide surveyors besides you? Yes, one, Mr. Collier.
4. What are the duties of tide surveyor? The duties are various;—boarding ships on arrival, at all hours—rummaging—clearing the same—the general supervision of the duties afloat—placing tide-waiters, for the protection of the revenue, on the arrival of each ship—ship measuring for tonnage, for registration—and visiting ships in charge of tide-waiters, at uncertain hours.
5. Have you anything at all to do with the clerical duties of the establishment? On the arrival of a ship from London, for instance, I ask for the manifest, the cockets, the list of passengers, and list of dutiable stores in the ship; and of each of these I have to make out copies, and send one to the Governor General, one to the Colonial Secretary, and one to the Immigration Office, and one we retain for the ledger, to know the number of souls arriving in the Colony within a given period.
6. You have nothing to do with keeping the accounts, or receiving any cash? We receive nothing more than the moneys necessary for paying the tide-waiters and boatmen.
7. How do you receive that? By cheque from the Collector.
8. What description of voucher is there in that case? The usual pay abstract, which is sent to the Colonial Treasurer monthly.
9. Have you anything to do with the dutiable goods after landing, or in reference to their landing, in any way? The surveillance I hold is only afloat; the goods in question go under the hands of the landing waiters as soon as they are landed.
10. It appears that the chief part of the duty you have to perform is afloat? Yes.
11. Have you anything to do with dutiable goods that are being removed afloat from one part of the harbour to another? We have tide-waiters and export officers appointed for that purpose; and the duty of removing goods for export is under my superintendence.
12. Have you anything to do with the removal of goods from one bonded store to another by water? Nothing; but if a landing waiter sends to the tide surveyor for an officer to remove certain goods from such a ship to such a bonded store, an officer is sent accordingly.
13. Is there an officer sent in every instance? In every instance. There is a positive order that no boat leaves a ship without an officer.
14. Has there been any increase in your branch of the department since the evidence was taken by the Committee appointed last year? No, there has been no increase of numbers. Some men have left, and others have been placed on the list. The number we have now is twenty-five.
15. Are these men permanently employed? No; they are only paid as their services are required.
16. What is the amount of salary you receive? £325.

J. De Courcy
Bremer, Esq.

13 May, 1858.

- J. De Courcy Bremer, Esq.** 17. And there is no other emolument—no perquisites in any way? No, except in case of seizures, or things of that kind. Both tide surveyors are on the same salary.
- 18 May. 1858.** 18. Is there anything you could suggest to the Committee by way of improvement in that branch of the department which is under your direction? No, I do not see that I could suggest anything to improve the present working of the department.
19. There are no fixed hours for the performance of the duties entrusted to you? No fixed hours for the tide surveyors; we may be employed from sun-rise to sun-down, Sundays included, and there is also night work—two visits a week to all ships with tide-waiters on board.
20. Has any person any authority over you except Colonel Gibbes? I am under the direction of the Collector and the Landing Surveyor. The Landing Surveyor is the head of the waterside department.
21. What number of boats are used by the department? We have three in constant use.
22. In what way are these boats in constant use? One boat (my own) has a coxswain and four men; the next, Mr. Collier's, has a coxswain and three men; and the other boat, for the use of the Collector and the Landing Surveyor, has two men—making eleven men in all.
23. Do I understand you that three boats and that number of men are absolutely necessary? Most undoubtedly they are. Mr. Collier and myself have to perform our duties generally in different directions; he may have to go to Darling Harbour and I to the Heads, or *vice versa*. The other boat is for the Landing Surveyor to visit the wharves, which are very numerous.
24. Would he not be able to visit the wharves without the assistance of a boat? The boat is necessary for the use of the Landing Surveyor and the Collector, and has always been allowed in days gone by. In the Home service a Landing Surveyor acting as Controller is allowed two men. These three boats are in constant use, and we have also a spare boat in case of accident, or of repairs being necessary to either of the others.
25. Have you any instructions with reference to your duties? We have printed instructions, but I have not a copy with me now.
26. I suppose on some occasions you are absent from the performance of your duties, for a day or a week for instance? Yes, with the permission of the Collector of Customs.
27. Under such circumstances, who attends to your duty? The Collector appoints another officer of the department to perform the duties in my absence, or approves of such arrangement as may be made with another officer.
28. He appoints an officer next in position to yourself? Yes, if I should be sick or absent on leave.
29. I understood you to say that you receive no cash, nor have any control of any of the revenue? We receive, as I before said, the cash for paying the tide-waiters and boatmen, but nothing else.
30. You receive nothing on account of the department? Nothing whatever.
31. Do you know anything about the bonded stores? It is a branch of the department I know very little about.
32. *By Mr. Buckley:* Where did you receive your appointment? From Sir George Gipps, in 1846.
33. Did you receive your first appointment to the Customs Department from him? Yes; I came in as sixth landing waiter.
34. Had you no appointment from home? I was confirmed by Earl Grey some years afterwards. Mine was a colonial appointment, confirmed by Earl Grey. I have paid superannuation about five years.
35. What salary had you last year? £350; but it has been reduced, by the reduction of the gold increase, to £325.
36. What particular officers are under you? The extra tide-waiters and export officers.
37. Do you mean the landing waiters? No; they are the day-guards of all the wharves they are on; I am the row-guard of the harbour.
38. Are the coast waiters under you? No.
39. You have no control over any but the tide-waiters? Only the tide-waiters and export officers.
40. When a vessel is ready to be launched do you board her to take her measurement? She is measured either by Mr. Collier or myself. A certificate is sent in that such a vessel requires to be measured; that certificate comes to one of the tide surveyors, who takes it, and measures the vessel according to the time and assignments the parties may wish.
41. You have nothing to do, you say, with goods that are sent under bond from the stores? It is my duty to protect goods on the water. For instance, yesterday I had six men trying to tow off a punt laden with dutiable goods, which had stuck fast on Dawes' Point.
42. Were you in charge of the punt at the time? No; a proper officer was in charge, but I was passing, and I deemed it my duty to try and get her off.
43. Did you get her off at last? No; we had to get another boat and transfer the spirits.
44. There was no loss sustained? No.
45. Do you know of any instance of any dutiable goods having been sent by water from a bonded store without being in charge of a proper officer? Not recently; some years ago there may have been such cases.
46. Within the last two years it has not been so? No.
47. Does a proper officer go with drays that remove dutiable goods? It does not come within my province, and therefore I cannot tell you positively, but I think not; I will not be sure.
48. Does it commonly occur that you get a punt laden with dutiable goods fast in the way you have spoken of? No, very seldom; I do not think I have known such an instance before.
49. Do you ever board ships before the Health Officer? I have, perhaps, on one or two occasions, boarded a London ship before the Health Officer; but only on the pilot's assurance that things were all correct. However, it is not usual or proper to board a vessel before the Health Officer gives her pratique.

50. You do not board vessels placed in Quarantine? No.
51. Is there any proper officer to prevent smuggling at the Heads? None; there was a tide surveyor down there, but the office was done away.
52. Is there no one to see that no dutiable goods are landed from immigrant vessels in Quarantine? We give it all possible attention; but it would be impossible, as we are at present situated, to do more than we do in that respect.
53. Have you any idea, from any circumstance that has come under your own knowledge, that smuggling is carried on in the neighbourhood of the Heads? It is my opinion that a great deal of spirits are run in Middle Harbour.
54. *By the Chairman*: Now, do you think? Yes.
55. Will you state what reason you have for supposing this is done? I think many vessels may come in coastwise. There is no protective force.
56. You say you are of opinion that very large quantities are landed in this way? I do not say very large quantities; but I am of opinion that smuggling generally may be carried on there.
57. Have they facilities for doing it to a very large extent down there—I mean to say, is the Customs Department so ineffective that an active body of men might smuggle to a considerable extent? I could not exactly say that, because if they did attempt to do it on a large scale, the Customs would be apprised of it in one way or another; and we have force enough, I think, to protect the revenue if such were the case.
58. Do you think smuggling has increased since the removal of the officer stationed at Watson's Bay? I am given to understand there is smuggling there. I do not say it has increased.
59. You are frequently down at the Heads? Yes.
60. Is it in your opinion desirable that an officer should be stationed there—would the revenue benefit by it? I am of opinion that an officer in Middle Harbour would be of service; but it would be of no use to send him with only two men; he should have a full boat's crew, armed.
61. I suppose smuggling is generally carried on during the hours of darkness? I think there is very little, from what I can see, of smuggling so carried on. There may be illicit distillation; or an American ship may land a package or two of tobacco, or anything of that kind.
62. Has any information ever come to you with reference to any smuggling? I have had information with respect to illicit distillation.
63. Not smuggling from any ships? No.
64. In what you have said, do you allude to smuggling from vessels? I say that such might be the case, without protection is afforded to the revenue by the appointment of an officer to reside down there.
65. But I presume that you take the necessary precaution when a vessel arrives—that is to say, no sooner does she arrive than you place an officer on board? Most undoubtedly.
66. How do you do in case of exports—is there any supervision over them? That depends on circumstances. For instance, if a vessel is going to the port of Melbourne with dutiable goods, I do not deem it necessary to place an officer on her, because the Customs Officers there are so very particular; the clearance of the vessel would be shown on her arrival at Melbourne, and any demurrage would be found out. But, on the other hand, if a vessel were going to California, or the Islands, we would always place an officer on board of her for the protection of the revenue.
67. From the time they are shipped till the vessel is gone? Yes.
68. You say an officer is necessary at the Heads, but that he would be of very little service without an efficient boat's crew; but if this precaution be taken of putting an officer on board vessels outward bound until they leave the port, and upon inward vessels as soon as they arrive, what chance is there of smuggling unless that officer connives? I am only speaking of ships coming in casually in the night, and running goods before being boarded. A vessel may come in at eleven or twelve o'clock, run into Middle Harbour, and land fifty or a hundred hogsheads of rum before morning.
69. Did you ever know of any circumstance of the kind taking place? Never.
70. Do you enter into any bond or security? Yes; I have two sureties in £250 each.
71. *By Mr. Donaldson*: Is there any preventive officer in Broken Bay? Yes, Mr. Ross; he is the coast waiter there. Mr. Brett is at Botany.
72. *By the Chairman*: Are you not aware that it was in consequence of the tide surveyor at Watson's Bay not being considered necessary that he was removed? Colonel Gibbs removed him, I believe, for that reason, and, as far as my opinion goes, I think with only two men it was impossible he could do the duty; he could not board vessels down there in his boat when there was a heavy sea running. In fact the officer was useless, because two men were insufficient for the service.
73. If he had no officer to leave on board a ship, what was the use of his boarding her? We do not generally take officers with us in the boat when boarding for the first time; we take her report, and as soon as we get on shore we nominate an officer to go on board.
74. During the day an officer is placed on board? Yes, as soon as we can manage it.
75. *By Mr. Buckley*: What is your opinion with regard to the present system of bonded stores—are they convenient to the public? They appear to me to be so.
76. Do you not imagine it desirable to have one large store to bond everything that arrives in the Colony in charge of the Government? If you were to do the same as they do in the Home Service in the Docks, it certainly would be a benefit.
77. Would it decrease the number of officers required for carrying on the department? I do not think it would, for there must be an officer for each floor or division in the store.
78. Would it not decrease the number of lockers? It might, perhaps; but it is a matter I understand very little about.
79. Would it lessen your duties in any way? I do not see that it would, unless, indeed, it might do so by causing the concentration of ships and goods to one point.

J. De Courcy
Bremer, Esq.
13 May, 1858.

- J. De Courcy
Bremer, Esq.
13 May, 1858.
80. *By the Chairman*: Does any officer in the Customs get additional pay for overtime? The landing waiters get paid for overtime, at rates in accordance with their standing in the department; at least it was so when I was in that branch. They get a shilling an hour for every £100 of salary; if a man gets £200 a year, he gets two shillings an hour; the tide-waiters get one shilling.
81. Is that paid by the parties inconvenienced by their attendance, or by the revenue? By the parties. All ships are allowed twenty days to discharge, or twenty-four including Sundays; if they are over that time the tide-waiter goes on the pay of the ship.
82. The Government is put to no additional expense for overtime? No.
83. The men you put on board vessels in the harbour are expected to keep watch day and night, are they not? They are presumed to be on duty all day, and to see the hatches properly locked at night, remaining on the ship night and day.
84. Such an officer gets no relief at all till the ship is finally cleared? He gets no relief until she is finally jerked by the tide surveyor, rummaged, and cleared.
85. What course is adopted with reference to vessels arriving with large quantities of dutiable goods as stores? There has been no definite course of scaling up, as they do at home, or allowance made according to the number of men; they are allowed the free use of their stores during the time they are in port, but they furnish me, on coming in, with a list of their stores, and it is my duty to see that no undue use has been made of them; this I do by personal inspection, say once a week.
86. There was a practice here, I think, at one time—perhaps you can say if it is still continued—of ascertaining the quantity of dutiable stores, and issuing a supply for a certain period, say a week? It has never been done in my time.
87. It is not done now? It is not done now.
88. Do you know, or have you heard it generally rumoured, that there are a number of persons connected with the Customs Department who are frequently in such a state of intoxication as to be unfit to perform their duties? I have heard many rumours of such matters, but I have not been personally aware of it.
89. *By Mr. Buckley*: Did you never see any one round the wharves you have visited in an unfit state to perform his duties? I cannot say I ever did.
90. You have never seen any of them asleep in their boxes? No; it is very seldom I go into a landing waiter's box.
91. *By Mr. Campbell*: Are you quite sure you have never reported officers for drunkenness or neglect of duty? I have reported tide-waiters for being in a state of inebriety.
92. *By the Chairman*: Have you never seen or known any officer holding a position superior to that of a tide-waiter in that state? No.
93. Do you know if any have been reported by any other officer? No.
94. Do you know if those officers you reported were still retained in the service? Some may have been reinstated.
95. They were removed, and have since been reinstated? Yes.

James Collier, Esq., called in and examined:—

- J. Collier,
Esq.
13 May, 1858.
1. *By the Chairman*: You are an officer of the Customs Department? Yes; I am Second Tide Surveyor.
2. What are the duties you have to perform? The principal duties are boarding ships, placing tide-waiters on their ships, visiting them, measuring ships, and so on.
3. Is there any revenue derived from the measurement of ships? No.
4. There is no charge made? No; the Treasury authorises a charge, but it has never been charged in the colonies; the charge allowed by the Act is seven shillings and sixpence per section.
5. What supervision have you when ships arrive with dutiable goods, or when such goods are placed on board vessels in the harbour for export? We place tide-waiters on board ships as they arrive; and there are four export officers under our direction, whose duty it is to see to the shipment of goods for export.
6. Is there any person authorised to look after the security of goods for export after they are put on board? No, unless it is a ship for New Zealand or the Islands. We use our discretion. If there is a large quantity of goods put on board a ship bound outwards, we generally place an officer on board while she remains in the harbour. A great deal depends upon the parties shipping, or the places the vessels are going to.
7. Have you any instructions for the performance of your duty? Yes.
8. *By Mr. R. Campbell*: Are they in writing? They are the home instructions to tide surveyors.
9. Will you furnish us with a copy? I will. (*The witness handed in the same. Vide Appendix A.*)
10. *By the Chairman*: Do you give any security for the performance of your duty? Yes, £500.
11. Two sureties? Yes.
12. Do you not cause some supervision to take place over goods when being shipped, for instance, in a punt to a vessel in the stream? Yes; an officer always accompanies a punt in removing goods from one ship to another.
13. Is that always the case in removing dutiable goods from a ship to a bonded warehouse, or from the warehouse to a ship? Yes.
14. Has that been always the case, or only lately? Within the last twelve months.
15. Since this inquiry was first instituted? Yes. Spirits are moved more by boat or punt now, to save the expense of dray hire. We used to have cart followers when they were removed by drays. A messenger followed the drays, but now an officer accompanies the punt.
16. Are you constantly employed? Yes.

17. You have no fixed hours? No fixed hours; early and late, according as ships come in.
18. Have you any control over the boats? I have one for my service.
19. What boats are there? Four boats, one of which is a spare boat.
20. What number of men? I have four men; the First Tide Surveyor has five; and the small boat has two men.
21. What duty does the third boat perform? It is for the use of the Landing Surveyor or Collector when he may require a boat. Very frequently we have a man sick, and we take one of these two in his place.
22. Do you think that portion of the department connected with the water service is in an efficient state to prevent smuggling? I do not think it is, for the extent of the harbour.
23. Do you believe any smuggling takes place? I do, and I do not think we can prevent it.
24. In what way? In a small way—not in a large way. Vessels can land small quantities of tobacco or spirits.
25. Not unless they come in at night? It is landed in the day-time.
26. Is there not an officer on board every vessel? No; the expense would be enormous. It was only the other day Mr. Bremer discovered a captain landing tobacco in two trunks packed up and corded. It is not what is placed on the manifest that is smuggled, but vessels coming from the Islands bring up small quantities of tobacco, which they can get cheap there, and take it on shore as opportunity offers.
27. Do you keep any accounts at all—have you anything to do with any portion of the clerical department? We have the reports of the ships inwards.
28. You have nothing to do with any cash receipts, except what you receive from the Collector to pay the tide-waiters? Nothing more.
29. What books are kept to show the amount due, or what voucher do you produce as a guarantee for the payment of the money? Each man sends in a return of the time he has been on duty; when he is put on board a ship the time is marked in a book, and at the expiration of the month he sends in a return of his time, which is checked by myself, then the voucher is made out upon which he is paid, and they are all kept and filed.
30. Have you had any occasion to report any person belonging to your branch of the department for being drunk or asleep on duty? I am afraid most of them are too sleepy. We have not the best set of men in the tide branch that I could wish for.
31. *By Mr. R. Campbell:* Why is it the officers appointed to act as extra tide-waiters are so inefficient? They appear to creep into the department; they are not the class of men we ought to have. We require a very efficient set of men for the tide branch; it is a very responsible office, if a man performs his duty as he ought to do.
32. Who appoints these persons? They are usually appointed by the Collector, upon recommendations which he receives from the Treasury, I think, generally.
33. Are these appointments in his gift? Very few of them are solely appointed by him.
34. *By Mr. Donaldson:* Do not the extra tide-waiters get paid by the day, according to the occupation they may have? Yes, when employed they receive 10s. 6d. a day.
35. They are not regularly on the staff? No.
36. You think a better plan might be adopted? Yes; I think it would be better to appoint a superior set of men on fixed salaries.
37. *By the Chairman:* Would they not have a great deal of idle time—for instance, sometimes you may have only four employed, though at other times there may be twenty? We could employ them although they might not be on board ships. The four export officers cannot always do their duties, and we have, frequently, to call on tide-waiters to assist them. I think we might reduce the number on fixed salary from twenty-five to fourteen—twelve for permanent ship duty, and two for accompanying boats from the different ships to the stores.
38. You think that would be an improvement on the present mode? Yes.
39. How long have you been appointed? I was appointed in 1840, at home, and joined the service here in 1841.
40. What salary do you receive? It is £325 now.
41. The only difference between you and Mr. Bremer is, that he is called First and you Second Tide Surveyor? Yes, he was appointed before me; the duties are the same, and the pay is the same.
42. *By Mr. R. Campbell:* What are the average earnings of extra tide-waiters in the year? I should say the department pays them about £130 a year each, and the extra pay would make it £150; besides that, they are boarded and lodged by the ship while on duty.
43. They are not relieved while on duty? No, not as a rule. If there are two ships together we allow one of the men to go home for a time to get clean linen, and the other man gives an eye to the ship.
44. If there are not two ships together they are not relieved? No.
45. When they are asleep there is no one on guard? The officer remains on board day and night, and it is his duty to see the hatches securely fastened every night.
46. *By Mr. Donaldson:* Do you think a general system has arisen in the department of promoting men permanently to the staff from the list of extra tide-waiters? I think it has been so.
47. Then the department is recruited from inferior men? Yes; we lose the best men, and we do not get good men in return. Several men who have been under my charge, and who have been promoted, were very good men and a credit to the service, but we do not get such men in their places.
48. *By the Chairman:* When you employ them in any other way besides as tide-waiters, I suppose you generally select the best men? Yes, we select those most fit for duty. There are several we have on our list that even the agents do not feel disposed to employ, because they are not men to perform the duties satisfactorily.
49. Do you believe the department, as a whole, is efficient, or could you suggest anything for its improvement? I think, taking it as a whole it is better than it has been for some time.

J. Collier,
Esq.
13 May, 1858.

- J. Collier, Esq.
13 May, 1853.
50. Do you think it is in an improving state? I think as far as the bonds go it is improving in that respect. We have more men employed, and the public have greater facilities now than they had.
51. *By Mr. R. Campbell:* Have you any baggage searchers now? No.
52. Why were they done away with? I think the Collector recommended it.
53. By the abolition of that office there has been an opening for smuggling? It gives greater facilities, no doubt, for smuggling in small quantities.
54. *By the Chairman:* Is there any suggestion you could make to the Committee with regard to the department? There is a matter I would like to bring to your notice—the time that ships are allowed to discharge. There is no difference made between a vessel of two hundred tons and one of two thousand; the time is in every case twenty working days, and it seems to be a great grievance with shipmasters.
55. Is not that an arrangement of the Collector's? No, it is by law.

APPENDIX A.

Instructions by the Commissioners of His Majesty's Customs to the Tide Surveyors of the Customs in the British Possessions abroad.

Article 1. You will observe that by the Act 6 Geo. IV. cap. 109. sec. 11, you are required to take the oath therein set forth on your admission into office; and that by the 9th section of said Act you are prohibited from receiving any fee or reward, without the sanction of the Lords of the Treasury, on pain of dismissal for the first offence; and that by the 29th section of the aforesaid Act, if any person shall give, offer, or promise to give any bribe or reward to any Officer of the Customs, to induce him to neglect his duty, or to do any act whereby the provisions of any Act of Parliament may be evaded, every such person forfeits the sum of £500.

Art. 2. You are diligently to attend your duty at such times and places as the Collector and Controller shall direct, in order to be in readiness to board the proper number of tide-waiters upon every vessel from foreign parts on her first entrance to the port.

Art. 3. And when tide-waiters are placed on board any vessel, you are to give them a strict caution to prevent the illegal unshipping of goods, or any other frauds.

Art. 4. You are to keep a book containing an account of the arrival of all vessels, shewing their names,—name of master,—from what port,—nature of her cargo,—when boarded,—name of officer (if any) appointed to the vessel; and such an account is to be kept of all vessels sailing from the port, a daily transcript of which is to be delivered to the Collector and Controller every morning for their information: And whenever you are unable to attend your duty, from any cause whatever, you are to apprise the Collector and Controller thereof, in order that they may appoint another officer to your duty, and if your absence should be occasioned by sickness, you are to send to the Collector and Controller as soon as practicable, a medical certificate in proof of your illness and inability to attend your duty, and you are to produce to them a similar certificate once a week during the time you are absent from duty.

Art. 5. You are as soon as practicable after the vessel's arrival, to proceed on board, and with the assistance of your boatmen, strictly and carefully to examine the hold, cabins, and all suspicious places, taking an account of the stores on board for the use of the vessel, the particulars of which, and the time of your rummage you are to enter in the tide-waiter's book; observing that if you have occasion to use a candle, that it be in a lantern, secured with horn or isinglass, and in case you discover any prohibited goods, or any goods not reported, you are to secure the same, and deposit them in the King's Warehouse as soon as practicable, taking care to enter the particulars thereof in the tide-waiter's book (should any be on board), previously to your removing such goods from the vessel, and acquaint the Collector and Controller therewith, for their directions.

Art. 6. You are also frequently to rummage the vessels upon your station during the delivery of their cargoes, and to ascertain, from time to time, whether the stores left on board on the vessel's arrival appear to have been expended for the use of the vessel; and in case you discover good grounds to suspect that any part thereof has been run on shore, or improperly disposed of, you are immediately to communicate the circumstance to the Collector and Controller, for their directions.

Art. 7. You are, by the most active and vigilant superintendence, to see that the tide-waiters at their post and strictly perform their duty; and in case you discover that any of them neglect their duty, or conduct themselves improperly, you are immediately to represent the same to the Collector and Controller; and you are not to take upon yourself to order, nor are they to permit, any customable goods to be landed before entry and payment of duties, without orders in writing from your Collector and Controller, or the landing waiter appointed to the vessel, unless you shall discover any small packages of goods which appear intended to be run, when you are to secure the same in the King's Warehouse, or in such manner as the Collector and Controller shall direct; neither are you, the boatmen, or tide-waiters, under any pretence whatever, whether the same be passengers' baggage or otherwise, to presume to open, examine, or deliver any packages on board, whether from foreign parts or coastwise, but the same are to be examined by the landing waiter. Seamen's chests, however, after having been examined, may be delivered, provided you are fully satisfied, from the small quantity and inferior quality of the contents, that they are *bona fide* the personal baggage of such seamen.

Art. 8. You are frequently, and at uncertain periods, to visit all vessels so long as the tide-waiters are continued on board, in order to ascertain whether they are on duty, and are

NOTE.—This applies to those ports only where the employment of tide-waiters has been sanctioned.

are sober; and you are to take care that they do not leave the vessel until her cargo is delivered, without leave; and upon such visitations you are carefully to examine their official books, to ascertain that they are properly kept, and that they discharge their duty agreeably to these instructions; and you are to note the day and hour of such visitations, on the back of the tide-waiter's official book, and sign your initials thereto; and in case any of the officers should apply to you for leave of absence, you may grant the same for such time as shall appear necessary, first entering in their book the time they may go, and the time they are to return, taking care that it be in the day-time, and that the ship be not at work.

J. Collier,
Esq.
13 May, 1858.

Art. 9. In order that you may ascertain that the tide-waiters do not quit their vessels during the night-time, you are to make nightly visitations to the vessels on which they are boarded, taking care that such visitations be not less than twice in the week, and that the same be made at uncertain periods, varying both the night and the hour in such manner as shall most effectually prevent the tide-waiters from expecting the precise time when such visitations are to take place, and you shall on the following day prepare and lay before the Collector and Controller an account thereof, describing the names of the vessels, the hour of your visitations, and the names of any of the tide-waiters that may be found absent from duty.

Art. 10. You are to observe, that if any article cleared as stores be unshipped without payment of duty, the same will be liable to forfeiture, and the parties offending will subject themselves to the penalties which the law imposes in such cases.

Art. 11. In your daily visitations you are occasionally to rummage the vessels during the delivery of their cargoes, in order to see that no unnecessary delay takes place in their unloading; and every Monday morning you are to deliver to the Collector and Controller a list of all vessels that have been in port above twenty days uncleared, from the date of the Master's Report, containing a particular account of the goods that may be remaining on board, with the reasons thereof, and, if possible, the names of the merchants to whom they belong, in order that the proper parties may be called upon to enter the goods, and in the event of their refusing or neglecting to do so, and the Collector and Controller see no cause to allow a longer time, the goods are to be secured, and dealt with as pointed out by the 6 Geo. IV., cap. 114, sec. 23.

Art. 12. When you have ascertained that vessels have discharged their cargoes, you are in person carefully and diligently to rummage all suspicious places, in order to discover whether any goods have been concealed for the purpose of defrauding the revenue, and, should any such goods be discovered, you are to make seizure of the same, and forthwith give an account thereof to the Collector and Controller; and when you have discharged the tide-waiter who may have been boarded on such vessel, you are to note the same in his book; and if you neglect to clear vessels in due time, whereby the revenue may incur unnecessary expense in tide-waiters, or if you fail to rummage, as before described, or suffer that important duty to be performed by your boatman in your absence, it will be considered as a great breach of your duty, and be punished accordingly.

Art. 13. You are also to keep an exact account, in your book of boardings, of the employment of all tide-waiters, distinguishing therein the established from the extra men, the time when they were boarded and cleared, and the amount of their day pay, from which you are to make out bills, in the usual printed forms, comprehending all these particulars, in order to enable such tide-waiters and boatmen to obtain payment thereof in the Collector's Office; and at the end of each quarter you are to deliver to the Collector and Controller an extract from the said book, certified by you, and specifying the amount of each officer's pay, with the time, and number, and names of vessels, on which they have been respectively employed.

Art. 14. You are to observe, that if in making out such bills of the tide-waiters' boardings, or in granting such certificates of the boatmen's employment, you shall include any day or day's on which they shall not have been actually upon duty, it will be followed by your immediate dismissal.

Art. 15. You are to observe that you have no discretionary power to overlook the absence, without leave, of tide-waiters boarded on vessels; and should you in any instance do so, you will be considered equally culpable with the absent party, and be punished accordingly.

Art. 16. You shall conduct yourself with strict sobriety and subordination, pay due respect to your superior officers, obey their directions, and behave civilly to all persons with whom you may be concerned in the discharge of your duty.

Custom House, London.

FRIDAY, 21 MAY, 1858.

Present:—

MR. EGAN,
MR. FLOOD,

MR. DONALDSON,
MR. R. CAMPBELL.

DANIEL EGAN, Esq., IN THE CHAIR.

George Thornton, Esq., M. P., examined:—

1. *By the Chairman:* You were examined before the Committee which sat on the Customs Department in 1856? Yes.
2. Has any circumstance taken place since that examination which would lead you to a different conclusion, in reference to the general mode of conducting the department? No; I am confirmed in the opinions I expressed then.

G. Thornton,
Esq., M. P.
21 May, 1858.

G. Thornton,
Esq., M.P.

21 May, 1858.

3. Could you inform the Committee whether, in your opinion, any reduction could be made in the clerical branch of the department? In the department generally, I would rather say, I have no hesitation in stating my firm belief—a belief founded on great experience and a thorough knowledge of the whole department—that there might be a reduction and improvement. I am sure it could be considerably reduced.

4. Do you think there has been any improvement in the management since you last gave your evidence—I think you then stated it was very inefficiently managed? I am not in so good a position now to speak of the management as I was then, because then I was fresh from the work, as it were; but my belief and opinions are unchanged.

5. Could you suggest to the Committee any plan by which it might be reduced in expenditure and made more efficient? I think I could. If the Committee would listen to my suggestions, I think I could offer some which would have the effect of making the department more efficient, and more acceptable to the general public. The question, however, comprises such a large amount of answer that it would take some time to consider it. I did not come to-day prepared to answer such a question, or I should have been more particular and precise; but I will be very glad to attend the Committee again, and give a more perfect answer than I can do to-day. In the first place I may say, that the system of tide-waiters is a failure entirely, in respect to the protection of the revenue, though it involves an expense of some £4,000 a year.

6. You mean those persons who are placed on board ships in the harbour? Yes—what are called extra tide-waiters.

7. You think they afford no security whatever to the revenue? Not a sufficient security. The system is decidedly wrong, and has not the effect intended. If you refer to my former evidence with respect to the tide-waiters, you will find that I made some suggestions with respect to that particular department—that I, in fact, suggested a totally different mode of protecting the revenue, by fastening down the hatches of ships at a certain hour every evening, and sealing them, so that they could not be opened without the knowledge of the officer of Customs, by appointing watchmen at the different wharves, varying the present system of landing waiters, and doing away entirely with the tide-waiters.

8. You think by adopting that course we could dispense with the extra tide-waiters altogether? Yes.

9. Then the Chief Tide-waiter would have to go round at certain hours in the evening to look up and seal the hatches of vessels, and again at a certain hour in the morning to open them? It would be the duty of the Landing Waiter to do that, and then the tide-waiters would be useless. There are three persons doing the duty of the tide-waiter while a ship is discharging—the mate of the vessel, the merchant's clerk, and the tide-waiter himself—I mean with respect to the duty he has to do in the day-time, in taking an account of all goods that go over the ship's side; in addition to which, the tide-waiters are supposed to be on board at night to prevent the running of dutiable goods.

10. You think this day-work unfits them for the watch they are supposed to keep at night, because they must go to sleep, of course? They must go to sleep; and I believe the officers of Customs will tell you that they have repeatedly had to punish them for being found away from their ships at night.

11. You say the duty of locking and sealing the hatches should devolve on the Landing Waiter, when the tide-waiters are done away as you propose—I believe the duty as it is at present performed by the tide-waiters is under the direction of Mr. Bremer and Mr. Collier? Yes. I think I would prefer to appoint one person to see this duty faithfully and properly carried out according to the plan I propose; and there could be no more faithful and efficient officer than Mr. Collier.

12. Do you think by adopting that course of locking and sealing the hatches at night, instead of employing tide-waiters as at present, there would be a greater check given to smuggling? I think it would afford the revenue far more protection, and would tend to increase the efficiency of the department. It would also decrease the expenditure by some twenty per cent. of itself; for, if I remember right, the expense of the whole department is about £20,000 a year, of which £4,000 is for tide-waiters. In addition to the tide-waiter performing the duty, done as I have said by the mate of the vessel and the merchant's clerk, the landing waiter has to do nearly the same thing over again; so that for that purpose, at all events, the tide-waiter is quite unnecessary, and, as we have seen, the protection he affords to the revenue at night is of a very doubtful character—in fact, he is perfectly useless. Mr. Bremer knows, and could tell you, that these men have been repeatedly punished and dismissed for being off their ships at night; it is a fact of frequent occurrence; the very nature of their position and their small pay render them liable to it, in my opinion.

13. That is the only recommendation you could make for that particular branch of the department? Yes.

14. Have you anything to suggest with reference to any other branch? I think the department generally is far too expensive, and not so efficient as it ought to be. Commencing with the Collector himself, I could not say too much in his favor, speaking of his personal character and efforts; I believe he is the most hardworking Government officer we have; he is always, day after day, at his post, constantly working at the duties of his office; but, from his kind nature, I believe he is often imposed upon. This particular department requires, in my opinion, a constant, thorough, and vigilant supervision in all its ramifications. The Collector should make himself acquainted with what is going on at all the different wharves and bonded stores every day, so that his officers would be in awe of him, and would understand that all their proceedings are well known. But that is not generally done.

15. *By Mr. Flood:* From the advanced age of Colonel Gibbs, do you consider that he can give to the duties of his department that active superintendence which you speak of? I do not think he can.

16. Do you consider that in consequence of his advanced years he is physically incapable of performing the duties efficiently? I have no doubt a younger man would perform the duties more actively. G. Thornton,
Esq., M.P.
17. Do you think a change in the head of the department is necessary, for the reasons you have assigned? I would rather not answer this question. Coming then to the second in command—Mr. Garling, the Landing-surveyor as he is called—I must say I think his office wholly unnecessary and superfluous. Mr. Garling is a very old officer of Customs, no doubt—I believe the oldest in our service—but still his office is not required. 21 May, 1858.
18. *By Mr. Donaldson*: Do you consider him competent, as second in command, to fill up the gap in the active supervision of the department left by Colonel Gibbes? Certainly not; he is incompetent for every reason; he is indolent and careless.
19. You are of opinion that the services of the Landing-surveyor might be dispensed with? Yes; there are no duties appertaining to such an officer, and whatever duties he is supposed to perform should be done by the Inspector of Warehouses, who could do them in a much better style than they have ever been done before.
20. Would you favor the Committee with your general opinion as to the efficiency of the rest of the staff of the department, so far as you have had opportunity of judging, suggesting what diminutions you think might be made in the numerical strength of the department? I think the clerical department might be modified and reduced.
21. You are of opinion that with an active Collector of Customs, and an active Inspector of Warehouses, the whole of the executive duties would be thoroughly attended to? I am quite sure of it.
22. Do you know anything of the character and proceedings of Mr. Cathcart Still, the present Inspector of Bonded Warehouses? I was one of the parties who suggested that this particular office should be created, and, without the knowledge of Mr. Still, no doubt, I have watched him particularly; and, from his mode of carrying on the duties, I have reason to be very much satisfied with the recommendation I then gave. I am quite sure, from the system Mr. Still has introduced into the bonded warehouses alone it has been a most advisable appointment.
23. In the evidence you gave in 1856, you say the officer holding this appointment "should be a man of knowledge, ability, and integrity"—does Mr. Still come up to your ideas of those requirements? Quite so.
24. Of the clerical staff in the Long Room I suppose you do not know so much? Yes, I know the whole thing; I do not suppose anybody in the Colony knows more about the whole working of the establishment than I do.
25. Could you suggest any saving in that branch of the department?
26. I find here eleven clerks under the chief clerk, with salaries varying from £220 to £575—do you imagine they can all be fully employed? I have already stated that I think there might be a reduction. For instance, there is an account kept there of imports and exports, which is quite unnecessary, except as regards imports and exports for duty, and exports for drawback; the remainder is only for statistical purposes, and might be kept in a much less cumbrous manner. That, I think, employs two clerks.
27. Do you know anything of the system of promotion hitherto observed in the department? Not of late years. I knew a good deal about it in former years; but latterly I have not been aware what the system has been.
28. Was it the case, within your recollection, that the lockers were confined to their own branch of duty, and could not rise beyond the position of First Locker? I think that was generally so.
29. Do you know of any reason for that? I do not.
30. Can you imagine any? The only reason I can see is that the amount of qualification required for the performance of a locker's duties, is not sufficient to fit him for the performance of those of a higher grade. All a locker has to do, besides keeping an eye on the store he is in charge of, is to re-gauge casks for duty.
31. A locker is supposed to be a man of integrity, sobriety, and industry—is there anything you can imagine that should prevent a locker with these qualifications from making a good landing-waiter? Certainly not.
32. Are you of opinion that for the good of the department, and as an incentive to the correct performance of its duties, it would be desirable to allow promotion to go on regularly, through all the branches, until a man rose as high as he could? Undoubtedly I am. I can easily imagine that a locker, who might be precluded from advancing, under the operation of the rule you have alluded to, might be far more qualified by character, education, and habits, than a man who was already a landing waiter at a high salary.
33. *By the Chairman*: Are you aware what is Mr. Nash's position in the department? Warehouse-keeper—a very necessary office, and a very efficient officer; he performs his duty very faithfully indeed.
34. *By Mr. Donaldson*: What are his duties? He keeps a general account of goods warehoused, under the head of Warehouse Account. All dutiable goods for bond that come in are entered and passed into his books, which are kept most excellently by Mr. Nash, without a fault I believe. I have never heard a complaint by the public, either as to his intelligence or his habits; and his books are most necessary and most efficiently kept, to my certain knowledge.
35. *By Mr. Flood*: When you were examined before was the present tariff in existence? Yes.
36. Have you any reason to think that much smuggling is carried on here? I think some smuggling is carried on.
37. In what articles particularly? Particularly in tobacco.
38. Have you anything to suggest to the Committee by which that might be prevented? That would be comprehended in my former reply—that there requires to be a more constant and

G. Thornton, and vigilant supervision, which would infuse into every officer of the department the same zealous spirit.

39. Upon what grounds do you found your belief that smuggling is carried on in tobacco to a considerable extent? Information has been given to me from a variety of sources. I have been told that there have been instances where tobacco smuggling has been detected and the parties have been punished. There are other instances where parties have been known to offer cheap tobacco, which must have been smuggled, from the price. In fact, from the lax system at present pursued, smuggling is comparatively easy; and I have no doubt some of the ships that come here do smuggle.

40. Was the information you received of a reliable character? It was, but in no way that I could trace it out. My mind was satisfied that smuggling had taken place, but that it was conducted in a way that made it impossible for me to discover it.

41. Have you endeavored to ascertain anything like the average quantity that has passed contraband? No. The smuggling of tobacco is a matter of very easy accomplishment.

42. In consequence of the lax system of the department? In consequence of the lax system of the tide-waiters' department. A great many ships come here having more or less tobacco on board; they lie alongside our wharves, near grocery stores and other houses, and it very often occurs that the tide-waiters are not on board at night when they should be—that I consider a lax system. It is impossible, too, that if a tide-waiter is on duty all day he can remain awake all night; and, therefore, while he is asleep, there is no protection against smuggling.

43. Is it not a fact that large quantities of wines and spirits which have never paid duty, are consumed on board ships in harbour? Yes; when I was connected with the department there used to be large quantities consumed as ships' stores.

44. Do you think they ought to be allowed to break bulk or to use spirits that have not paid duty? In particular cases I think they should be allowed to use spirits duty free in harbour, but that the quantity should be limited. For instance, when discharging a heavy cargo, it would be very expensive to pay duty on the spirits given to the men, who expect to get it; but there should be some regulation as to the quantity, which I am not aware exists now.

45. *By Mr. Campbell:* I think there is a regulation to that effect now. There is stock taken when a ship comes in; she reports the quantity of stores she has on board, and an officer has to see that no more than a sufficient allowance has been made use of before she departs? The system cannot be perfect. Before a vessel clears out they jerque her, but they do not generally examine into the truth of her report on her arrival. A captain may report that he has fifteen gallons of brandy in a broached hoghead, whereas he may have sixty, and as the ship is not jerqued until she has discharged cargo, he has plenty of opportunity to make away with the difference. It all goes back to the same question—that there is not that vigilant supervision which should exist in the department in all its ramifications; if it did, I would almost defy smuggling.

46. *By Mr. Donaldson:* I understand that your suggestion is now, that there should be a supervision which would check the inward statement as to the stock of spirits on board in store, and also the outward? Just so.

47. Whereas now they only check the quantity when the ship is bound outward, and, if that agrees tolerably with the unchecked statement made on arrival by the captain, that is considered sufficient? Just so.

48. *By the Chairman:* Do you know that years ago, when a vessel reported her stores, it was the practice to pump off for use a certain allowance, and then to seal up the store-room until they were afterwards examined by the tide-surveyor? It was so, but it has not been so lately. You know, as well as I do, that in old times the former Landing-surveyor, Mr. Jeffrey, conducted his business very differently from what it is now.

49. *By Mr. Flood:* After a ship has been reported, and given in an account of her cargo, does she give in also an account of her stores? Yes.

50. After she has discharged her ordinary cargo, does the tide-waiter remain on board? No, he leaves the ship. The tide-waiter is only permitted to remain on board a certain number of days, according to the tonnage of the ship; and if it should happen that the dutiable goods are not all discharged by that time, the tide-waiter must remain at the expense of the ship.

51. Supposing the ship's cargo is all discharged, does the tide-waiter still remain on board? No; when the dutiable goods are all discharged he is taken off.

52. Then, if the master of a vessel should report that he has, as stores, one hundred pounds of tobacco and fifty gallons of spirits, although he may have a thousand pounds of the one and five hundred gallons of the other, there is nothing to prevent him from landing the whole, or any part thereof, after the tide-waiter has left the ship? Nothing. I speak, of course, of the practice when I was in the department, and I know of no change since then.

53. Do you believe that considerable quantities, both of tobacco and spirits, are carried off from ships that visit this port, in small parcels, without paying any duty? I believe so.

54. *By the Chairman:* Do you believe any smuggling takes place on the arrival of vessels, before they come up the harbour? It is very likely, but I do not know any instance of it. If a ship brings up any where outside of Pinchgut, it may be done without much difficulty; there is no officer put on board until she reports herself; and there is nothing to prevent a vessel from landing a boat-load of tobacco on the North Shore, or elsewhere.

55. *By Mr. Flood:* You alluded just now to a case, or cases, where parties had been detected smuggling, and had been punished? Yes, there have been several cases of detection, but I could scarcely refer to them by name.

56. Were the quantities smuggled of any magnitude? No, not of great magnitude; it has generally been from ships' stores. I think a person of the name of Rundle made a seizure—the same man who has been since dismissed on a charge for stealing tobacco. Some time ago it is stated he was sitting in Mr. Dixon's, the tobacconist, shop, on a cask of tobacco

tobacco, waiting for orders, and while he sat there he was observed by the shopman to be filling his pockets with tobacco. The shopman told his master, and Mr. Dixon followed Rundle and asked him to have a glass of ale; they went across to a public house, and Dixon said to him, "Before you take the ale I want my tobacco out of your pocket," and Rundle thereupon delivered it up. This is the sort of man deputed by the Crown to look after the revenue.

G. Thornton,
Esq., M.P.

21 May, 1858.

57. *By the Chairman:* Are you aware whether any of the persons connected with the Customs Department receive any perquisites? Yes, some of them do receive extras, in this way: The department is supposed to be opened at nine o'clock in the morning and closed at three or four in the afternoon, but if a ship wishes to discharge before nine or after three, the landing waiter, for this overtime, gets about two or three shillings an hour, I think it is.

58. Does that frequently occur? Yes, it is a very general thing; but that is an accommodation to the public, and the public pay for it.

59. *By Mr. R. Campbell:* Is it not an injurious practice to allow these over-hours for the landing of dutiable goods? Yes, I have no doubt about that. In the summer time they should extend the regular hours for discharging.

60. When ships have authority to discharge from six to six, the bonded stores are kept open to a very late hour—is not that objectionable? I think it is a very objectionable practice as applying to dutiable goods.

61. You think over-hours should not be allowed, as regards dutiable goods, after three or four o'clock? No, they should not, because if you land a number of casks of spirits at a late hour, it is impossible to get them properly stowed in a bonded store before dark.

62. *By the Chairman:* If a landing-waiter is required to remain overtime with three or four ships at the same time at the same wharf, does he get paid for all those ships? I believe so.

63. Have you any idea what is the general average paid for overtime? No; but I think it would amount to something considerable.

64. The tide-waiter is on board the same ship, and he gets nothing? I think not.

65. The landing-waiter gets it all to himself? Yes.

66. Has the amount ever reached £10 or £15 in one case? I should say it would amount to £10 on one ship; but the officers themselves can tell you exactly.

67. As it appears to be a general rule that the size of the ship is not considered in the allotted number of days for discharging, do you think it could not be better arranged by altering the time allowed according to tonnage? I am decidedly of opinion that a ship should be permitted to commence discharging at six o'clock in the morning, and to continue till six in the evening, except for dutiable goods.

68. Would you not make a difference in the number of days allowed, according to tonnage? Yes, I would give a number of days according to tonnage, *pari passu*.

69. *By Mr. Flood:* Can you inform the Committee whether the public have suffered materially in the weighing in and weighing out of the bonded stores of such goods as sugar and tobacco, as well as in the quantities of wines and spirits—that is to say, is there much deficiency in the quantities delivered out as compared with those received in? I have no doubt not only have the public suffered to a serious extent, but the revenue has suffered to a like extent. If the Committee were to get a statement of the quantities of spirits delivered into bond in former years, and the quantity delivered out, they could not believe their eyes; it is most extraordinary.

70. What should you suppose is the loss to the revenue and the proprietors annually on tobacco? I could not say; but in spirits the loss has been very great indeed.

71. Can you state anything like the per centage? I should say an average of at least ten per cent. has been lost.

72. On the whole of the wines and spirits bonded? No; my remarks would only apply to certain stores. There are other stores where such a thing could not possibly arise, and does not arise.

73. Can you account for the loss in any way? No, except by supposing that some spirit casks leak at the bung-hole with the bung upwards.

74. *By the Chairman:* Is there any other suggestion with which you could favor the Committee, in addition to your former evidence, or the evidence you have given to-day? The department is susceptible of great improvement by an easy process;—a remodelling of the whole, adopting new and improved systematic arrangements throughout, a large reduction of the expenses, and much greater efficiency be insured, and last and not least, the revenue enormously increased; a daily, constant, and thorough supervision of the whole department in its every ramification, by a zealous, active, and experienced head; this action on his part would infuse a like spirit into every faithful officer in the department, whilst it would also have the inevitable effect of separating the worthy from the unworthy officer, of which latter the department could be relieved. I am also strongly of opinion that the bonded warehouses should be more concentrated, or rather Queen's Bonded Warehouses established; the improvement this latter would effect in many respects would surprise the Government. I am also strongly of opinion that every person, previous to appointment in the Customs, should be tested as to his knowledge of figures, arithmetic, with some other and higher branches of education. I have known lockers, whose duty it was to ascertain quantities of spirits, tobacco, &c., for duty, absolutely unable to add up a column of figures. In my evidence herein, and as formerly given, I, of course, speak of the system adopted whilst I was connected with the department. I wish to explain, in reference to a portion of my former evidence, as to incivility on the part of the Chief Clerk of the Long Room, that I intended it to apply to the late Mr. Webb, who was then officiating in that capacity. He afterwards left the service, and is now dead.

Mr.

Mr. David Nash called in and examined:—

- Mr. D. Nash. 1. *By the Chairman*: What branch of the Customs Department are you connected with? I am Warehouse-keeper.
- 21 May, 1858. 2. How long have you been Warehouse-keeper? I have been in the department about thirty years, and Warehouse-keeper eight or nine years, I think.
3. Will you state to the Committee what are the duties you perform as Warehouse-keeper? My duties are to initial all entries previous to paying duty, make out delivery orders to the lockers, all dispatch notes coastwise—
4. You keep an account of all dutiable goods in all the bonded stores? Yes.
5. And before any can be taken out there must be a certificate from you? Yes; initialled by me as to the correctness of the weight or measurement.
6. Your department is a check on the bonded stores? Yes.
7. If reference were made to you at any time, you could tell the quantity of all the dutiable goods in the various stores? I do keep a return of that kind—the total quantity in the whole of the stores; but in the stock-books, the weights and measurements are carried out separately.
8. Can you say, from the long time you have had the conducting of this department, whether there have been any deficiencies, and if so, to what extent, in the quantities of goods taken in to the bonded stores, compared with those that are delivered out—what per centage of loss do you think has occurred in tobacco, cigars, and spirits, taken separately? I should not think it would amount to more than three per cent. on the spirits, on the whole.
9. Do you believe that to have been the case during the time you have had the management of this department? Yes.
10. What would be the amount, do you think, on tobacco? Tobacco would be much less—considerably less; I could not say exactly, but I should think about one or two per cent.
11. Have you anything to do with the receipt and delivery of these goods? No; except that I issue the orders for delivery.
12. What return have you to enable you to know the goods are there? The landing-waiter delivers a return of all dutiable goods landed, and at what stores they are placed, and from that I make an entry.
13. It is from this record you make out the certificates to enable parties to get their goods out of bond? Not a certificate, but a locker's delivery order, on receiving my copy of the entry of the duty having been paid.
14. Do you receive the quantities and strength from the landing-waiter? Yes; he returns them to me in his gauging book.
15. Are the certificates made out in your department? No; they are made out by the merchants or importers. We do not acknowledge them as official documents.
16. Has the merchant's clerk access to your books, to enable him to make out the certificates correctly? Yes.
17. Do you believe there is any smuggling going on in the port of Sydney? I should think there is very little.
18. In what description of goods do you think it most likely to take place? More in the tobacco line.
19. Do you believe the goods smuggled are taken from cargo or from stores? They are more likely to be from ships' stores; but I am not aware that there is any smuggling.
20. How many persons are connected with that branch of the department of which you are the head? There are only two clerks under me.
21. What salaries do those clerks receive? One £225, and the other £195.
22. Has there been any change in the salaries of your branch since the Committee sat in 1856? No.
23. Have the duties increased in any way? Considerably.
24. Has there been any addition of strength since 1856? Not in my room. From the increase of the duties we are very much occupied. Indeed, I have not any time to move from eight or half-past eight o'clock in the morning to five in the evening.
25. Do you know how the bonded stores are conducted now? I think tolerably well, but no better than usual.
26. There have been no complaints from the public of irregularity or want of attendance? There are occasionally some trifling reports of that kind.
27. Is there anything you could suggest to improve the working of that branch of the department with which you are connected? No. We have a great deal to do.
28. You know nothing of the working of the other branches of the department? I have been in other branches, but they have been altered since.
29. *By Mr. R. Campbell*: What situation did you hold before you were appointed to your present one? I was a locker. I have been pretty well in all the branches.
30. *By the Chairman*: Do any of the landing-waiters come immediately under your control? No.
31. Under whose immediate control are they? Under the Landing-surveyor.
32. *By Mr. R. Campbell*: Up to what hours are dutiable goods allowed to be landed? The order is that they should not be landed later than twelve o'clock, that is for goods intended for bond.
33. When was that order issued? It has been issued a long time. The Customs authorities at home wrote out about it, saying that the stores were not to be open after four o'clock.
34. Are there not instances of stores being open later than that? Yes.
35. Do I understand that the instructions are not to allow dutiable goods to be landed after four o'clock? Goods intended to be warehoused should be got into bond before four o'clock, but other dutiable goods duty paid are allowed to land till four o'clock.
36. Are you sure of that? Pretty well certain. The Collector gave those orders some time ago.

37. How long ago? Eight or nine years; in fact ever since I have been Warehouse-keeper. Mr. D. Nash.
 38. Have there not been instances of stores being open as late as five o'clock? Yes frequently. 21 May, 1858.
 39. How does that arise? In consequence of goods not having been got in in time.
 40. Has the Collector's attention been drawn to it? I cannot say. It is of almost every day occurrence that stores are open after four o'clock.
 41. Do you think that is proper? No, certainly not. They ought to be closed by that time; and goods ought to be landed in time to allow them to be so.
 42. Would you make any difference in the hour of closing in winter and summer? No; I think four o'clock a very good hour; it might be a little later in summer.
 43. By the Chairman: When the bonded stores are kept open later than the regular hour, it is in consequence, I suppose, of large quantities of dutiable goods having been landed which the landing-waiters are unable to get weighed or gauged, so that they may be received into store in proper time? Yes; or perhaps it is in consequence of the drays not coming for them in time.
 44. Did you ever know dutiable goods to be landed and left out all night, not under the Queen's keys? No.

THURSDAY, 27 MAY, 1858.

Present:—

MR. EGAN,	MR. W. MACLEAY,
MR. DONALDSON,	MR. R. CAMPBELL,
MR. WEEKES.	

DANIEL EGAN, ESQ., IN THE CHAIR.

Colonel J. G. N. Gibbes, Collector of Customs, called in and examined:—

1. By the Chairman: You were examined before a Committee on the Customs Department which sat in 1856? I was. Col. J. G. N. Gibbes.
 2. Has there been any increase in the number of officers in the department since that period? An Inspector of Warehouses has been appointed; and, in consequence of the bonded storekeepers having been made to pay a license fee, and a duty on the measurement of their warehouses, the Government, to meet the views of the public, increased the number of lockers from twelve to twenty-two, because the parties who had to pay this license fee and duty expected to have greater accommodation given to them than they had had before; they expected to have their warehouses kept open all day, and consequently a locker who formerly attended two warehouses could now only attend one, and we were therefore obliged to get additional lockers. 27 May, 1858.
 3. Are you aware what increase of expenditure that has occasioned? I should suppose the increase amounts to some £1,200 a year, or something of that sort; but the whole was covered, of course, by the payments I have alluded to; in fact the Government were a trifle in pocket by the arrangement.
 4. Then the new arrangement did not increase the revenue? No; neither did the expense fall on the Government, which, instead of having to pay £2,340 a year to the lockers, as before the change, paid nothing, and thus it may be said there was that amount in the shape of increase to the revenue.
 5. Do you think the change has afforded any increased security to the public or to the Government? I do not see that it has. The increase in the number of lockers was more a benefit to the public than to the Government.
 6. It afforded the public greater facilities, by allowing the bonded stores to be kept open all day? Certainly.
 7. Did the alteration in the hours extend to the whole of the bonded stores, or only to particular stores? Some were open all day previous to this, on account of the extent of their business; but others were only open for half the day—from nine o'clock till twelve or one, and from twelve or one o'clock to half-past three. Now they are all open all day, except four, the proprietors of which did not desire the accommodation, and which are now attended by two lockers.
 8. Do you think the management and supervision of the bonded stores is at present carried on in a satisfactory way? Yes, I do.
 9. Is there any suggestion you could make for the improvement of that branch of the department? No.
 10. By Mr. Donaldson: Were not some alterations introduced into the warehouse department, after the appointment of the Inspector of Warehouses, in the way of keeping the books? Yes.
 11. Will you state what those alterations were, and whether you considered them improvements? I believe they were in some measure on the principle of double entry; and they were undoubtedly improvements.
 12. Was not some journal, or book, by whatever name called, introduced by the Inspector of Warehouses, by which he could check and tally the quantity of goods in any bonded warehouse at any time? Yes.
 13. Was not the state of the instruments also improved or looked into? The instruments had been long in use, and were defective to a certain extent, and therefore the Inspector of Warehouses, by my direction, procured a sufficiency of hydrometers to give every locker a new one. I had previously applied, through the Colonial Storekeeper's Department, to have twenty-four hydrometers sent from England; but they had not then arrived, and have not, in fact, arrived to this hour.

Col. J. G. N.
Gibbes.

27 May, 1858.

14. New instruments were procured, however? Yes, in shops in the town, where they had them of sufficient goodness for our purpose.
15. Has not some improvement been made in the system of re-gauging since the appointment of the Inspector of Warehouses? Not that I know of.
16. *By the Chairman:* Do you the present charge made by the Government on the bonded warehouses is a fair one? I think it is rather oppressive on some of the occupiers of warehouses.
17. Could you suggest any mode by which the expense of the additional convenience of keeping the bonded stores open all day could be defrayed, in preference to the one now adopted? I do not know that I could. I have heard that some propositions have been made to the Government to obviate the necessity of charging these fees, by placing a duty upon all Custom House bonds and entries. That would amount to much the same thing, and they would be relieved from the measurement duty, but not from the license fee. Every bonded storekeeper pays £50 a year for his license, to begin with, and after that he pays so much more according to the capacity of his store, the maximum being £300, which is, I think, scarcely right, because there are one or two stores that would pay £500, in all probability, if they were taxed in the same way as smaller ones.
18. Do you think a reasonable license fee would be much better than the present mode of taxation by measurement? It would, of course, be more advantageous to the occupiers; but it would leave the expense of the lockers to be borne to a certain extent by the Government.
19. Suppose a license fee were imposed to such an extent as would cover that expense? Then it would come to about the same thing, for the expense is only covered now by a mere trifle, not worth speaking of.
20. The discontinuance of the present arrangement would not increase the expenditure beyond that which it was heretofore when they paid nothing? They paid nothing then, and they pay nothing in England.
21. Do they not all pay now for the additional facilities given them? I do not know that I can say yes, because there were seven or eight stores which had the same facilities they have now, being open all day long, without paying anything; the Government bore the whole expense. The other twelve or fourteen stores were open only half a day each, and consequently only required half the number of lockers.
22. On what grounds was the privilege given to these eight to have their stores open all day? The extent of their business required it.
23. In reference to the tide-waiters,—do you think, from your experience, that that branch of the department could be dispensed with altogether? I do not.
24. Do you not think the mode—which I think has been adopted in Victoria—of sealing up the hatches after the day's delivery, could be adopted with advantage? I attach very little value to the sealing of the hatches. Seals can be imitated, and there is access to be had to the hold of a ship in half-a-dozen places. In some vessels there is not even a bulkhead between the fore-castle, where the men reside, and the hold. Then again, who is to do it?
25. The tide-surveyor? When there are perhaps four and twenty ships discharging at once, the tide-surveyor could not by any possibility do it. It is all very well at Hobart Town—I believe that system was adopted there—where all the business is transacted in a small cove, a mere nothing as compared with Sydney; but it would not do here, where we have to attend not only to Sydney Cove, but to Darling Harbour and all the different wharves besides. In my opinion it would be impracticable, nor do I think, if it could be carried out, that any advantage would be derived from it.
26. You do not think the reduction in the amount of expenditure would compensate for the inefficient way in which the revenue would be protected? I do not think the saving of expense would be equal to the loss or risk of loss by smuggling. In short, I consider the present mode safer and better. As I stated in my former evidence, these matters are not understood in many respects. In England every ship has a landing-waiter of its own, besides two tide-waiters on board; whereas we only board one tide-waiter, and have a landing-waiter to four ships, who, in some cases, has charge of two or three different wharves.
27. What are the duties of landing-waiters? A landing-waiter in England keeps a book of every single article that comes out of the ship, and the tide-waiters on board, who take it turn about, and keep watch and watch during the day and night, also keep a book which is a check on that of the landing-waiter, whose book again is a check upon them.
28. Are there any further duties which attach to the landing-waiter? Yes, many; he has to gauge and to weigh—in fact he has a great variety of duties that I can hardly enumerate off-hand. The tide-waiter is the man who weighs the cargoes of sugar and coffee here; but it is not so in England—the landing-waiter does it.
29. *By Mr. Donaldson:* Do I understand that the duties of the landing-waiters here are not the same as at home? No.
30. What are the duties of the landing-waiters here? They are on their posts at the prescribed hour in the morning, when the ships begin to discharge; and they keep books in which they enter all the goods for bond which leave the ship. But while a man is attending one ship he cannot see what is going on at another three hundred yards off, and therefore he cannot keep that account as they do in England. Still, he keeps visiting these ships, and sees that the tide-waiters are doing their duty, and examines their books. When casks are landed on the quay he commences gauging them, but while doing that of course he cannot do anything else, and meanwhile the other ships are going on discharging without any other superintendence than that of the tide-waiters.
31. Then, in point of fact, the duty of the landing-waiter is relative rather than actual—it is more a supervising duty over the tide-waiters in bulk than any specific duty? He takes charge of the whole; but he has a vast deal to do with regard to gauging and proving spirits, and he also has to check all the sugar, coffee, and various other articles weighed, to dip the wine, and to ascertain the contents and strength of the case gin and brandy. They generally weigh.

weigh the cases, and if they find one light of course they open it, as it is evident there is some breakage. Col. J. G. N. Gibbs.

32. I understood the weighing was done by the lockers? They weigh case spirits, but not sugar, coffee, &c., and I almost think it ought to be done, and fear that I shall be obliged to order it to be so, as our new Inspector of Warehouses seems to be fond of throwing odium on the waterside department, which never existed before. It is probable that differences in gauging may have arisen from the circumstance of the landing-waiters having defective hydrometers, while the lockers all had new or good ones; but the effect of the Inspector's proceedings is to have created a jealousy and bad feeling between two branches of the service which before have always worked harmoniously. 27 May, 1868.

33. Has the public service been injured or benefited by the course taken by the Inspector of Warehouses? It has not been injured, nor do I think it has been in any way benefited.

34. If any mistakes have been found out, has it not been benefited? These mistakes have often proved to be errors on their side.

35. Can you suggest any plan which would prevent errors on either side? Not without having two gaugings and two weighings, which would be very inconvenient in one point of view, but in another it might be desirable that the locker should gauge when the spirits enter the bonded store, because, perhaps three months afterwards, he re-gauges them, when required for consumption, and then it is said the original gauge was not correct; but I believe the landing-waiters are in every respect as competent to gauge as any locker we have.

36. But, as I understood you, the duty of the landing-waiters is rather confined to the supervision of a number of tide-waiters, and to gauging and weighing where it falls to them; they do not take the charge of any particular ship's cargo, but rather overlook the duties of the tide-waiters? They are responsible for the whole of that cargo and for its due discharge, and they are obliged to do the best they can to effect it.

37. They see that the tide-waiter does it? They do it as far as possible; they can see only a part of the cargo come out of each ship, but it is their province to see as much of it as possible.

38. Then there is no absolute check on the cargo of any single ship, as far as the landing-waiter is concerned? I should say not of the entire cargo. But it is the tide-waiter's duty to allow nothing to go out of a ship without my warrant for it. I will, however, give a further detail of the duties of the landing-waiters.—1st. Previous to handing his warrants to the tide-waiter, he has to check them with the ship's manifests, to see that no goods (either free or otherwise,) are entered which have not been duly reported, although it is impossible for the landing-waiter to take an account of free goods from the ship's side. He has, when they are landed, to exercise a supervision over them, and open and examine any packages which he has reason to suspect have not been properly described.—2nd. To gauge and weigh all spirits, tobacco, and cigars, &c., for bond; and perhaps, whilst so engaged, he receives a sight entry for the examination of goods to pay duty from the wharf, in which case he must leave the goods for bond to attend to those for duty. These interruptions sometimes cause the bonded goods to be later in reaching the warehouse than is desirable.—3rd. Bottled spirits, gin in particular, have to be examined at the bonded stores, as a correct account cannot be taken at the place of landing, owing to the risk of breakage in carting. But this obliges the landing-waiter occasionally to leave his wharf. At the same time sugar or coffee may be landing, the weight of which, it will be seen, can only be taken by the tide-waiter, but still his weights and calculations are afterwards checked by the landing-waiter.—4th. When his vessels are discharged, he has carefully to make up his books before returning them to the Custom House, and account for all cargo so delivered. Those goods which have paid duty, or been bonded, he takes from his own account; the free goods from the tide-waiter's. If he finds all correct, he gives notice to the tide-surveyor to jerque the ship, and take the tide-waiter off. If there is any discrepancy between the cargo landed and the ship's report, the master is called upon to account for it before the ship is allowed to clear.—5th. A landing-waiter has frequently several ships discharging at the same time, and his work in gauging (his most important duty) sometimes so accumulates that he has to get the assistance of a landing-waiter from another wharf.—6th. The practice of discharging vessels by lumpers has become so general of late, that it sometimes happens that some of the bonded goods have to be sent to the warehouse at once, and weighed or gauged on another day, although such goods are not allowed to be landed after the dinner hour of one o'clock.—7th. The landing-waiter has to attend to the shipment of goods for drawback, and those from bond, matters of considerable consequence, with many others which casually arise.

39. By Mr. Campbell: The landing-waiter checks the tide-waiter's book daily? Yes.

40. By the Chairman: The responsibility rests on the tide-waiter? No, on the landing-waiter. He checks the tide-waiter's book; and keeps an account also of all bonded goods.

41. Is the landing-waiter's return checked with the manifest? Yes; we have a clerk in the office who does nothing else than jerque these papers; and whenever he finds a deficiency, on comparison with the inward manifest, a letter is sent, which I have printed, calling upon the captain of the ship to account for the deficiency.

42. When a ship arrives, is there anything to show the tide-surveyor what quantity of stores she has on board? The manifest will, or ought to show that.

43. There will be a difference to the extent of what may have been consumed on the voyage? The captain is bound to make out a manifest here.

44. What course is adopted by the tide-surveyor in reference to spirits and other articles of stores, after a ship arrives? He visits her weekly, to see that the consumption is not greater than it ought to be; and sometimes he seizes a part of them, if they are very extensive, in such part of the ship as may be available for that purpose, and leaves out only a certain quantity.

45. Does he, in the first instance, ascertain the quantity to be there, according to the manifest? Yes.

- Col. J. G. N. Gibbes. 46. He ascertains that there is neither more or less? Yes. Frequently the consumption is greater than the law allows; but, as he boards the ship as early as possible after her arrival, nothing can have taken place within our territory.
- 27 May, 1858. 47. By Mr. Donaldson: Is any actual examination of the stores made by the tide-surveyor—does he gauge and weigh, to see that the quantities stated are correct, on the arrival of each ship? I do not think he does—in fact it would be impracticable.
48. He starts on the assumption that the captain's statement is correct, without taking stock? He is obliged to do so. He sees it, but he does not gauge or weigh, which, as I have said, is impracticable. Any person who has seen the store-room of a large ship will know that the stores are usually so jammed and stowed that they cannot be moved or got at immediately, and if they could, the tide-waiter has no scales with him, nor if a cask of rum was got out and hoisted on deck could he gauge, as he has no instruments with him, nor would he have time, having frequently to board other ships. If a man says he has two puncheons of rum unbroached (if come-atable) he sounds them to ascertain whether they are full.
49. Suppose a man says he has ten gallons in a cask that has been broached, does he ascertain whether it is so? I am inclined to think he cannot dip until the ship comes to her moorings; he looks at the stores to see, as far as he can, that they correspond with the report of the captain, and, on the ship coming to her anchorage, he goes off again and ascertains the fact. I believe they are rather particular.
50. By the Chairman: You believe, that during the time of discharge there is a weekly inspection, to see that nothing more than ought to be consumed is consumed? Yea. Besides, the tide-surveyor has an interest in it; sometimes he discovers that half a keg of tobacco, for instance, has not been reported, and he then immediately seizes it.
51. He has an interest in the seizure? Yea.
52. Do you believe there is any smuggling going on in the Port of Sydney? There may be, and, I believe, always has been, on a small scale; but I see no means of checking it, without going to an expense that would amount to ten times the loss which may be now sustained.
53. Do you believe that what smuggling takes place is from stores or from cargo? I suspect it is not perhaps from either the one or other; I imagine it is chiefly in cigars brought out by the mates and other people, and landed in small quantities whenever they can manage to do so without detection. Some of the captains would smuggle, no doubt, but, in general, I do not think that is the case; the masters of vessels coming here are usually most respectable men.
54. There is a Landing-surveyor, as he is called, attached to the Customs' Department? Yes; he is the second officer of the port, next in authority to myself.
55. Will you state the duties he is expected to perform? He supervises the whole of the water side department, and used to superintend the bonded warehouses; he is Surveyor of Warehouses, according to appointment of the Board of Customs.
56. That duty has been taken from him in consequence of the new arrangement? He is still Surveyor of Warehouses, but they are now left to the Inspector. He visits all the wharves to see that the landing-waiters do their duty; and if disputes arise, he decides them, if possible on the spot, and if he cannot do that, they eventually come before me.
57. Do you believe there is an absolute necessity for such an officer? Beyond a doubt there is. I know no port of any consequence in all England, or in any port of the British dominions, without one. I will here take leave to give a statement of the Landing-surveyors in the United Kingdom, leaving out the great ports of London and Liverpool:—Bristol, 3; Hull, 3; Dublin, 2; Glasgow, 2; Southampton, 2; Leith, 2; Belfast, 1; Cork, 1; Plymouth, 1; Gloucester, 1; Limerick, 1; Sunderland, 1; Dover, 1; Folkstone, 1; Greenock, 1; Newcastle, 1; and 88 other minor ports where the Controllers are also Landing-surveyors. At Melbourne there are 2; and at Geelong, 1.
58. Does the Landing-surveyor here hold any authority over the Inspector of Warehouses? I consider that if he thinks proper to give an order to the Inspector of Warehouses the latter is bound to obey it. The Landing-surveyor is over him; but he very rarely gives such an order. A circumstance, however, lately arose which will now be brought before the Government. The Inspector of Warehouses does not think he ought to be controlled by the Landing-surveyor. I differ with him.
59. You think it better that he should be controlled by the Landing-surveyor? I do. The appointment of the Inspector of Warehouses is a very peculiar one. I never see him. I do not know where he is; he may be in attendance all day, or not all; but I am not aware of it.
60. By Mr. Donaldson: Has he not a room in the Custom House? He has.
61. Does he not keep books which you can have reference to, and check at any time? Yes; they remain at the warehouses.
62. They can always be sent for? Yes, certainly.
63. Before and at the time the appointment of Inspector of Warehouses was made, was it not supposed the Landing-surveyor did the duty? Yes; it was his province to visit the warehouses, and keep a check over them.
64. That duty was not then efficiently performed? It was not, because it could not be well done by the same man who had to superintend all the waterside branch.
65. A mistake was found out in some port wine, which you were of opinion could have been prevented had there been an Inspector of Warehouses, and which could not occur now? It could not occur now, because I gave strict instructions, before the Inspector was appointed at all, that I would dismiss any locker who allowed bonded goods to go into a free store, as was done in that case. At the time this occurrence took place, we had a locker—Mr. Edenborough—who was in bad health, one week sick and another week well; and he having—on one occasion of the bonded store he attended being full—allowed this port wine to be placed, as he intended temporarily, in a free store, and neglected afterwards to inform the locker who

who took his place; the consequence was that this wine was by degrees forgotten. But when we came to take stock, some two or three years afterwards, it was found that some seventy-five casks of port wine, shewn by the books to be in Messrs. Lamb's bond, were not there, which led to inquiry, and it was then discovered that the casks had been placed in the free store, under the circumstances I have stated. No doubt the Messrs. Lamb, when the bonded store became less full, ought to have had the wine removed into it.

Col. J. G. N.
Gibbes.

27 May, 1868.

66. *By the Chairman:* Ought not the wine, in the first instance, to have been placed in some other bonded store? Certainly it ought. It was an indulgence granted by the locker without being reported, until by degrees it was lost sight of. I believe the Messrs. Lamb themselves had lost sight of the circumstance, or they never would have passed the wine into consumption. Captain Lamb had just gone home, and Mr. Parbury also; in short, the gentlemen acting for the firm were totally unconscious that it was not duty-paid wine.

67. *By Mr. Donaldson:* Is not the system of checking stocks so much improved now that the same thing could not occur again? The same thing could not occur again, because no bonded goods would be allowed to go into any other store than that for which the entry was passed.

68. With regard to the clerical staff, consisting of eleven clerks, do you not consider that capable of reduction? I feel a good deal of difficulty in answering that question. Our department is a peculiar one; it is not easy to place on the same shoulders many duties—they are so perfectly distinct and different from each other. I have myself reduced one clerk; that is, I took the opportunity of a man leaving us clandestinely and embarking for England, to abolish his office; or rather I recommended that it should be abolished, and it was so.

69. Was that one of these eleven? No; one of twelve. There are only ten clerks I may say actually belonging to the Customs; because one (Mr. Mackenzie) is the distillery clerk, and performs various other duties.

70. Then you do not see your way to a reduction of the clerical staff? I do not.

71. Can you furnish the Committee with a correct list of all the officers of your department at this date, with their designations, dates of appointments, and so on? I have caused a list of that kind to be prepared, and I beg now to hand it in to the Committee. (*The witness handed in the same. Vide Appendix A.*)

72. With regard to the lockers, I suppose while there are so many bonded stores no reduction can be made in their number? Certainly not.

73. Have you considered lately the subject of a Government bond? No, I have not considered it recently; but I think I gave my opinion to the previous Committee that considerable advantage would be derived from such an establishment. I do not think, however, that one would be sufficient; there should be one on each side of the town—on the Circular Quay, and somewhere in Darling Harbour.

74. In the return of officers of the department supplied to the Committee of 1856, there are two baggage searchers—they have been since dispensed with? Yes. I recommended the reduction of those officers.

75. Have you seen any cause to regret that? Not at all.

76. The coast-waiter at Watson's Bay has also been removed? Yes. I recommended the removal of Mr. Keon from Watson's Bay, because he did not seem to be very much needed there, and there was an opening for him at Eden, Twofold Bay, without distressing him and his family; but there was then a Water Police boat, with six men stationed there, which has since been removed, and consequently there is no revenue officer there now further than this, that I have given deputations to all the pilots to act as Custom House officers wherever they see a necessity for doing so. At the same time I do not think that that is the place where smuggling would go on, if there was any.

77. You do not think there is any occasion to re-establish a branch of the Customs' Department at Watson's Bay? I do not.

78. Speaking generally, there is nothing in the strength of the department, as it stands at present, that you could safely recommend should be reduced? No. I shall be quite happy to go into the clerical department, and see if I can so arrange the duties that they could be efficiently performed by a smaller number of clerks. But it should be borne in mind that I have now to receive the pilotage dues, which is a duty that was not done by my department before; and if the tax proposed to be levied on the Chinese is adopted, I shall have to take that also. I feel pretty well convinced that with our present duties only, you could not take off more than one clerk—I do not say you could take off one—but if you did, when these additional duties were placed on us he would have to be restored.

79. You think, however, that the present strength of the department would be sufficient to undertake the duty of collecting a tax on the Chinese immigrants, and also the collection of the pilotage rates? Yes.

80. *By the Chairman:* Does not the Harbour Master furnish you with a minute of the amount of pilotage due on each ship? Not in sufficient time. Some party comes and pays the pilotage on the tonnage of the vessel, and two or three days afterwards comes the ticket from the Harbour Master, by which we perhaps find, when it is too late, that instead of sixteen feet the ship drew seventeen feet of water, and should therefore have paid a higher sum, because it is the depth she goes out at with cargo that is paid for. The mistake cannot always be remedied afterwards, because oftentimes there is no agent, and if there is, the accounts of the ship being wound up previous to her departure, it is always a troublesome piece of business.

81. Is there not some portion of the accommodation provided in the Custom House which is not used by your department? Yes; there are two rooms occupied by Custom House Agents.

82. Do you not think that, when you have to do the additional duties you have spoken of, the whole of that accommodation will be required by the Customs Department? Perhaps it

Col. J. G. N.
Gibbes.

27 May, 1858.

may be so, for we have long since given up to the Port Officer two of the best rooms in the house.

83. Has not the privilege thus given to some of the Custom House Agents caused a good deal of jealousy on the part of others who have not been able to obtain the same facilities? It possibly may; but, of course, they know very well we cannot give rooms to everybody. The parties who occupy these two rooms at present have conducted the business for twenty years.

84. There has never been any charge made for the use of these rooms? There has not been as yet, but there is going to be.

85. Do you not think it more desirable that no privilege should be given to one Custom House Agent which cannot be conceded to all, and that the whole of the building should be used for Government purposes? In one point of view, no doubt, that would be the best; but in another I suspect the public would find great inconvenience if the agents were removed from the building, because offices are not to be had within any short distance of the Custom House unless they build them. I may mention that recently an application was made by the Steam Navigation and Pilot Board for a small room in the Hall of the Custom House occupied by some of my clerks. I declined it. Mr. Drew said it was absolutely necessary for the Steam Board to assemble in it, and I, in answer, stated that if it *was* absolutely necessary they should have a room—they could remove the Custom House Agents, or tax them with a rent sufficient to find a place for the Steam Board to meet in. The Government have adopted the latter proposal, and these Custom House Agents will for the future be charged £50 each per annum for the use of a single room; and it is to be the understanding that they are to turn out at any time they may be required to do so, on a fortnight's notice.

86. Do not the additional or extra tide-waiters require some place in the Custom House which should be appropriated to their use? Perhaps they do, and they have none.

87. *By Mr. Donaldson:* You think it desirable there should be accommodation at the Custom House for the tide-waiters? I do. Our tide-waiters—although some of them may not be all we could wish—are a superior set of men to the tide-waiters in England, who are generally of a lower class, such as working shoemakers, tailors, and so on.

88. Is not that counterbalanced by the greater supervision which is given in England by the landing-waiters or other officers? Yes. All I meant to say was, that, as a better class of men, they ought to have accommodation which is not granted to persons in the same capacity in England.

89. Would the revenue be benefited by their having a better means of checking their books, which it is to be presumed the accommodation we speak of would afford them? No, I do not think it would have any effect in that way. They make up their books the last thing before they leave their ships.

90. *By the Chairman:* These tide-waiters have no place allotted to them at present in the Custom House? No.

91. *By Mr. Weekes:* You think it desirable they should have an office in the Custom House, but you are unable to give them that accommodation in consequence of the Custom House Agents occupying two of the rooms? I think they should have some place; but they would scarcely require one room to themselves.

92. Do you know whether it is the custom at home for the Custom House Agents to occupy rooms in the Custom House? I am not aware. While we are on this subject I may mention, that a few years ago it was proposed by the Custom House Agents to finish the wings of the Custom House, according to the plan proposed by Mr. Lewis, the then Colonial Architect; and they would have done that at their own expense if they had been allowed to occupy the rooms.

93. Was that offer made by the Custom House Agents as a body or by individuals? There were not so many at that day, but there were at all events a certain number who made the offer; whether the whole of the parties who were then acting as Custom House Agents were desirous of joining in the proposal I cannot say.

94. Do you not think it would have been a very good investment for them, if they had obtained an exclusive right to occupy those rooms? Yes, I think it would. We could not allow them to build the wing at the east end, because it would block up the Port Master's Office.

95. *By the Chairman:* Have not some Custom House Agents been allowed to erect offices in the neighbourhood of the Custom House on the adjacent land? Yes.

96. Are you aware whether that privilege would be extended to any person who had a license to act as a Custom House Agent? I should suppose it would, because they have all built on the condition that their erections should be pulled down at a moment's notice, if required.

97. *By Mr. Weekes:* Is not the land belonging to the Custom House very limited? The Custom House land is, but the Government land opposite is where these places are built.

98. Does not the fact of their being within the building give great advantages to those agents who have offices in the Custom House? I should say it did.

99. And, therefore, the privilege is exceedingly valuable? I believe it to be so.

100. If you think it desirable they should be there at all, would it not be better to put these offices up for tender, and so throw them open for competition—would not that be likely to bring an increased sum to the revenue? I dare say they would bring a higher rent in that way, because others would run the present occupants up, probably for the sake of annoying them.

101. Between the two, the public would get the benefit? Yes.

102. Have you acted on the instructions of the Government so far as to commit yourself to any engagement with the present occupants of the rooms? No. I considered the matter to be so far settled that I could at once call upon these parties to consider themselves as tenants at will; but I would not do so until I got the necessary documents. Another point for consideration

consideration is, how this rent is to be paid, whether half-yearly in advance, or quarterly, or whether it is to be paid only at the end of each quarter. If they have paid half a year in advance, and you turn them out at a fortnight's notice, you must refund, of course.

Col. J. G. N.
Gibbes.

103. Taking into consideration the requirements of the department of Customs, are you of opinion that any of the officers of the Custom House should be let to Custom House Agents? I cannot say as to that, further than I have already stated, that I believe their position there is very convenient to the public, but not more so than if they were *immediately* outside of it. I know for a fact that persons have been put to considerable inconvenience from not being able to ascertain where particular Custom House Agents were to be found. Besides the two agents who have rooms in the Custom House, there is a third who has a desk in the passage, for which he is to pay £10 a year.

27 May, 1858.

104. *By the Chairman:* In 1852 a Committee was appointed by the House of Commons to inquire into the Customs Department in England, and I see that they make the following recommendation in their Report: "The original importer of goods is liable by law for all duties thereon, however long they may remain in bond, and although he may have parted with his interest in them years before, and the property been transferred from one to another of the various parties. Many cases of consequent hardship have been brought before your Committee, and they suggest that the warehouse-keeper, not the importer, should be held responsible for the duties, with the following securities to himself:

"That the Customs locker be bound to hand to the warehouse-man, in the care of the bonded goods, a duplicate warrant for their delivery, such warrant to protect him against any action on the part of the Crown.

"That in the case of an examining floor, where the goods may be said to pass in transit, either such warrant must be given, or the signature by the Customs Officer of the Warehouse-keeper's books, will be held equally valid.

"That at the expiration of four years from the landing of the goods, stock thereof be taken by the Crown, so as to limit the responsibility of the warehouse-man, and the Customs should then call on the then proprietor to re-enter the goods, and, in cases where the duty is assessed on the landing weights or quantities, to pay up the duty on such deficiency as may be ascertained to exist at the time, and cannot be traced to natural causes;"—Is any such course adopted here? No.

105. Any deficiency is a loss to the Government? The law here is this; if you have goods in bond and you dispose of them to another party you may ask to have your bond cancelled, and the other party is immediately called upon to enter into his own bond. But the goods may pass through twenty hands, and the consequence is nobody ever does it.

106. Is not a certain amount allowed for leakage? No; all deficiencies are allowed to pass by our law, and I think it ought to be so; I do not consider that an importer of goods ought to be obliged to pay for that which he does not get. If he puts a cask containing sixty gallons into a bonded warehouse, and ten of those gallons run out in consequence of some defect in a stave, he has it not to sell, and I do not think he ought to be called upon to pay duty for it. It is very well to say it might be discovered; but I deny that. The casks are stowed in tiers three deep, and a cask may leak in a small way for a long time, until a large quantity of spirits be lost, before that cask is required to be taken out; and that being so, why should the owner be called upon to pay duty for it? He has not even the control of his own cask—it is in the hands of the bonded storekeeper, and he cannot get at it. Therefore, I am one of those who consider that the Crown has no right to the duty on these deficiencies. If it can be proved that the casks have been spoiled, then of course the bonded storekeeper would be liable.

107. *By Mr. Wesker:* In former days has it not been sometimes found that a mere bundle of staves represented a cask of spirits? It was on one occasion, many years ago.

108. It came out before the Committee which sat in 1856, that dutiable goods, spirits for instance, about to be placed in a bonded store, remote from the wharf where the ship was discharging, were sent to that store simply in the charge of an ordinary carter, no one attached to the Customs Department following the cart—does the same practice prevail now? It does, to a certain extent; some little changes have taken place. But the cart-notes shew the locker to whom the cart is despatched the quantity sent, and it is his province to see that it is right, and to give a receipt. It is just a question of expense. If the Government like to have cart followers, who would cost a great deal of money, of course it can be done.

109. Are the casks gauged on landing on the wharf? They are.

110. Are they re-gauged when they get to the bonded store? In all probability they are not; but, perhaps, they may be re-dipped.

111. There is no rule to that effect? No.

112. Is it not possible that something may be abstracted from the casks *in transitu*, and what check is there against such a thing? My own impression is that there is very little risk. The carter must go out of his direct line, into some obscure place, in order to spile a cask and get half a gallon or a gallon of brandy; and in doing so he would be subject to great risk of detection; people would be alive to that sort of thing. It would not be worth his while to risk detection and punishment. I do not doubt the possibility of such a practice, but I do doubt that it exists. But I am quite willing to introduce cart followers on all occasions, if it is thought worth the expense.

113. In point of fact, however, the goods are for a period out of the custody of the Customs authorities and in that of ordinary carters? They are. That is one of the reasons why I hope that in any new Act there will be provision made for the licensing of carters for this purpose. I think that would afford sufficient protection.

114. *By Mr. Donaldson:* You assisted the late Government in preparing a Consolidated Customs Act? I did.

115. Have you seen any reason to alter the opinions you then entertained as to the desirableness of such an Act? I have not.

116.

- Col. J. G. N. 116. Generally, do you think the Bill prepared by the Government of that day a good one?
Gibbes. I do.
- 27 May, 1858. 117. It would simplify the law in some respects, so that it would be more readily understood by the officers of your department, and would be more intelligible to the public? Yes, it would have that effect.
118. It repeals four Acts entirely and other four partially? Yes.
119. You think the course indicated in that Bill is the course that legislation on the Customs Laws should take in this Colony? Yes.
120. Do you recollect the appointment of a man named Paget to your department? I do.
121. Do you also recollect the cause of his dismissal? I could not detail the particulars at this moment; but he was found to have been guilty of certain irregularities, which could not be overlooked.
122. Can you furnish any papers connected with his case? I can.
123. Do you recollect whether there was any reference to the Executive Government? Yes, there was. He was regularly tried by myself, and evidence was pretty extensively taken.
124. You are not in the habit of dismissing any officer without reference to the Executive Government? No; except in the case of extra tide-waiters, whose appointment and dismissal belongs, as I consider, to the Collector of Customs. I consider it my duty, however, to suspend any officer who commits himself, and then make a reference to the Government.
125. Was not a person named Snow reinstated as an officer in your department, after having been dismissed? He was, for two days.
126. Why was that—was he not dismissed for drunkenness and impropriety of conduct? It was in this way:—After having been dismissed from the Customs he was appointed to another Government office as a clerk, after having been kept without an appointment for some seven or eight months. While in that situation he gained a very good character from the head of the department, for assiduity, attention, and punctuality; but he was not competent to fill the place in which he was put. I believe their time in the office was too much occupied to give him instruction, and he was consequently removed. I understood he was to be appointed to some other place more suited to him, and, in the meantime, I put him again on the tide list. I believed then that the man was reformed, and I hope he is. The Minister of Finance objected, however, to his being placed on the tide list, and what he is doing now I do not know.
127. Was he not dismissed for being drunk, and for not having given up the keys which were in his possession as a locker? Not quite so bad as that. On his way to the Custom House with the keys he was fallen in with by the Inspector of Warehouses in a state of gross intoxication; the keys were taken from him, and upon the circumstance being reported he was immediately dismissed. I have often thought that not permitting the man to re-enter the service was a harsh measure; for it was supposed at the time—and I have known other instances—that he had called at some public house on his way to the Custom House to deliver his keys, and had taken ale which was drugged, and consequently became in the state in which he was found. Of course he has suffered most severely. His mother, who is the widow of a Lieutenant-Colonel in the army, was dependent upon him; for his father having sold out, she has no pension; and his estate having been sold in the Encumbered Estates Court in Ireland, they came out here to see if they could do anything better than at home.
128. By Mr. Wickes: Did the facts you have stated come out on your investigation previous to his dismissal? No investigation took place. The Inspector of Warehouses reported to me the state in which he had found him, and that was sufficient to ensure his dismissal.
129. Was he dismissed by the Government or by yourself? By the Government.
130. He was suspended by you, and dismissed by the Government? Yes.

SELECT COMMITTEE ON THE CUSTOMS DEPARTMENT.

21

APPENDIX A.

A RETURN of the Persons employed in the Customs' Department.

NAME OF OFFICE.	NAME OF HOLDER.	WHEN APPOINTED TO CUSTOMS' SERVICE OF THIS COLONY.	WHEN APPOINTED TO PRESENT OFFICE IN CUSTOMS' SERVICE.	BY WHOM APPOINTED.	Amount of Fixed Salary.	Length of Service in the Customs' Dept. N. S. W.
Collector	John George Nathaniel Gibbes	1 May, 1834	1 May, 1834	Lords of the Treasury	1,700	21 1
Landing Surveyor	Frederick Garding	12 Sept., 1837	10 Nov., 1847	Do	630	30 8
Chief Clerk	William Norman McWilliam	6 Jan., 1842	1 Jan., 1853	Originally appointed by the Lords of the Treasury; present appointment made by the Governor Gen.	530	16 4
Second do. and Cashier	John Halford Madlocks	15 Feb., 1843	1 Jan., 1853	Do	530	15 3
Inspector of Warehouses	William Cathcart Still	19 Jan., 1857	19 Jan., 1857	Governor General	500	1 4
Third Clerk	Henry John Rucker	16 Jan., 1849	1 Jan., 1853	Originally appointed by the Lords of the Treasury; present appointment made by the Governor Gen.	375	9 4
Fourth do.	Stewart Marjoribanks Mowle	8 Sept., 1852	16 Aug., 1855	Governor General	325	5 8

Coastwaiter*	George Brett	8 Jan., 1846	8 Jan., 1846	Governor General	245	12 4
2 Boatmen	at £96 each per annum.					

* Provided with Quarters.

* First appointment of Colonel Gibbes in the Customs' Service as Collector, 1 January, 1830.—First appointment in the service of the Crown as Custom House, Sydney, 27 May, 1858.

J. GIBBES,
Collector of Customs.

FRIDAY, 4 JUNE, 1858.

Present:—

MR. EGAN,
MR. DONALDSON,MR. WEEKES,
MR. FLOOD,

MR. R. CAMPBELL.

DANIEL EGAN, ESQ., IN THE CHAIR.

William Cathcart Still, Esq., called in and examined:—

- W. C. Still, Esq.
4 June, 1858.
1. *By the Chairman:* You are connected with the Customs, I believe? Yes. I am Inspector of Bonded Warehouses.
 2. That office is under the control of the Collector of Customs? Yes.
 3. How long have you filled that appointment? I was appointed acting inspector on the 19th January, 1857, and my appointment was confirmed on the 19th of April of that year.
 4. Is that the first appointment in that capacity that has been made in that department? I think so.
 5. What is the chief duty you have to perform? If the Committee would allow me, I would give them the information from a copy of the instructions I received. If permitted, I will read them.
 6. *By Mr. Donaldson:* Who are they from? From the Collector of Customs, on my being gazetted. This is the original. I can give a copy if desired by the Committee. (*Witness read instructions from Colonel Gibbs. Vide Appendix A.*)
 7. *By the Chairman:* Now, since the date of your appointment, you have endeavored to carry out your instructions? I have.
 8. What was the state of the bonded stores—was the manner of conducting them very efficient—what state did you find the various bonded stores in? There appeared to have been no supervision at all over them.
 9. No supervision? None by a superior officer.
 10. Did you make any report or suggestions in consequence? I did.
 11. Can you state what was the result? In my letter-book I have two letters, or reports, which would give the Committee an idea of some of the matters requiring supervision.
 12. Were these letters submitted to the Collector of Customs? Yes.
 13. Was there any action taken upon them? Not immediately upon all the matters brought under notice.
 14. Part of your suggestions were acceded to, and part of them there was no action taken on? Yes.
 15. *By Mr. Donaldson:* Let us have the suggestions? (*Witness read from letter-book.*)
 16. *By the Chairman:* That is the first letter you wrote after your appointment? (*Witness read letter, dated 29th April, 1857. Vide Appendix B.*)
 17. *By Mr. Donaldson:* In that first letter you suggested that cart-notes should accompany the cart to the bonded store—is that the case now? No; that is not invariably the case. (*Witness read letter, dated 6th May, 1857. Vide Appendix C.*)
 18. Was the general incorrectness of the hydrometers considerable? Yes, and some of the instruments had not been properly adjusted.
 19. *By the Chairman:* The two letters you are now speaking of are your suggestions for the better management of bonded stores? There are three letters—one I forgot to mention. (*Witness read a third letter, dated 16th May, 1857. Vide Appendix D.*) These are the particular letters which I refer to. There are other things which occasionally transpire that I correspond about.
 20. Now, with reference to the first letter containing your suggestions—was there any part of them carried out? Yes.
 21. Will you state what part? I pointed out the defective state of the hydrometers, and discovered that six new ones were procurable; they were purchased at my suggestion, and that enabled me to go on. The whole of the defective instruments have not been replaced, but I have a mode of adjusting them, so that no injury results to the revenue.
 22. Is there any other suggestion not complied with? I never got the rods. I do not know whether any steps were taken to get them. I may state, in fairness to the Collector of Customs, that there is a difficulty in getting rods. I bought one set afterwards—all that could be procured. The object of my suggestions was to apply a check on the landing-waiter's gauges as much as possible, which struck me as very desirable.
 23. Are the rods obtainable in the Colony or not? I heard during the last few days that one set might be obtained.
 24. Was there any other suggestion in your first letter not acceded to? The cart-notes were not entirely followed out. The regulations regarding them have not been strictly obeyed. At some of the warehouses, when the superintendence devolved upon me, there were no cart-notes received at all, at others only occasionally, and frequently so incorrect as to be almost valueless.
 25. Is that the case now? The system is greatly improved since I took charge, but still we do not get them regularly, and then of course we have only the carter's account of what was despatched from the wharf.
 26. You trust the carter, and no documents accompanying? As I said before, they are not sent invariably.
 27. Is the latter part of your suggestion complied with—in the event of cart-notes not coming with each cart, at the end of the day a return to be sent to shew the quantity forwarded? Not in all cases.
 28. The man who took the load, could he not bring it to you at all? He could do it.

29. Then you have no check at all? Not immediately, for a month may elapse before the landing-waiter calls upon the locker to sign his book for the number of packages received. These cart-notes, if sent regularly and correct, would be of great value to the locker, because he cannot always spare time in the midst of deliveries and other duties even to count the packages as they are removed from the drays, and he must therefore trust a good deal to the landing-waiter.

W. C. Still,
Esq.

4 June, 1858.

30. If there is any fraud committed you cannot tell by whom it is committed? You could not immediately, but after a time you could.

31. That is almost a temptation to fraud. Your appointment, with reference to that particular branch has not been the means of any greater supervision than before? I have done all I can in the matter. The direction to the landing officers in regard to these cart-notes does not rest with me; but, as a set-off to their irregularity, I have introduced into the warehouses a book called a "Locker's Journal of Receipts and Deliveries," in which every day's work is entered, and that checks the packages received by the drays.

32. That affords some check on what is received? It is a check upon what was despatched from the wharf to the warehouse.

33. You have no documents accompanying it? Not in all cases.

34. Whose business is it to see the documents signed—is it the landing-waiter or the tide-waiter? That belongs to the landing-waiter's branch.

35. You say in one of your letters that you suggested a remedy which has not been carried out? Yes.

36. *By Mr. Donaldson*: Did you say in your letters that there should be cart-followers or cart-notes? I think cart-notes would be sufficient if the landing-waiter was enjoined to send them invariably. But it does not appear clear who is to blame—the landing-waiter or the tide-waiter. The landing-waiter gauges and despatches the casks. All other packages are discharged by the tide-waiter.

37. Are the tide-waiters strictly directed and supervised by the landing-waiter to send these notes? Hitherto not in all cases, seemingly.

38. The matter of fact is, he is not looked after? The landing-waiter trusts the tide-waiter.

39. *By Mr. Flood*: Would it not meet the difficulty if the cart receipts were kept in duplicate—the officer delivering the goods to the carter to keep one, forwarding the other to the officer who receives the goods? I think it would. I endeavoured to do something of that kind with regard to sugar. I am very particular about sugar. Where the ship is in the neighbourhood of the warehouse I endeavour to arrange between the locker and the tide-waiter that they make and receive a note, at the end of each day, of the quantity received at the warehouse. I have no power to direct the tide-waiters in these matters.

40. If the cart-notes are kept in duplicate, and the tide-waiter is compelled to furnish his book at the close of the day for the purpose of being compared with the accounts and receipts which have been received by the locker, the detection of goods not delivered would be discovered immediately? I think that plan would answer completely.

41. Without giving much more labor to the officers concerned? I think it could be done without much extra labor.

42. *By Mr. Weekes*: The principle you are referring to would only check the quantity? It would check the number of packages only, although, in sugar, coffee, and some other articles, it could be brought to check the weight also.

43. You say that only the carter, and not an officer of Customs accompanies the dray in going from the wharf to the bonded store? No officer.

44. Does it not strike you that the revenue could be defrauded by the possibility of dray loads of goods in transitu being tampered with, either casks of an inferior quality being substituted for goods of a superior quality, or by weakening the contents by taking out a portion and filling it up with water—what check really exists against such things as that? It certainly could be done, but it would be found out ultimately.

45. In what way? By a sample order. After the cask is warehoused you can taste the spirit—you can also have a private re-gauge at any moment, and the usual re-gauge if a month in bond will give you the strength and certified quantity. If the spirit has been tampered with it will then shew.

46. How would you trace it—to whom—the party who bought the spirit might let the goods remain for a considerable time in the bonded store; how would you find out who tampered with it; the loss to the revenue is certain, and the loss to the owner of the goods certain? Supposing no cart-note accompanied it from the wharf, we still would have some trace—from the bond mark and number we find the ship; that gives us the wharf, and the officer who discharged at that particular date, and he might have some recollection of the carters, who are all well known to the officers; but, of course, if a very considerable time were to elapse the deficiency would be difficult to trace.

47. Still it is possible that you may be in a position not to be able to find it out? Yes. If I may be allowed to state, among my orders to the lockers I directed them "to go over the gauges of the landing officers, whenever their other duties will permit, and report to the Inspector any discrepancies they may detect in regard to the original return of the strength or quantity of any package received into their charge." In obedience to my directions, one of the lockers reported to me that he had discovered a deficiency of fifteen gallons in the original gauge of fifteen casks. The treatment the locker received in this case would deter, I think, other lockers from subjecting themselves to similar consequences.

48. Your rule being re-gauging after deposit in the warehouse? Yes.

49. You were alluding just now to the locker and the re-gauge, and that he found out that there was a deficiency? Yes.

50. Tell the Committee what you refer to when you say that the locker received such treatment that you think he would be deterred obeying your order again? I do not say that he would never obey my order again; I meant that it might deter him or others from obeying this particular order.

51.

W. C. Still,
Esq.
4 June, 1858.

51. Repeat the case you were referring to? The locker reported to me the deficiency, as before referred to, and I brought it under the notice of the Collector of Customs, who directed the Landing-surveyor to send the landing-waiter to correct his gauge. This officer went to the locker and spoke in such a way that he considered he was insulted. This officer is in charge of two warehouses—a morning warehouse and an afternoon warehouse.

52. What is the name of the locker? Mr. Mundy. The error was discovered at the forenoon bond, but the landing-waiter, instead of visiting the locker there, called upon him at his afternoon bond, and in an insulting manner demanded his keys, that he might proceed to correct his gauge unaccompanied by the locker. To this the latter demurred, as he wished to be present during the time his store was open. The landing-waiter returned to the Custom House, and complained to the Collector of the obstruction thrown in his way by the locker, and obtained an order to Mr. Mundy "to accompany the landing-waiter" to his afternoon bond. Now this was what the locker himself had offered to do, but it seems the landing-waiter concealed this from the Collector, for, instead of making use of this order, he procured one of an opposite nature from the Landing-surveyor, whom he kept in ignorance of the previous order from the Collector. The landing-waiter then returned to the locker, and, after some more abuse, obtained the keys on the Landing-surveyor's order, and went to correct the gauge by himself. As I had witnessed on one or two occasions previously an interference with the warehouse duties, I thought this a fitting opportunity to elicit the opinion of the Minister as to whether I was to have the complete control of the lockers or not. I therefore requested the Collector of Customs, in reply to a note from him, to bring the matter under the notice of Mr. Jones, then Minister, whose Minute in regard to it I thought would have been a protection to me for the future. I considered that the Landing-surveyor, in issuing this order to the locker, had gone beyond his province, and that he was trenching upon my authority.

53. By Mr. Donaldson: Read the minute of Mr. Jones? (Witness read the same. Vide Appendix E.) I considered in practice that gave me the independent supervision of the warehouse branch.

54. It has not in practice been carried out, that minute? No, it has not. The locker in this case complained bitterly of the treatment he had received from the landing-waiter, who threatened him with ulterior consequences. The order seems to be a very unpalatable one to the lockers.

55. By Mr. Weekes: That order being re-gauging? Yes. I am sure it is an unpalatable duty to correct the landing officers, and persons in their position are not willing to incur the ill-will of their superior officers. The landing-waiters will not admit that the lockers should be allowed to correct their gauges.

56. Then you think some influence does work prejudicially to the interest of the public in the Customs Department in that particular? I think it does in that particular.

57. You think it is a very unpalatable duty to carry out? Yes, I think the lockers view it so. It brings them into collision with their superiors.

58. Is it not an ordinary thing to submit these matters to a check in every other department? It is.

59. This is simply a check on the officer who gauges, you observe? Yes, but it seems to be viewed more as personal matter.

60. Then, do I understand that it is your opinion that you should have power to give instructions to the lockers to re-gauge every thing that is deposited in the warehouses? Yes. I wish to institute a check.

61. Is that the only locker that carried out your instructions? Yes.

62. Did he continue to do it? That officer would, but, as I stated, he was insulted in consequence. When at leisure this duty can be performed, but at some of the warehouses the lockers are too busy to attend to it.

63. Do you think it of that importance that it should be part of the duty of the lockers—taking all those circumstances into consideration, such as tampering, &c.? I think it should be part of their duty.

64. But at the same time you say that their duties are so extensive that in all cases they could not do it? They could not in all cases.

65. By Mr. Donaldson: I should like to learn from you, Mr. Still, now that we are on the subject of re-gauging, something about the certificates. Dutiable spirits are, I believe, principally and originally gauged by the landing-waiter. I should like to follow up the question of the preparation of the certificates, and see how it affects the revenue—is it the case that the certificates on which duty is primarily charged are made up from the gauge by the landing-waiter? The original entry is the landing-waiter's gauge. If your goods are bonded you can pay on that, or take out a re-gauge order.

66. Generally what is the system? They pay on both; on the re-gauge orders and on the original entries.

67. If a re-gauge order is considered so essential as to be almost always considered necessary, where do you see the importance of checking the gauge of the landing-waiter? It is not always the case to pay on a re-gauge; you then pay on the quantity returned by the landing-waiter.

68. The difficulty you see is, that duty might be paid on a defective gauge without a check of the bonded store? Yes.

69. Would that be favorable to the importers, or otherwise? In some cases it would be favorable, and in other cases it would be against them. There might be errors. In the hurry of gauging a large number of casks, mistakes might occur at the landing, and we cannot be too particular in seeing that the full duty is collected on all articles.

70. By Mr. Weekes: Who issues the certificates in the various bonded stores? The certificates are copied from the Custom House entries. We do not issue them.

71. Suppose I put 20 hogsheads in bond, who gives me the certificates? The importer or his agent makes out these certificates from our entries.
72. Is it signed by a private storekeeper? Either by the bonded storekeeper himself or his manager.
73. Is it within your knowledge that certificates in duplicate, or rather certificates that do not represent the goods in the warehouse, have been issued by bonded storekeepers? Nothing of that kind has come within my knowledge.
74. Do you know any check against that being the case? The bonded storekeeper could make out as many copies as he likes; we have nothing to do with the certificates.
75. I want to know what protection there is that a bonded storekeeper does not issue as many certificates as he likes. We know that they are merchantable articles, and that you can sell 50 hogsheads on the certificates—they go from hand to hand? We have nothing to do with them.
76. Can you suggest any system that would be a check? By making it a Government document instead of a private one.
77. Bearing the signature of some officer of the Customs—would that check it, or can you suggest any other mode? The fact is, this is a matter I have very little to do with; it does not come within my province at all.
78. You are not aware that it has been said in some recent instances that these duplicate certificates have been issued in fraud, in fact? I am not cognizant of it. I should think a respectable storekeeper would not do such a thing.
79. Are the certificates always kept in duplicate? I cannot say.
80. *By Mr. Flood:* Is there any place where I can go and ascertain that the certificates are genuine? Yes. If you go to the Custom House and get a sample order, the locker will soon prove whether the goods are in bond or not.
81. Suppose when he applied to the Warehouse-keeper for a sample of the goods there were no goods there? Then it would be palpable that the certificates were not genuine.
82. Have you a book kept in any place shewing the casks of spirits as set forth in the certificates as having been deposited? Yes; the Customs Warehouse-keeper has his Register. He is an obliging person, and from him the party would soon ascertain in what particular store the goods were warehoused.
83. *By the Chairman:* Do you know whether in former days the certificates were not signed by the Collector of Customs? I cannot say whether it was the practice in former days.
84. *By Mr. Weekes:* Would it come within your particular province—would it entail much duty on you if you were called on to countersign the different certificates in your daily visits to the warehouses—you being responsible that what you signed was in the warehouses? The mere initialling or signing would not entail so much trouble. It would be impossible for me to visit daily all the warehouses for this purpose—perhaps, for some days I cannot see them at all. I may have business at one warehouse which may keep me a whole day engaged, or, perhaps two days. I should have to be followed about, and this might be inconvenient to parties. The delay also might frequently prevent a sale. Should, however, it be considered necessary to have a better protection to the public than at present exists, of course it might be arranged that I should be in attendance at the Custom House at a particular hour to sign these documents.
85. *By the Chairman:* Is there not some Custom regulation which prohibits the re-gauging of spirits unless a certain time has elapsed? There is. I have arranged with the Landing-surveyor that nothing is to be re-gauged under a month in bond.
86. It was a longer period than that formerly? I think it was three months.
87. Have you found any great difference between the re-gauge of a month and that which was the gauge at the time of it being put in store? Occasionally I find a deficiency, and occasionally a surplus of measurement.
88. If it were correctly gauged there could be no surplus? There could be no surplus if correctly gauged.
89. *By the Chairman:* How many lockers are there under your control? Twenty.
90. Are you aware of what is the amount of salary these lockers receive? They vary—from £275 to £163 per annum.
91. Now, what is the manner in which the duties of the warehouse branch of the department are performed by those at present employed—is it in a satisfactory way, and are they such men as you have entire confidence in? I think, with the exception of one officer, who is just now on good behaviour, they are all doing their duty satisfactorily.
92. With the exception of one? Yes; but I have no fault to find with him at present.
93. Are the keys of the bonded warehouses left in their possession any time, or are they deposited entirely with the persons in charge? They are deposited with the Customs Warehouse-keeper every evening on the bonds closing.
94. I suppose duplicate keys are kept by the bonded storekeepers—what is the mode of security so far as locks and keys go? There are two keys to each entrance to the warehouse, one held by the warehouse-keeper and the other by the locker. I discovered that some of these keys supposed to be found by the Government were in reality the private property of the warehouse-keeper.
95. A good many keys that are supposed to be public keys are the private property of the warehouse-keeper? Yes. In the course of some correspondence with the Collector of Customs some time back, I pointed out this, and the Collector seemed to think it a most unprecedented and unusual practice.
96. *By Mr. Weekes:* You pointed out that these keys which were supposed to be public were not so? Yes.
97. What do you mean by public keys? Keys held by the locker and purchased at the expense

- W. C. Still, Esq.
4 June, 1858.
- expense of the Crown. In this instance they were at the expense of the warehouse-keeper.
98. You think it objectionable that the public keys should be his private property? Yes. I agreed with the Collector of Customs that these keys should not be found by private individuals, but by the Government. I have made a requisition for the proper number, and we are gradually replacing those keys by others purchased by the Government.
99. Is the Queen's lock different to the padlock which was purchased by the owner of the store? Yes, in some instances; but I do not see that any injury to the revenue could have occurred, because, from the description of locks used, duplicate keys are not sold with them. I think they were Barron's locks.
100. Then you do not think this has affected the revenue? I do not think the revenue has been affected.
101. A man might have duplicate keys? With the superior patents you get duplicate keys. You do with Marr's and Chubb's, but not with Barron's.
102. You can get hold of one of the keys and make a duplicate key from it? You can do that with any key, however superior, and whoever finds it. It is the principle of these keys being purchased by private individuals that I consider objectionable.
103. *By the Chairman*: Then, in reference to the security in that particular there has been a change since you took charge? Yes; we are gradually placing our own locks upon all the doors.
104. *By Mr. Weekes*: You said the lockers take the Queen's keys to the Warehouse-keeper? Yes, to Mr. Nash, the Warehouse-keeper, every evening.
105. Is that always the case? It came to my knowledge that it was not the case on one occasion.
106. *By Mr. Donaldson*: What case was that? That was the case of a Mr. Snow.
107. Did you report that to the Collector? I did.
108. Will you relate the circumstances of that case? Mr. Snow was the locker of Messrs. Griffiths and Cooper's warehouses. The Warehouse-keeper reported to me that Mr. Snow had not returned his keys over night, nor had he appeared that morning to sign his name in the Attendance Book. In the afternoon I went up to Cooper's, and found Mr. Snow had just left. I discovered him in the street, in a state of intoxication. As he was too insensible to deliver to me the warehouse keys, which were in his pocket, I was obliged to resort to the aid of the police to procure them; and having obtained them, they were forwarded to the Custom House. On my report, Mr. Snow was dismissed the next day.
109. *By the Chairman*: Do you think it would be desirable that there should be a Queen's Bonded Store? I have thought over the matter, and I think it would be desirable.
110. *By Mr. Flood*: I want to know how many lockers you have any control over? Twenty.
111. What control have you over the lockers? I considered when I was appointed by the honorable member Mr. Donaldson, then Minister over my department, that I had the complete superintendence of the warehouse branch, and I was under that impression while that honorable gentleman remained in office. The very week, however, that Mr. Donaldson retired, I received a note from the Collector of Customs, which, if the Committee will allow me to read, will give them some information on the point. (*Witness read the same. Vide Appendix F*) This note was in reply to my complaint of the Landing-surveyor's interferences, and informed me that, although I was Inspector of Warehouses, Mr. Garling was *Surveyor of Warehouses*. As this concerned my position in the department, a correspondence ensued, and the Minister, Mr. Jones, made the Minute I have already read. I claim no superiority over the Landing-surveyor; I merely wish to be allowed to attend to my own duties without the interference of others.
112. Are you compelled to communicate through the Landing-surveyor, Mr. Garling? No; in all cases I communicate to the Collector, direct. My position in the department does not appear to have been properly pointed out to the officers or to the public. As Inspector of Warehouses, I consider that all matters connected with the Warehouse Branch should be arranged by me; but the reverse is the case. Many things are done through the Landing-surveyor, and not unfrequently orders to the lockers are issued by him: this interference fetters my exertions. It is no encouragement to devise improvements. I feel it the more, as I was given to understand by the Minister who appointed me, that my position as Inspector of Warehouses was, except to the Collector himself, entirely independent of any other officer.
113. *By Mr. Donaldson*: Do I understand that it compromises your usefulness rather than your authority? Both. I consider it not only fetters my exertions, but that it also compromises my authority at the warehouses.

APPENDIX A.

Copy of Instructions issued to Inspector of Warehouses.

*Custom House, Sydney,
7 April, 1857.*

Sir,

Agreeably to your request, that I should furnish you with some written instructions for your guidance in the performance of the duties of the office to which you have been appointed, I beg to say that you are to take upon yourself the general superintendence of the Warehouse Branch of this department.

2. It will be necessary that you visit daily as many of the bonding stores as circumstances will admit of, and that you will see that the lockers have entered the hour of their arrival at the warehouse in the Appearance Book kept for that purpose, and that they are at their post.

3.

3. You will examine the entries of goods for the warehouse, and see that they have been duly copied into the Stock Book; and by a comparison of the "Locker's Orders" of the day preceding with that Stock Book, ascertain that all deliveries have been written off, at the same time putting your initials thereto.

W. C. Still,
Esq.
4 June, 1868.

4. You will take care that the casks are stowed in tiers, of not more than three tiers in height, (except where all are quarter-casks, in which case there may be four tiers in height,) the larger packages at the bottom, and the quarter-casks above.

5. All casks should be stowed in such manner that the marks and numbers can be ascertained at any time, by having a passage between the heads.

6. By this arrangement it will not be difficult to ascertain if any cask is leaking; and when such is the case, it should be immediately got out, and the owner called upon to have it re-coopered.

7. In the event of his refusing to do so, you have the power to order it to be done, causing the locker to enter the occurrence in the Stock Book, with the expense incurred; and the cask is not to be delivered until that expense is repaid.

8. When coopered, it would be desirable to re-gauge or dip it, and to note the contents in the Stock Book, with the date.

9. Should a cask be found empty, the head should be taken out, to ascertain if it has been spiled, and the cask then removed from the store, and then written off the Stock Book; the circumstance being notified to the Warehouse-keeper, that he may discharge it from his ledger.

10. None but persons on business should be allowed in the warehouse.

11. You will direct the lockers not to allow any samples to be drawn off, without a proper order from the Customs Warehouse-keeper or myself.

12. You will allow no private gauging for sale by the lockers to interfere with their public duty.

13. You will direct the lockers to acquaint you, when any re-gauging, re-packing, re-weighing, or vatting is required.

14. It will be a part of your duty to see that no inferior brandies are re-packed into casks with superior brands, unless those brands are first erased.

15. You will ascertain, on your visits to the warehouses, that cart or boat notes are received by the lockers from the landing-waiters, for all goods sent from the ship to the warehouse, and that those notes are filed.

16. You will ascertain that all goods have been properly marked and numbered, previous to their being stowed, or immediately after being stowed.

17. You will give the lockers to understand that the warehouses are not to be kept open after four o'clock, p.m., without special permission.

18. It will be your express province to report to me any dereliction from duty on the part of the lockers, either from incapacity, negligence, or any other cause.

To the Inspector of Warehouses,
Port of Sydney.

I have, &c.,
J. GIBBES,
Collector.

APPENDIX B.

From Inspector of Warehouses, to Collector of Customs, respecting Irregularity of Cart-notes.

Custom House, Sydney,
29 April, 1877.

Sir,

I deem it my duty to bring under your notice that, contrary to the regulation on the subject, in most instances goods are conveyed from the wharves to the various warehouses without being accompanied by cart-notes.

As the landing-waiters' returns are frequently not made up for a considerable time after the commencement of the landing, the presence of these notes in the interim—in checking the import entry, and the actual quantity of goods, particularly case packages, forwarded by the drays to the warehouses,—is of great value to the locker; and I may also observe, that in the working of the journal about to be introduced under your sanction, the value of these notes will be still more enhanced.

I venture, therefore, respectfully to suggest, that the landing-waiter be directed "to forward, when practicable, a cart-note by every load of goods leaving for the warehouse," and that, when circumstances prevent his doing so, and no cart-notes have been made out for any previous loads during the day, "the last load leaving the wharf be invariably accompanied by a note containing full particulars of the whole day's despatch to the particular warehouse."

The Collector of Customs.

I have, &c.,
W. CATHCART STILL,
Inspector of Warehouses.

W. C. Still,
Esq.

4 June, 1858.

APPENDIX C.

From Inspector of Warehouses to Collector of Customs, respecting Defective Hydrometers.

Custom House, Sydney,
6 May, 1857.

Sir,

Having considered it very desirable, among some of my first labors, to test the hydrometers in use at the different warehouses, I have the honor to acquaint you that on receipt from the Landing-surveyor of an instrument which, although not a correct one, I adjusted by the standard (No 6919) in the Custom House, I proceeded on the first day of the month to carry out my views, and beg to enclose a detail of the results of the examination, which I finished yesterday.

At Gilchrist's, Wilkinson's, and at Towns', I found that neither the warehouse-keepers nor the lockers had any instrument in use at all, and that whenever strengths are required to be taken, the practice is to borrow from the nearest warehouse possessing one. I need not allude to the inconvenience and delay such a course must obviously occasion to the locker, as well as to the dissatisfaction naturally enough felt on the part of the warehouse-keepers, who generally do not scruple to express their surprise, to use their own words, that in the face of the large item of revenue now collected from their premises, ostensibly for the purpose of defraying the expenses of supervision, the lockers in charge are so stinted in the supply of the necessary implements to enable them to carry out their duties. At Brown's, Kirchner's, Leigh's, and at Smith's, the instruments in use are private property, but permitted to be used by the lockers to avoid the impediments to the despatch of business which would result in having to wait for the loan of one.

It will be seen from the enclosed detail that some of the hydrometers are in a very defective state, and where they have not been previously tested and adjusted, the revenue must have suffered to some extent.

Although I have determined upon periodical adjustments, namely the first week in each month, and may by this course prevent errors of any serious amount occurring, yet these frequent regulations of the instruments cannot but lead to considerable doubt and dissatisfaction on the part of a large section of the public connected with transactions at the warehouses.

I would therefore suggest, that whenever our stock of hydrometers can be replenished, either from home or by purchase on the spot, each locker be placed in possession of a new and correct instrument, and the defective ones called in and condemned.

While on this subject, I beg to allude to the mode hitherto adopted of adjusting an incorrect instrument, which I respectfully venture to state, from a long practical experience in these matters, is *erroneous*.

Having succeeded in regulating the instruments in use in the branch under my supervision, so as to produce that degree of uniformity in testing samples so essentially necessary to preserve the accuracy of the accounts of the department, as well as to meet the expectations of the public, I cannot but think that if the hydrometers of the water-side officers were adjusted at fixed and frequent periods upon a similar principle, one general agreement in the declaration of strengths would result, and prove not only a source of satisfaction to the individual officers themselves, but also to the many persons whose speculations in business may be affected by any variation in the instruments of the Customs Officers.

I have, &c.,

W. CATHCART STILL,
Inspector of Warehouses.

The Collector of Customs.

APPENDIX D.

From Inspector of Warehouses to Collector of Customs, respecting supply of articles at the Warehouses.

Custom House, Sydney,
16 May, 1857.

Sir,

I do myself the honor to bring under your notice several matters connected with the supervision at the warehouses, which I beg to be permitted to condense in one communication, in place of interrupting you with a separate letter on each subject.

I will allude to, first,—

The supply of gauging rods.—I find that, except at Brown's, Kirchner's, the Argyle, and at Lloyd's, where they are the property of the warehouse keepers, a complete set of rods are not in the possession of any locker, and that where a re-gauge all round of the original packages, or a re-pack into a new one is required, it frequently becomes a difficulty with the locker, who generally has but the head and bung-rods to work with, to arrange the matter, and the diagonal gauges thus arrived at do not, it is well known, always agree with the results of a complete or all-round measurement.

With the view, therefore, to render each locker as efficient in his duties as possible, I respectfully have to suggest that the warehouses where they are wanted be each supplied with a complete set of rods, and that the lockers individually be held responsible for their order and safe custody.

I

I may state, while on this subject, that it is my intention, when the stowage in the various stores is sufficiently completed to facilitate stock taking, in connection with the weekly balancing of the new Journal, to test daily the gauges of the lockers, as well as those arrived at previously by the waterside officers; but without the full complement of rods at each warehouse, this duty, which I think would be viewed favorably by the public, will be arrested.

W. C. Still,
Esq.
4 June, 1858.

Secondly, the supply of weights and measures.—As disputes occasionally occur respecting low ullages, and the gauges of case liquids, and as small measures are not always furnished at the warehouses, but have to be borrowed when required from the nearest landing-waiter, if he can spare them at the time, I would suggest, that I should be supplied with a complete set of measures (5 gallons down) for general use, as well as a complete set of the small weights (14 lbs. down), and scales to test the gauge of cigars and snuffs, and other light goods.

Thirdly, the locks in use at the warehouses.—I find that altogether there are about 100 locks and keys in charge of the lockers; and although the majority of these are of a very fair description, and answer the purpose required, yet there are several of a very inferior sort, which I cannot but desire to see changed for a better kind. A patent lock can be broken as well as a common one, but the latter is with much less difficulty opened or picked. There are about a dozen which I think should be removed at once; and as an extension of the flights for bonding goods at some of the large warehouses is not improbable, I would propose, to meet all contingencies, that twenty-four (24) new locks be obtained, of a medium patent, such as Barron's, which, although not so good as Hobbs', Chubb's, or Marr's, would answer equally as well, and besides are much cheaper.

Fourthly, the lockers' office accommodation.—I cannot but observe that the lockers meet with many impediments in the performance of their duties from the want of sufficient office conveniences. Although the Warehouse-keeper generally allows the use of some kind of a desk or table in the corner of the store, yet I think on examination it would be found that in most instances the accommodation thus provided is not altogether so compatible with the locker's official position, and the safety of the Government documents entrusted to his care, as could be desired. Nor can I too strongly advert to the expediency of preventing such free access to the lockers' books and papers as at present is afforded to any person who from curiosity or design may wish to inspect them.

I hope, therefore, that it may be possible to obtain from the Colonial Architect a sufficient number of well-secured desks, of uniform size, to supply those warehouses where they may be needed.

I also beg to bring under your notice the demands made upon me for stationery by the lockers. These gentlemen inform me that they have hitherto been obliged to defray the expenses of all indispensable articles, such as paper, pens, pencils, ink, &c., from their own private resources, no stationery of any description having been furnished from the department.

As stationery is so generally expected to be supplied as a matter of course for the performance of Government duties, I trust, sir, that after the foregoing explanation I may be empowered to deliver to each locker periodically a sufficient allowance for the duties of his position.

The hydrometers I have already addressed you respecting in a separate communication; and I beg respectfully to tender my thanks for the reception given to the suggestions which I ventured to place before you.

Finally, I beg to recapitulate the number of the articles required, viz.:—

- 20 sets gauging rods, complete.
- 1 complete set weights and scales (14 lbs. down.)
- 1 do. measures (5 gallons down.)
- 24 medium patent locks.
- 12 desks, uniform size, with fastenings.
- Stationery to supply 22 warehouses periodically.

I have, &c.,

W. CATHCART STILL,
Inspector of Warehouses.

The Collector of Customs.

APPENDIX E.

MINUTE of Minister of Finance on Letter of Collector of Customs transmitting Letter from Inspector of Warehouses complaining of interference of Landing-surveyor.

WHILE concurring generally with the views expressed by the Collector of Customs as to the powers and the rank of the Landing-surveyor, I think in practice the latter officer should, to the utmost extent possible, avoid interfering with the duties which are peculiarly cast on the Inspector of Warehouses; and where this interference should be unavoidable, it should be exercised in such a way as not to compromise the authority and position of the Inspector with those who rank below or are subordinate to him.

In the cases mentioned in paragraphs 2 and 3 of the Collector's letter, it would have been better if the Landing-surveyor had acted through the Inspector of Warehouses.

R. J.
Sept. 22, '57.

APPENDIX F.

W. C. Still,
Esq.

8 June, 1858.

From Collector of Customs to Inspector of Warehouses, in reply to his complaint of interference of Landing-surveyor.

My Dear Sir,

Referring to your Memo. of yesterday's date, I beg to say, that if you will read the copy of my letter to Mr. Kidd (which Mr. Llewellyn will shew you), you will see that I have exonerated Mr. Mundy from all blame, and called on him (Mr. K.) for an explanation of his conduct.

With respect to your observations about Mr. Garling, I think I can take upon myself to say that he had no intention whatever of acting discourteously towards you, or to infringe on your duties, but was himself also misled by Mr. Kidd. At the same time, it may be well to explain to you, that Mr. Garling is not only the second officer in the Port, but that he is also the "Surveyor of Warehouses," having been so appointed when he succeeded Mr. Jeffreys as Landing-surveyor, and that office not being abrogated by your appointment of Inspector.

I am, &c.,

J. GIBBES,

6th Sept., 1857.

Enclosed I send you an extract from the Instructions issued by the Board of Customs to Landing-surveyors, under which we continue to act with the consent of the Government.

J. G.

W. C. Still, Esq.,

&c., &c., &c.

TUESDAY, 8 JUNE, 1858.

Present:—

Mr. DONALDSON,
Mr. EGAN,Mr. WEEKES,
Mr. FLOOD.

THE HON. S. A. DONALDSON, Esq., IN THE CHAIR.

William Cathcart Still, Esq., called in and further examined:—

1. *By Mr. Flood:* Were you not appointed, Mr. Still, for the purpose of taking stock and examining the warehouses generally? I was first appointed for the purpose of taking stock, in consequence, as I understood from the Minister of Finance, that there had been some defalcations in the warehouses.
2. In pursuance of the verbal instructions you received from Colonel Gibbes, did you take stock at the various warehouses of the City? I did, except at the Sugar Company's Bond.
3. Previous to your doing so, were any documents or books placed in your hands for the purpose of guiding you in taking stock? None whatever.
4. After you had taken stock, what became of the accounts so taken? I forwarded them to the Custom House as I transcribed my rough notes.
5. Were you ever called on to compare them with the original or supposed contents of the warehouses? I was not communicated with in that respect after I sent in my returns.
6. Did they acknowledge the receipt of your returns, or was that unnecessary from the position you occupy? I forwarded the returns in an official letter, and I got one acknowledgment, I think, when I had sent in the returns of the first seven warehouses.
7. Then, in point of fact, you, of your own knowledge, cannot inform the Committee whether there was any deficiency or not, you not having been called on to compare the result of your examination with the original or supposed contents of the warehouses? No, I cannot, except in regard to a case which has lately arisen in connection with Mr. Aldis. That case may throw some light on the way the returns were corrected.
8. Will you state to the Committee the particulars of that case? It is the custom to have an "overtime sale" of all goods over three years in bond, if not re-warehoused. On searching the register for the purpose of making out this list in January last—
9. The goods you speak of after three years are considered confiscated? They are not considered confiscated, but they are put up for public sale, and sold to pay rent and other charges.
10. Are they sold for rent or duty? They are put up at an upset price, which is the rent amount. They are sold in bond, to be cleared for home consumption or exportation within three months from the day of sale. If they bring more than the rent amount, the surplus is reserved for the owner of the packages, and he obtains it on application at the Custom House. In making out the usual list in January last, the Warehouse-keeper reported to the Collector that certain packages belonging to Mr. Aldis, and warehoused three years' back, did not appear from the reports of the lockers to be in any of the bonds, although the entries were open in the register. Mr. Aldis was then communicated with, and he replied, that at the time the inspector took stock "he had pronounced his stock to be correct."
11. *By the Chairman:* Meaning you? Yes. Mr. Aldis' communication was then referred to me.

W. C. Still,
Esq.

8 June, 1858.

12. *By Mr. Flood*: Mr. Aldis said it was pronounced to be correct by you? Yes.
13. *By the Chairman*: At the time of taking stock by you it was correct? He stated "that at the time I took stock I said it was correct." This letter was referred to me to report on.
14. What was your report? I replied that Mr. Aldis must be mistaken in regard to my having "pronounced his stock to be correct." So far as respects the stock then in store being taken by me, my account was right; but, as regards the checking of the return with the Customs' books, that was not left in my hands. Mr. Aldis had mistaken my meaning altogether, and evidently took it for granted that there was no deficiency.
15. *By Mr. Flood*: You did not on the first occasion compare the stock taken with the books of the warehouse? No. I also pointed out to the Collector of Customs in my report —
16. Is that your report of Mr. Aldis' case? Yes.
17. To what effect did you report? I expressed my surprise that when my stock account of last year was forwarded for examination, the discrepancies were not then detected, and at once reported. I considered that this absolved me in the matter.
18. *By Mr. Weekes*: Did you make any statement at all on taking stock that Aldis' Bond appeared to be correct? I said, very probably, my stock taking was correct—meaning my inventory of the packages then in store.
19. What did you compare them with when you made that statement? I could not have stated that the quantity in store was correct. I had merely to send in my returns of what I found. I had nothing to do with comparing the returns with the books.
20. What is the date of that report? 19th March, 1858. I took stock in February of the preceding year, and this deficiency, which should have been reported then, does not appear to have been discovered until the lapse of a year after the proper time.
21. Did this taking stock of Aldis' store form part of your general stock taking? It was included among the other warehouses. Since then that bond has closed.
22. In the paper presented to the House, and ordered to be printed, Colonel Gibbs says, (this is dated 15 March, 1857)—"I beg leave to state that Mr. Still, who was appointed to take stock in the several bonding warehouses, closed his inspection on the 6th instant, and that the comparing his returns with the Warehouse-keeper's stock-books has occupied the clerks in the warehouse branch from the 27th ultimo to the 13th instant, which will account for my not sooner having made any report. (2.) I am happy to say that the discrepancies are insignificant, and that the deficiencies, out of fifty-two thousand two hundred and forty-six packages in bond, amount to only twenty-seven quarter-casks of wine"—Have you any means of knowing whether that statement is correct? As I said before, I had not the correction of the stock accounts. I had no official knowledge of a deficiency, except the case I am now alluding to of Mr. Aldis.
23. The correction rested with the Custom House? With the Custom House.
24. *By the Chairman*: Was your attention drawn to the 27 quarter-casks of wine? No; I received no information about them. The only letter, as I stated before, concerning these stock accounts, was an acknowledgment of the returns of the first seven warehouses.
25. What was the deficiency in Aldis' Bond that you were called on to report—what was the character and nature of the goods? Tobacco and cigars.
26. Colonel Gibbs says in his letter of the 15th March—"I am happy to say that the discrepancies are insignificant, and that the deficiencies, out of fifty-two thousand two hundred and forty-six packages in bond, amount only to twenty-seven quarter-casks of wine"—How do you reconcile that statement made by Colonel Gibbs that there was only a deficiency of twenty-seven quarter-casks of wine, when there was also the deficiency of Aldis', which you reported on? The deficiency in tobacco and cigars was discovered in March last, in 1858. I think the non-detection of the deficiency at the time resulted from the peculiar mode of book-keeping.
27. In the Custom House? Yes, and the out-door department also.
28. *By Mr. Flood*: Did you ever see the letter alluded to by Mr. Weekes, and signed by Colonel Gibbs? That report I have merely read in the papers as a public parliamentary document. It was never referred to me for any official use.
29. Then it would appear that the letter which Mr. Weekes has called your attention to has been found to be incorrect, inasmuch as a deficiency has been discovered in Aldis' store? Yes.
30. *By Mr. Weekes*: Were these deficiencies arising after your inspection of March? No, previous. This bond was almost immediately afterwards closed.
31. *By the Chairman*: What was the deficiency in Aldis' store stated to be? I will read it from my letter-book, which I have with me.
32. What were the quantities you were called on to report on—what was the deficiency that was pointed out to you? 14 cases of cigars, weighing altogether 850 lbs., and 16 cases of tobacco, weighing altogether 2,080 lbs.
33. What else? Nothing else.
34. The Warehouse-keeper's report was referred to you to report on? Yes.
35. *By Mr. Weekes*: On this investigation you made a report that there was a deficiency—did you learn this from the books at the Customs? I found it out by the Warehouse-keeper's books.
36. You inspected the books, and so of your own knowledge obtained the deficiency? The bond had been closed, and I could not discover any of these packages in going over the stock in other stores. I found the Warehouse-keeper's report of the deficiency was correct.
37. What was your report after that? (*Witness read his report. Vide Appendix A.*)
38. *By Mr. Flood*: Are there any warehouses in Sydney in which the owners of the warehouses bond their own goods? Yes.

- W. C. Still, Esq.
8 June, 1858.
39. Is that the case with Mr. Aldis? Yes, it was; he bonded his own goods in his own warehouse.
40. When you took stock in the warehouse, if there was any deficiency, unless comparison was made with the original contents, the deficiency could not be discovered? No.
41. You are not aware any such comparison took place with the return you sent in and the original contents? I attribute these apparent deficiencies or errors to the peculiar mode of book-keeping, and to carelessness in not writing off correctly. I say, apparent errors, because an export warrant for the tobacco has been discovered since. This has relieved Mr. Aldis of the responsibility as regards the tobacco, although in the books the deficiency still appears against him in regard to the cigars. At the same time, I do not attribute anything wrong to Mr. Aldis, as warrants may turn up for the cigars, as in the case of the tobacco.
42. Do you know who was the owner of the wines in Mr. Kirchner's stores? I do not. I have had no official information respecting any deficiency, except Mr. Aldis'.
43. According to your statement, Mr. Still, it appears then, first of all, that the errors stated against Mr. Aldis ought to have been discovered in the Custom House books when you made your report in February or March, 1857; and, secondly, that according to the statement now made, an export warrant had actually been issued by the Custom House authorities, and that this warrant does not appear to have been written off in their books at all—is that the case? Yes, that is the case.
44. *By the Chairman:* I infer, from what you said, that there have been considerable inaccuracies in the mode of keeping the Custom House warehouse books—will you state to the Committee if you have altered that system in any way or improved it, and if so in what respects? I found that in some of the warehouses the books were very badly kept. In some instances, I found entries omitted to be written off; and in other cases I found goods in the bond which the books did not show.
45. *By Mr. Weekes:* That is, the books in each store? Yes. I also found entries in the books and no goods in the bond to correspond. It struck me that some change was necessary, and I supplemented these stock books by the introduction of a "Lockers' Journal of Receipts and Deliveries." This book I can show to the Committee if they desire it.
46. This book you intended to be kept by each locker at each bonded store? Yes.
47. *By the Chairman:* You have introduced this? Yes. This journal is kept in Dr. and Cr. form. The locker debits himself with every thing that comes in, under its proper head, and takes credit for the same on delivery, and the balance stock in hand is shown every Friday evening. Every paper that goes through the locker's hands is initialled by me before being put away, and must correspond with the entry in this journal and stock-book. By this means, the stock on hand in the whole of the warehouses can be ascertained at any time, as the books, in fact, can be balanced at a moment's notice.
48. Would you hand in the heading of that book to the Committee? I hand in a spare sheet with the heading. (*Witness handed in the sheet.*)
49. You can take out a particular item and state the stock there ought to be in a minute? Yes.
50. This book was introduced by yourself? Yes.
51. Now give us some information of the principal books of the department—do you know anything of them? I have nothing to do with the in-door department. This book is in connection with my own department.
52. You don't check it with the Custom House books? No.
53. What officer is responsible for the principal books? There are different branches. The Warehouse-keeper keeps charge of the register and quarterly sheets relating to the warehouses. Mr. Llewellyn keeps the impress ledger. Then the Cashier has his accounts, which are checked by the Collector and Landing-surveyor.
54. You don't know anything of the books? No, not practically.
55. *By Mr. Weekes:* Judging from the system of book-keeping which prevails in the Custom House, there is very little probability of their stock on hand agreeing with your stock on hand, as shewn by your books? That will depend, in a great measure, as to their correctness, and how the entries have been written off. Their books are kept differently, and, as they have no journal, they cannot possibly show the quantity of stock on hand so readily as the lockers can, or state the actual stock at such frequent dates.
56. It is the same system that prevailed when this letter was sent from Colonel Gibbs to the Minister of Finance—has there been any alteration? In the warehouse there is an alteration.
57. In the Customs is there any alteration? I am not aware of any. It all depends (for correctness) as to the mode in which the entries are written off.
58. It is not probable that their books would agree with your return? There may be errors arising, but which, in taking over-time stock, will always transpire. If a journal had been in existence at each store formerly, these deficiencies would have been discovered much sooner.
59. *By the Chairman:* Do you hand in copies of these returns to the Collector? No, I do not.
60. You are not bound to furnish these returns to the head of the department, to check their books with? No. They are so comprehensive I don't know whether they could be published.
61. Would it not be useful to them to check the books of the head department with. If found different would they not look in to it? The mode of keeping the warehouse register is somewhat different to that observed at the warehouses. The registers consist of many volumes, and contain an account of all the goods in the several bonds; while the locker only keeps an account of his own store, and can add up his book daily, and check it by his journal. The Warehouse-keeper has such constant occupation in writing off and passing entries, that I am sure neither he nor his assistants could spare time to compare these returns with their books so frequently. (*Witness handed in a Return of the Stock taken at Campbell's Bond up to last Friday, 4th June. Vide Appendix B.*)

62. *By Mr. Weekes*: That is the stock as shown by your books at each respective store? Yes. W. C. Still, Esq.
 63. You do not know whether this agrees with the Custom House or not? No; it would take a considerable time to compare it.
 64. *By the Chairman*: You know that return is correct? Yes. 8 June, 1858.
 65. *By Mr. Weekes*: The packages, of your own knowledge, are in the stores? They are, to the best of my knowledge; the balances are correct.
 66. *By the Chairman*: You start with stock-taking, and assuming the entries you then made are correct, so far as you know, you could take any item, and check it, and prove the number of packages were there? Yes.
 67. This is not taken from any hypothesis? No.
 68. You would be prepared to verify it? Yes.
 69. *By Mr. Flood*: The stock is not taken by any other person? No; this is compiled from the balance of the books we commenced originally with my stock-taking.
 70. *By Mr. Weekes*: You charged each store with what you actually found there? Yes.
 71. *By the Chairman*: You do not know whether the Customs agree with this return? No.
 72. *By Mr. Flood*: In taking particulars at each warehouse, do you take them yourself, or by the lockers? The lockers enter everything that comes in and goes out; therefore they get a true account. I prepared the account to start with. This is a faithful account of what takes place.
 73. Is this compiled from the locker's books or from actual survey? From actual survey, as the goods come in and go out.
 74. Not from the locker's books? It is from the locker's books, and his own actual count.
 75. *By Mr. Weekes*: Are you aware whether this return of the stock in bonded stores agrees with the statement of stock as published periodically in the *Government Gazette*? It is differently compiled, and the stock published in the *Government Gazette* only enumerates a few articles, viz., rum, brandy, gin, colonial spirits, snuff, tobacco, and cigars. My return mentions every dutiable article.
 76. That document is not made up from your returns? It is not.
 77. *By Mr. Flood*: Have you any reason to believe that the public revenue is improved in consequence of this system of book-keeping which you have introduced in bonded warehouses? I think there is a better check now upon the packages in bond; instead of waiting to compare with the register in the Custom House, you can at any moment, by adding up the journal, see whether the figures tally with the stock in bond.
 78. So fraud would be easily detected? Yes.
 79. *By the Chairman*: Can you inform the Committee, generally, on the system calculations are made in over-time sales—the mode the sales are conducted—generally, give us what you know on that subject? At the end of every six months the register is examined, and all goods found to be in bond over three years are, except permission is granted to have them re-warehoused, put up for public sale, to be cleared for home consumption or exportation, within three months of the day of sale, or else confiscated and destroyed.
 80. Were the goods always found there, do you know, when these sales were advertised? I cannot speak, except from experience of my own time.
 81. Well, since you have had experience? I may mention, that the management of these sales has hitherto been under the Landing-surveyor, and even after my appointment of Inspector of Warehouses, they continued under his direction, but as the last sale in January approached, I requested their future supervision, conceiving they came within my peculiar province in connection with the warehouses. The Collector assented, and I drew up some suggestions, which has altered the system hitherto pursued.
 82. To what effect? I suggested, that instead of holding a sale at each warehouse, a sale of the whole of the goods should take place at the Queen's Store, in the Custom House yard, and that the lockers should furnish me, a week previous to the day of sale, with samples of each article, properly labelled and initialled by the officer, as a guarantee to the purchaser that the goods were in bond. The last sale was carried out on this plan, which appeared to give general satisfaction. The whole of the goods were sold in about three hours, whereas previous sales sometimes occupied three days.
 83. Did your sale take place in the Queen's Warehouse? Yes.
 84. Did you find in every instance the goods stated to be in the warehouse over-time were there, of your own knowledge? I satisfied myself completely on that point; and I may mention, I was the more particular from a circumstance I witnessed attending a sale when I first entered the department. I was tempted, from curiosity, to attend this sale, and upon the first article being put up after I arrived, the locker or storekeeper called out "not in bond."
 85. What was the article? I cannot recollect.
 86. What became of the article? They went on to the next article.
 87. What was the article? I cannot recollect. I have gone round (since I had the management of the sales) and examined every article, and as the lockers send me samples they are labelled for inspection.
 88. At what bond did this occur? Lloyd's Bond.
 89. *By Mr. Flood*: Were there any other lots that were put up and dealt with in this manner? I am not aware of any. I only remained a few minutes. I merely visited from curiosity.
 90. *By the Chairman*: Will you state your experience of the weighing tobacco for duty, and how the tares are corrected on the weight? The tares are adjusted by the Landing-surveyor, Mr. Garling.
 91. Are they weighed there and then, and is that the weight on which they pay duty, or is there any re-weigh? A re-weigh frequently takes place after the goods have been in warehouse some time.

W. C. Still,
Esq.

8 June, 1858.

92. The re-weigh would be less than the original weight on cigars? Yes, it should be.
93. You have known instances of a re-weigh shewing an excess? I do not recollect, in tobacco or cigars.
94. In any other article have you known an excess on a re-weigh? Sugars are less. Occasionally we find sugar, when weighed out for duty, shew a surplus on the original entry.
95. Not on the original weight? Yes, occasionally we find a surplus.
96. Sugar is always weighed on coming from the ship? Yes; and I have known it weigh more when it leaves the store.
97. *By Mr. Flood:* When you first joined the service, did you find a superior class of persons employed, or were they generally inefficient—I mean those appointed as lockers and persons under you? I found one or two parties whom I did not think quite suited to remain as lockers; two in particular.
98. From what reason? One was pointed out to me as addicted to habits of intoxication, and the other could not gauge, although in charge of a bond for a considerable time. The first soon committed himself, and has been removed from the department; the other has been reduced to the tide list. He is an elderly person, and has a large family to support; and except in the knowledge of gauging, in other respects is not wanting in ability.
99. *By Mr. Weekes:* In every other respect, except where he was of importance, he was competent? Yes. His defect was from weak sight; he could not see the figures on the rods.
100. *By Mr. Flood:* Have you received the cordial co-operation of the officers immediately above you, in carrying into effect the various improvements you have suggested? In most instances I think the Collector has attended to my suggestions. There are some matters, however, in which my position does not appear to be properly understood; and I do not meet that acknowledgment of my appointment which I consider I should receive. I may state, that in all my communications with the Collector of Customs I have always addressed him in most respectful terms, and invariably treated him with the courtesy due to his high position.
101. Then, in point of fact, the head of the department does not cordially assist you in carrying into effect the alterations you have suggested for the purpose of improving the department? My suggestions are attended to, but I cannot but perceive that there is an under current of feeling, which I conceive is prejudicial to my position in the department and with the public.
102. *By the Chairman:* Is that on the part of the Collector, or the next officer under him, or whom? Well, if the Committee were to read the various memoranda that passes between the Collector and myself, and the correspondence with the Treasury, I am sure they would be satisfied that I do not meet with encouragement. I may allude to the results of my instancing the "re-gauge" system. I addressed a letter to the Collector of Customs on the 2nd of June last year, and on the 24th of the same month I reported a case to him the moment I discovered the re-gauge had not been presented in the Long Room.
103. Was the "re-gauge" in excess? It was. It was a re-gauge of two casks of brandy at Gilchrist's bond. The locker who gauged the casks endorsed the order, which shewed an increase in the strength of the spirit in both packages; the calculations gave two additional gallons at proof to pay duty upon; as duty was paid upon the original entry in lieu, of course the revenue suffered. This proved my representation of the 2nd June was right, and that these things could be done. I will read to the Committee my letter of the 2nd June, 1857. (*Vide Appendix C*)
104. Was there not some legal proceeding respecting this letter? Not with respect to this letter, but legal proceedings subsequently arose in connection with the case of "re-gauge" I have just mentioned. In reporting on the conduct of a locker against whom a complaint had been made, I reminded the Collector of Customs of a conversation respecting this very case. After my report had gone in, and the locker's matter ended, the Collector of Customs and the Custom House Agent had an interview, and the Collector then addressed to me the following memorandum, to which I replied. The day after receipt of the Collector's memorandum a lawyer's letter was forwarded to me, succeeded shortly after by a second one. I will read to the Committee these letters, as well as a letter published in the *Sydney Morning Herald*, from which will be gathered the result of these proceedings. (*Vide Appendices D., No. 1 and No. 2; and E., No. 1, No. 2, and No. 3.*)
105. What did your law expenses come to? £6 6s.
106. And you paid this sum? Yes. The plaintiff sued for £30 damages. The Court assessed damages at one shilling, which in the Court of Requests causes each party to pay their own costs. I may mention that the agent states in his published letter that I *colled in witnesses*. This is either a mis-statement or a mis-print. Although I had three witnesses in attendance, viz., the Customs Warehouse-keeper, to prove the issue of the "re-gauge requisition"; the locker, who gauged the casks, and handed back the "re-gauge" to the agent; and the officer from the Long Room, to prove that duty had been paid upon the original entry in lieu,—my lawyer did not place either myself or these parties in the witness-box, conceiving it unnecessary, the admissions drawn from the plaintiff himself when under cross-examination rendering him confident of a verdict in my favor.
107. *By Mr. Flood:* Was there any other case of excess after re-gauge discovered? This was the only case reported to the Collector of Customs, and I did it to instance my representation of the 2nd June, 1857. It was not for a considerable time after that any check was adopted in the Custom House in regard to the issue of these "re-gauge orders." Mr. Nash, the Warehouse-keeper, now places a red-ink note in his Register when they are issued.
108. *By the Chairman:* Mr. Nash puts a red-ink note against the re-gauge? Yes.
109. Have you considered at all the propriety of passing a Bill to consolidate the laws relating to the Customs? I think it is very desirable.
110. Will you take a copy of the Bill, and favor the Committee with your comments on the Bill next time? Yes, I shall be happy to do so.

111. *By Mr. Flood:* Have you discovered any articles containing spirits which have passed free of duty? On analysing a sample of some liquids hitherto passing duty free, a considerable quantity of proof spirit was found to be contained in it.

112. *By the Chairman:* You represented that to the Government? Yes. I suggested that duty should be charged as on spirits. I have also made other experiments.

113. It was not in your time that the "Old Tom" was discovered? No.

114. *By Mr. Flood:* Have you the necessary instruments for testing the various liquids? It requires to be acquainted with distillation. I had rough apparatus at first, but since entering the Customs I have procured a complete set of philosophical instruments from England, with a view to being as useful in my position as possible.

115. Were these paid for by the Government? No, by myself. I do not claim to be reimbursed. I take an interest in my duties, and wish to render myself as useful to the Government and the public as possible.

116. Have you the power of seizing articles? The Collector of Customs considers that a warehouse officer cannot seize, and I believe he includes me under that head.

117. *By the Chairman:* Do you think the Customs laws should give you that power? Yes.

118. *By Mr. Flood:* Do you think it absolutely necessary that the Inspector of Warehouses and lockers should have that power? Yes, I think so. I would point out that the lockers at the water-side warehouses have opportunities of using this power, but at present they are obliged to call upon the nearest landing-waiter to assist them. I would also observe, that when this is the case the Crown's share of the seizure is diminished, the proceeds being divided amongst three instead of two, if the lockers were given the same power as a landing officer.

W. C. Still,
Esq.

8 June, 1858.

APPENDIX A.

Report of Inspector of Warehouses on goods missing from Aldis' Bonded Warehouse, reported in the first instance by the Customs Warehouse-keeper, to Collector of Customs.

I have examined the Entries in the Warehouse-keeper's Register, and find them as stated by Mr. Nash in his communication of the 9th instant.

With respect to the boxes of tobacco marked Q411, I perceive that although the Register, the landing-waiter's entry in the book, and the Import Warrant, all shew that these goods were intended for bonding in Aldis', yet thirteen out of the original number landed appear to have been exported from Pollard's, on the 19th May, 1856.

On questioning Mr. Pollard's warehouse assistant, he informs me that in consequence of Aldis' being shut, and no officer in attendance there at the time the drays arrived from the wharf, thirteen of the packages (Nos. 1 to 13,) were brought to Pollard's for temporary security, but were allowed to remain there until exported, some time afterwards; the remaining packages now missing, (Nos. 14 to 29,) Mr. McCrae further states, he is positive were not received into the bond under his charge.

Mr. Aldis, on being called upon for explanation, mentions that when I took stock in his warehouse, on the 3rd February, 1857, "I pronounced his stock to be correct." Mr. Aldis must be mistaken. I cannot recollect any conversation with Mr. Aldis on the subject, although he was, I think, present when his stock was taken, and any remarks that may have passed between us must have had reference to the packages then in store being correctly counted and entered in my inventory.

The examination of the "Returns of Stock" in the different warehouses, in January and February, 1857, was not entrusted to me. As I completed my lists I forwarded them to the Custom House, and I do not know upon whom the responsibility rested of checking them with the Custom House registers; nor did I receive any official communication respecting them after they had left my hands.

The goods now reported by the Warehouse-keeper appear to have been missing previous to my taking stock at Aldis' on the 5th February, 1857, as they are not mentioned among the packages I then found, and I am only surprised that when my Return went in for examination, the discrepancy between it and the Register was not then detected, and at once reported.

W. CATHCART STILL,
Inspector of Warehouses,
19th March, 1858.

APPENDIX C.

From Inspector of Warehouses to Collector of Customs, bringing under notice a system attending Re-gauge Certificates.

W. C. Still,
Esq.

8 June, 1858.

Custom House, Sydney,
2 June, 1857.

Sir,

I have the honor to bring under your notice, that since the adjustment of the hydrometers, the lockers occasionally find on the re-gauge by requisition the strengths of spirits show considerably higher than when originally warehoused.

When this is the case, the re-gauge requisition is not always presented in the Long Room, but duty is paid on the article according to the original entry in lieu.

With the view therefore to preserve the revenue from any further evasion of the full duty, I beg to suggest that the lockers be directed, on discovery of an increase in *either strength or quantity* of any article on a re-gauge, to forward the "Requisition" to the Custom House by the warrant messengers, and that duty only be calculated upon the figures returned by the locker in that document.

I have, &c.,

W. CATHCART STILL,
Inspector of Warehouses.

APPENDIX D.

No. 1.

Memorandum of Collector of Customs to Inspector of Warehouse.

As a report to which Mr. Still alludes *was* current some considerable time back, it becomes necessary to explain that such was *not* the case.

It appears that Mr. Larmour was so pressed for time that he preferred paying duty on the article according to the original certificate, without waiting for the re-gauge being made; and in consequence, Mr. Cohen immediately reported the circumstance to Mr. Nash, but did not, I believe, return the re-gauge order, which had not been made use of, and which he consequently considered waste paper.

It would, however, have been more proper if he had done so.

30 January, 1858.

J. GIBBES,
Collector.

No. 2.

Inspector of Warehouses in reply to Memorandum of Collector of Customs, dated 30th January, 1858.

Mr. Still is sorry to recur again to the subject of Mr. Cohen's re-gauge of June last; but having a clear recollection of the whole transaction, and two consequent conversations with the Collector, he finds it impossible to alter his first view of the matter.

In the explanation now given, which is entirely new to Mr. Still, and places the matter in a different light, there are two points requiring remark.

In the first place, the name of the owner of the spirits was *Tolano*, and not Larmour; and, secondly, that so far from the "Re-gauge Requisition" *not having been made use of*, it was filled up without delay, and handed back to the agent by the locker, shewing a considerable increase in the strengths originally returned of the two casks in question—this result gave two gallons additional at proof to pay duty upon; and, although the certificate was treated as waste paper, *its non-production*, under whatever explanation may be given, and the paying duty upon the original entry in lieu, caused a loss to the revenue of 20s., and, of course, a corresponding saving to that amount to the private individual.

It was not this trifling amount, however, so much as to prevent the evil for the future that led Mr. Still to move in the matter—he would have considered it a grave dereliction of duty on his part if he had not done so.

APPENDIX E.

Letters to Inspector of Warehouses from Mr. D. L. Levy, Solicitor.

No. 1.

Lloyd's Chambers, 213, George-street,
2 February, 1858.

Sir,

Mr. P. J. Cohen has consulted me respecting certain libellous and slanderous expressions made use of by you towards him in a letter addressed to the Collector of Customs, with a view to injure him in his business and reputation. He has therefore requested me to commence proceedings against you, unless you retract the said expressions, and apologise to him for writing the same, and pay the costs of this application (£1 1s.) by 12 o'clock to-morrow morning.

Mr. W. C. Still,
Custom House.

I am, &c.,
DAVID L. LEVY.

W. C. Still,
Esq.

8 June, 1858.

No. 2.

Lloyd's Chambers, 213, George-street,
5 February, 1858.

Dear Sirs,

In answer to yours of yesterday's date, I beg to say that the expressions of which Mr. Cohen complains are contained in a letter written by your client to the Collector of Customs, in justification of a second complaint made by my client against a Mr. Garvan, one of the Customs lockers, wherein he accuses Mr. Cohen with having defrauded the revenue, to which letter your client has free access, and can see it any time in the Collector's office. I have, therefore, to state, that unless your client at once retracts the words contained in that letter, and makes an apology, I am instructed to at once commence proceedings against him; and it is also the intention of my client to lay the whole correspondence before the Government. In the event, therefore, of your client not complying with the above request, I shall feel obliged by your informing me whether you will accept process in his behalf.

I am, &c.,

DAVID L. LEVY.

Messrs. Dick & Brown,
Solicitors, 63, Pitt-street.

No. 3.

Letter published in the Sydney Morning Herald, addressed to the Editor of that Journal.

COHEN v. STILL.

To the Editor of the Sydney Morning Herald.

Sir,

I have to call your attention to the above report in this day's *Herald*. The facts proved in evidence on oath were simply these. Having had occasion to complain of the negligence of one of the lockers, it was referred to Mr. Still for his report—some words in his reply made me write a second letter to the Collector, in which, whether right or wrong, I stated it appeared to me "Mr. Still evidently was disposed to screen him." The libel for which I brought the action was in reply to this second letter, couched in a memo. to the Collector, in these words:—"I now beg to make observations upon the liberty Mr. Cohen has taken with my name. This person is the same individual whom the Collector and informed me he had reprimanded a short time since for destroying (contrary to his bond "license as a Custom House Agent) a re-gauge certificate, by which the revenue suffered."

I called Colonel Gibbes, the Collector of Customs, as a witness, and he distinctly denied, on oath, that he ever had reprimanded me, or heard that I had destroyed a re-gauge certificate; he also distinctly denied, on oath, that he ever told Mr. Still so. I was also called as evidence, and on my oath denied that I had ever been reprimanded by the Collector, or that I had ever destroyed a re-gauge certificate. This was the whole substance of the case. The defendant, Still, called in witnesses, and on this evidence I obtained a verdict in my favour. Your reporter is in error in stating that the defendant sent in a letter to retract the words I had made use of, when it was I who sent him two letters previously to commencing proceedings to retract his statements, or to apologise, which he refused to do. As to damages, I gave no proof that I ever sustained any, consequently I could expect none.

Trusting you will insert this explanation,

I am, &c.,

T. J. COHEN.

March 22.

TUESDAY, 15 JUNE, 1858.

Present:—

MR. EGAN,

MR. DONALDSON,

MR. BUCKLEY.

MR. FLOOD,

MR. WEEKES,

DANIEL EGAN, Esq., IN THE CHAIR.

William Cathcart Still, Esq., called in and further examined:—

1. By Mr. Flood: From whom do they (the Custom House officers) derive the power of seizing, and from what law? There are certain officers, by virtue of their position, have the power of seizing under the Customs Law.

2. Who are the officers who have the power of seizing under the law? So far as I can understand, the Collector, the Landing-surveyor, the tide-surveyors, and the landing-waiters only have the power of seizing.

3. Does the Collector of Customs possess the power of deputing or authorizing any one to seize contraband goods? The officers I have mentioned can seize independent of any delegation from him.

4. Does he possess the power under the Custom House law to nominate and appoint persons who afterwards possess the power of seizing without any further authority? That is a question of law.

5. I wish to know whether you are aware he has that power—have you seen the Act? I think it is a question of law whether he can nominate persons with the power to seize.

6. You are of opinion that the Collector of Customs does not possess the power of nominating the lockers, and giving them the power to seize contraband goods? It is a doubtful question. I believe the Collector has stated it is doubtful whether the lockers have the power of seizing.

7.

W. C. Still,
Esq.

15 June, 1858.

7. What is the practice of inspectors of distilleries with respect to seizures? They all have the power of seizing. They are commissioned officers, and, by virtue of their commission, make seizures. Their commission alludes more to illicit distillation and frauds in licensed distilleries.

W. C. Still,
Esq.

15 June, 1858.

8. *By the Chairman:* I recollect that Henry Hothersall Browne, Esquire, had some commission to seize everything? I believe he had a writ of assistance, which is different from the ordinary authority. A "writ of assistance" is a perpetual search warrant. Under the ordinary commission the officer must take out a warrant before a magistrate before he can enter premises to seize.

9. *By Mr. Flood:* Whatever the law is with regard to seizure, you conceive it necessary that the lockers should have the power of seizing all contraband goods? As I said before, I think the Inspector of Warehouses, and all lockers, should have that power; and that the Inspector of Warehouses should have, in addition, a "writ of assistance," to facilitate his proceedings in cases requiring secrecy and expedition.

10. How do you determine the contents of a case of cigars? Cigars are weighed on landing, and the tare adjusted by the landing-surveyor. The locker has nothing more to do than to deliver the packages, except when a re-weigh order is taken out, when, if there is any difference in the weight, it is endorsed on the order and paid for accordingly. While on this subject, I would mention that I suggested, at the instance of a merchant, a new method of weighing cigars, which, I believe, has been adopted, and prevents a good deal of altercation about the tares. Hitherto the tare has been arranged by the weight of the wood being deducted from the weight of the whole case. My plan is to weigh the cigars only; you then get the correct weight, and save altercation between the officers and the importers.

11. Do you unpack the cigars? You empty one box of the case, and weigh the cigars, and from that result you average the weight of the whole.

12. Is it done in all cases now? I believe it is the practice now.

13. *By Mr. Donaldson:* Will you favor the Committee with your opinion as to the desirableness, or otherwise, of having a Queen's Bonded Storehouse, either for spirits alone, or for all dutiable articles, in substitution of the present system of private bonded warehouses? Although it will be admitted by impartial persons that there is a degree of order and discipline at the warehouses which did not exist when the superintendence first devolved upon me, I am of opinion that the present system of private bonding will never meet with the full confidence of the public. I do not by these observations intend to convey the slightest imputation upon any of the present bonded storekeepers, who are all highly respectable persons, and many of their stores are as orderly and as well conducted as any public bond could be. The warehouses, however, are now so numerous, so scattered throughout the city, and some of them so distant from the wharves and the Custom House, that, to lessen the inconvenience, loss of time, cartage expenses, &c., thus occasioned to the public, I would recommend the erection of one large Government bond—to be situated centrally; the old Commissariat offices, I think, would form an excellent site—such bond to be a receptacle for spirits, tobacco, and cigars only. I have already made a suggestion respecting certain articles which the merchants might be permitted to store on their own premises, and be exempt from the locker's continuous supervision. Should the idea I have ventured to intrude upon the Committee,—and which I have reason to believe is also entertained by a large number of persons practically versed in the working of the present bonding system,—be considered worthy of consideration, I would further suggest, that no alteration of an old building be attempted, but that the warehouse be built *purposely*, otherwise the object in view will be only half attained. In planning a building of this description, regard should be had to the points of approach and departure, so that no unnecessary delay be occasioned in loading and unloading drays; and to the roof of each section of the warehouse should be attached hoisting tackle, for the more expeditious mode of cutting out casks from the tiers. At present there are twenty-four bonded warehouses in Sydney, employing twenty lockers. In a Government bond, such as I have suggested, the work now performed by these persons could, I think, be discharged by one inspector, an accountant, and a clerk, and about eight lockers; of course the necessary gang of laborers, coopers, &c., will be required; but the proceeds from a reasonable rent and other charges would, I am sure, soon render the establishment self-supporting. While on this subject I may perhaps be allowed to allude to the bonding of wine and beer; the latter seldom finds its way into the warehouse, generally paying duty from the ship's side; but the former article is bonded in large quantities. From some calculations which I have made, I find that the duty collected last year on wine was at the rate of about 18 per cent. upon the declared value on importation, and upon beer the collection is not quite $3\frac{1}{2}$ per cent. *Ad valorem* duties are considered completely out of date, I am aware, by many persons; but, supposing these articles had been placed at an equal rate, say 10 per cent. under that system, I find that the revenue would have derived £8,000 more than from the fixed duty. Wine occupies a large space in a warehouse, and at some of the bonds the re-gauge and delivery of this article form the principal duty of the lockers. Whether wine and beer, in any future arrangement, should not be the exceptions to the abandonment of the *ad valorem* system, may perhaps be worthy of consideration.

14. Have you perused the Bill, called the Customs Consolidation Bill, handed to you on the last occasion? I have.

15. Will you favor the Committee with your remarks—have you read it? I have read it, and have drawn up a few suggestions.

16. Do you consider, from your experience in the department, that such a law as that is desirable under the present system of legislation? I think it very desirable, and would give great satisfaction to the mercantile community.

17. As consolidating the laws relating to gunpowder, coasting duties, &c.? Yes.

18. You think it useful? Yes.

- W. C. Still, Esq.
15 June, 1858.
19. Will you state to the Committee your suggestions? I beg to hand in the following suggestions. (*Vide Appendix A.*)
20. Will you favor the Committee with your opinion as to the present state of the law as regards bonded warehouses, and any amelioration or improvement that may occur to you, with regard to the present licensed Bonded Store Act? The bonded warehouses are principally governed by certain clauses in the Act 9 Victoria, No. 21; but I think it highly necessary that some special enactment should be passed for their better regulation. The Act 20 Victoria, No. 21, imposing a duty upon bonded warehouses, may be considered to be suspended, after the discussions which have taken place in Parliament, and the expressed intention of the Government to introduce some other measure in lieu. Perhaps the Committee will allow me as an answer to the question, to read some suggestions that I embodied and forwarded to the Government when the debates in Parliament closed, and it was understood that some modification of the present Act was intended. (*Vide Appendix B.*)

APPENDIX A.

Additional provisions to "Customs Consolidation Bill," suggested by Inspector of Warehouses on perusal of the Bill, by direction of the "Select Committee on Customs Department."

1. After clause 2, page 2:—Provision to clear up doubts as to who are seizing Officers of Customs.
2. Clause 9, page 3, to be altered:—*Bonded warehouses to be licensed by Minister of Finance and Trade. Such license to be renewed annually, on report of Inspector of Warehouses that "the enactments and provisions of this or any other Act for the time being relating to the warehousing of goods subject to duty have been complied with," so far as the particular warehouse is concerned.*
3. After clause 16, page 5:—Should follow the new measure the Government, it is said, contemplate introducing in lieu of the present Bonded Store Act. In that measure provision should be made to permit importers to warehouse tea, sugar, molasses, coffee, and chicory, in *free stores*; such stores to be open at any time to the inspection of the Inspector of Warehouses, or officers acting under him. Importer to enter into a bond for payment of full duties on the above articles, according to import weight. Sugar to be allowed 3 per cent for waste, if in store over *six months*. Quantities under £50 duty value at one shipment to be cleared for home consumption on importation. Importer to keep a journal, to be provided by the Government, of all receipts and deliveries of such articles; such account to be balanced weekly. The quantities delivered at any time to be covered by amount in duty paid warrants. Any untrue declaration of entries, or balance in journal, to involve a penalty, as well as forfeiture of remainder of the particular parcel of goods, if in the warehouse.
4. Clause 76, page 24:—Should be altered—to read after the words "warehoused therein"—"to the satisfaction of the Inspector of Warehouses," "so that easy access, &c."
5. After clause 90, page 28:—A provision should follow making it imperative on owners of goods in bonded warehouses to take out "re-weigh" or "re-gauge orders" before removal, on discovery of any excess in the import or landing quantity of such goods, by Inspector of Warehouses, or any officer acting under his directions.

Departmental arrangement:—Re-gauge orders to be numbered, and counterparts to be retained in the Custom House.

A provision respecting non-production of re-gauge orders by owners of goods, to involve a penalty of £10; to Custom House Agents, forfeiture of license.

6. After clause 180, page 53:—Persons intimidating or using threatening language to any officer of Customs, while in attendance in the execution of his duty at any public wharf, or bonded or free warehouse, or in charge of any dutiable goods, to pay a penalty of for each offence.

APPENDIX B.

Suggestions to be embodied in "An Act to amend an Act to impose a duty on Bonded Warehouses."

1. So much of the said Act to be repealed as relates to the payment of any additional duty beyond the annual sum of fifty pounds, by the occupier of any warehouse appointed for the free warehousing and securing therein of goods subject to duty.
2. The privilege of warehousing goods subject to duty, to terminate on the thirty-first day of December next following the granting thereof; such privilege to be renewed annually, upon payment of the sum of fifty pounds.
3. It shall not be lawful for the occupier of any warehouse, *not* approved of as a bonded store *previously* to the passing of this Act, to have the privilege of warehousing goods subject to duty, unless it be certified by the Inspector of Warehouses that the capacity of such warehouse is not less than one thousand five hundred tons, and that such warehouse is situate within the distance of one hundred yards from any public wharf or landing place; and the cubical contents of such warehouse shall be ascertained by admeasurement of the internal space, and forty cubic feet shall be calculated to the ton.
4. Fees to be demanded upon warehousing entries, and upon giving bond to warehouse goods, according to the following scale:—

Upon every warehousing entry, "*one shilling.*"

Upon giving bond to warehouse, at the rate of "*Seven shillings and sixpence*" in every one hundred pounds of duty value mentioned in such bond.

MEMORANDUM.—The provisions of clause 3, as regards size and position of warehouse, not to apply to the Out-Ports; neither are these suggestions intended to have a retrospective effect.

FRIDAY,

FRIDAY, 18 JUNE, 1858.

Present :—

Mr. EGAN, | Mr. WEEKES,
Mr. R. CAMPBELL.

DANIEL EGAN, ESQ., IN THE CHAIR.

William Henry Aldis, Esq., called in and further examined :—

1. *By the Chairman* : I believe you have been previously examined before this Committee? W. H. Aldis, Esq. I have.
2. Has any other circumstance come within your observation since you gave evidence before this Committee which would enable you to suggest anything by way of improvement in the general management of any branch of the Customs Department, either in reference to the Custom House or bonded stores? I have no particular circumstance to relate in addition to my former evidence. I am happy to say that the Customs officers are far more particular in the weights of tobacco and general business than they were formerly. I shall be most happy to give you any suggestions upon the new Customs Bill when I have an opportunity of reading it.
3. *By Mr. Weekes* : Did Mr. Still, the Inspector of Warehouses, shortly after his appointment take stock of your warehouse? He did.
4. Did he report to you that it was correct? We understood it to be correct. He has no authority to report to me. He goes through it, and if it is correct he passes on to the next store; if it is not, I presume, he would very soon let us know. His report, I imagine, goes in to the Collector.
5. How long ago is that? That was somewhere about the time I was examined here before. It must have been in February last year, I think.
6. Has there been any deficiency or alleged deficiency brought to light since that time? Yes.
7. What did it consist of—can you give us the particulars—and how was it discovered? The deficiency, I presume, was discovered in the Warehouse-keeper's department by Mr. Nash. He sent in a statement to the Collector—and the Collector to me—that there were 14 or 16 cases of cigars and upwards of a ton of tobacco that had been bonded three or four years previously, alleged to be deficient in my store.
8. Had those articles that you describe—the cigars and tobacco—been in your store previous to the stock taking by Mr. Still? Some of them had never been in my store—the tobacco had never been in, although I was charged with upwards of £200 duty upon this particular article.
9. Was any portion of it in your store previous to taking stock? Yes; the cigars were in my store originally. They were bonded as long ago as 1854.
10. What steps did you take on receiving that intimation from the Custom House? I waited for a day or two, and then wrote a letter to the Collector, telling him it was impossible I could account for it; and that if there had been any deficiency, Mr. Still ought to have reported the same when he took stock. I told him that it was not worth my while, under the new regulations, to keep on a bonded store; that I intended to transfer the whole of my stock to Pollard's, with the sanction of the Collector of Customs, provided he would allow me to put all my goods into Pollard's store—which was agreed to. After my stock had been examined by Mr. Still—after it had been checked by Mr. Pollard's clerk, the whole of my stock was removed to Pollard's store, and again passed by the Customs as correct; this occurred while I was in Melbourne, and during, or immediately after the removal of my stock, the whole of the warrants and orders which were left at my warehouse were taken away by the Customs, so that when the deficiency the other day was said to exist, I had no means of proving how they went out of the store.
11. How long after the whole of your stock of bonded goods had been removed to Pollard's was it that you received information of the deficiency? More than twelve months afterwards.
12. And what steps did you then take? I wrote to the Collector, stating that I had not the means, but if I could I should be most happy to furnish him with the information. Shortly after that I looked at my invoice book, but could not find out where or what this tobacco was. I have a vast deal of tobacco going through my hands in the course of the year—I should say nearly three parts of all the tobacco imported into Sydney. When the documents were taken away I had no means of proving the alleged deficiency. A thought, however, occurred to me (quite accidentally) that the tobacco charged to me was never in my store at all, and that its description answered a parcel I sold to one of Her Majesty's ships of war. I mentioned the circumstance to Mr. McCrae, Mr. Pollard's clerk, and in less than half an hour afterwards, Mr. McCrae came up and informed me that I was quite correct in my surmises—that the tobacco had been shipped in the "Herald" or "Juno," and in fact produced the Customs warrant for the same. The export warrant was signed by a clerk in the Warehouse-keeper's office, named Rogers.
13. Where did Mr. McCrae say he had obtained that document? From off the file in Pollard's store.
14. What then? Well, it appeared that Mr. McCrae took it to the Custom House, and gave the Warehouse-keeper the information, and found it to be correct. It had been signed by Mr. Rogers, a clerk there, and not by Mr. Nash. Then it was discovered.
15. Then, in point of fact, that ton of tobacco was shipped without the knowledge of the Customs? There was a regular export entry passed for it, signed by Mr. Rogers, (who is there now,) and I presume had been omitted to be entered by him in the Customs books. Mr. Nash, the Warehouse-keeper, cannot do everything. He has far too much to do. He is the first who crosses the threshold of the Custom House in the morning, and the last who re-crosses it at night, and is the hardest worked officer in the Customs.

W. H. Aldis,
Esq.

18 June, 1858.

16. But at all events the information came from the Custom House of this deficiency of one ton of tobacco, among other goods? Yes.
17. At the same time that tobacco had been regularly shipped in one of Her Majesty's ships? Yes, and never was in my store. But after that I received another letter from the Collector.
18. How long after? About a month: calling upon me to pay the duty upon the cigars.
19. To pay the duty upon the cases of cigars before alluded to? Yes. And then I immediately took all the correspondence (I would not have anything further to say in the matter myself,) and referred the Collector of Customs to my solicitors, Messrs. Bradley and James.
20. What was your motive for placing the matter in the hands of your solicitors? I was informed that the Collector could make me pay it. I thought it very extraordinary if he could compel me to keep his books—the Customs books.
21. Did you take any steps to explain your case to the Collector of Customs? No. Mr. Nash called upon me, and I told him it was utterly impossible I could explain it.
22. You maintaining that there was not that deficiency? I maintained that they had either paid duty or had been exported, but that I was not in a position to prove anything of the sort, because they took away all my documents when I went to Melbourne, and it was understood to be all correct.
23. Did any correspondence take place between your solicitors and the Collector of Customs with respect to the cigars? Yes; Mr Bradley wrote a letter, stating my case.
24. Was there any reply to that? There has been no reply.
25. Then what has been the result? Since then they have found out some more of the cigars—not the Customs—some one in the Customs—am not prepared to say whom.
26. That is another shipment of which the Customs had omitted to take due account? With which they had charged me as deficiency in my store.
27. Do you say that the whole of these cigars have been found, or that some portion remain yet unaccounted for? There were three shipments, amounting to twelve or fourteen cases; one of those shipments has since been discovered.
28. Then two are at present standing as deficient? They stood as deficient, but I believe the duty has been paid by some one—not by me.
29. You believe the duty has been paid by somebody? I was told so.
30. On those two shipments of cigars which at present it is not explained what became of them? Yes.
31. Do you know by whom the duty has been paid? I do not. It must have been paid by some one connected with the Customs.
32. Have you had no further communication from the Collector of Customs since the letter apprising you of the deficiency? I had a gentleman calling upon me to know whether I would allow the duty to be paid upon them. I said "of course"; it was not for me to allow it, or otherwise. I had nothing to do with it.
33. That is, the duty on the missing cigars? Yes.
34. Was that an officer of the Customs? No.
35. Was he applying on his own account? No; he must have applied on behalf of some other person. He was a relative of a gentleman in the Customs.
36. By Mr. R. Campbell: Have you any objection to name him? I hardly think it necessary.
37. By Mr. Weekes: He did not state on whose account he applied to you? He did not; he merely wished to know whether I would allow the duty to be paid, and the duty has been paid.
38. And no one can tell what became of the cigars? I cannot. The Customs ought to know.
39. Then I understand from you that the affair is now, and in that way, finally settled? It is finally settled.
40. So that of this alleged deficiency the ton of tobacco was found to have been duly shipped, and one of the shipments of cigars to have been regularly re-shipped? Whether the duty has been paid or the goods re-shipped I know not.
41. The remaining part being paid by some mysterious agent, and so the matter ends—is that the case? Something of that sort.
42. By Mr. R. Campbell: When you say that the cigars and tobacco were duly shipped for exportation, you do not know that of your own knowledge? I saw the voucher for the tobacco, and that is all.
43. You only saw the export voucher? I did not see it until it was taken to the Customs.
44. That is the way in which it was found out—from an indistinct remembrance you had of the transaction? Yes.
